Information files are being updated and capital project appropriations from the state's FY '80 budget are being analyzed for the remaining communities prior to meetings with local city councils in February and March.

MAJOR PROGRAM CATEGORY: Community Facilities Development

Task #5: Seek completion of inventory and condition surveys of public facilities in all Interior communities prior to July 1, 1980 and continue to provide project development assistance and seek financing for small community projects identified in the Rural Capital Improvements Program.

KEYWORD: RURAL CAPITAL IMPROVEMENTS

a. Budget and Staffing Estimate:

Activity Code	Estimated Additional Cost	Annual Management Cost	Program Staff Required
Capital	10,000,000	100,000	2 man/yrs.

b. Program Calendar:

07/01/80 * ---------- * 04/30/84

c. "Task" Status as of January, 1980:

Inventory and Condition Surveys of State Facilities in all Interior Alaska REAAs are now being completed by DOTPF. With the acceptance of the grant from the Farmers Home Administration of the U.S. Department of Agriculture, FTVAD's Rural Capital Improvements Program is once again underway.

The State of Alaska is being asked to provide $100,000 in additional financing for the program during the coming year. This financing will enable staff members to spend more time in those communities that have requested FTVAD assistance in trying to develop local capital projects.

MAJOR PROGRAM CATEGORY #4

ENERGY CONSERVATION AND HOUSING REHABILITATION

Because of the temperature extremes in Interior Alaska and the high cost of fuels, the Fairbanks area seems a natural target for energy conservation programs, experiments with different heating methods, and encouragement for new energy industries in the Interior.

In the summer of 1976, the Rural Community Action Program staff requested assistance from the Town and Village Association in providing home weatherization to low income families within the Fairbanks North Star Borough. The borough administration also asked the Association to provide this program to borough residents.

The project was approved by the Association's regional board at its December 1976 meeting. The Association now administers a winterization program for the Borough, as well as a weatherization and housing rehabilitation program for the City of Fairbanks.

Another facet of the Energy Conservation Program is waste heat (excess energy) utilization. Feasibility studies are being conducted to develop data on methods for capping energy now being discharged in the atmosphere and water bodies from pipeline pump stations, power plants, refineries and other future manufacturing plants to be used as energy to operate fish hatcheries, commercial greenhouses, forage dryers, pulp mills, vegetable dehydration plants, tanneries, etc. Another source of waste heat will be created with the construction of compressor stations for the gasline. Information of this kind is also essential to the design and development of community facilities particularly in rural areas.

Within the Energy Conservation and Housing Rehabilitation Program one task has been established by the Association's Board of Directors for staff work through October, 1981.

This is listed by task number, keyword code, and page number below. Information about the task includes the budget and staffing estimate, program calendar and current project status.

Information about the goals and objectives of the Association's Energy Conservation and Housing Rehabilitation Program can be found on page 42 of The Overall Economic Development Program for Fairbanks and the Interior of Alaska ... Through 1981, published September, 1979.

TASK	KEYWORD CODE	PAGE NO.
Task #1	Energy Conservation	26

MAJOR PROGRAM CATEGORY: Energy Conservation and Housing Rehabilitation

GOAL A: Effective Utilization of the District's Energy Sources

Objective: Identify and promote modern technology for utilizing alternative sources of energy

Board Policy: Through the Small Industries Committee FTVAD will develop a program of small energy technology grants for local experiments in improving energy efficiency and reducing energy costs.

Task #1: Working with residents, develop and complete 20 small energy conservation projects by 1982 leading to a reduction of 25% in energy waste in the Interior.

KEYWORD: ENERGY CONSERVATION

a. Budget and Staffing Estimate:

Activity Code	Estimated Additional Cost	Annual Management Cost	Program Staff Required
D-Comp.	5,000,000	up to 50,000	1 man/yr.

b. Program Calendar:

04/01/80 ---------- 04/30/82

c. "Task" Status as of January, 1980:

Several discussions are underway with local people and organizations involved with energy conservation projects. Among the projects being discussed are:

1. A large greenhouse utilizing MUS waste water ... and community garden
2. A feasibility study to analyze the use of dirigibles and/or blimps for transportation of freight in the Interior's rural areas
3. Recycling newspaper for the manufacture of insulation
4. Local manufacture or assembly of solar panels, and other energy conservation equipment
5. Super-insulated housing
6. Gasohol production
7. Energy conservation standards in building design

MAJOR PROGRAM CATEGORY #5

PETROLEUM RESOURCE POLICY

Because of the massive impact of rapid petroleum resource development on the short and long term economic stability of the community, the question of the appropriate response by the general public and by government has occupied much of the time and attention of the Association since its formation in 1972.

The primary vehicles developed to deal with this question involved continuous information processing oriented toward the information demands of business, government and individuals throughout the Interior.

The information base thus developed will be enormously valuable in anticipating the short term problems and opportunities which will accompany the construction of a natural gas pipeline.

However, a great deal of work remains to be done in this area if Interior Alaskans are to gain more than transitory benefits from future petroleum development in Alaska.

Within the Petroleum Resource Policy Program five tasks have been established by the Association's Board of Directors for staff work through October, 1981.

These are listed by task number, keyword code, and page number below. Information about each task includes the budget and staffing estimate, program calendar and current project status.

Information about the goals and objectives of the Association's Petroleum Resource Policy Program can be found on pages 43 and 44 of The Overall Economic Development Program for Fairbanks and the Interior of Alaska ... Through 1981, published September, 1979.

TASK	KEYWORD CODE	PAGE NO.
Task #1	Oil and Gas Management	28
Task #2	Energy Development Impact	29
Task #3	Alaska Regional Center, U.S.G.S.	30
Task #4	Gas Conditioning Plant	31
Task #5	Mineral Industry Development	32

MAJOR PROGRAM CATEGORY: Petroleum Resource Policy

GOAL A: Greater Utilization of Petroleum Resources

Board Policy: Since its formation in 1972, FTVAD has been heavily involved with the complex issue of pipeline "impact". Though considerable information and understanding of the issue's many subtleties has been gained, there has been little progress in developing either a federal or a state impact assistance program for small communities. The communities bear the social costs and the political and economic disruption of these massive projects with little hope of achieving lasting economic benefits or protection of important community values.

During the past several years the federal government has tried to develop an impact assistance program for inland areas ... as opposed to coastal zone areas.

Because of the probable construction start for the Alcan natural gas pipeline in the early 1980s, federal impact assistance legislation is urgently needed for anticipatory planning. If Congress adopts the legislation FTVAD will move rapidly toward the implementation of a planning and coordination program in anticipation of construction of the Alcan natural gas pipeline. Such a program is critically needed, particularly in the Upper Tanana River area which was not directly affected by the oil pipeline project.

Task #1: To locate all public and private offices with northern oil and gas development, management and research responsibilities in Fairbanks by 1981.

KEYWORD: OIL AND GAS MANAGEMENT

a. Budget and Staffing Estimate:

Activity Code	Estimated Additional Cost	Annual Management Cost	Program Staff Required
Development	50,000	10,000	1 man/yr.

b. Program Calendar:

04/01/80 ---------- 04/30/82

c. "Task" Status as of January, 1980:

Northwest Energy Company has opened their corporate headquarters for their Alaska operations in Fairbanks; Governor Hammond has opened the State Pipeline Coordinator's Office in Fairbanks; the federal Inspector for the Pipeline has not yet decided the location of his Alaska office.

Additional funds are being sought from private foundations in order to analyze other administrative functions of the state and federal governments which are more appropriately conducted from a location in the Interior of Alaska.

MAJOR PROGRAM CATEGORY: Petroleum Resource Policy

GOAL A: Greater Utilization of Petroleum Resources

Task #2: Raise 20 million dollars in financing for impact related job training, capital improvements by 1981.

KEYWORD: ENERGY DEVELOPMENT IMPACT

a. Budget and Staffing Estimate:

Activity Code	Estimated Additional Cost	Annual Management Cost	Program Staff Required
D-Comp.	20,000,000	50,000	1 man/yr.

b. Program Calendar:

04/01/80 ---------- 04/30/83

c. "Task" Status as of January, 1980:

Congress is expected to consider the Inland Energy Development Impact Assistance Bill early in the coming session. The bill, numbered S.1880, is in the Senate Energy Committee chaired by Senator Henry Jackson of Washington. Senator Stevens is a member of the Committee and Senator Gravel is a co-sponsor of the bill.

The State of Alaska has, so far, shown little interest in establishing state policy or programs in this area, though FTVAD has been assured by Lt. Governor Terry Miller and the governor's Executive Assistant Jerry Reinwand that this is an issue of high personal priority.

FTVAD is seeking funds from private foundations in order to finance the yearly costs necessary to establish an impact assistance program in the Interior.

As a result of Board adoption of a resolution supporting the state's efforts to link preferential hiring and contracting with financing the natural gas pipeline, a special committee made up of Ruth Burnett, Fairbanks City Council, Mike Ribar, Fairbanks North Star Borough Assembly, and Jerry Smetzer, FTVAD Executive Director, has been established. The committee will prepare a resolution seeking residential hiring and contracting preference on all state contracts in areas of the state which are suffering high rates of unemployment, and low levels of personal income. The committee may expand its assignment to include impact problems associated with the construction and operation of the gas pipeline.

MAJOR PROGRAM CATEGORY: Petroleum Resource Policy

GOAL A: Greater Utilization of Petroleum Resources

Objective: In its role as catalyst for economic development in the region, FTVAD will work with state and federal agencies to encourage the location of the United States Geological Survey Alaska Regional Center in Fairbanks

Board Policy: As of this date, Governor Hammond has pledged his support to the location of the proposed Alaska Regional Center of the U.S. Geological Survey in Fairbanks. Such a center when fully staffed would permanently employ 500 people. An internal committee of U.S.G.S. personnel has prepared a report to Dr. Menard, Director of U.S.G.S. recommending that move occur, but that more intensive study is needed. If Secretary Andrus concurs with Dr. Menard on the creation of the Alaska Regional Center, FTVAD will conduct research, publication, cooperation, advocacy and travel as necessary to assure that Fairbanks is elected as the site of the regional center. Since current federal policy on the location of federal facilities require that location decisions be sensitive to local economic problems.

Task #3: The location of the U.S.G.S. Alaska Regional Center in Fairbanks by reason of the proximity to major geophysical research facilities at the University and because of the importance of such a center to a diversified economic base in the region.

KEYWORD: ALASKA REGIONAL CENTER U.S.G.S.

a. Budget and Staffing Estimate:

Activity Code	Estimated Additional Cost	Annual Management Cost	Program Staff Required
Technical Assistance	50,000	5,000	$5,000

b. Program Calendar:

04/01/80 ---------- 04/30/82

c. "Task" Status as of January, 1980:

During September the U.S.G.S. announced that a move of some of its Menlo Park offices to Anchorage would occur during the coming year. Several local parties objected vigorously to U.S.G.S. Director Dr. William Menard. Menard in a letter to several Fairbanks parties, including FTVAD, assured us that the move involved a "... relatively small number of employees", was "temporary", and was done because, essentially, most geologic activity programs in the state are already headquartered in Anchorage.

Dr. Menard did assure FTVAD that the location of the actual U.S.G.S. "Center of Excellence" in Alaska had not been made, and, before it is made, there would be ample time for interested parties to "... present their views on selection of a center location".

MAJOR PROGRAM CATEGORY: Petroleum Resource Policy

GOAL B: Greater Utilization of the District's Mineral Resources

Objective: Attract potential petrochemical industry developers to the District by investigating options for financing petroleum processing facilities, and by initiating more research into the economics of the District's petrochemical potential under environmentally acceptable methods.

Task #4: Work with the Fairbanks North Star Borough in its efforts to investigate the feasibility of the location of a natural gas conditioning plant in the Interior.

KEYWORD: GAS CONDITIONING PLANT

a. Budget and Staffing Estimate:

Activity Code	Estimated Additional Cost	Annual Management Cost	Program Staff Required
Technical Assistance	500,000	50,000	1 man/yr.

b. Program Calendar:

04/01/80 * ---------- * 04/30/82

c. "Task" Status as of January, 1980:

On November 29, 1979 the Assembly of the Fairbanks North Star Borough adopted resolutions numbered 79-69 and 79-70 supporting, respectively, an Interior Alaska site for the gas conditioning plant; and state financial participation in the construction of the plant.

On January 14, 1980 Governor Hammond announced the formation of a group chaired by Lt. Governor Terry Miller to "...work with engineering consultants employed by the State in evaluating developing plans [for the gasline]". Hammond has requested an appropriation of $500,000 to do this work. ERA will issue an advisory memo to the Task Force on Economic Development relevant to Interior Alaska's interest in natural gas by the end of January.

FTVAD has recommended that money be appropriated by the state to the Fairbanks North Star Borough to finance technical studies of an Interior location for the gas conditioning plant.

MAJOR PROGRAM CATEGORY: Petroleum Resource Policy

GOAL B: Greater Utilization of the District's Mineral Resources

Objective: Encourage optimum multiple use and utilization of the mineral resource land base for mineral production; greater research into the economic potential of the District's mineral resources under environmentally acceptable methods; and greater development of competitive mineral products, including industrial development of the asbestos, coal, copper, lead, phosphate, limestone, nickel and other minerals of the District.

Task #5: To increase the number of permanent jobs in the Interior's mineral and petroleum industries by 1,000 by 1985.

KEYWORD: MINERAL INDUSTRY DEVELOPMENT

a. Budget and Staffing Estimate:

Activity Code	Estimated Additional Cost	Annual Management Cost	Program Staff Required
Development	50,000	10,000	1 man/yr.

b. Progr Calendar:

01/01/81 01/31/82

c. "Task" Status as of January, 1980:

On May 31, 1979, the Assembly of the Fairbanks North Star Borough adopted Resolution No. 79-30 providing support for mineral development within the Borough. The Task Force on Economic Development has established mineral development as a local economic activity with potential for diversifying the Fairbanks economy, and it will be a study topic by Economics Research Associates under the Title IX Strategy Development Grant.

In early December the Fairbanks North Star Borough adopted Ordinance No. 79-107 which creates appropriate zones for the conduct of mining activity within the borough.

MAJOR PROGRAM CATEGORY #6

WORKFORCE DEVELOPMENT

In the spring of 1975, the Fairbanks Town and Village Association was asked to help plan, seek funding for, and coordinate the Community Forum on Growth. Two additional staff members were hired under a grant from the Alaska Humanities Forum and the well-attended forum was held in April. The final analysis showed that Interior residents wanted more information about what effect the "pipeline boom" was having on the community. They wanted to be able to take advantage of opportunities and to minimize the adverse effects of this largest-ever construction project. They asked that more attention be given to the human element when development was being planned. The human resources category was incorporated into the work program and was adopted by the board at its March 1977 meeting.

Such projects as the Fairbanks Rehabilitation Center and the Senior Citizen Center have since been adopted under this category.

Within the Workforce Development Program two tasks have been established by the Association's Board of Directors for staff work through October, 1981.

These are listed by task number, keyword code, and page number below. Information about each task includes the budget and staffing estimate, program calendar and current project status.

Information about the goals and objectives of the Association's Workforce Development Program can be found on page 45 of The Overall Economic Development Program for Fairbanks and the Interior of Alaska ... Through 1981, published September, 1979.

TASK	KEYWORD CODE	PAGE NO
Task #1	TVCC/Hutchison	34
Task #2	Fairbanks Fire Training Center	35

MAJOR PROGRAM CATEGORY: Workforce Development

GOAL A: Improved Human Resource Services

Objective: Increase and enhance on-the-job training and/or classroom training opportunities for district residents relevant to jobs and skills assessment of the area

Board Policy: FTVAD commends the Tanana Valley Community College and the Fairbanks North Star Borough School District for their mutual effort to cooperate closely in the use of the Hutchison Adult Career Development Center for the conduct of vocational education programs. In this spirit of cooperation, FTVAD believes that funds which may become available for expanded facilities for vocational education should be used to expand Hutchison Adult Career Development Center in order to provide vocational training opportunities for the greatest number of residents of Interior and Northern Alaska.

FTVAD also recommends that the Regional Fire Training Center being developed under the sponsorship of the City of Fairbanks be fully developed as a Regional Training Center in order to provide fire training services and training facilities for all communities of Interior and Northern Alaska.

Task #1: To expand the use of the Hutchison Adult Career Development Center as Northern Alaska's regional manpower development and vocational training center, and to expand the number of regional students in the program by 1,000 per year by 1983.

KEYWORD: TVCC/HUTCHISON

a. Budget and Staffing Estimate:

Activity Code	Estimated Additional Cost	Annual Management Cost	Program Staff Required
Planning	50,000	10,000	1 man/yr.

b. Program Calendar:

07/01/80 ---------- 07/31/83

c. "Task" Status as of January, 1980:

FTVAD efforts currently inactive pending approval of cooperative agreements between the FNSB School District and the Hutchison Adult Career Development Center.

MAJOR PROGRAM CATEGORY: Workforce Development

GOAL A: Improved Human Resource Services

Task #2: Seek technical assistance funds to determine methods of coordinating regional recruiting and training programs for Hutchison and the Regional Fire Training Center.

KEYWORD: FAIRBANKS FIRE TRAINING CENTER

a. Budget and Staffing Estimate:

Activity Code	Estimated Additional Cost	Annual Management Cost	Program Staff Required
Technical Assistance	20,000	2,000	$2,000

b. Program Calendar:

07/01/80 07/31/81

c. "Task" Status as of January, 1980:

Program is currently inactive pending action by the City of Fairbanks to construct and operate a fire training center.

MAJOR PROGRAM CATEGORY #7

RENEWABLE RESOURCE DEVELOPMENT

Each year as the world population increases and as the export of food becomes a major bargaining force in foreign policy and balancing the national economy, more agricultural land is required to meet the demands.

Alaska is virtually the only state of the union that has idle agricultural land for production. There are approximately 20 million acres of arable land suitable for agricultural production in Interior Alaska.

Agriculture can supply the economic base needed in most bush villages while it simultaneously supplies the village residents with a stable diet. Many village corporations such as Minto and Manley Hot Springs selected lands under ANCSA entitlement specifically for their suitability to agricultural production.

The initial OEDP published in the spring of 1974 addressed agriculture as an important aspect of economic development but little has been done to set strategies for development until the December 1976 FTVAD annual Board meeting and the March 1977 semi-annual Board meeting.

Within the Renewable Resource Development Program two tasks have been established by the Association's Board of Directors for staff work through October, 1981.

These are listed by task number, keyword code, and page number below. Information about each task includes the budget and staffing estimate, program calendar and current project status.

Information about the goals and objectives of the Association's Renewable Resource Development Program can be found on page 42 of The Overall Economic Development Program for Fairbanks and the Interior of Alaska ... Through 1981, published September, 1979.

TASK	KEYWORD CODE	PAGE NO.
Task #1	Agricultural Production	37
Task #2	Forest Products Industry	38

MAJOR PROGRAM CATEGORY: Renewable Resource Development
GOAL A: Increased Agricultural Production

Objective: Opening of domestic and foreign market

Board Policy: The state is making major investment in the Delta agricultural project for export. FTVAD will cooperate in order to better develop foreign markets. Better information needs to be developed to identify agricultural commodities other than barley are being imported to Pacific Rim countries, what the world market prices are, and what institutional obstacles are in the way of marketing interior agricultural products.

Task #1: By working with the state's efforts to develop barley production for export in the Delta/Tanana area, and by assisting in developing agriculture in the Totchaket area near Nenana, FTVAD hopes to double the number of acres for the production of agricultural exports; and by working with TCC/ Koyukon Development Corporation, double the number of acres in villages for the purposes of import substitution.

KEYWORD: AGRICULTURAL PRODUCTION

a. Budget and Staffing Estimate:

Activity Code	Estimated Additional Cost	Annual Management Cost	Program Staff Required
Planning	50,000	10,000	1 man/yr.

b. Program Calendar:

07/01/80 ---------- 01/31/83

c. "Task" Status as of January, 1980:

No current activity.

MAJOR PROGRAM CATEGORY: Renewable Resource Development

GOAL B: Development of Forest Products Industries

Objective: Expansion of inventory work of forest resources in the district

Board Policy: The forests of the Interior represent the most abundant of the Interior's renewable resources. The forests are also an important local source of raw materials essential for the manufacture of various wood products, and they have made possible a vital local industry based on dimension lumber, and materials for the construction of log buildings in Interior communities. Additionally, because of a multitude of institutional obstacles, including architectural standards mandating the use of non-Alaskan lumber, the forest represents the Interior's most underdeveloped export industry. Assisting in the expansion of the existing local industry and overcoming these obstacles, developing wood products based on the Interior's forest for both domestic and export markets, will require an interdisciplinary approach and a major commitment of time and talent by several local organizations and public and private institutions. Currently the U.S. Department of Agriculture jointly with Doyon, Ltd., is working on the expansion of the Interior's forest industry. FTVAD will support this effort.

Task #2: Remove institutional obstacles preventing more diversified domestic use of local forest products in order to double value of Interior forest industry production in real dollars by 1983.

KEYWORD: FOREST PRODUCTS INDUSTRY

a. Budget and Staffing Estimate:

Activity Code	Estimated Additional Cost	Annual Management Cost	Program Staff Required
Planning	50,000	10,000	1 man/yr.

b. Program Calendar:

07/01/80 ---------- 07/31/83

c. "Task" Status as of January, 1980:

No current activity.

TASK SUMMARY

BUDGET PLANNING SUMMARY

for the period October 1, 1980 through September 30, 1982

Prepared by: The staff of the Fairbanks Town and Village Association

JANUARY 1980

"Serving the People and Communities of Interior Alaska"

INTRODUCTION

In August of 1978 the Fairbanks Town and Village Association established a procedures manual for the conduct of its internal affairs. Chapter 4 of the manual describes our budget development procedures and this pamphlet contains a summary of information prepared under Chapter 4, Sections 03. through 06.

The Association's fiscal year begins October 1st and ends September 30th. The budget cycle is three years with each annual budget in the current cycle defined as follows:

Operating Budget:	October 1, 1979 - September 30, 1980
Planning Budget:	October 1, 1980 - September 30, 1981
Preliminary Budget:	October 1, 1981 - September 30, 1982

Assumptions used to develop annual budgets for this cycle are listed on the following page. Questions on information presented here should be referred to Jerry Smetzer, Executive Director, or Walt Gesin, Deputy Director, Management.

Jerry Smetzer
Executive Director

January 31, 1980

ASSUMPTIONS

1. That FTVAD's annually renewable grants from the federal Economic Development Administration, the Fairbanks North Star Borough, and the federal Farmer's Home Administration will continue at least at their present level with possible cost-of-living increases each year.
2. That FTVAD's efforts to establish an annually renewable grant program for local and regional non-profit corporations involved with economic development by the State of Alaska are successful and will yield approximately $100,000 per year to FTVAD.
3. That FTVAD will be successful in [illegible] efforts to raise the additional money necessary to carry out the 24 "Tasks" listed in The Overall Economic Development Program for Fairbanks and the Interior of Alaska in the amounts and in the time frame shown in the "Budget/Staffing" estimate.
4. That the Board of Directors and the Executive Committee will, as financing becomes available, approve the staffing, budget increases, and contracting necessary to carry out the "Tasks" and, therefore, the Association's goals and objectives.

VALUE OF CURRENT CONTRACTS AS OF DECEMBER 31, 1979

Title	Contracting Agency	Source of Funds	Duration	Amount	Expiration Date
FTVAD	FNSB	Local	12 mos.	60,000	06/30/80
EDA Title III	EDA	Federal	12 mos.	85,800	09/30/80
EDA Title IX	EDA	Federal	12 mos.	75,000	09/30/80

FAIRBANKS TOWN AND VILLAGE ASSOCIATION
FOR DEVELOPMENT, INC.

Executive Committee Meeting
Thursday, December 13, 1979
9:00 a.m.

Arctic Room, Polaris Building
Fairbanks, Alaska

A meeting of the Executive Committee of the Fairbanks Town and Village Association for Development, Inc. was held on Thursday, December 13, 1979, at 9:00 a.m., in the Arctic Room of the Polaris Building, Fairbanks, Alaska. The meeting was called to order at 9:00 a.m.

EXECUTIVE COMMITTEE MEMBERS PRESENT:

Chris Anderson, President
Spud Williams, Vice-President
Mellie Terwilliger, Secretary
Wally Burnett, Treasurer
Jonathan Solomon, Member

BOARD OF DIRECTORS PRESENT:

Steve Squires
Rudy Hamilton
Jeff Stokes
David Miller
Harry Maillelle
Adelle Chase
John A. Carlson
Dr. William R. Wood

FTVAD STAFF PRESENT:

Jerry Smetzer, Executive Director
Walter Gesin, Deputy Director, Management
Robert Grove, FmHA Program Director
Ron Ponchione, Winterization Program Director
Barbara Supelak, Administrative Supervisor
Bobbi Fyten, Program Assistant

GUESTS PRESENT:

Ann Helmick, Main, Hurdman and Cranstoun
Charlie Backus, Photographer
Ned Osborn, Economics Research Associates
Dan Stephan, Economics Research Associates
Dave Rasley, Title IX Task Force
Ruth Burnett, Title IX Task Force

DISCUSSION OF A POSSIBLE WORKING AGREEMENT BETWEEN TANANA CHIEFS CONFERENCE AND INTERIOR VILLAGE ASSOCIATION AND FAIRBANKS TOWN AND VILLAGE ASSOCIATION TO POOL RESOURCES AND CO-ORDINATE EFFORTS FOR PROJECTS AND PROGRAMS IN THE RURAL AREAS OUTSIDE FAIRBANKS

The meeting opened with a general discussion of a possible working agreement between the Tanana Chiefs Conference, the Interior Village Association and Fairbanks Town and Village Association, to pool resources and coordinate efforts for projects and programs in the rural areas outside Fairbanks.

Mr. Williams and Mr. Smetzer had met earlier with an IVA representative to discuss such an agreement. At that meeting it had been decided that such a working agreement could be very helpful in raising needed project financing, avoiding conflicts and improving working coordination between the three organizations...particularly in the villages.

Mr. Smetzer stated that before the three parties pursued the discussions further, they wanted to outline the proposal before the executive boards of their respective organizations.

Mr. Burnett asked that any proposal for a three party agreement be reviewed with the Executive Committee prior to any formal action committing FTVAD.

Mrs. Terwilliger asked if such an agreement would be similar in form to the existing agreement between TCC and FTVAD. Mr. Smetzer said that, in general form, the agreements would probably be similar.

At 9:10 a.m., the Executive Committee recessed. The meeting was reconvened at 9:20 a.m.

FTVAD FINANCES

a) AUDIT REPORT

At the request of the Executive Committee, Ann Helmick, representing Main, Hurdman and Cranstoun, gave a brief review of their audit of the Association's financial records for FY '79.

WALLY BURNETT moved that the audit report for FY '79 be recommended for approval to the FTVAD Board of Directors at their annual meeting to be held December 14, 1979.
seconded by JONATHAN SOLOMON

In response to Ms. Helmick's review, Mrs. Terwilliger requested that the record show the Association had carefully followed financial recording procedures suggested by the firm at the conclusion of last year's audit. As a result, no discrepancies were found in the Association's financial record for this fiscal year, and no recommendations were necessary.

MOTION CARRIED UNANIMOUSLY

Wally Burnett, Fairbanks, examines the audit report.

b) CURRENT FINANCIAL STATUS

Mr. Smetzer distributed a Budget Planning Document to those present. He reported that the Association had established a procedures manual a year ago for the conduct of its internal affairs and set the policy for planning the Association's budgets in three year cycles. He pointed out that in the current FY '80 budget there was a shortage of funds, due in part to the fact that the Association had been unsuccessful, despite over two years of intensive efforts, in developing annually renewable state financial support for any kind of interior economic development program.

Mr. Smetzer also stated that until the State of Alaska established a program of providing reliable financial support in the form of annually renewable grants to independent organizations involved with economic development, the absence of state policy and financial support would eventually make it impossible to conduct any kind of effective long range program of regional or local economic planning and development within the interior.

Mr. Smetzer further stated that the borough and the federal Economic Development Administration were providing annual planning and development grants for basic operations to the Association in the amount of $85,000 and $86,400 per year in this fiscal year. It is imperative that the state with its vastly superior financial resources start providing at least as much - preferable $100,000 - per year to the Association.

Mrs. Terwilliger suggested that it might be possible to put a little pressure on the state through the federal agencies which provided funds. Jonathan Solomon maintained that the Association should get the area legislators to initiate bills

that would appropriate the necessary funds for local and regional economic development within the regional boundaries of each of the 12 native regional corporations. Mayor Wood stressed the importance of conducting an effective census within the District. He also related his plans to initiate a committee concerning the census and the possibility of division of the various areas into economic development regions. The funds for the economic development programs would be appropriated by the state but administered locally. Mr. Smetzer stated because of the Executive Committee's concerns in this area that following the board meeting he intended to immediately draft legislation concerning the subject and would send a copy to each of the Executive Committee members for their review prior to submitting it to the state legislature and the Governor for action.

c) PROJECTED BUDGET

Mr. Walt Gesin briefly reviewed the FY '81 and FY '82 budgets. Mr. Smetzer called attention to the "Status of Projects and Programs" document and explained its layout. He pointed out the fact that the Association's budget increased during the time that the "Tasks" identified by the board were being carried out and decreased when the projects were completed.

FTVAC PROGRAMS

a) FmHA

Mr. Robert Grove reported on program related developments in Fort Yukon. He stated he hoped to coordinate the CIP plans with the various capital project financing agencies in each community and encourage a system whereby the village residents decided what they wanted from capital project development by state and federal agencies rather than being informed what they would receive without their consideration. He also commented briefly on the Inland Energy Development Impact Assistance bill currently making its way through Congress and how it could be applied to use in the Interior.

Mr. Grove commented that since taking over the position he had been working closely with the communities of McGrath and Fort Yukon, and planned to be working in Delta, but was presently waiting for the Tanana Chiefs Conference to complete a survey in the interior villages so that there would not be any duplication of efforts in those communities in which the survey was being conducted.

Mr. Smetzer briefly outlined SB 1880, the Inland Energy Development Impact Assistance bill, and the effect it could have on the area and the money that would be authorized to conduct anticipatory planning for the gas pipeline. He pointed out that if the bill passed the program would also be adminstered by the Farmers Home Administration of the Department of Agriculture.

b) ENERGY CONSERVATION & HOUSING REHABILITATION

At Mr. Smetzer's request, Mr. Grove reported on behalf of Winterization Director Ron Ponchione that there had been a slowdown in the winterization program, because the HUD funds for rehabilitation were running out. However, a total of 225 homes had been winterized and/or rehabilitated so far. A Crisis Intervention program, which assisted certain people on a one-time basis with such essentials as fuel, had been cut back. He also reported that while

Bob Grove, FTVAD staff, Fairbanks, discusses the Rural Capital Improvements Program. Adele Chase, Anvik, listens.

he had been working with the winterization program, various experiments had been carried out with solar collectors and different types of insulation in the Fairbanks area.

c) INVENTORY AND CONDITION SURVEYS

Mr. Grove reported on the inventory and condition surveys which had been accomplished in the Iditarod REAA by FTVAD staff and local engineering and architectural firms for DOTPF last spring. The reports from those surveys were available in the FTVAD offices.

Ruth Burnett, Fairbanks; Ned Osborn, Los Angeles; Dave Miller, Takotna; and Dan Stephan, San Francisco, discuss Title IX investment strategy.

MEETING WITH NED OSBORN AND DAN STEPHAN OF ECONOMICS RESEARCH ASSOCIATES OF SAN FRANCISCO, BOROUGH MAYOR JOHN CARLSON, AND MEMBERS OF THE FAIRBANKS TASK FORCE ON ECONOMIC DEVELOPMENT FOR A BRIEFING ON THE TITLE IX INVESTMENT STRATEGY PROGRAM

At 11:02 a.m., a joint meeting of the Executive Committee, the Title IX Task Force, and representatives of Economics Research Associates was held.

Mayor Carlson, Chairman of the Title IX Task Force, introduced Mr. Ned Osborn and Mr. Dan Stephan, of Economics Research Associates, to those present.

Mr. Osborn commented that since he had been in Fairbanks he had been encouraged and impressed by the community's enthusiasm and cooperation and felt that this would help with the development of the strategy.

Mayor Carlson remarked that it was important to emphasize that the end result of the study was to be a viable and implementable plan, not another document to be shelved. Mr. Smetzer commented that the plan was to encourage private investment to stimulate the local economy.

Mr. Osborn noted that the first task the consultants hoped to accomplish would be to identify the economic base and determine how it could be expanded. The study would hopefully also point out the bottlenecks which impeded growth and development in the area. Mr. Solomon remarked that he had attempted to get this idea about the importance of the rural communities to Fairbanks' economic base into focus for some time without much success, but was encouraged to see that positive steps were being taken in that direction.

Mr. Smetzer pointed out that Mr. Osborn and Mr. Stephan had decided to spend some time in at least one of the rural villages outside Fairbanks in order to gain a better understanding of Fairbanks' economic relationship to the rural areas.

Mr. Dan Stephan mentioned the utilization of a leveraging financial package with the state to activate federal grants as a key element of the strategy. Ruth Burnett reported that she had recently attended meetings in Anchorage at which organizations similar to the Association had discussed the state's future. She suggested that the information which had been compiled following the meeting held ten years ago could be made available to the consultants for their use.

Mr. Dave Rasley of the Operating Engineers Local 302 discussed his union's hiring hall procedures in the Fairbanks area and how village residents were affected. It was suggested that the subject was one which should be discussed at the general board meeting to be held the next day if Mr. Rasley could attend.

ADJOURNMENT

There being no further business to be considered, the Executive Committee meeting adjourned at 11:39 a.m.

FRIDAY, DECEMBER 14, 1979

Chris Anderson, Fairbanks; Ray Kent, Fairbanks; and Mike Andon, Tanana, listen to board debate.

MINUTES

ANNUAL BOARD OF DIRECTORS MEETING
FAIRBANKS TOWN AND VILLAGE ASSOCIATION FOR DEVELOPMENT, INC.

December 14, 1979
Arctic Room, Polaris Building
Fairbanks, Alaska

The annual meeting of the Board of Directors of the Fairbanks Town and Village Association for Development, Inc. was called to order at 9:20 a.m., Friday, December 14, 1979, in the Arctic Room of the Polaris Building by President Chris Anderson.

PRESENT:

Fred Alexie
Chris Anderson
Mike Andon
Fred Baker
Eddie Bergman
Dave Brennen
John Carlson
Adele Chase
Larry Crouder
Richard Frank
Bill Green
Rudy Hamilton
Ray Kent
Harry Maillelle

Jerry Smetzer, Executive Director
Walter G. Gesin, Deputy Director, Management
Ron Ponchions, Winterization Program Director
Robert A. Grove, Program Director (FmHA & RCIP)
Barbara Sepelak, Administrative Supervisor
Bobbi Fyten, Program Assistant
Joel Lockman, Research Assistant

GUESTS:

Ron Punton, Fairbanks City Council
Ruth Burnett, Fairbanks City Council
Thomas A. Bazan, Real Estate Associates
Charlie Backus, Photographer
Don Nelson, KJNP
Darlene Pasley-Nebeker, Dept. of Labor, Fairbanks Job Service
Steve Porten
Mark Boyer, Office of Senator Mike Gravel
Candace Magnuson, Wordsmith Agency
Virgil Severns, Cooperative Extension Service
Ray Morgan, Cooperative Extension Service
Dave Rasley, Operating Engineers, Local 302
Paula Schiller, KUAC-FM
Senator Bettye Fahrenkamp, Alaska State Senate
Lottie Fleeks, Dept. of Labor, Fairbanks Job Service

CALL TO ORDER

INTRODUCTION OF NEW BOARD MEMBERS

It was noted that there was not a quorum of either the full Board of Directors nor the Executive Committee present at the time the meeting was called to order.

Mr. Smetzer briefly explained the layout of the "Budget Planning Document." He called attention to the "Status of Projects and Programs" document which was a summary of each of the tasks listed in the "Overall Economic Development Program for Fairbanks and the Interior of Alaska through 1981" (OEDP). An estimate of costs to carry out those tasks had been developed, and a chronology as well as a current project status report as of December 1979, was given.

REVIEW OF PROJECT AND PROGRAM STATUS

Mellie Terwilliger, Tok; Bill Green, Fairbanks; and Larry Croudot, Fairbanks, listen to a report of project status.

1. ECONOMIC DEVELOPMENT

Mr. Smetzer explained Major Program Category #1, Economic Development, Goal A, Task #1, Economic Diversification Strategy. He stated that the Title IX Strategy Program was one means of accomplishing the Board's desire to develop

greater public awareness of the economic development needs in the area. A $75,000 Title IX Strategy Development grant from EDA as well as $25,000 matching funds from the Fairbanks North Star Borough had been appropriated and after a rigorous selection process by the Fairbanks based Task Force on Economic Development, the consulting firm of Economics Research Associates of Los Angeles had been chosen, Mr. Smetzer explained.

Referring to Task #2, Small Industries Development concerning cottage industries, he reported that the Association was proposing to work jointly with the Adult Learning Programs of Alaska, Inc. to develop a five year program of assistance to resident-owned small businesses. Mayor Wood announced that he would be attending a White House Conference on small businesses in January and welcomed any comments, suggestions on assistance to identify the primary problems associated with small industry development.

Concerning Goal B, Task #4, Fairbanks Downtown Revitalization, Mr. Smetzer noted that while several rural communities had expressed an interest to develop a tourism trade, there were many villages which did not desire involvement in that industry. However, regarding Tanana Mission Restoration, included in Task #4, Mr. Smetzer also noted that the City of Tanana was interested in restoring its old mission church and FTVAD staff was assisting.

Goal C, Task #5, New Loan Funds, Mr. Smetzer remarked that the Association had been talking with various state and federal lending assistance agencies in the hope of getting a public lending authority into the area to make loans for private business ventures.

Referring to Goal D, Task #6, Decentralization, the recommendation for federal decentralization, Mr. Smetzer explained that Title V Commissions were used as a federal device for linking states into a common planning apparatus in a region. The legislation for a single state Title V Commission for Alaska was currently being considered in Congress. He spoke briefly on local decentralization and efforts to work with Tanana Chiefs Conference in sub-regional and comprehensive planning in the villages. TCC was currently in the process of decentralizing its offices and operations, he added.

A brief discussion ensued concerning unorganized boroughs and legislative attempts to develop a statute which would organize the unorganized boroughs.

In response to Mr. Smetzer's statement regarding a proposed recommendation to the State of Alaska by the Board of Directors concerning decentralization of state government, Mr. Ray Kent suggested tabling action until a quorum was present.

2. TRANSPORT DEVELOPMENT

Mr. Smetzer called the board's attention to Major Program Category #2, Transport Development, Task #1, Fairbanks Airport Development. The major program of this category was development of Fairbanks International Airport, he stated and added that the representatives of Economics Research Associates had had discussions with various airport personnel and air carriers on that subject. Other matters related to airport development were the hydrant fueling system, which had recently received a favorable report from the revenue bonding authority as a feasible facility and would soon be ready to go to market; the air cargo facility; a port authority and a Foreign Trade Zone.

In response to a request from Mr. Williams, Mr. Smetzer explained the Foreign Trade Zone (FTZ) concept as a means of assembling foreign components into domestic products - thus reducing customs duties on finished products. He added that Economics Research Associates had experience in the area of FTZ's

and had worked with the City of San Jose to set one up. They would be considering all points of the issue quite closely as part of the Fairbanks Investment Strategy. Mr. Smetzer stated that he did not foresee spending much time on the FTZ until the consultants had looked into it, and had explored the competitive advantages and disadvantages of a Fairbanks or Anchorage zone.

Referring to Task #2, Rural Airport Development, and improvements for six rural airports, Mr. Smetzer stated that the Department of Transportation and Public Facilities (DOTPF) was currently working on those projects.

Task #3, Local Service Roads, Mr. Smetzer reported, concerned Local Service Roads and Trails projects in Anvik, Grayling and Holy Cross, but until the issue involving gravel was resolved work could not be completed on those projects. A court determination made in December, 1978 stated that regional corporations owned the gravel and therefore it could not be used as local match by the community. Mr. Spud Williams suggested that the Association's efforts could be aimed at changing DOTPF's concept of the local match and maintained that since the Department did not expect free gravel in the Fairbanks area projects, it was not equitable to expect it from the rural communities. Mr. Mike Andon suggested that the Association consider the possibility of changing the state's policy on the purchase of gravel. Mr. Smetzer advised that the matter be brought up for consideration when a quorum of the Board of Directors was present.

3. COMMUNITY FACILITIES DEVELOPMENT

Major Program Category #3, Community Facilities Development, Mr. Smetzer explained, encompassed an effort to overcome some of the facility problems in the rural communities, and emphasized construction activities in those communities. Two active projects were facilities in the City of McGrath and the City of Fort Yukon. He related that Bob Grove had been hired with a grant from FmHA to work with 14 rural communities which had requested assistance with their facilities by developing a method to fit them into the communities' goals and objectives and helping to work with the various state and federal sources of capital project financing.

Mr. Grove explained that the legislature had appropriated $250,000 and FmHA had granted a $35,000 guaranteed industrial loan for the City of Fort Yukon's common-use maintenance facility to house a fire department and the maintenance equipment for the roads and airport. It was also expected that EDA may appropriate additional funding for the building if a clear stimulus to the local economy could be shown.

In McGrath, he stated, the residents were attempting to rennovate an already existing structure to permit housing of the health center as well as space for maintenance equipment.

Referring to other villages, Mr. Grove explained that his efforts were directed mainly at coordinating some of the programs that were already in progress and also working closely with the TCC survey. He noted that in many cases government agencies had constructed facilities without any consideration being given to the desires of the village residents.

Mr. Eddie Bergman stated that the community of Allakaket was in need of a new office building and in March had submitted an application to the Association for assistance in getting the facility to which Mr. Grove responded that he was in the process of organizing his office since taking over his present position and would make every effort to follow through on any unfinished projects. Mr. Smetzer, referring to Task #4, Rural Capital Improvements, in the cate-

gory, related that 14 rural communities had adopted formal resolutions requesting the Association's assistance with capital improvement projects and that the office had just recently received a request from the City of Delta Junction to be added to that list.

Mayor Wood commented that a frequent problem with construction of facilities in the small rural communities was assuring a feasible way for them to be maintained after they were built, to which Mr. Dave Brennen stated that this should also be a matter of consideration by the state in dealings with its rural facilities.

Mayor Wood went on to comment that the matter could perhaps qualify as a legitimate use of the state's permanent fund to be included in a broad category for fuel, energy, health, safety, etc., so that whatever facility was constructed or installed in a rural community, the operational costs would be partially offset from income derived from the fund.

Mayor John A. Carlson, Fairbanks North Star Borough, shares an observation with Mayor William R. Wood, City of Fairbanks, during board discussion.

2. TRANSPORT DEVELOPMENT

Reverting to Major Program Category #2, Transport Development, Mr. Smetzer commented briefly on various transportation problems in the bush areas. He related that he and Mr. Anderson had attended a White House sponsored conference on that subject in Anchorage recently. Basically, over the past few

months, there had been a 50-60% increase in the cost of passenger and freight transportation to and from the rural areas. In that regard, there had been discussions in the planning session the day before that the Association's efforts be concentrated heavily on restoring the barging system on the Yukon and on any other matters which might help alleviate some of the transportation related problems.

Mr. Fred Alexie noted that it cost $17.50 per 5-gallon can of gasoline to transport it into Kaltag.

Mr. Smetzer suggested that the Board of Directors consider adopting a resolution encouraging improvements in the transportation category.

4. ENERGY CONSERVATION AND HOUSING REHABILITATION

Referring to Major Program Category #4, Energy Conservation and Housing Rehabilitation, Mr. Smetzer reported that within this category the Association had been pursuing a program for about 1½ years under the guidance of Ron Ponchione to install insulation, storm windows and doors, etc., for people who came within the guidelines, generally low income people or senior citizens. To date, work had been done on 225 houses in the Fairbanks North Star Borough.

The Association was presently investigating opportunities in energy conservation projects and had considered the testing of prototypes, including the utilization of MUS waste heat, Mr. Smetzer stated. Mayor Wood remarked that the use of waste heat had many ramifications for a diversity of projects, one of them being increasing the area's self-sufficiency in production of food. Mr. Smetzer commented that the Association would not be directly involved with the prototype projects, but would like to initiate the machinery to get them started and financed.

5. PETROLEUM RESOURCE POLICY

Regarding Major Program Category #5, Petroleum Resource Policy, Goal B, Task #4, Gas Conditioning Plant, Mr. Smetzer remarked that Mayor Carlson had sent a letter concerning the three major areas involving location of the gas conditioning plant that needed investigation. The funds for the studies would be allocated by the state, but should be under local control, he stated. Mr. Smetzer stated that he expected to continue working closely with Mayor Carlson and the Borough to raise the estimated half million necessary to conduct the basic feasibility studies.

Concerning Goal A, Task #1, Oil and Gas Management, Mr. Smetzer briefly commented on location of all public and private offices with northern oil and gas development, management and research responsibilities in Fairbanks. Of the three parties concerned with the gas pipeline - state, federal and private - the federal office had not yet determined where to locate within the state, but it was hoped that when a final decision was made that office would locate in Fairbanks as well. Regarding the Beaufort Sea lease sale, Mr. Smetzer remarked that due to local efforts, including those of the Association, the sale had been held in Fairbanks, as would, hopefully, the next Beaufort sale scheduled for February, 1983.

It was suggested by Mayor Wood that if the Fairbanks area wished to have this type of business activity in the future it might behoove the residents to have a welcoming committee and demonstrate some enthusiasm. Mr. Smetzer pointed out that efforts were made to work with the state and federal sale managers, but they made it clear they didn't need any help from Fairbanks.

Mr. Smetzer commented briefly on SB 1880, the Inland Energy Impact Assistance Bill, and the advantages it would provide to areas such as the Interior if it was approved by Congress. The Bill would allow access to public works grants, business and development loans, as well as other federal programs to assist the community in avoiding problems and taking advantage of projects such as the gas pipeline.

Goal A, Task #3, Alaska Regional Center, U.S.G.S., Mr. Smetzer stated, concerned the location of the proposed U.S.G.S. Alaska Regional Center in Fairbanks. Last August, he reported, an announcement had been made stating that the center would be located in Anchorage. But he had been assured by Dr. Menard in a letter that this involved only a few employees and that he would fully consult with all communities interested prior to making a final decision on the matter.

Concerning Goal B, Task #5, Mineral Industry Development, Mr. Smetzer reported that the Association would start working on that project next year. Mr. Brennen remarked that at its meeting the previous evening, the Fairbanks North Star Borough Assembly had adopted an ordinance creating a mineralized mining zone to help prevent future conflicts between surface rights land use and sub-surface rights mineral use. Mr. Williams maintained that this concept could also be applied to future resource and residential use of land in the rural areas. Mr. Brennen assured Mr. Williams that he would shortly receive a copy of the ordinance.

6. WORKFORCE DEVELOPMENT

Mr. Smetzer briefly reviewed Major Program Category #6, Workforce Development, and added he hoped that Mr. Dave Rasley, Business Agent for Operating Engineers Local 302, would be able to attend the meeting later that day to comment on his union's hiring practices.

Mr. Smetzer also stated that considerable effort was going into the coordination of local school district and Tanana Valley Community College programs at the Hutchison Career Development Center. Mr. Smetzer stated that he is involved in those efforts and will continue to press for more regional adult programs at Hutchison.

7. RENEWABLE RESOURCE DEVELOPMENT

Referring to major Program Category #7, Renewable Resource Development, Mr. Smetzer explained that the organization was not directly involved with many programs in this area, but hoped to get into some by July, 1980. Mr. Brennen commented that the Borough Assembly had recently adopted a resolution requesting the State of Alaska to establish a state forest in all the feasible areas of the borough to, hopefully, provide the land management mechanism to sustain full commercial utilization. Mr. Williams related that Tanana Chiefs Conference was doing comprehensive forest inventories in its own region for marketing purposes, basically on requests concerning funding availability, for such communities as Tetlin, Dot Lake, Nenana and Venetie.

A short discussion ensued on establishing a quorum for the meeting. Mr. Anderson noted that in the event that a quorum of the full Board of Directors was not present, a quorum of the Executive Committee could be established and those members could act in behalf of the full board.

EXECUTIVE COMMITTEE RECOMMENDATION

At 11:15 a.m., a meeting of the Executive Committee of the Fairbanks Town and Village Association for Development, Inc. was called to order by President Chris Anderson.

EXECUTIVE COMMITTEE MEMBERS PRESENT:

Chris Anderson, President
Spud Williams, Vice-President
Mellie Terwilliger, Secretary
Jonathan Solomon, Member

A roll call of the Board of Directors of the Fairbanks Town and Village Association for Development, Inc. was then taken. Only 18 members were present. Nineteen members were required to establish a quorum.

MELLIE TERWILLIGER moved to accept Eddie Bergman of Allakaket as a member of the Board of Directors of the Fairbanks Town and Village Association for Development, Inc.
seconded by JONATHAN SOLOMON

MOTION CARRIED UNANIMOUSLY

ACCEPTANCE OF AUDIT REPORT

Mr. Anderson stated that at its meeting the day before, the Executive Committee had accepted the audit report for FY '79, adding that the management letter included in the report had commended the Association's staff for its endeavors to follow the recommendations suggested after last year's audit. Mr. Solomon commented that it was not very often that an auditing management letter was written without any suggested recommendations and stated he also felt that the Association should be lauded for its efforts. Mr. Brennen commented that as Chairman of the Borough Assembly's Audit Committee, the organization's audit report was the most unqualified financial statement he had seen.

Mr. Anderson then noted that a quorum of the full Board of Directors was present with the recent arrival of additional Directors.

JONATHAN SOLOMON moved to adjourn the Executive Committee meeting.
seconded by SPUD WILLIAMS

MOTION CARRIED UNANIMOUSLY

At 11:21 a.m., the meeting of the Executive Committee was adjourned and a meeting of the Board of Directors was called to order.

MAYOR WOOD moved to accept the FY '79 audit report.
seconded by DAVE BRENNEN

Mayor Wood requested that the FTVAD staff be given a good commendation for their year-long effort to maintain the Association's budget so meticulously.

MOTION CARRIED UNANIMOUSLY

JONATHAN SOLOMON moved to accept Eddie Bergman of Allakaket as a member of the Board of Directors of the Fairbanks Town and Village Association for Development, Inc.
seconded by MAYOR CARLSON

MOTION CARRIED UNANIMOUSLY

Mr. Anderson announced that Rev. Don Nelson of KJNP radio station had attended the board meeting. Mrs. Terwilliger explained that the Tok Chamber of Commerce had asked her to request the Association's assistance in obtaining a KJNP translator station for that area.

MELLIE TERWILLIGER moved that FTVAD assist the Tok Chamber of Commerce in helping to get translators into Dot Lake to serve the Upper Tanana Region.
seconded by BILL GREEN

At Mr. Anderson's request, Reverend Nelson explained the procedures involved in installing a translator station. He remarked that although the operational cost of the station was minimal, the cost of installation was high and it would require the assistance and financial support of various organizations to help with those costs. He related that Alascom had waived one of its fees and that

the FCC had approved the Dot Lake location, and that both actions were positive steps. Mr. Andon questioned the possibility of getting the translators into other areas as well, to which Reverend Nelson replied that it would depend on financing and also whether or not there was already a facility in those areas.

MOTION CARRIED UNANIMOUSLY

Mr. Smetzer recalled that during discussions earlier that morning there had been five suggested resolutions. The first dealt with the Association's recommendations to the State of Alaska on decentralization of its administration and management of state agencies; the second had to do with the organization's recommendation to DOTPF to allow purchase of gravel under the Local Service Roads and Trails program in the villages; the third, dealing with the KJNP translator station in Dot Lake, had been adopted by the Board of Directors; the fourth suggested adding the City of Delta Junction to the list of communities desiring capital improvements assistance; and fifth was a non-specific resolution to reaffirm the Association's efforts in the area of rural transportation systems.

DAVE BRENNEN moved to adopt the staff's recommendation on state decentralization.
seconded by JONATHAN SOLOMON

Mr. Solomon commented that the recommendation of the staff included a statement concerning a six region concept; however, there were 12 native corporations in existence and he felt that those should be used.

JONATHAN SOLOMON moved to amend the first paragraph to read: "... within the legal boundaries formed by the twelve native regional corporations created under the authority of the Alaska Native Claims Settlement Act of 1971."
seconded by MELLIE TERWILLIGER

In response to a question from Mr. Williams, Mr. Smetzer explained that the six regions were the physiographic regions of the state - southeast, southcentral, southwest, northwest, north and interior. It was set up that way because it was generally in conformance with the six native corporation boundaries except in some cases where regional corporations were combined in a single region. Mr. Kent commented that the legislature and the state's Department of Community and Regional Affairs were currently involved in a study on the subject, but felt that the organization should support the regional corporation boundaries. Mr. Stokes felt that the McGrath sub-region was better served by the southcentral region and favored following the REAA boundaries. Mr. Williams stated that while he was sympathetic to Mr. Stokes' concerns, he felt that the area of policy and planning and the area of service delivery could be most compatible with use of the native corporation regions.

MOTION TO AMEND THE RECOMMENDATION CARRIED

The staff recommendation to be considered by the Board of Directors would read as follows:

> "1. The Governor should by Administrative Order immediately institute a common system of regional planning, development, and government administration boundaries within the legal boundaries formed by the twelve native regional corporations created under the authority of the Alaska Native Claims Settlement Act of 1971.

2. The Governor should by Executive Order begin immediately the decentralization of administrative decision making into these regions by divesting agencies of the state of their accumulations of centralized authority which were not explicitly granted by the constitution.

3. The Governor should by Executive Order begin immediately the democratization of the state's administration of planning, development, project recommendation and priority setting activities, and the delivery of needed government services within these regions by financing and contracting their provision through fiscally sound, locally controlled non-profit, quasi-governmental corporations conducting related activities."

MOTION CARRIED UNANIMOUSLY

DAVID MILLER
seconded by DAVE BRENNEN

moved to add the City of Delta Junction to the list of communities named under Task #4, Community Facilities Development category who have officially requested FTVAD staff assistance in developing local capital improvement projects.

MOTION CARRIED UNANIMOUSLY

Jeff Stokes, Nikolai, confers with Mollie Terwilliger, Tok, during lunch.

Mr. Anderson called the board's attention to the issue of the state's gravel purchase policy. Mr. Smetzer suggested that the Board of Directors consider a

resolution to strongly recommend to the State of Alaska Department of Transportation and Public Facilities that their procedures be changed to allow the purchase of gravel in rural communities for local service roads. Mr. Williams suggested adding purchase of rights-of-way as well. Mayor Carlson remarked that under the current state statutes, Local Service Roads and Trails funds could not be utilized to purchase rights-of-way and to effect such a policy would take a change in legislation and not procedure.

MIKE ANDON
seconded by SPUD WILLIAMS

moved that FTVAD strongly recommend that DOTPF change in procedures under its Local Service Roads and Trails program to allow the purchase of gravel for local service roads and further recommend that that statute be changed to allow purchase of rights-of-way for local service roads.

MOTION CARRIED UNANIMOUSLY

SPUD WILLIAMS
seconded by DAVID MILLER

moved to recess for lunch and reconvene at 1:30 p.m.

MOTION CARRIED UNANIMOUSLY

At 12:12 p.m., the Board of Directors recessed for lunch.

Victor Nicholas, Nulato, discusses the need for runway lighting in his community. Fred Baker, Fairbanks, listens.

At 1:01 p.m., the Board of Directors reconvened for a "Round Table" discussion.

Fred Baker stated that he had no comments to make.

Mayor Carlson commented that the board meeting gave several groups of people an opportunity to get together to discuss problems and possible solutions.

Adele Chase declined to comment.

Victor Nicholas expressed his concern with transportation problems associated with travel to the rural areas. There were some major concerns in this regard, including the fact that air transportation was essential during emergencies. He also commented on the need for runway lighting in Nulato. Mr. Smetzer advised that he thought funds for lighting several rural runways including Nulato had been included in an appropriation bill last year. He asked Bob Grove to check on it, and write a letter to Mr. Nicholas.

Steve Squires commented on various concerns, stressing the utilization of idle state funds for agricultural development.

Jeff Stokes had no comments.

Mellie Terwilliger remarked that the only outside source of income in many areas was from fire fighting. She expressed her hope that the Small Industries Development Program would improve this situation.

Dave Brennen stated that he was impressed with the Association's work program and accomplishments. He stressed the importance of keeping abreast of the efforts of other agencies and organizations.

Jonathan Solomon declined to comment.

Mr. Smetzer invited the guests present to speak.

Ray Morgan, of the Cooperative Extension Service, maintained that in the future there was the possibility of conflicts developing among the users of timber, but felt that FTVAD could assist in establishing a policy. He could also foresee an increase in commercial fisheries.

Ruth Burnett, member of the Fairbanks City Council, stated she was encouraged by the community interest shown at the meeting.

Jonathan Solomon briefly commented on commercial fisheries and fishing licenses.

Ron Punton, member of the Fairbanks City Council, expressed his hopes that the Title IX strategy development project would lead toward a more organized development of the Fairbanks area. It was essential that groups such as FTVAD, the Chamber of Commerce and the Downtown Association work together for the betterment of the community, he stated.

Dave Rasley, Business Agent for the Operating Engineers Local 302, spoke at length on the hiring practices and procedures for his particular union. He noted that in order for a person to maintain his position on the list, it would be necessary for him to re-register every 90 days following his initial registration date. He added that it was possible to register either by mail or in person. Mr. Rasley noted that a $10.00 per month fee was charged non-members due to the fact that it was mandatory for the Operating Engineers to maintain records of those individuals for a period of 10 years. In response to a question from Mr. Miller, Mr. Rasley stated that at the present time there would be

a long wait for a person who recently registered to get to the top of the work list, but he encouraged those who desired work through the union to sign up as soon as possible. He commented briefly on the need for native corporations and other interested organizations to supply input to the various companies concerning Alaskan hire. In answer to Mr. Grove's query, Mr. Rasley stated that when a call for workers was received, the union had 48 hours to fill the position, but he noted that in some instances it was necessary to repond to the call immediately ... otherwise expensive equipment had to sit idle.

Mr. Bergman related an experience which had occured in Allakaket in that a contractor was doing work in the area, but when the work slowed down the local people were layed off first. Mr. Rasley explained that in such a case it was probably a matter of economics; however, he suggested that if this happened in the future that the affected people consult with the contractor and attempt to work out a more equitable solution. His union would cooperate wherever possible.

Dave Rasley, Fairbanks, confers with Fred Alexie, Kaltag, on union procedures.

A discussion ensued concerning an Alaskan local hire law and the question of whether or not it was a negotiable item in projects such as the gas pipeline.

Fred Alexie stated he did not wish to comment.

Chris Anderson had no comments.

Mike Andon declined to comment.

Larry Crouder questioned the motion passed by the Board of Directors concerning the Association's support of the KJNP translator station. Mr. Smelzer explained that the action was merely a statement of support by the Board of

Directors and that there were no funds involved as far as the Association was concerned.

Ray Kent had no comments.

Referring to statements made by Mr. Nicholas, Mr. Grove remarked that state funds had been appropriated for various projects, and that some of them had not been carried out, but that he was currently trying to find a recent report by the Legislature on the status of capital appropriations to determine where the problems were, so that FTVAD could untangle the red tape and make sure the projects get underway this summer.

Harry Maillelle did not wish to comment.

David Miller declined to comment.

Jonathan Solomon commented briefly.

Spud Williams stated it was his feeling that the concept of the Association had come a long way since its inception and lauded Mr. Smetzer and his staff for their efforts in making the organization a viable one, and, particularly for bringing together so many key people from Fairbanks and the rural areas around it to discuss common problems and try and resolve them.

Mr. Smetzer thanked Mr. Williams and the board for their support over the years and pointed out that little could have been achieved without the dedication and hard work of his staff.

STAFF BUDGET RECOMMENDATIONS

Mr. Smetzer briefly reviewed the budget document, noting that in the current FY '80 budget there was a shortage of funds, due in part to the fact that the Association had been unsuccessful, despite over two years of intensive efforts, in developing annually renewable state financial support for any kind of interior economic development program. However, efforts were being made to come up with those funds. He also noted that the proposed overall budget increase to nearly $1,000,000 in FY '81 was not a permanent one, but was planned to take the organization through intensive project development activity for next year. Depending on timing and financing these programs would resume their FY '80 level the following year. The assumption is that the overall budget will fall back to current levels in FY '82.

JONATHAN SOLOMON moved to accept FTVAD staff budget recommendation for the FY '80, FY '81, and FY '82 fiscal years as presented in the Budget Planning Document for the currently budget cycle.
seconded by MELLIE TERWILLIGER

In response to questions from Mr. Williams, Mr. Gesin explained that the amount allocated for "Leave" was budgeted in the event that an employee with accrued leave desired to take it out in cash rather than take the leave. The amount for "Equipment Purchase" was for payments on equipment the Association currently had in its possession, and not for new equipment.

Mr. Smetzer explained that the current fiscal year's projected shortfall was a management problem at this point, but if any changes in staff or other important decisions were to be made, the Executive Committee would be consulted first. In response to a question from Mike Andon, he stated that the Title IX

program was a one year intensive program and would terminate at the end of the current fiscal year.

MOTION CARRIED UNANIMOUSLY

Spud Williams, Fairbanks, listens to board debate.

ELECTION OF OFFICERS

SPUD WILLIAMS
seconded by MIKE ANDON

moved to nominate the current members of the Board's Executive Committee with the exception that Dave Brennen be nominated in place of Ernie Holmberg.

MOTION CARRIED UNANIMOUSLY

SPUD WILLIAMS moved that nominations close.
seconded by JONATHAN SOLOMON

MOTION CARRIED UNANIMOUSLY

The Executive Committee members are as follows:

Chris Anderson, President	Jack Coghill, Member
Spud Williams, Vice-President	Dave Brennen, Member
Wally Burnett, Treasurer	Jonathan Solomon, Membe
Mellie Terwilliger, Secretary	

In response to various comments, Mr. Solomon maintained that it was difficult to negotiate on local minority hire, especially that related to the pipeline, when there was no state financial participation for that project.

SPUD WILLIAMS moved that FTVAD support the state's
seconded by JONATHAN SOLOMON efforts in tying one of the stipulations of state participation in financing the Alcan Gas Line to local hire provisions in the pipeline labor agreement.

MOTION CARRIED UNANIMOUSLY

There being no further business to come before the board, the meeting was adjourned at 2:17 p.m.

Dave Brennen, Fairbanks; Johathan Solomon, Fort Yukon; and Jerry Smetzer, FTVAD staff, Fairbanks, discuss boroughs after the board meeting.

Metcalfe - Suggests amending HB625, HB626 Section 3 with the requirement that additional funding would be contingent on how efforts of the Dept. of C&RA and TVA could be better coordinated. (Metcalfe then withdraws motion when Smelzier points out that there is no substantial conflicts between the activities of the Dept.of C&RA and TVA)

Palmer McCarter, Dept. of C&RA

No position on the bill. 56 capital improvements have been appropriated by the legislature. There are competing organizations which have represented themselves as being representative of the community. As there are several other agencies in the state, non-profit, not-state funded organizations which might also expect state suppot. The question is whether the state should be assisting these organizations. The Dept. of C&RA operates the capital improvement projects and rural development assistance programs and do coordinate with Fbks. TVA. As such, are not in competition. Commerce and Economic Development Dept. would probably be in a more competitive role.

COMMITTEE ACTION: Bill passed out of committee.

DIVERS FLAG LEGISLATION

Briefing paper for an act:

"An Act requiring flags for divers"

By Parker and Martin

Eleventh Legislature - Second Session

Every month, diver training programs in Anchorage, Fairbanks, Juneau, Sitka, Ketchikan and elsewhere are certifying an average of 50 new divers. Given the seasonal variation in interest, it's safe to say 500 or more divers are certified every year around the state.

And why not? With more miles of coastline than the other states combined, Alaska offers the underwater explorer a richness and variety of marine life found nowhere else in the U.S. The tropics are the deserts of the sea. The real riches -- as in commercial fishing -- are to be found in the high latitudes, north and south.

While there are no statistical data to confirm or refute what follows, the consensus among diving instructors puts the total number of certified divers living in Alaska in the five figure bracket. Although the guesses vary, the number of qualified -- not necessarily active -- divers in the state could easily be 20,000 or more; 10,000, certainly, is a credible number. And, it's a number that equals or exceeds the number of boats berthed in coastal harbors around the state.

DIVERS FLAG LEGISLATION
Briefing paper/2

So far, there have not been any diver-boat accidents. But, the growing numbers of divers and the growth of the recreational fleet state-wide raise the likelihood of such an occurrance from a possibility to a probability. At present, very few divers use the divers flag, saying either that the boaters do not know what it means, or that there are so few boats that the risks are minimal. Boaters, likewise, are generally unfamiliar with the ensign although its meaning is covered in Coast Guard boater safety courses.

In other states, the campaign for the adoption and recognition of the divers flag has used photographs showing the hideous pattern of propeller slashes across the back or side of an accident victim. Unless this legislation is adopted and a vigorous information campaign is launched, such photographs could appear in the Alaskan press. Simply put, the growing numbers of divers and boaters using the same waters makes it mandatory that the divers flag be adopted and recognized as a warning that people are submerged and that boaters should steer clear of the area.

The onus is not on the divers or the boaters; the responsibility is mutual. Divers must display the flag if they want boaters to avoid the area in which they are diving. And boaters, no less than motor vehicle operators seeing a stop sign, must come to recognize the divers flag as an accepted warning symbol, as appropriate in Alaska's oceanic and lake environments as the stop sign is in every community.

Alaska is one of 13 states which as yet have not formally adopted or recognized the divers flag. All of the others have adopted or formulated some regulations defining conditions for its display and response by boaters. While specifics vary from state to state, most

Therefore, the recommended draft legislation covering the use and display of the divers flag in Alaska calls for 150 feet of boater clearance and no-wake speeds. Hopefully, its enactment will prevent needless tragedy in Alaska waters.

Committee discusses pchange suggested by the Alaska Power Authority to make the study broader than just a study of hydro and have it include all power possibilities.

Committee agrees with suggestions and approves a CS containing such changes.

COMMITTEE ACTION: CS to be drafted with suggested amendment.

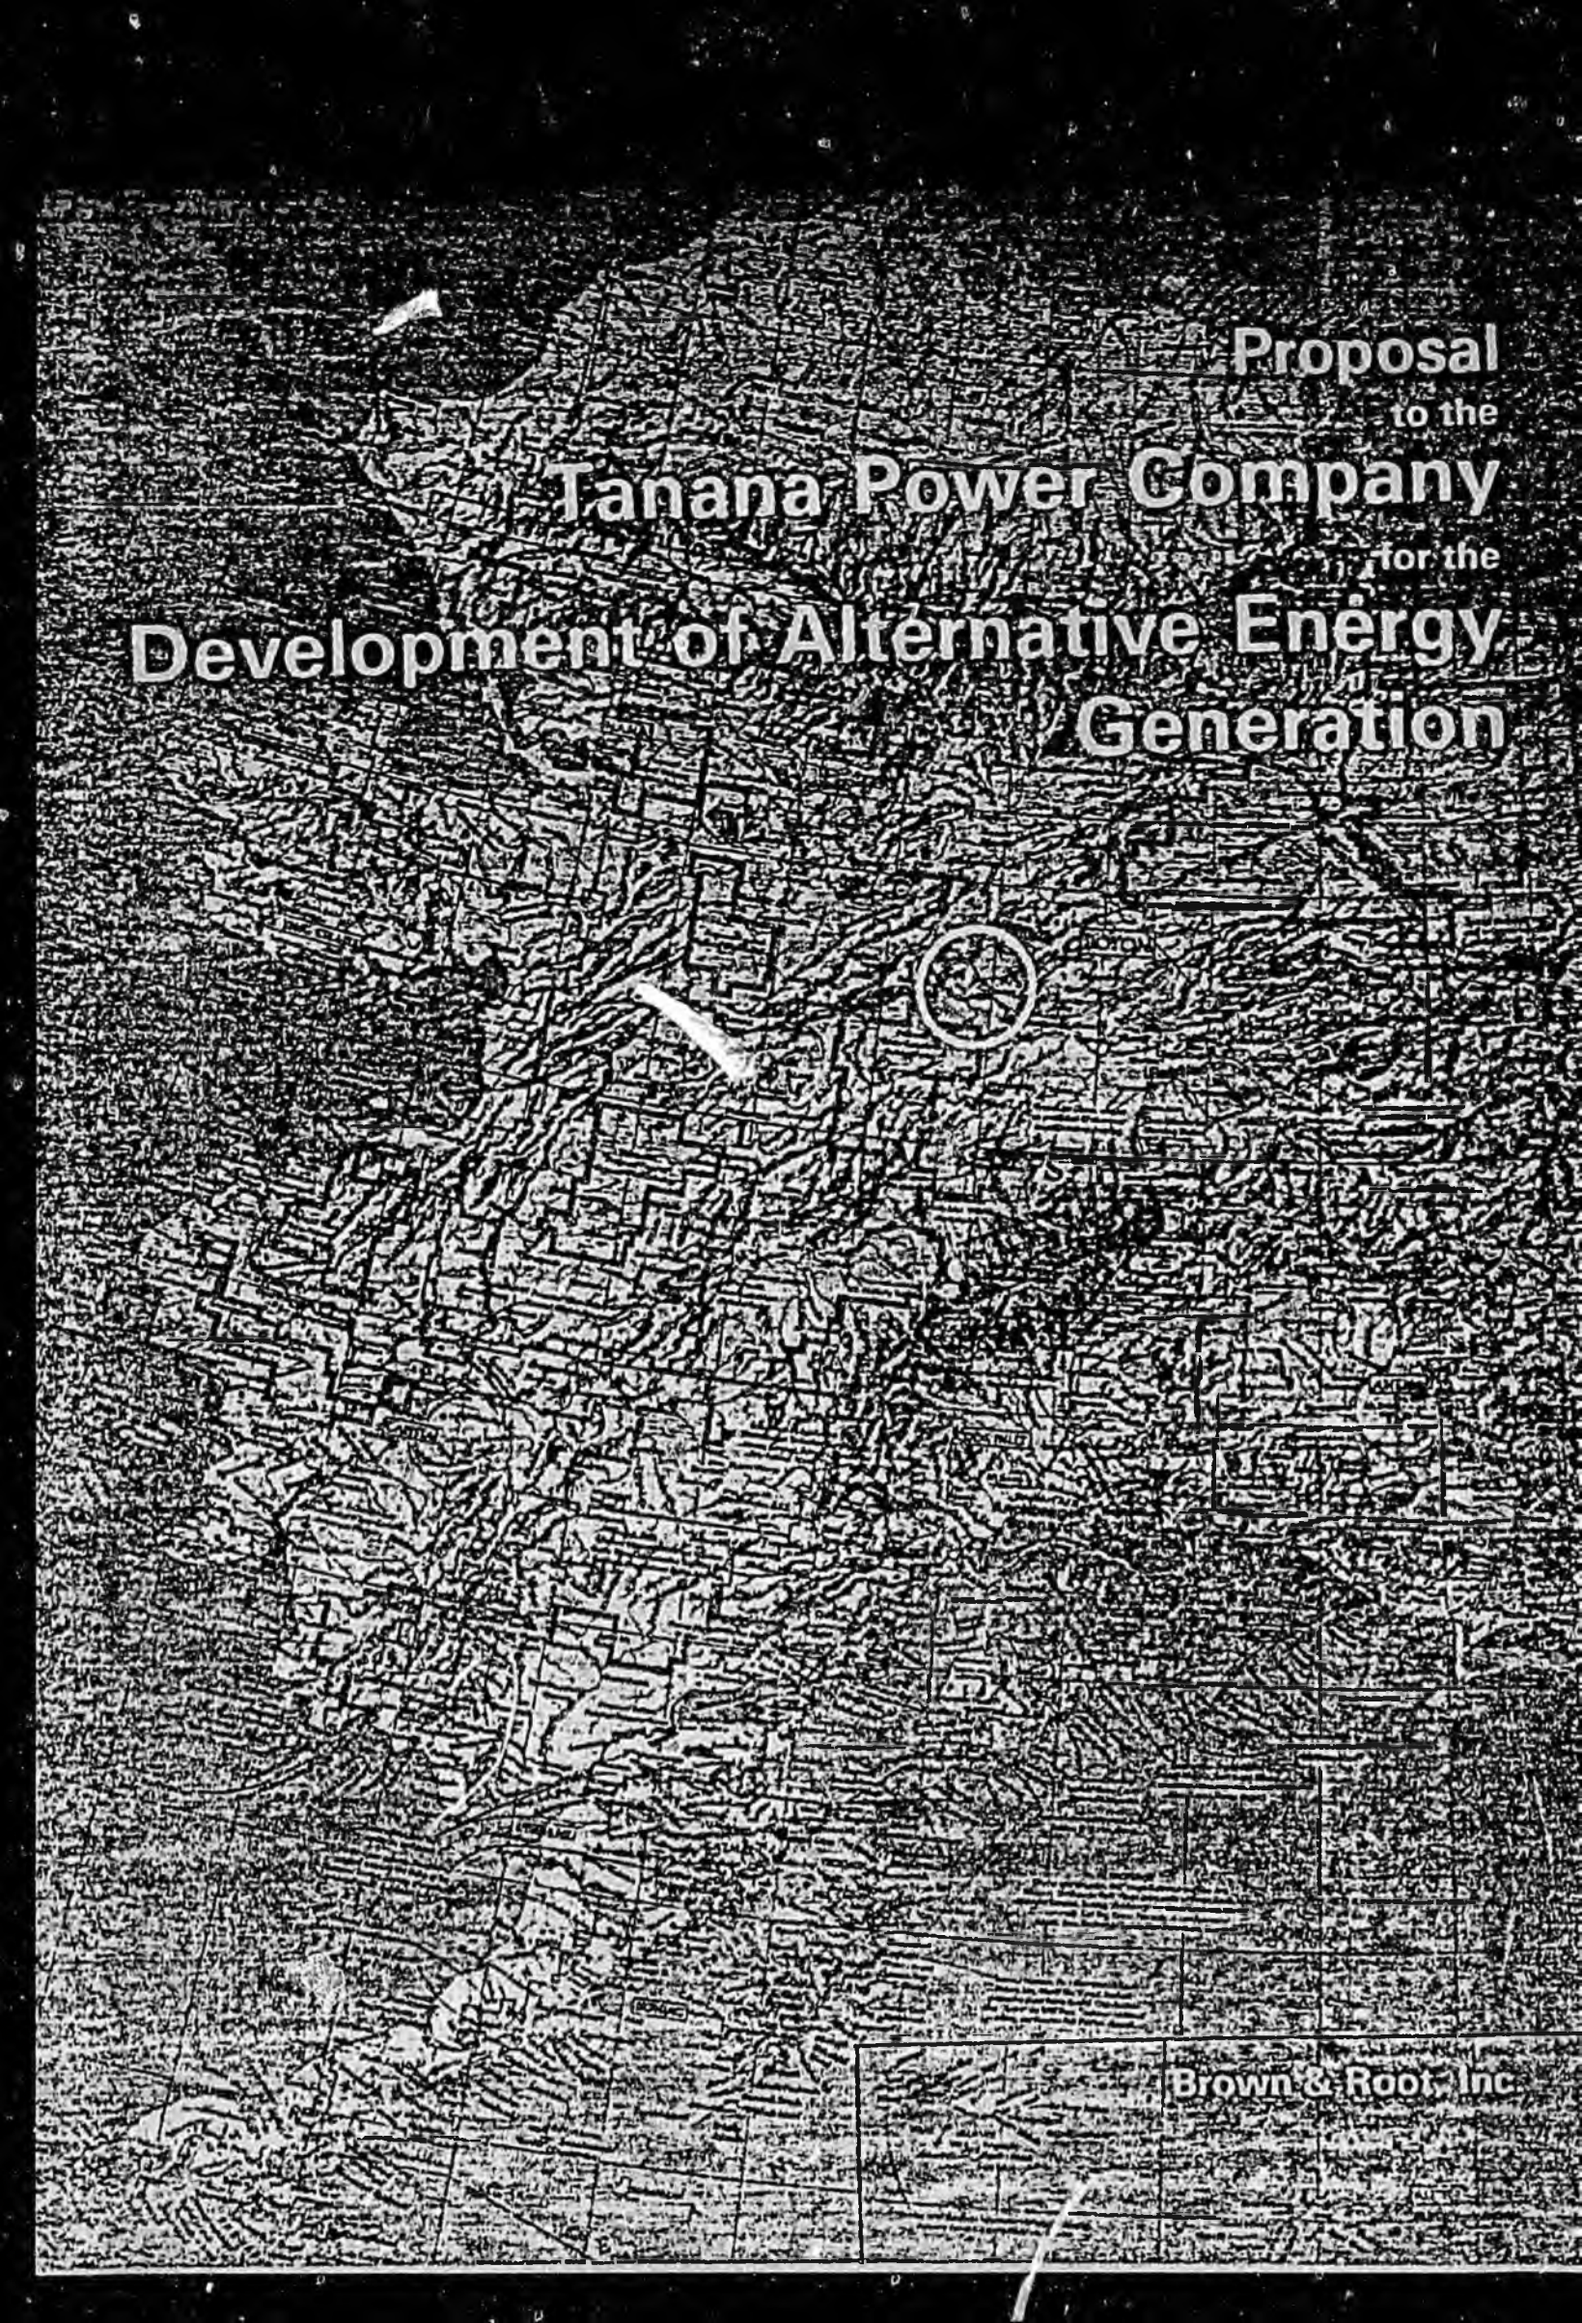
Have any studies been done in the area?
Power Authority would do if they had funds.
Not convinced

Corp. of Engineers due to make recommendations of this study Sept year.

Supplemental hydro bill being developed in Fairbanks.

Not high in priority — return might not be too great. Faith with you go, less chance of funding. Streams < hydro potential.

Should look not only at hydro but that all alternatives be considered.



Proposal to the Tanana Power Company for the Development of Alternative Energy Generation

Brown & Root, Inc.

Brown & Root, Inc. Post Office Box Three, Houston, Texas 77001

C. W. Weber
Vice President

(713) 678-9009

November 2, 1979

Tanana Power Company
P. O. Box 74
Tanana, Alaska

Gentlemen:

Brown & Root, Inc. and its joint venture partner, Marks Engineering, are pleased to submit their proposal stating their qualifications and the justification for their selection as Consultant to prepare a Reconnaissance Study for Development of Alternative Energy Generation for the Tanana Area. Brown & Root, Inc. is the sponsor of the joint venture, and the work will be carried out and performed on behalf of the joint venture under the direction of Brown & Root. Brown & Root, its Alaskan subsidiaries, and Marks Engineering of Anchorage, all have considerable experience working on major projects in Alaska. The joint venture has extensive manpower resources of more than 65,000 personnel, as well as considerable financial resources.

We have made an in-house evaluation of existing topographic and hydrological information of the area in close proximity to Tanana and believe that the potential for a small hydroelectric development is a promising viable alternative for Tanana's power needs.

The content of the proposal presents the technical discussion covering the objectives, background and work plan for preparing the study.

In particular, we would point out that:

1) All members of our team have experience in their relevant fields of interest.

2) We have performed work of a similar nature on other projects.

3) We will assign senior specialized personnel to carry out the effort.

We feel our combination of expertise, resources, and local presence in Alaska represent a unique team. We appreciate the opportunity

SECTION IV

of being considered for this important assignment and assure you of the commitment we feel for the attainment of project goals and objectives.

We propose to perform the work outlined herein for a lump sum amount of $35,000 under the conditions set forth in the "Engineering and Technical Services - Fixed Sum", revised 7/78 and included in Section VII of this proposal.

We will be pleased to meet with you and to answer questions as well as to provide any amplifying materials.

We are prepared to proceed with the work upon receipt of one copy of this letter approved by you.

Very truly yours,

BROWN & ROOT, INC.

Tanana Power Company

SECTION I

INTRODUCTION

This proposal has been prepared for a Reconnaissance Study for Development of Alternative Energy Generation for the Tanana Power Company in the Tanana Market area.

Our proposal outlines:

a) a statement of the study objectives and scope of work,

b) the background, capabilities, and experience of the project team,

c) the study plan which describes how the work will be performed,

d) the organization and management plan for the study,

e) the key personnel we propose to use, and

f) the budget.

SECTION II

STUDY OBJECTIVE AND SCOPE OF WORK

STUDY OBJECTIVE

The objective of the study is to identify the most suitable electrical energy generation system for the Tanana market area. The objective will be accomplished by:

1) Determining the present and projected electrical power needs of the area.
2) Evaluating alternative electrical generation sources including diesel generation, hydroelectric, pulp fired steam, wind, interconnection and conservation.
3) For the viable alternative generation sources, preliminary designs will be prepared to establish engineering acceptability and estimated costs.
4) Assess the environmental considerations for each viable alternative along with the licensing aspects.
5) Perform economic analysis that take into account the income and cost at the desired interest rates.
6) Present recommendations for those alternatives worthy of a more detailed investigation.

SCOPE OF WORK

The following scope of work will be performed to achieve the study objective.

1) Forecast the power requirements of the Tanana market area, describe and evaluate the market areas existing power system and determine its power needs.

2) Evaluate alternative energy sources such as hydroelectric, diesel, pulp fired steam, wind, interconnection, and conservation, and their viability to meet area needs.

3) Identify sites with hydroelectric potential and perform an initial screening of these sites.

4) For sites with a viable hydroelectric development potential establish an estimate of the average annual output from the facilities. Perform a preliminary reservoir regulation analysis to determine the storage capacity and drawdown characteristics of the reservoir.

5) Determine the hydroelectric plant capacity projected power production and configuration along with the type and number of units and operating schedule. Explain the decisions behind the unit selection process.

6) Assess the potential environmental impact of the projected power projects along with any institutional constraints that may be encountered. Identify any fish and wildlife resources which may be impacted by the projects. Discuss possible mitigation measures and their impact on project economics.

7) Assess the safety hazards, if any, introduced or eliminated by the development of the projects. Justify the design flood and spillway capacity for the sites with hydroelectric potential.

8) Prepare conceptual designs and layout for the proposed hydroelectric sites and estimate the order of magnitude costs.

9) Identify feasible transmission line routes to serve the market areas and prepare an order of magnitude cost estimate.

10) Estimate annual operation and maintenance costs for the viable power generation alternatives.

11) Estimate project costs for each viable energy power generation alternative and perform an economic analysis.

12) Present a plan and schedule for satisfying the licensing application requirements of the Federal Energy Regulatory Commission and any other agencies for the projects.

13) Prepare and publish a report which covers all the items outlined above and present recommendations for further action by the power company.

SECTION IV

STUDY PLAN

The objective of the study and the scope of work have been described in Section II of this proposal. The approach that we intend to use to perform the scope of work is now described.

1) Study Outline and Schedule

We propose, as the initial step in the study, to prepare an outline for the report and describe briefly the areas to be covered in each section. From this outline a schedule will be prepared which will be used as a monitoring tool to control the progress of the study.

2) Power Requirements

The forecast of power requirements will be made for the Tanana market area. The study will examine historical power and energy use trends and project future trends with particular consideration being given to potential large users. The area's existing power generating facilities will be evaluated. The forecasts of the power requirements and the area's existing power capability will influence the size of the energy generating alternatives to be examined.

3) Energy Alternatives

The energy alternatives of hydroelectric, diesel, pulp fired steam, wind, interconnections, and conservation will be evaluated. The evaluation of the alternatives will consider:

a) the technical and engineering feasibility,

b) economics,

c) environmental and licensing aspects,

d) safety, and

e) overall suitability of each alternative.

It is anticipated that of the six alternatives that hydroelectric generation will be the principal viable alternative and this proposal is structured on this assumption.

4) Hydroelectric Power Plant Site Selection

The power requirements forecast will have established the size of the generating capacity required. It is assumed in preparing this proposal that the energy alternative analysis will have concluded that hydroelectric power is a viable alternative. A site selection study will be made to determine suitable locations for all viable and possible power plants.

Topographic maps of the surrounding areas will be studied and the sites that have the necessary hydropower potential will be identified. Sites that have potential for hydroelectric power development will be screened and those sites that appear suitable for further study will be identified. The screening criteria that we propose to use are as follows:

Geology

The USGS geological and stock maps of the area and pertinent literature listed in the North American Biblography and Index for Geology will be reviewed. Those sites that have features such as major fault zones, rock glaciers, slide scars and adverse lithological characteristics will be eliminated from further study.

Hydrology

The topographic maps published by USGS, and any other re ily available maps will be gathered for the study area. Hydrologic data from NOAA, stream gage records if available, d any other accessible published information will be obt ned. Thi- information will be used to determine the approximate hydro power potential at the sites. This potential will be compared with the power forecast for the market area and those sites that are not suitable for meeting the projected demand will be eliminated from further study.

Site Visits

A preliminary survey will be made of the sites developed from published topographic, geologic and hydrographic data to determine their acceptability for further study. A reconnaissance visit will be made to the study area if weather and terrain conditions permit.

5) Site Generation Capability

The hydrologic data will be used to project the stream flows at the selected sites and assessment will be made of maximum and minimum stream flows. This information along with reservoir storage capacity will be used to establish the power generation capability of the site.

Further input for the reservoir regulation analysis would include:

a) The area capacity curve for the reservoirs which could be computed using the information from the topographic maps.

b) Evaporation loss and sedimentation build up which would be obtained from a literature search.

c) Any water rights obligations or controlled releases required from the reservoir.

d) The load demand curve from the power forecast.

To perform the reservoir regulation analysis Brown & Root has several computer programs in house which may be used to perform the computations. These are:

U. S. Corps of Engineers Program HEC-5	Reservoir System Operation for Flood Control and Conservation
Brown & Root Program CW-507	Yield Measures Study for Multi-lake System
Brown & Root Program CW-501	Flood System Routing and Flood Hydrograph

The information that will be generated from this analysis will be:

a) the power generated from the water release

b) the preferred size of the reservoir

c) the minimum height of the dam.

6) Hydroelectric Plant Unit Selection

The conceptual design, layout of the sites (see item 9) and the information derived from the reservoir regulation analysis will be used to determine the type of turbine/generator that would be most suitable at the sites.

The capacity of the units will be governed by the power requirements and variation in those requirements for the area.

intake structure, outlet works, penstock, powerhouse, tailrace and switchyard.

This information will be used to make order-of-magnitude cost estimates for each site.

10) Transmission Routes

The transmission line routes from the project sites to the market area will be defined. The type and capacity of the lines will be determined from the power forecast analysis and the capacity of the generating units.

A one line diagram will be prepared of the proposed electrical system and the transmission routes will be shown on a map of the area.

The estimated costs of the transmission system will be made.

11) Operation and Maintenance Costs

Operation and maintenance costs will be estimated for each energy generation alternative and will be based on the location of the sites, the size of the generating units, and the operational mode of the power system.

12) Economic Analysis

An economic analysis will be made for each viable alternative energy source. Each analysis will be based on:

a) at least two interest rates,

b) an assumed rate of inflation,

c) an assumed rate for the increase in power costs,

d) the estimated project costs,

e) the estimated operation and maintenance costs,

f) a 35 year term, and

g) that portion of the available power that can reasonably be marketed.

The results of this analysis will give the costs per kwh for each of the viable alternatives.

All the economic analysis will be compared with the diesel generation alternative which will be used as a yardstick for comparison.

13) Licensing Application Requirements

A survey will be conducted to determine which agencies will require licensing applications for the alternatives. In addition to the Federal Energy Regulatory Commission (for hydro alternatives) other submissions may be required due to location of the sites. The information to be prepared for these agencies for licensing applications will be listed and a proposed plan and schedule for submitting the material will be formulated.

14) Recommendations and Conclusions

The recommendations and conclusions of the study will be included in the report.

15) Publication

The study will be published and 5 copies submitted for draft review approximately 13 weeks after the notice to proceed. After review, the report will be finalized, and 30 copies issued.

ORGANIZATION AND MANAGEMENT PLAN

Organization

The study will be under the direction of a Project Manager who has had extensive experience in hydroelectric power projects. Reporting to him will be personnel from the specialized disciplines who will be engaged on the project as their need for services dictates.

The organization chart is shown in Figure 1 and indicates the functions to be performed by the various specialists.

Management Plan

The objective of project management will be the successful coordination of the project so that the project is completed on time and within budget, and the final report is of a high quality. Brown & Root will use the following in meeting the above objectives.

a) Scheduling

b) Location of the work

c) Meetings

d) Reviews

Scheduling

As described earlier, a project schedule will be prepared with a pre-requisite being the preparation of a table of contents for the report. The schedule will indicate when the various phases of the study effort and sections of the report will have to be completed to meet the project deadline. As part of our proposal we have prepared a preliminary schedule

in bar chart form and this is shown as Figure 2. For the execution of the work a project schedule will be drawn as a network to show the cross transference of information that will be required from one work area to another.

Location of the Work

The work will be performed at the office of Marks Engineering in Anchorage, Alaska and at the Brown & Root offices in Houston, Texas. It is proposed to conduct the phases of the work that deal with the power forecasts for the Tanana market area, transmission routing, delineation of the alternative energy sources, and a part of the site screening phase in Alaska. The phases of the work that require personnel from the specialized disciplines of Brown & Root will be performed in Houston where their experience can be readily drawn upon. All the work associated with the publication of the report will be performed in Houston.

The division of the work will be such that as much work as possible is performed in Alaska and that the personnel facilities at the two offices are used in an efficient and effective manner.

Meetings

We consider it important that a meeting be held with the Tanana Power Company in order that an evaluation of the work be performed. We propose to have a progress meeting approximately 5 weeks after the work has commenced. At this time the power forecast and alternative energy analysis phases of the work will have been essentially completed and the initial site screening work will be under way. At the meeting we would review the work already accomplished, the methodology to be used in the reservoir regulation and economic analysis, the schedule for the remainder of the study, and the proposed table of contents of the final report, the review

procedures for the draft copy of the report; and other pertinent matters. During this visit to Alaska a reconnaissance would be made of the sites under consideration for hydroelectric power development.

Mr. J. E. Marks will be residing in Anchorage and kept fully informed of the progress of the work and will act as the Brown & Root representative in all meetings with the Tanana Power Company.

Reviews

Reviews by the company of work accomplished by Brown & Root are essential for the transfer of information by the two groups. It is anticipated that information for review will be submitted to the Company before the draft report is issued. After the draft report has been issued for review we propose a meeting be held in Alaska to discuss and resolve the comments by the Tanana Power Company. The final report will be published after incorporating the comments of the Company.

SECTION VII

BUDGET

Brown & Root proposes to complete the work described in this proposal for the fixed sum of $35,000 based on the following conditions for "Engineering and Technical Services - Fixed Sum" - revised 7/78.

BROWN & ROOT, INC.

CONDITIONS FOR
ENGINEERING AND TECHNICAL SERVICES - FIXED SUM

1. The services performed hereunder by Engineer shall be subject to Owner's inspection, but the detailed manner and method of doing same shall be under the control of Engineer. Owner will provide full information regarding his requirements for the Project, will designate a representative authorized to act in his behalf with respect to the Project, will examine submissions made by Engineer and render decisions pertaining thereto promptly to avoid unreasonable delay in the progress of the work. Owner will furnish information required of him as expeditiously as necessary for orderly progress and Engineer may rely upon its accuracy and completeness.

2. Engineer shall retain all pertinent technical records relating to services performed hereunder for a period of at least 2 years after completion thereof. Owner shall have access during a period of 2 years to those records required for audit of items reimbursable at actual cost, if any.

3. Extra work shall not be performed, nor shall the scope of work be increased or decreased, unless authorized by Owner and agreed to by Engineer. The cost of studies and analyses required to determine scope changes shall be reimbursable and additive to the Fixed Sum.

4. For Engineer's personal services and non-labor costs for services requested by Owner which are not clearly within the scope of the work described as covered by the Fixed Sum, Engineer shall be entitled to an adjustment in the Fixed Sum, as mutually agreed. In the absence of mutual agreement on such adjustment to the Fixed Sum, Owner shall pay Engineer for the added work in accordance with Engineer's Terms and Conditions for Engineering and Technical Services current at the time of performance of such work, copy of which will be furnished upon request.

5. Engineer may submit periodic billings consistent with its standard billing procedures, not more frequently than weekly, based upon its estimates for work performed during the applicable period, subject to Owner's approval, and payment without retainage, will be due 10 days after receipt of each such billing. Should Owner not approve an entire billing, payment shall be due on the approved portion. On projects calling for substantial expenditures, Engineer may require arrangements for use of Owner's funds for payments of expenditures under procedures mutually agreed to.

6. Engineer shall provide the following insurance: Workmen's Compensation-Statutory; Employer's Liability - $100,000; Comprehensive General Liability-Bodily Injury - $100/300,000, Property Damage - $100,000; Comprehensive Automobile Liability-Bodily Injury - $100/300,000 and Property Damage - $100,000.

   Upon written request of Owner received within 5 days of the acceptance hereof, Engineer will provide additional insurance, if available, including increased coverage and/or limits; and the Owner will pay Engineer an agreed amount for the increased coverage. Engineer shall indemnify and hold harmless Owner from liability to third parties for personal injury

or property damage arising out of the Engineer's negligence or other actionable performance of work hereunder, provided, however, that such indemnity shall apply only to accidents occurring during the performance of work hereunder. Engineer's liability to Owner for the foregoing or other indemnity or for any damages arising in any way out of the performance of this contract is limited to the aforementioned insurances. In no event shall Engineer be liable for any indirect, special or consequential loss or damage arising out of the performance of services hereunder including, but not limited to, loss of use, loss of profit, business interruption or costs of field labor, equipment and materials, whether caused by negligence of Engineer or otherwise, nor shall Engineer be liable in any manner whatsoever for a failure attributable to design criteria provided by Owner, even though Engineer may have participated in the development of such criteria, and Owner shall indemnify and hold Engineer harmless from any such damages or liability. No indemnification, warranty, or hold harmless obligation regarding patents or other proprietary rights is assumed by Engineer, nor is any express or implied license under any prior patent or invention of Engineer granted Owner by virtue of this Agreement.

7. (a) All services hereunder will be performed in accordance with sound and generally accepted industry standards and practices. These services are to be performed by Engineer for Owner in consideration of the payments specified herein and with the obligation that should any of the services of Engineer hereunder not satisfy the aforementioned standards or practices, as a result of human error or omission on the part of Engineer, Engineer's sole obligation resulting therefrom will be to perform corrective services of the type originally undertaken by Engineer provided such corrective services are requested of Engineer by Owner in writing within one year from the completion (and delivery of the results thereof) of the services hereunder which include the alleged unsatisfactory services with no additional charge to be made for such corrective services.

(b) As to the warranty or guaranty of items of, or patent indemnity on, machinery, equipment or other products manufactured by others, or work of consultants, contract personnel or subcontractors, Engineer's responsibility with respect thereto is limited to the assignment by Engineer to Owner of the manufacturer's consultant's, contract personnel's, or subcontractor's warranty or guaranty and/or patent indemnity, and Engineer's cooperation with Owner in Owner's enforcement thereof.

8. Owner may, at its discretion, terminate the work under this agreement at any time by giving 10 days written notice. In such event, Owner shall assume all obligations, commitments, and claims that Engineer may have theretofore in good faith undertaken or incurred in connection with the work, and Owner shall pay Engineer an equitable portion of the Fixed Sum provided for in this agreement earned to date of termination by Engineer plus the costs of closing out of this work, less any amount previously paid to Engineer, plus a reasonable termination charge to be mutually agreed to between Owner and Engineer.

TEMPORARY		---				

III. ANALYSIS (See Fiscal Note Preparation Instructions, Section III)

A detailed reconnaissance study of the Tanana Valley area hydroelectric potential will cost approximately $35,000. However, if hydrologic information is insufficient or not available the cost of obtaining this information could not be included in the cost of the study. The Power Authority would have to expend up to $3,000 out of operating budget funds for proposal preparation, review, contract administration and study management.

Anchorage, Alaska 99501

Attention: Mr. Eric Yould, Executive Director

Dear Mr. Yould:

We have recently contacted the U.S. Army Corps of Engineers with regard to their proposed timetable to study our area for potential hydroelectric sites. The Corps plans to study the area during 1980 and 1981, however, we feel that Congressional and budgetary constraints will slow the development of any hydroelectric sources for the Tanana Area.

Our consultant, Brown & Root/Marks Engineering have made an evaluation of existing topographic and hydrological information of the area in and about the Tanana Area and have identified seven (7) potential creeks that can serve Tanana's power needs.

Tanana Power Co. now serves 140 consumers with an annual consumption of approximately 2,000,000 kilowatt hours and a demand of 500 kilowatts.

The attached map shows the potential dam locations, the drainage area limits, and location of power plants.

The attached table "A" lists information on each of the potential sites. It should be noted that in all cases, the reservoir is at a much higher elevation than the powerhouse. Higher dams could be employed to reduce the penstock lengths. Evaluations would have to be made to determine if higher dams with shorter penstocks are more suitable than the low dams with long penstocks shown in Table "A".

We are requesting that funds be made available by the Alaska Power Authority to proceed with a Reconnaisance Study in 1980 for the development of hydroelectric energy generation for the Tanana Area.

Your cooperation in this matter is sincerely appreciated.

Sincerely,

Clifton Eller

Clifton Eller, President
Tanana Power Co.

FURTHER REFERRALS: ~~Financa~~

HEARING DATE: 2/4/80

MEMBERS PRESENT: Bill Parker, Margaret Branson, Pat O'Connell, Pat Carney, Charlie Parr, Fred Zharoff, Ray Metcalfe

Murray - Project Director from Kodiak
Addresses inadequacy of existing services. Dept. of Social Services has been administering and it has been done poorly. AFN had the contract for homemaker services in 1979. Local administration is what is being sought. This could be considered a pilot program in Kodiak. The closer such programs get to the community, the more effective they are.

Parr -Dept. ameks decisions re who will administer. HESS still has responsibility for determining who receives help?

Murray - Local community would make this decision;

Parr - Has a problem with the local community making that decision.

Art Holmberg, Director of Div. of Social Services
Administration of Homemaker program has been a disaster. Particularly in the rural areas this has been a problem. HESS determines eligibility. No problem with idea of a pilot program. HESS would have to contract as they have no grant in aid authority. Can't pay money in advance. Administrative Procedures Act forbids this.

Parr - Doesn't understand that there couldn't be payment in advance. If the language says grant, it could be given as a grant.

Holmberg - Statewide contract recommended in HB616 for another year. Would like to see it all under one program. HB616 would have to be reworded.

Parr - Allocation made to Dept. to be proportionately dispersed. Would approximate need in each community be determined by the Dept? Otherwise money might run out.

Holmberg - Health home aids services have been added to HB 616. Homemake and Home health can be split.

COMMITTEE ACTION:
Bill signed out of committee with amendments

Project Director
Tel. 486-5630

Dear Mr. Holmberg:

I have been the project director of the Senior Citizens of Kodiak, Inc since October, 1972. During the time I have served as director I have witnessed several arrangements for the delivery of homemaker services in the State of Alaska. As a result, I have developed definite feelings about the delivery of this service; and would like to share with you my perception of the past, present and what I envison as the realistic future of the delivery of this important service. Please recognize that my analysis is based upon my experience in the Kodiak area, but I strongly believe it can be extrapolated with some reliability to the remainder of the State. I would first like to comment on the past.

A. Past

I first became involved with clients seeking homemaker services in 1974. At the time the service was delivered by Alaska Homemaker Service. The division of family and children's services was the local contact to which I made referrals for service. They in turn contacted Alaska Homemaker-Homehelper Service to authorize the delivery of the service. It was the responsibility of AHHS to provide a homemaker to the client. However, they did not have the ability to handle this and relied on Div. of Family and Children's Service to find a homemaker and monitor the delivery in the home. This arrangement continued until June of 1977. By this time the Div. of Social Services had been created, and due to the adverse comment on this arrangement defunded Alaska Homemaker Homehelper Service, and contracted with Werner's Bookkeeping Service to handle the contract. More reliance was placed on the district social workers to administer the program. However, there did not exist a clear channel of communication as to who was to be responsible for what. Under this arrangement the funds alocated for the year were expended by mid-October with several clients left in an adverse situation--no homemaker. Again, this arrangement proved inadequate and unacceptable. Pressure was placed upon the division to develop a better program for the delivery of this service. An RFP was developed, and the Alaska Federation of Natives was awarded the contract for a State-wide service

Senior Citizens of Kodiak

Box 315
Kodiak, Alaska
99615
Dennis Murray
Project Director
Tel. 486-5630

for the present year FY 78-79.

B. Present
During this year I have been directly involved with the delivery of homemaker services in the Kodiak area. It has been my experience that the efforts of AFN can be compared with the arrangement between the state and Werner's Bookkeeping. That is to say that the quality of the service has not improved. I would like to sight an example where I was directly involved.

Ex. An elderly female, age 78, was admitted to the Kodiak Island Borough Hospital with general symptoms of dizziness, electrolite imbalance, etc. In a day or two the patient improved substantially, and the physican determined that acute hospital was no longer appropriate. However, the patient was reluctant to return home complaining of lonliness, etc. In addition to the symptoms elicited upon admittance to the hospital the patient had two sensory deficiencies which were contril ting to her overall health status. The patient has suffered substantial hearing loss during the past several years. Also, the patient has developed severe visual impairity due to the development of cataracts on both eyes. With this information the doctor attempted to secure authorization for admittance of the patient to the ICF facility in Kodiak. However, the medical review officer for the medicaid program determined that there was insufficient evidence to justify medi aid's payment for the cost of care in the ICF facility. It was recommended that the patient seek care at the custodial level. (Such care does not exist in Kodiak, and the patient would have to be transfered to Anchorage.)

It was decided by the family and myself that the patient's condition might improve if she were to move to the new elderly housing project recently completed. Crucial to the move was the placement of a homemaker in the home to assist the patient with daily living tasks. I contacted the local social services office regarding the application, and was asked my recommendation for a person to deliver the service. I recommended a neighbor of the client with whom the client had a comfortable relationship. The application was submitted by the social worker to Anchorage social services for authorization and transmittal to AFN for their final processing and approval. It is my understanding

from Ms. Betty Davis, regional supervisor for the division of social services approved the request on February 5, 1979, and transmitted the request to AFN for final processing. To date the homemaker has not received a contract. The homemaker has been delivering services, but with no guarantee that payment will be made for services rendered.

It is my firm belief that under the present mechanis the example I have sighted is not the exception but, in fact, the rule. (Please remember, I am speaking from my vantage point, and will certainly modify my position where it can be demonstrated I am incorrect.)

Senior Citizens of Kodiak
Box 315
Kodiak, Alaska
99615
Dennis Murray
Project Director
Tel. 486-5630

At this point I would like to make some observations about the past and the present mechanisms for delivery of this service to the elderly in the State of Alaska.

#1 Attempting to provide a service on a state-wide basis by one contractor with insufficient administrative funds is an effort in futility.

#2 Attempting to use the district offices of the division of social services is almost as difficult. It has been my experience that the primary emphasis of the division of social services has been and will continue to be the delivery of services to children. That is not to say that this is not proper, but it is a comment on the attitudes expressed or otherwise of social workers dealing with adult protective assistance and especially the delivery of homemaker services to the elderly. (I pose the question, "If all of your experiental background, your schooling and the major portion of your job description related to the delivery of services to children, would you have the empathy, understanding, etc. to deal with an occasional adult protective assistance need??????????????????????????") [Again, I will reaffirm my position---"I'm from Missouri---show me differently and I'll change my thinking.] I'll also pose a corresponding question, "How many district social workers have degrees in social work with emphasis in gerontology??????"

#3 To my knowledge the division of social services does not have a clearly defined policy regarding adult protective assistance cases. There appears to be no prioritization of need based on established criteria. Without such information it seems to me that the utilization of funds under the adult protective assistance category is a misnomer and some placements are inappropriate given the need for conservation of limited resources. To further emphasize this point I would like to sight two examples.

a. Using the case of client mentioned earlier, I would feel this is to be given high priority. This person was at risk of being institutionalized inappropriately.

Senior Citizens of Kodiak

Box 315
Kodiak, Alaska
99615
Dennis Murray
Project Director
Tel. 486-5630

a. continued
With adequate homemaker support this person can continue to live independently for some time. The cost of that homemaker support may be $500.00/mo. The cost of ICF care would be $3,000/mo. minimum.

b. The second case is an elderly gentleman living alone in his own home. He doesn't drive much anymore, and needssome assistance in cooking his meals. However, physically he is in fair condition. His situation is not ideal, but he is managing. If he can be delivered a meal from the senior center and provided transportation when needed he will be able to continue his present living situation. He, too, would be eligible for adult protective assistance services; but certainly he should not be delivered services ahead of the first case.

#4 Since 1974 I am unaware of any consistant monitoring and evaluation of the delivery of homemaker services in the Kodiak area. The only monitoring and evaluation which has occurred has been through the efforts of the senior center.

#5 In addition to the division of social services other agencies have been involved in a myriad of programs delivering some form of homemaker services in the state. Some programs have been sponsored by the State Office of Aging. Others have used C.E.T.A funding, Title IX funding, etc. There exists, in my opinion, a serious fragmentation and lack of coordination in the delivery of this service$. [Please find attached a resolution addressing this question. One similar to it was adopted by the Governor's Advisory Committee on Aging at their October, 1978 meeting in Ketchikan.]

By now I'm sure your tired of hearing about the negative so I'll close this part by saying I believe alot of persons have benefited from the services provided, but it is my strong belief those services can be provided in a more qualitative and cost effective manner. I would now like to make a case for what I consider to be a more effective delivery of this important service.

C. The Future
I think the division of social services and the state office of aging should develop and inter-agency agreement whereby the division of social services would alocate $750,000 of the 1.6 million budget for adult protective assistance to the state office of aging for realocation to senior centers in the following urban areas: Anchorage, Fairbanks, Juneau, Ketchikan, Kodiak and Sitka. Since the office of aging is already established to distribute monies via grant applications and the centers establish' various categories of service, the proportion used

C. The Future continued....
for administrative expense at both the state and local levels could be contained to 10% or less. This would leave 90% of the funds alocated for direct services to the recipients. I would like to sight Kodiak as an example of how this procedure could work.

1. Kodiak Homemaker Program
The office of aging through the competitive bidding process makes available to its grantees monies for the specific delivery of homemaker services. Emphasis is placed on the urban areas initially for response. [Although small projects may wish to tackle the service on a case by case basis, I believe the senior centers in the urban areas may be more capable of handling this program initially. I would not rule out the opportunity of the smaller senior programs from applying where an ability in the area has already been demonstrated]
Once the state office of aging has made the alocations (let us assume that Kodiak area receives $30,000.00), the senior program will initiate the delivery of the service. It would be my desire to proceed as follows:
#1 I would hire a full-time homemaker supervisor. This person would be a licensed LPN. I would pay this person based on experience $12,000--13,000 annually. This person would be responsible for performing direct services during 60--80% of his/her typical day. In addition, this person would be responsible for the necessary monitoring and evaluating of potential clients, paperwork for reporting services rendered, and supervising any part-time help hired to perform specific services. $3,000-5,000 would be spent on fringe benefits for the workers, $1,000 would be spent for overall center administration with the remainder used to hire part-time workers on an as-needed basis
#2 One potential obsticle would be the present regulations regarding the limiting of services by our corporation to persons 60 years and above. I would attempt to modify the articles of incorporation of the center so that this barrier would be eliminated. This change is in recognition that adult protective assistance has a client population of persons age 18--over.

99615
Dennis Murray
Project Director
Tel. 486-5630

C. 1. #3 I realize there needs to be more refinement of this proposal, but I believe that it is the first step toward a more comprehensive delivery of homemaker services in many Alaskan communities.

For those areas which do not come forward with a good plan for service in their communities I would alocate the remainder of the $1.6 million to the division of social services for use by the district social workers for the delivery of this service.

I have certainly not expressed all of my thoughts regarding this program, but I feel I have provided you with a firm basis of my thinking. I challenge you and the division of social services to use my ideas to improve this very important service in the State of Alaska.

I would be happy to discuss my ideas with you or your representative at your convenience. I intend to testify at the public hearing in Anchorage on February 27 regarding the FY 80 social services plan and specificly adult protective assistance. I firmly believe a cooperative agreement can be made between your division and the office of aging to implement my thinking.

I thank you in advance for the opportunity to provide input on this matter.

Sincerely yours,

Dennis Murray

RESOLUTION NUMBER 5

V. WHEREAS, there exists throughout the State of Alaska a serious fragmentation in the delivery of in-home services with various levels of service being provided by persons with various levels of skills (and in some cases no skills) without adequate planning, training, monitoring and evaluation of the effects of these efforts; and

WHEREAS, this situation has created serious problems for communities delivering these services and more importantly the recipients of these services; and

WHEREAS, there exists within several departments of the local, state and federal government and the private sector, resources directed at this service delivery program [To Include: Comprehensive Employment Training Act (C.E.T.A.) within Community and Regional Affairs, 12 Regional Native Health Corporations, and others; Adult Protective Services within the Div. of Social Services; Senior Employment opportunities under Title IX of the Older American's Act, Title III of the Older American's Act for supportive services; Municipal health services in the larger communities; Public Health Nurses within DHSS; Medicare; etc.....; and

WHEREAS, the federal government and the State Government have identified in-home services as a State and National priority and legislation has been introduced which stresses the need for one central access point in any community for the delivery of this service,

Therefore Be It Resolved,
That the request the Department of Social Services to place in highest priority within its state plan the following:

1) Identification of all agencies and groups providing this service at whatever level,
2) the development of a state-wide plan for the delivery of this service through coordinated efforts with all agencies involved.
   This plan is to include:
   a. state-wide objectives which can be measurable as to the impact of in-home services on the programs, advantages and disadvantages to the consolidation of existing programs into a more community based central access point.,
   b. standardization of criteria for training, monitoring and evaluation of these programs,
   c. the pooling of resources to provide training of persons delivering these services,
   d. clear definition of the levels of services, how they inter-relate, how they are different, what should be the order of priority when a community considers a program in the area.

Continued

3) Once formalized, this information should be made available to all interested groups and individuals on a state-wide basis with particular attention to grantees of the office of aging.
4) The possibility of senior centers becoming that central access point on a state-wide basis for the delivery of this services. What are the advantages and disadvantages of this approach????

Directed To: Commissioner Helen Beirne, Dept. of Health & Social Services

RESOLUTION

Delivery of Homemaker Services in the Kodiak Area

Whereas, The present mechanism for the delivery of homemaker services under the adult protective assistance provisions of the Division of Social Services FY 79 plan is inadequate, ineffective and poorly administered in the Kodiak area,

Whereas, The delivery of this service is vital to the well-being of the area's elderly population,

Whereas, The board of directors of the Senior Citizens of Kodiak, Inc., an advocate for improved services to the elderly of the Kodiak Island Community, has discussed the present situation at length,

Whereas, The board of directors recognizing the importance of this service has authorized in the past significant staff time towards the development of a more coordinated and cost effective use of the homemaker service in the area including the development with the Kodiak Mental Health Center of a homemaker training program [40 individuals received training under a subcontract with the Mental Health Center],

Whereas, The board of directors feel that the present system must be changed in order that the elderly receive the full benefit of this service thereby improving their general health status, and in some cases, preventing their inappropriate and premature institutionalization,

Whereas, The board of directors of the Senior Citizens of Kodiak feels that there should be local control for the provision of the homemaker service,

Whereas, the federal government also recognizes the need for the development of a focal point for the delivery of all services to our nation's elderly (a multi-purpose senior center), and has included language in the 1978 amendments to the Older American's Act expressing this desire,

Whereas, The board of directors feel that the senior center can provide this service in a qualitative and cost effective manner,

Therefore Be It Resolved, That the Division of Social Services alocate a portion of its resources under the adult protective assistance category of its FY 80 social services plan to the State Office of Aging for its reallocation to the Kodiak Senior Citizens Center to the delivery of homemaker services in the Kodiak Island Area.

This Resolution was adopted by the unanimous consent of the board of directors of the Senior Citizens of Kodiak, Inc. at their February 21 meeting

[Rev. Bob Childs, Sec'y--Treas,]

Project Director
Tel. 486-5630

Dear Fred:

Upon returning to Kodiak several other matters kept me from completing the homemaker proposal. I have just now had the opportunity to finish it.

Please note in the proposal to Mr. Holmberg of the Division of Social Services that our community is requesting that a sub-contract be awarded to us from the contractor for the south-central regional area. It certainly is not clear whether this will be possible. It will be the decision of the regional contractor. [I should explain that the division of social services has requested proposals for homemaker services in 6 regional areas of the state. This is a program change from last year's request for a state-wide contract. However, as I indicated in my previous coorespondance with you, a regional contract does not help our Kodiak area.]

In my letter to Senator Mulcahy on behalf of my board of directors I asked him to introduce legislation which would appropriate funds directly to our community for this service. I believe the board would also like you to introduce companion legislation in the house. It is the feeling of the board and various agency personnel that Kodiak can serve as a model for other communities in this area.

I feel that the strategy should be that this request is for a pilot program with language to include other areas if it is proven successful.

Further, I believe that your introduction of a bill would also serve the purpose of heightening the awareness of the division of social services that our community is serious on this matter. It may increase our chances of obtaining the sub-contract.

Should you have any questions about this, do not hesitate to contact me.

Sincerely yours,

Dennis Murray

Dear Mr. Holmberg:

This letter and proposal for sub-contract to deliver In-Home Support services in the Kodiak area stems from our telephone conversation on March 8. It continues to be the strong feeling of the board of the Senior Citizens of Kodiak that our organization can perform these services in a more comprehensive manner than the previous contractors. I would certainly urge your strong endorsement of this sub-contract with whatever organization is successful in obtaining the contract for the southcentral region.

Should you have any questions regarding this proposal, do not hesitate to contact me.

Sincerely yours,

Dennis Murray

SENIOR CITIZENS OF KODIAK, INC.

Homemaker Proposal FY 80

Senior Citizens of Kodiak

Box 315
Kodiak, Alaska
99615
Dennis Murray
Project Director
Tel. 486-5630

Background: The Senior Citizens of Kodiak, Inc. has had a special interest in the provision of In-Home Support services in the Kodiak area for several years. In 1975 the organization invited Ms. Dove Kull, administrator of the Alaska Homemaker-Home Health Aide service of Juneau, to speak to the Borough health resources council concerning the services provided through her organization. Specificly, the council and the community were interested in strengthening the program in the Kodiak area. Ms. Kull indicated that funds for the training of homemakers and their direct supervision in the Kodiak area were extremely limited. Further, she did state that her organization would assist our community in whatever way they could.

In 1976 the division of social services defunded Alaska Homemaker-Home Health aide Service, and opted for a contract with Werner's Bookkeeping of Juneau to administer the state-wide contract. This change in format meant the district offices of social services would have a much greater involvement with the delivery of this important service. Unfortunately, under this arrangement the program funds were exhausted by mid-year with supplemental funds necessary to sustain the program until the new fiscal year. Further, this mechanism did not foster greater program development (training, etc.) in the local areas.

Because this arrangement did not prove satisfactory, the division was encouraged to seek other venues for the delivery of this service. Again, a contract was awarded to the private sector, Alaska Federation of Natives (AFN), for the FY 78-79 year. In my opinion, this arrangement did not improve the delivery of the service, but, in point of fact, has proven to be less desirable in the Kodiak area than the contract with Werner's Bookkeeping.

Through their board of directors, the Senior Citizens of Kodiak has discussed the need to improve this service for our area at several meetings. The following proposal is a result of those meetings. It is felt that a locally controled and administered program would be of much greater benefit to the elderly and handicapped of our communities.

Senior Citizens of Kodiak

HOMEMAKER PROPOSAL

ethod: The Senior Citizens of Kodiak, Inc. intends to provide In-Home Support services as one component of its multi-purpose senior center operation. Services will be provided to eligible persons as defined by the category of Adult Protective Assistance under the Division of Social Services Title XX plan.

Critical to the success of this program will be the hiring by the corporation of a full-time In-Home Support services supervisor. (See Attached Job Description)

As indicated in the job description this supervisor will be directly under the director of the senior center for program operations. As a component program of the senior center, this effort will be housed in the same offices.

Accounting for the project will be handled by Jo Hadju Accounting.

JOB DESCRIPTION

JOB TITLE: HOMEMAKER SUPERVISOR

DEPARTMENT: SENIOR CITIZENS OF KODIAK

REPORTS TO: PROJECT DIRECTOR

SUPERVISES: 4-5 part-time homemakers

GENERAL FUNCTION: The person in this position directs the activities of the In-Home support services sponsored in the Kodiak Island community by the Senior Citizens of Kodiak. He/She will be involved in performing direct services and supervising the activities of several part-time assistants

JOB FUNCTIONS/MAJOR ACTIVITIES

1. Performs direct services to eligible elderly in their homes to include some medical services within the framework of an LPN skill level. Inclusive in this is consultation with the doctor concerning regimen of treatment, etc. (60% of time)

2. Hires and places in the home part-time assistants on an as-needed basis. Supervises their activities to include monitoring and evaluation at least monthly.(20% of time)

3. Works with other agencies including the Kodiak Island Borough Hospital, Public Health Center, Div. of Social Services, Council on Alcoholism and Kodiak Area Native Association in fostering cooperative relationships for the delivery of in-home support services. (5% of time)

4. Is responsible for completing reports delineating the kinds and types of services rendered, numbers of persons served, etc. on a monthly basis. (5% of time)

5. Other related duties as assigned. (10% of time)

SKILLS, KNOWLEDGE AND ABILITIES

Person in this position must have current standing in state of Alaska as Licensed Practical Nurse. Must have demonstrated abilities in working with elderly in a community setting (one--two years of work with geriatrics). Must have valid driver's license.

DECISION MAKING RESPONSIBILITIES/AUTHORITY:

This person works under the direction of the project director. Exercises independent judgement with hiring part-time workers and making duty assignments. (project director will reserve final approval of persons hired) Plans day with a great degree of independence of other center functions.

SUPERVISORY AUTHORITY:

Assigns tasks on an as-needed basis to 4-5 part-time homemakers.

SIBILITY & CONTACT

Has a fair degree of contact with clients and general public.

Working Conditions:

Will vary dependent of home situations. Generally favorable

3-5-79

To: Senator Bob Mulcahy, Representative Fred Zaroff & Commissioner Helen Beirne, DHSS

From: Concerned professionals of various health and social services agencies of the Kodiak Island Community

Re: Homemaker Services

As representatives of several health and social service agencies in the Kodiak Island Community, we have discussed the present mechanism for the delivery of homemaker services at a meeting of 3-5-79 in the senior center. As a group, we have found the present system to be wanting in its capability of delivering effective services in our area. We have, therefore, drafted the following resolution which we present to you; and ask that you give it close attention.

Whereas, the present delivery system for homemaker services in the Kodiak Island Community is inadequate and ineffective as presently provided for under the Adult Protective Assistance category of the Division of Social Services Plan, and

Whereas, it is recognized that these services are not limited to elderly; but the elderly do represent the single largest client population, and

Whereas, The Senior Citizens of Kodiak, Inc. [a grantee of the State Office of Aging] has demonstrated a vital concern for the delivery of this service in the Kodiak area including a contracted training program and a great deal of staff time towards the development of this service; and through its board of directors has expressed a desire and an interest in administering this program at the local level, and

Whereas, the comprehensive amendments to the Older American's Act of 1978 address the question of the need for one central access point in a community for the delivery of all services to the nation's elderly,

Therefore Be It Resolved, that one or both of the following actions be strongly urged and requested,

1. The Division of Social Services contract with the Kodiak Senior Center through the State Office of Aging to provide for the delivery of homemaker services as outlined under proposed provisions of the FY 80 social services plan under the adult protective assistance category in the Kodiak Island area. This contract should be seen as a first step in the expanded involvement of senior centers in the delivery of this service on a state-wide basis.

2. If the above action is not appropriate or adequate to meet the needs in the Kodiak area, our representatives should draft the necessary legislation for the establishment of a Kodiak area Homemaker program with initial appropriation of $25,000.00. This appropriation should be seen as a model project for the entire state.

POSITION PAPER/Department of Health & Social Services

POSITION PAPER

HOUSE BILL NO. 616
(Identical to S.B. 323)

"An Act making a special appropriation to the Department of Health and Social Services for homemaker health aide services; and providing for an effective date."

The Department of Health and Social Services supports in concept the addition of home health aide services under the Division of Social Services. In the FY 81 budget the Governor has included an additional $303.5 over the FY 80 funding level of $1150.0 for homemaker services. The Department can support additional services up to that level of funding.

Home health aides provide personal care services such as bathing, assistance with transfer activities, assistance with ambulation, and assistance with passive exercises. These services alone would have an impact on reducing unnecessary institutionalization of disabled and chronically ill Alaskans. The impact would be more substantial if home health aide services were a component of a comprehensive home health care program ranging from skilled nursing to homemaker-home health aide services.

Currently the availability of home health services in Alaska is limited. The Division of Public Health has a limited amount of money available for skilled nursing home health services in Juneau and Fairbanks. Payment for home health care is also available under Medicare (Title XVIII) and Medicaid (Title XIX). The home health care available under these federal programs include home health aide services and are limited to medicaid and medicare eligible individuals. The eligibility requirements of these programs are restrictive and, as a result, many people in need of home health care are not able to receive needed services. They may be ineligible due to age, income or a disability which does not fall within the federal requirements.

If the Department developed either a homemaker-home health aide service or a comprehensive home health care program, this program would include the present homemakers who, after additional training, would be capable of providing health aide services under supervision of medical/nursing professionals. In order to implement a new program, much developmental work would need to be accomplished during Fiscal Year 1981. The contractor would need to set up a safe home health delivery service which includes, on a continuing basis, training and professional supervision. The addition of a home health component would result in a higher unit cost during the development phase and increase ongoing administrative costs.

Clarification is needed regarding interim committee intent with respect to eligibility for home health services. Currently, homemaker service is provided to all Alaskans based on need and service availability, regardless of age or income, under the Division of Social Services' child protection and adult protection programs.

POSITION PAPER/Department of Health & Social Services

Clarification is also needed regarding any interim committee intent with respect to contract limitations, i.e., whether or not regional contracts are mandatory. This information will assist the Department in preparing a request for proposals and in determining the allowable administrative costs for contractors. The Department recommends that this not be a requirement for FY 81.

Although the Bill authorizes a $2500.0 appropriation, the Department's understanding is that the interim committee intent is for an additional $1046.5 over the Governor's FY 81 budget request for homemaker services. The Governor's FY 81 budget request contains $1453.5 for homemaker service in the Division of Social Services.

The Department would like clarification regarding interim committee intent with respect to the use of additional funds. It is anticipated that the unit cost of homemaker services will increase in FY 81.

The Department views the addition of home health care services as a means of further assisting Alaskan citizens to receive the services they need in the least restrictive setting possible, as well as reducing the cost of unnecessary institutionalization.

III. ANALYSIS (See Fiscal Note Preparation Instructions, Section III)

A. Assumption

1. Both positions budgeted for 12 months.

2. A 9% inflation rate for line items 100, 300 and 400.
A 10.8% inflation rate for line item 200.

IV. DATE January 28, 1980 PREPARED BY Art Holmberg
AGENCY Division of Social Services
PHONE 465-3170

Original: Legislative Finance
cc: Budget and Management
Prime Sponsor (First Legislator Named)

reviewed by Michael Oulone
Division of Mgt. Budget
DHSS 1/29/80

33-001 (Rev. 12/78)

TITLE: "An Act making a special appropriation to the Department of Health and Social Services and Social Services for homemaker health aide services; and providing for an effective date."

III. ANALYSIS (Continuation)

Coordinator for the homemaker-home health aide service would be responsible for:

-the development and maintenance of program policy
-coordination of homemaker-home health aide service with other services and programs
-establishing and maintaining standard of service
-technical assistance
-preparation of program requirements, contract preparation, contract monitoring and program evaluation
-collection analysis and interpretation of statistical data.

At the present time the responsibility for the management of the homemaker contract is being shared by several staff. The addition of a home health aide component would result in the need for a single central office position to establish standards of service, work with the contractor to develop a uniform referral system, record keeping system and establish monitoring guidelines.

Clerk Typist III

The additional work resulting from the new program component would double the present authorization level thus resulting in twice the paper flow, therefore, a clerk typist is needed.

Program Summary

1. New Positions

Range 18 - 6 mos @ $2,465 =		$14,790
6 mos @ $2,640 =		$15,840

MEMBERS PRESENT:

Bill Parker	X	Pat Carney	X
Margaret Branson	X	Charlie Parr	X
Pat O'Connell	X	Fred Zharoff	X
		Ray Metcalfe	X

Robert Shirenberg, Kenai

25 years in fire service. Discusses history of protection and the poor record of fire protection from loss of life and property damage. Mentions effects of public and private fire systems/This bill would give businessmen an incentive to install fire systems. Efforts are directed at containing fire and confining it to one individual piece of property. In the major fires experienced in the state, the amount of loss has been substantial. The proposed incentives in the bill will allow business men to have a cost effective method of proptecting their businesses. Insurance costs would be reduced. In rural area this would be especially important. As growth continues in the state, the situation will become worse. Passage of this bill would assist in general public fire protection. The costs associated with protecting a non-protected building are astronomical. These costs are greatly reduced with sprinkler systems. If such systems are removed from the tax rolls, there is a great incentive.

Sharon Trailer - Div. of Loans

Fire protection loans are available now. The preferred treatment indicated in the bill for fire protection loans would be a problem and would require a reallocation of resources within the dept. There would need to be additional staff.

Parr - Doesn't see that this would be a problem. Field officiers should be able to rubber stamp fire protection loan applications to indicate what they are for.

Marie Pignalberi, Deputy Commissioner of C&RA

Dept. is opposed to the bill. It is further eroding the "full and true value" definition as used by the assessor. It erodes the property tax base and places an unfair burden on others. If committee wants to go this route, it should place this as an exemption under AS29. If the state mandates such exemptions, there should be consideration of reimbursement to the communities.

COMMITTEE ACTION: No Action

TAPE # 2 SIDE 1&2 Footage 00-820 (Side 1) 238-461 (Side 2)

Parr - p. 1 lines 16-17 Parr questions if these are retroactive.

McCarter - Says that the value of an existing or new structure would be covered.

Chitwood, Ak. Municipal League
Since the bill mandates an exemption there should be reimbursement to the municipalities. Corresponding benefit to the community is recognized by the League.

Parr - Permissive language re "full and true value" might be considered. Leave it up to the communities to decide.

Chitwood - Local government might be penalized in school foundation formula as the figure is used in that formula.

Gordon Zerbitz, Ak. Public Utilities Commission
Discusses reason for standby rate and the problems with eliminating totally the charge associated with such standby supply for sprinkler systems.

Parr -Doesn't see any justification for standby rates.
Zerbitz- Magnatude of rates are of concern.
O'Connell - Would Commission be open to reducing rates?
Zerbitz - Requirements are placed re "delivery" on demand--that is the basis for the rates.

Jeff Hill, A,. State Firefighters
Supports bill. Passed resolution of support #799.

Gary Croize, Dept. of Public Safety
Supports bill. It provides incentives necessary. Questions what is included in definition of fire protection systems in bill? Definition is unclear.

Lee Ghallager, Pres. of Fire Fighters
Anchorage fire fighters have been opposed to standby rate. Give full support to the bill.

(4) FISCAL IMPACT: ☐ NONE ☐ FISCAL ANALYSIS ATTACHED

(5) AMENDMENTS PROPOSED:

None

(6) COMMENTS:

The provisions in this bill provide the incentive and means and methods for the installatio of private fire protection systems in private property which will in turn enhance and support the public fire protection systems and capabilities of communities throughout Alas

Many communities are being faced with providing additional fire protection services and with the costs associated with providing those services. A community fire protection incentive program can provide an alternative to the increasing costs of fire protection.

A long term affect of such a program would be in the area of security of a communities assets, e.g. private fire protection systems protect the economics of the community by providing security for the businesses that provide the tax base and employment of those within the community. Both the direct and indirect socioeconomic impacts, from fire, would be reduced.

February 29, 1980

The Honorable Bill Parker
Pouch V
Juneau, Alaska 99811

Dear Mr. Parker:

Re: Definitions of Fire Protection Systems in House Bill 648

At the House Community and Regional Affairs Committee hearings on the above bill, a question concerning definition of fire protection systems was raised. The State Fire Chiefs Association explained their understanding of the bill was that it would cover those fire protection and fire alarm systems as defined in the National Fire Codes. What follows is a suggested definition of fire protection systems.

> Fire protection systems are those systems as defined in the National Fire Codes, current edition, published by the National Fire Protection Association.
>
> The systems include, but are not limited to, the following: Foam extinguishing systems, high expansion foam systems, carbon dioxide systems, Halon 1301 systems, Halon 1211 systems, dry chemical systems, water operation fixed systems, foam/water sprinkler and supply systems, standpipe and hose systems, hydraulic sprinkler systems, and associated pumps and tanks as required for the foregoing systems.
>
> Fire alarm systems include, but are not limited to: supplemental station signalling systems, local protective signalling systems, auxilliary signalling systems, remote station signalling systems, proprietary signalling systems, automatic fire protection systems.

The growing public support for this bill is indicative of its benefit. The Alaska Fire Chiefs Association and the Alaska State Fire Fighters Association emphatically urge its enactment.

If you have any questions please do not hesitate to call.

Very truly yours,

Brian R. Shute

Dear Mr. Evans:

As a member of the House Community and Regional Affairs Committee, I listened to the testimony on HB 648, about which you wrote on March 4. I voted "Do Pass" in the Committee and will support the bill.

Sincerely,

Charles H. Parr

CHP:vc

Alaska Fire Chiefs' Association

March 4, 1980

The Honorable Charles H. Parr
Pouch V
Juneau, Alaska 99811

Dear Representative Parr:

This letter is in support of House Bill 648 and Senate Bill 370 which are strongly supported by the Alaska Fire Chiefs' Association and the Alaska State Firefighters Association.

This bill will make low interest loans available to property owners to finance the installation of private fire protection systems, it will provide tax credits to property owners with private fire protection systems, and it will eliminate water standby utility charges on property owners' utility bills. It is an impressive program which will save cities and property owners money, without increasing mandatory regulation or other red tape.

Upon reading the enclosed position paper authored by the above Associations, I am sure you will agree with the Firefighters and Fire Chiefs that this bill is something long over due and it should be strongly supported.

When the program is explained every organization to whom the program has been presented has enthusiastically supported the program. The Fire Chiefs' Association is in receipt of letters from the Cordova Chamber of Commerce, the City of Ketchikan, the Water Conservation Association, all of which enthusiastically support the legislation. It is understood that more enthusiastic support is on the way and building. Please support House Bill 648 and its companion Senate Bill 370 this session. Thank you.

Very truly yours,

ALASKA FIRE CHIEFS' ASSOCIATION

James Evans, President

P.S. The sponsors of the House and Senate bills, as well as Committee Chairmen, have been provided with a Digest of factual material which conclusively and emphatically documents the effectiveness of private fire protection in controlling fires, and, therefore, local government costs. Copies of that material can be obtained from their respective Legislative offices.

RESOLUTION

(An Act Relating to Fire Prevention)

WHEREAS: The Greater Ketchikan Chamber of Commerce Board of Directors has evaluated House Bill #648 and Senate Bill #370 and;

WHEREAS: The Greater Ketchikan Chamber of Commerce Board of Directors has determined that Fire Protection systems should not be included in the assessment value of a building and;

WHEREAS: The Greater Ketchikan Chamber of Commerce Board of Directors has determined that a Utility Company should not be entitled to levy charges for water to hydraulic sprinkler fire prevention systems per unit and

WHEREAS: The Greater Ketchikan Chamber of Commerce Board of Directors has determined that the directives indicated in these bills are in the best interest of preventative operations relating to fire protection;

BE IT THEREFORE RESOLVED: The Greater Ketchikan Chamber of Commerce Board of Directors recommends immediate passage of House Bill #648 and Senate Bill #370 as they read in identical form.

Approved and adopted this 13th day of February, 1980, by the Greater Ketchikan Chamber of Commerce Board of Directors.

Material Prepared By:
Robert R. Shirnberg
Fire Marshal
Nikiski Fire Dept.
Chairman Ad-Hoc Committee
ASFA/AFCA
December-2-1979

The Alaska State Firefighters Association and the Alaska Fire Chief's Association, at their respective annual meetings in October of 1979 in Petersburg, Alaska, were presented a program entitled, "Community Fire Protection Incentive Program".

Both the Alaska State Firefighters Association and the Alaska Fire Chief's Association submitted to their respective memberships a resolution calling for support in the preparation of program material to enact the Community Fire Protection Incentive Program during the 1980 session of the Alaska State Legislature. Both bodies passed unanimously this resolution.

A joint AD-HOC committee was formed, comprised of members of the ASFA and the AFCA to prepare the necessary material and to carry out the legislative program presentation.

The State of Alaska has the honor of being Number #1 in many catagories. We are by far the largest state in the Union. Our fisheries and resources from the sea are Number #1 in value. Our resources on oil and gas production are approaching Number #1. Our mineral potential is the greatest of all states.

Our state also has the dubious honor of being Number #1 by some margin in the loss of life per capita by fire and the property dollar loss per capita. It appears that the growth of our state is assured with projections of ship building facilities, processing and support facilities for a bottom fishing industry, oil and gas production with related petrochemical industrial plants, mineral development, etc. With the population and constructions that will come with this growth and with our present methods of providing fire protection, we will retain the dubious honor of being Number #1 in per capita loss of life and property damage as a result of fire.

We in the fire service recognize that a new approach in providing for both public and private fire protection needs must be developed. We recognize that the Community Fire Protection Incentive Program does offer the method to redirect fire protection systems and combine the best features of both public and private fire protection in a manner that will improve and better the community against the ravages of fire. It provides a method whereby the costs for public fire protection can be controlled as the community expands and grows.

The Community Fire Protection Incentive Program provides a method whereby the private property owner and businessman will have the incentive and support necessary to provide for the installation of private fire protection systems in their property. This incentive is created through a three-part program as follows:

~~Permanent Revolving Loan Fund~~ Include in Small Business Loans Program

This loan fund will provide loans to private property owners and businessmen at an interest rate and such terms that will create an incentive to install private fire protection systems such as hydraulic sprinkler systems.

The terms of the loan will be such that the direct insurance saving received for the installation of the sprinkler system will be calculated in the repayment schedule. It is the intent that the peoperty owner will realize a real dollar return on the installation of the sprinkler system. An example would be

that if the net insurance saving was $6,000 annually, the loan terms would require a $4,000 annual payment, resulting in a net return to the property owner of $2,000 annually until the loan has been paid off, at which time the property owner would receive the entire $6,000 benefit.

Tax Incentive

Remove from the property tax rolls the assessed value of the private fire protection system. There is no question of the roll that the private fire protection has in supporting the public fire protection system. It is taken into consideration in the I.S.O. rating schedule, it has a decided effect on reducing the overall insurance rating of a community's fire defenses. It protects the community's tax base. It protects the jobs and the economy of the community.

With our present policy of taxing private fire protection systems, we discourage the property owners from installing such voluntary systems.

Again, the private property owner and business man will be encouraged to install private fire protection systems if we remove the tax burden that is placed on such systems.

Water Standby Surcharge for Sprinkler Connections

Some water utilities have placed an excessive standby water rate to property owners that have installed hydraulic sprinkler systems in their property. In many cases these special rates have eliminated or exceeded any dollar saving the property owner may have enjoyed because he has installed a sprinkler system.

In some cases the owners of property equipped with sprinkler systems have shut the sprinkler system down and discontinued its use and accepted the higher insurance rate because there was a dollar saving between the water standby rate and the increased insurance premiums.

As can be seen, the excessive water rate charge is a direct attack on the incentive to install private fire protection systems.

Therefore, it is necessary that special water rates for properties equipped with sprinkler systems be reduced to a very nominal fee or eliminated altogether.

This program intent is to provide for the property owners and businesses the incentive and assistance to install fire protection systems. The program is to be made available to property owners in all areas of the state of Alaska, from the larger municipalities to the smaller communities and very rural areas. To those communities with full-time paid fire departments to those with volunteer fire departments, and also those areas without any fire protection at all. The program makes assistance available to areas that are isolated, such as remote cannery locations, and a method to provide for fire protection of such facilities.

With such a program in effect and within a few short years, we will see a decided reduction in our property fire loss and loss of life from fire. We will realize a direct saving in the cost of our public fire protection systems. We will be able to better meet the fire protection needs of our expanding and growing communities, and be able to control the costs of this expansion.

Fewer jobs will be lost through catastrophic fires, the economy better protected, the tax base of the community better assured, and those public programs that are supported by the tax base better protected.

DEFINITIONS OF FIRE PROTECTION SYSTEMS

Fire protection and fire alarm systems are those systems as defined in the National Fire Codes, current edition, published by the National Fire Protection Association.

These systems include, but are not limited to the following: Foam Extinguishing systems, High Expansion Foam systems, Carbon Dioxide systems, Halon 1301 systems, Halon 1211 systems, Dry Chemical systems, Water Spray Fixed systems, Foam/Water Sprinkler and Spray systems, Standpipe and Hose systems, Hydraulic Sprinkler systems, and associated pumps & tanks as required for the foregoing systems.

Fire Alarm systems include, but are not limited to: Central Station signaling systems, Local Protective signaling systems, Auxiliary systems, Remote Station signaling systems, Propietary signaling systems, Automatic Fire Detection systems.

Dear Representative Malone:

This is a letter of support for House Bill No. 648. I am very pleased that you and Representative Duncan have taken the initiative to introduce this measure.

This legislation will certainly support the businessman and encourage him to install fire protection systems in his property; which will lead to improved fire protection for our communities, along with reduced costs for fire protection services.

Respectfully,

Robert S. Oehler
Owner

Representative Bill Parker
Chairman
House Community and Regional Affairs Committee

Dear Representative Parker:

We strongly support and recommend that the Community and Regional Affairs Committee act favorably and recommend DO PASS to Senate Bill No. 370, an Act relating to fire prevention. (HB 648)

We feel the provisions of this act that will allow businessmen and property owners to receive loans at terms and interest as proposed, will encourage the installation of fire protection systems. An additional incentive will be created for the property owner by removing the fire protection systems from the real property tax roles.

This bill addresses and removes the inequity in water utility rates charged to property owners who have installed hydraulic fire protection systems.

All three of the provisions of this bill will create the much needed incentive that will allow property owners to make the needed installation of fire protection systems a reality. This will, in years to come, reduce the costs and demands of the public fire departments, and will assist greatly in bringing our escalating loss of life and property under control; reducing this loss and bringing together the public and private fire protections to rpovide the most cost effective method of providing for the fire protection needs of our communities.

Your support on this legislation will be greatly appreciated by those of us who work daily in the areas of fire prevention and suppression.

Respectfully Yours,

Russell J. Bagley

Kenai, Alaska 99611

Dear Mr. Shirnberg,

This is to inform you that on January 29, 1980, the Cordova Chamber of Commerce took action supporting proposed legislation for the installation of Private Fire Protection Systems.

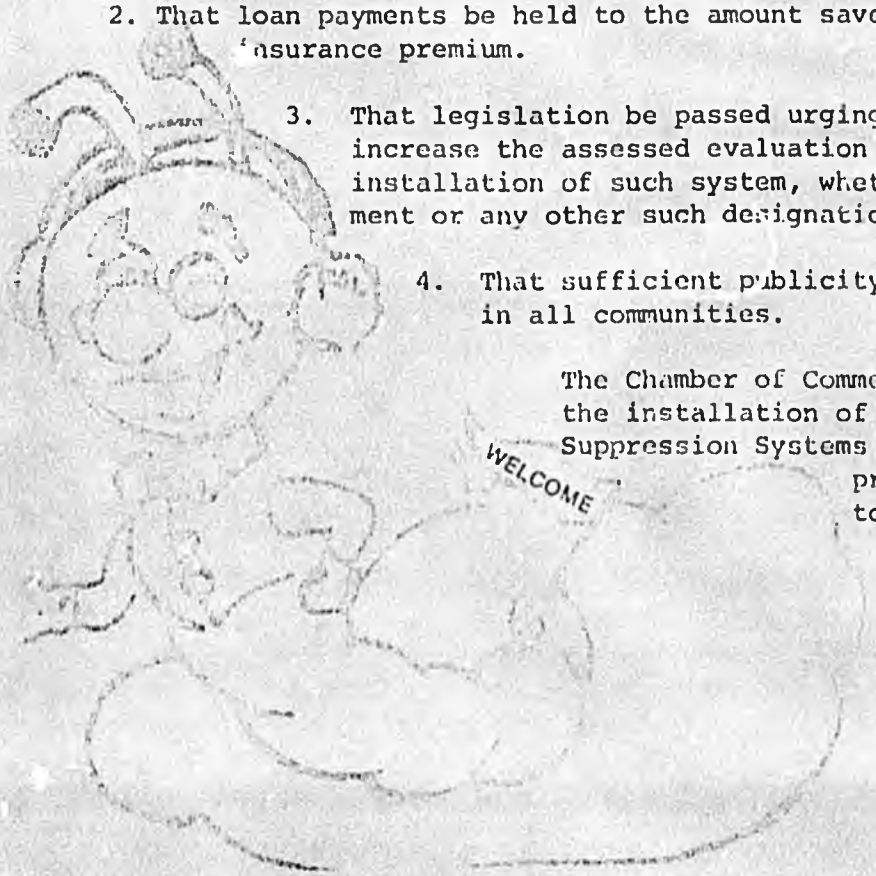
The following are specific concepts supported by this Chamber:

1. Low interest or no interest loans with a minimum of paperwork to be made available to businesses for the purpose of installing Private Fire Protection and Suppression Systems.

2. That loan payments be held to the amount saved on the establishemnt's fire insurance premium.

3. That legislation be passed urging local municipalities to not increase the assessed evaluation of the property because of the installation of such system, whether it be named as an improvement or any other such designation.

4. That sufficient publicity be given to business people in all communities.



The Chamber of Commerce feels that incentives for the installation of Private Fire Protection and Suppression Systems will reduce the loss of lives, property, and lost man-hours due to destruction of business property.

Sincerely,

Robert L. Varnam

Re: Exempting Fire Protection Systems from Municipal Property Tax Assessment (HB-648)

Dear Ms. Chitwood:

The proposal to exempt fire protection systems from local property tax assessment is absurd. Although the goal is admirable. it would tend to disrupt the fairness of the property tax. All property should be on the tax rolls so that the tax rate is at a minimum and all property owners will be paying on the same basis. By exempting certain property. the tax rate will increase and the tax burden will be on fewer taxpayers.

Also. if fire protection systems are worthy of a tax exemption. why not other exemptions for other worthy improvements (eg. better locks thus reducing burglaries. fireproofing walls. etc.).

Finally. it was reported that no financial encouragement is needed at this time due to the significant reduction of insurance rates when a fire protection system is installed. For example. one local business paid for a sprinkler system in four years due to reduced insurance rates. Surely this is incentive enough.

Cordially.

COMMUNITY FIRE PROTECTION INCENTIVE PROGRAM

Prepared by Robert R. Shirnberg
October 20, 1979
Fire Marshal
Nikiski Fire Department
283-4202
P.O. Box 1167, Kenai 99611

COMMUNITY FIRE PROTECTION INCENTIVE PROGRAM

This program is designed to provide the means and methods for the installation of private fire protection systems in private property and to enhance and support the public fire protection systems of the communities throughout the state of Alaska. This is to be accomplished through the combination of three approaches:

1. Establish a loan fund to provide loans to private property owners for the installation of fire protection systems.

2. A tax incentive for property owners by removing from the property tax rolls the assessed value of the private fire protection system.

3. Control the water standby rate charge, charged by water utilities for large diameter service to sprinkler systems. Such rate charges should be set at a level that will not discourage the installation of sprinkler systems.

What are the possible long term benefits from the Community Fire Protection Incentive Program?

It is apparent that if such a program is carried out to the ultimate, that most of our commercial and business properties could be protected by sprinkler systems. If this was the case, it will have a decided effect on the fire flow requirements of each community by reducing the flow requirements. This will affect the apparatus and equipment required, location and response distances of the companies, the number and location of fire stations, as well as the manning requirements of the fire departments.

There is no question that the State of Alaska is undergoing rather rapid growth in population. The oil industry is expanding, other industrial plants associated with the oil industry are planned and coming on line. The fishing industry is expanding into new products and plants. This is bringing additional population and businesses into many of our communities. This growth is impacting the fire protection systems of many of our cities and rural areas. Communities are being faced with providing additional fire protection services and with the costs of providing these services.

The community fire protection incentive program can provide an alternative to the increasing costs of fire protection. The fire service may well be able to hold the line in respect to increasing costs associated with the growth of the community, and may well be able to reduce the costs in relation to the mill rate required for fire protection.

I have enclosed a copy of an article by Harry E. Hickey, an associate professor with the University of Maryland, entitled "Built-In Fire Protection and Fire Department Manning." This was published in the Fire Management Review, a publication of the City Management Association. This is an area of interest to city managers, and will probably be discussed with the fire departments. The article is idealistic, but does indicate what effect providing sprinkler systems can have on the fire protection system of a community.

I suspect that the greatest long term effects of the Community Fire Protection Incentive Program will be in the area of security of the community's assets. I look at these assets as the commercial property, the business within these properties, and the jobs created by these businesses. The community's assets are all the properties within their community, and the income for the community's programs are derived in the form of taxes on this property. With the property protected by sprinkler systems, the community's tax base and programs are protected from fire.

Such a system protects the economics of the community by providing security for the businesses that provide employment of those within the community. The immediate effect of fire on a business is often dramatic, in that amount of dollar loss attributed to the building and contents. The long-term effect of this fire is often overlooked in that the business and jobs lost, the former employees who often must leave the community to work elsewhere, and the effect of the lost payrolls. Few businesses recover from large fires; most often the fire destroys not only the building and contents, but along with that, the jobs and revenue from the business itself. This has the direct effect of removing the property from the tax rolls. We lose the tax generated by the former employees of the business. In many cases, the long-term effect is far more costly on the community than the dramatic immediate loss of the fire itself. In the long-term, this is probably the most important consideration for the establishment of a Private Fire Protection Systems Funding Program.

There have been a number of canneries in smaller communities that have been destroyed by fire. Most often they have not rebuilt, and in some cases the communities where this has happened have ceased to be. There have been a number of fires in commercial property in our larger communities that have destroyed a million dollar tax base, along with large numbers of jobs. These have long-term effects on the community.

The Community Fire Protection Incentive Program can reduce by a very large degree the economic effects of this type of fire.

FIRE PROTECTION REVOLVING LOAN FUND

The revolving loan fund should be funded at a level that will allow for rapid implementation and installation of private fire protection systems.

This fund will make loans to property owners that desire or are required by the uniform building code to install private fire protection systems. Interest rates and loan terms of such loans should be established at a level that encourages the property owner to install such systems.

Requests for loans shall be considered on a priority basis, with those properties that are required to retro-fit fire protection systems in existing properties having the highest priority.

Loan priorities shall be established by the State Fire Marshal's Office. The fire protection system to be installed shall meet the standards as required by the State Fire Marshal's Office.

Cities and municipalities that have code enforcement and standards administered by building department and fire prevention services shall establish the priority schedule for loans and shall review and approve fire protection systems that meet the required standards. Loan requests meeting their approval shall be forwarded to the State Fire Marshal's Office for review and approval.

The revolving loan fund shall be administered by the Department of Commerce, and loan requests that have been approved by the State Fire Marshal's Office shall be granted.

VI
F

LOAN PRIORITY

PRIORITY#1

Property that will be required under the Uniform Building Code (1976) or (1979) as adopted by the State of Alaska to be retro-fitted with sprinkler systems.

PRIORITY#2

Exsisting property that is not required by the Uniform Building Code to be retro-fitted with sprinkler systems, but where the property owner desires to install a sprinkler fire protection system.

PRIORITY#3

New construction that is not required by the Uniform Building Code to install sprinkler systems, but where the property owner desires to install a sprinkler fire protection system.

PRIORITY#4

New or exsisting dwelling units where the property owner desires to install a approved sprinkler protection system.

VI
F

TAX INCENTIVE PROGRAM

What are we talking about when we speak of a tax incentive program for fire protection? In looking back over the years, and in particular to the fire protection systems that are provided by private property owners, business and industry, we find that through Fire Codes, Uniform Building Codes and ordinances we have insisted that these same property owners provide private fire protection systems.

In effect, what we are telling the property owner is that we in the fire service cannot provide or meet the fire protection requirements for their particular property, that we insist that they install a system that will provide for fire detection and extinguishment, and supplemented by our fire department, we can then possibly handle the fire problem in his building or property.

When the property owner provides for this private fire protection, we often overlook the fact that he is not only providing protection for his property, but in effect is providing a part of the overall fire protection system of the community. His system does provide for fire protection to nearby properties in that the chances of the fire extending beyond his property is practically illiminated through his built-in fire protection system.

With the installation of a sprinkler system or other fire protection system within the property, the value of the propert increases. Up to now the increased value of the fire protection system has been added or included in the tax assessment bill on the property.

I strongly feel that to require a property owner to provide for private fire protection systems on his property and then increase his tax bill because he has installed such a system is again self-defeating. We must be able to encourage the property owner to install such systems. We well know that such a system adds directly to the over-all fire protection system of the community.

To encourage the installation of private fire protection systems in our communities throughout the state, with the direct long-range effect of reducing or at least being able to maintain th current level of public fire protection we should consider the following:

Inact legislation at the State level that will remove from the tax rolls the assessment against private fire protection syste: The net effect to the property owner will be that his property tax rate will be reduced by the value of the private fire protection system.

Presently, the property owner that provides [illegible] protection systems for his property receives the following benefits:

1. Protection for his building
2. Protection for the contents
3. Protection for the occupants
4. Protection for his business
5. A reduction in the insurance premiums

The public receives the following benefits when a private property provides fire protection systems:

1. The public that enters or resides within the building is protected.
2. The nearby property owners are protected from fire extending from the property in question.
3. The community's tax base is protected in the property
4. The community has assurance that this business will not be destroyed by fire.
5. The jobs provided within this property are secure from fire.
6. There is a lesser demand or requirement on the community public fire department because this property has a built in fire protection system.
7. The overall fire insurance rating will be enhanced by those properties protected by fire protection systems.

It is apparent that those property owners that install private fire protection systems not only receive certain benefits directly, but in respect to the community as a whole, that through their private efforts, provide a larger degree of benefi to the community in general.

Up until the present time, the property owner that provided private fire protection systems has received no direct benefits or credit from the community or local government for his effort The community has in general not recognized what the private fire protection systems mean to a community.

It is apparent that if all private property owners could or world provide private fire protection systems, it will have a dramatic long-term effect on the total community fire protection system. It will certainly affect the costs of providing community fire protection in the future.

WATER SURCHARGE RATE

The standby water surcharge rate that is applied in some communities to those property owners that have or have been required to install full sprinkler protection for their property is in effect self defeating in respect to the fire protection system of the community.

It appears that the only consideration for this type of charge is to provide additional revenue for the utility.

This type of rate charge will result in property owners taking a second look at installations of sprinkler systems. Unless the property owner has a direct benefit that is cost effective he will not be interested in providing fire protection systems for his property.

The benefits that the property owners should receive in the event he provides a sprinkler system for his property would be a reduction in his insurance rate, that will pay back the cost of the sprinkler system within a reasonable time. Another benefit is the protection of his property and business from fire.

An additional water surcharge for sprinkler connection is contrary to the fire protection needs of the community. The community should rather assist and encourage the property owner to install such systems.

We in the fire service, and those that are in communities that have placed a surcharge for sprinkler systems, have often been silenced and are unable to protest this self-defeating development of our fire protection systems. Where the administration is dead set against such charges and they are unable to speak out, such organizations as the State Fire Fighters Association can take a stand and pursue legislation at the State level prohibiting such charges.

If we can encourage the state legislators either by law, or administrative action by the Public Utilities Commission, to eliminate or reduce to a reasonable charge, the service provided for sprinkler systems we will have accomplished much in providing a direction and guidance in meeting the needs for fire protection in our communities.

The following examples compare cost figures for an Incentive Program versus today's cost.

BASE FIRE INSURANCE RATES

Property Discription 29,560 sq. ft. concrete block, retail shop complex..

Fire Protection Class Rural#8

Value of Building $702,000

Insurance Carried $700,000

Protected Rate .40 per 100

Unprotected Rate 2.65 per 100

Estimated cost of Sprinkler System $42,000

Assesed value of Sprinkler System $42,000

Property Tax Rate 5 mills

Fire Protection Loan 42,000 Interest 7% No.of Years 5

Monthy Payment $831 Annual Payment $9979

Cost Unprotected Property		Cost Protected Property	
Insurance	$18,550	Insurance	$2,300
Tax (mill rate)	$3,500	Tax	$3,500
		Tax Credit	$210
		Loan Payment	$9,979
Total	$22,050	Total	$16,069

Annual saving to property owner $5,981

Saving to property owner on complition of loan payments $15,960

Built-In Fire Protection And Fire Department Manning

by
Harry E Hickey
Associate Professor
University of Maryland

The number of companies required and the manning levels for each company are directly related to the number of hazards in a community. Any community has a range of hazards. Therefore, the geographical location and the nature of these hazards are prime factors in determining the location of engine and ladder companies.

PROPERTY HAZARD LEVEL REDUCTION

Generally, property hazard levels should be used to determine the number and type of fire companies required and the manning levels for eac

One method of measuring property hazard levels is to determine the amount of water required to control and extinguish a fire in a building c a group of buildings. Required fire flow will vary according to a building's ground floor area, height, construction, occupancy, internal fire protection and alarm systems (automatic sprinklers and alarm transmissior to emergency response service), and exposure conditions.

The Guide for the Determination of Required Fire Flow, which is published by the Insurance Services Office (ISO), can help to determine fire flow requirements for specific hazards (there is some question on the validity of the final computations). It is also helpful in assessing fi flow requirements according to a community's hazard variables. The guid states that by using these computations, fire flow requirements "may be reduced by up to 50% for complete automatic sprinkler protection. . Where buildings are either fire resistive or non-combustible construction, the reduction may be up to 75%". Thus, established fire flow values can be cut drastically by requiring the installation of automatic sprinkler pro tection.

Regardless of the method used to compute required fire flow, there i general agreement that the public protection equipment requirement incre with the fire flow requirement. Conversely, as the property hazard is reduced, so is the required fire flow and thus, the level of fire depart response.

A community policy to control and reduce property hazard levels by requiring automatic sprinklers can have a significant impact on holding line with fire department manning requirements. In addition to improved life safety and property protection, automatic sprinklers may reduce pro erty insurance premiums and the demand on the community's fire suppressi delivery system. This may open new service delivery options, such as improvement of emergency medical services with existing personnel.

HYPOTHETICAL CASE STUDY

The community of Newtown, which covers approximately 12.75 square miles, has 5 primary hazards characterized by: ordinary construction, four stories, ground floor areas from 43,000 to 50,000 sq. ft., occupanc at the moderate hazard level, and normal exposure conditions. It is assumed that these buildings are the worst fire hazards in the community and that the level of fire protection required for them will be equal or better for the rest of the community.

Without automatic sprinkler protection the ISO guide sets a required fire flow of 8,000 gallons per minute for each fire. However, using the water supply section of the ISO Grading Schedule, the basic fire flow fo

Newtown is 7,500 gallons per minute. The guide makes a clear distinction between required fire flow and basic fire flow.

If each of the primary hazards were retrofitted with a hydraulic automatic sprinkler system, the peak required fire flow for each fire demand zone would be reduced from 8,000 gallons per minute to 4,000 gallons per minute. This would reduce the basic fire flow for Newtown to 3,500 gallon per minute.

The reduction in fire flow requirements has a dramatic effect on manning levels. Fire suppression manning requirements were calculated on the following assumptions:

- a 48 hour work week
- average vacation and sick leave of 4 hours per week for each individ
- 38 persons are required to staff a suppression position 24 hours a d
- engine and ladder companies each require one officer on duty at all times

The ISO Grading Schedule was used to determine the number of engine an ladder companies required, based upon the response distance and the established required fire flows, and the manning requirements for each company.

Company and manning requirements were calculated with and without automatic sprinklers.

	Without Automatic Sprinklers	With Automatic Sprink
Stations	5	3
Engines	7	4
Ladders	3	1
Officers	42	15
Firefighters	209	76

Annual personnel costs (including fringe benefits) were estimated on the basis of $24,000 for each officer and $18,000 for each firefighter.

	Without Automatic Sprinklers	With Automatic Sprink
Officers	$1,008,000	$ 360,000
Firefighters	3,762,000	1,368,000
TOTAL	4,770,000	1,728,000

The reduction in personnel costs alone is $3,042,000. This hypothetic case does not consider the cost factors for installing automatic sprinkle community water system design, deactivation of two fire stations, or the potential savings on community insurance premiums.

It has been established that the property hazard level is the primary factor affecting manning levels for fire companies. When the hazard is reduced, so is the manning requirement. This is only one method of assessing the difference between protection from specific hazards with a complement of fire suppression personnel and increased private protection to lower the demand for public protection.

BY R. J. COLEMAN
Director of Fire Protection

and

G. L. CARMICHAEL
Fire Marshal
San Clemente, Calif., Fire Dept.

Faced with a tremendous increase in the residential fire problem as its population doubles in the next 10 years, San Clemente, Calif., has passed an ordinance requiring sprinkler systems to be installed in new residential construction. The ordinance also applies to the remodeling of more than 50 percent of a building.

There has been a great deal of talk over the years about residential fires, which account for the largest number of structural fires and take the most lives, but San Clemente has done something about the residential fire problem. The sprinkler ordinance is also aimed at restraining the cost of public fire protection while maximizing fire department services and putting technology to work for us.

What prompted the passage of the residential sprinkler ordinance was a unique growth situation in the city and preparatory work by the staff of the San Clemente Fire Department.

Land to be developed

San Clemente covers 15 square miles with a population of 25,000. Two thirds of the city, about 10 square miles, is vacant land. The three corporations which own this land are prepared to fully develop it within the next 10 years. The population of San Clemente is due to double by 1990.

The fire department staff several years ago realized that it faced this potential and instituted a fire department master plan project. One of the elements of the master plan was to examine alternative methods of providing fire protection during this period of unprecedented growth. Initially, the department received most of its information and training on the master plan project from attending the National Fire Academy fire protection master planning course.

Historically, 50 percent of the fire loss in San Clemente has occurred in single and multiple residential buildings. The five-year fire record also showed that the largest percentage of fires started in kitchens and living rooms. The result of this statistical data was the formulation of a master plan goal to "reduce the loss of life and property in dwelling fires by building fire protection into new construction."

Three systems studied

Research during the master plan project developed a great deal of information on studies of residential sprinkler systems, smoke detectors and early warning systems. These systems were immediately identified as possible means of mitigating the fire problem.

The first of these systems that was integrated into the city's codes was that of smoke detectors. A comprehensive smoke detector ordinance, patterned after the San Carlos one, was adopted in 1976. This ordinance requires the installation of smoke detectors in all new homes and in existing homes when they are sold or by 1981, whichever comes first.

Members of the fire department took some of their basic information on residential sprinkler tests from United States Department of Commerce studies. With the aid of several local automatic sprinkler companies, the department conducted a series of controlled burns, experimenting with a wide range of heads and installation specifications suggested by the Department of Commerce studies. These tests were run in cooperation with local building contractors and developers. Interested parties were allowed to witness the tests and make suggestions on how to incorporate sprinkler systems into their construction projects.

Four sprinkler goals

The residential sprinkler ordinance was developed with four major goals:

1. That it be low cost.
2. That it be aesthetically acceptable to homeowners.
3. That it be aimed at reducing liability in providing fire services.
4. That it speed the response of extinguishing agents in a dwelling fire.

One thing became apparent right away. The state of the art in residential sprinkler protection was not perfect. But, to draw an analogy, the fire department staff felt "that if the Wright Brothers had waited for the Concorde to be invented, they probably never would have built the first aircraft." The decision was made to take what information we had and move forward with the development of a comprehensive sprinkler ordinance for dwellings.

The San Clemente Fire Department operates with an all-volunteer force that is backed up by reserve fire fighters. Based on this operational situation, it was our intent to provide residential sprinkler systems with three objectives in mind. The first objective was to contain 90 percent of all dwelling occupancy fires to the room of origin. The second was to utilize the sprinkler system to prevent flash-over from extending a fire into rooms adjacent to the room of origin. The third objective was to provide fire suppression capability for the first 15 minutes of an alarm.

Fire department support

These three objectives recognized that these systems must be supported by fire suppression forces if they were to be 100 percent effective. These three objectives also recognized that the residential sprinkler system was primarily a tool to mitigate against fire spread during the reflex time period.

The department already had a partial track record on these systems. Due to the other problems in the community, such as limited access, underground garages, etc., the department had already required several apartment houses and condominiums to be sprinklered to NFPA Pamphlet 13-D requirements. Prior to passage of the ordinance, the fire prevention bureau had required these systems in approximately six of these occupancies. Three had been completed prior to the final drafting of the ordinance.

Consideration of this alternative was given a tremendous boost with the passage of proposition 13. This tax-limiting initiative highlighted the general problem of eroding revenue to support fire departments.

One of the most important elements in the study was that of cost. With home construction costs spiraling rapidly, one of the objectives of the study was to develop a system that would be economically feasible during construction. With single family dwelling construction costs running at over $40.00, the installation of a truly domestic residential system was a relatively insignificant amount. The staff estimated the cost to be only $700 to $800 during the construction of a home of about 2100 square feet.

Early warning system

The third system that has yet to be required by ordinance is the early warning alarm system to tie together the other systems. The fire department communications officer, Captain Bill Bundy, has authored an ordinance and designed specifications for an alarm system that will allow the fire department to monitor both smoke detectors and residential sprinkler systems with

There are many other elements of the residential sprinkler system too lengthy to discuss in this article. Two of the major construction requirements, however, will be tightly controlled by the fire department.

First, the system must be installed according to proper design. Through a series of inspections and testing, the fire department will examine every installation and compare it against the standards and engineering drawings.

Secondly, the quality of construction will be controlled through a series of permits authorized under the ordinance, which in summary states, "No one shall install a residential sprinkler system in San Clemente without a fire department permit." These permits can be obtained through the office of the fire chief. It will be his obligation, prior to issuance of a permit, to be satisfied that the applicant has adequate training and knowledge in sprinkler system plumbing practices.

One-year sprinkler installer permits are issued for a $10 fee that covers the administration costs of the fire department.

Premium cut sought

The fire prevention bureau is soliciting input from the insurance industry in an attempt to get a reduction in insurance premiums for occupancies that are protected by all three built-in systems. The results of that study are incomplete at this time.

In summary, the enactment of these amendments to the Uniform Fire Code should allow our city to maximize our fire suppression forces without facing spiraling costs or reduced revenue. It will not prevent our department from growing in terms of additional staff and equipment. As a matter of fact, the master plan also calls for two new fire stations.

It is still too soon to determine if the standards and the ordinances produce a statistically significant level of reduction in the fire problem. The fire department staff is continuing to build a partnership of the fire service, the sprinkler industry, the insurance industry, the building industry and the local citizenry to upgrade the ordinances if that becomes necessary.

Hopefully, when the development of the three vacant land areas is completed, we will have an environment that is considerably safer from a fire loss point of view than the average community. We really don't know that for sure. To compare to our early analogy about the Wright Brothers, we have now built in a system that is flying, but we are really not sure how it's going to land. Only time will tell! □ □

Sprinklers Cut Fresno's Fire Losses and Budget

EDWARD J. REILLY and JOHN A. VINIELLO

In the 1960s, the city of Fresno, California began the process of basing its municipal firesafety program on the installation of automatic sprinklers. As a result, the city decreased its fire losses, decreased the percentage of the municipal budget allocated to its fire department, and improved its insurance rating.

Many of the details of the Fresno program were explained in a March 1975 FIRE JOURNAL article entitled "How the City of Fresno Achieved Better Fire Protection." A major element of the program was the enactment by the Fresno City Council in 1961 of the Dangerous Building Ordinance, which focused on the central business district and gave city officials the power to remedy the hazards resulting from unsafe buildings or structures. City officials were empowered to condemn those buildings or order their repair, renovation, or restoration so that they would meet the requirements of the *Fresno Building Code*.

Under the provisions of the Dangerous Building Ordinance, buildings owners could choose among several alternatives to bring their buildings up to the requirements of the *Building Code*. Most owners found that the most economical way to comply with the *Code* was to install automatic sprinklers.

The city coupled the Dangerous Building Ordinance with a funding plan that city officials arranged with the local agency that administered the federal urban renewal program in Fresno. Federal funds were provided to the city by the US Department of Housing and Urban Development for the acquisition of property and the demolition of buildings not worth saving. The city's agreement with the urban renewal agency specified that any new construction in the city's urban renewal area would be sprinklered in accordance with NFPA 13, *Standard for the Installation of Sprinkler Systems*. Finally, the urban renewal agency agreed to help interested owners find loans for building renovation. The agency did not, however, provide funds to owners or guarantee loans made to owners.

As a result of these two actions by the city — enactment of the Dangerous Building Ordinance and the agreement with the federal urban renewal agency — sprinkler protection became almost universal in the 18-block central business district and a separate 22-block area once considered a slum. More than 95 percent of all the buildings in both areas ultimately were protected by automatic sprinklers.

Representatives of the National Automatic Sprinkler and Fire Control Association (NAS), which was involved in the initial discussions that resulted in the Fresno program, revisited the city in 1977 to study the results produced by the program. What follows is a recounting of the effects that the organization found the program had made on the fire department and fire losses.

Fire Department Results

In 1955, Fresno's population stood at 115,000. By 1977, 69,500 people had been added to its population, a

Mr. Reilly is President of the National Automatic Sprinkler and Fire Control Association, Inc. Mr. Viniello is that organization's Vice-President of Field Operations.

65 percent increase. In 1955, Fresno covered only 21 square miles. By 1977, through a process of annexation, its area had jumped to 58 square miles. During the same period, the number of Fresno's engine companies increased from 9 to 11, a 22 percent increase. Total paid fire-fighting personnel increased from 218 men in 1955 to 276 men in 1977, a 26 percent increase. The number of fire fighters on duty around the clock remained unchanged: 68 men on duty during any 24-hour period in 1955, and 68 men on duty around the clock in 1977.

The burden per fire fighter had increased enormously between 1955 and 1977. In 1955, there were 3.2 fire fighters per square mile of area to protect. By 1977, the number of fire fighters per square mile was reduced to 1.2 men per square mile. Therefore, each fire fighter was required to protect more than 2½ times the number of square miles of area in 1977 than he was required to protect in 1956.

The number of fire fighters on duty during any 24-hour period decreased from 6.04 men per 10,000 in 1955 to 3.64 men per 10,000 in 1977. So the fire department was protecting almost twice as many people and property in 1977 as it had predicted in 1955, and had to cover over 2½ times the geographical area with only 20 percent more equipment, and virtually no increase in manpower.

In 1955, Fresno's fire department received so few deficiency points that it was rated as a Class 1 department. If the fire department were to maintain its Class 1 rating, 14 new fire stations would have to have been added between 1955 and 1976. Assuming a cost of $1 million per station, including land and construction costs, this $14 million acquisition would have cost the taxpayers about $2.2 million per year, assuming a 6 percent municipal bond issue floated over a 20-year period.

Fourteen pumpers would have to have been added to maintain a zero deficiency point rating. At $65,000 per truck, this additional cost would add about $145,600 per year to the fire department budget with the same 6 percent municipal bond float for the same 20-year period.

It is difficult to calculate with precision the impact of additional manpower required to maintain a zero increment in deficiency points resulting from a manpower shortfall. However, in 1955, the Fresno Fire Department was up to full complement: six men per company, on duty 24 hours a day. By 1976, only four men could roll on a call during any hour of the day or night.

If the three-platoon system (three men working 56-hour shifts around the clock) had been in existence in 1955, 84 new fire fighters would have been required to meet full manpower needs of the department. To say it another way, Fresno's 1977 department of 276 men would have to have been increased to 360 men if the department were to maintain its Class 1 rating. This would have added about $1.26 million per year to Fresno's fire department budget. This would have increased the 1977 fire department budget from about $9 million per year to about $12.6 million. About a 40 percent increase. If the fire department budget came to 13 percent of the total in 1955, it would have come to about 11 percent in 1977 if manpower, fire stations, and equipment were to be maintained at zero deficiency point levels.

Fire Losses

Between 1956 and 1966, per capita fire losses averaged $4.71. In the decade immediately following, per capita fire losses averaged $8.11. However, construction cost more than doubles every decade. NAS wanted to measure the cost of replacing buildings destroyed by fire, so it adjusted per capita fire losses to the Building Construction figures published by *Engineering News Record*. Adjusting per capita fire losses to the Building Code Index, "real losses" dropped 22.4 percent in that decade.

Of even greater significance is the fact that nonresidential losses averaged 62.1 percent at the beginning of the 20-year period. By 1976, nonresidential losses had plunged to 43.5 percent of the total, and it was these buildings that became the object of the intensive automatic sprinkler master plan.

Conclusions

The Fresno program is a comprehensive fire defense master plan.

In the decade that followed its implementation, the city's fire losses (adjusted for inflation) were cut by 22 percent.

The fact that 95 percent of two urban renewal areas covering 40 square blocks were protected throughout by automatic sprinklers under a combination of ordinances made it possible for the fire department to take full advantage of the 50 percent reductions permitted under the "fire flow" standards of the Insurance Services Office (ISO) grading schedule and the additional 25 percent credit given by ISO for superior construction. This resulted in the imposition of almost *zero* deficiency points against the water department.

Intelligent planning based upon a thorough understanding of the ISO grading schedule enabled the building and fire departments to take the steps needed to upgrade the city from an ISO Class 3 to Class 2 city.

The implementation of the plan resulted in economies in fire department operations of up to 40 percent of the total operating budget for that department. The 1977 fire department budget of $9 million would probably range up to about $12.6 million if the 84 added fire fighters, 14 pumpers, and 14 fire stations required to maintain a zero

(Continued on page 91)

deficiency point rating had been implemented as a solution to the fire defense strategy.

Real losses (measured in replacement cost of buildings destroyed) were reduced by 22 percent. While most cities in the United States are operating with fewer fire stations, fewer pumpers and ladders, fewer fire fighters, and less equipment than they had 20 years ago (and many are protecting more land area), Fresno chose to do so out of an intelligent master concept. Its results: a more efficient municipal government, more fire protection for its citizens at less cost, lower insurance rates, and a smaller, more efficient, higher paid, and well-trained fire department, plus a planning and inspection department with the proven capability to develop and execute a "cost effective" master plan for municipal fire defense. △

Light-Wall and Special Light-Weight Pipe in Automatic Sprinkler Systems *(continued from page 61)*

Table 1.

Pipe Trade Size	*Internal Diameter (Inches)* Schedule 40	Schedule 10[1]	*% of Reduction in Friction Loss*
1"	1.049	1.097	20%
1¼"	1.380	1.442	19%
1½"	1.610	1.682	19%
2"	2.068	2.157	19%
2½"	2.469	2.635	27%
3"	3.068	3.260	26%
4"	4.026	4.260	24%
5"	5.047	5.295	21%
6"	6.065	6.357[2]	20%
8"	8.071[3]	8.249[4]	10%

[1] Schedule 30.
[2] 0.134" wall thickness — light-wall pipe.
[3] 0.188 wall thickness — light-wall pipe.
[4] ASTM A-135 light-wall steel pipe.

An illustration of the effect of specifying light-wall pipe as a substitute for standard-weight pipe in an automatic sprinkler system follows. A warehouse with high-piled storage of a type requiring 0.38 gpm per square foot over 2,000 square feet of floor area uses 17/32-inch orifice automatic sprinklers. The pressures required for this automatic sprinkler system are illustrated in Table 2 for both standard-weight and light-wall pipe.

Fire pump power demand in this example can be reduced by as much as 13 percent, depending on pump efficiency. Table 2 illustrates that this water supply will be required to deliver 16.7 psi less pressure at 760 gpm.

Smooth Interior Pipe Walls

Friction loss is a function of interior wall roughness. Light-wall pipe, manufactured in accordance with ASTM A-135 specifications, is made by the electric-resistance-weld process. The steel used to form this pipe is rolled, either cold or hot, and has a smooth surface. The pipe is generally formed cold, and thus has little opportunity for scale formation and roughening of the surfaces. Standard-weight pipe is often formed hot, and may include scale and other imperfections on its surfaces. Ten percent improvement in surface finish can result in a 16 percent reduction in friction loss.

Table 2

Pressure Required	*Standard Weight*	*Light-Weight* Schedule 10
To obtain sprinkler discharge	22.6	22.6
Friction Loss:		
Branch Lines	32.0	26.1
Mains	15.0	34.2
Underground	15.0	15.0
Elevation	10.8	10.8
TOTAL	125.4	108.7

SUMMARY

1. Sprinkler system designers have an added option of using Schedule 10 light-wall pipe.

2. Substitution of Schedule 10 light-wall pipe for Schedule 40 pipe will significantly reduce the total pressure and power demand on the water supply.

3. Reduction in pressure requirements can save installed and operating costs as follows:

- Less horsepower required to deliver water;
- Smaller pumps or the ability to supply sprinkler systems from existing water supplies;
- Smaller pipe sizes — lower pipe cost — less weight — less labor and freight costs. △

Fire Protection Water Standby Charges: Not in the Public Interest

by BRIAN R. SHUTE

A high fire death rate is peculiarly an American problem. No other industrialized nation comes close to the American fire death rate. Fire deaths and injuries per million population in the United States are nearly three times that of Sweden, which has the next highest death and injury rate by fire.

In 1978 over 3 million fires caused over $4 billion worth of fire losses. The dollar value of the damage and destruction by fire does not even begin to approximate the actual losses because serious fires create indirect business and community losses such as:

(a) Loss of customers

(b) Loss of profits

(c) Cost of retaining key personnel during shutdown

(d) Loss of taxes on destroyed property

Finally, there are indirect losses of a personal nature. These may be even more difficult to estimate, yet their importance should not be neglected. In addition to financial losses incurred through temporary unemployment and expenses incurred in finding and moving to new housing, there is the destruction of irreplacable personal belongings.

Water is an indispensable commodity when it comes to fighting fire. Fires cause billions of gallons of water to be consumed putting them out. Consequently, given the compelling social goal of avoiding the catastrophic fire losses, together with the absolute necessity of water for basic human existence, a municipality should develop policies which maximize its ability to provide both fire protection and adequate water supplies.

According to the National Fire Protection Association, private fire protection systems (of which automatic sprinkler systems are the backbone) are the most effective means of controlling fires in buildings. Not only do private fire protection systems put out fires, they do not require nearly as much water to extinguish fires on the average as is required by the Fire Department. The expenses of the Fire Department incurred fighting sprinklered fires are much less, and the chance for injury to firemen as a result of fire is almost negligible in sprinklered buildings.

Brian R. Shute is an Anchorage, Alaska attorney. He represents the Water Conservation Association of Anchorage.

In Anchorage, Alaska, in 1977, the Public Utilities Commission approved a new tariff for the Anchorage Water Utility. As a result, the utility required owners of private fire protection systems to make a monthly payment for merely having an automatic sprinkler system connected to the utility water supply. The owner was required to pay even when he did not use any water at all.

It came to the attention of the Water Conservation Association that the monthly charges in some cases were so high that they were in excess of insurance savings realized through installation of the system. Consequently, some owners were deciding to turn off their fire protection system because it had become uneconomical to maintain. The Water Association was also aware of some new construction for which plans for installation of private fire protection systems had been cancelled because the stiff water standby charge was too high in relation to the savings which could be realized by having the systems installed.

The Water Conservation Association took the position that the standby charge which owners of private fire protection systems were being required to pay was not in the interest of conservative water usage, was not in the interest of increasing the fire worthiness of the general Anchorage municipal area, and did not further cooperative planning to solve the interrelated problems of providing adequate fire protection and water supplies to the City.

The Water Conservation Association prepared a memorandum to more fully explore whether the standby charge fire protection owners were being required to pay was in the public interest. A detailed fact digest was compiled. As a result of its study, the Water Conservation Association concluded that the standby charges were not in the public interest and, consequently, should either be eliminated or alternative methods found to restore the economic incentives for installing private fire protection systems so the water conserving and fire loss reducing characteristics can be promoted.

As a result of its efforts, the Water Conservation Association has apparently succeeded in getting the Municipality of Anchorage to agree to a potential of a reduction in standby charge of as much as 75 percent or more. However, the Association would like to see the charge eliminated completely for the following reasons:

PRIVATE FIRE PROTECTION SYSTEMS BOTH CONSERVE AVAILABLE WATER SUPPLIES AND GREATLY REDUCE LOSSES CAUSED BY FIRES.

1. Private fire protection systems conserve water supplies.

Statistics showing the effectiveness of automatic sprinkler protection are phenomenal. Only in rare instances do automatic sprinkler systems fail to control fires in sprinklered buildings. The failures are seldom due to the sprinklers, but rather the lack of water often because the system has been turned off either intentionally or by vandals. A complete record of fires in sprinklered buildings would show that their efficiency probably approaches 100%. Of all the fires controlled by sprinklers more than 90% of them are controlled by three or less sprinkler heads.

The effectiveness of automatic sprinklers stems from their presence at the potential scene of a fire before the fire starts. They can apply water immediately where it is needed because there are no problems of access to the seat of the fire or interference with visibility for fire fighting due to smoke. Sprinklers can extinguish fires much earlier than a Fire Department could ever respond to an alarm. The amount of water necessary to put out a fire in its beginning stages is nowhere near the amount required for the Fire Department to put it out after it gets going.

Performance characteristics of sprinklers indicate that standard automatic sprinklers discharge anywhere from 15 to 55 gallons of water per minute, depending on the pressure at the sprinkler head. In comparison, a heavy-attack two and one-half inch mobile hose line in operation can consume more than two hundred gallons per minute. If the fire is not put out in its infant stages (as occurs over 90% of the time when automatic sprinklers are deployed), it may take a number of heavy-attack lines hours to control the fire, if the water supply holds out that long.

2. The total required fire flow for a municipality is reduced with the widespread installation of private fire protection systems.

The traditional method for estimating the water supply required to serve a municipality's fire protection needs is by computing fire flow requirements. The latest developments in estimating fire flow requirements are found in the **Guide for Determination of Required Fire Flow** published by the Insurance Services Office (ISO) in 1972. The fire flow formula reflects significant water conservation propensities of private fire protection. Depending upon the flamability of a given building, the fire flow required is reduced by twenty-five to fifty percent when a sprinkler system is present in a building.

The guide for determining required fire flow just referred to is a determination made for specific buildings. The ISO utilizes this formula for determining fire flow requirements for Anchorage as a City. The procedure for making a city-wide fire flow determination is more fully described in the ISO **Municipal Grading Schedule.**

The last analysis of Anchorage fire flow requirements was performed and summarized by ISO in a 1969 report. ISO is presently in Anchorage reevaluating the fire flow requirements. The 1972 fire flow guide has been revised since the last fire flow study was done for Anchorage in 1969. ISO engineers indicated that the reduction in fire flow requirements for a building can be even greater than 50%, to as much as 75%, given the right kind of building construction.

It was the opinion of the ISO engineers that although the ISO methodology did not enable a precise computation of the reduction in Anchorage fire flow requirements caused by the private sprinkler protection, it was significant. ISO indicated that the sprinkler installation in the central business district alone made Anchorage's central business district a much better fire risk.

Finally, ISO engineers indicated that with all of the factors of the Municipal grading schedule taken into account, they were hopeful that the required fire flows for Anchorage would be less than the 1969 studies indicated. However, the investigation work for the study has not been completed, and consequently the fire flow requirement is still to be determined.

In 1969, ISO engineers completed a report on Anchorage. It is significant that one of the improvements recommended by ISO was installation of automatic sprinkler equipment in all basements exceeding 2,500 square feet.

Examination of the respective quantities of water needed by the Fire Department versus sprinkler systems to extinguish fires, the 25% to 75% discount for fire flow required for a given building, and a study of the Municipal Grading Schedule all indicate that the amounts of water demanded to maximize Anchorage's fire protection efforts are reduced by widespread installation of private fire protection systems. The conservation aspects of private fire protection are significant and should be encouraged.

PRIVATE FIRE PROTECTION REDUCES THE COST OF OTHER PUBLIC SERVICES.

In addition to the water conservation aspects of automatic sprinkler systems, and the significant savings in life and property, there are other public benefits from widespread installation of private fire protection systems. Among these are:

1. Both the economic and physical burden of the fire department are decreased since private fire protection generally puts out the fire before the fire department even arrives. This also decreases the hazards of fighting fire.

2. The cost of manpower and time fighting fire is reduced and therefore the money necessary to operate the Fire Department itself is also lessened.

3. Private fire protection decreases fire insurance cost for the entire city.

4. Private fire protection increases municipal tax revenues by encouraging property improvement.

5. Private fire protection increases a community's total fire protection security, preventing conflagrations and exposure fires.

6. Private fire protection results in lessening the cost of capital improvements to the water utility since widespread installation of private fire protection decreases

the required fire flow necessary for adequate municipal fire protection.

7. Private fire protection saves billions of gallons of water which is in chronic short supply in most cities.

8. The encouragement of private fire protection systems is consistent with the State policy of encouraging fire protection devices (smoke alarms). Since private fire protection reduces the cost of the fire department for fighting fires in sprinklered buildings, State revenue sharing money can be used for other fire department purposes, making more efficient use of the State money.

9. The omission of automatic sprinklers imposes upon the architect more stringent rules governing compartmentalization, fire proofing, exit distance spacing, travel distance, and exterior design requirements. It costs more to construct without sprinklers.

BECAUSE WIDESPREAD INSTALLATION OF PRIVATE FIRE PROTECTION CONSERVES SCARCE WATER RESOURCES AS WELL AS SIGNIFICANTLY DECREASING LOSS OF LIFE AND PROPERTY FROM FIRE, THE MUNICIPALITY SHOULD ENCOURAGE WIDESPREAD INSTALLATION OF THE SYSTEMS BY PROVIDING NEW INCENTIVES FOR OWNERS TO INSTALL PRIVATE FIRE PROTECTION, AND BY CONTINUING EXISTING INCENTIVES.

The primary incentive for voluntary installation of private fire protection systems is the reduced insurance rates to the owner which enable him to amortize the cost of installation over a period of a few years.

Because of the safety factors accompanying installation of automatic sprinklers and the reduced fire flow characteristics, an owner installing private fire protection can reduce his insurance premiums when the installation has been approved by ISO. This incentive for voluntary installation of private fire protection had been largely eradicated by the implementation of a flat monthly charge by the Anchorage Water Utility of anywhere between $7.10 to $254.10 per month, depending upon the size of pipe delivering water to the building. The most prevalent sizes of pipe are four, six and eight inch pipe for which charges were $28.45 per month, $63.55 per month and $112.85 per month, respectively. These rates nearly eat up, and in some cases entirely eliminate, the savings on insurance an owner achieves by installing private fire protection. Even when the rates do not entirely eat up the insurance savings, they eat up so much of the insurance savings that it takes too long to amortize the cost of installation, and it is uneconomical to install private fire protection.

But when fire protection needs and water supply requirements are examined in the total picture, it appears that the widespread installation of private fire protection will alleviate rather than create additional fire protection demands upon the water supply; the water saving capacities of automatic sprinklers will reduce the total quantity of water required to fight any given number of fires. To levy a standby charge, whether water is used or not, which eliminates the insurance cost advantage is to create a disincentive and discourage voluntary installation of private fire protection systems. Obviously, this will result in a corresponding reduction in water conservation and increase in total potential demand for water for fire protection.

Largely through the work and application of ISO's Municipal grading schedule, the Municipality of Anchorage receives a fire risk rating which determines fire insurance rates for the City. As has already been discussed, widespread installation of private fire protection systems contribute significantly to reducing fire flow requirements for Anchorage, and, therefore, play a part in reducing fire insurance premiums to property owners in the city generally. It is those owners who do not have private protection systems who raise insurance rates, not owners who have installed such systems. To penalize owners for installing private fire protection systems by requiring them to pay this standby charge is to penalize the wrong people. It is the person who fails to install the sprinkler system who contributes to increased insurance rates, who requires immeasurably greater quantities of water to be consumed in putting out fires, and who creates a public hazard, since a fire in a non-sprinklered building is much more likely to rage out of control and burn property of others nearby.

As owners and citizens of the Anchorage municpal area, private fire protection owners have a vested interst in the continuing viability of both the fire protection effort and the adequacy of the water supply. The members of the Water Conservation Association feel that since widespread installation of private fire protection systems not only makes Anchorage a safer place to live, but also reduces Fire Department costs and conserves precious water resources, that the incentive for voluntary installation of sprinklers should be restored. There are a number of options which can be looked at to achieve this purpose.

METHODS TO OPTIMIZE THE FIRE PROTECTION EFFORT AND PROVIDE ADEQUATE WATER SERVICE.

The Anchorage Area Borough Assembly is empowered by the Municipal Charter to prescribe rules and procedures for the operation and management of municipal utilities. Municipal Charter, Article XVI (C) (1975). The Water Conservation Association offers the following alternatives to the water standby charge as being more productive solutions to the total municipal problem of providing adequate fire protection and sufficient water supply.

1. Grant a tax credit to owners who install private fire protection systems. This will indirectly make those who do not voluntarily install private fire protection systems pay for their counter productive and wasteful practice of depending upon the resources of the Fire Department to fight fires. This will also restore the incentive for owners to voluntarily install private fire protection systems, which is lost when insurance savings are eaten up by the standby charge.

2. Simply stop the standby charge for private fire protection. The Water Utility will not have the benefit of the alternative source of revenue from the ad valorem property tax, but this lack of revenue will be more than made up by the savings which result from the public benefits created by the incentive to install private fire protection systems.

Cordova Chamber of Commerce

BOX 99

"The Friendly City"

CORDOVA, ALASKA 99574

MT. ECCLES

January 30, 1980

Mr. Robert Shirnberg
Post Office Box 1167
Kenai, Alaska 99611

Dear Mr. Shirnberg,

This is to inform you that on January 29, 1980, the Cordova Chamber of Commerce took action supporting proposed legislation for the installation of Private Fire Protection Systems.

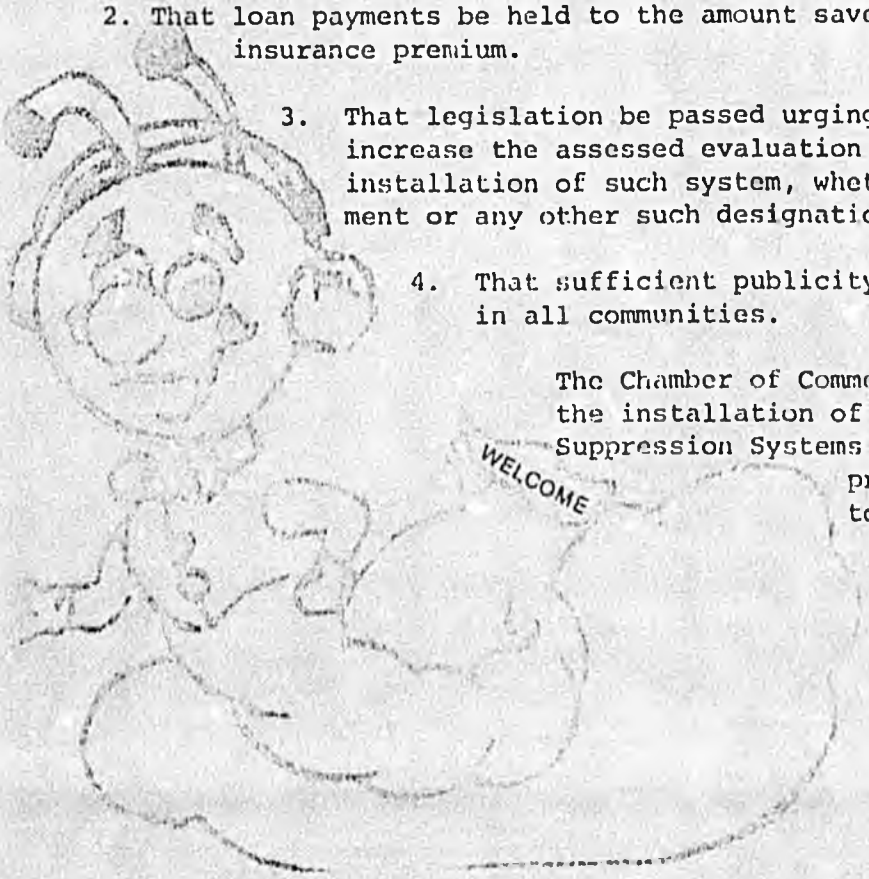
The following are specific concepts supported by this Chamber:

1. Low interest or no interest loans with a minimum of paperwork to be made available to businesses for the purpose of installing Private Fire Protection and Suppression Systems.

2. That loan payments be held to the amount saved on the establishemnt's fire insurance premium.

3. That legislation be passed urging local municipalities to not increase the assessed evaluation of the property because of the installation of such system, whether it be named as an improvement or any other such designation.

4. That sufficient publicity be given to business people in all communities.



The Chamber of Commerce feels that incentives for the installation of Private Fire Protection and Suppression Systems will reduce the loss of lives, property, and lost man-hours due to destruction of business property.

Sincerely,

Robert L. Varnam

Robert L. Varnam

Alaska Fire Chiefs' Association

March 4, 1980

The Honorable Bill Parker
Pouch V
Juneau, Alaska 99811

Dear Representative Parker:

This letter is in support of House Bill 648 and Senate Bill 370 which are strongly supported by the Alaska Fire Chiefs' Association and the Alaska State Firefighters Association.

This bill will make low interest loans available to property owners to finance the installation of private fire protection systems, it will provide tax credits to property owners with private fire protection systems, and it will eliminate water standby utility charges on property owners' utility bills. It is an impressive program which will save cities and property owners money, without increasing mandatory regulation or other red tape.

Upon reading the enclosed position paper authored by the above Associations, I am sure you will agree with the Firefighters and Fire Chiefs that this bill is something long over due and it should be strongly supported.

When the program is explained every organization to whom the program has been presented has enthusiastically supported the program. The Fire Chiefs' Association is in receipt of letters from the Cordova Chamber of Commerce, the City of Ketchikan, the Water Conservation Association, all of which enthusiastically support the legislation. It is understood that more enthusiastic support is on the way and building. Please support House Bill 648 and its companion Senate Bill 370 this session. Thank you.

Very truly yours,

ALASKA FIRE CHIEFS' ASSOCIATION

James Evans, President

P.S. The sponsors of the House and Senate bills have been provided with a Digest of factual material which conclusively and emphatically documents the effectiveness of private fire protection in controlling fires, and, therefore, local government costs. A copy of that Digest is enclosed for the use of your Committee.

LOSS OF LIFE AND DAMAGE TO PROPERTY FROM FIRE

Throughout the world fire takes a heavy toll of human life. The progress that has been made in controlling this tragic waste has been due primarily to the intelligent application of the principles of fire prevention and protection discussed in other sections of this HANDBOOK.

In this chapter, the present and past record of destruction of life by fires and explosions in the United States is reported, and the factors affecting life safety from fire are discussed. In the other chapters of this Section, property damage is similarly treated, fire investigating and reporting are discussed, and large loss fires and conflagrations are analyzed.

A. Deaths and Injuries by Fire

According to estimates by the NFPA Fire Analysis Department, the annual fire death toll in the United States has averaged about 12,000 per year over the last 20 years. The number increased in absolute terms until 1970. Since then, it has shown a slight decline. (In 1974 the estimate was 11,600, a decline of 100 from the previous year.) In general, the risk of death from fire to a given individual has been declining fairly steadily, as can be seen from the death rate per million population (see Fig. 1-2A).

A high fire death rate seems to be peculiarly an American problem. No other industrialized nation comes close to the American fire death rate (see Fig. 1-2B).

Fire Injuries

Personal injury by fire, always painful and often disfiguring, involves about ten times the number of deaths in the United States. According to estimates by the NFPA at least 123,000 fire-related injuries occurred in the United States in 1974. Every fire injury is a potential fatality, although improvement in medical techniques has substantially improved the chances of recovery from serious fire injuries.

Nonfatal fire casualties are principally due to burns and to the inhalation of carbon monoxide and other gaseous products of combustion, though many casualties involve various other types of injury.

Trend of Fire Casualties

The principal reason that gradual improvements in life safety have not resulted in a more significant downward trend in the actual number of fire casualties in the rapid growth of population in recent years. From 1964 to 1974 the number of people in the United States increased about 10 percent. During the same period, the annual death rate from fire decreased 2¼ percent.

The annual total of fire deaths is continuing, however, at a high level in spite of improvements in building construction, more widespread installation of automatic protection, more effective fire prevention campaigns, and more efficient fire department operation. While these factors have all had their effect in improving life safety from fire, there have been other offsetting factors, particularly the progressive increase in the smoking habit and the general increase in the use of flammable liquids.

When a going industry is struck by fire, and key processes or equipment sustain damage, serious business interruption can occur. Such business interruption can have one or more of the following effects:

1. Losses to the Fire-damaged Business
   (a) Loss of customers
   (b) Loss of return on capital investment
   (c) Loss of profits on finished goods
   (d) Loss of confidence of stockholders
   (e) Loss of credit standing
   (f) Loss of good will of customers, employees, and the community
   (g) Loss of trained personnel who transfer to other jobs
   (h) Cost of retaining key personnel during shutdown
   (i) Loss of productive services of key personnel retained during enforced shutdown
   (j) Seizure of fire insurance payments by uneasy creditors
   (k) Excessive replacement costs due to overtime, inability to buy at time most advantageous to buyer, etc.
   (j) Cost of demolition
   (m) Cost of replacing depreciated buildings and equipment with new facilities
   (n) Continuance of fixed charges during shutdown.
   (o) Cost of hiring temporary quarters
   (p) Loss of patterns, valuable records, and other items that cannot be replaced or can be replaced only at great cost
   (q) Loss of earning power of patents, trade marks, etc.
   (r) Loss of value of past advertising
   (s) Inability to defend against unjust claims due to loss of records
   (t) Loss of rent from tenants

2. Losses to the Community
   (a) Loss of circulation of employee payroll
   (b) Increased burden on welfare funds
   (c) Loss of business by suppliers of raw materials and services to fire-damaged plant
   (d) Loss of a labor market
   (e) Loss of taxes on destroyed property

In some special cases, a single fire can seriously hamper production in an entire industry. The 1954 fire in an automatic transmission plant, in Livonia, Mich., halted production for several months. Its transmissions were used in six makes of automobile. Their unavailability led to sharply depressed sales for five major U.S. automobile makers. Indirect losses were never accurately estimated.

Another example is a fire in a telephone exchange in downtown New York City in 1975 that disrupted service to 170,000 phones. The impact of such an outage on a major commercial center, such as the Wall Street financial district, is hard to assess, but it must have been substantial.

These two cases indicate the magnitude that indirect losses can assume.

Finally, there are indirect losses of a personal nature. These may be even more difficult to estimate, yet their importance should not be neglected. In addition to financial losses incurred through temporary unemployment and expenses incurred in finding and moving to new housing, there is the destruction of irreplaceable personal belongings.

PART II

S T A T I S T I C S

HOW SPRINKLERS OPERATE AND THEIR EFFECTIVENESS AT REDUCING LOSSES CAUSED BY FIRE

FUNDAMENTALS OF SPRINKLER PROTECTION

Automatic fixed extinguishing systems are the most effective means of controlling fires in buildings. In order to understand the capabilities of these systems, a thorough understanding of their use is essential. This Section deals with one such extinguishing system; sprinklers.

A. Development of Sprinkler Protection

The rapid growth of business and industry and the resultant increase in fire hazards and property values brought about the need for more adequate protection against fire. The difficulty of reaching a fire with hose streams has often been demonstrated, and such simple fire protection as water pails, standpipes, and hose equipment has proved inadequate unless the fire was discovered in its early stages. Although fire control has been made easier by improved building construction, comparatively little headway was made in reducing fire loss involving delayed detection until the advent of the automatic sprinkler.

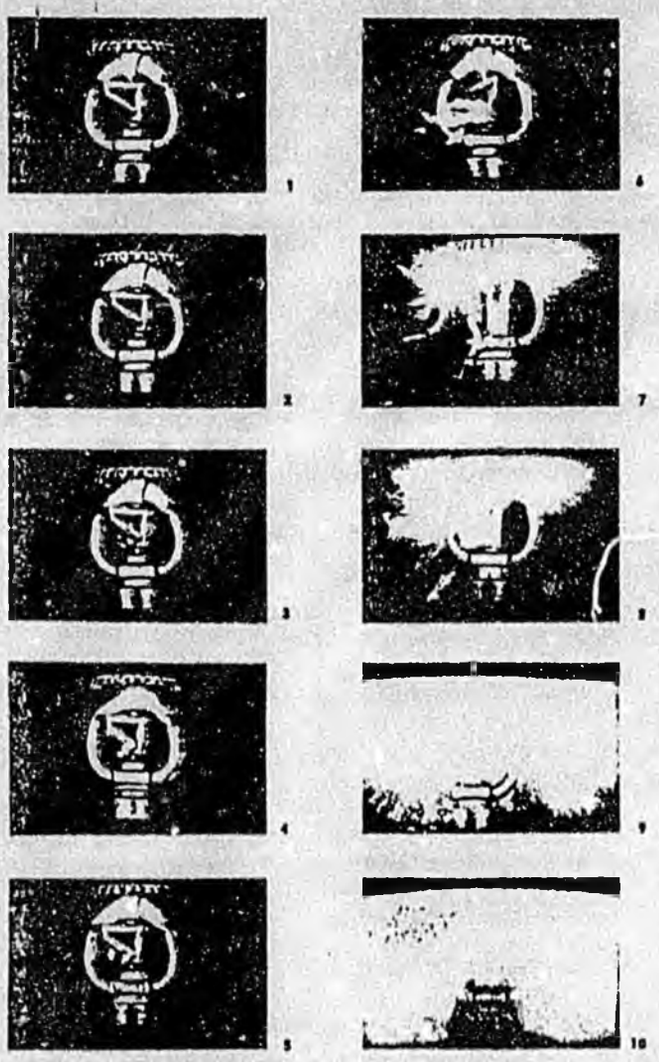

Fig. 14-1A. Operation of a typical fusible link automatic sprinkler is shown in this sequence of photos. As heat melts the solder, separation of members of the soldered link (the sloping side of the triangle in photos 1 to 5) is followed by complete separation of the link and lever arrangement (photo 6) which releases the cap over the sprinkler orifice allowing water to escape and strike the deflector (photos 7 to 10).

The Automatic Sprinkler

Automatic sprinklers are devices for automatically distributing water upon a fire in sufficient quantity either to extinguish it entirely or to prevent its spread in the event that the initial fire is out of range of, or is of a type that cannot be extinguished by, water discharged from sprinklers. The water is fed to the sprinklers through a system of piping, ordinarily suspended from the ceiling, with the sprinklers placed at intervals along the pipes. The orifice of the fusible link automatic sprinkler is normally closed by a disk or cap held in place by a temperature-sensitive releasing element. Figure 14-1A shows in stop-action photo sequence the operation of a typical fusible link, upright automatic sprinkler.

Perforated Pipe and Open Sprinkler Systems

The forerunners of the automatic sprinkler were the perforated pipe and the open sprinkler. These were installed in a number of mill properties from 1850 to 1880 (see Fig. 14-1B). The systems were not automatic, the discharge openings in the pipes often clogged with rust and foreign materials, and water distribution was poor.

Open sprinklers, an improvement over perforated pipes, consisted of metal bulbs with numerous perforations attached to piping and intended to give improved water distribution. This system was only slightly better than the perforated pipe.

Early Automatic Sprinklers

The idea of automatic sprinkler protection, whereby heat from a fire opens one or more sprinklers and allows the

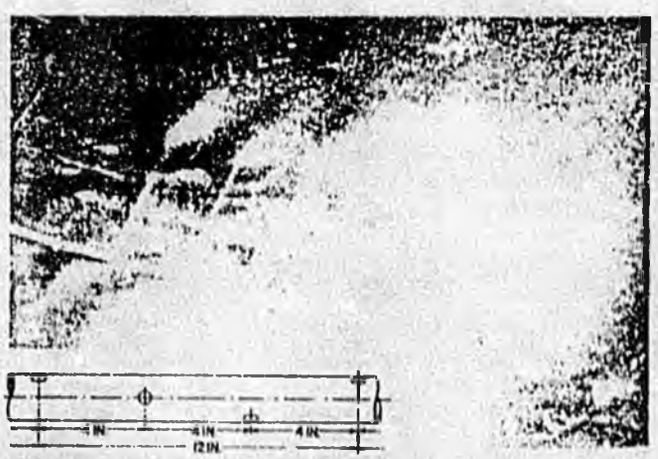

Fig. 14-1B. Early Perforated Pipe Sprinkler System: Water is shown discharging from a length of pipe representing what was the type of sprinkler protection in use from 1850 to about 1880. The inset shows the locations of perforations and the distances between them on a typical length of perforated pipe as was installed by the Providence Steam and Gas Pipe Co. (Grinnell Corp.)

Source: National Fire Protection Association; Fire Protection Handbook, pp. 14-1 through 14-48 14th edition 1976

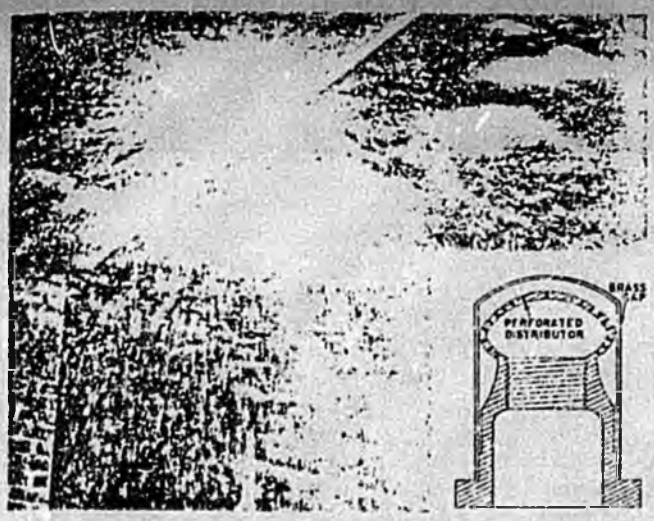

Fig. 14-1C. An Early Automatic Sprinkler: Water is shown discharging from a Parmalee No. 3 upright sprinkler which was first used in 1875. It consisted of a brass cap soldered over a perforated distributor and was designed to screw onto a nipple. The inset shows a cross-sectional view of the sprinkler.

water to flow, dates back to about 1860. Its practical application in the United States, however, began about 1878 when the Parmelee sprinkler was first installed. This sprinkler, while very crude when compared with modern devices, gave generally good results and proved conclusively that automatic sprinkler protection was both practical and valuable. (See Fig. 14-1C.)

B. Value of Automatic Sprinkler Protection

Automatic sprinkler protection helped develop modern industrial, commercial, and mercantile practices. Large areas, high buildings, hazardous occupancies, large values, or many people in one fire area, all tend to develop conditions which cannot be tolerated without automatic fixed fire protection. Part C of this chapter contains material on the performance of automatic sprinkler systems.

Safety to Life

Automatic sprinklers, properly installed and maintained, provide effective safeguards against loss of life by fire. Their value is psychological as well as physical: they give a sense of security to the occupants of buildings, and minimize the possibility of panic.

NFPA records of loss of life by fire show that in completely sprinklered buildings fire fatalities have been minimal.* They are limited to situations where sprinklers cannot be expected to be effective, such as in cases where the water is shut off, or where suffocation occurs before a fire is large enough to cause sprinklers to operate. Loss of life can also be caused by explosions where sprinklers have no opportunity to be effective.

Automatic sprinklers are particularly effective for life safety because they give warning of the existence of fire, and at the same time apply water to the burning area. With sprinklers there are seldom problems of access to the seat of the fire, or of interference with visibility for fire fighting due to smoke. While the downward force of the water discharged from sprinklers may lower the smoke level in a room where a fire is burning, the sprinklers also serve to cool the smoke and make it possible for persons to remain in the area much longer than they would if the room were without sprinklers.

Objections sometimes advanced against automatic sprinkler installation in the interest of life safety are generally based on misconceptions of the basic characteristics of sprinkler protection. The opinion is sometimes expressed that sprinkler discharge might drench people and cause panic or illness. This objection ignores the fact that without sprinklers the same people in the fire area would perhaps be burned to death. There is no case in the NFPA records of over 100,000 fires in sprinklered buildings where water from automatic sprinklers has in any way contributed to panic or caused any other hazard to occupants.

Another common misconception is that *all* sprinklers discharge water at the time of fire. This is not the case, as most fires are controlled by only a few sprinklers in the immediate vicinity of the fire.

Other objections to automatic sprinkler protection are based upon cost, and occasionally upon appearance. These objections are unsound where conditions are such that sprinklers are needed for life safety. Sprinklers are generally no more expensive than some decorative floor coverings, and aesthetic designs are available in sprinklers.

Contrary to popular opinion, automatic sprinklers are practicable for dwellings and other small properties. In country areas where water supplies are limited, a pressure tank can be provided with sufficient capacity to control the fire during evacuation.

NFPA 101, Life Safety Code, recognizes sprinklers in numerous ways, particularly to offset deficiencies in existing buildings. For example, longer travel distances to exits and interior finish of a higher combustibility are permitted with sprinklers.

Recent developments in the sprinkler industry have resulted in systems and discharge devices that will cycle on and off. When a fire occurs, this system reacts to the increase in temperature and discharges water. When the temperature decreases to a predetermined level because the fire has been controlled or extinguished, the system automatically stops the flow of water. Should the fire flare up again, the system will repeat this cycle. This cycling continues until the fire is either out or the system is shut off.

Protection of Property

Figures available on the fire loss in manufacturing and mercantile properties where sprinklers are installed show a much better loss/value ratio than those properties not so equipped. Insurance may largely compensate for property loss, but a severe fire loss goes much further.

Prevention of Business Interruption

In addition to the saving in direct fire losses due to sprinkler protection, there is a saving represented by the

* The only fatalities in fully sprinklered properties reported to the NFPA were caused by explosions or flash fires; by ignition of the bedding or clothing of a person who was too young, too old, too intoxicated, or too handicapped in some other way to protect himself properly; by closure of water supply valves to the sprinkler system; or by hazards too severe for effective sprinkler performance in the protected property. Explosions in sprinklered properties have caused fatal injuries to occupants or have so damaged sprinkler piping as to render the systems virtually useless, with resultant loss of life. Severe flash fires have under unusual conditions traveled in advance of sprinkler operation, trapping victims before they had time to reach safety.

In those isolated instances of fatalities to sleeping, handicapped, or intoxicated persons, ignition of clothing or bedding caused fatal burns or asphyxiation either because the small fire did not generate sufficient heat to fuse a sprinkler, or because the victim had suffered fatal injuries before the sprinkler operated. In these latter instances, however, the sprinklers protected the lives of persons in adjoining areas.

Source: National Fire Protection Association; Fire Protection Handbook, pp. 14-1 through 14-48 14th edition 1976

freedom from business interruption. There also is an undetermined but possibly even greater reduction in conflagration and exposure losses, which reasonably may be attributed to automatic sprinkler protection. The destruction of property and its adverse association and sometimes permanent effect upon business may be, and often is, a great hardship, not only to the owner, tenants, and employees, but also to the community as a whole. Safeguarding a business from serious interruption by fire is often a determining factor in a decision to install sprinkler protection.

In many situations, sprinkler protection is required by law for specific parts of the building only. Where partial systems are required, complete systems should be installed. Partial systems are not cost effective. Should the fire start remote to the system, it will have no effect on the growing fire. Should the fire burn into the protected area, it will generally have developed sufficient intensity to overpower the sprinklers, thereby wasting water needed by the fire service to fight the fire.

Minimizing of Water Damage

Standard sprinkler systems have devices which automatically give an alarm in case of sprinkler operation; thus, they not only apply water at the point most needed, but also give an audible signal. This permits immediate check of fire conditions and minimizes water damage.

A properly installed sprinkler system will generate less water damage than the application of hose streams by the fire service. Sprinklers are not hampered in their operation by smoke or heat as is the fire service. Sprinklers can apply water efficiently and promptly to the seat of the fire. For this reason, they are one of the greatest life-saving tools of the fire service.

Fear of water damage is sometimes offered as an objection to the installation of automatic sprinkler protection. This comes in part from the thoughtless emphasis placed upon water damage in news reports of fires. Statements that a fire was of insignificant size, but that water damage was severe have been frequent. The probability of very severe destruction by fire in the absence of automatic sprinkler protection is seldom mentioned in these news accounts.

Accidental discharge of water from an automatic sprinkler system or other parts of a fire service water system due to defects in sprinklers, water control devices, piping, or associated equipment, is very rare. Precautions to prevent unnecessary discharge of water as a result of mechanical injury, freezing or overheating, or corrosion are covered in Chapter 6 of this Section.

Economics of Sprinkler Protection

In addition to the protection against destruction of property values and interruption to business, the saving in insurance costs often makes the expenditure for automatic sprinkler protection a sound business investment.

Many buildings do not have automatic sprinkler protection because the per dollar cost of the protection has appeared unjustifiably high to the building owners in relation to the value of the building.

Savings in insurance premiums alone could in numerous cases be adequate to finance, over a few years time, the installation of automatic sprinkler protection. Of equal importance are the many building code "trade-offs" that are allowed when sprinklers are installed. These "trade-offs" permit an increase in undivided area and often less fire resistance for the building construction, and therefore less erection cost. No value can be placed on the life safety aspects of total sprinkler protection or the security occupants feel when such systems are installed.

C. Record of Automatic Sprinkler Performance

Periodically the NFPA prepares summaries of sprinkler performance from the fire data reported to its Fire Analysis Department. The information is published in the NFPA *Fire Journal* as the Automatic Sprinkler Performance Tables, and is also available in pamphlet form.[1]

Effectiveness of Automatic Sprinklers

Only in rare instances do automatic sprinkler systems fail to control fires. The failures are very seldom due to the sprinklers themselves, but rather to the lack of water. Even with older types of sprinklers which are no longer approved, the failure of the sprinkler itself has been very infrequent. Failure of the modern types under normal conditions is practically unknown. Some 117,770 fires in sprinklered buildings have been reported to the NFPA since 1897. Of these, 95 percent of the sprinklers showed satisfactory performance.

Because numerous fires extinguished by one or two sprinklers (with only a slight loss) are not reported to NFPA, the NFPA records do not represent the total number of fires in sprinklered properties. If it were possible to include a complete record, the efficiency of sprinkler performance would probably approach 100 percent.

It should be noted that recorded data reflect only the efficiency of operation, and are but indirectly related to the amount of fire losses. For example, where sprinklers do not operate because the water is shut off, unsatisfactory performance is recorded even though the fire may have been promptly discovered and extinguished by other means. Figure 14-1D shows graphically cumulative data from 1970 to 1974 on the number of sprinklers operating.

In recent years, the apparent percentage of satisfactory sprinkler operations has declined. From 1970 to 1974 it was 81 percent. This may be the result of the NFPA's data-gathering system which concentrates on those fires causing larger losses. Other studies (N.Y. Board of Fire Underwriters, Factory Mutual, etc.) that are based on approximately 100 percent reporting show considerably higher rates. The same is true of Australian records where all sprinkler actuations are reported.

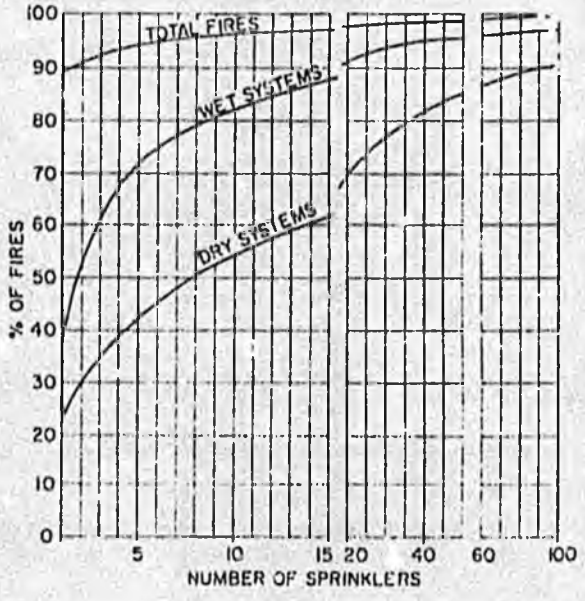

Fig. 14-1D. Number of sprinklers operating, cumulative data, 1970-74.

Source: National Fire Protection Association; Fire Protection Handbook, pp. 14-1 through 14-48 14th edition 1976

Effectiveness of Sprinklers by Occupancy Groups

Table 14-1A shows characteristic differences in sprinkler effectiveness for 22 major occupancy groups. As would be expected, some situations present a more difficult extinguishing problem than do others. This record of effectiveness is useful in evaluating the need for specially designed systems or auxilliary fire fighting facilities.

Unsatisfactory Sprinkler Performance by Occupancy Groups

Table 14-1A also lists by occupancy the reasons for unsatisfactory sprinkler performance for the same 22 occupancy groups. Closed sprinkler control valves are the most frequent cause, being responsible for 36 percent of the unsatisfactory performance reported. A study of the fires not controlled by sprinklers is of great importance, as it shows how to guard against such occurrences. It will be noted from Table 14-1A and from Figure 14-1E that in most cases there is a definite explanation for unsatisfactory performance. A more detailed analysis of unsatisfactory sprinkler performance will be found in the 1970 edition of the NFPA Automatic Sprinkler Performance Tables.[1]

D. Standard Sprinkler Installations

The terms "sprinkler protection," "sprinkler installations," and "sprinkler systems" usually signify a combination of water discharge devices (sprinklers); one or more sources of water under pressure; water-flow controlling devices (valves); distribution piping to supply the water to the discharge devices; and auxiliary equipment, such as alarms and supervisory devices. Outdoor hydrants, indoor hose standpipes, and hand hose connections are also frequently a part of the system that provides protection. Figure 14-1F is an illustration of a typical sprinkler installation with all common water supplies, outdoor hydrants, and underground piping.

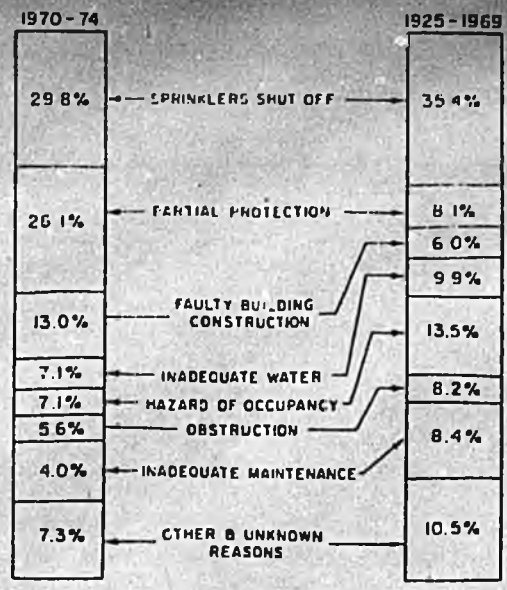

Fig. 14-1E. Reasons for unsatisfactory sprinkler performance.

When considering water supply problems, the performance of sprinklers, dry-pipe or wet systems, or special arrangements of sprinkler protection, the designation "sprinkler system" applies to the sprinklers controlled by a single water supply valve. Under this definition large buildings require several sprinkler systems, and a single water system may supply a number of sprinkler systems.

The fundamentals of sprinkler protection evolve around the principle of the automatic discharge of water, in sufficient density, to control or extinguish a fire in its incipiency. In planning for a system that fulfills this objective, many factors must be considered. They can, however, be broadly grouped into four categories: the sprinkler system itself, features of building construction, hazards of occupancy, and water supplies.

Table 14-1A. Sprinkler Performance Summary and Classification of Unsatisfactory Performance*

1957-1967

An analysis of 225 fires in "completely" sprinklered "life safety" occupancies (light or ordinary hazard).
99.1% of these fires were extinguished or controlled by sprinklers.
The three instances of unsatisfactory performance resulted from "closed" valves.
Simple automatic valve supervision by central station, proprietary or remote station systems would send an automatic trouble signal alerting building employees and/or the fire department that water is "shut-off".

April, 1971

We don't very often publish book reviews. But this case is different. We would be remiss in our responsibilities to you — our readers — if we didn't tell you about Harry W. Marryatt's text, a comprehensive and scholarly study of automatic sprinkler performance in Australia and New Zealand, covering a period of 82 years.

Harry Marryatt is the founder of the Australian Fire Protection Association, has been its chairman since it was established in May, 1960. He is a graduate of the University of Melbourne, a charter member of the Society of Fire Protection Engineers (USA) and a Fellow of the Australian Institute of Management. He has been a professional fire protection engineer for more than forty years; has designed, manufactured, installed and serviced automatic sprinkler systems and virtually all fixed fire protection systems in Australia for more than four decades.

The book, inspired by Percy Bugbee, Chief Administrator of the National Fire Protection Association International (retired), is the most incisive, penetrating, detailed and comprehensive text published to date on the historic behavior of automatic sprinkler systems.

The book is more than a statistical analysis of sprinkler performance. It is a fire protection engineer's delight, examining the basic principles of loss control, delving into the basic physical laws governing the capabilities of water to absorb heat when droplets are broken up into a fine spray.

For those of you who relish the physics and chemistry of fire, its calculitic formulae, this book will keep you and your slide rule busy.

For those of you who want a reference text with well documented case histories of fires in virtually every conceivable

type of occupancy, this is an indispensable reference source.

If you delight in "the laws of large numbers", statistics, this text is the ultimate source of information about sprinklers, originating from Australia and New Zealand, where statistical research into sprinkler behavior stands out as an example for the world to emulate.

Marryatt has evaluated 5,734 fires, virtually every instance of sprinkler operation of which a known record exists in the nation's down under. His conclusion: 5,720 extinguishments out of a possible 5,734. 99.76% of all recorded fires: successfully extinguished by sprinklers.

Marryatt has wrung every conceivable drop of information out of the statistics he has developed: operating temperatures of sprinklers, types of sprinkler (link and lever, bulb, pendant, upright, etc.), response time of the "fire brigade" (department), time of day at which fires occurred, month of year, construction type (fire resistive — non-fire resistive), floors of buildings in which fires occurred, the height above the floor of sprinklers in operation. He makes extensive

AUSTRALIA - NEW ZEALAND
WHY UNSATISFACTORY PERFORMANCE?

	No. of Fires	Percent of Unsatisfactory Performance
• Severe external exposure	4	28.6%
• Partial sprinkler protection	4	28.6%
• Explosions Systems destroyed by blast	3	21.5%
• Fire loading too high for water supply	1	07.1%
• Inadequate water supplies	1	07.1%
• Roof surface destroyed	1	07.1%
TOTAL	14	100.0%

Source: 242 National Automatic Sprinkler and Fire Control Association, Inc.; News Bulletin, p. 25-28, January-March, 1973

commentaries on water supplies, flowing pressures, gallonage consumed, and a detailed analysis with illustrative case histories on the behavior of fires in nearly one hundred types of occupancies.

His analysis of incendiary fires, even cases where as many as seven fires were set by an arsonist, have given sprinklers a 100% record in controlling 120 out of a possible 120 fires set by arsonists.

Marryatt's five years of research into 5,734 fires discovered only 14 cases where sprinklers failed to extinguish or control fires. That's only 0.24% compared to a record of 99.76% of the total fires successfully managed by sprinklers.

In 82 years, 14 unsuccessful operations is a little short of unbelievable.

The most amazing fact to emerge from the book was the small number of sprinklers needed to control fires. 66.56% of all fires were controlled by one sprinkler. 82.12%, by two or less sprinklers. 91.23%, by four or less sprinklers. Only 176 fires opened more than ten sprinklers out of a possible 5,734. That's 3.08%.

If you really want to know the story on sprinklers, this book is a must.

You can order it directly from the National Fire Protection Association.

S T A T I S T I C S

HOW MUCH WATER SHOULD A CITY HAVE AVAILABLE FOR FIGHTING FIRES

1. ISO Guide for Determination of Required Fire Flow

2. Municipal Grading Schedule Description

WATER SUPPLY REQUIREMENTS FOR FIRE PROTECTION

This chapter gives information on the quantities of water needed for fire protection purposes. The components of a water system are discussed in other chapters in this section. No distinction is made for ownership of a system, whether public or private, as quantities of water needed for fire protection are not based on ownership of the system but rather on experience and engineering analysis of fire protection requirements for the property to be protected. Supply requirements for automatic sprinklers or other fixed systems using water are discussed in appropriate chapters of Sections 14 and 15.

A. The Two Uses of Water Systems

Water systems designed today for municipal use have dual functions; they supply potable water for domestic consumption, and they supply water for fire protection. Domestic consumption means more than just water for human consumption. It includes water used for sanitation, industrial processes, lawn sprinkling, air conditioning and similar water-consuming purposes. Sometimes industrial sites will provide separate systems for supplying process water and water for fire protection. Any dual-purpose system must be able to supply enough water for fire protection while at the same time meet the maximum anticipated consumption for other purposes.

B. Rates of Consumption

There are three rates of consumption that are considered in designing water systems. They establish a base to which required fire flows can be added in designing a system or determining its adequacy. The rates are:

1. Average daily consumption—the average of the total amount of water used each day during a 1-year period.
2. Maximum daily consumption—the maximum total amount of water used during any 24-hour period in a 3-year period. (Unusual situations which may have caused an excessive use of water, such as refilling a reservoir after cleaning should not be considered in determining the maximum daily consumption.)
3. Peak hourly consumption—the maximum amount of water that can be expected to be used in any given hour of a day.

The maximum daily consumption is normally about 1.5 times the average daily consumption. The peak hourly rate will vary from two to four times a normal hourly rate. The effect these varying consumption rates will have on the ability of the system to deliver required fire flows will vary with the system design. But both maximum daily consumption and peak hourly consumption should be considered to ensure that water supplies and pressures do not reach dangerously low levels during these periods, and that adequate water will be available in the event of a fire.

C. Water for Fire Fighting

Historically, water systems for cities and towns were developed with needs other than fire protection in mind. However, it was found that in a large city which had to have a lot of water for drinking, sanitation, and other purposes, there was usually sufficient water to provide a useful supply for fire fighting purposes. On the other hand, waterworks designed on the basis of ordinary water needs of a small city would be able to deliver only a fraction of the water which might be needed for fire fighting.

All this led to inquiries into the cost in a given city for a waterworks that could provide water for fire fighting purposes as well as for other uses. A number of distinguished engineers associated with individual waterworks examined the problem and their findings were discussed in technical papers presented at engineering society meetings. Papers by J. Herbert Shedd (1889),[1] J. T. Fanning (1892),[2] and Emil Kuichling (1897)[3] should be consulted for details of the discussions in which standards now followed in American and Canadian waterworks practice developed (Table 11-1A).

Table 11-1A. Estimates of Fire Flow

	Number of Fire Streams Required Simultaneously

Freeman, John R., *The Arrangement of Hydrants and Water Pipes for the Protection of a City Against Fire.*[4]

Figures furnished by National Board of Fire Underwriters, and presented in a paper by Metcalf, Leonard, et al.[5]

The Number of Hose Streams

The starting point for considering the cost of water for fire protection was an estimate of the number of hose streams that a fire department might need for fire fighting. This was usually estimated on the basis of the central portion of the city where the largest buildings were located and where there was the greatest building congestion. The number of streams was found to be related, in a very rough way, to the population. Shedd's proposal, the first, was on the basis of hose streams discharging 200 gpm. He suggested that a community of 5,000 population, as a rule, would need about five such streams and that the needs of

Source: National Fire Protection Association; Fire Protection Handbook, pp. 11-2 through 11-6 14th edition 1976

other cities could be graduated up to thirty streams in a city of 180,000. Fanning proposed streams requiring about 54 psi pressure as the basis. His figures were of the same general order as Shedd's, beginning at seven streams for a community of 4,000 and going up to twenty-five streams for a city of 150,000.

Kuichling suggested a formula where the number of streams required would be the square root of the population in thousands multiplied by a factor of 2.8. There were arithmetical differences as to how these estimates worked out for individual cities, but they were of the same general order (Table 11-1A). Most important, they did provide a basis from which the waterworks designers could make some estimates of the cost factors which fire demands imposed on various details of the system.

During this period of consideration of waterworks design features to provide fire protection, the most important paper on the subject, *The Arrangement of Hydrants and Water Pipes for the Protection of a City Against Fire*, was presented (1892) by John R. Freeman.[4] He had done the fundamental work on flow of water through hose and nozzles, so he was able to pin down the definition of a standard fire stream to one with a discharge of 250 gpm at 40 to 50 psi pressure. He said that the relationships suggested by Shedd and Fanning between population and the number of streams required were of the right order, but he did not think the needs of individual cities could be quite so definitely pinned down. He suggested two to three streams as a minimum at 1,000 population graduated up to thirty to fifty at 200,000 (Table 11-1A). Most significantly, he warned: "Ten streams, or as large a proportion thereof as the financial consideration will permit, may be recommended for a compact group of large, valuable buildings, irrespective of a small population."

Engineering: Distributing Network, Hydrant Spacing, Storage

Freeman noted a fundamental difference in purpose between a system designed for supplying ordinary water needs and one for water for fire protection. Fire draft required concentration of the water, whereas domestic draft was a matter of distribution.

Freeman sought to secure recognition of the fact that if a water system was to supply fire protection needs, the distribution system should be designed to concentrate the needed amounts of water. Small pipes were sufficient for distribution, but larger ones were needed for concentration of supply to fire streams. He suggested 6-in. diameter pipe as the minimum for residential districts, and he noted that 8-in. pipe was adequate only where it formed part of a network of distributing pipes whose intersections were not far apart.

Another important point Freeman made was that hydrants should be placed where they could concentrate streams at specific blocks or groups of buildings to be protected rather than on an arbitrary basis of a certain number of feet apart on the street mains. His work on hose streams had shown how long hose lines reduced the water that can be delivered promptly on a fire. He therefore suggested a working rule for hydrant spacing of 250 ft between hydrants in compact mercantile and manufacturing districts, and 400 to 500 ft in residential districts. These working rules can still be used as guides for good design. (Hydrant spacing is discussed in greater detail in Chapter 2 of this Section.)

Freeman further insisted that fire supply should be in addition to maximum domestic consumption and laid the foundation for eventual recognition of this principle. He also indicated how much water should be stored in standpipes or elevated reservoirs in the application of the principle. He expressed the judgment that flow for all of the hose streams required should be supplied from a reliable source, such as an elevated storage reservoir, for a period of not less than 6 hrs during a period when the system was also furnishing maximum demands for domestic and other uses. His judgment also was that to supply the combined fire and domestic needs in a system provided with reliable pump capacity, a 1-hr supply in a standpipe or elevated reservoir would be acceptable.

The Insurance Grading Schedule

As early as 1889, the NBFU (National Board of Fire Underwriters) began to make fire protection surveys of municipalities. This work was intensified in 1904 after a conflagration in Baltimore. Today the larger cities countrywide and the smaller communities in all but seven states are surveyed by the ISO (Insurance Services Office), successor to the NBFU. The survey includes an evaluation of a municipality's water system in all its details, and a map is usually prepared of the system itself. Actual hydraulic tests are made to determine the fire flow available in various parts of the community.

From the examination of the water supply, as well as other factors affecting fire defenses, the community is provided with recommendations expressing an engineering judgment on what the community should consider in its decisions on its public fire protection program. Engineers use as a yardstick the latest edition of ISO's *Grading Schedule for Municipal Fire Protection*,[6] that considers a municipality as a whole, and no longer places more emphasis on protection for downtown districts than on other important districts as did earlier editions of the grading schedule. (For a more complete discussion of the insurance grading schedule see ~~Section 9, Chapter 6~~ III-18—III-21).

D. Fire Protection Requirements in Water Systems

The capacity of a water system is determined by the total amount of water it must furnish. This is the sum of: (1) water required for domestic or industrial uses, and (2) water required for fire service. In small towns, the requirements for fire protection exceed other requirements.

In North American cities, a public water system is expected to furnish water for a great variety of purposes. In individual cities, there may be a heavy industrial demand, but demands for air conditioning and lawn sprinkling are examples of regular uses which can also affect the required capacity of the system. The adequacy of a public water system for fire protection cannot be taken for granted. These other demands on the system must be determined to estimate their effects on the capacity of the system for fire protection.

A joint report (1951) of committees of the American Society of Civil Engineers, the American Water Works Association and others,[7] suggested that the maximum general service demand on a waterworks system be taken as the peak hourly demand during a test year. This, they noted, was the only figure which can fairly be compared with the maximum fire flow requirement.

Source: National Fire Protection Association; Fire Protection Handbook, pp. 11-2 through 11-6 14th edition 1976

Evaluating System Capacity

ISO engineers evaluate the ability of a water system to meet the maximum daily consumption rate plus the needed fire flow. In most large cities, the peak hourly rate exceeds the maximum daily consumption rate plus fire flow, and therefore, is the controlling factor in system design. However, in the smaller communities the reverse is true with the maximum daily consumption rate plus fire flow being the controlling factors. For many years water consumption has been increasing in most municipalities resulting in increased peak hourly rates. One result of this trend has been an increase in the number of municipalities in which the peak hourly rate controls design.

Pressure Characteristics of Systems

The pressure for which systems are normally designed reflect several practical considerations. They attempt to provide pressures that are adequate for water supplies both for domestic consumption and for fire protection. If either type of service demands special ranges of pressure, they too can be provided. Pipe and related fittings and methods of using them will allow almost any desired range.

San Francisco, for example, has a separate system, designated the "high pressure system," under the control of the fire department. All of the pipe is extra-heavy cast iron, tar-coated and lined, and tested on installation and repair to 450 psi. Two steam-operated pump stations can pump water from San Francisco Bay into the system, and 20,000 gpm at 250 psi can be delivered to most of the principal mercantile district. San Francisco provided this system primarily because an earthquake might put the regular public water system out of service. A number of other cities have provided similar "high pressure" systems.

Modern motorized fire department pumping apparatus make heavy streams and high pressures available from ordinary water systems where adequate volume is provided. Cities that formerly had separate systems of fire mains, operating at so-called high pressures, now generally have these operating at what would be normal public water pressures. They retain the advantages of an extra system of water mains.

Public water systems reflect a compromise on the question of pressures. Pressures in the range of 65 to 75 psi are best in most systems. This range is adequate for ordinary consumption in buildings up to about ten stories. It will provide sufficient water for automatic sprinkler systems in buildings of four to five stories. Where pressures of this order are provided, there is a reasonable margin to make it relatively easy to compensate for local fluctuations in draft at various times.

It is generally recommended that a minimum residual pressure of 20 psi be maintained at hydrants when delivering the required fire flow. Pumpers can be operated where hydrant pressures are less, but with difficulty. Where hydrants are well distributed and of the proper size and type (so that friction losses in the hydrant and suction line may not be excessive), it may be possible to set 10 psi as the minimum pressure. Sufficient suction pressure should be maintained to prevent developing a negative pressure in the street mains, which might result in the collapse of the mains or other water system components, or back-siphonage of polluted water from some interconnected source. The use of residual pressures of less than 20 psi is not permitted by most state health departments.

Pressures in a public water system may be considered excessive as they approach 150 psi. As pressures increase, they tend to cause leaks in domestic plumbing, and special attention is required to restrain the mains in the ground. Pipe and fittings used in the ordinary public water system are designed for maximum working pressures of 150 psi. This does not mean that it is good practice to run pressures up that high. Pressure-reducing valves can be used in some sections of a system where the topography would produce excessive pressures, and individual water services to buildings may require pressure reducing valves to keep the pressure on domestic piping at safe levels.

Systems for Higher Elevations

When water must be supplied to an area of a community on high ground, the usual practice is to provide a separate water distribution system for the elevated section so that a normal range of pressures is provided. In such cases, the elevated area should be provided with its own water storage facility, and pumps may be provided to boost the water from the rest of the system. Likewise, the upper stories of a high building should be provided with water systems in the building itself. These systems will have the same requirements as for an area on a hill. A very tall building would have to be divided into a number of pressure zones. Zones of more than twelve stories tend to get outside the normal pressure ranges. In any case, each pressure zone must have storage of water in amounts needed for the sprinkler service or hose streams to be provided, and a system of pumps so that each zone is supplied from the zone below. Care should be taken to ensure that the pumps will be able to operate even during times of power failures.

E. Calculating Fire Flows

For many years the NBFU formula (see Table 11-1A) was commonly used as a guide in determining the fire flow required in the downtown business districts of municipalities. The formula

$$G = 1020\sqrt{P}\ (1 - 0.01\sqrt{P})$$

gave the fire flow, G, in gallons per minute as a function of the population, P, in thousands.

In making fire protection surveys, the fire flow requirements in the sections of the municipalities outside the downtown business district were estimated by the engineers of the NBFU and insurance bureaus.

As cities became more decentralized, the formula based on population became less reliable as a guide for the fire flow needed in the downtown district. In addition, it became more apparent that a guide to engineering judgment was needed for the other sections of the cities. In 1948, a paper by A. C. Hutson,[8] assistant chief engineer of the NBFU, provided some specific suggestions for estimating fire flow requirements in these sections.

The latest developments in estimating fire flow requirements are found in the *Guide for Determination of Required Fire Flow*[9] published by ISO in 1972. It provides guidance for estimating fire flow requirements in all parts of a municipality. The basic formula in the guide is:

$$F = 18\,C\,(A)^{0.5}$$

where F is the required fire flow in gallons per minute, C is the coefficient related to the type of construction, and A is the total floor area of the building considered.

The values for C are: 1.5 for wood frame construction, 1.0 for ordinary construction, 0.8 for noncombustible con-

Source: National Fire Protection Association; Fire Protection Handbook, pp. 11-2 through 11-6 14th edition 1976

struction, and 0.6 for fire resistive construction. Interpolation is used if the type of construction does not fall into one of the four categories.

To the result obtained by application of the formula, a credit or surcharge is applied for occupancy, a credit for complete automatic sprinkler protection when provided, and a surcharge for exposures.

The maximum fire flow required is 12,000 gpm for any one location. The practical reason for this top figure is that manual fire fighting methods using men with hose streams and heavy stream appliances are not likely to develop a larger supply considering the general arrangement of buildings and the availability of hydrants. However, the possibility of a second simultaneous fire in the largest cities is considered, for which an allowance of 2,000 to 8,000 gpm additional may be made. This sets a practical maximum fire flow demand of 20,000 gpm for any city.

For groupings of one-family and small two-family dwellings not exceeding two stories in height, the short method of determining required fire flow given in Table 11-1B may

Table 11-1B. Fire Flows for Groups of Dwellings

Exposure Distances Feet	Suggested Required Fire Flow* Gallons per minute
Over 100	500
31 to 100	750–1,000
11 to 30	1,000–1,500
10 or less	1,500–2,000†

* Where wood shingles could contribute to spreading fires, add 500 gpm.

† If the buildings are continuous use a minimum of 2,500 gpm.

be used. The required fire flow should be available with consumption at the maximum daily rate (see Part B of this chapter). The number of hours during which the required fire flow should be available varies from 2 to 10 hours as indicated in Table 11-1C.

Table 11-1C. Duration of Required Fire Flow (U.S. Gallons)

Required Fire Flow			Required Fire Flow		
Gallons per minute	Million gallons per day	Duration hours	Gallons per minute	Million gallons per day	Duration hours
1,000	1.44	2	4,500	6.48	4
1,250	1.80	2	5,000	7.20	5
1,500	2.16	2	5,500	7.92	5
1,750	2.52	2	6,000	8.64	6
2,000	2.88	2	7,000	10.08	7
2,250	3.24	2	8,000	11.52	8
2,500	3.60	2	9,000	12.96	9
3,000	4.32	3	10,000	14.40	10
3,500	5.04	3	11,000	15.84	10
4,000	5.76	4	12,000	17.28	10

There are fires where quantities of water in excess of the required fire flow are used. Water supplies of 50,000 gpm or greater have been used in fire suppression, but to design systems capable of delivering flows of that magnitude in the average community for a possible unusual situation is not good economic practice.

F. Adequacy and Reliability of Supply

The adequacy of any given water system can be determined by engineering estimates. The source, including storage facilities in the distribution system, must be sufficient to furnish all the water that combined fire and domestic needs may call for at any one time. Arrangement of the supply works and details of the pumping facilities may limit the adequacy of the supply or affect its reliability. The various components of a water system are discussed in other chapters of this Section.

In a "pumping" system, a common arrangement is to have one set of pumps that takes suction from wells or from a river, lake, or other body of water. If the water does not have to be filtered, the pumps may discharge directly into the distribution system. Where filtration is necessary, the pumps take suction from the primary source and discharge the water into settling reservoirs and filter beds. After processing, the water flows to clear water reservoirs from which a second set of pumps takes suction and discharges the water directly into the water main system. Unfortunately, failure of any part of the equipment may put the supply works out of commission. This is usually taken care of by duplication of units and by arrangement of the plant so as to facilitate repairs.

In considering the reliability of the supply works, features taken into account include: minimum yield, frequency and duration of droughts, condition of intakes, earthquakes, floods, forest fires, ice formations, silting up or shifting of river channels, and absence of watchmen where needed or the possibility of physical injury to them. Reliability is also affected by reservoirs out of service for cleaning and interdependence of parts of waterworks. The condition, arrangement, and reliability of individual units of plant equipment, such as pumps, engines, generators, electric motors, fuel supply, electric transmission facilities and similar items are also factors. Pumping stations of combustible construction are subject to destruction by fire unless equipped with automatic sprinklers.

Duplication of pumping units and storage facilities, and arrangement of mains and distributors so that water may be supplied to them from more than one direction, are measures that can assure continuous operation. The importance of duplicate facilities is shown by the frequency of their use.

G. Future Requirements for Determining Fire Flow

The amount of water needed to control and extinguish a fire in a given property cannot be established currently in precise terms. Differences in fire fighting tactics and variations in conditions which may exist at the time of a fire, as compared with the conditions existing when fire flow requirements were established, are variables that cannot be adequately measured at the present time. Better fire experience data basis should make it possible to tailor fire flows more specifically to conditions that might be expected at the time of a fire. Better analysis may indicate a need to increase fire flow beyond what is presently required, or it may result in a water system design based upon a balance between the risk involved and the economics of maintaining the water system.

The Role of Codes and Ordinances

Fire prevention codes can effectively limit hazards and ignition sources within buildings which in turn will not only help to limit the number of fires, but the size of fires through

Source: National Fire Protection Association; Fire Protection Handbook, pp. 11-2 through 11-6 14th edition 1976

the control of combustibles in a fire area. A good building code further reduces the chance for a serious fire by requiring construction materials and building assemblies which will contain a developing fire to a given area. These two factors alone will reduce considerably the amount of water needed for fire fighting. Zoning ordinances that establish distances between properties can be effective in controlling exposure situations.

The Role of Fire Detection and Extinguishing Systems

The increased use of automatic extinguishing systems, whether they use water or some other agent, will affect the quantities of water required. However, until more widespread use is made of early warning systems and automatic extinguishing systems, it will not be possible to equate the effect of these systems to required fire flow. Consideration is now given in the ISO *Guide for Determination of Required Fire Flow* for the presence of automatic sprinklers.

Water supply requirements are just one factor in a complex system that in total determines what the potential for a fire is, how extensive the fire will be, and the measures needed to suppress it. Research will someday equate all these factors and permit establishing fire flows on the basis of sound, thoroughly researched, and documented principles.

SI Units

The following conversion factors are given as a convenience in converting to SI units the English units used in this chapter.

1 ft = .305 m
1 psi = 6894.757 Pa
1 gpm = 3.785 litres/min

HOW THE ISO ESTIMATES FIRE-FLOW REQUIREMENTS

Insurance Services Office

Guide for Determination Of Required Fire Flow

1. An estimate of the fire flow required for a given fire area may be determined by the formula:

$$F = 18\ C\ (A)^{0.5}$$

where

F = the required fire flow in gpm

C = coefficient related to the type of construction

C = 1.5 for wood frame construction

= 1.0 for ordinary construction

= 0.8 for noncombustible construction

= 0.6 for fire-resistive construction

Note: For types of construction that do not fall within the categories given, use a coefficient reflecting the differences. Such coefficients shall not be greater than 1.5 nor less than 0.6 and may be determined by interpolation.

A = the total floor area (including all stories, but excluding basements) in the building being considered. For fire-resistive buildings consider the 6 largest successive floor areas if the vertical openings are unprotected; if the vertical openings are properly protected, consider only the 3 largest successive floor areas.

The fire flow as determined by the above shall not exceed 8,000 gpm for wood frame construction

Source: Insurance Services Office, Guide for Determination of Required Fire Flow, New York, June 1972.

8,000 gpm for ordinary construction

6,000 gpm for noncombustible construction

6,000 gpm for fire-resistive construction

except that for a normal 1-story building of any type of construction the fire flow shall not exceed 6,000 gpm.

The fire flow shall not be less than 500 gpm.

For 1-family and small 2-family dwellings not exceeding 2 stories in height see note 10.

2. The value obtained in No. 1 above may be reduced by up to 25% credit for occupancies having a light fire loading or may be increased by up to a 25% surcharge for occupancies have a high fire loading. As a guide for determining low or high fire loadings, lists of light hazard and extra hazard occupancies as given in National Fire Protection Association Standard No. 13 are included in the Appendix.

The fire flow shall not be less than 500 gpm.

3. The value obtained in No. 2 above may be reduced by up to 25% credit for complete automatic sprinkler protection. For building of fire-resistive or noncombustible construction having a light fire loading the reduction may be up to 50%. The percentage reduction that can be made for an automatic sprinkler system will depend upon the extent to which the automatic sprinkler system is

Source: Insurance Services Office, Guide for Determination of Required Fire Flow, New York, June 1972.

judged to reduce the probability of fires spreading within and beyond the fire area. Normally this reduction will not exceed 25 percent.

4. To the value obtained in No. 2 above a surcharge should be added for structures exposed within 150 feet by the fire area under consideration. The degree of this charge shall depend upon the height, area, and construction of the building(s) being exposed, the separation, openings in the exposed buidings(s), the length of exposure, the provision of automatic sprinklers and/or outside sprinklers in the building(s) exposed, the occupancy of the exposed building(s), and the effect of hillside locations on the possible spread of fire.

The charge for any one side generally should not exceed the following limits for the separations shown:

Separation	Charge
0-10 feet	25%
11-30	20
31-60	15
61-100	10
101-150	5

The total percentage surcharge shall be the sum of the charges for all sides, but shall not exceed 75%.

5. The value obtained in No. 2 above is reduced by the

Source: Insurance Services Office, Guide for Determination of Required Fire Flow, New York, June 1972.

credit (if any) determined in No. 3 above and increased by the surcharge (if any) determined in No. 4 above.

The fire flow shall not exceed 12,000 gpm nor be less than 500 gpm.

Note 1: The guide is not expected to necessarily provide an adequate value for lumber yards, petroleum storage, refineries, grain elevators, and large chemical plants but may indicate a minimum value for these hazards.

Note 2: Judgment must be used for business, industrial, and other occupancies not specifically mentioned.

Note 3: Consideration should be given to the configuration of the building(s) being considered and to the fire department accessibility.

Note 4: Wood Frame structures separated by less than 10 feet shall be considered as one fire area.

Note 5: Party Walls: Normally an unpierced party (common) wall may warrant up to a 10% exposure charge.

Note 6: High one-story buildings: When a building is stated as 1 - 2, or more stories, the number of stories to be used in the formula depends upon the use being made of the building. For example consider a 1 - 3-story building. If the building is being used for high-piled stock, or for rack storage, an occupancy surcharge may be warranted. However, if the building is being used for steel fabrication and the extra height is provided only to facilitate movement of objects by a crane, the building would probably be considered as a 1-story building and an occupancy credit may be warranted.

Note 7: If a building is exposed within 150 feet, normally some surcharge for exposure will be made.

Note 8: Where wood shingle roofs could contribute to spreading fires, add 500 gpm.

Note 9: Any noncombustible building is considered to warrant an 0.8 coefficient.

Source: Insurance Services Office, Guide for Determination of Required Fire Flow, New York, June 1972.

Note 10: Dwellings: For groupings of 1-family and small 2-family dwellings not exceeding 2 stories in height, the following short method may be used. (For other residential buildings, the regular method should be used.)

Exposure distances	Suggested required fire flow
Over 100'	500 gpm
31-100'	750-1000
11-30'	1000-1500
10' or less	1500-2000*

*If the buildings are continuous, use a minimum of 2500 gpm.

Also consider Note 8.

Outline of Procedure

A. Determine the type of construction.

B. Determine the ground floor area.

C. Determine the height in stories.

D. Using tables in Appendix, determine required fire flow to the nearest 250 gpm.

E. Determine the credit or surcharge for occupancy and apply to the value obtained in D above. Do not round off the answer.

F. Determine the credit, if any, for automatic sprinkler protection. Do not round off the value.

G. Determine the total surcharge for exposures. Do not round off the value.

H. To the answer obtained in E, subtract the value obtained in F and add the value obtained in G.

Source: Insurance Services Office, Guide for Determination of Required Fire Flow, New York, June 1972.

Round off the final answer to the nearest 250 gpm if less than 2500 gpms and to the nearest 500 gpm if greater than 2500 gpm.

Use of Tables (Steps A, B, C, D)

The tables use the GROUND AREA of the building and the height of the building in stories. Using the table corresponding to the type of construction, look under the number of stories and locate the gound area of the building(s) being considered between two ground areas given in the table. The corresponding fire flow is found in the left column.

EXAMPLES:

a. Given: A 3-story building of ordinary construction of 7300 square feet (ground area). Using the table C = 1.0, in the 3-story column, 7300 square feet falls between 7100 and 8500 square feet and the corresponding fire flow is 2750 gpm.

b. Given: A 3-story building of ordinary construction of 7300 square feet (ground area) communicating to a 5-story building of ordinary construction of 9700 square feet (ground area) for a total ground area of 17,000 square feet. Determine the total floor area which equals 3 (7300) + 5 (9700) = 70,400 square feet. Using the table C = 1.0, under the one story column for 70,400 square feet the corresponding fire flow is 4750 gpm.

c. Given: A 3-story wood frame building of 7300 square feet (ground area) communicating with a 5-story building of ordinary construction of 9700 square feet (ground area) for a total ground area of 17,000 square feet.

   Determine the total floor area for each type of construction and for the fire area which is 3 (7300) = 21,900 square feet of wood frame construction, 5 (9700) =

Source: Insurance Services Office, Guide for Determination of Required Fire Flow, New York, June 1972.

48,500 square feet of ordinary construction, and a total area of 70,400 square feet with 31% being of wood frame construction and 69% being of ordinary construction. Under the one-story column in the wood frame construction table (C = 1.5), an area of 70,400 square feet has a corresponding fire flow of 7250 gpm. Similarly, under the one-story column in the ordinary construction table (C = 1.0), an area of 70,400 square feet has a corresponding fire flow of 4750 gpm. In this case, the fire flow will be 31% (7250) + 69% (4750) = 2250 + 5530 gpm or, to the nearest 250 gpm, = 5500 gpm.

d. Given: A 2-story building of ordinary construction of 105,000 square feet (ground area) communicates with a 1-story building of noncombustible construction of 80,000 square feet (ground area). Normally the required fire flow would be determined by proportioning as in "c" above. This would result in a required fire flow of 7460 gpm, or 7500 gpm. However, it is to be noted that the total area of the 2-story building alone results in a fire flow of 8,000 gpm and, of course, the logical answer would be 8,000 gpm. Any time the total area results in the use of an upper limit for fire flow, the possibility of a portion of the fire area justifying the upper limit must be investigated.

e. Given: A normal 1-story building of ordinary construction of 210,000 square feet (ground area). The table gives a required fire flow of 8,000 gpm, however, since this is a normal 1-story building, the maximum fire flow is 6,000 gpm.

f. Given: A normal 1-story building of ordinary construction of 80,000 square feet communicates with a normal 1-story building of noncombustible construction of 85,000 square feet. Normally the required fire flow would be determined by proportioning as in "c" above. This would result in a required fire flow of 6480 gpm, or 6500 gpm. However, since these are normal 1-story buildings the maximum fire flow is 6,000 gpm.

B. Insurance Grading Schedule

The "Grading Schedule for Municipal Fire Protection" is published and copyrighted by the Insurance Services Office.* The schedule provides a yardstick for ISO insurance grading engineers in classifying municipalities with reference to their fire defenses and physical conditions. Gradings obtained under the schedule are used throughout the United States in establishing base rates for fire insurance purposes. A similar schedule is used in Canada by the Insurers' Advisory Organization to evaluate municipal fire defenses in that country.

The Insurance Grading Schedule originally was developed by the National Board of Fire Underwriters and was continued by its successor, the American Insurance Association, prior to the organization of ISO. It has had a profound influence upon the level of municipal fire protection provided in many communities. While ISO never assumes to dictate the level of fire protection services provided by a municipality, reports of surveys made by its Municipal Survey Office generally do contain recommendations for correcting any serious deficiencies found, and over the years have been accepted as guides by many municipal officials in planning improvements in their services. It is generally appreciated that removal of deficiencies can result in a more favorable fire insurance classification which has certain economic rewards as well as a general satisfaction that the community is providing its citizens with an improved level of service, or is holding a favorable classification where already obtained. While from time to time communities may want to employ independent consultants to evaluate their fire departments, water supplies, and building regulations, the fact is that over the past sixty odd years underwriters' surveys have provided a uniform measurement of municipal fire defenses involving many millions of dollars of engineering time and talent at no cost to the local communities which may choose to follow the recommendations. It has been observed, for example, that American communities enjoy the most adequate and reliable water systems in the world. This has been due in large measure to the engineering evaluations and recommendations of underwriter survey teams.

The Municipal Grading Schedule is subject to change with the state of the art and references in this text are to the 1974 edition. With the organization of ISO, application of the Grading Schedule has tended to be more uniform throughout the country. Under NBFU and AIA the larger communities, generally those over 40,000 population, were surveyed directly by teams of engineers from the national organization while smaller communities generally were graded by state or regional rating associations some of which used their own systems of grading municipal fire defenses. Most of the latter now have been consolidated into regional ISO offices insofar as municipal surveys are concerned although state associations have essential functions in filing rates and performing other duties as may be required by law.

The Grading Schedule is based upon a deficiency point system with a possible 5,000 points of deficiency representing a community totally unprotected against fire. The 5,000

Table 9-6B. Relative Class as Determined by Points of Deficiency

Points of Deficiency	Relative Class of Municipality
0– 500	First
501–1,000	Second
1,001–1,500	Third
1,501–2,000	Fourth
2,001–2,500	Fifth
2,501–3,000	Sixth
3,001–3,500	Seventh
3,501–4,000	Eighth
4,001–4,500	Ninth*
More than 4,500	Tenth*

* A ninth class municipality is one (a) receiving 4,001 to 4,500 points of deficiency or (b) receiving less than 4,001 points but having no recognized water supply.

* A tenth class municipality is one (a) receiving more than 4,500 points of deficiency, or (b) without a recognized water supply and having a fire department grading over 1/55 points, or (c) with a water supply and no fire department, or (d) with no fire protection.

points are divided into 10 classes, and every 500 points eliminated places the community in a more favorable class. Table 9-6B shows the relative class as determined by points of deficiency. However, a ninth class municipality may be one receiving 4,001 to 4,500 points of deficiency, or receiving less than 4,001 points but having no recognized water supply. A tenth class municipality may be one receiving over 4,500 points of deficiency, or without a recognized water supply, or with a water supply but no fire department, or without a water supply with a fire department grading over 1,755 points, or no fire protection at all. In many rural areas there are subclasses of Class 9 recognizing the value of properly organized and equipped rural fire departments serving communities without a recognized water supply. Such fire departments are required to have stipulated water tanker capacity as well as pumping engines.

The 5,000 possible deficiency points are divided between 4 main subject areas or features. Water supply and fire department each account for a possible 1,950 points, or 39 percent. Fire service communications account for another 450 points, or 9 percent. Fire safety control, including fire prevention and building regulations, counts for 650 points, or 13 percent. Where there is a divergence of more than 500 points between water supply and the fire department, additional deficiency points may be assessed on the grounds that a good water supply requires an adequate fire department to apply it in fire fighting, and a good fire department without an adequate water supply is less effective. If either of these essentials is lacking, up to 900 additional deficiency points may be charged.

Water Supply

It is important to understand that a principal basis for the Grading Schedule's evaluation of fire protection is the ability to provide needed "fire flow" of water measured in gpm. In years past schedule requirements were based largely upon population protected which, while having some validity, was not entirely equitable because some of the smaller communities may contain properties with serious fire potentials that could require large flows of water, whereas a larger community might not require as much water to control its fires. An example might be a very large unsprinklered shopping complex in a suburban residential community. In both water supply and fire department service, reliability factors get considerable attention in the schedule.

Required fire flow is the rate of flow needed for fire fighting to confine a major fire to the buildings within a block or group. The determination of this flow depends upon construction, occupancy, size of buildings, and exposure hazards. Required flow is determined for each section of a municipality and may vary from a minimum of 500 gpm to a maximum of 12,000 gpm for a single fire. Where consideration must be given to simultaneous fires, an additional 2,000 to 8,000 gpm is required. Actual flow tests are made in each section of the municipality and the results obtained are compared with the flow required in each neighborhood to deal with the hazards found.

For purposes of grading under the standard, a "basic fire flow" is used which is indicative of the quantities of water needed for handling fires in important districts. Among the items considered under water supply are: adequacy of supply works; reliability of source of supply; reliability of pumping capacity and of power supply; the condition, arrangement, operation, and reliability of system components; adequacy and reliability of mains and their installation; arrangement of the distribution system; distribution of hydrants and their size, type, installation, and condition; and various miscellaneous factors.

A minimum recognized water supply for grading purposes must be able to deliver at least 250 gpm for 2 hours, or 500 gpm for 1 hour for fire protection plus consumption of water at the maximum daily rate. Any water supply which cannot meet this requirement is not graded, and the full 1,950 deficiency points are assigned.

Fire Department

Items considered under the fire department include: pumpers, ladder trucks, distribution of companies and types of apparatus, pumper capacity, design and condition of apparatus, number of officers, manning, master and special stream devices, equipment for pumpers and ladder trucks (including elevating platforms), hose and its condition, training, response to alarms, fire operations, special protection such as fireboats, and miscellaneous factors.

A minimum recognized fire department under the schedule must have a permanent organization under applicable state and local laws, and be headed by one person responsible for the operation of the department. There must be sufficient membership to provide a response of at least 4 members to alarms, with training conducted for all active members. There must be at least one piece of suitable fire apparatus with housing and maintenance for the apparatus. Means must be provided for 24-hr receipt of alarms and immediate notification of members. Any fire department that cannot meet these requirements is not graded, and a full 1,950 deficiency points are assigned.

Under the schedule the number of engine and ladder companies must be at least equal to the number required for the basic fire flow. Engine and ladder companies must be located so that travel distances for first due, for first alarm companies, and for the maximum number of companies needed to apply required fire flows meet recommended travel distances. Structural conditions and hazards in the municipality may call for more companies than needed to apply basic fire flow. The probability of simultaneous fires, the number and extent of runs, and the need for placing additional companies in service or for relocating companies during periods of high frequency of alarms are factors considered. Consideration is given to providing protection for all areas during multiple alarms and simultaneous fires.

Where the required fire flow is 4,500 gpm or less, response

Source: National Fire Protection Association; Fire Protection Handbook, pp.9-77 through 9-80 14th edition 1976

distance for the first due engine company must be not over 1½ miles, except that it may be 2 miles in residential districts of 1- and 2-family dwellings not requiring over 2,000 gpm fire flow, and 4 miles where such dwellings have an average separation of 100 ft or more. For flows of from 5,000 to 8,500 gpm inclusive, the first due engine should be within 1 mile, and for flows of 9,000 gpm or more the distance is ¾ mile.

The first due ladder company should be within 2 miles for flows of 4,500 gpm or less, but may be 3 miles for residential districts of 1- and 2-family dwellings and 4 miles where such dwellings have an average separation of 100 ft or more. Where there are less than 5 buildings of a height equal to 3 or more stories, a ladder company may not be required. Where required fire flow is from 5,000 to 8,500 gpm, the first due response distance for ladder trucks is reduced to 1½ miles, and where the required flow is 9,000 gpm or more the first due ladder should be within 1 mile.

Standard first alarm response is 2 engines and 1 ladder company for flows not exceeding 8,500 gpm, except that for flows of less than 2,000 gpm only one engine may be required, and ladder coverage may not be required for flows of 3,500 gpm or less if there are less than 5 buildings of a height requiring such service.

For flows of 9,000 gpm and above, the first alarm response should be 3 engines and 2 ladders. Response distances for the second due engine should be within 4 miles with fire flows of under 2,000 gpm, within 2½ miles for fire flows of from 2,000 to 4,500 gpm, 2 miles for flows from 5,000 to 6,500 gpm, and 1½ miles for flows between 7,000 and 8,500 gpm. Where 3 engines are required, these should be within 1½ miles. Where 2 ladders are required on first alarms, these should be within 2 miles.

Maximum multiple alarm response and response distances also are specified for the various fire flows. In general, one engine company is required for each 1,000 gpm fire flow through 7,000 gpm. At higher flows, additional engine companies are required up to 15 for 12,000 gpm. Maximum multiple alarm response distances for engines vary from 3 miles for 3 engines to 5 miles for 15 engines. In general, the response on each multiple alarm should duplicate the first alarm response.

A second ladder company within 2½ miles is required for multiple alarms with fire flows of 5,000 to 6,500 gpm, a third ladder company should be within 3½ miles for flows of 7,000 to 8,500 gpm, and on up to 7 ladders within 5 miles for 12,000 gpm.

It should be appreciated that these response requirements are a rather conservative minimum standard. Many fire departments will exceed these because pre-fire planning indicates need for additional companies because of life hazard or in order to run hand lines to control fires inside of buildings rather than application of maximum fire flow to merely confine fires as envisioned under the schedule. Levels of manpower on responding companies often influence the number of companies assigned to respond to various alarms. The basic purpose of the Grading Schedule is to confine fires to groups of buildings involved to avoid conflagrations, and it does not demand the same level of service that many communities choose to provide.

Under the schedule there should be at least one reserve pumper for every 8 pumpers or major fraction in service, but not less than one. This is essential to permit proper maintenance. Fully equipped reserve pumpers manned by designated off-shift or volunteer members are considered as increasing the pumpers in service and may equal up to one in-service pumper if manned on first alarms, and ½ an in-service pumper if manned on specified multiple alarms; however, credit cannot exceed ½ of the required number of pumpers. Where the requirements for manning reserve pumpers have not been met, equipped reserve pumpers may be credited the same as outside aid.

Pumpers responding on automatic mutual aid within 5 miles of the municipal limits may be credited not to exceed ⅓ of the pumpers required. This credit requires a detailed mutual aid system with scheduled assignments and proper training and communications. Credit allowed may not reduce the point charge by more than 75 percent, except that where there is a central communications center dispatching all companies the reduction may be up to 90 percent. Consideration also is given to outside aid available within 15 miles, and depending upon various factors deficiencies may be reduced by not more than 33 percent for such available response. Similar credits are allowed for response of ladder companies responding on scheduled mutual aid and outside aid, and for reserve ladders manned by off-shift personnel. However, deficiencies charged for an inadequate number of ladder trucks is only half that for pumpers.

Pumping capacity must be not less than the basic fire flow, and additional capacity may be needed. From the response assignments in the schedule it appears that 1,000 gpm pumpers are assumed to be standard, although credit is given for smaller capacity pumps and also for available pumps on other apparatus. Where simultaneous fires are likely, the pumper capacity must not be less than the total flow requirements for the simultaneous fires. Pumper capacity is taken as that demonstrated by test and not merely that specified in purchasing contracts. In the absence of proper test data, the credit for pumper capacity may be reduced.

Fire Department Officers

There must be a chief officer in charge of the department. For more than 2 companies there must also be an assistant or other officer above company rank who is in charge in the absence of the chief. For over 8 companies there must be sufficient battalion or district fire chiefs to provide one on duty for each 8 companies or major fraction thereof. For less than 12 companies the assistant chief may serve as a battalion or district chief. The preceding is a very conservative requirement. Many fire departments provide a district fire chief on duty for each 5 or 6 companies in order to give prompt supervision of fire companies at fires and to cover simultaneous alarms. Most fire departments with 5 or more companies provide a chief officer on each duty shift, although not required under the schedule.

There must be a company officer on duty at all times with each required engine, hose, or ladder company. The company officers are credited in the company strength. Two call or volunteer officers are considered equivalent to one full paid officer, up to ½ the number of paid officers required.

Manning Standards

Standard manning is 6 men on duty for each required engine and ladder company, including the officer and 5 men for hose companies where pumps are not required. Where companies operate special apparatus, additional manning may be needed. Years ago from 5 to 7 men were considered standard manning, depending upon the type of company and the hazards of the district served. Today with the greater mobility of radio-equipped apparatus and the fact that serious hazards are found in all parts of the community and not just in a central district, a uniform manning is considered desirable. The 6-man standard level of com-

Source: National Fire Protection Association; Fire Protection Handbook, pp. 9-77 through 9-80 14th edition 1976

pany manning is a practical requirement based upon the work that must be done by engine and ladder companies. Where fewer men are provided, it is often necessary to obtain additional manpower from other companies.

While the standard calls for a 6-man level of company manning, credit is given for chiefs' aides who participate in fire fighting. Credit also is given for manpower responding on other units, such as rescue squads and fire department ambulance crews, to the extent that these assist in fire fighting, but not to exceed credit of one man per company. Credit is given also for the regular response of off-duty or volunteer fire fighters. In the schedule, 3 off-duty or volunteer members are counted as equal to one paid man on duty, up to ½ of the required on-duty strength. Thus a fire company with 3 men on duty and 9 off-duty or volunteer members assigned to respond can be counted as a full 6-man crew. However, records of such off-duty response must be kept for both day and night alarms to substantiate the actual value of such manning. If proper records are not kept, call or volunteer response may be taken on the basis of 6 men on call equaling one on duty. In many small fire departments, small outside fires may be handled by the paid men on duty on still alarms without call assistance, but full standard response should be made immediately to all alarms for structural fires and other alarms that present a hazard to life and property.

Under the schedule a fully volunteer or call department with no paid men on duty ready to immediately answer alarms but with good call response would be charged 40 points of deficiency, as compared with an identical fire department having standard 6-man fire companies on duty or the equivalent under the schedule. This amounts to only 80 percent of all the possible deficiency points in a municipal grading. This would appear to be a small deficiency as compared with the advantage of immediate response by on-duty fire companies. If the volunteer or call department has paid apparatus operators on duty, the deficiency might be only 20 points out of 5,000 in the grading, all other things being equal.

Manpower responding on automatic mutual aid is credited up to ½ of the required strength, but may not reduce the point charge by more than 75 percent or 90 percent as may be applicable. Credit also is given for outside aid, but may not reduce the point charge remaining after automatic aid and off-shift response credit has been applied by more than 33 percent. Credit also is given for off-shift response based upon past experience when called.

Deficiency charges are determined by comparing the total required manning of the fire companies being graded with the on-duty strength of these companies as determined by the schedule. Any deficiency divided by the number of companies equals the average deficiency per company. An average deficiency per company of one man results in only 10 points, two men 20 points, three men 40 points, four men 80 points, and five men 160 points. Thus, a fire department that maintains 5 men on each required engine and ladder company assisted by rescue squads, ambulance crews, and chiefs' aides may not be considered deficient in manpower under the standard. Likewise, a fire department that has an average on-duty manning of 3 men per required company plus response of off-duty or call men may not be considered deficient if the record of response is satisfactory. Thus, the manpower requirements are flexible and reasonable. Places that should expect poor grading on manpower are those with 2- and 3-man engine companies and 1- or 2-man ladder companies without satisfactory arrangements for prompt response of off-shift members or other men on call and without well-scheduled automatic mutual aid. Such departments obviously are too badly undermanned to effectively apply required fire flow when serious fires occur. On the other hand, a small community requiring 2 engines and a ladder and having 6 paid men on duty supplemented by good off-shift and call response plus automatic mutual aid may have a minimum deficiency charge for manning.

Fire Service Communications

As fire service communications are an essential element in the fire defenses of any community, the Grading Schedule evaluates the following: the communications center; the communications center equipment and current supply; fire alarm boxes; alarm circuits and facilities including current supply at fire stations; material, construction, condition, and protection of circuits; fire department radio; fire department telephone service; conditions adversely affecting use and operations of facilities; fire alarm operators; and the handling of alarms. While alarm boxes are not required in residential districts, a credit of up to 20 points is given for such boxes depending upon coverage.

Determination of deficiencies under the various communications items are based upon the degree of compliance with the intent of applicable provisions of NFPA No. 71, Standard for Public Fire Service Communications. This Standard is discussed in further detail in Chapter 3 of this Section of the HANDBOOK.

Some persons in the fire service have often felt that the Grading Schedule placed undue emphasis on water supply at the expense of the fire department. In earlier editions of the schedule this may, to some extent, have been true. However, in recent editions items under fire department control including fire service communications and control of hazards amount to up to 58.5 percent of the 5,000 possible deficiency points. The one area in which water supply still has an advantage over the fire department service is the requirement that without a recognized water system, no community can have a classification better than Class 9. Hundreds of fire departments serving areas without water systems are organized to exceed the minimum requirements for fire flow from water systems by using fleets of tankers, and by the use of large diameter water supply hose supplied from pumpers at suction sources prepared and maintained by the fire department. With the water supply equipment responding with the attack pumpers, no delay is involved. Many rural fire departments believe that their ability to apply required fire flow should be recognized because it has proven successful in the control of major fires, including fires in communities recognized as having inadequate water supplies.

PART IV

INSURANCE STATISTICS AND INFORMATION CONCERNING SPRINKLERS AND FIRE PROTECTION

INSURANCE SAVINGS CAUSED BY AUTOMATIC SPRINKLERS

Installation of automatic sprinklers reduce fire insurance premiums by an approximate average of seventy-five percent (75%) when they are installed in a building. The insurance savings will vary from this percentage by:

1. Type of construction;
2. Occupancy hazard class;
3. Quality of construction (combustible to fire resistive); and,
4. Quality of sprinkler equipment installation

In a building of fire-resistant construction, the insurance premium reduction is less since the sprinkler system is merely an addition to a building which already has fire protection qualities.

Source: Insurance Services Office, Anchorage, Alaska. The above information is subject to particular circumstances of each individual risk being evaluated, and is not conclusive or binding for any particular risk or other building.

PART V

SPRINKLER WATER CONSUMPTION CHARACTERISTICS

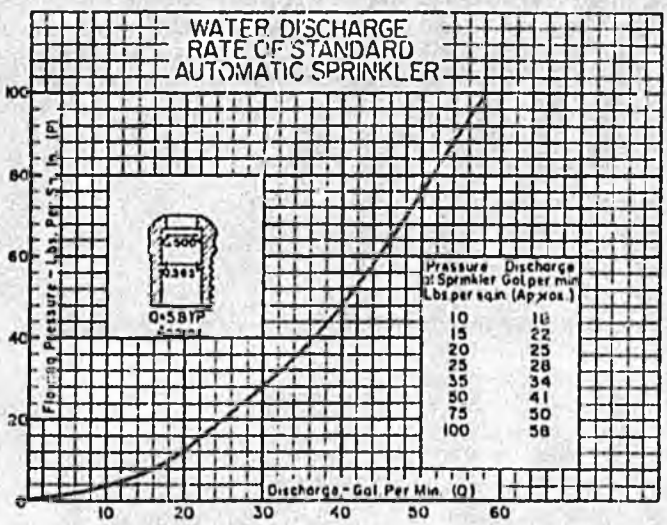

Fig. 14-3G. Water discharge rate of standard automatic sprinkler.

Source: National Fire Protection Association; Fire Protection Handbook, pp. 14-42 through 14-48 14th edition 1976

WATER SUPPLIES FOR SPRINKLER SYSTEMS

It is vital that every automatic sprinkler system have a water supply of adequate pressure, capacity, and reliability. Both the rate of flow and the total volume that may be needed must be considered.

A. Types of Supplies

Sprinkler systems may be supplied with water from one or a combination of sources, such as street mains, gravity tanks, reservoirs, fire pumps, pressure tanks, rivers, lakes, wells, etc. (see Fig. 14-1F).

In theory, a single water supply would seem to be all that is necessary for satisfactory protection. However, that single supply may at times be temporarily out of service; it may be disabled at the time of a fire or before a fire is completely extinguished; or the pressure or the capacity may be below normal during an emergency. Therefore, a secondary supply may be necessary, depending on the strength and reliability of the primary supply, the value and importance of the property, the area, height and construction of the building, the occupancy, and the outside exposures. Occasionally, three supplies are needed, especially where neither the primary nor a single secondary supply is judged wholly satisfactory or reliable.

Connections to Public Water Works Systems

A connection from a reliable public water works system of adequate capacity and pressure is the preferred single or primary supply for automatic sprinkler systems. In determining its adequacy, consideration has to be given not only to the normal capacity and pressure of the system, but also to the probable minimum pressures and flows available at unfavorable times such as during summer months, during heavy demand on the system, or during impairment caused by flood or by winter conditions.

The size and arrangement of street mains and feeders from public water supplies are also important. Connections from large mains fed two ways or from two mains on a gridiron system may provide an excellent supply. Street mains less than 6 in. in diameter are usually inadequate and unreliable. Feeds from dead-end mains are also undesirable.

Water meters, if required by the water supply authority, should be of types approved for fire service (see Sec. 11, Chap. 2).

Flow and pressure tests under varying conditions of demand are generally necessary to determine the amount of public water available for fire protection. The proper method of making such tests is described in Section 13, Chapter 5.

Cross-connections Between Public and Private Supplies

Where a secondary supply is needed to supplement the public water supply, public and private supplies can be connected so as to feed into a single fire protection system. These systems are commonly referred to as being "cross-connected."

In some localities, cross-connections may be prohibited by health authorities.

Where they are not prohibited, regulations and sound practices must be complied with in order to avoid the possibility of public health being endangered by water of questionable potability entering the public system.

In general, cross-connections are permitted if carefully supervised precautions, such as a special double check valve, or other accepted devices for preventing backflow, are provided. In cases where one sprinkler supply is from public mains, health authorities usually permit, as a secondary source, either well constructed and well maintained covered steel tanks or concrete reservoirs that are filled with public water only.

Gravity Tanks

Gravity tanks of adequate capacity and elevation make a good primary supply and may be acceptable as a single supply. Details of the construction, heating, and maintenance of gravity tanks are given in NFPA No. 22, Standard for Water Tanks for Private Fire Protection, hereinafter in this chapter referred to as the NFPA Water Tank Standard (see also Sec. 11, Chap. 3 of this HANDBOOK). In determining tank size and elevation, consideration should also be given to the number of sprinklers expected to operate, duration of operation, the arrangement of underground supply piping, and the provision of hose standpipes, hydrants, and fire department connections.

Fire Pumps

A fire pump having both a reliable source of power and a reliable suction water supply provides a good secondary supply and in some instances is acceptable as a primary supply. With ample water a fire pump is capable of maintaining a high pressure over a long period of time, and may be a necessary part of some installations requiring greater water pressure than would otherwise be available.

For details of power sources, pump construction, installation, and methods of control and operation, NFPA No. 20, Standard for Centrifugal Fire Pumps, should be consulted (see also Sec. 11, Chap. 3 of this HANDBOOK).

Manually controlled pumps may be used if the primary water supply will last long enough to allow dependable starting of the fire pump, and if there is an automatic waterflow signal to make known the need for fire pump operation.

Automatic control of fire pumps is usually needed where a high water demand may occur immediately, as with a deluge system; or where a competent pump operator is not continuously present. Automatic fire pumps should have their suction under a positive head to avoid the delays and uncertainties of priming.

Under favorable circumstances of moderate property values and hazard, dependable power, and a dependable suction supply under a head, an electrically driven, automatically controlled fire pump supervised from a central station may be accepted as the primary supply for automatic sprinklers.

The automatic control of electrically driven centrifugal pumps must be arranged to prevent frequent repeated starting of the motor, either by initiating continuous running until stopped manually, or by a timing device that will stop the motor automatically only after a predetermined period of operation.

Pressure Tanks

Pressure tanks have several possible uses in automatic sprinkler protection. An important limitation is the small volume of water which can be stored in such tanks. Where a small pressure tank is accepted as the water supply, the system is classed as a Limited Supply System.

In situations where an adequate volume of water can be supplied by a public or private source but where the pressure is not sufficient to serve a sprinkler system directly, the pressure tank gives a good starting pressure for the first sprinklers that operate; the flow from it may be used while the fire pumps start automatically to increase the supply pressure.

In tall buildings where the public water pressure is too low for effective water distribution from the highest sprinklers, pressure tanks may be used to supply such sprinklers during the time required for a public fire department to begin supplying water through fire department connections.

Each proposed use of pressure tanks calls for special consideration and analysis of water capacity, location, and arrangement of the connection to the sprinkler system. Each installation is usually required to have specific approval. Details on the construction, installation, and maintenance of pressure tanks are given in the NFPA Water Tank Standard (see also Sec. 11, Chap. 3 of this HANDBOOK).

Fire Department Connections

Under fire conditions which result in a considerable number of sprinklers operating, public water or tank supplies may not provide water at sufficient pressure for effective discharge and distribution. Also, the pressure in many public water supplies to sprinkler systems may be materially reduced by hose streams from hydrants. In such cases, a connection through which the public fire department can pump water into the sprinkler system provides an important auxiliary supply. Fire department connections are therefore a standard part of sprinkler systems.

Fire department connections should be of approved type, readily accessible, and properly marked. Each connection should be fitted with a check valve, but not with a gate valve. There should be a proper drain, and an approved drip

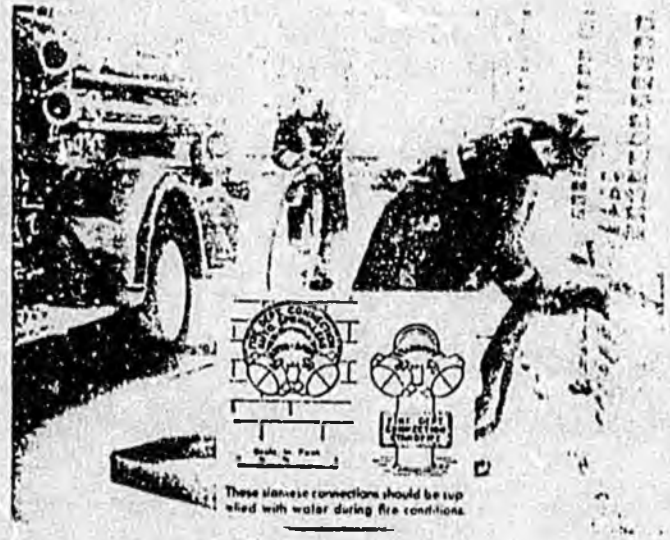

Fig. 14-4A. Fire fighters attaching hose lines to a fire department (siamese) connection supplying a sprinkler system. The inset shows typical siamese connections for sprinkler systems and standpipes. A check valve allows the use of a single hose line.

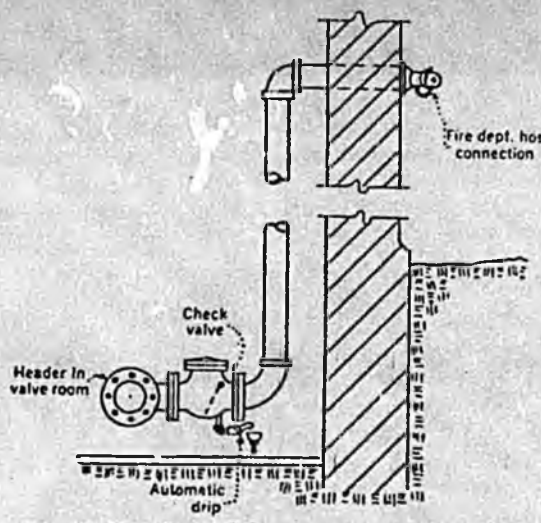

Fig. 14-4B. Typical fire department connection.

device between the check valve and the outside hose coupling. Figures 14-4A and 14-4B show the main features of a fire department connection. Other details of installation and pipe size are given in NFPA No. 13, Standard for the Installation of Sprinkler Systems, hereinafter referred to in this chapter as the NFPA Sprinkler Standard.

Where a sprinkler system has a single riser, the fire department connection should be attached to the system side of the controlling gate valve for a wet system, and between the dry-pipe valve and the gate valve for a dry system. This makes it possible to pump water into the system even if the gate valve is closed.

If there are two or more sprinkler system risers connected to a public main, each system must have its own fire department connection. If more than one riser is connected to a yard system the fire department connection should feed into the yard system on the supply side of all riser shutoff valves, and there must be a check valve in all other water supply connections into the yard system to prevent backflow and loss of water supplied through the fire department connection. If one riser is shut off, the fire department connection can still supply all other risers.

In an emergency, a fire department can pump water from public hydrants or other sources of water into a sprinkler system through its hose and a yard hydrant or other hose connection using a double female hose coupling, if other supply connections have a check valve or a gate valve that can be closed.

B. Water Supply Requirements

The water supply needed for sprinkler systems raises questions that defy specific answers except with sprinkler systems where it is planned that all sprinklers in the fire area will discharge water. Such systems include deluge and water spray systems utilizing open sprinklers where the design must provide water supply for all the sprinklers in any fire area, systems employing closed automatic sprinklers in hazardous areas where the simultaneous operation of all sprinklers is usually assumed, and multiple open sprinkler systems in a single fire area where one or more systems can be expected to operate. With such sprinkler systems (largely used for special hazard situations) the water supply requirement resolves itself mainly into a matter of hydraulic and mathematical calculations. The answer to the water supply requirement with the majority of sprinkler systems, how-

Source: National Fire Protection Association; Fire Protection Handbook, pp. 14-42 through 14-48 14th edition 1976

ever, is not so definite. If a water source that could supply all the sprinklers is available, there would be no problem, but such a water supply is seldom practical except in the case of small systems. The water supply requirement for any sprinkler system is directly related to the number of sprinklers expected to operate, but this depends on so many variables and uncertain factors that no exact mathematical solution is possible.

The NFPA Sprinkler Tables show that in 93 percent of all fires in sprinklered buildings, twenty or less sprinklers opened. Experience shows that with adequate water supply the percentage of unsatisfactory sprinkler performance is extremely small. Thus, water supply is a significant problem, particularly with large sprinkler systems and with systems protecting greater than ordinary hazards.

The answer to the water supply requirement for any particular sprinkler system lies mainly in experienced engineering judgment, based on consideration of the factors for or against sprinkler control. Where the cooling effect from the water discharged by sprinklers is greater than the heat liberated by the fire, the sprinklers can gain control. When the reverse situation occurs, as from an overtaxed water supply, the sprinklers cannot control the fire and the sprinkler system may fail. Where all conditions are favorable, the control of fire should be accomplished by the operation of only a small number of sprinklers. As conditions vary, however, with different classes of occupancy, areas, and types of buildings, the number of sprinklers expected to operate in order to control a fire may range up to possibly the total number in the area, and the water supply should be provided accordingly. (See Fig. 14-1D for cumulative data for the various numbers of sprinklers operating in fires.)

C. Influence of Various Factors on Water Supply Need

The primary factors affecting the number of sprinklers which might open in a fire, and therefore to be considered in determination of the water supply requirement, include the following:

Hazard of Occupancy, Including Flash Fire Hazard and Potential Rate of Heat Liberation: This is the most important factor, and one involving experienced judgment to evaluate. Where the flash fire hazard is present, it is usually necessary to provide water sufficient for the operation of all the sprinklers in any individual fire area.

Initial Water Pressure: At a pressure of 15 psi, a standard sprinkler will discharge about 22 gpm, or an average of 0.17 gal per sq ft per min on an area of 130 sq ft. At 30 psi, the discharge is 33 gpm; at 50 psi, 41 gpm, and at higher pressures the discharge is correspondingly greater, also with a greater area of coverage. With a greater discharge and greater area of coverage, there is a better chance of fire control with a small number of sprinklers, and less need for large volumes of water to supply a large number of sprinklers.

Obstructions to Distribution of Water from Sprinklers, such as High-piled Stocks, Bale Tiering, Pallets, Racks, and Shelving: With obstruction, there is less likelihood that fire will be controlled in its initial stages, and a greater chance of opening a large number of sprinklers needing large water supplies.

High Ceilings and Draft Conditions: With ceilings of unusual height, there is greater chance that drafts will carry heat away from the sprinklers immediately over a fire, resulting not only in delay in the application of water but also in the opening of sprinklers remote from the place of origin of the fire. More water is usually needed under such conditions. The same situation exists wherever there are drafts, such as in areas open to the weather on the sides, where winds can divert heat from sprinklers over the fire.

Unprotected Vertical Openings: Sprinkler systems in multistory buildings are usually designed on the assumption that fire will be controlled on the floor of origin. Where there are unprotected openings up which heat and fire may spread, it may be expected that more sprinklers will open, particularly in the case of a fire originating near the vertical opening. In case of high combustibility, the interconnected floors may need to be considered as one fire area. This means more water and larger pipe sizes in risers and supply main.

Wet or Dry System: Owing to the delay due to exhausting air from dry-pipe systems, more sprinklers open on dry-pipe systems than on wet systems. This may call for greater water supplies.

Size of Undivided Areas: A large undivided area has a greater number of sprinklers, with a possibility of a greater maximum number of sprinklers operating, and a consequently greater water demand than with a small area.

Configuration and Type of Ceiling Construction: These influence water demand, including such factors as curtain boards, or beams affording curtain board effects to retard fire spread, and the possibility that fire may spread under a combustible ceiling out of reach of sprinklers or burn through.

Extent of Coverage and Exposures: Any fire in an unsprinklered space extending to an area with automatic sprinklers places an abnormal demand on the sprinkler system, and requires increased water supplies for effective functioning of the system.

The preceding factors must be considered individually and collectively, and it is not feasible to derive any general formula or simple method of arriving at water supply requirements.

There are, however, certain general statements on this subject that may be made. One is that any situation may be effectively protected with much less water where the water is applied automatically rather than manually. Another is that it is good practice to provide more water, at higher pressure, than will probably be needed to extinguish any fire. Hose streams may be used to supplement sprinklers, even when not necessary, and an ample supply of water provides a margin of safety.

With a very large fire area of low to moderate hazard it is not reasonable to expect to supply all sprinklers simultaneously. Actually, the pipe sizes are not large enough to do so, except where very high supply pressures can produce a high discharge rate from sprinklers near the source of supply as well as effective discharge from the most remote sprinkler. This situation is aggravated where sprinkler supply is from an end or side of the system. The most effective piping pattern calls for sprinkler risers at the center.

The managers of large properties under sprinkler protection may, by "shopping," secure insurance coverage predicated on water supplies that are "shaded" for economy. Obtaining the desired coverage does not mean that, measured in terms of true fire safety, the property is sufficiently protected. Property owners who realize that any fire may cause indirect losses far beyond any insurance indemnity will consider full protection essential.

D. Water Supply Requirements for Pipe Schedule Sprinkler Systems

Notwithstanding the general problems involved in arriving at water supply requirements, the hazard of occupancy, being the factor of major importance, has made it

Source: National Fire Protection Association; Fire Protection Handbook, pp. 14-42 through 14-48 14th edition 1976

possible to establish "Guides to Water Supply Requirements for Sprinkler Systems" using this factor as the primary consideration with latitude allowed for the contributing factors.

The established "Guide" tables contained in the NFPA Sprinkler Standard divide hazards of occupancy, for the purpose of determining water supplies, into several groups with specified minimum water supplies for each group (see Table 14-4A).

Where fire pumps contribute to the water supply, standard sizes of pumps should be used at adequate rate of discharge, as outlined in Section 11, Chapter 4. A suction supply for the pump should preferably be large enough for continuous operation, as outlined in Section 11, Chapter 4.

Where pressure tanks furnish the water supply, the provisions for pressure tanks in Section 11, Chapter 3, should be followed.

Where a combination of different water supplies is provided in the interest of reliability, it is good practice to have the rate of supply from each source at least equal to the minimum requirement for the system.

The "Guide" should be used only with experienced judgment, but it can serve for all cases qualifying in the Light Hazard and Ordinary Hazard, Groups 1 and 2, occupancy classifications which constitute the larger percentage of sprinkler installations. The other occupancy classifications usually involve more complex factors, and therefore require special consideration.

Light Hazard Occupancies

Examples of Light Hazard Occupancies are apartment buildings, dormitories, office buildings, seating areas of restaurants, and hospitals. In these occupancies the potential rate of heat liberation is low, areas are usually subdivided, and a small number of sprinklers should normally control any fire. Under these conditions, 500 gpm should generally be sufficient, with an upward range to 750 gpm where conditions are less favorable.

Ordinary Hazard, Group 1, Occupancies

The Ordinary Hazard, Group 1 classification includes occupancies where the combustibility of contents is generally low, such as in garages, bakeries, laundries, and canneries, but is greater than for the Light Hazard classification. In this group the water supply requirement may be as low as 700 gpm where small areas, noncombustible construction, and very limited hazards are encountered; it can range up to 1,000 gpm as these conditions become more adverse.

Ordinary Hazard, Group 2, Occupancies

Ordinary Hazard, Group 2 classification includes occupancies such as clothing factories, mercantiles, pharmaceutical manufacturing, and shoe factories. With this group the features of combustibility of contents, ceiling heights, and obstruction are generally unfavorable, separately or jointly, and as indicated the water supply requirements may range as high as 1,500 gpm. It will be noted, however, that an 850 gpm minimum is retained for this group and this, of course, would be applicable only under very favorable conditions.

Water supply requirements for the three classes mentioned, as in all cases, call for a careful consideration of all factors concerned, but the figures given in Table 14-4A are of value in placing lower and upper limits for the classes concerned. While it is never advisable to provide less than the lower limit indicated, the upper limit will usually be sufficient for all situations within the group classification.

Ordinary Hazard, Group 3, Occupancies

Ordinary Hazard, Group 3, consists of occupancies where standard sprinkler spacing and pipe schedules are considered satisfactory, but where more than ordinary water supplies are advisable. This group includes certain woodworkers and other occupancies such as flour and feed mills, paper mills, piers and wharves, and tire storage.

Table 14-4A. Guide to Water Supply Requirements for Pipe Schedule Sprinkler Systems

Occupancy Classification	Residual Pressure Required (See Note 1)	Acceptable Flow at Base of Riser (See Note 2)	Duration in Minutes (See Note 4)
Light Hazard	15 psi	500–750 gpm (See Note 3)	30–60
Ordinary Hazard (Group 1)	15 psi or higher	700–1000 gpm	60–90
Ordinary Hazard (Group 2)	15 psi or higher	850–1500 gpm	60–90
Ordinary Hazard (Group 3)	Pressure and flow requirements for sprinklers and hose streams to be determined by authority having jurisdiction.		60–120
Warehouses	Pressure and flow requirements for sprinklers and hose streams to be determined by authority having jurisdiction. Also see Chapter 7 of NFPA 13, NFPA 231, and NFPA 231 C.		
High-Rise Buildings	Pressure and flow requirements for sprinklers and hose streams to be determined by authority having jurisdiction. Also see Chapter 8 of NFPA 13.		
Extra Hazard	Pressure and flow requirements for sprinklers and hose streams to be determined by authority having jurisdiction.		

NOTES:

1. The pressure required at the base of the sprinkler riser(s) is defined as the residual pressure required at the elevation of the highest sprinkler plus the pressure required to reach this elevation.
2. The lower figure is the minimum flow including hose streams ordinarily acceptable for pipe schedule sprinkler systems. The higher flow should normally suffice for all cases under each group.
3. The requirement may be reduced to 750 gpm if building area is limited by size or compartmentation or if building (including roof) is noncombustible construction.
4. The lower duration figure is ordinarily acceptable where remote station water-flow alarm service or equivalent is provided. The higher duration figure should normally suffice for all cases under each group.

Source: National Fire Protection Association; Fire Protection Handbook, pp. 14-42 through 14-48 14th edition 1976

Extra Hazard Occupancies

Extra Hazard occupancies consist of properties where flash fires opening all the sprinklers in a fire area are probable, and call for close sprinkler spacing and larger pipe sizes. Such occupancies include explosives manufacturing, extra hazard chemical works, pyroxylin plastic manufacturing, cotton picking and opening operations, and other occupancies with a flash fire hazard.

It is not possible to lay down any general rules for these last two groups, and their water supply needs can be evaluated only on an individual basis by engineers with broad background experience. For this reason, the NFPA Sprinkler Standard refers to determination by the authority having jurisdiction as the only possible answer to the problem. It is in such occupancies that hydraulic calculations are most often needed to determine water supplies.

In any treatment of hazards by general groups of occupancy, it must be noted that individual properties differ markedly, and that buildings of the same nominal occupancy classification may show widely different individual hazards which should be considered in any determination of water supply.

E. Water Supply Requirements for Hose Stream Protection

The values given in Table 14-4A include hose stream requirements. In considering water requirements for hose streams, it should be realized that if sprinklers perform effectively little hose stream assistance is required. Although this is generally the case, a realistic viewpoint must be taken of possible contingencies and the amount of water that might be needed for hose stream protection under adverse conditions.

In evaluating hose stream requirements, possibilities should be considered such as the amount of water necessary for final extinguishment or clean-up operations, or in the event that sprinklers are retarding fire spread but are not fully effective in gaining control and extinguishment.

F. Water Supply Requirements for Hydraulically Designed Sprinkler Systems

A fire protection engineer planning new water supplies or evaluating existing supplies for sprinkler systems must have some information regarding the hydraulic behavior of sprinkler piping systems.

Hydraulic Calculations

A hydraulically designed sprinkler system is one in which pipe sizes are selected on a pressure loss basis to provide a prescribed density (gallons per minute per square foot) distributed with a reasonable degree of uniformity over a specified area. This permits the selection of pipe sizes in accordance with the characteristics of the water supply available. The stipulated design density and area of application will vary with occupancy hazard.

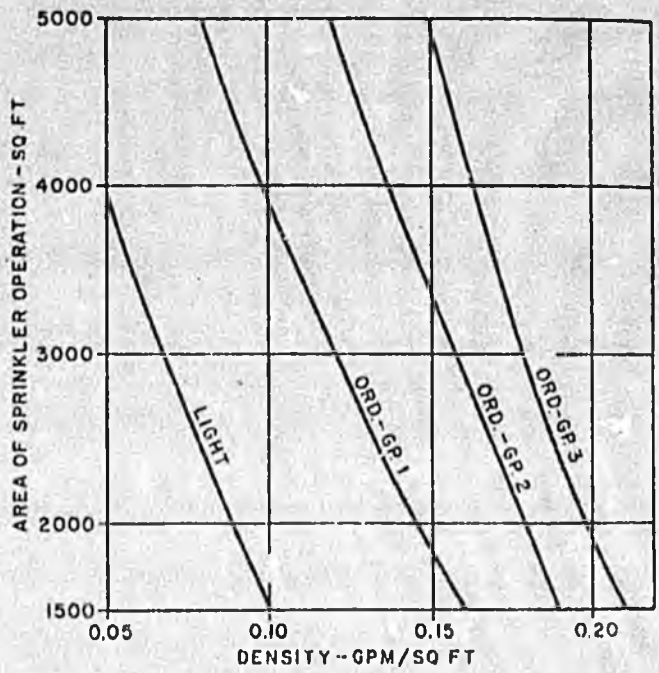
Table 14-4B is used to determine density, area of sprinkler operation, and water supply requirements for hydraulically designed sprinkler systems. Systems must be calculated to satisfy a single point on the appropriate design curve, and interior piping must be based on this design point. It is not necessary to meet all points on the selected curve. Total water supply available to the system at the base of the riser at the residual pressure required by the design must be not less than shown in Table 14-4B; this total water supply need not be calculated through the overhead piping.

Table 14-4B. Density, Area of Sprinkler Operation, and Water Supply Requirements for Hydraulically Designed Sprinkler Systems

Minimum Water Supplies

Hazard Classification	Sprinklers GPM	Combined Inside & Outside Hose—GPM	Duration in Minutes
Light	150	100	30
Ord.—Gp. 1	400	250	*60–90
Ord.—Gp. 2	600	250	*60–90
Ord.—Gp. 3	750	500	*60–120

NOTES: The lower duration figure is ordinarily acceptable where remote station water-flow alarm service or equivalent is provided.



NOTES:

For dry systems increase area of sprinkler operation by 30 percent.

For combustible construction with wet or dry systems the minimum area of application is 3,000 sq ft.

For hazard classifications other than those indicated see appropriate NFPA Standards for design criteria.

Calculations shall be based upon the area of sprinkler operation selected from Table 14-4B, or upon the area of the largest room being considered, whichever is smaller. Such rooms must be enclosed by construction having a fire resistance rating at least equal to the water supply duration indicated in Table 14-4B, and wall openings must be protected in an approved manner. For areas of sprinkler operation less than 1,500 sq ft, the density for 1,500 sq ft is used.

The same hazard occupancy classifications apply to hydraulically designed sprinkler systems as apply to pipe schedule sprinkler systems as mentioned in Part D of this Chapter. The recommended water supply figures are, however, somewhat lower due to the greater efficiency of a calculated system.

The water allowances for inside hose and for outside hydrants may be combined and added to the system requirement at the system connection to the underground main. The total water requirement must be calculated through the underground main to the point of supply.

With deluge systems and water spray systems having open orifices, calculations are essential. (See NFPA No. 15, Standard for Water Spray Fixed Systems.) Automatic sprinkler systems protecting high piled storage situations require a specific water density for fire control. (See NFPA No. 231, Standard for Indoor Storage, and NFPA No. 231C, Standard for Rack Storage of Materials.) Hydrau-

Source: National Fire Protection Association; Fire Protection Handbook, pp. 14-42 through 14-48 14th edition 1976

lically calculated systems can, however, be used for all types of occupancies.

Methods of making flow calculations for sprinkler systems are given in the following: (1) the NFPA Sprinkler Standard, (2) NFPA No. 15, Standard for Water Spray Systems for Fire Protection, (3) *"Automatic" Sprinkler Hydraulic Data* published by "Automatic" Sprinkler Corp. of America,[1] (4) Factory Mutual Corporation's *Handbook of Industrial Loss Prevention*,[2] and (5) an address "Water Flow Characteristics of Sprinkler Systems" reported in the Proceedings of the 58th Annual Meeting of the NFPA.[3]

The design area for the system is the hydraulically most remote area, and usually includes sprinklers on both sides of the cross main. Each sprinkler in the design area must discharge at a flow rate at least equal to the stipulated minimum water application rate (density). Begin calculations at the sprinkler hydraulically farthest from the supply connection. With common system configurations this will be the end sprinkler on the end branch line. The minimum operating pressure for any sprinkler must not be less than 7 psi.

The Most Remote Sprinkler

Assuming a minimum pressure of 10 psi at the most remote sprinkler and a discharge coefficient of 0.75 for a standard ½-in. orifice sprinkler (the coefficient varies—0.78 is used elsewhere in this HANDBOOK), we will have a discharge of 17.7 gpm calculated from the formula $Q = 29.8\ cd^2\sqrt{P}$ (see Sec. 11, Chap. 6), used in calculating flows through orifices and short tubes. The value for $29.83\ cd^2$ in this instance is 5.6, a figure commonly used as the sprinkler discharge constant K in the simplified formula $Q = K\sqrt{P}$. Velocity pressure is not a factor at the more remote sprinkler, but it is considered at all the other sprinklers in the example that follows. Some organizations ignore velocity pressure in their calculations. The error introduced is on the safe side. NFPA No. 15, Standard for Water Spray Fixed Systems, recommends considering velocity only when it is more than 5 percent of the total pressure.

Assuming sprinklers 10 ft apart on branch lines, with the end section of pipe 1 in. nominal diameter, the friction loss at 17.7 gpm flow, with a Hazen and Williams formula coefficient of 120 (value for black steel pipe) will be 1.0 psi (see Fig. 11-6L in Sec. 11, Chap. 6 and change friction loss values in that graph, which are based on $C = 100$, to values based on $C = 120$ by multiplying by 0.714).

Second Sprinkler from the End

The total pressure at the second sprinkler will be 10.0 + 1.0 = 11.0 psi. Of this, velocity pressure based on a flow of 17.7 gpm will be 0.3 psi (see Fig. 11-6A, Sec. 11, Chap. 6). The normal pressure (pressure acting perpendicular to the pipe wall) acting on the second sprinkler is the total pressure of 11.0 psi less the velocity pressure of 0.3 or 10.7 psi. On all sprinklers except the end sprinkler, only normal pressure is considered as acting on the sprinklers.

The discharge from the second sprinkler, at a pressure of 10.7 psi, will be 18.3 gpm.

The pipe between the second and third sprinkler, also 1 in. diameter, 10 ft long, and with a flow of 17.7 + 18.3 = 36.0 gpm, will have a friction loss of 3.8 psi, and a velocity pressure of 1.2 psi. Total pressure at the third sprinkler equals 10.7 + 3.8 + 1.2 or 15.7 psi.

Other Sprinklers on a Branch Line

Up to this point, velocity pressure has been based on flow downstream from the sprinkler being considered; this has been confirmed by tests.[3] It has also been shown by those tests that beyond the second sprinkler velocity pressure should be figured from the flow on the upstream side of the sprinkler being considered. This is done by trial and error, assuming a flow from the sprinkler, calculating the velocity pressure from the total flow, determining a normal pressure, and calculating a flow from the normal pressure. If the calculated flow is not reasonably close to the assumed flow, assume a different flow and repeat the procedure until the two are close.

Assume a flow from the third sprinkler of 19.0 gpm, and also assume that the pipe between the third and fourth sprinkler is 1¼ in. Total flow is 36.0 + 19.0 = 55.0 gpm. Velocity pressure is 0.9 psi and normal pressure at the third sprinkler is therefore 15.7 − 0.9 or 14.8 psi. Corrected flow then becomes 21.6 gpm, which is not close enough to the 19 gpm assumed. Try an assumed flow of 21.4 gpm. Velocity pressure at 57.4 gpm is 1.0; normal pressure is 14.7 psi and the new corrected flow is 21.5 gpm. Total flow at the third head then becomes 36.0 + 21.5 = 57.5 gpm. The calculating procedure for the other sprinklers on the branch line is the same as for the third sprinkler.

At this point it will be seen that we have exceeded the 15 psi minimum riser pressure, unless, as is quite probable, the pressure with 57.5 gpm flow is substantially higher than that with 500 gpm flow. Whether or not the pressure with 57.5 gpm flow is higher than 15 psi depends on the characteristics of the water supply. However, in any case it appears that with not many more sprinklers open the pressure at the most remote sprinkler will be less than the 10 psi selected in this example.

Branch Lines, Cross Mains, Risers, and Fittings

Cross Main Pressure at the Branch Line Connection: This is the normal pressure at the nearest open sprinkler increased by the friction loss and the velocity pressure in the intervening pipe. If the branch line is fed through a tee and nipple, additional friction loss allowances must be made except that the friction loss in nipples less than 6 in. long is customarily neglected.

Two Branches in One Line of Sprinklers: These may have the same or different numbers of sprinklers. The pressure at the entrance to the two branches will always be the same. The computations starting at the end sprinklers will be duplicated for the number of open sprinklers.

After the discharge from any number of sprinklers on a branch line has been computed and the pressure to produce the flow has been determined, the entire branch line can be considered to have the discharge characteristics of a single orifice and the discharge constant K in the formula $Q = K\sqrt{P}$ can be determined, P being the net pressure where flows are taken from tees in the cross main.

Branches on Opposite Sides of a Cross Main: These branches may have different numbers of sprinklers open, in which case the cross main pressure must be the higher of the two computed values. This increases the discharge from the branch giving the lower computed pressure, and the actual discharge must be calculated for the higher pressure using the equation:

$$\frac{Q_1}{Q_2} = \sqrt{\frac{P_1}{P_2}}$$

in which P_2 is taken as the higher pressure, Q_2 the corresponding increased discharge to be determined, and P_1 and Q_1 the pressure and corresponding discharge from the branch requiring only the lower pressure.

After the appropriate increased discharge has been deter-

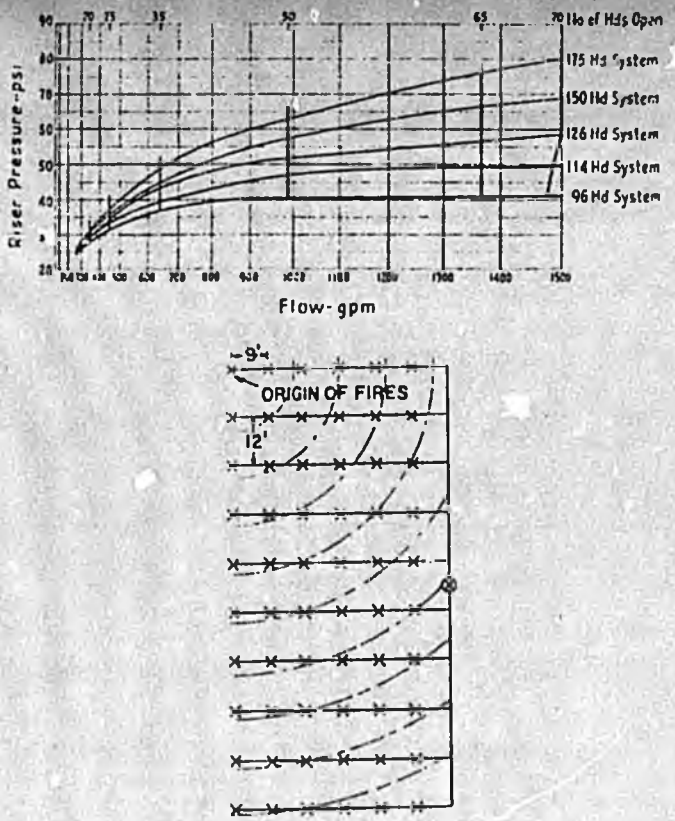

Fig. 14-4C. A flow curve for a side-central feed to sprinklers on a system having six sprinklers on each branch line is shown on the above graph. Below is the pattern of sprinklers opening on a side-central fed system. (Factory Mutual System)

mined, the two rates of flow can be combined and K for the combined branches calculated.

When sprinklers on the second branch line are assumed to have opened, starting at the cross main sprinkler, the opened sprinkler most remote from the cross main is considered as the end head in the branch line computation, the next opened is the second, etc., regardless of nonoperating sprinklers on the outer end of the branch.

Cross Main Pressures: Cross main pressures are calculated by the same procedure as used for sprinklers on a single branch line, except that it is not necessary to use the trial and error procedure for the third and additional branch lines since the effect of change in velocity pressure with flows passing through tees in the cross main is usually negligible. The net head producing the flow in successive branch lines is taken as the normal pressure at the end branch line increased by the friction loss in the pipe between the branches.

Riser Pressure: Riser pressure is taken as the normal pressure at the nearest flowing branch increased by the total friction loss between this branch and the riser and by the velocity pressure in the cross main at the riser connection.

Friction Loss in Fittings: This is generally included in calculations only when the fitting involves a change in direction of flow. An exception to this is the fitting immediately preceding the sprinkler.

Friction loss in control, gate and check valves, strainers, meters, and similar devices is always included.

The friction loss in piping between the source of supply and the opened sprinklers must obviously be included in all calculations.

Where there are differences in elevation, these must be allowed for on the basis that each foot of height represents 0.434 psi. In multistory buildings, this may be a substantial factor.

Feed mains, cross mains, and branch lines within the same system may be looped or gridded to divide the total water flowing to the design area.

Sprinkler System Water-flow Curves

To avoid repetition of laborious computation of water flows and pressures when such information is needed in cases involving standard sprinkler, spray, or open head systems, it is possible to prepare diagrams or "water-flow curves" from which riser pressures and corresponding total sprinkler flows may be determined for different numbers of opened sprinklers. One such series of curves, as developed by the Factory Mutual Engineering Corporation, and the piping arrangement and assumed pattern of opened sprinklers is shown in Figure 14-4C.

SI Units

The following conversion factors are given as a convenience in converting to SI units the English units used in this chapter.

1 ft^2 = 0.0929 m^2
1 in. = 25.400 mm
1 ft = 0.305 m
1 psi = 6.895 kPa
1 gpm = 3.785 litre/min

PART VI

STATISTICS

METERS ARE AVAILABLE WHICH CAN MEASURE WATER CONSUMED FOR FIRE PROTECTION AND CITIES WHICH HAVE UTILIZED METERS FOR DETERMINING PRIVATE FIRE PROTECTION CHARGES

H. Meters for Fire Connections

Fire flow meters are devices capable of measuring small and large flows with a minimum loss of head for heavy

Source: National Fire Protection Association; Fire Protection Handbook, pp. 11-21 through 11-25 14th edition 1976

demands. They are offered in two types: (1) detector check valve-type meters that detect only small rates of flow and (2) so-called full registration meters that measure the entire flow throughout the line in which they are installed. Meters of types other than the fire flow type have been found to be unsatisfactory for fire protection water supplies.

Detector Checks

These devices consist of a check valve with a weighted clapper in the main passage and a disc meter in a bypass around the check. In operation the smaller flows pass through the disc meter in the bypass and are accurately registered. Disc meters may be furnished up to 3 in. in size to serve specific needs. For heavy flows the check valve opens and a free unmetered waterway is provided. Beyond the point where the weighted check valve lifts, the bypass meter registers only a small part of the flow. In many situations the detector checks should give the water works the assurance desired as to the proper use of water.

Figure 11-2BB shows a representative detector check valve.

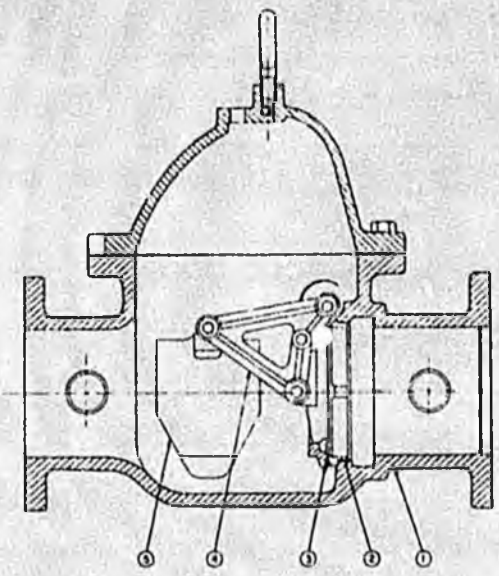

Fig. 11-2BB. A detector check valve. Photo shows view from top of weighted check valve and meter in bypass. Section view shows clapper in closed position. (The Viking Corporation)

Full Registration Meters

These devices are of three general types, each produced by a different manufacturer, and they have been designed for small friction loss with large flows and for a main passageway practically unobstructed when open. The three types are: (1) proportional type meters, (2) meters of the displacement type in a bypass and (3) turbine-type meters.

Proportional Type, Hersey Detector Meter, Model FM: This meter is a special meter of the compound type in which a "proportional meter" and an automatic valve in the main line of the meter are combined with a disc or compound meter in a bypass (see Fig. 11-2CC).

In the Model FM, the smaller flows pass through and are measured by the bypass meter. When the demand for water reaches a rate of flow which causes a difference in pressure

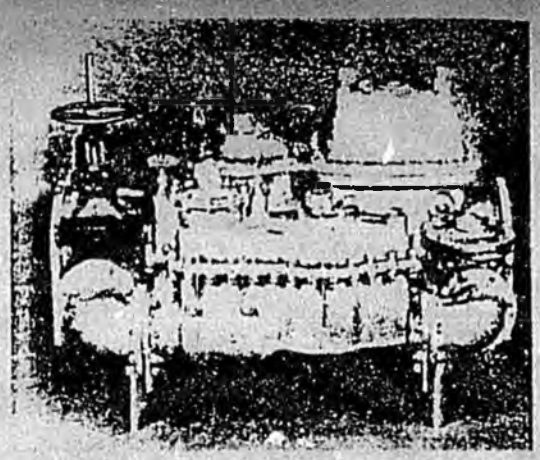

Fig. 11-2CC. A detector meter of the proportional type. (Hersey-Sparling Meter Company)

of 4 psi in the bypass, the automatic check valve opens and provides a practically free waterway through the main line. When water begins to flow through the line in which the automatic valve has opened, it is slightly retarded by a restricting orifice placed a little upstream from the automatic valve, and a part of the water is diverted through a metering unit. This diverted flow is a fixed percentage of the total flow through the restricting orifice. The metering unit is calibrated to record the total quantity through the line, the sum of the readings of the bypass meter and the main line metering unit gives the total flow.

Displacement Type, Neptune Trident Protectus Meter: This meter has all of the working parts in one casing. A disc meter is installed in a bypass on one side and a current meter on the other side of the main waterway. Small flows pass through the disc meter and are recorded when the check valve is closed. With larger flows the main check valve opens and gives a free waterway. The opening of the check valve stops the flow through the disc meter and opens the bypass to the current meter so that the flow through the open waterway is measured proportionately. The sum of the readings gives the total flow (see Fig. 11-2DD).

Turbo Type, Rockwell W-2000 Turbo Meter: This meter is based on the turbine principle of measurement. The meter is composed of two principal assemblies, the main case and the measuring chamber. The main case contains the flow straightening vane assembly. The measuring chamber includes rotor, adjusting vane, pulse amplifier chart and terminal strip for attaching the connecting cable. The function

Source: National Fire Protection Association; Fire Protection Handbook, pp. 11-21 through 11-25 14th edition 1976

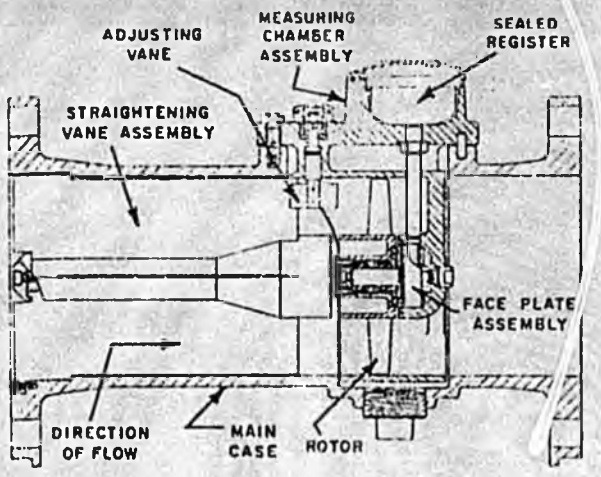

Fig. 11-2EE. A fire flow meter of the turbo type. (Rockwell Mfg. Co.)

of a printed circuit card is to electronically count revolutions and transmit intelligence to a register. The meter should be installed with a 6-in. Rockwell strainer placed immediately upstream of the meter. If the strainer is not used, a minimum of 15 diameters of straight pipe must be immediately upstream of the meter to assure valid registration (see Fig. 11-2EE).

Friction Loss in Fire Flow Meters and Detector Check Valves

The standard specifications for cold water meters adopted by both the American Water Works Association and the New England Water Works Association limit the friction loss for fire flow meters to 4 psi at rated flow capacities. Table 11-2H gives friction loss values for the three currently available types of fire flow meters.

Friction loss values for meters of the disc, current and compound type that are used commonly in waterworks systems for general purposes are relatively high and not suited for fire protection purposes. AWWA limits their friction loss values to 20 psi.

Detector Check Valves: The friction loss in detector check valves listed and approved by recognized testing laboratories is less than 3 psi for the following flows:

Size (in.)	Flow (gpm)
4	750
6	1,500
8	3,000
10	4,500
12	6,500

The pressure required to open the clapper is less than 20 psi.

PART VII

P L A N N I N G

FIRE PROTECTION CAN BEST BE ACHIEVED THROUGH FORESIGHT AND COOPERATION OF ALL CITY DEPARTMENTS INCLUDING THE FIRE DEPARTMENT AND WATER DEPARTMENT

C. Planning

The following information has been extracted in whole and in part from "America Burning," the report of the National Commission on Fire Prevention and Control[1], and is considered appropriate for inclusion in this portion of the HANDBOOK.

Planning

Fire protection has been largely a local responsibility, and for good reasons it is destined to remain so. Each community has a set of conditions unique to itself, and a system of fire protection that works well for one community cannot be assumed to work equally well for other communities. To be adequate, the fire protection system must respond to local conditions, especially to changing conditions. Planning

Source: National Fire Protection Association; Fire Protection Handbook, pp. 9-80 through 9-82 14th edition 1976

is the key: Without local-level planning, the system of fire protection is apt to be ill-suited to local needs and lag behind the changing needs of the community.

Excellent fire protection (for example, in the form of automatic extinguishing systems) lies within technical grasp, and certainly lies within the resources of most communities to provide. Even with considerable public support, this protection would require many years to accomplish. In the meantime, in every fire jurisdiction (whether a municipality, county, or region) standards aiming at a significant increase in fire protection must be set. Among the concepts to be defined:

Adequate Level of Fire Protection: The question of "adequacy" addressed itself not only to day-to-day normal needs, but to major contingencies that can be anticipated and to future needs as well. What is needed is a definition of "optimal" protection—in contrast to "minimal" protection, which fails to meet contingencies and future needs, and "maximal" protection, which is more than the community can afford.

Reasonable Community Costs: Fire, both as threat and reality, has its costs: property losses, deaths, injuries, hospital bills, lost tax revenues, plus the costs of maintaining fire departments, paying fire insurance premiums, and providing built-in fire protection. Each community must decide on an appropriate level of investment in fire protection. Some costs beyond the public's willingness to bear should be transferred to the private sector (as when buildings over a certain size or height or with a certain occupancy are required to have automatic extinguishing systems).

Acceptable Risk: A certain level of losses from fire must be accepted as tolerable simply because of limited resources of the community. Conditions that endanger the safety of citizens and fire fighters beyond the acceptable risk must be identified as targets for reduction.

Consideration of these matters helps to determine what functions and emphasis should be assigned to the fire department, other municipal departments, and the private sector, both now and in the future. It helps to define new policies, laws, or regulations that may be needed. Most important, consideration of these matters makes clear that fire safety is a responsibility shared by the public and private sectors. Because the fire department cannot prevent all fire losses, formal obligations fall on owners of certain kinds of buildings to have built-in fire protection. For the same reason, private citizens have an obligation to exercise prudence with regard to fire in their daily lives. But prudence also requires education in fire safety, and the obligation to provide that education appropriately falls in the public sector, chiefly the fire department. The public sector (again, chiefly the fire department) also has an obligation to see that requirements for built-in protection in the private sector are being met.

A fire department, then, has more than one responsibility. Nor are the responsibilities just mentioned exhaustive. At least 8 important functions for fire departments can be identified:

Fire Suppression: Fire fighters need proper training and adequate equipment for saving lives and putting out fires quickly, and also for their own safety.

Life Safety-paramedical Services: Capabilities needed during fires and other emergencies include first aid, resuscitation, and possibly paramedical services. (By "paramedical services" we mean emergency treatment beyond ordinary first aid, performed by fire service personnel under supervision (through radio communication, for example) of a physician.)

Fire Prevention: This includes approving building plans and actual construction, inspecting buildings, their contents, and their fire protection equipment, public education, and investigating the causes of fires to serve as a guide to future priorities in fire prevention.

Fire Safety Education: Fire departments have an obligation to bring fire safety education not only into schools and private homes, but also into occupancies with greater than average fire potential or hazard to people, such as restaurants, hotels, hospitals, and nursing homes.

Deteriorated Building Hazards: In coordination with other municipal departments, fire departments can work to abate serious hazards to health and safety caused by deteriorated structures or abandoned buildings.

Regional Coordination: Major emergencies can exceed the capabilities of a single fire department, and neighboring fire jurisdictions should have detailed plans for coping with such emergencies. But effectiveness can also be improved through sharing of day-to-day operations—as, for example, an area-wide communication and dispatching network.

Data Development: Knowledge of how well a fire department is doing, and of how practices should change to improve performance, depends on adequate record-keeping.

Community Relations: Fire departments are representative of the local community that supports them. The impression they make on citizens affects how citizens view their government. Volunteer departments dependent on private donations must, of course, also be concerned with their community relations. Moreover, since fire stations are strategically located throughout the community, they can serve as referral or dispensing agencies for a wide range of municipal services.

As communities set out to improve their fire protection, it is not the fire department alone they must consider. The police have a role in reporting fires and in handling traffic and crowds during fires. The cooperation of the building department is needed to enforce the fire safety provisions of building codes. The work of the water department in maintaining the water system is vital to fire suppression. In the realm of fire safety education, the public schools, the department of recreation, and the public library can augment the work of the fire department. Future development and planning will influence the location of new fire stations and how they will be equipped.

These are just the obvious examples of interdependence. So seemingly trivial a matter as the manner in which house numbers are assigned and posted can affect the ability of fire departments to respond quickly and effectively to emergencies.

Master Planning

Fire protection is only one of many community services. Not only must it compete for dollars with other municipal needs, such as the education system and the police department, but, in planning for future growth, the fire protection system must take into account the changes going on elsewhere in the community. For example, if a slum area is to be torn down and replaced with high-rise apartment buildings, that will change the fire protection needs of the area. Changes in zoning maps will also change the fire protection needs in different parts of the community.

To cope with future growth, local administrators are turning increasingly to the concept of *master planning* of municipal functions. Such plans include an examination of existing programs, projection of future needs of the community, and a determination of methods to fill those needs. They seek the most cost-effective allocations of resources to help assure that the needs will be met.

Source: National Fire Protection Association; Fire Protection Handbook, pp. 9-80 through 9-82 14th edition 1976

A major section of a community general plan of land use should be a *Master Plan for Fire Protection*, written chiefly by fire department managers. This plan should, first of all, be consistent with and reinforce the goals of the city's overall general plan. For example, it should plan its deployment of manpower and equipment according to the kind of growth, and the specific areas of growth, that the community foresees. It should set goals and priorities for the fire department. Not only is it important to set objectives in terms of lives and property to be saved, but also to decide allocations among fire prevention inspection, fire safety education, and fire suppression as the best way to accomplish the objectives.

Having established goals, the plan should seek to establish "management by objectives" within the fire department. This operates on the principle that management is most effective when each person is aware of how his tasks fit into the overall goals and has committed himself to getting specific jobs done in a specified time.

Because fire departments exist in a real world where a variety of purposes must be served with a limited amount of money, it is important that every dollar be invested for maximum payoff. The fire protection master plan should not only seek to provide the maximum cost-benefit ratio for fire protection expenditures, but should also establish a framework for measuring the effectiveness of these expenditures.

Lastly, the plan should clarify the fire protection responsibility for other groups in the community, both governmental and private.

Devising a Fire Protection Plan

The following can serve as guidelines to fire department administrators for developing and presenting a master plan for fire protection:

Phase I

1. Identify the fire protection problems of the jurisdiction.
2. Identify the best combination of public resources and built-in protection required to manage the fire problem, within acceptable limits:
   (a) Specify current capabilities and future needs of public resources;
   (b) Specify current capabilities and future requirements for built-in protection.
3. Develop alternative methods that will result in tradeoffs between benefits and risks.
4. Establish a system of goals, programs, and cost estimates to implement the plan:
   (a) The process of developing department goals and programs should include maximum possible participation of fire department personnel, of all ranks;
   (b) The system should provide goals and objectives for all divisions, supportive of the overall goals of the department;
   (c) Management development programs should strive to develop increased acceptance of authority and responsibility by all fire officers, as they strive to accomplish established objectives and programs.

Phase II

1. Develop, with the other government agencies, a definition of their roles in the fire protection process.
2. Present the proposed municipal fire protection system to the city administration for review.
3. Present the proposed system for adoption as the fire protection element of the jurisdiction's general plan. The standard process for development of a general plan provides the fire department administrator an opportunity to inform the community leaders of the fire protection goals and system, and to obtain their support.

Phase III

In considering the fire protection element the governing body of the jurisdiction will have to pay special attention to:

1. Short- and long-range goals,
2. Long-range staffing and capital improvement plans,
3. The code revisions required to provide fire loss management.

Phase IV

The fire loss management system must be reviewed and updated as budget allocations, capital improvement plans, and code revisions occur. Continuing review of results should concentrate on these areas:

1. Did fires remain within estimated limits?
2. Should limits be changed?
3. Did losses prove to be acceptable?
4. Could resources be decreased or should they be increased?

SI Units

The following conversion factors are given as a convenience in converting to SI units the English units used in this chapter.

1 gal (U.S.) = 3.785 litres
1 gpm = 3.785 litres/min

II. SERVICE CHARGES

The rates and charges shown are the monthly service charges for water service only. Assessments, contributions in aid of construction or charges for specific services beyond the scope of normal water services (e.g., special construction of a long service line; repair of damage which was the responsibility of the customer) are in addition to the following rates.

Schedule A - Residential

One to five units; per unit per month	$ 9.50	(I)

Schedule B - Metered commercial and industrial

This schedule applies to commercial, industrial, and multiple unit residential accounts which are metered. Metering requirements are contained in Rule 9 of this tariff.

Metered rate per 1,000 gallons	$ 1.20	(I)

Schedule C - Unmetered commercial and industrial

This schedule applies to all unmetered commercial and industrial accounts, including multiple unit residential accounts which have six or more units. The rates are for one month's service and vary by service size.

Service Size	Monthly Rate	
3/4"	$ 14.65	(I)
1"	25.90	(I)
1 1/2"	57.70	(I)
2"	102.80	(I)
3"	232.40	(I)
4"	412.95	(I)

MAR 23 1977
State of Alaska
Public Utilities Commission

II. SERVICE CHARGES (CONTINUED)

Schedule C - Unmetered commercial and industrial (continued)

Service Size	Monthly Rate	
6"	$ 927.85	(I)
8"	1,649.20	(I)
10"	2,576.20	(I)

Twelve inches or larger service shall be a contracted service. Additionally, any service of six inches or larger which is for mixed accounts (i.e., more than one customer class) may be contractual service at the discretion of the management of the Anchorage Water Utility subject to approval of the APUC.

Schedule D - Special customers

(1) Temporary construction service charge for unmetered service using the service line that will serve the building under construction. The charge shall be a flat monthly charge for service according to the following schedule:

Service Size	Monthly Rate	
3/4"	$ 16.10	(I)
1"	21.50	(I)
1½"	32.20	(I)
2"	42.95	(I)
3"	64.40	(I)
4"	85.85	(I)
6"	128.80	(I)
8"	171.75	(I)
10"	214.65	(I)

MAR 23 1977
State of Alaska
Public Utilities Commission

II. SERVICE CHARGES (CONTINUED)

Schedule D - Special customers (continued)

(2) Temporary construction or other use requiring a connection to a fire hydrant. The AWU reserves the right to require the customer to use a meter when an appropriate meter is available. Service shall be restricted to 2-1/2 inches diameter to 4-1/2 inches diameter. A meter deposit of $100 will be required when the service is connected. The deposit shall be refunded when the undamaged meter is returned to the Water Utility. The monthly charges are:

Service Size	Demand Charge	Commodity Charge	
2½"	$250.80 per month	$.42 per 1,000 gallons	(I)
3"	300.95 per month	.42 per 1,000 gallons	(I)
4"	401.25 per month	.42 per 1,000 gallons	(I)
4½"	451.40 per month	.42 per 1,000 gallons	(I)

(3) When an appropriate meter is not available for a temporary connection to a fire hydrant, the following monthly charges shall be effective:

Service Size	Monthly Charge	
2½"	$ 271.70	(I)
3"	321.85	(I)
4"	422.15	(I)
4½"	472.30	(I)

Schedule E - Private fire protection

This schedule shall apply to private fire services. The charges are in addition to the charge for basic water service unless the service connection is used exclusively for fire protection. The charges vary by service size.

ANCHORAGE, ALASKA

FILE NO. 554

GENERAL

The 1960 U.S. Census showed a population of 44,320 and the present estimated population is 50,000. Area of the city is 15.1 square miles of which 4.3 square miles are included in tidelands, military reservations, and railroad right-of-way. The remaining 10.8 square miles are approximately 50% built upon. Elevations in the city range from sea level to 250 feet, with the average elevation of the principal business district 100 feet. The city is a terminus for the main supply routes serving Alaska as well as a tourist stopping point during most of the summer.

Long cold winters are common with an average snowfall of 12 inches. Prolonged low temperatures below —10 degrees are infrequent. A moderate to severe earthquake hazard exists within the city and surrounding areas. Alaska falls within the circum-Pacific belt of earthquakes which also includes coastal California and Japan. The earthquake of March 27, 1964, was centered about 75 miles from the city and reached a Richter magnitude of 8.4. Major landslides occurred in the city's downtown and residential areas, causing major damage to buildings and the water distribution system.

WATER SUPPLY

General.—The system is municipally owned and supplies nearly all of the city built-on areas and additional area to the east and south. Supervision is by an appointed director. There is no civil service but long tenure is prevalent.

Records are mainly complete, but individual valve records are not maintained.

Alarms of all fires during winter and of second alarm fires at other times are telephoned to the water treatment plant; response is made to all such fires.

Supply Works.—See map. A diversion dam on Ship Creek, elevation 530, 5¼ miles east of the city, provides 53% of the system supply capacity by gravity and is the source of water supply for Fort Richardson and Elmendorf Air Base; supply line capacity is 10.5 mgd. Seven pumped wells, total capacity 11.6 mgd, deliver the remaining supply to the distribution system. Flow in Ship Creek is a minimum during the early winter, but water has never been below the spillway. The March, 1964, earthquake disrupted casings of 2 wells, and earth slides above the diversion dam muddied gravity supply, seriously reducing the capacity of the treatment plant which can process in excess of the supply line capacity.

A small section, with 7 hydrants, in the southern part of the city is served by the Romig Water Company which has an emergency connection from an 8-inch city main for fire supply.

Distribution Storage.—See map. System storage is limited to the 0.5-mg treatment plant clear well, elevation 366.

Consumption.—The average daily consumption for the 12 months ending July 31, 1968, was 11.01 mgd with a maximum of 16.56 mg on July 24, 1968.

Pressures.—The average pressure during fire flow tests was 57 psi, with a maximum of 87 psi and minimum of 38 psi.

Distribution System.—See map. From the Control House, 1400 feet west of the treatment plant, a 24-inch wood-stave pipe line extends well into the distribution system furnishing the main supply to the more important northern section of the system. The southern portion of the system is supplied by a 36-, 30-inch reinforced concrete steel-cylinder-type pipe the capacity of which is greatly restricted by a 16-inch branch supplying 2 lines of 10- and 8-inch pipe. New mains are of cement-lined cast iron with older

pipe of tar-coated cast iron. Of the total pipe in the system, 28% is asbestos-cement pipe, and 9% is wood-stave pipe in 6-, 8-, and 10-inch sizes. Of the 154.85 miles of 4-inch and larger mains, only 0.32 mile is 4-inch and 59.97 miles are 6-inch. Dead ends of 6-inch mains total 4.21 miles.

The average valve spacing is 4340 feet on supply mains, 910 feet on arterial mains, 440 feet in the principal business district, and 810 feet in representative residential districts. There is no regular valve inspection program.

There are 869 public and 16 private hydrants. Of the public hydrants, 31 have 4-inch connections to mains, and 148 lack a large pumper outlet; others are of satisfactory size and type with a pumper and 2 or 3 hose outlets, and all have valved connections.

The average hydrant spacing is 125,500 square feet in the principal business district, 173,000 square feet in other high-value districts, and 214,400 square feet in representative residential districts; hydrants are inspected 2 or more times a year and after every use during freezing weather.

Fire Flow Tests.—See map with table. Tests were witnessed on August 8 and 14, 1968, under normal conditions. The consumption rate during the tests in the principal business district was about 15.8 mgd, and daily consumption was 13.05 and 12.70 mg, respectively. The principal business district tests were repeated the second day, after regulator valves and important line valves were checked, and were made at a time when consumption did not materially exceed the maximum daily rate. Test 9, on the Romig Water System, was made with the city emergency connection open. Tests 24, 25, and 26 were repeated on October 2 after a regulator by-pass valve, found open, was closed and a 16-inch valve, found closed, was opened.

Proposed Improvements.—See map. The 36-, 30-inch southern section supply main was being extended to a 5-mg reservoir under construction for completion in 1969. A gridiron of 12- and 16-inch mains, being installed in the northern section of the port and industrial area, was nearly complete at the time of the survey.

FIRE DEPARTMENT

In addition to the city, the department provides fire protection for the Spenard and Muldoon Public Utility Districts outside the city with an estimated population of 30,000 and an area of 24 square miles. One ladder and 5 engine companies, and an ambulance are in service in 4 fire stations in the city; the 2 engine companies in one station in the Spenard District and the one engine company in the Muldoon District are under the jurisdiction of the city fire chief according to written contracts, although the fire stations and the fire apparatus are owned by the districts.

There are 93 full-paid members (including 20 assigned to the 3 companies outside the city) as follows:

Fire Force:		
Officers:	Chief and Senior Captains	5
	Company	26
Fire fighters and Engineers:		52
Non-fire force:		10

Members work an average of 64 hours per week. The number normally on duty is 18 with the engine and ladder companies within the city and 7 with the 3 companies outside the city. Some of the off-shift members are called on second alarm fires, and all of the off-shift on fifth alarm fires. Some outside aid is readily available.

All apparatus and vehicles in service and reserve are equipped with radio transmitter-receivers on a frequency shared with 3 small fire departments.

Pumper capacity is adequate. Repairs to apparatus are made by a full-time department mechanic; the shop area is at the rear of the apparatus floor at Engine 3 quarters. The preventive maintenance program includes annual tests of pumpers, but no 200-psi pressure tests have been conducted in many cases. Service tests, at draft, of 5 pumpers were witnessed during the survey; 2 did not deliver rated capacities at required pressures.

Hose drying facilities are provided at each fire station, and hose tests are conducted annually; 15% is over 10 years old.

Rules and regulations, adopted in 1968, have been distributed to each fire station.

Training is under the part-time supervision of a lieutenant who is assisted by other officers. An 80-foot drill tower with basement, attached to Engine 1 quarters, is of reinforced concrete construction and is equipped with a standpipe system. Grounds are paved but somewhat congested; a pumper test pit is provided, but no hydrants are available. There is no regular schedule for drills at the tower, but most companies average about one 3-hour drill per month on each shift; few of the drills are combined company drills. Each company conducts 2 hours of training daily at quarters; about 25% are drills. New members normally receive some training before appointment; after appointment, the company officer is responsible for the new man's training. Some officer schools have been conducted, and

monthly staff officer meetings are held. Most members have received some instruction in the hazards of radioactive materials; some have had advanced training.

There has been no regularly scheduled building inspection program by companies for pre-fire planning purposes. A few of the more important occupancies are inspected once or twice a year, but most notes and sketches are incomplete or lacking. A more complete inspection program has been recently started but is progressing slowly.

Within the city response to all box alarms and telephone alarms for fires in buildings is 2 engine companies, one ladder company, and a chief officer, except that no ladder company is dispatched to some outlying high value districts and many residential districts; outside the city 2 engine companies and a chief officer normally are dispatched to box alarms and telephone alarms for fires in buildings. During the fiscal year 1967-1968 there were 3757 alarms of which 238 were for building fires and 2444 were ambulance calls; 1430 of the alarms were outside the city of which 916 were ambulance calls.

Fire methods include the extensive use of 1½-inch hose lines, spray nozzles, and breathing equipment. Back-up lines are laid if fire is evident or upon orders. Pumpers connect to hydrants on most fires, but occasionally direct hydrant streams are used in areas with higher pressures. The first company to arrive connects to sprinkler or standpipe systems if fire is evident or upon orders. Ladder, ventilation, and salvage work is performed by the ladder company or engine companies but is hindered by lack of adequate manpower.

FIRE ALARM

The telegraph-type fire alarm system is maintained by a technician from the municipal electronics laboratory.

Alarm headquarters is in a room on the first floor of the public safety building, a 2-story building of fire-resistive construction; the room contains some combustible materials and is not properly cut off from other operations in the building. Headquarters equipment, installed in 1962, with emergency ground return facilities, is of automatic type and is mainly complete. Current is supplied by individual circuit rectifiers with a common battery. Each fire station has a punch register and tapper, a radio receiver, and voice alarm facilities.

There are 117 boxes in service, all of which are accessible; 12 are located outside the city limits in contract districts. Fifteen boxes are provided with indicating lights; the condition of paint on boxes and on bands on poles is generally good. Of the 47 miles of box and alarm circuits, 4 miles are in underground cable, 35 miles in messenger supported aerial cable, and the remainder is of aerial wire construction. Four box and one alarm circuits are in service; moderate to considerable ground readings were noted on 2 of the circuits.

Five telephone trunk lines extend to a switchboard in alarm headquarters; 4, arranged for progressive operation, are reserved for emergency calls for the city and contract districts, and one additional is for emergency calls from a small nearby fire department; 4 trunks for business calls extend to instruments with switching facilities at the department secretary's desk and in alarm headquarters. Voice amplification circuits extend to 5 fire stations and are used in lieu of fire telephone extension lines.

One operator is on duty at all times. Telephone alarms for fires in buildings are confirmed over the alarm system. Tests and records are fairly good.

FIRE PREVENTION

Hazardous Materials.—The city has adopted the 1965 edition of the Fire Prevention Code of the American Insurance Association along with a few additional ordinances. An amendment has eliminated the requirement for most permits. The gas code contains generally good requirements for gas piping and gas appliances.

Fire prevention activities are under the direction of the chief of the fire department and include the outlying districts adjacent to the city. The fire prevention bureau consists of a fire marshal, a deputy fire marshal, 2 inspectors, and 1 clerk. All are appointed by the chief of the fire department.

The bureau makes inspections of most occupancies every 1 to 2 years. Many businesses are required to have approval from the bureau before their annual business license is issued. Some inspections are made of small businesses by fire department companies. Most conditions found during the survey were fair or fairly good.

Electricity.—A city ordinance adopts the 1965 edition of the National Electrical Code along with some other requirements. Electrical regulations are enforced by the city electrical inspector. Fairly good procedures are in effect for inspections during construction, and each job site is visited at least 3 times. Because the city-owned power and light company also supplies surrounding districts outside the city limits, the inspector spends much of his time on inspections outside the city. There is no

reinspection program. Most new work was fairly good, and existing installations were found to be in fair condition.

BUILDING DEPARTMENT

The city has adopted the 1964 Uniform Building Code, with the appendix and some amendments. The 1964 Uniform Housing Code, which provides minimum requirements for new and existing places of habitation as well as some provisions for fire protection, has also been adopted. Fire Zone 1 covers all of the principal business district, some adjoining blocks, and most other commercial districts throughout the city. Fire Zone 2 includes some of the areas bounding the high-value districts which should be in Fire Zone 1; some of the principal business district is adjacent to a variable zone that allows some types of wood frame construction. Restrictions within Fire Zone 1 are satisfactory; restrictions within Fire Zone 2 are inadequate. Wood shingle or shake roofs are permitted outside of Fire Zones 1 and 2.

The department is under supervision of the building official, assisted by 1 plan check engineer, 1 zone enforcement officer, 2 building inspectors, 1 mechanical inspector, and 1 clerk. All personnel are selected by examination and appointed by the building official. Procedures are fairly good. Plans are checked by the plan checker; review of fire safety features is coordinated with the fire prevention bureau. Records are consolidated although somewhat incomplete. Major plans except for most residential occupancies are kept indefinitely; most plans are fairly well stored and filed.

STRUCTURAL CONDITIONS

Principal Business District.—See map. The district includes 16 blocks or part blocks and covers 38.9 acres. Streets cover 35% of the district and are between 60 and 80 feet in width. Of the total block area, 55% is built upon, with individual blocks ranging from 15% to 84%. Buildings average 1 and 2 stories although 5 buildings are over 8 stories. The tallest building is a 14-story building that joins several older wood frame structures to form a large hotel complex. Wood frame construction covers 21%, fire-resistive construction covers 41%, and automatic sprinklers protect 17% of the built-on area. Exposures to the district are mild from all directions.

Shopping Centers.—The one large shopping center in the city limits, Northern Lights Shopping Center, occupies approximately 9 acres at the south city limits along Northern Lights Boulevard between Spenard Road and Minnesota Drive. Construction is of ordinary type, and the entire area is mutually exposed along a front enclosed mall. Automatic sprinkler protection is provided throughout.

Other Business Districts.—Along the principal streets of the city, namely, 5th Avenue, Gambell Street, Fireweed Lane, and Spenard Road, are smaller commercial districts. Construction in these districts is mostly ordinary or wood frame. Heights vary from 1 to 3 stories. The closely built sections of these districts are confined to narrow strips along both sides of the street.

Industrial Districts.—Practically all of the industrial occupancies are located near or along the railroad right-of-way and the waterfront. This district consists of several large bulk oil storage plants, a large number of warehouse facilities, a few light manufacturing plants, and a variety of small businesses. Most of the buildings are widely separated and have relatively low heights. Some of the larger buildings have automatic sprinkler protection.

Waterfront District.—A portion of the city-owned pier is being reconstructed. Upon completion, the waterfront will have facilities for loading and unloading of cargo, a separate dock for transfer of fuel and oils to the various bulk plants, and several smaller piers to handle fishing boats. The new piers are all of concrete pile and deck construction while the remaining older wharves are mostly timber and wood frame.

Institutional Districts.—Along Providence Drive in the southeast portion of the city, an institutional district is developing. It presently contains the Alaska Youth Correctional Institute, the Alaska Psychiatric Institute, the Providence Hospital, and Alaska Methodist University. All of the buildings are well separated and of new construction. The hospital is a 5-story structure and also the tallest building in the district. Areas are mainly large, and the basement portions of some buildings are sprinklered.

Residential.—Residential districts consist mainly of detached, 1- and 2-story wood frame dwellings with a few apartment house districts and government housing projects. Composition roofs predominate in most sections. Current urban renewal projects are aimed at eliminating the substandard houses along the Seward Highway between 17th and 19th Avenues.

Earthquakes.—The city has felt many earthquakes prior to the severe shock of 1964; for example, the moderate shock of October 3, 1954, caused minor damage to the tall buildings in Anchorage (the same buildings were severely damaged or collapsed in the 1964 shock).

Further details on the 1964 earthquake and nature of the earthquake hazard in Anchorage may be obtained from the following publications:

"The Alaska Earthquake", published by the American Insurance Association and the Pacific Fire Rating Bureau, 465 California Street, San Francisco, California

"The Prince William Sound, Alaska, Earthquake of 1964 and Aftershocks", Volume II part A, available from Superintendent of Documents, Washington, D. C.

RECOMMENDED IMPROVEMENT PROGRAM

The following program has been prepared to assist the City of Anchorage in providing better protection to life and property from fire and may be used as a guide for future planning. In general, recommendations under each heading are listed in the order of their importance. The areas in which the City of Anchorage provides fire protection services under contract have not been analyzed as to their specific fire protection needs, and recommendations for these areas are not included in this program.

WATER SUPPLY

1. That additional hydrants be provided so that:
   a. In the principal business district there will be one hydrant at each street intersection.
   b. In other high-value districts there will be one or 2 hydrants at each street intersection, depending upon the character of the district, with intermediate hydrants so that they are not over 300 feet apart.
   c. In residential districts there will be one hydrant at each street intersection with intermediate hydrants so that they are not over 500 feet apart.

2. That the 5-mg reservoir be completed as soon as possible.

3. That the distribution system be strengthened by the installation of mains shown in red on the map, that 6-inch dead ends be eliminated wherever possible, and that the following be adopted as the minimum size of mains used for hydrant supply for all future construction:
   a. In high value districts, 8- and 12-inch; the former to be used where it completes a close gridiron and the latter for longer lines, not closely interconnected.
   b. In residential districts, 8-inch; 6-inch to be used only where it completes a close gridiron and in no case for runs of over 600 feet between interconnections.

4. That the 24-inch wood-stave supply line be replaced by pipe conforming to an appropriate American Water Works Association standard.

5. That comprehensive indexed records and maps suitable for use in the field be compiled for all system valves; that valves be inspected annually and large and important valves more frequently; that valves be maintained in good condition; and that inspections, operations, and conditions be recorded.

6. That hydrants be maintained in good operating condition at all times.

7. That all alarms of fire be received and recorded over the fire alarm system at the water treatment plant.

FIRE DEPARTMENT

1. That at least 4 members be on duty at all times with each engine and ladder company.

   NOTE: Seven members on duty at all times with each high-value engine and ladder company, 6 with other ladder companies, and 5 with other engine companies is considered standard manning.

2. That a ladder company, equipped with an aerial ladder truck, be established in Engine 3 quarters.

3. That a full-time training officer be appointed; that more suitable training facilities, including a structure in which fires may be built, be provided in an area where the use of smoke and water will not be restricted; and that the training program be expanded to include supervised combined company drills at the training grounds, regularly scheduled schools for all officers, and additional training for pump operators.

4. That company members make more frequent inspections of buildings in their respective districts for pre-fire planning purposes; inspection data to be recorded on suitable forms, augmented by appropriate notes and sketches, and used as subjects for discussion in the training program.

5. That the apparatus replacement program be continued, and that the repair facilities be ex-

panded, including additional tools and equipment, and that a more complete preventive maintenance program be adopted.

6. That a ladder company be included in the response to all box alarms and all telephone alarms for fires in buildings.

7. That the rules and regulations be expanded, to include complete fire ground rules, and be distributed to each member.

8. That all fire stations be of noncombustible construction (preferably fire-resistive), of good design, and suitably located, and that proper refueling facilities be provided at each fire station.

9. That if the city continues to provide protection outside the city, an additional ladder company be established.

FIRE ALARM

1. That 2 qualified operators be on duty at all times in alarm headquarters.

2. That additional boxes be installed so that one will be visible from and be within 500 feet of every building in high-value districts and be within 800 feet of buildings elsewhere; and that the conspicuousness of boxes be improved by installing indicating lights over all boxes in high-value districts.

3. That the reliability of the system be improved by:

a. Providing additional box circuits so that none will serve an excessive area.
b. Repairing circuits to remove high ground readings.
c. Providing emergency power facilities at each fire station and for local circuits at alarm headquarters.
d. Installing circuits underground or in messenger supported aerial cable, wherever possible.
e. Providing automatic recording devices for radio and voice amplification facilities.

FIRE PREVENTION

1. That additional qualified personnel be appointed to the fire prevention bureau so that adequate control can be maintained over hazardous materials, processes, and occupancies including regular and systematic inspections of all commercial and industrial buildings at suitable intervals, and that adequate records be kept of such inspections.

2. That a complete inspection of old wiring be made and defects corrected, and that all wiring be subsequently reinspected at suitable intervals.

BUILDING DEPARTMENT

1. That the building code be amended to include those structural features necessary to restrict the spread of fire. It is recommended that the National Building Code of the American Insurance Association be used as a guide in framing these amendments.

2. That only roof coverings of class C or better be permitted within the city limits.

3. That Fire Zone 1 be revised to include all closely built business and commercial areas. It is suggested that the Recommended Method for Laying Out Fire Limits by the American Insurance Association (National Board of Fire Underwriters) be used as a guide in determining these revisions.

STRUCTURAL CONDITIONS

1. That owners of existing defectively constructed buildings which involve serious life hazard or are so located as to form conflagration breeders be required to protect floor, fire wall, and exposed window openings.

2. That approved automatic sprinkler equipment be required in all basements exceeding 2500 square feet in area used for storage or for mercantile purposes and in all buildings which by reason of their size, construction, or occupancy involve serious life hazard or might act as conflagration breeders.

Report based on survey made during July, and August, 1968, by engineers R. I. Eby, M. J. Myrick, and R. E. Boudon, in cooperation with Karl Steinbrugge and other personnel of the Pacific Fire Rating Bureau. Acknowledgment is made of the assistance rendered by the mayor, city manager, and other officials.

VI	PRIVATE FIRE PROTECTION REDUCES THE COST OF OTHER PUBLIC SERVICES	13
VII	TAX CREDITS, LOW INTEREST LOANS FOR PRIVATE FIREPROTECTION, INSTALLATION, AND ELIMINATION OF WATER STANDBY CHARGES WILL PROVIDE THE LEGISLATIVE INCENTIVE TO MOVE TOWARD UTILIZATION OF THE BEST AND MOST ECONOMICAL FIRE SAFETY TECHNOLOGY - PRIVATE FIRE PROTECTION	16
	A. Why Legislative Incentives?	16
	B. Low Interest Loans Will Cause Financing to be Available so that Sprinklers can be Installed in Both New and Pre-existing Construction	17

C. Tax Credits for Installation of Private Fire Protection Will Encourage, not Penalize, the Owner Who Adopts Better Fire Safety Technology, and Will Not Cause Cities to Lose Tax Revenue 18

D. Elimination Of Water Standby Charges 20

VIII CONCLUSION 21

I. THE PROBLEM: ALASKA'S EXPANDING AND DEVELOPING COMMUNITIES WITH UNDERDEVELOPED PUBLIC SERVICES ARE PARTICULARLY VULNERABLE TO CATASTROPHIC FIRE LOSSES.

A high fire death rate is peculiarly an American problem. No other industrialized nation comes close to the American fire death rate. Fire deaths and injuries per million population in the United States are nearly three times that of Sweden which has the next highest death and injury rate by fire.

In 1974 nearly 3 million fires caused nearly $4 billion worth of fire losses. The dollar value of the damage and destruction by fire does not even begin to approximate the actual losses because serious fires create indirect business and community losses such as:

(a) Loss of customers

(b) Loss of profits

(c) Cost of retaining key personnel during shutdown

(d) Loss of taxes on destroyed property.

Finally, there are indirect losses of a personal nature. These may be even more difficult to estimate, yet their importance should not be neglected. In addition to financial losses incurred through temporary unemployment and expenses incurred in finding and moving to new housing, there is the destruction of irreplacable personal belongings. With its vast expanses and small communities with

underdeveloped public services, Alaska has a particularly dismal experience with fire losses. Tragic reminders of this are the New England Fish Company and Alaska Steamship dock fire in Cordova, the fires in Sitka which destroyed the priceless Russian cathedral, and the Sitka Cold Storage Company and dock facility. Perhaps most tragic are the cannery fires in small communities (most recently in Craig, Alaska, in 1980). Most often the canneries have not been rebuilt, and in some cases, the communities, which relied on the canneries as their sole means of economic support have ceased to exist. Canneries have plenty of water by virtue of the business they are in, and private fire protection would have eliminated the monetary losses, and in some cases, assured the continued existence of the community itself.

Water is an indispensable commodity when it comes to fighting fire. Fires cause billions of gallons of water to be consumed putting them out. Providing adequate water supplies constitutes a major community expense. Residents of the Anchorage and Matanuska-Susitna boroughs are certainly aware of the Susitna hydroelectric project, as part of the ongoing efforts to assure that area with adequate and safe water supplies. The residents of Juneau learned of the exigencies of having adequate water supplies in January of 1980, when climatic conditions temporarily depleted their water supply.

The State of Alaska will undergo rapid growth in population as development of its resources progresses. The oil industry is expanding, other industrial plants associated with the oil industry are planned and coming on line. The fishing industry is expanding into new products and plants. This is bringing increasing population and business to many of our communities. The growth is impacting the fire protection and water supplies of these growing areas. Communities are being faced with providing additional fire protection services, and with the costs of providing these services. See, Shirnberg, Robert R., Community Fire Protection Incentive Program, October 20, 1979.

Consequently, given the compelling social goal of avoiding catastrophic fire losses, together with the absolute necessity to provide water for basic human existence, a community must develop policies wich maximize its ability to provide both fire protection and adequate water supplies.

II. THE SOLUTION: MAXIMUM UTILIZATION OF PRIVATE FIRE PROTECTION SYSTEMS MINIMIZES FIRE LOSSES AND MINIMIZES COSTS OF OPERATING FIRE DEPARTMENTS AND WATER UTILITIES.

Private fire protection systems (the backbone of which are automatic sprinkler systems) are the most effective means of controlling fires in buildings. Not only do private fire protection systems put out fires, they do not require nearly as much water to extinguish fires as would be required for the Fire Department to put out the same fire. Nor do sprinkler systems require as much or as expensive equipment to fight a given fire as a Fire Department. Where private fire protection systems are deployed the expense and cost of the Fire Department are much less, and the chance for injury to firemen as a result of fire is almost negligible in sprinklered buildings. Sprinkler systems are the most technologically advanced fire fighting weapon, and their use should be maximized to reduce and hold down costs of the Fire Department.

We must accept the fact that public fire departments can contral a fire only in its early development stages. For the most part, fire departments can only combat fire by directly overwhelming it with massive amounts of expensive equipment, manpower and water. When the fire is small, the fire department is still on the way. Even with the best response time, it is fact that many small fires are out of control by the time the fire departments arive.

By contrast, the private fire protection system has no response time. It is on scene before the fire starts, and usually has put out the fire before the fire department even arrives.

III. LEGISLATION CREATING INCENTIVES FOR THE INSTALLATION OF PRIVATE FIRE PROTECTION SYSTEMS WILL ENCOURAGE A STATEWIDE SHIFT TOWARD MAXIMIZING UTILIZATION OF MORE EFFICIENT, LESS COSTLY FIREFIGHTING TECHNOLOGY, THEREBY HOLDING DOWN OR REDUCING COSTS OF WATER UTILITIES AND FIRE DEPARTMENTS.

Private fire protection is an alternative. Its technology is ready to be implemented, and, through legislative incentive, it will reduce the increasing burden of fire protection costs. Within a few short years of implementing legislative incentives, private fire protection systems will become increasingly prevalent in communities statewide. As Alaskan communities expand and grow, the legislative incentives will alleviate the necessity to expand the manpower, equipment, and water supplies for the fire department as in the past. Fire departments won't need to open as many new stations, buy as much firefighting equipment, or hire as many firefighters to meet the fire protection needs of the state's expanding communities. Costs of water supplies will be reduced as existing supplies go farther as a result of the water conservative propensities of private fire protection systems are realized. By moving now to take advantage of proven fire protection technology huge savings in property loss, jobs, insurance costs, building costs, life, and indeed even entire communities (in cases of unprotected cannery fires) will result and those savings will continue to accrue and continue to accelerate as the incentives prompt more and more property

to be protected. (For a hypothetical case study of savings a community can realize as a result of widespread sprinkler installation see, Hackey, Associate Professor, Univ. Maryland, Built In Fire Protection and Fire Department Manning (Appendix A).

IV THE SAVINGS IN LIFE, PROPERTY, CONSERVATION OF WATER, AND REDUCED COST OF LOCAL GOVERNMENT SERVICES FROM WIDESPREAD INSTALLATION OF PRIVATE FIRE PROTECTION SYSTEMS.

Statistics showing the effectiveness of automatic sprinkler systems are phenomenal. Only in rare instances do automatic sprinkler systems fail to control fires in sprinklered buildings. The failures are seldom due to the sprinklers, but rather, the lack of water, often because the system has been turned off, either unintentionally, intentionally, or by vandals. A complete record of fires in sprinklered buildings would show that their efficiency probably approaches 100%. National Fire Protection Association, Fire Protection Handbook, pp. 14-1 through 14-48, 14th edition, 1976. Given the billions of dollars in fire losses, the potential for savings resulting from widespread installation of sprinklers cannot be ignored. Of all the fires controlled by sprinklers, more than 90% of them are controlled by three or less sprinkler heads. Fire Protection Handbook, supra.

The effectiveness of automatic sprinklers stems from their presence at the scene of a potential fire before it srarts. They can apply water immediately where it is needed because there are not problems of access to the seat of the fire, or interference with visibility for fire fighting due to smoke. Fire Protection Handbook, supra. Sprinklers extinguish fires much earlier than a fire department could

ever respond to an alarm. Automatic sprinklers are particularly effective for life safety because they give warning of the existence of fire, and at the same time apply water to the burning area.

> The only fatalities in fully sprinklered properties reported to the National Fire Protection Association were caused by explosions or flash fires; by ignition of the bedding or clothing of a person who was too young, too old, too intoxicated, or too handicapped in some other way to protect himself properly. . . .
>
> In those isolated instances of fatalities to sleeping, handicapped, or intoxicated persons, ignition of clothing or bedding caused fatal burns or asphyxiation either because the small fire did not generate sufficient heat to fuse the sprinkler, or because the victim had suffered fatal injuries before the sprinkler operated. In these later instances, however, the sprinklers protected the lives of persons in adjoining areas. Fire Protection Handbook, supra.

See, also, Horne, B.G., Fire Chief, Controlling the Cost of Fire Protection in the City of San Buenaventura.

Water necesaary to put out a fire in its beginning stages is nowhere near the water required for the fire department to put it out after it once gets blazing. Performance characteristics of sprinklers indicate that standard automatic sprinklers discharge anywhere from 18 to 58 gallons of water per minute, depending on the pressure at

the sprinkler head. Fire Protection Handbook, supra, at pp. 14-42 through 14-48. By comparison, a heavy-attack two and one-half inch mobile fire department hose line in operation can consume as much as 250 gallons of water per minute. If the fire is not put out in its infant stages (as occurs over 90% of the time when automatic sprinklers are deployed), it may take a number of heavy-attack lines hours to control the fire - if the water supply holds out that long.

Sprinklers do not cause excessive water damage. Damage by sprinklers is negligible compared to that caused by fighting the same fire with a hose stream. Most fires are controlled by a small number of sprinklers, while many hose streams are required to combat a fire which is out of control. Sprinklers, in most cases, control the fire immediately. The water damage which does occur is negligible compared to the damage which would have resulted if the building should have been completely or substantially consumed by a fire fought by conventional means. See, Horne, B. G., Fire Chief, Controlling the Cost of Fire Protection in the City of San Buenaventura.

V. THE SIZE OF A COMMUNITY'S WATER SYSTEM CAN BE REDUCED BY WIDESPREAD INSTALLATION OF PRIVATE FIRE PROTECTION SYSTEMS IN THE COMMUNITY.

A major part of the cost of the developing community's water supply is the additional reservoir of water which must be on hand for major fires, and the high pressure distribution lines from the reservoir to assure the fire department will have enough water pressure to project many hose streams onto a raging major fire. Nowhere near the same quantity of water or water pressure would be required for automatic sprinklers to do the same job.

The traditional method for estimating the water supply required to serve a community's fire protection needs is by computing fire flow requirements. The criteria to estimate fire flow requirements are found in the Guide for Determination of Required Fire Flow, Insurance Service Organization, 1972. The fire flow formula reflects significant water conservation propensities of private fire protection. Depending on the flammability of a given building, the fire flow required is reduced by 25% to 75% when a sprinkler system is present in a building. Fire Protection Handbook, supra, at pp. 11-2 through 11-6.

The fire flow formula developed by ISO can be utilized to determine the community-wide fire flow requirements. This procedure is more fully described in ISO's Municipal Grading Schedule, copies of which are available in many

community Fire Department and Fire Department Protection offices.

Although the methodology in the Municipal Grading Schedule does not enable a precise computation of the reduction in community fire flow requirements caused by widespread sprinkler installation, it is significant. Anchorage, Alaska, is a specific case in point, where ISO engineers indicate installation of sprinklers in the Central Business District, alone, made Anchorage a more fireworthy community, and caused a reduction in fire flow requirements.

VI. PRIVATE FIRE PROTECTION REDUCES THE COST OF OTHER PUBLIC SERVICES.

In addition to the water conserving properties of automatic sprinkler systems, and the significant savings in life and property, there are other public benefits from widespread installation of private fire protection systems. Among these are:

1. Both the economic and physical burden of the Fire Department are decreased since private fire protection generally puts out the fire before the fire department even arrives. This also decreases the hazards of fighting fire.

2. The cost of manpower and time fighting the fire is reduced and therefore the money necessary to operate the Fire Department can be reduced, stablized, and diverted to other essential Fire Department or community expenditures.

3. Private fire protection decreases fire insurance costs not only for the person installing it, but also for an entire community where the installations are widespread. Many rural communities have little or no fire protection. These communities may not be able to afford the expensive fire-fighting equipment more urbanized communities have. Commercial construction moneys are also difficult to obtain because insurance rates are too high. By installing private fire protection, great reductions in insurance premiums can be achieved, which will enable property owners to get reasonable insurance premiums needed to obtain financing for construction.

4. Construction without sprinklers imposes higher insurance costs and imposes on the architect more stringent rules governing compartmentalization, fire proofing, exit distance spacing, travel distance, and exterior design requirements. It costs more to construct without sprinklers. 242 News Bulletin, Automatic Sprinkler Fire Control Association, Inc., pp. 1316 (1973). Providing incentives to construct with sprinklers will lower construction costs and then insurance costs, enabling construction to go forward that otherwise would have been too costly. The resulting stablization and expansion of a community's economic base, not to mention expanded tax base, is obvious.

5. Private fire protection increases municipal tax revenues by encouraging property development.

6. Private fire protection increases a communit's total fire protection security, preventing conflagrations and exposure fires.

7. Private fire protection results in lessening the cost of capital improvements to the community's water supply since widespread installation of private fire protection decreases the required fire flow necessary for adequate municipal fire protection.

8. Private fire protection saves billions of gallons of water, which is in chronic short supply in many communities.

9. Encouragement of private fire protection is consistent with the State policy of encouraging installation of fire protection devices (smoke alarms).

10. Since private fire protection can reduce the cost of the Fire Department and the water utility, Municipal tax

dollars and State revenue sharing monies can be expended for other essential services, making more efficient use of government dollars.

These benefits are substantial and should be encouraged by the incentive legislative programs hereinafter described.

VII. TAX CREDITS, LOW INTEREST LOANS FOR PRIVATE FIRE PROTECTION, INSTALLATION, AND ELIMINATION OF WATER STANDBY CHARGES WILL PROVIDE THE LEGISLATIVE INCENTIVE TO MOVE TOWARD UTILIZATION OF THE BEST AND MOST ECONOMICAL FIRE SAFETY TECHNOLOGY - PRIVATE FIRE PROTECTION.

A. Why Legislative Incentives?

The decision to install or not to install private fire protection hinges on two variables. First, the Uniform Building Code requires building materials with a higher fire rating for higher fire rating for higher risk occupancies. If construction is without sprinkler systems the construction costs may be too high, and the increased cost could prevent the decision to construct from even being made. Second, the reduction in insurance rates for buildings with sprinklers will be greater for some kinds of buildings than for others. The size of the reduction is largely determinative of how long it will take the property owner to amortize the cost of the sprinkler system. If the insurance reduction is too small, it will take too long to amortize the cost of installing the system, and the decision to install it may not be made, with the resultant loss in fire safety. Legislative incentives in the form of low interest loans which can be obtained to finance sprinkler installation, additional tax credits to buildings that have sprinklers, and legislative elimination of water standby charges will make the decision to install private protection economical and, thus, voluntary. A significant trend would develop

wherein water guzzling fire companies would be replaced by water efficient sprinkler systems, reducing both losses caused by fire and costs to local government.

B. Low Interest Loans Will Cause Financing to be Available so that Sprinklers can be Installed in Both New and Pre-existing Construction.

Funds for low interest loans to finance installation of private fire protection systems should be available in amounts that will allow for a rapid implementation and installation of private fire protection systems by those who qualify for the loans. Many small businesses in our state do not have access to financing at reasonable rates. The current level of interest rates simply does not make it economical for the property owner to consider the installation of private fire protection. Loan qualifications should be established on the basis of need similar to that required for small business loans. But, in addition, loans should also be made available to property owners who are required to install private fire protection by the community building codes, with some consideration given to those property owners desiring to install a system in a pre-existing structure. Making funds available to owners of pre-existing structures will accelerate the move towards utilizing private fire protection technology instead of the more costly and riskier Fire Department.

C. Tax Credits for Installation of Private Fire Protection Will Encourage, not Penalize the Owner who Adopts Better Fire Safety Technology, and Will Not Cause Cities to Lose Tax Revenue.

Installation of private fire protection systems causes property valuations to increase. Up to now the increase has been included in the property's assessed and the community's mill rate has been applied accordingly, thus raising the owner owner's taxes. This penalizes the property owner for installing fire protection systems. A property owner who does not install such a system is the one to penalize, because he increases the potential for disastrous fires in the community, and causes escalating costs for the Fire Department and Water System. Enacting State legislation will remove from tax rolls the penalizing assessment against private fire protection systems. This approach does away with counterproductive taxing practices, and maximizes the cost savings of better fire safety technology.

Local governments will not lose tax revenue as a result of the tax credit for fire protection systems. First, as the incentives induce increasing numbers of fire protection systems to be installed, fire departments will save literally millions of dollars because their requirements for manpower, equipment, and additional fire stations will be drastically reduced, to maintain a given level of fire safety. Attached as Appendix II is an actual case study of great savings which resulted in fire department costs in

C. Tax Credits for Installation of Private Fire Protection Will Encourage, not Penalize the Owner who Adopts Better Fire Safety Technology, and Will Not Cause Cities to Lose Tax Revenue.

Installation of private fire protection systems causes property valuations to increase. Up to now the increase has been included in the property's assessed and the community's mill rate has been applied accordingly, thus raising the owner owner's taxes. This penalizes the property owner for installing fire protection systems. A property owner who does not install such a system is the one to penalize, because he increases the potential for disastrous fires in the community, and causes escalating costs for the Fire Department and Water System. Enacting State legislation will remove from tax rolls the penalizing assessment against private fire protection systems. This approach does away with counterproductive taxing practices, and maximizes the cost savings of better fire safety technology.

Local governments will not lose tax revenue as a result of the tax credit for fire protection systems. First, as the incentives induce increasing numbers of fire protection systems to be installed, fire departments will save literally millions of dollars because their requirements for manpower, equipment, and additional fire stations will be drastically reduced, to maintain a given level of fire safety. Attached as Appendix II is an actual case study of great savings which resulted in fire department costs in

the City of Fresno, California. By inducing widespread installation on of private fire protection systems, the City of Fresno's fire department saved literally millions of dollars, according to the study. Reilly and Viniello, Sprinklers Cut Fresno's Fire Losses and Budget, Fire Journal, November 1979 (See Appendix II). Appendix I empirically documents the huge savings which will result to the Fire Department from a program of this sort.

Second, the assessed value of a sprinkler system, when compared to the value of the rest of a building, is minimal. Without the sprinkler system a fire will destroy the building, and the corresponding loss from municipal tax rolls of the entire valuation of the building will be many-fold greater than the minimum value of the sprinkler system. The City's tax base will grow more rapidly if it is not being consumed by destructive fires, which will not occur when a City's property tax base is protected by sprinklers. It is a certainty that the loss of tax-assessable property will be many times greater in a community that does not have widespread sprinkler installation.

Third, the major component of a City's water supply cost is the necessity to have water available to combat fire. Widespread installation of private fire protection systems will drastically reduce the fire flow demand, with a correspondent cost reduction to the water

utility. In sum, then, the savings to the fire department and the water utility, together with the increased tax base that will result from the increased fire safety, induced by exemption of fire protection systems from the tax base, all culminate to provide increased, rather than decreased, revenue to municipalities. The tax credit incentive in Senate Bill 370 and House Bill 648 will insure this result.

D. Elimination Of Water Standby Charges

One of the most invidious disincentives to the installation of private fire protection systems has been the water standby charge levied by water utilities. The charge is levied when a private fire protection system is connected to the water system, regardless of whether it consumes water or not. The theory of the charge is that the connection of the system creates demand that the Utility must meet. Nothing can be further from the truth, however. By connection to the water supplies, the required fire flow, and, therefore, demand, is reduced. Sprinklers simply do not demand anywhere near as much water to fight fires as do Fire Departments. See, p. 6, supra; see, also, Fire Protection Handbook, supra, at 14-42 through 14-48. The cumulative effect if widespread spinkler installation is reservoir requirements which are stablized or reduced when compared to the requirements without the sprinklers.

Water demand charges eat up or completely eliminate any

insurance savings to the property owner which would otherwise go towards amortizing the cost of installing the system. The demand charge makes it uneconomical to install the sprinklers. The water demand charge eliminates the only source of cost saving to be realized by installation of the sprinkler system. The demand charge should be exposed for what it is--a disincentive to installation of private fire protection that is counter productive to the goal of having adequate water supplies, and to the goal of making our communities safe from destructive fires. In the interests of conserving scarce water resources and maximizing the public fire protection dollar, then, legislation banning imposition of water demand charges on private fire protection systems should be enacted.

VIII. CONCLUSION

For the foregoing reasons support of this legislative program is urgently solicited. Senators, Representatives, local governments, and the public are urged to support these legislative incentives. The Alaska State Firefighter's Association and the Alaska State Fire Chiefs Association believe it's time to stop utilizing expensive, dangerous, and outmoded fire safety technology to protect our communities. These legislative incentives promote utilization of the best firefighting technology, while at the same time saving money. It will save the public and local government

money, and conserve scarce water resources, thereby saving in water supply construction.

A QUARTERLY NEWSLETTER FOR LOCAL GOVERNMENT OFFICIALS WINTER 1979

Reducing Manning Costs For Fire Suppression

"Manning policy for fire suppression personnel is a very controversial issue. At a time when taxpayers are demanding budget stringency, fire department manning practices require further examination and evaluation. To date, no significant research has been done on the fundamental question of how many fire fighters are optimally required for fire suppression duty. As a priority issue, the U.S. Fire Administration is planning to initiate a manning study this year. In this issue of **Fire Management Review**, Dr. Harry Hickey makes some important observations on how built-in fire protection can affect ISO water flow requirements and therefore, fire suppression manning levels."

Gordon Vickery, Administrator, U.S. Fire Administration

Built-In Fire Protection And Fire Department Manning

by
Harry E. Hickey
Associate Professor
University of Maryland

The number of companies required and the manning levels for each company are directly related to the number of hazards in a community. Any community has a range of hazards. Therefore, the geographical location and the nature of these hazards are prime factors in determining the location of engine and ladder companies.

Property Hazard Level Reduction

Generally, property hazard levels should be used to determine the number and type of fire companies required and the manning levels for each.

One method of measuring property hazard levels is to determine the amount of water required to control and extinguish a fire in a building or group of buildings. Required fire flow will vary according to a building's ground floor area, height, construction, occupancy, internal fire protection and alarm systems (automatic sprinklers and alarm transmission to an emergency response service), and exposure conditions.

The **Guide for the Determination of Required Fire Flow**, which is published by the Insurance Services Office (ISO), can help to determine fire flow requirements for specific hazards (there is some question on the validity of the final computations). It is also helpful in assessing fire flow requirements according to a community's hazard variables. The guide states that by using these computations, fire flow requirements "may be reduced by up to 50 percent for complete

automatic sprinkler protection. Where buildings are all fire resistive or non-combustible construction, the reduction may be up to 75 percent." Thus, established fire flow values can be cut drastically by requiring the installation of automatic sprinkler protection.

Regardless of the method used to compute required fire flow, there is general agreement that the public protection equipment requirement increases with the fire flow requirement. Conversely, as the property hazard is reduced, so is the required fire flow and thus, the level of fire department response.

A community policy to control and reduce property hazard levels by requiring automatic sprinklers can have a significant impact on holding the line with fire department manning requirements. In addition to improved life safety and property protection, automatic sprinklers may reduce property insurance premiums and the demand on the community's fire suppression delivery system. This may open new service delivery options, such as improvement of emergency medical services with existing personnel.

Hypothetical Case Study

The community of Newtown, which covers approximately 12.75 square miles, has 5 primary hazards characterized by: ordinary construction; four stories; ground floor areas from 43,000 to 50,000 sq. ft.; occupancies of the moderate hazard level; and normal exposure conditions. It is assumed that these buildings are the worst fire hazards in the community, and that the level of fire protection required for them will be equal or better for the rest of the community.

FIRE MANAGEMENT REVIEW
VOLUME ONE, NUMBER THREE

FIRE MANAGEMENT REVIEW is published quarterly by the International City Management Association (ICMA) under Grant No. APR 77-20903 from the National Science Foundation. The project is administered by ICMA's Management Research Center which is directed by Lisa Stevenson.

FIRE MANAGEMENT REVIEW is published to share research with, and assist in utilization by, local governmental administrators and fire service managers, and to create a climate for change. Points of view or opinions stated in this publication do not necessarily represent the official position of the National Science Foundation or ICMA.

Any part of this document may be reproduced with an order acknowledgment of the source.

Project Manager and Editor — Carroll Buracker

Administrative Assistant — Donna Reeves

Project Secretary — Joan M. Moore

Without automatic sprinkler protection the ISO guide sets a required fire flow of 8,000 gallons per minute for each fire. However, using the water supply section of the ISO Grading Schedule, the basic fire flow for Newtown is 7,500 gallons per minute. The guide makes a clear distinction between required fire flow and basic fire flow.

If each of the primary hazards were retrofitted with a hydraulic automatic sprinkler system, the peak required fire flow for each fire demand zone would be reduced from 8,000 gallons per minute to 4,000 gallons per minute. This would reduce the basic fire flow for Newtown to 3,500 gallons per minute.

The reduction in fire flow requirements has a dramatic effect on manning levels. Fire suppression manning requirements were calculated on the following assumptions:

- a 48 hour work week;
- average vacation and sick leave of 4 hours per week for each individual;
- 3.8 persons are required to staff a suppression position 24 hours a day; and
- engine and ladder companies each require one officer on duty at all times.

The ISO Grading Schedule was used to determine the number of engine and ladder companies required, based upon the response distance and the established required fire flows, and the manning requirements for each company.

Company and manning requirements were calculated with and without automatic sprinklers.

	Without Automatic Sprinklers	With Automatic Sprinklers
Stations	5	3
Engines	7	4
Ladders	3	1
Officers	42	15
Fire fighters	209	76

Annual personnel costs (including fringe benefits) were estimated on the basis of $24,000 for each officer and $18,000 for each fire fighter.

	Without Automatic Sprinklers	With Automatic Sprinklers
Officers	$1,008,000	$ 360,000
Fire fighters	3,762,000	1,368,000
TOTAL	4,770,000	1,728,000

Sprinklers Cut Fresno's Fire Losses and Budget *continued from page 89*

deficiency point rating had been implemented as a solution to the fire defense strategy.

Real losses (measured in replacement cost of buildings destroyed) were reduced by 22 percent. While most cities in the United States are operating with fewer fire stations, fewer pumpers and ladders, fewer fire fighters, and less equipment than they had 20 years ago (and many are protecting more land area), Fresno chose to do so out of an intelligent master concept. Its results: a more efficient municipal government, more fire protection for its citizens at less cost, lower insurance rates, and a smaller, more efficient, higher paid, and well-trained fire department, plus a planning and inspection department with the proven capability to develop and execute a "cost-effective" master plan for municipal fire defense. △

Light-Wall and Special Light-Weight Pipe in Automatic Sprinkler Systems *continued from page 64*

Table 1.

Pipe Trade Size	*Internal Diameter (Inches)* Schedule 40	Schedule 10[1]	*% of Reduction in Friction Loss*
1"	1.049	1.097	20%
1¼"	1.380	1.442	19%
1½"	1.610	1.682	19%
2"	2.068	2.157	19%
2½"	2.469	2.635	27%
3"	3.068	3.260	26%
4"	4.026	4.260	24%
5"	5.047	5.295	21%
6"	6.065	6.357[2]	20%
8"	8.071[1]	8.249[3]	10%

[1] Schedule 30.
[2] 0.134" wall thickness — light-wall pipe.
[3] 0.188 wall thickness — light-wall pipe.
[4] ASTM A-135 light wall steel pipe.

An illustration of the effect of specifying light-wall pipe as a substitute for standard-weight pipe in an automatic sprinkler system follows. A warehouse with high-piled storage of a type requiring 0.38 gpm per square foot over 2,000 square feet of floor area uses 17/32-inch orifice automatic sprinklers. The pressures required for this automatic sprinkler system are illustrated in Table 2 for both standard-weight and light-wall pipe.

Fire pump power demand in this example can be reduced by as much as 13 percent, depending on pump efficiency. Table 2 illustrates that this water supply will be required to deliver 16.7 psi less pressure at 760 gpm.

Smooth Interior Pipe Walls

Friction loss is a function of interior wall roughness. Light-wall pipe, manufactured in accordance with ASTM A-135 specifications, is made by the electric-resistance weld process. The steel used to form this pipe is rolled, either cold or hot, and has a smooth surface. The pipe is generally formed cold, and thus has little opportunity for scale formation and roughening of the surfaces. Standard-weight pipe is often formed hot, and may include scale and other imperfections on its surfaces. Ten percent improvement in surface finish can result in a 16 percent reduction in friction loss.

Table 2

Pressure Required	*Standard-Weight*	*Light-Weight* [illegible] *at 20*
To obtain sprinkler discharge	22.6	22.6
Friction Loss		
Branch Line	32.0	26.1
Mains	45.0	34.2
Underground	15.0	15.0
Elevation	10.8	10.8
TOTAL	125.4	108.7

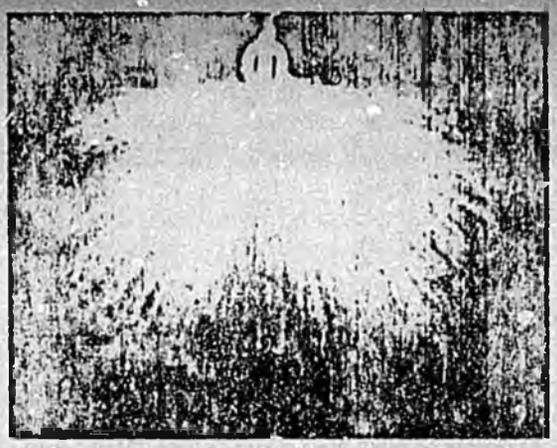
SUMMARY

1. Sprinkler system designers have an added option of using Schedule 10 light-wall pipe.

2. Substitution of Schedule 10 light-wall pipe for Schedule 40 pipe will significantly reduce the total pressure and power demand on the water supply.

3. Reduction in pressure requirements can save installed and operating costs as follows:

- Less horsepower required to deliver water.
- Smaller pumps or the ability to supply sprinkler systems from existing water supplies.
- Smaller pipe sizes — lower pipe cost — less weight — less labor and freight costs. △



Sprinklers Cut Fresno's Fire Losses and Budget

EDWARD J. REILLY and JOHN A. VINIELLO

In the 1960s, the city of Fresno, California began the process of basing its municipal firesafety program on the installation of automatic sprinklers. As a result, the city decreased its fire losses, decreased the percentage of the municipal budget allocated to its fire department, and improved its insurance rating.

Many of the details of the Fresno program were explained in a March 1975 FIRE JOURNAL article entitled "How the City of Fresno Achieved Better Fire Protection." A major element of the program was the enactment by the Fresno City Council in 1961 of the Dangerous Building Ordinance, which focused on the central business district and gave city officials the power to remedy the hazards resulting from unsafe buildings or structures. City officials were empowered to condemn those buildings or order their repair, renovation, or restoration so that they would meet the requirements of the *Fresno Building Code*.

Under the provisions of the Dangerous Building Ordinance, buildings owners could choose among several alternatives to bring their buildings up to the requirements of the *Building Code*. Most owners found that the most economical way to comply with the *Code* was to install automatic sprinklers.

The city coupled the Dangerous Building Ordinance with a funding plan that city officials arranged with the local agency that administered the federal urban renewal program in Fresno. Federal funds were provided to the city by the US Department of Housing and Urban Development for the acquisition of property and the demolition of buildings not worth saving. The city's agreement with the urban renewal agency specified that any new construction in the city's urban renewal area would be sprinklered in accordance with NFPA 13, *Standard for the Installation of Sprinkler Systems*. Finally, the urban renewal agency agreed to help interested owners find loans for building renovation. The agency did not, however, provide funds to owners or guarantee loans made to owners.

As a result of these two actions by the city -- enactment of the Dangerous Building Ordinance and the agreement with the federal urban renewal agency — sprinkler protection became almost universal in the 18-block central business district and a separate 22-block area once considered a slum. More than 95 percent of all the buildings in both areas ultimately were protected by automatic sprinklers.

Representatives of the National Automatic Sprinkler and Fire Control Association (NAS), which was involved in the initial discussions that resulted in the Fresno program, revisited the city in 1977 to study the results produced by the program. What follows is a recounting of the effects that the organization found the program had made on the fire department and fire losses.

Fire Department Results

In 1955, Fresno's population stood at 115,000. By 1977, 69,500 people had been added to its population, a

Mr. Reilly is President of the National Automatic Sprinkler and Fire Control Association, Inc. Mr. Viniello is that organization's Vice-President of Field Operations.

65 percent increase. In 1955, Fresno covered only 21 square miles. By 1977, through a process of annexation, its area had jumped to 58 square miles. During the same period, the number of Fresno's engine companies increased from 9 to 11, a 22 percent increase. Total paid fire-fighting personnel increased from 218 men in 1955 to 276 men in 1977, a 26 percent increase. The number of fire fighters on duty around the clock remained unchanged: 68 men on duty during any 24-hour period in 1955, and 68 men on duty around the clock in 1977.

The burden per fire fighter had increased enormously between 1955 and 1977. In 1955, there were 3.2 fire fighters per square mile of area to protect. By 1977, the number of fire fighters per square mile was reduced to 1.2 men per square mile. Therefore, each fire fighter was required to protect more than 2½ times the number of square miles of area in 1977 than he was required to protect in 1956.

The number of fire fighters on duty during any 24-hour period decreased from 6.04 men per 10,000 in 1955 to 3.64 men per 10,000 in 1977. So the fire department was protecting almost twice as many people and property in 1977 as it had predicted in 1955, and had to cover over 2½ times the geographical area with only 20 percent more equipment, and virtually no increase in manpower.

In 1955, Fresno's fire department received so few deficiency points that it was rated as a Class 1 department. If the fire department were to maintain its Class 1 rating, 14 new fire stations would have to have been added between 1955 and 1976. Assuming a cost of $1 million per station, including land and construction costs, this $14 million acquisition would have cost the taxpayers about $2.2 million per year, assuming a 6 percent municipal bond issue floated over a 20-year period.

Fourteen pumpers would have to have been added to maintain a zero deficiency point rating. At $65,000 per truck, this additional cost would add about $145,600 per year to the fire department budget with the same 6 percent municipal bond float for the same 20-year period.

It is difficult to calculate with precision the impact of additional manpower required to maintain a zero increment in deficiency points resulting from a manpower shortfall. However, in 1955, the Fresno Fire Department was up to full complement: six men per company, on duty 24 hours a day. By 1976, only four men could roll on a call during any hour of the day or night.

If the three-platoon system (three men working 56-hour shifts around the clock) had been in existence in 1955, 84 new fire fighters would have been required to meet full manpower needs of the department. To say it another way, Fresno's 1977 department of 276 men would have to have been increased to 360 men if the department were to maintain its Class 1 rating. This would have added about $1.26 million per year to Fresno's fire department budget. This would have increased the 1977 fire department budget from about $9 million per year to about $12.6 million. About a 40 percent increase. If the fire department budget came to 13 percent of the total in 1955, it would have come to about 11 percent in 1977 if manpower, fire stations, and equipment were to be maintained at zero deficiency point levels.

Fire Losses

Between 1956 and 1966, per capita fire losses averaged $1.71. In the decade immediately following, per capita fire losses averaged $8.11. However, construction cost more than doubles every decade. NAS wanted to measure the cost of replacing buildings destroyed by fire, so it adjusted per capita fire losses to the Building Construction figures published by *Engineering News Record*. Adjusting per capita fire losses to the Building Code Index, "real losses" dropped 22.4 percent in that decade.

Of even greater significance is the fact that nonresidential losses averaged 62.1 percent at the beginning of the 20-year period. By 1976, nonresidential losses had plunged to 43.5 percent of the total, and it was these buildings that became the object of the intensive automatic sprinkler master plan.

Conclusions

The Fresno program is a comprehensive fire defense master plan.

In the decade that followed its implementation, the city's fire losses (adjusted for inflation) were cut by 22 percent.

The fact that 95 percent of two urban renewal areas covering 40 square blocks were protected throughout by automatic sprinklers under a combination of ordinances made it possible for the fire department to take full advantage of the 50 percent reductions permitted under the "fire flow" standards of the Insurance Services Office (ISO) grading schedule and the additional 25 percent credit given by ISO for superior construction. This resulted in the imposition of almost *zero* deficiency points against the water department.

Intelligent planning based upon a thorough understanding of the ISO grading schedule enabled the building and fire departments to take the steps needed to upgrade the city from an ISO Class 3 to Class 2 city.

The implementation of the plan resulted in economies in fire department operations of up to 40 percent of the total operating budget for that department. The 1977 fire department budget of $9 million would probably range up to about $12.6 million if the 84 added fire fighters, 14 pumpers, and 14 fire stations required to maintain a zero

AMENDMENT

By the Community and
Regional Affairs Committee

Offered in the SENATE

TO: SENATE BILL NO. 370

Page 1, lines 8 - 17, delete all material and insert the following in its place:

"* Section 1. AS 29.53.020(a) is amended by adding a new paragraph to read:

(7) real property to the extent and subject to the conditions provided in (j) of this section.

*Sec. 2. AS 29.53.020 is amended by adding a new subsection to read:

(j) Two percent of the assessed value of a structure is exempt from taxation if the structure contains fire protection systems in operating condition incorporated as a fixture or part of the structure. The exemption granted by this subsection is limited to

(1) an amount equal to two percent of the value of the structure based on the assessment for 1981, if fire protection systems are a fixture of the real property on January 1, 1981; or

(2) an amount equal to two percent of the value of structure as of January 1 following the installation of the fire protection systems as fixtures of the structure after January 1, 1981."

Renumber following sections accordingly.

For purposes of this Act, definition of approved types of fire protection systems and fire alarm systems shall be made available through the State Fire Marshall's Office. On or before the end of October 1980 the State Fire Marshall's Office shall submit a list of approved types of systems to the State Assessor's Office, Department of Community and Regional Affairs and Division of Business Loans, Department of Commerce and Economic Development. This information will also be available to the public.

Cordova Chamber of Commerce

BOX 99

"The Friendly City"

CORDOVA, ALASKA 99574

MT. ECCLES

January 30, 1980

Mr. Robert Shirnberg
Post Office Box 1167
Kenai, Alaska 99611

Dear Mr. Shirnberg,

This is to inform you that on January 29, 1980, the Cordova Chamber of Commerce took action supporting proposed legislation for the installation of Private Fire Protection Systems.

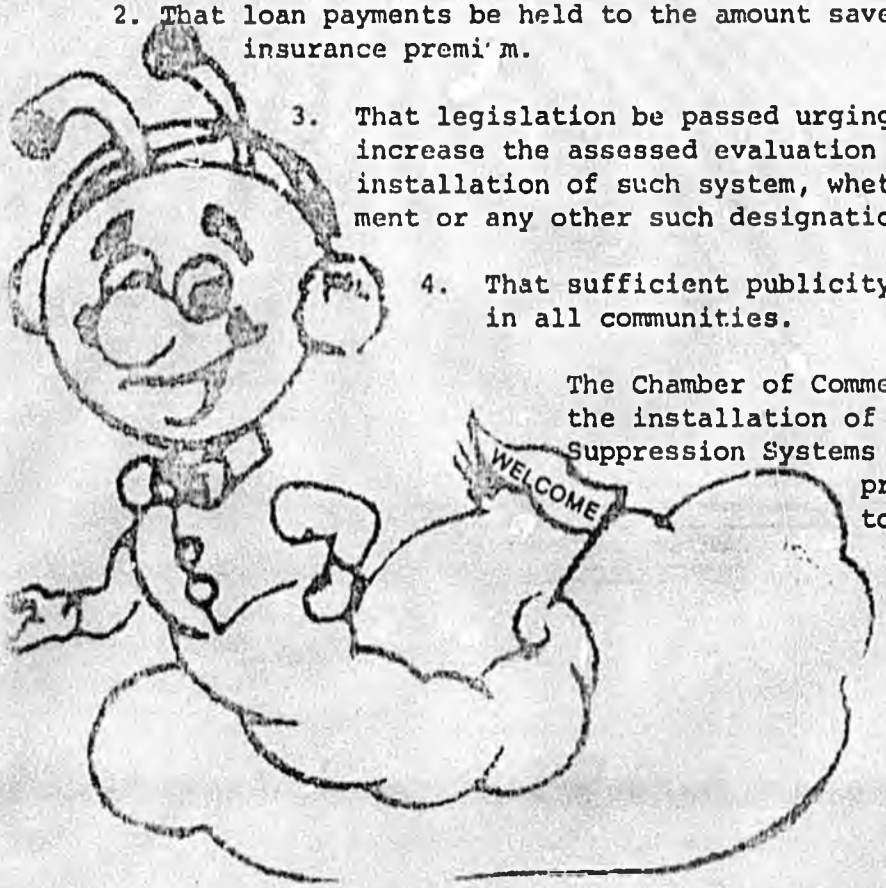
The following are specific concepts supported by this Chamber:

1. Low interest or no interest loans with a minimum of paperwork to be made available to businesses for the purpose of installing Private Fire Protection and Suppression Systems.

2. That loan payments be held to the amount saved on the establishemnt's fire insurance premium.

3. That legislation be passed urging local municipalities to not increase the assessed evaluation of the property because of the installation of such system, whether it be named as an improvement or any other such designation.

4. That sufficient publicity be given to business people in all communities.



The Chamber of Commerce feels that incentives for the installation of Private Fire Protection and Suppression Systems will reduce the loss of lives, property, and lost man-hours due to destruction of business property.

Sincerely,

Robert L. Varnam

Fire Protection Water Standby Charges: Not in the Public Interest

by BRIAN R. SHUTE

A high fire death rate is peculiarly an American problem. No other industrialized nation comes close to the American fire death rate. Fire deaths and injuries per million population in the United States are nearly three times that of Sweden, which has the next highest death and injury rate by fire.

In 1978 over 3 million fires caused over $4 billion worth of fire losses. The dollar value of the damage and destruction by fire does not even begin to approximate the actual losses because serious fires create indirect business and community losses such as:

(a) Loss of customers

(b) Loss of profits

(c) Cost of retaining key personnel during shutdown

(d) Loss of taxes on destroyed property

Finally, there are indirect losses of a personal nature. These may be even more difficult to estimate, yet their importance should not be neglected. In addition to financial losses incurred through temporary unemployment and expenses incurred in finding and moving to new housing, there is the destruction of irreplacable personal belongings.

Water is an indispensable commodity when it comes to fighting fire. Fires cause billions of gallons of water to be consumed putting them out. Consequently, given the compelling social goal of avoiding the catastrophic fire losses, together with the absolute necessity of water for basic human existence, a municipality should develop policies which maximize its ability to provide both fire protection and adequate water supplies.

According to the National Fire Protection Association, private fire protection systems (of which automatic sprinkler systems are the backbone) are the most effective means of controlling fires in buildings. Not only do private fire protection systems put out fires, they do not require nearly as much water to extinguish fires on the average as is required by the Fire Department. The expenses of the Fire Department incurred fighting sprinklered fires are much less, and the chance for injury to firemen as a result of fire is almost negligible in sprinklered buildings.

Brian R. Shute is an Anchorage, Alaska attorney. He represents the Water Conservation Association of Anchorage.

In Anchorage, Alaska, in 1977, the Public Utilities Commission approved a new tariff for the Anchorage Water Utility. As a result, the utility required owners of private fire protection systems to make a monthly payment for merely having an automatic sprinkler system connected to the utility water supply. The owner was required to pay even when he did not use any water at all.

It came to the attention of the Water Conservation Association that the monthly charges in some cases were so high that they were in excess of insurance savings realized through installation of the system. Consequently, some owners were deciding to turn off their fire protection system because it had become uneconomical to maintain. The Water Association was also aware of some new construction for which plans for installation of private fire protection systems had been cancelled because the stiff water standby charge was too high in relation to the savings which could be realized by having the systems installed.

The Water Conservation Association took the position that the standby charge which owners of private fire protection systems were being required to pay was not in the interest of conservative water usage, was not in the interest of increasing the fire worthiness of the general Anchorage municipal area, and did not further cooperative planning to solve the interrelated problems of providing adequate fire protection and water supply to the City.

The Water Conservation Association prepared a memorandum to more fully explore whether the standby charge fire protection owners were being required to pay was in the public interest. A detailed fact digest was compiled. As a result of its study, the Water Conservation Association concluded that the standby charges were not in the public interest and, consequently, should either be eliminated or alternative methods found to restore the economic incentives for installing private fire protection systems so the water conserving and fire loss reducing characteristics can be promoted.

As a result of its efforts, the Water Conservation Association has apparently succeeded in getting the Municipality of Anchorage to agree to a potential of a reduction in standby charge of as much as 75 percent or more. However, the Association would like to see the charge eliminated [illegible] for the following reasons:

PRIVATE FIRE PROTECTION SYSTEMS BOTH CONSERVE AVAILABLE WATER SUPPLIES AND GREATLY REDUCE LOSSES CAUSED BY FIRES.

1. Private fire protection systems conserve water supplies.

Statistics showing the effectiveness of automatic sprinkler protection are phenomenal. Only in rare instances do automatic sprinkler systems fail to control fires in sprinklered buildings. The failures are seldom due to the sprinklers, but rather the lack of water, often because the system has been turned off either intentionally or by vandals. A complete record of fires in sprinklered buildings would show that their efficiency probably approaches 100%. Of all the fires controlled by sprinklers more than 90% of them are controlled by three or less sprinkler heads.

The effectiveness of automatic sprinklers stems from their presence at the potential scene of a fire before the fire starts. They can apply water immediately where it is needed because there are no problems of access to the seat of the fire or interference with visibility for fire fighting due to smoke. Sprinklers can extinguish fires much earlier than a Fire Department could ever respond to an alarm. The amount of water necessary to put out a fire in its beginning stages is nowhere near the amount required for the Fire Department to put it out after it gets going.

Performance characteristics of sprinklers indicate that standard automatic sprinklers discharge anywhere from 15 to 55 gallons of water per minute, depending on the pressure at the sprinkler head. In comparison, a heavy-attack two and one-half inch mobile hose line in operation can consume more than two hundred gallons per minute. If the fire is not put out in its infant stages (as occurs over 90% of the time when automatic sprinklers are deployed), it may take a number of heavy-attack lines hours to control the fire, if the water supply holds out that long.

2. The total required fire flow for a municipality is reduced with the widespread installation of private fire protection systems.

The traditional method for estimating the water supply required to serve a municipality's fire protection needs is by computing fire flow requirements. The latest developments in estimating fire flow requirements are found in the **Guide for Determination of Required Fire Flow** published by the Insurance Services Office (ISO) in 1972. The fire flow formula reflects significant water conservation propensities of private fire protection. Depending upon the flamability of a given building, the fire flow required is reduced by twenty-five to fifty percent when a sprinkler system is present in a building.

The guide for determining required fire flow just referred to is a determination made for specific buildings. The ISO utilizes this formula for determining fire flow requirements for Anchorage as a City. The procedure for making a city-wide fire flow determination more fully described in the ISO **Municipal Grading Schedule.**

The last analysis of Anchorage fire flow requirements was performed and summarized by ISO in a 1969 report. ISO is presently in Anchorage reevaluating the fire flow requirements. The 1972 fire flow guide has been revised since the last fire flow study was done for Anchorage in 1969. ISO engineers indicated that the reduction in fire flow requirements for a building can be even greater than 50%, to as much as 75%, given the right kind of building construction.

It was the opinion of the ISO engineers that although the ISO methodology did not enable a precise computation of the reduction in Anchorage fire flow requirements caused by the private sprinkler protection, it was significant. ISO indicated that the sprinkler installations in the central business district alone made Anchorage's central business district a much better fire risk.

Finally, ISO engineers indicated that with all of the factors of the Municipal grading schedule taken into account, they were hopeful that the required fire flows for Anchorage would be less than the 1969 studies indicated. However, the investigation work for the study has not been completed, and consequently the fire flow requirement is still to be determined.

In 1969, ISO engineers completed a report on Anchorage. It is significant that one of the improvements recommended by ISO was installation of automatic sprinkler equipment in all basements exceeding 2,500 square feet.

Examination of the respective quantities of water needed by the Fire Department versus sprinkler systems to extinguish fires, the 25% to 75% discount for fire flow required for a given building, and a study of the Municipal Grading Schedule all indicate that the amounts of water demanded to maximize Anchorage's fire protection efforts are reduced by widespread installation of private fire protection systems. The conservation aspects of private fire protection are significant and should be encouraged.

PRIVATE FIRE PROTECTION REDUCES THE COST OF OTHER PUBLIC SERVICES.

In addition to the water conservation aspects of automatic sprinkler systems, and the significant savings in life and property, there are other public benefits from widespread installation of private fire protection systems. Among these are:

1. Both the economic and physical burden of the fire department are decreased since private fire protection generally puts out the fire before the fire department even arrives. This also decreases the hazards of fighting fire.

2. The cost of manpower and time fighting fire is reduced and therefore the money necessary to operate the Fire Department itself is also lessened.

3. Private fire protection decreases fire insurance cost for the entire city.

4. Private fire protection increases municipal tax revenues by encouraging property improvement.

5. Private fire protection increases a community's total fire protection security, preventing conflagrations and exposure fires.

6. Private fire protection results in lessening the cost of capital improvements to the water utility since widespread installation of private fire protection decreases

the required fire flow necessary for adequate municipal fire protection.

7. Private fire protection saves billions of gallons of water which is in chronic short supply in most cities.

8. The encouragement of private fire protection systems is consistent with the State policy of encouraging fire protection devices (smoke alarms). Since private fire protection reduces the cost of the fire department for fighting fires in sprinklered buildings, State revenue sharing money can be used for other fire department purposes, making more efficient use of the State money.

9. The omission of automatic sprinklers imposes upon the architect more stringent rules governing compartmentalization, fire proofing, exit distance spacing, travel distance, and exterior design requirements. It costs more to construct without sprinklers.

BECAUSE WIDESPREAD INSTALLATION OF PRIVATE FIRE PROTECTION CONSERVES SCARCE WATER RESOURCES AS WELL AS SIGNIFICANTLY DECREASING LOSS OF LIFE AND PROPERTY FROM FIRE, THE MUNICIPALITY SHOULD ENCOURAGE WIDESPREAD INSTALLATION OF THE SYSTEMS BY PROVIDING NEW INCENTIVES FOR OWNERS TO INSTALL PRIVATE FIRE PROTECTION, AND BY CONTINUING EXISTING INCENTIVES.

The primary incentive for voluntary installation of private fire protection systems is the reduced insurance rates to the owner which enable him to amortize the cost of installation over a period of a few years.

Because of the safety factors accompanying installation of automatic sprinklers and the reduced fire flow characteristics, an owner installing private fire protection can reduce his insurance premiums when the installation has been approved by ISO. This incentive for voluntary installation of private fire protection had been largely eradicated by the implementation of a flat monthly charge by the Anchorage Water Utility of anywhere between $7.10 to $254.10 per month, depending upon the size of pipe delivering water to the building. The most prevalent sizes of pipe are four, six and eight inch pipe for which charges were $28.45 per month, $63.55 per month and $112.85 per month, respectively. These rates nearly eat up, and in some cases entirely eliminate, the savings on insurance an owner achieves by installing private fire protection. Even when the rates do not entirely eat up the insurance savings, they eat up so much of the insurance savings that it takes too long to amortize the cost of installation, and it is uneconomical to install private fire protection.

But when fire protection needs and water supply requirements are examined in the total picture, it appears that the widespread installation of private fire protection will alleviate rather than create additional fire protection demands upon the water supply; the water saving capacities of automatic sprinklers will reduce the total quantity of water required to fight any given number of fires. To levy a standby charge, whether water is used or not, which eliminates the insurance cost advantage is to create a disincentive and discourage voluntary installation of private fire protection systems. Obviously, this will result in a corresponding reduction in water conservation and increase in total potential demand for water for fire protection.

Largely through the work and application of ISO's Municipal grading schedule, the Municipality of Anchorage receives a fire risk rating which determines fire insurance rates for the City. As has already been discussed, widespread installation of private fire protection systems contribute significantly to reducing fire flow requirements for Anchorage, and, therefore, play a part in reducing fire insurance premiums to property owners in the city generally. It is those owners who do not have private protection systems who raise insurance rates, not owners who have installed such systems. To penalize owners for installing private fire protection systems by requiring them to pay this standby charge is to penalize the wrong people. It is the person who fails to install the sprinkler system who contributes to increased insurance rates, who requires immeasurably greater quantities of water to be consumed in putting out fires, and who creates a public hazard, since a fire in a non-sprinklered building is much more likely to rage out of control and burn property of others nearby.

As owners and citizens of the Anchorage municpal area, private fire protection owners have a vested interst in the continuing viability of both the fire protection effort and the adequacy of the water supply. The members of the Water Conservation Association feel that since widespread installation of private fire protection systems not only makes Anchorage a safer place to live, but also reduces Fire Department costs and conserves precious water resources, that the incentive for voluntary installation of sprinklers should be restored. There are a number of options which can be looked at to achieve this purpose.

METHODS TO OPTIMIZE THE FIRE PROTECTION EFFORT AND PROVIDE ADEQUATE WATER SERVICE.

The Anchorage Area Borough Assembly is empowered by the Municipal Charter to prescribe rules and procedures for the operation and management of municipal utilities. Municipal Charter, Article XVI (C) (1975). The Water Conservation Association offers the following alternatives to the water standby charge as being more productive solutions to the total municipal problem of providing adequate fire protection and sufficient water supply.

1. Grant a tax credit to owners who install private fire protection systems. This will indirectly make those who do not voluntarily install private fire protection systems pay for their counter productive and wasteful practice of depending upon the resources of the Fire Department to fight fires. This will also restore the incentive for owners to voluntarily install private fire protection systems, which is lost when insurance savings are eaten up by the standby charge.

2. Simply stop the standby charge for private fire protection. The Water Utility will not have the benefit of the alternative source of revenue from the ad valorem property tax, but this lack of revenue will be more than made up by the savings which result from the public benefits created by the incentive to install private fire protection systems.

TAX INCENTIVE PROGRAM

What are we talking about when we speak of a tax incentive program for fire protection? In looking back over the years, and in particular to the fire protection systems that are provided by private property owners, business and industry, we find that through Fire Codes, Uniform Building Codes and ordinances we have insisted that these same property owners provide private fire protection systems.

In effect, what we are telling the property owner is that we in the fire service cannot provide or meet the fire protection requirements for their particular property, that we insist that they install a system that will provide for fire detection and extinguishment, and supplemented by our fire department, we can then possibly handle the fire problem in his building or property.

When the property owner provides for this private fire protection, we often overlook the fact that he is not only providing protection for his property, but in effect is providing a part of the overall fire protection system of the community. His system does provide for fire protection to nearby properties in that the chances of the fire extending beyond his property is practically illiminated through his built-in fire protection system.

With the installation of a sprinkler system or other fire protection system within the property, the value of the property increases. Up to now the increased value of the fire protection system has been added or included in the tax assessment bill on the property.

I strongly feel that to require a property owner to provide for private fire protection systems on his property and then increase his tax bill because he has installed such a system is again self-defeating. We must be able to encourage the property owner to install such systems. We well know that such a system adds directly to the over-all fire protection system of the community.

To encourage the installation of private fire protection systems in our communities throughout the state, with the direct long-range effect of reducing or at least being able to maintain the current level of public fire protection we should consider the following:

Inact legislation at the State level that will remove from the tax rolls the assessment against private fire protection systems. The net effect to the property owner will be that his property tax rate will be reduced by the value of the private fire protection system.

Presently, the property owner that provides private fire protection systems for his property receives the following benefits:

1. Protection for his building
2. Protection for the contents
3. Protection for the occupants
4. Protection for his business
5. A reduction in the insurance premiums

The public receives the following benefits when a private property provides fire protection systems:

1. The public that enters or resides within the building is protected.
2. The nearby property owners are protected from fire extending from the property in question.
3. The community's tax base is protected in the property
4. The community has assurance that this business will not be destroyed by fire
5. The jobs provided within this property are secure from fire.
6. There is a lesser demand or requirement on the community's public fire department because this property has a built-in fire protection system.
7. The overall fire insurance rating will be enhanced by those properties protected by fire protection systems.

It is apparent that those property owners that install private fire protection systems not only receive certain benefits directly, but in respect to the community as a whole, that through their private efforts, provide a larger degree of benefits to the community in general.

Up until the present time, the property owner that provided private fire protection systems has received no direct benefits or credit from the community or local government for his efforts. The community has in general not recognized what the private fire protection systems mean to a community.

It is apparent that if all private property owners could or would provide private fire protection systems, it will have a dramatic long-term effect on the total community fire protection system. It will certainly affect the costs of providing community fire protection in the future.

Meter Requirements

and

Hawaiian Shows 'Em How!

By Edward J. Reilly *Director of Information*

National Automatic Sprinkler and Fire Control Association, Inc

277 PARK AVENUE NEW YORK [illegible]

Part One

Water shortage. It is one of the major domestic problems now facing this nation. Its dimensions are long term and nationwide.

What impact does this fact have on your municipality's capacity for fire defense?

Somewhere in the United States a fire breaks out every 12 seconds. Over $1.5 billion in property and contents are ravaged by flames annually.

On an average of once a day a "large loss" fire makes headlines. (A "large loss" fire is one that exceeds $250,000.00.)

All this adds up to one conclusion:

Billions of gallons of water are needed daily to safeguard lives and property from fire.

> A few years ago a "large loss" fire was sustained in downtown Saratoga Springs, New York. Population: 16,000. At the time of the fire the public water supply for this city was about five million gallons per day. The fire which occurred in the business district placed a demand of *six million* gallons of water a day to prevent conflagration.
>
> Result: Demand exceeded supply. It was necessary to by-pass the filter beds to meet the total demand for *ten million gallons of water needed* to fight this fire. For several days, residents had to boil all water used to drink and cook as a health precaution.

THE JOURNAL OF AMERICAN INSURANCE, a monthly publication of the American Mutual Insurance Alliance, spotlighted the problem of inadequate public water in a feature story titled "OUR THIRSTY CITIES" in its December 1962 issue. It is a story of a serious national problem of which all too few Americans are aware. Carefully documenting its sources, the JOURNAL pointed out that in 1961 inadequate water supplies were largely responsible for 52 out of the 358 "large loss" fires that occurred in the United States and Canada. Water shortage "is at least partly responsible for the fact that the nation's annual fire loss has risen from $5.50 per person in 1951 to $8.60 per person in 1960. Even more shocking:

- One out of five water utilities was (according to a 1955 survey made by the U.S. Public Health Service) deficient in basic water supply.
- Two out of five were deficient in transmission capacity.
- One out of three lacked adequate pumping facilities to meet fire fighting needs.
- Two out of five needed additional treatment plants to avoid having to pull untreated water into the system in fire emergencies.

- Ground storage facilities were inadequate in 29 per cent of the cities; elevated storage was insufficient in 13 per cent.
- Distribution system improvements, such as eliminating dead-end mains, were needed in 57 per cent of the systems to assure adequate pressure and supply to all locations.

Poor water supplies seriously jeopardize the growth of our cities. From a municipal viewpoint, inadequate water prevents industries from locating in a city. Fire insurance rates are too high when water needed for important industrial progress is not available. For example: Springfield, Ohio had not attracted a new industry for 50 years. By improving its water supply facilities, its fire insurance rates dropped by 10 per cent and 11 new industrial plants moved in to provide needed employment.

The fact that water supply facilities must be improved is obvious. Many communities, using federal and state matching grants have already taken steps to alleviate this problem.

But meanwhile it seems essential that water used for fire protection purposes be conserved.

MORE MILES PER GALLON WITH WATER — FOR FIRE FIGHTING PURPOSES

Ironically many American communities are actually working against themselves. All available information indicates that a pernicious tax, known as the "stand-by charge" is gaining wider acceptance in American cities. The Stand-by Charge is a tax or charge, based on the size of a city water connection, the number of sprinklers, a flat rate, floor area, or a combination of any of these for the purpose of raising revenue to provide adequate water for private fire protection systems.

WHAT IS THE PRACTICE IN NORTH AMERICAN MUNICIPALITIES?

The Factory Mutual Engineering Division is part of the National Association of Mutual Fire Insurance Underwriters. Its decennial publication, PRIVATE FIRE SERVICE CONNECTIONS -- SURVEY OF STAND-BY CHARGES AND METER REQUIREMENTS — 1950-1960, summarizes a survey based on 1,250 public and private water companies serving approximately 3,100 communities in the United States and Canada. Here are the results of that survey:

		UNITED STATES		CANADA
		(1) Municipal (1000)	Private (1451)	(2) Municipal (105)
(3)	METERS			
	Required	28%	38%	18%
	Not Required	72	62	82
	Total	100%	100%	100%
(4)	STAND-BY CHARGES			
	Yes	51%	88%	39%
	No	49	12	61
		100%	100%	100%
	BASIS OF CHARGE			
	Connection size	21%	27%	8%
	Hydrants	3	3	5
	Sprinklers	1	1	5
(5)	Combination	21	57	17
	Flat Rate	4	—	1
	Floor Area	½	—	2
	Other Basis	½	—	1
	Total	51%	88%	39%

Let's examine the pros and cons of stand-by charges:

PRO *To provide adequate public water to supply private fire protection facilities, it is necessary to raise additional revenue by taxing owners of buildings protected by private fire protection facilities. Therefore, the cost of such expanded or improved facilities should be borne by owners of buildings protected by private fire protection systems.*

CON Fire Protection is a total municipal problem. The Fire Department and Fire Prevention Bureau (Fire Marshal), the Police Department, the Water Department and the fire insurance underwriters each have a part to play in the total fire security efforts of a community.

No single department operates in a vacuum. They must be viewed as an integral unit mutally concerned with the over-all fire protection-prevention effort of a municipality.

However, the major burden of municipal fire defense falls upon the shoulders of the Fire Department.

BUT . . .

1. Shorter work weeks result in the fact that fewer firemen are able to respond to a given alarm than at any previous time. This condition promises to worsen.
2. The ratio of firemen to population has dwindled steadily since World War II.
3. Firemen are charged with the responsibility of protecting higher valued properties, more buildings, more volatile and flammable contents each year. Because of the plight of the public fire services, the need for private fire protection is increasing. The backbone of private fire protection is the *automatic sprinkler system.*

Fire officials' associations have unanimously endorsed basement sprinkler ordinances and associations of fire chiefs have been extremely effective in obtaining automatic sprinkler ordinances in Fire Prevention Codes across the nation.

Most rank and file fire fighters know that no firemen has ever been killed in line of duty in a building protected by an approved automatic sprinkler system.

Building officials, too, acting through their large building code congresses, have recognized the important roll of automatic sprinklers, and have adopted provisions into building codes to strengthen automatic sprinkler requirements *for new construction.*

PRIVATE FIRE PROTECTION SERVES A PUBLIC PURPOSE

An owner who elects to install an automatic sprinkler system is serving a *public purpose*:

1. He precludes the possibility of exposure fires and conflagrations.
2. He secures greater personal safety to firemen and offers the best possible safety to life to his employees and to the general public.
3. He safeguards continuity of business in his own plant.
4. He is generally a major taxpayer in a community. By installing automatic sprinklers, he insures a steady flow of taxes needed to support the various municipal departments which work together to protect his property and the property and lives of his neighbors.

In cities that have meter and stand-by requirements, he pays for water used to extinguish a fire in his property three times:

First: He pays for private water measured through his meter.

Second: He pays an annual stand-by charge whether he has a fire or not.

Third: He pays for public water should it be needed.

If his neighbor, the owner of an unsprinklered building, has a fire, both he and his neighbor pay for that water.

Water used to fight fires in unsprinklered buildings vs. sprinklered buildings is often consumed in the ratio of *ten thousand* to *one* gallons per minute. The consumption of two, three or four million gallons of water is not uncommon in the suppression of fires in unprotected properties.

CHARGES AGAINST PRIVATE FIRE PROTECTION — REDUCE MUNICIPAL REVENUES

The installation of automatic sprinklers is clearly a property improvement. To the extent that buildings are improved, a direct taxable value is added to the total value of property effected and increased revenue to a municipality results.

Therefore, when private fire protection is discouraged, public revenue diminishes in direct proportion.

COST — PRIVATE VERSUS PUBLIC WATER

It is argued by some water departments that owners of private fire protection systems should pay above and beyond public water rates to expand and improve water facilities.

In view of the fact that private fire protection serves a public purpose by reducing the cost of public fire protection and because it spares the community tens of millions of gallons of water, he should be given water at the lower rate charged to the municipality for municipal fire protection.

It is further argued by some water department officials that the addition of a sprinklered plant to a community required adds expenditure to provide public water mains to the property.

Industry and population follow public water supplies. No water main laid to one sprinklered property in a municipality will remain unshared for long. Other industries, housing developments, shopping centers will invariably move near public water mains; thus, dividing the cost of public water among many users.

FIRE INSURANCE REDUCTIONS

PRO *Owners of sprinklered properties enjoy reduced fire insurance premiums which reduce the owner's operational cost and amortize the cost of private fire protection in a few years. Therefore, because of reduced overhead, owners of sprinklered properties are better able to carry the financial burden of providing adequate water supplies.*

CON This is a *non sequiter.*

To impose a tax or charge against an owner of property protected by a private fire protection system because he has made a good business judgment, is discriminatory.

By installing sprinklers, he has diminished the demand placed upon the public fire services, the water supply system, police and traffic control.

Private fire protection must be viewed as a public aid. It should not be penalized.

OTHER UTILITIES HAVE STAND-BY CHARGES

PRO *Some public water officials justify stand-by charges because electric power and gas utilities have them.*

CON This comparison is misleading. Everyone uses electric power. Virtually every taxpayer uses gas or electricity for heating and cooking. Therefore, everyone pays his fair share and there is no inequity in raising revenue when all citizens enjoy equal benefits. In the case of stand-by charges against owners of sprinklered properties, we are discussing a tiny minority of the general population. Not more than a few hundred taxpayers out of a half million are required to pay these charges. Therefore, the stand-by charge against private fire protection is discriminatory.

METER REQUIREMENTS

Some cities require the use of full flow fire meters.

These meters are intended to measure the flow of water when a fire occurs.

Other communities require so-called detector check meters which are designed to detect leakage, waste or theft of water.

The requirement for full flow fire meters can be compared to a requirement for a speedometer on your automobile which costs nearly as much as the automobile itself.

Obviously full flow fire meter requirements discourage private fire protection installations. Fire and building officials who envision automatic sprinklers as an integral part of their city's fire fighting capabilities are hard put to justify fire protection and building codes which make sprinklers mandatory when they are confronted with mandatory requirements for full flow fire meters.

The cost of purchasing and installing such a meter could conceivably be equal to the cost of sprinklering a 4,000 square foot basement.

WHAT'S BEHIND THESE METER REQUIREMENTS?

Some public officials believe that water used to fight fires with private fire protection facilities should be measured and that owners should be charged. The reason is that the owner has benefited from reduced fire insurance premiums and can well afford to pay for the metering devices.

Nevertheless, public water used to extinguish a fire in an unsprinklered building is not metered and public fire protection water in the order of millions of gallons is frequently necessary to effect good fire control. But the water bill for this purpose is shared by everyone, including owners of sprinklered and unsprinklered buildings. Therefore, the requirement for full flow fire meters is *discriminatory* and ultimately results in reduced fire fighting capacity within a community when sprinklers are discouraged or eliminated.

From a fire fighting standpoint such meters result in needless "friction loss" which reduces water pressure and volume needed to fight fires.

"Friction loss" is the result of an impediment (within the metering device itself) which reduced the velocity and volume of water needed to fight fires.

One of the components found in sprinkler systems is a water flow alarm device. In effect it detects the flow of water and prevents waste and leakage within a system. It is a kind of built-in metering device.

Many sprinkler systems are connected to central station supervisory services which transmit an alarm indicating flow of water. The requirement for a meter in such cases is a duplication of cost without concomitant benefit.

SUMMARY:

It has been said that "the power to tax is the power to destroy". Any economic sanction levied against private fire protection is, in effect, a tax which results in a diminishment of the total fire security effort of a community and increases the burden of public fire protection in direct proportion.

Conversely to strengthen private fire protection by encouraging its expansion:

1. Decreases both the economic and physical burden of the Fire Department and concomitantly decreases the hazards of fighting fire.
2. Decreases total fire insurance costs because anyone's fire is everyone's loss.
3. Increases tax revenues by encouraging property improvement.
4. Encourages cost conscious industries to move into new communities.
5. Increases a community's total fire protection security, preventing conflagrations and exposure fires.
6. *Saves billions of gallons of water which is in chronic short supply in most cities.*

Part Two

Houston Shows 'Em How!

THE DEMISE OF A "STAND-BY CHARGE"

A scrappy little band of Houston businessmen known as the ASSOCIATION FOR ENCOURAGING FIRE PROTECTION has succeeded in showing us all how to deal with that pernecious phenomenon known as the "*Stand-By Charge*".

On February 24, 1961, the Houston City Council enacted an ordinance that prevaled in part for a *monthly charge* of $1.00 per inch on all city water connections to automatic sprinkler systems. For example, the owner of a sprinklered building, served by an eight (8") inch city connection to his sprinkler system was required to pay $8.00 per month or $96.00 per year.

Then it all began. Mr. Russell Cummings, owner and manager of the leading storage and moving business in Houston asked, Why? Seriously. When the city mailed him a bill for a "*stand-by charge*", he was puzzled. "What am I getting for my money?" he asked. A chain of phone calls and correspondence led him up and down a labrynth of municipal offices and he came up with an assortment of answers that didn't make sense to him. He knew he was being asked to pay for something, and he couldn't find out what he was getting for his money.

He began to think about some of the answers he had gotten back when he inquired of various public officials.

He had been told that it was necessary to tax his sprinkler system, a privately owned fire protection system, to raise revenue to expand or maintain public water supplies. But he also knew that the amount of water that could be used by a sprinkler system in case of a fire could only reduce the amount of water needed. If his neighbor who had an unsprinklered building had a fire, millions of gallons of water might be needed, and it would be paid for out of public taxes. But the immeasurably small amount of water that his sprinkler system could conceivably use had to be paid for by means of a "*stand-by charge*".

He also learned that there were probably in the order of 1,000 or more sprinkler systems in Houston and their very existence greatly reduced the burden of public fire protection. Without these sprinkler systems, far more Fire Department personnel and fire fighting equipment would be needed to cope with the hazards which would exist.

He had invested in a sprinkler system. He reasoned that by doing so he was safeguarding the future of his own business, protecting the lives of his employees and could amortize the cost of the sprinkler system in fire insurance rate reductions. It annoyed him to learn that his good business judgment was being penalized and it could take him

or other owners of sprinklered buildings as much as 200 years to amortize the cost of the system after paying his monthly and annual charge on his water connection.

Further, he had increased the value of his property by installing sprinklers, was paying a tax on the increased evaluation of his building and was now being double taxed for a property improvement which actually worked against the whole fire protection effort of the City of Houston.

THE ASSOCIATION TO ENCOURAGE FIRE PROTECTION

Russell Cummings was a realist. He had some experience in politics. He was a businessman, and he knew that alone he could do nothing.

He wrote a letter to Mayor Louie Welsh, to each City Councilman and to other public officials in the City. A telephone campaign followed and he invited representatives of the Insurance Agents Association (The Insurance Exchange of Houston), the Retail Grocers Association, the Chamber of Commerce Fire Prevention Committee, and the Junior Chamber of Commerce Safety Committee. He invited leading fire protection contractors in Houston and a meeting was called. Attendance was unanimous and an organization known as the Association to Encourage Fire Protection was formed. Russell Cummings was elected President.

An organization was formed, with letterhead, telephone number, officers and some of the leading businessmen of Houston as members.

It turned out that Mayor Louie Welsh; Councilmen A. J. "Curley" Miller, Frank Mann, Lee McLemore, Bill Elliott, Homer Ford, Bob Webb, Johnny Goyan and Frank Maneuso were also interested in fair play and, once the case for "encouraging good fire protection" was layed before them, they were in unanimous agreement: the "stand-by charge" was repealed, as any Texan would say, "*pronto*".

Less than 20 months after the law had been enacted, it was repealed.

AS WE SEE IT . . . The Houston story could be repeated anywhere. And it should be. Most city officials are fair minded men. But the business of financing a modern municipal government with its myriad of departments and bureaus is a complex business. A single voice, speaking alone at City Hall, would go unheeded. Not because public officials are callousod or indifferent or unresponsive to the wishes of the electorate, but because, by the nature of politics, public officials must tune their ears to organizations; not to individuals.

A lot of work went into the repeal of this Houston "stand-by charge". It took leadership and hard work. But an injustice had been imposed, and that small band of willful men made their voices heard.

To Mayor Louie Welsh, the members of his City Council and other Houston officials, and to the Association to Encourage Fire Protection — *Well Done!*

February 20, 1980

Senator Brad Bradley
Pouch V
State Capital
Juneau, Alaska 99811

Dear Senator Bradley:

I have been informed by the Fire Chief's Association that you are in support of a bill similar to House Bill No. 648 which would exclude the value of fire protection systems from the tax assessments of the full and true value of a building. I believe you will find the following information of interest and useful to you.

On February 15, 1980 I went by the Fairbanks North Star Borough Assessors office and pulled the file on my residence at 3292 Jefferson Drive in Fairbanks, (Executive Park Subdivision, Block 2 Lot 24), and was very surprised to learn that my appraisal had recently increased from $76.725 to $93,325, and increase of $16,600. Inquiring as to the reason for the increase I found out that they had reassessed me $2.25/foot for my 2,393 square foot house (a total of $5,384.00) for the simple residential sprinkler system that I installed last summer. Yet the materials for the complete system, which conforms to NFPA Pamphlet 19D, cost me in the neighborhood of only $600 and the labor amounted to less than thirty (30) hours (about $1,200.00). This is barely more than 1/3 what I have been assessed.

In comparison it is interesting to note that the recently completed finishing work on the basement of this same house caused a reassessment of $4,858.00 an amount less than the 1" pipe residential sprinkler system that I had installed.

Hopefully you might be able to use this information as an example to assist you in your effort to get a bill similar to House Bill #648 passed this year. Such a bill will certainly encourage Alaska residents to install residential sprinkler systems within there homes and help reduce the Alaska life and property loss due to fire, without it, it is obvious from my experience that there is certainly strong financial disincentive.

It is of interest to also note, that the Insurance Companies serving Alaska will not give the home owner a reduction in his fire insurance cost for installing a residential sprinkler system but it is possible for a business to get up to a 75% reduction in his fire insurance cost if he installs a commercial sprinkler system.

Sincerely,

Warren B. Cummings
3292 Jefferson Drive
Fairbanks, Alaska 99701

MEMORANDUM

FEBRUARY 27, 1980

TO: REPRESENTATIVE BILL PARKER, CHAIRMAN
HOUSE COMMUNITY & REGIONAL AFFAIRS

FROM: SENATOR MIKE COLLETTA

RE: SB 370/HB 648 Fire Prevention

The attached letter from James A. Van Altvorst, City Manager of Ketchikan is forwarded for your review.

Your attention to this matter is appreciated.

P.O. BOX 3160, ANCHORAGE 99501 • POUCH V JUNEAU 99811

FEB 26 1980

CITY OF KETCHIKAN

334 FRONT STREET P. O. BOX 7300 TELEPHONE 907 225-3111

February 22, 1980

Senator Mike Colletta
Pouch V
Juneau, Alaska 99811

Dear Senator Colletta:

On behalf of the City of Ketchikan, I wish to add support to passage of Senate Bill 370, an act relating to fire prevention.

Approved automatic fire protection systems are obviously and definitely advantageous to the building in which they are installed. However, the benefits of those systems go far beyond the individual structures. They also benefit the entire community.

Essentially, installation of such systems decreases a community's "fire flow requirement" which is the community's ability to deliver water to control fires. A decrease in the "fire flow requirement", in effect, reduces the need for fire fighting equipment, facilities to house that equipment and staff to operate and maintain that equipment and facilities without reducing the level of fire protection in the community. Therefore, the entire community can benefit because of a reduction in the cost necessary to provide a given level of fire protection.

Because the entire community can benefit from the installation of approved fire protection systems in individual building, building owners should be given an incentive to install such systems rather than suffer additional fees or taxes because they installed those systems. Therefore, the City of Ketchikan supports Senate Bill 370.

If you have questions about the City's position on this issue, please contact me.

Sincerely,

James A. Van Altvorst
City Manager

Rep. Hugh Malone
State Representative
Juneau, Alaska 99811

Dear Rep. Malone:

I believe some time ago I talked to you about a film we have of Tyonek.

The film has everything in it from Old Village to New one. Everything a villager did in the past are recreated, from weaving baskets to Indian Chief doing the war dance. We need in excess of $80,000.00 to finish the film.

To finish the film we must, (1) Film a Tyonek shooting a moose and every family head going to get their share.

(2) Beluga Hunt.

(3) The first Oil Company on Tyonek lands and its effect on the Tyoneks and finally narrating the film.

We would appreciate anything you can do for us to get this very important and historic film completed.

Sincerely,

Emil McCord Sr.

Carol Hodge
Village File

TYONEK HISTORY FILM PROJECT

Sometime back the NVT council gave Emil McCord the assignment of coodinating the efforts to search for funding and to revive the completion of this film project started in 1966. Frank Brink was employed by the Village council to make a film to depict the history of our tribe. He worked for about 4 years and shot over 20,000 feet of film. His wife, Jo, made all the costumes, did all the research of the anthropology and history of the ancient times of our people. About five years ago Frank had worked and got a committment from NBC to produce a one-hour documentary for Public Service TV to be televised nationwide. A proposal had been written to obtain the funding and Tyonek was required to put up $10,000 as matching seed money. Apparently, the Village did not have the money to spend at that time and the project fell through.

With the hard work and interest of Emil McCord, Sr, this project was been revived. Emil coordinated the efforts of several people here in Anchorage, including myself, and Frank Brink was notified to come to Alaska with some work footage and a budget to get the project started again. Communicating with Emil, I arranged with Carroll Hodge, Channel 7, KAKM, to have a showing at my house on Sunday, October 22nd. I had called the public affairs people of ARCO, Sohio/BP , Xerox, and others who may be able to contribute. The showing lasted from 3p.m. until 7 p.m. That next day Arco called to apologise for not showing up. None of the other companies came.

I met with Gary Holthaus, Alaska Humanities Forum, Thursday Nov. 2, and got the materials to submit a grant proposal. Gary was confident that we would be sucessful, providing we can get $30,000 from the private sector. That way Ak Humanities Forum might be able to match that plus give us an outright grant pf $27,000 to bring us up to the $87,330.00 we need to finish the project.

I want to apologise to Emil for the misunderstanding of the film storage. Frank had indicated that several letters were written to the council in the past giving instructions as to how to store the film. Apparently that letter is in the files somewhere and had never been paid attention to. Nevertheless, it was the request of Frank (who has the knowledge and concern of the film) to get the film from KAKM and hold it until he arranged proper storage. The showing of the two reels of the original film cannot be checked for damage until Frank can get it to a laboratory. Just running the film on a regular projector can damage the film for use later. When I retreived the film from KAKM it was just sitting out in one of the outside rooms where anyone could get to it and the temperature was not as Frank said it should be. Because of the importance and value of this original film, Frank is very concerned that it

be cared for properly so that the footage not be lost. In viewing two reels of work footage, already nearly a dozen people who were living are now dead. This film cannot be replaced, therefore, for that alone it is irreplaceable.

Frank is going to check on the cost of storage in a special vault in Hollywood with a company that does this type of sotrage and will let me know what the cost will be and whether we should store it there.

Today, Nov 9, 1978, I met with ARCO, Tom Brennan, Public Affairs, and showed the two reels of work footage Frank left with me. I wrote a new budget, as per Frank's figures and a cover letter with a summary and narrative of the film. This was given to Mr. Brennan and he is to call me back a week from next Monday to let me know what ARCO may be willing to contribute. (See attached packet).

The next step is to contact others, EXXON, XEROX, the Cook Inlet Historical Society, the National Endowment for the Humanities, and others to seek funding. This will take alot of effort and time on my part. Frank also left some instructions for me to write up some information he needs and to look for an anthropologist. I have contacted Rosita Worl and she is going to contact some others and meet with me soon to discuss the project.

All the funding from the private sector must be committed before we submit the one to the Alaska Humanities Forum by Jan 1, 1978. If we are sucessful in getting $30,000 committed from the private sector, then the Humanities Forum proposal will have a better chance of success.

In regards to the above work that is involved with getting all the pieces together, I will need to use the Anchorage office typewriter, telephone, and stationery. Already I have had a run-in with Bob McGlosion about this. I want to make it clear that much of what the Village council requires me to do will require me to use the above things mentioned. I do not have the proper typewriter at home to write the business letters, contracts, etc., that must be done in a business-like manner. If I cannot have use of the Anchorage office then everything will have to be sent to the Village for your secretary to do the typing. This will slow things down and make it difficult to operate properly. I will not do the work if this permission is not granted. It is only because of my desire to help Tyonek that I do alot of what I do, and, without bragging, I do the work well. I woould like an immediate reply to straighten out this matter, as there is much work to be done and it needs to done as quickly as possible.

Respectfully submitted,

Esther O. Kaloa

Esther O. Kaloa
Business Consultant

I wish to produce a one-hour documentary film tracing three periods in the history of the tiny (200 member) tribe of Tyonek Indians who live of the west shore of Cook Inlet in Alaska.

The first period will trace the roots and rituals of this anchient Athabascan tribe.

The second period will reveal the effects of the tribe's first contact with foreign cultures-Russian (1796-1867) and American (1867 to the present).

The third period will document the catastrophic impact of oil exploration of the Tyonek Reservation and the instant inheritance of approximately sixteen million dollars. It will further show how members of the tribe attempted to cope with the monumental physical and psychological changes in their struggle for cultural survival.

Brief History

In 1963, oil exploration accelerated throughout Alaska with three areas coming under intense investigation. They were the North Slope, the Kenai Peninsula, and the Cook Inlet Basin. As a part of the Cook Inlet exploration, the Panamerican Petroleum Oil Co.,(late Amco) obtained United States government approval to do exploratory drilling on the Tyonek Reservation.

The tribal council met , and from tribal records determined that the oil company might have no authority to enroach upon

the reservation without approval of the Tyonek people and compensation to tribe.

At that historic meeting, the tribe voted to seek legal advice to determine their in the matter. A prominent Alaskan attorney Stanley McCutcheol volutcered his services to represent the tribe. He obtained an injunction against Panamerican Petroleum Oil Company, and after a year's legal battle, the oil company was required to pay lease monies to the Tyonek tribe versus other government agencies. Subsequent to this action the Pan American Oil Company paid Tyonek approximately fourteen million dollars for oil and gas lease rights on the reservation.

Prior to 1963, the Tyonek's depended mostly on fishing, hunting and trapping for survival. Tribal tales confirm periods of starvation during several winters when moose and fish take was down. At those times some tribal members either became seriously ill or died. Most affluent Alaskans were ignorant of Tyonek needs or ignored them. However, there are accounts of emergency food supplies being sent to Tyonek village by concerned citizens This will reveal the status of the tribe when it was the recipie of 14 million dollars.

In an unprecented action, the Tyonek Village Council determined that rather than divide the money per capita among the tribal members, they would establish a master family plan for the judicious use of the funds to provide adequate housing, health care, education and guaranteed employment for every adult who was able to work. The plan also included resource development,

old age assistance, and pensions. It further provided for investments for the future welfare of the tribe. No lump sums were given to any tribal member except an initial house-hold fund of $5000 for each family or household.

When the plan was completed, the old Tyonek village was systematically torn down. The village consisted of small one and two room log and clapboard cabins, where in some cabins ice often formed on the damp floors and parts of moose carcasses would hang down from the rafters. As many as eight people would bed down for the night in space no larger than twelve by twelve feet.

New prefabricated electrically heated houses were built. From that time on the Tyoneks were physically comfortable. However, there began a series of accidents and tragedies that involved alcohol, violent arguments, fatal shootings, fires, drownings. and with it all, a prevailing loneliness brought on by changes for which the culture was unprepared.

As the tribe struggled to adjust to a new way of life, some questionable investments were made, some money was misused and squandered in spite of all precautions. But perhaps, the saddest effect of all the deaths of a munber of young bright people, still in their teens, whose own security may have been so threatened by cataclysmic change that they were unable to cope. However, there were values of better health and social services that did accrue.

valuable tribal traditions and a thrust to strengthen those which deal with family unity and pride. There is a strengthening of interest and devotion to their religious faith nurtured by the Russia Orthodox church, the major symbol of hope for release from the depression that has affected the lives of many Tyonek villagers since the change in their way of life. The church with its symbols and colorful ceremonies was the closest substitute for the ancient tribal rituals of thanksgiving, sacrifice and blessing.

For the Tyoneks the road back is long and precarious, but there is a feeling of hope and a growing sense of pride in a heritage once on the way to extinction.

This is the story of the Tyonek people I wish to explore on film. I am convinced that such an ethno-historical document on film could have a number of long-range benefits. The film could be used by other Native Americans like the Navajos who are faced with a decision regarding the development of shale oil resources on their reservation. Also, since the Tyonak people were involved in the largest native land claims settlement in American history (this is a part of the oil period of Tyonek history), their response and participation in the settlement would provide insights for many native groups contemplating the same experience.

Native Village of Tyonek- estimated expenses -

to be provided by the Village

TRANSPORTATION	
Round trip from Shreveport, Louisiana to Tyonek for two people-	$1100.00
Round trips from Anchorage to Los Angelos (1)	376.00
Trips to Tyonek for four people (approx)	120.00
FOOD	
Three people for six months, average $350 per month	2100.00
Lodging at Tyonek for six months, average for 3 people @ $200.00 per month	1200.00
Technical assistance (other than normal cooperation participation, interviews, etc.)	
Reservation transportation(to include by vehicle, boat, etc.)	
Mechanical-technical assistant	
Scene reconstruction (from each period of Tyonek history, the primative; the foreign influence; the coming of oil) It is difficult to accurately assess the many services to support and recreate scenes for shooting. This estimate of half-time equivalent services for six Tyonek people for six-months-to be paid by Tyonek village.)	21,000.0
Archival slides and still photos of old village and people prior to 1966 (approximately 500 slides and 300 stills)*	550.00
Archival footage (16mm color) old homes, people. village activities prior to 1966 (this also includes the tearing down of old homes and construction of new homes and new village activities from 1963 to 1966) estimated 5,000 feet at $3.00 per foot*	15,000.0
Total of Tyonek funds and services	$41,446.00

* Most of the above costs have already been expended or film shot, the costs of transportation, food and lodging will be needed ($5396.00), the $21,000 for six people from Tyonek can be [illegible]00 if those people volunteer. The $15,000 balance for archival film is that which is already shot, but not paid for. We may check with Frank to see if this cost is included in the $87,000.00 budget.

ESTIMATED BUDGET ONE HOUR 16mm COLOR DOCUMENTARY FILM

15,000 ft. ECO raw film stock @ $15.00 per 100 ft.	$2250.00
Ten-1800 ft rolls ¼" professional recording tape @ $7.50 per roll	75.00
Laboratory Costs:	
processing 15,000 ft @ .10¢ per ft.	1500.00
conforming-350 cuts (estimate) @ $2.50 per cut	875.00
sound selection and editing (lab production service) 50 hrs. @ $35.00 per hr.	1750.00
Music (composing, performing, scoring, editing)	5000.00
Narration, recording, editing, (written, plus live interview)	2500.00
Special effects	1500.00
Titles and credits	800.00
Workprint (archival footage and new footage) 20,00 ft @ 18¢ per ft.	3600.00
Trial prints, two-2000 ft @ 36¢ per ft.	1440.00
Release prints, two 2000 ft @ 26¢ per ft.	1040.00
Miscellaneous reserves	5000.00
Contract fees:	
Producer, director, cameraman, editor narrator, composer-for 1 year	30,000.00
Asst. producer, still camera, research, interviewer, $2500 per mo.,-6 mos.*	15,000.00
TOTAL ESTIMATED COST	$87,330.00

* Anthropologist/sociologist to be hired in Alaska

MANAGEMENT OFFICE
1675 "C" STREET — ROOM 245
ANCHORAGE, ALASKA 99501

November 9, 1978

Tom Brennan, Director
Public Affairs
Atlantic Richfield Company
711 W 8th Avenue
Anchorage, Alaska 99510

Dear Mr. Brennan,

As per our telephone conversations you will find attached a summary and narrative of the film tracing the history of the tribe of Tyonek.

It is the intent of the Native Village of Tyonek to find means to finish this film which was begun in 1966. Frank Brink, a well known man in his field of theater and film, was employed to produce and direct the movie. Due to the untimely death of Albert Kaloa, Jr, who played the main character of chief throughout the trilogy of the history of the tribe, continuation of the film making was stopped.

For several years an attempt to find funding sources to complete the film was unsuccessful. With the efforts of many interested parties the Alaska Humanites Forum has shown an interest to assist the Village to complete the film. They are willing to match funds allocated from the private sector, and also, to provide a grant.

With this possibility, the Native Village of Tyonek is now soliciting for funds from the private sector. The total amount budgeted to complete the fiming amounts to approximately eighty-seven thousand dollars ($87,000.00). We need to obtain thirty-thousand dollars ($30,000.00) from the private sector. Tyonek has already invested thirty-eight thousand dollars and will provide board and room for the staff when the filming process begins again, and transportation.

Mr. Brink has negotiated with CBS to provide a one-hour documentation on Public Service TV. We hope this to be the main use of the film. There is enough subject matter in the film to produce a minimum of six (6) educational films. This is another market we have.

After seeing some of the footage we have to show, I am sure you will be as enthusiastic and excited as we are to finish this film. It is the most comprehensive film of this type ever made of a history of a people of Alaska and we are proud to be a part of that history. Could you assist us in a contribution, you will be given nationwide recognition if our

Thank you for your interest.

Respectfully submitted,

Esther O. Kalon

Bill Parker
Capitol, Room 104
Juneau, Alaska 99811

Dear Representative Parker,

I am writing to request your support for House Bill No. 663 that was introduced by Representative Malone on February 4, 1980. The Bill seeks an $80,000.00 appropriation for the Tyonek Native Village to complete a historical and cultural film of our village which is located on the west shore of Cook Inlet. The film, which was started several years ago using our own resources, traces the development of our culture and village from ancient times to the present. Although a portion of the film has already been completed we need additional funds to finalize this important documentary.

This film is not only of great importance to the people of Tyonek, but could be a valuable aid to all of the Native people of Alaska by providing an insight on the problems that we have faced and the methods that we have used to overcome these obstacles.

Your favorable consideration of support for this Bill will be deeply appreciated by all of our people.

Sincerely,

David Trenton,
President

BILL NUMBER AND TITLE: SSHB 685 re Regional Housing Authorities

ORIGINAL SPONSOR: Eliason
RECEIVED FROM: --

OTHER SPONSORS: _____
FURTHER REFERRALS: --

HEARING DATE: 4/18/80

MEMBERS PRESENT:

Bill Parker	X	Pat Carney	X
Margaret Branson	X	Charlie Parr	X
Pat O'Connell		Fred Zharoff	X
		Ray Metcalfe	

Jack Smody, Deputy Director HUD
E. Allen Robinson, Economist, HUD

Legally there is no reason why Sitka Community Association couldn't be given the power to function as a regional housing authority. Any recognized non-profit corporation can participate. If additional authorities were added to the enabling legislation, it would not reduce the amount of money available to Alaska. The "fair share" allocation method is used statewide and would continue to be used.

The materials distributed by HUD were referred to and explained. These included: A map of the regions used for distribution purposes by HUD; chart of assisted housing programs completed 1970-1979, under construction or planned for 1980; figures for the funded assisted housing in Alaska; and chart for the assited housing allocation plan by household type and household size, 1979.

Considerations for the committee:
Conventional loans are open to anyone. Some of the program specify Indian housing. A municipality, IRA, etc. could in fact function as a housing authority. There must be the ability to manage for 25 years and there must be an entity HUD can deal will. A cooperation agreement and application are part of the process.

It has generally been determined that it requires 200 units to make a project financially workable. The maximum owners/ renters can pay is 25% of their income including utilities.

In Sitka, ther is a program reservation for 34 units. There have been problems constructing these units because of questionable land ownership status. 24 units for the elderly have been completed.

Parr - As the application process seems elaborate, there might be some merit to the argument for economy of scale in the issue. It might be beyond the capability of the smaller group to actually manage such a project.

Smody - Takes in excess of 200 units to carry a project financially

COMMITTEE ACTION: Committee recommends that HUD, Sitka Community Ass'n. and Tlingit Haida Housing Authority meet on issue. Bill not passed out.

TAPE # 9 SIDE 1 Footage 121-1358

for 25 years. The average time from application to construction nationally is 18 months while in Alaska it is 9 months. Two people would be needed to administer, an executive director and an administrative assistant. The regional housing authorities were established in 1974. Some were carried for 2 years before they could get started. It is important to cut down administrative costs as much as possible.

Joe Wilson, Tlingit Haida Central Council

Concerned over the creation of another "competing" group. Tlingit Haida appoints Commissioners of the Tlingit Haida Housing Authority Bd. Not opposed to IRAs functioning as housing authority but (1) it would put them in competition with other communities in Southeastern Ak. (2) IRA organizations are federal entities. Artic es and bylaws may be restictive in allowing this involvement as they can only serve their own native membership.

Johann Dybdall , Tlingit Haida Housing Authority

Discusses allocation of units to Southeastern Ak. Refers to pervious testimony. In response to question on the place of residence of the board members, Dybdall responds that they are from Sitka, Klukwan, Angoon, Hydaberg, and Craig.

Parr - Observes that economy of scale, i.e., a critical mass of people with expertise to handle the housing programs may be necessary and that IRAs are too small. If the problem was the unfair allocation of units, there might be a legitimate reason for giving the responsibility to the IRAs. There doesn't appear to be discrimination because of geographic regions. Generally, bill does not appear to be desirable.

Carney - Disagrees. MCre local control is desirable. Not convinced it is going to cost as much as HUD representatives indicated to administer.

Parr - No testimony has indicated any real reason for doing this. No discrimination is being practiced. There is no proof that the IRA can develop the program better.

Zharoff - Agrees with Parr. Regional housing authority in Kodiak contacted and they agree with the sentiments generally expressed by Parr.

Branson - Concerned that the bill opens the door to all the IRAs.

Eliason - The issue is not discrimination, rather local control.

Parker - Suggests that HUD representatives, Tlingit Haida Housing Authority, Sitka Community Association, and Rep. Eliason get together to solve the problems with the uncompleted housing project of 34 units. Bill will be held in committee pending the outcome of the meeting.

OTHER SPONSORS:
FURTHER REFERRALS: --

HEARING DATE: 4/14/80 Teleconference with Ketchikan/Sitka

MEMBERS PRESENT:

Bill Parker	Pat Carney X
Margaret Branson X	Charlie Parr X
Pat O'Connell x	Fred Zharoff X
	Ray Metcalfe

Andrew Hope, Pres., Sitka Community Association, Sitka

Supports passage of the bill. Sitka Village Planning Council was formed in 1968. Received a planning award in 1972. The housing unit in question has been in progress for 8 years. The City/Boro of Sitka and the Metlakatla Indian Association support the bill. The Association believes they can avoid delays if they can administer the projects themselves. Other aspects of community development can be incorporated into the planning in addition to housing. Comprehensive planning can be carried out if it is done on a local level. Local self determination is the issue.

Although the bill specifies just the Sitka Community Association, the resolution asks that all tribal councils be empowered to function as housing authorities.

The fact that the Sitka Community Association is a local organization will help to expedite things. Having to deal with out-of-town agencies is difficult. Local contractors would also benefit as they would be able to keep tabs on things.

Information on the allocations could be received from HUD, DPDP, and Dept. C&RA.

Ed K. Thomas, Ex. Director, IRA Council, Ketchikan

Administers programs. Community Block grant funds are administered by the Council. Supports the bill and an amendment which would include the Ketchikan Native Association as well. Many communities would be excluded the way the legislation is currently drafted. The problem of housing needs in Ketchikan is great and they have received little. The money is not being distributed properly. Want an opportunity to deal with the agencies themselves. In favor of having all tribal councils included.

Keith Red Eagle, Member of Sitka Community Association, Sitka

Directs CETA program. Supports bill. Most urgent that action be taken and that regional housing be created. Have been experiencing difficulties in getting HUD housing. Frustration, one-way communication, and delay have been their experiences.

COMMITTEE ACTION: No action on bill.

TAPE # 8 SIDE 1 Footage 1272-1709

Robert Nielson, Community Housing Program, Sitka

Communication gap exists with the Tlingit/Haida Housing Program. If the local group were given housing authority, they could work more effectively with the local Planning and Zoning Commission.

Marty Lasse, Planner for the Ketchikan Indian Ass'n., Ketchikan

Rep. Dick Eliason - sponsor of the bill

The Sitka Community Association is working out of a $900,000 building now. It isn't a small operation. Highly credible. As he is not acquainted with all of the IRAs, he doesn't know if they could all function effectively. Sitka could be viewed as a "pilot project'. They could probably administer better than T/H. He is not asking for a blanket authority, rather just that the Sitka group be allowed to operate. The bill is limited to the Sitka Community Assocation. The Ass'n was incorporated in the 1930s ; was inactive for a time and now has been reactivated within the last 8 years.

Branson - Could the Tlingit/Haida Housing Authority contract with the Sitka Community Association.

Rep. Dick Eliason - Not sure but assumes this would be possible. Communication gap is the biggest problem.

Parr - Appears that as the statute relates to ASHA's powers, that this would include non-native as well as native housing.

The Committee requests that a HUD representative be available to answer questions at the next ;hearing on the bill. Also want to know compostion of T/H bo rd, whether Sitka has representation. And if municipalities could function as a housing authority.

FURTHER REFERRALS:

HEARING DATE: 3/31/80

MEMBERS PRESENT: Bill Parker, Margaret Branson, Pat O'Connell, Pat Carney, Charlie Parr, Fred Zharoff, Ray Metcalfe

Andy Ebona, Executive Director, Tlingit Haida Central Council
Johan A. Dybdahl, Tlingit Haida Housing Authority

No formal position on the bill. There are alot of problems caused by the amendment, however. Concern that there will be a reduction in the unit allocations . Difficulties in putting together a housing project were noted. Expertise required. Management feasibility must be demonstrated. The funding for a project could be in jeopardy if the project is not properly managed. Dependency on government subsidies must be realized and additionally, T/H has been there with monetary support when it has been necessary.

Andy Ebona - Must address the question of whether this will open the door for other IRAs as well to function as regional housing authorities. As there are well over 200 IRAs this could present a problem. Concern that passage of this and inclusion of many IRAs could be a problem in that HUD office in Anchorage can manage only a certain number of people per housing authority. Staffing to administer the monies and programs might be a problem.

Existing T/H authority should be used. Other entities shouldn't be created as housing authorities because there are problems. Under HUDs formula of "fair share allocation", units would be lost if construction isn't accomplished. Questions if local group could develop expertise.IRAs were crated by the "wisdom" of BIA. The intervention of the federal government in "Indian Country" only confuses the issue. Don't create an entity just because there are problems.

Eliason - opportunity to prove themselves should exist for the Sitka Community Association.Ak. State HOusing authority had units in Sitka originally. Twoenty four units of elderly housing were under management. The Sitka "40" project is the reason for the request of the Sitka Community Association to function as a housing authority. Sitka INdian Village was

COMMITTEE ACTION: No Action

TAPE # 6 SIDE 1 Footage 844-1247

targeted and the units and problems existed with finding usable land in this area. The project was then changed to 34 units. Appraisal problems and waiver took 18 months.

Dybdahl- Central Council money was used to buttress programs which otherwise would have died. Property cost have been paid by the Central Council. HUD would have withdrawn if Central Council weren't backing.

		Ray Metcalfe	X

Rep. Dick Eliason

Reviewed history of request and discussed the resurgence of the Sitka Community Association. Eliason stressed that the intent was not to eliminate those groups which already have the housing authority but rather to add this additional group.

Parr- Points out that these housing authorities have the same authority as ASHA and that there should be some caution as to who is allowed to exercise what amounts to substantial power re housing.

Bruce Horowitz, Alaska Legal Services

Supports giving Sitka Community Association, which is an IRA Council, the power to function as a housing authority.

Parr- If you open up the authority to IRAs you will have a real problem given the number of them in the state.

Eliason - There would be closer supervision and review of proposed projects if the group is right in Sitka and that's one of the reasons why it would be advantageous to allow HB685 to pass.

O'Connell - Has the idea of subcontracting or delegating of the contractual powers been pursued?

Committee requests that Tlingit Haida Central Council position on the issue be part of the decision making and requests that the Council be notified of the proposal.

COMMITTEE ACTION: No action.

CRAIG COMMUNITY ASSOCIATION
P.O.Box 25
Craig, Alaska 99921

April 17,1980

Honorable Bill Parker
Pouch V
Juneau, Alaska 99811

R.E. HB 685

Dear Representative Parker:

The Craig Community Association (CCA), IRA Council, has been reorganized and active since January 1977; and now has an established office. The CCA now is the primary funding agency for the Craig Native community; presently we provide a comprehensive early childhood program in Craig and Klawock; we contract directly with the BIA for Johnson O'Malley Program funds; provide four CETA-PSE positions; and through a full time administrative office we provide administrative support to all programs, write proposals, and coordinate with any and all appropriate persons; or entities in regard to their relationship with the Craig Native community.

Our present budget, (direct grant and contract monies), is approximately $258,000.00 We also have approximately $90,000.00 in program monies which we affect indirectly, or which feeds into our programs indirectly. We presently employ 15 persons fulltime and also budget for some part time positions as well as local consulting services.

Attached you will find Resolution 80-10 of the Craig Community Association, IRA Council, concerning local housing arthorities.

The Craig Community Association supports local housing authority formation for the following reasons:

1) Craig has received only 15 houses and only one phase. (HUD)
2) On site maintenence is either very sporadic or nonexixtent for the existing houses.
3) In two unsuccessful attempts to reach agreement with the City of Craig, Tlingit & Haida Regional Housing Authority did not coordinate with existing, active, Native organizations; and did not follow up with negotiations.
4) Though the Craig Community Associaiton has designated a Housing Committee, there has been no communication from T&HRHA to explore possible coordination.
5) As a result of inadequate communication and coordination the housing needs of the low and moderate income persons in Craig are not being met.
6) As a result of poor communication and coordination, the community of Craig has no inputs into existing programs.
7) We strongly feel that if a local housing authority existed that negotiations with the City could begin; and, ultimately, be successful.
8) There is a severe housing shortage in Craig

On March 28,1980 the Craig Community Association sent a telegram to Terry Gardiner, Oral Freeman, and Robert Ziegler asking for support for amending Title 18 to allow IRA Councils to form local housing authorities. By copy of this letter we once again ask support.

Thank you for allowing us to present this testimony and for contacting our office in regard to Hb 685.

Sincerely,

Thomas H. Abel

RESOLUTION 80-10
of the
CRAIG COMMUNITY ASSOCIATION
IRA COUNCIL
CRAIG, ALASKA

TITLE: Creation of Local Native Housing Authorities

Whereas, the Craig Community Association, IRA Council, is a duly constituted Indian Tribe organized pursuant to the Acts of Congress of June 18, 1934(49 Stat. 984) and May 1, 1936(49 Stat. 1250), and is recognized by the U.S. Government as a tribal governing body; and

Whereas, Regional Native Housing Authorities were created by the Alaska State Legislature in 1971 under Title 18.55.995 and,

Whereas, these Regional Native Housing Authorities were modeled on the Alaska Native Claims Settlement Act Regional Corporations, and

Whereas, the regional approach has failed on same occasions to take local concerns into consideration, and

Whereas, the enabling legislation required that: "A housing authority created by this section may not transact business or exercise powers granted to it until the governing body of the named association has, by proper resolution, declares that there is a need for the authority to function, gives it the authority to function and has named its commissioners...", and

Whereas, under principles of the Indian Self Determination and Education Assistance Act, the Central Council of Tlingit and Haida is not a Tribal Governing body. The Central Council is required to obtain resolutions of support from tribal governing bodies at the local level before they are permitted to contract programs for those communities, and

Whereas, the Department of Housing and Urban Development recognizes those Native Housing Authorities under Title 24, Section 805.108: "An Indian Housing Authority (IHA), may be established: Pursuant to a state law which provides for the establishment of IHAS with all necessary legal powers to carry out low income housing projects for Indians."

Therefore Be It Resolved, by the Council of the Craig Community Association: That the Alaska State Legislature be requested amend Title 18 of the Alaska Statutues, to allow local Alaska Native Tribal Governing bodies to create local housing authorities.

CERTIFICATION

I, the undersigned as President of the Craig Community Association, IRA Council, do hereby certify that the foregoing Resolution CCA 80-10, was adopted by the Craig Community Association, IRA Council at a special meeting held March 4, 1980 by a unanimous quorum vote.

ATTEST:

Charlene Thomas
Secretary

Thomas S. Abel
President

excel in the life areas of their choice, and to achieve the measure of self-determination essential to their social and economic well-being.

DEFINITIONS

25 USC 450b.

SEC. 4. For the purposes of this Act, the term—

(a) "Indian" means a person who is a member of an Indian tribe;

(b) "Indian tribe" means any Indian tribe, band, nation, or other organized group or community, including any Alaska Native village or regional or village corporation as defined in or established pursuant to the Alaska Native Claims Settlement Act (85 Stat. 688) which is recognized as eligible for the special programs and services provided by the United States to Indians because of their status as Indians;

(c) "Tribal organization" means the recognized governing body of any Indian tribe; any legally established organization of Indians which is controlled, sanctioned, or chartered by such governing body or which is democratically elected by the adult members of the Indian community to be served by such organization and which includes the maximum participation of Indians in all phases of its activities: *Provided*, That in any case where a contract is let or grant made to an organization to perform services benefitting more than one Indian tribe, the approval of each such Indian tribe shall be a prerequisite to the letting or making of such contract or grant;

(d) "Secretary", unless otherwise designated, means the Secretary of the Interior;

(f) "State education agency" means the State board of education or other agency or officer primarily responsible for supervision by the State of public elementary and secondary schools, or, if there is no such officer or agency, an officer or agency designated by the Governor or by State law.

REPORTING AND AUDIT REQUIREMENTS

Record-keeping.
25 USC 450c.

SEC. 5. (a) Each recipient of Federal financial assistance from the Secretary of Interior or the Secretary of Health, Education, and Welfare, under this Act, shall keep such records as the appropriate Secretary shall prescribe, including records which fully disclose the amount and disposition by such recipient of the proceeds of such assistance, the cost of the project or undertaking in connection with which such assistance is given or used, the amount of that portion of the cost of the project or undertaking supplied by other sources, and such other records as will facilitate an effective audit.

88 STAT. 2204
88 STAT. 2205

(b) The Comptroller General and the appropriate Secretary, or any of their duly authorized representatives, shall, until the expiration of three years after completion of the project or undertaking referred to in the preceding subsection of this section, have access (for the purpose of audit and examination) to any books, documents, papers, and records of such recipients which in the opinion of the Comptroller General or the appropriate Secretary may be related or pertinent to the grants, contracts, subcontracts, subgrants, or other arrangements referred to in the preceding subsection.

(c) Each recipient of Federal financial assistance referred to in subsection (a) of this section shall make such reports and information available to the Indian people served or represented by such recipient as and in a manner determined to be adequate by the appropriate Secretary.

(d) Any funds paid to a financial assistance recipient referred to in subsection (a) of this section and not expended or used for the purposes for which paid shall be repaid to the Treasury of the United States.

PENALTIES

25 USC 450d.

SEC. 6. Whoever, being an officer, director, agent, or employee of, or connected in any capacity with, any recipient of a contract, subcontract, grant, or subgrant pursuant to this Act or the Act of April 16, 1934 (48 Stat. 596), as amended, embezzles, willfully misapplies, steals, or obtains by fraud any of the money, funds, assets, or property which are the subject of such a grant, subgrant, contract, or subcontract, shall be fined not more than $5,000 or imprisoned for not more than two years, or both, but if the amount so embezzled, misapplied, stolen, or obtained by fraud does not exceed $100, he shall be fined not more than $1,000 or imprisoned not more than one year, or both.

25 USC 452.

WAGE AND LABOR STANDARDS

25 USC 450e.

SEC. 7. (a) All laborers and mechanics employed by contractors or subcontractors in the construction, alteration, or repair, including painting or decorating of buildings or other facilities in connection with contracts or grants entered into pursuant to this Act, shall be paid wages at not less than those prevailing on similar construction in the locality, as determined by the Secretary of Labor in accordance with the Davis-Bacon Act of March 3, 1931 (46 Stat. 1494), as amended. With respect to construction, alteration, or repair work to which the Act of March 3, 1921 is applicable under the terms of this section, the Secretary of Labor shall have the authority and functions set forth in Reorganization Plan Numbered 14 of 1950 (15 F.R. 3176; 64 Stat. 1267) and section 2 of the Act of June 13, 1934 (48 Stat. 948, 40 U.S.C. 276c).

40 USC 276a note.

5 USC app. II.

(b) Any contract, subcontract, grant, or subgrant pursuant to this Act, the Act of April 16, 1934 (48 Stat. 596), as amended, or any other Act authorizing Federal contracts with or grants to Indian organizations or for the benefit of Indians, shall require that to the greatest extent feasible—

25 USC 452.

INDIAN PREFERENCE

(1) preferences and opportunities for training and employment in connection with the administration of such contracts or grants shall be given to Indians; and

(2) preference in the award of subcontracts and subgrants in connection with the administration of such contracts or grants shall be given to Indian organizations and to Indian-owned economic enterprises as defined in section 3 of the Indian Financing Act of 1974 (88 Stat. 77).

25 USC 1452.
88 STAT. 2205
88 STAT. 2206

CARRYOVER OF FUNDS

25 USC 13a.

SEC. 8. The provisions of any other laws to the contrary notwithstanding, any funds appropriated pursuant to the Act of November 2, 1921 (42 Stat. 208), for any fiscal year which are not obligated and expended prior to the beginning of the fiscal year succeeding the fiscal year for which such funds were appropriated shall remain available for obligation and expenditure during such succeeding fiscal year.

25 USC 13, 13a.

Sec.
271.17 Pre-application technical assistance.
271.18 Tribal request for initial contracts.
271.19 Status of contracts in effect before effective date of regulations.
271.20 Recontracting.
271.21 Submission of requests to contract.
271.22 Review and action by Superintendent.
271.23 Review and action by Area Director.
271.24 Area Office recommendation to decline.
271.25 Review and action by Commissioner.
271.26 Appeal of Commissioner's decision to decline.
271.27 Technical assistance after declination.

271.64 Review and action by Area Director or Commissioner.
271.65 Appeal of Area Director's or Commissioner's decision to decline.
271.66 Revisions or amendments proposed by Bureau.

Subpart F—Retrocession and Reassumption

271.71 Retrocession.
271.72 Full retrocession procedures.
271.73 Tribal assumption of retroceded contracts.
271.74 Reassumption.
271.75 Cancellation for cause.
271.76 Bureau operation of retroceded and reassumed contracts.
271.77 Authorized position and end-of-year employment ceiling reserve for Bureau operation of retroceded, reassumed or cancelled contracts.

Subpart G—Hearings and Appeals

271.81 Hearings.
271.82 Appeals from decision or action by Area Director.
271.83 Appeals from decision or action by Commissioner.
271.84 Appeals from Bureau decision to cancel contract for cause.

AUTHORITY: Sec. 102, Public Law 93-638, 88 Stat. 2203, unless otherwise noted.

Subpart A—General Provisions

§ 271.1 Purpose and scope.

(a) The purpose of the regulations in this Part is to give the application and approval process for non-profit contracts with the Bureau under section 102 of Title I of the Indian Self-Determination and Education Assistance Act (Public Law 93-638, 88 Stat. 2203). Title I is known as the Indian Self-Determination Act. Contracts under the Act include "tribal governmental functions" as defined in § 271.2(q), "business related functions" as defined in § 271.2(d), and certain contractable trust resources programs or parts of programs as set forth in § 271.32. The nature of contracts with Indian entities which do not fall within the purview of the Act, including contracts which may provide for profit, and the conditions for entering into such contracts, are set forth in the regulations implementing the Act of June 25, 1910 (36 Stat. 861, 25 U.S.C. 47), commonly referred to as the "Buy Indian" Act.

(b) Section 104 of Title I of the Act provides authority for making grants for certain purposes. It is the Bureau's policy to make grants for the purpose specified in Section 104 of the Act in lieu of contracts. Part 272 of this chapter gives the procedures and requirements for obtaining grants under section 104 of the Act.

(c) Nothing in these regulations shall be construed as:

(1) Affecting, modifying, diminishing, or otherwise impairing the sovereign immunity from suit enjoyed by an Indian tribe;

(2) Authorizing or requiring the termination of any trust responsibility of the United States with respect to the Indian people; or

(3) Permitting significant reduction in services to Indian people as a result of this Part.

(d) Nothing in these regulations shall be construed to mandate a tribe to apply for a contract or contracts with the Bureau to plan, conduct, and administer all or parts of any Bureau program. Such applications under these regulations are strictly voluntary.

§ 271.2 Definitions.

As used in this part: (a) "Act" means the Indian Self-Determination and Education Assistance Act (Public Law 93-638, 88 Stat. 2203).

(b) "Area Director" means the official in charge of a Bureau of Indian Affairs Area Office.

(c) "Bureau" means the Bureau of Indian Affairs.

(d) "Business related function" means all programs authorized to be administered by the Bureau for the benefit of Indians enumerated as line items in the Bureau's annual budget request under Tribal Resources Development as the Sub-activities of Business Enterprise Development, Credit and Indian Action Teams; Revolving Funds for Loans; Indian Loan Guaranty and Insurance Funds; and also programs or parts of programs connected with construction projects but exclusive of the actual construction of the project.

(e) "Commissioner" means the Commissioner of Indian Affairs.

(f) "Days" means calendar days.

(g) "Economic enterprise" means any commercial, industrial, agricultural, or business activity that is at least 51 percent Indian owned, established or organized for the purpose of profit.

(h) "Indian tribe" means any Indian Tribe, Band, Nation, Rancheria, Pueblo, Colony or Community, including any Alaska Native village or regional or village corporation as defined in or established pursuant to the Alaska Native Claims Settlement Act (85 Stat. 688) which is federally recognized as eligible by the United States Government through the Secretary for the special programs and services provided by the Secretary to Indians because of their status as Indians.

(i) "Indian" means a person who is a member of an Indian tribe.

(j) "Previously private school" means a school (other than a Federal school formerly operated by the Bureau) that is operated primarily for Indian students in any grade or grades from age 3 years through grade(s) 12; and, which at the time of application is controlled, and sanctioned or chartered by the governing body(s) of an Indian tribe(s).

(k) "Recontracting" means the entering into a contract with a tribal organization which holds a contract for the same program.

(l) "Resolution" means the formal manner in which the tribal government expresses its legislative will in accordance with its organic documents. In the absence of such organic document, a written expression adopted pursuant to tribal practices will be acceptable.

(m) "Secretary" means the Secretary of the Interior.

(n) "Superintendent" means the official in charge of a Bureau of Indian Affairs Agency Office.

(o) "Tribal Chairman" means tribal chairman, governor, chief or other person recognized by the tribal government as its chief executive officer.

(p) "Tribal government, "tribal governing body" and "tribal council" means the recognized governing body of an Indian tribe.

(q) "Tribal governmental function" means all programs authorized to be administered by the Bureau for the benefit of Indians enumerated as line items in the Bureau's annual budget requests under the Activities of Education and Indian Services, the Subactivities of Direct Employment and Road Maintenance, and those programs related to Irrigation and Power Operation and Maintenance identified as a part of the subactivity minerals, mining, irrigation and power under the Activity of Tribal Resources Development.

(r) "Tribal organization" means the recognized governing body of any In-

dian tribe; or any legally established organization of Indians or tribes which is controlled, sanctioned, or chartered by such governing body or bodies or which is democratically elected by the adult members of the Indian community to be served by such organization and which includes the maximum participation of Indians in all phases of its activities; *Provided*, That a request for a contract must be made by the tribe that will receive services under the contract; *Provided further*, That in any case where a contract is let to an organization to perform services benefiting more than one Indian tribe, the approval of each such Indian tribe shall be a prerequisite to the letting of such contract.

(s) "Trust resources" means natural resources, land, water, minerals, funds or property, asset, or claim, including any intangible right or interest in any of the foregoing, which is held by the United States in trust for any Indian tribe or any Indian individual or which is held by any Indian tribe or Indian individual subject to a restriction on alienation imposed by the United States.

(t) "Trust responsibility" means, for the purposes of this part only, the protect, manage, develop and approve authorized transfers of interests in trust resources held by Indian tribes and Indian individuals to a standard of the highest degree of fiduciary responsibility.

§ 271.3 Revision or amendment of regulations.

In order to make any substantive revisions or amendments to the regulations in this Part, the Secretary shall take the following actions:

(a) Consult with Indian tribes and national and regional Indian organizations to the extent practicable about the need for revision or amendment and consider their views in preparing the proposed revision or amendment.

(b) Present the proposed revision or amendment to the Committees on Interior and Insular Affairs of the United States Senate and House of Representatives.

(c) Publish the proposed revisions or amendments in the Federal Register as proposed rulemaking to provide adequate notice to, and receive comments from, all interested parties.

(d) After consideration of all comments received, publish the regulations in the FEDERAL REGISTER in final form not less than 30 days before the date they are made effective.

(e) Annually consult with Indian tribes and national and regional Indian organizations about the need for revision or amendment, and consider their views in preparing the revision or amendment.

(f) Nothing in this section shall preclude Indian tribes or national or regional Indian organizations from initiating request for revisions or amendments subject to paragraphs (a), (b), (c) and (d) of this section.

§ 271.4 Statement of policy.

(a) The Congress has recognized the obligation of the United States to respond to the strong expression of the Indian people for self-determination by assuring maximum Indian participation in the direction of educational as well as other Federal services to Indian communities so as to render such services more responsive to the needs and desires of those communities.

(b) The Congress has declared its commitment to the maintenance of the Federal Government's unique and continuing relationship with and responsibilities to the Indian people through the establishment of a meaningful Indian self-determination policy which will permit an orderly transition from Federal domination of programs for and services to Indians to effective and meaningful participation by the Indian people in the planning, conduct, and administration of those programs and services.

(c) It is the policy of the Bureau to facilitate the efforts of Indian tribes to plan, conduct, and administer programs, or portions thereof, which the Bureau is authorized to administer for the benefit of Indians and to facilitate the coordination of all Federal and other programs on Indian reservations.

(d) It is the policy of the Bureau to continually encourage Indian tribes to become increasingly knowledgeable about Bureau programs and the opportunities Indian tribes have regarding them; however, it is the policy of the Bureau to leave to Indian tribes the initiative in making requests for contracts and to regard self-determination as including the decision of an Indian tribe not to request contracts.

(e) It is the policy of the Bureau not to impose sanctions on Indian tribes with regard to contracting or not contracting; however, the special resources made available to facilitate the efforts of those Indian tribes which do wish to contract should be made known to all tribes, as should the current realities of funding and Federal personnel limitations.

(f) Contracting is one of several mechanisms by which Indian tribes can exercise their right to plan, conduct, and administer programs or portions thereof which the Secretary is authorized to administer for the benefit of Indians. Another mechanism afforded Indian tribes is the use of a grant, as provided in Part 272 of this chapter, or other resources, to plan the manner in which it wishes the Bureau to operate a program or portion thereof.

(g) Contracting by its very nature places Bureau officials in the dual position of assisting Indian tribes, in many instances, by furnishing technical assistance in preparation of contract proposals, and of carrying out their fiscal and administrative responsibilities as officials of the Federal Government. It is recognized that very often these two positions are in opposition to each other. The Act and these regulations are designed to address this problem to the degree practicable. The Commissioner, Area Directors and Superintendents, as line officers of the Bureau, are expected to balance these two positions within the framework of the regulations in this Part.

(h) The regulations in this Part are not meant to and do not change the eligibility criteria which individuals must meet to be eligible for any program currently operated by the Bureau. The eligibility criteria for each Bureau program is given in the Part of Chapter I, Title 25 of the Code of Federal Regulations which deals with that program. A contractor shall use the existing Bureau eligibility criteria in operating all or parts of a Bureau program under a contract under this part unless a waiver is obtained from the Commissioner. The Commissioner may not waive eligibility criteria established by statute. The Commissioner may waive eligibility criteria established by regulation in Chapter I, Title 25 of the Code of Federal Regulations.

Subpart B—Application Process

§ 271.11 Eligible applicants.

Any tribal organization is eligible to apply for a contract or contracts with the Bureau to plan, conduct, and administer all or parts of Bureau programs under section 102 of the Act. However, before the Bureau can enter into a contract with a tribal organization, it must be requested to do so by the Indian tribe or tribes to be served by the contract in accordance with § 271.18.

§ 271.12 Contractable Bureau programs.

Tribal organizations are entitled to contract with the Bureau to plan, conduct, and administer all or parts of any program which the Bureau is authorized to administer for the benefit of Indians. All or parts of any program include:

(a) Any part of a Bureau program which is divisible from the remainder of the program so long as the contract does not significantly reduce benefits to Indians served by the non-contracted part(s) of the program. However, to the extent that it is within the Bureau's existing authority and the program or part thereof involves only one tribe and one Bureau Agency or Area Office, the benefits provided to Indians by the non-contracted part(s) of the program may be reduced at the request of the tribe. When the program or part thereof serves more than one tribe, the benefits provided by the non-contracted part(s) of the program may be reduced when all of the tribes served consent to a reduction.

(b) A single employee position only when the functions to be performed provide a direct service to Indians and meets the criteria in paragraph (a) of this section.

(c) Programs or parts of programs or services that are authorized but not currently operated or provided by the Bureau.

(d) Operation of, or services provided by, previously private schools.

(e) All of the foregoing paragraphs of this section apply to trust resources programs or portions thereof. Additional criteria for contractable trust resources programs, or portions thereof, are given in § 271.32.

nder § 14–7.5003 has been changed to clarify the method by which preference is to be given to Indian firms in the awarding of subcontracts, consistent with efficient performance of the contract.

Authorship Statement

The primary author of this regulation is Mr. William Opdyke, Office of Administrative and Management Policy, Office of the Secretary.

Determination of Significance

The Department of the Interior has determined that this document is not a significant rule and does not require a regulatory analysis under Executive Order 12044 and 43 CFR Part 14.

Pursuant to the authority of the Secretary of the Interior contained in 5 U.S.C. 301, 41 CFR Chapter 14 is amended as stated below.

Dated: October 22, 1979.

William L. Kendig,

Assistant Secretary of the Interior.

1. The Table of Contents of Part 14–1 is amended by adding a new § 14–1.354 as follows:

Subpart 14–1.3—General Policies

Sec.

* * * * *

14–1.354 Indian preference in employment, training, and subcontracting opportunities.

2. Subpart 14–1.3 is amended by adding a new § 14–1.354 as follows:

Subpart 14–1.3—General Policies

* * * * *

§ 14–1.354 Indian preference in employment, training, and subcontracting opportunities.

(a) *Statutory requirements.* Section 7(b) of the Indian Self-Determination and Education Assistance Act (Sec. 7(b), Public Law 93–638; 88 Stat. 2205; 25 U.S.C. 450e(b)) requires that any contract or subcontract entered into pursuant to the Act; the Act of April 16, 1934 (48 Stat. 596; 25 U.S.C. 452), as amended, (the Johnson-O'Malley Act); or any other Act authorizing contracts with Indian organizations or for the benefit of Indians shall require that, to the greatest extent feasible: (1) Preferences and opportunities for training and employment in connection with the administration of such contracts shall be given to Indians; and, (2) Preference in the award of subcontracts in connection with the administration of such contracts shall be given to Indian organizations and to Indian-owned economic enterprises as defined in section 3 of the Indian Financing Act of 1974 (Sec. 3, Pub. L. 93–262; 88 Stat. 77; 25 U.S.C. 1452).

(b) *Applicability.* (1) The Indian Preference clause, set forth in § 14–7.5002 of this chapter, shall be included in all solicitations issued and contracts awarded by: (i) the Bureau of Indian Affairs, except solicitations issued and contracts awarded pursuant to Titles I and II of Pub. L. 93–638, (25 U.S.C. 450 et seq.; and 25 U.S.C. 455 et seq., respectively), (ii) a procuring activity other than the Bureau of Indian Affairs when the contract is entered into pursuant to an act specifically authorizing contracts with Indian organizations and, (iii) a procuring activity other than the Bureau of Indian Affairs where the work to be performed is specifically for the benefit of Indians and is in addition to any incidental benefits which might otherwise accrue to the general public.

(2) The Indian Preference Program clause, set forth in § 14–7.5003 of this chapter, shall be included in all solicitations issued and contracts awarded by a procuring activity which may exceed $50,000 which contain the clause required by paragraph (b)(1) of this § 14–1.354 and where, prior to solicitation, it is determined that the work under the contract will be performed in whole or in part on or near an Indian reservation(s). The Indian Preference Program clause may also be included in solicitations issued and contracts awarded by a procuring activity which may not exceed $50,000, but which contain the clause required by paragraph (b)(1) of this § 14–1.354 and which, in the opinion of the procuring activity, offer substantial opportunities for Indian employment, training and subcontracting.

(c) Definitions. For purposes of this § 14–1.354, the following definitions shall apply:

(1) "Indian" means a person who is a member of an Indian Tribe. If the contractor has reason to doubt that a person seeking employment preference is an Indian, the contractor shall grant the preference but shall require the individual within thirty (30) days to provide evidence from the Tribe concerned that the person is a member of that Tribe.

(2) "Indian Tribe" means an Indian Tribe, band, nation, or other organized group or community, including any Alaska Native village or regional or village corporation as defined in or established pursuant to the Alaska Native Claims Settlement Act (85 Stat. 688; 43 U.S.C. 1601) which is recognized as eligible for the special programs and services provided by the United States to Indians because of their status as Indians.

(3) "Indian organization" means the governing body of any Indian Tribe or entity established or recognized by such governing body in accordance with the Indian Financing Act of 1974 (88 Stat. 77; 25 U.S.C. 1451).

(4) "Indian-owned economic enterprise" means any Indian-owned commercial, industrial, or business activity established or organized for the purpose of profit provided that such Indian ownership shall constitute not less than 51 percent of the enterprise.

(5) "Indian reservation" includes Indian reservations, public domain Indian allotments, former Indian reservations in Oklahoma, and land held by incorporated Native groups, regional corporations, and village corporations under the provisions of the Alaska Native Claims Settlement Act, (85 Stat. 688; 43 U.S.C. 1601 et seq.).

(6) "On or near an Indian reservation" means on a reservation or the distance within that area surrounding an Indian reservation(s) that a person seeking employment could reasonably be expected to commute to and from in the course of a work day.

(d) Compliance enforcement. (1) The procuring activity concerned shall be responsible for conducting periodic reviews to insure contractor compliance with the requirements of the clauses set forth in §§ 14–7.5002 and 14–7.5003 of this chapter. These reviews may be conducted with the assistance of the Indian Tribe(s) concerned.

(2) Complaints of non-compliance with the requirements of the clauses set forth in §§ 14–7.5002 and 14–7.5003 of this chapter which are filed in writing with the procuring activity shall be promptly investigated and resolved by the contracting officer.

(e) Tribal preference requirements. (1) Where the work under a contract is to be performed on an Indian reservation, the procuring activity may supplement the clause set forth in § 14–7.5003 of this chapter by adding specific Indian preference requirements of the Tribe on whose reservation the work is to be performed. The supplemental requirements shall be jointly developed for the contract by the procuring activity and the Tribe. Supplemental preference requirements must represent a further implementation of the requirements of section 7(b) of Pub. L. 93–638 and must be approved by the Office of the Solicitor for legal sufficiency before being added to a solicitation and resultant contract. Any supplemental preference requirements to be added to the clause in § 14–7.5003 of this chapter shall be included in the solicitation and

ANCSA

(C) $70,000,000 during each of the third, fourth, and fifth fiscal years;

(D) $40,000,000 during the sixth fiscal year; and

(E) $30,000,000 during each of the next five fiscal years.

(2) Four percent interest per annum, which is authorized to be appropriated, on any amount authorized to be appropriated by this paragraph that is not appropriated within six months after the fiscal year in which payable.

(3) $500,000,000 pursuant to the revenue sharing provisions of section 9.

Fund expenditures for propaganda or political campaigns, prohibition. Penalty.

(b) None of the funds paid or distributed pursuant to this section to any of the Regional and Village Corporations established pursuant to this Act shall be expended, donated, or otherwise used for the purpose of carrying on propaganda, or intervening in (including the publishing and distributing of statements) any political campaign on behalf of any candidate for public office. Any person who willfully violates the foregoing provision shall be guilty of a misdemeanor and, upon conviction thereof, shall be fined not more than $1,000 or imprisoned not more than twelve months, or both.

Distribution.

(c) After completion of the roll prepared pursuant to section 5, all money in the Fund, except money reserved as provided in section 20 for the payment of attorney and other fees, shall be distributed at the end of each three months of the fiscal year among the Regional Corporations organized pursuant to section 7 on the basis of the relative numbers of Natives enrolled in each region. The share of a Regional Corporation that has not been organized shall be retained in the Fund until the Regional Corporation is organized.

REGIONAL CORPORATIONS

SEC. 7. (a) For purposes of this Act, the State of Alaska shall be divided by the Secretary within one year after the date of enactment at this Act into twelve geographic regions, with each region composed as far as practicable of Natives having a common heritage and sharing common interests. In the absence of good cause shown to the contrary, such regions shall approximate the areas covered by the operations of the following existing Native associations:

(1) Arctic Slope Native Association (Barrow, Point Hope);

(2) Bering Straits Association (Seward Peninsula, Unalakleet, Saint Lawrence Island);

(3) Northwest Alaska Native Association (Kotzebue);

(4) Association of Village Council Presidents (southwest coast, all villages in the Bethel area, including all villages on the Lower Yukon River and the Lower Kuskokwim River);

(5) Tanana Chiefs' Conference (Koyukuk, Middle and Upper Yukon Rivers, Upper Kuskokwim, Tanana River);

(6) Cook Inlet Association (Kenai, Tyonek, Eklutna, Iliamna);

(7) Bristol Bay Native Association (Dillingham, Upper Alaska Peninsula);

(8) Aleut League (Aleutian Islands, Pribilof Islands and that part of the Alaska Peninsula which is in the Aleut League);

(9) Chugach Native Association (Cordova, Tatitlek, Port Graham, English Bay, Valdez, and Seward);

(10) Tlingit-Haida Central Council (southeastern Alaska, including Metlakatla);

(11) Kodiak Area Native Association (all villages on and around Kodiak Island); and

(12) Copper River Native Association (Copper Center, Glennallen, Chitina, Mentasta).

Note that these are not the regional corporations

↓

a tribe is a village or a regional or village corp.

Any dispute over the boundaries of a region or regions shall be resolved by a board of arbitrators consisting of one person selected by each of the Native associations involved, and an additional one or two persons, whichever is needed to make an odd number of arbitrators, such additional person or persons to be selected by the arbitrators selected by the Native associations involved. Boundary disputes, arbitration.

(b) The Secretary may, on request made within one year of the date of enactment of this Act, by representative and responsible leaders of the Native associations listed in subsection (a), merge two or more of the twelve regions: *Provided*, That the twelve regions may not be reduced to less than seven, and there may be no fewer than seven Regional Corporations. Region mergers. Limitation.

(c) If a majority of all eligible Natives eighteen years of age or older who are not permanent residents of Alaska elect, pursuant to subsection 5(c), to be enrolled in a thirteenth region for Natives who are non-residents of Alaska, the Secretary shall establish such a region for the benefit of the Natives who elected to be enrolled therein, and they may establish a Regional Corporation pursuant to this Act. Thirteenth region.

(d) Five incorporators within each region, named by the Native association in the region, shall incorporate under the laws of Alaska a Regional Corporation to conduct business for profit, which shall be eligible for the benefits of this Act so long as it is organized and functions in accordance with this Act. The articles of incorporation shall include provisions necessary to carry out the terms of this Act. Incorporation.

(e) The original articles of incorporation and bylaws shall be approved by the Secretary before they are filed, and they shall be submitted for approval within eighteen months after the date of enactment of this Act. The articles of incorporation may not be amended during the Regional Corporation's first five years without the approval of the Secretary. The Secretary may withhold approval under this section if in his judgment inequities among Native individuals or groups of Native individuals would be created.

(f) The management of the Regional Corporation shall be vested in a board of directors, all of whom, with the exception of the initial board, shall be stockholders over the age of eighteen. The number, terms, and method of election of members of the board of directors shall be fixed in the articles of incorporation or bylaws of the Regional Corporation. Management.

(g) The Regional Corporation shall be authorized to issue such number of shares of common stock, divided into such classes of shares as may be specified in the articles of incorporation to reflect the provisions of this Act, as may be needed to issue one hundred shares of stock to each Native enrolled in the region pursuant to section 5. Stock, issuance.

(h)(1) Except as otherwise provided in paragraph (2) of this subsection, stock issued pursuant to subsection (g) shall carry a right to vote in elections for the board of directors and on such other questions as properly may be presented to stockholders, shall permit the holder to receive dividends or other distributions from the Regional Corporation, and shall vest in the holder all rights of a stockholder in a business corporation organized under the laws of the State of Alaska, except that for a period of twenty years after the date of enactment of this Act the stock, inchoate rights thereto, and any dividends paid or distributions made with respect thereto may not be sold, pledged, subjected to a lien or judgment execution, assigned in present or future, or otherwise alienated: *Provided*, That such limitation shall not apply to transfers of stock pursuant to a court decree of separation, divorce or child support. Stockholders' rights.

Pouch V (MS 3100)
Juneau, Alaska 99811

Dear Sir:

As a follow-up to the teleconference April 14, 1980 on H. B. 685 we would like to summarize our position as one of frustration with the inefficiency and poor service delivery from the Tlingit-Haida Regional Housing Authority to the Native community of Ketchikan.

We feel that legislation enabling the creation of local housing authorities will result in strong and viable local housing programs. Currently, programs are either not available to the local citizens, as in the case of our proposal for turn-key housing, or else the service delivery is interminably slow.

In the matter of property rights of potential turn-key home owners, we intend to address this according to the law and give our assurances that one of our responsibilities as a local housing authority will be to eliminate this problem as is currently being experienced through Tlingit-Haida Regional Housing Authority.

For the amendment itself, please include the following:

* Section 1. AS 18.55.996(a)(10) is amended to read:

(10) Tlingit-Haida Central Council or Alaska Native Brotherhood (Southeastern Alaska including Metlakatla and excluding Baranof Island and Revillagigedo Island w/exception of Saxman).

* Section 2. AS 18.55.996(a) is amended by adding a new paragraph to read:

(14) Sitka Community Association (Baranof Island).

(15) Ketchikan Indian Corporation
(Revillagigedo Island, excluding Saxman).

Thank you for your time and attention.

Sincerely,

Edward K. Thomas, Executive Director

The Honorable Bill Parker
Representative, State of Alaska
Pouch V
Juneau, Alaska 99801

Dear Sir:

We are most interested in having HB685 amended to include all IRA Councils. We added our name to the present amendment to follow the form as set by Sitka Community Association; but since the issue has become a discussion on the feasibility of IRA Councils, in general, being open to develop individual housing authorities, we would like to the Committee to know that we do very much support this legislative change.

Individual IRA Councils representing individual communities with unique needs are in the best position to communicate directly with citizens, local government bodies and contractors for a service delivery of high accountability. From a citizen view-point, having a local and accessible agency is critical. Low-income people do not have extra funds to make long distance phone calls or visits to Juneau to work on their own behalf. We must remember the varied circumstances surrounding each community and not, through fear or paternalism, dismiss local control as watered-down or fragmentary.

The State already supports a divisional housing authority system as evidenced by ASHA plus the regional Native Housing Authority legislation already in existence.

We feel very strongly on this issue and wish we could be present for comments. Please know we appreciate your attention and efforts in this matter.

Sincerely,

Edward K. Thomas
Executive Director

EKT/emg

Whereas, the Craig Community Association, Inc. Council, is a duly constituted Indian Tribe organized pursuant to the Acts of Congress of June 18, 1934(49 Stat. 984) and May 1, 1936(49 Stat. 1250), and is recognized by the U.S. Government as a tribal governing body; and

Whereas, Regional Native Housing Authorities were created by the Alaska State Legislature in 1971 under Title 18.55.995 and,

Whereas, these Regional Native Housing Authorities were modeled on the Alaska Native Claims Settlement Act Regional Corporations, and

Whereas, the regional approach has failed on some occasions to take local concerns into consideration, and

Whereas, the enabling legislation required that: "A housing authority created by this section may not transact business or exercise powers granted to it until the governing body of the named association has, by proper resolution, declares that there is a need for the authority to function, gives it the authority to function and has named its commissioners...", and

Whereas, under principles of the Indian Self Determination and Education Assistance Act, the Central Council of Tlingit and Haida is not a Tribal Governing body. The Central Council is required to obtain resolutions of support from tribal governing bodies at the local level before they are permitted to contract programs for those communities, and

Whereas, the Department of Housing and Urban Development recognizes those Native Housing Authorities under Title 24, Section 805.106: "An Indian Housing Authority (IHA), may be established Pursuant to a state law which provides for the establishment of IHAS with all necessary legal powers to carry out low income housing projects for Indians."

Therefore Be It Resolved, by the Council of the Craig Community Association: That the Alaska State Legislature be requested amend Title 18 of the Alaska Statutues, to allow local Alaska Native Tribal Governing bodies to create local housing authorities.

CERTIFICATION

I, the undersigned as President of the Craig Community Association, IRA Council, do hereby certify that the foregoing Resolution CCA 80-10, was adopted by the Craig Community Association, IRA Council at a special meeting held MARCH 4, 1980 by a unanimous quorum vote.

ATTEST:

Sitka Community Association

Sitka Community Association
P.O. Box 4360
Mt. Edgecumbe, Alaska 99835
747-3207

The Sitka Community Association is a designated prime sponsor under the Department of Labor, Employment and Training Administration. This allows us to receive funds under the CETA for Employment and Training.

Comprehensive Employment and Training Act
CETA

The Comprehensive Employment and Training Act provides for Classroom Training, On the Job Training, Work Experience, and Public Service Employment for eligible adults and youth.

The Act is designed to assist primarily economically disadvantaged segments of the population. The Department of Labor, Employment and Training Administration, recognizes economically disadvantaged as being a person who is either:

1. A member of a family which receives public assistance.
2. A member of a family whose income during the previous 6 months or an annualized basis was such that
   (a) The family would have qualified for public assistance.
   (b) It does not exceed the poverty level.
   (c) It does not exceed 70 percent of the lower living standard income level.
3. A foster child on whose behalf state or local government payments are made.
4. Where such status presents a significant barrier to employment
   (a) A client of a sheltered workshop.
   (b) A handicapped individual.
   (c) A person residing in an institution; a facility providing 24 hour support such as prison, hospital, or community care facility; or
   (d) A regular out-patient of a mental hospital, rehabilitation facility or similar institution.

The Sitka Community Association CETA Program is administered under Titles II, III, IV, and VI. Eligibility for Title II requires a person to be unemployed 15 of 20 weeks prior to application. For Title VI the period is 10 of the last 12 weeks. In addition to the periods of unemployment, individuals must be economically disadvantaged, as described above. Title IV authorizes operation of the youth programs. The families of participating youth must meet the same eligibility requirements of the other titles.

The Sitka Community Association began its program in December of 1978. At our peak employment period, we provided jobs for 47 adults and 41 students in 1979. This does not include the many individuals that worked in the program and moved on to unsubsidized employment or furthered their formal education.

We presently have 35 Public Service Employee participants. In February of 1980, we will add an 'in-school' youth program that will extend through the summer.

Lack of funding for FY 1980 will not allow us to operate our Public Service Employee program past May 30. We are presently seeking additional funding for FY 1981.

We recently received funding under Title VII of the CETA, which allows us to employ eligible participants in the private sector for apprenticeship training in the construction trades. This will begin in Januay 1980 and run through September 30, 1980.

For further information about the Sitka Community Association CETA Program please contact Keith Redeagle or Robert Nielsen at the Sitka Community Association Building, 456 Katlian St., P.O. Box 4360, Mt. Edgecumbe, Alaska 99835; or call 747-3207, 3208, or 3209.

Higher Education Program

Policy. It is the policy of the Bureau of Indian Affairs and its contractors to encourage all qualified Native students to seek higher education. Scholarship grants *are not a right.* Funds are appropriated by Congress to aid Native students who are in financial need *after* other sources of funds are applied.

Scope of Program. The program provides financial assistance for post-secondary education in accredited colleges and universities with the intent that the assistance will lead to the attainment of a Bachelor of Science or Bachelor of Arts degree. Students may begin at a two-year college if they later intend to transfer to a four-year institution to complete their studies. Graduate students are also eligible for assistance.

Type of Aid. Scholarship grants do not have to be repaid. They are awarded to qualified applicants yearly. All students must apply or reapply *each* year.

Eligibility Requirements.

1. Students must be ¼ or more Alaska Native (Aluet, Eskimo, and Indian).
2. Students must be residents of the Sitka — Mt. Edgecumbe area.
3. Students must be accepted for enrollment in an accredited college or university.
4. Students must have financial need.
5. If a student has received previous college assistance through another Bureau of Indian Affairs agency or contractor, he or she must be in good standing with that program.

Selection of School. Scholarship grants may be used at any accredited in-state or out-of-state school, whether public or private.

Use of Funds. Grant funds may be used for tuition, subsistence, fees, books, supplies, and miscellaneous expenses related to school attendance. Each student is responsible for his or her travel to and from school.

Student Responsibility.

1. Students must maintain acceptable academic standing; maintain school conduct within the policies and rules of the institution attended and demonstrate satisfactory progress toward degree requirements. Students must send a copy of their grades for each term to the Higher Education Program as soon after the end of the term as possible.
2. Students must inform the Higher Education Program of their withdrawal from school and the reason for the withdrawal.
3. Students must keep the Higher Education Program advised of their current school address.

4. Students must inform the Higher Education Program if they transfer to another institution before the end of the academic year.
5. Students should attempt to earn at least $400.00 during the summer months (sophomores — $500; juniors, seniors and graduate students — $600).

Application Procedure.

1. Students must apply for financial assistance at the institution they plan to attend and complete all necessary forms.
2. Students must complete a Higher Education Program application on or before *April 1st* for the following school year which begins in September. Applications received after April 1st will be considered on a first-come first-serve basis.
3. Students must submit copies of their high school transcript or GED scores and a letter of acceptance to the Higher Education Program.

Further Information: Contact Jan Garcia, Director: Higher Education Program, Sitka Community Association, Box 4360, Mt. Edgecumbe, Ak. 99835; 747-3207, 3208, or 3209.

Adult Vocational Training Program

Objective. The primary objective of the Adult Vocational Training Program is to assist those individuals who apply who are either unemployed or underemployed and need a skill in order to obtain reasonable and satisfactory employment, to acquire such necessary skills.

Scope of Program. The program provides counseling, vocational guidance and direct aid to enable eligible Alaska Natives and American Indians to enter and complete vocational training programs at accredited schools and institutions, including those recognized by the Alaska State Department of Education. Training programs cannot exceed 24 months, except for those in registered nursing programs who may receive up to 36 months of training.

Type of Aid. Financial assistance is a grant, not a loan. It does not have to be repaid.

Eligibility Requirements.

1. Applicant must be ¼ or more Alaska Native or American Indian.
2. Applicant must be a resident of the Sitka — Mt. Edgecumbe area.
3. Applicant should be between the ages of 18 and 35.
4. Applicant must be in need of training and financial assistance.
5. Applicant should not have received previous training under this, or other Bureau of Indian Affairs Adult Vocational Training Programs.

Selection of School. All training facilities must meet the eligibility requirements of the state in which they are conducted and be approved by the Juneau Area Director of the Bureau of Indian Affairs.

Trainee Responsibility.

1. Trainees must meet full-time training criteria.
2. Trainees are required to make satisfactory progress in their course of training and to conform to a reasonable standard of conduct.
3. Trainees are required to maintain good attendance records.

Further Information. Contact Jan Garcia, Director: Employment Assistance, Sitka Community Association, Box 4360, Mt. Edgecumbe, Ak. 99835; 747-3207, 3208, or 3209.

Direct Employment Program

Objective. The primary objective of the Direct Employment Program is to assist those eligible who voluntarily seek permanent employment to enable them to become self-sufficient and self-supporting.

Scope of Program. Services include transportation to the job site, subsistence enroute, a living stipend (not to exceed one month) pending receipt of the first paycheck, funds for clothing or tools if needed, pre-departure counseling and referral services at the job site.

Type of Aid. Financial assistance is a grant. It does not need to be repaid.

Eligibility Requirements.

1. Applicant must be ¼ or more Alaska Native or American Indian.
2. Applicant must be a resident of the Sitka — Mt. Edgecumbe area.
3. Applicant must be in need of financial assistance.
4. Applicant should not have received Direct Employment Services during the preceding 6 months.
5. Applicant must be able to verify full-time employment.

Further Information. Contact Jan Garcia, Director: Employment Assistance, Sitka Community Association, Box 4360, Mt. Edgecumbe, Ak. 99835; 747-3207, 3208, or 3209.

Social Services

Overview. Social Services at the Sitka Community Association is funded through the Bureau of Indian Affairs in Juneau, Alaska. Pat Williams, MSW, is Director of Social Services and Joni Lewis is the Eligibility Worker. Social Services has three components: General Assistance, Child Welfare, and Social Services. Our working hours are 8:30–5:00, Mon–Fri.

General Asistance. General Assistance is for those people who are unemployed or under-employed. Eligibility is determined by family size and amount of rent, if any. Any income such as unemployment benefits, etc. are deducted from the basic grant. Persons who have applied for Social Security or Security Supplemental Income, but who have not received payments, may apply for general assistance also.

This is temporary assistance since other resources have to be investigated. Persons applying for general assistance are required to actively seek suitable employment. You must be at least ¼ Native American and/or Alaska Native and a resident of Sitka to apply for this program.

Child Welfare. If you have dependents that are not your biological children, under 18 years of age, and are residing in your household you may be eligible for child welfare. We fund child welfare only for the interim until the family makes application with state services for ADC (Aid to Dependent Children). Therefore, child welfare is only temporary funding and not an on-going assistance program. You must be at least ¼ Native American and/or Alaska Native and a resident of Sitka to apply for this program.

Social Services. Pat Williams, Director of Social Services, offers counseling to families and individuals in need. Social Services works closely with the Native Education Counselors in providing counseling services to the entire family. If you are experiencing crisis in your family, or if you would like to discuss parenting concerns, call Ms. Williams for an appointment.

Joni Lewis is a certified alcoholism counselor. She provides counseling to the alcoholic and his or her family. She is also available for consultation.

There is no charge for these services.

Career Resource Center

The career Resource Center is located on the second floor of the Sitka Community Association Building.

The services available through the Center are:

1. To enable SCA members to obtain Vocational Career Counseling and testing.
2. To improve basic educational weaknesses through individual self-directed use of the materials at the career Education Resource Center.
3. Through use of self-directed designed materials individuals may become educationally capable of taking advantage of the SCA Higher Education and Employment Assistance programs.
4. To enable SCA members to: identify specifically and assess their talents; increase their educational abilities; explore occupations and training programs or schools which match their talents and abilities; and implement their decisions to further their education or training.

Specific materials available for use are:

1. Exploring Careers filmstrips and tapes.
2. Life skills series — pamphlets.
3. Job skills series — pamphlets.
4. Strong–Campbell interest inventory.
5. Skills for daily living learning packets.
6. Career Exploration learning packets.
7. Community Resources.
8. Occupational outlook materials.
9. Information on colleges such as location, cost to attend, size of student body, and general studies offered.

In addition to Career guidance the Center offers help in obtaining a GED. Help is available to enroll in the GED program, to help work out problems that prevent clients from attending classes or tutoring sessions for the GED, and also to determine entry level for the GED.

Counseling is also available to alleviate any fears or reservations about the Adult Basic Program. Information and one-to-one consultation is available for everyday problems such as consumer problems, budgeting, and identifying community resources to meet specific needs.

(3) provisions relating to the subordination of the state's interest in and application of annual payments of principal and interest or the proceeds of a permitted sale of, or insurance or prepayments on, the mortgages; and

(4) the right of the authority to repurchase the mortgages at a predetermined price. (§ 3 ch 134 SLA 1976)

Effective date. — Section 4, ch. 134, SLA 1976, makes this section effective June 9, 1976, in accordance with AS 01.10.070(c).

Article 3. Slum Clearance and Redevelopment Act.

Section

934. State aid for an urban redevelopment or urban renewal project in a disaster area

Sec. 18.55.934. State aid for an urban redevelopment or urban renewal project in a disaster area.

(c) For purposes of this section, "cost of the project" includes, in addition to costs directly related to the project, the sum total of all costs of financing and carrying out the project. These include, but are not limited to, the costs of all necessary studies, surveys, plans and specifications, architectural, engineering or other special services, acquisition of real property, site preparation and development, purchase, construction, reconstruction and improvement of real property and the acquisition of machinery and equipment as may be necessary in connection with the project, an allocable portion of the administrative and operating expenses of the grantee; the cost of financing the project, including interest on bonds issued to finance the project; and the cost of other items, including any indemnity and surety bonds and premiums on insurance, legal fees, fees and expenses of trustees, depositaries, financial advisors, and paying agents for the bonds issued as the issuer considers necessary.
(am § 22 ch 168 SLA 1978)

Effect of amendment. — The 1978 amendment added subsection (c). As the rest of the section was not affected by the amendment, it is not set out.

Article 5. Regional Native Housing Authorities.

Section

995. Purpose and intent
996. Creation of authorities
997. Residential loans

Sec. 18.55.995. Purpose and intent. The legislature finds that an acute shortage of housing and related facilities exists in the villages of

Alaska and that adequate housing cannot be provided by the private sector due to the economic depression which exists in most villages of Alaska. It is the purpose and intent of the legislature to provide a means for certain native associations to form public corporations with the powers and duties comparable to the Alaska State Housing Authority. (§ 1 ch 123 SLA 1971; am § 2 ch 151 SLA 1975)

Effect of amendment. — The 1975 amendment, effective June 19, 1975, deleted "for the specific purpose of implementing the President's National Indian Program for Indian Housing, under which the State of Alaska's share initially will be 1,200 new homes in 1972, in the remote housing program" from the end of the second sentence.

Legislative committee report. — For report on ch. 151, SLA 1975 (HCS CSSB 289 am H), see 1975 Senate Journal, p. 769; 1975 House Journal, p. 1275.

Sec. 18.55.996. Creation of authorities. (a) The following associations are given the authority specified in (b) of this section:

(1) Arctic Slope Native Association (Barrow and Point Hope)

(2) Bering Straits Association (Seward Peninsula, Unalakleet, St. Lawrence Island)

(3) Northwest Alaska Native Association (Kotzebue)

(4) Association of Village Council Presidents (southwest coast of Alaska including all villages in the Bethel area and all villages on the Lower Yukon River and Lower Kuskokwim River)

(5) Tanana Chiefs Conference (Koyukuk, the middle and upper Yukon River villages and the upper Kuskokwim and Tanana River villages)

(6) Cook Inlet Association (Kenai, Tyonek, Eklutna and Iliamna)

(7) Bristol Bay Native Association (Dillingham, Upper Alaska Peninsula)

(8) Aleut League (Aleutian Islands, Pribilof Islands and that part of the Alaska Peninsula which is in the Aleut League)

(9) North Pacific Rim Native Corp. (Cordova, Tatitlek, Port Graham, English Bay, Valdez, Seward, Eyak and Chenega)

(10) Tlingit-Haida Central Council or Alaska Native Brotherhood (Southeastern Alaska including Metlakatla)

(11) Kodiak Area Native Association (all villages on and around Kodiak Island)

(12) Copper River Native Association (Copper Center, Glennallen, Chitina and Mentasta)

(13) Alaska Federation of Natives, Inc.

(b) There is created with respect to each of the associations named in (a) of this section a public body corporate and politic to function in the operating area of the individual associations to be known as the regional housing authority of the associations possessing all powers, rights and functions now or subsequently specified for the Alaska State Housing Authority, under the Alaska State Housing Authority Act (§§ 10 — 290 of this chapter) except those specified with respect to the construction and acquisition of public buildings for lease to the state or any

subsequently specified authority which is inconsistent with § 995 of this chapter. The authority shall have the power to enter into agreements with local government, other political subdivisions of the state, the state or the federal government for the exercise of a function or power relating to construction, operation and maintenance of public facilities or public utilities. Upon execution of such an agreement and for the period of the agreement the authority shall have the same powers and functions relating to the subject matter of the agreement as those which may legally be exercised by the governmental unit with whom the agreement is made including the authority to separately or together with the other unit borrow money and issue notes, bonds or other evidence of indebtedness to finance a project within the scope of the agreement subject to the express limitations, if any, contained in the agreement. All obligations or liabilities of the regional housing authorities shall remain their own and shall not be obligations or liabilities of the state.

(f) The authority shall have the power to acquire, construct, operate and maintain group homes, multipurpose community centers, child care centers and other community facilities.

(g) If an activity associated with the planning, financing, construction or operation of a project by a regional housing authority established in this section conflicts with an activity of the Alaska State Housing Authority, the governing body of the municipality in which the project is located shall resolve the conflict.

(am §§ 3, 6 ch 151 SLA 1975; am § 1 ch 274 SLA 1976; am § 1 ch 12 SLA 1977)

Effect of amendments. — The 1975 amendment, effective June 19, 1975, added the present second and third sentences of subsection (b) and added subsection (f).

The 1976 amendment, in paragraph (9) of subsection (a), substituted "North Pacific Rim Native Corp." for "Chugach Native Association," deleted "and" preceding "Seward," and added "Eyak and Chenega" to the end.

The 1977 amendment, effective March 31, 1977, added subsection (g).

As the rest of the section was not affected by the amendments, it is not set out.

Legislative committee report. — For report on ch. 151, SLA 1975 (HCS CSSB 289 am H), see 1975 Senate Journal, p. 769; 1975 House Journal, p. 1275.

Sec. 18.55.997. Residential loans. (a) In addition to the powers authorized to a regional housing authority under § 996 of this chapter, a regional housing authority may, in accordance with procedures and policies adopted and approved by the board of directors of the Alaska Housing Finance Corporation, make loans for the purchase or development of residential housing in rural areas of the state. A loan shall be secured by collateral in an amount acceptable to the board of directors of the Alaska Housing Finance Corporation. The rate of interest on a loan authorized by this section may not exceed an interest rate approved by the board of directors of the Alaska Housing Finance Corporation.

(b) In this section,

(1) "development" means the construction of a new residence or the repair, remodeling, rehabilitation or expansion of an existing home;

(2) "rural" means any community of the state with a population of 4,500 or less that is not connected by road or rail to Anchorage or Fairbanks. (§ 11 ch 167 SLA 1978)

Effective date. — Section 16, ch. 167, SLA 1978, makes this section effective July 18, 1978, in accordance with AS 01.10.070(c).

Chapter 56. Alaska Housing Finance Corporation.

Section
10. Findings and purpose
20. Alaska Housing Finance Corporation
30. Corporation governing body
50. Administration of affairs
52. Executive director
60. Employment of personnel
88. Administrative procedure
90. General powers
92. Veterans' loans for residential housing
94. New capital city mortgage loans
95. Mortgage insurance
115. Independent financial advisor
125. Capital reserve fund
210. Definitions

Sec. 18.56.010. Findings and purpose.

(d) The program of making loans for residential housing to veterans in accordance with AS 26.15 has increased and improved the supply of adequate housing in the state, and the continuation of the program is essential to the economic growth of the state and the expansion of the supply of adequate residential housing in the state. Participation by the Alaska Housing Finance Corporation in the program of purchasing and insuring state veterans' loans as provided in this chapter will be of material aid in insuring the continuance of the program of making loans for residential housing to veterans in accordance with AS 26.15.

(e) Expansion of the program of the Alaska Housing Finance Corporation of purchasing insured and uninsured mortgage loans is essential to the economic growth of the state and the supply of adequate residential housing in the state.

(f) The legislature finds that enabling the Alaska Housing Finance Corporation to assist in financing the program of veterans' loans for residential housing in accordance with AS 26.15 and to expand its program of purchasing other mortgage loans serves a public purpose in benefiting the people of the state. The Alaska Housing Finance Corporation is empowered to act on behalf of the state and its people in serving this public purpose for the benefit of the general public. (am § 4 ch 151 SLA 1975)

Effect of amendment.

The 1975 amendment, effective June 19, 1975, added subsections (d), (e) and (f).

As the rest of the section was not affected by the amendment, it is not set out.

Legislative committee report.

For report on ch. 151, SLA 1975 (HCS CSSB 289 am H), see 1975 Senate Journal, p. 769; 1975 House Journal, p. 1275.

CHAIRMAN

H 60 (Rev. 12/78)

STATE OF ALASKA
DEPT. OF ENVIRONMENTAL CONSERVATION
JAY S. HAMMOND, GOVERNOR
POUCH O – JUNEAU 99811

December 12, 1979

The Honorable John G. Fuller
Box 689
Nome, Alaska 99762

Dear Mr. Fuller:

For the last several months, our Village Safe Water (VSW) program staff has been working with the 12 regional Native health corporations to develop a priority list of candidate villages for future projects, funded under the Village Safe Water Act. Our purpose is to provide you and others in the Alaska Legislature with a prioritized list of 15 villages which we and the regional health corporations feel are most in need of improved sanitation services.

The selection process began last July when letters were sent to each health corporation, asking them to select up to three communities in their area to be considered along with candidate villages from the other 11 regions. To guide their deliberations, the health directors were asked to consider a number of factors, the most important being the availability of safe drinking water. For instance, melting ice or collecting river water for drinking is less safe and convenient than having a protected community well nearby. In addition, to avoid duplication of effort we asked the health corporations not to consider communities where sanitation improvements are proposed by the U.S. Public Health Service (PHS) or some other agency. We also reminded the health directors that the Attorney General recently ruled that Village Safe Water funds cannot be used for solid waste disposal facilities. So only villages needing water supply, sewage disposal, bathing and/or laundry services were to be considered.

Seven of the 12 health corporations responded with candidate villages and supporting background information on each. Some of those that chose not to participate indicated that the Public Health Service had already provided sanitation services for all villages in their regions. VSW program staff then reviewed and checked the information submitted and used it to develop the following statewide priority list.

Regional Health Corporation	Village	Priority
Yukon Kuskokwim Health Department	Newtok	1
Copper River Health Department	Copper Center	2
Aleutian Pribilof Island Association	Nelson Lagoon	3
Copper River Health Department	Chistochina	4
Bristol Bay Health Department	Portage Creek	5
Tanana Chiefs Health Authority	Eagle Village	6
Tanana Chiefs Health Authority	Rampart	7
Tanana Chiefs Health Authority	Ruby	8
Yukon Kuskokwim Health Department	Chefornak	9
Bristol Bay Health Department	Kokhanok	10
Yukon Kuskokwim Health Department	Stoney River	11
Bristol Bay Health Department	Pedro Bay	12
North Slope Borough Health Department	Point Lay	13
Copper River Health Department	Cantwell	14
Mauneluk Association	Selawik	15

This list reflects the relative need for improved sanitation services in each village, with special emphasis on the need for safe drinking water. For example Newtok, a community of 154 people, was placed at the top of the list because residents can only use rainwater for drinking, and it is only seasonally available. Water can be obtained at the BIA School, but residents are limited to 5 to 10 gallons per family per day. While the regional school district plans to drill a well to serve a new high school in Newtok, there are no provisions to extend service to the village. In addition, PHS does not plan to improve sanitation services in this community.

Copper Center, population 275, is number two on the list. In this interior community some residents obtain their drinking water from individual home wells drilled by PHS in 1965. However, of the original 29 wells, 10 are not operating, and most of the others produce water of poor chemical quality. Iron and manganese concentrations exceed drinking water standards and create taste, color and odor

problems. Due to community growth since 1965, there are now about 75 homes in need of an acceptable water supply. With Copper Center anticipating electrical service from a hydroelectric system, the difficulty of powering sanitation systems may be less than in some other villages.

At Nelson Lagoon, which is number three on the list, residents must travel 16 miles to obtain drinking water. The shallow, hand driven wells in the village produce brackish water suitable only for washing clothes. Also Nelson Lagoon has excellent potential for the use of wind power to generate electricity. It is very likely that a VSW facility in this village could be powered by wind energy.

The fourth village is Chistochina, population 33, where residents obtain their drinking water from Sinona Creek, which is littered with dead salmon during the summer months. Water and sewer systems installed by PHS in 1970 have failed.

Number five on the list is the Bristol Bay community of Portage Creek, where water is available from the school. Eleven of 13 families use this source. However, the school is closed for the summer months, and in the winter the well occasionally runs dry.

In Eagle Village, sixth on the list, residents must drive three miles in the summer to the City of Eagle for drinking water. In the winter months the Yukon River is the preferred source of supply. This community has no water system and there are no prospects for improvements from other agencies.

Rampart, with a population of 58, is seventh on the list. Village residents haul water from a nearby creek except for a two week period during breakup.

In Ruby (eighth) and Chefornak (ninth) there is critical need for sanitation improvements, but PHS plans projects in those villages in the near future.

In Kokhanok, Stoney River and Pedro Bay (tenth, eleventh and twelfth respectively), good sources of drinking water are available to residents, but sewage disposal problems may exist.

Point Lay was placed thirteenth on the priority list because $400,000 in VSW Funds have already been authorized for sanitation improvements there. Also, the North Slope Borough assembly has apparently appropriated an additional $100,000 for this purpose.

Cantwell and Selawik were placed at the bottom of the list because water and sewer facilities already exist in those communities, and additional improvements are scheduled in the near future by the PHS.

More detailed background information on each of these communities can be found in the enclosed village data summary.

Estimating the cost of Village Safe Water projects in specific villages is nearly impossible at the time a bond bill is being considered. Costs can vary from $100,000 to more than $1 million depending on what services are to be included, and local factors such as availability of water, type of treatment required, waste disposal options, power availability, and soil conditions.

What services will be provided by a VSW facility (i.e. the scope of the project) is largely a matter of choice by the village receiving it. Choices authorized by the VSW Act are water supply, sewage disposal, bathing and laundry services. The project scope must be negotiated with the village after funding for their facility has been approved in a bond election.

After project scope is established, the cost of providing the selected services can be estimated based on local conditions and preliminary engineering investigations. At this time alternate sources of energy to power the VSW facility are investigated. The technical and economic feasibility of appropriate alternate energy sources are evaluated, and incorporated into the design of the facility whenever possible.

To accommodate the problem of having to identify funds for VSW projects before their costs are known with any accuracy, the Department recommends a "group funding" approach. This technique is based on the assumption that the cost of groups of five projects varies much less than the cost of individual projects. From past construction experience in the VSW program, the total cost of several randomly selected groups of five projects was determined in 1981 construction dollars. The average cost of these groups of five projects is $6.5 million in equivalent 1981 dollars, or $1.3 million per project.

Because VSW facilities, and virtually any other village utilities project will fail prematurely without some degree of technical, management and financial assistance, this Department has been requesting and receiving general fund

appropriations for operation and maintenance assistance to villages receiving VSW facilities. An inevitable consequence of constructing more VSW facilities is the need for larger appropriations for operation and maintenance assistance as the facilities are completed.

If you have any questions on the VSW priority list or desire additional background information on any of the communities involved, please contact me.

Sincerely,

Ernst W. Mueller
Commissioner

Testimony of

Ernst W Mueller

Commissioner of Environmental Conservation

On House Bill 689

Before the

House Committee on Community and Regional Affairs

March 7, 1980

I am Ernst W. Mueller, Commissioner, Department of Environmental Conservation. I am here today to testify on H.B 689, for the provision of bond funds for the award of grants to build water and sewerage facilities throughout the State of Alaska. These funds are administered by my Department in the Facility Construction and Operation Section. Two programs are included in the bond bill.

(1) Construction grants, which are available only to incorporated municipalities. Fifty percent of non-federally financed costs can be granted. Costs of operation and maintenance support of water and sewerage facilities are not grant eligible under this program.

(2) Village Safe Water. Grants under this program are available with populations ranging between 25 and 600, or to second class cities. One hundred percent funding is available for construction. Costs of operation, and maintenance support of facilities are grant eligible, these funds are included in the Department's operating budget.

The capital budget submittal fully describes these programs and a detailed delineation of the $25.520 million bond request. The primary purpose of the program is to improve sanitation facilities, improve public health and protect the quality of the environment. A secondary benefit results from stimulation of the local economy due to employment opportunities generated during construction. In the case of the VSW projects, which are performed under force account by the villages, valuable construction and management skills are imparted to the community.

This program differs from other State capital construction programs in that the Department has no firmly established set of projects at the time the bond funds are requested, or even when approved by the voters. Construction grants projects are developed by the municipal grantee in accordance with local planning requirements. They proceed at a pace selected by municipalities. The Department is often unaware of the specific project until an application is received. Therefore, to meet continually changing needs, it is necessary to have adequate funds available upon demand. Of course, the Department has performed a statewide needs assessment to provide us with basic information of sewage and water supply requirements.

In order to assure that there are adequate funds available, the Department projects past bond obligation rates and then adds an inflation factor to forecast future needs. This process is explained in the capital budget submittal. To date, this method has been very accurate. The $23.0 million request is nearly identical with the need forecast two years ago. Having an adequate supply of bond funds

available allows us to meet all grantee requests without requiring us to determine which communities can construct facilities when there are not funds available for all communities' needs. The program can run on a first-come, first-served basis.

Having adequate funds also has a secondary benefit in that the Department's administrative procedures and costs can be kept lower, since we are not required to establish a detailed ranking of priorities among the communities. If priority allocation of funds was necessary, the Department would be forced to require additional paper work from the grantee to enable us to make these decisions.

The VSW needs are also projected, based on past expenses for building a standard type of facility. The actual facilities to be built have not yet been determined. However, the bush caucus has been provided with a priority list of projects detailing in which communities the Department feels the greatest public health needs exist. The $2.520 million requested for the VSW Program would fund approximately three new projects. This amount is suggested due to the limitations of our existing small staff to handle new projects. Since the VSW projects require a far greater amount of staff work per project than does the construction grants program, we are limited to approximately two new projects per engineer. If the Legislature chooses to fund more than the first group of projects listed on the priority list, the Department would like the opportunity to submit an additional fiscal note to assure that proper staffing becomes available.

The Department favors H.B. 689 for $25.520 million if there are no changes in AS 46.03 030. If AS 46.03 030 is amended by either adding solid waste facilities or changing the percentage of grant funding, the dollar amount in H.B. 689 needs to be increased, so that the projects can be funded. The eligibility of solids waste facilities would require an additional $8-$10 million in H.B. 689. In addition, an appropriation of $2.5-$3 million to cover the time period July 1, 1980 to December 31, 1980 would be required, so that communities would have money available immediately for solid waste purposes. A fiscal note has been prepared showing an increased need to hire more staff for the operation of the expanded grants program. This fiscal note requests a total of $82,700 to cover the salaries and support costs of an engineering position and an administrative assistant. The Department endorses the concept of adding solid waste facilities to our grants program if adequate funding is provided.

Increasing the percentage of grant participation above the current level of 50 percent is a serious concern of the Department. It has been our experience that as the grantee's percentage of project contribution is lowered, there is often a corresponding decrease in the level of active project participation by the grantee. The 50 percent level of funding appears to be adequate to ensure that the grantee administers this project properly. It is also probable that should State grants be increased to too high a percentage of toal project cost, municipalities would have little interest in applying for federal grants (which require more paper work). The EPA provides approximately $18-20 million per year for sewerage system projects in 12.5 percent for a total of 87.5 percent in grant funding. If, for example, the State grant

percentage was raised from 50 percent, there would be a strong likelihood that some communities would settle for a lesser total grant to avoid EPA grant requirements. An immediately increased annual demand of $18-$20 million on the State bond funds could result.

Should the Legislature choose to alter either the grant percentage or include solid waste facilities as grant eligible, a corresponding increase in the amount of the bond proposition will be required if the same number of projects are to be funded in the future.

Thank you for this opportunity to provide comments on H.B. 689. I would be glad to provide any further information you may need.

Department of Environmental
Conservation

1980 Capital Budget

Attached for your review and consideration is the Department's 1980 capital budget proposal. This submittal is in two parts; Village Safe Water and Construction Grants. With Departmental reorganization both programs are now located in the Facility Construction and Operation Section, Division of Field Operations.

Our analysis of budget needs indicates that $25,520.0 will be required to continue our construction programs at their current level of activity. Therefore, we respectfully request that you support our request for a 1980 bond proposition totaling $25,520.0.

The budget format does not exactly lend itself to our construction programs. Where differences occur we have attempted to explain our procedures on the budget forms. Please feel free to contact us if additional information clarity is required.

Relationship with Objectives

The Village Safe Water (VSW) Act (AS 46.07) calls for "the installation of ... at least one facility for safe water and hygienic sewage disposal in each village." According to the VSW Act a "facility shall include, at a minimum a source of clean water, such as a well with pumping facilities or utilization of surface water treated so it is safe and healthful for use, shower bath facilities, an adequate means of hygienic sewage disposal, and facilities for the washing of clothes."

When a VSW facility providing safe water supply and sewage disposal services has been completed in a village, progress toward budget objectives 1 and 3 has been made in the amount of the population of the village. Department activities other than VSW construction, such as enforcement of the drinking water regulations, also contribute to achieving objectives 1 and 3.

Need for Capital Construction

The Alaska Water assessment task force, chaired by the VSW program managers, did a cursory inventory of village sanitation facilities in 1976 and discovered that: 1) about 25,000 rural Alaskans (about half the village population) depend on domestic water supply methods in immediate need of improvements, 2) less than half of the industrial and institutional establishments in villages have adequate water supplies, and 3) in more than two-thirds of Alaska's villages, the environment is being unacceptably contaminated by human wastes. A copy of the task force report is enclosed.

The task force report also reveals that water supply and waste disposal methods in more than two-thirds of Alaska's villages are in violation of State and federal laws and regulations.

Nearly all of the more than 200 villages in Alaska lack the financial, technical and management resources to obtain adequate sanitation services and comply with legal environmental standards on their own.

Management Strategy

Imposing enforcement penalities on the villages would serve no useful purpose because most of the villages are unable to respond without outside assistance. Similarly, motivation and education programs alone do not help. Sanitation services of the kind defined in the VSW Act will not exist in the villages without money to build physical facilities.

CATEGORY NRMEC AGENCY ENVIRONMENTAL CONSERVATION PROGRAM Facility Construction & Operation

ANAYLTIC STATEMENT Continued (2)

The U.S. Public Health Service (PHS) administers a federal program for installing water supply and waste disposal systems in Native villages. But the federal program is currently confined to villages receiving housing projects, and not all villages satisfy the eligiblity criteria for PHS projects. Hence, it is only through the VSW program that many villages might hope for financial assistance in obtaining sanitation services.

The type of VSW facility built in a particular village depends on local conditions such as surface topography, soil conditions, availability of water sources, village layout, and the needs and desires of village residents. To date, VSW projects have consisted of a central community structure, usually wood frame, where people can go to get safe water, dispose of hand carried sewage, use rest rooms, take showers and do laundry. Pipe water distribution and sewage collection systems, either above or below ground, serving individual homes are also possible, as are vehicle haul systems for delivery to individual homes. But no such systems have yet been selected by villages receiving VSW projects.

Very few villages in Alaska have the financial, technical and management resouces to successfully operate and maintain any utility systems, including VSW facilities, without outside assistance. But there are no continuing programs though which such assistance is available. For the few (about a dozen) VSW facilities built so far, this Department has requested and received annual general fund appropriations to provide operation and maintenance assistance. But providing financial assistance for VSW operation and maintenance has not been adopted by the State as a continuing long term commitment. Until the operation and maintenance future of village utilities is more secure, the Department recommends limiting VSW construction to no more than two facilities per year. That means an annual construction budget of about $1,2000,000 at FY 81 prices.

Construction Priorities

VSW construction priorities are established jointly by VSW staff and the directors of the 12 regional native health corporations. The intention is to let village residents themselves, through their regional representatives, decide who is most in need of VSW services.

REVISED DATE

ANALYTIC STATEMENT Continued (3)

Before a legislative session, during which bond funds are authorized (i.e., once every two years), each health corporation director is invited to select candidate village(s) from his region. The number of candidate villages from each region depends on the amount of construction money anticipated and until adequate operation and maintenance provisions are made a construction rate of one or two facilities per year is recommended. After the regional candidates are selected, the health corporation directors meet jointly with VSW staff to review the candidate villages and rank them in order of need for VSW services. Then the priority list is presented to the Legislature, along with a recommendation of how much construction money should be authorized.

The cost of a VSW facility can vary from less than $100,000 for a simple watering point in a small village, to more than $1,000,000 for a facility in a large village offering all the services authorized by the VSW Act. Estimating the cost of a particular VSW project is not feasible as part of the prioritizing because it is a long, involved and expensive process to negotiate the appropriate scope of the project in a village and to determine what that scope of project will cost for the local conditions that exist. It is not reasonable to ask a village to participate in that effort unless they have a funded project.

It is highly desirable to carry out a construction schedule established with the regional health corporations. A primary purpose of those corporations is to speak for the villages concerning sanitation utility problems. Their recommendations of how fast to build facilities and where to build them, made with the advice and assistance of VSW staff, should be persuasive. But no matter how construction priorities and expenditure rates are determined, no facility should be built unless its operation, maintenance and management future is provided for.

If funds are not available for VSW construction because a bond issue fails, a general fund capital appropriation could be considered. But without funds for capital construction, the contribution of VSW program activities toward achieving objectives 1 and 3 could not be made.

PROJECT NARRATIVE

At the present time, there are four projects on the VSW priority list for 1980 bond funds. They are Circle, Portage Creek, Point Lay and False Pass. However, currently this priority list is being reevaluated and new candidate villages are being selected by the health corporation directors. It is anticipated that a new priority list will be complete by December 1979. After this, the appropriate scope of the project for each village will be negotiated with village residents, and a preliminary cost estimate made based on the scope of project and local conditions. This process will continue through the priority list until the $2,520,000 in 1980 construction bonds are used up. Past VSW construction experience suggests there will be money for about three projects.

Project Need -

Conditions in the first four villages on the VSW priority list which illustrate the need for improved sanitation services are summarized below:

1. Circle - 51 people, get water from trading post in summer, but most haul untreated water from Yukon River in winter. Privies and honey

CONTINUATION OF NARRATIVE

1. Circle Continued

   buckets for sewage disposal, and evidence of sewage surfacing from school sewage disposal system. No PHS project planned.

2. Portage Creek - 66 people, some get water from school during school year, otherwise use untreated water from river. Honey buckets for sewage with indiscriminate dumping. No PHS project planned.

3. Point Lay - 50 people, in summer haul untreated water from lake a mile away, in winter melt ice. Honey buckets for sewage with indiscriminate dumping. No PHS project planned. Village received $400,000 VSW capital appropriation from Legislature in FY 80 budget, but that's not enough because local conditions are so difficult (e.g., permafrost; flat, poorly drained tundra; lack of good quality water sources).

4. False Pass - 56 people, piped water service to homes from cannery system, no treatment but no evidence of contamination. Main problem is raw sewage discharged on ground and on beach. No PHS project for sewage disposal planned.

The scope of each VSW project will be tailored to alleviate the specific sanitation problems in the villages. Human health and safety will be protected by providing a safe, dependable drinking water source for all village residents. In all four villages there is sewage pollution of the natural land and water environment which jeopardizes the health and safety of village residents, and violates federal and State environmental regulations. Also, the Village Safe Water Act calls for adequate sanitation services in all villages in the State.

CATEGORY NRMEC AGENCY ENVIRONMENTAL CONSERVATION PROGRAM Facility Construction & Operation

PROJECT TITLE

35b PROPOSED PROJECT ANALYSIS

REVISED DATE

Site features such as land ownership, utilities available, and access will be determined when project scope is negotiated with each village and preliminary estimates are made.

Project Description -

The physical features of a VSW facility depend on the services to be provided in a particular village, and on local environmental conditions. Most projects involve developing a safe, dependable water source using a well if subsurface conditions make it possible; or a surface water source if ground water is not accessible. Unorthodox methods such as rain collection are sometimes used when water sources are unusually difficult to develop. Water treatment equipment is installed as necessary depending on the bacteriological and chemical quality of water sources available. Pumping, storage and dispensing equipment and structures, with appurtenant mechanical and electrical systems, are required for a simple watering point. Energy sources can be village AVEC systems, village owned electrical systems, school generators, and wind generators and waste heat recovery, if feasible.

When rest rooms, sewage disposal, and bathing and laundry services are also provided, more extensive structures and equipment are required. Nearly all building are wood frame so that village residents can do most of the constructing and handle maintenance. Rest rooms usually contain standard flush toilets, urinals and lavatory fixtures, with water saving devices used when appropriate. Bathing facilities include standard showers when sufficient water is available, and saunas where steambaths are a traditional method of bathing.

Laundry services are provided by standard washers, extractors and dryers with water saving devices used when appropriate.

Sewage treatment and disposal methods vary greatly depending on local conditions. Lagoons are used when possible to minimize operating problems. But primary and secondary treatment systems are sometimes necessary when subsurface disposal is impossible (e.g., due to permafrost) and effluent must be discharged to the land surface or a natural water body.

CONTINUATION FORM

CATEGORY NRMEC AGENCY ENVIRONMENTAL CONSERVATION PROGRAM Facility Construction & Operation

PROJECT TITLE _____

01-1033 (7/79)

REVISED DATE _____

Documentation of Estimated Capital Cost -

The request for $2,520,000 in 1980 bonds is to fund $1,200,000 in VSW projects in SFY 81, and $1,320,000 worth of projects in SFY 82. The amount in SFY 82 includes a 10% inflationary increase over SFY 81 costs.

The scope and cost of individual projects have not yet been determined for reasons given earlier, and costs vary greatly. Based on previous VSW construction experience, however, it is estimated that for any group of three or four VSW facilities, construction costs will average about $800,000 per facility at SFY 81 prices. This estimate is based only on past projects and does not include any engineering estimates for actual projects on the priority list for 1980 bonds. The intention is to go as far down the priority list as $2,520,000 will allow, and it is expected that about three projects can be funded.

Analysis of Estimated Operational Expenses -

The operation, maintenance and mangement costs for a VSW facility depend on the extent and complexity of the physical plant, the inclination and ability of the village to manage the utility system, and such things as power, fuel and transportation costs that vary from village to village. Based on the operational experience of the eleven existing VSW facilities, ultimate annual operating costs are proving to be about 10% of construction costs. So for a facility constructed in SFY 81 for $800,000, the ultimate annual operating cost is expected to be $80,000 in SFY 81 dollars.

Money to pay operating costs for VSW facilities generally comes from three sources: 1) fees paid by village residents who use facility services, 2) fees paid by institutions (e.g., schools, FAA sites, health clinics) provided with VSW water and sewer services, and 3) operation and maintenance assistance grants from this Department. The amount of O&M grant assistance provided is the amount by which the other two revenue sources fall short of meeting approved operating expenses. The grant assistance can vary from none at all in a large village where the residents have money to use their facility frequently and where institutions agree to pay substantial fees, to 70 or 80 percent of operating costs in relatively poor

small villages with no institutions paying fees. Over the 5 year operating history of the VSW program, O&M grant assistance from the State has averaged about 50% of total operating costs, and that figure is used for estimating the impact of the 1980 bond projects on the State operational budget.

The first year a VSW facility operates, the costs of operation, maintenance and management are higher than the ultimate annual operating costs. Plant operators and village administrators require special training and guidance until they learn the ropes; "bugs" in the physical plant must be worked out; and stocks of operating supplies, spare parts and standby equipment are accumulated. Based on past operational experience with VSW facilities, first year operating costs are estimated to average about 30 percent more than ultimate operating costs, or about 13 percent of construction costs.

The only increase expected in the Department's operating budget for SFY's 81 and 82 due to the 1980 VSW bond projects is for the O&M grants. Administration of the construction and O&M programs can be handled by existing staff.

Identification of Alternatives Considered -

There are several means by which villages can attain sanitation services, including PHS construction projects, Housing and Urban Development grants, Economic Development assistance grants and grants from the State Department of Community and Regional Affairs. Only the PHS program, however, is big enough to make visible improvements in village sanitation conditions.

For many, and perhaps most, of the more than 200 villages, the PHS program is the apprporiate source of assistance for sanitation services. They have more than 15 years of experience in rural sanitation, a multi-million dollar construction budget funded by the federal government, and a large relatively talented staff with established working relationships with villages throughout the State.

The PHS program can serve only Native villages, however, and there are some Native villages likely never to receive PHS assistance because they do not meet eligiblity requirements for the federal program (e.g. technical feasibility and economic feasibility). Such villages usually lack the technical and management expertise it takes to parlay assistance like HUD community assistance grants and EDA development grant into sanitation services. Also, the VSW Act specifies that State assistance to villages for sanitation facilities will be provided through the VSW program

Once it is determined that the VSW program will be the means for helping a village attain sanitation services, there are many methods for providing them. Selecting appropriate methods in determining the scope of the project. Among the possibilities are a piped water and sewer system serving individual homes, a central facility with vehicle haul service to individual homes, a central facility with no haul service, a simple watering point, several watering points scattered throughout the village, privies for sewage disposal, and several sewage dump sites scattered throughout the village with piped sewage collection to central treatment and disposal. After project scope is determined, there is a multitude of engineering choices to be made of ways to develop and build the facility.

Basically, it is village residents who select the "alternatives" that are most appropriate as the means for solving their sanitation problems, with advise and guidance from VSW staff. Factors considered in making those choices include minimizng construction costs, keeping the project as small and simple as possible, and minimizing operating requirements and costs. The engineering choices of how to build a facility according to a selected scope of project are recommended by professional engineers hired as design consulants. The consultants' recommendations including such things as floor plans, pump sizes and types, water and sewage treatment methods, floor covering, and type of foundation, are considered by VSW staff and village administrators, and either accepted or appropriately modified. The classical engineering criterion of attaining the desired service or function at the least cost is the basis for selecting among design alternatives.

NARRATIVE

An appropriate role for the VSW program in meeting rural sanitation needs has never been defined. Soon after the VSW act was passed the Department realized there was no rational basis for deciding how many VSW facilities should be built, how fast they should be built, how construction priorities should be established, how operation and maintenance needs should be met and other such questions. Hence the Department embarked on an ambitious comprehensive planning effort, the purpose of which was to prescribe a complete strategy for meeting all rural sanitation needs. The intention was to consider all existing programs and resources devoted to village sanitation, and involve all major participants in rural sanitation programs in the planning process, so that everyone would subscribe to the grand design and participate in its implementation.

After devoting more than three years to the comprehensive planning effort, it appears that completing the project as originally conceived is not feasible. A detailed report on work completed so far, is enclosed. Included in the report is a discussion of why it is not feasible to attain the original planning objectives according to the original schedule, and recommendations for redirecting the planning effort.

The revised planning effort will consist of concentrating on specific questions of immediate consequence to the VSW program, such as: 1) should financial, technical and management assistance for VSW facilities be accepted as a long-term service of the State, 2) how will it be determined whether a PHS or a VSW project is most appropriate for a given village, 3) how many VSW projects can be built per year without overtaxing

37 POTENTIAL CAPITAL PROJECT

REVISED DATE

Department's management capacity for construction projects and in the O&M assistance program. At least until the narrowed planning effort reveals answers to some of these basic questions concerning the scope of the VSW program, the Department recommends that construction be limited to levels indicated on form 34 of this budget request.

It is conceivable, however, that planning results available before the term of the six year plans has expired might suggest an accelerated construction schedule. If so funds for those future projects would be included in a capital budget request at the appropriate time, and supported with VSW planning results.

38 STATUS OF CURRENTLY APPROVED CAPITAL PROJECTS

REVISED DATE

Management Strategy

The Department awards grants from unobligated bond funds to communities on a first-come, first-serve basis as eligible projects are identified and approved by the Governor. The community is responsible for determining whether a project's in its best interest and meets local planning and zoning requirements. The Department reviews all plans and specifications for conformance with sound engineering standards.

Since projects are initiated by local government and proceed at a pace determined by local resources and politics it is impossible for the Department to attempt to forecast needs based on anticipated project development. Forescasting bond needs is also complicated by the provision in the statue that allows the Department to match federal funds. Since many federal funding programs are available it would be difficult to coordinate bond fund needs with their projects. In the past we have attempted to estimate bond fund needs by contacting municipal officals to determine their projected needs. Unfortunately, this has not proven very satisfactory. Since municipal priorities often change without our knowledge, thereby throwing off our projections. In addition, emergency or unplanned projects often arise which had not been anticipated.

Therefore, the Department's belief that we can best estimate our future bond needs by extrapolating past bond fund obligation rates to meet future needs. The present obligation rate is just slightly over $1.0 million per month. Unobligated bond funds from the 70, 72, 76 and 78 authorizations total approximately $23.325 million. Projecting current obligations from October 1979 through December 1982 with a construction inflation rate of 10% a year the following table was generated:

October - December 1979	$1.0 million X 3 months	=$ 3.0 Million
1980-	$1.0 million X 1.1 X 12 months	= 13.2 million
1981	$1.1 million X 1.1 X 12 months	= 14.5 million
1982	$1.2 million X 1.1 X 12 months	= 15.8 million
		$46.5 million

Relation With Objectives

Alaska Statute 46.03.030 authorizes the Department to award grants to incorporated municipalities for the construction of water and sewerage facilities. These projects provide safe, dependable water supplies and reduce the chances of water-borne diseases and environmental degradation through the collection and treatment of sewage. Projects aided with construction grant funding enable the Department to progress toward meeting budget objectives 1 and 3 as outlined in the Policy Budget for FY81. These objectives call for the reduction in the number of people exposed to pollution related health hazards. These hazards may be the result of improperly treated domestic water supplies or the insanitary disposal of domestic wastes.

Need for capital construction

Alaska Statute 46.03.030 authorizes the Department of Environmental Conservation to grant to incorporated municipalities, as funds are available, up to a maximum of 50 percent of the non-federally financed costs of eligible water and sewerage projects. Grants awarded under this statute assist municipalities in constructing sewage treatment facilities complying with public law 95-217 and the Alaska Water Quality Standards. In addition, grants for water supply projects enable communities to provide adequate quantities of potable water to rapidly expanding residential areas. High construction costs and the rapid population increases make state construction grant assistance highly desirable, if not mandatory if state and federal laws are to be met.

The construction grant program has had a very successful history of accomplishment. Bond issues of $8, $32, $29.5 and $19.7 million have been approved in 1970, 1972, 1976 and 1978 respectively for a total of $89.2 million. These funds have aided in the construction of over 200 projects, many of which would not have been possible without State assistance. These facilities have greatly reduced the hazards of water borne disease outbreaks and protected the aquatic environment from water contaminants.

Expansion of water and sewerage services are essential to the organized development of communities. Many areas within the State lack soil conditions suitable for the development of closely spaced on-lot water and sewage disposal systems. In these areas housing density must be decreased if the health of the residents is to be protected. Since few people can afford large tracts of land, growth patterns generally result in subdivisions. Within an incorporated municipality, many communities are utilizing the water and sewerage grants to provide these services to newly developing areas, assessing the benefiting property owners for the remaining 50% of costs. In many areas developed without benefit of the grants, failing septic tank systems are now necessitating the con-struction of sewerage systems, there by resulting in double costs to the residents. The cost of the septic system can now be avoided and growth can proceed without fear of health hazard due to contaminated drinking water supplies.

Management Strategy

The Department awards grants from unobligated bond funds to communities on a first-come, first-serve basis as eligible projects are identified and approved by the Governor. The community is responsible for determining whether a project's in its best interest and meets local planning and zoning requirements. The Department reviews all plans and specifications for conformance with sound engineering standards.

Since projects are initiated by local government and proceed at a pace determined by local resources and politics it is impossible for the Department to attempt to forecast needs based on anticipated project development. Forecasting bond needs is also complicated by the provision in the statue that allows the Department to match federal funds. Since many federal funding programs are available it would be difficult to coordinate bond fund needs with their projects. In the past we have attempted to estimate bond fund needs by contacting municipal officals to determine their projected needs. Unfortunately, this has not proven very satisfactory. Since municipal priorities often change without our knowledge, thereby throwing off our projections. In addition, emergency or unplanned projects often arise which had not been anticipated.

Therefore, the Department's belief that we can best estimate our future bond needs by extrapolating past bond fund obligation rates to meet future needs. The present obligation rate is just slightly over $1.0 million per month. Unobligated bond funds from the 70, 72, 76 and 78 authorizations total approximately $23.325 million. Projecting current obligations from October 1979 through December 1982 with a construction inflation rate of 10% a year the following table was generated:

October - December 1979	$1.0 million X 3 months	=$ 3.0 Million
1980-	$1.0 million X 1.1 X 12 months	= 13.2 million
1981	$1.1 million X 1.1 X 12 months	= 14.5 million
1982	$1.2 million X 1.1 X 12 months	= 15.8 million
		$46.5 million

Subtracting the unobligated bond funds from the $46.5 million we are left with unmet needs totaling $23,175 million. Rounding this need down to the next whole number we estimate that $23.0 million will be required to maintain the construction grants program at its current level of activity. This estimate is consistent with the $24.0 million figure projected in the last capital budget submittal.

If funds e not available for construction grants projects because of failure of the bond proposition, a general fund capital appropriation could be considered. Without the funds for capital construction, the contribution it is impossible for the Department to attempt to forecast needs based on anticipated project development. Forecasting bond needs is also complicated by the provision in the statute that allows the Department to match federal funds.

PROJECT NARRATIVE

Projects are not known or defined at this time. Projects are identified by municipalities as the need develops. Applications are reviewed and project eligibility determined on a first-come, first-served basis up to the availability of funds. Eligible projects include water source development, treatment and distribution and sewage collection treatment and discharge. Projects occur state-wide and costs and project scope are determined by the grantee. Grants will be awarded up to the limit of bond authorization. The length of project time varies but probably averages 1.5 years.

NARRATIVE

This form does not apply to construction grants since the grantee identifies the project needed to provide a solution to a specific problem.

Form 38 Narrative

Since grantees proceed with projects at their discretion, the Department has no way to estimate the rate of payments or anticipated completion date. Therefore, the column for estimated expenditures gives only the most current expenditure for each project and the column for the estimated completion date has been left blank. The remainder of the form has been completed for each project that has been awarded a grant and is segregated by bond fund. There are some potential projects for which the Governor's authorization has been received but for various administrative or technical reasons of non-compliance by the grantee the grants have not been awarded. Therefore, the total for amounts authorized will not yield the same results as records kept by administration for bond fund balances.

III. ANALYSIS (See Fiscal Note Preparation Instructions, Section III)

If S.B. 436 is adopted, authorizing the award of solid waste construction grants, it will be necessary to amend S.B. 131 to add an additional $10.0 million to cover the increased grants burden. Also an additional $2.5 to $3.0 million appropriation will be needed to cover the award of grants from the July 1, 1980 effective date through the time when bond funds are approved for use. Should S.B. 436 be amended further to increase the grant percentage to 75% this fiscal note will need to be amended.

Ernest Mueller, Commissioner Dept. Environmental Conservation
Keith Kelton, Chief, Facilities Construction & Operations Section

Made reference to the Senate C&RA CS on SB 131, originally introduced by Sen. Kerttula which raised the bond amount to $41 million and included grants for solid waste facilities construction.

Discussion and questions concentrated on the Village Safe Water Act, its effectiveness, and the prioritization of the projects to be funded by the bonds in the villages.

The Commissioner pointed out that two major changes had taken place in the Village Safe Water program during the last 5 years including: 1. the projects had been simplified a great deal 2. Local labor was now being used extensively in the projects.

In response to whether the communities were able to afford continued support of the projects after they were installed, Mueller responded that there had been a problem in Beaver.

Mr. Kelton reviewed the bond chart developed by the Dept. which outlined the process followed after the bonds were approved by the voters.

Parr questioned the ability of the Dept. to handle increased amount of funding and whether staff would be necessary. As relected in the Senate fiscal note on the subject, additional staff would be necessary if solid waste was to be added to the bond bill.

It was clarified that bond money could be used for bond specifications. Budget and Management is responsible for processing the application.

Housing and health clinics in the facilities are authorized in the statutes and are available if the communities indicate interest in such. The State works with the Public Health Service in constructing projects.

COMMITTEE ACTION:

TAPE # 1 SIDE 1 Footage 1987

Jerry Lovett, City Manager, Cordova
Supports the bill and also SB 436.

Parr - questions if sludge can be dumped. Thought that it had been illegal since 1972.

Carney - Questions DEC on villages included in the list of those who would get funding.

Branson - Suggests amending line 1 page 2 to include "solid waste" construction grants. This will be included in a CS.

BY THE COMMUNITY AND REGIONAL AFFAIRS COMMITTEE

CS FOR SENATE BILL NO. 131

IN THE LEGISLATURE OF THE STATE OF ALASKA

ELEVENTH LEGISLATURE - SECOND SESSION

A BILL

For an Act entitled: "An Act providing for the issuance of general obligation bonds in the amount of $41,520,000 for the purpose of paying the cost of water and sewerage system and solid waste facility construction; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. For the purpose of paying the cost of water and sewerage system and solid waste facility construction, general obligation bonds of the state in the principal amount of not more than $41,520,000 shall be issued and sold. The full faith, credit and resources of the state are pledged to the payment of the principal of and interest and redemption premium, if any, on these bonds. These bonds shall be issued under the provisions of AS 37.15 as those provisions read at the time of issuance.

* Sec. 2. If the issuance of these bonds is authorized by the qualified voters of the state, a special fund of the state to be known as the "1980 Water Supply and Sewerage Systems and Solid Waste Facilities Construction Fund" shall be established, to which shall be credited the proceeds of the sale of the bonds described in sec. 1 of this Act except for the accrued interest and premiums. The amount of $41,520,000 is appropriated from the "1980 Water Supply and Sewerage Systems and Solid Waste Facilities Construction Fund" to the Department of Environmental Conservation to be allocated as follows:

Project	Location	Amount
(1) village safe water construction		

	grants	statewide	$ 2,520,000
(2)	municipal water supply, sewerage system and solid waste facilities construction grants	statewide	39,000,000

* Sec. 3. If the issuance of these bonds is authorized by the qualified voters of the state, the amount of $146,000 or as much of that amount as is found necessary is appropriated from the general fund of the state to the state bond committee to carry out the provisions of this Act and to pay expenses incident to the sale and issuance of the bonds authorized in this Act. The amounts expended from the appropriation authorized by this section shall be reimbursed to the general fund from the proceeds of the sale of the bonds authorized by this Act.

* Sec. 4. The question whether the bonds authorized in this Act are to be issued shall be submitted to the qualified voters of the state at the next general election and shall read substantially as follows:

Proposition

State General Obligation Water Supply and Sewerage Systems and Solid Waste Facilities Construction Bonds $41,520,000

Shall the State of Alaska issue its general obligation bonds in the principal amount of not more than $41,520,000 for the purpose of paying the cost of village and municipal water supply, sewerage system, and solid waste facilities construction?

Bonds Yes [ ]

Bonds No [ ]

* Sec. 5. This Act takes effect immediately in accordance with AS 01.10.-070(c).

Introduced: 2/8/80
Referred: Community & Regional Affairs and Finance

BY THE RULES COMMITTEE BY REQUEST OF THE GOVERNOR

HOUSE BILL NO. 689

IN THE LEGISLATURE OF THE STATE OF ALASKA

ELEVENTH LEGISLATURE - SECOND SESSION

A BILL

For an Act entitled: "An Act providing for the issuance of general obligation bonds in the amount of $25,520,000 for the purpose of paying the cost of capital improvements for water and sewer systems; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. For the purpose of paying the cost of capital improvements for water and sewer systems, general obligation bonds of the state in the principal amount of not more than $25,520,000 shall be issued and sold. The full faith, credit and resources of the state are pledged to the payment of the principal of and interest and redemption premium, if any, on these bonds. These bonds shall be issued under the provisions of AS 37.15 as those provisions read at the time of issuance.

* Sec. 2. If the issuance of these bonds is authorized by the qualified voters of the state, a special fund of the state to be known as the "1980 Water Supply and Sewerage Systems Fund" shall be established, to which shall be credited the proceeds of the sale of bonds described in sec. 1 of this Act except for accrued interest and premiums. There is appropriated from the "1980 Water Supply and Sewerage Systems Fund" to the Department of Environmental Conservation the amount of $25,520,000, allocated in accordance with the following projects and estimates:

	Project	Location	Amount
(1)	Village safe water construction grants	Statewide	$ 2,520,000

(2) Urban water and sewer construction grants Statewide 23,000,000

* Sec. 3. If the issuance of these bonds is authorized by the qualified voters of the state, the amount of $89,400, or as much of that amount as is found necessary is appropriated from the general fund of the state to the state bond committee to carry out the provisions of this Act and to pay expenses incident to the sale and issuance of the bonds authorized in this Act. The amounts expended from the appropriation authorized by this section shall be reimbursed to the general fund from the proceeds of the sale of the bonds authorized by this Act.

* Sec. 4. The amount withdrawn from the public facility planning fund for the purpose of advance planning for the improvements financed under this Act shall be reimbursed from the proceeds of the sale of bonds authorized by this Act.

* Sec. 5. The question whether the bonds authorized in this Act are to be issued shall be submitted to the qualified voters of the state at the next general election and shall read substantially as follows:

Proposition

State General Obligation Water Supply and Sewerage Systems Bonds $25,520,000

Shall the State of Alaska issue its general obligation bonds in the principal amount of not more than $25,520,000 for the purpose of paying the cost of capital improvements for water and sewer systems?

Bonds Yes [ ]

Bonds No [ ]

* Sec. 6. This Act takes effect immediately in accordance with AS 01.-10.070(c).

Senate Bills

Committee Substitute for Senate Bill 131 presently reflects:

1. Title and body contents of SB 342

2. $10 million G.O. Bond increase - covering solid waste facilities, plus new wording when relating to same.

3. $ 6 million G.O. Bond increase - raising State share from 50% to 75%

Committee Substitute for Senate Bill 436 presently reflects:

1. Page 1, line 10, section 1 - new wording (per Dept. Environmental Conservation request) to incorporate the raising of the State share from 50% to 75%

2. Amending typewriter error, page 1, line 28 to read (d) instead of (e)

3. Page 2, Line 21, Section 5 - adding a new paragraph stating "solid waste" definition as stated in HB 353, (per D.E.C. request and in answer to Mr. Baldwin's concern, our bill drafter.)

Issue Paper
Water and Sewer Construction Grants
December 1979

The Department, through the Facilities Construction and Operation section, administers a grant program which is directed toward providing incorporated communities with assistance in the construction of water and sewerage services. Two basic grant programs are administered: the State general obligation bond water and sewer grant program authorized by AS 46.03.030; and the federal wastewater pollution control program authorized by the Clean Water Act of 1977.

Under the State water and sewer grant program, incorporated municipalities may apply for grants to fund up to 50 percent of project costs for new water and sewerage facilities. If federal funding is involved in a project, State grants are limited to half the non-federal share of eligible project costs. Funded projects include facilities needed for community expansion as well as facilities needed to correct existing public health and environmental problems.

The Department performs the following administrative responsibilities in support of this program:

- review of grant applications
- review of project plans and specifications
- analysis of project construction and operating costs

- processing of grant offers and payment requests
- inspection of projects during construction and following completion
- preparation of project audit reports to ensure that grant funds were properly utilized by grantees.

Eligible projects are presently funded as need arises, after a review to ensure that projects are capable of meeting the need identified at an acceptable life cycle cost. The source of funding for these grants is general obligation bond funds which have been periodically authorized by the voters. Presently, approximately $18,112,626 are available for obligation to projects through this program.

Since July, 1976, $37,358,030 has been obligated to water and sewage projects throughout the state. Of this total, $14,465,1[illegible] (38.7%) was for community water supply projects; $9,450,000 (25.3%) was for sewage treatment and intercepter facilities (matching EPA funding); and $13,442,850 (36.0%) was for sewage collection facilities. These grants have supported projects in major communities in all regions of the state. The program is not heavily used by bush communities because the Public Health Service and the State Village Safe Water programs are addressing utility needs of remote areas. It is also usually difficult for small remote communities to raise the 50 percent matching requirements. In some instances, however, projects in remote areas are funded through the program in conjunction with other federal, state, or local funding sources.

The grant program for construction of sewage treatment facilities is administered under the authorization of the federal Clean Water Act of 1977. This Act mandates that community sewage treatment works achieve secondary treatment by 1983, except those communities capable of discharging effluent into marine coastal waters which receive good tidal mixing may be allowed to follow less stringent requirements. Secondary treatment is a broad term for many methods of treating sewage through the use of biological processes, and usually results in removal of 85% of the pollutants. Depending upon congressional appropriations from year to year, Alaska is allocated $16-25 million annually. These funds are then available to communities to finance 75 percent of the cost of sewage treatment and intercepter projects. The State water and sewage grant program mentioned above contributes an additional 12 1/2 percent toward such projects leaving only 12 1/2 percent to be funded locally.

The Clean Water Act assigns the Environmental Protection Agency the responsibility for this grant program. The Act also stipulates that EPA may delegate the administration of the program to the states, and makes funding available to those states which assume administration of the program. Alaska assumed responsibility for a major portion of the program in December of 1978 (one of the first states to do so) and was awarded a grant of $245,349 to cover costs of administration through June, 1980. EPA has reserved funding to defray State administration expenses in subsequent fiscal years.

In order to reduce the significant delays in grant processing which occurred under EPA administration, and to better ensure that projects are consistent with the unique requirements of Alaska, the Department assumed responsibility for the following administrative tasks:

- preparation of annual project priority list
- review of grant applications
- review of consultant agreements
- review and approval of plans and specifications
- review and approval of project change orders
- review and approval of O & M manuals.

Under agreement with EPA, State certification of these items will be accepted as if performed by EPA staff (subject to periodic audit). It is expected that additional administrative tasks will be delegated the state, including:

- facility plan approval
- interim and final project inspections
- eligibility determinations
- review and approval of planning documents
- preparation of necessary environmental assessments
- issuance of numerous other technical approvals required for each project.

Since 1975, grants averaging $20,000,000 a year have been awarded to 30 communities throughout the state. As with the State water and sewer grant program, mainly the larger communities have benefitted from the program. Recent modifications of the Clean Water Act present opportunities for making funding available to smaller communities for innovative, individual, or non-conventional sewage handling facilities.

HEARING DATE: 4/11/80

MEMBERS PRESENT:			
Bill Parker	X	Pat Carney	X
Margaret Branson	X	Charlie Parr	X
Pat O'Connell		Fred Zharoff	
		Ray Metcalfe	X

Branson - Discusses concept of the proposed bill as an amendment to correct duel majority problem created by floor amendment when bill was passed during the last session.

Chitwood - Presents alternative proposal developed by the Municipal League. Says AML proposal is an attempt to simplify the law yet solve some of the problems.

Branson - Doesn't support the League's suggested bill and approach. Maintains that once every 10 years isn't too often to ask the voters if they want to retain their exisiting method of representation.

Metcalfe - Expresses concern for the people outside of the cities and says that the duel majority is vital.

Palmer McCarter, Director of Local Assistance, Dept. of C&RA Support HB698. Floor amendment of 1979 jeopodizes local governments ability to develop a plan for representation and to have it adopted. Discusses the difficulty of getting a majority when you have 3 options or plans for 2 different categories of voters (inside and outside cities) to vote on. Strongly urges that the committee support the bill.
Attorney General has raised an issue related to the current law in the second option offered the voters -- current law allows that a borough may create districts and have election at large but require the candidates to live within districts of substantially equal population. The use of the term "substantially" may be a problem. A.G. has recommended elimination of that term.

Branson - Legal people have stated that 10% diviation is allowable and Billy Barrier of Legislative Research does not think the exisiting wording is a problem.

COMMITTEE ACTION: No action.

Re: H.B. 689 - Composition and Apportionment of General Law Boroughs

Dear Ms. Gorsuch:

As per your request, attached is a list of the points contained in the Alaska Municipal League proposal for amendment of A.S. §§ 29.23.021 - .025. This summarizes the problems perceived by the boroughs and the Municipal League in the statutes on the subject of borough apportionment and composition which was enacted last year.

Please note, however, that we do agree with Representative Parr's comments at the committee hearing on March 7 that the law in this area could be greatly simplified and that, in effect, A.S. 29.23.023 and A.S. 29.23.025 could be repealed completely. Representative Parr suggested that the only duty of the State was to ensure that equal representation was provided in all borough assemblies, but beyond that (except for any special provisions governing weighted voting or institutional representation) the boroughs (like cities) should be permitted to determine their own local apportionment and composition. In support of that position, a bill was drafted to be presented to the House Community and Regional Affairs Committee by the Municipal League.

I would strongly recommend that this latter alternative be considered favorably by the committee as a simple and concise way to clea up the problems raised in the attached memo.

Thank you.

Sincerely,

Richard M. Treiser
Assistant Municipal Attorney

RE: APPORTIONMENT AND COMPOSITION OF GENERAL LAW BOROUGHS

The following is a summary of problems and recommendations for changes in the provisions of A.S. 29.28.021 - .025. References are made to the statutes enacted last year, effective January 1, 1981.

1. Provide that review and change in form of representation/composition be by ordinance (ratified by the voters) at the option of the Assembly or as necessary to accomplish reapportionment, not mandatory every ten years. (See A.S. 29.23.023(a)).

2. Provide a forth alternative to forms of representation to permit a combination of the other forms and clarify that multiple member districts are permissible. (See A.S. 29.23.023(a)).

3. Provide a specific and sufficient time schedule (90 days after ordinance adopted) to hold an election to approve a change of form of representation. (See A.S. 29.23.023(b)).

4. Provide that only one form of representation be selected by the assembly and presented for ratification, not all four alternatives. (See A.S. 29.23.023(b)).

5. Provide that a simple majority, not a dual majority is required for ratification of a form of representation. (See A.S. 29.23.023(b)).

6. Provide a specific time period (4 months) for the Assembly to seek approval of a different form if the first is rejected. (See A.S. 29.23.023(c)).

7. Provide that the Department of Community and Regional Affairs shall determine the form upon failure to gain ratification, but then only if a change in representation is necessary and not if the existing form may lawfully be retained.

8. Clarify that any districts called for will be determined after a form is approved at election and provide a specific and sufficient time to prepare the same (2 months for at-large forms, 6 months for districts).

9. Provide a specific and sufficient amount of time to effectuate the new form of representation (the next regular election held not sooner than 60 days after adoption of the implementing ordinance).

10. Clarify that institutional representation is prohibited, but that Council members are not ineligible to be elected to the Assembly and vice-versa. (See A.S. 29.23.023(c)).

11. Clarify that any general law borough which changes its form of representation while reapportioning must do so according to the election and other procedures and time limits provided in A.S. § 29.23.023. (See A.S. 29.25.025(b)).

12. Provide for a moratorium (of 2 years) on citizen's reapportionment petitions after the Assembly has reviewed its apportionment and found it proper or has corrected it. (See A.S. 29.23.025(d)). This does not prevent reapportionment by the Assembly at its own initiative or by court order or law during this period.

13. Provide that reapportionment shall not be subject to election or approval by the voters except inasmuch as it involves a change in form of representation. (See A.S. 29.23.025(d)).

14. Provide specific and sufficient time limits: 1) for preparing a new apportionments plan (6 months for districting plans), 2) for the Department of Community and Regional Affairs to do so upon failure of the Borough, and 3) for the Borough to effectuate that plan (at the next regular election not sooner than 60 days after adoption. (See A.S. 29.23.025(e) and (g)).

15. Permission for weighted voting, which is otherwise lawful. (See A.S. 29.23.021(c)).

from Matanuska-Susitna Borough. 3-7-80

ESTIMONY OF JAMES EKSTEDT ON HOUSE BILL 698 BEFORE

THE HOUSE COMMITTE ON COMMUNITY AND REGIONAL AFFAIRS, MARCH 7, 1980

Jim Ekstedt

Ladies and gentlemen my name is James Ekstedt and I am a member of the Assembly of the Matanuska-Susitna Borough and represent the Palmer area before the Borough Assembly. I have been a member of the Borough Assembly for three years and also am serving as a member of the City Council for the City of Palmer. I am also a member of the Board of Directors of the Alaska Municipal League. I have been asked to appear before this Committee today on behalf of the Assembly of the Matanuska-Susitna Borough and the citizens of the Matanuska-Susitna Borough whose form of government and assembly apportionment will be affected by State Statutes during the coming year.

I wish to first address House Bill 698, offered by Representatives Branson, Malone and O'Connell. As I understand the bill, it would replace a subsection in Alaska Statutes 29.23.023 which presently requires that proposals concerning modification of the form of representation be submitted to the voters and that votes be tabulated in separate classifications for first and home rule cities of the borough and on the other hand for the remaining area of the borough. House Bill 698 would eliminate the need to classify votes cast on proposed forms of representation and would instead provide that a plurality of the votes on the question would decide the issue. While I am in general agreement with the change proposed by House Bill 698, I believe that that bill does not go far enough in addressing some of the major problems which our Borough Assembly and the Alaska Municipal League see in the present reapportionment statutes which were

enacted into law last year. I believe that your Committee should seriously consider additional amendments to Alaska Statutes 29.23 which would correct many of the deficiencies our Assembly sees in those reapportionment statutes. I understand that Mrs. Ginny Chitwood, the Executive Director of the Alaska Municipal League has furnished this Committee with a copy of a bill drafted by the Assistant Municipal Attorney for the Ketchikan Gateway Borough which bill has both the support of the Alaska Municipal League and the Assembly of tne Matanuska-Susitna Borough.

We believe that enactment of the bill prepared by the Alaska Municipal League would correct many of the deficiencies that presently exist in statutes governing selection of the form of representation and reapportionment. I would like to address some of those problems that exist in present law and indicate how the bill proposed by the Alaska Municipal League would effectively deal with and resolve those problems.

1. Present law (found at AS 29.23.021(C) catagorically prohibits weighted voting on borough assemblies even though weighted voting schemes can be implemented in order to make the one man one vote principal work. On the other hand the bill proposed by the Alaska Municipal League would allow weighted or fractional voting so long as the basis for doing so is not contrary to the one man one vote principal of the Federal and State Constitutions. In other words, the bill proposed by the Municipal League would allow general law boroughs such as the Kenai Peninsula Borough who have serious problems of distance and communication between various population centers to continue to use the fractional or weighted vote if the fractional or weighted vote complies with the one man one vote principal.

While I do not believe that the Assembly of the Matanuska-Susitna Borough wishes to use the fractional or weighted vote, I believe that other municipalities in the state should be allowed that option if the fractional weighted vote can be used to assist them in implementing the one man one vote principal.

2. The present law found at AS 29.23.023 absolutely requires that all boroughs submit a ballot proposition to their voters no later than January 31, 1981 and every ten years thereafter asking voters to select from among certain alternate forms of representation of their assemblies. This requirement is mandatory; and borough assemblies have no choice but submit the question of form of representation to their voters even though neither the assemblies nor the electorate wish to even face that question. On the other hand the bill proposed by the Alaska Municipal League merely allows boroughs to mofidy their form of representation from time to time if the question is submitted to the voters for their approval. If the assembly is satisfied with its form of representation, it would not be required to endure the expense, delay and confusion of submitting the question of its own form of representation to the voters. We believe that the Legislature should not be in the business of mandating to local governments that, contrary to the wishes of many local governments including the Matanuska-Susitna Borough they submit the question of its form of representation to the voters on a periodic basis. We do believe that if the assembly chooses to alter its form of representation then that question should be submitted to the voters for their approval.

3. The wording of the present statutes governing submission of the form of representation to the voters appears to require that the voters select from three alternate propositions: First, that assembly members be elected at large; second, that assembly members be elected at large but be required to live within certain election districts; and third, that assembly members be elected by and from election districts established by the borough. We believe that such a ballot would be cumbersome, expensive and confusing. On the other hand the bill proposed by the Municipal League would allow the assembies to select a new form of representation and submit only that form of representation to the voters. Obviously, if the voters rejected that form of representation the assembly could continue with its existing form or alternatively submit yet another form to the voters. We believe that this alternate method of submitting the question to the voters is much less confusing and would probably result in more reasoned decisions by the electorate on this important question.

4. The present law preserves the requirement that votes cast on the form of representation be tabulated in dual catagories, one or first class and home rule cities and the other for all other areas of the borough. The bill prepared by the Alaska Municipal League abolishes the classification system and would allow a change in the form of representation if that change were approved by a majority of votes cast on that question. To the extent that House Bill 698 abolishes the dual classification system, our Assembly is in accordance with the change proposed in that bill.

Present law requires that borough assemblies determine whether they are malapportioned if they receive a petition signed by 50 voters which "contains evidence" that the existing apportionment scheme does not meet constitutional standards. We believe that the standard contained in present law for determination of reapportionment is far to low and would require assemblies to suspend their business and evaluate those petitions even though many do not contain sufficient evidence to persuade the assembly that in fact the body is malapportioned. On the other hand the bill proposed by the Alaska Municipal League requires assemblies to consider reapportionment petitions only if the petition has "reliable and accurate data" showing that the assembly is malapportioned and if that data is sufficient to serve as a basis for reapportionment. Certainly our Assembly does not want to impose undue burdens on citizens who honestly believe that our body is malapportioned but our Assembly also feels that we should not be required to engage in the time consuming and expensive process of determining whether we are in fact malapportioned unless petition contains accurate data which effectively demonstrates the need for consideration of our apportionment and can assist us in resolving any inequities in our present districting.

5. The present statutes have no provisions whatsoever limiting the number of reapportionment petitions which can be submitted to the borough assembly. In other words, the assembly is legally obligated to consider virtually frivolous reapportionment petitions ad seriatim even though similar petitions have been previously rejected. On the other hand the bill proposed by the Alaska Municipal League proposes a two year moratorium on consideration of reapportionment petitions if the assembly

hears such a petition and decides that it is apportioned fairly within the one man one vote principal of the constitution. We believe that such a moratorium is an important change that should be made to existing law to eliminate presentation of frivolous or repetitive reapportionment petitions to our borough assembly.

The present statutes provide only that changes in assembly apportionment shall be effective on the first regular election after approval of a reapportionment ordinance. This section does not in any way tell us how the new assembly is to be elected, how to deal with existing terms, and how to determine the length of terms of new members. On the other hand the bill proposed by the Alaska Municipal League addresses transition between existing and future apportionment plans and would require an election for all assembly seats within 60 days after reapportionment of the assembly. After that election, borough assembly members would draw straws for the length of their respective terms and would establish staggered terms of office. While there may be alternate methods of handling transition between present and future apportionment, we believe that the method contained in the bill proposed by the Alaska Municipal League satisfactorily addresses that question and should be adopted by your Committee.

6. Current law also requires that the reapportionment plan adopted by the assembly be submitted to the voters for approval. Our Assembly believes that location of boundaries of assembly districts is ultimately a technical or legal question which should not be submitted to the voters. Clearly the assembly is required by the Constitution of the

State of Alaska and that of the United States to devise a reapportionment plan which is consistent with the one man one vote principal. Once that decision has been properly made, we believe the voters should not be required to decide whether they agree with the precise boundaries selected by the borough assembly provided that such boundaries preserve the one man one vote principal. The bill proposed by the Alaska Municipal League eliminates the requirement that redistricting plans be submitted to the voters for their approval, and thereby eliminates the need to have voters decide technical or legal questions beyond their expertise or capabilities.

In summary, our Assembly finds that many problems exist with the present statutes governing reapportionment. While we are in agreement with Representatives Branson, Malone and O'Connell that the dual classification system for counting votes on representation questions should be ended, we believe that House Bill 698 does not go far enough in addressing the problems our Assembly finds in those existing statutes. I would therefore, on behalf of the Assembly and citizens of the Matanuska-Susitna Borough urge this Committee to adopt the recommendations made by the Alaska Municipal League for modification of the reapportionment statutes. I would be happy to answer any questions this Committee may have.

Assembly Composition, Apportionment and Reapportionment

AML Draft - sectional analysis

Section 1

Repeals AS 29.23.021, 29.23.023, and 29.23.025 on assembly composition and apportionment, composition and representation requirements for general law boroughs, and assembly recomposition and reapportionment. These three sections were enacted into law during 1979 and become effective January 1, 1981.

Section 2

Sec.29.23.021. Assembly composition and apportionment.
(a) consistent with U.S. Constitution
(b) assembly of newly incorporated borough as set out in incorporation petition; existing assembly consistent with this chapter.
(c) weighted vote allowed.

Sec.29.23.023. Composition and representation of general law borough.
(a) assembly by ordinance may change to:
1.-elected at large
2.-elected at large, reside in district
3.-elected by and from districts
4.-combination of above
(b) ordinance ratified by voters and not subject to referendum
(c) if voters turn down ordinance, assembly may propose another form of representation; if no form ratified within 4 months of the first election, Dept. of C&RA selects form.
(d) if at large, assembly has 60 days to adopt implementing ordinance; with other forms, assembly has six months to implement; if not done, Dept. of C&RA has six months to implement.
(e) ordinance applicable at next election held not sooner than 60 days after apportionment becomes effective;
(f) assembly by ordinance may change the number of assembly members.
(g) no institutional representation.

Sec.29.23.025. Assembly reapportionment.
(a) not later than 7/31/81 and thereafter within four months after decennial census, assembly by resolution determines if malapportioned.
(b)at times other than decennial census assembly by resolution may determine if malapportioned when presented by a petition of borough voters or upon its own initiative.
(c) 2 year reapportionment moratorium after change in apportionment.
(d) if malapportioned, assembly shall devise new apportionment according to standards of AS 29.23.021 and may change form of representation or composition.
(e) changes called for in (d) must be according to procedures in AS.29.23.023 for ~~changes~~ general law boroughs.
(f) six month time limit to reapportion; if not then Dept of C&RA does it.
(g) effective at the next election held not soomer than 60 days.

3/6/82

Assembly Composition, Apportionment, and Reapportionment

SB 137 - effective 1/1/81

Repeals existing AS 29.23.020.

AS.29.23.021. Assembly Composition, and Apportionment.
(a) consistent with US Constitution
(b) assembly of newly incorporated borough composed and apportioned as set out in incorporation petition and may be changed by ordinance; assembly of existing borough as set out in 29.23.023.
(c) no weighted voting.

AS.29.23.023. Composition and Representation Requirements for General Law Boroughs.
(a) by 7/31/81 and thereafter within four months of a decennial census report, election on alternate forms of representation:
1.-elected at large
2.-elected at large, reside in district
3.-elected by and from districts.
(b) two tabulations of votes - inside cities and outside. (no provision for what happens with different pluralities.)
(c) no institutional representation

AS.29.23.025. Assembly recomposition and reapportionment.
(a) by 7/31/81 and thereafter within four months of a decennial census report, assembly by resolution determines if malapportioned.
(b) if malapportioned assembly by ordinance shall reapportion within three months and may change composition.
(c) assembly by ordinance may reapportion or change composition on the basis of other reliable population data or by petition of more than 50 voters.
(d) ordinances in (b) and (c) must be ratified by voters.
(e) establishes four month time limit for (b) and if ordinance not approved then Dept. of C&RA reapportions.
(f) provides for judicial review.
(g) effective date - next regular election.

AS.29.18.050(4). assembly of new general law boroughs may not exceed 11 members.

HB 698.

AS 29.23.023(b) repeals the dual tabulation and replaces it with assembly by ordinance providing for form of representation which conforms to election results of (a)

3/6/80

Assembly Composition, Apportionment, & Reapportionment

existing law until 1/1/81

AS.29.23.020
(a) number of assembly members, apportionment, and voting procedures determined by incorporation petition, charter, or ordinance; must be consistent with US Constitution.
(b) reapportionment - within six months after decennial census
1.-assembly by resolution determines is malapportioned;
2.-if malapportioned, assembly by ordinance provides for reapportionment;
3.-ordinance must be ratified by voters.
(c) tabulation of vote - two classifications: inside first class and home rule cities and outside; if voters don't approve plan, Dept. of C&RA provides for reapportionment.
(d) may reapportion following same procedures between decennial census reports if petitioned by voters or on assembly initiative.
(e) effective next regular election
(f) provides for judicial review.

3/6/80

repealed by sec. 21 [24] ch. 83, SLA 1979

Sec. 29.23.021. Assembly composition and apportionment [Effective January 1, 1381]. (a) Assembly composition and apportionment shall be consistent with the equal representation standards of the Constitution of the United States.

(b) The assembly of a newly incorporated borough is, after incorporation and until the adoption of an ordinance providing for a change in composition or apportionment, composed of the number of members and apportioned as set out in the incorporation petition approved by the voters. If the borough is already incorporated, the assembly shall be composed and apportioned in a manner that is consistent with AS 29.23.023 and prescribed by charter or ordinance.

(c) An assembly may not provide for weighted voting. (§ 1 ch 83 SLA 1979)

Effective date. — Section 27, ch. 83, SLA 1979, makes this section effective January 1, 1981.

Editor's note. — Section 26, ch. 83, SLA 1979, effective June 2, 1979, provides: "Notwithstanding AS 29.23.040, amended by sec. 4 of ch. 83, SLA 1979, the terms of office of borough assemblymen elected or appointed to dual borough assembly-city council seats are not affected by the amendment made to AS 29.23.040 in sec. 4 of ch. 83, SLA 1979 until reapportionment of the borough assembly is required or proposed under AS 29.23.020, repealed by sec. 21 [24] of ch. 83, SLA 1979, or is effected as required or proposed under AS 29.23.021 — 29.23.025, added by sec. 1 of ch. 83, SLA 1979."

Statute superseded home-rule enactments. — See Roderick v. Sullivan, Sup. Ct. Op. No. 1099 (File No. 2243), 528 P.2d 450 (1974), decided under former AS 29.23.020.

Sec. 29.23.023. Composition and representation requirements for general law boroughs [Effective January 1, 1981]. (a) The borough assembly shall provide for its composition and for the form of its representation. Not later than July 31, 1981, and thereafter within four months after the report of a federal decennial census, the assembly shall propose and submit to the voters at a regular election or special election called for the purpose, alternative forms of representation by which members are

(1) elected at large by all qualified voters of the borough;

(2) elected at large by all qualified voters of the borough, but required to live within an election district or zone established by the borough for election of assembly members, with each district or zone being of substantially equal population; or

(3) elected by and from election districts or zones established by the borough for the election of borough assembly members.

(b) The proposals set out in (a) of this section shall be submitted to the voters. The vote on the proposals submitted to the voters shall be tabulated in two separate classifications. One classification shall consist of all votes cast in the first class and home rule cities in the borough.

providing for its composition and the form of representation which conforms to the form of representation receiving a plurality of the votes in each classification at that election.

(c) A member of the assembly of a general law borough may not be elected or appointed by and from the council of a city in the borough. (§ 1 ch 83 SLA 1979)

Effective date. — Section 27, ch. 83, SLA 1979, makes this section effective January 1, 1981.

Editor's note. — Section 26, ch. 83, SLA 1979, effective June 2, 1979, provides: "Notwithstanding AS 29.23.040, amended by sec. 4 of ch. 83, SLA 1979, the terms of office of borough assemblymen elected or appointed to dual borough assembly-city council seats are not affected by the amendment made to AS 29.23.040 in sec. 4 of ch. 83, SLA 1979 until reapportionment of the borough assembly is required or proposed under AS 29.23.020, repealed by sec. 21 [24] of ch. 83, SLA 1979, or is effected as required or proposed under AS 29.23.021 — 29.23.025, added by sec. 1 of ch. 83, SLA 1979."

Sec. 29.23.025. Assembly recomposition and reapportionment [Effective January 1, 1981]. (a) Not later than July 31, 1981, and thereafter within four months after the official report of a federal decennial census, the assembly shall determine and declare by resolution if the existing apportionment of the assembly meets the applicable standards of AS 29.23.021 — 29.23.023.

(b) If the existing apportionment of the assembly does not meet the applicable standards of AS 29.23.021 — 29.23.023, the assembly shall provide by ordinance for its reapportionment. At the same time, the assembly may change the composition of the assembly.

(c) In addition to providing for apportionment at the times required under (b) of this section, the borough assembly shall provide by ordinance for its reapportionment and may provide for a change in its composition whenever it determines, on the basis of federal census reports or other reliable population data, that the existing apportionment does not meet the standards for apportionment in AS 29.23.021. If a petition signed by not less than 50 borough voters requests the assembly to determine whether the existing apportionment meets the standards for apportionment in AS 29.23.021, and the petition contains evidence that the existing apportionment does not meet those standards, the assembly shall make the determination requested.

(d) An ordinance adopted by the assembly under (b) or (c) of this section shall be submitted to the voters for approval. In order for the ordinance to be approved it must receive the approval of a majority of the votes cast.

(e) Within four months of a determination by the assembly that the current apportionment does not meet the standards of AS 29.23.021 — 29.23.025, the assembly shall adopt an ordinance providing for

reapportionment has not been approved, the Department of Community and Regional Affairs shall provide for the reapportionment in accordance with the standards of AS 29.23.021 — 29.23.023.

(f) A reapportionment ordinance, or a determination of the borough assembly that applicable standards do not require adoption of a change in apportionment, is subject to judicial review.

(g) A change in assembly apportionment or composition under this section is effective beginning with the first regular election for members of the assembly which follows approval of a reapportionment ordinance. (§ 1 ch 83 SLA 1979)

Effective date. — Section 27, ch. 83, SLA 1979, makes this section effective January 1, 1981.

Editor's note. — Section 26, ch. 83, SLA 1979, effective June 2, 1979, provides: "Notwithstanding AS 29.23.040, amended by sec. 4 of ch. 83, SLA 1979, the terms of office of borough assemblymen elected or appointed to dual borough assembly-city council seats are not affected by the amendment made to AS 29.23.040 in sec. 4 of ch. 83, SLA 1979 until reapportionment of the borough assembly is required or proposed under AS 29.23.020, repealed by sec. 21 [24] of ch. 83, SLA 1979, or is effected as required or proposed under AS 29.23.021 — 29.23.025, added by sec. 1 of ch. 83, SLA 1979."

Statute superseded home-rule enactments. — See Roderick v. Sullivan, Sup. Ct. Op. No. 1099 (File No. 2243), 528 P.2d 450 (1974), decided under former AS 29.23.020.

The legislature intended that all reapportionment ordinances be submitted to the electorate. Roderick v. Sullivan, Sup. Ct. Op. No. 1099 (File No. 2243), 528 P.2d 450 (1974), decided under former AS 29.23.020.

Sec. 29.23.040. Regular term of office. Assemblymen are selected for three-year terms and until their successors are selected and have qualified, unless different terms not exceeding four years are prescribed by borough charter or ordinance. The regular term of office begins on the first Monday following certification of the election. The current term of incumbent assemblymen may not be altered under this section. This section applies to home rule and general law boroughs. (§ 2 ch 118 SLA 1972; am § 13 ch 118 SLA 1972; am § 4 ch 83 SLA 1979)

Effect of amendment.

The 1979 amendment, effective June 2, 1979, rewrote the second sentence.

Editor's note. — Section 26, ch. 83, SLA 1979, effective June 2, 1979, provides that the terms of borough assemblymen elected or appointed to dual borough assembly-city council seats are not effected by the amendment made to AS 29.23.040 by sec. 4, ch. 83, SLA 1979 until reapportionment of the assembly is required or proposed under AS 29.23.020 or under AS 29.23.021 — 29.23.025.

Sec. 29.23.060. Procedure.

Cross reference.

As to abstaining from official action when there is a conflict of interests, see AS 29.23.555.

is required or proposed under AS 29.23.020, repealed by sec. 21 [24] of ch. 83, SLA 1979, AS 29.23.021 — 29.23.025, added by sec. 1 of ch. 83, SLA 1979."

Sec. 29.23.021. Assembly composition and apportionment [Effective January 1, 1981]. (a) Assembly composition and apportionment shall be consistent with the equal representation standards of the Constitution of the United States.

(b) The assembly of a newly incorporated borough is, after incorporation and until the adoption of an ordinance providing for a change in composition or apportionment, composed of the number of members and apportioned as set out in the incorporation petition approved by the voters. If the borough is already incorporated, the assembly shall be composed and apportioned in a manner that is consistent with AS 29.23.029 and prescribed by charter or ordinance.

(c) An assembly may not provide for weighted voting. (§ 1 ch 83 SLA 1979)

(d)

Effective date. — Section 27, ch. 83, SLA 1979, makes this section effective January 1, 1981.

Editor's note. — Section 26, ch. 83, SLA 1979, effective June 2, 1979, provides: "Notwithstanding AS 29.23.040, amended by sec. 4 of ch. 83, SLA 1979, the terms of office of borough assemblymen elected or appointed to dual borough assembly-city council seats are not affected by the amendment made to AS 29.23.040 in sec. 4 of ch. 83, SLA 1979 until reapportionment of the borough assembly is required or proposed under AS 29.23.020, repealed by sec. 21 [24] of ch. 83, SLA 1979, or is effected as required or proposed under AS 29.23.021 — 29.23.025, added by sec. 1 of ch. 83, SLA 1979."

Statute superseded home-rule enactments. — See Roderick v. Sullivan, Sup. Ct. Op. No. 1099 (File No. 2213), 528 P.2d 450 (1974), decided under former AS 29.23.020.

Sec. 29.23.023. Composition and representation requirements for general law boroughs [Effective January 1, 1981]. (a) The borough assembly shall provide for its composition and for the form of its representation. Not later than July 31, 1981, and thereafter within four months after the report of a federal decennial census, the assembly shall propose and submit to the voters at a regular election or special election called for the purpose, alternative forms of representation by which members are

(1) elected at large by all qualified voters of the borough;

(2) elected at large by all qualified voters of the borough, but required to live within an election district or zone established by the borough for election of assembly members, with each district or zone being of substantially equal population; or

(3) elected by and from election districts or zones established by the borough for the election of borough assembly members.

(b) The proposals set out in (a) of this section shall be submitted to the voters. The vote on the proposals submitted to the voters shall be tabulated in two separate classifications. One classification shall consist of all votes cast in the first class and home rule cities in the borough.

The other classification shall consist of all votes cast in the remaining area of the borough. The borough assembly shall, within three months of the certification of the results of the election adopt an ordinance providing for its composition and the form of representation which conforms to the form of representation receiving a plurality of the votes in each classification at that election.

(c) A member of the assembly of a general law borough may not be elected or appointed by and from the council of a city in the borough. (§ 1 ch 83 SLA 1979)

include this wording as part (d) in AS 29.23.021

Effective date. — Section 27, ch. 83, SLA 1979, makes this section effective January 1, 1981.

Editor's note. — Section 26, ch. 83, SLA 1979, effective June 2, 1979, provides: "Notwithstanding AS 29.23.040, amended by sec. 4 of ch. 83, SLA 1979, the terms of office of borough assemblymen elected or appointed to dual borough assembly-city council seats are not affected by the amendment made to AS 29.23.040 in sec. 4 of ch. 83, SLA 1979 until reapportionment of the borough assembly is required or proposed under AS 29.23.020, repealed by sec. 21 [24] of ch. 83, SLA 1979, or is effected as required or proposed under AS 29.23.021 — 29.23.025, added by sec. 1 of ch. 83, SLA 1979."

Sec. 29.23.025. Assembly recomposition and reapportionment [Effective January 1, 1981]. (a) ~~Not later than July 31, 1981, and thereafter~~ Within ~~four~~ two months after the official report of a federal decennial census, the assembly shall determine and declare by resolution if the existing apportionment of the assembly meets the applicable standards of AS 29.23.021. ~~— 29.23.023.~~

(a) Eliminate 1st phrase, change "four" to "two", delete reference to 29.23.023

(b) If the existing apportionment of the assembly does not meet the applicable standards of AS 29.23.021 — ~~29.23.023~~, the assembly shall provide by ordinance for its reapportionment. At the same time, the assembly may change the composition of the assembly.

(b) Eliminate reference to 29.23.023 and add "by ordinance"

(c) In addition to providing for apportionment at the times required under (b) of this section, the borough assembly shall provide by ordinance for its reapportionment and may provide for a change in its composition whenever it determines, on the basis of federal census reports or other reliable population data, that the existing apportionment does not meet the standards for apportionment in AS 29.23.021. If a petition signed by not less than 50 borough voters requests the assembly to determine whether the existing apportionment meets the standards for apportionment in AS 29.23.021, and the petition contains evidence that the existing apportionment does not meet those standards, the assembly shall make the determination requested.

(c) Add "by ordinance" and a provision at the end requiring Dept of CRA review if requested by petitioners.

(d) An ordinance adopted by the assembly under (b) or (c) of this section shall be submitted to the voters for approval. In order for the ordinance to be approved it must receive the approval of a majority of the votes cast.

(e) Within ~~four~~ six months of a determination by the assembly that the current apportionment does not meet the standards of AS 29.23.021 — 29.23.025, the assembly shall adopt an ordinance providing for

(e) change "four" to "six"

(e) cont. change "four" to "six" and delete reference to 29.23.023.

(g) delete "which follows approval of a reapportionment ordinance" + replace with "held not sooner than sixty (60) days following approval of a reapportionment ordinance."

reapportionment, and submit the ordinance to the voters. If, at the end of the ~~four~~ six month time period, an ordinance providing for reapportionment has not been approved, the Department of Community and Regional Affairs shall provide for the reapportionment in accordance with the standards of AS 29.23.021 ~~—29.23.022~~.

(f) A reapportionment ordinance, or a determination of the borough assembly that applicable standards do not require adoption of a change in apportionment, is subject to judicial review.

(g) A change in assembly apportionment or composition under this section is effective beginning with the first regular election for members of the assembly ~~which follows approval of a reapportionment ordinance~~ held not sooner than sixty (60) days following approval of a reapportionment ordinance (§ 1 ch 83 SLA 1979)

Effective date. — Section 27, ch. 83, SLA 1979, makes this section effective January 1, 1981.

Editor's note. — Section 26, ch. 83, SLA 1979, effective June 2, 1979, provides: "Notwithstanding AS 29.23.040, amended by sec. 4 of ch. 83, SLA 1979, the terms of office of borough assemblymen elected or appointed to dual borough assembly-city council seats are not affected by the amendment made to AS 29.23.040 in sec. 4 of ch. 83, SLA 1979 until reapportionment of the borough assembly is required or proposed under AS 29.23.020, repealed by sec. 21 [24] of ch. 83, SLA 1979, or is effected as required or proposed under AS 29.23.021 — 29.23.025, added by sec. 1 of ch. 83, SLA 1979."

Statute superseded home-rule enactments. — See Roderick v. Sullivan, Sup. Ct. Op. No. 1099 (File No. 2243), 528 P.2d 450 (1974), decided under former AS 29.23.020.

The legislature intended that all reapportionment ordinances be submitted to the electorate. Roderick v. Sullivan, Sup. Ct. Op. No. 1099 (File No. 2243), 528 P.2d 450 (1974), decided under former AS 29.23.020.

Sec. 29.23.040. Regular term of office. Assemblymen are selected for three-year terms and until their successors are selected and have qualified, unless different terms not exceeding four years are prescribed by borough charter or ordinance. The regular term of office begins on the first Monday following certification of the election. The current term of incumbent assemblymen may not be altered under this section. This section applies to home rule and general law boroughs. (§ 2 ch 118 SLA 1972; am § 13 ch 118 SLA 1972; am § 4 ch 83 SLA 1979)

Effect of amendment.

The 1979 amendment, effective June 2, 1979, rewrote the second sentence.

Editor's note. — Section 26, ch. 83, SLA 1979, effective June 2, 1979, provides that the terms of borough assemblymen elected or appointed to dual borough assembly-city council seats are not effected by the amendment made to AS 29.23.040 by sec. 4, ch. 83, SLA 1979 until reapportionment of the assembly is required or proposed under AS 29.23.020 or under AS 29.23.021 — 29.23.025.

Sec. 29.23.060. Procedure.

Cross reference.

As to abstaining from official action when there is a conflict of interests, see AS 29.23.555.

(1) class;

(2) name;

(3) boundaries;

(4) [Effective until January 1, 1981] composition and apportionment of the assembly or council;

[Effective January 1, 1981] composition and apportionment of the assembly or council, but the number of members of a borough assembly may not exceed 11;

(5) for a first class borough, a designation of areawide powers to be exercised;

(6) for a second class borough, a designation of areawide and nonareawide powers to be exercised;

(7) maps, documents, and other information required by the Department of Community and Regional Affairs;

(8) for first class city incorporation, the signatures and resident address of 50 permanent resident voters or of 15 per cent of the permanent resident voters within the proposed municipality, whichever is greater, based on the number who voted in the area in the last general election;

(9) for second class city incorporation, the signature and resident address of 25 permanent resident voters or of 15 per cent of the permanent resident voters within the proposed municipality, whichever is greater, based on the number who voted in the area in the last general election;

(10) for borough incorporation, the signature and resident address of 15 per cent of the permanent resident voters in each first class city and 15 per cent of voters in the area outside first class cities based on the number who voted in the respective areas in the last general election;

(11) for a city, a designation of the powers proposed by the petitioners to be exercised;

(12) a proposed operating budget for the municipality projecting sources of income and items of expenditure through the first full fiscal year of operation. (§ 2 ch 118 SLA 1972; am § 9 ch 200 SLA 1972; am § 2 ch 212 SLA 1976; am § 3 ch 83 SLA 1979)

Effect of amendments.

The 1976 amendment, effective June 21, 1976, substituted "and nonareawide powers to be exercised" for "powers to be exercised and of powers to be exercised in the area outside cities only" at the end of paragraph (6), deleted "to show that the proposed municipality meets the standards for incorporation" from the end of paragraph (7), inserted "or of 15 per cent of the permanent resident voters" in paragraph (8), added the language beginning "whichever is greater" to the end of paragraph (8), substituted "25 permanent resident voters or of 15 per cent of the permanent resident voters" for "10 permanent resident voters" in paragraph (9), added the language beginning "whichever is greater" to the end of paragraph (9), and added paragraphs (11) and (12).

The 1979 amendment, effective January 1, 1981, added "but the number of members of a borough assembly may not exceed 11" to the end of paragraph (4).

BILL NUMBER AND TITLE: HB 797Reclassification of Home Rule Cities

ORIGINAL SPONSOR: Branson
RECEIVED FROM:

OTHER SPONSORS:
FURTHER REFERRALS:

HEARING DATE: 3/21/80

Teleconference with Anch., Fbks., Valdez, Ketchikan, Sitka

MEMBERS PRESENT:

Bill Parker	X	Pat Carney	
Margaret Branson	X	Charlie Parr	X
Pat O'Connell		Fred Zharoff	X
		Ray Metcalfe	X

Charlie LaPage. City Council Member, Valdez/Box 830, Valdez 99686
Support HB 797. Has two questions:

1. p. 3 Lines 10,11 Assumes that the charter of the home rule city would become the charter of the unified municipality -What about provision for a new or transitional charter? This is not addressed.
2. P. 3 Lines 25-29 This section seems to make moot the intent of the legislation as the unified municipality could be included in a borough at some later date.

Parr - Asks if this isn't really annexation? Cites p. 3 lines 25-29.

LaPage points out that Valdez has discussed the situation with Cordova and agreed that it would be difficult for them to be together. Provides for a one-step conversion to a home rule municipality.

Parr- Again asks what the difference is between home rule borough and unificed municipality and home rule city with annexed areas? Would have to provide services to annexed areas.

LaPage- Unified city/borough would be the best situation.

Parr- Isn't the issue that the pipeline revenues are at stake?

COMMITTEE ACTION: No action.

TAPE # SIDE _____ Footage _____

(b) If a proposed charter is rejected, the charter commission shall prepare another proposed charter to be submitted to the voters at a regular or special election to be held within one year after the date of the first charter election. If the second proposed charter is also rejected, the charter commission shall be dissolved and the question of adoption of a charter shall be treated as if it had never been proposed or approved. (§ 2 ch 118 SLA 1972; am § 9 ch 200 SLA 1972)

Effect of amendment. — The 1972 amendment, effective July 1, 1972, substituted "Department of Community and Regional Affairs" for "Local Affairs Agency' in paragraph (2) of subsection (a).

Sec. 29.13.080. Charter amendment. A municipal charter may be amended as provided in the charter or by initiative referendum as provided in AS 29.28.060—29.28.110, except that no amendment shall be effective unless ratified by the voters. (§ 2 ch 118 SLA 1972)

Article 2. Home Rule Limitations.

Section
100. Limitation of home rule powers

Sec. 29.13.100. Limitation of home rule powers. Only the following provisions of this title apply to home rule municipalities as prohibitions on acting otherwise than as provided. They supersede existing and prohibit future home rule enactments which provide otherwise:

(1) AS 29.13.080 (charter amendment)

(2) AS 29.18.140 (borough transition)

(3) AS 29.23.020—29.23.050 (city representation and vote on borough assembly)

(4) AS 29.23.250(a) (election and term of mayor)

(5) As 29.23.540 (prohibitions respecting appointment and removal of personnel)

(6) AS 29.23.560 (municipal reports)

(7) AS 29.23.580 (meetings public)

(8) AS 29.28.010, 29.28.020(b) — 29.28.030 (municipal elections)

(9) AS 29.28.130—29.28.250 (recall)

(10) AS 29.33.010(b) (areawide borough powers)

(11) AS 29.33.290(c) (acquisition of additional areawide powers)

(12) AS 29.43.020—29.43.040 (powers of cities outside boroughs)

(13) AS 29.48.033 (garbage and solid waste services)

(14) AS 29.48.035(b) (effect of areawide exercise of borough power)

(15) AS 29.48.035(c) (borough building code jurisdiction within cities)

(16) AS 29.48.037 (extraterritorial jurisdiction)

(17) AS 29.48.040—29.48.100 (utilities)

(18) AS 29.48.180 (codification)

(19) Repealed by § 8 ch 147 SLA 1972, effective September 10, 1972.

(20) AS 29.48.210 (expenditure of borough revenue)

(21) AS 29.48.220 (post audit)

(22) AS 29.53.010—29.53.350, 29.53.400 (borough and city property tax)

(23) AS 29.53.415(d) (interest on sales tax)

(24) AS 29.58.180(b) (security for bonds)

(25) AS 29.58.315 (bond attorneys, bond and financial consultants)

(26) AS 29.68.010 (annexation and exclusion)

(27) AS 29.68.030—29.68.110 (merger and consolidation)

(28) AS 29.68.500—29.68.580 (dissolution)

(29) AS 29.73.020 (eminent domain)

(30) AS 29.73.030 (adverse possession)

(31) AS 29.73.040 (taxation of municipalities)

(32) AS 29.73.050 (municipal name changes)

(33) AS 29.23.555 (conflict of interest). (§ 2 ch 118 SLA 1972; am §§ 2, 8 ch 147 SLA 1972)

Revisor's note (1972).—In ch. 118, SLA 1972, AS 29.48.035(b) was omitted from the list in AS 29.13.100. Since, by its own terms, it applies to home rule municipalities, it has been included here as AS 29.13.100(14); succeeding paragraphs (including the one added by § 2, ch. 147 SLA 1972) have been renumbered. For specific discussion of AS 29.13.100, see 1972 House Journal, p. 1720 or 1972 Senate Journal Supplement No. 3, p. 3.

Effect of amendment. — The 1972 amendment, effective September 10, 1972, added paragraph (33) and repealed paragraph (19).

Chapter 18. Incorporation.

Article
1. Requirements (§§ 29.18.010—29.18.030)
2. Procedures (§§ 29.18.050—29.18.150)
3. Transitional Assistance (§§ 29.18.180—29.18.200)
4. Development Cities (§§ 29.18.220—29.18.460)

Article 1. Requirements.

Section
10. First class cities
20. Second class cities
30. Organized boroughs

Sec. 29.18.010. First class cities. A community having 400 or more permanent residents may incorporate as a first class city. (§ 2 ch 118 SLA 1972)

March 19, 1980

Representative Bill Parker
Chairman, House Community & Regional
Affairs Committee
Pouch V
Juneau, Alaska 99811

Re: HB 797, Reclassification of Home Rule Cities

Dear Sir:

The City of Wrangell is a Home Rule City located outside an organized borough and are very concerned with any legislation which may affect us.

We support the concept of House Bill No. 797. Adoption of this legislation would provide us with a flexibility that is not now available. The Voters would have the option of reclassification if they should determine it would be beneficial to the community.

Very truly yours,

Joyce Rasler

Article 5. Simultaneous
Incorporation and Unification

Sec. 29.68.620. SIMULTANEOUS INCORPORATION AND UNIFICATION AUTHORIZED. Notwithstanding other provisions of law relating to incorporation and unification, an area conforming to the standards set forth in A.S. 29.18.030, which contains one or more cities within its proposed boundaries, may simultaneously incorporate and unite to form a single unified municipality by complying with this chapter.

Sec. 29.68.630. SIMULTANEOUS INCORPORATION AND UNIFICATION TO BE PROPOSED BY PETITION OR RESOLUTION. Simultaneous incorporation and unification of an area shall be proposed by filing a petition with the Department of Community and Regional

Affairs conforming with the requirements of section 640 of this chapter, or by resolution of the council of a first class home rule city within the proposed unified municipality. Such a resolution shall present the proposition required in §640(a) of this chapter, include all information required by §640(c), and shall be presented to the Department of Community and Regional Affairs. Such a resolution may be adopted not more often than once every 12 months.

Sec. 29.68.640. PETITION REQUIREMENTS.

(a) The petition shall read:

"PETITION FOR ELECTION CONCERNING SIMULTANEOUS INCORPORATION AND UNIFICATION AND ELECTION OF CHARTER COMMISSION TO PROPOSE UNIFICATION CHARTER

We, the undersigned, qualified voters of the proposed unified municipality do hereby petition that the following proposition be placed before the voters within the proposed unified municipality as provided by law:

'Shall there be simultaneous incorporation of the area described as

and formation of a charter commission (the charter commission members to be elected as elsewhere provided in this ballot) to prepare, adopt and submit to the voters for their approval or rejection a proposed charter uniting the incorporated area and all cities within it as a single unit of home rule government having the powers,

duties and functions of a unified government as authorized by law?

Yes [ ] No [ ]'

Signature	Address	Inside First Class or Home Rule City	Outside First Class or Home Rule City"

(b) The petition shall be signed by at least

(1) that number of qualified voters within the proposed unified municipality who live outside of all first class and home rule cities in the proposed unified municipality equal to 25 per cent of the qualified voters who voted in the last general election; and

(2) that number of qualified voters residing in each first class and home rule city located within the proposed unified municipality equal to 25 per cent of the qualified voters who voted in the last general election in each city.

(c) The petition shall include all information about the proposed unified municipality which is required by A.S. 29.18.050.

Sec. 29.68.650. REVIEW. The Department of Community and Regional Affairs shall review the petition to determine whether it complies with §640 of this chapter. A deficient petition shall be immediately returned to the person who initiated it with a statement indicating which requirements have not been satisfied.

Sec. 29.68.660. INVESTIGATION AND CALL FOR CHARTER COMMISSION NOMINATIONS. Once it is determined by the Department of Community and Regional Affairs that a petition meets the requirements of §640 of this chapter, the following actions shall be taken:

(1) the Department of Community and Regional Affairs shall comply with the provisions of A.S. 29.18.070 and A.S. 29.18.080(a), concerning the incorporation aspects of the petition or resolution;

(2) the Local Boundary Commission shall comply with the provisions of A.S. 29.18.080(b) and A.S. 29.18.090 concerning the incorporation aspects of the petition or resolution.

Sec. 29.68.780. ELECTION ON CHARTER.

(a) The proposed charter adopted by the charter commission shall be submitted to the voters at the election specified in §740 of this chapter. The Department of Community and Regional Affairs shall prepare the ballots for use in the election in the manner in which regular municipal elections are conducted. In addition, the Department of Community and Regional Affairs shall publish notice of the election by radio and television in a manner intended to apprise the entire proposed unified municipality population of the election.

(b) A person who is a qualified voter within the proposed unified municipality may vote in the election on the proposed charter.

(c) If a majority of the votes cast in the area of the proposed unified municipality outside all first class and home rule cities and a majority of the votes cast in the remaining area of the proposed unified municipality, composed of all first class and home rule cities, are cast in favor of the proposed charter, the charter is ratified. If the charter is ratified, two copies of the charter shall be filed with each of the following authorities:

the Department of Community and Regional Affairs. A copy with signatures affixed shall also be filed with the clerk of each city within the proposed unified municipality.

Sec. 29.68.770. PUBLICATION AND POSTING OF PROPOSED CHARTER. Within 10 days after filing the proposed charter, the Department of Community and Regional Affairs shall have it published once in at least one newspaper having general circulation distributed within the proposed unified municipality, if there is a newspaper having general circulation distributed within the proposed unified municipality. In addition, the Department of Community and Regional Affairs shall have a copy of the proposed charter posted in at least three public places within each city of the proposed unified municipality and each area outside cities. Copies of the proposed charter shall be made available by the Department of Community and Regional Affairs to the public at both the office of the Department of Community and Regional Affairs and the office of the clerk of each city within the proposed unified municipality. The Department of Community and Regional Affairs shall publish notice by radio and television of the publication, posting, and availability of the proposed charter in a manner intended to apprise the entire proposed unified municipality population of the existence of the proposed charter.

(1) lieutenant governor;

(2) commissioner of the Department of Community and Regional Affairs;

(3) district recorder for the area of the unified municipality;

(4) clerk of each city in the unified municipality.

(d) If a proposed charter is rejected, the charter commission shall prepare, adopt and submit another proposed charter to the voters within the proposed unified municipality at a general election, or a special election called by the Department of Community and Regional Affairs, held within 120 days of the date of the first charter election. If the second proposed charter is also rejected, the Charter Commission shall submit a third proposed charter to the voters at an election called by the Department of Community and Regional Affairs and held within 120 days of the second charter election. If the third proposed charter is rejected, the Charter Commission shall be dissolved, and the question of simultaneous incorporation and unification shall be treated as if it had never been proposed or approved.

Sec. 29.68.790. ELECTION OF INITIAL OFFICERS AND EFFECT OF RATIFIED CHARTER.

(a) After ratification of the charter, nominations for initial officers of the unified municipality shall be made by petition in the form prescribed by the lieutenant governor which include. the name and address of the nominee and a statement of the nominee that he is qualified under the provisions of this title for the office that he seeks. A person may file for and occupy more than one office, but he may not serve simultaneously as municipal mayor and as member of the municipal assembly or council. Petitions to nominate elected municipal officers must include the signatures and resident addresses of 50 voters in the area of the unified municipality, or that area of the unified municipality from which the officers are to be elected under the composition and apportionment set out in the accepted incorporation petition.

(b) Election of the initial officers shall occur within 90 days after ratification of the charter. The elected initial officers shall take office on the first Monday following certification of their election. The initial elected assembly or council members shall determine by lot the length of their terms of office so that a proportionate number of terms expire each year, resulting in staggered terms of office for members subsequently elected.

(8) designation of the new unified municipality's official name, subject to the provisions of (b) of this section;

(9) other charter provisions which the charter commission elects to include and which may be included in a home rule charter under this chapter and the state constitution.

(b) The area to be unified shall be known as a borough or a city or by some other designation consistent with existing law.

Sec 29.68.750. PUBLIC HEARINGS. Both before and after drafting the proposed charter, the charter commission shall hold a public hearing in each area of the proposed unified municipality represented on the charter commission by the eight charter commission members who were not elected at large. Other public hearings may be held by the charter commission whenever and wherever it believes necessary and appropriate.

Sec. 29.68.760. FILING OF PROPOSED CHARTER. Upon the adoption of a proposed home rule charter by the charter commission, the charter shall be signed by at least a majority of the total membership of the commission and shall be filed with

(1) provisions for adjustment of existing bonded indebtedness and other obligations in a manner which will reserve a fair and equitable burden of taxation for debt service, subject to §800 of this chapter;

(2) provision for the establishment of

(A) service areas;

(B) sections, if desired; and

(C) reapportionment of the sections, if established;

(3) provision for nonpartisan government and provision for the selection, organization, authority and responsibilities of the governing body and its executive and administrator;

(4) the transfer or other disposition of property and other rights, claims, assets and franchises of the local government to be unified under the charter;

(5) provision for exercise of the rights of initiative and referendum as required by A.S. 29.13.050;

(6) a method of amending the charter;

(7) the date on which the charter, if approved at the charter election required by §780 of this chapter, is effective;

(e) Vacancies on the charter commission shall be filled by a majority vote of the commission. The person appointed to fill a vacancy must be a qualified voter of the same area as the person whom he succeeds and must have been a qualified voter of that area for at least one year immediately preceding the date of his appointment.

(f) The Department of Community and Regional Affairs may grant a per diem allowance to the commission members and may reimburse the members for travel expenses incurred in carrying out the duties prescribed by this chapter.

(g) Costs, fees, and other expenses incurred by the charter commission shall be paid by the State.

Sec. 29.68.740. CHARTER PREPARATION. (a) A charter commission established under this chapter shall prepare, adopt and submit a proposed home rule charter for the area to be unified to the voters for approval or rejection at an election called by the Department of Community and Regional Affairs and held within 60 days of the date of publication and posting of the proposed charter as required in §770 of this chapter. The charter shall include among its provisions:

candidates who received the highest number of votes from their respective areas shall serve as members of the commission.

Sec. 29.68.730. CHARTER COMMISSION ORGANIZATION AND PROCEDURE. (a) The charter commission authorized by this chapter shall hold its first meeting within 30 days of the date of certification of its election. The commission shall elect from among its members a chairman and a deputy chairman.

(b) A majority of the total membership of the charter commission constitutes a quorum. No decision of the commission is valid or binding unless approved by that number of members necessary to constitute a quorum.

(c) The charter commission may elect other officers from among its membership, adopt rules governing its procedures and hire and discharge commission employees. Rules adopted must conform with the provisions of this chapter.

(d) Meetings of the charter commission shall be open to the public at all times. A journal of commission proceedings shall be kept and shall be available for public inspection at the Department of Community and Regional Affairs.

(c) The election of charter commission members shall take place at the same time as the election on the question of simultaneous incorporation and unification. If the petition fails, no charter commission members are elected.

(d) An Alaska voter who has been a resident of the area within the proposed unified municipality for 30 days before the date of the election order may vote.

(e) The lieutenant governer shall supervis the election in the general manner prescribed by the Alaska Election Code (A.S. 15.05 - 15.60). The State shall pay all election costs under this section.

Sec. 29.68.710. REQUIREMENTS FOR APPROVAL OF SIMULTANEOUS INCORPORATION AND UNIFICATION. If a majority of the votes cast within the boundaries of the proposed unified municipality favors the proposition for simultaneous incorporation and unification, the proposition shall be approved.

Sec. 29.68.720. REQUIREMENTS FOR ELECTION OF CHARTER COMMISSION. If simultaneous incorporation and unification is approved, those charter commission

each of these areas shall be proportionate to the respective populations as determined by the Department of Community and Regional Affairs.

Sec. 29.68.700. ELECTION. (a) After accepting the petition or resolution for simultaneous incorporation and unification, and after the date fixed for receiving nominations for charter commission candidates, the Department of Community and Regional Affairs shall immediately notify the lieutenant governor of its acceptance of the petition. Within 30 days after notification, the lieutenant governor shall order an election in the proposed unified municipality to determine whether the voters desire simultaneous incorporation and unification of the proposed unified municipality. The election shall be held not less than 30 nor more than 90 days after the date of the election order.

(b) The ballot on the question of simultaneous unification and incorporation shall be worded exactly as provided in §640(a) of this chapter.

after notice of the call for nominations has been given by the Department of Community and Regional Affairs.

Sec. 29.68.680. QUALIFICATIONS OF CHARTER COMMISSION CANDIDATES. A person is eligible to be nominated as a candidate for the charter commission if he has been a qualified voter of the area within the proposed unified municipality from which he seeks election for at least one year immediately preceding the date his nomination petition is filed with the Department of Community and Regional Affairs.

Sec. 29.68.690. COMPOSITION OF CHARTER COMMISSION. The charter commission members shall be qualified voters and shall consist of 11 members, three of whom shall be residents elected at large from the area of the proposed unified municipality and 8 of whom shall be (1) residents of and elected from the area outside cities in the proposed unified municipality or (2) residents of and elected from a city or cities in the proposed unified municipality. The number representing

(3) if the Local Boundary Commission determines that the proposed municipality meets the standards for incorporation, it shall accept the petition or resolution and the Department of Community and Regional Affairs shall issue a call for the nomination of charter commission candidates, specifying the filing deadline and outlining the procedure described for making nominations under §670 of this chapter.

Sec. 29.68.670. NOMINATION OF CHARTER COMMISSION CANDIDATES. (a) Charter commission candidates shall be nominated by a petition signed by at least 50 qualified voters of the area within the proposed unified municipality from which the candidate seeks election or by a number of qualified voters from that area equal to at least 10 per cent of the number of votes cast from that area in the last general election, whichever is less.

(b) Nomination petitions shall be filed with the Department of Community and Regional Affairs on or before the date set by the Department of Community and Regional Affairs, which date shall not be less than 30 days

Sec. 29.68.650. REVIEW. The Department of Community and Regional Affairs shall review the petition to determine whether it complies with §640 of this chapter. A deficient petition shall be immediately returned to the person who initiated it with a statement indicating which requirements have not been satisfied.

Sec. 29.68.660. INVESTIGATION AND CALL FOR CHARTER COMMISSION NOMINATIONS. Once it is determined by the Department of Community and Regional Affairs that a petition meets the requirements of §640 of this chapter, the following actions shall be taken:

(1) the Department of Community and Regional Affairs shall comply with the provisions of A.S. 29.18.070 and A.S. 29.18.060(a), concerning the incorporation aspects of the petition or resolution;

(2) the Local Boundary Commission shall comply with the provisions of A.S. 29.18.060(b) and A.S. 29.18.090 concerning the incorporation aspects of the petition or resolution.

duties and functions of a unified government as authorized by law?

Yes [ ] No [ ]'

Signature	Address	Inside First Class or Home Rule City	Outside First Class or Home Rule City"

(b) The petition shall be signed by at least

(1) that number of qualified voters within the proposed unified municipality who live outside of all first class and home rule cities in the proposed unified municipality equal to 25 per cent of the qualified voters who voted in the last general election; and

(2) that number of qualified voters residing in each first class and home rule city located within the proposed unified municipality equal to 25 per cent of the qualified voters who voted in the last general election in each city.

(c) The petition shall include all information about the proposed unified municipality which is required by A.S. 29.18.050.

shall revise, repeal, or reaffirm all city ordinances, resolutions and orders in force within the unified municipality at the time of unification. Each ordinance, resolution, regulation, or order in force at the time of unification shall remain in force until superseded by action of the new governing body.

Sec. 29.68.820. RIGHT TO STATE AND FEDERAL FUNDS PRESERVED. All provisions of law authorizing contributions of any kind, in money or otherwise, from the state or federal government to cities shall remain in full force and effect with respect to a unified municipality organized under §§ 620 - 830 of this chapter.

Sec. 29.68.830. POWERS OF A UNIFIED MUNICIPALITY. A municipality organized under §§ 620 - 830 of this chapter shall have all powers

(1) not prohibited it by law or charter;

(2) granted to organized boroughs and first class cities.

Sec. 29.68.840. EFFECT. §§620 - 830 of this chapter do not modify the procedures for incorporation pursuant tc §§29.18.050 - 29.18.150 or for unification pursuant to §§29.68.240 - 29.68.440.

(c) The ratified charter becomes effective on the same day that the elected initial officers take office and operates to dissolve all local governments within the area of the unified municipality in accordance with the charter.

Sec. 29.68.800. ASSETS AND LIABILITIES. A municipality created by simultaneous incorporation and unification shall succeed to all the assets and liabilities of the local governments it unified. A bonded indebtedness or other debt incurred before unification shall remain the tax obligation of the area which contracted the debt, except that the tax obligation may be spread over a larger area by ordinance if the governing body determines that the asset for which the bonded indebtedness or other debt was incurred was used for the benefit of the larger area before unification, or is so used after unification. However, pre-unification bonded indebtedness or other debt for sewage collection systems, water distribution systems, and streets, even if determined to be used for the benefit of a larger area than that which incurred the debt, shall remain the tax obligation of the area which incurred the debt.

Sec. 29.68.810. ORIDNANCES. Within two years after ratification of the charter, the governing body of the unified municipality

Reply to:

February 5, 1980

Mr. Jalmer Kerttula, Senator
Alaska Senate
Pouch V
Juneau, Alaska 99811

Dear Senator Kerttula:

We have just received the Cordova water supply feasibility study prepared by Merrell & Associates/Black & Veatch. The study was commissioned to solve our ongoing water supply problem due to winter freeze-up, damaged pipeline and summer dry-up due to lack of snow pack.

To briefly summarize the report, the consultants recommend that the Murchison Falls Creek supply (near Pete Lovseth's home) be improved with an additional 18" supply line, treatment, 3-500,000 gallon storage tanks and supplement the 6" supply lines to the canneries with 10-12" lines plus some operational improvements to the existing system to provide a year-round reliable supply of 3.3 million gallons of water per day to the city. This will provide sufficient water supply to keep the canneries operating at full capacity (see letters from Marpac, Inc., North Pacific Processors and St. Elias) during both salmon and crab seasons. You might note Marpac's letter indicating firm plans for a bottomfish fishery which will require a great deal more water.

The proposed 3-500,000 gallong storage tanks will insure a constant pressure and will replace 1-35,000 gallon and 1-100,000 gallon tank. The improvements and storage will reduce the water flow deficiencies and aid in obtaining a ower fire rating combined with a lower fire insurance rate.

The first year, Phase I design and construction, cost is $3,000,000 and a 1981, Phase II design and construction cost is $1,600,000.

The Governor's supplemental budget, as I understand, is based on a "Construct Now" program; in other words those projects which can be constructed in 1980, thus giving an infusion into the sluggish Alaskan economy.

The project, Phase I, can be designed and bid by May 15, 1980 The project would, at a minimum. employ from 30-45 persons directly plus a great deal of material, shipping, and support labor. The gillnet season in Cordova was a disaster last year and the 1980 forecast is dim. These people will need work and this project would provide that work.

I request that you work to amend HB 558, the "Now" bill to include $1,500,000 to implement Phase I of the Cordova water supply feasibility study which will provide needed jobs and combined with Phase II will provide the City of Cordova with a reliable water supply. A firm water supply will insure faster cannery development and assure the continued viability of the Cordova fish processing industry.

We strongly urge your support and effort in the funding of this vital project.

Very truly yours,

Perry Lovett
City Manager

Mr. Perry Lovett
City of Cordova
Box 1210
Cordova, AK 99574

Dear Mr. Lovett,

We need three things to keep the seafood industry in business.

The first requirement is water. We need at least 900,000 gallons of water, per 24 hour day, when operating at full capacity. Last year, with the big season, this amounted to many days. Our water supply was short; so at times we had to limit production. This year a big catch is predicted for the Bristol Bay area. We're going to fly in plenty of fish and bring in tenders from that area. Water is our No.1 necessity and you just don't have it.

Our second problem is dredging. This is essential if we are to get boats to our dock for unloading. We talked about this in Anchorage at the E.D.A. meeting of December 18, 1979.

Our third necessity is electricity; which is a matter to be discussed with our co-op.

Please give these items careful consideration as they mean much to Cordova's livlihood.

Sincerely,

James A. Poor

morpac
inc.

February 1, 1980

Mr. Perry Lovett
City Manager
City of Cordova
Box 1210
Cordova, Alaska 99574

Dear Perry:

This is to inform you of Morpac, Inc. need for a substantial supply of water for this coming season and an increase for us in the near future for the expansion of our freezer plant and the future plans for a bottom fish operation.

In the past we have had to shut down operations or curtail them due to the lack of water which has been costly to us and the employees at Morpac, Inc. We also experienced low water pressure this last summer during the heavy canning season which effected the operation of the filler machine on the salmon line. This also causes great concern to us regarding fire protection.

At the present our peak period is 600,000 gals. per day. This would increase during the expansion to 1,000,000 gals. per day.

We feel there is a definite need for the City of Cordova to increase and improve the water system for the continuing growth of the industry and welfare of its citizens.

We are definitely behind you in your program to up-grade and expand this system. If you need any additional help or information please do not hesitate to call.

CORDOVA WATER SUPPLY FEASIBILITY STUDY

for

CITY of CORDOVA, ALASKA

MERRELL & ASSOCIATES / BLACK & VEATCH

JANUARY 1980

Figure 5-5 ALTERNATIVE 4 AND 7 - MURCHESON FALLS - CRATER LAKE

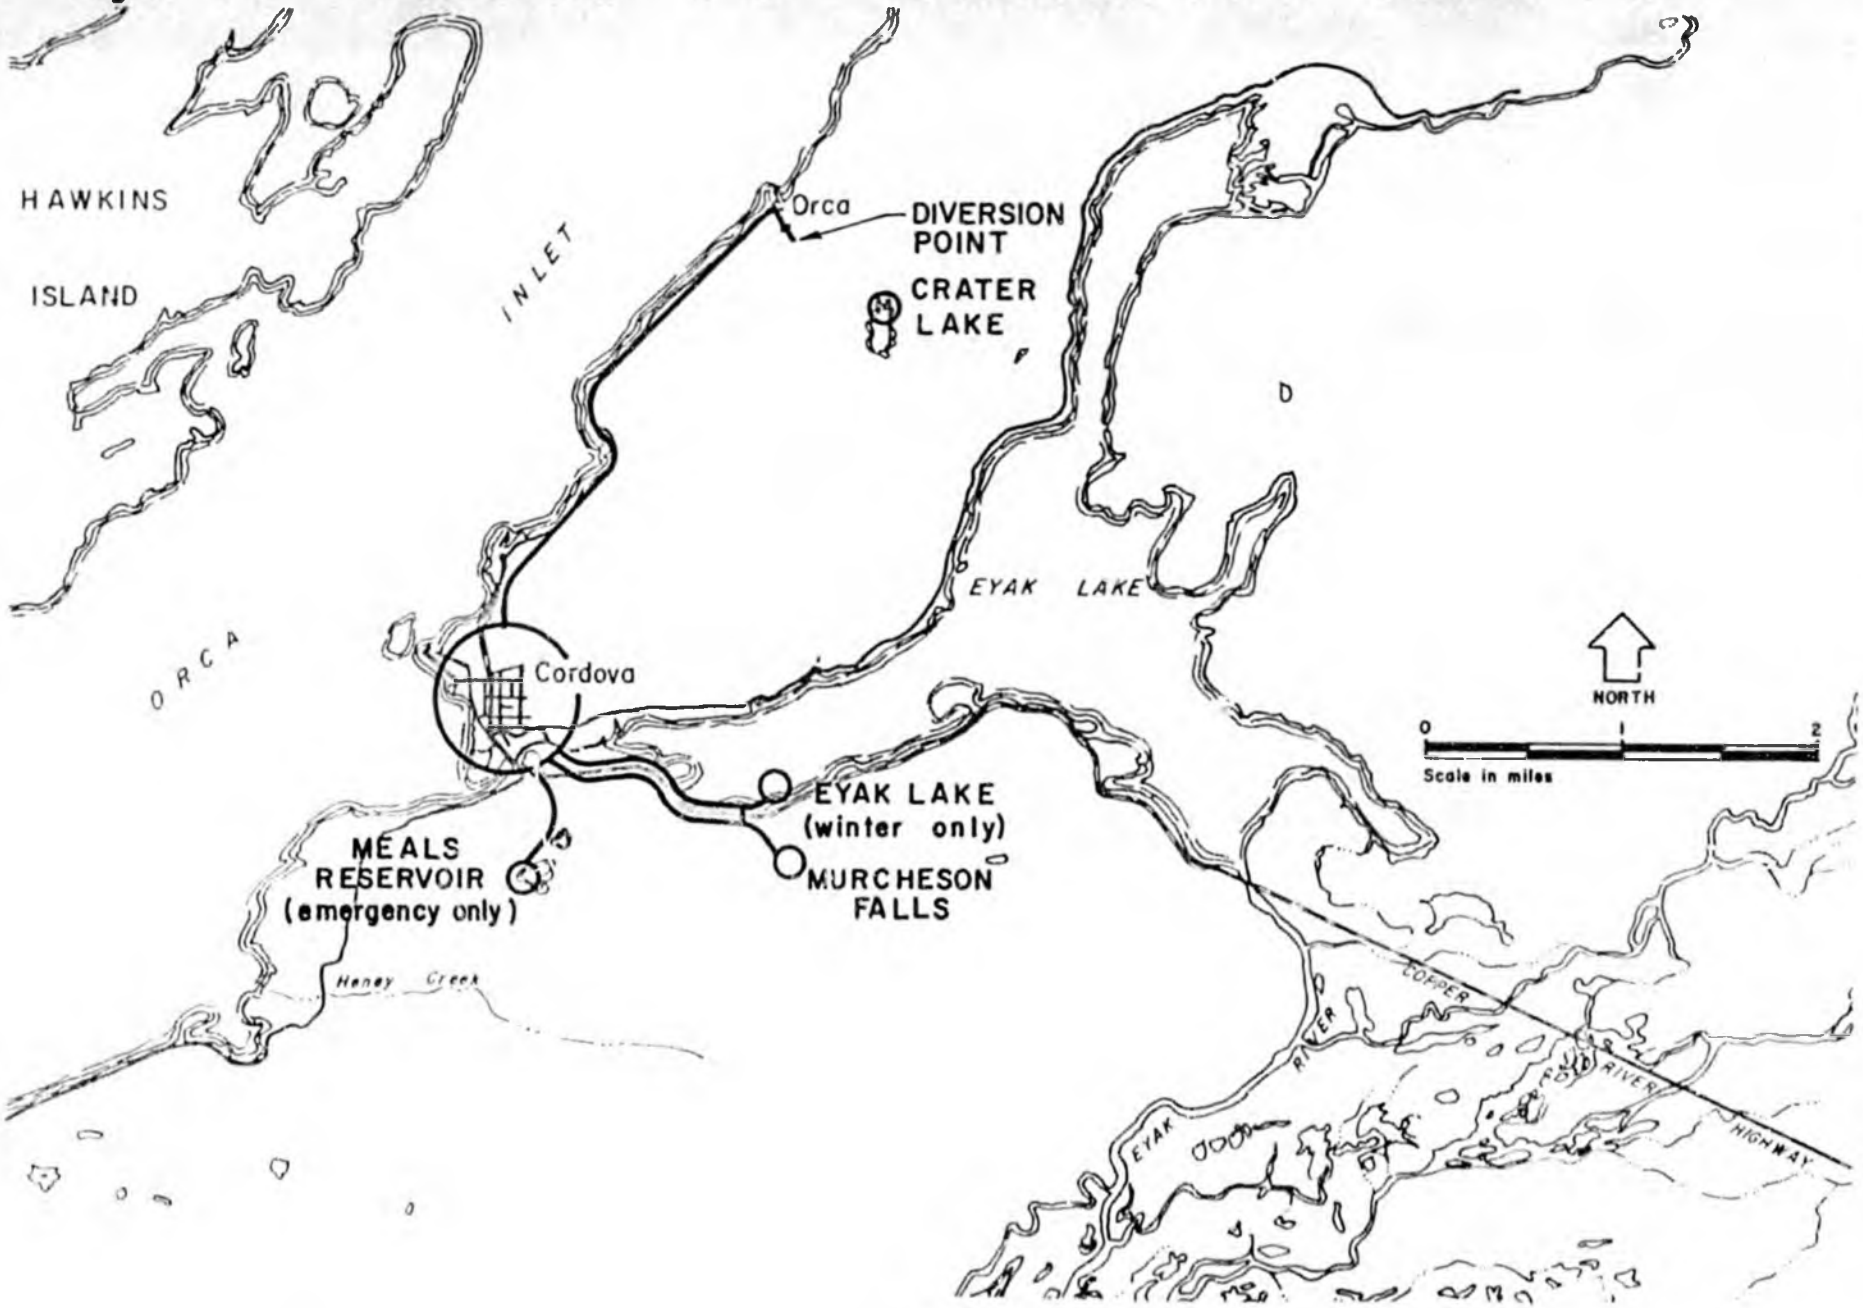

Table 5-6. COST SUMMARY - ALTERNATIVE 4
MURCHESON AND CRATER

Capital Costs	
Murcheson Falls Creek	
Catchment improvements	$ 85,000
Transmission line, 18-inch	500,000
Crater Lake Intake from Lake	
Catchment and intake facilities	182,000
Transmission line, 18-inch	1,340,000
Chlorination and metering	56,000
~~Eyak Lake Treatment Plant~~ Elliott	833,000
Meals Emergency Supply	220,000
Total capital cost	$3,226,000
30% Contingency, Engineering, Legal, etc.	968,000
TOTAL ALTERNATIVE COST	$4,194,000
Annual Costs	
Power	$ 34,000
Personnel	30,000
Supplies, equipment, etc.	22,000
TOTAL ANNUAL O&M COST	$ 86,000

Alternative 4 - Murcheson and Crater

Alternative 4 would utilize both Murcheson Falls Creek and Crater Lake as principal sources of supply. Rather than taking the water directly from Crater Lake, however, this alternative assumes a diversion facility on the downstream tributary from Crater Lake near Orca at elevation 195. The location of the diversion facility would permit the operation of the supply source without the use of automatic control valves. This would be similar to the operation of Murcheson Falls supply. It should be noted that this alternative is the only one which presents some potential for the development of power associated with the water supply project. The development of a joint water supply and power project was considered and is presented as Alternative 7.

Alternative 4, utilizing the diversion near Orca, would require approximately 13,000 feet of 18-inch transmission main from the diversion facility to the distribution system in town. A disinfection system for this supply would also be required.

Improvements at Murcheson Falls and Eyak Lake would be similar to those identified for Alternative 1. Once again, the Eyak Lake treatment plant would be utilized as a winter-only supply when adequate quantities are not available from the principal sources.

This alternative is presented graphically in Figure 5-5, with associated costs presented in Table 5-6.

Eyak Lake not necessary if water taken from the Lake rather than downstream tributary.

Figure 5-6 ALTERNATIVE 5- MURCHESON FALLS REINFORCED

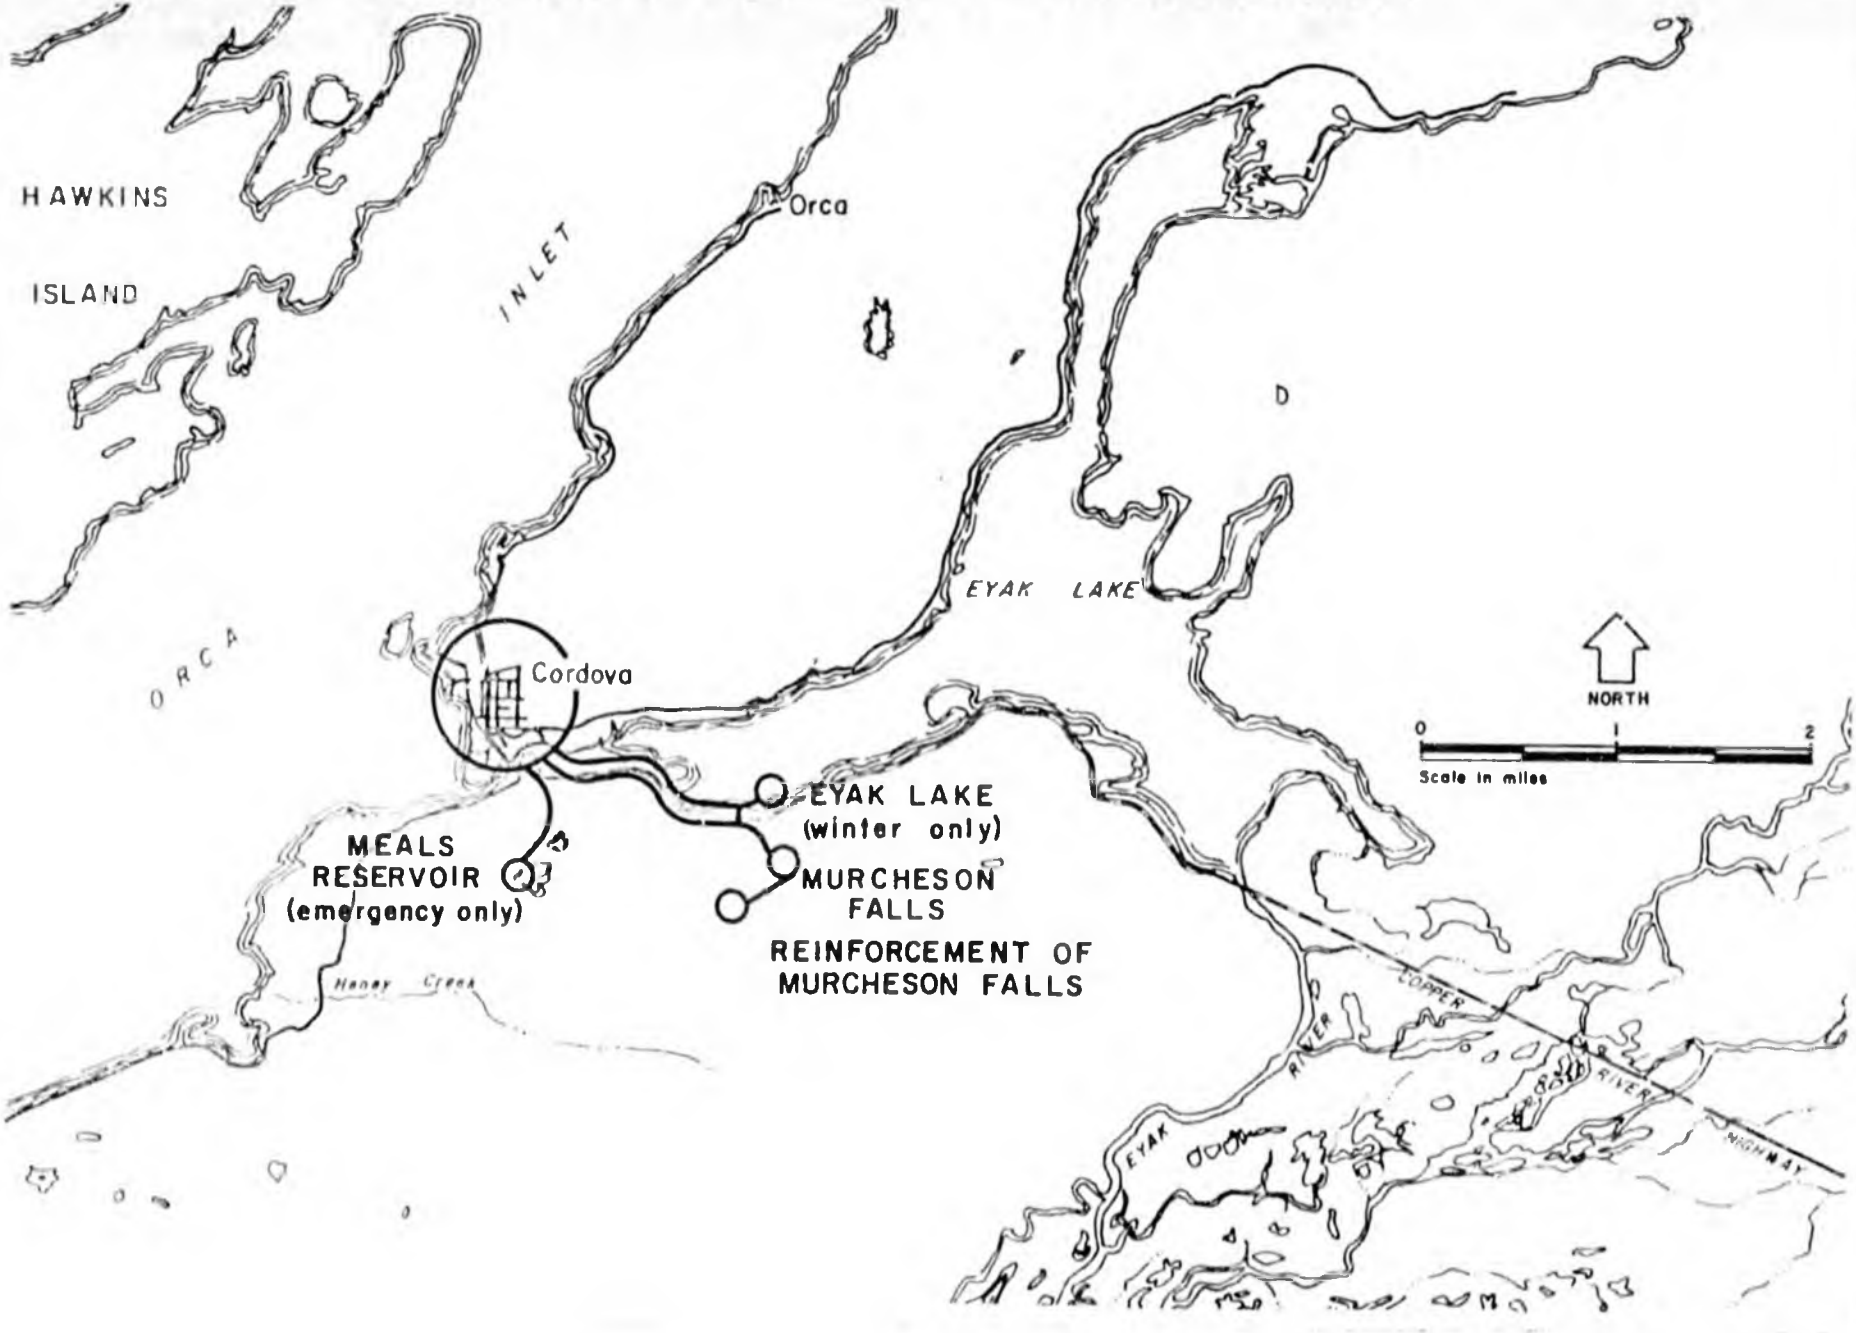

Table 5-7. COST SUMMARY - ALTERNATIVE 5
MURCHESON REINFORCED

Capital Costs	
Murcheson Falls Creek	
Catchment improvements	$ 85,000
Transmission line, 18-inch	500,000
Reinforcement diversion and transmission	474,000
Eyak Lake Treatment Plant	833,000
Meal Emergency Supply	220,000
Total capital cost	2,112,000
30% Contingency, Engineering, Legal, etc.	634,000
TOTAL ALTERNATIVE COST	$2,746,000
Annual Costs	
Power	$ 34,000
Personnel	28,000
Supplies, equipment, etc.	21,000
TOTAL ANNUAL O&M COSTS	$ 83,000

Alternative 5 - Murcheson Reinforced

Alternative 5 would utilize Murcheson Falls Creek as the primary source of supply, with reinforcement from the watershed immediately to the west. Meals Lake will function as an emergency and a secondary supply source. The Heney Creek tributary will continue to be maintained with minimal capital improvements to the catchment facility and the transmission line. Specifically, these improvements will include replacement of approximately 200 feet of transmission line on the side of the canyon wall in Heney Creek Canyon and the modification of the catchment to allow easier maintenance. These improvements will, hopefully, be sufficient to keep the system operating as a secondary source to Murcheson Falls for a ten-year period. During the winter months, or during prolonged periods of dry weather, Meals Lake will be drained to its practical limit. When both Murcheson Falls and Meals Lake are depleted, Eyak Lake will serve as the emergency source. Beyond ten years, it is expected that hydroelectric power will be developed which will cause the pumping and treating of water from Eyak Lake to be more economical, thus removing the need to maintain the Heney Creek supply in case of a major failure.

The improvements necessary at Murcheson Falls would include the same improvements required for Alternative 1. Reinforcement of Murcheson Falls Creek would involve the construction of a diversion facility on the main tributary creek in the adjacent watershed and a transmission line from the new diversion facility to the Murcheson Falls Creek watershed. This additional supply into the Murcheson Falls drainage would not make the supply dependable year-round, but would minimize the length of time that treated water from Eyak Lake would be required. The water treatment plant for Eyak Lake would be similar to that described in Alternative 1, including the joint utilization of a disinfection system for both the Eyak Lake and Murcheson Falls Creek supplies.

This alternative is presented graphically in Figure 5-6, with associated costs presented in Table 5-7.

Table 6-1. CAPITAL COST SUMMARY -
RECOMMENDED SYSTEM IMPROVEMENTS

Project Element	1980	1981
Murcheson Falls Improvements	$ 111,000	
Transmission Line	650,000	
Murcheson Reinforcement		$ 616,000
Water Treatment Plant		1,083,000
Distribution Main	286,000	
Storage Reservoirs	1,019,000	510,000
Meals Emergency Supply Improvements	286,000	
Telemetry	59,000	
Totals	$2,411,000	$2,209,000
TOTAL PROJECT COSTS	$ 4,260,000	

O&M cost of $112,000 to the annualized capital cost gives a total first year annual cost of $247,000. Adding this cost to the City's 1979/80 budget for "Water Operation and Maintenance" of about $230,000 would cause the costs for total water service to approximately double. If the existing water rate structure did not change but was updated to take into effect the increased costs, the monthly cost to a residence would be approximately $25.00, and the metered production cost would be about $0.73 per 1000 gallons.

There are several things which will have an impact on the ultimate charge to the customer that cannot be accurately estimated at this time. They include savings in annual cost now required to operate and maintain the existing system, actual

construction cost of improvements, amount of grant funds made available from other sources for construction, changes in the rate structure, and changes in water usage. Without a rate analysis, it is not possible to accurately reflect the increased costs back to a flat-rate charge or a metered water rate. It is recommended that such a rate analysis be performed.

For discussion purposes, based upon a 50 percent grant, there are three cost elements:

1. Annualized capital cost, including principal and interest,

2. Project operation and maintenance cost for the capital improvements, and

3. Existing operation and maintenance budget.

Based upon these elements, the monthly service charge for residential users would be between $18 and $25 per month.

An important factor in the net cost of water system improvements which should be considered is the effect on fire insurance rates. The proposed system improvements would easily permit the water system to qualify for the next higher rating. If the next higher rating were obtained following the implementation of the proposed project, it would result in an approximate ten percent (10%) reduction in fire insurance costs to both the industries and commercial establishments in Rancho Cordova.

February 5, 1980

Mr. Jalmer Kerttula, Senator
Alaska Senate
Fouch V
Juneau, Alaska 99811

Dear Senator Kerttula:

We have just received the Cordova water supply feasibility study prepared by Merrell & Associates/Black & Veatch. The study was commissioned to solve our ongoing water supply problem due to winter freeze-up, damaged pipeline and summer dry-up due to lack of snow pack.

To briefly summarize the report, the consultants recommend that the Murchison Falls Creek supply (near Pete Lovseth's home) be improved with an additional 18" supply line, treatment, 3-500,000 gallon storage tanks and supplement the 6" supply lines to the canneries with 10-12" lines plus some operational improvements to the existing system to provide a year-round reliable supp of 3.3 million gallons of water per day to the city. This will provide sufficient water supply to keep the canneries operating at full capacity (see letters from Marpac, Inc., North Pacific Processors and St. Elias) during both salmon and crab seasons. You might note Marpac's letter indicating firm plans for a bottomfish fishery which will require a great deal more water.

The proposed 3-500,000 gallong storage tanks will insure a constant pressure and will replace 1-35,000 gallon and 1-100,000 gallon tank. The improvements and storage will reduce the water flow deficiencies and aid in obtaining a ower fire rating combined with a lower fire insurance rate.

The first year, Phase I design and construction, cost is $3,000,000 and a 1981, Phase II design and construction cost is $1,600,000.

The Governor's supplemental budget, as I understand, is based on a "Construct Now" program; in other words those projects which can be constructed in 1980, thus giving an infusion into the sluggish Alaskan economy.

The project, Phase I, can be designed and bid by May 15, 1980 The project would, at a minimum. employ from 30-45 persons directly plus a great deal of material, shipping, and support labor. The gillnet season in Cordova was a disaster last year and the 1980 forecast is dim. These people will need work and this project would provide that work.

I request that you work to amend HB 558, the "Now" bill to include $1,500,000 to implement Phase I of the Cordova water supply feasibility study which will provide needed jobs and combined with Phase II will provide the City of Cordova with a reliable water supply. A firm water supply will insure faster cannery development and assure the continued viability of the Cordova fish processing industry.

We strongly urge your support and effort in the funding of this vital project.

Very truly yours

Perry Lovett
City Manager

Mr. Perry Lovett
City of Cordova
Box 1210
Cordova, AK 99574

Dear Mr. Lovett,

We need three things to keep the seafood industry in business.

The first requirement is water. We need at least 900,000 gallons of water, per 24 hour day, when operating at full capacity. Last year, with the big season, this amounted to many days. Our water supply was short; so at times we had to limit production. This year a big catch is predicted for the Bristol Bay area. We're going to fly in plenty of fish and bring in tenders from that area. Water is our No.1 necessity and you just don't have it.

Our second problem is dredging. This is essential if we are to get boats to our dock for unloading. We talked about this in Anchorage at the E.D.A. meeting of December 18, 1979.

Our third necessity is electricity; which is a matter to be discussed with our co-op.

Please give these items careful consideration as they mean much to Cordova's livlihood.

Sincerely,

James A. Poor

morpac inc.

February 1, 1980

Mr. Perry Lovett
City Manager
City of Cordova
Box 1210
Cordova, Alaska 99574

Dear Perry:

This is to inform you of Morpac, Inc. need for a substantial supply of water for this coming season and an increase for us in the near future for the expansion of our freezer plant and the future plans for a bottom fish operation.

In the past we have had to shut down operations or curtail them due to the lack of water which has been costly to us and the employees at Morpac, Inc. We also experienced low water pressure this last summer during the heavy canning season which effected the operation of the filler machine on the salmon line. This also causes great concern to us regarding fire protection.

At the present our peak period is 600,000 gals. per day. This would increase during the expansion to 1,000,000 gals. per day.

We feel there is a definite need for the City of Cordova to increase and improve the water system for the continuing growth of the industry and welfare of its citizens.

We are definitely behind you in your program to up-grade and expand this system. If you need any additional help or information please do not hesitate to call.

III. ANALYSIS (See Fiscal Note Preparation Instructions, Section III)

To prepare fiscal notes on all bills relating to municipalities would require an additional Local Government Specialist III (Range 17) and a Clerk/Typist III (Range 8) - Personal Services costs are based on these figures plus 28% for benefits.

Contractual costs are for an additional 300 sq. feet of office space (.5), base telephone rate and long distance tolls for 1 (1.0), and Mag Card rental (3.3). Travel is figured at 1.5 per year. In many instances the LGS will need to go to the municipalities to research fiscal impact of bills. The commodities cost is for the costs of printing forms. All the above costs are increased at 8% a year for inflation.

The one time equipment cost is for desks, office equipment, etc. for two.

Ginny Chitwood Ak. Municipal League
League support legislation.

Palmer McCarter, Dept. C&RA
Reviews legislative history of the revenue sharing program and funding for the program. The Free Conference Committee in 1979 Session approved funding to the 83% level. 85% was paid out to municipalties. HB 905 is the governor's supplemental bill which would bring the funding level back up to 83%.
The figure being suggested in this bill would fund revenue sharing 100%. The Governor has said that he has no objection to this full funding. SB437 redefines "total project costs". McCarter encourages the committee's support. Mentions that in Rep. Gardiner's HB192, the new revenue sharing method would separate hospital and road monies in different funds.

Parr - In Anchorage, Ak. Hospital might be taken over by the Indian Public Health service. Questions what will happen to the construction money paid for that hospital by the state if this happens?

McCarter - There would be no reimbursement to the state for these monies. Hospital must be municiapally owner, privately owned or non-profit to get the revenue sharing funds.

Chitwood - Governor vetoes 100% funding in 1979 although the legislature made an attempt to fund it totally.

John Carlson, Mayor, Fairbanks
Supports.

COMMITTEE ACTION: Bill passed out of committee.

130. Final determination for the program
140. Definitions

19 AAC 30.010. SCOPE OF REGULATIONS. The regulations in this chapter are prescribed for implementing, interpreting, and making specific the act providing state aid to local governments, AS 43.18.010 – 43.18.045. (Eff. 9/5/76, Reg. 59)

Authority: AS 43.18.040
AS 44.47.050(14)
AS 44.47.160

19 AAC 30.020. STANDARDS FOR AYMENTS OF ENTITLEMENTS UNDER AS 43.18 AND THIS CHAPTER. Applicants for payments under AS 43.18.010 – 43.18.045 will demonstrate to the department that they are qualified for payments in the following categories of service for which they have power and exercise the power with a minimum level of financial support:

(1) POLICE PROTECTION: An applicant is eligible for payment if the following minimum standards are met:

(A) the applicant must provide police protection with one or more police officers on duty or on call at all times;

(B) a police officer must be at least 19 years of age and must not have been convicted by a court of a crime which is classified as a felony in this state within the past 10 years;

(C) an applicant will not be eligible to receive revenue sharing funds unless a police officer within 12 months after his appointment has satisfactorily completed a basic course in police training approved by the Department of Public Safety. The commissioner may grant an extension of time for the completion of the basic program by a police officer upon presentation of evidence by the municipality that a police officer is unable to complete the basic program within 12 months of his appointment due to illness, injury, family emergency, military service or special duty assignment. An extension may also be made when the commissioner determines that it would be in the public interest.

(D) notwithstanding the provisions of (A) and (B) of this section, the commissioner may waive the requirements set forth in paragraph (C) on presentation of evidence by the municipality and acceptance of the evidence by the Police Standards Council that a police officer is otherwise qualified based on work experience, education, or training;

(E) recognition of the applicant by the Police Standards Council as a "participating police department" is evidence of eligibility under this section.

(2) FIRE PROTECTION:

(A) a municipal applicant is eligible for payment if it provides fire protection. Fire protection includes, but is not limited to, fire protection provided by a volunteer fire department which is currently registered with the State Fire Marshal and which has official recognition and financial support from the municipality in which it is located;

(B) a volunteer fire department located

outside a municipality is eligible if it meets the following criteria:

(i) it is currently registered with the State Fire Marshal; and

(ii) minimum financial support as defined in 19 AAC 30.020(10) is provided; and

(iii) unexpended funds are dedicated irrevocably for the operation and maintenance of fire protection services;

(C) organizational grants shall be made on the same basis to facilitate the organization of a volunteer fire department in an area not in a municipality upon application of the proposed fire protection group to the State Fire Marshal and approval of an application according to standards of organization and service prescribed by regulations promulgated by the State Fire Marshal, and upon submitting an application for state aid to the department.

(3) AIR OR WATER POLLUTION CONTROL: An applicant is eligible for payment under this category if it meets either of the following minimum standards:

(A) the municipality is engaged in a comprehensive study of an air pollution control program or implementing an air pollution control program; or

(B) the municipality has a sanitary sewage treatment facility and sewage disposal system which is in compliance with state law or the sewage treatment facility is under construction and will meet state requirements.

(4) LAND USE PLANNING: An applicant is eligible for payment if the following minimum standards are met:

(A) the municipality shall be in the process of preparing or updating a comprehensive land use plan or be implementing a comprehensive land use plan through exercise of platting or zoning powers; and

(B) if a municipality has a population over 12,000 persons, the municipality, to qualify for aid under this paragraph, shall employ a staff planner charged with the primary responsibility for land use planning and plan implementation; or

(C) if the municipality has a population fewer than 12,000 persons, the municipality shall qualify for aid under this paragraph by availing itself of planning assistance through one of the following:

(i) a staff planner charged with the primary responsibility of land use planning and plan implementation or a planning commission engaged in the preparation or implementation of a comprehensive land use plan; or

(ii) an annual contract with a recognized planning firm to provide land use planning and plan implementation on a consulting basis with a work program outline approved by the Department of Community and Regional Affairs; or

(iii) participation in the state's continuing planning advisory service program of the Department of Community and Regional Affairs through assistance in the preparation or implementation of a comprehensive planning program.

(5) PARKS AND RECREATION: An applicant is eligible for payment if one or more of the following minimum standards are met:

(A) a municipality must provide a park or recreational facility available to the public; or

(B) the municipality provides a recreational program on a regular and continuing basis available to the public.

(6) TRANSPORTATION FACILITIES: An applicant is eligible for payment under this category if it operates one or more of the following facilities:

(A) a small boat harbor which provides deep water shelter, either natural or artificial, on the coast of a sea, lake, river or other body of water; or

(B) a port or dock which has the capability of receiving cargo from and discharging cargo to commercial vessels; or

(C) an airport for the convenience of private and commercial aircraft. Excluded are airports exclusively operated and maintained by a federal or state agency or by a private party, airports maintained on a seasonal basis, and natural landing strips; or

(D) a transit system for the transportation of people in accordance with established tariffs by rail and monorail, or buses specifically designed and constructed to accommodate the general public.

(7) ROAD MAINTENANCE: An applicant is eligible for payment under these categories if one or both of the following minimum standards are met:

(A) a public road, street or highway maintained by an applicant must be dedicated to public use by licensed automotive equipment; specifically excluded are roads, streets or highways maintained by a federal or state agency or maintained by the applicant pursuant to an agreement with a federal or state agency;

(B) an ice road maintained by an applicant must connect two or more inhabited areas and be used by licensed automotive equipment.

(8) HEALTH FACILITIES AND HOSPITALS: An applicant is eligible for payment under these categories if one or more of the following minimum standards are met:

(A) Municipal Health Services: an applicant shall have and exercise the health power and have within its boundaries a qualifying hospital under (B) or (C) of this section;

(B) Municipal Hospitals: an applicant must have and exercise the power to provide hospital facilities and services. Payment shall be based on the number of beds actually set up for patient care limited to the number of beds licensed as of July 1 of the entitlement year by the Department of Health and Social Services and provided for in the current construction design of the hospital. Funds received under this subparagraph may be used only for hospitals and shall be apportioned among qualifying hospitals as the applicant determines;

(C) Nonprofit Hospitals: an applicant shall certify to the department before June 30 of the entitlement year that the hospital is in compliance with all standards for hospitals which have been adopted by the applicant. Payments to the applicant shall be transferred immediately to the hospital in accord with the basis by which the entitlement was generated by the hospital and shall be applied to the annual cost of operation and maintenance of the hospital or for the provision of health care service at the hospital as the directors of the hospital determine;

(D) to be eligible under (B) or (C) of this section, the hospital must be licensed as a general hospital by the Department of Health and Social Services; hospitals wholly operated or wholly supported by a federal or state agency are ineligible under (B) and (C) of this section;

(E) Health Facilities: an applicant must have and exercise the power of health service. Payment shall be based on the number of beds set up for patient care, or payment shall be made per health facility as the applicant determines;

(F) to be eligible under (E) of this section, a health facility shall be a public health center, maternity home, community mental health center, facility for the mentally or physically handicapped, nursing home, or convalescent center which is licensed, when required, by the state under AS 18.20.010 – 18.20.130 or if licensing is not required, approved by the department, and is owned or operated by an applicant or by a nonprofit corporation or other nonprofit sponsor. Facilities wholly operated or wholly supported by a federal or state agency are ineligible;

(G) financial eligibility for hospitals and health facilities and health services shall be based on the financial support provided by

the applicant and excludes those services that are actually provided or wholly funded by a federal or state agency. Any unexpended entitlement received shall be dedicated irrevocably for the service, operation, or maintenance of the health facility or health service;

(H) funds received by a municipality under (A) or (E) of this section shall be used for expenses of health services or operation and maintenance of facilities as the applicant determines.

(9) CONSTRUCTION AID: an applicant is eligible for payment if the following minimum standards are met:

(A) if construction of a hospital or health facility began after January 1, 1968, and state matching aid for construction approved for payment to the municipality or other facility sponsor constitutes less than 25 percent of the total project cost, the state shall pay to the municipality or other facility sponsor each fiscal year a sum equal to $2,500 per bed for the maximum number of beds provided for in the construction design of the hospital or health facility. State aid provided for in this section shall continue until the municipality or other facility sponsor has received an amount which, combined with state matching money for construction of the hospital or health facility, equals 25 percent of the total project cost. No funds received for construction shall be used for any other purpose;

(B) state matching aid for construction means any construction aid program administered by the Department of Health and Social Services;

(C) project or construction costs shall be those contracted costs that are eligible for financial participation under the Hill-Burton Construction Program for construction of new buildings, including, but not limited to, the expansion, replacement and modernization of existing buildings and initial equipment of any such buildings; including architect and consultant fees, but not including the cost of land acquisition and offsite improvements;

(D) other facility sponsor shall refer to a public or nonprofit corporation which owns or operates, or both, a hospital or health facility which is located outside the corporate limits of a municipality.

(10) FINANCIAL BASIS FOR ELIGIBILITY: (a) A determination that a service was provided or a power was exercised shall be based on the financial support provided during an applicant's fiscal year containing July 1, 1976. Subsequently, the financial support shall be determined from the applicant's previous fiscal year containing July 1 of the previous entitlement period.

(b) Financial support is defined as a minimum cash disbursement of not less than 20 percent of the amount received for a category of service funded during the previous fiscal year or, in the case of a newly acquired power, a budget appropriation not less than 20 percent of the amount to be received for the eligible category of service. (Eff. 9/5/76, Reg. 59)

Authority: AS 43.18.010 AS 44.47.050(14)
AS 43.18.040 AS 44.47.160

19 AAC 30.030. DATE OF ELIGIBILITY. Eligibility for receipt of state aid provided by AS 43.18.010 – 43.18.045 is predicated upon the possession and exercise of a power or provision of a service by an applicant as of July 1 of the entitlement period. (Eff. 9/5/76, Reg. 59)

Authority: AS 43.18.040
AS 44.47.050(14)
AS 44.47.160

19 AAC 30.040. APPLICATION. (a) Application for state aid to local governments under AS 43.18.010 – 43.18.045 shall be made on forms prescribed by the commissioner.

(b) Not later than August 15 of the entitlement period, the department will forward application forms to each municipality incorporated before July 1 of the entitlement period and to every other potential applicant incorporated before July 1 of the entitlement period which the department is aware of and which it believes may be eligible for state aid.

(c) As a condition to participation in the program, application for state aid under AS

43.18.010 – 43.18.045 shall be returned to the department mailed no later than November 1 of the entitlement period. Based on information certified by the municipal officials and contained in the application submitted, the commissioner will prepare an initial determination of entitlement no later than December 15 and will mail notice of the amount of entitlement to each applicant determined eligible. However, if the commissioner determines that an applicant has failed to comply substantially with AS 43.18.010 – 43.18.045 and the regulations of this chapter or failed to provide the category of service or failed to exercise the power funded during a previous entitlement year, the commissioner will reduce the current entitlement of the applicant by the difference between the sum of the prior year payments and the proper entitlements, or demand the sum of payment and prepayment amount be repaid to the department if the current entitlement is insufficient. (Eff. 9/5/76, Reg. 59)

Authority: AS 43.18.010
AS 44.47.050(14)
AS 44.47.160

19 AAC 30.050. APPEAL. (a) Within 10 days after receipt of the notice of entitlement from the department, an applicant may appeal the determination of initial entitlement to the commissioner. The appeal shall be in writing and shall identify the particular category or categories to which the applicant takes exception, the determination of entitlement to which the applicant takes exception, and the reasons for its exception. The appeal shall include all relevant supporting evidence.

(b) The commissioner shall review the record of appeal and enter the final determination of entitlement. The commissioner may affirm or modify the determination of entitlement previously entered, and shall notify the applicant of the decision.

(c) If the applicant fails to appeal an initial determination within the time set forth in subsection (a) of this section, the determination of entitlement entered pursuant to sec. 40(c) of this chapter constitutes the final determination of the department.

(d) The manner of computation of population may not be made the subject of an appeal. (Eff. 9/5/76, Reg. 59)

Authority: AS 43.18.040
AS 44.47.050(14)
AS 44.47.160

19 AAC 30.060. POPULATION DATA. (a) The date for determination of population of an applicant is July 1 of the entitlement year.

(b) The population data used in determination of allocations of state aid and adjustments to those allocations will be the official report of the United States Bureau of the Census. However, an applicant may substitute for the official report of the United States Bureau of the Census

(1) an enumeration, certified as true and correct by the governing body of the municipality or chief administrative officer of a volunteer fire department located outside a municipality, specifying the names of residents of the municipality, service area, or area served by a fire department, prepared according to the criteria established by the department; or

(2) an estimate of population based upon other reliable data such as public school enrollment figures, public utility connections, registered voters, and certified employment payrolls; or

(3) the latest military population supplied by the adjutant general for the military population residing on a military reserve; or

(4) the latest available population estimate prepared by the Division of Employment Security, Alaska Department of Labor.

(c) The commissioner may require each applicant which offers an estimate of its population to submit such evidence as may be necessary to verify computation of the population estimate. The commissioner may require the applicant to provide further information within 10 days of the date of receipt of notification, or the estimate will be rejected and allocations made on the basis of the best data available to the department. (Eff. 9/5/76, Reg. 59)

Authority: AS 43.18.010(c) AS 44.47.050(14)
AS 43.18.040 AS 44.47.160

19 AAC 30.070. FINANCIAL REPORTS. (a) Each unified municipality, organized borough, home rule city, city of the first class, hospital, nonmunicipal health facility, or other facility sponsor shall submit one copy of its annual audit for the fiscal year preceding the entitlement period. Preparation of the audit shall be by a licensed accountant.

(b) Each city of the second class and each volunteer fire department located outside a municipality shall submit an audit or certified statement of income and expenditures of the accounts and financial transactions for the fiscal year preceding the entitlement period in a form approved by the commissioner.

(c) No payment of a final entitlement for the applicant will be made until an audit or statement of income and expenditures is filed by the applicant with the department. (Eff. 9/5/76, Reg. 59)

Authority: AS 43.18.010(c)
AS 43.18.040
AS 44.47.050(14)
AS 44.47.160

19 AAC 30.080. PREPAYMENT AND BUDGETS. (a) The commissioner may provide for prepayment to an applicant a sum not to exceed 50 percent of the previous year's entitlement computed without regard to any proration and not to exceed the current year's entitlement.

(b) Prepayments will be allowed to an applicant upon receipt by the department of a completed application and approved budget mailed no later than October 1 of the entitlement year.

(c) Prepayments shall be deducted from the entitlement prior to transmittal of the balance of the entitlement due. (Eff. 9/5/76, Reg. 59)

Authority: AS 43.18.040
AS 44.47.050(14)
AS 44.47.160

19 AAC 30.090. OVERPAYMENT AND ADJUSTMENT. (a) After mailing of prepayments, if the commissioner determines that the prepayment mailed to an applicant exceeds the entitlement payable to an applicant during the entitlement period, the commissioner shall

(1) request that the difference between the amount of prepayment and the proper entitlement be repaid to the department; or

(2) reduce, in the next entitlement period, the entitlement to an applicant by the difference between the sum of the payments and the proper entitlement.

(b) After mailing of the balance of the entitlement due to an applicant, if the commissioner determines that the sum of the prepayment and final payment exceeds the entitlement payable to the applicant during an entitlement period, the commissioner shall

(1) request that the difference between the sum of the payments and the proper entitlement be repaid to the department; or

(2) reduce, in the next entitlement period, the entitlement to an applicant by the difference between the sum of the payments and the proper entitlement. (Eff. 9/5/76, Reg. 59)

Authority: AS 43.18.020
AS 44.47.050(14)
AS 44.47.160

19 AAC 30.100. PRORATING THE ANNUAL APPROPRIATION FOR THE PROGRAM. If the amount appropriated is insufficient for the purpose of each applicant's share authorized under AS 43.18.010 – 43.18.045, such funds as are available shall be distributed pro rata among the applicants based upon the notices of final entitlement. (Eff. 9/5/76, Reg. 59)

Authority: AS 43.18.040
AS 44.47.050(14)
AS 44.47.160

19 AAC 30.110. INCORPORATION OR DISSOLUTION OF AN APPLICANT. (a) An applicant which is incorporated during the entitlement period is not eligible to receive state aid for the entitlement period during which it was incorporated.

(b) An applicant which is to be dissolved pursuant to AS 29.68.500 during the entitlement period will receive an entitlement payment prorated over the number of days in the entitlement period during which it has been in existence.

(c) Grants shall be made to facilitate the organization of volunteer fire departments located outside a municipality from the funds available. Requests may be made any time during the entitlement year on a proper application form. (Eff. 9/5/76, Reg. 59)

Authority: AS 43.18.040
AS 44.47.050(14)
AS 44.47.160

19 AAC 30.120. UNIFIED MUNICIPALITIES. For purposes of AS 43.18.010 – 43.18.045 and the regulations of this chapter, a unified municipality shall be treated as an organized borough. (Eff. 9/5/76, Reg. 59)

Authority: AS 43.18.040
AS 44.47.050(14)
AS 44.47.160

19 AAC 30.130. FINAL DETERMINATION FOR THE PROGRAM. The Department of Community and Regional Affairs will finally approve or disapprove entitlements based upon information provided by the applicant and other departments of the state. (Eff. 9/5/76, Reg. 59)

Authority: AS 43.18.040
AS 44.47.050(14)

payees. (§ 7-1-6 (c) ACLA 1949; am § 20 ch 186 SLA 1957; am § 1 ch 44 SLA 1969; am § 5 ch 149 SLA 1978)

Effect of amendment. — The 1978 amendment added the present second sentence.

Chapter 18. State Aid to Local Governments.

Article
2. Aid for School Construction (§§ 43.18.100 — 43.18.135)

Article 1. Aid for Miscellaneous Municipal Purposes.

Section
10. State aid to local governments
30. Local tax levy reduction

Sec. 43.18.010. State aid to local governments.

(j) If construction of a facility began after January 1, 1968 and state matching aid for construction approved for payment to the local government or other facility sponsor constitutes less than 25 per cent of the total project cost, the state shall pay to the local government or other facility sponsor each fiscal year a sum equal to $2,500 a bed for the maximum number of beds provided for in the construction design of the facility or five per cent of the total project cost, whichever is greater. State aid provided for in this subsection shall continue until the local government or other facility sponsor has received an amount which, combined with state matching money for construction of the facility, equals 25 per cent of the total project cost. No funds received for construction shall be used for any other purpose.

(k) A city or borough may not receive state shared revenue based on the population residing on that portion of a military reservation annexed to a city or borough after January 1, 1973, except as provided in this subsection. If a military reservation is located within a city or borough, the city or borough is limited in its entitlement to state shared revenue, based on the population residing on the reservation, as follows: 50 per cent of the amount paid per capita for police protection under (a)(1) of this section; 25 per cent of the amount paid per capita for parks and recreation under (a)(5) of this section; and 50 per cent of the amount paid per capita for transportation facilities or services under (a)(6) of this section.

(l) For the purposes of (j) of this section, "total project cost" includes, in addition to costs directly related to the project, the sum total of all costs of financing and carrying out the project. These include, but are not limited to, the costs of all necessary studies, surveys, plans and specifications, architectural, engineering or other special services, acquisition of real property, site preparation and development, purchase, construction, reconstruction and improvement of real property and the acquisition of machinery and equipment as may be necessary in connection with the project; an allocable portion of the administrative

and operating expenses of the grantee; the cost of financing the project, including interest on bonds issued to finance the project; and the cost of other items, including any indemnity and surety bonds and premiums on insurance, legal fees, fees and expenses of trustees, depositaries, financial advisors, and paying agents for the bonds issued as the issuer considers necessary.

(am § 24 ch 168 SLA 1978; am § 3 ch 173 SLA 1978)

Effect of amendments.

The first 1978 amendment added subsection (l).

The second 1978 amendment, effective July 1, 1978, added "or five per cent of the total project cost, whichever is greater" to the end of the first sentence of subsection (j).

As the rest of the section was not affected by the amendment, it is not set out.

Editor's note. — Subsection (k) is set out above to correct a typographical error in the main pamphlet.

Sec. 43.18.030. Local tax levy reduction. (a) The intent of §§ 10—100 of this chapter in authorizing state aid for educational purposes and municipal services is that municipalities which levy taxes reduce those levies in reasonable proportion to the amount of state aid received by the municipality for a given fiscal year.

(b) If the municipality levies and collects real or personal property taxes, the governing body shall furnish the following notice with tax statements mailed for the fiscal year for which aid is received under AS 14.17 and §§ 10—100 of this chapter:

"NOTICE TO TAXPAYER

For the current fiscal year the (city) (borough) has been allocated the following amount of state aid for school and municipal purposes under the public school foundation program (Alaska Statutes 14.17), the municipal services revenue sharing program of Alaska Statutes 43.18.010 — 43.18.050, and the program of state aid for retirement of school construction debt (Alaska Statute 43.18.100):

PUBLIC SCHOOL FOUNDATION PROGRAM ASSISTANCE	$
STATE AID FOR RETIREMENT OF SCHOOL CONSTRUCTION DEBT	$
AID BASED ON MUNICIPAL SERVICES FURNISHED (fire protection, police protection, air or water pollution control, land use planning, road maintenance, parks and recreation, transportation facilities and services, hospital operation)	$
Total Aid	$

ALASKA STATUTES
TITLE 43, CHAPTER 18
STATE AID TO LOCAL GOVERNMENTS
AS 43.18.010 - AS 43.18.045

Section

10. State aid to local governments
12. Area cost-of-living differential
20. Construction and implementation of chapter
30. Local tax levy reduction
40. Regulations
45. Unification, merger, or consolidation of municipalities

Sec. 43.18.010. STATE AID TO LOCAL GOVERNMENTS. (a) During each fiscal year the state shall pay to a city or organized borough of any class which has power to provide the following services and exercises that power

(1) $12 per capita to cities and boroughs providing police protection, subject to the conditions of this paragraph and (g) of this section;

(A) municipal police protection shall be available 24 hours a day;

(B) municipal police officers shall be U. S. citizens who are at least 19 years of age and who have not been convicted of a crime involving moral turpitude within the past 10 years;

(2) $7.50 per capita to cities and boroughs providing fire protection;

(A) fire protection includes, but is not limited to, fire protection provided by a volunteer fire department registered with the state fire marshal which has official recognition and financial support from the city or borough in which it is located;

(B) in addition to the grants authorized under this section, the state shall pay to a volunteer fire department registered with the state fire marshal and serving an area not in an organized borough or a city a sum for protection purposes equal to $7.50 per capita for the population served by the department, as determined by the state fire marshal using the latest figures of the United States Bureau of the Census or other reliable data; grants shall be made on the same basis to facilitate the organization of volunteer fire departments in an area not in an organized borough or a city, upon application of the proposed fire protection group to the state fire marshal and approval of applications according to standards of organization and service prescribed by regulations promulgated by the state fire marshal;

(3) $2 per capita to cities and boroughs providing air or water pollution control or both;

(A) in order to qualify for air pollution control aid the municipalities shall be either engaged in comprehensive study of an air pollution control program or implementation of an air pollution control program;

(B) in order to qualify for water pollution control aid the municipalities shall either have primary or secondary sewage treatment facilities under construction or be providing primary or secondary sewage treatment;

(4) $2 per capita to cities and boroughs providing land use planning, subject to the conditions of this paragraph;

(A) the municipalities shall be in the process of preparing or updating a comprehensive land use plan or be implementing a comprehensive land use plan through exercise of zoning powers; and

(B) if the municipality has a population of fewer than 12,000 persons, the municipality shall qualify for aid under this paragraph by availing itself of planning assistance through either:

(i) a staff planner charged with the primary responsibility of land use planning and plan implementation; or

(ii) an annual contract with a recognized planning firm to provide land use planning and plan implementation on a consulting basis with a work program outline approved by the Department of Community and Regional Affairs; or

(iii) the State's continuing planning advisory service program through the Department of Community and Regional Affairs;

(C) if a municipality has a population over 12,000 persons, the municipality, to qualify for aid under this paragraph, shall employ a staff planner charged with the primary responsibility for land use planning and plan implementation;

(5) $5 per capita to cities and boroughs providing for parks and recreation;

(6) $5 per capita to cities and boroughs providing transportation facilities or services limited to municipally-operated small boat harbors, ports, airports, or transit systems.

(b) During each fiscal year the state shall pay to a city or organized borough of any class which has power to provide for road maintenance and exercises the power a sum equal to $1,500 a mile for each mile of road, street or highway maintained by the local government, excluding the official state highway system, roads, streets or highways not dedicated to public use, any roads, streets or highways maintained under the local service road program (AS 19.30.111 - 19.30.251), and alleyways, in accordance with regulations adopted by the Department of Highways. No payments may be made for maintenance of roads not used by automotive equipment. Frozen waterways and connections from inhabited areas to the waterways which may be safely used for public transportation by automotive equipment and are so used during a portion of a year are eligible for payments of $900 per mile if the waterways and connections are maintained during the period of use by a municipality or combination of municipalities. The Department of Community and Regional Affairs after consultation with the Department of Highways, shall determine which waterways and connections qualify and, where the waterways or connections lie outside the corporate limits of a municipality, which municipality is eligible for the shared revenue unless the municipalities involved have agreed in writing to a particular distribution.

(c) For purposes of this section, population shall be determined by the latest figures of the United States Bureau of the Census or other reliable population data, including but not limited to public school enrollment figures, public utility connection, registered voters or certified employment payrolls.

(d) If a borough exercises the powers in (a) of this section in the borough area outside cities only, or in a service area only, the grants authorized under this section shall be based on the population of the borough area outside cities or the service area respectively.

(e) If the services in (a) and (b) of this section are provided by a service area, the borough shall give to the service area an amount equal to the funds provided by the state for the services provided by the service area.

(f) Funds received by a city, borough, or service area under this section may be expended for any public purpose for which it has power to expend public funds, except as provided in (h) of this section.

(g) If a city within an organized borough provides police protection services, the borough may not qualify for aid under (a)(1) of this section unless

(1) police protection services are provided in the borough area outside cities, or if limited to a service area, in the service area, through borough contract with a city or the state; or

(2) the borough assumes and exercises power to provide police protection services on an areawide basis in the manner provided by law.

(h) During each fiscal year the state shall make payments as follows

(1) $2 per capita to a municipality which has the power to provide health facilities and services and in which a hospital is located;

(2) in addition to the payment made under (1) of this subsection

(A) the state shall make payments to a municipality which has the power to provide hospital facilities and services and which exercises the power on the basis of $1,000 per bed for each bed actually used for patient care limited to the number of beds provided for in the construction design of the hospital, or $75,000 a hospital for those hospitals with 10 or more beds, or $25,000 a hospital for those hospitals with less than 10 beds, as the municipality may elect; funds received under this subparagraph may be used only for hospitals and shall be apportioned among qualifying hospitals as the municipality determines;

(B) the state shall make payments on the basis set out in (A) of this paragraph to a municipality for nonprofit hospitals not operated by a municipality if the municipality first certifies to the department that the hospital is in compliance with all standards for hospitals which have been adopted by the municipality; in the absence of this certification the funds which would have gone to the hospital lapse into the state general fund; payments to the municipality shall be transferred to the hospital in accord with the basis by which the entitlement was generated by the hospital and shall be applied to the annual cost of operation and maintenance of the hospital or for the provision of health care service at the hospital as the directors of the hospital determine;

(C) a hospital may not receive payment under both (A) and (B) of this paragraph;

(3) $1,000 per bed to an organized borough or city outside an organized borough in which a health facility is operated for each bed actually used for patient care, limited to the number of beds provided for in the construction design of the health facility, or $4,000 per health facility as the local government may determine;

(4) funds received by a municipality under (1) or (3) of this subsection shall be used for expenses of health services or operation and maintenance of facilities as the municipality determines;

(5) before funds may be distributed under this subsection, the commissioner of health and social services shall certify to the distributing agency that any accumulation of assets by non-profit corporations or other recipients under this subsection are dedicated irrevocably to a public purpose.

(i) In (h) and (j) of this section

(1) "hospital" means a licensed hospital determined by the Department of Health and Social Services to be a general hospital; the term excludes facilities operated or wholly supported by the state or the federal government;

(2) "health facility" means public health centers, maternity homes and community mental health centers, facilities for the mentally or physically handicapped, nursing homes and convalescent centers which are licensed, when required, by the state under AS 18.20.010 - 18.20.130 and are owned or operated or both by a local government or by a non-profit corporation or other non-profit sponsor; the term excludes facilities operated or wholly supported by the state or the federal government.

(j) If construction of a facility began after January 1, 1968 and state matching aid for construction approved for payment to the local government or other facility sponsor constitutes less than 25 percent of the total project cost, the state shall pay to the local government or other facility sponsor each fiscal year a sum equal to $2,500 a bed for the maximum number of beds provided for in the construction design of the facility. State aid provided for in this subsection shall continue until the local government or other facility sponsor has received an amount which, combined with state matching money for construction of the facility, equals 25 percent of the total project cost. No funds received for construction shall be used for any other purpose.

(k) A city or borough may not receive state shared revenue based on the population residing on that portion of a military reservation annexed to a city or borough after January 1, 1973, except as provided in this subsection. If a military reservation is located within a city or borough, the city or borough is limited in its entitlement to state shared revenue, based on the population residing on the reservation, as follows: 50 percent of the amount paid per capita for police protection under (a) (1) of this section; 25 percent of the amount paid per capita for parks and recreation under (a) (5) of this section; and 50 percent of the amount paid per capita for transportation facilities or services under (a) (6) of this section.

Sec. 43.18.012. AREA COST-OF-LIVING DIFFERENTIAL. (a) State payments to a city or an organized borough or to an unorganized borough volunteer fire department under sec. 10 of this chapter shall reflect area cost-of-living differentials. Amounts distributed shall be based upon the sum of per capita, per mile and per bed or facility grants due each city or organized borough or volunteer fire department multiplied by the appropriate area cost-of-living differential. The area cost-of-living differential for each city and organized borough or volunteer fire department shall be determined annually by election district under the provisions of AS 39.27.030; however, the area cost-of-living differential to be applied shall not result in an amount to be distributed less than the base allocation.

(b) The election districts used in (a) of this section are those designated by the proclamation of reapportionment and redistricting of December 7, 1961, and retained for the house of representatives by proclamation of the governor, September 3, 1965.

Sec. 43.18.020. CONSTRUCTION AND IMPLEMENTATION OF CHAPTER. (a) This chapter may not be construed so as to create a debt of the state.

(b) The special municipal services account is established. Funds to carry out the provisions of sec. 10 of this chapter may be appropriated annually by the legislature to the account. If amounts in the account are insufficient for the purpose of each local government's or other recipient's share authorized under sec. 10 of this chapter, such funds as are available shall be distributed pro rata among eligible local governments and other recipients.

(c) Money in the special municipal services account which, at the end of the fiscal year for which the money is appropriated, exceeds the amount required for the allocations authorized in this chapter reverts to the general fund.

Sec. 43.18.030. LOCAL TAX LEVY REDUCTION. (a) The intent of this chapter in authorizing state aid for municipal purposes is that local governments which levy property taxes reduce those levies in reasonable proportion to the amount of state aid received by a local government for a given fiscal year.

(b) The governing body shall furnish the following notice with tax statements mailed for the fiscal year for which aid is received under this chapter:

"NOTICE TO TAXPAYER

For the current fiscal year the (city) (borough) has been allocated the following amount of state aid for school and municipal purposes under the Public School Foundation Program (Alaska Statutes 14.17) and the revenue-sharing provisions of Alaska Statutes 43.18:

SCHOOL AID	$
AID BASED ON MUNICIPAL SERVICES FURNISHED (fire protection, police protection, air or water pollution control, land use planning, road maintenance, parks and recreation, transportation facilities and services, hospital operation)	$
TOTAL AID	$

The millage equivalent of this state aid, based on the present dollar value of a mill in the municipality, is _____ mills."

Sec. 43.18.040. REGULATIONS. The Department of Community and Regional Affairs shall adopt regulations necessary to carry out the purposes of secs. 10 - 99 of this chapter. The regulations shall include minimum standards required to qualify a municipality for grants for each service and provisions for a performance report adequate to demonstrate to the department that each service for which credit

was allowed was actually performed by the municipality, at least at the prescribed minimum level.

Sec. 43.18.045. UNIFICATION, MERGER OR CONSOLIDATION OF MUNICIPALITIES. If a borough and the cities within the borough merge, consolidate or unify in accordance with AS 29.68, the amount of revenue sharing to which the successor municipality is entitled shall be computed for the first year and each year thereafter as if the merger, consolidation or unification had not occurred, and the successor municipality shall recieve not less than the amount so computed.

Total Entitlements		$21,224,756	$18,828,909
Less Prior Year Adjustments		61,981	54,985
Final Entitlements		$21,162,775	$18,773,924

RATES USED TO COMPUTE GRANT ENTITLEMENTS
UNDER THE STATE AID TO LOCAL GOVERNMENTS
MUNICIPAL SERVICES REVENUE SHARING PROGRAM

Municipal Services	Rates
Police Protection	$12 per capita
Military	6 per capita
Fire Protection	$7.50 per capita
Air(*)/Water(**) Pollution Control	$2 per capita
Land Use Planning	$2 per capita
Parks and Recreation	$5 per capita
Military	1.25 per capita
Transportation Facilities	$5 per capita
Military	2.50 per capita
Road Maintenance	
Public Roads	$1,500 per mile*
Ice Roads	900 per mile**
Health Services	$2 per capita
Hospitals	$75,000 per hospital*
	25,000 per hospital**
	1,000 per bed***
Health Facilities	$4,000 per facility*
	1,000 per bed**
Construction Aid	$2,500 per bed*
	5% of construction cost**
	(whichever is greater)

DEFINITIONS

COLA - means cost-of-living allowance used in computing total grant entitlements.

FY 79 - means the fiscal year ending June 30, 1979.

	Total for Boroughs & Unified Govt's	Total for Cities	Total for Fire Protect-ion Groups	Total FY 1979 Approved Entitlements
Police	$ 2,167,788	$ 1,369,943		$ 3,537,731
Fire	1,859,306	869,394	$ 60,942	2,789,642
Air/Water	590,612	178,134		768,746
Land Use Planning	706,808	51,856		758,664
Parks & Recreation	1,546,252	416,710		1,962,962
Transportation	1,906,158	300,595		2,206,753
Roads	925,605	1,250,264		2,175,869
Health Services	449,186	115,142		564,328
Hospitals	779,000	743,000		1,522,000
Health Facilities	580,000	510,000		1,090,000
Construction Aid	1,959,543	542,226		2,501,769
Entitlements	13,470,258	6,347,264	60,942	19,878,464
COLA	308,783	1,026,068	11,441	1,346,292
Total Entitlements	$13,779,041	$7,373,332	$72,383	$21,224,756
Less Prior Year Adjustments				61,981
Final Approved Entitlements				$21,162,775
TOTAL APPROPRIATED TO THE REVENUE SHARING ACCOUNT				$18,688,000
PLUS SPECIAL APPROPRIATION FOR FIVE LATE APPLICANTS (Seward, Upper Kalskag, Lower Kalskag, Copper Center VFD, and Iliamna VFD)				$ 106,327
Total FY 1979 Appropriation				$18,794,327
ACTUAL DISBURSEMENT				18,773,924
BALANCE				$ 20,403

NOTES

As the total entitlements exceeded the amount appropriated to the revenue sharing account, each recipient's share was prorated at 88.712%.

All FY 1979 grant funds were allocated when entitlements were prorated; however three cities failed to submit FY 1978 financial statements by June 30, 1979, a prerequisite to receipt of State shared revenues. This accounts for the balance.

IN THE HOUSE BY THE COMMUNITY AND REGIONAL AFFAIRS COMMITTEE

CS FOR HOUSE BILL NO. 886

IN THE LEGISLATURE OF THE STATE OF ALASKA

ELEVENTH LEGISLATURE - SECOND SESSION

A BILL

For an Act entitled: "An Act making a special appropriation to the Department of Community and Regional Affairs, unorganized borough regional planning account; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. The sum of $300,000 is appropriated from the general fund to the Department of Community and Regional Affairs, unorganized borough regional planning account, for allocations to unorganized boroughs for the preparation of management programs.

* Sec. 2. The unexpended and unobligated portion of the appropriation made by this Act lapses into the general fund June 30, 1982.

* Sec. 3. This Act takes effect on the effective date of a version of an Act entitled, "An Act relating to unorganized boroughs, establishing unorganized boroughs, establishing a program of planning assistance for unorganized boroughs, authorizing adoption of home rule charters by unorganized boroughs, and directing submission of recommendations concerning adjustment of the boundaries of service areas of the unorganized borough; and providing for an effective date."

III. ANALYSIS (See Fiscal Note Preparation Instructions, Section III)

The Department anticipates that one full time position will be needed for administration and coordination of the appropriation within this bill. It is assumed the grant will serve 4 of the 21 areas in the unorganized borough. The position will have to travel to each of the 4 areas on three occasions. It is assumed that grant funds will continue to be appropriated.

BILL WORK SHEET

BILL NUMBER 897 RE Repealing limitation of the rate of sales tax limited by a municipality

Received from _____ Fical Note _____
Referred to — LAA Legal Contact _____

HB921 - Introduced at request of P. Hay for Bethel

CONTACTS: State Affairs Committee (M Mullen)

Sponsor: For Homer -
they limit to 3% as any sales tax has to
Boroughs can go up to 6%
Cities limited to 3%

Boroughs & cities limited to 3%.

Definition of "use tax" not clear

Use tax could be levied along with sales tax.

(1973 AG opinion) - didn't - Bristol Bay so hard to impose sales "use tax". Can call it tax & use tax

Mun 16 - advocacy division
3% to 4% - eliminate sealing fee & legislation
Out of 4% - would consider 1½% for
TV station would be lowered
Cologne would be saving $30 mil
Bed tax would be separate

As long as it goes before the people it
is not a problem.

Letter to Bill Ray

United Fishermen's Ass - Sharon Mahlen
Concerns re Communities imposing sales tax on
fish. 3% - left limit
Selective selling by fishermen
Bristol Bay - options don't work - SE different

Get local note re "home rule" & C&RA

Suggests limiting amendment to retail sales

CITY of BETHEL

P. O. Box 388 • Bethel, Alaska 99559
543-2297 — Area Code 907

March 6, 1980

Rep. Bill Parker, Chairman
Community & Regional Affairs
Pouch V
Juneau, Alaska 99811

Rep. Russ Meekins, Chairman
Finance Committee
Pouch V
Juneau, Alaska 99811

The Bethel City Council and Finance Committee have pondered the question of how the local government could receive additional tax dollars that would be fair and equitable. Property tax was ruled out because the City would end up foreclosing on a high percentage of citizens as many of them live off of subsistence or only have seasonal jobs. Fish tax was considered but our boundaries do not cover the point of sale of the fish. The other form of taxation which the Council considered to be fair is a local income tax, as this is the form of revenue that the State and Federal Governments use to fund their services, it should be considered by the legislature.

Since House Bills 897 and 921 have been introduced to increase sales tax from the existing ceiling of 3%, the City of Bethel would like to strongly support its passage by the legislature.

As sales tax is the only viable means of taxation, each community should not be restricted by the present 3% ceiling, it should be a local decision. Each community should have the opportunity to fund its own services through the form of taxation that they feel is the most fair and equitable means.

Your favorable consideration of these bills would be greatly appreciated.

Sincerely,

Lyman Hoffman
City Manager

JUNEAU ALASKA"

THE CITY OF BETHEL WOULD LIKE TO GO ON RECORD IN SUPPORTING THE INTENT OF HB 897 WHICH WOULD ALLOW EACH MUNICIPALITY TO DECIDE HOW MUCH SALES TAX VERSUS PROPERTY TAX THEY WOULD LEVY IN ORDER TO PROVIDE COMMUNITY SERVICES. AS MUCH FREEDOM IN SELECTING THE LEVEL OF TAXATION AS WELL AS THE SOURCE OF TAXATION IS WHAT SHOULD BE ALLOWED AS THERE ARE SO MANY DIFFERENT CIRCUMSTANCES IN ALASKA. HB 897 CERTAINLY IS IN THE RIGHT DIRECTION.

Gordon Stockdale, Administrative Assistance, Rep. Duncan
Discusses changes in CS work draft with the committee.

Carney - Suggests word change on p. 4 line 14 which would convey the intent of "encourage in the cration and development of enterprises" rather than the use of"corporations".

Metcalfe - Suggests adding a 7-yr. sunset provision.

Branson - Expresses concern that this appears to be just another Council which has no power. What assurance is there that it will do anything?

Stockdale - Believes that having the Lt. Gov. as Chairman of the Council will assure that something is done.

Parr - Suggests that there be wording added on p. 4, a new #6 which would allow that the Council would be responsible for directing the state use of federal money for rural development purposes. This would address Rep. Branson's concern that the group may prove to be powerless.

Concurrence among committee members that these modifications would be made in the Committee Substitute.

COMMITTEE ACTION: CS to be drafted with amendments discussed.

HEARING DATE: 4/7/80

MEMBERS PRESENT:

Bill Parker	X	Pat Carney	X
Margaret Branson	X	Charlie Parr	X
Pat O'Connell	X	Fred Zharoff	X
		Ray Metcalfe	

Gordaon Stockdale, Administrative Assistant, Rep. Jim Duncan

Reviews changes in the committee substitute for the committee.

Parker - Questions if there is a need for a definition of "rural"? Stockdale responds that by defining one might create a vacumm for the urban areas and create a need to establish such a Coucil for the urban areas.

Carney - Believes that the Resource Development Council could do the job for the whole state. Stockdale stresses the need to get a cooperative effort for the rural areas.

Parr - Concerned that the office wouldn't be doing anything specific. Questions what the office can do to create industry. Stockdale says the office could access resource capabilities and facilitate use of such resources. Parr doesn't see that this Council is doing anything "different".

Carney - Doesn't like having just the rural areas addressed. Doesn't like policy statements on p. 1 lines 23-26. The renewable resources of the state should be developed and the Council should be composed of representatives of individual industries (fishing, timbering, etc)

Zharoff - Supports p.1 line 24 statement

Parr - On p. 1 line 24 "if there is an economic base" should be added. Doesn't believe in the statement as it stands.

Carney - Rural like style should be taken into consideration but he doesn't believe it should be given highest priority. Sees this as another bureaucratic office. If the thrust is for whole state concerns, then he questions the staements on p.1 lines 24-26 as a problem.

Bob Palmer, Special Projects Coordinator, Office of the Governor
Reviews President's initiative which led to the

COMMITTEE ACTION:

No action

TAPE # 7 SIDE 1 Footage 260-1505

The concept originated in the White House. It is being interpreted by the Governor's Office as involving wide-spread and broadbased representation. Would use "floating" membership in the group to deal with different problems affecting different areas of the state. Improved economic opportunities would be developed. Solutions would need to be prioritzed. The designation of the lead agency has taken place with the Agricultural Council being used and there would be provision for private sector representatives as well. There would be a need for a full time staff. Currently two individuals are being considered for the job of Executive Director. An administrative order on the subject is being developed by the Governor. Core group would be established similar to HB932. Regional aquaculture association would be included. Agricultureal Action Council reps would be included. The agricultural potential of various areas needs to be expanded and the bottomfish potential developed.

Parr - What would the office do specifically?

Palmer - Would make agricultural loans availalbe.

Parr - Why is a separate Council needed? Why not use the Office of Commerce and Economic Development?

Palmer - The establishment of this separate group is being suggested because the federal government is requiring such a group and has indicated its interest in working with such a group.

Branson - Federal government hasn't done much to stimulate the economy and she believes it is silly to set up such an office to accomodate the federal government.

Palmer - There is a question of whether the monies which are coming into the state are being wisely spent and this group would establish priorities.

Carney - Development oriented prople are not included inthe proposed legislation. There would be no gain in the addition of this Council. The economic base of the whole state should be considered.

Palmer - The role of the exisiting Rural Development Council is different. Parr- That expertise should be used.
Palmer - The Governor is doing that and his Administrative Order should be ready shortly.

Carney - Legislative direction is needed. There should be specialists in different areas of expertise to advise this group.

BILL NUMBER AND TITLE: HB 932 Creating Office of Rural Development and Rural Development Council

ORIGINAL SPONSOR: Rules/Request of OTHER SPONSORS: _____

RECEIVED FROM: Budget & Audit(Duncan) FURTHER REFERRALS: Finance

HEARING DATE: 3/19/80 Joint Meeting with Senate C&RA Present: Sturgulewski,Kelly, Mulcahy,Stimson

MEMBERS PRESENT:

Bill Parker	X	Pat Carney	X
Margaret Branson	X	Charlie Parr	X
Pat O'Connell	X	Fred Zharoff	X
		Ray Metcalfe	X

Rep. Jim Duncan and Gordon Stockdale, Aide to Rep. Duncan testify on the intnet of HB 932, the history and development of the bill. Addressed their concerns relating to the narrow agency lines which are presently used for developing economic policy for rural Alaska. Want to build a role for the state in rural policy formation and want to bring federal and state resources together.
The specifics of the bill were reviewed and outlined for the Committee by Rep. Duncan.

Sen. Sturgulewski asked if it wasn't the role of the Rural Development Council to develop the policy statements and questioned those on pl. 1.

Stockdale - Pointed out the dependency of the rural areas on CETA funding and the instability of such funding and the need to develop self sustaining entities in rural Alaska.

Carney - The Council should be broadened to relate to the whole state. The Council should include representatives from private industry.

Stimson - Questions why the office is in the Office of the Governor rather than C&RA.

Parr - Questions the role of the state in the existence of a village and the policy statements on p.1. Doesn't believe that the state has a role. Asks shy the Dept. of Commerce and Economic Development can't handle the functions being proposed for the Council in this bill.

Duncan - The prime role of the Office and Council would be coordinative.

Parr - Suggests addition on p. 1 line 24 of "where there is or can be developed an economic base.

COMMITTEE ACTION:

No action.

TAPE # 4 SIDE 2 Footage 19-1636

Metcalfe - Efforts should be coordinated with groups such as the Fairbanks Town and Viallage Association. But there should not be a policy to develop economic support where it can't be developed.

Duncan - This office would cross agency lines.

Parr - Asks relationship with the cooperative Extension Sedrvice and the Rural Development Council.

Stockdale-There are no executive branch members on the Rural Development Council.

Zharoff - Questions the large size of the board (16 members) and asks why Dept. of Commerce and Economic Development isn't included.

Bob Palmer, Special Projects Coordinator, Office of the Governor

White House initiated suggestion for a Rural Policy Group. Thrust was to improve living conditions in rural America. Dept. of Agriculture is the lead agency. The Director of Agriculture is the lead person in Region X. Since the Governor's Office is already pursuing development of such a group and the reorientation of the Agricultural group, duplication of effort would result from the passage of this bill.Committee developed in Governor's Office would be an adjunct of the Agricultural Council.

Parr - Asks if Governor is planning to issue an executive order on the subject?

Palmer - Action Council has been given directive and that will be formalized

Stimson - Sees it as inconsistent that Agricultural Council would head up use of rural development money in Alaska. Focus would not necessarily be strictly agriculture.

Zharoff - Asks how Governor is defininf "rural".

Palmer - This has not been defined.

Mike DeMann

Discussed history of Dept. of C&RA and its origin in the Rural Development Office. Concern that there was no operational program to go along with the policy group. Ak. needs to get its own rural policy act together. We can make a stronger case with the federal government if we have our act together. Membership in the Council needs to be broad. Commerce and Ec. Developemtn is a resource as is DPDP. Sees Office as an opportunity to get the State's act together and to maximize initiative of the Federal Government.

Spud Williams, Tanana Chiefs Conference

Concerned that this is another "social club".Statewide organization needs to be decentralized. In the Interior an economic development district has been formed. Why create another organization? We are creating layers and layers of government on the central level.This can't work. Decentalize through the native non-porfits. Local control is necessary.

Carney - Shares some of Williams' concerns but not his negative approach.

Williams - Make the existing Departments work. Step on tail of Dept. of C&RA and make it work as an advocacy group. It could in fact be economically oriented. It has a rural perspective or "had" such a perspective.

Jeff Smith, Director of Planning, Maneuluk

Regional Strategies are a broad planning effort currently underway in his region. Economic development needs to be specifically addressed. HB932 is excellent. Past policy is to do things "to" rather than "with" people. People want to have a say.

Parr-If initiative is coming from the people, then State and federal governments should be responded to the requests.

Sturgulewski - Problem is lack of coordination. There is no relationship with operating agencies in the direction of rural policy.

April 15, 1980

Received after bill was passed out of Committee

The Honorable Russ Meekins
Chairman, House Finance Committee
Alaska State Legislature
Pouch V
Juneau, Alaska 99811

Re: CSHB 932, relating to rural development

Dear Mr. Chairman:

We wish to call to your committee's attention some legal problems presented by CSHB 932, a bill establishing the office of rural development and the rural development council.

The bill provides for members of the legislature to serve on the rural development council then vests the council with a veto power over the expenditure of federal money for rural development. As you know, the ruling in Kelley v. Hammond was that the constitution does not permit that arrangement. Moreover, by vesting the council with that power and with the duty of providing policy direction for the office of rural development and assisting it in its activities, the bill necessarily makes membership on the commission a public office. Members of the legislature may not, of course, hold other office. Begich v. Jefferson, 441 P.2d 27 (Alaska 1968). Were they to accept appointment to this commission, they might forfeit their office as legislators, that being the general rule.

Additionally, the bill provides (Sec. 44.19.22o) for the director of the office of rural development to hire staff and determine their compensation, within the budget limits. No reason occurs why this office should be different from others and not staff and fund positions in accordance with the same rules and procedures as all other agencies. This provision implies a difference.

We would recommend that lines 7-8 on page 2 of the

bill be deleted, that lines 25 and 26 on page 2 be deleted, that everything after the word "council" on line 11 and all of lines 12 and 13 on page 3 be deleted, that the words "legislative co-chairman," on line 29 on page 3 be deleted, and that the first sentence on lines 19-20 on page 4 be deleted.

We appreciate this opportunity to bring these matters to your attention.

Sincerely yours,

SUBJECT: Attached (testimony on HB 932)

Attached, for your information and comment, is a copy of the testimony I prepared and delivered last Friday before the Joint House/Senate CRA Committees on HB 932.

In essence, it is a good Bill and sorely needed to meet the problems and issues it identifies. My only problem is that it doesn't seem to go far enough to serve as an instrument to truly force the Administration to develop appropriate rural Development policies for Alaska.

I would be interested in your comments and observations. Clearly, the time has come to push this issue.

Thanks for your help.

TESTIMONY OF

PHIL SMITH, EXECUTIVE DIRECTOR
RURAL ALASKA COMMUNITY ACTION PROGRAM, INC.

BEFORE

JOINT HOUSE/SENATE COMMUNITY AND REGIONAL AFFAIRS COMMITTEES

HB 932

MARCH 28, 1980

Administration • P.O. Box 3-3908, Anchorage, Alaska 99501 • (907) 279-2511

LADIES AND GENTLEMEN OF THE JOINT COMMITTEE ON COMMUNITY AND REGIONAL AFFAIRS, FOR THE RECORD, MY NAME IS PHIL SMITH. AS EXECUTIVE DIRECTOR OF THE RURAL ALASKA COMMUNITY ACTION PROGRAM, I WELCOME AND APPRECIATE THIS OPPORTUNITY TO TESTIFY ON HOUSE BILL 932, AND TO EXPRESS MY SUPPORT FOR ITS PASSAGE. CLEARLY, THE ISSUE OF RURAL DEVELOPMENT IN ALASKA IS ONE WHICH IS BOTH TIMELY AND APPROPRIATE FOR THE LEGISLATURE TO ADDRESS.

AT THE OUTSET, I WOULD LIKE TO CONGRATULATE THE AUTHOR AND SPONSOR OF THE BILL FOR RECOGNIZING THE SERIOUS PLIGHT OF RURAL ALASKA. FURTHER, THE STATEMENT OF FINDINGS, POLICY, AND PURPOSE CONTAINED IN SECTION 1 OF THE BILL IS LAUDABLE, IF FOR NO OTHER REASON THAN THAT THE BILL PROCLAIMS THE POLICY THAT "VILLAGES AND SMALL COMMUNITIES SHOULD EXIST IN THE STATE." IN SPITE OF THAT IMPORTANT AND SIGNIFICANT POLICY STATEMENT, HOWEVER, SECTION 1 MAY BE A LITTLE TOO OPEN TO INTERPRETATION. TERMS NEED TO BE DEFINED.

FOR INSTANCE, WHAT IS REALLY MEANT BY "RURAL DEVELOPMENT," A "HEALTHLY PRIVATE ECONOMIC BASE," AND "THE ADVOCACY OF A PRIVATE ECONOMY?" IF THE ASSUMPTION IS THAT THE PUBLIC INTEREST IS TO BE SERVED BY THE EXISTENCE OF SMALL TOWNS AND VALLAGES IN ALASKA, THEN THE BILL'S EMPHASIS ON DEVELOPMENT OF A "PRIVATE ECONOMIC BASE" SEEMS TO ME TO RESPOND TO ONLY A SMALL PART OF THE CHALLENGE.

THERE IS NO DOUBT IN MY MIND THAT THERE IS A DEMONSTRATED NEED FOR THE STATE OF ALASKA TO DEVELOP AN ECONOMIC POLICY FOR RURAL ALASKA. ABSENT SUCH A POLICY, THE "ECONOMIC CRISIS" REFERRED TO IN THE BILL WILL UNDOUBTEDLY CONTINUE. ALSO, ABSENT SUCH A POLICY, IT WILL BE DIFFICULT, IF NOT IMPOSSIBLE, TO DEVISE AND IMPLEMENT APPROPRIATE POLICIES RELATING TO ENERGY, TRANSPORTATION, TELECOMMUNICATIONS, HUMAN SERVICES, LOCAL GOVERNMENT, AND THE WHOLE HOST OF OTHER PUBLIC ISSUES WHICH IMPACT THE LIVES OF VILLAGE PEOPLE.

So, yes, we need an economic policy. I am not sure, however, that we need to develop such a policy by transferring all of the assumptions of the Western Cash Economy onto the backs of village people. An "economic policy" for rural Alaska must be one which is appropriate to each locale, not one that is designed only to maximize capital in the private sector in order to develop busisnesses for their own sake. An appropriate economic policy for rural Alaska must include a thorough and sensitive analysis of the nutritional/cultural/economic imperative of subsistence. Additionally, it must be planned and it must grow from the village and from the villager's own aspirations. Any "economic policy" devised in Washington or Seattle or Juneau or Anchorage and thrust upon the villages may well do far more harm than good.

Accordingly, as the language of HB 932 is further developed, I would suggest that the Statement of Findings, Policy, and Purpose be re-worked to demonstrate a high degree of sensitivity to what rural development is really all about -- that is, the well-being of rural Alaskan people on their own terms, with their own expectations being the bell-wether against which to measure its success, and the freedom and the authority to control their own destiny. It is clearly not enough to import the failing of the Western Cash Economy to rural Alaska.

All of the above implies a significant and most complex challenge for those who would develop public policy. Unfortunately, the mechanism proposed in HB 932 (the creation of a "Rural Development Council" and a staff position, both lodged within the Office of the Governor) may not be adequate to respond to the issues and concerns that the Bill itself identifies.

The pervasive assumption behind the need to create the Council and the Office of Rural Development is that existing mechanisms already available to the Administration (such as the Department of Community and Regional Affairs and other line

DEPARTMENTS AND AGENCIES OF STATE GOVERNMENT, THE DIVISION OF POLICY DEVELOPMENT AND PLANNING IN THE GOVERNOR'S OFFICE, THE STATUTORIALLY AUTHORIZED BUT UNFUNDED RURAL AFFAIRS COMMISSION, AND OTHER STRUCTURES AVAILABLE TO THE GOVERNOR) LACK EITHER THE MANDATE, THE WILL. OR THE DIRECTION TO DO THE JOB. SINCE THERE IS A PERCEIVED LACK OF COMMITMENT ON THE PART OF THE ADMINISTRATION TO FORTHRIGHTLY ADDRESS THE PROBLEM, I AM CONCERNED THAT ALL THIS BILL REALLY DOES IS TO HAND THE GOVERNOR YET ANOTHER STRUCTURE WHICH MAY OR MAY NOT FUNCTION. THEREFORE, BOTH THE POWER AND THE AUTHORITY OF THE COUNCIL NEED TO BE CONSIDERABLY EXPANDED.

ANOTHER CONCERN I HAVE WITH THE STRUCTURE, SCOPE, FUNCION, AND MANDATE OF THE COUNCIL, AS OUTLINED BY THE BILL, IS THAT (WITH THE EXCEPTION OF THE DIRECTOR OF THE COOPERATIVE EXTENSION SERVICE OF THE UNIVERSITY), THERE IS NO ROOM FOR FEDERAL INVOLVEMENT. PRESIDENT CARTER'S DECEMBER 20TH PROMULGATION OF THE "SMALL COMMUNITY AND RURAL DEVELOPMENT POLICY" OF THE UNITED STATES GOVERNMENT IS A CLEAR INVITATION AND A CHALLENGE FOR GOVERNORS TO EXTABLISH STATE RURAL DEVELOPMENT COUNCILS AS MECHANISMS FOR INSURING COORDINATION OF JOINT FEDERAL/STATE EFFORTS TO IMPLEMENT LOCAL RURAL DEVELOPMENT PRIORITIES. IN SHORT, THE PRESIDENT IS ASKING STATES TO TELL THE FEDERAL GOVERNMENT WHAT RESPONSES IN FEDERAL POLICY AND PROGRAMS AND FUNDING PRIORITIES ARE NEEDED IN ORDER TO ACTUALIZE THE DEVELOPMENTAL DESIRES OF RURAL AMERICA.

ALTHOUGH I ADMIT IT IS POSSIBLE (EVEN TEMPTING ON OCCASION) TO BE CYNICAL ABOUT THE MOTIVES OF THE FEDERAL GOVERNMENT AS THEY RELATE TO ALASKA, THERE IS EVERY INDICATION THAT, AT LEAST IN THIS INSTANCE, THE PRESIDENT IS SERIOUS. IF THE PURPOSE OF HB 932 IS TO ESTABLISH A STRUCTURE TO TAKE ADVANTAGE OF PRESIDENT CARTER'S RURAL INITIATIVES, IT SEEMS TO ME THAT FEDERAL PARTICIPATION OF THE COUNCIL IS INDICATED.

IN CLOSING, I WOULD LIKE TO REITERATE MY SUPPORT OF HB 932, AND URGE ITS PASSAGE ONCE MORE. AS I NOTED EARLIER, THERE IS A SIGNIFICANT LACK OF POLICY DEVELOPMENT AND POLICY

DIRECTION RELATING TO COMMUNITY DEVELOPMENT IN RURAL ALASKA. THAT THIS FACT IS RECOGNIZED BY THE AUTHORS OF THE BILL AND BY THE COMMITTEES HOLDING HEARINGS ON IT IS A SIGNIFICANT STEP IN THE RIGHT DIRECTION. THE WEAKNESSES IN THE BILL WHICH I HAVE NOTED IN THIS TESTIMONY ARE MINOR. SHOULD THE COMMITTEES BE INTERESTED, I WOULD BE HAPPY TO WORK WITH THE MEMBERS TO ASSIST IN DRAFTING APPROPRIATE AMENDMENTS. BEYOND THAT, I AM SURE THAT OTHERS TESTIFYING TODAY WILL LIKEWISE COMMIT THE NECESSARY TIME AND EFFORT TO ASSURE THAT A COMMITTEE SUBSTITUTE EMERGES WHICH CAN DO THE JOB THAT SO DESPARATELY NEEDS TO BE DONE.

THANKS VERY MUCH FOR THE OPPORTUNITY TO TESTIFY. I WOULD BE HAPPY TO ENTERTAIN ANY QUESTIONS YOU MIGHT HAVE.

DRAFT
12/6/79

BACKGROUND AND DISCUSSION PAPER ON STATE-LEVEL RURAL DEVELOPMENT COORDINATION

(For Use at December 19 Meeting of USDA Rural Development Coordinating Committee)

Rq; NAGLE

Background:

1. The President's Policy Statement on Small Communities and Rural Development calls for strengthening the interdepartmental Assistant Secretaries Working Group on Rural Development by designating the President's Assistant for Intergovernmental Affairs or his designee to be cochairperson with the Secretary of Agriculture's designee. The statement also assigns to the Working Group primary responsibility for implementing those programmatic initiatives and reforms requiring interagency coordination and cooperation.

2. In calling for support of state rural development councils to institutionalize and coordinate rural development efforts within state government and to provide a focus for coordination with federal agencies, the White House statement echoed the first three directives to State Rural Development Coordinating Committees listed in Secretary Bergland's Memorandum No. 1979 on Rural Development of March 21, 1979:

1) Support the establishment of a governor's rural development council or similar structure for rural development policy management within a State government.

2) Work with the governor's council and/or other appropriate agencies in the State to develop State and local rural development strategies.

3) Develop strategies for targeting USDA resources and encouraging other Federal and State agencies to cooperatively target their programs on locally determined rural needs.

3. Entities already in existence at the time of the Secretary's Memorandum include the Minnesota Rural Development Council under the Office of the Governor, the Alaska Rural Development Council, and Nevada's Resource Action Council. In recent months, governors in North Carolina, New York, New Mexico, and Arizona have established Rural Affairs Councils with staff support provided in part by Section 111 Rural Planning grants from FmHA. Planning for similar councils is underway in Maine, Vermont, New Hampshire, and Puerto Rico. They have also received Section 111 grants to help staff such councils. The governors of West Virginia and Arkansas are currently considering the official designation of present state Rural Development Committees if membership on them is broadened to include all the federal and state agencies with programs that impact on development in rural areas. The Rural Affairs Councils previously in existence, as well as those recently established, vary widely in structure and in the extent of the involvement of federal agencies.

12 States & Puerto Rico

DRAFT
12/6/79

4. Some outstanding examples of State Rural Development Committees which are successfully involving a wide range of non-USDA federal agencies, as well as state agencies and substate planning districts, include Florida, Massachusetts, Wyoming, Missouri, and Pennsylvania. Other committees that are undergoing revival and restructuring and that show promise of becoming effective interagency coordinating instruments include Washington, Oregon, Idaho, Wisconsin, and Kentucky. In the Kentucky restructuring, consideration is being given to asking the Governor to designate a state cochairperson of the committee who will serve with the elected federal chairperson.

10 states

Most of the other State Rural Development Committees in both membership and emphasis are dominated by USDA. Although some have involved state agencies, very few have managed to attract the non-USDA federal agencies, such as HUD, EPA, and EDA whose funds account for so much of what is spent on development in rural areas. Although the committees have served as useful forums and coordination instruments for USDA itself, few could be described as effective instruments for coordination of agencies and programs outside USDA.

Action Recommendations:

1. The cochairpersons of the Assistant Secretaries Working Group on Rural Development should:

a. invite governors who have already established Rural Affairs Councils to include either directly or on relevant subcommittees or task forces the key federal agencies with development programs impacting on rural areas;

b. invite governors without such councils to establish them with the degree of federal agency involvement that will make the councils the major instrument of rural development coordination as called for in Section 603 of the Rural Development Act of 1972;

c. request the chairpersons of the Federal Regional Councils to establish rural development task forces or subcommittees for each of the Federal Regions;

(d) establish a direct tie between the state councils, the FRC committees, and the Assistant Secretaries Working Group on Rural Development;

e. ask members of the ASWG to direct their respective field staffs to become actively involved in the FRC committees and the state-level Rural Affairs Councils;

f. in states where governors are reluctant to establish official Rural Affairs Councils, ask the present State Rural Development

DRAFT
12/6/79

Committees to expand their membership or to establish appropriate task forces or subcommittees that would involve the relevant state agencies and such non-USDA agencies as HUD, EPA, EDA, and CSA. Such committees will be considered the major state-level coordination instrument as called for in Section 603 of the Rural Development Act. The Assistant Secretaries who make up the Assistant Secretaries Working Group on Rural Development will be asked to direct the ranking official of their agency in such states to become an active member of the committee.

2. The USDA Rural Development Coordinating Committee should:

   a. Support the Assistant Secretaries Working Group on Rural Development and the White House Office for Intergovernmental Affairs in carrying out the above recommendations, by

      (1) urging the chairpersons of the present State Rural Development Committees to reinforce the invitation to the governors by offering assistance in the establishment of a Rural Affairs Council;

      (2) using the Regional Workshops to win the support and involvement of the Rural Development Committees in the move toward Governors' Rural Affairs Councils;

      (3) ensuring that nothing of value in the work now going on in the state committees is lost in the creation of new entities.

Implications for Present Rural Development Committees:

1. Where governors' Rural Affairs Councils have been created, the former USDA-initiated Rural Development Committees are urged, but not required, to stay in existence. (In North Carolina, New Mexico, and Arizona, where Rural Affairs Councils have been created, the Rural Development Committees, made up of USDA agency heads, have remained in existence. Their continued existence enables the USDA agencies to respond to the initiatives of the Councils, to suggest certain initiatives to the Councils, and to deal with rural development matters more particular to USDA.)

2. Where governors' Rural Affairs Councils are created, the present committees might well decide to rename as "USDA Rural Development Liaison Committees" to keep the distinction clear.

3. Because most of the present State Rural Development Committees are, in effect, USDA committees, with 11 of them now using USDA in their titles, little change would be necessary.

4. For those few present committees that are recognized by governors, state agencies, and non-USDA federal agencies as broadly representative federal/state coordinating instruments, some will very likely be asked to evolve more formally into a governor's officially designated Rural Affairs Council.

DRAFT
12/6/79

5. Since most of the present Small Farm and Land Use Committees are ~~related or~~ subcommittees or otherwise related to the present Rural Development Committees, a number of options are possible.

a. Some might become subcommittees or task forces of a governor's Rural Affairs Council.

b. Some might emerge as separate committees within the structure of the new USDA State Coordination and Administration Committees. (This would certainly be the case should a Rural Development Committee decide to dissolve itself.)

c. Most will most likely remain and be related to a USDA Rural Development Liaison Committee.

Criteria for Governors' Rural Affairs Councils:

Much more thinking needs to be done. Such entities are pioneer efforts in federalism and public administration. Useful for discussion purposes are some criteria that apparently were considered in the establishment of the New York Rural Affairs Council. As described by the Council's co-vice chairperson, Karen Noble Hanson, the minimum requirements considered for the Council were:

1. Include at least five to six federal agencies.

state legislators?

2. Include major state agencies having rural development mandate or programs.

3. Have representation at the highest level of these agencies so that policy-level persons were present and able to make decisions.

4. Be chaired by the Governor or Lieutenant Governor, personally, with co-chairs of USDA and other state agencies.

5. Having working committees that would bring thoughtful program, legislative, and regulatory ideas or concerns to its attention. The committee would transmit these ideas to the proper state or federal officials.

6. Have the blessing and support of the Governor's office.

7. Be negotiated by written agreement.

8. Be staffed initially be a person from a Section 111 FmHA grant, eventually by the state government directly.

The New York Rural Affairs Council is chaired by the Lieutenant Governor. Co-Vice chairpersons are the head of New York's State Agriculture and Markets Department and the USDA Regional Representative to the Federal Regional

DRAFT
12/6/79

Council. Federal agencies serving are: USDA, HUD, HEW, CSA, DOT, EPA, and EDA. Nine state agencies are included. Four subcommittees (agriculture, economic development, health, and housing) do the major work of the Council.

As described by Ms. Hanson, "All USDA agency heads have been invited to serve on all subcommittees of the Council. In addition, all USDA agency heads will serve on the subcommittee on agriculture." Apparently, although only one USDA representative will be a member of the Council itself, all USDA agency heads will be invited to all Rural Affairs Council meetings.

Calendar No. 183

96TH CONGRESS
1st SESSION

S. 835

[Report No. 96–171]

To extend the Appalachian Regional Development Act and title V of the Public Works and Economic Development Act of 1965 and to provide for a nationwide system of multistate regional development commissions to promote balanced development in the regions of the Nation.

IN THE SENATE OF THE UNITED STATES

MARCH 29 (legislative day, FEBRUARY 22), 1979

Mr. RANDOLPH (for himself and Mr. MOYNIHAN) introduced the following bill; which was read twice and referred to the Committee on Environment and Public Works

MAY 15 (legislative day, APRIL 9), 1979

Reported by Mr. RANDOLPH, with amendments and an amendment to the title

[Omit the part struck through and insert the part printed in italic]

A BILL

To extend the Appalachian Regional Development Act and title V of the Public Works and Economic Development Act of 1965 and to provide for a nationwide system of multistate regional development commissions to promote balanced development in the regions of the Nation.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Regional Development Act of 1979".

SEC. 2. ~~(a) Multistate regional commissions, established under the Appalachian Regional Development Act of 1965 and title V of the Public Works and Economic Development Act of 1965, and strengthened under the Regional Development Act of 1975, have displayed a strong potential for increasing State and substate efforts in behalf of regional concerns. Significant opportunities and problems demanding multistate regional cooperation and State participation remain. In addition, a new range of national problems having regional dimensions has appeared, including community conservation, energy development and conservation, transportation, and export development.~~

~~(b) In the Regional Development Act of 1975, the Congress provided regional commissions with broader authorities and placed the title V regional commissions with the Appalachian Regional Commission in a common framework in which all commissions were encouraged to address shared development problems and issues of regional transportation, health, education, and energy development.~~

~~(c) The potential of multistate decisionmaking when applied to programs and projects of regional significance indi-~~

~~cates the desirability of expanding the regional commissions to cover the entire Nation. The Congress finds that all States should be afforded the opportunity to join a regional commission established under this Act. The Congress also finds that multistate regional institutions represent a unique and productive means of providing incentives for concerted and cooperative action among groups of States acting together with a Federal representative as a regional commission. The Congress also finds that there is need to provide special incentives beyond those authorized in existing legislation to improve the ability of regional commissions to assist Governors to coordinate regional, State, and substate development programs.~~

~~(d) Therefore, it~~ *It* is the purpose of this Act to ~~create a nationwide system~~ *authorize creation* of regional commissions and to provide a framework for regional commissions to coordinate the efforts of Federal, State, and local governments in ~~(1) planning for growth and change so as to maximize the social and economic benefits and to minimize the costs in activities which will improve the quality of life for the people in all the regions of the Nation; (2) implementing regional programs and projects which can be carried out through intergovernmental cooperation; (3) meeting the special problems created in a region as a result of national policies or needs; (4) providing improved means to direct assistance to~~

~~States for resolving shared and interstate regional problems; (5) providing a new mechanism for improving the ability of Federal programs and policies to function effectively, taking into account specific regional differences and perspectives; and (6) serving as a model for simplified and flexible program administration while meeting statutory objectives.~~ *(1) planning and implementing programs to improve the capability of States and local governments to resolve shared and interstate regional problems of economic decline and dislocation due to rapid growth; (2) undertaking shared efforts to establish stable and diversified regional economies and meet basic service needs in areas and communities experiencing economic decline or dislocation due to rapid growth; (3) providing a mechanism for improving the ability of Federal programs and policies to function effectively, taking into account specific regional differences and perspectives; (4) establishing priorities from the regional perspective for public and private investment in areas affected by economic decline or dislocation due to rapid growth; (5) fostering creation of regional institutions to address shared problems and encouraging commonality of services on a regional basis where appropriate; and (6) meeting the special problems created in a region as a result of national policies or needs.*

TITLE I

SEC. 101. This title may be cited as the "Appalachian Regional Development Act Amendments of 1979".

SEC. 102. Section 2 of the Appalachian Regional Development Act of 1965 is amended as follows:

(1) The fifth sentence of subsection (a) of such section is amended by inserting "including the provision of services to people in the region," after "special problems,".

(2) The sixth sentence of subsection (a) is amended to read as follows: "The public investments made in the region under this Act shall be concentrated in areas where there is a significant potential for future growth, including emerging small cities and urban centers and areas affected by energy development, where the expected return on public dollars invested will be the greatest, and in remote and hard-to-reach areas where there are special problems in providing for human service needs.".

SEC. 103. Subsection (b) of section 105 of the Appalachian Development Act of 1965 is amended to read as follows: "To carry out this section there are hereby authorized to be appropriated to the Commission, *to be available until expended,* for the *two-year* period ending ~~September 30, 1983, to be available until expended, such sums as may be~~

~~necessary.''.~~ *September 30, 1981, not to exceed $7,000,000 (of which not to exceed $1,100,000 shall be available for expenses of the Federal Cochairman, his alternate and his staff) and for the two-year period ending September 30, 1983, $8,500,000 (of which $1,400,000 shall be available for expenses of the Federal Cochairman, his alternate, and his staff).*

SEC. 104. Section 106 of the Appalachian Regional Development Act of 1965 is amended as follows:

(1) Paragraph (5) is amended by adding at the end, "The Office of Personnel Management is further authorized, under such terms and conditions as it shall prescribe, to contract with the Commission *and with any regional commission established or recognized under the Regional Development Act of 1979* for coverage as of the date of the Appalachian Regional Development Act Amendments of 1979 in such retirement and other employee benefit programs of the Federal Government, of any employee of the Commission not covered in such programs who gives written notice to the Commission of his desire to come within the purview of such coverage.".

(2) Paragraph (7) is amended by striking out "1979" and inserting in lieu thereof, "1983".

SEC. 105. Title 5, United States Code, is amended as follows:

(1) The last sentence of section ~~5445(a)~~ *5334(a)* of title 5, is amended by striking out "was a Federal employee immediately prior to such employment by a commission and".

(2) Such title is amended by inserting after section 6312 a new section as follows:

"§ 6213. Accrual and accumulation for former Appalachian Regional Commission and title 5 regional commission employees

"Services rendered as an employee of the Appalachian Regional Commission under section 106(2) of the Appalachian Regional Development Act of 1965, or of a regional commission established pursuant to section 502 of the Public Works and Economic Development Act of 1965, under section 506(2) of such Act, *or pursuant to the Regional Development Act of 1979* shall be included in determining years of service for the purpose of section 6303(a) of this title in the case of any employee as defined in section 6301 of this title. The provision of section 6308 of this title for transfer of annual and sick leave between leave systems shall apply to the leave system established for such employees.".

SEC. 106. (a) Section 201(g) of the Appalachian Regional Development Act of 1965 is amended by striking

everything after ~~"1979",~~ ~~and~~ ~~inserting~~ ~~in~~ ~~lieu~~ ~~thereof:~~ ~~"$400,000,000~~ ~~for~~ ~~fiscal~~ ~~year~~ ~~1980;~~ ~~$500,000,000~~ ~~for~~ ~~fiscal~~ ~~year~~ ~~1981;~~ ~~$550,000,000~~ ~~for~~ ~~fiscal~~ ~~year~~ ~~1982;~~ ~~$550,000,000~~ ~~for~~ ~~fiscal~~ ~~year~~ ~~1983;~~ ~~$550,000,000~~ ~~for~~ ~~fiscal~~ ~~year~~ ~~1984;~~ ~~$500,000,000~~ ~~for~~ ~~fiscal~~ ~~year~~ ~~1985;~~ ~~and~~ ~~$470,000,000~~ ~~for~~ ~~fiscal~~ ~~year~~ ~~1986.".~~ *"1980", and inserting in lieu thereof: "$350,000,000 for fiscal year 1981; $400,000,000 for fiscal year 1982; $450,000,000 for fiscal year 1983; $500,000,000 for fiscal year 1984; and $500,000,000 for fiscal year 1985.".*

(b) The third sentence of section 201(a) of the Appalachian Regional Development Act of 1965 is amended by striking "three thousand twenty-five" and inserting in lieu thereof "three thousand ~~one~~ ~~hundred~~ *fifty-eight*".

(c) Subsection (h) of section 201 of the Appalachian Regional Development Act of 1965 is amended by striking "70 per centum" and inserting in lieu thereof "80 per centum" and by adding at the end the following: "Projects approved after March ~~30,~~ *31,* 1979, and on or before the date of enactment of the Regional Development Act of 1979 may be adjusted to receive a Federal share not greater than 80 per centum.".

SEC. 107. *(a)* Section 202 of the Appalachian Regional Development Act of 1965 is amended by adding the following new subsection:

"(f)(1) The Commission may make grants to the States, ~~including grants for reasonable administrative expenses,~~ for innovative projects and for demonstrations approved pursuant to section 303, of methods and techniques for meeting human services needs of individuals and families in the region which the Commission determines cannot reasonably be accomplished under other provisions of this title or other Federal programs, and shall give special emphasis to demonstrations serving people in the more remote and hard-to-reach areas of the region and in areas impacted by energy development.

"(2) States may carry out such demonstrations directly, or through the employment of private individuals or firms under contracts entered into for such purposes, or through arrangements with public bodies and private nonprofit organizations.

"(3) Demonstrations may be funded entirely from appropriations to carry out this Act or in combination with funds available under other Federal grant-in-aid programs or from any source. Notwithstanding any provision of law limiting the Federal share in any such other program, funds appropriated to carry out this subsection may be used to increase such Federal share as the Commission determines appropriate *to a maximum of 80 per centum.* No component of a demonstration shall receive financial assistance under this

title after five years following the commencement of the assistance for such component.".

(b) The seventh sentence of section 202(c) of the Appalachian Regional Development Act of 1965 is amended by striking everything after "except" and through "child development demonstrations" and inserting in lieu thereof "that child development demonstrations assisted under this section during fiscal year 1979 may, upon State request, be approved under section 303 of this Act for continued support beyond that period".

SEC. 108. (a) Section 207(c)(2) of the Appalachian Regional Development Act of 1965 is amended by—

(1) inserting "(including land acquisition)" after "reasonable site development costs";

(2) striking "10 per centum" each place it occurs and inserting in lieu thereof "25 per centum"; and

(3) adding at the end thereof "The Secretary (or a State acting under subsection (e) of this section) shall assure that reductions in the cost of housing units due to the acquisition of land pursuant to this section shall accrue to the benefit of ultimate purchasers or tenants of such housing units and not to the financial benefit of any profitmaking entity.".

(b) Section 207 of the Appalachian Regional Development Act of 1965 is amended by adding the following new subsections:

"(f) In furtherance of the purposes of this section, at the request of the Commission *in accordance with section 303 of this Act* the Secretary of Agriculture is authorized to use all of the authority to acquire land under the provisions of section 601(c) of the Powerplant and Industrial Fuel Use Act (Public Law 95–260). Funds for such acquisition shall be provided under this section or by the affected State.

"(g) The Commission is authorized and directed to undertake a demonstration of appropriate incentives or programs to attract large scale housing developers to operate in the central Appalachian region. In conducting such demonstration, the Commission, after consultation with potential developers and to the extent practical, shall select at least three sites or areas, and the Commission is authorized to use the authority of this section or section 302 of this Act.".

SEC. 109. Title II of the Appalachian Regional Development Act of 1965 is amended by inserting after section 208 the following new section:

"BUSINESS, RAILROAD, AND ENERGY RESOURCE ACTIVITIES

"SEC. 209. (a) In order to assist in stimulating agriculture, mining, construction, manufacturing, commercial, and

other economic activities in the region, including the development of indigenous arts and crafts, the Commission is authorized to make grants approved pursuant to section 303 to the States~~, including grants for reasonable administrative expenses~~, for—

"(1) Business related technical assistance, including entrepreneurial development, management advice, market analyses, and utilization or financial feasibility studies.

"(2) Establishing revolving funds to be used for business, agricultural and forestry enterprise development loans, with special emphasis on loans furthering development opportunities for entrepreneurs that are identified through technical assistance activities under this Act.

"(3) Making grants for—

"(A) Projects for the acquisition of rail properties by public bodies where critical to a State investment program approved pursuant to section 303. No such grant for a project shall exceed 80 per centum of the cost thereof, and the non-Federal share may be in cash or in kind, fairly evaluated, including but not limited to equipment and services.

"(B) Projects for the rehabilitation, repair, and modernization of rail properties (except rolling stock) where critical to a State investment program approved pursuant to section 303. No such grant for a project shall exceed 50 per centum of the cost thereof, and the non-Federal share may be in cash or in kind, fairly evaluated, including but not limited to equipment and services.

"(4) Demonstration projects in connection with the development, production, utilization, and conservation of the region's energy resources, including site development where necessary for the feasibility of projects.

"(5) Assistance to communities in maintaining, restoring, or augmenting commercial air passenger service, but not including capital assistance or operating subsidies.

"(b) States may carry out such activities directly, or through the employment of private individuals or firms under contracts entered into for such purposes, or through arrangements with public bodies and private nonprofit organizations.

"(c) Assistance under this section may be funded entirely from appropriations to carry out this Act or in combination with funds available under other Federal grant-in-

aid programs or from any service. Notwithstanding any provision of law limiting the Federal share in any such other program, funds appropriated to carry out this section may be used to increase such Federal share as the Commission determines appropriate.".

SEC. 110. The first sentence of subsection (c) of section 214 of the Appalachian Regional Development Act of 1965 is amended by striking "December 31, 1978" and inserting in lieu thereof "October 1, 1983".

SEC. 111. The last sentence of section 302(b)(1) of the Appalachian Regional Development Act of 1965 is amended to read as follows: "No more than $5,000,000 shall be obligated for such energy resource related demonstrations in any fiscal year under this section or section 209(c)(4), and no more than $2,500,000 shall be obligated for such indigenous arts and crafts demonstrations.".

SEC. 112. Section 302(b) of the Appalachian Regional Development Act of 1965 is amended by adding the following new paragraph:

"(5) The Commission shall investigate, seek opportunities for, and report on the use of technical assistance and demonstration authority under this section and assistance under section 207 to increase the use of solar energy equipment in residences in the Appalachian region, to assist in the standardization of such

equipment, to encourage financing by regional credit institutions and Federal programs of installations of such equipment,. and to facilitate inclusion of solar energy equipment installation costs in residential mortgage financing. The Commission is authorized to conduct pilot projects to put in practice the findings of such investigation.".

SEC. 113. Title II of the Appalachian Regional Development Act of 1965 is amended to add a new section 304 as follows:

"SEC. 304. The Commission shall provide for the continuing evaluation of projects and programs authorized under this Act which shall include measures of their effectiveness in achieving the goals and objectives prepared pursuant to sections 102(a)(1) and 225 of this Act. The Commission shall prepare an annual evalution program which (1) includes a statement of specific actions that have been or will be taken as a result of previous evaluations, and (2) lists those specific program evaluations to be performed during the current and succeeding years, including the estimated cost of conduct such evaluation.".

SEC. ~~111.~~ *114.* Section 401 of the Appalachian Regional Development Act of 1965 is amended to read as follows:

"SEC. 401. (1) In addition to the appropriations authorized in section 105 for administrative expenses, and in section 201(g) for the Appalachian development highway system and local access roads, there are authorized to be appropriated to the President, to be available until expended, to carry out this Act *and the Regional Development Act of 1979,* $340,000,000 for the two-fiscal-year period ending September 30, 1981, and $380,000,000 for the two-fiscal-year period ending September 30, 1983.

"(2) No more than 25 per centum of the funds available for obligation in any fiscal year under this section shall be obligated for direct grants by the Commission to carry out the purposes of sections 202(f), ~~207(c),~~ and 209.".

SEC. 115. Section 403 of the Appalachian Regional Development Act of 1965 is amended by adding the following:

"The Commission is authorized and directed to study whether, in view of the purposes set forth in section 2 of this Act and in the Regional Development Act of 1979, any counties contiguous to the Appalachian region should be added to the region or remain in regions established or recognized under the Regional Development Act of 1979, and whether, in view of such purposes, any such counties or blocks of counties currently in the Appalachian region should be transferred to a region established or recognized under the Region-

al Development Act of 1979. Such study shall be conducted in conjunction with the study required under the last sentence of section 308 of the Regional Development Act of 1979, and the results of such study together with any recommendations shall be submitted to the Congress not later than two years after enactment of the Appalachian Regional Development Act Amendments of 1979.".

SEC. ~~112~~ *116.* Section 405 of the Appalachian Regional Development Act of 1965 is hereby repealed.

TITLE II

SEC. 201. This title may be cited as the "Regional Commission Act of 1979".

SEC. 202. (a) The Secretary shall recognize appropriate "development regions" within the United States upon the written request of the Governors of the States in which such region will be wholly or partially located if the Secretary finds that there are common cultural, economic, geographic, natural resource, and social relationships among the areas within such region *and that the region is of sufficient geographic size and population to warrant recognition.*

(b) It is the intention of the Congress that ~~every area of the Nation ultimately be included in a development region, but not in more than one~~ *each area of the Nation be included in not more than one development region.*

(c) It is the intention of the Congress that every region consist of two or more States, except in the case of Alaska ~~if the Secretary determines that a multistate approach is not practical.~~, *which is hereby recognized as the Alaska Development Region.*

(d) The boundaries of a region may be subsequently altered in the same manner as they were established.

ESTABLISHMENT OF REGIONAL COMMISSIONS

SEC. 203. (a) Upon the recognition of a development region, the States shall establish a regional development commission for such region. *In the case of the Alaska Development Region, at the request of the Governor of Alaska, the Secretary shall take any action necessary to establish and operate the Alaska Regional Development Commission not later than October 1, 1979.* Any such commission shall be established and shall operate in accordance with section 502 (b) through (e) of the Public Works and Economic Development Act of 1965. Sections 505(b), 506, 507, and 508 of such Act shall apply to each such commission.

(b) Each regional commission established pursuant to the Appalachian Regional Development Act of 1965 or title V of the Public Works and Economic Development Act of 1965 shall continue in operation under this Act unless boundaries or State membership of such commission are altered pursuant to this Act.

SEC. 204. (a) In carrying out the purpose of this Act, each regional commission shall, with respect to its region:

(1) in accordance with title III of this Act, develop and implement a regional growth policy process which shall include the preparation of (i) a multiyear regional development plan with policies and priorities for action programs to guide Federal, regional, State, private, and substate investments, and (ii) annual regional investment strategies which include specific policies and investment proposals affecting Federal, regional, State, and substate participation in support of regional growth policies and priorities;

(2) develop and implement mechanisms for coordinating the development and growth management activities of State governments and substate entities with regional policy development, including, but not limited to, economic development, coastal zone management, comprehensive planning, environmental protection, energy conservation and development, transportation, *cultural resource development*, outdoor recreation planning, and implementation programs;

(3) conduct, in cooperation with relevant Federal and State agencies and private resources, research on and analysis of interstate and shared problems, re-

sources, and opportunities for advancing regional development;

(4) provide consultation to and continuing liaison with Federal Regional Councils and those Federal agency members whose planning and development activities bear on regional priorities, policies, and plans regarding the regional interest in such activities;

(5) advise Federal agencies that fund multistate organizations not covered by this legislation on the relevance of such funding to regional commission plans, priorities, policies, and programs and on the steps required to avoid duplication of activities;

(6) provide a working liaison (A) with private sector leadership, especially those which operate at the multistate level; (B) with other multistate organizations including other regional commissions; and (C) with substate entities engaged in functional or comprehensive planning which bears on the fulfillment of regional plans, priorities, and policies;

(7) engage in cooperative activities with other regional commissions established under this Act, with other regional organizations, with local governments, and with Federal agencies.

(b)(1) As the Presidentially appointed Federal partner to the Governors, each Federal Cochairman has the dual re-

sponsibility of presenting the national perspective to the regional commission and of communicating the regional concerns of the State members to the Federal Government. Each Federal Cochairman is responsible for coordination and cooperation between the Commission and Federal departments and agencies. As a member of a commission, each Federal Cochairman has the responsibility for fostering the development of a collaborative institutional setting in which both State and Federal members jointly determine regional development policy.

(2) Each Federal Cochairman shall—

(A) present *to the Congress, the committee established under section 302 of this Act, other affected parties, and except in the case of the Appalachian Regional Commission, the Secretary,* on behalf of the Commission, the regional development plan, annual investment strategy, growth policy recommendations, legislative recommendations, and reports on the activities of the Commission;

(B) encourage Federal departments and agencies to apply their programs and policies to support development plans, programs and priorities established by the commission;

(C) involve Federal departments and agencies in the activities of the Commission, as appropriate;

(D) assist the Commission in its participation in the regional growth policy process;

(E) to the extent practicable, consult with appropriate Federal departments and agencies concerning significant programs and projects to be considered by the Commission prior to voting on such matters;

(F) represent, in dealings with the Commission, Federal policies affecting regional development established by the President and, except in the case of the Appalachian Regional Commission, the Secretary;

(G) assure that the Commission gives adequate attention to problems and solutions which are shared by two or more States in the region and preference to projects or programs for which effort by two or more States is useful in addressing needs effectively;

~~(G)~~ *(H)* take a leadership role in the preparation of the Commission budget for submission *through the Secretary (except in the case of the Appalachian Regional Commission) and such persons as the Secretary may designate* to the Office of Management and Budget and the Congress; and

~~(H)~~ *(I)* assure commission compliance with applicable Federal fiscal and management requirements established or identified under section 208 of this Act or, in the case of the Appalachian Regional Commission,

established or identified by the Federal Cochairman *or such Commission.*

Nothing in this Act shall preclude the Federal Cochairman from presenting the Commission's budget to the Office of Management and Budget or from communicating with appropriate committees of the Congress.

(3) When a Federal Cochairman dies, resigns, becomes disabled, is removed, or is absent from the country, a designated assistant or the executive director of the Commission shall perform the routine administrative duties of the Federal Cochairman not involving the exercise of the vote of the Federal Cochairman, until a successor is confirmed or the absence or disability stops.

(c)(1) Each Commission shall employ an executive director as the chief administrative officer of the Commission and such other officers and staff as the Commission may determine. The executive director shall be responsible for carrying out the administrative functions of the Commission, for direction of the Commission staff and for such other duties as the Commission may assign. The executive director shall be appointed and may be removed by vote of the Commission. All other officers and employees of the Commission shall be appointed by the executive director under such rules of procedure as the Commission may determine.

(2) All appointments and promotions of officers and employees of the Commission shall be on the basis of merit and fitness and no test or qualification with respect to politics, race, color, sex, age, physical handicap, or religion shall be permitted or given consideration. Any officer or employee of the Commission who is found by the Commission to be guilty of a violation of this ~~section~~ *paragraph* shall be removed from office by the Commission.

(d) In addition to the duties set forth in subsection (a) of this section, the Alaska Regional Development Commission may—

(1) review resources inventories of Federal agencies;

(2) review and make recommendations to the President, the Congress, and the Alaska State Legislature on Federal, State, and local land use plans and proposed activities; and

(3) assist Alaska Native Regional Corporations established pursuant to the Alaska Native Claims Settlement Act (Public Law 92–203) in preparing land use plans.

SEC. 205. (a) An application for a grant or for any other assistance for a specific project under section 207 of this Act shall be made through the State member of the Commission representing such applicant, and such State member shall

evaluate the application for approval. No application for grants or other assistance for specific programs or projects under any provisions of this Act shall be approved unless it is certified by the State member and determined by the Commission, including the affirmative vote of the Federal Cochairman—

(1) to implement the Commission's regional development plan;

(2) to be described in the Commission's annual investment strategy;

(3) to be backed by adequate assurance and evidence that the project will be properly administered, operated, and maintained; and

(4) to otherwise meet the requirements for assistance under this Act.

(b) Nothing contained in this Act shall be interpreted as requiring any State or political subdivision thereof to engage in or accept any project under this Act without its consent.

SEC. 206. (a) In addition to other activities authorized by this Act, the Secretary is authorized to provide to commissions technical assistance and incentive grants to aid the commissions in carrying out their responsibilities under this Act and to undertake new program and policy objectives. In general, such assistance may be provided ~~directly~~ through members of the Secretary's staff or through incentive grants

to the commissions; ~~or, indirectly,~~ through the payment of funds authorized for this section to other departments or agencies of the Federal Government; through the employment of private individuals, partnerships, firms, corporations, or suitable institutions, under contracts entered into for such purposes; or through grants to institutions of higher education or nonprofit organizations. Technical assistance may include studies and plans evaluating the needs of, and developing potentialities for, regional development; administrative management; interregional cooperation; research on improving the conservation and utilization of the human, *cultural,* and natural resources of the region; planning, investigations and studies; economic and demographic information and analysis; and ~~innovative projects, demonstrations, and~~ training programs which will further the purposes of this Act. Special provision shall be made to assure that newly formed commissions are able to function fully and effectively as soon as practicable.

(b)(1) In carrying out its functions under this Act, each commission is authorized to engage in planning, investigations, and studies, and to provide other technical assistance to States, substate areas and communities, both urban and rural, including the payment of administrative expenses to substate planning and development organizations (including economic development districts created under the Public

Works and Economic Development Act), which will further the purpose of this Act, and which have been included in the approved annual investment strategy. Such activities may be carried out by the Commission through the payment of funds to departments, agencies, or instrumentalities of the Federal Government, or through the employment of private individuals, partnerships, firms, nonprofit corporations, or suitable institutions under contracts or grants entered into for such purposes or through grants-in-aid to agencies of State or local governments. ~~Special provision should be made for the development and growth management requirements of small towns, counties, and substate districts.~~

(2) In carrying out this subsection each commission is authorized to provide assistance to communities in maintaining, restoring, or augmenting commercial air passenger service, but not including capital assistance or operating subsidies.

(3) Each commission shall investigate, seek opportunities for, and report on the use of technical assistance and demonstration authority under this subsection and section 207 to increase the use of solar energy equipment in residences in its region, to assist in the standardization of such equipment, to encourage financing by regional credit institutions and Federal programs of installations of such equipment, and to facilitate inclusion of solar energy equipment

installations costs in residential mortgage financing. The commission is authorized to conduct pilot projects to put in practice the findings of such investigation.

(c) The Secretary is authorized to make incentive grants to commissions for the following purposes:

(1) Encourage and enable States to develop and improve mechanisms for coordinating State development programs and planning within each State and with commission development programs and planning, with substate development activities and with State budget processes. Such grants are to enable Governors to develop among State agencies and levels of government a unified set of development objectives for programs such as economic development, comprehensive planning, outdoor recreation, *cultural resource development*, coastal zone management, transportation, and environmental protection.

(2) Encourage and enable commissions to develop procedures, including public hearings, consultations, and surveys program review, to enable Governors *and State legislatures* to participate in regional growth policy processes for the purpose of shaping Federal and State programs and policies necessary for the successful implementation of regional plans.

(3) Encourage commission and cooperative State actions augmenting national energy, export, urban, and rural community conservation, and similar policies whose effectiveness would be strengthened by commission and State participation.

(4) Encourage other special activities needed to strengthen the overall program including fostering interregional cooperation; creating regionally based systems for demographic and economic analysis; expanding activities of a multistate character; and increasing State Government financial and other support for commission plans.

SEC. 207. (a) In addition to any authority under the Appalachian Regional Development Act of 1965 or title V of the Public Works and Economic Development Act of 1965, each regional commission is authorized to provide financial assistance for projects which will further ~~regional development, as defined in this Act.~~ *the purpose of this Act as expressed in section 2(d) (1) and (2).* Such projects may include, but are not limited to, transportation, energy development and conservation, environmental and natural resource management activities, fisheries, agriculture, tourism, forestry, export promotion, business or industrial development, productivity improvements, community conservation and growth management, human resources, vocational, educa-

tional and training programs, ~~promotion of~~ *development of indigenous* arts and culture, and flood or other natural hazard protection activities. ~~(b)~~ To the maximum extent practicable, each commission shall provide assistance under this section by transferring funds for programs or projects approved by the commission to the heads of Federal departments or agencies to be used for—

(1) all or any portion of the basic Federal contribution to programs or projects under any Federal grant-in-aid program authorized on or before September 30, 1983, and for the purpose of increasing the Federal contribution to programs or projects under such programs above the fixed maximum portion of the costs of such programs or projects otherwise authorized by the applicable law; and

(2) the Commission contribution to programs or projects and for grants management and technical assistance provided by the department or agency for projects at the request of the Commission.

Notwithstanding any other law, the heads of Federal departments and agencies are hereby authorized to accept such funds, to disburse them in accordance with policies adopted by the Commission, and to provide any assistance which may be necessary to carry out the approved program or project. The Federal portion, including the commission

portion, of the costs of each program or project assisted shall not exceed 80 per centum of such costs.

~~(c)(1)~~ *(b)(1)* Each commission may make direct grants to the States or to qualified multistate organizations ~~or regional organizations established by commissions~~ for innovative projects and for demonstrations of unique methods and techniques for meeting the purposes of subsection (a) of this section which the Commission determines cannot reasonably be accomplished under subsection ~~(b)~~ *(a)* of this section or *any other Federal program* and are in accordance with the regional development plan.

(2) States may carry out such projects and demonstrations directly, or through the employment of private individuals or firms under contracts entered into for such purposes, or through grants with public bodies and private nonprofit organizations.

(3) Such projects and demonstrations may be funded entirely from appropriations to carry out this Act which are apportioned to the commissions by the Secretary or in combination with funds available under other Federal grant-in-aid programs or from any source. Notwithstanding any provision of law limiting the Federal share in any such other program, funds provided to carry out this subsection may be used to increase such Federal share as the Commission determines appropriate. No component of any such project or demonstra-

tion shall receive financial assistance under this Act, the Appalachian Regional Development Act of 1965 or title V of the Public Works and Economic Development Act of 1965 after five years following the commencement of any assistance for such component under one of the above Acts.

(4) Except as provided in subsection ~~(d)~~ *(c)*, grants for innovative projects and demonstration under *this* subsection ~~(c)~~ may be made for up to ~~100~~ *80* per centum of the costs of any project.

(5) No grant shall be provided for an innovative program or demonstration project unless the ~~Federal Cochairman~~ *Commission as a matter of policy* determines in what respect the project is innovative and what it is intended to demonstrate and certifies that there is a reasonable plan to evaluate the results of the innovation or demonstration by an independent source and to disseminate the results.

(6) No more than 20 per centum of the funds available to any commission under this title shall be used for the purposes of this subsection or subsection (c) of this section, unless such commission determines that a greater percentage of such funds must be put to such use to implement a major objective of the regional development plan addressing a need shared by two or more States in the region.

~~(d)~~ *(c)* Each commission is authorized to make grants for the operation of any project, including initial operating

funds which comprise, among other things, the cost of recruiting and training qualified personnel, *for which the Commission determines that funds for operation are not available under any other Federal, State, or local program.* A grant for the operation of any project shall be made only if the project or facility is not operated for profit. Such grants may be made for up to 100 per centum of the costs thereof for the two-year period which begins, for each component facility or service assisted under any such operating grant, on the first day that such facility or service enters into operation as a part of a project. For the next three years of operation, such grants shall not exceed 75 per centum of such costs. No grants for operation of any project shall be made after five years following the commencement of such initial grant for operation of the project. No such grants shall be made unless the Commission is satisfied that the operation of the project will be conducted under efficient management practices designed to avoid operating deficits. The Federal contribution may be provided entirely from funds authorized under this section, or in combination with funds provided under other Federal programs.

~~(c)~~ *(d)* Financial assistance under this section shall not be taken into account in the computation of the allotments among the States made pursuant to any other provision of law. Funds appropriated to carry out this Act shall be avail-

able without regard to any limitations on authorization for appropriation in any other Act.

~~(f)~~ *(e)* No financial assistance shall be provided under this Act to assist private establishments relocating from one area to another or to enable private contractors or subcontractors to undertake work theretofore performed in another area by other contractors or subcontractors. Section 704(e) of the Public Works and Economic Development Act shall apply to all financial assistance under this Act.

~~(g)~~ *(f)* The authorities and requirements of this section and section 206 of this Act shall supersede and replace the authority of ~~section~~ *sections* 505(a), *509, 515, 516, and 517* of the Public Works and Economic Development Act of 1965.

(g) No commission shall provide financial assistance under this section for the purposes of allowing a recipient to use grant funds to make grants to profit-seeking business enterprises.

(h) No State and no political subdivision of such State shall be eligible to receive benefits under this Act unless the aggregate expenditures of State funds exclusive of local funds (other than those originated as revenues collected by the State) and Federal funds, and, in the case of the Appalachian Regional Commission, exclusive of expenditures for participation in the National System of Interstate and De-

fense Highways, for the benefit of the area within the State located in the region are maintained at a level which does not fall below the average level of such expenditures for its last two full fiscal years preceding the date of enactment of this Act. A commission may recommend a lesser requirement when it finds that a substantial population decrease in that portion of a State which lies within the region would not justify a State expenditure equal to the average level of the last two years or when it finds that a State's average level of expenditure, within an individual program, has been disproportionate to the present need for that portion of the State which lies within the region. Funds may be provided for programs and projects in a State under this Act only if the commission determines that the level of Federal and State financial assistance under this Act, and under Acts other than this Act, for the same type of programs or projects in that portion of the State within the region will not be diminished in order to substitute funds authorized by this Act.

(i) Each commission in providing assistance under this section shall afford first attention to areas affected by economic decline, and in addition shall address basic service needs in areas experiencing dislocation due to rapid growth, as appropriate.

COORDINATION

SEC. 208. (a) Taking into account all relevant national policies, the Secretary shall coordinate and provide for Federal policy guidance to the Federal Cochairmen.

(b)(1) There is hereby established the Regional Development Council, composed of the Federal Cochairmen of the regional development commissions, which shall serve as a mechanism for consultation regarding policy and administrative improvements in the program authorized by this Act. The ~~Council shall elect~~ *Secretary shall select, after consultation with the members,* one of its members to serve as chairman and one to serve as vice chairman. The council shall participate in the liaison and coordination responsibilities provided under section 302 of this Act.

(2) There is hereby established in the Department of Commerce an Office of Regional Development, which shall be headed by a Director, appointed by the Secretary ~~in~~ *after* consultation with the Chairman of the Regional Development Council, and composed of such staff as may be necessary to carry out its functions. Such Office shall perform such duties in support of the regional commissions as are ~~requested by the commissions or as are~~ prescribed by the Secretary, provide staff for the Regional Development Council, perform reviews and studies, assist the Federal Cochairmen in the preparation of the budget for the commission program, facilitate

intercommission relationships, and provide supplemental technical and support services as necessary for the Federal Cochairmen. In addition such Office shall, subject to the provisions of this Act, assist States in initiating Regional Commissions or proposed boundary modifications~~, and assist the Federal Cochairmen in investigating the effects of the Federal Government's procurement, scientific, technical, and other related policies upon regional and area development.~~

(c) The ~~Office, with the policy guidance of the Secretary and the Council,~~ *Secretary* shall identify the basic areas in which minimum standards of fiscal responsibility and management, *including uniform cost principles,* must be adopted to assure that commission activities are consistent with the provisions of this Act. The ~~Office~~ *Secretary* shall specify such minimum standards *in regulations* and require each regional commission to adopt them as part of their internal regulations. In addition, the ~~Office shall adopt, with policy guidance of the Secretary and~~ *Secretary shall adopt, after consultation with* the Council, procedures and regulations governing—

(1) the recognition of regions and changes in boundaries;

(2) records to be kept by commissions and recipients of commission funds;

(3) administrative policies and procedures developed by the commissions;

(4) the establishment and operation of a management information system covering activities authorized under this Act.

(5) conditions under which the Secretary may withhold funds from a commission for violation of this Act or any regulations adopted under this Act.

(d)(1) Each commission shall develop and adopt administrative policies and procedures to prevent the overobligation of commission funds. Each commission, in accordance with this section, shall develop and adopt specific policies and procedures to promote economy and efficiency in the administration of its programs and operations and to prevent and detect fraud and abuse in such programs and operations.

(2) Each commission shall adopt specific policies and procedures to assure that any program or project which receives assistance is properly and efficiently administered, operated, and maintained.

(e) This section other than subsection (d) shall not apply in the case of the Appalachian Regional Commission. Such Commission shall consider adopting the minimum standards of fiscal responsibility and management and the procedures established under subsection (c) of this section.

(f) The Secretary shall evaluate on an annual basis the performance of the regional commissions, other than the Appalachian Regional Commission, in adhering to procedures

and regulations established under this section and in implementing the provisions of this Act.

BONDING, INSURANCE, LIABILITY

SEC. 209. (a) The executive director of a commission and such other employees as the Commission requires shall be bonded in such form and amounts as the Commission may require. The Commission may pay the premium for the bonds.

(b) The Commission shall purchase insurance and pay the premiums therefor against loss or damage to any of its personal property and against liability for injury to persons of property. Such insurance coverage shall be in such form and amount as the Commission may determine~~, subject to the conditions of any grant from the Secretary~~.

(c) The Commission shall be responsible for claims arising out of negligent acts or omissions of its officers, agents, and employees only to the extent prescribed by law generally with respect to officers, agents, and employees of the Government of the United States.

RECORDS AND AUDIT

SEC. 210. (a) Each Commission shall keep such records which will fully disclose the amount and disposition of the funds provided to the Commission, and such other records which will facilitate an effective audit. The records, books, and accounts shall be available for audit by any member of

the Commission, *the* Secretary *(except in the case of the Appalachian Regional Commission)*, and the Comptroller General of the United States or their duly authorized representatives.

(b) All recipients of assistance from a commission and all contractors of a commission shall keep such records which will fully disclose the amount and the disposition by each recipient of the proceeds of such assistance, the total cost of the project or activity for which such assistance is given or used, and the amount or activity supplied by other sources, and such other records which will facilitate an effective audit. The Secretary *(except in the case of the Appalachian Regional Commission)*, the Commission, the Comptroller General of the United States or any of their duly authorized representatives shall have access for the examination and audit of any books, documents, and records of any and all recipients that are pertinent to assistance received under this title. Any recipient or contractor who fails to abide by this requirement or who refuses to readily make his books available for inspection and audit by those authorized to audit such records shall not be eligible for further funding under this title.

NONDISCRIMINATION

SEC. 211. No person in the United States shall, on the grounds of race, color, national origin, sex, or physical handicap, be excluded from participation in, be denied the

benefits of, or be subjected to discrimination under any program or activity receiving financial assistance from a regional development commission.

SEC. ~~211.~~*212.* (a) There are authorized to be appropriated to the Secretary to carry out this Act other than title I, to be available until expended, for each of the fiscal years 1980, 1981, 1982, and 1983, not to exceed $250,000,000.

(b) After deducting such amounts as are required for the administrative expenses of commissions other than the Appalachian Regional Commission, the Secretary shall distribute the remainder of the sums appropriated under this authorization for any fiscal year as follows:

(1) beginning in fiscal year 1981 any funds in excess of the sums appropriated for fiscal year 1980, but not to exceed 20 per centum of the total sum appropriated each year, ~~to~~ *may* be set aside for the purposes authorized under section 206 (a) and (c) of this Act;

(2) the balance of the sums appropriated to be provided to the eligible commissions (other than the Appalachian Regional Commission) to carry out the activities authorized under sections *206(b)*, 207, and 303 of the Act, according to a formula to be developed by the Secretary after consultation with the commissions and the Senate Committee on Environment and

Public Works and the House Committee on Public Works and Transportation.

(c) Funds appropriated under this section shall be provided by the Secretary to each of the Federal Cochairmen for the benefit of the appropriate regional commission, in accordance with the distribution established under subsection (b) of this section. Obligation of such funds shall be approved by each commission in accordance with section 205 of this Act. Each Federal Cochairman is authorized to receive and hold such funds, subject to the preceding sentence, on behalf of such Commission.

TITLE III

SEC. 301. This title may be cited as the "Regional Growth Policy Process Act".

SEC. 302. (a) The President shall establish an interagency committee, or use an existing committee, composed of a senior White House official (who shall chair such committee), *the Chairman of the Regional Development Council,* and senior officials of the departments and agencies concerned with regional development activities, to provide means for program coordination and support for the regional commissions and the Federal Government in determining policies and recommendations which will further the purposes of this Act.

(b) The President shall assure the provision of effective liaison between the Federal Government and the regional commissions and access to Federal funding and technical assistance for regional development activities.

(c) The recommendations contained in each commission's regional development plan and regional growth policy recommendations shall be brought to the attention of the heads of the Federal departments and agencies by the committee established under subsection (a) and its Chairman, acting together with the Federal Cochairman, and a schedule shall be established by the Chairman for review and response by the agencies and departments affected. The Chairman shall assure that discussions necessary to the resolution of any issues occur between representatives of the commissions and those of the affected Federal departments and agencies. The Chairman shall also attempt to identify and encourage solutions to regional issues which involve the participation of two or more departments or agencies. The Chairman, in transmitting such plans and policy recommendations to the Federal departments and agencies, shall assure that, to the extent practicable, adjustments in policies and procedures necessary to the successful implementation of each commission plan will be made.

(d) To the extent practicable, the Federal Cochairman of a regional commission shall be appointed as chairperson of the appropriate Federal Regional Council.

(e) Each Federal department or agency shall, consonant with law, cooperate with such commissions in assisting them in carrying out their activities under this Act and, to the maximum extent practicable, adjust its procedures and policies in order to assure—

(1) its participation in developing and implementing each Commission's regional development plan; and

(2) coordination among development programs and planning activities within States and between State and regional development programs and planning activities.

(f) Federal departments, agencies, and instrumentalities undertaking or providing financial assistance for programs shall take steps to assure that, to the maximum extent practicable, such programs are not inconsistent with the goals, objectives, plans, and strategies established by the commissions pursuant to this Act.

(g) Each Federal department and agency shall consult with the appropriate commission or commissions in advance of providing financial assistance to any multistate organization engaged in activities related to the purposes of this title.

SEC. 303. (a) Each Commission shall set requirements for State members to prepare and submit for Commission approval a development plan for their States in the region. Such plan shall be revised annually. Each State development plan shall reflect the goals, objectives, and priorities established in any regional development plan, shall be built upon an assessment of State problems and opportunities that involves the participation of *State legislatures*, local governments, the private sector, and substate planning and development organizations, and shall—

(1) describe the State organization and continuous process for comprehensive development planning, including the procedures established by the State for the participation of development districts in such process; the means by which such process is related to State budget processes; and the method of coordinating development planning, policies, and programs in the State under this Act and other Federal and State programs;

(2) set forth the development goals, objectives, and priorities of the State and identify the needs and opportunities on which such goals, objectives, and priorities are based;

(3) describe the development program for achieving such goals, objectives, and priorities, including

funding sources and recommendations for an implementing investment program, including specific projects to receive assistance under this Act, in sufficient detail to explain their contribution to the goals, objectives, and priorities;

(4) describe the mechanisms established to assure appropriate opportunity for participation of the private sector in development planning and programing and to coordinate activities between public and private institutions;

(5) set forth a system for *periodically* evaluating *in quantitative and qualitative terms, as appropriate,* the effectiveness of plans, programs, and projects affecting the attainment of the goals, objectives, and priorities of the regional and State plans and programs; ~~including, to the extent feasible, quantified measures of impact~~.

(b)(1) Substate planning and development districts certified by the State under subsection (c) of this section provide the linkage between State and substate planning and development. In carrying out the development planning process, including the selection of programs and projects for assistance, States shall consult with local planning and development districts, local units of government, citizens, and private sector organizations, and take into consideration the

goals, objectives, priorities, and recommendations of such bodies. The districts shall assist the States in the coordination of substate activities.

(2) Each Commission shall develop a plan for and as soon as practicable require the preparation and execution of areawide action programs which specify interrelated projects and schedules of actions together with the necessary agency fundings and other commitments to implement such programs. Such programs shall make appropriate use of existing plans affecting the area. To the extent permitted under this Act, State and substate planning processes shall be designed to coordinate and utilize to the maximum extent possible existing substate institutions and Federal, State, and local programs and projects in the affected areas and shall consider anticipated private as well as public investments.

(c) No entity shall be certified as a development district for the purposes of this Act, unless the Governor finds that—

(1) it is one of the following:

(A) a nonprofit public body organized or chartered under the law of the State in which it is located;

(B) an agency or instrumentality of a State or local government;

(C) an agency or instrumentality created through an interstate compact; or

(D) a combination of such bodies, agencies, and instrumentalities;

(2) the proposed district is geographically and politically structured to carry out a comprehensive planning and development program;

(3) the district and its governing body have responsibility for all or most of the relevant development planning activities being undertaken in its area;

(4) it is part of a single statewide system of development districts;

(5) the governing body of the district is composed of at least a majority of local elected officials of general purpose local governments from the affected area. *Wherever possible, areawide clearinghouses designated by either the Office of Management and Budget or the Governor pursuant to section 204 of the Demonstration Cities and Metropolitan Development Act of 1966 as amended or title IV of the Intergovernmental Cooperation Act of 1968, as amended, shall be certified as substate planning and development districts pursuant to this section.*

SEC. 304. (a) Within eighteen months after its establishment or after enactment of this Act, whichever is later, each regional development commission shall prepare in consultation with Federal, State, interstate, private, and substate development organizations and local governments, a multiyear

development plan for its region. The plan shall reflect and accommodate the goals, objectives, and priorities established in the State development plans accepted by the commission. The plan shall be built upon an assessment of regional problems and opportunities that involves the participation of State and local governments and the private sector in the regional development process and shall give due consideration to the planning and proposed activities of other Federal, State, interstate, substate, and local organizations and governments which may significantly affect the region. The plan shall include the following elements:

(1) a review of—

(i) prior regional studies of and plans for the region,

(ii) the current regional economy and the projected economy based on the best available data,

(iii) relevant plans of other public planning bodies and major private sector interests in the region,

(iv) multistate and shared problems requiring regional attention,

(v) the adequacy of existing Federal, State, and local programs and policies to meet the commission's goals and strategies;

(2) a framework for the continuing analysis of data needed to conduct effective regional development activities and to make decisions on programs and project selection;

(3) a determination of necessary and feasible regional goals, objectives, and priorities for regional development;

(4) a development program to achieve the commission's goals and objectives;

(5) strategies to implement the plan and recommended levels of Federal, State, and local funding for implementing Commission programs to attain the goals, objectives, and priorities; and

(6) criteria for the identification and selection of projects which are consistent with the goals of the Commission.

(b) Each Commission shall prepare an annual investment strategy on a Federal fiscal year basis to implement its regional plan. This strategy ~~should~~ *shall* include (i) identification of specific Federal, interstate, State, and substate programs and projects which will assist the commission in regional development activities; (ii) proposed funding of activities under this Act or the Appalachian Regional Development Act of 1965; and (iii) proposed policies which may be adopted by Federal departments and agencies and State and

local governments in order to reflect in the administration of their programs and regulations, insofar as applicable statutes permit, perspectives, conditions, and approaches particular to each region and necessary to the successful implementation of the regional plans. Such strategy shall be transmitted to the committee established under section 302 and, except in the case of the Appalachian Regional Commission, the Secretary, prior to the start of the new fiscal year, *and* shall be used as the basis of consultation with the heads of Federal departments and agencies through the interagency mechanism described in such section.

(c)(1) Prior to a commission vote to approve a regional development plan or annual investment strategy under this section, the Federal Cochairman shall have a maximum of seventy-five days in which to review the plan or strategy and seek review by the Secretary in accordance with paragraph (2) of this subsection. The Federal Cochairman shall vote on the plan or strategy only after consultation with appropriate Federal departments and agencies, in order to assure that—

(A) the plan or strategy is consistent with national economic and social policies and trends,

(B) the plan or strategy addresses shared and interstate regional problems and solutions and provides a mechanism for project or program funding selection

which adequately attends to such problems and needs, and

(C) the plan or strategy reflects interregional consistency and compatibility, so that the activities of a commission will not adversely affect the conditions in or plans of another region.

(2) Except in the case of the Appalachian Regional Commission, the plan described in paragraph (a) of this section shall be reviewed by the Secretary and may be disapproved within sixty days of transmittal, only if the Secretary determines that the requirements of paragraph (1) (A) and (C) of this subsection are not met by the plan.

(d) Each commission shall review its multiyear plan annually and undertake a formal assessment of such plan every five years.

(e) Notwithstanding section 205(a)(1) of this Act, for a period not to exceed eighteen months after the establishment of a commission or the enactment of this Act, whichever is longer, assistance may be provided under this Act on the basis of State development plans and commission annual investment strategies.

SEC. 305. (a) The development planning process and the regional growth policy process shall ~~be ultimately based on~~ *reflect* the goals, objectives, priorities, and recommendations of development districts and local governments as re-

flected in State development plans. ~~The~~ *To the extent practicable, the* regional development plan, and annual investment strategies shall be developed from and shall incorporate such goals, objectives, priorities, and recommendations. The State, in the preparation of a State development plan, and the Commission, in the preparation of the regional development plan and annual investment strategies, shall accommodate and to the extent practicable harmonize the diverse goals, objectives, priorities, recommendations, and needs identified by development districts and local governments.

(b)(1) To the maximum extent practicable, planning processes required or assisted under this Act shall be based on and not duplicate existing planning processes and institutions, and shall make appropriate use of any existing plans for the affected area. Planning assisted under section 302 of the Public Works and Economic Development Act shall be integrated to the maximum extent practicable with planning required or assisted under this Act, and such planning shall be conducted in conjunction with the review procedure required pursuant to title IV of the Intergovernmental Cooperation Act of 1968.

(2) Each commission shall establish a satisfactory process of consultation with general purpose local governments and local planning and development districts to assure compliance with section 303(a), (b)(1) and (b)(2) and section

304(a). Such process of consultation shall provide that any local government or development district may petition to the commission for review of any action of a State or the commission inconsistent with such sections.

~~(b)~~ *(c)* Public and private sector participation in the development of the goals, objectives, and priorities of regions, States, and development districts shall be provided for, encouraged, and assisted. Regional development commissions and member States shall prepare and publish guidelines to assure full opportunity for public and private sector participation in the establishment of such goals, objectives, and priorities.

SEC. 306. When used in this Act:

(1) The term "regional development" means the ~~process of improving conditions and opportunities for individuals, communities, States, and regions through~~ selective management of resources and activities toward the achievement of regional goals in the approved regional plan, including those goals affecting human *and cultural* resources, institutional, community, and economic development;

(2) The term "commission" refers to a regional development commission established pursuant to this Act, the Appalachian Regional Development Act of 1965, or title V of the Public Works and Economic

Development Act of 1965, unless the context indicates otherwise;

(3) The term "Secretary" means the Secretary of Commerce;

(4) The term "State", "States", and "United States" include the several States, the District of Columbia, the Commonwealth of Puerto Rico, the territories of the Virgin Islands, Guam, American Samoa, the Commonwealth of the Northern Marianas, and the Trust Territory of the Pacific Islands;

(5) The term "Governor" includes the chief executive officers of the territorial and political units included in the definition of the term "State";

(6) The term "regional growth policy process" means the process of developing and communicating recommendations affecting shared and interstate problems of growth and decline set out in the regional plan and annual investment strategy with specific reference to policy recommendations applicable to the Federal, State, and local governments and necessary to the successful implementation of the plan and strategy;

(7) The term "substate planning and development district" is a multijurisdictional entity certified to a regional development commission either by the Governor or legislature of the State in which such entity is lo-

cated, or by the State officer designated by State law to make such certification, as having responsibility for continuous, coordinated, comprehensive public facilities and services planning. Unless otherwise provided under State law, local development districts previously certified pursuant to the Appalachian Regional Development Act of 1965 and economic development districts designated pursuant to the Public Works and Economic Development Act of 1965 shall be recognized as substate planning and development districts certified pursuant to this paragraph; and

(8) The term "annual investment strategy" means the annual project packages, investment programs, or proposed funding elements of the member States as approved by the Commission and certified by such Commission to be consistent with and in furtherance of an approved regional development plan.

SEC. 307. (a) Each regional commission shall make a full and detailed report each fiscal year to the Congress, each State member, and the Secretary with respect to the commission's past and proposed activities. The first such report shall be made for the first fiscal year in which a commission has been in existence for more than three months after enactment of this Act. Such reports shall be printed and transmitted to

the Congress not later than six months after the end of the fiscal year for which the report is made.

(b) Each biennium, each regional commission, with the assistance of the Secretary (except in the case of the Appalachian Regional Commission), shall submit a report to the Congress of the economic trends, development inhibitors, growth opportunities, and other relevant economic and social data for each region.

(c) Not later than one year after the establishment of the Alaska Regional Development Commission pursuant to section 203(a) of title II of this Act, the Secretary shall submit a report to the President and the Congress on the following issues:

(1) the desirability of creating a joint Federal-State Economic Development and Land Use Planning Commission for Alaska, with land use planning and classification powers;

(2) a proposed structure and recitation of functions and duties of such a commission;

(3) the extent to which such a commission should be integrated with the Alaska Regional Development Commission established pursuant to section 203(a) of title II of this Act.

This report shall be prepared in consultation with the Secretaries of the Interior and Transportation and the Governor of Alaska.

SEC. 308. Within six months after the first biennium after enactment of this Act, the President shall conduct a comprehensive review of the commissions operating under the authority of this Act. This review shall include, among other things, an evaluation of the commissions' program effectiveness, a determination of the effectiveness of Department of Commerce management and support of commissions, any recommendations for preferred placement of the program in the executive branch, and an assessment of the progress made in unifying and coordinating federally assisted regional, State, and substate development programs and planning activities. Within eighteen months after enactment of this Act, the President shall conduct a review of the appropriateness of regional commission and Federal Regional Council boundaries. The President shall report the results of such reviews to the Senate Committee on Environment and Public Works and the House Committee on Public Works and Transportation.

SEC. 309. (1) There is hereby established a system of Border Resource Research Institutes under the jurisdiction of the Southwest Border Regional Commission. Within one year after enactment of this section, the Commission shall

designate one university in each border State for membership in the system of Institutes.

(2) It shall be the duty of each such Institute to initiate and support research programs in the various fields relative to border problems and to provide for educational programs and the training of specialists through such research, investigations, and experiments. Such research, investigations, experiments and training may include population issues; water, land and air resource issues; and other aspects of border resource problems, including the dissemination of the results of research deemed potentially significant for the solution of border resource problems.

(3) The Commission is hereby charged with the responsibility for the funding and proper administration of the Institutes and shall prescribe such rules and regulations as may be necessary to carry out these provisions. The Commission shall furnish such advice and assistance as will best promote the purposes of the Institutes and encourage and assist in the establishment and maintenance of cooperation by and between the Institutes and between them and other research organizations.

Amend the title so as to read: A bill to extend the Appalachian Regional Development Act and title V of the Public Works and Economic Development Act of 1965 and to provide for multistate regional development commissions to promote balanced development in the regions of the Nation.".

REGIONAL DEVELOPMENT ACT OF 1979

MAY 15 (legislative day, APRIL 9), 1979.—Ordered to be printed

Mr. RANDOLPH, from the Committee on Environment and Public Works, submitted the following

REPORT

together with

MINORITY AND ADDITIONAL VIEWS

[To accompany S. 835]

The Committee on Environment and Public Works, to which was referred the bill (S. 835) to extend the Appalachian Regional Development Act and title V of the Public Works and Economic Development Act of 1965 and to provide for a nationwide system of multi-State regional development commissions to promote balanced development in the regions of the Nation having considered the same, reports favorably thereon with amendments and an amendment to the title and recommends that the bill as amended do pass.

GENERAL STATEMENT

Nearly 15 years ago, the Congress recognized the fact that certain regions of this nation were not enjoying the economic viability and prosperity common to the rest of the United States. Lagging regions could attribute their difficulties to a variety of reasons: depletion of natural resources; outmigration of population, technological changes resulting in obsolesence in single-industry areas and geographic isolation, among others. Most of the problems in these economically depressed areas transcended State boundaries.

To carry out an effective program of assistance in these distressed region, in 1965 the Congress authorized the creation of multi-state regional commissions through enactment of the Appalachian Regional Development Act and title V of the Public Works and Economic Development Act. These commissions are partnerships of the States and

59-109 O

the Federal Government. Under the shared guidance of the Governors of the States involved and a Federal representative, a commission's primary responsibility is to develop regional policy to address common problems. Commissions provide a cooperative structure for such problem identification. To carry out a regional investment strategy, a commission provides assistance in assembling, from the array of available existing State and Federal authorities, those programs and projects which will meet the special needs of an area. It works with Federal agencies in selecting and shaping activities appropriate to provide unique responses to regional problems.

It is through regional development commissions that local, State and Federal officials, in spite of individual concerns, can combine resources to address difficulties which are shared by contiguous units of governments. This kind of effort, stemming as it does directly from the people, is vital to the development of workable regional plans. Such a plan must encompass a set of goals and objectives jointly determined by the commission partners after consideration of the views of people from all sections and groups in the region.

The primary purpose and responsibility of the regional commissions established in 1965 was to aid lagging areas—areas of chronic and substantial unemployment and low incomes. This task has not been completed. Strides have been made over the last 10 years and disparities between regions have narrowed. But differences still exist and the widest disparities exist between areas within regions. The commissions are to continue to give first priority to areas of decline. These areas most need help to move forward. Because the problems are deep seated and long-standing, they require the combined ingenuity and resources of the States and Federal Government. Coherent, coordinated strategies must be planned and adhered to. Investment must be concentrated and planned over a long period. There is no short cut to remedy the years of decline. During consideration of this legislation, the Committee reaffirmed its intent that the first priority of a commission is to address declining areas.

States have argued that the commission structure is useful in helping them to cope with sudden, rapid growth and the dislocations such growth brings to a region. The Committee agrees and has expanded the authority to plan for and coordinate policies to deal with dislocations in areas of rapid growth.

Another purpose of the bill is to strengthen and improve the coordination role of the regional commissions. The growth planning process outlined in the bill will improve the ability of the commissions in carrying out this function.

As a result of the White House Conference on Balanced National Growth and Economic Development last year, the President announced in January his desire to institute a regional growth policy process. He reiterated the finding of the conference that the varied economic problems in regions of the Nation suggested a need for strong State and local action to develop regional balanced growth policies and to focus local, State, and Federal funds in accordance with these strategies. President Carter determined that the existing Appalachian Regional Commission and the title V commissions were the vehicles through which such policies should be channeled.

In a unique arrangement, decision making is shared by the chief elected State official—the Governor, and a representative of the Federal government—the Federal Co-chairman. This arrangement has made the Commissions valuable institutions for addressing on a cooperative basis other shared regional matters. While the primary purpose of the commissions is to overcome the gap in income and jobs, they have also become a forum for shared State action on other regional issues such as pollution, coastal zone management, and energy.

Through its unique partnership, the commissions have served a valuable liaison role between the region and the national government. The commissions have been able to represent particular regional issues and opportunities to the various Federal departments and agencies in the formulation of those agencies' policies and programs. Thus regional perspectives can be brought to national policy, helping to tailor national programs to situations as they exist in the particular regions of the country. For example, an energy consuming region of the country such as the Northeast brings a different focus to national energy policy than an energy producing area such as the West. Both of these views should be made known before policy is established. Unnecessary hardship could be avoided and adjustments could be provided for before dislocations occur rather than after the fact.

The commissions also serve as a liaison, bringing national goals and objectives to regional decision makers. Armed with this information, regional policy can be directed to take advantage of national policy where possible. At a minimum the region will avoid policies contrary to national goals.

The Appalachian Regional Commission and the title V commissions were originally authorized by separate acts of Congress. They were last extended by a single statute—the Regional Development Act of 1975. The Committee on Environment and Public Works feels that now, 14 years after their inception, all these commissions should be in a sense melded into a common framework, and made to demonstrate the viability and effectiveness of a well-conceived regional strategy. The committee believes that this legislation will further this objective.

Background

Appalachian Regional Commission

The special needs of the Appalachian Region were recognized by the Congress in 1965 when it passed the Appalachian Regional Development Act. It was envisioned at that time as a unique partnership between the Federal Government and the 13 member States. It was created to address the severe problems of the Appalachian area. In spite of its rich human and natural resources, the area traditionally lagged behind the rest of the Nation in its rate of growth and development.

In the 14 years since its inception, the Appalachian program has come a long way toward fulfilling expectations. It has helped to change the face of the area dramatically by fostering new hope, new initiative, and new enterprise. Some of these advancements are as follows:

Appalachia's poverty population has decreased since 1960 from 31 percent of the total populace to 14 percent in 1976. This represents a

55-percent decline in poverty incidence during a period when nationwide figures show a 48-percent decline.

In per capita income, between 1965 and 1976 Appalachian total personal income climbed from 78 to 85 percent of the national average.

An existing trend of outmigration has been reversed. An average of 58,000 persons per year have migrated to the area.

The region added approximately 1.35 million jobs between 1965 and 1977, bringing Appalachia's official unemployment rate down to a level more nearly approximating that of the rest of the Nation.

In education, as of 1960, only one-third of the region's adult population had completed high school. By 1976, the percentage is estimated to have risen to approximately 60 percent.

In the area of health, the average number of physicians in the region rose from 92 for every 100,000 residents in 1963, to 116 per 100,000 in 1976.

Another major accomplishment under the Appalachian program has been the development of vocational schools. To date, the Commission has invested more than $300 million in a regionwide system of vocational schools. There are now nearly 500 such schools serving 300,000 students.

The importance of the Appalachian development highway system to the economic growth of this mountainous region cannot be overemphasized. Of the entire 3,025 miles now authorized, approximately 1,700 miles, or 56 percent are either completed or under construction. An additional 680 miles of access roads have been built to serve industrial sites, hospitals, schools, or other public facilities. When the entire system is completed, 85 percent of the people of Appalachia will be within 30 miles of a high quality highway. The highway program is vital to the development of Appalachia.

These are significant advances. But much remains to be done. Of Appalachia's 19 million inhabitants, 2.7 million continue to live in poverty. Only six out of the region's 397 counties have a per capita income that has reached the national income average. Despite improvements in the availability of health facilities, serious health problems remain. Infant mortality rates still exceed those of the rest of the Nation. A high incidence of diseases such as hepatitis, streptococcus, tuberculosis, measles, and rubella remains. And the 1976 ratio of 116 physicians to every 100,000 people lags behind the national average of 174 per 100,000.

The Committee considers that the most significant aspect of the total Appalachian experiment has been the continuing development of the partnership role among all levels of government. The experiment is succeeding. This legislation extends the Appalachian Regional Commission for an additional 4 years, and provides it with additional authorities and responsibilities.

TITLE V REGIONAL COMMISSIONS

The Public Works and Economic Development Act of 1965 recognized that there were lagging regions in parts of the country outside of Appalachia. Title V of that Act provided for the establishment of regional development commissions in other sections of the country which had special problems and needs demanding individual analysis

and response. Like Appalachia, they were given broad authority to supplement other Federal grants, to undertake planning and studies, provide technical assistance, and encourage investment plans and the capability of State members to foster economic growth. Federal direction for these programs was placed in the Department of Commerce.

There are now eleven title V commissions, comprising all or parts of 48 States, three of which were designated in December, 1978.

The commissions have pursued a wide variety of programs. They have differed in their development programs as their regions have differed one from the other in the nature and scope of the problems that distinguish them as lagging regions.

Commission programs for the most part are directed toward closing the income gap, creating more jobs, and raising education levels. Programs dealing with transportation, natural resources, regional economic analysis, State investment planning, energy development, vocational education, tourism, and health are typical examples.

In the Regional Development Act of 1975, Congress expanded the program authorities of the commisions in the fields of energy, transportation, health and education—comparable authorities earlier provided the Appalachian Regional Commission. Congress also attempted to upgrade regional development through the commissions by raising the annual authorization from $150 million in 1975 to the present $250 million level. By all accounts, program performance under the commissions has been significantly limited because past Administrations have never requested adequate funding. But this legislation again expands their authorities and provides a more clearly defined framework for their operation within the executive branch.

Purpose of the Legislation

S. 855, as amended, extends the Appalachian Regional Development Act and title V of the Public Works and Economic Development Act, and provides for the creation of regional commissions to promote balanced development in all regions of the Nation to respond to economic distress.

The bill as approved by the Committee continues the operation of the Appalachian Regional Commission and its program for an additional four years, through fiscal year 1983. It also provides a mechanism for the implementation of a similar regional approach to areas of economic distress in the rest of the Nation, most of which are already included in commissions established under title V of the Public Works and Economic Development Act of 1965.

The regional commissions under title II of the reported bill are authorized at not to exceed $250 million for each of the fiscal years 1980, 1981, 1982, and 1983. The nonhighway program authorization for the Appalachian Regional Commission under title I of the bill is $340 million for the 2-fiscal-year period 1980 and 1981, and $380 million for the 2-fiscal-year period 1982 and 1983. The Appalachian Development Highway Program authorizations are $350 million for fiscal year 1981 (an increase of $180 million); $400 million for fiscal year 1982; $450 million for fiscal year 1983; $500 million for fiscal year 1984; and $500 million for fiscal year 1985.

Title III, the "Regional Growth Policy Process Act", provides a means whereby the Federal Government, the States, and regional, substate and local entities can together address, on a regional basis, problems experienced in two or more States.

While a primary purpose of the regional commission program is still to assist areas of economic decline, their authority has been expanded to include hardship caused by sudden rapid growth.

A key feature of the legislation is the creation of an interagency committee at the White House level which shall provide program coordination and support for the regional commissions and the Federal agencies. This will provide the commissions with a visibility which they have lacked under the existing title V program, and should assure them a greater voice in the cohesion and coordination of the multifaceted Federal programs established to assist States and local governments in the resolution of their shared economic problems.

Provisions are included in the legislation which will assure accountability and responsibility on the part of the Federal, commission and State entities under this Act.

In conclusion, the legislation expands the authorities of the regional commissions while at the same time more clearly defines their responsibilities. This is intended to assure the development of an integrated approach to problems of economic distress based on local, State, and regional perceptions, and ultimately reflected in actions by the Federal Government.

Regional Growth Policy Process

Title III of this legislation establishes a regional growth policy process to bring the Federal Government, regional commissions, States, and local governments into a cooperative structure for addressing regional issues.

FEDERAL COORDINATION

The President has proposed this new "process", based on recommendations of the 1978 White House Conference on Balanced National Growth and Economic Development. A January, 1979, memorandum from the President to agency and department heads on the subject of regional commission support provides appropriate background for a discussion of the growth policy process:

> In light of the changing patterns of economic activity across the country, and in order to extend the ability of States and localities to shape Federal policies in behalf of regional concerns, new processes for planning, coordination and policy support are required. To develop and carry them out will require cooperation on the part of the Secretary of Commerce, Federal departments and agencies, the Interagency Coordinating Council, the Federal Cochairmen of the Appalachian and title V Regional Commissions and the Federal Regional Councils.
>
> * * * I am instituting a regional growth policy process to assist the regional commissions in developing and implementing their multiyear regional development plans and annual

> investment programs. These plans and, more importantly, the annual investment programs should be developed from the ground up, reflecting sub-state and State development plans. Through this policy process, the regional commissions will be given an opportunity to prepare recommendations to Federal departments and agencies for solutions to problems of regional growth and decline * * *

This important innovation expands the influence of the commissions beyond their limited funding base to all of the relevant Federal programs, including financial and technical assistance, direct development, and other Federal decisions. Use of the White House Interagency Coordinating Council assures that the regional commission point of view will have the attention of all units of the executive branch.

This opportunity for the governors and Federal cochairmen, acting together as commissions, to address the larger problems shared by the States of each region will require a spirit of constructive accommodation on the part of Federal agencies. Not every problem viewed by a commission to be of regional significance and requiring adaptation of some Federal policy or procedures can be accommodated by the affected Federal agencies. But this new process ought to identify those that can, and do so with reasonable speed.

Section 302 delineates the Federal role in coordinating with the regional commissions. The President is directed to establish an interagency committee for program coordination and support for the regional commissions and the Federal Government is determining policies and recommendations which will further the purposes of this Act. The committee is to be chaired by a senior White House official, and composed of the Chairman of the Regional Development Council, and senior officials of Federal departments and agencies concerned with regional development activities.

Each commission is required to prepare a multiyear regional development plan and annual investment strategies. The interagency committee authorized in section 302 is directed to establish a schedule for review of the recommendations contained in each commission's plan and annual regional growth policy recommendations by the Federal departments and agencies represented on the committee. The commissions are to participate in any discussions with those Federal agencies which are necessary to resolve any issues, and the Chairman is to attempt to identify and encourage solutions to regional issues involving the participations of more than one department or agency.

This section also requires Federal Cochairmen of regional commissions to be appointed Chairpersons of appropriate Federal Regional Councils where practicable. If the Federal Regional Councils are to serve any useful purpose, it is important for them to be linked to the regional commissions.

Federal departments and agencies are directed to cooperate with commissions to the maximum extent possible. They are also directed to assure that existing Federal programs are not inconsistent with commission activities, and to consult with appropriate commissions prior to providing financial assistance to any multistate organization engaged in activities related to regional growth purposes.

REGIONAL PLANNING

Title III also establishes a regional planning process involving all levels of government.

The regional growth policy process set forth in this title emphasizes the importance of a ground-up approach to planning. The participation of substate and local entities is emphasized and the goals, objectives and priorities of communities are accorded great respect in this process. The warp and woof of this planning fabric—from local to multicounty to State to regional—will be as durable as the imagination, hard work and persistence of those involved.

At the same time, there must be adequate guidance from the commissions to States and substate levels. The planning process within a State must be relevant to regional goals and regional planning needs. The committee has no illusions that the process envisaged in this title will be productive if Federal departments and agencies and State and local governments do not develop respect for the plans and strategies generated by it. Without such respect, participants cannot be faulted for resisting the adaptation of their policies or procedures to accommodate the goals and priorities of these plans and strategies.

Section 303 establishes the base for the development planning process, outlining the responsibilities of States and development districts. Each commission shall require State members to prepare and submit a development plan for each State in the region, updated annually. Criteria for such State plans are delineated.

Each commission is directed to develop and require execution of areawide action programs. These programs, prepared at the multicounty level, set forth interrelated projects and schedules of actions and the financial resources necessary to carry them out. Subsection (c) authorizes Governors to certify development districts for these purposes. States are directed to work with local units of government, development districts, citizens, and private interests. A Governor may not certify a development district unless it conforms with specific criteria.

Section 304 describes the commission responsibility to prepare a multiyear development plan and annual investment strategy. The multiyear plan is due within 18 months of enactment. It is to be reviewed annually and formally assessed every five years.

Investment strategies are to be transmitted to the interagency committee and, except for the Appalachian Regional Commission, to the Secretary for use as the basis of consultation with Federal departments and agencies through the mechanism described in section 302. This strategy identifies programs and projects, proposed funding, and proposed policies which may be adopted by Federal agencies and State and local governments to reflect in their respective programs and regulations ways to further the implementation of the regional plan.

After development of a regional development plan or investment strategy, the Federal Cochairman shall have no more than 75 days to review such plan or strategy and to obtain the Secretary's review. The Federal Cochairman is directed to consult with appropriate Federal agencies in the course of that review.

The Secretary of Commerce has disapproval authority over regional development plans of all commissions except the Appalachian Re-

gional Commission. Such disapproval must be made within 60 days of transmittal, and must be predicated on a finding that the plan is inconsistent with certain national and interregional policies and activities.

Regional commissions are to review multiyear plans annually and do a formal assessment of such plans every 5 years.

Section 305 states that the Development planning process and the regional growth policy process are to reflect the goals, objectives, priorities, and recommendations of development districts and local governments as they are presented in approved State development plans. To the extent practicable, regional development plans and annual investment strategies are to be developed from and shall incorporate such goals, objectives, priorities, and recommendations.

The preparation of State and regional plans shall accommodate and harmonize the multiplicity of goals, priorities, recommendations and needs identified by development districts and local governments.

Commissions are required to assure an adequate process of consultation with local governments and development districts.

Accountability

GAO report and Department of Commerce audit

On February 28 of this year the Department of Commerce released a report on its audit of selected activities of the title V regional commissions. In late April the General Accounting Office issued a report addressing the nonhighway activities of the Appalachian Regional Commission.

Both these reports were critical of existing commissions from several standpoints. The Department of Commerce report was directed to commission administrative activities rather than to specific programs. It found deficiencies in coordination, both at the Commerce Department level and with other Federal agencies. Problems were found in the planning, selection, and evaluation of projects, as well as operation and monitoring of completed projects. Inconsistencies in expenditures from program monies and administrative funds exist.

Many of these same problems were also mentioned in the report of the General Accounting Office on the Appalachian Regional Commission. In addition, problems were cited concerning a possible decline in State participation in nonhighway programs and priority of program evaluation.

The Committee recognizes that many of the points raised in these reports are valid. Specific language has been included in this legislation which the Committee believes will alleviate existing problems. The procedure spelled out in title III, the Regional Growth Policy Process, spells out in detail the role of the Federal government in coordinating with the regional commissions. The specific duties of the commissions are outlined in several sections of the bill, principally sections 204 and 304.

State responsibilities for maintenance of effort are spelled out in section 207(h).

Fiscal responsibility and management standards are required on the part of the Federal government and commissions.

The Committee is aware of existing problems in commission administration and programs. This legislation seeks to alleviate those problems while at the same time expanding the regional commission concept to other parts of the Nation. The Committee expects to monitor commission activities closely as they carry out the directives of this legislation.

LEGISLATIVE PROVISIONS

The committee considered the question of accountability to be of grave importance in the development of this legislation. The careful spelling out of the specific responsibilities of each element in this unique Federal, State and substate partnership is essential both from the standpoint of assuring the viability of the program and the protection of the participants.

Recent reports of the General Accounting Office and the Department of Commerce have criticized the operations of existing commissions. This legislation contains a number of safeguards to assure accountability on the part of the Federal, State and commission elements, as well as recipients of assistance from commissions.

For the commissions in title II, the Secretary of Commerce is required in section 208 to identify basic areas in which minimum standards of fiscal responsibility and management must be adopted, including uniform cost principles; to specify such minimum standards in regulations; to require each commission to adopt such standards as part of their internal regulations; and adopt procedures and regulations governing conditions under which the Secretary may withhold funds from a commission for violations of this Act or any regulations adopted under this act. The Secretary is further required to evaluate, on an annual basis, the performance of the commissions in adhering to such procedures and regulations, and in implementing the provisions of this act.

Section 204(b)(2) requires all Federal cochairmen to assure commission compliance with applicable Federal fiscal and management requirements either established under this legislation or by the ARC Federal Cochairman or that commission itself.

In section 210 the commissions themselves are mandated to keep records which will fully reflect the amount and disposition of the funds provided to them, and such other records which will facilitate an effective audit. They are also required, in section 208, to adopt policies to prevent fraud, waste, and abuse in their programs. They must adopt specific policies and procedures to assure that any program or project which receives assistance is properly and efficiently administered, operated, and maintained. Section 210 requires that approval by commissions of applications for grants or other assistance must be predicated upon a determination that there will be proper administration, operation, and maintenance of the project to be undertaken.

In section 208 the Appalachian Regional Commission is encouraged to adopt standards of fiscal responsibility and management. The Committee expects such standards to be no less stringent than those proscribed for the other commissions by the Secretary. The Appalachian Regional Commission is also directed, in section 113, to evaluate, on an annual basis, its effectiveness in achieving the goals and objectives of its program.

Finally, section 210 requires all recipients of assistance from a commission and all contractors of a commission to keep complete records, to be available to any member of the commission or the commission itself, the Comptroller General, and, except for the Appalachian Regional Commission, to the Secretary. Those refusing to comply with this requirement shall not be eligible for further funding under this act.

Role of the Federal Cochairman

Section 204(b)(1) describes the expanded role of the Federal Cochairmen. As the Presidentially appointed partner to Governors, each Federal Cochairman has the dual responsibility for (1) communicating regional concerns of the State members to the Federal Government, and (2) presenting the national perspective to the regional commission.

Title III, the Regional Growth Policy Process Act, significantly enhances the role of the Federal Cochairman. As a statutory participant of the White House-Chaired interagency committee process, his responsibility is to assist in the implementation of regional development plans. He has an expanded role in the preparation and submission of commission budgets. The bill throughout encourages a greater advocacy role for the Federal Cochairman to encourage Federal departments and agencies to support commission plans, programs, and priorities.

The "Federal presence" in the person of the Federal Cochairman is an essential responsibility in the act. It is expected that such Cochairmen will assure commission compliance with applicable Federal fiscal and management requirements established in the act. It is vital that Federal Cochairmen represent the Federal interest in commission determinations with respect to: State maintenance of effort requirements (section 207(h)); commission priority for assisting areas of economic decline; the exercise of commission waivers of the 20 percent limitation on funds for innovative and demonstration projects authorized under section 207(b); the integrity of the relationship between the planning and policy process and project selections; and assuring adequate commission attention to problems and solutions shared by two or more States with each region.

The committee realizes that too little policy guidance has been provided in the past within the Executive Branch to assist the Federal Cochairmen in the exercise of their duties. With a national system of regional commissions and a national commitment to address certain problems at a subnational level, the absence of policy guidance and support inside the Executive Branch is no longer excusable.

Participation of Appalachian Commission Partners

The 1975 amendments to the Appalachian Regional Development Act included provisions to enhance the participation of the Governors as active members of the Commission. The response of the Governors to those amendments has been gratifying. There are a few matters of concern, however, which have been observed in oversight on the Commission's implementation of the 1975 amendments.

While the Governors themselves have been active, occasionally alternates to the State Members have been appointed who do not meet the act's requirement that they be members of the cabinet or of the Governor's personal staff. It is important that only State officials with decision-making authority at the cabinet level or who have full access to the Governor serve as alternates. In addition, it is important that such an alternate attend all the Commission meetings when the State member is not present.

To maintain full gubernatorial participation, Commission meetings at which a quorum of State members must be present should not have to address administrative matters, contract approvals, or personnel questions not involving policy decisions. Minor modifications of annual investment programs also do not have to be decided at meetings which include the personal participation of a quorum of Governors.

In 1975 the Committee was concerned primarily with the role of Governors in the Appalachian Regional Commission. Historically, the Federal Cochairman, as the representative of the President, has been a key participant in the unique partnership experience of the Appalachian Regional Commission since its inception in 1965. The committee intends that the Federal Cochairman remain an active participant in the partnership.

The Federal Cochairman, in partnership with the Governors of the 13 Appalachian States, is charged by statute with working to bring about the growth and economic development envisioned by the Congress in the Appalachian Regional Development Act. There is no question that the Federal Cochairman should be a visible spokesman for the Commission throughout the Region. However, even more important are his responsibilities in Washington. It is the Federal Cochairman's personal responsibility to attend Commission meetings, and to work in concert with the States to develop programs and policies that will help shape the future of the Region. The Federal Cochairman has a full time position with a unique opportunity to influence the future of Appalachia by personal participation in dealings with Federal agencies, the Congress, and within the Commission itself.

There may be occasional instances when the Federal Cochairman must be absent from his duties, and the statute provides for an alternate to serve in his place at those times, and when not serving as such, to perform duties assigned him by the Federal Cochairman. The basic functions of the Federal Cochairman are, of course, not delegable to the alternate or anyone else.

Appalachian Highways

As stated in the general statement at the beginning of this report, approximately 56 percent of the 3,025 miles currently authorized for the Appalachian highway system is either complete or under construction.

The Administration bill (S. 912) authorized $300 million for fiscal years 1980 through 1985 for the highway program. S. 835 as introduced contained a total of $3.5 billion for 7 fiscal years for this purpose. This was the amount calculated by the States to be necessary for the completion of the entire system. The committee reduced these amounts to levels more compatible with anticipated appropriation levels and with

expected construction capabilities. Section 106 of S. 835 authorizes a total of $2.03 billion for 5 fiscal years, as follows:

Fiscal year:	Millions
1981 (an increase of $180 million over existing authorization)	$300
1982	400
1983	450
1984	500
1985	500

S. 835 as amended also provides for a 33-mile increase in the authorized mileage for the system, from 3,025 miles to 3,058 miles. This increase is for centerline alinement and minor rerouting due to environment problems.

The committee is aware that the Commission prepares cost estimates for the Appalachian development highway system as a basis for allocating highway funds among the States. In the past, authorizations and funds have been distributed among the States according to each State's relative share of remaining costs to complete the system, with a maximum limit for any one State. Up to now this has been a workable policy.

However, the committee is also aware of the need to complete individual highway corridors and that some States have accelerated their construction programs utilizing their own funds and by prefinancing. Under present procedures, as States approach completion of their portion of highway corridors within the Appalachian highway system, their relative share of remaining costs diminish, thereby lengthening the time it takes to complete individual highway corridors. Therefore, in allocating authorization and funds in the future, the Commission should take into consideration the need to complete individual highway corridors and the efforts individual States have made to accelerate completion using their own funds on corridor segments in the past or future, as well as prefinancing.

The committee wishes to make clear that the present prohibition on the use of section 214 funds for highway or road construction is intended to preclude section 214 supplemental funding for the Appalachian development highway system or access road projects authorized under section 201 of this Act, or for Federal aid highway programs under title 23 of the U.S. Code.

The committee agrees that the Commission may continue to supplement development projects under other Federal grant-in-aid programs which include incidental road construction as project components, such as the industrial site development programs authorized under title I of the Public Works and Economic Development Act or section 310B of the Consolidated Farm and Rural Development Act; or recreational development projects under the Land and Water Conservation Fund Act.

Appalachian Housing

The problem of adequate basic housing in Appalachia has been severe for some time, and appears to be worsening. Over one million Appalachian homes are substandard—either unsafe, with insufficient plumbing, or overcrowded—in some cases all three. This figure is more compelling when it is realized that in central Appalachia, 38 percent of the housing is inadequate.

Section 107(b) of S. 835 amends section 202(c) to permit continued operational funding for these centers upon the request of a State. The amendment applies only to those projects supported in fiscal year 1979, and is not intended to restore or resume funding for projects whose grant funds ceased prior to that time. Projects initially approved after September 30, 1979, must conform to the existing 5-year limitation. The committee supports current Commission policies which promote and assist projects funded under this section to achieve earliest possible independence from ARC funding. The ability of States and local project sponsors to attract other public and private resources to maintain activities stimulated by flexible ARC aid is vital to the ARC demonstration process and its ability to generate new programs in undeserved areas. The Committee does not intend that the Commission become a direct operating program agency. Discretionary grants made in accordance with this amendment will follow the normal Commission approval process and will be included in state Appalachian development plans and programs, prior to being submitted by the Governor.

Business, Railroad, and Energy Resource Activities

S. 835 as amended adds a new section to title II of existing law authorizing the Appalachian Regional Commission to make grants for the stimulation of agriculture, mining, construction, manufacturing, commercial, and other economic activities. Such grants can be made for business related technical assistance, establishment of revolving funds for business, agricultural and forestry enterprise loans, acquisition and rehabilitation of rail properties by public bodies, and projects for development, production, utilization and conservation of energy resources. States may carry out such activities directly or through the private sector, public bodies, or private nonprofit organizations.

With regard to the railroad activities authorized by this section, acquisition or rehabilitation of rail properties must be deemed critical to State investment plans. The Federal share for acquisition is limited to no more than 80 percent of the total cost, and Federal funding for rehabilitation can be no more than 50 percent. Neither acquisition nor rehabilitation grants may be made for rolling stock.

Incentive Grants

Section 206 of S. 835 authorizes the Secretary to provide technical assistance and incentive grants to commissions. Each commission, in turn, is authorized to provide technical assistance to States, substate areas, and urban and rural communities.

Incentive grants to commissions by the Secretary are authorized for purposes such as improved coordination of development programs and planning; encouragement of procedures enabling Governors to participate in regional growth policy; development of cooperation of State and commission activities augmenting national energy, export, and urban policies; and encouragement of other special activities.

The committee amended this section by adding two additional technical assistance authorities for all commissions. Commissions are authorized to provide assistance to communities in maintaining, restor-

ing, or augmenting commercial air passenger service, excluding capital assistance or operating subsidies.

Further, each commission is directed to investigate, seek opportunities for, and report on the use of technical assistance and demonstration authority under this subsection and under section 207 to increase the use of solar energy equipment in residences in its region. Commissions are to assist in the standardization of such equipment, to encourage financing by regional credit institutions and Federal programs of installations of such equipment, and to facilitate inclusion of solar energy equipment installation costs in residential mortgage financing. Commissions are authorized to conduct pilot projects to put into practice the findings of such investigations.

The incentive grant authority in section 206 is an important element of this legislation. It is designed to further encourage commissions in their efforts under this Act, by providing funding for additional activities to those commissions displaying a determined effort to move forward in addressing regional economic problems.

Funds under this section are not to be used for State personnel or administrative costs which should be borne by the States. General concern has been expressed about the shifting of administrative costs to the Federal share of commission funding. The committee intends this matter to be addressed by the Secretary and all of the commissions in establishing rules and regulations.

Commission Authorities

Section 207 includes program authority for the commissions. Existing law is expanded to make clear that commission funds may be spent for broad spectrum of economic activities, including transportation, energy development and conservation, environmental and natural resource management agriculture, and development of indigenous arts and culture.

The bill continues the authority of the commissions to supplement other ongoing Federal programs, to provide "first dollar" and to undertake innovative projects which can not be initiated under other Federal agencies. The bill places a 20-percent limit on the amount of funds the commission may use to undertake innovative projects or demonstrations. A waiver is provided where a commission can show that a larger percentage necessary to carry out a major objective of the commission plan. The Committee is aware of the flexibility provided in the demonstration authority and that, indeed, much of the commissions' effort is to develop new approaches to problems. This flexible authority, however, can be abused and becomes a means of substituting commission funds for other investments in the region. The Committee wants to make clear that this authority will be used only where necessary and on innovative programs.

This section imposes a 5-year limitation on funding any component of any project under this Act, the existing Appalachian Regional Development Act, (Public Law 89–4, as amended,) or the Public Works and Economic Development Act (Public Law 89–136). Funding may be made for up to 80 percent of project costs. Grant approval is contingent upon certification by the Commission that the project is truly innovative.

Grants for project operation may be made only for nonprofitmaking projects for which funds are not available under any other Federal, State, or local program. Such grants may be up to 100 percent for two years from the commencement of project operation, and up to 75 percent for the following three years, after which time no grants may be made for project operation.

The section further specifies that financial assistance under this Act may not be provided to assist in the relocation of private establishments or to enable private contractors or subcontractors to undertake work previously performed in another area by other contractors or subcontractors.

Cultural resource development has been included as an important element in promoting balanced social and economic regional development, with funding for developing and carrying out programs that promote cultural resources development and growth, for research on the conservation and utilization of cultural resources, and for incentive grants at the State level to develop a unified set of development objectives.

Cultural resources are "people magnets"—stimulating tourism, attracting ancillary businesses, and encouraging rehabilitation. They generate large cast flow for a modest investment, and also provide jobs in supplying goods and services while humanizing the environment. Cultural resources are the human and physical assets which contribute to the creation of fine and folk arts, music, theater, dance, literature, design and architecture, including those traditional academic and other institutions and groups which practice, preserve and transmit such arts.

REGIONAL DEVELOPMENT COUNCIL/OFFICE OF REGIONAL DEVELOPMENT

Section 208 establishes a procedure for the Secretary to provide Federal policy guidance to the Federal Cochairmen. A Regional Development Council is established to serve as a mechanism for consultation on policy and administrative improvements in the program established under this act. This Council is to be composed of the Federal Cochairmen, and shall participate in the liaison and coordination responsibilities under section 302. The Council Chairman shall be selected by the Secretary after consultation with the members.

Additionally, this section directs the establishment in the Department of Commerce of an Office of Regional Development, to be headed by a Director appointed by the Secretary, after consultation with the Chairman of the Regional Development Commission and composed of such staff as necessary. This office is to assist the Secretary in carrying out her responsibilities under this act. In addition, the office is to assist commissions in their budget preparations and in their relationships with each other, as well as providing technical and support services as necessary to the Secretary and the Federal Cochairmen. Other related responsibilities are described in the section.

The Secretary is directed to assure that commission activities are consistent with this act by specifying minimum standards of fiscal responsibility and management, and by adopting procedures and regulations governing recognition of regions and boundary changes, record-keeping, administrative policies, and establishment of a man-

agement information system. The section also spells out other accountability requirements discussed elsewhere in this report.

Maintenance of Effort

S. 835 was amended to include a maintenance of effort and substitution section. Section 221 of the Appalachian Regional Development Act (Public Law 89–4) contains a maintenance of effort provision which is intended to assure that the States not view the act as an opportunity to divert from Appalachia those State funds which would have been spent if the Appalachian Act had not been enacted. This section requires States to maintain the same level of expenditures in the Appalachian portions of their States as was spent in the last 2 full fiscal years preceding the date of enactment, that is 1963 and 1964.

The recent report of the General Accountnig Office on the Appalachian Regional Commission suggested that it may be more appropriate to use "proportionate" levels of expenditures rather than "aggregate". The Committee chose instead, in section 207(h), to restate the maintenance of effort provision in an amended form, making it applicable to all regional commissions. The new base line for calculating past State expenditures will, however, be fiscal years 1977 and 1978.

The commissions are directed to give funding priority to areas affected by economic declnie. Activities in areas experiencing rapid growth problems should be primarily directed to basic service needs.

The Committee suggests that the records to be kept by the commissions as required by these amendments should include data which will enable the commissions to monitor State financial participation in their programs.

The Committee has always been concerned that this program not be viewed as simply another conduit of Federal funds and that the States not use these funds to supplant other funding sources.

In its report on the Appalachian programs, the General Accounting Office indicated an increased use of that commission's first dollar authority and recommended the committee place a limit on the use of these funds. The committee does not believe a fixed limitation is warranted at this time, but is concerned about the increasing use of first dollar authority. The committee believes that the commissions need the flexibility provided by the first dollar authority. Regional policy is not bound by the availability of funding and gives commissions leeway in meeting their objectives. The committee is concerned, however, about excessive use of this authority. One of the primary goals and responsibilities of the commissions is to influence other Federal programs. Through excessive reliance on first dollar authority, the commissions duplicate existing programs and tend to become a direct, categorical grant program—a role that has never been intended for the commissions.

The committee believes the commissions must give more attention to this matter and take more effort to tap other funding sources. To assist the commissions in assessing the use of and need for first dollar funds, each annual investment strategy should identify where first dollar money is used.

The committee will continue to maintain a strong interest in this area.

Civil Service

Section 104 extends Federal employment and retirement benefits to Appalachian Regional Commission and title V commission employees whether or nor they were previously Federal employees.

In accordance with existing legislation, ARC employees who were employed by the Federal Government immediately prior to Commission service are eligible for Federal retirement, life, health and disability programs. In establishing benefits for other Commission employees, the Commission has tried to provide comparability for all. With recent changes in the Social Security law and the Federal benefit system, the cost of providing comparability outside the Federal benefit program makes this virtually impossible. It is unfair to those who came to the Commission from State government, local communities and the private sector to receive lesser benefits than those who came from the Federal Government. Therefore, the bill authorizes the Office of Personnel Management to contract with the Commission for staff members' benefits. As the costs of benefits for the Commission staff are shared jointly by the Federal Government and the States, the savings realized would accrue to the Federal Treasury as well as the States.

Appalachian Boundary Study

From time to time since the inception of the Appalachian regional program, States have requested that additional counties be included within the Appalachian region. Such requests were received this year for several counties in Virginia and New York.

With the expansion of the regional commission concept to the rest of the Nation, the problem naturally arises of whether counties contiguous to the Appalachian region should be incorporated into that region or remain in another region established or recognized under this act.

Section 115, therefore, directs the Appalachian Regional Commission to conduct a study. The study shall evaluate the social and economic characteristics of the counties in the Appalachian region and contiguous to it with the goal of identifying, to the extent possible, those characteristics which counties within the region have in common and which therefore constitute reasonable standards for transfer in or out of the region.

The study is to be conducted in conjunction with the Presidential study of commissions and Federal Regional Council boundaries mandated in section 308, and the study results and recommendations are to be submitted to the Congress no later than 2 years after enactment of this act.

Border Resource Research Institutes

Section 309 of S. 835 as amended authorizes the establishment of a system of Border Resource Research Institutes under the jurisdiction of the Southwest Border Regional Commission.

The section requires the Commission to designate one university in each of the States of California, Arizona, New Mexico, and Texas for the purpose of initiation and support of research programs into border resource problems.

Once the Border Commission has designated the four Border Resource Research Institutes and rules and regulations have been drafted, a reasonable annual level of funding for the institutes at the outset would be $250,000 per institute.

The committee realizes that the Research Institute program is new and must be meshed with other Southwest Border Commission efforts. Consequently, the committee recognizes that funding levels for this program must ultimately be determined by the Commission and implementation of the program may be in stages.

The designated universities need not be in one of the counties under the Southwest Border Commission, except when practicable. Instead, the Commission should select the university within the State that has the best capability to undertake studies on border resource problems.

Alaska Regional Commission

In addition to reauthorizing existing commissions, the reported bill recognizes a development region embracing just the State of Alaska and requires the Secretary, at the request of the Governor of Alaska, to establish the Alaska Regional Development Commission no later than October 1, 1979.

This action is based on two findings. First, section 502(f) of the Public Works and Economic Development Act currently authorizes the establishment of certain single-State regional economic development commissions, including Alaska. Second, the committee decided that the State of Alaska meets all the criteria for designation as a development region set forth in this bill.

The circumstances of geography and size call for a unique approach in Alaska. These circumstances result in the existence of several regions within the State which are distinguished from each other by cultural, climatological and economic attributes. Three geographically distinct native groups (Eskimo, Indian, and Aleut) and the dispersed character of timber, fishery, mineral and tourism sectors of the economic base contrast with the similarity of each Alaskan region's difficulties with transportation, communication, social services, promotion of exports, the high cost of living, the high unemployment rate, and the constant battle with a hostile climate.

Upon consideration of these issues, it appears appropriate for Alaska to form a single State commission. Therefore, section 202(c) of the bill recognizes Alaska as the Alaska development region. Section 203(a) requires the Secretary of Commerce, at the request of the Governor of Alaska, to establish and operate the Alaska Regional Development Commission no later than October 1, 1979.

In addition to having all the duties of other commissions, section 204(d) authorizes the following activities which may be undertaken by the Alaska Regional Development Commission: (a) review resource inventories of Federal agencies; (b) review and make recommendations to the Federal Government and State legislature on land use plans and proposed activities; and (c) assist Alaska Native regional corporations in preparing land use plans.

Section 307(c) of the bill authorizes a study by the Secretary of Commerce of the desirability of creating a joint Federal-State Economic Development and Land Use Planning Commission for Alaska,

with land use planning and classification powers. This study is to be completed not later than one year after the establishment of the Alaska Regional Development Commission and is to be conducted in consultation with the Secretaries of the Interior and Transportation and the Governor of Alaska.

Rollcall Votes

Section 133 of the Legislative Reorganization Act of 1970 and the rules of the Committee on Environment and Public Works require that any rollcall votes be announced in this report. During the committee's consideration of this measure six rollcall votes were taken. Each of those votes was publicly announced during the open meetings of the committee for marking up this legislation. The tabulation of the votes is available in the offices of the committee. S. 835, the Regional Development Act of 1979, was ordered reported on May 9 by a vote of 12 to 2. Senators Randolph, Muskie, Gravel, Bentsen, Burdick, Culver, Hart, Moynihan, Stafford, Baker, Domenici, and Pressler voted in the affirmative, and Senators Chafee and Simpson voted in the negative.

Regulatory Impact

The committee believes that this legislation will cause no change in regulatory activity by the Federal Government, or by private business.

Cost of Legislation

Section 252(a)(1) of the Legislative Reorganization Act of 1970 requires publication in this report of the Committee's estimate of the cost of the reported legislation, together with estimates prepared by any Federal agency. S. 835 as amended authorizes Federal expenditures of $2,765,500,000 for fiscal years 1980 through 1983, and an additional $1 billion for the Appalachian highway system for fiscal years 1984 and 1985. These amounts are allocated as follows:

Title I: Appalachian Regional Development Act Amendments:	
Administrative expenses:	
1980-81	$7,000,000
1982-83	8,500,000
Highways:	
1981	180,000,000
1982	400,000,000
1983	450,000,000
1984	500,000,000
1985	500,000,000
Nonhighway programs:	
1980-81	340,000,000
1982-83	380,000,000
Title II: Regional Commission Act:	
Programs:	
1980	250,000,000
1981	250,000,000
1982	250,000,000
1983	250,000,000
Total	3,765,500,000

Section 403 of the Congressional Budget and Impoundment Control Act requires each bill to contain a statement of the cost of such bill prepared by the Congressional Budget Office. The report follows:

CONGRESSIONAL BUDGET OFFICE,
U.S. CONGRESS,
Washington, D.C., May 15, 1979.

Hon. JENNINGS RANDOLPH,
Chairman, Committee on Environment and Public Works, U.S. Senate, 4204 Dirksen Senate Office Building, Washington, D.C.

DEAR MR. CHAIRMAN: Pursuant to section 403 of the Congressional Budget Act of 1974, the Congressional Budget Office has prepared the attached cost estimate for S. 835, the Regional Development Act of 1979.

Should the committee so desire, we would be pleased to provide further details on this estimate.

Sincerely,

ALICE M. RIVLIN, *Director.*

CONGRESSIONAL BUDGET OFFICE COST ESTIMATE

MAY 15, 1979.

1. Bill number: S. 835.
2. Bill title: The Regional Development Act of 1979.
3. Bill status: As ordered reported by the Senate Committee on Environment and Public Works on May 7, 1979.
4. Bill purpose: The bill authorizes the creation of regional commissions and provides a framework for these commissions to coordinate the development efforts of Federal, State and local governments in most areas requiring intergovernmental cooperation. The bill also extends the authorizations through 1983 for the Appalachian Regional Commission and title V of the Public Works and Economic Development Act of 1965, and it makes existing regional commissions part of a nationwide system of multi-State regional development commissions to promote balanced development in all region of the Nation.

TITLE I—APPALACHIAN REGIONAL DEVELOPMENT ACT AMENDMENTS OF 1979

Title I authorizes appropriations for the Appalachian Regional Commission (ARC), the Appalachian development highway system, and for the nonhighway, regional development activity of all commissions covered by the bill. The title also clarifies the status of existing commission employees within the new commission framework and adds new grant authority for projects involving methods of meeting the human services needs in the region.

Title II of the Appalachian Regional Development Act of 1965 is amended by adding a section designed to stimulate economic investment by providing funds to States to make grants and establish revolving funds for business loans. Grants under this authority are directed toward transportation systems infrastructure, specifically rail and air service.

TITLE II—REGIONAL COMMISSION ACT OF 1979

This title establishes the intent of Congress that every area of the Nation be included as part of a development region and be represented by a regional development commission. All existing commissions (the Appalachian Regional Commission and all commissions created through title V of the Public Works and Economic Development Act of 1965) are automatically covered by authorities est blished in this act, subject to boundary changes authorized by the bill. This title specifies the procedures for creating commissions, their mission, and their role in the intergovernmental regional development process. New commissions require the written initiative of the governors of concerned States and will function according to procedures specified in the act. The bill creates an Office of Regional Development within the Department of Commerce to support regional commissions at the Federal level.

TITLE III—REGIONAL GROWTH POLICY PROCESS ACT

This title establishes an interagency committee to coordinate and support regional commissions and the Federal Government in determining policies and recommendations which will further the programs supported by this bill. In addition, it establishes the requirement for annual development plans for each State in each region and further requires each regional commission to prepare multiyear development plans and annual investment strategies.

Section 309 of title III establishes a system of Border Resource Research Institutes under the jurisdiction of the Southwest Border Regional Commission (SBRC) to address issues crucial to the area. Funding would come from SBRC funds.

The authorization levels established by this bill allow the ARC and other existing commissions to be funded at the level requested by the President for fiscal year 1980. The President's 1980 budget request includes $208.6 million for regional commissions, excluding Appalachian highway funds. The bill authorizes approximately $423 million for those same activities. Additional funds, in excess of the President's request, are provided for all regional commissions for grants and development support activities.

5. Cost estimate:

[In millions of dollars]

Estimated authorization level:[1]	
Fiscal year:	
1980	423
1981	694
1982	844
1983	894
1984	500

[1] For the purpose of this estimate, when specific amounts are authorized to cover a 2-year period (that is, sections 105 and 401 of the Appalachian Regional Development Act of 1965), one-half of the authorized amount is shown in each year. The budget impact of this bill does not include $300 million in fiscal year 1979 and $170 million in 1980 previously authorized for the Appalachian development highway system.

In addition to the amounts shown in the above table, the bill authorizes $500 million for the Appalachian development highway system in 1985. A total of $1.6 billion in outlays from the authorizations in this bill will be incurred after fiscal year 1984.

Including existing authorizations, total funds authorized for these programs are approximately $723 million in fiscal year 1980 and $774 million in 1981.

The costs of this bill fall within budget function 450.

[In millions of dollars]

Estimated outlays:	
Fiscal year:	
1980	172
1981	333
1982	468
1983	635
1984	583

6. Basis of estimate: For the purposes of this cost estimate it is assumed that all authorized funds are appropriated and are available at the start of each fiscal year. The portion of costs attributable to the ARC is assumed to be spent at rates equal to the program's recent spending pattern, with highway and nonhighway spending treated separately. Of the sum authorized by section 113 of the bill, an amount equal to the President's 1980 budget request for ARC nonhighway programs was assumed to be allocated to those programs, with that value inflated in fiscal years 1981 to 1983 by the CBO inflator for the gross national product. The balance of the authorization was assumed to be distributed to regional commissions established by title II of this bill.

To estimate the outlays associated with title II it was necessary to make some assumptions about the number and nature of restructured regional commissions. For the purposes of this estimate it was assumed that the eight existing regional commissions would continue to operate essentially as in the past. Funding for these programs was assumed to be equal to the President's fiscal year 1980 request plus a prorated share of any additional funds. These funds were assumed to be spent at historical rates.

To meet the mandate for new commissions it was assumed that eight additional regional commissions would be recognized in fiscal year 1980. It was further assumed that these commissions would incur administrative expenses similar to the existing commissions, adjusted for startup costs and partial year administration expenses. Grants and other assistance from these new commissions were assumed to start late in fiscal year 1980 with normal activity first occurring in fiscal year 1981.

7. Estimate comparison: None.

8. Previous CBO estimate: On May 15, 1979, the Congressional Budget Office prepared a cost estimate for H.R. 2063, a bill which reauthorized the Appalachian Regional Commission and amended title V of the Public Work and Economic Development Act of 1965. The relevant portions of each bill are similar, except that the House provided authorizations for only 2 years in most instances and did not establish a number of reporting requirements provided for in S. 835.

9. Estimate prepared by: Linwood T. Lloyd (225-7760).

10. Estimate approved by:

C. G. Nuckols
(For James L. Blum,
Assistant Director for Budget Analysis).

HEARINGS

The Subcommittee on Regional and Community Development held 3 days of hearings on this legislation: April 3, 4, and 5, 1979. Issues relative to the subject of this legislation were also discussed in full Environment and Public Works Committee hearings on the proposed fiscal year 1980 budget requests for the Appalachian Regional Commission and the title V commissions. These hearings were held on February 21 and 22, 1979.

MINORITY VIEW OF MR. CHAFEE

As I said in our subcommitee on May 7, referring to the title V commissions:

> We are taking a program that is existing and we are changing it; we are broadening it in a period when we are trying to reduce the pervasive impact of the Federal government on everybody's lives.

These commissions have not achieved their purpose, to date, of trying to foster multistate cooperation in meeting challenges. It is essential that these commissions first prove they can achieve this purpose before we give them a broader mandate.

All too often, title V commissions have become a method of receiving Federal money which is then simply divided amongst the states according to population. In fact, only 20 percent of their projects have been interstate in nature. Because of this, I have tried in the last few weeks to restrict the broadened mandate that this bill encompasses. As the recent audit by the Department of Commerce state,

> The "regional" aspect of the title V program is the one unique quality that distinguishes this program from similar government program concerned with economic development.

Unless this program develops some form of accountability that ensures the funding of truly regional projects, it will not receive my full support.

I have offered several amendments that have strengthened the concept of regional and focused the program on its original goal of aiding distressed areas. For instance, the committee agreed with my motion to limit the primary purpose of the commissions to aiding declining areas.

As regards the Appalachian Regional Commission, I do not believe that its powers should be broadened, mileage added to its highway system and the spending authorization greatly increased (it uses from $450 million in the current fiscal year to $640 million in fiscal year 1983) when already its authorizations and appropriations are far greater than all the title V's combined ($368.7 million appropriated this year for ARC versus $63 million for all the others).

ARC and the title V's were originally conceived to help distressed areas and were to last a finite time. Now they have grown into a nationwide system of commissions constantly conceiving of new rationale to justify their existence, and all viewed as permanent.

The time has come gradually to scale down authorizations for all these commissions with a view to blending their current responsibilities into existing Federal programs.

JOHN H. CHAFEE.

MINORITY VIEWS OF SENATOR SIMPSON

This legislation proposes to make permanent and extend the scope of a cluster of subnational quasi-governments known as Regional Development Commissions. Composed of Governors of the States lying within regional delineations of the country and a Federal cochairman—who has veto power over expenditures of Federal funds—the "title V commissions" are so named from their charter, title V of the Public Works and Economic Development Act of 1965.

The purpose of that act was to "help areas and regions of substantial and persistent unemployment and underemployment to take effective steps in planning and financing their public works and economic development." It was directed to "depressed areas", as they were then termed not only as a humane effort for the people of those neglected areas but also in the broad interest of a healthy national economy. Title V—which established the Regional Action Planning Commissions and which the bill before the Senate proposes to replace while also extending the authority of the separately organized Appalachian Regional Commission—begins by setting forth in section 501 the criteria for identifying seriously lagging regions: high unemployment, low family incomes, poor housing, a single or two-industry economy in long-term decline, substantial outmigration of labor or capital, and the like.

The Regional Commissions were presented at that time as temporary institutions, designed to direct sharply focused assistance to clearly defined problem areas which were unresponsive to the general growth patterns of the national economy—geographic areas suffering an underlying and intractable problem requiring extra-ordinary effort. In short, the Commissions were intended to be a kind of special task force addressing unique and severe problems. They were to concentrate the attention of the participating Governors, together with Federal funds and technical assistance, not only on ameliorating the manifest effects, but also to attack the root cause of distress.

I have reviewed this history because I consider the proposal now advanced to be wholly different—and that it cannot, therefore, be considered simply an extension of the title V commissions as originally conceived and generally accepted. The present proposal is, of course, one that comes to the Congress from the participants in the Regional Commissions and their advocates, so in that sense it is an extension of their hopes and desires for this form of "shadow government."

That this is so may illustrate several things: (1) the natural growth of a bureaucracy once established; (2) the building of a constituency where Federal funds are in prospect; (3) the difficulty of disbanding an organization when its term is done or its task mainly completed; or (4) the passion for coordinated planning and paperwork which may soon overwhelm constitutionally established State, local and Federal Government.

What began as a sharply focused effort directed to limited geographic areas in crisis or chronic distress is now to cover the entire United States "wall to wall."

What began as criteria of distress—the high unemployment and low income guidelines of section 501—has now been abandoned in favor of a type of planning for change through the growth policy process.

What began as "seed money"—supplemental funds designed to attract other Federal, State and local funds—became "first dollar money"; that is, extra funds whenever State priorities or Federal budgets failed to reach the desired project. Next comes 100 percent "demonstration project" funds. There is a curious type of logic here, as in the 50-percent matching programs of yore, which required a State or local "share" to be paid by communities of limited income, and now many of these programs are already 75 or 80 percent Federally funded. The "leverage" effect is to be found instead in the attempt to pry loose additional projects which might otherwise fail the criteria established by the Congress. The "multiplier" is a demonstration project which can be regenerated with Federal funds derived from all taxpayers.

What began as a tightly knit task force directed to priority goals has now become an organization which wants to coordinate all available Federal programs and play power broker for the taxpayer's dollar.

It will be argued that this reorientation of purpose, this change in the philosophy behind the title V commissions should come as no surprise; the trend has long been evident. That is appallingly quite true. The latest fashionable mode for regional commissions to embrace was most recently and effectively presented at the White House Conference on Balanced National Growth and Economic Development, sponsored by the chairman and members of the Senate Committee on Public Works and held in January 1978 as a precursor to the development of this legislation. The precise question before the Congress—upon which we are asked to vote—is whether or not to enact into law the direction of that Conference, as distilled and defined by the administration acting through the Department of Commerce in cooperation with representatives of the National Governors Association.

S. 835 as introduced, and the administration bill as reported by the House Public Works Committee, proposes "a nationwide system of multistate regional development commissions to promote balanced development in the regions of the Nation." The first purpose of that bill was

> planning for growth and change so as to maximize the social and economic benefits and to minimize the costs in activities which will improve the quality of life for the people in all the regions of the Nation.

I compliment my sincerely motivated colleague, Senator Chafee, in his capacity as ranking minority member of the Regional and Community Development Subcommittee, for his success in eliminating this stunningly broad purpose, and in striking the mandate to create a new political action device. He attempted to hold to the intention of existing law, by directing the clear purpose of the bill to "shared and interstate regional problems of economic decline and dislocation due to rapid growth." I am afraid, however, that these and the other improvements secured in subcommittee, substantial as they are, cannot change the

basic direction given throughout the bill, or the intent of the Administration and the zealous advocates and wily bureaucrats of the title V commissions who support it.

To discover this underlying direction and intent, it is necessary only to review title III of the bill, which I commend to my colleagues for its instructive text:

Section 302, for example, requires the President to establish a committee chaired by "a senior White House official," who is instructed to periodically call on the carpet the heads of various Federal departments and agencies so as to determine whether or not they are carrying out the regional development plans prescribed by the bill, who presumably will knock heads to get "the resolution of any issues" between the regional commissions and the line agencies, and who will fix a schedule "for review and response" to commission plans by the rest of the Federal Government. So begins title III, which we will come to know as the Regional Growth Policy Process Act.

The record of the regional commissions over the past 12 years has been decidedly mixed: some successes with mostly indifferent results, and when a bad result surfaces it is usually blamed on a lack of Federal funds, or upon confused authority. Except, that is, for the Appalachian region, which has been handsomely funded, where life has improved and where in its central region, which elicited the 1965 national response, coal field poverty is being daily exchanged for the problems of boom and "energy impact."

Most recently, the commissions have been criticized through careful and responsible audits by the Department of Commerce and the General Accounting Office. Their findings support observations made by knowledgeable experts for years: that the projects selected often are not regional, that clear priorities and specific objectives are neither formulated nor followed, that even after 14 years goals are not quantified nor progress measured against the goals.

There is simply no way to determine how much of the job has been actually accomplished in the last 2 or 5 or 14 years—or when, if ever, the work of the Regional Commissions will be completed. For example, the GAO report to the Congress of April 27, 1979, addresses—

> Problems and issues that need to be resolved by the Congress, the Office of Management and Budget, and the Commission before the Appalachian experience can be expanded to a nationwide system of multi-State regional commissions.

These evaluations are usually met with much strident philosophical rhetoric, and the full jargon of "creative federalism."

I can perceive four alternative outcomes if this legislation is enacted:

First, its rhetoric would become real, establishing a new political system coordinating all the rest of government; producing economic development planning, growth planning, and land-use planning; successfully presenting before the executive and legislative branches of the Federal Government regional views in which are incorporated State and grassroots goals—while in turn reflecting national policy back down the chain to the regional, State and local levels. Who can believe this will actually occur? It may be a worthy vision, but I think

we would be on fragile and treacherous ground if we believe writing this dream into law will make it so. It smacks of a total lack of confidence in the present American systems of government as we know them—at all levels. Passage of the legislation would implement the full coordination and planning potential of the adminstration bill and S. 835 as introduced. It would not, alone, require large project authority or grant funds. The great paradox of the administration bill, of course, is that this proposed mechanism of such enormous scope is accompanied by a request for only negligible funds in the President's budget.

So a second outcome could be that, realistically and hopefully, the proposed regional growth policy process will never replace the present institutional forms of government. The chief result of enacting this bill would then be only to open the doors of the treasury to rapidly increased funding for the title V commissions. Its advocates may well anticipate multiplying this year's budget of $74 million by tenfold, and then by 10 again. That would not be inconsistent with "parity with Appalachia." It would provide a wonderful cornucopia, largely outside established restraints—such as local taxpayer wrath—and in any event we would greet a new set of players at the game board.

A third outcome could be the limitation of this program to sharply defined areas having special needs of such severity that they merit a specific national contribution for their remedy. It would require each commission to settle on one or two high priority objectives—tackle them, stick to them, and attain them. This is the approach I understand Senator Chafee, to his credit, pursued in subcommittee. But the record of the commissions, including Appalachia, raises great doubt as to their ability or desire to set quantified goals, or to faithfully devote their resources to the specific accomplishment of those established goals.

A fourth outcome could be that even if this legislation is enacted—with all of its high blown promise, and with all its barely submerged hope of grasping at future billions—the Regional Commissions will continue to be ineffective and superfluous. They may continue to be largely ignored, even if given a desk in the White House. But they would retain their extraordinary capacity for stimulating more studies, more think tank capers that demand coordination and signoffs, and a fixed base of operations for yet another set of novel planners. Failing the great new institutional promise, lacking the great escalation in program and project funds, they could remain small and somewhat useful bureaucracies—just as they were originally intended.

To assure that hoped for outcome, however, we need no bill at all.

ALAN K. SIMPSON.

ADDITIONAL VIEWS OF SENATORS BAKER, CHAFEE, DOMENICI, STAFFORD, AND SIMPSON

During the markup of this bill, we opposed the adoption of the provisions establishing a special commission, with broad authority over land use in the State of Alaska. These appear as sections 204(d) and 307(c) in the bill. No hearings were held on these provisions, and legislative language on these subsections was not presented during markup to the committee for its consideration.

The issue is not whether Alaska should be eligible for a separate title V commission. That, indeed, may be reasonable. Rather, we oppose the special character of this commission for three basic reasons:

First, the language of this provision States that the Commission may "review and make recommendations * * * (on) land use plans and proposed activities" and "assist Alaska Native Regional Cooperations * * * in preparing land use plans." We believe that such language establishes a dangerous precedent for extending potential land use authorities to other title V Commissions. That is not, and should not be, the responsibility of these commissions.

It is difficult to find a more politically explosive issue than Federal involvement in local and state land use planning. The battles on this issue have been fought both in committees and on the floor over successive sessions of Congress. Regardless of the merits of Federal involvement—even at the request of the particular State in question—this bill presents neither an appropriate time or place or such legislation. These amendments are an attmept not only to circumvent the Congressional process with regard to Alaskan lands, but also the congressional process with regard to Federal land use planning generally.

Second, these amendments establish the Secretary of Commerce, rather than the Secretary of the Interior, as the focus for this land-use intrusion in Alaska. It should be noted that a land-use commission has existed for Alaska since the early 1970's.

Third, we do not believe that the volatile issues relating to the designation and use of Alaska lands should be determined or affected in this fashion, without benefit of hearings or more thorough evaluation. While we may have disparate views on the issues relating to the proper use of Alaska lands, we are agreed that such a determination should not be considered in the context of the title V program. Resolving the Alaska lands issue is the responsibility of the Congress, which has undertaken that process in other legislation through other committees, with hearings. The back-door approach in this legislation merely muddies the water, and could delay or subvert a reasonable solution.

For these reasons, we oppose strongly the adoption of these provisions in the Committee bill.

HOWARD H. BAKER.
JOHN H. CHAFEE.
PETE V. DOMENICI.
ROBERT T. STAFFORD.

Representative Dale Locker (Ohio)

Washington Report

A new approach to federal policy on rural development

Rural America—its "changing face," its special needs, and the coordination of the hundreds of federal programs that affect its human and natural resources—was the focus of attention in late December as President Carter announced his Small Community and Rural Development Policy.

The policy, as outlined before a gathering of hundreds of state and local officials and representatives of community-based organizations and the small town business and financial community, combines a set of principles to guide the administration of federal programs, a series of organizational and procedural changes to develop the institutional capacity at the federal and state level to deal with rural issues on a continuing basis, and an "action agenda" of over 100 initiatives to help meet pressing rural needs.

In noting the changes in many rural areas—growth in population, expansion in rural employment, diversification of rural economies—the President argued the need for "a forward-looking policy . . . to manage the effects of such change—to enable individuals and communities to solve their problems and to capitalize on their opportunities."

And yet, he continued, "rural people and communities have proportionately greater unmet basic human needs than do other parts of the nation." Almost 40 percent of the nation's poor live in rural areas. Rural areas have 58 percent fewer physicians, 38 percent fewer dentists and 29 percent fewer nurses, on a per capita basis, and yet a higher incidence of chronic disease exists and more workdays are lost due to illness in the rural sector than in urban areas. While 57 percent of the rural poor and 45 percent of the rural elderly do not own an automobile, public transportation carries less than 1 percent of rural residents who work away from home.

To meet these needs and manage the effects of change in rural areas, the President directed his top administrators to manage their programs so as to recognize local priorities and facilitate decision-making, to invest federal funds in ways that complement state-local plans and priorities, to use federal assistance to help leverage private sector investments, to target federal funds to disadvantaged persons and distressed commmunities in rural areas, to provide local citizens and their leaders with assistance for more effective decision-making and development efforts, and to make federal programs more accessible to rural jurisdictions and better adapted to rural circumstances and needs.

The capacity to implement the policy's principles and initiatives was enhanced by a request to Congress for creation of an Undersecretary of Agriculture for Small Community and Rural Development, who will aid the Secretary in carrying out his responsibilities under the Rural Development Act of 1972, and who will co-chair, along with the President's Assistant for Intergovernmental Affairs, a revitalized Working Group on Small Community and Rural Development.

The Working Group will include top officials from the Office of Management and Budget, the Domestic Policy Staff, the departments of Education, Energy, Transportation, Housing and Urban Development, Agriculture, Treasury, Interior, Health and Human Services, Labor, and Commerce, as well as the Environmental Protection Agency, ACTION, the Community Services Administration, the Small Business Administration, and the General Services Administration.

The President also directed the Secretary of Agriculture to appoint an Advisory Council to monitor policy implementation and to advise the Secretary and the Working Group, including participation in an annual review of rural policies, programs and budget levels. Members of the Council will include state and local elected officials, representatives of community-based organizations and other private interest groups, and representatives of the business and financial community.

A second level of advisory bodies would be created with the positive response of governors to the President's invitation to establish State Rural Development Councils. Federal Regional Councils will be directed to set up rural development task forces to assist state implementation efforts, and agency heads will direct their field personnel to participate on the state councils as requested by the governors.

The Secretaries of Housing and Urban Development, Health and Human Services, Education, Commerce, Energy, Labor, Transportation, and Interior, and the Administrators of the Environmental Protection Agency, the Community Services Administration, and the Small Business Administration were also directed to review existing policies and programs in relation to the policy principles, and to designate a senior official to be responsible for monitoring implementation of the policy and to serve as a rural advocate within the agency.

On the Agenda

The "action agenda" announced by the President comprises key actions already taken by the Administration and a series of new proposals which will require executive and/or congressional response to implement. The series of White House Rural Initiatives announced over the past 15 months in the areas of health, sewer and water, rural elderly housing, communications, energy, transportion, and public works forms the core of ongoing agenda items. These actions and new proposals that should be of interest to state legislators include:

Housing—

- extend current four-year, four-state demonstration in state delivery of federal housing and community assistance to other rural distressed communities in those states;
- fully implement initiative on congregate elderly

housing, with social services provided on site ($12.5 million, 10-site demonstration); and
- develop standardized loan application and appraisal forms for HUD, FHA, FmHA, and VA.

Energy—
- implement initiatives to promote small-scale hydroelectric, community-based unconventional gas and small-scale fuel alcohol development;
- support legislation providing $750 million in grants and $1.5 billion in loan guarantees over five years to assist states in meeeting the needs of areas experiencing rapid energy resource development ("boom towns");
- support loans financed from windfall profits tax revenue for construction of small-scale alcohol fuel plants; and
- extend the 4 cents per gallon tax exemption on the sale of gasahol.

Health—
- continue implementation of four-year initiative to construct or rehabilitate 300 primary care clinics and to train and employ rural residents as support staff;
- promote full implementation by HFW of the Rural Health Clinic Services Act;
- place top legislative priority on Child Health Care Program and other preventive care programming for children;
- promote legislation permitting "swing beds" to simplify Medicare and Medicaid reimbursement in rural hospitals; and
- provide incentives to states and local communities to increase access to alcohol and drug abuse programs in rural areas.

Capacity building—
- develop a national program to support locally selected circuit-riding managers to assist rural towns and counties;
- continue to fund FmHA Section 111 rural planning programs;
- provide technical assistance to rural officials on the use of 1980 census data and improve access to detailed data at the small town level;
- negotiate a single set of application, auditing, and reporting requirements for clusters of federal aid programs; simplify and standardize compliance requirements with cross-cutting federal laws and executive orders.

Transportation—
- continue implementation of the components of the June 1979 initiative, including assistance to commuter airlines and small town airports, rehabilitation of railroad branchliners, promotion of rural ridesharing, and coordination and delivery of social service and public transit;
- propose amendments to provide $1.0 million per year from 1981-85 for small airport development; and
- support adequate funding of Section 18 (Nonurbanized Public Transportation Program) of Surface Transportation Act of 1978.

Other items of interest include:
- funding the planning and construction of alternative wastewater systems;
- supporting special emphasis on program needs of rural areas in reauthorizing legislation for vocational education;
- requiring state governments to provide adequate access to welfare programs and the Food Stamp program in sparsely populated areas;
- emphasizing rural downtown revitalization through policy to facilitate transfer and lease of federal property, and convening of a national conference on redevelopment of mainstreet;
- fully implementing the Environmental Protection Agency's policy on agricultural land protection;
- adopting as a national goal the elimination of unsafe drinking water during the 1980's;
- fully implementing the Rural Clean Water Program in FY 1980; and
- completing the joint CEQ-USDA study of the effects of conversion of prime agricultural land to other uses and of measures to control such conversion.

The Working Group began its formal deliberations in late January, at which time the process for the appointment of the Advisory Council was initiated. The White House has been in contact with each governor to encourage the designation of a state rural development council. And during the coming weeks, a series of conferences for state and local officials and others interested in rural affairs will be held throughout the country to assist in publicizing and implementing the small community and rural development policy.

Rep. Dale Locker is Chairman of NCSL's Rural Development Committee.

MEMORANDUM

TO: Community & Regional Affairs Committee Members

FROM: Rep. Jim Duncan

DATE: March 24, 1980

SUBJECT: House Bill 932

On Wednesday, March 19, House Bill 932 was first heard by a Joint Session of the Community and Regional Affairs Committee. At that time, some concern was expressed over the advisability of adopting an advocacy position toward rural communities and villages as we propose in House Bill 932.

Please let me assure you that there is nothing in the intent of this legislation that supposes the State must accept extraordinary social responsibility for those communities with little or no resources to develop a local economic base. In fact, our current situation of CETA maintenance of otherwise nonexistent cash economies in the absence of State policy has done more to mandate State responsibilities by default than a well-addressed development policy ever could.

In this bill I hope we begin to address some of the problems of inadequate rural access to State infrastructure, uncoordinated agency practices, lack of Private Sector considerations in State policies, and this State's marginal ability to affect Federal-Alaska economic policies and agency practices. The formation of a council in the Governor's office that will begin to do something rather than create another level of study and advisement requires a special commitment on our part and a special structure to do the job.

In many ways, the high cost of government in Alaska is directly related to the same causes of exceptionally high

risk and the high cost of private capital investments in rural development. These problems can be simultaneously addressed. The government role of defining the limit and degree of development Alaska can tolerate requires a counterpoint that seeks to facilitate development within those imposed limits, to the mutual benefit of both the public interest and the objectives of private enterprise.

These roles, though complimentary, can come into conflict if they are vested in the same structure particularly when private industry seeks a fair hearing of its problems and objectives at the same door they were issued their limitations. Similarly, no appointed public official has quite the objective credibility that an elected officer does to reach across broad agency, state-federal, and private industry boundaries to elicit cooperation.

Please examine the enclosed material which further explains the rationale behind HB 932. I welcome your suggestions for improvements to this bill.

March 24, 1980

The Honorable William K. Parker
Alaska House of Representatives
Pouch V
Juneau, Alaska 99811

Dear Bill,

With reference to HB932, an alternative creating the Governors Office of Rural Development and the Rural Development Council, I would like to offer the following comments:

1) The creation of the Governors Office of Rural Development is the most direct method for meeting the states responsibility to recognize the "special relationship" which exists between the state govenment and rural Alaskans. A possible alternative may be the creation of rural desks within state departments. However; cost constraints make this opiton less attractive.

2) The existing Rural Development Council is capable of providing necessary policy direction and other duties as proposed. Also, the current composition and leadership are dedicated to the orderly and meaningful development of rural Alaska. In addition to most state departments, the current membership includes representation from major nonprofit corporations and federal agencies with significant operating programs in rural Alaska.

If you have any questions or comments please call.

Sincerely,

COMMUNITY ENTERPRISE DEVELOPMENT

TELECONFERENCE NOTICE

The House Community and Regional Affairs Committee, chaired by Rep. Bill Parker, and the Senate Community and Regional Affairs Committee, chaired by Senator Arliss Sturgulewski, will hold a joint teleconference on Friday, March 28 at 1:30 P.M. Juneau time on

HB 932 Creating an Office of Rural Development and Rural Development Council

The teleconference will include testimony from all sites. Persons interested in testifying or observing at this hearing should contact the local Legislative Information Office in the following communities: Anchorage, Bethel, Fairbanks, Dillingham, Kotzebue, Nome, Kodiak, Soldotna, Ketchikan and Sitka. Further information may be obtained from the House Committee Chairman (465-3824) or the Teleconference Coordinator (465-4980).

HOUSE BILL NO. 932

IN THE LEGISLATURE OF THE STATE OF ALASKA

ELEVENTH LEGISLATURE - SECOND SESSION

A BILL

For an Act entitled: "An act creating the office of rural development, and the Rural Development Council; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. FINDINGS; POLICY, PURPOSE. (a) The legislature finds that there is a public interest in the development of a healthy private economic base in rural Alaska, that the rural areas of the state and the many small communities of the state have been in economic crisis for decades, and that in many rural communities a private economic base has ceased to exist which conditions endanger the economic, social, and cultural well-being of the state's rural citizens and the healthy growth and balance of the state's entire economy. The legislature further finds that while many opportunities for economic growth may be available to rural areas, the problems of the state's rural areas are many and complex, spreading beyond the confines or authority of any one program, any one government, or any one policymaker and therefore requiring a special initiative on the part of all concerned parties.

(b) It is the policy of the legislature that

(1) villages and small communities should exist in the state;

(2) there is a special commitment to the development of a private economic base for villages and small communities;

(3) the state should use its resources and financial strength to encourage a healthy rural economy;

(4) the state has the primary policy responsibility to act and to

catalyze commitment among many interests, including the state, federal government, local governments, and the private sector to promote a private economy in rural areas; and

(5) the advocacy of a private economy compatible with rural life-style should be of the highest priority of state policy.

(c) It is the purpose of this Act to create a governmental structure that will function as the advocate of rural economic issues and rural community issues concerning development within state, federal, and local governments, and in the private sectors, and which will assist rural people and institutions in laying the foundations of a healthy rural private economic base.

* Sec. 2. AS 44.19 is amended by adding new sections to read:

ARTICLE 3C. OFFICE OF RURAL DEVELOPMENT.

Sec. 44.19.191. OFFICE OF RURAL DEVELOPMENT. There is established in the Office of the Governor the office of rural development. The director of the office is appointed by the governor and serves at his pleasure. The governor (may) consult with the council concerning the appointment or discharge of the director.

Sec. 44.19.201. COUNCIL ESTABLISHED. (a) There is established the Rural Development Council as the policy council for the office of rural development. The council consists of

(1) the lieutenant governor;

(2) a member of each house of the legislature appointed by the presiding officer of that house;

(3) four ~~state~~ officers appointed by the governor from among the commissioners of the departments of transportation and public facilities, ~~environmental conservation, health and social services~~, community and regional affairs, and ~~natural~~ resources and the director of the division of policy development and planning; community & development

Six private sector representatives, appointed by the Gov, who are rural area and small communities residents.

(4) two members appointed by the governor who are engaged in private enterprise which has significant rural involvement;

(5) six members appointed by the governor who are residents of rural areas of the state, and small communities who represent the private sector

(6) the director of the cooperative extension service of the University of Alaska.

(b) The members of the council appointed by the governor serve at the pleasure of the governor. Are the members specified terms?

(c) The lieutenant governor is chairman of the council and one of the legislative members shall be elected by the council as legislative co-chairman.

(d) Members of the council serve without compensation but are entitled to per diem and travel expenses provided by law for members of boards and commissions.

Sec. 44.19.211. PURPOSE OF THE COUNCIL. The purpose of the council is to provide policy direction to the office and to assist the office in the performance of the duties of the office. The council shall assist in coordinating the economic development activities of all departments and agencies of gover ment so that the need for those activities and the impact of those activities on rural areas is considered and assist in coordinating the activities of departments and agencies of government which have field responsibilities in the rural areas to the extent that those activities relate to economic development. The council shall also assist the office in its advocacy function.

Sec. 44.19.216. MEETINGS. The council shall meet at the call of the chairman or legislative co-chairman, at the request of a majority of the members, or at a regularly scheduled time as determined by the members, but not less than 4x annually. ~~The state officers listed in AS 44.19.201(a)(3) who are not~~ appointed to the council are ex officio members of the council and may

The Ak Fed representative of USDA/FmHA, Region X Rural Adopted Task Force, the Governor Special Project Coordinator)

attend and participate in all meetings of the council but may not vote. The council may convene meetings of heads of agencies or departments which are concerned with rural matters or economic development if the council determines a meeting to be useful.

Sec. 44.19.221. POWERS AND DUTIES OF THE OFFICE. The office shall

(1) act as advocate for the development of an economic base in rural Alaska, for community development and for public services which will enhance the opportunity for growth of an economic base in rural Alaska, and for other matters and programs useful to development of the private economy in rural Alaska;

(2) act as the ~~state agency for federal rural development programs when appropriate~~ responsible agency in case of default for rural development;

(3) coordinate rural development programs among departments and agencies;

(4) act as advocate for rural development programs which are not within the jurisdiction of a specific department or agency;

(5) act as advocate for appropriate technology development for rural needs.

Sec. 44.19.226. STAFF. Within budget and appropriation limits, the director may hire staff and determine their compensation. Except for making inquiries, neither the council nor an individual member of the council may give orders to the staff on administrative matters.

Sec. 44.19.231. REPORTS. Before January 15 of each year the office shall submit to the legislature a comprehensive report describing the activities of the council and the office for the preceding year.

Sec. 44.19.236. DEFINITIONS. In AS 44.19.191 - 44.19.236

(1) "council" means the Rural Development Council;

(2) "director" means the director of the office of rural development;

(3) "office" means the office of rural development.

* Sec. 3. This Act takes effect immediately in accordance with AS 01.10.-070(c).

STATE-FEDERAL INTERAGENCY AGREEMENTS

Prepared by:

Gordon Stockdale
Economic Development
Coordinator

In light of the New White House Small Communities and Rural Development Policy, we face a somewhat steeper effort than we were confronted with before in forging a meaningful agreement with the U.S. Department of Agriculture.

Although the option to negotiate an agreement is still available with the Department of Agriculture, the role of such an agreement as the key instrument for rural development is substantially diminished by President Carter's Rural Policy announcement. White House Aides perceive the President's dramatic invitation to all Governors to ally themselves with his rural effort as extinguishing the need for any special agreements with states.

In truth there is still much to gain from the negotiation of a State/FmHA agreement and if pursued vigorously, that option is still available for Alaska. The benefits of the agreement are obviously most relevant to specifically agricultural development and immediately related infrastructural areas such as transportation and marketing. The agreement may however, have significant impact on other rural development concerns, depending on the Governor's response to the White House Policy announcement, and how well the agreement is articulated with the objectives of the new policy.

There are two distinctly separate issues at this point which must be addressed: The first is the formation of the Rural Development Council in response to the White House Rural Policy announcement of December 20, 1979. The other is the State-Federal Interagency Agreement which should be negotiated to enhance the ability of the Council Chairman to forward Alaska policy recommendations to the Cabinet (agency signatory) level of as broad an agency representation as is possible. To gain the greatest advantage of these complimentary opportunities, it is imperative that we structure the Council to show an extraordinary breadth and depth of rural issue understanding, and a commitment to act.

The agreement for Alaska will probably differ from the existing agreements with other States in several key respects:

1. It should explain at the outset Alaska's unique rural character, the almost complete absence of certain basic government and economic infrastructure commonly perceived in the rural nature of the contiguous United States. (tacitly analogous to an emerging nation)

2. It should state that local community development, state capital improvements, private capital investment, and the investment of federal monies are all inseparable elements in the concept of economic development.

3. It should advance the formation of an Alaska rural development policy which recognizes that the common interests of a wide variety of capital sources and expertise can be brought to bear in the service of Alaska's public interest.

4. It should advance the federally perceived need to adapt the parameters of all programs to suit more specifically the problems they address on the basis of this State's uncharacteristic universe of needs.

5. It should show a long-term commitment to act as an instrument of change, directed to the solution of problems and not merely a forum to address symptoms of prevailing pressures.

There is much more to be done to identify the specific line items that will compose the agreement. At this time, in the absence of a well defined state rural development policy, several options can be considered.

The first of these is to undertake the negotiation of a very specific instrument which will address our current priorities as they are identified by those who are charged with the responsibility to negotiate. This position is laden with serious liabilities however. A rush into specific agreement, prematurely, risks obscuring our need for a representative and thoughtfully developed rural policy. We also risk

limiting the relationship described in the agreement to attending short-term pressing issues rather than committing to a constructive and lasting course of action. The most serious long-term liability in this option is the forfeiture of an Alaska/Federal Policy relationship that would be of real value.

Another possibility is to define development goals in much the same manner of the FmHA agreements with Arizona and Arkansas. These are agreements with very broadly defined general goals. Unlike the specific agreement, they are not very limited in scope and offer little risk of either generating, or being mistaken for policy. These agreements don't confine themselves to pressing, immediate issues, but instead set forth goals that may accommodate a substantial universe of needs and solutions. Unfortunately their generality is their weakness. Because no specific course of action is readily apparent in the text, there is little imperative for action. Also, because this type of agreement is open to a variety of interpretations and applications it offers little direction and is soon regarded as less than serious. Finally, as in the first example, this type of agreement would fail to establish a valuable Alaska/Federal Policy relationship.

An Alaska/FmHA interagency agreement should be a technical instrument, leaving the subject of goals and objectives description to the Governor's Rural Development Council. The instrument should define all state agency roles as they relate to Rural Development and assign the responsibility for coordination and oversight of these roles to a lead agency with a sufficient mandate of authority to direct and supervise. The instrument should further compliment the means and authority by which the Rural Development Council may develop the Governor's policy and instruct the lead agency to execute it.

The agreement should describe a similar structure on the Federal side, but the degree and extent to which Federal agencies may be expected to cooperate can be determined only after considerable negotiation. It must be remembered that Region X, in Seattle, has brokered most of Alaska's federal relationships for many years. It is deeply entrenched and only limited adaptation may be expected unless the Alaska/Federal relationship is important at the Cabinet and White House level in Washington, D.C.

This brings us back to the importance of the White House Small Community and Rural Development Policy announced by President Carter in December. Although it is separate and distinct from the State/FmHA interagency agreements, it can serve to help fuse a purposeful and lasting Alaska/Federal policy relationship.

TESTIMONY OF ANDREW W. EBONA

on

HOUSE BILL 932, "AN ACT CREATING THE OFFICE OF RURAL DEVELOPMENT, AND THE RURAL COUNCIL: AND PROVIDING FOR AN EFFECTIVE DATE."

(Presenced at the Joint House and Senate Community & Regional Affairs Committee Teleconference on March 28, 1980.)

MADAME CHAIRMAN, MR. CHAIRMAN, HONORABLE SENATE AND HOUSE COMMITTEE MEMBERS, LADIES AND GENTLEMEN. I AM ANDREW W. EBONA, EXECUTIVE DIRECTOR OF THE CENTRAL COUNCIL OF THE TLINGIT & HAIDA INDIANS OF ALASKA. FOR THOSE OF YOU WHO ARE NOT AWARE, THE TLINGIT AND HAIDA CENTRAL COUNCIL IS THE CONGRESSIONALLY-RECOGNIZED GENERAL GOVERNING BODY FOR OVER 16,000 TLINGIT AND HAIDA INDIANS IN SOUTHEAST ALASKA. A MAJORITY OF THOSE CONSTITUENTS RESIDE IN RURAL ALASKA, WHICH MAKES HOUSE BILL 932 EXTREMELY IMPORTANT TO US.

ALLOW ME TO FURTHER QUALIFY OUR TESTIMONY. THE CENTRAL COUNCIL HAS TWO BASIC DEPARTMENTS ... THE DEPARTMENT OF COMMUNITY SERVICES AND THE DEPARTMENT OF HUMAN SERVICES. BOTH WORK DIRECTLY WITH OUR NINETEEN (19) COMMUNITIES IN DELIVERING SERVICES. AS A RESULT OF INPUT FROM THOSE COMMUNITIES, WE FEEL THAT WE CAN STATE POSITIVELY THAT WE HAVE EXTENSIVE WORKING KNOWLEDGE OF THE RURAL AREA. AS A MATTER OF INFORMATION, WE HAVE ALSO PARTICIPATED WITH VARIOUS OTHER REGIONAL NATIVE NON-PROFITS AND STATE/FEDERAL AGENCY REPRESENTATIVES ON A TASK FORCE FOR RURAL DEVELOPMENT. THIS TASK FORCE HAS BEEN IN EXISTENCE FOR THREE YEARS AND HAS BEEN ATTEMPT-

ING TO COORDINATE THEIR EFFORTS IN DELIVERING SERVICES TO THE RURAL COMMUNITIES AS THE RURAL DEVELOPMENT COUNCIL WOULD HOPE TO DO. THE RECOMMENDATIONS AND SUPPORT THAT WE ADVANCE HERE ARE OFFERED IN THE HOPE THAT THE STATE WILL BE ABLE TO UTILIZE AND LEARN FROM OUR EXPERIENCES.

HB 932, "AN ACT CREATING THE OFFICE OF RURAL DEVELOPMENT, AND THE RURAL DEVELOPMENT COUNCIL", PRESENTS A CONCEPT WHICH WE WHOLEHEARTEDLY ENDORSE. WE ARE ALL AWARE THAT ONE OF THE CONDITIONS, WHICH GENERATES OR RELATES DIRECTLY TO MANY OF THE RURAL ALASKA PROBLEMS, IS THE LACK OF AN ECONOMIC BASE IN THE RURAL AREAS. THIS PIECE OF LEGISLATION WAS DEVELOPED IN RECOGNITION OF THIS AND THEREFORE EARNS OUR SUPPORT.

THOSE PROVISIONS WHICH PROVIDE FOR COUNCIL APPOINTMENT ATTEMPT TO SET UP A MECHANISM WHICH WOULD PROVIDE FOR COORDINATION OF EFFORT IN ALL ACTIVITIES DIRECTED TOWARDS THE RURAL COMMUNITIES. THIS IS INDEED LAUDABLE CONSIDERING THE FACT THAT EFFORTS IN THE PAST HAVE BEEN MADE ON AN AGENCY-BY-AGENCY, PIECEMEAL BASIS. WE ARE, HOWEVER, CONCERNED THAT AGENCY REPRESENTATION WOULD OVERWHELM RURAL REPRESENTATION. A WAY TO AVOID THIS WOULD BE TO PLACE THE STATE DEPARTMENT REPRESENTATIVES ON THE RURAL DEVELOPMENT COUNCIL IN AN EX-OFFICIO CAPACITY. WE WOULD ALSO HOPE THAT THE STATE DEPARTMENT OF COMMERCE & ECONOMIC DEVELOPMENT WOULD BE INCLUDED ON THE LIST OF RELATED DEPARTMENTS, SINCE IT IS RURAL DEVELOPMENT THAT IS BEING ADDRESSED.

TO DATE THERE HAS BEEN NO FORMAL STATE POLICY CONCERNING RURAL DEVELOPMENT. THE POLICY OF THE LEGISLATURE AS OUTLINED ON PAGE ONE OF THE BILL WOULD BE ACCEPTABLE AS THE GOALS AND OBJECTIVES OF THE COUNCIL. WE RECOMMEND THAT ONE OF THE RESPONSIBILITIES AND OUTCOMES OF THE COUNCIL

WOULD BE THE DEVELOPMENT OF SPECIFIC POLICIES THE STATE COULD AND WOULD UTILIZE IN COORDINATING RURAL DEVELOPMENT. THIS MEANS THAT THE COUNCIL MUST HAVE SOME SORT OF AUTHORITY TO RECOMMEND STATE POLICY AND TO ASSURE THAT IT IS FOLLOWED.

OTHER CONSIDERATIONS THAT MUST BE TAKEN ARE THE MAKE-UP OF THE COMMUNITIES THAT COMPRISE RURAL ALASKA. THE BULK OF THOSE COMMUNITIES ARE MADE UP OF ALASKA NATIVES. WE URGE THAT THIS BE TAKEN INTO CONSIDERATION WHEN APPOINTMENTS ARE BEING MADE. THE STATE MUST ALSO RECOGNIZE THE ROLES AND THE RESULTING IMPACT THE REGIONAL AND LOCAL PROFIT AND NON-PROFIT NATIVE CORPORATIONS HAVE IN THE RURAL COMMUNITIES. THEY ALSO SHOULD BE REPRESENTED ON THE RURAL DEVELOPMENT COUNCIL.

WITH THE INCLUSION OF THESE RECOMMENDATIONS IN HOUSE BILL 932 THE CENTRAL COUNCIL GOES ON RECORD IN TOTAL SUPPORT OF AN OFFICE OF RURAL DEVELOPMENT AND A RURAL DEVELOPMENT COUNCIL.

Andrew W. Ebona, Executive Director
Central Council of the Tlingit &
Haida Indian Tribes of Alaska

STATE OF ALASKA

JAY S. HAMMOND, Governor

OFFICE OF THE GOVERNOR

DIVISION OF POLICY DEVELOPMENT AND PLANNING

POUCH AD
JUNEAU, ALASKA 99811
PHONE: 465-3512

March 18, 1980

Bill Parker, Chairman
House of Representatives
Community and Regional Affairs
Pouch Y, State Capital
Juneau, Alaska 99811

Mr. ~~Chairman~~ Bill:

You have requested that I appear before your committee and comment on HB932 "An act creating the office of rural development and the Rural Development Council." Although I will be unable to personally attend the hearing, I would like to share with you and your committee my comments on this legislation.

The Division of Policy Development and Planning has had some experience during the last three years in assisting some rural areas of the state undertake planning efforts which would help them direct the kind of development which will occur within their region.

The most notable of these has been the "Regional Strategy" planning program underway in the NANA region. In conjunction with the U.S. Department of Housing and Urban Development and the Alaska Department of Community and Regional Affairs, the Division has provided funds and assistance to the Mauneluk Association to develop a regional development plan. This planning process has served as a vehicle to coordinate the activities of all major government agencies in the region and to make their activities consistent with local needs and desires. The NANA Regional Strategy program which we began almost two years ago was designed to address the problems identified in Section 1 of HB932 which declares that "the problems of the state's rural areas are many and complex, spreading beyond the confines or authority of any one program, any one government, or any one policy maker...."

We agree with this statement and have been working within the executive branch to devise a process which recognizes the unique nature of rural Alaska. We are attempting to create a broadly based coordinating effort which will target the resources of the federal and state governments so that development activities will benefit Alaska's rural citizens to the maximum extent possible.

01-A3LH

As you may know, the Carter Administration has established a Small Community and Rural Development Policy in an effort to coordinate the various forms of federal assistance to rural America, and to better focus on the priority needs, as identified by the State. The mechanisms through which such coordination will be achieved at the federal level are an interagency group of assistant secretaries of major federal agencies in Washington, D.C. and regional task forces composed of members of the federal regional councils. The principal agency in charge of policy implementation at the federal level will be the U.S. Department of Agriculture. At the State level the identification of rural development priorities will be the responsibility of state organizations designated by each Governor. Last fall Governor Hammond designated the Agriculture Action Council as the entity to coordinate this federal policy in Alaska. Recognizing that the Council's mandate is somewhat narrower than the federal initiative, we are presently preparing recommendations to expand the Council's membership as it regards the federal rural development initiative. The proposed expanded membership generally follows the structure of the Rural Development Council proposed in HB932. It is our intent to finance this new organization (we understand that federal funds are available) and develop a work program which will identify priority rural development needs, help to initiate specific projects which will meet those needs and coordinate the state, federal and private resources necessary to bring such projects to fruition. In effect we are attempting to do within an existing framework what this Legislation seeks to accomplish by creating a new organizational structure.

For this reason, we feel this effort can be accomplished without any additional statutory authority.

Please let me know if there is any other information which we can share with the committee which might be helpful in its discussion of this issue.

Sincerely,

Frances A. Ulmer, Director
Division of Policy Development
and Planning

SUBJECT: Special Assignment on Alaska

THRU: Gordon Cavanaugh
Administrator

THRU: William M. Hunt
Acting Deputy Associate Administrator

TO: Alex P. Mercure
Assistant Secretary
for Rural Development

I met first with the staff director of the Seattle FRC in Seattle. In Juneau, I met with both administrative and legislative staff as arranged by Governor Hammond's assistant, Bob Palmer. I spent considerable time with Secretary's Representative Fisher, FmHA State Director Roderick, Alaska Federation of Natives President Morris Thompson (former head of BIA), the small farms and conservation districts committees, and many other citizens, legislators, and natives. Opinions expressed to me were amazingly consistent on the following issues:

- Political labels are quite unimportant. An organized approach to rural development has bipartisan support in the legislature and between the legislature and the governor. There seems to be wide support for Lt. Governor Terry Miller as the next governor.

- Development needs are well defined and understood, as you heard when you were there last June.

- The State has incredible developmental resources at its disposal through the oil revenues--yet there is universal concern that only the other guy's needs will be met and not everyone's, and that the revenues will be used to meet short-run exigencies rather than to build a viable economy that can sustain itself after the oil revenues cease.

- The State must develop a self-sustaining economy--and, in particular, a viable agriculture economy--in order to avoid continuous boom and bust cycles.

- The main problems are seen as the inflexibility of federal programs, program managers who cannot respond to the unique needs and opportunities of the State, and the lack of coordination among federal programs and the management of them.

COPY COPY COPY COPY

A less widely recognized problem soon became clear: the main problem is not the lack of federal flexibility as much as it is a lack of political consensus in the State. As the President's Policy on Small Community and Rural Development emphasizes, rural development programs of all levels of government come together at the State, not the national level. Effective coordination of policy and activities must, therefore, be under strong leadership within states. Alaska has the resources but has not had the political will to forge a consensus on the use of the resources. Until a consensus is developed, assumption of leadership for rural development involves great risk.

Evidence of the lack of consensus is in the myriad of task forces, committees, subcommittees, conferences, hearings, etc., that exist in the state to bring the right people together and to coordinate their efforts--and to avoid having to make the hard choices. The numbers of them and the frequency of their meetings is mind-boggling in a state with less than half a million population spread over such a great area. The problems and opportunities have been studied, debated, discussed, and reported on almost beyond comprehension. Yet, there exists nothing to bring them together into a coherent whole. Recommendations abound, but no one has yet been able to devise the tradeoffs necessary to subordinate goals and priorities.

Recently, however, several things have fallen into place:

- Governor Hammond has asked Secretary Bergland to work with him to create a state/federal partnership for rural development.

- The staff of Representative Jim Duncan, Chairman of the House Budget and Audit Committee, has just about completed a study and recommendations on desirable relationships for coordinated development among state agencies, and a framework to work out others.

- The President's policy provides the vehicle necessary to get federal agencies organized and working with each other and with state and local officials at the federal and the state levels.

With the exception of one issue, the Alaska Railroad (discussed below), the Federal Government should not attempt to assume the State's burden by setting up a study or a series of task-oriented task forces. The problems have been studied to death. What is needed is full federal support for the State's assumption of the role of convening the important actors to begin to set priorities. Once the priorities have been set, the Federal Government, with the State, can pursue activities--or further studies if necessary--to meet the priorities.

If the Governor is willing to designate a Rural Development Council in accord with the President's invitation, and if he is willing to put it under the leadership of someone with recognized status (the Lt. Governor,

COPY COPY COPY COPY

for example), federal agencies will be willing to participate as per their orders from the Working Group on Small Community and Rural Development. Thus, the structure for state policy-setting plus inter-governmental coordination of policy and implementing actions would be in place.

Life could be breathed into such a structure, and political consensus boosted, by a highly visible state/federal memorandum of agreement to make it all work. USDA, through the Seattle FRC Rural Development Task Force, should take the lead role in preparing and implementing the agreement. (The study being prepared for Representative Duncan's Committee recommends that USDA (FmHA) take the lead among federal agencies. Both the Department and Secretary Bergland are popular in Alaska.) A highly visible agreement and effort to develop a joint investment strategy are very important because of the huge federal presence in Alaska and the universal distrust of the dominant federal partner--the Department of the Interior.

An agreement could specify the course to be followed to reach initial consensus on overall goals and priorities. So that all federal agencies would have reason to actively participate, the agreement could even specify task forces and lead agency responsibility to perform the background work necessary to set priorities. The agreement could provide funding for staff to the Governor's Council: EDA 304 funds could be used as well as FmHA 111 funds. Other agencies, especially Interior, could be encouraged to contribute.

It would take some very high quality staff work to help forge the consensus and leadership that are necessary. Someone will have to be brought into the State at a high salary. This and the high travel costs will make the staff support quite expensive.

RECOMMENDATIONS:

- The Board of Directors of the Council of State Community Affairs Agencies (COSCAA) is meeting in Juneau early in July. This will get some very high-powered state officials into Alaska: e.g., Hank Huckaby, Community Affairs Commissioner in Georgia; and Paula Herzmark, Executive Director of the Department of Local Affairs in Colorado. If we will cover their additional per diem and travel expenses, they will conduct training seminars and dialogues with appropriate state and local officials.

- I understand that Jack Watson and Berry Crawford will be going to Alaska after they attend the USDA Workshop to be held in Spokane, March 17-20. Jack Watson could announce that he and you have directed the newly formed Region X FRC Rural Development Task Force to begin at once to negotiate a memorandum of agreement for a state/federal rural development partnership.

° As a broader than FmHA/State agreement, it could be signed by Jack Watson and you, or perhaps, by the Secretary. A special show of concern and commitment by the Secretary could go far to smooth over the ill feelings for the President that derive from the popular animosity toward Interior and the land settlement issue.

° If the ceremony took place while the COSCAA group was there, the agreement could be credited for the assistance they would be there to provide--and it would impress them too.

° As you know, the Alaska Railroad is crucial to the development of large-scale agriculture in the Delta area near Fairbanks. There is a lot of controversy over freight rates--the RR wants to charge the barley project full costs for returning the empty trains, making the price of the barley noncompetitive. I recommend that a task force to address this issue be set up soon. Berry Crawford has a special interest in it. With your direction, I could work with him and Bob Palmer to get something going right away.

NOTES:

° The Alaska natives control most of the State's developable private land and venture capital. State officials and the public recognize this and seem to be very eager and quite willing to give the natives a prominent role in the State's development.

° On the other hand, at a legislative hearing on discrimination, I heard a lot of testimony that the pipeline and drilling companies discriminate against minorities and women.

° The development of a bottom fishing industry is of special concern to the White House. EDA has funded an infrastructure development planning project to develop a plan that could coordinate and guide investments of public funds by federal agencies, the State, municipal governments, and port districts in support of fisheries development and related community growth. No doubt, a lot can be learned from this project on how to go about creating a joint investment strategy in Alaska.

° A study to inventory all of the task forces, committees, etc., involving federal agencies is underway under the aegis of the Seattle FRC.

RURALCAP		

(3) PROGRAM EFFECTS OF BILL HB 932 creates the office of rural development and the Rural Development Council, established in the Office of the Governor. The Director of the office of rural development is appointed by the Governor. The Rural Development Council is established as the policy council for the office of rural development. The council consists of sixteen members and is chaired by the Lieutenant Governor, and one of the legislative members shall be elected by the council as legislative co-chairman.

(4) FISCAL IMPACT: X ☒ NONE ☐ FISCAL ANALYSIS ATTACHED X To be prepared by Governor's Office

(5) AMENDMENTS PROPOSED:

See comments below:

(6) COMMENTS

This Department supports the establishment of the Office of Rural Development. We wonder whether the Governor would want this in his office inasmuch as he is moving other agencies out of his office into appropriate departments. Our recommendation is to put this in a department and have it function as an independent commission similar to Alaska Municipal Bond Bank Authority, Alaska Industrial Development Authority, etcetera.

In regard to the council membership, we would recommend two members from each house of the legislature to insure broader base representation. We would further recommend the commissioners from the Department of Community and Regional Affairs, the Department of Commerce and Economic Development, the Department of Natural Resources and the Department of Transportation and Public Facilities, with the

Director of the Division of Policy Development and Planning as a fifth member.

In regard to the meetings, we recommend that quarterly meetings be scheduled as a minimum.

On page four, line 19, in regard to staff, we recommend that the full council determine the selection of the executive direc .

March 16 - Sunday

Lee:

1. I never did have an opportunity to call Keith and Rebecca on this bill since I was tied up with RurALCAP.

2. There doesn't appear to be need for a fiscal note on this rural development council bill at this point. I am just preparing the following, which you can feel free to change in any way. Then I thought we could submit a bill analysis to Keith after that, since this information below isn't in final form and you will probably want to change it.

Marie

H.B. 932 establishes an Office of Rural Development in the Office of the Governor. We wonder whether the Governor would want this in his office inasmuch as he is moving other agencies out of his office into appropriate departments. A recommendation might be to put this in a department and have it function as the Alaska Power Authority and Alaska Public Utility Commission out of the Commerce Department, or the State Manpower Services Council out of C & RA, with an executive director and other appropriate staff, as are needed, who would be responsible to the commissioner of the department.

In regard to the council membership, we would recommend two members

In regard to the [illegible]

from each house of the legislature to insure that at least one from each body would be able to attend the meetings. We would further recommend specifically the commissioners from the Department of Community and Regional Affairs, the Department of Commerce and Economic Development, the Department of Natural Resources and the Department of Transportation and Public Facilities, with perhaps the Director of the Division of Policy Development and Planning as a fifth member from the agencies. We recommend deletion of part 4 on page 3 (two members appointed by the governor who are engaged in private enterprise which has significant rural development) as we feel they could be covered by part 5.

Instead of the lieutenant governor chairing the council, we would recommend that one of the public members be elected by the others to chair the meetings.

2. There doesn't appear to be need for a fiscal note on this rural development council bill at this point. I am just preparing the following, which you can feel free to change in any way. Then I thought we could submit a bill analysis to Keith after that, since this information below isn't in final form and you will probably want to change it.

Marie

H.B. 932 establishes an Office of Rural Development in the Office of the Governor. We wonder whether the Governor would want this in his office inasmuch as he is moving other agencies out of his office into appropriate departments. A recommendation might be to put this in a department and have it function as the Alaska Power Authority and Alaska Public Utility Commission out of the Commerce Department, or the State Manpower Services Council out of C & RA, with an executive director and other appropriate staff, as are needed, who would be responsible to the commissioner of the department.

In regard to the council membership, we would recommend two members from each house of the legislature to insure that at least one from each body would be able to attend the meetings. We would further recommend specifically the commissioners from the Department of Community and Regional Affairs, the Department of Commerce and Economic Development, the Department of Natural Resources and the Department of Transportation and Public Facilities, with perhaps the Director of the Division of Policy Development and Planning as a fifth member from the agencies. We recommend deletion of part 4 on page 3 (two members appointed by the governor who are engaged in private enterprise which has significant rural development) as we feel they could be covered by part 5.

Instead of the lieutenant governor chairing the council, we would recommend that one of the public members be elected by the others to chair the meetings.

H.B. 932

In regard to the meetings, we recommend that quarterly meetings be scheduled as a minimum.

On page 4, line 19, in regard to staff, we recommend that the full council determine the number of staff they need and make the selection of the executive director and other appropriate staff as needed.

Lee--those are just rough comments from our earlier discussion. I'm not sure what format you want them in at this time -- we have had no request for department comments yet. I'm not sure who you will designate to attend and/or speak at this hearing on Wednesday since you and I both will be gone.

Marie

"RURAL ALASKA IS IN A STATE OF
PROFOUND ECONOMIC DEPRESSION, - HAS BEEN
FOR MANY YEARS"

I. INTENT: Create Rural Development Council to advocate and assist in rural development.

TIMING: Carter has created new Rural Policy - One time opportunity for revising federal relationship; break Region X Policy brokerage.

II. BASIC PROBLEMS:

1. No comprehensive state commitment to rural economy.

2. Village economic institutions have been left to "go it alone."

3. State relates to rural Alaska through narrowly defined agency boundaries.

4. State now has capital resources to leverage private capital in fostering rural development. Existing structure and policy have a history of poor performance.

III. SOME OF THE OBSTACLES:

1. Need for executive commitment to "an active" rural development policy.

2. Failure to recognize private industry role in basic economies (not a strictly government role).

3. Traditional government/private industry adversity precluded partnership approach to development.

4. Failure to recognize rural development is fundamentally urban development.

5. Inadequate direction of public resources to build an economy - needs Executive Commitment.

IV. STATE'S INTEREST:

1. To begin to establish a very fundamental cash economy in rural Alaska - requires special government role.

2. Infrastructure development is an investment; returns are not immediately apparent.

FEDERAL/STATE INTERAGENCY AGREEMENT

1. State agency structure and operational limits are defined in large part by their federal counterpart agencies.

2. Alaska has had virtually no role in Alaska Federal Policy formation.

3. Seattle's Regional Administrators have exercised brokerage of Alaska interests for years - deeply entrenched.

4. Alaska still has an option to exercise the last of the Federal/State Interagency Agreements.

5. We will be the only state with this option under the new White House Rural Development Policy.

6. The structure of the Council is still open. Its membership is the key to taking advantage of the built-in ability to make things happen!

Alaska State Legislature

House of Representatives

Committee on

Community & Regional Affairs

Official Business

Pouch V
State Capitol
Juneau, Alaska 99811

March 21, 1980

Sent to attached 3/21/80

TELECONFERENCE NOTICE

The House Community and Regional Affairs Committee, chaired by Rep. Bill Parker, and the Senate Community and Regional Affairs Committee, chaired by Senator Arliss Sturgulewski, will hold a joint teleconference on Friday, March 28 at 1:30 P.M. Juneau time on

HB 932 Creating an Office of Rural Development and Rural Development Council

The teleconference will include testimony from all sites. Persons interested in testifying or observing at this hearing should contact the local Legislative Information Office in the following communities: Anchorage, Bethel, Fairbanks, Dillingham, Kotzebue, Nome, Kodiak, Soldotna, Ketchikan and Sitka. Further information may be obtained from the House Committee Chairman (465-3824) or the Teleconference Coordinator (465-4980).

MEMORANDUM

TO: Rep. Bill Parker, Chairman
Community & Regional Affairs Committee

FROM: Jim Duncan

DATE: March 4, 1980

SUBJECT: House Bill 932 -- An Act Creating the Office of Rural Development, and the Rural Development Council

I would appreciate your committee's earliest possible consideration of HB 932. I am enclosing a copy of the bill with backup information.

Gordon Stockdale of my staff or I will be available at your convenience to explain and discuss this important legislation.

JD:jp
Enclosures

"RURAL ALASKA IS IN A STATE OF
PROFOUND ECONOMIC DEPRESSION, - HAS BEEN
FOR MANY YEARS"

I. INTENT: Create Rural Development Council to advocate and assist in rural development.

TIMING: Carter has created new Rural Policy - One time opportunity for revising federal relationship; break Region X Policy brokerage.

II. BASIC PROBLEMS:

1. No comprehensive state commitment to rural economy.

2. Village economic institutions have been left to "go it alone."

3. State relates to rural Alaska through narrowly defined agency boundaries.

4. State now has capital resources to leverage private capital in fostering rural development. Existing structure and policy have a history of poor performance.

III. SOME OF THE OBSTACLES:

1. Need for executive commitment to "an active" rural development policy.

2. Failure to recognize private industry role in basic economies (not a strictly government role).

3. Traditional government/private industry adversity precluded partnership approach to development.

4. Failure to recognize rural development is fundamentally urban development.

5. Inadequate direction of public resources to build an economy - needs Executive Commitment.

IV. STATE'S INTEREST:

1. To begin to establish a very fundamental cash economy in rural Alaska - requires special government role.

2. Infrastructure development is an investment; returns are not immediately apparent.

FEDERAL/STATE INTERAGENCY AGREEMENT

1. State agency structure and operational limits are defined in large part by their federal counterpart agencies.

2. Alaska has had virtually no role in Alaska Federal Policy formation.

3. Seattle's Regional Administrators have exercised brokerage of Alaska interests for years - deeply entrenched.

4. Alaska still has an option to exercise the last of the Federal/State Interagency Agreements.

5. We will be the only state with this option under the new White House Rural Development Policy.

6. The structure of the Council is still open. Its membership is the key to taking advantage of the built-in ability to make things happen!

THE CARTER ADMINISTRATION

SMALL COMMUNITY AND RURAL DEVELOPMENT POLICY

DECEMBER 20, 1979

It is with great personal satisfaction that I announce today my Small Community and Rural Development Policy. I believe it reflects a change in both the programs and the attitudes of the federal government as we seek solutions for the kinds of problems I have seen all my life, growing up and living in a rural area.

We have long needed to translate generalized concerns about rural problems into a set of specific goals, principles, programs, and mechanisms for effective implementation. Building on the many rural initiatives launched during the past two-and-a-half years, this policy provides a clear purpose and a clear program of action for addressing important small community and rural needs, and for managing the profound demographic and economic changes that are taking place in rural America.

Built into this policy is the recognition that rural Americans have extraordinary creativity, dedication, and perseverance. The role of the federal government should be to encourage and support the resources and resourcefulness of rural America and to be the partner of its local leaders.

Nownere is the sense of partnership, neighborliness, and shared responsibility more evidenced than in the communities all across rural America. That is why I am optimistic about the future of this nation and the future of rural and small town America. In many ways, working together and combining our strengths and resources, we can build a better life for all Americans, urban and rural.

Jimmy Carter

PART ONE

POLICY STATEMENT

Our Rural Heritage

Rural and small town America is an integral part of the nation's economic and social fabric. Rural America provides our nation's food, fiber, and wood and accounts for most of our domestic mineral and energy supply. It plays an increasingly important role in the nation's manufacturing, trade, and service economy. Earnings from rural exports make a vital contribution to our nation's trade balance. Most important, our national character draws strength from the rural values of hard work, self-reliance, and a sense of community. Rural America is rich and diverse in history, culture, and natural beauty. It is "home" for generations of Americans and where increasing numbers of Americans prefer to recreate and make their future home.

This nation was mostly rural for its first 150 years. Americans were heavily dependent for their livelihood -- often for their very existence -- on what they could themselves produce from the land. At the turn of this century six of every ten Americans still lived in rural places. The changes since then have been dramatic.

The mechanization of agriculture, improvements in transportation and communication, the process of industrialization, and overall economic growth have greatly altered the economic and social organization of America. For our last fifty years we have been mainly a nation of city and suburban dwellers. During this time, most of the old cliches about rural and urban lost their meaning.

As we enter our third century, the living patterns and preferences of Americans are shifting again. These shifts between urban and rural are occurring in the context of an extraordinary diversity within rural America itself. This diversity is mirrored in the variety of our rural areas -- areas that take such divergent forms as a New England coastal fishing village, a Midwest farm community, a mining town in Appalachia, a ranching area in the Rocky Mountains, a settlement of tenant farmers in the Mississippi Delta, a pueblo in the Southwest, a Southern town in transition to becoming a metropolitan center, and a small Western town experiencing "boom growth" from energy development.

The Changing Face of Rural America

For decades the population of urban areas grew while large numbers of people left the farms and small towns. Since 1970 this migration trend has reversed. The annual growth rate of rural areas has averaged 1.3 percent since 1970, exceeding the rate of growth in urban areas by over 40 percent.

Rural employment, previously declining and historically tied to the land, is now growing and diversifying. Not only are new jobs being created at a faster rate in rural than in urban areas but the composition of rural work itself is changing. Although agriculture is still the dominant influence in many rural economies, overall, employment in manufacturing, trade, and professional services now exceeds direct agricultural employment. Agriculture itself has changed enormously. It has become a highly sophisticated, often specialized, component of a larger food and fiber system that includes suppliers on one end of the production chain and processors and marketers on the other.

This growth in rural population, the accompanying expansion in rural employment, and the increasing diversity of rural economies result from a number of factors -- a strong preference for rural and small town living, the movement of retirees to rural areas, longer-distance job commuting, reduced outmovement from farms, and expanded mining, manufacturing, and service activities in rural areas.

Although the dramatic turnaround in population trends and the growth in job opportunities are the predominant influences in rural America in the 1970's, it is important to note that not all rural areas or rural people have shared in this growth. Approximately 500 counties in parts of the Great Plains, the Corn Belt, and the Mississippi Delta continue to lose population as many have been doing for 20 or 30 years. Most of these counties are heavily agricultural and have experienced an exodus of workers from agriculture that has exceeded non-farm job creation.

Of course, even in areas benefiting from economic growth and diversification, the benefits are not always well distributed. Great numbers of rural and small town residents suffer from problems that afflict the poor wherever they live. Problems resulting from the isolation of being poor or old in rural America can have a particularly virulent effect on both body and spirit.

Special Rural Needs

Even though rural America is growing, too many rural residents have failed to benefit from that growth. Too many remain, in the words of President Lyndon Johnson's Rural Poverty Commission, "the people left behind." Notwithstanding the progress that has been made, a disproportionate share of the nation's poor still live in rural areas -- about 40 percent of the total. Virtually all of the nation's persistently poor counties are rural. The toll, whether measured in terms of economic efficiency or human dignity, is too high.

A disproportionately large number of the rural poor are Blacks, Hispanics, and Native Americans. Approximately 27 percent of rural Hispanic people and 38 percent of rural lacks live on incomes below the poverty level (compared to 1 percent for rural Whites). About 40 percent of all Native Americans were living below the poverty level in 1970. Women in both the rural and the urban work force do not share equitably in the economic rewards of their labor. In 1977, the average annual income of women working full-time in rural areas was only 54 percent of the income of rural men. Also, households headed by females made up almost 35 percent of all non-metropolitan households living in poverty.

There are other indications that rural America is not fully sharing in the benefits of our nation's growth and development. Rural areas have 58 percent fewer physicians, 38 percent fewer dentists, and 29 percent fewer nurses, on a per capita basis. Yet, rural Americans suffer from a higher incidence of chronic disease and lose more days from work due to illness or incapacity than their urban counterparts.

Three times the proportion of rural housing units lack complete plumbing as urban units. Over 2 million rural Americans do not have running water in their homes; over 4 million have inadequate sewage disposal systems or none at all; and many rely on sources of drinking water that fail to meet safe drinking water standards.

Less than one percent of rural Americans who work away from home utilize public transportation to get to work -- a statistic that dramatically reveals how dependent rural Americans are on the family car. Yet over 57 percent of the rural poor, and 45 percent of the rural elderly do not own an automobile, contributing even further to their isolation and immobility, not only from jobs, but from vital social services as well.

These problems and others of comparable severity are further compounded by the limited capacity and resources of local governments to respond. Whether small community needs are those associated with growth or with decline, they pose special problems for local governments. About one quarter of all rural people live in or near towns of less than 2,500; three quarters live in or near towns of less than 20,000. Given their small population bases, most small rural governments are limited in the array of public services they can provide. Large-scale urban-oriented technologies are often not economically feasible when applied to small towns and rural areas. And while the range of public services offered by rural governments is more limited, the per unit cost of providing these services is usually higher.

Many small towns, remote from Washington and from their state capitols, lack the "grantmanship" that is so often required to compete successfully for limited Federal and state assistance. This difficulty is compounded by the fact that many federal programs have been formulated with big cities in mind. As a result, such programs frequently contain eligibility and other criteria that hinder access by small communities. Even when assistance is available, the lack of fiscal resources makes it difficult for many small communities to match federal grants and to repay loans.

Even those small communities now experiencing economic growth are finding that along with the blessings, growth brings a new set of problems. Many communities are unprepared for the economic and social adjustments that become necessary. Changing demographic and economic patterns may not only exacerbate chronic and deep-seated problems but they often create new ones.

Some of the problems are already apparent. As a result of rapidly escalating property values and taxes, too many rural families on low and fixed incomes are in danger of losing their land and homes. As a result of the growth in residential, commercial and industrial land use, prime agricultural land is being lost and fragile ecosystems are being impaired. The influx of new residents -- especially when it escalates to "boom growth" -- makes it difficult for local governments to provide essential public services in a timely way.

Why A Rural Policy

My Administration is adopting a Small Community and Rural Development Policy because:

- Rural America's human and natural resources are a mainstay of the nation's economy and contribute very significantly to the American way of life. A conscious and sustained effort is needed to ensure the wise use and continued productivity of these resources.

- Many rural areas are in the midst of significant economic and demographic change -- change that is creating new demands, new problems, as well as new opportunities. A forward-looking policy is needed to manage the effects of such change -- to enable individuals and communities to solve their problems and to capitalize on their opportunities.

- Rural people and communities have proportionately greater unmet basic human needs than do other parts of the nation. We must seek to assure that, to the maximum extent our resources allow, we address these needs and redress inequities.

- The entire nation, including our cities and suburbs, is served best when good jobs, livable incomes, decent housing, a healthy environment, dependable energy supplies, and other basic needs are met in small communities and rural areas and when neither urban nor rural residents have to move in search of a better life.

- Confused and often contradictory policy goals and implementation responsibilities have frustrated past efforts to address rural needs both within the federal government and between the federal government and state and local governments and community-based organizations. We need clear policy direction and a framework for integrating current federal efforts and reviewing future policy initiatives in order to evaluate the impact of actions we take and resources we commit.

- Frequently, past rural programs have been developed in Washington, D.C. on the basis of inadequate and out-of-date information. We need to improve our rural data base. We also need to assure that diverse rural perspectives are available to federal policy makers and program managers. This continuous source of input is particularly important now when rural America is in transition.

Policy Goals and Principles

The Administration's Small Community and Rural Development Policy is designed to recognize the great diversity of rural needs and circumstances. Rather than attemptin to impose a single grand strategy on a diverse rural America, the policy I am announcing sets forth goals and principles, organizational

and procedural arrangements to help ensure their implementation, and a set of new initiatives to fill gaps and deficiencies in existing federal programs. The basic intent is to provide a policy process within which the federal government, in cooperation with state and local governments and the private sector, can provide the greatest degree of support for local efforts to solve problems and improve the quality of rural life.

In partnership with the Congress, state and local governments, and private sector leadership, my Administration is committed to work toward:

- meeting the basic human needs of rural Americans;
- providing opportunities for rural people to be fully and productively employed and providing a favorable climate for business and economic development;
- addressing the rural problems of distance and size; and
- promoting the responsible use and stewardship of rural America's natural resources and environment while preserving the quality of rural life.

In support of these goals, I am directing my Secretaries and Heads of Departments and Agencies to adhere, to the maximum feasible extent, to the following principles, in the administration of federal programs. Specifically, federal administrators are directed to:

- manage their programs in ways that recognize local priorities and facilitate local decision-making in rural America;
- make federal investments in ways that complement state-local development plans and priorities;
- use federal assistance to help leverage private sector investments in rural community and economic development projects and programs;
- give high priority to the targeting of federal assistance to disadvantaged persons and distressed communities in rural areas;
- make federal programs more accessible to rural jurisdictions and community-based organizations, better adapted to rural circumstances and needs, better coordinated, and more streamlined in their administration; and

- make special efforts to provide local citizens and their leaders with the assistance needed for effective community decision making and development efforts.

Implementation

A statement of policy goals and principles is not enough. These goals and principles will only begin to have impact on the needs of rural Americans as they are reflected in changes in the way government acts -- changes in programs, in delivery systems, in accessibility, and sometimes even in attitude. Thus, I am taking two important steps to help ensure that this policy is fully and effectively implemented.

First, I am proposing a rural development action agenda -- a set of specific action steps which the Administration will pursue to address priority rural needs. This action agenda -- outlined in detail in Part Two -- builds upon and expands the White House Rural Development Initiatives of the last two years and is based on advice received from extensive consultations with the Congress, the states, local officials, and rural leaders across the country. Although it is an ambitious agenda, one that is broad in scope and meticulous in detail, it is also unfinished. Many more actions and reforms are needed and will be taken in the future.

Second, I am directing a number of organizational and procedural changes as part of a strategy to develop the institutional capacity needed to solve problems on an on-going basis and assure the effective, sustained implementation of the policy principles identified here. [Such an institutional structure must extend beyond the boundaries of the federal government to state and local governments, rural interest groups, local leaders, and innovators.] [It must provide a basis for the collaborative implementation of programs and initiatives which have been jointly developed.] With these requirements in mind, I am:

- o Asking Congress to create the position of Under Secretary of Agriculture for Small Community and Rural Development. This new position will help carry out Secretarial and Administration policy and assist the Secretary to fulfill his government-wide mandate under the Rural Development Act of 1972.

Alex Mercure

- Placing renewed emphasis on the Working Group on Small Community and Rural Development and directing this group to play an aggressive and effective role in monitoring and assisting the implementation of this policy pursuant to Section 603 of the Rural Development Act of 1972. Toward this end:

Mercure / WATSON

- the Working Group will be co-chaired by the Under Secretary for Small Community and Rural Development (USDA) and my Assistant for Intergovernmental Affairs and Secretary to the Cabinet;

- both the Under Secretary for Rural Development (USDA) and my Assistant for Intergovernmental Affairs will be staffed specifically for this purpose;

- the Working Group will be composed of principal federal program managers, and such others as may be named by the co-chairpersons:

Executive Associate Director (Budget), Office of Management and Budget
Associate Director (Rural and Agriculture), Domestic Policy Staff
Assistant Secretary for Budget and Programs, Department of Transportation
Assistant Secretary for Community Planning and Development, Department of Housing and Urban Development
Assistant Secretary for Housing, Department of Housing and Urban Development
Deputy Under Secretary, Department of Health and Human Services
Assistant Secretary for Employment and Training, Department of Labor
Assistant Secretary for Economic Development, Department of Commerce
* Assistant Secretary for Land and Water Resources, Department of Interior
Assistant Secretary for Rural Development, Department of Agriculture
* Assistant Secretary for Capital Investment and Debt Management, Department of Treasury
Deputy Under Secretary, Department of Energy
Appropriate Representative of the Department of Education
Associate Director of ACTION
Deputy Director, Community Services Administration
* Deputy Administrator, Environmental Protection Agency
Executive Assistant/Director of Administration, General Services Administration
Deputy Administrator, Small Business Administration

- Directing the Secretary of Agriculture to appoint an Advisory Council to monitor implementation results and to advise him (and through him the Working Group) on needed federal actions. The Council will be composed of public officials named by major public interest groups, representatives of community-based organizations and other private interest groups, representatives of the business and financial community, and others to be selected by the Secretary.

- Inviting the nation's Governors to establish State Rural Development Councils as a mechanism for ensuring effective coordination in joint federal-state efforts to implement state and local rural development priorities. The Federal Regional Councils will be directed to establish a rural development task force to assist state implementation efforts, and the Secretaries and Heads of Agencies will direct federal field personnel to participate on the state Rural Development Councils if a governor so desires.

- Directing the Working Group, acting through the Secretary of Agriculture and based on advice of the Advisory Council, to annually review existing and proposed policies, programs, and budget levels to determine their adequacy in meeting rural needs and embodying the policy principles articulated here. A report, based on this review, should be submitted to OMB at an appropriate time in the budget cycle and to other Secretaries and Heads of Agencies as appropriate. The Secretary of Agriculture is further directed to submit a report to me each year that documents the implementation steps pursuant to this policy and that satisfies the reporting requirements of the Rural Development Act of 1972.

- Directing the Secretaries of Housing and Urban Development, Health and Human Services, Education, Commerce, Energy, Labor, Transportation, and Interior, and the Administrators of the Environmental Protection Agency, the Community Services Administration, and the Small Business Administration to review relevant departmental or agency policies and programs in terms of their adequacy in embodying the policy principles and to designate a senior official to be responsible for monitoring implementation of this policy within the agency, serving as a rural advocate within the agency, and acting as a point of contact for small community and rural leaders seeking information or assistance.

A cornerstone of my Administration's Small Community and Rural Development Policy is the coordination of federal, state, and local efforts to serve rural people and enhance their prospects for the future. To help accomplish this important aim, federal officials must be constantly exposed to a range of rural experiences and information and brought into contact with those people who represent rural viewpoints and are working to meet rural concerns. The emphasis on ongoing, institutionalized follow-up and non-federal involvement is intended to provide an environment conducive to the development and execution of policies and programs which are sensitive to rural needs and circumstances.

PART TWO

ACTION AGENDA

What follows is a description of some of the key actions already taken by this Administration to address rural problems and a summary listing of new actions announced today to further address these problems in the context of overall policy goals. The new initiatives are based, to a large extent, on recommendations made during the extensive consultations which were held with Members of Congress, state and local elected officials, and public and private interest groups to identify priority needs and what needs to be done to address them.

Many more actions and reforms are required. No rural policy pronouncement can be viewed as the last word. It must rather serve as a source of guidance, emphasis, priority, and inspiration in the context of which future work must be planned and undertaken. Those problems which could not be fully addressed in this statement will be placed on the 1980 agenda of the Working Group on Small Community and Rural Development and the Advisory Council to that group.

The new initiatives detailed below will be implemented by the Departments and the Working Group on Small Community and Rural Development. The Working Group will assist in establishing lead agency responsibilities, time frames, and where possible, quantitative targets to be reached. The designated agencies will develop work plans, including time schedules, information or other resources needed from other agencies, anticipated problems, and needed policy guidance. Review by the Working Group will provide opportunities for coordinating actions and schedules and sharing resources as needed. The Working Group will also establish monitoring guidelines to assure timely reports on progress and problems encountered in implementing the initiatives.

MEETING THE BASIC HUMAN NEEDS OF RURAL AMERICANS

HOUSING

Actions Already Taken

- A joint agreement between FmHA and HUD initiated a four-year demonstration in state delivery of federal housing and community development assistance to rural disadvantaged populations and distressed communities in four states. During the first two years of the demonstration, over 2,100 new housing units were constructed and an additional 5,484 homes were rehabilitated or weatherized. The program is currently being extended to other rural areas with similar needs in each of the four demonstration states.

- Under the White House Rural Development Initiatives, the Administration announced in January, 1979, a set-aside of funds to construct 10 demonstration elderly congregate housing projects, with social services provided on-site. Since that announcement, FmHA regulations have been changed to make the provision of social services a matter of routine consideration when elderly congregate housing projects are planned. Such housing provides a much-needed alternative to institutional care for the elderly who need social services some of the time.

- FmHA implemented a new rental assistance program providing rent subsidies to nearly 43,000 rural low-income families so they could afford to live in FmHA-financed rental and farm labor housing developments.

- FmHA increased the level of Section 504 low-income housing repair loans and grants from $24 million in 1978 to $43 million in 1979 to better meet the special needs of older Americans.

- The Federal National Mortgage Association (FNMA) has established a "satellite" lending program which permits small lenders to sell their loans to FNMA through approved FNMA seller/servicers. This new correspondent relationship is very important to the typically small and undercapitalized rural lender who could not normally take advantage of the marketing opportunities afforded by FNMA.

- To help cut fuel bills for rural families and implement national energy conservation goals, FmHA and the Rural Electrification Administration (REA) began a program to allow REA-financed cooperatives to use FmHA rehabilitation loan funds to weatherize homes for their customers.

- To increase the availability of federal assistance for homeownership to lower income households, FmHA revised the "good credit history" application procedures to ensure equal credit opportunities without discrimination for FmHA housing loan applicants. In addition, FmHA aggressively emphasized use of the provision allowing low-income borrowers to temporarily suspend housing loan payments when medical problems, loss of jobs, or other emergencies prevent payment.

- o HUD ' - increased funding of state and local human ri commissions to improve fair housing enforcemen. in rural and small communities.

- o The Veterans Administration loan referral system minimizes requirements for direct loans from local lending institutions in rural areas. Eligible veterans can receive VA direct loans up to 60 percent of home mortgage amounts under the program.

- o HUD has begun a Rural 1000 program to facilitate construction of Section 8 assisted housing with eight units or fewer in communities of under 1000 population.

- o HUD has initiated a "rural track processing strategy" to enable one developer to work with local builders to construct small housing developments, scattered in rural communities over a large geographic area.

Action Agenda

to address the following policy objectives: increasing opportunities for low and moderate income rural people to become homeowners or to live in decent rental housing; improving access to federal, state, and local housing programs and resources for lower income residents; ensuring that the housing needs of rural Americans are reflected in national housing programs and standards

- o monitor and fully implement the White House Rural Elderly Housing Initiative which mandates all congregate elderly housing constructed with FmHA funds to have social services provided on site, and provides a $12.5 million 10-site demonstration highlighting this regulatory change;

- • revise the HUD/FmHA Minimum Property Standards for Single Family Housing to permit its adaptation to local conditions and to reduce housing costs; hold interagency t.aining sessions on use of the new Minimum Property Standards handbook;

- • develop and make available variable housing design plans (blueprints) which meet Minimum Property Standards to assist small builders and self-help housing groups;

- make current FmHA grant and loan assistance available to families wish to add on a room or remodel their house to provide living quarters for elderly family relatives;

- continue demonstration project and assess the feasibility of a prototype land bank for residential sites;

- support appropriations for FmHA's Homeownership Assistance Program (HOAP);

- develop and implement an interagency agreement (CSA, FmHA, DOL, HUD, HEW) to provide for coordinated assistance related to FmHA Section 514 farmworker housing construction, including a set-aside of HUD Section 8 rental assistance for Section 514 very-low-income housing repair program;

- make HUD's Certified Housing Counseling program available in rural areas;

- develop standardized loan application and appraisal forms to the extent practical for HUD, FHA, FmHA, and VA to broaden credit opportunities for rural families;

- monitor and fully implement the inter-agency agreement among DOL, HUD, FmHA, and CSA on farmworker housing as a starting point in developing a comprehensive housing policy for migrant and seasonal farmworkers;

- continue the FmHA/HUD funded major national rural cooperative housing demonstration project to develop and maintain an integrated delivery system in rural areas for small rural housing cooperatives to increase homeownership opportunities for rural residents;

- expand to 32 states the delegated mortgage processing program of HUD's Rural Assistance Initiatives, which authorizes local savings and loan associations and other mortgage lenders to process FHA-insured single family mortgage loans under Sections 235 and 203(b), thereby increasing the access to these FHA-insured loans in areas which are some distance from HUD offices.
→ FmHA ?

HEALTH

Actions Already Taken

- In October, 1978 the Administration, working through HEW and FmHA; announced the White House Rural Health Initiatives to finance the construction and rehabili-

tation of 300 primary health clinics in rural areas. Construction of the 300 new clinics and training of rural people to provide staff services will take place over the next four years. These centers will serve about 1.35 million people. In the past year 71 clinics have been authorized for funding under this program and 507 people are being trained to staff them.

- o HEW and FmHA are cooperating to target loan funds for medical facilities to 125 rural communities by the end of 1980. HEW Community Health Services Program's budget has been increased to $40 million to reflect this Administration's support for the requirement that 40 percent of Community Health Center Services go to rural areas.

- o HEW has begun a pilot program to use public schools as sites for primary health care service projects. Over the next year, the department expects to work with six to ten communities to place satellite health centers in schools where vacant space and available school transportation will increase the accessibility of health care for rural residents.

- o To alleviate the shortage of doctors and other health care professionals in small towns and rural areas, the Administration supported passage of the Rural Health Clinics Services Act which expanded the scope of primary health care services performed by physician assistants and nurse practitioners. HEW has certified over 400 clinics for reimbursement for services performed by these health professionals in the eighteen months since the law was signed. In addition, HEW has worked to make mental health services more available by stationing mental health professionals in rural primary care centers. To augment these efforts, additional National Health Service Corps professionals have been assigned to rural areas.

- o To ensure that residents of small towns and rural areas have opportunities to enter the health care professions and help deliver health care services to their communities, the Administration has taken several actions: a joint agreement between HEW and DOL will enable about 500 migrant and seasonal workers to obtain jobs and training in rural health projects; Job Corps graduates can now obtain permanent employment in the Public Health Service; and students of health-related professions will benefit from the current assessment of the accessibility of vocational training programs in rural areas.

- o Significant efforts have been made during the last four years to provide alternative health and supportive

services for older and disabled Americans and to enable them to live independently or with their families. These efforts include an HEW demonstration program to link services of rural primary care centers with local agencies providing support services to the elderly, and the HEW Home Health Program which supports the development and expansion of home health agencies. Since 1977, about 150 of these home health projects have been funded in rural areas.

- Actions taken to direct federal resources to the special needs of rural Americans include: the Black Lung Program which provides health, education, outreach and clinical services to approximately 122,000 victims of black lung disease in rural areas; demonstrations in delivering burn care on a regional basis; the Center for Disease Control program to support state laboratory improvement efforts and provide direct assistance for laboratory technicians working in rural areas.

Action Agenda

to address the following policy objectives: ensuring adequate primary health care services and facilities; alleviating the shortage of doctors and other health care professionals; promoting non-institutional care and independent living for the elderly and disabled; and ensuring that the special health needs of rural Americans are reflected in national health care programs and standards

- monitor and ensure full implementation of the White House Rural Health Clinics Initiatives to support construction and/or rehabilitation of 300 rural primary care health clinics over the next four years and to train and employ rural residents as support staff;

- promote full implementation by HEW of the Rural Health Clinic Services Act including: elimination of federal barriers especially in certification processing, cost reporting and Medicare/Medicaid reimbursement procedures; clinics and personnel and provide incentives for states to expedite reimbursement; evaluation of any legislative or regulatory changes that may be needed, especially with respect to the setting of cost reimbursement schedules and the need to assure public input in the development of regulations; and designation of a focal point within HEW to implement the Act;

- increase the availability of trained medical personnel in rural areas through encouraging and providing inducements to states, private foundations, and others to persuade medical, dental, and nursing schools to admit a greater number of rural students; using regional mechanisms such as AHECs in medical personnel placement, training, and continuing education; placing a greater number of medical personnel in rural areas through the National Health Service Corps; and providing incentives for increasing the number of nurse practitioners and physicians assistants;

- promote legislation permitting "swing beds" which would simplify Medicare and Medicaid reimbursement in small rural hospitals;

- assure that the special health needs of rural areas are recognized in any legislation related to the National Health Plan;

- encourage increased uniformity in Medicaid eligibility, scope, benefits, and coverage across the country (Proposed National Health Plan standards are uniform across the states.);

- place top legislative priority on CHAP and other preventive care programming for children;

- expansion of the WIC program into more rural areas, and improved coordination between WIC and rural health service programs;

- give greater emphasis to provisions in the Health Planning law which provide for sub-regional health groups in formulating local and state plans;

- ensure that health planning agencies adapt national health standards to differing regional and state needs and priorities, and that such standards reflect the unique circumstances and needs of medically underserved populations in isolated rural communites;

- target primary care programs to meet more adequately the needs of medically underserved rural areas and population groups, including minorities, women and migrant and seasonal farmworkers;

- work for passage and full implementation of the Mental Health Systems Act which would provide services in rural areas and would put particular emphasis on rural poverty areas and areas with high concentrations of minorities;

- promote integrated systems of physical and mental primary care through linkage arrangements between agencies providing general health care and specialized mental health agencies and, where possible, seek a single grantee for both activities;

- provide incentives to states and local communities to make greater efforts to reach persons in rural areas with alcohol and drug abuse problems.

WATER AND SEWER

Actions Already Taken

- As part of the White House Rural Development Initiatives, the President announced in December, 1978, an agreement which substantially improves the way in which EPA, FmHA, EDA, and HUD relate to each other and deliver approximately $2.5 billion in water and sewer assistance annually to small towns and rural areas. Features of the agreement include the adoption of common criteria for defining "affordable systems"; single environmental assessments; single A-95 reviews; single construction inspections; and, for FmHA and EDA, a common application form and common auditing and reporting requirements. The agreement also calls for the development of one consistent set of compliance requirements with some 16 cross-cutting federal laws and executive orders, and the common use of a "community profile form" as a means of making an early determination of which agencies might participate in a joint-funded project and meet with the applicant community in a pre-application conference. Over 300 applications have been processed under these new procedures over the past nine months, with the net result that it is now much easier and faster for small rural communities to find out what kinds of assistance are available and how to get it.

- For the first time, the Clean Water Act recognizes the construction of alternative and innovative treatment technologies including on-site systems as an eligible purpose for construction grants; moreover, municipal bodies may receive grants for these purposes to serve small non-profit or commercial institutions as well as residential users.

- EPA has proposed technical assistance training packages for elected officials and citizens involved in Step I facilities planning. These packages will provide local decisionmakers with the background necessary to assess the costs and benefits of various wastewater treatment options. They will also include information on water conservation, wastewater treatment processes, operation

and maintenance problems, cost-effectiveness analysis, and innovative and alternative wastewater treatment systems. These technical assistance training packages will be available for use in rural communities from appropriate State and EPA offices by FY 80.

- Under Section 205(g) of the Clean Water Act, up to 2 percent of the State's allotment may be set aside for management of the Construction Grants Program by the State. Part of this set-aside can be used by the States to manage grants for small communities if it so specifies in its delegation assessment. So far delegation agreements have been signed for Illinois, Texas, California, New Hampshire, and Wisconsin; New York is pending.

- For the first time, EPA grants for water and sewer funding Steps 2 and 3 can be combined into one grant for communities of 25,000 or less population if the total estimated Step 3 cost is $2 million or less ($3 million in States with unusually high construction costs).

- Rural States must set aside 4 percent of their EPA Construction Grants allotment for alternatives to conventional treatment for communities with populations of 3,500 or less, or the sparsely populated areas of larger communities. Other States have the option of setting aside up to 4 percent of their allotments for this purpose.

- The Agricultural Credit Act of 1978 increased the maximum allowable grant for FmHA water and waste disposal projects from 50 percent to 75 percent of eligible project development costs. This change will enable FmHA to provide higher levels of assistance to the most financially needy communities.

- On July 13, 1978, FmHA and EPA signed a Joint Policy Statement relative to implementation of the Safe Drinking Water Act. The Act authorized EPA to set and enforce national drinking water standards but did not provide funds to help water suppliers meet the standards. Most of the communities that will need additional water treatment to meet the standards are in rural areas. Therefore, FmHA has agreed to give priority to applications for loan and/or grant assistance from such communities as part of its financial assistance programs for promoting orderly development in rural communities.

- EDA has changed its regulations to enable communities to receive up to 80 percent total Federal funding for jointly funded projects. The previous regulations restricted the total amount of Federal involvement for

projects in which EDA participates to the percentage allowed by EDA for the redevelopment area (a percentage ranging from 50 percent to 80 percent). This change will enable communities to receive larger federal amounts for projects when EDA is involved.

o Effective October 1, 1978, EDA delegated approval authority for Title I Public Works projects under $500,000 to the Regional Office Directors. This delegation will shorten the time involved for the Federal government to make funding decisions on projects and make EDA more responsive to local government needs.

Action Agenda

to address the following policy objectives: ensuring safe drinking water supplies and adequate sewage treatment and disposal; facilitating dissemination of information about and application of appropriately scaled alternate technologies to meet rural needs and circumstances

- monitor and ensure full implementation of the White House Rural Water and Sewer Initiatives;

we did This! →

- amend the Rural Water and Sewer Agreement (involving EPA, FmHA, HUD, and EDA) to include the Indian Health Service;

- monitor and fully implement the agreements involving EPA and DOL to train disadvantaged rural residents to operate and maintain rural water and wastewater treatment facilities;

Need ↓

- ? encourage the use of EPA's cost-effectiveness criteria for wastewater systems funded by HUD and FmHA;

This →

- place a priority within all relevant agencies on funding the planning and construction of alternative wastewater systems that are often more consistent than conventional systems with the needs and financial resources of rural areas (such technology is eligible for an 85 percent grant under EPA's construction grants program);

o place priority on use of regional management and administrative entities such as septic tank or water supply districts that are appropriate modes for delivery of rural water and wastewater treatment services;

- o adopt as a national goal the elimination of unsafe drinking water during the decade of the Eighties, and appoint a study group with private sector and federal, state, and local government participation to recommend needed actions to achieve this goal;

EDUCATION

Actions Already Taken

- o HEW is studying Federal aid programs to rural schools and examining the impact of allocation formulas on rural school districts. Exploration of measures to reduce the repetitiveness of grant application requirements has begun. Further, HEW is evaluating program regulations and administrative procedures which affect funding for rural education. The Bureau of Elementary and Secondary Education will be working with rural organizations and agencies to develop a rural agenda for future education planning, using the results of these studies.

- o The Fund for the Improvement of Post-Secondary Education has encouraged proposals from a variety of sources to improve post-secondary education, including projects which address the problems endemic to rural locations. In some cases the projects are working to improve the quality and availability of educational information and programs to rural adults. Other projects are targeted to specific audiences: older adults, farmworkers, Indiana and migrant youth residing in rural areas. Grants have also been used to test the effectiveness of cable TV and video for delivering educational services to remote areas.

- o The Northwest Regional Education Laboratory, sponsored by N.I.E., has developed a process for broadening citizen and practitioner participation in addressing the educational problems of rural communities. Their Rural Futures Development Strategy was field-tested at six sites in Utah and Washington in 1977 and is currently being transferred to other rural communities. Among the results of the demonstration is a new effort, in cooperation with five State school board associations, to develop a training program for school board members to strengthen local decision-making procedures on rural school boards.

Action Agenda

to address the following policy objectives: improve basic educational skills, employment skills, and opportunities for post-secondary education; and ensuring that resources for education programs are made available to small and rural communities across the country

- o form an inter-program task force at the new Department of Education to examine program policy effects on rural areas and to develop recommendations for assuring equity for rural constituents;

- o improve access to vocational and adult education in isolated rural areas by establishing this as a priority area for the Bureau of Adult and Vocational Education and supporting a provision in reauthorizing legislation for Vocational Education to include a special emphasis on program needs of rural needs.

INCOME MAINTENANCE, SOCIAL SERVICES AND LEGAL AID

Actions Already Taken

- o Administration efforts to target food stamp benefits to the poorest of the poor resulted in significantly increased participation in rural areas. The majority of the three million new food stamp recipients live in rural areas.

- o As a result of 1978 Head Start Amendments, enrollment of children from very small communities in Head Start programs is now easier as many areas are allowed to develop their own local standards of eligibility.

- o Improvements in social welfare service delivery include a demonstration of the use of satellite diagnostic service centers to make it easier for people living long distances from agency offices to find out and benefit from federal, state and local assistance programs.

Action Agenda

to address the following policy objectives: alleviating poverty; streamlining the delivery of social services in rural areas; and assuring access to legal services

- ensure that rural concerns are addressed in enactment and implementation of welfare reform, particularly: a federal minimum floor for cash assistance; mandated AFDC-UF benefits for two-parent families; requirements for state government to provide adequate access in sparsely populated areas;

- review implementation of the Food Stamp program to assure that it meets rural needs, including: support legislation removing the cap on expenditures, continuation of the non-public-assistance food stamps program; requirements for state governments to provide adequate access in sparsely populated areas;

- aggressively pursue the target of providing at least two legal service attorneys for every 10,000 poor people through the Legal Services Corporation;

- encourage each appropriate Legal Services Corporation office to include rural perspectives in its planning process;

- improve the delivery of legal services to rural areas through encouraging law schools to develop manuals dealing with common legal problems affecting the rural poor; using LEAA funds to establish rural legal education and information centers; using law students in rural legal outreach programs; and formally recognizing and facilitating networking among rural legal services personnel and enhancing peer-to-peer technical assistance.

JOB CREATION AND BUSINESS AND ECONOMIC DEVELOPMENT

JOB CREATION

Actions Already Taken

o As a result of this Administration's Economic Stimulus Programs, unemployment in non-metropolitan areas was reduced by 17 percent during the past two-and-a-half years, representing the creation of over 2.5 million new jobs.

o The Carter Administration has doubled the size of public service employment opportunities in non-metropolitan areas over the past two-and-a-half years (from 93,000 in 1977 to more than 225,000 in both 1978 and 1979) -- the largest public service buildup since the New Deal.

- The Administration has provided the largest expansion of youth employment and training opportunities in history--three times the size of rural youth programs under the War on Poverty.

- Since 1976, the Administration has doubled the number of employment and training opportunities in rural areas for senior citizens, migrant and seasonal farmworkers, and Indian and Native Americans.

- The Administration has implemented the largest and most comprehensive welfare reform demonstration for low income workers. Six of the 15 pilot programs are in rural areas. These programs will create an estimated 7,000 jobs for unemployed heads of low income families.

- As part of the President's Private Sector Initiative (Title VII of the Comprehensive Employment and Training Act of 1977), 65 Private Industry Councils have been established to provide a mechanism for transitioning rural workers from CETA training slots to unsubsidized private jobs through the use of on-the-job subsidies.

- In cooperation with the State of North Carolina, DOL has established a special demonstration project to develop a model for linking employment and training activities with other federally funded rural development programs.

- DOL is in the process of establishing 71 new field offices for the Office of Federal Contracts Compliance Programs which will greatly increase the accessbility of rural minorities and women to DOL's Equal Employment Opportunity enforcement resources.

- Employment components included in the White House Rural Development Initiatives providing for the training and placement of: 3,000 operators of rural water and wastewater treatment systems (1,500 on Indian reservations); 1,000 operators of small-scale hydroelectric and fuel alcohol plants and community-based unconventional gas facilities; 1,500 workers as drivers, mechanics, and dispatchers in rural social service and rural transportation systems; and 500 assistants in rural health care clinics.

- An expanded private sector apprenticeship program in DOL provides opportunities for up to 1,800 Appalachians with emphasis on youth, economically disadvantaged persons, and Job Corps terminations.

- The FmHA-DOL farmworker work experience program under which DOL has transferred almost $7 million to FmHA for placing up to half of all successful trainees in paraprofessional and clerical positions in FmHA offices and the rest in unsubsidized jobs.

- Under a FmHA, DOL, CSA agreement, rural youth are being given construction job training by DOL while rehabilitating homes for low income families under FmHA housing programs. The two-year project is expected to result in the rehabilitation of about 1,000 homes.

- The innovative TVA Cash Corps for Youth Program provides opportunities for rural youth to earn summer income through cash crop production. These opportunities often provide income required for further education, adjusting from rural to urban employment, or acquiring basic farm production and management skills.

Action Agenda

to address the following policy objectives: increasing job opportunities for minorities, women, and the economically disadvantaged; improving vocational guidance, training, and job opportunities for rural youth

- provide a strong rural component to the Employment Initiatives to vigorously implement a new agreement which establishes the goal of placing CETA eligibles in 20 percent of the total number of employment opportunities created from grants and loans made under FmHA's Community Facilities and Business and Industry Loan Program;

- aggressively apply Defense Procurement Order Number 4 which gives preference for government contracts to areas of high unemployment, many of which are in rural areas;

- support the 4-H economics, jobs, and careers programs to assist youth in career decisions and enhance their employment opportunities;

- improve efforts to train farmworkers for skilled agricultural jobs as well as for non-agricultural jobs and give priority consideration to farmworker youth under the interagency Agricultural Entrepreneurship Agreement (involving DOL, CSA, FmHA, and Cooperative Extension);

- o provide improved employment and economic development opportunities for reservation Indians through a comprehensive program to coordinate CETA employment and training programs with the economic development programs of HUD, EDA, FmHA, SBA, and CSA (using the Employment Initiatives as a model);

- o implement a cooperative effort involving TVA, a proposed Tri-Counties Utilities Districts, local elected officials, the State of Tennessee Department of Economic Development, EDD staff, various federal development agencies, private oil and gas interests, and others to develop the unconventional gas resources in the rural counties of Morgan, Fentress, and Scott (Tennessee), as part of a wider demonstration effort of an intergovernmental approach to ensure that local people and communities capture associated benefits (jobs, business development, community improvements, and related economic development); this demonstration will be undertaken as part of the White House Initiative entitled "Area Development from Large-Scale Construction";

- o implement, as part of this same White House Initiative (Area Development from Large-Scale Construction), several additional demonstrations of the intergovernmental strategy for promoting local and minority jobs, small and minority business development, orderly community development, and economic development from large-scale construction; including projects being constructed by the U.S. Army Corps of Engineers, the Water and Power Resources Services and privately financed projects.

ECONOMIC DEVELOPMENT

Actions Already Taken

- o The Administration has sponsored economic development legislation of tremendous potential importance to rural America. The National Public Works and Economic Development Act now being considered by the Congress can bring to bear capital and credit resources sorely needed in many rural areas for private business development.

- o The Small Business Administration has been making one out of every two business loans in non-urban areas. In the past 18 months SBA has made 13,000 loans in non-urban areas.

- The Economic Development Administration (EDA) and the Farmers Home Administration (FmHA) have improved access to needed credit and capital for rural business development. Since 1977 alone, FmHA has obligated $2.5 billion in guaranteed loans to rural businesses. Since 1978, EDA has provided over $17 million in grants for local revolving loan funds serving rural businesses and has made $90 million in direct and guaranteed business loans in rural areas.

- The Department of Housing and Urban Development (HUD) has allocated $171.1 million in urban economic development grants for projects in small cities since August, 1978, under the UDAG program. This is 25 percent of total UDAG funding.

- Credit and capital access for minorities in rural areas have been improved by the new joint efforts of FmHA and the Office of Minority Business Enterprise (OMBE) to assist rural minorities in developing sound business firms funded by FmHA loans. For the first time, $100 million in loan funds have been set aside for minority and women entrepreneurs.

- The National Trust for Historic Preservation has conducted pilot projects in selected small towns to demonstrate the potential benefits of locally orchestrated downtown revitalization requiring minimal outside expertise and support.

- TVA has worked in approximately 30 small communities in the past two-and-one-half years to help them improve and modernize their central business districts and make those communities more attractive and efficient locations for future development.

- USDA, CSA and ACTION sponsored five small farm conferences in 1978 to provide small farmers with a forum for airing priority concerns and advocating actions desired of farm policymakers. The small farm conferences resulted in the initiation of 16 joint pilot projects to help small-acreage farmers increase their production and income.

- Implementation of FmHA's limited resources farmers program, authorized by the Agricultural Credit Act of 1978. Under the program, FmHA state directors earmarked at least 25 percent of their FY 1979 farmer program allocations to low income family farms.

Action Agenda

to address the following policy objectives: improving access to credit and capital; strengthening small farms; expanding markets for rural businesses, contributing to the commercial revitalization of small town "main-street"; and building on the base of federal capital expenditures for major construction projects to assure maximum local, rural economic development

- improve the retailing of federal credit resources (FmHA, CSA, HUD, SBA, EDA) through utilizing mobile offices, increased reliance on savings and loan associations and commercial banks (expansion of FmHA demonstration and implementation of relevant provisions of SBA legislation if passed), and fuller utilization of economic development districts and community-based organizations;

- promote development of community-based organizations through establishing rural Small Business Investment Corporations and implementation of the Consumer Coop Bank;

- make special efforts to ensure that rural small businesses are adequately informed about the Community Reinvestment Act and its potential benefits;

- encourage establishment of rural community development credit unions;

- increase market promotion and related technical assistance for rural businesses through small business export conferences, OPIC, Export-Import Bank, and Commerce;

support rural downtown revitalization through development of a policy to accelerate legally mandated property disposal procedures and facilitate transfers and leases of surplus, condemned, and repossessed federal property;

- support GSA regulation amendments which call for locating federal facilities in central business locations of small as well as big cities (rather than in outlying areas); emphasize location of rural-serving offices in small towns;

- aggressively implement the new Community Conservation Policy designed to coordinate and target federal assistance to downtown revitalization projects;

- o support the creation of a Downtown Revitalization Center to capitalize on the small-town commercial revitalization experience of the National Trust for Historic Preservation, various State government downtown redevelopment programs, and local groups, with a mandate to convene a national conference on redevelopment of "mainstreet"; conduct training seminars for local officials and businessmen, and provide an information and technical assistance clearinghouse.

ENERGY

Actions Already Taken

- o As part of the White House Rural Development Initiatives the President announced in May, 1979, several new steps are being taken to help rural communities develop local energy resources for local utilization. One includes an agreement among nine agencies--including DOE, the U.S. Army Corps of Engineers, EDA, USDA, CSA, and HUD--to target funds and provide the construction of up to 100 small-scale hydroelectric plants by the end of 1981. A second involves commitments from several agencies (EDA, CSA, and DOE) to assist construction of up to 100 small-scale fuel alcohol plants. A third is a grant to the American Public Gas Association to demonstrate the feasibility of utilizing natural gas from coalbeds and other unconventional sources for local development.

- o The Energy Security Corporation will provide funds for biomass conversion to synthetic and alcohol fuels. In addition, the targeted use of portion of a windfall profits tax revenues to provide relief from rising energy bills for low income people will have a special impact in rural areas with their high concentration of low income people.

- o The Appalachian Regional Commission, which has established a policy advisory council on energy, has funded several demonstrations of the use of wood and carpet-mill waste for energy production, has promoted the use of fluidized bed combusition technology to burn high sulfur coal and mine refuse, and has sponsored seminars on coal mining productivity and feasibility of low-head hydroelectric power generation.

- In the areas of conventional energy supplies, final determinations were made under the Natrual Gas Policy Act of 1978 to guarantee sufficient guantities of natural gas to meet 100 percent of current requirements for food and fiber production.

- To conserve energy in rural home heating, the FmHA has adopted improved thermal performance standards for housing units it finances, is demonstrating a low-cost solar water and space heating system, and is allowing use of wood-burning stoves and furances in the housing it finances.

- To deal with fuel logistics, the Federal Highway Administration and the Appalachian Regional Commission are devising a detailed state-by-state assessment of road needs attributable to energy production. In addition, the FRA is working with other agencies to devise solutions to the problems associated with disruptions that often result from the movement of coal unit trains through small towns.

- White House Rural Development Initiatives to promote rural ridesharing (discussed below) contribute to energy conservation in the largest category of rural energy use--transportation.

- In the area of weatherization, the DOE weatherization program for low income households will now allow the use of non-CETA labor on installation crews where there is a significant shortage of CETA personnel, overcoming a major barrier to the full implementation of this program in many rural areas. Also, an agreement has been established between REA and FmHA to conduct rural energy audits and and make available FmHA Section 502 loans and Section 504 loans and grants for the weatherization of low income rural households.

- To integrate energy conservation into economic development planning, DOE and EDA have made available grant funds to as many as 20 rural Economic Development Districts to develop integrated economic development and energy plans giving special attention to energy conservation efforts and alternative energy resources.

- To guarantee adequate fuel supplies for agriculture and rural transportation, DOE's Economic Regulatory Administration has ruled that four percent of middle distillate fuels, including diesel, planned for delivery into a State must be set aside for redistribution by partici-

pating States to meet energy shortages and hardship cases. Also, the Economic Regulatory Administration has re-allocated gasoline supplies among major suppliers to ensure that the needs of agriculture and farm markets continue to be given the highest priority; and in the event that gasoline rationing is implemented, the Administration has established relatively larger percentages of gasoline supplies for those predominantly rural States where residents are highly dependent on automobiles and must drive longer distances.

- In DOE's Industrial Process Heat Program, 23 projects are under contract to demonstrate the feasibility of using solar energy for producing industrial process heat. Nearly two-thirds of these projects are located in rural areas and contribute to rural industrial development. These systems, in various phases of design, construction and operation, will generate thermal energy for applications such as commercial processing forgood, lumber drying, heating greenhouses, and use in other industries such as concrete block manufacturing, chemicals, and oil refining.

- DOE and USDA are cooperating in a program to adapt solar energy for on-farm uses in agriculture. More than 50 experiments are being conducted in 28 states emphasizing the design of solar systems which can be constructed of materials and equipment readily available to farmers. In order to transfer solar energy technology and systems designs from the research laboratory to the farm site, a pilot program of on-farm demonstrations has been initiated. At present, 91 projects in nine states have been authorized for solar energy heating of swine and poultry houses and dairy buildings, and a similar number of projects is planned in 1980 for crop and grain drying.

- The Appalachian Regional Commission has funded several demonstrations of the use of wood as a low-cost alternative source of energy for homes, hospitals and small businesses. These demonstrations have included the pyrolysis of wood in Tennessee for use as a heating fuel and gas, a wood gasification plant in Georgia to heat a hospital, and a timber-for-fuel development organization in North Carolina.

Action Agenda

to address the following policy objectives: reducing dependence on foreign oil through conservation while ensuring that necessary energy supplies are dependably available for agricultural production and marketing; encouraging and supporting the development of innovative alternative energy resources to meet rural community needs; and protecting the quality of rural life by mitigating the negative consequences of energy development on small towns

- monitor and ensure full implementation of the White House Rural Energy Initiatives to promote small-scale hydroelectric, community-based unconventional gas, and small-scale fuel alcohol development;

- support passage of authority to make direct or guaranteed loans that would be financed from windfall profits tax revenues for the construction of small-scale alcohol fuel plants, and extend the 4¢ per gallon tax exemption on the sale of gasohol;

- provide DOE grant assistance to community-owned gas utilities for unconventional gas exploration and development;

- assist states to meet rapid increases in needs for public facilities and services resulting from new or expanded energy development through support for legislation which would provide up to $750 million through FmHA for grant assistances over five years with a limit of $1.5 billion in total loan guarantees; states would be encouraged to use federal impact assistance to establish revolving funds through which assistance would be distributed to localities, primarily in the form of loans;

- implement in connection with several already federally-funded energy development projects an intergovernmental strategy developed under the White House Rural Development Initiatives to promote local jobs, business development, and orderly community development;

- use DOE, EDA, NASA and USDA resources in support of the commercialization and utilization of selected energy technologies which are especially suited to rural and small town circumstances (e.g., wood, wind, solar heat for processing, and small-scale hydro);

- make available variable housing design plans which include as options use of solar heat, solar hot water, passive heating and cooling, earth berm insulation, and adequate orientation for solar exposure;

- increase the allocation of public service employment slots (under CETA) to weatherization projects where existive CETA resources are insufficient to match funds for materials.

ADDRESSING THE RURAL PROBLEMS OF DISTANCE AND SIZE

TRANSPORTATION AND COMMUNICATIONS

Actions Already Taken

- As part of the White House Rural Development Initiatives, several transportation initiatives were announced in June, 1978, in the areas of social service/rural public transit, air service, rail branchline rehabilitation, and ridesharing. These include:

  - an agreementamong CAB, FAA, EDA, FmHA, and SBA to coordinate and target assistance ($200 million) to commuter airlines wanting to enter and serve rural markets, and to small community airports wanting to upgrade facilities;

  - an agreement among DOT, HEW, CSA, ACTION, FmHA, and DOL to improve the coordination and delivery of social service and public transit, including a commitment to train and place 1,500 CETA eligible persons as drivers, mechanics, and dispatchers working in Section 18 transportation systems; arrangements to provide surplus government vans to Section 18 systems; a set-aside of FmHA loan funds to help purchase special equipment; cooperative action by the insurance industry, State regulatory agencies, and the Federal government to make insurance more available, flexible and affordable for social service and public transit providers; and measures to reduce the large paperwork burden imposed on transportation providers by the billing, accounting, and reporting requirements of social service agencies;

  - an agreement among FRA, EDA, and FmHA to provide coordinated assistance for the rehabilitation of railroad branchlines which are given high priority in State rail plans; and

- a series of actions to promote rural ridesharing (carpooling, vanpooling) including commitments by CAAs, USDA's Cooperative Extension Service, and EDDs to promote and support ridesharing in rural areas, an IRS clarification that passenger pick-up, driver incentive, and maintenance mileage are eligible vanpooling uses for purposes of determining eligibility for the 10 percent investment tax credit; arrangements whereby surplus and excess vehicles will be made available to CSA, EDA, and USDA in their efforts to promote ridesharing; and issuance by DOE of a proposed rule to assure bulk users sufficient gasoline to maintain operation of vanpools during periods of shortage.

o Passage of the Nonurbanized Public Transportation Program (Section 18) as a part of the Surface Transportation Assistance Act of 1978 moves rural transit out of the research and demonstration phase--under FHWA's Rural Public Transportation Demonstration Program (Section 147), over 100 two-year demonstration projects were funded at a total cost of $25 million--with a clear legislative mandate to develop an ongoing program that provides operating as well as capital, administrative, and technical assistance.

o Administration proposals passed the Congress in 1978 strengthened the Federal Railroad Administration's Local Rail Service Assistance program by shifting its focus away from temporary continuation of service on abandoned rail lines to capital rehabilitation of potentially viable lines that have not yet been abandoned. The funds go to rehabilitate, before abandonment, the lines carrying five million gross ton miles of traffic or less per mile annually through grants or loans to railroads; provide alternate transportation facilities and services (e.g., team tracks for use by shippers); and assist in maintaining service on branchlines which have been abandoned by private rail carriers.

o An expanded program for the renovation or replacement of bridges will primarily benefit rural counties.

o The Airline Deregulation Act of 1978 contained several key provisions for rural areas. Among other things it:

- authorizes CAB to require "essential air service" for a 10-year period and to provide subsidies to a regulated carrier or a replacement commuter airline to assure the continuation of essential service as necessary;

- requires CAB to determine within one year of enactment what constitutes "essential air service" for each location served at the time of enactment and authorizes CAB to adjust these definitions and develop definitions for other locations to accommodate future needs;

- requires commuter aircraft to the maximum extent feasible to conform to the FAA safety requirements imposed on larger passenger aircraft;

- permits commuter airlines (for craft with 30 or more seats) to enter into interline agreements with trunk and local air service carriers to provide through-ticketing services;

- exempts from CAB regulation commuter aircrafts carrying cargo weighing less than 18,000 pounds and carrying fewer than 56 passengers; and

- makes commuter airlines eligible for the first time for FAA's aircraft loan guarantee program (for the purchase of the planes and replacement parts).

o The Administration is proposing amendments to the Airport and Airway Development Act of 1970 which would provide greater opportunities for small airports to receive airport development grant assistance. More funds would be available for all eligible airport development, including aircraft parking areas, terminals, runways, taxiways, and emergency buildings and vehicles. Approximately 12 percent of the funds available for airport development will be used to foster small community air service. This would total about $.5 billion for the years 1981-85 or approximately $100 million per year.

o The Commerce Department's National Telecommunications and Information Administration (NTIA) has filed proposals with the Federal Communications Commission to drop restrictions on ownership of cable TV in some rural areas and to create a new class of low power broadcast stations.

o The Department of Agriculture has instituted a program to help rural telephone companies provide television and other services. REA will make available increasing amounts up to $40 million in 1982 for direct loans and loan guarantees to support rebuilding rural telephone lines. The portion of the telephone plant, or other broadband facilities, which will be used to carry commercial television signals will be financed through the Business and Industrial Loan Program of FmHA.

- As part of the President's civilian space policy, NTIA will assist Federal, State and local agencies in the procurement of satellite communications services for rural areas and will conduct technical and economic analyses on this use of communications satellites.

- NTIA has begun distributing grants for public communications facilities. Under legislation developed by the Administration and Congress in 1978, many of these grants will go to rural areas that have inadequate public broadcasting service.

Action Agenda

to address the following policy objectives: overcoming the problems of isolation from job sites, social services, and the government; improving accessibility to new technologies; reducing the dependence of rural residents on the private automobile, addressing the special problems which rural entrepreneurs have in gaining access to raw materials and markets because of the problems of transportation

- monitor and ensure full implementation of the White House Rural Transportation Initiatives;

- support adequate funding for Section 18 of the Surface Transportation Act of 1978;

- monitor and ensure full implementation of the White House Rural Communications Initiatives to enable rural residents to assess modern communications technology.

CAPACITY BUILDING

Action Already Taken

- A range of agency-funded programs have been undertaken to increase the management capacity of target communities. These funding commitments are exemplified by the following: HUD has granted $3.5 million to 16 states for technical assistance projects aimed at building management capacity building program, Economic Development Districts (EDD's) have received increased assistance to carry out economic development planning. CSA funded a Virginia State University project to demonstrate how state land grant colleges and extension services can work with community action agencies to assist low income farmers. TVA has entered into an agreement with the Tennessee Valley

Center for Minority Economic Development to provide special assistance to rural areas with predominantly minority populations, helping them take the necessary steps to participate more fully in the region's economy. CSA made a grant to the Emergency Land Fund in Atlanta for the purpose of providing assistance to minority farmers and landowners. A consortium of agencies (including EDA, FMHA, EPA, and HUD) funded the National Demonstration Water Project which has created a network to assist rural communities in developing the capacity to meet their water and sewer needs.

- HUD developed a simplified Housing Assistance Plan for small cities applying for single-purpose grants.

- For FY 1980 CDBG competition, the selection criteria have been changed slightly to eliminate a perceived bias towards certain kinds of projects to allow small communities to select activities addressing critical locally-identified community development needs.

- The Bureau of the Census sponsored a new State Data Center program, which is a Federal-State-local cooperative program whose objective is to improve access to and use of statistical information by State and local government planners and decision-makers.

Action Agenda

to address the following policy objectives: improving access to federal programs; improving targeting and delivery of technical assistance; improving coordination among federal agencies, other levels of government and private organizations in rural areas; and developing and disseminating better information about rural conditions

- develop a national program to support locally selected circuit-riding managers to assist small communities and rural counties;

- promote intergovernmental assignments of federal personnel to rural jurisdictions and organizations, to increase knowledge of and sensitivity to rural problems within federal agencies as well as assist in meeting local capacity building needs;

- o encourage and support higher priority within the Cooperative Extension Service to provide outreach and technical assistance to low income and isolated rural residents;

- o convene a White House meeting to explore options and develop cooperative plans for the participation of philanthropic, educational, religious, and charitable organizations in rural capacity building and other rural development projects;

- o recruit retired executives as SCORE volunteers to provide technical and management assistance to governments and businesses in rural areas; explore other options and incentives to encourage the private sector to provide technical and management assistance for rural institutions;

- o support continued funding of the FmHA Section 111 rural planning program to provide state and local capacity building assistance;

- o encourage federal field offices (EDA, HUD, Census) and the land grant institutions, incooperation with ISETAP, to provide technical assistance to rural officials on the use of 1980 census data and improve access to detailed data at the rural community level;

- o direct the Working Group on Small Community and Rural Development, in cooperation with ISETAP, to develop a rural research agenda, including data needs, and to assist in coordinating federally-sponsored applied research and data collection;

- o negotiate a single set of application, auditing, and reporting requirements for each of several frequently combined clusters of federal aid programs to reduce red tape and paperwork burdens; simplify and standardize compliance requirements with cross-cutting federal laws and executive orders.

PROMOTING THE RESPONSIBLE USE AND STEWARDSHIP OF AMERICA'S NATURAL RESOURCES AND ENVIRONMENT

Actions Already Taken

- o In October 1978, the Secretary of Agriculture issued a USDA policy on land use which directs USDA agencies to: advocate the retention of important farmlands and forestland, prime rangeland, wetlands , and other lands

designated by State and local governments; advocate actions that reduce the risk of flood loss, minimize impacts of floods on human safety, health and welfare, and restore and preserve the natural and beneficial functions and values of floodplains; advocate and assist in the reclamation of abandoned surface-mine lands and in the planning for the extraction of coal and other nonrenewable resources in ways that will facilitate later restoration of the land to its prior productivity; advocate the protection of threatened and endangered animal and plant species and their habitats, designated archaeological, historic, and cultural sites, and designated ecosystems; advocate the conservation of natural and manmade scenic resources, and assure that these agencies protect and enhance the visual quality of the landscape. A USDA Land Use Committee has been providing leadership for implementation of the policy, and USDA agencies were given one year to bring their programs and actions into compliance.

- EPA also has promulgated an Agricultural Lands Protection Policy, which is aimed at retaining prime and unique farmland, farmland of local and statewide importance, farmlands in or contiguous to environmentally sensitive areas, and farmlands with significant capital investments in "Best Management Practices."

- In mid-1979, CEQ and USDA initiated an interagency study of the factors affecting the availability of agricultural lands and their conversion to other uses. The study will be completed and findings and recommendations submitted in late 1980.

- The Department of Interior and USDA's Soil Conservation Service are providing technical and financial assistance to landowners to protect the environment from the adverse effects of coal mining practices. Since 1978, 2,200 acres of abandoned mine land have received such treatment as stabilization, control of erosion, and sediment, enhancement of water quality, and return of the land to useful purposes. TVA has undertaken a surface mine reclamation program under which thousands of acres of mined land are being revegetated.

- The Department of Interior is preparing a National Plan of Action to combat desertification. It will identify means of reversing the decline of biological productivity of arid and semiarid areas in the rural west.

- The Heritage Conservation and Recreation Service has directed a comprehensive review of federal programs affecting barrier islands on the Atlantic and Gulf coasts to develop a plan for protecting them.

- The Department of Commerce has funded 19 state coastal zone management programs to assure that the shores of oceanic and inland water bodies are managed and used for public good.

- Land use planning for the public lands, most of which are in the rural west, is committed to being accomplished cooperatively with local communities. To the extent practical, plans are being made to be compatible with those of local governments. The resulting benefit is orderly use and conservation of land and resources.

- National Park Service improvements to sewer, water, and waste disposal systems within the parks has resulted in cleaner and safer conditions in nearby communities. Federal and State regulations have been met, which assures that effluent into streams, groundwater, and the atmosphere is safe and clean.

- National Park Service responsibility for monitoring of air and water quality within park areas results in constraints on pollution sources from outside the parks. This has a beneficial effect on surrounding communities within the entire region.

- EPA has funded water resource planning and management programs in every state.

- The Forest Service, in cooperation with the State Foresters in Mississippi, Alabama, Kentucky, Oregon, and West Virginia are working with low income and limited resource farmers to find ways to better utilize their farm woodlots as income-producing properties. This is a part of the Department's Small Farm Assistance Project.

- Under the Yazoo-Little Tallahatchie Flood Prevention projects the Forest Service has planted 840 million trees on 750,000 acres of eroding lands to protect soil and water resources and provide raw materials to local industries--creating jobs and income for area residents.

- Since 1977, 851,900 people were provided assistance by the Soil Conservation Service in planning and applying conservation measures. Application of these conservation practices has had a very positive environmental, social and economic impact on adjacent lands and communities.

- Over 27,500 units of government were provided assistance by SCS in resource management, and over 23,500 land use plans were reviewed for units of government to determine adequacy of standards.

- More than 300 measures were completed in rural areas and communities through USDA's Resource Conservation and Development Program, at a cost of about $25 million. These included measures for critical erosion control, rural recreation, and flood prevention.

- In FY 1978 and 1979, 32 flood hazard studies have been undertaken by SCS to assist rural communities in development of floodplain management programs to reduce flood losses.

- A water and related land resource study has been undertaken by SCS on the lands of the Colorado River Indian Reservation, Arizona, to assist those native Americans in the wise use of their land and water resources.

- Nearly 200 county Important Farmland Inventories were made and another 320 prepared to guide rural communities in land use decisionmaking involving retention of agricultural lands.

Action Agenda

to address the following policy objectives: preserving agricultural land and promoting pollution-free land, air, and water

- monitor and fully implement EPA's policy on agricultural land protection for all programs with particular attention to the siting and sizing of wastewater treatment facilities

- continue implementation of joint EPA-USDA programs demonstrating the application of best management practices to control non-point source pollution from agricultural runoff;

- fully implement the Rural Clean Water Program in FY 1980;

- move aggressively to complete the joint CEQ-USDA study of the effects of conversion on prime agricultural lands to other uses and of measures to control such conversion;

- promote and demonstrate means of using farm and nonfarm generated organic waste for land treatment and sources of nutrients.

The Role of State Rural Departments 63

This report briefly reviews state responsibility and organization from the perspective of Alaska's varied rural populations.

The report probes state organization and function in terms of the potential "role and placement" of a state structure charged with encouraging the development of a private economic base in rural areas. The report does not seek "fault" in existing programs, or suggest fault through past action or inaction, but rather seeks to indentify rural programs which offer creative association for some "new" structure charged with forging a state/private partnership devoted to expanding a "private" economic base in rural Alaska.

At Issue: A Rural Strategy

In the final analysis this report is suggestive that the state needs to be continually developing and modifying a broad and flexible "Rural Economic Development Strategy."

Secondly, the state needs the MEANS by which to implement and sustain such long-range policies.

Thirdly, the state needs to take the leadership by establishing a structure on the Alaska level, designed to maxmimize and coordinate federal, state, local, and private resources available for desirable rural economic development projects. The more detailed consideration of the proper design of such a state structure, and the placement of such a structure within the framework of state government, is the subject of a companion report to this document.

Lastly, as a matter of statewide economic policy, this report suggests that rural development is fundemental to urban development. Rural economic growth should be an important urban economic goal, since such development is essential to broadening the economic base of the state's commercial centers.

GOVERNMENT STRUCTURE AND "POLICY"

Government generally is a highly organized structure designed to provide a variety of "services" that a society has determined to be necessary. Therefore the established structure of government says something about established policy, the priority of various policies, and about the "lack of such policy."

In the case of an Alaskan rural economic policy, there is essentially no clearly identifiable structure, and therefore there is no apparent state rural economic policy, or policies. There are, of course, many state rural "service" programs, and a large variety of state rural policies addressing various rural needs, but few touch upon the the seemingly primary need of "an economic base."

However, this should not be suprising since Alaska state government, or any other similar government, is generally a structure developed to deliver the more traditional services --education, transportation, health and social services, and etc. It is perhaps an unusual circumstance, that our government systems in this country often focus strong issue on "things economic," but rarely do they develop the means to effect strong economic policy. The problem of effecting rural policy is even more acute, since a lack of infrastructure and isolation limit the normal means of "advocacy."

Under any circumstance the distance between our American government systems and our private economic systems is significant, and only when unusual tools are available to a government, or there is crisis, is policy generally able to bridge the distance and weld government and private economic goals to some common purpose. In view of our public and private systems "seperation," Alaska's potential for success in forging a state/private partnership must be open to issue. However, Alaska does have some special and unusual "tools" at-hand --tools that most other government have no hope of having available.

ALASKA: SPECIAL TOOLS FOR SUCCESS

First; the general state of collapse of the Alaska rural economy in many regions means there are few entrenched interests to complicate and make policy change difficult.

Second; Alaska is in many respects the most "rural" of all the states, providing opportunity for Alaska to gain federal recognition of its rural economic needs on the federal agency level.

Third; Current federal policy is shifting to emphasize federal support for private efforts that contribute to a continuing private economic base, with special emphasis on rural economic initiatives. Alaska has special opportunity to take advantage of both old and new federal resources, and also has special reason to sell its often unusual needs to the federal government.

Fourth; The structure of the State of Alaska is less complex, and has a clearer line of authority than most other governments, creating special opportunity to expedite and coordinate federal resources. In other words, Alaska has a genuine executive structure, while most other governments (competing for resources) are structured into something akin to a "committee of executives."

Fifth; The state is Alaska's largest resource owner. Aside from being a political entity, the State of Alaska is one of the largest and and most diversified resource corporations in North America.

The role of resource owner is untypical of other governments, and gives the state both special opportunity (and responsibility) to promote economic development and to forge a mutually beneficial partnership with the private economic structure needed to develop those resources.

Sixth; The state is also a large financial corporation well beyond the bounds of the usual government service institution. The state's resource disposition provides it with "excess revenues" well beyond the state's immediate and future service demands, leaving opportunity for the prudent use of excess financial capital as a tool in encouraging private development.

Seventh; The settlement of Alaska Native Land Claims has provided a unique private structure in rural Alaska, and has created opportunity for the state to work in partnership with that unique private corporate structure. The land claims settlement has created a rural network in private interests that has both lands and some financial capital. The native corporations represent a "local opportunity" for partnership and for participation in development, which is completely unavailable in most other similar areas of "third world" economic conditions. The native corporations have the unusual nature of having the efficient structure of the private corporation, but also having a local base.

Eighth; The economy of Alaska has access to a large federal landmass, and its various resources, as well as significant marine resources and the nation's largest continental shelf.

Ninth, The final special difference for an Alaska economic initiative may be in the "timing." The timing is very likely "right" in terms of the: 1) maturing of the land claims corporation, 2) in terms of the maturing of the state resource and land base, 3) in terms of the state's financial resources, 4) in terms of world crisis over long term resource commitment and availability, and lastly, 5) in terms of the evolution of federal policy to stress private development, and the opportunity for maximizing federal financial resources and generating federal cooperation and coordination.

Nevertheless, the forging of a tri-partnership --state, federal, and private-- to address rural economic problems and develop an Alaska rural development policy, is not a easy task. However, in any such policy the state must have primary responsibility, and it is the state that has the lasting interest in insuring that rural economic policies are developed and can be sustained over a sufficient period of time. If an emphasis on rural economic problems is to be initiated, then it is the state that has the responsibility for initiation.

Initiation by the state also provides a certain acknowledgement by other partners, especially the federal government, of the state's leadership in setting economic priorities, in economic and environmental planning, and in allocating monetary resources. Such leadership also provides opportunity for a commanding role in maximizing state financial resources available for development by addition of federal and private effort.

THE "PLACE" OF A RURAL INITIATIVE STRUCTURE

The end result of a review of state rural service responsibility is a determination of whether a structure, designed to promote policy enhancing a rural "economic foundation," belongs "within" the traditional government service structure, or is best placed "outside" of normal government delivery institutions.

The general conclusion of this report in reviewing state rural programs appears to recommend that such a structure should stand "separate" from the general programs. The basic function of the routine delivery of rural service, and the task of maintaining a continually changing rural economic development strategy, appear to be inherently separate.

Many reasons can be presented in defense of such a "separation," but these reasons, in terms of detail, belong more properly in the companion report to this document which deals with the potential conceptual design of a state policy structure.

However, such reasoning ranges from the traditional separation of the private economy and government service roles in our American systems, the special "advocate" nature of an economic policy structure, and the need for a structure to be an advocate of rural services related to rural economy that are broader than the function of any one agency.

Finally, to be successful in bridging the gap between private and public systems, such a policy group needs the strong political adjacency and backing of both the executive and the legislative.

The success of government dealing with the private policy sector may be rooted in government respecting the private-policy sector as a sector to be treated with a respect, and on an equal footing, with the policy branches of government. Therefore, the suggestion that state dialogue with the private sector be subordinated to a sub-bureaucracy status may be fatal to a successful policy partnership. In other words, a policy partnership suggests a certain equality and mutual interest among the parties.

A principal determination of the policymaker in seeking to "place" a state structure charged with encouraging a private economic base, may therefore be, whether the public policymaker chooses to treat the private sector as an equal and independent partner in policy, or whether that private sector is a subordinate partner suggestive that it is to be "directed" by some line-agency.

However, this is not to suggest that such a rural economic development structure does not have a strong interest in, and relationship too, the rural service agencies and the state's role in community development. An economic development structive would be strongly supportive of rural service needs, especially as they impact development opportunities.

Hence, in "placing" a state policy structure charged with addressing economic issues, a number of primary considerations have thus far surfaced. They are:

1) The issues of whether the mission and the charge of economic advocacy are not inherently different, and therefore such a structure perhaps should not be subordinate in a line-agency with service functions.

2) The need for a political adjacency to governor and legislature in order to maintain momentum, and

3) The issue of treating the private policy sector as a legitimate policy level co-equal.

THE RURAL POLICY SYSTEMS

The previous discussion questioned the placement of a state rural economic policy structure essentially "within" the state line-service functions. However, the policy structure external to the state government itself must also be reviewed in terms of such a state system.

In rural Alaska four basic policy systems are identifiable. The systems are familiar structures in American policy, but as might be expected, in rural Alaska some of those structures are underdeveloped or almost non-existant.

It is not "within" any one of these systems that a rural development strategy must be forged, but rather between such systems. The structure by one means or another, to be successful, must forge a partnership among these systems.

These identifiable policy systems are, in their broadest context, as they apply to rural Alaska:

1) The federal policy system.

2) The state policy system.

3) The local government policy system.

4) The private enterprise policy system.

The first three systems are clearly recognizable, although each has its special difficulties in dealing with the problems of rural Alaska. However, it is perhaps unfortunate that the American "alter-ego" to government, our very dynamic private economic system, is not recognized and communicated with as a fundemental policy system.

As indicated the above systems each have their problems when applied to rural Alaska. The special problems of the state system and the local government system will be discussed in more detail in following material. However, the federal system deserves some brief comment, since the system has "more established economic roles" than state and local systems, but must suffer from sheer logistics of policy between remote policy centers and extremely isolated Alaska rural communities in a bi-cultural setting. The federal government also faces the very realistic problem of having to establish policy criteria on a norm that fits an incredible variety of national situations.

Despite areas of extreme policy dispute between the state and federal government, the federal government does offer significant resources that can be applied to a rural development initiative.

ORIGINS OF STATE RURAL POLICY

The state largely inherited the rural policy system from the federal government. The Territorial government also carried out certain rural service functions. It is perhaps easy to point an accusing finger at the federal government, alledging a neglect of rural Alaska, but it should also be remembered that Alaska Territorial government was a form of "self government" and had the option to function in rural regions.

There are many reasons why Alaska Territorial Government did not expand its functions into the rural regions, and many of those reasons are very practical and many are simply circumstantial under the conditions of the period. Conversely, a case can be made that the federal government made significant efforts, especially when one considers the practical circumstances of that government in dealing with rural Alaska. Like all government, the federal agencies depend on policy, and policy depends on "appropriations" that generally derive from a political base. Obviously, Alaska had little political base, and the far flung and isolated rural needs of the state lacked even the cohesion necessary for a local advocacy. Most federal agencies lacked support for carrying out Alaska functions, while others received "fall-out" support from general "Indian" legislation enacted by the Congress

It is not the function of this report to go into detail concerning the problems of early rural policy. However, a few brief comments lend perspective to the later development of rural policy under statehood.

Presently, state rural policy is primarily aimed at delivering in rural areas the "traditional" services of government. And, in view of the difficulty the state has had in simply forging policy for the more traditional services in rural areas, it is not suprising that the state has been incapable of addressing a "less traditional" role regarding the economic plight of its rural populations.

In general, the circumstances that retarded the delivery of basic services in rural Alaska, simply more fully eclipsed a policy recognition of economic conditions and attendant state responsibility.

First, in early statehood, since the state was not delivering the traditional basic services, it was unlikely that the state should perceive self-responsibility for the more non-traditional and difficult to service economic problems. Additionally, generally government will not respond to more difficult development of "economic policy" unless there is a crisis. There are some exceptions, such as the nation's long history of addressing agricultural economic policy. Hence, economic policy in the area of U.S. agricultural policy has become "traditional policy." Additionally, in places like rural Alaska, hidden away from general policy-view (and public) view by isolation, wilderness, and culture misperceptions, despite severe economic problems, the existance of such "crisis" was simply not recognized.

Secondly, in early periods Alaska rural policy was fractured, and additionally there was no traditional local government system to be the conveyor of local needs to "the citizens," and to be the purveyor advocacy to senior governments.

Third, in the early years of statehood there was a perception, despite the declarations of the State Constitution, that native issues were federal issues, and that native Alaskans were still the "wards" of the federal government.

Fourth, state responsibility was further undercut by assertions that rural problems were the result of federal neglect (somehow justifying further state neglect).

Fifth, there was general recognition that rural services were expensive. Therefore there was a natural, and perhaps quite practical, resistance on the part of the revenue impoverished young state to create rural services, or to encourage an early transfer of many functions from the federal government.

Sixth, a public perception that statehood and local control would bring a magically improving general economy tended to undercut entry into economic policy. Statehood itself was perceived to be the economic solution for all Alaska. The economic emphasis of the time was more on the government-revenue side of the economic equation.

Seventh, the federal poverty programs were implemented in the early 1960s. Many of these programs were administered by the state, and others were delivered directly to rural Alaska. The programs appeared to be dramatically attacking rural poverty, and did tend to "finance" the entry of the state into rural responsibility. However, most of the programs focused on traditional government policy areas, such as education and basic services, and there was not a coordinated emphasis on the causes of rural poverty --the lack of "cash" industry and the rising demand for "cash" in the rural economy. The programs for the most part were conceived in Washington D.C. and funded on an "on-gain/off-again" short term grant basis. The cycle of poverty programs failed to recognize that much of pre-war rural Alaska had a variety of "cash" industries that fit community life-style, but that post-war Alaska saw those industries sink into almost total recession.

The poverty programs did their job in identifying that rural Alaska was in "poverty," in providing an element of advocacy that substituted for the lack of infrastructure, and in easing the state into a rural outreach.

Eighth, land claims settlement contributed to public misconceptions and adversity. Land claims helped dramatically forge state rural issue and policy, but tended to distract from a detailed focus on very basic rural needs. Public reaction to land claims was that native Alaska (rural Alaska) has land and money, so let them solve their own problems. Oddly, the land claims structure should have been "welcomed" as an economic middle-ground structure usable by government in development policy.

Ninth, the gigantic economic issues of the pipeline period of the early 1970s tended to sweep aside lesser and more homegrown economic problems. The pipeline was a distraction. The "euphoria" of the pipeline boom, both within and outside of government, created the assumption that something would rub-off on everyone.

Tenth, rural political representatives have generally been at a disadvantage in securing policy attention and service dollars, partially due to the lack of a local government funding vehicle for channeling state monies for local services. For example, broad funding formulas have allowed urban lawmakers to sercure most appropriation needs on almost an "automatic" annual basis. One formula delivered basic school support for urban areas, and another picked up local debt service. Such formulas delivered urban educational services and also relieved local tax burdens for other purposes and services. Maintaining such services required only minimal political effort each year, with all urban lawmakers having a common interest. In contrast, rural lawmakers have constantly been required to fight line-by-line for service approprations within the budget, often in competition with fellow rural representatives. Under such conditions the rural lawmakers quickly "expends" his political opportunities for minor gains in "bricks-and-mortar." Despite urgent long range problems, the rural politician has had little excess energy to devote after battling for immediate needs. Applied to economic development, rural lawmakers have had difficulty in just marshalling their talents for the "most basic" of traditional basic services, let alone entry into such long-range, complex, and less traditional policy arenas as restoring a private rural economic base.

The lack of substantial local governments in rural Alaska creates many problems. The rural state representative is left being a substitute local government representative, and the state is often cast in the role of substitute local government. However, this report does not suggest that creation of "local government" in rural Alaska will necessarily resolve local-government oriented problems. Obviously, rural Alaska lacks population density and the usual dynamics that makes local government viable, and therefore caution should be exercised in attempting to create a system that may be unrealistically "grafted" on top of rural communities. The lack of a "cash" economy in rural regions may be prerequisite to a genuine local government --a government that rural people feel belongs to "them" and not the state.

This report earlier suggested that a crucial issue in a public/private partnership in development is whether the public treats the private as a "respected" policy equal, or whether it attempts to subordinate that policy partner. Suggested was that an equality is perhaps crucial to a true partnership and creativity. The same may be true of local government, which is often termed a "lesser" government. It may be important to a rural "economic initiative" partnership, as well as to the proper relationship of a rural local government with the state, that the policymaker determine whether rural local government belongs to a rural public, or is simply a step-child of the state for the state's convenience, and whether in any partnership the policymaker (and the state) views such a relationship as one of equals, or of a subordinate relationship. The

relationship, and <u>be suggestive of a subordinate role of the state.</u>

BENCHMARKS IN ALASKA RURAL POLICY

Alaska rural policy has its origins in the Territorial period in Territorial legislation, in federal legislation, and in the organic legislation of the federal government that granted powers to Alaska level governments of the period. The basis for the expanding policy role of Alaska government in that time was linked to: 1) the ability of the Territory to carry out functions, and 2) its desire, or lack of desire, to responsibly tax itself to carry out policy functions and services.

Limit on Territorial Powers

In granting powers to Alaska in various pieces of organic legislation dating even to pre-Territorial status, the Congress saw fit to limit the ability to finance through "bonding," which correspondingly limited the ability of the Territory to finance capital projects. Since most rural needs were "facility" oriented and expensive, that basic federal limitation considerably hamstrung Territorial government. Depending on the period, the Territories ability to "tax" was also limited.

As a result statehood and the ability to bond represented a crucial benchmark in the state being able to finance rural programs.

Congress reenforced the situation by granting the Alaska cities the right to bond for facilities. In reviewing the situation it is easy to conclude that Congress desired to keep the Territorial government weak.

Alaska Willingness to Tax

The ability of the Territory to tax was also in question at times, with such question being aimed mostly at the ability to tax the lucrative fishing industry. Alaska was willing to tax its "outside" owned industries, Congress under lobby by Seattle interests was reluctant, but it must also be acknowledged that when it came to taxation the Territory also showed a very "marked disinterest" in taxing its own citizens by any means.

Hence, while Alaska decried federal dominance it was reluctant to "pay-its-own-way." As a result Territorial government resembled something of a "pass-through" agency." With little money of its own, the Alaska government took in federal funds and other earmarked revenue, and passed those funds through to local government.

In the pre-statehood period it was local government that had the ability to bond themselves, tax themselves, and which were the primary recipient of Territorial federal funds. The weak Territorial government did not have unrestricted funds to spend in rural regions, and the lack of a local government infrastructure left the rural citizens out of the basic funding pattern. The pattern simply reenforced the "division" of the Alaskan urban/rural spheres, and the dominance of the federal government in the rural area. The lack of revenue, and the lack of a willingness of the Territory to raise its own from its own citizens, simply meant there was no "Territorial presense" in rural Alaska.

Perhaps the crucial benchmark paving the way for Alaska rural policy was the Territories decision to "tax itself" after a bloody 1948 election surrounding the issue. Territorial Gov. Ernest Gruening for a decade had advocated the need for a comprehensive schedule of Alaska taxes to finance government, and for a decade the Territorial Legislature steadfastly refused such a program. In exasperation Gruening in 1948 aggressively campaigned against the legislature, and suprisingly won a majority that enacted Alaska's first really comprehensive revenue base.

The decision to tax was an important decision in declaring an assertive self-responsibility, and while benefits were not oriented towards rural Alaska, the revenue availability would begin a long process of accepting more expensive rural responsibilities. Oddly, the tax benchmark was likely a crucial step in the final drive for statehood. The period 1948 - 1953 saw lawmakers begin to organize a very fractures government, saw a leveling of federal agency power, saw the Territory complete an organized compilation of its laws, saw the abolition of the Alaska Fund with a coordinated tax system, the creation of a Territorial Department of Fisheries (as an assertion of local management), and the creation of the Alaska Statehood Committee.

Territorial Influences on Alaska Structure

The Territorial experience was one of wrestling with a fractured Territorial government, with a variety of elected officials, a weak legislature, a federally appointed governor, and policy strings that disappeared into the maze of Washington D.C.

The Territorial experience had established the firm place of local government in the policy framework of Alaska political thinking. The new emphasis was not so much to create a "super-executive" structure, but to create a structure far removed from the cob-webs of the Territory, where the line of responsibility was clear and where there was clearly some "one" in charge.

Constitutional Benchmarks

The constituion Alaskans drafted in 1955 produced a number of rural benchmarks and framed a few ongoing policy dilemmas.

The constitution created generally a simple executive structure with the governor clearly responsible for all actions. While Alaska has its ongoing problems in making government function, the simple structure of the Alaska system in the long-run should be an advantage for rural needs, policy development, and coordination of multi-government effort. Many other state's administrative structure resembles a "committee" of executives.

The constitution declared responsibility for ALL its citizens, laying both the legal and policy foundation that native Alaska, and therefore rural Alaska, was the responsibility of the state.

The constitution recognized the unresolved nature of Alaska native land claims.

The constitution attempted to deal with the problem of local government by declaring that Alaska would be divided into governmental units called "boroughs" (State Constitution, Article X). The lack of local government still causes problems in state dealings with rural Alaska, but also, the fundemental problems that have precluded the normal creation and function of local government in such remote rural areas are also still with us.

Early Statehood Benchmarks

In the early period of statehood the state government was not without rural concerns. The state attempted entry into vocational education aimed at rural areas, and airports were a high priority. A Rural Development Agency was established in the Office of the Governor, which acted as the representative of the governor in assessing and resolving urgent rural problems, and which also administered a small grants program (now lodged in the Rural Assistance Division, Department of Community and Regional Affairs). However, in the first half of the 1960s state efforts were constrained by budget uncertainty as the state absorbed functions from the federal government and attempted to establish a revenue base. Under such circumstances the state budget was small, growing from $60-million to $154-million by 1965. Early bond issues totaled only $30-million (1960), $17-million (1962), and $13-million (1964).

The real rural issues began to surface in the mid-1960s as the state's financial ability grew and as confidence grew that the could pay for new effort in policy.

In 1965 the Legislature developed a concept of rural regional high schools, and presented a $5-million bond issue to the public. While the concept ultimately never came into existance, the public DID APPROVE THE BONDS. The action was an important legislative, and public, declaration that the state was ready to begin carrying out its rural education service responsibilities, and that the state, not the federal government has the responsibility for educating rural Alaskans (native Alaskans). Likewise, the issue recognized the severe problems of secondary education for rural citizens.

In 1966 Land Claims settlement became an issue for the first time in the public policy forum.

Additionally, in the 1966 elections issue surfaced as to whether the state should create a Department of Native Affairs to tackle rural Alaska problems. The issue produced considerable debate, contributed to public awareness of "things rural," but floundered in both the native and non-native community on the basis of not wishing to create another "little-Bureau of Indian Affairs," and on concerns that such an agency would create difficult racial question. The issue lead to the counter suggestion of creating a Department of Community and Rural Affairs.

On the Congressional level by 1964 Alaska representatives were beginning to press for an Alaska Housing Program for rural communities, and press for upgrade and transfer of BIA schools to the state.

The mid-1960s also saw the entry of the federally instigated war on poverty programs. The programs made contribution to developing "rural awareness" on the part of both policy maker and public, and likewise contributed to grass-roots awareness of problem solving on the rural level.

By 1966 native land claims had brought about the first phase of the land freeze, and the land claims problem was rapidly becoming the state's most serious issue.

By 1968 significant efforts were being made to bring electrical services to Alaska rural communities. The Alaska Village Electrical Co-operative (AVEC), organized to finance through the the federal Rural Electrification Agency (REA), also required a somewhat hasty organization of many Alaska rural communities into Alaska fourth class cities.

Throughout the majority of the 1960s two adjacent policy/issue streams were developing. Independent issue forces were developing such as land claims, as well as political forces such as the Alaska Federation of Natives, and other non-profit corporation agencies in the form of rural need advocates (AVEC, poverty non-profits, etc.). And, in the other stream,the improving revenue base of state government, more than $200-million by fiscal 1969, allowed a cautious state expansion into rural service needs. In perspective, the 1960s was a period when Alaska was unsure it could meet the basic obligations of statehood in terms of financing government, and as events of the decade provided "confidence," the state showed willingness to confront more costly rural service needs.

The discovery of oil and Prudhoe Bay in 1968 and the entry into a "surplus revenue" condition in 1969 with the receipt of the $900-million set the stage for facing more rural responsibility on the part of the state.

On one hand the rural areas suffered in the "funding process" because they were not part of local government systems, and therefore could not participate in the almost "automated" state transfer of funds to Alaska local governments that saw additional funding equally more than half of the $900-million shifted to urban areas in the next five years. On the other hand, the existance of excess funds meant that rural areas could push for additional education funds, transportation improvements, and other health service needs.

By 1971 the legislature had created the rural State Operated School System SOS, and while short-lived, the effort was aimed at providing rural Alaska a sembalance of autonomy, input, and substitute local government in the area of education.

In terms of funding for education, the stepped up appropriations in essence represented the first <u>significant state money</u> that the state had put into rural education. Prior to 1970 the state's receipts under federal PL-874 impact funding approximately equaled the state's rural school outlay for operations (Note: The federal government generously allowed the state to receive maximum impact funds even treating open-to-entry federal lands as maximum federal impact).

The state in the early 1970s enacted such legislation as a Village Safe Water Act (although little more than a declaration of responsibility for health needs), it addressed the needs for community roads, trails, and designed state municipal revenue sharing so small communities could obtain a share for the barest expressions of responsibilities such as fire, police, and etc.

Settlement of Land Claims in 1971 began a process of constructing a private corporate infrastructure throughout rural Alaska. However, there was unfortunately little state effort to recognize that structure in any institutional construction, or to take an interest in the survival and success of those unique creations on the part of the state.

The legislature did create in the early 1970s the Department of Community and Regional Affairs, which was designed to collect together rural and community functions of state govenment. The assumption existed that such a department would provide adequate "rural linkage." However, while the department has in many cases performed very capably, it was created as a line-agency (program agency), and as such too much was expected in regard to such an agency pursuing problems that exist outside the scope of defined programs or are multi-agency.

The legislature in the mid-1970s hammered out the Rural Education Attendance Area legislation (REAAs), disbanding the old SOS school system in favor or regional districts.

The REAAs represented a significant policy step in creating (education-service) local government, in allowing a genuine measure of regional autonomy and self-determination, in providing a funding formula taking the burden off rural lawmakers to have to fight for each individual school need. The REAAs also sought to follow native corporation boundaries, seeking to achieve a social and geographic compatibility.

THE PATTERN OF STATE SERVICES

The present pattern of state services being extended into rural Alaska are very BASIC AND TRADITIONAL SERVICE ORIENTED.

The entry into rural services follows the traditional American pattern of education, transportation, and health and social services.

On the rural community level this translated into the presence of teachers, school facilities, an airport, roads in trails, the availability of safe water, and to a lesser degree the presence of sewage disposal, electrical service, and adequate housing. Of these services teachers, school buildings, roads, trails, and airports can be funded either by formula or by state appropriation. However, water, sewage, and community electricity are utility in nature, implying some measure of local support and responsibility. Additionally, adequate housing implies some ability to support that housing.

It is in the area of utility services, housing, and personal income that state policy runs into the "void" that is at the bottom of rural issue. The issue is the lack of rural economy, the lack of ability to support services, housing, and family.

A review of state service responsibility in rural area reflects emphasis on blindly providing categorical services. It is the Department of Education's responsibility to facilitate education. It is the Department of Transportation's responsibility to provide roads and airports as directed by the legislature, it is the responsibility of the Department of Environmental Conservation to police safe water, it is the Department of Community and Rural Affairs responsibility to operate various assigned community assistance efforts. Each department has its functions and carries out that function. However, schools need electricity, water, and sewage, and homes and people need services, and the later need income for paying for such services and for purchasing other personal needs.

In the final analysis, no state agency is responsible for any kind of comprehensive addressing of the problems of rural economy.

The failure to address an Alaska rural economy is not a failure of program agencies and their specific authorities, but rather a failure of state policy to recognise that while services are urgently needed, they coumpound the problem of rural economics --the widening division of "cash available" and "cash needed" to pay for services.

The economic conditions of rural Alaska date to the 1940s, and while rural Alaska has always lacked services, it has not always lacked an economy. Pre-World War II rural Alaska had a variety of "cash" industries, depending on the rural region, that quite amply supported the rural life style of the period.

Such rural industries were fur, fish, gold, labor intensive transportation, woodcutting, and etc., all of which declined into disasterous conditions by the mid-1950s. External influences and changing technology eroded the rural economy. The price of gold was frozen in the early 1930s, spelling a slow death for Alaska mining, fur fashions changed and fur farming, synthetics, and fur imports snuffed out the fur industry, the bush plane eclipsed labor intensive transportation, and the convenience of oil killed off the woodcutting industry. In 1948 the Alaska Railroad altered its Yukon River steamboats from woodburners to oil, and overnight the woodyards and much economy disappeared from the Yukon Valley. Likewise the decline of major industry saw the decline of fishing for barter and cash.

A strong case can be made that for the past quarter century rural Alaska has been in severe depression and almost nobody noticed. This can be contrasted with the quick response and issue attached to the current problems of the state's urban economies. The difference is likely that a sophisticated infrastructure exists in the urban areas to demand that economic crisis be recognized and dealt with to the extent possible.

By and large it was not the role of the state service agencies to notice and deal with such a fundemental issue as rural economy, an issue obviously far exceeding the boundaries on the jurisdiction of any one, or for that fact, all such agencies.

The purpose of reviewing state services within the context of economic rural needs is that while such agencies must remain largely within their categorical responsibilites, these same agencies are very valuable front-line allies in an rural economic initiative. Regardless of however the state chooses to address the broad issues of rural economic plight, the facts also are that a fairly small number of state agencies have the rural organization and community level experience that must be brought into any such effort.

The following section will review state agency from the stand-point of both present rural involvement and the nature of that involvement.

RURAL EMPHASIS OF STATE AGENCIES

State government growth over two decades has produced a greater state presence in rural areas. Growth has produced a developing pattern of state agencies with a viable rural network of employees in the field.

Agencies with singificant rural presence divide into functions which by their nature must remain narrow, such as police functions, and agencies which have sigificant community development potential. The following chart reflects agencies with large numbers of employees "outside" Juneau, Fairbanks, and Anchorage.

STATE EMPLOYMENT BY DEPARTMENT AND LOCATION
(Timeframe 1977)

Agency	Juneau	Anchorage	Fairbanks	Other	Total
Governors Office	174	106	25	21	326
Administration	307	102	90	170	669
Law	59	69	29	17	174

TOTALS	3,485	3,526	1,232	2,973	11,216

* Agencies with large rural organizations and/or responsibilities.

** Agencies with specialzed rural functions.

Several other organizations outside of the state structure deserve mention. One is the University of Alaska, which has a growing rural network, and other other are the Rural Education Attendance Areas (REAAs). The latter are of interest not only because of their comprehensive local government coverage, but because their boards constitute publically elected representation.

The following review of state agencies will be reviewed in order of groups of agencies reflecting:

1) Agencies with either large numbers of rural employees in the field, significant rural responsibilities, or with both.

2) Agencies with large field organizations but with highly specialized responsibilities, and which therefore might not be appropriately called upon in some coordinative rural effort.

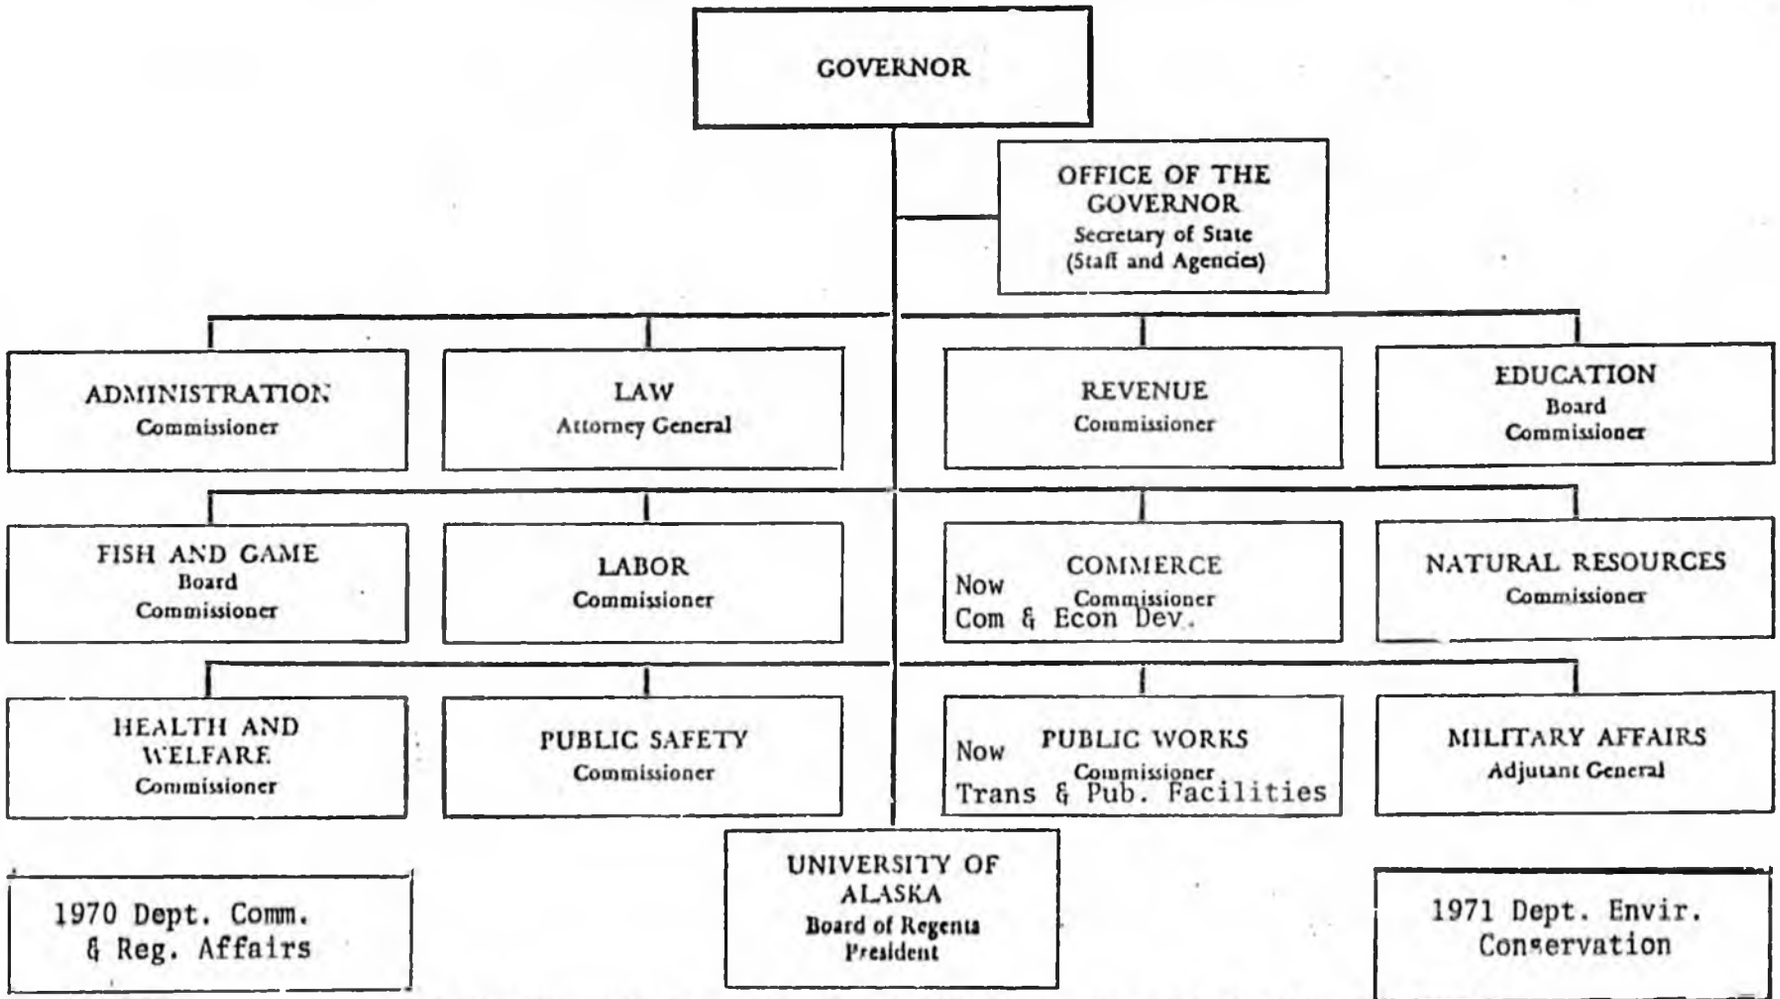
3) Agencies with small rural field staff operations, but which have a large policy impact on potential rural issues. Agencies with potential for rural involvement.

4) Agencies without significant rural field operations and with little definitive rural responsibility.

The following page provides a view of how the architects of Alaska government established state agencies in 1959 with twelve departments (the contitution limited departments to 21). The basic organization has altered little in two decades. Two new agencies have been added, another department was created and then merged with Commerce (Dept. Commerce & Economic Dev.), while the early day version of Public Works was split into thr Departments of Highways and Publig Works, and then remerged in 1977 into Transportation and Public Facilities.

Alaska 1959

ORGANIZATION OF THE EXECUTIVE BRANCH



Principal departments and agencies based on the State Constitution and the State Organization Act of 1959. Members of the Fish and Game and Education Boards and the Board of Regents appointed by Governor. Commissioners of Education and Fish and Game appointed by Governor from names submitted by Boards. Heads of all other principal departments directly appointed by Governor. All appointments subject to legislative confirmation. The administration of the University of Alaska is specifically established by the Constitution and is not under the same direct executive control as the principal departments included here.

GOVERNOR'S OFFICE

The Governor's office is both a kind of "super-agency" and a kind of "catch-all" agency, inheriting functions which either do not fit elsewhere or which have inherent conflicts in role (example: The Public Defender would be suspect if under the Department of Law and the state's chief prosecuter. There is also a tendency to place "advocacy" agencies in the Governor's Office, since their role of advocacy may clash with line-service roles and since their actions shape basic new policy.

Obviously many functions of the Governor's office have an impact on rural policy, but a few have a very important policy shaping role.

They are:

--POLICY DEVELOPMENT AND PLANNING
  --Coastal Zone Management Subagency

--OFFICE OF TELECOMMUNICATIONS

--GROWTH POLICY COUNCIL (Office Lt. Governor)

Other agencies of the Governor's Office have a very definite but special role in rural policy, such as the HUMAN RIGHTS COMMISSION and CRIMINAL JUSTICE PLANNING COMMISSION. The Office of International Fisheries and the state's trade office functions in Denmark and Tokyo could have an important rural relationship in regard to facilitating private economic initiative.

The Division of Policy Development and Planning can have a large impact on rural policy, and especially on rural private economic development. However, DPDP is an agency that must maintain a very broad planning perspective, and must carry out functions that must make it at times an "adversary," as opposed to an "advocate." An example may be the agencies difficult role in Coastal Zone Management, where it may have to oppose local demands (such as current differences over the North Slope Borough's proposed Coastal Zone Plan).

DPDP must also be broadbased and have continual involvement in all sorts of policy, including rural policy, and for that very reason DPDP may not be able to act as a genuine rural economic advocate.

Telecommunications is an agency in the Office of the Governor that has functioned as an "advocate" in terms of rural communications issues, and general Alaska communications issues in recent years. Telecommunicat- could have been assigned to DPDP, but it is doubtful if DPDP could have specialized and have acted as "advocate" as did the Office of Telecommunications.

DEPARTMENT COMMUNITY AND REGIONAL AFFAIRS

The Department of Community and Regional Affairs Department has the responsibility to meet the state's responsibility to render maximum assistance to government and the community and regional level. The Department is therefore not necessarily a department charged with "maximum" rural obligations. However, the department is perceived by many policy-makers as a Department with special rural obligations, and the department also perceives itself to a certain extent in that manner. The charge of the department places CRA in a position of assisting in rural areas where government is small, inadequate, lacks professional management, and in many respects acting as "subsitute" government where non exists at all.

The Department has five divisions:

(1) Administrative Services
(2) Manpower
(3) Community Planning
(4) Local Government Assistance
(5) Community and Rural Assistance

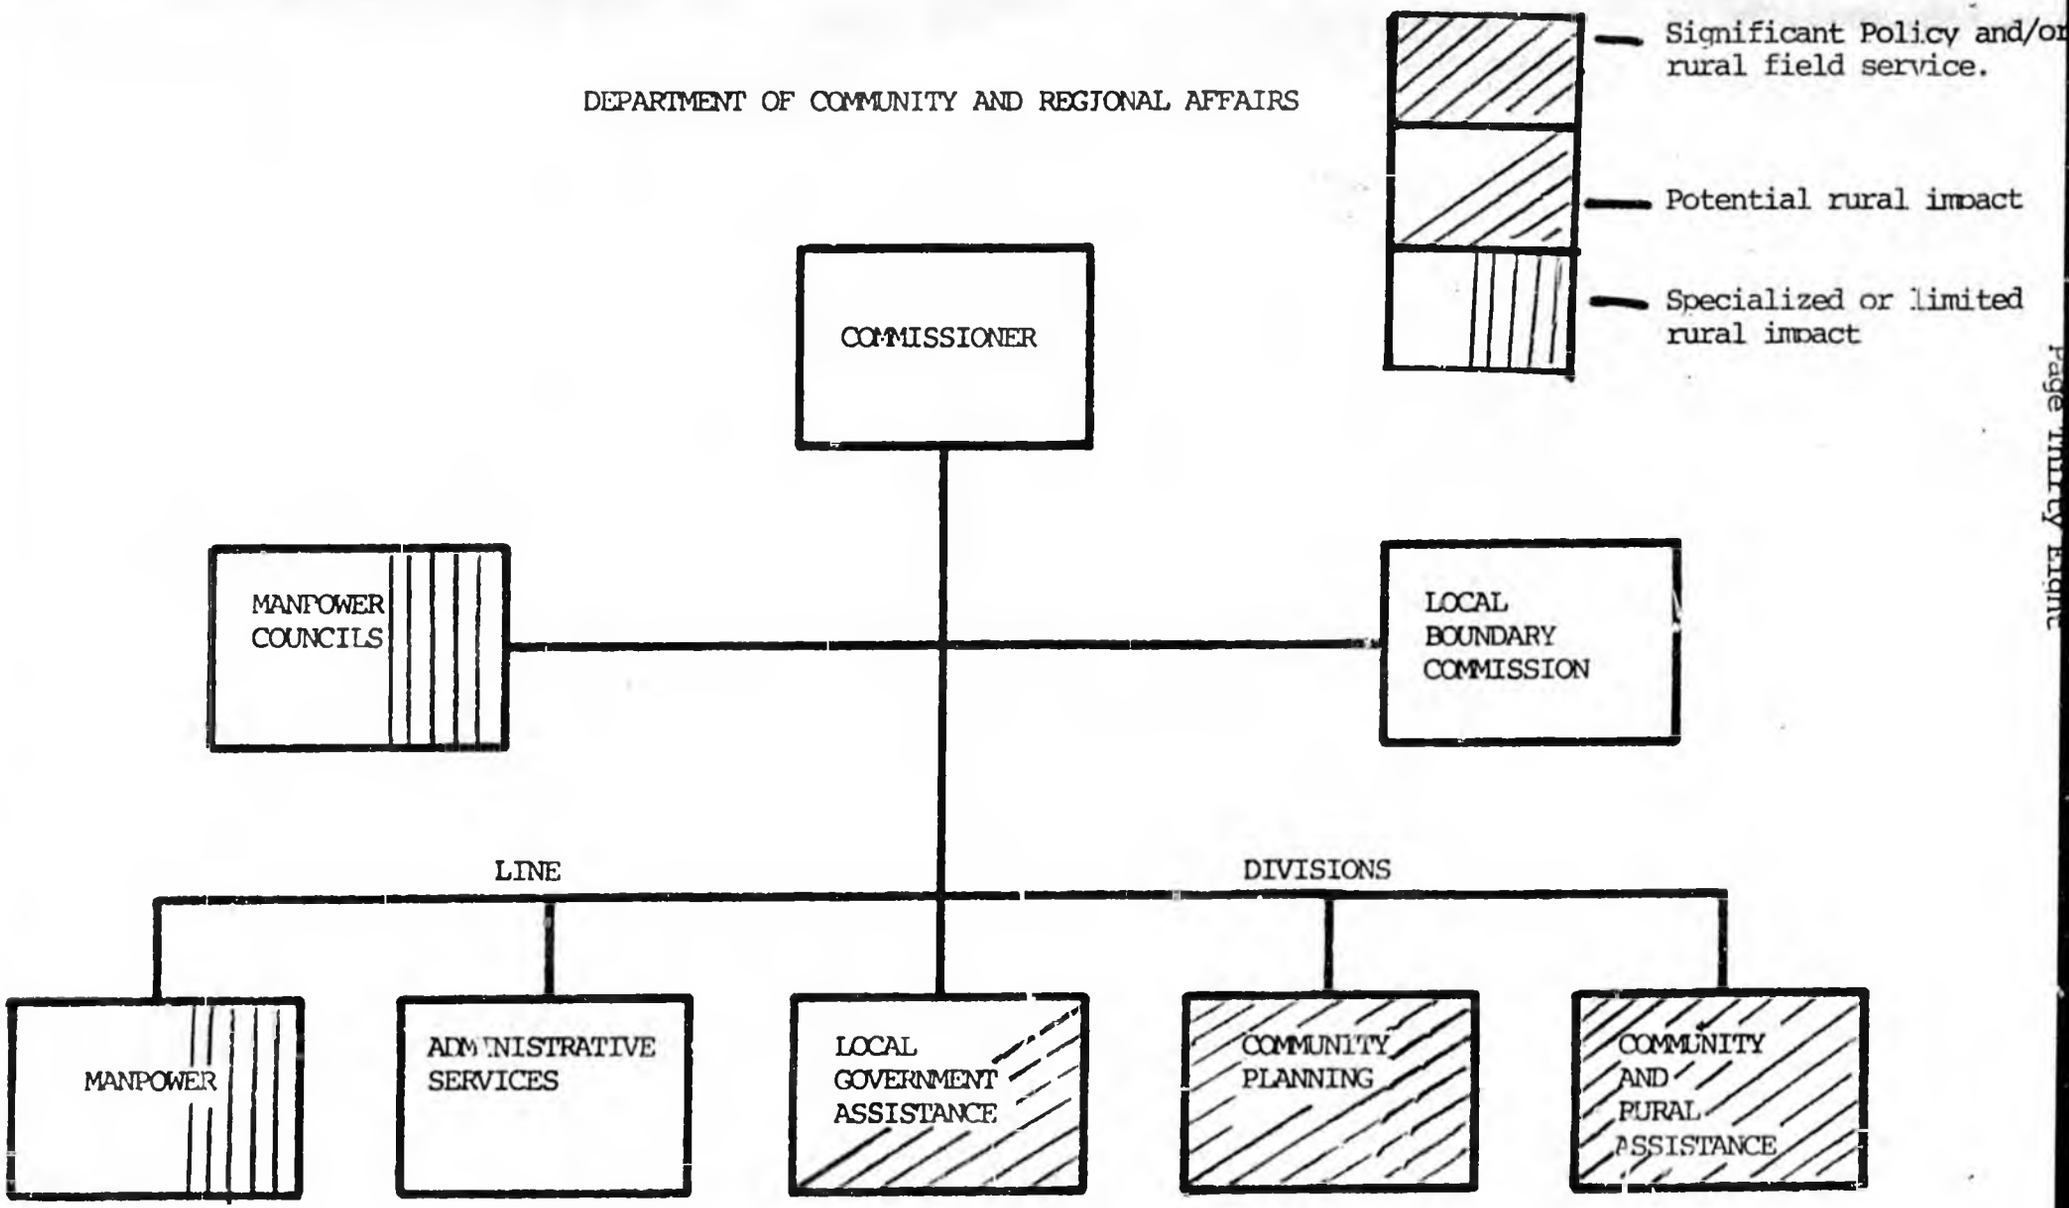
The Department also is the seat of policy groups or commissions such as: 1) THE STATE BOUNDARY COMMISSION, 2) MANPOWER COUNCILS, and more recently 3) THE PRIVATE INDUSTRIES COUNCIL (PIC).

The Department maintains offices in key rural centers, and operating programs such as the rural assistance grants projects, has a valuable rural outreach.

CRA now has an important rural presence and as rural Alaska wrestles with difficult local government problems, the department will have an even more important role. However, the future demands of local government in rural Alaska will tend to specialize CRA in the government area, creating new obligations that will tax its resources in maintaining its program service obligations.

The department is now presently small with primary rural responsibility placed in its community planning function, local government assistance function, and rural assistance and grants program. CRA will be an important partner in economic advocacy in rural Alaska, and it is likely in that process that whatever structure is designed as a rural economic advocate, will likewise be an advocate of maximizing CRAs program and service functions.

Community and Regional Affairs, although quite small compared with other departments, must be selected as one of the four to five departments with significant rural policy and field obligations. The Department has also the most "generalized" functions of those rural agencies (as compared with Transportation, or HSS) and therefore the Department may be a likely nominee for a lead-functionary among program-service agencies in bringing together coordination in the field on economic projects.



Page Thirty Eight

DEPARTMENT OF TRANSPORTATION AND PUBLIC FAILITIES

The Department has the largest number of employees in state government. Many employees are either in planning and construction, or maintenace along transportation systems connecting major urban centers, but nevertheless, a sizable number of employees are represented in rural areas.

The Department has four major units:

1) Administration
2) Design and Construction
3) Maintenance and Operations
4) Facility Planning and Research
**Trabsportation Planning (Office of Commissioner)

The Department is very important to rural areas because of its planning and development of rural transportation systems, its planning and development of facilities, and its maintenance of such facilities. In both areas the department has critical possible SUPPORT and EXPERTISE to offer private development in rural areas.

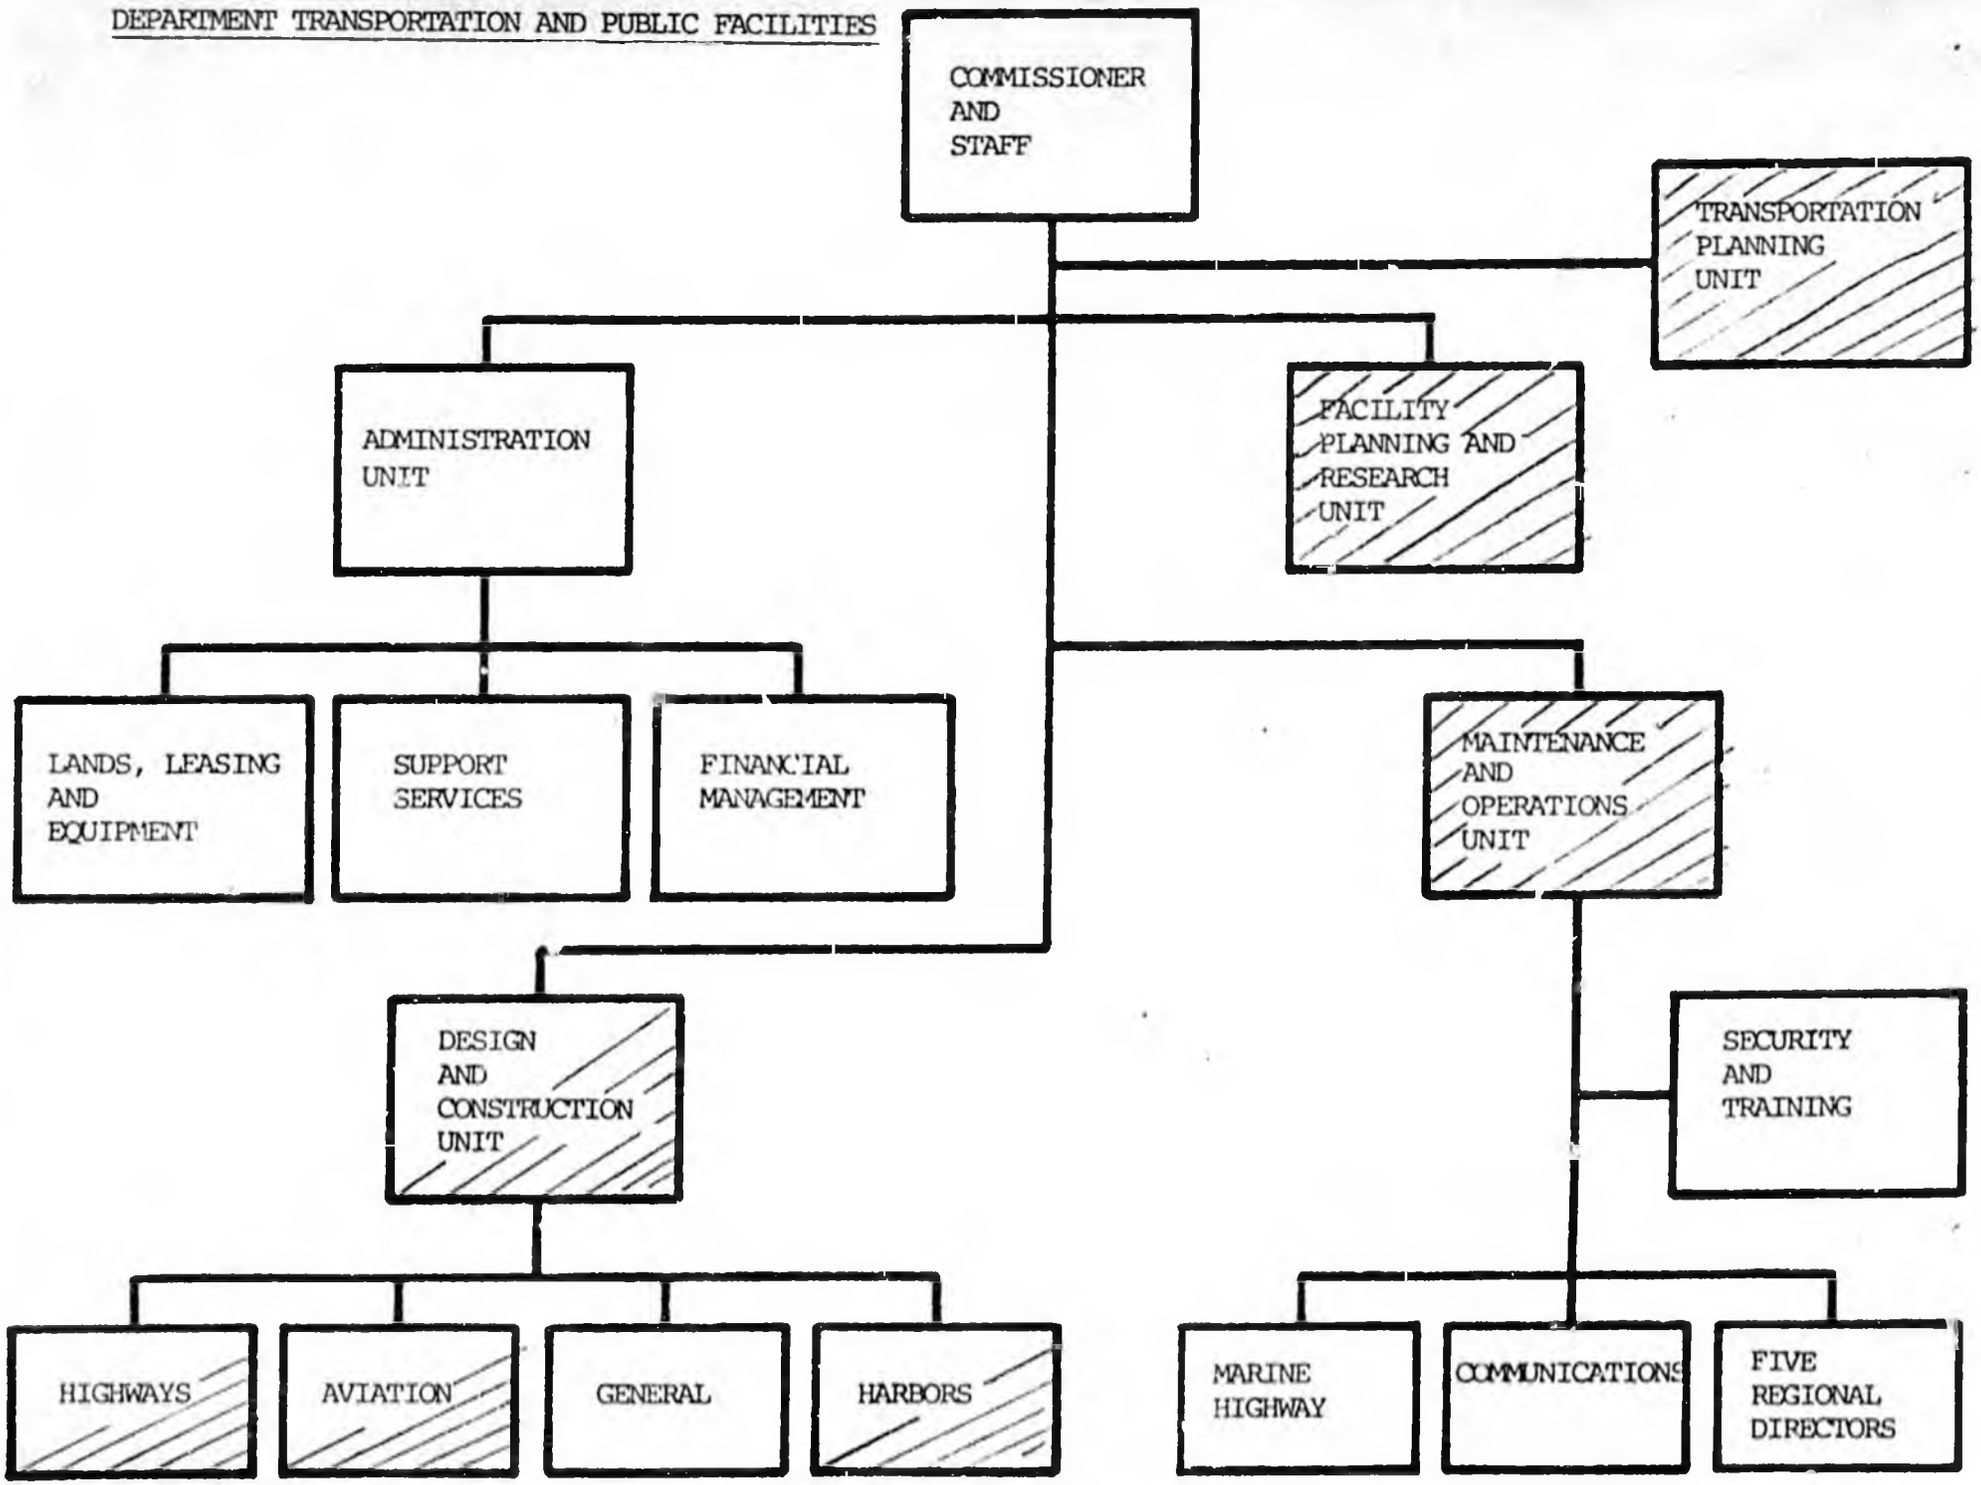
DOT important rural functions are:

1) TRANSPORTATION AND FACILITY PLANNING: Important in terms of possible coordination and support of rural development in the private area.

2) MAINTENANCE AND OPERATIONS: A valuable field staff with rural experience.

3) DESIGN AND CONSTRUCTION UNITS: Important in building to rural needs. A source of practical development experience for rural projects.

DEPARTMENT TRANSPORTATION AND PUBLIC FACILITIES



DEPARTMENT HEALTH AND SOCIAL SERVICES

The Department is the state's second largest department and is perhaps the largest in terms of employees functioning on the field level in rural areas of the state.

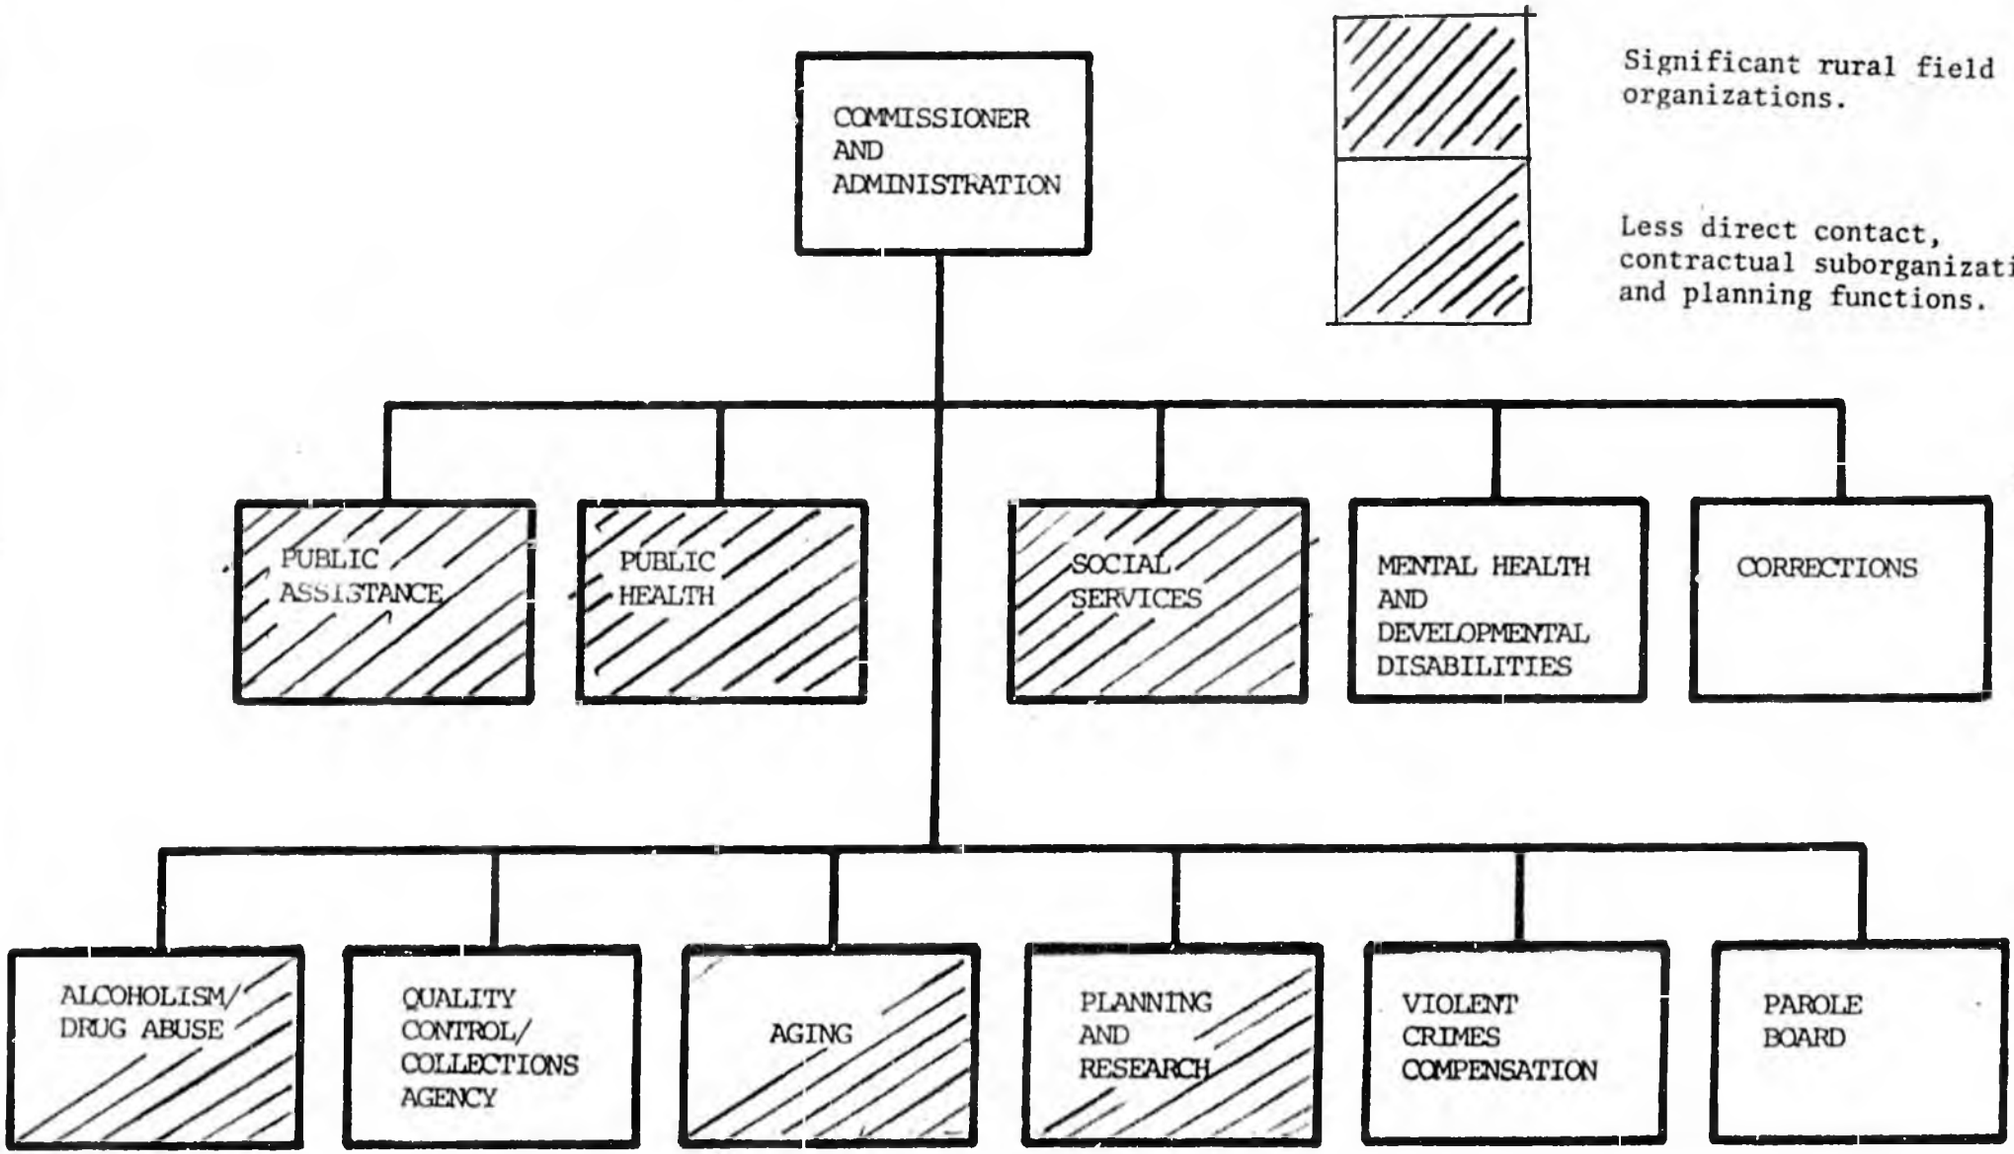
HESS has rather specialized program functions, but in any effort at developing a coordinated rural awareness and effort, the fact is that the department has the most strategically placed field staff. The contact of the staff with communities is also reasonably frequent and regular. The Department is also contact and program involvement with a great many rural Alaska non-profit corporations that deliver various kinds of contract services.

Ironically the department with this "largest rural presence" is the department that is charged with putting on the social and economic "band aids" in an almost futile attempt to patchup the results of decades of economi and social deterioration.

The key field divisions are: PUBLIC ASSISTANCE, PUBLIC HEALTH, SOCIAL SERVICES, and less directly ALCOHOLISM, AGING, and PLANNING AND RESEARCH.

Despite the seeming gap between HSS programs and the function of an economic initiative, it may be important that the department b· included among departments that would be partr · to economic initiative.

DEPARTMENT OF HEALTH AND SOCIAL SERVICES



DEPARTMENT OF FISH AND GAME

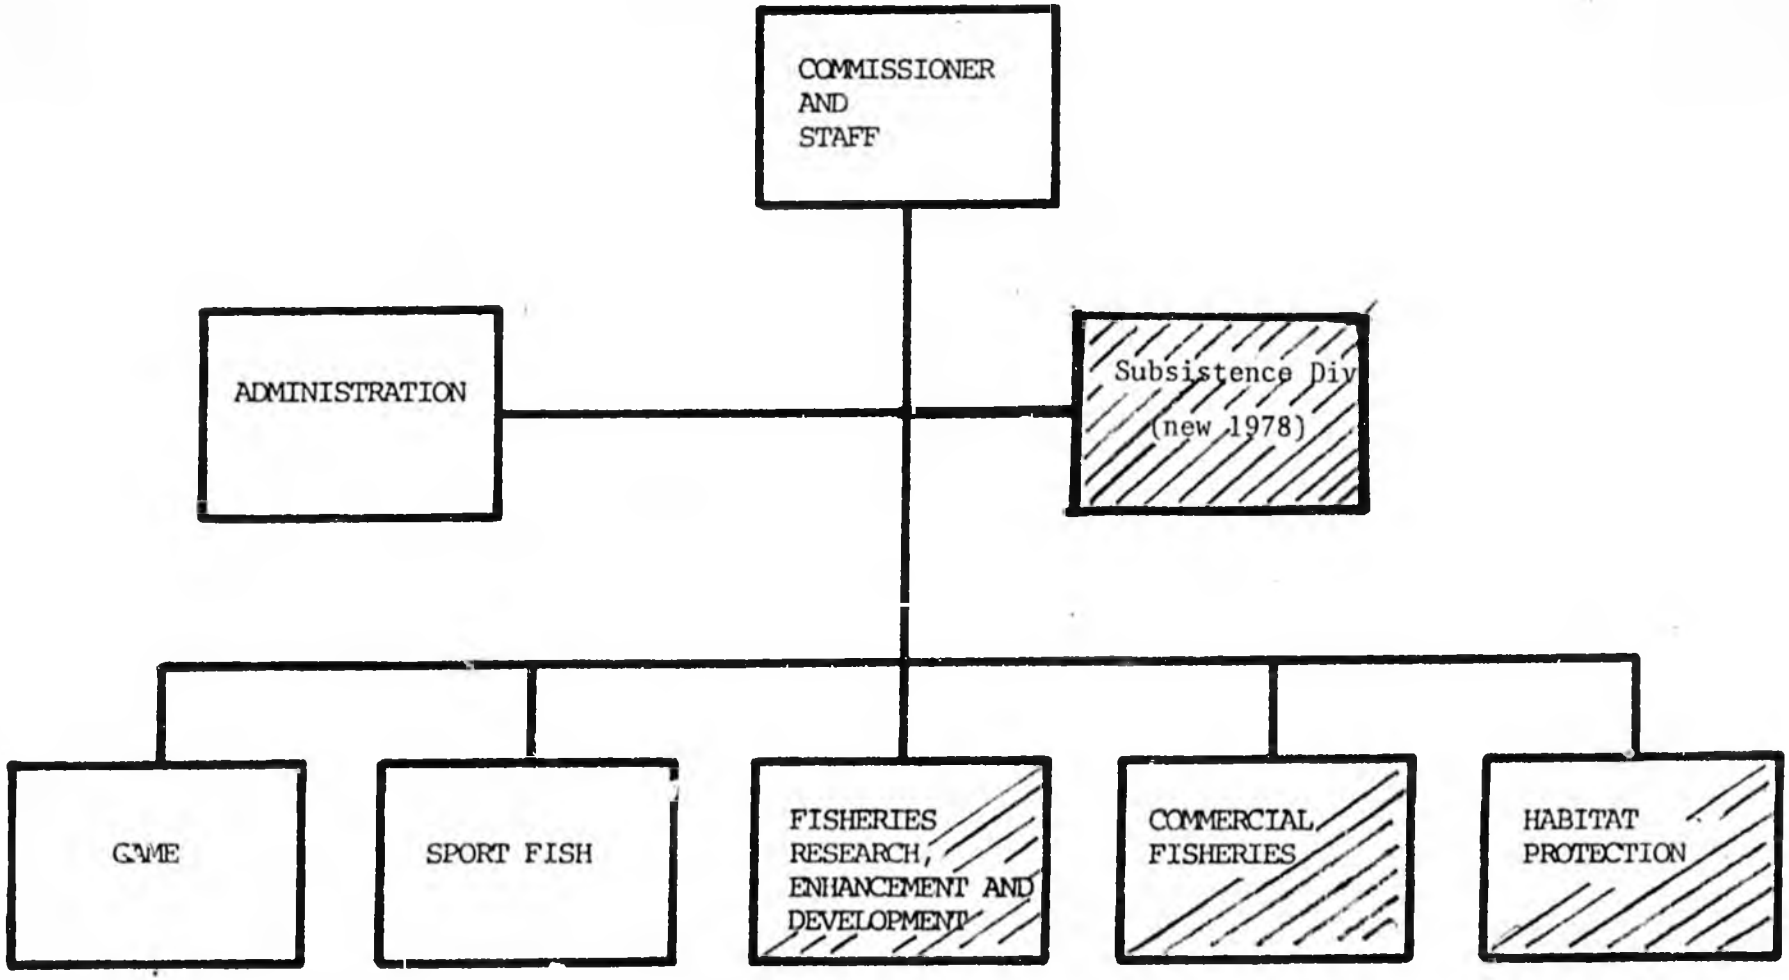
The Department of Fish and Game has a sizable rural staff, but one which has rather specialized functions in most cases. The Department has five principal divisions: GAME, SPORT FISH, COMMERCIAL FISHERIES, HABITAT PROTECTION, FISHERIES RESEARCH, ENHANCEMENT, AND DEVELOPMENT, and a sixth unit added in 1978 to deal with SUBSISTENCE.

Fisheries Research and enhancement, commercial fisheries, and habitat protection all can be involved in rural issues and problems. However, in terms of an expectation of "early" advocacy, the divisions may have a conflict in role, since they must police and question various proposals made against their primary spheres of interest. Such units cannot be expected to be policeman, evaluator, and advocate.

The subsistence division implemented in 1978 for the first time created a unit within the department that was broadly oriented towards a rural issue --use of the resource for subsistence. The broad charge of the division has also equipped it to function more in the role of advocate of rural needs than other departmental units.

It may be in a rural economic initiative that the Subsistence Divison might prove an effective coordinator between other units and external structures involved in rural development.

DEPARTMENT OF FISH AND GAME



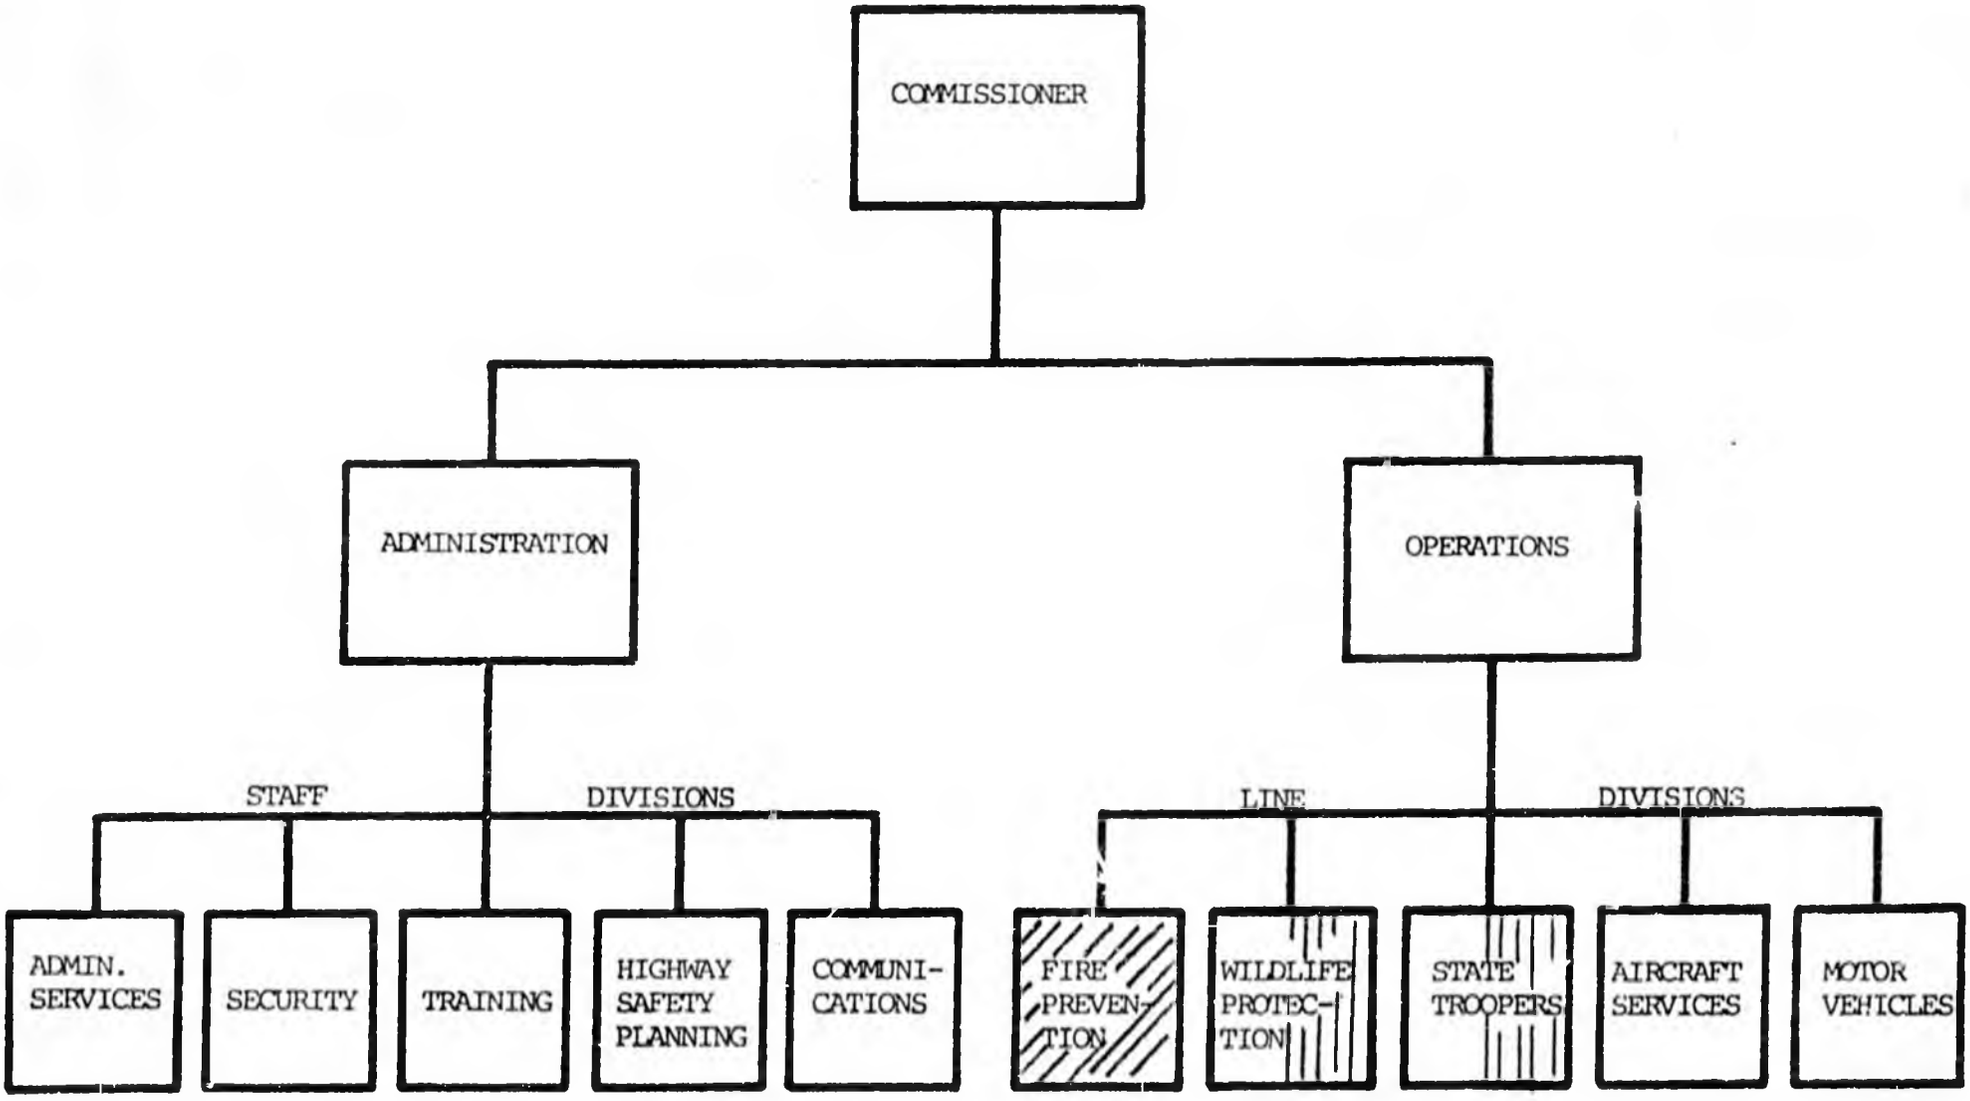
DEPARTMENT OF PUBLIC SAFETY

The Department of Public Safety is perhaps the most field oriented department in state government. The department is literally a field agency. However, while the department has an excellent rural spread of employees, and an excellent communications network, its specialized police function removes it from being a functional part of any rural coordinative unit. The role of the department is simply inherently different from development functions.

The department also operates the division of Wildlife Protection, and while this unit is extensively rural oriented, it has even a stronger conflict.

The division within Public Safety that could have significant rural impact, and become significant rural advocate in terms of community development and protection, is the DIVISION OF FIRE PREVENTION.

DEPARTMENT OF PUBLIC SAFETY



DEPARTMENT OF NATURAL RESOURCES

The Department has a small rural field operation, and that field operation is largely through the state's expanding development of park facilities. The Department is not a rural field "operative," but is and can be a significant department in terms of policy that can impact rural lifestyle and development.

The Department has primary say in disposition and/or management of a large portion of the state's surface and subsurface resource wealth.

Key divisions with rural policy impact in the department are:

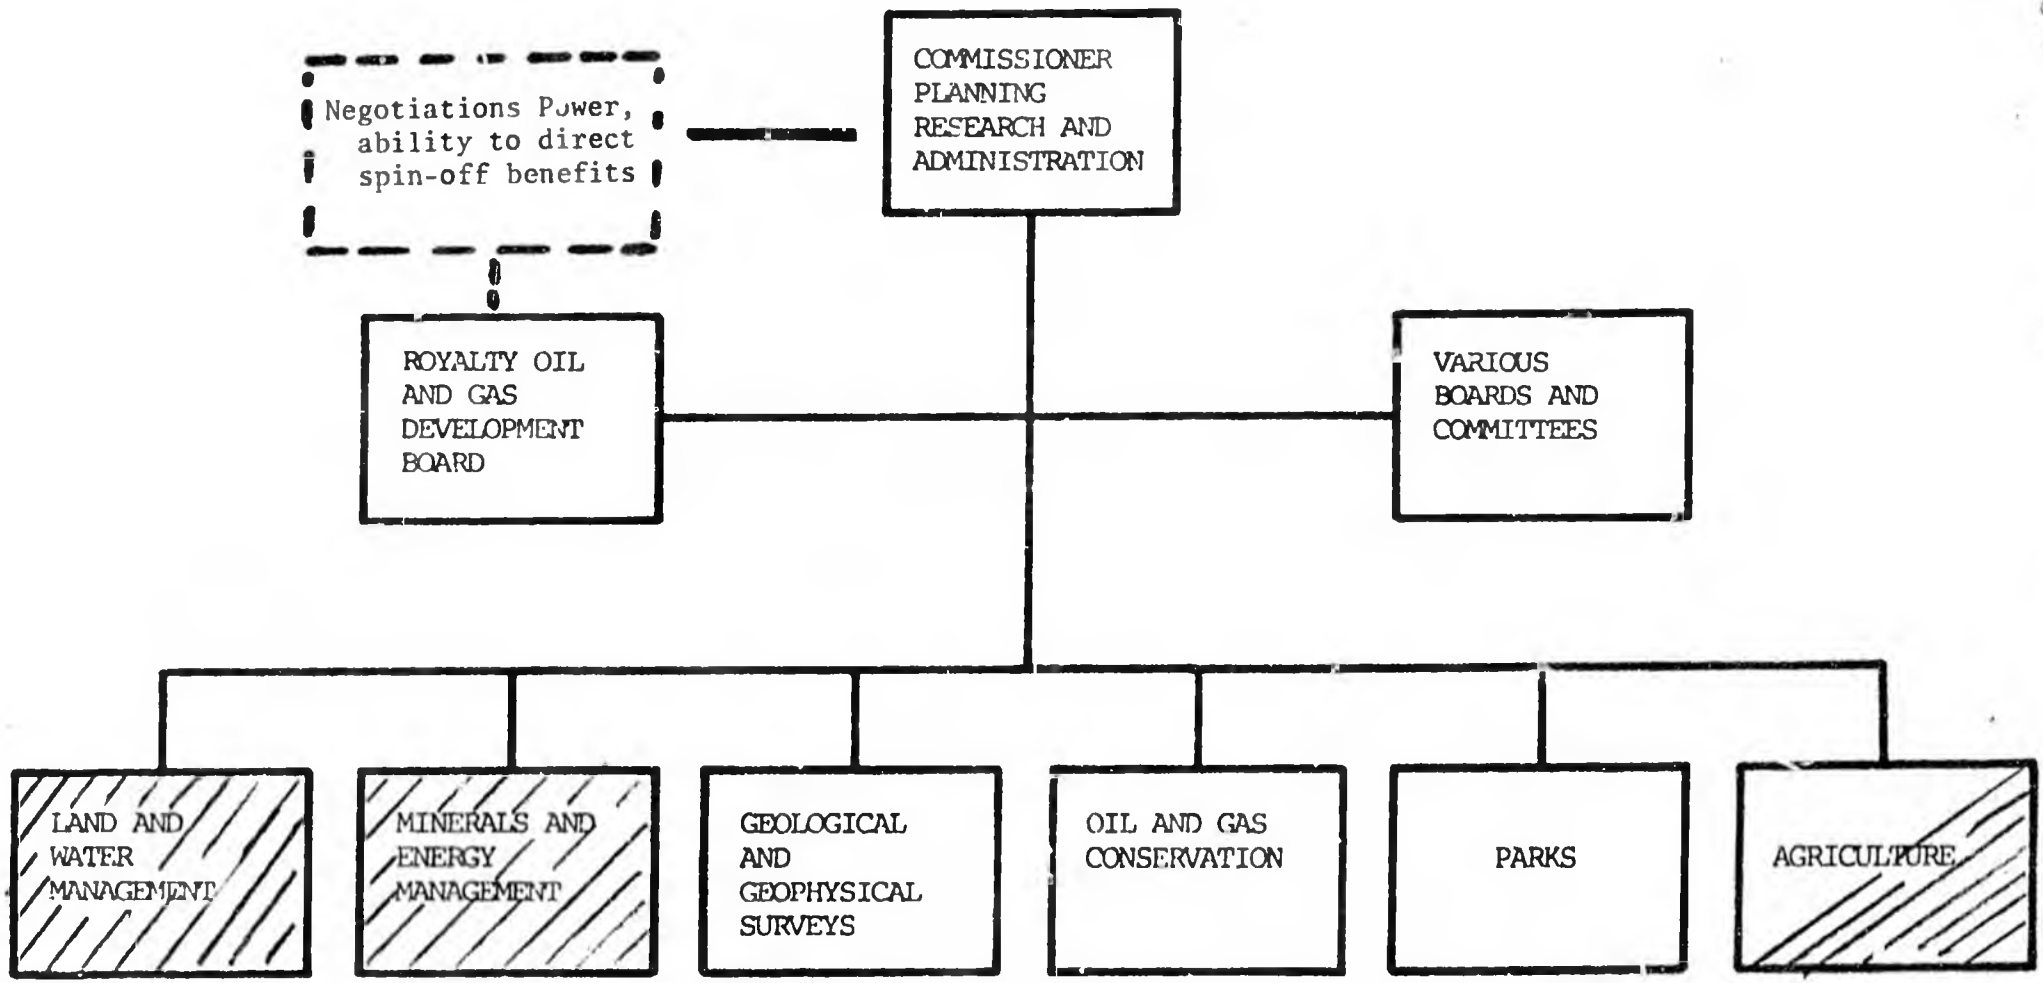
1) LAND AND WATER MANAGEMENT: Management and disposition of state land and water resources. This division can have a positive impact on cooperating with community projects, and/or cooperating with native land management and development.

2) MINERALS AND ENERGY MANAGEMENT: Manager of the state's oil disposition (together with Oil and Gas Conservation).

3) AGRICULTURE: Charged with Alaska agricultural policy, which will have an expanding place in the Alaska economy in the next quarter century.

The Department has tends to be the lead negotiator in major resource contracts of state leased resources (Alpetco, Gas Pipeline, as well as the specific resource lease). This role involves delicate decisions that concern spin-off, or soft benefits, and as a result the department could have a crucial place in determine whether "macro-scale" projects in some manner can be made to benefit or underwrite the "micro-economies" of small rural communities.

DEPARTMENT OF NATURAL RESOURCES

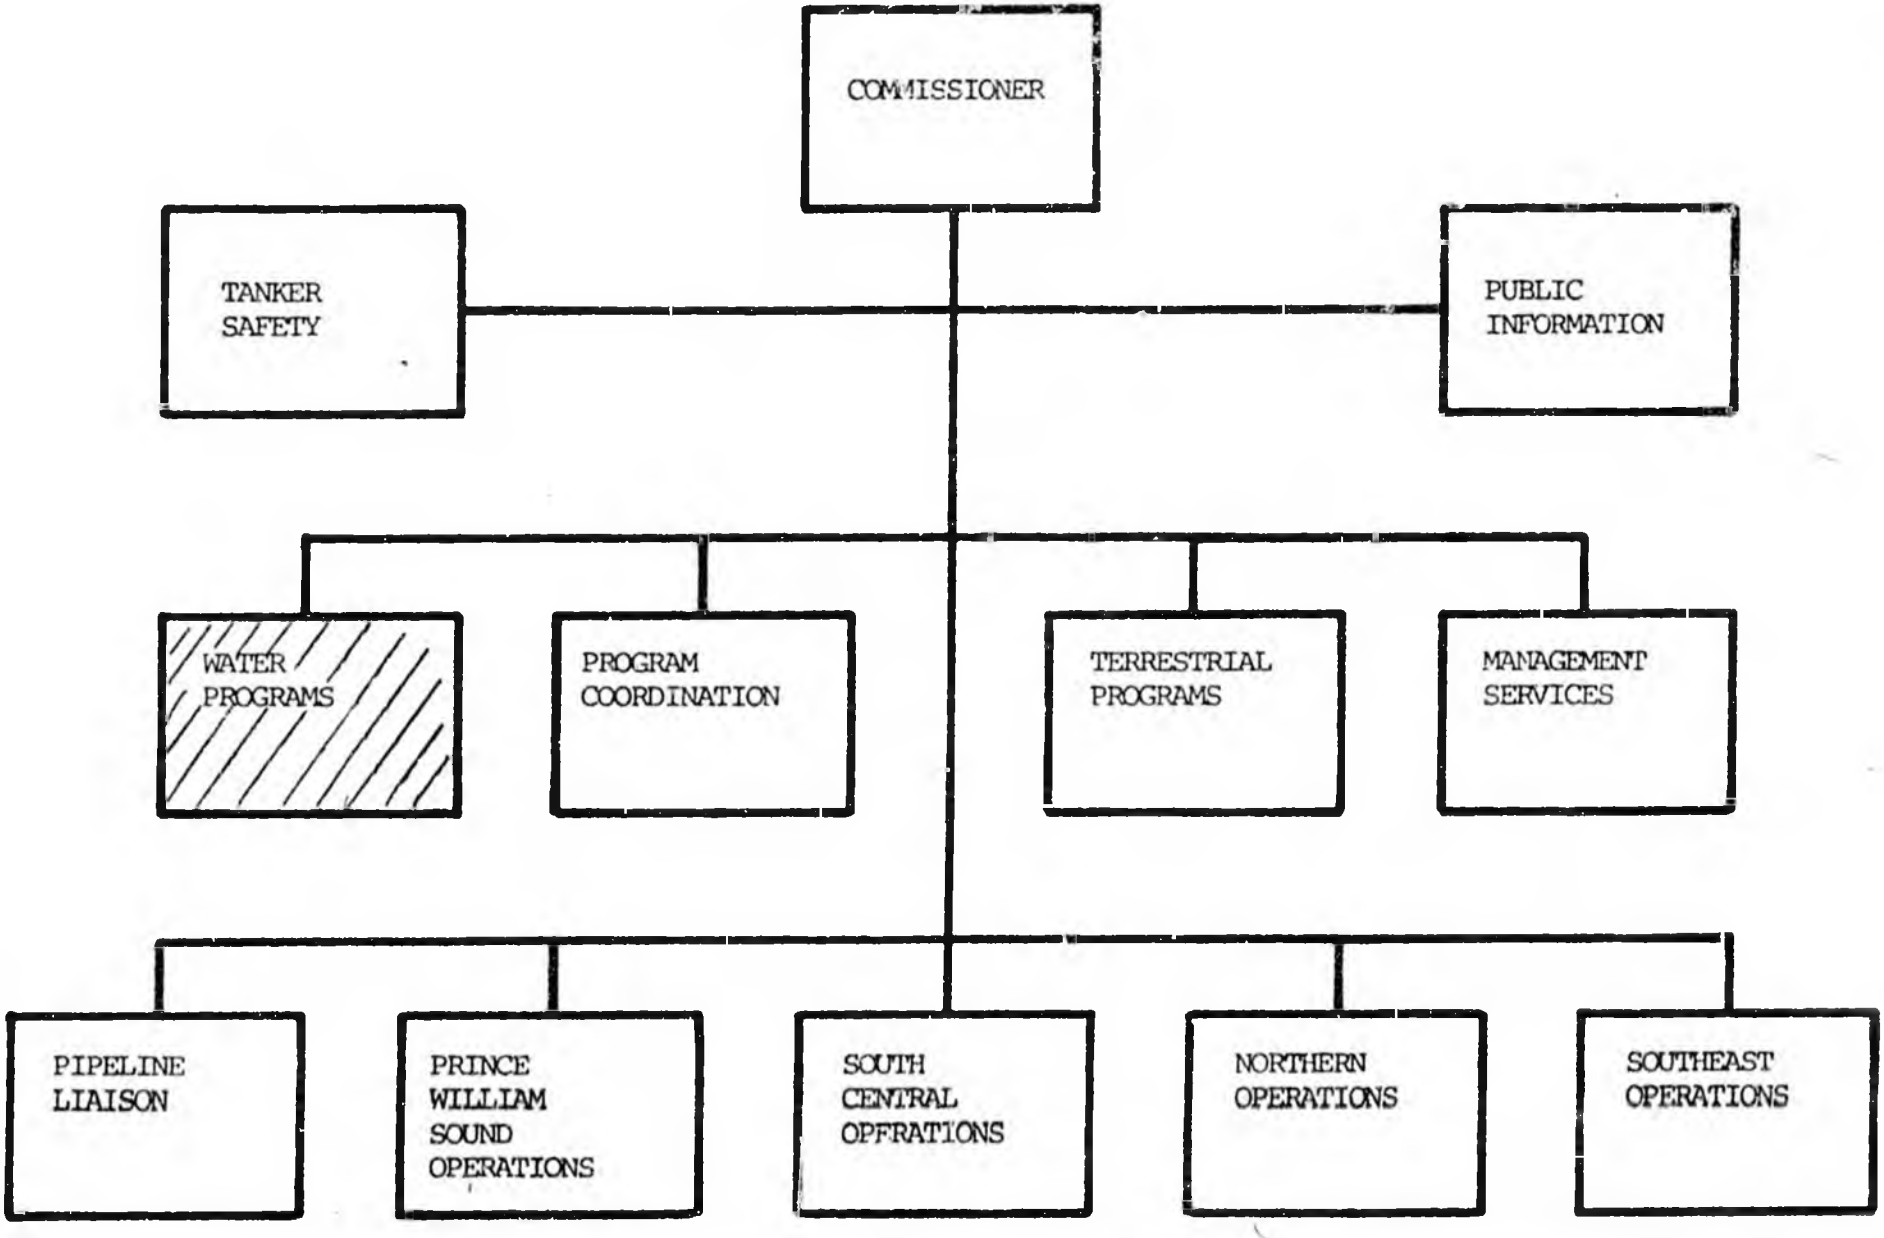


DEPARTMENT OF ENVIRONMENTAL CONSERVATION

The department is small and has responsibility for maintaining the state's environmental quality. As such DEC must be both the operator of several service programs and the state "advocate" of the environment. Such a role of advocacy would appear to prohibit to a certain extent its participation in rural economic development initiative. This is not to suggest DEC could not participate in coordination and attempts to speed consideration of a project. However, the DEC could not be expected to be THE ADVOCATE.

DEC does administrate the state's program of small community water and sewage development. Such programs are essential to rural community development, and could relate to private economic development. DEC must act as developer and policemen at times, and faces some conflicts in the sewer and water area. DEC must be the critic of systems at times to the extent that a technology is not realistic within the framework of a small rural community. The department can in such circumstances recommend the subsidy of systems, but this may reflect interdepartmental conflict since the agencies policemen role may lead to compacting its own future budget, and/or developing complicated utility projects that pull DEC into management to the extent of being perhaps undesirable and secondly the type of situation no bureaucracy will volunteer for.

DEPARTMENT OF ENVIRONMENTAL CONSERVATION



DEPARTMENT OF EDUCATION

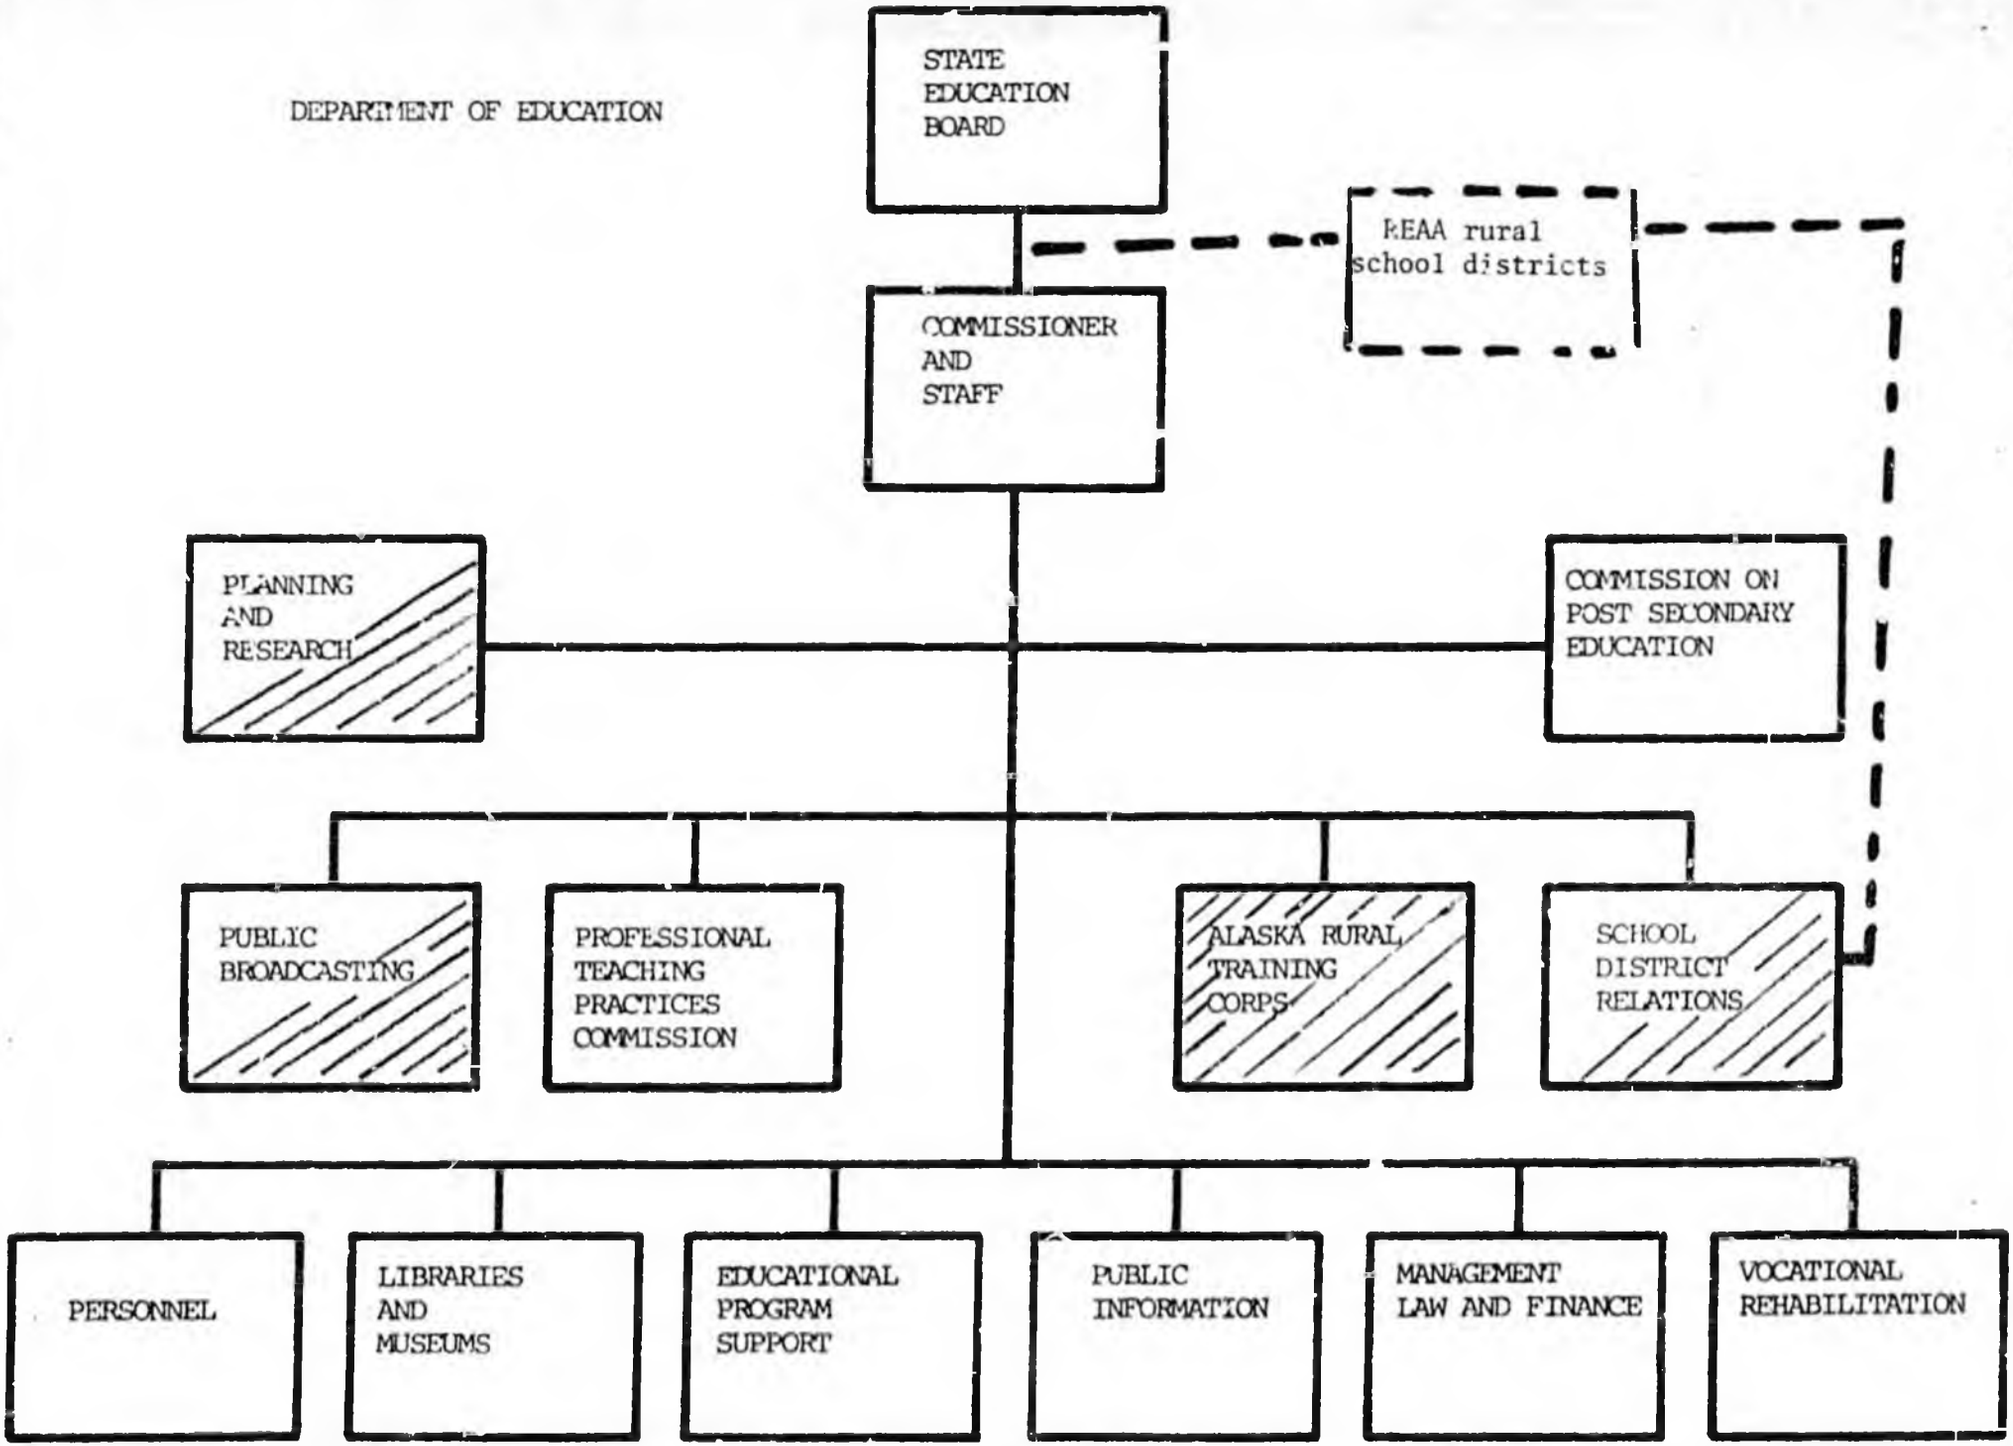
The Department of Education no longer has a direct rural field operation as it did up until the creation of rural independent school districts (although 100% state supported).

The REAAs could be treated as an offshoot of the department, but since they also represent a very significant element of region-wide locally elected government in rural Alaska, they are best treated as seperate entities.

The significant divisions of the department therefore are the ALASKA RURAL TEACHING TRAINING CORPS, SCHOOL DISTRICT RELATIONS, PLANNING AND RESEARCH, and the PUBLIC BROADCASTING COMMISSION.

The Public Boardcast Commission has significant rural impact, since that agency is in charge of expanding public roadio stations in the rural areas of the state. The stations provide a unique sense of community contact in rural Alaska and provide a vital communications link.

DEPARTMENT OF EDUCATION



DEPARTMENT OF COMMERCE AND ECONOMIC DEVELOPMENT

The department is a merger of the old Department of Economic Development and the Department of Commerce. The Development function has largely become the Division of Economic Enterprise, which carries out some research and keeps basic state economic data.

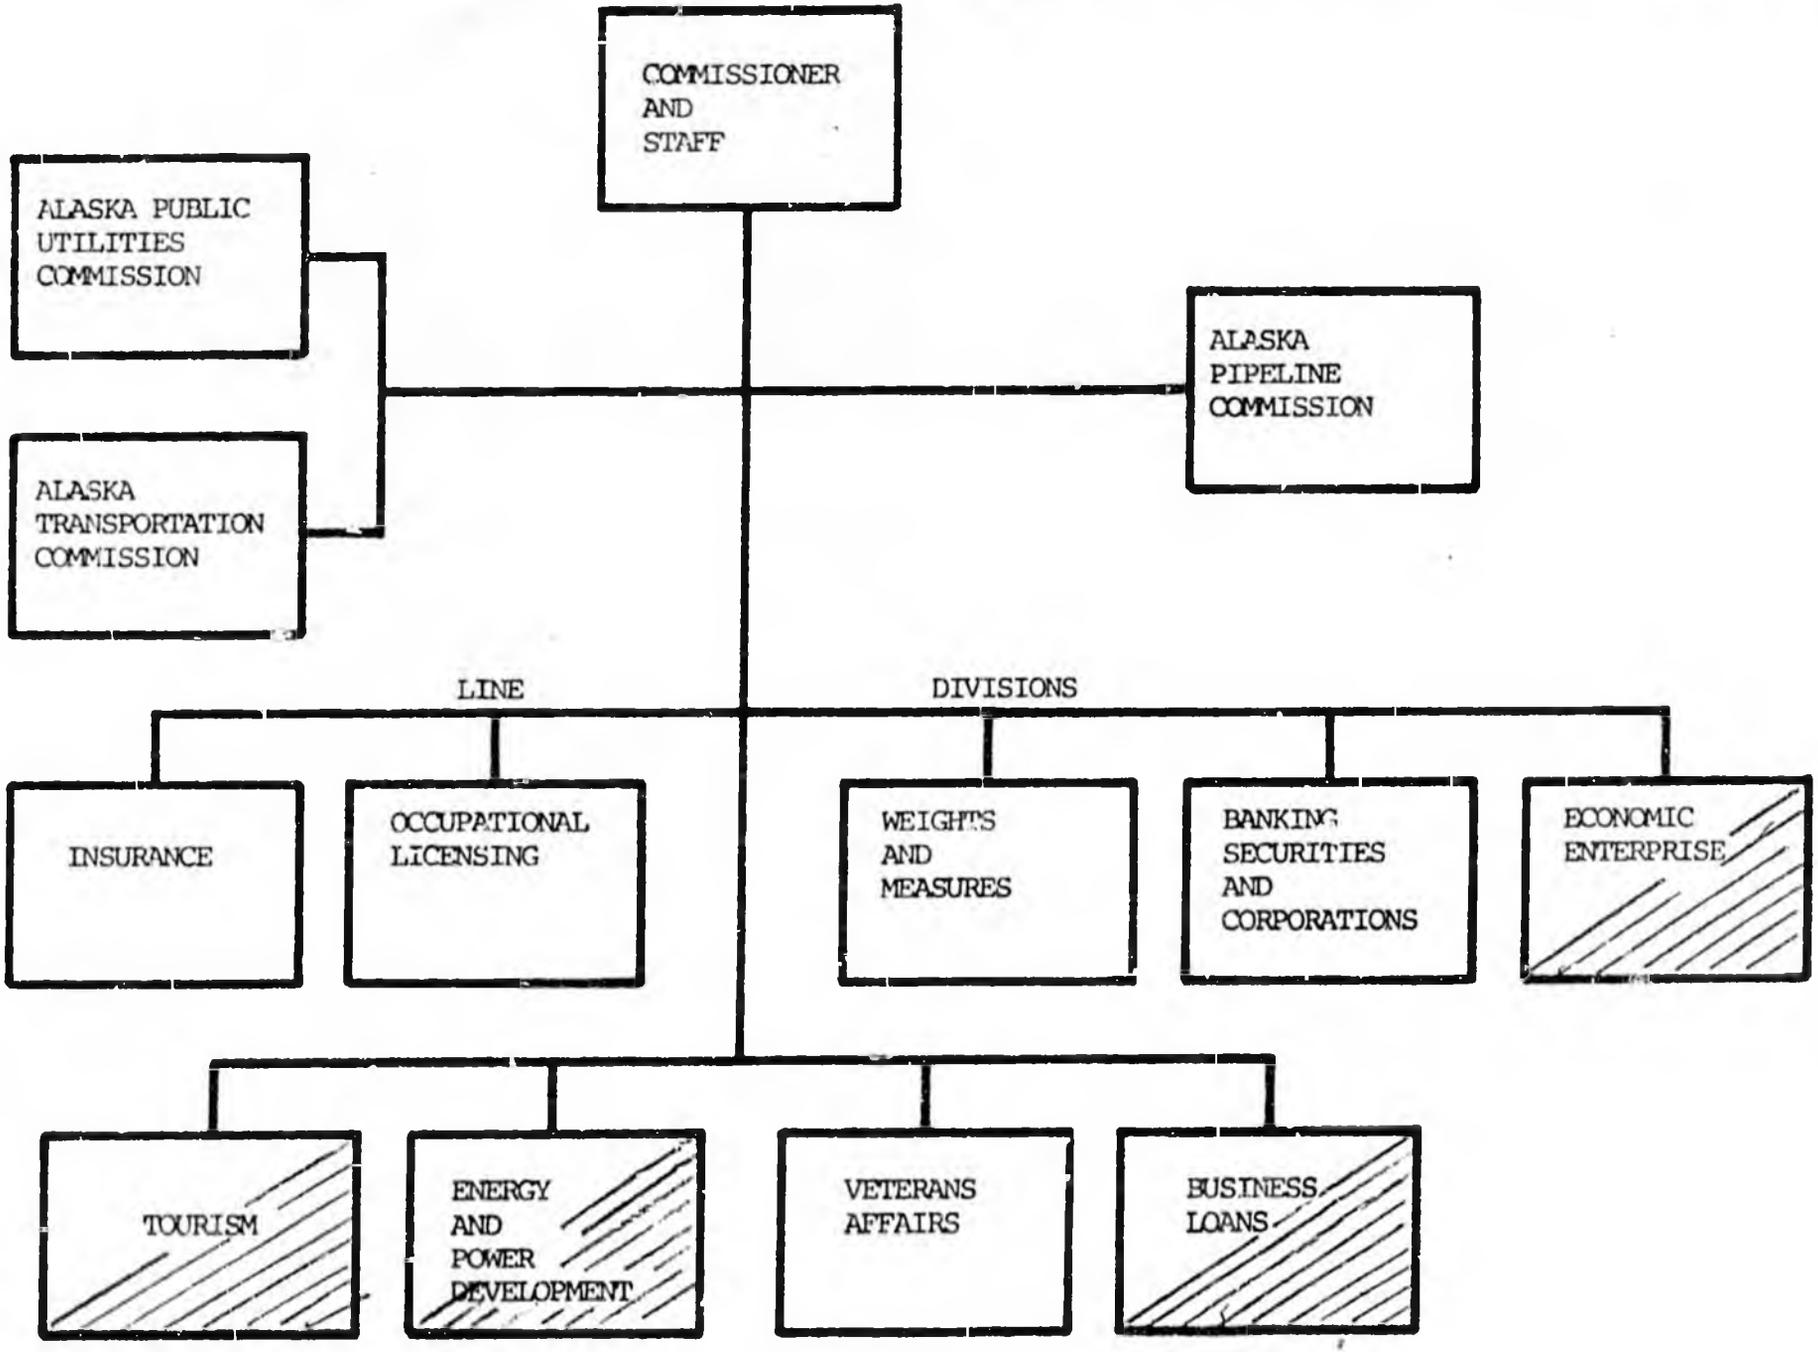
However, the department could take on substantial rural interests if the state becomes the department to which a variety of state loan programs are assigned under the current condition of excess revenue. The department already operates the state's business loan program.

The department could also take on various roles in terms of management assistance to development corporations, and could become "home" in the event rural conditions required an occassional "state corporation" to carry out certain functions.

Commerce to date has been something of a collection of state regulatory and licensing functions. However, in the future the role of the department may be well worth considering as a partner in carrying out a rural economic initiative.

Development related authorities, although more independent, tend to be attached to Commerce. Currently the Alaska Housing Authority, the Alaska Housing Finance Corporation, Alaska State Development Authority, and the Alaska Power Authority, all of rural development significance, are attached to the agency.

COMMERCE AND ECONOMIC DEVELOPMENT



OTHER STATE DEPARTMENTS

The other state departments do not carry out what might be termed either rural field operations or definitive rural policy.

The remaining departments are the departments of:

--REVENUE

--LABOR

--ADMINISTRATION

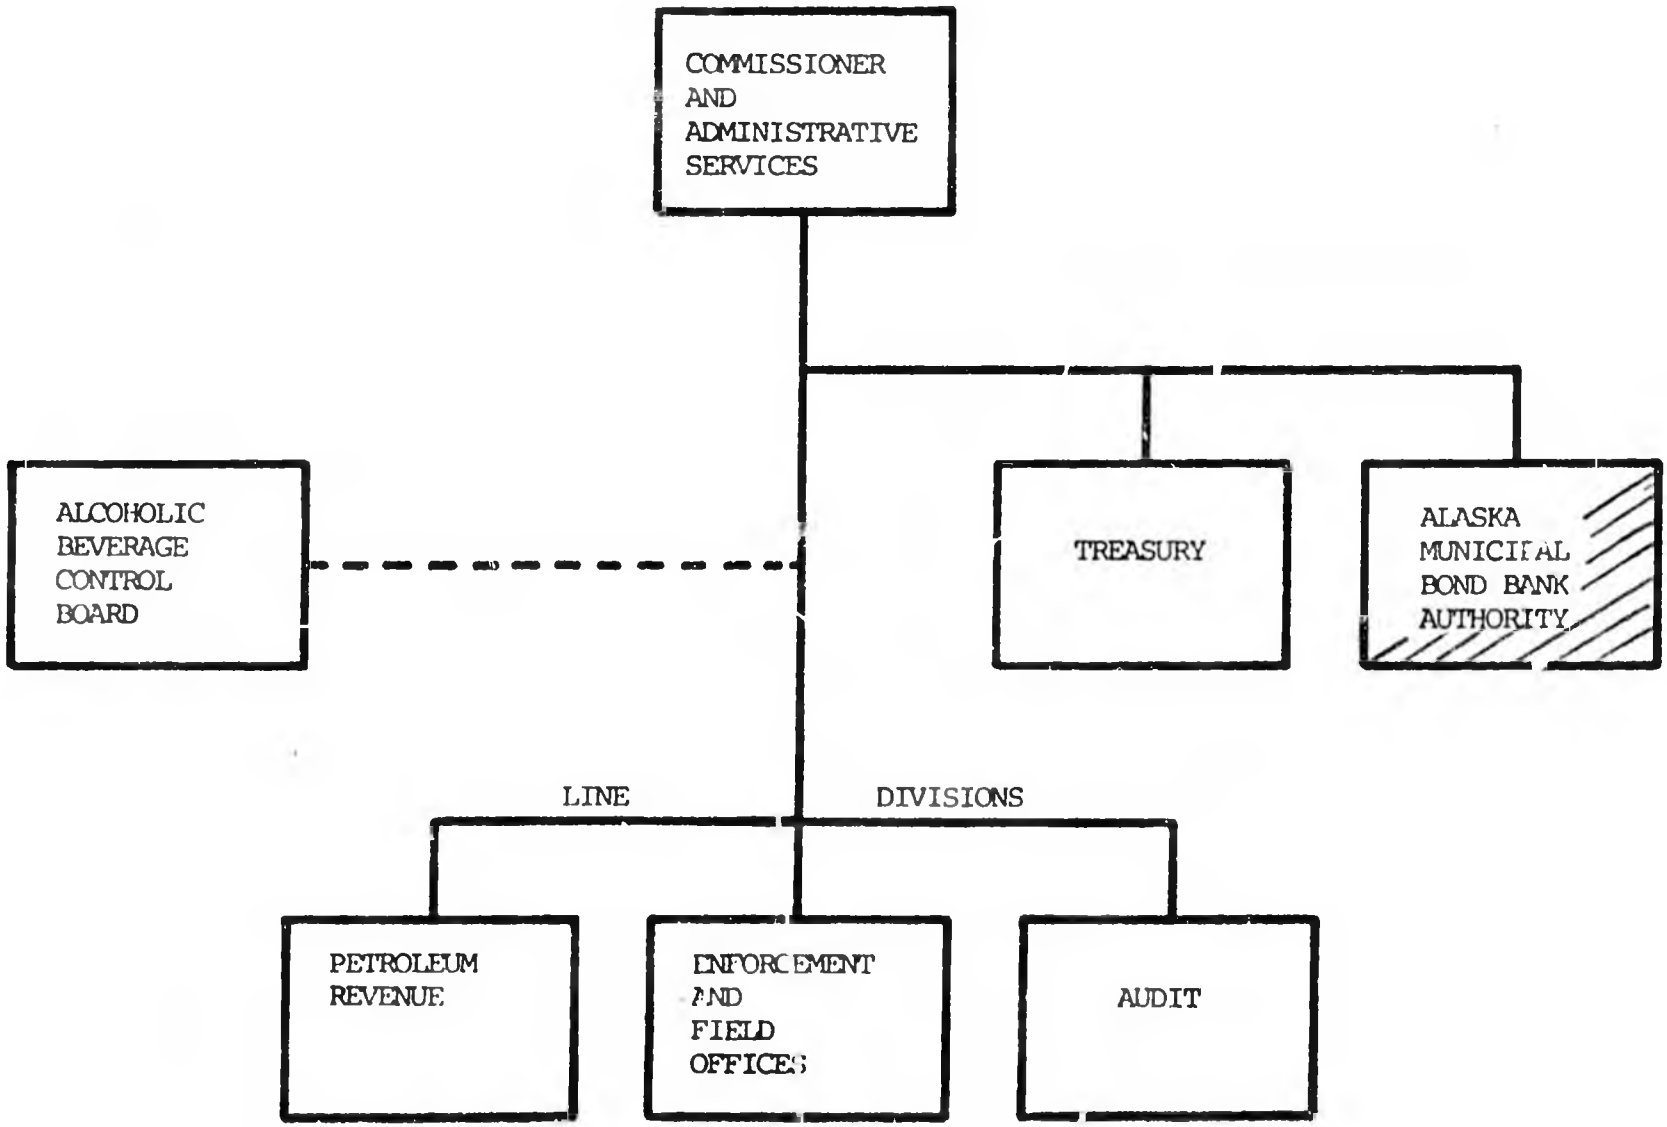
--LAW

--MILITARY AFFAIRS

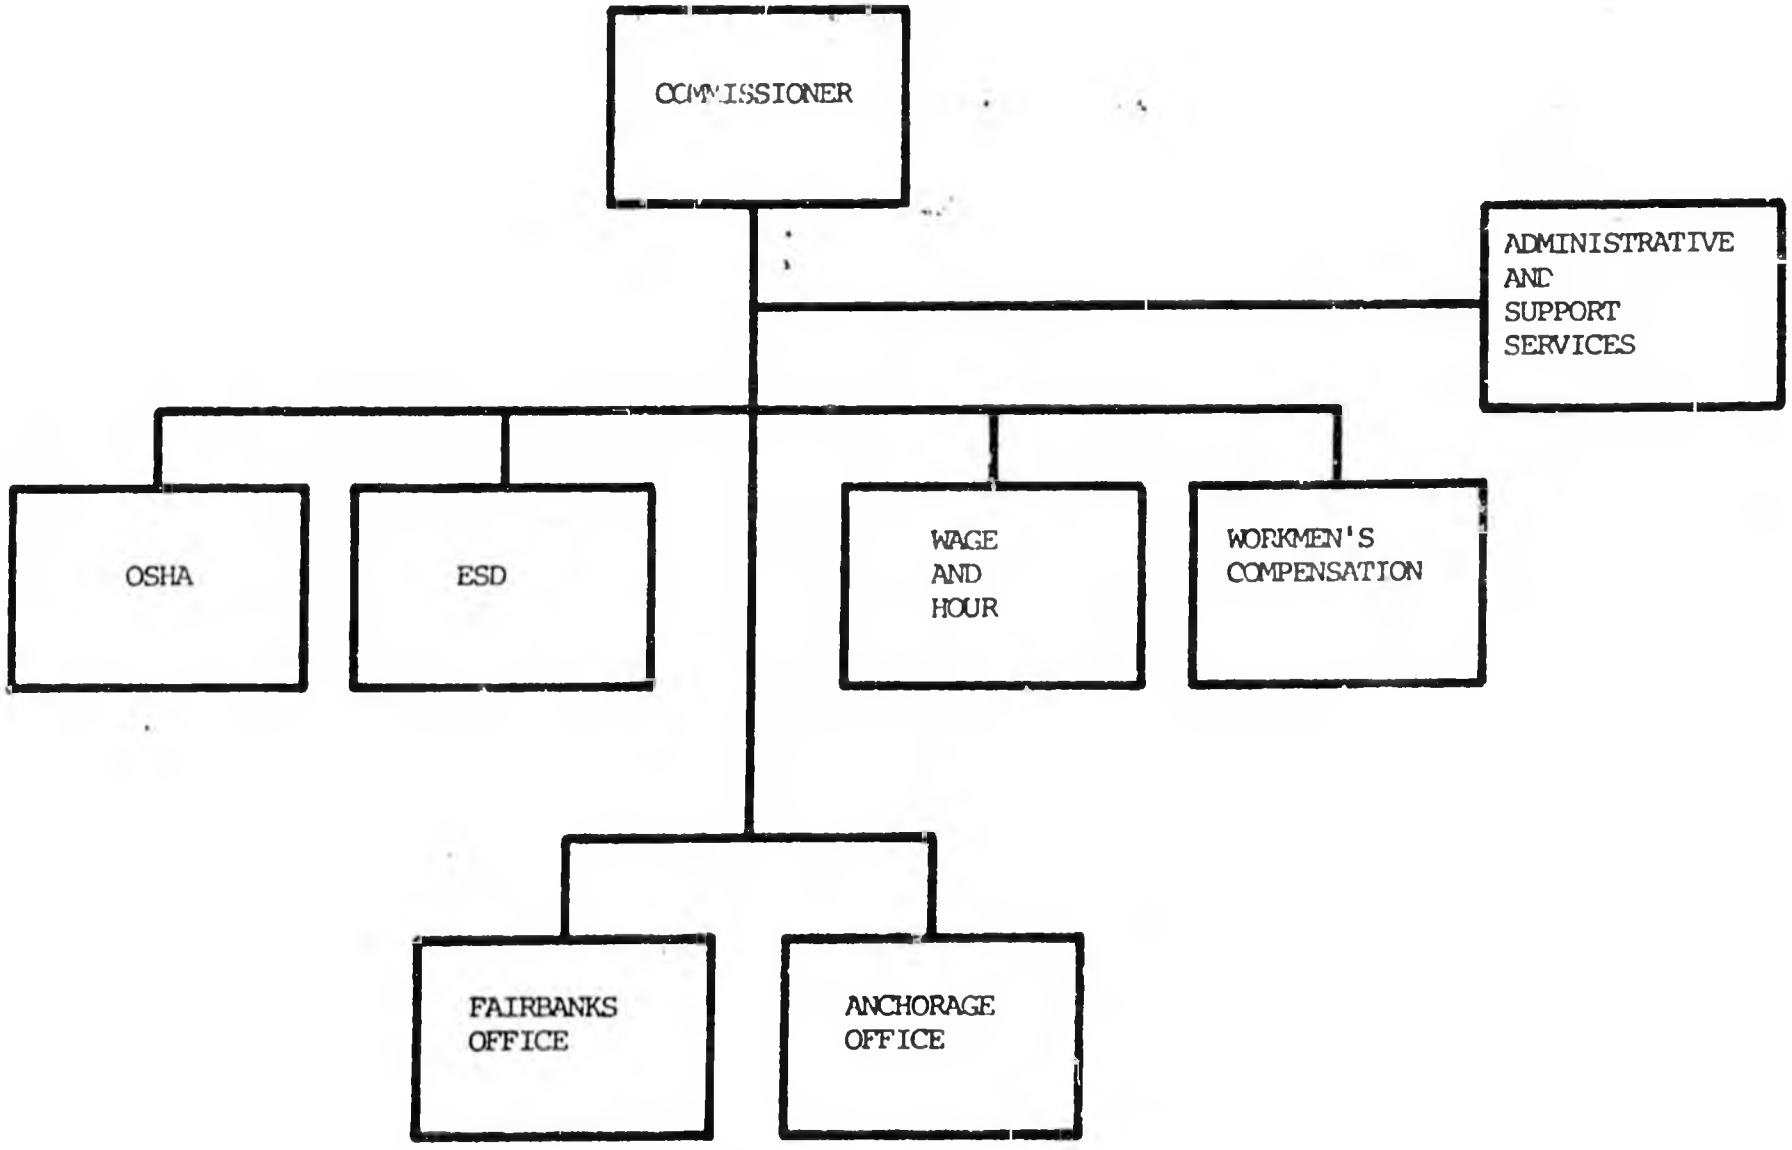
Each department has some rural functions, and several could at some point take on significance. For example, the functions discussed in relation to the Department of Commerce (loan funds etc.) might end up in revenue under new policy. Military Affairs includes the rural Alaska National Guard, and an active Department of Labor could have rural impact via innovative affirmative action programs.

It should be noted that one of the state's first corporate structures for handling a margin of excess revenues for investment, The Alaska Renewable Resources Corporation, was attached to the Department of Revenue (although independent in authority).

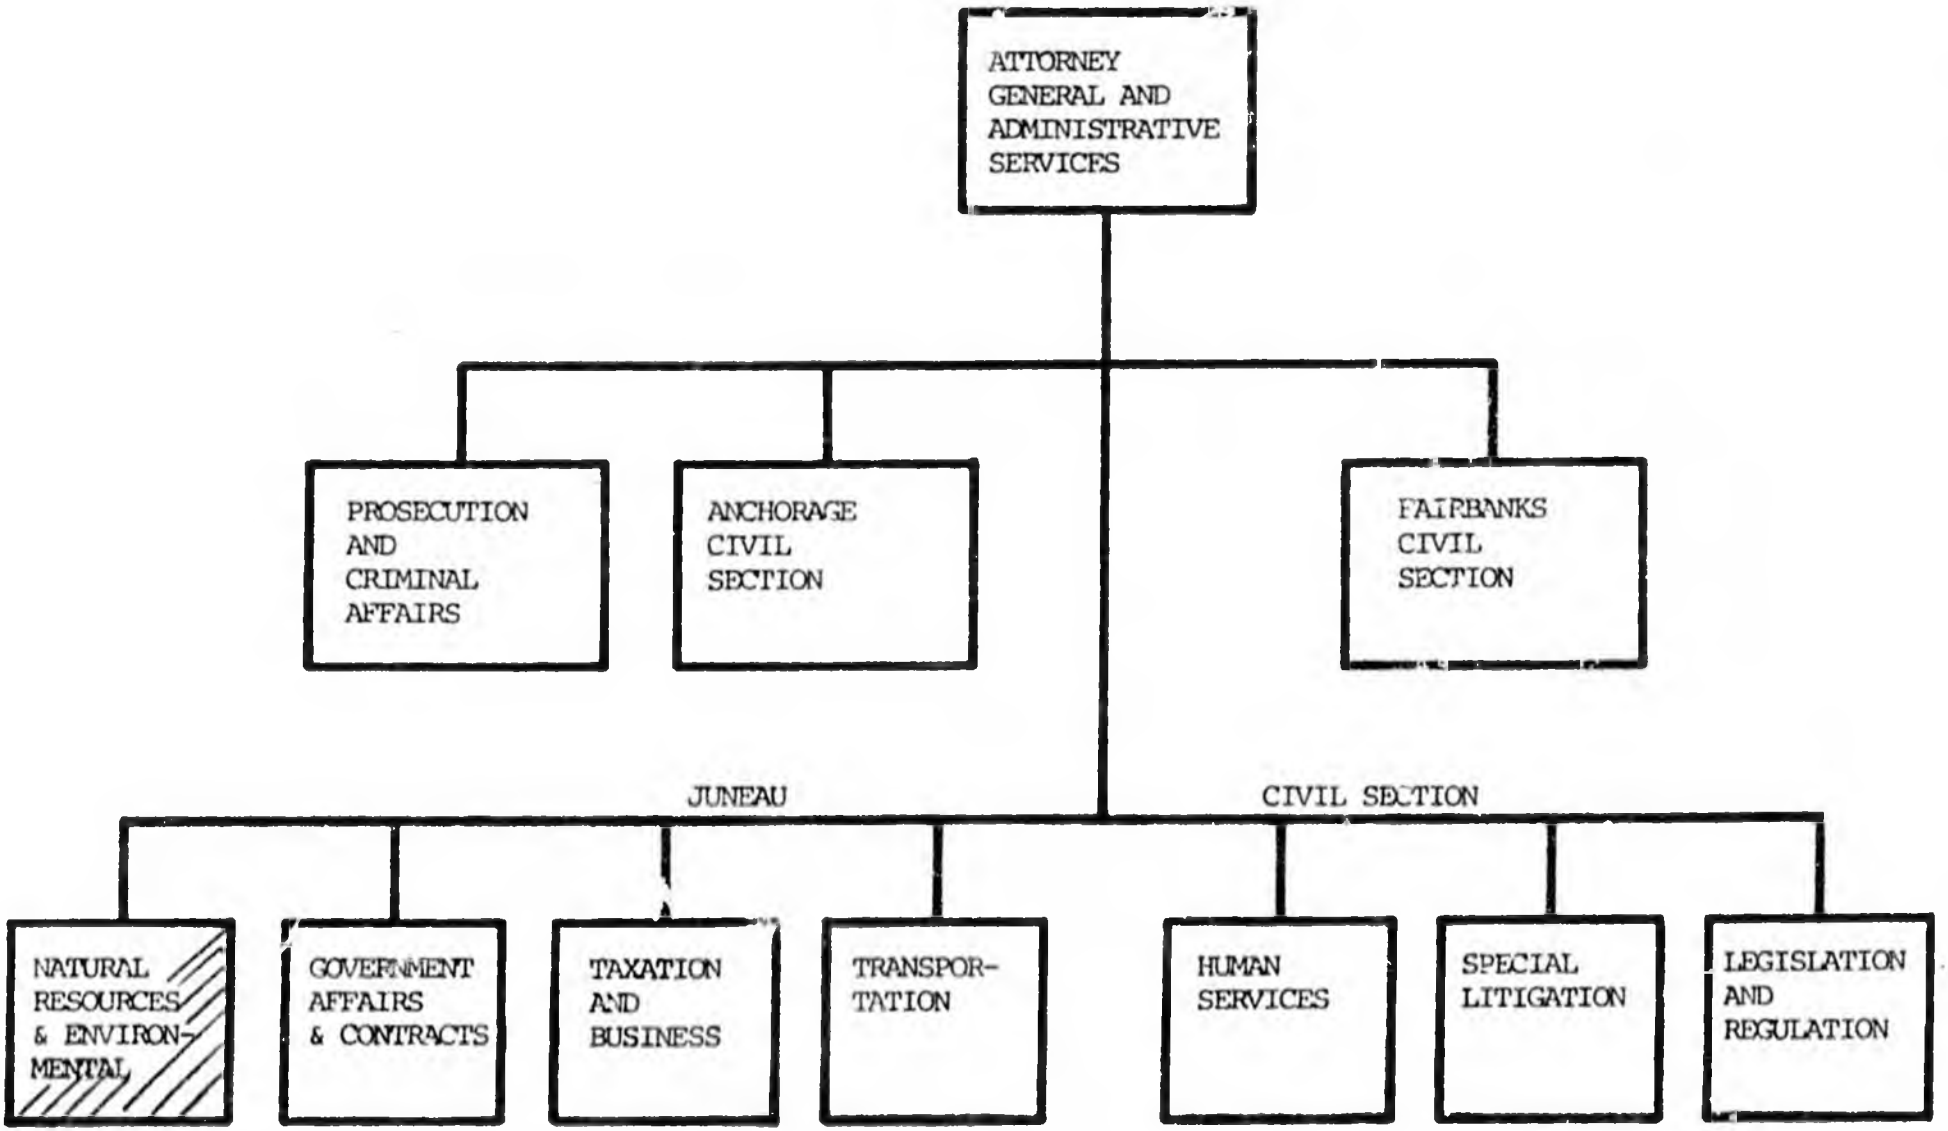
DEPARTMENT OF REVENUE



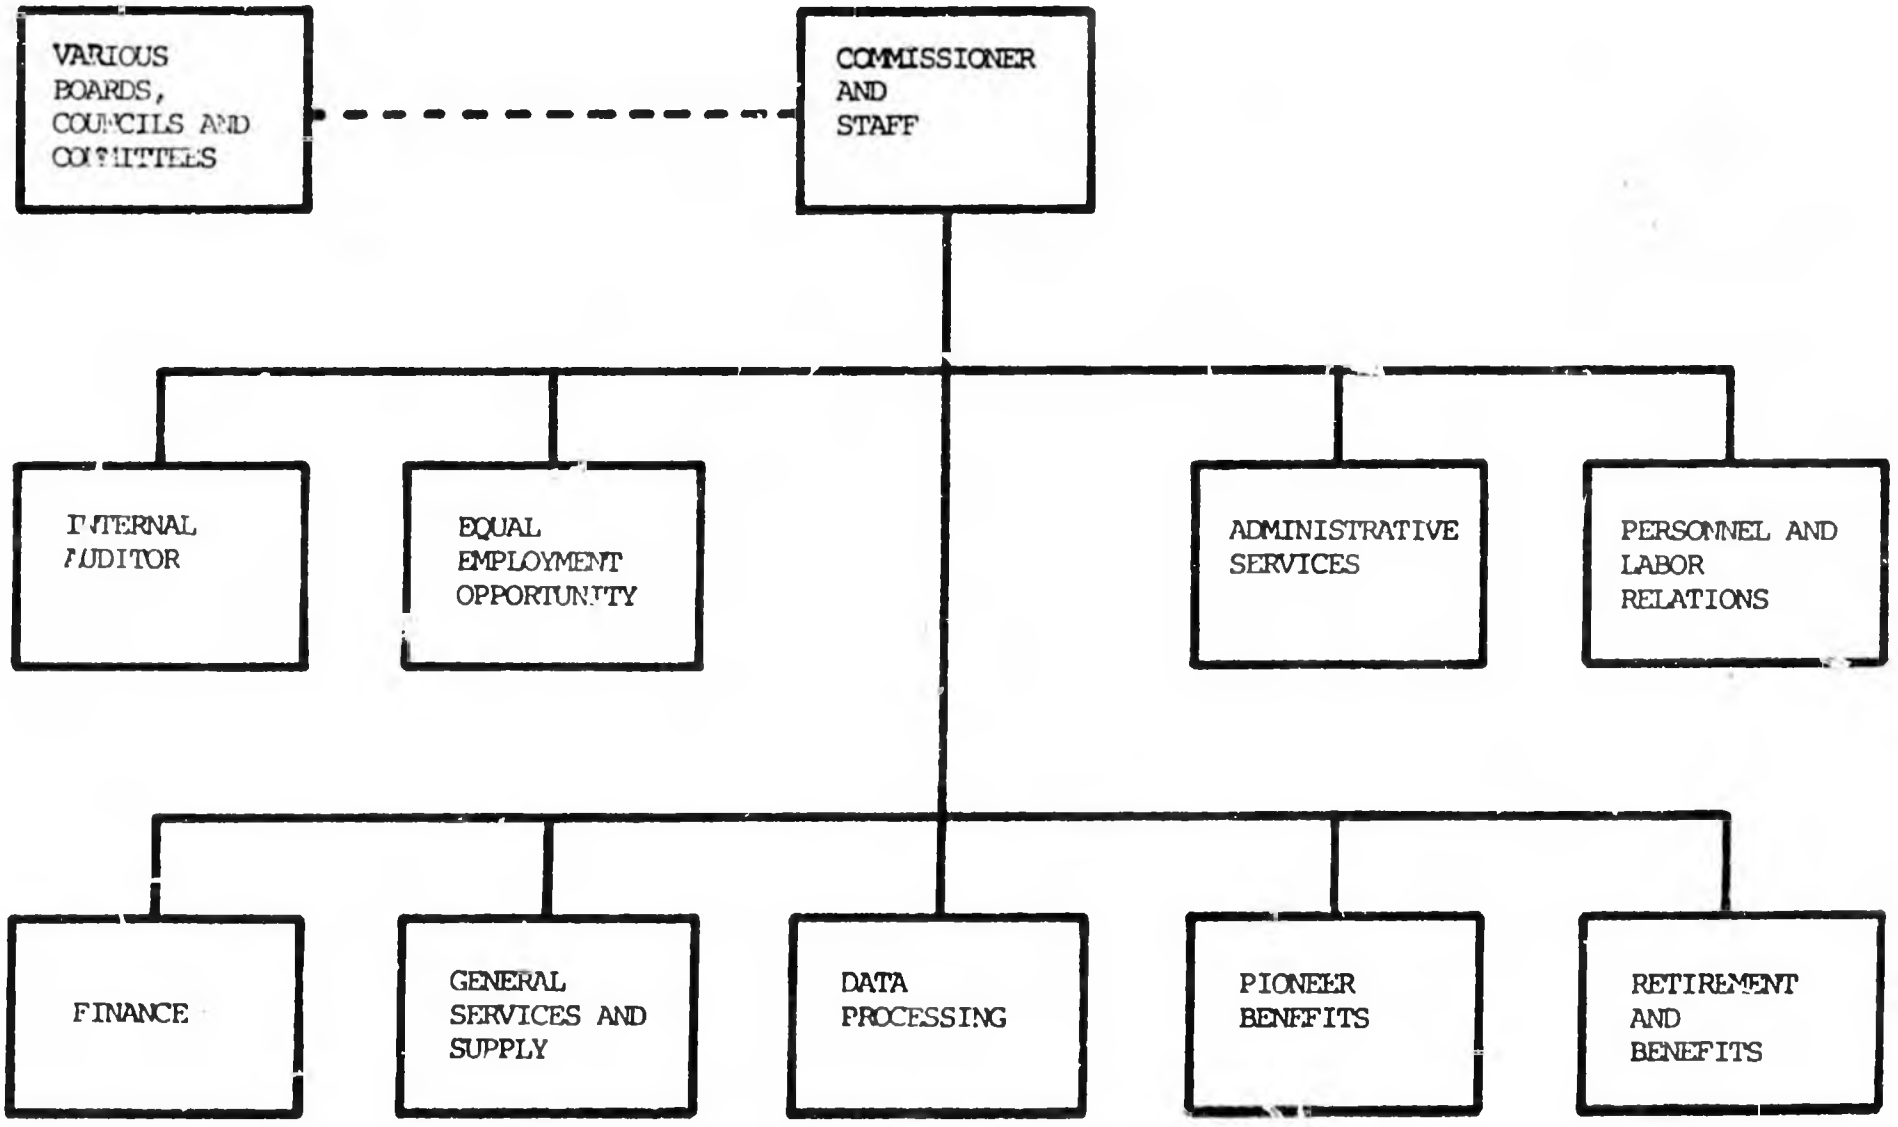
DEPARTMENT OF LABOR



DEPARTMENT OF LAW



DEPARTMENT OF ADMINISTRATION



OTHER SIGNIFICANT QUASI-STATE STRUCTURES

Two other organizations with significant rural organizations and/or impact which must be considered are:

--THE RURAL EDUCATION ATTENDANCE AREAS (REAAs)

--THE UNIVERSITY OF ALASKA (and Cooperative Extension Service)

The REAAs are significant in that they provide a framework of universal local government in rural Alaska where there previously was no such framework. The function of the REAA is education, but regardless, it represents a source of input, decision making, and even possible administration from "duly elected" representatives of the public.

This paper does not suggest requiring REAAs to necessarily function beyond the educational function. However, in the past leadership and input in rural Alaska often came from non-elected leaders since there were no comprehen other governments. The REAA structure now DOES PROVIDE for a source of input from "elected leaders."

Additionally, on a voluntary basis the REAAs could function as an administrative organization carrying out an assigned function, contract, or providing the framework for administration of some function on to a smaller and less able rural community. In any event, the REAAs provide a basis for rural regionalization, and a basis for a possible relationship to a rural economic initiative.

The University of Alaska has also grown into a statewide institution stretching from Ketchikan to Kotzebue, and functioning in rural areas through the Cooperative Extension Service attached to the university structure. The university in Alaska is also charged with post-secondary education delivery far beyond the "classic university." The university structure could prove valuable in training, management assistance, in technical assistance to communities, and in many other respects.

THE PRIMARY RURAL "FIELD AND POLICY" DEPARTMENTS

This review of state function and organization reflects certain key agencies which have useful rural field organizations. Those agencies therefore "stand-out" for selection in the sense the state's rural service organizations must be coordinated in relation to a rural economic initiative.

Agencies with primary field organizations are:

1) DEPARTMENT OF COMMUNITY AND REGIONAL AFFAIRS

2) DEPARTMENT OF TRANSPORTATION AND PUBLIC FACILITIES

3) DEPARTMENT OF HEALTH AND SOCIAL SERVICES

Agencies with primary policy impact:

4) DIVISION OF POLICY AND PLANNING (Office Governor)

PRIMARY RURAL AND FIELD POLICY DEPARTMENTS (Continued)

Agencies with secondary policy impact:

5) DEPARTMENT OF NATURAL RESOURCES

6) DEPARTMENT ENVIRONMENTAL CONSERVATION

Agencies with special rural relationship:

7) UNIVERSITY EXTENSION SERVICE

8) RURAL EDUCATION ATTENDANCE AREAS (REAAs)

STATE ADMINISTRATION TASK FORCE

The primary state agencies listed above are essentially a "de facto" rural problem task force and rural projects coordinating group (minus University Extension Service and REAAs)

Their role is a "de facto" one that exists whether formalized or not. The inherent responsibilities of the departments mean they can either function on a less formal basis, even to the extent of coordination via destructive "turf battles," or their existance and functional relationship can be recognized in any degree from simple "mutual recognition" and agreement to appointment to some highly institutionalized structure. It is likely in most instances that policy issues or projects will affect only a limited number of the above agencies.

THE ROLE OF STATE "RURAL DEPARTMENTS"

The previously discribed "rural" oriented departments can be marshalled to provide efficient new state service programs in rural Alaska. The structure of state government is simple enough in Alaska, and the structure of the departments in question is simple enough, to achieve coordination and cooperation. However, what is meant here is relatively "established" concepts of state services.

Next, as local government is created in rural Alaska, these respective departments likely can achieve a relative successful measure or cooperation in aiding that government, and in providing a measure of "substitution" where the local government framework is inadequate. It should be remembered that the difficult natural basis for local government in rural Alaska, may make the latter (substitution) the probable route for some years to come.

Last, we should recognize that the departments are primarily "service" departments with a broad range of responsibilities. Hence, their role as a rural advocate, or moreso, as a rural development advocate, may pose many conflicts. It is therefore likely that a structure designed for economic advocacy in rural Alaska must exist outside the departmental structure. Some seperate structure must be present to act as a rural advocate, leaving the departments free to cooperate and at times to oppose projects and proposals. However, the advocate must be present to push concepts into the policy forum.

Additionally, rural problems exist because their are a special set of problems, hence a special advocate. Hence, a rural structure is needed to isolate attention to those rural problems, but by nature that institution should be temporary and likely close to the seat of political policy.

Lastly, a rural advocate charged with the problems of developing a "private" rural economy, faces a sphere outside the usual provinces of government. Crossing into that opposite sphere is difficult, is likely beyond the capacity of routine departments with a myriad of other problems and demands, and will require a continued support and awareness of the makers of political policy.

Hence, a structure charged with rural economic advocacy will have to function seperate from the service departments, will likely have to remain free of "service" attachments of its own, will have to stand "between" govenment and the private sector, and will have to draw on a sustained executive/legislative political support (rather than a bureaucratic support).

The advocacy of rural development on occassion will be able to deal in "marco-size development," in attempts to tailor large projects to support rural needs. But by-and-large the structure will have to face the task of "micro" development, of thinking small for small communities, in terms of a half dozen jobs instead of a thousand jobs.

A STATE "ADVOCACY STRUCTURE:"

Kinda of Issues and Problems 28

This report suggests several alternative policy structures for guiding a special process of encouraging private economic development in rural Alaska, and for giving that process a "sustainable" emphasis over an extended period of time.

The suggested structures ARE NOT solutions in themselves, but merely represent functional vehicles that can help develop and sustain effort to create a private economic base in rural Alaska.

The proposals inherent in this report are based on the serious conditions of the economy of much of rural Alaska. Additionally, they make a case as to why the "present" might provide special conditions, resources, and a timeliness in attacking such difficult conditions.

PURPOSE IN THE BROADEST SENSE

In the broadest sense, the purpose of a special structure is ma shall, coordinate, and sustain existing and potential federa and private resources capable of contributing to growth of a omic base for the rural communities and regions of the sta

Further, the structure should provide a single focal point for involving rural Alaska people in the process. Such a structure would be a first attempt at building a state-relationship with Alaska rural development's mosy unique partner --the native land claims corporations.

The private land, capital, and social base of the rural village corporation represents a grassroots structural resource in itself. The availability of such a field level structure in a depressed region is a most favorable circumstance of infrastructure in such general conditions of third-world economic void. However, the state has essentially ignored the existance of the corporations and any inherent state interest in their success or failure.

Any structure must also address "community development" issues basic to a private economic base. However, care must be taken that community development does not dominate the structure, or tend to divert energy from more difficult to resolve economic tasks.

The most important purpose of a special structure must be a strong "missionery dedication" to creation of private economy in rural regions.

THE SPECIAL "PRIVATE" CHARACTER

Two basic features of the mission of rural development in Alaska appear to justify a special structure og government, whether that structure is temporary or permanent.

First, the charge to generate a "private economic base" is not a familiar role of government. Second, responsibilities of such a policy effort tend to overlap the established categories of government programs.

THE NEED FOR SPECIAL EMPHASIS

Special emphasis to a problem outside the bounds of traditional government services is difficult to achieve for line-agencies. A mission may be so critical, and so varied, that indeed it MUST OPERATE BEYOND THE BOUNDARIES OF TRADITIONAL SERVICE AGENCIES. But architects of such things "beyond" the bounds of those service agencies, often fashioned as so-called "coordinators," must concede that more often than not, such creations become quickly isolated and powerless to carry out their tasks within government.

A purported "special structure" cannot hope to invade the "turf" of entrenched agencies, unless first the legislature is thoroughly convinced of the depth of the target problem, and secondly unless the state executive is equally convinced.

In order to avoid the inevitable muted-isolation of such a special structure, the construction of the unit must build-in strong political backing and involvement. Such backing is essential precisely because such a structure is being asked to INTERFERE WITH THE ESTABLISHED ROUTINES OF OLD LINE AGENCIES, or is being asked to "reach" where they cannot reach.

Confronted by an "outside structure" charged with coordination, or the like, an established line-agency will generally take the easiest path. Generally that easiest path is to resist outside interference. Only if there is a very strong commitment in high level policy ranks, or after an agency gets its fingers slapped, will traditional agencies opt to "cooperate," since that then becomes their "easiest path." In other words, in constructing a special structure policymakers must analyze how to give a separate structure special "clout."

A special structure, in commission or agency form, and whether permanent or temporary, cannot be justified unless lawmakers are convinced of the following:

(1) . . . that the economic problem in rural Alaska is catastrophic in scope, or lacking that extreme;

(2) . . . that the mission does not fit traditional program agencies, or spreads beyond the bounds of a number of agencies;

(3) . . . that the problems require a special emphasis, or perhaps are problems easy to slide off for "future action," therefore tending to submerge the mission under the day-to-day crisis of a department.

(4) . . . that the problems are so serious and complex that a line agency lacks the "clout" to deal with the issue, or to initiate action and propose solution without special political backing.

(5) . . . that the mission is genuinely not to "run program," but rather to coordinate and provide muscle for other existing state programs and resources, and to provide the same between government and other institutions (federal, state, local government, non-profit, private).

Additionally, inherent in many of the foregoing criteria is that a special rural development structure should be cast in the role of "advocate." The role of advocate could pose inherent conflicts within some departments, and in the case of a planning agency may compromise that agency by presupposing the outcome of careful planning work. The role of the planning agency may require a very close partnership with the advocate agency, but the planning agency may be something of an alter-ego partner, being required to occassionaly criticize and oppose the more active advocacy of its alter-ego partner.

THE MEASURE OF THE ALASKA "RURAL ISSUE"

The measure of the problem of "rural economy" in Alaska measures very high against most of the previous criteria. Individuals may differ in assessment of degree of the problem, or in the nature of solution, but few are likely to disagree that the condition of the state's rural community economy is indeed catastrophic and has been for more than three decades.

From another view, economic events of the past several decades in Alaska have wrought tremendous growth and changes in urban Alaska. But the economic gap, as well as the sense of alienation between urban and rural Alaska, has widened. This division also tends to follow unfortunate racial lines among Alaskans.

The economic contrasts of rural and urban Alaska presents a picture of prosperous urban islands floating in a sea of rural economic depression.

Whatever the cause or whomever, if anyone, is to blame, the economic condition of much of rural Alaska is undisputably a human tragedy and an embarassment to our democratic economic systems.

SPECIAL OPPORTUNITIES OF THE PRESENT

It is difficult for our system of government to reach into the private economic sector and participate in constructing economic equity. The independence and separate dynamics of our government systems and our private economic systems do not always relate to each other. However, in critical times our systems, while perhaps slow to respond, have generally proven able to rectify glaring inequities.

Looking for the means to build a public/private relationship, a case can be made that unused federal resources are available. Additionally, it appears that federal economic policy is shifting to emphasize priority policy: . . . that only "private jobs" can resolve severe economic problems in the long run.

Present federal policy is shifting resources to rural and development initiatives that stress private development and private employment. These so-called "White House Initiatives" hold out great opportunity to those who are ready for them, for those who can put them together with other available resources, and for those like Alaska, that have a genuine underdeveloped rural base that is starved for "risk capital."

CURRENT ACTION

Recognizing the federal opportunity, the Alaska Legislative Budget and Audit Committee, together with the State Administration, has been working to put together a series of federal/state agreements designed to coordinate federal economic resources through a single federal lead agency, and to put that agency together with a state working counterpart.

The effort would be to coordinate federal resources of value in a rural economic initiative, to maximize those resources, and to clear federal/state barriers to development (regulatory, etc.) on a timely basis.

The state working counterpart would be WHATEVER SPECIAL STRUCTURE THE LEGISLATURE AND EXECUTIVE chooses to approve (which is the primary subject of this report).

PRIVATE RESOURCES

A case can be made also that private resources are now available for rural development that were not present in the past.

The native corporate structure has matured and gained experience in the last eight years. The capital assets of the native corporations, and especially the village corporations represent a "resource" that should be assisted by state and federal development policy.

However, the capital of native corporations in many respects is no different than any other capital. Despite the fact such capital has a social base in the form of resident community stockholders, such capital must still find and/or develop viable projects which offer both reasonable security of the investment and adequate return. It must be stressed that under the law, the native corporations ARE NOT social welfare organizations, but are established as profit making private corporations. They have the same problems in facing high risk frontier development as other corporations, except that their personal motivation to "do it" in the face of higher risk is likely stronger. However, it is possible that the proper use of state and federal resources, in conjunction with native corporate resources, might be able to reduce risk to native capital and encourage the flow of such assets into rural development.

The current proposal to pre-pay the remainder of the state's obligation under land claims settlement will also add significantly to the financial base of native corporation capital. Such an action may be the single largest, and the simplest action, the state can take in regard to rural development.

The private land and resource base that is a part of the land claims structure is also a significant factor in rural development. The goal of a state structure should be to help assist and direct capital to grassroots rural development, regardless of whether that capital is private, state, federal, or native, and to encourage the use of state, federal, and native land and resources in a coordinated fashion in behalf of encouraging a rural private economic base.

Additionally, Alaska financial institutions are now considerably stronger and more varied than a decade ago. They have stronger ties to outside institutions, and due to such world scale developments as Prudhoe Bay, new significance of fisheries resources, a capital and resource base from land claims, Alaska commands a respect far beyond the measure of its present economic production.

STATE RESOURCES

The chief asset of the state is its "position" to act as a focal point in bringing together available existing resources, and to apply to an effort to construct a viable rural private economy.

The state must be, and is the natural initiator of a search for, and a marshalling of, economic resources. Obviously, federal agencies do not come seeking difficult and often risky development efforts.

The state also has basic resources of its own to offer that it did not have a decade ago. The state has the ability to act as initiator of community services related to private development, such as utilities, transportation facilities, and technical assistance. The state has the ability to participate in capital, or to attack basic private financing issues such as fire insurance in rural areas. The state has a "field network" available through program agencies, which with proper coordination, could assist in both local community development and private projects.

The state also offers a superior basic structure with which to coordinate with federal institutional participants. The Alaska structure has a strong central line of authority leading from the governor, and is vastly different than the fractured multi-elective structure that exists in many other states.

THE ALASKA DIFFERENCE: LENGTH AND DEPTH OF COMMITMENT

Alaska requires a long-term commitment to rural economic problems. The state's rural problems are not a result of recent economic recession, or existing sick industries, the problems are a result of more than a quarter century of economic collapse and difficult cultural adjustments. The Alaska effort may require the better part of a decade..

It is here --in length and depth of commitment-- where Alaska differs markedly from the manner in which other state's will approach the development of SPECIAL FEDERAL AGREEMENTS to enhance private economic development. A review of the few existing agreements, and potential agreements, indicates that the agreements appear geared towards one or two "priorities-of-the-day." They seem to carry a hidden presumption of temporariness about them, and lack a strong tie to "joint" executive/legislative commitment and development of intrastate mechanism to focus on more than the "issues-of-the-day." In this respect it is likely the initial motivation of Alaska is different from other states.

In reviewing the federal opportunity for both the state to command and coordinate federal resources, there appears to be a significant opportunity for Alaska to be the only, or at minimum one of the few, states to approach the agreements with a much longer range view in mind.

Alaska has the opportunity to get the federal government committed to state rural development, committed to special treatment and coordination, and to keep that commitment going for a prolonged period. However, in order to command the long-term commitment of the federal government the state must first itself be committed.

As previously stated, economic initiatives under our separate public and private policy systems require a deep commitment to bridge the gap. In Alaska this means a commitment of the executive and the legislature, and further a broadbased commitment within the legislative body. Oddly, the effort must command the commitment of the urban legislator and the perception that the effort is also vital to the urban economies of the state.

Commitment of rural policymakers to such an effort is something to be taken for granted, with some exceptions. However, rural backing and rural development as a "rural issue, can isolate the effort as a regional issue, and one therefore elgible to be pushed, shoved, cut, threatened, bargained, and generally politically played-out in the precarious wars of short-term legislative policy. Unfortunately, long term issues requiring a breadth and depth of commitment, issues needing an expectation of sustainability over time, do not always fare well in the battles of more immediate political pie-cutting.

However, the commitment of urban legislators could provide the commitment to rural development the sustainability it needs. Urban lawmakers have an interest of their own in an expanding and healthy rural economy.

Previously Alaska was described as a series of urban economic islands floating in a sea of economic depression. Whether that picture is overstated can be argued, but the lesson of the protrayal cuts both ways. The picture not only reflects a non-existant rural economy, and all which that infers, but equally a precariously isolated urban economic structure.

The picture is one of precariously narrow urban economies based primarily on government spending, cycles of construction and singular resource development booms, and one of urban communities failing to develop themselves as broad commercial centers serving a growing economy far beyond their own borders.

In other words, for the state's narrow based and isolated urban economies, rural development is "urban development." It is not only urban development, but offers a strongly stabilizing ingredient for the urban economic structure. It is almost impossible to undertake development in most rural areas of the state that does not benefit the urban commercial centers. However, the converse is not true, since urban development may hold no benefits for rural communities.

Urban policymakers may also consider the long-range ramifications of continued neglect of a rural economy:

(1) . . . that the urban/rural economic contrast is both a serious ethical and functional problem for Alaska.

(2) . . . that the end-results of continued rural economic poverty tend to become urban social and economic problems due to out-migration into urban areas.

(3) . . . that in future general economic constrictions, urban unemployed will tend to outmigrate from the state, but that the rural unemployed, represented mostly by native Alaskans, are unlikely to outmigrate except to urban areas due to deep cultutal ties.

(4) . . . that while Alaskan urban economies have grown dramatically over the past several decades, those economies remain narrow.

(5) . . . that in order to develop a stable commercial center, the center must have an economy to serve "elsewhere."

(6) . . . that rural development promotes both direct, and indirect economic activity for urban centers.

(7) . . . . that rural development expands opportunity for larger scale rural resource development, since expanding economic benefits will increase confidence of both urban and rural parties that that such "development" can be managed for mutual benefit.

There must also be an awareness that rural Alaska needs a scale of development we might term "micro development." However, urban inrerests tend to key on "marco-development" scale projects, projects on a scale where it is often simply asssumed that there is enough "economic fall-out" to benefit everyone. However, this is not necessarily true, and especially so for non-urban areas.

Carefully managed "marco-scale" development may be made to pay some dividends to rural Alaska. But what rural Alaska does need is micro-development, development that is small, not nearly so exciting and romatic to advocate for policymakers, but which fits the needs and the life-style of rural communities. In a sense, a structure charged with rural economic advocacy will need to learn to "think small," and it will take some adapting on the part of policymakers to think in terms of thousands of dollars, tens of jobs, and etc., instead of on sweeping scales of billions of dollars, world scale resources, and thousands of jobs.

THE POSSIBLE ALASKA STRUCTURES

The purpose of creating a structure is to provide a functional vehicle for policy focus, and to put the label "special" on the structure. Such labeling tends to put the structure, and the policy community, "on notice" that they intend to do something, and to invite scrutiny if they show a lack of performance. A special structure also tends to isolate itself sufficiently to invite participation of interested parties.

Three types of structures appear possible:

(1) A SPECIAL COMMISSION, responsible to the Governor, and working out of the Office of the Governor.

(2) AN OFFICE created within the Office of the Governor. A small agency essentially part of the executive staff.

(3) Assignment to an existing agency with related interests, either creating a new unit thereto, or reorganizing an existing unit.

The basic alternative "settings" for a structure will be discussed in terms of the least viable first.

Assignment to Existing Department

The assignment of the task of rural development advocacy and coordination to an existing department immediately relegates the issue to whatever is the status of that agency.

If the agency is a sub-unit of an existing division, of an existing department, then it is likely the federal government would view the state effort in much the same manner of other states --that the structure has one of two priorities and little other interest.

It is not the intent here to be critical of the ability of any one of several possible agency operators, but rather to suggest that it is asking alot of a sub-component agency to be able to become not only an interagency coordinator among state agencies, but also between state and federal governments and between government and the private sector.

As a sub-component within a line-department, a rural economic development initiative would first have to command its fair share of attention by department heads from among the "daily crisis" of regular operating programs.

Next, since such a rural effort would reach beyond departmental confines, not only would the rural effort have to battle for survival among competing demands within the department, but also it would have to survive among competing demands outside the department. Such a program would constantly require the department chief officer to run interference in coordinating problems with other departments, as well as with key players in the governor's office and with other institutions. The sub-departmental assignment can be made to look good on an organizational chart, but likely asks a line-agency chief, already besieged with enough operational problems, to unrealistically wear thin their welcome in "unhappy" interdepartmental "turf" battles, much less to provide the "extra-energy" to provide leadership to draw together federal, state, and private interests.

The fact remains, that programs are just that, they are designed to deliver an established service in a beneficial manner and with a mimimum of bureaucratic boat-rocking both "within and "without" the departmental organization. A department may well prove the exception, especially if it is new and must find its policy niche, when there is exceptional political backing, or when there is unusual leadership.

However, in viewing something as complex as a rural development effort involving multiple departments, governments, and other institutions, the process appears to supercede the primary "operations" role of a state line-department.

The structure must be capable of:

--FIRST, capable of refining its charge to projects which can be accomplished. The structure must participate in selecting rural priority efforts.

--SECOND, it must determine who, if anyone, is presently charged with a needed function, must encourage rural responsibilities be assigned departments, and give backing to departments in carrying out their rural functions.

--THIRD, the rural structure must be capable of some leeway in independent articulation. It cannot be just the state administration's spokesmen, since one of its purposes will be to inject "unfinished ideas" into the"

--executive policy forum
--legislative policy forum
--private policy forum
--and the public forum

--FOURTH, the rural structure must plow new ground in that it should not be a GOVERNMENT PROGRAM, but must be a facilitator of private effort. It must strike a respectful partnership with the "private policy" sector.

--FIFTH, the structure must be cast in a role of "advocate" for rural initiative --for rural action.

Last, there is always the very real problem of the tendencies in an operational department to convert potential of a popular effort into gain for its own agency budget needs.

If a departmental placement for structure is to be considered, there are a number of potential candidates with rural field organizations. Key among them would be the Department of Community and Regional Affairs, and the Department of Transportation and Public Facilities.

Additionally, the Division of Policy and Planning (DPDP) in the Office of the Governor, would serve as a home for such a structure, either as an intregal port on of the division, or as a more defined sub-component like the Office of Coastal Zone Management. However, there could also be conflicts of fundemental roles. The rural effort needs the partnership, the resources of DPDP, and DPDP should be encouraged to build a strong rural planning component. But DPDP also may need to be the alter-ego of the rural structure, as it functions as rural advocate. It would appear DPDP's planning role should be to put the product of advocacy into a larger scheme, and as alter-ego be the necessary critic of the much more activist rural advocacy agency.

A CABINET LEVEL AGENCY

The creation of a special agency in the Office of the Governor is perhaps the simplest creation. Such an office would be small and it is likely its ability to function, and command policy attention within that framework, would be largely dependent on the capability of the person heading such as office.

The office could serve well enough as the focal point for state interaction with the federal/state interagency agreements. And, in terms of carrying out the intrastate functions of the federal/state agreements, such an office would probably be able to carry out its task of state department coordination.

However, open to question is whether such an office could carry out the "expanded" mandate of a significant rural development initiative. Since rural Alaskans, and legislators, would not be on the inside of such a construction, it is likely the tendency would be for those interests to become critics of actions, lack of actions, or both.

It is also doubtful that such an office left simply in that form, could be the injector of unfinished ideas into various forums, or if so, that the injection would tend simply to be into the executive policy forum shielded from the dynamics of more public policy forums. Additionally, circumstances would tend to make the office "spokesmen" for the state administration on rural economic issues, limiting the dynamics of the structure.

If a simple agency structure is selected, then effort will be required to give the office high prestige, and to provide it with staff. The dimensions of the office might be expanded by merging the function with the Private Industries Councils created federal Title VII, thereby providing the agency with a rural private outreach and some dynamics of rural "input." However, at this point the Office begins to take on the posture of the commission/ agency form of structure.

Under conditions of other times a modified Office structure could suffice, but today the senior policy structure of the state is virtually besieged by "macro-issues," such as d-2, OCS, bottom fishery, gas pipeline, gas liquids development, excess revenue policy, Beaufort Sea development, and many others.

The heavy burdens of Alaska policy going into the 1980s would appear to suggest that a long-range rural policy structure most be given "something extra" to program it for survival.

STRUCTURAL SETTING

The structural setting of a cabinet level office would be much like the other "offices" of the governor, except that a portion of its responsibility would face "outward" from state government to interface with the federal interagency agreements and the federal/state joint function. In many respects the structural arrangement of the rural structure need not be much different if developed in a "commission" form.

The special office could be flanked on one side by the Private Industries Council (PIC), which could act as an advisory group, even to the extent of merging staff functions. The office should also be flanked by the Division of Policy and Planning (DPDP), which could beef up its own rural planning capability and establish direct liaison with the rural office.

It is preferrable under the Alaska strong executive concept that the office be clearly responsible to the governor, and that the governor in the final analysis be responsible for the rural office. The purpose of attaching other involvements is not to erode or substitute for executive responsibility, but to provide some of the special elements previous described. Such features could add political strength by tapping legislative input, involve input from rural advisory features, and achieve status by the involvement of a key political officer such as the Lt. Governor.

However, such features added to a cabinet level office transcends into the third alternative structure, esentially which seeks to construct involvement of other key interests without dilluting the final "executive" responsibility of the office

A RURAL COMMISSION/AGENCY STRUCTURE

The third alternative structure initially appears the most complex. However, the appearance of complexity is derived largely from trying to name the main compenents of the rural structure, and determine their basic purposes. In a sense naming such a structure merely formalizes what likely exists in a "de facto" sense anyway.

The concept of the commission structure would simply be to draw together in one place the "key parties" with rural roles, and then to balance out that more institutional group with a balance of rural field representatives. The structure should remain firmly within the executive framework. The policy group would bring together the following components.

--INSTITUTIONAL REPRESENTATIVES, not necessarily limited to state officials.

--LEGISLATIVE REPRESENTATION, providing a balance against administration.

--RURAL PUBLIC REPRESENTATION, providing for non-institutional balance from the rural field areas.

--PRIVATE SECTOR REPRESENTATION, providing representation from private business, possible finance.

The group would be a comission capable of acting as a "whole," but it would also be a commission capable of acting in the form of its natural "parts," the basic components of these subcommittees being drawn from the sectors they represent on the commission:

--DEPARTMENTAL COORDINATING SUBCOMMITTEE

--RURAL ADVISORY SUBCOMMITTEE

--PRIVATE SECTOR SUBCOMMITTEE

In order to allow the commission to function more efficiently it is suggested the governor name an executive committee of five:

--One agency representative
--One Legislative Representative
--Two rural representatives
--The chairman (of the commission)

The structure would be designed to allow, when appropriate, each subcomponent to operate on its own in special areas of concern and assignment. However, at the request of the subcommittees, or the direction of the chairman, the subcommittees would overlap depending on the problem being addressed. Additionally, legislators would be considered members of any of the subcommittees. The system would allow for each subcommittee to specialize in its natural area, with rural representatives minimizing rural outreach and input

The function of the executive committee would be to also operate as the key component in facing the federal government, and in efficiently dealing with the smaller issues of implementing the federal/state inter-agency agreements.

The executive committee would be the state salesperson in the federal market place, seeking to maximize federal resources.

An innovation in the executive committee structure might be to call the legislative representative the "Legislative Co-Chairman." The suggestion is that the legislative co-chairman would not have the same management perogratives of the chairman, but could be used to maximize the presence of the commission by carrying to the federal level the power of legislative position as well as being charged with rural leadership as (Legislative) Co-Chairman. In considering the latter suggestion, it should be remembered that there is a difference between the "elected" leaders and the agency presentatives reception in Washington offices. The elected representatives has no constraints in skipping middle-management, or in the unquestioned right of calling on Washington level political support and in involving them in deliberations. The posturing of the legislative co-chairmanship would solely to an attempt to sustain the rural effort by tapping political power and political presense as the state structure faces Washington D.C. Equally, the Lt. Governor might be used to be the Chairman of the state structure, thus again tapping the political strength and presense of the elective leaders.

The goal of tapping the state's political power structure is to provide a strong and unified executive/legislative policy face towards Washington D.C. (such policy links also facilitate federal links to the state).

In terms of excecutive functions on the internal Alaska level the legislative possition should not violate the integrity of the traditional Alaska executive system. In this area the position of legislators would be that of members.

In terms of the policy structure reaching out for input into rural Alaska, here the legislators could again play a stronger role, perhaps even facilitating common outreach efforts between legislative committees and the commission effort.

MEMBERSHIP

The Commission shall be composed of not more than 14-members, with four being institutional members, two being legislators, two being members of the private economic community, and six being members from rural areas.

Legislators could be appointed by the governor, or by the presiding officers of each chamber.

Legislation should provide for the membership of the director of the University Cooperative Extension Service on the commission as one of the four instititional members.

The legislation should name state departments with key rural field and/or planning responsibility, requiring the Governor to name two as institutional members. The legislation should state that other chief administrators shall serve ex-officio at the request of the Governor or Lt. Governor.

The legislation should name the Lt. Governor as an institutional member and name the Lt. Governor as Chairman of the Commission unless he chooses not to serve on the commission. In such event the Governor shall name another Chairman from any of the membership.

Two private economic community members should be appointed by the governor, representing private business and/or financial expertise.

Six members should be appointed who live in rural areas. It is suggested that these members be drawn from a list of nominations from the boards of the Rural Education Attendance Areas (REAAs). Requested should be first nomination of REAA board members willing to serve, and preferrably with private business experience in rural areas, and second for nominations other than board members. The intent is to move towards using the state's only region-wide elective rural officers for public input in state policymaking affecting their communities. The legislation should ask that the governor's appointment from those nominations recognize the various rural regions of the state as much as is possible comensurate with a small number of members to be appointed.

AGENCY DIRECTOR AND STAFF

The Legislation should provide for the appointment of the Director of the rural structure by the governor.

The gubenatorial appointment makes clear the primary executive loyalty and nature of the structure. Additionally, the act of inviting legislators into a titular role of an executive commission denotes a certain amount of trust between the two branches of government on rural advocacy. As a practical matter, the governor may be well advised to consult with the commission in selecting a director, while making it very clear that the director has the support and confidence of the governor. In this regard, it should be considered that the director will have to function among other department heads in coordinating rural functions. If it is not clear that the director is the "governor's person," then the functionality or the ability to coordinate and cooperate with other agencies is open to question. Without executive recognition, the director is likely to quickly become the underling of whatever key administration official on the commission DOES HAVE THE GOVERNOR'S CONFIDENCE.

The legislation should also provide for commission staff within the provisions of legislative budgeting. The nature of the commission may also mean that some staff can be provided by federal grants. In staffing expertise should be split between employees with practical rural awareness and staff that has expertise in working within government and private agency structures.

AGENCY/COMMISSION DESIGN

The design of the commission appears complex. It is in reality quite simple. The appearance of complexity comes from trying to arrive at a design of any unit whereby the pieces of the unit can remain separate when necessary (or when working on issues and problens which need not involve the other components of the commission)

--The design allows for the federal government to design whatever cooperating unit it desires and attach it to the state creation.

--Whatever federal working unit could 1) function seperately, and 2) be part of a unified state/federal working council, depending on working goals and conflicts. And, 3) a federal designee (likely of the federal designated lead agency under interagency agreements), could be a federal vice-chairman of any combined unit.

--The state executive committee could function as a separate state unit in direct Washington lobby efforts.

--The state executive committee is designed to simplify the federal interface and internal state interagency coordination.

--The full state Rural Development Commission is designed to function as a whole in dealing with problems, policy, and projects.

--The State Rural Development Commission is designed to function in its natural "parts" in 1) attacking problems unique to those parts, and 2) in trying to fullfill obligations to have an "outreach and input" to and rural rural areas of the state.

--The State Rural Development Commission in its "parts" will also be able to accomodate overlapping between those parts based on the "overlap" of problems and the "overlap" of the individual "interest" of members.

--The state/federal structure at the top will be able to direct the function of state/federal subunits who actually exist in, and have practical field knowledge of, rural Alaska regions.

--In keeping with establishing a line of authority, the State Rural Development Agency would work under the "direction" of the Governor through the offices of the Lt. Governor acting as Chairman. The commission would provide the carry-through on rural issues.

THE KINDS OF ISSUES AND PROBLEMS

The kinds of issues and problems the rural structure will handle will be varied. The central theme of the commission at any period in "time" will depend on what is possible within the historical circumstances of that time period.

--The development of a private economic base in terms of "specifics" will in part depend on practical economics --practical potentials of "what's" possible "where," and "when."

--The structure may address the issue of "what the state should do" in helping prevent failure and default of smaller native/private corporations actually located in rural areas.

    --possible maintenance of a village management assistance effort like attempted by Alaska Native Foundation (through CRA, or by contract).

--State potential in encouraging native capital investment in rural areas, and in participating in the "security" of front-line rural investments.

--The development of state loan instrumentalities, and state bonding authorities, in such a manner as to be practically useful for potential rural investors.

--Identification and resolution of other rural "blockages" to private investment.

    --fire insurance.
    --bonding availability.
    --utility infrastructure.
    --transportation
    --training Assistance

--An advocate to "tailor" large "macro" economic projects, whether a major petroleum project, or an applicant for state industrial bonds, to respond not just to such things as generalized affirmative action, but more specifically to the "micro-economic" needs of more remote rural communities (if an employer can rotate an employee from Anchorage or Texas, it is possible to rotate an employee from a rural village.

MEMORANDUM FOR FEDERAL REGIONAL COUNCIL CHAIRPERSONS

FROM: JACK WATSON

SUBJECT: Implementation of the President's Small Community and Rural Development Policy

As you know, the President announced his Small Community and Rural Development Policy on December 20, 1979. The Federal Regional Councils are being called upon to play an important role in its implementation.

Several copies of the President's policy statement are enclosed (additional copies are available on request). As you will note, the policy articulates a set of general goals and policy principles, identifies over 100 specific action steps to be taken during the year to address pressing rural needs, and provides the institutional capacity needed to enable us to develop programs, solve problems, and translate a continually evolving "action agenda" into concrete results. Elements of this implementation strategy include:

- Creation of the position of Undersecretary of Small Community and Rural Development at USDA. The Undersecretary will assist the Secretary of Agriculture in carrying out his mandate, under the Rural Development Act of 1972, to coordinate rural development activities throughout the Administration.

- Formation of a Working Group on Small Community and Rural Development to provide a continuing assessment of priority rural needs and to design, coordinate, and implement responsive policies and programs. This Working Group will be made up of high-level federal program managers and will be co-chaired by the new Undersecretary and me.

- Establishment by the Secretary of Agriculture of an Advisory Council to monitor implementation results and advise him and the Working Group on needed federal actions. The Council will be composed of elected officials from the major public interest groups, representatives of community-based organizations and private interest groups, representatives of the financial community and others.

- An invitation to the nation's Governors to establish State Rural Development Councils as a mechanism for ensuring effective coordination in joint federal-state rural development efforts

- A Presidential directive to the Secretaries and Heads of Agencies to review relevant agency policies and programs in terms of their adequacy in embodying the policy principles and to designate a senior official to be responsible for monitoring implementation of this policy within the agency, serving as a rural advocate, and acting as a point of contact for small community and rural leaders seeking information and assistance.

Building on steps that some of you have already taken, the implementation strategy also calls for creation of rural development task forces by the FRCs to assist the State Rural Development Councils in implementing joint federal-state rural development plans.

Since USDA and particularly FmHA will play a key role government-wide in implementing the President's policy, I request that you designate the appropriate FmHA Area Coordinator in your region as Chairman of the FRC Rural Development Task Force. Each should be backed up by a State FmHA Director. I am instructing Gordon Cavanaugh, FmHA Administrator, to have his Area Coordinators contact you in this regard.

Please feel free to call on Berry or me to answer any questions you may have as you move ahead with your plans to help implement the President's policy.

Warm regards and best wishes for the new year.

THE WHITE HOUSE

WASHINGTON

December 26, 1979

Dear Ed:

On December 20, 1979, President Carter announced the Administration's Small Community and Rural Development Policy. In recognition of the essential role played by the states within our federal system, the President has, as part of his policy, invited the nation's Governors to establish State Rural Development Councils as a mechanism for ensuring effective coordination in joint federal-state efforts to implement state and local rural development priorities. Furthermore, he is directing the Federal Regional Councils to establish rural development task forces to assist state efforts, and is instructing federal field personnel within the states to participate directly on the State Rural Development Councils when invited to do so by the Governors.

I want to add my voice to this invitation and assure you that I will work closely with you to help implement those programs and projects which are given high priority within your state.

Several copies of the President's policy statement are enclosed. As you will see, it articulates a set of general goals and policy principles, identifies over 100 specific action steps to be taken during the year to address pressing rural needs, and provides the institutional capacity to enable us, in a partnership effort, to develop programs, solve problems, and translate a continually evolving "action agenda" into concrete results. Besides inviting the Governors to establish State Rural Development Councils, a key feature of the policy involves the creation of an Under Secretary for Small Community and Rural Development within the Department of Agriculture. The new Under Secretary and I will co-chair a Working Group on Small Community and Rural Development, a group made up of principal federal program managers here in Washington.

Please feel free to call on me or Berry Crawford of my staff to answer any questions you may have as you move ahead with your state's rural development plans.

Warm regards and best wishes for the new year.

Sincerely,

Jack

Jack H. Watson, Jr.
Assistant to the President
for Intergovernmental Affairs

The Honorable Ed Herschler
Governor of Wyoming
Cheyenne, Wyoming 82002

Enclosures

THE WHITE HOUSE

WASHINGTON

January 29, 1980

Dear Fob:

Several weeks ago I sent you copies of the Administration's Small Community and Rural Development Policy and joined the President in inviting you to establish a State Rural Development Council.

The State Rural Development Councils will play a key role in a Federal-state-local partnership to expand opportunities for rural and small town development. To provide ideas on how you might organize and operate your council, I am enclosing a copy of a working paper jointly prepared by the National Governors' Association and U.S. Department of Agriculture staff. You may have suggestions beyond the contents of this paper which we would be happy to discuss with you. We simply want to build on any successful organizational efforts you may have under way.

It would be helpful if you would designate a member of your staff, or an agency head, with whom we can follow up to tailor a Federal response which will best meet the needs of Alabama. Your designee will be contacted by the Chairperson of the Federal Regional Council serving your state to begin implementing the partnership effort contemplated in the President's policy.

As always, please feel free to call on me or Berry Crawford of my staff to answer any questions you may have. In addition, your staff may wish to contact Bill Bivens, NGA's Senior Policy Fellow for Rural Affairs and a principal staff liaison with my office. His number is (202) 624-7734.

I look forward to working with you as implementation of the Small Community and Rural Development Policy proceeds.

Sincerely,

Jack

Jack H. Watson, Jr.

The Honorable Forrest H. James, Jr.
Governor of Alabama
Montgomery, Alabama 36104

NGA-USDA Staff Working Paper

STATE RURAL DEVELOPMENT COUNCILS: FOCUS FOR THE SMALL COMMUNITY AND RURAL DEVELOPMENT POLICY

On December 20, 1979, President Carter formally announced his Administration's Small Community and Rural Development Policy. In outlining his strategy to develop the institutional capacity needed to solve problems on an ongoing basis and assure the effective implementation of the policy principles, the President announced that he is:

> Inviting the nation's Governors to establish State Rural Development Councils as a mechanism for ensuring effective coordination in joint federal-state efforts to implement State and local rural development priorities.

The President further stated that:

> The Federal Regional Councils will be directed to establish a rural development task force to assist state implementation efforts, and the Secretaries and Heads of Agencies will direct federal field personnel to participate on the State Rural Development Councils if a governor so desires.

Both of these steps are particularly relevant to the President's direction to the Secretaries and Heads of Departments and Agencies that, "to the maximum feasible extent," they administer their programs to "make federal investments in ways that complement state-local development plans and priorities."

Responsiveness to Governors

Clearly, the President's Small Community and Rural Development Policy is in significant measure a response to the Governors' call for a state-federal partnership in community and economic development.

Late in 1977, the National Governors' Association Task Force on Urban Policy proposed that a national urban policy be derived from state comprehensive growth strategies. In mid-1979, the NGA articulated its latest "Comments on the Development of a National Rural Policy," which stated in part that "a state development strategy for rural areas ought to be used as the primary guide for the funding decisions of EDA, EPA, FmHA, and HUD in most small cities and rural areas." The Presidential response has been positive.

Framework for Partnership

In presenting a set of principles to guide federal program administration, the President's rural policy recognizes the need for a strong partnership among all levels of government and between the public and private sectors. Each of the more than 100 specific actions to be taken requires some level of intergovernmental and interagency cooperation in planning and implementation.

The policy provides for an improved federal institutional structure and capacity to help realize the state-federal partnership. An interdepartmental Working Group for Small Community and Rural Development, co-chaired by the President's Secretary to the Cabinet and the soon-to-be-created Under Secretary

for Rural Development at USDA, will be responsible for ensuring that the President's policy is fully and actively supported by all relevant federal agencies. The direct involvement of the President's Assistant for Intergovernmental Affairs and Secretary to the Cabinet makes clear the Administration's commitment to making this arrangement work effectively.

In the field, the federal institutional focus for the policy will be centered in a Rural Development Task Force established under each of the ten Federal Regional Councils (FRCs), which have been reinvigorated by the Administration. These task forces will serve as communications conduits between the national-level Working Group and federal field officials. They will coordinate federal responses to rural development needs and priorites and will serve as sources of information and assistance to State Rural Development Councils. An important function will be to help promote and maintain federal sensitivity to rural needs and circumstances and state and local rural development priorities.

Governors' Rural Development Councils

To foster the state-federal partnership at the State level, the President's policy recognizes and underscores the vital role of the Governor as the master link in the intergovernmental chain. The President's invitation to Governors to create State Rural Development Councils reflects a deep understanding of the central role of Governors in coordination of federal as well as state programs. It recognizes that only Governors have the authority and capacity to organize effective coordination efforts, with the necessary political and bureaucratic balance to allow all

parties to reach agreement on mutually supportive development strategies and implementation procedures. It emphasizes that program implementation takes place at other than the national level by directing attention to state-local plans and priorities as well as local priorities and decision-making.

Thus, the President's policy reflects a federal desire to be a more willing and effective partner in state and local development efforts. To pursue this objective, the President is directing federal agencies to increase the effectiveness of their programs by working closely with state and local governments, as well as with each other.

Given a policy that federal investment decisions should consider and support state and local development priorities and efforts to the maximum extent possible, the State Rural Development Councils can:

- provide the Governor a forum for identifying opportunities for joint investments targeted to shared rural development concerns and priorities;
- provide the Governor an institutional vehicle for conducting broad-based assessments of rural conditions and progress toward accomplishment of rural development goals;
- provide the Governor an organizational base for identifying and addressing interagency and intergovernmental procedural obstacles to timely implementation of mutually desirable resource allocations;
- facilitate coordinated leadership of rural development efforts and agreement on complementary roles and relationships among state and federal agencies and other participants;
- stimulate and facilitate the formulation of joint investment strategies which go beyond a project-by-project approach and support their implementation.

Policy Implementation Linkages

The purpose of the President's invitation to the Governors is not simply to erect new institutional structures, but to suggest a workable mechanism for pursuing joint goals. The invitation offers an opportunity to help change federal agency perspectives and practices in line with the principles that the President articulated:

- o recognition of local priorities and facilitation of local decision-making by federal program managers;
- o investment of federal resources in ways that complement state-local development plans and priorities;
- o use of federal assistance to help leverage private sector investments in rural development;
- o accordance of high priority to the targeting of federal assistance to disadvantaged persons and distressed communities;
- o reform of federal programs to make them more accessible, better suited to rural circumstances, more streamlined administratively, and better coordinated; and
- o provision of assistance to rural citizens and leaders, to promote effective community decision making and development efforts.

It is expected that Governors will find it useful to include key state legislators from rural districts, representatives of rural local governments, rural private sector leaders, and rural citizen group representatives on their State Rural Development Councils, to assist the federal and state agency representatives in identifying priorities for joint attention. Inclusion of such grass-roots representation may be particularly valuable in helping to sensitize federal officials to rural circumstances and needs in the state.

Experience in the few states where Governors have established

development councils indicates above all the need for flexibility. States differ significantly in the number of federal agencies represented in each, the level of authority of on-site federal field office heads, the way state government is organized and how it relates to local governments, economic and demographic patterns, and type and severity of development needs.

In the more effective existing councils, representation includes virtually all state agencies active in rural and small community development, all development-oriented federal departments with offices in the state, and state associations of local governments and/or their inter-local planning and development district agencies. State legislative membership varies, as does representation of the state land-grant university systems. Experience has also shown the importance of having a full-time staff support group for the councils. In view of this, the federal Working Group will pursue the possibility of federal financial support for a staff component to State Rural Development Councils.

possible sources:
- Sec. 111 (USDA)
- Sec. 302 (HUD)
- Sec. 701 (EDA)

Governors' development councils appear to work best when established as state-level coordination devices aimed at resolving identifiable issues involved in strategy implementation. While councils may discuss development policy needs, as well as policy coordination, it is not appropriate for the federal participants to assume to advise the Governor on state policy matters. Rather, they should communicate policy recommendations based on state concerns to federal agency officials.

Much of the work of the more active councils has been

focused on specific issues and has been conducted through functionally oriented task forces or committees. Economic development, health, housing, and transportation have been common topics for specific actions. Governors may wish to organize the work of their Rural Development Councils around state-specific rural issues so as to avoid generalized discussions which may not contribute to tangible actions to solve rural problems.

Each state is faced with numerous feasible organizational options for structuring its way of working with federal agencies. It may, in fact, already have an effective state rural development committee which can be further strengthened. The precise choice is not nearly as important as the fact that the federal government is inviting the states to play the key intergovernmental role in rural development. The states are being offered an opportunity to help determine how, where, and when federal program dollars will be spent for rural development purposes.

CHAPTER 60
RURAL DEVELOPMENT ASSISTANCE GRANT PROGRAM

Section

10. Scope of Regulations
20. Program Authority
30. Eligible Applicants
40. Eligible Projects
50. Grant Limitations
60. Form and Content of Application
70. Review of Application
80. Decision on Application
90. Filing Deadlines
100. Monitoring of Grant
110. Completion of Grant
120. Forced Closure of Grant
130. Appeals
140. Technical Assistance
150. Definitions

19 AAC 60.010. SCOPE OF REGULATIONS. The regulations in this chapter are prescribed for implementing, interpreting, and making specific the act providing state aid for rural development assistance, AS 44.47.130 - 140. (Eff. / / Register)

Authority: AS 44.47.160

19 AAC 60.020. PROGRAM AUTHORITY. The authority of the Department under AS 44.47.130 - 140 is delegated by the commissioner of Community and Regional Affairs to the Division of Local Government Assistance. (Eff. / / Register)

Authority: AS 44.47.160

19 AAC 60.030. ELIGIBLE APPLICANTS. (a) All communities in the state are eligible for rural development grants except:

(1) any first class or home rule city with a population greater than 2,000;

(2) any organized borough or unified municipality unless that organized borough or unified municipality has authority to receive and expend funds for the project proposed and further provided that the project directly benefits an otherwise eligible applicant, as defined in (b) of this section.

DRAFT

(b) An I.R.A., tribal or traditional council or a non-profit community organization, located within an organized borough or unified municipality, may apply for and receive a rural development grant if the following conditions exist:

(1) the borough or unified municipality in which the entity is located does not possess the necessary authority to receive and expend funds for the particular project; and

(2) the governing body of the borough or unified municipality has gone on record as supporting or stating non-opposition to the project.

(c) In the absence of a municipal government any I.R.A., tribal or traditional council, or a non-profit community organization representing an eligible community may apply for a rural development grant.

(d) Two or more eligible applicants may join together and submit a single application. In such case, the total amount of funding for which the project is eligible shall be an amount equal to the number of eligible applicants multiplied by $40,000.00.
(Eff. / / Register)

Authority: AS 44.47.160

19 AAC 60.040. ELIGIBLE PROJECTS. To be eligible, projects must generate community development, the product of which may be, but is not limited to:

(1) creation of or continuance of permanent jobs in the community;

(2) an additional source of permanent income to the community;

(3) establishment of basic community facilities;

(4) a study determining the feasibility of a project leading to community development. (Eff. / / Register)

Authority: AS 44.47.160

19 AAC 60.050. GRANT LIMITATIONS. (a) Grants to any one community may not exceed $40,000.00 in any fiscal year. Applications requesting funding for more than one fiscal year will be considered.

(b) All projects constructed with rural development grant funds, either wholly or partially, shall be open and available to the public during the normal hours of operation of the facility.
(Eff. / / Register)

Authority: AS 44.47.160

DRAFT

19 AAC 60.060. FORM AND CONTENT OF APPLICATION. (a) Application for a rural development grant shall be made on forms prescribed by the director. Application forms are available to eligible communities upon request.

(b) The following documents shall be appended to the application form:

(1) a resolution, signed by the governing body of the applicant community, endorsing the project;

(2) for applicants defined in 19 AAC 60.030(b), a statement from the governing body of the municipality stating the municipality lacks the authority to carry out the project and endorsing or stating non-objection to the project;

(3) a letter of intent or other form of cooperative agreement from each additional agency that will contribute to the project, if applicable;

(4) if a construction project, land documents such as title, lease, special use permit, or other documents demonstrating the applicant's authority to build upon and occupy the property;

(5) if a construction project, a plan of the proposed project;

(6) a list of materials to be purchased, if applicable;

(7) rental, lease, or other use agreements the project will be subject to upon completion, if applicable.

(8) if the applicant is located in a municipality which exercises the zoning power and/or building code power, an affidavit from the appropriate municipal official stating the proposed project complies with local zoning requirements and/or building codes.

(9) If a construction project, a letter from the State Fire Marshall's Office, stating that it has reviewed the construction plans. (Eff. / / Register)

Authority: AS 44.47.160

19 AAC 60.070. REVIEW OF APPLICATION. (a) Within 10 days of receipt of a grant application the division shall review it and determine if it contains all of the information required by these regulations. If the application is determined complete, the application shall be evaluated in accordance with the criteria established in section 080 of this chapter and a recommendation for or against funding, or for deferral of the project made to the director.

DRAFT

(b) If an application is found deficient, it may be returned to the applicant together with comments conducive to correction of the deficiencies and resubmission of the application, or the applicant shall be requested, in writing, to submit additional information which will correct the deficiencies. (Eff. / / Register)

Authority: AS 44.47.160

19 AAC 60.080. DECISION ON APPLICATION. (a) A decision to fund a rural development grant shall be made by the director. The director's decision shall be based upon the following criteria:

(1) commitment of the applicant to the project;

(2) economic condition of the community;

(3) impact of the project on the community;

(4) condition of basic community facilities;

(5) capability of the applicant to adminster the grant;

(6) availability of other funding sources;

(7) relative priority with respect to other applications and with the overall public interest.

(b) In entering a decision to fund a grant application, the director may make funding of the grant contingent upon additional stipulations not contained in the grant application.

(c) Upon approval, disapproval, or deferral of a grant application, the applicant shall be notified in writing.

(d) A grant is considered awarded when the application has been approved and when the applicant and the department have signed a letter of agreement specifying, among other items, the purpose of the grant, the amount and the period of performance. (Eff. / / Register)

Authority: AS 44.47.160

19 AAC 60.090. FILING DEADLINES. (a) Grant applications will be considered for approval two times per year. In order to be considered, grant applications must be submitted in accordance with the following:

(1) application period No. 1. Applications must be submitted to the division postmarked no later than December 1. A decision will be entered no later than February 1.

DRAFT

(2) application period No. 2. Applications must be submitted to the division postmarked no later than June 1. A decision will be entered no later than August 1.

(b) A grant application received after the deadline or considered but not funded in one application period will automatically be considered in the next application period, unless withdrawn by the applicant.

(c) Notwithstanding other provisions of this section the director may accept an application postmarked after December 1 if it is determined that the annual appropriation is sufficient to fully fund all previously submitted eligible applications. (Eff. / / Register)

Authority: AS 44.47.160

19 AAC 60.100. MONITORING OF GRANT. Each grant shall be monitored by the division. At any time during normal business hours there shall be made available to the division all records with respect to all matters covered by the letter of agreement. The division reserves the right to audit, examine, and make excerpts for transcripts from records relating to all matters covered by the letter of agreement. (Eff. / / Register)

Authority: AS 44.47.160

19 AAC 60.110. COMPLETION OF GRANT. (a) The project is considered completed and the grant closed when:

(1) the letter of agreement is fully executed; and

(2) the applicant requests that unused funds be returned to the division or the bank account reaches a zero balance; and

(3) all expense reports, invoices, and checkbooks, including check stubs and unused checks, have been returned to the division; and

(4) the governing body of the applicant community has adopted a resolution accepting the project as a public facility.

(b) Upon completion of the requirements of (a) of the section the division shall notify the grantee that the grant is closed.
(Eff. / / Register)

Authority: AS 44.47.160

19 AAC 60.120. FORCED CLOSURE OF GRANT. (a) Upon failure to comply with the letter of agreement and any other grant stipulations, the division may give written notice by certified mail to the grantee, specifying such failure and stating the action needed to correct the deficiencies. Corrective action shall be taken by the grantee within 10 days of receipt of such written notice. The division may withhold payment of grant funds until there has been compliance by the grantee.

DRAFT

(b) If the grantee fails to comply with (a) of this section, the division, after giving at least 15 days written notice, may:

(1) close the bank account and return any remaining funds to the grant fund; and

(2) notify the grantee that the grant has been closed for cause, stating the cause, and stating that this closure will be considered in the evaluation of any future application. (Eff. / / Register)

Authority: AS 44.47.160

19 AAC 60.130. APPEALS. (a) Within 30 days of receipt of a letter advising the applicant that the director has denied a grant application, the applicant may appeal the denial to the commissioner. The appeal must be in writing and must identify the part or parts of the letter of denial to which the applicant takes exception.

(b) Upon receipt of a proper appeal of a denied application, the commissioner will review the record and enter a final determination. The commissioner may affirm, reverse, or modify the decision of denial. The applicant shall be notified in writing, within thirty days of the commissioner's decision. Notification shall include an explanation of why the decision was rendered.

(c) If the applicant fails to file an appeal within the time set forth in (a) of this section, the director's decision constitutes the final determination of the department.

(d) The commissioner's decision is final and is an act of discretion. (Eff. / / Register)

Authority: AS 44.47.160

19 AAC 60.140. TECHNICAL ASSISTANCE. The division will make every reasonable effort to respond to an eligible applicant's request for technical assistance in community development, grant development, grant administration and management. (Eff. / / Register)

Authority: AS 44.47.160

19 AAC 60.150. DEFINITIONS. Unless the context indicates otherwise in this chapter:

(1) "commissioner" means the commissioner of the department of community and regional affairs.

(2) "community" means a city of any class or an unorganized village which is a social unit.

DRAFT

19 AAC 60.150

(3) "community development" means a fluid condition in which changes occur and there is maximum participation and cooperation among local people whose own resources are tapped for the betterment of the community;

(4) "department" means the department of community and regional affairs;

(5) "director" means the director of the division of local government assistance;

(6) "division" means the division of local government assistance within the department of community and regional affairs;

(7) "facility" means a permanent improvement constructed, operated, or maintained for the convenience of the public;

(8) "grant" means a rural development assistance grant awarded pursuant to these regulations;

(9) "grantee" means an eligible applicant who has been awarded a rural development assistance grant;

(10) "grant project" means the project for which use of rural development assistance grant funds is authorized as defined in the letter of agreement between the applicant and the division;

(11) "I.R.A. council" means a village council formed under the provisions of the Indian Reorganization Act of 1934 whose constitution and/or charter has been ratified by the Bureau of Indian Affairs, Department of the Interior. An I.R.A. council representing more than one community is excluded;

(12) "project" means a permanent improvement constructed, operated and/or maintained for the convenience of the public or a study which will lead to such permanent improvement;

(13) "tribal or traditional council" means an eligible recipient under the Indian Self-Determination and Education Assistance Act (25 U.S.C 450) or the State and Local Fiscal Assistance Act of 1972 (31 U.S.C. 1221 and 24 C.F.R. Section 571.3(c));

(14) "non-profit community organization" means a local, rural organization that has organized under state law, adopted by-laws and elects its governing body in a manner that insures equal representation of the people residing in the community. Any non-profit organization representing more than one rural community is excluded. (Eff / / Register)

DEPT. OF COMMUNITY & REGIONAL AFFAIRS

DIVISION OF LOCAL GOVERNMENT ASSISTANCE

POUCH B – JUNEAU 99811

April 7, 1980

RE: Proposed Regulations - Rural Development Assistance Grant Program

Dear Legislators, Municipal Officials and other citizens:

Enclosed are copies of the notice of proposed regulations for the Rural Development Assistance (RDA) grant program and the proposed regulations.

Our purpose in submitting proposed regulations is as follows:

1) to make clear how applicants apply and qualify for the RDA grant program;

2) to clarify existing language and procedures.

You may submit oral or written statements or arguments at the hearings, or mail written statements directly to the Department as suggested in the attached notice. Closing date for comments will be May 15, 1980, 4 o'clock p.m.

Additional copies of the proposed regulations may be obtained at our Anchorage, Juneau, Bethel, or Nome offices.

If you have any questions about the proposed regulations or have any suggested changes, please call or write.

Sincerely,

Palmer McCarter by PKP

Palmer McCarter
Director

PM/1/lh

Enclosures:

NOTICE OF PROPOSED CHANGES IN THE REGULATIONS OF
THE DEPARTMENT OF COMMUNITY AND REGIONAL AFFAIRS

Notice is hereby given that the Department of Community and Regional Affairs, under authority vested in AS 44.47.160, proposes to amend regulations in Title 19 of the Alaska Administrative Code to implement AS 44.47.160 (concerning rural development) as provided below.

19 AAC 60.010-160, "Rural Development Assistance Grant Program Regulations" received 16 public hearing during September and October, 1978. For the purpose of taking testimony in connection with adopting the regulations.

Those regulations are hereby amended as follows:

----minor changes are made in wording of sections

----several sections reorganized and renumbered.

----19 AAC 60.090 (REVIEW PERIOD AND FILING DEADLINE) is amended to change application and review dates.

Notice is also given that any person interested may present oral or written statements or arguments relevant to the actions proposed at hearings held as provided below:

Small Conference Room, Second Floor, 225 Cordova Street, Building B, Anchorage, at 9:00 a.m. on April 30, 1980.

Conference Room, Second Floor, Community Building, 150 3rd. Street, Juneau, at 9:00 a.m. on April 30, 1980.

Governor's office, Second Floor, State Office Building on Front Street, Nome, at 9:00 a.m. on April 29, 1980.

Governor's office, Old Eskimo Building, Kotzebue at 1:00 p.m., April 30, 1980.

Local Government Assistance Division Office, Kuskokwim Office Building, Bethel, at 10:00 a.m. on April 25, 1980.

Conference Room, State Office Building, 675 7th. Avenue, Fairbanks, 9:30 a.m., May 7, 1980.

Copies of the proposed regulations may be obtained by writing: Division of Local Government Assistance, Department of Community and Regional Affairs, 225 Cordova Street, Building B, Anchorage, Alaska, 99501, or calling 276-1721.

The Department of Community and Regional Affairs, upon its own motion or at the instance of any interested person, may at the hearing or after it, adopt the proposals substantially as described above without further notice or may decide to take no action on them.

April 7, 1980

		Ray Metcalfe	X

Rep. Dick Eliason

This bill is seen as a technical housekeeping measure. In Sitka the Borough assembly meetings are held on Tues. and that is the traditional time for swearing in new members. Refers to letter from Sitka.

Discussion of the 1979 law and the wording of the original law followed.

Palmer McCarter, Director of Local Assistance, Dept. C&RA

Supports HB947. Questions however the deletion of lines 16,17, "the current term may not be altered". Discusses the history of the current wording with passed with HB66. There was a presumption that the first Monday of Octover was the election date. Runoff elections created conflicts. Attorneys chose to amend section. McCarter says the proposed wording in HB947 is preferable.

Branson - Suggests that the bill read that the term of office would begin "immediately" following certification. What would happen thought in the case of a runoff election?

O'Connell - Suggest that deleted wording in fact be included as part of (a)

Palmer McCarter - suggests it may be necessary to have a fixed date for the beginning of a term of office.

Suggestion made that legal research clarify some of the questions raised.

COMMITTEE ACTION: No Action

TAPE # 5 SIDE 2 Footage 11' -1644

SCSCSHB 947 - ASSEMBLY APPORTIONMENT & REAPPORTIONMENT

BACKGROUND & SUMMARY

Last session the House attached a complicated assembly apportionment and reapportionment bill to a Senate passed municipal code cleanup bill and adopted a floor amendment that made the prescribed process virtually impossible to implement. Because it was very late in the session with no time for a free conference committee and because the effective date of the bill wasn't until January 1, 1981, the Senate decided to accept the House version and amend it this session to make the reapportionment procedures workable. Senate CS for CSHB 947 sets out assembly apportionment standards in AS 29.23.021, revises and simplifies the reapportionment procedures in AS 29.23.025, and repeals AS 29.23.023 which contains the most onerous provisions of the bill (SB 137) that passed last year.

* * * * * * * * *

PROBLEMS WITH AS 29.23.023, ENACTED LAST YEAR

SCSCSHB 947 repeals AS 29.23.023 which provided:

Special Election on Form of Representation. Required special election following decennial census asking borough residents if they want their assembly members elected at large, elected at large but required to live in a district, or elected by and from districts. Boroughs must go to the expense of a special election whether or not there is any dissatisfaction with the current form of representation, and whether or not the assembly is malapportioned. This provision is not necessary because there already exists in law the initiative procedures which may be used by borough residents to change their form of representation.

Dual Plurality Tabulation. Results of above election must be tabulated both inside and outside cities; the assembly must devise a reapportionment plan which "conforms to the form of representation receiving a plurality of the votes in each classification at that election." Nowhere in the law does it say what happens if the people inside the cities vote one way and the people outside vote another.

Short Time Limit. AS 29.23.023 allows only four months for the assembly to devise a reapportionment plan, adopt an ordinance, and get that ordinance ratified by borough voters. Because of the amount of time needed for legal notices for adoption of ordinances and elections, assemblies would have very little time to come up with a reapportionment plan.

* * * * * * * * * * *

HIGHLIGHTS OF SENATE CS for CSHB 947

Apportionment Standards. As 29.23.021, as revised by SCSCSHB 947, sets out standards for assembly apportionment:

1.-consistent with equal representation standards of US Constitution;
2.-apportionment set out in incorporation petition approved by voters;
3.-no weighted voting;
4.-no institutional representation (city council may not appoint one or more of its members to serve on borough assembly).

Reapportionment Procedure. As 29.23.025, as revised by SCSCSHB 947, sets out procedures for assembly reapportionment:

1.-assembly determine if malapportioned within 2 months of census report;
2.-if malapportioned, assembly has 6 months to adopt by ordinance a reapportionment plan that must be ratified by voters;
3.-if no plan approved within 6 months, C&RA Commissioner provides reapportionment (similar provision in current law);
4.-allows reapportionment at times other than following a census;
5.-provides for advisory review by C&RA Commissioner and for judicial review;
6.-specifies election at which reapportionment plan goes into effect.

AS 29.23.025 is applicable to boroughs but not to unified municipalities. Another part of SCSCSHB 947 clarifies that unified municipalities must provide for reapportionment in their charters.

Miscellaneous Provisions. SCSCSHB 947 also deletes the requirement that the number of assembly members of new boroughs not exceed 11 and allows boroughs to establish by ordinance or charter the date on which assembly terms begin.

Introduced: 3/7/80
Referred: Community & Regional Affairs

IN THE HOUSE

BY THE COMMUNITY AND REGIONAL AFFAIRS COMMITTEE

HOUSE BILL NO. 947

IN THE LEGISLATURE OF THE STATE OF ALASKA

ELEVENTH LEGISLATURE - SECOND SESSION

A BILL

For an Act entitled: "An Act relating to the term of office of borough assemblymen; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 29.23.040 is amended to read:

Sec. 29.23.040. REGULAR TERM OF OFFICE. (a) Assemblymen are selected for three-year terms and until their successors are selected and have qualified, unless different terms not exceeding four years are prescribed by borough charter or ordinance.

(b) The regular term of office begins on the first Monday following certification of the election, unless a different date is prescribed by borough charter or ordinance. [THE CURRENT TERM OF INCUMBENT ASSEMBLYMEN MAY NOT BE ALTERED UNDER THIS SECTION.]

(c) This section applies to home rule and general law boroughs.

* Sec. 2. This Act takes effect immediately in accordance with AS 01.10.-070(c).

reapportionment, and submit the ordinance to the voters. If, at the end of the four-month time period, an ordinance providing for reapportionment has not been approved, the Department of Community and Regional Affairs shall provide for the reapportionment in accordance with the standards of AS 29.23.021 — 29.23.023.

(f) A reapportionment ordinance, or a determination of the borough assembly that applicable standards do not require adoption of a change in apportionment, is subject to judicial review.

(g) A change in assembly apportionment or composition under this section is effective beginning with the first regular election for members of the assembly which follows approval of a reapportionment ordinance. (§ 1 ch 83 SLA 1979)

Effective date. — Section 27, ch. 83, SLA 1979, makes this section effective January 1, 1981.

Editor's note. — Section 26, ch. 83, SLA 1979, effective June 2, 1979, provides: "Notwithstanding AS 29.23.040, amended by sec. 4 of ch. 83, SLA 1979, the terms of office of borough assemblymen elected or appointed to dual borough assembly-city council seats are not affected by the amendment made to AS 29.23.040 in sec. 4 of ch. 83, SLA 1979 until reapportionment of the borough assembly is required or proposed under AS 29.23.020, repealed by sec. 21 [24] of ch. 83, SLA 1979, or is effected as required or proposed under AS 29.23.021 — 29.23.025, added by sec. 1 of ch. 83, SLA 1979."

Statute superseded home-rule enactments. — See Roderick v. Sullivan, Sup. Ct. Op. No. 1099 (File No. 2243), 528 P.2d 450 (1974), decided under former AS 29.23.020.

The legislature intended that all reapportionment ordinances be submitted to the electorate. Roderick v. Sullivan, Sup. Ct. Op. No. 1099 (File No. 2243), 528 P.2d 450 (1974), decided under former AS 29.23.020.

Sec. 29.23.040. Regular term of office. Assemblymen are selected for three-year terms and until their successors are selected and have qualified, unless different terms not exceeding four years are prescribed by borough charter or ordinance. The regular term of office begins on the first Monday following certification of the election. The current term of incumbent assemblymen may not be altered under this section. This section applies to home rule and general law boroughs. (§ 2 ch 118 SLA 1972; am § 13 ch 118 SLA 1972; am § 4 ch 83 SLA 1979)

Effect of amendment.

The 1979 amendment, effective June 2, 1979, rewrote the second sentence.

Editor's note. — Section 26, ch. 83, SLA 1979, effective June 2, 1979, provides that the terms of borough assemblymen elected or appointed to dual borough assembly-city council seats are not effected by the amendment made to AS 29.23.040 by sec. 4, ch. 83, SLA 1979 until reapportionment of the assembly is required or proposed under AS 29.23.020 or under AS 29.23.021 — 29.23.025.

Sec. 29.23.060. Procedure.

Cross reference.

As to abstaining from official action when there is a conflict of interests, see AS 29.23.555.

LEGISLATIVE AFFAIRS AGENCY

M E M O R A N D U M February 29, 1980

SUBJECT: Terms of borough assemblymen
(Work Order Number 8250)

TO: Representative Richard I. Eliason

FROM: John B. Chenoweth
Legislative Counsel

This bill is provided without insertion of a name of a sponsor: I cannot put your name to the bill because of the personal bill deadline rule.

Mr. Hallgren, the City/Borough attorney, will be in touch with you to admit that the request embodied in the first page of his February 25th letter is in error; the law presently provides that which he asks you to accomplish.

T[illegible] statutory cite at the top of page 2 of his letter, on which the request he makes on page 2 of that letter is based, is incorrect. The provision which poses a problem for him is AS 29.23.040. The bill draft attached addresses his concern with reference to the latter provision.

You may wish to indicate to Mr. Hallgren that the source of the 1979 amendment of AS 29.23.040, that is, the source of the "problem" mentioned in page 2 of the letter, was Senate Bill 137, a bill offered by the Governor. With reference to the 1979 change, the governor's transmittal letter says:

> The [amendment of AS 29.23.040] merely specifies when newly-elected assemblymen take office, correcting an obvious oversite. . . . (Emphasis added.)

You may want to advise Mr. Hallgren that his complaint relative to legislative instrusion into the concerns of a home rule municipality ["I wish that your colleagues would someday quit poking the legislative stick in the eye of the home rule municipality and stop creating problems where none existed before."] should as well be addressed to the Department of Community and Regional Affairs, on behalf of the administration, in recognition of its zeal to suggest correction of "obvious oversights" in Title 29.

LEGISLATIVE AFFAIRS AGENCY

M E M O R A N D U M April 1, 1980

SUBJECT: House Bill 947, relating to the term of office of a borough assemblyman, and proposed CSHB 947, relating to elected officials of a borough.

TO: Representative Bill Parker, Chairman
House Community and Regional Affairs Committee

FROM: John B. Chenowe[illegible]
Legislative Counsel

In reviewing this bill preparatory to completing the committee substitute requested, I discovered a drafting error in the original. The question of policy which attends that error deserves the committee's attention.

In the original, I bracketed language relating to the "current term of incumbent assemblymen", believing that the reference was to assemblymen who were serving on the date the provisions of the Municipal Code revision took effect. Under that interpretation, the reference having survived its usefulness, I proposed its deletion.

The reference, I find, is intended to cover assemblymen who are serving at the time a proposed change in term of office is expected to take effect, whenever that proposed change occurs. Accordingly, I have restored the provision, redrafting it for clarity.

If members of the committee are of the opinion that the term of office of an assemblyman should not be "protected" from extension or contraction because of change of charter provision or ordinance relating to term of office, the material should be deleted from the bill.

Assembly Composition, Apportionment and Reapportionment

AML Draft - sectional analysis

Section 1

Repeals AS 29.23.021, 29.23.023, and 29.23.025 on assembly composition and apportionment, composition and representation requirements for general law boroughs, and assembly recomposition and reapportionment. These three sections were enacted into law during 1979 and become effective January 1, 1981.

Section 2

Sec.29.23.021. Assembly composition and apportionment.
(a) consistent with U.S. Constitution
(b) assembly of newly incorporated borough as set out in incorporation petition; existing assembly consistent with this chapter.
(c) weighted vote allowed.

Sec.29.23.023. Composition and representation of general law borough.
(a) assembly by ordinance may change to:
1.-elected at large
2.-elected at large, reside in district
3.-elected by and from districts
4.-combination of above
(b) ordinance ratified by voters and not subject to referendum
(c) if voters turn down ordinance, assembly may propose another form of representation; if no form ratified within 4 months of the first election, Dept. of C&RA selects form.
(d) if at large, assembly has 60 days to adopt implementing ordinance; with other forms, assembly has six months to implement; if not done, Dept. of C&RA has six months to implement.
(e) ordinance applicable at next election held not sooner than 60 days after apportionment becomes effective;
(f) assembly by ordinance may change the number of assembly members.
(g) no institutional representation.

Sec.29.23.025. Assembly reapportionment.
(a) not later than 7/31/81 and thereafter within four months after decennial census, assembly by resolution determines if malapportioned.
(b) at times other than decennial census assembly by resolution may determine if malapportioned when presented by a petition of borough voters or upon its own initiative.
(c) 2 year reapportionment moratorium after change in apportionment.
(d) if malapportioned, assembly shall devise new apportionment according to standards of AS 29.23.021 and may change form of representation or composition.
(e) changes called for in (a) must be according to procedures in AS.29.23.023 for ~~changes~~ general law boroughs.
(f) six month time limit to reapportion; if not then Dept of C&RA does it.
(g) effective at the next election held not soomer than 60 days.

3/6/82

Assembly Composition, Apportionment, and Reapportionment

SB 137 - effective 1/1/81

Repeals existing AS 29.23.020.

AS.29.23.021. Assembly Composition, and Apportionment.
(a) consistent with US Constitution
(b) assembly of newly incorporated borough composed and apportioned as set out in incorporation petition and may be changed by ordinance; assembly of existing borough as set out in 29.23.023.
(c) no weighted voting.

AS.29.23.023. Composition and Representation Requirements for General Law Boroughs.
(a) by 7/31/81 and thereafter within four months of a decennial census report, election on alternate forms of representation:
1.-elected at large
2.-elected at large, reside in district
3.-elected by and from districts.
(b) two tabulations of votes - inside cities and outside. (no provision for what happens with different pluralities.)
(c) no institutional representation

AS.29.23.025. Assembly recomposition and reapportionment.
(a) by 7/31/81 and thereafter within four months of a decennial census report, assembly by resolution determines if malapportioned.
(b) if malapportioned assembly by ordinance shall reapportion within three months and ~~may~~ change composition.
(c) assembly by ordinance may reapportion or change composition on the basis of other reliable population data or by petition of more than 50 voters.
(d) ordinances in (b) and (c) must be ratified by voters.
(e) establishes four month time limit for (b) and if ordinance not approved then Dept. of C&RA reapportions.
(f) provides for judicial review.
(g) effective date - next regular election.

AS.29.18.050(4). assembly of new general law boroughs may not exceed 11 members.

HB 698.

AS 29.23.023(b) repeals the dual tabulation and replaces it with assembly by ordinance providing for form of representation which conforms to election results of (a)

3/6/80

Assembly Composition, Apportionment, & Reapportionment

existing law until 1/1/81

AS.29.23.020
(a) number of assembly members, apportionment, and voting procedures determined by incorporation petition, charter, or ordinance; must be consistent with US Constitution.
(b) reapportionment - within six months after decennial census
1.-assembly by resolution determines is malapportioned;
2.-if malapportioned, assembly by ordinance provides for reapportionment;
3.-ordinance must be ratified by voters.
(c) tabulation of vote - two classifications: inside first class and home rule cities and outside; if voters don't approve plan, Dept. of C&RA provides for reapportionment.
(d) may reapportion following same procedures between decennial census reports if petitioned by voters or on assembly initiative.
(e) effective next regular election
(f) provides for judicial review.

re: assembly composition, apportionment and reapportionment

Attached for your consideration is a draft of a proposed assembly composition, apportionment and reapportionment bill prepared by a special Alaska Municipal League committee. I am preparing a sectional analysis and a comparison between this bill, HB 698, SB 137 - passed last year, and current law that I will distribute prior to Friday's committee meeting.

SCS CSHB 947 - Assembly Apportionment and Reapportionment

The borough assembly apportionment and reapportionment provisions of SCS CSHB 947 basically go back to what was in Title 29 prior to the complicated amendments that were adopted last session. In addition, this bill contains three improvements to the prior law:

1.-deletes the dual majority provision, which required assembly adopted reapportionment ordinances to be ratified by the voters inside and outside cities;

2.-clarifies that weighted voting is not permissable; and

3.-clarifies that institutional representation is prohibited, per an attorney general's opinion.

LEGISLATIVE AFFAIRS AGENCY

MEMORANDUM April 1, 1980

SUBJECT: House Bill 947, relating to the term of office of a borough assemblyman, and proposed CSHB 947, relating to elected officials of a borough.

TO: Representative Bill Parker, Chairman
House Community and Regional Affairs Committee

FROM: John B. Chenoweth
Legislative Counsel

In reviewing this bill preparatory to completing the committee substitute requested, I discovered a drafting error in the original. The question of policy which attends that error deserves the committee's attention.

In the original, I bracketed language relating to the "current term of incumbent assemblymen", believing that the reference was to assemblymen who were serving on the date the provisions of the Municipal Code revision took effect. Under that interpretation, the reference having survived its usefulness, I proposed its deletion.

The reference, I find, is intended to cover assemblymen who are serving at the time a proposed change in term of office is expected to take effect, whenever that proposed change occurs. Accordingly, I have restored the provision, redrafting it for clarity.

If members of the committee are of the opinion that the term of office of an assemblyman should not be "protected" from extension or contraction because of change of charter provision or ordinance relating to term of office, the material should be deleted from the bill.

RE: FCCSHB947

Being aware that you will be involved in the revision of Title 29, as per the requirements of CSSCR66 which directs the Alaska Legislative Council to review the Municipal Government statutes, I want to call your attention to an area of law, enacted by the Eleventh Legislature as FCCSHB947, which you will want to address during the course of your revision. In the haste of the last days of legislative activity, the following omissions went unnoticed when the Free Conference version of the bill was adopted.

Section 9 AS 29.23.025 (e) outlines the procedures to be followed if a reapportionment ordinance has not been approved by the voters after the assembly has determined that reapportionment is necessary. The law does not address what happens to the order--is it voted on by the people? Can the order be appealed? Is administrative or judicial review provided for?

In Section 29.23.029 and Section 29.23.031 there should be additional statutory references providing for judicial review and relief in all applicable instances and referencing all applicable voter approved ordinances and reapportionment orders under Sec. 031.

Both the draftsman, Jack Chenoweth, and Ginny Chitwood of the Municipal League which will be involved in the revision of Title 29 are familiar with the problems in the Free Conference law and would be able to answer any questions.

*Sec. 1 AS 29.13.100(3) - *Sec. 4 AS 29.23.021(d)

No changes in the text of the sections

AS 29.23.023:

FCCS *Sec. 5
SCS [Repealed in Senate CS]

The Senate CS repealed AS 29.23.023. The FCCS re-enacts the provision to maintain the requirement that, following each decennial census, borough officials permit the residents to vote on form of representative and assembly composition, and that any proposed change in form of representative and composition which involves use of districts requires the assembly to specify the proposed districts on the election ballot. As offered in the FCCS, the provisions of AS 29.23.023 describe the forms of representation which may be offered for voter consideration and the time period in which the election must be called. The section exempts home rule and unified municipalities from being subject to its provisions.

AS 29.23.025(a)

FCCS *Sec. 6
SCS *Sec. 5

Replaces Senate CS language with provisions which tie apportionment provisions to changes in composition and form of representation.

AS 29.23.0025(b)

FCCS *Sec. 7
SCS *Sec. 6

The FCCS version borrows from existing AS 29.-23.025(c) by specifically authorizing the borough assembly to charge its approtionment when the existing standards of AS 29.23.021 (one-man/one-vote; no institutional representation; no weighted voting) no longer apply.

AS 29.23.025(c)

FCCS *Sec. 8
SCS *Sec. 7

The FCCS confines this section to voter-initiated petitions asking for change in apportionment.

AS 29.23.025(e)

FCCS *Sec. 9
SCS *Sec. 8

Substantially the same in both versions -- describes time limits for apportionment when required.

Apportionment Appeals

FCCS *Sec. 10 -- AS 29.23.027
SCS *Sec. 9

Authorizes appeals of apportionment ordinances which are alleged to be not in compliance with standards of AS 29.23.021 to the commissioner of community and regional affairs. The FCCS version describes the procedures to be followed under the appeal.

Judicial Review

FCCS *Sec. 10 -- AS 29.23.029
SCS *Sec. 12 (h) and (i)

Substantially the same

Effective Date of New Apportionments

FCCS *Sec. 10 -- AS 29.23.031
SCS *Sec. 11 and *Sec. 12 (j)

Substantially the same

Applicability of Apportionment

FCCS *Sec. 10 -- AS 29.23.033
SCS *Sec. 12 (k)

Substantially the same

No changes in remainder of bill --

Because material in existing AS 29.23.025(f) and (g) is picked up in new AS 29.23.027 and AS 29.23.031, these are repealed in the FCCS.

FREE CONFERENCE CS FOR HOUSE BILL NO. 947

IN THE LEGISLATURE OF THE STATE OF ALASKA

ELEVENTH LEGISLATURE - SECOND SESSION

A BILL

For an Act entitled: "An Act relating to borough assemblies and amending the apportionment requirements of charters of unified municipalities; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 29.13.100(3) is repealed and re-enacted to read:

(3) AS 29.23.021 (borough assembly composition and apportionment), and AS 29.23.040 - 29.23.050 (borough assembly members)

* Sec. 2. AS 29.18.050(4) is amended to read:

(4) composition and apportionment of the assembly or council [, BUT THE NUMBER OF MEMBERS OF A BOROUGH ASSEMBLY MAY NOT EXCEED 11];

* Sec. 3. AS 29.23.021(b) is amended to read:

(b) The assembly of a newly incorporated borough is, after incorporation and until the adoption of an ordinance providing for a change in composition or apportionment, composed of the number of members and apportioned as set out in the incorporation petition approved by the voters. If the borough is already incorporated, the assembly shall be composed and apportioned in a manner that is consistent with <u>the requirements of this section</u> [AS 29.23.023] and prescribed by charter or ordinance.

* Sec. 4. AS 29.23.021 is amended by adding a new subsection to read:

(d) A member of the assembly of a borough may not be elected or appointed by and from the council of a city in the borough.

* Sec. 5. AS 29.23.023 is repealed and re-enacted to read:

Sec. 29.23.023. COMPOSITION AND FORM OF REPRESENTATION. (a) The

borough assembly shall provide for its composition and for the form of its representation.

(b) ~~by July 31, 1981,~~ and, thereafter, within two/three/four months after the report of a federal decennial census, the assembly shall propose and submit to the voters of the borough, at a regular election or special election called for the purpose, one or more forms of borough assembly representation. The forms of representation which the assembly may submit to the voters are

(1) election of members of the borough assembly at large by all qualified voters of the borough;

(2) election of members of the borough assembly by district, including but not limited to, /OR/ limited to the following:

(A) election at large by all qualified voters of the borough, but with a requirement that a candidate live within an election district established by the borough for election of assembly members;

(B) election by and from election districts established by the borough for the election of assembly members; or

(C) election by and from an election district established by the borough for election of assembly members, with a requirement that a candidate live within a zone or section within that election district.

(c) A form of borough assembly representation which includes election of borough assembly members by district under (b)(2) of this section shall be submitted to the voters of the borough with a plan of apportionment as required by AS 29.23.025(a).

(d) The borough assembly shall, within 30 days of certification of the results of the election held on a proposed form of representation under this section, adopt an ordinance providing for its composition and

the form of assembly representation, and, if applicable, the apportionment of assembly seats which corresponds to the proposed form of representation which receives the greatest number of votes at the election.

(e) This section does not apply

(1) to a unified municipality incorporated under AS 29.68.240 - 29.68.440;

(2) to a home rule borough if the borough, by charter, provides procedures permitting voters to approve a change in assembly composition and form of representation which are substantially similar to the procedures in this section.

* Sec. 6. AS 29.23.025(a) is repealed and re-enacted to read:

(a) If the borough assembly proposes and submits to the voters a form of representation which includes election of borough assembly members by district under AS 29.23.023(b)(2), the assembly shall submit with the proposition a proposed plan of apportionment which corresponds to the form of representation proposed. The assembly shall describe the plan of apportionment in the ballot proposition, and may present the plan in any manner which it believes accurately describes the apportionment which it is proposing under the form of representation.

* Sec. 7. AS 29.23.025(b) is amended to read:

(b) If the existing apportionment of the borough assembly does not meet the applicable standards of AS 29.23.021 [AS 29.23.021 - 29.23.023], the assembly shall provide by ordinance for its reapportionment. At the same time, the borough assembly may, by ordinance, change the composition of the assembly.

* Sec. 8. AS 29.23.025(c) is amended to read:

(c) In addition to providing for apportionment at the times required under (a) and (b) of this section, the borough assembly shall provide by ordinance for its reapportionment and may provide, by

ordinance, for a change in its composition whenever it determines, on the basis of federal census reports or other reliable population data, that the existing apportionment does not meet the standards for apportionment in AS 29.23.021. If a petition signed by not less than 50 registered [BOROUGH] voters who are residents of the borough requests the borough assembly to determine whether the existing apportionment meets the standards for apportionment in AS 29.23.021, and the petition contains evidence that the existing apportionment does not meet those standards, the assembly may [SHALL] make the determination requested. The borough assembly shall make a determination required by this sub section within two months of receipt of a petition which meets the requirements of this subsection.

* Sec. 9. AS 29.23.025(e) is amended to read:

(e) Within six [FOUR] months of a determination by the borough assembly that the current apportionment does not meet the standards of AS 29.23.021 [AS 29.23.021 - 29.23.025], the borough assembly shall adopt an ordinance providing for reapportionment, and submit the ordinance to the voters. If, at the end of the six-month [FOUR-MONTH] time period, an ordinance providing for reapportionment has not been approved by the voters, the commissioner of the Department of Community and Regional Affairs shall provide for the reapportionment in accordance with the standards of AS 29.23.021 [AS 29.23.021 - 29.23.023] by preparing an order of reapportionment and delivering the order to the borough mayor.

* Sec. 10. AS 29.23.025(f) is repealed and re-enacted to read:

(f) A reapportionment ordinance approved by the voters, or a decision of the borough assembly that the standards of AS 29.23.021 do not require a change in apportionment, may be appealed to the commissioner of the Department of Community and Regional Affairs. Fifty

registered voters who are residents of the borough may submit a petition to the commissioner of community and regional affairs requesting the commissioner to determine whether the proposed reapportionment ordinance approved by the voters meets the standards of AS 29.23.021, or whether a decision of the borough assembly that the standards of AS 29.23.021 do not require a change of apportionment is correct. If the petition asks the commissioner of community and regional affairs to review an ordinance approved by the voters under (e) of this section, the petition shall be delivered to the commissioner not later than 20 days after certification of the election. If the petition asks the commissioner of community and regional affairs to review a decision of the borough assembly under (c) of this section, the petition shall be delivered to the commissioner within 20 days of the decision of the borough assembly. The commissioner of community and regional affairs shall review the petition and may make the determination requested. The commissioner shall provide copies of his determination to the persons petitioning for appeal and to borough officials not later than 60 days after he receives the petition. If the commissioner determines that the proposed reapportionment ordinance approved by the voters does not meet the standards of AS 29.23.021, or if he determines that the decision of the borough assembly that the standards of AS 29.23.021 do not require a change of apportionment is not correct, the commissioner

may, by order, direct the borough assembly to prepare a reapportionment ordinance which meets the standards of AS 29.23.021 and submit the ordinance to the voters under this section.

↓
(NEXT PAGE)

/OR/

shall provide for the reapportionment of the borough assembly in accordance with the standards of AS 29.23.021 by preparing an order of reapportionment and delivering the order to the borough mayor.

* Sec. 11. AS 29.23.025(g) is amended to read:

(g) A change in assembly apportionment or composition under this section is effective beginning with the first regular election for members of the assembly which is held more than 60 days after the later of:

(1) approval of the reapportionment ordinance by the voters under (e) of this section; or

(2) the delivery to the mayor of a reapportionment order of the commissioner of community and regional affairs under (e) or (f) of this section [FOLLOWS APPROVAL OF A REAPPORTIONMENT ORDINANCE].

* Sec. 12. AS 29.23.025 is amended by adding new subsections to read:

(h) The commissioner of community and regional affairs may request the superior court to enforce a reapportionment order granted under (e) or (f) of this section.

(i) Each of the following is subject to judicial review:

(1) a plan of reapportionment approved by the voters under (a) of this section;

(2) a reapportionment ordinance approved by the voters under (e) of this section;

(3) a determination by the borough assembly under (c) of this section that the standards of AS 29.23.021 do not require a change in apportionment; and

(4) a reapportionment order of the commissioner of community and regional affairs made under (e) or (f) of this section.

(j) The provisions of (g) of this section do not apply to a borough in which a change in assembly composition or apportionment is

subject to review and approval or determination of nonobjection by the Attorney General of the United States under the Voting Rights Act of 1965, as amended, (42 U.S.C. 1971 - 1974). A change in assembly composition or apportionment subject to review under the Voting Rights Act of 1965, as amended, is effective beginning with the first regular election for members of the assembly which is held more than 60 days after

(1) receipt by the borough assembly of approval by the Attorney General of the United States of the proposed change in the composition or apportionment of the assembly;

(2) receipt by the borough assembly of a statement of nonobjection from the Attorney General of the United States to the proposed change in the composition or apportionment of the assembly; or

(3) the last day on which the Attorney General of the United States may review a proposed change in the composition or apportionment of the assembly.

(k) The provisions of this section do not apply

(1) to a unified municipality incorporated under AS 29.68.-240 - 29.68.440;

(2) to a home rule borough if the borough, by charter, provides for reapportionment of the borough assembly.

* Sec. 13. AS 29.23.040 is amended to read:

Sec. 29.23.040. REGULAR TERM OF OFFICE. (a) Assemblymen are selected for three-year terms and until their successors are selected and have qualified, unless different terms not exceeding four years are prescribed by borough charter or ordinance. Except when otherwise required by a change of composition or apportionment, if the term of an assemblyman is changed by charter or ordinance, the term of an assembly man holding office at the time the change takes effect is not affected

by that change.

(b) The regular term of office begins on the first Monday following certification of the election, unless a different date is prescribed by borough charter or ordinance. [THE CURRENT TERM OF INCUMBENT ASSEMBLYMEN MAY NOT BE ALTERED UNDER THIS SECTION.]

(c) This section applies to home rule and general law boroughs.

* Sec. 14. AS 29.68.350(a)(2) is repealed and re-enacted to read:

(2) provisions for

(A) the establishment of service areas; and

(B) the establishment of districts or sections for the election of members of the legislative body of the unified municipality, if election of members of the legislative body is not areawide, and procedures by which to reapportion the election districts or sections;

* Sec. 15. Sections 1 - 12, and 14 of this Act take effect January 1, 1981.

* Sec. 16. Sections 13, 15, and 16 of this Act take effect immediately in accordance with AS 01.10.070(c).

Composition - Number

Apportionment
Allocation among different constituencies

Form of Rep - at large or by district

6/2/80

This problem created with "combination" already in present law that made the change

There is some confusion as to whether this is to be "temporary" or "permanent" law, so . . . . . .

As "temporary" law, applicable only to exempt only pre-1980 census apportionments:

* Sec. 15. EXEMPTION FROM REQUIREMENTS. (a) If a borough assembly has been reapportioned after December 31, 1979, the borough assembly is not required to submit to the voters of the borough one or more proposed forms of representation as required by AS 28.23.023(b).

(b) The provisions of (a) of this section do not apply to a borough assembly which was reapportioned after December 31, 1979, from providing for another reapportionment under AS 29.23.025(b) or (c) if evidence is presented under AS 29.23.025(b)or (c) that the reapportionment, as completed, does not meet the standards of AS 29.23.021, as amended by secs. 3 and 4 of this Act.

As "permanent" law applicable to provide exemptions for reapportionments which are done preceding any federal census:

Redraft AS 29.23.023(e), page 3, by adding a new paragraph to read:

(3) to the assembly of a general law borough which has been reapportioned under AS 29.23.025 during the 18 months preceding ~~report of~~ a federal census report.

Sec. 29.23.023. COMPOSITION AND FORM OF REPRESENTATION. (a) The

LA-2 20A

borough assembly shall provide for its composition and for the form of its representation.

(b) Not later than the first regular election which occurs after the report of a federal decennial census, the assembly shall propose and submit to the voters of the borough, at that regular election or at a special election called for the purpose, one or more forms of borough assembly representation. The forms of representation which the assembly may submit to the voters are:

(1) election of members of the borough assembly at large by the qualified voters throughout the borough;

(2) election of members of the borough assembly by district, including but not limited to, /OR/ limited to the following:

(A) election at large by the qualified voters throughout the borough, but with a requirement that a candidate live within an election district established by the borough for election of assembly members;

(B) election from election districts established by the borough for the election of assembly members by the qualified voters of a district, or

(C) election within an election district established by the borough for election of assembly members by the qualified voters of the district, with a requirement that a candidate live within a zone or section within that election district.

(c) A form of borough assembly representation which includes election of borough assembly members by district under (b)(2) of this section shall be submitted to the voters of the borough with a plan of apportionment as required by AS 29.23.025(a).

(d) The borough assembly shall, within 30 days of certification of the results of the election held on a proposed form of representation

under this section, adopt an ordinance providing for its composition and the form of assembly representation, and, if applicable, the apportionment of assembly seats which corresponds to the proposed form of representation which receives the most votes at the election.

(e) This section does not apply

(1) to a unified municipality incorporated under AS 29.68.-240 - 29.68.440;

(2) to a home rule borough if the borough, by charter, provides procedures for changing assembly composition and form of representation.

* Sec. 6. AS 29.23.025(a) is repealed and re-enacted to read:

(a) If the borough assembly submits to the voters a form of representation which includes election of borough assembly members by district under AS 29.23.023(b)(2), the assembly shall submit with the proposition a proposed plan of apportionment which corresponds to the form of representation proposed. The assembly shall describe the plan of apportionment in the ballot proposition, and may present the plan in any manner which it believes accurately describes the apportionment which is proposed under the form of representation.

* Sec. 7. AS 29.23.025(b) is amended to read:

(b) If the existing apportionment of the borough assembly does not meet the applicable standards of AS 29.23.021 [AS 29.23.021 - 29.23.023] the assembly shall provide by ordinance for its reapportionment. At the same time, the borough assembly may, by ordinance, change the composition of the assembly.

* Sec. 8. AS 29.23.025(c) is amended to read:

(c) In addition to providing for apportionment at the times required under (a) and (b) of this section, the borough assembly shall provide by ordinance for its reapportionment and may provide, by ordi-

LA-L 10A

nance, for a change in its composition whenever it determines, on the basis of federal census reports or other reliable population data, that the existing apportionment does not meet the standards for apportionment in AS 29.23.021. If a petition signed by not less than 50 registered [BOROUGH] voters who are residents of the borough requests the borough assembly to determine whether the existing apportionment meets the standards for apportionment in AS 29.23.021, and the petition contains evidence that the existing apportionment does not meet those standards, the assembly may [SHALL] make the determination requested. The borough assembly shall make a determination required by this subsection within two months of receipt of a petition which meets the requirements of this subsection.

* Sec. 9. AS 29.23.025(e) is amended to read:

(e) Within six [FOUR] months of a determination by the borough assembly that the current apportionment does not meet the standards of AS 29.23.021 [AS 29.23.021 - 29.23.025], the borough assembly shall adopt an ordinance providing for reapportionment, and submit the ordinance to the voters. If, at the end of the six-month [FOUR-MONTH] time period, an ordinance providing for reapportionment has not been approved by the voters, the commissioner of the Department of Community and Regional Affairs shall provide for the reapportionment in accordance with the standards of AS 29.23.021 [AS 29.23.021 - 29.23.023] by preparing an order of reapportionment and delivering the order to the borough mayor.

* Sec. 10. AS 29.23.025(f) is repealed and re-enacted to read:

(f) A reapportionment ordinance approved by the voters, or a decision of the borough assembly that the standards of AS 29.23.021 do not require a change in apportionment, may be appealed to the commissioner of the Department of Community and Regional Affairs. Fifty

registered voters who are residents of the borough may submit a petition to the commissioner of community and regional affairs requesting the commissioner to determine whether the proposed reapportionment ordinance approved by the voters meets the standards of AS 29.23.021, or whether a decision of the borough assembly that the standards of AS 29.23.021 do not require a change of apportionment is correct. If the petition asks the commissioner of community and regional affairs to review an ordinance approved by the voters under (e) of this section, the petition shall be delivered to the commissioner not later than 20 days after certification of the election. If the petition asks the commissioner of community and regional affairs to review a decision of the borough assembly under (c) of this section, the petition shall be delivered to the commissioner within 20 days of the decision of the borough assembly. The commissioner of community and regional affairs shall review the petition and may make the determination requested. The commissioner shall provide copies of his determination to the persons petitioning for appeal and to borough officials not later than 60 days after he receives the petition. If the commissioner determines that the proposed reapportionment ordinance approved by the voters does not meet the standards of AS 29.23.021, or if he determines that the decision of the borough assembly that the standards of AS 29.23.021 do not require a change of apportionment is not correct, the commissioner

may, by order, direct the borough assembly to prepare a reapportionment ordinance which meets the standards of AS 29.23.021 and submit the ordinance to the voters under this section.

LA-L 20A

shall provide for the reapportionment of the borough assembly in accordance with the standards of AS 29.23.021 by preparing an order of reapportionment and delivering the order to the borough mayor.

* Sec. 11. AS 29.23.025(g) is amended to read:

(g) A change in assembly apportionment or composition under this section is effective beginning with the first regular election for members of the assembly which <u>is held more than 60 days after the later of:</u>

<u>(1) approval of the reapportionment ordinance by the voters under (e) of this section; or</u>

<u>(2) the delivery to the mayor of a reapportionment order of the commissioner of community and regional affairs under (e) or (f) of this section</u> [FOLLOWS APPROVAL OF A REAPPORTIONMENT ORDINANCE].

* Sec. 12. AS 29.23.025 is amended by adding new subsections to read:

(h) The commissioner of community and regional affairs may request the superior court to enforce a reapportionment order issued under (e) or (f) of this section.

(i) Each of the following is subject to judicial review:

(1) a plan of reapportionment approved by the voters under (a) of this section;

(2) a reapportionment ordinance approved by the voters under (e) of this section;

(3) a determination by the borough assembly under (c) of this section that the standards of AS 29.23.021 do not require a change in apportionment; and

(4) a reapportionment order of the commissioner of community and regional affairs made under (e) or (f) of this section.

(j) The provisions of (g) of this section do not apply to a borough in which a change in assembly composition or apportionment is

subject to review and approval or determination of nonobjection by the Attorney General of the United States under the Voting Rights Act of 1965, as amended, (42 U.S.C. 1971 - 1974). A change in assembly composition or apportionment subject to review under the Voting Rights Act of 1965, as amended, is effective beginning with the first regular election for members of the assembly which is held more than 60 days after

(1) receipt by the borough assembly of approval by the Attorney General of the United States of the proposed change in the composition or apportionment of the assembly;

(2) receipt by the borough assembly of a statement of nonobjection from the Attorney General of the United States to the proposed change in the composition or apportionment of the assembly; or

(3) the last day on which the Attorney General of the United States may review a proposed change in the composition or apportionment of the assembly.

(k) The provisions of this section do not apply

(1) to a unified municipality incorporated under AS 29.68.-240 - 29.68.440;

(2) to a home rule borough if the borough, by charter, provides for reapportionment of the borough assembly.

* Sec. 13. AS 29.23.040 is amended to read:

Sec. 29.23.040. REGULAR TERM OF OFFICE. (a) Assemblymen are selected for three-year terms and until their successors are selected and have qualified, unless different terms not exceeding four years are prescribed by borough charter or ordinance. Except when otherwise required by a change of composition or apportionment, if the term of an assemblyman is changed by charter or ordinance, the term of an assemblyman holding office at the time the change takes effect is not affected

by that change.

(b) The regular term of office begins on the first Monday following certification of the election, unless a different date is prescribed by borough charter or ordinance. [THE CURRENT TERM OF INCUMBENT ASSEMBLYMEN MAY NOT BE ALTERED UNDER THIS SECTION.]

(c) This section applies to home rule and general law boroughs.

* Sec. 14. AS 29.68.350(a)(2) is repealed and re-enacted to read:

(2) provisions for

(A) the establishment of service areas; and

(B) the establishment of districts or sections for the election of members of the legislative body of the unified municipality, if election of members of the legislative body is not areawide, and procedures by which to reapportion the election districts or sections;

* Sec. 15. Sections 1 - 12, and 14 of this Act take effect January 1, 1981.

* Sec. 16. Sections 13, 15, and 16 of this Act take effect immediately in accordance with AS 01.10.070(c).

*Sec. 1 AS 29.13.100(3) - *Sec. 4 AS 29.23.021(d)

No changes in the text of the sections

AS 29.23.023:

FCCS *Sec. 5
SCS [Repealed in Senate CS]

The Senate CS repealed AS 29.23.023. The FCCS re-enacts the provision to maintain the requirement that, following each decennial census, borough officials permit the residents to vote on form of representative and assembly composition, and that any proposed change in form of representative and composition which involves use of districts requires the assembly to specify the proposed districts on the election ballot. As offered in the FCCS, the provisions of AS 29.23.023 describe the forms of representation which may be offered for voter consideration and the time period in which the election must be called. The section exempts home rule and unified municipalities from being subject to its provisions.

AS 29.23.025(a)

FCCS *Sec. 6
SCS *Sec. 5

Replaces Senate CS language with provisions which tie apportionment provisions to changes in composition and form of representation.

AS 29.23.0025(b)

FCCS *Sec. 7
SCS *Sec. 6

The FCCS version borrows from existing AS 29.-23.025(c) by specifically authorizing the borough assembly to change its approtionment when the existing standards of AS 29.23.021 (one-man/one-vote; no institutional representation; no weighted voting) no longer apply.

AS 29.23.025(c)

FCCS *Sec. 8
SCS *Sec. 7

The FCCS confines this section to voter-initiated petitions asking for change in apportionment.

AS 29.23.025(e)

FCCS *Sec. 9
SCS *Sec. 8

Substantially the same in both versions -- describes time limits for apportionment when required.

Apportionment Appeals

FCCS *Sec. 10 -- AS 29.23.027
SCS *Sec. 9

Authorizes appeals of apportionment ordinances which are alleged to be not in compliance with standards of AS 29.23.021 to the commissioner of community and regional affairs. The FCCS version describes the procedures to be followed under the appeal.

Judicial Review

FCCS *Sec. 10 -- AS 29.23.029
SCS *Sec. 12 (h) and (i)

Substantially the same

Effective Date of New Apportionments

FCCS *Sec. 10 -- AS 29.23.031
SCS *Sec. 11 and *Sec. 12 (j)

Substantially the same

Applicability of Apportionment

FCCS *Sec. 10 -- AS 29.23.033
SCS *Sec. 12 (k)

Substantially the same

No changes in remainder of bill --

Because material in existing AS 29.23.025(f) and (g) is picked up in new AS 29.23.027 and AS 29.23.031, these are repealed in the FCCS.

FREE CONFERENCE CS FOR HOUSE BILL NO. 947

IN THE LEGISLATURE OF THE STATE OF ALASKA

ELEVENTH LEGISLATURE - SECOND SESSION

A BILL

For an Act entitled: "An Act relating to borough assemblies and amending the apportionment requirements of charters of unified municipalities; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 29.13.100(3) is repealed and re-enacted to read:

(3) AS 29.23.021 (borough assembly composition and apportionment), and AS 29.23.040 - 29.23.050 (borough assembly members)

* Sec. 2. AS 29.18.050(4) is amended to read:

(4) composition and apportionment of the assembly or council [, BUT THE NUMBER OF MEMBERS OF A BOROUGH ASSEMBLY MAY NOT EXCEED 11];

* Sec. 3. AS 29.23.021(b) is amended to read:

(b) The assembly of a newly incorporated borough is, after incorporation and until the adoption of an ordinance providing for a change in composition or apportionment, composed of the number of members and apportioned as set out in the incorporation petition approved by the voters. If the borough is already incorporated, the assembly shall be composed and apportioned in a manner that is consistent with the requirements of this section [AS 29.23.023] and prescribed by charter or ordinance.

* Sec. 4. AS 29.23.021 is amended by adding a new subsection to read:

(d) A member of the assembly of a borough may not be elected or appointed by and from the council of a city in the borough.

* Sec. 5. AS 29.23.023 is repealed and re-enacted to read:

Sec. 29.23.023. COMPOSITION AND FORM OF REPRESENTATION. (a) The

borough assembly shall provide for its composition and for the form of its representation.

(b) Not later than the first regular election which occurs after the report of a federal decennial census, the assembly shall propose and submit to the voters of the borough, at that regular election or at a special election called for the purpose, one or more forms of borough assembly representation. The forms of representation which the assembly may submit to the voters are:

(1) election of members of the borough assembly at large by the qualified voters throughout the borough;

(2) election of members of the borough assembly by district, including

(A) election at large by the qualified voters throughout the borough, but with a requirement that a candidate live within an election district established by the borough for election of assembly members; or

(B) election from election districts established by the borough for the election of assembly members by the qualified voters of a district;

(3) election of members of the borough assembly both at large and by district.

(c) A form of borough assembly representation which includes election of borough assembly members under (b)(2) or (b)(3) of this section shall be submitted to the voters of the borough with a plan of apportionment as required by AS 29.23.025(a).

(d) The borough assembly shall, within 30 days of certification of the results of the election held on a proposed form of representation under this section, adopt an ordinance providing for its composition and the form of assembly representation, and, if applicable, the apportion-

ment of assembly seats which corresponds to the proposed form of representation which receives the most votes at the election.

(e) This section does not apply

(1) to a unified municipality incorporated under AS 29.68.-240 - 29.68.440;

(2) to a home rule borough if the borough charter contains procedures for changing assembly composition and form of representation.

* Sec. 6. AS 29.23.025(a) is repealed and re-enacted to read:

(a) Not later than two months after the official report of a federal decennial census, the borough assembly shall determine and declare by resolution whether the existing apportionment of the borough assembly meets the standards of AS 29.23.021. If the borough assembly submits to the voters a form of representation which includes election of borough assembly members under AS 29.23.023(b)(2) or (b)(3), the assembly shall submit with the proposition a proposed plan of apportionment which corresponds to the form of representation proposed. The assembly shall describe the plan of apportionment in the ballot proposition, and may present the plan in any manner which it believes accurately describes the apportionment which is proposed under the form of representation. If the borough assembly determines that its existing apportionment meets the standards of AS 29.23.021, the assembly may include the existing apportionment as a proposed plan of apportionment of assembly seats which corresponds to a form of representation which is proposed.

* Sec. 7. AS 29.23.025(b) is repealed and re-enacted to read:

(b) The borough assembly shall provide, by ordinance, for a change in an existing apportionment of the borough assembly whenever it determines that the apportionment does not meet the standards of AS 29.23.021. At the same time, the borough assembly may, by ordinance,

change the composition of the assembly.

* Sec. 8. AS 29.23.025(c) is repealed and re-enacted to read:

(c) If a petition signed by not less than 50 registered voters who are residents of the borough requests the borough assembly to determine whether the existing apportionment meets the standards for apportionment in AS 29.23.021, and the petition contains evidence that the existing apportionment does not meet those standards, the assembly may make the determination requested. The borough assembly shall make a determination required by this subsection within two months of receipt of a petition which meets the requirements of this subsection.

* Sec. 9. AS 29.23.025(e) is amended to read:

(e) Within six [FOUR] months of a determination by the borough assembly under (b) or (c) of this section that the current apportionment does not meet the standards of AS 29.23.021 [AS 29.23.021 - 29.23.025], the borough assembly shall adopt an ordinance providing for reapportionment, and submit the ordinance to the voters. If, at the end of the six-month [FOUR-MONTH] time period, an ordinance providing for reapportionment has not been approved by the voters, the commissioner of the Department of Community and Regional Affairs shall provide for the reapportionment in accordance with the standards of AS 29.23.021 [AS 29.23.021 - 29.23.023] by preparing an order of reapportionment and delivering the order to the borough mayor.

* Sec. 10. AS 29.23 is amended by adding new sections to read:

Sec. 29.23.027. APPORTIONMENT APPEALS. (a) A reapportionment ordinance approved by the voters, or a decision of the borough assembly that the standards of AS 29.23.021 do not require a change in apportionment, may be appealed to the commissioner of the Department of Community and Regional Affairs. Fifty registered voters who are residents of the borough may submit a petition to the commissioner of community and

regional affairs requesting the commissioner to determine whether the proposed reapportionment ordinance approved by the voters meets the standards of AS 29.23.021, or whether a decision of the borough assembly that the standards of AS 29.23.021 do not require a change of apportionment is correct. If the petition asks the commissioner of community and regional affairs to review an ordinance approved by the voters under AS 29.23.025(e), the petition shall be delivered to the commissioner not later than 20 days after certification of the election. If the petition asks the commissioner of community and regional affairs to review a decision of the borough assembly under AS 29.23.025(c), the petition shall be delivered to the commissioner within 20 days of the decision of the borough assembly.

(b) The commissioner of community and regional affairs shall review the petition and may make the determination requested. The commissioner shall provide copies of his determination to the persons petitioning for appeal and to borough officials not later than 60 days after he receives the petition.

(c) If the commissioner of community and regional affairs determines that the proposed reapportionment ordinance approved by the voters does not meet the standards of AS 29.23.021, or if he determines that the decision of the borough assembly that the standards of AS 29.23.021 do not require a change of apportionment is not correct, the commissioner shall, by order, direct the borough assembly to prepare a reapportionment ordinance which meets the standards of AS 29.23.021 and submit the ordinance to the voters.

(d) When the borough assembly has been directed by the commissioner of community and regional affairs to prepare a reapportionment ordinance under (c) of this section, the borough assembly shall, within two months of its receipt of the commissioner's order, adopt an ordi-

nance providing for reapportionment. The borough assembly shall submit an ordinance adopted under this subsection to the voters at a regular election or special election held within 60 days of the date of adoption of the reapportionment ordinance.

(e) If at the end of the time period provided under (d) of this section an ordinance providing for reapportionment has not been approved by the voters, the commissioner of community and regional affairs shall provide for the reapportionment of the borough assembly in accordance with the standards of AS 29.23.021 by preparing an order of reapportionment and delivering the order to the borough mayor.

Sec. 29.23.029. JUDICIAL REVIEW AND RELIEF. (a) The commissioner of community and regional affairs may request the superior court to enforce a reapportionment order issued under AS 29.23.027(e).

(b) Each of the following is subject to judicial review:

(1) a plan of reapportionment approved by the voters under AS 29.23.025(a);

(2) a determination by the borough assembly under AS 29.23.025(c) that the standards of AS 29.23.021 do not require a change in apportionment;

(3) a reapportionment ordinance approved by the voters under AS 29.23.025(d);

(4) a reapportionment order of the commissioner of community and regional affairs made under AS 29.23.027(c);

(5) a reapportionment ordinance approved by the voters under AS 29.23.027(d); and

(6) a reapportionment order of the commissioner of community and regional affairs made under AS 29.23.027(e).

Sec. 29.23.031. EFFECTIVE DATE OF APPORTIONMENT. (a) A change in assembly apportionment or composition under AS 29.23.025 or 29.23.027 is

effective beginning with the first regular election for members of the assembly which is held more than 60 days after the later of:

(1) approval of a reapportionment ordinance by the voters under AS 29.23.025(a), 29.23.025(e), or 29.23.027(d); or

(2) the delivery to the mayor of a reapportionment order of the commissioner of community and regional affairs under AS 29.23.027(e).

(b) The provisions of (a) of this section do not apply to a borough in which a change in assembly composition or apportionment is subject to review and approval or determination of nonobjection by the Attorney General of the United States under the Voting Rights Act of 1965, as amended, (42 U.S.C. 1971 - 1974). A change in assembly composition or apportionment subject to review under the Voting Rights Act of 1965, as amended, is effective beginning with the first regular election for members of the assembly which is held more than 60 days after

(1) receipt by the borough assembly of approval by the Attorney General of the United States of the proposed change in the composition or apportionment of the assembly;

(2) receipt by the borough assembly of a statement of nonobjection from the Attorney General of the United States to the proposed change in the composition or apportionment of the assembly; or

(3) the last day on which the Attorney General of the United States may review a proposed change in the composition or apportionment of the assembly.

Sec. 29.23.033. APPLICABILITY OF APPORTIONMENT PROVISIONS. The provisions of AS 29.23.025 - 29.23.031 do not apply

(1) to a unified municipality incorporated under AS 29.68.-240 - 29.68.440;

(2) to a home rule borough if the borough, by charter,

provides for reapportionment of the borough assembly.

* Sec. 11. AS 29.23.040 is amended to read:

Sec. 29.23.040. REGULAR TERM OF OFFICE. (a) Assemblymen are selected for three-year terms and until their successors are selected and have qualified, unless different terms not exceeding four years are prescribed by borough charter or ordinance. Except when otherwise required by a change of composition or apportionment, if the term of an assemblyman is changed by charter or ordinance, the term of an assembly man holding office at the time the change takes effect is not affected by that change.

(b) The regular term of office begins on the first Monday following certification of the election, unless a different date is prescribed by borough charter or ordinance. [THE CURRENT TERM OF INCUMBENT ASSEMBLYMEN MAY NOT BE ALTERED UNDER THIS SECTION.]

(c) This section applies to home rule and general law boroughs.

* Sec. 12. AS 29.68.350(a)(2) is repealed and re-enacted to read:

(2) provisions for

(A) the establishment of service areas; and

(B) the establishment of districts or sections for the election of members of the legislative body of the unified municipality, if election of members of the legislative body is not areawide, and procedures by which to reapportion the election districts or sections;

* Sec. 13. AS 29.23.025(f) and (g) are repealed.

* Sec. 14. Sections 1 - 10, 12, and 13 of this Act take effect January 1, 1981.

* Sec. 15. Sections 11, 14, and 15 of this Act take effect immediately in accordance with AS 01.10.070(c).

contain the signatures of 25 percent of those voting in the last general election. Area Dispatch, Inc. v. City of Anchorage, Sup. Ct. Op. No. 1231 (File No. 2624), 544 P.2d 1024 (1976).

Article 2. Home Rule Limitations.

Section
100 Limitation of home rule powers

Sec. 29.13.100. Limitation of home rule powers. Only the following provisions of this title apply to home rule municipalities as prohibitions on acting otherwise than as provided. They supersede existing and prohibit future home rule enactments which provide otherwise:

(3) [Effective until January 1, 1981] AS 29.23.020 — 29.23.050 (borough assembly representation)

[Effective January 1, 1981] AS 29.23.021; 29.23.025 — 29.23.050 (composition and apportionment of borough assembly; borough assembly recomposition and reapportionment; assembly representation)

(22) AS 29.53.010 — 29.53.400 (borough and city property taxes)

(34) AS 29.33.050, AS 29.41.010(a), AS 14.12.020(a) (responsibility for education on military reservations)

(35) AS 29.58.345 — 29.58.350 (bonded debt for school construction)

(36) AS 29.63.065 (exemption from special assessment)

(37) AS 29.33.090(d) (zoning of state land for homesite entry)

(38) AS 29.48.130(a)(12) (municipal exemption on contractor bond requirements)

(39) AS 29.33.150(b) (applicability of local platting regulations to state land in a municipality)

(am § 2 ch 32 SLA 1973; am § 43 ch 53 SLA 1973; am § 2 ch 137 SLA 1975; am § 2 ch 114 SLA 1975; am § 3 ch 218 SLA 1976; am § 4 ch 142 SLA 1977; am § 1 ch 20 SLA 1978; am § 2 ch 81 SLA 1978; am § 2 ch 83 SLA 1979; am § 1 ch 85 SLA 1979)

Effect of amendments.

The first 1973 amendment added paragraph (34).

The second 1973 amendment deleted "city representation and vote on" preceding "borough assembly" and added "representation" to the end of paragraph (3).

The 1974 amendment added paragraph (35).

The 1975 amendment added paragraph (36).

The 1976 amendment substituted "AS 29.58.345" for "AS 29.58.340" at the beginning of paragraph (35).

The 1977 amendment added paragraph (37).

The first 1978 amendment rewrote paragraph (22), which formerly read "AS 29.53.010 — 29.53.350, 29.53.400 (borough and city property tax)."

The second 1978 amendment added paragraph (38).

The first 1979 amendment, effective January 1, 1981, rewrote paragraph (3).

The second 1979 amendment, effective July 1, 1979, added paragraph (39).

As the rest of the section was not affected by the amendments, it is not set out.

Legislative committee report — For report on ch. 53, SLA 1973 (CSHB 382), see 1973 House Journal, pp. 793, 885.

Senate CS for HB 947

Section 1. AS 29.13.100(3) is repealed and re-enacted to read:

(3) AS 29.23.021 (borough assembly composition and apportionment), and AS 29.23.040 - 29.23.050 (borough assembly members)

* Sec. 2. AS 29.18.050(4) is amended to read:

(4) composition and apportionment of the assembly or council [, BUT THE NUMBER OF MEMBERS OF A BOROUGH ASSEMBLY MAY NOT EXCEED 11];

Article 2. Procedures.

Section		Section	
50.	Petition	100.	[Repealed]
70.	Investigation	110.	Incorporation election
80.	Report and hearing	120.	Election of initial officers
90.	Decision on municipal incorporation		

Sec. 29.18.050. Petition. Municipal incorporation is proposed b filing a petition with the Department of Community and Region Affairs. The petition shall include the following information about th proposed municipality:

(1) class;

(2) name;

(3) boundaries;

(4) **[Effective until January 1, 1981]** composition and apportionme the assembly or council;

[Effective January 1, 1981] composition and apportionment of t assembly or council, but the number of members of a borough assemb may not exceed 11;

(5) for a first class borough, a designation of areawide powers to exercised;

(6) for a second class borough, a designation of areawide a nonareawide powers to be exercised;

(7) maps, documents, and other information required by t Department of Community and Regional Affairs;

(8) for first class city incorporation, the signatures and reside address of 50 permanent resident voters or of 15 per cent of t permanent resident voters within the proposed municipality, whiche is greater, based on the number who voted in the area in the last gener election;

(9) for second class city incorporation, the signature and reside address of 25 permanent resident voters or of 15 per cent of t permanent resident voters within the proposed municipality, whiche is greater, based on the number who voted in the area in the last gener election;

(10) for borough incorporation, the signature and resident address 15 per cent of the permanent resident voters in each first class city an 15 per cent of voters in the area outside first class cities based on th number who voted in the respective areas in the last general electio

(11) for a city, a designation of the powers proposed by the petitione to be exercised;

(12) a proposed operating budget for the municipality projectin sources of income and items of expenditure through the first full fisca year of operation. (§ 2 ch 118 SLA 1972; am § 9 ch 200 SLA 1972; am § 2 ch 212 SLA 1976; am § 3 ch 83 SLA 1979)

Effect of amendments. — end of paragraph (8), substituted "

to apportionment of the borough assembly is required or proposed under AS 29.23.020, repealed by sec. 21 [24] of ch. 83, SLA 1979, or is effected as required or proposed under AS 29.23.021 — 29.23.025, added by sec. 1 of ch. 83, SLA 1979."

Sec. 29.23.021. Assembly composition and apportionment [Effective January 1, 1981]. (a) Assembly composition and apportionment shall be consistent with the equal representation standards of the Constitution of the United States.

(b) The assembly of a newly incorporated borough is, after incorporation and until the adoption of an ordinance providing for a change in composition or apportionment, composed of the number of members and apportioned as set out in the incorporation petition approved by the voters. If the borough is already incorporated, the assembly shall be composed and apportioned in a manner that is consistent with AS 29.23.023 and prescribed by charter or ordinance.

(c) An assembly may not provide for weighted voting. (§ 1 ch 83 SLA 1979)

Effective date. — Section 27, ch. 83, SLA 1979, makes this section effective January 1, 1981.

Editor's note. — Section 26, ch. 83, SLA 1979, effective June 2, 1979, provides: "Notwithstanding AS 29.23.040, amended by sec. 4 of ch. 83, SLA 1979, the terms of office of borough assemblymen elected or appointed to dual borough assembly-city council seats are not affected by the amendment made to AS 29.23.040 in sec. 4 of ch. 83, SLA 1979 until reapportionment of the borough assembly is required or proposed under AS 29.23.020, repealed by sec. 21 [24] of ch. 83, SLA 1979, or is effected as required or proposed under AS 29.23.021 — 29.23.025, added by sec. 1 of ch. 83, SLA 1979."

Statute superseded home-rule enactments. — See Roderick v. Sullivan, Sup. Ct. Op. No. 1099 (File No. 2243), 528 P.2d 450 (1974), decided under former AS 29.23.020.

Sec. 29.23.023. Composition and representation requirements for general law boroughs [Effective January 1, 1981]. (a) The borough assembly shall provide for its composition and for the form of its representation. Not later than July 31, 1981, and thereafter within four months after the report of a federal decennial census, the assembly shall propose and submit to the voters at a regular election or special election called for the purpose, alternative forms of representation by which members are

(1) elected at large by all qualified voters of the borough;

(2) elected at large by all qualified voters of the borough, but required to live within an election district or zone established by the borough for election of assembly members, with each district or zone being of substantially equal population; or

(3) elected by and from election districts or zones established by the borough for the election of borough assembly members.

(b) The proposals set out in (a) of this section shall be submitted to the voters. The vote on the proposals submitted to the voters shall be tabulated in two separate classifications. One classification shall consist of all votes cast in the first class and home rule cities in the borough.

* Sec. 3. AS 29.23.021(b) is amended to read:

(b) The assembly of a newly incorporated borough is, after incorporation and until the adoption of an ordinance providing for a change in composition or apportionment, composed of the number of members and apportioned as set out in the incorporation petition approved by the voters. If the borough is already incorporated, the assembly shall be composed and apportioned in a manner that is consistent with the requirements of this section [AS 29.23.023] and prescribed by charter or ordinance.

* Sec. 4. AS 29.23.021 is amended by adding a new subsection to read:

(d) A member of the assembly of a borough may not be elected or appointed by and from the council of a city in the borough.

* Sec. 14. AS 29.23.023 is repealed.

* Sec. 5. AS 29.23.025(a) is amended to read:

(a) Within two [NOT LATER THAN JULY 31, 1981, AND THEREAFTER WITHIN FOUR] months after the official report of a federal decennial census, the borough assembly shall determine and declare by resolution if the existing apportionment of the assembly meets the applicable standards of AS 29.23.021 [AS 29.23.021 - 29.23.023].

* Sec. 6. AS 29.23.025(b) is amended to read:

(b) If the existing apportionment of the borough assembly does not meet the applicable standards of AS 29.23.021 [AS 29.23.021 - 29.23.023] the assembly shall provide by ordinance for its reapportionment. At the same time, the borough assembly may, by ordinance, change the composition of the assembly.

* Sec. 7. AS 29.23.025(c) is amended to read:

(c) In addition to providing for apportionment at the times required under (b) of this section, the borough assembly shall provide by ordinance for its reapportionment and may provide, by ordinance, for a change in its composition whenever it determines, on the basis of federal census reports or other reliable population data, that the existing apportionment does not meet the standards for apportionment in AS 29.23.021. If a petition signed by not less than 50 registered [BOROUGH] voters who are residents of the borough requests the borough assembly to determine whether the existing apportionment meets the standards for apportionment in AS 29.23.021, and the petition contains evidence that the existing apportionment does not meet those standards, the assembly may [SHALL] make the determination requested. The borough assembly shall make a determination when required by this subsection within two months of its receipt of a petition which meets the requirements of this subsection.

The other classification shall consist of all votes cast in the remaining area of the borough. The borough assembly shall, within three months of the certification of the results of the election adopt an ordinance providing for its composition and the form of representation which conforms to the form of representation receiving a plurality of the votes in each classification at that election.

(c) A member of the assembly of a general law borough may not be elected or appointed by and from the council of a city in the borough. (§ 1 ch 83 SLA 1979)

Effective date. — Section 27, ch. 83, SLA 1979, makes this section effective January 1, 1981.

Editor's note. — Section 26, ch. 83, SLA 1979, effective June 2, 1979, provides: "Notwithstanding AS 29.23.040, amended by sec. 4 of ch. 83, SLA 1979, the terms of office of borough assemblymen elected or appointed to dual borough assembly-city council seats are not affected by the amendment made to AS 29.23.040 in sec. 4 of ch. 83, SLA 1979 until reapportionment of the borough assembly is required or proposed under AS 29.23.020, repealed by sec. 21 [24] of ch. 83, SLA 1979, or is effected as required or proposed under AS 29.23.021 — 29.23.025, added by sec. 1 of ch. 83, SLA 1979."

Sec. 29.23.025. Assembly recomposition and reapportionment [Effective January 1, 1981]. (a) Not later than July 31, 1981, and thereafter within four months after the official report of a federal decennial census, the assembly shall determine and declare by resolution if the existing apportionment of the assembly meets the applicable standards of AS 29.23.021 — 29.23.023.

(b) If the existing apportionment of the assembly does not meet the applicable standards of AS 29.23.021 — 29.23.023, the assembly shall provide by ordinance for its reapportionment. At the same time, the assembly may change the composition of the assembly.

(c) In addition to providing for apportionment at the times required under (b) of this section, the borough assembly shall provide by ordinance for its reapportionment and may provide for a change in its composition whenever it determines, on the basis of federal census reports or other reliable population data, that the existing apportionment does not meet the standards for apportionment in AS 29.23.021. If a petition signed by not less than 50 borough voters requests the assembly to determine whether the existing apportionment meets the standards for apportionment in AS 29.23.021, and the petition contains evidence that the existing apportionment does not meet those standards, the assembly shall make the determination requested.

(d) An ordinance adopted by the assembly under (b) or (c) of this section shall be submitted to the voters for approval. In order for the ordinance to be approved it must receive the approval of a majority of the votes cast.

(e) Within four months of a determination by the assembly that the current apportionment does not meet the standards of AS 29.23.021 — 29.23.025, the assembly shall adopt an ordinance providing for

see next page

reapportionment, and submit the ordinance to the voters. If, at the end of the four-month time period, an ordinance providing for reapportionment has not been approved, the Department of Community and Regional Affairs shall provide for the reapportionment in accordance with the standards of AS 29.23.021 — 29.23.023.

(f) A reapportionment ordinance, or a determination of the borough assembly that applicable standards do not require adoption of a change in apportionment, is subject to judicial review.

(g) A change in assembly apportionment or composition under this section is effective beginning with the first regular election for members of the assembly which follows approval of a reapportionment ordinance. (§ 1 ch 83 SLA 1979)

Sec. 8. AS 29.23.025(e) is amended to read:

(e) Within six [FOUR] months of a determination by the borough assembly that the current apportionment does not meet the standards of AS 29.23.021 [AS 29.23.021 - 29.23.025], the borough assembly shall adopt an ordinance providing for reapportionment, and submit the ordinance to the voters. If, at the end of the six-month [FOUR-MONTH] time period, an ordinance providing for reapportionment has not been approved by the voters, the commissioner of the Department of Community and Regional Affairs shall provide for the reapportionment in accordance with the standards of AS 29.23.021 [AS 29.23.021 - 29.23.023] by preparing an order of reapportionment and delivering the order to the borough mayor.

Sec. 9. AS 29.23.025(f) is repealed and re-enacted to read:

(f) A reapportionment ordinance approved by the voters, or a determination of the borough assembly that the standards of AS 29.23.021 do not require a change in apportionment, may be appealed to the commissioner of the Department of Community and Regional Affairs. Fifty registered voters who are residents of the borough may submit a petition to the commissioner of community and regional affairs requesting the commissioner to determine whether the proposed reapportionment ordinance approved by the voters meets the standards of AS 29.23.021, or whether a determination of the borough assembly that the standards of AS 29.23.021 do not require a change of apportionment is correct. If the petition asks the commissioner of community and regional affairs to review an ordinance approved by the voters under (e) of this section, the petition shall be delivered to the commissioner not later than 20 days after certification of the election. If the petition asks the commissioner of community and regional affairs to review a determination of the borough assembly under (c) of this section, the petition shall be delivered to the commissioner within 20 days of the determination of the borough assembly. The commissioner of community and regional affairs shall review the petition and may make the determination requested. The commissioner of community and regional affairs shall provide copies of his decision to the persons petitioning for appeal and to borough officials not later than 60 days after he receives the petition.

Sec. 10. AS 29.23.025(g) is amended to read:

(g) A change in assembly apportionment or composition under this section is effective beginning with the first regular election for members of the assembly which is held more than 60 days after the latest of the following:

(1) approval of the reapportionment ordinance by the voters under (e) of this section;

(2) the delivery to the mayor of the reapportionment order of the commissioner of community and regional affairs under (e) of this section; or

(3) a final determination of the commissioner of community and regional affairs of an appeal under (f) of this section approving a revised [FOLLOWS APPROVAL OF A] reapportionment ordinance.

* Sec. 11. AS 29.23.025 is amended by adding new subsections to read:

(h) Each of the following is subject to judicial review:

(1) a reapportionment order of the commissioner of community and regional affairs made under (e) of this section; and

(2) a decision of the commissioner of community and regional affairs on an appeal made under (f) of this section.

(i) The provisions of this section apply to

(1) a home rule and a general law borough;

(2) a unified municipality incorporated under AS 29.68.240 - 29.68.440 before the effective date of this section, unless

(A) election of members of the assembly of a unified municipality occurs at large; or

(B) the commissioner of community and regional affairs determines, not later than February 1, 1981, that the charter of the unified municipality contains procedures by which to apportion election districts or sections.

Sec. 29.23.040. Regular term of office. Assemblymen are selected for three-year terms and until their successors are selected and have qualified, unless different terms not exceeding four years are prescribed by borough charter or ordinance. The regular term of office begins on the first Monday following certification of the election. The current term of incumbent assemblymen may not be altered under this section. This section applies to home rule and general law boroughs. (§ 2 ch 118 SLA 1972; am § 13 ch 118 SLA 1972; am § 4 ch 83 SLA 1979)

Effect of amendment.

The 1979 amendment, effective June 2, 1979, rewrote the second sentence.

Editor's note. — Section 26, ch. 83, SLA 1979, effective June 2, 1979, provides that the terms of borough assemblymen elected or appointed to dual borough assembly-city council seats are not effected by the amendment made to AS 29.23.040 by sec. 4, ch. 83, SLA 1979 until reapportionment of the assembly is required or proposed under AS 29.23.020 or under AS 29.23.021 — 29.23.025.

Sec. 12. AS 29.23.040 is amended to read:

Sec. 29.23.040. REGULAR TERM OF OFFICE. (a) Assemblymen are selected for three-year terms and until their successors are selected and have qualified, unless different terms not exceeding four years are prescribed by borough charter or ordinance. Except when otherwise required by a change of apportionment under AS 29.23.025, if the term of an assemblyman is changed by charter or ordinance, the term of an assemblyman holding office at the time the change takes effect is not affected by that change.

(b) The regular term of office begins on the first Monday following certification of the election, unless a different date is prescribed by borough charter or ordinance. [THE CURRENT TERM OF INCUMBENT ASSEMBLYMEN MAY NOT BE ALTERED UNDER THIS SECTION.]

(c) This section applies to home rule and general law boroughs.

...ts, fees, and other expenses incurred by the charter commission are a debt of the borough and shall be paid upon proper ...ification. (§ 2 ch 118 SLA 1972)

Sec. 29.68.350. Charter preparation. (a) A charter commission established under this chapter shall prepare, adopt and submit a proposed home rule charter for the area to be unified to the voters for approval or rejection at a regular or special borough election called by the borough assembly held within 60 days of the date of publication and posting of the proposed charter as required in § 380 of this chapter. The charter shall include among its provisions:

(1) provisions for adjustment of existing bonded indebtedness and other obligations in a manner which will reserve a fair and equitable burden of taxation for debt service, subject to § 410 of this chapter;

(2) provision for the establishment of

(A) service areas;

(B) sections, if desired; and

(C) reapportionment of the sections, if established;

(3) provision for nonpartisan government and provision for the selection, organization, authority and responsibilities of the governing body and its executive and administrator;

(4) the transfer or other disposition of property and other rights, claims, assets and franchises of the local government to be unified under the charter;

(5) provision for exercise of the rights of initiative and referendum as required by AS 29.13.050;

(6) a method of amending the charter;

(7) the date on which the charter, if approved at the charter election required by § 390 of this chapter, is effective;

(8) designation of the new municipality's official name, subject to the provisions of (b) of this section;

(9) other charter provisions which the charter commission elects to include and which may be included in a home rule charter under this chapter and the state constitution.

(b) The area to be unified shall be known as a borough or a city or by some other designation consistent with existing law. (§ 2 ch 118 SLA 1972; am § 6 ch 147 SLA 1972)

Effect of amendment. — The 1972 amendment, effective September 10, 1972, deleted the language following "existing law" in subsection (b).

Sec. 29.68.360. Public hearings. Both before and after drafting the proposed charter, the charter commission shall hold a public hearing in each area of the borough represented on the borough assembly. Other public hearings may be held by the charter com-

* Sec. 13. AS 29.68.350(a)(2) is repealed and re-enacted to read:

(2) provisions for

(A) the establishment of service areas; and

(B) the establishment of districts or sections for the election of members of the borough assembly, if election of borough assembly members is not areawide, and procedures by which to reapportion the election districts or sections;

* Sec. 15. Sections 1 - 11, 13, and 14 of this Act take effect January 1, 1981.

* Sec. 16. Sections 12, 15 and 16 of this Act take effect immediately in accordance with AS 01.10.070(c).

Sectional Analysis - Senate CS for HB 947

Sec. 1. Makes AS 29.23.021 applicable to home rule municipalities.

Sec. 2. Deletes requirement that the number of members of a borough assembly may not exceed 11.

Sec. 3. Deletes reference to AS 29.23.023, which is repealed by Sec. 14 of this bill.

Sec. 4. Prohibits institutional representation.

Sec. 5. Requires a embly to determine if malapportioned; changes time limit from 4 months to 2 months; deletes reference to AS 29.23.023.

Sec. 6. Deletes reference to AS 29.23.023; requires changes in apportionment or composition to be made by ordinance - AS 29.23.025(d) requires voter approval of apportionment and composition ordinances.

Sec. 7. Clarifies wording and requires borough assembly to make a determination if malapportioned if petitioned by 50 registered voters who are residents of the borough.

Sec. 8. Lengthens time limit from 4 months to 6 months to adopt a reapportionment ordinance and clarifies wording about Dept. of C&RA providing for reapportionment.

Sec. 9. New section which provides review by the C&RA Commissioner if petitioned by 50 registered voters who are residents of the borough.

Sec. 10. Technical change in effective date of reapportionment plans.

Sec. 11. Provides for judicial review; makes section applicable to home rule and general law boroughs and to unified municipalities whose assemblies are not elected at large or whose charter does not contain reapportionment provisions.

Sec. 12. Permits reapportionment to change the regular term of office of an assemblyman; permits charter or ordinance to change when the regular term of office begins.

Sec. 13. Clarifies that charters for unified municipalities must contain provisions for reapportionment procedures.

Sec. 14. Repeals AS 29.23.023, which would require special elections or forms of representation, dual-plurality to implement, and extremely tight time limits.

Sec. 15 & 16. Effective date sections.

New Section 5 (re-number remaining sections accordingly)

Sec. 5. AS 29.23.023 (b) is repealed and reenacted to read:

(b) one or more of the proposals set out in ~~section~~ (a) of this section shall be submitted to the voters at the next regular election.

City and Borough of Sitka

P.O. BOX 79 · SITKA, ALASKA · 99835

February 25, 1980

Representative Richard Eliason
Pouch V
Juneau, Alaska 99811

Dear Representative Eliason:

It has recently been brought to our attention by Assembly member, Roberley Potter, that A.S. 29.23.023 was enacted last year. Unless amended, this statute will have many unintended effects on Sitka. Chief among these effects would be to cost the municipality money and to hold both the Assembly and the State Legislature up to ridicule.

29.23.023 (which applies to Home Rule Municipalities) provides that by July 31, 1981, all municipalities must hold an election and present to the voters various local apportionment schemes for Assembly representation.

In Sitka, since unification in 1971, all Assembly members have been elected at large; however, this law would require the City to spend a fair amount of time and money coming up with proposed election districts (containing equal populations) and to have a vote on the whole mess.

It seems obvious to me, at least, that the real purpose of the statute is to force various municipalities around the State which do have election districts to review them and to also give the citizens the right to vote for area-wide representation.

I don't believe that places already having area-wide representation were really intended to be covered by this Statute.

The Statute should be amended to allow for such an exemption or we're all going to have fun explaining why we are going through such an expensive waste of time in Sitka.

Could you please investigate this situation and consider sponsoring legislation to exempt municipalities like Sitka which already provide area-wide Assembly representation?

I wish to also point out a further minor problem. A.S. 29.23.130 (c) as amended last year (and applicable to Home Rule Municipalities) has the term of office of new Assembly men begin ". . . . on the first Monday following Certification of the Election."

There are two problems with this in Sitka, First: The former practice in Sitka has been for the election to be certified at the next regular Assembly meeting following the election. Following certification, the new members are sworn in and take their seats. Under this new procedure, we would have to call a Special meeting the Monday following certification merely to swear in new members.

Second: The Mayor (while having no special powers in Sitka) may continue to be sworn into office at the meeting where the election is certified since the Legislative enactments covering the beginning of Mayors' terms are not made applicable to Home Rule Municipalities. That's also going to look real funny to the voters if we swear in a new Mayor at one meeting but have to wait until the next Monday to swear in the rest of the new Assembly members.

I wish that your collegues would someday quit poking the Legislative stick in the eye of the Home Rule Municipality and stop creating problems where none existed before.

I realize that my comments would have been more helpful if they had been made prior to passage of these Statutes, however, I am sure none of us realized the potential problems at that time.

If I can be of any aid to you, please let me know.

Sincerely,

Peter S. Hallgren
Municipal Attorney

SCSCSHB 947 - ASSEMBLY APPORTIONMENT & REAPPORTIONMENT

BACKGROUND & SUMMARY

Last session the House attached a complicated assembly apportionment and reapportionment bill to a Senate passed municipal code cleanup bill and adopted a floor amendment that made the prescribed process virtually impossible to implement. Because it was very late in the session with no time for a free conference committee and because the effective date of the bill wasn't until January 1, 1981, the Senate decided to accept the House version and amend it this session to make the reapportionment procedures workable. Senate CS for CSHB 947 sets out assembly apportionment standards in AS 29.23.021, revises and simplifies the reapportionment procedures in AS 29.23.025, and repeals AS 29.23.023 which contains the most onerous provisions of the bill (SB 137) that passed last year.

* * * * * * * * * *

PROBLEMS WITH AS 29.23.023, ENACTED LAST YEAR

SCSCSHB 947 repeals AS 29.23.023 which provided:

Special Election on Form of Representation. Required special election following decennial census asking borough residents if they want their assembly members elected at large, elected at large but required to live in a district, or elected by and from districts. Boroughs must go to the expense of a special election whether or not there is any dissatisfaction with the current form of representation, and whether or not the assembly is malapportioned. This provision is not necessary because there already exists in law the initiative procedures which may be used by borough residents to change their form of representation.

Dual Plurality Tabulation. Results of above election must be tabulated both inside and outside cities; the assembly must devise a reapportionment plan which "conforms to the form of representation receiving a plurality of the votes in each classification at that election." Nowhere in the law does it say what happens if the people inside the cities vote one way and the people outside vote another.

Short Time Limit. AS 29.23.023 allows only four months for the assembly to devise a reapportionment plan, adopt an ordinance, and get that ordinance ratified by borough voters. Because of the amount of time needed for legal notices for adoption of ordinances and elections, assemblies would have very little time to come up with a reapportionment plan.

* * * * * * * * * *

HIGHLIGHTS OF SENATE CS for CSHB 947

Apportionment Standards. As 29.23.021, as revised by SCSCSHB 947, sets out standards for assembly apportionment:

1.-consistent with equal representation standards of US Constitution;
2.-apportionment set out in incorporation petition approved by voters;
3.-no weighted voting;
4.-no institutional representation (city council may not appoint one or more of its members to serve on borough assembly).

Reapportionment Procedure. As 29.23.025, as revised by SCSCSHB 947, sets out procedures for assembly reapportionment:

1.-assembly determine if malapportioned within 2 months of census report;
2.-if malapportioned, assembly has 6 months to adopt by ordinance a reapportionment plan that must be ratified by voters;
3.-if no plan approved within 6 months, C&RA Commissioner provides reapportionment (similar provision in current law);
4.-allows reapportionment at times other than following a census;
5.-provides for advisory review by C&RA Commissioner and for judicial review;
6.-specifies election at which reapportionment plan goes into effect.

AS 29.23.025 is applicable to boroughs but not to unified municipalities. Another part of SCSCSHB 947 clarifies that unified municipalities must provide for reapportionment in their charters.

Miscellaneous Provisions. SCSCSHB 947 also deletes the requirement that the number of assembly members of new boroughs not exceed 11 and allows boroughs to establish by ordinance or charter the date on which assembly terms begin.

SUBJECT: SCS CSHB 947, sectional analysis
(Work Order Number 8564)

TO: Senator Arliss Sturgulewski
Chairman, Senate Community and Regional
Affairs Committee

FROM: John B. Chenoweth
Legislative Counsel

This bill

(1) changes substantially requirements of law applicable to the composition and apportionment of the assemblies of boroughs; and

(2) alters requirements relating to the term of office of a member of a borough assembly.

*

Note: In sections 1 - 3 of Ch. 83, SLA 1979, the first session of the Eleventh Legislature made substantial changes in the law relating to the composition and apportionment of borough assemblies. These changes are due to become effective on January 1, 1981. The changes, generally include

(1) general provisions and standards applicable to the composition and apportionment of all boroughs, set out at AS 29.23.021;

(2) composition and representation requirements for general law boroughs (that is, exclusive of home rule boroughs and unified municipalities), set out at AS 29.23.023; and

(3) recomposition and reapportionment procedures applicable to all boroughs, set out at AS 29.23.025.

SCS CSHB 947 alters many of the provisions adopted last year.

*

A principal change in this bill is the repeal of AS 29.-23.023 [* Sec. 14] and the retention of some of the key provisions of that repealed section elsewhere.

* Sec. 3 of this bill deletes a reference to AS 29.23.023, appearing in AS 29.23.021. If adopted, the assembly of a borough or unified municipality would be required to conform to standards of composition and apportionment applicable under the Constitution of the United States (popularly referred to as "equal protection"). Additionally, if adopted, the assembly of a borough could not provide for weighted voting, and, by the inclusion of the material in * Sec. 4 of the bill, could not include members appointed from city councils of cities in the borough (i.e. no "institutional representation").

* Sec. 4 "saves" a provision, now AS 29.23.023(c), and imposes it as a standard applicable to all boroughs and unified municipalities.

* Sec. 5 shortens, from four to two months, the period in which, after the report of census information, a borough is obliged to determine whether it meets existing apportionment standards under AS 29.23.021. (Last year, when AS 29.23.023 was enacted, it was understood that an official report of the 1980 census would be issued about April 1, 1981, and four months were allowed to boroughs to make the determination required.) Elsewhere in the section, the term "borough" is added to assembly, as clarification, and the reference to AS 29.23.023, repealed in sec. 14 of the bill, is corrected.

* Sec. 6: The operative provision is the inclusion of the words "by ordinance" to clarify how the borough shall provide for changes in composition as well as apportionment. Other changes in the section are for consistency.

* Sec. 7: The changes in AS 29.23.025(c) make more specific the requirements which are imposed on persons who wish to challenge a determination of the borough assembly concerning apportionment. "50 registered voters who are residents of the borough" is substituted for "50 borough voters" so that local elections officials may be able to determine with certainty whether a petition request is presented by bona fide residents of the borough. Additionally, when a determination is requested, the assembly is given two months to make that determination.

* Sec. 8 increases to six months (from four) the period of time in which the assembly, having ruled that it is malapportioned under the applicable standards, must (1) adopt a reapportionment ordinance and (2) submit it to the voters for approval. If no ordinance has been approved by the voters at the end of six months after a determination of the assembly that it is malapportioned, the commissioner of the Department of Community and Regional Affairs is given responsibility to impose a reapportionment plan. The plan is to be presented as an order of the commissioner delivered to the assembly for implementation.

* Sec. 9 establishes a plan for an advisory determination by the commissioner of community and regional affairs that an assembly is malapportioned or that an ordinance presenting a new apportionment plan, even after ratification by the voters, does not meet constitutional or statutory requirements. The provision has no legal effect as to any other procedures bearing upon changes of composition or apportionment, and appears to be available only for its local political effect.

By * Sec. 10, your committee clarifies which municipal election it is in which an apportionment or composition change becomes applicable.

New subsections of AS 29.23.025, added in * Section 11, indicate when voters may seek judicial review of a reapportionment ordinance or order, or an apportionment determination (whether of the borough assembly or of the commissioner of community and regional affairs), and delay implementation of an apportionment change or composition change if the change is subject to review and approval (or determination of nonobjection) by the United States Department of Justice under the 1965 Voting Rights Act, as

amended. Your committee inserted language in subsection (j), added by section 11, to indicate that the provisions of AS 29.23.025 applied to boroughs -- home rule and general law -- eliminating, by implication (but not specifically), applicability of AS 29.23.025 to unified municipalities.

Related changes involving composition and apportionment of borough assemblies appear in * sections 1, 2, and 13: In section 1, the provisions of AS 29.23.021 (relating to standards of composition and apportionment and manner of voting) are made binding on home rule governments, including home rule boroughs and unified municipalities. By section 2, a requirement that the assembly of a newly-incorporated borough not exceed 11 members is removed. Section 13 rewrites a requirement imposed on unified municipalities to require that their charter contain, when applicable, procedures for reapportionment (necessary because unified municipalities are impliedly exempted from the reapportionment procedures of AS 29.23.025).

Because, generally, the statutory sections which * Sections 1 - 11 and * Sections 13 and 14 replace are not due to take effect until January 1, 1981, the effective date of these changes is delayed to that date. [* Sec. 15]

* Sec. 12, the remnant of the original House bill, makes further changes (in addition to those enacted last year at section 4, Ch. 83, SLA 1979) relative to the term of office of a borough assembly member. The principal operative amendment is the underscored language at page 5, lines 24 and 25, by which an exception to the date mandated for the start of the term of office of a borough assembly member may be made by a borough by charter or ordinance. The additional change -- the inclusion of new language in subsection (a) and the deletion of the second sentence of subsection (b) -- represents an attempt to make it clear that, except when required by a change in apportionment, the term of office of a member of a borough assembly may not be altered by action of the assembly, thus precluding foreshortening or extension of terms. AS 29.23.040 is binding on home rule governments by AS 29.13.100(3), re-enacted in sec. 1 of this bill. This change is given immediate effect in order to avoid problems which may arise in certain home rule municipalities having charter provisions contrary to the law as it currently reads immediately following the October, 1980, regular municipal elections. [* Sec. 16]

Sectional Analysis - Senate CS for HB 947

Sec. 1. Makes AS 29.23.021 applicable to home rule municipalities. sets up standards for computer & re-apportionments.

Sec. 2. Deletes requirement that the number of members of a borough assembly may not exceed 11. no limit until last year -- applies to new boroughs —

Sec. 3. Deletes reference to AS 29.23.023, which is repealed by Sec. 14 of this bill.

Sec. 4. Prohibits institutional representation. city councilmen can't be Borough assemblymen.

Sec. 5. Requires assembly to determine if malapportioned; changes time limit from 4 months to 2 months; deletes reference to AS 29.23.023.

Sec. 6. Deletes reference to AS 29.23.023; requires changes in apportionment or composition to be made by ordinance - AS 29.23.025(d) requires voter approval of apportionment and composition ordinances.

Sec. 7. Clarifies wording and requires borough assembly to make a determination if malapportioned if petitioned by 50 registered voters who are residents of the borough.

Sec. 8. Lengthens time limit from 4 months to 6 months to adopt a reapportionment ordinance and clarifies wording about Dept. of C&RA providing for reapportionment. 29.23.025(e) need reference back —

Sec. 9. New section which provides review by the C&RA Commissioner if petitioned by 50 registered voters who are residents of the borough.

Reg by Byke Mahle

Sec. 10. Technical change in effective date of reapportionment plans.

Sec. 11. Provides for judicial review; makes section applicable to home rule and general law boroughs and to unified municipalities whose assemblies are not elected at large or whose charter does not contain reapportionment provisions. current law applies to home rule. Doesn't apply to cities - limited to at large/ district

Sec. 12. Permits reapportionment to change the regular term of office of an assemblyman; permits charter or ordinance to change when the regular term of office begins.

Sec. 13. Clarifies that charters for unified municipalities must contain provisions for reapportionment procedures.

Sec. 14. Repeals AS 29.23.023, which would require special elections on forms of representation, dual-plurality to implement, and extremely tight time limits.

Sec. 15 & 16. Effective date sections.

SCS CSHB 947 - Assembly Apportionment and Reapportionment

The borough assembly apportionment and reapportionment provisions of SCS CSHB 947 basically go back to what was in Title 29 prior to the complicated amendments that were adopted last session. In addition, this bill contains three improvements to the prior law:

1. deletes the dual majority provision, which required assembly adopted reapportionment ordinances to be ratified by the voters inside and outside cities;

2. clarifies that weighted voting is not permissable; and

3. clarifies that institutional representation is prohibited, per an attorney general's opinion.

CHAIRMAN

I 60 (Rev. 12/78)

My name is Edward Zeine. I am the administrator at Cordova Community Hospital, and am representing Alaska State Hospital Association. It is an honor and a privilege to REPRESENT THE ASSOCIATION AND testify before this committee on behalf of the House Bill 974. TESTIMONY IN 4 PARTS 1- JUSTIFICATION FOR SMALL HOSPITALS 2- COST INCREASE DATA 3- HOSPITAL COST CONTAINMENT 4- SPECIFIC ON CORDOVA

Rural hospitals in Alaska provide a service to the community that cannot be provided by any other means. Members of the community rely upon the hospital to provide them with life saving resources and stabilization of traumatic injuries and acute medicaal conditions that if were not available could mean uncessary loss of life or limbs. ~~In this particular phase of emergency care for acute traumatic physicaal or medical conditions~~ I'm speaking of. Additionally the hospitals provide modern up to date medical care for those less emergent conditions that ~~however~~ still require confienement in a hospital for treatment. The local rural hospital is utilized by citizens in the community for acute medical conditions due primarily to ~~the~~ their EASY ACCESS, THEIR knowledge of the professionalism that nurses and physicians in the community possess and the knowledge that they will receive individual attention. Another most important factor- when a person is recovering from an acute medical or surgical condition is that the person's family and friends are available to provide emotional support that helps lead to a path of recovery. Also the day to day knowledge of the welfare of patient's family, children or loved ones is immediately available ~~and~~ to the patient, ~~can be assured that all is well on the home front~~ THIS KNOWLEDGE contributes to the speedy recovery of the patient.

Those patients and families who desire religious services and assistance are able to have those services and assistance provided by those clergymen or pastors with whom they have had day to day contact. For these reasons and others, I believe soundly justify the existence and access to rural hospitals in Alaska.

It is our experience that the citizens living in ~~the rural towns~~ Alaska strongly support their health care facilities

The small hospital, although a most important factor in providing primary care is experiencing a tremendous increase in costs to the point of pricing itself to a ~~point~~ where the average worker is unable to afford the cost of that care in his community. Most businesses would attempt to increase sales to offset increased costs, however small rural hospitals are dependent on the local population which does not change, therefore utilization of services, or intensity factors does not change rapidly enough to impact upon the inflationary rate.

House Bill 974 would result in lessening the burden of cost of medical care to every citizen utilizing the services of ~~the local~~ hospitals. Examples of the increased costs hospitals are experiencing are as follows: Display Figures

Hospital Boards and Administrators of hospitals have participated in strong cost containment programs. As an example the Alaska State Hospital Association has developed a shared service program specifically where the small hospital joins with larger hospitals in purchasing of supplies. In this shared purchasing program a small hospital is able to purchase small quantities of certain medical supplies at the same cost as larger hospitals due to over all volume of purchases.

The Alaska Hospital Association has esatblished an audio/visual film programs that make educational materials available for boards, nursing services, etc. ~~available to the small hospitals~~ at little or no cost to hospitals.

Other areas of shared services that lessen costs to small hospitals in obtaining modern professional services are circuit riding controller, microfilming of medical records and x-rays and peer review programs.

I would like to assure this committee that the hospitals have taken strong cost containment measures in their individual facilities that ~~will~~

~~although they~~ lessen the total expenditures for operations, ~~which~~ ~~have~~ has had a large impact on containing increased costs because of the advancing inflationary rate.

Many of ~~the~~ our cities are required to grant financial aid to hospitals in order to keep the hospitals financially solvent. This has placed an undue burden on the operating costs of municipalities which can be absorbed only through new taxes to the citizens. The hospitals find themselves between spiraling increased costs and an outcry from the consumer absorbing these increases. Therefore the Alaska State Hospital Association strongly supports separate action by the legislature to increase revenue sharing for hospitals, ~~which~~ we believe ~~will~~ this can be supported by legislators from large cities as well as small communities as we suggest that there would be no opposition to providing support for high level health care to our citizens, ~~as~~ they have provided that support for health care legislation in the past.

~~THANK YOU~~.

A FEW MOMENTS NOW TO TALK SPECIFICALLY ABOUT CORDOVA COMMUNITY HOSPITAL

CITY OF CORDOVA IS SUPPORTING THE HOSPITAL IN ITS ROUTINE OPERATIONAL COSTS TO ABOUT $140,000 THIS FISCAL YEAR.

IN SUMMER, CORDOVA IS A HIGHY TRANSIENT POPULATION - ~~ADD~~ DUE TO CANNERY AND FISHING FLEET. WE EXPERIENCE A LARGE LIST OF UNCOLLECTABLE ACCOUNT FOR MANY TRANSIENTS CANNOT PAY WHEN THEY NEED HEALTH CARE AND WE DO NOT TURN THEM AWAY.

OUR HOSPITAL IS IN OLD BLDG, WE HAVE HAD WIND DAMANGE THIS YEAR WHICH WILL PLACE AN ADDITIONAL ~~$~~ FINANCIAL BURDEN ON THE CITY OF CORDOVA AND THE HOSPITAL OF 30-50 ~~thousand~~ dollars.

MEETING FEDERAL REGULATION FOR CERTIFICATION & LICENSURE OF THE HOSPITAL IS INCREASINGLY COSTLY - APPARENTLY ~~NO~~ MANY ARE UNAWARE THAT A CHANGE OR MODIFICATION OF HOSPITAL ONLY

Subsydize by city over $100,000

Bldg need repair

18 x 125,000 - $2,250 plus.

REQUIREMENTS USUALLY RESULTS IN INCREASED COSTS TO HOSPITAL TO COMPLY.
ALL OF THESE AREA IMPACT UPON THE HOSPITAL OPERATING BUDGET.
THE ONLY WAY HOSPITAL'S CAN GENERATE REVENUE IS TO CHARGE THE PERSON USING THE SERVICE - THAT IS THE PATIENT - EXCEPT FOR THIS REVENUE SHARING WHICH WILL HELP ALL CITIZENS IN ALASKA.
YOUR FAVORABLE PASSING OF THIS LEGISLATION WITH FULL FUNDING WILL BE APPRECIATED.

THANK YOU

FURTHER REFERRALS: Finance

HEARING DATE: 4/9/80

MEMBERS PRESENT:

Bill Parker	X	Pat Carney	X
Margaret Branson	X	Charlie Parr	X
Pat O'Connell		Fred Zharoff	X
		Ray Metcalfe	

Portia Kauffmann, Administrator of Health and Social Licensing, HESS
Reviews licensed bed and construction figures with committee as contained on information sheets prepared by the Dept. Question of confidentiality raised and method of dealing with issue, as recommended by the Attorney General discussed--that of using numbers to identify hospitals and income/expenditure categories.

Parr - Hospitals receiving state money should have information available. It's about time that a "freedom of information" act be passed.
Are long term care beds included in HB 974? (Yes)
Discussion of economy of scale would be helpful. Occupancy rate is the important factor. High vacany rate in the small hospitals. 60%-70% utilization necessary to break even.

Lowell Swartz, Coordinator of Health Facilities Development, HESS
Researched why small hospitals get more funding that large. A flat rate rather than per bed amount was used as small hospitals with 10 beds couldn't function with $10,000. Choice of 10 was arbitary. The rate has been raised over the years.

Doug Goldback, Finance Officer, HESS
Discussion of revenue figures contained in HESS informational material. Operating expense statements are not required to be turned in. There is already statutorial authority for funding hospital construction independent of the revenue sharing program. Remodeling money is also included in this.

Palmer McCarter, Director, Division of Local Government Assistance, C&RA
Explains that passage of HB 975, the funding for HB 974 is not necessary as long as a fiscal note is developed for HB 974 and accompanies the bill. Called attention to the increased fiscal note as the cost of living allowance had been inadvertantly omitted from the fiscal note for HB 975.

Parr - Questions how much money it is reasonable to appropriate? Formula seems arbitrary. Haven't heard any defense for the formula used.

COMMITTEE ACTION:
CSHB974 passed out of Committee.

TAPE #7 SIDE 2 Footage 130-1452

The Committee has received no indication of what they need to save. And no proof of what they need in the way of financial assistance has been offered. Revenue and expense sheets don't show need. They have only received a general statement that small hospitals need more than the large hospitals.

Palmer McCarter- Program shouldn't be within revenue sharing. Needs differ. Not responsibility of Dept. of C&RA to handle; HESS should administer. There should be an attempt to verify hospital construction costs. Over 25 % of program monies go to hospital construction. Whole review of operational and construction aid should be improved. Ak. Medical Facility exists as well. Piecemeal approach exists now to funding.

Parr - Average small hospitals losing $50,000 year. Across the board appraoch bothers him. May be giving one institution gravy (the small hospitals) and hurting another.

Chenoweth, Jack , Legal Research
The need issue should be discussed. General aid for health needs could be addressed. Redevelop a program for state assistance and limit funding to one year (June 30, 1981)to force discussion of alternatives. Departments could be directed to report back.

Parr - Letter of Intent could accompany bill.

Carney - Notes the present division of funding per bed. Suggests that 2 fiscal years might give adequate time for such a study. A logical explanation of the formula should be developed.

Ed Zine, Administrator Cordova Hospital

Support increase. Data is collected by the hospital Ass'n. on and "under 40 bed" "over 40 bed" basis. The average deficit if $50,000 for hospitals. Refers to graph which shows average daily use graphed.

Small hospitals have emergency medical care and it is difficult for small hospitals to economize as reducing staff is difficult. Have to have at least one nurse, cook, etc. even if there is only one patient. Multiple disciplinary teams do exist and are encouraged. Most small hospitals do have such teams as an economy measure. There is a need to give quality care even though a hospital is small.

In Cordova, the use of the budget category "restricted funds" in Cordova is connected to specific donations for a particular purpose.

Carney - The percentage of the increase suggested in the bills is not consistent.

Perry Lovitt, City Manager, Cordova

Comments on need of small hospitals.

Committee concurs in decision to have a study for 1 year; increase figures to $200,000 and $70,000; and direct HESS to conduct a study on general subject of hospital funding in a Committee Substitute.

HEARING DATE: 4/2/80

MEMBERS PRESENT:

Bill Parker	X	Pat Carney	X
Margaret Branson	X	Charlie Parr	X
Pat O'Connell	X	Fred Zharoff	X
		Ray Metcalfe	X

Edward Zine, Administrator, Cordova Community Hospital. Testifying on behalf of the Hospital Association.
See copy of testimony attached.

Parr - Asks what % of the cost of care should the local people be paying?

Zine responds with the specifics of the Cordova situation.

Mary Foster, Dept. of Community and Regional Affairs
Dept. has no objection to the bill but sufficient funds need to be appropriated.
Ms. Foster was questioned on various points including the request for information on how much profit various hospitals make.

Carney - Suggests that the hospitals might be required to do cost accounting so that costs aren't passed along to the consumer.

Parr - Asks how much of the cost is borne by the patient and says that this is the point at issue. How muchis borne b the taxpayers from the general fund? Sees no justification for the existing formula or for the proposed change. No one seems to know why the formula is in its present form. Economy of scale needs to be looked at.

Lowell Swartz, Coordinator of Health Facilities Development, HESS
Recalls the rationale for the formula being that the larger the hospital, the more costly it would be to operate.

Zine - States that it is the opportunity for hospitals to increase utilization which allows them to increase revenues. Smaller communities don't have intensity factor. Cost of operation is therefore effected and lower in a large community.

COMMITTEE ACTION: Committee determines that additional information is necessary to act on bill including: *utilization figures; comparative costs; rate charged per day and amount of profit

No Action

CS FOR HOUSE BILL NO. 974

IN THE LEGISLATURE OF THE STATE OF ALASKA

ELEVENTH LEGISLATURE - SECOND SESSION

A BILL

For an Act entitled: "An Act relating to state aid for hospitals; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. Notwithstanding AS 43.18.010(h)(2)(A), during the fiscal year ending June 30, 1981, the Department of Community and Regional Affairs shall make payments under AS 43.18.010(h)(2) to a municipality which has the power to provide hospital facilities and services and which exercises the power on the basis of $1,000 per bed for each bed actually used for patient care limited to the number of beds provided for in the construction design of the hospital or $200,000 a hospital for those hospitals with 10 or more beds, or $70,000 a hospital for those hospitals with less than 10 beds, as the municipality may elect. Amounts received under this section may be used only for hospitals and shall be apportioned among qualifying hospitals as the municipality determines.

* Sec. 2. (a) The Department of Health and Social Services and the Department of Community and Regional Affairs shall jointly examine and report their recommendations on the extent to which the state should assist municipalities, nonprofit corporations, and others in the construction and operation of hospitals and health facilities.

(b) By February 1, 1981, the commissioner of health and social services shall submit to the legislature a report, accompanied by draft legislation, examining programs of state aid for hospital and health facility construction and operation, including both public and private facilities, and recommending a comprehensive health and hospital financial assistance program. The report

and accompanying legislation shall be based on health care and health facility need, expressed as a function of number of beds, occupancy rate of facilities, kinds of care and levels of service provided or not provided, or any other factors which the commissioner of health and social services reasonably believes should be the basis by which state assistance for hospitals and health facilities and their programs should be provided.

(c) The report and accompanying legislation presented under (b) of this section shall

(1) include, if necessary, reference to certificates of need legislation and any other current program of the federal or state government which applies in determining whether hospitals and health care facilities shall be constructed;

(2) recommend a permanent program of state assistance to municipalities for hospital care and health care services, whether provided by public or private facilities, which improves the level of care for the people of the state.

* Sec. 3. This Act takes effect July 1, 1980.

THE LEGISLATURE OF THE STATE OF ALASKA
ELEVENTH LEGISLATURE

FISCAL NOTE

III. ANALYSIS (See Fiscal Note Preparation Instructions, Section III)

The additional cost of increasing the hospital's category to $200,000 per hospital with 10 or more beds, or $60,000 with less than 10 beds would be $1,805,690.

Based on $200,000 grants included in this bill and assuming no new hospitals will become eligible.

12 municipalities now receive $75,000 per hospital
($200,000 - $75,000 = $125,000 x 12 = $1,500,000)

Alaska Hospital now receives$175,000
($200,000 - $175,000 = $25,000)

Prepared by: Lowell Swartz Date: 4-25-80
Division/Office: SHPDA PH: 465-3038
Department of Health & Social Services

Approval DHSS Mgt. & Bdgt: [illegible] Date: 4/29/80

33-001 (Rev. 12/79)
Modify by DHSS (11-28-79)

A study to determine the State's role in providing aid/support to Alaska's acute care facilities and how such aid/support should be disbursed should provide important policy and resource allocation direction for the State on this complex issue. Because of the health planning and policy considerations raised, the study should be conducted under the aegis of the DHSS Division of State Health Planning and Development with particular focus on its facilities development section.

With current Division staff limitations and work load commitments this scope of work would be contracted to a qualified research group with capabilities in and a working knowledge of Alaska's health care delivery system, health care economics, capital development in health care facilities, State plans for development as articulated by the Statewide Health Coordinating Council, State regulations and other dimensions. It is anticipated that the scope of work would require approximately $50,000.

To ensure input of affected/interested parties, a task force would be convened to advise the contractor and the Division on the study. The task force would include a hospital administrator, a representative of a third party payor, a consumer, a representative of the State's Medicaid program, a member of the Division's facilities development staff, a Health Systems Agency board member and a member of the Statewide Health Coordinating Council. The task force would meet in Anchorage, the most economical meeting site, at least three times during the study at an approximate cost of $3000 per meeting.

Costs are included to produce a report for select distribution at the conclusion of the study.

RE: Fiscal Note

Attached for your review and for a fiscal note is CSHB 974 which has been signed out of committee. Please note the changed figure on p. 1 line 16 (as compared with HB 974) and the new section beginning on page 1 line 20.

Tuesday

LAA 15

TESTIMONY

My name is Edward Zeine. I am the Administrator at Cordova Community Hospital, and I am representing Alaska State Hospital Association. It is an honor and a privilege to represent the Association and testify before this committee on behalf of the House Bill 974. My testimony will be in 4 parts: 1- Justification for small hospitals

2- Cost increase data

3- Hospital cost containment

4- Specifics on Cordova

Rural hospitals in Alaska provide a service to the community that cannot be provided by any other means. Members of the community rely upon the hospital to provide them with life saving resources and stabilization of traumatic injuries and acute medical conditions that if were not available could mean unnecessary loss of life or limb. Additionally the hospitals provide modern up-to-date medical care for those less emergent conditions that still require confinement in a hospital for treatment.

The local rural hospital is utilized by citizens in the community for acute medical conditions due primarily to their easy access, their knowledge of the professionalism that nurses and physicians in the community possess and the knowledge that they will receive individual attention. Another most important factor when a person is recovering from an acute medical or surgical condition is that the person's family and friends are available to provide emotional support that helps lead to a path of recovery. Also the day to day knowledge of the welfare of the patient's family, children or loved ones is immediately available to the patient.

Those patients and families who desire religious services and assistance are able to have those services and assistance provided by those clergymen or pastors with whom they have had day to day contact. For these reasons and others, I believe soundly justify the existence and access to rural hospitals in Alaska.

It is our experience that the citizens living in Alaska strongly support their health care facilities.

The small hospital, although a most important factor in providing primary care is experiencing a tremendous increase in costs to the point of pricing itself to where the average worker is unable to afford the cost of that care in his community. Most businesses would attempt to increase sales to offset increased costs, however small rural hospitals are dependent on the local population which does not change, therefore

utilization of services or intensity factors do not change rapidly enough to impact upon the inflationary rate.

House Bill 974 would result in lessening the burden of cost of medical care to every citizen utilizing the services of hospitals. Examplesof the increased costs hospitals are experiencing are as follows:

item	78/79 cost	79/80 cost
MICA	9,425.00/yr.	18,027.00/yr.
Salaries		9% increase over 78/79
Cordova Telephone	10.00/station	18.00 per station
Cordova Electric	.054 per 1,000 kw	.085 per 1,000 kw
Copy Machine paper	38.00 case	52.69 case
X-ray film - 500	514.94	565.79
Ace Bandages - 6"	1.18 roll	1.88 roll
A B D Pads -3"x3"	.04 per pad	.24 per pad
Fuel Cost	Feb. '79 = 1493	Feb.'80 = .866 (almost doubled)
Electricity - 18% increase due to fuel escalation		

Hospital Boards and Administrators of hospitals have participated in strong cost containment programs. As an example the Alaska State Hospital Association has developed a shared service program specifically where the small hospital joins with larger hospitals in purchasing of supplies. In this shared purchasing program a small hospital is able to purchase small quantities of certain medical supplies at the same cost as larger hospitals due to over all volume of purchases.

The Alaska Hospital Association has established an audio/visual film program that makes educational materials available for Hospital Boards, nursing services, etc. at little or no cost to hospitals.

Other areas of shared services that lessen costs to small hospitals in obtaining modern professional services are circuit riding controller, microfilming of medical records and x-rays and peer review programs.

I would like to assure this committee that the hospitals have taken strong cost containment measures in their individual facilities that lessen the total expenditures for operations, which has had a large impact on containing increased costs because of the advancing inflationary rate.

Many of our cities are required to grant financial aid to hospitals in order to keep the hospitals financially solvent. This has placed an undue burden on the operating costs of municipalities which can be

absorbed only through new taxes to the citizens. The hospitals find themselves between spiraling increased costs and an outcry from the consumers absorbing these increases. Therefore the Alaska State Hospital Association strongly supports separate action by the Legislature to increase revenue sharing for hospitals. We believe this can be supported by legislators from large cities as well as small communities as we suggest that there would be no opposition to providing support for high level health care to our citizens. They have provided that support for health care legislation in the past.

A few moments now to talk specifically about Cordova Community Hospital.

The City of Cordova is supporting the hospital in its routine operational costs to about $140,000 this fiscal year.

In the summer, Cordova is a highly transient population due to cannery and fishing fleet. We experience a large list of uncollectable accounts for many transients cannot pay when they need health care and we do not turn them away.

Our hospital is an old building. We have had wind damage this year which will place an additional financial burden on the city of Cordova and the hospital of 30-50 thousand dollars.

Meeting federal regulations for certification and licensing of the hospital is increasingly costly. Apparently many are unaware that a change or modification of hospital requirements usually results in increased costs to hospitals to comply.

All of these areas impact upon the hospital operational budget.

The only way hospitals can generate revenue is to charge the person using the service - that is the patient- except for this revenue sharing which will help all citizens in Alaska.

Your favorable passing of this legislation with full funding will be appreciated.

Thank you.

* * * ALL HOSPITALS * * *

There are 1459 general hospital beds in 11 federal hospitals and 17 "open to the public" hospitals. The beds are distributed as follows:

FEDERAL	LOCAL GOV'T	PRIVATE
7 USPHS - 381 beds	5 owned/operated - 125 beds	6 - 595 beds
4 Military 202 beds	6 owned/other op. 156 beds	
583 beds	281 beds	
40% of total	19% of total	41% of total

* * * GENERAL PUBLIC HOSPITALS * * *

A further breakdown of the 17 hospitals and 876 beds open to the public show:

(the number in parentheses is nursing home beds)

Under 20 beds		20 to 30 beds		31 to 100 beds		Over 100 beds	
Glenallen	6	Sitka	24	Ketchikan	44 (48)	Alaska	154
Wrangell	9 (14)	Kodiak	25(19)	Juneau	67	Fairbanks	155
Cordova	12 (8)	Seward	29		111 (48)	Providence	250
Homer	13 (4)	Soldotna	30				559

Petersburg	13 (12)						
Valdez	15						
Palmer	17 (6)						
	98 (50)						
Hospitals	47%		23%		12%		18%
Beds	11%		12%		13%		64%

* * * NURSING HOMES * * *

There are 644 nursing home beds in Alaska. As noted above, there are 8 hospitals with 117 nursing home beds (18% of the total beds). There are 5 "free-standing" nursing homes;

St Ann's	Juneau	45 beds
Wesleyan	Seward	64 beds
Careage	Anchorage	101 beds
Careage N.	Fairbanks	101 beds
Nakoyia	Anchorage	216 beds
		527 beds

The State of Alaska operates 4 Pioneer Homes with 170 beds. There are plans to build in Ketchikan in direct competition with the beds already in existence.

POSITION PAPER/Department of Health & Social Services

HOUSE BILLS 974 and 975

H.B. 974: "An Act increasing state aid to municipalities for hospitals; and providing for an effective date."

H.B. 975: "An Act making a special appropriation to the Department of Community and Regional Affairs for grants for hospitals; and providing for an effective date."

The majority of the State's general hospitals are located in communities having small populations. These hospitals have low occupancy rates expect during the summer months when the fishing and tourism industries are in full operation. Also, small hospitals lack volume purchasing power due to the small quantities of drugs and other medical supplies consumed in their operations. Some of the small hospitals must be subsidized by the communities in which they are located, thus placing an additional tax burden upon residents of the community.

House Bills 974 and 975 are designed essentially to aid hospitals in meeting operating expenses and ease the financial burden otherwise placed on communities.

The Department of Community and Regional Affairs receives and disburses grants under AS 43.18 to grant applicants and is the lead agency for testimony on the subject proposed legislation.

Symbol Explanation

LTC = Skilled Nursing and/or Intermediate Care

SNF = Skilled Nursing Facility

ICF = Intermediate Care Facility

IMR = Intermediate Care Facility for the Mentally Retarded

Sec. 18.20.070. Compliance with regulations. Each hospital in operation at the time the department adopts rules and regulations or minimum standards under §§ 10 — 130 of this chapter has a reasonable time, under the particular circumstances, not exceeding one year from the date of adoption within which to comply with them. (§ 40-6-8 ACLA 1949)

Sec. 18.20.080. Inspection and consultation for alterations. (a) The department shall make annual inspections and investigations of hospital facilities.

(b) The department may by regulation require that a licensee or applicant desiring to make a specified type of alteration or addition to its facilities or to construct new facilities shall, before commencing the alteration, addition or new construction, submit plans and specifications to the department for preliminary inspection and approval or recommendations with respect to compliance with the regulations and standards. (§ 40-6-9 ACLA 1949; am § 5 ch 112 SLA 1957)

Sec. 18.20.085. Hospital records retention. (a) Unless specified otherwise by the department a hospital shall retain and preserve records which relate directly to the care and treatment of a patient for a period of seven years following the discharge of the patient. However, the records of a patient under 19 years of age shall be kept until at least two years after the patient has reached the age of 19 years or until seven years following the discharge of the patient, whichever is longer. Records consisting of X-ray film are required to be retained for five years.

(b) The department shall by regulation define the types of records and the information required to be included in the records retained or preserved under (a) of this section. The department may by regulation specify records and information to be retained for longer periods than those set out in (a) of this section.

(c) If a hospital ceases operation, it shall make immediate arrangements, as approved by the department, for the preservation of its records.

(d) In this section, "hospital" includes those facilities defined as hospitals under §§ 130(1) and 2103, of this chapter. (§ 1 ch 41 SLA 1970)

Sec. 18.20.090. Information confidential. The department may not publicly disclose information received by it in a manner identifying an individual or hospital except in a proceeding involving the question of licensing. (§ 40-6-11 ACLA 1949)

Sec. 18.20.100. Annual report of department. The department shall prepare and publish an annual report of its activities and operations under §§ 20 — 130 of this chapter. (§ 40-6-12 ACLA 1949)

regulations prescribed thereunder prohibit disclosure of the name of the individual.

Soc. Sec. Rul., No. 70-6, Jan. 1970 (C. B. 1970, 155, HIR 27-70-1). [This ruling was originally reported at NEW DEVELOPMENTS ¶ 26,080.]

.28 **Drug Abuse Office and Treatment Act of 1972—Disclosure of patient records.**—Where patient records concerning drug abuse are received by the Social Security Administration from any source for use in the administration of the Social Security Act: (1) such records are not subject to the disclosure provisions of section 408 of the Drug Abuse Office and Treatment Act of 1972 (P. L. 92-255, unless they are maintained in connection with the performance of a drug abuse prevention function authorized or assisted under any provision of the Drug Abuse Act or any act amended by it; (2) in those situations where disclosure of such records is subject to both Part 401 of the Regulations (reported at ¶ 18,051 *et seq.*) and section 408, the provision with the greater restrictiveness with respect to whether and how the information may be disclosed is controlling.

Soc. Sec. Rul., No. 73-18 (C. B. 1973, 91). [This ruling was originally reported at NEW DEVELOPMENTS ¶ 25,807.]

.30 **Exchange of provider certification and termination information between Medicare and Medicaid agencies.**—See ¶ 14,751.21 in the "MEDICAID" division.

.31 **Exemptions from disclosure, Freedom of Information Act.**—[*The statutory exemption*—Exemption (3) of the Freedom of Information Act, 5 U. S. C. 552(b)(3), exempts from mandatory disclosure] matter "specifically exempted from disclosure by statute. . . ." The Government in the Sunshine Act amended exemption (3) with the result that the Department can no longer cite section 1106(a) [¶ 16,375] as authority for denying a Freedom of Information request. . . . Accordingly, any social security information previously withheld on this basis must be made available unless another Freedom of Information Act exemption applies or another statute, which qualifies under amended exemption (3), prohibits disclosure.

• • •

Although section 1106(a) no longer qualifies, there are other statutes affecting social security information which appear to meet the exemption (3) criteria as amended by the Sunshine Act. For example, . . . Section 1865(a)(2) of the Social Security Act, which protects the confidentiality of accreditation survey reports submitted by the Joint Commission on Accreditation of Hospitals, will continue to do so under the new disclosure rules. Sections 1106(d) and (e) of the Social Security Act, which protect certain official reports dealing with the operation of the health programs established by title XVIII of the Act, qualify under exemption (3) and will remain binding.

42 F. R. 14703, March 16, 1977.

Section 1865(a)(2) provides for the Joint Commission on Accreditation of Hospitals (JCAH), if authorized by the hospitals, to release to the Secretary (or a State agency designated by him) on a confidential basis copies of accreditation surveys of hospitals made by the JCAH. As section 1865(a)(2) allows no discretion on the part of the Secretary to disclose information obtained from JCAH, materials released under this provision are thus specifically exempted by statute from disclosure to the public under exemption (3) of the Freedom of Information Act, 5 U. S. C. 552(b)(3), as amended by section 5(b) of the Government in the Sunshine Act, Pub. L. 94-409, which became effective March 12, 1977. Because section 1106(a) of the Social Security Act neither precludes discretion to disclose nor provides specific criteria for withholding, it does not fall within exemption (3) of the Freedom of Information Act.

42 F. R. 58403, November 9, 1977.

[*The confidentiality exemption*—] Exemption (4), 5 U. S. C. 552(b)(4), protects "trade secrets and commercial or financial information obtained from a person and privileged or confidential." [Current case law on exemption (4) requires that data be "obtained from" a source outside the Executive Branch for exemption (4) to be applicable.]

42 F. R. 14703, March 16, 1977.

The regulation permitting disclosure of provider cost reports to the public (Reg. § 422.435) is invalid as it applies to the provider because it does not comply with the requirements of the Administrative Procedure Act in that: (1) it was not promulgated within the statutory authority of the Freedom of Information Act insofar as it pertains to the disclosure of information of a confidential nature, which is exempted by the FOIA (exemption (4)); and (2) it is an abuse of discretion on the part of HEW in that it is in derogation of 18 U. S. C. § 1905, a criminal statute that makes it illegal for any employee of a governmental agency to disclose information that concerns or relates to the trade secrets, operations, or confidential statistical data, amount, or source of any income, profits, losses, or expenditures of a corporation.

Parkridge Hospital, Inc. v. Blue Cross and Blue Shield of Tennessee, et al., USDC (E. D., Tenn.), Apr. 15, 1977. [This decision was originally reported at NEW DEVELOPMENTS ¶ 28,559.]

Pursuant to the Freedom of Information Act, government agencies are forbidden to release "trade secrets and commercial or financial information obtained from a per-

© 1978, Commerce Clearing House, Inc.

son and privileged or confidential." Since the information in provider cost reports is financial and confidential, HEW may not disclose the information to the public. Furthermore, a government agency may not go beyond its own regulations. The Social Security Act provides that no disclosure of information can be made except as prescribed by regulations, and the regulations provide for disclosure of information from financial reports and other records of providers only to certain Federal and State officers and employees. Accordingly, HEW was enjoined from acting beyond the scope of its own regulations and violating the confidentiality exemption (exemption (4)) of the Freedom of Information Act by releasing provider cost reports to the public in a case that arose when a competitor of a skilled nursing facility requested release of its unaudited cost report.

The court denied a motion for class action certification, in the belief that HEW would follow the court's orders, unless reversed by a higher court. However, the court noted that HEW plans to adopt new regulations permitting the disclosure of cost data reports.

Bryan S. McCoy, Jr., d/b/a Twinbrook Nursing Home v. Weinberger, USDC (W. D. Ky.), 386 F. Supp. 501 (1974). [This decision was originally reported at NEW DEVELOPMENTS ¶ 27,146.]

[*The privacy exemption*—] In applying the interim rules to social security information, in all likelihood the most pertinent Freedom of Information exemption will be exemption (6), 5 U. S. C. 552(b)(6), which protects "personnel and medical files and similar files the disclosure of which would constitute a clearly unwarranted invasion of personal privacy." This exemption requires the Department to weigh the individual's interest in privacy against the public interest served by disclosure. . . .

The balancing test may have . . . impact on other information . . . , for example, payments to individual physicians under the Medicare program. Although this information reflects at least to some degree the physician's income, a matter in which he has a privacy interest, disclosure would serve the strong public interest in the accountability of government programs, revealing how public funds are spent and the extent to which the funds are paid to individuals when acting in a business or professional capacity. [See .50, below, for specific instructions concerning disclosure of physician/supplier charge information.]

42 F. R. 14703, March 16, 1977.

.32 **Fees for information.**—Certain fees and charges have been established to recover some of the cost of disclosing information to the public under the provisions of the Freedom of Information Act. Providers, contractors, and State agencies are also required to pay appropriate fees for copies of reports they may request pertaining to other providers, contractors, or State agencies. Such fees are not reimbursable administrative costs under the Medicare program for contractors or State agencies. A provider may claim such fees as allowable costs only if the provider demonstrates to the intermediary that the information is necessary in developing and maintaining the operation of patient care facilities and activities. Members of Congress, when clearly requesting information on behalf of a constituent or other third party, are subject to the same fees and charges that would apply to the person represented, but they are exempt from charges in all other cases. No charge will be made to the public for inspection of disclosable documents, for normal mailing of requested materials, for time spent in deciding whether to provide information or securing approval, or for requests which result in charges of $5 or less.

Charges must also be made for disclosing information under the provisions of Regulation No. 1. In general, the fees will be the same as those charged for disclosing information under the Freedom of Information Act.

Fees.—Unless otherwise specified . . . , the following fees are to be charged for disclosing information:

A. *Photocopying.*—A charge of 10 cents per page (one side of a sheet) will be made for photocopying documents or records. If the page to be photocopied is too large to be printed on one photocopy, the charge is 10 cents per photocopy.

B. *Searching.*—When a request results in searching time in excess of one-half hour, a charge of $1.50 for each half-hour, excluding the first half-hour, will be made. This charge is in addition to any charges for photocopying materials. There is no searching fee for time spent photocopying.

C. *SSA-Printed Material.*—$.01 per printed page.

D. *Preparation of Materials from Punchcards, Magnetic Tape, or Microfilm.*—Charges for preparing materials from magnetic tape, microfilm, or punchcards will be based on the actual cost, as determined on a case-by-case basis. The intermediary or carrier will prepare an estimate of such costs and refer requests requiring preparation of materials from machine sources to the regional office for determination of the fee. The regional office will determine the fee based on the cost information submitted by the intermediary or carrier which will include the following:

1. *Personnel Salaries.*—Compute the time spent by all staff members (including analysts, supervisors, and clericals) in search-

**Percent occupancy is based on licensed beds. Fairbanks Memorial percent occupancy was calculated for 126 licensed beds through October 5, 1978 and 155 licensed beds October 6--December 31, 1978. Norton Sound percent occupancy was calculated for 10 beds through June 30, 1978 and 13 beds July 1--December 31, 1978.

†Percent occupancy is based on licensed beds rather than beds in use. During 1978 St. Ann's Nursing Home had 25 beds in use. Percent occupancy calculated on beds in use would be 55.4%. Ketchikan General had 42 acute care beds in use (41.8% occupancy); Alaska Hospital and Medical Center had 118 beds in use (69.9% occupancy); and Providence had 215 beds in use (83.2% occupancy).

**Mt. Edgecumbe has 8 chronic care and 3 alcoholism treatment beds. The 8 chronic care beds accounted for 507 patient days, 1 discharge and a 17.3% occupancy. The 8 alcoholism treatment beds accounted for 2058 patient days, 69 discharges and a 72.3% occupancy.

CORRESPONDENCE

ALASKA STATE HOSPITAL ASSOCIATION INC.

5401 CORDOVA STREET
PHONE: 277-1633

ANCHORAGE, ALASKA 99503

March 3, 1980

Margaret Branson
Representative
Alaska Legislature
Pouch V
Juneau, Alaska 99811

Introduced by

Dear Representative Branson:

A serious problem is now facing Alaska's health providers, especially our hospitals. These institutions are caught between spiraling costs and an outcry from the consumers in absorbing those increases. A national hospital effort participated in by all of our facilities managed to reduce the amount of increases in costs through a conscientious cost containment effort during 1979. I have attached a copy of those efforts for your review.

It is becoming increasingly more difficult to hold the cost of hospital care down since a substantial portion of that expense is beyond management control: necessary new life saving technology is usually expensive; over half of the hospitals expense is for personnel wages and benefits; fixed overhead related to physical plant; energy requirements; cost of financing; and supply costs i.e. plastics, paper, etc., have increased dramatically over the past year.

While the cost of operation has increased, many of our smaller hospitals have realized a significant drop in cash flow, particularly due to delays in getting medicaid reimbursement and an increase in non-insured patients who must pay their bills over a period of time. I have selected four major areas where costs have increased dramatically to our institutions for your review.

Cost Increases

	78-79	80-81 (projected)
X-ray film (silver)	8%	60%
plastics	7%	10%
Labor	14.4%	?
Energy		
National		
Fuel oil	56%	?
Alaska		
Fuel oil	61%	?
National		
Electricity	14%	?
Alaska		
Electricity	17.7	?

(Statistics were taken from the 1980 Department of Labor CPI report; U S News and World report, February 3, 1980, and 1978-79 Alaska Hospital Association Group Purchasing analysis.)

Due to the unprecedented increases in costs for electricity, fuel, plastics, and other necessary hospital products, in addition to the present ecomony as it relates to hospital reimbursement we request that the minimum revenue sharing hospital support be increased from $75,000 to $200,000. This additional support would largely offset the unprecedented inflation and cash flow problems our hospitals are facing, holding costs down to patients and meeting immediate cash flow needs.

Thank you for your consideration of this request, and should you need further information please contact our office at your convenience.

Sincerely,

Max Kersbergen
Executive Director

SISTERS OF
PROVIDENCE

SERVING IN THE WEST SINCE 1856

April 7, 1980

The Honorable Bill Parker
Chairman, Community & Regional
Affairs
Pouch V
Juneau, Alaska 99811

Position Paper: H.B. 974 - "An Act increasing state aid to municipalities for hospitals; and providing for an effective date"

H.B. 975 - "An Act making a special appropriation to the Department of Community and Regional Affairs for grants for hospitals; and providing for an effective date"

Dear Representative Parker:

Providence Hospital has reviewed H.B. 974 and H.B. 975 and supports passage of both bills.

Our major point of support is that the increase in funding will help our many smaller hospitals retain viability in their communities. It is important that these smaller hospitals continue to be resources for health care services in the many outlying areas, as people in those communities look to them to be staffed and available when the need arises. This additional financial support will help to assure that this happens.

We also recognize that the financial support to the larger institutions might be cut back a small amount, and we are willing to accept this possibility.

We also re-emphasize that revenue sharing funds for hospitals should have a direct pass through to the hospitals. This will assure us that we will be getting our money in a timely fashion and will cut back in unnecessary red tape at the municipality level. Line 18 of H.B. 974 indicates that the funds may be used only for hospitals. We would like to see this amended to must. On line 19, if there is a direct pass through of funds, we see no reason to include the words, "as the municipality determines."

MEMBERS OF THE SISTERS OF PROVIDENCE CORPORATION—ALASKA: PROVIDENCE HOSPITAL, ANCHORAGE—WASHINGTON: PROVIDENCE MEDICAL CENTER, SEATTLE—THE DePAUL RETIREMENT RESIDENCE AND MOUNT ST. VINCENT NURSING CENTER, SEATTLE—PROVIDENCE HOSPITAL, EVERETT—ST. PETER HOSPITAL, OLYMPIA—ST. ELIZABETH HOSPITAL, YAKIMA—OREGON: PROVIDENCE HOSPITAL, MEDFORD—PROVIDENCE MEDICAL CENTER, PORTLAND—PROVIDENCE CHILD CENTER, PORTLAND—ST. VINCENT HOSPITAL AND MEDICAL CENTER, PORTLAND—CALIFORNIA: PROVIDENCE HOSPITAL, OAKLAND—PROVIDENCE HIGH SCHOOL, BURBANK—SAINT JOSEPH MEDICAL CENTER, BURBANK

It is important that these hospitals continue to remain strong and provide needed services. Without these funds, it may be very difficult for them to do so. Thank you for the opportunity of expressing our position. If you should need additional clarification, please feel free to contact us at any time.

Sincerely,

Al M. Camosso
Administrator

HB 974 REVENUE SHARING-HOSPITALS

There are 16 hospitals within organized municipalities that are eligible for grants from the State of Alaska. They are:

40 Beds & Under	41-100 Beds	Over 100 Beds
Cordova	Juneau	Alaska-Anchorage
Homer	Ketchikan	Fairbanks
Nome	Kodiak	Providence-Anch.
Palmer		
Petersburg		
Seward		
Sitka		
Soldotna		
Valdez		
Wrangell	(Glenallen is in an "unorganized" region)	

The rationale for subsidizing is that these hospitals are necessary for the common good of their community. The 10 hospitals of 40 beds or less are absolutely essential to their communities. However, they are not economically feasible due to their small size and underutilization. Most of them operate with a skeleton staff which precludes any significant cost reductions. Cash flow is a constant and serious problem! They desperately need to be subsidized by their local and state government.

The medium and large size hospitals also need subsidizing to keep their charges within reasonable reach of Alaskans.

We propose that this legislation be changed to set up three seperate categories of grants that recognize the needs of the different hospitals. The smaller hospitals because of their need to offset their fixed costs and the larger hospitals to offset the larger expenses of operation. The patients (Alaskans) are the beneficiaries.

HB 974 Revenue Sharing-Hospitals (con'd)

A possible schedule would be:

Licensed Beds	No.of Hospitals	Grant	Total
40 beds & under	10	$200,000	$2,000,000
41 - 100 beds	3	$225,000	$ 675,000
Over 100 beds	3	$250,000	$ 750,000
	TOTAL ANNUAL GRANT		$3,425,000

Attached hereto is an excerpt from DHSS's MEDICAL FACILITIES PLAN (Nov. 1979) showing hospital statistics.

*State licensing does not include PHS and military hospitals. For these facilities beds refer to beds set up and in use.

**Percent occupancy is based on licensed beds. Fairbanks Memorial percent occupancy was calculated for 126 licensed beds through October 5, 1978 and 155 licensed beds October 6--December 31, 1978. Norton Sound percent occupancy was calculated for 16 beds through June 30, 1978 and 13 beds July 1--December 31, 1978.

*Percent occupancy is based on licensed beds rather than beds in use. During 1978 St. Ann's Nursing Home had 25 beds in use. Percent occupancy calculated on beds in use would be 55.4%. Ketchikan General had 42 acute care beds in use (41.8% occupancy); Alaska Hospital and Medical Center had 118 beds in use (69.9% occupancy); and Providence had 215 beds in use (83.2% occupancy).

**Mt. Edgecumbe has 6 chronic care and 8 alcoholism treatment beds. The 8 chronic care beds accounted for 507 patient days, 1 discharge and a 17.3% occupancy. The 8 alcoholism treatment beds accounted for 2058 patient days, 69 discharges and a 72.3% occupancy.

[1]Data from Certification and Licensing, Alaska Department of Health and Social Services.

[2]Data from FY 1977 Annual Hospital Survey.

[3]Discharges.

[4]Alaska Hospital and Medical Center bassinet total includes 6 neonatal intensive care beds; Providence includes 14 neonatal intensive care beds; and Fairbanks Memorial includes 3 neonatal intensive care beds.

Urge your support of House Bill 974 and 975 to increase State aid to Community Hospitals. The effect in Nome will be to increase our hospital's ability to deal with skyrocketing operating costs. Presently, adjustment of rates to consumers are virtually impossible to make in a timely enough fashion to keep pace with the change in fuel and other operating costs. For the rural hospital with rapid changes in utilization of the hospital this can create very real uncertainties and, or, financial crisis. The added support called for in this legislation will greatly aid all rural hospitals.

COST CONTAINMENT REPORT

'79 Cost Containment Report

The Voluntary Effort

In Alaska 100% Membership

Resolutions of Alaska's Hospitals

Senate Joint Resolution #22 applauds the voluntary cost containment efforts of Alaskan hospitals and requests a progress report to the legislature. The Alaska State Hospital Association, representing its membership, appreciates the opportunity to report on the success in containing the increase of health care costs in Alaska.

The Voluntary Effort, to contain the increase in expenditures and health care costs in the United States, was begun in November, 1977, in all 50 states. This is a cooperative effort of the members of the American Hospital Association, the American Medical Association and the Federation of American Hospitals. The purpose of the Voluntary Effort is to bring together health care providers, insurers, suppliers, business and consumers in a joint program of voluntary action to contain health care costs as an alternative to additional government bureaucracy. The long range goal is to moderate the increase of total health care expenditures, with an immediate target of reducing the rate of increase in health care expenses by two percentage points in 1979, or in range with the Consumer Price Index (CPI), whichever reflects the lower percentage.

The Alaska Voluntary Cost Containment Committee implements and monitors this program in Alaska. This working committee of the Alaska State Hospital Association consists of representatives from the health insurance industry, state governmental agencies, major statewide health care and hospital associations, hospital supply industry, and recognized accounting professionals.

In Alaska, 100% membership participation in this voluntary program has been achieved. In keeping with the national Voluntary Effort, the following resolution has been approved by each member hospital Board.

WHEREAS, the American Hospital Association, the American Medical Association, and the Federation of American Hospitals, in recognition of the need to restrain the rate of increase in health care expenditures, agreed to organize a Voluntary Cost Containment Program and urged each hospital to reassess its operating and capital budgets to see if anything further can be done to reduce these budgets, consistent with sound medical practice, and

WHEREAS, the American Hospital Association, the American Medical Association, and the Federation of American Hospitals have organized a National Steering Committee on Voluntary Cost Containment, which has developed a 15-point program to be implemented through state-level voluntary cost containment committees and through voluntary action of individual hospitals, and

WHEREAS, the Governing Board has thoroughly reviewed these developments with the medical staff and the chief executive officer and is in agreement with the steps that have been taken at the national and state levels, and

WHEREAS, the Local Governing Board is committed to voluntary action as the key to cost containment and desires to play a leadership role in demonstrating the value of voluntary action in cost containment,

Resolved

THEREFORE, BE IT RESOLVED, that the Local Governing Board supports the program of the National Steering Committee on Voluntary Cost Containment, has reassessed its operating and capital budgets to see if additional reductions or postponements can be made, consistent with sound medical practice, pledges the use of all reasonable means to keep operating expenditures and capital budgets at the lowest levels, consistent with sound medical practice; and seeks provisional certification by the State of Alaska Voluntary Cost Containment Committee.

Compiled by the Department of Health Systems Studies, Hospital Research Center
Sources of Data: American Hospital Association, U.S. Department of Commerce, U.S. Department of Labor

NB Please note the state by state inventory of health care costs and bed ratios. As you will notice, Alaska is at the lower range in all categories.

NB Although some national statistics indicate that Alaska has a higher daily cost, when applied to Alaska's average shorter length of stay, costs per admission are in line with the U.S. average.

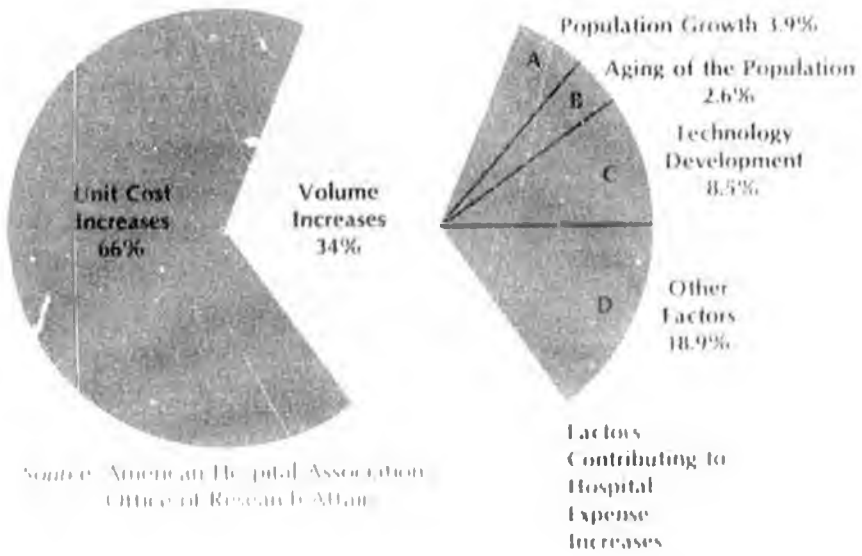
National Overview

Factors contributing to hospital expense increases can be grouped into two major categories: Price increases or inflation affecting unit costs and increases in the volume or quantity of hospital services provided to patients.

An increase in unit cost is due to inflation if there is no change in quantity, quality, and productivity. For example, inflation in hospitals is reflected in unit cost increases resulting from wage increases in excess of productivity gains, increased prices for materials used by hospitals such as fuel and food, increased physician fees, higher insurance premiums, and higher interest rates for borrowed funds. In addition to these factors, increased unit costs have resulted from increased government regulations and improvements in quality, both of which are difficult to measure.

Increases in hospital expenses due to volume have been broken down into four main factors, as noted in the chart below. During the time span of this study, the nationwide quantity of hospital services increased because the population increased, and those aged 65 or over (who require over three times more hospital services than the under 65 category) also increased. Advances in medical science and technology accounted for 8.5 percent of the increase in hospital expenses.

Other factors accounted for approximately 19 percent of the increase in total hospital expenses. These factors include broader health services coverage for more individuals by private health insurance, and expanded governmental programs such as Medicare and Medicaid. Another factor was expanded employee health benefits and higher incomes, allowing individuals to purchase more hospital services.



Factors Contributing to Hospital Expense Increases

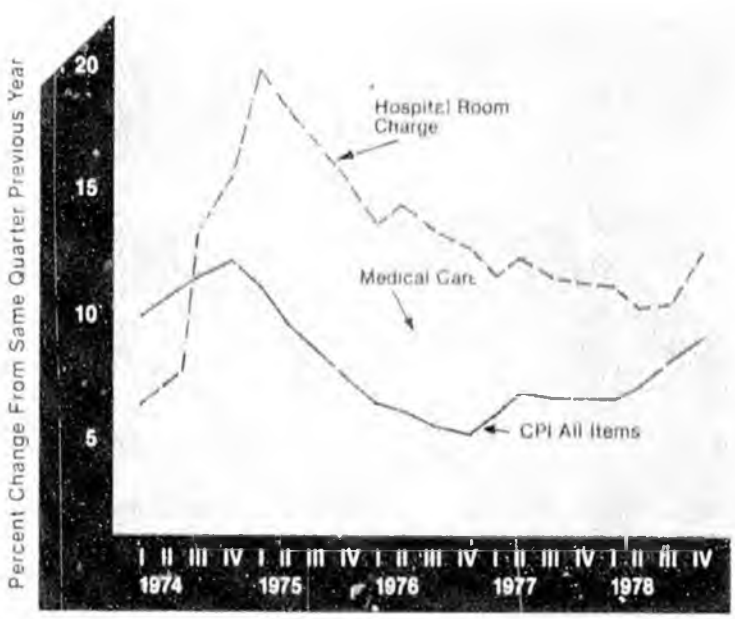
Inflation in the Health Sector

Trends in the growth of prices for the health sector should be compared to trends for the general economy. The health sector is monitored using the Hospital Room Charge and the Medical Care Component of the Consumer Price Index (CPI). Economy-wide inflation is measured using the overall CPI.

Similar growth patterns have occurred over the last five years for the three indicators since the initiation of the Voluntary Effort at the end of 1977, the growth of the three inflation measures has been slowly rising. Since the middle of 1978, however, the general rate of inflation has begun to accelerate. The Medical Care Component of the CPI has shown only a slight increase since the Voluntary Effort began, and is now increasing at a substantially slower rate than the CPI as a whole. During the first quarter of 1979, the Medical Care Component showed a stable rate of increase, while the CPI continued to accelerate. The Hospital Room Charge Component grew steadily and, as in past years, at a higher rate than other measures of inflation until the fourth quarter of 1978 when there was a surge in room prices. During the first quarter of 1979, however, the hospital room index decelerated, despite the continued rapid growth of general consumer prices.

CHART 5



Economy wide Price Inflation vs. Price Inflation in the Health Sector

American Hospital Association
Office of Research Affairs

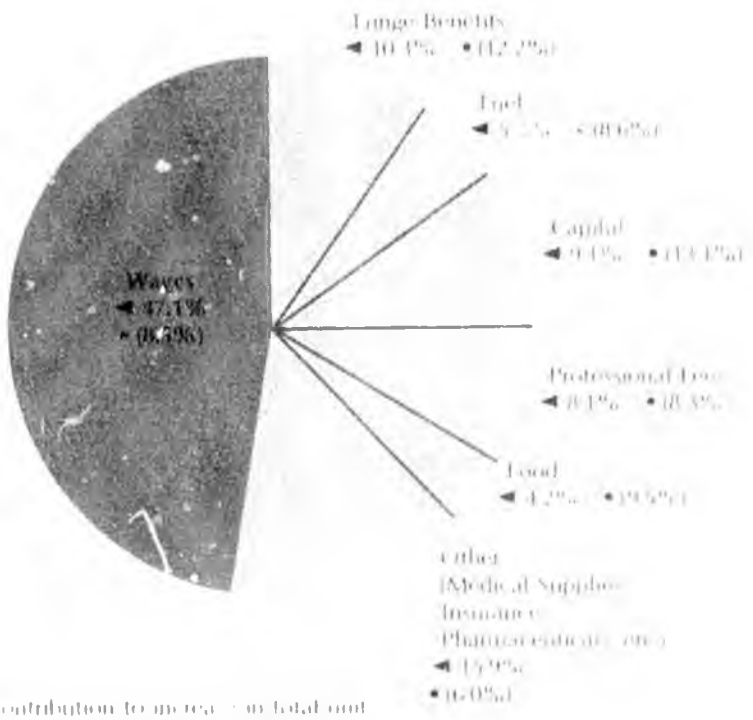
Hospital Market Basket Prices

Both inflation and an increased volume of services contributed to hospital expense increases in 1978.

"Hospital market basket" price increases refer to increases in the unit cost of the goods and services hospitals purchase. Market basket price increases include wage increases and increased acquisition costs (purchase prices) for materials such as fuel, food, professional fees, insurance and borrowed funds.

Approximately two-thirds of the increase in hospital costs has been caused by Hospital market basket price inflation since 1969. The chart below examines some of the elements of the increase in market basket prices, and shows their relative contribution to the overall increase in the cost of the hospital market basket during 1978.

Total hospital expenses for the fourth quarter of 1978 were 12.8 per cent or $1.8 billion higher than total expenses for the fourth quarter of 1977. 45.7 percent or $810 million of this increase was due to growth of services, and 54.3 percent or $962 million was due to market basket price increases.



◄ Contribution to increase in total cost over 1977 levels
• Percent increase in unit cost from 1977-78

Source: American Hospital Association Office of Research Affairs

Hospital Market Basket Components and Their Relative Increase in 1978

Growth in Hospital Service Volume

Nationally since 1973, the total volume of hospital services has increased at an average annual rate of 6.8 percent. Between 1977 and 1978, the total volume of services increased 5.5 percent.

Increasing service intensity accounted for 74 percent of the increase in the total volume of services provided by hospitals during the 1973 to 1978 period. Increasing service intensity reflects:

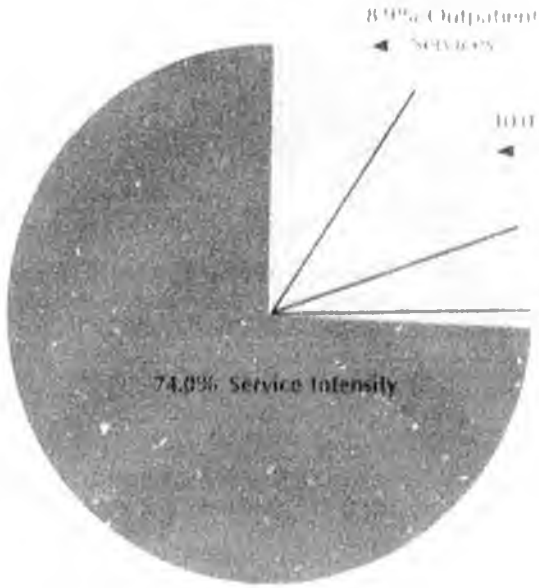
a. Changes in patient mix, particularly increases in the number of patients over-65 years of age.

b. The development of new services.

c. Shorter average length of stay which requires more services to be provided on each day.

d. Regulations requiring hospitals to provide more services, particularly in the administrative area.

Available information indicates that trends in Alaska correspond to the national pattern.



Factors Contributing to Growth of Hospital Service Volume, 1973-1978

Source: American Hospital Association Office of Research Admin.

Note:
The 0.9 percent net increase in under-65 population represents the combined effect of a 3.0% percent growth of population offset by a 2.1% percent decline in the patient day use rate. As population growth outpaced the reduction in the use rate, the volume of services to the under-65 population increased.

Voluntary Effort Commitment in Alaska

Hospital cost containment programs have existed for some time, but the Voluntary Effort gave such efforts nationwide focus which increased the commitment in Alaska. Historically, the hospitals in Alaska have had to maintain a close rein on expenditures due to the higher cost of living, which is reflected in the cost of all supplies and manpower used to keep a hospital operational. During the past several years, our hospitals have been diligent in improving the efficiency of their health delivery, and are continuing to improve management techniques. These efforts are reflected in recognizable savings.

Shared Services

Hospitals throughout Alaska have the opportunity to participate in several shared service programs which help reduce a hospital's operating costs. Through **Group Purchasing**, contract member institutions combine their volume in certain categories of high volume or expensive supplies to receive better pricing and/or services. This coordinated, statewide programs involves approximately 800 acute care beds in Alaska. While savings to members are not always obvious, actual savings are identifiable beginning with the first contract. The "Group Price" becomes the state market price, which fluctuates, but which will always be lower than pre-contract prevailing prices.

Another shared service is our **Circuit-Riding Controller Program** which allows facilities to share controller services to improve their financial capabilities while eliminating the necessity for smaller facilities to hire a full time controller. Presently, five institutions are served by this program.

Shared Services

A unique shared service is the **Audio Visual Library** which has over 500 videocassettes available for use by health services in Alaska. These programs are mailed to the requesting facility, and allow each institution to structure the educational program to fit their needs. New videocassettes are purchased periodically to maintain current quality of the educational material. Facilities share the cost of this central resource, at a great savings over employing full time educational directors or retaining professional consultants periodically.

Health care facilities are mandated by state and federal regulations to maintain medical records in accordance with accepted standards and practices. A continuing shortage of certified medical record technicians makes it extremely difficult for many of our smaller hospitals to successfully fill this position. A traveling **medical record consultant** is available to these hospitals needing this service.

Some hospitals share **laundry services** as well as utilizing **pharmacy** and **dietary consultants.** There are also **energy audit consultant services; shared technical services;** and **continuing education/inservice training programs;** all of which support cost containment.

Consumer Price Index

The unique aspect of the Voluntary Effort is that it has developed a monitoring mechanism to identify and measure the total economic growth in hospital spending over a specific period of time. In the past, hospital spending was frequently measured against the CPI which indicates the relationship between expenses and the inflation rate, but fails to include the unique factors (such as the continuous hours of service, variety of technical/professional, special technological equipment, etc.) which distinguish health care from the general economy.

To remedy this, the Voluntary Effort data will reflect the following areas:

1) inflation experienced in a given period for the cost of goods and services hospitals must purchase;

2) increased expenses related to increased use of services resulting from population growth and aging;

3) technological costs related to improvements in diagnostic and treatment capabilities in medical care.

The Voluntary Effort Today

Where is the Voluntary Effort today? Hospitals during the past year have significantly reduced the rate of increase in health care operational costs. Nationally, in 1976, the rate of increase in hospital annual expenditures was 19.1%. By the end of 1978, that figure had been reduced to 12.8%.

More importantly, the difference between the increase in the GNP and the rate of increase in hospital expenditures has been reduced continually since 1976. **It is important to point out that since February, 1979, the medical index of the CPI has been below the CPI average.**

Some have said that the Voluntary Effort is simply a political response. To the contrary, it is something that has been needed in our country not only in the health care industry, but in all major industries. **By necessity, Alaska's hospitals have been applying cost controls before they became a part of the national program.**

International Comparison

Annual Percentage Increases in Health Care Expenditures, Gross National Product (GNP), and Consumer Price Index (CPI) 1965-1975

Regulation Impact on Health Care Costs

Various government entities have shown support and cooperation with the Voluntary Effort. All three Alaskan Congressmen and many of our state legislators have shown support for and endorsed the success of the hospital Voluntary Effort. However, the major threat to the continued success of the Voluntary Effort still comes from government. There are two major areas in which anticipated government action would impede the continued success of the Voluntary Effort.

1. CONTINUED INCREASE OF GOVERNMENT REGULATIONS OF THE HEALTH CARE INDUSTRY. A recent major study indicates that over 25% of hospital costs are attributable to meeting government regulation requirements. Therefore, the most dramatic action to affect hospitals cost savings would be to halt the ever increasing impact of government regulations in the health care industry.

2. THE CARTER ADMINISTRATION HAS PROPOSED AND IS VIGOROUSLY SEEKING **VOLUNTARY** WAGE AND PRICE CONTROLS FOR HOSPITALS WHILE **LEGISLATING LIMITS ON HOSPITAL CHARGES.** (This administration-endorsed bill was defeated in 1978 and 1979 by Congress.)

Such legislation singles out the health care industry by imposing limits upon the ability to generate revenue while allowing labor and other costs to increase. This is ironic since the hospitals are presently the only major industry in the United States to successfully institute a voluntary effort to control their costs. Such mandated controls would be unsuccessful since it would be applied to a single industry, while other industries are allowed to change wages and prices in adjusting to the inflation in the economy. The cost of implementing and maintaining the controls on hospitals would negate the savings achieved by the hospitals and would destroy these private sector institutions that have become the best in the world.

National Cost Containment Planning

At the national level, our congressmen and the American Hospital Association feel that Alaskan and Hawaiian hospitals should be considered exempt from national cost containment guidelines because of the population base, distance from the continental limits, remoteness, lower level of utilization of health services, patient mix and age, and additional costs due to increased shipping and freight rates.

There is also a need to support the equity reserve required for the future replacement of facilities, equipment, and new technology. Frequently, the public doesn't understand that all non-profit hospitals need this equity. In spite of the above obstacles, Alaskan hospitals have made a concerted effort to reduce expenditures.

National cost containment planning forces hospitals to focus on those expenditures which could directly affect quality of care. Hospitals have little control over such areas as compliance with government regulations, delayed government reimbursement, inflation as it affects equipment, supplies, services, and manpower costs, increases in utility rates, and communications which have seriously affected what hospitals must charge to continue to provide quality care.

Alaska Cost Containment Projects

The following examples demonstrate primary areas of our cost containment effort. There are, of course, other activities which resulted in additional savings. No attempt has been made to communicate everything that our membership is doing to reduce the rate of hospital inflation.

Cost Containment Projects

Energy

5-25 Bed Facility

Use night lights rather than overhead fluorescent fixtures

Change fixtures from two to one tube fixtures.

Reduce incandescent lamps from 75 watts to 40 watts in areas not jeopardized by low light

Timer applied to shut off high pressure boiler during hours not in use

Steam sterilization done at specific time to save a number of loads

Set up time for lights to be turned off in areas not needed

Education of the employees regarding turning off power not needed

Insulation installed wherever possible to cut down on heat loss.

90% of oil fired incineration use cut out by having City pick up all items three times weekly rather than weekly

25-50 Bed Facility

Use less hot water when cleaning and sterilizing whirlpool equipment

G.E. Watt miser tubes have been installed in continuously activated fixtures.

Shut-off valves installed in steam dryer feed lines for activation when dryers are idle

Surge suppressors installed on all electrical breaker panels.

Installed new boiler burners which save 30% in fuel use and costs

The water temperature has been turned down to a minimum acceptable level

Re-insulated old water pipes and hot water tanks

50 Beds & Up

Installed a heat recovery system We maintain ourselves

Keep receiving doors closed to contain heat in the winter and air conditioning in the summer.

Water softener installed to boiler system Reduced boiler water treatments, 57% savings in chemicals No scaling of boiler tubes less gas used Stretch inspections to 120 days from previous 90 days

Shut down the perimeter fin tub heating in the PO Savings in hot water and electricity.

Floodlight bulbs replaced as they burn out with 75 watts, previously 150 watts No loss of light levels

Cost Containment Projects

Manpower

5-25 Bed Facility

Reduce the number of staff on duty if there is not enough work load on one day This is done voluntarily

Documentation by each department to help cut down on their overtime

Use CETA positions to fill peak hours, thus saving money from the hospital's budget

25-50 Bed Facility

Effort not to use outside help when secretarial duties can be performed by department personnel

Use senior citizen help as much as possible — paid for by Senior Community Employment Program.

Stagger arrival time of employees so that all are active and busy instead of congregating as a group

Continuing staff product education as to the use of the product, the price most feasible and availability of the items, including waste containment controls

Training of personnel to handle more than one job efficiently

Use of UB-16 single form billing system This minimizes billing time.

50 Beds & Up

We are budgeting for a decrease in FTE — Despite a projected increase in volume of services We are able to do this through better training, management and streamlined operations We are covering more space and accomplishing more in an hour with fewer people

We physically rearranged our trayline and increased employee efficiency We were able to reduce one position from the trayline and increase efficiency by 1.5 trays per minute

The hospital took the responsibility for the CT service which was done at a cost of $1,000 This created a savings of $44,000

Biomedical electronics technicians are doing hospital television repairs, saving the cost of a service contract.

Cost Containment Projects

Manpower

5-25 Bed Facility

25-50 Bed Facility

We order additional copies of our billing ledger to use on follow-up billing. The cost is very small and saves many man-hours in duplicating billing ledgers.

Group items of similar type on one work order rather than spreading worker's time over all the building.

Purchasing materials which launder easily – can be tumble dried and folded with a minimum of handling.

Revise work schedules and increase coverage and productivity, thus eliminating the need for extra staff position at considerable savings.

Closer monitoring of benefit programs and premiums paid for employees who have turned over.

Standard recruiting package for applicants which saves on secretarial time.

Continued monitoring of the merit pay system to see that raises are not automatic but are based on performance evaluation.

Every fulltime equivalent, or part thereof, is reviewed by administration before that individual may be hired by any department head.

50 Beds & Up

The emergency generator testing routine has been revised saving time and one-half wages to reset computer functions in areas serviced by the unit.

Before we replace a fulltime employee, a "casual" is hired and time utilization in the position is studied.

Utilization review has become a Medical Records function and has been reduced to a ½ time position.

Cross training has been implemented to reduce temporary help during sick time, vacation, and holidays.

By replacing carpet in high spillage areas with tile, man hour cleaning costs have been cut by 20%.

A computer program was written to instantaneously generate the Medicaid log from the patient accounting system. The old manual log took approximately 400 hours per year to prepare.

The bi-weekly general ledger journal entry to record manually prepared payroll checks is now generated and interfaced by the computer. Prior to this the entry was prepared manually requiring about 20 hrs/month.

We have an active program for personnel to voluntarily go home when workload is down.

We have a successful effort to reduce paid manhours including overtime and sick leave abuse. This has been evidenced in our UR reduction.

Cost Containment Projects

Shared Services

5-25 Bed Facility

We are now using a commercial laundry which represents a savings of $3,000/year.

A centralized purchasing and inventory control system has been established wherein routine hospital supplies are ordered on an annual basis, volume discounts taken, and perpetual inventory maintained.

We have successfully covered several staff positions with a shared service person. We now use a consulting dietitian, radiologist, nurse anesthetist, and medical records librarian. As gratifying as these results are, we would like to add a biomedical engineer and respiratory therapist.

25-50 Bed Facility

Spread basic cost-per-meal by cooking also for the local Senior Citizens Committee, reimbursed by that program.

50 Beds & Up

We are saving several thousand dollars through a group purchasing contract. An example of this is a 9% savings on the purchase of IV solutions.

We are combining our food shipments with several other facilities in the community. This reduces our freight rate, and allows us to use full containers rather than partial containers, at the same rate.

We continue to work with the ASHA to establish group contracts for various products. At the present time, there are 29 contracts established. Approximately $37,000 in savings are realized after assessments.

Cost Containment Projects

Other

5-25 Bed Facility

We use generic drugs when acceptable. This reduces our costs and the cost of the patient by ½ to ¼.

Reduction of long distance calls, keeping in mind the cost of writing a letter versus the toll charges.

We started a public ER awareness program which included cost information given to patients before being treated in the ER, newspaper articles, and an interview with a physician on a local radio station. The results of our ER cost containment program was that our ER visits declined by 14% and a net savings of $16,500. This reduction in utilization occurred while other types of hospital utilization was increased.

25-50 Bed Facility

We conserve on the use of x-ray film by using the size most appropriate for the case.

Evaluate the cleaners and products used, utilizing products which have the most efficiency.

Constantly re-evaluating the present cost savings programs for means of improvement.

We draw all blood donors locally at the cost of $44/unit. If we were to ship it in from Anchorage, it would cost $130/unit.

We sterilize the nondisposable O2 nebulizer units for use on the floor when indicated. The cost of sterilization is less than the cost of using a disposable unit each time.

We sterilize disposable items whenever possible rather than just throwing them away, if they were opened from sterile packages.

50 Beds & Up

We installed, own and operate our own trunk line phone system. By doing our own service work and maintenance we save $6,000/month.

Standing admitting orders are no longer being used, decreasing unnecessary work for each patient.

We have changed to two-ply computer paper at a cost of $24.11/box from a three ply paper which costs $43.20 per box.

An estimated annual savings of $2,200 is expected by using a new arterial blood gas kit, which saves .70/case.

A quota system has been instituted for most supplies based on daily patient census. This has resulted in better usage and less theft.

Standard brands of cleaning supplies are being used, eliminating excess quantities of items which are good for only one purpose.

Cost Containment Projects

Other

5-25 Bed Facility

We adopted the cart system of inventory control. This system resulted in reduced loss of supplies due to outdating, reduced the cost of labor to maintain the system, reduced the cost of inventory because of establishing economic reorder levels, and increased control of supplies as they are dispensed to patients.

It is clear that health maintenance actions are far more cost effective than health restoration. Accordingly, the hospital inaugerated and became the home of a number of programs: weight control, alcohol awareness, anti-smoking, parent-child awareness, pre-maternal counseling, and LaMaze classes.

The hospital grounds were landscaped by a volunteer group which saved the hospital $2,000. The volunteers helped build a helicopter landing pad which saved $10,000. Local fishermen have donated fish to the hospital worth another $1,000. The auxiliary spent many hours working in the hospital, saving a substantial amount of money.

25-50 Bed Facility

Dropping several duplicate magazine subscriptions.

Coordination with the fire department for use of the CPR manikins and supplies. This eliminates the need for additional CPR manikins which cost $1,000.

Better utilization of cash: keeping non-essential operating cash in demand savings rather than sitting idle in the checking account.

Constant effort to examine the quality of the product where "a Ford may be substituted for a Cadillac".

Devising color coding system for inpatient folders using marking pens instead of purchasing expensive new file folders helps in time of retrieval.

Change from serial numbering system to unit numbering system, saves time in filing and maintaining unit records.

Reorganize system for posting and indexing for greater efficiency. Time savings per month of approximately 16-24 hours.

Reorganization of the office equipment and work space resulted in saving time for two clerks, thus eliminating the need to hire another half time equivalent.

With the increase in raw food costs the department is going to make more items from scratch.

Watching dispensers carefully so they dispose just the right amount rather than wasting cleanser soution.

50 Beds & Up

High loss items have been eliminated from the cafeteria menu and prices are constantly re-evaluated.

The Respiratory Therapy Department is presently using up stock levels of IPPB disposable set-ups and anticipates using non-disposable set-ups by the first of the year. Presently researching the possibility of using other non-disposable items by using proper sterilization techniques and maintaining a quality control program.

The Pharmacy Department keeps costs down by participating in the Alaska Hospital Association's group purchasing of pharmaceuticals. Lower rates on drugs are obtained through large quantity bids.

Hospital Pharmacy & Therapeutics Committee has drafted a proposal that the number of antibiotics be reduced to one brand. This would enable the supply of a certain antibiotic to be put up for bid and would effectively reduce the cost to patients.

Rotex silver recovery units have been installed in the X-ray Department to better reclaim silver from processing chemicals. The net dollar increase in silver recovery will be 40%.

Cost Containment Projects

Other

25-50 Bed Facility

Using one cleaner for many cleaning jobs and purchasing in larger quantities thus cutting the duplicity of various solutions needed.

Changed film and chemical companies which resulted in no actual cost savings but provided an additional quality control and computer program in helping upgrade quality and lower cost.

Cutting the amount of xeroxing to a minimum.

Carefully assessing the cost effectiveness of using the telephones rather than writing letters.

Carefully monitoring the cost of telephone calls and requiring that all departments keep logs of any calls made.

50 Beds & Up

When anti-embolism stockings come back through the laundry the washed ones are sold to patients for half the purchase price. Occupational therapy uses ready-made splints where appropriate instead of custom-made devices. The Physical Therapy Department started using clean rags to wipe out the whirlpool rather than towels to decrease the quantity of laundry.

The Maintenance Department has substantially depleted their spare parts inventory and eliminated the practice of purchasing excess stock of items. This saved the hospital approximately $10,000 in inventory.

We have had fuel savings due to temperature cutbacks in non-patient areas of the hospital. Use of air conditioning is similarly reduced during the summer to conserve fuel.

Hired a biomedical technician who has started doing maintenance and repair on hospital equipment, thus reducing the cost of outside service contracts.

Variables in Accounting

Due to the differences in accounting techniques and the variables in member hospital expenses, there has been an intentional avoidance in quantifying the total dollars of cost effectiveness which has been stimulated through our membership effort.

Commitment by Alaskan Hospitals

What we can assure our patients is that Alaskan hospitals have been, and remain committed to, doing everything in their power to contain the increase in hospital costs. As a result of this program, there is a renewed awareness of expenditure accountability by the medical staff, management, and professional staff. Our membership has effectively demonstrated their responsibility in holding down hospital expenditures. This has resulted in numerous effective programs while maintaining quality of care at competitive costs, and slowing increases in hospital expenditures to less than the rate of inflation.

III. ANALYSIS (See Fiscal Note Preparation Instructions, Section III)

*There would be no fiscal impact to this Department. The additional cost could be prorated. This has been the procedure in the past when the total entitlements exceed the amount appropriated to the budget for this grant program.

However, if it is not the intention of the legislature to put more burden on the municipalities in the program, by further reducing the proration factor, the following additional funding should be added to the FY 1981 budget for this grant program.

FISCAL NOTE - Continued HB 974

The additional cost of increasing the hospitals' category to $200,000 per hospital with 10 or more beds, or $60,000 with less than 10 beds would be $1,805,690.

Based on $200,000 grants included in this bill and assuming no new hospitals will become eligible.

12 municipalities now receive $75,000 per hospital
($200,000 - $75,000 = $125,000 x 12 = $1,500,000

Alaska Hospital now receives $175,000
($200,000 - $175,000 = $25,000)

Fairbanks Memorial now receives $155,000
($200,000 - $155,000 = $45,000)

Ketchikan General Hospital now receives $92,000
($200,000 - $92,000 = $108,000)

$1,500,000	
25,000	
45,000	
108,000	
$1,678,000	
127,690	COLA
$1,805,690	TOTAL ADDITIONAL FUNDING REQUIRED

There was no fiscal impact computed for the preceding fiscal years. We are assuming that if any additional funding is required it would be added to the budget request.

MEMORANDUM State of Alaska

Prepared by: Lowell Swartz Date: 4-25-80
Division/Office: SHPDA PH: 465-3038
Department of Health & Social Services

Approval DHSS Mgt. & Bdgt: [illegible] Date: 4/29/80

33-001 (Rev. 12/79)
Modify by DHSS (11-28-79)

A study to determine the State's role in providing aid/support to Alaska's acute care facilities and how such aid/support should be disbursed should provide important policy and resource allocation direction for the State on this complex issue. Because of the health planning and policy considerations raised, the study should be conducted under the aegis of the DHSS Division of State Health Planning and Development with particular focus on its facilities development section.

With current Division staff limitations and work load commitments this scope of work would be contracted to a qualified research group with capabilities in and a working knowledge of Alaska's health care delivery system, health care economics, capital development in health care facilities, State plans for development as articulated by the Statewide Health Coordinating Council, State regulations and other dimensions. It is anticipated that the scope of work would require approximately $50,000.

To ensure input of affected/interested parties, a task force would be convened to advise the contractor and the Division on the study. The task force would include a hospital administrator, a representative of a third party payor, a consumer, a representative of the State's Medicaid program, a member of the Division's facilities development staff, a Health Systems Agency board member and a member of the Statewide Health Coordinating Council. The task force would meet in Anchorage, the most economical meeting site, at least three times during the study at an approximate cost of $3000 per meeting.

Costs are included to produce a report for select distribution at the conclusion of the study.

	Ray Metcalfe

Rep. Alvin Osterback, Sponsor

Uses map to discuss problem which exists particularly in the Aleutian Chain area. Sand Point and King Cove would like to work together on developing a coastal management program independently of the rest of REAA 8 which is noncontiguous. Refers to correspondence between Dept. C&RA and the communities on the issue.

Parr - Questions the effect of such a subdivision on the planning for Outer Continental Shelf activities.

Murray Walsh, Office of CZM

Bottomfish and OCS impacts would be addressed in the planning process regardless of the size of the coastal resource service area.

Veronica Clark, Dept. C&RA

Dept. supports the concept of the bill as does the Alaska Coastal Policy Council which endorsed the proposal.

Parr - Questions effect on Council representation of HB992.

Clark

Nine regions of the state have representation on the Council and HB 992 wouldn't effect this. Clark generally addressed problems with the inability to subdivide REAAs in the Prince of Wales area and Southeast Ak. in particular. It is her perception that planning hasn't been initiated thus far as people aren't aware or convinced that they have some-to gain from the planning exercise.

Parker - Questions if it is the intent in the proposed CS work draft that one first class or home rule city could exclude itself while another might be required to be included in the subdivided area? This point needs to be clarified in the final CS.

COMMITTEE ACTION: Supports drafting of CS with clarifications noted by Committee members.

TAPE # 9 SIDE 1 Footage 1352-1756
9 2 00-712

Zharoff - Suggests that other "features" might be relevant to be included on p. 1.

Carney - Other "features" would probably be brought out during the public hearing process.

Parr - At the least, economic and ecological considerations should be mentioned.

Committee concurs that a CS be drafted based on the work draft.

April 10, 1980

Don Gilman, Co-chair
Alaska Coastal Policy Council
Soldotna, Alaska
and
John Haltermann, Co-chair
Alaska Coastal Policy Council
Juneau, Alaska

Dear Messrs. Gilman and Halterman:

Recently Representative Osterback sponsored, through the House Resources Committee, HB 992, An Act relating to the formation of coastal resource service areas; and providing for an effective date. This bill, as I understand it, seeks to solve problems encountered in the Alaska Peninsula/ Aleutian chain in establishing viable coastal resource service districts.

A similar bill may be introduced on the Senate side, by Senator Mulcahy. As Chair of the Senate Community and Regional Affairs Committee, I would appreciate hearing from you regarding this bill--your and the Council's view both of the problem and of this particular solution to that problem.

Thank you for your cooperation.

Sincerely,

Arliss Sturgulewski
Senator, District 10-H

3540 Murray Hales' Sphere influence. 10-20 mile circle around them. Watersheds as boundaries. Implementation by cooperative agreement. Forest Service agrees to Hydaburg + [Klawock & Craig during this now. Sea Alaska + Marine Corps. Forest Service DNR on all agreeing.

Council wants to approve plan for area larger than planning area, - Endorse action but couldn't enforce.

Bill Thompson - re functioning of READ + boundary determination - READ

CSSB 562 makes three changes in the Alaska Coastal Management Act of 1977:

SEC. 1 Section 1 makes a minor semantic change recognizing the addition of the option described in Section 2 of the bill.

SEC. 2 Section 2 allows the Commissioner of Community and Regional Affairs to divide regional educational attendance areas (REAAs) into no more than three coastal resource service areas for coastal management purposes. This proposed change resulted from concern that options offered by the Alaska Coastal Management Act may not be well suited to regions of the unorganized borough which have not yet organized coastal resource districts.

HOW DOES THE EXISTING LAW WORK?

(1) Organized boroughs develop their own coastal management programs.

(2) Residents of the unorganized borough have four options:

a. A coastal resource service area may be organized into a coastal resource district if a majority of qualified voters in a special election approve organization and elect a seven-member board to oversee development of a coastal management program. (NOTE: A coastal resource service area is an REAA unless the Commissioner of Community and Regional Affairs combines one or more REAAs into a single service area.)

b. First-class, home-rule and second-class cities with active planning programs may develop and adopt their own coastal management programs within their corporate limits.

c. These cities may voluntarily join the surrounding coastal resource service area.

d. These cities may remain separate districts but voluntarily enter into mutual agreements with adjacent coastal resource service areas for joint or cooperative administration of their coastal management programs.

WHICH REGIONS WOULD BE AFFECTED BY CSSB 562?

The following three regions which have not yet organized coastal resource districts nearly three years after enactment of the Alaska Coastal Management Act:

Aleutian Chain (REAA 8)
Prince William Sound (REAA 21)
Southeastern (REAAs 18 and 19)

These regions have several characteristics in common:

(1) None has a dominant regional center.

(2) Each has several first-class or home-rule cities which operate their own school systems and have nothing to do with the adjacent REAA.

(3)The configuration of fishing districts and other economic and ecological factors may lend themselves to natural divisions within REAA boundaries.

(4) Especially in the Aleutian Chain, long distances and adverse weather conditions may make it extremely difficult and expensive to get together regularly.

If Section 2 is enacted, it would give residents of the unorganized borough the option of developing coastal management programs within a subdivision of an REAA in which residents have common interests and concerns and can get together with relative ease. It should also encourage these areas of the unorganized borough to develop coastal management programs on a reigonal basis.

CSSB 562 includes the following assurances that the subdivision of REAAs would not be excessive or indiscriminate:

(1) An REAA may be divided into no more than three coastal resource service areas.

(2) A public hearing must be held in the REAA affected.

(3) Consideration must be given to geographic, cultural, economic and environmental factors as well as to other factors which might arise at a public hearing or from some other source.

(4) Each subdivision must include at least one first-class or home-rule city so that there is a reasonable balance of population between subdivisions.

(5) All cities within the boundaries of a coastal resource service area formed by division of an REAA are automatically part of the surrounding service area and may not prepare a separate coastal management program.

(6) Coastal resource service areas which have organized districts may not be subdivided. (This provision excludes the Northwest Alaska region, Bering Straits region and the Yukon/Kuskokwim region).

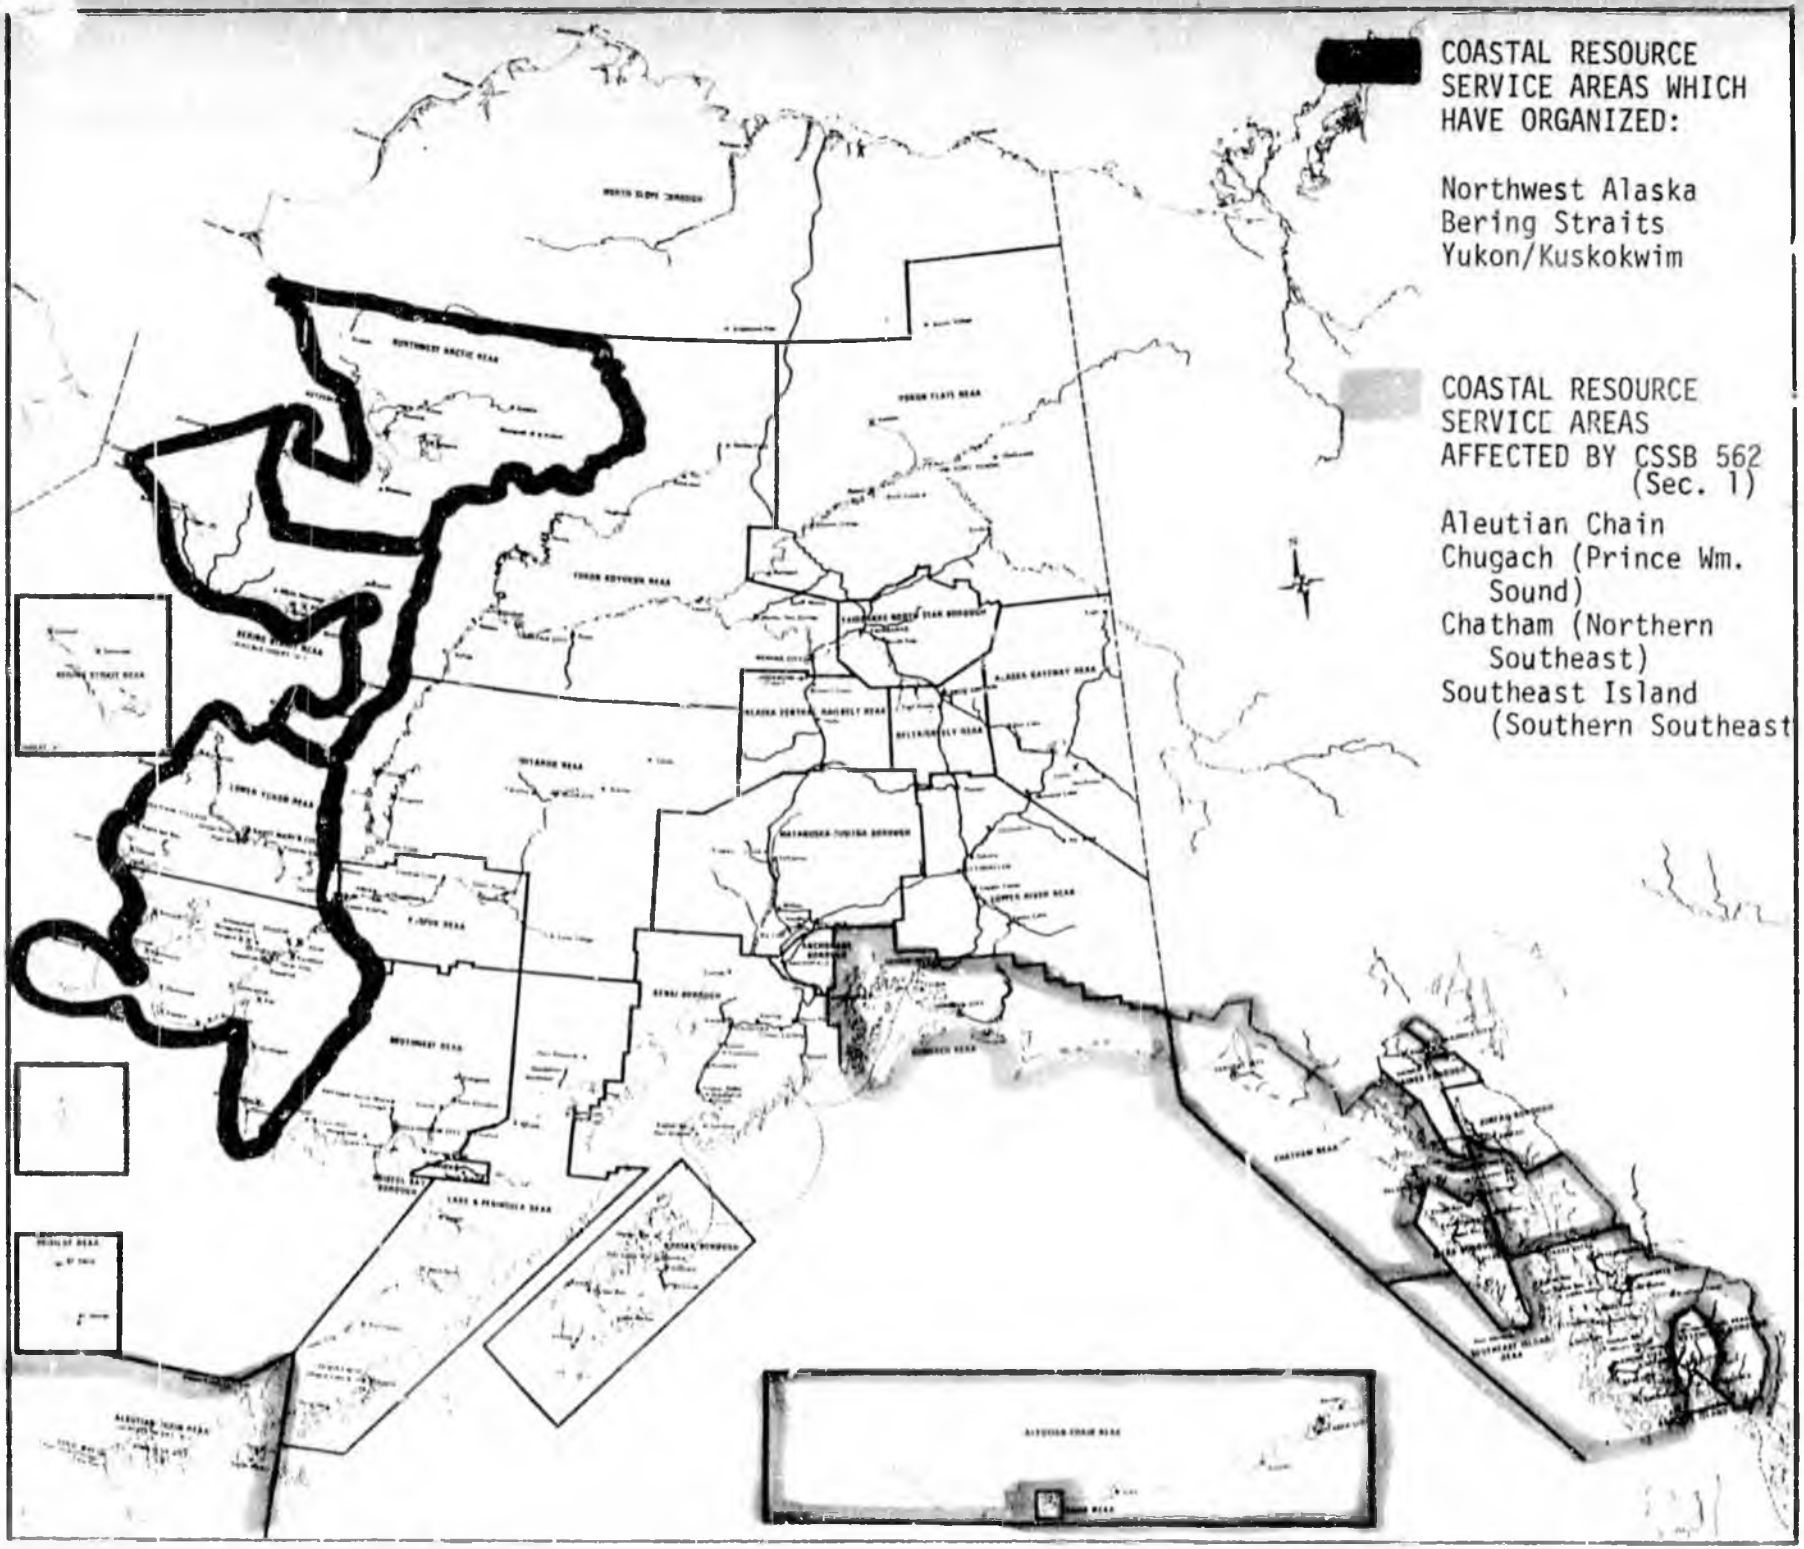
WHICH ORGANIZATIONS SUPPORT SECTION 2 OF CSSB 562?

(1) The city councils of Unalaska, Sand Point and King Cove have endorsed the amendment in concept.

(2) At various times in the past, the cities of Craig, Klawock, Hydaburg, Petersburg and Yakutat have expressed interest in planning for an area larger than their corporate limits yet smaller than the REAA in which they are located.

(3) At its most recent meeting, March 18-19, the Alaska Coastal Policy Council passed a resolution endorsing this amendment in concept.

SEC. 3 Section 3 states that all cities within a coastal resource service area encompassing one or more undivided REAAs are considered part of the surrounding coastal resource service area unless they exclude themselves by resolution of their governing bodies. However, if a city excludes itself from an adjacent coastal resource service area, it must agree to administer its coastal management program jointly or cooperatively with the coastal resource service area board. The intent of this section is to encourage regional planning wherever possible by making it difficult for cities to exclude themselves from the surrounding coastal resource service area. Under the existing law, cities are assumed to be excluded from the surrounding coastal resource service area unless they pass resolutions to include themselves; under the proposed law would be assumed to be included until they take positive actions to exclude themselves. Under the existing law, mutual agreement for joint or cooperative administration of programs is voluntary; under the proposed amendment it would be mandatory.



COASTAL RESOURCE SERVICE AREAS WHICH HAVE ORGANIZED:
Northwest Alaska

CSHB 99.2

For an Act entitled: "An Act relating to the formation of coastal resource service areas; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 46.40.120 is amended by adding a new subsection to read:

(d) For purposes of coastal zone management only, the commissioner of the Department of Community and Regional Affairs may, after public hearings held in the area affected, divide an existing regional educational attendance area into two (or more) coastal resource service areas according to geographic, cultural or other features relevant to coastal management planning; however

(1) each coastal resource service district formed by dividing an existing regional educational attendance area must contain at least one first class city or home rule city; and

(2) a coastal resource service district formed before the effective date of this Act may not be divided for coastal management planning purposes.

* Sec. 2. AS 46.40.190 is amended to read:

Sec. 46.40.190. COOPERATIVE ADMINISTRATION. (a) A city within the coastal area which is not part of an adjacent coastal resource service area shall be included [MAY INCLUDE ITSELF] for purposes of this chapter within an adjacent coastal resource service area unless [IF] its governing body, by resolution adopted by a majority of its membership, chooses to exclude [CONSENTS TO THE INCLUSION OF] the city from an adjacent coastal resource service area and a copy of the resolution is

filed with the commissioner of the Department of Community and Regional Affairs. This section does not apply to a coastal resource service district formed in accordance with AS 46.40.120(d).

(b) Nothin in this chapter restricts or prohibits cooperative or joint administration of functions between a municipality and a coastal resource service area organized under the provisions of this chapter upon initiation of a mutual agreement for the purpose. A city which is excluded from an adjacent coastal resource service area under (a) of this section must enter into a mutual agreement for cooperative or joint administration of functions with the coastal resource service area board from the adjacent coastal resource service area.

* Sec. 3. This Act takes effect immediately in accordance with AS 01.10.-070(c).

III. ANALYSIS (See Fiscal Note Preparation Instructions, Section III)

Administrative activities associated with HB 992 would include travel and advertising for public hearings. Costs could be absorbed by the Governor's FY 81 budget request (program area: Natural Resource Management Administration; BRU: Coastal Zone Management). Assuming the Governor's budget for that BRU is approved there should be no additional administrative costs associated with HB 992.

STATE MEMBERS:
Frances Ulmer, Director of Policy Development & Planning, Co-chairman
Robert Ward, Commissioner of Transportation & Public Facilities
Charles Webber, Commissioner of Commerce & Economic Development
Robert LeResche, Commissioner of Natural Resources
Lee McAnerney, Commissioner of Community & Regional Affairs
Ernst Mueller, Commissioner of Environmental Conservation
Ronald Skoog, Commissioner of Fish & Game

The Honorable Arliss Sturgulewski, Chairman
Senate Community and Regional Affairs Committee
Alaska State Senate
Pouch V
Juneau, Alaska 99811

Dear Senator Sturgulewski:

The Alaska Coastal Policy Council, at its last meeting on March 18 and 19, 1980, took action on four items related to coastal management that will be of interest to the Legislature and in particular to the two Community and Regional Affairs Committees.

Resolution 79-2 of the Rural Alaska Coastal Management Conference, requesting Continuation of Coastal Resource Service Area (CRSA) boards, was endorsed by the council with a request for implementation powers deleted. Resolution 79-6 of the Rural Alaska Coastal Management Conference requesting the creation of interior resource districts, was endorsed in its entirety by the council. Copies of the resolutions, as the council endorsed them, are attached for your information.

The council supports CSSB 348 CSSB 349, and CSHB 581, as described by Ms. Margo Waring, which deal with local governments and make provisions for unorganized boroughs, including the division of rural education attendance areas.

Finally, the council voted to request amendment of section 46.40.120 (b) of the Alaska Coastal Management Act as follows:

> The Commissioner of the Department of Community and Regional Affairs may, after public hearings held in the area affected, consolidate two or more regional education attendance areas as a single coastal resource service area or may subdivide an existing regional education attendance area, according to geographic, cultural, or other features relevant to coastal management planning.

This proposed amendment is now before the House of Representatives as HB 992, currently pending in the House Community and Regional Affairs Committee.

RESOLUTION 79-2 OF THE RURAL ALASKA COASTAL MANAGEMENT CONFERENCE

AS ENDORSED BY THE ALASKA COASTAL POLICY COUNCIL

ENTITLED: REQUESTING CONTINUATION OF COASTAL RESOURCE SERVICE AREA BOARDS.

WHEREAS, the Alaska Coastal Management Act of 1977 allows for the formation of coastal resource service areas in the unorganized borough for the purpose of developing coastal management programs, and

WHEREAS, the Department of Community and Regional Affairs provides funding and technical assistance so that coastal management plans may be developed and approved; and

WHEREAS, the coastal resource service area is formed after an election by the communities in the affected region; and

WHEREAS, the coastal resource service area boards are comprised of members from those various communities; and

WHEREAS, there is currently no provision for funding of coastal resource service area boards after the approval of their plans; and

WHEREAS, there is no mechanism for coastal resource service areas to monitor the implementation of their plans; and

WHEREAS, there is no mechanism for coastal resource service areas to monitor consistency determinations made by state agencies;

NOW THEREFORE BE IT RESOLVED that the Alaska State Legislature amend the Alaska Coastal Management Act of 1977 in order that the coastal resource service boards maintain their identity and be funded after approval by the Coastal Policy Council and the legislature of their coastal management plans.

RESOLUTION 79-6 OF THE RURAL ALASKA COASTAL MANAGEMENT CONFERENCE

AS ENDORSED BY THE ALASKA COASTAL POLICY COUNCIL

ENTITLED: REQUEST FOR CREATION OF INTERIOR RESOURCE DISTRICTS.

WHEREAS, the State of Alaska and the federal government have released oil and gas lease schedules for the next five years; and

WHEREAS, the State of Alaska and the federal government have enacted legislation providing for the formation of coastal resource districts; and

WHEREAS, the federal government and the State of Alaska provide funds for implementation of coastal zone management plans to the coastal districts; and

WHEREAS, the State of Alaska's five year schedule includes oil and gas lease sales in the interior of Alaska; and

WHEREAS, oil and gas development and pipeline construction in the Interior has the same impact as offshore development; and

WHEREAS, these interior areas have no legislative basis for creating district plans and no source of funding districts in the event of oil and gas lease sales and pipeline construction; and

WHEREAS, the Department of Community and Regional Affairs is allocated funds for the development of coastal districts,

Now, therefore, be it

RESOLVED, that the Department of Community and Regional Affairs search for a method of funding resource districts in the areas of the Interior which will be impacted by state oil and gas lease sales and pipeline construction, and

BE IT FURTHER RESOLVED that the Alaska State Legislature fund interim planning districts.

FROM: Marjorie

Re HB 992 SB562

Change #2 to require that for each subdivision of an REAA must contain at least one first class, or home rule city (Valdez and Cordova are both home rule as are Petersburg and Wrangell). Also, we need to be aware that in REAA 7 there is no first class or home rule city, only the second class city of Port Heiden)

#9 for consideration should be:
An REAA subdivided for the purpose of coastal management planning may be combined with another coastal resource service area for coastal zone management purposes.

Juneau, Alaska 99811

Dear Representative Parker:

The Alaska Coastal Policy Council, at its last meeting on March 18 and 19, 1980, took action on four items related to coastal management that will be of interest to the Legislature and in particular to the two Community and Regional Affairs Committees.

Resolution 79-2 of the Rural Alaska Coastal Management Conference, requesting Continuation of Coastal Resource Service Area (CRSA) boards, was endorsed by the council with a request for implementation powers deleted. Resolution 79-6 of the Rural Alaska Coastal Management Conference requesting the creation of interior resource districts, was endorsed in its entirety by the council. Copies of the resolutions, as the council endorsed them, are attached for your information.

The council supports CSSB 348, CSSB 349, and CSHB 581, as described by Ms. Margo Waring, which deal with local governments and make provisions for unorganized boroughs, including the division of rural education attendance areas.

Finally, the council voted to request amendment of section 46.40.120 (b) of the Alaska Coastal Management Act as follows:

> The Commissioner of the Department of Community and Regional Affairs may, after public hearings held in the area affected, consolidate two or more regional education attendance areas as a single coastal resource service area <u>or may subdivide an existing regional education attendance area, according to geographic, cultural, or other features relevant to coastal management planning.</u>

This proposed amendment is now before the House of Representatives as HB 992, currently pending in the House Community and Regional Affairs Committee.

RESOLUTION 79-2 OF THE RURAL ALASKA COASTAL MANAGEMENT CONFERENCE

AS ENDORSED BY THE ALASKA COASTAL POLICY COUNCIL

ENTITLED: REQUESTING CONTINUATION OF COASTAL RESOURCE SERVICE AREA BOARDS.

WHEREAS, the Alaska Coastal Management Act of 1977 allows for the formation of coastal resource service areas in the unorganized borough for the purpose of developing coastal management programs, and

WHEREAS, the Department of Community and Regional Affairs provides funding and technical assistance so that coastal management plans may be developed and approved; and

WHEREAS, the coastal resource service area is formed after an election by the communities in the affected region; and

WHEREAS, the coastal resource service area boards are comprised of members from those various communities; and

WHEREAS, there is currently no provision for funding of coastal resource service area boards after the approval of their plans; and

WHEREAS, there is no mechanism for coastal resource service areas to monitor the implementation of their plans; and

WHEREAS, there is no mechanism for coastal resource service areas to monitor consistency determinations made by state agencies;

NOW THEREFORE BE IT RESOLVED that the Alaska State Legislature amend the Alaska Coastal Management Act of 1977 in order that the coastal resource service boards maintain their identity and be funded after approval by the Coastal Policy Council and the legislature of their coastal management plans.

RESOLUTION 79-6 OF THE RURAL ALASKA COASTAL MANAGEMENT CONFERENCE

AS ENDORSED BY THE ALASKA COASTAL POLICY COUNCIL

ENTITLED: REQUEST FOR CREATION OF INTERIOR RESOURCE DISTRICTS.

WHEREAS, the State of Alaska and the federal government have released oil and gas lease schedules for the next five years; and

WHEREAS, the State of Alaska and the federal government have enacted legislation providing for the formation of coastal resource districts; and

WHEREAS, the federal government and the State of Alaska provide funds for implementation of coastal zone management plans to the coastal districts; and

WHEREAS, the State of Alaska's five year schedule includes oil and gas lease sales in the interior of Alaska; and

WHEREAS, oil and gas development and pipeline construction in the Interior has the same impact as offshore development; and

WHEREAS, these interior areas have no legislative basis for creating district plans and no source of funding districts in the event of oil and gas lease sales and pipeline construction; and

WHEREAS, the Department of Community and Regional Affairs is allocated funds for the development of coastal districts,

Now, therefore, be it

RESOLVED, that the Department of Community and Regional Affairs search for a method of funding resource districts in the areas of the Interior which will be impacted by state oil and gas lease sales and pipeline construction, and

BE IT FURTHER RESOLVED that the Alaska State Legislature fund interim planning districts.

STATE OF ALASKA

JAY S. HAMMOND, GOVERNOR

DEPT. OF COMMUNITY & REGIONAL AFFAIRS

OFFICE OF THE COMMISSIONER POUCH B – JUNEAU 99811

April 21, 1980

The Honorable Bill Parker
Chairman
Community and Regional Affairs
Committee
Alaska State House of Representatives
Pouch V
Juneau, Alaska 99811

Dear Mr. Chairman:

At your request, the Department of Community and Regional Affairs has prepared background information on HB 992 and explored alternatives to the bill.

BACKGROUND

The Alaska Coastal Management Act of 1977, as amended, allows residents of the unorganized borough to organize coastal resource districts encompassing one or more regional educational attendance areas (REAAs). The Commissioner of Community and Regional Affairs has authority to combine two or more REAAs into a single coastal resource service area prior to organizational elections. Municipalities which exercise planning powers are also districts; they may join an adjacent coastal resource service area but are not required to do so. Each district prepares a coastal management program to be submitted to the Coastal Policy Council and State Legislature. This system seems to work well in certain areas, but has been received with reservation in others. Attachment 1 lists each coastal REAA and coastal resource districts within each REAA and indicates whether the district's coastal management program is under way or completed. REAAs which have not yet conducted coastal management elections but could do so under the present law are described as "potential" districts.

Coastal resource districts have been organized in three regions of the unorganized borough; another region is seriously considering following suit. Districts have formed in the Northwest Alaska region (REAA 1), the Bering Straits region (REAA 2), and the Yukon/Kuskokwim region (REAAs 3 and 4); district formation is under consideration in the Bristol Bay region (REAAs 6 and 7). These four regions have the following traits in common:

1. Each region has one dominant regional center: Kotzebue in the Northwest Alaska region; Nome in the Bering Straits region; Bethel in the Yukon/Kuskokwim region and Dillingham in the Bristol Bay region.

2. All of the communities in the Northwest Alaska region and all but one in each of the other regions are second class cities or unincorporated and therefore obtain educational services from an REAA. (First class and home rule cities operate their own school districts.)

3. In two of the three regions which have organized coastal resource districts the regional center has chosen not to join the adjacent service area. Consequently, in the Bering Straits region there are two coastal resource districts, the City of Nome and the Bering Straits Coastal Resource Service Area; in the Yukon/Kuskokwim region, there are also two coastal resource districts, the City of Bethel and the Yukon/Kuskokwim Coastal Resource Service Area.

In addition to the regions discussed in the foregoing paragraphs, there are six coastal REAAs which have not yet organized coastal resource districts. They have the following characteristics:

1. Four of them--the Aleutian Islands (REAA 8), Northern Panhandle (REAA 18), Southern Panhandle (REAA 19) and Prince William Sound (REAA 21)--have several first class or home rule cities each and no dominant regional center. Therefore, each region has several school districts, several coastal resource districts, and no established central gathering place or service center (except Anchorage, Juneau, or Seattle).

2. Federal landholdings consume much of the land within each region. Federally owned land is not part of the State's coastal zone. Settled areas and non-federal land often occur as isolated pockets separated by thousands of acres of federally owned land.

HB 992 resulted from concern that options offered by the Alaska Coastal Management Act may not be well suited to the second set of REAAs discussed above (REAAs 8, 9, 10, 18, 19, 21). Attachment 2 describes advantages and disadvantages of the status quo [AS 46.40.120(b)], HB 992, two legislative alternatives and one administrative alternative.

Sincerely,

Marie Mathews-Pignalberi

for Lee McAnerney
Commissioner

REAA 20	Metlakatla/Annette	* Annette Islands Indian Reserve
REAA 21	Chugach	* Cordova * Valdez Prince William Sound Coastal Resource Service Area (potential)

* Program under way or completed

Status quo	Advantages	Disadvantages
AS 46.40.120(b) allows the Commissioner of Community and Regional Affairs to consolidate two or more REAAs into one coastal resource service area after considering standards applicable to incorporation of borough governments , the likelihood that a borough would be incorporated within the area, or the extent of federally owned land and water within the area.	By using the REAA as the basic unit for planning in the unorganized borough, the present law does not create any new boundaries for delivery of government services.	The present law allows first-class and home rule cities (and second-class cities under certain circumstances) to develop coastal management programs separate from the region. Many cities do not see it in their best interest to join forces with an entire REAA. Consequently, coastal resource service areas are not being organized in several REAAs, yet many cities have legitimate interest in influencing development outside their corporate limits.
HB 992		
Under HB 992, AS 46.40.120(b) would be amended to allow the Commissioner of Community and Regional Affairs to not only consolidate two or more REAAs into one coastal resource service area, but also subdivide REAAs into separate coastal resource service areas according to geographic, cultural, or other features relevant to coastal management planning. Borough incorporation standards would also be considered, as would federal ownership of coastal land and water.	HB 992 also uses REAAs as the basic unit of reference for coastal resource service areas. First-class or home-rule cities of the unorganized borough might be more inclined to join coastal resource service areas smaller than the entire REAA in which they are located. HB 992 would allow residents to plan for those areas which affect them most directly and with which they are most intimately familiar.	Indiscriminate subdivision of an REAA could produce fragmented coastal management programs.
Legislative alternative #1		
Retain the language of HB 992, but restrict application of the subdivision provision to the Aleutian Chain (REAA 8), Northern Panhandle (REAA 18), Southern Panhandle (REAA 19), and Prince William Sound (REAA 21). Allow the Commissioner of Community and Regional Affairs to combine REAAs with subdivisions of other REAAs if such combinations satisfy standards mentioned in HB 992.	This provision would restrict application of the subdivision section to areas most likely to express interest in them.	The restriction may be unnecessary since coastal resource service areas have organized districts in most of the other coastal REAAs. There may be constitutional questions about treating regions differently by specifying the geographic area rather than by specifying standards which must be met.

Attachment 2

Legislative alternative #2	Advantages	Disadvantages
Retain the language of HB 992, but add the following provision: If an REAA is divided and an organization election is called in one subdivision, an election will automatically be called in all other subdivisions of the REAA. If any one of the subdivisions elects to organize a district, all other subdivisions are automatically organized. The coastal management program from all subdivisions of an REAA must be coordinated from the outset and submitted simultaneously to enable the Coastal Policy Council and State Legislature to reach a reasonable conclusion about the compatibility of the plans. Although each subdivision would have its own board, there would be a seven-member regional oversight board with representation from the entire REAA (or combination of REAAs) on a one-man, one-vote basis.	All of the advantages of HB 992. Greater coordination among plans than would be afforded under HB 922.	Certain areas may be prematurely coerced into preparing a coastal management program by virtue of actions taken by neighboring areas. Any section could delay approval of the programs of other sections. Creation of another layer of government would make the process more cumbersome and costly.
Administrative alternative		
A coastal resource service area encompassing one or more REAAs could voluntarily organize itself in such a way that board members from one area would meet routinely with local people in that area and use full board meetings as a means to combine sectional ideas and make compromises if necessary.	Local involvement in regional coastal management planning with as few new formal structures as possible. No legislative change would be needed.	The representation and consequent voting strength of any given area on the seven-member service area board would be less in an entire REAA than in a subdivision of it.

Fallback position limit to Aleutians

HB 992

Application of ACMP to the
Aleutian/Pribilof Island Region

Adopting an ideal goal to be implemented if possible

Problem:

Options provided under the Alaska Coastal Management Act for formation of "coastal resource districts" are not applicable to the Aleutian/Pribilof Island Region.

Background:

The Aleutian/Pribilof Island Region presents a unique situation relative to the establishment of coastal resource service areas. Within the Region are three first-class cities (Sand Point, King Cove and Unalaska) as well as regional educational attendance areas 8, 9 and 10 (Aleutian Chain, Pribilof and Adak).

Under present law the first-class cities have the option of becoming single coastal resource service areas, thus establishing their own coastal management planning programs within their respective political boundaries, or of joining forces with the REAA's to develop a regional planning effort.

In addition, the three REAA's may become separate coastal resource service areas or, under authority granted in AS 46.40.120(b) the Commissioner of the Department of Community and Regional Affairs, may consolidate REAA's 8, 9 and 10 into one or two service areas for coastal management purposes.

Given these conditions there exists the possibility of one or six, or any combination within these numbers, coastal resource service areas being created within the Aleutian/Pribilof Island Region.

The population of the Region is approximately 3600 with 2274 (63%) residing in the three first-class cities (Sand Point 773, King Cove 733 and Unalaska 768). The second-class communities of Akutan and St. Paul contain 652 residents, 85 and 567 respectively. Total Regional population residing in incorporated municipalities totals 2926 or 81%. Clearly, if the first-class communities elect to establish their own programs within their jurisdictions, the remaining area (REAA's 8, 9, & 10) will be substantially diluted of human resources with which to develop and implement a coastal management program.

Land interests in the region are geographically complex. Village corporations were unable to select ANCSA entitlements within the core townships of Native villages due to the configuration of islands and Federal reserves. As such, village corporations selected deficiency lands under the Act this resulted in the ownership of land many miles from their respective villages. An example is the Tanadqusix Corporation at St. Paul (Pribilof Islands). Tanadqusix Corporation has substantial land holdings approximately 200 miles away on Unalaska Island. This is the case for a majority of the Aleutian's village corporations thus creating an extremely fragmented pattern of land ownership and land interests throughout the chain.

Several Aleutian villages are vacant of population, yet represent vast land holdings and thus development interests for shareholders residing elsewhere. Unga and Sanak are two cases in point. Village Corporation members from Unga and Sanak reside in Sand Point yet hold major land interests outside of Sand Points City boundaries. They fear that should Sand Point elect to become a coastal resource service area they, as residents of Sand Point, will be precluded from having a voice in a coastal management program which encompasses their corporate land holdings.

The communities, on the other hand, would prefer to work with the respective corporations in a coastal management program but do not care to be involved or necessarily influenced by actions a thousand miles away.

The Aleutian/Pribilof Island Region situation strongly indicates the need to provide a third option for creating coastal resource service areas. This option would address the need to create service districts which emphasize common interests and geographic proximity in areas where land mass, economic interests and population are not contiguous.

Proposed Legislative Amendment

Section 3 AS 46.40.120(b) is amended to read:

(b) The Commissioner of the Department of Community and Regional Affairs may, after public hearings held in the area affected, consolidate two or more regional educational attendance areas as a single coastal resource service area or may subdivide an existing regional education attendance area according to geographic, cultural or other features relevant to coastal management planning.

Mr. Lawrence H. Kimball, Jr.
Director
Division of Community Planning
Department of Regional and Community Affairs
225 Cordova, Building B.
Anchorage, AK 99501

Dear Mr. Kimball Gary

In response to your letter of March 21, 1980 concerning the language of a possible amendment to AS 46.40.120(b), I can state the amendment accomplishes precisely the purpose which the City Council hopes for. I have discussed the language of the amendment with City Manager Burton; it has the support of the City administration. At the next regular City Council meeting (April 10, 1980), we shall report on the swift response which we have had from the Division to our request for assistance and inform the Council of the proposed amendment.

Thank you, again, for the attention which you have given this matter.

Sincerely,

CITY OF UNALASKA PLANNING DEPARTMENT

Mr. Richard Careaga
Director of Planning
P.O. Box 89
Unalaska, Alaska 99685

Dear Mr. Richard Careaga:

In response to your letter of March 17 requesting our assistance in drafting an amendment to AS 46.40.120(b), I would like to relay the following information.

The City Councils of Sand Point and King Cove have made identical requests. In order to accommodate these requests in a timely manner I drafted a proposed amendment and presented same to the Alaska Coastal Policy Council on Wednesday, March 19.

Following my presentation and brief discussion the Council voted 11-0 in favor of a resolution supporting the proposed amendment. This support will accompany the proposed amendment to Juneau where we will request it be introduced via committee. We will meet with Sand Point officials and legislators for the affected area next week in Juneau to discuss the matter.

I have enclosed a copy of the proposed amendment for your City Council's review. Should the Council support it as written, I would appreciate a letter to that affect. Should there be a need to amend the language please contact me immediately as time is of the essence.

Thank you for your assistance in this matter and please assure the City Council and Mayor Holmes that we will keep them informed as things progress.

Thank you also for the courtesies extended during our recent visit. I enjoyed our stay.

Best regards,

Larry

Lawrence H. Kimball, Jr.
Director

IN THE HOUSE

BY THE COMMUNITY AND REGIONAL AFFAIRS COMMITTEE

CS FOR HOUSE BILL NO. 992

IN THE LEGISLATURE OF THE STATE OF ALASKA

ELEVENTH LEGISLATURE SECOND SESSION

A BILL

For an Act entitled: "An Act relating to the formation of coastal resource service areas; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 46.40.120(a) is amended to read:

(a) Except as otherwise provided in [(b) OF] this section, each regional educational attendance area established under AS 14.08.031 containing a part of the coastal area may be organized as a coastal resource service area.

* Sec. 2. AS 46.40.120 is amended by adding a new subsection to read:

(d) For purposes of coastal zone management only, the commissioner of the Department of Community and Regional Affairs may, after public hearings held in the regional educational attendance area affected, divide an existing regional educational attendance area into no more than three coastal resource service areas according to geographic, cultural, economic, environmental, or other features relevant to coastal management planning; however

(1) each coastal resource service area formed by dividing an existing regional educational attendance area must contain at least one first class city or home rule city;

(2) a city within a coastal resource service area formed by dividing an existing regional educational attendance area may not elect to exclude itself from the coastal resource service area; and

(3) a coastal resource service area formed before the effective date of this Act may not be divided for coastal management planning

purposes.

* Sec. 3. AS 46.40.190 is amended to read:

Sec. 46.40.190. COOPERATIVE ADMINISTRATION. (a) A city within the coastal area which is not part of a [AN ADJACENT] coastal resource service area shall be included [MAY INCLUDE ITSELF] for purposes of this chapter within an adjacent coastal resource service area unless [IF] its governing body, by resolution adopted by a majority of its membership, chooses to exclude [CONSENTS TO THE INCLUSION OF] the city from an adjacent coastal resource service area and a copy of the resolution is filed with the commissioner of the Department of Community and Regional Affairs.

(b) Nothing in this chapter restricts or prohibits cooperative or joint administration of functions between a municipality and a coastal resource service area organized under the provisions of this chapter upon initiation of a mutual agreement for the purpose. A city which elects to be excluded from an adjacent coastal resource service area under (a) of this section shall enter into a mutual agreement for cooperative or joint administration of functions with the coastal resource service area board from the adjacent coastal resource service area.

* Sec. 4. This Act takes effect immediately in accordance with AS 01.10.-070(c).

III. ANALYSIS (See Fiscal Note Preparation Instructions, Section III)

Administrative activities associated with HB 992 would include travel and advertising for public hearings. Costs could be absorbed by the Governor's FY 81 budget request (program area: Natural Resource Management Administration; BRU: Coastal Zone Management). Assuming the Governor's budget for that BRU is approved there should be no additional administrative costs associated with HB 992.

CS SB 562/HB 992

SUGGESTED AMENDMENTS TO SB 562/ HB 992

1. ~~(b) as is in statute 46.40.120 (b)~~

46.40.120 as amended

ADD (c) For purposes of coastal zone management only, REAAs the commissioner of the DCRA may, after public hearings held in the area affected, divide an existing REAA into two or more coastal resource service areas, according to geographic, cultural or other features relevant to coastal management planning.

(1) Other factors not withstanding, each coastal resource service district formed as a subdivision of an REAA, must contain at least one first class or home rule city.

(2) No coastal resource service district formed peior to the effective date of this act may be subdivided for coastal planning purposes.

~~(3) A subdivision of an REAA formed for the purposes of coastal management planning may not be combined with another coastal resource service area for coastal zone management purposes, upon approval of the Commissioner.~~ may join cooperatively with another coastal resource service area for coastal zone management purposes, upon approval of the Commissioner.

Sec. 2. AS 46.35.190 is amended to read:

46.35.190 COOPERATIVE ADMINISTRATION. (a) A city within the coastal area which is not part of an adjacent coastal resource service area may exclude (INCLUDE) itself for purposes of this chapter ...

(1) The provisions of 46.35.190 (a) do not apply to coastal resource service districts formed under 46.40.120 (c).

(b) Nothing in this chapter restricts or prohibits cooperative or joint administration of functions between a municipality, and a coastal resource service district formed under 46.40.120 (c) and a coastal resource service area organized under the provisions of this chapter upon initiation of a mutual agreement for the purpose.

(c) (1) A mutual agreement for cooperative or joint administration is required when a city selects to exclude itself from an adjacent coastal resource service area under the provisions of 46.35.190 (a).

HB 992/SB 562

Suggested changes to minimize potential adverse effects of this legislation.

1. For each subdivision of an REAA, specify a minimum percentage of the REAA's coastline that must be in each subdivision (this would work toward minimizing potential super fragmentation by establishing a standard for CRA to use).

2. For each subdivision of an REAA, specify that it must contain at least one first ~~or second class cities~~. This would also serve the purpose of minimizing numbers of subdivisions and insuring a "lead" community which could administer the program, as Regional Corporations will be less likely to serve that role under the draft legislation. If this is adopted #1 above may not be essential.

3. Add language that states that 46.40.190 does not apply to subdivisions of an REAA. This further insures #2 above, i.e., that a first class city cannot opt out of a subdivided REAA coastal resource service district. If opting out is allowed, then you could have small districts without any population to speak of.

4. Change 46.40.190 to provide for opting out rather than opting in. This would apply to all REAAs.

5. Change 46.40.190 (b) so that when a first class city opts out of a coastal resource service district, a cooperative agreement is mandatory.
Add language to require that in this case of an opted out first class city, a city representative sit on the coastal resource service district board and vice versa as ex offcio members.

6. Regarding crsd boards, change the language to provide for board numbers from 5-11 (as is the REAA board) instead of the inflexible seven member board.

7. Insure that either by mentioning the REAAs which can subdivide or ~~as~~ otherwise, provide that the ability to subdivide is not retroactive. We want to avoid situations in which a crsd that has completed a czm plan won't go back, subdivide, and get funded agin for another czm plan.

8. Eliminate all references to boro/incorporation standards being used for subdivisions. It would set a poor precedent to in any way imply that these small subdivisions are potential regional governments. Suggested language might be : "For purposes of coastal zone management planning only, coastal resource service districts may be formed from a part of an REAA" or other words that would state that boro incorporation standards are not being used.

The CS is circulated for review by the committee.

Branson - Cites the reference to "unorganized borough bill" and REAA boundaries and suggests that the reference to the unorganized borough bill be eliminated since use of those boundaries was contingent on the passage of HB580. She suggested that it appeared to be a poor way to write legislation.

O'Connell - Sees the bill as "flying in the face of the political process". It mandates a fair and equitable distribution of of capital projects money even if the people don't want the distribution to be fair. Suggests that instead HB9, taxing the unorganized areas, be passed out of committee.

Metcalfe - Doesn't like the bill. Sees "need" as the willingness of a community to act together to put together a proposal and to tax themselves.

O'Connell - Concerned that the legislature would be establishing a level of support with capital projects which couldn't be maintained then the oil money runs out. Suggests that the needs of many communities couldn't be met for even one project with the accumulated money for 5 years.

Jim Rhode, Administrative Assistant, Rep. Hugh Malone
Distributes printouts with figures based on a formula giving a weight of 7-3, population/area for entitlement purposes under CSHB1010. The figures were discussed.

Lee Sharp, Municipal Attorney, Juneau

Basically in favor of any form of revenue hearing and generally favors state assistance for capital projects however there are two basic defects in the bill as presently written:

(1) Area is used as a major component in the formula
(2) Bill contains a basic disincentive to organization in the sparcely populated, smaller communities.

Opposed to having population and area considered equally. It is people who generate the need for capital projects and it seems irrelevant to take into consideration the water within the borough of Juneau or the large land masses of the North Slope Borough.

Technical problems with the bill are:

* Assistance is not going to first and second class cities, rather just those otherwise organized.
* How would you could the population of a borough and the first class and home rule cities within it?
* Why don't first and second class cities receive consideration for assistance?
* If a borough doesn't exercise Parks and Recreation or another power for which money/facilities are being provided, how could they operate same?
* Does the requirement for a 5 year Capital Plan create conflict for those communities which currently develop 6 or 7 year plans? (perhaps the manda e for annual updating solves this problem)
* P. 5 line 1 Why is the plan of the organized municipality submitted to the regional council?
* P. 5 General problem with the formula as contained in the bill. The amount of area taken into consideration should be reduced as it distorts the situation.
* P. 6 l. 1 What does the term "agreement" mean? This requi -] ment is a problem.
* P. 7 lines 18-20 Questions whether the Dept. of Labor figures are updated annually and suggests that the municipality-determined population figures used in revenue sharing be considered instead.

COMMITTEE ACTION:

No action

TAPE # 10 SIDE 1 Footage 486-1785

Sharp reiterates that he likes the idea but not with the formula in the bill. It is people not area which creates "need". Further, if the stat is going to provide maintenance, there is no incentive for organization.

Dennis Dooley, SouthEastern Director of Programming for Dept. of Transportation and Public Facilities
Raises points in attached notes.

Parr- Suggests that cost of construction rather than cost of doing business be used as in the school formula.

Dooley - Responds that it would be difficult to sue school differential costs for other capital projects. Refers to p. 8 and asks how "costs" are going to be paid? Suggests that there needs to be clarification on how the service charge for required bond sales to implement the projects will be paid.

Parr - Asks for the distinction between major and minor maintenance costs.

Dooley - States that $50,000 is usually considered the dividing line between costs associated with maintenance being considered those under $50,000 (minor maintenance) and those above $50,000 as major . Those considered minor are usually in the operating budget.

Jim Kohler, Manager, City of Yakutat
Supports strongly the concept embodied in the bill as a good and innovative as well as simple approach to funding capital projects. It allows the local political subdivision t determine its priorities and to execute those priorities. It requires locally based planning. Suggests that the basic concept and worth of the bill not be overlooked in dealing with some of the technical and formula problems.He agrees with some of the technical problems cited by Sharp but says that the formula is not improperly skewed toward sq. mile consideration. Some weight must be included for land to offset some fixed costs for such facilities. The mechanics of fund distribution needs some work. A helpful exercise might be to look at what local governments are statutorily authorized to do and to allow entitlements to go to municipalities which have power to plan and execute. City budgets address costs which must be included in such projects and these priorities should be set by local government.

Parr - Watershed decision needs to be made re local vs. state responsibility in each of the listed areas for funding.

Dooley - Local concerns might also be regional and statewide.

Ginny Chitwood - Ex. Director, Ak. Municipal League
The 50%/50% gives too much weight in the formula to area but it should be recognized that area is a facotr. The mechanics of distribution presents some problems in that first class cities have the same powers basically as do home rule. The basic powers delegated are the same as home rule.

Composition of regional councils with "one" representative elected from each city may not be enough. There should be more flexibility in the composition.

There may be a problem when second class boroughs having adopted few powers and containing first class or second class cities which may have adopted more powers.

Staley's Notes

HB 1010

1. Perhaps a better definition of local capital project

(2) can a location agree to have their funds spent on a State responsibility project if it is of a higher priority

3. Can home rule cities agree to have their funds spent outside their boundaries

(4) Can a ~~city~~ borough and a home rule city agree to combine their funds and build projects in each others area

5. Can a home rule city petition for inclusion along with the unorganized area which encompasses it?

6. Regional Councils
   15 members
   → who perform these services from the organized & home rule cities

OTHER SPONSORS: _____
FURTHER REFERRALS: Finance

HEARING DATE: 4/16/80

MEMBERS PRESENT: Bill Parker, Margaret Branson, Pat O'Connell, Pat Carney, Charlie Parr, Fred Zharoff, Ray Metcalfe

Jim Rhode, A.A. Rep. Hugh Malone

Formula developed for the bill reflects capital spending patterns. Relative population as well as relative area are included. Refers to and reviews material with figure breakdown for various boroughs and REAAs.

Strict "need" could have been recognized but that has been associated with property value and the cost of a property value review has been placed at $200,000 per REAA by the Assessor's Office. An update would be necessary every three years. Tax effort would be difficult to use in the bill because of the limited tax base in the unorganized borough.

It appear that there is a need to look at the "Six Year Capital Improvement Plan" concept as it has not been implemented as intended. The Administration is supposed to do a needs assessment statewide. This is an invitation to prepare a "wish list" as a prioritization of cost/benefit not necessary. Local contractorscould be involved if things are planned in advance.

An idea is currently under consideration by the Finance Committee to authorize language requiring capital projects be proposed during the first legislative session and the executive branch would do cost estimates and other analyses for the 2nd Session.

Carney - Questions inclusion of total sq. miles in the formula and states that he does not see the relevancy to capital projects. Also, wants figures for Mat-Su and Kodiak Boroughs.

Rhode - In response to question, states that proposal does not include state facilities which would be planned for by the state.

Parr - It appears difficult to justify square miles in the formula.

Rhode - Anchorage and Fairbanks are getting 20x what's necessary to maintain existing standards.

COMMITTEE ACTION:
Information session only/No action taken

TAPE # 8 SIDE 2 Footage 424-1562

Parr - His perception is that even the cities don't all have a minimum level of service in all the areas covered by the Capital Foundation.

There should be some provision for the fact that some rural areas don't want roads. Maybe there should be a separate formula for each category (roads, trails, recreational facilities, etc)

How will state facilities be accommodated? Community schools are often used for recreation centers. Allowance would have to be made for this kind of situation when local money had gone into the contruction of such facilities. How would exisiting inequities be dealt with which already exisit in the appropriation system (such as the Cultural Facilities Act). There should be some provision for a cultural facility which has been given money in the past. There needs to be a tie in with the existing programs which disperse money. Should be an "across the board" approach if it is going to be done.

Steve VanSant-- Dept. of C&RA

Suggests changing membership of the Regional Councils to 11 members. These might play the role of transitional bodies for eventual boroughs and there should be consideration of this by making the maximum number 11 on p. 3 line 21.

Senate Members: Sturgulewski, Kelly

Ted Berns, Municipal Attorney, Anchorage

Objects to the bill and opposes for philosophical and technical reasons. Objects to the manner in which the resource wealth is proposed to be distributed statewide. The benefits of resource development are part of the public domain and yet the formula shows the benefits to the underpopulated areas of the state. Sees the bill as an encroachment into the local affairs of the municipalities.

Technically, the allocation formula is a problem. In fact, geographic area and population will have little to do with relative need and ability to fund those needs. Cited unacceptability of language on p. 5 lines 9,10 which allow that the entitlement be "disbursed in accordance with the terms of an agreement between the commissioner and the recipient."

Basically, Anchorage municipality is opposed to the legislation as "the Municipality of Anchorage can do a better job of getting the money out in the streets."

Elsie O'Brien, Mat Su, City Clerk, City of Houston

Agrees with the testimony given by Anchorage. Objects that there is no provision that the money be disbursed in a particular district after it goes to the borough. What provision is there for redistribution to second and first class cities?

Jeff Smith, Mauneluk Association, Planning Division Director

Opposed to SB 546. Each area would be tied to a certain amount of funding for capital projects. It is unclear who would make the final determination in the use of the funds. Once you establish a limit to your funding, you limit development.

Ginny Chitwood, Executive Director, Municipal League

Endorces the bill and the concept of a rational approach to capital expenditures. Specific areas which need to be addressed include:

COMMITTEE ACTION: No Action

TAPE # SIDE ____ Footage _____

1. Makeup of Regional Councils (should be more than 1 representative from the first class cities in some areas)
2. Role of first and second class cities
3. Formula

Expanding on these points, perhaps the makeup of the Councils should be more flexible. Some boroughs have limited powers and the political subdivision should be the city. (home rule and first class cities have school powers) Undeveloped areas need more funding. But the formula is over skewed for area.

Jerry McCutcheon, Anchorage

Poor bill. Haven't considered the people you are trying to do something for. With the Governor appointing, he can pack the Councils.

Re Project '80 being funded for Anchorage--the years of Anchorage's history will be wiped out with the replacement of the block of buildings now standing.

IN THE HOUSE

BY THE COMMUNITY AND REGIONAL AFFAIRS COMMITTEE

HOUSE BILL NO. 1010

IN THE LEGISLATURE OF THE STATE OF ALASKA

ELEVENTH LEGISLATURE - SECOND SESSION

A BILL

For an Act entitled: "An Act relating to state aid for local capital projects; establishing the capital projects foundation fund; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 44.42.020 is amended by adding a new paragraph to read:

(14) adopt regulations for management of the capital projects foundation fund established under AS 44.42.100 and administer that fund.

* Sec. 2. AS 44.42 is amended by adding new sections to read:

ARTICLE 2. CAPITAL PROJECTS FOUNDATION ENTITLEMENTS.

Sec. 44.42.100. CAPITAL PROJECTS FOUNDATION FUND. (a) There is established in the department a capital projects foundation fund for the purpose of providing state assistance for improvement, maintenance and new construction costs of local capital projects. Within the limits of appropriations for the purpose, the department shall make entitlements for capital projects to organized boroughs, to home rule municipalities as defined in AS 29.08.010, and to municipalities unified under AS 29.-68, which have capital improvement plans.

(b) Within the limits of appropriations for the purpose, the department shall make and manage entitlements for capital projects for unorganized boroughs if a version of an Act entitled "An Act relating to unorganized boroughs, establishing unorganized boroughs, establishing a program of financial assistance for the preparation of regional plans by unorganized boroughs, permitting adoption of home rule charters by unorganized boroughs, and directing submission of recommendations con-

cerning adjustment of the boundaries of service areas of the unorganized borough; and providing for an effective date" is enacted. If that bill is not enacted, the department shall make and manage entitlements for capital projects for each regional educational attendance area organized under AS 14.08.031.

(c) A first class city which has not adopted a home rule charter and which is outside of an organized borough and outside of a regional educational attendance area shall be included in the capital improvement plan and shall be represented on the regional council of a regional educational attendance area or an unorganized borough which borders the city.

(d) The amount of appropriations authorized for the capital improvements foundation fund for each fiscal year is equal to $200 times the state population as annually determined by the Department of Labor.

Sec. 44.42.110. ELIGIBLE FACILITIES. An entitlement from the capital projects foundation fund may be used for improvement, maintenance, or new construction costs of the following type of facility if the project is identified in a capital improvement plan under AS 44.42.-130:

(1) libraries;

(2) community and emergency detention facilities;

(3) fire halls, including the purchase of fire vehicles;

(4) parks;

(5) recreational facilities;

(6) water and sewer facilities;

(7) health facilities;

(8) community centers;

(9) cultural facilities;

(10) transportation facilities which do not duplicate state

facilities and which are not inconsistent with the state transportation plan under AS 44.42.050 as determined by the department, including

(A) service roads;

(B) trails;

(C) harbors and docks for small boats;

(D) seaplane floats;

(E) public transit facilities, including the purchase of transit vehicles;

(F) emergency and recreational airstrips for small aircraft.

Sec. 44.42.120. REGIONAL COUNCILS. (a) A regional council shall be established for each unorganized borough if a version of an Act entitled "An Act relating to unorganized boroughs, establishing unorganized boroughs, establishing a program of financial assistance for the preparation of regional plans by unorganized boroughs, permitting adoption of home rule charters by unorganized boroughs, and directing submission of recommendations concerning adjustment of the boundaries of service areas of the unorganized borough and providing for an effect date." is enacted. If that bill is not enacted, a regional council shall be established for each regional educational attendance area. A regional council shall be composed of 15 members as follows:

(1) one elected official who is selected by the city council of each first class city located within an unorganized borough or regional educational attendance area, or which is included in an unorganized borough's capital improvement plan or a regional educational attendance area's capital improvement plan under AS 44.42.100(c);

(2) additional members selected by the governor from persons nominated by the Department of Community and Regional Affairs who are from second class cities and unincorporated communities within an unor-

ganized borough or regional educational attendance area; members from second class cities shall be elected officials.

Sec. 44.42.130. CAPITAL IMPROVEMENT PLANS. (a) With assistance from the department, each regional council established under AS 44.42.-120 shall formulate a capital improvement plan. To qualify to receive an entitlement from the capital projects foundation fund, each organized borough, home rule municipality, and unified municipality shall formulate a capital improvement plan. A capital improvement plan formulated in accordance with this section shall be a five-year plan updated annually, and shall

(1) identify all capital projects needed in the borough, municipality, or regional educational attendance area;

(2) assign a priority to each capital project identified;

(3) include cost estimates for each capital project;

(4) include a list of needed capital projects which are not eligible for an entitlement from the capital improvement foundation fund;

(5) identify possibilities for projects involving facilities having more than one use;

(6) consider the feasibility of waste heat utilization and other energy-saving measures for capital projects;

(7) provide for site acquisition for capital projects; and

(8) provide for needed public access and utilities.

(b) A capital improvement plan and revisions to a capital improvement plan for an unorganized borough or regional educational attendance area shall be adopted by the regional council after a public hearing and submitted to the department.

(c) A capital improvement plan and revisions to a capital improvement plan for an organized borough, home rule municipality, or unified

municipality shall be submitted by the regional council to the city council or borough assembly. After a public hearing, and after approval by the council or assembly, a capital improvement plan shall be submitted to the department.

* Sec. 3. AS 44.42 is amended by adding a new section to read:

Sec. 44.42.140. DISTRIBUTION OF ENTITLEMENTS. (a) Entitlements from the capital projects foundation fund shall be distributed annually by the department to each organized borough, home rule municipality, and unified municipality which has submitted a capital improvement plan as required by AS 44.42.130. Entitlements from the capital projects foundation fund shall be distributed annually to accounts established by the department for each unorganized borough or for each regional educational attendance area which has submitted a capital improvement plan as required by AS 44.42.130.

(b) The amount of an entitlement shall be allocated one-half on the basis of adjusted population and one-half on the basis of adjusted area. An entitlement shall be the ratio of the adjusted population to the total adjusted population plus the ratio of the adjusted area to the total adjusted area, times one-half the amount of an appropriation to the capital projects foundation fund.

* Sec. 4. AS 44.42 is amended by adding new sections to read:

Sec. 44.42.150. USE OF ENTITLEMENTS. (a) An entitlement from the capital projects foundation fund distributed to an organized borough, home rule municipality, or unified municipality may be used only for projects identified in a capital improvement plan submitted to the department. Each recipient shall determine which project or projects to finance with the entitlement received each year under AS 44.42.140.

(b) An entitlement from the capital projects foundation fund to an organized borough, home rule municipality, or unified municipality shall

how much authority? Legislature?

be disbursed in accordance with an agreement between the commissioner and the recipient.

(c) An entitlement from the capital projects foundation fund for a project located in a first or second class city as part of the capital improvement plan of an unorganized borough or a regional educational attendance area may be disbursed, with the concurrence of the city council of the first or second class city, subject to the following terms:

(1) that the first or second class city will secure, retain and protect title to the site of an existing facility or on which a new facility is to be constructed; for purposes of this paragraph it is sufficient that title is obtained in fee or by a lease which provides that the city enjoys exclusive use of the site and any improvements for the estimated life of the facility;

(2) that the first or second class city will assume responsibility for the operation of the facility to be financed with the entitlement, and the feasibility of the discharge of this obligation shall be demonstrated to the satisfaction of the commissioner before the payment of the entitlement.

(d) If it appears that the cost of a capital project financed by an entitlement from the capital projects foundation fund to an organized borough, home rule municipality, or unified municipality will vary substantially from the cost estimated at the time the entitlement was made for the project, the recipient is responsible for obtaining the additional money needed to complete the project. This additional money may be obtained from other entitlements made from the capital projects foundation fund. If a project financed by an entitlement from the capital projects foundation fund to an organized borough, home rule municipality, or unified municipality costs less to complete than esti-

mated at the time the entitlement was made, the recipient may use the excess money on other projects in its capital improvement plan.

(e) In an unorganized borough or regional educational attendance area each regional council shall annually determine which projects in its capital improvement plan to finance with entitlements from the capital projects foundation fund. The department is responsible for the design and construction of the projects selected by a regional council under this subsection and shall carry out the projects in accordance with AS 36.

(f) An entitlement from the capital projects foundation fund may be used to match state or federal grants.

Sec. 44.42.160. DEFINITIONS. In AS 44.42.100 - 44.42.160

(1) "adjusted area" means the area in square miles of a home rule municipality, unified municipality, organized borough, or unorganized borough or regional educational attendance area which has a capital improvement plan, multiplied by the construction cost differential;

(2) "adjusted population" means the population, as determined by the Department of Labor using the latest figures of the United States Bureau of the Census, of a home rule municipality, unified municipality, organized borough, or unorganized borough or regional educational attendance area which has a capital improvement plan multiplied by the construction cost differential;

updated? how about rev. sharing figures.

(3) "construction cost differential" means one plus the percentage by which average construction costs in a home rule municipality, unified municipality, organized borough, or unorganized borough or regional educational attendance area are greater than or less than the average construction costs in Anchorage as determined by the department using the latest available figures;

(4) "improvement" means renovations and additions to an existing facility which allow for better service than the facility provided in its original condition;

(5) "improvement, maintenance or new construction costs" includes, in addition to costs directly related to the project, the total of all costs of financing and carrying out the project; these include, but are not limited to, the costs of surveys, plans and specifications, architectural, engineering or other special services, acquisition of real property, site preparation and development, purchase, construction, reconstruction and improvement of real property;

(6) "maintenance" means restoration and repair needed to keep a facility as close as possible to its original condition.

* Sec. 5. Sections 1, 2, 4 and 5 of this Act take effect July 1, 1980.

* Sec. 6. Sections 3 and 6 of this Act take effect July 1, 1981.

Information Sheet

CAPITAL FOUNDATION FUND

The Capital Foundation Fund will, by appropriation, provide funds to all areas of the State for certain capital improvements. To expend funds, each area will need to develop an areawide capital improvement plan, approved by the local assembly when there is one, and developed with the Department of Transportation and Public Facilities when there is no local government.

Organized and unorganized boroughs are encouraged to conduct regionwide planning to avoid costly duplications of capital projects and to prioritize, on the local level, needs among communities, rather than leaving this process to state level government.

Each area, so long as appropriations are made, is certain of a source of funding for local projects. Each area will receive a formula share of the appropriation. This stability will be advantageous to local governments for planning purposes. Additionally, unlike the current situation, areas may have greater ability to use capital projects for anti-cyclic economic benefits by being in control of fund expenditures. Annual funds do not lapse and may be accumulated for locally determined purposes.

Capital Foundation Funds may be used as the local match required for certain state and federal projects. This will be particularly significant in rural areas which do not now have a source of local match.

Funds are eligible for both construction and maintenance costs. This means that local governments will be encouraged to consider life-cycle costs and encouraged to maintain buildings and other improvements in order to maximize the efficiency of their capital dollars.

Local governments, under the Capital Foundation Fund program, will be assured of a steady supply of state funds for capital improvements that will be directed toward locally determined project needs and can be expended at a locally determined pace.

(6) any additional information which will facilitate understanding of the governor's proposed programs and financial plans by the legislature and the public. (§ 1 ch 188 SLA 1970; am § 7 ch 168 SLA 1978)

Effect of amendment. — The 1978 amendment rewrote this section.

Sec. 37.07.062. Capital budget. (a) The general appropriation bill required to be submitted to the legislature in § 20(a), of this chapter shall contain a separate section for capital outlays which is divided into subsections for each of the capital projects funds (AS 44.42.080) which lists, for each project, the (1) project identification number; (2) project title; (3) source of funding; (4) amount expended on the project during the preceding fiscal year, the amount authorized for the current fiscal year, and the amount proposed to be expended during the succeeding fiscal year; (5) estimated start for construction; (6) schedule of bond elections pertaining to the appropriation, including elections previously held. The total appropriation to each capital projects fund shall be reflected in the balance sheet of each fund as of June 30 of each fiscal year.

(b) Upon the effective date of the general appropriation bill, the amounts appropriated by the bill for capital outlay shall be paid into the appropriate capital project funds established under AS 44.42.080.

(c) The balance sheet of each capital projects fund (AS 44.42.080) shall, at the end of eac' fiscal year, contain the following items so as to reflect the status of each fund and that the appropriations to each fund are not based upon a fiscal year:

(1) cash with treasury — shows a normal debit balance;

(2) bonds authorized and unissued — shows a normal debit balance; these are assets of each fund and shall be sold in accordance with the election date of each authorization; the proceeds are expended on a first-in, first-out basis;

(3) bonds to be authorized — shows a normal debit balance; these shall be reflected in general obligation bond or revenue bond act proposals accompanying each year's capital improvements program revision; the general obligation bond act proposals are to provide funding for the three fiscal years following the general election date;

(4) general fund; reserve for capital outlay — shows a normal debit balance; this is the amount required by AS 37.05.157 to be included in the general appropriation bill as the reserve for capital outlay to cover the succeeding six-year planning period;

(5) general fund; other — shows a normal debit balance; additional appropriations from the general fund above those required by law for capital outlay;

(6) other funds — shows a normal debit balance; appropriations from other state funds for capital outlay;

(7) federal aid — shows a normal debit balance; includes funds expected to be received from federal sources for capital projects;

(8) expenditures, prior fiscal year — shows a normal credit balance;

(9) encumbrances — shows a normal debit balance;

(10) reserve for encumbrances — shows a normal credit balance;

(11) fund balance — shows a normal zero balance.

(d) The annual financial report of the state shall contain the following statements for each capital projects fund:

(1) balance sheet;

(2) analysis of changes in bonds authorized and unissued;

(3) analysis of changes in bonds to be authorized;

(4) analysis of changes in funds to be provided by others;

(5) statement of expenditures and encumbrances compared to appropriations. (§ 8 ch 168 SLA 1978)

Sec. 37.07.070. Legislative review. The legislature shall consider the governor's proposed comprehensive operating and capital improvements programs and financial plans, evaluate alternatives to the plans, make program selections among the various alternatives and determine, subject to available revenues, the level of funding required to support authorized state services. During each regular session of the legislature, legislative review of the plans shall be accomplished according to the following schedule:

(1) By the 45th legislative day, the legislature shall have established by concurrent resolution the total amount of state general funds that shall be available for appropriation for the budget year and the tentative allocation of the funds among program categories in both the operating and capital budgets. The resolution shall be introduced by the finance committee of the house in which the general appropriations bill was introduced.

(2) By the 90th legislative day, the house in which the general appropriations bill was introduced by the governor shall have calendared for second reading a version of the general appropriations bill. The bill shall be supported with documentation to explain the proposed appropriations and related statements of intent. In addition, a list of other appropriations or measures with fiscal implications pending before the legislature shall be included with the documentation for the calendared bill. (§ 1 ch 188 SLA 1970; am § 1 ch 66 SLA 1977; am § 9 ch 168 SLA 1978)

Effect of amendments. — The 1977 amendment added the second sentence of the introductory paragraph and paragraphs (1) and (2).

The 1978 amendment, in the introductory paragraph, substituted "operating and capital improvements programs and financial plans" for "program and financial plan" in the first sentence and "the plans" for "the plan" in the first and second sentences.

Alaska State Legislature

House of Representatives

Committee on

Community & Regional Affairs

State Capitol
Juneau, Alaska 99811

TO: Tamara Cook
FROM: Marjorie Gorsuch
DATE: 4/7/80
RE: Capital Projects Foundation Fund Bill

We have reviewed SB 546 and would like the House version of the bill drafted as a companion to SB 546 but with the following changes:

p. 3 lines 8 and following should read:
(1) one representative from each first class city selected by their city councils who are elected officials from first class cities located within the unorganized borough or regional educational attendance area;
(2) additional members selected by the governor from persons nominated by the Department of Community and Regional Affairs who are from second class cities and unincorporated communities within the unorganized borough or regional educational attendance area. Second class city representatives shall be elected officials.

p. 4 line 1
(5) identify shared facility opportunities

p. 5 lines 10 and following:
Delete wording following "recipient"
Draft a new (c) to read as follows:
(c) For projects built in first or second class cities in the unorganized boroughs, upon concurrence by the Council, the commissioner may make an agreement including any provision agreed upon by the parties, including the following:
(continue with line 13)

Bill would like the bill ready for our 8:30 A.M. Committee meeting on 4/9 and for introduction that day. Many thanks.

CAPITAL FOUNDATION PROGRAM
(Construction and Maintenance)

FORMULA

Appropriations. The amount of appropriations authorized to be made to the capital foundation program for a fiscal year is equal to two hundred dollars times the state population.

Distribution. Amounts in the capital foundation program shall be distributed annually to municipalities and unorganized boroughs by the department by (a) allocating one-half of the amounts on the basis of population and one-half on the basis of area; and (b) determining the share of an individual municipality or unorganized borough by multiplying its population and area by the construction cost differential for that region. The minimum grant shall be five per cent of the largest distribution made to any municipality or unorganized borough.

Construction Cost Increases. The Department of Transportation and Public Facilities shall submit to the legislature on or before February 15 of each year an estimate of the average percentage increase in construction costs in the state during the previous year.

DEFINITIONS

(1) 'population" means the population of the state, municipality, or an unorganized borough as determined by the department using the latest figures of the U.S. Bureau of the Census or other reliable population data, including but not limited to school enrollments, public utility connections, registered voters, or certified employment payrolls.

(2) "construction cost differential" means one plus the percentage by which average construction costs in a region are greater than or less than the average construction costs in Anchorage as determined by the Department of Transportation and Public Facilities using the latest figures.

(3) "department" means the Department of Community and Regional Affairs.

ILLUSTRATION OF FORMULA (in round terms)

Base:	Population	X	Construction Cost Differential		Area (Sq. Mi.)	X	Construction Cost Differential	
Organized Areas	349,000		1.0	= 349,000	149,376		1.0	= 149,376
Unorganized Boroughs	80,000		1.25	= 100,000	437,036		1.25	= 546,295
	429,000			449,000				695,671

Appropriation: 429,000 X $200 = $85,800,000

Grant:

Adjusted Per Cent of Population X $200
Adjusted Per Cent of Area X $200

Organized Areas

349,000 / 449,000	= .78	X	$42,900,000	=	$33,462,000	
149,376 / 695,671	= .215	X	$42,900,000	=	9,223,500	
					$42,685,500	$42,685,500

Unorganized Boroughs

100,000 / 449,000	= .22	X	$42,900,000	=	$ 9,438,000	
546,295 / 695,671	= .785	X	$42,900,000	=	33,676,500	
					$43,114,500	43,114,500
					Total	$85,800,000

ILLUSTRATIONS, CAPITAL FOUNDATION ENTITLEMENTS

Appropriation: 429,000 X $400 = $171,600,000

ARLISS
FROM MARGO
RE CAPITAL FOUNDATION FUND

I attended the H CRA Committee hearing on this bill on Friday May 2.

Comments were generally supportive of the legislation, with suggested "technical" changes. Some of those suggestions were indeed technical. However, there were some major policy suggestions made regarding the legislation that I though you should be aware of.
The most significant one is a desire on the part of some folks (Kohler and Sharp in particular) to give greater power to local city governments rather than to boros. Both of these people would like to see an entitlement go to the city. From Kohler, I suspect it comes from fear of being overwhlmed by others in one's boro. Kohler also makes the point that cities are the strong part of local goverbment in Alaska and, therefore should be given what they have the power to do and handle. He sees the regional government folks being a planning body , not a construction or whatever body.
Chitwood presented a position that was mid-way between the Sharp/Kohler position and the position presented in the bill. As I understand it, she was advocating for cities to do their own planning, but bring it to the council and to let cities in oxx unorganized boros do their own building/ownership.

To accept the Kohler/Sharp position would be to move away from the philosophy behind the bill as written and move much more into the revenue sharing model.

Some aspects of the Chitwood approach could easily be incorporated and some might be highly advisable (ex. cities in unorganized boro to do their own handling of funds, when the regional council approves to DOT that the priority projects (s) is within the city.

Marge and I will be workin on this soon. Changes suggested of the technical sort will be incorporated. Do you have any thoughts to share re the policy questions? Please let me know?

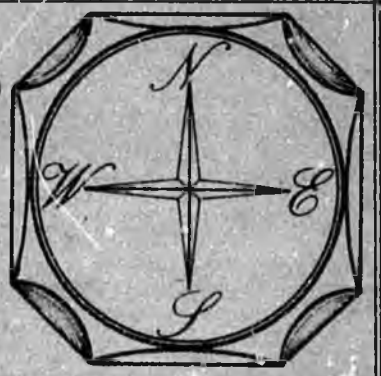
Funding of capital projects for the state: a legislator's view

By SEN. ARLISS STURGULUSKI

Compass

Points of view from our community



It looks likely that by the end of this session of the legislature, legislators will have appropriated about $500 million for capital projects throughout the state. This wish list — translated by the budget process into concrete, stone, and many new construction jobs — comes from a variety of sources — state agency requests, the governor's additions, legislators' responses to citizen requests and legislators' desires to "do something for the folks back home."

Not all these projects are equally needed. Past experience indicates that some percentage will include projects no one wants to see built, other projects whose operation costs will be so high that local people will reject them, others for which maintenance funds are not available. Some of these projects will duplicate facilities that exist; some will be a source of community conflict if they are only desired by some special interest group. Many have been proposed because communities want to get their economies moving; but they will be frustrated by their inability to get the project on the line in time to have any effect on their current economic condition. On the other hand, some communities will have more projects than they can reasonably handle without overheating their economies. Some of these projects are "unknowns" — no preliminary design or cost estimates have been done, and no one is sure they should be built.

While this year's capital budget is the largest in Alaska's history, we all recognize that the state has long been in the local construction business. And the state will continue in this role because state government has greater revenues than local governments, because legislators "bring home the bacon," and because there is a need throughout the state for facilities of all sorts and for public works projects to affect economic goals.

Recognizing this reality, through the Senate Community and Regional Affairs Committee, I have introduced legislation (SB 546) which seeks to systematize the capital construction process by providing for local capital improvements planning and local determination of construction priorities. Identical legislation has been introduced by Rep. Bill Parker through the House Community and Regional Affairs Committee. Equity concerns have led us to propose a system that is similar to revenue sharing entitlements, except that, in addition to organized areas receiving funds, unorganized areas also receive entitlements. Let me briefly describe the scope of SB 546.

The Capital Foundation Fund will, by appropriation, provide funds to all areas of the state for certain capital improvements. To expend funds, each area will need to develop an areawide capital improvement plan, approved by the local assembly when there is one, and by advisory groups assisted by the Department of Community and Regional Affiars when there is no local government.

Organized boroughs, unified home rule municipalities, and unorganized boroughs are encouraged to conduct regionwide planning to avoid costly duplications of capital projects and to prioritize, on the local level, needs among communities, rather than leaving this process to state level government...

Each area, so long as appropriations are made, is certain of a source of funding for local projects. Each area will receive a formula share of the appropriation. This stability will be advantageous to local governments for planning purposes. Additionally, unlike the current situation, areas may have greater ability to use capital projects for anti-cyclic economic benefits by being in control of fund expenditures. Annual funds do not lapse and may be accumulated for locally determined purposes. Home rule municipalities and organized boroughs expend funds themselves. In unorganized areas, the Department of Transportation and Public Facilities is responsible for fund expenditures. Local governments, under the Capital Foundation Fund program, will be assured of a steady supply of state funds for capital improvements that will be directed toward locally determined project needs and can be expended at a locally determined pace.

Capital Foundation Funds may be used as the local match required for certain state and federal projects. This will be particularly signigicant in rural areas which do not now have a source of local match.

Capital Foundation Fund entitlements may be used for any priority established by the capital improvement plan in the following classes: libraries, cultural recreation, health and community facilities; neighborhood parks; emergency detension facilities; water, sewer, solid waste, and resource recovery facilities; and a variety of transportation facilities, such as local transit facilities and equipment.

Gorsuch says 400 jobs on the line

Assembly: State must boos

By JULIE ANNE GOLD
Daily News reporter

The Anchorage Assembly telegraphed a "hard and distinct" message to the Anchorage School Board Monday night — either the state legislature produces an extra $16 million needed to finance next year's proposed school budget, or severe cuts will be made across the board in city school programs.

"That's where it is," said assemblyman Dave Rose at a special joint session of the assembly and school board. The assembly is "hard pressed this year" to meet diverse fiscal demands of various city groups, he said, and "would be reluctant to levy" any additional taxes to increase local school budget funding.

Board member Lee Gorsuch warned that more than 400 administrative and teaching positions would be cut if the assembly insisted on trimming the budget.

The city finances about $25 million of the present school budget; the rest comes from state and federal taxes. Next year's proposed $139.8 million budget represents a 5.1 percent increase over last year's combined $130 million spending for public and military base schools.

"This year we have absolutely got to rely on the legislature of Alaska to give us the rest," Rose said. "If they do not act with dispatch the budget will be much less than what the board recommended."

The legislature is considering amended Senate Bill 199, which proposes to increase state school foundations funds. Those funds now finance almost 75 percent of Al funding, anywhere from $3 million.

Rose estimates at least $1 earmarked for Anchorage.

Three or four assemblymen to go to Juneau Wednesday to bill now snagged in the House tee.

If the legislature still has funds by April 15, Rose said, most likely be made.

Gorsuch said most additio traced to fixed instructional c tional programs, and a "gobb

Funding of capital projects for the state: a legislator's view

By SEN. ARLISS STURGULUSKI

Compass

Points of view from our community

It looks likely that by the end of this session of the legislature, egislators will have appropriated about $500 million for capital rojects throughout the state. This wish list — translated by the udget process into concrete, stone, and many new construction obs — comes from a variety of sources — state agency requests, he governor's additions, legislators' responses to citizen requests nd legislators' desires to "do something for the folks back ome."

Not all these projects are equally needed. Past experience ndicates that some percentage will include projects no one wants o see built, other projects whose operation costs will be so high hat local people will reject them, others for which maintenance unds are not available. Some of these projects will duplicate acilities that exist; some will be a source of community conflict s they are only desired by some special interest group. Many ave been proposed because communities want to get their conomies moving; but they will be frustrated by their inability to et the project on the line in time to have any effect on their urrent economic condition. On the other hand, some communi- es will have more projects than they can reasonably handle ithout overheating their economies. Some of these projects are unknowns" — no preliminary design or cost estimates have been one, and no one is sure they should be built.

While this year's capital budget is the largest in Alaska's istory, we all recognize that the state has long been in the local onstruction business. And the state will continue in this role ecause state government has greater revenues than local overnments, because legislators "bring home the bacon," and ecause there is a need throughout the state for facilities of all orts and for public works projects to affect economic goals.

Recognizing this reality, through the Senate Community and egional Affairs Committee, I have introduced legislation (SB 46) which seeks to systematize the capital construction process y providing for local capital improvements planning and local etermination of construction priorities. Identical legislation has een introduced by Rep. Bill Parker through the House Communi- y and Regional Affairs Committee. Equity concerns have led us o propose a system that is similar to revenue sharing entitle- nents, except that, in addition to organized areas receiving funds, norganized areas also receive entitlements. Let me briefly escribe the scope of SB 546.

The Capital Foundation Fund will, by appropriation, provide unds to all areas of the state for certain capital improvements. 'o expend funds, each area will need to develop an areawide apital improvement plan, approved by the local assembly when here is one, and by advisory groups assisted by the Department f Community and Regional Affiars when there is no local overnment.

Organized boroughs, unified home rule municipalities, ar unorganized boroughs are encouraged to conduct regionwi planning to avoid costly duplications of capital projects and prioritize, on the local level, needs among communities, rath than leaving this process to state level government...

Each area, so long as appropriations are made, is certain of source of funding for local projects. Each area will receive formula share of the appropriation. This stability will advantageous to local governments for planning purposes. Ad tionally, unlike the current situation, areas may have great ability to use capital projects for anti-cyclic economic benefits being in control of fund expenditures. Annual funds do not lap and may be accumulated for locally determined purposes. Hom rule municipalities and organized boroughs expend funds ther selves. In unorganized areas, the Department of Transportati and Public Facilities is responsible for fund expenditures. Loc governments, under the Capital Foundation Fund program, w be assured of a steady supply of state funds for capit improvements that will be directed toward locally determin project needs and can be expended at a locally determined pace.

Capital Foundation Funds may be used as the local mat required for certain state and federal projects. This will particularly significant in rural areas which do not now have source of local match.

Capital Foundation Fund entitlements may be used for a priority established by the capital improvement plan in t following classes: libraries, cultural recreation, health a community facilities; neighborhood parks; emergency detensi facilities; water, sewer, solid waste, and resource recove facilities; and a variety of transportation facilities, such as loc transit facilities and equipment.

Playing the game of legislative end-around

Tom Rhodes

by Tom Fink

THE LEGISLATURE is much like a football game. You don't win or lose until the game ends. Being an armchair quarterback, however, I am very disturbed by some of our plays and lack of success. It is as if the TV announcer is telling me that our team is running when I can in fact see that it is passing.

Our legislature and governor have resisted any tax repeals on the basis that we would be aiding non-residents. Yet they turn around and pass a new permanent fund law which unequivocally dedicates our permanent fund for investments for non-residents. The permanent fund law among other items specifically provides that not more than 15 percent of the fund can be invested in real estate mortgages in Alaska and in any case must have a yield equal to mortgages outside the state.

The permanent fund law is a non-resident law. It has many interesting provisions. After February of this year 50 percent of the oil monies shall go into the fund rather than 25. The fund is not designed for the benefit of Alaskans. It specifically demands that the state seek the highest possible return. It lists a series of permissible investments. Most of the investments are in federal government securities or securities backed by federal gurantees. However, the fund can invest in corporate bonds, short term corporate notes, and bankers acceptances.

Investments in corporate bonds are limited to 25 percent of the permanent fund and investments in Alaska real estate mortgages are limited to 15 percent of the fund. There is no limit on the other investments.
