Property Tax Assm't Study

Official Business

Alaska State Legislature

House of Representatives

Committee on

Community & Regional Affairs

Pouch V
State Capitol
Juneau, Alaska 99811

May 1, 1979

Lee McAnerney
Commissioner
Community & Regional Affairs
Pouch B
Juneau, Alaska 99811

Dear Lee,

I was pleased to learn that the Department of Community and Regional Affairs, through the Office of the State Assessor, is preparing to do a study of a more equitable approach to providing residents of Alaska with property tax relief--particularly those in need of relief as a result of limited incomes.

I concur that this study would indeed be a worthwhile endeavor and that the current "piece-meal" approach of providing property tax relief to certain groups of taxpayers needs revision.

As this study will presumably result in legislation which would be reviewed by the Community and Regional Affairs Committee, I would appreciate being informed of its progress. Please send any pertinent information to the following addresses.

Rep. Bill Parker

Bill Parker
Chairman

STATE OF ALASKA

JAY S. HAMMOND, GOVERNOR

DEPT. OF COMMUNITY & REGIONAL AFFAIRS

OFFICE OF THE COMMISSIONER

POUCH B
JUNEAU, ALASKA 99811

April 16, 1979

The Honorable Bill Parker
Chairman
Community and Regional Affairs Committee
Alaska State House of Representatives
Pouch V
Juneau, Alaska 99811

Dear Mr. Chairman:

RE: PROPERTY TAX ADMINISTRATION

The enclosed article was published in the April/May edition of the "Assessment Digest" and is one of the better dissertations on need for property tax reform and some current thinking on alternate approaches.

Realizing that you and your committee are very busy at this time, these are being transmitted for your review at your convenience. It does, however, appear certain that tax reform measures will continue to be one of the major issues of concern in future sessions of the legislature.

This article, which is relatively well written, points out some basic ideas and may be helpful as these items are discussed and legislative action is proposed.

Sincerely,

Lee McAnerney
Commissioner

The Only Alternative to the Property Tax—A Better Property Tax

Walter Ryback

In one sense there is no alternative to the property tax. It is unique. It performs good and necessary functions that no other tax duplicates.

Yet none of us would claim that the property tax in its present form is a model of perfection. In that sense, the best alternative to the property tax is a better property tax.

There are no practical or logical reasons that we cannot attain that better property tax. Perhaps the chief obstacles are the mental images that stand in the way of understanding. How these images hold us captive was nicely explained by Don Marquis, the light-hearted philosopher. In what he modestly dubbed "The Almost Perfect State," Marquis wrote:

> Personally, I was never able to see the remotest resemblance to anything like a human face in the moon. But when I was a child I was told that there was a face in the moon; presently, I thought I *should* see it, and began to say I saw it. And all my life I have gone on lying about it—talking and even writing about the Man in the Moon.[1]

The myths surrounding the property tax are more formidable than how the moon appears to earthlings. But if Marquis, back in the 1920s and long before moon landings could discern that there was no face on the moon, and could further conclude that the moon was not made of green cheese, we should not now despair about the public's ability to sift through the bizarre notions that momentarily obscure a clear vision of property tax issues.

Whatever the power of false images, in this year of the "Great Tax Revolt" it could be perilous to fail to stand up to those who seek to maim or abolish the property tax. For if they succeed, it would be a calamity of the first magnitude, depriving us of a tax that can be one of our keys to an independent and prosperous future.

Howard Jarvis made himself a legitimate target when he designed the amendment that erodes the California property tax and sets back assessment administration in that state by light years. We can aim our retaliatory barbs at him in the spirit of the spearthrower who said, as he took aim at his foe, "This should put some iron in his blood." Of course, Jarvis is far from the only villain in the act. In passing out responsibility, we should not overlook the long parade of economists who have gained the spotlight by kicking the property tax.[2] Nor should we forget all the politicians who have won acclaim by taking cheap shots at property taxes and assessments.[3] How long has it been since you heard public finance specialists or local politicians stand up in public to say anything favorable about the property tax?

No wonder, after continuously hearing property taxes badmouthed by their leaders, citizens consistently list the property tax as their least popular tax. And no wonder they will follow a Jarvis, or his clones that are cropping up elsewhere, giving up their birthright in good property taxation for a mess of tax relief potage.

It cannot be emphasized too much that the property tax is one of the best taxes in our fiscal kit of tools. Property values grow as the community grows, providing a kind of natural income for it. Tapping a local source of revenue, the property tax can prevent communities from becoming too dependent on distant, centralized governments. The property tax alone enables the city or county to recoup values which they create through public works and services. And the tax is one of the few that citizens can readily speed up or slow down to exercise control over their officials.

Prevalent Myths about the Property Tax

To restore this tax to the reputation it deserves requires weeding out its counterproductive features. The most notorious of these features, in my view, is the taxation of improvements.

A look at some of the false images surrounding the property tax may suggest why the *un*taxing of housing and other buildings should take high

priority in the battle to save the property tax.

FABLE NUMBER 1. *A site value tax would be a new tax.* Far from being a new tax, we already have the site value or land value tax. We have always had it. Are there any assessors who are not assessing land or any jurisdictions that are not taxing it? We do not base the tax on land exclusively, but we certainly tax land.

A pure site value tax is what remains when improvements are excluded from the tax. Such an exclusion would not be novel. In the United States, the property tax started out mostly as a land tax. Then we went through a long period of adding a wide array of things to produce an all-encompassing general property tax. More recently, as John B. Rackham has pointed out, there has been a trend to get back to basics. Among the items that many states have discarded--because of their negative impacts or the difficulty in their enforcement--have been business inventories and personal property. Clearly, after these facets of the tax had outlived their usefulness and had been eliminated, the property tax that remained was not viewed as some strange, unfamiliar creature. The site value tax has always been an integral part—and in the opinion of many, the best part—of the property tax. All the good things that may be said about the site value tax, therefore, refer at least in some degree to the property tax that is now under siege.

FABLE NUMBER 2. *The property tax is inelastic*. According to this old saw, property tax receipts fail to keep pace with economic expansion and growth of incomes. The public finance experts who used to repeat this alleged weakness were remarkably silent when Californians and others began protesting that the property tax was too elastic. These experts claimed that the tax had reached its upper limits by World War II. If so, it has certainly been reborn as a revenue producer. From 1920 through 1945, property tax collections nationwide ranged from four to five billion dollars a year. By 1955 they rose to $11 billion. By 1970 to $30 billion. And now to $65 billion. So much for inelasticity.

FABLE NUMBER 3. *The property tax is regressive*. Strong evidence to the contrary has been developed by Mason Gaffney, Henry Aaron, and others.[4] Where faulty assessment procedures favor wealthy property holders, the tax may weigh more heavily on the poor. But a tax system cannot be fairly condemned because its rules are disregarded in particular instances. The warranty for the evenhandedness of the tax assumes normal care and handling.

However, the regressive theory wins adherents to the extent taxes on rental homes and apartments are passed on to low-income tenants. Untaxing these buildings would make the property tax decidedly more progressive. And because valuable lands are highly concentrated in the hands of the rich, a site value tax would offer substantial relief to middle-income and lower-income families.

FABLE NUMBER 4. *The property tax is confiscatory*. Jarvis revived this myth during the Proposition 13 campaign. He urged citizens to save themselves from the oppressive taxation of Latin America's "dictator countries" and from what he called the "English disease." On this point, Jarvis scores high on inventiveness.

As Gaffney remarked, poor South American nations have had Proposition 13 for most of their history.[5] When I worked in Ecuador, property was barely taxed at all. Ecuadorians had a saying, "We're a rich land but a poor people." While this was mostly true, some of the people—those in the small landholding class that held rural and urban areas in their grip—were fabulously wealthy. One would have to be exceedingly naive to suppose that this ruling class shielded the property they owned from taxation out of concern for the impoverished masses. England's landed gentry, too, have managed fairly well to shelter property from taxation; it is the incomes of England's working people that are being taxed to the bone.

One of the virtues of the property tax which emerges from the pages of our history is that it can be a brake against the confiscation of land by the few from the many. The contrast between socioeconomic conditions in the nations settled by the British, which relied almost exclusively on the property tax for local revenues, and the nations settled by the Portuguese and Spanish, which did not, speaks eloquently to this point.

Until a century ago, virtually all local government revenue and the bulk of state funds in the United States were derived from property taxes; federal taxes, except for tariffs, were minute. This era when the property tax reigned supreme coincided with the nation's most dynamic growth. Upward mobility was at a maximum. The very idea of a poverty class seemed unAmerican. The property tax, far from being considered confiscatory, was widely accepted as a necessary element of a just economy.

FABLE NUMBER 5. *The property tax is inflationary*. This is half fable, half truth. The tax on buildings is inflationary, the tax on land is not. When both are linked together, their opposing impacts somewhat cancel each other out. This helps explain why the substantial property tax cut in California did not bring tenants the instant rent reductions Jarvis promised. Because Jarvis was a long-time lobbyist for apartment owners, some suspect his promise was simply a cynical ploy to win votes. It is conceivable, nevertheless, that Jarvis was really confused, along with the typical American, thanks to the failure of most economists to spell out how taxes on land and on buildings behave differently.

It is a common experience to watch taxes force prices up. We see this tax inflation at the gasoline pump, or at checkout counters where sales taxes are added to the cost of purchases. Taxes on houses and commercial structures follow this pattern. The higher the taxes, the higher the total prices.

Taxes on land, however, do not work this way. Mysterious or contrary to intuition as it may appear, the higher the tax on land, the lower its price falls, as real estate brokers know from practical experience. Because of this, I predicted that Proposition 13 may have an inflationary impact on land prices:

> Of (California's) $7 billion tax cut, at least 40 percent, or $2.8 billion, represents land values. This is likely to be capitalized in increased land prices, adding $45 billion or more on top of already staggeringly high land prices.[6]

How this capitalization effect occurs is illustrated by the following specific example.

You bought a piece of land in 1975 for $150,000; annual property taxes were $4,200. Under Proposition 13, the tax is cut to $1,500. This annual tax savings of $2,700 makes the land more attractive by the amount one would have to put in the bank to reap $2,700 a year. At 6 percent interest, this would be $45,000. Thus, the $150,000 property now sells for $195,000, a 30 percent increase.

I hope I am wrong about this prediction of escalating land prices in California. Since my example deals exclusively with a case of bare land, the effect may be mitigated somehwat by the reduction in taxes on buildings.[7] But what land economics teaches in general is this: high taxes on buildings and low taxes on land create a double-barreled inflationary effect. The maximum anti-inflationary effects can be realized by reducing or eliminating the taxes on buildings and shifting them to land values.

FABLE NUMBER 6. *Property taxes don't make much difference.* Tell it to Governor Brown and the legislators in Sacramento who disregarded citizen pleas for relief. Tell it to cities like Boston where little private commercial building occurs unless developers first win property tax abatements for twenty years or more. Tell it to communities that lure commerce and industry with property tax reductions. Tell it to the Minneapolis-St. Paul region where, to halt tax warfare among neighboring jurisdictions, a tax-base sharing system was instituted.

Tell it to all the people sitting on land ripe for development who find it more profitable to hold their parcels out of use. From their perspective, a land tax is a holding cost. If this cost is low relative to the annual increase in value of the site (actual or anticipated), owners sit patiently while gains accrue without any effort on their part. These decisions to withhold land from use are reinforced by the knowledge that any buildings they construct on the site will immediately bring forth higher taxes.

The fairy tale that property taxes make little difference to land speculation, blight, urban sprawl, housing supply, and business locations has been peddled by many academics. This is puzzling until you realize that those who state this viewpoint have neglected to differentiate between land taxes and improvement taxes. Both taxes are very potent. But they pull in opposite directions, like two locomotives on either end of a train, one chugging north and the other chugging south. An observer looking only at the way the freight cars jerk back and forth might falsely conclude the locomotives were weak.

Jarvis recognized that the property tax did make a difference. Focusing exclusively on the building tax locomotive, he struck paydirt with voters by reminding them how the tax, in effect, punished property owners who built or remodeled, even though these activities put people to work and improved city neighborhoods. The quarrel with Jarvis on this point is that he tarred and feathered the whole property tax, not just the building tax that has been causing so much individual and social pain.

Cartoonist Herblock recently pictured a renovated home and a homeowner proudly telling the wife and kids, "we had to break the piggy bank to do it, but we finally got the old house fixed up." An assessor is shown slinking around the side of the house, toting up its higher taxable value. What bothered me was the implication that the assessor was the villain. He merely carries out the laws mandating that improvements be included in the property tax base. The laws, not the assessors, impose this disincentive to housing construction and maintenance. Homeowners and other citizens who tolerate such laws are not without blame. If citizens dislike the laws, they may look to Pennsylvania and the District of Columbia for examples of enabling laws that permit taxes on improvements to be reduced or eliminated. Australia and New Zealand have undertaken wholesale abandonment of property taxes on buildings, and with good results.

FABLE NUMBER 7. *Site value reform must await assessment reform.* I confess that for years I have often gone along with this view. But it proved to be a soap bubble punctured by Proposition 13. California has been among the nation's leaders in the drive to achieve accurate, uniform, frequent assessments, yet that is where the ax fell. Was this coincidental? Apparently, the full and timely reassessments during a highly inflationary period exaggerated the defects of the property tax, making it more onerous and contributing to the taxpayer revolt. Political leaders welcomed assessment reforms and the greater revenues they produced. When taxpayers complained about escalating burdens, politicians blamed assessments, conveniently forgetting to mention that they alone had the power to raise—and lower—property tax rates.

Let me stress that my support of reforms to make assessments as uniform and fair as humanly possible is in no way diminished.[10] But these reforms should be undertaken in tandem with the move to rid the tax of its punitive impact on those who build and maintain our communities. A clock seems to be running out on the public's tolerance of the property tax in its present state. We no longer have the luxury of dealing with its problems one at a time.

FABLE NUMBER 8. *The property tax is the most burdensome tax.* This myth is so much at odds with the facts that many commentators concluded that Proposition 13 supporters simply clobbered property taxes to register their displeasure with *all* taxes. The polls do not entirely support this view; they reveal tremendous anti-property tax sentiment. Perhaps tax administrators unwittingly perpetuate this sentiment by their inattention to a small but critical detail—the method of payment.

Why not take a cue from the income tax fraternity? They collect taxes, seemingly painlessly, via paychecks. They often take out too much, using interest-free money that does not belong to them until accounts are settled each year. Instead of resenting these excess payments, most taxpayers look at the refunds as windfalls. They are so grateful they tell friends how many hundreds they get back, hardly noticing how many thousands they paid in.

In contrast, the annual lump sum payment of property taxes hits many homeowners like a ton of bricks. The cash flow problem is avoided when mortgage lenders require property taxes to be paid in advance in monthly installments, along with capital, interest, and insurance. For owners who lack this mechanism, why not devise property tax payroll deduction plans for people on wages and salaries? And for retirees and others who do not receive regular payroll checks, why not

devise automatic monthly payment plans through checking accounts, of the sort that many insurance firms utilize?

Officials who resolve this seemingly minor payments problem are likely to become heroes to their constituents. No doubt they will be widely copied, and they will do much to strengthen property tax support in the future.

Suggestions and Conclusion

If there is a move to modernize the property tax, leaving it as a tax on land values alone, some have suggested that the tax rate on land values be progressive. Jefferson, according to a letter written in 1795,[11] favored such an approach. Among nations that have levied land taxes at increasingly high rates as parcels become larger or more valuable are Australia, Brazil, Egypt, and Poland. Taiwan offers an interesting current example.

Taiwan levies a flat 1 percent land tax on small plots of urban land occupied by owners. It levies a flat 1.5 percent land tax on sites in industrial use. But it levies a progressive land tax ranging from 2 to 7 percent on large, valuable holdings. According to Shih-ko Shen, director of Taiwan's Land Bureau, this strategy prevents land speculation and facilitates land acquisition by actual users.[12] There is reason to believe that Taiwan's landlords, after seeing landlords literally wiped out by Communists on the Chinese mainland, accepted this remarkable system as their ticket to survival.

My preference is for a neutral property tax. It is now biased in the United States against land use in favor of land holding. This could be corrected by removing the tax on improvements, requiring land users to pay no more than their adjacent land bankers. I would rather see how this kind of neutral tax functions before adding a special stinger through a progressive tax rate. Yet one can imagine circumstances—for example, where landlordism of an almost feudal nature had taken hold—in which a progressive land tax might be considered necessary.

Let me conclude by stressing again that the property tax is one of the best taxes. The tax on buildings, however, strikes me as one of the least desirable taxes—a weakness that detracts from our property tax. Removing this building tax will help defuse the taxpayer revolt by combining relief with tax equity. It will do this without strangling local government finances; on the contrary, taxing site values should strengthen the local tax base. It will encourage more compact land use which is no small matter in an era of energy shortages.[13] And it will help suppress the inflation that has become one of our most critical domestic problems.

In sum, it makes sense to appreciate and hold fast to what is best in the property tax.

The views expressed are the author's and do not necessarily reflect those of the organization with which he is associated.

1. Don Marquis, *The Almost Perfect State*, (New York: Doubleday, Page & Co., 1927).

2. Some of the current generation of economists present far more balanced views of the property tax, including its merits. Notable among them are Mason Gaffney, C. Lowell Harriss, Arthur P. Becker, Dick Netzer, Donald C. Shoup, Gene Wunderlich, John Shannon, and L. L. Ecker-Racz.

3. Exceptions to this rule appear to be so rare that it might be worthwhile for IAAO to search out state and local public officials who have the integrity to speak forthrightly about property taxes, and then to give appropriate awards to such individuals.

4. Henry J. Aaron, *Who Pays the Property Tax: A New View* (Washington, D.C.: Brookings Institution, 1975); Mason Gaffney, "The Property Tax Is a Progressive Tax," *Proceedings*, National Tax Association, 1971.

5. Mason Gaffney, "Tax Limitation: Proposition 13 and Its Alternatives," mimeographed, remarks to Center for the Study of Democratic Institutions, August, 1978.

6. Rybeck, "Urban Sounding Board," *Nation's Cities*, vol. 16, no. 8, August 1978.

7. Inflationary impacts are far too complex to treat in detail in this summary. For an example of this complexity, the lower taxation of buildings tend to contribute to higher land values at the same time that it reduces building prices.

8. *Washington Post*, May 24, 1978.

9. R. W. Archer, *Site Value Taxation in Central Business District Redevelopment, Sydney, Australia* (Washington, D.C.: Urban Land Institute, 1972); Rolland O'Regan, *Rating in New Zealand* (Wainuiomata, New Zealand: Baranduin Publishers, Ltd., 1973). Both of these publications are unusually evenhanded, indicating problems as well as advantages of site value taxation.

10. IAAO's major new work on administrative streamlining, *Improving Real Property Assessment: A Reference Manual*, was published in November 1978. The author was privileged to participate in the preparation of this comprehensive and current guidebook.

LAW

Supreme Court Decision Exposes Assessors to Potential Liability

On January 15, 1979 the United States Supreme Court entered a brief order which may have the profound effect of exposing local and state property tax officials, for the first time, to personal liability in certain narrowly defined situations. The Supreme Court exercised its discretion not to hear an appeal of *Cullerton* v. *Fulton Market Cold Storage Co.*, No. 78-748, letting stand the decision of the lower Court of Appeals for the Seventh Circuit, No. 77-2133, August 7, 1978.

Fulton Market claimed that, from 1958 to 1973, its property in Cook County, Illinois had systematically and intentionally been assessed at levels of up to two and one half times that at which property was generally assessed in the county in those years. In 1974, Fulton Market filed suit in the United States District Court for the Northern District of Illinois against the two Cook County assessors in

STATE OF ALASKA

JAY S. HAMMOND, GOVERNOR

DEPT. OF COMMUNITY & REGIONAL AFFAIRS

OFFICE OF THE COMMISSIONER POUCH B – JUNEAU 99811

March 14, 1979

The Honorable Bill Parker
Chairman
House Community and Regional
Affairs Committee
Alaska State Legislature
Pouch V
Juneau, Alaska 99811

Dear Representative Parker:

RE: HOUSE BILL NO. 223

At the request of the members of the House Community and Regional Affairs Committee, State Assessor Terry Earley has attempted, given information available from the Federal Veterans Administration, to analyze the cost of alternatives to House Bill No. 223. The five requested alternatives are recapped on the attached summary sheet; an individual fiscal note is also attached for each alternative.

I would like to again call your attention to the position stated by the State Assessor in his testimony before your committee on March 7, 1979. The Department is strongly opposed to the "piece-meal" approach of providing property tax relief to certain groups of taxpayers in Alaska (i.e., senior citizens and farmers). House Bill No. 223 would extend this type of tax relief program to disabled veterans.

Property tax relief should be made available to those in need throughout the State of Alaska but should not be provided those residents who do not have a demonstrated need for State refunded property tax relief payments. We believe a more comprehensive program of property tax relief ought to be made available by the Legislature, preferably in the form of a reimbursement or rebate based upon income as determined through the filing of Alaska State income tax returns.

The Department, through the Office of the State Assessor, is prepared to pursue a more equitable approach to providing residents of Alaska with property tax relief - particularly those in need of relief as a result of limited incomes. Proposed legislation could be made available for consideration by the next session of the State Legislature. We would appreciate an expression from your committee as to whether or not this is a worthwhile endeavor for the Department to pursue prior to the next session.

If you have questions regarding the attached alternatives to House Bill No. 223, Mr. Earley or I will be pleased to respond.

Sincerely,

Lee McAnerney
Commissioner

Senate Community and Regional Affairs Committee

Representative Joe McKinnon (Sponsor of HB 223)

Senator Brad Bradley (Sponsor SB 154)

During the meeting of the House Committee on Community and Regional Affairs of March 7, 1979 property tax exemptions for Disabled Veterans were discussed. The following is a recap of fiscal impacts of the several proposals discussed.

	TOTAL ELIGIBLE	TOTAL COST
1. Exempting veterans over 40% disabled both homeowners and renters and leaving the $20,000 income limit.	670	$311,280
2. Exempting veterans over 40% disabled both homeowners and renters and reducing income limit to $10,000.	424	$197,948
3. Exempting veterans over 40% disabled both homeowners and renters and also including veteran's widows and reducing income limit to $10,000.	544	$253,698
4. Exempting veterans over 40% disabled both homeowners and renters and eliminating income restrictions.	681	$317,044
5. Exempting veterans over 40% disabled both homeowners and renters, also including veteran's widows and eliminating income restrictions.	876	$407,902

Prepared by:

Department of Community and Regional Affairs
Office of the State Assessor

Other Approaches & Comments

An eligible veteran shall be exempt from a portion of his local property taxes or rent equivalent based on the following chart:

Percent of Disability	Taxes Payable as a Percentage of Income
10% to 30%	5%
30% to 40%	4%
40% to 50%	3%
50% to 60%	2%
60% to 70%	1%
70% and up	0%

Examples -

A veteran who is 25% disabled and has total income of $15,000 would be required to pay the first $750 of the tax bill on his residence.

A veteran who is 55% disabled and has an income of $10,000 would be required to pay the first $200 of the tax bill on his residence.

This approach ties the exemption to both income and percent of disability.

Because of the reliance on income there is some difficulty in administration.

The simplest way to administer this approach would be as a credit on state income tax. This is, of course, a refund that requires taxpayer outlay of cash and then a refund.

This program could also be administered much in the same manner as the senior citizen renters equivalency program with the Department of Community & Regional Affairs making the refunds directly to the disabled veteran.

Yet another approach would be to make the reimbursement completely contingent on income. Something to the effect: "disabled veterans with a disability greater than _____% shall be entitled to a refund of property taxes in the amount that the annual property tax bill or rent equivalent exceeds the appropriate percentage of their income based on the following table":

Income	Percentage
Under $4,000	0%
$4,000 but under $5,000	1%
$5,000 but under $6,000	2%
$6,000 but under $7,000	3%
$7,000 but under $10,000	4%
$10,000 and up	5%

Examples -

An eligible veteran has an income of $9,000 and pays taxes of $800.
$9,000 X 4% = $360 $800 - $360 = $440 refund

An eligible veteran has an income of $4,500 and pays taxes of $1,000.
$4,500 X 1% = $45 $1,000 - $45 = $955 refund

The easiest approach to administration of this type of reimbursement is an income tax rebate, but could be handled like the senior citizen renters program, with rebates by the Department to the eligible applicant.

One of the major complaints about the property tax over the years is that it is not responsive to the earning power of the taxpayer. The two alternatives mentioned do make property taxes more responsive to the taxpayers ability to pay.

However, it should also be pointed out that every class of taxpayers exempted increases the burden on the balance of the taxpayers.

There are approximately 380,000 people living in areas of the state where property taxes are levied. There are currently 5,400 senior citizens and 200 farmers being exempted; that is a total of 5,600 or 1 1/2 percent of the total population being subsidized. Although 5,600 residents does not sound like a lot when considered independently, the addition of the more standard type of exempt properties such as governmental, churches, charitable institutions, and property of veterans organizations make properties that are currently tax exempt a very substantial part of the property tax base throughout Alaska.

Representative Joseph H. McKinnon
Alaska House of Representatives
Pouch V
Juneau, Alaska 99811

Dear Representative McKinnon:

I thank you for the opportunity to comment on House Bill No. 223. As you may recall, I had the opportunity to testify at a hearing on substantially the same bill of the Community & Regional Affairs Committee two years ago.

The proposed amendments to AS 29.53.020 were discussed and the gross income limitation and eligibility (40% service-connected disability) were adjudged fair.

The American Legion, Department of Alaska, has had many opportunities to discuss the proposed amendments. We wholeheartedly endorse the concept of exempting from taxation the real property owned and occupied by a disabled veteran.

As stated above, the conditions for exemption are reasonable and just.

Please accept this statement as giving full support to House Bill No. 223. If further testimony is desired, I will be more than happy to appear before the committee seeking information.

Sincerely,

William C. Kelm

: Bill

Representative Joyce Munson
Pouch V
Juneau, Alaska 99811

Dear Joyce,

I received a number of bills from Juneau recently and noted that you are a co-sponsor on HB 223. I want to suggest a slight change. I would like to see the addition of (unremarried widow of the disabled veteran) without the inclusion of the adjusted gross income of (less than $20,000).

It could also read (unremarried widow and/or the principal abode of the children of the disabled veteran).

I approve the 40% disability clause vs the Senate Bill 154 which reads 50% disability of the disabled veteran.

I have rewritten sections of HB 223 so you can see what I mean.

HB 223 An Act providing for exemption of disabled veterans (or unremarried widows who maintain the principal abode of the children of the disabled veteran) from payment of real property taxes;

(e) The real property owned and occupied as a permanent place of abode by a resident 65 years of age or over or by a disabled veteran (or unremarried widow who maintains the principal abode of the children of the disabled veteran) without regard to his age is exempt from taxation of the assessed value of the real property.

I am assuming that the bill has been written in order to provide relief to a disabled veteran and his dependents or minor children. I contend that if the veteran dies, that it is even more important to provide a home for the children of the veteran because of the stress encountered upon the absence of the (probably) major wage-earner. Therefore I feel that widows and minor children should be included.

I don't believe this addition is going to cost very much because, lets face it, how many unremarried widows with minor children of a disabled veteran do we have maintaining a home in Alaska?

Good luck in Juneau.

Cheers!!

Lois Pillifant

III. ANALYSIS (See Fiscal Note Preparation Instructions, Section III)

According to the Federal veteran's Administration, there are approximately 706 disabled veterans receiving compensation for 40% or greater disability. Assuming about 25% rent their homes, 530 may be presumed eligible. Assuming that another 30 would be ineligible for either exceeding the income limit or being 65 years of age and already exempt leaves approximately 500 eligible veterans.

500 (veterans) times $558 (average senior citizen tax savings) = $279,000.

III. ANALYSIS (See Fiscal Note Preparation Instructions, Section III)

According to the Federal Veterans Administration there are 706 veterans receiving compensation for 40% disability or greater. Assuming 25% of that number to be renters, we then have 176 renters and 530 homeowners. Further assuming that 40% of these numbers are ineligible due to either exceeding income limit or being over 65 years of age and already eligible for exemption. Therefore we end up with 318 eligible homeowners and 106 eligible renters.

318 homeowners @ $558 (average senior citizens savings) = 177,444

106 renters @ $184 (average renters equivalency payment) = 19,504

424 TOTAL $196,948

III. ANALYSIS (See Fiscal Note Preparation Instructions, Section III)

According to the Federal Veterans Administration there are 706 veterans receiving compensation for 40% disability or greater. Our best estimate is that there are 200 additional unremarried widows of disabled veterans. This makes a total of 906 persons initially eligible. Assuming 25% of these people rent, we would have 226 renters and 680 homeowners. If we assume 40% of those are ineligible for exceeding the income limitation or being over 65 years of age and already eligible for exemptions, we end up with 408 homeowners and 136 renters.

408 homeowners @ $558 (average senior citizens savings) = $227,664

136 renters @ $184 (average senior citizen renter reimbursement) = 25,024

544 TOTAL $252,688

SUBJECT Permitting Student Interns to Continue Employment

REQUESTED FOR Rep. Bill Parker BY Marg Gorsuch EXT. 3024

* DELIVER TO Rep. Bill Parker TAKEN BY Behr

INSTRUCTIONS, EXPLANATIONS

Community and Regional Affairs and other departments currently have student interns working (part-time) during the school year. The interns are considered temporary employees. The departments would like to continue hiring the students on a temporary basis during summer vacations, etc. They find that the departments cannot, due to personnel and/or APPA union policies regarding the situation. Rep. Parker would like the situation looked into and what remedies can be offered to allow these students to continue working for longer periods of time.

MEMORANDUM

SUBJECT: Continuation of Student Intern Employment (W.O.#6944)

TO: The Honorable Bill Parker

FROM: Ken Humphreys J.K.H.
Senior Policy Analyst

In response to your request, we have investigated alternatives under which student interns may be allowed to continue working beyond the time limits set out in the Personnel Rules and the APEA agreement. There are actually three types of "student" interns: student (high school), college and graduate interns. All are classified as temporary employees.

Personnel Rule 5 05.0 provides in part that, "No temporary appointment shall exceed six months except where the Director grants an extension of a temporary appointment because of extenuating circumstances. Article 2, section 2(b)1 of the current APEA agreement limits the employment of a temporary employee in any one department to nine consecutive months in any twelve month period with no extensions. Copies of these provisions are attached.

The least expensive and, if APEA is agreeable, the most straightforward solution to the tenure problem is a letter of agreement between the state and APEA to the effect that the time limitations on temporary employment will not be applied to the interns. This solution was initially employed in a recent, very similar case involving the "Older Americans" program (see attached letter of December 13, 1978).

A second solution would be to create permanent positions for the interns. Since they would no longer be classed as temporary employees, the time limitations would not apply. Whether these permanent positions were created by request of the various departments through the Office of Budget and Management or through legislative action, it would involve additional expense for benefits. If the positions were in the classified service, there would be difficulties with recruitment and examination procedures.

A third possibility is to place the intern positions in the partially exempt service under AS 39.25.130(a). This requires action by the Commissioner of Administration and by the Personnel Board and is the

solution which was ultimately used in the recent "Older Americans" case. It avoided the ordinary recruitment and examining procedures and, since those positions were permanent, provided benefits to the "Older Americans" (see attached letter of January 16, 1979). This solution might meet with resistance from APEA on the grounds that it is an unwarranted erosion of the bargaining unit.

Finally, the legislature might act to directly place these intern positions into the partially exempt or the exempt service. Again, this would likely be opposed by APEA and there is the possibility that they still might succeed in representing those employees.

We will be happy to contact APEA or to delve further into any of these approaches or others you might care to pursue.

5-6
(781)

5 06.0 Temporary Appointments

Temporary appointments shall, when practicable, be made from eligible lists. If the Director has found it impracticable to make certification because of non-availability of eligibles, he may authorize the temporary appointment of a qualified individual designated by the appointing authority. No temporary appointment shall exceed six months except where the Director grants an extension of a temporary appointment because of extenuating circumstances. The acceptance or refusal by an eligible of a temporary appointment shall not affect his standing on the eligible list. The period of temporary service shall not be counted as part of his probationary period in case of subsequent appointment to a permanent position.

5 06.1 Short Term Appointments

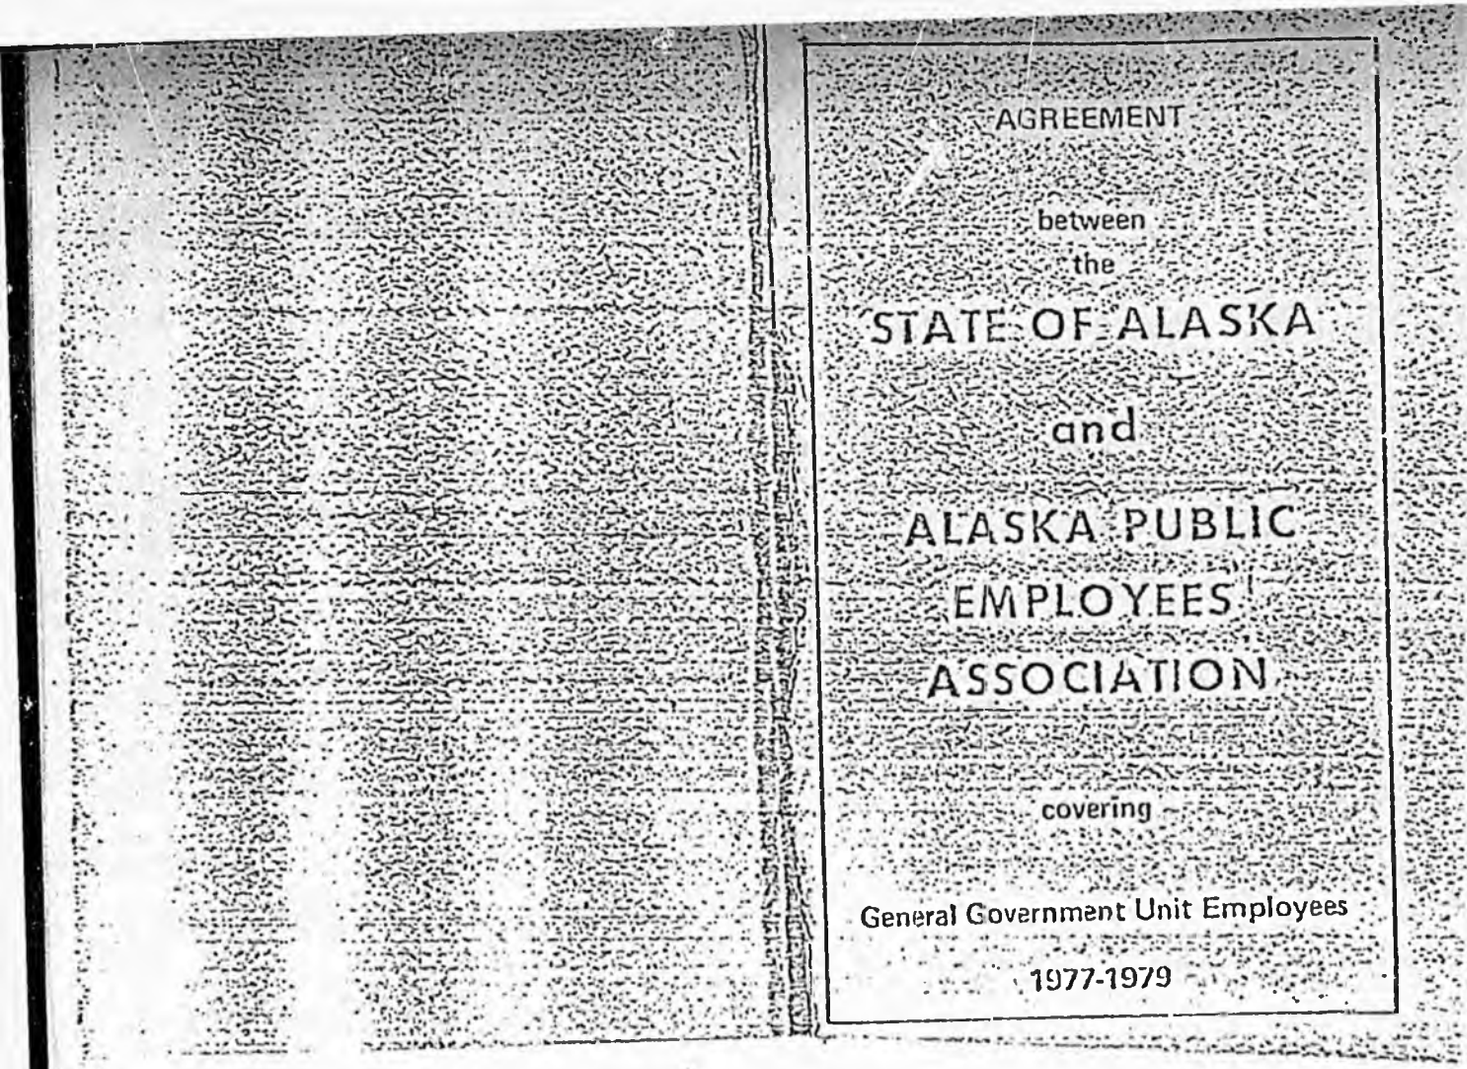
When the Director determines it is in the best interest of the State to do so, he may authorize a short-term appointment. Such appointments shall not exceed 90 days in any calendar year and shall be for specific work in remote areas only. When authorized, an appointing authority may make a selection only from among Alaskans residing in the remote area in which the short term employment exists. The minimum rate of pay in that area for the assigned salary range shall normally be the compensation for such work. However, the Director may authorize exceptions based on local economic conditions. Short term appointments may be made only on forms approved by the Director.

5 07.0 Emergency Appointments

An emergency appointment is an appointment for a period not to exceed thirty (30) calendar days, made under conditions necessitating immediate action to provide for carrying on work that must be continued in the public interest. Successive emergency appointments or more than three emergency appointments for one person within one calendar year are prohibited.

An emergency appointment shall be reported to the Director the day it is made. The report should state why the emergency appointment was made, the expected duration of the work, any other pertinent information, and what action, if any, is requested of the Director.

However, whenever circumstances require immediate need of a guard or attendant for a prisoner, patient or ward in custody of the State, the department responsible may employ a suitable person on an emergency basis, and the limit of three emergency appointments for one person within one calendar year shall not apply. The Director shall notify the Departments of classes to which emergency guard or attendant appointments are authorized and prescribe the procedures to be followed in effecting such appointments.



Bargaining Unit Member leaves and returns to his/her home if travel begins and ends outside assigned working hours.

(r) "Work Week" in this Agreement shall consist of thirty-seven and one-half (37½) hours in pay status within a maximum of five (5) consecutive days and all employees shall be guaranteed a full work week.

Article 2
RECOGNITION

Section 1 – General Recognition

The State of Alaska, hereinafter referred to as the Employer, recognizes the Alaska Public Employees Association, hereinafter referred to as APEA, as the exclusive representative of all permanent, probationary, provisional and temporary employees in the General Government Unit for collective bargaining with respect to salaries, wages, hours and other terms and conditions of employment. It is recognized that all new classifications created by the Employer shall be placed in the appropriate bargaining unit, consistent with prior Labor Relations Agency rulings on the type of work involved. Subsequent to the effective date of this Agreement, the Labor Relations Agency and APEA shall be notified of all new classifications created within ten (10) days of such action and such notification to include the specifications of the job classifications. Both parties recognize that the Labor Relations Agency shall retain its authority to make final determination of unit classification assignments. No position shall be reclassified to a class outside this bargaining unit without written notification to APEA of such action concurrent with the notification to the department. The words "employee" and "employees" as used in this Agreement shall mean only employees serving in the General Government Unit except temporaries, provided that temporaries, while not defined as employees under this Agreement, are nevertheless members of the General Government Unit.

Section 2 – Representation of Temporaries Recognized

It is recognized that the need exists to hire temporaries in positions similar in duties and requirements to permanent positions in the bargaining unit. The Employer and APEA now agree that all determinations concerning the terms and conditions of temporary employment shall be made independently by the Employer, except as provided for in this Article or as specifically provided for in subsequent Articles.

(a) All temporaries shall meet the minimum qualifications as required of individuals seeking permanent employment in the class into which they are to be hired.

(b) 1. A temporary employee may be employed by any one department for a maximum of nine (9) consecutive months in any twelve (12) month period. Such appointment may not be extended.

2. The individual would then be entitled to immediately seek further temporary employment with another department.

(c) An individual hired into a class covered by this Agreement as a temporary must perform the work of that class and may not be paid less than the entry salary step of the range assigned to the class in which he/she is to work.

(d) 1. Temporary employees are covered by the holiday provisions of this Agreement and the Personnel Regulations.

2. Temporaries who begin a shift and are then sent home during the first half of the shift shall receive four (4) hours pay or their normal hours of work, whichever is less. Temporaries who are sent home during the second half of a shift shall receive seven and one-half (7½) hours pay or their normal hours of work, whichever is less.

Juneau, Alaska 99801

Dear Pat:

This will confirm the results of our meeting of December 8 concerning the "Older Americans" program. It is my understanding that we agreed that due to the nature of the program temporaries employed under the "Older Americans" program would be exempt from the time limitation provisions of Article 2, Section 2(b)1, Letter of Agreement #6, and Personnel Rule 5 06.0.

Please indicate your concurrence, if my recollection is consistent with yours, by signing below and returning a copy to me for my records. If what I have written is not your understanding of our agreement, please let me know at your earliest convenience.

Sincerely,

Robert L. Stewart
Deputy Director

JAY S. HAMMOND, GOVERNOR

DEPARTMENT OF ADMINISTRATION

OFFICE OF THE COMMISSIONER

POUCH C
JUNEAU, ALASKA 99811

January 16, 1979

DIRECTOR'S OFFICE
FEB 20 1979
DIV. OF PERSONNEL & LABOR RELATIONS

RECEIVED
FEB 13 1979
Dept. of Administration
Commissioner's Office

Mr. C.R. "Steve" Hafling, Chairman
Alaska State Personnel Board
1147 "G" Street
Anchorage, Alaska 99501

Dear Mr. Hafling:

The Department of Health and Social Services has requested that the positions listed herein be placed in the partially exempt service. Under AS 39.25.130(a), the Personnel Board may extend the partially exempt service to include additional classifications, upon the recommendation of the Commissioner of Administration. Such extensions may be made only when the Board finds that the position in question meets the following criteria:

1. involves principal responsibility for the determination of policy;

2. involves principal responsibility for the way in which policy is carried out; or

3. involves responsibilities and duties of a type not susceptible to ordinary recruitment and examining procedures.

I recommend that the positions in question be placed in the partially exempt service for reason of meeting the third criteria set forth above.

The purpose of recruitment and examining procedures for the classified service is to identify and select those individuals best qualified to perform a set of established duties. The procedures are designed to disregard social, economic and other characteristics which have no bearing on expected job performance.

The positions in question are funded under Federal Title V, Senior Community Service Employment Program of the Older Americans Act as amended. The program is designed to address social and economic

/LH

needs of the participants. Their useful employment meets program goals without regard to the quality of service they may or may not provide. The federal requirements mandate eligibility based on the applicant's age and economic condition. These restrictions are not consistent with merit principles of selection nor is the concept of duties and responsibilities susceptable to ordinary recruiting and examining procedures.

The positions established for this program are:

PCN	CLASS TITLE
06-0345	Employment Security Specialist IA
06-0346	Employment Security Specialist IA
06-0347	Employment Security Specialist IA
06-0348	Employment Security Specialist IA

RE: Intern Program

Attached for your information is the response to our request for background and options on the question of hiring of interns.

We have discussed the subject with Cherie Shelley of A.P.E.A. and she is of the opinion that the passage of CSSB198 am will solve the problem as she would classify interns as "project employees" (See Sec. 39.25.198 (5) of attached bill)

She further stated that if they were to remain classified as "temporary" employees, she would not see any difficulty in A.P.E.A. specifically exempting such interns.

RE: Intern Program

Attached for your information is the response to our request for background and options on the question of hiring of interns.

We have discussed the subject with Cherie Shelley of A.P.E.A. and she is of the opinion that the passage of CSSB198 am will solve the problem as she would classify interns as "project employees" (See Sec. 39.25.198 (5) of attached bill)

She further stated that if they were to remain classified as "temporary" employees, she would not see any difficulty in A.P.E.A. specifically exempting such interns.

STATE of ALASKA

MEMORANDUM

TO: Sterling Gallagher
Commissioner
Department of Revenue

DATE : May 1, 1978

FROM: Gerald D. Heier GDH
Petroleum Property Assessor
Petroleum Revenue Division

SUBJECT: State Assessment Review Board

The State Assessment Review Board established under AS 43.56.040 currently has only three members of an authorized five. I would like to submit the following two names for consideration for appointment to the Board:

Earl Cooper, Box 177, Homer, Alaska
Earl Miller, 3500 Hiland Drive, Anchorage, Alaska 99504

Earl Cooper has been in private business in Homer since 1957. He currently owns Homer Transfer, a local freight service in Homer. He served on the Homer Public Utility District for three and one-half years prior to the incorporation of Homer as an organized municipality. He has served on the Homer City Council for 12 years and as an assemblyman on the Kenai Peninsula Borough Assembly for ten years. For further reference, both Senator Clem Tillion and Representative Leo Rhode are from Homer and know Mr. Cooper. I have personally known Earl for approximately twelve years and believe that he would be a conscientious member on the State Assessment Review Board.

Attached is Earl Miller's resume. I believe that he too would be a conscientious Board member.

January 23, 1980

Terry Gardiner, Speaker of the House
Alaska Legislature
Pouch V
Juneau, Alaska 99811

Dear Representative Gardiner:

In accordance with AS 44.19.893(4), the Alaska Coastal Policy Council is pleased to present on this tenth day of the legislative session, the Municipality of Anchorage, City of Haines, and Annette Islands Indian Reserve District Coastal Management Programs as approved by the Council. These district programs:

> ...take effect upon adoption of a concurrent resolution by a majority of members of each house of the legislature or by a vote of the majority of the members of each house at the time the houses are convened in joint session to confirm executive appointments submitted by the governor. (AS 46.40.080.)

The Council requests early consideration and approval of these additions to the Alaska Coastal Management Program (ACMP).

On January 16, 1979, the Council adopted the Office of Coastal Management's (OCM) findings and conclusions (see attachments) regarding the three district programs. OCM concluded that each of the three district programs submitted for review and approval by the Council was substantially consistent with the ACMP statutes and regulations and thus recommended approval of these programs.

It should be noted that the lands of the Annette Islands Indian Reserve are held in trust by the federal government. The Indian Reserve is therefore technically excluded from Alaska's coastal zone according to federal law. In the spirit of cooperation, however, OCM and the Alaska Department of Community and Regional Affairs encouraged the development of a district program because local residents were willing to pursue coastal planning and management under their own initiative and the benefits from such an effort were expected to outweigh the shortcommings of limited State jurisdiction. Although the Annette Islands Indian Reserve District Coastal Management Program can not technically become part of the ACMP, the Council is requesting the Legislature to informally approve the program as a courtesy to the community.

A fourth district coastal management program, the North Slope Borough,

ALASKA
COASTAL MANAGEMENT PROGRAM

Mid-Beaufort Segment District Program, had initially been submitted for consideration by the Council in November 1979. OCM had recommended disapproval of the program because of certain inconsistencies with ACMP statutes and regulations. Before the Council took final action on this program, the North Slope Borough Assembly, by formal resolution, repealed an earlier resolution giving conceptual approval of the program and withdrew the program from Council consideration. The North Slope Borough fully intends to refine their program to bring it into compliance with ACMP statutes and regulations as well as expanding the program to accomodate the entire portion of the North Slope Borough Coastal Area. It is anticipated that the North Slope Borough will re-submit its coastal program for consideration by the Council in approximately one year.

Your attention is also requested for one other action taken by the Council during the preceeding year. In accordance with a Senate Letter of Intent, dated March 13, 1979, the Council adopted the following amendment to the ACMP regulations:

> 6 AAC 80.100 (a)(3) timber harvest and timber management activities must be planned so as to protect streambanks and shorelines, minimize ~~prevent~~ adverse impacts on fish resources and habitats, and minimize adverse impacts on wildlife resources and habitats.

Again, the Council requests early consideration and approval of this amendment to the ACMP regulations.

The Council and OCM look forward to working with you during the current session and we are available at your convenience for presentations and discussion on the three district programs, the amendment to the ACMP regulations, or any other topic relevant to the ACMP. In addition, upon your request or the request of a committee chairperson, OCM will be happy to provide draft language of resolutions for legislative approval of the three programs and the amendment to the ACMP regulations. To arrange for meetings or to obtain copies of any of the materials referenced, please contact Murray Walsh at OCM (465-3540).

If we may be of any assistance whatsoever, please do not hesitate to ask.

Sincerely,

Frances A. Ulmer for
Co-Chairman

Donald Gilman for
Co-Chairman

SENATE JOURNAL

SENATE LETTER OF INTENT

SENATE CONCURRENT RESOLUTION NO. 12

Testimony received by the Community and Regional Affairs Committee indicated the need for a change in the Alaska Coastal Policy Council's regulations. Specifically:

(1) 6 AAC 80.100 (a)(3) timber harvest and timber management activities must be planned so as to protect streambanks and shorelines, prevent adverse impacts on fish resources and habitats, and minimize adverse impacts on wildlife resources and habitats.

The testimony indicated the need:

following words "streambanks and shorelines," delete "prevent" insert "minimize"

A representative from the Alaska Coastal Policy Council and a representative from the Office of Coastal Management concurred with the need for this change.

It is the intent of this committee that the words "minimize adverse impacts" should apply to both fish resources and habitats and wildlife resources and habitats.

The Committee urges the Alaska Coastal Policy Council to consider and adopt this change at its earliest convenience.

Adopted as a Senate Letter of Intent March 13, 1979 by unanimous consent.

For your information in consideration of SCR 53

LEGISLATIVE AFFAIRS AGENCY

M E M O R A N D U M February 26, 1980

SUBJECT: Legislative role in approving coastal management programs.

TO: Senator Arliss Sturgulewski, Chairman
Senate Community and Regional Affairs Committee
Attn: Margo Waring, A.A.

FROM: Tamara Brandt Cook TBC
Legislative Counsel

AS 46.40.080 simply provides for adoption by the legislature of coastal management programs which have already been reviewed and approved by the council. Clearly under the terms of this statute the legislature may approve the program or disapprove the program. Although the statute does not provide for the situation involving legislative approval of only part of a program, there is also no clear requirement that the legislature approve or disapprove the entire program. In fact, the legislature has done just that on previous occasions, so there is some precedent for the proposition that under the terms of AS 46.40.080 the legislature may approve a program in part and disapprove it in part. SLA 1978, Legislative Resolve Number 41.

Under AS 46.40.060 all district coastal management programs are submitted to the Alaska Coastal Policy Council for review and approval. Standards for council review are itemized in AS 46.40.070. In view of these provisions, an argument could be made that the legislature should not disapprove a program or part of a program that has been adopted by the council unless it finds that the council failed to properly apply the standards set out.

Since there is no case law on point and the language of the statute does not specifically restrict the legislative role, the legislature appears to be free to approve a management program, disapprove a program, or approve it in part and disapprove it in part. Note that the recent case, State of Alaska, and Department of Revenue v. A.L.I.V.E. Voluntary, No. 2022, February 19, 1980 casts considerable doubt upon the ultimate effect of legislative resolutions.

ALASKA
COASTAL MANAGEMENT PROGRAM

12/24/79 Sent to Margie Brosnek / Jane Walsh for comment.

DRAFT AMENDMENT CT THE ALASKA COASTAL MANAGEMENT ACT

(This amendment has been proposed as a result of a request by Nunam Kitlusisti made to the Alaska Coastal Policy Council. At issue is the role of coastal resource service area planning boards after the coastal programs for the districts have been approved. As written, the Alaska Coastal Management Act does not specify what the role of such boards would be after approval of the programs, or even if they would continue to exist. The proposed amendment would provide for continued existence and a review and comment role for pending state and federal agency actions.)

The Alaska Coastal Management Act is amended by adding the following new section:

Sec. 46.40.185. COASTAL RESOURCE SERVICE AREA BOARDS AFTER APPROVAL OF DISTRICT PROGRAMS FOR THE SERVICE AREAS. (a) Coastal resource service area boards will participate in the implementation of their districts' coastal management program by reviewing and commenting on the actions and pending actions of the state agencies as those agencies carry out their responsibilities under section 46.40.090. (a) of this chapter.

(b) All state agencies shall inform the coastal resource service area boards of actions which would significantly affect the coastal resources of their respective districts and shall provide reasonable amounts of time for the boards review and recommendations on the proposed actions. When a state agency's decision differs from the recommendation of a coastal resource service board, the coastal resource service area board recommendation and the basis for the differences will be included in the decision.

(c) The coastal resource service area board may act on behalf of the coastal resource district for the purpose of implementing, enforcing or complying with the district coastal management program as provided in

sec. 46.50.100(b) of this chapter.

(d) Should the area, or a portion thereof, included in a district coastal management program developed by a resource service area board become organized to assume planning powers provided in AS 29.33.070-29.33.245 the district coastal management program may by ordinance be adopted by the organized municipality.

Box 461
Haines, Alaska 99827
February 14, 1980

Representative Bill Parker, Chairman
Committee on Community & Regional Affairs
House of Representatives
Pouch V
State Capitol
Juneau, Alaska 99811

Honorable Bill Parker:

Please accept this as written testimony for your public hearing on the Haines District Coastal Management Program, scheduled for February 27th and March 3, 1980.

The Haines plan covers a very small geographical area. For this reason future coastal plans of the area covering more territory are imminent. They will be conducted as municipal boundries are adjusted through annexation or establishment of a Borough Government with planning powers.

Therefore little time should be spent on this plan and it should be adopted as submitted.

Although the Haines Plan went through extensive public hearing and reflects the local attitude, it's preparation was truly only to comply with state and federal regulations.

Yours truly,

Marvin P. Hartshorn

I'd like to comment on 2 areas within the Haines CZM Plan

One is the proposed passage of the McClellan Flats wetlands for quote "light industrial and storage uses and mobile home parks". We feel that this is contrary to the intent of the Alaska CZM guidelines for Coastal Development (6 AAC 80.130). Also the U.S. Fish and Wildlife Coordination Act mandates our agency to determine the water dependency or water relatedness of a project when reviewing the Public Notice for a Corps of Engineers permit. The National Marine Fisheries Service discourages general industrial and storage projects and mobile home parks in wetland areas when suitable upland site are available as alternatives. Possibly the City of Haines should consider designating other areas for these uses, or request the Corps of Engineers to make a determination as to the extent of wetlands within the McClellan Flats area which falls within Section 404 jurisdiction.

Secondly, our agency encourages ~~that~~ areas of special biological significance ~~are~~ to be designated as Areas Which Merit Special Attention. Within this area we have several ~~recommendations~~ recommendations. In particular we recommend the area of the confluence of the Chilkat River with the Tsirku River which was designated as critical salmon habitat by the Alaska State Legislature. We also ~~recommend~~ the Glory Hole of ~~the~~ Chilkoot Lake because of its value as a sockeye salmon spawning area and the entire length of the Chilkoot Lake outlet because of its importance for salmonid migration and spawning. Development which could adversely impact the latter 2 areas is conceivable because of the proximity of the Haines Highway system.

Alaska MUNICIPAL League

TELEPHONES
(907) 586-1325
586-6526

204 N. FRANKLIN ST.
JUNEAU, ALASKA 99801

February 27, 1980

To: House CRA Committee

From: Ginny Chitwood, Executive Director

Re: Amendment to Coastal Policy Act

At the annual meeting of the Alaska Municipal League, held last fall in Sitka, the members adopted the following paragraph as part of the 1980 policy statement:

> The League supports the concept of "extra-territorial" planning by municipalities in the unorganized borough with statutory provisions to permit the Alaska Coastal Policy Council to adopt said "extra-territorial" planning as part of the Alaska Coastal Management Program until such time as a resource district plan is adopted

The enclosed bill, which is a starting point for implementing this section, and the memo from the Ketchikan Gateway Borough were endorsed by the AML Legislative Committee in December.

We believe it is very important that the concerns of adjacent areas addressed in each coastal management plan that is approved. An amendment to the act, along the lines of this proposal, will help to achieve that goal.

The enclosed material has been submitted to the Alaska Coastal Policy Council and will be considered at its next meeting scheduled for mid-March.

HOUSE BILL NO.

IN THE LEGISLATURE OF THE STATE OF ALASKA

ELEVENTH LEGISLATURE - SECOND SESSION

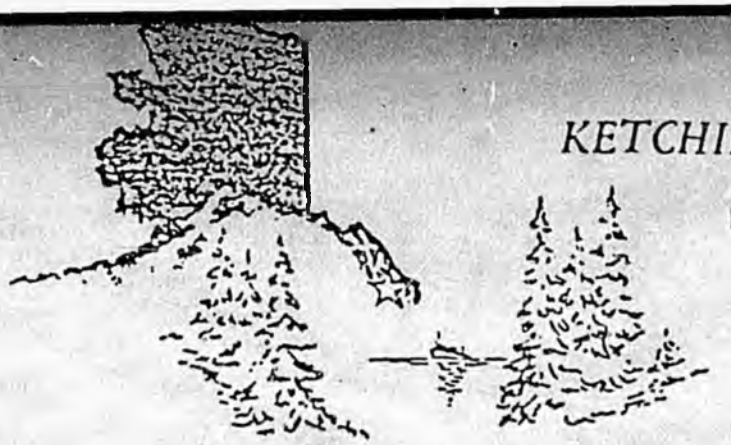
A BILL

For an Act entitled: "An Act relating to filing of notice of interest by adjoining cities or boroughs regarding proposed district coastal management plan in unorganized boroughs and providing opportunity to be heard prior to approval of district coastal management plan by Alaska Coastal Policy Council; and providing for an effective date.

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1: AS 46.40.180 is amended by adding new subsections thereto to read:

(e) Any organized city or borough which claims to have an interest in the manner in which resources, or the use of resources, in any unorganized borough adjacent to its boundaries are developed shall notify the Department of Community and Regional Affairs of the nature and extent of such interest. Before adoption by a coastal resource service area board, or by the Department of Community and Regional Affairs under Section 170 of this chapter, a district coastal management program shall be submitted to each organized city or borough which has filed a notice of interest with the Department of Community and Regional Affairs.



KETCHIKAN GATEWAY BOROUGH
344 FRONT STREET
KETCHIKAN, ALASKA 99901

TO: Legislative Committee of
Alaska Municipal League

THRU: Judith A. Slajer
Borough Manager

FROM: Marvin Yoder MY
Economic Development Specialist

SUBJECT: Extraterritorial jurisdiction in Coastal Management district

Working with our municipal attorney, Mr. Walker, we decided that the basic need of organized districts was to be able to have input into plans being compiled in adjacent resource service areas.

The two options available are for the organized municipalities to use its resources to physically inventory and plan for those areas that have direct influence on the municipality or to simply state that the impact exists and then request an opportunity to determine the extent of the impact when the resource service area begins to formulate its plan. After discussing these concepts with individuals involved in Coastal Management programs, we chose the latter option.

The second decision was whether the proposed new language should be added to the State statutes or to the regulations. In the statutes AS 46.40.180 describes the requirements necessary for a resource district to have its plan approved. The proposed addition stipulated that concerns expressed by adjacent districts must be addressed by public hearings and records of these hearings are to be documented in the permanent record of the district.

The second approach would be to amend the regulations. This would be done by the Alaska Coastal Policy Council with the legislative concurrence. Section 6 AAC 85.140 provides opportunities for other government agencies to coordinate and review coastal plans and specifically mentions adjacent districts.

Our recommendation is to attempt to change the statutes and assume that the regulations will be changed to conform to the intent of the act.

(e) Any organized city or borough which claims to have an interest in the manner in which resources, or the use of resources, in any unorganized borough adjacent to its boundaries are developed shall notify the Department of Community and Regional Affairs of the nature and extent of such interest. Before adoption by a coastal resource service area board, or by the Department of Community and Regional Affairs under Section 170 of this chapter, a district coastal management program shall be submitted to each organized city or borough which has filed a notice of interest with the Department of Community and Regional Affairs.

(f) The council shall not approve a district coastal management program unless it finds that each organized city or borough that has filed a notice of interest under (e) above has received notice and an opportunity to present its concerns regarding such plan at a public hearing before the coastal service area board or the Department of Community and Regional Affairs which concerns shall become part of the record regarding such plan.

* Section 2: This Act takes effect immediately in accordance with AS 01.10.070(c).

KETCHIKAN GATEWAY BOROUGH
344 FRONT STREET
KETCHIKAN, ALASKA 99901

TO: Legislative Committee of
Alaska Municipal League

THRU: Judith A. Slajer
Borough Manager

FROM: Marvin Yoder MY
Economic Development Specialist

SUBJECT: Extraterritorial jurisdiction in Coastal Management district

Policy Statement p. 8 IV E(2)

Working with our municipal attorney, Mr. Walker, we decided that the basic need of organized districts was to be able to have input into plans being compiled in adjacent resource service areas.

The two options available are for the organized municipalities to use its resources to physically inventory and plan for those areas that have direct influence on the municipality or to simply state that the impact exists and then request an opportunity to determine the extent of the impact when the resource service area begins to formulate its plan. After discussing these concepts with individuals involved in Coastal Management programs, we chose the latter option.

The second decision was whether the proposed new language should be added to the State statutes or to the regulations. In the statutes AS 46.40.180 describes the requirements necessary for a resource district to have its plan approved. The proposed addition stipulated that concerns expressed by adjacent districts must be addressed by public hearings and records of these hearings are to be documented in the permanent record of the district.

The second approach would be to amend the regulations. This would be done by the Alaska Coastal Policy Council with the legislative concurrence. Section 6 AAC 85.140 provides opportunities for other government agencies to coordinate and review coastal plans and specifically mentions adjacent districts.

Our recommendation is to attempt to change the statutes and assume that the regulations will be changed to conform to the intent of the act.

On November 30, 1979 the proposed amendment was placed before the Policy Council and received favorable comments; however no formal action was taken. It is my opinion as a member of the Council that if there is a statute change, the Policy Council will change the regulations to reflect that change.

HOUSE BILL NO.

IN THE LEGISLATURE OF THE STATE OF ALASKA

ELEVENTH LEGISLATURE - SECOND SESSION

A BILL

For an Act entitled: "An Act relating to filing of notice of interest by adjoining boroughs or cities regarding proposed district coastal management plan in unorganized boroughs and providing opportunity to be heard prior to approval of district coastal management plan by Alaska Coastal Policy Council; and providing for an effective date.

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1: AS 46.40.180 is amended by adding new subsections thereto to read:

(e) Any organized borough or city which claims to have an interest in the manner in which resources, or the use of resources, in any unorganized borough adjacent to its boundaries are developed shall notify the Department of Community and Regional Affairs of the nature and extent of such interest. Before adoption by a coastal resource service area board, or by the Department of Community and Regional Affairs under Section 170 of this chapter, a district coastal management program shall be submitted to each organized borough or city which has filed a notice of interest with the Department of Community and Regional Affairs.

(f) The council shall not approve a district coastal management program unless it finds that each organized borough or city that has filed a notice of interest under (e) above has received notice and an opportunity to present its concerns regarding such plan at a public hearing before the coastal service area board or Department of Community and Regional Affairs which concerns shall become part of the record regarding such plan.

* Section 2: This Act takes effect immediately in accordance with AS 01.10.070(c).

Introduced:
Referred:

IN THE SENATE

BY THE COMMUNITY AND
REGIONAL AFFAIRS COMMITTEE

SENATE CONCURRENT RESOLUTION NO.

IN THE LEGISLATURE OF THE STATE OF ALASKA

ELEVENTH LEGISLATURE - SECOND SESSION

Endorsing an action of the Alaska Coastal Policy Council.

BE IT RESOLVED BY THE LEGISLATURE OF THE STATE OF ALASKA:

WHEREAS Chapter 84, Session Laws of Alaska 1977, established the Alaska coastal management program, the Alaska Coastal Policy Council and the general obligation upon local governments to undertake coastal resource planning; and

WHEREAS the Annette Island Indian Reserve, while legally not a coastal resource district under the terms of Alaska law, and not part of Alaska's coastal zone under the terms of federal law, has nevertheless engaged in a cooperative coastal planning effort with the Alaska coastal management program; and

WHEREAS in a grant agreement between the Annette Islands Indian Reserve and the Department of Community and Regional Affairs, the Annette Islands Indian Reserve received funding with which to develop a coastal program and agreed to produce a coastal program that would be consistent with the Alaska coastal management act and the guidelines standards of the Alaska Coastal Policy Council; and

WHEREAS the Annette Islands Indian Reserve has completed and approved such a program and submitted it to the Alaska Coastal Policy

Council for review and approval, and

WHEREAS the Alaska Coastal Policy Council has conducted a regular review of the Annette Islands Indian Reserve coastal program and has approved it; and

WHEREAS the Alaska Coastal Policy Council has requested the legislature to endorse the Council's approval of the Annete Islands Indian Reserve coastal management program to acknowledge this achievement;

NOW THEREFORE BE IT RESOLVED, that in accordance with the findings and conclusions of the Alaska Coastal Policy Council. The Alaska State Legislature endorses the coastal management program of the Annette Island Indian Reserve, and offers appreciation for a job well done.

FOREST PRACTICES REGULATION CHANGE

Introduced:
Referred:

BY THE COMMUNITY AND
REGIONAL AFFAIRS COMMITTEE

IN THE SENATE

SENATE CONCURRENT RESOLUTION NO.

IN THE LEGISLATURE OF THE STATE OF ALASKA

ELEVENTH LEGISLATURE - SECOND SESSION

Approving regulations adopted by the Alaska Coastal Policy Council.

BE IT RESOLVED BY THE LEGISLATURE OF THE STATE OF ALASKA:

WHEREAS Chapter 84, Session Laws of Alaska 1977, established the Alaska Coastal Policy Council and charged the Council with the responsibility of adopting regulations establishing guidelines and standards for the development of a coastal management program; and

WHEREAS the Alaska Coastal Policy Council has adopted guide lines and standards in 6 AAC 80 and 6 AAC 85 for use by state agencies in making land and water use decisions and for use by municipalities and coastal resource service areas in the preparation and development of district coastal management programs; and

WHEREAS the guidelines and standards adopted by the Council on March 31, 1978 have been approved by the legislature during the Second Session of the Tenth Legislature with selective deletions and letters of intent calling for further attention to certain matters in the guidelines and standards; and

WHEREAS the Council adopted amendments to the guidelines and standards on December 15, 1978, in response to the request of the legislature and other parties; and

WHEREAS the guidelines and standards adopted by the Council on December 15, 1978 have been approved by the legislature during

the First Session of the Eleventh Legislature with a letter of intent calling for further attention to a certain matter in 6 AAC 30 80.100 of the guidelines and standards; and

WHEREAS the Council adopted and amendment on August 1, 1979 in response to the request of the legislature which reads:

"Change the word "prevent" which appears in 6 AAC 80.100. (a)(3) to "minimize";

and,

WHEREAS this amendment to the guidelines and standards approved and adopted by the Alaska Coastal Policy Council is deemed to be consistent with the policy and objectives for the state coastal management program identified in chapter 84, SLA 1977; and

WHEREAS AS 46.40.080 requires approval of amendments to the state coastal management program either by adoption of a concurrent resolution by a majority of the members of each house of the legislature or by majority vote of the members of each house at the time of the houses are convened at a joint legislative session to confirm executive appointments submitted by the governor; and

WHEREAS, in accordance with the statute, the Alaska Coastal Policy Council has submitted its amendment to the guidelines and standards for legislative approval;

BE IT RESOLVED, that in accordance with AS 46.40.080, the Alaska State Legislature approves the amendment to 6 AAC 80.100 (a)(3) adopted by the Alaska Coastal Policy Council on August 1, 1979.

NOTICE

The Senate Community and Regional Affairs Committee will hold a series of three meetings regarding legislative approval of three district coastal management programs--Haines District Coastal Management Program, Annette Islands District Management Program, and Anchorage Municipal District Coastal Management Program.

2/8/80 8:30-10:00 a.m. Joint House-Senate CRA Committees will hold a work session on the district programs with presenations by the Office of Coastal Management.
HCRA Committee Room, Capitol Building, Rm. 112.

2/21/80 1:00-3:00 p.m. Senate CRA Committee Public Hearing regarding district coastal programs and related policy and implementation issues. A copy of Committee concerns is attached. In advance of this session interestested parties are invited to submit written comments on policy and implemencation concerns. Public testimony is encouraged on district programs.

2/28/80 1:30 p.m. Senate CRA Additional comments, if any, on the district programs and action meeting.
SCRA Committee, Rm. 207, Capitol Building

Gentlemen:

Representative Bill Parker, Chairman of the House Community and Regional Affairs, has scheduled a hearing on the [illegible]ette Islands District Management Program. You can call the good Representative's Juneau office at 465-3870 and tell him on which of these two dates you'd like to testify: Wednesday, February 27 or Monday, March 3 at 8:30 a.m. in Room 112, Capital Building. If you decide that there is no need to put testimony on record, you should call Representative Parker's office and let that fact be known. In other words, either way, call Mr. Parker's office as soon as you know which route you are going.

Regards,

BH Ziegler

Dear Bill:

Enclosed is a copy of the comments our office recently submitted on the Draft Environmental Impact Statement on the Alaska Coastal Management Program. I don't know if they are relevant to your Committee's immediate agenda, but in any case I hope they will be of some use in its future deliberations on the Alaska Program.

Next time you are back in Anchorage I would very much like to have the chance to talk to you about the whole coastal management issue.

Thank you for your interest.

Sincerely yours,

Robert E. Mintz

EXPRESS MAIL

March 5, 1979

Pacific Regional Manager
Office of Coastal Zone Management
3300 Whitehaven Street, N.W.
Washington, D.C. 20235

Dear Mr. Coffey:

We are pleased to submit our comments on the draft EIS for the Alaska coastal management program. We strongly support the concept of coastal management for Alaska. This letter, with attached comments and recommendations, constitutes our response to this document. The summation of concerns presented in this letter is based on the more detailed analysis and comment supplied in the attachment. We request that your replies to our comments address both the concerns aired in this letter and the issues identified in the attached document.

We support a strong coastal management program for Alaska. We feel that the diverse nature and relatively pristine quality of coastal Alaska warrants special management consideration. Due to the exceptional quality of the Alaskan coast, and the extensive physical, biological, and social resources which depend on the continued integrity of the coastal ecosystem, we cannot afford to follow the previous pattern of reacting to development in a piecemeal manner. An effective management scheme must provide predictable, comprehensive guidance based on sound resource management principles. It is our hope that the Alaska Coastal Management Program can provide such a management program.

The program, as currently approved by the legislature, is unacceptable, and the amendments which attempt to improve deficiencies in the program, have not yet received legislative approval. Consequently, we cannot recommend approval or disapproval of the program at this time. Other program elements, such as uses of state concern, and the manual of standards, have not yet been subjected to public review through the EIS process. We therefore reserve the right to review and comment on the program after legislative action and prior to program certification and approval by the Department of Commerce.

Other weak points in the program, addressed more fully in the attached document, are:

(1) The ACMP does not give adequate consideration to environmental values,

(2) The ACMP inadequately provides for consideration of regional and cumulative impacts,

(3) The ACMP allows overly broad exceptions to its requirements,

(4) The "Uses of State Concern" resolution has not been subjected to public review,

(5) Important provisions regarding district accomodation of Uses of State Concern are unclear,

(6) Required legislative approval of each district program is likely to cause unnecessary delay in implementation of plans,

(7) The AMSA designation process may stifle public participation,

(8) Many of the guidelines and standards need clarification, and exceptions to the guidelines and standards should be more narrowly defined, and,

(9) Some of the guidelines and standards rely on existing state programs which have not been effective in the past.

Because of the tentative nature of portions of the ACMP, the thrust of our comments and recommendations at this time is to air our concerns and seek clarification of issues from both the Office of Coastal Management and the Office of Coastal Zone Management. Once the legislature has acted, we will be more able to assess the acceptability of the program.

We thank you for this opportunity to comment on the DEIS for Alaska's coastal zone management plan, and look forward to working with you in the future.

Sincerely,

David Benton

David Benton
Nancy Cliff
Suzanne Weller
Robert E. Mintz

Submitted on behalf of:

Trustees for Alaska, an Alaskan non-profit public interest law firm with approximately 1000 members,

Friends of the Earth, an international environmental organization with offices and membership in Alaska,

Alaska Center for the Environment, an Alaskan non-profit environmental organization with 3000 members.

Encl.
EXPRESS MAIL

I. The ACMP Does Not Give Adequate Consideration To Environmental Values

The Federal Coastal Zone Management Act ("CZMA") was passed in reaction to the widespread degradation of productive coastal habitats. * Recognizing that development in the coastal zone has always had its champions, Congress sought to protect the long-ignored natural values of our coastal areas, and expressed "the urgent need to protect and to give high priority to natural systems in the coastal zone." CZMA of 1972, Sec. 302 (g). The repeated federal stress on protection of coastal systems in a natural state has received less than wholehearted support from the state of Alaska.

Underlying most of the policies and objectives, standards, and guidelines of the ACMP is the implicit assumption that most of Alaska's coastline will be developed. These regulatory mechanisms have been proposed with an eye toward industrial, recreational and commercial uses of this vast untouched resource. Rarely do they promote the "important ecological, cultural, historic, and esthetic values in the coastal zone;" CZMA of 1972, Sec. 302 (e) nor do they suggest that substantial areas are so valuable and/or fragile that they should not be subjected to any development.

II. The ACMP Inadequately Provides for Consideration of Regional & Cumulative Impacts

We are concerned that the State Act, and the guidelines and standards, inadequately provide for consideration of regional and cumulative impacts of activities in the coastal zone. The CZMA found that "...present state and local institutional arrangements for planning and regulating land and water uses (in the coastal zone) are inadequate," CZMA of 1972, Sec. 302 (g), and encouraged states to develop unified policies and processes for dealing with land and water uses of more than local significance. Sec. 302 (h), CZMA of 1972. Alaska's mechanisms for coping with regional and

* (d) The coastal zone, and the fish, shellfish, other living marine resources, and wildlife therein, are ecologically fragile and consequently extremely vulnerable to destruction by man's alterations.

(e) Important ecological, cultural, historic, and esthetic values in the coastal zone which are essential to the well-being of all citizens are being irretrievably damaged or lost.

(f) Special natural and scenic characteristics are being damaged by ill-planned development that threatens these values.

Coastal Zone Management Act of 1972, §§ 302(d), (e), (f).

cumulative impacts in the coastal zone remain inadequate.

A. Regional planning receives little attention in Alaska's program.

The guidelines and standards attempt to provide for regional planning, 6 AAC 80.030(b) and (c):

(b) The council will initiate an interagency program of comprehensive resource management for each geographic region listed in AS 44.19.891(a)(1). Regional programs will

(1) assist the council and districts in identifying uses of state concern and developing management policies for these uses;

(2) provide resource, social, and economic information on a coordinated regional basis; and

(3) assist the council and districts in identifying, avoiding, or minimizing existing or potential conflicts.

(c) Plans and recommendations developed as part of the regional program described in (b) of this section must be transmitted to the district through the Office of Coastal Management. District planning efforts must demonstrate review and consideration of these plans and recommendations. If the final district program proposed does not agree with the regional program plans and recommendations, the differences will be resolved by the council.

However, it is unlikely that thorough regional planning will take place in time to significantly influence the district planning processes. The original regional planning team was recently disbanded because it was ineffective, and the current regional planning mechanism, described at DEIS 205-208, cannot be expected to produce results sufficiently early to affect the development of local plans. The State Agency Coastal Coordinating Team will also apparently not "provide resource, social, and economic information on a coordinated regional basis" as required by 6 AAC 80.030(b)(2).

B. The ACMP does not consider cumulative impacts of activities in the coastal zone.

Although the ACMP adequately details plans for evaluating the potential of any particular site to withstand a certain activity, there is no specific capacity for cumulative impact review, either within a district, or on a regional or statewide basis. Thus, significant actions in the coastal zone may not be recognized. Needless to say, fragile ecosystems know no superimposed political boundaries. In Alaska attention must even be paid to the international implications of local environmental disruptions. By ignoring cumulatively destructive developme , the state not only violates the federal

legislative intent, but also jeopardizes the continuing health of its economy and sociocultural structure. The ACMP should clearly outline a technique for the interaction of coastal districts, stressing the need for review of cumulative impacts of various individual activities and piecemeal permit and license decisions.

C. The ACMP inadequately provides for participation of citizens outside a district, in the district's planning and implementing process.

While the ACMP has admirably provided for the flow of information between State, Federal, and local agencies, there is only the most meager attention given to the need for affected citizens to stay informed of coastal zone activities to be undertaken in other districts. This oversight might be easily obviated by broadening the A-95 clearinghouse distribution scope or by directing the Office of Coastal Management to reinforce the notification process.

A related matter is that of conflict resolution in a district for which a management program has been approved. A citizen outside the district in question does not have standing before the Coastal Policy Council to voice a complaint about implementation of, compliance with, or enforcement of that district's program.

> (b) On petition of a coastal resource district, a citizen of the district, or a state agency, showing that a district coastal management program is not being implemented enforced or complied with, the council shall convene a public hearing to consider the matter...

AS 46.40.090(b). This may be easily rectified by conferring such standing and encouraging outside participation.

III. <u>The Alaska Coastal Management Act, and the Guidelines and Standards, allow overly broad exceptions to the requirements of the plan.</u>

The ACMA, and the guidelines and standards, contain a number of loopholes which can subvert the purposes of the CZMA. The most important of these are the broad exceptions contained in the definition of "feasible and prudent," 6 AAC 80.900(9), and in the standards governing Council approval of plans which do not comply

with the guidelines and standards, AS 46.40.070(b)(2).

A. "Feasible and prudent."

The definition of "feasible and prudent" as proposed in the amendments to the guidelines and standards, 6 AAC 80.900(9) is

(9) "feasible and prudent" means consistent with sound engineering practice and not causing environmental, social, or economic problems that outweigh the public benefit to be derived from compliance with the standard which is modified by the term "feasible and prudent";

This definition fo a phrase which modifies the proposed energy activities siting guidelines, 6 AAC 80.070(b), the habitat standards, 6 AAC 80.130(d), the proposed transportation and utility standards, 6 AAC 80.080, the coastal development standards, 6 AAc 80.040, and the proposed mining and mineral processing standards, 6 AAC 80.110, provides a loophole which might be used to bypass the already broad requirements of the guidelines and standards. Any flexibility needed can be provided by a narrow definition of feasible and prudent, plus exemptions incorporated in individual standards as appropriate.

The definition of feasible and prudent, as proposed, allows departure from a number of the guideline and standards if the "environmental, social, or economic problems (caused by compliance) outweigh the public benefit to be derived from compliance." This definition would possibly allow non-compliance with the guidelines and standards in order to protect a private interest. The public should only forego a public benefit if the costs to the public outweigh the public benefits to be gained.

The balancing process implicit in the definition gives too much unguided discretion to the districts, and should be replaced with a definition such as,

"consistent with sound engineering practice, and not causing unique problems . . ."

The definition, drawn from Citizens to Preserve Overton Park v. Volpe, 401 U. S. 402, 415-16 (1971), demonstrates a strong commitment to the guidelines and standards, while allowing exceptions in the unusual cases where the guidelines and standards are not appropriate. Since the DEIS states that the "effect of allowing exceptions to the standards will be to cause adverse impacts which the standards seek

to avoid," DEIS at 261, (referring to energy facilities siting standards), exceptions should be carefully circumscribed. An Overton Park standard will carefully limit exceptions; the 6 AAC 80.900(9) definition of "feasible and prudent" may not.

B. The Alaska Coastal Management Act allows overly broad exceptions to the guidelines and standards

AS 46.35.070(b)(2) allows Council approval or district plans which do not comply with the guidelines and standards so long as "strict adherence(to the guidelines and standards) would cause or probably cause substantial irreparable harm to another interest or value in the coastal area of the district." This provision contains the same basic flaws as the definition of feasible and prudent. It might not be read as requiring balancing of public risks versus public benefits, and provides flexibility where none is required. Needed flexibility can be incorporated in the guidelines and standards.

IV. <u>The AMSA designation process is likely to hinder public participation.</u>

The AMSA designation process as defined in the draft EIS, could effectively prevent an individual from making an AMSA recommendation, particularly if this person is from rural Alaska where much of the required information would be extremely difficult to obtain. Because of this problem we propose the following two-step process as a method of assuring adequate public participation.

Although we agree that the information required for AMSA nomination is important to the overall process and must be included in any AMSA designation, we feel that the task of researching and compiling much of the required information lies with the governmental bodies involved,

and not with the individual. It should be stressed that this is merely a change in the identification process and not in the designation process. In order to take effect, the AMSA recommendation must still be approved by the district, the Council, and the Legislature, as provided in the ACMP.

Our proposed AMSA designation process would consist of two parts. Part one, the recommendation stage, would identify a particular area as a potential AMSA. This recommendation could be made by any government agency, local government, private group, or citizen, and could be presented to either the district or the Council as provided in the Council-proposed amendments to 6 AAC 80.160(a). If the recommendation is made by a governmental body, all information required by 6 AAC 80.160 (a)(1-7) would be provided, and the process would remain as currently proposed. If the recommendation is made by a private group or citizen, only more limited information would have to be provided at the recommendation stage. Information which would be required of private parties would include:

(1) the basis or bases for designation under AS 46.40.210(1) or (b) of this section;

(2) a map showing the approximate geographical location and proposed boundaries of the AMSA;

(3) a description of the area which includes dominant physical and biological features and their significance;

(4) present and anticipated conflicts among uses and activities within or adjacent to the area, if any; and

(5) a summary or statement of policies which would be applied in managing the area, including a description of allowable and incompatible uses and activities.

Provision should be made for accepting or rejecting a recommendation based on its suitability and reasonableness. We do not want to bury either the districts or the Council with AMSA designations. However, it should be noted that AMSA's are the only truly protective provisions in the ACMP. Public participation must be insured, through the Guidelines and Standards, in this important component of the program.

Upon finding that the recommendation warrants further action, the district (or Council) would prepare a "hearing document" on the proposal.* This document would include the following information (as provided for in 6 AAC 80.160(a)):

(1) the basis or bases for designation under AS 46.40.210(1) or (b) of this section;

(2) a map showing the geographical location, surface areas, and, where appropriate, bathymetry of the area;

(3) a description of the area which includes dominant physical and biological features;

(4) the existing ownership, jurisdiction and management status of the area, including existing uses and activities;

(5) the existing ownership, jurisdiction and management status of adjacent shoreland and seas areas, including existing uses and activities;

(6) present and anticipated conflicts among uses and activities within or adjacent to the area, if any; and

(7) a proposed management scheme, consisting of the following:

(A) a description of the uses and activities which will be considered proper and the uses and activities which will be considered improper with respect to land and water within the area,

(B) a summary or statement of the policies which will be applied in managing the area, and

(C) identification of the authority which will be used to implement the proposed management scheme.

It should be noted that much of this information will be supplied in the initial recommendation. The more detailed land status and status and statutory information will be provided by the planning body involved. This would result in a more equitable distribution of effort and responsibilities in the AMSA designation process.

This "hearing document" would be widely circulated to the affected local governments, appropriate state agencies, and interested public groups or individuals for review and comment. The review period would

* The information submitted by Federal and State agencies, or local governments, under 6 AAC 80.160(a) would constitute a "hearing document" and would be subject to public review and comment.

be 60 days and at least one public hearing would be held in the local area.

Following the public review and comment period, a "designation document" would be prepared, consisting of the information contained in the hearing document, all public comment on the proposal, and either the district's or the Council's response (whichever is appropriate) to these comments. The designation document is the hearing document adjusted to respond to government and public comments and concerns. It is this document which would be used in the designation and approval process outlined in the DEIS at 113-115.

V. No clear remedy exists if districts do not submit programs within the allotted time.

The Coastal Zone Management Act of 1972 requires that adequate enforcement mechanisms be establised to ensure that state and local policies regarding use of the coastal zone are carried out. The current Alaska plan, as described in the draft EIS, needs to clarify the remedy if a district does not submit any program within the 30 month period specified.

AS 46.40.050 states that a district shall complete its plan within 30 months, and AS 46.40.060 sets forth a procedure for Council approval or disapproval of a district program, once it is submitted. However, if no district program is submitted, no obvious provision currently exists to allow the Council to force preparation of a plan, or to allow another body to prepare the plan instead of the district. We suggest that a provision similar to AS 46.40.170(b) be added at AS 46.35.055, so that an area which does not submit a district program or have one near completion can be subjected to a program prepared by the Department of Community and Regional Affairs, or another appropriate body.

VI. The requirement that all district programs be approved by the legislature is likely to lead to unnecessary delay.

Under the system set up by the ACMA, district plans are (a) approved at the district level, (b) approved by the Council, and then (c) approved or disapproved by the legislature. We believe that legislative approval is an unnecessary step which will delay, and possibly confuse the process.

The Alaska Coastal Management Act provides for district approval, Council approval, and legislative approval before a plan becomes part of the Alaska Coastal Management Program(at which point federal and state consistency provisions apply.) Alaska legislature meets approximately 5 months a year, and popular pressure is building to limit the length of the session. Since the legislature meets from approximately January through April or May, a plan which is submitted in December may not wait long for approval, but a plan approved by the Council in May must wait for 7 months before even being considered. If the legislature wants to retain power over the program, a legislative veto 'rather than an affirmative approval requirement) might be appropriate. As the DEIS stresses, Alaska has an immediate need for a coastal zone management program, and a legislative approval requirement will delay implementation of the program, without significantly contributing to the overall management scheme.

VII. Uses of State Concern

Because Coastal Policy Council Resolution 13, dealing with the subject of "uses of state concern," has not been addressed in the DEIS, it is not possible now for us to comment adequately on this subject. There is, however, some language in the state Coastal Management Act which should be considered. Section 46.40.070(c) establishes three criteria for evaluating district restrictions on uses of state concern. In principle these criteria are proper, but there may be room for misinterpretation of the second criterion, "availability of reasonable alternative sites." What this appears to mean is that districts should consider the issue of alternative sites in deciding on possible restrictions or exclusions of uses in question. However, one might conceivably read the provision as requiring that any time a particular instance of a use of state concern is proposed, the district must allow it where proposed, unless there is an alternative site available. This construction would of course go far beyond the requirements of the Federal Act, Sec. 306(c)(8) which mandates that certain types of uses be given adequate consideration, not that they ride roughshod over all competing uses and values. * It is inconceivable that, in enacting a program which so greatly encourages local decision-making in coastal management, the legislature would have intended the criterion to have the latter effect. If there is any question about the meaning of this provision, it may be desirable to clarify the subject in the final EIS.

* Some areas, regardless of development potential, and of the availability or non-availability of alternative sites, should not be developed because they are fragile, or because the naturally-functioning habitat is too valuable to be disturbed.

VIII. Comments on Specific Guideline and Standards.

A. Coastal Development-6 AAC 80.040

6 AAC 80.040. COASTAL DEVELOPMENT. *(a) In planning for and approving development in coastal areas, districts and state agencies shall give, in the following order, priority to:*

(1) Water-dependent uses and activities;

(2) Water-related uses and activities; and

(3) Uses and activities which are neither water-dependent nor water-related for which there is no feasible and prudent inland alternative to meet the public need for the use or activity.

(b) The placement of structures and the discharge of dredged or fill material into coastal water must, at a minimum, comply with (the standards contained in) Parts 320-323, Title 33, Code of Federal Regulations, (Vol. 42 of the Federal Register, pp. 37133-47) (July 19, 1977).

Pressure to develop much of Alaska's coastline can only increase over time. Indeed, much of the coast is slated for development in the not-too-distant future. It is also true that only a limited amount of the available coastal area is suitable for development. The ACMP recognizes this fact and the coastal development standard is an attempt to address this issue. The standard does set priorities for uses, giving preference to water-dependent activities over uses which do not require a coastal location.

However, the standard fails to address the issue of limiting development to suitable areas. The question here centers on the carrying capacity of a particular area to sustain development. With limited shorefront space, will a district elect to dredge and fill an area (estuary, salt marsh, etc.) to accomodate new development? The standard needs to address this issue in terms of limiting development to those areas in which it is suitable, and by promoting use of already developed areas as much as possible prior to expansion into new, less acceptable areas ("in-filling").

The standard also fails to supply a concise mechanism for resolving conflicts between two or more water-dependent uses competing for the same space. A clarification of these two issues is needed, providing:

- a clear mechanism for arbitrating the use of limited waterfront space between two or more competing water-dependent uses, and

- a statement of policy explicitly promoting in-filling within already developed areas, and declaring if, when, and under what conditions development can proceed in unacceptable areas (such as geophysical hazard

areas, wetlands, estuaries, etc.) once all other available areas suitable for development are used within a district.

Part (b) of the coastal development standard requires compliance with the standards contained in the Code of Federal Regulations, Title 33, parts 320-323. The standard fails to identify the agency responsible for administering these regulations, particularly in the Unorganized Borough. Currently, these regulations are administered by the Corps of Engineers. In the past the Corps has shown reluctance to actively regulate and manage activities taking place in these areas. We are concerned that this not remain the case. Two issues come to mind:

(1) Does the State, through its Dept. of Environmental Conservation or other agencies, have a wetlands management program? If it does, this should be clearly described in the DEIS.

(2) If, as we believe, the State does not have a wetlands management program, then the following must appear in the FEIS:

(a) a clear identification of which agency or agencies will be responsible for wetlands management under ACMP in both the districts and the Unorganized Borough,

(b) an explicit description of the regulatory powers of this agency (agencies) to administer this aspect of wetlands management and the relationship this will have to districts and state agency activities under ACMP, and

(c) a description of responsibilities among districts and agencies for monitoring enforcement and compliance with these regulations.

B. Geophysical Hazards - 6 AAC 80.050

> 6 AAC 80.050. GEOPHYSICAL HAZARD AREAS. *(a) Districts and state agencies shall identify known geophysical hazard areas and areas of high development potential in which there is a substantial possibility that geophysical hazards may occur.*
>
> *(b) Development in areas identified under (a) of this section may not be approved by the appropriate state or local authority until siting, design, and construction measures for minimizing property damage and protecting against loss of life have been provided.*

Clearly the intent of this standard is to identify hazard areas and to prevent, limit, or modify development in these areas in order to minimize damage and loss of life. Section (b) of this standard reads:

(b) Development in areas identified under (a) of this section may not be approved by the appropriate state or local authority until siting, design, and construction measures for minimizing property damage and protecting against loss of life have been provided.

It is unclear whether this means that development in areas which have been identified in (a) shall not proceed, or that development is at the discretion of the district.

C. Coastal Access - 6 AAC 80.060 (b)

(b) (Districts and state agencies shall give high priority to maintaining and, where appropriate, increasing public access to coastal waters.)

The proposed addition to 6 AAC 80.060 of subsection (b), giving high priority to maintaining public access, is of course necessary and desirable. However, there is a serious question whether the description of the "Shorefront Access and Protection Planning Process" actually refers to an effective process as distinguished from a collection of potential tools which might or might not be used in an organized fashion. Where in the ACMP is a mechanism which ensures that possible threats to access are anticipated, evaluated and managed with respect to present and future access needs and opportunities and specifically how will these issues be addressed from a statewide perspective?

D. Energy Facilities - 6 AAC 80.070

The standards provided in the Council's proposed amendments for siting of energy facilities generally appear helpful and reasonable. However, as in a number of other instances, their effectiveness is likely to be significantly impaired by the qualifier "to the extent feasible and prudent," as that phrase is defined in 6 AAC 80.900(9) (proposed amendment). Another concern is the possibility that subsection (a) of the energy facilities standard might be misinterpreted as implying that each and every district necessarily contains sites suitable for the development of major energy facilities, a proposition which may or may

not be true. Some districts may have no sites suitable for such facilities, while others have many such sites. Indeed, it is possible that there is no location in the entire state suitable for certain facilities, e.g. "uranium enrichment or nuclear fuel processing facilities." DESI, p. 63. The Federal Act, of course, does not require states to provide sites for all such facilities, but only to ensure adequate consideration of the national interest when determining if, when, and under what conditions such facilities should be sited.

More generally, the proper evaluation of optimal siting of energy facilities in Alaska requires a statewide perspective in order to take account of the differences among districts and not just the differences within each district. While the language of subjection (a) does refer to the State as well as the districts, it is unclear how such evaluation will be carried out and used.

Presumably, the "energy facility planning process" required by Section 305)b)(8) of the Federal Act should perform this coordinating function, but the DEIS's description on this score (Appendix 7) is far from reassuring. Despite an impressive array of authorities which could be used and of occasions where planning has been attempted, we question whether the state has demonstrated the existence of any coherent process "for anticipating and managing the impacts from" energy facilities. We also take specific exception to the DEIS's inclusion, on p. 397, of the Agency Advisory Committee on leasing as a coordination mechanism. While the Alaska Dept. of Natural Resources some time ago proposed pre-leasing regulations which would have officially established such a planning and advisory committee and related planning tools, including social, economic, and environmental analyses of proposed leasing actions, issuance of these regulations has been inexplicably withheld. In the meantime, it is our understanding that a previous ad hoc version of this committee (since formalized through an executive order) has ceased to function meaningfully in the current planning stages of the proposed joint Federal-State Beaufort Sea lease sale.

The energy facilities planning process, as described in the DEIS, has other important implications and limitations. Of primary concern

is the reliance on the process on the current State oil and gas leasing program. Significant problems with this programs include:

- no current provision for analysis of the social or environmental costs associated with the State's oil and gas leasing program,

- no requirment for analysis of the long-term effects and/or goals of the State's oil and gas leasing program, and

- no provision for public review and comment on the State's program. This is exemplified by the fact that comment on the recently released state five-year leasing program was solicited from the industry only. To our knowledge no other interest groups (Native, environmental, consumer advocacy groups, etc.) were contacted concerning this matter. Public participation is a key requirment in both the state and federal coastal management acts. We assume that this applies to the energy siting process and are curious how this requirement will be met by the state oil and gas leasing program.

E. Transportation and Utilities - 6 AAC 80.080

6 AAC 80.080. TRANSPORTATION AND UTILITIES. *(a) Transportation and utility routes and facilities in the coastal area must be sited, designed, and constructed so as to be compatible with local community goals and desires as expressed in district programs and local comprehensive plans.*

(b) Transportation and utility routes and facilities must be sited inland from beaches and shorelines unless the route or facility is water-dependent or no feasible and prudent inland alternative exists to meet the public need for the route or facility.

There is no mention in this standard of minimizing adverse environmental impacts when a coastal route or site is selected as provided under part (b). We recommend that language be added to this standard, providing that transportation and utility routes and facilities which are sited along the coast as provided by part (b) should be designed and sited in order to minimize impacts on wetlands, estuaries and other productive or vulnerable habitats.

F. Fish and Seafood Processing - 6 AAC 80.090

6 AAC 80.090. FISH AND SEAFOOD PROCESSING. *Districts shall identify and may designate areas of the coast suitable for the location or development of facilities related to commercial fishing and seafood processing.*

This standard needs to address the issue of seafood plant waste disposal. There are areas within coastal Alaska which presently have quite a water pollution problem arising from the dumping of wastes from seafood processing plants. The standard should, at a minimum, require plants to be sited and designed to minimize this problem.

G. Timber Harvest and Processing - 6 AAC 80.100

We are concerned that the timber harvest standards of the ACMP are to be prempted by as yet unknown regulations promulgated under the state Forest Practices Act. ("FPA") While the timber harvest and processing standards provide for special consideration of coastal values as required by the Federal CZMA of 1972, Sec. 305(2), we have no assurance that the FPA regulations will provide such treatment. We recommend that the FPA regulations be required to be consistent with the coastal zone timber harvest and processing standards. This will assure that coastal values will be given specific attention within an overall state timber harvest and processing program.

If the FPA regulations preempt the current timber harvest and processing

standards, they will amend the Alaska Coastal Zone Management Program and will require public review prior to adoption.

H. Mining and Mineral Processing - 6 AAC 80.110

6 AAC 80.110. MINING AND MINERAL PROCESSING. *(a) Mining and mineral processing in the coastal area must be permitted, (regulated) designed and conducted so as to be compatible with the standards contained in this chapter, adjacent uses and activities, regional programs, statewide and national needs, (and) district programs, and local comprehensive plans.*

(b) Sand and gravel may be extracted from coastal waters, intertidal areas, barrier islands, and spits, when there is no feasible and prudent alternative to coastal extraction which will meet the public need for the sand or gravel.

Part (b) of this standard makes explicit provision for the extraction of sand and gravel from "coastal waters, intertidal areas, barrier islands, and spits, when there is no feasible and prudent alternative to coastal extraction which will meet the public need for the sand or gravel. While there may be cases where the exception cited under (b) will be necessary to promote the public good, we do not want this to become license for indiscriminate industrial or private utilization of these fragile habitats. We feel that sand and gravel must not be allowed to be extracted from these areas unless there is no possible alternative which will meet the public good. Part (b), as now written, is unclear. It should explicitly state that this exception is to be allowed only in unusual, narrowly-defined cases.

I. Habitats - 6 AAC 80.130

In reviewing the habitat standards, several weaknesses become apparent. Some of the more important general concerns include:

(1) Several coastal habitat types are not distinguished in the standards. Thses include floodplains, coastal forests, tide-water glacier and glacial moraine areas, and the distinction between Arctic high energy coasts and subarctic high energy coasts. These latter two areas need to be separate because of the extreme differences between them as to coastal processes such as erosion and depostion.

(2) The general breadth of the standards is needed to allow a certain latitude in management decisions. To further weaken the standard with the provisions in part "d" is unnecessary. A strict interpretation of these provisions is required to insure that the protective intent of the standards is fulfilled.

(3) The approach of the habitat standards is not comprehensive enough. There are no provisions made to relate activities in one

area to impacts in another area. An example would be activities in the upland habitat area which would affect estuaries or wetlands downstream.

(4) In addition, there are no provisions for maintaining scenic quality in habitats such as rocky islands and seacliffs, high energy coasts, forested areas, etc. While this is not a direct function of habitat management, it should be included in sections which deal with areas of exceptional scenic value.

The habitat standards are central to a system of coastal resource management. By identifying and defining these major habitat types the ACMP focuses attention on their unique qualities. Through provision of broad management goals for these areas, the ACMP helps to insure the protection and continued quality of Alaska's coastal resources. The following recommendations are intended to further these goals by identifying particular deficiencies in each standard. We recognize that the legislature cannot change the present language found in the Guidelines and Standards. However, by proposing specific language we feel that the office of Coastal Zone Management and the Coastal Policy Council can best visualize what our concerns are.

Offshore - 6 AAC 80.130(1)

> *Offshore areas must be managed as a fisheries conservation zone so as to maintain or enhance the state's sport, commercial and subsistence fishery.*

The standards for local program development state that "offshore areas must be managed as a fisheries conservation zone so as to maintain or enhance the state's sport, commercial and subsistence fishery." No mention is made of the need to preserve adequate stocks of marine birds, mammals and non-commercial fish. The introduction to the standard describes the offshore area as a vital feeding area for marine mammals and fish, pelagic seabirds and invertebrate fauna. It states that offshore ice is used for hauling-out by walrus and seals, that polar bears den on stable landfast ice, and that offshore areas are used as corridors by whales, fish, and seabirds. The standard must

be amended so that the productivity of non-commercial fish and wildlife populations is protected by district policies.

We recommend that the standard be changed to read:

"Offshore areas must be managed as a living resource conservation zone so as to maintain, enhance, and protect important biological resources of this region including marine mammals, birds, commercial and non-commercial fish stocks and invertebrate fauna."

Estuaries - 6 AAC 80.130(2)

Estuaries must be managed so as to assure adequate water flow, natural circulation patterns, nutrients and oxygen levels, and avoid the discharge of toxic wastes, silts, and destruction of productive habitat.

Estuarine habitats are extremely important ecological units within the coastal environment. They are vital areas for fish, marine animals, birds, and other biota. These areas are also highly sensitive to disturbance and disruption. Conservation of these areas is necessary to protect many of the renewable and natural resources of coastal Alaska. In order to promote this protection, we would recommend that the standard be modified to read:

"Estuaries must be managed so as to minimize dredge and fill activities and to assure adequate water flow, natural circulation patterns, nutrients and oxygen levels, and avoid the discharge of toxic wastes, silts, and destruction of productive habitat."

Wetlands - 6 AAC 80.130(3)

Wetlands and tideflats must be managed so as to assure adequate water flow, nutrients, and oxygen levels and avoid adverse effects on natural drainage patterns, the destruction of important habitat, and the discharge of toxic substances.

Wetlands are vital habitat areas for waterfowl, shorebirds, moose and other mammals. They are also critical links in the overall water cycle and are an important source of nutrients for coastal waters. Our recommendation for the wetlands standard is a change to read: "Wetlands and tideflats must be managed so as to minimize dredge and fill activities and to assure adequate water flow, nutrients, and oxygen levels and avoid adverse effects on natural drainage patterns, the destruction of important habitat, and the discharge of toxic substances."

Rocky Islands and Seacliffs - 6 AAC 80.130 (4)

Rocky islands and seacliffs must be managed so as to avoid the harassment of wildlife, destruction of important habitat, and the introduction of competing or destructive species and predators.

These areas are important breeding and rearing areas for many species of seabirds, raptors, fur seals, sea lions and harbor seals. They also serve as important roosting or hauling out areas for marine birds or mammals. Many such species are highly dependent on these habitats and are extremely sensitive to disturbance while using these areas. Rocky islands and seacliffs are also some of the most majestic features of the Alaskan coasts, possessing a scenic quality of national signifiance.

Our recommendation for the Rocky Island and Seacliff standard is

"Rocky islands and seacliffs must be managed so as to avoid the harrassment of wildlife, destruction of important, habitat, the introduction of competeing or destructive species, and in such a manner as to protect the scenic quality of the area."

Barrier Islands and Lagoons - 6 AAC 80.130 (5)

Barrier islands and lagoons must be managed so as to maintain adequate flows of sediments, detritus, and water, avoid the alteration or redirection of wave energy which would lead to the filling in of lagoons or the erosion of barrier islands, and discourage activities which would decrease the use of barrier islands by coastal species, including polar bears and nesting birds.

Barrier island/lagoon systems are extremely important marine environments, particularly in the Beaufort and Chukchi Seas. They are some of the most productive areas in these regions and are highly sensitive to disruption. Of particular concern is the alteration of the characteristic water flow and/or the attendant erosion/deposition patterns. We recommend that these areas be managed as a system, and offer the following change in the standard:

"Barrier island/lagoon systems must be managed so as to maintain adequate flows of sediments, detritus, and water, avoid the alteration or redirection of wave energy which would lead to the filling in of lagoons or the erosion of barrier islands, protect the quality of important fish and wildlife habitat and discourage activities which would decrease the use of barrier islands by coastal species such as polar bears, seals, and nesting birds."

High Energy Coasts - 6 AAC 80.130 (6)

(6) high energy coasts must be managed by assuring the adequate mix and transport of sediments and nutrients and avoiding redirection of transport processes and wave energy; and

Although high energy coasts are described as "featureless" in the DEIS, it should not be assumed that such shorlines lack important values. Some of these areas are in the wildest regions of the state and provide one with a feeling of solitude and a quality of wildness hard to find along much of the nation's coastline today. We would therefore offer the following change to this standard:

High energy coasts must be managed in such a manner as to assure the adequate mix and transport of sediments and nutrients and avoiding redirection of transport processes and wave energy, and to minimize the disruption of the scenic quality of the area.

204 N. FRANKLIN ST.
JUNEAU, ALASKA 99801

February 27, 1980

To: House CRA Committee

From: Ginny Chitwood, Executive Director

Re: Amendment to Coastal Policy Act

At the annual meeting of the Alaska Municipal League, held last fall in Sitka, the members adopted the following paragraph as part of the 1980 policy statement:

> The League supports the concept of "extra-territorial" planning by municipalities in the unorganized borough with statutory provisions to permit the Alaska Coastal Policy Council to adopt said "extra-territorial" planning as part of the Alaska Coastal Management Program until such time as a resource district plan is adopted.

The enclosed bill, which is a starting point for implementing this section, and the memo from the Ketchikan Gateway Borough were endorsed by the AML Legislative Committee in December.

We believe it is very important that the concerns of adjacent areas be addressed in each coastal management plan that is approved. An amendment to the act, along the lines of this proposal, will help to achieve that goal.

The enclosed material has been submitted to the Alaska Coastal Policy Council and will be considered at its next meeting scheduled for mid-March.

HOUSE BILL NO.

IN THE LEGISLATURE OF THE STATE OF ALASKA

ELEVENTH LEGISLATURE - SECOND SESSION

A BILL

For an Act entitled: "An Act relating to filing of notice of interest by adjoining cities or boroughs regarding proposed district coastal management plan in unorganized boroughs and providing opportunity to be heard prior to approval of district coastal management plan by Alaska Coastal Policy Council; and providing for an effective date.

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1: AS 46.40.180 is amended by adding new subsections thereto to read:

(e) Any organized city or borough which claims to have an interest in the manner in which resources, or the use of resources, in any unorganized borough adjacent to its boundaries are developed shall notify the Department of Community and Regional Affairs of the nature and extent of such interest. Before adoption by a coastal resource service area board, or by the Department of Community and Regional Affairs under Section 170 of this chapter, a district coastal management program shall be submitted to each organized city or borough which has filed a notice of interest with the Department of Community and Regional Affairs.

(f) The council shall not approve a district coastal management program unless it finds that each organized city or borough that has filed a notice of interest under (e) above has received notice and an opportunity to present its concerns regarding such plan at a public hearing before the coastal service area board or the Department of Community and Regional Affairs which concerns shall become part of the record regarding such plan.

* Section 2: This Act takes effect immediately in accordance with AS 01.10.070(c).

KETCHIKAN GATEWAY BOROUGH
344 FRONT STREET
KETCHIKAN, ALASKA 99901

TO: Legislative Committee of
Alaska Municipal League

THRU: Judith A. Slajer
Borough Manager

FROM: Marvin Yoder MY
Economic Development Specialist

SUBJECT: Extraterritorial jurisdiction in Coastal Management district

Working with our municipal attorney, Mr. Walker, we decided that the basic need of organized districts was to be able to have input into plans being compiled in adjacent resource service areas.

The two options available are for the organized municipalities to use its resources to physically inventory and plan for those areas that have direct influence on the municipality or to simply state that the impact exists and then request an opportunity to determine the extent of the impact when the resource service area begins to formulate its plan. After discussing these concepts with individuals involved in Coastal Management programs, we chose the latter option.

The second decision was whether the proposed new language should be added to the State statutes or to the regulations. In the statutes AS 46.40.180 describes the requirements necessary for a resource district to have its plan approved. The proposed addition stipulated that concerns expressed by adjacent districts must be addressed by public hearings and records of these hearings are to be documented in the permanent record of the district.

The second approach would be to amend the regulations. This would be done by the Alaska Coastal Policy Council with the legislative concurrence. Section 6 AAC 85.140 provides opportunities for other government agencies to coordinate and review coastal plans and specifically mentions adjacent districts.

Our recommendation is to attempt to change the statutes and assume that the regulations will be changed to conform to the intent of the act.

On November 30, 1979 the proposed amendment was placed before the Policy Council and received favorable comments; however no formal action was taken. It is my opinion as a member of the Council that if there is a statute change, the Policy Council will change the regulations to reflect that change.

Dear Representative Parker:

The attached draft amendment to the Alaska Coastal Management Act was prepared by the Coastal Policy Council staff in response to a request presented by representatives of Nunam Kitlusisti at the Council meeting in Sitka on November 1. It is anticipated that the Council will vote on the amendment at our next meeting on January 16. We would appreciate it if you would review the draft and provide us with your comments in time for that meeting.

Thank you in advance for your help.

ALASKA
COASTAL MANAGEMENT PROGRAM

DRAFT AMENDMENT OT THE ALASKA COASTAL MANAGEMENT ACT

(This amendment has been proposed as a result of a request by Nunam Kitlusisti made to the Alaska Coastal Policy Council. At issue is the role of coastal resource service area planning boards after the coastal programs for the districts have been approved. As written, the Alaska Coastal Management Act does not specify what the role of such boards would be after approval of the programs, or even if they would continue to exist. The proposed amendment would provide for continued existence and a review and comment role for pending state and federal agency actions.)

The Alaska Coastal Management Act is amended by adding the following new section:

Sec. 46.40.185. COASTAL RESOURCE SERVICE AREA BOARDS AFTER APPROVAL OF DISTRICT PROGRAMS FOR THE SERVICE AREAS. (a) Coastal resource service area boards will participate in the implementation of their districts' coastal management program by reviewing and commenting on the actions and pending actions of the state agencies as those agencies carry out their responsibilities under section 46.40.090. (a) of this chapter.

(b) All state agencies shall inform the coastal resource service area boards of actions which would significantly affect the coastal resources of their respective districts and shall provide reasonable amounts of time for the boards review and recommendations on the proposed actions. When a state agency's decision differs from the recommendation of a coastal resource service board, the coastal resource service area board recommendation and the basis for the differences will be included in the decision.

(c) The coastal resource service area board may act on behalf of the coastal resource district for the purpose of implementing, enforcing or complying with the district coastal management program as provided in

sec. 46.50.100(b) of this chapter.

(d) Should the area, or a portion thereof, included in a district coastal management program developed by a resource service area board become organized to assume planning powers provided in AS 29.33.070-29.33.245 the district coastal management program may by ordinance be adopted by the organized municipality.

SUBJECT: Information

The attached materials are presented for purposes of background information relative to the proposed annexation.

They are as follows:

1. City Finance Director's memorandum concerning the City's financial ability to handle annexation.

2. City Finance Director's affidavit concerning financial capabilities of the City.

3. Consulting report from Dick Berg concerning annexation.

4. Statement issued by Sweeney Insurance concerning fire rates.

5. Resolution 5-79 concerning issues of concern to annexation area residents.

6. Borough Assessor's estimated value of personal property tax memorandum.

7. City Building Inspector's memo concerning building permits.

8. Memorandum to joint committee on Community and Regional Affairs concerning economic analysis for annexation vs service district.

9. Presentation made at public hearing before the annexation committee by City Manager, Clair Harmony.

10. Affidavit of Richard Sims; Rolland Jones; Charles Powell; and Wilton White.

11. City testimony at Local Boundary Commission hearing.

12. Memorandum from Public Works Superintendent concerning Island Lake road system.

13. Typical assessments for water distribution system and estimates of costs.

14. State roads priority list.

15. City published brochure on annexation information.

January 23, 1979

To: City Manager - Clair W. Harmony

From: Finance Director - H. R. Hyde

Subject: Proposed annexation

You requested some information regarding the City's finances as related to the proposed annexation area.

The City has taken certain steps in anticipation of annexation being approved. We have included in the 1978/79 amendatory budget a contingency account to cover certain costs if annexation is approved. They are as follows:

1. Facilities Planning Report.
   It is estimated that this initial planning report will cost approximately $40,000.00. It would be financed by the following:

Grant from Environmental Protection Agency 75% -		$30,000.
Grant from Alaska Department of Environmental Conservation	12-1/2%	5,000.
City of Kodiak	12-1/2%	5,000.

   The City's $5,000.00 is included in the contingency account previously mentioned.

2. Design Sanitary Sewer Extension.
   In connection with the design of sewer collector lines, there is a grant available from the Alaska Department of Environment Conservation for 50% of the costs. The City would have to match these State funds.

   For the design of the interceptor lines the Environmental Protection Agency will give a Grant for 75% of the costs and the Alaska Department of Environmental Conservation will give a Grant for 12-1/2% of the costs. The City must finance the remaining 12-1/2%.

3. Design Waterline Extension.
   The Alaska Department of Environmental Conservation will give a Grant for 50% of the design costs. The City must match with its 50% of the costs. There is $48,000.00 included in the contingency account in the amendatory budget to cover its estimated share of the costs for designing the waterline extension.

The City has sufficient cash on hand to cover all "up front" costs in connection with the Facilities Planning Report and the design of the two systems before the various Grants are processed and payments received.

At this time, there has been no definite decisions made beyond the design of the water and sewer line systems. Probably the actual construction costs would be recovered by the formation of assessment districts. It may be necessary for the City to issue bonds to cover some portion of the costs of constructing these utility systems.

Based upon the best information that the Borough Assessor can furnish at this time, the City would receive approximately $23,000.00 for each Mill levied on real property in the annexation area. This would start in 1980. If the City were to retain its present 9.1 Mill rate, the real property tax revenue would be approximately $209,000.00. However, the intent is to have this area zoned for different tax rates based upon the City services each zone would received. It is my estimate that because of the different zones, the City would probably receive about $150,000.00 annually in real property taxes from the annexation area.

Since the City presently is paying the Borough Personal Property Tax for all personal property within the City; this cost must be taken into consideration. Again, based upon the best information the Borough Assessor can furnish; the payment of the Borough Personal Property Tax for the Annexation Area would cost the City approximately $25,000.00 annually.

For fiscal year 1978/79, the City is receiving $65,550.00 from the Borough for fire protection services in the area to be annexed. With annexation, the City would lose most if not all of this revenue.

Annexation of this area should increase the revenue of the water/sewer utility fund. It has been estimated that there are approximately 125 residences that would probably immediately tie in to existing sewer collector lines. At the present residential sewer rates, this would be approximately $22,500.00 additional annual revenue to the Water/Sewer Utility Fund.

The City will have additional costs for the Public Works Department to maintain the roads and remove snow. Also, there would be increased costs for police and fire protection. It is difficult to estimate the amount of these addtional costs at this time. These additional costs would include both additional personnel and equipment. It is my opinion that the City is financially able to meet these additional costs for services. Further, with annexation, I believe that there will be considerable growth in this area which should increase the City's tax base.

IN THE SUPERIOR COURT FOR THE STATE OF ALASKA

THIRD JUDICIAL DISTRICT AT KODIAK

CITY OF KODIAK,

Plaintiff,

vs.

KODIAK ISLAND BOROUGH and BETTY WALLIN, Mayor of Kodiak Island Borough,

Defendants.

No. 3KO-78-120 Civ.

AFFIDAVIT OF HARRY R. HYDE IN SUPPORT OF PLAINTIFF'S MOTION FOR SUMMARY JUDGMENT

STATE OF ALASKA)
) ss.
THIRD JUDICIAL DISTRICT)

HARRY R. HYDE, being first duly sworn, upon oath, deposes and says:

1. I am the finance director for the City of Kodiak ("the City"). This affidavit is prepared and submitted in support of plaintiff's Motion for Summary Judgment.

2. I have been employed as finance director for the City since March 1, 1976. For the eleven years preceeding that date I was finance director for a water service district in California.

3. As part of my official duties, I am responsible for the preparation of the City's budget, for the payment of bonded indebtedness of the City, for preparation of cost evaluations for the municipal services, assisting in the preparation of grant applications, investment of City funds, and am obligated to be aware of and knowledgeable on the City's financial capabilities.

4. Both the administration and the City Council are in the process of amending the City's 1978/79 budget. The budget ordinance has already had first reading before the City Council. Public hearing on the second reading of the ordinance is to be held in the future.

5. In the amended budget there is allocated a total of One Hundred Thirty-Three Thousand Dollars ($133,000.00) of City funds as the City's portion of matching funds for grants that are available at the present time from the State and federal governments. Five Thousand Dollars ($5,000.00) of the above total is budgeted for the City's twelve and one half percent (12-1/2%) share of a facilities planning report, which will survey the services and facilities needed in Service District One of the Mill Bay/Monashka Service Area if that area is annexed to the City. There is Eighty Thousand Dollars ($80,000.00) in the above stated sum earmarked for the City's matching share of grants presently available for design of the sanitary sewer extension into the Service District One of the Mill Bay/Monashka Service Area if that area is annexed to the City. There is Forty-Eight Thousand Dollars ($48,000.00) earmarked in the above stated sum as the City's portion of a grant presently available for the design of water line extensions in Service District One of the Mill/Bay Monashka Service Area if that area is annexed to the City. The City has sufficient cash on hand to cover all required matching funds in connection with the facility planning report and the designs of the sanitary sewer and water line extensions before the various grants are processed and payments received by the City.

6. The City, at the present time, has access to the same sources of Federal and State funds as does the Kodiak Island Borough.

7. The City, in the past, has sold both general obligation bonds and revenue bonds and presently has a bond rating of BAA, said rate established by Moody's Bond Rating.

8. The Borough presently has a bond rating of BAA1.

9. The City's assessed valuation represents approximately eighty percent (80%) of the total assessed valuation of the Kodiak Island Borough. The Borough is presently in the process of reappraising the urban areas of the Kodiak Island Borough. At the present time, the City's assessed valuation is approximately Eighty-Six Million Dollars ($86,000,000.00) with an anticipated increase as a result of reappraisal to One Hundred Twenty-Eight Million Dollars ($128,000,000.00).

10. The assessed valuation of the area encompassed by Service District One of the Mill Bay/Monashka Service Area is approximately

Seventeen Million Dollars ($17,000,000.00).

11. If Service District One of the Mill Bay/Monashka Service Area is annexed to the City, the City has the financial capability to provide the services of sewer, water, roads and the full range of general government services such as police, fire protection, parks and recreation and libraries.

12. If the Kodiak Island Borough has to sell bonds to finance capital improvements in Service District One of the Mill Bay/Monashka Service Area and if the full faith and credit of the Kodiak Island Borough is pledged to support those bond issues, the City's bonding capacity will be reduced.

DATED this 1 day of February, 1979.

MINUTES OF A REGULAR MEETING OF THE COMMON COUNCIL OF THE CITY OF KODIAK, ALASKA
HELD ON NOVEMBER 12, 1970

I. MEETING CALLED TO ORDER

Mayor Resoff called the meeting to order at 7:30 p.m. Present were Council Members Berg, Craig, Dyson, Powell and Sutliff. Councilman Sims arrived at 7:45 p.m.

II. PREVIOUS MINUTES

a. Minutes of a Regular Meeting of October 29, 1970.

Councilman Berg moved for approval of the minutes as presented, seconded by Councilman Powell. Roll call was unanimously favorable.

b. Minutes of a Special Meeting of November 10, 1970.

Councilman Sutliff moved for the approval of the minutes of the special meeting, seconded by Councilman Berg. Roll call was unanimously favorable.

III. PERSONS TO BE HEARD

a. Mr. Milton White, Borough Chairman

Chairman White presented a step annexation program, proposed petitions, and map of the proposed annexation area. Spruce Cape Road and the Mill Bay side of Island Lake were the proposed areas.

The residents would pay a portion of the City tax and the Borough tax with the precentage adjusted over a period of four years until the areas could receive full City fire protection, police protection, water, and road maintenance. The increased revenues would provide the necessary money for the cost of providing the increased service over the four year period.

The Mayor asked about the representation of these areas. Chairman White replied that the step annexation gave the residents time to get representation, and it was pointed out that several Council members have holdings in these areas now.

Councilman Powell moved that the Council approve the step annexation program presented by the Borough and recommended to the Borough that the Monashka Bay side of Island Lake and Dark Lake be included with the proposed areas. It was seconded by Councilman Berg.

Councilman Sims stated that funding from Federal agencies would be more easily obtained with this annexation because the agencies are not interested in funding just the City area, but the community as a whole. He also felt that taking the Monashka Bay side of Island Lake and Dark Lake would be too much at this time. The Council was in agreement with this.

Chairman White suggested that this area become a third area to be annexed. City Manager Jones recommended that Councilman Powell's motion be amended in this way, and this was agreeable to the Council.

Roll call was unanimously favorable.

IV. OLD BUSINESS

a. Women's Bay Appraisal Report

The Council felt that the appraised rental was too high on this property. Councilman Sims proposed renting only part of this area and perhaps using Borough land near the dock to store pots. This would involve transporting the pots about one mile.

Different areas were discussed for possible pot storage.

Mr. Ole Harder said that if a boat harbor and/or dock were not combined in the same area, the purpose of leasing this land would not be accomplished.

Transporting pots to various areas, how they could be transported, and the cost involved was discussed. The Council felt that pot storage areas were available until such time that a dock and pot storage area combined could be developed.

No action was necessary by the Council. City Manager Jones will pursue negotiations.

b. Gibson Cove Appraisal Report

City Manager Jones stated that this area has been appraised and will be advertised for sale. No action from the Council was necessary.

V. NEW BUSINESS

a. Letter of Congratulation to Chief Rhines.

A letter of congratulation to Chief Rhines on his graduation from the F.B.I. Academy was read by City Manager Jones and signed by the Council.

b. Letter Concerning Lt. Henderson as Acting Chief

A letter recommending a merit pay increase for Lt. Henderson was read by City Manager Jones. Councilman Dyson moved that the Council approve the merit pay increase and asked unanimous consent. It was seconded by Councilman Sims. There were no objections and the motion was approved.

c. Resolution 70-17 - Surplusing Gibson Cove Property

Councilman Berg moved for approval of this Resolution, seconded by Councilman Dyson. Councilman Powell recommended a change on page one, paragraph three, the first sentence the word "now" be changed to "not" so that it reads "WHEREAS, ... not using said . . . .,and". This change was incorporated into the motion. Roll call was unanimously favorable.

d. Municipal League Dues

City Manager Jones said that the Municipal League is proposing to double the dues in order to put another staff member in Juneau to work on the State and Federal-aid programs.

MINUTES OF A REGULAR MEETING OF THE COMMON COUNCIL OF THE CITY OF KODIAK, ALASKA
HELD ON JANUARY 13, 1972

I. MEETING CALLED TO ORDER

The Mayor called the meeting to order at 7:30 p.m. Present were Council Members Anderson, Dyson, Lovett, Powell and Sutliff.

II. PREVIOUS MINUTES

Councilman Powell moved for approval of the Minutes of the meetings of December 9 and December 23 held on December 22, seconded by Councilman Dyson. Roll call was unanimously favorable.

III. PERSONS TO BE HEARD

a. Mr. Wally Hickerson and Mr. Richard Guzy RE: Techite Pipe

Mr. Guzy stated that his company was low bidder on supplying this pipe to the contractor on the Monashka Creek project, but Techite was taken out of the specifications. He also stated that the contractor would like to use the pipe, but without a vote from the Council this could not be done.

Mr. Hickerson then presented background information on Techite Pipe: its development, use and testing.

No action was taken at this time.

b. Mr. Beitenger RE: State Highway Route Systems

Mr. Beitenger asked that the City Council request the State Division of Highways to reclassify Rezanof as a Secondary Route rather than a primary, remove the secondary classification from Mill Bay and Spruce Cape--from the cutoff road to the Loran Station--and classify them as local state roads.

These requests were stated in Resolution 2-72 which the Mayor read by title. Councilman Dyson moved for approval, seconded by Councilman Sutliff. Roll call was unanimously favorable.

c. Mr. Fred Street RE: Cab Zones

A letter from Mr. Street was read by the Mayor. Mr. Street felt that public interest would best be served by the abolishment of cab zones within the mall parking lot. Discussion followed.

Councilman Sutliff moved that a study of cab zones be made by the Chief of Police and the City Manager to be presented at the next Council meeting, seconded by Councilman Dyson. Roll call was unanimously favorable.

d. Mr. Wilton White RE: Annexation

Mr. White and the Council discussed the recommendation of the Boundary Commission for full rather than step annexation and the inclusion of a larger area than had been requested.

Councilman Powell moved that the Council go on record as opposing the Boundary Commission's position on annexation as presented to the Council, seconded by Councilman Sutliff. Roll call was unanimously favorable.

IV. OLD BUSINESS

a. Halfway House

Councilman Sutliff moved that the City have no objection to the Kodiak Council on Alcoholism making improvements as outlined by them to meet the specifications of the Sanitarian and the Fire Chief, seconded by Councilman Lovett. Roll call was unanimously favorable.

Councilman Powell moved that the actual lease agreement between the

TO: Mayor and Council

FROM: R. G. Berg

SUBJECT: Annexation and Pillar Mt. Reports

DATE: January 23, 1979

The Council following my tenure as City Manager asked that I continue in an advisory/coordination capacity covering two subjects:
1. The Pillar Mountain potential slide, and
2. Annexation as recommended by the State Local Boundary Commission.

I agreed to follow through on the above, and with the excellent and cooperative help of the City staff believe we may properly assume at least partial success.

ANNEXATION:
The Local Boundary Commission after presentation by City of Kodiak representatives of limited areas contiguous to the City and residents of the proposed annexation area chose to recommend annexation of a larger area to the City of Kodiak as the most logical manner in which to supply necessary municipal services. This recommendation was in contradiction to the proposal of the establishment of the service district by the Kodiak Island Borough.

We proceeded to gather data from Wrangell, Petersburg and other municipalities that had faced Local Boundary Commission recommendations of a similar nature. We also met with representatives of the Department of Community and Regional Affairs in regard to the Boundary Commission recommendations in their capacity as staff representatives to the Boundary Commission. The Council caused to be prepared and passed Resolution 24-78. A committee of persons knowledgable in the area of municipal affairs who presently reside in the proposed annexation area was appointed by Mayor Stevens. These persons are Mrs. Marion Johnson, Bob Waage, Emil Norton, Pete Resoff, Bob Brooks and Nick Szabo. This committee met a number of times with the City Manager, City Engineer and the writer to determine the most basic needs of the area and in what manner they could be financed and made a reality. Under the auspices of this committee's activity, the City staff and I prepared differential tax areas, phase I for wastewater and water service as well as road construction and reconstruction, established and reserved an area for a fire substation and prepared recommendations to the City Council covering these subjects as well as visual displays for the use of the committee at a public hearing held and attended by interested residents of the area.

The public meeting was attended by approximately 30 people including staff members from the City and both our State Senator, Bob Mulcahy, and Representative Fred Zharoff. Inserts for the newspaper were prepared on two occasions outlining briefly in the first issue some annexation considerations and full coverage in the second edition as to recommendations of the committee on differential taxation and services that could be offered by the City of Kodiak. Two work files were prepared for use by your representative, Bob Hartig, in Juneau by me inclusive of all information available in City files since 1968 covering the annexation subject. A number of press interviews were granted to representatives of the two local papers covering the subject and the writer met with Mr. Hartig as well as Representative Zharoff and Senator Mulchay.

After the public meeting held by the Mayor's Annexation Committee, the Committee determined that there was no viable alternative to annexation to the City of Kodiak. All the committee members in attendance at this meeting were in agreement and made their recommendation known in writing to the City Council. Mr. Nick Szabo was not in attendance at this meeting, although, he had been invited. Recently there was a letter to the Editor in the Kodiak Mirror and Kadiak Times referring to Mr. Szabo's term on the annexation committee which contained a number of misleading statements. The writer was rather flattered that anyone who had resided in this community for any length of time could feel that the members of the Mayor's Committee could be influenced by his argumentative ability over their best judgement.

At the present time Mr. Hartig is prepared to represent you in Juneau and the City Manager has visual presentations for his use.

It appears to me that the Kodiak Island Borough is not in good shape to contend that they can supply services to the area due to their failure to obtain passage of non-areawide service powers. For your information, substantial financial support for the Anti Annexation Committee appears to be coming from the ownership of the Beachcombers which are probably concerned that restrictive police powers and/or hours might be a greater likelyhood if they were incorporated within the City than otherwise.

I belive an extremely fair attempt has been made to educate the public in regard to annexation and that the Mayor s Committee did an excellent job devoting many hours to the subject. The direct mail advertising recently received by residents and boxholders in Kodiak from the Borough Residents for Autonomy is comparable to the Szabo letter to the Editor and contains a number of rather naive attitudes such as "after annexation takes place, the City can levy any tax rate it wishes regardless of the wishes of the area residents". I suspect any tax increase that residents did not wish to take place would not be enacted by their representatives or if they were, Council membership would be changed at the next general election.

Mr. Bob Brooks has circulated petitions that will be forwarded to Mr. Hartig for his use indicating both the number of City residents and annexation area residents who support annexation to the City as the least costly and most efficient method to obtain the necessary services. Anything you can do to clarify points raised by the Borough residents for Autonomy will be helpful. There is no doubt in the writer's mind that the most economical and efficient way to solve some of our local problems in the annexation area is for the residents to agree with annexation. There is no great advantage to the City to incorporate the area from either a bonding or financial basis but the long-range effect can be most

beneficial to all concerned.

The Kodiak Island Borough Assembly obviously continues to belabor under the impression that their activities (i.e. service district) will fulfill the desire and needs of the majority as during their meeting of January 12, 1979 they enjoyed a packed house arranged by the citizens group known as the Citizens for Autonomy. After numerous impassioned pleas to support their efforts by sending Mayor Wallin and the Borough Attorney retained for the purpose, Joan Katz, to Juneau to lobby against annexation, the Assembly moved to support "commensurate with what support toward annexation the City proposes . . .". The effect of this, of course, is as usual, if the City taxpayer spends (through the Council) $10,000 to support annexation and the Kodiak Island Borough (through the Assembly) spends $10,000 to try to defeat for a total of $20,000, the City taxpayer has paid $18,000 of the total. Of course, the Borough and the Citizens for Autonomy contend they pay 50% of the City sales tax but what they don't mention is that this neither jibs with population figures or values on income as can be measured by tangible wealth (value of property). In other words, a City resident appears to own 80%+ of real estate, and pay 80% of Borough local taxes so there must be an inequity in values of that real estate since the monies spent by various residents are usually transformed into some tangible property, i.e. remodeling additions, various improvements and luxuries including boats, cars, trucks, etc.

Realism has little to do with problems of annexation and I suspect that those most vocal would be against any progress in their area except that they would enjoy as a gift at someone else's expense.

I could recommend under any normal situtation that the City simply let the residents do whatever they want to solve their own problem. However, you and I both know that those same residents and the KIB who are the most vociferous against annexation will be the first to critize the only logical deliverer of services to the areathe City. Further, I would fully expect the City to face increasing litigation over the sewage treatment plant and on the expanded use of the City water collection and distribution systems. I am sure after reviewing the many cost analysis factors and assuming that people need adequately planned and realistically engineered water and sewer service that must be connected to existing City services to avoid unnecessary duplication. The most economical way to accomplish the goal is through annexation to the City of Kodiak.

PILLAR MOUNTAIN LAND SLIDE:

Neither I nor most residents of the Kodiak community can become to excited about an actual hazard existing at any greater risk than that which most of the fishing fleet may face any day.

There are, however, inherent economic and social dangers connected with the USGS report that must bear concern. The USGS warning of potential hazard was precipitated by the KIB in that their consultant (Kramer, Chin and Mayo) on the Comprehensive Plan requested various State and Federal officials to review the potential hazard which resulted in the USGS warning notice. This level of warning, however is the least serious of the notices that can be issued by the USGS according to the Federal Register. Further, it (the report) has a number of interesting qualifiers. One of which is that a major slide of the type that could do maximum damage is an "extreme case". It is interesting to note, no other similar studies were conducted in the area even though similar surface situations exist along the State Highway System, (i.e. Old Woman's Mt., USCG support Center).

After issuance of the USGS report and the warning notice's distribution to numerous Federal and State agencies as required by the Federal Register, the following took place.

1. The L.A. Times Science Editor took notice or was advised and wrote a "scare story" on the mountain that was picked up as worthy copy by a number of large newspapers including the Miami Herald.

2. The KIB consultant, Kramer, Chin and Mayo, caused to be printed a summary document of the Comprehensive Plan that included numerous references to the Pillar Mt. hazard and implied that no further dock or port expansion could take place until the problem was resolved. Although this document was not supposedly to be distributed until it was approved by the Assembly, the KIB staff chose to furnish copies to the local press.

3. Numerous insurance carriers contacted their local agents to determine the validity of the report.

4. On July 1, 1978, the City's insurance carrier, Insurance Comapny of North America, excluded coverage related to Pillar Mt. on the General Liability Policy.

5. Much concern was expressed locally as to future availability of invesment monies, industrial financing, boat insurance, port expansion, bond sale costs, additional cannery expansion, new freight routes and foreign investment considering Kodiak favorably in the future due to the "hazard".

6. The KIB under took a planning study to explore the joint management of a port in conjunction with the City and Koniag, Inc.

As there appeared to be no further follow up from the KIB, the

City staff immediately contacted the State congressional delegation outlining the problem and seeking guidance and assistance.

Until late fall of 1978, little was accomplished except the passage of letters in the many State and Federal bodies all of which expressed concern but non of whom, including the USGS, offered any concrete aid.

The City staff and writer did, however, undertake the gathering of all available data on Pillar Mt. and related studies and incidents that were felt to be pertinent. These included contact with the previous Alaska Road Commission (territorial) Superintendent, Kodiak, Bureau of Public Roads representatiaves, consultant reports, dock engineering studies, Department of Transportation and Department of Highways reports, theoretical thesis on effects of predictions, reports of University of Pennsylvania, University of Colorado, Colorado State and others.

At our request, Senator Ted Stevens was instrumental in forcing the USGS to review the problem their prediction could create economically and socially and was helpful in forcing the establishment of the Geotechnical review committee which was initially established December 3, 1978.

The KIB on December, 7, 1978 helpfully passed a resolution covering the formation of the Geotechnical group and charged them with various responsibilities. After a six to eight month hiatus their concern was appreciated by the City staff but rather late and misdirected. Regardless, the Geotechnical Committee met and considered the problem on January 9, 10, 11, 1978 and as expected, the Committee was unable to furnish us with true probabilities of the extreme hazard outlined in the USGS report. Neither the USGS representatives nor other members of the Committee are willing to indicate whether there is a possibility of a major slide within any framework of probability or degree of chance. Therefore, it is probably important for the City to consider remedial action without a great deal of further study because such studies will be qualified and without resolution. Any activity to reduce the seriousness of the possibility of a slide in the area should be undertaken with such monies as may be made available.

The State monitoring system which was initiated at the request of the City through the State Geologist Office will merely give us an indication whether or not we have surface movement. I would liken the results to the United Nations--Much rhetoric, no action.

My recommendation to the Council follows:

1. That further studies are an exercise in futility and that even the most expensive study considered including all phases of work at $900,000 will not result in essential knowledge.

2. That the problem if it is to be solved will be solved by the City of Kodiak and that little or no help will be available elsewhere including the KIB. Although the Borough will insist on any study of the problem being a "planning function".

3. Continue close coordination with Senator Stevens office and staff all of whom have been extremely helpful.

   a. Senator Gravel has expressed some interest in helping and of course continue to keep Representative Young apprised of the situation.

4. With the aid of your own consultant without extensive studies determine remedial action that can be undertaken locally or in conjunction with other agencies.
   i.e. without triggering a slide, start removal of material next to RCA (try to get site surplused due to limited traffic) and dump at toe of slope, fill behind sheet piling, create both dock, van parking and buffer in case of slide, etc. as outlined to you previously. Tie into breakwater construction and allow commercial excavation within controlled engineering plan.

According to those geologists, soils mechanics, etc. we have talked to unofficially, not only do they doubt the possibility of a major ballistic type slide they are of the opinion that removal of the top and portion of the slope by terracing can reduce the center of gravity of a major slide and considerably reduce the potential hazard. There are, however, other ways that this might be accomplished as described to you by Mr. Frank Patton.

Your City staff will continue to evaluate the situation and inform you of possibilities to alleviate the hazard. The attached copy of a Kodiak Fish Wrapper editorial is as accurate, in my estimation, as anything written on the subject.

Council Ref

DESIGNATE

TO George Magnuson
Fire Chief
Kodiak, Alaska

SUBJECT Fire Fighters — and I.S.O. Rating.

DATE February 22, 1978

In response to your call on the extension of the fire protection service to Island Lake and Monashka Bay areas, the City of Kodiak has at this time a rating of Class 5. With the present rate of new homes and businesses in the City and the amount of fire fighters that you now have, it is not going to be adequate to keep the Class 5 rating, as the ISO rating is based on population and full time fire fighters on duty. The City could be changed from a Class 5 to a Class 7. The cost to homeowners and businesses with the increase in rates could be as high as 24%.

You also asked about lowering the Class for Island Lake and Monashka Bay area. ISO has to approve any Class change. As you know, they would have a minimum of a 6" water line with fire hydrants. Even with an independent fire district, this would not solve anything, as you would still need the fire hydrants along the roads.

In talking to the ISO agent, you are getting close to having the inability with the present full time fire fighters to match the growth of the City of Kodiak. In response to table #5, the ISO rating is in disagreement, as you would need additional fire fighters.

CITY OF KODIAK

RESOLUTION NO. 5-79

A RESOLUTION EXPRESSING THE INTENT OF THE COUNCIL OF THE CITY OF KODIAK WITH REGARD TO TREATMENT OF ISSUES OF CONCERN TO RESIDENTS OF THE PROPOSED ANNEXATION AREA.

WHEREAS, the Boundary Commission for the State of Alaska has determined to recommend to the legislature that areas generally referred to as Mill Bay and Spruce Cape be annexed to the City of Kodiak; and

WHEREAS, a Committee of citizens concerned with the annexation has held meetings, gathered information and made recommendations to the Council of the City of Kodiak; and

WHEREAS, the Council has determined to accept recommendations from the Committee and desires to adopt these recommendations by Resolution for implementation by ordinance following legislative action on the annexation.

NOW, THEREFORE BE IS RESOLVED by the Council of the City of Kodiak, Alaska, as follows:

Section 1. During such time as full services are not available, differential taxation shall be established and utilized in the area proposed for annexation, pursuant to the tax zone map attached hereto and incorporated by reference, and taxes within those zones shall be based on the following percentages of the City of Kodiak mill rate: Zone 1 - 100%; Zone 2 - 75%; Zone 3 - 35%.

Section 2. Trailers shall be permitted outside established trailer parks in the area proposed for annexation under such terms, in such locations and for such periods of time as will be established by ordinance to be developed after public hearings utilizing comments, information and recommendations received from residents of the area to be annexed.

Section 3. The city staff shall continue preliminary planning and engineering efforts relating to extension of water and sewer facilities to the area to be annexed, and shall investigate the availability of grants for partial or total funding of such extensions, so that water & sewer service may be made available to the area to be annexed as expeditiously as possible.

PASSED and APPROVED this 25th day of January, 1979.

SUBJ: Borough Building Permits in the Proposed Annexation Area

DATE: December 26, 1978

The building permits issued in the subject area for the past five years are as follows:

YEAR	TOTAL VALUATION	TOTAL FEES
1974	$ 73,900.00	$ 337.00
1975	$102,400.00	$ 481.00
1976	$173,650.00	$ 818.00
1977	$866,968.00	$3,288.00
1978	$509,400.00	$1,804.00

The year 1978 was January through June only. The City relinquished the Borough Building Permit Program as of July 1, 1978.

SUBJECT: Economic Analysis of Annexation vs Service District

The following analysis attempts to deal with existing costs and minimum costs that might exist. It is an attempt to evaluate, with qualifications, costs that could reasonably be expected.

ANNUAL SERVICE DISTRICT COSTS	SERVICES	ANNUAL CITY/ANNEXATION COSTS
$300	Sewer Rates	$180
$165	Water Rates	$120
$619	Fire Insurance	$306
$115	Fire Dist. Rates	-0-
$350	Borough Tax Rate	$350
-0-	City Tax Rate	$455
$1,549	(All Services)	$1,411

Plus Personal Property Tax (Real Total)

Minus Personal Property Tax (Real Total)

SEWER RATES -The current monthly sewer rate is $15 both within and those few areas served outside the City boundaries; however, a recent analysis by the Public Works Department has indicated that a self-supporting enterprise sewer rate should be upwards of $25 per month. Rather than increasing this cost to the citizens of Kodiak, the City Council transferred $104,000 from the general fund into the sewer enterprise fund. However, should the City contract for services with a service district, it would be reasonable to assume that a fair and self-supporting rate be established in that contract. The rate would be in excess of $22 per month and more probably as much as $25. This explains the higher annual figure for service districts.

WATER RATES--Current water rates in the City are $120 annually. Rates outsdie the City are $165 annually. The increased rate is a standard procedure in many cities to allow for administrative services, real overhead and initial capital investment.

FIRE INSURANCE RATES--Within the City of Kodiak, a $50,000 home would be charged $306 for fire insurance. However, most of the proposed annexation area has a fire insurance rating of 9 in comparison to the City's which is 5; therefore, the proposed annexation area residents would pay $619. The critical factor here is that the City can provide fire hydrants and water mains at an accelerated rate effecientiy and effectively because of its expertise and experience, fire services policies and goals, than can single-purpose oriented service distircts.

FIRE DISTRICT RATES--Borough residents in the annexation area currently are levied a 2.3 fire district mill rate. If annexation occurs, the residents would not have to pay this mill rate.

BOROUGH TAX RATE--The Borough mill rate of 7.0 would remain whether annexation occurred or not.

CITY TAX RATE--If annexation occurred, the current mill rate of 9.1 would be levied, thus, a $50,000 property would equal $455 annually. Of course, with the City mill rate all City services would be provided.

SUB-TOTALS--Annexation for most of the residents and area would cost $138 less than if annexation did not occur and the Borough were to provide services through a service district.

REAL TOTALS--Since the City pays the personal property tax for its residents to the Borough, there would be a further reduction for City residents and, of course, a further increase for Borough residents.

PRESENTATION MADE BEFORE THE ANNEXATION COMMITTEE
December 12, 1978
By City Manager Clair Harmony

I. Should annexation become a reality this January, we at City Hall have tried to set up a preliminary plan:
1. What will take place
2. What the 2,000 residents of the new area might expect in the way of effective delivery of services and of course, what their concerns are now.

We are here tonight to present our best estimates as to costs, taxes, location of services and to offer some options.

We are not in an advocate role, but are simply trying to do some preplanning for an action, which at this point in time, has been initiated and recommended by the Local Boundary Commission and will be going before the State Legislature in January.

The existence of the Annexation Committee and this public hearing before that body are sincere efforts to encourage expressions of public concern and input. Hopefully the committee will formulate a policy statement that can be adopted by the Kodiak City Council, which will provide for the following:
1. Early and special representation.
2. Reasonable differential property taxing zones.
3. Efficient priorities on road improvements.
4. Quality Police and Fire services.
5. Good delivery of water and sewer services.
6. Ultimate expansion of Parks/Recreation and Library services.
7. Modifications that might be invisioned by the community at large, the public here tonight and the committee through its deliberations.

1. As to early representation:
   a. Voting franchise rights would become effective immediately.
   b. In addition, a special representative would be elected from the new area, to serve in an advisory capacity with the City Council for three (3) years.

2. The differential taxation zones would attempt to provide some equity based on the delivery of services like roads, police and fire. As long as the City cannot get a fire truck into a home because of poor access routes, there should be less of a tax burden on that homeowner, and so on.

   Basically the difference between Fire Zones 1, 2 and 3 are that zone 1 would receive 100% delivery of City services, therefore the full mill rate (9.10). Zone 2 would have no effective delivery of fire service and are those areas where the roads are not maintainable, thus 75% mill rate.

   Zone 3 would pay a 50% mill rate and would have poor delivery of police, fire and road improvements. All zones would be changed over the next several years as these services are upgraded.

3. Improvements to roads would progress at a reasonable rate, funded by increased shares in State Revenue Sharing, highway funding and hopefully the committment by the State Legislature to fund greater levels of capital improvements. This could excellerate quality delivery of services to the annexation area.

4. Police and fire services can be expanded from revenue sharing funds, together with the slow phasing out of the State Troopers.

5. Water and sewer services which are funded through assessment districts, State and Federal grants could proceed in higher density areas, and be in as early as 1980 in those areas shown on the map here tonight.

6. Parks/Recreation and Library services would expand on a somewhat slower basis, I would guess, and generally would be funded by general assessments and grants.

II. Briefly, advantages of annexation would include:
1. relief to the poluted conditions of Island Lake.
2. Better fire and rescue.
3. Quality delivery of water at a lesser user rate.
4. Exemption of personal property taxes.
5. Reduction in fire insurance rates.
6. An equal voting status with your neighbors inside the present City boundaries.
7. Plus other factors which will insure for the general health and welfare of the whole area.

III. Conclusion

In conclusion, we are here tonight to answer questions about annexation, which may or may not take place. It is sort of out of our hands. We have tried to research the various possibilities without spending an exorbitant amount of time and City dollars. What is really needed are the expressions on your concerns which can help the City Council provide reasonable alternatives and effective delivery of service should annexation become a reality.

No. 3KO-78-120 Civ.

AFFIDAVIT OF RICHARD H. SIMS IN SUPPORT
OF PLAINTIFF'S MOTION FOR SUMMARY JUDGMENT

STATE OF ALASKA)
) ss.
THIRD JUDICIAL DISTRICT)

1. I have been a resident of Kodiak for the past thirteen years.

2. I served on the City Council for the City of Kodiak from the fall of 1969 to the fall of 1972. I served on the Kodiak Island Borough Assembly from the fall of 1970 to the fall of 1972.

3. I have read the affidavits' of Stuart O. Denslow, Ed Naughton and Betty Wallin submitted in support of the Borough's opposition to the City's motion for summary judgment. I have read the Borough's counterclaim and affirmative defenses to the City's complaint.

4. Contray to what is stated in the affidavits, the Borough has not continuously engaged in trying to secure water and sewer service to the residents outside the City. The Borough did not have sewer or water powers and the attitude of the Borough Assembly was to let the City solve the problem of water and sewers and would refer individual applicants for water and sewer to the City.

5. Contrary to what is stated in the affidavits, the Borough Assembly was well aware of the fact that the City would require, when feasible, that individuals residing outside the City and who wanted to hook up to water or sewer to annex to the City.

6. On November 12, 1970, the Borough Chairman, Wilton White came before the City Council with a step annexation proposal that would provide for the annexation of the Spruce Cape Road area and the Mill Bay side of Island Lake. These areas were consistant with the areas that EPA was trying to force into the sewage collection system. EPA had consistantly tried to force a massive sewage project on to the Kodiak Island urban and commercial area. In revising the Comprehensive Plan, in developing the Regional Water Quality Management Plan and in the proposals of the engineering firm of Tryck, Nyman and Hayes, it was both the City's and the Borough's intent to limit the sewage systems proposed in those plans to the areas that the Borough proposed be annexed to the City.

7. The Borough did not have the financial means to pay for any sewer costs, the areas of Spruce Cape and Island Lake could not stand the assessments that would be levied to pay for extensions and it was clearly understood that the areas would go onto the sewer and water systems when the population grew enough to support assessment districts and could be annexed to the City.

8. To assert that the City has secretly harbored theories and misrepresented its position to the Borough is ridiculous. From the formation of the Kodiak Island Borough to, I believe 1974 when the Borough Assembly was reapportioned, two members of the City Council of Kodiak also served as members of the Borough Assembly. As stated before, I served both on the City Council and the Borough Assembly for two years.

9. Had there been any intent for the Borough to become involved in the business of sewer collection and water distribution, the City would have required that the Borough contribute to the costs being incurred by the City in developing the systems.

10. As for the agreements and resolutions and ordinances passed by the Borough Assembly and City Council, they were to meet the demands of EPA and the State in order that the sewer project could be built.

11. During the period I was on the Borough Assembly and the City Council, it was understood that the urban areas outside the City would be served with sewer and water when those areas annexed to the City. That was the understanding of the City government and the Borough government.

12. I was personally active as a Borough Assemblyman in trying to have step annexation of the Spruce Cape and Island Lake areas occur. It was a result of the position of the Local Boundary Commission that a larger area

than was requested and a higher level of services and taxation would be imposed that the legislative annexation attempt was rejected at the request of the City and the Borough.

13. It has never been my understanding that any agreement existed between the City and the Borough regarding the City servicing areas outside the City with sewers. See Borough Assembly minutes of June 17, 1971 and July 1, 1971 which I have attached to this affidavit.

14. In preparing this affidavit, I have reviewed both City Council and Borough Assembly minutes for the years 1970-1972.

AFFIDAVIT OF ROLLAND JONES IN SUPPORT OF
PLAINTIFF'S MOTION FOR SUMMARY JUDGMENT

STATE OF ALASKA)
) ss.
THIRD JUDICIAL DISTRICT)

ROLLAND JONES, being first duly sworn, upon oath, deposes and says:

1. I have been a resident of Kodiak since 1964.

2. From June of 1970 to July of 1972, I was City Manager for the City of Kodiak.

3. I have reviewed an agreement dated July 2, 1970, signed by myself, between the City and the Borough. It is my recollection that the agreement simply stated that the Borough did not have sewer powers and the City did and was the only agency capable of applying for grant funds.

4. That it has been my understanding that Alaska law does not allow a service district to be formed if the services could be provided by a city and that any action taken by me as city official would have been with that premise in mind.

AFFIDAVIT OF CHARLES A. POWELL IN SUPPORT OF PLAINTIFF'S MOTION FOR SUMMARY JUDGMENT

STATE OF ALASKA)
) ss.
THIRD JUDICIAL DISTRICT)

CHARLES A. POWELL, being first duly sworn, upon oath, deposes and says:

1. I have been a resident of Kodiak since August of 1957.

2. I served on the City Council of the City of Kodiak for the fall of 1971 to the fall of 1974. I served on the Borough Assembly from the fall of 1972 to the fall of 1974 and during that period was the presiding officer of the Assembly and Deputy Mayor of the City of Kodiak. I was the first Borough Chairman for the Kodiak Island Borough, serving from 1964 to 1965. I was a member of the State Legislature in 1967-68.

3. During my service on the City Council, the Borough Assembly and as Borough Chairman there was never any doubt that the areas outside the City would be served by the City's sewer and water systems when those areas became urbanized sufficiently to be annexed to the City.

4. It has always been my understanding of municipal law in Alaska that a service area or district could not be formed next to a City, that the Constitution and State Statutes prohibited that.

5. It was understood by the City that when it came time to provide sewer services to the Spruce Cape and Island Lake areas, that they would be annexed to the City.

6. In the agreements and resolutions and ordinances concerning the City's sewer project, the only intent expressed was that the City was the only entity capable of building the sewer system and getting the grant funds and that the Borough would cooperate with the City to do that. It was assumed that when the City extended the sewer it would be to areas that were annexed to the City.

AFFIDAVIT OF WILTON T. WHITE IN SUPPORT OF PLAINTIFF'S MOTION FOR SUMMARY JUDGMENT

STATE OF ALASKA)
) ss.
THIRD JUDICIAL DISTRICT)

WILTON T. WHITE, being first duly sworn, upon oath, deposes and says:

1. I have been a resident of Kodiak since July of 1919.

2. I was the Borough Chairman of the Kodiak Island Borough from the fall of 1965 to 1967. I was a member of the City Council of the City of Kodiak in 1968. I was the Borough Chairman of the Kodiak Island Borough again from the fall of 1969 through 1973. I was again on the City Council of the City of Kodiak in 1974 and 1975 and also sat on the Borough Assembly in 1974 and 1975. I am presently on the City Council of the City of Kodiak having been elected in the fall of 1978.

3. During my years as Borough Chairman that position was an elective office and the Chairman was the chief administrative officer of the Borough government.

4. From 1969 to at least 1975, the total staff of the Kodiak Island Borough consisted of the Borough Chairman, the Borough Clerk, one secretary, an assessor an assessor's clerk and a bookkeeper.

When the City began to apply for funding to build the sewer treatment system, the Borough government was in no position to even consider participating in the financing or construction of sewers outside the City. In 1970 or 1971, the people of the entire Borough passed a school bond issue. All of the bids for construction came in over the amount of bond monies available. Recognizing the simple facts that there was very limited financial resources and a very limited Borough staff, the efforts of the Borough government were directed at getting the schools built. During this period of time, the Kodiak Island Borough could not have created a sewer service district. It would have been impossible in terms of Borough staff and the tax base to support it. The City already had the departments, manpower, expertise and the financial capability to develop and construct the sewers and treatment system. The Borough was more than happy to let the City do it.

6. I have reviewed: an agreement dated July 2, 1970, marked as Exhibit 1 to Stuart O. Denslow's affidavit; the affidavit of Stuart O. Denslow; the affidavit of Betty Wallin; the affidavit of Ed Naughton; Kodiak Island Borough Resolution No. 73-15R; the 1971 Kodiak Metropolitan Area Interim Water Quality Management Plan and Defendant's memorandum in Opposition to Plaintiff's motion for summary judgement.

7. It is my distinct recollection that there never was any discussion with the Kodiak Island Borough government and the City of Kodiak regarding any agreement for furnishing sewer service outside the city limits of Kodiak. We all knew that there was a problem with sewage in the Island Lake and Spruce Cape area but the Borough was in no position to do anything about it. It was recognized that as the population of those areas encreased something would have to be done. We knew that the Borough did not have sewer powers and could not spend monies even if we had had funds available. The only logical solution appeared to be that as the areas outside the City became more populated that they sshould be annexed to the City.

8. The cooperation of the Kodiak Island Borough with the City of Kodiak in solving the sewer problem was to assist in having the areas in need of sewers annexed to the City. Three large scale annexations were attempted. The first two failed at the polls. The third attempt was a joint effort of the City and Borough with legislative annexation. When the recommendation of the Local Boundary Commission was made to the legislature, it was so different in terms of area and the requirements imposed for immediate services that the City and Borough jointly requested of the legislature that the annexation be disapproved.

9. There was one joint service agreement entered into between the City and the Borough during the years setforth above. That was an agreement for fire and ambulance service. I, as Borough Chairman, negotiated that agreement for the Borough with the City. If there had been any agreement between the Borough and the City regarding sewers, I would have negotiated it

also. There was no agreement.

10. In the fall of 1973, Ross Wood became Borough Chairman and I told him that now that the schools were pretty much completed that the priority facing the Borough was to try to resolve the sewage problems in the Spruce Cape and Island Lake areas. At that time, annexation appeared to be the only viable alternative and still to this day it is the only economically feasible solution.

DATED this 31st day of January, 1979.

Wilton T. White
WILTON T. WHITE

SUBSCRIBED AND SWORN to before me this 31st day of January, 1979.

Notary Public in and for Alaska
My commission expires: March 4, 1981

As you are aware, the main item on the agenda is the annexation of Mill Bay Road, from the City limits to Cut-off Road. However, there is a much bigger issue that will be discussed later on. The City's presentation tonight will be a summary of services now being provided to the residents of the City of Kodiak. I will say a few words about each service the City is currently providing and the department head who is responsible for that service will be available if you have any questions.

The City Clerk filed a petition with Community and Regional Affairs on October 19, 1977 and with the Borough on the same date. Public notice of the annexation was published on October 21, 25, 26 and 28, 1977.

In the Alaska Administrative Code, 19AAC 05.010 - 19AAC 20.010. one can find the criteria necessary for qualification for annexation.

Item 1 refers to contiquity with the City. This criteria is met as you can see by the map.

Item number three asks if the property is platted or held for sale for urban residential or commercial purposes. In this case, the land is platted and is for sale for urban residential purposes. The population does not now equal that of the City, however, it is only a matter of time until all the buildable land is utilized, either for residential or commercial purposes. Population of the territory being considered for annexation stems primarily from actual growth of the City beyond its legal boundaries. The property is valued high for prospective urban purposes.

Item number four of the regulations asks if the City can provide services more efficiently than another municipality, if the services are needed. This is certainly so since the only other municipality is the Kodiak Island Borough and with its present powers and staffing it is not in a position to offer any services similar to what the City of Kodiak is now providing its own residents. In most cases, if not all instances, the Borough would have to contract with the City or establish duplicate structures and purchase necessary equipment to provide the same services. This of course, would raise the cost for those utilizing those services. The need for additional services is there because the area is becoming increasingly urban. An ordinance passed on second reading at the last Borough Assembly meeting for service areas actually includes the property under consideration this evening. The ordinance establishing the service area excludes all territory in the City as of November 1, 1977.

Item number five discusses the future development and growth of the City and how that will be felt in the annexed area. The City is currently planning on expansion of utilities in this specific area that will be discussed a little later on.

Item number six speaks to the health or safety of City residents. In the area covered by this proposed annexation, there is a definite need for sewage facilities. The City of Kodiak is the only entity able to provide that sewage service. By annexation of this area the City would be able to alleviate the potential health problems.

Item number seven, there are many areas adjacent to the City where the City limits go back and forth across roads, etc. If a definite straightened boundary existed, the police, fire and other services would be able to serve the City residents much better. In some instances, City employees and services must cross land outside the city limits to necessarily serve residents of the City due to this boundary situation. This also causes problems serving areas inside the City because of the inability to get easements, etc. for water and sewer lines.

Number eight is one of the most important items as it asks what City services are received without tax contribution. At the present time, residents of the area outside the City are receiving limited protection from the City police department, as our officers are authorized to assist the Troopers when necessary. The parks and recreation department, boat harbor, cargo dock and municipal airfield serve everyone and the museum is an attraction to all. In addition, the ferry dock serves all residents. The City is responsible for the landfill for all the Kodiak urban area and the cemetery is also free to Borough and City residents alike. The Borough residents are also using City streets to go to and from work and shopping that are cleared of snow and paid for by the City of Kodiak taxpayers. Water and sewer is provided for the different businesses in town and those living outside the City who are working in town also benefit from that. At the present time, the Borough does pay the City for library and fire protection, however I am certain that a case could be made that whatever is contributed is not equal to the usage, i.e. major equipment expenditures in the fire department.

The present assessed valuation of personal and real property within the City of Kodiak is $127,748,101. The assessed valuation outside the City limits of Kodiak within the entire Kodiak Island Borough is $32,806,810. This is a total of $160,554,911. In percentages, the City of Kodiak has 79.57% or 80% of the assessed valuation of the Kodiak Island Borough. The Borough has 20.43% or 20%.

In terms of dollars and cents, for every dollar that the Borough collects from the taxpayers and ultimately spends, 80 cents comes from City taxpayers and 20 cents comes from Borough taxpayers outside the city limits.

The Borough does give the City $15,000 for library services. We have facts and figures that show that library usage by the Borough residents is 40% of the total, while City residents use the library 60%. If we take the 80% figure for taxes paid by residents within the city limits, $15,000 of that $12,000 comes from City taxpayers. So while the Borough keeps telling us how much they give us for library services, they are actually giving us 80% or $12,000 of City money and only $3,000 from Borough taxpayers.

It also can be said that the cargo dock, boat harbor, water and sewer departments are enterprise funds. However, a case can be made that the administrative time taken by the City Council and others is time
for by residents outside the City. It is also obvious that if it were not for the City of Kodiak taxpayers in the first place, the people outside of the City boundaries would never be able to enjoy the services they now have. It is the City of Kodiak taxpayers that make it all possible.

At this time I would like to go through the different departments of the City and explain the services that the City now provides.

PARKS AND RECREATION. Each of you has a copy of the services the City is now providing all residents, Borough and City alike, in this important function. The 1977-78 budget is $128,946 while estimated revenues for this year are $20,000. That leaves a total of $108,946 that comes out of general fund revenues which are paid for by City taxpayers. The City does receive State revenue sharing funds for parks and recreation. However, only the population of the City is allowed to be used.

I might mention that the City does utilize the Borough school facilities to provide some recreation services. We are told time and again that this is the contribution from the Borough to the parks and recreation budget. However, that does not hold much water because school facilities are here and they were paid for out of taxes paid in part by the residents of the City. Only 20% of that local support comes from the Kodiak Island Borough residents. If any of you have any questions, Ian Fulp, the City's parks and recreation director, is here to answer them for you.

PUBLIC WORKS. The next department is public works. The City now has a 12-inch water main which is extended to Lot 18 of the proposed annexation area and we are now furnishing water to Lots 1, 14, 15, 16 and 17 in the proposed area. It would be desirable to extend this main through the area and to tie into an existing 12-inch line at Cut-off Road. This would establish another loop in our system which in turn would add more volume of water to the northeast portion of the system for fire fighting purposes. This line will also provide water service to the homes in the area and fire hydrants where such protection is not now available.

The City now has a sewer main extended to the lot line of Lot 15 and has budgeted an additional amount of money to extend it to Lot 18. Should this area be annexed, it would be feasible to extend this line to Lot 23 from this direction and cover the remaining area from a sewer already installed on the northeast side.

The municipal airstrip is partially involved in this annexation. The City has interest in and owns parts of the property involved. It would be advantageous to have it inside the City as periodic maintenance on the field is performed.

Mr. Herman Boukers, the Superintendent of Public Works, is also available to answer any questions you might have.

LIBRARY The library has already been mentioned; however, I will go over that again in case there are any questions. For the first five months of a reregistration period, approximately 40% of the library borrowers were residents of the Borough while 60% were residents of the City.

These figures are for persons who come into the library regularly. The books that are sent to the villages are usually sent to the village schools and are not included in the above statistics. I have already mentioned the library budget and the contribution of the Borough. Elizabeth Carroll, our Library Director is also present tonight.

FIRE. A different situation exists in the fire department. The fire district located in the Borough is in the proposed area under discussion.

The City and Borough have an agreement whereby the City provides fire protection for areas in the Borough. This is based on the mill rate for the fire department that the residents inside the City pay for that service. The basic figures for fire calls, losses and man-hours spent on fires in the Borough is enclosed with your information. So far in 1977, the Kodiak fire department has answered 26 calls in the Borough.

The City of Kodiak also operates the ambulance service for the Kodiak urban area. Recently the Kodiak Island Borough purchased an ambulance and turned it over to the City of Kodiak for the City to operate. In other cities that I have been in, the ambulance service is operated by the hospitals. We do appreciate having an additional ambulance available to answer calls in the Kodiak urban area; however, it is important to note that with health powers, the Borough should have this responsibility. I do not want to belabor the point because of the "generosity" of the Borough in allowing the City to use its ambulance.

Getting back to fire, in the area of insurance, for a $70,000 home, the City rate at class 5 is $559. The same $70,000 home in the Borough without the adequate water and response time is $1,115 for a difference of $556. The point is that by having water and adequate fire service available, a resident taxpayer in the Borough would save approximately half the cost he is now paying for fire insurance.

It is also important to note that the City does conduct fire inspections of the residences and businesses in the annexed area.

Chief Magnusen will answer any questions you might have.

CITY ENGINEER. The City Engineer feels that the organization which operates and maintains a utility system should have the final say in how and when the system is developed. For example, in the case of the City water system, he does not believe any extension should be permitted unless it meets the following criteria: (1) The proposed extension conforms to an approved water system development plan. (2) Construction is done in accordance with City standard specifications and (3) Construction is monitored by a City inspector. In short, the City being the owner and operator of the system should control development of that system. There are only two ways in which this could be accomplished, annexation of lands prior to development or a Borough ordinance requiring all new water system to meet the above criteria. He feels it can be easily shown that annexation is the more positive method allowing all water users an equal voice in the organization which operates the system.

One example of the Borough's inability to handle their responsibility is in the area of subdivision development. At the present time, the Sarch Street sewer line is being reconstructed due in part to inadequate control of subdivision development by the Borough.

In the case of sanitary sewer facilities, there is one additional option that may be considered. That is having the Borough own and operate the waste water treatment plant and take over the responsibility of operating and maintaining the total waste water collection system. This concept is not considered practical, however, as it requires two municipal organizations to control utility systems which overlap.

In conclusion, he feels that orderly growth and development of water and sewer systems within our community is best accomplished by placing all areas served by these systems within the same municipal boundaries. Anything short of this would be a detriment to all concerned.

BOAT HARBOR. The City Council from 1965 to 1971 authorized general fund expenditures to assist the small boat harbor. These expenditures total approximately $50,000. In 1974, the City Council, in an effort to equalize taxation, placed the harbor on an enterprise system and subsequently wrote off a $50,000 deficit. From 1972 through 1975, the City expended general fund monies for capital improvements in the boat harbor which included (1) redecking work around loading dock I, (2) installing two 3,000 gallon waste oil tanks, (3) building Shelikof Street loading dock, (4) installation of electrical meters, (5) dredging sludge from drainage culverts.

The above capital improvements total approximately $53,000. Since the small boat harbor was rebuilt in 1965 to the present time, the City has expended in the neighborhood of $100,000 for the small boat harbor operations.

CARGO DOCK. The 1977/78 budget has an amount from the general fund of $149,703. This is a deficit that the City is presently incurring in the cargo terminal operation and is due to contract differences with Sea-Land. Many of the improvements at the cargo dock are paid for out of State funds. It is important to note that the City does spend general fund revenues when problems arise. George Cutrell, the Port Operations Manager is here to answer any questions you might have.

POLICE SERVICES. The Police Chief feels that the proposed annexation would benefit the citizens. When they call for emergency and routine service at the present time, it is confusing to the dispatcher whether to dispatch a police officer or State trooper. This is especially true when street addresses are nonexistent.

Due to the broken configuration of property, liability could result if a police officer mistakenly took action in an area out of the City's jurisdiction. There should be no additional cost to the City for providing this service since the police officers are utilizing Mill Bay Road at the present time to reach other areas within the City.

Probably the best document that I can present to you this evening is the petition by the registered voters of the proposed new first class city Spread Eagle. It calls for fire and road services only. These would be provided by the new city.

Duplication of road and fire services will be quite a burden on these taxpayers. If they purchase additional fire equipment, build a building and have volunteers, the fire service would not be any better than it is right now. I believe the only way to improve service would be if the new city hired fire fighters on a full time basis. This has already proven to be too costly for the existing fire district when they hired their firefighters.

Regarding the road service, it is important to note that it would probably be contracted out to a private company would be a considerable expense.

On page 5 of the brief of the petition for incorporation of Spread Eagle, there is a discussion of the aim of the proposed City which would be to maintain large lots and low density housing in order to preserve the existing forest. The manner in which this would best be accomplished would be to give the residents the power to control the development of and provide the services for the area in which they reside.

First class city incorporation will not protect lot size and density. The only way this could be accomplished would be to incorporate as a first or second class borough and have planning and zoning powers. Another city is definitely not the answer.

In conclusion, I would like to reiterate my main points.

1. The property is used for urban purposes, is platted and is an extension of the City's boundaries. The value of the land is due to the proximity to the City.

2. The City can provide services more efficiently than any other municipality.

3. Expansion of utilities is planned for the area.

4. Sewage facilities are needed to protect the health of the residents.

5. A straightened boundary of the City is definitely needed.

6. I have made the point several times regarding City services received by Borough residents without tax contribution. The most obvious problem with the Borough's thinking is they feel they are actually giving the City something. The idea is like a Federal or State grant instead of the City being part of the Borough. Just because there are two separate municipalities involved does not mean we are not the same people.

Fire Calls & Losses
In the Borough

Year	Calls	Dollar Loss
1970	13	Unknown
1971	17	8,600.00
1972	20	17,800.00
1973	22	6,360.00
1974	20	33,265.10
1975	18	6,400.00
1976	22	21,600.00

This brings the total calls in the Borough in the above period to 134 calls with a dollar loss of $94,225.10. So far in 1977 the Department has answered 26 calls in the Borough and a dollar loss of $66,550.00.

Man Power & Man Hours

Year	Man power	Man Hours	Average Pre Call
1970	Unavailable		
1971	301	300.6	16.7

MEMORANDUM

TO: Dick Berg

FROM: Herman Beukers, Supt. of Public Works

SUBJ: Island Lake Roads

DATE: November 21, 1978

In accordance with your instructions, the following information is submitted:

MAINTAINABLE ROADS

Island Lake Road from Mill Bay to Lake	2,500 feet
Back Island Lake Road (Platted)	3,800 feet
Balika from Island Lake to Mill Bay Road	2,500 feet
Road from Island Lake to Mike Brechan's	750 feet
Ram Site Road	1,900 feet
2 1/5 Miles TOTAL	11,450 feet

It is estimated that the cost per mile for maintaining roads, which includes grading, drainage, snow removal and dust control will be approximately $12,000 per mile per year.

Shahafka Acres Road	1,600 feet
Melnitsa Lane	200 feet
TOTAL	1,800 feet

The above roads will be maintainable with some surfacing work and widening which can be done with City forces. The estimated cost to upgrade these two roads is $7,200. They then would be part of the maintainable system which would then consist of two and one-half miles of road.

The area is gaining access to its lots on roads that are barely trails and are not constructed in the platted right-of-ways. Eventually the proper roads will have to be constructed. Some could be built in the platted right-of-way, others, especially on the back side, would require acquisition of the right-of-way.

Because of the timber in the area and normal construction problems, it is estimated construction costs would be high, especially as we are required to follow our ordinance which states the right-of-way shall be cleared and a 30 foot gravel surface street shall be constructed. It is estimated that the cost would be $[illegible],000 per mile. This figure is based on Brechan's costs on Lake View Drive in the area with a 20% (10% a year) inflation factor.

Special Supplement to the Kadiak Times and Kodiak Daily Mirror

City of Kodiak

SPECIAL REPORT

ANNEXATION

The area outlined below has been recommended for Annexation by the State of Alaska Boundary Commission. It generally encompasses the area from the existing City limits to Spruce Cape along the water — then to Abercrombie and along Lake View Drive.

ISLAND LAKE ANNEXATION HISTORY

In 1968, the first attempt at annexing Island Lake and Spruce Cape occurred. The main reason for the residents request appears to be fire protection. An election was held and the annexation question was defeated.

In 1970, the Borough initiated step annexation of certain areas (including Island Lake). The Boundary Commission recommendation included a larger area. The Boundary Commission also recommended that all services be provided in one year rather than step annexation. The City, Borough and private citizens sent telegrams and letters to legislators asking that annexation not be approved as the services could not be provided in one year and the cost to the residents both Borough and City, would have been exorbitant.

In 1972, petitions were received from Island Lake residents requesting annexation However, Municipal Boundary regulations were being revised by the State. After the new regulations were established, the City was told that the petition would have to be done under the new regulations. The City Manager at that time, met several times with the residents of Island Lake concerning annexation.

Then the City Manager discussed the problem with the Council and it was agreed that the City should proceed rather than asking the people to present another petition. It was then discovered that planning Grant funds would be available for a comprehensive study of the services needed and manner of providing them. The Borough has planning powers, & the City Manager worked with the Borough to obtain the funds and conduct the study. In the July 22, 1976 Council minutes, The City Manager states, regarding the progress on annexation, "The Borough has applied for a grant to study the situation . . .part of the study would be on whether annexation or a service district would be the best method."

A service district was considered by the residents favorably, but since it was to be contiguous to the present city limits and all services would be furnished by the City, a serious legal question arose as to its position under State Statute.

At the present, the Local Boundary Commission recommendation to annex the area to the City of Kodiak will be made within the first 10 days of the forth-coming State Legislature.

WHAT ABOUT WATER & SEWER

The City of Kodiak engineering department has been doing preliminary planning for water and sewer service to the proposed annexation area so that construction could begin as soon as possible, if annexation were approved. Previous studies have been incorporated. It is anticipated that grants will be received for 50% to 75% of the costs.

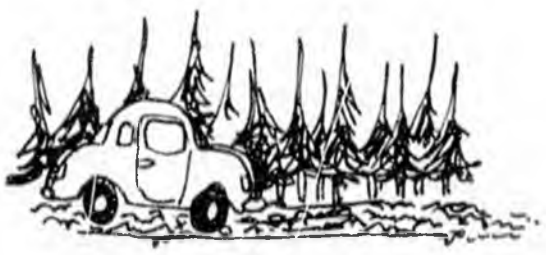
The City has to the best of its ability incorporate the previous work of the citizens and engineering firm retained by the Borough. Plans showing proposed water and sewer lines will be available at the public meeting.

One unusual concept advanced is to allow acceptable Septic Systems in low denisty hard to reach areas in order to keep cost down and to allow assessment relief for the life of the System. Detailed engineering can not be realized until annexation is a reality & appropriate Grant monies can be applied for.

WHAT ABOUT ROADS

1st Priority?

1. Unamed Road in U.S.S. 3467
2. Track A Island Lake
3. Unamed Road in U.S.S. 3219, 3103, 3464 Island Lake
4. Cliffside & Cliffside Loop
5. Seabreeze & Woodland
6. Unamed Road in U.S.S. 3099



2nd Priority? What else should be done.

Reconstruct for purpose of snow removal, road grading, fire & police coverage.

There are 2½ miles of maintainable roads in the area. Maintenance means grading, drainage, snow removal and dust control.
With a minimum of work another 2½ miles of road would be maintainable.

WHAT ABOUT POLICE

Available on maintainable road system with one year or more additional coverage of state police - dispatch available on personal, telephone, or C.B. contact. Additional policemen and vehicles will be added as necessary to cover the entire area.

DIFFERENTIAL TAXATION?

WHAT IS IT ? A method of allowing new residents a break on taxation until they receive the same type and quantity of services as other residents.

Zone No. 1

Generally that area next to Mission Road outside the present boundaries that may anjoy all City services afforded present City residents. Present Mill Rate for City purposes at 100% would apply.

Zone No. 2

Generally that area north of Mill Bay USS 2467, Shafaka Acres, Block 7 Monashka Bay subdivision that cannot receive full services. Mill Rate at 75% would apply.

Zone No. 3

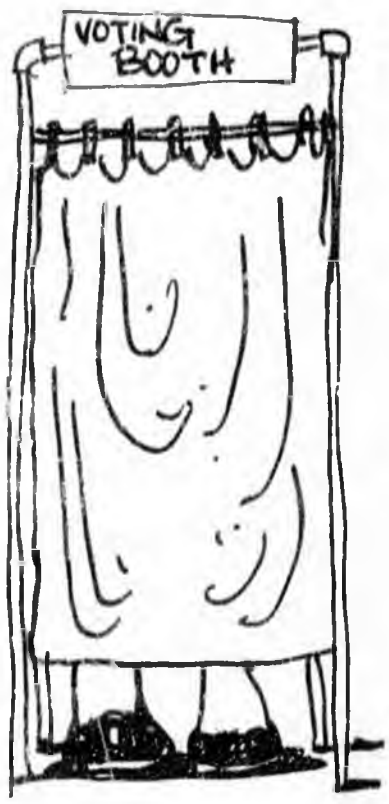
Generally that area of Woodland Acres, and back of Island Lake that the city is presently unable to reach adequately with fire & police due primarily to present road conditions. 50% of the City Mill rate.

SEE THE CITY'S MAP

EARLY & SPECIAL REPRESENTATION

Early representation is afforded by a City Charter provision which allows any resident who has lived in the newly annexed for 2 years and in Alaska for 3 years the ability to run for Mayor or Council.

Also, the City Council by special provision will ask for the election of a special representative from the annexed area to serve as an advisor with the council for 3 years. Residents of the annexed area will of course vote for all council members and mayor as their respective terms expire.



THE CITY MADE THE FOLLOWING PROMISES IN RESOLUTION NO. 24 - 78

CITY OF KODIAK

RESOLUTION NO. 24 - 78

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Kodiak, Alaska as follows:

1. The City will, to the extent possible, establish and implement in the areas to be annexed, a system of differential taxation for any such areas that do not receive all services of the City supported by taxation or which receive these services at a level different from that provided in other areas of the City.

2. The City Manager is hereby directed to develop tentative plans for the provision of services to the areas proposed for annexation and to determine whether the City may be prevented by requirements for capital improvements or for other reasons from providing full services to portions of those areas for any temporary period of time. On or before October 1, 1978, the City Manager shall report to the Council and advise of the areas where provision of full services may be temporarily delayed, the level of service that will be provided and the estimated differential in cost between full services and the services to be provided.

3. The City Manager and the City Attorney shall explore existing legal requirements regarding residency requirements for voting and elective office, and the existing number of Council Members an make recommendations to the Council on or before October 1, 1978, regarding possible changes in law or policy to provide residents of newly annexed areas with representation within the City comparable to that currently available to City residents, and any recommendations regarding required changes in ordinances to implement that objective.

4. The City shall engage in an information program regarding the proposed annexation with the objective of making the public and the legislature aware of the need for and benefits of annexation, and shall employ the services of a qualified person, to the extent determined advisable, to actively support approval of the annexation by the Alaska legislature.

PASSED AND APPROVED this 24th day of August, 1978.

LET THE CITY KNOW WHAT OTHER WRITTEN PROMISES YOU WANT:

LEGISLATIVE AFFAIRS AGENCY

MEMORANDUM January 31, 1979

SUBJECT: Annexation to the City of Kodiak

TO: Representative Bill Parker, Chairman
House Community & Regional Affairs Committee

FROM: John B. Chenoweth, Legislative Counsel

May I take this opportunity to clarify and expand on one point of discussion and inquiry concerning yesterday's testimony.

I suggested that I thought there were four courses of action open to the Legislature with respect to the Local Boundary Commission's recommendation to annex territory to the City of Kodiak. It could, of course, adopt HJR 10, setting aside the recommendation in its entirety. It could, in the alternative, take no action, allowing the annexation to become effective sometime around March 9.

The other alternatives derive from the precedent of an annexation to the City of Seward in 1964. In that year, the Legislature provided that an extensive area to the north of that city be made a part of the municipality. In the next year, 1965, the Legislature sought to provide by direct legislation for detachment of the territory. The House adopted the measure, but the Senate substituted its own resolution, asking the Local Boundary Commission to reconsider portions of the 1964 recommendation during the following interim. The Commission did respond to the Senate's request, submitting a recommendation in 1966 by which portions of the territory which was earlier annexed by Legislative act was subsequently detached. This recommendation was reviewed by the Legislature and not annulled, thus effecting a second boundary adjustment to the City of Seward.

I would see, then, the precedent of the Seward annexation as a third possible alternative, together with its converse, the adoption of HJR 10 (annulling the Kodiak City annexation) and the adoption of a separate concurrent resolution requesting the Boundary Commission to reconsider its decision. Representative Parr's observation to the effect that the Legislature cannot "guarantee" a Local Boundary Commission is entirely correct, but I do think that this approach adds a little to the Legislature's ability to assure rational and equitable results in local boundary change matters.

2749-60

Extended Home Rule

SECTION 10. The legislature may extend home rule to other boroughs and cities.

Home Rule Powers

SECTION 11. A home rule borough or city may exercise all legislative powers not prohibited by law or by charter.

Boundaries

SECTION 12. A local boundary commission or board shall be established by law in the executive branch of the state government. The commission or board may consider any proposed local government boundary change. It may present proposed changes to the legislature during the first ten days of any regular session. The change shall become effective forty-five days after presentation or at the end of the session, whichever is earlier, unless disapproved by a resolution concurred in by a majority of the members of each house. The commission or board, subject to law, may establish procedures whereby boundaries may be adjusted by local action.

Initiat and Refer Appli

Petitu

Agreements: Transfer of Powers

SECTION 13. Agreements, including those for cooperative or joint administration of any functions or powers, may be made by any local government with any other local government, with the State, or with the United States, unless otherwise provided by law or charter. A city may transfer to the borough in which it is located any of its powers or functions unless prohibited by law or charter, and may in like manner revoke the transfer.

Local Government Agency

SECTION 14. An agency shall be established by law in the executive branch of the state government to advise and assist local governments. It shall review their activities; collect and publish local government information, and perform other duties prescribed by law.

Initia Elect

Special Service Districts

SECTION 15. Special service districts existing at the time a borough is organized shall be integrated with the government of the borough as provided by law.

THE PERSONS WHO APPEAR BEFORE YOU MAY BE AS BROAD, AS IMAGINATIVE, EVEN AS UNRELATED TO THE PARTICULARS OF THE SUBJECT MATTER BEFORE YOU AS IT IS POSSIBLE FOR THEM TO BE. THERE ARE NO LIMITATIONS ON WHAT YOU MAY REQUIRE: THERE IS BUT ONE THING THAT YOU MAY DO -- THE RESOLUTION OFFERED BY MR ZHAROFF IS THE VEHICLE FOR ANNULLING THE RECOMMENDED ANNEXATION IN ITS ENTIRETY; YOU CANNOT REDRAW THE LINES. (THAT IS NOT TO SAY THAT, IN THE EVENT YOU CHOOSE TO RECOMMEND ANNULMENT, YOU CANNOT ADOPT THE RESOLUTION OF MR ZHAROFF BUT, AT THE SAME TIME, REQUIRE THE COMMISSION TO RECONSIDER SPECIFIC BOUNDARY CHANGES OF THE CITY, SPECIFYING THE AREAS OF YOUR CONCERN. ALTERNATIVELY, IF THERE ARE AREAS WHICH THE BOUNDARY COMMISSION EXCLUDED FROM ANNEXATION BUT WHICH YOU BELIEVE SHOULD BE RECONSIDERED FOR INCLUSION, YOU MAY DIRECT THAT, BY RESOLUTION, TO THE ATTENTION OF THE COMMISSION.)

NOW, I DON'T KNOW WHETHER THESE MUSINGS FULFILLED THE INTENT OF THE CHAIRMAN IN EXTENDING AN INVITATION FOR ME TO SIT IN THIS CHAIR. BUT I HOPE IT CONTRIBUTES SOMETHING TO YOUR DELIBERATIONS , AND THAT IT MAKES THIS EFFORT AT LEGISLATIVE REVIEW MORE MEANINGFUL TO YOU. I DON'T ENVY YOU THE TASK.

IF THERE ARE ANY QUESTIONS WITH RESPECT TO ANY OF THESE POINTS, I WILL TRY TO RESPOND.

THANK YOU.

MENT UNIT INVOLVED IN AN ANNEXATION, TO SEE WHETHER THE CITY (AS IN THIS INSTANCE) OR BOROUCH (IF THAT WERE THE CASE) WERE CAPABLE OF PROVIDING SERVICES THROUGHOUT AN EXPANDED AREA.

NEXT, I BELIEVE THE LEGISLATURE MAY PROPERLY INQUIRE INTO THE ANTICIPATED EFFECT OF THE BOUNDARY CHANGE OF THE PEOPLE INVOLVED, PRINCIPALLY THE RESIDENTS OF THE AREA IN QUESTION, BUT ALSO THOSE WHO ALREADY RESIDE WITHIN THE UNIT OF GOVERNMENT AND WHO MAY SEE CURRENT SERVICE LEVELS DILUTED IN AN EXTENSIVE AREAWIDE EXPANSION OR, IN THE ALTERNATIVE, AN INCREASE IN THE TAX BURDEN. TAXATION IS ALWAYS THE CENTRAL FACTOR IN ANNEXATION DECISIONS, BUT IT IS ALMOST NEVER PROPERLY FOCUSSED. THE QUESTION IS NOT ONE OF TAX INCREASE THAT NORMALLY ATTENDS THE INCLUSION OF NEW TERRITORY INTO AN EXISTING TAX-LEVYING JURISDICTION, BUT RATHER, WHETHER, FIRST, LEVELS OF TAXATION CAN BE RELATED TO LEVELS OF SERVICE TO BE OFFERED AND, SECOND, WHETHER ANNEXATION, WITH ITS ATTENDANT TAX BURDEN CHANGES, WILL CONTRIBUTE TO A BETTER SHARING OF THE BURDENS AND OPPORTUNITIES FOR LOCAL GOVERNMENT THROUGHOUT A METROPOLITAN REGION, EVEN IF, AS IN THIS INSTANCE, THE METROPOLIS IS ONLY THE SIZE OF "GREATER KODIAK."

FOURTH, I WOULD SUGGEST AS A FACTOR OR ELEMENT WARRANTING LEGISLATIVE EXAMINATION IS THE RESULTANT RELATIONSHIP OF THE ANNEXATION ON CITY/BOROUGH RELATIONS. IN TWO DECADES, IT HAS BECOME RATHER CLEAR THAT THE THEORETICAL DIFFERENCES PERCEIVED BY THE FRAMERS OF THE CONSTITUTION WHICH WARRANTED A CONCLUSION ON THEIR PART THAT THERE BE TWO TYPES OF LOCAL GOVERNMENT -- THE CITY AND THE BOROUGH -- GIVE RISE TO OTHER DIFFERENCES IN PRACTICE. CITY-BOROUGH RELATIONSHIPS THROUGH THE LAST 20 YEARS CAN ONLY BE DESCRIBED AS "STORMY."

THE CASE BOOKS AND MEETINGS OF MUNICIPAL GOVERNMENTS ARE REPLETE WITH THE RESULTS OF LITIGATION, THREATS OF LITIGATION, AND REACTIONS TO LITIGATION AS CITIES AND BOROUGHS STRIVE FOR POLITICAL ACCOMODATION, IF NOT FOR POLITICAL BALANCE. IN THREE MAJOR URBAN AREAS, ANCHORAGE, JUNEAU, AND SITKA, THE PROBLEM HAS BEEN RESOLVED BY UNIFICATION. IN OTHERS, NOTABLY FAIRBANKS AND KETCHIKAN, MINOR BOUNDARY ADJUSTMENTS HAVE SERVED TO ACHIEVE THAT BALANCE. THAT SAME PROCESS MAY NOW BE UNFOLDING IN THE KODIAK ANNEXATION. THE LEGISLATURE MAY DO WELL TO CONSIDER WHETHER FULFILLMENT OF THE ANNEXATION WILL HAVE AN EFFECT ON THE RANGE OF POLITICAL, SERVICE AND OTHER RELATIONSHIPS BETWEEN THE CITY AND THE BOROUGH AND WHETHER, IN THE SHORT-RANGE AND IN THE LONG-RUN, THOSE RELATIONSHIPS WILL GROW STRONGER.

FIFTH, LASTLY, IS THE OPPORTUNITY FOR THE LEGISLATURE TO REVIEW THE DECISION OF THE LOCAL BOUNDARY COMMISSION FOR COMPLIANCE WITH PROPER ADMINISTRATIVE PROCEDURES. WAS THE HEARING PROPERLY NOTICE? WERE THOSE IN ATTENDANCE GIVEN OPPORTUNITY TO COMMENT? DID THE COMMISSION ENTER A DECISION ON THE RECORD? DID THE COMMISSION ADHERE TO ITS OWN REQUIREMENTS? PROCEDURAL COMPLIANCE IS IMPORTANT. AT LEAST ONE ANNEXATION OF THE COMMISSION HAS BEEN SET ASIDE BY THE COURTS FOR FAILURE OF THE COMMISSION TO ATTEND TO STATUTORY REQUIREMENTS. THE LEGISLATURE COULD SAVE TIME AND LITIGATION BY REFUSING AN ANNEXATION, NO MATTER HOW MERITORIOUS, IF THERE HAS BEEN A SUBSTANTIAL FAILURE TO MEET ADMINISTRATIVE REQUIREMENTS.

THE PART OF THE LOCAL BOUNDARY CHANGE PROCESS WHICH REQUIRES OR ALLOWS LEGISLATIVE REVIEW OF A BOUNDARY COMMISSION DECISION IS VERY MUCH A POLITICAL PROCESS. THE INQUIRIES YOU DIRECT TO

ARTICLE 1. ANNEXATION TO CITIES

Section
10. Annexable territory
20. Application of standards
30. Annexation of incorporated territory

19 AAC 05.010. ANNEXABLE TERRITORY. (a) Territory which is contiguous to a city may be annexed to that city if one or more of the following standards are met:

(1) all land to which the territory is contiguous is within the city's boundaries; or

(2) all land in the territory is wholly owned by the city; or

(3) the territory is urban in character. In determining whether territory is urban in character, the commission may consider, without limitation, whether the property is platted or held for sale for urban, residential or commercial purposes, whether the population density of the territory approximates that of the annexing city, whether the population of the territory stems primarily from actual growth of the city beyond its legal boundaries, and whether the property is valuable primarily by reason of its suitability for prospective urban purposes; or

(4) the territory is presently in need of a municipal service or services which the city can provide more efficiently than another municipality; or

(5) there is a likelihood that future growth and development of the city will occur within the territory and annexation of the territory will enable the city to plan for and control that development; or

(6) the health or safety of city residents is endangered by conditions existing or developing in the territory and annexation will enable the city to remove or alleviate those conditions; or

(7) the extension into the territory of city water, sewer, street, or other facilities, or of city police, fire, health or other services is necessary to enable the city to provide adequate service to city residents; and it is impossible or impractical for the city to extend such facilities or services unless the territory is within the city's boundaries; or

(8) residents of, or owners of property in, the territory receive or may be reasonably expected to receive the benefit of city services without commensurate tax contributions whether such services are rendered or received inside or outside the territory. In determining whether this standard is met, the commission will consider alternate methods available to the city for offsetting the cost of providing services to individuals or property beyond its property taxation powers; or

(9) the annexation is otherwise necessary to accomplish a valid public purpose.

(b) Territory which is not contiguous to the city may be annexed to the city if

(1) all the land in the territory is wholly owned or leased by the city or used primarily for the performance of city functions; and

(2) annexation is necessary to enable the city to achieve adequate control, protection or management of the property.

(c) Territory which does not meet the requirements of (a) of this section may nevertheless be annexed to a city if such territory lies between the city boundary and territory which could be annexed under (a) of this section but for the requirement of contiguity. (Eff. 10/13/72, Reg. 43)

Authority: Art. X, Sec. 12
State Constitution
AS 44.19.260(a)(2)

19 AAC 05.020. APPLICATION OF STANDARDS. No annexation will be approved unless the annexing city demonstrates to the satisfaction of the commission that it is capable of extending and willing to extend services to the annexed area as follows:

(1) except in the case of an annexation pursuant to 19 AAC 10.190–19 AAC 10.240, full municipal services shall be extended to the annexed area immediately except where impossible for want of necessary capital facilities. Where full municipal services may not be provided immediately, the annexing city shall satisfy the commission that it will provide those services within a reasonable time;

(2) in the case of an annexation under 19 AAC 10.190–19 AAC 10.240, annexation will be approved only if the commission is satisfied that the city's plan for gradual extension of services is reasonably correlated with the gradual extension of taxation and provides for extension of full municipal services to the annexed area within the transitional period;

(3) notwithstanding (1) and (2) of this section, annexation by a city possessing authority to establish and operate differential taxation zones may be approved if the commission is satisfied that the city is willing and able to use such authority to

(A) provide the territory with such services as may be necessary; and

(B) insure that the annexed area is not subjected to unfair taxation for services not available in the annexed area;

(4) the commission may conduct public hearings or investigations subsequent to the effective date of any annexation to determine whether the extension of services or taxation, and/or utilization of differential taxation zones, is proceeding in a reasonably expeditious and equitable manner. If the commission determines that the extension of services or taxation, and/or utilization of differential taxation zones, is not progressing in a reasonably expeditious and equitable manner, it may institute detachment proceedings under 19 AAC 05.050. (Eff. 10/13/72, Reg. 43)

Authority: Art. X, Sec. 12
State Constitution
AS 44.19.260(a)(2)

19 AAC 05.030. ANNEXATION OF INCORPORATED TERRITORY. (a) In the case of any annexation of territory of another incorporated city, or of an incorporated borough which is providing services to the territory that the city will provide upon annexation, the commission will determine the method by which assets, debts, and liabilities are to be distributed between the city and the municipality formerly providing services.

(b) In determining the method of transfer of service responsibility, and the distribution of debts and assets, the commission will approve any fair and equitable agreement between the municipalities affected, but will independently review any proposed agreement.

(c) Territory which is part of an incorporated city shall not be annexed to another city unless the commission determines the annexation to be in the best interests of the annexing city, the municipality from which the annexed territory is taken, and the annexed area, all considered as a whole; and unless the commission determines that the annexation will not result in a temporary or permanent loss of service to the annexed area.

(d) No separate or additional proceedings are required for detachment of territory within an incorporated city or borough which has become annexed to another city, but the detachment is effected by and at the same time as the annexation itself. (Eff. 10/13/72, Reg. 43)

Authority: Art. X, Sec. 12
State Constitution
AS 44.19.260(a)(2)

State Constitution
AS 44.19.260

19 AAC 10.030. FORM AND CONTENTS. (a) The petition shall be addressed to the Local Boundary Commission and shall bear a caption which clearly identifies the nature of the boundary change and the municipality or municipalities whose boundaries are to be changed.

(b) The petition shall contain the following:

(1) the name, resident address and mailing address of each petitioner;

(2) the name and mailing address of the attorney or other representative designated by the petitioner(s) to receive service, notice, and all other correspondence relating to the proceedings on behalf of the petitioner(s);

(3) a legal boundary description of the territory affected by the proposed boundary change;

(4) the quantity of land contained in the territory;

(5) the assessed or estimated value of all taxable property, giving separate totals for real and personal property in the territory;

(6) the number of residents in the territory.

(7) the rate or rates at which real and personal property are taxed in the territory;

(8) the rate or rates of any sales tax levied by and/or collected in the territory.

(9) the amount and a full explanation of any outstanding bonded indebtedness for which the territory is wholly or partially responsible. (Eff. 9/26/62, Reg. 7; am 10/13/72, Reg. 43)

Authority: Art. X, Sec. 12
State Constitution
AS 44.19.260 (a)(2)

19 AAC 10.040. EXHIBITS. There shall be appended to the petition the following exhibits:

(1) a map or maps showing

(A) the present boundaries of the territory whose boundaries are to be changed;

(B) the maps shall be sufficiently detailed to show all streets and roadways. All copies of the maps submitted as exhibits to copies of the petition shall conform in color and other distinguishing markings, to the original exhibit;

(2) also, an affidavit of the petitioner, or his representative or attorney who prepared the petition, indicating the source from which the information contained in the petition was acquired; and stating that a census or other reliable enumeration of the territory was conducted by him, or under his direct supervision, specifying the dates when the census or enumeration was begun and completed and verifying that it was taken accurately. If an official census has been made of the territory by the federal, state or municipal government within one year of the date of the petition, a copy of that census may be appended to the petition in lieu of a census affidavit;

(3) all inter-municipal agreements regarding transitional provisions of services and distribution of assets and liabilities;

(4) a certified copy of the resolution or ordinance authorizing the municipality to file the petition if the petitioner is a municipality;

(5) the affidavit of petitioner or his representative or attorney, that service of the petition has been made in compliance with sec. 60 of this chapter. (Eff. 9/26/62, Reg. 7; am 10/13/72, Reg. 43)

Authority: Art. X, Sec. 12
State Constitution
AS 44.19.260(a)(2)

19 AAC 10.050. BRIEFS. The petition shall be accompanied by a written brief. The brief shall fully set forth the reasons supporting the boundary change and shall demonstrate that the boundary change meets the standards prescribed in ch. 5 of this title. The commission may require such additional information as in its view will be useful for evaluation of the petition. (Eff. 9/26/62, Reg. 7; am 10/13/72, Reg. 43)

Authority: Art. X, Sec. 12
State Constitution
AS 44.19.260(a)(2)

19 AAC 10.060. SERVICE. (a) The petitioner shall by certified mail, serve a copy of the petition and brief, together with accompanying exhibits, upon every municipality in or adjoining the territory. Such service shall be made at the same time that the petition is filed with the Commissioner of the Department of Community and Regional Affairs.

(b) The petitioner shall arrange that the petition, exhibits and brief will be available for inspection by the general public at a designated place in or near the territory between the hours of 9:00 a.m. and 4:30 p.m. The affidavit required under sec. 40 of this chapter shall specify the exact location where the petition is available for inspection. (Eff. 9/26/62, Reg. 7; am 10/13/72, Reg. 43)

Authority: Art. X, Sec. 12
State Constitution
AS 44.19.260(a)(2)

19 AAC 10.070. REVIEW OF PETITIONS. The Department of Community and Regional Affairs shall review the petition and brief and determine whether they

(1) are in substantially the proper form; and

(2) contain the factual information required by these regulations.

If the department determines that the petition or brief is deficient as to form or content, it shall return the defective petition or brief for

correction or completion. If the department determines that the petition and brief are in substantial compliance with these regulations, it shall notify the petitioner that the petition and brief have been accepted. (Eff. 9/26/62, Reg. 7; am 10/13/72, Reg. 43)

Authority: Art. X, Sec. 12
State Constitution
AS 44.19.260(a)(2)

19 AAC 10.080. NOTICE OF PETITION. (a) Upon receipt of notice from the department that the petition and brief have been accepted, the petitioner shall cause notice of the filing of the petition to be published in a newspaper of general circulation in the territory. Such notice shall be in the form specified by the Commisioner of the Department of Community and Regional Affairs and shall include a brief explanation of the proposed boundary change, the name of the petitioner, the name of each municipality whose boundaries are to be changed, and shall indicate the place where the petition and brief may be inspected by the public as provided in sec. 60 of this chapter.

(b) The petioner shall furnish the commissioner of the Department of Community and Regional Affairs with proof of compliance with (a) of this section. Upon receipt of such proof, the commissioner shall submit the petition and brief to the commission.

(c) No petition filed with the commissioner shall be deemed to be pending before the commission until the petition and brief have been submitted to the commissioner pursuant to this section. (Eff. 9/26/62, Reg. 7, am 10/13/72, Reg. 43)

Authority: Art. X, Sec. 12
State Constitution
AS 44 19.260(a)(2)

19 AAC 10.090. CALL FOR HEARING. The commission shall determine the time and place of the hearing which shall be held in or near the territory. At least fifteen days prior to the date of the hearing, the commissioner shall cause notice of the hearing to be given and served by certified mail upon:

(1) all municipalities specified at sec. 60 of chapter; and

(2) any person or municipality who has filed an answering brief pursuant to sec. 100 of this chapter. (Eff. 9/26/62, Reg. 7; am 10/13/72, Reg. 43)

Authority: Art. X, Sec. 12
State Constitution
AS 44.19.260(a)(2)

19 AAC 10.100. ANSWERING BRIEF. (a) A person residing or owning property in the territory or municipality whose boundaries are to be changed or in the governing body of any municipality may file a brief in opposition to the proposed boundary change. The original of the brief shall be filed with the commissioner together with proof that one copy was served upon petitioner or designated representative.

(b) A person or municipality filing an answering brief shall be designated a respondent.

(c) The answering brief shall indicate any factual information thought to be incorrectly or incompletely presented in the petition or petitioner's brief and shall demonstrate the manner in which the proposed boundary change fails to satisfy the standards prescribed in ch. 5 of this title. The brief shall include a discussion of the considerations set forth in sec. 50 of this chapter.

(d) The commission shall consider the respondent to have acquiesced in facts or arguments asserted in the petition and petitioner's brief which are not challenged or controverted in the respondent's brief. (Eff. 10/13/72, Reg. 43)

Authority: Art. X, Sec. 12
State Constitution
AS 44.19.260(a)(2)

19 AAC 10.110. REPLY BRIEF. Prior to the hearing, the petitioner may file a brief in reply to any new matter raised in an answering brief. (Eff. 10/13/72, Reg. 43)

Authority: Art. X, Sec. 12
State Constitution
AS 44.19.260(a)(2)

19 AAC 10.120. DEPARTMENT REPORT. The Department of Community and Regional Affairs shall prepare a report on the proposed boundary change. The report shall summarize the issues raised in the petition and briefs and may comment upon those issues or any other issue which the department deems to be relevant to the proposal. The report may contain recommendations to the commission. The report shall be filed with the commission prior to the date of hearing. (Eff. 10/13/72, Reg. 43)

Authority: Art. X, Sec. 12
State Constitution
AS 44.19.260(a)(2)

19 AAC 10.130. HEARING. (a) The petitioners shall first proceed to support the petition through exhibits, testimony and such other means as bear upon the issues raised by the petition. The presentation shall proceed in substantially the following manner:

(1) the presentation shall be conducted by the petitioner or his designated representative or attorney;

(2) the presentation shall be opened with a brief discussion of the nature of the proposed boundary change and the reasons to be advanced in its support. At the conclusion of the opening statement, petitioner shall submit an outline naming the persons who will give statements in support of the petition. Outlines shall be submitted in sextuplicate and copies shall be served upon all adverse parties;

(3) petitioner shall proceed to conduct his presentation in the manner indicated in his outline. The chairman may allow petitioner to deviate from his outlined presentation.

(b) Upon completion of the petitioner's presentation each respondent shall proceed, in the manner established by the chairman and in the same manner as prescribed for the petitioner, to present his views. Respondent's presentation shall include all information and argument which respondent wishes to advance in rebuttal of petitioner's presentation.

(c) Upon completion of the respondent's presentation, petitioner shall have an opportunity to offer rebuttal.

(d) Upon completion of petitioner's rebuttal, the commission will hear the views of all or interested persons or political subdivision, not petitioner or respondent. To obtain the floor, a person must be recognized by the chairman and must state his name, address and the nature of his interest. A person purporting to speak on behalf of a municipality shall demonstrate his authority to do so. The chairman may impose reasonable limitation of the time allotted each speaker and may curtail repetitive and irrelevant statements.

(e) Members of the commission may at any time pose questions or comment on matters raised during the hearing; however, representatives of the department with consent of the chairman may pose questions or comment on matters raised during the hearing.

(f) The chairman may temporarily suspend the order of proceedings set forth in this section to allow rebuttal, counter-rebuttal, or general public comment on a particular issue or issues. (Eff. 9/26/62, Reg. 7; am 10/13/72, Reg. 43)

Authority: Art. X, Sec. 12
State Constitution
AS 44.19.260(a)(2)

19 AAC 10.140. DECISIONAL MEETING. (a) The commission shall consider all aspects of the written and oral testimony before it and any other relevant and reliable data available to it concerning a boundary change proposal. A majority of the total membership of the commission may decide the issue. The commission shall prepare a written statement of its decision including an explanation of the major consideration upon which it relied in reaching its decision.

(b) Any decision of the commission shall be mailed immediately to the petitioner and to all parties who have submitted a reply brief and to any other interested parties who give written notice to the Commissioner of the Department of Community and Regional Affairs that they desire a copy of the decision. (Eff. 9/26/62, Reg. 7; am 10/13/72, Reg. 43)

Authority: Art. X, Sec. 12
State Constitution
AS 44.19.260(a)(2)

19 AAC 10.150. NON-COMPLIANCE. Compliance with the regulations of this chapter may be waived by the commission if substantial rights of interested parties are not prejudiced by such waiver. Any deviation from the procedures set forth in this chapter is waived by the commission unless the commission or a party objects. (Eff. 9/26/62, Reg. 7; am 10/13/72, Reg. 43)

Authority: Art. X, Sec. 12
State Constitution
AS 44.19.260(a)(2)

19 AAC 10.160. DETERMINATION OF PROCEDURE. Where there are alternative procedures for effecting a boundary change, the commission may select the procedures which it deems most appropriate under the circumstances. (Eff. 10/13/72, Reg. 43)

Authority: Art. X, Sec. 12
State Constitution
AS 44.19.260(a)(2)

19 AAC 10.170. CERTIFICATION OF BOUNDARY CHANGES. Within 30 days after a boundary change becomes effective, in accordance with Art. X, Sec. 12 of the Constitution, the Department of Community and Regional Affairs shall prepare a certificate of the change. The department shall transmit duplicate originals of the certificate to the organized borough in which the boundary change has taken place and/or to the municipality whose boundaries have been changed. The department shall also record a copy of the certificate in the recording district in which the boundary change has taken place. (Eff. 10/13/72, Reg. 43)

Authority: Art. X, Sec. 12
State Constitution
AS 44.19.260(a)(2)

19 AAC 10.180. PUBLIC MEETINGS. The commission, at its discretion and prior to consideration of any petition requesting a boundary change, may require municipalities whose boundaries are proposed to be changed to conduct meetings or hearings in the area to be annexed to acquaint residents with the purposes sought to be accomplished and the benefits which are expected to be derived by residents should the boundary change be made and to solicit public opinions on the proposed annexation. The Local Boundary Commission may require that transcripts or minutes be taken of such meetings or hearings for the commission's use and may require that the municipality certify to the commission that such meetings or hearings were conducted as directed by the commission. (Eff. 10/13/72, Reg. 43)

Authority: Art. X, Sec. 12
State Constitution
AS 44.19.260(a)(1)

ARTICLE 2. STEP ANNEXATION.

Section
190. Petition
200. Local election
210. Taxes
220. Voting
230. Ordinances
240. Borough services

19 AAC 10.190. PETITION. An annexation petition submitted to the Local Boundary Commission may request that during each of not more than five full fiscal years after the annexation takes effect, the rate of taxation for city services on the annexed properties shall be at a specified percentage of the full city tax rate. The proposal shall provide an increase from fiscal year to fiscal year until the percentage equals 100 percent of the full city tax rate. The city may not tax annexed property at a rate other than the percentage authorized for that year. Provided, however, that the municipality pursuant to AS 29.53.405 may levy taxes in the annexed area at a different percentage from that authorized for the year in question, if such difference is attributed to the cost of provision in the territory of a special service not supported by the general municipal levy. (Eff. 2/28/65, Reg. 14; am 10/13/72, Reg. 43)

Authority: Art. X, Sec. 12
State Constitution
AS 29.53.405
AS 44.19.260(a)(2)

19 AAC 10.200. LOCAL ELECTION. The Local Boundary Commission will require the governing body of the municipality to which annexation is sought to submit the proposal to the voters in the area to be annexed. The municipality shall bear all expenses of said election and shall submit to the Department of Community and Regional Affairs or Local

Boundary Commission such information and/or reports that either may require prior to, during or subsequent to the election. No such election shall be valid unless the notices pertaining to such election, the way in which the proposal is phrased on the ballot, and the timing of the election have been approved by the Commissioner of the Department of Community and Regional Affairs. (Eff. 2/28/65, Reg. 14; am 10/13/72, Reg. 43)

Authority: Art. X, Sec. 12
State Constitution
AS 44.19.260(a)(2)

19 AAC 10.210. TAXES. The percentage of city taxes on newly annexed properties is determined as follows:

(1) city services to be provided during each year are scheduled by the petitioners or the Local Boundary Commission in consultation with city officials;

(2) the cost of each service as a percentage of the gross general fund expenditure for the fiscal year immediately preceding the annexation is computed;

(3) newly annexed residents pay a percentage of the full city property tax rate equal to the total percentage cost of all services provided. (Eff. 10/13/72, Reg. 43)

Authority: Art. X, Sec. 12
State Constitution
AS 44.19.260(a)(2)

19 AAC 10.220. VOTING. Residents in the newly annexed territory have the same voting privileges as other city residents. (Eff. 10/13/72, Reg. 43)

Authority: Art. X, Sec. 12
State Constitution
AS 44.19.260(a)(2)

19 AAC 10.230. ORDINANCES. City sales tax ordinances and all other city ordinances except those applicable to city services not yet provided are immediately effective in the annexed territory. (Eff. 10/13/72, Reg. 43)

Authority: Art. X, Sec. 12
State Constitution
AS 44.19.260(a)(2)

19 AAC 10.240. BOROUGH SERVICES. The city must accept immediate responsibility for non-areawide borough services currently provided in the newly annexed territory. (Eff. 10/13/72, Reg. 43)

Authority: Art. X, Sec. 12
State Constitution
AS 44.19.260(a)(2)

CHAPTER 15. BOUNDARY CHANGES BY LOCAL ACTION

Article
1. Annexation to Municipalities
2. Detachment from Municipalities

ARTICLE 1. ANNEXATION TO MUNICIPALITIES

Section
10. Initiation of request for boundary change
20. Form and contents of petition
30. Exhibits
40. Annexation of territory of another municipality
50. Filing of petition
60. Sufficiency
70. Review by Local Boundary Commission
80. Election
90. Notice of election
100. Conduct of election
110. Form of ballot
120. Canvassing of election
130. Effective date of annexation
140. Annexation without election
150. Annexation of municipally-owned property
160. Timeliness

19 AAC 15.010. INITIATION OF REQUEST FOR BOUNDARY CHANGE. (a) A request for an annexation under secs. 10–160 of this chapter may be initiated by a petition signed by at least ten percent of the currently registered voters residing within the territory proposed to be annexed, or by a petition of the municipality seeking annexation.

(b) The person or entity initiating the p tition shall be designated petitioner. (Eff. 4/1/73, Reg. 45)

Authority: Art. X, Sec. 12
State Constitution
AS 29.68.010(b)
AS 44.19.260(a)(2)

19 AAC 15.020. FORM AND CONTENTS OF PETITION. (a) The petition shall be addressed to the Department of Community and Regional Affairs and shall bear a caption which clearly identifies the nature of the boundary change and the municipality whose boundary is to be changed.

(b) The petition shall contain·

(1) the name, residence address, and mailing address of each peititoner;

(2) the name and mailing address of the attorney or other representative designated by the petitioner(s) to receive service, notice and all other correspondence relating to the proceedings in behalf of the petitioner(s);

(3) a legal description of the territory affected by the proposed boundary change;

(4) the estimated number of residents within the territory proposed to be annexed;

(5) the quantity of land contained within the territory proposed to be annexed;

(6) the assessed or estimated value of all real and personal property within the territory proposed to be annexed;

(7) the rate or rates at which real and personal property are taxed within the municipality to which annexation is proposed;

(8) the rate or rates of any sales or use tax levied by and/or collected within the municipality to which annexation is proposed;

(9) the amount of and a full explanation of any outstanding bonded indebtedness for which the territory proposed to be annexed is wholly or partially responsible;

(10) the population and area of the annexing municipality. (Eff. 4/1/73, Reg. 45)

Authority: Art. X, Sec. 12
State Constitution
AS 29.68.010(b)
AS 44.19.260(a)(2)

19 AAC 15.030. EXHIBITS. There shall be appended to the petition the following exhibits;

(1) a map or maps showing the boundaries of the territory proposed for annexation; and

HOUSE COMMUNITY AND REGIONAL
AFFAIRS COMMITTEE

Matter of the annexation of territory to the City of Kodiak

January 29, 1979

YOU HAVE ASKED ME HERE BRIEFLY TO PROVIDE AN OVERVIEW OF THE ROLE ENVISIONED FOR THE LEGISLATURE IN ITS REVIEW OF AN ANNEXATION WHICH HAS BEEN RECOMMENDED BY THE STATE'S LOCAL BOUNDARY COMMISSION. THAT IS NOT AN EASY TASK. AND, WHILE MY REMARKS SHOULD BE UNDERSTOOD BY YOU TO BE LESS IN THE NATURE OF "RULES" THAT MUST BE FOLLOWED THAN THEY ARE "OBSERVATIONS" OR "SUGGESTIONS" THAT MAY BE CONSIDERED, I HOPE THAT THEY WILL HELP YOU TO FOCUS ON THE MERITS OF THE ARGUMENTS THAT ARE TO BE PRESENTED ON BOTH SIDES OF THE MATTER FREE OF THE EMOTIONALISM THAT IS CHARACTERISTIC OF VIRTUALLY EVERY SIGNIFICANT BOUNDARY CHANGE.

THERE IS A PURPOSE TO THIS PROCESS. IT IS A MANDATE OF THE ALASKA CONSTITUTION THAT THE ALASKA LEGISLATURE REVIEW AND CONSIDER BOUNDARY CHANGES FAVORABLY RECOMMENDED BY THE STATE'S LOCAL BOUNDARY COMMISSION. THE SOURCE OF THAT MANDATE IS ARTICLE X, SECTION 12, PART OF THE LOCAL GOVERNMENT ARTICLE OF THE STATE CONSTITUTION:

> A local boundary commission or board shall be established by law in the executive branch of the state government. The commission or board may consider any proposed local boundary change. It may present proposed changes to the legislature during the first ten days of any regular session. The change shall become effective 45 days after presentation or at the end of the session, whichever

is earlier, unless disapproved by a resolution concurred in by a majority of the members of each house.

THAT RESOLUTION, HOUSE JOINT RESOLUTION 10, OFFERED BY REPRESENTATIVE ZHAROFF, IS, OF COURSE, THE MECHANISM BY WHICH THE LEGISLATURE MAY EXPRESS ITS DISAPPROVAL.

OVER THE WEEKEND, I SPENT SEVERAL HOURS RESEARCHING ANY INFORMATION THAT WOULD SHED LIGHT ON WHAT WAS INTENDED BY THIS CONSTITUTIONAL PROCEDURE. I FOUND SIGNIFICANT COMMENTARY CONCERNING THE ROLE AND RESPONSIBILITY OF A PROPOSED (FROM THE PERSPECTIVE OF 1955-56) COMMISSION OR BOARD TO CONCERN ITSELF WITH DEVELOPMENT OF A LOCAL GOVERNMENT FRAMEWORK ADAPTABLE TO MEET THE NEEDS OF DIFFERENT AREAS OF THE STATE AND THE PRINCIPAL ROLE ASSIGNED TO IT OF REVIEWING AND TAKING ACTION ON CHANGES IN BOUNDARIES OF MUNICIPALITIES. TYPICAL WERE THESE COMMENTS, COMPOSED AFTER THE CONSTITUTION HAD BEEN DRAFTED BUT BEFORE THE PROCLAMATION OF STATEHOOD WHICH WOULD GIVE LIFE TO THE PROPOSED CONSTITUTION:

> The constitutional provision regarding local boundaries contained in article X, sec. 12, was written for the purpose of unfreezing municipal boundaries and making them readily adjustable to changing needs resulting from the growth and movement of population and from changes in the demands for local services. The section of the Constitution was <u>designed to overcome roadblocks which vested local interests and prejudices in small segments of natural communities often put in the way of a proper readjustment of local boundary lines.</u> . . .

FURTHER ALONG IN THE SAME DOCUMENT, THERE APPEARS THIS ADDITIONAL OBSERVATION:

> The basic assumption in this discussion of annexation is one which is implicit in the local government article of the State Constitution. The assumption is that worthwhile local home rule depends upon the thoughtful and courageous exercise of the state's responsibility for establishing and maintaining ... responsible self-government. The State cannot discharge its responsibility for local institutions by automatically ratifying the petitions or votes of any groups of local citizens that may happen to express themselves favorably or unfavorably with respect to ... annexation. To pursue such a course would result in such a conglomeration of local jurisdictions as would make a mockery of the whole concept of local self-government.

TWO POINTS, THEN, WITH REFERENCE TO THE MATERIAL QUOTED: FIRST, THE ADAPTATION OF LOCAL GOVERNMENT TO CONTINUALLY CHANGING CONDITIONS IS A CHARACTERISTIC OF ALASKA'S LOCAL GOVERNMENT SYSTEM; SECOND, THAT DECISION MUST BE TAKEN NOT BY THOSE IMMEDIATELY AFFECTED BUT BY A STATE AGENCY (THE LOCAL BOUNDARY COMMISSION) ON THE BASIS OF INDEPENDENT EVALUATION.

NOW, WHILE THERE IS A SIGNIFICANT AMOUNT OF MATERIAL ANALYZING OR COMMENTING UPON THE NECESSITY FOR AND PROPER ROLE OF A STATE BOARD TO REVIEW AND CONSIDER LOCAL BOUNDARY CHANGES, THERE IS VIRTUALLY NOTHING TO DESCRIBE THE PURPOSE OF LEGISLATIVE OVERSIGHT. THE COMMENTARY OFFERED BY THE DRAFTSMEN OF THE STATE CONSTITUTION IS UNENLIGHTENING. OTHER SOURCES, NOTABLY EFFORTS BY THE LEGIS-

LATURE AND THE COURTS TO FILL THE GAP, ARE USEFUL AS COMMENTARY, BUT OFFER NO FIRM RULES. LET ME OFFER, THEN, SOME OF MY OWN THOUGHTS.

YOU MUST UNDERSTAND, FIRST, THAT THE CITIES AND BOROUGHS OF THE STATE OF ALASKA ARE POLITICAL SUBDIVISIONS OF THE STATE -- CREATURES OF THE STATE, SOMEONE HAS CALLED THEM, AND, AS THE ELEVENTH BIENNIAL LEGISLATURE WENDS ITS WAY INTO HISTORY, AND YOU ARE CALLED UPON TO CONSIDER TESTIMONY ON ONE OR ANOTHER BILLS BEARING ON LOCAL GOVERNMENT STRUCTURE, FUNCTION, AND FINANCES, YOU WILL BETTER UNDERSTAND THE CHOICE OF THAT WORD "CREATURES." AS POLITICAL SUBDIVISIONS, THE CITIES AND BOROUGHS WHICH HAVE BEEN INCORPORATED ARE ESTABLISHED TO PERFORM PORTIONS OF THE STATE'S RESPONSIBILITIES FOR GOVERNMENT THAT THEY ARE CAPABLE OF PERFORMING. GENERALLY, THE MORE THAT CAN BE PERFORMED AT THE INSTANCE OF LOCAL OFFICIALS, WITHOUT DETAILED ATTENTION FROM STATE OFFICIALS, HOPEFULLY, THE BETTER FOR ALL CONCERNED. BUT THE STATE CANNOT ESCAPE RESPONSIBILITY FOR THE ESSENTIAL QUALITY AND COMPETENCE OF THE UNITS OF LOCAL GOVERNMENT WHICH EXIST AND OPERATE IN ACCORDANCE WITH APPLICABLE STATE STATUTES. THUS, THE LEGISLATURE'S ROLE -- FROM THE OUTSET, EVEN WITH RESPECT TO ANNEXATIONS -- IS ONE OF OVERSIGHT.

LOCAL GOVERNMENT INVOLVES THE DISCHARGE OF LEGAL RESPONSIBILITIES, BOTH THOSE THAT MAY BE ACCEPTED BY THE VOTERS OF THE COMMUNITY AND THOSE WHICH MAY BE IMPOSED BY THE STATE. THE LEGISLATURE SHOULD UNDERSTAND, AND I THINK IT DOES GENERALLY UNDERSTAND, THAT THE CAPACITIES AND ABILITIES OF MUNICIPALITIES TO ACCEPT AND DISCHARGE THESE RESPONSIBILITIES GREATLY VARIES. THUS, THE REVIEW PROCESS OFFERS AN OPPORTUNITY TO GAUGE THE CAPACITIES OF THE LOCAL GOVERN-

MENT UNIT INVOLVED IN AN ANNEXATION, TO SEE WHETHER THE CITY (AS IN THIS INSTANCE) OR BOROUGH (IF THAT WERE THE CASE) WERE CAPABLE OF PROVIDING SERVICES THROUGHOUT AN EXPANDED AREA.

NEXT, I BELIEVE THE LEGISLATURE MAY PROPERLY INQUIRE INTO THE ANTICIPATED EFFECT OF THE BOUNDARY CHANGE OF THE PEOPLE INVOLVED, PRINCIPALLY THE RESIDENTS OF THE AREA IN QUESTION, BUT ALSO THOSE WHO ALREADY RESIDE WITHIN THE UNIT OF GOVERNMENT AND WHO MAY SEE CURRENT SERVICE LEVELS DILUTED IN AN EXTENSIVE AREAWIDE EXPANSION OR, IN THE ALTERNATIVE, AN INCREASE IN THE TAX BURDEN. TAXATION IS ALWAYS THE CENTRAL FACTOR IN ANNEXATION DECISIONS, BUT IT IS ALMOST NEVER PROPERLY FOCUSSED. THE QUESTION IS NOT ONE OF TAX INCREASE THAT NORMALLY ATTENDS THE INCLUSION OF NEW TERRITORY INTO AN EXISTING TAX-LEVYING JURISDICTION, BUT RATHER, WHETHER, FIRST, LEVELS OF TAXATION CAN BE RELATED TO LEVELS OF SERVICE TO BE OFFERED AND, SECOND, WHETHER ANNEXATION, WITH ITS ATTENDANT TAX BURDEN CHANGES, WILL CONTRIBUTE TO A BETTER SHARING OF THE BURDENS AND OPPORTUNITIES FOR LOCAL GOVERNMENT THROUGHOUT A METROPOLITAN REGION, EVEN IF, AS IN THIS INSTANCE, THE METROPOLIS IS ONLY THE SIZE OF "GREATER KODIAK."

FOURTH, I WOULD SUGGEST AS A FACTOR OR ELEMENT WARRANTING LEGISLATIVE EXAMINATION IS THE RESULTANT RELATIONSHIP OF THE ANNEXATION ON CITY/BOROUGH RELATIONS. IN TWO DECADES, IT HAS BECOME RATHER CLEAR THAT THE THEORETICAL DIFFERENCES PERCEIVED BY THE FRAMERS OF THE CONSTITUTION WHICH WARRANTED A CONCLUSION ON THEIR PART THAT THERE BE TWO TYPES OF LOCAL GOVERNMENT -- THE CITY AND THE BOROUGH -- GIVE RISE TO OTHER DIFFERENCES IN PRACTICE. CITY-BOROUGH RELATIONSHIPS THROUGH THE LAST 20 YEARS CAN ONLY BE DESCRIBED AS "STORMY."

THE CASE BOOKS AND MEETINGS OF MUNICIPAL GOVERNMENTS ARE REPLETE WITH THE RESULTS OF LITIGATION, THREATS OF LITIGATION, AND REACTIONS TO LITIGATION AS CITIES AND BOROUGHS STRIVE FOR POLITICAL ACCOMODATION, IF NOT FOR POLITICAL BALANCE. IN THREE MAJOR URBAN AREAS, ANCHORAGE, JUNEAU, AND SITKA, THE PROBLEM HAS BEEN RESOLVED BY UNIFICATION. IN OTHERS, NOTABLY FAIRBANKS AND KETCHIKAN, MINOR BOUNDARY ADJUSTMENTS HAVE SERVED TO ACHIEVE THAT BALANCE. THAT SAME PROCESS MAY NOW BE UNFOLDING IN THE KODIAK ANNEXATION. THE LEGISLATURE MAY DO WELL TO CONSIDER WHETHER FULFILLMENT OF THE ANNEXATION WILL HAVE AN EFFECT ON THE RANGE OF POLITICAL, SERVICE AND OTHER RELATIONSHIPS BETWEEN THE CITY AND THE BOROUGH AND WHETHER, IN THE SHORT-RANGE AND IN THE LONG-RUN, THOSE RELATIONSHIPS WILL GROW STRONGER.

FIFTH, LASTLY, IS THE OPPORTUNITY FOR THE LEGISLATURE TO REVIEW THE DECISION OF THE LOCAL BOUNDARY COMMISSION FOR COMPLIANCE WITH PROPER ADMINISTRATIVE PROCEDURES. WAS THE HEARING PROPERLY NOTICE? WERE THOSE IN ATTENDANCE GIVEN OPPORTUNITY TO COMMENT? DID THE COMMISSION ENTER A DECISION ON THE RECORD? DID THE COMMISSION ADHERE TO ITS OWN REQUIREMENTS? PROCEDURAL COMPLIANCE IS IMPORTANT. AT LEAST ONE ANNEXATION OF THE COMMISSION HAS BEEN SET ASIDE BY THE COURTS FOR FAILURE OF THE COMMISSION TO ATTEND TO STATUTORY REQUIREMENTS. THE LEGISLATURE COULD SAVE TIME AND LITIGATION BY REFUSING AN ANNEXATION, NO MATTER HOW MERITORIOUS, IF THERE HAS BEEN A SUBSTANTIAL FAILURE TO MEET ADMINISTRATIVE REQUIREMENTS.

THE PART OF THE LOCAL BOUNDARY CHANGE PROCESS WHICH REQUIRES OR ALLOWS LEGISLATIVE REVIEW OF A BOUNDARY COMMISSION DECISION IS VERY MUCH A POLITICAL PROCESS. THE INQUIRIES YOU DIRECT TO

THE PERSONS WHO APPEAR BEFORE YOU MAY BE AS BROAD, AS IMAGINATIVE, EVEN AS UNRELATED TO THE PARTICULARS OF THE SUBJECT MATTER BEFORE YOU AS IT IS POSSIBLE FOR THEM TO BE. THERE ARE NO LIMITATIONS ON WHAT YOU MAY REQUIRE: THERE IS BUT ONE THING THAT YOU MAY DO -- THE RESOLUTION OFFERED BY MR ZHAROFF IS THE VEHICLE FOR ANNULLING THE RECOMMENDED ANNEXATION IN ITS ENTIRETY; YOU CANNOT REDRAW THE LINES. (THAT IS NOT TO SAY THAT, IN THE EVENT YOU CHOOSE TO RECOMMEND ANNULMENT, YOU CANNOT ADOPT THE RESOLUTION OF MR ZHAROFF BUT, AT THE SAME TIME, REQUIRE THE COMMISSION TO RECONSIDER SPECIFIC BOUNDARY CHANGES OF THE CITY, SPECIFYING THE AREAS OF YOUR CONCERN. ALTERNATIVELY, IF THERE ARE AREAS WHICH THE BOUNDARY COMMISSION EXCLUDED FROM ANNEXATION BUT WHICH YOU BELIEVE SHOULD BE RECONSIDERED FOR INCLUSION, YOU MAY DIRECT THAT, BY RESOLUTION, TO THE ATTENTION OF THE COMMISSION.)

NOW, I DON'T KNOW WHETHER THESE MUSINGS FULFILLED THE INTENT OF THE CHAIRMAN IN EXTENDING AN INVITATION FOR ME TO SIT IN THIS CHAIR. BUT I HOPE IT CONTRIBUTES SOMETHING TO YOUR DELIBERATIONS , AND THAT IT MAKES THIS EFFORT AT LEGISLATIVE REVIEW MORE MEANINGFUL TO YOU. I DON'T ENVY YOU THE TASK.

IF THERE ARE ANY QUESTIONS WITH RESPECT TO ANY OF THESE POINTS, I WILL TRY TO RESPOND.

THANK YOU.

2665 - 66
2748 - 57
2749 - 60

Extended Home Rule

SECTION 10. The legislature may extend home rule to other boroughs and cities.

Home Rule Powers

SECTION 11. A home rule borough or city may exercise all legislative powers not prohibited by law or by charter.

Boundaries

SECTION 12. A local boundary commission or board shall be established by law in the executive branch of the state government. The commission or board may consider any proposed local government boundary change. It may present proposed changes to the legislature during the first ten days of any regular session. The change shall become effective forty-five days after presentation or at the end of the session, whichever is earlier, unless disapproved by a resolution concurred in by a majority of the members of each house. The commission or board, subject to law, may establish procedures whereby boundaries may be adjusted by local action.

Agreements: Transfer of Powers

SECTION 13. Agreements, including those for cooperative or joint administration of any functions or powers, may be made by any local government with any other local government, with the State, or with the United States, unless otherwise provided by law or charter. A city may transfer to the borough in which it is located any of its powers or functions unless prohibited by law or charter, and may in like manner revoke the transfer.

Local Government Agency

SECTION 14. An agency shall be established by law in the executive branch of the state government to advise and assist local governments. It shall review their activities; collect and publish local government information, and perform other duties prescribed by law.

Special Service Districts

SECTION 15. Special service districts existing at the time a borough is organized shall be integrated with the government of the borough as provided by law.

LEGISLATIVE AFFAIRS AGENCY

MEMORANDUM January 31, 1979

SUBJECT: Annexation to the City of Kodiak

TO: Representative Bill Parker, Chairman
House Community & Regional Affairs Committee

FROM: John B. Chenoweth, Legislative Counsel

May I take this opportunity to clarify and expand on one point of discussion and inquiry concerning yesterday's testimony.

I suggested that I thought there were four courses of action open to the Legislature with respect to the Local Boundary Commission's recommendation to annex territory to the City of Kodiak. It could, of course, adopt HJR 10, setting aside the recommendation in its entirety. It could, in the alternative, take no action, allowing the annexation to become effective sometime around March 9.

The other alternatives derive from the precedent of an annexation to the City of Seward in 1964. In that year, the Legislature provided that an extensive area to the north of that city be made a part of the municipality. In the next year, 1965, the Legislature sought to provide by direct legislation for detachment of the territory. The House adopted the measure, but the Senate substituted its own resolution, asking the Local Boundary Commission to reconsider portions of the 1964 recommendation during the following interim. The Commission did respond to the Senate's request, submitting a recommendation in 1966 by which portions of the territory which was earlier annexed by Legislative act was subsequently detached. This recommendation was reviewed by the Legislature and not annulled, thus effecting a second boundary adjustment to the City of Seward.

I would see, then, the precedent of the Seward annexation as a third possible alternative, together with its converse, the adoption of HJR 10 (annulling the Kodiak City annexation) and the adoption of a separate concurrent resolution requesting the Boundary Commission to reconsider its decision. Representative Parr's observation to the effect that the Legislature cannot "guarantee" a Local Boundary Commission is entirely correct, but I do think that this approach adds a little to the Legislature's ability to assure rational and equitable results in local boundary change matters.

SENATE
JOURNAL SUPPLEMENT

January 24, 1979 Wednesday No. 3

STATE OF ALASKA

LOCAL BOUNDARY COMMISSION

JUNEAU, ALASKA

RECOMMENDATIONS OF THE LOCAL BOUNDARY COMMISSION SUBMITTED TO THE ELEVENTH STATE LEGISLATURE FIRST SESSION ASSEMBLED

SUBMITTED JANUARY 23, 1979

RECOMMENDATIONS

. Recommendation for annexation of territory to the City of Kodiak.

. Recommendation for correcting an error in the present corporate boundary description of the Kenai Peninsula Borough.

STATE OF ALASKA

LOCAL BOUNDARY COMMISSION

JUNEAU, ALASKA

RECOMMENDATION FOR ANNEXATION OF TERRITORY TO THE CITY OF KODIAK, ALASKA

SUBMITTED TO THE ELEVENTH LEGISLATURE, FIRST SESSION ASSEMBLED

SUBMITTED JANUARY 23, 1979

RECOMMENDATION FOR ANNEXATION OF TERRITORY

to the

City of Kodiak

WHEREAS, the petitioner, the City of Kodiak, has requested that certain property in the Mill Bay area be annexed to the city, to wit: twenty five lots contiguous to and North and East of the City of Kodiak, including residential and commercial properties; and

WHEREAS, upon receipt of the petition, the Department of Community and Regional Affairs determined that the petition was sufficient; and

WHEREAS, subsequent to giving proper notice, the Local Boundary Commission held a public hearing at Kodiak, Alaska, on December 12, 1977, in the Kodiak City Council Chambers; and

WHEREAS, as a result of that public hearing, the Local Boundary Commission determined other urban lands in addition to those defined in the petition might be suitable for annexation to the City of Kodiak; and

WHEREAS, after giving proper public notice, the Local Boundary Commission held an additional public hearing at Kodiak on April 26, 1978, to consider annexation of geographical areas generally described as the Spruce Cape area, the Mill Bay area, the Monashka Bay area, and the United States Coast Guard Station to the City of Kodiak; and

WHEREAS, after giving proper public notice, the Local Boundary Commission held a public meeting in Anchorage on August 16, 1978, to review the record of proceedings on the

petition; and

WHEREAS, the City of Kodiak has stated to the Local Boundary Commission that it is financially capable of providing its full range of general fund services to the area encompassed by the Local Boundary Commission decision; and

WHEREAS, the Local Boundary Commission has determined that the territory to be annexed meets the standards for annexation set forth at 19 AAC 05.010(3) in that the area is generally urban in character, as evidenced by Kodiak Island Borough population estimates, property valuations, and the relatively high level of commercial activity; and

WHEREAS, the Local Boundary Commission has determined that the territory to be annexed meets the standards for annexation set forth at 19 AAC 05.010(4) in that evidence gathered at the public hearings shows that the area to be annexed is in need of municipal services which can be most efficiently provided by the City of Kodiak; and

WHEREAS, the Local Boundary Commission has determined that the territory to be annexed meets the standards for annexation set forth at 19 AAC 05.010(5) in that Kodiak Island Borough planning documents indicate there is likelihood that growth and development will occur in the territory and annexation will enable the city to plan for and control that development and arrange the most efficient municipal services plan to accommodate the expected growth;

NOW, THEREFORE, the Local Boundary Commission recommends that, pursuant to Article X, Section 12, of the Alaska

stitution, and Alaska Statutes 44.19.260, the petition to annex the territory generally described as the Spruce Cape area and the Mill Bay area be approved and that the boundaries of the City of Kodiak be amended to read as follows:

Beginning at Corner 3 of U.S. Survey 3945, said point being the true point of beginning; thence,

(1) S 55°21'W, 10,868.88 feet to Corner 2 of U.S. Survey 3945; thence,

(2) S 34°34'E, 4250.40 feet to Corner 1 of U.S. Survey 3945; thence,

(3) S 5°06'E, 957.66 feet to Corner 2 of U.S. Survey 2537-B, identical with Corner 15, U.S. Survey 3945; thence,

(4) S 5°05'30"E, approximately 260.74 feet, more or less, to a point intersecting with the Northerly ROW of the Abbert Highway; thence,

(5) along the said ROW in a Westerly and then Southerly direction to a point located upon the common boundary of Public Land Orders 5566 (parcel 2) and 5550, located within U.S. Survey 1673; thence,

(6) S 45°00'E, 2000 feet; thence,

(7) Southeasterly 3,280 feet, more or less, to point "A", said point "A" lying: S 15°34'E, 1,290 feet, more or less, to the center of the channel of St. Paul Harbor from the Southwest corner of Lot 6, Block 20 of U.S. Survey 2537-B; thence,

(8) N 58°06'E, 7,470 feet to a point in the channel North of the Easterly tip of Crooked Island; thence,

(9) N 0°50'W, 1,644.7 feet to a point located in the channel between Near Island and Holiday Island; thence,

(10) N 42°22'E, 5,200 feet, to Point "B", said point "B" lying: S 42°22'W, 3,037.1 feet, more or less, from a point on an

isolated rock which bears S 31°50'E, 191.95 feet from WC 6 MC, U.S. Survey 1822, said point also lying S 32°24'E, 1,162 feet, more or less, from MC 6, U.S. Survey 2873; thence,

(11) N 32°24'W, to a point in the channel which is 1,000 feet from the mean high water line of Kodiak Channel; thence,

(12) along a line, 1000 feet seaward, from the meander line of mean high water in a Northeasterly and then Northwesterly direction to a point 1,000 feet Northerly from the most Northerly tip, at mean high water, of Spruce Cape; thence,

(13) continuing along a line, 1,000 feet seaward, from the meander line of mean high water, proceeding around Mill Bay in a Southwesterly, Northwesterly, and then Northeasterly direction, to a point which is located upon the projected extension seaward of the Northern boundary of Lot 17, Block 1, Second Addition of Miller Point Subdivision, plat approved 11/29/66, said boundary being more specifically described as a line bearing S 73°01'E from the Division of Lands Witness Corner monument located 15 feet West of the Northeast Corner of Lot 17, Block 1, of said subdivision; thence,

(14) N 73°01'W, 1,000 feet to the Northeast Corner of Lot 17, Block 1, of said subdivision; thence,

(15) N 73°01'W, along the Northerly boundary of Lot 17, Block 1, of said subdivision, 327.41 feet, and continuing on approximately the same bearing an additional 1728.59 feet to WC 6 of Lot 3, U.S. Survey 3462; thence,

(16) S 47°56'W, 2551.56 feet to Corner 1, Lot 3, U.S. Survey 3462, identical to the East Corner of Lot 3 of Block 6, Monashka Bay Subdivision, plat approved 9/19/67; thence,

(17) S 45°42'59"W, 295.41 feet, to the South Corner of Lot 3, Block 6 of said subdivision; thence,

(18) N 44°05'04"W, approximately 115 feet, along the Southwesterly boundary of Lot 3, Block 6 of said subdivision to a point which bears N 50°13'26"E from the South Corner of

Lot 7, Block 5, of said subdivision; thence,

(19) S 50°13'26"W, across Otmeloi Way to the South boundary of Lot 7, Block 5, of said subdivision, and continuing along the Westerly ROW of Lake View Drive, 4,433.17 feet, more or less, to the Southeast Corner of Lot 7 of Block 8 of the Monashka Bay Subdivision, plat approved 9/19/67; thence,

(20) S 79°11'50"E, 569.59 feet, to Corner 5 of U.S. Survey 3467; thence,

(21) S 23°54'W, 2500.01 feet, to Corner 4 of U.S. Survey 3467, identical with Corner 4 of U.S. Survey 3468; thence,

(22) S 85°27'W, 746.33 feet, to Corner 3 of U.S. Survey 3468, identical with Corner 7 of U.S. Survey 2538-A; thence,

(23) S 55°21'W, 1893.54 feet, to Corner 4 of U.S. Survey 3945; thence,

(24) N 34°39'W, 2811.6 feet to Corner 3 of U.S. Survey 3945, the true point of beginning.

In accordance with Article X, Section 12, of the Alaska Constitution, this recommendation shall become effective forty-five days after presentation to the legislature or at the end of the session, whichever is earlier, unless disapproved by a resolution concurred in by a majority of the members of each house.

STATE OF ALASKA

LOCAL BOUNDARY COMMISSION

JUNEAU, ALASKA

RECOMMENDATION FOR CORRECTING AN ERROR IN THE PRESENT CORPORATE BOUNDARY DESCRIPTION OF THE KENAI PENINSULA BOROUGH

SUBMITTED TO THE ELEVENTH LEGISLATURE, FIRST SESSION ASSEMBLED

SUBMITTED JANUARY 23, 1979

RECOMMENDATION FOR CLARIFICATION OF SOUTHEASTERLY BOUNDARY

of the

KENAI PENINSULA BOROUGH

WHEREAS, the Local Boundary Commission has requested that the boundary description of the Kenai Peninsula Borough, dated April 30, 1974, be corrected and clarified in the southeasterly part of the boundary description, in the general area of Sargent Ice Field and the Chugach National Forest Boundary; and

WHEREAS, subsequent to giving proper notice, the Local Boundary Commission conducted a public hearing in Soldotna on Friday, January 12, 1979, to consider whether the boundary in question should be clarified and corrected; and

WHEREAS, after giving proper notice, the Local Boundary Commission held a public meeting in Yakutat on Thursday, January 18, 1979, reviewed the original boundaries, the proposed clarification, and all testimony prior to and during the January 12, 1979, public hearing; and

WHEREAS, the Kenai Peninsula Borough is in accord with the proposed clarification;

NOW, THEREFORE, the Local Boundary Commission recommends that, pursuant to Article X, Section 12, of the Alaska Constitution, and Alaska Statutes 44.19.260, the recommendation to clarify and correct the southeasterly boundary of the Kenai Peninsula Borough be approved and the following described boundary be adopted:

Beginning at Cape Douglas on the west side of Cook Inlet at the N.E. Corner of Sec. 27, T15S, R24W (projected), Seward Meridian, State of Alaska; thence West to the N.E. Corner of Sec. 29, T15S, R26W (projected); thence South to the S.E. Corner of Sec. 32, T16S, R26W (projected); thence West to the N.E. Corner of T17S, R28W (projected); thence South to the S.E. Corner of T17S, R28W (projected); thence West to the S.W. Corner of T17S, R32W (projected); thence North to the N.W. Corner of T17S, R32W (projected); thence West to the S.W. Corner of T16S, R32W (projected); thence North to the N.W. Corner of T13S, R32W (projected); thence West to the S.W. Corner of T12S, R32W (projected); thence North to the N.W. Corner of T11S, R32W (projected); thence East to the S.W. Corner of T10S, R30W (projected); thence North to the N.W. Corner of T9S, R30W (projected); thence East to the S.E. Corner of T8S, R29W (projected); thence North to the N.E. Corner of T8S, R29W (projected); thence East to the N.E. Corner of T8S, R28W (projected); thence North to the N.W. Corner of T6S, R27W (projected); thence East to the S.W. Corner of T5S, R26W (projected); thence North to the N.W. Corner of T5S, R26W (projected); thence East to the S.W. Corner of T4S, R25W (projected); thence North to the N.W. Corner of T1S, R25W (projected); thence East to the S.W. Corner of T1N, R24W (projected); thence North to the N.W. Corner of T4N, R24W (projected); thence East to the S.W. Corner of T5N, R23W (projected); thence North to the N.W. Corner of T8N, R23W (projected); thence West to the S.E. Corner of T9N, R24W (projected); thence North to the N.E. Corner of T12N, R24W (projected); thence West to the S.E. Corner of T13N, R24W (projected); thence North to the N.E. Corner of T15N, R24W (projected); thence East to the N.E. Corner of T15N, R12W (projected); thence South to the N.W. Corner of T13N, R11W (projected); thence East to the N.E. Corner of T13N, R10W (projected); thence South to the S.E. Corner of T13N, R10W (projected), said Corner being in Cook Inlet at Longitude 150°58'18"W, Latitude 61°10'00"N; thence Southeasterly to the S.E. Corner

of T12N, R9W (projected), said Corner being in Cook Inlet at Longitude 150°46'37"W, Latitude 61°04'49"N; thence Northeasterly to the N.E. Corner of T12N, R7W (projected), said Corner being in Cook Inlet at Longitude 150°26'01"W, Latitude 61°10'01"N; thence Southeasterly to the N. E. Corner of T11N, R6W (projected), said Corner being in Turnagain Arm at Longitude 150°14'40"W, Latitude 61°04'49"N; thence East to the N.E. Corner of T11N, R5W (projected), said Corner being in Turnagain Arm at Longitude 150°04'01"W, Latitude 61°04'49"N; thence Southeasterly to the N.E. Corner of Sec. 24, T10N, R2W (projected), said Corner being in Turnagain Arm at Longitude 149°32'05"W, Latitude 60°57'01"N; thence Southeasterly to the N.E. Corner of T9N, R1W (projected), said Corner being in Turnagain Arm at Longitude 149°21'26"W, Latitude 60°54'25"N; thence East to the N.E. Corner of T9N, R1E (projected), said Corner being in Turnagain Arm at Longitude 149°10'48" West, Latitude 60°54'25" North; thence Southeasterly to the N.E. Corner of Sec. 15, T9N, R2E (projected), said Corner being in Turnagain Arm at Longitude 149°03'41"W, Latitude 60°52'41"N; thence Southerly to the N.E. Corner of Sec. 26, T9N, R2E (projected), said Corner being in Turnagain Arm at Longitude 149°01'55"W, Latitude 60°50'57"N; thence South to the S.E. Corner of Section 35, T9N, R2E (projected); thence West to the N.E. Corner of Section 2, T8N, R2E (projected); thence South to the N.E. Corner of Sec. 2, T7N, R2E (projected); thence East to the N.E. Corner of T7N, R4E (projected); thence South to the S.E. Corner of T5N, R4E (projected); thence West to the N.E. Corner of T4N, R4E (projected); thence South to the N.E. Corner of Sec. 25, T4N, R4E (projected); thence East to the S.E. Corner of the S.W. 1/4 of Sec. 22, T4N, R5E (projected); thence Southerly to the S.E. Corner of the S.W. 1/4 of Sec. 34, T1N, R5E (projected); thence West to the N.E. Corner of the N.W. 1/4 of Sec. 3, T1S, R5E (projected); thence Southerly to the S.E. Corner of the N.W. 1/4 of Sec. 27, T1S, R5E (projected); thence West to the S.W. Corner of the

N.W. 1/4 of Sec. 27, T3S, R5E (projected); thence South to the N.E. Corner of Sec. 9, T3S, R5E (projected); thence Southwesterly to the S.E. Corner of Sec. 7, T3S, R5E (projected), said Corner being at or approximately at Cape Junken; thence Southwesterly to the S.E. Corner of the N.E. 1/4 of Sec. 4, T4S, R1E (projected), said Corner being at or approximately at Barwell Island; thence Southwesterly to the N.E. Corner of the S.E. 1/4 of Sec. 17, T5S, R1W (projected), said Corner being at or approximately at Pilot Rock; thence Southwesterly to the S.W. Corner of the S.E. 1/4 of Sec. 33, T7S, R2W (projected), said Corner being at or approximately at Seal Rock; thence Southwesterly to the N.W. Corner of Sec. 14, T10S, R7W (projected), said Corner being at or approximately at Pye Reef; thence Southwesterly to the S.E. Corner of the N.E. 1/4 of Sec. 23, T11S, R10W (projected), said Corner being at or approximately at Gore Point; thence Southwesterly to the S.E. Corner of the N.E. 1/4 of Sec. 27, T12S, R13W (projected), said Corner being on or approximately on the Southerly point of East Chugach Island; thence Southwesterly to the S.E. Corner of Sec. 31, T12S, R14W (projected), said Corner being at or approximately at Perl Rock; thence Southwesterly to Longitude 153°00'00"W, Latitude 59°02'00"N, in Cook Inlet; thence Southwesterly to the place of beginning at Cape Douglas, containing 25,600 sq. mi. more or less.

Together with all State waters lying within and appurtenant to the above described boundary; EXCEPT, all waters lying more than three miles Southerly of the boundary line between Perl Rock at or approximately at the S.E. Corner of Sec. 31, T12S, R14W (projected) and Longitude 153°00'00"W, Latitude 59°02'00"N, in Cook Inlet, and the N.E. Corner of Sec. 27, T15S, R25W (projected), at Cape Douglas, Southwesterly offshore jurisdiction terminates at a line beginning at the N.E. Corner of Sec. 27, T15S, R24W (projected), at Cape Douglas; and extending S62°30'00"E three miles.

Kodiak, Alaska 99619

20 May 1978

Local Boundary Commission
State of Alaska

STATEMENT OF THE POSITION OF THE COMMANDING OFFICER, UNITED STATES COAST GUARD SUPPORT CENTER, KODIAK, ALASKA, WITH RESPECT TO THE PROPOSED ANNEXATION OF UNITED STATES COAST GUARD SUPPORT CENTER, KODIAK, ALASKA, TO THE CITY OF KODIAK, ALASKA.

To the Local Boundary Commission:

Having received notice of a public hearing to be held by the Local Boundary Commission on 20 May 1978, at Kodiak, Alaska, for the purpose of obtaining public testimony concerning, among other things, the annexation of USCG Support Center Kodiak to the City of Kodiak, I hereby offer to the Commission my written statement of the position of this Command as well as of the Commander, Seventeenth Coast Guard District, with respect to such annexation.

ANNEXATION OF THE ENTIRE SUPPORT CENTER

It has long been and it remains the position of the Support Center Kodiak Command to oppose the annexation of Support Center Kodiak to the City of Kodiak or to the Kodiak Island Borough for the following reasons:

The purpose and rationale behind annexation of any area to a political subdivision is to better serve the needs of the residents of the area through the provision of municipal services and through municipal supervision of the growth and development of the area. Annexation also provides the concommitant rights of the municipality to tax the residents of the annexed area to finance provided services and the right of the residents to a voice and vote in matters affecting the local municipality. The need for services within the area considered for annexation and the ability of the municipality to provide such services immediately or in the near furture are the prime requisites necessary to legitimize annexation. In the case of USCG Support Center Kodiak, neither of these requisites is met. Neither the City of Kodiak nor the Kodiak Island Borough provides a single substantial service to the residents of Support Center Kodiak or to the Coast Guard Command. Electrical power is generated by the Coast Guard power plant and shared with Kodiak Electric Association through a wheeling agreement. Water service to the Support Center and its residents and tenants is provided from Coast Guard sources. Sewage disposal and treatment is accomplished by Coast Guard facilities as is solid waste disposal. Road maintenance of all internal Support Center roads is accomplished by Support Center public works personnel. In the

words of the final report of the Department of Community and Regional Affairs dated May 17, 1978, the Coast Guard Support Center "is totally self-sufficient, containing all facilities and providing all services necessary for the well-being of Coast Guard personnel."

Although the Kodiak Island Borough provides schools for children residing on Support Center Kodiak, the Federal Government provides funding to offset the cost of educating those children.

If Support Center Kodiak in its entirety were annexed to the City of Kodiak and/or to the Kodiak Island Borough, certain residents of the Support Center would be subject to potential taxation based upon ownership of personal property. It should be noted that the bulk of otherwise taxable property held by Support Center residents would likely escape taxation because it is owned by military personnel who are protected from local taxation by the Soldiers and Sailors Civil Relief Act. It is nonetheless patently unreasonable to permit potential taxation of some Support Center residents when no services are received in return. The United States Government and its instrumentalities are exempt from local taxation. With the exception of the State-leased airport facility, there are no commercial activities or sales outlets on the Support Center which would be subject to significant local taxation.

It is obvious that Support Center residents do make limited use of City services while in the City of Kodiak. However, Support Center residents support such services through the payment of sales tax on transactions within the City.

The Department of Community and Regional Affair's preliminary report dated May 10, 1978, indicated the Department's position that the appropriate standards for annexation were satisfied only for the State airport portion of Support Center Kodiak. In its final report, dated May 17, 1978, the Department "suggests" that the entire Support Center be considered for annexation, citing as its only basis for including the entire Support Center the fact that the "territory is urban in character as evidenced by USCG's own estimate of population to be approximately 3,000 residents."

Even assuming that Support Center Kodiak is "urban in character" it is obvious that this standard is not properly applicable to a self-sufficient, self regulating, internally planned Federal Military Installation. The Department clearly failed to look behind the mere words of the Administrative Code and to consider the purpose behind the standard in light of the Commission's analysis guidelines and common sense.

Annexation of the Support Center could result in participation in local elections by a rather substantial, essentially transient, voting population. While it is not the intention of the Support Center Command to argue for or against the inclusion of these persons in the local political structure, such possible consequences should be noted by the Commission.

In summary, unless and until the City of Kodiak and/or Kodiak Island Borough can provide significant services to the Support Center and its residents, the Support Center Command will continue to oppose annexation of the entire Support Center.

ANNEXATION OF THE STATE AIRPORT

The City Manager of the City of Kodiak has indicated, both directly to the Support Center Command and to the Department of Community and Regional Affairs (as indicated in the Department's preliminary report dated May 10, 1978), that the City is seeking annexation of only that part of Support Center Kodiak encompassing the State-leased airport and perhaps such minimal unpopulated portions of the Support Center necessary to provide contiguity.

The Support Center Command does not oppose annexation of the State-leased airport portion of the Support Center provided that the annexing body is willing to undertake at the earliest possible time the provision of all or most of those services now provided to the airport facility by the Support Center.

The Support Center presently provides the airport with water, sewage, electricity for the airport runway lighting, solid waste pickup and disposal, and primary structural fire response. Support Center Kodiak can not and will not expand its provision of these services (sewage service capability being particularly strained at present) as the airport facility expands.

It should be emphasized that the non-opposition of the Support Center Command to the annexation of the State airport as compared to the opposition of the Command to total annexation is based on the following considerations:

1. Annexation of the airport only would not impact negatively on Support Center residents.

2. The Support Center generally receives no major services from the City and/or Borough justifying annexation and such services are unlikely to be available in the near future. The State airport, on the other hand, presently constitutes a drain on Support Center services which could be alleviated to a substantial degree by annexation of that facility with subsequent provision of services by the annexing municipality.

3. The State airport facility constitutes a potential source of tax revenue for the annexing municipality to offset services provided to the facility. The remainder of the Support Center represents minimal additional revenue.

GENERAL COMMENTS

The Support Center Command offers the following comments concerning the procedural aspects of the Department of Community and Regional Affair's reports and the Local Boundary Commission's Hearing.

Despite the fact that the Department's report bears the date May 17, 1978, it was not available to the Coast Guard in Juneau even as late as May 19, 1978, and was not made available to Support Center Kodiak until the day of the public hearing. Furthermore, the Support Center Command is unaware of any petition submitted by the City of Kodiak or by the Department dealing with annexation of all or any part of Support Center Kodiak. The petition mentioned in the introduction to the Commission's final report dated May 17, 1978, deals with other areas under consideration for annexation.

The Support Center Kodiak Command objects to the hurried approach taken by the Department of Community and Regional Affairs in the preparation of its report and conclusions and in the scheduling of a hearing on Support Center annexation. The Support Center Command further objects to the lack of sufficient time to examine the Department's final report, particularly in light of the major reversal of the Department's position with respect to Support Center annexation. The Support Center Command likewise objects to the Department's failure to require adherence to the Title 19 Alaska Administrative Code requirements respecting petitions for annexation.

Some or all of the material presented herein many be elaborated upon and new material may be presented by the Support Center Kodiak Command representative at the Local Boundary Commission's public hearing.

KODIAK ISLAND BOROUGH,	)
Respondent.	)

RESPONDENT'S BRIEF

I. Introduction

On October 19, 1977, the City of Kodiak submitted a petition for annexation of certain property located along Mill Bay Road in the Kodiak Island Borough to the Department of Community and Regional Affairs. While deficient in several respects (the most glaring of which was the absence of a resolution or ordinance authorizing the City to seek annexation), the petition was accepted by the Department. The City's case, as revealed in its brief, appears to rest on two principal grounds: first, that residents and property owners of the territory are deriving benefits from the City, such that they should be made to pay a commensurate share of the City's tax burden; and second, that the City could provide services to the territory more efficiently under annexation than could otherwise be accomplished. Intruding onto the specifics of this annexation proposal is petitioner's avowed intent to annex substantial other areas of Kodiak Island. See, Memorandum from Ivan L. Widem, City Manager, to the Local Boundary Commission, dated October 17, 1977.

Contrary to the City's allegations, it is the Borough's position that the best interests of the residents and property owners of the affected territory, and of the local governments involved, would not be served by this proposed annexation. As the Borough shall demonstrate, residents and owners of the territory would gain virtually nothing besides a hefty increase in their local taxes should this petition be successful -- an increase for services for which they presently pay more than adequate y. The change in status would only serve to foster conflict, moreover, between the City of Kodiak and the Borough, and between the City and affected residents.

II. Lot Ownership and Configuration Within the Territory

At the outset, some factual clarification is required. In addition to the deficiencies in the petition mentioned above, there appear to be errors contained in the notice of hearing and attached lot descriptions provided by the Local Boundary Commission staff. First, Lots 3, 4, 5, 6, 7, 9 and 11 are identified as belonging to the City of Kodiak. Borough research indicates that those lots are currently patented by the State (patent number 50-64-0228 for lots 3-7, and 50-64-0169 for lots 9 and 11). The Borough, moreover, has filed land selections on these lots pursuant to AS 29.18.190, et seq. (Excerpt from Land Selections filed by Dale Tubbs for the K.I.B., Exhibit A.) The Borough, thus, possesses a specific interest in these particular lots, augmenting its underlying concern for the welfare of its residents in general.

In addition to this error, there appears to be an oversight in regard to Lot 27. This lot has not previously been annexed; nor is it included in the petition. It is

certainly possible that the City intentionally deleted this lot, perhaps because of known owner opposition to annexation. Such exclusion, however, would result in a continuation of the alleged misalignment of City boundaries. Since this "misalignment" is one of the grounds advanced by petitioner in support of annexation, the absence of Lot 27 is, at best, confusing. It suggests that this annexation proposal may not have been thoroughly analyzed from a thoughtful, planning perspective.

III. Standards for Annexation

Alaska Administrative Code Section 19.AAC 05.010 sets forth specific standards which provide guidelines for annexation. It is recognized that two of these standards ([1] and [3]) are met by this petition. The City raises no issues under Standards (2), (5), (6) and (9). These standards could not, in fact, be met in this case. Petitioner's case rests primarily on the purported fulfillment of Standards (4), (7) and (8). The Borough contends that there is not, in fact, compliance with these standards.

A. There is No Need in the Territory for Municipal Services that Could Not be Provided as Efficiently Without Annexation. (Standard No. 4.)

The City asserts that it can provide various services more effectively under annexation than would otherwise be possible. The City's history, however, and the facts regarding each of those services, suggest differently:

1. Sewer and Water. The City argues that sewer and water services would be extended immediately upon annexation. In fact, under a 1970 agreement between the Borough and the City, the City has long since been designated the agency responsible for implementation of water and sewer projects within the area of the road system in the Kodiak

failure to live up to the terms of this agreement accounts for the fact that services have not previously been extended to the lots within this territory. The City's track record is not one to inspire confidence.

2. Law Enforcement. The City simply describes its police force by numbers of officers and size of budget. The only argument made in this context, however, is that "Due to the nature of the boundaries in this area, certain problems can arise". (Petitioner's Brief, p. 1.) The Borough cannot envision what those problems might be. City police may certainly traverse City boundaries to get from one part of the City to another without violating any laws or ordinances. The only response possible to this broad statement is that the State Troopers provide police service to the territory. Residents and property owners have voiced no complaints about the level of service.

3. Fire Protection. The City's analysis of fire protection is, like its presentation of law enforcement, simply a descriptive one. What should be said is that there would be absolutely no change in fire protection provided the residents and property owners of the territory were the annexation to take place. Borough Fire District No. 1 presently covers this territory and is serviced through contract with the City; the contract provides fair consideration. (Exhibit C.) It might be noted, moreover, that the Borough owns one of the fire trucks utilized by the City, as well as a new ambulance similarly operated by the City and used inside and outside its boundaries.

4. Parks and Recreation. The City outlines its services in the parks and recreation area, and alleges a budget of $128,946 for this department. Apparently the intention is to suggest that Borough residents outside the

City are getting "something for nothing". In fact, the City is able to operate the pool and the gym only because the Borough has made them available. The pool and gym collectively are worth approximately $3,220,000, substantially more than the City's budgeted amount for this service. (Memorandum from Borough Assessor, Ed Haney, December 6, 1977; Exhibit D.) The joint agreement between the Borough, its School District and the City, further delineates the benefits accruing to the City through the use of these facilities. (Joint Agreement for the Use and Operation of Gymnasiums and Swimming Pool, Exhibit E.)

In addition, the Borough adopted parks and recreation powers within the last year, and has contracted for a major parks and recreation study to be completed by April of next year. City residents will undoubtedly benefit from the exercise by the Borough of its parks and recreation power.

5. Library. In describing its library with attached budgetary figures, the City again fails to make any case showing that Borough residents are taking unfair advantage. Petitioner acknowledges the Borough contribution of $15,000 to the library financing. There is no showing that this contribution is grossly disproportionate to the use by non-city residents of the library facilities. And there is also no mention of the fact that the Borough operates four libraries of its own which make interlibrary loans to the City library.

6. Cemetery. The City simply states that the cemetery, with its paid contractural employee, is available to Borough residents. There is no indication of how much this employee is paid; he may in fact be part-time. And there is no mention of the fact that the City acquired

the land for the cemetery in 1968 from the Borough for the price of $1.00. (Minutes of K.I.B. Assembly Meeting, 2/15/68, Exhibit F.) At the time, that land was worth approximately $29,600. At present, its estimated value is $300,000. (Memorandum from Ed Haney, Borough Assessor, to Stu Denslow, Borough Manager, Exhibit G.) Borough residents have more than paid their way into their ultimate resting places. Again, the level of service for the territory affected by this petition would not be increased through annexation.

7. Public Works Functions. The City's one-sentence remark in regard to public works provides little to which the Borough can helpfully respond. The fact that the Public Works Department provides street maintenance and snow removal is essentially irrelevant, since the primary road involved is Mill Bay Road, which is state maintained. Should the residents of the area decide that further local roads are necessary, they could finance them through road service districts, rather than taxing the general public for such neighborhood improvements. It might be noted, moreover, that private contractors are available to the Borough to provide competent road service, as is illustrated by the road service district in the Bells Flats-Russian Creek area. (Contract between the K.I.B. and Alagnak, Inc., Exhibit H.) House numbering, the other item mentioned in connection with public works, is a planning function and will be undertaken by the Borough as it proceeds with implementation of its comprehensive plan.

8. Cargo dock, boat harbor, ferry terminal and airport. The City alleges that these facilities are "to some extent" self-supporting, and then claims that general fund contributions have been made to maintain the facilities. Again, the City's lack of specificity renders the Borough's

attempt to be responsive difficult. Borough research uncovered only a $149,703 loan from the City's general fund to the cargo dock. (City of Kodiak, 1977/78 Budget, p. 46.) A loan hardly constitutes a "contribution". The City's presentation in this regard raises two additional questions. First, it is not at all clear that the municipal airport, as discussed further below, is an asset to Kodiak. The extreme hazardousness of this strip might merit its closure, rather than its support by taxpayers money. Second, it is not clear why general fund contributions should ever be used to make up deficits in the operating budgets of these enterprise activities. The people who use them should pay for them; those who do not use them, should not.

9. Garbage Collection. Residents of the territory would gain nothing new in the way of garbage collection should annexation take place. At present, they have the option of paying for garbage collection or transporting their own refuse to the dump. Under annexation, that option would be removed and they would pay for the service whether or not they wanted it. There has been no showing that such imposition is necessary.

A review of the above services indicates that the City has not demonstrated that it could improve the lot of territory residents through annexation. In fact, as described above, the residents and lot owners would gain virtually nothing to their advantage by way of annexation. As shown on the table below, however, these people would stand to lose a great deal. Best estimates reveal that, assuming the addition of sewer and water to all lots, the cost to lot owners should they remain outside the City limits would be 9.47 mills taxation plus $28.75 per month in water and sewer assessments; if the territory were annexed, the rate would

jump to a substantial 16.3 mills, with assessments in the neighborhood of $25.00 per month.

	City Resident	Borough Resident Outside City Limits
Borough Mill Rate	7.2	7.2
City Mill Rate	9.1	-0-
Fire Protection Mill Rate	-0-	2.27
Water	$10.00/mo.	$13.75/mo.
Sewer	$15.00	$15.00
Total	16.3 Mills $25.00/mo.	9.47 Mills $28.75/mo.

The City has simply failed to make a showing that such a rate increase is warranted or equitable for those affected.

B. Annexation Will Not Enable the City to Improve any Health or Safety Conditions in the Territory. (Standard No. 6.)

As noted previously, the City has not invoked this standard. It would be dismissed without comment were it not for the irony it brings to light. There is, in fact, a serious safety hazard located within the territory. That hazard is the municipal airport. Yet the City, which exercises complete control over this airport and even mentions it among the services provided to territory residents, has failed in its duty to alleviate the significant safety hazard that it poses. There is no reason to assume the City would perform more responsibly should other such problems arise.

C. It is Practical to Provide all Necessary Services to City Residents Without Bringing the Territory Within the City Boundaries. (Standard No. 7.)

Petitioner's brief includes broad statements to the effect that there is a "misalignment of boundaries [which] causes problems with enforcement of City ordinances and with providing certain services to those areas already annexed". That is the extent of petitioner's analysis. In light of joint Borough-City agreements covering water,

sewer, and fire, the Borough cannot envision any problems that might arise because of the existence of a few City lots within the territory. If the problems were significant, the City presumably would never have annexed those lots causing the present "misalignment".

D. The City is Receiving (or Should be Able to Devise Means of Receiving) Ample Reimbursement for the Services Provided Territory Residents and Lot Owners. (Standard No. 8.)

The City complains that it "provides substantial benefits to residents and owners of properties outside of [its boundaries] without corresponding tax contributions for municipally provided services". (Petitioner's Brief, p. 2.) Yet, sewer and water should be provided only upon assessment; fire protection is paid for by the Borough which levies a 2.27 mill rate on property owners within the District; parks and recreation services are in large part made available through the Borough-donated pool and gym; contribution is made by the Borough directly to the municipal library; the cemetery exists on a $300,000 plot of land given for $1.00 to the City by the Borough; the cargo dock, boat harbor, ferry terminal and airport are or should be self-supporting through user fees; and garbage collection is currently paid for by those who use it.

In addition to the direct payments identified above, all Borough residents outside the City fund the City's services and programs, whether or not they receive any benefits from them, through a three percent sales tax levied by the City on all goods and services sold within the City or by City-based businesses, whether the service is provided within or without the City. (City Ordinance 3.08.010 et seq.) Virtually all sales of goods and services on Kodiak Island take place within the City, so all residents

of the Island are sorely affected by this tax. Sales tax receipts, moreover, have been used to pay Borough personal property tax for City residents; owners of personal property within the City have not been required to make such payments out of their own pockets. (City Ordinance 3.04.010B.) Borough residents living outside the City boundaries have thus paid personal property tax twice; first their own, and then a substantial contribution to the payment of taxes for those persons who have personal property located within the City limits. Residents and lot owners in the territory have amply compensated the City for any benefits they might receive.

IV. Procedural Factors Against Annexation

Four intertwined procedural issues are raised by the manner in which this petition has proceeded to date. First, petitioner and the Local Boundary Commission seem determined to propel this matter forward with great speed, presumably because of the approaching start of the Legislative session. Such precipitous action, however, has resulted in failure by the Commission to follow its own guidelines, and has put great strains on the Borough and any other would-be respondent to prepare adequately for the upcoming hearing. (1) Thus, the petition was apparently accepted notwithstanding the fact that no resolution from the City Council was attached (19 AAC 10.040[4]); (2) the sources of information contained in the petition were presented only in a statement, not an affidavit (19 AAC 10.040[2]); and (3) the petition was wrongly addressed to the Department rather than the Commission (19 AAC 10.030). In addition, the interest in reaching a quick determination in this case resulted in a refusal by the Staff Assistant to grant a few days postponement of the hearing. The Borough's attorney had requested such an

extension in order that a well-informed brief might be prepared and presented to the Commissioners sufficiently in advance of the hearing to enable them to receive the evidence with some foreknowledge of both sides of the case. (See, letter from Joan M. Katz to Pat Poland, Exhibit I.)

Second, as noted throughout the course of this brief, the City's presentation to the Local Boundary Commission consists primarily of broad allegations, without substantiating facts. Such material did not put the Borough in a sufficiently informed posture to respond adequately.

Third, the issue of annexation of the petitioned-for territory is clouded by the avowed intention of the City to extend its boundaries to still other areas. Mr. Poland has indicated to the Borough's attorney that the broader issues of annexation of large portions of the Kodiak Island Borough will in fact enter into the Commission's deliberations in the course of the hearing on the Mill Bay Road territory. Yet no petition has been filed on those other, very different areas; there is no way the Borough can prepare any response. Other interest groups, such as the Native population of Kodiak, may have strong feelings when confronted with the full scope of the proposed annexation. It would appear that any and all questions of annexation on the Island of Kodiak should await a proper petition adequately setting forth all the territory sought to be annexed with ample factual basis for the City's position. Absent such a rational approach, serious error might be committed as Commission deliberations are hurried forward without sufficient groundwork being laid. There is no emergency warranting such procedure.

Fourth, and finally, in connection with the intent to annex considerably more territory than is revealed in this petition, it would seem appropriate to handle this matter by

the step annexation procedure. Of critical concern to the Borough Assembly, staff and people they represent, is the fact that no opportunity has been afforded the people of this territory to vote on the issue of annexation. An election would give the Commission precise information regarding the people's views on this matter. It would also go far to reduce the anger and bewilderment experienced by Borough residents who view the non-elective process as an uncharacteristically undemocratic one for this State to be imposing upon them.

V. Conclusion

The only context in which the City's petition is comprehensible is that of a power play, a grab for land which the petitioner has no demonstrated ability to govern effectively. The evidence shows that the residents of the territory would gain nothing from annexation, but would stand to lose considerably from a financial standpoint. Abstract arguments supporting annexation are overshadowed by the reality of the cost-benefit ratio to those lot owners, by the fact that they do not support this petition, and by the realization that there is no equitable reason for increasing the City's tax base. Honest appraisal tells us that the City's track record for the delivery of services and for fair dealing with citizens on Kodiak Island is seriously deficient. There is no basis for granting the petition. There is sound basis for denying it. The Kodiak Island Borough respectfully requests that the Local Boundary Commission reject the City of Kodiak's petition for annexation.

Dear Mr. Denslow:

This is to acknowledge receipt of Kodiak Island Borough's Municipal Selections, ADL 200122.

Further processing of the pending selections by the Southcentral District Office is not anticipated until completion of legislative action on House Bill 133 which addresses the municipal land selection problems in Title 29 of the Alaska Statutes. If, in the meantime, there are critical priority selections requiring immediate attention or questions regarding your selection status, we will be glad to respond to your needs.

Sincerely,

L. A. Dutton
District Manager

DESIGNATING THE CITY OF KODIAK AS THE AGENCY RESPONSIBLE FOR IMPLEMENTATION OF WATER AND SEWER PROJECTS ELIGIBLE FOR FEDERAL FUNDING

THIS AGREEMENT, made and entered into this 2nd day of July, 1970, by and between the CITY OF KODIAK, a municipal corporation, hereinafter referred to as "CITY" and KODIAK ISLAND BOROUGH, a municipal corporation organized under the laws of the State of Alaska, hereinafter referred to as "BOROUGH",

W I T N E S S E T H :

WHEREAS, BOROUGH is a second class borough and as such has limited authority which does not include the power to provide water or sewer service and

WHEREAS, CITY is a first class city and as such has a Public Works Department and in connection therewith provides sewer and water service to the residents residing within the corporate limits of the CITY OF KODIAK and to some residences residing outside the corporate limits of the CITY OF KODIAK, and

WHEREAS, the parties hereto desire to make application for Federal aid on local sewer and water project and one of the parties hereto must be designated an agency responsible for implementation of such projects.

NOW, THEREFORE, in consideration of the foregoing, the parties hereto mutually agree as follows:

1. CITY is hereby designated the agency responsible for implementation of any water or sewer projects within the area of the road system in the KODIAK ISLAND BOROUGH and is hereby authorized to make application for Federal aid in connection therewith.

IN WITNESS WHEREOF the parties hereto have caused this Agreement to be executed by their proper officials on the day and year first above written.

CITY OF KODIAK

EXHIBIT B

CONTRACT TO FURNISH FIRE PROTECTION SERVICE

THIS CONTRACT made this 2ND day of ~~May~~ July, 1970, by and between the CITY OF KODIAK, hereinafter referred to as "City" and the KODIAK ISLAND BOROUGH, hereinafter referred to as "Borough", both being municipal corporations organized under the laws of the State of Alaska.

W I T N E S S E T H

WHEREAS, City is an Alaskan municipal corporation, being a home-roll or charter city, and as such is lawfully authorized and empowered to enter into the Agreement hereinafter recited; and

WHEREAS, Borough is an Alaskan municipal corporation of the second class and has under its powers formed a Fire Service District as provided by law and therefore is lawfully authorized and empowered to enter into the Agreement hereinafter recited; and

WHEREAS, Borough is presently without adequate fire protection in its Fire Service District and desires to have the services of City's Fire Department and to pay for such services; and

WHEREAS, City is willing to furnish fire protection to Borough's Fire Protection District provided an adequate payment is made.

NOW, THEREFORE, City and Borough agree as follows:

SERVICES TO BE RENDERED

FIRST: Subject to the conditions and qualifications hereinafter recited, the City will furnish to Borough's Fire Protection District during the period of this Agreement, the services of City's Fire Department to the same extent as if the area encompassed within the boundaries of the Borough's Fire Protection District were a part of the incorporated area of the City.

TERM OF AGREEMENT

SECOND: The term of this Agreement shall be continuous until terminated by mutual agreement of the Parties or by notice of intention to terminate given in writing not less than ninety (90) days before the intended date of termination when such notice is given and which notice may be given by either Party at any time hereafter.

PAYMENT

THIRD: Borough agrees to pay to City during the term of this Agreement an amount equal to the millage rate levied by City for fire protection service in the City, which amount shall be levied and collected on all properties within Borough's Fire Protection District at the same millage rate. City shall give to Borough, in writing, at the time it sets its millage rate, the millage levied for fire protection within the City and that same millage rate shall thereafter be applied to all properties within the Borough Fire Protection District for the ensuing year and this amount shall be paid to City.

CITY IS NOT RESPONSIBLE FOR CONDITION OF FACILITIES

FOURTH: City assumes no responsibility for the condition of the water mains, adequacy of fire hydrants, water pressure or of any of the facilities to be furnished by Borough's Fire Protection District except to render the best service possible under the conditions which exist at any given time.

RESPONSIBILITY OF FIRE CHIEF

FIFTH: In agreeing to give Borough's Fire Protection District the same type and quality of fire protection service as

that enjoyed by the City, it is understood by Borough that the ultimate decision and discretion as to the method and manner of controlling or extinguishing fires is vested in the Fire Chief of the City. Neither City or Borough shall be allowed any priority in dispatching of fire fighting equipment or personnel, but in any given case, the decision shall be in the discretion of the City's Fire Chief.

FIREMEN TO BE MADE PEACE OFFICERS

SIXTH: City does not agree to furnish any peace officers in connection with the response to any fires within the Borough Fire Protection District unless such powers are conferred upon firemen by the laws of the State of Alaska and in that event the powers and authorities shall be limited to that authority granted.

INSPECTION BY FIRE DEPARTMENT

SEVENTH: The Fire Department of City shall have the same right to make inspections of any and all structures and grounds within the Fire Protection District of Borough and to make appropriate recommendations thereon with the same force and effect as the Fire Department has within the City.

BOROUGH TO ABATE FIRE HAZARDS OR NUISANCES

EIGHTH: Borough agrees to take timely action to abate any fire hazard or nuisance when such is called to the attention of the Borough Chairman or Borough Assembly.

INDEMNITY OF FIRE DEPARTMENT

NINTH: Borough agrees that the Fire Department of the City shall have the same privileges and immunities with respect to liability as said Department has in the City.

ADJUSTMENT OR REVISIONS OF BOUNDARIES

TENTH: Borough agrees that if the present geographical boundaries of the Fire Protection District of Borough are reduced or enlarged or expanded, then and in such event City may either refuse to service such enlarged area or this Agreement shall be amended to provide an added consideration for the additional fire protection to be rendered by City or a reduction in the compensation by reducing the amount thereof by subtracting the millage from those properties withdrawn.

CITY IS INDEPENDENT CONTRACTOR

ELEVENTH: The management, regulation and control of City's Fire Department shall remain the sole obligation of City, and the relationship of City to Borough shall, upon this Agreement taking effect, be that of independent contractor.

IN WITNESS WHEREOF, the Parties hereto have executed these presents by resolution of their respective governing bodies, duly authorizing the same.

ADDENDUM

TO CONTRACT TO FURNISH FIRE SERVICE

Whereas the parties hereto have heretofore entered into an Agreement whereby CITY agreed to furnish to BOROUGH's Fire Protecti District, the services of CITY's Fire Department to the same extent as if the area encompassed within the boundaries of the BOROUGH's Fire Protection District were a part of the incorporated area of th CITY and

Whereas BOROUGH agreed to pay to CITY during the term of said Agreement, an amount equal to the millage rate levied by the CITY for fire protection service in the CITY but no provision was made, nor account taken of the Capital Improvements of the Fire Department to date or in the future,

Now therefore, the parties hereto agree that the BOROUGH will transfer, and the CITY will accept the equity of the BOROUGH in its fire truck and equipment as the BOROUGH's contribution to the Capital Improvements of the CITY's Fire Department to date, and to make further contributions to the Capital Improvements of the Fire Department through assessment and taxation at the same time and on the same basis as may be done by CITY in the future.

IN WITNESS WHEREOF, the parties hereto have executed these presents by resolution of their respective governing bodies, duly authorizing the same.

SUMMARY STATEMENT
OF THE KODIAK ISLAND BOROUGH'S POSITION ON
THE CITY OF KODIAK'S PROPOSED ANNEXATION

At the behest of large numbers of constituents, and on the basis of its own judgment, the Kodiak Island Borough Assembly has determined to oppose the annexation of the "Mill Bay Road" and "Mission Road" areas by the City of Kodiak. The Local Boundary Commission has submitted its recommendation in favor of annexation. Kodiak lawmakers Mulcahy and Zharoff have introduced joint resolutions for disapproval of the annexation.

The matter now rests with the Legislature, its discretion to be guided, as in other policy matters, by the best interests of the citizens involved. The Legislature has until March 10, 1979 to adopt the Mulcahy/Zharoff resolutions, or the annexation will become effective. (Art. X, Sec. 12, Alaska Constitution.)

The Borough is concerned with four central issues relating to the proposed annexation. In the hope that legislators attempting to analyze this matter may find identification of these issues useful, they are presented in summary form below.

1. Lack of Democratic Process in Approving Annexation

The people of Kodiak share a sense of outrage at the manner in which this annexation has proceeded to date. While the Alaska Statutes (AS 29.68.010[b][1]) and the Local Boundary Commission regulations (19 AAC 10.200 and 15.030) authorize a vote on annexation by the residents of the affected territory, no such opportunity was ever afforded the people in this case. Although they came in droves to Commission hearings and testified in opposition to the annexation, their views were not heeded. The Local Boundary Commission chose instead to decree what was "best" for the residents of Kodiak, City and Borough alike. The Boundary Commission was within its legal rights in adopting this procedure. The theoretical "legality" however, does not alter the fact that imposing a government upon a group of citizens against their will is contrary to our fundamental concepts of majority rule, due process, and democracy.

2. The Economic Facts and Equities

One of the grounds for annexation propounded by the City is the purported unfairness of Borough residents availing themselves of City services without -- allegedly -- paying their way. In fact, the Borough makes possible many of the services for which the City takes credit through Borough donation of major facilities (e.g. swimming pool and gymnasium). The City properly charges user fees for port and dock operations. And non-City residents contribute approximately 50 percent of the City's three percent sale tax revenues which fill the municipal coffers each year. The Borough Planning Director, who currently lives outside the City limits, has calculated that fully 70 percent of his local tax dollar actually goes to the City.

In addition to supporting general City operations, these sales tax receipts are used in another, highly significant way: to pay the personal property tax for City residents and others who own personal property within City limits. Residents in the territory proposed for annexation thus pay personal property taxes twice: first their own, and then a substantial contribution to the taxes of persons living inside the City.

From the perspective of individuals living in the Mill Bay and Mission Road areas, annexation would result in an increased tax burden in the neighborhood of 6.8 mills. In light of the fact, as indicated below, that most of these residents do not want or need the "services" which would theoretically become available to them upon annexation, such onerous taxes would be completely unwarranted.

3. Forced Change in Lifestyle

Most of the people in the territory proposed for annexation chose to live in this region specifically to avoid crowded, urban conditions, unnecessary government intrusion, and burdensome tax assessments. Many invested substantial sums in individual sewer and water systems. They have no desire for additional police services. They do not want City refuse collection. They live on State-maintained roads or unpaved local roads, which are just fine with them. They have voted that, to the extent necessary, they want the Borough to provide sewer and water and road service through service districts -- at a level of service they can afford.

Should annexation of these people's land occur, many on larger rural lots will be forced to subdivide to pay their property taxes. A greater need for services will then arise. The City's ability to provide such services will be strained. And a very desirable, very Alaskan lifestyle will have been destroyed.

4. Ability and Integrity of the City

The move for annexation did not come from the people within the City. They have no more desire for annexation than do the residents in the affected territory. The annexation petition originated in City Hall alone. It is questionable whether this is a government whose jurisdiction should be extended at this time.

The City of Kodiak has attempted to coerce residents into accepting annexation by denying its ability to provide utility services outside its own boundaries. Yet the Alaska Statutes specifically confer such authority on the City, as does the City's own Charter. (See AS 29.48.040; Kodiak Charter Art. VIII, Sec. 8-1) By agreement with the Borough, moreover, pursuant to federal and state grants, the City is obliged to cooperate in the furnishing of water and sewer services to residents outside the City limits who require this assistance. The City has refused to honor this obligation. The people in the area proposed for annexation do not want to be within the power of a governmental entity which, in their view, has not dealt fairly with them.

City residents have complained moreover, that there are unmet needs within the current City limits. It would seem more appropriate for the City to focus its attention there before taking on additional problems outside its present boundaries.

In summary, the people do not want or need annexation, nor do the equities of the situation require it. To the contrary, fundamental fairness and a basic democratic approach to government mandate the defeat of this annexation proposal.

BEFORE THE LOCAL BOUNDARY COMMISSION FOR THE

STATE OF ALASKA

Re: Proposed Annexation of Certain Lands in the Kodiak Urban Area to the City of Kodiak	)

BRIEF OF THE RESPONDENT KODIAK ISLAND BOROUGH

Introduction

Annexation entails substantial financial, political and practical consequences for property owners and residents of the lands involved. To assess those consequences in connection with the Kodiak situation, three fundamental questions need to be asked: (1) whether annexation would serve any real purpose so far as the territory to be annexed is concerned; (2) whether the alleged equities on the City's part exist in fact, or have been advanced simply to justify a quest for additional revenues; and (3) whether adverse consequences would befall individuals within the territory, or without, should annexation occur. Respondent's analysis of these questions will address the relevant, specific factors set forth in 19 AAC 05.010, as well as the concerns raised in both the letter of May 1, 1978, from Sheila Gallagher to Stewart Denslow, and in the Preliminary Report from the Department of Community and Regional Affairs, dated May 10, 1978.[1] In light of the fact that this proposed annexation is a legislative one, with no opportunity for the people involved to express their opinions at the polls, abstract theories of symmetry in local government should not be afforded excessive weight. The

[1] The final report was not available at the time this Brief was being prepared.

realities of the Kodiak situation need to be examined.

I. What Needs Exist Within The Territory That Could Best Be Met By Annexation?

Annexation makes sense only if services are needed and desired by the people affected which can best be provided by the annexing government. The evidence in this case, however, is that people outside the City's current boundaries are generally content with not only their government, but also the kinds and levels of services they are presently receiving.

An attitudes survey conducted by the Anchorage Urban Observatory last year indicates that the three greatest concerns for residents outside the City are litter, roads and the high cost of goods.[2] Inside the City, residents are most concerned about the same two priority issues, although roads are placed above litter. The problems of physical isolation and "environment" tie for third place. Outside the City only one person in the sample rated utilities as a top priority; only one identified animal control as such. And not a single person identified police or fire service as the most urgent problem.

These findings are highly significant in reflecting a general, marked absence of desire on the part of people in the affected territory to change the kind, or raise the level, of services they receive - even when no price tag is attached. The only exceptions occur in connection with roads and litter.

a. Roads. Kodiak's roads are essentially State maintained, with only 13 miles of road under City jurisdiction and 15.5 miles within the Borough's authority. Annexation for the purposes of road maintenance would be nonsensical for two reasons. First, the people within the City are more dissatisfied with the condition of their roads than are the people outside the City,

---

[2] For more detailed information on this survey see Kodiak Island Borough Economic Analysis, submitted by Drs. Green and Hill as part of the Borough's presentation in this proceeding.

suggesting that the City is hardly the appropriate government unit to undertake further road work. In addition to the findings of the Urban Observatory study in this regard, there is the testimony of City residents like Charles Davidson, who stated at the December 12, 1977 hearing that he was opposed to annexation in light of the City's inability to adequately pave and/or oil the roads within its current jurisdiction.

Second, Borough voters have recently elected to adopt road power within Service District I of the Mill Bay-Monashka Service area. This power will enable the Borough to offer road service to those areas in which the property owners vote to foot the bill. Such an undertaking has previously proven successful in the Bells Flat area, where private contractors provide road maintenance. (See Exhibit H to Respondent's Brief of December 9, 1977, regarding the proposed Mill Bay Road Annexation.)

Comments by the Local Boundry Commission staff concerning the absence of a Borough public works department to provide road maintenance are irrelevant to the Kodiak situation. As indicated previously, the roads at issue here do not cover hundreds of miles, but rather approximately 15.5 miles. Private contractors are not only capable of providing maintenance, grading, snow removal, etc. for this amount of road surface; such contractual arrangements would seem to be a boon to the local economy. Finally, it should be noted that in Fiscal 1978 the people of the Russian Creek and Bells Flat areas voted to spend $38,000 on road maintenance for nine miles of road while the City spent $1,110,014 for 13 miles of road maintenance and construction. The people currently living outside the City's boundaries should continue to have the right to choose to spend $38,000 vs. $1,110,01 if they are satisfied with the lower level of service. Annexation would deprive them of that right to choose.

JOAN M. KATZ
ATTORNEY AT LAW
1814 HIDDEN LANE
ANCHORAGE, ALASKA 99501
(907) 274-3904

b. Litter. Litter, the other major concern of Kodiak residents in and outside of the City, also provides no basis for annexation. The State again has responsibility for maintaining

its roadways and would be charged with litter removal in those areas. The Borough, pursuant to its planning, road and health powers would similarly be able to undertake this responsibility. To support its case for annexation, the City would seem to have the burden of showing that it could better meet this problem.

c. Sewer and Water. The only additional, significant need that the Local Boundary Commission might want to examine would be that for sewer and water. In some areas of the Borough outside the City, sanitation standards necessitate, and the people desire (although not as a top priority) sewer and water improvements. The analysis submitted by the independent consultants from the Alaska Urban Observatory indicates that there is no reason to believe the City could meet these needs at less cost than the Borough. Unlike the services of roads and police, moreover, sewer and water are public utilities, in the same category as telephones. As such, they must pay their own way. They could, theoretically, be provided by a private corporation. The expansion of sewer and water into the territories in question should, therefore, have no bearing on the issue of annexation. (See Green and Hill, Kodiak Island Borough Economic Analysis, at 7.)

A review of services needed in the affected territory thus reveals that annexation represents a theory without any practical application or rational nexus to the facts of this case. There is no cry for expanded police protection. There is no reason to deprive private contractors of the opportunity to provide road maintenance at the level the people can afford. In his letter of December 16, 1977 to Mr. Strandberg, the City Manager himself acknowledged: "I am certain you are aware that as soon as an area gets water and sewer from the core City they have no need to annex. This is especially true in the Kodiak urban area". (Exhibit A, at 2-3) The point made by Drs. Green and Hill, of

course, is that not even sewer and water requirements create any need or justification for annexation. From the territory's standpoint, annexation is simply not needed in any way, to provide any service.

II. Is the City Entitled To Annexation For Reasons of Equity?

It is arguable, though Respondent would oppose this notion, that even without a need for annexation, such action could be required if the City is presently being placed in an inequitable position by virtue of non-City residents' use and enjoyment of City facilities and services. The City took this position in its Mill Bay Road petition brief; the information presented by Respondent in connection with that annexation is equally applicable here. Respondent's previous brief summarized the facts regarding specific services mentioned by the City in its plea for "equity" as follows:

> The City complains that it "provides substantial benefits to residents and owners of properties outside of [its boundaries] without corresponding tax contributions for municipally provided services". (Petitioner's Brief, p.2.) Yet, sewer and water should be provided only upon assessment; fire protection is paid for by the Borough which levies a 2.27 mill rate on property owners within the District; parks and recreation services are in large part made available through the Borough-donated pool and gym; contribution is made by the Borough directly to the municipal library· the cemetery exists on a $300,000 plot of land given for $1.00 to the City by the Borough; the cargo dock, boat harbor, ferry terminal and airport are or should be self-supporting through user fees; and garbage collection is currently paid for by those who use it.

Also mentioned in Respondent's previous brief was the highly significant fact of the three percent sales tax levied by the City on all goods and services sold within the City or by City-based businesses. Strong concern with the "high cost of goods" as expressed in the Urban Observatory attitudes survey, indicates the substantial impact of this tax. In a memorandum prepared at the time of the previous annexation hearing in Kodiak,

the Borough Planning Director researched his own financial situation and presented figures establishing that as a non-City resident, he was paying more taxes to the City (as a result of the sales tax) than he was contributing to the Borough through personal and real property taxes. (Memorandum from Planning Director to Borough Manager, December 6, 1977, Exhibit B.)

Local Boundary Commission regulations contemplate that measures such as sales taxes can be used as alternatives, not supplements, to annexation. 19 AAC 05.010(a)(8) provides in part:

> In determining whether [property owners in the territory receive the benefit of City services without commensurate tax controls] the Commission will consider alternate methods available to the city for offsetting the cost of providing services to individuals or property beyond its property taxation powers . . . .

Through this sales tax (plus the contribution to firefighting equipment, dock user fees, etc.), non-City residents of the Borough more than pay their way They pay not only for benefits they receive, but for benefits innuring only or principally to City residents. For example, $60,000 received from sales tax revenues (to which non-City residents contribute as much per capita as City residents) has been used to finance construction of water and sewer facilities within the City in the 1977-78 fiscal year. (City of Kodiak Budget 1977-78 Fiscal year.) Even more significant perhaps, a substantial percentage of the property taxes owed by City property owners are being paid by sales tax receipts garnered from non-City residents as well as City residents. While the appraised value of City property should have netted the City 1.3 million dollars in tax receipts, in fact only $655,000 is being collected. (City of Kodiak Budget 1977-78 Fiscal year.) Where is the equity in such an arrangement? If City residents are not even paying their own property taxes at this time, what possible justification can there be for seeking to tax people currently outside the City boundaries?

It is apparent, thus, that if any group of people is being treated inequitably, it is the territory residents: they pay City bills through sales taxes while contributing directly through user fees and the like for services that they utilize. The City, in truth, simply wants to spread it's overhead a little thinner - an understandable position, but one decidedly negated by the equities of the situation.

III. Would Annexation Have Any Adverse Effects Upon Territory Residents Or Other Kodiak Citizens?

It is evident that annexation is not warranted because of any need for City services or from any equitable standpoint. It should be recognized, in addition, that annexation could be extremely harmful to territory residents - and ultimately to the Kodiak community at large.

Respondent's previous brief on Mill Bay Road attempted to illustrate the relative costs to territory residents of provisions of water and sewer services with and without annexation. On the assumption that territory property owners would pay existing City taxes to acquire such services, it was determined that the price tag for the annexed resident would be 16.3 mills plus $25.00 per month in assessments, as opposed to 9.47 mills and $28.75 per month for non-City residents. (Respondent's Brief 12-09-77 at 8.) Drs. Green and Hill have calculated potential mill rates under annexation on the alternative assumption that annexation would simply shift some of the City's cost to the new territory. In that case the mill rate for City residents would be 15.19 mills - as opposed to 9.47 for non-City residents receiving sewer and water. (See Green and Hill at 12.) The difference under either method of calculation, is clearly substantial.

There is another consideration however, which is as important as the economic detriment to be suffered through annexation.

This is the potential effect on this relatively small community of the hostility that would be engendered by the imposition of annexation on a group of people who are adamantly opposed to it. An effort at unification was initiated by the City on October 27, 1977. (Resolution 23-77, Exhibit C.) The Borough responded in good faith, and scheduled a day long workshop attended by members of the public, City and Borough officials, a representative from Community and Regional Affairs and the former attorney of the Anchorage Charter Commission. As a result of that meeting, the Borough Assembly voted unanimously to put the question of unification on the ballot this Fall. (Resolution No. 78-34-R, April 6, 1978, Exhibit D.)

Unification is an appropriate means by which to avoid duplication of government units and promote more efficient government. Most importantly, it is also a means well suited to healing political wounds and allowing citizens to work together toward common goals. If the Local Boundary Commission were to try to design a tool aimed at destroying any hope for unification in Kodiak, it could propose no better means than the contemplated annexation. As testimony at the December 12, 1977 hearing established, many citizens of the Borough outside the City limits are bitterly antagonistic towards the City as a result of actions or inactions attributable to that government. Many citizens, further, are outraged by their lack of opportunity to vote their views on the annexation question. Should City dominion now be imposed upon them, the chances of a harmonious movement towards unification would be destroyed.

Conclusion

Annexation may have a theoretical appeal along the lines of political neatness. Theory is not reality, however, and the fact is that without annexation there will be service districts,

with annexation, there will probably be differential taxation with inconsistent levels of service, and with unification, there would still -- and again -- be service districts. The diference between the present situation and annexation -- the only two options available to the Local Boundary Commission -- is in the degree of choice to be exercised in the annexed territory. And that choice of course translates into substantial impact on the pocketbooks of the property owners involved.

The Local Boundary Commission is undoubtedly cognizant of its significant power and responsibility in considering legislative annexations. Respondent urges the Commissioners to ask themselves the three questions posed in this Brief while deliberating the merits of this case. The answers, the Borough feels confident, will show no need for services that the Borough cannot provide at a cost comparable to or lower than the City; no inequity done to the City by non-City residents; and adverse effects on both territory residents and other Kodiak citizens alike should annexation be approved. In light of these realities, Respondent respectfully submits that legislative annexation in this case would be an abuse of discretion. Respondent requests that annexation be denied.

DATED this 12th day of May, 1978.

KODIAK ISLAND BOROUGH

DATE: December 6, 1977

FROM: Borough Assessor/ Ed Haney

TO: Whom It May Concern

At the time of construction in 1973 the cost of building the Kodiak High School gymnasium was One Million One Hundred Fifteen Thousand Dollars ($1,115,000). Reproduction today would be approximately One Million Six Hundred Seventy Thousand Dollars ($1,670,000).

The swimming pool complex in 1973 cost One Million Thirty Five Thousand Dollars ($1,035,000) to build and to reproduce it today would approximately cost One Million Five Hundred Fifty Thousand Dollars ($1,550,000).

Totaling the two (2) buildings together shows a cost to build in 1973 of Two Million One Hundred Fifty Thousand Dollars ($2,150,000).

The reproduction of the two (2) buildings together in 1977 would come to Three Million Two Hundred Twenty Thousand Dollars ($3,220,000).

KODIAK ISLAND BOROUGH SCHOOL DISTRICT
POST OFFICE BOX 886
KODIAK, ALASKA 99615
(TELEPHONE: (907) 486-3131)

JOINT AGREEMENT FOR THE USE & OPERATION OF GYMNASIUMS & SWIMMING POOL

This agreement entered into this 15th day of November 1977, by and between the KODIAK ISLAND BOROUGH, hereinafter referred to as the *BOROUGH*, the KODIAK ISLAND BOROUGH SCHOOL DISTRICT, hereinafter referred to as the *DISTRICT*, and the CITY OF KODIAK, hereinafter referred to as the *CITY*.

WITNESSETH:

WHEREAS, the *DISTRICT* has under its jurisdiction the operation and management of three gyms and one swimming pool within *CITY* boundaries, said gyms being the Kodiak High School gym, the Main School gym, and the East Elementary gym; and,

WHEREAS, the *BOROUGH* contributes to the *CITY* recreation program by making school facilities available to the City Parks & Recreation Department for public use; this they do in lieu of providing recreational funds to the *CITY*; and,

WHEREAS, the *DISTRICT* obligated itself before the election of February, 1972 to running the pool for the public; and,

WHEREAS, it is inconvenient and costly for the *DISTRICT* to run a public recreation program; and,

WHEREAS, said swimming pool and gymnasiums are physically convenient and capable of being used by the *CITY* and its program conducted

by the Parks & Recreation Department; and,

WHEREAS, maximum use can be made of said swimming pool and gymnasium facilities by the joint use thereof of the *DISTRICT* and the *CITY*, and it is in the best interests of the parties hereto and the public that such use be made thereof.

NOW THEREFORE, in consideration of the above premises and the undertaking and convenants of each of the parties as hereinafter set forth, it is agreed by and between the parties as follows:

1. TERMS:

This *AGREEMENT* shall be effective for a term of 7½ months, commencing on November 15, 1977, and ending on August 1, 1978. The *AGREEMENT* may be terminated by either party giving 30 days written notice.

2. USE OF POOL & GYMS:

The *DISTRICT* shall have the right of exclusive use of said swimming pool and gymnasiums upon regular school days, Monday through Friday of each week during each school year, from 7:30 AM to 5:00 PM of each of the said days, except that the *CITY* reserves the right to use the pool or gymnasiums for the public if they are not being used at that time by the *DISTRICT*. The *DISTRICT* shall also, in addition to the hours specified, have the right to use the pool and gymnasium facilities for school activities and athletic purposes, but the gymnasiums and pool shall not be used by the *DISTRICT* for any program designed, or by its nature competitive with the recreation program carried on by the *CITY*. However, the *DISTRICT*

may not retain the gyms or pool for the daily practices of their athletic teams beyond the hour of 7:30 PM.

3. FACILITIES:

The *DISTRICT* facilities which are the subject of this agreement include the pool, the gyms, the locker rooms, together with a limited amount of office storage space.

4. SCHEDULING OF FACILITIES:

The *DISTRICT* shall have first priority in scheduling its activities. After the *DISTRICT* establishes its schedule, the *CITY* shall make up its recreation schedule. The *CITY* must provide the *DISTRICT* with at least one week advance notice prior to commencement or change of the *CITY* recreation time schedule. Once the *CITY* established their recreation schedule, the *DISTRICT* must give the City Parks & Recreation director at least one week advance notice before changing their *DISTRICT* schedule, and this schedule change must meet the approval of the City Parks & Recreation director and the School Superintendent. Use of *DISTRICT* facilities by groups outside the realm of the *CITY* or the *DISTRICT*, at times other than during regular school hours, will be scheduled by the *DISTRICT* Community School Coordinator with the approval of the *CITY* Parks & Recreation director.

5. DENIAL OF FACILITIES:

The *DISTRICT* reserves the right to deny the use of their facilities to groups which by their behavior may either do physical harm to the facilities or participants, or by their presence downgrade the moral

and ethical standards of the *DISTRICT*.

6. CITY OPERATIONS:

The *CITY*'s responsibility is restricted to public use of the gyms and the pool as well as daily maintenance of the pool. This means that the *CITY* will:

a. Hire, terminate, pay, and supervise all *CITY* recreation personnel.

b. Schedule all *CITY* recreation use programs and activities.

c. Do the pool vacuuming, filtration, chemical up-keep, and locker room clean-up.

d. Provide reimbursement to the *DISTRICT* for overtime custodial services incurred when *CITY* recreational activities last later than 10:30 PM, unless prior agreements are made for use of the facility past the alloted time.

e. Provide supervisory personnel for all *CITY* recreation activities and insure that *CITY* recreation participants have vacated *DISTRICT* facilities prior to the supervisor's conclusion of duties.

7. DISTRICT OBLIGATIONS:

The *DISTRICT* will at its sole cost and expense:

a. Provide heat, light, power, water, chemical supplies, and equipment necessary for both *DISTRICT* and *CITY* use.

b. The *DISTRICT* will continue to handle all major mechanical work and the annual pool overhaul.

c. Provide all necessary building maintenance for the gyms, pools, and supporting facilities.

d. Provide regular custodial services during the regular school year when facilities are vacated by *CITY* recreation participants and supervisors by 10:30 p. m.

8. FEES:

Since *CITY* expense for operating the pool must be met by gate receipts, all gate receipts collected by the *CITY* are to be the property of the *CITY*.

9. LIABILITY INSURANCE:

The *CITY* shall at all times maintain and keep in effect liability insurance covering its use of said facilities.

10. PROPERTY DAMAGE

The *DISTRICT* facilities or property thereon damaged or destroyed by reason of the negligence or acts of the *CITY* employees or persons using the *DISTRICT* facilities during the times that said facilities are subject to the exclusive use of the *CITY* shall be the responsibility of the *CITY*, and reimbursement for replacement or repair thereof shall be made by the *CITY* to the *DISTRICT*; provided, however, that nothing herein contained shall be construed to obligate the *CITY* to make repairs for damage which is due to ordinary wear and tear.

11. TERMS OF THIS AGREEMENT

The terms of the *AGREEMENT* may be renegotiated to meet the prerequisities of the Community Education Program.

D. Resolution 68-5-R Setting Amount Owed by City for Payment on Personal Property Taxes. The resolution was read. Mrs. Hajdu inquired why the Borough was just now collecting these taxes from the City for 1967. Mr. Valkama explained that the City could make better use of these funds than the Borough, and so the delay was beneficial to them; and also that the City is just now collecting its 1967 sales tax, out of which this payment is made. Further, the Borough supplemental personal property roll has just been completed for 1967. Mrs. Springhill moved, seconded by Mr. Arndt, that the resolution be adopted. Mr. Burt and Mr. Bullock wished to review the tax returns before any action was taken. Mr. Valkama commented that if further reviews were made, it would probably turn out that the City would owe more money because in 1967 there were no teeth in the law requiring that people living inside the City file for their personal property. Motion carried by unanimous roll call vote.

E. Approval of Tax Adjustments Nos. R-67-38 and R-67-39. Both of these lots were taken by ASHA in 1966 and should have been in ASHA's name for 1967 instead of John Thevik's. Mrs. Springhill moved, seconded by Mr. Bullock, that adjustments No. R-67-38 and R-67-39 be approved. Motion carried by unanimous roll call vote.

F. Approval of November 15, 1968, as Delinquent Date for Second Half Payment of 1968 Taxes. It was explained that the ordinance sets November 1 as the delinquent date, but that enough tax bill forms are left from 1967 to use for 1968 if November 15 is again used as the delinquent date for second half payments of taxes. Mrs. Springhill moved, seconded by Mr. Arndt, that November 15, 1968, be approved as the delinquent date for second half payment of 1968 taxes. Motion carried by unanimous voice vote.

G. Conveyance of Cemetery in USS 3511 to City. Mr. Best stated that the cemetery is presently being arranged haphazardly, and suggested that it be conveyed to the City since they have the necessary staff to properly carry out proper arrangements. After discussion, Mrs. Springhill moved, seconded by Mr. Arndt, that the cemetery in USS 3511 be conveyed to the City for $1.00 with the provisions that it be properly laid out for roads and access and in accordance with the Subdivision Ordinance, insofar as practicable for a cemetery. Motion carried by unanimous roll call vote.

H. Dewitt Fields re Anton Larsen Road. Mr. Fields stated that he had been asked by Okey Chandler on behalf of the people of Anton Larsen Bay and Port Lions to meet with the Assembly concerning the restoration of this road, which is covered now at high tide for one mile. He stated that a petition concerning the road had been submitted to the Governor, and that the reply stated that $500,000 would be required to reroute the road. However, local contractors felt that the road could be sufficiently raised for only $25,000 to $30,000. Mrs. Hajdu suggested that the State be requested to use maintenance funds for this purpose, that they be informed that cost estimates for the job were less than $100,000, and that the road is needed by the families in the area and by the people from Port Lions and Ouzinkie who use it, after coming in by boat, as a means of getting to Kodiak. Mrs. Springhill moved, seconded by Mr. Bullock, that a resolution be drawn up by the attorney incorporating the ideas which were suggested in this discussion to take care of the problem of the Anton Larsen Bay Road. It was suggested that copies of the resolution be sent to the Governor and Kodiak's Representative and Senator. Motion carried by unanimous roll call vote.

X CHAIRMAN'S REPORT

A. Legislation of Interest. Mr. Best pointed out the following legislation of special interest:

HB 375
HB 376
HB 432 for school construction grants.
HB 463--appropriation bill for HB 432.
SB 175--providing for State to pay for defaults of local school bonds. This would help to give Alaska a better bond rating and may lower interest rates.
SB 298--3% education wage tax.

B. Building Inspector's Vehicle. Mr. Best suggested that since the City furnishes gas for the vehicle, the Borough furnish necessary repairs. The Assembly concurred.

EXHIBIT F

KODIAK ISLAND BOROUGH

M E M O R A N D U M

TO: Stu Denslow/Borough Manager

FROM: Ed Haney/Borough Assessor/Appraiser

SUBJ: Lot 1, Hospital Subdivision, USS 1822
Appraised Valuation

DATE: November 29, 1977

This lot (5.92 acres) was transferred from the Kodiak Island Borough to the City of Kodiak in 1968 to be used as a cemetary, recorded in Book of Deeds 21 at pages 92 and 93.

Comparable land in this area was selling for $5,000 per acre in 1968. As this is all high and well-drained land the 5.92 acres would have had a value of $29,600.00.

The 1978 value of this property were it put to it's best use (not a cemetary) would be $25,000 per acre or $148,000. If this land were subdivided into residential lots the market vlaue would total $300,000. This is possible because of adjacent water, sewer and access.

As a cemetary, it's value is almost an intangible, however to purchase land under today's market conditions would come close to the $300,000 figure.

Patrick K. Poland
Staff Assistant to the
Local Boundary Commission
Department of Community
and Regional Affairs
511 West Fourth Ave.
Anchorage, Alaska

Dear Pat:

This is simply to confirm our conversation of last Friday, November 18, 1977. At that time I requested that the Kodiak hearing now scheduled for December 12, 1977 be rescheduled for later in that week to enable me to prepare the Borough's brief in sufficient time so that Commissioners would have the opportunity to review it prior to the hearing. You denied that request. The Borough is now proceeding with the case within the time frame you have set forth. Should the short time allowed appear to prejudice the Borough at a later date, the objection will be reiterated at that time.

I look forward to hearing from you later today in regard to the review of Commissio precedents we discussed.

Thanks for your consideration.

Sincerely,

Joan M. Katz

Betty Wallin, Mayor
Kodiak Island Borough
Kodiak, Alaska

Honorable Betty Wallin:

In accordance with your request, Dr. P.J. Hill and I conducted an analysis to determine the economic consequence with regard to the matter of annexation of portions of the Kodiak Borough by the City of Kodiak. To facilitate the study, we have thoroughly dissected the annual operating budgets of both governmental entities, that is, the Borough and City, and analyzed a substantial amount of information contained in reports produced by other consultants and government entities.

We have generally concluded that the residents in the area being considered for annexation will not derive appreciable economic benefit from the City's proposed boundary expansion. From an economic prospective, the only justifications for expanding the governmental and taxing authority of the City are; (1) if the residents outside the City are dissatisfied with the level of service they are receiving, (2) if the City can provide services more efficiently and economically than the Borough and (3) if residents inside the City are carrying a disproportional burden for service shared by area-wide residents. Relevant information suggests that none of these conditions exist; therefore, annexation is not warranted. The basis for these conclusions are summarized in numerical order throughout the remainder of this report.

Sincerely,

G. Hayden Green, Ph.D.

P.J. Hill, Ph.D.

KODIAK ISLAND BOROUGH ANNEXATION ECONOMIC ANALYSIS

1. Borough residents level of satisfaction with existing services:

Members of the Anchorage Urban Observatory research staff were commissioned to conduct a survey of attitudes of residents in the Kodiak Borough as part of an OCS impact study in 1977. As part of that study, respondents were asked questions regarding their level of satisfaction with services received. A total of 472 individuals completed the survey. To determine if the level of satisfaction with services received varies between residents within the City and those residents in the proposed annex area, some additional computer and statistical analyses were conducted of the original questionnaire responses.

Individuals living in the village who responded to the questionnaire were omitted. The balance of the respondents were separated into two groups, that is, those people within the City limits and those in the proposed annex area. One question asked was, "What do you dislike about your area?" Of the 199 respondents living within the City, 15.1% listed roads; and 13.1% listed litter as their main area of dissatisfaction. Of the 119 individuals responding to the questionnaire who live in the proposed annex area, 12.6% listed roads; while 13.4% listed litter. This was the area with which residents registered their greatest level of dissatisfaction (roads and litter). In the Table attached, it can be seen that very little difference exists between the level of dissatisfaction with services between individuals living within the City limits and those living outside. In fact it should be noted that, while 2.5% of the respondents living within the City listed police and fire protection as their number one concern, not one person living outside the City listed it as an area of dislike. (See Table 1)

In another question residents were asked to rank several factors which they considered major problems facing the Kodiak Borough. In Table 2 the percentage of individuals listing various factors as their number one concerns are shown. It should be noted that only 5 percent of the respondents living outside the City listed inadequate public facilities and services as a primary concern.

A third question queried residents about those areas they felt were the communities' most pressing needs. Again, we separated respondents within the City and those in the proposed annex area. The factors listed as being the most pressing need were housing and roads by both sectors of the areas' population. Nine percent of the City's residents listed public services, water and sewer as a pressing need; while only 4.2 percent outside the City listed it as their first concern. (See Table 3)

In a subsequent question, residents were asked to rate community facilities and service as either presently being adequate, needing upgrading at the present time or needing upgrading in the future. A perusal of Table 4 suggests that residents outside the City have equal concerns with the level of services they receive. (See Table 4)

Several important implications pertinent to the issue of annexation are gleaned from the survey data:

1. Individuals within the City limits and those persons outside the City have similar attitudes towards the level of service they receive, that is, a comparable level of satisfaction with regard to public goods in relation to their cost.

2. The services of greatest concern to both City and Borough residents are roads and litter conditions. According to state records, the City maintains 13 miles of roads; while the Borough maintains 9 miles of roads. The remaining road system is state or privately maintained. The survey results suggest that residents do not perceive the City as doing a better job maintaining their road systems than the Borough is with its roads.

3. The survey results clearly suggest that the City is not more astute at providing services to local residences than the Borough government. There is some dissatisfaction among City residents with some services provided by the City of Kodiak, i.e. law enforcement, animal control, airport, parks, and roads. Within those services provided area-wide by the Borough, there exists a relatively high level of resident satisfaction, i.e. medical service and education.

4. The survey results indicate that individuals in the outlying areas are satisfied with the level of service they are receiving. This would suggest that the initiative to expand the boundaries of the City limits originated within the City or from a minority group.

2. Can the City provide services more efficiently and economically than the Borough?

One other area upon which the annexation decision should be predicated is the cost of providing public services. The City asserted in the original petition that it could provide services to the area in question more efficiently through annexation than otherwise.

In discussing this, several things need to be well defined. First, it is desirable to separate public goods from public utilities especially with respect to governmental finance. There are some goods that local governments provide that are, in reality, public utilities. Sewer and water systems fall under this category. Those who receive the benefits from these goods are easily identified; and these systems should, if possible, be supported by user fees. These facilities should not be financed by general taxes.

Secondly, with respect to the financing of public goods, it is possible to go the service district route efficiently. All that is required is an institutional arrangement whereby those who receive the benefits can be assessed in proportion to the costs. (The costs would include some prorata share of the fixed plant, not just thin marginal cost.) There is no loss in efficiency in doing this through service districts, and there is no economic reason for necessitating annexation. Expansion of services may produce some economies of scale (the larger the operation, the lower is the cost per unit of output); yet these can be realized without annexation. The service district would seem a more desirable route because of the ability of the residents to choose which public utilities they want.

Public goods are those types of goods which must, by necessity, be provided through taxation (police, planning, general administration, parks, etc.); yet there is no reason to believe that they require the annexation process. They could be provided on the basis of service districts and differential taxation. It should be remembered that the benefits of the service (public good) do have geographical limitations.

Further, it is doubtful than any particular government has a unique advantage in terms of production costs. Both the Borough and the City have to buy their resources in the same market, and they face the same types of technology. There is probably no economic rationale for having a service provided by one government over another.

To provide a basis for comparing the cost and operating efficiency of the two governments, we used the 1977/78 operating budgets of the two entities. (See Table 5)

It should be noted that several duplicated positions exist within the Borough and City governments. These will not be eliminated if the City boundaries are expanded.

A preferable alternative to annexation would be unification. If the two governments were unified, the positions listed in Table 6 could be eliminated. It should be noted, however, that the historical experience of unification efforts have not resulted in substantial cost savings. Where costs are saved in one area, they are often absorbed in others. The primary advantage of unification is the elimination of the conflict that often arises where two governments serve the same citizenry.

3. Are residents inside the City carrying a disproportional burden for services?

Kodiak is particularly concerned that they (City residents) are paying for many "public goods" that are used by people who live outside the City boundaries. The charge is that these non-city residents are "free riders." It would be useful to examine sources of revenue for the City and identify revenues that are paid by City residents and by non-residents.

The population of the respective areas (City and surounding area) is computed as follows: The total population of the City (official population figures used by the State of Alaska for revenue sharing) and the Borough in 1977 is 4,960 and 7,901 respectively. The population of the five second-class cities in the Borough (these are Akhiok, Larsen Bay, Port Lions, Ouzinke and Old Harbor) totaled 940. It will be assumed that there are approximately 200 persons living in other areas (areas outside cities). Therefore, the total population living in the greater Kodiak (City) area is 7,901 less 1,140 or about 6,761. Of that total, 4,960 live in Kodiak city; and about 1,800 live in the surrounding area. Therefore, of the total resident population in the greater area, City residents account for approximately 73 percent which implies that the surrounding area holds about 27 percent of the population.

Additionally, the migratory labor force accounts for a significant portion of those people who are hit by sales taxes. Accounting for a trend, it would appear that, on average, the labor force is 13 percent higher than the permanent residents would support. This is due to the cyclic nature of employment.

Thus, there would appear to be a significant portion of the population that would be hit by the sales tax who are not permanent residents of Kodiak city. Assuming that there are not wide differences in the distribution of income between residents (of the City) and non-residents, it would not be unreasonable to assume that people would pay the same amount in sales taxes to the City, no matter where they lived either within the City, the surrounding area or were transient labor force. Conceivably, what I can account for would seem to indicate that residents of the surrounding area and transient labor force (in covered employment) would probably account for about 40 percent of the total sales taxes collected. Additionally, there are others who pay sales taxes who are not accounted for by this figure (any sales that are made to Borough residents outside the greater Kodiak city area which would include all the outlying villages and any purchases made by the U.S. coastguard personnel). Also, there are significant sales taxes paid by people who work in Kodiak in the summertime who are not in covered employment; this would include all the sales made to fishing boats from the outside. Thus, the portion of sales taxes paid by non-city residents is probably greater than 50 percent.

TABLE 6

POSSIBLE DUPLICATION ELIMINATED THROUGH UNIFICATION

Dues for City Clerk Assoc.	1,600	
	$126,138	

(2% saving on combined budget)

One of the traditional arguments for a sales tax, at least in this instance, would seem to hold true. Sales taxes can be levied to tax people who might otherwise escape taxation, notably, tourists, transients, and non-residents of a political jurisdiction.

Other taxes of the city that are ultimately paid by non-city residents would include their portion of the property taxes that are shifted forward by commercial businesses within the City. Traditionally, across the U.S., businesses account for about 50 percent of property taxes (see Advisory Commission on Intergovernmental Relations, Federal-State-Local Finances: Significant Features of Fiscal Federalism, 1973-74 ed., Washington, D.C., p. 173). It is commonly believed that businesses shift large portions of the property tax on to the consumer in the form of higher prices. For example, the Port of Kodiak included $83,000 as a payment to City government in lieu of property taxes. This payment was included as part of the rate base in calculating charges for use of the terminal. This shifting is especially true in non-competitive market structures which is characteristic of the Kodiak economy. Thus if 50 percent of total retail sales which are made in Kodiak are made to non-city residents and are passed along in the form of higher prices, then it would be possible to conclude that approximately 25 percent of the property taxes paid to the city are, in fact, paid by non-city residents.

In terms of the total tax revenue Kodiak city collects, the City residents collect a significant portion of their taxes from people who do not reside in the City. Of total property taxes paid, we can attribute $163,750 to non-residents; and, of the total sales tax revenue ($1,250,000), approximately half ($625,000) can be attributed to non-residents. Thus it would seem as though non-residents pay as much as $788,000 into the purse of Kodiak city which accounts for almost 41 percent of total tax revenue. It can hardly be said that there is a significant "free rider" problem.

It is interesting to examine what would happen to property taxes in the area to be annexed if annexation were to take place and the City spread its property taxes out over a larger tax base. Currently, there are four service areas where differential taxation is imposed. These include: the City (TCA1), the fire district (TCA8), the road district (TCA9) and the villages (TCA9). The fire district and the road district property would be added to that of the City upon annexation; both of these areas hold about 12.85 percent of the total property in the Borough. The City, on the otherhand, contains 81.17 percent of total property in the Borough.

By using the mill rate and the tax base of the areas to be annexed along with the City, it is possible to examine what would happen if the property tax of the City were spread over the whole area. Currently the City is taxed at a 16.33 mill rate; the surrounding area mill rate is 7.23 with an additional assessment of 0.75 mills in the road district and 2.27 mills in the fire district. If the focus of annexation were to simply shift some of the cost to the outlying areas, the same total amount would be collected with the mill rate of the various areas being equalized. The overall mill rate would be 15.19 mills -- a decrease of 1.14 mills in the City (a decrease of $85.5 on a $75,000 home), an increase of 5.69 mills in the fire district (a $426.00 increase in property taxes on a $75,000 home), and an increase of 7.21 mills in the road district (an increase of $540.75 on a $75,000 home) for residents outside the City.

Further, it might be noted that the area to be annexed includes the U.S. Coast Guard base. Thus the retail sales on the base would be subject to the City sales tax which would add to the City revenues significantly. It is difficult to know how much this will add to the City revenues. The Office of non-appropriated fund for the Coast Guard reported that this total operation was approximately $3.5 million. While most of that was the BX and similar activity, the precise amount that would be hit by a retail sales tax would be difficult to determine. If, for example, $2.0 million were covered by the retail sales tax, the City would collect $60,000. This is about five percent of the total tax revenues for the City.

KODIAK ISLAND BOROUGH

E

M E M O R A N D U M

DATE: May 19, 1978

TO: Chairman and Membership
Alaska Local Boundary Commission

FROM: Kodiak Island Borough

SUBJ: Local Boundary Commission Report Proposing The Annexation of Certain Borough Lands to The City of Kodiak

On Friday, May 12th, Kodiak Island Borough was presented with a copy of a Preliminary Report to the Local Boundary Commission proposing to annex certain lands in the urban area of the Borough to the City of Kodiak. The Boundary Commission staff and the City of Kodiak had a number of months to prepare the analysis and recommended annexations, whereas the Borough was given a period of only seven (7) days in which to evaluate the technical and financial consequences of the staff assumptions and recommendations in the report. The Borough has exerted its best efforts to prepare for this hearing. If more detail is required by the Commission we will be glad to provide that as soon as reasonably possible.

A cursory examination of the report noted numerous areas of fact, substance and assumption which appears to reflect a bias by the staff in favor of annexation and resulting in inaccurate conclusions. Specific examples of the above were conveyed to Boundary Commission staff by phone on May 18th, 1978. If required, a more detailed comment will be provided in writing upon the conclusion of our evaluation in the weeks ahead.

Matters of Policy

Section VI of the above referenced report draws conclusions and makes recommendations based on the apparent assumption that annexation is the only viable boundary adjustment technique and that the Local Boundary Commission should review activities in the area for purposes of assuming a mediating role to resolve alleged conflicts related to municipal services and the occupancy of contiguous political and physical space.

Unfortunately, the staff fails to recognize that the City of Kodiak is part of Kodiak Island Borough, in point of fact, representing only slightly over four square miles, in the heart of the Borough urban area, located within the five thousand five hundred square mile archipelago. Within the area of the archipelago the Kodiak Island Borough has operating responsibility for the most significant area-wide public services in the form of education, health services and facilities, planning, zoning and community development, assessment and taxation and non-areawide parks and recreation (see Table 1).

On a more selected basis, Borough voters have chosen to create a series of special service districts to provide for the construction and maintenance of roads, sewer and water utilities and fire protection. No requests have been received for police service or solid waste disposal.

Through their actions voters have expressed the desire to create special service districts which enable them to identify the municipal services

they desire to receive, the level of service to be provided and the costs they are willing to bear for the maintenance of those identified levels of service. As a matter of policy the Borough Assembly has agreed to provide only those types and levels of Borough municipal services that are requested by the citizens as they are willing to vote for and, subsequently, pay for them. Through the utilization of service districts non-areawide special services can be identified by citizens to include a determination of level of service and the costs associated with same. This policy approach assures that the voter is consciously committing himself to a service burden based upon need and willingness to pay. In the context of this policy, the City of Kodiak can be looked upon as a service district wherein the voters assumedly have selected a unique combination of services and levels of support appropriate to their needs and wishes. Unfortunately, an assumption appears to have been made by the City of Kodiak and the Boundary Commission staff, that through the act of annexation a package of preselected services from the Kodiak urban service district (City) ought to, in some way, be superimposed on the voters of adjacent service areas. The research of Messers. Green and Hill show conclusively that there are no socioeconomic or political conclusions that warrant annexation actions./1

Unification On Fall Ballot

Unification of the City within the Borough provides a method of boundary adjustment which can by a vote of the people, provide a governmental organization that flexibly meets the needs of diverse interests in the

same political and physical space while giving the voting public continuous opportunity for decision making with respect to the identification of services and the determination of levels and costs for the delivery of same. Kodiak Island Borough Assembly Resolution 78-34-R will place the question of unification before the voters of the Borough at the October, 1978 election, which if acted upon affirmatively, in due course, will dissolve the one boundary line of contention.

Determining Levels Of Service

A fundamental of democracy provides that people will be given the opportunity to select both the type and level of services they are willing to vote and ultimately pay for. This condition introduces the opportunity for different levels of service within different portions of the urban area. By way of example, it can be pointed out that the provision of road service in the Bells Flats/Russian Creek Road Service District costs approximately $4,000.00 per mile per annum. The service includes grading, some ditching and culvert work and snow removal. The service is provided by a private public works contractor employed by the Borough. In contrast, in the City of Kodiak similar street maintenance activities are costing the City approximately $16,000.00 per mile as provided by the City Department of Public Works. Construction is not included in either example. We can conclude from the numerical comparisons that either City maintenance is four times as good per unit price or some other condition intervenes to justify the differences in cost per equivalent level of service. It should be obvious from the cost savings involved, however, that the Borough will continue to utilize a contractor

for a public works function to meet the level of service expectations. In another example, police service, the Borough has not received a request for service beyond that which is provided by the Alaska State Troopers. In the absence of a request for additional special police service we must conclude that there is a high level of satisfaction with the service currently rendered. Concurrently, in the City of Kodiak $813,000.00 were spent last fiscal year for police services.

The above examples serve only to point out that in a given urban area significant difference in levels of demand for services exist and the voting public must be provided with an opportunity to select the level of service and through their vote indicate their willingness to pay for the costs of same. The Borough service district mechanism provides the least obtrusive and most flexible method for meeting special public service demands.

Dear Pat:

Enclosed is a copy of Kodiak Island Borough Ordinance 77-35-0. As you can see, it is establishing the Mill Bay-Monashka Service Area. Also enclosed is a map to give you an idea of the area this encompasses.

I am sending this to you for information purposes only as I feel that this action by the Borough is the kind of procedure we have been expecting for quite some time. In view of the fact that the City has requested the Local Boundary Commission to look into possible annexation of the very same area, I feel it is important that the Commission be made aware of this new development.

You did mention that the Commission has the power to prohibit this type of action from taking place in an area that could very well be annexed to the City. I believe the City could adequately show that this area is now being served in many ways by the City of Kodiak. I feel that if service areas are allowed there will be very little compulsion for these people to want to become residents of the City of Kodiak.

Under Section 29.63.090 (d), service areas, the following is a quote: "A new service area may not be established if, consistent with the purposes of Article X of the State Constitution, the new service can be provided by an existing service area, annexation to a city or by incorporation as a city" (emphasis added). It is obvious that if the Borough were to ask for water and sewer service areas they would have to use the City's facilities for these services. If road powers were the concern of the ordinance mentioned above, the Borough would have to contract or establish a new operation for servicing the roads in this area. At the present time the City has facilities, equipment and manpower to provide this service to the residents of the City of Kodiak. It is one thing to start from scratch or contract

with a private company or to provide a service. Since the City already has men, equipment, a shop, etc. it is obvious that this should be accomplished through annexation instead.

While it is one thing to overlook the State Statutes, I feel that if this service area is allowed it would be contradictory to the Constitution of the State of Alaska which is the supreme document in matters of this case.

I do not have any other information on what the Borough is doing; however, I am sure you have the resources to get the information you need. If I hear of anything more, I will be sure to let you know.

Thank you very much for your review of this most important matter.

Very truly yours,

CITY OF KODIAK

Ivan L. Widom
City Manager

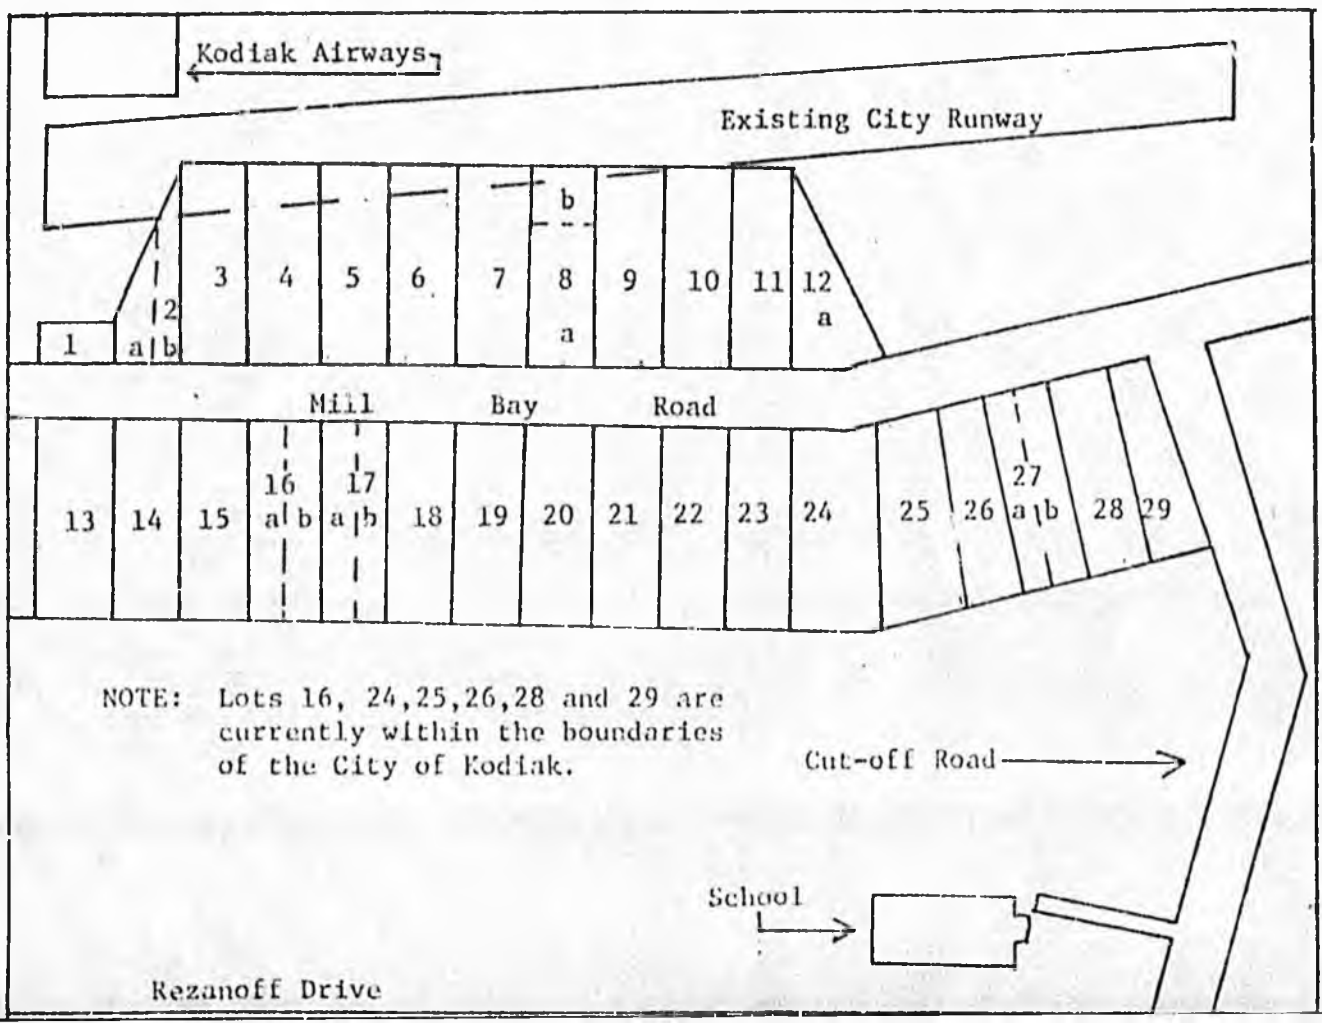
NOTICE OF PUBLIC HEARING

Pursuant to AS 44.19.290 and 19AAC 10.090 notice is hereby given that the Local Boundary Commission will conduct a public hearing on Monday, December 12, 1977, at 7:00 p.m. in the council chambers of the City of Kodiak. The purpose of the hearing is to obtain testimony of the public regarding the petition of the City of Kodiak proposing annexation of certain property located along Mill Bay Road to the City of Kodiak. The territory proposed for annexation is more specifically described as:

Lots 1,2A,2B,3,4,5,6,7,8A,8B,9,10,11,12A,13, 14,15,17A,17B,18,19,20,21,22 and 23 of United States Survey number 3098, comprising some 21.73 acres.

A map displaying the general location of the property is shown below.



Any person wishing to speak at the hearing may do so. Persons unable to attend the hearing may arrange to have someone speak in their behalf at the hearing or may present written testimony prior to the public hearing. Written comments should be mailed to:

Department of Community and Regional Affairs
Division of Local Government Assistance
511 West Fourth Avenue
Anchorage, Alaska 99501

Following the conclusion of the public hearing the Local Boundary Commission may convene a decisional meeting. Pursuant to the authority granted the Local Boundary Commission by Article X, Section 12 of the Alaska Constitution and AS 44.19.260 the Commission may enter any one of three possible decisions:

1) To accept the petition as presented; or

2) To reject the petition; or

3) To amend the boundaries of the area proposed for annexation and accept the petition. Should the Commission decide to amend the boundaries of the area proposed for annexation, it may do so by decreasing the size of the territory proposed for annexation or by adding to the territory proposed for annexation any territory adjacent to the City of Kodiak.

Pursuant to the previously stated authority the Local Boundary Commission's decision is subject to legislative review.

Should bad weather or other factors preclude the conduct of the hearing at the scheduled time and place, the hearing is rescheduled for the following day, Tuesday, December 13, 1977 at the same time and location.

Dated this 9th day of November, 1977, at Anchorage, Alaska.

Kodiak Island Borough
KODIAK, ALASKA
RECEIVED
DEC 19 1977

Dear Mr. Strandberg:

I do not envy the Commission's position when attempting to relate to the problems such as we have here in Kodiak. I respect your willingness to listen to many statements that are irrelevant; however, I do not believe they should bear much weight in your decision.

When I finished my initial remarks, I asked for an opportunity to reply to the Respondent's Brief. For one reason or another, you did not honor my request. I realize your desire not to prolong the hearing; however, there were many points that were made that were not true. It is too bad that you were not willing to give me an opportunity to clear them up for you and those attending the meeting.

I think it should be made known in what capacity your fellow Commission member, Ms. Gallagher, is working for the Borough. It is obvious that if her employment has anything to do with any of the issues mentioned in the annexation proceedings she should disqualify herself from any court proceedings, as well as Commission activities. Her ability to ask questions during the hearing that would bear on possible litigation would seem reason enough for her to disqualify herself. I would like to hear from you or Ms. Gallagher regarding this issue.

There are several points I would like to make that were brought out in the testimony of the citizens.

EXHIBIT A

1. The City sewage treatment plant is 100% funded by the Federal and State Governments and City of Kodiak. The City's portion is financed in part by general obligation bonds. There are no Borough funds involved in this sewage treatment plant.

2. It is obvious that the City is not going to reap any huge benefits from the annexation proposal. Half of the lots are in public ownership, there are no industries, pipelines, etc. that would constitute a windfall to the City if the annexation did occur.

3. Postponing the decision on this annexation until after the legislature begins is not fair. The merits are quite obvious. I should not have to go into any detail on this.

4. As far as I could ascertain, there was not one registered voter from the area in question who spoke against the annexation. If an election were held rather than the public hearing, none of those people would have been able to voice their opinions. I think it was incumbent upon the Commission to make this clear. One of the items I wished to make known was that no resident of the area spoke on the annexation. The only people involved were property owners and those renting or leasing for business purposes.

5. At the Borough meeting on December 1, I tried to explain that the annexation of the Mill Bay Road area was the only item to be considered at the hearing. The Borough overreacted and sent out notices to all post office box holders as well as the notices in the paper. I feel that it is this kind of activity that turns people off toward government and makes all our jobs more difficult.

6. As I understand it, there are five members of the Boundary Commission and since two can hold a public hearing but three need to make a decision, the other two members that were absent also need to concur in the decision to hold another public hearing on this annexation.

It is quite obvious that the residents of the Borough and City residents who own property in the Borough are against annexation because of the additional financial burden. As far as I am concerned, that is no reason for these people not to be annexed. From your comments, you seem to have similar feelings. I am going to ask the Council of the City of Kodiak to wait six months before meeting with the Boundary Commission again since no annexations can occur until 1979. The Borough will go ahead with their service areas and unnecessary duplication of taxing structures will automatically result. I am certain you are aware that as soon as an area gets water and sewer from the core City they have no need

to annex. This is especially true in the Kodiak urban area.

I would like to take this opportunity to thank you for visiting with us. I really feel that you have quite a burden on your shoulders. I appreciate that fact only too well; however, I still feel that you have accepted your positions of trust and you have a responsibility to the municipalities that are depending on you for proper decisions.

Very truly yours,

CITY OF KODIAK

KODIAK ISLAND BOROUGH

CONFIDENTIAL MEMORANDUM

TO: Borough Manager

FROM: Planning Director

SUBJECT: Individual Breakdown of City and Borough Taxes

RE: Information Required by Counsel

DATE: December 6, 1977

During our discussions with Mrs. Joan Katz, she requested I prepare a breakdown of my estimated Kodiak Island Borough Real and Personal Property Tax as well as the amount of Sales Tax collected by the City for goods and services.

The following reflects the assessed valuation of the real property I lease:

Land	Building	Total	KIB Mill Rate		Amount of Tax
$8,900	$32,890	$41,790	$9.50	=	$397.00

Personal Property:

Description	Valuation		Mill Rate	Amount of Tax
1965 Dodge $\frac{1}{2}$ Ton P.U. w/Camper	$ 500			
1974 Buick 2 Dr. H.T.	2,975			
1973 Chevrolet K5 Blazer	2,900			
1969 5-HP Outboard Motor	50			
Total	$6,425	x	$9.50	$ 61.04
Total Amount of Tax Revenue Collected by K.I.B.				$440.04

The following reflects the estimated Sales Taxes I pay:

EXHIBIT B

CONFIDENTIAL MEMORANDUM

To: Borough Manager
From: Planning Director
Subject: City and Borough Taxes, Individual Breakdown
Date: December 6, 1977

Sales Taxes:

Item	Amount of Tax (Month)
Food	$ 21.00
Telephone	2.25
Electricity	2.55
Fuel Oil (Furnace)	7.50
Clothing	3.00
Automobile Gas and Oil	1.80
Tire Repair	.54
Cosmetics	1.00
Water	.42
Dry Cleaning	.60
Cable Television	.51
Entertainment (Movies)	.75
Appliances (Large & small, Replace & repair)	1.05
Cards, Gifts, Candy	1.50
Books, Magazines, Newspaper	1.00
Meals Out	6.00
Beverages	5.00

Average Amount of Sales Tax Paid to City of Kodiak, $ 56.47 per Month;

Total Yearly Amount Sales Tax Paid to City (x 12), $ 677.64

Average of Combined City and Borough Taxes for non-City Resident, $1,117.68

Percentage of Total Tax Paid to the City of Kodiak, 60.629%

Percentage of Total Tax Paid to Kodiak Island Borough, 39.370%.

Of the $440.04 paid to the Borough, 2.27 Mills or $109.44 were paid over to the City of Kodiak for fire protection, thus leaving the Borough with a net tax collected in the amount of $330.60, and the City of Kodiak with a total $787.08.

Percentage of Adjusted Total Tax Paid to the City, 70.421%,

Percentage of Adjusted Total Tax Paid to the Borough, 29.579%.

Respectfully submitted,

H Milligan

Harry Milligan

CITY OF KODIAK
RESOLUTION NUMBER 23-77

A RESOLUTION OF THE COUNCIL OF THE CITY OF KODIAK REGARDING THE ESTABLISHMENT OF A JOINT COMMITTEE TO STUDY UNIFICATION

WHEREAS, major changes are occurring in the entire Kodiak Island Borough, and

WHEREAS, the tax base is not sufficient to support excessive governmen and

WHEREAS, the relationships between the City of Kodiak and the Kodiak Island Borough demand close cooperation and coordination, and

WHREEAS, unification of the two governments might be in the best intere of the residents of the Kodiak Island Borough;

NOW, THEREFORE, BE IT RESOLVED that the Council of the City of Kodi wishes to participate in a study task force along with the Borough Assembly members and private citizens to study the advantages and disadvantages of unification and to recommend whether or not unification would be in the best interest of the residents of the Kodiak Island Borough. The Council respectfully requests the Borough Assembly to participate in this task force and to meet with the Council in worksession to determine how best to implement this study group.

PASSED AND APPROVED this 27th day of October, 1977.

April 18 election opposed

Council votes to sue

Kodiak Mirror, March 28, 1978

The Kodiak City Council voted yesterday to file suit against the Kodiak Island Borough to prevent the borough from holding a scheduled April 18 election to establish a Monashka-Mill Bay Service district.

The suit will be filed by a special attorney, Don Johnson of Anchorage, City Manager Ivan Widom told the Mirror this morning.

The council's decision to file suit was reached after city and borough council members failed to reach any agreement at a joint borough-city meeting Saturday.

The joint meeting was held to discuss who would provide sewer service to the Monashka-Mill Bay area after the city sewage treatment plan is in operation.

"The city is not trying to stop people from voting," city councilman Gary Stevens told the Mirror this morning, explaining that the city feels the special service district election would be illegal.

"We're trying to save the voters the $1,500 it would cost to hold the election," Stevens said.

"The city's point is," he explained, "that our interpretation of state law is that as long as an area is adjacent to the municipality and the city provides services, a new service district is illegal. The area should be annexed."

If the borough did establish a special service district for the Monashka-Mill Bay area, Stevens said, the borough would probably then contract with the city to provide sewer and water services.

"Hopefully the borough isn't going to start an additional water department," Stevens said.

"If the borough goes in there and builds the water district and then contracts with the city to maintain and operate it," he explained, "the city is at a disadvantage because it was not in on the planning. We will have the same problems we had on Larch Street.

"We want to be in on the planning to assure the system is compatible with ours," Stevens said. "We don't want to waste the taxpayers' money."

Further, he explained, the borough planners have determined that the urban Kodiak area will eventually extend to

(Continued on Page 2)

From page 1

the end of Spruce Cape.

"If this is true," Stevens said, "and I believe it is true...it's foolish for there to be two urban areas, one outside and one inside the city."

"I hope what is going to happen," Stevens said, "is that when people see the squabble they will demand unification." Juneau, Sitka and Anchorage went to unification, Stevens said, adding, "It's the answer for Kodiak. Unification would get rid of duplication, squabbling and lawsuits."

RECEIVED
MAY 3 1978
DEPT. OF COMMUNITY
AND REGIONAL AFFAIRS

Local Boundary Commission
Department of Community and
Regional Affairs
511 West Fourth Avenue
Anchorage, Alaska 99501

Gentlemen:

As I understand it, the Boundary Commission is holding a hearing in Kodiak to consider three items. The first is to make a decision on the Mill Bay Road annexation. This was heard by the Boundary Commission on December 12, 1977. The second item is to discuss two 100% annexations; one involving the City's airport property and the other is the Frontier Southern Baptist Church property. The third item is to discuss the boundary question in the total urban area of Kodiak.

The City of Kodiak has supplied the Boundary Commission with a great deal of information regarding the Mill Bay annexation. The Borough has gone ahead with their plans to create a service area in the Kodiak urban area adjacent to the city limits. The City of Kodiak has decided to stop this service area creation through the court system. If it turns out that the courts will not allow the service area to be created, the responsibility will be placed on the City of Kodiak to provide services to the projected service area.

There is another area that I would like to bring to your attention as well. This involves the Coast Guard Base adjacent to the City of Kodiak. At the present time, the State of Alaska leases part of the Coast Guard Base for the State airport and is currently considering expansion of that facility. The Coast Guard Base, including the airport, is not within the boundaries of the Kodiak Island Borough; therefore, we have a difficult situation.

The City of Kodiak Police Department is the security agency involved at the airport. Our police officers provide the necessary anti-hijacking protection for the State. There are areas at the airport that are leased to individuals and the property is not taxed in any way. As the airport grows and develops, increased commercial activity will be present at that facility. It is obvious that the Kodiak Island Borough

is missing out on a great deal of personal property tax at the airport. I am not certain about the real property taxes since it is Federal property.

Another issue is the fact that Koniag Native Corporation is receiving excess property from the Coast Guard. There are plans to develop this property, of course. As long as the property remains outside of the jurisdiction of the Planning and Zoning function, the area could be developed without adequate controls. I feel it is important that the Boundary Commission take a look at this situation as well.

The immediate concern is to annex the State airport. I believe that part of the Coast Guard Base could be annexed without any residents taken in. I realize this is another whole dimension to the boundary situation in the Kodiak urban area; however, I think that if you are going to be looking at the total urban area around the City of Kodiak, the Coast Guard facility and State airport should be taken into consideration.

I have done some research regarding the formation of boroughs and utilization of service areas in the context of what is happening currently in the Kodiak urban area. I must apologize that the amount of research done and the limits of my resources does not make this study a complete one; however, the basic issues as I see them are presented below.

The most adequate source of information is a publication called "The State and Local Government System" by Thomas A. Morehouse and Victor Fisher. I was only able to find the SEG interim report #23, March, 1970.

I would like to take the liberty of quoting the specific paragraphs and furnishing you with Xerox copies of specific pages of the report. By utilizing this method, I will not take things out of context and give you incomplete information. This, of course, will make this communication to you a rather lengthy one; however, I think the end result will be much more convincing.

Since the subject report was published in March of 1970, I am certain the research was done in 1969 and before. That means that at lease for the last nine years the State of Alaska has been aware of the problems existing between cities and boroughs. There are references to other publications in this study that show that the State of Alaska has been aware of the problem prior to 1969. Due to lack of resources and adequate time, I will not go into a long dissertation regarding the Constitutional Convention, creation of boroughs and other instrumentalities of local government. However, I do plan to dwell on the issues that were brought out by Mr. Morehouse and Mr. Fisher that relate to the specific problem that the Boundary Commission is concerned with in the Kodiak urban area.

On Page I-18, the situation that we now have here is presented. At the top of the page, it mentions the Boundary Commission's responsibilities and ability to affec ıte the necessary controls. The next paragraph talks about the borough form of government and I quote: "In its current stage of evolution, then, the borough possesses the form but not the substa..ce of authoritative area-wide government. It is 'general government' within which a powerful special government--the school district--has maintained and even increased its autonomy. It has 'exclusive authority' for area-wide functions, but in practice, its functions are divided and shared with independent city and school administrations. It is a 'regional government' but it competes with city government for both territory and function. It speaks of promoting 'area-wide' policy and programs but it is so structured as to facilitate the expression of local selfinterest and localized service area needs"

The next paragraph on Page I-18 and I-19 further develop this idea: "The basic problem is that in most areas two forms of local government--the city and the borough--are attempting to occupy political and physical 'space' where there is room only for one. This is so particularly where a borough centers on a single urban core served by a well established city (Anchorage, Fairbanks, Sitka, Ketchikan). The case for a single urban area-wide governmental unit for these places would seem clear. Much less clear, however, is the rational used for super-imposing the borough as a second unit for local general government on the existing muni ipal base in these more developed regions of the State. On the other hand, where the borough, as a regional government, might serve smaller areas of settlement and rural areas, as well as region-wide needs, more room could be considered avaliable for both borough and city governments (e.g. Kenai, Kodiak, Matanuska-Susitna)."

The fact that growth in the last nine years has placed the City of Kodiak in the same situation as Anchorage, Fairbanks, Sitka and Ketchikan is pointed out by your addressing the same issues as discussed in the report.

On Page I-25, at the top of the page, there is a discussion regarding cities. "City boundaries should be so located as to encompass an entire 'natural' socio-economic and political community. Since most of Alaska's urban settlements are small and relatively compact, there is no technical reason why this criterion cannot easily be met. This would minimize the need for service areas in organized boroughs to perform urban services that can be performed by a city."

On the same page there is a discussion regarding service areas. This goes on to the next page as well and is certainly germain to the discussion at hand. "While it is generally desirable that matters of government organization and functions

be determined locally, past experience of borough-city conflict over annexation and the creation and operation of service areas indicate that the State probably through the Boundary Commission should review local action and play a mediating role. The purpose would be to insure that appropriate incorporation and annexation standards are met, that a new service area is actually warranted and, if so, that it is properly constituted. Any area bordering on a city should be subject to annexation rather than permitting its establishment as a borough service area or its incorporation as a separate city. If annexation or incorporation is not feasible or desirable, expansion of an existing service area would be considered providing that a determination is made that the existing service area should not itself be annexed or incorporated. Only after each of these options is considered in order should it be permissible to establish a new service area and then only with a clear understanding that it is subject to future adjustment within the broader system of organized local government."

Further on in the study, on Page IV-37, the same kind of information is presented. "The State was to assume a continuing responsibility for the overall design and performance of the local governmental system. Specifically for this purpose two new State agencies were mandated by the Constitution: a Local Boundary Commission and a 'local government agency'. The Boundary Commission would assure that borough and city boundaries were properly aligned in the first instance and subsequently were responsive to changing needs and conditions. The Commission was thus authorized by the Constitution to 'consider any proposed local government boundary changes' and subject to legislative veto it could implement such changes."

On Pages VI-16 and VI-17 there is a discussion of city versus borough. "It was apparent from the start that a potential stalemate between cities and boroughs was built into the new local governmental system set forth in the Constitution. Boroughs and the cities within them were very likely to compete with each other for territorial jurisdiction over urbanizing areas outside city limits. To service these places the borough would need to acquire additional powers or create special service areas. If additional area-wide powers were sought, these would be at the direct expense of city authority since area-wide powers assumed by the borough are denied to the cities. If nonarea-wide (outside city) powers were sought or if service areas were created, these could constitute blocks to city expansion."

On Page VI-18, there is a discussion of annexation versus service areas. "As viewed by the Public Administration Service (PAS) in its report to the Statehood Committee in 1959, there were two contrasting approaches to local government reorganization in the more urbanized areas of the state. On the one hand, the borough could be established with a view toward eventual absorption of the city within it. On the other, the jurisdiction of the city could be expanded through annexation of the urbanizing areas around it. In most of urban Alaska, there appeared to be no need for more than one unit of local governmnent to provide urban services.

Population and economic bases were small and duplication of governmental machinery would be wasteful. 'By all odds' reported PAS, 'the most direct and least complicated line of evolution for many communities would be expansion of the central city with all of its existing plant, political structure, credit and fiscal base and political know-how'. But 'if this line of reasoning is valid, what foreseeable use is there for organized boroughs . . '?"

> PAS concluded: "It may be that the best solution for the problems of urban government in most areas will be to concentrate the full responsibility in a single level, the city, or the completely consolidated city-borough. On the other hand, it may be that the borough will provide a very useful agency in rural Alaska for the exercise of local responsibility for administration and at least partial financing of education and a growing list of local or regional services such as local roads, fire protection, uitlities (water, sewer and others), health, recreation, etc., some of which would be provided on a borough-wide basis and some in special service areas organized and governed under the authority of the borough."

"Ignoring these considerations, the State layered borough government over the cities of urban Alaska and established no borough units in rural Alaska."

On Page VI-20, this thought continues. "At the same time, the borough service area has been available as a vehicle for meeting service needs for developed enclaves outside the city. This tends to neutralize whatever attraction city annexation may have for those seeking more and higher quaility urban services. With the borough service area, residents outside the city may select the particular mix of services they wish and be assured of paying, through differential mill rates, only for those additional services directly received in their immediate area of residence. For this reason, however, service areas also fragment the borough. The separate suburban enclaves develop, a built-in resistance to unified or consolidated area tax and service structures, and service area status insulates their residents from the cost of city facilities and services that they share or benefit from, perhaps most obviously as owners of property whose value is enhanced simply because the city is accessible."

I find that the above paragraph gets to the heart of the problem and I think that to go further would just elaborate this very same thinking and belabor the point.

One of the outgrowths of the current Kodiak Borough-City conflict has been the idea of unifying the governments in the Kodiak Island Borough. Resolutions have been passed by both the City of Kodiak and the Kodiak Island Borough regarding unification. At the Borough Assembly meeting on April 7, the Borough Assembly

did adopt a Resolution to put the question on the ballot next October. Hopefully, the Boundary Commission will look at the problem in the immediate context of what is going on now rather than what might happen in the future. I am certain that you are aware of the unification procedures and the fact that the Kodiak Island Borough is fragmented with a home rule city, five second class cities and the Borough. In addition, there are many residents outside of the cities that compound the complexity of unification. While I personally see unification as the only answer and ultimately it is bound to occur, the process will probably take two to three years before unfiication becomes a reality.

The Boundary Commission is the only body that has the power, authority and responsibility to mediate the conflicts described above. I feel that the State of Alaska is certainly at fault by allowing the borough-city annexation-service area conflicts to exist in the first place. In the last nine or ten years the situation has gotten worse and it has even reached Kodiak Island which in itself is isolated from the rest of Alaska. This is certainly not the time nor the place to lay blame but to look at answers within the context of legalized solutions.

The obvious is clear. The Boundary Commission should consider steps to annex the total urban area into the City of Kodiak by using the stipulation for differential taxation as described in 19AAC 05.020 (3) and (4). Without the total picture being reviewed and the Boundary Commission taking appropriate action, I see this situation continuing for a number of years. Since the Boundary Commission decided not to act on the Mill Bay Road annexation when you were here in December because of a decision to look at the entire urban area, I think it is encumbent that the Boundary Commission act positively to stop the squabbling and hassles that have resulted because of the City-Borough conflicts.

If Kodiak were an isolated case and our problems were unique to Alaska, I would be the first one to bring that to your attention; however, it is clear that since the creation of the Kodiak Island Borough and the fact that City Council-members do not sit on the Borough Assembly and removal of the weighted voting provision, many conflicts were bound to result. Only through the good offices of the Boundary Commission will the Kodiak Island taxpayers and residents see a resolution to their problem.

Hopefully, unification is the final solution to the problems, perhaps, that is what this is all about. The Constitutional Convention was aware that unification was probably the only answer; however, they did not deem it practical to mandate that from the beginning. It seems as though the only answer is unification; however, in the meantime we must look to the political realities of that process. As mentioned above, the City is taking legal action against the Borough to stop the formation of the service district immediately outside of the city limits. The Borough plans on utilizing City water and sewer to serve the residents of these service areas. As long as the Boundary Commission refuses to take positive annexation action,

Eric, Here were the enclosures I spoke of. Ivan

Mr. Eric Simpson
Local Government Specialist
Community and Regional Affairs
Pouch B
Juneau, Alaska 99811

Dear Eric:

Enclosed are the copies of the letters we discussed on the phone.

As I mentioned to you, I would like to have some more information on what the Boundary Commission is going to be doing in Kodiak. My request is made in part because of the potential misunderstandings that might result due to the number of issues involved. As I see it now, there are three specific issues. One, the Mill Bay Road annexation. Two, the two one-hundred percent annexations that the City processed and three, the entire Kodiak urban area.

I would like to know if these are the issues that the Boundary Commission is going to be discussing. Does the Boundary Commission want me to present all the material on the Mill Bay Road annexation over again or is what they have previsouly received adequate?

There are many issues involved in discussions about the boundaries in the total Kodiak urban area. I am not certain that I can prepare adequately for that type of discussion in advance unless I have further information from the Boundary Commission. If at all possible, I would like to get additional information so that I can prepare an adequate report on the issues involved. I realize this is putting a burden on you; however, I do not want to get into a position where the City of Kodiak is not given a fair opportunity to present its case.

Please let me know as soon as possible what is on the agenda and the specific issues.

Very truly yours,

CITY OF KODIAK

Ivan

Ivan I. Widom
City Manager

AND REGIONAL AFFAIRS

built into the borough structure. Another method of city representation (e.g., borough sections, at-large, or some combination of both) would not mean the elimination of conflict. Indeed, it is possible that confrontations between completely separate city and borough governments might even be more intense in the absence of assembly "screening" and internal stalemating. However, these confrontations would more likely occur in political arenas larger than the assembly structure, often forcefully presenting themselves for more definitive resolution at the state level.

Annexation Vs. Service Areas

As viewed by the Public Administration Service (PAS) in its report to the Statehood Committee in 1959, there were two contrasting approaches to local government reorganization in the more urbanized areas of the state. On the one hand, the borough could be established with a view toward eventual absorption of the city within it. On the other, the jurisdiction of the city could be expanded through annexation of the urbanizing areas around it. In most of urban Alaska, there appeared to be no need for more than one unit of local government to provide urban services. Population and economic bases were small, and duplication of governmental machinery would be wasteful. "By all odds," reported PAS, "the most direct and least complicated line of evolution for many communities would be expansion of the central city with all of its existing plant, political structure, credit and fiscal base, and political know-how." But, "if this line of reasoning is valid, what foreseeable use is there for organized boroughs . . .[?]"[21] PAS concluded:

[21] PAS, op. cit., p. 71.

would need to acquire additional powers or create special service areas. If additional areawide powers were sought, these would be at the direct expense of city authority, since areawide powers assumed by the borough are denied to the cities. If non-areawide (outside city) powers were sought, or if service areas were created, these could constitute blocks to city expansion. Moreover, borough assemblymen from outside the city could be expected to resist city annexation cutting into their constituency. And if, at the same time, this meant that assemblymen from the city would acquire the weighted vote advantage because of an increase of the city population (to a majority of the borough population), the resistance would be all the more intense.

Assembly Structure

Since the city is represented on the assembly by city council members, the ground is already prepared for city-suburban splits and polarization because of the assembly's own internal structure. This can directly channel and reinforce the internal divisions that would in any case exist because of the normal political reality of competition and conflict among the different interests that assemblymen are elected to represent.[19] Direct city representation, as required by the constitution,[20] enhances certain naturally unstable aspects of the political process that have already been

[19] Cf. Paul Ylvisaker, "Some Criteria for a 'Proper' Areal Division of Governmental Powers," Area and Power, Arthur Maass, ed. (Glencoe, Ill.: The Free Press, 1959), p. 39.

[20] Alaska, Constitution, Article X, Section 4. This, it should be noted, is the only instance in which the article prescribes a specific feature of internal organization, a practice otherwise avoided, and deliberately so, by the article's framers.

serve the city and is obligated to work with the borough planning staff. In the hopeful words of the state's Attorney General, "the system is a carefully balanced one which demands a great deal of cooperation between city and borough."[17]

Thus, although the borough presumably has "exclusive" planning and zoning authority, effective arrangements are anything but clear-cut. They are, in part, the outcome of practical, and often unstable, compromises in the writing and interpretation of statuatory provisions. Complicating the issue in this case is a concept of planning that does not account for differences in scale or level. Consequently, political and administrative accommodations must be reached at the local level in order that even routine planning tasks -- at project, neighborhood, city, and areawide levels -- can be accomplished. By denying planning authority to the city, the borough act tended to complicate rather than clarify borough-city administrative relationships -- it helped create a structure within which conflict was bound to occur, and one that has in some cases operated to eliminate city planning functions altogether. But the planning conflict only reflects larger differences between the city and borough.

City Vs. Borough

It was apparent from the start that a potential stalemate between cities and boroughs was built into the new local governmental system set forth in the constitution. Boroughs and the cities within them were very likely to compete with each other for territorial jurisdiction over urbanizing areas outside city limits.[18] To service these places, the borough

[17] Quoted in Alaska, Local Affairs Agency, Alaska Local Government, Vol. VII, No. 7, October 1964, p. 4.

[18] See PAS, op. cit., pp. 63-73.

to the long term goal of a unified local governmental system, and provisions were included in the constitution for the purpose of encouraging close cooperation between boroughs and cities within them.

Cities, then, would continue to exist within the new boroughs and, between them, they would eventually exercise all local government powers in the state. Special districts, including school districts and public utility districts, would be absorbed into these two constitutional forms of local government. While elective school boards could remain in existence, they would be under the general budgetary control of the borough assemblies.

The state was to assume a continuing responsibility for the overall design and performance of the local governmental system. Specifically for this purpose, two new state agencies were mandated by the constitution: a local boundary commission and a "local government agency." The boundary commission would assure that borough and city boundaries were properly aligned in the first instance, and subsequently were responsive to changing needs and conditions. The commission was thus authorized by the constitution to "consider any proposed local government boundary change" and, subject to legislative veto, it could implement such changes. The local government agency, on the other hand, would broadly "advise and assist local governments . . . review their activities," and perform other functions assigned by law.

Within this very open and apparently simple constitutional framework, the state legislature was to specify and elaborate essential features of local government and state-local relations. The ultimate goal, however, was not state control, but maximum local control of the internal

indicate that the state, probably through the Boundary Commission, should review local action and play a mediating role. The purpose would be to ensure that appropriate incorporation and annexation standards are met, that a new service area is actually warranted, and, if so, that it is properly constituted. Any area bordering on a city should be subject to annexation rather than permitting its establishment as a borough service area, or its incorporation as a separate city. If annexation or incorporation is not feasible or desirable, expansion of an existing service area would be considered, providing that a determination is made that the existing service area should not itself be annexed or incorporated. Only after each of these options is considered in order, should it be permissible to establish a new service area, and then only with clear understanding that it is subject to future adjustment within the broader system of organized local government.

Functions and Finances

Issues of governmental structure, functions, and finances are closely interrelated; one cannot properly be considered in isolation from the others. State policies such as the following would help create and reinforce the local government structure outlined above.

1. Financial incentives. State financial aid policies should be designed to (a) eliminate current disincentives to local incorporation or annexation, and (b) provide positive incentives for performance of urban area functions by cities and regional functions (including special service areas) by boroughs. The state should re-examine all provisions of law and fiscal relations (e.g., tax and revenue sharing) that tend

3. Cities. Cities are viewed as the basic units of local government, located both within and outside of organized boroughs. City boundaries should be so located as to encompass an entire "natural" socio-economic and political community. Since most of Alaska's urban settlements are small and relatively compact, there is no technical reason why this criterion cannot easily be met. This would minimize the need for service areas and organized boroughs to perform urban services that can be performed by a city.

The city classification scheme should parallel the borough's. That is, there should be but two classes of municipal corporation -- home rule and general law. As in the case of organized boroughs, general law cities should have the option of assuming home rule status and privileges.

4. Service Areas. Service areas in organized and unorganized boroughs would be vehicles primarily for meeting special service needs and applying differential tax rates, as at present. In unorganized borough areas, they would be directly under the jurisdiction of the state and the advisory councils. The service area should not be used as a substitute for organized borough or city status. The determination of the need to establish a service area should be based upon consideration of settlement patterns within the borough, proximity to a city or existing service area, the desire for special types and levels of service on the part of the area's residents, and their capacity to provide the additional revenues necessary to support the desired types and levels of services.

While it is generally desirable that matters of government organization and functions be determined locally, past experience of borough-city conflict over annexation and the creation and operation of service areas

"space" where there is room only for one. This is so particularly where a borough centers on a single urban core served by a well established city (Anchorage, Fairbanks, Sitka, Ketchikan). The case for a single, urban areawide governmental unit for these places would seem clear. Much less clear, however, is the rationale used for superimposing the borough, as a second unit of local general government, on the existing municipal base in these more developed regions of the state. On the other hand, where the borough, as a regional government, might serve smaller areas of settlement and rural areas, as well as region-wide needs, more room could be considered available for both borough and city governments (e.g., Kenai, Kodiak. Matanuska-Susitna).

Borough government does not exist at all in most of Alaska, for the "unorganized borough" does not function. Current developments in unorganized Alaska suggest, however, that the social and political conditions for increased local self-government are now emergent. Therefore, in considering the governmental needs for unorganized Alaska, it will be necessary to avoid outmoded notions of the "readiness" of its residents for self-government. In the absence of formal governmental institutions, Native leaders are building their own regional organizations and promoting local participation in a number of federally funded social and economic development programs. Unless these realities are taken fully into account, local government policies developed at the state level will meet with no more success in rural Alaska during the 1970's than did state policies concerning the organized borough in urban Alaska during the 1960's.

The momentum of the statehood movement has been spent, making it all the more difficult to effect basic alterations in the existing scheme.

4. The state was to control local government boundary changes that could be made objectively in response to changes in urban population and economic growth patterns. Just as the Boundary Commission was unable to substitute its authority for local determinations in the initial setting of borough boundaries, so it has since played a minor role in controlling subsequent alterations of borough and city boundaries. As in pre-statehood days, most significant boundary changes are subject to several procedural checks and to elections in the areas immediately affected. The commission has not been in a position to counter or withstand the political pressures brought to bear, particularly when proposed boundary changes are perceived as affecting values associated with local autonomy, suburban separatism, or tax and service independence.

In its current stage of evolution, then, the borough possesses the form but not the substance of authoritative areawide government. It is a "general government" within which a powerful special government -- the school district -- has maintained and even increased its autonomy. It has "exclusive authority" for areawide functions, but in practice these functions are divided and shared with independent city and school administrations. It is a "regional government," but it competes with city governments for both territory and functions. It speaks of promoting "areawide" policies and programs, but it is so structured as to facilitate the expression of local self-interest and localized service area needs.

The basic problem is that in most areas two forms of local government -- the city and the borough -- are attempting to occupy political and physical

> It may be that the best solution for the problems of urban government in most areas will be to concentrate the full responsibility in a single level, the city, or the completely consolidated city-borough. On the other hand, it may be that the borough will provide a very useful agency in rural areas for the exercise of local responsibility for administration and at least partial financing of education and a growing list of local or regional services such as local roads, fire protection, utilities (water, sewer, and others), health, recreation, etc., some of which would be provided on a borough-wide basis and some in special service areas organized and governed under the authority of the borough.[22]

Ignoring these considerations, the state layered borough governments over the cities of urban Alaska and established no borough units in rural Alaska.

As described above, the state was confronted with the problem of "integrating" all areas served by special districts. City annexation of all, or even a larger part, of these surrounding areas appeared to be politically out of the question. Even in the case of a small public utility district completely encompassed by the city of Anchorage, opposition to city annexation was intense, although the annexation was finally accomplished. In this case, the Boundary Commission exercised its constitutional prerogative of ordering the annexation, subject to legislative veto, without a vote of the residents of the district. Its action was upheld by the state Supreme Court.[23] This was a relatively simple case of a special district that was required under the constitution to be integrated into a city or borough. Completely surrounded by Anchorage, it was an obviously practicable and logical move for the city to annex it. On the other hand, the Boundary Commission had been most respectful of political realities in cases where suburban residents, often fearing that the cost in new taxes will outweigh the benefits of additional services received, object

---

[22] Ibid.

[23] City of Anchorage vs. Fairview Public Utility District No. 1, Alaska Supreme Court (1962).

to city annexation. Certain groups of outside-city residents have also been extremely possessive of their identity and autonomy, much in the tradition of suburban and rural separatism, with central cities often cast in somewhat morally suspect roles.[24]

At the same time, the borough service area has been available as a vehicle for meeting service needs of developed enclaves outside the city. This tends to neutralize whatever attraction city annexation may have for those seeking more and higher quality urban services. With the borough service area, residents outside the city may select the particular mix of services they wish and be assured of paying, through differential mill rates, only for those additional services directly received in their immediate area of residence. For this reason, however, service areas also fragment the borough. The separate suburban enclaves develop a built-in resistance to unified or consolidated area tax and service structures, and service area status insulates their residents from the cost of city facilities and services that they share or benefit from, perhaps most obviously as owners of property whose value is enhanced simply because the city is accessible.

So, following the line of least relative resistance, boroughs were established in large part to solve the special district problem. Critical by-products of this action were the blocking of significant annexation activity by the cities within them and, in several cases, the fragmenting of the urban area. This outcome was foreseen by PAS in its 1959 report: "The conclusion is inescapable that it would often be more difficult to

[24] Although Alaska's "central cities" are really small and medium-sized towns by U.S. standards, such anti-city sentiments often seem to be magnified here. This is, in part, the result of Alaska's peculiar socio-economic characteristics and political "culture" as described in Chapter III above, as well as traditional American attitudes toward the "city."

City of Kodiak

PHONE (907) 486 - 3224
P.O.BOX 1397
KODIAK, ALASKA 99615

May 20, 1978

Ms. Sheila Gallagher, Chairwoman
Local Boundary Commission
Dept. of Community & Regional Affairs
Pouch B
Juneau, Alaska 99811

Dear Ms. Gallagher:

In response to your letter of May 1, 1978, I would like to give you the following information.

One of the keys to the situation in the Kodiak urban area is the fact that the City of Kodiak is already providing many services to those outside the City that they are not fully paying for. The City of Kodiak is a full service city. The ongoing services now provided include library, parks and recreation, road (grading, snow removal, pavement patching, storm drainage etc.), water, sewer, sewage treatment, cargo dock (port), boat harbor, ferry dock, fire (and ambulance), police (and animal control), engineering, landfill, museum, airport and cemetery. In addition, the City financially supports the following: Kodiak Council on Alcoholism, Kodiak Senior Citizens, Chamber of Commerce, Head Start, Kodiak-Baranof Productions and similar organizations.

The first service is the library. At the present time, the City of Kodiak has the library and receives a $15,000 contribution from the Borough. The current library budget is $143,602. The Borough is contributing 9.57% of the total budget. As of December 31, 1977, there was a total of 2,363 registered borrowers in the library. 1,438 were City residents and 925 were Borough residents. That is equal to 41% of the borrowers coming from the Borough. At the end of March, 1978, there were 1,598 City and 1,066 Borough registered borrowers, for a total of 2,661. The most current figures show that 40% of the registered borrowers are Borough residents. I might also mention that 80% of the locally collected tax dollars that the Borough collects and spends, come from within the City of Kodiak. In other words, $12,000 of that $15,000 is paid for by the City of Kodiak residents.

Regarding parks and recreation, we have a similar situation where the City of Kodiak taxpayers fund a recreation program that is a benefit to all. We do not charge more for Borough residents than we do for City residents to participate. This includes the use of the High School swimming pool for public purposes before and after school, weekends and summer months. The City has a contract with the School District to operate and maintain the pool. The City also has a cross country skiing program, a summer youth recreation program, basketball for children, teen-

agers and adults and many other winter and summer recreation programs. All the parks in the Kodiak urban area are part of the City of Kodiak's parks and recreation program, other than the State Park at Fort Ambercrombie. The parks and recreation budget for the current fiscal year is $132,311. The Kodiak Island Borough contributes to this program by allowing the recreation program to utilize Borough buildings, ie. school buildings and playgrounds. As stated with the library, I feel that it is important that you note that the citizens and taxpayers of the City of Kodiak contribute 80% of the funds locally collected and spent by the Borough.

The total police department budget for the current fiscal year is $871,619. The City Police Department does provide back-up service for the State Troopers when necessary. A copy of the report on Kodiak Police Department activity outside the City is attached.

The Police Department also provides dispatching service after regular hours for the State Troopers, as well as the jail facility for those incarcerated by the Troopers--this includes Bristol Bay and the Aleutian Chain.

Also provided are alcoholism services through an agreement with the Kodiak Council on Alcoholism for the sleep off center that is located behind the police station. The alcoholism problem in Kodiak is severe and certainly does not limit itself to residents of the City. Currently the City is providing $12,120 to the Kodiak Council on Alcoholism for their services.

There is currently a fire district in the area in question. The City of Kodiak charges the fire district for service based on the dollar amount of property valuation. The current fire department budget is $357,135. The amount received from the Borough service area is $54,646. In addition to providing fire protection, the City also provides the ambulance service. Since the Borough has health powers, the Borough is not compensating the City adequately for this service. There are presently two ambulances utilized by the fire departmet, one of those was provided by the Kodiak Island Borough. However, the real cost of ambulance service is the time of the emergency medical technicians who actually work with the ambulances. At the present time, the City of Kodiak's taxpayers are subsidizing the Borough in this regard. This goes for the residents of the area in question for annexation, as well as for the entire Kodiak Island Borough including the villages. There are many times when the fire department responds to a medi-vac and takes people from the State airport to the Kodiak Island Borough Hospital.

The City of Kodiak provides the services at the Cargo Dock. Since this is an enterprise fund, the City does not contribute funds out of the general fund unless there are exceptional circumstances involved. This current year is an example. There are $73,926 going into the Cargo Terminal Fund from the general fund as a loan. The City of Kodiak provides the mechanism for cargo to come across the dock. If the City were not in the business, it would probably be private enterprise offering the same service and making a profit. This, of course, would raise the cost of freight.

depend a great deal on the area involved. Library services will not be expanded. Parks and recreation services could be extended if the City were to annex the area, because additional land would be available that we could use for parks, trails etc. The cargo dock and boat harbor would not change in any way. As the area in question grows, police services will become more of an issue. However, at the present time, the City Police are backing up the State Troopers and as the area grows and develops, there will be more of a need for police services. The City of Kodiak would be able to provide police services to the newly annexed areas as the need develops. To reflect reduced services, differential taxation could be utilized to the extent required.

The City and Borough have been discussing an additional fire station to better serve the residents of the area in question. While the people out there are already served by the Kodiak Fire Department, there is the problem of reaching a fire in an adequate amount of time. From what I understand, there is little desire for the residents in the fire service area to create their own fire department. The City would be called on to provide these services. It is obvious to me that the City should build the building, purchase the equipment and coordinate, in every way possible, with the main fire department.

The creation by the Borough of the service area for water, sewer and roads plays an important part in these annexation proceedings. As described above, the City of Kodiak now provides water and sewer service to the areas in question. New sewer and water lines are needed in the Island Lake area. Since it is the City of Kodiak that is to provide these services through its water system and sewage treatment plant, it is obvious that we can best serve the residents of these areas through annexation. At the present time, the City of Kodiak is in court with the Borough over the creation of this service area because it is in conflict with the State Constitution and Statutes.

If water and sewer lines are built and are supposed to be connected onto the City systems, then it is only proper that the City design these lines and have control over their construction. The other key point is that, as I understand it, it is the intent of the Borough and service area to contract with the City for water and sewer services. This means that the City of Kodiak's employees will actually be doing the work such as repairing lines, making connections and so forth. It is very difficult for me to understand how this can be provided by anyone else without starting up a whole new public works department. Either through the new public works department or by contracting with the City, the costs for water and sewer services would be more than if the area were annexed to the City and it became part of the City's system. No matter how the water and sewer lines are built, there will be assessments or taxes against the property for construction costs. No money will be saved by the residents through the service area for water and sewer service.

The same holds true with road powers. As I understand it, it is the intent of the Kodiak Island Brough not to start a new road department. Therefore, the people would be served by the City of Kodiak Road Department or a private contractor through contract. This, of course, is a very expensive way to go and the City would pass on administrative as well as other costs to provide these services. It is only logical that the area be annexed and that road service be provided by the City of Kodiak. It is also important to note that the fire service depends on the ability to get the fire engine to the scene of the fire. If the roads are not cleared and maintained properly, then the City's ability to service in this regard is questionable. If these were both City functions it would be much simpler to provide the necessary fire and road service through coordinated efforts.

The new Borough Comprehensive Plan describes future growth as going into the Spruce Cape, Island Lake and adjacent areas. In fact, the plan promotes growth in that direction. It is difficult for me to understand how the Borough can promote growth and development of the area and then oppose annexation at the same time. You have been given maps that show the projected increases in population and extension of water and sewer into the subject area. This is a map prepared for the Borough by their consultant.

By your letter of May 1, you requested that we address ourselves to questions relating to the services which the City feels the areas adjacent to Kodiak should receive, the level of those services and the expense and income associated with those services. It is the feeling of the City that the areas defined by the staff of the Department of Community and Regional Affairs as the Mission Road Area and the Mill Bay Road area should receive all services available from the City of Kodiak and that those services should be provided at the same level as they are provided within the existing City. Water, sewer and road service have been determined to be needed as a result of the election to create a service district to provide those services. Fire and ambulance service are currently being provided by contract between the service district and the City of Kodiak. Police service has not been requested for any service area and that service is currently provided by the Alaska State Troopers with back up from the City of Kodiak. If annexed it is probable that the State Troopers will discontinue that service.

It is also the belief of the City of Kodiak that those services should be provided at the same level as they are provided within the existing City. By contract, fire and ambulance service is provided at that level, and there is no reason to believe that water, sewer, road service or police protection will be needed at a lower level.

The estimated expenses and income related to providing all services at a level consistent with the level of such services in the City is as follows:

ANNEXATION BUDGET

Library - no change, already serving the residents at no cost. However, those annexed would help pay for services that they are already receiving.

Parks and Recreation - no change unless additional facilities are built in newly annexed area. However, those annexed would help pay for services that they already are receiving.

Police - depends on level of service provided. For full service:

3 new police officers	$75,000
1 desk officer	$20,000
Supplies	$ 5,000
Repairs & Maintenance	$ 8,000
2 vehicles	$14,000 (Sales Tax)
TOTAL	$122,000

Fire - a new fire station will have to be built in the next year or so in the subject area. If not annexed, the costs would be borne by residents of the Fire Service District. New fire engines will also be needed. This would be from a bond issue or sales tax.

New station	$210,000
New engines	$100,000
TOTAL	$310,000

Manpower depends on level of service desired. For the first few years there could be volunteers and then paid personnel. If paid personnel immediately, then costs would be very high since it would be necessary to have a least 7 firefighters on 24 hours to cover adequately.

7 firefighters, 3 shifts and 1 to cover in case of vacation, sick leave etc.	$150,000
Supplies, utilities etc.	$ 25,000
TOTAL	$175,000

The important thing to remember about fire is that the new station and employees are needed now. By annexing, the City would spread the cost to all the City taxpayers. If not annexed, it would be the responsibility of the residents of the Fire Service Area.

Cargo Dock - no change, already serving the residents.

Boat Harbor and Ferry Dock - already serving the residents.

Public Water - New water lines are needed. The residents would be assessed for any improvements. They would not have to pay the 37-1/2% surcharge they pay now. No new employees or vehicles would be needed in the near future.

Sewer - New sewer lines are needed in Island Lake now. The residents will be assessed for any improvements. There is no surcharge on sewer service at the present time. No new employees or equipment are needed in the near future until the sewer lines are constructed. The costs to provide sewer lines would be no different if the City or Borough applied for Federal and State funds because each is eligible for the same grants and loans.

Roads - The City would have to purchase new equipment and hire several new employees. However, this would have to be done anyway if it were contracted out by the service area to the City. This would be more expensive because of having to contract with the City and paying additional costs.

2 new employees	$45,000
1 new dump truck	$45,000 (Sales Tax)
1 new grader	$80,000 (Sales Tax)
Supplies etc.	$ 5,000
1 Pickup truck	$ 6,500 (Sales Tax)
TOTAL	$181,500

Solid Waste - The City's ordinance and contract would probably have to be modified to fit the needs of the new residents. All the new residents would be required to pay something towards the operation of the landfill based on actual costs. Mandatory trash pickup and payment is now part of the monthly utility billing for all City residents. Service is provided by contract and would continue at the level desired.

Cemetery - The newly annexed residents pay a proportionate share of costs.

Municipal Airport - If the area were to be annexed, the City would have more revenue to draw from.

Income to the City is another matter. Since the residents now pay sales tax on almost everything they buy in Kodiak, no change would be made there unless new businesses are started in unannexed areas. There are currently before the Planning and Zoning Commission applications for business zoning in the subject area.

The only change would be an increase in the mill levy. This is a very complicated issue. At the present time, the City of Kodiak has no personal property tax.

Our real property tax mill levy is 9.10. The Borough does have a personal property tax. Some years ago, the City of Kodiak agreed to pay the Borough personal property tax for City residents. The current Borough mill rate is 7.23 mills. Under the present situation, the City would pay the Borough personal property tax for the residents if annexed.* This would lower their tax bill for personal property tax to zero.

However, they would then have to pay an additional 9.10 mills to the City for real property. This is further confused by the fact that the residents of the area in question already pay 2.27 mills for fire service. After annexation this would be included in the 9.10.

	Borough Current	Borough If Annexed
CITY MILL LEVY (Real Property)		9.10 (Real Property)
BOROUGH MILL LEVY (Real & Personal)	7.23	7.23 (Real Property)
FIRE SERVICE AREA (Borough Residents)	2.27	None

Here is an example of what the costs will be:

$70,000 House (Real Property)
$ 5,000 Car (Personal Property)

BOROUGH RESIDENTS

7.23 (General) Real and Personal Tax
2.27 (Fire) Real and Personal Tax
9.50 TOTAL

9.50 x $70,000 = $665
9.50 x $ 5,000 = $ 48
$713

37-1/2% Water Surcharge 45
TOTAL $758

CITY RESIDENTS - Full service, police, road maintenance etc.

9.10 City Taxes
7.23 Borough Taxes
16.33 TOTAL

16.33 x $70,000 = $1143
* - 0 - x $ 5,000 = - 0 -
$1143

CITY TAXES $1143
BOROUGH TAXES w/fire service) 758
$385 Difference

*Note In December of 1977 the City Council adopted an ordinance effective December 31, 1978, which will repeal the exemption of personal property within the City from Borough taxes. If that ordinance becomes effective, the above will not apply.

The current City mill levy is 9.10 mills. The only logical way to apportion costs to new residents would be to break the 9.10 mill down according to the separate general fund departments. The Water and Sewer Fund is separate and is self-supporting except for capital improvements. These are paid for out of sales tax revenues.

If the City were to provide full service to the residents of Mission Road, Spruce Cape, Mill Bay, Island Lake and Monashka (all the area presently within the Fire Service Area (the revenues would be according to Attachment #2). The revenues

based on assessed valuation ($14,749,160) of the total area would be $134,217. State Revenue Sharing for all City provided services would add another $56,199. These revenues could increase by 50% if current State legislation is passed. Federal General Revenue Sharing and Federal Anti-Recessional Assistance would add approximately another $50,000. This would total $240,416. The operation and maintenance costs as stated above approximate $333,000. This does not include the building of a new fire station (which would come from a bond issue or sales tax) but does include 7 new fire fighters.

There would be a shortfall of revenue of approximtely $92,584 which could come from additional sales tax revenues. This is how the rest of the general fund departments are supplemented.

It would appear that the Monashka Bay area, if annexed to the City would be provided with fewer services or services at a lower level and the use of differential taxation would therefore seem appropriate. Based on the petition for the incorporation of Spread Eagle, Alaska, it seems that many people in the urbanized portion of the Monashka Bay area do not desire any additional services. They are currently in a fire service district and receive service under contract from the City of Kodiak, except to the extent prohibited by the lack of road maintenance services.

Under AS 29.18.100 (b), the Commission could reject the petition for incorporation of Spread Eagle if it determined that desired municipal services can be more practically and economically provided by the Borough or by annexation to an existing city. If the municipal boundary of the City of Kodiak is extended to annex areas adjacent to the proposed Spread Eagle it would appear that any additional services could be provided more practically and economically by that contiguous city. It may therefore be logical to annex the area to the City with provisions for the establishment of differential taxation until it receives the same services at the same level as provided in other portions of the City.

The only portion of the Coast Guard base that could reasonably require any City services at the present time is that area encompassing the airport facilities. The services would seem to be limited to police services. In view of the fact that all other services are provided by the Coast Guard and would presumably be continued by the Coast Guard. The City of Kodiak would request that annexation of all or any portion of the base, including the airport, be deleted from consideration until the City has had an adequate opportunity to consult and coordinate with the Coast Guard and determine whether additional services could or should be provided, and evaluate the revenue and expense factors of such annexation. If determined to be appropriate, a petition for annexation will be submitted in the future.

SUMMARY

The City of Kodiak feels there are areas that should be annexed to the City. The Mill Bay Road annexation originally petitioned for is just a small part of the total picture as the Boundary Commission has realized. The City has shown that many

residents outside the City area are already using City services and utilities. However, the City feels those utilizing the services should bear a fair share by becoming part of the City and having an opportunity to participate in where and how these services are provided.

Along with that, is the concept of utilizing the City utility system, ie. water and sewer, on a contract basis. This places a burden on the City to plan for areas not within its jurisdiction. Annexation of the Mill Bay - Monashka Service Area would bring our utility system into a proper position for planning and control.

The final point is that we live on an island and essentially are groups of similar people who have chosen to live here. Having a City and adjacent service areas through the Borough is not correct according to the State Constitution and Statutes. We are only talking about 8,000 people. Our similarities far outweigh our differences and the situation we are now confronting must be resolved. As mentioned in my April 24th letter, service areas seem to divide the population and cause problems such as you are considering tonight.

Thank you for your time and attention.

Sincerely,

CITY OF KODIAK

Ivan L. Widom

BOUNDARY COMM.

Editor's note. — The repealed section derived from § 7, ch. 101, SLA 1955.

Sec. 44.19.230. Rural development fund.

Repealed by § 1 ch 69 SLA 1964.

Editor's note. — The repealed section derived from § 8, ch. 101, SLA 1955.

Sec. 44.19.240. Rural and remote areas defined.

Repealed by § 1 ch 69 SLA 1964.

Editor's note. — The repealed section derived from § 3, ch. 101, SLA 1955.

Sec. 44.19.250. Local boundary commission. There is in the Department of Community and Regional Affairs a local boundary commission. The local boundary commission consists of five members appointed by the governor for overlapping five-year terms. One member shall be appointed from each of the four major senatorial election districts and one from the state at large. The member appointed from the state at large is the chairman of the commission. (§ 7 ch 64 SLA 1959; am § 5 ch 200 SLA 1972)

Cross reference. — As to appointment, qualifications, and terms of office of members of departmental boards, councils, or commissions, see AS 39.05.060.

Effect of amendment. — The 1972 amendment substituted "Department of Community and Regional Affairs" for "Local Affairs Agency" in the first sentence.

When constitutional provision effective. — The method for making boundary changes, contemplated by art. X, § 12, of the Alaska Constitution, was operative upon the enactment of AS 44.19.250 and 44.19.260. Fairview Pub. Util. Dist. No. 1 v. Anchorage, Sup. Ct. Op. No. 61 (File Nos. 69, 71), 368 P.2d 540 (1962), cert. denied, 371 U.S. 5, 83 S. Ct. 39, 9 L. Ed. 2d 49 (1962).

Cited in Mobil Oil Corp. v. Local Boundary Comm'n, Sup. Ct. Op. No. 989 (File No. 1947), 518 P.2d 92 (1974).

Sec. 44.19.260. Powers and duties. (a) The local boundary commission shall

(1) make studies of local government boundary problems;

(2) develop proposed standards and procedures for changing local boundary lines;

(3) consider a local government boundary change requested of it by the legislature, the commissioner of community and regional affairs, or a political subdivision of the state; and

(4) develop standards and procedures for the extension of services and ordinances of incorporated cities into contiguous areas for limited purposes upon majority approval of the voters of the contiguous area to be annexed and prepare transition schedules and prorated tax mill levies as well as standards for participation by voters of these contiguous areas in the affairs of the incorporated cities furnishing services.

(b) The local boundary commission may

(1) conduct meetings and hearings to consider local government boundary changes and other matters related to local government boundary changes, including extensions of services by incorporated cities into contiguous areas and matters related to extension of services; and

(2) present to the legislature during the first 10 days of a regular session proposed local government boundary changes, including gradual extension of services of incorporated cities into contiguous areas upon a majority approval of the voters of the contiguous area to be annexed and transition schedules providing for total assimilation of the contiguous area and its full participation in the affairs of the incorporated city within a period not to exceed five years. (§ 7 ch 64 SLA 1959: § 2 ch 45 SLA 1960; am §§ 1, 2 ch 55 SLA 1964; am §§ 1, 2 ch 161 SLA 1966; am § 6 ch 200 SLA 1972)

Cross reference. — For further statement of powers of local boundary commission, see Alaska Constitution, art. X, § 12.

Effect of amendment. — The 1972 amendment substituted "commissioner of community and regional affairs" for "director of local affairs" in paragraph (3) of subsection (a).

Editor's note. — Section 9, ch. 200, SLA 1972, provides: "Where the titles 'Local Affairs Agency' or 'Rural Development Agency' appear in the law of this state, they shall be read as the 'Department of Community and Regional Affairs.'"

Section 11, ch. 200, SLA 1972, provides: "All litigation, hearings, investigations and other proceedings pending under a law amended or repealed or functions which may be transferred by this Act, continue in effect and may be continued and completed notwithstanding a transfer or amendment or repeal provided for in this Act. Certificates, orders, rules or regulations issued or filed under authority of a law amended or repealed by this Act or functions which may be transferred by this Act, remain in effect for the term issued, until revoked, vacated, or otherwise modified under the provisions of this Act. All contracts or other obligations created by a law amended or repealed by this Act or by virtue of functions which may be transferred by this Act, and in effect on July 1, 1972, remain in effect until revoked, or modified under the provisions of this Act. Appropriations, records, equipment and other property of agencies of the state integrated with the Department of Community and Regional Affairs established under this Act are transferred to the department. Appropriations and other money available and to become available to agencies the functions, powers and duties of which have been transferred to the Department of Community and Regional Affairs established under this Act shall be available for the objects and purposes for which appropriated or otherwise made available, subject to the terms, restrictions, limitations or other requirements imposed under this section or federal law."

Legislative committee report. — For legislative committee report on ch. 161, SLA 1966, see House Journal (1966), p. 575.

Powers and duties of local boundary commission. — When grouped together, the powers and duties of the local boundary commission are as follows: (1) To consider any local government boundary change (§ 12, art. X, Alaska Constitution); (2) to present proposed changes to the legislature (§ 12, art. X, Alaska Constitution; § 7, ch. 64, SLA 1959); (3) (subject to law) to establish procedures whereby boundaries may be adjusted by local action (§ 12, art. X, Alaska Constitution); (4) to make studies of local government boundary problems (§ 7, ch. 64, SLA 1959); (5) to develop proposed standards and procedures for changing local boundary lines (§ 7, ch. 64, SLA 1959); (6) to hold hearings on proposed boundary changes (§ 7, ch. 64, SLA 1959). 1959 Ops. Att'y Gen., No. 30.

The local boundary commission has the power and authority to recommend borough boundaries to the legislature. 1959 Ops. Att'y Gen., No. 30.

By this section and AS 44.19.340 it is provided that the commission must make studies of local government boundary problems, develop proposed standards and procedures for changing boundaries, and consider boundary changes requested of it by political subdivisions. The commission may conduct hearings on boundary changes and present proposed changes to the legislature. The change becomes effective unless the legislature disapproves; legislative silence permits the change. United States Smelting, Refining & Mining Co. v. Local Boundary Comm'n, Sup. Ct. Op. No. 727 (File No. 1461), 489 P.2d 140 (1971).

When constitutional provision effective. — See same catchline in note to AS 44.19.250.

Alaska Const., art. X, § 12 established two methods by which local boundaries might be changed: (1) by direct action of the local boundary commission subject to legislative disapproval, and (2) by establishment by the commission of procedures for the adjustment of boundaries by local action. Port Valdez Co. v. City of Valdez, Sup. Ct. Op. No. 1044 (File No. 1996), 522 P.2d 1147 (1974).

Step annexation allows for gradual assimilation. — As an alternative to immediate annexation, the step-annexation provision allows for gradual assimilation of contiguous areas into incorporated cities where direct annexation would be premature or impractical. Port Valdez Co. v. City of Valdez, Sup. Ct. Op. No. 1044 (File No. 1996), 522 P.2d 1147 (1974).

How step annexation commenced. — Ordinarily, a step annexation will be commenced by a municipality's petition specifically requesting that alternative, although presumably the commission could require the municipality to annex by the step method. Port Valdez Co. v. City of Valdez, Sup. Ct. Op. No. 1044 (File No. 1996), 522 P.2d 1147 (1974).

Section implements Alaska Const., art. X, § 12. — The legislature implemented Alaska Const., art. X, § 12 by enacting AS 44.19.260. Port Valdez Co. v. City of Valdez, Sup. Ct. Op. No. 1044 (File No. 1996), 522 P.2d 1147 (1974).

The intention of Alaska Const., art. X, § 12 and this section was to provide an objective administrative body to make state-level decisions regarding local boundary changes, thus avoiding the chance that a small, self-interested group could stand in the way of boundary changes which were in the public interest. Port Valdez Co. v. City of Valdez, Sup. Ct. Op. No. 1044 (File No. 1996), 522 P.2d 1147 (1974).

The duties imposed upon the commission in subsection (a) are mandatory. United States Smelting, Refining & Mining Co. v. Local Boundary Comm'n, Sup. Ct. Op. No. 727 (File No. 1461), 489 P.2d 140 (1971).

And those in subsection (b) are discretionary. United States Smelting, Refining & Mining Co. v. Local Boundary Comm'n, Sup. Ct. Op. No. 727 (File No. 1461), 489 P.2d 140 (1971).

The development of standards is a precondition to the commission's exercise of its discretion under subsection (b) of this section. United States Smelting, Refining & Mining Co. v. Local Boundary Comm'n, Sup. Ct. Op. No. 727 (File No. 1461), 489 P.2d 140 (1971).

The exercise of the commission's discretion under subsection (b) of this section is conditioned upon the development of standards and procedures for changing local boundary lines under subsection (a) (2) of this section. United States Smelting, Refining & Mining Co. v. Local Boundary Comm'n, Sup. Ct. Op. No. 727 (File No. 1461), 489 P.2d 140 (1971).

Under subsection (a) of this section the legislature requires the commission to develop standards in order to recommend boundary changes. United States Smelting, Refining & Mining Co. v. Local Boundary Comm'n, Sup. Ct. Op. No. 727 (File No. 1461), 489 P.2d 140 (1971).

Since mandatory terms were used, the legislature clearly intended the local boundary commission to adopt regulations concerning modification of local boundary lines. Mukluk Freight Lines v. Nabors Alas. Drilling, Inc., Sup. Ct. Op. No. 867 (File No. 1870), 516 P.2d 408 (1973).

There are three purposes underlying the statutory requirement of annexation standards. Port Valdez Co. v. City of Valdez, Sup. Ct. Op. No. 1044 (File No. 1996), 522 P.2d 1147 (1974).

First, such standards expose the basic decision-making processes of the commission to public view and thus subject commission action to broad corrective legislation. Port Valdez Co. v. City of Valdez, Sup. Ct. Op. No. 1044 (File No. 1996), 522 P.2d 1147 (1974).

Second, the standards guide local governments in making annexation decisions and in preparing proposals for the commission. Frustration of these purposes cannot harm the opponent of annexation. Port Valdez Co. v. City of Valdez, Sup. Ct. Op. No. 1044 (File No. 1996), 522 P.2d 1147 (1974).

Third, annexation standards objectify the criteria of decision-making and delineate the battleground for a public hearing, but the supreme court cannot perceive how the absence of such delineation in any manner prevented full and fair expression of an opposing position at the hearing on an annexation. Port Valdez Co. v. City of Valdez, Sup. Ct. Op. No. 1044 (File No. 1996), 522 P.2d 1147 (1974).

Continued failure to have promulgated standards made an annexation a fortiori voidable and prima facie illegal. Port Valdez Co. v. City of Valdez, Sup. Ct. Op. No. 1044 (File No. 1996), 522 P.2d 1147 (1974).

Failure to promulgate standards for annexations was not an error so substantial as to result in injustice. Port Valdez Co. v. City of Valdez, Sup. Ct. Op. No. 1044 (File No. 1996), 522 P.2d 1147 (1974).

The duty under subsection (a) (3) to consider requested boundary changes implies a reasonable time limitation. United States Smelting, Ref. & Mining Co. v. Local Boundary Comm'n, Sup. Ct. Op. No. 727 (File No. 1461), 489 P.2d 140 (1971).

Hence, not all of subsection (a) can be characterized as comprehending continuing duties and not conditions. United States Smelting, Ref. & Mining Co. v. Local Boundary Comm'n, Sup. Ct. Op. No. 727 (File No. 1461), 489 P.2d 140 (1971).

Alaska Const., art X, § 12, empowers the legislature to veto commission actions. United States Smelting, Ref. & Mining Co. v. Local Boundary Comm'n, Sup. Ct. Op. No. 727 (File No. 1461), 489 P.2d 140 (1971).

But such section does nothing to compel the legislature to review for compliance with its own requirements. United States Smelting, Ref. & Mining Co. v. Local Boundary Comm'n, Sup. Ct. Op. No. 727 (File No. 1461), 489 P.2d 140 (1971).

Alaska Const., art. X, § 12, and AS 44.19.340 do not make the decision as to whether the commission has complied with the law exclusively legislative. United States Smelting, Refining & Mining Co. v. Local Boundary Comm'n, Sup. Ct. Op. No. 727 (File No. 1461), 489 P.2d 140 (1971).

Legislature handicapped in absence of known standards governing change of boundary lines. — Under Alaska's constitution, the supreme court has the duty of insuring that administrative action complies with the laws of Alaska. Absent known standards governing the changing of local boundary lines, the legislature's ability to make rational decisions as to whether to approve or disapprove proposed local boundary changes of the commission is seriously handicapped. United States Smelting, Refining & Mining Co. v. Local Boundary Comm'n, Sup. Ct. Op. No. 727 (File No. 1461), 489 P.2d 140 (1971).

Existing cities with local boundary commission created boundaries remain unaffected by the holding, under the de facto municipality doctrine, in United States Smelting, Refining & Mining Co. v. Local Boundary Comm'n, Sup. Ct. Op. No. 727 (File No. 1461), 489 P.2d 140 (1971).

Doctrine of de facto municipal incorporation applied to annexations. — See Port Valdez Co. v. City of Valdez, Sup. Ct. Op. No. 1044 (File No. 1996), 522 P.2d 1147 (1974).

The doctrine of de facto municipal incorporation insulates from collateral attack annexations not impeccably effected where the annexation is attempted under a proper statute, a good faith effort is made to comply with the statute, the statute is colorably complied with, and the municipality has exercised its powers in g faith within the annexed territory. P aldez Co. v. City of Valdez, Sup. Ct. O . 1044 (File No. 1996), 522 P.2d 1147 (1974).

All annexations will have the purpose and effect, in part, of extending city services. Port Valdez Co. v. City of Valdez, Sup. Ct. Op. No. 1044 (File No. 1996), 522 P.2d 1147 (1974).

The post-annexation creation of differently served and treated areas does not impugn the reasonableness of the annex tion. Port Valdez Co. v. City of Valde , Sup. Ct. Op. No. 1044 (File No. 1996', 522 P.2d 1147 (1974).

Standing to contest annexation. — An ggrieved property owner in an area to be annexed has standing to contest the annexation. United States Smelting, Refining & Mining Co. v. Local Boundary Comm'n, Sup. Ct. Op. No. 727 (File No. 1461), 489 P.2d 140 (1971).

Annexations effected through local boundary commission procedures receive a full administrative hearing, followed by legislative review, before they are subjected to judicial scrutiny. Port Valdez Co. v. City of Valdez, Sup. Ct. Op. No. 1044 (File No. 1996), 522 P.2d 1147 (1974).

Common challenge is to attack procedures. — The more common challenge to local boundary commission action attacks the procedures by which the substantive decisions were made. Port Valdez Co. v. City of Valdez, Sup. Ct. Op.

No. 1044 (File No. 1996), 522 P.2d 1147 (1974).

The selection of annexation method made by the commission and approved by the legislature is controlling. Port Valdez Co. v. City of Valdez, Sup. Ct. Op. No. 1044 (File No. 1996), 522 P.2d 1147 (1974).

Judicial review. — There are questions of public policy to be determined in annexation proceedings which are beyond the province of the court. Examples are the desirability of annexation, as expressed in published standards. Judicial techniques are not well adapted to resolving these questions. In that sense, these may be described as "political questions," beyond the compass of judicial review. But other annexation issues, such as whether statutory notice requirements were followed, are readily decided by traditional judicial techniques. United States Smelting, Refining & Mining Co. v. Local Boundary Comm'n, Sup. Ct. Op. No. 727 (File No. 1461), 489 P.2d 140 (1971).

The policy decision as to the mode of annexation is an exercise of lawfully vested administrative discretion which the supreme court will review only to determine if administrative, legislative or constitutional mandates were disobeyed or if the action constituted an abuse of discretion. Port Valdez Co. v. City of Valdez, Sup. Ct. Op. No. 1044 (File No. 1996), 522 P.2d 1147 (1974).

Wood River made part of city of Dillingham. — When the legislature failed to disapprove of the commission's proposal, the commission's local boundary change, which consisted of the abolition of the boundary of Wood River and the confirmation of the boundary of the city of Dillingham, had the effect of making Wood River a part of the city of Dillingham. When the boundary commission's proposal for boundary change became effective, the city of Wood River was dissolved, even though the statutory procedures for dissolution of cities were not followed. Oesau v. City of Dillingham, Sup. Ct. Op. No. 467 (File No. 856), 439 P.2d 180 (1968).

Sec. 44.19.270. Meetings and hearings. The chairman of the commission or the commissioner of community and regional affairs with the consent of the chairman may call a meeting or hearing of the local boundary commission. All meetings and hearings shall be public. (§ 3 ch 45 SLA 1960; am § 7 ch 200 SLA 1972)

Effect of amendment. — The 1972 amendment substituted "commissioner of community and regional affairs" for "director of local affairs" in the first sentence.

Sec. 44.19.280. Minutes and records. The local boundary commission shall keep minutes of all meetings and hearings. If the proceedings are transcribed, minutes shall be made from the transcription. The minutes are a public record. All votes taken by the commission shall be entered in the minutes. (§ 3 ch 45 SLA 1960)

Sec. 44.19.290. Notice of public hearings. Public notice of a hearing of the local boundary commission shall be given in the area in which the hearing is to be held at least 15 days before the date of the hearing. The notice of the hearing shall include the time, date, place, and subject of the hearing. The director of local affairs shall give notice of the hearing at least three times in the press, through other news media, or by posting in a public place, whichever is most feasible. (§ 3 ch 45 SLA 1960)

Sec. 44.19.300. Quorum. Three members of the commission constitute a quorum for the conduct of business at a meeting. Two members constitute a quorum for the conduct of business at a hearing. (§ 3 ch 45 SLA 1960)

Sec. 44.19.310. Boundary change. A majority of the membership of the local boundary commission must vote in favor of a proposed boundary change before it may be presented to the legislature. (§ 3 ch 45 SLA 1960)

Sec. 44.19.320. Expenses. Members of the local boundary commission receive no pay but are entitled to the travel expenses and per diem authorized for members of boards and commissions. (§ 4 ch 45 SLA 1960)

Sec. 44.19.330. Hearings on boundary changes. No local government boundary change may be proposed to the legislature unless a hearing on the change has been held in or in the near vicinity of the area affected by the change. (§ 2 ch 45 SLA 1960)

Sec. 44.19.340. When boundary change takes effect. When a local government boundary change is proposed to the legislature during the first 10 days of any regular session, the change becomes effective 45 days after presentation or at the end of the session, whichever is earlier, unless disapproved by a resolution concurred in by a majority of the members of each house. (§ 2 ch 45 SLA 1960)

By this section and AS 44.19.260 it is provided that the commission must make studies of local government boundary problems, develop proposed standards and procedures for changing boundaries, and consider boundary changes requested of it by political subdivisions. The commission may conduct hearings on boundary changes and present proposed changes to the legislature. The change becomes effective unless the legislature disapproves; legislative silence permits the change. United States Smelting, Refining & Mining Co. v. Local Boundary Comm'n, Sup. Ct. Op. No. 727 (File No. 1461), 489 P.2d 140 (1971).

Alaska Const., art. X, § 12, empowers the legislature to veto commission actions. United States Smelting, Ref. & Mining Co. v. Local Boundary Comm'n, Sup. Ct. Op. No. 727 (File No. 1461), 489 P.2d 140 (1971).

But such section does nothing to compel the legislature to review for compliance with its own requirements. United States Smelting, Ref. & Mining Co. v. Local Boundary Comm'n, Sup. Ct. Op. No. 727 (File No. 1461), 489 P.2d 140 (1971).

This section and Alaska Const., art. X, § 12, do not make the decision as to whether the commission has complied with the law exclusively legislative. United States Smelting, Refining & Mining Co. v. Local Boundary Comm'n, Sup. Ct. Op. No. 727 (File No. 1461), 489 P.2d 140 (1971).

Legislature handicapped in absence of known standard governing change of boundary lines. — Under Alaska's Constitution the supreme court has the duty of ensuring that administrative action comports with the laws of Alaska. Absent known standards governing the changing of local boundary lines, the legislature's ability to make rational decisions as to whether to approve or disapprove proposed local boundary changes of the commission is seriously handicapped. United States Smelting, Refining & Mining Co. v. Local Boundary Comm'n, Sup. Ct. Op. No. 727 (File No. 1461), 489 P.2d 140 (1971).

Existing cities with local boundary commission created boundaries remain unaffected by the holding, under the de facto municipality doctrine, in United States Smelting, Refining & Mining Co. v. Local Boundary Comm'n, Sup. Ct. Op. No. 727 (File No. 1461), 489 P.2d 140 (1971).

Standing to contest annexation. — An aggrieved property owner in an area to be annexed has standing to contest the annexation. United States Smelting, Refining & Mining Co. v. Local Boundary Comm'n, Sup. Ct. Op. No. 727 (File No. 1461), 489 P.2d 140 (1971).

Report to the Local Boundary Commission on the proposal to annex certain lands to the CITY OF KODIAK

Department of Community
and Regional Affairs
Anchorage, Alaska

December 8, 1977

I. PROCEEDINGS TO DATE

Initial consideration of the City of Kodiak's current annexation proposal by the Department of Community and Regional Affairs (DCRA) began in late September when City Manager Ivan Widom contacted DCRA and stated the city's annexation plans (attachment #1). Shortly thereafter, on October 17, City Manager Widom submitted a memorandum outlining reasons why he felt a number of areas immediately surrounding the City should be annexed to the City (attachment #2).

On October 19, the City submitted a formal petition for annexation. Initial review of the petition and supporting documents indicated that they were in substantial[1] compliance with the statutory and regulatory provisions[2] pursuant

---

1. The petition was deficient in three areas addressed by the Local Boundary Commission's regulations. However, because:

   1) the deficiencies were a product of the Local Boundary Commission's regulations and not statutory law; and 2) the Commission is specifically authorized to waive deviations from the regulations (19AAC 10.150); and 3) a delay in accepting the petition would almost surely preclude consideration of the petition by a Local Boundary Commission prior to the beginning of the upcoming legislative session, it was the determination of your staff that the substantial rights of interested parties would not be prejudiced by accepting the petition.

Deficiencies of the petition and corrective action taken, if any, are set forth below.

1) Petitioners failed to attach a copy of the City Council resolution authorizing filing of the petition as required by 19AAC 10.040(4). The required resolution was received on November 25.

2) The Notice of Filing of Annexation Petition required by 19AAC 10-080 was published prior to formal acceptance of the petition. No corrective action was considered necessary as the defect was harmless.

3) The affidavit required by 19AAC 10.060 was presented in the form of a sworn statement, not notarized. As in 2), the defect was considered harmless.

---

2. AS 44.19.2600340 (Local Boundary Commission)
   AS 29.68 (Alteration of boundaries)
   19AAC 10 (Procedures for Boundary Changes)
   19AAC 05.010-030 (Standards for Annexation to Cities)

to which the petition was submitted. Accordingly, a letter stating acceptance of the petition was issued on November 9 (attachment #3); that same letter also notified petitioners that the Local Boundary Commission would conduct a public hearing on the annexation proposal on December 12.

Formal notice (attachment #4) of the Local Boundary Commission's hearing was also provided to the Kodiak Island Borough and published in the Kodiak Daily Mirror (attachment #5), editions dated November 23, 25, 27 and December 2 and 9, 1977.

II. PRIOR BOUNDARY CHANGES

The following is a synopsis of prior changes to the City of Kodiak's boundaries.

Action and Date: Annexation - March, 1960
Character of Property: Undeveloped lands - no road access
Description: Near Island, Gull Island, Popoff Island, Uski Island, Holiday Island, Crooked Island

Action and Date: Annexation - March, 1960
Character of Property: City watershed
Description: U.S. Survey 3945

Action and Date: Detachment - , 1960
Character of Property: Undeveloped lands - no road access
Description: Holiday Island, Crooked Island

Action and Date: Annexation - January, 1970 - vetoed by legislature
Character of Property: Residential, industrial and commercial
Description: Entire urban area of Kodiak outside of current city boundaries

Action and Date: Annexation - March, 1973
Character of Property: Residential
Description: Lots 16A, B and C of U.S. Survey 3098

Action and Date: Annexation - March, 1973
Character of Property: Residential
Description: Lots 26A, B, C, and D. of U.S. Survey 3098

Action and Date: Annexation - June 1974
Character of Property: Residential
Description: U.S. Survey 3098 - Lot 25

Action and Date: Annexation - April, 1975
Character of Property: Highway right-of-way, gravel pit.
Description: Lots 7-16, U.S. Survey 2537-B

Action and Date: Annexation - April, 1976
Character of Property: Residential
Description: Lot 24, U.S. Survey 3098

Action and Date: Annexation - April, 1976
Character of Property: Industrial - Canneries
Description: Gibson Cove

Action and Date: Annexation - June, 1977
Character of Property: Municipal Cargo Dock
Description: Tidelands adjacent to U.S. Survey 2537-B

Action and Date: Annexation - September, 1977
Character of Property: Residential
Description: Lot 1, Block 1, U.S. Survey 3066 A and B

III. GENERAL INFORMATION

Kodiak was incorporated as a town in September, 1940 under Federal Law, was later classified as a first class city under state law and subsequently adopted a home rule charter in the Fall of 1965. The city operates under the council-manager form of government and, according to the City's budget, provides a broad range of municipal services, including:

Service	Budgeted Funds (FY 78)
General Fund Estimated Expenditures	
1. Legislative, Judicial, Legal	$ 65,020
2. Executive	78,544
3. City Clerk	77,717
4. Finance Director	223,270
5. Police Department	813,379
6. Fire Department	333,241
7. Public Works Department	631,401
8. Parks and Recreation	128,946
9. Library and Museum	155,351
10. Engineering	112,159
11. Non-Departmental	1,450,239*
Total General Fund Estimated Expenditures	$ 4,069,267

*Includes:	$ 530,000	Payment to Borough in lieu of a borough personal property tax
	125,000	Insurance
	150,000	Advance to cargo terminal fund
	130,000	City Engineering Department
	417,000	Capital Project Transfers

$ 70,000	Bond payments
50,000	Contingency
33,000	Other

General Fund Estimated Revenues

1. Taxes	$1,915,000
2. Licenses and Permits	20,570
3. Intergovernmental Revenues	392,550
4. Charges and Services	342,210
5. Miscellaneous Revenue	34,070
6. Non-Revenue Receipts	1,364,867
Total General Fund Estimated Revenue	$4,069,267

Capital Project Funds Estimated Expenditures*

1. Federal Revenue Sharing Trust	$ 261,000
2. Federal Unit-Recession Fiscal Assistance Fund	53,500
3. Street Improvement	140,000
4. Building Improvement	7,000
5. Water Source Expansion	1,305,000
6. Water/Sewer Line Construction	110,000
7. Sewage Treatment Plant	7,643,105
8. Cargo Pier Construction	873,775
9. HUD Block Grant	1,274,660
10. Major Equipment Purchases	41,000
Total Capital Project Funds Estimated Expendi ure	$11,709,040

* Revenues for capital project funds are identical.

Enterprise Funds Estimated Expenditures*

1. Cargo Terminal	$ 905,097
2. Boat Harbor	369,265
3. Water/Sewer Utilities	1,109,007
Total Enterprise Funds Estimated Expenditures	$2,383,369

*Enterprise Fund revenues equal expenditures.

TOTAL ESTIMATED REVENUE	$18,161,676
TOTAL ESTIMATED EXPENDITURES	$18,161,676

The City of Kodiak is located within the Kodiak Island Borough which is a borough of the second class. In addition to the mandatory powers of education, tax assessment and collection, and planning, platting and zoning, the borough also has the areawide power of hospitals and non-area powers of parks and recreation and building inspection. On a service area basis the borough provides fire protection to the area adjacent to the city and the village of Karluk and provides road maintenance to the Bells Flats area. The borough is currently considering the establishment of a road maintenance service area for the road systems north of the City of Kodiak.

V. PETITIONERS BRIEF

The basic thrust of petitioners arguments seem to be that the area is urban in nature (19AAC05.010 (3))[3] and requires city services - most notably sewer and water (it is the policy of the City of Kodiak not to extend sewer and water beyond the city's boundaries). In support of this argument, petitioners simply state that the property is similar to existing property inside the City of Kodiak. Petitioners have apparently concluded that the subject territory is so obviously urban in character that detailed evidence, beyond the basic information required by regulation and included in the petition, supporting that statement is not needed; our investigation substantiated that conclusion.

VI. CONCLUSIONS AND RECOMMENDATIONS

That the area proposed for annexation is identical in nature to other areas in the city - that is, urban in character - seems relatively obvious. Given that conclusion, the issue then resolves to one of determining who should provide municipal services to the area. We believe firmly that the language of Article X, Section 5[4] of the Alaska Constitution

---

3. 19 AAC 05.010. ANNEXABLE TERRITORY. (a) Territory which is contiguous to the city may be annexed to that city if one or more of the following standards are met: (3) the territory is urban in character. In determining whether territory is urban in character, the commission may consider, without limitation, whether the property is platted or held for sale for urban, residential or commercial purposes, whether the population density of the territory approximates that of the annexing city, whether the population of the territory stems primarily from actual growth of the city beyond its legal boundaries, and whether the property is valuable primarily by reason of its suitability for prospective urban purposes.

4. Section 5. Service areas to provide special services within an organized borough may be established, altered, or abolished by the assembly, subject to the provisions of law or charter. A new service area shall not be established if, consistent with the purposes of this article, the new service can be provided by an existing service area, by incorporation as a city, or by annexation to a city. The assembly may authorize the levying of taxes, charges, or assessments within a service area to finance the special services.

encourages the provision of municipal services by cities and discourages the provision of services by boroughs on a service area basis, except when unique circumstances dictate otherwise. Accordingly, we recommend acceptance of the petition as submitted.[5]

However, it is also our conclusion that the subject petition represents only the tip of the iceberg with respect to the question of who shall provide municipal services in the Kodiak area. As this report is being finalized we have just received a petition for incorporation of a first-class city in the Monashka Bay area. Additionally, the Kodiak Island Borough has just adopted an ordinance calling for a vote on the question of establishing a road service area consisting of the Kodiak urban area exclusive of the City of Kodiak. We have also received correspondence from the City of Kodiak indicating that it feels that it should be the provider of municipal services to the Kodiak urban area. In the opinion of the Department of Community and Regional Affairs these series of events represent a mandate to the Local Boundary Commission to find an immediate answer to the question: what municipal entity shall provide municipal services to the Kodiak urban area? Accordingly, we further recommend that the Local Boundary Commission:

1) Schedule a public hearing on the above stated question and notify the public that a potential answer to the question is annexation of significant portions of the Kodiak urban area to the City of Kodiak; and

2) Order officials of the City of Kodiak and the Kodiak Island

---

5. The petition actually contained two descriptions of property to be annexed. The written description omitted Lot 27 of U.S. Survey No 3098 while the map indicated that it was to be included. Subsequent corresepondence (attachment #6) from the City indicates their desire to involve it in the annexation proposal.

Borough to submit to the Commission prior to the public hearing a five year schedule of services to be provided to areas currently outside of the City of Kodiak complete with narratives describing the level of service to be provided and costs associated therewith.

REPORT TO THE LOCAL BOUNDARY COMMISSION ON THE PROPOSAL TO ANNEX CERTAIN LANDS IN THE KODIAK URBAN AREA TO THE CITY OF KODIAK

Department of Community
and Regional Affairs
Juneau, Alaska

May 17, 1978

I. INTRODUCTION

On December 12, 1977, the Local Boundary Commission conducted a public hearing to take testimony respecting a petition (attachment #1) submitted by the City of Kodiak proposing annexation of certain properties to the City. As a result of that hearing the Commission elected to postpone action on the City's petition and subsequently submitted petitions for 100% annexations until it considered the broader issue of who --the City of Kodiak or the Kodiak Island Borough-- should be the principal provider of municipal services to residents of the Kodiak ~~urban~~ area. The Commission directed the Department of Community and Regional Affairs, in its capacity as staff advisor to the Commission, to prepare a report stating specific recommendations as to which areas, if any, ought to be annexed to the City of Kodiak.

II. AUTHORITY AND NOTICE

Article X, Section 12 of the Alaska Constitution grants authority to the Local Boundary Commission to "consider any proposed local government boundary change" and to "present proposed changes to the legislature during the first ten days of any regular session". Alaska Statutes grant the Commission authority to "conduct meetings and hearings to consider local government boundary changes and other matters related to local government boundary changes, including extensions of services by incorporated cities into a contiguous area and matters related to extension of services".

In accordance with AS 44.19.290, notice of the Local Boundary Commission's forthcoming public hearing and decisional meeting was ordered published in the Kodiak Daily Mirror editions dated May 4, 8, 15, and 19. A copy of the Notice is appended as attachment #3. Notice was also sent, by certified mail, to the manager of the Kodiak Island Borough, the manager of the City of Kodiak, and the Commanding Officer of the U.S. Coast Guard Station in Kodiak. Additionally, notice of the hearing was transmitted over radio station KVOK and TV station KOTV at least three times during the period May 1 to May 19.

III. GENERAL INFORMATION

The following is a brief description of each of the four areas identified in the Notice of Public Hearing:

Mission Road Area: Generally this area consists of the territory located between the northeast boundary of the City of Kodiak and the terminus of Mission Road, located at Spruce Cape. Although the area is largely residential in character, it does contain several small service businesses. There are several mobile home courts located in the area, as well as a Baptist Mission. The only notable public facility is the Kodiak sewage treatment plant presently operated by the City. The Borough contends that the Kodiak sewage treatment plant is a regional facility which should be jointly operated by the City and the Borough.

Staff of the Kodiak Island Borough estimated the population of the area to be 790 residents as of 1977. There are at least 316 water taps in the Mission Lake, Outer Mission Road and Spruce Cape Areas. The City

indicated the population estimate of 790 residents is low. The Borough will provide the estimated value of taxable property at the public hearing. The population is projected to be 1,390 by 1985, a 76% increase over current figures.

Mill Bay Road Area: Generally includes that area extending from the northwest boundary of the City of Kodiak to the point where Mill Bay Road splits to Otmeloi Point and Fort Abercrombie, including the area around Island Lake, Beaver Lake and the relatively newly developed area of East Mill Bay.

Like the previously discussed territory, the area is primarily residential in character, although several businesses do operate in the area. The land most heavily populated is that surrounding Island Lake, while the remainder of the population is fairly evenly scattered throughout the Island Lake area. Population density is moderate to low. Borough estimates made in 1977 show a population of 400 for the Island Lake area and a total area population of 550. There are 100 water taps in the Island Lake Area and numerous wells. The City indicated the current population estimate of 400 residents is low. Estimates project a population of 900 for the Island Lake area by 1995. The only public facility of any consequence is the City of Kodiak's municipal airport. A Catholic school, teaching grades 1-8, is also located in the area. The Borough will provide an estimated value of taxable property at the public hearing.

Monashka Bay: Generally includes the area adjacent to Otmeloi Point and Fort Abercrombie roads. Much of this land is dedicated to public purposes such as the Fort Abercrombie State Park, the City of Kodiak Ram

Site -- a local outdoor theatre, a VFW site and the land fill site operated by the City on Borough land, water reservoir and transmission facilities. The remainder of the area is either undeveloped or very lightly developed. In 1978 Borough staff estimated the population of the area at 100. The current assessed value of property for Mission Road, Mill Bay and Monashka Bay areas is approximately $21 million.

All of the previously described areas receive certain services from the Kodiak Island Borough, including the areawide services of education, planning, platting and zoning, tax assessment and collection and hospitals and health facilities; the non-areawide power of parks and recreation is not provided at this time; and, on a service area basis, fire protection, road maintenance, sewer and water service. The latter three services were only approved by voters in April of this year so actual implementation of the service has yet to begin. Fire protection is, in fact, provided by the City of Kodiak through a contract with the Kodiak Island Borough.

The City is providing 440 water taps and 48 sewer taps to the Mission Road Area, Mill Bay Area, and the Monashka Bay Area.

Coast Guard Base: The reservation, which is excluded from the Kodiak Island Borough boundaries, abuts the City of Kodiak's southern boundary and is totally self-sufficient, containing all facilities and providing all services necessary for the well-being of Coast Guard personnel. The Kodiak Island Borough operates an elementary school on base, while junior high and high school students attend school in downtown Kodiak.

We are not aware of any significant private property on the reservation with the exception of the Wien Air Alaska airport facility. The current estimated population of the U.S.C.G. station is approximately 3,000. An estimate of the potential taxable property at the U.S.C.G. station is between $200,000 and $400,000.

IV. FINANCIAL INFORMATION

The City of Kodiak was incorporated as a town in September 1940, under Federal law. It was later classified as a first class city under State law and subsequently adopted a home rule charter in the fall of 1965. The City operates under the council-manager form of government and, according to the City's budget, provides a broad range of municipal services, including:

Service	Amended Budgeted Funds (FY 78)
General Fund Estimated Expenditures	
1. Legislative, Judicial, Legal	$ 76,520
2. Executive	78,469
3. City Clerk	83,567
4. Finance Director	229,011
5. Police Department	871,619
6. Fire Department	357,135
7. Public Works Department	690,604
8. Parks & Recreation	132,311
9. Library and Museum	161,602
10. Engineering	146,958
11. Non-Departmental	1,344,117*
Total General Fund Estimated Expenditures	$ 4,171,913

*Includes:

$392,948	Payment to Borough in lieu of a borough personal property tax
135,875	Insurance
73,926	Advance to cargo terminal fund
67,000	Public utility services
421,191	Capital Project Transfers

133,200	Bond payments
26,841	Contingency
93,136	Other

General Fund Estimated Revenues	
1. Taxes	$2,023,000
2. Licenses and Permits	28,870
3. Intergovernmental Revenues	434,016
4. Charges and Services	366,802
5. Miscellaneous Revenue	39,734
6. Non-Revenue Receipts	1,279,491
Total General Fund Estimated Revenues	$4,171,913

Capital Project Funds Estimated Expenditures*	
1. Federal Revenue Sharing Trust	$ 261,000
2. Federal Anti-Recession Fiscal Assistance Fund	79,516
3. Street Improvement	673,300
4. Building Improvement	153,135
5. Water Source Expansion	1,320,655
6. Water/Sewer Line Construction	381,037
7. Sewage Treatment Plant	7,643,105
8. Cargo Pier Construction	873,775
9. HUD Block Grant	1,335,007
10. Major Equipment Purchases	111,780
Total Capital Project Funds Estimated Expenditures	$12,832,310

*Revenues for capital project funds are identical.

Enterprise Funds Estimated Expenditures*	
1. Cargo Terminal	$ 919,917
2. Boat Harbor	368,876
3. Water/Sewer Utilities	1,283,501
Total Enterprise Funds Estimated Expenditures	$ 2,572,294

*Enterprise Fund revenues equal expenditures.

TOTAL ESTIMATED REVENUES	$19,576,517
TOTAL ESTIMATED EXPENDITURES	$19,576,517

The City of Kodiak is located within the Kodiak Island Borough, which is a Borough of the second class. In addition to the mandatory powers of education; tax assessment and collection; and planning, platting and zoning, the Borough also has the areawide power of hospitals and non-areawide powers of parks and recreation and building inspection. On a service area basis the Borough provides fire protection through a city contract to the area adjacent to the City and to the village of Karluk and provides road maintenance to the Bells Flats area. The Borough has very recently established the Monashka service area to provide water, sewer, and maintenance for the road systems north of the City of Kodiak. On March 23, 1978 the City filed a complaint for declaratory judgment and injuction against the establishment of the Monashka service district claiming the services of water, sewer and road maintenance can be provided by the City without any necessity for creating the service district. (Attachment #5)

V. STANDARDS FOR ANNEXATION

Title 19 of the Alaska Administrative Code, Section 05.010, Alaska Statutes 29.63.909 and Article X Section 5 of the Alaska Constitution[1] set forth specific standards and requirements which provide guidelines for annexation. Realizing that annexation may be proposed if any one of these standards are met, the Department will indicate the applicable standard and summarize any appropriate issues raised as follows:

(1) Mission Road Area. In accordance with 19 AAC 05.010, the Department suggests that the following applicable standards appear to be satisfied because the territory between Mission Lake and Spruce Cape is:

(a) contiguous to the City as evidenced by the Kodiak Island Borough map prepared by Kramer, Chin, & Mayo Inc.

(b) essentially or will be urban in character as noted in the Kodiak Island Borough map prepared by Kramer, Chin & Mayo Inc.

---

[1] "Section 5. Service areas to provide special services within an organized borough may be established, altered, or abolished by the assembly, subject to the provisions of law or charter. A new service area shall not be established if, consistent with the purposes of this article, the new service can be provided by an existing service area, by incorporation as a city, or by annexation to a city. The assembly may authorize the levying of taxes, charges, or assessments within a service area to finance the special services."

Resident Population Estimates

(provided by Borough)

	1977	1985	1995
Mission Road	520	720	920
Mission Lake	270	470	870
Mid Cape	0	200	600
Spruce Cape	0	0	600
TOTAL	790	1,390	2,990

At least one-third of the total land area is undeveloped and the largest portion is the former U.S. Coast Guard LORAN Station whose operation of this facility will be terminated on December 31, 1979. Additionally, the former U.S.C.G. LORAN station was declared surplus and has been selected by one of the Kodiak Island Native corporations formed under the Alaska Native Claims Settlement Act. While no immediate development plans appear to exist, it is anticipated that the property will see development, primarily for residential purposes, in the future. The current borough planning estimates project a population of 600 on the former U.S.C.G. LORAN station by 1995 and 600 residents for the Mid Cape Territory. The U.S.C.G. LORAN facility currently has a population of (4) residents.

(c) presently in need of municipal services of water, roads, and fire protection which the City should be able to provide more efficiently than the Borough could by using differential tax zones.

The Department would suggest that the City and the Borough should more appropriately respond to the question of who can provide the specific services more efficiently by whatever means they desire. However, the Department would make the following observations:

Sewer and water facilities are provided to the majority of the area by the City of Kodiak. The previous sewer and water lines were constructed under the auspices of a public utility district prior to statehood and were subsequently taken over by the City of Kodiak. The majority of the water line was put in after the earthquake ruined the wells. Several private sewer lines were also built at that time. According to a 1970 agreement between the Borough and the City, the City has long been designated as the agency responsible for implementation of water and sewer projects within the area of the road system in the Kodiak Island Borough. The City recently installed a sewer interception to the treatment plant.

The territory is presently in need of local road maintenance as evidenced by the recent service area election to provide the service. However, the Department of Transportation is presently responsible for road maintenance on the Spruce Cape road. In determining which governmental agency can most efficiently provide the service for the area it is noted that the City has the only existing Public Works Department capable of providing road maintenance. The Borough has chosen to provide road maintenance through private contracts rather than through a Municipal Public Works Department.

Fire protection is provided by the Borough through a contractual arrangement with the City because the City has the only municipal fire department.

(2) Mill Bay Area. According to 19 AAC 05.010, the Department suggests that the following applicable standards appear to have been satisfied for the territory adjacent to Mill Bay Road extending from Kodiak Subdivision to the turn-off to Fort Abercrombie.

(a) The territory is contiguous to the City as evidenced by the Kodiak Island Borough map prepared by Kramer, Chin and Mayo Inc.

(b) The terrritory is essentially urban in character as noted in the Kodiak Island Borough map prepared by Kramer, Chin and Mayo Inc.

Resident Population

	1977	1985	1995
Beaver Lake	30	130	730
East Island Lake	310	510	710
West Island Lake	70	120	170
East Mill Bay	50	150	250
West Mill Bay	70	120	170
TOTAL	530	1,030	2,030

The land most heavily populated is surrounding Island Lake, while the remainder of the population is fairly evenly scattered throughout the Island Lake area.

(c) The territory is presently in need of municipal services of water and sewer, roads and fire protection, which the City should be able to provide more efficiently than the Borough could by using differential tax zones.

Here again the Department would suggest that the City and the Borough should more appropriately respond individually to this question of which municipality can provide the service more efficiently. However, the Department would make the following observations:

City water is provided to portions of the area surrounding Island Lake--the water line used is a temporary one, and water pressure is often very low. No sewage collection or treatment facilities operate in the Island Lake area. Consequently, due to the population density, water table, and lack of a collection system, a serious water pollution problem exists at Island Lake (attachment #4).

The territory is presently in need of municipal road maintenance as evidenced by the recent service area election to provide the service. The Department notes that the City has the only existing Public Works Department capable of providing road maintenance.

Fire Protection is provided by the City through a contracted arrangement with the Borough because the City has the only municipal fire department.

(3) The Monashka Bay area. In accordance with 19 AAC 05.010, the Department suggests that the following standards appear to be satisfied for the territory adjacent to Mill Bay Road and extending to the Fort Abercrombie extension to the end of Mill Bay Road, including the Pillar Creek, Virginia Creek and Monashka Creek water shed.

(a) The territory is contiguous to the western boundary of the City as shown by the Kodiak Island Borough map as prepared by Kramer, Chin and Mayo Inc.

(b) Portions of the territory should be annexed to enable the City to achieve adequate control, protection or management of the land fill site and the water shed of city water supply.

The area surrounding Monashka Bay Area #21 is not populated as shown on the Kodiak Island map. The surrounding land is primarily dedicated to public purposes such as the Fort Abercrombie State Park, the Kodiak Ram Site -- local outdoor theatre, VFW, and the land fill site operated by the City on Borough property, water reservoir and transmission facilities. If this area were annexed and included the water shed of Monashka Creek, Virginia Creek and Pillar Creek, the City would have direct jurisdiction over the territory within its boundaries (see Attachment #2).

However, according to the 1978 Kodiak Island Borough's regional plan and development strategy draft summary report, the current water storage capacity at Pillar Creek is inadequate to guarantee a supply of water to industrial users during periods of low stream flow. Potentially,

large fish production losses could occur during peak harvests and this could discourage construction of new processing plants. An Outer Continental Shelf service base would also require large amounts of fresh water to supply drill rigs. Further economic development will require increasing water storage capacity. The most readily apparent alternative is for the City to go ahead with raising the Monashka Creek Dam.

The Department notes that this project is a city function on land purportedly owned by the Borough. The City claims the Borough has said that the land will be turned over to the City. The Department would suggest clarification should be made as to whether this land will be turned over to the City, and who should ultimately provide the service.

(4) The Coast Guard Base: The Department now suggests that the entire U.S.C.G. station be considered for annexation. In accordance with 19 AAC 05.010 the Department would suggest that the following standards appear to be satisfied for the territory proposed.

(a) The territory is urban in character as evidenced by the U.S.C.G.'s own estimate of population to be approximately 3,000 residents.

(b) There is a likelihood that future growth and development will occur within the territory particularly at the State airport which is leased from the U.S.C.G.

(c) Part of the territory (i.e. airport) is presently in need of municipal services of police protection, roads, and fire protection, which the City, using differential tax zones, should be able to provide more efficiently than the Borough using the service area mechanism.

The City of Kodiak Police Department is the security agency at the airport. The City provides the anti-hijacking protection for the airport. The City contends this area is in need of police protection, including the parking lot and restaurant which is being built. As the airport grows and develops, increased commercial activity as well as private aircraft will be at the facility. The Division of Aviation has plans to develop the airport further to handle private craft, and the City has indicated an interest in closing its existing airport.

At the present time the U.S.C.G. Station provides security police services, fire protection (in conjunction with the City), and airport maintenance (in conjunction with the FAA and the Department of Transportation), water sewers and sewer treatment facilities, crash services, and garbage and solid waste collection and disposal on the base.

Another issue is the fact that Koniag Native Corporation is hoping to receive excess property at the airport for further development. However, the U.S.C.G. has no immediate plans to dispose of any excess property.

According to Article X Section 7, City annexation of the Coast Guard Base (including the State Airport) would also extend the Kodiak Island Borough boundaries as well. Should annexation occur, the Borough would acquire a tax base of the territory and could exercise all of its powers in the area. The U.S.C.G. personnel could then exercise their rights as city and borough residents.

The Department would suggest that the City determine whether there is sufficient taxable property at the U.S.C.G. station to justify police protection or any other services. However, additional State and Federal grants should be available to assist with providing these services such as State and Federal Revenue Sharing. Apparently the Kodiak Island Borough has previously negotiated with the U.S.C.G. concerning 100% annexation without success.

Recommendation

The basic problem appears to be that the City and the Borough are attempting to provide the same municipal services and occupy the same political and physical space. While it is generally desirable that matters of government organization be determined locally, conflicts have occurred over annexation with creation of the Monashka Bay Service area and the request for incorporation of a first class city in the Monashka Bay area. These conflicts would indicate that the Local Boundary Commission should review the activities and assume a mediating role to resolve these conflicts.

The Department believes firmly the language of Article X, Section 5 of the Alaska Constitution[2] encourages the provision of municipal services by cities and discourages the provision of services on a service area basis by a borough when those services can be provided by a city through annexation. Any territory bordering on a city should be encouraged to annex rather than permitting it to remain as a borough service area, providing the annexation standards are met. Ideally the boundaries should encompass an entire natural socio-economic and political area which is urban in character.

We believe that the four areas studied in this report adequately fall within the urban socio-economic and political influence of the City of Kodiak and generally meet annexation standards.

---

[2] Ibid.

The final solution for the problem of the Kodiak urban area may be complete unification or consolidation of the city and borough governments. Resolutions have been passed by both the City of Kodiak and the Kodiak Island Borough regarding unification. At the Borough Assembly meeting on April 7, the Borough Assembly did adopt a Resolution 78-34-R to put the question on the ballot next October. The City Manager has stated that without the total picture of annexation being reviewed and the Local Boundary Commission taking appropriate action, the City believes the present situation would prevail for a number of years. The Borough Manager stated that unification could take place as soon as mid-1979. Also, the Borough Manager contends the most economical solution to the problem would be to dissolve the City and provide municipal services on a service area or areawide basis.

The Department recommends that the Local Boundary Commission consider annexation to the City of the territories proposed based upon (1) the standards of annexation which appear to be satisfied for areas proposed; (2) the city and borough testimony in response to the standards raised and the feasibility of services which would be provided; and (3) the testimony of the residents which will be given at the public hearing.

The Bells Flats-Russian Creek Service area, located immediately adjacent to the Coast Guard Base, was not included in the Official Notice of Public Hearing as an area to be considered. The Department would also recommend that the Local Boundary Commission consider this area for future annexation to the City in view of its relative small size, the estimated borough population of 160 as of 1977, the fact that the Borough has created a service area for road maintenance, and the potential taxable property is estimated to be $3,600,000.

JOINT COMMITTEES OF COMMUNITY & REGIONAL AFFAIRS

KODIAK, ALASKA FEBRUARY 10, 1979

BY WILLIAM H. BULEN, PRESIDENT KODIAK SANITATION, INC.

HONORABLE SENATORS AND ASSEMBLYMEN
LADIES AND GENTLEMEN

My name is William Bulen. My son Richard Bulen and I own and operate Kodiak Sanitation, Inc.. We have a lot of interest in the matter before you and obviously most of it is financial. Therefore, asking us how we feel about the matter is like getting a wolf to watch the sheep.

However, there is one aspect to the present situation which we think is grossly unfair and I will confine my remarks to this problem.

We have many complaints from our commercial customers regarding the unauthorized use of dumpsters. Only this week I received a call from someone at Kodiak Community College asking what they could do to stop people from using their dumpster. I had to advise them that for all practical purposes their only recourse was to talk to the people involved. As you can understand, this would serve no purpose beyond causing the offenders to find another dumpster.

In the area you are considering today we serve 89 homes and all trailer parks. We estimate that there are 315 additional residential units in the area, which are the ones without refuse service. Some of these people take their trash to the dump but a large percentage of them take it to town and place it in a convenient dumpster. The other day I heard someone remark that they had seen someone transfering trash to the dumpster at the new Post Office while people in two other cars waited to do likewise.

I do not mean to infer that all borough residents are garbage freeloaders but I will have to admit that even some of my friends are numbered among them. For some strange reason, otherwise honest people will not hesitate to steal service.

The only practical solution to this and other garbage related problems is mandatory garbage service, which would be achieved by annexation. In this we do have a financial interest so I will say no more.

Thank you

TESTIMONY OF NORMAN D. WOOTEN

BOX 3016
KODIAK, ALASKA

Februrary 10, 1979

My greatest concern over this entire matter is the fact that we as residents had no say in a decision that has so much effect on us. If an election were to be held in the area and the people were for the annexation then I would abide with that decision.

I own and reside on a one acre lot in the Dark Lake area. This lot is covered with spruce trees and berry bushes. I and my neighbors plow and maintain our own road. I haul and dispose of my own trash. Certainly this is extra work and less convenient for me than if I were in the city and entitled to all these services as a citizen. I purposely chose this lifestyle though. I desire to live in an uncongested area such as I do for several reasons. My two small daughters have the run of a fairly large area without me having the worries of a typical "town" parent of traffic-pedestrian hazards. My dog is free to roam over this same area without the city animal restrictions. I'm able to enjoy a clear view of the lake.

What does all this have to do with annexation? Even though according to city publicity I am to be in the zone paying 35% of assessed tax rate I am uncomfortable with this promise. If and when the time arrives that I am to pay full taxation I am not at all certain I will be able to afford the tax on a one acre lot. If my property were valued at $50,000.00, my present tax at 7.0 mills would be $350.00 per year. Under the city assessment of 16.1 mills it would jump to $855.00 per year plus the assessments for any proposed improvements in services. This being the case I would have to subdivide to be able to retain a place to live that I could afford. This is an unacceptable risk to me.

Joint Committee Hearing
Senate & House Community & Regional Affairs Committees
Kodiak, Alaska

Members of the Legislature, Ladies and Gentlemen:

I am appearing before you today both as a spokesman for the Borough Residents for Autonomy and as a resident, property owner and business person in the Spruce Cape area. So I would like to speak both in general terms and also as to how annexation might affect me as an individual residing in the area proposed for annexation.

First of all, it seems to us as a group that the only instance in which the Boundary Commission should exercise its statutory right to force an annexation without an assenting vote by the people affected by their decision should be in a circumstance where it can be clearly and irrefutably documented that there is an overriding public need. This is not the case in Kodiak. Testimony at the public hearings has been conflicting and documented facts are nearly non-existent. No detailed study has been performed by any independent agency as to the true costs to the residents of the area proposed for annexation, nor to the residents of the existing City of Kodiak. No time schedule for the provision of services had been furnished the Boundary Commission at the time of its decision. At no time has there been a real dialogue between the City administration and representatives of the area proposed for annexation (who have not been hand-picked by the City) as to what services they desire, if any.

The decision of the Boundary Commission appears to have been based on several assumptions:

1. That there is a need for water and sewer services in the area proposed for annexation.

2. That the residents of the area proposed for annexation are enjoying City services without paying their share of the costs.

3. That annexing this large area into the City would reduce conflicts between City and Borough governments and provide for greater efficiency.

4. That since many of us do our shopping and find employment in the City of Kodiak, that it is only logical that we should be governed by its administration.

It is certainly true that certain areas are in dire need of water and sewer. However, by far the greater portion is very large lots, sparsely settled. Individual water and sewer systems have been installed and are functional. Also, the City has indicated that it is beyond its physical and economic capability to provide sewer to these sparsely populated tracts. The residents have voted for

for a service district so that the services can be furnished only where they are wanted and needed, and where the residents have indicated a willingness to pay for them. When the City accepted Federal funding for the sewerage treatment plant, it also committed itself to extending sewer service to this entire area regardless of the political boundaries. The costs, of course, are borne by the users and not by the general taxpayer.

Insofar as our not paying our own way, let me cite my specific example. My residence and office on Spruce Cape Road are served by City water. We pay a premium due to our location outside the City. We have our own EPA approved septic system. We are on a State road, which is very well maintained by the Highway Department, and for which the State would continue to pay if we were annexed. The State Troopers responded promptly on the one occassion in twenty-two years when they were called. Our fire protection is through the auspices of a service district. When enough of us feel that we want a higher digree of fire protection, we alone will bear the costs of a sub-station. We enjoy being out of the heavily populated area with our children and our pets. So far, my clients have been willing to drive the extra distance for the accounting services I provide them.

As I see it, I will be paying an additional 6.8 mills, or $1,300 in my particular case, for the privilege of using the City Library, which I do not use at the present time. There will be no reduction in the taxes I pay to the State when the Troopers are replaced by City Police and the costs of road maintenance will continue to be borne by the State. If and when the municipal sewer crosses my land, I will also pay my full share for this (as I would if I remained outside the City). I am an avid reader, but I can buy many books to increase my own library for $1,300.

In addressing the point of efficiency of government, although the existing City-Borough conflict is at times distressing, it is an effective system of checks and balances. I don't need to remind any member of this committee that the most efficient form of government is a dictatorship. One of the beauties of our democratic form of government is that if the people living under that government really don't like it, then we ourselves have the option to change it by opting for unification or simply by "throwing the rascals out".

The Legislature has just appropriated ~~1.172~~ 2 million dollars toward a joint effort with Governor Hammond to convince the great white fathers in Washington, D.C. that even in their infinite wisdom they might not always know just what is right for the people of Alaska. Yet the Boundary Commission has decided that they are the persons best qualified to know what is best for us in Kodiak, despite overwhelming testimony from the people involved that they were opposed to the action being considered. I ask you to consider the implications.

Finally the argument has been advanced that we should be annexed since the City of Kodiak furnishes the shopping facilities for most of us. I do in fact, do most of my buying there, putting approximately $2,000 of sales tax into the City's general fund between business and personal purchases. But please bear in mind that most of the merchandise sold in the City of Kodiak originates in the Port of Seattle. While I have seen some editorializing that Kodiak Island might consider seceeding from the State of Alaska, I haven't heard any serious discussion of the entire island being annexed to Seattle!

Thank you very much for coming so far to hear us out.

Jo Hajdu

THE KODIAK DAILY MIRR

Vol. 37, No. 252 Wednesday, December 28, 1977

from Okie Chandler

City council defers tax issue one year

The Kodiak City Council last night approved the second reading of an ordinance exempting the city from assessing a personal property tax after amending the new statute to go into effect Jan. 1, 1979.

The ordinance, which met strong opposition from fishermen and others during a public hearing, was originally written to go into effect Jan. 1, 1978. Council member Toni Eaton proposed the amendment, which was approved 4-1, after several residents urged that more time be taken to study the city's and borough's taxing methods.

The amended version of the ordinance, which in effect requires city residents to pay their own borough personal property tax in 1979 unless another taxing method is developed, was also approved by a 4-1 vote.

Councilman Dave Woodruff opposed both the amendment and the ordinance which the council initially approved Dec. 22 at their regular meeting. Council member Carol Lechner was not present at the meeting last night which attracted between 60 and 75 city and borough residents.

You have "stirred up a hornet's nest in the community we don't need," longtime Kodiak fisherman Oscar Dyson said to the council. "We'll have an uphill battle to fight," he added, and later charged the council with helping to run the fishing industry out of Kodiak.

United Fishermen's Marketing Assoc., manager Tom Casey vowed to work as hard as he could to remove members of the council should they support the ordinance. If you approve this ordinance you will be "throwing this industry (fisheries) into a crisis situation," he said.

Casey later declined to make any comments after the council passed the amended ordinance which replaces an ordinance earlier approved by the council after a referendum was passed at the October general election asking the city to hold its sales tax to 3 percent and not pay the personal property tax for city residents.

Several persons at the hearing last night discounted that referendum as not being the wishes of the people because of a low voter turnout. "The fishing fleet was out on the seas when the referendum passed," said Harold Jones, owner and skipper of the Marcy J. "We can't play politics and fish at the same time," he added.

The fishermen, who have long enjoyed the city picking up the borough tax bill for their boats, claim that they could lose their vessels to taxes given one or two bad years.

"We don't want to face a $7,000 tax bill every year," Jones said.

The borough now assesses $7 for every $1,000 of a boat's value. Given a vessel valued at $1 million, the tax would be $7,000.

Borough Mayor Betty Wallin is now forming a citizen

Earthquake toll mounts

Rubble fills the street of the village Sar-Asiyab, hard-hit by an earthq miles south of Tehran last week. A second earthquake has struck that to the U.S. Geological survey. Today's quake registers 6.6 on the Richt the Red Sea north of Asmara, Ethiopia.

Oil contract offer deac

JUNEAU (AP) — Competitors for Alaska's royalty share of Prudhoe Bay crude oil have been given until the end of the week to submit any final proposed contract alterations to state negotiators, Natural Resources Commissioner Robert LeResche said today.

Once the "last best offers" are submitted, LeResche said he has set aside a month for final negotiations and an inhouse decision on which of the four rival proposals should be recommended for approval by the Royalty Oil and Gas Development Advisory Board.

"We're still trying for Feb. 1 for submitting a contract to the Legislature," LeResche said.

As the time for a decision approaches, Alaska Petrochemical Co. (Alpetco) remains the apparent leader with an offer which LeResche says meets the administration's double-barreled mandate of

struck at Hargeisa, Somalia's second largest city, while four other jets bombed the port city of Berbera, located along the Gulf of Aden.

According to the Somali radio broadcast monitored here, all casualties occurred at Hargeisa where Somali forces shot down two Ethiopian planes — Soviet-made Mig-21 jets.

Another Ethiopian plane, an American-built F-5 jet, was shot down at Berbera by Somali forces, the radio said, but additional details of the bombing incidents were not disclosed.

Hargeisa, located about 45 miles from the Ethiopian border, was reportedly attacked by Ethiopian jets earlier this month and at least nine persons were said to have died in the bombing incident.

In announcing Tuesday's bombing incidents, a regional secretary of Somalia's Socialist Party called the attacks "barbaric" and said they were

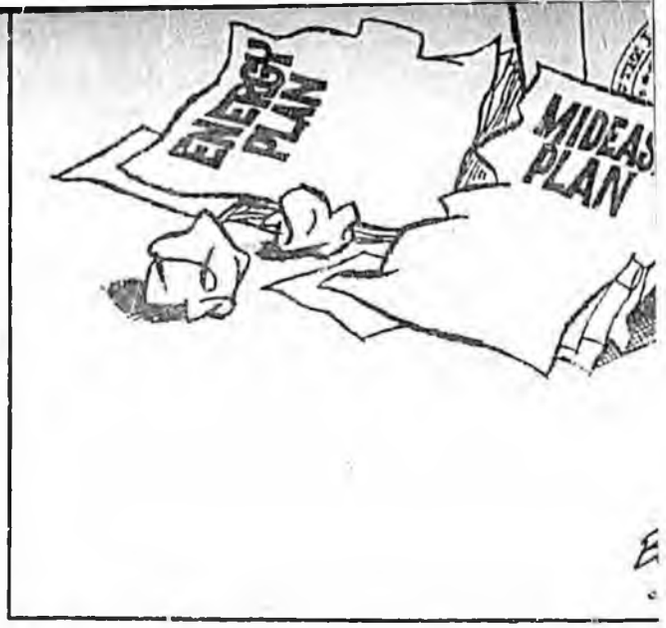
Somali tribesmen are fighting a secessionist war. Somalia provides the secessionists with material support.

Transmitter beams radio

UNALASKA (AP) — Residents of Unalaska will be able to listen to American radio again soon, courtesy of the Armed Forces Radio Network and the Alaska Public Broadcasting Commission.

For the past couple of years Unalaskans have been listening to Radio Moscow, although some U.S. stations could be picked up at night. The Aleutian Island town used to have an AFRN relay transmitter, but it was removed several years ago.

Now the Public Broadcasting Commission has sent an engineer to put up a new transmitter, which will make AFRN available again.



City council

(Continued from Page 1

committee to study the city and borough budgets and different taxing methods.

Names already suggested for the 12-member study group include Wilton White, Dick Berg, Oscar Dyson, Tom Casey, Don Egelus, Dottie Paulson and Chuck Powell. Wallin and city mayor Tommy Frost have been suggested as possible co-chairmen.

At the same time a petition was filed yesterday with the city clerk's office by the Fishermen's Wives asking the council not to support the new ordinance, said Marcy Jones, secretary for the Fishermen's Wives. She said there were 229 names on the petition.

The meeting last night went on for two hours with the council calling two, five-minute recesses.

Police investigate school

The Kodiak Police Department is investigating a break-in at the high school which was discovered this morning at 6:30 a.m. during a routine patrol.

School officials report that $12 was stolen from a cash box, and that $200 to $300 in damage was done to windows and doors in gaining entry to the cafeteria.

Police said entry was made through a side door, and that window panes were broken to get the door open. The break-in apparently occurred sometime after the building was closed following the student-alumni game at the high school last night, police said.

Police arrested Juanito Malpaya, 42, of Kodiak last night on a charge of drunken driving. He was scheduled for arraignment this morning. Malpaya was lodged in jail in lieu of bail.

Juan De Guzman, 63, Kodiak was arrested yesterd for petty larceny following citizens arrest for shoplifting De Guzman was arraigned th morning in district court here that charge and for five traff tickets.

The Kodiak Fire Departme answered two false alarm yesterday, according to a fi department news release

Calls were answered to Mi Bay Road, adjacent to the Lod and Guns shop, and to a garag fire north of the intersection Mill Bay Road and the ne Rezanof extension.

Oil offer deadline

(Continued from Page 1)

LeResche said premiums are allowed as long as they don't exceed the government-imposed ceiling price on oil.

Alaska Petrofining Co. currently trails Alpetco in second place with a contract which is based on the shaky premise of tax exempt bonds to construct its proposed in-state refinery complex.

LeResche said he has asked Alaska Petrofining to seek an independent legal evaluation of its contention that the Internal Revenue Service would approve its tax exempt scheme, but added that the state's own New York bond attorneys continue to insist that the IRS would never sanction such a deal.

LeResche said Alaska Petrofining may come in this week with a "whole new

Meanwhile, the two remaining competitors, Alaska Petroleum Co. and Alaska Oil and Chemical Co, have yet to back away from their unacceptable proposals for further studies as prerequisites to committing themselves to processing the royalty oil in the state, LeResche said.

LeResche said Alaska Petroleum officials have called him repeatedly to object to his calling their proposal a study, but the cabinet official insists "that is what it boils down to."

"They say they would commit to building a refinery, but give them two years to spend $1 million and at that time their board would decide whether it is profitable or not," LeResche said.

"Hopefully, they will submit

now has been on that basis."

LeResche called the Alaska Oil and Chemical proposal "very sincere," but added that it, too, needed major revisions to eliminate offensive study provisions.

"They say it (in-state processing) will never pay economically, but they want to join with the state to figure out the true costs and benefits," LeResche said. "At such time we know the true costs and benefits, then the state would have the sole right to tell them whether to proceed.

"But if we do proceed, they want us to sell them the oil at a cheap enough price so that they can make between 15 and 20 per cent on their investment."

The major unanswered question, even in the two leading

reas considered for annexation include the ace Cape area, an extension of the Mill Road area and the Monashka Bay area.

commission also looked at annexation of Coast Guard Support Center, although the had not pressed for its annexation.

ity attorney Bob Mahoney said political trol is not the main issue in the dispute.

said 63 percent of the population lives ide the city limits and 79 percent of the tax e is in the city. Futhermore, he said the is experienced at providing fire, water, er and road service and is the proper up to supply those services.

Mahoney said the city planned a passive role for the Monashka Bay area without full service and differential taxation.

By Jerry D. Martini

Borough Mayor Wallin: Political power is crux of annexation issue.

City Manager Ivan Widom explained the city provides services for non-city residents such as fire and ambulance, parks systems, police backup, library, boat harbor and many other services used by all the people. But Widom said non-city residents are not paying a fair share for the services.

Widom produced a map provided by a borough consultant showing projected growth in the area headed for the areas the city wants to annex. He said there will be an increased need for services int hese areas and the city should provide services for the districts since it already has the needed maintenance department along with sewer and water service.

But Borough Mayor Betty Wallin saw the issue from a different viewpoint. She said the city is in financial trouble and needs more people for its tax base.

Two killed in air crash

ANCHORAGE (AP) — Two pilots scanning the spring salmon run for fishermen below died Sunday when their single-engine planes slammed into each other over Cook Inlet, about 175 miles southwest of Anchorage, federal authorities said.

Cliff Cernick, a spokesman for the Federal Aviation Administration, said the two persons were the only ones aboard the floatplanes at the time of the crash.

The Alaska State Troopers sent a helicopter to pluck the bodies from the wreckage of the planes, which had plunged into the icy waters. The bodies were taken by fishing boat to the town of Kenai where autopsies were to be performed.

apanese ship turns U.S. processor

By CHRIS BLACKBURN
Staff writer of the
Kodiak Daily Mirror

lvah Hales went to Japan t year to buy freezing ipment and stayed to buy an -foot floating processor nstructed on the hull of a panese stern trawler.

he Wakkanai, which arrived Kodiak from Japan last week, y be the first foreign-built, nerican owned processor to ter the Alaskan fishery.

However, the effect of the Jones Act has been to increase costs for the U.S. fishing industry by preventing fishermen from purchasing low-cost foreign built vessels, though it is these same low cost vessels against which the U.S. fishing industry must compete on the world markets to sell their products.

The Jones Act does not prohibit processing aboard foreign built boats. Hales said he may also be given permission

"The 200-mile limit made this possible," Brenda Hales, Alvah's wife, said Friday. She is staying aboard the Wakkanai while the final outfitting is completed in Kodiak.

Hales said when he went to Japan to buy some freezing equipment which was being taken off surplus vessels he found a whole line of vessels tied up to the dock which were being surplused by the Japanese because the 200-mile limits around the world have

Hales negotiated a price for the Wakkanai and flew to Washington, D.C., to begin the paperwork necessary to import the vessel into the U.S.

Washington, D.C., officials were "very helpful," Hales said.

He specifically menti aed Bill Hannum, Jr., in the National Oceanic and Atmospheric Administration, NOAA, policy office and James K. White in NOAA's General Council Office in Juneau.

Customs officials, the Coast

screamed curses at the pudgy former postal worker.

The girl's mother then broke down crying, and Violante sobbed into his hands.

The victim's father, Jerry Moskowitz, cried, "No Justice!" after Justice Joseph Corso of Brooklyn announced the sentencing delay.

Earlier, as guards tried to bring Berkowitz into the courtroom the first time about 10 a.m., he lunged toward a window and had to be subdued. In the struggle, he bit and kicked several of the guards and one of them was taken to a hospital, according to a police source.

The extent of the guard's injuries was not known.

Edward McCarthy, aide to Bronx District Attorney Mario Merola, said Berkowitz told court authorities he did not want to be sentenced — "at least not today."

Berkowitz faced prison terms totaling up to 175 years.

Vessel turns processor

From page 1

Guard and the Ad-measurement team which determined the Wakkanai is 887 gross tons were also helpful, Hales said.

The Wakkanai required federal and state licenses before it could operate in Alaskan waters. "It seems like we were constantly applying for licenses," Mrs. Hales said.

Eastern Seafoods was also required by the Alaska Department of Labor to put money on deposit as a performance guarantee. Hales said he deposited with the National Bank of Alaska.

The Wakkanai sleeps 35 in two and one-man rooms. There is one six bunk room in the stern for female employees, and a helicopter deck above the bunkroom.

At full capacity the vessel can process 9,700 salmon a day in a 16-hour working day, Hales said.

On a deck 100,000 pounds of salmon can be held on ice before processing and the ship's freezers will hold 300,000 pounds.

The vessel was gutted to the bulkheads during the conversion from stern trawler to processor, Hales said. Conveyor belts carry the salmon from gutting tables to glazing and packaging tables and then to the freezers.

Before going to the galley or cabins the processing crew passes through a "mud room" where they can leave their boots and coats and wash up.

The galley-recreation room is paneled in an orange-brown wood with a TV video-tape player in one corner.

The Wakkanai is steered by dial controls from the bridge. As well as two radars, public address system and telephones, and VHF radios, the Wakkanai has its own telex system which can print out weather reports as well as other communications.

Hales, who now lives in Oregon, fished crab in Alaska from 1963 to 1967 and was part owner of the vessel Diver I. He went to work for a vertically integrated" processing firm and learned sales.

He has opened processing plants in South America, Mexico and the Carribeen, and a two million pound cold storage warehouse in Brazil which Hales currently has leased out.

In the British West Indies he processed lobster and conch, a large snail which Hales called "a starch staple" in the area.

Last year he was in Kodiak buying salmon. At one point Hales said he had problems getting the salmon processed and "Chuck Jensen at Pacific Pearl really helped me out."

Hales has a contract to deliver salmon to Eastern Products in Wakkanai on the island of Hokkaido in Japan.

"I came for fish and I intend to get fish," he said. "We'll be very competitive." Hales said he intends to stay in the Kodiak area into September for the late salmon run.

Under the terms of his permits the Wakkanai is not allowed to dock at Sand Point, Dutch Harbor or Kodiak because of the overcrowding at those ports Hales said.

He has formed no definite plans for his floating processor after salmon season.

"I'm not going to do king crab," he said. Hales indicated he might stay in Alaska for tanner crab or might take the Wakkanai to the East Coast for lobster.

The Wakkanai is currently skippered by Stan Lee, who has been running the Columbia. Frank Gonzales is chief engineer and Hales is serving as first mate.

Hales has a video tape system aboard the vessel to film the processing lines in action. "I want to do time and motion studies," he said.

Sitting in Hale's office aboard the vessel is a large carved bear with a red salmon in its mouth. "It's my good luck piece," Hales said. "It was given to me in Japan.

Annexation

(Continued from Page 1)

She said the city should either raise taxes or cut back on some services and not "force annexation on the people without a vote."

Wallin claimed unification is the solution to problems between the two governments. "Unification is the only way to go. We can do it," she said.

The borough mayor continued on the unification theme, saying "If there is no annexation I will fight for unification. But if there is annexation, there will never be unification."

"I think it's time they pay their fair share. And it's time they should also have a voice in government," Stevens said.

Dr. David Greene of the University of Alaska, Anchorage, and his colleague, Dr. P. J. Hill, provided a social and economic analysis for the borough, which they presented at the hearing.

Greene said annexation should take place if the residents of the areas were dissatisfied, if the borough could not provide services and if city residents were paying an unfair share of the taxes.

A survey he took indicated the residents were not unhappy with the current services they are receiving. He also said the borough was capable of providing those services.

Hill is a tax specialist and claimed sources outside the city pay at least 40 percent of the city sales taxes.

Afognak

(Continued from Page 1)

Cities Act, said following the decision Sunday. He said he was pleased at having stopped the Afognak petition through the democratic process.

Afognak Native Corporation member Pete Olsen was uncertain whether their corporation would contest the reversed decision, and said the matter would be taken up at the next board meeting.

Afognak Native Corporation manager Richard Wamser was not at the meeting yesterday and could not be reached for comment. Earlier during public hearings held on the petition, Wamser questioned whether the commission had a right to reconsider their previous decision

Woman jailed for destruction

An 18-year-old Kodiak woman was arrested and charged with malicious destruction of private property last night after police received a report of a disturbance at the Waldo's apartments on Mill Bay Road.

Dawn E. Chatterton was arraigned this morning in District Court and remained incarcerated in city jail after her arrest in the incident. She had allegedly kicked some holes in the wall at the apartment and broke the glass out of a fire extinguisher case.

Police also reported a motorcycle was stolen yesterday afternoon from the residence of Penny Carbary in the 1800 block of North Boulevard. The value and exact make of the cycle was not reported.

Two traffic accidents were reported over the weekend.

A 1976 Ford Sedan operated by Gary J. Moore, 28, of Kodiak was struck on the right front door as he attempted to turn right onto Alder Lane from Rezanof Street Saturday afternoon. Moore's car was hit by a 1977 Ford pickup truck driven by Geoffrey M. Peterson, 16, of Kodiak.

Moore's car received $800 in damages and Peterson's $900. Peterson was issued a citation for passing on the right side.

Budget crisis still looms

By STACIE PETERSON
Staff Writer of the
Kodiak Daily Mirror

The City of Kodiak is now working on an amendatory budget which shows that there is a projected increase in revenues of $146,498 for the remainder of the fiscal year, according to Ivan Widom, city manager.

Widom earlier this month said at a public meeting the city needs more money to operate its government, and that unless something is done, "we're going to have to cut services."

"The problem is not with this year's budget," Widom told the Mirror in an interview yesterday, "the problem is next year when we either raise taxes or cut services because we don't have the savings to fall back on that we had this year."

Widom said yesterday that during the current shortfall in cash flow, the city used money left over from last year's budget which the city had invested.

It is the responsibility of the city's budget officer to keep as much money invested as possible so that the city can draw interest on the money.

Currently the city has $600,000 invested, Widom said. When he first started working here the city had $1,400,000 invested he reported.

Part of the invested money is obligated to Sea-Land, and to bonded indebtedness for principal and interest payments for several city projects.

The $450,000 shortfall Widom reported at the meeting called by Mayor Betty Wallin on Dec. 15, was met by drawing money from the city's investments, Widom said.

Widom reports that the projected increase in the city revenue is being absorbed by projected increases in expenditures.

Some items making up the increase in revenues include a $100,000 rise in the projection of income from the city sales tax; a $36,938 increase in income from the raw fish tax; a $15,800 refund from the state for boarding prisoners; a $34,734 increase from a projected hike in the sewer rates; and an additional $99,695 from federal revenue sharing trust funds.

Several smaller additions to the projections on last year's budget bring the total to $307,241. Money was returned to the fund balance, drawn out earlier to meet the cash flow shortfall, reducing the amount available for expenditures to $146,498.

Widom said increased expenditures include a proposed five percent cost of living increase to city employees and upgrading their benefits to be comparable to those offered in other Alaskan cities.

Other projected increases in expenditures include a $55,000 payment on the debt service on the principal of bonds for a new fire truck; an additional $18,222 for snow removal and smaller amounts in every department for raises and overtime payments.

The expenditures balance with the projected increase leaving no money to carry over until next year for emergency uses, Widom said.

The city's total estimated revenues through June 30 of this year are $4,215,765. The projection at the time the present operating budget was drawn up was $4,069,267.

Widom said the amendatory budget is being developed by the city council in work session with some of the proposed expenditures approved and others dropped.

Bankruptcy faces some native groups

ANCHORAGE (AP) — An analyst says some of Alaska's 12 regional Native corporations may face bankruptcy within the next five years unless changes are made.

University of Alaska business professor Dr. Dean Olson has completed a three-year financial analysis of the corporations formed under the Alaska Native Claims Settlement Act. Olson has worked with one corporation and still advises some of the Native firms. His analysis appeared in the Alaska Native Management Report, a publication of the Alaska Native Foundation.

Olson said some the corporations need to develop rational planning and decision-making guidelines for more productive future operations. He said internal problems and external handicaps have combined to produce the shaky status of some corporations.

He said the financially-troubled corporations suffer from a lack of comprehensive planning and objective analysis, and what he calls "patrimonial" elements – employment policies influenced by family or kinship relationships.

Additional frustrations have resulted from the confusing nature of the claims act. That, "coupled with the naive expectations of the onlooking public," seems to have led to a need to "get something, anything, going in these early years," he said.

He added that the cost of implementing the claims act and setting up the companies has been high, and he estimates that at least 10 per cent of the settlement money has been used for legal expenses.

Uncertainty about what lands will finally be conveyed has slowed resource development, he said, and financial relief that may be provided by such development is "distant at best."

Olson said the companies must establish "routinely sustainable operations" by 1982 or "they will be unable to preserve the land estate intact, and share values in 1991 will be profoundly disappointing to those who own them." Shareholders in the corporations may not sell their shares until 1991 — 20 years after the act was passed.

Postal emplo clear mail ba

Kodiak postal employees are now working to clean up a backlog of second and third class mail which has piled up since last September, according to Joe Mellin, officer in charge.

Mellin reports that all second and third class mail was moved to the airport during the second week of December to make room for the Christmas rush.

A temporary postal employee is presently doing the rough sorting of the mail at the airport in the freight section. She began working on the backlog last Thursday, he said.

After the sorting, the mail is then moved to the downtown post office to be delivered to individual boxes.

Mellin said that in order to expedite mail delivery employees are not checking the names on the 2nd and 3rd class mail, but simply delivering it to the box number on the address.

Onion Bay resident Dodd Shay

Besides Local Boundary Commission chairman Sheila Gallagher, who is an attorney in Anchorage, Sigvold Strandberg from Anchorage, Sid Hopson from Barrow and Charles Bettisworth from Fairbanks are expected to arrive in Kodiak today for the hearings.

Bettisworth and Hopson, however, were not on the commission when it initially approved the petition.

According to that original petition, only a dozen residents were believed to live within the affected area, which includes Raspberry and Whale Islands. Since that time the Department of Community and Regional Affairs has learned that roughly 90 people live on Afognak including 50 employees at the Danger Bay logging camp.

Outspoken critic of the Development Cities Act, Dodd Shay who owns five acres and a house on Onion Bay of Raspberry Island, has been deeply involved in trying to stop the petition.

During the Democratic Convention, held in Kodiak April 21-23, Shay was successful in obtaining a party-endorsed resolution op-

City council tables sales tax increase

The Kodiak City Council voted last night to table an ordinance that would raise the city sales tax from three percent to five percent after a recommendation to that effect was made by City Manager Ivan Widom who had earlier placed the ordinance on the agenda.

When the issue came before the council, Widom began with an explanation of how an election last October indicated city residents did not want an increase in sales tax, but instead wanted to pay their own borough personal property tax.

The property tax is a major reason behind the need for a sales tax hike. The city currently pays the borough tax for all city residents, and in December the council chose to continue payment of the tax.

Widom contends the city can't afford to pay the tax without an increase of revenue.

After his comments on the election and subsequent council action, Widom immediately recommended the council study the proposed city budget for possible cuts and consideration of a one percent sales tax increase and that the council table the ordinance.

Council voted to table the ordinance 4-0 with Councilman Leroy Mayberry absent.

An ordinance related to sales taxes was defeated just before vote on the tax increase. The ordinance would have defined the word "solicitation" in the current sales tax laws as meaning solicitation by catalogues specifically. The city could then tax items purchased through catalogues.

Councilmember Toni Eaton said that the ordinance "can't be enforced and would cost more than it's worth to enforce."

In other action before the council, a first reading on a resolution to increase boat harbor rates passed 4-0. The resolution would raise exclusive moorage rates from $8 per foot yearly to $10 a foot and increase transient rates from $4 per foot to 80 percent of the exclusive rate of $10 or $8 per foot.

There was a public hearing on the matter before the vote. Four people spoke to the council and all of them said they thought the rate increase was acceptable, but they added that they hoped some of the cost increase would go to increased security for the harbor.

The council also passed a resolution that said it "recognized and appreciated" the services of former mayor Thomas Frost, Jr., who resigned two weeks ago because of health reasons.

Candidate asks for oil liability

State senate candidate Ed Naughton today urged congressional members from Alaska to amend the 1920 mineral leasing act, which includes provisions affecting shipment of Prudhoe Bay crude oil, to provide full protection of the state fishery.

Naughton said this morning that he sent telegrams to Sens. Ted Stevens and Mike Gravel, and Rep Don Young, cautioning that no matter where oil is delivered, strict liability for spills and disasters must be required.

Under the current Trans-Alaska Pipeline amendment of the Mineral Leasing Act, Naughton said, liability is

Hearing tonight on proposed tax

By DEBORAH NELSON
Mirror Staff Writer

Borough residents will have a chance to air their views in the borough assembly chambers tonight at 6:30 regarding the elimination of the borough personal property tax, and two alternate tax proposals under consideration by the borough assembly.

The first proposal in the resolution would request voters to decide if the borough may be authorized to levy sales taxes in the manner required by law, and the alternate proposal pertains to a tax which would be levied on the sale of raw or unprocessed resouces within the borough, commonly known as the "raw fish tax."

It is the later proposal which generated the most discussion at the Nov. 2 regular borough assembly meeting, which led to the decision that the tax proposals should be aired at tonight's public hearing.

At the Nov. 2 meeting, assembly member Ed Jack spoke in favor of the tax, saying that the proposed tax on raw resources such as timber and fish would be a "value added tax." The taxation on these natural resources would raise the value of the resources with the subsequent increase in price being passed on to the consumer, Jack said. He said in Kodiak the majority of the costs would be passed on to Japanese consumers, Kodiak's primary consumer of these resources.

Borough resident Oscar Dyson spoke out at the Nov. 2 meeting against the tax proposal, stating that it was an attempt to strip the fishermen of their profits, and that the tax would make Kodiak an unpopular locale for the bottomfishing industry.

because of the new crab measuring regulations, according to the Nov. 2 Cordova Times.

The fishermen also charged they had been deprived of 75 to 85 percent of their income and had suffered a loss of good will from their patrons because they were unable to supply enough blue king crab to meet the demand, according to the Cordova Times.

Filing suit were Ray and Sandra Cesarini, Chuck Baim, Mike Lopez and Roy Alley, all of Valdez, and Nat Butcher, Chet Cheshier, Lew Cocran and Dennis Nolan, all of Cordova.

On Nov. 3 Judge Ralph Moody upheld the state's new crab measuring regulation and refused to issue a temporary restraining order against the state.

Though the state's position had been upheld, the Department of Fish and Game stipulated the Prince William Sound fishermen could continue to use the carapace length, measured from the eye notch to the rear center

area and petroleum reservoir and source-rock potential," state geologists call the oil and gas potential within three miles of Kodiak Island "poor to fair."

Both the younger Miocene rocks and the older pre-Miocene rocks around Kodiak are not porous or permeable enough to hold reservoirs of oil or allow oil to be pumped out, state geologist Ross G. Schaff said in a telephone interview today from Anchorage.

However, the Miocene rocks show a good potential for being oil sources, Schaff said, and the Petroleum geologist Bill Lyle, who headed the state part of the joint state-federal project said the test results showed "there is very little possiblity of finding oil on Kodiak Island itself."

Karluk plan puts students in Kodiak

Kodiak Island School district officials have come up with a short range solution to providing education to the children of Karluk whose village was ravaged last week during violent winds and high seas.

Seven older children from the south side of the village will be moved into town to become the youngest members of the Kodiak Area Native Association's cottage program while a temporary school facility has been set up in Karluk for the children in

(Continued on Page 2)

City attorney to rule on taxing issue

A ruling is expected this week by city attorney Robert Mahoney on the legality of a city sales tax ordinance which went into effect last summer and is being questioned by borough residents.

Mahoney was scheduled to arrive here Friday from Anchorage to confer with city finance director H. R. Hyde over the ordinance, but poor weather delayed his arrival.

Contacted today, Hyde said he has still not discussed the ordinance with Mahoney.

Last week Peter Jackson, a borough resident who lives on Mill Bay Road outside the city limits said he questions whether the city can charge him tax on a washer and dryer he received at city dock, which he believes to be outside the city limits.

"I ordered that washer and dryer direct from Seattle, paying them in full the price of the items plus shipping."

"A month later," Jackson said, "the items arrived at city dock. I noticed on the bill that the city had charged me city sales tax.

"I question whether the city can do this. I ordered it in Seattle, the city dock is outside the city limits."

Edward Nelson, a city resident, ordered some parts for a range from Sears. Nelson, who posted and received his order through the Fleet Post Office at the Coast Guard Support Center also questions that the city can legally charge the 96 cents tax he was charged on his order.

The ordinance, which states that the three percent city sales tax can be collected on an item if the "sale is made by a business located within the city, the order is received or solicited within the city, or payment is received within the city and delivery is made to a purchaser on or adjacent to the road system within the Kodiak Island Borough."

The ordinance also states that the tax can be collected if "the sale is made by a business located outside of the city as a result of solicitation inside the city" and payment or delivery occur within the city."

Hyde said Friday that the ordinance is being interpreted by the city to mean that items ordered via catalogues received through the Kodiak Post Office are valid for taxation.

"We believe that the catalogues are received "at a point within the city limits," he added.

Crowds pay tribute to Humphrey

ST. PAUL, Minn. (AP) — The powerful with whom Hubert H. Humphrey served so long, and the humble whom he served with such boundless energy, are paying final tribute to the Minnesota senator.

Vice President Walter F. Mondale, a fellow Minnesotan and a Humphrey protege, accompanied the senator's body and the Humphrey family on the return trip to Minnesota for today's funeral.

President Carter, who led the tributes at a memorial service in the U.S. Capitol on Sunday, also flew here for the funeral.

Humphrey's body lay in state in a flag-draped coffin in the rotunda of the Minnesota Capitol while, through the night, the people who elected him five times to the Senate slowly walked by. Many wept silently.

By midmorning more than 20,000 persons had filed past the coffin, including many state employees who [illegible]

Americans."

Former Presidents Gerald R. Ford and Richard M. Nixon, and Lady Bird Johnsen, widow of President Lyndon B. Johnson, were among the mourners who heard Carter say: "We and our families are here today to testify that Hubert Humphrey may well have blessed our country more than any of us."

Carter and Mondale noted that Humphrey had asked that memorials to him be celebrations rather than mourning.

TESTIMONY OF OKEY CHANDLER
BEFORE THE HOUSE AND SENATE
COMMITTEES ON COMMUNITY AND
REGIONAL AFFAIRS REGARDING
THE PROPOSED ANNEXATION BY
CITY OF KODIAK OF THE MILL BAY
ROAD AND MISSION ROAD AREAS

I, Okey Chandler, have been a citizen of Kodiak for 33 years. I have a tremendous personal investment in the democracy of this country, with over five years in the military, and a personal expenditure between $4,000 and $5,000 in public information efforts to keep it alive in Kodiak.

The root of our problem is that the City Council under its Home Rule Charter, has absolute powers. They can and do override referendums. At the focus of today's meeting I say to you emphatically, I resent the forced annexation effort.

The Mission Road and Spruce Cape Road area contains about 350 acres and is the resident place of 2/3 of the people who would be impacted negatively by the annexation effort. Between 75% and 80% of the people live in trailers. In the Island Lake area containing approximately 150 acres, the majority of the people live on the front side of Island Lake and in the vicinity of Naughton's Trailer Court on Mill Bay. The remaining area under consideration within the proposed annex area has very few people and some very large parcels of land with no people at all.

My personal experiences with the City have been very poor. When I lived in the Leite Addition at 1520 Mission Road, the City was engaged in building the sewer line. During the process of installation they broke the old sewer line and I of course asked

the City to hook me up. More than a year later, they completed the installation and during that time I was without sewer. When the installation was made, it didn't work. They told me the trunk line wasn't deep enough and it was necessary to install a line above ground. I asked the City to cover the line to keep it from freezing. The City Manager said "You can cover it yourself as it's on your land". The facility is still there today - above ground.

The history of real estate in the area is of considerable interest. More than thirty lots in the area have been repossessed for default of payments. These lots originally sold for prices ranging from a few hundred dollars to $2,000 or $3,000. Most of the lots beyond Mill Bay to the north are bought on the long-term installment plan. The people who live in this area are happy with what they have and most cannot afford, nor do they need, anything the City has to offer.

From the City's perspective, they continue to claim they are broke and as a result, they are incapable of taking care of the people currently living within the City, let alone those many persons in the proposed annex area. If this annexation becomes a reality, it will shatter the hopes and dreams of a lot of people. Many will lose their land and their homes as a result of tax burdens imposed by services that they neither need, nor can afford to pay for.

In 1969, it was discovered that about one half of the business establishments in the downtown area were not paying any taxes on their land. When the Borough tax assessor sent them a tax bill for 1969, they refused to pay and demanded to be excused

from the tax payment. The Borough Assembly, which at that time was dominated by City-oriented weighted voting, accommodated their request. This should be ample evidence that big business and the Chamber of Commerce completely dominated the local governments at the expense of the working people, even to the point that they have to pay City sales tax on their rent.

O. Key Chandler
2-10-79

Okey Chandler
P.O. Box 1635
Kodiak, Alaska 99615

P.S. It is an interesting fact that there are over 3,500 acres of land in the City of Kodiak. Included in this land are hundreds of prime building lots, which to date have nothing constructed on them. So why do we need annexation?

Rosalie Weaker 11615
10 Feb 1979

Dear Sirs:

Due to a prior commitment, my husband and I are unable to attend this meeting but want to go on record as being against this proposed annexation, Lots 13 & 15, Survey 3103 on the back side of Island Lake.

The city seems to conveniently forget why we have a water line in this area and more than once have been reminded at public meetings. I testified at the Boundary Commission meeting last fall that during the time Pete Dewean was mayor, the city did some work at the reservoir that put blue clay into the lake system. This blue clay was plugging filters on washers, and furnaces and was only a matter of time until these appliances would be ruined beyond repair. In order to avoid a law suit, a water line was run out here by the city. We were informed we would be charged a higher rate, the fees to be used for the maintenance and repair of the line.

When Jack Isadore was city manager, he called a meeting of the Island Lake and Shahafka Acres residents and tried to stampede us into asking for annexation. This meeting was held at East

Elementary school. He pointed out the inadequacies of the water line, the need for sewers etc. The final topper however was the statement that the city could not offer anything in the way of utilities at that time - I can't remember the exact words, but that was the gist of it.

We don't feel that the city can offer us ~~anything~~ any more at this time than they could then and therefore are against this proposed action.

Thank you very much

Ellen Ross (Ellen Ross)

William Ross (William W. Ross)

Carol Lechner
Public Testimony

I keep hearing that the democratic process has not been properly executed because the area in question for annexation did not get to vote on whether they wanted or did not want annexation. What about the person who wants annexation because his neighbor's sewer is running in his front yard and the same neighbor does not want annexation because he lives at the top of the hill? Or, the people that want annexation because Island Lake can no longer be used as a true recreational site because of polution? What are these victims' rights?

The vote on service districts narrowly passed, the vote on non-area wide powers failed, this means several thing to me--either the people already have the services provided by the City, or they want to continue existing with the problems they have, or they do not want the Borough to provide the services, or they feel it will cost them too much additional money. The problems will not go away and it will cost the people no matter who provides these services.

Who is better able to provide these services? The City presently has full services, sure they have some problems but nobody is perfect. I would venture to say every city in the U.S. has their problems. The City has vested many dollars in equipment and manpower, in my opinion, to have good, well trained personnel in these departments. People that know and understand the day to day routine of working and running these departments. In my opinion, it is beyond belief that a municipality who has never been in the business of public works, streets, fire or police could have the same knowledge--in 5 years time--to efficiently and effectively operate these services more economically then an established municipality with 39 years experience.

Services are costly enough without setting up two duplicate, full-service municipalities next door to one another. The area in question does not have the population or the bonding capacity based on their assessed valuation to warrent a separate full-service municipality. I feel the legislature would be doing a disservice to the whole area to create a situation such as that.

As an example, according to a breakdown by the City Finance Department, the City resident pays out of real property tax, .96 mills for fire services; whereas, the fire service district pays 2.23 mills for this service.

I believe further information on financing has been furnished to you in your information packet.

The City has, I feel, shown good faith in attempting to pre plan should annexation take place and has also addressed the concerns of the residents of the area. More information on this has also been provided to you.

It is questionable, according to State law, whether a new service district can legally be established if the new service can be provided by annexation to a City.

Thank you.

TESTIMONY OF BETTY WALLIN,
MAYOR OF THE KODIAK ISLAND BOROUGH
BEFORE THE HOUSE AND SENATE COMMITTEES ON
COMMUNITY AND REGIONAL AFFAIRS
REGARDING THE PROPOSED ANNEXATION
BY THE CITY OF KODIAK OF
THE MILL BAY ROAD & MISSION ROAD AREAS

I am Betty Wallin, Mayor of the Kodiak Island Borough. I'd like to welcome you to Kodiak and take this opportunity to thank you for bringing your hearing here so that the people affected may speak to you directly.

The citizens living in the annexation area have very specific grievances against the City and reasons for believing that annexation would be contrary to their interests. As mayor for all the citizens of the Borough, inside and outside the City, my perspective on annexation is perhaps more broadly based. I firmly believe that annexation should not be allowed to proceed for two reason: first, it would constitute a travesty of our democratic processes; second, it would sound the death knell for unification.

It is possible that you will hear today from a few individuals claiming to support annexation. But virtually all who have contacted me -- and there have been many -- have expressed strong opposition to this proposal. They have argued over and over again against the unfairness of having this decision made without the benefit of a vote of the people concerned. (We complain about the federal government controlling our lands without understanding our needs and heeding our voice. How different will it be if the State, through its Local Boundary Commission, decides the fate of the residents of the annexation territory without appreciation for their needs and knowledge of how they might vote?)

I have had no answer for the citizens who approached me with their concern. I have found myself in complete accord with their views. Were this a case where residents were clearly in support of annexation, or apathetic in their attitude, the Local Boundary Commission's omnipotent role would be more palatable. But, obviously, this is not such a case. We ask the help of you, our elected representatives in bringing democracy to the annexation process.

I have, as indicated, a second problem with this annexation. It derives from an aspiration I hold for Kodiak, a hope for its future which would avoid problems such as this in the days and years to come. This hope is for unification.

We held an election on unification last October, in the midst of all this controversy. The proposition was defeated. But the tallies on either side were not terribly far apart. Given a little more time to explain to the people what unification could do for Kodiak Island, I am convinced the outcome would be different. I am equally convinced that unification is the only sensible, constructive way to go for this City and this Borough. And I am just as firmly convinced that it will not come to pass if this annexation takes place.

For the sake of democracy, for the sake of all those people whose interests would be adversely affected, and for the hope for the future -- unification -- I ask that Committee members recommend passage of Senator Mulcahy's and Representative Zharoff's respective resolutions.

Thank you for your consideration.

JUNE 1977

The preparation of this report was financed in part by funds from the Alaska Coastal Management Program and the Office of Coastal Zone Management, National Oceanic and Atmospheric Administration, U. S. Department of Commerce, administered by the Division of Community Planning, Alaska Department of Community and Regional Affairs

P R E F A C E

During the last five years the United States has engaged in an intensive search for new oil and natural gas sources. Spurred by the Arab oil embargo and the resultant national shortage of oil, the United States heightened its efforts to reduce dependence on foreign oil through exploration and development of resources within this country. Inevitably the quest for new oil sources led to Alaska.

Oil exploration and development are not new to Alaska, however. Over the past twenty years the oil industry has explored much of Alaska in a search for new deposits. The first Alaskan deposits of developable oil were found in the Cook Inlet Basin. Offshore platforms were located in Cook Inlet in the early 1960's. At the same time, rigs were drilling in the nearby Swanson River drainage. Refining operations were set up near Kenai to process some of the Cook Inlet oil and are still producing petroleum products.

While the Cook Inlet fields were being developed, the oil industry turned its exploration attention to other parts of Alaska. In the late 1960's large quantities of oil were discovered on the North Slope. The crude oil found there was low grade and heavily laden with sulfur, but quantities were so great that extraordinary methods were sought to bring the oil to market. The Trans-Alaska Pipeline resulted.

Now that the development stage of oil production is underway on the North Slope, the oil industry has directed its exploratory energies toward what it considers the next area of great potential for oil production - the Alaskan Outer Continental Shelf (OCS). Government and industry experts have estimated that one-fifth of the nation's undiscovered recoverable oil may lie under Alaska's OCS.

Preparation for Gulf of Alaska oil development has not happened over night. The possibilities of oil deposits in the Gulf of Alaska have been studied by private industry and the state and federal governments for over a decade. Until recently, however, there has been little effort to develop oil production in this area due to adverse cost and technical considerations.

The present need for national oil sources coupled with recent technological advances in the field of offshore production have prompted the federal government and the oil industry to agree that oil production in this area is now feasible. Firm evidence that development of the oil resources in the Gulf of Alaska will occur was evidenced by a major oil lease sale held April 13, 1976, in which 409,057 acres in the Northern Gulf of Alaska were leased to the oil industry. Offshore exploratory drilling of this land is expected to begin in the summer of 1977.

A new lease sale of up to 3.2 million acres of land located on the Kodiak Shelf, east of Kodiak Island, has been tentatively scheduled for November, 1977. The oil industry originally nominated 12.8 million acres in this area as having strong potential for developable oil deposits, and it is expected that initial exploration for oil will begin shortly following the lease sale. See Map 2 on page 33.

Offshore oil development on the Kodiak Shelf will generate substantial onshore development. During the initial exploration stage the onshore facilities will be relatively minor since the oil companies will avoid substantial capital expenditures until the existence of economically viable oil deposits is verified. However, once oil is found development of the oil fields will occur. Consequently, the onshore facilities will swell in size and their activities will intensify to the point that their presence will severely impact the surrounding area and communities. The impacts will involve both air and marine transportation activity; population increases; demands on housing, community facilities and infrastructural services as well as economic impacts and changes in the basic life style of the surrounding residents. Because of Kodiak Island's proximity to this area, it is inevitable that the Kodiak area will thus be affected.

The purpose of this study is to help determine what impact oil exploration will have on Kodiak and to provide recommendations designed to help plan for and mitigate adverse conditions that such impact might create.

For years Kodiak has been a relatively self-sufficient community. As the largest city on the island it has functioned as a regional economic and cultural center as well as a base for the fishing industry. Both the City and Island of Kodiak have experienced a steady trend of growth and anticipate a continuation of growth in the foreseeable future. Now, with the advent of oil exploration and possible production, the Kodiak area is faced with the possibility of major changes. The importance of planning for these changes is emphasized by the following quote from the Draft EIS for the OCS Lease Sale in the northern Gulf of Alaska.

> "As the development of offshore oil and gas proceeds from the initial exploratory phase through drilling, production, and transport, substantial onshore activity will be generated, from which both positive and negative impacts can be expected.
>
> "The degree to which on balance these effects are positive is related to the ability of public officals to plan for and direct the onshore development that is integral to OCS development and to

plan for the growth that onshore facilities generate throughout the region. OCS operations will result in massive development in areas where there is little or no experience in land use planning or regulatory activities. Unless this capability is quickly developed in such areas, the result could be permanent degradation of the environment and unnecessary disruption of traditional values and life styles for those living there now." (CEQ 1974)

The process of preparing the study was divided into four Phases. Phase one of the study process was a compilation of base line data assessing the current level of community services, utilities, facilities and housing. The end result is a summary profile of the community and a generalized projection of the growth trends that have been established and that could be expected to continue regardless of OCS development.

Phase two involved review and projections of expected oil industry activity in the Kodiak area. Many external factors will affect the level of this activity: the amount of recoverable oil discovered, the degree of oil industry reliance upon Kodiak as a transportation and staging area for OCS development, and Kodiak's capability to provide services and facilities necessary for oil development.

The first of these factors is a large unknown greatly affecting employment, land needs, transportation and utility requirements, and community facilities. Consequently, this report examines these associated impacts for each of three levels of oil discovery and production. These levels correspond to the U.S.G.S. high, low, and middle estimates of recoverable oil reserves.

Phase three related information in the community inventory to the various levels of expected oil industry activity. It identifies potential problems in the availability of community facilities and utilities, housing, and other vital community services. The report then reviews available means of solving those problems. It indicates alternative policies and programs for fulfilling needs generated by OCS development and, at the same time, minimize negative impacts on Kodiak. The City and Borough of Kodiak, various village governments, state and federal governments, and private industy should consider these alternatives.

Phase four of the study process considered the final outcome of OCS development in terms of impacts. In essence, the study develops through phases one, two and three, a forecast of oil activity as it will relate to the community existing today. Phase four describes the long-term impacts that will result from OCS development if it occurs.

For the purpose of publication, the study has been organized into two volumes. Volume I begins with the summary profile that resulted from the Community Inventory. It also contains phases two, three and four of the study profile. Volume II contains the complete Community Inventory developed in phase one of the study process. It is a useful reference document and should be updated frequently.

The majority of the work within this report is based on data compiled prior to the instigation of this study. The limited time frame and budget of this study have precluded research into new areas and development of totally original data. Even so, gathering and condensing existing information from the many sources available into this document has been a worthwhile effort. It provides a picture of Kodiak as it now exists and a scenario for the development of the Outer Continental Shelf in Kodiak.

COMMUNITY PROFILE

Through the process of preparing this study, a large body of information has been assembled that is descriptive of the social and economic characteristics of the Kodiak Island Borough. That information comprises Volume II of the OCS Impact Study for Kodiak.

The study has shown us that Kodiak is a very unique and vital community, both within the metropolitan area and throughout the outlying portions of the islands. The economy in Kodiak is strong, and the future holds promise of continued prosperity and economic independence. Unlike many other isolated communities in Alaska, Kodiak's size and economic importance has resulted in the provision of the full range of community facilities, utilities, and services that are necessary for a growing self-sufficient community. Table 1 shows who provides the basic public services available in Kodiak.

The study has also shown us that Kodiak has a number of problems that may negatively affect the community's quality of life and its ability to to maintain its growth pattern in the future. These problems, if not addressed promptly, will be compounded with the advent of OCS oil activity.

The following profile briefly summarizes the information presented in Volume II which describes the community as it exists today and gives an indication of how its strengths and weaknesses will be affected by or will affect future development.

ECONOMIC OUTLOOK

With an estimated current population of 9,620 people, Kodiak is among the five largest population centers in Alaska. Currently the Kodiak Island Borough is growing at a rate of approximately three percent per year. This is a healthy growth rate and one that demonstrates the economic vitality of Kodiak. The community has the potential to continue growing as long as the basic industries continue to maintain their strength. In fact, based on historical trends and the current condition of the economy, it is estimated that the population of Kodiak will double within the next twenty years. It is especially important to note that these estimates are made without consideration of any possible OCS development impact on the population. This means that Kodiak does not need the economic boom that OCS activity would bring. The community is healthy; the population and economic base are growing; and the prospects for the future are bright.

COMMUNITY FACILITIES
Kodiak City Metropolitan Area

Prepared by Simpson Usher Jones Inc. for Kodiak Island Borough

The preparation of this map was financed in part by funds from the Alaska Coastal Management Program and the Office of Coastal Zone Management, National Oceanic and Atmospheric Administration, U. S. Department of Commerce, all administered by the Division of Community Planning, Alaska Department of Community and Regional Affairs.

EXISTING FACTORS AFFECTING FUTURE TRENDS

There are several important factors that could affect the ability of Kodiak to maintain its growth rates and realize its potentials. The factors described below could have a stifling effect on the economy and could also adversely affect the living environment. Each of them is individually significant and should be addressed regardless of OCS development.

Crime

Criminal activity is normally one of the first and most serious impacts experienced as a result of a "boom" economy. Recent history in Fairbanks, Valdez and a variety of smaller communities along the Trans-Alaska Pipeline route have borne this out. In Kodiak the industrialization and rapid economic growth anticipated to accompany OCS development is already being preceded by an increase in crime. Between 1975 and 1976 total criminal activity was up and the more serious and violent crimes (Part I Offenses) increased.

This situation presents a serious threat to the quality of life in Kodiak. Immediate action by local, state and federal governments is necessary in order to prepare for and combat this problem.

The potential for further rises in criminal activity is increased due to the completion of the Trans-Alaska Pipeline in the near future. As economic activity and population growth decrease in towns and cities along the pipeline, the people who found them easy places to make an illicit living will look for new places to operate. They perceive that Kodiak offers the opportunities they seek. This, along with changes in the internal characteristics of the community, could allow crime to rival fishing as Kodiak's largest industry.

It is incumbent on the community to take action that will create an atmosphere that discourages the criminal, both resident and nonresident.

Housing

Another serious problem facing Kodiak today is a housing shortage. As indicated above, the population is currently growing at approximately three percent per year. However, over the last five years housing starts, including multifamily units, have averaged less than three percent per year. In addition, over 40 percent of the housing units in Kodiak are in fair to poor condition. Analysis of these statistics indicates that the housing market is not keeping pace with population growth. There is no surplus housing stock on the market from which a prospective home buyer or renter can choose, thus costs are high. This is evident by the small number of dwelling units for sale or for rent in Kodiak at any given time. In addition new homes built in Kodiak are normally sold and/or occupied very quickly. For example, single family homes under construction are generally sold before they are fifty percent complete.

An already inadequate housing supply coupled with an ever present desire by residents to upgrade their housing (a practice most generally achieved by moving into newer homes) creates a discouraging outlook for supplying the housing needs for Kodiak's normal population growth. Fulfilling housing needs resulting from OCS development would be impossible at the current level of housing starts.

There are several reasons why the growth in the housing market has been slow in Kodiak. First, areas available for development which have a full range of utilities are extremely limited. The areas currently served by sewer and water are developed to near capacity, and high utility installation costs discourage development of new areas.

Land availability is another problem in the Kodiak city area. Much of the land surrounding the city is owned by the government and private land available for residential development is limited both in terms of quantity and quality. Much of the available property is either too steep or too boggy to attract development.

The cost of housing is another factor which affects the housing stock in Kodiak. The average new three-bedroom house in Kodiak ranges between $60,000 and $80,000. In 1974 the average wage in Kodiak was just over $1,000 per month. Applying an average increase in salaries of twelve percent per year, this same salary would be about $1,260 per month in 1976. The purchase of a $70,000 home, however, would require a monthly mortgage payment of approximately $650 per month, much too high to be accommodated by the average wage. Therefore, for the average wage earner to purchase the average home in Kodiak, it would require that at least two persons within that household be employed. It may be concluded that housing costs are escalating faster than wages, thus creating a shortage of buyers for the Kodiak housing market. This in turn discourages speculative housing starts and drives up the value of existing homes and the cost of custom-built houses.

Commercial And Industrial Land Use

Another problem which will affect the future growth of Kodiak is a shortage of commercial and industrial property. New businesses in Kodiak have a difficult time locating on properly zoned land. This results in higher land costs thus higher consumer prices and finally a higher cost of living. In addition, a less efficient growth pattern is created within the community when businesses are forced to locate on any available commercial or unzoned property they can find rather than in places that are logical and well-suited for that particular type of business. As a point in fact, commercial services are now beginning to appear in places scattered throughout the community. Each time this happens, the potential for conflicts among land uses is increased. This can compound the shortage of prime residential land as well as inhibit the planning and evolution of efficient transportation systems.

Industrial land is also needed to accommodate growth in the fishing industry, as well as to support the nonbasic industrial activities

within the community which are a direct result of basic industry growth. There are no industrial parks in Kodiak, either planned or unplanned. Warehouse space is in short supply, and the potential for new space is limited.

These land use considerations must be addressed by the community in order to maintain the growth patterns and economic development rates that have been established. If they are ignored, they will become more serious and will have an accelerating negative impact on the economic system in Kodiak. In addressing the problems, careful planning must be considered in adopting fiscal policies which will encourage the development of additional moderately priced housing, and the provision of more commercial and industrial areas in proper locations. Considerations such as access, effect on surrounding land uses, neighborhood character, and future land use demands must be taken into account in order to effectively deal with these concerns without creating new problems.

Social Services

In addition to these land use and economic considerations affecting the future of Kodiak, social factors affecting the quality of life in the community should also be monitored. While these factors may not directly affect the employment rates, housing costs and other developmental characteristics of the community, they do have a direct effect on the living environment in terms of convenience, esthetics and the social well-being of the residents.

Social services are particularly important to a well-balanced community. While there are many such services available in Kodiak, their capabilities to cope with some of the more serious problems is currently impaired by a lack of funds and personnel support on the part of the governmental agencies involved. This is especially true of the health and social services provided by the State of Alaska in spite of recent increases in personnel and budgets. For the most part, those agencies are still underfunded and undermanned. While programs have been established to handle many serious problems such as mental health, alcoholism and public assistance, they can actually accommodate only a relatively small part of the persons currently in need of assistance.

At present there is no indication that the demand for these services will accelerate over and above normal population growth rates. However, if in the near future Kodiak is faced with an extraordinary increase in population due to OCS development, the problems already associated with the social service programs will be further compounded by a larger demand for services and the probability of more complex problems to solve. The community and the State should address these inadequate services as an immediate priority. The level of services offered must be upgraded to adequately meet the current needs of the community and plans should also be made to prepare for the impact that may occur with the advent of a population boom due to OCS development. If not resolved, the inadequacies in the social services could have one of the most serious and most deleterious OCS related impacts on the Kodiak community.

Recreation Facilities

Another community component that is currently below standard is adequate recreational facilities. Kodiak now falls short of meeting the community demand for neighborhood parks, indoor and outdoor winter recreational facilities, and weekend and vacation facilities around the island. Through provision of these facilities, Kodiak can mitigate many of the social problems which plague many other growing communities. The potential for rapid population growth due to OCS development makes the need for parks and recreational facilities even more acute.

OUTLYING VILLAGES

The various villages located around Kodiak Island have many divergent characteristics while at the same time having a number of common concerns and features. Their populations range in size from over 300 to under 100. Their locational characteristics are similar in that each is located adjacent to salt water and each is near rivers or streams that offer fresh water sources.

The degree or level of development varies between the villages. Port Lions is the most highly developed with a relatively wide range of community facilities and services including, but not limited to, lighted and maintained city streets, local police protection, modern community-wide telephone service and a comparatively high level of commercial services. The other villages have far less in the way of community facilities and government services. None of the others have maintained streets, community telephone service, or local police. Most have some degree of commercial services and all have schools operated by the Kodiak Island Borough School District. The level of community water and sewer service varies from village to village.

The relationship of the villages to OCS development also varies. Some have the potential of a high level of direct impact. Old Harbor has already been approached by oil industry personnel as a possible site of an onshore service base. The village corporation sought and recieved assistance from the Koniag Regional Native Corporation in dealing with the oil industry; as yet no facilities are definitely planned for Old Harbor.

Ouzinkie and Port Lions also have potential for direct OCS impacts; but because of their location, they are less likely candidates for service base facilities than is Old Harbor. Like Old Harbor, the rest of the village corporations on Kodiak Island will deal with the oil industry in cooperation with Koniag, Incorporated.

The probability of indirect impacts from OCS development is high in all of the villages. All offer scenic surroundings, hunting and fishing in relative abundance. This will draw tourists and sportsmen in their off-time who seek seclusion, as well as opportunities for trophies and food.

Preparation for these impacts is imperative. The villages can gain from the impacts if that is their desire. However, the implications in terms of economic change, alteration of life styles and physical modification of the villages are extreme. With the notable exception of Port Lions, none of the villages are at all prepared for what could ultimately be the largest influx of people in their histories.

CONCLUSION

The factors described above are significant and deserve special attention. The assets of the Kodiak Island Borough and its communities are uniquely valuable and should be protected and enhanced. The problems faced by the communities are not insoluble; they are the types of problems that are normally to be expected in a time of rapid growth. They are also the type that can be dealt with through community awareness, local action and proper planning and implementation.

OCS oil development has the potential for either strengthening already healthy communities or creating problems that could result in economic and social disruption for many years to come. The result of OCS impact will depend upon the level of oil industry activity which will occur in Kodiak and the methods that are used in planning for and coping with the impact.

A number of trends can be predicted for Kodiak regardless of OCS development. First, Kodiak will continue to grow. Along with that growth, the cost of living will undoubtedly rise moderately. Housing costs will increase until adequate, buildable land is available to accommodate a growing housing market. The residents of Kodiak can expect their problems with respect to crime, housing, recreational and open space facilities and social services to continue to worsen unless the government steps up its efforts to deal with these issues. Inherent in such an effort, would be the possibility of some increase in the cost of government and a resultant rise in taxes. This situation is one that is common to growing communities.

There are a number of ways in which these concerns can be addressed through proper planning and management tools. Regardless of whether OCS development occurs, these should be addressed as part of the upcoming Kodiak comprehensive plan.

The components of the community that would be most affected by an economic and population boom resulting from OCS development would be those problems which are already most serious. Without exception, the problems described above would become worse at an accelerated rate. Also, increased demands for transportation facilities would place an additional demand on the existing facilities, both internal and external.

In order to determine the proper methods of dealing with the impacts that OCS development might bring, it will be necessary to determine the level of oil industry impact, the resultant population increases to be

expected, and the demands that that economic and population growth will place on the basic community infrastructure. Volume I of this report assesses the demand that the oil industry will place on Kodiak. This assessment is used to determine the types of policy alternatives that are available to the community internally and what policies should be endorsed and encouraged in the state and federal governments in order to protect Kodiak's quality of living and economic viability in the forthcoming years.

DEVELOPMENT SCENARIO

ASSUMPTIONS: MAGNITUDE OF RESERVES

Three development scenarios, representing the U.S.G.S. high, low, and middle level of recoverable oil reserves on the Kodiak Shelf are examined in Table 2.

Table 2: Estimated Oil and Gas Reserves

	Oil Reserves	Gas Reserves
Case 1	250 million barrels	0.125 x $10^{12} ft^3$
Case 2	1200 million barrels	0.5 x $10^{12} ft^3$
Case 3	2100 million barrels	0.95 x $10^{12} ft^3$

Source: U.S.G.S. estimates in draft EIS-Western Gulf.

In Case 1, development of oil discoveries of this size would be uneconomic. Explorations are curtailed early on, and no development takes place. Case 3 represents the maximum estimate of recoverable oil and would involve a reasonable amount of development, including an offshore oil pipeline and land terminal. Case 2 is a mid-point between the two other estimates. Two methods of developing this volume of reserves are evaluated here: Case 2a using pipelines and an onshore terminal, and Case 2b using S.B.M.S., or offshore storage requiring no pipeline to shore. In each case, gas reserves are too low to warrant development. Hence no scenario involves gas pipelines or a L.N.G. (liquified natural gas) plant.

ESTIMATED TIMETABLE OF DEVELOPMENT

Table 3 indicates what offshore development is necessary to recover the range of reserves estimated above.

Table 3: Offshore Development Plans

	# Oilfields Developed	# Oil Platforms	# Gas Platforms	Peak Oil Output	Peak Gas Output
Case 1	---	---	---	---	---
Case 2	3	3	---	250,000 bpd*	---
Case 3	4	5	---	450 bpd	---

* bpd = barrels per day

Source: Niall Trimble, Department of Community and Regional Affairs, Division of Community Planning, State of Alaska, 1977.

In Case 1, results from drilling are disappointing and so exploration work ceases after four years. No further offshore work is carried out.

In Cases 2 and 3, production follows exploratory drilling. Platforms are installed offshore and, in Cases 2a and 3, oil pipelines are laid to an offshore storage terminal, presumably on Kodiak Island. These pipelines are 140 and 300 miles in length, respectively, and necessitate the lay-barge and bury-barge activity.

Probable Timetable of Development

Assumptions used in computing a timetable for development include:

1. Sale of federal leases will be in January, 1989.
2. Upon discovery of a developable oilfield, construction of a permanent drilling platform capable of delivering oil will take five years.
3. Oilfield discovery dates, platform delivery dates, and construction timetable are as outlined in Table 4.

Oil output for each year is estimated in Table 5. Oil output levels are lower than those postulated for other parts of the Gulf of Alaska, as one may expect. However, they are still considerable in terms of American offshore oil production. Case 2 and Case 3 peak production, occurring in 1993, is equivalent to 25.9% and 46.9%, respectively, of the total 1974 U.S. offshore production.

Table 4: Estimated Timetable of Development

	Case 1	Case 2	Case 3

OFFSHORE DEVELOPMENT PLAN

Offshore Activity

Given the above assumptions regarding recoverable reserves, necessary development, and probably timetable of events, one can estimate the level of offshore activity over time. This information is presented in Table 6 below. Section A shows activity during the exploration phase; Section B, platform installation dates for those oilfields developed in Cases 2 and 3. In Cases 2a and 3, oil pipelines of 140 and 200 miles in length, respectively, will be laid offshore. Sections C and D give the lay-barge and bury-barge activity necessary to these operations; Section E, the number of supply boats required for each level of activity.

Offshore Employment

Total employment levels offshore on rigs, platforms, barges, and supply boats is set out in Table 7, while Table 8 breaks down this total by activity. Oil companies are expected to recruit personnel for this work exclusively from the lower 48. As such, the impact of these jobs on the Kodiak area should be fairly minimal. If offshore workers did move to Alaska, it would probably be to the Anchorage area.

ONSHORE DEVELOPMENT PLAN

Offshore oil production will require onshore facilities, notably service bases with supply boat berths and, in Cases 2a and 3, pipelines and oil terminals. The size of the find determines the number of service bases and the size of the storage facilities. Choice of method in transporting the oil, i.e. either by pipeline as in 2a or by S.B.M. offshore as in 2b, also makes a big difference in onshore facility needs. Facility construction and its associated land, employment, and other needs are discussed below.

Facility Construction

Given the January 1980 lease sale, the oil industry plans on construction onshore facilities according to the schedule outlined in Table 9.

Table 9: Onshore Construction Schedule

Case 1	Nil
Case 2a	1 base (2 berths) built 1980-1981 1 base (3 berths) built 1982-1983 1 oil terminal, capacity 250,000 bpd, built 1985-1988
Case 2b	1 base (2 berths) built 1980-1981
Case 3	1 base (2 berths) built 1980-1981 2 bases (3-4 berths) built 1981-1982; 1982-1983 1 oil terminal, capacity 450,000 bpd, built 1984-1987

Source: Simpson Usher Jones, 1977.

Service bases, with berths for supply boats, are essential to OCS development from the exploration phase through the production phase. Onshore oil storage and marine terminals are also required during the production phase of Cases 2a and 3.

The number of working supply boats determines the demand for onshore berths, and hence the necessary number of service bases. This demand is set out in Table 10.

The pattern of berth demand parallels that of the Northern Gulf: it increases rapidly over 6 or 7 years to a peak. This peak lasts but one year; then requirements fall steadily to around 2 to 3 berths -- apparently the long term demand. Communities such as Kodiak should be wary of accepting supply-boat bases if this development damages other local industries. After the first ten years or so, activity and hence employment drop to a fairly low level.

Table 10: Demand for Supply Boat Berths

Year	Case 1	Case 2a	Case 2b	Case 3
1980	1	1	1	1
1981	1	1	1	2
1982	1	2	2	2
1983	1	2	2	3
1984	0	4	1	6
1985	0	4	1	8
1986	0	5	2	9
1987	0	5	2	7
1988	0	2	2	3
1989	0	2	2	4
1990	0	2	2	3
1991	0	2	2	3
1992	0	2	2	3

Source: Niall Trimble, Dept. of Community and Regional Affairs, Division of Community Planning, State of Alaska, 1977.

In addition to supply boat berths, a service base includes other basic and supplementary facilities. These are listed below.

Basic Facilities

Berths
Staging Areas
Floodlighting
Warehousing
Open Storage
Fueling Facilities
Water (potable and drilling)
Mud and Cement Supplying Facilities
Mobile Equipment
Agency Facilities (ship chartering, freight forwarding, customs, etc.)
Office Accommodation
Communications
Refuse Removal Facilities

Spare service base facilities are now non-existent in the parts around the Western Gulf. As such, additional facilities will be needed from the start of exploration. All levels of offshore activity except Case 1 will require one small base of two berths from the beginning of exploration. No further bases are needed in Case 2b. However, Cases 2a and 3 both require one more medium base by 1984, and Case 3 would need another medium sized service facility the following year.

Land Acquisition

Land is needed for the above additional service bases and oil storage terminals noted above. In addition, land may be required near a commercial airport.

Land needs for marine service bases have been well defined through experience in the North Sea offshore oil fields. The State Department of Community and Regional Affairs recently published the study "Marine Service Bases for Offshore Oil Development" (Tom Smyth; Alaska Consultants, July, 1976). In this study, Smyth divided land requirements into two categories: 1) land immediately adjacent to the port facilities; and 2) backup land for ancillary uses. The land adjacent to the port is needed for the quay apron, silos, transportation corridors, tank storage, and warehousing. The backup lands are necessary for open storage, office facilities and other supplementary facilities. The space required to accommodate these facilities during the exploration phase of development at a North Sea service base location is shown in Table 11.

Table 11: Land Use, Space Per Offshore Rig, and Space Per Berth*
Selected Service Base Servicing Exploration Phase
Scottish Sector, North Sea

	Area	Space per Rig	Space per Berth	Space per Berth (2)
Recurring Requirements:				
Quay apron & silos	1.50	.38	.50	.50*
Warehousing	1.25	.31	.42	.62
Open storage	11.50	2.87	3.83	5.75
Offices	.50	.12	.17	.25
Non-Recurring Requirements:				
Workshops	.00	.00	.00	.00
Tank Storage	.25	.06	.08	.12
Other	.00	.00	.00	.00
TOTAL	15.00	3.75	5.00	7.25

* Space calculated in acreage
(1) Assuming two (2) berths
(2) Assuming the apron behind the third berth is unused.

Source: Alaska Consultants, Inc.

It is assumed that the North Sea average of 7.25 acres of land per berth during the exploration period will apply to the Western Gulf of Alaska. As drilling progresses at a more rapid rate during development, Smyth estimates that each berth would require approximately 8 acres at the service base.(1) Using this figure, additional land needs for service bases are outlined in Table 12.

Table 12: Land Requirements - Service Bases

Case 1	Nil
Case 2a	40 acres - (16 acres in 1979, +24 acres in 1982)
Case 2b	16 acres in 1979
Case 3	72 Acres (16 acres in 1979, +24 in 1981, +32 in 1982)

Source: Niall Trimble, Dept. of Community and Regional Affairs, Division of Community Planning, State of Alaska, 1977.

Land needs for crude oil storage and terminal depends upon the level of production. Case 2a requires an oil terminal capacity of 250,000 bpd; Case 3, a capacity of 450,000 bpd. According to the previously referenced draft Crude Oil Storage and Marine Terminals profile, the smaller terminal would require about 100 acres; the larger about 150 acres. However, if the only land available is hilly or unstable, as is common in Kodiak, storage capacity could be reduced some 60 percent. Consequently, a larger site may be necessary: some 250 acres in Case 2a, and 375 acres in Case 3.

Additional land may also be required near a commercial airport, as indicated in Table 13. According to a forecast by the Gulf of Alaska Operators' Committee, approximately half as much land is required at the airport as is required at the marine service base. Using this assumption, the following additional land would be needed near the Kodiak airport.

Table 13: Additional Land Requirements

Airport

Case 1	Nil
Case 2a	20 acres (8 in 1979 + 12 in 1982)
Case 2b	8 acres in 1979
Case 3	36 acres (8 in 1979; +12 in 1981; +32 in 1982)

Oil Terminals

	Suitable Ground	Hilly or Unstable Ground
Case 1	Nil	---
Case 2a	100 acres	250 acres
Case 2b	Nil	---
Case 3	150 acres	375 acres

Source: Simpson Usher Jones, Inc. (Sontag), 1977.

Total estimated land requirements for each level of development are summarized in Table 14.

Table 14: Total Land Requirements

	Case 1	Case 2a	Case 2b	Case 3
Service Bases	---	40 ac.	16 ac.	72 ac.
Airport	---	20	8	36
Oil Terminals	---	100-250	---	150-375
Total Acreage Needed		160-310	24	258-513

Source: Simpson Usher Jones, Inc. (Sontag), 1977.

Onshore Employment

Labor needs for construction, administration, and facility operations are examined here. These are then combined with offshore employment needs to get total labor requirements. Finally, using the percentage of total jobs occurring in the coastal zone, employment levels in that area are set out by year. The labor force required to build the oil terminal is outlined in Table 15.

Table 15: Oil Terminal Labor Force

	Year 1*	Year 2	Year 3	Year 4
Case 2a - 250,000 bpd	150	600	1,200	300
Case 3 - 450,000 bpd	200	1,000	1,900	600

* As mentioned in the previous section, Year 1 is 1985 in Case 2a and 1986 in Case 3.

Source: Niall Trimble, Dept. of Community and Regional Affairs, Division of Community Planning, State of Alaska, 1977.

Terminal operations employment is: Case 2a, 150 personnel; Case 3, 250 personnel.

These figures enable us to calculate onshore employment by activity. Table 16 below gives onshore employment figures for administration jobs; rig, platform, service base, and terminal associated jobs; and construction work for each case.

Table 16: Onshore Employment by Activity

SUMMARY OF EMPLOYMENT

The pattern of employment growth and decline is similar to that shown for the Northern Gulf licenses in many respects:

1. The different scenarios vary considerably in expected levels of employment. In 1986, the number of Western Gulf jobs could be 0, 1,900, 700, or 4,100 depending on whether Cases 1, 2a, 2b, or 3 came about. Obviously an accurate forecast of employment in this area is still impossible.

2. Employment rises rapidly to a peak, generally around 1986-1987, and then falls sharply. However, the number of jobs does not fluctuate so rapidly in Case 2b.

3. Choice of method of transportation, pipeline or S.B.M., once again makes a critical difference to the impact on the economy. In Case 2a the job count reaches almost 2,800 in 1987, when the count for Case 2b, the S.B.M. mode, is only 1,000 jobs.

Despite the similarities between the Northern and Western Gulf, there are two distict differences in employment:

1. The general level of activity is much smaller. The highest employment figure recorded for the top scenario, Case 3, is just over 4,000. In the Northern Gulf, equivalent figures for the two top scenarios were 6,800 and 10,600. This is partly because oil reserves are probably smaller; primarily, though, gas reserves are so limited in the waters around Kodiak Island that there is virtually no possibility of a gas pipeline or L.N.G. plant.

2. The absence of gas developments cushions the severe decline from the peak level of employment found in the Northern Gulf. There, employment by 1990 was generally around 40 percent of peak. In comparison, the proportions in the West are 43.3 percent and 51.8 percent of peak for Cases 2b and 3, respectively. Clearly the reduced level of construction will mean that employee reductions will not be quite so dramatic as they might in the Northern Gulf experience.

Employment in the Coastal Zone

Separate calculations for employment in the coastal zone have also been performed for the Western Gulf. That portion of onshore employment which occurs in the coastal zone is outlined in Table 19.

Relating the figures in Table 19 to Table 16, Onshore Employment by Activity, gives the total coastal zone employment. Results are summarized in Table 20 and Table 21.

Table 19: Onshore Employment in Coastal Zone

Activity	% of Jobs in Coastal Zone
Administration	0%
Base Operations	100%
Rig-Associated	50%
Platform-Associated	50%
Terminal Operations	100%
Construction	100%

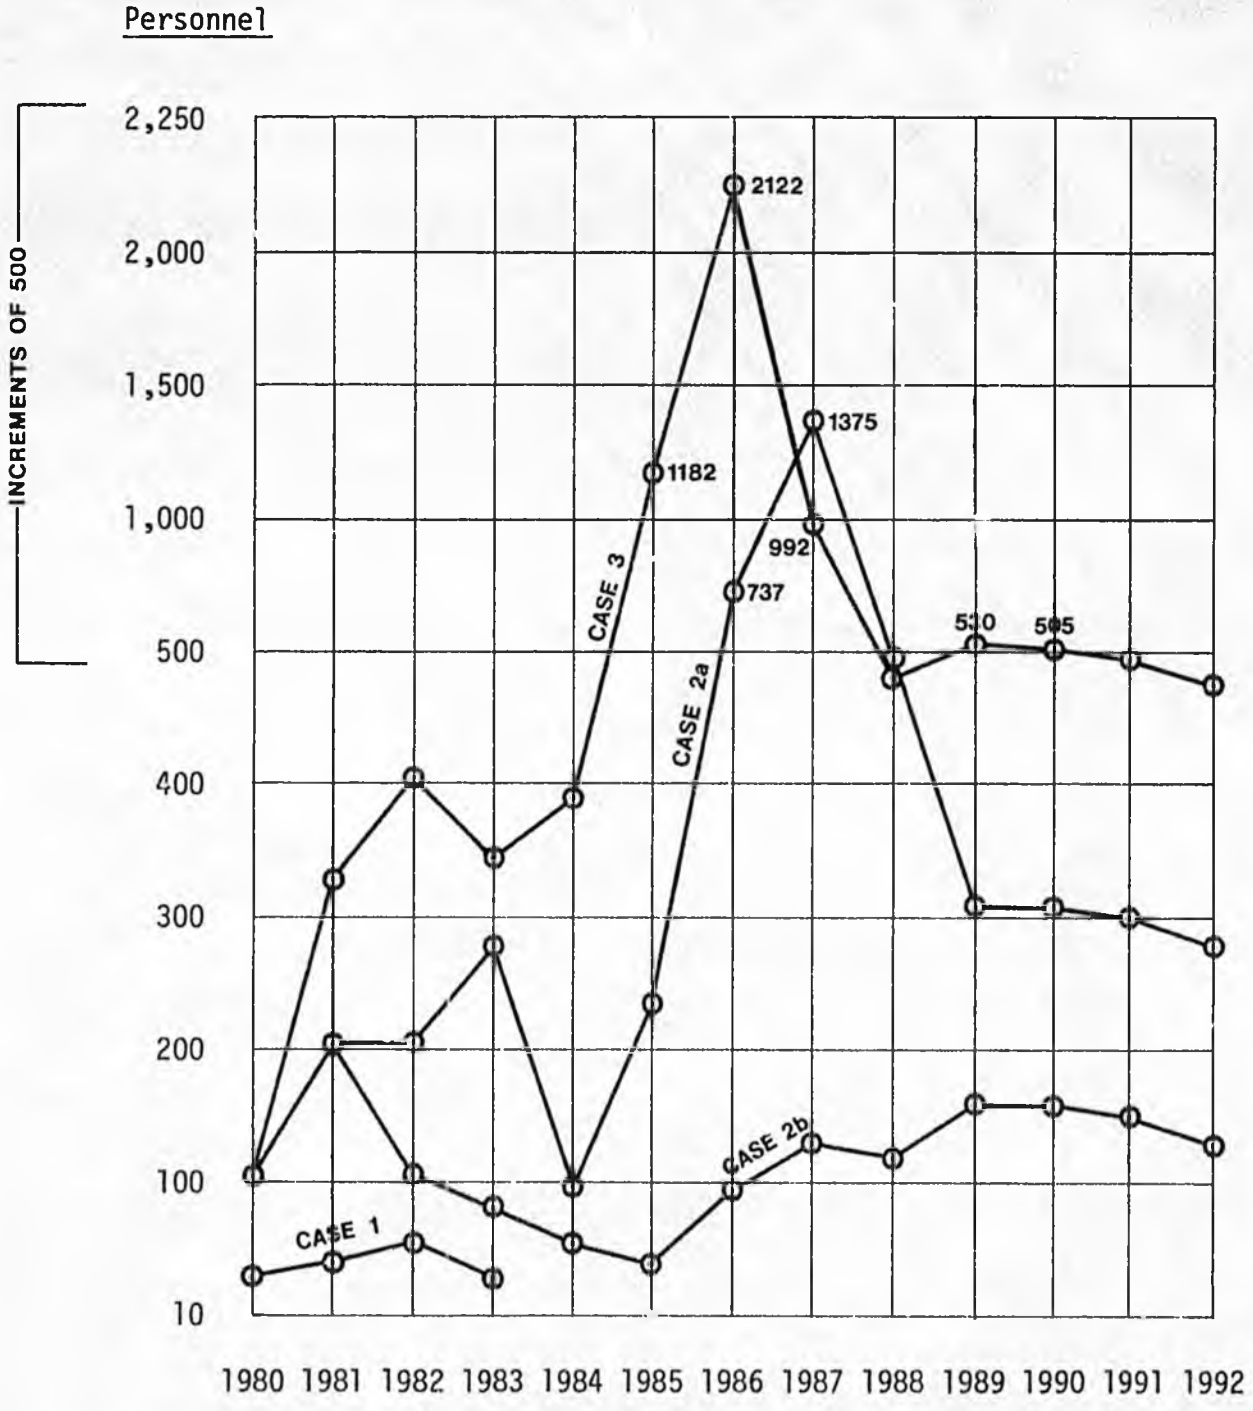
Table 21: Coastal Zone Employment

From Western Gulf of Alaska OCS Activities



Source: Niall Trimble, Depart. of Community & Regional Affairs, Division of Community Planning, State of Alaska, 1977.

For both Cases 2a and 3, employment grows moderately from 1980 to 1984, and then grows explosively for the short period 1985-1986 while construction labor forces build up. A very sharp decline follows, with employment levels falling by 80 percent. In Case 3, employment in the coastal zone falls from 2,100 in 1986 to 500 in 1988. Thereafter the labor force should remain relatively stable.

MISCELLANEOUS REQUIREMENTS: WATER, GRAVEL

OCS development will generate a variety of less significant needs. Many will not be identified until later in the development process. However, several are predictable now, including water and gravel requirements.

Fresh water is normally used in large quantities for offshore drilling: mixed with chemicals, it makes the drilling fluid or "mud" used to displace rock cuttings. According to the Materials Supply Profile published by the Department of Community and Regional Affairs, approximately 600,000 to 900,000 gallons of "drill water" is utilized for each exploratory well drilled offshore. Since production wells are normally shallower than exploration wells, we assume that 600,000 is the average water requirement for both exploratory and development wells.

According to the development scenarios, in 1989 the peak number of wells will be drilled: an estimated 21 wells in Case 2 and 39 in Case 3. This will require 12.6 million and 23.4 million gallons of water, respectively, or approximately 47,547 or 64,110 gallons per day for drilling operations alone. The Kodiak municipal water system is already used to capacity and could not, therefore, provide anywhere near this amount of water. Consequently, drill water must come from alternate sources, possibly Seward or from water wells drilled on Kodiak Island near the marine service bases. New drilling techniques utilizing salt water could also be used extensively in the Western Gulf to reduce expenses of transport and/or development of water sources. Although salt water in drilling mud is normally somewhat more expensive than fresh water, it may be more economically feasible here considering transportation and development costs.

Most drilling and other industrial supplies will not be shipped from Kodiak, for Kodiak does not have the supply houses necessary to supply materials to drilling operations on a continuing basis. Although materials may be bought in Kodiak in emergencies, this would not be the normal mode of operation.

Large amounts of gravel, primarily for concrete mixing, will be needed for marine service bases, terminals and oil storage facilities. Kodiak has no extensive sources of commercial grade gravel: blasting is the primary source of aggregate. Although it is impossible to determine how much gravel is needed, the Kodiak Island Borough will undoubtedly receive requests for quarry permits. The Borough should be prepared with policies and development standards to apply to these requests.

PROBABLE LOCATION OF ONSHORE DEVELOPMENT

In the Western Gulf, the oil industry must decide where to locate onshore facilties. This decision is affected by Northern Gulf operations as well as factors relating to mode of operation. Basically, three alternate modes of operation are possible: 1) using Seward for onshore service bases throughout both exploration and development phases; 2) using Seward during initial exploration phases with a partial or total move to Kodiak as development and production progress; or 3) using Kodiak Island for onshore facilities throughout the entire exploration, development and production phases. Many decisions must be made and information known before a final decision on one mode.

A number of interrelated factors will affect the oil industry's decisions. No one factor will solely determine which mode is uses; each will contribute to the final decision. An understanding of these factors and their relationships, explained below, is crucial in estimating potential impacts of decisions on operational modes.

Factor 1: Cost of Exploration versus Probability of Discovery

Any time a new oil field is developed, the oil industry is taking a gamble. National averages indicate that only one out of three potential oil fields contain sufficient quantities of petroleum products to economically warrant development. Consequently, oil companies normally utilize as little capital as possible in exploring new fields. Apparently this is the approach they are taking in the Gulf of Alaska.

Oil companies have already taken actions that indicate they will utilize existing facilities during the exploration phases of OCS development as much as possible. In the short run this decision may mean greater inconvenience to the industry due to lengthy transportation distances, expensive short-term land costs, and insufficient onshore facilities. However, if economical quantities of oil are not found, the oil companies will, in the long run, save themselves the expense of developing needless new facilities.

The oil industry took the "minimum investment during exploration" approach in their development of Upper Cook Inlet. As the initial exploration wells were being drilled during the late 1950's and early 1960's, the offshore rigs in Cook Inlet were supplied mainly out of Anchorage. This included the supply boats and the crew boats. This approach shifted, however, when oil deposits were discovered and production platforms went into operation in the mid-1960's. At that time the oil industry selected Kenai as a permanent center for onshore service operations due to its close proximity to the oil fields and other favorable aspects. New facilities were built, subcontractors and supply companies located their operations in Kenai and crew change and material supply operations were carried out there.

Based on the recent industry statements and their past experience both in Alaska and nationally, it is believed the oil industry will once

again depend on existing facilities during the exploration phase of development in the Northern Gulf of Alaska. Communities whose facilities are being considered to supply the exploratory efforts are believed to be Seward, Cordova and Yakutat. Of these sites, recent trends indicate that Seward is favored by some companies as the initial base of operations.

Seward is particularly attractive because it has a year-round deep water port, a railhead, highway access, available industrial land and a relatively favorable political climate. In addition, it is midway between the Northern and Western Gulf lease areas. Exxon has already gained control of 32 acres in Seward. Thirty of those acres are three miles to the north of town and have both road and rail access. The remaining two acres are located on the waterfront within the city limits of Seward. In addition it is reported that Texaco is currently looking for industrial land in the Seward area. Shell and Arco are already depending on Seward to obtain fresh water supplies necessary to support their drilling operations in the Northern Gulf of Alaska. In addition, plans have been made by Dresser Industries, a major oil field supply company, to build a barite plant in Seward. Barite is a primary component of drilling fluid (mud).

While using Seward as a water source, Shell and Arco (formerly with Mobil as the SAM group) have indicated that they intend to utilize Yakutat as a service base for their operations in the Northern Gulf. However, feelings within the oil industry indicate that the adverse political climate and the lack of required facilities in Yakutat have discouraged other OCS operators from locating there.(2)

While Shell and Arco will probably continue to use Yakutat as a base for Northern Gulf development, they will have to establish another, closer service base if they pursue development of the Kodiak Shelf. Seward and Kodiak will be the two most likely sites. If the other major oil companies choose Seward as a base for the exploration of the Kodiak Shelf, Shell and Arco will probably locate there initially. It is a frequent practice for oil companies to locate their onshore service facilities in close proximity to one another. This practice enables them to share facilities such as airports, heliports, and dock facilities. It also means subcontractors and supply companies can serve an entire oil field from one location, a situation far more preferable than establishing numerous, smaller facilities at scattered bases.

As noted above, the oil industry's interest in Seward is only a trend and is a result primarily of their activity in the Northern Gulf. At this point there is still a great deal of speculation, and it is probable that Kodiak will be given more consideration as a service base site for the exploration phase on the Kodiak Shelf in the Western Gulf. That decision will be based on the costs of building and operating facilities in Kodiak compared with the cost of operating out of Seward. The potential results of that comparison are directly related to the following factor.

Factor 2: Location of Service Bases for Northern Gulf Development

Decisions made within the next two years by the oil companies concerning their mode of operation in the Northern Gulf of Alaska could have a tremendous affect on their final decisions on how to handle operations in the Western Gulf. As indicated above, decisions have already been made to provide service bases for the Northern Gulf initially in Seward and Yakutat. As the development phase in the Northern Gulf proceeds, it may become advantageous for the oil companies to abandon the initial exploration phase service bases in Seward and locate comprehensive service bases closer to the oil fields. For the purposes of discussion, one likely site for such a remote comprehensive onshore service facility would be Icy Bay. The Chugach Native Association has land available in Icy Bay for service bases and has indicated an interest in working with the oil companies in locating such bases there. If this were to happen, then the Seward base would tend not to develop into a comprehensive service base although some activity would still originate from there. This could tend to diminish the role of Seward in the development of the Kodiak Shelf. The oil companies would then have the option of developing remote comprehensive service facilities in Kodiak or utilizing the existing although noncomprehensive facilities in Seward.

On the other hand, if the decision is made to continue to operate out of Seward throughout the exploration, development and production phases of the Northern Gulf oil fields, then it can be assumed that the same Seward service base would be appropriate for use in the exploration of the Kodiak Shelf. In that case, the oil industry would not have the necessity of developing new comprehensive service bases for the exploration phase of the Kodiak Shelf, although that alternative would not be eliminated. If oil was subsequently discovered in the Western Gulf, then the industry would have to decide whether or not the development of new service bases on Kodiak Island would be less expensive in the long run than continuing to operate out of a comprehensive service base in Seward.

In summary, if the oil industry decides to utilize Seward as a comprehensive onshore service facility for the development of the Northern Gulf, then the probability is high that they would utilize the same service base for their initial activity in the Western Gulf. If, however, the industry decides to build a remote service facility closer to the lease areas in the Northern Gulf, then it is possible that they would decide to build a similar onshore facility on Kodiak for the development of the Kodiak Shelf. Again, this decision is related to the following factor.

Factor 3: Location of Lease Sale Area in the Western Gulf

This is one of the most obvious determining factors affecting the location of service bases for the Western Gulf. As can be seen in Map 1, the lease area on the Kodiak Shelf extends in a northeasterly southwesterly direction on the eastern side of Kodiak Island from the southern tip of the island almost to the tip of the Kenai Penninsula. If oil reserves are discovered near the northern end of the lease sale area, then the feasibility of using Seward as an onshore service facility during one or

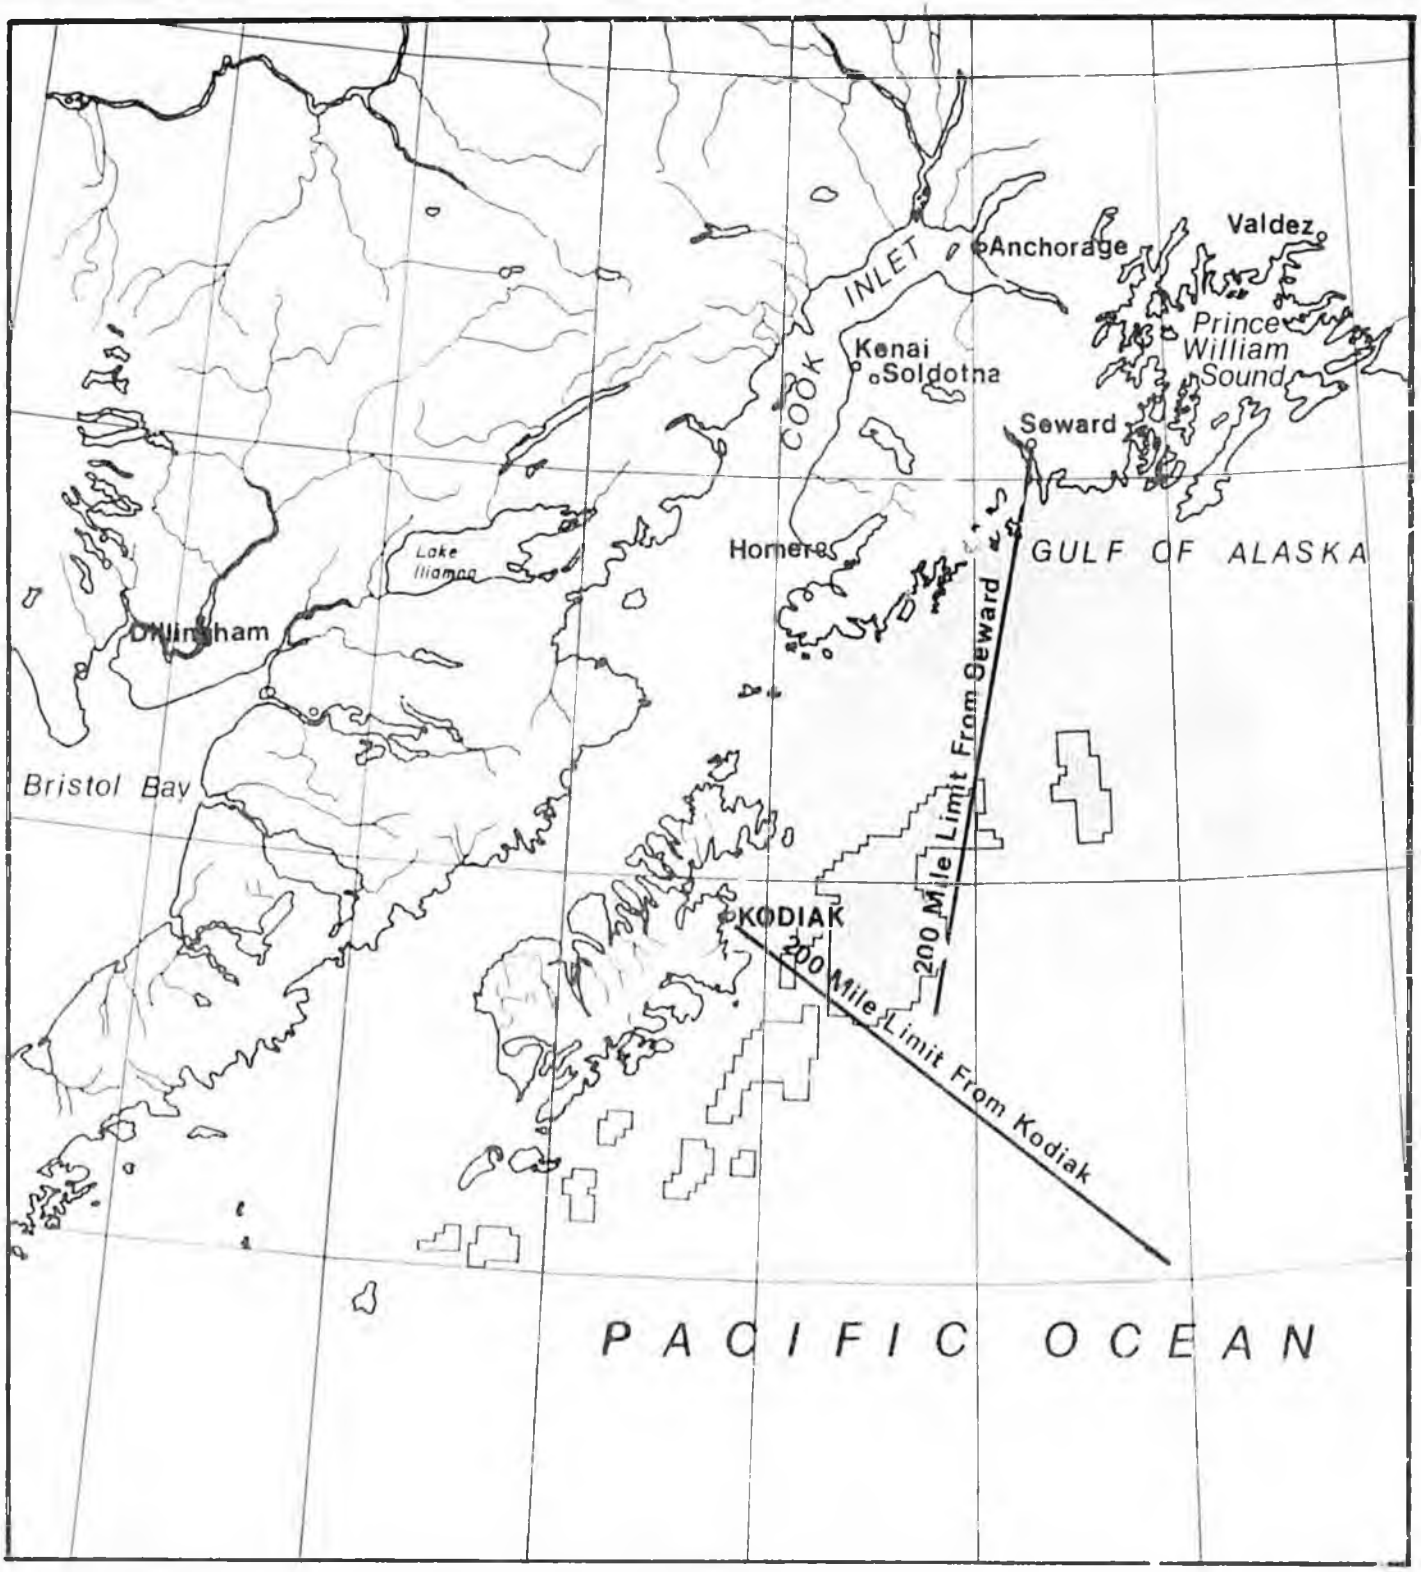
more of the phases will be greatly increased. However, if oil is discovered near the southern tip of the lease area, the utilization of Seward throughout the exploration, development and production phases could easily be infeasible. The oil industry has indicated that the service bases should be within two hundred miles of the oil development areas. Map 1 shows the extent of the two hundred mile radius from both Seward and Kodiak. This two hundred mile figure is not necessarily absolute. Depending upon transportation costs and facility development costs, decisions might be made to operate onshore service facilities further than two hundred miles from the rigs.

This question will be partially answered at the time the lease sales are held. If the industry leases land in the northern half of the lease sale area, then the probability of using Seward will be increased. However, if the majority of leases are in the southern half, then the probability of using Kodiak Island as a service base site would be higher. The final answer to the question will be known only at the time that oil is actually discovered and the delineation wells are drilled that will determine the size of the fields to be developed.

Factor 4: Air Support Facilities

An important consideration in determining the location of onshore service facilities is the capability of the various candidate sites to accommodate both commercial and noncommercial air support services. The majority of the supplies needed to operate the exploration and development rigs will be transported from the service facility via work boat regardless of whether the onshore facilities are located in Kodiak or Seward. However, certain items such as some perishables as well as equipment and personnel needed on the platform for drilling emergencies will come by air. Helicopters will be used to transport these items to the platforms. In most cases, however, the industry will attempt to utilize commercial air carriers between the nearest airport and supply centers such as Anchorage to keep helicopter flight time as low as possible. For instance, assume a particular tool was needed at a platform on the Kodiak Shelf as quickly as possible. Assuming adequate airline schedules, it would be less expensive and faster to put the tool on a commercial jet from Anchorage to Kodiak and then on a helicopter from Kodiak to the oil platform than it would be to ship the tool to Seward and then fly the tool by helicopter from Seward to the oil platform. The same is true of personnel, both in the case of emergency technical personnel as well as entire drilling crews.

Information from the oil industry to date indicates that the helicopters that will be used in the Gulf of Alaska are the Sikorski S61 and the Bell 212.(3) The larger of the two is the S61. It has a maximum range of 450 miles which will allow it to fly a maximum of approximately 200 miles to a platform with a 50 mile reserve range. Thus over half of the lease area on the Kodiak Shelf is out of range of the helicopters if they were to be flown from Seward. On the other hand, almost all of the lease area is within the 200 mile range from Kodiak. See Map 2.



WESTERN GULF OF ALASKA
OIL LEASE SALE AREAS

0 50 100 MILES

Prepared by Simpson Usher Jones Inc. for Kodiak Island Borough

OIL LEASE SALE LOCATION MAP

MAP 2

In addition to helicopter traffic, it will be necessary to utilize Hercules airplanes during the development of the Kodiak Shelf. At present the Seward airport cannot accommodate aircraft of this size. The Seward airport has two runways. Runway 12/30 has a length of 4750 feet. Runway 15/33 is 2300 feet long. The surface on both runways is a light BST with a 40,000 pound maximum load. This will not accommodate a Hercules-type airplane. In addition the Seward airport has no instrument landing system (ILS). Aircraft operating out of Seward must utilize visual flight rules (VFR). According to the State of Alaska Division of Aviation, there is little chance that the Seward airport could ever accommodate ILS equipment because of terrain problems. Kodiak, on the other hand, does have an ILS system capable of handing both helicopters and cargo aircraft traffic. The runways at Kodiak are longer, the longest being 7500 feet, and there is no practical weight limit on the runways. Consequently, from a flight operations standpoint, the Kodiak airport is ideally suited for OCS development related air support while the Seward airport is incapable of providing such air support.

In order to accommodate the air service operations, it is necessary to have a number of onshore facilities located at the airport. These include a number of onshore employees involved with expediting, aircraft maintenance, and loading and unloading aircraft. In addition warehouse space, office space, aircraft maintenance facilities, and apron area would be required. At present the Seward airport has no area available for the development of these types of facilities. The airport is adjacent to land owned by the Alaska Railroad, which is not available for development of support facilities. There is no lease space available on the apron for support facilities and little chance of expansion. Kodiak has ample area for these types of facilities. In addition to the apron that is currently being used for commercial aircraft, the Kodiak airport has at lease two separate apron areas that could be used for air support facilities. Ample land is available around the airport that could be developed with industrial facilities to support OCS development.

Another factor concerning air support services is the lack of adequate commercial air carriers in Seward. Because of the small size of the airport, the lack of facilities, the low weight capacity and the absence of ILS equipment, the Seward airport cannot accommodate commercial jet air carriers. Kodiak is currently served by both Wien Air Alaska and Western Airlines. Wien Air Alaska currently operates an average of two flights a day from Anchorage and Western operates three flights per week from Seattle to Kodiak during the spring and summer months. Therefore, platform crew change operations could easily be carried out in Kodiak but would be difficult and inconvenient to be operated through Seward.

Because of these factors and based on past experiences and indications from the oil industry, it seems logical that Kodiak will be the base of air support operations for the OCS development on the Kodiak Shelf. While there is no absolute necessity that marine support facilities be located in close proximity to the air support facilities, it is assumed that for economic, coordination and convenience purposes the oil industry would prefer to have those facilities located close to each other. This factor will have a significant influence on the industry's decision as to the location of their onshore marine service facilities.

Factor 5: The Availability of Land and Port Facilities

Sources within the oil industry have indicated concern over utilizing Kodiak for onshore marine service bases. Their concerns center around a perceived lack of available land, inadequate port and transportation facilities and inadequate supplies of water to be used in the drilling operation. At present the port facilities within the City of Kodiak are being used to their capacity (see Volume II, Transportation Facilities). In addition, land is not available near these port facilities that could be used for warehousing, office space and outdoor storage necessary for an onshore service base. Consequently, if service bases are located on Kodiak, completely new facilities will have to be built. The one exception to this is the former Chiniak tracking station that is currently controlled by the Koniag Regional Native Corporation. Chiniak does have a number of facilities that would be needed as part of an onshore service facility. These include office structures, housing quarters, repair and maintenance facilities, some warehouse space, an airstrip and an infrastructure of utilities and roads. In addition land is available for additional development of outdoor storage areas and warehousing. The Chiniak facility does not currently have any port facilities, although studies are now being conducted to determine the feasibility of developing a port facility at the site. Preliminary indications from Koniag Corporation are that port facilities to serve rig tenders and general supply boats would cost approximately 25 to 30 million dollars. The Port of Seward, however, does have adequate port facilities to handle the marine services needed to supply the materials to rigs operating during the exploration on the Kodiak Shelf. It will be necessary, if Seward is selected as a comprehensive service base site, to develop additional open storage, warehousing and office space. However, the cost of these is substantially less than the cost of developing new port facilities in Kodiak. A decision on this factor will be heavily influenced by Factor 6.

Factor 6: Transportation Costs

As indicated above, during the exploration phase the oil industry will probably try to minimize their costs by utilizing existing facilities whenever possible. This factor would point to a utilization of Seward during that exploration phase. However, if and when oil is discovered on the Kodiak Shelf, the cost of developing permanent onshore facilities in Kodiak will have to be weighed against the cost of transportation from Seward. This will in turn be affected by the location of the discovery wells in the Western Gulf and the availability of lands and facilities in Kodiak. It may be determined that in the long run the cost of developing new facilities in Kodiak would be too high to outweigh the transportation costs and inconvenience involved in utilizing Seward as a permanent service facility. In that case, the end result would probably be marine service facilities operated out of Seward and air service facilities operated out of Kodiak. However, the amount and location of oil discoveries on the Kodiak Shelf could be such that a new permanent base would be feasible on Kodiak Island.

Factor 7: Political Climate

At present the oil industry has indicated some uncertainty over the political climate in Kodiak with reference to OCS development. The residents and local governments of Kodiak have not made a strong collective statement either for or against the encouragement of oil development facilities on Kodiak Island. If the people of Kodiak were to indicate a strong desire to boost their economy through encouraging OCS development on the island, then the probability of locating permanent service base facilities in Kodiak would be strengthened. However, if the community were to take a hostile position towards oil development, the industry would be less inclined to move there.

One of the most important factors in the development of an oil field is timing. While the oil industry can accommodate and even plan for some delays caused by an unfavorable political climate, they will avoid those delays if possible. Here again, the political climate in Kodiak is not a sole determining factor. Clearly the factors affecting the final decision on service base locations make the issue quite complex. However, that complexity gives the Kodiak community increased influence over the decisions affecting the future development of the area. For instance, if it were made clear to the oil industry that Kodiak welcomed its presence politically and socially, and if the local governments adopted policies that would foster the development of the needed facilities such as ports, additional airport facilities, water supplies and industrial parks, then the oil industry would find it relatively easy to justify moving to Kodiak if other factors so indicated. On the other hand, if Kodiak made it clear that the oil industry was not welcome and if no move was made to accommodate the industry with industrial facilities, then Seward would remain the location of onshore facilities as long as it was economically feasible. Regardless of the direction Kodiak takes, economics will rule the final decision made by the oil industry. However, because of the Kodiak community's location, it has the opportunity to affect those economic considerations to a certain degree by its attitude toward oil development.

Factor 8: Facility Requirements During Production Phase

Facilitiy requirements depend not only on the amount of recoverable oil reserves, but also on the method of production. One method involves transporting oil from the production platforms to shore via pipeline, with an onshore storage terminal. In this case, the onshore pipeline terminal is located as close as possible to the oil fields, thus minimizing costs and oil spill potential. Consequently, when oil companies begin constructing permanent production platforms, Kodiak should prepare for the development of pipeline terminals, onshore crude oil storage facilities, and marine terminals.

Alternately, the single buoy mooring system (S.B.M.S.) method uses offshore marine terminals and storage faciilities. This study examines facility requirements for both methods of production.

Even the high U.S.G.S. estimate of gas reserves is very low and almost certainly insufficient to warrant development. As such, no gas pipelines or L.N.G. plants are anticipated.

Conclusion

Considering the above factors, the "most likely" operational mode for Cases 2 and 3 appears to be the second, which uses Seward as a base during the exploratory phase and transfers to Kodiak during development and production phases. In Case 1, Seward would be the base during exploration, as there is no production, then would move to Kodiak. Specifically, the oil industry would begin initial development in summer of 1980 by providing marine support services to exploratory rigs from Seward and air support services from Kodiak. At the same time it investigates a probable site for an onshore service facility on Kodiak Island should a major oil strike occur. Upon discovery and delineation of a commercially producible oilfield on the Kodiak Shelf in 1981, construction of service bases on Kodiak Island would begin. If the oil industry has agreed with Kodiak residents to locate development away from population centers, it will probably locate the base near the southern end of the existing road system, either at Chiniak or on the north side of Ugak Bay. Less probable is locating it somewhere between Chiniak and the Coast Guard Base, either in Kalsin Bay or Middle Bay. In Cases 2a and 3, an oil storage facility and a marine terminal would probably be sited within this area also, possibly near the service base for convenience.

Information presented in the preceding section should prove extremely useful to the community in determining and gauging the actual schedule of oil activity during the next ten to twenty years. Although based on estimates, it uses oil development experiences in other areas along with data on the Kodiak Island Borough. Actual development should be compared with these estimates to adjust impending impacts, so that the community is always cognizant of the level of activity and associated impacts.

ENVIRONMENTAL IMPACTS

In spite of numerous past and ongoing studies, little concrete knowledge regarding the effects of oil development exists. Kodiak Community College, the Alaska Department of Fish and Game, the Northwest Fisheries Center of the National Marine Fisheries Service, as well as a number of private and public entities are upgrading and expanding the data base. Even so, research is sometimes a slow process and results are often inconclusive. In addition, offshore oil development activities in the North Sea have just begun, and information on impacts, especially long term, is still coming in.

This difficulty in predicting impacts is demonstrated in the rough draft of the BLM/OCS Environmental Impact Statement of the Western Gulf. A tremendous quantity of information about the natural environment discusses potential impacts of OCS development, analyzing numerous species of flora and fauna in the marine and terrestial environment. However, the authors admittedly had difficulty quantifying impacts. Even so, the document is enlightening and should be "required reading" for anyone seriously concerned with short and long term effects of OCS development.

Following is a review of the potential impacts on both the physical and socio-economic environment of Kodiak Island Borough. These were identified in the BLM/OCS document or result from work done in this study.

Physical Environment - Offshore

Two basic sources of impacts could result from OCS development: 1) spills which inject crude oil or other associated substances into the natural environment, and 2) bottom disruption. Impacts of each are discussed in turn.

Oil Spills

The likelihood of spills introducing oil into the natural environment is quite high. If so, there will be impacts, and some could be extreme. However, the relative seriousness of the spill is unknown until it occurs. Pipeline accidents, oil and gas well blowouts, spills resulting from fires, tanker accidents, chronic minor spills and natural seeps, as well as a variety of accidental spills resulting form the malfunction of drilling and transportation equipment, could all cause oil spills. Some potential effects of these spills are extremely negative.

A major oil spill could contaminate or kill fish, a vital concern to the Kodiak economy. Kodiak's economy would definitely be adversely affected

if this contamination caused a loss of catch or gear. The probable frequency of oil spills and the significance of their impacts upon the natural environment has not been quantified. However, the BLM/OCS office, in their Draft Environmental Impact Statement, have estimated that over an assumed 25-year production life of the Kodiak Shelf oil fields, approximately 433,000 barrels of crude oil and other materials will be spilled based on historical data concerning other oil fields in the high find development scenario. They have also indicated that in this same case, during the years of peak activity and production up to 10,700 barrels of oil could be spilled within one year, and that throughout the production period a total of 30,000 barrels could be spilled by tankers, both within this area or along their transportation routes and at their destinations. (4) Historical data indicates that by far the great majority of the oil spilled into the natural environment will be minor in size as well as in environmental impact. It is anticipated, however, that at least a few oil spills will have a major potential impact (over 1,000 barrels) that could have lasting effects. An estimated 5,500 oil spill incidents will occur over the 25-year course of oil production in the Westarn Gulf of Alaska. Because of the distance of the lease areas from shore and the natural characteristics of crude oil including evaporation rates, dispersion characteristics and weathering, the BLM/OCS office has estimated that a spill would have to be 1,000 barrels in size to have a significant ecological impact. (5) It must be remembered that the conclusions of the Draft Environmental Impact Statement are based on averages and probabilities, and that spills much smaller than 1,000 barrels could create significant ecological impact if located in the right place at the right time.

The segments of the natural environment that could be affected by oil spills and malfunctions is extremely broad. They include: 1) modification of the food web due to contamination from petroleum hydrocarbons (PHC); 2) impacts on marine habitats; and 3) impact on primary sources of food and on various organisms. These impacts are not limited just to marine life. An offshore oil spill could easily have a serious effect on land mammals and birds in terms of bodily contact and alteration of the food web. The species most susceptible to the impacts of OCS development are brown bear, deer and elk. (6)

Bottom Disruption

Sea floor disruption can result from two sources: 1) physical disturbances of the surface of the sea floor due to placement of platforms, anchors and other mechanical paraphernalia associated with development and production; and 2) chemical and biological changes resulting from the settling of crude oil products from an oil spill.

Experiments and actual experiences related to OCS development indicate that as oil spills into salt water, certain parts evaporate, some parts dissolve into the water, and others remain relatively intact and settle on the sea floor. According to BLM/OCS, the fouling of sediments on the sea floor in significant quantities results in the lack of production of food and habitat and thus an absence of the normal sea life species. Petroleum hydrocarbons (PHC) can also mix with sand and gravel, forming

a solid material which is deposited on the bottom of the ocean and added to the food web. This obviously depends on the volume, frequency and degree of occurrence of this phenomenon. It is impossible now to determine what the environmental impacts will be due to this type of activity.

The other form of bottom disruption, physical alteration, is somewhat more predictable and its impacts are normally less significant. The area of disruption of a permanent platform is normally confined to within two acres and thus permanently removes an extremely small area from the ocean floor. Each permanent platform would remove 1 to 1.5 acres of sub-sea surface from the habitat available to marine life. The effect of pipeline construction on or below the ocean floor would be more significant, although still relatively minor considering the total area of the Kodiak Shelf. According to a recent study by the Woods Hole Oceanographic Institution, 1976, bottom disruption and removal of sea floor by offshore production platforms will normally have negligible adverse effect on the marine life production capabilities of the area.

Physical Environment - Onshore

Impacts on the natural environment that could result from OCS development would be generated by human activity: construction, operation of OCS development, and population pressures. These impacts would generally be similar to those resulting from any major industrialization effort, and could affect air quality, water quality, habitat, land forms, and the full range of animal and plant life that occupy the area.

Air Quality

The air quality of the area surrounding OCS development on land, as well as at sea, can be impacted through a number of sources. One of the most obvious sources of air pollution is particulate concentrations created by construction activity. It is anticipated that the construction of marine service bases, crude oil storage facilities and tanker terminals will involve intensive construction activity over a number of years. Depending upon soil conditions, atmospheric conditions and mitigating measures taken by construction personnel, the potential for particulate (dust) pollution is high. In addition, construction vehicles and heavy equipment, most of which utilize fossil fuels as a power source, can, if not properly maintained and equipped, pollute the air with exhaust matter. This kind of pollution will also be generated by population increases and the subsequent increase in vehicular usage. Another source of air pollution is fires, both accidental and deliberate. The occurrence of a major crude oil fire at a storage facility could have a devastating effect on air quality over a long period of time. Modern design techniques and safety equipment are thought to be adequate to prevent and/or extinguish any such fires. However, the possibility of their occurrence still exists.

The degree of cumulative impacts as a result of air quality degradation will be determined by the atmospheric conditions and the concentration

of sources. In Kodiak air current movements are strong and frequent, and the projected population concentrations are relatively low in terms of air pollution potential. Thus significant air pollution problems are not anticipated as a result of OCS development. However, it must be remembered that depending upon the magnitude of the source and the atmospheric conditions at the time any one incident could catastrophically affect air quality.

Water Quality

Potential impacts on the quality of fresh water within the Kodiak Island group will also be generated primarily by human activity. Construction projects in or near streams or lakes could result in significant degradation due to alteration of the courses and/or beds of these water bodies as well as through contamination by particulates and chemicals. Special attention must be paid to the location of construction projects and methods of operation with respect to the potential for such impacts.

In addition, construction activity could affect runoff characteristics by altering land forms. Excavation penetrating aquifers could also affect subsurface water quality. Both surface and subsurface water qualities could be adversely impacted by chronic and/or catastrophic onshore spills. Petroleum products spilled on the surface could be carried through runoff or absorption into these water sources. Depending upon the amounts, types and characteristics of these foreign substances, the effects could vary in duration.

Habitat Disruption or Destruction

As indicated in previous sections, the amount of land required for direct and indirect OCS related facilities will be relatively high in terms of other single activities currently on Kodiak Island. Whenever land is disturbed and/or developed, habitat is altered or possibly destroyed. One exception is when facilities are located in already industrialized areas within the City of Kodiak environs. BLM/OCS has estimated in their Draft Environmental Impact Statement that in the event of a high find, up to 1,100 acres of land could be utilized for support and supply facilities, production and treatment facilities, crude oil terminals and pipeline rights-of-way. (7) When compared to the total land area within the Kodiak Island Borough, this acreage is relatively insignificant. Even so, many ecosystems and habitat areas on Kodiak Island are very sensitive and specialized. Location of OCS related industrial facilities on or through relatively small specialized areas could have a significant impact on the future of life forms in the surrounding area. Facilities must be situated where the potential for disruption of significantly sensitive habitat areas is avoided or minimized.

SOCIC-ECONOMIC IMPACTS

Local Population

Population increases in Kodiak correlate to the level of offshore development of the Western Gulf OCS. They are a function of the nature of employment, duration and type of labor requirements, and the extent to which the local community accepts and/or encourages population growth.

As indicated in the Demographic Inventory, Volume II of this study, Kodiak's population is currently growing by approximately 3.4 percent per year. Based on this growth rate, Kodiak's population should double by 1995 without OCS activity in the area. This rate represents a healthy economy and indicates the desirability of Kodiak as a residence.

Projected population increases from OCS development will further increase that population growth rate. Estimated projections are based on the following assumptions:

1. Any new onshore facilities, including service bases and oil terminals, will be located in the Kodiak Borough. Thus the bulk of direct employment required to operate those facilities will also be within the Borough.

2. Anchorage will be the headquarters and work location of the administrative and support staff, as is currently industry practice.

3. All long term onshore operations personnel (service bases, terminals) will reside on Kodiak Island. Workers tend to relocate close to their place of employment when employment is long term. Conversely, jobs of short term duration, such as construction and drilling, will discourage workers from relocating to the job site. Therefore resident population levels do not necessarily correspond to employment levels, especially in the exploration and development phases. However, variances will decrease in magnitude as oil production begins and long term employment increases.

4. Local demand for indirect labor will increase as the population growth from oil activities spawns concommitant growth in supply, transportation, service and other businesses.

These assumptions are all based on practices in the North Sea and are presented in tabular form in Table 22.

Table 22: Formula for Population Change

Employment Activity	Percent of Total Jobs in Kodiak
Onshore:	
Administration	0%
Base Operations	100%
Platform-associated	50%
Rig-associated	50%
Terminal Operations	100%
Construction	100%
Offshore:	
Rigs	0%
Lay-Barge	0%
Bury-Barge	0%
Supply Boats	40% years 1-3; then 80%
Platforms	40% years 1-3; then 80%

Source: Niall Trimble, Depart. of Community & Regional Affairs, Div. of Comm. Planning, 1977

Using the above formula in conjunction with the employment levels by activity (Tables 6 and 8 in previous section), we can determine the OCS-related population changes over time for each development scenario as shown in Table 23.

Combining the population changes resulting from OCS development with the projected population resulting form normal growth (Table 35 in Volume II) gives the projected population with development. These estimates, based on four levels of OCS impact, are presented in Table 24 for the years 1978 through 1992. Also included in Table 25 is the cumulative year-by-year percentage change in population.

As shown in Table 25, population increases will vary from year to year. The average yearly increase for the 15 year period from 1978 to 1992 ranges from 3.46 for Case 1 (no development) to 5.47 for Case 3 (high

find) -- some 61 percent higher than the "normal". The population doubles from the 1975 figure in Case 3, and progressively later for Cases 2a, 2b, and 1. Variations in population increase rates correspond to the labor needs of the oil industry and corresponding characteristics of jobs. For both Cases 2a and 3, employment grows moderately from 1980 to 1984, and then grows explosively for the short period 1985-1986 while construction labor forces build up. A very sharp decline follows, with employment levels falling by 80 percent. In Case 3, employment in the coastal zone falls from 2,100 in 1986 to 500 in 1988. Thereafter the labor force should remain relatively stable. As indicated earlier, the existing growth rate in Kodiak is about 3.4 percent per year.

Table 23: Total OCS-Related Population Changes in Kodiak

Source: Niall Trimble, Department of Regional Affairs, Div. of Community Planning, State of Alaska, 1977

The first significant population increase with OCS is in 1980, when all cases jump to a 6.0 percent growth rate. This represents the initial influx of OCS related work force. Growth rates then return to normal in Case 1. They increase again in 1981 in the other cases, and then decline through 1984 due to the short term nature of exploration jobs. Growth rates then climb abruptly in proportion to the numbers of construction workers building the service bases and terminals, hitting a peak of 15.4 percent in 1987 in Case 2a; 13.8 percent in 1989 in Case 2b; and 15.3 percent in 1986 in Case 3. All three cases have over 13 percent growth rates in 1989, which dramatically drop off to 0.5 percent or less within three years. Development is essentially completed then, and growth rates return to the normal rates established prior to OCS activity.

Population impacts from OCS development are substantial: 1992 population is 18.5 percent more under Case 2a development than with normal growth; 15.7 percent higher under Case 2b; and 32.6 percent higher under Case 3. With a large oil discovery, 1985 population approximates the 1992 population without oil related industrialization.

Obviously this growth will impact all aspects of the Kodiak community. A review of those impacts follows.

Public Services

Water, Sewer, and Road Services

Little information is now available on existing land use, gross areawide densities, and their relationships to existing community utilities and services; data will be developed in the aforementioned comprehensive plan. Ongoing and future engineering studies will determine water, sewer, and road requirements. With more detailed information, more detailed conclusions will result. All this information must be coordinated through a cohesive planning process to determine current trends of development and future development potentials. Only with a coordinated community devleopment planning effort can Kodiak Island Borough and its various communities adequately prepare for OCS development.

Enough information is available, however, to allow generalized estimates of road and public utility required necessary to serve projected population increases. The assumptions used in making these estimates include:

1. Population estimates and estimated population characteristics are based upon the development scenarios of low, medium and high finds. If those scenarios change, population estimates will change correspondingly.

2. Kodiak local governments and residents will want new residential development within the Kodiak metropolitan area to be served with basic public services (water, sewer and roads). This is assumed because rapid community development without these services could lead to serious environmental problems. This trend is evident in Kodiak in the Island Lakes area.

3. A substantial amount of land will be developed or redeveloped, including resubdivision, as a result of rapid population growth. Relatively large areas of the undeveloped land near the City of Kodiak is now subdivided. However, many of those subdivisions represent "paper plats" which do not have the basic community facilities (water, sewer and roads), Consequently, it may be desirable, subject to future decisions upon community goals, to resubdivide some land to accommodate different land uses and densities.

4. When raw land is developed or redeveloped, approximately 28 percent on a gross area basis will be dedicated to road rights-of-way. This percentage is based on extensive experience in land development and application of modern subdivision design techniques. It includes both rights-of-way internal to a subdivision, as well as collector and arterial roads.

5. The average right-of-way width in Kodiak will be 60 feet. This assumption is based on current planning procedures and practices in the Kodiak community.

6. Lineal footage of water and sewer required to serve newly developed land on a gross area basis equals the lineal feet of roads within that same area.

The assumptions described above are based on the most recently available information concerning Kodiak as well as pertinent information typical of public services in general. The relevancy of these assumptions to the level and type of activity that occurs in the future should be monitored so that any adjustments in the estimates that follow can be based upon those changes.

The methodology utilized in making public service impact estimates is not intended to make detailed financial assessments and capital improvement plans. Nor is it intended as an infrastructural design tool. Due to the lack of land use data, information is not available on the lineal footage of existing road and utilities available for development or redevelopment at the present time. This methodology can be utilized, however, as a general guide in demonstrating the magnitude of impacts that can be expected in Kodiak.

In order to determine the impacts of OCS development on public services, the amount of land that will be served by public services and the density of development that is expected to occur must be determined. In the absence of a set of community goals and objectives, estimates have been made based upon the basic residential zoning districts in the Kodiak Island Borough Zoning Ordinance. Density was determined as follows.

First, 28 percent of the land on a gross acreage basis (or 12,197 square feet per acre) was subtracted for the purposes of road rights-of-way. The remaining land, 31,363 square feet per acre, was divided by the lot sizes allowed in the zoning ordinance. Then the dwelling units allowed per lot were allocated based on the requirements of the zoning ordinance. With some simple arithmetic we can then determine the amount of land per dwelling unit. The formula is as follows:

1 Acre - 28% = Developable Land Per Acre (DLA)

DLA/Minimum Lot Size = Number of Lots Per Acre (LPA)

LPA x Maximum Allowed Dwelling Units Per Lot = Dwelling Units Per Acre (UPA)

The Kodiak Zoning Ordinance allows a minimum lot size of 7200 square feet in any residential zone. The densities within the R-1, R-2, and R-3 zones vary, depending upon the zone and the actual lot size involved. An example of the formula described above based on the R-1 zone would be as follows:

43,560 square feet (1 acre) - 12,197 (28%) = 31,363 (DLA)

31,363 sq. ft. divided by 7200 sq. ft. = 4.35 (LPA)

4.35 lots x 1 unit per lot (R-1) = 4.35 (UPA)

An example of a higher density zone is available through a review of the R-3 zone, which requires 2,000 sq. ft. per dwelling unit. If a landowner desires to build a six-unit apartment under the R-3 zone he would be required to provide a 12,000 square foot minimum lot. Thus the last two lines of the formula would read as follows:

31,360 sq. ft. divided by 12,000 sq. ft = 2.61 (LPA)

2.61 lots x 6 units = 15.7 (UPA)

Similar density figures can be developed for all of the zoning districts and any residential development proposal.

To obtain the gross land area required per dwelling unit, including rights-of-way, we divide the square footage in an acre by the number of units per acre. Thus a six-plex in the R-3 zone would result in 43,560 sq. ft. divided by 15.7 units per acre equals 2,774.5 gross square feet of land per dwelling unit.

In order to determine the length of roads, and thus water and sewer lines to serve new residential development, we now go back to the 28 percent of land on a gross acreage basis that was allocated for rights-of-way. A simple arithmatic formula is used.

Length = area divided by width

We have already established that the normal width of road rights-of-way in Kodiak are 60 feet. Therefore, the length of road required to serve developed land is estimated as follows: 12,197 sq. ft. divided by 60

feet equals 203.3 lineal feet. Based on these formulas, we can estimate that for each acre of gross land area that is devleoped for residential uses, approximately 200 feet of road will be required to provide adequate access. Based on our assumption that the length of water and sewer lines is equivalent to the length of roads on a gross area basis, it is estimated that 200 lineal feet of water line and sewer line are also required to serve each acre of developed land.

By comparison, three hypothetical cases based on different development densities are presented below. Example A represents the development of new dwelling units at the maximum density allowed by the R-1 zone in the Kodiak Zoning Ordinance (4.35 units per acre). Hypothetical Example B represents new residential development based on a density of 15.7 units per acre (six-plex development in the R-3 zone). Hypothetical Example C involves one additional factor. As discussed in the section on Housing Impacts, a substantial amount of residential development could occur outside the reasonable limits of public services (water, sewer and roads). This could occur based upon the desires of the new residents or upon the goals and objectives established by the existing residents of Kodiak. For the purposes of comparison, we assumed that 50 percent of the new housing units constructed through 1988 would be beyond the limits of public services and would be developed at a gross density of .67 units per acre (1.5 acres per dwelling unit). The remaining 50 percent of the new housing will be developed within the metropolitan area at a gross density of 4.35 units per acre (R-1) and would utilize public services.

The following figure has two basic intents. First it provides a generalized estimate of the land area and public services required to serve new residential development at varying densities. Second, it allows comparison of the results of land use decisions relative to the requirements for public services. See Table 26.

Analysis of these figures reveals that the relatively low denstiy, typical single family development indicated in Example A requires construction of 24.5 to 41.83 miles each of roadways, water, and sewer lines, depending on the development scenario used. The lower number is almost twice as much road as the City currently maintains. However, relatively high density development (Example B) will require 6.79 to 11.59 miles each of water, sewer, and roads, again depending on scenario. Hypothetical Example C calls for 12.25 to 21.12 miles of public services, about half as much as in Example A. The lower number, representing the no development scenario, is slightly below the current amount of roads now maintained by the City of Kodiak. The magnitude of the difference caused by the varying densities is further emphasized by looking at lineal feet of public services per dwelling unit. In Examples A and C, required footage is some 3.5 times more than the high density Example B.

These comparisons point out the importance of land use decisions. If the community elects to encourage high density development with a full range of community facilities and utilities, the ratio of lineal feet of public service per dwelling unit is much lower than if it decides to encourage low density development.

Table 26: Development Requirements With OCS Development

Case	# New Housing Required	Land Required	Road Required	Water & Sewer Lines Required
Example "A" @ 4.35 Units Per Acre				
Case 1	2814	646.9	129,380'	129,380'
Case 2a	3545	814.9	162,980'	162,980'
Case 2b	2955	679.3	135,860'	135,860'
Case 3	4804	1104.4	220,880'	220,880'
Example "B" @ 15.7 Units Per Acre				
Case 1	2814	179.2	35,851'	35,851'
Case 2a	3545	225.8	45,144'	45,144'
Case 2b	2955	188.2	37,646'	37,646'
Case 3	4804	305.9	61,195'	61,195'

Example "C" @ 4.35 Units per Acre (1)

Case	New Hous. (no Public Services)	Land Req. @ .67 Unit/Ac.	New Hous. w/ Public Services	Land Req. @ 4.35 Units/Ac.	Miles of Water,Sewer Road(2)	Total Land Required
Case 1	1407	2100	1407	323.4	66,000'	3432.0 Ac.
Case 2a	1773	2646	1772	408.3	81,682'	3054.3 Ac.
Case 2b	1478	2206	1477	339.5	67,901'	2545.5 Ac.
Case 3	2402	3585	2402	552.2	111,514'	4137.2 Ac.

(1) Example "C" = 50% of new housing units are beyond reasonable limits os public services -- developed at gross density of .75 units per acre (upa). Remaining housing utilizing publis services -- developed at gross density of 4.35 upa.

(2) Within Metropolitan Area

Source: Simpson Usher Jones, Inc. (Sontag), 1977.

Total land area required in Example A ranges from 647 to 1,104 acres, depending on the development scenario; in Example B, from 179 to 306 acres; and in Example C, from 2423 to 4137 acres, half of which is inside and half outside the metorpolitan area.

Presumably, as development activity increases the majority of new structures will be on existing utilities and roads. Shortly after the initial impacts of OCS development and resultant population growth, the existing road and utility system will be utilized to capacity. New facilities must then be constructed to accommodate any additional growth. Given this basis, future costs of these public services are estimated. As that land served by existing road and utility lines is developed, it

will be necessary to extend those services or force new development outside the area of public services and, consequently, require extremely low densities.

Cost per lineal foot of these services in Kodiak is now quite high: an average $180 per lineal foot for combined water and sewer service. This average is based on trunk and lateral sewers and various soil conditions. Cost of streets and street improvements, including paving, is approximately $250 per lineal foot. However, gravel roads built to minimum standards (20 feet wide) cost approximately $60 per lineal foot. (8) Utilizing these figures, we can calculate the potential costs of the public services based on the densities indicated in the Hypothetical Examples A, B and C. It is assumed in Example C that the housing units outside the reasonable limits of public services will have privately owned and maintained roads, water and sewer systems. Table 27 shows the cumulative costs for each case.

Table 27: Cost of Public Services*

Case	Miles Public Serv.	Sewer & Water	Paved Road	Minimum Gravel Rd.
Example "A"/4.35 upa				
Case 1	24.50	$11,642,000	$32,340,000	$ 7,761,600
Case 2a	30,87	14,669,424	40,748,400	9,779,616
Case 2b	25.73	12,226,896	33,963,600	8,151,264

* Sewer and water @ $90.00 per lineal foot = $475,200 per mile.
Paved Road @ $250.00 per lineal foot = $1,320,000 per mile.
Minimum Gravel Road @ $60.00 per lineal foot = $316,800 per mile.

Source: Simpson Usher Jones, Inc. (Sontag), 1977.

Estimates assume that all new development subsequent to 1980 will require new public services, and residential development prior to 1980 will utilize existing services. In actual fact there will probably be a gradual switch from existing to new public services. The relative ratio of development within lands currently served by public services to development in newly served areas is impossible to determine on a year-to-year basis.

This information clearly shows that higher density development is more economical per dwelling unit from a direct cost standpoint. Traditionally, low density single family development does not pay for the services it requires through the taxes it generates, and medium density apartments normally pay in taxes more than their share of costs of public services. These factors should be considered when determining the mix of densities necessary to support adequate public facilities.

Housing

Anticipating housing impacts from OCS development are calculated by multiplying the projected population increases by the estimated family size, taking into account the historical trend of a decreasing number of persons per family. (See Housing Inventory and Demographic Inventory, Volume II).

Table 28 shows the housing required between 1978 and 1992 with OCS development according to the various scenarios. Family size figures are based on historical trends in Kodiak and the population projections in the Demographic Inventory in Volume II. The table shows the total number of housing units required to support the indicated population, as well as the yearly increase in housing units necessary to accommodate the yearly population increase.

As Tables 28-31 show, demand for new housing units corresponds to population increases (Table 24) and to the type of employee activity (Table 16 in first section). This demand increases as short term employment decreases.

Peak number of additional units needed in each case is 409 in Case 1 (1985); 843 in Case 2a (1987); 769 in Case 2b (1989); and 894 in Case 3 (1989). Total additional housing needs vary from 2814 units in the low find scenario to 4804 units in the high find scenario; likewise, average number needed per year from now until 1992 range from 165.5 to 283. These are only averages, and in any given year the requirements are either well below or above that figure. However, they do represent an increase in annual housing requirements from those predicted in the Housing Inventory of Volume II.

The community must make many decisions concerning the location and type of housing to meet this expected demand. Presumably a disproportionate majority of the new housing units will be in the Kodiak metropolitan area and along the road system. This is primarily because most population increases will be due to OCS development, and employment opportunities will either be within the Kodiak metropolitan area, at service base sites, or near the road system (see Map 3).

UNSUITABLE & UNAVAILABLE LANDS

Prepared by Simpson Usher Jones Inc. for Kodiak Island Borough.

MAP 3

As indicated earlier, apparently the only suitable land available from directly related onshore facilities is either near or on the road system. This does not necessarily mean that all or even most housing will be in or immediately adjacent to the City of Kodiak. Depending on land use decisions made by the Kodiak Island Borough, a situation could easily arise whereby large numbers of housing units could be placed on the road system beyond the limits of public utilities and services but close to places of employment. For instance, if onshore service bases, marine terminals, and crude oil storage facilities are constructed near the end of the Chiniak Road at Chiniak or on Ugak Bay, personnel there who did decide to live in Kodiak permanently may choose to live relatively close to those facilities. Thus, a population center in that area is possible assuming developable land were made available for housing and ancillary commercial uses.

Conversely, if the Borough prefers to concentrate residential development in the metropolitan area, it could discourage and, in some cases, even prohibit residential development in other areas. This would affect the characteristics and, therefore, the impacts of growth related to OCS development.

Electrical Service

As indicated in the Community Facilities Inventory (Volume II), the Kodiak Electrical Association (KDA) has a current generating capacity of 24,918 kilowatts. At present all of KEA's generating capacity comes from diesel genrating turbines.

The current kilowatt-to-opulation ratio is 2.5 kilowatts per person utilizing the estimated 1976 population as a base. KEA feels that their current generating capacity will be satisfactory to accommodate the expected population growth through the early 1980's. This projection does not, however, take into account additional growth resulting from OCS development. Under normal growth conditions, by 1985 the population would be 13,439 people and the kilowatt-to-population ratio would be 1.8 kilowatts per person. However, with the induced population as a result of OCS development, that 13,000 plus population will be reached one to three years earlier than expected, depending on the development scenario. In addition, the population will continue to grow at an accelerated rate for about five years after that population is reached. Therefore, it is imperative that the electric utility begin to plan for additional power demands immediately. Also, if OCS facilities locate close enough to the City of Kodiak to utilize KEA power, it is likely that the current generating capacity would not be adequate past 1982.

With this obvious need for accelerated development of additional generating capacity, the question of the source of electrical power arises. As indicated in the Community Facilities Inventory (Volume II), KEA's plant is the largest diesel electrical generating plant in the state. At present the price of diesel fuel is rising at an extremely rapid rate. If diesel power is utilized to increase capacity and thus additional fuel supplies are required at the higher rates, then the cost of electrical power will rise accordingly.

This trend indicates a need for the development of alternative power sources. Hydroelectric power generation is historically the most inexpensive method of generating electicity. Consequently, the feasibility of the Terror Lake Hydroelectric project should be investigated thoroughly.

Law Enforcement Services

As indicated in the Community Profile and in Volume II (Public Safety Facilities), historically crime has not been a significant problem in Kodiak. However, in the last year there have been significant increases in criminal rates. This trend can be expected to continue throughout OCS development. The mobility of the new population and work force, the social and cultural differences, and pressures due to rapid population growth will result in increased crime rates. In order to cope with this situation, all of the law enforcement services should increase their effectiveness, primarily through increases in work force.

At present the ratios of police officers and public safety employees to population is relatively high in Kodiak, as is the number of law enforcement officers per thousand population. According to the 1975 Federal Bureau of Investigation, the average ratio of full time law enforcement employees (including civilians) per 1,000 population in cities under 10,000 in population in the Pacific states is 2.8 employees per 1,000 population in 1975. (9) In Kodiak, however, in 1976 the ratio of police department employees per 1,000 population was 5.1 per 1,000. However, the ratio of law enforcement officers per 1,000 in similar cities in 1975 was 2.2. In Kodiak the ratio is 2.5. This is based on an estimated city population in 1975 of 5,500 persons (see Volume II, Demographic Inventory). This ratio is about 13 percent higher than the average for cities of similar size and location. However, the high increase in crime rate justifies these higher ratios. In fact, to handle the work load required by the increase in crime, the department has proposed adding three officers to its force. This would bring the ratio of officers to population to 3 officers per 1,000 population.

In order to maintain the same police officer to population ratios throughout the rapid population growth period during OCS development, significant increases will have to be made in the police force. Table 32 shows an estimate of the required police force increases based on the growth of population of the entire Kodiak Island Borough. The estimated requirements for police force personnel was calculated in this manner for two reasons. First, it is impossible to determine the rate in which the City of Kodiak will grow relative to the entire population because of possible changes in city limits and unknown factors concerning the location of future residential units. Also, as the City of Kodiak is the only major city within the Kodiak Island Borough, most of that population spends some time within the city limits.

The current ratio of city police officers to total Borough population is 1.046 officers per 1,000. Based on the current estimated need for three new officers (see City Police Department - Public Safety Inventory, Volume II), the desirable rate would be slightly over 1.3 officers per

1,000 population. This figure is used in calculating the requirements for new police officers through the OCS development period.

Table 32: Police Force Requirements - City of Kodiak - With OCS

1992	16,982	22	20,133	26	19,649	26	22,526	29

Source: Simpson Usher Jones, Inc. (Sontag), 1977

As can be seen, by 1992 the need for officers will increase in proportion to the population, rising by some 69 percent in Case 1 and some 123 percent in Case 3. These figures also apply to other public safety personnel, whose activity is directly related to police activity.

Kodiak must maintain a high level of law enforcement capabilities to maintain the quality of life. The "boom" that could occur will draw a higher proportion of cirminals that would normally come. To avoid severe criminal and social problems, police services must remain commensurate with population.

Educational Facilities

Rapid population growth will especially affect educational facilities in Kodiak. In the past public schools in Kodiak have generally shown increased enrollment figures as the population has grown. Between 1970 and 1974 the population within the five- to seventeen-year old age group grew at approximately three percent per year, comparable to the rate of growth for the total population. By 1974 that age group represented 28.2 percent of the total population on Kodiak Island. However, the continuation of that relative increase is difficult to project accurately for a number of reasons. First is the decrease in size of the average family in Kodiak, as described in the Demographic Inventory (Volume II). Second, families that move into Kodiak as a result of OCS development will tend to be younger and thus more likely to have children of school age. However, the fact that these people are more mobile and are in most cases moving to a new environment, often without prior knowledge of its characteristics, would tend to result in less children.

In estimating the future demands on educational facilities, we assumed that all these trends will stabilize the percentage of the population in the five to seventeen year old age group at approximately 30 percent. Table 33 shows the number of people in that age group that will result from the population growth associated with OCS development.

Table 33: Additional Classrooms Needed With OCS Development

1992	5094	6040	5895	6758	255	302	295	338

Source: Simpson Usher Jones, Inc. (Sontag), 1977.

The table also shows the number of classrooms needed to maintain a 20 student per classroom ratio in the schools. At present the schools within the Kodiak metropolitan area are slightly above 20 students per classroom, and the village schools are in most cases well below that ratio. As most population growth associated with OCS development will probably be in the Kodiak metropolitan area and its environs, most classrooms will be needed there.

Now the urban area has 161 classrooms, according to the Kodiak Island Borough School District. This will meet the needs generated by population growth through 1978. After 1979 additional classrooms will be required as shown in Table 33.

Communication Facilities

The Glacier State Telephone Company has recently expanded its facilities in Kodiak to meet estimated demands under normal growth rates to 1980. The population expected in the Kodiak Island Borough under normal growth rates in 1980 would be 11,370 people. However, the next few years will experience the accelerated population growth generated by OCS development. Again it is imperative that the telephone company begin planning now to meet that demand as it occurs. Fortunately, according to Glacier State Telephone Company, the facilities in Kodiak are capable of expansion to meet any reasonable future demands. (See Communications Inventory - Volume II.)

The demands on commercial communication facilities (radio and television) will increase according to population increases. Since they are owned by profit-making corporations whose revenues are generated primarily by advertising, it is anticipated that the level of service will increase as revenues from advertising increase. This is a normal function of the commercial market and should represent no appreciable impact on the Kodiak community.

Recreational Facilities

Kodiak is fortunate to have a tremendous amount of park land and open space surrounding the city. The Chugach National Forest and the Kodiak Wildlife Refuge occupy the great majority of the land area of the Kodiak Island Borough. They offer good recreational facilities and opportunities. In addition Kodiak's location on the coastline near some of the best fishing areas and water recreation areas in the State further enhances the recreation opportunities available to the residents.

Neighborhood parks are another consideration, however. Currently Kodiak has less than 15 acres of neighborhood park area. According to the ratios developed in the Demographic Inventory, approximately 84 percent of the population, or 8,347 residents, currently live within the metropolitan area or on the road system. The National Park Recreation and Open Space Association recommends a minimum of 2.5 acres of neighborhood parks per 1,000 population. The ratio for Kodiak currently is 2.5 acres per 1,400

population. To bring the amount of parks into conformity with the national standards, an additional five acres is currently needed in the Kodiak metropolitan area for park lands. Based on the projected population increases due to OCS development, an additional 20 acres of neighborhood parks will be needed by 1988. See Table 34.

Table 34: Neighborhood Park Requirements - 1988 - With OCS

Case	1988 Population	Total # Acres Needed	# Additional Acres Needed
1	14,857	37	17
2a	17,217	43	23
2b	16,579	41	21
3	19,369	48	28

Source: Simpson Usher Jones, Inc. (Sontag), 1977.

Again, according to the National Park Recreation and Open Space Association standards, neighborhood parks for a community the size of Kodiak should be between five and ten acres each. To accomplish this goal, Kodiak must begin planning the locations of these parks now.

Local Economy

Some of the largest impacts generated by rapid growth and development are felt in the economy. Many are the positive effects of economic growth: businesses flourish, job opportunities increase, and salaries rise. At the same time, however, prices and unemployment rise and those persons and families who cannot or do not partake of the higher salaries are adversely affected.

One basic cost that will probably rise as a result of an economic boom is the cost of government. As population increases, so does the demand for services provided by government. Funds to pay for those services will be generated by two sources. One is an increase in taxes. This is normally resisted by local government for a variety of reasons. The other is an actual increase in population which increases the tax base.

There is normally a lag in the services provided by government in a boom situation. Consequently, the demand for the services increases even more. In addition to this supply and demand function, increased government costs will be generated by the need for governmental provision of increased regulatory functions in a number of areas.

Rapid and increasing development demands monitoring and regulatory functions in order to preserve the health, safety and welfare of the population. These functions come in the areas of building codes, zoning, health and social services, education and police protection. All of these aspects have been discussed previously and their potential for increase has been noted.

In addition to regulatory and public service functions, additional governmental activity will be desirable in order to monitor the activities of the oil industry. Without such monitoring and the background data that it generates, the local governments cannot plan for and respond to the major phases of development.

Assigning exact numbers or percentages of increase to these factors is impossible without prior knowledge of the methods the community will utilize in approaching future growth. However, in general, increases from 10 to 15 percent per year in the cost of government would not be unexpected.

Increase in the cost of government also connotes an increase in the cost of living. The cost of living is affected not only by government but also by the increased demand and consequent costs of goods and services and housing. Housing is one of the most basic and largest cost in the cost of living index. As indicated before, demand for housing units will rise substantially during the exploration and development phases of OCS development in the event of a high find. Subsequent to those phases, the demand should return to a growth rate similar to that experienced prior to OCS development. During those periods of high demand, however, the cost of housing will be determined by the basic market function. If new development is encouraged and keeps pace with population growth, then increases in the cost of housing will be relatively normal. However, if residential development occurs at a pace slower than population growth, the cost of housing will increase.

As in the case of government services, there is a great potential lag in the provision of housing units. In the early 1980's population could jump substantially. However, most of that population growth will be based on short term employment. There could be a distinct tendency for the construction industry to avoid overbuilding during that period. Consequently, when permanent population increases do result from the longer term work in the mid-1980's, housing could be in extremely short supply.

The situation relative to basic commercial goods and services is similar to that of housing. However, the impact of OCS development should not be as direct. Most of the goods and services provided for OCS activities will be shipped from places other than Kodiak (Anchorage, Seattle, etc.). Consequently, the market function should provide basic goods and services to the population as it grows.

Impacts on basic industries could be either significant or neglible. As indicated in the Economic Inventory in Volume II, fishing is the basic industry in Kodiak. There are a number of ways in which the fishing

industry could be affected. If there is a major environmental catastrophe, the productivity of the industry could be drastically reduced. This would severely damage the economy of Kodiak despite the economic growth due to OCS development. In the absence of environmental catastrophes, the potential productivity of the fishing industry would be governed, as it is today by primarily natural instead of economic factors. The economic productivity of the industry increases due to increased local demand for fresh fish products.

The fishing industry could also be affected by a reduction in the labor force. If wages and salaries paid to workers associated with OCS development are competitive with earnings in the fishing industry, industrial activities could syphon off some of the fishing labor market. If so, the overall economic productivity of the fishing industry could be reduced. Even this impact could have beneficial qualities. If fishing productivity remains high, it is doubtful that successful fishermen would abandon their current jobs. If the fishing productivity declined because of natural factors, then the industrial activity associated with OCS development might serve as a "labor sponge" for these fishermen not able to make competitive wages. This might also reduce the intensity of fishing activity in those lean years, allowing marine resources to regenerate.

Another potential impact on the fishing industry is the increase in oil-related marine activity. As indicated, at the peak of activity as many as 12 supply boats could be making up to 300 trips per month. This would be in addition to the associated barge and tanker traffic.

Collisions are a serious result of this increased marine traffic. While the number of boats involved in oil activities will be insignificant compared to the total number of fishing boats, the frequency of supply boat trips makes collisions a hazard. This is especially true considering the frequency of weather conditions limiting visibility in the Kodiak area. A collision between a supply boat and a fishing vessel could have serious repercussions in addition to the possible loss of life and property. It could create resentment against oil-related people and a subsequent increase in social and psychological pressures. On the other hand, oil-related boats and platforms could provide navigational and emergency services.

Impacts on the fishing industry can also be caused by obstructions on the sea floor that interfere with fishing gear. Obstructions could include pipelines, production facilities, anchors associated with semi-submersible rigs, and debris. All but the latter should be marked by buoys. However, some buoys will enevitably be lost. To minimize fishing gear damage, the industry should initiate a strict bouy maintenance program. They may also establish a fund to replace of been damaged by oil-related equipment or activity.

Another adverse effect on the fishing industry results from potential competition for harbor facilities and marine services. Although Kodiak is among the top three fishing ports in the United States, the community is extremely short on harbor facilities and marine services. The small

boat harbor is hopelessly overcrowded and boats are normally parked up to four abreast at the transient docks. Competition is high for space on the grids and fuel dock. Nevertheless, through a spirit of cooperation and common purpose, the fishing boats seldom have serious conflicts. The addition of oil industry-related marine traffic could create significant problems. Harbor facilities cannot handle the 200 foot supply boats and no maintenance facilities are capable of servicing oil-related vessels. In fact, there are no dry dock facilities on Kodiak Island.

In addition, fuel supplies may not be sufficient for both oil and fishing boats. For example, in August 1976 several geophysical vessels operating on the Kodiak Shelf refueled in the harbor. In doing so they depleted the supply, and fishing boats were left without fuel. This situation can create an adverse reaction toward the oil industry as well as economically affecting the fishing industry. To avoid this competition between oil and fishing vessels, the oil industry could moor, maintain and fuel their boats at supply bases remote from the fishing ports on Kodiak Island. In addition, operators of both oil and fishing industry vessels should understand the purpose, needs and capabilities of each vessel's use.

Transportation Impacts

As with other basic community facilities and services, OCS impacts on Kodiak's transportation system would be substantial. They can be measured in terms of the expected increases in industrial activity as well as increases in population. The potential increased demand for roads and airport facilities has already been described. Impacts, especially those associated with surface transportation, will be substantial and costly.

Air Transportation

Considering the labor force directly related to oil development and production (not including construction workers), we can estimate the requirements for commercial air carrier service. This kind of shift or "hitch" work has been common in the oil fields of Alaska.

During the peak years of 1987 in Case 2a and 1986 in Case 3, 1375 and 2122 people will be employed, respectively, in the offshore/onshore support services. If a three week on, one week off crew change schedule is utilized, the 25 percent of that work force will change crews each week. Consequently, 319 or 530 people per week will leave their jobs for home, assuming most workers do not move to Kodiak.

At present Wien Air Alaska flies up to 14 flights into Kodiak per week, and Western Airlines flies three flights a week to Kodiak from Seattle for seven months of the year. During the summer, then, a total of 17 flights a week to Kodiak. The Boeing 737 aircraft that Wien uses carries 112 persons; however, Wien often has cargo on the same aircraft. Based on an average two-to-one passenger to cargo area ratio, it can

carry approximately 900 persons per week into and out of Kodiak.(10) The Western plane carries almost all passengers, giving an average capacity of 110 passengers and allowing 330 passengers in and out of Kodiak per week. This gives Kodiak a total commercial air carrier capacity of 1230 passengers per week. The addition of 319 employees, as in Case 2a, would require an extra three flights per week; 530 workers, as in Case 3, would require five extra flights.

In addition to the employees directly related to OCS development, construction crews will be moving in and out of Kodiak. It is impossible to estimate the volume and frequency of their travel. However, if the local government isolates OCS industrialization from population centers, the work force will live in construction camps at the construction site. Constractors would then probably to go to the crew change mode of operation. Added to these employees will be the increased population due to economic development and the increased in transient assuming a relatively large number of "boomers" or "camp followers" will arrive in Kodiak on a regular basis.

Along with passenger traffic increase comes an increase in cargo volume. Additional cargo capacity will be needed primarily to supply the everyday goods necessary to support an increased population, although there may be an added increase due to the OCS related supplies utilized for the construction camps, marine service bases, and offshore rigs. Again, it is difficult to estimate the increases in cargo necessary without extensive research into airline records. However, based on the information available, an additional two flights per week from Anchorage would be required for purely cargo purposes in the event of a high find.(11)

This brings the total increase in flights into the Kodiak airport to a potential five to eight per week, or a 29 to 47 percent increase in commercial air carrier activity. This would give a total of 22 to 25 flights per week, or about three flights per day, into Kodiak on a year round basis.

Marine Transportation

The impacts on marine transportation facilities will also be significant. As indicated in the Transportation Inventory (Volume II), City of Kodiak dock facilities are currently operating at their maximum capacity. In the last year, 165 vessels have utilized the city dock facilities and have moved 205,000 tons of cargo to and from Kodiak. That cargo volume represents no extraordinary industrial acitvity. We can assume that the demand for cargo tonnage will increase at least in proportion to population growth, not including increases in cargo due to OCS-related activity. Since the capacity of existing facilities is limited, thier use for OCS-related cargo should be avoided.

In 1976 the ratio of cargo tonnage at the city dock per population was approximately 21 tons per person based on the estimated population of the Borough. Table 35 gives the total tonnage through 1992 based on population growth anticipated by OCS development.

Table 35: Estimated Tonnage*- Kodiak Cargo Dock - With OCS

Year	Case 1 No Find	Case 2a Mod Find Pipeline	Case 2b Mod Find S.B.M.	Case 3 High Find
1978	223,314	223,314	223,314	223,314
1979	230,916	230,916	230,916	230,916
1980	242,823	244,902	244,902	244,902
1981	253,932	261,114	261,114	268,989
1982	265,377	278,208	275,436	280,644
1983	268,611	285,957	280,413	297,192
1984	272,937	294,483	284,739	314,748
1985	282,219	306,852	290,409	346,626
1986	291,816	337,974	319,200	399,798
1987	301,728	389,928	337,890	406,980
1988	311,997	361,557	348,159	406,749

1991	344,904	420,840	410,676	471,093
1992	356,622	422,793	412,629	473,046

* Estimated at 21 tons/person

Source: Simpson Usher Jones, Inc. (Sontag), 1977.

Over the next 16 years cargo weight increases steadily by some 65 percent in Case 1 and 119% in Case 3. Since current dock facilities are operating at capacity, additional facilities will be required. It is not necessarily true that the frequency of vessel berthings will increase commensurate with the total tonnage increase. As Kodiak demands more cargo tonnage, it will become more economical for shippers (in this case, Sealand) to devote more cargo space on board each ship to Kodiak. There will undoubtedly be some increase in berthings, but the magnitude of increase is impossible to determine. Even so, under current conditions of 165 berthings per year, an average 2.2 days per berthing is available for unloading. As the frequency of berthings increases, the time available to load and unload ships decreases. As this happens, the need for storage and maneuvering space on the dock will become more critical. The City of Kodiak should expand port facilities as demand increases, and plans should be formulated now to keep abreast of community requirements.

Surface Transportation

Surface transportation between the airport and the service bases will generate additional transportation needs, as will transport of freight by barge and ship from the "Lower 48" or ports in Alaska (Seward or Anchorage) into the service base. Without knowing the size of the ships involved, it is impossible to estimate the frequency of trips needed to supply the 800,000 to 1.2 million tons of freight involved in the highest estimated level of development, Case 3. However, marine traffic is sure in increase substantially.

Industrial vehicular traffic between the service bases and the City of Kodiak will also increase if the bases are located on the highway system. This increase will be lower than that for marine traffic, as the bulk of drilling materials will be transported via ships and barges. (12) If it proves a significant increase, though, the roadbed along the Chiniak Highway must be upgraded. Bridges on the highway are relatively new and can support large semi-tractor/trailer trucks, according to the Highway Department (see Volume II - Transporation Facilities).

SUMMARY OF IMPACTS

Based upon the discussions and assumptions made in the preceding sections, it is clear that the total environment, both natural and human, will be subject to significant changes throughout the OCS development depending upon the level of oil activity. In Cases 2 and 3, the population will increase dramatically and change the social, economic and environmental characteristics of Kodiak Island. Public services will be in demand and possibly in short supply. Prices and the cost of living will increase at a rate never before experienced by the indigenous population of Kodiak. The everyday life of the resident of Kodiak will change as activity increases.

Many people are concerned that the quality of human life will be drastically and adversely affected. To some extent this is undeniable. However, in large part, the assessment of the quality of human environment is subjective. Presumably, most current residents live there becasue they like the attributes of Kodiak. From their standpoint the changes will undoubtedly degrade the quality of life. However, new residents who move there as a result of OCS development may feel that the quality of life may improve.

The potential for impacts on the natural environment are indeed frightening. In a "worst case scenario", large areas of land could be destroyed, the resources of the abundant sea could be reduced or destroyed, the quality of water, both fresh water and salt water, could be severely degraded, and the air around Kodiak could turn to a hazy brown. Conversely, if strict controls are placed on industry activities and if the oil development process is fortunate enough to be free of natural catastrophes and significant human error, the final assessment of impacts on the natural environment could be minimal. The potential for each case is there. Much depends upon the residents' level of concern, the efficiency of the

government in its regulatory functions, the responsiveness and responsibility of the oil industry, and, perhaps most important, the cooperation of nature.

ALTERNATIVE POLICIES AND PROGRAMS

There are a number of methods available to the Kodiak community and its governments that will allow preparation for and some degree of control over the impacts of OCS development. As has been indicated earlier, the actions of the oil industry have the potential of affecting all segments of the social and economic structure of Kodiak and almost all locations in the Kodiak Borough. Some of these impacts will be more significant than others; however, all of them need to be addressed by the community.

The community should be constantly aware that the most effective way to control impacts of any development, including OCS related activities, is to control the source of those impacts. This does not necessarily mean imposed or totalitarian control; cooperative control can be even more effective. In this case the source of the impacts is OCS activity. However, in the case of each individual impact there is also a subsource, i.e., marine traffic, environmental degradation due to construction, population growth, etc. In each case some form of control over those subsources would be the ideal method of mitigating the impacts. In a totalitarian government control of the impact sources would be a basic function of government and would be relatively uncomplicated in terms of the power of control. However, that situation would also give rise for opportunities for abuse of the control, both over the activities and the people affected by the impacts. In the United States, in order for a community to gain the level of control that will be effective in determining negative impacts, cohesive actions on the part of the entire community is necessary. Any OCS community has the power to control OCS related development to a certain extent. In order to do so, however, it requires a tremendous amount of human energy. Public officials and the residents of the community have to be knowledgeable of the operational modes, attitudes, and methods of the oil industry. In addition, the community must identify the factors which can give them a good bargaining position. Those that are already available should be strengthened. Any others that are possible should be developed. Alternative courses of action should be formulated with respect to dealing with the oil industry and the direct and indirect impacts that can be expected. A wide range of community input should be received prior to settling on the utilization of one of those alternatives. When that decision is made, and only after it is made, the community can begin to effectively exert a controlling influence on their future with respect to OCS development.

In a step designed to begin that decision making process, the Kodiak Island Borough has recently signed a contract with the State Department of Community and Regional Affairs that will provide funds for the preparation of a Comprehensive Plan and an economic adjustment strategy intended to allow the community to prepare for the impacts of OCS development. The funds are being made available through the Federal Economic Development Administration and the Department of Housing and Urban Development.

These studies will include a set of comprehensive goals and objectives, a land use plan, an economic base study, a community facilities study, a housing study, a transportation plan (both internal and external), an implementation plan, a capital improvements plan and a government services program. The results should provide detailed recommendations for policies and programs to be pursued in each area based on the goals and objectives. This will be Kodiak's first opportunity to express its desires and needs in relation to OCS oil development. The strategies formulated will give direction to the governments and the oil industry concerning the community's intended approach toward OCS activities and their impacts.

The program and policy areas discussed below are intended to provide the impetus for direction that those studies should take. They are discussed in terms of alternatives. Without the input and information developed in the forthcoming studies, no final decisions can be made concerning the exact policies and programs that should be implemented. However, some recommendations are made where specific problems have been identified.

LAND USE POLICIES

Almost any economic activity requires the use of land. OCS development is no exception. Land is very important to the oil industry both in terms of dollars and convenience. Land will also be required by the community as a result of the indirect impacts of OCS development. Population growth will require land for housing, commercial activities and community facilities. All of these areas should be addressed by the community as they formulate their land use policies.

Industrial Site Planning for OCS Activities

There are a number of methods available for community control and/or regulation of OCS projects. In the coming years the local governments will be faced with numerous decisions concerning OCS related development projects as well as projects resulting from population growth and community expansion. In evaluating the suitability of industrial facilities related to OCS development, the community should know what stage of OCS development activity is involved in the facility, the scale and size and duration of the project, the type of activity that will be carried out as a result of the project, complete information concerning the ownership, management and ultimate responsibility for all aspects of the project, and the need for any public services that will be required by the project. Also, prior to making a final decision, the community must determine, either through assistance from the project sponsor or assistance from other governmental agencies (the state and federal government) or through its own staff, what the environmental, economic and social implications of the project might be.(13) There are two primary methods available to gain this information.

The most direct method of control is ownership. The community can either own the land or own the facility itself. If it owns the land, it

can lease it or it can sell it. Leasing is an extremely powerful method of control. A lease can contain many stipulations. The local government has almost no restrictions on the type of requirements they can include, such as the type of facility involved, the operational methods of the projects, the scale and magnitude of the project, design review requirements, and mandatory scheduling restrictions.

If the local government elects to sell land to the sponsor of an OCS related facility, the sale can affect almost any aspect of the ensuing development. However, control through deed restrictions is not as direct nor is it as effective as the controls that can be placed on a lease document.

The community also has the option of actually building the faciltiies through a public development corporation or an independent authority. The complete facilities can then be leased to the industry operatives. Pros and cons are associated with special purpose authorities. They offer a method of obtaining financing and funds other than those utilized by local governments. They also offer the opportunity to oversee a particular development with personnel who have the specific technical and professional expertise in the related field. Authorities can unfortunately be extremely complicated and redundant in terms of the powers that they exercise. Special purpose authorities are used throughout the United States for the development and control of ports, airports, housing programs and public services and facilities.

An alternative to creating a special purpose authority would be for the local governments to build and own the required industrial facilities as public facilities. Financing for an endeavor such as this could come from the oil industry itself.

The major method of controlling or affecting the impacts of OCS development is through regulations. Local governments in Alaska are charged with the responsibility to provide guidance and regulation in a number of fields. The resultant regulations have the potential of being extremely powerful in terms of effective control over OCS related projects. The types of regulations available include zoning ordinances, building codes, comprehensive planning and associated so-called specific area planning, capital improvements scheduling and growth phasing, and specific regulations developed for the purpose of controlling OCS development.(14)

The most common and probably the most affective of these regulations in terms of their potential for control over OCS industrial projects is the zoning ordinance. Through the use of a zoning ordinance, local government has the opportunity to establish land use limitations, dimensional requirements which include height, lot coverage, building placement, noise requirements, parking regulations, access requirements, review processes and a variety of other specialized regulations and requirements. Through judicious use of zoning powers, the Borough can determine the exact location and size of a particular zone that will allow OCS development. It should be noted, however, that these tools must not be used indiscriminately. One of the most basic concepts of planning, and one that has been upheld by the courts repeatedly in recent years, is that

zoning patterns and ordinances must be based upon comprehensive planning decisions that have already been made and published by the community. Without the proper background and implementation procedures, the zoning ordinances stand a good chance of being declared unconstitutional if taken to court.

The comprehensive plan is also a good tool for the regulation of industrial activities. It should indicate the type of development that the community expects to see, and the locations within which that development should occur. Within the comprehensive planning process, the community may include neighborhood plans or specific area plans. These are normally much more detailed in their scope and recommendations concerning land use and development.

Another strong method of control and/or regulation of OCS development is the environmental review process which is available through the federal government when federal funds are utilized. However, the local government has the authority to establish environmental criteria and review procedures for specific types of development. These can be used to affect the operational modes as well as the location of OCS related facilities.

Many of the above stated direct and indirect regulatory and control processes are currently available in the Kodiak Island Borough. However, a number of them are not available and have not been considered. The following recommendations are made based on obvious needs that currently exist in Kodiak. Acceptance and implementation of the recommendations should be based on goals and objectives that are developed during the comprehensive planning process.

Recommendations

1. To the extent possible, the Kodiak Island Borough should discourage the location of OCS related industrial facilities within the Kodiak metropolitan area or in any of the other villages on Kodiak Island. The location of such facilities within those areas would be extremely disruptive to the traditional lifestyles, community structures, and social and economic characteristics. Also none of the communities provide the services and facilities required by the oil industry; consequently, an attempt to provide those facilities would result in an extreme hardship on the community for many years to come. The Borough should insist that the oil industry be self sufficient and willing to pay its own way in terms of the impacts resulting from facilities directly related to OCS development and the indirect impacts created by population growth accompanying OCS development.

2. As stated, the community is beginning a comprehensive planning process. A great deal of attention should be devoted to this on the part of the public officials as well as the residents of the community. Extraordinary measures should be taken to involve the community in the process so that an educated, cohesive and unified position can be taken by all of the residents of Kodiak Island on subjects of future growth and industrialization.

3. The Borough should completely revise its land use regulations in conjunction with the new comprehensive plan. As part of this revision process, the Borough is urged to look at new and innovative land regulation techniques such as planned unit developments, specific area plans, contract zoning, and conditional use permits.

4. The transportation portion of the comprehensive plan should include an official streets and highways plan that delineates major and minor arterials, collectors and neighborhood streets as well as standards for construction and traffic loads for those streets.

5. A complete detailed six year capital improvements program should be developed and adhered to.

In addition to these recommendations for specific programs and policies, the community should investigate the feasibility of utilizing the following methods of OCS control.

1. Special purpose authorities.

2. Financial and staff assistance from state and federal agencies.

3. The possibility of cooperative and/or joint agreements with the oil industry for development of OCS facilities.

Residential Policies

The current housing problem in Kodiak will become more severe unless action is taken now to solve the problem. The community must determine its goals and objectives and desires as well as its capabilities. The type of housing, the density and the location at which housing should be placed should be specifically identified. Also important are the obstacles present that could inhibit the development of housing in Kodiak. These could include financing, community facilities and utilities, and land. Assistance is available from both state and federal agencies as well as private consultants in solving these problems.

A number of approaches can be taken in dealing with housing problems. They must be coordinated with the comprehensive planning effort and an adopted set of goals and objectives.

One of the first tasks necessary will be to determine what lands are appropriate and available for housing development. Plans must be made for the provision of a full range of community services and facilities (water, sewer, roads, electricity) to that land. Without this action, housing development in the future will be haphazard, scattered and provision of public services in the future will be significantly more expensive.

The community should also encourage utilization by developers and public agencies of federal and state housing programs. Numerous programs are available ranging from assistance to the housing occupant to mortgage

insurance and direct assistance to contractors. It is also possible for the local governments to set up housing authorities through federal programs and thus be able to develop the housing themselves.

It will be important during certain phases of the OCS development for theIt will be important during certain phases of the OCS development for the community to have made provisions for temporary housing. During periods of high intensity, short term employment the demand for housing will be especially high. This "spill over" housing could be developed through mobile home parks with temporary water, sewer and electric facilities that could either be converted or removed when the demand for such housing decreases.

One of the most serious housing problems in Kodiak is cost. Throughout the various phases of OCS development that problem will become consistently more serious. It is important for the community to institute programs and policies that will help alleviate escalating cost trends to the extent possible. Rapid inflation of land costs can be stabilized through the passage and strict adherence to comprehensive plans.(15) If a landowner or prospective land buyer knows that the land in question has been planned and zoned for a specific use, the value of that land will not only be established and maintained, but the potential for speculative increases in land costs will be reduced.

Escalating construction costs can also be counteracted through a number of public policies. These are primarily centered around zoning and the provision of public services. As we have pointed out previously, higher densities will normally decrease public costs. They will also result in lower cost per unit to the consumer. Higher density housing does not necessarity mean that the living environment within those units is degrading. Through modern zoning and design techniques, townhouses and condominiums with adequate recreational and design amenities can be encouraged. The result can be very attractive residential projects on relatively small amounts of land. Such projects have the potential of a greater efficiency of public utilities and roads and less expensive building costs compared with the quality of the units involved.

This concept applies to almost any type of housing development. Through the use of incentives, the local governments can allow the housing developer an opportunity for a high rate of return on his investment in return for the provision of greater amounts and qualities of amenities.

Recommendations

The following recommendations are made for consideration by the local community.

1. In the capital improvements program and the comprehensive plan, the community should indicate exact areas where public utilities and facilities are to be extended. They should also specifiy the timing of the provision of those services. This will allow both public and private entities to prepare for development well in advance of its occurrence

and thus reduce escalation in land costs and result in improved physical planning. There is no question that as population grows housing units will be built, and in many cases public facilities, utilities and roads will have to be extended to them. If their location and densities are predicted in advance, the cost of providing those services could be reduced.

2. The rewrite of the zoning ordinance should include conditional use or special exception provisions in order to provide the local governments with the tools necessary to encourage innovative quality development. These will also provide the decision makers with a review and veto power over both residential and other types of development that are not in compliance with the comprehensive planning principals.

3. The community should develop and adopt a mobile home park ordinance and indicate on the comprehensive plan map, as well as the zoning map, areas in which it can be utilized. This will help to provide the spill over housing on a temporary basis and, if developed for permanent use, can allow moderate income families to own their own homes. Mobile home parks can be developed in an extremely attractive manner, assuming the inclusion of appropriate design and recreational amenities. The value of the mobile homes involved can actually appreciate over the years rather than depreciate, which has historically been the case in Kodiak.

Auxiliary Commercial and Industrial Policies

As the population in Kodiak grows as the result of normal growth trends or at an accelerated rate due to OCS development, the demand for commercial services and ancillary industrial uses will increase. There will be many development proposals placed before the community that are not directly associated with OCS activities. The community must be ready to analyze and make decisions concerning those developments with respect to the community goals. In reviewing commercial and industrial projects, information similar to that required for review of OCS related projects needs to be determined. In addition communities should analyze the market area that would be served by commercial projects. This will have an impact on the analysis of the locational characteristics of the project. In addition the communities should analyze the potential land use conflicts that could result from the location of commercial uses. In order to do so, information has to be gathered on current trends in Kodiak and their appropriateness to the communities' goals and objectives. This should be done as part of the comprehensive planning process. An important aspect of commercial and industrial projects are the traffic flows that will be created by their locations. Adequate streets that will prohibit the use of noncommercial (i.e., residential/recreational) streets for industrial or commercial oriented traffic should be provided. An official streets and highways plan would be extremely valuable in this type of analysis.

Recommendations

1. Kodiak should concentrate all major commercial development in the downtown area. The zoning ordinance could aid in doing this by providing incentives or bonuses for design amenities in this area. The incentives could be in the terms of height increments, density or intensity allowances, and a variety of other dimensional factors. Also, in order to encourage development in the downtown area, the community should consider the addition of municipal parking lots or structures in the downtown area. If the problems of vehicular conjestion continue to worsen, retail shoppers will tend to go to outlying shopping centers for their commercial services. Consequently the downtown area could actually decline in relative importance to the retail industry as the population increases.

2. While encouraging major commercial development in the downtown area, the planning authorities should allow for small neighborhood shopping facilities. These facilities should provide the commercial services that are needed to supply residential areas with their day-to-day commercial needs. It should not include commercial services that are provided on a community wide basis or other retail and heavy commercial outlets that are not necessary for the support of day-to-day needs. If these neighborhood commercial areas are kept small, they will not detract from the downtown area. This will help to reduce land use conflicts as well as traffic conflicts in and around residential areas by reducing the demand to drive downtown each time a small purchase is necessary. This balance between downtown and neighborhood commercial areas is critical and should be addressed in detail in the comprehensive plan.

3. Kodiak should consider the promotion or development of industrial/commercial parks. By concentrating industrial/commercial uses that are not necessary for day-to-day shopping needs or appropriate for the downtown area, both the community and businesses involved can benefit. This type of development will promote better use of land and public facilities, as well as enhance the esthetic qualities of commercial development. It also offers the opportunities for businesses that offer commercial services to other businesses to locate near their clients. This can be accomplished through the zoning ordinance as well as through municipal land leases and/or municipal development corporations.

TRANSPORTATION POLICIES

Transportation is Kodiak's lifeline. Its importance will increase throughout the phases of oil development, both from the standpoint of increased industrial requirements as well as because of population increases. The transportation characteristics of Kodiak are such that a significant rise in the cost of transportation can have a tremendous effect on the cost of living. The transportation system in Kodiak has three primary subcategories. They are (1) external transportation (transportation to and from the island from other points in Alaska and the Lower '48), (2) internal transportation (transportation to the

various parts of the island), and (3) local transportation within the communities. The community with the most obvious need for transportation planning and facilities is the city of Kodiak. The following will be a review of the alternatives available to the Kodiak Island Borough in preparing the transportation system for the impacts of OCS development.

External Transportation

Kodiak's external transportation system is based on the marine and airport facilities. They will have to be maintained and expanded in order to keep pace with future demands. One way to accomplish this difficult and expensive task is through a port or transportation authority. An authority can often deal with the problems of developing and maintaining the port, airports, and harbor facilities more efficiently than local government. This alternative could be accomplished solely by the City or Borough or through a joint authority with the State. At present land for the port facilities in Kodiak is limited, and efficient land use is critical. It will also be necessary in coming years to expand that facility. A significant amount of funds will be necessary for the development of port facilities to keep pace with the demands. One advantage of an authority is its ability to raise funds and obtain financing. It can provide the opportunity to improve the transportation facilities and thus attract transportation oriented businesses to locate on and around the facilities that they utilize.

As indicated in the development scenarios, there could be a large increase in air traffic into the Kodiak area. Passenger and cargo services will be necessary to accommodate the OCS development directly as well as the growing population of Kodiak. In order to accommodate this traffic, it is expected that airport facilities will be expanded. As has been indicated, the oil industry will require land, warehousing space, and maintenance facilities at the airport. The commercial air carriers will undoubtedly need additional space for their operations. Planning for this type of development in conjunction with upgrading airport facilities is not normally part of a community comprehensive plan. Funds for airport master planning are available through the Federal Aviation Administration. Without proper planning, the Kodiak airport could develop into an inefficient community facility with significant land use and safety problems.

The Borough should also encourage the State of Alaska to increase its ferry service to Kodiak. A port or transportation authority could help in this field by providing facilities and funds to upgrade that service.

Internal Transportation

As population pressures increase in Kodiak, recreational demands will also increase. There will be a demand for transportation throughout the Kodiak Island group. As population grows in the outlying villages, either as a result of OCS development or natural growth trends, access to the Kodiak metropolitan area will become more important also. Air

carrier service to the villages will increase; consequently, safety and cost problems could arise. The Borough should investigate the possibility of an Air Systems Study for the Kodiak Islands to insure that the airport facilities around Kodiak Island are adequate to handle projected demands.

In addition, there will be increases in demand for noncommercial access throughout the Borough. Facilities to meet these demands could be accomplished through a system of secondary roads leading to small docks and boat launching ramps at strategic points, at least on the northwestern part of Kodiak Island. This would allow transportation from the relatively nearby communities without the use of commercial carriers. Again this could be handled through a transportation authority or as a capital project administered by the Borough itself.

Local Transportation

Traffic, especially in the City of Kodiak, could be a major problem associated with OCS development. One of the concepts that needs to be considered in addressing these problems is the separation of commercial, industrial and normal vehicular traffic whenever possible. The Borough also needs to develop standards as part of their official streets and highways plan for the various classifications of roads. This can help to create throughways that avoid traffic impediments. The possibility of public transportation should also be addressed in the future. Funds are available through the Federal Department of Transportation and the Department of Housing and Urban Development for demonstration projects and facilities. While the present population will probably not support a public transportation system, by the end of the projected development phase of OCS activity a system may be needed. Also, as traffic increases in Kodiak, the potential for pedestrian/vehicular conflicts will increase. A trail system would help avoid this as well as provide additional recreational opportunities.

Recommendations

The following recommendations are made with respect to all of the subcategories of transportation needs on Kodiak Island.

1. The Borough and/or City should investigate the feasibility of a transportation authority. The authority should be comprehensive, with powers over the port, airports, the OCS transportation facilities, and should operate in close coordination with the Public Works Department of the City of Kodiak. This will allow for a comprehensive approach to transportation on Kodiak. It will open new avenues of funding that may make it possible to upgrade the transportation system consistent with the demands that could be placed upon it in a relatively short time.

2. The recommendation is repeated here that the Kodiak Island Borough develop, adopt and strictly implement and enforce an official streets and highways plan.

3. The State Division of Aviation should be urged to apply to the Federal Aviation Administration for funds to prepare a master plan for the Kodiak Airport in accordance with FAA Advisory Circular A/C 150/5070-6.

4. The community should address the future of the city of Kodiak's general aviation airport near the downtown area. This airport has many advantages but also has the potential for future disadvantages as population increases. FAA funds may be available to study the future growth potentials and/or land use conflicts that could result from dramatically increased air traffic operations at that airport.

COMMUNITY FACILITY, UTILITY AND PUBLIC SERVICE PROGRAMS

In previous sections the capabilities of and projected demands on community facilities, utilities and services have been identified. Also suggestions for provision of those facilities, utilities and services have been offered. Without the guidance provided by adopted goals and objectives as part of a comprehensive plan, this study can go no further. The following section will briefly summarize the problems identified and suggest principal sources of funds available to help the community in finding solutions.

Housing

As indicated above housing is and will be a major problem in Kodiak throughout the OCS development process. To meet the anticipated demand, the existing housing stock is important and must be maintained. New housing development must be encouraged in order to meet the demands that will be placed on the housing market in the future. Because of the rising demand and escalating costs, there will be an inevitable increase in the cost of housing also. In many cases this rising cost of housing will be offset by increased salaries. However, fixed and low income people and families could be severely impacted. Consequently, the maintenance and upgrading of the existing housing is especially important.

Maintenance and Upgrading of Existing Housing Stock

The community should encourage the upgrading and enhancement of neighborhood areas that are deteriorating under current conditions. Continued deterioration in certain areas (see Housing Inventory - Volume II) will remove that housing from the housing market.

Funding for housing maintenance and rehabilitation is available primarily through federal sources. The Housing Community Development Act of 1974 provides funds for neighborhood redevelopment. The City of Kodiak is an entitlement city under that Act and is currently in the process of upgrading the Aleutian Homes area with paved streets and storm drainage

in hopes that some of the poorly maintained houses within that area will be improved. The Kodiak Island Borough has obtained discretionary funds through the Act for the last two years and has been investing them in public facility improvements within the villages. This should help to maintain the housing stock in those areas.

Rehabilitation loans are also available through HUD under Section 312 of the Housing Act of 1964. These are direct federal loans to finance rehabilitation in urban renewal and code enforcement areas which are identified by the local government. By financing rehabilitation to bring the property up to applicable code requirements, the loans prevent unnecessary demolition of basically sound structures. The limit on these loans is $17,400 per dwelling unit. Any property owner in urban renewal or concentrated code enforcement areas is an eligible applicant as long as he can demonstrate that the loan can be repaid. Repayment requirements vary.

Another program through the Department of Housing and Urban Development is entitled Housing in Declining Neighborhoods. It provides mortgage insurance to purchasers to rehabilitate housing in older, declining residential areas. It is designed to provide adequate housing for low and moderate income families. HUD insures lenders against loss on mortgage loans to finance the rehabilitation of older, declining but still viable areas where conditions are such that normal requirements for mortgage insurance cannot be met. The terms of the loans vary according to the HUD/FHA programs under which the mortgage is insured. Any home owner or project owners eligible for FHA mortgage insurance is eligible for these loans.

There are many programs available to assist in the development of new housing. The majority of the federal programs available are administered through the Department of Housing and Urban Development. A review of the significant programs appropriate for Kodiak follows:

HUD Housing Programs

1. Home Mortgage Insurance Program. Through this program HUD insures commercial lenders against loss and encourages lenders to invest capital in the home mortgage market. The Federal Housing Authority insures the loans made by the private financial institutions for up to 97 percent of the property value and for terms of up to thirty years. Any applicant is eligible as long as he can make the cash downpayment and the mortgage payments.

2. Home Ownership Assistance for Low and Moderate Income Families (Revised Section 235). This program enables eligible families to afford new or rehabilitated homes that meet HUD standards. The Federal Housing Administration insures mortgages and makes monthly payments to lenders to reduce interest to as low as five percent. The homeowners must contribute 20 pecent of their adjusted income to monthly mortgage payments and must make a downpayment of 6 percent of the total cost of buying one home. There are dollar limits on the loans and sales prices. In

Alaska the limit is $29,000 ($33,000 for homes for five or more persons). The income limit for initial occupancy is 95 percent of the area median income.

3. Home Ownership for Low and Moderate Income Families. This program insures lenders against loss on mortgage loans to finance the purchase, construction, or rehabilitation of low cost one to four family housing. The maximum insurable loan for an owner-occupant is $29,000 in Kodiak. For a larger family (five or more persons) the limit is $33,000. Higher mortgage limits may apply to two to four family housing. Income level for initial occupancy is 95 percent of the area median income.

4. Condominium Housing. This program insures mortgages made by private lending institutions for the purchase of individual family units and multi-family housing projects. Sponsors may also obtain FHA insured mortgages to finance the construction or rehabilitation of housing projects which they intend to sell as individual condominium units. Any qualified sponsor may apply for a blanket mortgage covering the project, and any credit worthy person may apply for a mortgage on individual units in the project.

5. Mobile Homes (Title 1). The purpose of this program is to facilitate financing of mobile home purchases, thereby providing alternative lower cost housing. The FHA insures mobile home loans made by private lending institutions. Loans may be insured up to $12,500 in twelve years on a single modular unit and for $20,000 over fifteen years on double module units. Any person able to make the cash investment and the mortgage payments is an eligible applicant.

6. Mobile Home Courts. This program helps finance construction or rehabilitation of mobile home courts. FHA insures mortgages made by private lending institutions on the entire site. Mortgages in Kodiak would be limited to $5,850 per individual moble home space within each space. The park must be located in an area approved by FHA in which market conditions show a need for such housing. Eligible applicants include investors, builders, developers and others who meet FHA requirements.

7. Multifamily Rental Housing. Through this program, the FHA insures mortgages made by private lending institutions to finance the construction or rehabilitation of multifamily rental housing by private or public developers. The project must contain at least eight dwelling units. FHA requires that the housing financed under this program be able to accommodate families with or without children at reasonable rents. Funds under this program can be applied for by investors, builders, developers and any others who meet the FHA requirements as long as the housing project is located in an area approved by the FHA for rental housing and in which the market conditions show a need for such housing.

8. Existing Multifamily Rental Housing. Through this program FHA insures to purchase or refinance existing multifamily projects originally financed with or without federal mortgage insurance. HUD may insure mortgages on existing multifamily projects with or without requiring substantial rehabilitation. The project must contain eight or more units

and must be at least three years old. Again, investors, builders, developers and any others who meet FHA requirements may apply.

9. Multifamily Rental Housing for Low and Moderate Income Families (Section 221(d)(3) and (4)). This program is designed to help finance construction or substantial rehabilitation of multifamily rental or cooperative housing for low and moderate income or displaced families. Units financed under this program may qualify for assistance under Section 8 of the Housing and Community Development Act of 1974 if occupied by eligible low income families. Eligible applicants include public agencies; non-profit, limited-dividend or cooperative organizations; and private builders or investors who sell completed projects to such organizations. Tenant occupancy is not restricted by income limits except in the case of tenants receiving subsidies under the program.

10. Low Income Public Housing. Through this program local public housing agencies develop and operate low rent public housing projects. They finance them through the sale of bonds and notes. HUD furnishes technical and professional assistance in planning, developing and managing the projects and gives two kinds of financial assistance: preliminary loans for planning; and annual contributions to pay off the bonds and notes, assure low rents and maintain adequate services and reserve funds. Rents are based on the residents ability to pay, contribute to the cost of the managing, and operating the housing. The only eligible applicants for this type of program are public housing agencies established by local governments in accordance with State law.

11. Direct Loans for Housing for the Elderly or Handicapped (Section 202). This program makes long term direct loans to eligible private nonprofit sponsors to finance rental or cooperative housing facilities for elderly or handicapped persons. The current interest rate is based on the average rate paid on federal obligations during the preceding fiscal year. Eligible applicants include private nonprofit sponsors and eligible tenants include households with one or more persons, the head of which is at least sixty-two years old or is handicapped.

12. Indian Housing. Through this program indian housing authorities develop and operate rental and home ownership projects financing them through the sale of bonds and notes. HUD furnishes technical and professional assistance in planning, developing and managing the projects and also gives financial assistance in the form of annual contributions to pay off the bonds and notes. For rental projects the contributions also assure low rents and maintain adequate services and reserve funds. The indian housing authority is responsible for all maintenance costs on these projects. Rents that are based on the residents' ability to pay contribute to the cost of managing and operating the housing.

Water and Sewer Programs

The need for new and expanded water and sewer facilities in Kodiak as a result of OCS development has already been demonstrated in preceding sections. In order to fund the necessary construction of water

and sewer projects, it is obvious that the Kodiak community will need financial assistance. Listed below are several programs administered by both the state and federal government from which funds can be obtained for the needed facilities.

State Programs - The following is a list of state programs.

1. Water and Sewer Aid. This program is administered by the State Department of Environmental Conservation and provides financial assistance to pay the cost of capital improvements for water supply and sewage systems. The program is financed through State bonds which are sold to provide a fund from which grants of one half of the nonfederally funded portion of a project (to a maximum of 50 percent) may be paid to a municipal applicant. Any municipality within the State of Alaska is eligible to apply.

2. Village Safe Water Program. This program is also administered by the Alaska Department of Environmental Conservation. Eligible applicants include any community which has between 25 and 600 people residing within a two mile radius. The purpose of the program is to provide for safe water and hygienic sewage disposal systems and bathing and laundry facilities in remote Alaskan villages. The program is financed through State bonds which are sold to provide a fund which can be used for construction of facilities.

Federal Programs - The following is a list of federal programs.

1. Construction Grants for Waste Water Treatment Works. This program is designed to assist and serve as an incentive in the construction of municipal sewage treatment works which are required to meet the State and federal water quality standards. The program is administered by the Office of Water and Hazardous Materials of the Environmental Protection Agency. The funds can be used for the construction of municipal waste water treatment works with some limitations. Eligible applicants include any municipal, intermunicipal, state, interstate agency or indian tribe having jurisdiction over disposal of wastes.

2. Water Pollution Control - Area-wide Wastewater Treatment Management Planning Grants. This is another grant program administered by the Office of Water and Hazardous Materials of the Environmental Protection Agency. Its objective is to encourage and facilitate the development and implementation of areawide wastewater management plans. In order to apply for the funds, the applicant must be designated by the Governor and by the administrator of the Environmental Protection Agency as the official areawide waste treatment management planning agency for a given area. The applicant must also agree to develop a plan and a continuing planning process for the entire designated area.

3. Mortgage Insurance - Experimental Projects Other than Housing. This program is administered by the Housing Production and Mortgage Credit Division of FHA in the Department of Housing and Urban Development. Its objective is to provide mortgage insurance to help finance the

development of group medical facilities or subdivisions or new communities that incorporate new or untried construction concepts intended to reduce costs, raise living standards and improve neighborhood design. HUD/FHA insures lenders against loss on mortgage loans through this program. These loans may be used to finance the purchase of land and to develop building sites for subdivisions or new communities including water and sewer systems and streets where new technologies are incorporated.

4. Water and Waste Disposal Systems for Rural Communities. This program administered by the Farmers Home Administration of the Department of Agriculture is designed to provide basic human amenities, alleviate health hazards and promote orderly growth of rural areas by meeting the needs for new and improved rural water and waste disposal systems. The funds may be used for the installation, repair, improvement or expansion of a rural water system including distribution lines, wells, pump facilities and costs related thereto. The installation, repair, improvement or expansion of a rural waste disposal system including the collection and treatment of sanitary storm and solid wastes, are all eligible activities. Eligible applicants include municipalities, and in Alaska boroughs, as well as associations, cooperatives and corporations operated on a nonprofit basis and indian tribes on federal and state reservations. The facilities shall primarily serve rural residents. The service area cannot include any area in any city or town having a population in excess of 10,000 inhabitants according to the latest decennial census. Also the applicant must be unable to finance the proposed project from its own resources or through commercial credit at reasonable rates and terms, and they must have the legal authority necessary for constructing, operating and maintaining the proposed facility or service. Funds under this program come in the form of guaranteed loans or project grants.

Recreational Programs

As indicated earlier, the Kodiak Island Borough has recently assumed the areawide parks and recreation power authorized under State statutes. Also the City of Kodiak currently operates a parks and recreation program (see Recreation Facilities Inventory - Volume II). The following is a review of State and federal programs available to assist in the development of additional parks and recreation facilities in the Kodiak area.

State Programs - The following is a list of State programs.

1. Land and Water Conservation Funds (Bureau of Outdoor Recreation Grants). This program is administered by the Division of Parks of the State Department of Natural Resources. Both cities and boroughs may apply for funds under this program. The funds may be utilized to provide assistance in planning, acquisition and development of outdoor recreation areas and facilities. The program is financed utilizing federal funds from the Bureau of Outdoor Recreation on a 50/50 federal-local matching basis.

2. Trails and Footpaths. This program is also administered by the Department of Natural Resources. Its purpose is to provide for the

establishment of public ways for trails and footpaths. Any city or borough within the State can apply. Up to one percent of the total yearly State and federal matching monies combined under the Federal Aid Highways Program may be appropriated annually from the general fund of the Department of Natural Resources in order to fund this program.

Federal Programs - The following is a list of federal programs.

1. Outdoor Recreation Acquisition, Development and Planning. This program is administered by the Bureau of Outdoor Recreation, Federal Department of the Interior. Its purpose is to provide financial assistance to the states and their political subdivisions for the preparation of comprehensive statewide outdoor recreation plans and acquisition and development of outdoor recreation areas and facilities for the general public to meet current and future needs. It may be used for a wide range of outdoor recreation projects such as picnic area, intercity parks, camp grounds, tennis courts, boat launching ramps, bike trails, outdoor swimming pools, and support facilities such as roads, water supply, etc. Facilities must be open to the general public and not limited to special groups. Development of basic rather than elaborate facilities is favored. Priority consideration generally is given to projects serving urban populations and the funds are not available for the operation and maintenance of facilities. As indicated above under State Programs, all applications for these funds must be processed through the State Department of Natural Resources. Eligible applicants include any borough or city within the State of Alaska.

2. Parks and Recreation Technical Assistance. This program is administered by the National Parks Service, Department of the Interior. The objective of the program is to provide technical assistance to State and local agencies in planning, developing and managing their park and recreation areas so as to help meet the park and recreation needs of the nation. The program consists of technical and advisory services on such matters as agency organization, operation and maintenance of park systems, personnel training, historical and archeological programs, and general development planning. Eligible applicants include indian tribes, states, and local units of government.

Port and Harbor Facilities

As has been pointed out, the Kodiak small boat harbor is already overcrowded. In addition, the City of Kodiak cargo dock is currently operating at its capacity. The addition of OCS related cargo demands and vessel activity in the area will severely impact these facilities in case of moderate or large oil strick. Aid for the development of expanded or new facilities is available through the following programs:

1. Boat Harbor Aid - This program is administered by the State of Alaska, Department of Public Works. Its purpose is to aid local governments in the construction of floats, docks, grids, launching ramps and other

related small craft harbor facilities. Any city, borough, or community or interested group desiring harbor facilities may apply. Upon approval of an application, the State of Alaska will construct the public improvements requested. The program does not include direct financial grants or loans. The program is supported through the watercraft fuel tax revenue and utlizes 100 percent State money. The money is distributed project by project and is variable legislature by legislature.

2. Port Facilities Development - This program is also administered by the State Department of Public Works. Its purpose is to aid municipalities in the improvement of municipally owned and operated port facilities. Any municipality desiring port facilities or port facility improvements can apply. In Kodiak the program could pay up to 80 percent of project costs for port improvements. The State funds utilized are appropriated by the legislature and are normally the result of general obligation bond authorizations. The money is distributed project by project and it is variable from year to year.

Public Law Enforcement Programs

The crime rate in Kodiak increased over 100 percent within the last year (see Public Safety Facilities Inventory Volume II). At present public safety facilities are overtaxed. During the process of OCS development in Kodiak it will be necessary to upgrade and expand those facilities. Principle sources of funding for such facilities are described below.

1. Law Enforcement Assistance Comprehensive Planning Grants - This program is administered by the Law Enforcement Assistance Administration (LEAA) of the Department of Justice. Its objective is to provide matching grants to states for the operation of law enforcement and criminal justice planning agencies which develop and administer comprehensive statewide law enforcement and criminal justice improvement plans. States are the only eligible applicants for this program; however, their activities under this program can be of benefit to Kodiak.

2. Law Enforcement Assistance - Improving and Strenghening Law Enforcement and Criminal Justice - This is another LEAA program designed to implement the law enforcement and criminal justice programs developed under the LEAA comprehensive planning grants. Through this implementation program, states are allowed to improve and strengthen their criminal justice system through a variety of methods, including construction of new facilities. The type of assistance involved are project and formula grants depending upon the individual program.

The programs described above will help to solve the financial needs of the community generated by OCS development. There are many more State and federal programs available for various public facilities, utilities and services. In order for the community to be aware of all of the financial assistance sources available, the two following publications should be obtained: (1) The Catalog of Federal Domestic Assistance published by the Executive Office of the President, Office of Management and Budget, Washington, D.C., 20503; (2) the Alaska State Aid Catalog published jointly by the Department of Community and Regional Affairs and the Alaska Municipal League.

ESTIMATED LEVEL OF CAPITAL IMPROVEMENT REQUIREMENTS

As indicated in the Impacts Section of this report, substantial public facilities must be constructed and updated throughout the process of OCS development; these include water, sewer, roads, port facilities, educational facilities, parks and recreation facilities and police facilities. One of the most common methods of financing capital improvements by public bodies is through bonding. Both the City of Kodiak and the Kodiak Island Borough have the authority to issue bonds. The majority of the public services provided to the Kodiak metropolitan are provided by the City within the city limits; however, the Borough does have area-wide education and parks and recreation powers that will require facilities in the future.

The Constitution and laws of the State of Alaska permit local governments to issue general obligation bonds only if a bond authorization ordinance is approved by a majority of those voting on the question at a regular or special election. Prior to the election, notice of the total existing bond indebtedness must be published together with information concerning the cost of debt service on current indebtedness and total assessed valuation within the municipality. Unlike many other states, however, there is no constitutional or statutory limit on the permissible amount of general obligation indebtedness in terms of a percentage of total assessed valuation.

The Charters of the City of Kodiak and the Kodiak Island Borough do not impose any additional restrictions upon the issuance of general obligation bonds.

Assuming, therefore, that they would be able to obtain the approval of the voters for the issuance of new bonds, the principal constraint is not legal, but financial. Bonds would not be marketable unless prospective purchasers were able to be convinced that that amount of the existing general obligation indebtedness was not an unduly large proportion of the assessed valuation.

It is somewhat difficult to evaluate the present ability of Kodiak's local governments to attract investors for their general obligation bonds. The City's most recent issue was sold through the Alaska Bond Bank. The issue of the Bond Bank which provided funds to purchase the last general obligation bonds issued by the city was rated "A" by Moody's and Standard and Poors, which is a good rating. The security for the bonds was more than simply the taxing capability of the City of Kodiak, however, since state appropriations provide an additional source of payment for Bond Bank bonds. The Borough has yet to issue bonds through the Bond Bank; however should they do so, it is assumed that they would have a similar rating.(16)

Following a review of projected capital costs required during the period of OCS activity, i.e., until 1992. (See Table 36.) These costs are not intended for budgeting or detailed financial purposes. They do indicate the magnitude of fiscal impacts that OCS development will generate. Without the benefit of an approved set of goals and objectives,

only estimates of which projects will be built and the type of development is possible.

The cost figures shown for water, sewer and roads are based on Hypothetical Example "C". The educational system costs are based on 20 room schools at 20 students per room. Public Safety costs are based on the need for additional jail space and the upgrading of the headquarters building. The port facilities costs are based on the need for additional storage space as well as anticipated improvements to the dock facility itself.

Table 36: Projected Capital Projects & Costs - Kodiak Metro Area*

Case	Water/Sewer Systems(each)	Road System (1)	Public Safety (2)	Port Facil. (3)	Educational Facil. (4)	Total
Case 1	$ 5,881,200	$10,025,400	$ 1,000,000	$ 1,400,000	$25,500,000	$49,687,800
Case 2a	7,351,344	12,670,858	1,000,000	1,400,000	30,200,000	58,973,546
Case 2b	6,111,072	10,524,624	1,000,000	1,400,000	29,500,000	53,646,768
Case 3	10,036,334	17,284,608	1,000,000	1,400,000	33,800,000	72,557,856

*Based on Hypothetical Example "C"

1. Based on average cost of $155/foot.
2. Upgrade and expand City Jail facility and offices.
3. Additional storage and quay area and port upgrading - City.
4. New school facilities at $5,000 per student - KIB.

Source: Simpson Usher Jones, Inc. (Sontag), 1977.

In addition to the projects shown in Table 36 additional monies could be necessary for projects in the outlying villages. At this point, without knowledge of the intent of the community, the Kodiak Island Borough and the various communities towards their future development, it is impossible to predict the cost and timing for the purposes of capital improvements.

ECONOMIC POLICIES

As has been indicated earlier, the economic system in Kodiak will undoubtedly be severely impacted as a result of OCS development. Under normal conditions the economic fuctions of supply and demand without unreasonable government interference will allow a given local economy to maintain a relatively stable balance between cost of living and income. However,

in a "boom" economy situation, as is expected in Kodiak, the capabilities of a local economy are surpassed in terms of keeping pace with the rising demands for goods and services. Consequently, the cost of living can rise dramatically. This will be one of the most important issues facing the local governments on Kodiak Island in the years to come.

A tremendous amount of damage can be done to the base of the local economy if economic growth is not directed in to constructive areas. A basic goal of a local community during the OCS development process should be to strengthen the non-oil related segments of the economic base. In doing so the community can help to keep demand for goods and services from outstripping the capabilities of the local economy. If this can be successfully accomplished, the rate of increase in the cost of living can be controlled.

As indicated, at present the most important basic industry in Kodiak is fishing. During OCS development there will be opportunities to develop additional basic industries, including tourism and construction. The question of tourism is one that will have to be addressed by the community in their comprehensive plan. While it can help broaden the economic base of a community, it can also have adverse effects on the life styles through the addition of large numbers of non-resident people, as well as adding to the cyclical characteristics of the economy.

Tremendous increased demand for transportation facilities, public services, housing and commercial facilities could be forthcoming during OCS development. In order to meet these demands the community must help foster the development of the local businesses providing those goods and services. This can be done by promoting funding sources and improved technical capabilities within the businesses. At the same time, however, it will be necessary to transfer the cost of development, especially in the fields of public services, to the private businesses in order to keep taxes at a reasonable level.

At present, the canneries in Kodiak are the highest taxpayers. Seven of the top ten taxpayers are canneries and in 1975-76 those seven canneries had a combined valuation of over $14,000,000. However, the oil industry will become the highest taxpayer in Kodiak, given a moderate or high oil strike. Depending on the development scenario and the type of facilities developed in Kodiak, over $150,000,000 in facilities will be built during OCS activity. At a tax rate of 5.5 mills, the tax generation on value of that magnitude would be in excess of $1,000,000 per year. However, the additional $1,000,000 per year will not pay for the public services required to accommodate anticipated development. Consequently, additional capabilities and funding sources will be needed.

The community has several options in approaching this problem. It can generate additional taxes from the oil industries through franchises, fees, special taxes and various other means of municipal revenue generation. If this is the only approach, the oil industry could resent it, and lengthy court battles would be easily possible. In the meantime, revenues would not be forthcoming. Another approach is encouraging oil industry involvement in the development of the community. This can be done in

several ways. In order to encourage the growth of local businesses, loan funds could be set up at relatively low interest rates. This could help to provide the financial resources needed for new businesses to be started as well as expansion of existing businesses. This would help those businesses meet the demands for goods and services. The oil industry would be able to recover its costs through the interest rates, and at the same time help to keep the cost of living down within the community.

One effective way to foster the development of required housing is to involve the oil industry in that development process. Through wholly owned subsidiary development corporations, the oil industry could provide the housing and public facilities necessary to serve the population and at the same make a profit on the development. In order to encourage such activity, the community, especially the Borough, could joint venture with the oil industry in promoting residential development. The Borough has large areas of land to the north of Kodiak which are suitable for residential development. Through a joint venture agreement, the Borough could use the land as their investment in the development, and the oil industry could develop the land and/or buildings as the demand increased. The Borough would make a profit in return for their portion of the investment in addition to fostering the provision of the public facilities required. The tax base would also be increased. The oil industry would be aiding the community to provide facilities and housing while at the same time making a profit on the development projects. This type of arrangement also offers the oil industry a public relations advantage. By doing so it would show its responsiveness to the needs of the community at no cost to themselves.

This type of development process would not necessarily result in unfair competition with the local development businesses in the community. The Borough, through its joint venture agreements with the oil industry, could require that local subcontractors and contractors be used to the extent possible. This would serve to help strengthen the construction industry in Kodiak rather than bring in construction companies from outside the area. Consequently, the overall economic base of the community would be strengthened.

In summary, while the oil industry could have some very significant impacts in Kodiak, it can also be a major factor in helping to mitigate those impacts. Cooperation with the industry and utilization of its funds to the mutual benefit of the community and the industry will help combat inflation and provide the public services needed to serve the population growth generated by OCS development. This type of cooperation is encouraged.

INTRODUCTION

An Outer Continental Shelf lease sale of up to 3.2 million acres of land, located on the Kodiak Shelf east of Kodiak Island, has been tentatively scheduled for November, 1977 (Map 1). The oil industry originally nominated 12.8 million acres in this area as having strong potential for developable oil deposits, and it is expected that initial exploration for oil will begin shortly following the lease sale.

Offshore oil development on the Kodiak Shelf will generate substantial onshore development. During the initial exploration stage the onshore facilities will be relatively minor since the oil companies will avoid substantial capital expenditures until the existence of economically viable oil deposits is verified. However, once oil is discovered, developing the oil fields will occur. Consequently, onshore facilities will swell in size and their activities will intensify to the point that their presence will severely impact the surrounding communities. The impacts will involve both air and marine transportation activity; population increases; demands on housing, community facilities and infrastructural services as well as economic impacts and changes in the basic lifestyle of the surrounding residents. Because of Kodiak Island's proximity to this area, it is inevitable that the Kodiak area will thus be affected. The estimated level of oil industry activity and the impacts of that activity are described in Volume I of this study.

For years Kodiak has been a relatively self-sufficient community. As the largest city on the island, it has functioned as a regional economic and cultural center as well as a base for the fishing industry. Both the City and Island of Kodiak have experienced a steady trend of growth and anticipate a continuation of growth in the foreseeable future. Now, with the advent of oil exploration and possible production, the Kodiak area is faced with the possibility of major changes. The importance of planning for these changes is emphasized by the following quote from the Draft Environmental Impact Statement for the OCS Lease Sale in the northern Gulf of Alaska.

> "As the development of offshore oil and gas proceeds from the initial exploratory phase through drilling, production, and transport, substantial onshore activity will be generated, from which both positive and negative impacts can be expected.
>
> "The degree to which . . . these effects are positive is related to the ability of public officals to plan for and direct the onshore development that is integral to OCS development and to plan for the growth that onshore facilities generate throughtout the region. OCS operations will result in massive development in areas where there is little or no experience in land use planning or regulatory activities Unless this capability is quickly devleoped in such areas, the result could be permanent degradation of the environment and unnecessary disruption of traditional values and lifestyles for those living there now." (CEQ 1974)

In order to gauge the impact OCS oil will have on Kodiak, it is necessary to have an overall perspecitve of the community as it exists prior to OCS development. The following Community Inventory, compiled primarily from existing sources, provides a summary of facilities, utilities and services.

The Community Inventory consists of seven sections: Community Facilities, Utilities and Services; Village Inventory; Housing Inventory; Economic Inventory; Demographic Inventory; Land Status/Capability; and Summary Profile. Information is presented concerning which of these community components will be directly and/or indirectly impacted by potential OCS development.

In addition to providing a background for gauging the impact of OCS development, the Community Inventory may be suitable for other uses. Care has been taken to present the information in a format compatible for use by governmental agencies for comprehensive community planning, economic planning and projections. It may also serve local businesses and individual residents of the Borough.

OIL LEASE SALE LOCATION MAP

MAP 1

COMMUNITY FACILITIES, UTILITIES, AND SERVICES

The infrastructure of a community consists primarily of its basic utilities (water, sewer, electricity and telephone) as well as its basic transportation system. A community's growth and development patterns are determined to a great extent by its infrastructure. For instance, expansion of the infrastructure in a community will facilitate population growth and allow greater density in development. On the other hand, limiting the infrastructure can be used to deter population growth, restrict the density of development, and determine which areas of town will grow and which will not. Infrastructure limitations may cause serious problems however, if the population grows regardless of a restricted infrastructure.

The infrastructure is essential to a community's growth capability; therefore, it is important for policy makers to know the condition and capacity of their community facilities, utilities, and services. The following inventory is provided to assist in considering Kodiak's potential for growth. Since the impacts of OCS oil development will be more intensely felt in the largest population center; the facilities, utilities, and services that serve the urban area around the City of Kodiak and those that are provided area-wide throughout the Borough are described separately from those serving the individual outlying villages (See Village Inventory).

POWER AND UTILITY SERVICES

WATER SYSTEM

The largest public water system within the Borough is operated by the City of Kodiak. The area within which water is provided through this system is primarily the city limits of Kodiak; however, there is an eight inch transmission line that extends out to the end of Mill Bay Road. It also serves the Loran Station on Spruce Cape. Water service also goes out to the southwest of downtown Kodiak as far as Gibson Cove.

Currently the water system is being utilized to its practical capacity and any substantial population growth within the Kodiak area will require expansion of the water system facilities. According to engineering studies, expansion of the water facilities would require construction of a dam at Monashka Creek. Engineering has been completed for this project and a 24-inch transmission line has been installed. However, the Ouzinkie Village Native Corporation has claimed the Monashka Creek drainage area and until the question of property ownership can be resolved, a dam and reservoir cannot be constructed.

Assuming the land ownership problems are solved and construction can begin on the Monashka Creek dam, this first phase of the expansion would increase the storage capacity by over ten times the current amount and would make the total capacity of the water system over 500 million gallons. In addition, the dam could later be expanded to store up to seven billion gallons of water depending on the growth of the Kodiak area.

At the present time, the Kodiak water system does not have the capacity to handle additional large consumers. As demand increases, water lines are being excavated and replaced with larger lines to increase service capacity of the system, and this practice will continue until the storage capacity and supply system is increased. The downtown area is most seriously affected by the inadequate water system. This is because most of the canneries are located in the downtown area and they are all major water users. A 20-inch line from the water tank, as shown on Map 2, to the upper reservoir will eventually provide interim relief for getting water from the reservoir to the downtown area. Eventually, the City will have to provide more transmission lines in order to cope with anticipated growth at the present rate.

If growth were to occur on an accelerated basis, the present water system would be totally inadequate. OCS development and an ensuing population increase would completely over-tax the system to the point of causing some potential water shortages as well as a great deal of expense to the community in trying to upgrade an already over-taxed system.(1)

SEWER SYSTEM

The sewer system for the Kodiak urban area is also operated by the City of Kodiak. The area serviced by the sewer system is shown on Map 3. As can be seen, the sewer system is primarily within the city limits of Kodiak with the exception of a small area along Mission Road to the northeast of Potatoe Patch Lake. The capacity of the system at the present time is adequate, and a new 2.3 million gallons per day sewage treatment plant is currently nearing completion. All interceptor lines have been completed for the service area and there should be no problem in providing service to the rest of the community under the normal growth pattern.

If there is an increase in population and housing construction within the area, it will be necessary to provide additional sewer lines in order to serve those areas. It may also be necessary to increase the size of the line in some portions of the downstream end of the system.

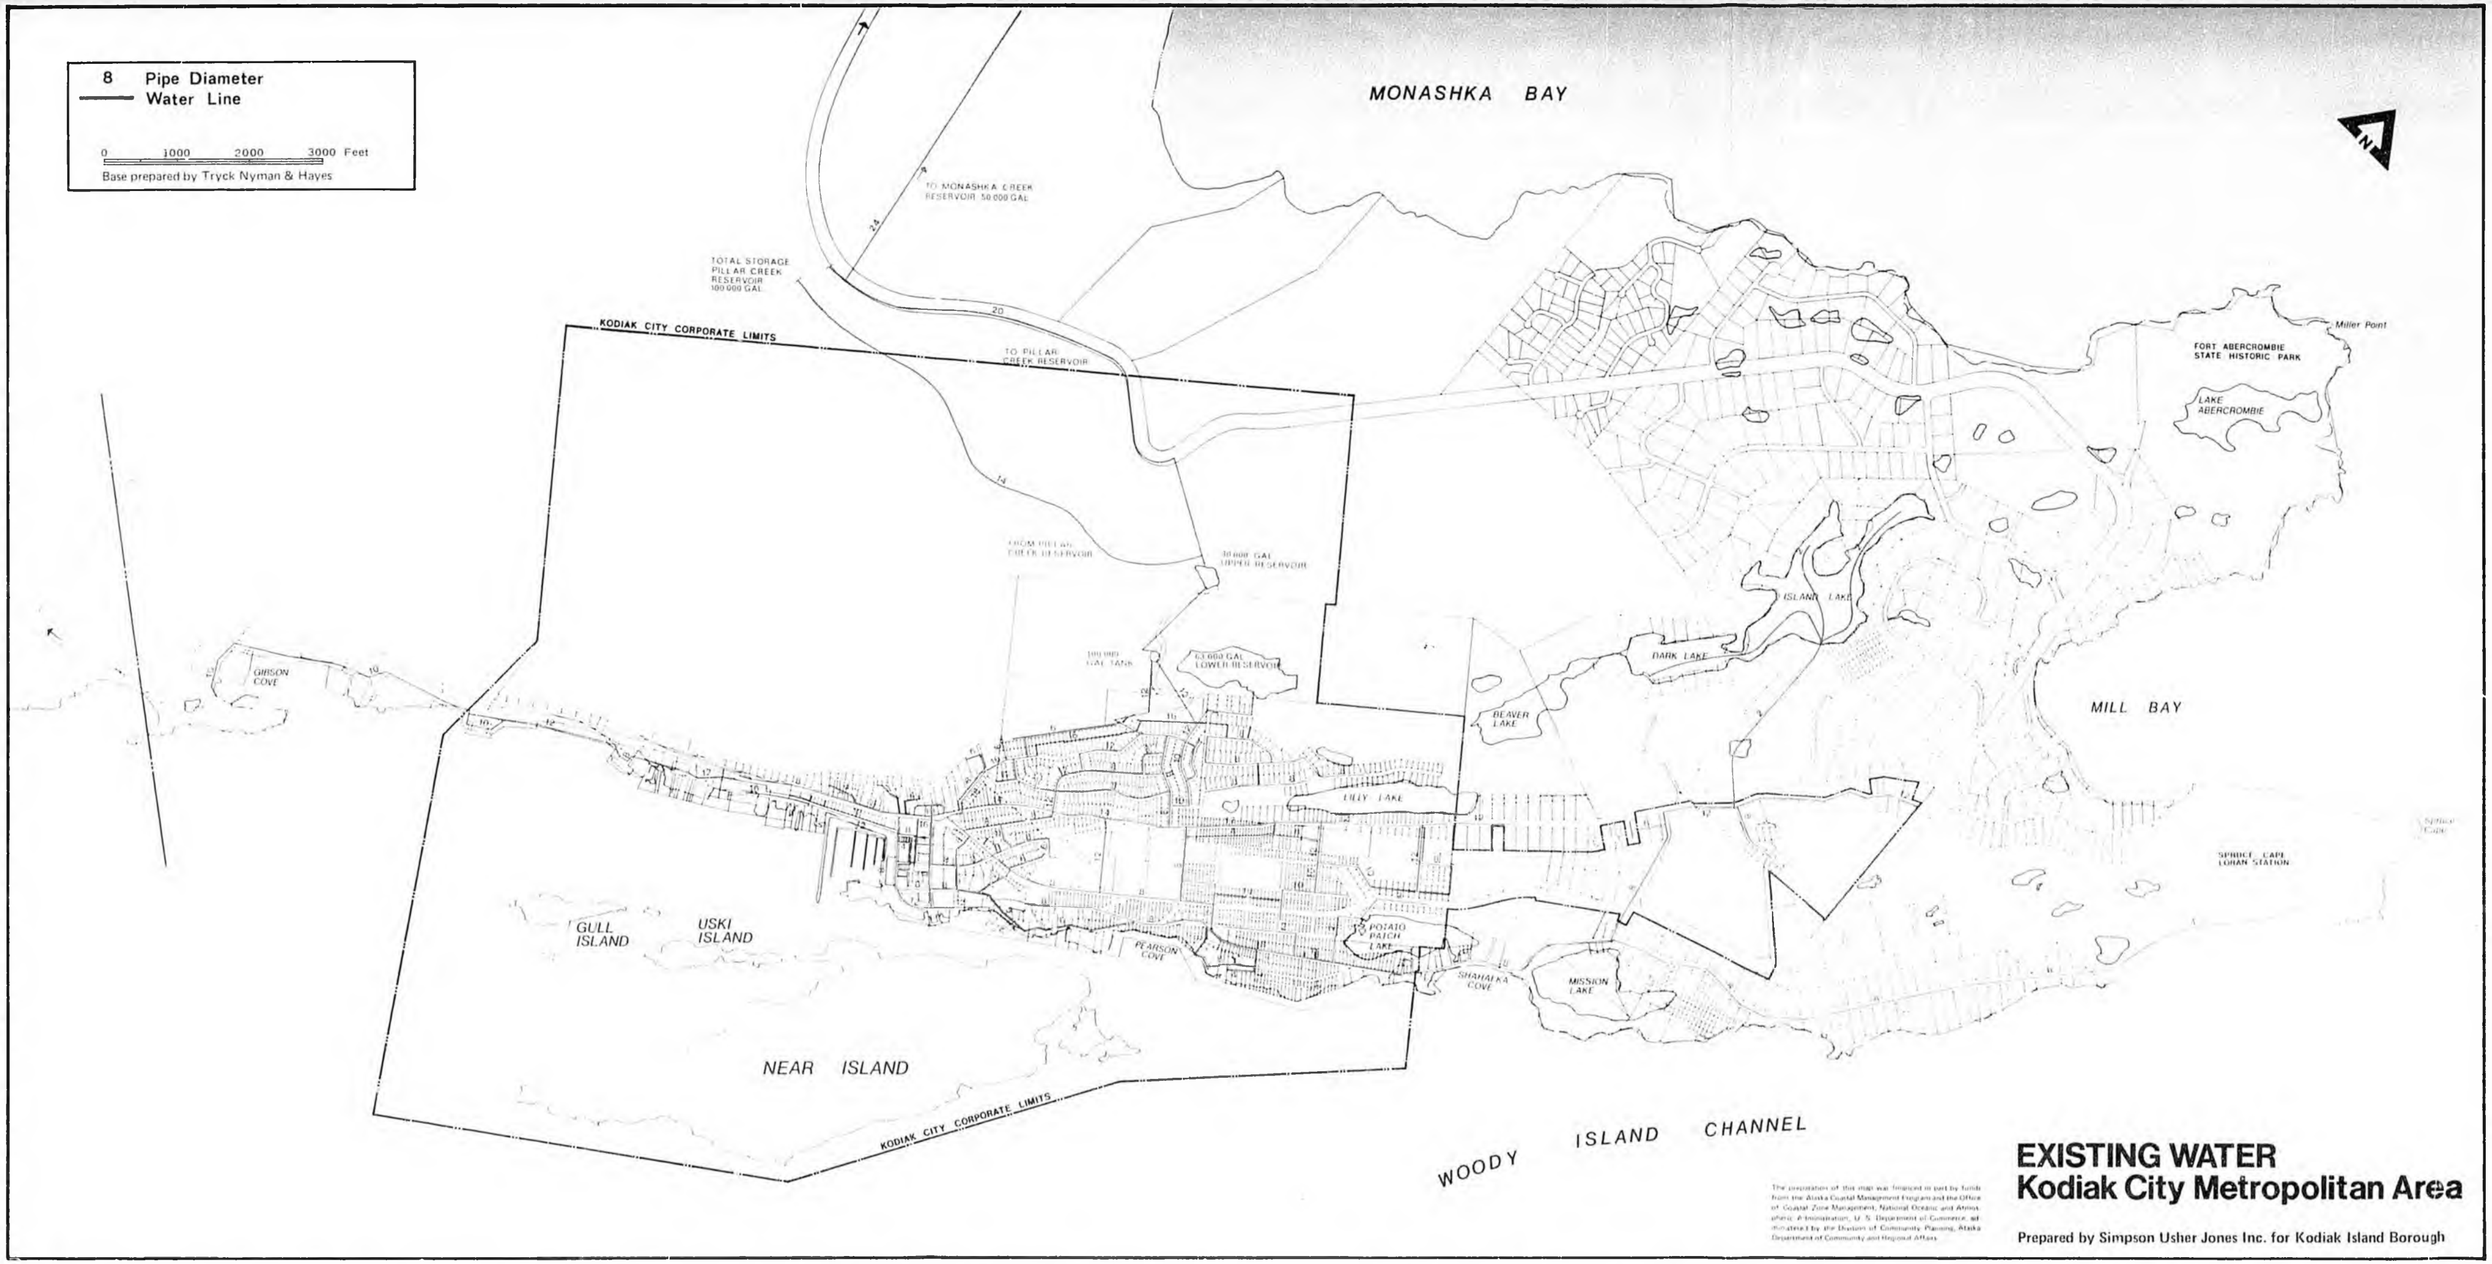
A sewage expansion feasibility study is currently being prepared for the Island Lakes area to the north and northeast of the city. This area is considered the most likely available property for residential development should a rapid expansion of the economy occur. Some low density residential development has begun in this area. Since public sewer service is not available, residents are building on-site disposal systems. As a result, some environmental problems are now occurring in the lakes. Additional building in that area has been stopped until the full extent of the environmental problems have been determined. Should additional building pressure be placed on this area, it would be necessary to serve it with public sewer.

In summary, with the exception of the Island Lakes area, the sewer system is adequate to handle the existing situation. The system has capacity for substantial expansion based on the new sewer treatment plant capabilities.(2)

ELECTRICAL SERVICE

Electrical energy is provided to the Kodiak area by the Kodiak Electrical Association. KEA is a cooperative corporation organized under the laws of the State of Alaska to provide electrical energy to a service area covering the City of Kodiak, its environs and the Port Lions area. Members of KEA receive their electrical energy needs from KEA and participate in the management of the organization through voting privileges on basic association issues and in the election of the board of directors which is nominated from the membership. KEA is a non-profit organization as defined by the Rural Electrification Association of the federal government. As of January 1, 1976, there were 2,382 members in the association.(3)

KEA's distribution facilities extend throughout the Kodiak area as well as to the outlying road system. New generating facilities have recently been completed in Kodiak which make the KEA plant the largest diesel-



The preparation of this map was financed in part by funds from the Alaska Coastal Management Program and the Office of Coastal Zone Management, National Oceanic and Atmospheric Administration, U. S. Department of Commerce, administered by the Division of Community Planning, Alaska Department of Community and Regional Affairs.

EXISTING WATER
Kodiak City Metropolitan Area

Prepared by Simpson Usher Jones Inc. for Kodiak Island Borough

MAP 2

powered electrification plant in the State of Alaska. The new plant consists of two 5,270 KW diesel generators and one 2,500 KW diesel generator, which adds a total of 13,040 kilowatts of power to KEA's existing capacity of 11,878 kilowatts for a total generating capacity of 24,918 kilowatts. It is estimated that this capacity will be adequate to meet Kodiak's power requirements through the early 1980's.(4)

Further expansion of the diesel generating capacity over the designed expansion capacity now available is currently in question. Fuel costs for the diesel generators has increased dramatically in the last few years and additional increases are anticipated (in June 1973 diesel fuel cost 14.09 cents per gallon, and in 1976 it cost 35.2 cents per gallon). These increases in fuel costs have made diesel-generated power extremely expensive and have made other types of power, such as hydro-electric sources, more attractive.

KEA is currently investigating the feasibility of a hydro-electric generating facility at Terror Lake, located 25 miles southwest of Kodiak. The site was originally considered for such a facility during World War II by the Army Corps of Engineers. KEA became interested in the early 1960's. At present, the Terror Lake project is projected to produce approximately 30,000 kilowatts and 175 million kilowatt hours annually. KEA has filed permit applications with the Federal Power Commission to investigate the feasibility of developing the project. If the Terror Lake facility is approved, financed and constructed, KEA will be able to provide a relatively inexpensive power source to the entire Kodiak Island for the foreseeable future.(5)

COMMUNICATION FACILITIES

The Kodiak area is served by a relatively wide range of communication facilities in both the public and private fields. There are services available and under construction that are, for the most part, adequate to handle communication needs.

TELEPHONE SERVICE

Telephone service is provided to the City of Kodiak and surrounding metropolitan areas by the Glacier State Telephone Company. This service also extends along the road system and to Port Lions. Telephone rates for the Kodiak area are found in Figure 1.

A total of 3,804 telephone numbers are currently in use in Kodiak, excluding extensions. Of those 1,591 are residential phones and 2,213 are commercial or business phones. The telephone subscription rate has shown a steady rate of growth over the past few years. The 1976 rate for instance, is between four and five percent higher than in 1975. In order to meet demand projections for 1979/80, Glacier State Telephone is currently expanding its facilities in Kodiak. When completed, it should then have the capacity to meet the currently projected needs of the community until 1980. A dramatic increase in population growth during this period would necessitate further expansion of the Kodiak facilities.(6)

Fig. 1: Telephone Service & Costs*

Type	Monthly Rate	Installation
Residential:		
Private Line	$ 13.35	$ 30.00
Two-Party Line	10.00	30.00
Extensions	3.00/ea.	17.00
Commercial:		
Per Line	$ 30.00	$ 60.00
Extensions	4.50/ea.	27.00
Also available:	3-, 6-, and 12-line phone systems, hold buttons, intercom, PABX switchboard equipment, radio and other lease lines.	

* The above rates are charged within the City Limits of Kodiak. Outside the City Limits there is an additional monthly charge of $1.00 per 1/4 air mile for a private line; and $.80 per 1/4 air mile for a party-line. These rates are for September, 1976.

LONG DISTANCE COMMUNICIATIONS

RCA Alascom provides long distance communications to the City of Kodiak through the White Alice Communications System (WACS). The White Alice System is an extensive and elaborate system of troposcatter and microwave facilities serving the military and the public. WACS is owned by the Air Force but is leased and operated by RCA Alascom.

Long distance calls from Kodiak travel on a microwave system to Pillar Mountain directly behind the city. The White Alice System then transmits them to Diamond Ridge on the Kenai Peninsula. From there, calls travel over another microwave system into Anchorage for switching. RCA Alascom plans to replace many of the White Alice facilities with major earth stations. Kodiak is scheduled to receive a major earth station in the next few years. Long distance calls will then travel via satellite.

RCA Alascom, in cooperation with the State of Alaska, has embarked on a plan to provide rural areas with improved communications through the network of smaller earth stations. Under this project the villages involved will initially receive one telephone for normal long distance communications and one for emergency medical communications. On Kodiak Island, earth stations have been constructed in Larsen Bay, Old Harbor, Ahkiok, and Karluk. Health aides in these villages have also been supplied with special medical telephones which will be linked via satellite to the Kodiak Island Hospital in Kodiak. Health aides are able to use these special telephones 24 hours a day to obtain diagnostic assistance and to order supplies.

The bush earth stations and medical systems on Kodiak Island are expected to be operational by the end of 1976. In addition, Old Harbor and Larsen Bay have been selected to receive live color television under a television demonstration project funded by the State. Under this experimental program, television signals will travel via the RCA satellite and will be received by the village earth stations. About 42 hours of programming will be shown in the villages each week. This project is scheduled to be operational in early 1977.(7)

RADIO AND TELEVISION STATIONS

There are two private radio stations in Kodiak. KVOK, an AM station, is located at 560 on the AM dial, and broadcasts with a power of 1000 watts. They estimate their range to be between 800 and 1000 miles. An FM station, KMXT, is located at 100.1 on the FM dial, and broadcasts with the power of approximately 3000 watts. Its range is approximately 30 miles.

The only television service available to Kodiak at the present time is cable television. Provided by KOTV, Inc., this station provides two program channels to the City of Kodiak. Channel 2 operates from approximately 10 a.m. to 2 a.m., and Channel 4 operates from approximately 4 p.m. to 2 a.m. KOTV is not a network station and can choose the programs

they want to air from all three networks. In addition, KOTV, Inc. operates two advertising channels which show local advertising on printed cards. Cable TV in Kodiak costs $17 per month for cable service.

With the upgraded long distance facilities that are currently planned, Kodiak's communication system can adequately handle any increase in population resulting from OCS development as well as meet the specialized needs of the oil industry for their communication purposes. It may be necessary, if OCS development occurs rapidly, to accelerate the RCA satellite program to help provide additional long distance capabilities within the next year.

TRANSPORTATION FACILITIES

A community's transportation system is important to its vitality and livability. The fact that Kodiak is an island makes its transportation facilities doubly important. Kodiak's transportation facilities include marine services, general and commercial air carrier facilities, and state and local roads and highways. This portion of the study will briefly discuss these transportation facilities.

HIGHWAYS - STATE DEPARTMENT OF HIGHWAYS

The State Department of Highways has two maintenance facilities in the Kodiak area. The main shop facility is located near downtown Kodiak, and a small maintenance facility is at Kalsin Bay.

Personnel within the Kodiak area include two equipment operators at the Kalsin Bay facility, seven equipment operators at the Kodiak maintenance facility, one secretary and one foreman.

There is a total of 120 miles of roads under state jurisdiction in the Kodiak Borough -- 12 miles of which are paved. The roads within the Kodiak metropolitan area that are maintained by the Highway Department are shown on Map 4. The remainder of the state maintained roads are shown on Map 9. The State Department of Highways performs the general maintenance on these roads. This includes patching, snow removal, cleaning ditches and grading unpaved roads. According to the personnel at the Kodiak maintenance facility, the equipment utilized in these functions is in good working order and is adequate to handle the maintenance functions in Kodiak.

All new road construction in the Kodiak area is handled by the Southcentral office of the Department of Highways in Anchorage. This office handles the design and construction of new roads with little or no involvement of the Kodiak office.

An increase in traffic on the Kodiak highways resulting from OCS development would require some upgrading of roads. If the road to Chiniak were utilized by heavy industrial traffic, it would be necessary to widen the road to at least 28 feet and straighten the roadway in some areas. The Department of Highways does not feel it would be necessary to pave the road, but it would have to be maintained at a level consistent with the increase of traffic generated. No estimates can be given as to percent increase without detailed information on vehicular traffic increase.(8)

HIGHWAYS - CITY OF KODIAK PUBLIC WORKS DEPARTMENT

The City Public Works Department is responsible for street construction and maintenance within the city limits. (See Map 4.) At the present time, they are in the process of a major paving project in the Aleutian Homes area. This paving project is being financed through a five-year grant program of HUD entitlement funds authorized under the Housing and Community Development Act of 1974.

The majority of the streets within the City of Kodiak are unpaved, and the City maintains them as either gravel or seal-coated roadways.

In most cases, the streets maintained by the City of Kodiak are designed to carry low-volume traffic. Should there be a sudden and rapid increase in population due to OCS development, it would be extremely difficult for the City to maintain the streets adequately due to increased traffic loads.

Roads within the metropolitan area that are not within the city limits and that are not part of the state road system are maintained privately. These roads have been constructed to varying standards and in many cases are designed to provide access to only a few property owners. A significant increase in traffic brought on by OCS development would seriously impact these areas. In preparing for OCS development, assessment of the local road situation is critical in order to plan for and alleviate any potential access problems that could be expected to arise.(9)

AIRPORTS AND AIR CARRIERS

Kodiak's major airport is located on the Coast Guard Base and is owned and operated by the State of Alaska, Division of Aviation. The civilian runway is 7500 feet long and paved with asphaltic compound. It is served by terminal facilities, owned by Wien Air Alaska, that include ticket counters, security waiting area, car rental agencies, indoor baggage facilities, and aircraft fueling facilities. (See Map 5.) There is no food service at the airport at the present time other than a number of vending machines; however, there is space available within the terminal facility to accommodate a snack bar or restaurant as soon as the demand warrants.(10)

The airport is used primarily by two major commercial air carriers. Wien Air Alaska operates the busiest schedule in and out of Kodiak's airport. In the winter, Wien makes two flights per day between Anchorage and Kodiak on Monday through Friday, and one flight daily on Saturday and Sunday. During the summer months (June 1, through September 15), they conduct two flights daily seven days a week between Anchorage and Kodiak. Wien generally flies Boeing 737 fan-jet aircraft between Anchorage and Kodiak, although, it also uses Fairchild F27 prop-jet aircraft on a limited basis.

Western Airlines provides jet service between Kodiak and Seattle during the summer months (April through October). During the summer of 1976,

KODIAK AIRPORT LAYOUT PLAN

MAP 5

Western offered this flight two times per week. It is anticipated that Western will provide Kodiak/Seattle service again in 1977, althougr the new schedule has not yet been determined. The Western flights utilize Boeing 720B fan-jets exclusively.

Air transportation is also available through Kodiak Western Alaska Airlines, Inc. This local flight service provides transportation to all of the nearby villages on a regularly scheduled basis from the downtown area. An example of its winter and summer schedule is shown in Figure 2.

This schedule may be revised from season to season. In addition to the flights shown, Kodiak Western Alaska Airlines, Inc. also services Bristol Bay in the summer with flights coordinated with Western's jet service to and from Seattle.

In addition to these scheduled commercial airlines, Kodiak is also served by a number of smaller air charter operations. The air charter operations provide on-call transportation services to all parts of the Kodiak Island area throughout the year. These air charter services are also utilized for hunting and fishing guide services.

In spite of what is often considered a high incidence of inclement weather, the Kodiak Airport has a relatively good record of dependability. As an example, over the last three years Wien Air Alaska has completed 94.7% of its scheduled flights to and from Kodiak. The 5.3% that were not able to be flown includes both mechanical and weather cancellation. Consequently, it is assumed that closure of the airport due to weather affected less than 5% of those flights.(11)

The City of Kodiak operates a small general aviation airport within the city limits. It is located on the northwest side of Mill Bay road at

the end of Lilly Lake. The runway is oriented in a NE/SW direction and is gravel-surfaced. Its length is 2,750 feet and it is 100 feet wide. There is no formal city-maintained apron area, however several private entities have developed adjacent gravel, aircraft parking areas. The southwest end of the runway ends immediately at the northeast end of Lilly Lake, which is utilized for float planes.

There are no air or ground traffic control activities associated with this airport, however the FAA does offer an air traffic advisory service from their tower on the Coast Guard Base. No records are kept concerning the number of operations at the City Airport.

Recent population growth and residential development have taken place near the airport. This has reduced the future potential capacity of that facility, although it is impossible to quantify that reduction of capacity without historical records on operations.

MARINE TRANSPORTATION SERVICES

Marine transportation service is essential to the viability of Kodiak since it is the only mode of surface transportation from the mainland possible. The City Dock operated by the City of Kodiak is the center of shipping activity. See Map 6. Its facilities include a 21,600 square foot warehouse and two piers, one of which is 360 feet long and one which is 350 feet long. During the past year, 165 vessels utilized the City Dock facilities and 205,000 tons of freight were moved across the dock in and out of Kodiak. Reports indicate that this year's activity will greatly surpass last year's. At present there is very little dock storage space available; however, the City of Kodiak is attempting to negotiate for additional space from the Coast Guard.(12)

Sea-Land Service Company is the major freight supplier to Kodiak. The City of Kodiak provides dock faciltiies to Sea-Land under a contractual agreement. This contract, which extends another 16 years, provides that Sea-Land is allowed 104 berthings per year. Goods are delivered to the Kodiak area on container ships. Because of the lack of storage area, the vans are then loaded on trucks and delivered to the destined business location where they are left until the ship arrives on its return trip.

If OCS development were to occur, the increased demand for goods and industrial equipment likely to accompany such development would place a significant increase in demand on dock facilities. Should this situation occur it would be necessary to increase the capacity and storage spaces of these facilities significantly. This will be discussed in more detail in Phase II of this study.

STATE OF ALASKA FERRY SYSTEM

Kodiak is served on a seasonal basis by the Tustumena, a 269 foot long ferry operated by the State of Alaska Division of Marine Transportation.

The Tustumena serves Kodiak twice a week during the winter (January 10 through April 30) on a loop going from Seward to Kodiak, from Kodiak to Homer, from Homer to Kodiak, and from Kodiak to Seward. During the summer (May 1 through mid-October) the ferry makes three trips to Kodiak per week following the same route as the winter schedule, with the addition of a Valdez/Seward run on the weekends. Between October 14 and January 9 each year, the Tustumena undergoes its annual repairs in accordance with Coast Guard regulations, and during this period there is no ferry service available to Kodiak. The State Ferry Terminal is located in downtown Kodiak (see Map 6).

Costs for ferry service are as follows:

	Winter Rates	
Seward to Kodiak	$16/passenger	$54/vehicle
Kodiak to Homer	$14/passenger	$42/vehicle

Summer rates for the 1977 season have not yet been determined; however, it is anticipated that these will be 20 to 25 percent higher than the winter rates.

The Tustumena can carry 200 passengers and 45 cars (figured at 8' x 20' space per car). Vans of 40 feet maximum length can be transported on this vessel. There are 26 staterooms available, two of which are four-bed units and the others are two-bed units.

The Tustumena uses an elevator system to load vehicles. Two cars or one van at a time are lowered into the Tustumena onto a roundtable which turns to position the vehicle for placement in the ferry.(23)

As population pressures increase in Kodiak, either through normal growth or through OCS development, it may be necessary to increase the frequency and consistancy of ferry service to the Kodiak area both in winter and summer. The ferry is the only vehicular link between Kodiak Island and the mainland, and thus will be important to people who must travel between Kodiak and other areas in Alaska by vehicle.

PUBLIC SAFETY FACILITIES

This section will discuss the public safety facilities available in Kodiak. These services include law enforcement, fire protection and emergency services. In addition, the court system and Division of Corrections facilities will be described here since they relate closely to law enforcement.

DEPARTMENT OF PUBLIC SAFETY, DIVISION OF ALASKA STATE TROOPERS

Kodiak is the headquarters for the "E" Detachment of the Alaska State Troopers. The "E" Detachement covers an area including Kodiak, Dillingham, Naknek, Sand Point, Saint Paul and most of the Aleutian Chain. The Detachment employs 18 people, eight of whom are stationed in Kodiak. Kodiak personnel include five troopers, two clerks and one pilot who works for both the Division of Alaska State Troopers and the Division of Fish and Wildlife Protection.

The State Troopers are charged with enforcing the laws of the State of Alaska. This entails a variety of tasks, the most time consuming of which are criminal investigations, search and rescue functions, crash site investigations, and driver's license administration and testing. In addition, the Troopers assist the Fish and Wildlife Protection Division on an as-needed basis.

Offenses reported to the State Troopers in Kodiak increased in the early 1970's but have decreased since 1974. While available statistics summarize enforcement activities throughout the "E" Detachment jurisdiction, general trends determined by this information are directly applicable to the Kodiak area. For example, Figure 3 lists a breakdown of offenses reported within the "E" Detachment from 1969 to 1975. Troopers in the Kodiak area have carried a work load proportionate to the figures shown.

At present, the State Troopers in Kodiak have a staff level that is barely able to handle the case load. According to estimates made by "E" Detachment Headquarters, it takes a minimum of five men to provide a 24-hour shift for Kodiak Island. This does not include man-days required for travel, vacation, administration, and court duties. In order to adequately handle a 24-hour shift and all the ancillary duties assigned to the the Trooper detachment, a minimum of eight troopers and two supervisors should be provided according to the Division representative in Kodiak.

In addition, the State Troopers and the Fish and Wildlife Protection Division need another airplane. At present, the only plane available for use by both the divisions is a Grumman Goose. While the Goose is adequate for certain types of aerial work, it does not meet the full

range of needs for the two divisions. It is recommended that another, more modern aircraft be added to the divisions so that travel time can be reduced and larger areas can be covered in search and rescue functions. It is also felt that the Troopers need a boat approximately 40 feet in length to provide better coverage in search and rescue missions.(14)

If full OCS development were to occur, the case load of the Troopers would be expected to increase substantially. A rapid increase in population would be accompanied by an increase in criminal and misdemeanor offenses in a rate higher than expected. This is because boom-type economies create social pressures resulting in social and economic problems not normally found in stable communities. The State Troopers, therefore, anticipate a need for a larger work force in "E" Detachment to handle an increase in population due to OCS development.

Source: Alaska Department of Public Safety

CITY OF KODIAK POLICE DEPARTMENT

The City of Kodiak Police Department provides police services within the City Limits. The Police Department headquarters are located near downtown Kodiak on Mill Bay Road. (See Map 6.)

The Department is organized in three divisions. The Administrative Division consists of the Chief of Police and one secretary. The Patrol Division consists of one Sargent of Police and nine police officers. The Service Division consists of one sargent, five desk officers, one cook, and one humane officer. The Service Division provides support services to the Department including clerical, dispatching and record maintanence. The humane officer is responsible for animal control.

The Police Department maintains four radio-equipped patrol cars, one four-wheel drive vehicle, one pickup truck with canopy (humane truck) and one 1-1/2 ton van.

The City of Kodiak's jail facility is also located in the Police Department headquarters. At present that facility will detain 20 prisoners. It does not, however, have cells separated for the detention of women and juveniles, and the City is not allowed to detain prisoners for more than 120 days after sentencing because of the limited jail space. As indicated in the Social Services Section of this report, the Police Department is also responsible for administering the Alcoholic Sleep-Off Center which is located behind the jail.

A study of the historical crime rate in Kodiak reveals some extraordinary findings that give a relatively accurate indication of the effects that OCS development on criminal activity in Kodiak. Figure 4 shows the number of persons charged with Part I and Part II offenses from 1970 through 1976, and the percentage of increase or decrease in criminal acts that occurred during this period. The information utilized for this figure is condensed from reports sent to the Federal Bureau of Investigation by the City of Kodiak Police Department. A description of the offenses included in Part I and Part II categories is also found in Figure 4.

There has, in recent years, been a fluctuation in criminal activity in Kodiak. This is probably due to flucuations in the economy. Such economic flucuations can cause changes in the crime rate due to social tensions, economic hardships of individuals and increases in the number of transient workers.

The most significant statistic within Figure 4 is the increase in the crime rate shown between 1975 and 1976. The major portion of that increase in 1976 occurred in Part I offenses, which are considered far more serious than the Part II offenses. This is primarily because Part I offenses normally represent a criminal act that is eminently dangerous to the life and/or physical well being of the victim.

Fig. 4: Criminal Offenses City Of Kodiak

Year	Part I Offenses[1]	% ±	Part II Offenses[2]	% ±	TOTAL	TOTAL % ±
1970	4	---	501	---	505	---
1971[3]	1	---	352	---	353	---
1972	47	+ 15%	504	+ .05%	551	+ 2.0%
1973	40	- 15%	229	- 55%	269	- 39%
1974	50	+ 25%	503	+ 120%	553	+ 63%
1975	53	+ 6%	450	- 10.5%	503	- 10%
1976	91	+ 72%	551	+ 22%	642	+ 28%

1. Part I Offenses: Criminal Homicide (Murder & Nonnegligent Manslaughter) Forcible Rape, Robbery, Aggravated Assault, Burglary, Larceny, Motor Vehicle Theft.

2. Part II Offenses: Other Assaults, Arson, Forgery & Counterfeiting, Fraud, Embezzlement, Stolen Property, Vandalism, Weapons, Prostitution & Commercialized Vice, Other Sex Offenses, Narcotic Drug Laws, Gambling, Offenses Against Family and Children, Driving Under the Influence, Liquor Laws, Drunkenness, Disorderly Conduct, Vagrancy, All other Offenses (except traffic).

3. Incomplete data for 1971.

Source: City of Kodiak Police Department information reported to FBI. Simpson Usher Jones, Inc. (1976).

Often times an increase such as this is not representative of the actual increase in crimes, but rather is reflective of an increase in efficiency of reporting or an increased level of service on the part of the agency involved. However, this not the case of the Kodiak Police Department. There have been no significant changes in the reporting requirements or standards, and the level of service of the department in terms of its personnel and equipment, was not appreciably changed between 1975 and 1976. Thus there is no reason to believe that the statistics shown in the table are influenced by external factors.

The increase in Part I offenses within the last year could be explained by any one, or all, of a number of changes that are occurring in Kodiak. Most of these changes are directly or indirectly related to economics. In recent years, the processing industry has been expanding rapidly and has encountered shortages in the available work force. Consequently, there has been a high degree of reliance on imported laborers that are either

migrant and/or transient. The majority of these workers are from cultural backgrounds different than the residents of Kodiak and have no hereditary roots within the community. According to the Police Department, a relatively high percentage of the criminal offenders reported in Figure 4 come from this group. Also, Kodiak is experiencing a much higher than normal incidence of unemployed transients from other major cities within Alaska. Again, according to the Police Department, there has been a high incidence of criminal offenses by transient persons from Anchorage, Fairbanks and Valdez within the last year. This would correspond with the completion of the Trans Alaska Pipeline project and the desire of the persons who were employed on that project to either seek new employment in other towns or simply explore other parts of the state. For the most part, the people within these groups are law abiding and have no intention of becoming involved with illicit activities. However, statistically there is a higher incidence of criminal offenders in these groups than is found in the indigenous population. A relatively high percentage of offenders in Kodiak tend not to have any type of cultural or economic attachment to the community.

There is an obvious correlation between this recent increase in criminal activity and the potential effects of rapid industrialization due to OCS development. A large portion of the labor force involved in oil development in Kodiak will have to be imported because the lack of required skills that are available in Kodiak as well as the general lack of work force available. Also, as industrialization occurs, Kodiak will experience an influx of "camp followers". These people have traditionally followed economic booms in hopes of either finding high paying jobs or establishing illicit operations, such as gambling and prostitution, to "cash in" on the boom. In most cases the jobs are not available and, unfortunately, there is normally a market for the illicit operations.

In order to cope with this situation, police services within the City of Kodiak will have to be increased. In discussions with the Police Department, a number of needs were identified that would help reduce these adverse impacts. One unfortunate, however necessary, priority would be an increase in the size of the jail facility. Since the city jail is the only detention facility on Kodiak Island it is already operating at or above its capacity. A continued increase in crime will make its expansion or the construction of a new facility imperative.

An increase in criminal activity will obviously require an increase in police departmental activity. A dramatic increase will require additional personnel. An increase in personnel will require an increase in the size of the Police Department facility. Currently, the department estimates that there is a need for additional personnel in the jail to handle bookings and releases on the work-release program, as well as to administer the Sleep-Off Center. The department is also in need of a juvenile officer to work with delinquent, dependent and neglected children. It is estimated that by the addition of this officer, 75% of the children that are now sentenced could be kept out of court. In addition, the department is in need of two more positions for traffic control. An increase in the criminal rate will require a much higher percentage of

individual police officer's time to be spent in the handling of criminal cases. Consequently, traffic control would be one of the first areas of police work that would receive less attention.

The present needs of the Department, based on the increased crime rate in 1976, would require the addition of five people to the department along with appropriate equipment and vehicles. If the crime continues to increase as can be expected during OCS development, the City of Kodiak should be prepared to expand the department even further.

THE ALASKA STATE COURT SYSTEM

The court system is housed in the state court building in downtown Kodiak. (See Map 6.) In addition to the administrative offices this building includes a law library with an inventory of approximately 5,000 legal books and documents. The law library is open to the public during the normal hours of operation of the state office.

At the present time court personnel include one Superior Court judge who presides over both the Superior and District Courts; one in-court deputy clerk who also functions as the judge's secretary; one magistrate who handles the administration of the court system and the small claims and arraignment function; a clerk of the court/acting magistrate; and a recording clerk, for a total of five employees.

The court's workload in Kodiak has shown a fluctuating increase over the past few years (Figure 5). The following charts provide a summary of Kodiak Superior Court's case load indicating the number of cases filed, the number of dispositions made, and the number of cases still pending during the years 1973, 1974 and 1975. Figure 6 provides an indication of the number and types of felony and misdemeanor charges filed in Kodiak during 1975.

Source: State of Alaska Court System

The first year Kodiak had both a Superior Court Judge and Public Defender was 1976. (See "Health and Social Services" for information regarding the Public Defender.) Consequently, the workload of the court system has increased dramatically. It is estimated that two additional personnel are needed to adequately handle the existing court administration workload. In addition, a law clerk is needed to assist the Superior Court Judge.

If full OCS development were to occur, it is anticipated that felony and misdemeanor offenses will increase significantly. Consequently, the court system's case load will also increase. Since the current staff level is overtaxed by its present workload, it is felt that the court system could not handle the additional burden brought on by OCS development without increasing its personnel.

STATE DEPARTMENT OF LAW

The District Attorney's office is the only representative of the State Department of Law in Kodiak. This office employs one attorney and one secretary. The function of the District Attorney's office is to prosecute all violations of state law within its service area which includes Kodiak, the Alaska Penninsula, the Aleutian Chain, and portions of Southwestern Alaska.

A full-time District Attorney has been employed in Kodiak since the fall of 1975. Prior to that, those functions were served by an Assistant District Attorney from the Anchorage office on a part-time basis.

In addition to the normal case load, the Kodiak District Attorney is responsible for prosecuting violations of fishing and hunting regulations for the Division of Fish and Wildlife. These cases include everything from illegal commercial fishing to complaints against sport fishermen for snagging salmon. Fish and Wildlife Protection cases account for approximately 25 percent of the District Attorney's time.

The District Attorney also handles divorce and paternity-related non-support complaints from other states through cooperative agreements. This is done on a time-available basis.

As previously mentioned, the District Attorney's office is responsible for the Kodiak area, the Aleutian Chain and the Alaska Penninsula. The greatest proportion of its time (approximately 70 to 75 percent) however, is spent on Kodiak cases. The District Attorney's office estimates that at least one additional attorney and one secretary are needed to adequately handle the present case load. The advent of OCS development would necessitate an even larger staff because of the problems anticipated to accompany population growth.(15)

DIVISION OF CORRECTIONS (Department of Social Services)

The Division of Corrections Office in Kodiak is also located in the state court building. It is staffed by two corrections officers and one secretary. The Division of Corrections is primarily in charge of correctional institutions and field services. However, since there is no state jail in the Kodiak area, the Kodiak office is totally involved in field services. The programs administered are as follows:

Juvenile Intake - Under this program the Division of Corrections reviews juvenile offenders to determine if they should be taken to court or handled in some other manner. This is a discretionary decision rendered by the corrections officer in Kodiak.

Convicted Offenders - Reports are required on convicted juvenile and adult offenders. In the case of adults, presentencing reports are prepared for the court on convicted felony offenders. These reports are reviewed by the court in the process of sentencing adult felons.

Predisposition reports are required by the court on juvenile offenders. These reports include complete background studies of the juvenile offenders. The court uses these reports to determine the disposition of the juvenile offender after sentencing.

Probation Supervision - This program directs the counseling and supervision of persons who have been convicted of crimes and placed on probation. It is the duty of the corrections officer to see that the terms and conditions of probations are met by the offenders.

Parole Supervision - This program administers probation supervision to previously convicted persons who are now on parole. Parole is also normally granted with attached conditions or terms, and it is the duty of the corrections officer to insure that those conditions are met by the parolee.

Interstate Compact - Under this program the Division of Corrections assumes courtesy supervision of parolees from other states. While it is required that correction officers must be notified by the state of origin when a parolee requests permission to move into his district, this procedure is seldom followed. Frequently parolees simply appear before the correction officer and request parole supervision.

Approximately 95 percent of the correction officer's case load in Kodiak involves probation supervision. Of that, 60 percent relates to adult offenders and 40 percent with juveniles. The remaining 5 percent of the time is spent preparing reports for both the department and the court.

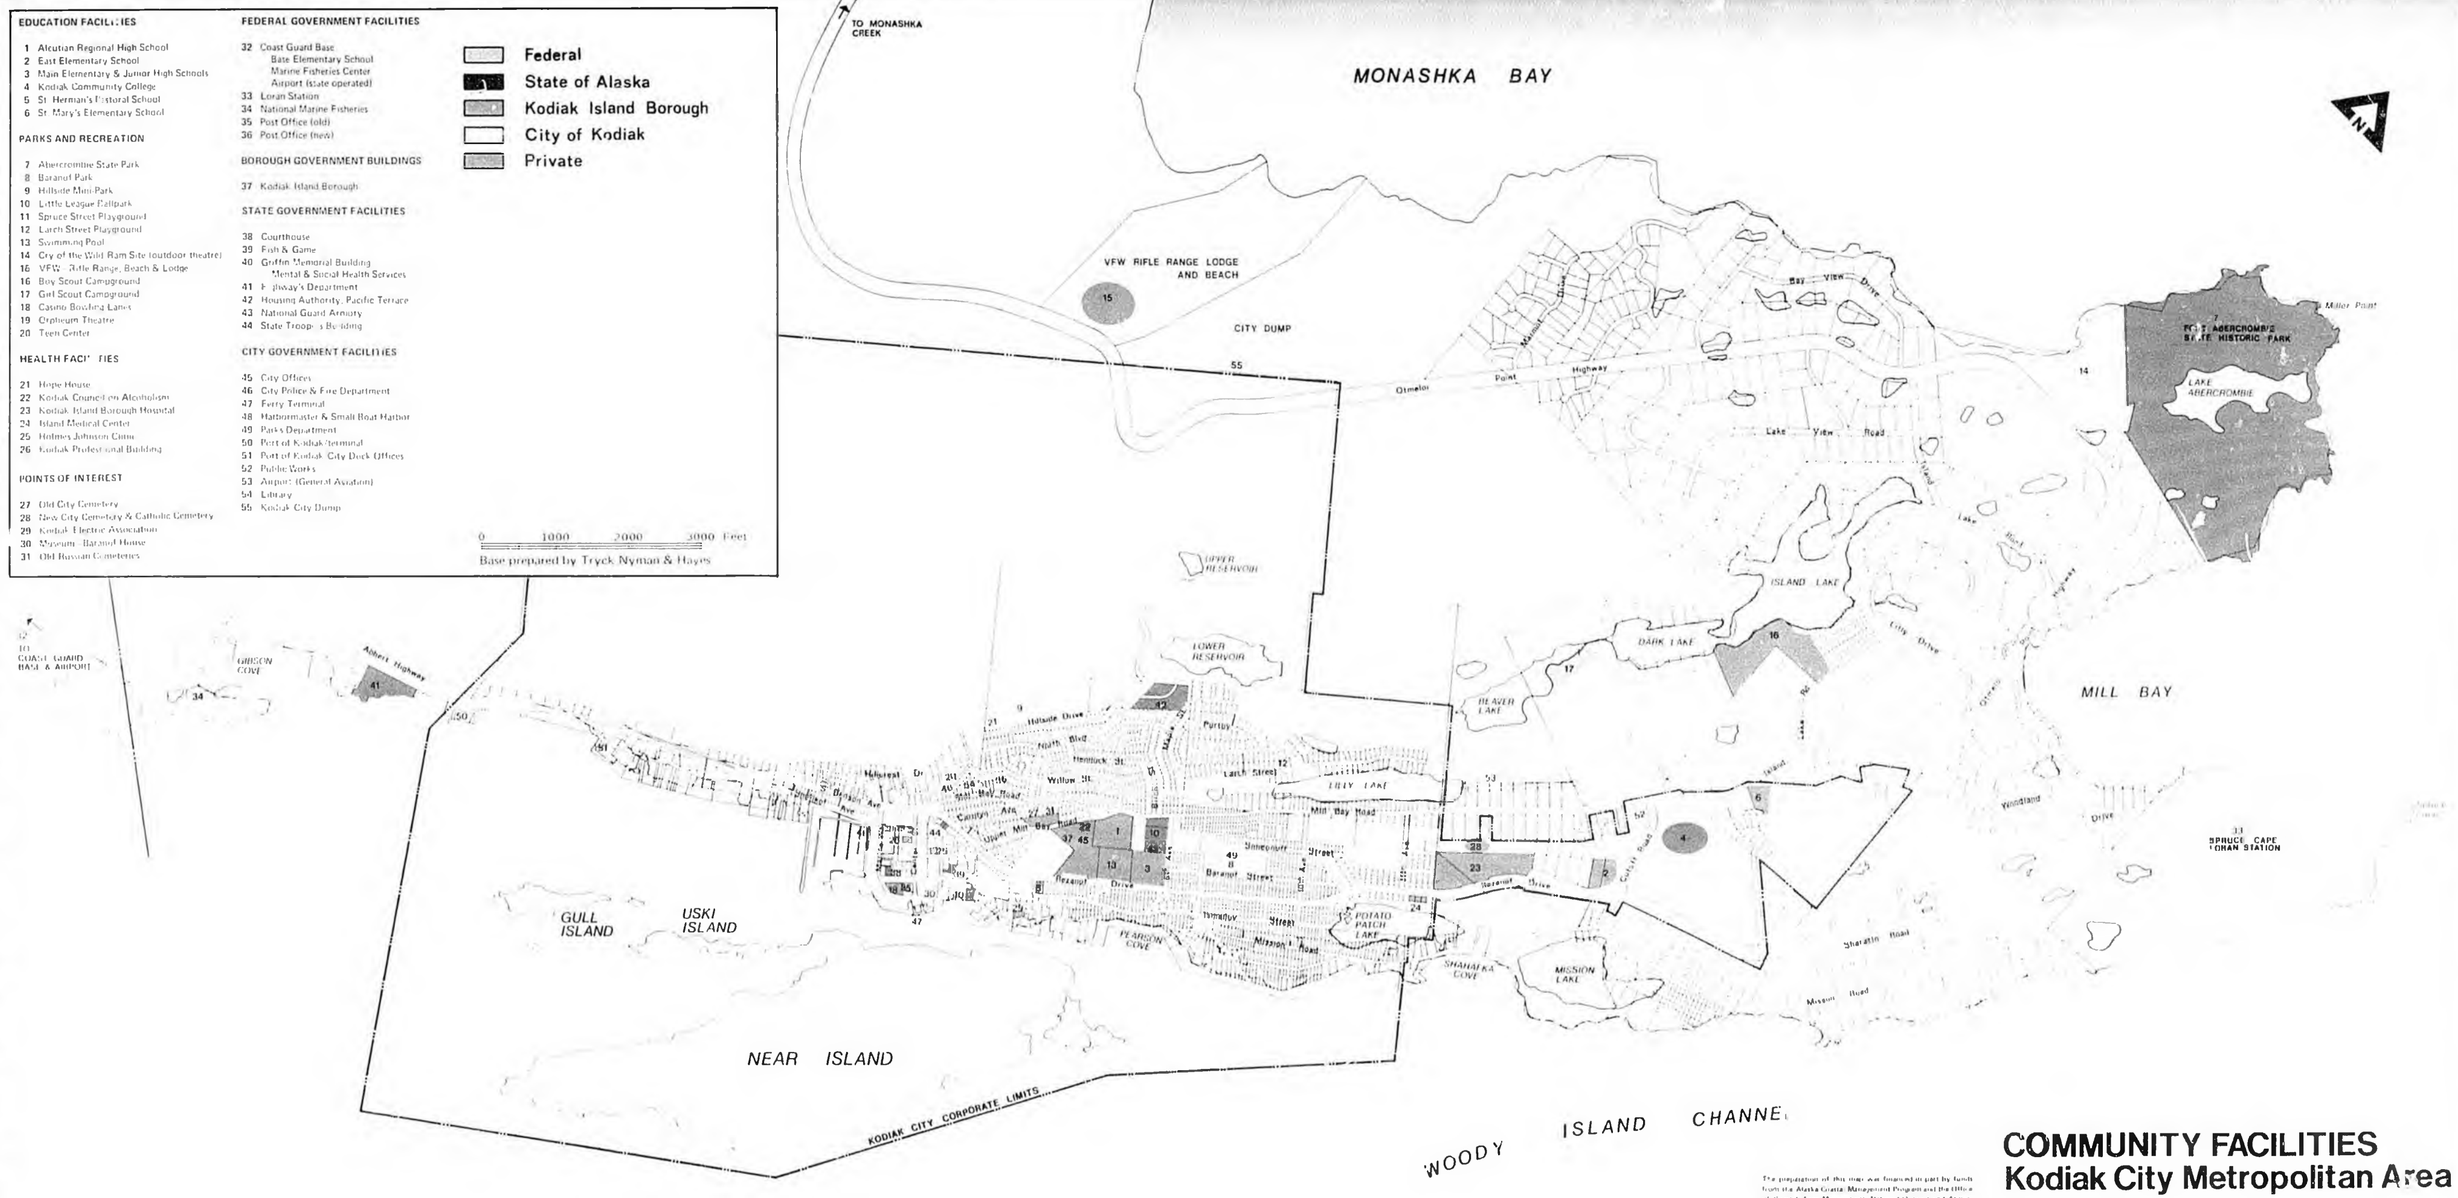
The Division of Corrections handles a heavy work load and additional personnel could currently be justified according to the Division repre-

sentative in Kodiak. If full OCS development were to occur, the case load would increase significantly, and so would the need for additional personnel and support facilities.(16)

EMERGENCY MEDICAL SERVICES

Emergency medical services in Kodiak are insufficient at the present time on a regional basis. While the City of Kodiak provides ambulance service to military personnel and their dependants at the Coast Guard Base, the remainder of the Island, including the villages, is without such service. When emergency medical help is needed, the villages receive verbal medical assistance from Kodiak physicians and nurses until the patient can be evacuated from the village. Medically, this is a very unsatisfactory system further complicated by unreliable communication and transportation difficulties due to unfavorable geographical and weather conditions.

The Coast Guard provides search and rescue service for the entire island.



COMMUNITY FACILITIES
Kodiak City Metropolitan Area

The preparation of this map was financed in part by funds from the Alaska Coastal Management Program and the Office of Coastal Zone Management, National Oceanic and Atmospheric Administration, U.S. Department of Commerce, administered by the Division of Community Planning, Alaska Department of Community and Regional Affairs.

Prepared by Simpson Usher Jones Inc. for Kodiak Island Borough

HEALTH AND SOCIAL SERVICES

The following is a review of health and social services available in the Kodiak area. More specifically, the services discussed are public assistance and welfare programs primarily directd toward persons with financial and sociological problems. Most of these services are based in the City of Kodiak or the immediately surrounding metropolitan area, although many services are provided to the outlying villages on a visitation basis. These will be noted where applicable.

The importance of health and social services within a community is often underestimated. The need for such services, however, may be particularly acute during an economic boom. Should Kodiak experience rapid population growth and industrialization due to OCS development, problems may arise such as overcrowding, cost of living increases, a rise in unemployment, housing shortages, traffic congestion, and more community health problems. Such changes may result in a significant degree social disruption since current residents of Kodiak have been accustomed to a stable, homogenous community with a steady growth rate.

Relatively speaking there have been few serious social conflicts and no serious community-wide health problems. It is possible, however, that conflicts between the life styles of the existing residents and the newcomers may occur. Resentment and other psychological pressures may build as a result of a population increase. In addition, since unemployment can be expected to rise due to an influx of job seekers who want to participate in the "boom", public assistance and welfare programs will be impacted.

To help avoid these problems or lessen their consequences, the health and social services available in Kodiak will be of valuable assistance.

HEALTH FACILITIES AND SERVICES

Kodiak Island Borough Hospital

The Kodiak Island Borough Hospital is located within the City of Kodiak and is owned by the Borough. (See Map 6.) It is operated by the Grey Nuns of Sacred Heart, Incorporated. This non-profit corporation has an operating agreement with the Borough and takes full responsibility for the day-to-day operation of the hospital.

The Kodiak Island Borough Hospital has a 44-bed capacity including a two-bed, intensive coronary care unit. Other departments within the hospital include obstetrics, surgery and emergency care. The hospital is equipped with X-ray equipment, two remote heart monitors, complete

kitchen facilities medical laboratory, EKG equipment and a variety of surgical equipment and monitoring facilities. At present the only additional equipment needed by the hospital is another stretcher for the emergency room, a backup EKG machine, microfilm equipment and additional up-dated surgical equipment.

The staff totals 55 full-time and part-time personnel, including medical and administrative positions. There are four full-time doctors on the staff and eight doctors on a courtesy staff. The yearly budget is approximately one million dollars.

Construction of a new intensive care wing is underway with occupancy expected in 1977. This 19-bed facility will require less equipment and staff personnel than the acute care facilities currently being used. In addition, it will increase the versatility and capacity of the hospital.

Full OCS development should not adversely affect the hospital. Upon completion of the current construction program, the hospital will be operating at 60 to 70 percent of full capacity. With the addition of the new wing and the purchase of equipment mentioned previously, the hospital should be able to accommodate the needs of a substantially large population.(17)

OCS development can be expected to bring a significant increase in industrial accidents. The hospital is also capable of handling that situation. The heliport at the City Airport is located near the hospital and provides fast transportation to offshore facilities. It would be necessary, however, to upgrade the roads between the hospital and heliport to allow for faster ground transport of emergency cases.

Health Care Agencies and Facilities

The following is a list of the various entities that provide health services in Kodiak in addition to the Kodiak Island Borough Hospital.

Kodiak Health Center

The Kodiak Health Center is operated by the Alaska Department of Health and Social Services, Division of Public Health. It is located in the Griffin Building (see map 6) and is open from 8:00 a.m. to 4:30 p.m., Monday through Friday. The center is staffed by three registered nurses and one clerk/receptionist. The following services are provided by the Kodiak Health Center: (18)

1. Public Health Nursing Service - Services available through the Public Health Nursing Service include physical examinations, house call visits, limited direct nursing care, follow-up on communicable diseases including tuberculosis and veneral disease, services related to mother and child care, evaluation of health problems and needs, health education, and health care consultation.

2. Clinics

Well Baby Clinic - Examinations and immunizations.

Immunization Clinics - Routine childhood and adult, international travel, exposure to a contagious disease, tuberculin skin testing.

Family Planning Clinic - Education, health exam and provision of desired birth control method.

Chest and X-ray Clinics - For tuberculosis and other respiratory problems.

Kodiak Island Borough School District

The School District provides health services through a registered school nurse whose office is located at the Kodiak High School. She provides general health screening, vision and hearing testing, health counseling and assistance to community agencies regarding child health matters.(19)

Physical Therapy - Physical therapy is provided by a traveling physical therapist who works out of the Kodiak Island Borough Hospital one or two times a month. The services provided by the physical therapist are offered to the community free of charge through the financial support of the Elks Lodge. The services offered are:

1. Teaching the patient or family to carry out an exercise program as needed.

2. Going into the home, if necessary, to help modify living arrangements to enable handicapped persons to increase their independence.

3. Evaluations of any persons with problems relating to physical therapy.

4. Specific physical therapy evaluation procedures (i.e. range of motion, muscle testing, electrical stimulation, functional evaluation).

5. School scoliosis screening. Also evaluations of children requested by the school nurse or teacher.

6. Motor development evaluations of infants and young children.

Kodiak Analytical Laboratories

Kodiak Analytical Laboratories is the only independent laboratory facility on the Island. It is located in the Kodiak Island Professional

Building (see Map 6). A full range of laboratory work can be provided upon physician's request. In addition, the laboratory will perform pregnancy and premarital blood tests for private individuals.

Private Physicians and Dentists

The City of Kodiak has several dentists and general medical practitioners. In addition there is a clinical psychologist and an optometrist. Specialists in the fields of dermatology; urology; orthopedics; opthomology; orthodontics; and ear, nose and throat; travel to Kodiak from Anchorage and Fairbanks at various frequencies throughout the year to treat patients needing special care. A family practitioner is located at Port Lions.

The current needs for professional medical services in Kodiak are being adequately met. OCS development would undoubtedly mean a greater need for medical services, especially in the area of emergency services due to the hazardous nature of the work involved in oil field development. As mentioned previously, however, the Kodiak Island Hospital should be able to accommodate these needs both in physical capacity and technical facilities. More private physicians and dentists may be needed as the population grows.

Mental Health Assistance

The Kodiak Aleutian Mental Health Center (KAMHC), established in 1970, provides most of the mental health assistance in Kodiak. The Center, which is located in the Griffin Memorial Building (Map 6), has a full range of services including 24-hour crisis intervention and emergency psychiatric hospitalization. The staff includes two social workers, one psychologist, and one native mental health worker. Local medical consultation is available at all times, and psychiatric consultation is scheduled on a monthly basis. Services are provided at the schools, the Alcoholism Council, the Kodiak Baptist Mission Program for Adolescents, and all other agencies in the community. The Center has also recently begun to provide mental health services to the surrounding native villages.

The purpose of the Kodiak Aleutian Center is to provide quality mental services to all residents of Kodiak Island regardless of income.

Its staff evaluates and treats various emotional disturbances such as behavior problems of children and adolescents, learning disabilities, school adjustment problems, and delinquent behavior, marital problems, disturbances in family living, alcohol and drug related problems, neuroses, and psychoses.

According to personnel at the Mental Health Center, many residents of Kodiak feel isolated because they live on an island. These feelings of isolation coupled with the seasonality of the fishing industry bring a variety of mental health problems.

Total state funding for the Kodiak Mental Health Center for fiscal year 1976 was $98,500. That figure will increase by $14,200 in 1977 for a total state funding of $112,700.

Four basic services are offered by the center. They are described as follows:

1. Outpatient care - This includes services for persons who require ongoing therapy, such as psychotherapy, marital counseling, family counseling, and group therapy.

2. Inpatient care - The Center utilizes the Kodiak Island Hospital for persons who require short-term psychiatric hospitalization, usually no more than ten days. Long-term hospitalization is provided by referral to Alaska Psychiatric Institute in Anchorage or other inpatient facilities outside the community.

3. Partial hospitalization - This is for patients who do not need complete hospitalization. These patients are engaged in part-time programs provided by the Center.

4. Education and consultation - This is a preventative service, intended to assist the community to better understand the problems of mental health and to offer training to staff members of other agencies.

Full OCS development would undoubtedly create a need for additional clinical staff due to social pressures generated by conflicting life styles and economic problems.(20)

Alcoholism and Alcohol Related Programs

Alcoholism is an extremely serious problem in Kodiak. It was identified in the Kodiak Island Borough Health Resources Council Report of August 1975 as Kodiak's number one health problem and a priority issue. Statistics reinforce this statement. For instance, of the total number of admissions to the Kodiak Island Hospital for 1975-76, 14 percent were alcohol related. Of the total number of ambulance responses by the Kodiak Fire Department, 22.6 percent were alcohol related. In addition, the court system reported that 33 percent of the District Court cases were alcohol related, and 44.8 percent of the Superior and District Court cases combined were alcohol related.

Most of the alcoholism programs in Kodiak are handled through the Kodiak Council on Alcoholism which is a chartered chapter of the National Council on Alcoholism - Alaska Region. Its offices are located in the Borough office building (Map 6). It is a private nonprofit corporation funded by state and local governments, and it provides three main facilities. They are Hope House, the Sleep-Off Center, and the Information and Education Center. All of these facilities are located in the City of Kodiak.

Hope House Alcoholism Treatment Center - Hope House is located at 319 Hillside Drive in Kodiak. It provides a four-week residential treatment program, extending into a 60-day half-way house program with after-care. It can accommodate nine men and two women. The clients who enter the program generally do so on a voluntary basis and are free to leave treatment at their own request. During the fiscal year 1975-76, a total of 61 persons were admitted to the Hope House and 54 were discharged.

Sleep-Off Center - The Sleep-Off Center is located at 217 Benson Avenue behind the City Police Department (Map 6). It includes beds for ten individuals, free coffee, tea and hot chocolate, shower and laundry facilities. Trained personnel are on duty to provide continual care. Referrals may be made to the Sleep-Off Center by police officers, the Kodiak Council on Alcoholism, medical clinics, ministers, and other agencies. Walk-in patients are also accepted. The desk officer at the City Police Department checks in all referrals and walk-ins before they are turned over for care at the Sleep-off Center. This does not mean the patients are incarcerated, however. They accept treatment on a voluntary basis and may leave when they wish. No fees are charged for the services rendered. During 1975-76, 244 persons utilized the Sleep-Off Center, with a total of 61 of those being referred by other agencies.

Information and Education Center - The Kodiak Council on Alcoholism Information and Education Center is located on the second floor of the Harbor Master Building (Map 6) at 403 Marine Way. The Center has a library which offers films, tapes, and literature on alcoholism. There is also a lounge area for clients and the general public which furnishes free coffee, tea and hot chocolate. Referral and consultation services with the staff and executive director of the Council are available on a scheduled and non-scheduled bases. In addition, films are shown on Monday, Wednesday and Friday at 1:30 p.m. for anyone who wishes to attend. Alcoholics Anonomous and a team on drug/alcohol use meet regularly at the center.(21)

District Sanitarian

The State Department of Health and Social Services provides the only sanitarian services in Kodiak. The Office of the District Sanitarian is located in the Griffin Memorial Building (Map 6) and is staffed by two sanitarians and one secretary. It is encharged with enforcing all state, borough and local health regulations for the Kodiak area as well as the Alaska Penninsula and the Aleutian Chain. The duties of the District Sanitarian include inspection and enforcement of the sanitation requirements for food services, seafood processors, barber shops, beauty shops, schools, grocery stores and on-site septic systems in residential areas. In addition it must investigate complaints by the public.

Due to the tremendous volume of work assigned to the District Sanitarian, the office is understaffed with three employees. It is felt that three additional sanitarians assigned to seafood processors plus two more

sanitarians and one aid to assist with the other areas of responsibility could easily be justified. In addition it is recommended that the City and Borough hire their own sanitarians to enforce local regulations.

Because of the limited staff, the District Sanitarian's Office has had to expend most of its effort attending to emergency situations. Normal day-to-day responsibilities have suffered from lack of attention and some problems are still unresolved as a consequence. As an example, the City of Kodiak has been faced with a large rat population in recent years. While it is a potentially serious problem, the District Sanitarian has been unable to devote enough time to the extermination of these animals. With proper staffing, however, this kind of problem could be handled on a continous basis.

PUBLIC ASSISTANCE PROGRAMS

The public assistance services addressed in this portion of the report will primarily include programs designed to meet the needs of persons and households requiring financial assistance, medical aid, or vocational training.

Housing Assistance

Housing is a major problem in the Kodiak area. As the Housing Inventory demonstrates, the current housing supply is short and rents are correspondingly high. This situation has created a need by many Kodiak residents for housing assistance.

Several programs are available to provide such help. One project, operated by the Alaska State Housing Authority, provides low cost housing to families in the City of Kodiak. Forty apartment units, ranging from one to four bedrooms and collectively known as Pacific Terrace (Map 6), are available to families who qualify under a formula based on the relationship between the family's size and its income. As an example, a family of three qualifies for this housing if it earns $7900 or less per year. Once they become residents, the family may increase its income without jeopardizing its tenancy. However, rent will increase in accordance with the raise in salary.

The housing provisions of Pacific Terrace require that a family must consist of either (1) two or more persons related by blood, marriage or adoption, and who live regularly together in the same dwelling unit; or (2) a single person who is disabled; or (3) a person who is 62 years of age or older.

Public demand for low cost housing at Pacific Terrace is high. It is estimated that vacancies occur only once every six months, and there is currently a two-year waiting list for qualified applicants.(23)

Another program providing housing assistance is offered by the Department of Health and Social Services, Division of Public Assistance. This

program, otherwise known as Income Maintenance, is moderately used in Kodiak. It provides rent and utility assistance as part of a general relief program. In 1975, the Division of Public Assistance expended $514,503 on 144 cases in Kodiak, an average of $3,572.94 per case.

Construction of 90 housing units in outlying villages is planned for the near future. These houses will be built by the Kodiak Area Native Housing Authority (KANA). an organization recently established by the Kodiak Area Native Association (KANA). Assistance by the Indian Health Service, and a 3.6 million dollar grant from HUD, aid this housing project.(24) All of the units will be located in villages around Kodiak Island. Old Harbor will receive 45 units. Ahkiok, Larsen Bay, and Karluk will receive 15 units each. At present, the funds for this program are held up by HUD because a new set of guidelines has been adopted for the Indian Housing Program and the cost structure of this project must be modified to meet those guidelines. There is no estimate as to when the funds will be available.

In a separate application to HUD, funds are being requested under Section 8 of the Housing and Community Development Act of 1974, for a 55-unit complex for the elderly. These funds would not cover constuction costs, but would provide housing assistance payments to qualified households. A simultaneous application for HUD mortgage insurance has been made to finance the construction of these units. Both applications are pending due to lack of funds.

The programs mentioned above can be valuable in providing housing to low and middle income people in Kodiak. In the future they will become even more important. Maintaining the funding for these programs will be vital to the success in meeting the housing needs in Kodiak.

As with other social services and public assistance programs, the housing program will be strongly impacted by full OCS development. As economic development occurs and population increases, housing will become more scarce and rents will become higher. Consequently, housing assistance will be needed by a larger percentage of the community. It follows, therefore, that funds for housing assistance programs must also increase in proportion to rising housing costs and population growth.

Social Services

The State Division of Social Services has an office in the Griffin Memorial Building in Kodiak (Map 6) to assist people in the Kodiak area, the Aleutian Islands, and the Alaska Peninsula. The staff, which consists of one full-time and one half-time employee, devote their time to counseling, child protection, regulation of daycare services, information dispersal, referrals to other agencies, and administrative functions.

There is an average of 130 cases continuously in progress. Of these about 50 are routine management jobs such as licensing, certifications, etc.; 30 are long-term assistance cases for families; and 50 are crisis cases requiring immediate, intensive attention. In addition to these

cases, about 50 families wait for social service assistance but cannot be helped until the present case load subsides.

Crisis situations demand most of the staff's time. Due to the lack of personnel, however, only the most serious of these cases can be investigated immediately. Alcohol-related incidents frequently account for the most serious problems. Unintentional child abuse is a common alcohol-related problem, although such cases generally involve neglect rather than malice.

The Division of Social Services estimates that to adequately handle its present workload it needs an additional professional plus four para-professional; two of whom should be located in outlying villages. Should OCS development occur, the anticipated social tensions would further increase the need for assistance by the Division. Quite obviously, such needs could not be met by current staff levels.(25)

Subsistance Programs

Several programs designed to increase the income of families living below subsistance level are available in Kodiak.

The Office of the State Division of Public Assistance, located in the Griffin Memorial Building (Map 6), offers grant programs to assist families with dependent children, the aged (65 and over), the blind, and the disabled. In addition, it furnishes utility, rent and medical assistance under a general relief program. Food is provided through the Food Stamp Program. The division's authority for administering assistance under these programs extends to all qualified residents of Kodiak Island.

The response to these programs has been high. As an example, there were 200 recipients of these assistance plans in August, 1976. This figure did not include applications which were denied or pending.

The most actively used plan is the Food Stamp Program, which provides subsistance aid based upon a ratio of family income to family size. In general, recipients of that program are new to the Kodiak area and are unemployed.

The next two most frequently used programs are Aid to Dependent Children and Aid to the Aged, in that order. These programs are generally used by residents of Kodiak who have lived in the community for longer periods of time.

In addition to the services mentioned above, the State Division of Assistance provides informal counseling and referral services to new applicants who are searching for employment and/or shelter.

The current staff at the Division consists of one full-time employee. The workload, however, warrants at least one additional employee to assist with the clerical tasks. If full OCS development were to occur, the staff and facility requirements would increase substantially since

economic booms historically bring large numbers of people who need welfare services while trying to find work. Such a situation could not be handled by the current staff level.(25)

The Social Security Administration's Supplemental Security Income Program provides additional subsistance income to a total of 76 households in Kodiak. On a monthly basis this income supplement ranges from $39 to $580 per month, with a mean of $145.50.

The Kodiak Area Native Association will also be providing subsistance programs in the near future. KANA is in the process of contracting with the Federal Department of Health, Education and Welfare to provide assistance funds and care to natives who do not qualify for other social service programs. These programs have been administered through the Bureau of Indian Affairs in the past, from their office in Anchorage. For additional information see the KANA Annual Report.

Employment Assistance

The State of Alaska, Department of Labor, provides the only employment assistance program in Kodiak through the Kodiak Job Service Center. This Center has three permanent and two temporary employees. As in many other state departments, the area of responsibility for the Kodiak Job Service Center includes the Alaska Peninsula and the Aleutian Chain.

The services provided by the Kodiak Job Service Center are listed below in order of the amount of time spent on each function.

1. Job placement/employment security
2. Unemployment Insurance
3. General administration
4. Selection, referral, testing, placement and follow-up for job training programs
5. Food Stamp Program (all food stamp applicants are automatically on file with ESC)
6. Promotional employer visits
7. Community speaking engagements
8. Immigration processing to ascertain if U.S. citizens are available to take jobs being sought by immigrants

The Job Service Center's most active period is approximately May 15 through July 15, when the fishing season is relatively slow. The unemployment insurance and job placement activities also increase at this time. Throughout the rest of the year, assuming the fishing season is average to good, unemployment insurance activity is lower.

Full OCS development will have an impact on the Kodiak Job Service Center similar to the effect described above on the Department of Health and Social Services, Division of Public Assistance. It can be expected that with a boom-type industrial situation, there would be an abnormal increase in unemployment insurance claims as well as requests for job placement. Until hiring policies of the industries involved are known, it is impossible to determine the exact extent of the increase in work load on the Kodiak Job Service Center.(27)

LEGAL ASSISTANCE PROGRAMS

Office of the Governor - Public Defender

The Public Defender's office is located in the State Court Building in downtown Kodiak. The primary purpose of this office is to provide legal representation in criminal matters for persons who cannot afford to retain a private attorney. Currently there is only one employee in this office and that employee is paid on a three-quarter salary basis. The office space is donated.

In addition to providing legal services to the Kodiak area, the Public Defender is also responsible for the Aleutian Chain and the Alaska Peninsula. The Public Defender's office was opened in Kodiak on February 1, 1976. By August, 1976, the Public Defender was handling 15 felony cases and 45 misdemeanor cases throughout the service district. The great majority of the cases involving the Public Defender are alcohol related, and the most common felony crimes are assault, burglary and breaking and entering.

Based on the current workload and the capability of the court system to handle cases, the Kodiak Public Defender's office estimates that one full-time attorney and one full-time legal secretary could adequately handle the work. If the case load were to increase due to OCS development and resultant social pressures, the office staff would have to be increased accordingly.(28)

Alaska Legal Services

Alaska Legal Services opened its office in Kodiak in September, 1975. Prior to that it provided services to the Kodiak area on a visitation basis.

While Alaska Legal Services will not handle criminal cases, it does provide civil representation to qualified people on Kodiak Island in matters such as divorces, contracts, native land laws, civil disputes, etc. It cannot accept cases which could result in cash settlements large enough to provide fees for private attorneys.

Staff at the Alaska Legal Services includes one attorney, one paralegal, one secretary/paralegal, one secretary/clerk, and a summer

intern. Alaska Legal Services is a private, nonprofit corporation, funded through state and federal monies. It is also supported by private foundations including KANA and CETA.

MISCELLANEOUS SOCIAL SERVICE ORGANIZATIONS

In addition to the agencies and entities already described, there are a number of special interest groups which provide various social services. They include the following organizations.(29)

American Red Cross

The Red Cross has two offices in Kodiak. One is on the Coast Guard Base where their services are primarily directed toward Coast Guard personnel. They provide two-way communications between service personnel and their families, and in emergencies they provide financial assistance for military personnel and their families. In addition, they teach health and safety to military personnel and their families, provide aid to veterans, and furnish volunteer workers for the base hospital.

The other Red Cross office in Kodiak serves the civilian population. It provides occasional volunteer services to public institutions and disaster services for the community when needed. In addition it offers classes in first aid and water safety to residents.

Kodiak Association for Retarded Citizens

The Kodiak Association for Retarded Citizes is a volunteer group dedicated to helping meet the special needs of retarded individuals. This group is affiliated with the Alaska State National Association for Retarded Children. Their services include instructional courses, counseling and information services.

Presently the association is involved with a City-sponsored six-week summer recreational program for retarded children and also with the local and state Special Olympics. To be able to handle these programs at the present level of service, the Asssociation has identified the need for funding for transportation of participants from Kodiak to the site of the Special Olympics and for daily transportation to the summer recreational sessions.

Additionally, the Association sees the need for a sheltered workshop for retarded individuals to be trained and employed in jobs fitting their abilities. The workshop would function as both trainer and employer; producing goods or services for consumption by the local community.

Additional needs include a recreational program for adults, a cottage home program to provide independent living accommodations for retarded

citizens, and an expanded public information program to improve public awareness of the retarded citizen and his or her problems.

Kodiak Island Youth Center, Incorporated

The Youth Center is open to teenagers for educational and recreational purposes. Their hours are 6 p.m. through 9 p.m., Monday through Wednesday, and 7 p.m. through 10 p.m. on Friday and Saturday. The facility may be used by any group or program on a continuing or one-time basis, depending on scheduling.

Kodiak LaLeche League

The LaLeche League is an international organization which promotes breastfeeding of babies. A series of four monthly meetings cover breastfeeding, childbirth, and infant care topics. Personal counseling is also available through telephone contacts and hospital visits.

Senior Citizens of Kodiak

The Senior Citizens of Kodiak is an active organization with a full-time director and staff. Monthly meetings are scheduled for civic and recreational activities. Senior Citizens provide a hot meal program and transportation for the elderly to the hospital, clinics, meetings, grocery stores, and to families for visits. In addition, the staff provides information and referral services regarding local, state and federal programs. A satellite program for Port Lions is also sponsored by this organization.

Koniag Incorporated

Koniag Incorporated is Kodiak's regional native corporation. Its primary objective is the implementation of the Alaska Native Claims Act. In fulfilling this function it has assisted villages in organizing their corporate structures as required by the Alaska Native Claims Settlement Act. They have also provided resource surveys for determining land values for villages and regional selections, and have furnished a variety of other assistance programs to the native community.

Child Care Services

The following organizations provide child care in the Kodiak area:

Headstart - Following pre-school structure, Headstart provides nutrition, health and education to children in families of limited income. It also provides career development for staff members and serves parents by referring them to other organizations and services for additional help. The Headstart Program operates from 9 a.m. to 4 p.m. daily.

The Kodiak Baptist Mission - The Kodiak Baptist Mission is the most extensive child care organization in Kodiak. Its primary purpose is to provide care and treatment to children whose families cannot support them. The facilities at the Kodiak Baptist Mission include two group homes which can accommodate 12 boys and girls between the ages of six and sixteen on a long-term basis. They have a third cottage which is equipped to provide temporary emergency care for a maximum of 14 children ranging in age from infancy to age 16. The maximum stay allowed at this temporary care facility is 90 days. The Mission also provide a second-hand clothing and household goods store.

Kodiak Child Daycare Center - The Daycare Center is a comprehensive facility which furnishes child care for children two to ten years old. It is open Monday through Friday from 7:30 a.m. to 5:30 p.m., and it offers a preschool program, activities, lunches and snacks.

EDUCATIONAL FACILITIES

Kodiak has a wide range of educational programs including public and private institutions, vocational schools and higher education facilities. The following is a review of these educational programs.

PUBLIC SCHOOLS - ELEMENTARY AND SECONDARY

By far the largest operator of schools in Kodiak is the Kodiak Island Borough. The Kodiak Island Borough School District provides basic education facilities to the residents of the City of Kodiak and its environs as well as the villages on Kodiak Island. For the purposes of this study, a statistical review of their facilities, enrollment, staff, and locations is most appropriate. Figures 7 and 8 indicate the enrollment by grade and location in each of the schools, and an inventory of the facilities, staff, and programs offered by each. See Map 6 for location of all schools in the Kodiak metropolitan area.

In addition to the facilities shown on Figures 7 and 8, the Kodiak Island Borough School District also offers speech and hearing therapy to grades Kindergarten (K) through 12 for all of the schools.

Fig. 7: Enrollment By Grade & School - October 28, 1975*

Grade	Total	High School	Junior High	Base	East	Main	Akhiok	Chiniak	Karluk	Larsen Bay	Old Harbor	Ouzinkie	Port Lions

Village Schools

Currently, the school district is attempting to bring secondary education programs to the village schools along with the necessary physical facilities needed to support these programs. Possibilities for funding these programs and the associated facilities include local bonds, direct legislative action on the part of the State and Borough, and federal funds available under Public Law 815 for construction. It may also be possible to gain more State support for vocational capital improvements. The following is a review of the specific requirements for each village in order to obtain secondary education.

Old Harbor

In Old Harbor it will be necessary to provide additional facilities, probably adjacent to the existing grade school, to house high school facilities. It will also be necessary to construct housing for the extra teaching staff required to run a secondary school.

Ouzinkie

An expanded secondary program has already begun and has required the use of a previously unused old school facility. At the present time, there are three teachers sharing two apartments. Plans have been made to provide additional classroom space plus living accommodations for the teachers on a new school site in Ouzinkie.

Port Lions

In Port Lions a secondary school program has already caused a need for additional classroom space, plus recreation and career-oriented areas. These needs are currently being investigated by the School District.

Akhiok

School enrollment in Akhiok has dropped 50 percent within the last five years. The school is housed in a modular structure originally intended for 10 years of use; however, according to the School District, the building should last much longer than that if it is property cared for. A one-teacher school facility may be adequate in the future.

Karluk

Karluk has also lost enrollment in the last few years and has dropped from a two-teacher school to a single-teacher school. The only capital efforts the School District is currently investigating are: upgrading the school building to include an adequate water supply, furnishing a restroom for the main building and providing a dependable power supply.

Larsen Bay

The Borough is currently investigating alternate school sites for this community. The existing site is marshy on two sides; and thus does not allow for significant growth. It is conceivable that a new school facility could be required in Larsen Bay in the next few years due to the community's potential for growth.

Chiniak

The future of the Chiniak School is questionable. With the closing of the Chiniak Tracking Station, the future of the school looked bleak. However, enrollment is now beginning to increase gradually. The school has a new generator facility and one classroom has been remodeled into teacher housing. An additional portable classroom is currently used for storage. If the population continues to grow it may be necessary to use this classroom for teaching purposes.

Afognak

Afognak does not have a school at present; however, it is anticipated that one will be needed within the next few years because of the growth of the logging community (about 400 families). School facilities in Afognak will have to be started from scratch.

Plans for upgrading educational facilities and services in the villages are based on existing growth patterns. Should any of these villages be chosen as a site for OCS on-shore facilities, the impact on the school system would be tremendous. It would probably be necessary to greatly expand the facilities.

Kodiak Urban Area Schools

The following is a review of the status of schools in the Kodiak urban area operated by the Kodiak Island Borough, and a discussion of their deficiencies and needs as indicated in the School District's Capital Improvement Program.

Base Elementary School

During fiscal year 1975/76, an independent heating system was being completed for the school. Two new boilers, new distribution lines and fin tubes were installed in the old wing, and domestic water lines were replaced. Some construction complications still exist, but they are being remedied.

The office of Health, Education and Welfare in Seattle is currently working on bids to renovate wiring and lighting in the building.

Because of the anticipated increase in base population, due to enforcement of the 200 mile fishing limit, it is imperative that planning begin immediately for expansion of the elementary facility there.

Main Elementary School

Main Elementary needs improvements to bring it up to operating standards. These improvements include:

1. Complete renovation of all bathrooms, locker rooms, and gym facilities; including replacement of the gym floor within two years.

2. Replacement of the domestic water supply system throughout the building.

3. Complete replacement of black iron heat distribution system with copper pipes - (Junior High).

4. Continuing classroom renovation throughout the building to include: Lowered ceilings, fluorescent lighting, and carpeting.

5. Installation of a clock/intercom system.

A facility for mentally retarded children should also be incorporated in the Main School complex.

Ideally, the facility should be remodeled to simulate a home setting with complete bathroom washing facilities, clothes drying equipment, cooking appliances, etc.

Kodiak High School

Even though a major building project at the high school was recently completed, there are still some needs which have not been considered. They include:

1. A need for a home economics (cooking) facility in the high school. The present facility is located in the Junior High and is not suited to the development of a large scale program.

2. Expansion of the metals shop to give adequate space for the development of projects. This may be accomplished by reorganizing existing space.

3. Renovation of the Chem-Physics laboratory for more teaching (instructional) stations. The present laboratory can handle only 12 students per chemistry class, which is an inefficient use of teacher time. Perhaps the high school is no longer large enough to offer chemistry every year and should offer it every other year alternating with physics. This approach would require classroom facilities accommodating 25 plus student stations.

In conjuction with the high school needs, an auditorium may be necessary for community-wide use. Music instruction facilities, such as were included in the original high school construction design, should also be considered.

For purposes of crowd control, the entrance doors to the gym in the high school need to be redesigned.

Prime consideration should be given to developing the high school parking lot to serve both Main School and the high school. In formulating this project, the extensive use of these two buildings during evening hours should be considered. The ordinance prohibiting parking at any time in front of Main School cannot be realistically enforced until the Borough provides adequate off-street parking adjacent to these schools. Until such time as these improvements are made and the parking ban is enforced, a pedestrian hazard will exist.

Junior High School

There has been discussion of relocating the Junior High School to the East Elementary building. Should that occur, a plan of remodeling the elementary facilities would have to be developed.

East Elementary School

Additional room is necessary in the parking lot. Some landfill will be required to do this.

PRIVATE EDUCATIONAL INSTITUTIONS

Saint Mary's Parochial School

Saint Mary's School is located in Kodiak and offers elementary education for grades one through eight. St. Mary's uses a system of double grades, small classes, and modified individual instruction.

HIGHER EDUCATION(31)

Kodiak Community College

The Kodiak Community College is operated by the State of Alaska. It is part of the University of Alaska Community College system and is governed by the Board of Regents and the President of the University of Alaska. Administrative, technical, logistical, and certain other functions are provided by the University of Alaska system. The Community College is fully accredited by the Northwest Association of Secondary and Higher School through its relationship with the University of Alaska.

Figure 9 lists a cumulative head-count for the Kodiak Community College for the last eight years. The figures indicate the Community College has shown a steady growth in all of its educational fields.

Fig. 9: Student Head-Count - Kodiak Community College

* Year includes summer, fall and spring semesters

** The figure in parenthesis is an estimated trimester average

	1968-69	1969-70	1970-71	1971-72	1972-73	1973-74	1974-75

THIS INFORMATION WAS OBTAINED FROM THE
UNIVERSITY OF ALASKA, ANCHORAGE
OFFICE OF INSTITUTIONAL STUDIES

The programs offered by the Community College are as follows:

General Education Development Tests

Adults who have not completed their complete high school education and wish to earn a diploma may do so by passing the GED Test given by the Community College.

Certificate Program

A Certificate Program is offered for completion of classes in the clerical cluster. This program takes 30 weeks to complete, and is offered on a yearly basis.

Degree Programs

General Degree Program - To receive a degree from the U of A, students must satisfy (1) general university requirements; (2) Degree requirements; (3) Program (Major) requirements.

Associate Degree Programs - Associate Degree Programs are offered in the following areas: (1) Associate in Arts (Accounting, Biology, Business Administration, Humanities, Natural Science, Police Administration); and (2) Associate in Applied Science (Business, Business Administration, Commercial Fishing, Home Economics, Seafood Processing).

Bachelor Degree Programs

These programs are available with study in Kodiak, but coordinated by the Anchorage Senior College; at present, degree programs are available in Business Administration and Public Administration.

Master Degree Programs

Masters Degrees are available in Kodiak but are coordinated by the Anchorage Senior College. At present, degree programs are available in Business Administration and Public Administration.

Miscellaneous Programs

Short courses, seminars, workshops, community service courses (non-credit), and arts and crafts laboratories are available upon request and minimum, economically feasible enrollment of students. Subjects are too numerous to list.

The budget of the Community College totals approximately $1,020,000 per year. Sources of funding include local, state and federal programs. The staffing of Community College is as follows:

1. 2 administrators
2. 7 clerical and support personnel
3. 8 full-time instructors
4. 2 half-time instructors
5. 40 part-time instructors

There are a number of factors within the community that will generate a demand for expanded facilities at the Community College in the near future. They are outlined as follows:

Fishing Industry - The 200 mile limit, increased technological complexity, regulatory pressures, and foreign competition increase the need for formal education/training in this industry.

U.S. Coast Guard in the Kodiak area - Oil development, enforcement of the 200 mile limit law, increased search and rescue needs, and construction and renovation of facilities will bring more Coast Guard personnel and their dependents to Kodiak. Traditionally, Coast Guard personnel create a demand for educational opportunities in the technical and post-secondary education system.

Native Communities - The responsibilities promulgated by the Native Land Claims Act and the desire for more capabilities and opportunities have increased the need for formal education at the post-secondary school level, particularly in the area of business and corporate management.

Cultural and Artistic Awareness - Support for all forms of art is growing in Kodiak.

Need for Young Talent in Alaska - Economic expansion and natural resource development make it mandatory for leadership to have a primary interest in Alaska.

New Programs - New programs are contemplated in the following areas: theater, computer science (a computer has recently been installed and is now operational), fisheries enforcement, health sciences, carpentry.

Greater demand for the Community College's educational services is anticipated should OCS development occur. In addition, needs for transportation to and from the college, student housing close to campus, and additional college facilities may be expected. These needs are further described below:

Transportation - Transportation is needed in the following areas:

1. From the downtown City of Kodiak area to the Community College for students without cars who live beyond walking distance from the college.

2. From the Coast Guard Base for Coast Guard personnel and their dependents who desire to take courses not offered on Base.

3. Ultimately, transportation from on-shore oil development support bases, if on the road system, to serve the needs of employees and their dependents.

Student Housing - Student housing will be needed near the Community College campus in order to:

1. Meet the needs of full-time native students from the outlying villages.

2. Meet the needs of students from other coastal Alaskan communities who come to Kodiak to obtain Associate Degrees in the Fisheries Technology Programs (the University of Alaska established the Fisheries Technology Program in Kodiak because of the proximity to major fisheries, processing efforts and major law enforcement headquarters).

Theatre/Auditorium/Classroom/Library Complex - A new complex will be needed to meet the expanding needs of the College and the community.

The current library area, for instance, does not have enough student study space, a factor which discourages greater use of the library facilities. Nor is there presently enough classroom space, as evidenced by the strain on facilities under the present class schedules. In addition to more room for the existing facilities, the College should have a theater and auditorium. There are no such facilities in Kodiak at the present. Consequently, it has been very difficult to stage concerts and plays and to provide meeting areas for large workshops, seminars, etc. Private fraternal organizations have been called upon time after time to supply their meeting rooms for such purposes.

VOCATIONAL SCHOOLS

In addition to the training offered by the Community College, Kodiak residents can obtain a wide range of vocational training through the Kodiak Aleutian Vocational High School. A boarding home program is available for students from outlying areas who wish to attend the school. Students and their parents may also take advantage of the counseling services offered. School staff work closely with community agencies such as medical clinics, the Mental Health Center and the police department concerning the welfare of their students.

As with other educational facilities, it is anticipated that demands for vocational programs, both at the high school and the Community College, will be significantly increased as a result of OCS development.

PARKS, RECREATION AND OPEN SPACE FACILITIES

Opportunities for outdoor recreation play a large part in determining the quality of life within a given community. Parks and open space allow people to escape some of the pressures of everyday life and to appreciate their natural settings. These factors are especially important in Kodiak where travel is limited because the community is located on an island.

Parks, recreation and open space facilities can also contribute to the economy of a community. In Kodiak for instance, the possibilities for attracting a strong tourism market are great due to the outstanding natural beauty of the area and the abundant wildlife. Development of campgrounds and other outdoor facilities would attract tourism and spur the local economy.

The advent of OCS development will further increase the demand for recreation and open space facilities. As the population increases and social pressures become more prevalent, the role of outdoor recreation facilities will become more important.

The following is a review of the existing facilities and lands that are available for outdoor recreation and open space uses in the Kodiak area (see Map 6). Since almost all parks and outdoor recreation facilities are provided through a governmental agency, the information in this section is catagorized by governmental entity.

CITY OF KODIAK

The City of Kodiak has an active Parks and Recreation Department which provides several programs and facilities for residents of the Kodiak area.(32) This Department is funded through the City of Kodiak General Fund, and it utilitizes general fund monies and state and federal grants. The 1976-77 budget includes $97,1016 for the Parks and Recreation Department. At present, the department has three permanent employees -- the Director, the Assistant Director, and a part-time Teen Center manager. In addition, there are a number of volunteer and temporary employees including pool checkers, high school gym superintendants, swimming instructors, gymnastic instructors, excerise instructors, and park maintenance and janitorial personnel through the Neighborhood Youth Corps or CETA Programs.

An inventory of all the City's park and recreation facilities follows:

Baranof Park

This is a seven acre park which was completed in September of 1973. It includes: a football field, a baseball field, a track, a wooded picnic area, a children's playground area, four color-coated tennis courts, three volleyball courts, and a basketball court.

Teen Center

This is a building which is 40 feet wide and 60 feet long. It includes: a large dance floor, a kitchen, two bathrooms, some storage space, and a small office. It has the following equipment: a pool table, a ping pong table, a foosball table, a television, and a reel-to-reel tape recorder.

School District Facilities

The following are the school district facilities utilized by the City of Kodiak.

1. High School Gym - This facility is comprised of a large gym floor with side baskets and a middle curtain which will accommodate two full-court basketball games at one time. It also has a combination gymnastics and wrestling area as well as a weight training room.

2. Swimming Pool - This is a six-lane, aluminum pool, 25 yards long with a diving board. The swimming pool and high school gym are part of the same complex and share the same locker room facilities.

3. Junior High School Gym and Stage - For many years this was the only facility of its type in town. It includes: a stage, two locker rooms, some storage space and office space, and a gymnasium.

4. East Elementary - The facilities which are used by the City are the multi-purpose room and a class room. The multi-purpose room is a small gymnasium-type facility with a tile floor.

5. Room 106 of the Junior High School - This is a double room used by the junior high school as a wrestling room. It has enough mats to cover the entire floor.

An inventory of all the City's park and recreation programs and their level of usage follows:

Basketball Programs

City League - This takes place in the junior high school gym from November through February, three nights a week and approximately 80 players and officials participate.

Junior High Basketball - This league also runs November through February. They play two nights a week. It is composed of four girls teams and nine boys teams. About 100 kids participate. It takes place in the junior high gym.

Little Dribbler Basketball - This is a basketball league for boys and girls ages nine to twelve. The league runs two four-hour sessions a week in the high school gym from October through March. Approximately 150 children participate. There is also a lot of spectator participation by parents.

Slow Break Basketball - This is a slowed down version of basketball for older men. This league plays twice a week in the junior high gym. Approximately 40 men participate from November through March.

Volleyball

Ladies' Volleyball - They meet in the fall and spring in the junior high gym. They play one night a week and about a dozen women show up each night. In winter they play at East Elementary.

City League - This is a men's league which meets twice a week from February through May in the junior high gym. Approximately 50 men take part.

Boy's Boxing

This is supervised on a volunteer basis. It runs two to three times a week at East Elementary School. Approximately ten boys take part on a regular basis. The program runs about four months a year.

Women's Exercise

This program is divided into five four week sessions with anywhere from six to thirty women participating. It is held in room 106 of the junior high.

Swimming Programs

Open Swim - These are two hour sessions on week nights and weekend afternoons. Thirty to sixty people attend each session.

Adult and Family Swim - These are one hour sessions, three times a week. Twenty to forty people attend each session.

Lap Swim - These are one hour sessions on weekday mornings and early evenings. Six to twelve usually attend.

Lessons - The City offers lessons at the rate of six six-week sessions per year. Classes range from tiny-tot to water safety instructor. Approximately 80 students enroll each session.

Open Gym

These are three hour sessions on week nights and weekend afternoons. It is held in the high school gym in conjunction with the open swim program and approximately thirty to sixty people attend each session.

Girl's Gymnastics

This is held during "ladies' night" which is part of the open gym program. Eighty to 100 girls participate in these once a week two-hour sessions. This program ran five weeks in 1976.

Mountaineering and Backpacking

This program includes lectures and outings. It met twice a week for six weeks in 1976. Approximately twelve people took part.

Badminton

This program includes four tournaments a year and free play sessions in the junior high gym on Wednesday evenings. About a dozen people attend these sessions regularly.

Tennis

Lessons - Two sessions of lessons by the City and two sessions of lessons co-sponsored with the Community College. About thirty people take part.

Tournaments - Two or three tournaments a summer are offered with about 15 people participating in each.

Free Play - The courts receive heavy usage every day of the week. There is especially heavy usage in the evening.

Crab Festival Games

These include: youth races, tennis tournaments, a badminton tournament, illar Mountain climb, a volleyball tournament, and predicated mile race. In most of these events participation depends upon the weather. From six to thirty people take part in each event.

Softball and Baseball Programs

The City maintains and prepares fields for: five Babe Ruth teams, one American Legion team, five women's softball teams, and eight men's softball teams. A total of more than 200 are involved.

Arts and Crafts

Three and one half hour sessions a week for ages three to fourteen are held at East Elementary School in June and August.

Special Recreation

This is recreation for the mentally handicapped. The City runs one six week program per year and help with the Special Olympics program. Approximately a dozen children take part.

Day Hikes

This program is offered for ages five and up every Friday in the summer. Each hike lasts two to four hours.

Teen Center

Open Center - During these sessions the center is available for teenagers to use the equipment and facilities at their discretion. The number of teenagers who take advantage of these open sessions varies from zero to thirty.

Dances - These are either record dances or dances with a live band. Dances with live music draw between 250 and 300 teenagers. About 100 teenagers come to dances with recorded music.

Special Events - These include: the haunted house, Halloween party, Christmas party, Thanksgiving party, joint Base-Town parties, swimming parties, movies, etc. The average participation is approximately one hundred.

The programs described above are well used throughout the year. The indoor programs and ficilities are particularly important in Kodiak because inclement weather frequently precludes outdoor recreation.

The City is presently attempting to aquire three additional mini-parks within the city limits. These mini-parks, funded through the Housing and Community Development Act of 1974, are scheduled to have recreation facilities completed by the summer of 1977. An additional four-acre park in the east addition of Kodiak will be constructed next summer. Its facilities will include playground equipment and softball field.

KODIAK ISLAND BOROUGH

In the fall of 1976, the residents of the Borough elected to provide area-wide parks and recreation powers; this program is just now getting under way. Within the next year a parks program should be developed and

a set of priorities prepared to determine the types and locations of park facilities and programs to be provided by the Borough under this new area-wide power.

STATE OF ALASKA

Fort Abercrombie

The State of Alaska has only one park facility on Kodiak Island - the Fort Abercrombie Historical Site which is located on 780 acres at Miller Point, north of the City of Kodiak. This fort was built on the top of high cliffs overlooking the Pacific Ocean during World War II as a look-out point against Japanese invaders. Later it was transformed into a gun emplacement as the level of war activity in the Northern Pacific increased. Records show that it was probably actively manned in the summer of 1942 and the spring of 1944. At the peak of military activity this installation may have included up to 200 men. In the late 1940s, the gun emplacements were destroyed and the fort was abandoned. (Map 7)

Fort Abercrombie is now a tourist and recreation site. Many of the old military structures are still standing, although they are in poor condition from weathering and vandalism. Nevertheless, the site is popular for its historical interest and recreational opportunities. Swimming, fishing and camping are popular here. The State has furnished seven camp sites, five picnic sites and several restrooms. General maintenance of these facilities is poor, however, and the roads within the park are inadequately maintained.

Fort Abercrombie could play a larger role in providing recreational and tourist facilities, however, more attention and maintenance must be directed toward this site to accommodate increased use.

FEDERAL GOVERNMENT

The two park areas in the Kodiak Island Borough under the federal government's jurisdiction are the Kodiak National Wildlife Refuge and the Chugach National Forest. See Map 7.

Kodiak National Wildlife Refuge

The Kodiak National Wildlife Refuge is located on the main Kodiak Island. It consists of over 2800 square miles on both Kodiak Island and Uganik Island. On Kodiak Island alone, the National Wildlife Refuge accounts for almost 80 percent of the Island.

The refuge was established in 1941 to preserve the natural habitat of the famed Kodiak bear and other wildlife. Unlike many refuges that were

established to restore natural habitats destroyed by man, this refuge remains unchanged. Mammals that live within the Kodiak National Wildlife Refuge include the Kodiak bear, red fox, land otter, weasel, tundra voala, and the little brown bat. Whales, porpoises, seals, and sea lions frequent the estuaries along the coast of the refuge where they feed on the large quantities of marine foods. A number of mammal species have been transplanted to the refuge since the 1920s. These include the black tailed deer, snowshoe hare, beaver, muskrat, reindeer, mountain goat, mink, red squirrel, and martin. Except for the mink and martin, these introductions have been generally successful. Recently, dahl sheep and moose have also been brought in.

The Kodiak National Wildlife Refuge is rich with hunting and fishing opportunities. Kodiak bear can be hunted within the refuge under the Alaska Department of Fish and Game regulations, and an annual take of between 150 and 200 bears is permitted. This harvest borders the maximum that may be killed without threatening the population. Currently 2400 bears are estimated to inhabit the Island. Other game species may also be taken in accordance with state regulations.

Sport fishing is allowed in the Refuge, and the lakes and streams are abundant with rainbow and dolly varden trout, grayling, salmon and steelhead.

Since special permits are not required to enter the refuge, it is impossible to determine the level of usage. There are a number of bush pilots and one local airline which furnish transportation to almost any part of the refuge. In addition commercial fishing boats can be chartered for excursions around the islands. There is no road access to the refuge.

Chugach National Forest

The Chugach National Forest was established by President Benjamin Harris in 1892 when he proclaimed Afognak Island was to be set aside as a forest and fish culture reserve. Since then the reserve area has been enlarged to include 4,726,000 in Southcentral Alaska. This study, however, is only concerned with the Afognak portion of the Chugach National Forest since it is the closest to Kodiak. This unit comprises 458,000 acres of the total. (Map 7)

The Afognak reserve is, for the most part, undeveloped. Currently, only five National Forest Service cabins are on the reserve with another under construction. These cabins are available for hunters, fishermen, and campers. It is anticipated that the National Forest Service will upgrade and increase its facilities as the demand for recreational outlets grows.

Big game hunting, particularly for brown bear and elk, is the main recreational attraction on the island. Trout fishing is another favorite sport and so is hiking. There are nine miles of wilderness trails maintained by the Forest Service. Photography, fishing and hunting excursions are currently offered on Afognak Island by four commercial

outfitter/guide operations.

Lack of easy access to Afognak Island is the main deterrent to more recreational use of the island. Currently transportation is limited to float-equipped aircraft, helicopters or boats.

While the areas described above encompass a great deal of potentially useful recreation land, very little of this land has been so developed. Camping facilities, with the exception of those units available at Fort Abercrombie, are almost nonexistent. Trail systems for hiking and backpacking are also minimal. More of these areas must be developed as the population increases. It will be particularly difficult to accommodate recreational needs resulting from OCS development unless plans are formulated now to handle that contingency.

CULTURAL FACILITIES

MUSEUM

The only major museum facility in Kodiak is the Erskine House, which is the home of the Baranof Museum. The building was originally constructed between 1792 and 1799 by Alexander Baranof; it it is the oldest wooden structure in the western United States and the oldest Russian structure in Alaska. It was originally used as a warehouse. It had been designated as a "site of national and historic significance" by the National Park Service, and is one of the few places where the public can see remnants of Russian occupation of the United States. (See Map 6.)

Erskine House, now owned by the City of Kodiak, is currently being renovated. The museum contains exhibits ranging from ancient Indian artifacts and old Russian antiques to modern day items. The history of the Kodiak area is vividly reconstructed through the well-preserved artifacts and pictures displayed in the museum.

Erskine House is open Monday through Friday from 11:00 a.m. to 3:00 p.m.; Saturday and Sunday from 1:00 p.m. to 4:00 p.m. Admission is free.(33)

LIBRARY

The City of Kodiak operates the Kodiak Public Library. (See Map 6.) It is the only public library in the Kodiak urban area. There are approximately 25,000 books, 1,418 records and 402 cassettes in the library. In addition, the library subscribes to 98 periodicals. Circulation is considered very high. During the 1975/76 fiscal year, circulation totaled 40,434 books.

The library staff consists of four full-time librarians, one permanent part-time assistant, one CETA employee, and two summer employees. The building was originally built in 1968 and consists of 5,820 square feet. A 1,952 square foot addition to the building is currently under construction.

The library conducts a Story Hour twice weekly that reaches approximately 40 children. There are also voluntary reading programs for all ages in which a number of books are assigned to be read and reported on by the participants.

In addition to providing library services to the Kodiak metropolitan area, the library also provides services to village libraries. Approximately 500 books are sent out quarterly to various village libraries. These books are normally duplicates of those within the library and are surplus to local needs.(34)

CRY OF THE WILD RAM

Kodiak's most unique cultural attration is not so much a facility as it is an event. The Cry of the Wild Ram is a play written by Frank Brink that depicts the story of the first Russian settlement on Kodiak Island. Lord Alexander Baranof first arrived on Kodiak in June of 1791 and shortly thereafter established a colony at the present site of the City of Kodiak. This was also the first Russian colony in America.

The play premiered in 1966 and has been produced annually (except 1974) on the last weekend in July and the first two weekends in August. It is staged by Kodiak Baranof Productions, Incorporated. Approximately 200 people are involved annually in the production, half of whom are in the cast. All but the director of the play are volunteers.

In the past, funds to cover the cost of production have been made available through the State of Alaska, Division of Tourism, the Alaska Council on the Arts, the Alaska Bicentennial Committee and the National Endowment of the Arts.

The "Ram", as it is often called, is held in a natural outdoor amphitheater overlooking Monashka Bay (see Map 6), four miles from the center of Kodiak. The play has gained a wide reputation as a tourist attraction and draws people from many places. Approximately 2,000 spectators see it annually, many from the lower 48 states.

One of the most significant factor about the "Ram", aside from its entertainment value, is its relevance to the history and heritage of Kodiak. Many of the aspects of Russian culture that were introduced by that first settlement still exist in Kodiak today. Preserving that heritage should be important to the community. It is an intangible asset that can never be regained once lost.

GOVERNMENTAL BODIES

The following section will describe the basic organizational characteristics and functions of the governmental units existing within the boundaries of the Kodiak Island Borough. The specific governmental bodies to be discussed are the City of Kodiak, the Kodiak Island Borough, the State of Alaska, and the Federal Government. Five second-class cities -- Akhiok, Larsen Bay, Ouzinkie, Port Lions, and Old Harbor -- will be each discussed separately in the Village Inventory section of this report.

LOCAL GOVERNMENT

There are a total of seven incorporated local governments within the boundaries of the Kodiak Island Borough. These include the Borough itself, the City of Kodiak, and five second-class cities located around the Island. This inventory of local government will focus its attention on the Borough and City of Kodiak since they are the largest and most active governments within the study area. The second-class cities will be discussed in the Village Inventory.

Kodiak Island Borough(35)

The Kodiak Island Borough encompasses the entire geologic formation known as the Kodiak Archipelago. It includes all land within the Kodiak Island group from the Trinity Islands on the south to the Barren Islands on the north. The estimated size of the Kodiak Island Borough is 4,500 square miles.

The Borough was incorporated September 24, 1963. It is a second-class borough with a manager form of government. The powers assumed by the Borough include parks and recreation, assessment, taxation, education, health, and planning and zoning.

The administrative arm of the Borough is divided into three departments which include general government, assessing, and planning and zoning. The Borough administrative staff consists of 13 full-time employees. In addition, a half-time employee serves as the OCS program coordinator. Legal and engineering services are provided to the Borough through contractual agreements.

General Government

The administrative arm of the Borough includes the Borough Manager, the clerk/treasurer, the cashier and bookkeeper. In addition to the

functions performed by these officers, general government handles the publications for public hearing, repair and maintenance of machines, transportation and travel expenses, office supplies and other miscellaneous operating activities.

The Assessing Department

The Assessing Department is responsible for assessment of all real and personal property within the Borough. The present mill levy assessed by the Borough is 5.80. The Borough is currently divided into four taxing districts described as follows:

TCA 1 — The area within the city limits of the City of Kodiak

TCA 8 — The fire service district encompassing all land outside the City of Kodiak extending to Spruce Cape and the end of Monashka Bay Road

TCA 9 — Road service district including the area designated as Bell Flat Subdivision and Russian Creek Subdivision and ADL 72-11, located in the Bell Flat area approximately seven miles from the City of Kodiak

TCA 5 — That area not included in the three districts listed above -- all the surveys along the road system to Anton Larsen Bay, all the villages etc.

The Assessing Department is increasing its appraisal capabilities. Upon completion of a training program currently underway, the department will have two assessors qualified to appraise real property, leasehold property, and possessory interest property. The latter two skills will be particularly helpful in relation to native land claims, oil interests and the possible annexation of the Coast Guard Base. Through such added expertise the Borough can establish vital statistics and information to be used by the Planning and Zoning Department, property owners, and special interest groups.

Planning and Zoning Department

The Planning and Zoning Department provides advisory services to the Planning and Zoning Commission relating to land use, comprehensive planning, subdivision review, and building inspection. In addition, the Planning and Zoning Department oversees engineering services, snow removal, mapping, and planning for local service roads and trails.

The Planning Department was formally established by ordinance in February, 1976. The department is currently embarking on accomplishing its major objective -- a new Regional Development Plan.

Apart from the departmental functions discussed above, the Borough exercises health power. This is accomplished in a number of ways. The Borough owns the Kodiak Island Borough Hospital (see Community Facilities, Utilities, and Services). Financial support is also provided to the Comprehensive Health Board, the Senior Citizens, a halfway house, the Kodiak Island Health Clinic, the Kodiak Aleutian Mental Health Center, a daycare program, a drug abuse program, a detoxification center, and sanitation ordinance enforcement. The 1976-77 budget includes $160,650 for health programs. Of that figure, the Mental Health Center was budgeted $108,000. Funding for the health and sanitation budget comes mainly from State and Federal Grants.

The Borough also administers several other municipal programs for the Island. They include the following:

Local Service Roads Program - This program is funded by the State of Alaska. The Borough, at present, does not have road power; however, the Borough Mayor and the Assembly do establish priorities on road plans. Through state bond issues, money is available to each district for road construction. Once constructed, the roads are then maintained under the state highways system.

Land Fills in the Villages - Through a HUD Discretionary Grant under the Housing and Community Development Act of 1974, the Borough is providing land fill facilities in seven villages around the Island, i.e., Port Lions, Chiniak, Old Harbor, Ouzinkie, Larsen Bay, Akhiok, and Karluk.

Extended Care Unit for the Kodiak Island Borough Hospital - Construction is underway on an addition to the Kodiak Island Borough Hospital. This addition will provide 20 beds for extended or long-term care.

Water System for Old Harbor - Also under the Housing and Community Development Act of 1974, the Borough has obtained a grant for engineering of a new water system for Old Harbor. It is anticipated that when the engineering work is completed, additional grant money will become available for construction of the system.

OCS Program - An Outer Continental Shelf Advisory Council has been formed to study the possible impact of oil exploration on the Kodiak Shelf. Grant monies were obtained for this purpose, and a portion of these funds have been used for the preparation of this report. Additional uses of the funds include travel, advertising, staff services, printing, and office space.

Parks and Recreation - The Kodiak Island Borough currently exercises an area-wide parks and recreation power. This power was approved by the voters in the October, 1976 elections. The Borough is authorized to create a parks and recreation department. Funds will be utilized from various sources to develop parks and recreation facilities needed in the Borough. Such facilities will include picnic areas, camper parks, boat launching ramps, recreation areas, and open space complexes.

City of Kodiak(36)

The City of Kodiak was incorporated on September 11, 1940. It is a "home-rule" city under the laws of Alaska and has adopted a Council/Manager form of government.

The City of Kodiak is located on the northeastern end of Kodiak Island (see Map 1). Municipal services are provided from four basic city-owned facilities which include water, sewer, a deep water port, and a small boat harbor. These are described in detail under the Community Facilities, Utilities and Services portion of this report.

An organization chart of the City of Kodiak is shown in Figure 10. The City is divided into eight basic departments: Public Works, Finance, City Engineering, Parks and Recreation, the Library, the Fire Department, the Police Department, and the Cargo Dock/Boat Harbor.

The City has a total of 71 employees, not including the Mayor and City Council members. The following is a list of the number of employees per department:

City Manager	1
City Clerk	2
Finance	6
Public Works	15
Engineer	3
Police	21
Fire	8
Library	5.5
Parks & Recreation	2.5
Boat Harbor/Cargo Dock	10
TOTAL	74

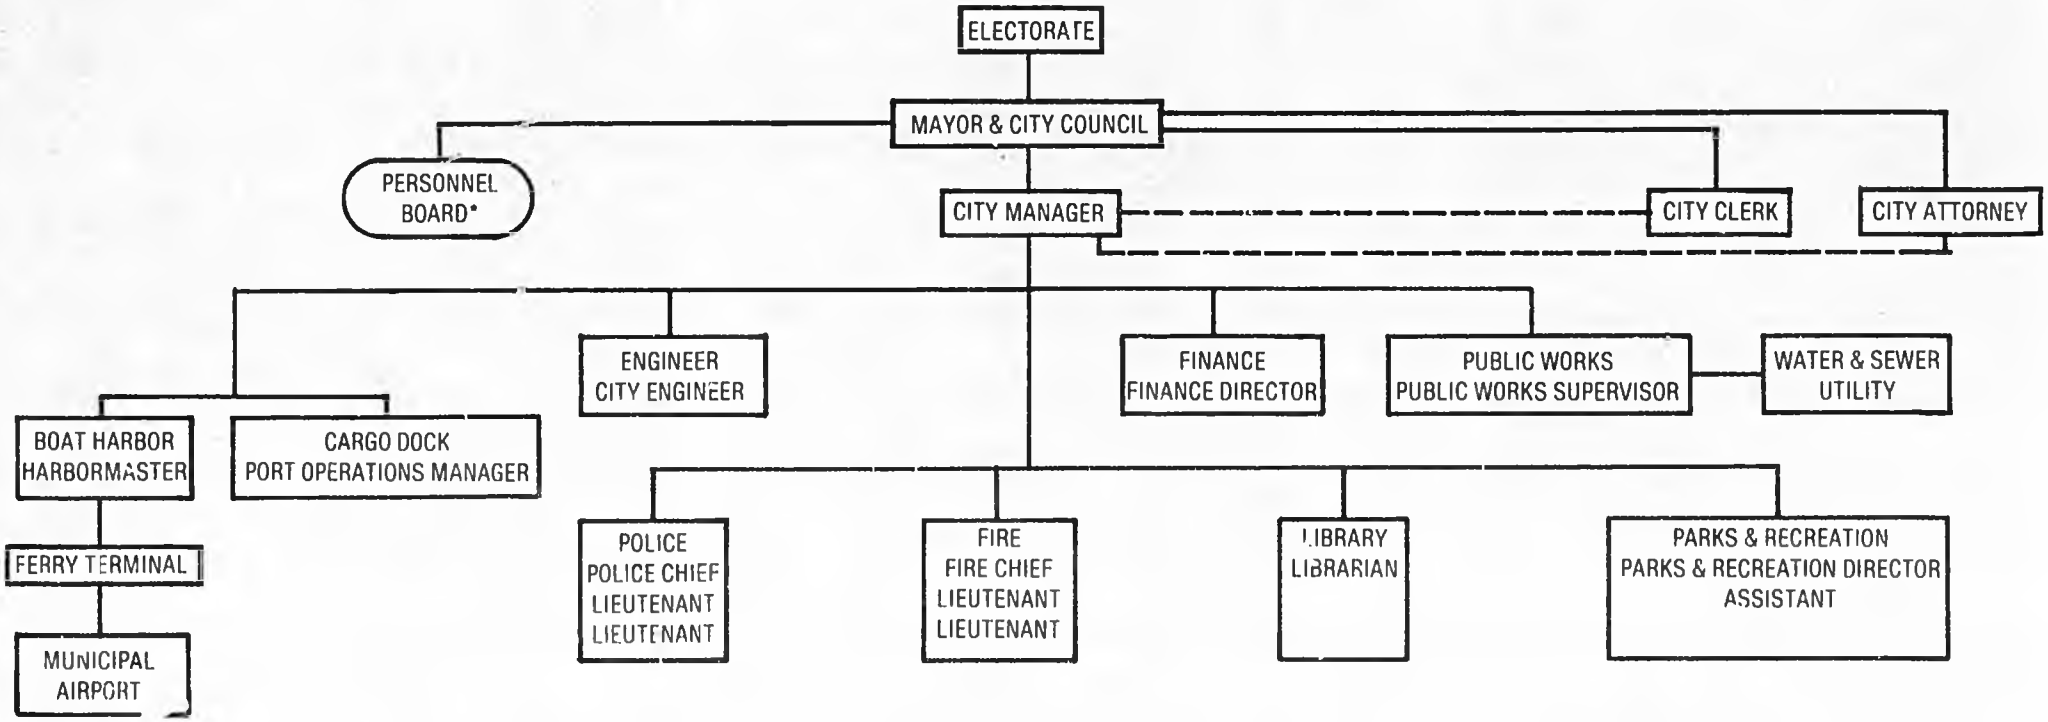
Source: City of Kodiak Budget - 1975/76

Police Department

As indicated above, the Police Department is the largest department within the City. A detailed description of that Department can be found in the Public Safety portion of the Community Facilities, Utilities and Services Inventory.

Public Works Department

Public Works Department is responsible for water, sewer, and street maintenance within the City. See the Power and Utilities portion of the Community Inventory for further description of sewer and water utilities.



*NOTE: APPOINTED BY CITY COUNCIL

Fig.10: City of Kodiak Organization Chart

The City maintains 13.65 miles of street within the City of Kodiak. A paving program for the Aleutian Homes area is currently underway and will provide residents with curbs, gutters, storm sewers and blacktop surface paving. Funds for this five-year program are being obtained from the HUD Entitlement Program authorized under the Housing and Community Development Act of 1974.

In addition to these functions mentioned above, the Public Works Department is also responsible for engineering, building inspection, and maintenance of dock facilities, city equipment, the City Dock, municipal buildings, and the Municipal Airport. It also assists with maintenance in the Parks and Recreation Department.

The remainder of the city departments and services are described under the Community Utilities, Facilities and Services Inventory.

It may be noted here that City personnel are concerned with the potential effects of OCS development, particularly as they relate to city functions. The main worry expressed in interviews was whether the City could maintain the level of its services, utilities, and facilities under the current funding methods if rapid development occurs. In all probability, no. Additional fund sources would probably be necessary to alleviate the growth-associated demands and problems.

STATE GOVERNMENT

The State governement is divided into three major sections -- the executive, legislative and judicial branches. The executive branch is further divided into 15 departments. An organizational chart outlining this state structure is shown in Figure 11. Functions and responsibilities of the various departments are listed in Figure 12. Many of these departments have branch offices in Kodiak and are designated with asterisks on Figure 11.

Most of the state offices in Kodiak have been described previously under sections relating to the services these offices provide. For the sake of brevity they will not be discussed again under this section.

State Department of Fish and Game(37)

One state department having offices in Kodiak, but not mentioned previously, is the Department of Fish and Game. It is the largest of all state departments in Kodiak and is composed primarily of the Western Region of the Commercial Fisheries Division. (See Map 6) The offices for this division are located in a new state office building in downtown Kodiak. In addition the Western Region has field offices at Chignik, Sand Point, Cold Bay and Dutch Harbor.

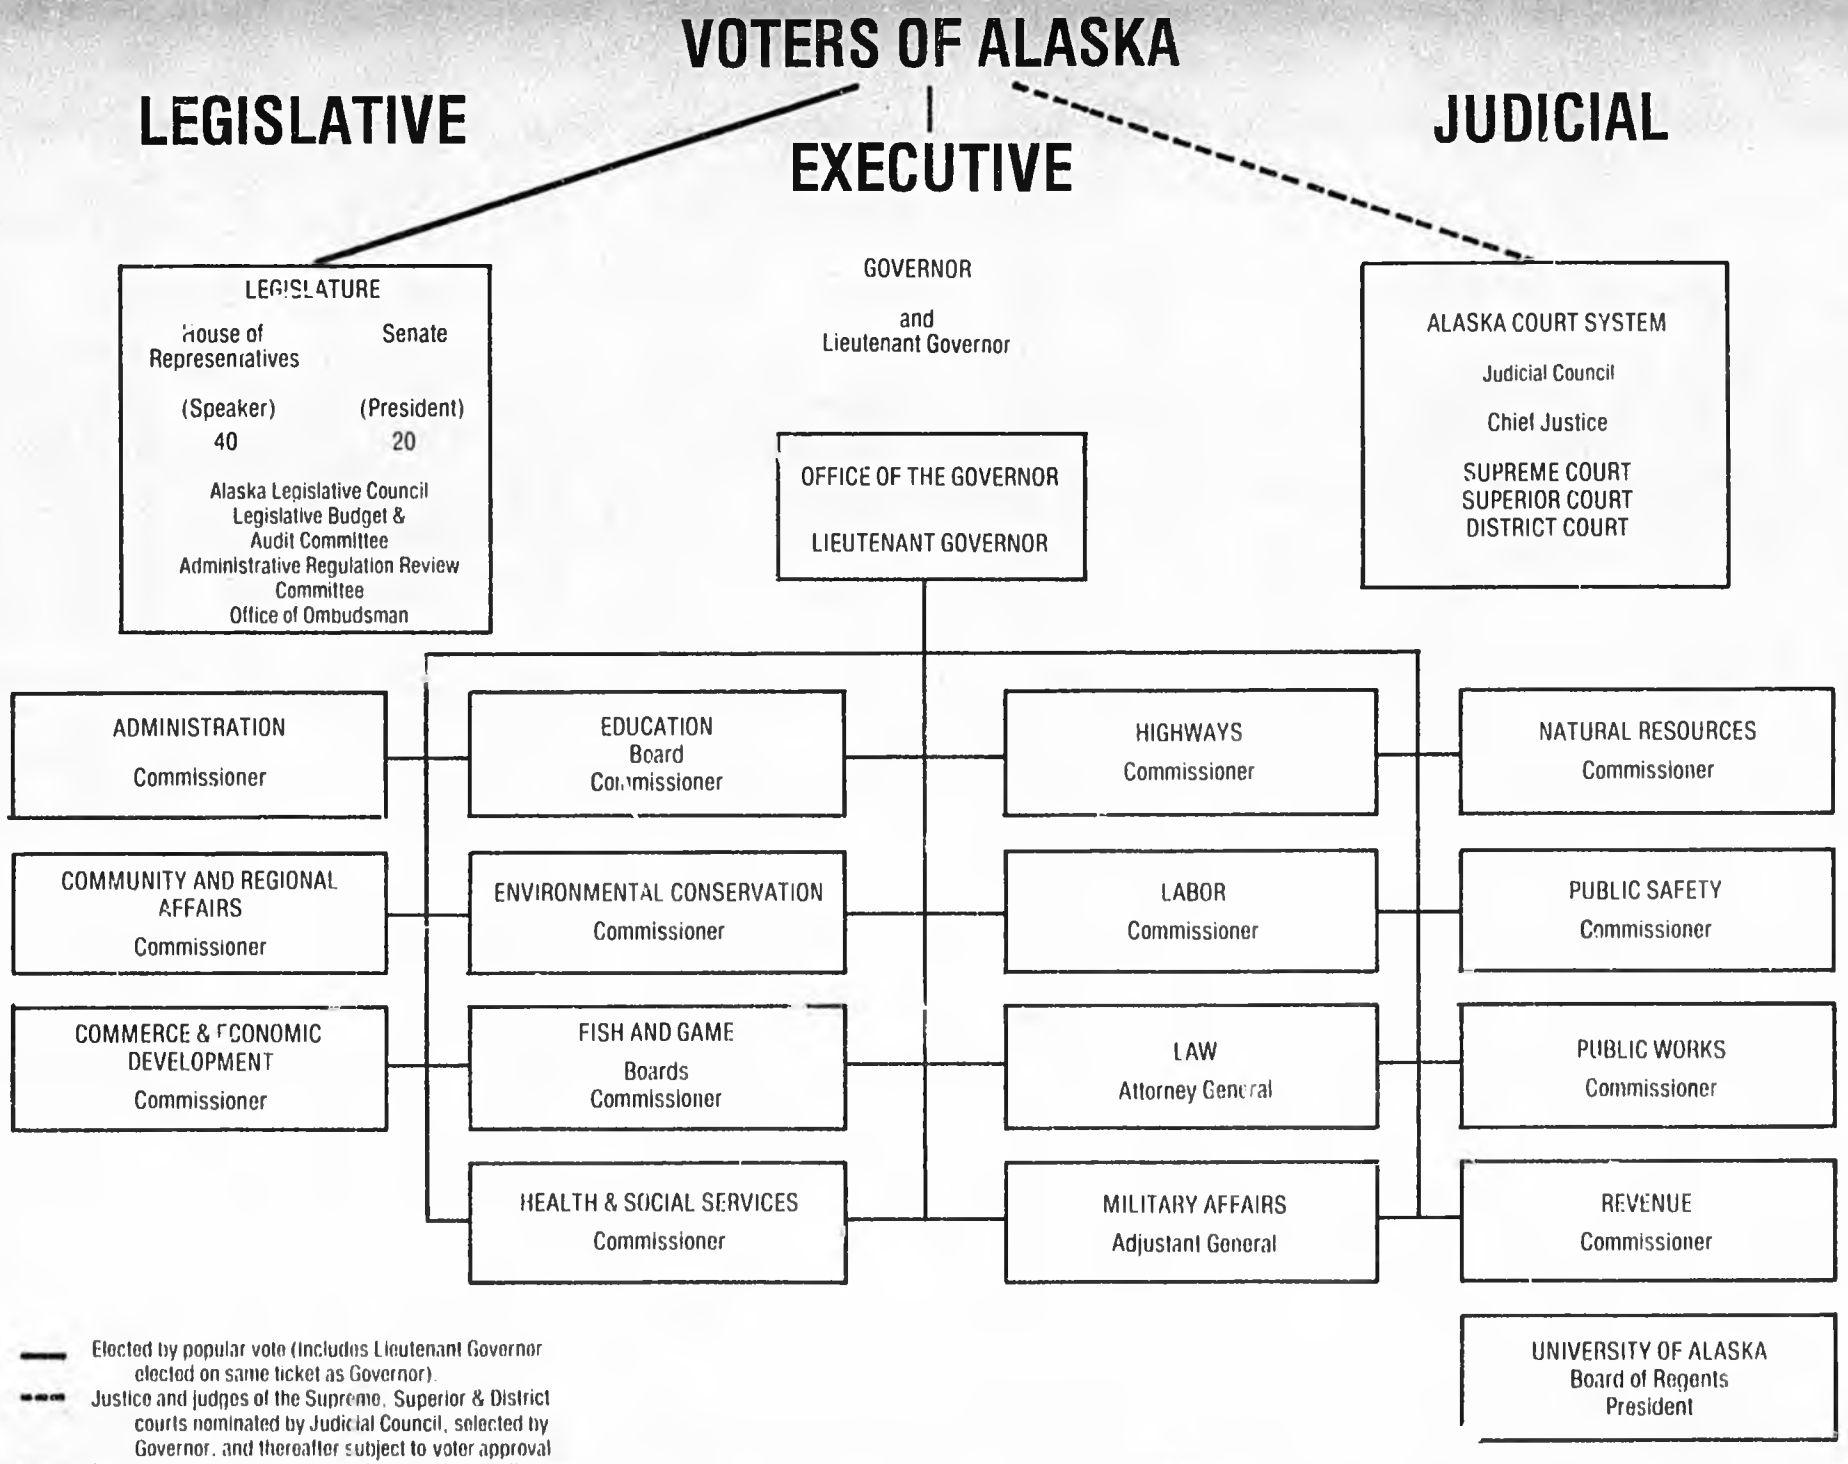


Fig. 11: State Organization Chart

The Kodiak Commercial Fisheries Regional Office is responsible for the management of Alaska's commercial fisheries in that portion of Alaska west and south of Cape Douglas and Cape Menshikof, including all shell fisheries in the Bering Sea. The total salmon and shellfish products in this area are valued at nearly 110 million dollars. Presently over 50 canneries and floating processors operate within this area. They process all five species of salmon plus herring, bottom fish, razor clams, shrimp, scallops and king, tanner and dungeness crab.

Management of these resources is divided into shellfish and salmon areas. Shellfish areas are comprized of Kodiak, Chiniak South Peninsula, Unalaska, Adak, and the Bering Sea. The salmon management areas are Kodiak Chignik, Alaska Peninsula, and the Aleutian Islands.

The Western Region Commercial Fisheries has a staff of 36 permanent employees including 26 biologists, one biometrician, a statistical technician, a boat officer, a statistical clerk, a fisheries technician, and seven clerical positions. In addition, approximately 75 temporary fishery biologists and fishery technicians are hired annually. Constant monitoring of the resources through statistical biological investigations and conservation functions is the major function of this division. To obtain necessary data to manage the salmon resource, counting towers and weirs are located on important red and pink salmon systems. A general sampling of commercial harvests plus biological data necessary to delineate age and size of composition are collected at these locations. Extensive aerial and foot surveys provide escapement data upon which chum and pink salmon management is partially achieved.

The shellfish resource is monitored through frequent field trips to fishing vessels and processing plants to determine conditions of catches and to gather biological information for proper management. Cruises aboard commercial and research vessels, as observers, are often a necessity. Extensive research programs on shrimp, razor clams, and tanner and king crab are conducted to determine their life histories, age composition, fishing mortality estimates, and allowable harvest levels. Approximately 250 vessel days are spent at sea conducting annual population studies.

The Western Region contributes over 90 percent to the state-wide commercial shellfish harvest and approximately 30 percent to the annual state-wide salmon harvest. The 1975 shellfish landings were estimated to range from 225 to 250 million. Salmon production is expected to total 13 to 15 million fish for this region in 1976.

The Commercial Fisheries Division expends approximately two million dollars annually to provide research and fishery management in the Western Region. This amounts to approximately one-third of the Department of Fish and Game's budget. In addition, funds designated as administrative support are allowed for a 32-foot gill net type vessel and a 90-foot fishing vessel for king and shrimp research.

Fig. 12: Functions of State Government

OFFICE OF THE GOVERNOR

Lieutenant Governor (Elections and other duties)

Public Defender Agency
Office of Child Advocacy
Policy Development & Planning

Other agencies and commissions

ADMINISTRATION

Centralized services: Personnel (classification, pay, retirement), accounts and disbursements; purchase and supply, distribution and mail; space allotment; executive budget preparation and execution, pioneers' homes.

COMMERCE & ECONOMIC DEVELOPMENT

Regulates banking, securities, insurance, professional licensing boards; corporations; veterans; weights/measures; Public Transportation Commission; Public Utilities Commission; Pipeline Commission; Housing Authority. Promotion for economic development of state resources including tourism, through collection, analysis, and reporting of data and advertising.

COMMUNITY AND REGIONAL AFFAIRS

State assistance to government at the community and regional level, including incorporation, organization, planning, finance, federal program participation, and management; Local Boundary Commission.

EDUCATION

State Board of Education. Administers state program for school administration, instruction and construction; state library and library services; Alaska State Museum.

ENVIRONMENTAL CONSERVATION

Responsible for coordinating and developing policies, programs and planning regarding the environment, and enforcing and setting standards for prevention and abatement of water, land and air pollution.

FISH AND GAME

Administration of state program for the conservation, development, and regulation of fish and game resources (commercial and sport); research; Fish and Game Boards.

HEALTH AND SOCIAL SERVICES

Administration of state and federal aid programs; comprehensive health planning; sanitation; vital statistics; juveniles; probation and parole; mental health; alcoholism.

HIGHWAYS

Administration of the state program for the construction, maintenance, and operation of state highways, roads, bridges, traffic signs and signals, and related facilities.

LABOR

Administration of state programs governing employer-employee relations: wages, hours, safety, workmen's compensation, unemployment compensation; statistics.

LAW

Legal services for all state agencies; opinions and instruments, legislative drafting and review; civil actions, all prosecutions of violations of state law; Commission on Uniform State Laws.

MILITARY AFFAIRS

Administers state program for the Alaska National Guard (Army and Air); and organizes state militia if the National Guard is called into federal service; Alaska Disaster Office.

NATURAL RESOURCES

Administers the state program for the conservation and development of natural resources; forests, lands, water, minerals, oil and gas, agriculture, parks, historical sites, and soil conservation.

PUBLIC SAFETY

Administers state program for law enforcement and protection of life, property and fish and wildlife; motor vehicle registration; state police, fire prevention, and watercraft safety program.

PUBLIC WORKS

Administers the state program for construction, maintenance and operation of state-owned buildings, docks, floats, and airports; operation of the state ferry system; general equipment maintenance.

REVENUE

Administration and enforcement of tax laws; collection, investment and management of state revenues; log and cattle brand registration; nonprofit gambling laws; Alcoholic Beverage Control Board.

Prepared by the LEGISLATIVE AFFAIRS AGENCY
January 1976

FEDERAL GOVERNMENT

With the exception of the U. S. Coast Guard, the federal government is probably the least conspicuous governing entity in Kodiak. Compared to state and local governments, the federal government has less direct contact with the public; it provides services to individuals; it has less enforcement activities; and, in general it is not involved in activities drawing much day-to-day public interest. Regardless of this low profile, the federal government greatly affects life in Kodiak through its policies.

While this report will not attempt to describe the total involvement of the federal government in Kodiak, it will describe the federal offices located in Kodiak and their functions. An organizational chart of the United States Government is provided in Figure 13 to assist the reader in determining how the Kodiak offices fit into the total scheme of the federal government.

United States Coast Guard

The largest and most well known federal facility in Kodiak today is the Coast Guard base, located approximately six miles to the southeast of the City of Kodiak. (See Map 9) The base was originally a naval station, but was taken over by the Coast Guard in 1972. Activities at the Kodiak Coast Guard base are carried out under two divisions. They are the Support Center Kodiak and the Air Station Kodiak. The Support Center is primarily responsible for logistical support of permanent and visiting personnel and equipment at the Coast Guard base. The Air Station provides search and rescue services, maritime law enforcement and logistical services in both the Gulf of Alaska and the Bering Sea. There is also a communications station in Kodiak which provides support for Coast Guard units in the North Pacific area.

The Kodiak Coast Guard base contains over 30,000 acres of land, making it physically the largest base in the entire Coast Guard system. It is the second largest base in terms of its personnel. There are 96 officers, 719 enlisted personnel, 185 civilian employees, and 120 exchange program employees for a total of 1,120 personnel. The salaries and expenditures generated by the base are in excess of $15 million per year.(39)

Coast Guard vessels in Kodiak include the 210-foot cutter "Confidence", the 205-foot "Storis", and the 180-foot buoy tender "Citris". The "Confidence" and the "Storis" are responsible for search and rescue, law enforcement and logistical services in the North Pacific. The "Citris" is primarily used to maintain navigational aid. The Coast Guard base also serves as a temporary facility for other Alaska Patrol (ALPAT) cutters during their missions in the North Pacific.

Aircraft currently stationed at the Kodiak Support Center include four C130 aircraft, four H3 helicopters, and three H52 helicopters. Coast Guard aircraft use a base runway which is part of a three-runway complex once belonging to a Naval Air Station. One runway is now operated by

THE GOVERNMENT OF THE UNITED STATES

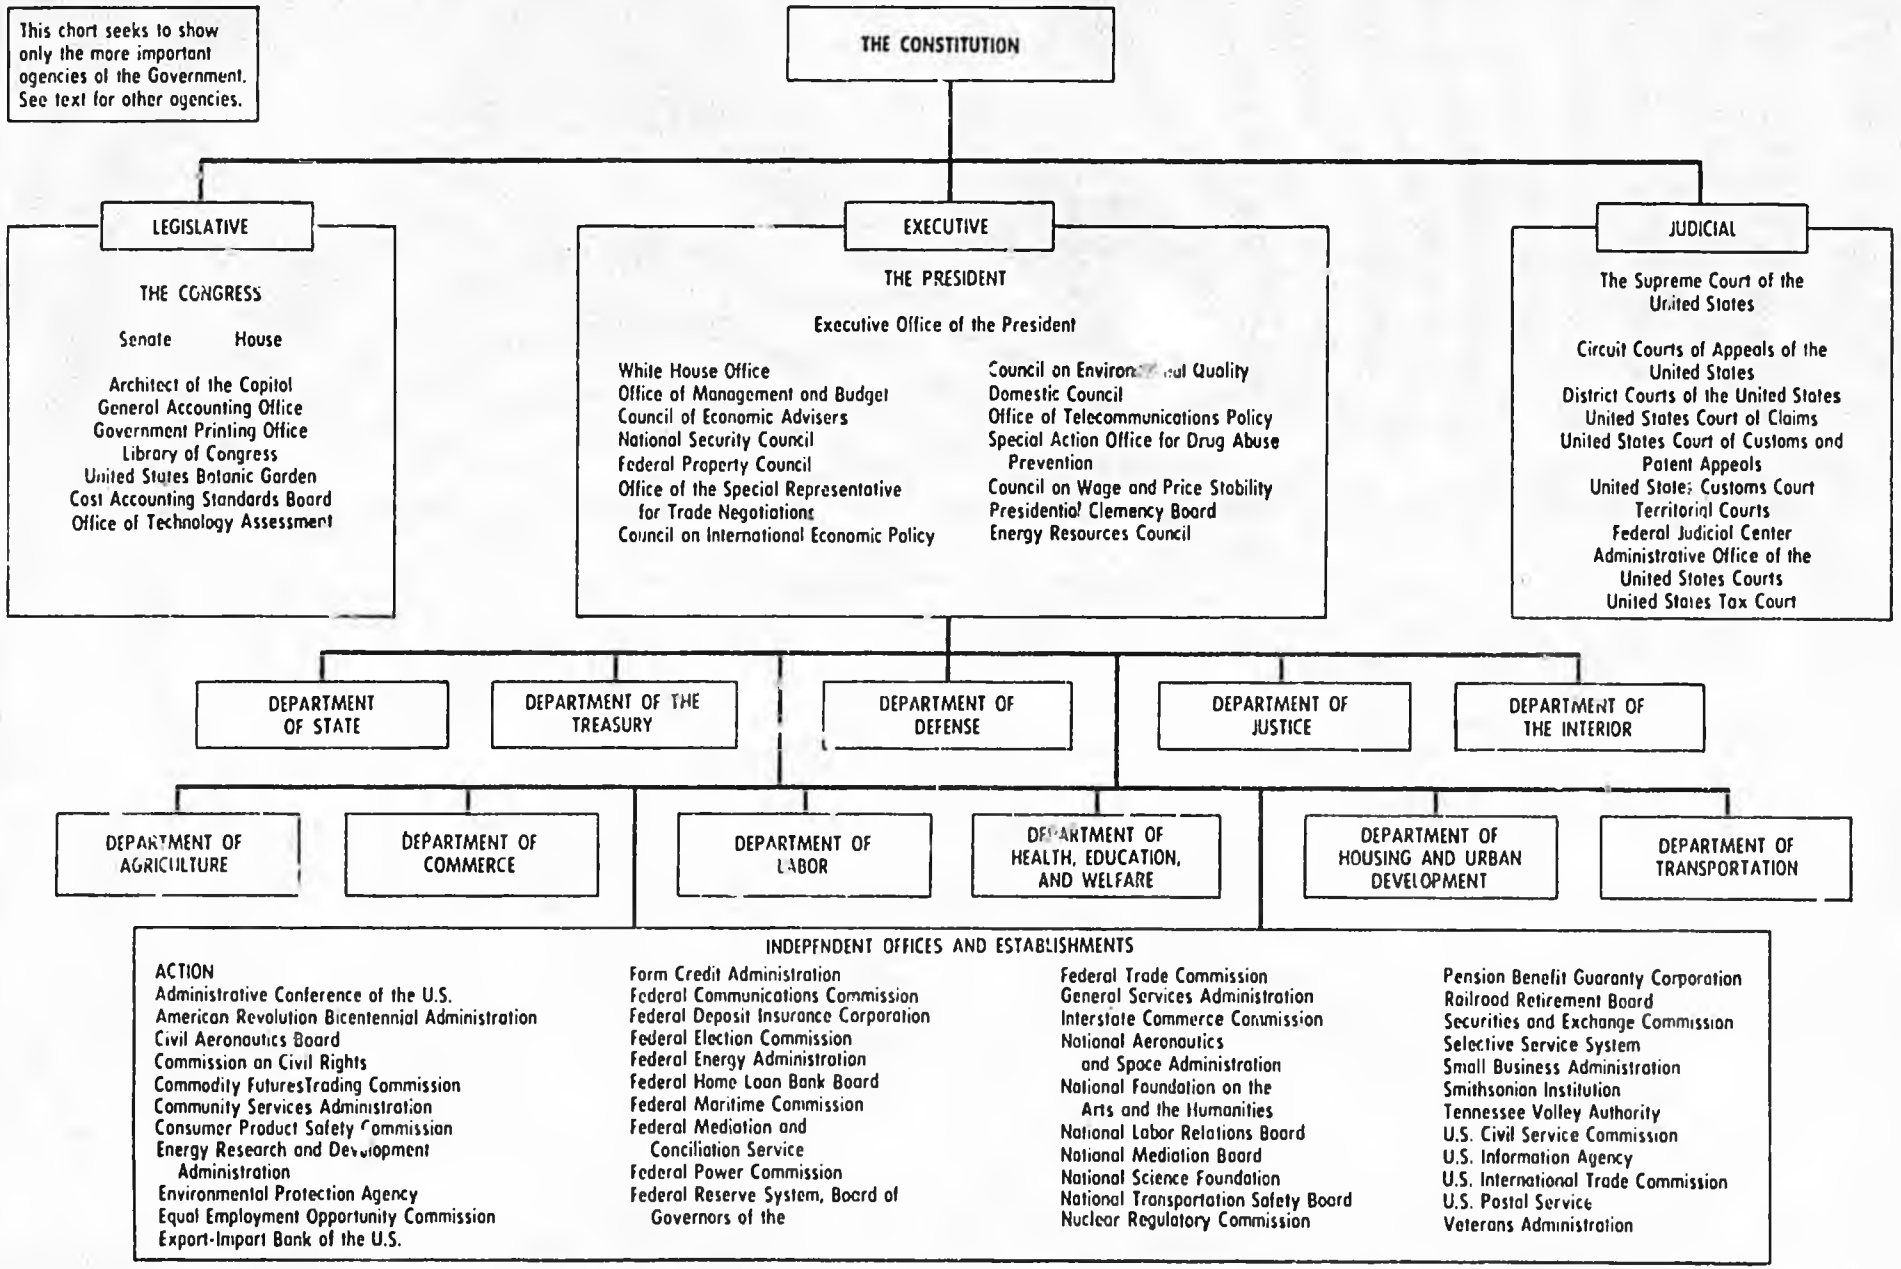

Fig. 13: Organization of U.S. Government

the State of Alaska as a commercial and general airport. That runway is approximately 3,000 feet long and is oriented in an east/west direction. The Coast Guard still utilizes the 5,000 foot north/south runway for its operations. The third runway is seldom used.

The Coast Guard base has a full range of community services and facilities including schools, library, recreational facilities, commercial services, housing, and utilities. At present there are approximately 2,500 personnel on base living in 557 family housing units and 250 single living units in barracks.

There are two major changes occurring at the Coast Guard base which will affect the Kodiak community. First, a recent Coast Guard policy requires civilian families who have lived on the Coast Guard base for more than two years to move off the base and find housing within the surrounding community. Consequently, 62 families will be moving from the base within the next year and a half. Because Coast Guard civilian salaries are relatively low, these families will be looking for moderately priced housing. This will severely impact Kodiak's housing supply.(39)

The second factor that will affect the Kodiak community will be the implementation and enforcement of the two hundred mile fishing limit. It is anticipated that the Coast Guard will need 125 additional personnel to carry out the work load generated by this new law. Such an increase in personnel would probably result in an overall gain in population for Kodiak of between four and five hundred people.

As a result of the new housing rule and the two hundred mile fishing limit, many Coast Guard personnel and their families will be seeking housing in the Kodiak area during the next two years. Should OCS development take place, it will likewise exert pressure on the community for housing needs during this same period.

The impact of the Coast Guard base in Kodiak is for the most part beneficial. Its local spending has helped to stabilize what historically has been a seasonally fluctuating economy. In addition it has provided a number of invaluable services to the fishing industry such as search and rescue and navigational aids. It is important, however, that the local governments and the Coast Guard work together to assure that the impact of OCS development is not aggravated by the impact of changes in Coast Guard base policies and Coast Guard growth in the area. The relationship between the local community and the Coast Guard base to date has been a healthy, mutually beneficial one. This spirit of cooperation should continue in the future to assure that both the local community and the Coast Guard base are not adversely affected by OCS development.

National Oceanic and Atmospheric Administration (Department of Commerce)

With the exception of the Coast Guard, the National Oceanic and Atmospheric Administration (NOAA) is the largest federal agency in Kodiak. NOAA was created on October 3, 1970, through a reorganization of various other federal agencies and departments. NOAA has a wide variety of functions

including responsibility for the National Weather Service, the National Ocean Survey, and the National Marine Fisheries Service. In addition, NOAA is in charge of executing portions of the Coastal Zone Management Act of 1972, the Marine Mammals Protection Act of 1972, the Marine Protection Research and Sanctuary Act of 1972, the Water Modification Reporting Act of 1972, the Endangered Species Act of 1973, and the Offshore Shrimp Fisheries Act of 1973.

The following excerpt from the United States Government Manual is a brief description of the primary duties of the NOAA.

> "The mission of NOAA is to explore, map, and chart the global ocean and its living resources, to manage, use and conserve those resources and to describe, monitor, and predict conditions in the atmosphere, ocean, sun, and space environment, issue warnings against impending destructive natural events, develop beneficial methods of environmental modification, and assess the consequences of inadvertent environmental modification over several scales of time."(40)

To simplify administration of these tasks, NOAA is divided into a number of smaller agencies. Those agencies having offices in Kodiak are listed and discussed below.

National Marine Fisheries Service (NMFS)

The National Marine Fisheries Service has three offices in Kodiak. These offices carry out extensive operations in the fields of ocean research, fish product utilizations, and enforcement and surveillance.

The Enforcement and Surveillance Section of NMFS is located in Gibson Cove near the City of Kodiak. Their facilities include offices, a warehouse for NOAA equipment, a darkroom facility and a conference room. This section is staffed by eight enforcement agents and one clerical employee.

Enforcement of oceanographic and fisheries treaties and agreements between the United States and foreign countries is the primary function of NMFS. In carrying out this enforcement role, NMFS service personnel work closely with the Coast Guard and utilize Coast Guard craft. NMFS enforcement agents have the power of arrest, search and seizure.

Their most time-consuming functions in Kodiak include the enforcement of the Marine Mammals Act and dockside halibut fishing regulation and enforcement. They must also review permits for construction work in tidal waters issued by the Corps of Engineers, and they have the authority to attach and enforce restrictions upon such work. Enforcement agents spend one-third of their time on field work or approximately 85 days per year at sea in Coast Guard cutters and 52 days per year in Coast Guard aircraft on patrol flights. The heaviest field season is between mid-April to October.

In addition to performing normal enforcement duties, NMFS serves as the landlord for the federal government over a 12-unit mobile home park on

the Coast Guard Base in Kodiak. This park provides trailer space for NMFS and other government employees; however, residents must provide their own mobile homes.

According to staff personnel in Kodiak, the effect of OCS development on the Enforcement and Surveillance Section of NMFS would be felt primarily in the enforcement of the National Marine Mammals Act. Large populations of marine mammals could be threatened by oil spills and the proposed development of the Cape Chiniak area. In addition to OCS impact, NMFS officials must plan for the enforcement of the 200 mile fisheries limit. If both of these developments take place, the staff believes the number of its enforcement agents in Kodiak will have to double to accommodate the additional workload.

The research section of NMFS operates the Fisheries Utilization Research Lab (FURL) which is located on the Coast Guard Base in Kodiak. This lab is the only research lab in the seafood utilization field in Alaska, and is one of only five under this program in the United States. Originally established in Ketchikan in 1940, FURL was moved to Kodiak in 1971 because of the expanding fishing industry in this area. The primary purpose of FURL is to find methods of utilizing both new and already available seafood products.

The lab is currently staffed with three chemists and one clerical employee. The information generated from research carried out at the lab is disseminated through informal contacts with local fishing industry personnel and through articles published in scientific and trade journals in the fisheries field.

The effect of OCS development on the research lab should be negligible. Likewise, the lab's research results should have no bearing on the operations of the oil companies in this area.

The third office of the National Marine Fisheries Service is the Northwest Fisheries Center (NWFC). NWFC is a research organization which gathers and analyzes data concerning stocks of fish (primarily shellfish) and formulates management plans for these species. At present, the bulk of the work carried out by NWFC is in the Bering Sea. However, NWFC will be more active in the Kodiak area as OCS development occurs.

There are a total of 15 people assigned to NWFC in Kodiak. Eight of the staff are professional biologists and mathematicians and the others are support personnel. Research projects frequently necessitate the use of the "Oregon", a 100-foot vessel owned by NWFC and based in Kodiak. In some cases however, NWFC uses up to four vessels at one time for research. The other vessels are based in Seattle and are operated under contract to the Bureau of Land Management.

The NWFC also send observers to Japanese fishing ships as provided under the terms of a treaty between the United States and Japan. While the Japanese fish in the North Pacific, the observers live aboard the ships and verify reported catches. They also collect biological information which is later added to the information collected by NWFC programs aboard its own ships.

The NWFC has also assigned three full-time people to Outer Continental Shelf research in Kodiak. Another seven people work in that field but are stationed in Seattle. Several bottom fish surveys have been carried out on the Kodiak Shelf through the NWFC in Seattle. Their findings will be helpful in monitoring the effects of OCS oil development on these species. Kodiak's research programs are mainly concerned with shrimp and crab. The objective of the shrimp studies is to "promote the maximum utilization of conservation of Alaska shrimp stocks by providing shrimp abundance, distribution, condition of stocks, and more effective harvesting techniques to industry and resource management agencies." With reference to crab, NWFC wants to "promote the effective use and conservation of king and tanner crab stocks in the eastern Bering Sea by providing a technical base of information to negotiating and managing agencies."

NWFC research will provide invaluable information on the fisheries and shellfish populations of the Outer Continental Shelf. This data, taken as a baseline, will enable scientists to monitor and evaluate the effects of oil development on marine life. It is essential, therefore, that such research be continued and stepped up if necessary, in order to provide the most up-to-date, comprehensive data possible before oil development takes place. It is unknown at the present whether more staff will be necessary to fulfill the NWFC's functions should OCS development occur.

National Weather Service (NWS)

The National Weather Service is the principle weather reporting agency for the United States and its possessions. It issues weather forecasts to the general public; provides warnings of destructive natural events such as hurricanes, floods, and tsunamis; and furnishes special services in support of aviation, marine activities, agriculture, forestry, urban air quality control and other weather sensitive activities.

In Kodiak the NWS is located on the Coast Guard Base in conjunction with the FAA facilities. It is primarily an observation station and data gathering center. The personnel include five meteorlogical tecnnicians and one electrical technician. There are no clerical positions.

The primary duties of the NWS in Kodiak are to make service observations each hour, to make tsunamic observations each six hours, and to launch weather balloons twice a day. The balloons report information back to the weather stations from altitudes in excess of 100,000 feet. These upper air soundings provide the basis for weather forecasting. The Kodiak station also provides public service weather reporting to the local community through the mass media, including tapes on the telephone, television, radio, newspapers and shortwave broadcasting.

It is not anticipated that a population increase caused by OCS development would effect the operations of the National Weather Service in Kodiak. Their function as a weather forecasting station would probably gain importance as marine traffic associated with OCS development increased;

however, it is not anticipated that this would cause a need for increased personnel or facilities.

Federal Aviation Administration (Department of Transportation)

The Federal Aviation Administration (FAA) is responsible for regulating air commerce to insure aviation safety. Its primary functions include safety regulation, registration and recording of aircraft and aircraft components; research and development of safe and efficient air navigation systems and air traffic control procedures, air navigation facilities, air space and traffic management; and airport planning and development programs.

In Kodiak the FAA facility is located on the Coast Guard Base. It provides traffic control for the Kodiak Airport and advisory service to the downtown airstrip. At the present time the FAA is upgrading its equipment to upgrade the airport to a Catagory "I" rating. This will include installation of new instrument landing system equipment, an aircraft localizer, glide slope equipment, and various other technical devices designed to allow instrument landings in adverse weather.

At present, the FAA handles a total of 17,000 to 18,000 operations per year, which is one of the lowest levels of activity handled by any FAA tower in the United States. Half of those operations are military; the rest are commercial and general aviation.

The personnel assigned to the FAA in Kodiak include one manager, seven air traffic controllers, ten electrical technicians plus one supervisory technician, and one clerical position.

According to the manager of the FAA in Kodiak, an increase in aircraft activity due to OCS development will not over-burden the FAA facilities because they now have the capability to handle up to three times the current level of operation.(42)

United States Forest Service (Department of Agriculture)

The Forest Service is responsible for providing nationwide direction in the field of forestry. It manages all national forests and provides research programs in forest technology.

The prime responsibility of the Forest Service in Kodiak is to manage the national forest lands on the Island. It reviews and regulates land use and special use permits within the national forests; it maintains the national forest cabins; it maintains fish ladders in cooperation with the Alaska Department of Fish and Game; and monitors wildlife activity in the national forests. At present, there are six full-time personnel with the Forest Service in Kodiak. Five of those personnel spend 50 to 80 percent of their time in the field. The sixth is a clerical position.

One of the major concerns of the Forest Service is harvestable timber. It recently conducted the Perenosa timber sale on Afognak Island. It is estimated that there are 332 million board feet of lumber within that sale, an anticipated 36 to 40 million board feet to be harvested per year. The Forest Service is responsible for administration of that timber area to assure that the terms of the sale are complied with on a continuing basis.

Oil development of the Kodiak OCS could impact the Forest Service operations in two ways. One would be an increase in recreational demands placed on the national forests. At present, the Forest Service maintains five cabins within that national forest. They indicate that they would be able to increase the number of cabins commensurate with the increase in demand that might be placed on them. Another effect of OCS development might be a request by the oil industry to build on-shore service facilities on Afognak Island. Such a request would require a special use permit from the Forest Service, including a full environmental impact statement of the project. It is not anticipated that these events would increase the need for additional Forest Service personnel or facilities in Kodiak.

United States Postal Service

The Kodiak Post Office (see Map 6) is the distribution center for incoming and outgoing mail for all of the Kodiak Islands. Mail delivery is provided through 17,050 post office boxes and a general delivery box which can accommodate an additional 500 customers. The present facilities cannot accommodate all the requests for post office boxes - approximately 500 people are wait-listed for these boxes.

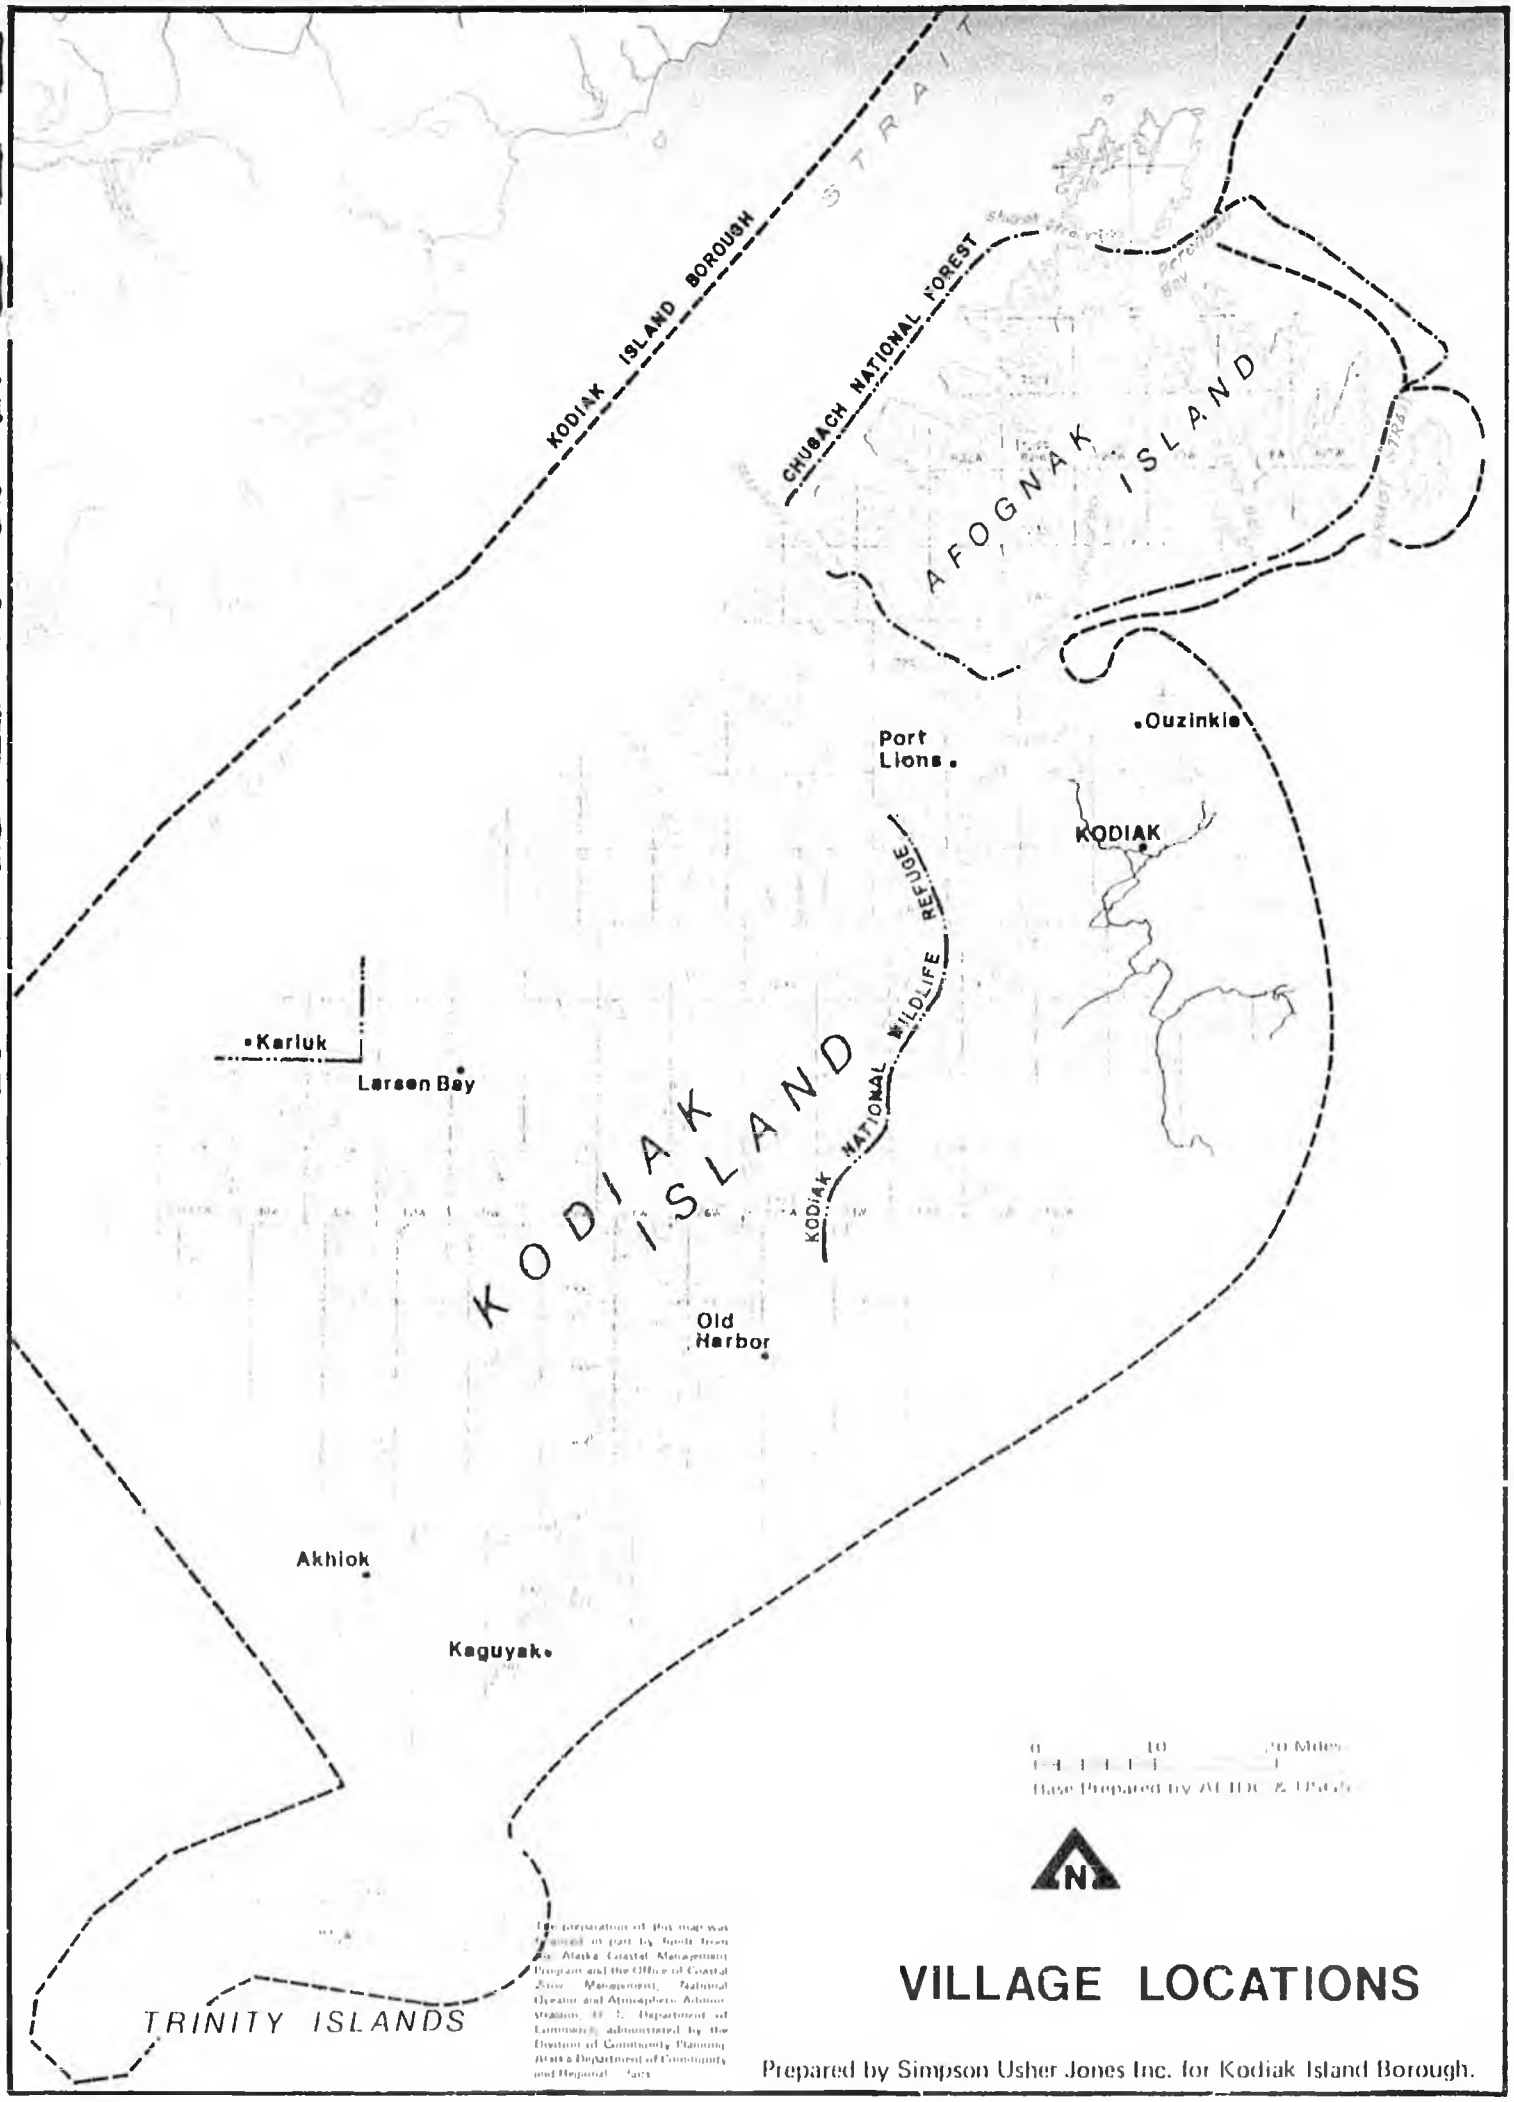
A new post office is scheduled for construction in 1977 and should be open in January, 1978. The new facility will be approximately three times the size of the existing facility with up to twice as many post office boxes.

Significant population increases generated by OCS development would severely impact post office operations. Based upon current growth patterns alone, it is estimated that nearly all of the post office boxes in the new post office will be assigned as soon as the facility is opened. A further increase in population due to OCS development would overburden the new facilities, in effect, bringing on another long wait-list situation for boxes and a heavy use of the general delivery service.

VILLAGE INVENTORY

A number of the various community services and facilities described in the preceding sections are available in the larger outlying villages around Kodiak Island. In some cases the villages have their own utility systems. In order to get a more concise picture of the status of facilities, utilities and services in these communities, the following will review the information available for those villages with local governments. All but one (Karluk) of the villages discussed are second-class cities; all of them are generally the more significant settlements on Kodiak Island other than the City of Kodiak and its environs.

In most cases, the only existing information available is printed in the Community Profiles that are prepared by the State Department of Commerce and Economic Development. Every effort has been made to update that information. In the case of Port Lions and Old Harbor, specific reports and studies were available that allowed a more in-depth treatment of the communities. For the location of the villages on Kodiak Island see Map 7.



VILLAGE LOCATIONS

Prepared by Simpson Usher Jones Inc. for Kodiak Island Borough.

MAP 7

AKHIOK

The village of Akhiok is located on Akhiok Bay west of Alitak Bay at the south end of Kodiak Island. It was incorporated as a second-class city in 1972. Akhiok is primarily a native community and its economy and employment are based entirely upon commercial fishing and cannery work. There is one telephone in Akhiok. It is located in the Community Hall and is operated by the City of Akhiok. Additional phone service is not considered feasible at this time. All other communications are through shortwave radio.

Akhiok is supplied with water through a water supply dam with a gravity feed distribution system. A 20,000 gallon water storage tank is located in the townsite but is currently unused. The Akhiok School has a well. Sewage disposal is through individual beach seepage pits with all homes being equipped with flush toilets and plumbing. Garbage disposal is currently handled through tide outflow. A sanitary landfill was built in Akhiok by the KIB with HUD grant funds in early 1977. The fill is not being used currently due to the lack of a vehicle to transport garbage to the fill site. The fill is located 1800 feet from the center of the village site. Electrical power is supplied to the homes within Akhiok by the school during its operation months. The rest of the year there is no power available. Some homes have individual generation. Until the late 1960's there was a central electrical system in Akhiok. However, in 1969 the generator broke down and has not been repaired.

There are no roads from Akhiok to other parts of the Island and none of the rural roads are maintained. There is a 1,600 foot gravel airstrip; however, it is not maintained. Kodiak Western Airlines serves Akhiok three times per week. Other transportation to the village is by air, via seaplanes, or by boat.

Akhiok has no police force and law enforcement services are provided by the State Troopers from Kodiak. The Fire Department consists of ten volunteer firemen although there is no firefighting equipment within the village. Mail service is provided through the post office in Akhiok and there are 25 subscribers.

The Akhiok Elementary School accommodates grades Kindergarten through nine and is operated by the Borough. There are two teachers and 29 students.

Health facilities are limited to one health aid. The Public Health Service provides a nurse from Kodiak on a visitation basis.

There is a total of 20 housing units within Akhiok, with one community hall, one church, a post office, and a library. An additional 15 houses are planned for construction this year through a BIA/HUD Indian Housing Program.

Like Karluk, Akhiok will probably not feel any direct affects as a result of OCS development. While it is closer to the lease sale area, Akhiok is almost totally void of the facilities necessary for an on-shore service facility. If the oil industry decides to build new service base facilities in a remote location, it seems likely that they will choose a site more convenient to the entire development area than Akhiok. However, the residents and city government in the community must be prepared for some indirect impacts. Again, similar to Karluk, Akhiok might find their community and its environs in demand for recreation uses and tourism. Preparation for those impacts should involve cohesive community goals and subsequent implementation policies through the City of Akhiok and the Kodiak Island Borough.

KARLUK

The village of Karluk is located on the Karluk River, on the east coast of Kodiak Island. It is primarily a commercial fishing village, offering seasonal employment. The Karluk village is physically split in half by the Karluk Lagoon. Transportation between the two sides is either via skiff or by foot over a mile lone sand and gravel spit that encloses the front of the lagoon. A foot bridge crosses the Karluk River at its outlet allowing access to the spit and the village store.

The water supply is provided mainly from surface water, and individual wells. There is a small dam that distributes water to 11 homes. Sewage disposal is through private septic tanks and privies. A city dump is used for solid waste disposal. Karluk has no central source of electricity; although many of the homes have individual generators. There is one telephone in Karluk located in the Community Hall.

There are no highway links to other parts of Alaska and no locally maintained roads. The state operates a 1,400 foot gravel airfield. Kodiak Western Airlines services the community with three flights a week with amphibious aircraft. The only other modes of transportation available are charter and private planes or boats. Transportation within the village is primarily via boardwalks. Many of the boardwalks are badly deteriorated and need replacing.

Karluk has no local police force; the State Troopers from Kodiak provide law enforcement. There are five volunteer firemen; and no firefighting equipment in the village other than fire extinguishers.

Karluk Elementary School accommodates Kindergarten through 8th grade, and is operated by the Kodiak Island Borough. There are two teachers and a student enrollment of 28. The school is currently in need of renovation including some structural repair.

Health needs are currently met by a clinic, staffed with one health aide. A public health nurse services Karluk on a visitation basis. Within the village is also a community hall, post office and a church.

Because of Karluk's location on the western side of Kodiak Island and its lack of community facilities, it is unlikely that it would be the site of any facilities directly related to OCS development. It could feel an impact in terms of increased tourism, hunting and fishing as a result of dramatic increases in population elsewhere in Kodiak Island Borough. Decisions need to be made concerning the degree to which these impacts are to be encouraged or discouraged. Implementation of land use regulations by the Kodiak Island Borough could have a significant effect on the availability of facilities to accommodate travelers and tourists. The involvement of the area residents is essential to this decision process. However, delays could result in unplanned and unwanted impacts.

LARSEN BAY

The City of Larsen Bay is located 62 miles west-southwest of Kodiak near the mouth of Larsen Bay. It is situated on the west shore of Uyak Bay on the west coast of Kodiak Island. Larsen Bay was formally founded in 1911 when a cannery was constructed there, and Larsen Bay was incorporated as a second-class city in 1974. Prior to that, the area was inhabited for at least 2,000 years.

The economy of Larson Bay is primarily based on fishing and cannery work, although there is potential for recreation and tourist-oriented employment relating to fishing and hunting.

There are no local police in Larsen Bay, and law enforcement services are provided by the State Troopers from Kodiak. The volunteer fire department consists of 22 volunteers although there is no firefighting equipment other than fire extinguishers.

There are no roads to any other part of Kodiak Island from Larson Bay and none of the local roads are maintained. Several miles of new road is currently being built in Larsen Bay by the BIA. The roads are not being constructed to State Highway Department standards, consequently they will not be maintained by the state. This presents a problem since the City of Larsen Bay does not have street maintainence capability. Transportation to and from the village is provided by Kodiak Western Airlines as well as private aircraft, boat, and charters. A new 4000 foot gravel runway has recently been completed. It is operated by the State Division of Aviation and is developed to standards that should be adequate for twin engine aircraft. There is also a 10,000 foot seaplane landing area in Larsen Bay.

Water is provided on an individual basis from wells and springs within the community. Sewage disposal is again provided on an individual basis. There are 24 privies and 12 septic tanks, all operated by individual owners. Electricity is provided by the individual home owner; solid waste is disposed by either burning it or piling it on the beach to be taken away by the tide.

Health facilities include a small clinic and one health aid. The services of a public health nurse from Kodiak are provided on a visitation basis. The school at Larsen Bay handles grades kindergarten through eight and is operated by the Borough. There is an enrollment of 18 students handled by one teacher. The community also has a community hall, two churches, and a post office.

There are a total of 31 housing units at Larsen Bay. Twenty-nine of those are single units, and there is one duplex.

As with other villages located on the western side of Kodiak Island, it is unlikely that Larsen Bay will be directly impacted by industrialization due to OCS development. However, the potential for secondary or indirect impact is quite high. Larsen Bay is an especially scenic community and already has a reputation as a popular hunting and fishing spot among residents of Kodiak, as well as the mainland. A dramatic population increase in Kodiak would undoubtedly bring a corresponding increase in tourism pressure in Larsen Bay. At present, the community does not have facilities such as hotels, restaurants, or camping grounds to handle a significant increase in tourist trade. A decision should be made by the community in the near future whether or not such an increase is desirable, and implementation of that decision should begin as soon as possible.

This is especially important in Larsen Bay since there are numerous archeological sites in the villages and the surrounding area. Well preserved artifacts are common. Their presence could easily attract amateur archeologists and artifact hunters. The result could be disasterous in terms of the loss of historical information and heritage as well as a severe impact on the lifestyles of the community if it is unprepared.

OLD HARBOR

Old Harbor is situated on a rocky shelf on the west shore of Sitkalidak Strait, 56 miles southwest of Kodiak on Kodiak Island. The village fronts onto a long, narrow, sand and gravel beach. It was originally established in 1884. The City of Old Harbor was incorporated as a second class city in 1966. It has a population of approximately 315 people.

The economy of Old Harbor is based entirely upon commercial fishing and processing; although at the present time, the processing industry is closed down due to the lack of a usable industrial water supply. The Kodiak Island Borough has recently begun a project to provide a water supply through HUD grants made available under the Housing and Community Development Act of 1974.

Seafood around Old Harbor is plentiful including commercial quantities of king crab, tanner crab, shirmp and salmon. In fact, one of the best shrimp grounds in the Kodiak Island Group is located near Old Harbor. Also, the community is located near Alitak Bank which is consistantly one of the highest producing king crab grounds in the islands. Other seafood species, such as scallops and clams, are available in potentially commercial quanties.

In March of 1975, the processing plant on the floating freezer ship "Sonya" burned. Due to the lack of an industrial water supply, no new processing facilities have been built. This has dealt a severe economic blow to the community since the work force of approximately 70 people, as well as 30 fishing vessels, have been idle. However, through the use of the available HUD funds, it is anticipated that the new water system will be completed within a year, thus allowing the processing industry to get reestablished.

Old Harbor has a barge dock which accommodates private boats and a 2,000 foot gravel runway and commercial air services are provided by Kodiak Western Airlines on a scheduled six flights per week basis. At this time Old Harbor has no road connections with other parts of Alaska and the roads within the community are maintained by the city. Old Harbor was served by the state ferry system at one time, however service was stopped when the Sonya was permanently moored at the dock. Now that the Sonya is gone, the dock is available and plans are being made for its expansion. This should provide adequate facilities to re-establish ferry service to the village.

Because of its location and physical confinement, Old Harbor has extremely limited potential of expansion of housing and community facilities. The 1968 the Kodiak Island Borough Comprehensive Development Plan indicated plans to build a bridge between two spits across a saltwater lagoon to

the northeast. That bridge is now completed and a road extends across the bridge to that area. This allows the development of new housing on the northeast side of the lagoon about one mile from the existing village. Topography is relatively gentle in this area, thus community expansion will be less difficult than is the case at the existing village site. Forty-five units of HUD/BIA housing will be constructed in this area during the summer and fall of 1977.

Water for the residents is currently provided through a dam and holding tank with a gravity system to the homes. Sewage disposal is provided through a public health service sewer system that operates on a community septic tank. Electrical power is provided to 58 consumers through diesel generation. The entire village is served with a phone system that was installed recently. It provides both local and long distance telephone capabilities to individual homes.

Fire protection is provided to the village by the City of Old Harbor. They have a volunteer fire department with a part-time firechief and one fire truck. The truck does need some repairs.

The community has a Russian Orthodox Church, a community building, a post office, library, theater, and two stores. The school in Old Harbor is operated by the Borough and serves grades Kindergarten through ten There are 97 students enrolled and 6 teachers.

Old Harbor's location on the southeastern portion of Kodiak Island and the fact that is is protected form the open seas of the Gulf of Alaska make it a potential site for development of onshore facilities to serve OCS development. This potential is confirmed by the fact that the village corporation has already been approached by representatives of the oil industry in an attempt to buy property in the area.

The utilization of a site in or near Old Harbor for OCS related on-shore services facilities would result in major changes and/or disruptions of the current economy, life style and physical characteristics of the community. At present, Old Harbor does not have the necessary facilities that would be required for a service base facility. These include adequate water supply, port facilities, an adequate airport, housing and other utilities. The cost of providing these facilities would be extremely high and is beyond the fiscal capacity of the city. If a decision is made by the oil industry to attempt to develop a service base in Old Harbor, it should be reviewed with respect to the community goals, economic implementation and environmental impacts. The Borough, the City of Old Harbor, and the Regional and Village Native Corporations have the combined resources to negate such a decision or, if OCS facilities are deemed appropriate in Old Harbor, to control their development. This subject should receive immediate attention by all parties concerned.

OUZINKIE

The City of Ouzinkie is located on the west coast of Spruce Island northeast of Kodiak Island. Spruce Island is separated from Kodiak Island by Narrow Strait. The City of Ouzinkie was incorporated as a second-class city in 1967. The economic base is primarily commercial fishing.

As with the other villages there is no local police in Ouzinkie. Law enforcement services are provided by the State Troopers from Kodiak. There are a total of 24 volunteer firefighters with no firefighting equipment other than individual fire extinguishers.

Ouzinkie has no highway link with other parts of Kodiak, and none of the local roads are maintained. There is no airstrip in Ouzinkie; although the State Division of Aviation has indicated plans to build a new airstrip on the north side of the village. The community is served on a scheduled basis by Kodiak Western Airlines from the City of Kodiak. There are six scheduled flights per week; in addition, charter flights are available to the village.

The City of Ouzinkie supplies water to the community through a central distribution system. Water is obtained from a small creek and piped into a 100,000 gallon storage tank. The system has deteriorated in recent years and is currently being upgraded by the Public Health Service. Sewage disposal is handled by two methods: either individual septic tanks or a number of small sewage disposal systems that accommodate from 2 to 6 houses. Electrical power is provided to the residents by the City of Ouzinkie. The distribution system is deteriorating and needs to be upgraded. Some electrical distribution lines are laying on the ground year round. This causes a "leakage" of power from the system. There are five large electrical generators in the village. They include a 50 KW plant, a 65 KW plant (in use), a 75 KW plant, an 85 KW plant and a 150 KW plant. Only the 65KW plant is currently operatable, although it is believed that all of the rest are repairable. The 65 KW plant is not adequate to serve the electrical power demand of the village.

Solid waste is disposed of either at the new landfill site built by the Kodiak Island Borough or through the traditional method of depositing garbage on the beach. The landfill is located approximately 1/2 mile from the village site and is used only by residents who have a means of hauling waste.

As in the previously described villages, health services are provided through a small clinic with one public health aide. Public health nursing services are provided on a visitation basis from Kodiak. The school in Ouzinkie is operated by the Borough and includes grades one through eight. There are three teachers who handle an enrollment of 42 students.

This community has a Community Center, two churches, and a post office Total number of housing units in Ouzinkie is 41, including one duplex.

Ouzinkie is located near several OCS lease tracts that have been identified by the oil industry as areas of high interest. Consequently, there is a possibility that Ouzinkie could be affected by OCS development. If any oil related facilities or personnel were to be located there, a significant disruption of the community could result. While there is currently no seafood transportation to Ouzinkie other than fishing boats, road and ferry access is possible.

According to the Kodiak Island Borough Comprehensive Plan (Tryck Nyman and Hayes, 1968, p.135) there are long range plans to upgrade an existing trail to a road from Monashka Bay near Kodiak to Neve Cove opposite Ouzinkie. From there, either a vehicular or passenger ferry could be operated to the town site. Pressure and/or financing from the oil industry could conceivably make this a reality in the foreseeable future. Since Ouzinkie has a partially protected natural harbor, the construction of improved year-round surface transportation links could make it a prime candidate for on-shore service facilities related to OCS development. As in the case of other outlying villages on Kodiak Island, this eventuality should be given considerable attention, and plans should be made both by the City and the Kodiak Island Borough to either discourage or control any oil related activities.

Ouzinkie also has significant tourism and historical potential. Elk and deer hunting. as well as fishing, are good in the area. There is also a Russian Orthodox Mission Chapel located at the southern end of Spruce Island that has been almost continuously occupied since 1790. These attractions will bring tourists and sportsmen to the area in increasing numbers as OCS development occurs. Community goals and preparation are essential if these impacts are to be successfully dealt with.

PORT LIONS

The City of Port Lions is located on Settler Cove near the mouth of Kizhuyak Bay, on the north coast of Kodiak Island. In comparison with the other communities around Kodiak Island, Port Lions is a relatively recent community. However its residents have been inhabitants of the Kodiak Islands for many years. Port Lions was located and built in Settler Cove in 1964 after the March 27th earthquake. The original people of Port Lions had formally been residents of the village of Afognak. They were forced to find a new townsite after the tidal waves and subsequent tidal action inundated Afognek with water. The site of the village had subsided five feet as a result of the earthquake. A complete new town was built in Settler Cove with the help of the U. S. Public Health Service, the Bureau of Indian Affairs, the Lions Club and various other public and private organizations. Initially 44 homes, one school, and a Community Hall were built and provided with water and sewer service. Since that time, Port Lions has become one of the fastest growing communities on Kodiak Island. It was incorporated as a second-class city in 1966.

The economy and employment in Port Lions is based primarily upon commercial fishing and seafood processing. A large Wakefield Processing Plant in Port Lions burned down in 1975 and has been replaced by a smaller floating processor. The cannery is located across Settler Cove from Port Lions on Peregebni Point. It is connected to the town via a gravel road around the cove. There is a small sawmill in Port Lions; however, it is not currently operating. Other commercial establishments in Port Lions include a cafe, a hotel or lodge, and a general store.

Port Lions is the only outlying village on Kodiak Island that has provided a local police force. At present, the city has budgeted for one paid police officer. Additional law enforcement services are provided by the Kodiak Headquarters of the State Troopers, 19 air-miles away. Fire protection is provided by 17 volunteer firemen and one fire truck.

Additional community facilities include the administrative offices of the City and Port Lions Native Corporation which are located in the Community Hall. It also serves as a public meeting hall and City Council chambers. Port Lions also has a public library which is operated through joint agreements with the Kodiak Public Library in the City of Kodiak.

The Port Lions telephone system is unique with respect to other outlying villages on Kodiak Island in that it serves the entire community, as well as providing direct dialing capabilities throughout the state and nation. There are currently 68 subscribers to the telephone service.

Cable television is also available to the residents of Port Lions. The television service costs $30 per month and installation charge is $75. Health facilities include a clinic with one doctor and one public health aide; a public health nurse is also dispatched from Kodiak on a visitation basis. Port Lions also has a post office with daily airmail service, although, like the City of Kodiak, there is no house-to-house delivery.

Utilities in Port Lions include a community water supply and distribution system that has recently been improved (1976) to provide adequate service to the existing community as well as the potential for future expansion. There is currently a 13.1 thousand gallon community sewer system that serves a large portion of the community; however, many of the residents still rely on individual septic systems. The community is in need of an adequate treatment plant in compliance with federal and state regulations. Electrical power is provided through the Kodiak Electrical Association. The offices of KEA are located in the City of Kodiak, however the generating plant is located in Port Lions.

Transportation facilities to and from Port Lions and within the community are also better than is found in other outlying villages on Kodiak Island. The community has a gravel-surfaced street system, slightly over one mile of which is maintained by the City. In addition, there is 4.2 miles of state roads in the area. Port Lions street system is the only village system in the Kodiak Islands that has street lights.

External transportation services are available through both air and marine carriers. Kodiak Western Airlines provides six flights per week to Port Lions. In addition, Klondike Airways utilizes a city-operated 2,600 foot gravel airstrip to the northeast of the community and provides flights on Monday, Wednesday and Friday between Anchorage and Port Lions. This service was begun in 1976.

Port Lions is also served by the Alaska Marine Highways System. The ferry "Tustumena" visits Port Lions weekly except for three months during the winter, at which time it undergoes yearly maintenance and repairs. Additional transportation services are provided to Port Lions from Kodiak via charter aircraft, as well as privately owned aircraft and boats.

Port Lions does not currently have a small boat harbor but an investigation of possible alternative sites has been done. It is conceivable, with cooperation between all levels of government, that a facility could be constructed in Settler Cove by the early 1980's.

The school in Port Lions is operated by the Kodiak Island Borough and handles Kindergarten through grade 10. The school was built in 1964 by the Bureau of Indian Affairs at the time the community was moved to its present location. The school includes four classrooms and four teachers. At present the additional classroom space as well as recreation and career facilities are being investigated by the school district. There are in excess of 70 students in the school at present. Housing in Port Lions consists of 67 single family units.

As is the case with most other villages or Kodiak Island, Port Lions offers excellent recreation opportunities that will undoubtedly draw the attention of increasing numbers of tourists as the population increases in Kodiak. Snowmobiling has become an active sport and the local snowmobile club has established a winter trail between Kodiak and Port Lions. Hunting and fishing are both good in the surrounding areas and the presence of both a lodge and restaurant make the potential for related tourism extremely high. This potential is heightened by the commercial transportation services as well as the fact that the community is only seven miles by water from Anton Larsen Bay where a boat launching ramp is located on the road system that leads to the City of Kodiak.

If Port Lions is to develop its recreational potential, action will have to be taken by the City, as well as the Kodiak Island Borough, to mai tain and possibly expand tourist accommodations, encourage the expansion of marine highway service, and possibly engage in a public relations campaign to publize the recreational and scenic assets of the community. Tourism offers a high potential for expanding and diversifying the Port Lions economy and can probably be developed on a continuing basis throughout the foreseeable future. However, this development should be encouraged only after the best interest of the community and the city are considered.

Like Ouzinkie, Port Lions is relatively close to OCS lease sale areas. While Settler Cove offers a semi-protected harbor and the community does have a number of the needed facilities and utilities, its situation is similar to that of Akhiok in that it is less than ideally suited from a locational standpoint for the site of onshore service facilities. Since much of the lease sale area is to the southeast of Kodiak Island, the distances traveled from Port Lions would be relatively high when compared with other sites that could be utlitized for OCS service facilities. However, if oil discoveries were made primarily in the north end of the lease sale, Port Lions could potentially be impacted.

Port Lions is probably the best equipped of the outlying villages on Kodiak Island to handle such industrialization, due to its relatively high level of community facilities and utlities; however, the degree of impact created by such industrialization, if it were to occur in or near the City, would completely change the physical and socio-economic characteristics that currently exist. The possibility of this eventuality should be monitored closely and the community attitudes towards such industrialization should be determined. This would allow for the preparation of plans and implementation policies to either discourage or to direct the growth of OCS related oil facilities that might be proposed for Port Lions.

HOUSING INVENTORY

The ability of the Kodiak community to keep pace with the demands for housing that will be generated by OCS development will determine to a significant degree what the impact that development will have. The following section of the report will describe the housing situation as it exists in Kodiak today.

The basis of the Housing Inventory is an actual count of housing conducted in Kodiak during the Summer and Fall of 1976. A "windshield" survey was carried out in August which involved driving all of the streets and roads on the road system from Monashka Bay to Chiniak, including all the streets within the urban area. Both base maps and aerial photos were used to augment the windshield survey. In addition to counting the number of units, the survey also noted the condition of each residential building within the area of road system. The condition catagories were broken down as follows:

Good All new housing; housing in obvious excellent or above average and average condition; no major structural defects or deficiencies from an outward appearance.

Fair - Basically structurally sound from an outward appearance; no obvious wall or roof structural defects; possibly in need of minor repairs such as window or door frame repair or replacement, or roof repair or replacement; obviously livable and safe for habitation.

Poor - Structural integrity of the building is questionable as evidenced by sagging walls or roof or foundation defects or other problems that indicate that the dwelling is in need of major renovation.

Additional information was gathered concerning vacancies, rents, construction costs, and construction activity in Kodiak. Aerial photos were also sent to each of the remote villages and population centers. Each building on the photos was identified and residential buildings were noted by the number of units they contained. Where information was not available, estimates were made based on the 1970 census information. The housing information presented for villages does not include the condition of units. It does include the information gathered concerning total numbers of units. Since the great majority of population growth and economic activity generated by OCS development is expected to be within the area serviced by the road system, the scope of this study did not include detailed on-site surveys in each of the villages. However, the information gathered does provide data on total numbers of residential units, both in the urban area and the villages. Figure 14 shows the estimated total housing count for the Kodiak Island Borough.

Fig. 14 - Estimated Total Housing Count*

Area	# Residential Units
Road System Area	1,973
Coast Guard	557
Old Harbor	66
Port Lions	60
Ouzinkie	40
Larsen Bay	31
Ahkiok	25
Karluk	25
Remainder of KIB	20
TOTAL	2,791

*Does not count group quarters associated with Canneries or Coast Guard Barracks.

HOUSING SURVEY

The Housing Survey of the area serviced by the road system revealed several significant characteristics of the housing stock in Kodiak. One of the most interesting and encouraging facts is that the great majority of residential structures in that area are in fair to good condition. As can be seen by Figure 15, almost 75% of all the housing units are in fair to good condition. The number of units in poor condition (9.7%) is quite low and should not be considered a serious problem. Trailers were identified separately in the housing survey; however, there was no attempt to classify them as good, fair or poor since most have metal skins and it is difficult to determine their condition from an outward appearance.

Fig. 15: Housing By Condition Including Trailers

Condition	Number	Percent
Good	839	42.5%
Fair	625	31.7%
Poor	192	9.7%
Trailers	317	16.1%
TOTALS	1973	100.0%

Source: Simpson Usher Jones, Inc., 1976

The distribution of residential structures by number units per building is also significant. This is shown in Figure 16. As can be seen by that table, almost 69% of all housing units are in single family dwellings. An extremely small percentage of units are in the medium sized apartments. A higher than expected number, almost 16%, are in the larger apartment buildings (nine units and up). Many of these larger apartment buildings have been built in recent years in response to the growing housing needs. The same characteristics are evident in Figure

Fig. 16: Standard Housing By Number Of Units Per Building

Units Per Building	Number of Units	Percentage
1	1141	68.9%
2 - 3	180	10.9%
4 - 8	88	5.3%
9 -	247	14.9%
TOTALS	1656	100.0%

Source: Simpson Usher Jones, Inc., 1976

The same characteristics are evident in Figure 17 which shows the housing by density, type and condition. 87.9% of those units in buildings containing nine or more units are considered in good condition with only 12.1% in fair condition and none in poor condition. Also, almost half of all apartment units are in the larger buildings. This shows a definite trend toward more intensive use of residential land, which can be attributed to a relative scarcity of such land and subsequent higher cost.

Fig. 17: Standard Housing Type & Condition

Units per Building	Good		Fair		Poor		Total	
	#	%	#	%	#	%	#	%
1	479	42.0	487	42.0	175	15.3	1141	100
2 - 3	107	59.5	65	36.1	8	4.4	180	100
4 - 8	36	40.9	43	48.9	9	10.2	88	100
9 -	217	87.9	30	12.1	0	0	247	100
TOTALS	839	50.7%	625	37.7%	192	11.6%	1656	100%

Source: Simpson Usher Jones, Inc., 1976

The middle density apartment units fared substantially worse from a condition standpoint. Almost 49% were considered in fair condition with less than 41% in good condition and 10% in poor condition. The group with the highest number of poor units was the single family homes with 15.3% of the units in poor condition. The good and fair units split almost evenly at approximately 42% each.

In general, the condition of standard housing in Kodiak is quite good with 50.7% of the units (not including mobile homes) considered good and 37.7% considered fair with only 11.6% in poor condition. It must be remembered that these condition ratings consider only the outward appearance and apparent structural integrity. They do not consider such amenities as landscaping, trim paint, interiors, etc.

When the housing conditions and density are examined on a neighborhood basis some very definite characteristics begin to appear. For the purposes of this study the area with contiguous roads was divided into 12 different homogeneous neighborhoods. All the housing information was tabulated according to these areas. (See map 8 and 9.) The tables on that map show housing by condition for each of the 12 areas. A review of that information shows that the Baranof Heights area has by far the highest percentage of dwelling units in good shape. There are several reasons why this would be true. First of all it is a relatively new area with portions of it still being developed. Also because the property has both sewer and water as well as a view, the land within the Baranof Heights area is of relatively high value. Consequently, due to financing requirements, the value of the residential units tend to be higher.

State Maintained Roads

Summer Maintenance Only

NORTHEAST PORTION KODIAK ISLAND HOUSING SURVEY/STATE ROADS

Prepared by Simpson Usher Jones Inc. for Kodiak Island Borough.

MAP 9

The area that has the highest concentration of poor units is Bell Flat. There were only 53 dwelling units within Bell Flat housing at the time of the survey. The majority of them are World War II structures that are substantially substandard in terms of building code requirements. Many of these buildings are Quonset huts which have been converted into dwellings.

The area that has the highest concentration of fair units is the Aleutian Homes. This is one of the densest areas in Kodiak, and while most of the units within the Aleutian Homes area are structurally sound and safe for habitation, many of them are in need of relatively major maintenance. It is expected that this type of maintenance will be encouraged with the completion of the paving and drainage project that is currently underway in that area.

Another area which has a high concentration of fair units and a higher than normal concentration of poor units is the Mission Road area within the city limits. There are several reasons for this. First, this is one of the older neighborhoods in Kodiak and many of the houses are quite old and in need of repair. They are also interspersed with commercial and industrial uses along the waterfront. This situation is not conducive to residential land uses; consequently, houses are not maintained in as good condition as they would be in a location more suited to residential uses.

The area that has the highest concentration of trailers is the Mission Road area outside the city. This area has traditionally had a high number of mobile homes, both in courts and on individual lots. The majority of mobile homes are in trailer courts within that area. The Monashka Bay area also has a high percentage of mobile homes, although the majority of these are on individual lots and are owner occupied. It is anticipated that many of those are placed there as temporary dwellings until permanent homes can be constructed. The majority of standard construction homes in this area are relatively new, but their size and character vary greatly.

Characteristics of housing density also differ between various areas indicated on Map 8. Figure 18, on the following page, shows the number of residential units per building by neighborhood. As should be expected, the area with the highest concentration of larger apartment buildings (nine units per building and up) is the downtown area. 52.9% of the dwelling units within that area are within the larger buildings. The second highest concentration of larger apartment units (31.3%) is in the Baranof Heights area. The number of single family units in these two districts correspond to the number of larger apartments, with 28.9% in downtown being single family homes and 49.6% in Baranof Heights being single family homes.

The Erskine Subdivision area, which is adjacent to downtown, has a high percentage of small and medium size apartments. Forty-three percent of the dwelling units in this area consist of two to eight unit apartment buildings and the remainder of the dwelling units are single family homes.

Fig. 18: Number Of Units Per Building By Area

Area	Single Family		2-3 Units		4-8 Units		9+ Units		TOTAL
	# of Units	% of Total	# of Units	% of Total	# of Units	% of Total	# of Units	% of Total

Source: Simpson Usher Jones, 1976

The remainder of the area surveyed has a high percentage of single family homes. In fact, the lowest percentage of single family homes in neighborhoods other than those described above is Baranof Park which is 63.5% single family. The remaining neighborhoods have a higher ratio than that.

The pattern of residential development that has occurred in Kodiak is common for growing communities. The highest concentration of high density residential development has been in or near the city center. Also in that area there is a relatively high percentage of fair and poor buildings. The residential areas immediately adjacent to the city center have a high percentage of units in fair to good condition. As you move out of town, especially towards Chiniak, the percentage of poor housing increases. This type of residential development is reflective of historical development trends. It indicates a formerly small, more rural community has begun to consolidate near the urban center. It is also reflected in the land values, which are generally higher near the city center, causing residential structures to be more expensive and better maintained. However, as the commercial core grows and land values increase further, the desirability of land in and immediately adjacent to the core for residential use decreases from a living environment as well as an investment standpoint.

This trend could become more pronounced and more significant in the future. If it continues as it is currently progressing, the desirability for residential uses in or near downtown will probably deteriorate. This is due to a combination of the lack of residential amenities, and the possible desire on the part of property owners to develop higher value commercial structures. The result could be a downtown area that offers little opportunity for quality residential units within walking distance. The long range ramifications that this would have on the economic viability of people-oriented retail establishments in the downtown is significant. This subject should be addressed in the Kodiak Island Borough's planning program before rapid development begins in response to OCS related demands.

Overall, the housing stock is in good condition. Unfortunately, the supply of housing is short. This problem will also have to be dealt with as economic development occurs more rapidly. The impact of OCS development on housing will be severe; consequently, programs and policies must now be developed to prepare for that impact and to assure that Kodiak can maintain its relatively high-quality housing stock.

CONSTRUCTION ACTIVITY

Residential construction activity has been increasing in recent years although the degree of increase has been somewhat erratic, as shown in Figure 19. In 1975 there was a dramatic increase in the number of units built over previous years.(43) This is primarily due to two large multi-family projects that were begun during that year. The number of single family units in 1975 actually decreased over 1974. In general,

housing construction peaked in 1974 and 1975 and has now begun a slight decline. It is anticipated that housing construction will increase again in 1977, well above previous levels of the early 70's.(44)

Fig. 19: Historical Construction Activity*

Year	Single-Family Units	Multi-Family Units	Group Quarters	Total
1971	12	4	*	16
1972	18	50	*	68
1973	14	12	*	26
1974	26	0	*	26
1975	26	107	*	133
1976	69	10	55	134
TOTAL	165	183	55	403

* Prior to 1975, construction reports are not available outside the city limits of Kodiak. Consequently, 1971 through 1974 figures do not include those areas.

Source: Kodiak Island Borough
Simpson Usher Jones, Inc. 1976

Map 10 shows the type and location of residential structure that has been occuring in the Kodiak area this year. It is interesting to note that the highest concentration of new construction is immediately adjacent to the area with the highest concentration of remodels and alterations. This denotes upgrading of the Aleutian Homes area as was predicted to occur as streets were improved. There is a substantial amount of additional land available in the Russel Estates area to the north and northwest of Baranof Heights Subdivision. This area will probably continue to be the center of substantial new construction in the next few years. The area is served with both water and sewer utilities, and as such, is very attractive for new home construction.

CONSTRUCTION COSTS

Constuction costs in Kodiak for residential units generally range from $35 to $40 per square foot for the average home.(45) This makes it possible to build a basic three-bedroom house with a garage for approximately $60,000 to $80,000 depending upon the size of the building, the amenities involved, and other variables. Assuming it costs $70,000 to

MAP 10

purchase an average new home in Kodiak, under conventional financing the mortgage payments on that house would be approximately $650 to $700 per month. According to a formula preferred by financial institutions, it would take a family with an income in excess of $30,000 to afford such a house.

These costs put the purchase of a new home out of reach for many residents in the Kodiak area. It has become increasing difficult to build houses in the $50,000 range throughout Alaska, including Kodiak. This is due to rising construction costs, land costs, financing costs, and labor costs. One way to avoid this is to allow and encourage construction of higher density residential units of a townhouse or condominium type. Such construction should result in a more efficient use of land, lower utility and street costs, and lower overall per unit construction cost. This can allow the development of owner occupied residential units in a price range affordable by a majority of the public.

RENTS

Rental costs are also relatively high in Kodiak. Average apartment rents range from $350 to $500 for a two-bedroom unit without covered parking. Although there are no definitive records available, all information indicates that apartment rents have been going up in the last few months in anticipation of the demands that will be created by the potential OCS development. According to apartment owners, vacancy rates are currently at zero, and even at normal growth rates they are not expected to be much above zero in the near future.

FUTURE HOUSING NEEDS WITHOUT OCS DEVELOPMENT

Impending development of the Outer Continental Shelf will obviously generate increased demand for housing in Kodiak. As indicated, existing housing is already in short supply. To judge the impact of that increased demand, one must predict future new housing needs without OCS development.

As explained in the Demographic Inventory of this report, future housing needs are estimated by comparing population projections with average family size. Utilizing this method, Figure 20 gives Kodiak's housing demands through 1995. The rate of housing demand increase is slightly higher than population increases due to the history of diminishing family size, both nationally and in Kodiak.

Estimated housing requirements indicate a need for constructing an average 188 units per year for the next 20 years. This construction will not occur evenly, but will come in sporadic bursts in response to economic conditions and population pressures.

Clearly a long-term increase in residential construction is necessary. The average rate of increase required would be 40 percent higher than the level of construction indicated in 1975 and 1976.

Fig. 20: Estimated Housing Required Without OCS Development

Year	Estimated Population	Estimated Family Size[1]	Estimated Housing Need
1975	9,620	3.30	2,665[2]
1980	11,370	3.20	3,553
1985	13,439	3.10	4,335
1990	15,884	3.04	5,225
1995	18,773	2.92	6,429

1. It is assumed that family size will continue to drop as it has in the past (See the Demographic Inventory for explanation.)

2. Unlike Figure 14, this figure includes 250 Coast Guard Base Barrack units since the people occupying those units are included in the total population.

CONCLUSION

Housing has the potential for being the most serious problem facing Kodiak within the next five years. The dilemma facing the community is how to meet short term demands for increased OCS related housing without over building permanent units in the long run. Such over-building far in advance of the demands shown in Figure 20 would have serious effects on the community, including a reduction in the value of existing homes, the potential vacancy rates far above what is economically acceptable, a subsequent reduction in rent and associated lack of maintenance and upkeep of apartment buildings, wasteful use of land, and reduced tax base. In order to avoid these problems, the community must find a way to provide the housing necessary to accommodate OCS development on a temporary basis without creating a situtaiton that is either aesthetically or socially unacceptable. At the same time the housing industry must be encouraged to maintain a relatively high level of activity in Kodiak during the next 20 years in order to keep abreast of demands caused by normal growth trends. These concerns must be addressed as soon as possible.

ECONOMIC INVENTORY

An area's economy is an important determinant of what happens in the community. The economy both constrains and provides opportunities for the community. An expanding economy provides jobs for the residents of the community and also attracts migrants to the community. Expansion of the economy is an important determinant of population growth. This population growth effects the community by increasing the demand for public services, but it also increases the community tax base which often means an expansion of opportunities. In the following section we will examine the changes in the Kodiak economy which have occurred in the recent past. Estimates will also be made of what the economy will do in the near future without the additional impact of OCS development.

The analysis in this section will be based on the Economic Base Theory of regional growth. This theory assumes that the economy can be divided into basic and nonbasic sectors. The basic sector consists of those industries which sell their goods and services outside the region. The fishing industry is the best example of a basic industry in Kodiak. State and Federal government employment are also examples of basic industries, since the funds that pay for these services come from outside the island. Industries in the nonbasic sector are those which exist primarily to serve the population generated by the basic sector. An example of a nonbasic industry is retail trade. Economic base theory states that the only reason for growth in the economy is the growth in the basic sector. Growth in this sector has a multiple effect on the economy because it also generates growth in the nonbasic sector to serve the population increase in the basic sector. What follows is an analysis of the important sectors of the Kodiak economy, and a projection of the future growth.

ECONOMY: PAST AND PRESENT

The most important industry to the Kodiak economy has traditionally been the fishing industry. It includes not only the fishing fleet which Kodiak services as a main port, but also the processing industry. The fishing industry also impacts the economy through the docking and re-supplying of ships not registered in Kodiak during fishing season. Kodiak serves as home port for the biggest fishing fleet in Alaska and this has been the major determinant of economic activity.

The second major sector of the economy is government, primarily Federal government. The Coast Guard base on Kodiak is the most important part of the Federal government sector. State government has also shown a recent strong growth in Kodiak. Government employment has the same effect in Kodiak as it has throughout the remainder of the State; it serves as a stabilizing force which counteracts any cyclical shifts in seasonal industries. Fishing and government are the two most important sectors of Kodiak's economic base.

Fig. 21: Proportion Of Total Employment By Industry

	1970	1974
Self Employed & Miscellaneous	21.4%	15.0%
Mining	---	---
Construction	1.5%	5.2%
Manufacturing	23.9%	32.4%
Transportation, Communications & Public Utilities	7.0%	6.6%
Trade	11.1%	10.8%
Finance, Insurance, Real Estate	---	2%
Service	6.1%	7.7%
Federal Government	12.4%	6.1%
State & Local Government	14.5%	14.2%

Source: Alaska Department of Labor, Statistical Quarterly, 1970 and 1974.

By examining the proportion of total employment in each industry (Figure 21), it can be seen that the most important industry is the fishing industry. The fishing industry accounts for the majority of employment

in the miscellaneous self-employed and manufacturing sectors (food processing accounts for almost 100% of the total manufacturing employment). The most important change in the ranking of industries was the drop in Federal Government from the fourth to the eighth most important employer. The combined effect of Federal, State, and Local Government makes the government sector the second most important industry, employing about 20% of the labor force in 1974. The addition of military employment would increase the importance of the governmental sector.

The same relationships can be seen in wages and salaries paid. Figure 22 shows the breakdown of wages and salaries by industry in 1973 and 1974. The fishing, which includes almost all of the workers in agriculture, foresting, and fisheries categories, as well as the manufacturing category, is the most important employer, paying almost 46% of total wages and salaries in 1974. Government is the second most important employer, paying about 24% of civilian wages and salaries. This underestimates fishing incomes by leaving out the incomes of of the self employed fishermen and those that are based out of locations other than Kodiak. The distribution of labor in the fishing industry, between fishing and manufacturing, is reversed in wages and salaries. The average monthly wage in fisheries in 1974 is $2013. This is more than twice that of $851 per month in manufacturing.

Fig. 22: Percent Of Total Civilian Wage/Salary Payments By Industry

	1973	1974
Agriculture, fisheries, forestry	17.8%	15.7%
Construction	6.4%	8.9%
Manufacturing	30.4%	30.0%

Trade	8.3%	8.2%
Finance	1.5%	1.7%
Services	4.8%	4.8%
Federal Government	9.8%	8.7%
State & Local Government	14.7%	14.9%

Source: Alaska Department of Labor, Statistical Quarterly, 1973, 1974.

Figures 23 and 24 illustrate the recent changes in civilian employment and its sectoral makeup. Between 1970 and 1974 civilian employment increased by approximately 26%. Three industries increased faster than the rate of civilian employment growth; they were construction, which more than tripled in the time period, manufacturing, and service. Even the industries below the average growth rate grew at acceptable rates, between 20% and 25%. Only Federal government civilian employment decreased

during this time period by 37%. Federal government civilian employment has experienced a continual decrease since 1970 even though the military stationed on Kodiak has grown.

Fig. 23: Kodiak Employment - Annual Average

	1970	1971	1972	1973	1974
Total Civilian Employment	3329	3023	3090	3844	4210

State & Local	667	500	549	560	589

Source: Alaska Department of Labor, Labor Force Estimates, by Industry and Area, 1970-1974.

An examination of employment shows that Kodiak has experienced a healthy growth rate since 1970. Employment has increased by 26% and the economy seems to be diversifying with a larger proportion of employment in the non-basic sector. Wages seem to be following this trend, with the average monthly salary increasing by 12% from $900 to $1,004 between 1973 and 1974. One problem is that even though the economy seems to be diversifying by increasing the size of its nonbasic sector, its concentration is increasing in the basic sector. Government employment, while still important, has decreased since 1970. If this trend would continue it would leave the Kodiak basic sector entirely dependent on the fishing industries and its cycles. This problem is lessened somewhat by the diversity of the fishing industry. Kodiak has become a year-round fishing port with salmon, crab, shrimp and halibut seasons overlapping, permitting year-round fishing. This has reduced the seasonality and dependence on one species; but diversity of the economic base is still a problem which needs attention.

Fig. 24: Growth Rates - 1970-1974

Three measures of regional economic well-being will be examined to describe the effect of the past economic growth. Two measures deal with employment while the third provides an overall indication of the growth of the economy. Unemployment and the unemployment rate are indicators of regional well-being. If the unemployment rate increases even with an increase in employment, economic well-being is decreased since the unemployment rate measures the probability of any one who wishes to work being out of a job.

Fig. 25: Kodiak Annual Average Unemployment Rates 1970-74

	1970	1971	1972	1973	1974
Unemployment Rate	7.8%	7.8%	9.0%	6.5%	9.5%

Source: Alaska Department of Labor, Labor Force Estimates by Industry and Area, 1970-1974.

Figure 25 shows the increase in the unemployment rate by 1.7% between 1970 and 1974. Because of this increase, we cannot claim an unambiguous increase in economic welfare since 1970.

The second measure of regional economic welfare concerns another type of unemployment, seasonal unemployment. The seasonal employment problem is common to most economies based on natural resource production. The problem arises because peak employment comes only in a few seasons leaving workers unemployed in the other seasons. Figure 26 analyzes the seasonality of employment in various industries. This table displays seasonality indexes for each industry. The seasonality index is the average winter quarter employment, divided by the average summer quarter employment. The extent of seasonality in an industry is measured by the extent this index is below one. If the number is below one it means employment was reduced in the winter quarter and seasonal employment existed.

Fig. 26: Kodiak Seasonality Index

	1974
Total Employment	.88
Construction	.78
Manufacturing	.83
Transportation, Communications, & Utilities	.80
Trade	.96
Finance, Insurance, Real Estate	1.16
Service	1.16
Miscellaneous	.60
Federal Government	1.06
State & Local Government	1.00

Source: Alaska Economic Research, Simpson Usher Jones, Inc., 1976.

The Kodiak economy can be easily divided into two sectors -- one where seasonality is of little importance, such as in Trade, Finance, Services, and Government, and another where seasonality is of primary importance. This illustrates the stabilizing effect of government employment, since it counteracts the seasonality in the fishing industry. The seasonality in the fishing industry can be seen by examining total employment, miscellaneous, and manufacturing -- all of these sectors are highly seasonal with employment as great as 40% less in the winter season.

One problem in regional economic studies is the lack of any data except civilian employment data for describing the economy. Employment data does not tell the whole story. To get a better overall picture of the performance of the Kodiak economy, a Kodiak Economic Index was developed.

(See Figure 27.) This index serves as a summary of the various important economic factors. The index is described as follows:

$$K.E.I. = \frac{3 \times \text{total civilian employment}}{10{,}000} - \frac{2 \times \text{total unemployment}}{10{,}000} + \frac{4 \times \text{gross earnings of Kodiak fishermen}}{100{,}000{,}000} + \frac{1 \times \text{Military Stationed}}{10{,}000}$$

Fig. 27: Kodiak Economic Index

	Employment[1]	Unemployment[2]	Gross Earnings[3]	Military[4]	K.E.I.
1970	2866	244	$ 11,614,077	1491	1.426
1971	3023	255	9,002,554	1301	1.344
1972	3090	306	11,764,112	659	1.403
1973	3844	266	21,242,365	690	2.015
1974	3928	414	23,576,533	733	2.114

Sources:
1. Alaska Department of Labor, Labor Force Estimated by Industry and Area, 1970-1974.
2. Ibid.
3. Alaska Commercial Fisheries Commission, 1976.
4. Alaska Dept. of Labor, Current Population Estimates, 1970-74.

This index includes many factors that employment figures alone would not account for. For example, in the fishing industry, both the size of the catch and the amount paid are important determinants of the available income. These variables do not depend directly on employment of fishermen. Use of gross earnings of fishermen in Kodiak serves to account for variability of the catch and prices paid. This index shows an increase in economic activity of 48% since 1970. The growth described by the index is greater than the 26% increase shown in the same time period by employment data. This illustrates a basically healthy and expanding economy.

THE FUTURE OF THE KODIAK ECONOMY

The future of the Kodiak economy without OCS development will depend on its two most important basic industries, the fishing industry and the Government. Growth in the economy is dependent on growth in the basic sector; the nonbasic sector serves the basic industries and grows as a result of its growth.

FISHING INDUSTRY

The future of the fishing industry on Kodiak will be effected by three external factors -- the effectiveness of the 200 mile fishing limit, the impact of limited entry, and the success of scientific management of Alaska's fishing resources. The 200 mile limit and its enforcement should increase the productivity of the Kodiak fishing industry by increasing the supply of fish available to the Kodiak fishing industry. Limiting foreign fleet hauls within 200 miles will make more fish available to be caught in the present and will also allow better management, which should increase the supply of fish available in the future.

Scientific managment of the fisheries should be more effective if the renewable resource fund which the state is trying to establish is approved. This fund may provide capital for proprietary fish hatcheries run by fishermen's associations which will then increase salmon runs. The importance of the increase in salmon supply to Kodiak depends on the effect of the State's limited entry program. The limited entry program was established to effect four goals: 1) Prevent the addition of more gear to overcrowded fisheries; 2) Encourage the use of underdeveloped fisheries; 3) Stabilize the amount of gear in each fishery at levels which allow fair dollar returns, effective fisheries management, and upgrading of gear and vessels; and 4) promote professional and diversified commercial fisheries.(46)

This program will have the effect of reducing the number of fishermen, but will increase the return to those remaining. The overall economic impact of this program on Kodiak will depend on whether the total return to the remaining fishermen on Kodiak is greater than the loss from the reduced number of fishermen.

Increasing the supply available to the Kodiak fishing industry and increasing the productivity of fishermen are only two ways of increasing the Kodiak fishing industry. Diversifying the types of fish caught is another way of expanding the fishery. Since 1969, the ratio of shellfish to salmon catch has changed from 1:9 in 1969, to about 2:1 in 1973. This diversification was important to the Kodiak fishing industry, reducing its seasonality and the impact of low runs in particular species.(47) Bottomfish offer an important future source of expansion.

Current limited production of such species as perch, cod, pollock and flounder is a result of unsatisfactory market conditions. The production of bottomfish should be helped by the 200 mile fishing zone and the reduction in foreign fishing vessels activity in Alaskan waters.(48)

GOVERNMENT

The most important segment of government activity on Kodiak is the Federal Government. Employment on the Kodiak Coast Guard Station is the largest sector of Federal employment. The Kodiak Support Center currently employs 1,120 people. Of these, 185 are civilians which is approximately 75% of all civilian federal employees on Kodiak. The Center currently spends about 15 million dollars a year on Kodiak in salaries, operating expenses, and capital improvements. An increase in Coast Guard activity on Kodiak will result because of the requirement to enforce the 200 mile fishing zone. Current plans for expansion call for increasing the military force by about 130. If existing ratios hold, this could lead to an increase of 28 in civilian employment and $200,000 in additional salaries and operating expenses. Future personnel expansion will also be necessary. Coast Guard expansion will also have an impact because of required construction. Current recommendations call for about $21,000,000 of construction in the next few years.(49)

OTHER BASIC INDUSTRIES

A recent study by Bradford Tuck on the Kodiak economy describes the future of the other portion of the Kodiak basic sector. We will summarize his findings below. Besides fishing and government, Tuck includes agriculture, mining, logging, and construction in the Kodiak basic sector. (50)

Agriculture is unlikely to produce a change in the near future. Problems of cost and scale will prevent any major increase in this sector. Tuck lists these problems with the beef industry in Alaska:

1. Lack of Alaska feed lots and infrastructure
2. Distance from markets and supply areas
3. High relative cost of Alaska beef

Mining has been only minimal, but this trend could change with OCS development in the Western Gulf. Without this development mining should continue to have only minimal impact.

Contruction should see an upward trend in the future. Demand for construction will come from plant construction and improvement in the fishing industry, state public works, and federal government construction at the Coast Guard Station. Demand will also increase for residential construction.

Logging and lumbering activity has potential for expansion. Future expansion will depend on the solution to environmental problems brought out in current timber sales.

CONCLUSIONS

Tuck concluded that without OCS development the Kodiak economy would experience a modest growth similar to the rate experienced during the last 10 years. He projected a total military and civilian employment of 6,292 in 1980. Of this, the basic employment would consist of 3,071 in the civilian base and 863 in the military. This projection shows a 43 percent increase in the total employment between 1970 and 1980.(51) With this same growth rate in the following decade Kodiak would have a total employment of about 9,000 by 1980. The impact of OCS development in the Western Gulf of Alaska on the Kodiak economy can be judged against these non-OCS development projections.

DEMOGRAPHIC INVENTORY

This section of the OCS Study discusses the population characteristics and growth trends of the Kodiak Island Borough. In examining the growth of the population, particular attention has been paid to the various factors that generated the growth and forecasts of future population growth have been made. By studying the characteristics of the population with respect to age and locational distributions, trends and areas of stability have been identified.

Knowledge of both the present and future population is helpful for impact planning. The numerical level of population growth and its demographic makeup both determines and indicates the amount of activity in the public and private sector. The activity in the support sector of the local economy is significantly affected by the amount and type of population. More importantly, the services demanded of the local government are directly related to the population.

A good example of the effect that demographic components can have on the public sector is the effect that a particular population characteristic can have on a school budget. The size of the school budget fluctuates in proportion to the number of school age children in a given population area. This characteristic would be indentified through age ratios. A given increase in population caused by OCS development will have varying impacts on Kodiak depending on its demographic characteristics.

Information utilized in this report about the demographic makeup of Kodiak's population was obtained from the 1960 and 1970 census. Information on the population growth has been gathered from both the census and the annual state population reports produced by the Alaska Department of Labor.

POPULATION GROWTH: 1970 - 1975

The population growth on Kodiak between 1970 and 1975 has been sporadic. There have been a number of major increases and decreases. The yearly rate of growth ranged from a low of -10.5% to a high of 4.2%. During this time period, Kodiak experienced an average annual rate of growth of 0.4%. This is less than one-fifth the average yearly growth rate found in the 1960's. This information, as well as the components of population growth is shown in Figures 28, 29, and 30. As a comparison, in the period between 1970 and 1975 the State of Alaska grew at a yearly rate of 6.8% which is about 17 times the rate of growth of Kodiak.

Fig. 28: Kodiak Population

Year	Total	Civilian	Military
1960	7174[1]	5367[2]	1807[2]
1970	9409[1]	7918[2]	1491[2]
1971	9723[2]	8422[2]	1301[2]
1972	8703[2]	8044[2]	659[2]
1973	8868[2]	8178[2]	690[2]
1974	9232[2]	8499[2]	733[2]
1975	9620[3]	8720[3]	900[2]

2. Current population estimates 1971 - 1975, Alaska Dept of Labor
3. Estimate made assuming rate of growth was the same as rate of growth of school enrollment

An important cause of the sporadic population growth was the change in the military population on Kodiak. The major population decrease in this time period occurred in 1972 when the Coast Guard took over the Kodiak base from the Navy. The military population was reduced by 49% from 1301 to 659 between 1972 and 1973. This military decrease was accompanied by a drop in the civilian population of approximately 400 people as a result of a reduction in military families and the loss of some support jobs.

Since 1972 both the civilian and military populations have experienced healthy growth. The population has grown at approximately 3.4% each year since 1972. The military has grown, since it reached its low of only 659 military stationed on Kodiak in 1972, to 900 stationed in 1975. This is a yearly average growth of 12% and brings the military to within 600 of the number stationed on Kodiak in 1970. This smaller

number of military may, because of the changing complexion of the military since Vietnam, have a greater population impact. Since the end of the Vietnam war, the Coast Guard may include more career-oriented personnel with families.

Fig. 29: Yearly Growth Rates

Years	Total	Military	Civilian
1960 - 1970*	3.1%	- 1.7%	4.8%
1970 - 1975*	.4%	- 7.9%	2.0%
1970 - 1971	3.3%	-12.7%	6.4%
1971 - 1972	-10.5%	-49.3%	-4.5%
1972 - 1973	1.9%	4.7%	1.7%
1973 - 1974	4.1%	6.2%	3.9%
1974 - 1975	4.2%	22.8%	2.6%

Year	Population	Military	Births	Deaths	Migration
1971	314	-190	283	52	83
1972	-1020	-642	212	37	-1195
1973	165	31	196	43	12
1974	364	43	191	63	236
1975	388	167	199	53	242

Source: Alaska Department of Labor Current Population Report, 1971-1975.

The civilian population has grown by 10% since 1970. The increased civilian population has counterbalanced the reductions in military personnel during its major reductions. Increases in civilian population can be best explained in terms of the increased importance of other sectors of the economy and are discussed in the Economic Inventory of this report.

POPULATION ESTIMATES

The population estimates for the years 1970 to 1974 were made by the Alaska Department of Labor, however the state's 1975 estimate was not consistent with other indicators of population growth. The state population estimate showed a decrease in Kodiak population of 431; this was a 4.6% decrease. Other indicators grew during this time period. Figure 31 compares the state's estimated growth rate and the growth of other indicators.

Yearly estimates of the population can be made in many ways which vary in accuracy and cost. Most accurate and costly would be to conduct a yearly census. Without a census, population estimates must be based on hard data which is produced yearly and is related to population growth. A housing count is an accurate method, if a measure of vacancy can be made. Two other types of data which reflect population are available - labor force data and school enrollment data. If a stable relationship can be found between either of these types of data and population, they can be used to estimate population growth. Of this data, school enrollment is the only data available for timely estimates.

Fig. 31: Growth Rates

State's Population Estimate	-4.6%
Military	22.8%
School Enrollment	4.2%
Gross Sales Receipts	11.7%

Source: Alaska Economic Research, Simpson Usher Jones, 1976.

By examining the relation between school enrollment and population, we found that the ratio of population to school enrollment varied by only 0.3 from 1972 to 1974 and by only 0.4 since 1970. Because of this stable relationship it was assumed that population grew at a rate equal to the school population. Assuming a rate of population growth equal to the 4.2% growth of school enrollment, a 1975 population of 9,620 is estimated, which is an increase of 388.

POPULATION GROWTH AND THE COMPONENTS OF CHANGE

One of the goals of this study is to forecast what Kodiak will be like in the future, both with and without outer continental shelf oil development. An obvious conclusion is that without OCS development, growth will continue much as it has in the past. This means that those forces determining population growth in the past will continue to operate and

grow at the same rate that they have in the past. The following projections of the future course of population growth will utilize the technique known as the Component Method.

The Component Method examines the growth in total population by forecasting the three major components of population change -- births, deaths, and migration. By examining these components in the recent past, we can estimate rates of change in each. Using these rates of change, population growth can be projected through 1995.

Figure 32 shows the components of population change since 1970. Traditionally, the Component Method develops growth rates for a five year time period. The change in military personnel in 1972 prevents the use of growth between 1970 and 1975 to determine the rates. We will develop five year growth rates based on the yearly averages found since 1972.

Fig. 32: Components Of Population Change

Year	Population	Population	Births	Deaths	Migration
1971	9723	314	283	52	83
1972	8703	-1020	212	37	-1195
1973	8868	165	196	43	12
1974	9232	364	191	63	236
1975	9620	388	199	53	242

Figure 33 shows the birth, death, and migration rates found since 1972. This figure also shows the average yearly rate for each component;

Fig. 33: Birth, Death and Migration

Year	Populaion Growth Rate	Birth Rate	Death Rate	Migration Rate
1972-73	.019	.022	.005	.001
1973-74	.041	.022	.007	.027
1974-75	.042	.022	.006	.026
Average	.034	.022	.006	.018

Source: Alaska Economic Research, Simpson Usher Jones, 1976

Using these average rates, the five year growth rates shown in Figure 34 were developed.

Fig. 34: Five Year Growth Rates

Population	Births	Deaths	Migration
.182	.115	.030	.093

Source: Alaska Economic Research, Simpson Usher Jones, Inc., 1976

Using the average rate increase of 3.4% per year, population projections for Kodiak through 1995 are shown in Figure 35.

Fig. 35: Population Projections Without OCS Development - 1975-1995

Year	Population	Year	Population
1976	9,947	1986	13,896
1977	10,285	1987	14,368
1978	10,635	1988	14,857
1979	10,996	1989	15,362
1980	11,370	1990	15,884
1981	11,757	1991	16,424
1982	12,157	1992	16,982
1983	12,570	1993	17,559
1984	12,997	1994	18,156
1985	13,439	1995	18,773

Source: Alaska Economic Research, Simpson Usher Jones, Inc. (Sontag)

According to these projections, population doubles by 1995. Any major change such as OCS development will affect population levels since this forecast is based on continuation of past trends.

POPULATION CHARACTERISTICS

As we mentioned previously, knowledge of the demographic makeup of the population is as important to decision makers as is knowledge about the total number of people. The distribution of certain population characteristics will determine the demands placed on the public and private sectors. Stability is an important characteristic to look for in the Kodiak population. If it has been stable in the past, there is reason to predict the same stability in the future. A change in the distribution

of population characteristics associated with OCS development will mean a disproportional impact on Kodiak's future population.

The main population chacteristics of interest to public decision makers are age distribution, locational distribution, and the family composition. These have an impact on housing, schools, and public services. The following analysis shows considerable stability in these characteristics. The population may seem less than stable, particularly when its migration pattern is examined. According to the 1970 Census, 49% of the population over five years old lived outside of Kodiak in 1965. This does not seem to describe a stable population, but this high proportion of migrants can be accounted for by the high proportion of military in the population. Of the 2,676 people over five years old on the military base in 1970, 77% had moved to Kodiak since 1965. Subtracting the military migrants reduces the number of new residents to 36%. This figure compares with 41.1% for the state as a whole, 44.9% for Anchorage, and 52.4% for Kenai. A relatively high rate state-wide is not unexpected since the state is growing faster than what would be considered a normal rate of increase. Migration is an important component of that growth.

Figure 36 through 38 describe the age distribution of Kodiak as indicated in the 1960 and 1970 Federal Census and a 1974 Census conducted by the Kodiak Borough. Comparing the percentage distribution in 1960 and 1970 shows a remarkable similarity.

Fig. 36: Age Distribution

Age	1960	1970
5	963	1073
5 - 9	754	1153
10 - 14	639	931
15 - 19	722	801
20 - 24	984	1380

5 - 19	.295	.307
20 - 29	.225	.242
30 - 39	.164	.139
40 - 49	.095	.096
50 - 59	.052	.064
60 -	.035	.038

Source: 1960 Census; 1970 Census

The importance of any age group is measured by its proportion of the total population. The largest change was in the 30-39 age group which showed a decrease of 2.5% over the 10-year period. Both with the 0 through 29 year olds increasing by 4.9% of the total population, and the population above 50 increasing by 1.6%. Despite the small changes, the age distribution can be considered the same in 1960 and 1970. This stability of the age distribution continues through to the present.

Figure 38 compares the civilian populations in 1970 and 1974. A greater change can be seen since 1970; the 5-17 age group, which is the school age portion, has increased by more than 10%. Even with this increase, the age distribution does not seem to have experienced any major change since 1970.

Fig. 38: Civilian Age Distribution

	1970		1974	
Age	Number	Percent	Number	Percent
5	698	.110	555	.087
5 - 17	1043	.164	1805	.282
18 - 55	3979	.626	3554	.554
55 -	637	.100	490	.077

Source: Kodiak Island Borough Special Census, 1974.

The locational distribution of population has also remained fairly stable. Figure 39 compares the locational distribution of the population in 1970

and 1974. Some distortion in these distributions may result from definitions of areas, since 1970 areas are defined by the census and 1974 areas are precinct boundaries. Even so, the two distributions are extremely similar. The biggest change was a decrease in the City of Kodiak by 1.9% and an increase in the proportion of population outside of the city and village boundaries by 1.7%. The change in population between 1970 and 1974 have been fairly evenly spread throughout the island.

Fig. 39: Civilian Locational Distribution

Kodiak Island Borough Census, 1974.

Family composition can be measured by average family size. This statistic is important since a projection of the future population can determine the overall demand for housing. The required housing stock equals the total population divided by the average family size. A reduction in the average family size would mean a larger housing stock would be required to house a given population. The average family size decreased between 1960 and 1970 by .09 people per household (from 3.63 to 3.54). This decrease can be explained by the national trend toward smaller families. A census taken in 1974 showed an even larger decrease in population per household to 3.30. This statistic shows the greatest change of the population characteristics we have examined, but still it can be explained by the trend to smaller families seen throughout the country. As long as this general trend can be predicted, the change should not disturb the ability to make predictions of the future demographic characteristics of the population.

LAND STATUS/CAPABILITY

Throughout the process of planning and preparation for the impacts of OCS development in Kodiak, questions concerning the demand for land and its use, capabilities, and availabilities will be brought before the community by both public and private entities. If the decision making bodies in Kodiak cannot respond to those questions promptly, then the development of residential, commercial and industrial facilities will occur in an unplanned, uncontrolled and haphazard atmosphere.

OCS development will create both direct and indirect demands for land throughout the exploration, development and production phases. Uses that will create a demand for land directely related to OCS development will include onshore marine service bases, oil storage facilities tanker terminals, industrial parks and transportation facilities such as roads, freight terminals and air support bases.

Indirect demands for land will be created by population growth and the resultant need for residential and commercial facilities to serve the population and local industrial facilities designed to meet the needs of a growing population. There will also be an increased demand for recreation lands and open space as well as the need for new facilities devoted to tourism and public facilities.

All of the decision makers concerned with Kodiak, including the private sector, the Kodiak Island Borough, the City of Kodiak, the State of Alaska, and the federal government will be involved in planning for the use and disposition of lands within the Borough. Decisions will have to be made in response to immediate requests for use permits, zoning, subdivisions and other types of applications relating to development projects. Decisions will also have to be directed toward long term land

uses so that land in the proper amounts and locations can be reserved for future requirements. In order to make these decisions, it will be necessary to determine what land is available for use and suitable for development within the Kodiak Island Borough as well as what the future needs will be. Information will also have to be available that will allow decisions directed toward minimizing the impact of OCS development on the natural environment, creating and maintaining a high quality of human environment, and protecting the significant historical and cultural assets of the area. At the same time and also to help minimize the overall long term impacts, it will be necessary to make land use decisions directed toward providing the type of land that will suit the proposed uses associated with OCS development from an economic and functional standpoint.

As stated above, information is required to make rational decisions. In order to function efficiently, the decision makers will need several types of information relating to land and its use. First they will need base line data concerning the physical attributes of the land within their various jurisdictions. Information will be required relating to soils, topography, slopes, hydrology (including water tables, aquifers and flood plains), environmental sensitivity both on a micro and macro scale, and seismic characteristics. The information should be in a form adaptable to application to specific sites as well as large ecosystems.

Second, information will be needed concerning the socio-economic attributes of land. This will include ownership, natural resources, land use demand requirements, and land values.

Third, it will be important to know the various special features associated with the land involved. This will include archeological sites, the importance to the various cultures involved, and any unique and scenic attributes that specific sites might possess.

This separation and delineation of various types of information is easily done in a report such as this; however, in actual fact the various facits of the land characteristics are inexorably intertwined to the point that it is almost impossible to consider one without the other. This portion of the OCS study will report on the information that is available concerning land in Kodiak and will make recommendations relative to the types of information needed for use evaluation that has yet to be developed and/or refined to the point of usefulness to local decision makers.

AVAILABLE INFORMATION

Information concerning land in Kodiak is generally limited. Most of the information that is available is on a very broad scale. Much of the needed information mentioned above is not available at all. This is an extremely unfortunate situation considering Kodiak is now facing rapid industrialization. However, it is not a predicament that was entirely unexpected. To date Kodiak has not been the site of rapid population growth or industrialization. There has not been a great deal of interest in the land and its detailed qualities and characteristics. In fact, the history of Kodiak is built on the basis of the opportunities and demands that come from the surrounding oceans instead of the lands.

The gathering, analysis, refinement and publication of information concerning land and its uses is an extremely complicated and time consuming process. Rarely has the demand for such data been recognized in a given area far enough in advance to have it ready for use when required. Kodiak is no exception. For instance, one of the basic tools of land analysis are aerial photos. However, the only photos available of Kodiak are extremely high level, generalized photos that do not allow analysis of detailed topography, vegetation and land features. There is soils information concerning the entire island; however, it is very generalized. It only provides data concerning soils and materials within six inches of the surface. There is extremely generalized seismic information and little or no specific information on the environmental sensitivity of the flora and fauna that inhabit the island. In that regard there is some raw data that has been compiled by the Alaska Department of Fish and Game on specific species and habitats. However, this data needs to be translated and consolidated into a form that can be applied to land use analysis.

A number of known archeological sites have been identified, but very few of those have been evaluated as to their historical and cultural importance. Many of these sites are extremely old, reaching back into prehistory. However, their significance in terms of potential future land use is not known.

There are large areas of public lands, wildlife reserves, and national forests within the Kodiak Borough. However, there is no data on the past use, the capabilities, and the future demands on those lands.

Ownership is one of the most complicated and frustrating problems relating to land status within the Kodiak Island Borough. Again, on a very broad scale, some ownership information is available. However, in attempting to determine exact ownership patterns, information was found to be either totally lacking or hopelessly complex. For instance, in trying to determine the ownership patterns in areas that were considered likely locations for onshore facilities related to OCS development, we found that most of the land was overlayed with several ownership claims, in some cases up to four. For instance, confusion arises when land that was originally owned by the federal government has been tentatively transferred to state ownership, whereupon private homesteading claims have been made and subsequently the same lands have been claimed by one of the various native corporations.

A good specific example that illustrates the problem of determining ownership in Kodiak is Near Island, which is located immediately adjacent to the waterfront in the City of Kodiak. According to the State of Alaska's land status plats, Near Island is owned by the federal government and has been tentatively approved (TA) for transfer to the State of Alaska. Prior to the passage of the Alaska Native Land Claims Settlement Act, a TA from the federal government was considered as an assurance that the ownership of the land would be transferred. However, the passage of ANCSA has reduced the amount of surety involved in a TA. To complicate this problem, in the early 1960's apparently with the feeling that the TA would be followed by a transfer of title, the State of Alaska granted a patent to the City of Kodiak for Near Island. Consequently, the current ownership of Near Island could be questioned. According to the State Division of Lands, if a question does arise concerning that ownership, it would have to be answered through the legal process. It must be remembered that the situation with regard to Near Island is not an unusual occurrence. It is common throughout Kodiak Island, and in some cases is compounded even further with homestead claims and ANCSA claims.

Because of these typical complications, it is imperative that public and private agencies in Kodiak verify land ownership prior to making decisions concerning land use or land disposition whether it relates to OCS development or not. This is especially true in the case of lands outside the Kodiak metropolitan area.

Even with these complications, there is sufficient information available about general land status on a broad scale to draw conclusions relative to areas available for OCS onshore development. Utilizing the information that is available for Kodiak Island, Map 11 was compiled to show the basic soils, topography and special features that are known to affect land in Kodiak. It can be determined from that map that the great majority of lands within the Kodiak Island Borough and in the Kodiak Island group are unsuitable and/or unavailable for active, permanent uses. There are a number of reasons for this and a description of these factors follows. (Map 11 is in back envelope.)

Soils

As indicated on the map, a large portion of Kodiak Island is unbuildable from a soils standpoint. In making this determination factors were taken into account which included drainage, flood plains. bearing capacities, steepness, the presence of year-round ice, and soil composition. Some of the information for this portion of the study was obtained through the joint Federal/State Land Use Planning Commission.(52) Other information utilized was obtained from the Soil Conservation Service and is generally related to agricultural potential.(53) However, a rough translation of the information can be made that allows its application to developmental potential.(54)

The area of poor soils shown on Map 11 is considered usable only for recreational, hunting and fishing, scenic, open space and possible some agricultural uses. The reasons from a soils standpoint that these lands were eliminated from potential development areas vary. Throughout the

center of the island the land forms are constituted primarily by mountainous areas. There are outcropping of rocks, ice fields, steep mountainsides with talus slopes and slide areas. Because of these influences the land would not support permanent development.

Near the southwestern end of the island, the mountainous areas are replaced by low lying swamp areas which contain soils with high silt contents. The water tables are high, and there are what appear to be large flood plain areas. Along the northwestern side of the island between Uyak Bay and Afognak Island there are additional mountainous areas that, from a soils standpoint, are unsuitable for development.

The majority of the good soils located within the Kodiak Island Borough are on the southwestern portion of the island between Cape Ikolik and the entrance to Uyak Bay. The village of Karluk is located about midway in this area. The soils in this area appear to be alluvial plains with fair developmental potential.

Additional good soils are found to the northeast of there, still on the western side of the mountains. Most of these areas are situated at the heads of the various bays including Zachar Bay, Spiridon Bay, Uganik Bay, Terror Bay, Viekoda Bay and Kizhuyak Bay, on which Port Lions is located. It would appear that the reason for the better soils in these areas is that slopes are gentler and the drainage areas are not as confined by steep topography. Consequently, sedimentary deposits have been able to accumulate. This allows for more stable and usable soil conditions from a development standpoint.

On the southeastern side of Kodiak Island adjacent to the lease sale area, the proportion of usable soils is much smaller. In fact, according to the information available, there are only two areas to the south of Ugak Bay that are at all usable for development purposes from a soils standpoint. Those areas include a small area around Old Harbor and a slightly larger area between Ahkiok and Olga Bay. The great majority of the remaining lands on this part of the island are mountainous and contain very few level areas where soils can accumulate. This is also true of Sitkalidak Island immediately adjacent to the Old Harbor area.

On the northeastern portion of the island from the north side of Ugak Bay to Narrow Strait, some relatively good soils can be found. Again in these areas, especially along the coastline, the slopes are generally less steep and the drainage systems have allowed sedimentation. Throughout the area localized soil conditions vary greatly from extremely wet lowlands to rock outcroppings. However, in general, as demonstrated on Map 11, usable land can be found throughout the area. The one exception to this is the Marin Mountains located to the southwest of Cape Chiniak and north of Ugak Bay.

Continuing north, Spruce Island on which Ouzinkie is located is generally composed of usable soils. Also, much of Afognak Island, especially in the northeastern portions, is buildable. Again, this is primarily due to the absence of extremely steep slopes and the greater depth of soil as opposed to rock outcroppings. Localized soil conditions can vary greatly, however, and specific sites may or may not be usable for development purposes.

Slopes

Slopes also constitute a major problem from a development standpoint in Kodiak. As indicated above, many of the soils problems are related to the steepness of the land. Map 11 also shows the generalized areas that contain slopes of greater than 25 percent. This is considered by most experts in the field as the reasonable limit of developable slopes. Even a 25 percent slope is quite steep. It is generally considered that anything above 10 to 15 percent is usable for special purposes only. Uses on slopes of this steepness are normally low in intensity and primarily confined to residential and recreational uses. Larger industrial type development almost always requires slopes that are less than 10 percent. The information available does not allow the accurate identification of slopes less than 25 percent.(55)

As indicated, steep slopes are common throughout the island. In the southwestern portion of the island around Karluk where soils are generally good, a large percentage of the land can be eliminated from the developable category because of the steepness of the hills in that area. This is also true in the area around Akhiok. Localized steep slopes are found throughout the entire western portion of the island where soils are in many cases considered usable. This also occurs in the northeastern portion of the island in the area served by the road system. This area ranges from gently rolling hills to larger mountains. The steepness of the land varies greatly within relatively small areas.

The physical characteristics of the land shown on Map 11 indicate that an extremely small percentage of Kodiak Island and its adjacent islands are suitable for development purposes. As pointed out above, it is primarily located on the northeast portion of the island in close proximity to the road system and existing developed areas. It is near the areas involved in the upcoming OCS lease sale. When detailed information is developed concerning these areas, even more land will be eliminated from the developable category and a clearer picture will emerge. With this information, assuming it is specific and detailed enough, specific sites can be evaluated.

Land Ownership

As indicated earlier, detailed information concerning land ownership on Kodiak Island is extremely complicated.(56) However, a review of the information that is available in usable form shows that large portions of Kodiak Island are in federal ownership in the form of the Kodiak National Wildlife Refuge and the Chugach National Forest. For the purposes of this study, it is assumed that federally owned lands within those reserves are not available for industrialization.

All of Afognak Island is within the Chugach National Forest and almost two-thirds of Kodiak Island is within the Kodiak National Wildlife Refuge. Afognak Island is a popular recreation area that is utilized by sportsmen and outdoor enthusiasts for hunting, fishing, camping, and various other outdoor activities. There are a number of Forest Service cabins available for recreational use on the island which are used by

residents of Kodiak as well as people from other parts of the state and nation. In addition there are logging operations being carried out on the northern side of the island to a limited extent.

The Kodiak National Wildlife Refuge covers the majority of Kodiak Island. It has been used for a number of experimental programs involving transplants of various animal species to the area. Most of the lands in the refuge are subject to poor soils and/or steep slopes, but some areas have physical characteristics that would allow development. Again, it is assumed that they will not be available for industrial or any other long term uses.

With the exclusion of these two federal reserves, the lands available for OCS industrialization are relatively limited. (See Map 12.) They have been narrowed down to the northeastern portion of Kodiak Island generally from Whale Passage to Kiliuda Bay. In addition it might be possible for the oil industry to utilize lands in or immediately surrounding the village of Old Harbor.

One factor that futher complicates the question of land ownership in many areas is the Native selections made under the Alaska Native Claims Settlement Act (ANCSA). There are 19 village corporations, in addition to the Koniag Regional Native Corporation, on Kodiak Island. Together they have selected 1,566,720 acres of land (see Map 13). The lands selected are not necessarily unavailable for use by virture of their selection. In fact, Koniag, Incorporated has indicated a willingness to talk with the oil industry concerning on-shore facilities. However, some of the lands are not suitable for OCS related uses due to their inclusion in other categories discussed here (natural features, federal reserves, etc.).

In the Kodiak urban area, specific information is available. As can be seen from Map 14, there are relatively large areas of local government ownership including both the Kodiak Island Borough and the City of Kodiak. Much of that land, especially that owned by the Borough, is available for future community expansion, and much of it is ideally located for residential uses although most of the lands outside the city limits are not served by municipal services. It is also important to note that the majority of the land within the existing developed portion of the Kodiak area that is shown in local government ownership is the site of various community facilities and therefore is not available for development.

It should be pointed out that the majority of the City's land shown on Map 14 to the west of the City center is extremely steep and unsuitable for development. Near Island is shown on the ownership map as the property of the City of Kodiak in spite of the previously mentioned complications with the title. It is interesting to note that both the federal and state governments own very little land in the developed portion with the exception of Ambercrombie State Park and the Spruce Cape Loran Station.

The lands on Map 14 that are not shown in governmental ownership are all privately owned although much of the land to the northeast of the city

center remains undeveloped. Most of the land is platted at the present time; however, the majority of these are "paper plats" and are unimproved. While this does indicate large areas available for growth of the community, such growth will require the provision of roads and public utlities prior to development in most cases.

Special Features

One of the most important special features associated with land in Kodiak is its archeological sites. According to the information available, there are presently 170 sites that have been identified as having archeological significance (see Map 11). (Federal/State Land Use Planning Commission) They range from prehistoric remains to early human settlements up to 2,000 years old. As is the case with current development on Kodiak Island, the archeological sites are located primarily along the seashore and within bays and inlets that provide protected water. It is extremely important that these sites be evaluated and cataloged according to their archeological, historical and cultural significance so that proper measures can be taken to protect them from encroachment or destruction as a result of future community growth and industrialization.

Another feature that is important with respect to future development is the seismic characteristics of the island. As shown on Map 11, there are several known faults on both sides of Kodiak Island. Although there is no record of recent significant seismic activity in these areas, it will be important in the future to develop basic geologic information sources and monitoring systems if the affected areas are considered for development.

CONCLUSION

In spite of the generality of the information available on Kodiak relative to land status, it is relatively easy to eliminate large areas of Kodiak Island as potential sites for development.

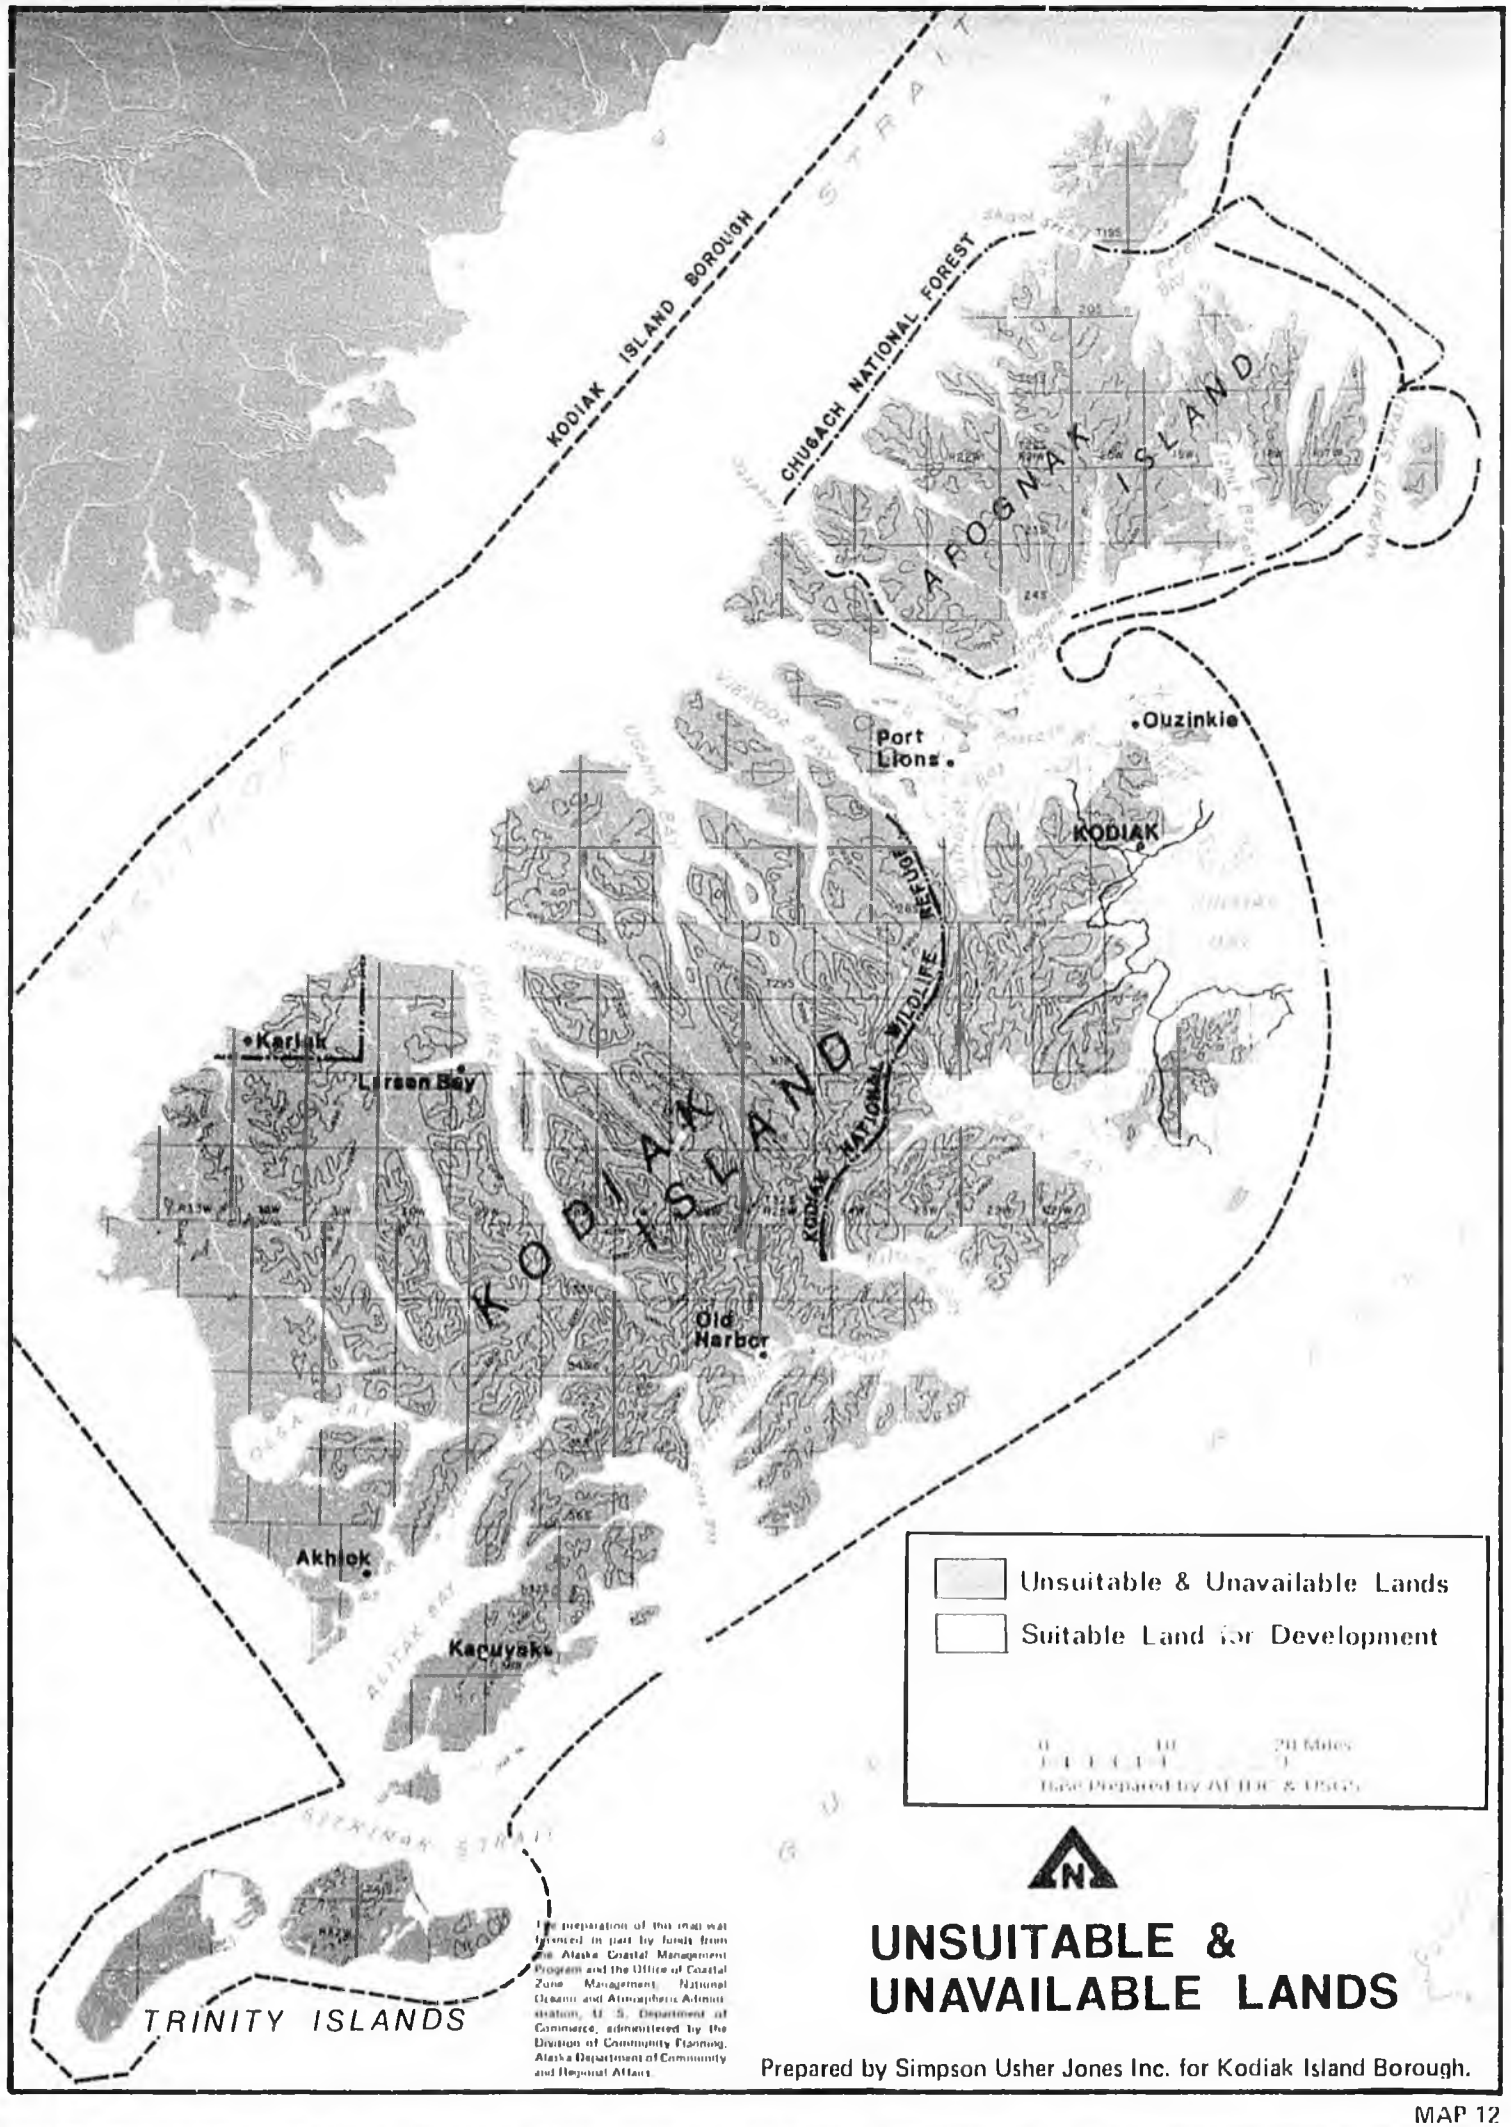
On the western and northwestern portions of the island, there is ample area with physical attributes necessary for development. However, this area is not located in close enough proximity to be utilized for onshore service base facilities related to OCS development and it is not near major areas that will generate population growth pressures. There are two major villages within the area (Karluk and Port Lions) that will undoubtedly continue to grow and will consequently affect the lands surrounding them. Detailed information should be gathered concerning those lands.

On the east and southeast portions of the island usable land is limited. However, based on the information available, land is available with suitable physical and socio-economic characteristics that could be used for community growth and industrialization. Prime candidates for such growth are, of course, the lands around the City of Kodiak and the lands

served by the road system in the area. The north side of Ugak Bay has several sites that could be utilized for OCS related industrialization. As indicated earlier, both Old Harbor and Ouzinkie appear to have the land characteristics and capabilities suitable for additional growth and potential industrialization.

Special attention should be paid to the archeological and seismic considerations on this entire side of the island as well as the natural environmental features of the area. In the Kodiak area where the lands are served by the road system, special attention needs to be paid to the impact that future growth and industrialization could have on the human environment.

Finally, more detailed information needs to be gathered and analyzed concerning land in the Kodiak Island Borough. Ideally this should be done for the entire borough; however, at the very least, specific studies should be done on lands that appear to be suitable for development in terms of population growth and OCS related industrialization. Detailed information needs to be gathered in the form of aerial photos, more complete soils information, topographic information (at a contour interval of no greater than ten feet), archeological evaluation, seismic considerations, and last but not least, ownership patterns. With this information, the decision makers in Kodiak and throughout the State of Alaska and in the Lower 48, including the various levels of goverment and private enterprise, can make rational decisions relative to land use and disposition.



The preparation of this map was financed in part by funds from the Alaska Coastal Management Program and the Office of Coastal Zone Management, National Oceanic and Atmospheric Administration, U.S. Department of Commerce, administered by the Division of Community Planning, Alaska Department of Community and Regional Affairs.

SUMMARY PROFILE

Through the process of preparing the community inventory for Kodiak, a large body of information has been assembled that is descriptive of the social and economic characteristics of the Kodiak Island Borough. That information comprises Volume II of the OCS Impact Study for Kodiak.

The majority of the information presented is self-explanatory; however, there are portions which were analyzed and explained in some detail. The majority of Volume II consists of information presently available through a variety of sources but that had not been compiled, analyzed or presented in one document. This consolidation of information should be extremely valuable as a planning and management tool for the decision makers in Kodiak as they grapple with the problems that will face the community in the near future. The information should provide a method of predicting and understanding the problems facing Kodiak and the various routes available to solve those problems.

The Community Inventory has shown us that Kodiak is a very unique and vital community, both within the metropolitan area and throughout the outlying portions of the islands. The economy in Kodiak is strong, and the future holds promise of continued prosperity and economic independence. Unlike many other isolated communities in Alaska, Kodiak's size and economic importance has resulted in the provision of the full range of community facilities, utilities and services that are necessary for a growing self-sufficient community. Figure 40 shows who provides the basic public services available in Kodiak.

The study has also shown us that Kodiak has a number of problems that may negatively affect the community's quality of life and its ability to maintain its growth pattern in the future. These problems, if not addressed promptly, will be compounded with the advent of OCS oil activity.

The following profile briefly summarizes the information presented in Volume I which describes the community as it exists today and gives an indication of how its strengths and weaknesses will be affected by or will affect future development.

ECONOMIC OUTLOOK

With an estimated current population of 9,620 people, Kodiak is among the five largest population centers in Alaska. Currently the Kodiak Island Borough is growing at a rate of approximately three percent per year. This is a healthy growth rate and one that demonstrates the economic viability of Kodiak. The community has the potential to continue growing as long as the basic industries continue to maintain their strength. In fact, based on historical trends and the current condition of the economy, it is estimated that the population of Kodiak will double within the next twenty years. It is especially important to note that these estimates are made without consideration of any possible OCS development impact on the population. This means that Kodiak does not need the economic boom that OCS activity would bring. The community is healthy; the population and economic base are growing; and the prospects for the future are bright.

EXISTING FACTORS AFFECTING FUTURE TRENDS

There are several important factors that could affect the ability of Kodiak to maintain its growth rates and realize its potentials. The factors described below could have a stifling effect on the economy and could also adversely affect the living environment. Each of them is individually significant and should be addressed regardless of OCS development.

Crime

Criminal activity is normally one of the first and most serious impacts experienced as a result of a "boom" economy. Recent history in Fairbanks, Valdez and a variety of smaller communities along the Trans-Alaska Pipeline route have borne this out. In Kodiak, the industrialization and rapid economic growth anticipated to accompany OCS development is already being proceded by an increase in crime. As indicated in the Law Enforcement Section of the Community Inventory, between 1975 and 1976 total criminal activity was up and the more serious and violent crimes (Part I Offenses) increased.

This situation presents the most serious threat to the quality of life in Kodiak that the community has ever faced. Immediate action by local, state and federal governments is necessary in order to prepare for and combat this problem.

The potential for further rises in criminal activity is increased due to the completion of the Trans Alaska Pipeline in the near future. As economic activity and population growth decreases in towns and cities along the Pipeline, the people who found them easy places to make an illicit living will look for new places to operate. Kodiak offers the opportunities they seek. This, along with changes in the internal characteristics of the community, could allow crime to rival fishing as Kodiak's largest industry.

It is incumbent on the community to take action that will create an atmosphere that discourages the criminal, both resident and non-resident.

Housing

Another serious problem facing Kodiak today is a housing shortage. As indicated above, the population is currently growing at approximately three percent per year. However, over the last five years housing starts, including multi-family units, have averaged less than three percent per year. In addition, over 40% of the housing units in Kodiak are in fair to poor condition. Analysis of these statistics indicates that the housing market is barely keeping pace with population growth. There is no surplus housing stock on the market from which a prospective home buyer or renter can choose, thus costs are high. This is evident by the small number of dwelling units for sale or for rent in Kodiak at any given time. In addition, new homes built in Kodiak are normally sold and/or occupied very quickly. For example, single family homes under construction are generally sold before they are fifty percent complete.

An already inadequate housing supply coupled with an ever present desire by residents to upgrade their housing (a practice most generally achieved by moving into newer homes), creates a discouraging outlook for supplying the housing needs for Kodiak's normal population growth. Fulfilling housing needs resulting from OCS development would be impossible at the current level of housing starts.

There are several reasons why the growth in the housing market has been slow in Kodiak. First, areas available for development which have a full range of utilities are extremely limited. The areas currently served by sewer and water are developed to near capacity, and high utility installation costs discourage development of new areas.

Land availability is another problem in the Kodiak city area. Much of the land surrounding the city is owned by the government or the native corporations, and private land available for residential development is limited both in terms of quantity and quality. Much of the available property is either too steep or too boggy to attract development.

The cost of housing is another factor which affects the housing stock in Kodiak. As indicated in the housing inventory, the average new three-bedroom house in Kodiak ranges between $60,000 and $80,000. We have also noted in the economic inventory that in 1974 the average wage in Kodiak was just over $1,000 per month. Applying an average increase in salaries of twelve percent per year, this same salary would be about $1,260 per month in 1976. The purchase of a $70,000 home, however, would require a monthly mortgage payment of approximately $650 per month, much too high to be accommodated by the average wage. Therefore, for the average wage earner to purchase the average home in Kodiak, it would require that at least two persons within that household be employed. It may be concluded that housing costs are escalating faster than wages, thus creating a shortage of buyers for the Kodiak housing market. This in turn discourages speculative housing starts and drives up the value of existing homes and the cost of custom-built houses.

Commercial And Industrial Land Use

Another problem which will affect the future growth of Kodiak is a shortage of commercial and industrial property. New businesses in Kodiak have a difficult time locating on properly zoned land. This results in higher land costs thus higher consumer prices and finally a higher cost of living. In addition, a less efficient growth pattern is created within the community when businesses are forced to locate on any available commercial or unzoned property they can find rather than in places that are logical and well-suited from a community growth standpoint. As a point in fact, commercial services are now beginning to show up in places scattered throughout the community. Each time this happens, the potential for conflicts among land uses is increased. This can compound the shortage of prime residential land as well as inhibit the planning and evolution of efficient transportation systems.

Industrial land is also needed to accommodate growth in the fishing industry, as well as to support the non-basic industrial activities within the community that are a direct result of basic industry growth. There are no industrial parks in Kodiak, either planned or unplanned. Warehouse space is in short supply and the potential for new space is limited.

These land use considerations must be addressed by the community in order to maintain the growth patterns and economic development rates that have been established. If they are ignored, they will become more serious and will have an accelerating negative impact on the economic system in Kodiak. In addressing the problems, careful planning must be considered in adopting fiscal policies which will encourage the development of additional moderately-priced housing, and the provision of more commercial and industrial areas. Considerations such as access, effect on surrounding land uses, neighborhood character, and future land use demands must be taken into account in order to affectively deal with these concerns without creating new problems.

Social Services

In addition to these land use and economic considerations affecting the future of Kodiak, social factors affecting the quality of life in the community should also be monitored. While these factors may not directly affect the employment rates, housing costs and other developmental characteristics of the community, they do have a direct effect on the living environment in terms of the convenience, esthetics and social well-being of the residents.

Social services are particularly important to a well-balanced community. While there are many social services available in Kodiak, their capabilities to cope with some of the more serious problems is currently impaired by a lack of funds and personnel support on the part of the governmental agencies involved. This is especially true of the health and social services, provided by the State of Alaska, in spite of recent increases in personnel and budgets. For the most part, those agencies are still underfunded and undermanned. While programs have been established to

handle many serious problems such as mental health, alcoholism and public assistance, they can actually accommodate only a relatively small part of the persons currently in need of assistance.

At present there is no indication that the demand for these services will accelerate over and above normal population growth rates. However, if in the near future Kodiak is faced with an extraordinary increase in population due to OCS development, the problems already associated with the social service programs will be further compounded by a larger demand for services and the probability of more complex problems to solve. The community and the State should address these inadequate services as an immediate priority. The level of services offered must be upgraded to adequately meet the current needs of the community and plans should also be made to prepare for the impact that may occur with the advent of a population boom due to OCS development. If not resolved, the inadequacies in the social services will probably have one of the most serious and most deleterious OCS related impacts on the Kodiak community.

Recreation Facilities

Another community component that is currently below standard is adequate recreational facilities. Kodiak now falls short of meeting the community demand for neighborhood parks, indoor and outdoor winter recreational facilities, and weekend and vacation facilities around the island. Through provision of these facilities Kodiak can mitigate many of the social problems which plague many other growing communities. The potential for rapid population growth due to OCS development makes the need for parks and recreational facilities even more acute.

OUTLYING VILLAGES

The various villages located around Kodiak Island have many divergent characteristics while at the same time having a number of common concerns and features. Their populations range in size from over 300 to under 100. Their locational characteristics are similar in that each is located adjacent to salt water and each is near rivers or streams that offer fresh water sources.

The degree or level of development varies between the villages. Port Lions is the most highly developed, with a relatively wide range of community facilities and services including, but not limited to, lighted and maintained city streets, local police protection, modern community-wide telephone service and a comparatively high level of commercial services. The other villages have far less in the way of community facilities and government services. None of the others have maintained streets, community telephone service, or local police. Most have some degree of commercial services and all have schools operated by the Kodiak Island Borough School District. The level of community water and sewer service varies from village to village.

The relationship of the villages to OCS development also varies. Some have the potential of a high level of direct impact. Old Harbor has already been approached by oil industry personnel and is considered a possible site of an on-shore service base. The village corporation sought and recieved assistance from the Koniag Regional Native Corporation in dealing with the oil industry; as yet no facilities are definitely planned for Old Harbor.

Ouzinkie and Port Lions also have potential for direct OCS impacts; although because of their location, they are less likely candidates for service base facilities than is Old Harbor. Like Old Harbor, the rest of the village corporations on Kodiak Island will deal with the oil industry in cooperation with Koniag, Incorporated.

The probability of indirect impacts from OCS development is high in all of the villages. All offer scenic surroundings, hunting and fishing in relative abundance. This will draw tourists and sportsmen in their off-time who seek seclusion, as well as opportunities for trophies and food.

Preparation for these impacts are imperative. The villages can gain from the impacts if that is their desire. However, the implications in terms of economic change, alteration of life styles and physical modification of the villages are extreme. With the notable exception of Port Lions, none of the villages are at all prepared for what could ultimately be the largest influx of people in their histories.

CONCLUSION

The factors described above are significant and deserve special attention. The assets of the Kodiak Island Borough and its communities are uniquely valuable and should be protected and enhanced. The problems faced by the communities are not insoluble; they are the types of problems that are normally to be expected in a time of rapid growth. They are also the type that can be dealt with through community awareness, local action and proper planning and implementation.

OCS oil development has the potential for either strengthening already healthy communities or creating problems that could result in economic and social disruption for many years to come. The result of OCS impact will depend upon the level of oil industry activity which will occur in Kodiak and the methods that are used in planning for and coping with the impact.

There are a number of trends that can be predicted for Kodiak regardless of OCS development. First, Kodiak will continue to grow. Along with that growth, the cost of living will undoubtedly rise moderately. Housing costs will increase until adequate, buildable land is available to accommodate a growing housing market. The residents of Kodiak can expect their problems with respect to crime, housing, recreational and open space facilities and social services to continue to worsen unless

the government steps up its efforts to deal with these issues. Inherent in such an effort, would be the possibility of some increase in the cost of government and a resultant rise in taxes. This situation is one that is common with a growing community.

There are a number of ways in which these concerns can be addressed through proper planning and management tools. Regardless of whether OCS development occurs, these should be addressed as part of the upcoming Kodiak comprehensive plan.

The components of the community that would be most affected by an economic and population boom resulting from OCS development would be those problems which are already most serious. Without exception, the problems described above would become worse at an accelerated rate. Also, increased demands for transportation facilities would place an additional demand on the existing facilities, both internal and external.

In order to determine the proper methods of dealing with the impacts that OCS development might bring, it will be necessary to determine the level of oil industry impact, the resultant population increases to be expected, and the demands that that economic and population growth will place on the basic community infrastructure. Volume I of this report assesses the demand that the oil industry will place on Kodiak. This assessment is used to determine the types of policy alternatives that are available to the community internally and what policies should be endorsed and encouraged in the state and federal governments in order to protect Kodiak's quality of living and economic viability in the forthcoming years.

JAY S. HAMMOND, Governor

DEPARTMENT OF REVENUE

OFFICE OF THE COMMISSIONER / POUCH S—JUNEAU 99801

April 28, 1975

The Honorable Nels Anderson
Chairman
House Resources Committee
Alaska State Legislature
State Capitol
Juneau, Alaska 99811

Dear Mr. Anderson:

re House Bill No. 346

House Bill No. 346, an Act relating to the oil and gas properties production tax was introduced in the House on April 26, 1975 and was referred to the House Resources and Finance Committees.

For the consideration of the House Resources Committee, I am enclosing a copy of a memorandum dated April 24, 1975 from O. K. Gilbreth, Jr., Director, Oil and Gas Division, Department of Natural Resources, Anchorage, Alaska concerning effect on Treasury, administrative problems and indicating that there would be no additional costs of administration.

Very truly yours,

R. D. Stevenson
Special Assistant

Enclosure

MEMORANDUM State of Alaska

DEPARTMENT OF NATURAL RESOURCES
DIVISION OF OIL AND GAS

TO: R. D. Stevenson
Special Assistant
Dept. of Revenue

DATE: April 24, 1975

FILE NO:

TELEPHONE NO:

FROM: O. K. Gilbreth, Jr.
Director

SUBJECT: HB #346

We have examined the subject bill and have discussed in detail some of the ramifications of the bill with Mr. John Messenger, Tom Williams and Will Condon of the Attorney General's office. We pointed out to these attorneys that the proposed bill provides that the tax will be levied on "the gross value at the point of production of the gas and liquids produced each month". The present tax is levied on oil and gas sold during the month and this volume is considerably different from the volume produced each month. The oil and gas conservation regulations require reporting of the volume produced. All production may not be sold and some may be retained in storage at the end of the month. When a sale is made the quality of the oil and gas is determined and run tickets are prepared and values paid on the basis of the quality of the oil sold. If the proposed change in the law could be interpreted to be levied on oil produced there is no way to determine the value of the oil produced. The attorneys, however, have advised me that for purposes of this particular law, "the gross value at the point of production" is in reality the point of sale and even though the law says oil produced it really means oil sold. All three attorneys have advised that this is the case and such being the case I see no objections to it. I should point out, however, that common usage in oil field terminology throughout the remainder of the United States provides that oil and gas produced means just that and oil and gas sold means that. Our law, I think, will be confusing if the proposed wording is adopted.

As you know, the tax is levied on the basis of individual wells and the amount of oil sold. Only on the oil sold can we determine the quality. I have talked with John Messenger and suggested that the law be changed to permit the value to be determined on a lease basis and alotted back to the individual wells based on routine well tests. This as a practical matter, is being done now, because there is no way to audit production records and production values according to the present law. If the proposal were changed to permit determining value on the basis of the lease runs then we would have a law that provides a legal means for auditing. John Messenger advised me that this could be done and he would so recommend it to Representative Cowper. I certainly recommend the change in order to comply with the law.

From the standpoint of fiscal effects of the bill, most oil being sold in the state at the present time has a value such that the cents per barrel tax applies. Hence HB #346 would have no effect on income of the state since the cents per barrel law is effective. However, should crude oil prices increase and the Department of Labor

cost index increase at a lower rate to the extent that the tax would be collected on percent of value, then there would be an increase in wellhead value of approximately 5 cents per barrel on each barrel of oil produced in the Cook Inlet area. As a maximum on one hundred ninety thousand barrels per day of production, this would amount to additional taxes of one hundred ninety two thousand dollars per year. Thus this law could have a fiscal effect of increasing tax receipts anywhere from zero to one hundred ninety two thousand dollars per year depending on the method of calculating the taxes.

I see no additional administrative costs associated with changing the law as the additional auditing burden would be minimal.

April 9, 1976

The Honorable Nels A. Anderson, Jr., Chairman
House Resource Committee
Pouch "V"
Juneau, AK 99801

Dear Mr. Anderson:

I respectfully request this letter be made part of the record when your committee holds hearings on HB 346 next week.

In the past Bristol Bay Native Corporation representatives have testified and have written several letters for the record explaining that we will be a producing oil company once commercial production is established on our lands.

The amendments in HB 346 are penalties to the producer who historically has used oil or gas on the lease or property to clean and treat the oil or gas to pipeline quality and shipment. This is a provision in both State and Federal lease forms, however taxing that portion of the royalty oil or gas is not a part of the lease forms. There are many variables and it is difficult to determine the amount of revenue this might produce, although it would be minor. Regardless, this bill would require additional metering, records, accounting and reporting which is punitive and would be costly to our Corporation. Therefore BBNC is opposed to the provisions of the entire bill.

Very truly yours,

BRISTOL BAY NATIVE CORPORATION

Bristol Bay Native Corporation 445 E. 5TH STREET / ANCHORAGE / ALASKA 99501 / PH. (907) 277-9511

April 9, 1976

The Honorable Nels A. Anderson, Jr., Chairman
House Resource Committee
Pouch "V"
Juneau, AK 99801

Dear Mr. Anderson:

I respectfully request this letter be made a part of the record when your committee holds hearings on the Second SS for HB 803 next week.

Bristol Bay Native Corporation is an Alaska Corporation subject to normal corporate income taxes, however this bill, if passed, will require seperate accounting and would appear to be an accounting department nightmare.

Without a final copy of the bill, BBNC's objections will be limited general statements and not specific paragraphs as follows:

1) General administrative costs should not be tied to a cents per barrel.
2) No deductions paid for services used or provided outside Alaska could and probably would be an exceptionally high burden on our Corporation.
3) Limiting deductions of exploration costs incurred in any calendar year to 20% could be prohibitive and contrary to normal accounting procedures.
4) By not allowing engineering or design costs incurred outside Alaska as a deduction, would again be an excessive burden on our Corporation. For example, with established production, BBNC will build and own 100% of a topping plant to supply fuel for our joint operations. The engineering and major construction would be performed outside Alaska.
5) Limiting interest to 9% per annum on funds used during construction of facilities used and useful in the production of a field may be capitalized, certainly ignores the financial facts that interests rates vary over a rather wide range. It may also be considered as an attempt to regulate similar to utility regulations.

Overall this bill would penalize our Corporation by requiring additional accounting, limiting normal deductions, reduce our income and thusly increasing

our Corporate taxes over the present corporate income taxes. Therefore BBNC is opposed to this bill in its entirety. We expect to be good corporate citizens and pay our fair share of taxes without being penalized as an Alaskan corporation.

Very truly yours,

BRISTOL BAY NATIVE CORPORATION

AREAS OF CONTINUING CONCERN

Wellhead value litigation was first instituted in March of 1970. No judgment has been issued and the Petroleum Revenue Auditor is still unable to verify or take issue with wellhead values used by oil and gas producers to determine royalty and tax obligations.

Recently the Deputy Attorney General received permission from the present Administration to pursue individual settlements with as many of the 13 oil producers involved as possible.

Because of the extensive time already taken to approach an acceptable resolution we support individual settlements as long as there is no legal precedent being set to effect North Slope production.

There should be a joint effort by the Departments of Law and Natural Resources to insure that full guidelines and regulations are in force when North Slope production begins.

Legislative efforts are also being proposed to address this same problem. There is a current effort to change the point of taxation from a per well basis to the point of transfer to a common carrier. This approach would solve problems of per well production allocation as well as fluctuating transportation deductions effecting wellhead value. For this reason, we encourage any constructive activity in this area.

The Federal Department of the Interior continues to make semi-annual payments to the State for 90% of the royalty revenue received from oil and gas produced on federal lands within Alaska. This revenue continues to be inadequately supported and as yet the Petroleum Revenue Auditor has been unable to verify the reasonableness of any of the payments.

Only recently has the Petroleum Revenue Auditor established a line of communication with United States Geological Survey personnel in an effort to independently compute the semi-annual receivables. As yet, it is too early to determine if this effort will be fruitful. For this reason we continue to recommend that the State require oil and gas producers to file a copy of their federal royalty return along with the State production tax return. The oil produced on federally-owned land is subject to production tax and the federal royalty is a deduction on the State tax return.

AGO 513812

3. Analyze calculated taxes and royalty vs. actual receipts.

4. Analyze actual receipts vs. forecast fees."

We encourage further development of the automated system for auditing Production Tax and Royalty returns. The automated audit procedures should include cross checking returns to valid supporting documents and comparing information reported in tax and royalty returns to production information required to be submitted directly to the Division of Oil and Gas by the producers.

5. There is a need for guidelines in determining "wellhead value" of oil for royalty and tax purposes.

On July 3, 1969, a directive was issued by the Commissioner of the Department of Natural Resources which was intended to define the value of State royalty oil.

A suit was filed against the State and the State filed suit in connection with the question of the value of the oil. Since the matter was referred to the courts, the Petroleum Revenue Auditor has been unable to verify the reasonableness of "wellhead value" used by oil and gas producers to determine royalty and tax due.

When the definition of wellhead value for royalty and tax purposes is legally determined:

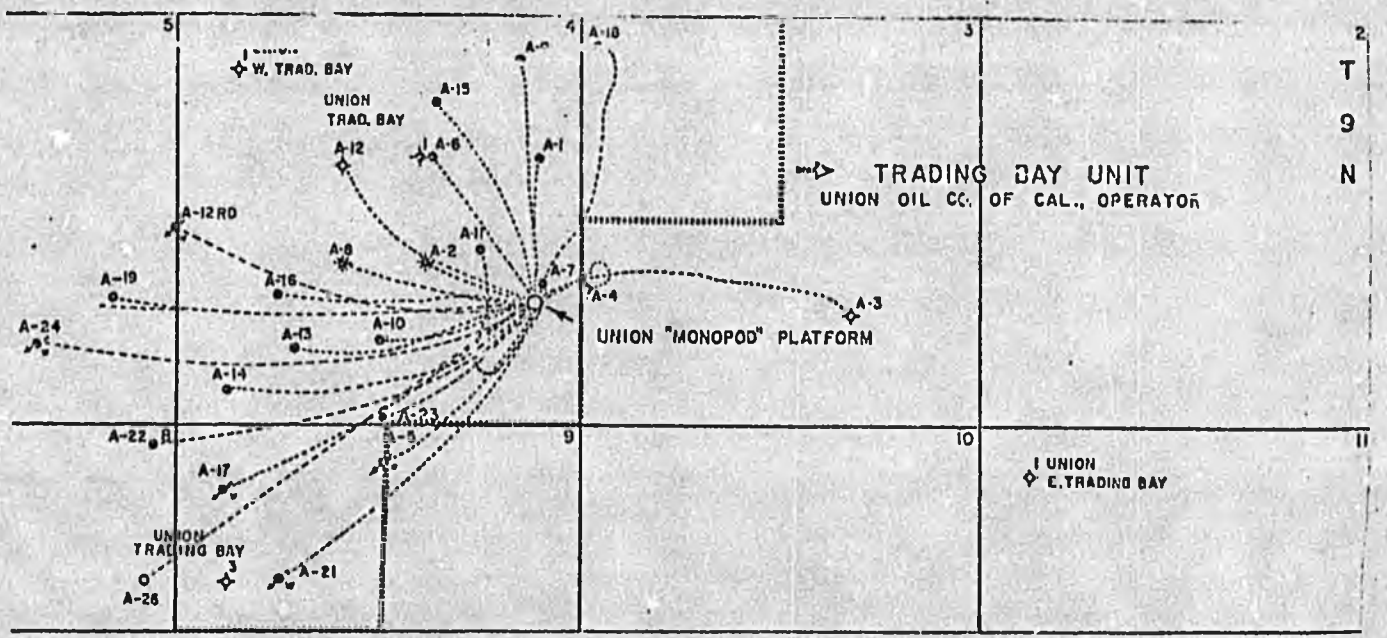
A. The State should assess all deficiencies due;
B. Specific guidelines for any deductible items should be established by regulation (if such guidelines are not established by the court) and added to the oil lease form; and
C. Periodic audits of oil company records should be conducted to determine that deductions being taken are proper.

AGO 513813

6. There is a need for more definitive and complete "per well" production figures for off-shore facilities.

Production tax calculations are based on average daily production for each well. However, it is standard practice in the oil industry not to meter the production of each well at offshore facilities. Instead, the production of each well is tested periodically to determine what portion of total production of the facility is represented by that well. Actual daily production of the facility for the month is allocated to each well based on the results of the periodic tests.

There are several of these offshore facilities in the Cook Inlet from which more than one well was drilled. A typical example is the Trading Bay Unit as illustrated in the below drawing taken from a statistical report issued by the Division of Oil and Gas.



STATE OF ALASKA
DEPARTMENT OF NATURAL RESOURCES
DIVISION OF OIL AND GAS
ANCHORAGE, ALASKA

TRADING BAY FIELD

SCALE: 1320' 0 1320' 2640' 3960'

May 1, 1972

The Division of Oil and Gas determines whether production on a "per well" basis appears reasonable by comparing current production to past history. In addition to the reasonableness test, periodic well tests conducted by oil producers are occasionally observed by Oil and Gas personnel. The well tests, however, are affected by many variable factors and average daily per well production cannot be certified by the Division of Oil and Gas as a result of observation of the tests.

The problem of pinpointing individual well production is a technical one. We have not addressed ourselves to this problem because of its technical nature. The Division of Oil and Gas should be encouraged to develop ideas regarding more effective observation and auditing tests or changing reporting requirements to obtain more definitive "per well" production figures.

7. Documents received in support of Production Tax and Royalty returns should be improved.

Oil is transported from offshore platforms in the Cook Inlet to onshore treating facilities and storage tanks by the producers. Pipeline companies such as Cook Inlet Pipeline Company and Kenai Pipeline Company receive the oil after it runs through a custody meter which measures the quantity. The only source document that the State receives in support of tax and royalty returns are meter tickets which report the amount of oil that passed through the custody meters during the month.

The meter tickets are supposed to be prepared and witnessed by a representative of the pipeline company and a representative of the oil producer. Employees of the State Division of Oil and Gas sign the meter ticket as a third witness when they are present to observe preparation of the ticket.

Out of 400 meter run tickets received in support of 1972 royalty returns, approximately 70 were printed by an automatic printing device at the meter station. The printing on about half of the above mentioned 70 tickets was illegible and hand written over. All other tickets were hand written. Only six of the 400 meter tickets were witnessed by a State employee.

KODIAK PLAN + DEVELOPMENT STRATEGY

SUMMARY REPORT

kodiak island borough
regional plan and development strategy

summary report

july 1978

The preliminary findings presented here are part of a technical study being performed by professional consultants under contract with the Kodiak Island Borough and the Division of Community Planning, Department of Community and Regional Affairs of the State of Alaska. The study has been financed in part through an Economic Development Administration Technical Assistance Grant. Statements, findings, conclusions, recommendations, and other data in this report are solely those of the contractor and do not necessarily reflect the view of the Kodiak Island Borough, State of Alaska, or the Economic Development Administration.

PREFACE

The purpose in preparing the Regional Plan and Development Strategy was two-fold:

- To assist officials of the Kodiak Island Borough to plan for the full range of government, economic, and social impacts expected to occur during the oil exploration and development programs off Kodiak Island.

- To develop or bring up to date all necessary elements of a Borough Comprehensive Plan and to schedule needed capital and governmental services improvements to coincide with anticipated offshore events.

This Summary Report reflects the required dual purpose. To this end, this report: 1) embodies the U.S. Economic Development Administration's requirements for planning and economic adjustment strategy and 2) provides the conceptual basis for a comprehensive plan for the Kodiak Island Borough.

A conclusion of the economic adjustment strategy which should be stated at the outset is that since OCS-related development is several years distant, there will be no occasion for the Kodiak Island local governments to seek Title IX implementation grant funding from the U.S. Economic Development Administration in the immediate future. Key issues and recommendations concerning the economic adjustment strategy are outlined under Section I., Introduction and Summary, of this report.

As a component of the comprehensive plan, this Summary Report along with other planning tools including draft zoning and subdivision regulations and a proposed capital improvements program have been submitted to the Kodiak Island Borough Planning and Zoning Commission and Borough Assembly for review.

Following action by the Borough Assembly, the revised and adopted version of the Regional Plan will be a part of the official comprehensive plan for the Kodiak Island Borough. When adopted, the comprehensive plan may differ from some of the provisions of this report. The preliminary character of this report should therefore be recognized, and it should not be interpreted as official Kodiak Island Borough policy.

The Regional Plan has been developed as a series of working papers on distinct study elements. The study elements dealt with such areas as transportation, the borough economy and population, and community services, all of which were intended to assist local government officials in minimizing any impact that might occur. The Summary Report incorporates the substance of these elements in their final recommended form, except for the text of three ordinances which are necessary to implement the comprehensive plan and which were printed separately in final draft form. As noted above, each of these measures will be reviewed, revised and adopted as individual ordinances by the Borough Assembly.

It is therefore expected that after final adoption the Borough will print and distribute the following ordinances:

1. Zoning Ordinance.
2. Subdivision Regulations.
3. Capital Improvements Programming Manual.

A fourth supporting study for the Regional Plan was printed separately in final draft form. This is the Environmental Impact Analysis (EIA) required under the regulations of the U.S. Economic Development Administration. The EIA will not require adoption by the Borough Assembly.

It will be apparent in reading the Summary Report that the focus of the Regional Plan has been on the Kodiak urban area. The reason is that plans for the Kodiak villages have been developed separately for the individual villages, with the aid of the Borough staff. As adopted by the Borough Assembly, the village plans will also constitute an important portion of the final comprehensive plan.

ABSTRACT

This report summarizes the findings and recommendations of the Kodiak Island Borough Regional Plan and Development Strategy.

In broad outline, the major findings and recommendations that have emerged from the study are:

- The economy of the Kodiak urban area, based upon the fishing industry and the Coast Guard Support Center, is strong and growing. Coast Guard employment is stable for the foreseeable future. The Alaskan fishing industry appears to be on the verge of significant expansion, and Kodiak could attract many of the jobs involved if it can provide the space and services necessary to the industry.

- At present, however, certain Kodiak utilities and community facilities are seriously strained. Housing for workers is expensive and in short supply. Until these constraints are removed, industrial growth will be slowed.

- These shortages in services and housing also have adverse social and environmental effects. Among them are surface water pollution, dust, periodic water and power shortages, high prices, overcrowded housing, and development in hazardous areas.

- Significant effort and expense will be required to correct these environmental effects and their causes. To minimize this effort and expense as well as to slow the rate of housing cost inflation, concentration of services in the existing Kodiak urban area is recommended.

- Consideration of natural hazards should also be incorporated into land-use decisions. A principal example is the potential instability of Pillar Mountain. A detailed geotechnical study of the mountain must be carried out before any expansion of the existing City dock and cargo facilities can be undertaken. The degree of tsunami hazard should also be investigated and integrated into future land-use planning decisions.

- On-shore employment associated with Outer Continental Shelf (OCS) oil exploration and development could seriously aggravate existing socio-economic problems in the urban area. A sudden population boom would require expansion in services that the boom would be too short-lived to finance. The boom would also drive prices and wages up, which could well force the fish-processing industry to move out of Kodiak. The result could easily be a post-boom depression.

- If oil is found, the Kodiak Island Borough will probably have to allow an oil terminal to be built somewhere in the Kodiak Archipelago. Siting of the facility can be crucial in determining impacts. From a socio-economic viewpoint, oil terminal development should be sited well away from both the urban area and the villages. Planning permission for a specific proposal should follow only after a complete environmental review. It should also be conditioned on the developers' assumption of responsibility for all utilities, services and community facilities for temporary and permanent work forces.

- Depending on the outcome of the geotechnical study of Pillar Mountain, it may be in the Kodiak community's interest to encourage development of a marine service base in conjunction with new community docking facilities. To be prepared to evaluate or even to initiate this type of proposal, the community will need to pursue a detailed examination of the economic and operational feasibility of alternative dock facility locations.

I. INTRODUCTION AND SUMMARY

The direct impetus behind this study has been the need to plan for the social, economic and governmental impacts expected to occur during the Outer Continental Shelf (OCS) oil exploration and development program off Kodiak Island. The OCS program has been mandated by the federal government because of the vital importance of oil to the nation's economy. At the same time, both the federal and state governments have acknowledged the need for community planning to deal with the local effects of OCS activity and have given financial and technical support to this planning effort.

Because the national interest is involved, the Kodiak community is unlikely to persuade the federal government to cancel the OCS lease sale for the Western Gulf of Alaska, now scheduled for 1980. However, the community can play a very significant role in deciding how the OCS program is carried out in Kodiak. In particular, the Kodiak Island Borough can exert a powerful influence over on-shore development by exercising the area-wide planning powers granted to it by the Alaska Statutes.

The Regional Plan and Development Strategy is intended to help the Borough to exercise these area-wide powers by bringing all necessary elements of the Borough comprehensive plan up to date. The core of the comprehensive plan is a set of long-range policies for the physical development of the Kodiak community. In developing these policies, a number of issues have emerged; OCS activity is important among these, but is by no means the only major issue. Other significant issues include the potential for expansion of the bottom fish industry and the stability of Pillar Mountain. These and other issues have all helped to shape this plan.

Kodiak Planning Program

The present study is the third step in a four-step Kodiak Island Borough planning effort dealing with long-range policy issues and OCS development:

1. OCS Impact Study
2. Marine Facilities Study
3. Regional Plan and Development Strategy
4. Management Study

A brief review of the Borough planning program will help to provide the context for this study.

1. OCS Impact Study. The Kodiak Island Borough Outer Continental Shelf Impact Study was completed by Simpson Usher Jones, Inc., in September, 1977. Its purpose was to provide working estimates of the probable levels of oil industry activity, both off-shore and on-shore, and a baseline inventory of community utilities, services and facilities in the Kodiak Island Borough.

As an extension of this study, Simpson Usher & Jones also prepared Village Sketch Plans for Akhiok, Karluk, Larsen Bay, Old Harbor, Ouzinkie and Port Lions, as well as the unincorporated community of Bells Flat. These plans

are in the process of being revised, amended and adopted by the villages, with help from Borough staff. It is recommended that these be incorporated with the plans for the urban area in one publication when all the plans are adopted.

Another separately reported element of the OCS Impact Study was a set of Draft Goals and Objectives for the Kodiak Island Borough based on a community attitude survey. This document is also being reviewed and amended prior to official adoption by the Borough Assembly. Finally, Simpson Usher & Jones also compiled a map of existing land use in the Kodiak urban area and prepared a sketch plan for future land use as a starting point for discussion of land-use alternatives in the urban area. These two maps are reproduced in the present report.

2. Marine Facilities Study. The Borough commissioned Woodward-Clyde Consultants to evaluate and rank possible sites for OCS-related marine facilities. This study was also completed in September, 1977, and its final title is Oil Terminal and Marine Service Base Sites in the Kodiak Island Borough. The four elements covered in the study are 1) potential demand for such facilities, 2) potential site locations, 3) geotechnical and environmental evaluations of these sites, and 4) site rankings and examination of interest group preferences.

As the final title indicates, the study concluded that marine service bases and oil terminals are the only OCS marine facilities likely to be built in the Kodiak Island Borough. Sites for these two types of facilities were ranked for biological impacts, socio-economic impacts and development costs. Various weighted combinations of these rankings were examined to see how sensitive overall site ranking is to the viewpoint of the group doing the ranking. The conclusions of the study indicate that several of the sites with low biological and socio-economic impacts - relative to other Kodiak sites - appear also to be feasible from a cost standpoint. In short, it appears that there is a range of feasible sites for both types of facility and that the Kodiak Island Borough will be able to influence OCS siting decisions. The most feasible sites, combining cost and impact considerations, are indicated on Map 2.

3. Regional Plan and Development Strategy. This is the present study. The degree to which control of any type of development is successful (and even legal) is in large part dependent on the clarity of community policy towards overall physical development. Therefore, the desire to control on-shore OCS development in the best interests of Kodiak has led to the necessity and opportunity of updating the comprehensive plan as the framework for control of all physical development in the Kodiak Island Borough. For this reason, the Regional Plan and Development Strategy has gone beyond OCS activity to examine a broad range of issues that affect the future of Kodiak.

4. Management Study. Following the completion of the Regional Plan and Development Strategy, the Kodiak Island Borough intends to undertake a fourth and final OCS-related planning study in cooperation with other local governments and groups such as Koniag. It will identify interests, roles and responsibilities among these groups, related specifically to OCS development. The intent will be to develop a unified working approach in the Kodiak community toward on-shore OCS facilities and related development.

Summary

The major findings of the Regional Plan and Development Strategy regarding present conditions in the Kodiak urban area are that the economy of the Kodiak urban area, based upon the fishing industry and the Coast Guard Support Center, is strong and growing. At present, however, housing is expensive and in short supply and certain Kodiak utilities and community facilities are seriously strained. These shortages in services and housing have adverse social and environmental effects, including surface water pollution, dust, periodic water and power shortages, high prices, overcrowded housing, and development in hazard areas. This study recommends that the Borough and other local governments work toward reducing these shortages in housing and community services. Significant expense and effort will be required to do this, but both the effort and the expense can be reduced if services are concentrated in the existing Kodiak urban area.

Looking beyond present conditions, there are three major areas of uncertainty that complicate planning for the future of the Kodiak community. These are OCS activity, the bottomfish industry, and the Pillar Mountain landslide.

The OCS lease sale for the Western Gulf of Alaska was to have occurred in 1978. It has been postponed to 1980 or possibly even later. When the lease sale occurs, petroleum exploration activity will commence, but development and production activities will still be uncertain. The findings of this study are that on-shore employment associated with OCS oil exploration and development could seriously aggravate existing socio-economic problems in the urban area, particularly if an oil terminal were constructed near the urban area. Construction of a terminal could cause a short-term influx of construction workers into the community. A sudden population boom would require expansion in services that the boom would be too short-lived to finance. The boom would also drive prices and wages up, which could well force the fish-processing industry to move out of Kodiak. The result could easily be a post-boom depression. Yet if oil is found, the Kodiak Island Borough will probably have to allow an oil terminal to be built somewhere in the Kodiak Archipelago. Siting of the facility can be crucial in determining impacts.

From a socio-economic viewpoint, oil terminal development should be sited well away from both the urban area and the villages. Permission for a specific proposal should be subject to the conditional use procedures developed in the revised draft of the Borough zoning code and development should be directed to sites identified in the Management Study. Permission should also follow only after a complete environmental review and should be conditioned on the developers' assumption of responsibility for all utilities, services and community facilities for temporary and permanent work forces.

As opposed to OCS development, the bottomfish industry holds out the promise of significant development in keeping with Kodiak's present economy and community preferences. Development of this fishery would help to reduce seasonal unemployment in the community and it appears that Kodiak could attract many of the jobs involved--if it can provide the space and services necessary to the industry.

A very recent report to the Alaska Legislature by the Interim Committee on Resource Matters, titled The Potential for Expanding Into an Alaskan Bottomfish Industry (January 1, 1978) notes that the stated purpose of the federal 200 mile limit extension is "to encourage the development of fisheries which are currently underutilized or not utilized by United States fisheries, including bottomfish off Alaska" (p. 3, emphasis added). The potential benefits to communities such as Kodiak would be increased if shore-based processing is generally adopted (NEFCO has installed an experimental processing line at Gibson Cove). The report identifies some of the community "infrastructure" requirements associated with on-shore bottomfish processing plants (pages 85 and 86) also mentioned in this study and observes that Kodiak is a "prime immediate location" for such plants. However, many economic aspects of the prospective American bottomfish industry are still unresolved. The report ends with proposed study legislation designed to provide some of the issuing information. In the meantime, Kodiak would be well advised to try to resolve issues such as water supply, expanded harbor facilities and space for waterfront industry in order to be able to continue to attract fishery development as it occurs.

The third area of uncertainty in the future of the Kodiak urban area is unfortunately also connected with the expansion of waterfront industry in the Inner Harbor area. This is the Pillar Mountain Landslide. The potential instability of this area above the City of Kodiak dock and cargo terminal facilities is described in this study. It is more thoroughly detailed in U.S. Geological Survey open file report number 78-217, Pillar Mountain Landslide, Kodiak, Alaska (1978) by Reuben Kachadoorian and Willard Slater. The open file report makes it clear that the landslide "is a potential hazard to the City of Kodiak and its environs and merits a thorough investigation and evaluation."

According to the report, the degree and extent of the hazard cannot be identified without a more detailed investigation. That investigation is absolutely necessary for informed and responsible decisions on development in the Inner Harbor area. Lives, property, and the future economic well-being of the Kodiak community are at stake. Furthermore, the open file report has been released, federal and state agencies are aware of the problem, and support for projects in the Inner Harbor area is likely to be conditioned on performance of the detailed investigation. Certainly, a detailed geotechnical study of the mountain must be carried out before any expansion of the existing City dock and cargo facilities can be undertaken. Depending on the outcome of the geotechnical study of Pillar Mountain, it may be in the Kodiak community's interest to encourage development of an OCS marine service base in conjunction with new community docking facilities. To be prepared to evaluate or even to initiate this type of proposal, the community will need to pursue a detailed examination of the economic and operational feasibility of alternative dock facility locations.

In conclusion, this study identifies a number of actions which the community can and should take to plan the orderly future development of Kodiak. In addition, the community can also deal with the three major areas

of uncertainty by 1) preparing to control the course of OCS development, if it occurs, 2) preparing to grasp the opportunity of assisting in the development of the bottom fishery, and 3) beginning the resolution of the Pillar Mountain issue by obtaining the geotechnical information which is a precondition to informed action.

II. ECONOMY AND POPULATION

The first step in planning for the future development of the Kodiak Island Borough is to examine existing economic and community patterns in the Borough. This step has been carried out in the Kodiak Island Borough Outer Continental Shelf Impact Study described in the previous chapter. That study, in two volumes, is the inventory upon which the regional planning effort has been based. As such, the OCS Impact Study is a companion document to this report and will not be duplicated here. A brief review of the regional setting and of Kodiak communities will help to put this planning effort into perspective, however.

The Kodiak Island Borough is the overall governmental unit for the Kodiak Archipelago. Map 1 illustrates the regional location of the Archipelago. The Kodiak urban area serves as a subregional center and transshipment point for the western third of Alaska's Southcentral Region, including the Aleutian chain. Kodiak's marine orientation is evident on this map, which also indicates the general area of the proposed Western Gulf OCS lease sale.

Map 2 indicates the established communities present in the Borough. In addition to the City of Kodiak, there are six smaller, incorporated jurisdictions: Akhiok, Karluk, Larsen Bay, Old Harbor, Ouzinkie and Port Lions. These are the "villages." The map also indicates the most feasible sites for OCS on-shore facilities identified in the report, Oil Terminal and Marine Service Base Sites in the Kodiak Island Borough, by Woodward-Clyde Consultants. That report is also a companion volume to this study.

In addition to the villages, two unincorporated rural settlements presently exist on the road system south and east of the urban area: Bells Flat and Chiniak. These are indicated on Map 3, along with the urban area and the Coast Guard Support Center.

A fourth map has been provided to display the spatial relationship between the Support Center, the City of Kodiak, and the balance of the urban area. Several facilities and sites of particular importance to the Kodiak urban area are also indicated, for later discussion.

Historical Perspective

After examining existing conditions, the next planning step is to identify the future trends and development patterns that would be likely if no actions were taken to shape them to community desires and needs. Examination of historical trends is a good starting point for doing this.

Between 1960 and 1975, the total population of the Kodiak Island Borough grew from approximately 7,200 to approximately 8,700 persons. That represented an average annual compound growth rate of 1.3% for the 15-year period. When we look at these population figures more closely, however, we find that it is important to distinguish between the military and civilian components of the total population. The official figures are somewhat deceptive because "military population" represents manning levels at the Coast Guard Support Center (formerly the Navy Base). The civilian population figures exclude military personnel, but do include military dependents. Even using these definitions, civilian population increased by an average annual compound growth rate of +2.6% between 1960 and 1975, while military population during the same 15-year period declined at -4.9% (see Table 1).

Over the entire 15-year period, civilian population grew steadily throughout the 1960's and remained relatively stable between 1970 and 1975. Military population, on the other hand, declined steadily throughout the 1960's and on until 1972, as a result of the gradual phase-out of the Kodiak Naval Base. In 1972, the Coast Guard took over the Kodiak base from the Navy, and the military stopped declining and began to show a slow increase. Note that there is some disagreement over the population estimate for 1975.

TABLE 1

Kodiak Island Borough
Population (1960-1975)

Year	Civilian Population (1)	Military Population (2)	Total Population
1960	5,367	1,807	7,174
1967	7,652	1,693	9,345
1968	8,020	1,500	9,520
1969	8,200	1,670	9,870
1970	7,918	1,491	9,409
1971	8,422	1,301	9,723
1972	8,044	659	8,703
1973	8,178	690	8,868
1974	8,499	733	9,232
1975	7,901	847	8,748(3)
Average Annual Compound Rate of Growth			
1960-75	2.6%	-4.9%	1.3%
1960-70	4.0%	-1.9%	2.8%
1970-75	0.1%	-10.0%	-1.6%

Source: Alaska Department of Labor, Current Population Estimates

---

(1) Includes military dependents.

(2) Manning levels; dependents not included, Coast Guard personnel replaced Navy personnel in 1972.

(3) Simpson Usher Jones estimate = 9,620, based on actual school enrollment for 1975.

The age distribution of the Kodiak population has been reasonably stable over this period.(1) In a special census taken of the civilian population in 1974 - not including military dependents living on the Support Center - the distribution was this:

TABLE 2

1974 Civilian Age Distribution

Age	Number	Percent
1-5	555	9%
5-17	1805	28%
18-55	3554	55%
55+	490	8%

Note the large percentage of school-age children.

The locational distribution of population has also remained quite stable. That is, village population has remained stable and growth has occurred in the Kodiak urban area. The 1974 special census counts are summarized here, with all residents of the Support Center again excluded. The "remainder" category includes the Mission Road area (outside City limits) and the Chiniak and Uganik census tracts.

TABLE 3

1974 Civilian Population by Location

Census Tract	Number	Percent
Kodiak	3700	57.8%
Ouzinkie	180	2.8%
Port Lions	243	3.8%
Akhiok	102	1.6%
Karluk	94	1.5%
Larsen Bay	98	1.5%
Old Harbor	304	4.7%
Remainder	1683	26.3%

Future Sources of Economic Growth

Evidence of population growth is ready at hand in the Kodiak urban area: high rents, low vacancy rates, and strained community services. The key factor pushing Borough population up is growth in the existing Kodiak economic base. Before projecting future population levels, with or without OCS development, it is important to briefly examine key sectors of the Kodiak economy to see if future growth in these sectors is likely to occur. The primary and most likely sources of growth fall into the following categories: (1) fisheries development, (2) military, (3) tourism, (4) forestry, and (5) OCS exploration and development.

At the present time, fisheries activity in Kodiak centers around king crab, tanner crab, shrimp and salmon. The traditional basis for fisheries activity in Kodiak has been the salmon harvest. During the early 1970s, the salmon harvest fell off significantly; but, since 1974, it has started to stabilize. In the future, the salmon fishery is expected to be stable or even show some limited growth. The king crab fishery has been relatively depressed for the last several years, partially as a result of over-harvesting during the 1967 through 1969 period. The king crab growing cycle is approximately eight years. Consequently, the stock should begin to show recovery in 1978 and support a stable fishery on a sustained yield basis. Tanner crab harvests are already on a sustained yield basis and should also be relatively stable in the future. The shrimp fishery is relatively new to Kodiak and has been growing steadily. The worldwide market demand for shrimp is strong and is projected to remain so throughout the future. Consequently, this part of the Kodiak fisheries industry will probably continue to show moderate growth, if overfishing is avoided.

A major potential source of growth in the fisheries industry is the harvesting and processing of bottom fish. The bottom fishery requires year-round fisheries activities and could act to deseasonalize employment fluctuations in the industry. As a result of the 200-mile limit extension in both the Soviet Union and the United States, there is little open area left for foreign fishing in the Bering Sea. Although specialized gear is required for this fishery, the shrimp fleet operating out of Kodiak probably can be modified to engage in this activity. Experimental fishing and processing activities are now testing the economic feasibility of American utilization of this fishery.

The expectation of most industry representatives is that the bottom fishery will become a major source of growth in the Kodiak area. Detailed study of the economic prospects of alternative means for developing this fishery are beyond the scope of this study. Nevertheless, it should be noted that one of the major objectives behind the 200-mile limit extension was to provide economic stimulus to the American fishing industry. It is therefore reasonable to expect that implementation of the limit and associated fisheries management measures will be in part carried out to enhance the industry's prospects. It is also assumed that if Kodiak decides to make the effort, it can capture a significant portion of this fishery.

The growth of civilian economic activity in the Kodiak Island Borough has been offset by the decline in military activity resulting from the closure

of the Kodiak Naval Base. Since the Coast Guard took over the base, military employment has increased moderately. On the basis of current plans, future employment at the Kodiak Coast Guard Base will be stable or increase very slightly. Consequently, the military impact on Kodiak's economy should be either neutral or slightly positive - contrasted with the negative impact of Navy withdrawal, which occurred from 1960 to 1972.

It appears that Kodiak has some potential for the growth of tourism. The Kodiak Chamber of Commerce has created a "visitors and convention bureau" (with a budget of approximately $50,000) for the purpose of seeking conventions and the development of pre-convention tours in conjunction with the City of Anchorage. Tour ships have begun to visit the urban area, and by 1980 it is possible that there will be as many as 15 or 20 tour ships visits each year. Over the next ten years, it appears feasible that tourism could grow to the point of generating 1.0-1.5 million dollars in gross revenues annually. If this type of development is pursued successfully, it can be expected that retail trade and services will expand more rapidly than they have in the past. However, tourism tends to be a low-wage, seasonal industry. Extensive development of this industry could exaggerate the undesirable seasonality of the existing Kodiak economy.

In the past, the lumber and wood products industry has not been a significant contributor to either the employment or income base of the Kodiak economy. The Afognak Lumber Company has begun harvesting timber on Afognak Island, and it appears that forestry activity could grow moderately. The Kodiak Native Association is working to establish a Native-owned and operated forest products industry for both harvesting and processing of lumber. The primary intended market would be the local construction industry. Given the current shortage of housing and assuming growth in general employment and population, it seems quite possible that a small scale integrated lumber and wood products industry could develop in the Borough and begin contributing jobs and income to the area's economic base.

Considering all four economic sectors just discussed, the Kodiak Island economy can be expected to show a stronger period of growth during the last half of the 70s than was evident during the first half. This would be true even without the introduction of OCS oil exploration and development activity.

Should OCS oil exploration and development occur, it could produce substantial increases in employment and income. However, Kodiak's economy is different than most other areas of Alaska where OCS impacts are anticipated. In most Alaskan communities, the trade-off is between environmental quality and economic (OCS-related) growth. In Kodiak, the physical limitations of inadequate housing, water supply, power generation, roads and shortages of certain types of land could prevent economic growth which might otherwise be expected to occur. If OCS development occurs, it will put additional strains on all these systems. Consequently, the trade-offs between OCS development involve not only environmental quality but also the continuation of the Borough's civilian, non-OCS-related economic growth.

A major existing sector of the Kodiak economy may be particularly vulnerable to OCS impacts - the food processing industry. The most critical factors for the food processing industry in Kodiak are: (1) the availability of labor, (2) the cost of labor, (3) housing supply available for seasonal

labor, and (4) the availability of electric and water utility services. If major on-shore OCS development occurs in the urban area, all of these factors will be affected. Since the community probably does not have the ability to prevent on-shore development on Kodiak, the challenge is to minimize the adverse impacts of OCS development by careful siting and management.

Future Population Forecasts

Working estimates of future population levels in the Borough are necessary to identify future requirements for community facilities, choose desirable land use patterns, and devise an appropriate strategy for dealing with OCS development. The critical period will be the years immediately ahead. Serious oil exploration efforts are likely to begin in 1980; if oil is found, peak development activity will probably occur around 1985. This is also the most useful period for planning local capital expenditures. Forecasts beyond this period are provided for the long-term view; by 1995, OCS activity is likely to dwindle to relatively small production crew operations.

Several methods are available to forecast future population growth in the Borough. One of these is the "component" method, by which birth rates, death rates, and migration rates are estimated from past records. These are then applied to a base year population and extrapolated into the future. This technique was used in the OCS Impact Study.

An alternative means of forecasting population, used here for comparison, assumes that over time, population adjusts to the availability of employment opportunities and the number of persons in the population who are actively seeking employment. In other words, in a small area such as the Kodiak Island Borough, the primary determinant of population change is the demand for workers. If the demand for workers consistently exceeds the ability of the local population to meet the demand, people will migrate into the area. Conversely, local residents will migrate out of the area rather than tolerate prolonged periods of unemployment. Therefore, the "labor force participation" method projects future population from labor force and employment trends.

The primary difference between the two projections is the assumption in the OCS Impact Study that future migration will continue at a rate approximating that of the past five years. On the other hand, the reasoning of the second method is that economic growth (reflected in employment and labor force) will be more rapid than it was in the past, now that the decline in military population has been arrested. As a consequence, it is believed that the rate of in-migration to the Borough will be significantly greater in the future than it was in the immediate past. Both forecasts represent baseline forecasts of population and do not include potential OCS population impacts.

Both forecasts have been used in this study to define the range of likely future population.[1] The "component" method is used as the low end of this range, and the "labor force participation" method provides a forecast of maximum likely population growth without OCS development (Table 4).

---

(1) Detailed descriptions of the two methods used are provided in "Working Paper B, Study Element 1: Economy, Population, Community Services," prepared for this study.

TABLE 4

Projected Total Population of Kodiak Island Borough
Without OCS Development

Year	Low	High
1974(1)	9,232	9,232
1980	11,370	12,920
1985	13,440	17,180
1990	15,880	21,600
1995	18,770	26,100

(1) Actual population, 1974 special census.

It should be noted that this population growth will not simply happen of its own accord. Both analyses predict levels of population likely if the preconditions of population growth are met. These preconditions involve several factors which are currently in short supply in Kodiak, including housing and industrial waterfront land. An active program of economic development will be needed to overcome these shortages if the Kodiak community decides it wants to continue growing. Should it do so, the likely locational distribution of population is indicated in Table 5. Population at the Coast Guard Support Center is now near its likely maximum and will grow very slowly in the future. Village population has been projected simply from present birth and death rates, assuming net migration to be zero. In this table, the Kodiak Urban Area figures also include Bells Flat and Chiniak.

TABLE 5

Locational Distribution of Projected Population
Without OCS Activity

Year	Villages	Support Center	Kodiak Urban Area--Low	Kodiak Urban Area--High
1974(1)	1,021	2,828	5,355	5,355
1980	1,130	3,400	6,840	8,390
1985	1,220	3,550	8,670	12,410
1990	1,330	3,710	10,840	16,560
1995	1,440	3,860	13,470	20,800

(1) Actual population, 1974 special census.

Estimates of direct employment likely to result in the coastal zone from OCS activity were developed in the OCS Impact Study. These estimates were developed around four cases or possible outcomes of OCS activity. Case 1 represents oil discoveries of approximately 250 million barrels. This size of development is uneconomical; consequently, after four years of exploratory drilling, no development takes place. Case 2 assumes that 1,200 million barrels of recoverable oil reserves are found. Two methods of developing this volume are evaluated. The first method involves using pipelines to

an on-shore terminal (Case 2a). The second method involves using off-shore terminals (SBM's) requiring no on-shore storage (Case 2b). Case 3 represents development of maximum likely reserves (2,000 million barrels), involving an off-shore oil pipeline and a land terminal.

These employment estimates were used to predict labor force impacts by estimating the number of OCS workers likely to reside in Kodiak. These workers would have a "multiplier" effect on service industries. Adding this to the direct employment figures resulted in total employment estimates. By including persons seeking employment, labor force impacts were identified. Total population impacts were then predicted by accounting for the families of persons in the labor force.(1) These are presented in Table 6.

TABLE 6

Projected OCS-Related Population

Year	Case 1	Case 2a	Case 2b	Case 3
1980	60	170	170	170
1981	80	320	320	530
1982	100	350	200	640
1983	60	460	170	570
1984		240	100	720
1985		440	80	1,910
1986		1,220	210	3,340
1987		2,180	210	1,920
1988		950	280	1,310
1989		830	360	1,420
1990		830	360	1,350
1991		810	340	1,320
1992-1995		770	300	1,280

The location of these population impacts will largely depend upon where OCS activity is located. Clearly, the Borough wants to have a voice in that locational decision. Case 2b is probably representative of the population impacts on the urban area if a service base alone were built within the urban area. Cases 2a and 3 indicate the level of population impacts possible if a terminal were located near the urban area. The peak population impacts in both these cases are due to the large construction crews necessary to build an on-shore oil terminal. It has already been pointed out that OCS development and attendant population growth could seriously conflict with the existing economic base of Kodiak, because of competition for limited labor, housing, goods, and services. This conflict would be greatly reduced if OCS development were self-sufficient and occurred at a distance from existing Kodiak communities.

---

(1) Again, the methods used are discussed in detail in "Working Paper B, Study Element 1: Economy, Population, Community Srvices," prepared for this study.

Recommendations

- Acknowledge that the fishing industry and the Coast Guard are the long-term base of Kodiak's economy and that the economy is growing. Encourage and maintain the community's existing economic base. Attempt to further stabilize year-round employment in the fishing industry by pursuing development of a Kodiak-based bottom fishery.

- Do not actively pursue economic development that would result in increased seasonal employment and corresponding unemployment in the off-season.

- Discourage short-term economic development that would threaten the long-term economic base. Minimize the negative effects of such development when it is necessary to allow it to occur.

- Pursue diversification of the economic base where not in conflict with the above recommendations.

- Job growth causes population growth. If the community wishes to continue economic growth, it should commit to accommodating the population growth that results from economic development, or else it should pace economic development to the community's ability to accommodate population increases.

III. COMMUNITY GOALS AND OBJECTIVES

In the previous chapter we summarized likely future trends in Kodiak's economy and population. We also addressed some basic community service requirements related directly to population size. The next step is to identify desired patterns for the future development of Kodiak. This is done by establishing community goals and objectives. This step is under way; Simpson Usher Jones, Inc. have prepared draft goals and objectives based on the 1977 Borough Community Attitude Survey.

As the draft states, "Without goals planning is aimless; it can accomplish very little other than bring to light problems and needs but cannot arrive at solutions." The draft goes on to note that "It is important for the decision making bodies to be aware of public desires and the degree to which they conflict with factual data so that the finally adopted goals and objectives can accommodate to the greatest extent possible the perceived needs of the public as well as the actual situations as they exist." A number of the draft goals and objectives also appear to conflict within themselves. This is to be expected. For example, Kodiak residents desire housing development to be both inexpensive and on large lots. These two desires are held in common with most Americans. The desires conflict, but this can be translated into looking for the best available buy, with low density as one of the "best buy" criteria.

The draft goals and objectives are now being reviewed and revised by the Borough Assembly, with the help of the Borough commissions. The final adopted goals and objectives will be incorporated into the final Kodiak comprehensive plan. In the meantime, the draft goals and objectives have been used in the development of planning recommendations and are reproduced here for reference. They have been put in the order they are dealt with in this report. Other than this, they have been reproduced exactly as they appear in the Simpson Usher Jones draft.

Primary Goal: To maintain the desirable aspects of the current living environment in Kodiak including the rural atmosphere, the freedom of life styles, and the recreation opportunities. To upgrade and maintain a full range of community facilities, utilities and services that are available in Kodiak. Further, to avoid the adverse effects of rapid population growth including over-taxed utilities, transportation systems and increased costs of living.

Governmental Goal: To provide a full range of governmental services to the residents of the Kodiak Island Borough including utilities, social services, policy direction and administrative services in the most efficient and effective manner possible.

Objective: Upgrade the existing governmental services within the current tax structure.

Objective: Avoid duplication between governmental departments and various levels of governments (borough, city, state and federal) by close cooperation and understanding of the functions and limitations of each.

Objective: Increase the number of services and utilities and facilities provided by the governments on Kodiak Island.

Objective: To use to the maximum extent possible state and federal financial assistance in providing new services and upgrading existing services within the borough.

Overall Village Goals: To establish and improve communication channels between the villages on Kodiak Island and the Kodiak Island Borough in order to allow for better knowledge and understanding of the problems, needs and potentials of those villages. Further, to help provide the services and facilities needed to upgrade the living environment within the villages without destroying the traditional life styles of the residents.

Objectives: To establish the position of village coordinator within the Kodiak Island Borough to assist in liaison between the borough government and the villages and their governments and to help in the administration of the city governments in the outlying villages.

Objectives: To establish a policy of annual visits to all villages by the serior staff of the borough, the borough assembly and the borough planning commission.

Objective: To prepare a detailed study of transportation needs both within as well as to and from the outlying villages and move to resolve the deficiencies at the earliest possible date.

Objective: To improve the level of law enforcement and fire protection within the villages by a realistic education process and assistance in providing and maintaining safety facilities within the villages.

Economic Goal: To encourage the development of a broader economic base for Kodiak that will provide year around employment and economic opportunities to the existing residents without encouraging an economy that induces a rapid increase in the number of permanent or transient residents.

Objective: To foster the development and growth of the fishing industry in and around Kodiak.

Objective: To encourage growth in the tourist industry in Kodiak.

Objective: To encourage the growth and expansion of the construction industry in order to providecompetition in the housing construction industry as well as employment opportunities.

Objective: To avoid the encouragement of growth in the timber and OCS related industries.

Objective: To continually update and implement the overall economic development plan for the Kodiak Island Borough.

Community Services and Facilities Goal: To update the full range of public services in order to provide more consistently efficient utilities, facilities and services to residents of Kodiak Island and further, to plan the expansion of those utilities, facilities and services in order to accommodate future anticipated growth.

Objective: To increase the public water supply in order to provide water services to expanding processing industry as well as to general community growth.

Objective: To upgrade and expand the sewer system to serve a larger area.

Objective: To encourage the development of the Terror Lakes Hydr-Hydroelectric Project in order to meet the growing demands for electrical power without drastic increases in costs that will be incurred if the electrical power is increased through diesel facilities.

Objective: Encourage proper maintenance and adequate upgrading of the telephone system in order to accommodate the existing population as well as future growth.

Objective: Plan for more effective law enforcement services to cope with the increase in criminal activity that is expected as a result of population growth and economic boom conditions.

Objective: To maintain a high level of fire protection services in the urban area and to increase the fire prevention and fire fighting capabilities of th villages.

Objective: To provide a higher level of animal control through increased facilities and code enforcement.

Objective: Increase the amount of public assistance available to resident of Kodiak who are in need

Objective: To encourage and assist in the development of additional public and private radio and television services for the residents of Kodiak.

Educational Goal: To continue to provide and upgrade the quality educational facilities within the Kodiak area and plan for expansion for the educational system in order to accommodate expected population growth levels.

Objective: Establish a boroughwide school site selection policy and move to acquire any needed size, space needed upon estimated population growth figures.

Objective: To establish firm standards for school site size and locational criteria.

Objective: To investigate the possibility of joint recreation/school facilities and sites.

Objective: To standardize the criteria for school facilities both within the Kodiak urban area and the village areas.

Objective: To pay increased attention to the educational needs of students from outlying villages.

Transportation Goal: To provide a more efficient internal island-wide transportation system; to improve the transportation facilities within the Kodiak urban area; and to encourage more effective and wider range of transportation alternatives to and from Kodiak Island.

Objective: Develop road maintenance functions throughout the Kodiak urban area.

Objective: Upgrade existing roads to accommodate the growth of the urban area that has taken place to date and plan for additional upgrading to accommodate anticipated future growth.

Objective: Investigate the feasibility of alternative transportation modes within the urban area including public transportation, bike paths and trail systems.

Objective: Investigate the feasibility of the continued operation of the city airport at Lilly Lake and the need to upgrade that airport, if it is determined that should remain in operation. Upgrading of that airport should consider the need to avoid land use conflicts around the airport and safety hazards that could arise.

Objective: To study alternative modes of island-wide transportation, including the development of a network of outlying dock and mooring facilities that will allow increased reliance by the outlying residents of the island on private boats.

Objective: Encourage the State of Alaska, Division of Aviation to prepare a master plan for the state airport at Kodiak in accordance with FAA guidelines so that facilities in need of improvement can be identified and upgraded and plans can be made for expansion in order to accommodate future demands.

Objective: Increase the efficiency of the city dock by providing additional quay area and storage space.

Objective: Investigate the possibility of expansion of State of Alaska ferry system service to Kodiak including a study of the necessity for improved docking facilities.

Land Use Goal: To work towards eliminating existing conflicts in the land use patterns within the Kodiak Island Borough and to plan for low intensity development that preserves the land use integrity of residential areas and concentrates commercial and industrial development in strategic locations.

Objective: Develop a capability for stronger, more effective zoning enforcement.

Objective: Assure in establishing zoning patterns that land use category separations are located along natural and man made boundaries that effectively buffer potentially conflicting land use districts from each other.

Objective: To assure the provision of adequate residential areas to help increase the housing stock at a relatively low density and cost.

Objective: To concentrate commercial development in the downtown area and other strategic locations without encroachment into residential areas.

Objective: To encourage the development of industrial uses in industrial parks.

Housing Goals: To actively work towards alleviating the current housing shortage in Kodiak by fostering the development of residential land and structures and to help the community maintain the existing housing stock in good condition.

Objective: To provide ample residential land so a broad range of residential locations are available to the home buyer and developer.

Objective: To provide, where possible, a full range of utilities to residential properties in order to simplify the process of residential development.

Objective: Encourage the use of state and federal funds to establish housing programs designed to help upgrade and maintain the existing housing stock.

Objective: To encourage the development of new residential areas, the purpose of providing housing to low and moderate income families.

Objective: To investigate the legal and social ramifications of establishing a rent review process in order to avoid artificially escalating housing costs due to an economic boom.

Objective: To discourage the use of mobile homes in the Kodiak area.

Objective: To avoid the development of new residential uses within the downtown area of Kodiak.

Objective: To encourage the development of new housing in existing residential areas.

Recreational and Cultural Goal: To develop a high level of active recreational facilities utilizing existing parks and open space lands.

Objective: To increase emphasis on development and utilization of recreational lands and decrease the emphasis on recreation land acquisition.

Objective: To attempt to provide a wide range of indoor recreational facilities to allow for leisure activities in winter months and in times of inclement weather.

Objective: To continue to maintain the museums and library within the Kodiak area at a high level of effectiveness in order to offer cultural opportunities to residents of the area.

Objective: To prepare a detailed parks and recreation and open space plan including standards for development of park lands and generalized designation of parks and recreation facility criteria.

OCS Development Goal: To discourage the development of OCS related facilities in and around the population centers on Kodiak Island and, if OCS facilities are located any where on the island, to require that they be concentrated in a limited number of locations as well as be self-sustained at their remote sites.

Objective: To prepare land use regulations that can effectively control the location of OCS related facilities including indirect and ancillary uses.

Objective: To prepare and adopt detailed OCS facility location policies and a physical planning process.

Objective: To encourage the oil industry to participate in funding efforts to mitigate the adverse impacts of their activities on the Kodiak shelf.

Objective: To establish borough-wide environmental impact review and control procedures applicable to OCS related facilities in order to assure that the natural environment is preserved and enhanced throughout any future period of OCS development.

Objective: To investigate the feasibility of local government development and ownership of onshore OCS related facilities to be leased the oil industry.

IV. CAPACITY CONSTRAINTS ON DEVELOPMENT

This chapter will identify some key factors which should constrain planning for development in the urban area. These constraints will affect the types and location of land uses as well as the amount of development that can take place without requiring major public investment in new utility systems or other facilities. In order for growth not to have overwhelmingly adverse effects on Kodiak residents, reasonable and realistic limits on the extent and pattern of future development must be identified.

A major question this planning effort is attempting to answer is whether OCS development should be encouraged or even allowed to take place within the urban area (where it could utilize existing services and utility systems) or whether the Borough should pursue a "remote site" strategy and require the oil industry to develop all necessary services and facilities on a completely separate basis. Information such as the amount of developable land within the urban area will help the Borough to decide which strategy is most appropriate. Three types of constraints will be examined: a) natural constraints, which help determine the land areas most suitable for development; b) man-made systems, which represent existing public investments and which may have capacity limits; and c) financial resources, which may limit local government's ability to provide the services necessary to sustain growth, and which also limit the individual resident's ability to obtain suitable housing in Kodiak, however great the employment opportunities.

Natural Constraints

A number of natural factors affect the suitability of land for development. Three have been selected as being particularly significant in the Kodiak urban area: steep slopes (Map 6), water and wetlands (Map 7) and natural hazards (Map 8). By subtracting lands that are already developed, we can map developable lands (Map 9). The already developed lands are indicated on Map 5, existing land use. This mapped inventory was prepared as part of the OCS Impact Study. It was not printed in that report, however, so it is reproduced here.

The degree of slope affects the suitability of land for development in two ways. First, building cost goes up as excavation and earthwork increases; this is a cost borne by the developer. Second, public costs for roads and utilities increase significantly as slopes steepen. Map 6 indicates four classes of slope. Land less than 5% can be considered "flat" for development purposes; site preparation costs are minimized, as are utility costs. This slope class is particularly well-suited for industry, commerce, institutions and the parking areas associated with these uses. Land between 5 and 10% slope is classed as "accessible". Roads and utilities costs, as well as building costs, are moderate. Kodiak winter icing conditions make 10% a reasonable maximum for road gradients. Slopes between 10% and 25% are classed as "buildable", but not readily accessible. This slope class can furnish dramatic homesites, although foundation costs exact a premium. Utility costs are excessive if any extensive area of this slope class must be traversed. Roads require expensive cut and fill; this also tends to cause erosion problems with Kodiak soils, leading to sedimentation in streams and lakes. Lands over 25% slope are classed as "very steep". Road and utility costs are prohibitive and building suitability is questionable due to potential slope instability.

The pattern of tones on Map 6 indicates that the majority of "flat" and/or "accessible" lands occur on the east side of the Pillar Mountain ridge. Slopes flatten out progressively toward Spruce Cape. The very mixed pattern on Near Island is a result of the hummocky bedrock topography there.

The water bodies and wetlands indicated on Map 7 are also important considerations in locating future development. The watershed boundaries define drainage basins that are important for planning wastewater and stormwater drainage systems. The Island Lake drainage basin is the largest in the urban area. Water quality in Island Lake is below state standards for drinking and even for swimming. In order to improve the water quality, sewers must be provided to the homesites in the drainage basin.

Lakes and ponds are important community assets and enhance property values if water quality is maintained. They can also be water sources, along with streams. Streams are also nature's storm drains. If they can be maintained in natural condition, they will provide amenity and recreation as well as utility. Wetlands are part of the natural storm drainage system. They regulate water flow by retaining peak discharges. They also function as natural settling basins in maintaining water quality. For these reasons any proposals to fill more wetlands in the urban area should be examined very carefully. As a general rule, such proposals should not be approved.

Map 8 indicates potential hazard areas due to flooding, tsunami or landslide. The most likely trigger of these events is a major earthquake. Earthquakes are common in Southcentral Alaska, although it is difficult to predict their frequency of occurrence and magnitude. The indicated floodplain area is the area that the Corps of Engineers has identified as likely to be inundated if the dam for the City's Lower Reservoir were to fail catastrophically. Most probably, this would be due to an earthquake. Future residential development should not be permitted in this floodplain. Several houses have already been built in the floodplain along Larch Street, next to Lilly Lake. The new townhouses near the Lower Reservoir were sited to avoid the floodplain. However, a sewer was installed that crosses it. An extension of Selief Avenue in the same area has been discussed. If and when Selief is extended, the feasibility of designing the roadbed to divert all the flow of potential floodwaters to Beaver Lake should be considered.

The tsunami inundation area indicated on the map is a tentative identification, based on the 1964 tsunami(1). The topographic mapping available for this study was based on the USGS datum before the earthquake. Adding together approximately 5-feet for 1964 subsidence, 9-feet for the highest expected tide (above "mean sea level", not "mean lower low water"), 12-feet for the 1964 tsunami crest and 6-feet for wave runup, we might expect a recurrence of the 1964 tsunami to inundate areas up to 32 feet in elevation, measured against the pre-1964 datum. For convenience, the 30-foot contour was followed

---

(1)Kachadoorian and Plafker, Effects of the Earthquake of March 27, 1964 Communities of Kodiak and Nearby Islands, Professional Paper 542-F, U.S. Geological Survey, 1967.

to establish the tsunami hazard areas indicated on the map. The location and elevation of probable tsunami hazard areas should be confirmed with the U.S. Geological Survey, however. Because land use controls are indicated for hazardous areas, it is also important to have the degree of hazard confirmed. In this connection, the Coast Guard has taken the tsunami potential into account in its recent planning and construction at the Support Center. Residential uses are not located in the hazard zone, a tsunami warning system is in operation, and evacuation plans are posted in all buildings.

The third natural hazard area is a possible slide zone on the east face of Pillar Mountain, between the City dock and the City cargo terminal. A surficial slide occurred here during the construction of the City dock in the early 70's, destroying the state highway. The area has been examined by representatives of the U.S. Geological Survey and the Alaska Department of Transportation and Public Facilities and some degree of movement or slippage detected. On this basis, potential instability has been identified, but the degree and extent of instability cannot be determined without further study. This information is necessary to plan for the future of the Inner Harbor area. The nature and extent of corrective actions - if any are necessary - cannot be identified without this information. In particular, it could affect decisions on the City dock and the cargo terminal, which are essential facilities in the urban area.

As noted, precise identification of two of the three hazard areas is hampered by lack of information at this time. A major geotechnical study of Pillar Mountain should be carried out, with assistance from the federal and state governments. One potential cause of a slide would be a major earthquake, so the likelihood and magnitude of future earthquakes will probably be an element of the study. Since this relates directly to possible future tsunamis, the study should also include an identification of the degree of tsunami hazard and the appropriate topographic elevation for a hazard zone within which land use controls would apply.

The types of restrictions that should be considered have been identified in the regional atlas prepared for Kodiak by the Arctic Environmental Information and Data Center: Kadyak, A Background for Living (p. 137). These controls would also be appropriate to a final slide hazard zone, if any, and to the Lower Reservoir floodplain area:

1. Restriction of land uses to those that are essential, such as docks and warehouses, with owners, builders, and occupants being cautioned on the hazard. Prohibition of siting of high-occupancy and critical structures, for example, schools, hospitals, police, and fire stations.

2. Placement of potential inundation areas under floodplain zoning, prohibiting all new construction and designating existing occupancies as nonconforming.

3. Orientation of structures with their long dimension parallel to the anticipated direction of wave movement.

4. Utilization of natural features such as peninsulas, islands, shoals, or large rock protrusions to act as breakwaters in siting communities or structures.

5. Where economically feasible and without encouraging a false sense of security, construction of restraining or diversion structures to minimize potential inundation.

6. Institution of appropriate systems to warn of impending danger. It is important to note here that tsunami warnings and watch bulletins issued by the Alaska Reigonal Tsunami Warning System are usually based upon seismic data, as valuable time would be lost if bulletins were issued only after a tsunami registered on tide gages. Consequently, bulletins will at times be issued in cases where a tsunami does not develop.

7. Adoption and implementation of evacuation plans.

8. Elimination of potentially hazardous dams or reservoirs.

In addition, construction activities or resource extraction activities which would tend to increase the likelihood of slope failure should cease in potential slide areas and not be permitted in the future. Rock quarrying on the side of Pillar Mountain, for example, steepens the slope further and could lead to future slides such as the one that destroyed the state highway.

The pattern of developable lands in the urban area has been displayed on Map 9. The purpose of this map is to identify how much developable land there is in the urban area, and where this land is located. This map was produced by combining the maps of existing land use, steep slopes, and water and wetlands. Natural hazards were not included because of the degree of uncertainty on two of the hazards mentioned above. They would have been included if adequate information were available.

Areas considered generally physically unsuitable for development include steep slopes, lakes, ponds, and wetlands. Already developed areas have been indicated with a gray tone (except for street rights-of-way, which have been left blank to display the street pattern). Undeveloped areas that are dry and in the "flat" or "accessible" slope classes are considered highly suitable for development and were also left blank; these can be differentiated from the street pattern by referring to the plat lines superimposed on the map. These undeveloped areas in the "buildable" slope class were considered to be limited in suitability. Several areas which are presently used at low intensity were classed as "transitional" in order to assess their suitability for redevelopment to higher intensity uses. Initially, these were the municipal airport and adjacent lands, including the concrete plant; the spruce cape loran station; the Cry of the Wild Ram site; the existing City landfill; and the VFW site. Of these,the municipal airport and Spruce Cape areas proved to contain significant amounts of land highly suitable for redevelopment from a physical standpoint.

The overall pattern of developable lands is very significant to decisions about the future pattern of development in the urban area. Large amounts of highly suitable land are present. Two major areas stand out: the municipal airport and adjacent lands; and the Rezanof Extension - Spruce Cape area.

Manmade Systems

The manmade systems which constrain the development pattern include certain utilities which are often called "infrastructure" because they are the framework upon which the community is structured. Four systems should be particularly prominent in current Kodiak planning. These are water supply, wastewater treatment, solid waste disposal and electricity.

The existing water system is presented on Map 10. The system has three primary functions. It supplies water for drinking and other residential uses, water for industrial purposes (the current primary user is the fish-processing industry), and water for fire-fighting. All are critical, but the latter is very important in determining the size and location of lines in residential areas. Fire-fighting equipment draws great volumes of water, stressing water mains to the point that line collapse is a very real possibility. To help prevent this and to assure a continued supply of water, mains should be looped to allow two routes of flow to any point. Possible system extensions to accomplish this in present developed areas are indicated on the map. The City Fire Department currently provides fire protection service to the already developed Island Lake and Mission Road areas, but the water supply is not adequate to serve these areas properly. System extension for these areas could easily serve new development along the Rezanof Extension and at Spruce Cape. Looping is also indicated around the airport area to serve existing development.

In addition to affecting the pattern of development, the water supply system affects the amount of development that can be serviced. Current water usage varies from 3.0 - 3.5 million gallons per day (MGD) when the major seafood processors are not operating, to 10 - 12 MGD when the processing plants are in operation (1). Current system storage capacity is inadequate to guarantee supply to industrial users during periods of low stream flow. Potentially, large fish product losses could occur during peak harvests and this could discourage construction of new processing plants. An OCS service base would also require large amounts of fresh water for supply to drill rigs (2). Further economic development will require increasing storage capacity; the most readily apparent alternative is to go ahead with

raising the Monashka Creek Dam. This is a City facility on disputed land; exercise of the Borough planning powers may help to speed negotiations between the parties.

Currently all domestic wastewater in the urban area is either collected and discharged to saltwater without treatment, or is handled by septic tanks or privies. The City is in the process of constructing a secondary treatment plant which is due to be completed in the summer of 1978. The treatment plant was designed and located to eventually serve the entire urban area. However, the initial service area is defined by the existing wastewater collection system. This is entirely within the City limits, except for a small area along Shahafka Cove and Mission Lake.

The treatment plant is based upon a projected service population of 9500 persons for a design year of 1995. The average design flow for the new treatment plant is 2.13 million gallons per day (MGD). This includes 0.85 MGD of infiltration and inflow and approximately 0.25 MGD of wastage.[1] If these two components can be reduced, it is possible that the new treatment plant could serve a population somewhat greater than 9500.

The existing wastewater collection system is presented in Map 11. Since present City population is around 4000, considerable expansion of the service population is possible. The Island Lake drainage basin is experiencing water quality problems and is one of the first areas to which service should be extended. Wastewater trunks would logically follow the drainage pattern (see Map 7) with a lift station at Mill Bay. Provision of the interceptor shown in this area would also make wastewater service possible for the undeveloped Spruce Cape and Rezanof Extension areas. The scheme shown here is very similar to one alternative recently proposed to Island Lake residents.

A second logical area for service extension is the municipal airport area. Because of the natural drainage pattern, it could be partially served by the Island Lake extension. A new sewer (shown as a dashed line) has been started to the townhouse development near the Lower Reservoir. This could be extended to pick up the Beaver Lake portion of the airport area. A collector up the Cutoff Road would pick up the remainder of the airport lands.

Solid waste disposal is another public utility which constrains development. It does not usually affect the overall development pattern, but the site of the sanitary landfill itself is critical and may be hard to locate. This appears to be the case in the urban area; suitable soils and drainage conditions seem to occur in very few places. The present City landfill site, for example, is presently inadequate because the scarcity of soil requires rock to be ripped for cover material. This coarse material allows rainwater to percolate into the buried waste, and to leach out pollutants. Drainage is also uncontrolled, so the polluted leachate works back out to surface water courses. The site will be totally inadequate for the disposal

---

[1] Tryck, Nyman and Hayes, Wastewater Treatment Process Selection (undated).

of sludge from the new treatment plant. It is therefore important that a proper site be located in the next six months, before the plant begins operation.

The Coast Guard landfill at the Support Center is in the same situation. To try to resolve the situation, the City of Kodiak and the Coast Guard recently agreed to consider joint utilization of a single landfill operation and cooperated in a study of potential sites. The site recommended was suitability (refer back to Map 4). Perhaps because it was assumed the Coast Guard had jurisdiction over these sites, the study did not develop comparative cost data for alternative sites. It also did not consider solid waste collection and disposal requirements for the urban area beyond the City limits. Swampy Acres, however, had been excessed and claimed by a Native corporation. It also appears that the site has considerable potential for industrial development. The new owners are likely to insist that any landfill operation provide them a financial return equivalent to industrial use.

At this point, an apparent impasse has been reached. One major difficulty in deciding a course of action is that the site study does not provide information for a fallback position. The study needs to be updated — or a new study done -- to fully compare alternative sites, including hauling costs and potential lease rates based on "highest and best use," in order to support decisions and to provide the background for negotiations.

Solid waste disposal is a regional problem in the Kodiak urban area and it is clearly in the interests of all jurisdictions and parties to cooperate. The Borough should take the lead in an immediate study update, involving both the City of Kodiak and the Coast Guard. The Borough is probably also in the best position to negotiate terms of a lease, since it has the zoning and platting powers. If the Swampy Acres site should prove to be the only suitable site, public health considerations would direct that it not be used for another purpose. This must be clearly demonstrated, however. In the interim, planning permission to develop the site for other purposes should not be granted.

Electrical power costs and generation capacity are additional factors that constrain community growth, although they do not have much effect on the spatial pattern of development. Kodiak Electric Association presently relies on expensive diesel generation, to supply the urban area and Bells Flat. It has a "nameplate" capacity of 25,000 KW, compared to a September 1976 peak demand of 9500 KW.[1] However, the nominal capacity is deceptive, because much of KEA's equipment is old and subject to mechanical problems. The fish-processing industry is a major user of power and expansion will require an adequate, reliable, and affordable supply system. KEA will install a new 7000 KW generator in 1979, but the long-range solution appears to be a hydroelectric project at Terror Lake. The Terror Lake project was

---

(1) Personal communication with L.H. Johnson, former Manager, Kodiak Electric Association.

delayed because of unfavorable economics when fuel costs were low. With increasing fuel costs, it now appears feasible and KEA is proceeding with planning. Completion could come as early as 1983. The Borough should give KEA any support it can to move the project along.

Financial Resources

By reference to Alaska Taxable, 1976, it is apparent that the City and Borough impose somewhat lower taxes than other Alaskan communities of comparable size. Therefore, if the community desires, it can finance some additional programs and improvements by moderate tax increases. The tax base itself will be increased by economic development, particularly OCS development. Eventually, the tax burden on individual property owners can drop significantly. However, the costs of community facilities for construction workers usually precede the tax base expansion by several years, so there is often an interim period of higher taxes.

The current percentage of indebtedness to valuation in the Borough and City is 6.85%. This is well below the commonly accepted rule-of-thumb maximum of 10%, but is above the state average of 4.42%. It probably reflects a relatively small industrial tax base and relatively high proportion of employment in government. The City's debt service will slightly increase and then remain stable over the next several years. The Borough's bonded indebtedness is primarily for schools and will drop sharply when the state takes over responsibility for school indebtedness in June.

In summation, all these factors appear to indicate that the urban area could probably raise up to five or six million dollars for new capital projects in the immediate future without excessive tax increases. This figure will provide a rough measure of the ability of the community to finance key projects. Most of this sum would probably be available to the Borough rather than the City because of the forgiveness of school debt. If the community were to raise these funds, they would go to projects benefiting the entire tax area, such as parks and schools. Improvement district assessments will have to support much of the cost of needed utility and road improvements, for example.

The financial resources of Kodiak residents should also be considered in planning the pattern of community development. The current shortage of affordable housing emerged as a major concern in the Community Attitude Survey. The reason for concern is apparent when household income distribution figures from the 1970 census are updated for inflation. Approximately 8% of Kodiak households have total incomes of $30,000 or more; 41% receive between $17,000 and $30,000; 51% receive less than $17,000 annually. The break points are significant. Using an income multiplier of 2.5, a family would need at least $30,000 income to be able to purchase a home for $75,000; this is a conservative minimum for new home prices in the urban area. A family would need at least $17,000 income to purchase a $42,500 home. This is a conservative minimum estimated price for an older house in the Aleutian Homes area or for a newer mobile home on a private lot.

The $17,000 household income level is probably also a measure of ability to rent a family-sized apartment unit.

This appears to tell us that only some 10% of Kodiak households can afford large-lot, single-family housing. Another 40% can afford older housing on smaller lots, mobile homes, or apartment rentals. A full 50% of households would appear to have difficulty finding housing on the private market.

How do Kodiak residents cope? Some build their own housing, some have been in their homes for a long time, some are in a limited number of public housing units. But for too many, overcrowding and bad housing conditions appear to be the result. Although statistical evidence of this is hard to produce, it is repeatedly confirmed in discussions with public officials and members of the community. Therefore, while low density residential development may be a desired pattern, sufficient space should be set aside for higher density, affordable housing, such as apartments and mobile homes. An adequate supply of smaller lots with services could also help to bring the cost of homesites down, or at least prevent further speculative inflation.

Priority Development Areas

To more specifically identify portions of the urban area in which higher intensity development can logically take place, 23 neighborhoods were identified in the urban area, plus three more on the road system, using the housing inventory developed in the OCS Impact Study as a starting point. The amounts of developable land in each category were inventoried for each neighborhood. In total, there appear to be some 650 acres of undeveloped, highly suitable lands in the immediate urban area, with an additional 340 acres of transitional, highly suitable lands. There are approximately 320 acres of undeveloped, limited suitability lands and another 180 acres of transitional, limited suitability lands. These areas appear adequate to accommodate even the maximum projected 1995 population entirely within the present urban area, if emphasis is placed on low-rise apartment housing and single-family housing on 7200 square-foot lots.

To provide a graphic illustration of where development might reasonably proceed first, the 23 urban area neighborhoods were prioritized (Map 12) on these criteria:

- Undeveloped land;
  - high = more than 50 acres undeveloped
  - moderate = 20-50 acres undeveloped, or more than 50 acres transitional
  - low = less than 20 acres developed, or less than 50 acres transitional

- Available services;
  - high = existing
  - moderate = near-term future
  - low = long-term future

- Suitable land;
  - high = more than 75% highly suitable
  - moderate = 50-75% highly suitable
  - low = less than 50% highly suitable

The areas that emerge as having the greatest potential for immediate development are Baranof Heights, Beaver Lake, Kadiak Subdivision, Outer Mission Road and Mid-Cape.

To verify that projected population increases could be accommodated in the urban area, the lower population projection was distributed by neighborhood (the higher projection also "fit in", however). This area distribution of population is displayed on Map 13. Existing population was estimated from the OCS IMpact Study housing count. Future estimates were based on the amount of developable land and preliminary assumptions about housing density. It is assumed, for example, that apartment construction will replace some existing structures in the Downtown and Aleutian Homes neighborhoods, though there is relatively little undeveloped land there.

Recommendations

Recommendations bearing upon specific land uses will be found in Chapter VII. Recommendations related to natural constraints are:

- Request that the federal and state governments conduct a full geotechnical investigation of the stability of Pillar Mountain The study should identify the degree of potential hazard and the extent of the hazard area, if any. Preventive and corrective actions should also be identified, if applicable, along with the costs of such actions.

- Request that the geotechnical study also include a determination of the degree of tsunami hazard and the extent of the hazard zone (a maximum elevation may be sufficient).

- Enact land-use controls for designated natural hazard areas.

V COMMUNITY FACILITIES

From the material developed in the previous chapters, it is now possible to identify key future community service and facility requirements and make some recommendations about meeting these requirements. Two types of requirements will be examined. The first is what is sometimes called the community infrastructure; this includes the utility systems discussed in the previous chapter, which constrain the future pattern and amount of development. The second type is the community facility: buildings and other physical improvements which are necessary for "people" services such as police, schools, etc. These facilities are generally located in response to development rather than in advance of it. Requirements for these facilities are directly related to population size and will be identified from the population projections developed in Chapter II.

Infrastructure

The water supply system was discussed in Chapter IV and illustrated on Map 10. It was pointed out that the system is already at design capacity as far as storage is concerned. To allow significant industrial expansion, storage would have to be increased. The City's Monashka Creek Dam plans would provide adequate capacity for many years. The distribution system should also be extended to provide safe drinking water; wells in Kodiak are potentially subject to contamination from septic tank wastes due to poor soils, high water table and shallow bedrock. The water distribution system should also be extended to guarantee adequate water supply for fire-fighting equipment. Areas for possible extensions were indicated on Map 10. Immediate priority should go to areas already partly developed. These would include Island Lake and the loop between Lilly Lake and the Lower Reservoir.

The wastewater collection system should also be extended to correct existing water quality problems, with first priority to Island Lake. This would more fully utilize the treatment plant, which is sized for 9500 people. If the low population projection proves correct, the plant itself should be adequate to at least 1990. If the high projected level of growth takes place, the plant may require expansion between 1985 and 1990. Extending the wastewater collection system will also make it possible to service significant amounts of undeveloped land that is highly suited to urban development. Because the cost of laterals will be borne by adjoining property owners, a beneficial side effect should be re-subdivision and sale for home construction of land held for speculation.

In both areas, the limited amount of public bonding capacity available requires that maximum benefit be extracted from each expenditure. Therefore, the pattern of future development should be controlled so that concentrations of population ultimately requiring public services do not emerge beyond the present area. This would cause expensive duplication of facilities, as well as altering the rural character of outlying areas on the road system.

To this end, retention of "conservation" zoning for outlying areas, with a minimum lot area of 5 acres is recommended. Relaxation of this minimum to 1 acre might be considered if the developer will provide approved public water supply and/or waste treatment, as environmental review determines.

The previous chapter also commented on streamways as storm drainage channels. These should be retained in natural condition. A drainage management study should also be undertaken in the next several years to determine what measures are necessary to prevent upland land uses from adversely affecting surface water courses and water bodies in the urban area.

The solid waste problem was also addressed in the previous chapter. The Borough was suggested as the appropriate body to deal with this regional issue in the immediate future.

Finally, the Terror Lake Hydroelectric Project appears desirable from the standpoint of an assured supply of lower-cost power adequate to serve both the urban area and the Support Center. It would save non-renewable fossil fuel and would apparently have few adverse impacts. KEA is actively pursuing the project but whatever assistance can be given should be given.

Projected Community Facility Requirements

The major community service requirements and facilities, other than utilities, associated with additional population are projected here. These include police services, fire protection, education, health services, recreation, and library services. Unlike the utilities discussed earlier, these do not direct the pattern of population growth. They respond to it.

A similar format is used for each facility requirement. First, requirements due to population growth based upon the existing economy are presented as a range, corresponding to the low and high projections of future population in Chapter II. Second, additional requirements likely to result from OCS activity are set out. In planning future facilities, the "low" population forecast will define minimum requirements. Actual growth in the economy, labor force, and population should be watched carefully to see if the higher set of requirements must be provided for. The 1980 census will be a good checkpoint for the population estimates. Additional requirements due to OCS-related population growth must be added in as soon as it is apparent which of the four cases is actually taking place.

Law enforcement in the City of Kodiak is the responsibility of the City Police Department. Outside the City limits, the Alaska State Troopers provide this service. The Borough itself does not provide law enforcement services. Should the City limits change as a result of annexation, the responsibility for law enforcement would shift from the State to the City of Kodiak. Unification would probably also entail additional law enforcement responsibilities for local government.

At the present time, the City of Kodiak's police station and jail (they are in the same building) are operating at full capacity, and the jail will probably have to be expanded within the next year or two. An indication of the degree of expansion is the number of additional officers required for the future (Table 7).

TABLE 7

Projected Police Staff Requirements,
City of Kodiak, Without OCS Activity

Year	Staff Levels	Staff Required
1976	22	
1980	29-30	7-8
1985	35-40	13-18
1990	40-50	18-28
1995	50-65	28-43

The impact of OCS activity on the police force will be strongly influenced by the location of oil company facilities. However, even if these facilities were located in or near the urban area, the impact on the Police Department would be relatively small, assuming that current police protection staff and jail facilities are expanded to maintain per capita protection in the face of normal population growth. The number of additional officers required on the police force as a result of the OCS-induced population growth is given in Table 8.

TABLE 8

Projected OCS-Related Police Staff Requirements

Year	Case 1	Case 2a	Case 2b	Case 3
1980	0	0	0	0
1985	0	1	0	5
1990	0	2	1	3
1995	0	0	0	0
Peak Impact Year[1]	0	5	1	8

(1) See Table 6 for peak impact years.

Fire protection within the Kodiak urban area is also a service provided by the City of Kodiak. Further extension of fire protection services outside the City limits is an issue that requires examination. Services could be extended under contract with the City, or independent fire districts could be formed. The following analysis assumes that the great bulk of future population increases will occur in the present urban area and will be served by the City Fire Department.

At present, the Fire Department is placing high priority on the reduction of the use of volunteer workers. With the use of paid staff, the department would be able to respond to emergency calls in the Island Lake and Spruce Cape areas within approximately four minutes - the maximum period of time allowable without serious loss of life or property. Table 9 shows the staff levels and additional staffing requirements for the Department.

TABLE 9

Projected Fire Department Staff Requirements
City of Kodiak, Without OCS Activity

Year	Staff Levels	Additional Staff Required	Additional Staff Required By Future Growth
1976	6	4	
1980	13-14	7-8	3-4
1985	15-18	9-12	5-8
1990	18-23	12-17	8-13
1995	21-29	15-23	11-19

As in the case of police protection, the impact on the fire-fighting force will be influenced by the location and type of facilities developed by the oil companies. Table 10 sets out the staffing requirements, assuming location in or near the Kodiak urban area. If this occurs, it will probably be necessary to establish a substation to reduce the travel time from the station to any potential fire in the urban area. This would cover residential and secondary industrial areas, but probably exclude oil terminal facilities (the oil companies would provide fire protection for these). At the present time, the department has the equipment to operate a substation but lacks the facility and staff. The substation should probably be located in the

Island Lake or Spruce Cape areas. If OCS development occurs in the Chiniak area, another substation would be needed. Jurisdictional responsibility in this case would have to be assigned. If the primary on-shore facilities under Case 2a and Case 3 are located off the road system in a self-contained site, no additional officers will be required for the fire protection staff over and above those for non-OCS population growth.

TABLE 10

Projected OCS-Related Fire Department Staff Requirements

Year	Case 1	Case 2a	Case 2b	Case 3
1980	0	0	0	0
1985	0	1	0	2
1990	0	1	0	2
1995	0	0	0	0
Peak Impact Year(1)	0	2	0	4

(1) See Table 6 for peak impact years.

The Borough is responsible for the provision of primary and secondary education throughout its boundaries and maintains a complete range of educational facilities. Assuming that the current ratios of students per classroom are maintained, Table 11 presents the numbers of classrooms required in the urban area through 1995.

The high school in Kodiak is new and was built with the potential for enlargement. Additional classroom space could be provided through the movement of partitions and it is estimated that the current high school could double its enrollment without excessive overcrowding. The elementary schools, however, are older and do not have the same flexibility. In addition, they are already operating at or near their capacity. In the near-term, 2 new elementary schools appear required by 1980, at 20 classrooms each. Another elementary school plus a 40-room junior high school may be required by 1985. Due to the lead time required for design and construction - approximately 2 years - planning for one elementary school should begin immediately.

TABLE 11

Projected Urban Area School Requirements
Kodiak Island Borough, Without OCS Activity

Year	Number of Elementary & Jr. High School Classrooms	Number of High School Classrooms	Additional Elementary & Jr. High Classrooms Required	Additional High School Classrooms Required
1976	195	41		
1980	235-248	49-52	40-63	8-11
1985	276-335	58-71	81-140	17-30
1990	326-425	69-90	131-230	90-189
1995	383-517	81-109	188-322	147-241

OCS population impacts - if they occur in the urban area - would generate needs for additional classroom space over and above those shown in Table 11. Table 12 sets these out for elementary and junior high school classrooms;

Table 13 does the same for high school needs. Cases 1 and 2b would have minimal impacts, but Cases 2a and 3 would add significant requirements - approximately one new elementary school for 2a and two new elementary schools plus half a junior high school for 3. In addition to these longer-term requirements, there would be peak impacts of a year or two in duration for Cases 2a and 3 in which the capacity of an entire additional elementary school would be required. This would probably lead to an expedient, such as double-shifting. High school classroom requirements under all four cases could probably be met within the existing facility.

(1) See Table 3 for peak impact years.

The Kodiak Island Borough owns the major health facility in the urban area, the Borough Hospital. With this hospital and privately provided clinics, the Borough currently has ample health facilities and services to provide for the foreseeable future population. The hospital currently has 25 beds for acute care which are averaging only 40% occupancy. A new wing has been added for the provision of long-term care. Rather than facilities, the major potential problem regarding delivery of health services at the hospital is staffing, - particularly professional nursing and laboratory technicians.

At present, the greatest demand for hospital services is OB/GYN care. The second highest demand for services (measured by admissions) is the detoxification treatment of alcoholics. The two major future health needs to be anticipated in Kodiak are (1) alcoholism and alcohol-related care and needs, and (2) family practice physicians, should population growth continue.

The Borough currently has ample health facilities and services to provide for OCS-related population and services to provide for OCS-related population growth. In addition, the oil companies would probably provide temporary medical care at construction camps. Further minimizing the need for additional Borough facilities.

Current staffed recreation programs in the urban area are extensive. These are organized and run by the City of Kodiak and involve use of both City and Borough facilities. Despite (and because of) these extensive recreation programs, recreation facilities are at or over capacity and will require expansion. Current facilities cannot be used to service any further growth of population without a noticeable deterioration of quality. Since existing facilities are inadequate to accommodate the future non-OCS growth of population, OCS-related growth will lead to a further deterioration in the quality of recreation services if recreation facilities are not expanded. The Borough is currently preparing a comprehensive parks and recreation plan to address these issues.

The Kodiak City Library is supported both by the City and the Borough. The building was constructed in 1968 and was expanded in 1977. The library's primary need is additional staff positions. With its new wing, the building should be adequate to provide services to the community for the next decade. After that, it will probably be necessary to expand the library through the provision of additional facilities and the increased acquisition of books and cassettes. This expansion of library services and facilities should also be adequate to provide for additional needs due to OCS-related population growth.

Recommendations

. Utilities ("infrastructure")

- Extend public sewers to the Island Lake area to correct existing water pollution problems. Design these sewers to serve medium density infill development, as well as future development in the Spruce Cape area.

- Extend the City water system to serve the Island Lake area on the same basis, for fire-fighting as well as drinking water supply.

- Derive maximum benefit from utility expenditures; i.e., concentrate on servicing developable areas adjacent to existing and future serviced areas.

- Increase the storage capacity of the City water system by raising the Monashka Creek Dam.

- For storm drainage, retain the existing stream drainage system in as near-natural condition as possible for flood-water storage, water quality and open space. Conduct a drainage management study of the unincorporated portion of the urban area to determine the degree of upland management necessary.

- Minimize the likelihood of future water quality problems in unplatted rural areas by maintaining the minimum lot area for homes serviced by septic tanks in presently unplatted areas to 5 acres with well water and to 1 acre with public water supply.

- Update and extend the City/Coast Guard solid waste study to identify capacities and operating costs of alternative solid waste disposal sites suitable for disposal of sewage sludge.

- Encourage development of the Terror Lake hydroelectric project.

. Facilities

- Construct new schools to keep pace with population growth. In the near-term (by 1980), build two new elementary schools; in the mid-term (by 1985), plan to build one elementary and one junior high school.

- Reserve school sites in developing areas for future population growth.

- Construct a fire station to serve the partially developed Island Lake area, with capability for future expansion.

- Construct additional police and jail facilities to keep pace with population growth to 1985.

VI. TRANSPORTATION

Transportation provides the access that allows lands and resources to be utilized for human purposes. Historically Alaskan development has been hindered by difficult and/or expensive access, despite the presence of many resources of high intrinsic value. Adequate transportation is critical to Kodiak's future development. Indeed, several existing transportation facilities help to anchor the urban area economically: the City dock, the state airport, the state ferry service, the Inner Harbor, crowded as it is. Transportation or development: it is arguable which is the cause and which the effect, but it is clear that the two must keep pace.

Urban Area Transportation

Streets and highways are the primary elements in the urban area transportation system, which is predominently oriented for travel by automobile. Adequate facilities for pedestrian and bicycle travel are virtually non-existent throughout most of the area. As the urban area develops, facilities for all three types of travel will need to be provided and upgraded. It will be important to relate land-use planning closely to existing or planned transportation facilities. In general, the principle to follow is the higher the intensity of use, the greater the transportation need. Just as paths and roads only make sense if they connect destinations, major destinations such as shopping areas, apartment complexes and schools should be located on major paths and roads. This will protect public safety (by providing access for firefighting, police, emergency vehicles) as well as improve traffic flow. In doing this, direct access may have to be controlled, or congested "strip development" may result. But the principle is still important: major uses on major roads.

Outside the City of Kodiak, 32-foot-wide gravel roadways are the standard for state highways. Within the City of Kodiak, most of the major streets are paved, and many have curbs, gutters and sidewalks along one or both sides. Map 14 illustrates the extent of paved roads in the Kodiak urban area. Roads which are maintained by either the Alaska Department of Transportation (DOT) or the City Public Works Department are generally in good condition; the paved roads indicated in Map 14 are particularly well maintained. Since the Borough currently has no road maintenance capability, roads outside the City which are not on the State system are not maintained on a regular basis; therefore, many of the local gravel access roads in the subdivisions just outside the City are in very poor condition.

State Route F-11 (Benson and Rezanof Drive) through Kodiak is the City's principal arterial street and is the only approach to the Kodiak urban area from the south. To the north, Mill Bay and Mission Roads supplement Rezanof Drive as secondary arterials connecting the residential areas of Kodiak with the Central Business District (CBD) and harbor. The recent completion of the Rezanof Drive extension will shift a significant portion of the through trips on Mill Bay Road to Rezanof Drive.

Map 15 illustrates the current daily traffic volumes on principal streets in the urban area. The heaviest concentration of vehicles occurs on the downtown streets which serve the principal commercial activity of Kodiak, the seafood processing plants and the adjacent small boat harbor. On Benson Avenue (SR F-11) between Marine Way and Center Street, the area's highest daily traffic volume of 8,950 vehicles per day was recorded. The intersection of Benson, Center, Mill Bay and Rezanof carries a total of 11,600 entering vehicles daily and is Kodiak's most heavily congested intersection. Map 15 also displays general traffic flows to and from the Kodiak CBD. The location of most work and shipping activities in the downtown focuses traffic on the limited number of through streets serving the downtown area. If the pattern of concentrating employment and retail growth in the downtown continues and is coupled with low density residential development to the north, the result will be increasing pressure for widening and upgrading Mill Bay, Rezanof and Mission Roads.

The City of Kodiak has undertaken a program of paving streets in densely settled residential areas. Recent reconstruction of Birch Street in the Aleutian Homes Subdivision and the paving of 6th, 10th and 12th Streets are examples of this program. The Aleutian Homes paving project was jointly financed by a HUD block grant allocation, City sales tax proceeds and abutting property owners. Another recent project is the extension of Rezanof Drive to Mill Bay Road by the Alaska DOT. Road construction costs on Kodiak Island are quite high compared to typical costs in the "Lower 48." The City's Aleutian Homes paving project, which consisted of excavating the existing gravel road and constructing a 33-foot-wide asphalt street wtih curbs, gutters, and sidewalks, cost $956,000--an equivalent of $1.03 million per mile. The State's extension of Rezanof Drive as a 32-foot-wide gravel road (with 40-foot sub-base) cost $1.7 million for 1.9 miles of road, or $0.88 million per mile.

Traffic control devices include all signs, signals and pavement markings placed on streets and highways by public authorities and which regulate, warn or otherwise guide traffic. Field review of Kodiak's traffic control

devices revealed a lack of pavement markings on paved City streets. The absence of lane lines contributes greatly to driver confusion at complex intersections, such as the one at Rezanof and Center, leading to congestion, delays and potential traffic conflicts among turning vehicles. There are no traffic signals presently operating in Kodiak, and signs are in general conformance with the provisions of the US Department of Transportation Manual on Uniform Traffic Control Devices. Several black-on-yellow "Yield Right of Way" signs of the pre-1971 design were observed, however. These should be replaced with the standard red-on-white "Yield" sign established by the MUTCD.

The TRANSPO Group conducted an inventory of parking facilities in downtown Kodiak. There are approximately 850 total vehicle spaces in the downtown area. The majority (75%) are located in City-owned parking lots serving the adjacent retail businesses. During the fishing season, severe parking shortages were reported in the downtown area, attributed to crewmen leaving vehicles in downtown parking lots while they are at sea. The lot adjacent to the boat harbor can accommodate only a small portion of this long-term parking demand. Weekday occupancy rates of 40-60 percent during the off-season were observed indicating a potential deficiency during peak parking demand periods.

Public transportation in the urban area now consists solely of privately owned and operated taxis. The existing taxi service, a form of paratransit, appears adequate to meet the current level of demand for public transportation services and, with modifications may be able to accommodate the demands for such services.

Facilities for pedestrians in the urban area are limited to sidewalks in the downtown and part of the Aleutian Homes area. There are also sidewalks along the paved portion of Rezanof Drive. Concern has been expressed over the lackof sidewalks and established trails, citing safety, dust, noise and general discomfort. No facilities have been provided or designated for bicycles either, and the same concerns have been expressed.

A principal source of problems in the present urban area road system is the design and construction of local roads by developers. Streets built by private developers as part of a subdivision are subject to public review at two points. The first point is during the subdivision permit application process. The Borough's Subdivision Regulations, in conjunction with an Official Streets and Highways Plan, should set overall design criteria for roads and streets within new developments. The second point is when such streets are dedicated to a public agency for operation and maintenance. The City of Kodiak is the appropriate agency within its corporate limits. As of this date, the Borough has not been accepting dedications because it has had no maintenance capabilities. Dedicated streets should be constructed to standard agency specifications to ensure that the public is not saddled with excessive repair and maintenance costs. In the past, the City of Kodiak has found that gravel roadways with inadequate subbase and substandard construction have proven to be difficult to maintain for normal use by residents. For this reason, the City is now in the process of developing standard specifications for dedicated improvements.

Forecasts of future traffic demand for the Kodiak urban area were prepared using the small-area population projections presented in Map 13. Growth factors for observed traffic patterns in established residential areas were developed from predicted population growth in these areas. Traffic forecasts for the developing residential neighborhoods outside the City were obtained by applying current trip generation rates (daily vehicle trips per person) to the future population estimates for these areas. The projections for 1985 are included on Map 15. Two alternative projections are shown on Map 16.

The results showed that the capacity of the existing CBD parking areas would be insufficient to accommodate the increased demand. Analysis of land use and developable land area revealed a similar lack of space in the downtown area for commercial and retail land use growth to serve the forecasted 1995 population of the Kodiak urban area. A sketch land use plan was developed to meet the future needs of the Kodiak urban area in accordance with the development goals and objectives of the Borough. A reassignment of future travel demands in accordance with this land use plan was then accomplished. Both projections are presented for comparison.

1985 forecasts assume modest expansion of retail and commercial floor area in the CBD, some new convenience shopping stores (food, drugs and housewares) in northeast Kodiak and concentration of new employment in existing locations near downtown. By 1995, it is anticipated that a new major retail shopping center will have opened in northeast Kodiak to serve the rapidly growing residential districts in that area.

A comparison of future traffic flows across selected screenlines bisecting the principal highway facilities in Kodiak is presented on Map 17. The map demonstrates that travel demand to CBD employment, commercial and retail activities could nearly double over the next twenty years, even with the proposed commercial and retail development in northeast Kodiak.

Using existing traffic conditions and projected land development patterns as a guide, a recommended Official Streets and Highways Plan was developed for the Kodiak urban area. As shown in Map 17, this plan delineates a system of major and minor arterials and collector streets to serve the growing traffic needs of the City of Kodiak and adjacent residential areas in the Borough. Existing streets are classified as to traffic function, and approximate locations for future collector streets in developing areas are suggested. The adoption of this plan by the Borough, with the concurrence of the City of Kodiak, as part of the comprehensive Borough Regional Plan and Development Strategy is strongly recommended. It will provide a comprehensive framework for future street planning in connection with zoning and land development review functions.

The recommended plan designates Rezanof Drive as the major arterial street, connecting the Kodiak CBD with residential developments and activity centers such as the Coast Guard Station lying outside City limits. Within the City, Rezanof is supplemented by Mill Bay Road and Mission Road as parallel minor arterial streets. East-west connectors at appropriate points are also indicated. The primary function of the arterial street system is to provide a high level of mobility for through trips and, where appropriate, limited access to commercial and residential land uses. Collector and local streets complete the recommended plan by providing access to the City's residential areas from the arterial street system.

Table 14 presents a summary of important characteristics of each type of street classification shown in the Official Streets and Highways Plan. While paved residential streets are a desirable goal in any community, the high cost of paving construction and low traffic volumes in Kodiak indicate that paving of local streets, and even some collectors, should be a low priority for the Borough and City. Properly constructed and maintained gravel roads appear adequate to serve the access needs of many of the area's residents. For new roads, however, strong consideration should be given toward paved streets in commercial areas, and even in residential districts within the urban area. The Borough should also adopt design standards based upon an Official Streets and Highways Plan before the next construction season. Concurrently, the Borough and the City should adopt detailed standard specifications for roadway construction. In developing areas, the question of paved versus gravel surface roads should be resolved by a policy decision either to provide paved streets throughout all residential areas or only to pave the major streets identified in the Official Streets and Highways Plan.

Although the need for maintenance of local roads outside the City is evident, the economics of scale indicate that the Borough should not attempt to develop yet a third road maintenance agency in Kodiak. It is therefore recommended that the City and the Borough jointly establish and fund a unified department for maintenance of all local roadways in the Kodiak urban area, with possible extensions to other portions of the Borough as economics dictate--the Bells Flat area, for example.

At least two general approaches to the establishment of a unified roadway maintenance department are possible. In the first concept, termed the "Urban Service District," the City of Kodiak would contract to extend service to areas beyond the City limits. Fire protection services are now provided to the Island Lake area on this basis. The "Metro" concept is a second approach in which the City and the Borough would set up a third, independent agency charged with specific, limited function--in this case, road maintenance. Whatever the jurisdictional approach, the existing City of Kodiak Public Works Department (KPWD) could logically furnish the core for a unified roadway maintenance department. When this unified department has been set up, the City and Borough should begin a five-year road improvement program to bring designated arterials and collectors up to the design standards proposed in Table 14.

Analysis of existing traffic conditions in Kodiak has led to the identification of several deficiencies in the transportation system which can be alleviated by immediate low-cost street improvements. The following projects are recommended for implementation by September 1979:

- Install pavement markings and traffic signs at appropriate locations throughout the Kodiak urban area. This program would be eligible for federal funding (up to 100%) through the Alaska Highway Safety Planning Agency in Juneau.

- Signalize and channelize the intersection of Benson, Center, Mill Bay, and Rezanof. Based upon hourly approach volumes, the intersection exceeds the Minimum Vehicular Volume Warrant (Warrant I) of the Manual on Uniform Traffic Control Devices for cities

TABLE 14 PRINCIPAL DESIGN CHARACTERISTICS FOR STREETS AND HIGHWAYS IN THE KODIAK URBAN AREA

STREET CLASS	TRAFFIC FUNCTION	ACCESS TO ABUTTING PROPERTY	TYPICAL STREET WIDTH (feet)[4]	ROW WIDTH (feet)	GENERAL ROADWAY TYPE	ADT RANGE
Major Arterial	Mobility for longer trips, serve through traffic	Highly Restricted	48 - 60	80	Paved, curb, gutter, and sidewalks[1]	5,000+
Minor Arterial	Mobility for short trips, serve commercial land uses	Some Restrictions	44 - 48	70	Paved, curb, gutter, and sidewalks[1]	3,000 to 5,000
Collector	Connect arterials and local streets, serve both residential and commercial uses	No Restriction	36 - 48	20	Paved, gravel shoulder[2]	1,000 to 3,000
Local	Land access, serve residential land uses	No Restriction	30 - 36	60	Gravel, Sealcoated[3]	less than 1,000

[1] Gravel shoulders outside developed areas

[2] Curb, gutter and sidewalk optional

[3] Paving optional; sealcoated gravel road may be sufficient

[4] In developed areas; street width includes parking lanes

of 10,000 persons or less. Physical modifications should also be made to the intersection approaches to improve traffic flows.

- Pave Upper Mill Bay Road between Mill Bay and Rezanof and improve the intersection of Mill Bay Road and Upper Mill Bay Road. This street should be paved to provide better access to government offices for area residents and to provide a secondary entrance to downtown Kodiak from the Aleutian Homes residential area. The intersection of Mill Bay and Upper Mill Bay should be improved to provide left turn lanes and generally channelize traffic movements with paints stripes and buttons.

- Monitor traffic volumes and install traffic signals at the following intersections when warranted:

  Upper Mill Bay Road and Rezanof Drive
  Upper Mill Bay Road and Mill Bay Road
  Mill Bay Road, and Birch Street and 6th Street
  Benson Street and Marine Way

The following recommendations are directed toward accommodation of long-term growth in the Kodiak urban area and may take considerable time to evolve into a series of specific implementation projects. Work on developing these programs and projects should begin as soon as possible, however, in order to ensure their timely implementation when the need arises:

- Adopt a comprehensive parking program for downtown Kodiak which addresses the needs of both the retail stores and the fishing fleet. It is recommended that the City of Kodiak control long-term parking in downtown Kodiak through adoption of a parking ordinance and police enforcement. Concurrently, the City should establish a peripheral lot for long-term parking adjacent to downtown with a low cost or free taxi shuttle service between the harbor and the parking lot.

- Develop a mass transit service which initially serves Kodiak Airport, downtown Kodiak, and the community college. Taxis or vans could operate on a regularly scheduled route from the Kodiak Airport (State Airport) through the downtown area and along Upper Mill Bay and Mill Bay Roads to the Community College. A license would be granted specifically for this route, and the operator would charge passengers a flat fare to or from downtown Kodiak. During the summer, the route could be extended to Fort Abercrombie.

- Improve pedestrain facilities along Mill Bay Road. The Mill Bay Road/Upper Mill Bay Road corridor is a logical location for pedestrian travel emphasis. Redevelopment of the roadway is necessary and sidewalks should be included when the roadway is upgraded. Bicycle facilities could also be provided in this corridor.

- Facilities for recreational walking and cycling should also be considered in the Borough's recreation planning. The location and design of these facilities will respond more to local preferences and specific siting opportunities than to functional transportation criteria.

Island-wide and External Transportation

The highway network in the Borough is limited to the Kodiak urban area and its environs. None of the villages are linked by overland routes. They are widely separated by difficult topography, making the extension of road connections extremely expensive in relation to the number of people served. More importantly, perhaps, road connections could have drastic cultural implications for the villages. Thus, air and water modes provide the principal means of both intra-Borough and external transportation for people and goods and are likely to continue to do so.

Kodiak Island Borough is generally well served by local and regional air carriers as well as on-call charter operations. Two major carriers, Wien Air Alaska and Western Airlines, provide service at the Island's major airport located on the U.S. Coast Guard Support Center south of the Kodiak urban area. Although air travel to and from Kodiak has grown rapidly in recent years (increasing approximately 20% each year since 1973), both major carriers have sufficient capacity on existing flight schedules to accommodate projected growth with an average load factor of less than 70% by 1985. On the other hand, passenger terminal facilities are barely adequate for the present.

Local air transportation to the villages of the Borough is provided by Kodiak Western Alaska Airlines. The majority of the village flights utilize amphibian or float planes which take off and land on Kodiak Harbor in the downtown area. Service frequencies vary from once or twice per week for smaller villages up to twice daily in summer for the largest villages (Old Harbor, Ouzinkie and Port Lions). Discussions with Kodiak Western Alaska Airlines management indicated a reserve capacity adequate to accommodate increased air passenger travel demand at several times the existing level.

The City of Kodiak owns a small, general aviation airstrip just outside the City limits on the northwest side of Mill Bay Road. The gravel-surfaced runway is in poor condition and has severe vertical alignment and sight distance problems. Fortunately, the present volume of use at the Kodiak Municipal Airport is low. Any significant increase in aircraft operations at this airstrip would require an extensive reconstruction program to bring the airfield up to acceptable standards.

Fresh water float planes utilize Lilly Lake, adjacent to the municipal airstrip. A significant percentage of this use is by Kodiak Western, which maintains hangar facilities at the municipal airport. Lilly Lake and the municipal airport are located in a prime area for expansion of the Kodiak urban area. There is an existing land-use conflict between aircraft operations and residential uses, which will continue to grow worse.

The state airport has far more than adequate capacity to handle all foreseeable commercial, general and Coast Guard air traffic. Therefore, all air transportation could probably be consolidated at the state airport. As a point of information, Kodiak Western has reportedly expressed interest in moving its entire operations to the state airport, proposing to operate its amphibians out of the existing crash boat harbor.

However, consolidation would mean a strain on the existing air passenger facilities at the state airport. While airside capacity is sufficient to accommodate a tripling of annual aircraft operations, landside capacity for commercial air passengers is barely adequate to meet today's needs. Failure to expand passenger facilities could result in very long ground times for aircraft between flights by 1985. Consolidation and expansion of general aviation, particularly in the face of possible OCS-related traffic, will also require additional facilities. Tie-down facilities, hangar space, warehousing, and fueling will require special attention.

It is recommended that the Borough initiate an Airport Master Plan study, enlisting the active cooperation of the City of Kodiak and the Coast Guard. This study should be a detailed examination of the alternatives for meeting the future needs of air travel to and from Kodiak including commercial airlines, Coast Guard operations, general aviation and float plane operations. Consolidation of operations at the state airport appears both possible and desirable. Terminal improvements might be financed initially by the Borough or a newly-instituted "Port of Kodiak," and the costs recovered over time from the carriers. General aviation facilities could also be self-supporting through user charges; space might also be made available to general aviation operators for construction of their own support facilities. Not only would this study provide an adequate basis for planning the future of Kodiak air transportation, it would be the necessary first step toward making the existing municipal airport available for redevelopment into productive residential, commercial and recreational land uses.

The Kodiak fishing fleet is one of the principal expressions of the Borough's economy, and the expansion of the fishing industry into the bottom fishery is one of the major sources of potential economic growth in Kodiak. It has been known for years that the present harbor is woefully inadequate, even for the needs of the existing fleet. The Army Corps of Engineers currently has in hand an approved plan to build a small boat harbor in Dog Bay. To provide access to this new harbor, the Port of Kodiak could commission, design and operate a passenger shuttle ferry to connect the harbor with downtown Kodiak. Funds to operate this service and to repay the initial cost of the ferry could come from docking fees charged to harbor users. However, aside from the economic problems of financing such a facility, the uncertainties related to the stability of Pillar Mountain pose a major threat to any development in the Inner Harbor and Dog Bay area: thus before a commitment to the building of a new boat harbor in this area can be made, a positive resolution to the Pillar Mountain issue must be achieved.

A previous planning study for Near Island proposed a development alternative in which a high-level highway bridge would provide access to the new harbor. Residential, commercial and institutional development would be added to the basic harbor development under this proposal. It is apparent that sufficient developable and easily serviced land exists in the Kodiak urban area to accommodate expansion without relying on Near Island. A rough estimate of what the bridge might currently cost is 4 million dollars ($100 per square foot, for a bridge 30 feet wide and one-quarter mile in length). This would absorb almost all the available local bonding capacity if financed locally. Pursuit of state or federal financing might actually jeopardize harbor development since the success of these efforts would be questionable,

and the Corps has made provision of access a first condition for their construction of the Dog Bay boat harbor. For these environmental, economic and land-use reasons, it is not recommended that the provision of a vehicular bridge to Near Island be pursued at this time. However, very little space for waterfront fishing-related industry is available around the Inner Harbor; this situation is aggravated by the Pillar Mountain Landslide. Should future harbor facility location studies identify Near Island as a logical priority area for industrial expansion despite the foregoing reasoning, the need for a vehicular bridge should be reconsidered.

Congestion has been reported at the City Dock, operated by the City of Kodiak. This appears to be due more to problems with ship scheduling and shoreside freight handling and storage, rather than to lack of berthing and unloading capacity. It is recommended that the Harbormaster assist the shipping lines in scheduling their vessel deliveries so that two or more vessels do not arrive in Kodiak simultaneously. At present, the average number of freighter arrivals is significantly less than one per day, so scheduling might well increase system capacity without requiring the very expensive provision of new dock space. Of course expanding the City dock would be unwise until the Pillar Mountain geotechnical study is completed. A similar approach to shoreside container handling and storage may also reduce the need for more backup area. Presently, ferry service to Kodiak is provided by the M.V. Tustumena. Capacity is adequate for present demand, except during the peak (summer) season and the period when the vessel is completely withdrawn from service for annual repairs. With population growth, demand can be expected to increase proportionately. The addition of a new vessel to the run would make it possible to maintain year-round ferry service to Kodiak during the winter and would add peak capacity during the summer season. It is therefore recommended that the Borough and City officially request that the State of Alaska take steps toward adding a vessel to the Kodiak service. At the same time, the Borough and Port Lions may wish to press for the addition of regular service to that community.

Small boats have historically been a principal means of travel in the Kodiak Archipelago. Well constructed launching facilities on Anton Larsen Bay and Monashka Bay would help to make travel to the Kodiak urban area safer from Port Lions and Ouzinkie by making it possible to reach intermediate destinations on the road network without rounding Miller Point and Spruce Cape in bad weather. The Anton Larsen Bay ramp would be an improvement and expansion of existing facilities, while the Monashka Bay ramp would provide good facilities where informal launching and beaching have taken place. Temporary moorage facilities should also be considered, though weather and water problems may ultimately make them unfeasible.

Recommendations

- Adopt an Official Streets and Highways Plan for the Kodiak urban area.

- Adopt design standards and construction standards for streets and highways.

- Establish and fund a unified road maintenance department for the urban area.

- Redevelop Mill Bay Road to consolidate access points, provide pedestrian facilities, and allow paratransit service.

- Implement immediate action projects to improve existing traffic conditions.

- Adopt a comprehensive parking program for downtown Kodiak to reduce conflict between long-term fishing fleet parking and retail store parking.

- Initiate airport master plan to improve, expand and consolidate air facilities at state airport.

- Provided a positive resolution to the Pillar Mountain problem is achieved, continue to encourage and participate in development of Dog Bay Small Boat Harbor.

- Assist in scheduling cargo berthings to improve cargo-handling and pursue provision of year-round ferry service.

- Provide small-boat launching and temporary moorage facilities in Monashka Bay and Anton Larsen Bay.

MAP 17

VII. LAND USE (Without OCS Development)

Sketch Plan

Another result of the OCS Impact Study was a sketch land use plan for the urban area, reproduced on Map 18. This map was produced to display one preliminary interpretation of the Borough Community Attitude Survey, and was not checked against projected population, utility requirements, etc. It has served as a good point of departure for the development of the recommended land use plan shown on Map 19.

Comparison of these maps displays some important decisions the community and its officials will have to make. Both plans are generalized policy proposals for a target year of 1995; neither would ever be fully realized. Rather, the purpose of the adopted long-range plan would be to guide short-range decisions on zoning, variances, subdivision approvals, street extensions, school siting and the like.

The sketch plan is essentially a continuation of present development and past plans. Significant points to note are the large amount of land in low density residential use (one acre lots), retention of most commercial growth in the downtown area, extensive development of Near Island, strip commerce along Mill Bay Road and an industrial park at the municipal airport. No specific use is identified for Spruce Cape.

Recommended Land Use Plan

By contrast, the recommended plan proposes much larger areas for medium (7200 square foot lots) and high density residential development (apartments), in areas served by sanitary sewers and public water. This is to offset the impact of rising land prices on housing costs. The plan also would allow trailer parks or mobile home subdivisions in selected medium density areas, again to offset rising housing costs. Specifically, the plan proposes expansion of residential use in the Island Lake-Spruce Cape area rather than Near Island or Bells Flat, both of which have previously been suggested as expansion areas. Apartments would be concentrated along Mill Bay Road, which should be redeveloped as a high density residential corridor with major roadway and traffic improvements, as well as pedestrian and bicycle facilities. The idea is to concentrate daily destinations for walkers in one area to gain the most benefit from transportation improvements. The Monashka Bay area would remain low density and unserviced.

New industrial development is suggested at Swampy Acres (off the map) and on land presently occupied by the City's Municipal Airport. The former recommendation is dependent upon identifying a suitable sanitary landfill site, and the latter recommendation is dependent upon the feasibility of relocating general aviation from the City airport to the State airport. Aesthetic impacts at both sites can be minimized by requiring landscaping and buffering. The plan proposes limited industrial development on Near Isalnd to support the Dog Bay Boat Harbor. Again, the plan's limitations on use of Near Island are contrary to a previous proposal.

Industrial area for the fish-processing industry is extremely limited in the existing Inner Harbor area. Judging by typical industrial space requirements, approximately 20 acres every 5 years would be required to allow the fisheries-related development that would generate the low-range projected population. Again, it is for the community to decide if it wants to pursue further economic development at all. If it wishes to do so, infill development along the existing "cannery row" is possible for the next five years or so. Beyond that, suitable land is not readily identifiable due to the uncertainty over Pillar Mountain, potential environmental problems (at locations such as Trident Basin), and marine engineering and weather issues. The Pillar Mountain situation also carries the potential that relocation of the City Dock may prove necessary. If so, it conceivably could prove beneficial for the community to seek cooperative development of new cargo and dock facilities with an OCS marine service base. The timing of the geotechnical study may be uncomfortably close to the OCS lease sale. The Borough and City may therefore wish to pursue a study of alternative sites, associated costs, and the location relationships between cargo facilities, backup facilities and the seafood processing industry. Pursuing the study now would provide the necessary information upon which to make a reasoned decision at the time of the lease sale or shortly after.

Only limited growth is suggested in the existing commercial core because it is located in a seismic wave hazard area. Expansion of commercial space is proposed in two neighborhood concentrations along Mill Bay Road and a second major center near Spruce Cape, timed as population develops in the Island Lake - Spruce Cape area. The intent is to control strip commercial development along Mill Bay, with eventual physical redevelopment of the roadway itself. The major characteristic of commercial strips is uncontrolled access, leading to safety problems and congestion, as well as visual blight.

Open space recommendations are tied to natural hazard and drainageway recommendations made earlier, and retention of public lands until they are evaluated for other purposes. A number of private parcels along shorelines are indicated as "green belt"; these are undeveloped properties in the tentative tsunami hazard zone. It is not intended that they be taken for public use, but that new residential use be prevented in this area. The greenbelts in the Spruce Cape Area are intended to indicate the potential application of planned unit development and recreation land dedication provisions in the zoning and subdivision ordinances.

Map 20 summarizes urban area projects that are suggested for action in the near future. These have all been touched upon earlier, but several may require further elaboration. The traffic signals indicated were discussed in Chapter VI. The Benson/Mill Bay intersection is already justified and eligible for funding assistance. The others will require more detailed traffic counts to verify needs. The police station expansion is a high priority, but should be delayed until the results of the current state-sponsored, state-wide study of Alaska State Trooper and holding facilities is known. It may be that at least part of the requirements for jail expansion can be met in a state-financed facility. The fire substation is proposed near the northern intersection of Mill Bay and Rezanof, to better serve already developed residential areas at the northern end of the urban area.

This location is also proposed for the first new elementary school. Children from the Island Lake and Outer Mission Road areas would be within easy walking distance of a school here, and it would be well-sited to pick up population from the Mid-Cape and Spruce Cape neighborhoods as they develop. A site size of 5-10 acres is recommended to accommodate playfields, parking and retention of natural areas for buffering and informal play. Unfortunately, there is no adequate publicly owned site in the area now. Purchase may be necessary, or dedication as part of a planned unit development may be possible, depending on the size of parcel ownership in the area. A second school site for the near future is identified at the south end of the municipal airport, on Borough land. This site would be dependent on the results of the airport study; it might still be feasible even if float plant operations were retained at Lilly Lake. Again, 5-10 acres is recommended; the site would be within one-half mile walking distance from the developing Baranof Heights, Beaver Lake and Kodiak Subdivision neighborhoods. A third priority site (shown on Map 19) would be at the south end of Lilly Lake, again depending on the airport study. The population of the Aleutian Homes area is probably greater than that suggested strictly by a count of housing units, and this neighborhood already appears able to fill half of a new elementary school by itself.

Suggestions have been made that the new school sites be at Bells Flat and Monashka Bay. Referring back to Maps 12 and 13, the recommended sites are at either end of the group of neighborhoods with high priority for development. These are the areas that are generating the major increase in school population. Map 13 displays the estimated 1977 populations of Chiniak, Bells Flat and Monashka Bay. Taking the elementary school population at roughly 20% of the total, the Bells Flat/Chiniak area probably generates 70 children while a new school would hold some 400-450 children. Since the Coast Guard Support Center is not growing significantly, it appears most reasonable to continue to accommodate these children at Peterson Elementary School. Monashka Bay appears to generate some 20 school children. Eventually a site is recommended at West Mill Bay, but in the meantime it is recommended that schools be centered where the school-age population is growing most rapidly. These are also the areas already or soon to be provided with sewers, water and fire protection. Again, the underlying recommendation is to concentrate public expenditures for the most benefit.

Major Non-OCS Alternatives

The recommended long-range plan for the urban area is a proposal made to the Kodiak community. The community will decide what its future is to be. The three basic alternatives before the community, setting OCS activity aside for the moment, are:

1. Continue present de facto policies and development trends. This might be termed the "No Action" alternative. It would look something like the sketch plan, except that the development of Near Island is believed to be unlikely.

2. Take steps to correct existing shortfalls in community facilities, infrastructure and housing. Develop necessary infrastructure and provide space to allow projected industrial growth and associated

population increases. This would amount to "planned growth." It would eventually look like the recommended plan, except that the final location of industrial expansion land cannot be determined at this time.

3. Take steps to correct existing shortfalls in community facilities, infrastructure and housing, but do not accommodate additional growth in employment. This would amount to a "growth freeze." This would resemble much of the recommended plan, but less area would be in medium and high density residential housing; the second commercial center would not develop; and Mill Bay would not develop fully into a high density, pedestrian-oriented corridor.

The recommendation made here is that the community choose alternative 2 or 3. To help in making the decision, this summary of the existing situation is offered:

- The economy of the Kodiak urban area is based upon the fishing industry and the Coast Guard.

- Coast Guard employment is stable for the foreseeable future. The Alaskan fishing industry appears to be on the verge of significant expansion, and Kodiak could attract many of the jobs involved if it can provide the space and infrastructure necessary to the industry--including both the fishing fleet and the canneries.

- At present, however, Kodiak's infrastructure is seriously strained, and housing for workers is in short supply. Until these constraints are removed, significant industrial growth is unlikely.

- The shortfall in services and housing also has adverse environmental effects. In particular, these include surface water pollution, dust, periodic water and power shortages, high prices, overcrowded housing, and development in hazard areas.

- Significant effort and expense will be required to correct these shortfalls and their effects.

- To minimize this effort and expense, as well as to slow the rate of housing cost inflation, concentration of service expenditures is recommended.

- Accommodating significant industrial growth and associated population growth will require additional expenditures in advance of that growth.

- Because of the uncertain stability of Pillar Mountain, large-scale expansion in the existing "cannery row" area is not advisable, and the existing city docking facilities should not be expanded at this point. Significant population growth may be delayed until industrial growth resumes.

Recommendations

Housing

- Slow homesite cost inflation by allowing resubdivision and development on 7,200 square foot lots in areas to be provided with services (Island Lake and Spruce Cape).

- Provide opportunity to reduce home construction costs by allowing townhouses and planned unit developments.

- Provide opportunity for affordable moderate income housing by zoning areas for mobile home subdivisions and trailer parks; allow mobile homes in other single-family areas only during construction of conventional homes (two-year limit).

- Provide additional areas for multi-family rental housing in West Channel area and along redeveloped Mill Bay Corridor.

- Encourage canneries to provide dormitory housing for seasonal workers (above tsunami hazard zone). Enforce existing zoning to eliminate overcrowding and de facto dormitory use of housing in single-family districts.

- Form local housing authority to provide housing for residents unable to afford private rentals or purchases.

Industry

- Pursue development of Dog Bay Small Boat Harbor for fishing fleet and interim development of transit docks at Shannon Point.

- Provide ferry to Near Island for access to Dog Bay moorage; allow limited area for fleet-related industrial development on Near Island, with care to protect Trident Basin.

- Pending outcome of Pillar Mountain geotechnical study, do not commit to expansion of City Dock or Cargo Terminal; pursue parallel study of: a) dock and ancillary facility requirements and b) alternative sites, related costs and operational characteristics.

- Pending above studies, expansion by canneries along "cannery row" should be with realization that City dock may be relocated.

- Encourage light industry to relocate from redeveloped Mill Bay Road to industrial park in municipal airport area.

- Restrict industrial activity in Bells Flat to accord with Coast Guard restrictions for Holiday Beach Receiver Station.

- If suitable alternative solid waste sites can be identified, allow transportation-related industrial development at "Swampy Acres."

Commerce

- Maintain existing downtown commercial core, with limited expansion, pending determination of probable tsunami recurrence and height. Commitment to expand should be with realization of potential tsunami hazard.

- Designate subsidiary neighborhood commercial centers to serve immediately adjacent residential areas.

- For the long-term, reserve area for a second commercial center to serve population in Spruce Cape and Island Lake areas, near intersection of Mill Bay Road and Rezanof Drive. Reserve sufficient area to relocate downtown core pending tsunami hazard identification.

VIII. OCS-Related Industry

The preceding chapters have been intended to bring Borough long-range planning to the point that reasoned decisions can also be made about Borough policy toward location and management of OCS onshore facilities and related industries. The two principal choices the community has are:

1. Try to capitalize on OCS onshore development as a stimulus to the Kodiak economy; allow it to site in or near the urban area.

2. Keep OCS development at arm's length; minimize its effect on the urban area.

A brief summary of the on-shore effects of OCS-related development includes these points:

- It probably cannot be kept out of the Borough.
- There is potential for short-term economic gain and a longer-term increase in the tax base.
- OCS-related employment could seriously aggravate existing socio-economic problems in the urban area. A sudden population boom, especially likely during the construction period for an oil terminal, would require expansion in services that the boom would be too short-lived to finance.
- A boom would also drive prices, and therefore wages, up; this could well force the fish-processing industry to move out of Kodiak. The result could be loss of a major share of the urban area's long-term economic base.
- Enough feasible and environmentally acceptable sites appear to be available (see Map 2) that the Borough can greatly influence the choice of site.

Therefore, a general arm's-length policy is recommended toward onshore OCS-related development. It should be kept out of the urban area and villages. If possible, one of the Native corporations should receive some of the benefits associated with provision of onshore facilities. However, the door should be left open for possible joint development of a service base near the urban area in view of the problem posed by the Pillar Mountain landslide and its proximity to the Inner Harbor.

Significant onshore OCS-related development is likely to occur only if and when an oil discovery is made. The oil companies are reported by Simpson Usher Jones, Inc. as not likely to establish a marine service base in the Kodiak Island Borough during the initial exploration period. During the development period, a base might be established, possibly beginning in 1982. This base would be a trans-shipment point for materials required by the offshore drill and production rigs and could therefore generate considerable vehicular traffic if located on the road system. It would also require a large supply of fresh water, which would strain the capacity of the City of Kodiak water system in its present configuration, if an attempt were made to link the service base to the City system. These would be the major impacts; the numbers of construction and operation personnel would probably not pose insurmountable problems for the urban area (see Case 2B, Table 6).

An oil terminal, the other likely type of onshore facility, would only be built if commercially exploitable amounts of oil were found. Construction would probably start in 1985 or 1986, and large numbers of construction workers would be required (Cases 2a and 3, Table 6). This influx of workers would definitely cause severe community dislocations unless mitigating measures were imposed.

The recommended strategy for dealing with OCS-related facilities revolves around two major points: 1) the Borough, in cooperation with other local jurisdictions and groups such as Koniag, can and should designate the feasible sites (Map 2) most appropriate for development; 2) the zoning ordinance should be amended to encourage development only on these sites and, in any case, under carefully designed conditional use procedures. In detail, the recommended approach would be as follows:

1. Specify OCS support facilities as prohibited uses in all zoning districts other than the General Industry district, where they would be permitted as a conditional use.

2. Adopt tight conditional use provisions for OCS support facilities, as proposed in the final draft version of the zoning code (Section 17.05.040).

3. Well before the lease sale, amend the zoning maps to designate these sites General Industry (12). Use the "amendment with special limitations" procedure (Section 17.08.090) to restrict the allowed uses beyond those generally permitted in the General Industry district (Section 17.03.130 of the draft zoning code). This would prevent other industrial uses such as canneries from pre-empting these prime sites. However, enough allowed uses have to be specified to avoid "spot zoning." Suggested uses include the following:

    a) Permitted principal uses and structures:

        i. Boat moorages;
        ii. Boat repair;
        iii. Open space for informal recreation.

    b) Permitted accessory uses and structures:

        i. Accessory buildings;
        ii. Watchman's dwellings and owner-operator's dwellings.

    c) Conditional uses:

        i. Petroleum exploration and development, marine service bases and oil terminals on tracts of not less than 5 acres.

d) Conditional accessory uses:

i. Fuel storage;
ii. Airports;
iii. Natural resource extraction operations;
iv. Dormitories.

As a result of this strategy, OCS support facilities would only be allowed in the Borough as conditional uses in the General Industry district. The only areas in this district would be the Borough's designated OCS sites and the Inner Harbor (OCS development here would be precluded by the terms of the conditional use section). Attempted OCS development in any other area would require Borough Assembly approval of a rezone (not granted easily), followed by compliance with all the conditional use provisions. In other words, two sets of public hearings rather than one. Since time is likely to be critical to the oil companies, this should further encourage them to look closely at the Borough's designated sites.

If these recommendations are followed, the planning mechanisms would be in place to deal with an actual OCS development proposal. An applicant would approach the Borough planning department as provided in the conditional use chapter (17.05) of the zoning code. Permission to develop would be subject to all the specific conditions set out there for OCS facilities. The planning commission would also impose additional conditions of approval to meet particular situations or needs. Conditions would focus on the mitigation of both the environmental and socio-economic impacts of OCS facility development.

Recommendations

- To avoid adverse impacts during construction period, do not allow oil terminal development immediately adjacent to urban area or villages. The only allowable sites on road network are to be at or beyond Kalsin Bay. Designate preferred sites and zone appropriately.

- Marine service base sites should meet the same conditions, unless City Dock relocation is warranted by results of Pillar Mountain study. If so, consider joint development of service base and City Dock.

- Retain "conservation" zoning in presently undeveloped areas. Planning permission for OCS development should be dependent upon complete environmental review and conditional use approval. Conditions to be imposed during construction.

  - Off-Island hiring halls.
  - Operators to furnish all utilities, services, housing and community facilities.
  - Limit need and opportunity for personnel visits to urban areas.
  - Limit need and opportunity for short-term secondary economic development.

IX. SHORT-TERM PLANNING TOOLS

This is the point in a planning study at which there is often a discussion of "implementing the plan." A more appropriate phrase would be "using the plan". A comprehensive plan is never fully achieved. It is a road map toward the community's future, and like road maps, it should be updated at frequent intervals. It represents long-range policy decisions about the community's future. These should be used to guide short-term planning decisions such as where to place mobile home parks, utility extensions, new school locations, and so on. Without the comprehensive overview, these short-term decisions can be seriously mistaken and successfully challenged in court.

Therefore, in one sense, this chapter will be written by the community's Planning and Zoning Commission. Draft revisions of the zoning ordinance, and subdivision regulations have been submitted and discussed. A Capital Improvement Programming (C.I.P.) process for the Borough has been proposed. An Official Streets and Highways Plan has also been put forward to guide future transportation projects and for reference when development proposals are made. The final drafts of these documents (they will not be completely final until adopted by the Borough Assembly) will be bound separately as appendices to the final version of this summary report.

X. ENVIRONMENTAL IMPACT ANALYSIS

An environmental impact analysis has been prepared for the Regional Plan and Development Strategy. The thrust of this analysis, like that of the plan, is directed toward the recommendations for the Kodiak urban area. The analysis is summarized here. It is fully reported in a separately printed working paper: "Study Element 7: Environmental Impact Analysis".

The proposed plan and development strategy consists of many recommendations which affect employment, population, land use and the physical character of the urban area. The basic employment recommendations are to encourage growth within the fishing industry and to discourage use of the local labor force for OCS-related employment. Diversifying the Borough's industry is a desirable goal, but development of seasonal industries such as tourism should not be actively pursued because growth in such industries could add on-season congestion and off-season unemployment. These are already causes of concern because of the seasonal aspects of the fishing industry.

The plan is based upon significant economic and population growth over the next 20 years. With active development and extension of the existing Kodiak economy, the population of the urban area could double or even triple within this period. Providing housing and services for this population will require considerable community effort and expense. Short-term OCS population growth would compound the difficulty. Therefore, it is recommended that OCS development and infrastructure (housing and services) be kept as separate as possible from the existing urban area. Obviously, if an oil service base and/or terminal develops on Kodiak Island connected to the existing road network, it will be extremely difficult to maintain total separation. However, by maximizing separation, the population growth in the urban area should be limited primarily to gains resulting from growth in the fishing industry and stabilization of Coast Guard manning levels.

An alternative "no growth" strategy would require a community decision not to pursue further economic development. Kodiak would then need less new housing and services, but there would still be serious problems with existing housing, services and degradation of the environment. Solving these existing problems and accommodating future population increases are important aspects of the proposed plan. Assuming that there is to be growth in the Kodiak urban area, it could also be approached in an unplanned manner. However, this would result in urban sprawl and aggravated environmental problems.

The proposal calls for planned development and concentration of housing and services within the present urban area. The result will be higher living densities for many neighborhoods. These densities will range from 6 units per net developed acre in single-family home areas, to 15 units per acre in multi-family apartment areas. Many Kodiak residents have expressed a desire to live at lower residential densities. However, less dense development usually causes more destruction of the natural environment and greater use of energy than that caused by concentrated development. It is also far easier and more economical to provide basic services to a concentrated area. Concentrated development will therefore help to keep housing costs down; these costs are also an expressed concern of Kodiak

residents. Finally, several transportation recommendations have been developed to reduce potential traffic congestion resulting from future development.

Parameters such as soils, slopes, drainage, and tsunami hazard areas have been considered in developing the plan recommendations. No extraordinary amount of grading or fill is anticipated, although minor amounts may be required for certain elements of the plan. The major probable adverse impact on the physical or natural environment will be the loss of trees, particularly with residential development of Spruce Cape. This impact can be mitigated by utilizing a Planned Unit Development approach to preserve open space and vegetation, particularly along drainageways. The plan recommends conserving most of Near Island as a natural area for limited recreational use. Under an earlier plan, Near Island would have been connected to the City with a bridge and almost fully developed. The current plan recommends a ferry, limited industrial development to support the Dog Bay small boat harbor, retention of the remainder of Near Island in its natural state, and protection of water quality in Trident Basin.

As previously noted, the plan proposes higher residential densities. Apartment districts are proposed near the CBD, as well as higher residential densities along both Mill Bay Road and Rezanof Drive. Once in-filling has been substantially completed in existing neighborhoods, expansion of residential land use is proposed toward Spruce Cape (and toward Monashka Bay in the long-term). While the private market can probably provide sufficient medium- to high-cost housing, special planning is required for low-cost housing. Higher densities will help offset some housing costs, particularly for land. The plan also recommends mobile homes as one means of providing low-cost single family housing. Mobile home subdivisions and trailer parks would be kept separate and well buffered from other housing in order to avoid potential advertisements on land values. Establishment of a local housing authority and help from the fish canneries in the form of dormitories for seasonal employees are also recommended to meet the needs for more low-cost housing.

Commercial use is to remain centered in downtown Kodiak for the mid-term. However, only a restricted area is available for expansion outside of the zone flooded by the 1964 tsunami. As population growth occurs in the Spruce Cape - Mill Bay - Island Lake areas, establishment of a second business district is recommended near the intersection of Mill Bay Road and Rezanof Drive. This proposal may cause some concern within the existing business community because it will mean only limited future growth for the present CBD. Limiting such growth is recommended because the present CBD was rebuilt in a hazard zone. By distributing commercial development, with new development on higher ground, the plan attempts to protect the urban area against another total loss of its business district. It also minimizes the potential for congestion and parking problems and would make shopping more convenient for future residents of the northeastern half of the urban area.

Neighborhood shopping is also proposed for several locations along Mill Bay Road. At present, Mill Bay is developing into a commercial strip, with uncontrolled access. This will lead to inefficient use of prime land along a major arterial, traffic congestion and safety problems. Redevelopment of Mill Bay to full arterial standards is recommended. As part of this redevelopment, Mill Bay Road is to become a major focus of neighborhood commercial and higher density residential development. The commercial development would not be dispersed, but would be concentrated in several distinct locations to serve adjoining residential areas.

Public facilities will also have to be expanded to meet existing needs and the needs of future growth. In particular, schools and fire protection must be expanded to reflect the growing population in the northeast urban area. Likewise, existing police staffing and facilities must be expanded to meet growing crime problems. Parks and recreation programs also need attention and these will be addressed in a future study.

There are several unknowns which will affect the future of the urban area. The plan recommends the maintenance of the industrial area in its present form and location. Space for expansion will be very limited in this location until the degree and extent of slide hazard from Pillar Mountain is determined. Also, the present City landfill for solid waste is nearing capacity and is located on land being transferred to a Native corporation. Since economic data on alternative locations is not complete, more study is required to determine a new landfill site. Finally, known historical and archeological sites are recommended to be preserved in the plan. Unfortunately, there is much that is not known about such sites, and further inventories should be undertaken soon prior to potential loss from new development.

In addition to these unknowns, other governmental agencies and private companies can have significant impacts in the future. These include the Coast Guard, with respect to its base and operations; the Corps of Engineers, with respect to Dog Bay and other harbor projects; the Department of Interior, with respect to its land holdings; the Native corporations, with respect to their land holdings and developments; and the course of OCS development which is addressed, but by no means resolved in the plan.

Overall, the plan should improve and protect conditions the physical or natural environment. The main objections to the plan will probably be based upon its recommendations for the human environment, particularly where those recommendations depart from previously stated goals, preivously developed plans and/or previously held convictions of business and the general public.

Dear Representative Parker,

I would like to thank you, and commend you for taking the time to look into, and vote accordingly, on the recent annexation issue here in Kodiak. My wife and I and the other residents and members of The Borough Residents for Autonomy have had our faith in the Alaskan style of Government greatly restored.

Thank you again and keep up the good work!

Sincerely,

Dick

Borough looks for options to annexation

The borough assembly last night voted to set machinery in motion for the Kodiak borough and city to work out their differences in the wake of defeated unification and annexation efforts.

The vote followed the defeat last fall at the polls of a move to have a commission draw up a charter for a unified government, and the defeat this week in the state legislature of a recommendation to annex some borough lands into the City of Kodiak.

When the Senate and House voted to reject the Local Boundary Commission's recommendation for annexation, they also passed bills directing the Department of Community and Regional Affairs to study alternatives to annexation. The department is to report back to the legislature on its findings.

Rather than wait around for the state to tell it what to do, the borough voted to have borough, city and borough and city representatives and residents from the proposed annex areas get together to discuss what to do to meet the intentions of annexation, such as providing increased services.

In other actions, the borough assembly made appointments to the Outer Continental Shelf and Overall Economic Development Plan boards, added a backup generator for Akhiok to its list of priorities and received a petition from parents in Chiniak regarding elementary school education.

Interest rates for all but the veterans home loan program would be tied to the conventional home mortgage rates, now about 11 percent, in a second measure the panel approved.

The veterans home loan fund would gain the most out of the measure by receiving all the interest and principal payments made on the roughly $30.) million now outstanding in veterans home loans. That money currently goes to the general fund.

In addition, Bradley said the 7½ percent interest rate could continue.

Gov. Jay Hammond has proposed that the veterans home loan program be absorbed by the Alaska Housing Finance Corp., which now makes loans to middle-and low-income persons. Veterans would pay about 8¾ percent interest under that arrangement.

"The vets do not want to go to AHFC and they'll raise hell to make sure they won't," Bradley said. He also said AHFC, which plans hearings March 19 in Fairbanks, Anchorage and Juneau on the proposal, "doesn't want them either."

Bradley said his bill would reopen veterans home loans — now shut down — until a longrange plan setting up something like a separate veterans housing finance corporation is reached. He also said veterans might be willing to limit their loans to just single-family dwellings or owner-occupied duplexes.

Juneau, Ak.

Chairman and members:

Thanks you for coming to Kodiak to hold a hearing concerning the recent annexation decision of the Boundry Commision. It is interesting to note that when the Boundary Commission came to Kodiak for a public hearing, only three members were present yet the decision was made by the entire commision. Listening to tapes is not the same as being at a hearing. If only the three members attending voted, the annexation would have been defeated as Mr. Strandberg voted against it. In later conversation with one of your committee members I believe Mr. Bettisworth said he was not in favor but went along with the majority. Mr. Bettisworth attended. This leaves only the chairman, Ms

Gallagher, of the members attending actively in favor of this annexation.

Mr. Strandberg's concerns about the time frame for providing services is well founded. Annexation of any size made in the past by the City of Kodiak have provided a poor track record of providing services in a timely manner. In one case, seven years to provide sewer and sidewalks are still to be provided more than 12 years later. This proposed annexation virtually doubles the size of the residential & business land mass of the City of Kodiak.

I make about $26,000/yr which is marginal in Kodiak. I own lot 12 USS 3101 near the end of Spruce Cape Rd. The size of this lot is 1.13 acres. I have a duplex on this property. Spruce Cape Rd is a state road, and whether annexed or not will still be state maintained. I have city water provided by a line

installed by the U.S. Army Corp of Engineers. In order to put this line in it was necessary to blast 3/4 miles through bed rock. The cost of a sewer line in this area is prohibitive and the priority by the city very low as we have no pollution problem. It will be at least ten years before the city of Kodiak will get around to us. They haven't even a tentative time frame. Yet they propose that we be in a 100% tax zone. Even if I were willing to change my life style, I could not. I have as much housing as is allowed with the services available. I couldn't subdivide and sell a portion. The average lot inside the city is 7200 square feet. The taxes are two and 1/2 times the tax outside. I will be paying taxes on 44,000 square feet with no way to reduce this size. To this fact? I haven't even had a say in this.

The voting district proposed for annexation voted 501 out of a

possible 850. This represents about 60%. The entire borough voted only 32.9%. I think this shows we are concerned and responsible citizens, more so than any other area in the borough. We resent not having a say in our destiny especially when city voters seem to care so little what happens to them.

The City of Kodiak is a Home Rule City. It gives their City Council tremendous power without concern for the will of the people (especially apathetic people). Their history of keeping their word is not good. For example, the proposal to put the sewer plant on Spruce Cape Rd included a sewer line for that road. The residents didn't object, feeling that we would benefit. The first thing cut because of cost was the sewer line for Spruce Cape Rd, but the sewer plant was put there. The proposal voted on by the people included this sewer line yet we

didnt get it.

Please reverse the Boundary Commissions decision, or rather recommend reversal.

Thanks you for your consideration

Sincerely

Ed Jack
Sprucecape Rd resident

Dear Governor Hammond:

I am circulating a petition that opposes forced annexation. I have several hundred signatures from the proposed annexation area. Ninety-five percent of those contacted signed the petition. The remaining five percent did not sign for religious reasons and other affiliations.

About eighty-five percent of City residents contacted have signed the petition opposing annexation.

We solicit your assistance in defeating this issue.

Sincerely,

Okey Chandler

January 25, 979

Dear Representative Parker:

I am greatly concerned about claims made by the City of Kodiak in the past several months concerning the underlying "necessity" for its annexation efforts. The City has alleged that annexation is required if it is to provide utility services sought by residents outside the municipal limits.

In fact, the City has every right to provide these services right now, without any annexation. Under Title 29 of the Alaska Statutes, municipalities owning or operating utilities are specifically authorized to extend their services outside the municipal limits. The City's own charter grants the identical power.

In addition, it is the Borough's position, currently being pursued in the courts, that the City not only has the "right" to provide these residents with water and sewer services, but is actually under an obligation to do so in light of agreements negotiated previously with the Borough and conditions attached to sewer and water funds provided the City under Federal and State grants.

Since utility funds are self-supporting, with the full costs paid by the users, there would be no cost to the residents of the City. I think it could be documented that the surcharge on the present water users outside the City results in a profit to the City. Further, until such time as sewer service is provided outside the City boundaries, the entire costs of the very expensive new sewerage treatment plant are being borne by the residents of the City, so it would be to the benefit of the users inside the City to expand the user base.

It is hard to believe that a municipal government such as the City of Kodiak would deliberately mislead the people of this area. Yet it is my opinion that such deliberate misrepresentation is precisely what has taken place. It is hoped that the municipal body which would seek to achieve annexation through such means will not be afforded the opportunity to govern those citizens it has attempted to deceive. Perhaps this is one of the reasons that the majority of the people living outside the City have elected to form service districts to take care of their needs as they perceive them.

Sincerely,

Jo

Re: Opposition to City of Kodiak Annexation Attempt

Dear Governor Hammond:

In 1965, I lived in the La Lande Addition, adjacent to the City of Kodiak. The lots were 50 X 100 feet and there was a trailer court in our vicinity. We petitioned the City of Kodiak to be annexed that year because of the need for sewer services. We were annexed in 1966.

We have a City water system that was installed with antique fittings. So poor is the City's public works capabilities that the Fitzgerald Welding Shop had a fire and was gutted because the fire department did not have the tools available to open the hydrants. It was only after the disastrous fire that modern hydrants were installed by the City. I continued to live in the same location until 1969, and the requested utilities had still not been installed. During the period of residence the only thing that I ever received were several tax increases from the City. The records of the City Public Works Department will show that the sewer was not installed until fall of 1973. The City of Kodiak's total lack of public works capability is not only well known, but easily documentable.

The City says they are broke and that they need the taxpaying participation of citizens outside the City to help underwrite the cost of services being rendered to City residents. The only thing that I can see that I will receive from the City of Kodiak are tax increases, as their past record shows. I request that you and your Administration and our Legislative representatives work aggressively against this forced annexation.

Sincerely,

John Morton

Community & Regional Affairs Committee Members -
State House & Senate
Alaska State Legislature

23 January 1979
Kodiak, Alaska

The Honorable Bill Parker
Alaska State House of Representatives

Dear Representative Parker:

I have been an Alaskan resident in Kodiak for 31 years and am in total opposition to the forced annexation of my area to the City of Kodiak for the following reasons:

1. The area is still very suburban in nature due to large lots, most of which are over one acre in size, one has 67 acres. In order to pay taxes and assessments on this size lot at this time, many of us would have to subdivide and sell part which would defeat the reason we moved out here.

2. The Antiquities Act — Proposition 13 ——— so many issues are showing us that people, yes Alaskans too do care "how" they're governed and when "enuff is enuff".

The people & their wishes should be important in decision making where their property and well-being is concerned. If people are so full of apathy that they don't express their opinions & wishes that is one thing. They deserve what they get. However, expressing such and being able to change inequitable laws and/or reverse decisions not representative of the people affected, is our right as citizens.

3. We know the City of Kodiak is in financial trouble - an article in our local papers now and again verifies this but must we pay for their mistakes and get nothing in return? We pay the city sales tax on everything we purchase in the city and everything that is delivered to us such as oil, propane, etc.... We also pay the Borough Personal Property Tax which city residents don't.... The Borough contributes to the city library on our behalf, swimming pool and gym are Borough. We who have city water pay a higher usage rate and we have and pay for a fire district.

People in the Borough recently voted for new service districts in the event they are needed, and only one area is in need of any particular service at this time which can be taken care of without being annexed. The Borough and City has an agreement contract stating the city will supply non-residents with services they are willing to pay for and want. Otherwise, the majority of the people are content with things as they are.

4. We residents organized and have circulated petitions in the affected areas and in the City. For myself I have had one person refuse to sign saying he was involved with the city over property he owns. Within the City I've only had two people not sign. Most people are well aware that the revenue the City would derive from our property couldn't pay for much service. I sincerely believe they only want us as a tax base for bonding purposes.

I am very suspicious of people or governments that go behind my back in order to get something done which affects me and mine so deeply.

If and when a majority of the people in my area by a vote feel it best to annex I would go along peaceably. None of the people in the City or in the affected areas were consulted on this matter - but treated like we weren't old enough to blow our own nose!!

Would much appreciate your careful consideration in helping to reverse the Boundary Commissions decision in this matter. Thank you for "listening".

ENC: Flyer put out & paid for
by organized residents
of affected areas.

Sincerely,
June Fuelson
Mrs. June Fuelson

Box 2069
Kodiak, Alaska 99615

Bill Parker
Chairman House Community & Regional
Affairs Committee
Pouch V
Juneau, AK. 99811

Dear Mr. Parker:

I am against FORCED ANNEXATION. We in the area that the City of Kodiak and the Boundry Commission are trying to force into the City moved in this area to be outside the City, and enjoy the wide open spaces. If we wanted to live in the City we would have built a home there and not where we all chose to live. Also I would have moved to Russia if I wanted to live under dictatorship.

Our Great Borough Government gave us an opportunity in Service District #1 to vote for or against a Service District and what improvements we wanted. The first was water; the second was sewer and the third was roads. The Borough was not biting off a bigger chunk than they can chew, like the City wants to. The Borough had Engineers draw up Plans and Specs for our Water and Sewer Service District and we are all set to go and then the City convinces the Boundry Commission to Force us in as the City is broke and needs our tax money to bail them out; but we will not get the services.

Furthermore no one wants to live under the City Charter as it reads now, as it is not according to Alaska State Statutes and someone in Juneau should look into this.

Please give us some consideration of "freedom to vote" as this is very important to all of us. Thank you for listening.

Sincerely,

Lorna-Lee Arndt

The Honorable Bill Parker
Alaska State House of Representatives

Dear Representative Parker:

I am writing you as chairman of the committee for Community and Regional Affairs, to ask that your committee investigate the apparent loss of citizens right to be heard as regards the Boundary Commissions position on the forced annexation of the approximately 2,000 acre's north of the City of Kodiak. As a resident of Kodiak for over 31 years, I have never seen a more flagrant disregard for the people than this.

Although permitted by Alaska Statutes, the intent of the Legislature could not have been to put the residents of the whole community at the mercy of commercial interests and a few misguided local politicians.

As chairman of "Borough Residents for Autonomy" for the past two months, I have discussed this issue with hundreds of local residents. My findings to date are that 95% of those residing outside the city oppose this forced annexation and at least 85% residing inside the city also oppose it. If it's against the wishes of the majority of the people, why should it be allowed to happen?

Thank you for your careful consideration of this matter.

Sincerely,
Dick Juelson
Dick Juelson, Chairman
Borough Residents for Autonomy.

Bill Parker
House of Representatives Chairman/Committee on Regional Affairs
Pouch V
Juneau, Alaska 99801

Dear Mr. Parker;

Although time is running short this letter is intended to bring about some action on the part of the Community and Regional Affairs Committee to help defeat forced annexation with the City of Kodiak. We are only two individuals living within the involved area, however we most certainly are not alone in our protest to this annexation.

To begin with let it be known that the wishes of area residents were totally ignored by the local boundary commission. Every resident of the area who testified at the boundary commission hearing spoke *against* forced annexation! It seems to us that our feelings and interests are being ignored by more powerful individuals who stand for annexation in the hope to gain a great deal for their own self-interests.

Another pertinent fact is that the area does not meet the standards for annexation. The area is not urban: the standard lot size in the area is one acre or larger, and one third of the land area is undeveloped.

City services are not reqired in this area. Fire protection is presently provided through a service district; roads are presently State-maintained or privately maintained; police protection is provided by the State Troopers; water is presently available to the majority of the area and is paid by user fees; sewers can be provided through service districts in those areas where sewers are needed.

We have signed a petition opposing forced annexation and hope that it will give you some idea how many individuals hope to stop annexation. We need your help! Please act on the behalf of the residents of this area by overturning forced annexation.

Sincerely,

Ron Matsuoka

RE: FORCED ANNEXATION IN KODIAK

January 15, 1979

Dear Sir:

We live in the sub-division known as Woodland Acres. It has come to our attention that this area is one of the areas that the Boundary Commission feels should be incorporated into the City of Kodiak.

A few months ago the Boundry Commission came to Kodiak and residents of the proposed areas of annexation by the City met in a public meeting. Of the more than 100 people present, the only person in favor of annexation was the City of Kodiak's City Manager. This should speak out as the view of the people involved in this annexation. Apparently, the Boundary Commission was blind and deaf for they still want to annex these areas into the City. How can this happen in a democracy? That is why we are writing this letter.

The reason we live in the area we do is for the privacy full acre lots afford. This is not our opinion alone, but shared by many of the people who live here. If our property was annexed into the City, we would be forced to sub-divide our property, or the taxes would be too costly for us to pay.

We have lived on our property for two years. In order to build our house, we had to spend $6,000 for a well and $1500 for our sewage system. Now the City wants to incorporate us and make us pay more money for sewer assessments and water assessments, both of which we proably won't see for 10 years. The City cannot even provide these services to all the residents within the City as the boundries stand now, how can they afford them for new residents.

The services the City says that it will provide are already received through the Borough. 1) Roads are presently State maintained or privately maintained. The City proposes to maintain only 2½ miles of road in the entire area. The City cannot even maintain roads that are within a half mile from City Hall! 2) Fire protection is presently provided through a service district. 3) Police protection is currently provided by the State Troopers.

WE DO NOT NEED OUR TAXES INCREASED!! WE DO NOT WANT TO BE INCORPORATED INTO THE CITY OF KODIAK!! Please hear our plea since the Boundary Commission ignored it!! Please do not force us from the land and privacy we, the residents of these proposed areas, want and need.

Sincerely,

Catherine Olsen
Steven Olsen

Senator Arliss Sturgulewski
Community & Regional Affairs Committee
Juneau, AK. 99811

Dear Senator Sturgulewski:

The anxiety and activity being generated by the Boundary Commissions annexation statement for an area in Kodiak is touching a lot of people. The flurry seen on top of the pile against annexation does not reflect the thinking of all of us residing in the area affected.

Our elected officials made a statement that they were going to abide by the majority of the voters they heard from. What they should have said is that they would act responsible to the needs of the area to be annexed. Both of our elected officials have lived in Kodiak a long time and are aware of the health problem in the Island Lake area. The Spruce Cape area also has a sewage problem. It is as critical as the Island Lake area but has not had the publicity. A lot of the effluent goes over the bank onto the beach or into swampy or creek areas. I am sure your group deserves a close look at this situation to make an intelligent judgement.

The State Health Department is accutely interested in what will happen. If this area is not annexed and the Borough government attempts to provide the service of sewer and water there could be legal problems to overcome. The services could be delayed and no telling how long it will take the court to come to a decision. Problems like this the officials are aware of and should be paying attention to and not just appeasing the voting public. The animosity against the city a few are carrying in the fight against annexation might cost us all a lot more than just taxes.

I truly think that your group coming to Kodiak and surveying and listening to the people will help the health and welfare of our neighbors. Thank you for your interest.

Very truly yours,

Emil Norton

Dear Committee Members;

The City of Kodiak's current taxation policy includes levy of sales tax on goods ordered directly from a point outside Kodiak (i.e. Seattle) when that firm has a representative in Kodiak. They justify this stand on a City Statute which permits such taxation when the goods involved are solicited for within the City proper. This policy results in City sales tax being charged for orders placed directly with the Sears-Roebuck office in Seattle. The City contends that Sears Roebuck catalogs and a Sears Catalog store being in Kodiak constitute sufficient solicitation to support such taxation.

I find this tax policy objectionable and question whether catalogs or the presence of a catalog store in Kodiak qualifies as solicitation - especially for those of us who live outside the city limits. It seems unfair that we Borough residents who live outside, but near the Kodiak City limits should have to pay this tax, whereas persons living elsewhere in the Borough do not.

I learned of this tax in April, 1978 when I placed a placed a fairly large order directly with the Sears Roebuck office in Seattle. Even though I paid for this order (including freight) in advance, I was billed an additional 3% by Sears Roebuck for Kodiak City Sales Tax prior to delivery.

I would appreciate your assistance as a member of the Community and Regional Affairs Committee in looking into the propriety of this taxation. Hopefully, your upcoming visit to Kodiak may provide an oppertunity to look into this matter in greater depth.

Your time concerning this matter is appreciated.

Cordially,

Peter B. Jackson

February 2, 1979

The Honorable Governor Jay Hammond
Juneau, Alaska

Dear Governor:

We are opposed to the forced annexation being proposed by the City of Kodiak, and the specially appointed Committee on Annexation.

We own three lots within the affected areas and are very disturbed that we are not being allowed to vote on this issue or be taken seriously when we say we are not interested in being annexed into the city. Two of our lots are vacant and our home is on the third. We were planning to build a larger home to accomodate the needs of our family more adequately, but if we are forced into the city it is extremely likely that we could not afford the taxes and other assessments that would be required for sewer and water services (which it seems very unlikely we would receive within a reasonable amount of time). Forced annexation would very possibly force us to sell our larger lot and the hopes of a larger home.

Please take all due action to see that those persons affected by this action on the part of the Kodiak City Council will have their opinions and desires heard, and that an equitable solution be implemented.

Thank you for your interest in these matters and your subsequent intervention as needed.

Sincerely,

Mr. & Mrs. Glenn Dick

Governor Hammond.

Dear Sir:

I wish to object to the annexation of the lands outside of the City of Kodiak.

I am a 34 year resident of Alaska, all in Kodiak. I have lived in the same place for 30 year

We, the resident voters, voted for a Service district, which will take care of our need for many year.

Most of us have spent many dollars developing our communities, and are happy as things are. If we went we would move on.

Being dictated to goes against the grain, and our democratic way of life.

I believe the same as most of the people in the concerned areas, that this is only a way for the City, "Kodiak" to get more ~~fa~~bonding base, and if the same holds true as in the past, they would not do any improvements for 5-10, meanwhile collecting taxes for which we would get nothing.

Please give this matter some serious thought.

Sincerely

E. E. Erwin

Juneau, Alaska 99615

Attention Arliss Sturgulewski:

This letter is to inform you and your Committee that the vocal minority, that is opposing annexation does not reflect the feelings of the majority in the city or the areas to be annexed. Nor do they offer an alternate solution to bringing about the badly needed services that Kodiak needs.

I am hopeful that in your wisdom or knowledge that you will base your support on the issue of facts in your inquirey, and not on the very vocal minority, as the majority is usually passive and not very vocal. Annexation is the last tool at our disposal to bring about the needed services, as a proposition to elect a unification charter commission and, or a proposition to grant service districts powers to the borough was voted down in our last election.

I leave the question to you; What other choice do we have other than annexation?

Sincerely,

Bob Brooks

The Honorable Bill Parker
Chairman, House Committee on
Community and Regional Affairs
Pouch V
Juneau, Alaska 99811

Dear Mr. Parker:

My husband and I live at Island Lake, Kodiak, in the area affected by the proposed City of Kodiak annexation. We are both opposed to the proposal.

The wishes of area residents were ignored in the Boundary Commission's recommendation. At the well-attended Boundary Commission hearing not one area resident spoke in favor of the proposed annexation; in fact, only the Kodiak City Manager testified in favor of the proposal. A petition opposing the annexation has been circulated among residents of the affected area; at this time over 600 of the area's 800 adult residents have signed the petition.

Prior to the City's proposal, the Kodiak Island Borough had, at the request of area residents, studied providing services to the area through Borough service districts. In an election area residents voted for the establishment of Borough water, sewer and road service districts. The Borough had previously negotiated agreements with the City of Kodiak to make possible this service district approach. Progress stopped, however, when the City sued the Borough and petitioned for annexation of the area.

Now, however, instead of looking toward the provision of services, City officials have stated that they cannot afford to provide sewer, road or improved water service to areas like the one in which we live. We live on a one-acre lot reached by a small privately maintained road. City officials have explained that because the area is sparsely populated and present roads inadequate, the City would not be able to provide services to us. But our situation is not unique in the area proposed for annexation. A one-acre lot is the standard lot size in the area, one-third of the area is completely undeveloped, and two-thirds of the area is sparsely populated.

As justification for recommending the annexation, the Alaska Department of Community and Regional Affairs in its May 17, 1978, Report to the

Local Boundary Commission, cited Article X Section 5 of the Alaska Constitution that " . . . a new service area shall not be established . . . if the new service can be provided . . . by annexation to a city." But if the City of Kodiak disavows any intention until some time in the distant future of providing services to the vast majority of the area, doesn't that negate the preference for annexation over a service district?

We urgently request you to recommend the House of Representatives defeat the proposed City of Kodiak annexation, both because the merits of the case argue against annexation and because forced annexation would strip the citizens involved of their right to have a voice in their own fate.

Sincerely,

Patricia Szabo

January 25, 1979

Dear Representative Parker:

I am greatly concerned about claims made by the City of Kodiak in the past several months concerning the underlying "necessity" for its annexation efforts. The City has alleged that annexation is required if it is to provide utility services sought by residents outside the municipal limits.

In fact, the City has every right to provide these services right now, without any annexation. Under Title 29 of the Alaska Statutes, municipalities owning or operating utilities are specifically authorized to extend their services outside the municipal limits. The City's own charter grants the identical power.

In addition, it is the Borough's position, currently being pursued in the courts, that the City not only has the "right" to provide these residents with water and sewer services, but is actually under an obligation to do so in light of agreements negotiated previously with the Borough and conditions attached to sewer and water funds provided the City under Federal and State grants.

Since utility funds are self-supporting, with the full costs paid by the users, there would be no cost to the residents of the City. I think it could be documented that the surcharge on the present water users outside the City results in a profit to the City. Further, until such time as sewer service is provided outside the City boundaries, the entire costs of the very expensive new sewerage treatment plant are being borne by the residents of the City, so it would be to the benefit of the users inside the City to expand the user base.

It is hard to believe that a municipal government such as the City of Kodiak would deliberately mislead the people of this area. Yet it is my opinion that such deliberate misrepresentation is precisely what has taken place. It is hoped that the municipal body which would seek to achieve annexation through such means will not be afforded the opportunity to govern those citizens it has attempted to deceive. Perhaps this is one of the reasons that the majority of the people living outside the City have elected to form service districts to take care of their needs as they perceive them.

Sincerely,

Jo

Re: Opposition to City of Kodiak Annexation Attempt

Dear Governor Hammond:

In 1965, I lived in the La Lande Addition, adjacent to the City of Kodiak. The lots were 50 X 100 feet and there was a trailer court in our vicinity. We petitioned the City of Kodiak to be annexed that year because of the need for sewer services. We were annexed in 1966.

We have a City water system that was installed with antique fittings. So poor is the City's public works capabilities that the Fitzgerald Welding Shop had a fire and was gutted because the fire department did not have the tools available to open the hydrants. It was only after the disastrous fire that modern hydrants were installed by the City. I continued to live in the same location until 1969, and the requested utilities had still not been installed. During the period of residence the only thing that I ever received were several tax increases from the City. The records of the City Public Works Department will show that the sewer was not installed until fall of 1973. The City of Kodiak's total lack of public works capability is not only well known, but easily documentable.

The City says they are broke and that they need the taxpaying participation of citizens outside the City to help underwrite the cost of services being rendered to City residents. The only thing that I can see that I will receive from the City of Kodiak are tax increases, as their past record shows. I request that you and your Administration and our Legislative representatives work aggressively against this forced annexation.

Dear Bill,

Saw you on Capitol '79 the other evening. We enjoy that program as it makes us feel closer to all our elected officials.

Thank you for considering the enclosed.

Jim Jackson

23 January 1979
Kodiak, Alaska

The Honorable Bill Parker
Alaska State House of Representatives

Dear Representative Parker:

I have been an Alaskan resident in Kodiak for 31 years and am in total opposition to the forced annexation of my area to the City of Kodiak for the following reasons:

1. The area is still very suburban in nature due to large lots, most of which are over one acre in size, one has 67 acres. In order to pay taxes and assessments on this size lot at this time, many of us would have to subdivide and sell part which would defeat the reason we moved out here.

2. The Antiquities Act — Proposition 13 —— so many issues are showing us that people, yes Alaskans too do care "how" they're governed and when "enuff is enuff".

The people & their wishes should be important in decision making where their property and well-being is concerned. If people are so full of apathy that they don't express their opinions & wishes that is one thing. They deserve what they get. However, expressing such and being able to change inequitable laws and/or reverse decisions not representative of the people affected, is our right as citizens.

3. We know the City of Kodiak is in financial trouble - an article in our local papers now and again verifies this but must we pay for their mistakes and get nothing in return? We pay the city sales tax on everything we purchase in the city and everything that is delivered to us such as oil, propane, etc..... We also pay the Borough Personal Property Tax which city residents don't.... The Borough contributes to the city library on our behalf, swimming pool and gym are Borough, we who have city water pay a higher usage rate and we have and pay for a fire district.

People in the Borough recently voted for new service districts in the event they are needed, and only one area is in need of any particular service at this time which can be taken care of without being annexed. The Borough and City has an agreement contract stating the city will supply non-residents with services they are willing to pay for and want. Otherwise, the majority of the people are content with things as they are.

4. We residents organized and have circulated petitions in the affected areas and in the City. For myself I have had one person refuse to sign saying he was involved with the city over property he owns. Within the City I've only had two people not sign. Most people are well aware that the revenue the City would derive from our property couldn't pay for much service. I sincerely believe they only want us as a tax base for bonding purposes.

I am very suspicious of people or governments that go behind my back in order to get something done which affects me and mine so deeply.

If and when a majority of the people in my area by a vote feel it best to annex I would go along peaceably. None of the people in the City or in the affected areas were consulted on this matter - but treated like we weren't old enough to blow our own nose!!

Would much appreciate your careful consideration in helping to reverse the Boundary Commissions decision in this matter. Thank you for "listening".

ENC: Flyer put out & paid for

Juneau, AK. 99811

Dear Mr. Parker:

I am against FORCED ANNEXATION. We in the area that the City of Kodiak and the Boundry Commission are trying to force into the City moved in this area to be outside the City, and enjoy the wide open spaces. If we wanted to live in the City we would have built a home there and not where we all chose to live. Also I would have moved to Russia if I wanted to live under dictatorship.

Our Great Borough Government gave us an opportunity in Service District #1 to vote for or against a Service District and what improvements we wanted. The first was water; the second was sewer and the third was roads. The Borough was not biting off a bigger chunk than they can chew, like the City wants to. The Borough had Engineers draw up Plans and Specs for our Water and Sewer Service District and we are all set to go and then the City convinces the Boundry Commission to Force us in as the City is broke and needs our tax money to bail them out; but we will not get the services.

Furthermore no one wants to live under the City Charter as it reads now, as it is not according to Alaska State Statutes and someone in Juneau should look into this.

Please give us some consideration of "freedom to vote" as this is very important to all of us. Thank you for listening.

Sincerely,

Alaska State House of Representatives

Dear Representative Parker:

I am writing you as chairman of the committee for Community and Regional Affairs, to ask that your committee investigate the apparent loss of citizens right to be heard as regards the Boundary Commissions position on the forced annexation of the approximately 2,000 acre's north of the City of Kodiak. As a resident of Kodiak for over 31 years, I have never seen a more flagrant disregard for the people than this.

Although permitted by Alaska Statutes, the intent of the Legislature could not have been to put the residents of the whole community at the mercy of commercial interests and a few misguided local politicians.

As chairman of "Borough Residents for Autonomy" for the past two months, I have discussed this issue with hundreds of local residents. My findings to date are that 95% of those residing outside the city oppose this forced annexation and at least 85% residing inside the city also oppose it. If it's against the wishes of the majority of the people, why should it be allowed to happen?

Thank you for your careful consideration of this matter.

Sincerely,
Dick Juelson

Dear Mr. Parker;

Although time is running short this letter is intended to bring about some action on the part of the Community and Regional Affairs Committee to help defeat forced annexation with the City of Kodiak. We are only two individuals living within the involved area, however we most certainly are not alone in our protest to this annexation.

To begin with let it be known that the wishes of area residents were totally ignored by the local boundary commission. Every resident of the area who testified at the boundary commission hearing spoke *against* forced annexation! It seems to us that our feelings and interests are being ignored by more powerful individuals who stand for annexation in the hope to gain a great deal for their own self-interests.

Another pertinent fact is that the area does not meet the standards for annexation. The area is not urban: the standard lot size in the area is one acre or larger, and one third of the land area is undeveloped.

City services are not reqired in this area. Fire protection is presently provided through a service district; roads are presently State-maintained or privately maintained; police protection is provided by the State Troopers; water is presently available to the majority of the area and is paid by user fees; sewers can be provided through service districts in those areas where sewers are needed.

We have signed a petition opposing forced annexation and hope that it will give you some idea how many individuals hope to stop annexation. We need your help! Please act on the behalf of the residents of this area by overturning forced annexation.

Sincerely,

Ron Matsuoka

RE: FORCED ANNEXATION IN KODIAK

January 15, 1979

Dear Sir:

We live in the sub-division known as Woodland Acres. It has come to our attention that this area is one of the areas that the Boundary Commission feels should be incorporated into the City of Kodiak.

A few months ago the Boundry Commission came to Kodiak and residents of the proposed areas of annexation by the City met in a public meeting. Of the more than 100 people present, the only person in favor of annexation was the City of Kodiak's City Manager. This should speak out as the view of the people involved in this annexation. Apparently, the Boundary Commission was blind and deaf for they still want to annex these areas into the City. How can this happen in a democracy? That is why we are writing this letter.

The reason we live in the area we do is for the privacy full acre lots afford. This is not our opinion alone, but shared by many of the people who live here. If our property was annexed into the City, we would be forced to sub-divide our property, or the taxes would be too costly for us to pay.

We have lived on our property for two years. In order to build our house, we had to spend $6,000 for a well and $1500 for our sewage system. Now the City wants to incorporate us and make us pay more money for sewer assessments and water assessments, both of which we proably won't see for 10 years. The City cannot even provide these services to all the residents within the City as the boundries stand now, how can they afford them for new residents.

The services the City says that it will provide are already received through the Borough. 1) Roads are presently State maintained or privately maintained. The City proposes to maintain only 2½ miles of road in the entire area. The City cannot even maintain roads that are within a half mile from City Hall! 2) Fire protection is presently provided through a service district. 3) Police protection is currently provided by the State Troopers.

WE DO NOT NEED OUR TAXES INCREASED!! WE DO NOT WANT TO BE INCORPORATED INTO THE CITY OF KODIAK!! Please hear our plea since the Boundary Commission ignored it!! Please do not force us from the land and privacy we, the residents of these proposed areas,want and need.

Sincerely,

Catherine Olsen
Steven Olsen

Senator Arliss Sturgulewski
Community & Regional Affairs Committee
Juneau, AK. 99811

Dear Senator Sturgulewski:

The anxiety and activity being generated by the Boundary Commissions annexation statement for an area in Kodiak is touching a lot of people. The flurry seen on top of the pile against annexation does not reflect the thinking of all of us residing in the area affected.

Our elected officials made a statement that they were going to abide by the majority of the voters they heard from. What they should have said is that they would act responsible to the needs of the area to be annexed. Both of our elected officials have lived in Kodiak a long time and are aware of the health problem in the Island Lake area. The Spruce Cape area also has a sewage problem. It is as critical as the Island Lake area but has not had the publicity. A lot of the effluent goes over the bank onto the beach or into swampy or creek areas. I am sure your group deserves a close look at this situation to make an intelligent judgement.

The State Health Department is accutely interested in what will happen. If this area is not annexed and the Borough government attempts to provide the service of sewer and water there could be legal problems to overcome. The services could be delayed and no telling how long it will take the court to come to a decision. Problems like this the officials are aware of and should be paying attention to and not just appeasing the voting public. The animosity against the city a few are carrying in the fight against annexation might cost us all a lot more than just taxes.

I truly think that your group coming to Kodiak and surveying and listening to the people will help the health and welfare of our neighbors. Thank you for your interest.

Very truly yours,

Emil Norton

Dear Committee Members;

The City of Kodiak's current taxation policy includes levy of sales tax on goods ordered directly from a point outside Kodiak (i.e. Seattle) when that firm has a representative in Kodiak. They justify this stand on a City Statute which permits such taxation when the goods involved are solicited for within the City proper. This policy results in City sales tax being charged for orders placed directly with the Sears-Roebuck office in Seattle. The City contends that Sears Roebuck catalogs and a Sears Catalog store being in Kodiak constitute sufficient solicitation to support such taxation.

I find this tax policy objectionable and question whether catalogs or the presence of a catalog store in Kodiak qualifies as solicitation - especially for those of us who live outside the city limits. It seems unfair that we Borough residents who live outside, but near the Kodiak City limits should have to pay this tax, whereas persons living elsewhere in the Borough do not.

I learned of this tax in April, 1978 when I placed a placed a fairly large order directly with the Sears Roebuck office in Seattle. Even though I paid for this order (including freight) in advance, I was billed an additional 3% by Sears Roebuck for Kodiak City Sales Tax prior to delivery.

I would appreciate your assistance as a member of the Community and Regional Affairs Committee in looking into the propriety of this taxation. Hopefully, your upcoming visit to Kodiak may provide an oppertunity to look into this matter in greater depth.

Your time concerning this matter is appreciated.

Cordially,

Peter B. Jackson

Dear Governor Hammond:

I am a life-long resident of Kodiak Island and I am opposed to being forced to join the City of Kodiak against my wishes.

It would cramp my life style as the City has too many restrictive ordinances. I would be very grateful if you would do what you can to stop this Forced Annexation.

Yours truly,

Patrick Anderson

Patrick Anderson

cc: Committee on Community & Regional Affairs

February 2, 1979

The Honorable Governor Jay Hammond
Juneau, Alaska

Dear Governor:

We are opposed to the forced annexation being proposed by the City of Kodiak, and the specially appointed Committee on Annexation.

We own three lots within the affected areas and are very disturbed that we are not being allowed to vote on this issue or be taken seriously when we say we are not interested in being annexed into the city. Two of our lots are vacant and our home is on the third. We were planning to build a larger home to accomodate the needs of our family more adequately, but if we are forced into the city it is extremely likely that we could not afford the taxes and other assessments that would be required for sewer and water services (which it seems very unlikely we would receive within a reasonable amount of time). Forced annexation would very possibly force us to sell our larger lot and the hopes of a larger home.

Please take all due action to see that those persons affected by this action on the part of the Kodiak City Council will have their opinions and desires heard, and that an equitable solution be implemented.

Thank you for your interest in these matters and your subsequent intervention as needed.

Sincerely,

Mr. & Mrs. Glenn Dick

Jan. 30. 1979

Governor Hammond.

Dear Sir:

I wish to object to the annexation of the lands outside of the City of Kodiak.

I am a 34 year resident of Alaska, all in Kodiak. I have lived in the same place for 30 years

We, the resident voters, voted for a Service district, which will take care of our need for many years.

Most of us have spent many dollars developing our own utilities, and are happy as things are. If we went we would move on.

Being dictated to goes against the grain, and our democratic way of life.

I believe the same as most of the people in the concerned areas, that this is only a way for the City, "Kodiak" to get more, ~~to~~ bonding base, and if the same holds true as in the past. they would not do any improvements for 5-10, meanwhile collecting taxes for which we would get nothing.

Please give this matter some serious thought.

Sincerely

E. E. Erwin

Attention Arliss Sturgulewski:

This letter is to inform you and your Committee that the vocal minority, that is opposing annexation does not reflect the feelings of the majority in the city or the areas to be annexed. Nor do they offer an alternate solution to bringing about the badly needed services that Kodiak needs.

I am hopeful that in your wisdom or knowledge that you will base your support on the issue of facts in your inquirey, and not on the very vocal minority, as the majority is usually passive and not very vocal. Annexation is the last tool at our disposal to bring about the needed services, as a proposition to elect a unification charter commission and, or a proposition to grant service districts powers to the borough was voted down in our last election.

I leave the question to you; What other choice do we have other than annexation?

Sincerely,

Bob Brooks

Chairman,
Senate Committee on Community & Regional Affairs
Pouch V
Juneau, AK 99801

Dear Sir:

In this day and age when the American government is supposed to be going back to the orginal ideals of our founding fathers of government for the people, by the people, of the people, Alaska seems to be somewhere back in the Dark Ages.

Recently here in Kodiak a local boundary commission was appointed to look into the annexation of several borough areas. For this purpose a hearing was held at which several residents of these areas in question participated. Every resident who testified at the boundary commission hearing was against annexation. Yet despite that fact, the boundary commission decided to go through with the annexation.

What does all this have to do with you and the Alaska State Legisture? You can set right this injustice by disapproving the annexation in this legislative session, otherwise we will have annexation forced down our throats.

We are totally against annexation - if for no other reason than the way our "local government" went about the procedure, disregarding the wishes of those citizens who are effected.

Hopefully, the Alaska State Legislature will demonstrate what democracy is all about by disapproving this forced annexation.

Sincerely,

Mr. D. ~~R.~~ Pistorese

Alaska State Legislature
Pouch V
Juneau, Alaska
99811

Dear Sirs:

As a resident of the Kodiak Island Borough I am appealing for your support in helping us to overcome a problem. The city of Kodiak is attempting by legislative action to annex the area in which I live into the city. The Local Boundry Commission is reccomending to the Committee on Community and Regional Affairs their approval of the proposal. I strongly urge that you vote against this proposal.

I am opposed to this annexation for the following reasons:

1. The residents of the area had their wishes totally ignored by the Commission. At the hearings in Kodiak on 16 August, 1978, not one resident testified in favor of this action. In fact, there was overwhelming opposition. If for no other reason I feel this fact should have a bearing on the decision.
2. I do not believe that we are urban in nature which is one of the criteria for annexation. The standard lot size is one acre or larger with one-third of the land being undeveloped.
3. I do not believe city services are required. The roads in the area are state or privately maintained. Police protection is provided by the State Troopers. Water is available through wells or user paid water lines. Sewer service will be obtainable at less expense through a service district plan.

Once again I ask that you cast your vote <u>against</u> the annexation proposal. Thank you for your time and consideration of this matter.

Sincerely yours,

Norman D. Wooten

Norman D. Wooten

CAN YOU AFFORD FORCED ANNEXATION?

Despite what the City of Kodiak says, annexation will cost you money . . .

. . . The present City mill rate is 16.1; the mill rate outside the City is 7.0. The proposal for differential tax zones in the annexation area is only a recommendation of the City's annexation committee--six residents of the area to be annexed. The City Council is not obligated to accept the recommendation. AFTER ANNEXATION TAKES PLACE, THE CITY COUNCIL CAN LEVY ANY TAX RATE IT WISHES--REGARDLESS OF THE WISHES OF AREA RESIDENTS.

. . . Fire insurance rates will not decrease because of annexation. Insurance rates are set by a national rating association. Lower rates would require a fire substation and fire hydrants as well as fully maintained roads, higher water pressure and more fire equipment and personnel for the larger area.

. . . Assessments for water and sewer, to be based on the square footage of each lot, will be inequitable. A homeowner on a 200' x 150' lot will pay five times more for water and sewer than a homeowner on a 60' x 100' lot. Unimproved lots will also be assessed for water and sewer.

. . . New trailers will not be allowed in the area, causing housing costs to rise.

. . . Costs of government will increase. The Borough government will continue its present functions so its costs won't decrease, BUT the City's costs will increase with a larger area to be serviced.

Borough residents already pay for the services they use. Almost half the City's revenue comes from sales tax; only about 9% comes from property taxes. It has been estimated that more than half of the sales tax is paid by non-City residents. Why should you be forced to pay more money?

ANNEXATION WILL NOT NECESSARILY IMPROVE SERVICES

. . . The City's record on road service is poor. Many roads inside the city are unpaved and poorly maintained. Just a few examples: Cope Street, High Street, Baranof Heights, Russell Estates, East Addition, Leite Addition.

. . . The City plans to improve sewer and water service only in certain parts of the annexation area.

. . . Recreation facilities are already available through the Borough-donated swimming pool and gym. The Borough contributes to the support of the A. Holmes Johnson Library for use by Borough residents.

. . . The City police force may be adequate for the present city area, but it would not be able to cover the large area to be annexed.

. . . "Early and special representation" allowing a resident of the area to be a non-voting member of the City Council is an empty promise. Any person may attend Council meetings, and the inequity of not having a vote is the central issue in forced annexation.

WHAT CAN YOU DO?

This forced annexation can be overturned by the Alaska State Legislature if it acts to disapprove the annexation in the legislative session beginning January 15. If the Legislature does not act, the annexation will take place. YOU CAN INFLUENCE THE LEGISLATURE:

1. A petition opposing forced annexation is presently being circulated. Both residents of the area to be annexed and city residents may sign the petition.

2. Write to the Chairman, Senate Committee on Community and Regional Affairs and the Chairman, House Committee on Community and Regional Affairs, Pouch V, Juneau, AK. 99801. Request that the committees hold a hearing on the Kodiak City annexation and urge them to recommend that the Legislature disapprove the annexation.

PLEASE TURN THE PAGE FOR MORE STEPS YOU CAN TAKE TO DEFEAT FORCED ANNEXATION

3. To help defeat forced annexation, also write to the President, Alaska Senate, and the Speaker, Alaska House of Representatives, Pouch V, Juneau. (If possible, enclose 20 copies of your letter for the Senate and 40 copies for the House and ask that the copies be distributed.) Urge the Legislature to disapprove the Kodiak City annexation for the following reasons:

a. The wishes of area residents were totally ignored by the local boundary commission. Every resident of the area who testified at the boundary commission hearing spoke <u>against</u> forced annexation.

b. The area does not meet the standards for annexation. The area is not urban: the standard lot size in the area is one acre or larger, and one-third of the land area is undeveloped.

c. City services are not required: 1) Fire protection is presently provided through a service district. 2) Roads are presently State-maintained or privately maintained. The City proposes to maintain only 2½ miles of road in the entire area. 3) Police protection is provided by the State Troopers. 4) Water is presently available to the majority of the area and is paid by user fees. 5) Sewers can be provided through service districts in those areas where sewers are needed.

If you have a question or want to sign the petition opposing annexation, call Dick Juelson, 486-3696, Norm Wooten, 486-4415 (after 5 p.m.), or Pat Szabo, 486-3853. Money contributions to help defray costs involved can be mailed to Dick Juelson, Box 286, Kodiak,AK.

This flier is sponsored by Borough Residents for Autonomy, residents of the area to be annexed. The six people appointed by the City Manager to the City's annexation committee do not represent the wishes of area residents. TO MAKE OUR WISHES KNOWN AND TO DEFEAT ANNEXATION, WE MUST LET THE STATE LEGISLATURE KNOW THAT THE MAJORITY OF THE AREA'S RESIDENTS AND PROPERTY OWNERS FEEL THE BOUNDARY COMMISSION WAS WRONG IN APPROVING FORCED ANNEXATION IN KODIAK.

PLEASE ACT NOW--BEFORE IT'S TOO LATE.

3 January 1979

RE: Local boundary commission proposal for Kodiak annexation

Dear Legislature:

I would like to go on record expressing my objection to the proposed boundary commission proposal for annexation to the city of Kodiak. In 1946, I obtained title to my homestead and have had continuous residency there since 1950. In 1973, I subdivided 19-one acre lots and have sold 12 of these lots. In 1973, I sold 100 acres to Mr. Al Schafer, who in turn, subdivided aobut 50-one acre lots. The remaining 67 acre parcel has been advertised for sale for six or seven months. However, the costs of development and the pending threat of annexation have discouraged buyers.

If there is a need for the development of this property, it can be developed through the Borough sewer, water and road service district, which we in the area voted for, without annexation, or the additional improvement, assessments and 9 mill city tax.

There is a 40 acre tract in USS 3515 adjoining my property with only one house. There are only 10 houses on my 160 acre homestead in US Survey 1682.

At this time, we feel the proposed annexation is premature. It should be postponed a few years until the need for full city services exists and the area has the population base necessary to support those services. Forced annexation to the city would leave me in dire circumstances, as I am 85 years old.

I think the members of the legislature should visit Kodiak prior to letting this happen. On that visit, I am sure you will discover many parts of the city which need and pay for city services, but are still waiting to receive them.

I respectfully request your support of a resolution rejecting this proposed annexation. If I can provide you with more information on this matter, please let me know.

Sincerely,

B E Nachtweih

December 21, 1978

Dear Legislator:

On behalf of the residents of the Spruce Cape, Monashka Bay, Mill Bay and Island Lake areas, I am seeking your assistance and that of your colleagues in the State Legislature in requesting that you support a joint Senate/House resolution, overturning the Local Boundary Commission's recommendation that these areas be annexed into the City of Kodiak.

As expressed in the attached letter to the Boundary Commission, the residents of this annexation area have not voted for annexation. They feel they do not need and cannot afford the full range of City services at this time. The recognize the need for sewer, water and road services as expressed by their vote when they approved a Borough service area to provide these services.

As you know, following that election the City of Kodiak took legal action to enjoin the election, even though their efforts to obtain a restraining order to bar the election were overruled by the Kodiak Superior Court. A final decision on this issue is still pending.

We recognize the State Constitution and the State laws of Alaska allow the Boundary Commission the power to annex areas regardless of the citizens' wishes; therefore, we ask your assistance in exercising your constitutional power to overturn this decision, by allowing free people the constitutional rights guaranteed by the U. S. Constitution to express themselves in a free election the type of local government they wish to represent them, and the types and levels of service from government they feel they need and can afford.

I am sending a copy of this letter to Governor Jay Hammond and each member of the Alaska State Legislature. I will also be forwarding additional materials to you during the discussions on this issue as I am sure other citizens of this area will also be doing.

Again, I ask your assistance and vote to undo what is about to be done to those of us who will be included in this annexation area.

Yours truly,

Okey Chandler

Okey Chandler

ANNEXATION HEARING

MAY 20, 1978

The Boundary Commission should not consider forcing anyone to be a part of the City before City government is in the framework of the U. S. Constitution.

October, 1977 City voters voted for everyone to pay their own personal property taxes instead of the City paying them. December, 27, 1977, several of the biggest businessmen, millionaire boat owners, etc., appeared before City Council and requested they override the referendum and they did. The City will pay their taxes until January 1, 1979.

Most cannery workers are paid $4.00 to $4.50 per hour. About 8 years ago, it was voted to tax rent. Labor in the City is taxed.

Last summer City Manager, Mr. Widom, stated that the City was going broke and found new things to tax: lawyer fees, Sears orders, freight and parcel post. A Sales Tax Inspector and Collector was hired.

At the last Council meeting, it came up to raise the sales tax $.02.

After looking at tax assessments and large businesses in the core area, it is obvious that most of them are paying taxes on 1965 valuations. Land values have risen 5-30 times as much in outlying areas.

Approximately 20 years ago, residents of the Mission Road area voted to be annexed to the City. Lots in the area were 1,000 to 6,000 square feet. Land value doubled in a year or two. In 5 to 6 years, the assessed value went up 20 times more than they were when annexed to the City. Allman Addition was annexed in 1965. Several

hundred people lived in both of these areas.

Area: Catholic School - 80 Acres, Annexed 1967.

Area: Kodiak Community College - 80 Acres, Annexed 1965.

Area: Hospital and Graveyard - 50 Acres, About 1966 Annexed.

Sealand Cargo Dock was annexed in 1977. They were paying $17,000 taxes and now pay no taxes.

Gibson Cove was annexed in 1976. No one lives in this area. The Borough is losing money.

There have been 15 to 20 other annexations. For various reasons quite a few were to keep from paying taxes on inventory and equipment.

The real property tax amounted to $677,116 in the City in 1977. Sales tax was $1,200,000. More than half of this was paid by people living outside of the City. Over 1/3 of City taxes are paid by people living outside of the City.

The Police Department is budgeted for $813,379 which is $136,000 more than all real property taxes collected in the City.

There were 3800 people living in the City in 1970. This is $214.00 for every person living in Kodiak to support the Police Department. People living outside City limits do not need City Police protection. There hasn't been an act of violence that I have seen in the newspapers outside of the Kodiak area.

The City Manager is grossly exaggerating the facts about services. He stated that 40% of library services were for people living outside of the City. There are about 3 times as many people living in the City as in the immediate vicinity. He stated there were 26 fires outside the City in 1977. There have been 2 trailer fires in the Spruce Cape area since December 12, 1977.

The cemetery was public land which was given to the City. The

City doesn't dig any graves. There is another cemetery.

The Ram site is a community project. The City is paid for everything that is landed at the City Dock. I am sure the City makes out.

All of the land in the Monashka Bay area was bought from the Borough or BLM on contract. 70-80% are buying in new subdivisions on installment. Monashka Bay has about 300 acres and 15-20 houses. USS 1682 has 160 acres about a mile from Island Lake. It is very irregular to be included in Island Lake area and has about 12 houses on it.

USS 3219 - 10 acres, 30-40 houses. Lots are 50 x 100. Many lines were put in 20 years ago and were not buried deep enough.

Any areas that wants an improvement district petitions the Borough and it is placed on the ballot. All water and sewer lines are installed by the City and Borough and are done by contract.

I came to Kodiak February, 1946. There were 2,600 people here then. In 32 years it has grown to 3,800. The projected population growth in the various areas are pipe dreams.

The airport is 5 or 6 miles from Sealand Dock. This is several hundred acres in this area that belongs to the Federal government. No one lives on it. Wien Airlines has a contract for security check. The City is paid, if this is annexed the City will probably tax freight, and tickets and everything else they can tax.

The only government we have in Kodiak that abides by the U. S. Constitution and common law is the Borough government. If this vast area is annexed to the City it will destroy what is left of democracy in this area.

The City is broke and seeks this large annexation to bail them out. The City Manager and City Council that sent for you never spent a day on the firing line to keep democracy alive. I request that you deny this petition for annexation.

Okey Chandler

June 13, 1978

Ms. Sheila Gallagher
Chairman, Local Boundary Commission
Suite 201
3201 "C" Street
Anchorage, Alaska 99503

Dear Ms. Gallagher:

Enclosed are statements from Kodiak City residents. Cope Street behind the Travel Lodge is about 300 yards long and hasn't improved in more than 32 years. Alder Lane & High Street are just as bad or worse.

The City Manager would have you believe that living in the City would solve everyone's problems since they would have a Public Works Department. He grossly exaggerated facts. He stated the average family on the West Coast was 4.0 in size when it is 3.5. In Kodiak it is 3.4. I am dubious of anything he gave you as evidence.

The electric meter reading is done on contract. All meters are read whether they are being used or not. I have 2 meters. A neighbor has 2 meters. There are 20 or so meters in the Spruce Cape area on unoccupied buildings. 75 or 30 per cent of people living on Spruce Cape & Mission Road live in trailers on rented lots.

The City Manager stated last Summer, the City was going broke. I gave Mr. Strandberg a copy of the 1977 Spruce Cape appraisals & am mailing you a copy.

Mr. Craig Bishop at the December 12 meeting was opposed to annexation of USS-3098 that he has his trailer court & bookeeping service on. He presented a petition at the Dec.12 meeting. He favored annexation. Mr. Bishop was recently elected President of Chamber of Commerce. He had an application to build an apartment complex which the City Council approved. He stated that a trailer court owner sold land to repair his roads. He sold 2 houses & the land they were about 300 yards from his trailer court. He sold the houses to increase his trailer sales' stock in Bells Flats. He has about 15 acres in his trailer court with 90 or 100 trailers. The roads are unplatted. The roads & trailer court are private property. If they are upgraded, the owner will pay for it. Mr. Bishop said that other roads were needed. All of the lots on Spruce Cape are 1 lot deep. The only roads needed are private driveways. He came to Kodiak '72 or '73.

Mr. Mills stated there was 1 house on Island in 1963. There were many houses in the Island Lake area then. The tax records & K.E.A. records will verify this. Since he was here, he worked in a cannery for several years & as a heavy equipment operator. He has applied for a 1/2 million dollar permit that requires City approval (he lives in the City).

Mr. William H. Lamme, former Kodiak Post Master, lived on Island Lake 20 years ago & now lives in Anchorage.

Mr. Gary Stevens, Acting Mayor of Kodiak, came to Kodiak in 1972 or '73 & is an official in a Japanese owned cannery .

The reason I've taken time to gather the above facts is that I have a tremendous investment in democracy with 5 years, 1 month and 29 days in the military. I have spent over $4,000.00 since 1963 and several months of my time trying to keep democracy alive on Kodiak Island. I obtained 500 borough books from Mr. Ronald Cease when the borough was formed in Kodiak and spent about $1,500.00 on newspaper adds; $1,000.00 on zerox copies, $800.00 or more on radio and T.V. adds; $800.00 on ovelopes, stamps/supplies, etc. I have mailed every member of the House & State Senate information/ research material on various issues which I was concerned with and also to every Governor except Governor Miller. I have written every U.S. Senator & key men in the House of Representatives & wired our representatives in D.C. & the President on several occasions.

Please give the above statements every consideration in whatever determinations you make which affects the lives of many Kodiak residents.

Sincerely,

Okey Chandler

TO WHOM IT MAY CONCERN

Mr. Neseth and I have lived at the end of Cope Streeet since the 1930's when the area was away out of town. Many homes have filled in the area since and Cope Street simply grew in by general use. It is grossly inadequate for the amount of traffic on it, expecially in the winter when it is too hazardous to drive as serious icing occurs. The overflow from ditching (or whatever) has nowhere but the road to get on, and is an every winter condition. Such a vehicle as the garbage truck has great difficulty meneuvering for a turn-- this is winter and Summer. Our private steps from the Base Road level to the Cope Street level past our kitchen window becomes a public thorofere for foot travel at this end. This is naturally a nuisance besides an invitation to who-knows-what mischeif in this day. We don't like it.

June 2, 1978

TO WHOM IT MAY CONCERN:

From March of 1974 to September of 1976 I lived on Cope Street, the street that ascends the side of Pillar Mountain from the Sheffield House.

The conditions of the public works and utilities on Cope Street are poor. The road is very narrow allowing only one way traffic. It is seldom graded, and has very limited parking. Occasionally while I lived there the garbage truck could not make it up the road due to heavy snow or ice. This limited the service.

The water pressure on Cope Street is also very poor. Many times I had absolutely no water pressure when my neighbor was using water. This was most inconvenient when I was in the shower and my neighbor flushed his toilet.

June 5, 1978

TO WHOM IT MAY CONCERN:

As a resident on Cope Street from November 1, 1975 to January 4, 1976, I found the public works facilities in very poor condition. There was no water pressure and at best of conditions was not able to wash clothes or shower without being inconveniences by poor water pressure. During our residency there we found that most times we had to park on Rezanoff and walk up the hill carrying groceries, etc., because there was no parking facilities available on the street. Snow removal activities prevented any parking during that period of time. Because of these conditions my family and I moved to another area.

The purpose of this letter, is to illustrate, through relating a series of past events, what I perceive to be a general lack of concern for the other guy or what could be termed an "every man for himself," attitude.

I had heard of Russell Estates and their "sewer problems" but was assured that my new house (Jim Smiths old house-Lot 3 Block 3) had already experienced the local problems and through a new pump and line that was installed, should have no further problems. We moved into the house on the twelveth of August 1977.

Everything was going smoothly until November 17th when my neighbor's (John Pirak) and my sewer line froze, breaking my grinder pump and I assume his also. The history on the open sewer lines that froze is somewhat unclear to me but I shall give you an account as best I can determine.

When Jim Smith lived in the house the plastic sewer line was apparently shattered from the main line back-pressure. This caused my contractor, Richard Carr, and Tac Plumbing to arrange to have a copper line installed to withstand the high pressures introduced by the less-than-sufficient sewage system laid by Russell Estates. Perhaps a one-way check valve would have been in order, at the street connection. I don't believe this was done, as I have street pressure on my house line even now.

The new copper line rests mostly on John Pirak's land and is a common line for both our houses, with each house tapping into the system through a "Y" type connection to the single line. This single line concept was probably adopted in order to reduce the high costs of the special materials involved in the fix.

Now we know how and why the open copper sewer lines were there, but not why they were left uncovered or whose responsibility it was to cover them, nor has anyone involved accepted the responsibility.

It should also be mentioned at this point that John Pirak's grinder pump and lead-in lines were open to the elements and unprotected from any possible freezing situation. Sometime after the sewage line replacement and before I bought the house, my grinder pump lones had also blown and had been replaced by Tac Plumbing with copper lines. As can be confirmed by Bradley Plumbing, the heat tape previously installed on the plastic lines was left laying on the bottom of the pump housing and consequently those lines were frozen. No indication of these problems was related to me by Jim Smith so I had assumed they did not exhist.

So much for the background. Now that my pump has quit and I have water all over my house (Nov 17), I called my contractor (Richard Carr) note- (house still under warranty) and explained the situation to him; careful to mention that I'm sure the line is frozen and the pump broken, and requested that he, as the contractor, make arrangements theough the responsible parties, to repair the problem. The reason I suspected a broken pump is that I had the complete service manual and trouble shooting guide on loan from the neighbor on the other side of me (who had recently experienced a similar problem), which clearly explained that a blocked line would most likely cause the pump to fail.

Richard Carr called Bradley Plumbing andthey arrived at the house some time later and examined the problem. He said,"the sewer line was frozen"!!! He then called his supervisor who apparently called Marine Welding Service to come and thaw the lines. Even though the line was then thawed, my pump, as suspected, failed to work: For that visit I was charged $36.05 by Bradley Plumbing for the service call and $30.90 by Marine Welding for thawing the line.

Richard Carr called Bradley Plumbing andthey arrived at the house some time later and examined the problem. He said,"the sewer line was frozen"!!! He then called his supervisor who apparently called Marine Welding Service to come and thaw the lines. Even though the line was then thawed, my pump, as suspected, failed to work: For that visit I was charged $36.05 by Bradley Plumbing for the service call and $30.90 by Marine Welding for thawing the line.

Bradley Plumbing ordered the repair parts for the pump; and I, as a back up, ordered them also. Our parts arrived at the same time about the 18th of December. This was for us, one month with no sewage. Not a pleasant experience when you've just bought an expensive house and its the holiday party season.

I had, in the meantime, talked with Richard Carr, still seeking his assistance in placing the bills in the hands of the responsible people.

I made arrangements with Bradley Plumbing to have the pump repaired the afternoon of 20 December but was greeted by the work crew at 08:30 a. m. when I was returning home from work. The men had just turned the circuit breakers off in the house and were ready to begin repairs. The next thing they did was cut the two electrical wires leading to the pump. One line was still hot and on the same line with my refrigerator. In my opinion a very dangerous and non professional approach. I mentioned I had the step-by-step instructions for pump removal and repair but they chose not to use them. They did remove the pump, take it to the shop, repair it, replace it, and it worked. The cost was $200.87 for two men for three hours minus $24.02 for parts. My neighbor indicated that he could do it in from one to two hours.

Incidentally, I covered the sewer lines myself to prevent freezing. Bradley Plumbing, after replacing the broken parts in the pump, re-installed the heat tape on the lead-in lines and confirmed it was working. These lines later refroze, even with the heat tape on, indicating the initial installation was not adequate to withstand the winter environment we experience in Kodiak.

Meanwhile, John Pirak's contractor (Mr Nylund), had put some heat tape and insulation on his pump and lines. They were, quite obviously, inadequate as their pump and lines refroze. John Pirak has had his problems too. After returning to Kodiak after his Christmas Vacation, he discovered his sewage system was not working properly. I don't know just what series of events led up to the present day situation, but I do know that about the fourteenth of February he began dumping raw sewage between our houses. The City was notified of this that day and a Mr. Herman Beukers came out and evaluated the situation and talked with John Pirak and myself. I had thought that this would be sufficient to "get the ball rolling" and clear up this problem. I was wrong, as I found out when I had returned home from an extended trip to Seattle on the 25th of February. Raw sewage was still being dumped between our houses routinely, and in its flow to Lily Lake was passing under my house. The stench was, and is, terrible. On Monday, the 27th of February, I called the City Manager and explained the situation to him and my displeasure that the situation had progressed unchecked. I had called John Pirak first to find out if anything was being done, to which he replied "no". It should be noted that even though I would not, and did not dump sewage during the month my system was out, there are people with different values, and under these circumstances, they cannot be faulted entirely in this matter. At least this time my phone calls prompted some action and the following day his system was again hooked into the sewer system and "magically" worked. If you should check with the weather bureau you would notice the temperature had been above freezing for several days and had undoubtably thawed the lines allowing his pump to again work. I believe this whole evolution is based on the simple fact that liquids freeze when not properly insulated from the cold.

Everyone is again happy and contented for the moment but; wait a minute, are John's pump and lines freeze-protected? No! they aren't and he is gone out on another Crabbing trip. Effectively there has been no long term solution introduced and the situation is likely to occur again at any moment.

Although I duscussed, in detail, all the aforementioned circumstances with each person involved, no one would acknowledge and accept the responsibilty for the occurrances or admit to a lack of professionalism. The common putoff was "I'll look into it", "The City is responsible", or " The other guy should have done it".

I intend to send a copy of this letter only to the people mentioned on the distribution list for now and will hold my final judgements until everyone has had ample time to respond to this and possibly bring new light on the situation and work out a reasonable answer to why this has happened, and correct those discrepancies that now exhist.

I have decided that the financial responsibility for my above mentioned problems, rests with Richard Carr and that he, in turn, should redeem whatever monies he feels he is due from the responsible individuals.

I would hope to have more pleasant relations with everyone in the future but realize few people are appreciated by those who bring them to task. It should also be noted that throughout this affair I ahve not lost my temper and my primary concern has always been to correct those faults that should never have occurred in the first place.

Sincerely yours,

D. R. Jeffs

Points for consideration raised by Jack Chenoweth on Kodiak annexation issue -- January 29, 1979

Re the character of local government in Alaska:

1. The adaptation of local government to continually changing conditions is a characteristic of Alaska's local government system.
2. The decision regarding changing boundaries must be taken not by those immediately affected but by a state agency (the Local Boundary Commission) on the basis of independent evaluation.

Points related to the purpose of legislative oversight on annexation questions:

1. As political subdivisions, the cities and boroughs which have been incorporated are established to perform portions of the state's responsibilities for government that they are capable of performing. The state cannot escape responsibility for the essential quality and competence of the units of local government which exist and operate in accordance with applicable state statutes.

2. Local government involves the discharge of legal responsibilities. The capacities and abilities of municipalities to accept and discharge responsibilities greatly varies. The review process offers an opportunity for the legislature to gauge the capacities of the local government to provide services throughout an annexed or expanded area.

3. The effect of the boundary change on the epople involved is a legitimate concern. As taxation is always the cental factor in annexation decisions, one should question if the levels of taxation can be related to levels of service to be offered and whether annexation, with its attendant tax burden changes, will contribute to a better sharing of the burdens and opportunities for local government throughout a metropolitan region.

4. The resultant relationship of the annexation on city/borough relations is also to be considered. The legislature may do well to consider whether fulfillment of the annexation will have an effect on the range of political, service and other relationships between the city and borough and whether, in the short-range and in the long run, those relationships will grow stronger.

5. The legislature has the opportunity to review the boundary change for compliance with proper administrative procedures. Was the hearing properly noticed? Were those in attendance given opportunity to comment? Did the Commission adhere to its own requirements? Etc.

Some questions raised by the annexation question:

1. What needs exist within the area to be annexed that would best be met by annexation?

2. Is the City entitled to annexation for reasons of equity?

3. Would annexation have any adverse effects upon those residing in the area to be annexed or upon other Kodiak residents?

4. Does the annexation proposed meet the standards for annexation as contained in 19 Alaska Administrative Code 05.010 ? (See copies given Committee members)

Re: City of Kodiak Proposed Annexation

Dear Representative Parker:

Last week I sent you rather voluminous information pertaining to the proposed Kodiak annexation. Some committee members have helpfully suggested that a more condensed presentation might be useful, with the original documents available for backup documentation.

Thus, at this time I am sending a summary statement outlining the Kodiak Island Borough's opposition to annexation. Also enclosed is a map of the relevant area which was prepared at my request by the staff of the Local Boundary Commission; (I merely added the color effects).

I hope this additional information is useful. Your consideration of this issue, which is of such vital interest to the citizens of Kodiak, is greatly appreciated.

Sincerely,

Joan M. Katz

Re: City of Kodiak Proposed Annexation

Dear Representative Parker:

I enjoyed talking with you this morning in connection with the above-referenced matter. Enclosed, as per our discussion, are copies of the two briefs I have submitted at various stages in this controversy. Please feel free to call me with any questions you may have or any additional areas regarding which you may need further input. I have also contacted Hayden Green at the University and he assures me that he and P. J. Hill, who prepared the economic analysis submitted to the Local Boundary Commission and included in the information being sent to you, will also be available to answer any questions you might have.

As you will note, the issues in this controversy range from basic principles of democratic government, to economics, to fundamental notions of fair dealing. Your concern that the people of Kodiak have an opportunity to present their views to the Committee in person is in my view, very appropriate and certainly appreciated. I am also grateful for your intention to see that I am kept abreast of your Committee's activities pertaining to Kodiak.

Sincerely,

Joan M. Katz

LOCAL BOUNDARY COMMISSION RECOMMENDATION FOR ANNEXATION OF TERRITORY TO THE CITY OF KODIAK

Saturday, February 10
East Elementary School
2:00 P.M.

June 13, 1978

Ms. Sheila Gallagher
Chairman, Local Boundary Commission
Suite 201
3201 "C" Street
Anchorage, Alaska 99503

Dear Ms. Gallagher:

Enclosed are statements from Kodiak City residents. Cope Street behind the Travel Lodge is about 300 yards long and hasn't improved in more than 32 years. Alder Lane & High Street are just as bad or worse.

The City Manager would have you believe that living in the City would solve everyone's problems since they would have a Public Works Department. He grossly exaggerated facts. He stated the average family on the West Coast was 4.0 in size when it is 3.5. In Kodiak it is 3.4. I am dubious of anything he gave you as evidence.

The electric meter reading is done on contract. All meters are read whether they are being used or not. I have 2 meters. A neighbor has 2 meters. There are 20 or so meters in the Spruce Cape area on unoccupied buildings. 75 or 80 per cent of people living on Spruce Cape & Mission Road live in trailers on rented lots.

The City Manager stated last Summer, the City was going broke. I gave Mr. Strandberg a copy of the 1977 Spruce Cape appraisals & am mailing you a copy.

Mr. Craig Bishop at the December 12 meeting was opposed to annexation of USS-3098 that he has his trailer court & bookeeping service on. He presented a petition at the Dec.12 meeting. He favored annexation.5/ Mr. Bishop was recently elected President of Chamber of Commerce. He had an application to build an apartment complex which the City Council approved. He stated that a trailer court owner sold land to repair his roads. He sold 2 houses & the land they were about 300 yards from his trailer court. He sold the houses to increase his trailer sales' stock in Bells Flats. He has about 15 acres in his trailer court with 90 or 100 trailers. The roads are unplatted. The roads & trailer court are private property. If they are upgraded, the owner will pay for it. Mr. Bishop said that other roads were needed. All of the lots on Spruce Cape are 1 lot deep. The only roads needed are private driveways. He came to Kodiak '72 or '73.

Mr. Mills stated there was 1 house on Island in 1963. There were many houses in the Island Lake area then. The tax records & K.E.A. records will verify this. Since he was here, he worked in a cannery for several years & as a heavy equipment operator. He has applied for a 1/2 million dollar permit that requires City approval (he lives in the City).

Mr. William H. Lamme, former Kodiak Post Master, lived on Island Lake 20 years ago & now lives in Anchorage.

Mr. Gary Stevens, Acting Mayor of Kodiak, came to Kodiak in 1972 or '73 & is an official in a Japanese owned cannery .

The reason I've taken time to gather the above facts is that I have a tremendous investment in democracy with 5 years, 1 month and 29 days in the military. I have spent over $4,000.00 since 1963 and several months of my time trying to keep democracy alive on Kodiak Island. I obtained 500 borough books from Mr. Ronald Cease when the borough was formed in Kodiak and spent about $1,500.00 on newspaper adds; $1,000.00 on zerox copies, $800.00 or more on radio and T.V. adds; $800.00 on envelopes, stamps/supplies, etc. I have mailed every member of the House & State Senate information/ research material on various issues which I was concerned with and also to every Governor except Governor Miller. I have written every U.S. Senator & key men in the House of Representatives & wired our representatives in D.C. & the President on several occasions.

Please give the above statements every consideration in whatever determinations you make which affects the lives of many Kodiak residents.

Sincerely,

Okey Chandler

TO WHOM IT MAY CONCERN

Mr. Neseth and I have lived at the end of Cope Streeet since the 1930's when the area was away out of town. Many homes have filled in the area since and Cope Street simply grew in by general use. It is grossly inadequate for the amount of traffic on it, expecially in the winter when it is too hazardous to drive as serious icing occurs. The overflow from ditching (or whatever) has nowhere but the road to get on, and is an every winter condition. Such a vehicle as the garbage truck has great difficulty maneuvering for a turn-- this is winter and summer. Our private steps from the Base Road level to the Cope Street level past our kitchen window becomes a public thorofare for foot travel at this end. This is naturally a nuisance besides an invitation to who-knows-what mischeif in this day. We don't like it.

June 2nd, 1978

TO WHOM IT MAY CONCERN:

I lived on High Street for five (5) years in house #306. The garbage truck and two wheel drive vehicles cannot travel up this road when deep snow or ice conditions prevail. The road is very narrow with no place to park. One house has no City water.

Sincerely,

Tempe Berestoff

June 2, 1978

TO WHOM IT MAY CONCERN:

From March of 1974 to September of 1976 I lived on Cope Street, the street that ascends the side of Pillar Mountain from the Sheffield House.

The conditions of the public works and utilities on Cope Street are poor. The road is very narrow allowing only one way traffic. It is seldom graded, and has very limited parking. Occasionally while I lived there the garbage truck could not make it up the road due to heavy snow or ice. This limited the service.

The water pressure on Cope Street is also very poor. Many times I had absolutely no water pressure when my neighbor was using water. This was most inconvenient when I was in the shower and my neighbor flushed his toilet.

June 5, 1978

TO WHOM IT MAY CONCERN:

As a resident on Cope Street from November 1, 1975 to January 4, 1976, I found the public works facilities in very poor condition. There was no water pressure and at best of conditions was not able to wash clothes or shower without being inconveniences by poor water pressure. During our residency there we found that most times we had to park on Rezanoff and walk up the hill carrying groceries, etc., because there was no parking facilities available on the street. Snow removal activities prevented any parking during that period of time. Because of these conditions my family and I moved to another area.

To Whom it may concern,

The purpose of this letter, is to illustrate, through relating a series of past events, what I perceive to be a general lack of concern for the other guy or what could be termed an "every man for himself," attitude.

I had heard of Russell Estates and their "sewer problems" but was assured that my new house (Jim Smiths old house-Lot 3 Block 3) had already experienced the local problems and through a new pump and line that was installed, should have no further problems. We moved into the house on the twelveth of August 1977.

Everything was going smoothly until November 17th when my neighbor's (John Pirak) and my sewer line froze, breaking my grinder pump and I assume his also. The history on the open sewer lines that froze is somewhat unclear to me but I shall give you an account as best I can determine.

When Jim Smith lived in the house the plastic sewer line was apparently shattered from the main line back-pressure. This caused my contractor, Richard Carr, and Tac Plumbing to arrange to have a copper line installed to withstand the high pressures introduced by the less-than-sufficient sewage system laid by Russell Estates. Perhaps a one-way check valve would have been in order, at the street connection. I don't believe this was done, as I have street pressure on my house line even now.

The new copper line rests mostly on John Pirak's land and is a common line for both our houses, with each house tapping into the system through a "Y" type connection to the single line. This single line concept was probably adopted in order to reduce the high costs of the special materials involved in the fix.

Now we know how and why the open copper sewer lines were there, but not why they were left uncovered or whose responsibility it was to cover them, nor has anyone involved accepted the responsibility.

It should also be mentioned at this point that John Pirak's grinder pump and lead-in lines were open to the elements and unprotected from any possible freezing situation. Sometime after the sewage line replacement and before I bought the house, my grinder pump lones had also blown and had been replaced by Tac Plumbing with copper lines. As can be confirmed by Bradley Plumbing, the heat tape previously installed on the plastic lines was left laying on the bottom of the pump housing and consequently those lines were frozen. No indication of these problems was related to me by Jim Smith so I had assumed they did not exhist.

So much for the background. Now that my pump has quit and I have water all over my house (Nov 17), I called my contractor (Richard Carr) note- (house still under warranty) and explained the situation to him; careful to mention that I'm sure the line is frozen and the pump broken, and requested that he, as the contractor, make arrangements theough the responsibie parties, to repair the problem. The reason I suspected a broken pump is that I had the complete service manual and trouble shooting guide on loan from the neighbor on the other side of me (who had recently experienced a similar problem), which clearly explained that a blocked line would most likely cause the pump to fail.

Richard Carr called Bradley Plumbing andthey arrived at the house some time later and examined the problem. He said,"the sewer line was frozen"!!! He then called his supervisor who apparently called Marine Welding Service to come and thaw the lines. Even though the line was then thawed, my pump, as suspected, failed to work: For that visit I was charged $36.05 by Bradley Plumbing for the service call and $30.90 by Marine Welding for thawing the line.

Bradley Plumbing ordered the repair parts for the pump; and I, as a back up, ordered them also. Our parts arrived at the same time about the 18th of December. This was for us, one month with no sewage. Not a pleasant experience when you've just bought an expensive house and its the holiday party season.

I had, in the meantime, talked with Richard Carr, still seeking his assistance in placing the bills in the hands of the responsible people.

I made arrangements with Bradley Plumbing to have the pump repaired the afternoon of 20 December but was greeted by the work crew at 08:30 a. m. when I was returning home from work. The men had just turned the circuit breakers off in the house and were ready to begin repairs. The next thing they did was cut the two electrical wires leading to the pump. One line was still hot and on the same line with my refrigerator. In my opinion a very dangerous and non professional approach. I mentioned I had the step-by-step instructions for pump removal and repair but they chose not to use them. They did remove the pump, take it to the shop, repair it, replace it, and it worked. The cost was $200.87 for two men for three hours minus $24.02 for parts. My neighbor indicated that he could do it in from one to two hours.

Incidentally, I covered the sewer lines myself to prevent freezing. Bradley Plumbing, after replacing the broken parts in the pump, reinstalled the heat tape on the lead-in lines and confirmed it was working. These lines later refroze, even with the heat tape on, indicating the initial installation was not adequate to withstand the winter environment we experience in Kodiak.

Meanwhile, John Pirak's contractor (Mr Nylund), had put some heat tape and insulation on his pump and lines. They were, quite obviously, inadequate as their pump and lines refroze. John Pirak has had his problems too. After returning to Kodiak after his Christmas Vacation, he discovered his sewage system was not working properly. I don't know just what series of events led up to the present day situation, but I do know that about the fourteenth of February he began dumping raw sewage between our houses. The City was notified of this that day and a Mr. Herman Beukers came out and evaluated the situation an, talked with John Pirak and myself. I had thought that this would be sufficient to "get the ball rolling" and clear up this problem. I was wrong, as I found out when I had returned home from an extended trip to Seattle on the 25th of February. Raw sewage was still being dumped between our houses routinely, and in its flow to Lily Lake was passing under my house. The stench was, and is, terrible. On Monday, the 27th of February, I called the City Manager and explained the situation to him and my displeasure that the situation had progressed unchecked. I had called John Pirak first to find out if anything was being done, to which he replied "no". It should be noted that even though I would not,and did not dump sewage during the month my system was out, there are people with different values,and under these circumstances, they cannot be faulted entirely in this matter. At least this time my phone calls prompted some action and the following day his system was again hooked into the sewer system and "magically" worked. If you should check with the weather bureau you would notice the temperature had been above freezing for several days and had undoubtably thawed the lines allowing his pump to again work. I believe this whole evolution is based on the simple fact that liquids freeze when not properly insulated from the cold.

Everyone is again happy and contented for the moment but; wait a minute, are John's pump and lines freeze-protected? No! they aren't and he is gone out on another Crabbing trip. Effectively there has been no long term solution introduced and the situation is likely to occur again at any moment.

Although I duscussed, in detail, all the aforementioned circumstances with each person involved, no one would acknowledge and accept the responsibilty for the occurrances or admit to a lack of professionalism. The common putoff was "I'll look into it", "The City is responsible", or " The other guy should have done it".

I intend to send a copy of this letter only to the people mentioned on the distribution list for now and will hold my final judgements until everyone has had ample time to respond to this and possibly bring new light on the situation and work out a reasonable answer to why this has happened, and correct those discrepancies that now exhist.

I have decided that the financial responsibility for my above mentioned problems, rests with Richard Carr and that he, in turn, should redeem whatever monies he feels he is due from the responsible individuals.

I would hope to have more pleasant relations with everyone in the future but realize few people are appreciated by those who bring them to task. It should also be noted that throughout this affair I ahve not lost my temper and my primary concern has always been to correct those faults that should never have occurred in the first place.

Sincerely yours,

D. R. Jefts

HOUSE
JOURNAL SUPPLEMENT

January 24, 1979 Wednesday No. 2

STATE OF ALASKA

LOCAL BOUNDARY COMMISSION

JUNEAU, ALASKA

RECOMMENDATIONS OF THE LOCAL BOUNDARY COMMISSION SUBMITTED TO THE ELEVENTH STATE LEGISLATURE FIRST SESSION ASSEMBLED

SUBMITTED JANUARY 24, 1979

RECOMMENDATIONS

1. Recommendation for annexation of territory to the City of Kodiak.

2. Recommendation for correcting an error in the present corporate boundary description of the Kenai Peninsula Borough.

STATE OF ALASKA

LOCAL BOUNDARY COMMISSION

JUNEAU, ALASKA

RECOMMENDATION FOR ANNEXATION OF TERRITORY TO THE CITY OF KODIAK, ALASKA

SUBMITTED TO THE ELEVENTH LEGISLATURE, FIRST SESSION ASSEMBLED

SUBMITTED JANUARY 24, 1979

RECOMMENDATION FOR ANNEXATION OF TERRITORY

to the

City of Kodiak

WHEREAS, the petitioner, the City of Kodiak, has requested that certain property in the Mill Bay area be annexed to the city, to wit: twenty five lots contiguous to and North and East of the City of Kodiak, including residential and commercial properties; and

WHEREAS, upon receipt of the petition, the Department of Community and Regional Affairs determined that the petition was sufficient; and

WHEREAS, subsequent to giving proper notice, the Local Boundary Commission held a public hearing at Kodiak, Alaska, on December 12, 1977, in the Kodiak City Council Chambers; and

WHEREAS, as a result of that public hearing, the Local Boundary Commission determined other urban lands in addition to those defined in the petition might be suitable for annexation to the City of Kodiak; and

WHEREAS, after giving proper public notice, the Local Boundary Commission held an additional public hearing at Kodiak on April 26, 1978, to consider annexation of geographical areas generally described as the Spruce Cape area, the Mill Bay area, the Monashka Bay area, and the United States Coast Guard Station to the City of Kodiak; and

WHEREAS, after giving proper public notice, the Local Boundary Commission held a public meeting in Anchorage on August 16, 1978, to review the record of proceedings on the

petition; and

WHEREAS, the City of Kodiak has stated to the Local Boundary Commission that it is financially capable of providing its full range of general fund services to the area encompassed by the Local Boundary Commission decision; and

WHEREAS, the Local Boundary Commission has determined that the territory to be annexed meets the standards for annexation set forth at 19 AAC 05.010(3) in that the area is generally urban in character, as evidenced by Kodiak Island Borough population estimates, property valuations, and the relatively high level of commercial activity; and

WHEREAS, the Local Boundary Commission has determined that the territory to be annexed meets the standards for annexation set forth at 19 AAC 05.010(4) in that evidence gathered at the public hearings shows that the area to be annexed is in need of municipal services which can be most efficiently provided by the City of Kodiak; and

WHEREAS, the Local Boundary Commission has determined that the territory to be annexed meets the standards for annexation set forth at 19 AAC 05.010(5) in that Kodiak Island Borough planning documents indicate there is likelihood that growth and development will occur in the territory and annexation will enable the city to plan for and control that development and arrange the most efficient municipal services plan to accommodate the expected growth;

NOW, THEREFORE, the Local Boundary Commission recommends that, pursuant to Article X, Section 12, of the Alaska

Constitution, and Alaska Statutes 44.19.260, the petition to annex the territory generally described as the Spruce Cape area and the Mill Bay area be approved and that the boundaries of the City of Kodiak be amended to read as follows:

Beginning at Corner 3 of U.S. Survey 3945, said point being the true point of beginning; thence,

(1) S 55°21'W, 10,868.88 feet to Corner 2 of U.S. Survey 3945; thence,

(2) S 34°34'E, 4250.40 feet to Corner 1 of U.S. Survey 3945; thence,

(3) S 5°06'E, 957.66 feet to Corner 2 of U.S. Survey 2537-B, identical with Corner 15, U.S. Survey 3945; thence,

(4) S 5°05'30"E, approximately 260.74 feet, more or less, to a point intersecting with the Northerly ROW of the Abbert Highway; thence,

(5) along the said ROW in a Westerly and then Southerly direction to a point located upon the common boundary of Public Land Orders 5566 (parcel 2) and 5550, located within U.S. Survey 1673; thence,

(6) S 45°00'E, 2000 feet; thence,

(7) Southeasterly 3,280 feet, more or less, to point "A", said point "A" lying: S 15°34'E, 1,290 feet, more or less, to the center of the channel of St. Paul Harbor from the Southwest corner of Lot 6, Block 20 of U.S. Survey 2537-B; thence,

(8) N 58°06'E, 7,470 feet to a point in the channel North of the Easterly tip of Crooked Island; thence,

(9) N 0°50'W, 1,644.7 feet to a point located in the channel between Near Island and Holiday Island; thence,

(10) N 42°22'E, 5,200 feet, to Point "B", said point "B" lying: S 42°22'W, 3,037.1 feet, more or less, from a point on an

isolated rock which bears S 31°50'E, 191.95 feet from WC 6 MC, U.S. Survey 1822, said point also lying S 32°24'E, 1,162 feet, more or less, from MC 6, U.S. Survey 2873; thence,

(11) N 32°24'W, to a point in the channel which is 1,000 feet from the mean high water line of Kodiak Channel; thence,

(12) along a line, 1000 feet seaward, from the meander line of mean high water in a Northeasterly and then Northwesterly direction to a point 1,000 feet Northerly from the most Northerly tip, at mean high water, of Spruce Cape; thence,

(13) continuing along a line, 1,000 feet seaward, from the meander line of mean high water, proceeding around Mill Bay in a Southwesterly, Northwesterly, and then Northeasterly direction, to a point which is located upon the projected extension seaward of the Northern boundary of Lot 17, Block 1, Second Addition of Miller Point Subdivision, plat approved 11/28/66, said boundary being more specifically described as a line bearing S 73°01'E from the Division of Lands Witness Corner monument located 15 feet West of the Northeast Corner of Lot 17, Block 1, of said subdivision; thence,

(14) N 73°01'W, 1,000 feet to the Northeast Corner of Lot 17, Block 1, of said subdivision; thence,

(15) N 73°01'W, along the Northerly boundary of Lot 17, Block 1, of said subdivision, 327.41 feet, and continuing on approximately the same bearing an additional 1728.59 feet to WC 6 of Lot 3, U.S. Survey 3462; thence,

(16) S 47°56'W, 2551.56 feet to Corner 1, Lot 3, U.S. Survey 3462, identical to the East Corner of Lot 3 of Block 6, Monashka Bay Subdivision, plat approved 9/19/67; thence,

(17) S 45°42'59"W, 295.41 feet, to the South Corner of Lot 3, Block 6 of said subdivision; thence,

(18) N 44°05'04"W, approximately 115 feet, along the Southwesterly boundary of Lot 3, Block 6 of said subdivision to a point which bears N 50°13'26"E from the South Corner of

Lot 7, Block 5, of said subdivision; thence,

(19) S 50°13'26"W, across Otmeloi Way to the South boundary of Lot 7, Block 5, of said subdivision, and continuing along the Westerly ROW of Lake View Drive, 4,433.17 feet, more or less, to the Southeast Corner of Lot 7 of Block 8 of the Monashka Bay Subdivision, plat approved 9/19/67; thence,

(20) S 79°11'50"E, 569.59 feet, to Corner 5 of U.S. Survey 3467; thence,

(21) S 23°54'W, 2500.01 feet, to Corner 4 of U.S. Survey 3467, identical with Corner 4 of U.S. Survey 3468; thence,

(22) S 85°27'W, 746.33 feet, to Corner 3 of U.S. Survey 3468, identical with Corner 3 of U.S. Survey 2538-A; thence,

(23) S 55°21'W, 1893.54 feet, to Corner 4 of U.S. Survey 3945; thence,

(24) N 34°39'W, 2811.6 feet to Corner 3 of U.S. Survey 3945, the true point of beginning.

In accordance with Article X, Section 12, of the Alaska Constitution, this recommendation shall become effective forty-five days after presentation to the legislature or at the end of the session, whichever is earlier, unless disapproved by a resolution concurred in by a majority of the members of each house.

STATE OF ALASKA

LOCAL BOUNDARY COMMISSION

JUNEAU, ALASKA

RECOMMENDATION FOR CORRECTING AN ERROR IN THE PRESENT CORPORATE BOUNDARY DESCRIPTION OF THE KENAI PENINSULA BOROUGH

SUBMITTED TO THE ELEVENTH LEGISLATURE, FIRST SESSION ASSEMBLED

SUBMITTED JANUARY 24, 1979

RECOMMENDATION FOR CLARIFICATION OF SOUTHEASTERLY BOUNDARY

of the

KENAI PENINSULA BOROUGH

WHEREAS, the Local Boundary Commission has requested that the boundary description of the Kenai Peninsula Borough, dated April 30, 1974, be corrected and clarified in the southeasterly part of the boundary description, in the general area of Sargent Ice Field and the Chugach National Forest Boundary; and

WHEREAS, subsequent to giving proper notice, the Local Boundary Commission conducted a public hearing in Soldotna on Friday, January 12, 1979, to consider whether the boundary in question should be clarified and corrected; and

WHEREAS, after giving proper notice, the Local Boundary Commission held a public meeting in Yakutat on Thursday, January 18, 1979, reviewed the original boundaries, the proposed clarification, and all testimony prior to and during the January 12, 1979, public hearing; and

WHEREAS, the Kenai Peninsula Borough is in accord with the proposed clarification;

NOW, THEREFORE, the Local Boundary Commission recommends that, pursuant to Article X, Section 12, of the Alaska Constitution, and Alaska Statutes 44.19.260, the recommendation to clarify and correct the southeasterly boundary of the Kenai Peninsula Borough be approved and the following described boundary be adopted:

Beginning at Cape Douglas on the west side of Cook Inlet at the N.E. Corner of Sec. 27, T15S, R24W (projected), Seward Meridian, State of Alaska; thence West to the N.E. Corner of Sec. 29, T15S, R26W (projected); thence South to the S.E. Corner of Sec. 32, T16S, R26W (projected); thence West to the N.E. Corner of T17S, R28W (projected); thence South to the S.E. Corner of T17S, R28W (projected); thence West to the S.W. Corner of T17S, R32W (projected); thence North to the N.W. Corner of T17S, R32W (projected); thence West to the S.W. Corner of T16S, R32W (projected); thence North to the N.W. Corner of T13S, R32W (projected); thence West to the S.W. Corner of T12S, R32W (projected); thence North to the N.W. Corner of T11S, R32W (projected); thence East to the S.W. Corner of T10S, R30W (projected); thence North to the N.W. Corner of T9S, R30W (projected); thence East to the S.E. Corner of T8S, R29W (projected); thence North to the N.E. Corner of T8S, R29W (projected); thence East to the N.E. Corner of T8S, R28W (projected); thence North to the N.W. Corner of T6S, R27W (projected); thence East to the S.W. Corner of T5S, R26W (projected); thence North to the N.W. Corner of T5S, R26W (projected); thence East to the S.W. Corner of T4S, R25W (projected); thence North to the N.W. Corner of T1S, R25W (projected); thence East to the S.W. Corner of T1N, R24W (projected); thence North to the N.W. Corner of T4N, R24W (projected); thence East to the S.W. Corner of T5N, R23W (projected); thence North to the N.W. Corner of T8N, R23W (projected); thence West to the S.E. Corner of T9N, R24W (projected); thence North to the N.E. Corner of T12N, R24W (projected); thence West to the S.E. Corner of T13N, R24W (projected); thence North to the N.E. Corner of T15N, R24W (projected); thence East to the N.E. Corner of T15N, R12W (projected); thence South to the N.W. Corner of T13N, R11W (projected); thence East to the N.E. Corner of T13N, R10W (projected); thence South to the S.E. Corner of T13N, R10W (projected), said Corner being in Cook Inlet at Longitude 150°58'18"W, Latitude 61°10'00"N; thence Southeasterly to the S.E. Corner

of T12N, R9W (projected), said Corner being in Cook Inlet at Longitude 150°46'37"W, Latitude 61°04'49"N; thence Northeasterly to the N.E. Corner of T12N, R7W (projected), said Corner being in Cook Inlet at Longitude 150°26'01"W, Latitude 61°10'01"N; thence Southeasterly to the N. E. Corner of T11N, R6W (projected), said Corner being in Turnagain Arm at Longitude 150°14'40"W, Latitude 61°04'49"N; thence East to the N.E. Corner of T11N, R5W (projected), said Corner being in Turnagain Arm at Longitude 150°04'01"W, Latitude 61°04'49"N; thence Southeasterly to the N.E. Corner of Sec. 24, T10N, R2W (projected), said Corner being in Turnagain Arm at Longitude 149°32'05"W, Latitude 60°57'01"N; thence Southeasterly to the N.E. Corner of T9N, R1W (projected), said Corner being in Turnagnin Arm at Longitude 149°21'26"W, Latitude 60°54'25"N; thence East to the N.E. Corner of T9N, R1E (projected), said Corner being in Turnagain Arm at Longitude 149°10'48" West, Latitude 60°54'25" North; thence Southeasterly to the N.E. Corner of Sec. 15, T9N, R2E (projected), said Corner being in Turnagain Arm at Longitude 149°03'41"W, Latitude 60°52'41"N; thence Southerly to the N.E. Corner of Sec. 26, T9N, R2E (projected), said Corner being in Turnagain Arm at Longitude 149°01'55"W, Latitude 60°50'57"N; thence South to the S.E. Corner of Section 35, T9N, R2E (projected); thence West to the N.E. Corner of Section 2, T8N, R2E (projected); thence South to the N.E. Corner of Sec. 2, T7N, R2E (projected); thence East to the N.E. RE: Kodiak Land Sale

The following information was received from Stuart Denslow, Borough Manager of the Kodiak Borough:

The Assembly of Kodiak decided on March 20, 1979 to appeal the decision made by Judge Roy Madsen in the Superior Court.

The Assembly determined that they would not sell the land in question in Bells Flats to Royal Large as the price was less than 1/2 the value of the land.

The basis for the decision by the Assembly was based on the the belief that the Assembly of 1974-75 did not have the power to reach the sale agreement. The Assembly also had procedural questions related to the local judge's handling of the case.

Denslow said that the problems were with the local ordinance, not with the state law, and that the local ordinance has since been brought into compliance.The problems seemed to have centered around the appraisal requirements.

A copy of Judge Madsen's opinion can be obtained from:

Charleen Glynn
Clerk of the Court
Box 1367
Kodiak, Alaska 99615

THE KODIAK DAILY MIR

Vol. 39 No. 47

Wednesday, March 7, 1979

Borough assembly holds special session

The borough assembly will consider at a special meeting tomorrow night whether to follow Judge Roy Madsen's decision in January to sell 4.2 acres of borough land for $10,550 in Bells Flats to Royal Large, who has been attempting to purchase the property for over 10 years, or to appeal the decision in the Superior Court.

Michael Sharon, the attorney presenting the borough in the case, said in 1975 the borough mayor and assembly had negotiated a sale of the land to Large for $10,550. Large had given the borough a check with 10 percent down on the sale of the land. However, Sharon said, the borough clerk at that time informed the mayor and assembly that since the warehouse on the land was not contained in the appraisal, the sale of the land would be inconsistent with the borough and state codes at that time.

The borough reconsidered its action, at which point Large hired attorney Ben Hancock to represent him in filing suit against the borough to sell him the land based upon the agreement.

In 1975, Large had contended that the warehouse on the land should not be considered in the appraisal of the land, because the warehouse had been present on the land since World War II, and that it was the improvements that he had made upon the warehouse which gave it any value in the first place.

Sharon stated that any improvements made on a piece of land after the lease expires which are not removed by the time of the lease expiration are to be included in the appraisal of the land, and it was from this premise that the borough had reversed its decision.

On July 23, 1978, the land including the warehouse was appraised by the borough assessor, and the land was appraised at $87,400. "Mr. Large is definitely not the villain in the case," said Sharon. "He has done nothing sneaky or improper in his attempts to purchase this land."

Sharon said from depositions on the case he has studied, that Large attempted to purchase the land in 1967 from the Navy but was unsuccessful. When the borough gained control of the land from the state, Large again attempted to purchase the land and was again unsuccessful, but he entered into a five-year lease with the borough in 1971.

Large said he did not wish to make any comment concerning the case.

Other items on the agenda for the meeting include discussion pertaining to the swimming pool, and a proposal for site surveys and soil studies for the Larsen Bay and Ouzinkie high schools. The planning and zoning department has requested an executive session with the borough concerning the Alderwood development.

RE: February 10, 1979, Joint Public Hearing in Kodiak

Attached is a traveling schedule for those members attending the above Hearing. By going as a group, we will receive a group discount on our plane fares. My office made and received confirmed reservations for our block trip (transportation plus Travelodge rooms in Kodiak); and after coordinating with your offices, your schedules appear as stated on this attachment. If you anticipate any changes, please contact my secretary. Also attached is a copy of the proposed agenda for our Joint Hearing.

We all realize our primary reason for this trip. In the event we do have some time left following our Hearing Saturday evening, legislators and staff have been invited to a League of Women Voters meeting.

An informal breakfast is tentatively being arranged by concerned citizens who wish to speak on the Development City Act and its proposed use on Afognak Island. They would like to meet with as many of the Joint Committee members as possible. Other Kodiak citizens may wish to meet with legislators at this informal breakfast also.

More specifics on the above; time, place, etc., will be announced later.

The Senate and House Community and Regional Affairs Committees have scheduled a Joint Committee Hearing in Kodiak on February 10, 1979. Subject of the Hearing is "Recommendation for Annexation of Territory to the City of Kodiak" as submitted to the Eleventh Legislature by the Alaska Local Boundary Commission: Senate Joint Resolution 12 and House Joint Resolution 10. Enclosed please find copies of each.

Senators and Representatives will arrive in Kodiak at 10:20 A.M., on February 10, and will proceed immediately on a bus tour of the area proposed for annexation. Representatives of both the City and Borough will serve as guides on the tour.

The Hearing will be held at 2:00 P.M., in the East Elementary School Auditorium. The agenda for the Hearing is enclosed.

We look forward to your attendance at the Hearing if possible.

Yours truly,

Senator Arliss Sturgulewski

Representative Bill Parker

Re: Kodiak Trip

Date: 2/9/79

This is to advise you of additional activities being planned during the Kodiak stay.

As you already know, following our arrival in Kodiak, on Saturday, a bus tour will be given to the group showing the proposed annexation area, before taking us to the Travelodge and our Public Hearing at 2 P.M.

Following the Public Hearing, or in the event a dinner break is taken, the Russian Dancers want to perform for us at 7:30 P.M. They are in the process of making dinner arrangements for our group at one of the dining places large enough to accommodate their performance.

Senator Rodey's office has advised there will be a no-host, informal, cocktail get-together at the Sheffield Travelodge, around 8 P.M., for anyone who would like to attend.

An 8:00 A.M. breakfast at the Travelodge is being arranged by citizens of Kodiak concerned about the Development Cities Act in connection with Afognak Island.

MINUTES OF THE LOCAL BOUNDARY COMMISSION

DECISIONAL MEETING

~~OCTOBER~~ AUGUST 16, 1978

The decisional meeting of the Local Boundary Commission commenced at 7:00 p.m. in Anchorage in the conference room, Suite 101, at 225 Cordova Street, Building B, on ~~October~~ August 16, 1978. The purpose of the meeting was to consider the annexation of any one or all of the following urban areas to the City of Kodiak: the Mission Road area; the Mill Bay Road area; the Monashka Bay area; and the United States Coast Guard Station.

Present at the meeting were Commissioners Sigvald Strandberg from Anchorage, Edward Hopson from Barrow, Josephine Anderson from Wrangell, C.B. Bettisworth from Fairbanks, and Chairman Sheila Gallagher from Anchorage.

Before beginning deliberations on the annexation proposals, Chairman Gallagher asked if there were any materials received by the Department subsequent to the hearing held in Kodiak and made a part of the public record. Erik Simpson, staff member to the Commission, replied that the Department had received a letter from Emil Norton on May 16, 1978, which was part of the record. He then read this letter in its entirety.

Commissioner Gallagher stated that though Ed Hopson and Josephine Anderson were not at the hearing on May 20, 1978, they had listened to the tapes and reviewed the file. Commissioner Gallagher then asked Edward Hopson if he was prepared to render a decision. He stated that he was; however, because he had missed both hearings, it had been a difficult decision for him to make. The chairman then asked Jospehine Anderson if she had reviewed the record to date and felt free to discuss, deliberate, and vote on a decision. Commissioner Anderson replied that she had reviewed the record and was ready to proceed.

Commissioner Gallagher noted that they had a quorum present and suggested that the Commission discuss the areas one at a time, starting with the Mill Bay area. She then moved that the petition to annex the Mill Bay area to the City of Kodiak be approved. Commissioner Anderson seconded the motion.

Commissioner Strandberg observed that it might be just a bit premature to vote on the decision of the Kodiak annexation. He stated that he was personally in favor of holding a work session with the city and the borough, since he felt that they should take a more careful look at the allegations made by the borough. He suggested that a work session would help the Commission determine whether or not the city is the best entity to provide these services. He felt that there simply

wasn't enough information in the record to make that determination. He did not want to offend anyone, but he said that he wanted to take a more careful look at the economic report by Hayden, Green, and Hill. He thought that the report was challengable in many respects,and that he didn't want to see it surface again to beat the Commission over the head in the legislature.

Commissioner Gallagher argued that she did not see how the report could do that, because logically it had many loopholes in it. As a practical matter, she disagreed with Sig Strandberg on the grounds that everything that needed to be done to reach a decision had been done. The Commission held a very lengthy hearing on 12-12-77, and an even more lengthy hearing on 5-20-78. Everyone wishing to be heard had been heard. The city and the borough each had two opportunities to present their cases. She had reviewed the Hayden, Green, and Hill report in detail and had asked many questions regarding the validity of that report. She observed that, frankly, she didn't know what good a work session would do. She said that it might be nice, but that there comes a point in time when you have received enough information in order to make a decision. Commissioner Gallagher declared that she had heard enough and was capable of rendering a decision.

Commissioner Strandberg mentioned that the previous marriage recommending a substantial annexation proposal to the legislature by the previous Commission did not work. He said that

perhaps he was being overly cautious, but that he saw a work session as contributing to the Commission's understanding of how the city is going to furnish the services more cheaply than a borough.

Commissioner Gallagher stated that she thought the Commission had done the best job they could and that she was not concerned about whether the legislature would overrule this matter.

Commissioner Bettisworth asked the staff to deliniate the boundaries on the map before them. After a discussion of the boundaries in the Mill Bay and Spruce Cape areas, the Commission returned to a discussion of the Mill Bay Road area. Commissioner Bettisworth asked how difficult it would be to write a description of the area. Mr. Simpson responded that, although it would be difficult, it could be written from the survey plats.

Chairman Gallaghe and Commissioner Strandberg briefly discussed the problem of submitting one or more proposals to the legislature.

The question was called for, and Commissioner Gallagher asked for a roll call vote on the motion to annex the Mill Bay Road area as described in the petition to the City of Kodiak.

Edward Hopson	Yes
Sig Strandberg	No
C.B. Bettisworth	Yes
Josephine Anderson	Yes
Sheila Gallagher	Yes

Chairman Gallagher stated that the motion had passed 4-1 in favor of the annexation of the Mill Bay Road area to the City of Kodiak.

Commissioner Gallagher asked if there was another motion to come before the floor. Commissioner Bettisworth made the motion that the area described as the Mission Road area be annexed to the City of Kodiak. Commissioner Anderson seconded the motion. Commissioner Gallagher asked Commissioner Bettisworth if there was any discussion.

Commissioner Bettisworth felt that this area fell into the same category as the Mill Bay area, in that it was receiving services and should be receiving services as one of the urban areas. He stated that there were also some underdeveloped lands in the area which have the potential of being developed and should be receiving city services during the development process.

After a discussion of the land ownership of Spruce Cape, the U.S. Coast Guard Loran Station and the transfer of this land to the local native corporation, Commissioner Strandberg

again stated that it was premature for the Commission to enter into a decision at this time. He felt that ultimately it would make sense to annex these areas to the City of Kodiak, but he thought the annexation process must contribute to the public's understanding of what and why this is taking place. He declared that the only way to demonstrate this to the legislature was to hold a work session and complete an incomplete tax study at that time. He stated that there was a need to demonstrate that the one entity could provide the municipal services better than the other.

Commissioner Gallagher asked if there were any more discussion on the motion to annex the Mission Road area. At the request of Commissioner Strandberg, Erik Simpson discussed the U.S. Coast Guard Loran Station. He explained that it was selected by one of the Alaskan Island native corporations and that it was described on page 11 of the Department's report to the Commission.

Commissioner Bettisworth asked if water and sewer services were being provided to the Loran Station. Mr. Simpson reported that he did not know. Commissioner Gallagher explained that water and sewer services were provided to the majority of residents in the Mission Bay Road area. Patrick Poland from the the Department of C&RA explained that water and sewer services were not provided to the Loran Station. Commissioner Gallagher noted that this was an error in the

report to the Commission.

Commissioner Strandberg asked if the motions contemplated a full annexation and extension of all services and mill levies. Commissioner Gallagher commented that there were no amendments which contemplated step annexation or differential taxation. She stated that the first motion extended the provision of full services.

Comissioner Strandberg suggested that they discuss the capacity of the city to extend these services in the forthcoming fiscal year. He asked if it were feasible to extend these services immediately. He raised the question of whether or not the combined tax bases are sufficient to generate the necessary revenues on the basis of the existing assessed valuations. He suggested that the Commission look at the pulication of Alaska Taxable which lists the full value ratios, indicating the extent to which properties were assessed at their full and true market values. He stated that he did not want to see the city get into a bind because it presented testimony at the hearings indicating that it was "a little tight right now."

Sheila Gallagher observed that, if her memory served her correctly, the city wanted this area included in their consideration of what should be annexed. She stated that the Commission had heard testimony from several persons,

including Ivan Widom and Attorney Bob Mahoney, concerning the ability of the city to provide these services in a relatively reasonable time and at a reasonable cost. She stated that she could not imagine that a governmental entity would present an area for annexation if it had not considered the cost of providing services to these areas.

Erik Simpson responded to Commissioner Strandberg's question concerning the property assessment ratios for the City of Kodiak. He stated that, according to Alaska Taxable 1977, the real and personal properties were assessed at 97% of their real and true market value. He said that the area outside the city has a ratio of 96.88%, the fire district has a ratio of 97.54%, and the road district has a ratio of 85.48%. He stated that, when you compare the city's ratio of 97% with the entire borough ratio of 96.78%, you can see that the assessment in the city is comparable to the assessment in the entire borough.

Commissioner Strandberg commented that, somewhere at the public hearings, it had been stated that the assessments of the city had not been at full and true value. Commissioner Gallagher acknowledged this. Commissioner Strandberg said that he was a bit alarmed by some of these statements and he wanted to have an opportunity to review them in a work session to attest their validity.

Commissioner Gallagher remembered that, when the city had testified on the Monashka Bay area, it had considered differential tax zones and step annexations for the provisions of services at graduated levels. She thought the provision of services would be immediate.

Commissioner Bettisworth observed that the borough had set up service areas for parts of the area outside of the city, and he asked what areas had been set up and what services were being provided. Mr. Simpson stated that the borough had set up service districts to provide for the provisions of water, sewer, and roads.

Commissioner Bettisworth asked if the tax base was sufficient to provide these services through some sort of borough process. Mr. Simpson stated that additional services to be provided by the city included police protection, fire protection, and whatever other services the city already provided.

Commissioner Bettisworth asked if the initial services provided were labor intensive services rather than capital intensive services. Mr. Simpson explained that the borough did provide for fire protection through a contract with the city and that road maintenance is provided by a private contract with the borough. He also explained that the water and sewage services were being provided, to some extent, in this area.

Commissioner Gallagher stated that the Mission Road area and Mill Road area had totally different considerations than the Monashka Bay and U.S. Coast Guard Station. Commissioner Gallagher asked if there were any more discussion on whether there should be a provision of full services within the motion as oppposed to differential taxation, step annexation, or something along those lines. Commissioner Gallagher noted that the city has stated that, in the case of the Mill Bay and Mission Road areas, it will, in fact, be able to provide and should provide the full range of services.

A roll call vote was taken.

Edward Hopson	Yes
Sigvald Strandberg	No
C.B. Bettisworth	Yes
Josephine Anderson	Yes
Sheila Gallagher	Yes

Commissioner Gallagher stated that the motion was approved by 4-1.

Commissioner Gallagher asked if there were any other motions in regard to the Mission Road area.

Hearing none, the Commission asked Mr. Simpson to outline the Monashka Bay area. Mr. Simpson explained that the area included the Miller Creek, Virginia Creek, and Monshka Creek

SUBJECT: Information

The attached materials are presented for purposes of background information relative to the proposed annexation.

They are as follows:

1. City Finance Director's memorandum concerning the City's financial ability to handle annexation.

2. City Finance Director's affidavit concerning financial capabilities of the City.

3. Consulting report from Dick Berg concerning annexation.

4. Statement issued by Sweeney Insurance concerning fire rates.

5. Resolution 5-79 concerning issues of concern to annexation area residents.

6. Borough Assessor's estimated value of personal property tax memorandum.

7. City Building Inspector's memo concerning building permits.

8. Memorandum to Joint committee on Community and Regional Affairs concerning economic analysis for annexation vs service district.

9. Presentation made at public hearing before the annexation committee by City Manager, Clair Harmony.

10. Affidavit of Richard Sims; Rolland Jones; Charles Powell; and Wilton White.

11. City testimony at Local Boundary Commission hearing.

12. Memorandum from Public Works Superintendent concerning Island Lake road system.

13. Typical assessments for water distribution system and estimates of costs.

14. State roads priority list.

15. City published brochure on annexation information.

January 23, 1979

To: City Manager - Clair W. Harmony

From: Finance Director - H. R. Hyde

Subject: Proposed Annexation

You requested some information regarding the City's finances as related to the proposed annexation area.

The City has taken certain steps in anticipation of annexation being approved. We have included in the 1978/79 amendatory budget a contingency account to cover certain costs if annexation is approved. They are as follows:

1. Facilities Planning Report.
   It is estimated that this initial planning report will cost approximately $40,000.00. It would be financed by the following:
   Grant from Environmental Protection Agency 75% - $30,000.
   Grant from Alaska Department of Environmental Conservation 12-1/2% 5,000.
   City of Kodiak 12-1/2% 5,000.
   The City's $5,000.00 is included in the contingency account previously mentioned.

2. Design Sanitary Sewer Extension.
   In connection with the design of sewer collector lines, there is a grant available from the Alaska Department of Environment Conservation for 50% of the costs. The City would have to match these State funds.

   For the design of the interceptor lines the Environmental Protection Agency will give a Grant for 75% of the costs and the Alaska Department of Environmental Conservation will give a Grant for 12-1/2% of the costs. The City must finance the remaining 12-1/2%.

3. Design Waterline Extension.
   The Alaska Department of Environmental Conservation will give a Grant for 50% of the design costs. The City must match with its 50% of the costs. There is $48,000.00 included in the contingency account in the amendatory budget to cover its estimated share of the costs for designing the waterline extension.

The City has sufficient cash on hand to cover all "up front" costs in connection with the Facilities Planning Report and the design of the two systems before the various Grants are processed and payments received.

At this time, there has been no definite decisions made beyond the design of the water and sewer line systems. Probably the actual construction costs would be recovered by the formation of assessment districts. It may be necessary for the City to issue bonds to cover some portion of the costs of constructing these utility systems.

Based upon the best information that the Borough Assessor can furnish at this time, the City would receive approximately $23,000.00 for each Mill levied on real property in the annexation area. This would start in 1980. If the City were to retain its present 9.1 Mill rate, the real property tax revenue would be approximately $209,000.00. However, the intent is to have the area zoned for different tax rates based upon the City services each zone would received. It is my estimate that because of the different zones, the City would probably receive about $150,000.00 annually in real property taxes from the annexation area.

Since the City presently is paying the Borough Personal Property Tax for all personal property within the City; this cost must be taken into consideration. Again, based upon the best information the Borough Assessor can furnish; the payment of the Borough Personal Property Tax for the Annexation Area would cost the City approximately $25,000.00 annually.

For fiscal year 1978/79, the City is receiving $65,550.00 from the Borough for fire protection services in the area to be annexed. With annexation, the City would lose most if not all of this revenue.

Annexation of this area should increase the revenue of the water/sewer utility fund. It has been estimated that there are approximately 125 residences that would probably immediately tie in to existing sewer collector lines. At the present residential sewer rates, this would be approximately $22,500.00 additional annual revenue to the Water/Sewer Utility Fund.

The City will have additional costs for the Public Works Department to maintain the roads and remove snow. Also, there would be increased costs for police and fire protection. It is difficult to estimate the amount of these addtional costs at this time. These additional costs would include both additional personnel and equipment. It is my opinion that the City is financially able to meet these additional costs for services. Further, with annexation, I believe that there will be considerable growth in this area which should increase the City's tax base.

IN THE SUPERIOR COURT FOR THE STATE OF ALASKA

THIRD JUDICIAL DISTRICT AT KODIAK

CITY OF KODIAK,

Plaintiff,

vs.

KODIAK ISLAND BOROUGH and BETTY WALLIN, Mayor of Kodiak Island Borough,

Defendants.

No. 3KO-78-120 Civ.

AFFIDAVIT OF HARRY R. HYDE IN SUPPORT OF PLAINTIFF'S MOTION FOR SUMMARY JUDGMENT

STATE OF ALASKA)
) ss.
THIRD JUDICIAL DISTRICT)

HARRY R. HYDE, being first duly sworn, upon oath, deposes and says:

1. I am the finance director for the City of Kodiak ("the City"). This affidavit is prepared and submitted in support of plaintiff's Motion for Summary Judgment.

2. I have been employed as finance director for the City since March 1, 1976. For the eleven years preceeding that date I was finance director for a water service district in California.

3. As part of my official duties, I am responsible for the preparation of the City's budget, for the payment of bonded indebtedness of the City, for preparation of cost evaluations for the municipal services, assisting in the preparation of grant applications, investment of City funds, and am obligated to be aware of and knowledgeable on the City's financial capabilities.

4. Both the administration and the City Council are in the process of amending the City's 1978/79 budget. The budget ordinance has already had first reading before the City Council. Public hearing on the second reading of the ordinance is to be held in the future.

5. In the amended budget there is allocated a total of One Hundred Thirty-Three Thousand Dollars ($133,000.00) of City funds as the City's portion of matching funds for grants that are available at the present time from the State and federal governments. Five Thousand Dollars ($5,000.00) of the above total is budgeted for the City's twelve and one half percent (12-1/2%) share of a facilities planning report, which will survey the services and facilities needed in Service District One of the Mill Bay/Monashka Service Area if that area is annexed to the City. There is Eighty Thousand Dollars ($80,000.00) in the above stated sum earmarked for the City's matching share of grants presently available for design of the sanitary sewer extension into the Service District One of the Mill Bay/Monashka Service Area if that area is annexed to the City. There is Forty-Eight Thousand Dollars ($48,000.00) earmarked in the above stated sum as the City's portion of a grant presently available for the design of water line extensions in Service District One of the Mill/Bay Monashka Service Area if that area is annexed to the City. The City has sufficient cash on hand to cover all required matching funds in connection with the facility planning report and the designs of the sanitary sewer and water line extensions before the various grants are processed and payments received by the City.

6. The City, at the present time, has access to the same sources of Federal and State funds as does the Kodiak Island Borough.

7. The City, in the past, has sold both general obligation bonds and revenue bonds and presently has a bond rating of BAA, said rate established by Moody's Bond Rating.

8. The Borough presently has a bond rating of BAA1.

9. The City's assessed valuation represents approximately eighty percent (80%) of the total assessed valuation of the Kodiak Island Borough. The Borough is presently in the process of reappraising the urban areas of the Kodiak Island Borough. At the present time, the City's assessed valuation is approximately Eighty-Six Million Dollars ($86,000,000.00) with an anticipated increase as a result of reappraisal to One Hundred Twenty-Eight Million Dollars ($128,000,000.00).

10. The assessed valuation of the area encompassed by Service District One of the Mill Bay/Monashka Service Area is approximately

Seventeen Million Dollars ($17,000,000.00).

11. If Service District One of the Hill Bay/Monashka Service Area is annexed to the City, the City has the financial capability to provide the services of sewer, water, roads and the full range of general government services such as police, fire protection, parks and recreation and libraries.

12. If the Kodiak Island Borough has to sell bonds to finance capital improvements in Service District One of the Hill Bay/Monashka Service Area and if the full faith and credit of the Kodiak Island Borough is pledged to support those bond issues, the City's bonding capacity will be reduced.

DATED this 1 day of February, 1979.

Harry R. Hyde
HARRY R. HYDE

SUBSCRIBED AND SWORN to before me this 1st day of February 1979.

Notary Public in and for Alaska.
My commission expires: Nov 4 1981

MINUTES OF A REGULAR MEETING OF THE COMMON COUNCIL OF THE CITY OF KODIAK, ALASKA
HELD ON NOVEMBER 12, 1970

I. MEETING CALLED TO ORDER

Mayor Hesoff called the meeting to order at 7:30 p.m. Present were Council Members Berg, Craig, Dyson, Powell and Sutliff. Councilman Sims arrived at 7:45 p.m.

II. PREVIOUS MINUTES

a. Minutes of a Regular Meeting of October 28, 1970.

Councilman Berg moved for approval of the minutes as presented, seconded by Councilman Powell. Roll call was unanimously favorable.

b. Minutes of a Special Meeting of November 10, 1970.

Councilman Sutliff moved for the approval of the minutes of the special meeting, seconded by Councilman Berg. Roll call was unanimously favorable.

III. PERSONS TO BE HEARD

a. Mr. Wilton White, Borough Chairman

Chairman White presented a step annexation program, proposed petitions, and map of the proposdd annexation area. Spruce Cape Road and the Hill Bay side of Island Lake were the proposed areas.

The residents would pay a portion of the City tax and the Borough tax with the precentage adjusted over a period of four years until the areas could receive full City fire protection, police protection, water, and road maintenance. The increased revenues would provide the necessary money for the cost of providing the increased service over the four year period.

The Mayor asked about the representation of these areas. Chairman White replied that the step annexation gave the residents time to get representation, and it was pointed out that several Council members have holdings in these areas now.

Councilman Powell moved that the Council approve the step annexation program presented by the Borough and recommended to the Borough that the Monashka Bay side of Island Lake and Dark Lake be included with the proposed areas. It was seconded by Councilman Berg.

Councilman Sims stated that funding from Federal agencies would be more easily obtained with this annexation because the agencies are not interested in funding just the City area, but the community as a whole. He also felt that taking the Monashka Bay side of Island Lake and Dark Lake would be too much at this time. The Council was in agreement with this.

Chairman White suggested that this area become a third area to be annexed. City Manager Jones recommended that Councilman Powell's motion be amended in this way, and this was agreeable to the Council.

Roll call was unanimously favorable.

IV. OLD BUSINESS

a. Women's Bay Appraisal Report

The Council felt that the appraised rental was too high on this property. Councilman Sims proposed renting only part of this area and perhaps using Borough land near the dock to store pots. This would involve transporting the pots about one mile.

Different areas were discussed for possible pot storage.

Mr. Ole Harder said that if a boat harbor and/or dock were not combined in the same area, the purpose of leasing this land would not be accomplished.

Transporting pots to various areas, how they could be transported, and the cost involved was discussed. The Council felt that pot storage areas were available until such time that a deck and pot storage area combined could be developed.

No action was necessary by the Council. City Manager Jones will pursue negotiations.

b. Gibson Cove Appraisal Report

City Manager Jones stated that this area has been appraised and will be advertised for sale. No action from the Council was necessary.

V. NEW BUSINESS

a. Letter of Congratulation to Chief Rhines.

A letter of congratulation to Chief Rhines on his graduation from the F.B.I. Academy was read by City Manager Jones and signed by the Council.

b. Letter Concerning Lt. Henderson as Acting Chief

A letter recommending a merit pay increase for Lt. Henderson was read by City Manager Jones. Councilman Dyson moved that the Council approve the merit pay increase and asked unanimous consent. It was seconded by Councilman Sims. There were no objections and the motion was approved.

c. Resolution 70-17 - Surplusing Gibson Cove Property

Councilman Berg moved for approval of this Resolution, seconded by Councilman Dyson. Councilman Powell recommended a change on page one, paragraph three, the first sentence the word "now" be changed to "not" so that it reads "WHEREAS, ... not using said . . . .,and". This change was incorporated into the motion. Roll call was unanimously favorable.

d. Municipal League Dues

City Manager Jones said that the Municipal League is proposing to double the dues in order to put another staff member in Juneau to work on the State and Federal aid programs.

MINUTES OF A REGULAR MEETING OF THE COMMON COUNCIL OF THE CITY OF KODIAK, ALASKA
HELD ON JANUARY 13, 1972

I. MEETING CALLED TO ORDER

The Mayor called the meeting to order at 7:30 p.m. Present were Council Members Anderson, Dyson, Lovett, Powell and Sutliff.

II. PREVIOUS MINUTES

Councilman Powell moved for approval of the Minutes of the meetings of December 9 and December 23 held on December 22, seconded by Councilman Dyson. Roll call was unanimously favorable.

III. PERSONS TO BE HEARD

a. Mr. Wally Hickerson and Mr. Richard Guzy RE: Techite Pipe

Mr. Guzy stated that his company was low bidder on supplying this pipe to the contractor on the Monashka Creek project, but Techite was taken out of the specifications. He also stated that the contractor would like to use the pipe, but without a vote from the Council this could not be done.

Mr. Hickerson then presented background information on Techite Pipe: its development, use and testing.

No action was taken at this time.

b. Mr. Beitenger RE: State Highway Route Systems

Mr. Beitenger asked that the City Council request the State Division of Highways to reclassify Rezanof as a Secondary Route rather than a primary, remove the secondary classification from Mill Bay and Spruce Cape--from the cutoff road to the Loran Station--and classify them as local state roads.

These requests were stated in Resolution 2-72 which the Mayor read by title. Councilman Dyson moved for approval, seconded by Councilman Sutliff. Roll call was unanimously favorable.

c. Mr. Fred Street RE: Cab Zones

A letter from Mr. Street was read by the Mayor. Mr. Street felt that public interest would best be served by the abolishment of cab zones within the mall parking lot. Discussion followed.

Councilman Sutliff moved that a study of cab zones be made by the Chief of Police and the City Manager to be presented at the next Council meeting, seconded by Councilman Dyson. Roll call was unanimously favorable.

d. Mr. Wilton White RE: Annexation

Mr. White and the Council discussed the recommendation of the Boundary Commission for full rather than step annexation and the inclusion of a larger area than had been requested.

Councilman Powell moved that the Council go on record as opposing the Boundary Commission's position on annexation as presented to the Council, seconded by Councilman Sutliff. Roll call was unanimously favorable.

IV. OLD BUSINESS

a. Halfway House

Councilman Sutliff moved that the City have no objection to the Kodiak Council on Alcoholism making improvements as outlined by them to meet the specifications of the Sanitarian and the Fire Chief, seconded by Councilman Lovett. Roll call was unanimously favorable.

Councilman Powell moved that the actual lease agreement between the

TO: Mayor and Council

FROM: R. G. Berg

SUBJECT: Annexation and Pillar Mt. Reports

DATE: January 23, 1979

The Council following my tenure as City Manager asked that I continue in an advisory/coordination capacity covering two subjects:
1. The Pillar Mountain potential slide, and
2. Annexation as recommended by the State Local Boundary Commission.

I agreed to follow through on the above, and with the excellent and cooperative help of the City staff believe we may properly assume at least partial success.

ANNEXATION:
The Local Boundary Commission after presentation by City of Kodiak representatives of limited areas contiguous to the City and residents of the proposed annexation area chose to recommend annexation of a larger area to the City of Kodiak as the most logical manner in which to supply necessary municipal services. This recommendation was in contradiction to the proposal of the establishment of the service district by the Kodiak Island Borough.

We proceeded to gather data from Wrangell, Petersburg and other municipalities that had faced Local Boundary Commission recommendations of a similar nature. We also met with representatives of the Department of Community and Regional Affairs in regard to the Boundary Commission recommendations in their capacity as staff representatives to the Boundary Commission. The Council caused to be prepared and passed Resolution 24-78. A committee of persons knowledgable in the area of municipal affairs who presently reside in the proposed annexation area was appointed by Mayor Stevens. These persons are Mrs. Marion Johnson, Bob Waage, Emil Norton, Pete Resoff, Bob Brooks and Nick Szabo. This committee met a number of times with the City Manager, City Engineer and the writer to determine the most basic needs of the area and in what manner they could be financed and made a reality. Under the auspices of this committee's activity, the City staff and I prepared differential tax areas, phase I for wastewater and water service as well as road construction and reconstruction, established and reserved an area for a fire substation and prepared recommendations to the City Council covering these subjects as well as visual displays for the use of the committee at a public hearing held and attended by interested residents of the area.

The public meeting was attended by approximately 30 people including staff members from the City and both our State Senator, Bob Mulcahy, and Representative Fred Zharoff. Inserts for the newspaper were prepared on two occasions outlining briefly in the first issue some annexation considerations and full coverage in the second edition as to recommendations of the committee on differential taxation and services that could be offered by the City of Kodiak. Two work files were prepared for use by your representative, Bob Hartig, in Juneau by me inclusive of all information available in City files since 1968 covering the annexation subject. A number of press interviews were granted to representatives of the two local papers covering the subject and the writer met with Mr. Hartig as well as Representative Zharoff and Senator Mulchay.

Enterprise fund activities

After the public meeting held by the Mayor's Annexation Committee, the Committee determined that there was no viable alternative to annexation to the City of Kodiak. All the committee members in attendance at this meeting were in agreement and made their recommendation known in writing to the City Council. Mr. Nick Szabo was not in attendance at this meeting, although, he had been invited. Recently there was a letter to the Editor in the Kodiak Mirror and Kadiak Times referring to Mr. Szabo's term on the annexation committee which contained a number of misleading statements. The writer was rather flattered that anyone who had resided in this community for any length of time could feel that the members of the Mayor's Committee could be influenced by his argumentative ability over their best judgement.

At the present time Mr. Hartig is prepared to represent you in Juneau and the City Manager has visual presentations for his use.

It appears to me that the Kodiak Island Borough is not in good shape to contend that they can supply services to the area due to their failure to obtain passage of non-areawide service powers. For your information, substantial financial support for the Anti Annexation Committee appears to be coming from the ownership of the Beachcombers which are probably concerned that restrictive police powers and/or hours might be a greater likelyhood if they were incorporated within the city than otherwise.

I belive an extremely fair attempt has been made to educate the public in regard to annexation and that the Mayor's Committee did an excellent job devoting many hours to the subject. The direct mail advertising recently received by residents and boxholders in Kodiak from the Borough Residents for Autonomy is comparable to the Szabo letter to the Editor and contains a number of rather naive attitudes such as "after annexation takes place, the City can levy any tax rate it wishes regardless of the wishes of the area residents". I suspect any tax increase that residents did not wish to take place would not be enacted by their representatives or if they were, Council membership would be changed at the next general election.

Mr. Bob Brooks has circulated petitions that will be forwarded to Mr. Hartig for his use indicating both the number of City residents and annexation area residents who support annexation to the City as the least costly and most efficient method to obtain the necessary services. Anything you can do to clarify points raised by the Borough residents for Autonomy will be helpful. There is no doubt in the writer's mind that the most economical and efficient way to solve some of our local problems in the annexation area is for the residents to agree with annexation. There is no great advantage to the City to incorporate the area from either a bonding or financial basis but the long-range effect can be most

beneficial to all concerned.

The Kodiak Island Borough Assembly obviously continues to belabor under the impression that their activities (i.e. service district) will fulfill the desire and needs of the majority as during their meeting of January 12, 1979 they enjoyed a packed house arranged by the citizens group known as the Citizens for Autonomy. After numerous impassioned pleas to support their efforts by sending Mayor Wallin and the Borough Attorney retained for the purpose, Joan Katz, to Juneau to lobby against annexation, the Assembly moved to support "commensurate with what support toward annexation the City proposes . . .". The effect of this, of course, is as usual, if the City taxpayer spends (through the Council) $10,000 to support annexation and the Kodiak Island Borough (through the Assembly) spends $10,000 to try to defeat for a total of $20,000, the City taxpayer has paid $18,000 of the total. Of course, the Borough and the Citizens for Autonomy contend they pay 50% of the City sales tax but what they don't mention is that this neither jibs with population figures or values on income as can be measured by tangible wealth (value of property). In other words, a City resident appears to own 80%+ of real estate, and pay 80% of Borough local taxes so there must be an inequity in values of that real estate since the monies spent by various residents are usually transformed into some tangible property, i.e. remodeling aditions, various improvements and luxuries including boats, cars, trucks, etc.

Realism has little to do with problems of annexation and I suspect that those most vocal would be against any progress in their area except that they would enjoy as a gift at someone else's expense.

I could recommend under any normal situtation that the City simply let the residents do whatever they want to solve their own problem. However, you and I both know that those same residents and the KIB who are the most vociferous against annexation will be the first to critize the only logical deliverer of services to the areathe City. Further, I would fully expect the City to face increasing litigation over the sewage treatment plant and on the expanded use of the City water collection and distribution systems. I am sure after reviewing the many cost analysis factors and assuming that people need adequately planned and realistically engineered water and sewer service that must be connected to existing City services to avoid unnecessary duplication. The most economical way to accomplish the goal is through annexation to the City of Kodiak.

PILLAR MOUNTAIN LAND SLIDE:

Neither I nor most residents of the Kodiak community can become to excited about an actual hazard existing at any greater risk than that which most of the fishing fleet may face any day.

There are, however, inherent economic and social dangers connected with the USGS report that must bear concern. The USGS warning of potential hazard was precipitated by the KIB in that their consultant (Kramer, Chin and Mayo) on the Comprehensive Plan requested various State and Federal officials to review the potential hazard which resulted in the USGS warning notice. This level of warning, however is the least serious of the notices that can be issued by the USGS according to the Federal Register. Further, it (the report) has a number of interesting qualifiers. One of which is that a major slide of the type that could do maximum damage is an "extreme case". It is interesting to note, no other similar studies were conducted in the area even though similar surface situations exist along the State Highway System, (i.e. Old Woman's Mt., USCG support Center).

After issuance of the USGS report and the warning notice's distribution to numerous Federal and State agencies as required by the Federal Register, the following took place.

1. The L.A. Times Science Editor took notice or was advised and wrote a "scare story" on the mountain that was picked up as worthy copy by a number of large newspapers including the Miami Herald.

2. The KIB consultant, Kramer, Chin and Mayo, caused to be printed a summary document of the Comprehensive Plan that included numerous references to the Pillar Mt. hazard and implied that no further dock or port expansion could take place until the problem was resolved. Although this document was not supposedly to be distributed until it was approved by the Assembly, the KIB staff chose to furnish copies to the local press.

3. Numerous insurance carriers contacted their local agents to determine the validity of the report.

4. On July 1, 1978, the City's insurance carrier, Insurance Comapny of North America, excluded coverage related to Pillar Mt. on the General Liability Policy.

5. Much concern was expressed locally as to future availability of investment monies, industrial financing, boat insurance, port expansion, bond sale costs, additional cannery expansion, new freight routes and foreign investment considering Kodiak favorably in the future due to the "hazard".

6. The KIB under took a planning study to explore the joint management of a port in conjunction with the City and Koniag, Inc.

As there appeared to be no further follow up from the KIB, the

City staff immediately contacted the State congressional delegation outlining the problem and seeking guidance and assistance.

Until late fall of 1978, little was accomplished except the passage of letters in the many State and Federal bodies all of which expressed concern but non of whom, including the USGS, offered any concrete aid.

The City staff and writer did, however, undertake the gathering of all available data on Pillar Mt. and related studies and incidents that were felt to be pertinent. These included contact with the previous Alaska Road Commission (territorial) Superintendent, Kodiak, Bureau of Public Roads representatiaves, consultant reports, dock engineering studies, Department of Transportation and Department of Highways reports, theoretical thesis on effects of predictions, reports of University of Pennsylvania, University of Colorado, Colorado State and others.

At our request, Senator Ted Stevens was instrumental in forcing the USGS to review the problem their prediction could create economically and socially and was helpful in forcing the establishment of the Geotechnical review committee which was initially established December 3, 1978.

The KIB on December, 7, 1978 helpfully passed a resolution covering the formation of the Geotechnical group and charged them with various responsibilities. After a six to eight month hiatus their concern was appreciated by the City staff but rather late and misdirected. Regardless, the Geotechnical Committee met and considered the problem on January 9, 10, 11, 1978 and as expected, the Committee was unable to furnish us with true probabilities of the extreme hazard outlined in the USGS report. Neither the USCS representatives nor other members of the Committee are willing to indicate whether there is a possibility of a major slide within any framework of probability or degree of chance. Therefore, it is probably important for the City to consider remedial action without a great deal of further study because such studies will be qualified and without resolution. Any activity to reduce the seriousness of the possibility of a slide in the area should be undertaken with such monies as may be made available.

The State monitoring system which was initiated at the request of the City through the State Geologist Office will merely give us an indication whether or not we have surface movement. I would liken the results to the United Nations--Much rhetoric, no action.

My recommendation to the Council follows:

1. That further studies are an exercise in futility and that even the most expensive study considered including all phases of work at $900,000 will not result in essential knowledge.

2. That the problem if it is to be solved will be solved by the City of Kodiak and that little or no help will be available elsewhere including the KIB. Although the Borough will insist on any study of the problem being a "planning function".

3. Continue close coordination with Senator Stevens office and staff all of whom have been extremely helpful.

   a. Senator Gravel has expressed some interest in helping and of course continue to keep Representative Young apprised of the situation.

4. With the aid of your own consultant without extensive studies determine remedial action that can be undertaken locally or in conjunction with other agencies.
   i.e. without triggering a slide, start removal of material next to RCA (try to get site surplused due to limited traffic) and dump at toe of slope, fill behind sheet piling, create both dock, van parking and buffer in case of slide, etc. as outlined to you previously. Tie into breakwater construction and allow commercial excavation within controlled engineering plan.

According to those geologists, soils mechanics, etc. we have talked to unofficially, not only do they doubt the possibility of a major ballistic type slide they are of the opinion that removal of the top and portion of the slope by terracing can reduce the center of gravity of a major slide and considerably reduce the potential hazard. There are, however, other ways that this might be accomplished as described to you by Mr. Frank Patton.

Your City staff will continue to evaluate the situation and inform you of possibilities to alleviate the hazard. The attached copy of a Kodiak Fish Wrapper editorial is as accurate, in my estimation, as anything written on the subject.

M E S S A G E

TO George Magnusen
Fire Chief
Kodiak, Alaska

SUBJECT Fire Fighters — and I.S.O. Rating.

DATE February 22, 1978

In response to your call on the extension of the fire protection service to Island Lake and Monashka Bay areas, the City of Kodiak has at this time a rating of Class 5. With the present rate of new homes and businesses in the City and the amount of fire fighters that you now have, it is not going to be adequate to keep the Class 5 rating, as the ISO rating is based on population and full time fire fighters on duty. The City could be changed from a Class 5 to a Class 7. The cost to homeowners and businesses with the increase in rates could be as high as 14%.

You also asked about lowering the Class for Island Lake and Monashka Bay area. ISO has to approve any Class change. As you know, they would have to have a

R E P L Y

BY

minimum of a 6" water line with fire hydrants. Even with an independent fire district, this would not solve anything, as you would still need the fire

DATE

hydrants along the roads.

In talking to the ISO agent, you are getting close to having the inability with the present full time fire fighters to match the growth of the City of Kodiak. In response to table #2), the ISO rating is in disagreement, as you would need additional fire fighters.

SIGNED

Lon Bourtneau, Agent

CITY OF KODIAK

RESOLUTION NO. 5-79

A RESOLUTION EXPRESSING THE INTENT OF THE COUNCIL OF THE CITY OF KODIAK WITH REGARD TO TREATMENT OF ISSUES OF CONCERN TO RESIDENTS OF THE PROPOSED ANNEXATION AREA.

WHEREAS, the Boundary Commission for the State of Alaska has determined to recommend to the legislature that areas generally referred to as Mill Bay and Spruce Cape be annexed to the City of Kodiak; and

WHEREAS, a Committee of citizens concerned with the annexation has held meetings, gathered information and made recommendations to the Council of the City of Kodiak; and

WHEREAS, the Council has determined to accept recommendations from the Committee and desires to adopt these recommendations by Resolution for implementation by ordinance following legislative action on the annexation.

NOW, THEREFORE BE IS RESOLVED by the Council of the City of Kodiak, Alaska, as follows:

Section 1. During such time as full services are not available, differential taxation shall be established and utilized in the area proposed for annexation, pursuant to the tax zone map attached hereto and incorporated by reference, and taxes within those zones shall be based on the following percentages of the City of Kodiak mill rate: Zone 1 - 100%; Zone 2 - 75%; Zone 3 - 35%.

Section 2. Trailers shall be permitted outside established trailer parks in the area proposed for annexation under such terms, in such locations and for such periods of time as will be established by ordinance to be developed after public hearings utilizing comments, information and recommendations received from residents of the area to be annexed.

Section 3. The city staff shall continue preliminary planning and engineering efforts relating to extension of water and sewer facilities to the area to be annexed, and shall investigate th availability of grants for partial or total funding of such extensions, so that water & sewer service may be made available to the area to be annexed as expeditiously as possible.

PASSED and APPROVED this 25th day of January, 1979.

SUBJECT: Economic Analysis of Annexation vs Service District

The following analysis attempts to deal with existing costs and minimum costs that might exist. It is an attempt to evaluate, with qualifications, costs that could reasonably be expected.

ANNUAL SERVICE DISTRICT COSTS	SERVICES	ANNUAL CITY/ANNEXATION COSTS
$300	Sewer Rates	$180
$165	Water Rates	$120
$619	Fire Insurance	$306
$115	Fire Dist. Rates	-0-
$350	Borough Tax Rate	$350
-0-	City Tax Rate	$455
$1,549	(All Services)	$1,411

Plus Personal Property Tax (Real Total)

Minus Personal Property Tax (Real Total)

SEWER RATES--The current monthly sewer rate is $15 both within and those few areas served outside the City boundaries; however, a recent analysis by the Public Works Department has indicated that a self-supporting enterprise sewer rate should be upwards of $25 per month. Rather than increasing this cost to the citizens of Kodiak, the City Council transferred $104,000 from the general fund into the sewer enterprise fund. However, should the City contract for services with a service district, it would be reasonable to assume that a fair and self-supporting rate be established in that contract. The rate would be in excess of $22 per month and more probably as much as $25. This explains the higher annual figure for service districts.

WATER RATES--Current water rates in the City are $120 annually. Rates outside the City are $165 annually. The increased rate is a standard procedure in many cities to allow for administrative services, real overhead and initial capital investment.

FIRE INSURANCE RATES--Within the City of Kodiak, a $50,000 home would be charged $306 for fire insurance. However, most of the proposed annexation area has a fire insurance rating of 9 in comparison to the City's which is 5; therefore, the proposed annexation area residents would pay $619. The critical factor here is that the City can provide fire hydrants and water mains at an accelerated rate effeciently and effectively because of its expertise and experience, fire services policies and goals, than can single-purpose oriented service districts.

FIRE DISTRICT RATES--Borough residents in the annexation area currently are levied a 2.3 fire district mill rate. If annexation occurs, the residents would not have to pay this mill rate.

BOROUGH TAX RATE--The Borough mill rate of 7.0 would remain whether annexation occurred or not.

CITY TAX RATE--If annexation occurred, the current mill rate of 9.1 would be levied, thus, a $50,000 property would equal $455 annually. Of course, with the City mill rate all City services would be provided.

SUB-TOTALS--Annexation for most of the residents and area would cost $138 less than if annexation did not occur and the Borough were to provide services through a service district.

REAL TOTALS--Since the City pays the personal property tax for its residents to the Borough, there would be a further reduction for City residents and, of course, a further increase for Borough residents.

PRESENTATION MADE BEFORE THE ANNEXATION COMMITTEE
December 12, 1978
By City Manager Clair Harmony

I. Should annexation become a reality this January, we at City Hall have tried to set up a preliminary plan:
1. What will take place
2. What the 2,000 residents of the new area might expect in the way of effective delivery of services and of course, what their concerns are now.

We are here tonight to present our best estimates as to costs, taxes, location of services and to offer some options.

We are not in an advocate role, but are simply trying to do some preplanning for an action, which at this point in time, has been initiated and recommended by the Local Boundary Commission and will be going before the State Legislature in January.

The existence of the Annexation Committee and this public hearing before that body are sincere efforts to encourage expressions of public concern and input. Hopefully the committee will formulate a policy statement that can be adopted by the Kodiak City Council, which will provide for the following:
1. Early and special representation.
2. Reasonable differential property taxing zones.
3. Efficient priorities on road improvements.
4. Quality Police and Fire services.
5. Good delivery of water and sewer services.
6. Ultimate expansion of Parks/Recreation and Library services.
7. Modifications that might be invisioned by the community at large, the public here tonight and the committee through its deliberations.

1. As to early representation:
   a. Voting franchise rights would become effective immediately.
   b. In addition, a special representative would be elected from the new area, to serve in an advisory capacity with the City Council for three (3) years.

2. The differential taxation zones would attempt to provide some equity based on the delivery of services like roads, police and fire. As long as the City cannot get a fire truck into a home because of poor access routes, there should be less of a tax burden on that homeowner, and so on.

   Basically the difference between Fire Zones 1, 2 and 3 are that zone 1 would receive 100% delivery of City services, therefore the full mill rate (9.10). Zone 2 would have no effective delivery of fire service and are those areas where the roads are not maintainable, thus 75% mill rate.

   Zone 3 would pay a 50% mill rate and would have poor delivery of police, fire and road improvements. All zones would be changed over the next several years as these services are upgraded.

3. Improvements to roads would progress at a reasonable rate, funded by increased shares in State Revenue Sharing, highway funding and hopefully the committment by the State Legislature to fund greater levels of capital improvements. This could excellerate quality delivery of services to the annexation area.

4. Police and fire services can be expanded from revenue sharing funds, together with the slow phasing out of the State Troopers.

5. Water and sewer services which are funded through assessment districts, State and Federal grants could proceed in higher density areas, and be in as early as 1980 in those areas shown on the map here tonight.

6. Parks/Recreation and Library services would expand on a somewhat slower basis, I would guess, and generally would be funded by general assessments and grants.

II. Briefly, advantages of annexation would include:
1. relief to the poluted conditions of Island Lake.
2. Better fire and rescue.
3. Quality delivery of water at a lesser user rate.
4. Exemption of personal property taxes.
5. Reduction in fire insurance rates.
6. An equal voting status with your neighbors inside the present City boundaries.
7. Plus other factors which will insure for the general health and welfare of the whole area.

III. Conclusion

In conclusion, we are here tonight to answer questions about annexation, which may or may not take place. It is sort of out of our hands. We have tried to research the various possibilities without spending an exorbitant amount of time and City dollars. What is really needed are the expressions on your concerns which can help the City Council provide reasonable alternatives and effective delivery of service should annexation become a reality.

THIRD JUDICIAL DISTRICT AT KODIAK

CITY OF KODIAK	)
Plaintiff,	)
vs	)
KODIAK ISLAND BOROUGH and BETTY WALLIN, Mayor of Kodiak Island Borough,	)
Defendants.	)

No. 3KO-78-120 Civ.

AFFIDAVIT OF RICHARD [illegible] IN SUPPORT OF PLAINTIFF'S MOTION [illegible] SUMMARY JUDGMENT

STATE OF ALASKA)
) ss.
THIRD JUDICIAL DISTRICT)

1. I have been a resident of Kodiak for the past thirteen years.

2. I served on the City Council for the City of Kodiak from the fall of 1969 to the fall of 1972. I served on the Kodiak Island Borough Assembly from the fall of 1970 to the fall of 1972.

3. I have read the affidavits of Stuart O. Denslow, Ed Haughton and Betty Wallin submitted in support of the Borough's opposition to the City's motion for summary judgment. I have read the Borough's counterclaim and affirmative defenses to the City's complaint.

4. Contray to what is stated in the affidavits, the Borough has not continuously engaged in trying to secure water and sewer service to the residents outside the City. The Borough did not have sewer or water powers and the attitude of the Borough Assembly was to let the City solve the problem of water and sewers and would refer individual applicants for water and sewer to the City.

5. Contrary to what is stated in the affidavits, the Borough Assembly was well aware of the fact that the City would require, when feasible, that individuals residing outside the City and who wanted to hook up to water or sewer to annex to the City.

6. On November 12, 1970, the Borough Chairman, Wilton White came before the City Council with a step annexation proposal that would provide for the annexation of the Spruce Cape Road area and the Mill Bay side of Island Lake. These areas were consistant with the areas that EPA was trying to force into the sewage collection system. EPA had consistantly tried to force a massive sewage project on to the Kodiak Island urban and commercial area. In revising the Comprehensive Plan, in developing the Regional Water Quality Management Plan and in the proposals of the engineering firm of Tryck, Nyman and Hayes, it was both the City's and the Borough's intent to limit the sewage systems proposed in those plans to the areas that the Borough proposed be annexed to the City.

7. The Borough did not have the financial means to pay for any sewer costs, the areas of Spruce Cape and Island Lake could not stand the assessments that would be levied to pay for extensions and it was clearly understood that the areas would go onto the sewer and water systems when the population grew enough to support assessment districts and could be annexed to the City.

8. To assert that the City has secretly harbored theories and misrepresented its position to the Borough is ridiculous. From the formation of the Kodiak Island Borough to, I believe 1974 when the Borough Assembly was reapportioned, two members of the City Council of Kodiak also served as members of the Borough Assembly. As stated before, I served both on the City Council and the Borough Assembly for two years.

9. Had there been any intent for the Borough to become involved in the business of sewer collection and water distribution, the City would have required that the Borough contribute to the costs being incurred by the City in developing the systems.

10. As for the agreements and resolutions and ordinances passed by the Borough Assembly and City Council, they were to meet the demands of EPA and the State in order that the sewer project could be built.

11. During the period I was on the Borough Assembly and the City Council, it was understood that the urban areas outside the City would be served with sewer and water when those areas annexed to the City. That was the understanding of the City government and the Borough government.

12. I was personally active as a Borough Assemblyman in trying to have step annexation of the Spruce Cape and Island Lake areas occur. It was a result of the position of the Local Boundary Commission that a larger area

than was requested and a higher level of services and taxation would be imposed that the legislative annexation attempt was rejected at the request of the City and the Borough.

13. It has never been my understanding that any agreement existed between the City and the Borough regarding the City servicing areas outside the City with sewers. See Borough Assembly minutes of June 17, 1971 and July 1, 1971 which I have attached to this affidavit.

14. In preparing this affidavit, I have reviewed both City Council and Borough Assembly minutes for the years 1970-1972.

ROLLAND JONES, being first duly sworn, upon oath, deposes and says:

1. I have been a resident of Kodiak since 1964.

2. From June of 1970 to July of 1972, I was City Manager for the City of Kodiak.

3. I have reviewed an agreement dated July 2, 1970, signed by myself, between the City and the Borough. It is my recollection that the agreement simply stated that the Borough did not have sewer powers and the City did and was the only agency capable of applying for grant funds.

4. That it has been my understanding that Alaska law does not allow a service district to be formed if the services could be provided by a city and that any action taken by me as city official would have been with that premise in mind.

AFFIDAVIT OF CHARLES A. POWELL IN SUPPORT OF PLAINTIFF'S MOTION FOR SUMMARY JUDGMENT

STATE OF ALASKA	)
	) ss.
THIRD JUDICIAL DISTRICT	)

CHARLES A. POWELL, being first duly sworn, upon oath, deposes and says:

1. I have been a resident of Kodiak since August of 1957.

2. I served on the City Council of the City of Kodiak for the fall of 1971 to the fall of 1974. I served on the Borough Assembly from the fall of 1972 to the fall of 1974 and during that period was the presiding officer of the Assembly and Deputy Mayor of the City of Kodiak. I was the first Borough Chairman for the Kodiak Island Borough, serving from 1964 to 1965. I was a member of the State Legislature in 1967-68.

3. During my service on the City Council, the Borough Assembly and as Borough Chairman there was never any doubt that the areas outside the City would be served by the City's sewer and water systems when those areas became urbanized sufficiently to be annexed to the City.

4. It has always been my understanding of municipal law in Alaska that a service area or district could not be formed next to a City, that the Constitution and State Statutes prohibited that.

5. It was understood by the City that when it came time to provide sewer services to the Spruce Cape and Island Lake areas, that they would be annexed to the City.

6. In the agreements and resolutions and ordinances concerning the City's sewer project, the only intent expressed was that the City was the only entity capable of building the sewer system and getting the grant funds and that the Borough would cooperate with the City to do that. It was assumed that when the City extended the sewer it would be to areas that were annexed to the City.

CITY OF KODIAK, Plaintiff,
vs.
KODIAK ISLAND BOROUGH and BETTY WALLIN, Mayor of Kodiak Island Borough, Defendants.

No. 3KO-78-120 Civ.

AFFIDAVIT OF WILTON T. WHITE IN SUPPORT OF PLAINTIFF'S MOTION FOR SUMMARY JUDGMENT

STATE OF ALASKA)
) ss.
THIRD JUDICIAL DISTRICT)

WILTON T. WHITE, being first duly sworn, upon oath, deposes and says:

1. I have been a resident of Kodiak since July of 1919.

2. I was the Borough Chairman of the Kodiak Island Borough from the fall of 1965 to 1967. I was a member of the City Council of the City of Kodiak in 1968. I was the Borough Chairman of the Kodiak Island Borough again from the fall of 1969 through 1973. I was again on the City Council of the City of Kodiak in 1974 and 1975 and also sat on the Borough Assembly in 1974 and 1975. I am presently on the City Council of the City of Kodiak having been elected in the fall of 1978.

3. During my years as Borough Chairman that position was an elective office and the Chairman was the chief administrative officer of the Borough government.

4. From 1969 to at least 1975, the total staff of the Kodiak Island Borough consisted of the Borough Chairman, the Borough Clerk, one secretary, an assessor an assessor's clerk and a bookkeeper.

When the City began to apply for funding to build the sewer treatment system, the Borough government was in no position to even consider participating in the financing or construction of sewers outside the City. In 1970 or 1971, the people of the entire Borough passed a school bond issue. All of the bids for construction came in over the amount of bond monies available. Recognizing the simple facts that there was very limited financial resources and a very limited Borough staff, the efforts of the Borough government were directed at getting the schools built. During this period of time, the Kodiak Island Borough could not have created a sewer service district. It would have been impossible in terms of Borough staff and the tax base to support it. The City already had the departments, manpower, expertise and the financial capability to develop and construct the sewers and treatment system. The Borough was more than happy to let the City do it.

6. I have reviewed: an agreement dated July 2, 1970, marked as Exhibit I to Stuart O. Denslow's affidavit; the affidavit of Stuart O. Denslow; the affidavit of Betty Wallin; the affidavit of Ed Haughton; Kodiak Island Borough Resolution No. 73-15R; the 1971 Kodiak Metropolitan Area Interim Water Quality Management Plan and Defendant's memorandum in Opposition to Plaintiff's motion for summary judgement.

7. It is my distinct recollection that there never was any discussion with the Kodiak Island Borough government and the City of Kodiak regarding any agreement for furnishing sewer service outside the city limits of Kodiak. We all knew that there was a problem with sewage in the Island Lake and Spruce Cape area but the Borough was in no position to do anything about it. It was recognized that as the population of those areas encreased something would have to be done. We knew that the Borough did not have sewer powers and could not spend monies even if we had had funds available. The only logical solution appeared to be that as the areas outside the City became more populated that they sshould be annexed to the City.

8. The cooperation of the Kodiak Island Borough with the City of Kodiak in solving the sewer problem was to assist in having the areas in need of sewers annexed to the City. Three large scale annexations were attempted. The first two failed at the polls. The third attempt was a joint effort of the City and Borough with legislative annexation. When the recommendation of the Local Boundary Commission was made to the legislature, it was so different in terms of area and the requirements imposed for immediate services that the City and Borough jointly requested of the legislature that the annexation be disapproved.

9. There was one joint service agreement entered into between the City and the Borough during the years setforth above. That was an agreement for fire and ambulance service. I, as Borough Chairman, negotiated that agreement for the Borough with the City. If there had been any agreement between the Borough and the City regarding sewers, I would have negotiated it

also. There was no agreement.

10. In the fall of 1973, Ross Wood become Borough Chairman and I told him that now that the schools were pretty much completed that the priority facing the Borough was to try to resolve the sewage problems in the Spruce Cape and Island Lake areas. At that time, annexation appeared to be the only viable alternative and still to this day it is the only economically feasible solution.

DATED this 31st day of January, 1979.

Wilton T. White
WILTON T. WHITE

SUBSCRIBED AND SWORN to before me this 31st day of January, 1979.

Notary Public in and for Alaska
My commission expires: March 4, 1981

As you are aware, the main item on the agenda is the annexation of Mill Bay Road, from the City limits to Cut-off Road. However, there is a much bigger issue that will be discussed later on. The City's presentation tonight will be a summary of services now being provided to the residents of the City of Kodiak. I will say a few words about each service the City is currently providing and the department head who is responsible for that service will be available if you have any questions.

The City Clerk filed a petition with Community and Regional Affairs on October 19, 1977 and with the Borough on the same date. Public notice of the annexation was published on October 21, 25, 26 and 28, 1977.

In the Alaska Administrative Code, 19AAC 05.010 - 19AAC 20.010, one can find the criteria necessary for qualification for annexation.

Item 1 refers to contiquity with the City. This criteria is met as you can see by the map.

Item number three asks if the property is platted or held for sale for urban residential or commercial purposes. In this case, the land is platted and is for sale for urban residential purposes. The population does not now equal that of the City, however, it is only a matter of time until all the buildable land is utilized, either for residential or commercial purposes. Population of the territory being considered for annexation stems primarily from actual growth of the City beyond its legal boundaries. The property is valued high for prospective urban purposes.

Item number four of the regulations asks if the City can provide services more efficiently than another municipality, if the services are needed. This is certainly so since the only other municipality is the Kodiak Island Borough and with its present powers and staffing it is not in a position to offer any services similar to what the City of Kodiak is now providing its own residents. In most cases, if not all instances, the Borough would have to contract with the City or establish duplicate structures and purchase necessary equipment to provide the same services. This of course, would raise the cost for those utilizing those services. The need for additional services is there because the area is becoming increasingly urban. An ordinance passed on second reading at the last Borough Assembly meeting for service areas actually includes the property under consideration this evening. The ordinance establishing the service area excludes all territory in the City as of November 1, 1977.

Item number five discusses the future development and growth of the City and how that will be felt in the annexed area. The City is currently planning on expansion of utilities in this specific area that will be discussed a little later on.

Item number six speaks to the health or safety of City residents. In the area covered by this proposed annexation, there is a definite need for sewage facilities. The City of Kodiak is the only entity able to provide that sewage service. By annexation of this area the City would be able to alleviate the potential health problems.

Item number seven, there are many areas adjacent to the City where the City limits go back and forth across roads, etc. If a definite straightened boundary existed, the police, fire and other services would be able to serve the City residents much better. In some instances, City employees and services must cross land outside the city limits to necessarily serve residents of the City due to this boundary situation. This also causes problems serving areas inside the City because of the inability to get easements, etc. for water and sewer lines.

Number eight is one of the most important items as it asks what City services are received without tax contribution. At the present time, residents of the area outside the City are receiving limited protection from the City police department, as our officers are authorized to assist the Troopers when necessary. The parks and recreation department, boat harbor, cargo dock and municipal airfield serve everyone and the museum is an attraction to all. In addition, the ferry dock serves all residents. The City is responsible for the landfill for all the Kodiak urban area and the cemetery is also free to Borough and City residents alike. The Borough residents are also using City streets to go to and from work and shopping that are cleared of snow and paid for by the City of Kodiak taxpayers. Water and sewer is provided for the different businesses in town and those living outside the City who are working in town also benefit from that. At the present time, the Borough does pay the City for library and fire protection, however I am certain that a case could be made that whatever is contributed is not equal to the usage, i.e. major

The present assessed valuation of personal and real property within the City of Kodiak is $127,748,101. The assessed valuation outside the City limits of Kodiak within the entire Kodiak Island Borough is $32,806,810. This is a total of $160,554,911. In percentages, the City of Kodiak has 79.57% or 80% of the assessed valuation of the Kodiak Island Borough. The Borough has 20.43% or 20%.

In terms of dollars and cents, for every dollar that the Borough collects from the taxpayers and ultimately spends, 80 cents comes from City taxpayers and 20 cents comes from Borough taxpayers outside the city limits.

The Borough does give the City $15,000 for library services. We have facts and figures that show that library usage by the Borough residents is 40% of the total, while City residents use the library 60%. If we take the 80% figure for taxes paid by residents within the city limits, $15,000 of that $12,000 comes from City taxpayers. So while the Borough keeps telling us how much they give us for library services, they are actually giving us 80% or $12,000 of City money and only $3,000 from Borough taxpayers.

It also can be said that the cargo dock, boat harbor, water and sewer departments are enterprise funds. However, a case can be made that the administrative time taken by the City Council and others is time
for by residents outside the City. It is also obvious that if it were not for the City of Kodiak taxpayers in the first place, the people outside of the City boundaries would never be able to enjoy the services they now have. It is the City of Kodiak taxpayers that make it all possible.

At this time I would like to go through the different departments of the City and explain the services that the City now provides.

PARKS AND RECREATION. Each of you has a copy of the services the City is now providing all residents, Borough and City alike, in this important function. The 1977-78 budget is $128,946 while estimated revenues for this year are $20,000. That leaves a total of $108,946 that comes out of general fund revenues which are paid for by City taxpayers. The City does receive State revenue sharing funds for parks and recreation. However, only the population of the City is allowed to be used.

I might mention that the City does utilize the Borough school facilities to provide some recreation services. We are told time and again that this is the contribution from the Borough to the parks and recreation budget. However, that does not hold much water because school facilities are here and they were paid for out of taxes paid in part by the residents of the City. Only 20% of that local support comes from the Kodiak Island Borough residents. If any of you have any questions, Ian Fulp, the City's parks and recreation director, is here to answer them for you.

PUBLIC WORKS. The next department is public works. The City now has a 12-inch water main which is extended to Lot 18 of the proposed annexation area and we are now furnishing water to Lots 1, 14, 15, 16 and 17 in the proposed area. It would be desirable to extend this main through the area and to tie into an existing 12-inch line at Cut-off Road. This would establish another loop in our system which in turn would add more volume of water to the northeast portion of the system for fire fighting purposes. This line will also provide water service to the homes in the area and fire hydrants where such protection is not now available.

The City now has a sewer main extended to the lot line of Lot 15 and has budgeted an additional amount of money to extend it to Lot 18. Should this area be annexed, it would be feasible to extend this line to Lot 23 from this direction and cover the remaining area from a sewer already installed on the northeast side.

The municipal airstrip is partially involved in this annexation. The City has interest in and owns parts of the property involved. It would be advantageous to have it inside the City as periodic maintenance on the field is performed.

Mr. Herman Boukors, the Superintendent of Public Works, is also available to answer any questions you might have.

LIBRARY The library has already been mentioned; however, I will go over that again in case there are any questions. For the first five months of a reregistration period, approximately 40% of the library borrowers were residents of the Borough while 60% were residents of the City.

These figures are for persons who come into the library regularly. The books that are sent to the villages are usually sent to the village schools and are not included in the above statistics. I have already mentioned the library budget and the contribution of the Borough. Elizabeth Carroll, our Library Director is also present tonight.

FIRE. A different situation exists in the fire department. The fire district located in the Borough is in the proposed area under discussion.

The City and Borough have an agreement whereby the City provides fire protection for areas in the Borough. This is based on the mill rate for the fire department that the residents inside the City pay for that service. The basic figures for fire calls, losses and man-hours spent on fires in the Borough is enclosed with your information. So far in 1977, the Kodiak fire department has answered 26 calls in the Borough.

The City of Kodiak also operates the ambulance service for the Kodiak urban area. Recently the Kodiak Island Borough purchased an ambulance and turned it over to the City of Kodiak for the City to operate. In other cities that I have been in, the ambulance service is operated by the hospitals. We do appreciate having an additional ambulance available to answer calls in the Kodiak urban area; however, it is important to note that with health powers, the Borough should have this responsibility. I do not want to belabor the point because of the "generosity" of the Borough in allowing the City to use its ambulance.

Getting back to fire, in the area of insurance, for a $70,000 home, the City rate at class 5 is $559. The same $70,000 home in the Borough without the adequate water and response time is $1,115 for a difference of $556. The point is that by having water and adequate fire service available, a resident taxpayer in the Borough would save approximately half the cost he is now paying for fire insurance.

It is also important to note that the City does conduct fire inspections of the residences and businesses in the annexed area.

Chief Magnusen will answer any questions you might have.

CITY ENGINEER. The City Engineer feels that the organization which operates and maintains a utility system should have the final say in how and when the system is developed. For example, in the case of the City water system, he does not believe any extension should be permitted unless it meets the following criteria: (1) The proposed extension conforms to an approved water system development plan. (2) Construction is done in accordance with City standard specifications and (3) Construction is monitored by a City inspector. In short, the City being the owner and operator of the system should control development of that system. There are only two ways in which this could be accomplished, annexation of lands prior to development or a Borough ordinance requiring all new water system to meet the above criteria. He feels it can be easily shown that annexation is the more positive method allowing all water users an equal voice in the organization which operates the system.

One example of the Borough's inability to handle their responsibility is in the area of subdivision development. At the present time, the Sarch Street sewer line is being reconstructed due in part to inadequate control of subdivision development by the Borough.

In the case of sanitary sewer facilities, there is one additional option that may be considered. That is having the Borough own and operate the waste water treatment plant and take over the responsibility of operating and maintaining the total waste water collection system. This concept is not considered practical, however, as it requires two municipal organizations to control utility systems which overlap.

In conclusion, he feels that orderly growth and development of water and sewer systems within our community is best accomplished by placing all areas served by these systems within the same municipal boundaries. Anything short of this would be a detriment to all concerned.

BOAT HARBOR. The City Council from 1965 to 1971 authorized general fund expenditures to assist the small boat harbor. These expenditures total approximately $50,000. In 1974, the City Council, in an effort to equalize taxation, placed the harbor on an enterprise system and subsequently wrote off a $50,000 deficit. From 1972 through 1975, the City expended general fund monies for capital improvements in the boat harbor which included (1) redecking work area on loading dock 1, (2) installing two 3,000 gallon waste oil tanks, (3) building Shelikof Street loading dock, (4) installation of electrical meters, (5) dredging sludge from drainage culverts.

The above capital improvements total approximately $53,000. Since the small boat harbor was rebuilt in 1965 to the present time, the City has expended in the neighborhood of $100,000 for the small boat harbor operations.

CARGO DOCK. The 1977/78 budget has an amount from the general fund of $149,703. This is a deficit that the City is presently incurring in the cargo terminal operation and is due to contract differences with Sea-Land. Many of the improvements at the cargo dock are paid for out of State funds. It is important to note that the City does spend general fund revenues when problems arise. George Cutrell, the Port Operations Manager is here to answer any questions you might have.

POLICE SERVICES. The Police Chief feels that the proposed annexation would benefit the citizens. When they call for emergency and routine service at the present time, it is confusing to the dispatcher whether to dispatch a police officer or State trooper. This is especially true when street addresses are nonexistent.

Due to the broken configuration of property, liability could result if a police officer mistakenly took action in an area out of the City's jurisdiction. There should be no additional cost to the City for providing this service since the police officers are utilizing Mill Bay Road at the present time to reach other areas within the City.

Probably the best document that I can present to you this evening is the petition by the registered voters of the proposed new first class city Spread Eagle. It calls for fire and road services only. These would be provided by the new city.

Duplication of road and fire services will be quite a burden on these taxpayers. If they purchase additional fire equipment, build a building and have volunteers, the fire service would not be any better than it is right now. I believe the only way to improve service would be if the new city hired fire fighters on a full time basis. This has already proven to be too costly for the existing fire district when they hired their firefighters.

Regarding the road service, it is important to note that it would probably be contracted out to a private company would be a considerable expense.

On page 5 of the brief of the petition for incorporation of Spread Eagle, there is a discussion of the aim of the proposed City which would be to maintain large lots and low density housing in order to preserve the existing forest. The manner in which this would best be accomplished would be to give the residents the power to control the development of and provide the services for the area in which they reside.

First class city incorporation will not protect lot size and density. The only way this could be accomplished would be to incorporate as a first or second class borough and have planning and zoning powers. Another city is definitely not the answer.

In conclusion, I would like to reiterate my main points.

1. The property is used for urban purposes, is platted and is an extension of the City's boundaries. The value of the land is due to the proximity to the City.

2. The City can provide services more efficiently than any other municipality.

3. Expansion of utilities is planned for the area.

4. Sewage facilities are needed to protect the health of the residents.

5. A straightened boundary of the City is definitely needed.

6. I have made the point several times regarding City services received by Borough residents without tax contribution. The most obvious problem with the Borough's thinking is they feel they are actually giving the City something. The idea is like a Federal or State grant instead of the City being part of the Borough. Just because there are two separate municipalities involved does not mean we are not the same people.

Fire Calls & Losses
In the Borough

Year	Calls	Dollar Loss
1970	13	Unknown
1971	17	8,600.00
1972	20	17,600.00
1973	22	6,360.00
1974	20	33,265.10
1975	18	6,400.00
1976	22	21,600.00

This brings the total calls in the Borough in the above period to 134 calls with a dollar loss of $94,225.10. So far in 1977 the Department has answered 26 calls in the Borough and a dollar loss of $66,550.00.

Man Power & Man Hours

Year	Man power	Man Hours	Average Pre Call
1970	Unavailable		
1971	301	100.6	16.7

MEMORANDUM

TO: Dick Berg

FROM: Herman Beukers, Supt. of Public Works

SUBJ: Island Lake Roads

DATE: November 21, 1978

In accordance with your instructions, the following information is submitted:

MAINTAINABLE ROADS

Island Lake Road from Mill Bay to Lake	2,500 feet
Back Island Lake Road (Platted)	3,800 feet
Balika from Island Lake to Mill Bay Road	2,500 feet
Road from Island Lake to Mike Brechan's	750 feet
Ram Site Road	1,900 feet
2 1/5 Miles TOTAL	11,450 feet

It is estimated that the cost per mile for maintaining roads, which includes grading, drainage, snow removal and dust control will be approximately $12,000 per mile per year.

Shahafka Acres Road	1,600 feet
Melnitsa Lane	200 feet
TOTAL	1,800 feet

The above roads will be maintainable with some surfacing work and widening which can be done with City forces. The estimated cost to upgrade these two roads is $7,200. They then would be part of the maintainable system which would then consist of two and one-half miles of road.

The area is gaining access to its lots on roads that are barely trails and are not constructed in the platted right-of-ways. Eventually the proper roads will have to be constructed. Some could be built in the platted right-of-way, others, especially on the back side, would require acquisition of the right-of-way.

Because of the timber in the area and normal construction problems, it is estimated construction costs would be high, especially as we are required to follow our ordinance which states the right-of-way shall be cleared and a 30 foot gravel surface street shall be constructed. It is estimated that the cost would be $[illegible],000 per mile. This figure is based on Brechan's costs on Lake View Drive in the area with a 20% (10% a year) inflation factor.

City of Kodiak

SPECIAL REPORT
ANNEXATION

The area outlined below has been recommended for Annexation by the State of Alaska Boundary Commission. It generally encompasses the area from the existing City limits to Spruce Cape along the water — then to Abercrombie and along Lake View Drive.

ISLAND LAKE ANNEXATION HISTORY

In 1968, the first attempt at annexing Island Lake and Spruce Cape occurred. The main reason for the residents request appears to be fire protection. An election was held and the annexation question was defeated.

In 1970, the Borough initiated step annexation of certain areas (including Island Lake). The Boundary Commission recommendation included a larger area. The Boundary Commission also recommended that all services be provided in one year rather than step annexation. The City, Borough and private citizens sent telegrams and letters to legislators asking that annexation not be approved as the services could not be provided in one year and the cost to the residents both Borough and City, would have been exorbitant.

In 1972, petitions were received from Island Lake residents requesting annexation However, Municipal Boundary regulations were being revised by the State. After the new regulations were established, the City was told that the petition would have to be done under the new regulations. The City Manager at that time, met several times with the residents of Island Lake concerning annexation.

Then the City Manager discussed the problem with the Council and it was agreed that the City should proceed rather than asking the people to present another petition. It was then discovered that planning Grant funds would be available for a comprehensive study of the services needed and manner of providing them. The Borough has planning powers, & the City Manager worked with the Borough to obtain the funds and conduct the study. In the July 22, 1976 Council minutes, The City Manager states, regarding the progress on annexation, "The Borough has applied for a grant to study the situation . . .part of the study would be on whether annexation or a service district would be the best method."

A service district was considered by the residents favorably, but since it was to be contiguous to the present city limits and all services would be furnished by the City, a serious legal question arose as to its position under State Statute.

At the present, the Local Boundary Commission recommendation to annex the area to the City of Kodiak will be made within the first 10 days of the forthcoming State Legislature.

WHAT ABOUT WATER & SEWER

The City of Kodiak engineering department has been doing preliminary planning for water and sewer service to the proposed annexation area so that construction could begin as soon as possible, if annexation were approved. Previous studies have been incorporated. It is anticipated that grants will be received for 50% to 75% of the costs.

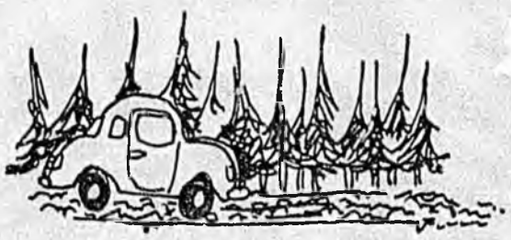
The City has to the best of its ability incorporate the previous work of the citizens and engineering firm retained by the Borough. Plans showing proposed water and sewer lines will be available at the public meeting.

One unusual concept advanced is to allow acceptable Septic Systems in low denisty hard to reach areas in order to keep cost down and to allow assessment relief for the life of the System. Detailed engineering can not be realized until annexation is a reality & appropriate Grant monies can be applied for.

WHAT ABOUT ROADS

1st Priority?

1. Unamed Road in U.S.S. 3467
2. Track A Island Lake
3. Unamed Road in U.S.S. 3219, 3103, 3464 Island Lake
4. Cliffside & Cliffside Loop
5. Seabreeze & Woodland
6. Unamed Road in U.S.S. 3099



2nd Priority? What else should be done.

Reconstruct for purpose of snow removal, road grading, fire & police coverage.

There are 2½ miles of maintainable roads in the area. Maintenance means grading, drainage, snow removal and dust control.
With a minimum of work another 2½ miles of road would be maintainable.

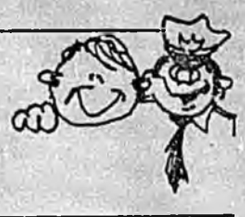
WHAT ABOUT POLICE

Available on maintainable road system with one year or more additional coverage of state police - dispatch available on personal, telephone, or C.B. contact. Additional policemen and vehicles will be added as necessary to cover the entire area.

DIFFERENTIAL TAXATION?

WHAT IS IT ? A method of allowing new residents a break on taxation until they receive the same type and quantity of services as other residents.

Zone No. 1



Generally that area next to Mission Road outside the present boundaries that may enjoy all City services afforded present City residents. Present Mill Rate for City purposes at 100% would apply.

Zone No. 2

Generally that area north of Mill Bay USS 2467, Shafaka Acres, Block 7 Monashka Bay subdivision that cannot receive full services. Mill Rate at 75% would apply.

Zone No. 3

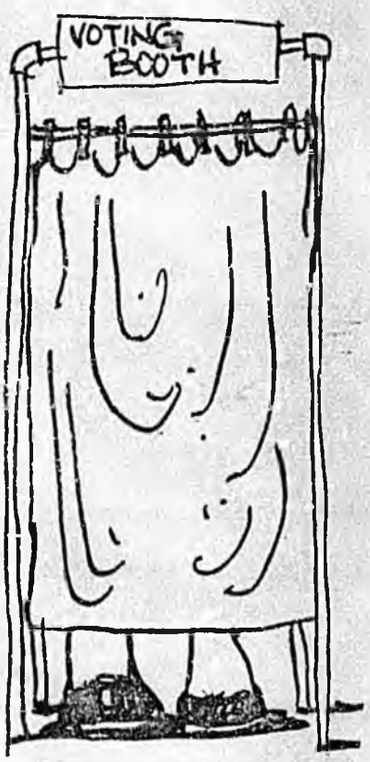
Generally that area of Woodland Acres, and back of Island Lake that the city is presently unable to reach adequately with fire & police due primarily to present road conditions. 50% of the City Mill rate.

SEE THE CITY'S MAP

EARLY & SPECIAL REPRESENTATION

Early representation is afforded by a City Charter provision which allows any resident who has lived in the newly annexed for 2 years and in Alaska for 3 years the ability to run for Mayor or Council.

Also, the City Council by special provision will ask for the election of a special representative from the annexed area to serve as an advisor with the council for 3 years. Residents of the annexed area will of course vote for all council members and mayor as their respective terms expire.



THE CITY MADE THE FOLLOWING PROMISES IN RESOLUTION NO. 24 - 78

CITY OF KODIAK

RESOLUTION NO. 24 - 78

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Kodiak, Alaska as follows:

1. The City will, to the extent possible, establish and implement in the areas to be annexed, a system of differential taxation for any such areas that do not receive all services of the City supported by taxation or which receive these services at a level different from that provided in other areas of the City.

2. The City Manager is hereby directed to develop tentative plans for the provision of services to the areas proposed for annexation and to determine whether the City may be prevented by requirements for capital improvements or for other reasons from providing full services to portions of those areas for any temporary period of time. On or before October 1, 1978, the City Manager shall report to the Council and advise of the areas where provision of full services may be temporarily delayed, the level of service that will be provided and the estimated differential in cost between full services and the services to be provided.

3. The City Manager and the City Attorney shall explore existing legal requirements regarding residency requirements for voting and elective office, and the existing number of Council Members an make recommendations to the Council on or before October 1, 1978, regarding possible changes in law or policy to provide residents of newly annexed areas with representation within the City comparable to that currently available to City residents, and any recommendations regarding required changes in ordinances to implement that objective.

4. The City shall engage in an information program regarding the proposed annexation with the objective of making the public and the legislature aware of the need for and benefits of annexation, and shall employ the services of a qualified person, to the extent determined advisable, to actively support approval of the annexation by the Alaska legislature.

PASSED AND APPROVED this 24th day of August, 1978.

These Ideas are proposals and the City Needs your input.

A Public meeting with the Annexation Committee will be held on December 12,1978 at 7 p.m. in the Council Assembly Chambers.

Number

KODIAK ISLAND BOROUGH SPECIAL ELECTION APRIL 18th, 1978 SAMPLE BALLOT

PROPOSITION NO. 1

SHALL THE KODIAK ICLAND BOROUGH EXERCISE SEWER POWERS WITHIN SERVICE DISTRICT I OF THE MILL BAY – MONASHKA SERVICE AREA INCLUDING, BUT NOT LIMITED TO, POWERS TO CONSTRUCT, MAINTAIN, REPAIR AND REPLACE PUBLIC SEWAGE COLLECTION, TRANSMISSION, TREATMENT AND DISPOSAL SYSTEMS AND FACILITIES.

YES ☐
NO ☐

PROPOSITION NO. 2

SHALL THE KODIAK ISLAND BOROUGH EXERCISE WATER SERVICE POWERS WITHIN SERVICE DISTRICT I OF THE MILL BAY – MONASHKA SERVICE AREA INCLUDING, BUT NOT LIMITED TO, POWERS TO CONSTRUCT, MAINTAIN, REPAIR AND REPLACE PUBLIC WATER PRODUCTION, COLLECTION, STORAGE, TREATMENT AND TRANSMISSION SYSTEMS AND FACILITIES.

YES ☐
NO ☐

PROPOSITION NO. 3

SHALL THE KODIAK ISLAND BOROUGH EXERCISE ROAD POWERS WITHIN SERVICE DISTRICT I OF THE MILL BAY – MONASHKA SERVICE AREA INCLUDING, BUT NOT LIMITED TO, POWERS TO CONSTRUCT, REPAIR, MAINTAIN AND IMPROVE PUBLIC ROADS.

YES ☐
NO ☐

Proposed Service District I

ALL RESIDENTS OF SERVICE DISTRICT I ARE ELIGIBLE TO VOTE.

NOTICE

AT THE REQUEST OF NUMEROUS BOROUGH RESIDENTS, THE BOROUGH OF KODIAK ADOPTED ORDINANCES AND ESTABLISHED APRIL 18, 1978 AS THE DATE OF A SPECIAL ELECTION TO APPROVE FORMATION OF SERVICE DISTRICT NO. 1 OF THE MILL BAY MONASHKA SERVICE AREA. SPECIAL SERVICE NO. 1 DISTRICT IS BEING ESTABLISHED TO ENABLE BOROUGH RESIDENTS LIVING IN THE AREA INCLUDED IN SERVICE DISTRICT NO. 1 TO OBTAIN SEWER, WATER AND ROAD SERVICES.

ESTABLISHMENT OF A SPECIAL SEWER SERVICE DISTRICT WAS CONTEMPLATED BY AGREEMENT BETWEEN THE BOROUGH AND THE CITY OF KODIAK PURSUANT TO WHICH THE CITY OF KODIAK ACTED AS AGENT FOR THE BOROUGH OF KODIAK IN OBTAINING IN EXCESS OF $5,000,000.00 TO CONSTRUCT A WASTE TREATMENT DISPOSAL FACILITY CAPABLE OF PROVIDING SEWER SERVICE TO THE CITY AND TO BOROUGH RESIDENTS LOCATED IN THE AREA PROPOSED TO BE SERVED BY SERVICE DISTRICT NO. 1. WATER AND ROAD POWER ARE BEING PROPOSED FOR SERVICE DISTRICT NO. 1 TO ENABLE A COORDINATED PRESENTATION OF ALL SUCH SERVICES TO THE RESIDENTS OF SERVICE DISTRICT NO. 1.

ON MARCH 28, 1978, THE CITY OF KODIAK FILED AN ACTION TO DECLARE ILLEGAL THE ESTABLISHMENT AND CREATION OF SERVICE DISTRICT NO. 1. SUCH SUIT IS APPARENTLY BASED ON THE CITY'S BELIEF THAT IT IS NO LONGER BOUND BY ITS AGREEMENT TO PERMIT BOROUGH RESIDENTS ACCESS TO THE SEWAGE TREATMENT DISPOSAL PLANT WHICH WAS ACQUIRED AS A RESULT OF A JOINT CITY–BOROUGH AGREEMENT REQUIRED BY THE STATE OF ALASKA AND THE ENVIRONMENTAL PROTECTION AGENCY. THE CITY NOW APPEARS TO BE ATTEMPTING TO FORCE ANNEXATION ON PERSONS PREVIOUSLY VOTING AGAINST ANNEXATION EVEN THOUGH ANNEXATION WILL RESULT IN ADDITIONAL TAXATION TO SUCH PERSONS WITHOUT PROVISION OF COMPARABLE SERVICES.

ALTHOUGH THE BOROUGH HAS PREVIOUSLY CONSULTED WITH AND BELIEVES IT HAS A VALID AGREEMENT WITH THE CITY WITH REGARD TO PROVIDING SEWER SERVICES TO THE RESIDENTS OF SERVICE DISTRICT NO. 1, THE BOROUGH NECESSARILY WILL DISCUSS PROVISION OF WATER AND ROAD SERVICES TO SERVICE DISTRICT NO. 1 WITH THE CITY, AND WILL ONLY PROVIDE SUCH SERVICES DIRECTLY IF NO AGREEMENT CAN BE REACHED. IF THE VOTERS APPROVE SERVICE DISTRICT NO. 1, THE BOROUGH WILL BE ABLE TO BEGIN ENGINEERING PLANNING FOR IMPROVEMENT AREAS WITHIN SERVICE DISTRICT NO. 1 AND TO SEEK FUNDING FOR SEWAGE COLLECTION LINES FROM THE STATE OF ALASKA AND THE ENVIRONMENTAL PROTECTION AGENCY. NO ADDITIONAL TAXES WILL ACCRUE TO DISTRICT RESIDENTS AT THIS TIME AND UNTIL FINANCING PROPOSALS ARE DEVELOPED AND APPROVED BY SERVICE DISTRICT NO. 1 RESIDENTS. THE BOUNDARIES OF SERVICE DISTRICT NO. 1 HAVE BEEN DETERMINED BASED ON ENGINEERING STUDIES TO ENABLE THE USE OF A GRAVITY FLOW SEWAGE COLLECTION SYSTEM WHICH WILL BE THE LEAST COSTLY TO BUILD AND OPERATE.

THE CITY, IN FILING ITS ACTION SEEKING TO DENY ITS OBLIGATIONS TO THE BOROUGH RESIDENTS UNLESS THEY SUBMIT TO BOROUGH ANNEXATION, MAY CAUSE DELAY IN IMPLEMENTATION OF SEWER SERVICES IN THE BOROUGH. IN ADDITION, SUCH ACTION BY THE CITY FORCES THE BOROUGH TO ESTABLISH ITS POSITION IN COURT UNLESS THE CITY AGREES TO LIVE UP TO ITS VALID AGREEMENTS. WHILE IT IS UNFORTUNATE THAT THE CITY AND BOROUGH HAVE BEEN UNABLE TO REACH AGREEMENT, A SUBSTANTIAL NUMBER OF BOROUGH RESIDENTS HAVE CLEARLY INDICATED TO THE BOROUGH THAT THE AGREEMENT TO PERMIT SEWAGE TREATMENT FACILITY HOOKUP WITHOUT ANNEXATION SHOULD BE ENFORCED.

Betty J. Wallin, Mayor
Kodiak Island Borough

ARTICLE 1. ANNEXATION TO CITIES

Section
10. Annexable territory
20. Application of standards
30. Annexation of incorporated territory

19 AAC 05.010. ANNEXABLE TERRITORY. (a) Territory which is contiguous to a city may be annexed to that city if one or more of the following standards are met:

(1) all land to which the territory is contiguous is within the city's boundaries; or

(2) all land in the territory is wholly owned by the city; or

(3) the territory is urban in character. In determining whether territory is urban in character, the commission may consider, without limitation, whether the property is platted or held for sale for urban, residential or commercial purposes; whether the population density of the territory approximates that of the annexing city; whether the population of the territory stems primarily from actual growth of the city beyond its legal boundaries, and whether the property is valuable primarily by reason of its suitability for prospective urban purposes; or

(4) the territory is presently in need of a municipal service or services which the city can provide more efficiently than another municipality; or

(5) there is a likelihood that future growth and development of the city will occur within the territory and annexation of the territory will enable the city to plan for and control that development; or

(6) the health or safety of city residents is endangered by conditions existing or developing in the territory and annexation will enable the city to remove or alleviate those conditions; or

(7) the extension into the territory of city water, sewer, street, or other facilities, or of city police, fire, health or other services is necessary to enable the city to provide adequate service to city residents; and it is impossible or impractical for the city to extend such facilities or services unless the territory is within the city's boundaries; or

(8) residents of, or owners of property in, the territory receive or may be reasonably expected to receive the benefit of city services without commensurate tax contributions whether such services are rendered or received inside or outside the territory. In determining whether this standard is met, the commission will consider alternate methods available to the city for offsetting the cost of providing services to individuals or property beyond its property taxation powers; or

(9) the annexation is otherwise necessary to accomplish a valid public purpose.

(b) Territory which is not contiguous to the city may be annexed to the city if

(1) all the land in the territory is wholly owned or leased by the city or used primarily for the performance of city functions; and

(2) annexation is necessary to enable the city to achieve adequate control, protection or management of the property.

(c) Territory which does not meet the requirements of (a) of this section may nevertheless be annexed to a city if such territory lies between the city boundary and territory which could be annexed under (a) of this section but for the requirement of contiguity. (Eff. 10/13/72, Reg. 43)

Authority: Art. X, Sec. 12
State Constitution
AS 44.19.260(a)(2)

19 AAC 05.020. APPLICATION OF STANDARDS. No annexation will be approved unless the annexing city demonstrates to the satisfaction of the commission that it is capable of extending and willing to extend services to the annexed area as follows:

(1) except in the case of an annexation pursuant to 19 AAC 10.190–19 AAC 10.240, full municipal services shall be extended to the annexed area immediately except where impossible for want of necessary capital facilities. Where full municipal services may not be provided immediately, the annexing city shall satisfy the commission that it will provide those services within a reasonable time;

(2) in the case of an annexation under 19 AAC 10.190–19 AAC 10.240, annexation will be approved only if the commission is satisfied that the city's plan for gradual extension of services is reasonably correlated with the gradual extension of taxation and provides for extension of full municipal services to the annexed area within the transitional period;

(3) notwithstanding (1) and (2) of this section, annexation by a city possessing authority to establish and operate differential taxation zones may be approved if the commission is satisfied that the city is willing and able to use such authority to

(A) provide the territory with such services as may be necessary; and

(B) insure that the annexed area is not subjected to unfair taxation for services not available in the annexed area;

(4) the commission may conduct public hearings or investigations subsequent to the effective date of any annexation to determine whether the extension of services or taxation, and/or utilization of differential taxation zones, is proceeding in a reasonably expeditious and equitable manner. If the commission determines that the extension of services or taxation, and/or utilization of differential taxation zones, is not progressing in a reasonably expeditious and equitable manner, it may institute detachment proceedings under 19 AAC 05.050. (Eff. 10/13/72, Reg. 43)

Authority: Art. X, Sec. 12
State Constitution
AS 44.19.260(a)(2)

19 AAC 05.030. ANNEXATION OF INCORPORATED TERRITORY. (a) In the case of any annexation of territory of another incorporated city, or of an incorporated borough which is providing services to the territory that the city will provide upon annexation, the commission will determine the method by which assets, debts, and liabilities are to be distributed between the city and the municipality formerly providing services.

(b) In determining the method of transfer of service responsibility, and the distribution of debts and assets, the commission will approve any fair and equitable agreement between the municipalities affected, but will independently review any proposed agreement.

(c) Territory which is part of an incorporated city shall not be annexed to another city unless the commission determines the annexation to be in the best interests of the annexing city, the municipality from which the annexed territory is taken, and the annexed area, all considered as a whole; and unless the commission determines that the annexation will not result in a temporary or permanent loss of service to the annexed area.

(d) No separate or additional proceedings are required for detachment of territory within an incorporated city or borough which has become annexed to another city, but the detachment is effected by and at the same time as the annexation itself. (Eff. 10/13/72, Reg. 43)

Authority: Art. X, Sec. 12
State Constitution
AS 44.19.260(a)(2)

19 AAC 10.010. PETITION. A request for a local government boundary change under this chapter is initiated by filing an original and six copies of a petition and supporting brief with the commissioner of the Department of Community and Regional Affairs. (Eff. 9/26/72, Reg. 7; am 10/13/72, Reg. 43)

Authority: Art. X, Sec. 12
State Constitution
AS 44.19.260(a)(2)

19 AAC 10.020. PETITIONER. (a) A petition may be initiated by

(1) a municipality whose boundaries are to be changed; or

(2) an organized borough in which the territory is located; or

(3) at least 10 percent of the qualified voters residing in the territory to be annexed, detached, or in the municipality to be dissolved, or in each municipality to be merged; or

(4) the Commissioner of the Department of Community and Regional Affairs.

(b) The person or entity initiating the petition shall be designated petitioner. (Eff. 9/26/72, Reg. 7; am 10/13/72, Reg. 43)

Authority: Art. X, Sec. 12
State Constitution
AS 44.19.260

19 AAC 10.030. FORM AND CONTENTS. (a) The petition shall be addressed to the Local Boundary Commission and shall bear a caption which clearly identifies the nature of the boundary change and the municipality or municipalities whose boundaries are to be changed.

(b) The petition shall contain the following:

(1) the name, resident address and mailing address of each petitioner;

(2) the name and mailing address of the attorney or other representative designated by the petitioner(s) to receive service, notice, and all other correspondence relating to the proceedings on behalf of the petitioner(s);

(3) a legal boundary description of the territory affected by the proposed boundary change;

(4) the quantity of land contained in the territory;

(5) the assessed or estimated value of all taxable property, giving separate totals for real and personal property in the territory;

(6) the number of residents in the territory.

(7) the rate or rates at which real and personal property are taxed in the territory;

(8) the rate or rates of any sales tax levied by and/or collected in the territory.

(9) the amount and a full explanation of any outstanding bonded indebtedness for which the territory is wholly or partially responsible. (Eff. 9/26/62, Reg. 7; am 10/13/72, Reg. 43)

Authority: Art. X, Sec. 12
State Constitution
AS 44.19.260 (a)(2)

19 AAC 10.040. EXHIBITS. There shall be appended to the petition the following exhibits:

(1) a map or maps showing

(A) the present boundaries of the territory whose boundaries are to be changed;

(B) the maps shall be sufficiently detailed to show all streets and roadways. All copies of the maps submitted as exhibits to copies of the petition shall conform in color and other distinguishing markings, to the original exhibit;

(2) also, an affidavit of the petitioner, or his representative or attorney who prepared the petition, indicating the source from which the information contained in the petition was acquired; and stating that a census or other reliable enumeration of the territory was conducted by him, or under his direct supervision, specifying the dates when the census or enumeration was begun and completed and verifying that it was taken accurately. If an official census has been made of the territory by the federal, state or municipal government within one year of the date of the petition, a copy of that census may be appended to the petition in lieu of a census affidavit;

(3) all inter-municipal agreements regarding transitional provisions of services and distribution of assets and liabilities;

(4) a certified copy of the resolution or ordinance authorizing the municipality to file the petition if the petitioner is a municipality;

(5) the affidavit of petitioner or his representative or attorney, that service of the petition has been made in compliance with sec. 60 of this chapter. (Eff. 9/26/62, Reg. 7; am 10/13/72, Reg. 43)

Authority: Art. X, Sec. 12
State Constitution
AS 44.19.260(a)(2)

19 AAC 10.050. BRIEFS. The petition shall be accompanied by a written brief. The brief shall fully set forth the reasons supporting the boundary change and shall demonstrate that the boundary change meets the standards prescribed in ch. 5 of this title. The commission may require such additional information as in its view will be useful for evaluation of the petition. (Eff. 9/26/62, Reg. 7; am 10/13/72, Reg. 43)

Authority: Art. X, Sec. 12
State Constitution
AS 44.19.260(a)(2)

19 AAC 10.060. SERVICE. (a) The petitioner shall by certified mail, serve a copy of the petition and brief, together with accompanying exhibits, upon every municipality in or adjoining the territory. Such service shall be made at the same time that the petition is filed with the Commissioner of the Department of Community and Regional Affairs.

(b) The petitioner shall arrange that the petition, exhibits and brief will be available for inspection by the general public at a designated place in or near the territory between the hours of 9:00 a.m. and 4:30 p.m. The affidavit required under sec. 40 of this chapter shall specify the exact location where the petition is available for inspection. (Eff. 9/26/62, Reg. 7; am 10/13/72, Reg. 43)

Authority: Art. X, Sec. 12
State Constitution
AS 44.19.260(a)(2)

19 AAC 10.070. REVIEW OF PETITIONS. The Department of Community and Regional Affairs shall review the petition and brief and determine whether they

(1) are in substantially the proper form; and

(2) contain the factual information required by these regulations.

If the department determines that the petition or brief is deficient as to form or content, it shall return the defective petition or brief for

correction or completion. If the department determines that the petition and brief are in substantial compliance with these regulations, it shall notify the petitioner that the petition and brief have been accepted. (Eff. 9/26/62, Reg. 7; am 10/13/72, Reg. 43)

Authority: Art. X, Sec. 12
State Constitution
AS 44.19.260(a)(2)

19 AAC 10.080. NOTICE OF PETITION. (a) Upon receipt of notice from the department that the petition and brief have been accepted, the petitioner shall cause notice of the filing of the petition to be published in a newspaper of general circulation in the territory. Such notice shall be in the form specified by the Commisioner of the Department of Community and Regional Affairs and shall include a brief explanation of the proposed boundary change, the name of the petitioner, the name of each municipality whose boundaries are to be changed, and shall indicate the place where the petition and brief may be inspected by the public as provided in sec. 60 of this chapter.

(b) The petioner shall furnish the Commissioner of the Department of Community and Regional Affairs with proof of compliance with (a) of this section. Upon receipt of such proof, the commissioner shall submit the petition and brief to the commission.

(c) No petition filed with the commissioner shall be deemed to be pending before the commission until the petition and brief have been submitted to the commissioner pursuant to this section. (Eff. 9/26/62, Reg. 7; am 10/13/72, Reg. 43)

Authority: Art. X, Sec. 12
State Constitution
AS 44.19.260(a)(2)

19 AAC 10.090. CALL FOR HEARING. The commission shall determine the time and place of the hearing which shall be held in or near the territory. At least fifteen days prior to the date of the hearing, the commissioner shall cause notice of the hearing to be given and served by certified mail upon:

(1) all municipalities specified at sec. 60 of this chapter; and

(2) any person or municipality who has filed an answering brief pursuant to sec. 100 of this chapter. (Eff. 9/26/62, Reg. 7; am 10/13/72, Reg. 43)

Authority: Art. X, Sec. 12
State Constitution
AS 44.19.260(a)(2)

19 AAC 10.100. ANSWERING BRIEF. (a) A person residing or owning property in the territory or municipality whose boundaries are to be changed or in the governing body of any municipality may file a brief in opposition to the proposed boundary change. The original of the brief shall be filed with the commissioner together with proof that one copy was served upon petitioner or designated representative.

(b) A person or municipality filing an answering brief shall be designated a respondent.

(c) The answering brief shall indicate any factual information thought to be incorrectly or incompletely presented in the petition or petitioner's brief and shall demonstrate the manner in which the proposed boundary change fails to satisfy the standards prescribed in ch. 5 of this title. The brief shall include a discussion of the considerations set forth in sec. 50 of this chapter.

(d) The commission shall consider the respondent to have acquiesced in facts or arguments asserted in the petition and petitioner's brief which are not challenged or controverted in the respondent's brief. (Eff. 10/13/72, Reg. 43)

Authority: Art. X, Sec. 12
State Constitution
AS 44.19.260(a)(2)

19 AAC 10.110. REPLY BRIEF. Prior to the hearing, the petitioner may file a brief in reply to any new matter raised in an answering brief. (Eff. 10/13/72, Reg. 43)

Authority: Art. X, Sec. 12
State Constitution
AS 44.19.260(a)(2)

19 AAC 10.120. DEPARTMENT REPORT. The Department of Community and Regional Affairs shall prepare a report on the proposed boundary change. The report shall summarize the issues raised in the petition and briefs and may comment upon those issues or any other issue which the department deems to be relevant to the proposal. The report may contain recommendations to the commission. The report shall be filed with the commission prior to the date of hearing. (Eff. 10/13/72, Reg. 43)

Authority: Art. X, Sec. 12
State Constitution
AS 44.19.260(a)(2)

19 AAC 10.130. HEARING. (a) The petitioners shall first proceed to support the petition through exhibits, testimony and such other means as bear upon the issues raised by the petition. The presentation shall proceed in substantially the following manner:

(1) the presentation shall be conducted by the petitioner or his designated representative or attorney;

(2) the presentation shall be opened with a brief discussion of the nature of the proposed boundary change and the reasons to be advanced in its support. At the conclusion of the opening statement, petitioner shall submit an outline naming the persons who will give statements in support of the petition. Outlines shall be submitted in sextuplicate and copies shall be served upon all adverse parties;

(3) petitioner shall proceed to conduct his presentation in the manner indicated in his outline. The chairman may allow petitioner to deviate from his outlined presentation.

(b) Upon completion of the petitioner's presentation each respondent shall proceed, in the manner established by the chairman and in the same manner as prescribed for the petitioner, to present his views. Respondent's presentation shall include all information and argument which respondent wishes to advance in rebuttal of petitioner's presentation.

(c) Upon completion of the respondent's presentation, petitioner shall have an opportunity to offer rebuttal.

(d) Upon completion of petitioner's rebuttal, the commission will hear the views of all or any interested persons or political subdivision, not a petitioner or respondent. To obtain the floor, a person must be recognized by the chairman and must state his name, address and the nature of his interest. A person purporting to speak on behalf of a municipality shall demonstrate his authority to do so. The chairman may impose reasonable limitation of the time allotted each speaker and may curtail repetitive and irrelevant statements.

(e) Members of the commission may at any time pose questions or comment on matters raised during the hearing; however, representatives of the department with consent of the chairman may pose questions or comment on matters raised during the hearing.

(f) The chairman may temporarily suspend the order of proceedings set forth in this section to allow rebuttal, counter-rebuttal, or general public comment on a particular issue or issues. (Eff. 9/26/62, Reg. 7; am 10/13/72, Reg. 43)

Authority: Art. X, Sec. 12
State Constitution
AS 44.19.260(a)(2)

19 AAC 10.140. DECISIONAL MEETING. (a) The commission shall consider all aspects of the written and oral testimony before it and any other relevant and reliable data available to it concerning a boundary change proposal. A majority of the total membership of the commission may decide the issue. The commission shall prepare a written statement of its decision including an explanation of the major consideration upon which it relied in reaching its decision.

(b) Any decision of the commission shall be mailed immediately to the petitioner and to all parties who have submitted a reply brief and to any other interested parties who give written notice to the Commissioner of the Department of Community and Regional Affairs that they desire a copy of the decision. (Eff. 9/26/62, Reg. 7; am 10/13/72, Reg. 43)

Authority: Art. X, Sec. 12
State Constitution
AS 44.19.260(a)(2)

19 AAC 10.150. NON-COMPLIANCE. Compliance with the regulations of this chapter may be waived by the commission if substantial rights of interested parties are not prejudiced by such waiver. Any deviation from the procedures set forth in this chapter is waived by the commission unless the commission or a party objects. (Eff. 9/26/62, Reg. 7; am 10/13/72, Reg. 43)

Authority: Art. X, Sec. 12
State Constitution
AS 44.19.260(a)(2)

19 AAC 10.160. DETERMINATION OF PROCEDURE. Where there are alternative procedures for effecting a boundary change, the commission may select the procedures which it deems most appropriate under the circumstances. (Eff. 10/13/72, Reg. 43)

Authority: Art. X, Sec. 12
State Constitution
AS 44.19.260(a)(2)

19 AAC 10.170. CERTIFICATION OF BOUNDARY CHANGES. Within 30 days after a boundary change becomes effective, in accordance with Art. X, Sec. 12 of the Constitution, the Department of Community and Regional Affairs shall prepare a certificate of the change. The department shall transmit duplicate originals of the certificate to the organized borough in which the boundary change has taken place and/or to the municipality whose boundaries have been changed. The department shall also record a copy of the certificate in the recording district in which the boundary change has taken place. (Eff. 10/13/72, Reg. 43)

Authority: Art. X, Sec. 12
State Constitution
AS 44.19.260(a)(2)

19 AAC 10.180. PUBLIC MEETINGS. The commission, at its discretion and prior to consideration of any petition requesting a boundary change, may require municipalities whose boundaries are proposed to be changed to conduct meetings or hearings in the area to be annexed to acquaint residents with the purposes sought to be accomplished and the benefits which are expected to be derived by residents should the boundary change be made and to solicit public opinions on the proposed annexation. The Local Boundary Commission may require that transcripts or minutes be taken of such meetings or hearings for the commission's use and may require that the municipality certify to the commission that such meetings or hearings were conducted as directed by the commission. (Eff. 10/13/72, Reg. 43)

Authority: Art. X, Sec. 12
State Constitution
AS 44.19.260(a)(1)

ARTICLE 2. STEP ANNEXATION.

Section
190. Petition
200. Local election
210. Taxes
220. Voting
230. Ordinances
240. Borough services

19 AAC 10.190. PETITION. An annexation petition submitted to the Local Boundary Commission may request that during each of not more than five full fiscal years after the annexation takes effect, the rate of taxation for city services on the annexed properties shall be at a specified percentage of the full city tax rate. The proposal shall provide an increase from fiscal year to fiscal year until the percentage equals 100 percent of the full city tax rate. The city may not tax annexed property at a rate other than the percentage authorized for that year. Provided, however, that the municipality pursuant to AS 29.53.405 may levy taxes in the annexed area at a different percentage from that authorized for the year in question, if such difference is attributed to the cost of provision in the territory of a special service not supported by the general municipal levy. (Eff. 2/28/65, Reg. 14; am 10/13/72, Reg. 43)

Authority: Art. X, Sec. 12
State Constitution
AS 29.53.405
AS 44.19.260(a)(2)

19 AAC 10.200. LOCAL ELECTION. The Local Boundary Commission will require the governing body of the municipality to which annexation is sought to submit the proposal to the voters in the area to be annexed. The municipality shall bear all expenses of said election and shall submit to the Department of Community and Regional Affairs or Local

Boundary Commission such information and/or reports that either may require prior to, during or subsequent to the election. No such election shall be valid unless the notices pertaining to such election, the way in which the proposal is phrased on the ballot, and the timing of the election have been approved by the Commissioner of the Department of Community and Regional Affairs. (Eff. 2/28/65, Reg. 14; am 10/13/72, Reg. 43)

Authority: Art. X, Sec. 12
State Constitution
AS 44.19.260(a)(2)

19 AAC 10.210. TAXES. The percentage of city taxes on newly annexed properties is determined as follows:

(1) city services to be provided during each year are scheduled by the petitioners or the Local Boundary Commission in consultation with city officials;

(2) the cost of each service as a percentage of the gross general fund expenditure for the fiscal year immediately preceding the annexation is computed;

(3) newly annexed residents pay a percentage of the full city property tax rate equal to the total percentage cost of all services provided. (Eff. 10/13/72, Reg. 43)

Authority: Art. X, Sec. 12
State Constitution
AS 44.19.260(a)(2)

19 AAC 10.220. VOTING. Residents in the newly annexed territory have the same voting privileges as other city residents. (Eff. 10/13/72, Reg. 43)

Authority: Art. X, Sec. 12
State Constitution
AS 44.19.260(a)(2)

19 AAC 10.230. ORDINANCES. City sales tax ordinances and all other city ordinances except those applicable to city services not yet provided are immediately effective in the annexed territory. (Eff. 10/13/72, Reg. 43)

Authority: Art. X, Sec. 12
State Constitution
AS 44.19.260(a)(2)

19 AAC 10.240. BOROUGH SERVICES. The city must accept immediate responsibility for non-areawide borough services currently provided in the newly annexed territory. (Eff. 10/13/72, Reg. 43)

Authority: Art. X, Sec. 12
State Constitution
AS 44.19.260(a)(2)

CHAPTER 15. BOUNDARY CHANGES BY LOCAL ACTION

Article
1. Annexation to Municipalities
2. Detachment from Municipalities

ARTICLE 1. ANNEXATION TO MUNICIPALITIES

19 AAC 15.010. INITIATION OF REQUEST FOR BOUNDARY CHANGE. (a) A request for an annexation under secs. 10–160 of this chapter may be initiated by a petition signed by at least ten percent of the currently registered voters residing within the territory proposed to be annexed, or by a petition of the municipality seeking annexation.

(b) The person or entity initiating the petiton shall be designated petitioner. (Eff. 4/1/73, Reg. 45)

Authority: Art. X, Sec. 12
State Constitution
AS 29.68.010(b)
AS 44.19.260(a)(2)

19 AAC 15.020. FORM AND CONTENTS OF PETITION. (a) The petition shall be addressed to the Department of Community and Regional Affairs and shall bear a caption which clearly identifies the nature of the boundary change and the municipality whose boundary is to be changed.

(b) The petition shall contain

(1) the name, residence address, and mailing address of each peititoner;

(2) the name and mailing address of the attorney or other representative designated by the petitioner(s) to receive service, notice and all other correspondence relating to the proceedings in behalf of the petitioner(s);

(3) a legal description of the territory affected by the proposed boundary change;

(4) the estimated number of residents within the territory proposed to be annexed;

(5) the quantity of land contained within the territory proposed to be annexed;

(6) the assessed or estimated value of all real and personal property within the territory proposed to be annexed;

(7) the rate or rates at which real and personal property are taxed within the municipality to which annexation is proposed;

(8) the rate or rates of any sales or use tax levied by and/or collected within the municipality to which annexation is proposed;

(9) the amount of and a full explanation of any outstanding bonded indebtedness for which the territory proposed to be annexed is wholly or partially responsible;

(10) the population and area of the annexing municipality. (Eff. 4/1/73, Reg. 45)

Authority: Art. X, Sec. 12
State Constitution
AS 29.68.010(b)
AS 44.19.260(a)(2)

19 AAC 15.030. EXHIBITS. There shall be appended to the petition the following exhibits;

(1) a map or maps showing the boundaries of the territory proposed for annexation; and

Lawmakers Set Hearing In Kodiak

JUNEAU (AP) — Lawmakers will take the legislative process to the city of Kodiak next week for a hearing on a disputed annexation proposal in the community.

The state Local Boundary Commission has proposed that an area east of the city, with a population of about 1,500, be annexed. But the two state legislators from Kodiak say they have questions about the proposal, or at least the method in which it was made. And a number of the affected residents — who apparently would face tax hikes under annexation — are protesting.

Although the Local Boundary Commission has recommended annexation of the Spruce Cape, Mill Bay and Island Lake areas, the Legislature can overturn the decision with passage of a resolution, said Sen. Bob Mulcahy, R-Kodiak.

The Community and Regional Affairs committees of the House and Senate are planning to hold a hearing in the city Feb. 10, said the island's other legislator, Democrat House member Fred Zharoff.

Lawmakers say the hearing will let them receive testimony from the residents firsthand.

The Boundary Commission, in its report to the Legislature, cited evidence in favor of annexation. The report said the proposed annex is "generally urban in character," and that it is "in need of municipal services which can be most efficiently provided by the city of Kodiak."

The report cited a likelihood of growth in the area and said annexation "will enable the city to plan for and control that development and arrange the most efficient municipal services."

But two residents of the area involved, Ron Matsuoka and Melissa Newton, in a letter to legislative leaders, said "the wishes of area residents were totally ignored by the local boundary commission."

"Every resident of the area who testified at the boundary commission hearing spoke against forced annexation," they said.

The residents said they feel city services are not required in the area.

Mulcahy said he wants to represent the "wishes of the majority of people," and that a number of persons are opposed to the annexation.

He said he was most disturbed by "the method in which the annexation took place," and that the affected residents didn't vote on the issue.

"I haven't been a carrier of the annexation banner," he said.

REPORT TO THE LOCAL BOUNDARY COMMISSION
ON THE PROPOSAL TO ANNEX CERTAIN LANDS
IN THE KODIAK URBAN AREA
TO THE CITY OF KODIAK

Department of Community
and Regional Affairs
Juneau, Alaska

May 17, 1978

I. INTRODUCTION

On December 12, 1977, the Local Boundary Commission conducted a public hearing to take testimony respecting a petition (attachment #1) submitted by the City of Kodiak proposing annexation of certain properties to the City. As a result of that hearing the Commission elected to postpone action on the City's petition and subsequently submitted petitions for 100% annexations until it considered the broader issue of who --the City of Kodiak or the Kodiak Island Borough-- should be the principal provider of municipal services to residents of the Kodiak urban area. The Commission directed the Department of Community and Regional Affairs, in its capacity as staff advisor to the Commission, to prepare a report stating specific recommendations as to which areas, if any, ought to be annexed to the City of Kodiak.

II. AUTHORITY AND NOTICE

Article X, Section 12 of the Alaska Constitution grants authority to the Local Boundary Commission to "consider any proposed local government boundary change" and to "present proposed changes to the legislature during the first ten days of any regular session". Alaska Statutes grant the Commission authority to "conduct meetings and hearings to consider local government boundary changes and other matters related to local government boundary changes, including extensions of services by incorporated cities into a contiguous area and matters related to extension of services".

In accordance with AS 44.19.290, notice of the Local Boundary Commission's forthcoming public hearing and decisional meeting was ordered published in the Kodiak Daily Mirror editions dated May 4, 8, 15, and 19. A copy of the Notice is appended as attachment #3. Notice was also sent by certified mail, to the manager of the Kodiak Island Borough, the manager of the City of Kodiak, and the Commanding Officer of the U.S. Coast Guard Station in Kodiak. Additionally, notice of the hearing was transmitted over radio station KVOK and TV station KOTV at least three times during the period May 1 to May 19.

III. GENERAL INFORMATION

The following is a brief description of each of the four areas identified in the Notice of Public Hearing:

Mission Road Area: Generally this area consists of the territory located between the northeast boundary of the City of Kodiak and the terminus of Mission Road, located at Spruce Cape. Although the area is largely residential in character, it does contain several small service businesses. There are several mobile home courts located in the area, as well as a Baptist Mission. The only notable public facility is the Kodiak sewage treatment plant presently operated by the City. The Borough contends that the Kodiak sewage treatment plant is a regional facility which should be jointly operated by the City and the Borough.

Staff of the Kodiak Island Borough estimated the population of the area to be 790 residents as of 1977. There are at least 316 water taps in the Mission Lake, Outer Mission Road and Spruce Cape Areas. The City

indicated the population estimate of 790 residents is low. The Borough will provide the estimated value of taxable property at the public hearing. The population is projected to be 1,390 by 1985, a 76% increase over current figures.

Mill Bay Road Area: Generally includes that area extending from the northwest boundary of the City of Kodiak to the point where Mill Bay Road splits to Otmeloi Point and Fort Abercrombie, including the area around Island Lake, Beaver Lake and the relatively newly developed area of East Mill Bay.

Like the previously discussed territory, the area is primarily residential in character, although several businesses do operate in the area. The land most heavily populated is that surrounding Island Lake, while the remainder of the population is fairly evenly scattered throughout the Island Lake area. Population density is moderate to low. Borough estimates made in 1977 show a population of 400 for the Island Lake area and a total area population of 550. There are 100 water taps in the Island Lake Area and numerous wells. The City indicated the current population estimate of 400 residents is low. Estimates project a population of 900 for the Island Lake area by 1995. The only public facility of any consequence is the City of Kodiak's municipal airport. A Catholic school, teaching grades 1-8, is also located in the area. The Borough will provide an estimated value of taxable property at the public hearing.

Monashka Bay: Generally includes the area adjacent to Otmeloi Point and Fort Abercrombie roads. Much of this land is dedicated to public purposes such as the Fort Abercrombie State Park, the City of Kodiak Ram

Site -- a local outdoor theatre, a VFW site and the land fill site operated by the City on Borough land, water reservoir and transmission facilities. The remainder of the area is either undeveloped or very lightly developed. In 1978 Borough staff estimated the population of the area at 100. The current assessed value of property for Mission Road, Mill Bay and Monashka Bay areas is approximately $21 million.

All of the previously described areas receive certain services from the Kodiak Island Borough, including the areawide services of education, planning, platting and zoning, tax assessment and collection and hospitals and health facilities; the non-areawide power of parks and recreation is not provided at this time; and, on a service area basis, fire protection, road maintenance, sewer and water service. The latter three services were only approved by voters in April of this year so actual implementation of the service has yet to begin. Fire protection is, in fact, provided by the City of Kodiak through a contract with the Kodiak Island Borough.

The City is providing 440 water taps and 48 sewer taps to the Mission Road Area, Mill Bay Area, and the Monashka Bay Area.

Coast Guard Base: The reservation, which is excluded from the Kodiak Island Borough boundaries, abuts the City of Kodiak's southern boundary and is totally self-sufficient, containing all facilities and providing all services necessary for the well-being of Coast Guard personnel. The Kodiak Island Borough operates an elementary school on base, while junior high and high school students attend school in downtown Kodiak.

We are not aware of any significant private property on the reservation with the exception of the Wien Air Alaska airport facility. The current estimated population of the U.S.C.G. station is approximately 3,000. An estimate of the potential taxable property at the U.S.C.G. station is between $200,000 and $400,000.

IV. FINANCIAL INFORMATION

The City of Kodiak was incorporated as a town in September 1940, under Federal law. It was later classified as a first class city under State law and subsequently adopted a home rule charter in the fall of 1965. The City operates under the council-manager form of government and, according to the City's budget, provides a broad range of municipal services, including:

Service	Amended Budgeted Funds (FY 78)
General Fund Estimated Expenditures	
1. Legislative, Judicial, Legal	$ 76,520
2. Executive	78,469
3. City Clerk	83,567
4. Finance Director	229,011
5. Police Department	871,619
6. Fire Department	357,135
7. Public Works Department	690,604
8. Parks & Recreation	132,311
9. Library and Museum	161,602
10. Engineering	146,958
11. Non-Departmental	1,344,117*
Total General Fund Estimated Expenditures	$ 4,171,913

*Includes:

$392,948	Payment to Borough in lieu of a borough personal property tax
135,875	Insurance
73,926	Advance to cargo terminal fund
67,000	Public utility services
421,191	Capital Project Transfers

133,200	Bond payments
26,841	Contingency
93,136	Other

General Fund Estimated Revenues

1. Taxes	$2,023,000
2. Licenses and Permits	28,370
3. Intergovernmental Revenues	434,016
4. Charges and Services	366,802
5. Miscellaneous Revenue	39,734
6. Non-Revenue Receipts	1,279,491
Total General Fund Estimated Revenues	$4,171,913

Capital Project Funds Estimated Expenditures*

1. Federal Revenue Sharing Trust	$ 261,000
2. Federal Anti-Recession Fiscal Assistance Fund	79,516
3. Street Improvement	673,300
4. Building Improvement	153,135
5. Water Source Expansion	1,320,655
6. Water/Sewer Line Construction	381,037
7. Sewage Treatment Plant	7,643,105
8. Cargo Pier Construction	873,775
9. HUD Block Grant	1,335,007
10. Major Equipment Purchases	111,780
Total Capital Project Funds Estimated Expenditures	$12,832,310

*Revenues for capital project funds are identical.

Enterprise Funds Estimated Expenditures*	
1. Cargo Terminal	$ 919,917
2. Boat Harbor	368,876
3. Water/Sewer Utilities	1,283,501
Total Enterprise Funds Estimated Expenditures	$ 2,572,294

*Enterprise Fund revenues equal expenditures.

TOTAL ESTIMATED REVENUES	$19,576,517
TOTAL ESTIMATED EXPENDITURES	$19,576,517

The City of Kodiak is located within the Kodiak Island Borough, which is a Borough of the second class. In addition to the mandatory powers of education; tax assessment and collection; and planning, platting and zoning, the Borough also has the areawide power of hospitals and non-areawide powers of parks and recreation and building inspection. On a service area basis the Borough provides fire protection through a city contract to the area adjacent to the City and to the village of Karluk and provides road maintenance to the Bells Flats area. The Borough has very recently established the Monashka service area to provide water, sewer, and maintenance for the road systems north of the City of Kodiak. On March 23, 1978 the City filed a complaint for declaratory judgment and injuction against the establishment of the Monashka service district claiming the services of water, sewer and road maintenance can be provided by the City without any necessity for creating the service district. (Attachment #5)

V. STANDARDS FOR ANNEXATION

Title 19 of the Alaska Administrative Code, Section 05.010, Alaska Statutes 29.63.909 and Article X Section 5 of the Alaska Constitution[1] set forth specific standards and requirements which provide guidelines for annexation. Realizing that annexation may be proposed if any one of these standards are met, the Department will indicate the applicable standard and summarize any appropriate issues raised as follows:

(1) Mission Road Area. In accordance with 19 AAC 05.010, the Department suggests that the following applicable standards appear to be satisfied because the territory between Mission Lake and Spruce Cape is:

(a) contiguous to the City as evidenced by the Kodiak Island Borough map prepared by Kramer, Chin, & Mayo Inc.

(b) essentially or will be urban in character as noted in the Kodiak Island Borough map prepared by Kramer, Chin & Mayo Inc.

---

[1] "Section 5. Service areas to provide special services within an organized borough may be established, altered, or abolished by the assembly, subject to the provisions of law or charter. A new service area shall not be established if, consistent with the purposes of this article, the new service can be provided by an existing service area, by incorporation as a city, or by annexation to a city. The assembly may authorize the levying of taxes, charges, or assessments within a service area to finance the special services."

Resident Population Estimates

(provided by Borough)

	1977	1985	1995
Mission Road	520	720	920
Mission Lake	270	470	870
Mid Cape	0	200	600
Spruce Cape	0	0	600
TOTAL	790	1,390	2,990

At least one-third of the total land area is undeveloped and the largest portion is the former U.S. Coast Guard LORAN Station whose operation of this facility will be terminated on December 31, 1979. Additionally, the former U.S.C.G. LORAN station was declared surplus and has been selected by one of the Kodiak Island Native corporations formed under the Alaska Native Claims Settlement Act. While no immediate development plans appear to exist, it is anticipated that the property will see development, primarily for residential purposes, in the future. The current borough planning estimates project a population of 600 on the former U.S.C.G. LORAN station by 1995 and 600 residents for the Mid Cape Territory. The U.S.C.G. LORAN facility currently has a population of 4 residents.

(c) presently in need of municipal services of water, roads, and fire protection which the City should be able to provide more efficiently than the Borough could by using differential tax zones.

The Department would suggest that the City and the Borough should more appropriately respond to the question of who can provide the specific services more efficiently by whatever means they desire. However, the Department would make the following observations:

Sewer and water facilities are provided to the majority of the area by the City of Kodiak. The previous sewer and water lines were constructed under the auspices of a public utility district prior to statehood and were subsequently taken over by the City of Kodiak. The majority of the water line was put in after the earthquake ruined the wells. Several private sewer lines were also built at that time. According to a 1970 agreement between the Borough and the City, the City has long been designated as the agency responsible for implementation of water and sewer projects within the area of the road system in the Kodiak Island Borough. The City recently installed a sewer interception to the treatment plant.

The territory is presently in need of local road maintenance as evidenced by the recent service area election to provide the service. However, the Department of Transportation is presently responsible for road maintenance on the Spruce Cape road. In determining which governmental agency can most efficiently provide the service for the area it is noted that the City has the only existing Public Works Department capable of providing road maintenance. The Borough has chosen to provide road maintenance through private contracts rather than through a Municipal Public Works Department.

Fire protection is provided by the Borough through a contractual arrangement with the City because the City has the only municipal fire department.

(2) Mill Bay Area. According to 19 AAC 05.010, the Department suggests that the following applicable standards appear to have been satisfied for the territory adjacent to Mill Bay Road extending from Kodiak Subdivision to the turn-off to Fort Abercrombie.

(a) The territory is contiguous to the City as evidenced by the Kodiak Island Borough map prepared by Kramer, Chin and Mayo Inc.

(b) The terrritory is essentially urban in character as noted in the Kodiak Island Borough map prepared by Kramer, Chin and Mayo Inc.

Resident Population

	1977	1985	1995
Beaver Lake	30	130	730
East Island Lake	310	510	710
West Island Lake	70	120	170
East Mill ay	50	150	250
West Mill Bay	70	120	170
TOTAL	530	1,030	2,030

The land most heavily populated is surrounding Island Lake, while the remainder of the population is fairly evenly scattered throughout the Island Lake area.

(c) The territory is presently in need of municipal services of water and sewer, roads and fire protection, which the City should be able to provide more efficiently than the Borough could by using differential tax zones.

Here again the Department would suggest that the City and the Borough should more appropriately respond individually to this question of which municipality can provide the service more efficiently. However, the Department would make the following observations:

City water is provided to portions of the area surrounding Island Lake--the water line used is a temporary one, and water pressure is often very low. No sewage collection or treatment facilities operate in the Island Lake area. Consequently, due to the population density, water table, and lack of a collection system, a serious water pollution problem exists at Island Lake (attachment #4).

The territory is presently in need of municipal road maintenance as evidenced by the recent service area election to provide the service. The Department notes that the City has the only existing Public Works Department capable of providing road maintenance.

Fire Protection is provided by the City through a contracted arrangement with the Borough because the City has the only municipal fire department.

(3) The Monashka Bay area. In accordance with 19 AAC 05.010, the Department suggests that the following standards appear to be satisfied for the territory adjacent to Mill Bay Road and extending to the Fort Abercrombie extension to the end of Mill Bay Road, including the Pillar Creek, Virginia Creek and Monashka Creek water shed.

(a) The territory is contiguous to the western boundary of the City as shown by the Kodiak Island Borough map as prepared by Kramer, Chin and Mayo Inc.

(b) Portions of the territory should be annexed to enable the City to achieve adequate control, protection or management of the land fill site and the water shed of city water supply.

The area surrounding Monashka Bay Area #21 is not populated as shown on the Kodiak Island map. The surrounding land is primarily dedicated to public purposes such as the Fort Abercrombie State Park, the Kodiak Ram Site -- local outdoor theatre, VFW, and the land fill site operated by the City on Borough property, water reservoir and transmission facilities. If this area were annexed and included the water shed of Monashka Creek, Virginia Creek and Pillar Creek, the City would have direct jurisdiction over the territory within its boundaries (see Attachment #2).

However, according to the 1978 Kodiak Island Borough's regional plan and development strategy draft summary report, the current water storage capacity at Pillar Creek is inadequate to guarantee a supply of water to industrial users during periods of low stream flow. Potentially,

large fish production losses could occur during peak harvests and this could discourage construction of new processing plants. An Outer Continental Shelf service base would also require large amounts of fresh water to supply drill rigs. Further economic development will require increasing water storage capacity. The most readily apparent alternative is for the City to go ahead with raising the Monashka Creek Dam.

The Department notes that this project is a city function on land purportedly owned by the Borough. The City claims the Borough has said that the land will be turned over to the City. The Department would suggest clarification should be made as to whether this land will be turned over to the City, and who should ultimately provide the service.

(4) The Coast Guard Base: The Department now suggests that the entire U.S.C.G. station be considered for annexation. In accordance with 19 AAC 05.010 the Department would suggest that the following standards appear to be satisfied for the territory proposed.

(a) The territory is urban in character as evidenced by the U.S.C.G.'s own estimate of population to be approximately 3,000 residents.

(b) There is a likelihood that future growth and development will occur within the territory particularly at the State airport which is leased from the U.S.C.G.

(c) Part of the territory (i.e. airport) is presently in need of municipal services of police protection, roads, and fire protection, which the City, using differential tax zones, should be able to provide more efficiently than the Borough using the service area mechanism.

The City of Kodiak Police Department is the security agency at the airport. The City provides the anti-hijacking protection for the airport. The City contends this area is in need of police protection, including the parking lot and restaurant which is being built. As the airport grows and develops, increased commercial activity as well as private aircraft will be at the facility. The Division of Aviation has plans to develop the airport further to handle private craft, and the City has indicated an interest in closing its existing airport.

At the present time the U.S.C.G. Station provides security police services, fire protection (in conjunction with the City), and airport maintenance (in conjunction with the FAA and the Department of Transportation), water sewers and sewer treatment facilities, crash services, and garbage and solid waste collection and disposal on the base.

Another issue is the fact that Koniag Native Corporation is hoping to receive excess property at the airport for further development. However, the U.S.C.G. has no immediate plans to dispose of any excess property.

According to Article X Section 7, City annexation of the Coast Guard Base (including the State Airport) would also extend the Kodiak Island Borough boundaries as well. Should annexation occur, the Borough would acquire a tax base of the territory and could exercise all of its powers in the area. The U.S.C.G. personnel could then exercise their rights as city and borough residents.

The Department would suggest that the City determine whether there is sufficient taxable property at the U.S.C.G. station to justify police protection or any other services. However, additional State and Federal grants should be available to assist with providing these services such as State and Federal Revenue Sharing. Apparently the Kodiak Island Borough has previously negotiated with the U.S.C.G. concerning 100% annexation without success.

Recommendation

The basic problem appears to be that the City and the Borough are attempting to provide the same municipal services and occupy the same political and physical space. While it is generally desirable that matters of government organization be determined locally, conflicts have occurred over annexation with creation of the Monashka Bay Service area and the request for incorporation of a first class city in the Monashka Bay area. These conflicts would indicate that the Local Boundary Commission should review the activities and assume a mediating role to resolve these conflicts.

The Department believes firmly the language of Article X, Section 5 of the Alaska Constitution[2] encourages the provision of municipal services by cities and discourages the provision of services on a service area basis by a borough when those services can be provided by a city through annexation. Any territory bordering on a city should be encouraged to annex rather than permitting it to remain as a borough service area, providing the annexation standards are met. Ideally the boundaries should encompass an entire natural socio-economic and political area which is urban in character.

We believe that the four areas studied in this report adequately fall within the urban socio-economic and political influence of the City of Kodiak and generally meet annexation standards.

---

[2] Ibid.

The final solution for the problem of the Kodiak urban area may be complete unification or consolidation of the city and borough governments. Resolutions have been passed by both the City of Kodiak and the Kodiak Island Borough regarding unification. At the Borough Assembly meeting on April 7, the Borough Assembly did adopt a Resolution 78-34-R to put the question on the ballot next October. The City Manager has stated that without the total picture of annexation being reviewed and the Local Boundary Commission taking appropriate action, the City believes the present situation would prevail for a number of years. The Borough Manager stated that unification could take place as soon as mid-1979. Also, the Borough Manager contends the most economical solution to the problem would be to dissolve the City and provide municipal services on a service area or areawide basis.

The Department recommends that the Local Boundary Commission consider annexation to the City of the territories proposed based upon (1) the standards of annexation which appear to be satisfied for areas proposed; (2) the city and borough testimony in response to the standards raised and the feasibility of services which would be provided; and (3) the testimony of the residents which will be given at the public hearing.

The Bells Flats-Russian Creek Service area, located immediately adjacent to the Coast Guard Base, was not included in the Official Notice of Public Hearing as an area to be considered. The Department would also recommend that the Local Boundary Commission consider this area for future annexation to the City in view of its relative small size, the estimated borough population of 160 as of 1977, the fact that the Borough has created a service area for road maintenance, and the potential taxable property is estimated to be $3,600,000.

Juneau, AK 99811

Re: City of Kodiak Proposed Annexation

Dear Representative O'Connell:

I enjoyed the opportunity to talk with you yesterday and hear of your experiences with annexation in Kenai. Enclosed, as per our discussion, are copies of the two briefs I have submitted at various stages in this controversy as well as a map supplied by Local Boundary Commission staff. (I, however, am responsible for the color effects.) Please feel free to call me with any questions you may have or any additional areas regarding which you may need further input. I have also contacted Hayden Green at the University and he assures me that he and P. J. Hill, who prepared the economic analysis submitted to the Local Boundary Commission and included in the information being sent to you, will also be available to answer any questions you might have.

I also intend to draw up a summary statement of the Kodiak Island Borough's position in the very near future to update and condense the material being sent to you today. I shall send that to you next week. In the meantime, I look forward to meeting you in Juneau.

Sincerely,

Joan M. Katz

Mr. Stuart Denslow
Borough Manager
Kodiak Island Borough
Box 1246
Kodiak, AK 99615

Dear Mr. Denslow:

This is to acknowledge receipt of Kodiak Island Borough's Municipal Selections, ADL 200122.

Further processing of the pending selections by the Southcentral District Office is not anticipated until completion of legislative action on House Bill 133 which addresses the municipal land selection problems in Title 29 of the Alaska Statutes. If, in the meantime, there are critical priority selections requiring immediate attention or questions regarding your selection status, we will be glad to respond to your needs.

Sincerely,

L. A. Dutton
District Manager

AGREEMENT

DESIGNATING THE CITY OF KODIAK AS THE AGENCY RESPONSIBLE FOR IMPLEMENTATION OF WATER AND SEWER PROJECTS ELIGIBLE FOR FEDERAL FUNDING

THIS AGREEMENT, made and entered into this 2nd day of July, 1970, by and between the CITY OF KODIAK, a municipal corporation, hereinafter referred to as "CITY" and KODIAK ISLAND BOROUGH, a municipal corporation organized under the laws of the State of Alaska, hereinafter referred to as "BOROUGH",

W I T N E S S E T H :

WHEREAS, BOROUGH is a second class borough and as such has limited authority which does not include the power to provide water or sewer service and

WHEREAS, CITY is a first class city and as such has a Public Works Department and in connection therewith provides sewer and water service to the residents residing within the corporate limits of the CITY OF KODIAK and to some residents residing outside the corporate limits of the CITY OF KODIAK, and

WHEREAS, the parties hereto desire to make application for Federal aid on local sewer and water project and one of the parties hereto must be designated an agency responsible for implementation of such projects.

NOW, THEREFORE, in consideration of the foregoing, the parties hereto mutually agree as follows:

1. CITY is hereby designated the agency responsible for implementation of any water or sewer projects within the area of the road system in the KODIAK ISLAND BOROUGH and is hereby authorized to make application for Federal aid in connection therewith.

IN WITNESS WHEREOF the parties hereto have caused this Agreement to be executed by their proper officials on the day and year first above written.

CITY OF KODIAK

BY: Richard A. Jones

KODIAK ISLAND BOROUGH

BY:

EXHIBIT B

CONTRACT TO FURNISH FIRE PROTECTION SERVICE

THIS CONTRACT made this 2ND day of ~~May~~ July, 1970, by and between the CITY OF KODIAK, hereinafter referred to as "City" and the KODIAK ISLAND BOROUGH, hereinafter referred to as "Borough", both being municipal corporations organized under the laws of the State of Alaska.

W I T N E S S E T H

WHEREAS, City is an Alaskan municipal corporation, being a home-roll or charter city, and as such is lawfully authorized and empowered to enter into the Agreement hereinafter recited; and

WHEREAS, Borough is an Alaskan municipal corporation of the second class and has under its powers formed a Fire Service District as provided by law and therefore is lawfully authorized and empowered to enter into the Agreement hereinafter recited; and

WHEREAS, Borough is presently without adequate fire protection in its Fire Service District and desires to have the services of City's Fire Department and to pay for such services; and

WHEREAS, City is willing to furnish fire protection to Borough's Fire Protection District provided an adequate payment is made.

NOW, THEREFORE, City and Borough agree as follows:

SERVICES TO BE RENDERED

FIRST: Subject to the conditions and qualifications hereinafter recited, the City will furnish to Borough's Fire Protection District during the period of this Agreement, the services of City's Fire Department to the same extent as if the area encompassed within the boundaries of the Borough's Fire Protection District were a part of the incorporated area of the City.

TERM OF AGREEMENT

SECOND: The term of this Agreement shall be continuous until terminated by mutual agreement of the Parties or by notice of intention to terminate given in writing not less than ninety (90) days before the intended date of termination when such notice is given and which notice may be given by either Party at any time hereafter.

PAYMENT

THIRD: Borough agrees to pay to City during the term of this Agreement an amount equal to the millage rate levied by City for fire protection service in the City, which amount shall be levied and collected on all properties within Borough's Fire Protection District at the same millage rate. City shall give to Borough, in writing, at the time it sets its millage rate, the millage levied for fire protection within the City and that same millage rate shall thereafter be applied to all properties within the Borough Fire Protection District for the ensuing year and this amount shall be paid to City.

CITY IS NOT RESPONSIBLE FOR CONDITION OF FACILITIES

FOURTH: City assumes no responsibility for the condition of the water mains, adequacy of fire hydrants, water pressure or of any of the facilities to be furnished by Borough's Fire Protection District except to render the best service possible under the conditions which exist at any given time.

RESPONSIBILITY OF FIRE CHIEF

FIFTH: In agreeing to give Borough's Fire Protection District the same type and quality of fire protection service as

that enjoyed by the City, it is understood by Borough that the ultimate decision and discretion as to the method and manner of controlling or extinguishing fires is vested in the Fire Chief of the City. Neither City or Borough shall be allowed any priority in dispatching of fire fighting equipment or personnel, but in any given case, the decision shall be in the discretion of the City's Fire Chief.

FIREMEN TO BE MADE PEACE OFFICERS

SIXTH: City does not agree to furnish any peace officers in connection with the response to any fires within the Borough Fire Protection District unless such powers are conferred upon firemen by the laws of the State of Alaska and in that event the powers and authorities shall be limited to that authority granted.

INSPECTION BY FIRE DEPARTMENT

SEVENTH: The Fire Department of City shall have the same right to make inspections of any and all structures and grounds within the Fire Protection District of Borough and to make appropriate recommendations thereon with the same force and effect as the Fire Department has within the City.

BOROUGH TO ABATE FIRE HAZARDS OR NUISANCES

EIGHTH: Borough agrees to take timely action to abate any fire hazard or nuisance when such is called to the attention of the Borough Chairman or Borough Assembly.

INDEMNITY OF FIRE DEPARTMENT

NINTH: Borough agrees that the Fire Department of the City shall have the same privileges and immunities with respect to liability as said Department has in the City.

ADJUSTMENT OR REVISIONS OF BOUNDARIES

TENTH: Borough agrees that if the present geographical boundaries of the Fire Protection District of Borough are reduced or enlarged or expanded, then and in such event City may either refuse to service such enlarged area or this Agreement shall be amended to provide an added consideration for the additional fire protection to be rendered by City or a reduction in the compensatio by reducing the amount thereof by subtracting the millage from thos properties withdrawn.

CITY IS INDEPENDENT CONTRACTOR

ELEVENTH: The management, regulation and control of City' Fire Department shall remain the sole obligation of City, and the relationship of City to Borough shall, upon this Agreement taking effect, be that of independent contractor.

IN WITNESS WHEREOF, the Parties hereto have executed these presents by resolution of their respective governing bodies,, duly authorizing the same.

ADDENDUM

TO CONTRACT TO FURNISH FIRE SERVICE

Whereas the parties hereto have heretofore entered into an Agreement whereby CITY agreed to furnish to BOROUGH's Fire Protecti District, the services of CITY's Fire Department to the same extent as if the area encompassed within the boundaries of the BOROUGH's Fire Protection District were a part of the incorporated area of the CITY and

Whereas BOROUGH agreed to pay to CITY during the term of said Agreement, an amount equal to the millage rate levied by the CITY for fire protection service in the CITY but no provision was made, nor account taken of the Capital Improvements of the Fire Department to date or in the future,

Now therefore, the parties hereto agree that the BOROUGH will transfer, and the CITY will accept the equity of the BOROUGH in its fire truck and equipment as the BOROUGH's contribution to the Capital Improvements of the CITY's Fire Department to date, and to make further contributions to the Capital Improvements of the Fire Department through assessment and taxation at the same time and on the same basis as may be done by CITY in the future.

IN WITNESS WHEREOF, the parties hereto have executed these presents by resolution of their respective governing bodies, duly authorizing the same.

KODIAK ISLAND BOROUGH

DATE: December 6, 1977

FROM: Borough Assessor/ Ed Haney

TO: Whom It May Concern

At the time of construction in 1973 the cost of building the Kodiak High School gymnasium was One Million One Hundred Fifteen Thousand Dollars ($1,115,000). Reproduction today would be approximately One Million Six Hundred Seventy Thousand Dollars ($1,670,000).

The swimming pool complex in 1973 cost One Million Thirty Five Thousand Dollars ($1,035,000) to build and to reproduce it today would approximately cost One Million Five Hundred Fifty Thousand Dollars ($1,550,000).

Totaling the two (2) buildings together shows a cost to build in 1973 of Two Million One Hundred Fifty Thousand Dollars ($2,150,000).

The reproduction of the two (2) buildings together in 1977 would come to Three Million Two Hundred Twenty Thousand Dollars ($3,220,000).

KODIAK ISLAND BOROUGH SCHOOL DISTRICT
POST OFFICE BOX 886
KODIAK, ALASKA 99615
(TELEPHONE: (907) 486-3131)

JOINT AGREEMENT FOR THE USE & OPERATION OF GYMNASIUMS & SWIMMING POOL

This agreement entered into this 15th day of November 1977, by and between the KODIAK ISLAND BOROUGH, hereinafter referred to as the *BOROUGH*, the KODIAK ISLAND BOROUGH SCHOOL DISTRICT, hereinafter referred to as the *DISTRICT*, and the CITY OF KODIAK, hereinafter referred to as the *CITY*.

WITNESSETH:

WHEREAS, the *DISTRICT* has under its jurisdiction the operation and management of three gyms and one swimming pool within *CITY* boundaries, said gyms being the Kodiak High School gym, the Main School gym, and the East Elementary gym; and,

WHEREAS, the *BOROUGH* contributes to the *CITY* recreation program by making school facilities available to the City Parks & Recreation Department for public use; this they do in lieu of providing recreational funds to the *CITY*; and,

WHEREAS, the *DISTRICT* obligated itself before the election of February, 1972 to running the pool for the public; and,

WHEREAS, it is inconvenient and costly for the *DISTRICT* to run a public recreation program; and,

WHEREAS, said swimming pool and gymnasiums are physically convenient and capable of being used by the *CITY* and its program conducted

by the Parks & Recreation Department; and,

WHEREAS, maximum use can be made of said swimming pool and gymnasium facilities by the joint use thereof of the *DISTRICT* and the *CITY*, and it is in the best interests of the parties hereto and the public that such use be made thereof.

NOW THEREFORE, in consideration of the above premises and the undertaking and convenants of each of the parties as hereinafter set forth, it is agreed by and between the parties as follows:

1. TERMS:

This *AGREEMENT* shall be effective for a term of 7½ months, commencing on November 15, 1977, and ending on August 1 _____, 1978. The *AGREEMENT* may be terminated by either party giving 30 days written notice.

2. USE OF POOL & GYMS:

The *DISTRICT* shall have the right of exclusive use of said swimming pool and gymnasiums upon regular school days, Monday through Friday of each week during each school year, from 7:30 AM to 5:00 PM of each of the said days, except that the *CITY* reserves the right to use the pool or gymnasiums for the public if they are not being used at that time by the *DISTRICT*. The *DISTRICT* shall also, in addition to the hours specified, have the right to use the pool and gymnasium facilities for school activities and athletic purposes, but the gymnasiums and pool shall not be used by the *DISTRICT* for any program designed, or by its nature competitive with the recreation program carried on by the *CITY*. However, the *DISTRICT*

may not retain the gyms or pool for the daily practices of their athletic teams beyond the hour of 7:30 PM.

3. FACILITIES:

The *DISTRICT* facilities which are the subject of this agreement include the pool, the gyms, the locker rooms, together with a limited amount of office storage space.

4. SCHEDULING OF FACILITIES:

The *DISTRICT* shall have first priority in scheduling its activities. After the *DISTRICT* establishes its schedule, the *CITY* shall make up its recreation schedule. The *CITY* must provide the *DISTRICT* with at least one week advance notice prior to commencement or change of the *CITY* recreation time schedule. Once the *CITY* established their recreation schedule, the *DISTRICT* must give the City Parks & Recreation director at least one week advance notice before changing their *DISTRICT* schedule, and this schedule change must meet the approval of the City Parks & Recreation director and the School Superintendent. Use of *DISTRICT* facilities by groups outside the realm of the *CITY* or the *DISTRICT*, at times other than during regular school hours, will be scheduled by the *DISTRICT* Community School Coordinator with the approval of the *CITY* Parks & Recreation director.

5. DENIAL OF FACILITIES:

The *DISTRICT* reserves the right to deny the use of their facilities to groups which by their behavior may either do physical harm to the facilities or participants, or by their presence downgrade the moral

and ethical standards of the *DISTRICT*.

6. CITY OPERATIONS:

The *CITY*'s responsibility is restricted to public use of the gyms and the pool as well as daily maintenance of the pool. This means that the *CITY* will:

a. Hire, terminate, pay, and supervise all *CITY* recreation personnel.

b. Schedule all *CITY* recreation use programs and activities.

c. Do the pool vacuuming, filtration, chemical up-keep, and locker room clean-up.

d. Provide reimbursement to the *DISTRICT* for over-time custodial services incurred when *CITY* recreational activities last later than 10:30 PM, unless prior agreements are made for use of the facility past the alloted time.

e. Provide supervisory personnel for all *CITY* recreation activities and insure that *CITY* recreation participants have vacated *DISTRICT* facilities prior to the supervisor's conclusion of duties.

7. DISTRICT OBLIGATIONS:

The *DISTRICT* will at its sole cost and expense:

a. Provide heat, light, power, water, chemical supplies, and equipment necessary for both *DISTRICT* and *CITY* use.

b. The *DISTRICT* will continue to handle all major mechanical work and the annual pool overhaul.

c. Provide all necessary building maintenance for the gyms, pools, and supporting facilities.

d. Provide regular custodial services during the regular school year when facilities are vacated by *CITY* recreation participants and supervisors by 10:30 p. m.

8. FEES:

Since *CITY* expense for operating the pool must be met by gate receipts, all gate receipts collected by the *CITY* are to be the property of the *CITY*.

9. LIABILITY INSURANCE:

The *CITY* shall at all times maintain and keep in effect liability insurance covering its use of said facilities.

10. PROPERTY DAMAGE

The *DISTRICT* facilities or property thereon damaged or destroyed by reason of the negligence or acts of the *CITY* employees or persons using the *DISTRICT* facilities during the times that said facilities are subject to the exclusive use of the *CITY* shall be the responsibility of the *CITY*, and reimbursement for replacement or repair thereof shall be made by the *CITY* to the *DISTRICT*; provided, however, that nothing herein contained shall be construed to obligate the *CITY* to make repairs for damage which is due to ordinary wear and tear.

11. TERMS OF THIS AGREEMENT

The terms of the *AGREEMENT* may be renegotiated to meet the prerequisities of the Community Education Program.

KODIAK ISLAND BOROUGH SCHOOL DSTRICT

By Louise Collins
School Board President

By David C Crowe
School Board Clerk

D. Resolution 68-5-R Setting Amount Owed by City for Payment on Personal Property Taxes. The resolution was read. Mrs. Hajdu inquired why the Borough was just now collecting these taxes from the City for 1967. Mr. Valkama explained that the City could make better use of these funds than the Borough, and so the delay was beneficial to them; and also that the City is just now collecting its 1967 sales tax, out of which this payment is made. Further, the Borough supplemental personal property roll has just been completed for 1967. Mrs. Springhill moved, seconded by Mr. Arndt, that the resolution be adopted. Mr. Burt and Mr. Bullock wished to review the tax returns before any action was taken. Mr. Valkama commented that if further reviews were made, it would probably turn out that the City would owe more money because in 1967 there were no teeth in the law requiring that people living inside the City file for their personal property. Motion carried by unanimous roll call vote.

E. Approval of Tax Adjustments Nos. R-67-38 and R-67-39. Both of these lots were taken by ASHA in 1966 and should have been in ASHA's name for 1967 instead of John Thevik's. Mrs. Springhill moved, seconded by Mr. Bullock, that adjustments No. R-67-38 and R-67-39 be approved. Motion carried by unanimous roll call vote.

F. Approval of November 15, 1968, as Delinquent Date for Second Half Payment of 1968 Taxes. It was explained that the ordinance sets November 1 as the delinquent date, but that enough tax bill forms are left from 1967 to use for 1968 if November 15 is again used as the delinquent date for second half payments of taxes. Mrs. Springhill moved, seconded by Mr. Arndt, that November 15, 1968, be approved as the delinquent date for second half payment of 1968 taxes. Motion carried by unanimous voice vote.

G. Conveyance of Cemetery in USS 3511 to City. Mr. Best stated that the cemetery is presently being arranged haphazardly, and suggested that it be conveyed to the City since they have the necessary staff to properly carry out proper arrangements. After discussion, Mrs. Springhill moved, seconded by Mr. Arndt, that the cemetery in USS 3511 be conveyed to the City for $1.00 with the provisions that it be properly laid out for roads and access and in accordance with the Subdivision Ordinance, insofar as practicable for a cemetery. Motion carried by unanimous roll call vote.

H. Dewitt Fields re Anton Larsen Road. Mr. Fields stated that he had been asked by Okey Chandler on behalf of the people of Anton Larsen Bay and Port Lions to meet with the Assembly concerning the restoration of this road, which is covered now at high tide for one mile. He stated that a petition concerning the road had been submitted to the Governor, and that the reply stated that $500,000 would be required to reroute the road. However, local contractors felt that the road could be sufficiently raised for only $25,000 to $30,000. Mrs. Hajdu suggested that the State be requested to use maintenance funds for this purpose, that they be informed that cost estimates for the job were less than $100,000, and that the road is needed by the families in the area and by the people from Port Lions and Ouzinkie who use it, after coming in by boat, as a means of getting to Kodiak. Mrs. Springhill moved, seconded by Mr. Bullock, that a resolution be drawn up by the attorney incorporating the ideas which were suggested in this discussion to take care of the problem of the Anton Larsen Bay Road. It was suggested that copies of the resolution be sent to the Governor and Kodiak's Representative and Senator. Motion carried by unanimous roll call vote.

X CHAIRMAN'S REPORT

A. Legislation of Interest. Mr. Best pointed out the following legislation of special interest:

HB 375
HB 376
HB 482 for school construction grants.
HB 483--appropriation bill for HB 482.
SB 175--providing for State to pay for defaults of local school bonds. This would help to give Alaska a better bond rating and may lower interest rates.
SB 298--3% education wage tax.

B. Building Inspector's Vehicle. Mr. Best suggested that since the City furnishes gas for the vehicle, the Borough furnish necessary repairs. The Assembly concurred.

EXHIBIT F

KODIAK ISLAND BOROUGH

M E M O R A N D U M

TO: Stu Denslow/Borough Manager

FROM: Ed Haney/Borough Assessor/Appraiser

SUBJ: Lot 1, Hospital Subdivision, USS 1822
Appraised Valuation

DATE: November 29, 1977

This lot (5.92 acres) was transferred from the Kodiak Island Borough to the City of Kodiak in 1968 to be used as a cemetary, recorded in Book of Deeds 21 at pages 92 and 93.

Comparable land in this area was selling for $5,000 per acre in 1968. As this is all high and well-drained land the 5.92 acres would have had a value of $29,600.00.

The 1978 value of this property were it put to it's best use (not a cemetary) would be $25,000 per acre or $148,000. If this land were subdivided into residential lots the market vlaue would total $300,000. This is possible because of adjacent water, sewer and access.

As a cemetary, it's value is almost an intangible, however to purchase land under today's market conditions would come close to the $300,000 figure.

STRIKE OUT INAPPLICABLE TERMS (a corporation) (a partnership) (an individual doing business as _____)

of Kodiak, State of Alaska, hereinafter called "Contractor".

WITNESSETH: That for and in consideration of the payments and agreements hereinafter mentioned, to be made and performed by the BOROUGH, the CONTRACTOR hereby agrees with the BOROUGH to commence and complete the construction described as follows: Road Maintenance and Snow Removal - Bells Flats/Russian Creek Service Area, hereinafter called the Project, for the amount specified in the attached bid schedule. All extra work in connection therewith, under the terms as stated in the General Conditions of the Contract; and at his (its or their) own proper cost and expense to furnish all the materials, supplies, machinery, equipment, tools, labor, insurance, and other accessories and services necessary to complete the said project in accordance with the conditions, and prices stated in the Proposal, the plans, which include all maps, plats, blueprints and other drawings and printed or written explanatory matter thereof, the specifications and contract documents, all of which are made a part hereof and collectively evidence and constitute the contract.

The CONTRACTOR hereby agrees to commence work under this contract on or before a date to be specified in a written "Notice to Proceed" of the BOROUGH and on a timely call out basis thereafter for the duration of the contract.

EXHIBIT H

The BOROUGH agrees to pay the CONTRACTOR in current funds for the performance of the contract.

IN WITNESS WHEREOF, the parties to these presents have executed this contract in three (3) counterparts, each of which shall be deemed an original, in the year and day first above mentioned.

Patrick K. Poland
Staff Assistant to the
Local Boundary Commission
Department of Community
and Regional Affairs
511 West Fourth Ave.
Anchorage, Alaska

Dear Pat:

This is simply to confirm our conversation of last Friday, November 18, 1977. At that time I requested that the Kodiak hearing now scheduled for December 12, 1977 be rescheduled for later in that week to enable me to prepare the Borough's brief in sufficient time so that Commissioners would have the opportunity to review it prior to the hearing. You denied that request. The Borough is now proceeding with the case within the time frame you have set forth. Should the short time allowed appear to prejudice the Borough at a later date, the objection will be reiterated at that time.

I look forward to hearing from you later today in regard to the review of Commissio precedents we discussed.

Thanks for your consideration.

Sincerely,

Joan M. Katz

EXHIBIT I

BEFORE THE LOCAL BOUNDARY COMMISSION FOR THE

STATE OF ALASKA

IN THE MATTER OF ANNEXATION OF CERTAIN PROPERTY LOCATED ALONG MILL BAY ROAD, KODIAK;	)
CITY OF KODIAK,	)
Petitioner,	)
vs.	)
KODIAK ISLAND BOROUGH,	)
Respondent.	)

RESPONDENT'S BRIEF

I. Introduction

On October 19, 1977, the City of Kodiak submitted a petition for annexation of certain property located along Mill Bay Road in the Kodiak Island Borough to the Department of Community and Regional Affairs. While deficient in several respects (the most glaring of which was the absence of a resolution or ordinance authorizing the City to seek annexation), the petition was accepted by the Department. The City's case, as revealed in its brief, appears to rest on two principal grounds: first, that residents and property owners of the territory are deriving benefits from the City, such that they should be made to pay a commensurate share of the City's tax burden; and second, that the City could provide services to the territory more efficiently under annexation than could otherwise be accomplished. Intruding onto the specifics of this annexation proposal is petitioner's avowed intent to annex substantial other areas of Kodiak Island. See, Memorandum from Ivan L. Widom, City Manager, to the Local Boundary Commission, dated October 17, 1977.

Contrary to the City's allegations, it is the Borough's position that the best interests of the residents and property owners of the affected territory, and of the local governments involved, would not be served by this proposed annexation. As the Borough shall demonstrate, residents and owners of the territory would gain virtually nothing besides a hefty increase in their local taxes should this petition be successful -- an increase for services for which they presently pay more than adequately. The change in status would only serve to foster conflict, moreover, between the City of Kodiak and the Borough, and between the City and affected residents.

II. Lot Ownership and Configuration Within the Territory

At the outset, some factual clarification is required. In addition to the deficiencies in the petition mentioned above, there appear to be errors contained in the notice of hearing and attached lot descriptions provided by the Local Boundary Commission staff. First, Lots 3, 4, 5, 6, 7, 9 and 11 are identified as belonging to the City of Kodiak. Borough research indicates that those lots are currently patented by the State (patent number 50-64-0228 for lots 3-7, and 50-64-0169 for lots 9 and 11). The Borough, moreover, has filed land selections on these lots pursuant to AS 29.18.190, et seq. (Excerpt from Land Selections filed by Dale Tubbs for the K.I.B., Exhibit A.) The Borough, thus, possesses a specific interest in these particular lots, augmenting its underlying concern for the welfare of its residents in general.

In addition to this error, there appears to be an oversight in regard to Lot 27. This lot has not previously been annexed; nor is it included in the petition. It is

WHO IS THIS MYSTERIOUS OWNER!?!

certainly possible that the City intentionally deleted this lot, perhaps because of known owner opposition to annexation. Such exclusion, however, would result in a continuation of the alleged misalignment of City boundaries. Since this "misalignment" is one of the grounds advanced by petitioner in support of annexation, the absence of Lot 27 is, at best, confusing. It suggests that this annexation proposal may not have been thoroughly analyzed from a thoughtful, planning perspective.

III. Standards for Annexation

Alaska Administrative Code Section 19.AAC 05.010 sets forth specific standards which provide guidelines for annexation. It is recognized that two of these standards ([1] and [3]) are met by this petition. The City raises no issues under Standards (2), (5), (6) and (9). These standards could not, in fact, be met in this case. Petitioner's case rests primarily on the purported fulfillment of Standards (4), (7) and (8). The Borough contends that there is not, in fact, compliance with these standards.

A. There is No Need in the Territory for Municipal Services that Could Not be Provided as Efficiently Without Annexation. (Standard No. 4.)

The City asserts that it can provide various services more effectively under annexation than would otherwise be possible. The City's history, however, and the facts regarding each of those services, suggest differently:

1. Sewer and Water. The City argues that sewer and water services would be extended immediately upon annexation. In fact, under a 1970 agreement between the Borough and the City, the City has long since been designated the agency responsible for implementation of water and sewer projects within the area of the road system in the Kodiak

failure to live up to the terms of this agreement accounts for the fact that services have not previously been extended to the lots within this territory. The City's track record is not one to inspire confidence.

2. Law Enforcement. The City simply describes its police force by numbers of officers and size of budget. The only argument made in this context, however, is that "Due to the nature of the boundaries in this area, certain problems can arise". (Petitioner's Brief, p. 1.) The Borough cannot envision what those problems might be. City police may certainly traverse City boundaries to get from one part of the City to another without violating any laws or ordinances. The only response possible to this broad statement is that the State Troopers provide police service to the territory. Residents and property owners have voiced no complaints about the level of service.

3. Fire Protection. The City's analysis of fire protection is, like its presentation of law enforcement, simply a descriptive one. What should be said is that there would be absolutely no change in fire protection provided the residents and property owners of the territory were the annexation to take place. Borough Fire District No. 1 presently covers this territory and is serviced through contract with the City; the contract provides fair consideration. (Exhibit C.) It might be noted, moreover, that the Borough owns one of the fire trucks utilized by the City, as well as a new ambulance similarly operated by the City and used inside and outside its boundaries.

4. Parks and Recreation. The City outlines its services in the parks and recreation area, and alleges a budget of $128,946 for this department. Apparently the intention is to suggest that Borough residents outside the

City are getting "something for nothing". In fact, the City is able to operate the pool and the gym only because the Borough has made them available. The pool and gym collectively are worth approximately $3,220,000, substantially more than the City's budgeted amount for this service. (Memorandum from Borough Assessor, Ed Haney, December 6, 1977; Exhibit D.) The joint agreement between the Borough, its School District and the City, further delineates the benefits accruing to the City through the use of these facilities. (Joint Agreement for the Use and Operation of Gymnasiums and Swimming Pool, Exhibit E.)

In addition, the Borough adopted parks and recreation powers within the last year, and has contracted for a major parks and recreation study to be completed by April of next year. City residents will undoubtedly benefit from the exercise by the Borough of its parks and recreation power.

5. Library. In describing its library with attached budgetary figures, the City again fails to make any case showing that Borough residents are taking unfair advantage. Petitioner acknowledges the Borough contribution of $15,000 to the library financing. There is no showing that this contribution is grossly disproportionate to the use by non-city residents of the library facilities. And there is also no mention of the fact that the Borough operates four libraries of its own which make interlibrary loans to the City library.

6. Cemetery. The City simply states that the cemetery, with its paid contractural employee, is available to Borough residents. There is no indication of how much this employee is paid; he may in fact be part-time. And there is no mention of the fact that the City acquired

the land for the cemetery in 1968 from the Borough for the price of $1.00. (Minutes of K.I.B. Assembly Meeting, 2/15/68, Exhibit F.) At the time, that land was worth approximately $29,600. At present, its estimated value is $300,000. (Memorandum from Ed Haney, Borough Assessor, to Stu Denslow, Borough Manager, Exhibit G.) Borough residents have more than paid their way into their ultimate resting places. CUTE! Again, the level of service for the territory affected by this petition would not be increased through annexation.

7. Public Works Functions. The City's one-sentence remark in regard to public works provides little to which the Borough can helpfully respond. The fact that the Public Works Department provides street maintenance and snow removal is essentially irrelevant, since the primary road involved is Mill Bay Road, which is state maintained. Should the residents of the area decide that further local roads are necessary, they could finance them through road service districts, rather than taxing the general public for such neighborhood improvements. It might be noted, moreover, that private contractors are available to the Borough to provide competent road service, as is illustrated by the road service district in the Bells Flats-Russian Creek area. (Contract between the K.I.B. and Alagnak, Inc., Exhibit H.) House numbering, the other item mentioned in connection with public works, is a planning function and will be undertaken by the Borough as it proceeds with implementation of its comprehensive plan.

8. Cargo dock, boat harbor, ferry terminal and airport. The City alleges that these facilities are "to some extent" self-supporting, and then claims that general fund contributions have been made to maintain the facilities. Again, the City's lack of specificity renders the Borough's

attempt to be responsive difficult. Borough research uncovered only a $149,703 loan from the City's general fund to the cargo dock. (City of Kodiak, 1977/78 Budget, p. 46.) A loan hardly constitutes a "contribution". The City's presentation in this regard raises two additional questions. First, it is not at all clear that the municipal airport, as discussed further below, is an asset to Kodiak. The extreme hazardousness of this strip might merit its closure, rather than its support by taxpayers money. Second, it is not clear why general fund contributions should ever be used to make up deficits in the operating budgets of these enterprise activities. The people who use them should pay for them; those who do not use them, should not. (pay)

9. Garbage Collection. Residents of the territory would gain nothing new in the way of garbage collection should annexation take place. At present, they have the option of paying for garbage collection or transporting their own refuse to the dump. Under annexation, that option would be removed and they would pay for the service whether or not they wanted it. There has been no showing that such imposition is necessary.

A review of the above services indicates that the City has not demonstrated that it could improve the lot of territory residents through annexation. In fact, as described above, the residents and lot owners would gain virtually nothing to their advantage by way of annexation. As shown on the table below, however, these people would stand to lose a great deal. Best estimates reveal that, assuming the addition of sewer and water to all lots, the cost to lot owners should they remain outside the City limits would be 9.47 mills taxation plus $28.75 per month in water and sewer assessments; if the territory were annexed, the rate would

do these figures (plus those on the next page) include present bonds?

jump to a substantial 16.3 mills, with assessments in the neighborhood of $25.00 per month.

	City Resident	Borough Resident Outside City Limits
Borough Mill Rate	7.2	7.2
City Mill Rate	9.1	-0-
Fire Protection Mill Rate	-0-	2.27
Water	$10.00/mo.	$13.75/mo.
Sewer	$15.00	$15.00
Total	16.3 Mills $25.00/mo.	9.47 Mills $28.75/mo.

How much would the personal property tax drop due to city paying that?

The City has simply failed to make a showing that such a rate increase is warranted or equitable for those affected.

16.30 9.47 6.83

B. Annexation Will Not Enable the City to Improve any Health or Safety Conditions in the Territory. (Standard No. 6.)

As noted previously, the City has not invoked this standard. It would be dismissed without comment were it not for the irony it brings to light. There is, in fact, a serious safety hazard located within the territory. That hazard is the municipal airport. Yet the City, which exercises complete control over this airport and even mentions it among the services provided to territory residents, has failed in its duty to alleviate the significant safety hazard that it poses. There is no reason to assume the City would perform more responsibly should other such problems arise.

C. It is Practical to Provide all Necessary Services to City Residents Without Bringing the Territory Within the City Boundaries. (Standard No. 7.)

Petitioner's brief includes broad statements to the effect that there is a "misalignment of boundaries [which] causes problems with enforcement of City ordinances and with providing certain services to those areas already annexed". That is the extent of petitioner's analysis. In light of joint Borough-City agreements covering water,

sewer, and fire, the Borough cannot envision any problems that might arise because of the existence of a few City lots within the territory. If the problems were significant, the City presumably would never have annexed those lots causing the present "misalignment".

D. The City is Receiving (or Should be Able to Devise Means of Receiving) Ample Reimbursement for the Services Provided Territory Residents and Lot Owners. (Standard No. 8.)

The City complains that it "provides substantial benefits to residents and owners of properties outside of [its boundaries] without corresponding tax contributions for municipally provided services". (Petitioner's Brief, p. 2.) Yet, sewer and water should be provided only upon assessment; fire protection is paid for by the Borough which levies a 2.27 mill rate on property owners within the District; parks and recreation services are in large part made available through the Borough-donated pool and gym; contribution is made by the Borough directly to the municipal library; the cemetery exists on a $300,000 plot of land given for $1.00 to the City by the Borough; the cargo dock, boat harbor, ferry terminal and airport are or should be self-supporting through user fees; and garbage collection is currently paid for by those who use it.

In addition to the direct payments identified above, all Borough residents outside the City fund the City's services and programs, whether or not they receive any benefits from them, through a three percent sales tax levied by the City on all goods and services sold within the City or by City-based businesses, whether the service is provided within or without the City. (City Ordinance 3.08.010 et seq.) Virtually all sales of goods and services on Kodiak Island take place within the City, so all residents

Amazing (How much is this in dollars?)

of the Island are sorely affected by this tax. Sales tax receipts, moreover, have been used to pay Borough personal property tax for City residents; owners of personal property within the City have not been required to make such payments out of their own pockets. (City Ordinance 4.04.010B.) Borough residents living outside the City boundaries have thus paid personal property tax twice; first their own, and then a substantial contribution to the payment of taxes for those persons who have personal property located within the City limits. Residents and lot owners in the territory have amply compensated the City for any benefits they might receive.

IV. Procedural Factors Against Annexation

Four intertwined procedural issues are raised by the manner in which this petition has proceeded to date. First, petitioner and the Local Boundary Commission seem determined to propel this matter forward with great speed, presumably because of the approaching start of the Legislative session. Such precipitous action, however, has resulted in failure by the Commission to follow its own guidelines, and has put great strains on the Borough and any other would-be respondent to prepare adequately for the upcoming hearing. Thus, the petition was apparently accepted notwithstanding the fact that no resolution from the City Council was attached (19 AAC 10.040[4]); the sources of information contained in the petition were presented only in a statement, not an affidavit (19 AAC 10.040[2]); and the petition was wrongly addressed to the Department rather than the Commission (19 AAC 10.030). In addition, the interest in reaching a quick determination in this case resulted in a refusal by the Staff Assistant to grant a few days postponement of the hearing. The Borough's attorney had requested such an

extension in order that a well-informed brief might be prepared and presented to the Commissioners sufficiently in advance of the hearing to enable them to receive the evidence with some foreknowledge of both sides of the case. (See, letter from Joan M. Katz to Pat Poland, Exhibit I.)

Second, as noted throughout the course of this brief, the City's presentation to the Local Boundary Commission consists primarily of broad allegations, without substantiating facts. Such material did not put the Borough in a sufficiently informed posture to respond adequately.

Third, the issue of annexation of the petitioned-for territory is clouded by the avowed intention of the City to extend its boundaries to still other areas. Mr. Poland has indicated to the Borough's attorney that the broader issues of annexation of large portions of the Kodiak Island Borough will in fact enter into the Commission's deliberations in the course of the hearing on the Mill Bay Road territory. Yet no petition has been filed on those other, very different areas; there is no way the Borough can prepare any response. Other interest groups, such as the Native population of Kodiak, may have strong feelings when confronted with the full scope of the proposed annexation. It would appear that any and all questions of annexation on the Island of Kodiak should await a proper petition adequately setting forth all the territory sought to be annexed with ample factual basis for the City's position. Absent such a rational approach, serious error might be committed as Commission deliberations are hurried forward without sufficient groundwork being laid. There is no emergency warranting such procedure.

Fourth, and finally, in connection with the intent to annex considerably more territory than is revealed in this petition, it would seem appropriate to handle this matter by

the step annexation procedure. Of critical concern to the Borough Assembly, staff and people they represent, is the fact that no opportunity has been afforded the people of this territory to vote on the issue of annexation. An election would give the Commission precise information regarding the people's views on this matter. It would also go far to reduce the anger and bewilderment experienced by Borough residents who view the non-elective process as an uncharacteristically undemocratic one for this State to be imposing upon them.

V. Conclusion

The only context in which the City's petition is comprehensible is that of a power play, a grab for land which the petitioner has no demonstrated ability to govern effectively. The evidence shows that the residents of the territory would gain nothing from annexation, but would stand to lose considerably from a financial standpoint. Abstract arguments supporting annexation are overshadowed by the reality of the cost-benefit ratio to those lot owners, by the fact that they do not support this petition, and by the realization that there is no equitable reason for increasing the City's tax base. Honest appraisal tells us that the City's track record for the delivery of services and for fair dealing with citizens on Kodiak Island is seriously deficient. There is no basis for granting the petition. There is sound basis for denying it. The Kodiak Island Borough respectfully requests that the Local Boundary Commission reject the City of Kodiak's petition for annexation.

Re: Proposed Annexation of Certain Lands in the Kodiak Urban Area to the City of Kodiak	)

BRIEF OF THE RESPONDENT KODIAK ISLAND BOROUGH

Introduction

Annexation entails substantial financial, political and practical consequences for property owners and residents of the lands involved. To assess those consequences in connection with the Kodiak situation, three fundamental questions need to be asked: (1) whether annexation would serve any real purpose so far as the territory to be annexed is concerned; (2) whether the alleged equities on the City's part exist in fact, or have been advanced simply to justify a quest for additional revenues; and (3) whether adverse consequences would befall individuals within the territory, or without, should annexation occur. Respondent's analysis of these questions will address the relevant, specific factors set forth in 19 AAC 05.010, as well as the concerns raised in both the letter of May 1, 1978, from Sheila Gallagher to Stewart Denslow, and in the Preliminary Report from the Department of Community and Regional Affairs, dated May 10, 1978.[1] In light of the fact that this proposed annexation is a legislative one, with no opportunity for the people involved to express their opinions at the polls, abstract theories of symmetry in local government should not be afforded excessive weight. The

[1] The final report was not available at the time this Brief was being prepared.

realities of the Kodiak situation need to be examined.

I. What Needs Exist Within The Territory That Could Best Be Met By Annexation?

Annexation makes sense only if services are needed and desired by the people affected which can best be provided by the annexing government. The evidence in this case, however, is that people outside the City's current boundaries are generally content with not only their government, but also the kinds and levels of services they are presently receiving.

An attitudes survey conducted by the Anchorage Urban Observatory last year indicates that the three greatest concerns for residents outside the City are litter, roads and the high cost of goods.[2] Inside the City, residents are most concerned about the same two priority issues, although roads are placed above litter. The problems of physical isolation and "environment" tie for third place. Outside the City only one person in the sample rated utilities as a top priority; only one identified animal control as such. And not a single person identified police or fire service as the most urgent problem.

These findings are highly significant in reflecting a general, marked absence of desire on the part of people in the affected territory to change the kind, or raise the level, of services they receive - even when no price tag is attached. The only exceptions occur in connection with roads and litter.

a. Roads. Kodiak's roads are essentially State maintained, with only 13 miles of road under City jurisdiction and 15.5 miles within the Borough's authority. Annexation for the purposes of road maintenance would be nonsensical for two reasons. First, the people within the City are more dissatisfied with the condition of their roads than are the people outside the City,

---

[2] For more detailed information on this survey see Kodiak Island Borough Economic Analysis, submitted by Drs. Green and Hill as part of the Borough's presentation in this proceeding.

suggesting that the City is hardly the appropriate government unit to undertake further road work. In addition to the findings of the Urban Observatory study in this regard, there is the testimony of City residents like Charles Davidson, who stated at the December 12, 1977 hearing that he was opposed to annexation in light of the City's inability to adequately pave and/or oil the roads within its current jurisdiction.

Second, Borough voters have recently elected to adopt road power within Service District I of the Mill Bay-Monashka Service area. This power will enable the Borough to offer road service to those areas in which the property owners vote to foot the bill. Such an undertaking has previously proven successful in the Bells Flat area, where private contractors provide road maintenance. (See Exhibit H to Respondent's Brief of December 9, 1977, regarding the proposed Mill Bay Road Annexation.)

Comments by the Local Boundry Commission staff concerning the absence of a Borough public works department to provide road maintenance are irrelevant to the Kodiak situation. As indicated previously, the roads at issue here do not cover hundreds of miles, but rather approximately 15.5 miles. Private contractors are not only capable of providing maintenance, grading, snow removal, etc. for this amount of road surface; such contractual arrangements would seem to be a boon to the local economy. Finally, it should be noted that in Fiscal 1978 the people of the Russian Creek and Bells Flat areas voted to spend $38,000 on road maintenance for nine miles of road while the City spent $1,110,014 for 13 miles of road maintenance and construction. The people currently living outside the City's boundaries should continue to have the right to choose to spend $38,000 vs. $1,110,01 if they are satisfied with the lower level of service. Annexation would deprive them of that right to choose.

JOAN M. KATZ
ATTORNEY AT LAW
1614 HIDDEN LANE
ANCHORAGE, ALASKA 99501
(907) 274-3804

b. Litter. Litter, the other major concern of Kodiak residents in and outside of the City, also provides no basis for annexation. The State again has responsibility for maintaining

its roadways and would be charged with litter removal in those areas. The Borough, pursuant to its planning, road and health powers would similarly be able to undertake this responsibility. To support its case for annexation, the City would seem to have the burden of showing that it could better meet this problem.

c. Sewer and Water. The only additional, significant need that the Local Boundary Commission might want to examine would be that for sewer and water. In some areas of the Borough outside the City, sanitation standards necessitate, and the people desire (although not as a top priority) sewer and water improvements. The analysis submitted by the independent consultants from the Alaska Urban Observatory indicates that there is no reason to believe the City could meet these needs at less cost than the Borough. Unlike the services of roads and police, moreover, sewer and water are public utilities, in the same category as telephones. As such, they must pay their own way. They could, theoretically, be provided by a private corporation. The expansion of sewer and water into the territories in question should, therefore, have no bearing on the issue of annexation. (See Green and Hill, Kodiak Island Borough Economic Analysis, at 7.)

A review of services needed in the affected territory thus reveals that annexation represents a theory without any practical application or rational nexus to the facts of this case. There is no cry for expanded police protection. There is no reason to deprive private contractors of the opportunity to provide road maintenance at the level the people can afford. In his letter of December 16, 1977 to Mr. Strandberg, the City Manager himself acknowledged: "I am certain you are aware that as soon as an area gets water and sewer from the core City they have no need to annex. This is especially true in the Kodiak urban area". (Exhibit A, at 2-3) The point made by Drs. Green and Hill, of

course, is that not even sewer and water requirements create any need or justification for annexation. From the territory's standpoint, annexation is simply not needed in any way, to provide any service.

II. Is the City Entitled To Annexation For Reasons of Equity?

It is arguable, though Respondent would oppose this notion, that even without a need for annexation, such action could be required if the City is presently being placed in an inequitable position by virtue of non-City residents' use and enjoyment of City facilities and services. The City took this position in its Mill Bay Road petition brief; the information presented by Respondent in connection with that annexation is equally applicable here. Respondent's previous brief summarized the facts regarding specific services mentioned by the City in its plea for "equity" as follows:

> The City complains that it "provides substantial benefits to residents and owners of properties outside of [its boundaries] without corresponding tax contributions for municipally provided services". (Petitioner's Brief, p.2.) Yet, sewer and water should be provided only upon assessment; fire protection is paid for by the Borough which levies a 2.27 mill rate on property owners within the District; parks and recreation services are in large part made available through the Borough-donated pool and gym; contribution is made by the Borough directly to the municipal library· the cemetery exists on a $300,000 plot of land given for $1.00 to the City by the Borough; the cargo dock, boat harbor, ferry terminal and airport are or should be self-supporting through user fees; and garbage collection is currently paid for by those who use it.

Also mentioned in Respondent's previous brief was the highly significant fact of the three percent sales tax levied by the City on all goods and services sold within the City or by City-based businesses. Strong concern with the "high cost of goods" as expressed in the Urban Observatory attitudes survey, indicates the substantial impact of this tax. In a memorandum prepared at the time of the previous annexation hearing in Kodiak,

the Borough Planning Director researched his own financial situation and presented figures establishing that as a non-City resident, he was paying more taxes to the City (as a result of the sales tax) than he was contributing to the Borough through personal and real property taxes. (Memorandum from Planning Director to Borough Manager, December 6, 1977, Exhibit B.)

Local Boundary Commission regulations contemplate that measures such as sales taxes can be used as alternatives, not supplements, to annexation. 19 AAC 05.010(a)(8) provides in part:

> In determining whether [property owners in the territory receive the benefit of City services without commensurate tax controls] the Commission will consider alternate methods available to the city for offsetting the cost of providing services to individuals or property beyond its property taxation powers . . . .

Through this sales tax (plus the contribution to firefighting equipment, dock user fees, etc.), non-City residents of the Borough more than pay their way They pay not only for benefits they receive, but for benefits innuring only or principally to City residents. For example, $60,000 received from sales tax revenues (to which non-City residents contribute as much per capita as City residents) has been used to finance construction of water and sewer facilities within the City in the 1977-78 fiscal year. (City of Kodiak Budget 1977-78 Fiscal year.) Even more significant perhaps, a substantial percentage of the property taxes owed by City property owners are being paid by sales tax receipts garnered from non-City residents as well as City residents. While the appraised value of City property should have netted the City 1.3 million dollars in tax receipts, in fact only $655,000 is being collected. (City of Kodiak Budget 1977-78 Fiscal year.) Where is the equity in such an arrangement? If City residents are not even paying their own property taxes at this time, what possible justification can there be for seeking to tax people currently outside the City boundaries?

It is apparent, thus, that if any group of people is being treated inequitably, it is the territory residents: they pay City bills through sales taxes while contributing directly through user fees and the like for services that they utilize. The City, in truth, simply wants to spread it's overhead a little thinner - an understandable position, but one decidedly negated by the equities of the situation.

III. Would Annexation Have Any Adverse Effects Upon Territory Residents Or Other Kodiak Citizens?

It is evident that annexation is not warranted because of any need for City services or from any equitable standpoint. It should be recognized, in addition, that annexation could be extremely harmful to territory residents - and ultimately to the Kodiak community at large.

Respondent's previous brief on Mill Bay Road attempted to illustrate the relative costs to territory residents of provisions of water and sewer services with and without annexation. On the assumption that territory property owners would pay existing City taxes to acquire such services, it was determined that the price tag for the annexed resident would be 16.3 mills plus $25.00 per month in assessments, as opposed to 9.47 mills and $28.75 per month for non-City residents. (Respondent's Brief 12-09-77 at 3.) Drs. Green and Hill have calculated potential mill rates under annexation on the alternative assumption that annexation would simply shift some of the City's cost to the new territory. In that case the mill rate for City residents would be 15.19 mills - as opposed to 9.47 for non-City residents receiving sewer and water. (See Green and Hill at 12.) The difference under either method of calculation, is clearly substantial.

There is another consideration however, which is as important as the economic detriment to be suffered through annexation.

This is the potential effect on this relatively small community of the hostility that would be engendered by the imposition of annexation on a group of people who are adamantly opposed to it. An effort at unification was initiated by the City on October 27, 1977. (Resolution 23-77, Exhibit C.) The Borough responded in good faith, and scheduled a day long workshop attended by members of the public, City and Borough officials, a representative from Community and Regional Affairs and the former attorney of the Anchorage Charter Commission. As a result of that meeting, the Borough Assembly voted unanimously to put the question of unification on the ballot this Fall. (Resolution No. 78-34-R, April 6, 1978, Exhibit D.)

Unification is an appropriate means by which to avoid duplication of government units and promote more efficient government. Most importantly, it is also a means well suited to healing political wounds and allowing citizens to work together toward common goals. If the Local Boundary Commission were to try to design a tool aimed at destroying any hope for unification in Kodiak, it could propose no better means than the contemplated annexation. As testimony at the December 12, 1977 hearing established, many citizens of the Borough outside the City limits are bitterly antagonistic towards the City as a result of actions or inactions attributable to that government. Many citizens, further, are outraged by their lack of opportunity to vote their views on the annexation question. Should City dominion now be imposed upon them, the chances of a harmonious movement towards unification would be destroyed.

Conclusion

Annexation may have a theoretical appeal along the lines of political neatness. Theory is not reality, however, and the fact is that without annexation there will be service districts,

with annexation, there will probably be differential taxation with inconsistent levels of service, and with unification, there would still -- and again -- be service districts. The diference between the present situation and annexation -- the only two options available to the Local Boundary Commission -- is in the degree of choice to be exercised in the annexed territory. And that choice of course translates into substantial impact on the pocketbooks of the property owners involved.

The Local Boundary Commission is undoubtedly cognizant of its significant power and responsibility in considering legislative annexations. Respondent urges the Commissioners to ask themselves the three questions posed in this Brief while deliberating the merits of this case. The answers, the Borough feels confident, will show no need for services that the Borough cannot provide at a cost comparable to or lower than the City; no inequity done to the City by non-City residents; and adverse effects on both territory residents and other Kodiak citizens alike should annexation be approved. In light of these realities, Respondent respectfully submits that legislative annexation in this case would be an abuse of discretion. Respondent requests that annexation be denied.

DATED this 15th day of May, 1978.

Regional Affairs
511 West Fourth Avenue
Anchorage, Alaska 99501

Kodiak Island Borough
KODIAK, ALASKA
RECEIVED
DEC 19 1977

Dear Mr. Strandberg:

I do not envy the Commission's position when attempting to relate to the problems such as we have here in Kodiak. I respect your willingness to listen to many statements that are irrelevant; however, I do not believe they should bear much weight in your decision.

When I finished my initial remarks, I asked for an opportunity to reply to the Respondent's Brief. For one reason or another, you did not honor my request. I realize your desire not to prolong the hearing; however, there were many points that were made that were not true. It is too bad that you were not willing to give me an opportunity to clear them up for you and those attending the meeting.

I think it should be made known in what capacity your fellow Commission member, Ms. Gallagher, is working for the Borough. It is obvious that if her employment has anything to do with any of the issues mentioned in the annexation proceedings she should disqualify herself from any court proceedings, as well as Commission activities. Her ability to ask questions during the hearing that would bear on possible litigation would seem reason enough for her to disqualify herself. I would like to hear from you or Ms. Gallagher regarding this issue.

There are several points I would like to make that were brought out in the testimony of the citizens.

EXHIBIT A

1. The City sewage treatment plant is 100% funded by the Federal and State Governments and City of Kodiak. The City's portion is financed in part by general obligation bonds. There are no Borough funds involved in this sewage treatment plant.

2. It is obvious that the City is not going to reap any huge benefits from the annexation proposal. Half of the lots are in public ownership, there are no industries, pipelines, etc. that would constitute a windfall to the City if the annexation did occur.

3. Postponing the decision on this annexation until after the legislature begins is not fair. The merits are quite obvious. I should not have to go into any detail on this.

4. As far as I could ascertain, there was not one registered voter from the area in question who spoke against the annexation. If an election were held rather than the public hearing, none of those people would have been able to voice their opinions. I think it was incumbent upon the Commission to make this clear. One of the items I wished to make known was that no resident of the area spoke on the annexation. The only people involved were property owners and those renting or leasing for business purposes.

5. At the Borough meeting on December 1, I tried to explain that the annexation of the Mill Bay Road area was the only item to be considered at the hearing. The Borough overreacted and sent out notices to all post office box holders as well as the notices in the paper. I feel that it is this kind of activity that turns people off toward government and makes all our jobs more difficult.

6. As I understand it, there are five members of the Boundary Commission and since two can hold a public hearing but three need to make a decision, the other two members that were absent also need to concur in the decision to hold another public hearing on this annexation.

It is quite obvious that the residents of the Borough and City residents who own property in the Borough are against annexation because of the additional financial burden. As far as I am concerned, that is no reason for these people not to be annexed. From your comments, you seem to have similar feelings. I am going to ask the Council of the City of Kodiak to wait six months before meeting with the Boundary Commission again since no annexations can occur until 1979. The Borough will go ahead with their service areas and unnecessary duplication of taxing structures will automatically result. I am certain you are aware that as soon as an area gets water and sewer from the core City they have no need

to annex. This is especially true in the Kodiak urban area.

I would like to take this opportunity to thank you for visiting with us. I really feel that you have quite a burden on your shoulders. I appreciate that fact only too well; however, I still feel that you have accepted your positions of trust and you have a responsibility to the municipalities that are depending on you for proper decisions.

Very truly yours,

CITY OF KODIAK

KODIAK ISLAND BOROUGH

CONFIDENTIAL MEMORANDUM

TO: Borough Manager

FROM: Planning Director

SUBJECT: Individual Breakdown of City and Borough Taxes

RE: Information Required by Counsel

DATE: December 6, 1977

During our discussions with Mrs. Joan Katz, she requested I prepare a breakdown of my estimated Kodiak Island Borough Real and Personal Property Tax as well as the amount of Sales Tax collected by the City for goods and services.

The following reflects the assessed valuation of the real property I lease:

Land	Building	Total	KIB Mill Rate		Amount of Tax
$8,900	$32,890	$41,790	$9.50	=	$397.00

Personal Property:

Description	Valuation		Mill Rate	Amount of Tax
1965 Dodge ½ Ton P.U. w/Camper	$ 500			
1974 Buick 2 Dr. H.T.	2,975			
1973 Chevrolet K5 Blazer	2,900			
1969 5-HP Outboard Motor	50			
Total	$6,425	x	$9.50	$ 61.04
Total Amount of Tax Revenue Collected by K.I.B.				$440.04

The following reflects the estimated Sales Taxes I pay:

EXHIBIT B

CONFIDENTIAL MEMORANDUM

To: Borough Manager
From: Planning Director
Subject: City and Borough Taxes, Individual Breakdown
Date: December 6, 1977

Sales Taxes:

Item	Amount of Tax (Month)
Food	$ 21.00
Telephone	2.25
Electricity	2.55
Fuel Oil (Furnace)	7.50
Clothing	3.00
Automobile Gas and Oil	1.80
Tire Repair	.54
Cosmetics	1.00
Water	.42
Dry Cleaning	.60
Cable Television	.51
Entertainment (Movies)	.75
Appliances (Large & small, Replace & repair)	1.05
Cards, Gifts, Candy	1.50
Books, Magazines, Newspaper	1.00
Meals Out	6.00
Beverages	5.00

Average Amount of Sales Tax Paid to City of Kodiak, $ 56.47 per Month;

Total Yearly Amount Sales Tax Paid to City (x 12), $ 677.64

Average of Combined City and Borough Taxes for non-City Resident, $1,117.68

Percentage of Total Tax Paid to the City of Kodiak, 60.629%

Percentage of Total Tax Paid to Kodiak Island Borough, 39.370%.

Of the $440.04 paid to the Borough, 2.27 Mills or $109.44 were paid over to the City of Kodiak for fire protection, thus leaving the Borough with a net tax collected in the amount of $330.60, and the City of Kodiak with a total $787.08.

Percentage of Adjusted Total Tax Paid to the City, 70.421%,

Percentage of Adjusted Total Tax Paid to the Borough, 29.579%.

Respectfully submitted,

H Milligan

Harry Milligan

CITY OF KODIAK
RESOLUTION NUMBER 23-77

A RESOLUTION OF THE COUNCIL OF THE CITY OF KODIAK REGARDING THE ESTABLISHMENT OF A JOINT COMMITTEE TO STUDY UNIFICATION

WHEREAS, major changes are occurring in the entire Kodiak Island Borough, and

WHEREAS, the tax base is not sufficient to support excessive governmen and

WHEREAS, the relationships between the City of Kodiak and the Kodiak Island Borough demand close cooperation and coordination, and

WHREEAS, unification of the two governments might be in the best intere of the residents of the Kodiak Island Borough;

NOW, THEREFORE, BE IT RESOLVED that the Council of the City of Kodi wishes to participate in a study task force along with the Borough Assembly members and private citizens to study the advantages and disadvantages of unification and to recommend whether or not unification would be in the best interest of the residents of the Kodiak Island Borough. The Council respectfully requests the Borough Assembly to participate in this task force and to meet with the Council in worksession to determine how best to implement this study group.

PASSED AND APPROVED this 27th day of October, 1977.

Jerry Tabbut
MAYOR

KODIAK ISLAND BOROUGH
RESOLUTION NUMBER 78-34-R

A RESOLUTION PLACING BEFORE THE VOTERS OF THE KODIAK ISLAND BOROUGH THE QUESTION OF ELECTION OF A CHARTER COMMISSION TO PREPARE A UNIFICATION CHARTER.

WHEREAS, Alaska Statute 29.68 provides a method whereby a borough and the cities within it may be united into one government under a home rule charter, and

WHEREAS, the Assembly has determined that the voters of the Kodiak Island Borough should be given an opportunity to determine whether they wish to create a charter commission to prepare a home rule charter to be approved or disapproved by separate vote of the voters within and outside first class cities at a subsequent election.

NOW THEREFORE BE IT RESOLVED by the Kodiak Island Borough Assembly:

Section 1. The following proposition shall be submitted to the voters at the next regular Borough election to be held on October 3, 1978, which is at least 90 days after adoption of this resolution:

Shall a charter commission be formed (and charter commission members be elected as elsewhere provided on this ballot) to perpare, adopt and submit to the voters for their approval or rejection a proposed charter uniting Kodiak Island Borough and all cities within it as a single unit of home rule government having the powers, duties, and functions of a unified government as authorized by law?

Yes ( ) No ( )

Section 2. Effective upon the adoption of this resolution, a call is issued for nominations of charter commission candidates, specifying the filing deadline, and outlining the procedures for making nominations as follows:

(a) Eleven qualified voters shall be elected to a charter commission. Three (3) at large and eight (8) from (1) cities, or (2) the area outside cities. The number of members elected from cities and from the area outside cities shall be proportionate to the respective populations, as determined by the Department of Community and Regional Affairs.

(b) Charter commission candidates shall be nominated by petition signed by at least 50 qualified voters of the area from which the candidate seeks election, or by a number of qualified voters from that area equal to at least 10 per cent of the number of votes cast from that area in the last regular Borough election, whichever is less.

(c) Nomination petitions shall be filed with the Borough Clerk not later than September 1, 1978, which date is at least 30 days after notice of the call for nominations has been given through the Borough. Nominating petition forms shall be provided by the Borough Clerk.

EXHIBIT D

(d) Procedures for acceptance of petitions, withdrawal of petitions and other election matters shall comply with all requirements of State law, and with the requirements of Title 2 of the Code of Ordinances of the Kodiak Island Borough to the extent consistent with State law.

Section 3. The vote on the proposition stated in Section 1 shall be tabulated in two separate classification

One classification shall consist of all votes cast in the (first class and home rule cities) of the Borough. The other classification shall consist of all votes cast in the remaining areas of the Borough. In order for unification to be approved, it is necessary that a majority of the votes in each classification favor unification.

If unification is approved, those charter commission candidates who received the highest number of votes from their respective areas shall serve as members of the commission.

PASSED AND APPROVED by the Assembly of the Kodiak Island Borough this 6th day of April, 1978.

KODIAK ISLAND BOROUGH

Anchorage, Alaska 99504

Betty Wallin, Mayor
Kodiak Island Borough
Kodiak, Alaska

Honorable Betty Wallin:

In accordance with your request, Dr. P.J. Hill and I conducted an analysis to determine the economic consequence with regard to the matter of annexation of portions of the Kodiak Borough by the City of Kodiak. To facilitate the study, we have thoroughly dissected the annual operating budgets of both governmental entities, that is, the Borough and City, and analyzed a substantial amount of information contained in reports produced by other consultants and government entities.

We have generally concluded that the residents in the area being considered for annexation will not derive appreciable economic benefit from the City's proposed boundary expansion. From an economic prospective, the only justifications for expanding the governmental and taxing authority of the City are: (1) if the residents outside the City are dissatisfied with the level of service they are receiving, (2) if the City can provide services more efficiently and economically than the Borough and (3) if residents inside the City are carrying a disproportional burden for service shared by area-wide residents. Relevant information suggests that none of these conditions exist; therefore, annexation is not warranted. The basis for these conclusions are summarized in numerical order throughout the remainder of this report.

Sincerely,

G. Hayden Green, Ph.D.

P.J. Hill, Ph.D.

G. Hayden Green, Ph.D, MBA

KODIAK ISLAND BOROUGH ANNEXATION ECONOMIC ANALYSIS

1. Borough residents level of satisfaction with existing services:

Members of the Anchorage Urban Observatory research staff were commissioned to conduct a survey of attitudes of residents in the Kodiak Borough as part of an OCS impact study in 1977. As part of that study, respondents were asked questions regarding their level of satisfaction with services received. A total of 472 individuals completed the survey. To determine if the level of satisfaction with services received varies between residents within the City and those residents in the proposed annex area, some additional computer and statistical analyses were conducted of the original questionnaire responses.

Individuals living in the village who responded to the questionnaire were omitted. The balance of the respondents were separated into two groups, that is, those people within the City limits and those in the proposed annex area. One question asked was, "What do you dislike about your area?" Of the 199 respondents living within the City, 15.1% listed roads; and 13.1% listed litter as their main area of dissatisfaction. Of the 119 individuals responding to the questionnaire who live in the proposed annex area, 12.6% listed roads; while 13.4% listed litter. This was the area with which residents registered their greatest level of dissatisfaction (roads and litter). In the Table attached, it can be seen that very little difference exists between the level of dissatisfaction with services between individuals living within the City limits and those living outside. In fact it should be noted that, while 2.5% of the respondents living within the City listed police and fire protection as their number one concern, not one person living outside the City listed it as an area of dislike. (See Table 1)

In another question residents were asked to rank several factors which they considered major problems facing the Kodiak Borough. In Table 2 the percentage of individuals listing various factors as their number one concerns are shown. It should be noted that only 5 percent of the respondents living outside the City listed inadequate public facilities and services as a primary concern.

A third question queried residents about those areas they felt were the communities' most pressing needs. Again, we separated respondents within the City and those in the proposed annex area. The factors listed as being the most pressing need were housing and roads by both sectors of the areas' population. Nine percent of the City's residents listed public services, water and sewer as a pressing need; while only 4.2 percent outside the City listed it as their first concern. (See Table 3)

In a subsequent question, residents were asked to rate community facilities and service as either presently being adequate, needing upgrading at the present time or needing upgrading in the future. A perusal of Table 4 suggests that residents outside the City have equal concerns with the level of services they receive. (See Table 4)

Several important implications pertinent to the issue of annexation are gleaned from the survey data:

1. Individuals within the City limits and those persons outside the City have similar attitudes towards the level of service they receive, that is, a comparable level of satisfaction with regard to public goods in relation to their cost.

2. The services of greatest concern to both City and Borough residents are roads and litter conditions. According to state records, the City maintains 13 miles of roads; while the Borough maintains 9 miles of roads. The remaining road system is state or privately maintained. The survey results suggest that residents do not perceive the City as doing a better job maintaining their road systems than the Borough is with its roads.

3. The survey results clearly suggest that the City is not more astute at providing services to local residences than the Borough government. There is some dissatisfaction among City residents with some services provided by the City of Kodiak, i.e. law enforcement, animal control, airport, parks, and roads. Within those services provided area-wide by the Borough, there exists a relatively high level of resident satisfaction, i.e. medical service and education.

4. The survey results indicate that individuals in the outlying areas are satisfied with the level of service they are receiving. This would suggest that the initiative to expand the boundaries of the City limits originated within the City or from a minority group.

2. Can the City provide services more efficiently and economically than the Borough?

One other area upon which the annexation decision should be predicated is the cost of providing public services. The City asserted in the original petition that it could provide services to the area in question more efficiently through annexation than otherwise.

In discussing this, several things need to be well defined. First, it is desirable to separate public goods from public utilities especially with respect to governmental finance. There are some goods that local governments provide that are, in reality, public utilities. Sewer and water systems fall under this category. Those who receive the benefits from these goods are easily identified; and these systems should, if possible, be supported by user fees. These facilities should not be financed by general taxes.

Secondly, with respect to the financing of public goods, it is possible to go the service district route efficiently. All that is required is an institutional arrangement whereby those who receive the benefits can be assessed in proportion to the costs. (The costs would include some prorata share of the fixed plant, not just thin marginal cost.) There is no loss in efficiency in doing this through service districts, and there is no economic reason for necessitating annexation. Expansion of services may produce some economies of scale (the larger the operation, the lower is the cost per unit of output); yet these can be realized without annexation. The service district would seem a more desirable route because of the ability of the residents to choose which public utilities they want.

Public goods are those types of goods which must, by necessity, be provided through taxation (police, planning, general administration, parks, etc.); yet there is no reason to believe that they require the annexation process. They could be provided on the basis of service districts and differential taxation. It should be remembered that the benefits of the service (public good) do have geographical limitations.

Further, it is doubtful than any particular government has a unique advantage in terms of production costs. Both the Borough and the City have to buy their resources in the same market, and they face the same types of technology. There is probably no economic rationale for having a service provided by one government over another.

To provide a basis for comparing the cost and operating efficiency of the two governments, we used the 1977/78 operating budgets of the two entities. (See Table 5)

It should be noted that several duplicated positions exist within the Borough and City governments. These will not be eliminated if the City boundaries are expanded.

A preferable alternative to annexation would be unification. If the two governments were unified, the positions listed in Table 6 could be eliminated. It should be noted, however, that the historical experience of unification efforts have not resulted in substantial cost savings. Where costs are saved in one area, they are often absorbed in others. The primary advantage of unification is the elimination of the conflict that often arises where two governments serve the same citizenry.

TABLE 5

3. Are residents inside the City carrying a disproportional burden for services?

Kodiak is particularly concerned that they (City residents) are paying for many "public goods" that are used by people who live outside the City boundaries. The charge is that these non-city residents are "free riders." It would be useful to examine sources of revenue for the City and identify revenues that are paid by City residents and by non-residents.

The population of the respective areas (City and surounding area) is computed as follows: The total population of the City (official population figures used by the State of Alaska for revenue sharing) and the Borough in 1977 is 4,960 and 7,901 respectively. The population of the five second-class cities in the Borough (these are Akhiok, Larsen Bay, Port Lions, Ouzinke and Old Harbor) totaled 940. It will be assumed that there are approximately 200 persons living in other areas (areas outside cities). Therefore, the total population living in the greater Kodiak (City) area is 7,901 less 1,140 or about 6,761. Of that total, 4,960 live in Kodiak city; and about 1,800 live in the surrounding area. Therefore, of the total resident population in the greater area, City residents account for approximately 73 percent which implies that the surrounding area holds about 27 percent of the population.

Additionally, the migratory labor force accounts for a significant portion of those people who are hit by sales taxes. Accounting for a trend, it would appear that, on average, the labor force is 13 percent higher than the permanent residents would support. This is due to the cyclic nature of employment.

Thus, there would appear to be a significant portion of the population that would be hit by the sales tax who are not permanent residents of Kodiak city. Assuming that there are not wide differences in the distribution of income between residents (of the City) and non-residents, it would not be unreasonable to assume that people would pay the same amount in sales taxes to the City, no matter where they lived either within the City, the surrounding area or were transient labor force. Conceivably, what I can account for would seem to indicate that residents of the surrounding area and transient labor force (in covered employment) would probably account for about 40 percent of the total sales taxes collected. Additionally, there are others who pay sales taxes who are not accounted for by this figure (any sales that are made to Borough residents outside the greater Kodiak city area which would include all the outlying villages and any purchases made by the U.S. coastguard personnel). Also, there are significant sales taxes paid by people who work in Kodiak in the summertime who are not in covered employment; this would include all the sales made to fishing boats from the outside. Thus, the portion of sales taxes paid by non-city residents is probably greater than 50 percent.

One of the traditional arguments for a sales tax, at least in this instance, would seem to hold true. Sales taxes can be levied to tax people who might otherwise escape taxation, notably, tourists, transients, and non-residents of a political jurisdiction.

Other taxes of the city that are ultimately paid by non-city residents would include their portion of the property taxes that are shifted forward by commercial businesses within the City. Traditionally, across the U.S., businesses account for about 50 percent of property taxes (see Advisory Commission on Intergovernmental Relations, Federal-State-Local Finances: Significant Features of Fiscal Federalism, 1973-74 ed., Washington, D.C., p. 173). It is commonly believed that businesses shift large portions of the property tax on to the consumer in the form of higher prices. For example, the Port of Kodiak included $83,000 as a payment to City government in lieu of property taxes. This payment was included as part of the rate base in calculating charges for use of the terminal. This shifting is especially true in non-competitive market structures which is characteristic of the Kodiak economy. Thus if 50 percent of total retail sales which are made in Kodiak are made to non-city residents and are passed along in the form of higher prices, then it would be possible to conclude that approximately 25 percent of the property taxes paid to the city are, in fact, paid by non-city residents.

In terms of the total tax revenue Kodiak city collects, the City residents collect a significant portion of their taxes from people who do not reside in the City. Of total property taxes paid, we can attribute $163,750 to non-residents; and, of the total sales tax revenue ($1,250,000), approximately half ($625,000) can be attributed to non-residents. Thus it would seem as though non-residents pay as much as $788,000 into the purse of Kodiak city which accounts for almost 41 percent of total tax revenue. It can hardly be said that there is a significant "free rider" problem.

It is interesting to examine what would happen to property taxes in the area to be annexed if annexation were to take place and the City spread its property taxes out over a larger tax base. Currently, there are four service areas where differential taxation is imposed. These include: the City (TCA1), the fire district (TCA8), the road district (TCA9) and the villages (TCA9). The fire district and the road district property would be added to that of the City upon annexation; both of these areas hold about 12.85 percent of the total property in the Borough. The City, on the otherhand, contains 81.17 percent of total property in the Borough.

By using the mill rate and the tax base of the areas to be annexed along with the City, it is possible to examine what would happen if the property tax of the City were spread over the whole area. Currently the City is taxed at a 16.33 mill rate; the surrounding area mill rate is 7.23 with an additional assessment of 0.75 mills in the road district and 2.27 mills in the fire district. If the focus of annexation were to simply shift some of the cost to the outlying areas, the same total amount would be collected with the mill rate of the various areas being equalized. The overall mill rate would be 15.19 mills -- a decrease of 1.14 mills in the City (a decrease of $85.5 on a $75,000 home), an increase of 5.69 mills in the fire district (a $426.00 increase in property taxes on a $75,000 home), and an increase of 7.21 mills in the road district (an increase of $540.75 on a $75,000 home) for residents outside the City.

Further, it might be noted that the area to be annexed includes the U.S. Coast Guard base. Thus the retail sales on the base would be subject to the City sales tax which would add to the City revenues significantly. It is difficult to know how much this will add to the City revenues. The Office of non-appropriated fund for the Coast Guard reported that this total operation was approximately $3.5 million. While most of that was the BX and similar activity, the precise amount that would be hit by a retail sales tax would be difficult to determine. If, for example, $2.0 million were covered by the retail sales tax, the City would collect $60,000. This is about five percent of the total tax revenues for the City.

City of Kodiak

SPECIAL REPORT
ANNEXATION

The area outlined below has been recommended for Annexation by the State of Alaska Boundary Commission. It generally encompasses the area from the existing City limits to Spruce Cape along the water — then to Abercrombie and along Lake View Drive.

ISLAND LAKE ANNEXATION HISTORY

In 1968, the first attempt at annexing Island Lake and Spruce Cape occurred. The main reason for the residents request appears to be fire protection. An election was held and the annexation question was defeated.

In 1970, the Borough initiated step annexation of certain areas (including Island Lake). The Boundary Commission recommendation included a larger area. The Boundary Commission also recommended that all services be provided in one year rather than step annexation. The City, Borough and private citizens sent telegrams and letters to legislators asking that annexation not be approved as the services could not be provided in one year and the cost to the residents both Borough and City, would have been exorbitant.

In 1972, petitions were received from Island Lake residents requesting annexation However, Municipal Boundary regulations were being revised by the State. After the new regulations were established, the City was told that the petition would have to be done under the new regulations. The City Manager at that time, met several times with the residents of Island Lake concerning annexation.

Then the City Manager discussed the problem with the Council and it was agreed that the City should proceed rather than asking the people to present another petition. It was then discovered that planning Grant funds would be available for a comprehensive study of the services needed and manner of providing them. The Borough has planning powers, & the City Manager worked with the Borough to obtain the funds and conduct the study In the July 22, 1976 Council minutes, The City Manager states, regarding the progress on annexation, "The Borough has applied for a grant to study the situation . . .part of the study would be on whether annexation or a service district would be the best method."

A service district was considered by the residents favorably, but since it was to be contiguous to the present city limits and all services would be furnished by the City, a serious legal question arose as to its position under State Statute.

At the present, the Local Boundary Commission recommendation to annex the area to the City of Kodiak will be made within the first 10 days of the forth-coming State Legislature.

WHAT ABOUT WATER & SEWER

The City of Kodiak engineering department has been doing preliminary planning for water and sewer service to the proposed annexation area so that construction could begin as soon as possible, if annexation were approved. Previous studies have been incorporated. It is anticipated that grants will be received for 50% to 75% of the costs.

The City has to the best of its ability incorporate the previous work of the citizens and engineering firm retained by the Borough. Plans showing proposed water and sewer lines will be available at the public meeting.

One unusual concept advanced is to allow acceptable Septic Systems in low denisty hard to reach areas in order to keep cost down and to allow assessment relief for the life of the System. Detailed engineering can not be realized until annexation is a reality & appropriate Grant monies can be applied for.

WHAT ABOUT ROADS

1st Priority?

1. Unamed Road in U.S.S. 3467
2. Track A Island Lake
3. Unamed Road in U.S.S. 3219, 3103, 3464 Island Lake
4. Cliffside & Cliffside Loop
5. Seabreeze & Woodland
6. Unamed Road in U.S.S. 3099

2nd Priority? What else should be done.

Reconstruct for purpose of snow removal, road grading, fire & police coverage.

There are 2½ miles of maintainable roads in the area. Maintenance means grading, drainage, snow removal and dust control.
With a minimum of work another 2½ miles of road would be maintainable.

WHAT ABOUT POLICE

Available on maintainable road system with one year or more additional coverage of state police - dispatch available on personal, telephone, or C.B. contact. Additional policemen and vehicles will be added as necessary to cover the entire area.

DIFFERENTIAL TAXATION?

WHAT IS IT ? A method of allowing new residents a break on taxation until they receive the same type and quantity of services as other residents.

Zone No. 1

Generally that area next to Mission Road outside the present boundaries that may enjoy all City services afforded present City residents. Present Mill Rate for City purposes at 100% would apply.

Zone No. 2

Generally that area north of Mill Bay USS 2467, Shafaka Acres, Block 7 Monashka Bay subdivision that cannot receive full services. Mill Rate at 75% would apply.

Zone No. 3

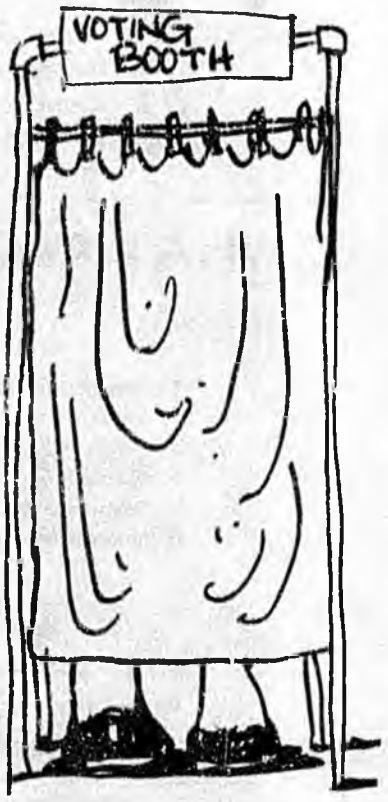
Generally that area of Woodland Acres, and back of Island Lake that the city is presently unable to reach adequately with fire & police due primarily to present road conditions. 50% of the City Mill rate.

SEE THE CITY'S MAP

EARLY & SPECIAL REPRESENTATION

Early representation is afforded by a City Charter provision which allows any resident who has lived in the newly annexed for 2 years and in Alaska for 3 years the ability to run for Mayor or Council.

Also, the City Council by special provision will ask for the election of a special representative from the annexed area to serve as an advisor with the council for 3 years. Residents of the annexed area will of course vote for all council members and mayor as their respective terms expire.



THE CITY MADE THE FOLLOWING PROMISES IN RESOLUTION NO. 24 - 78

CITY OF KODIAK

RESOLUTION NO. 24 - 78

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Kodiak, Alaska as follows:

1. The City will, to the extent possible, establish and implement in the areas to be annexed, a system of differential taxation for any such areas that do not receive all services of the City supported by taxation or which receive these services at a level different from that provided in other areas of the City.

2. The City Manager is hereby directed to develop tentative plans for the provision of services to the areas proposed for annexation and to determine whether the City may be prevented by requirements for capital improvements or for other reasons from providing full services to portions of those areas for any temporary period of time. On or before October 1, 1978, the City Manager shall report to the Council and advise of the areas where provision of full services may be temporarily delayed, the level of service that will be provided and the estimated differential in cost between full services and the services to be provided.

3. The City Manager and the City Attorney shall explore existing legal requirements regarding residency requirements for voting and elective office, and the existing number of Council Members an make recommendations to the Council on or before October 1, 1978, regarding possible changes in law or policy to provide residents of newly annexed areas with representation within the City comparable to that currently available to City residents, and any recommendations regarding required changes in ordinances to implement that objective.

4. The City shall engage in an information program regarding the proposed annexation with the objective of making the public and the legislature aware of the need for and benefits of annexation, and shall employ the services of a qualified person, to the extent determined advisable, to actively support approval of the annexation by the Alaska legislature.

PASSED AND APPROVED this 24th day of August, 1978.

RE: Kodiak Annexation

Attached please find the Report to the Second Session of the Eleventh Legislature relating to Review of Services Provided to the Residents of Kodiak Island Borough. This was prepared by the Dept. of Community and Regional Affairs in response to HCR 7 am passed by the Committee last session on the subject of Kodiak annexation.

Report to the Second Session of the Eleventh Legislature Relating to Review of Services Provided to the Residents in the Kodiak Island Borough

Prepared and Submitted Pursuant
to House Concurrent Resolution No. 7Am
by the Department of Community and Regional Affairs

January 18, 1980

Background

As a result of a petition to annex a small area into the City of Kodiak the Local Boundary Commission (LBC) held two public hearings, one on December 12, 1977 and the other on May 20, 1978, to take public testimony on the annexation of a larger area to the City of Kodiak. This area included the Spruce Cape area, the Mill Bay Road area, the Monashka Bay area, and the United States Coast Guard Station. Following the public hearing the LBC recommended to the First Session of the Eleventh Legislature that all of the areas, except the Coast Guard Station, be annexed to the City of Kodiak. The Legislature disapproved this annexation by adoption of House Joint Resolution 10. The Legislature, in House Concurrent Resolution No. 7 amended, requested the Department of Community and Regional Affairs to study the various options to provide "services throughout the road system extending North and Northeast of the City of Kodiak" and to submit a report to the Legislature by January 20, 1980.

Progress to Date

During 1979, the City of Kodiak and the Kodiak Island Borough worked together to devise an acceptable compromise to provide services to the residents of Service District #1 which includes the area proposed by the LBC for annexation. The Department was kept apprised of these negotiations, and it was clear that the City and Borough wished to work its problem out without C&RA involvement.

The negotiations centered around providing water and sewer service to an area referred to as Service District #1, which includes the Island Lake and Spruce Cape areas. The City of Kodiak indicated in writing in December, 1979, that "the City's attitude does not preclude small annexations as requested through the presentation of 100% petitions, but does reject the idea of major annexations". This attitude would also preclude the provision of services by instituting a step annexation. The Local Boundary Commission has also stated that it will not pursue annexation in the City of Kodiak area on its own and will only become involved if petitioned.

The method of providing service through a service district approach appears to have the mutual support of the City and Borough. The City is willing to provide water at the city boundary to Service District #1 and to treat effluence from this area. The City will provide water meters to allow for the billing to the Borough for the residents getting water and sewer service in the area outside the city.

The major concerns that need to be resolved deal with the operation and maintenance of the water and sewer utility service. A rate study needs to be conducted and the City and Borough have not, as of this date, reached an agreement on selection of a consulting firm to do this work. The City has stated that it does not wish to become involved in any contractual arrangement to operate and maintain the water and sewer systems within Service District #1. City Mayor Al Beardsley states that this "maintenance (within Service District #1) can just as easily be contracted (by the Borough) with a private firm". Agreement has been reached to allow the City inspection privileges during

installation of sewer lines to minimize infiltration into the sewer collection system within Service District #1.

Public Meeting

On January 12, 1980 Commissioner Lee McAnerney convened a public meeting for the purpose of receiving public comment regarding the "best" way to provide services to those residents of the Kodiak "urban" community outside the City of Kodiak. The managers of both the City and Borough, the city mayor, seven other assembly or council members, and fourteen public participants were present at the meeting.

Thirteen persons testified during the meeting. The overwhelming majority of those testifying favored the direction that the City and Borough have taken in negotiations between these two local governments. The testimony expressed a feeling that the service district approach gives the residents involved more alternatives in the level of service they will receive.

One person testified in favor of annexation of Service District #1 to the City of Kodiak as the best short-term alternative with unification of the City and Borough being the long-term or ultimate solution.

Future Outlook

This Department is prepared to assist the City of Kodiak and the Kodiak Island Borough in their attempt to work out remaining differences between them. Both the City and Borough should be commended for the progress that has been made to date. There is no reason to think that the remaining

differences cannot be worked out within the next few months.

The question of unification will again appear on the October, 1980 ballot. If this proposition is approved, jurisdictional problems in providing services to Kodiak Island residents would be resolved.

The Department concludes that no further action is required by the Legislature, the Local Boundary Commission or this Department, at this time, in the matter of provision of municipal services to residents living within the Kodiak "urban" area.

Tax 19 votes ahead; final count Monday

By Dan Humphrey

HAINES—The question of whether or not to have additional taxation is yet to be settled. As of press time, the results from Tuesday's borough election show 19 more votes in favor of a temporary one percent sales tax than against. There are still 33 absentee ballots and 33 questioned ballots to be counted Monday, March 10, by the borough assembly at a special meeting.

The unofficial count today showed that 234 borough voters favored and 215 did not favor the tax. Also, all service areas except "Proposition E," calling for emergency fire protection in the Haines Highway area from the airport to 18 Mile, are expected to be turned down.

Tabulated results so far are shown in the box at right.

If the temporary sales tax is approved, it will go into effect April 1, 1980, and stop March 31, 1981. The proceeds will go for the general administration of the Haines Borough and, specifically, for costs involved in intervening in the SEACC vs. State of Alaska, et al. lawsuit.

There will be no city-provided fire protection in the areas that turn down the proposed borough service areas. The borough will contract with the city to provide fire protection in the service area that will be set up.

The Haines City Council had called for a moratorium last October on all extra-territorial services because the city had no protection or right to go outside its corporate limits.

After a plea from Frank Wallace, the council lifted the moratorium until March 1 to give time for the borough to come up with service areas. The moratorium was later extended to July 1 at Wallace's reque. only to give time for the city and borou.h to settle the paperwork.

If the service areas are refused, the council will probably enforce the moratorium before July 1.

A total of 490 voters turned out for this special election. In the last municipal election, 488 people voted.

Volume II, No. 1 – Thursday, March 6, 1980 50¢

Legislature upholds annexation

By Jeff Brady

SKAGWAY—The petition by the City of Skagway to annex all of the land between the Canadian boundary and the Haines Borough boundary has been upheld by the Alaska Legislature. The legislature had until Tuesday to pass a bill denying Skagway the annexation, and that bill stalled in committee after a public hearing on Friday.

Sen. Sturgulewski, chairperson of the joint House-Senate Community and Regional Affairs Committee, told the Lynn Canal News Tuesday that no action was taken on the annexation petition which had been endorsed by the Local Boundary Commission. The legislature had 45 legislative days after the legislation was introduced to deny Skagway's petition, and the 45th day was Tuesday.

Testifying at the hearing for the annexation were city councilman Marvin Taylor and Sig Strandberg and Charles Bettisworth of the Local Boundary Commission. Skip Elliot of Dyea testified against the annexation, and Barbara Kalen of Skagway said she had mixed feelings about the annexation.

Taylor said after returning to Skagway that he felt the city got a fair hearing, and said he was pleased with the outcome. He said all of the committee members were present and asked a lot of interesting questions.

He said that he informed the committee members of the procedures the city took to annex the area. He said that he did not tell them anything different from what was said by him and city officials at other meetings.

The city has contended that it needs the land for long term control of growth in the area, land use planning and municipal selection of state lands. Skagway voters approved of the annexation last October, and the boundary commission approved of the annexation after a long public hearing in Skagway last December.

HEARING DATE: 2/29/80 Joint Senate/House C&RA: Senate members present: Sturgulewski, Mulcahy, Stimson

MEMBERS PRESENT:

Bill Parker	X	Pat Carney	X
Margaret Branson	X	Charlie Parr	
Fat O'Connell	X	Fred Zharoff	X
		Ray Metcalfe	

Sig Strandberg, Vice Chairman of Local Boundary Commission Points out boundaries of existing city of Skagway and of proposed annexation. Discusses history of 1978 annexation. Those who testified at Skagway LBC hearing on the subject were substantially in favor of annexation. The opposition presented articulate and substantive testimony. The LBC voted 3-1 in favor of the annexation. Some of the considerations included: There are a number of privately owned parcels in the Dyea area; the Park Service has been acquiring inholdings in the area proposed for annexation; the area is adaptable to development; the availability of hydroelectric sites outside of the exisiting city should be noted; planning, land use, and identification of land ownership could be done by the city. The appropriateness of borough incorporation was considered and rejected. Convenience of description could be viewed as a reason for the large annexation even though it is primarily ice and snow. Jurisdiction and services are needed outside of the current city limits. The question of tax equity is also an issue.

The Dyea residents were concerned about services and taxation and how they would be affected. There were concerned that the mantel of government regulation would be costly.

The geographic separation from the Haines borough eliminated the consideration of the area becoming part of that borough. The differential tax plan proposed by the city appeared to be fair to the LBC. There was also recognition that Skagway and Dyea are a social and economic unit.

In 1978 the LBC reduced the size of the parcel to be annexed by the city because the city didn't have a plan for differential taxation at that time. Not enough careful evaluation had taken place.

COMMITTEE ACTION: No negative resolution proposed. LBC decision to annex allowed to stand - 45th day since intro. 3/3/80

TAPE # 3 SIDE 1 Footage 324-1613

Land ownership was discussed and it was pointed out that the Fed. government owns a substantial amount of land in the area. The state has selected (Tentative Approval received) land on either side of the Dyea River. The Park Service is quietly acquiring all private property in the area.
Pop. approximately 850 (Skagway) 51 (Dyea)

Bettiworth - Member of the Local Boundary Commission
The opening of the road and the need for planning along the road were also considerations in the Commission's decision.

Marvin Taylo, Vice Mayor of Skagway
Skagway is a first class city of 11 square miles until 1978 then expanded slightly. It presently delivers all services but planning and zoning, water, sewer, and electricty to the Dyea residents. Services they receive, but do not pay for, include:solid waste, garbage, (used often by residents of Dyea) roads, police, fire, health (city owned), rescue/medical, cemetary, port, small boar harbor, historical district, library, museum, school, employment (in the city).
The city is interested in planning for the whole area.
The Nation Park SErvice is moving in at this time. The highway is completed and open during the summer. Pipeline will trigger developments in the Yukon. Barge facility and boat harbor are almost complete. State campgrounds planned for. There are approximately 150,000 tourists annually. Figures don't show air tourists (customs immigration miss these).

The city size had been unchanged for 80 years prior to 1978. The road is open and they need good planning and zoning along the reaod. The ice cap has high potential for recreation. Potential as major port for the Yukon. Transportation corridor for the northern panhandle. Land selection a concern.Cost of hydro necessitates looking at hydro. Not feasible to connect area to Haines as it is only connected by water and air.

45 miles of railroad property in the city. 16 miles of railroad and 10 residents along the RR. Skagway pays 14% ($53,000) for schools. Skagway one of the few first class cities outside of borough. The limit of 3% sales tax is a problem. City can put in TV cheaper than the STate can and wants to do that with part of the sales tax(?0

Skip Elliott, Dyea resident
Foregoen conclusion that the area will be annexed.
The LBC was hasty in making their decision. They had had split decisions in their other considerations around the state and wanted to have some unity.
8 months after the 1978 referendum, the city tried again to effect annexation. Questions wording on the ballot. The Mayor even admitted that they didn't want Dyea. The 250 acres which is part of the the municipal selection is marginal land. It appears that the Local Boundary Commission has changed its mind in 1 yr. The Park Service budget has been reduced so it probably won't be acquiring land. There are 25-30 pepople of voting age in Dyea--give them a chance. The fire dept. made only 1 fire call in 10 years. The schools outside the city are 100% funded by the state so the city isn't carrying

them. Clinic runs on $2 per capita per year. $15 per person would cover library costs for the residents. $25-50 would cover the cost of a police call and the city makes money on street and sidewalk funding. Planning and zoning are the only services the city would plan to give the residents of Dyea. And no one wants annexation. White Pass is depressed and has asked for money. Instead they should annex the Skagway Valley. The city was under the impression that they needed survey posts and didn't know that they could describe the area they were choosing to annex. 450 sq. miles is too large for a city.

The residents of Dyea submitted a peition signed by 14 residents of Dyea opposed to the annexation.
Negative aspects of annexation include: "big brother" unwanted; extra mill levy.

Barbara Callen, Skagway
Can see both sides of the issue. There is no water for community development in Dyea. inconvenient for community living. No way it would be feasible to be joined with Haines. It would only make the map look neat. Dyea wouldn't benefit in any way. Mixed feelings on annexation.

Senator Sturgulewski- Was economic pressure a valid reason for the annexation. In Dyea there is land for expansion. Skagway is constricted in land availability.

Sig Strandberg- LBC
Survey lines protracted. The fallback question should be: If there is a need for planning, what kind of a government structure is available. Don't want an extra layer of government (borough). They would be getting services through differential taxation. It is a classic problem of receiving services and not wanting to pay for them. City residents pay sales as well as property tax.

Milton Taylor - If residents of Dyea have something delivered to their home, they avoid the sales tax. Bond issue has to be paid off for the clinic so it is not just the $2 annual fee which would cover the services.

Elliott - The bonded indebtedness is being paid off by the sales tax. There are figures available to substantiate the costs.

Report to the Local Boundary Commission on the proposal to Annex territory to the City of Skagway

November 14, 1979

Department of Community and Regional Affairs

I. PROCEEDINGS TO DATE

On July 27, 1979, the Department of Community and Regional Affairs received a petition proposing annexation of some 431.35 square miles of territory to the City of Skagway. Review of the petition indicated that it was in the proper form and did contain all the necessary information. A letter stating acceptance of the petition was sent to L.B. Jacobson, petitioners representative, on July 30.

Notice of the Commission's forthcoming hearing was mailed to petitioners' representative on October 23 and was posted in three public places and televised over the Skagway Network Television during the period of October 29 through November 16.

II. PETITION

The petition, for all intents and purposes, is the same petition the Commission considered in November of 1976. Admittedly, it is a larger geographic area, but the vast majority of additional territory is mountainous, not suitable for development and, according to petitioners representative, is included so that the entirety of the region could be within the confines of one local government. Because the issues are the same as in 1976 and because the Commission's Statement of Decision entered in that proceeding (copy attached) does not indicate a basis for the deletion of

territory from the annexation proposal, the Department's recommendation is, literally, the same as it was in the prior proceeding.

III. RECOMMENDATIONS

Normally, our reports attempt to analyze an annexation proposal, note the positive and negative aspects of the proposal and make recommendations pursuant thereto. However, we have chosen to take a different approach this time; petitioners' arguments are clear and the information provided is detailed and accurate. We feel no need to expand or comment on petitioners' arguments - the decision is the Commission's.

However, we feel a broader question has been ignored; that question is "what size should a city be?" In our opinion all of petitioners' arguments are, to lessor or greater degrees valid, but at what point does a city become an innappropriate service mechanism. We are not suggesting that we have the answer, only that the question needs to be asked. Specifically, we recommend that petitioners be questioned as to how the city will provide services to such an enormous area.

ATT: Division of Local Government Assistance

Gentlemen:

The City of Skagway's proposal to annex all federal lands north of the Haines Borough to the Canadian border is objectionable to me as owner of land survey No. 1560. (Location map enclosed.) I find no advantages for my property in this proposal. The City of Skagway is not in a position to provide police protection, fire protection, road maintenance, public utilities, school or school transportation, etc. due to the remoteness of my property and the difficulties in crossing the deep Taiya Inlet. Adverse weather and sea conditions frequently isolate my property for days at a time.

We are proposing to establish a non-profit salmon hatchery on our property to assist the State with its burdens of government. The preliminary application has been approved and our proposal is based on maintaining a tax-free basis. Any service-area taxation by Skagway will complicate our efforts to finance the hatchery.

We have started construction of our own water, hydro-electric and sewage systems at high cost to us. All efforts to obtain governmental assistance to develop the renewable energy resource, which will result in a saving of fossil fuels have met with failure. We are making every effort to develop a renewable fishery resource that can operate independently, yet support the common property fisheries.

Skagway is presently our main source of food and building supplies. We pay sales tax on all these purchases. We also moor our work boat in the Skagway boat harbor where we pay a moorage fee and personal property tax. Eventually, we will moor our boat on our own property when construction is completed. It is immaterial whether we re-supply at Haines or Skagway however, Skagway is more convenient.

In conclusion, we fail to understand why Skagway should want to annex property that they cannot or are unlikely to support and hope that you will consider our objection.

Yours truly,

Eugene W. Richards

The White Pass and Yukon Corporation Limited

November 16, 1979

The Chairman
Local Boundary Commission
c/o Local Government Assistance Division
Dept. of Community & Regional Affairs
State of Alaska
Pouch "B"
Juneau, Alaska 99811

Dear Sir:

Re: Annexation by the City of Skagway

The Pacific and Arctic Railway and Navigation Company is a West Virginia Corporation carrying on business in Alaska under the laws of the State of Alaska. Together with our smaller affiliate, Skagway Terminal Company, we are the major taxpayer and employer in the City of Skagway.

Within the territory proposed to be annexed is the railroad's 200 foot right-of-way which runs from the north end of the City, following the east bank of the Skagway River, to the International U.S./Canada border, a distance of some 17 miles. In this large but narrow parcel of land the railroad has a right-of-way interest by virtue of an 1898 Act of Congress and owns the railway tracks and a four inch pipeline.

While we are optimistic that the community will enjoy gradual economic growth it is our contention the City has vastly overstated immediate prospects for growth. No doubt this is primarily due to events occurring since their petition was drafted. In any event we bring the following points to your attention;

1) It is physically impractical to transport pipe for the proposed natural gas pipeline through Skagway by means of the railway.

2) Northwest Energy - Foothills Ltd. has ammended its application for an oil pipeline to exclude the Skagway route.

3) The responsibility for the maintenance of the Canadian section of the Carcross/Skagway road lies with the Government of Yukon. They have stated on several occasions that they have no intention of maintaining the road during winter months.

/2

P.O. Box 4070, Whitehorse, Yukon, Y1A 3T1, Telex: 036-8-210; Telephone: (403) 667-7611

4) The Carcross/Skagway road is unlikely to be upgraded for heavy vehicle traffic as the City of Skagway itself is in opposition to such a step.

5) There have been relatively few land transactions in the community during the course of the last year and local financial institutions have shown a reluctance to lend mortgage monies. These are both negative growth indicators.

One further statement in the City's petition is deserving of specific comment. It is implied that the area selected for annexation is dictated by the location of established survey monuments. Our contention is that there are numerous possibilities for revising City boundaries given the constraints of using existing survey monumentation.

With reference to the conclusion section of the City's petition there are two basic reasons given for annexation. Firstly the City has the opportunity to acquire 500 acres of land from the State of Alaska provided lands to be selected are within the Municipality. They contend that there are not 500 acres of State owned lands within the existing Municipality that are suitable for future development. The lands they have in mind are apparently located along the Dyea road, in the Dyea Valley and along the A.B. Mountain ridge line.

As we appreciate that this is a once only opportunity for the City to acquire lands for future development we support their annexation of a modest acreage for this purpose.

The second stated reason for annexation is to allow for orderly planning and zoning and the extension of Municipal services. Our contention is that there is no demonstrated need for these additional services outside of existing boundaries with the possible exception of the Dyea area.

With particular reference to our right-of-way from the City boundary to the International Border we contend that there are no permanent residents, land owners, suitable lands for urban development or requirement for Municipal services such as fire and police protection. Furthermore the railway is required by legislation and will continue to be required to be responsible for fire protection within the right-of-way.

In summary these lands are not urban nor is there any likelyhood of them becoming urban in nature. We are of the opinion that the expansion of the City's property tax base is not sufficient reason for their inclusion within the Municipality.

The two preceding paragraphs also apply for the most part to the vast majority of the lands proposed for annexation. In conclusion we contend there is not sufficient justification for the annexation of additional land with the exception of those lands necessary in order to enable the City to exercise their entitlement to 500 acres of State owned property.

Yours truly,

K.M. Steele
Land Manager
Pacific & Arctic Railway & Navigation Company

MINUTES OF THE LOCAL BOUNDARY COMMISSION
DECISIONAL MEETING ON THE ANNEXATION TO THE CITY OF SKAGWAY

NOVEMBER 17, 1979

Beginning at 7:00 p.m. on November 17, 1979 at city hall in Skagway, Chairman Sheila Gallagher, along with Boundary Commission members Bettisworth, Anderson, and Strandberg, held a public hearing on the City of Skagway's petition to annex all of the unorganized borough outside the City of Skagway's current boundaries between the Haines Borough and the Canadian border. Approximately 70 people attended the public hearing and principle testimony supporting the petition was made by petitioner's representative, Attorney L.B. "Jake" Jacobsen with major opposition to the petition being given by several residents who live in the community of Dyea and a representative of the White Pass-Yukon Railroad.

At approximately 10:30 p.m. following the public hearing, Commissioner Gallagher convened a decisional meeting of the Local Boundary Commission for the purpose of acting on the petition for annexation as submitted by the City of Skagway. For purposes of discussion Commissioner Bettisworth moved and Chairman Gallagher seconded that the Local Boundary Commission accept the petition as submitted by the City of Skagway. Discussion followed as to the possibility of revising the boundaries to include a smaller area more adjacent to the current City of Skagway. Also, there was discussion concerning whether or not the City of Skagway could provide services to residents within the 481 square mile proposed boundaries. Commissioner Strandberg indicated that he was concerned that the area proposed for annexation was too small to be considered as a future borough and that, in the absence of other forms available for local government, the most desirable approach for providing local government services to the area would be through annexation to the City of Skagway. Commissioner Anderson expressed concern that with the opening of the highway it appears that the City of Skagway should have an opportunity to control development along that highway corridor. Chairman Gallagher expressed feelings that the Commission not concern itself with the "unorganized status" of certain areas that might be considered for exclusion from the petition and to concentrate Commission attention strictly to the annexation petition and the standards for annexation. She concurred with Commissioners' Strandberg and Anderson that the City of Skagway had acted in "good faith" following the previously approved annexation in Skagway (i.e. establishing differential tax zones, etc.)

On roll call vote, those voting in favor were Bettisworth, Strandberg, and Anderson; opposed Gallagher. The motion to accept the petition for annexation of unorganized borough territory between the Haines Borough and the Canadian Border was approved. Chairman Gallagher adjourned the decisional meeting at approximately 11:15 p.m.

Signed by:

Palmer McCarter

DEPARTMENT OF COMMUNITY AND REGIONAL AFFAIRS

In the Matter of Annexation)
by the City of Skagway, Alaska)
) PETITIONER'S BRIEF

I. In General. The City of Skagway, Alaska is a first class city organized and existing under the laws of the State of Alaska. It is Alaska's oldest city originally incorporated under terrritorial law as a municipality in 1900. The City of Skagway's original municipal boundaries, established in a 1900 election to incorporate, encompassed 931.49 acres more or less, excluding tide and submerged lands. The municipal boundaries were expanded through annexation in 1978 to encompass 11 square miles. According to the official 1970 census, the population of the City of Skagway was 675; its population for 1 July 1978 revenue sharing purposes as compiled for and approved by the Alaska Department of Community and Regional Affairs was 874.

II. Municipal Services Provided Within the City. The City of Skagway currently provides water, sewer (primary treatment), garbage and solid waste disposal services to its residents. Electrical power is provided by an independent, city-franchised utility regulated by the APUC. The City provides maintenance and repair services for city streets and rights-of-way.

Law enforcement within its jurisdiction is undertaken by a police force consisting of a chief of police and two officers, all on a full-time basis.

Fire protection, rescue and emergency medical services within the city and surrounding environs are undertaken by the Skagway Volunteer Fire Department operated out of the

ROBERTSON, MONAGLE, EASTAUGH & BRADLEY
A PROFESSIONAL CORPORATION
P.O. BOX 1211, JUNEAU, ALASKA 99802

City-owned fire hall, a modern facility constructed in 1969. Major equipment employed includes: one 1970 American LaFrance pumper, one 1973 American LaFrance pumper, one 1963 White 1000-gallon tank truck, one 1953 Howe Jeep pumper, one 1974 Dodge ambulance, 1 Kaiser Emergency Medical Rescue vehicle and one 1958 Ford hearse. The City retains and pays a part-time fire chief, two captains and two lieutenants. The Volunteer Fire Department has seventeen regular members in addition to officers, paid a drill allowance of $2,500 plus a special training allowance for fire training school attendance and fees. There are four fire cadets and eight emergency medical personnel. Additionally there are a number of former members of the fire department and civic minded citizens who invariably respond and assist in combating fires.

The City owns and operates a cemetery and charges a flat fee of $325.00 for opening and closing a grave plus the plot.

The City of Skagway by ordinance established a Port Authority which serves in a planning and advisory capacity to the Council respecting port development and regulation of maritime and small craft activities within Skagway Harbor, including the Small Boat Harbor.

The City of Skagway has adopted a complete zoning plan and map to govern the organized growth and development within the municipality, and further, has promulgated standards for subdivision development. These will be expanded to include the annexed territory. A unique aspect of its zoning plan is establishment of a Historic District and restrictive development regulations therein. To prevent

ROBERTSON, MONAGLE, EASTAUGH & BRADLEY
A PROFESSIONAL CORPORATION
209 H. O. A. BLDG.
P.O. BOX 1211, JUNEAU, ALASKA 99802
PHONE 586-2340

construction of substandard buildings and dwellings, the City Council has adopted the National Electrical Code, Uniform Building Code, and National Plumbing Code by reference in ordinance form. Also adopted is the fire prevention code promulgated by the American Insurance Association.

The City owns and operates a medical clinic in a rather new building, leasing same to a Haines-based physician commuting to Skagway two days per week to provide health and medical service to residents and the outlying population.

The municipal library is managed as a non-profit activity by a library board appointed by the Mayor. Library operations are financially subsidized by the City. A new public library building is presently under construction with an estimated completion date of early August 1979.

The Skagway Museum is an entirely city-operated entity both in terms of physical plant and personnel. Like the library, the museum is used by the population on an area-wide basis, not limited to residents. Further, the tourists which the museum and Historic District attract inure at least indirectly to the benefit of non-residents living on the periphery of Skagway's boundaries.

Additionally, the City owns the physical plant and facilities of the local school system operated by the Skagway School District through its School Board. The current enrollment for both primary and secondary grades is 200 students, 10 of which reside outside the present municipal boundaries.

III. Extra-territorial Services. The City currently provides extra-territorial fire protection to non-residents

ROBERTSON, MONAGLE, EASTAUGH & BRADLEY
A PROFESSIONAL CORPORATION
200 H. B. A. BLDG.
P.O. BOX 1211, JUNEAU, ALASKA 99802
PHONE 586-2440

on a limited and gratuitous basis. The decision of whether to respond to an out-of-town request for fire service lies with the independent discretion of the fire chief who will consider all known and relevant factors giving preference to vigilance and protection within the City. outside calls are responded to only with the tank truck, jeep pumper and emergency rescue vehicle.

As to law enforcement outside the City, Skagway has no Alaska State Trooper based at the City, but instead relies upon a trooper being sent over from time to time from Haines on an as-needed basis. In essence, the City of Skagway does provide extra-territorial police protection currently; its offices are commissioned by the State to enforce state law and they do respond to calls for assistance outside the Skagway City limits. Approximately 35% of the traffic accidents investigated by the police department during the past 3 1/2 years occured outside the City limits.

The City provides no water or sewer service on an extra-territorial basis. The City operates and maintains the only garbage dump in the vicinity. There is no charge made to persons residing outside the city limits who use the dump facility.

The residents within the territory proposed for annexation naturally use the city-owned and maintained schools, medical clinic, library, museum and all other municipal facilities, including city streets and roadways. The non-residents benefit from the access to and actual utilization of the foregoing municipal facilities but other than through payment of the 3% sales tax do not financially

contribute to their establishment, maintenance or perpetuation in any manner corresponding with the contributions from local residents.

IV. Imminent Development. The prospective developments advised in Skagway's 1976-7 annexation brief have largely materialized. The Klondike Goldrush Historical Park and Skagway-Carcross Road are fact and the third project, port development, is well along. The city-State joint use barge and ferry terminal off-loading facility is scheduled for completion this October, 1979 at a cost of $3.5 million. The White Pass rail freight dock and dredging project is in the permit process. Accordingly, it can be seen in retrospect that the City's 1976-7 annexation petition forecast the major projects with commendable accuracy.

Additionally, it appears that additional major projects will be imminently undertaken. These prospective developments in and about the City will assuredly affect its growth, level of commercial activity, and invoke desirability for further municipal control respecting external affiars.

1. Additional Port Developments. The City is in receipt of State and EDA grant funding for the concurrent construction of a heavy duty transfer bridge and cargo staging facility. The White Pass & Yukon Route has applications pending approval by the Corps of Engineers for construction of improvements to its water front facilities - e.g. dredging and rehabilitation of the cargo dock, dredging and major alteration of the Ore Terminal wharf. Dredging work in the City's Small Boat Harbor has been completed and the new float system is scheduled for installation in the summer of

in May 1979 and has been heavily traveled subsequently, e.g. for the period 7 May, 1979 to 30 June, 1979, the U.S. Customs Service reports some 12, 198 persons, 6,243 U.S. citizens and 5,955 Canadian and other nationalities, have traveled southbound over the highway. Canadian customs reports some 17,000 persons traveling northbound during the same period. This road is certain to become a major transportation corridor for commerce to interior Alaska and the Yukon Territory. Its importance was originally understated. It will serve as a scenic alternative to the Haines Highway for ferry borne vehicles entering and departing Alaska and will, as well, attract traffic traveling the Alcan Highway. The last session of the State Legislature appropriated some $564,000.00 for the procurement of maintenance equipment and employment of additional highway maintenance personnel in order to keep the road open year-around. It is anticipated that the Canadian Government will follow suit. For example, the Federal Government of Canada has appropriated $3 million for further construction and improvements and it is expected a portion of this funding will be applied to winter maintenance.

The establishment of the National Park and the opening of the highway already have resulted in increased tourism as well as changes in the nature of visitors, specifically, more younger families with children; more backpackers and hikers and more recreational and camping vehicles as opposed to retired couples traveling by cruise ships. The impacts of the Park and Highway are already being felt in Skagway. There is a lack of campgrounds and accomodations for recreation vehicles, resulting in traffic congestion and tight parking

ROBERTSON, MONAGLE, EASTAUGH & BRADLEY
A PROFESSIONAL CORPORATION

in and close by the Historic District. Additional campgrounds and tourist support facilities are required, and, due to the limited developable land within the City limits, these will have to be located in the area proposed for annexation to the north of the City and along the Dyea road and in the Dyea valley. To prevent haphazard development with attendant adverse impact on the natural environment, creation of dangers to public health and safety, it is essential that the City exercise zoning and platting authority.

Impacts of change deserve comment. As noted above, the distinct impacts of the Park and Highway are already present. If either of the pipeline projects materialize, singly or in combination, the City will be severely impacted. The City will be faced with almost overwhelming demands for housing accomodations and for municipal services, most obviously, public safety, education and utility.

In order to meet and to reduce or ameliorate the adverse aspects of these foreseen changes the City must plan and prepare. The time is now. The City is doing this. The City's OEDP Committee has spent a great deal of time recently in updating the City's Overall Economic Development Plan. This report emphasizes the need for annexation.

Additionally, the City has received a planning grant under the Coastal Energy Impact Program. This planning effort will include the development of a District Coastal Management Plan, an Energy Impact Plan and also a comprehensive plan, a capital improvement plan and a financial management plan. Work on this plan will be initiated this summer with a completion date of May 1980.

V. Why the Boundaries Proposed? The municipal boundaries of Skagway remained unchanged for 75 years. Until the last several years, growth in and around the City has not warranted extension of the municipal boundaries on the basis of need for provision of municipal services when viewed in the light of costs and services benefit to residents both within and outside the municipal boundaries. In 1976 it became apparent to the City Council that the City, by reason of its serving as a major port in a transportation corridor and as the commercial and industrial center of the area, has conferred substantial benefits upon residents and owners of properties outside the City without corresponding tax contributions on their part for these services and benefits. Due to opposition on the part of some of these non-residents and primarily because of a lack of consensus within the Council, the City petitioned for only a limited extension of its boundaries. The Local Boundary Commission considerably reduced the extent of the territory applied for and the annexation was approved by the Legislature in March of 1978. Subsequently, in its administration of government, the City has established differential tax districts for the annexed areas based on the City's capability to provide municipal services and the level of services provided.

The lines of communications in the Skagway area are limited and there is a dearth of developable land which is readily accessible - e.g. the area is largely river flood plain, mountain and glaciers. There are however, pockets of land suitable for residential or industrial development and to which provision of access will be practicable through

ROBERTSON, MONAGLE, EASTAUGH & BRADLEY
A PROFESSIONAL CORPORATION
PHONE 586-2340
P.O. BOX 1211, JUNEAU, ALASKA 99802

road improvements and construction, e.g., along the Dyea road, in the Dyea valley and along the AB Mountain ridge line. And, most importantly, there is the transportation corridor through the White Pass. These are the areas which must be made available and developed in order that the City may accomodate ongoing and foreseen increased population and industrial growth. Under the State municipal land selection program the City's entitlement is 500 acres. There are, however, not 500 acres of State land within the City boundaries which are suitable for selection. Therefore, with the concurrence and assitance of the State Division of Lands, the City has nominated lands for selection which lie outside the present municipal boundaries. In making these nominations, it was understood that the City would have until 1986 to extend its boundaries through annexation and thereby select its full allocation. The recent legislature, however, set a deadline of 1 October 1980 for municipal land selection. Therefore, completion of the annexation process has become a matter of urgency.

To facilitate annexation, it is considered to be entirely appropriate as well as both more practical and more economical that the area to be annexed be encompassed by established survey monuments. Accordingly, the City Council reached a decision to petition for annexation of all of the area within the unorganized borough encompassed by the Haines Borough boundary and the U.S.-Canada Boundary.

Given the confines established by the Haines Borough boundary and the U.S. - Canada boundary, it is self-evident that any further enlargement of the City of Skagway's

ROBERTSON, MONAGLE, EASTAUGH & BRADLEY
A PROFESSIONAL CORPORATION

P.O. BOX 1211, JUNEAU, ALASKA 99802
PHONE 586-3340

boundaries will be impossible. The question becomes which form of government is most appropriate. The Skagway Council rejected establishment of a borough as being an overlapping, expensive, and largely unnecessary layer of government; better that the City should expand into the "gap". Further, there was no legal method under the State statutes for the City to transform into a unified city-borough in a single step. Lastly, the Council acknowledges a legislative trend toward classification of all lands in the State and toward elimination of the unclassified borough. Enlargement of the City of Skagway's boundaries to 431 square miles might be considered large for a city, but it is a mere paucity by present borough standards prevailing in the state. Specifically, it would be approximately one-third as large as the present smallest borough, about one-tenth as big as the "average" borough, and little useful purpose could be seen in organizing yet another separate local government unit in the form of a borough. A borough would furnish no greater services, and the City of Skagway has adopted a scheme of differential tax zones to implement a policy of real property taxation to correspond with the level of services provided.

VI. City Owned Properties Outside the Existing Boundaries. A segment of the west side of the City's recreational park at Yakutania Point lies outside the present boundary. The City has nominated several hundred acres of land for municipal selection which lies outside the City limits. Subject to approval of this petition, some of these lands will be selected prior to 1 October 1980.

ROBERTSON, MONAGLE, EASTAUGH & BRADLEY
A PROFESSIONAL CORPORATION
[illegible]
P.O. BOX 1211, JUNEAU, ALASKA 99802

VII. Population and Activities Within the Area Proposed for Selection. A total of 51 persons reside outside the City limits and within the area proposed for annexation. There are approximately 175 acres of privately-owned land in the area, primarily along the Dyea Road and in Dyea Valley. In addition to permanent residences there are a number of recreational cabins located on private and State land which are occupied weekends.

The largest industrial activity in the area, the White Pass and Yukon Route has extensive improvements in the area, specifically the railway and pipeline through the White Pass. The area proposed for annexation consists largely of Federal and State lands including the National Park and a portion of the Tongass National Forest.

VIII. Taxes, Services and Benefits in Transition. Upon receiving annexation authority, the City of Skagway would propose to undertake planning and zoning control immediately and to increase the level of police and fire protection as practicable throughout the enlarged jurisdiction. That is not to say that the services will be equal. For example, the Council will have to consider obtaining some separate and lesser firefighting equipment for placement at Dyea.

The City of Skagway's fiscal year runs from July 1 through June 30 of the next calendar year. Since the effective date of the annexation would fall in the middle of calendar year 1980 and most probably at a time other than the commencement of Skagway's 1980-81 fiscal year, it is contemplated that the City's services would be phased in on a schedule roughly

ROBERTSON, MONAGLE, EASTAUGH & BRADLEY
A PROFESSIONAL CORPORATION
200 H. D. A. BLDG.
P.O. BOX 1211, JUNEAU, ALASKA 99802
PHONE 586-7340

commensurate with additional revenue which is generated for capital improvements. The City will not impose taxation, either on real or personal property, in the territory proposed for annexation until tax year 1981.

Extension of governmental services and of water and sewer utilities will be undertaken on a basis compatible with the City's financial ability with a view toward a favorable cost-benefit ratio. This is not in the immediate future and Skagway would establish differential tax zones which would be amended from time-to-time in parallel with the level of services provided. Skagway's present differential tax zone applies 100% of the levy to the land on the flats on the southeast side of the river; 79 1/2% to the flat lands on the other side of the river, and a 50% levy on the sloping lands and those within the City towards Dyea. It is contemplated that additional tax zones with appropriately lesser rates would be established for the areas proposed for annexation by this petition, e.g., for the Dyea and White Pass Corridor areas.

The City Council recognizes the need for fire, rescue and ambulance services; a plan will be formulated to ascertain how to best respond to additional requirements.

The construction of new residential and commercial structures and additions thereto in the new territory will be subject to the Planning and Zoning Permit process thus insuring greater value through compliance with recognized standards. In this regard, it is the intent of the City Council that these standards will be applied in a reasonable and equitable manner with due consideration given to the

ROBINSON, MONAMEE, EASTAUGH & BRADLEY
A PROFESSIONAL CORPORATION
509 W. 3rd AVE.
P.O. BOX 1211, JUNEAU, ALASKA 99802

situs and nature of the building and to the individual life style preference of the inhabitants. The City's comprehensive zoning plan will have to be revised and expanded commensurate with its enlarged jurisdiction, and this will be done. In undertaking this task, the City plans to recognize non-conforming uses through "grandfather rights" and to confer with residents and owners of property in Dyea to ascertain whether full applicability of the aforementioned codes is appropriate in that sector.

Members of the population currently residing outside of the city and using municipally-provided services are unable to play a role in the formulation of policy pertaining to those services. The annexation would, in addition to the obvious benefit of the privilege of voting, allow those who are currently non-residents of the City to participate in policy formulation through candidacy for elective office such as council and school board, and serve on numerous committees and commissions.

There are no inter-municipal agreements regarding transitional provisions of services and distribution of assets and liability because this proposed annexation does not affect any other city or borough.

It is contemplated that benefits from annexation would accrue to the city, present as well as those enfranchised by annexation. The tax base will be broadened by the extensive capital investment programs proposed for support of the oil and natural gas pipelines. For example, of the estimated $211 million cost for the oil pipeline, some $163 million will be expended for capital improvements within the proposed

ROBERTSON, MONAGLE, EASTAUGH & BRADLEY
A PROFESSIONAL CORPORATION
PHONE 586-1119
P.O. BOX 1211, JUNEAU, ALASKA 99802

municipal boundaries. The City will also arguably benefit from receipt of a percentage of the Tongass National Forest stumpage fees. These benefits will enable the upgrading of city services for the benefit of all residents, tourists and casual users of the area, commercial and industrial users who would patronize the area as a transportation corridor and staging location, and in particular will provide for the extension of a higher level of services to the more removed areas such as Dyea Valley.

IX. Conclusion. The purpose of this annexation petition is to anticipate growth and provide for advance planning. The increase in activity attendant to the construction and operation of the pipelines will both benefit the City's economy and generate increased demands and costs for governmental services. The City will require that the pipeline construction companies assume a major share of these costs until they can be supported by the increased tax base. In the absence of annexation, the City would be lacking adequate jurisdiction and controls necessary to implement timely extensions of municipal services.

Annexation is imperative if the City of Skagway is to fully realize its land selection entitlements.

It is the conclusion of the City Council that there is a need for basic governmental services such as the promotion and control of land usage and development through the exercise of planning and zoning authority paralleled by the extension of police and fire protection service to the inhabitable areas outside the city which are now or soon will be partially urban in character. Extension of the City

boundaries rather than formation of an overlapping borough jurisdiction is deemed a more prudent alternative. The volume and nature of tourism and recreational visitation is both changed and increased, and most importantly, the prospects for major industrial development are imminent. The City wishes to respond to the foreseen impact by enlarging its jurisdiction "to provide for maximum local self-government" consistent with Alaska's Constitutional mandate.

LOCAL BOUNDARY COMMISSION
JUNEAU, ALASKA

RECOMMENDATIONS OF THE LOCAL BOUNDARY COMMISSION SUBMITTED TO THE ELEVENTH STATE LEGISLATURE SECOND SESSION ASSEMBLED

SUBMITTED JANUARY 18, 1980

Recommendation for Annexation of Territory

to the

City of Skagway

WHEREAS, petitioner, the City of Skagway has requested that certain territory be annexed to the City of Skagway; to wit: the entire area contiguous to the City between the Haines Borough and the Canadian border containing residential and recreational lands; and

WHEREAS, subsequent to giving proper notice, the Local Boundary Commission conducted a public hearing in Skagway on November 17, 1979, to consider whether the territory for which the City of Skagway petitioned should be annexed to the City; and

WHEREAS, following the public hearing the Local Boundary Commission convened a decisional meeting at which it reviewed the City of Skagway's petition, supporting brief and all testimony received prior to and during the November 17, 1979, public hearing; and

WHEREAS, the Local Boundary Commission has determined that the proposed area met the standards for annexation in that the area is likely to see development that will require municipal services; and

WHEREAS, the City of Skagway is the only local government located proximate to the territory which has the capability of providing the needed services;

NOW THEREFORE, the Local Boundary Commission recommends that pursuant to to Article X, Section 12 of the Alaska Constitution and Alaska Statutes 44.19.260 that the petition for annexation of territory to the City of Skagway be approved and that the boundaries of the City of Skagway be changed to read as follows:

City of Skagway. Beginning at Mt. Bagot at Lat. 59° 21' N and Long. 135° 2' W. Thence due West on a straight line to a point in the center of Lynn Canal on Taiya Inlet at approximately Lat. 59° 21' N and Long. 135° 22'.5" W. Thence northwesterly to Monument No. 124 on the Alaska-Canada Boundary at Lat. 59° 44' N and Long. 135° 43' W. Thence northeasterly along the Alaska-Canada Boundary to Mt. Foster. Thence southeasterly along the Alaska-Canada Boundary to the point of beginning.

In accordance with Article X, Section 12 of the Alaska Constitution, this recommendation shall become effective forty-five days after presentation to the legislature or at the end of the session, whichever is earlier, unless disapproved by a resolution concurred in by a majority of the members of each house.

Report to the Second Session of the Eleventh Legislature Relating to Review of Services Provided to the Residents in the Kodiak Island Borough

Prepared and Submitted Pursuant
to House Concurrent Resolution No. 7AM
by the Department of Community and Regional Affairs

January 18, 1980

Background

As a result of a petition to annex a small area into the City of Kodiak the Local Boundary Commission (LBC) held two public hearings, one on December 12, 1977 and the other on May 20, 1978, to take public testimony on the annexation of a larger area to the City of Kodiak. This area included the Spruce Cape area, the Mill Bay Road area, the Monashka Bay area, and the United States Coast Guard Station. Following the public hearing the LBC recommended to the First Session of the Eleventh Legislature that all of the areas, except the Coast Guard Station, be annexed to the City of Kodiak. The Legislature disapproved this annexation by adoption of House Joint Resolution 10. The Legislature, in House Concurrent Resolution No. 7 amended, requested the Department of Community and Regional Affairs to study the various options to provide "services throughout the road system extending North and Northeast of the City of Kodiak" and to submit a report to the Legislature by January 20, 1980.

Progress to Date

During 1979, the City of Kodiak and the Kodiak Island Borough worked together to devise an acceptable compromise to provide services to the residents of Service District #1 which includes the area proposed by the LBC for annexation. The Department was kept apprised of these negotiations, and it was clear that the City and Borough wished to work its problem out without C&RA involvement.

The negotiations centered around providing water and sewer service to an area referred to as Service District #1, which includes the Island Lake and Spruce Cape areas. The City of Kodiak indicated in writing in December, 1979, that "the City's attitude does not preclude small annexations as requested through the presentation of 100% petitions, but does reject the idea of major annexations". This attitude would also

preclude the provision of services by instituting a step annexation. The Local Boundary Commission has also stated that it will not pursue annexation in the City of Kodiak area on its own and will only become involved if petitioned.

The method of providing service through a service district approach appears to have the mutual support of the City and Borough. The City is willing to provide water at the city boundary to Service District #1 and to treat effluence from this area. The City will provide water meters to allow for the billing to the Borough for the residents getting water and sewer service in the area outside the city.

The major concerns that need to be resolved deal with the operation and maintenance of the water and sewer utility service. A rate study needs to be conducted and the City and Borough have not, as of this date, reached an agreement on selection of a consulting firm to do this work. The City has stated that it does not wish to become involved in any contractual arrangement to operate and maintain the water and sewer systems within Service District #1. City Mayor Al Beardsley states that this "maintenance (within Service District #1) can just as easily be contracted (by the Borough) with a private firm". Agreement has been reached to allow the City inspection privileges during installation of sewer lines to minimize infiltration into the sewer collection system within Service District #1.

Public Meeting

On January 12, 1980 Commissioner Lee McAnerney convened a public meeting for the purpose of receiving public comment regarding the "best" way to provide services to those residents of the Kodiak "urban" community outside the City of Kodiak. The managers of both the City and Borough, the city mayor, seven other assembly or council members, and fourteen public participants were present at the meeting.

Thirteen persons testified during the meeting. The overwhelming majority of those testifying favored the direction that the City and Borough have taken in negotiations between these two local governments. The testimony expressed a feeling that the service district approach gives the residents involved more alternatives in the level of service they will receive.

One person testified in favor of annexation of Service District #1 to the City of Kodiak as the best short-term alternative with unification of the City and Borough being the long-term or ultimate solution.

Future Outlook

This Department is prepared to assist the City of Kodiak and the Kodiak Island Borough in their attempt to work out remaining differences between them. Both the City and Borough should be commended for the progress that has been made to date. There is no reason to think that the remaining differences cannot be worked out within the next few months.

The question of unification will again appear on the October, 1980 ballot. If this proposition is approved, jurisdictional problems in providing services to Kodiak Island residents would be resolved.

The Department concludes that no further action is required by the Legislature, the Local Boundary Commission or this Department, at this time, in the matter of provision of municipal services to residents living within the Kodiak "urban" area.

THE FOLLOWING DOCUMENT(S) MAY NOT FILM LEGIBLY BECAUSE OF POOR QUALITY OF THE ORIGINAL.

CITY OF SKAGWAY, ALASKA

Ordinance No. 85-5

AN ORDINANCE PROPOSING THE MODIFICATION OF THE MUNICIPAL BOUNDARIES OF THE CITY OF SKAGWAY BY ANNEXATION OF THE SURROUNDING AREA AS DESCRIBED IN SECTION 5 BELOW.

BE IT ORDAINED BY THE COUNCIL OF THE CITY OF SKAGWAY, ALASKA:

Sec. 1. Classification. This ordinance is of an impermanent nature and is not to be codified in the Skagway Code of Ordinances.

Sec. 2. Severability. If any provision of this ordinance or any application thereof to any person or circumstance is held invalid, the remainder of this ordinance and the application to other persons or circumstances shall not be affected thereby.

Sec. 3. Effective Date. This ordinance shall be effective upon adoption. However, the official map and zoning map of the City of Skagway shall not be modified until the annexation is approved by the Alaska State Legislature.

Sec. 4. Declaration of Intent. The City of Skagway proposes to modify and extend its municipal Corporate boundaries and jurisdiction by annexation of surrounding, unincorporated lands and waters of the United States.

Sec. 5. Description. The territory proposed to be annexed to the City of Skagway Recording District, First Judicial District, State of Alaska, is described as follows:

The land and water area contiguous to the City encompassed by the following boundaries:

On the South and West by the Haines Borough Boundary and on the North and East by the Canadian Boundary.

Sec. 6. Standards. It is verily submitted that the territory proposed for annexation does and will continue to satisfy the standards prescribed in 19 AAC 05.010.

Sec. 7. Procedure. The City of Skagway shall forthwith petition for a local government boundary change pursuant to Chapter 10, Title 19, Alaska Administrative Code.

Sec. 8. Purpose of Annexation. The justification and purpose for the proposal to extend the municipal boundaries and jurisdiction of the City of Skagway are premised on the following considerations:

1) Although the territory to be annexed is presently sparsely populated on a permanent basis, it is foreseen that there will be a significant growth in permanent residents within the next decade and a major increase in the number of transients as the result of the establishment of the Klondike Gold Rush National Park and the opening of the Klondike International Highway.

2) The City of Skagway currently provides limited governmental services within the territory and for residents of the territory. (eg. Police, fire, magistrate's court.)

3) The City of Skagway currently serves and will continue to serve as the commercial, industrial and transportation center of the territory.

4) The residents of the City and the many visitors to the City use the territory for recreational purposes.

5) A demand for and a gradual and equitable extension of municipal services to the territory is logical and foreseeable. Accordingly, the extension of the municipal boundaries and jurisdiction of the City of Skagway is necessary in order that the City may control the development and the provision of municipal services in the territory.

Sec. 9. Authorization. The Mayor, City Manager, City Clerk and City Attorney, and such other municipal officials as are deemed appropriate, are authorized to initiate, petition and implement such procedures as may be necessary to complete this annexation as proposed herein and/or as modified by the Local Boundary Commission and the Alaska State Legislature.

BILL NUMBER AND TITLE: HB 9 Tax in the Unorganized Borough

ORIGINAL SPONSOR: Parr
RECEIVED FROM:

OTHER SPONSORS:
FURTHER REFERRALS: ~~Finance~~

HEARING DATE: 4/30/80

MEMBERS PRESENT:				
	Bill Parker	X	Pat Carney	
	Margaret Branson	X	Charlie Parr	X
	Pat O'Connell	X	Fred Zharoff	X
			Ray Metcalfe	X

Terry Early, State Assessor
Initial assessment would be done if a borough were to be formed. 3.83% is average mill rate statewide at present time. Two main problems with assessment are:
(1) Restricted deeds and the inequities caused by these
(2) Cost of doing the assessment would be high

Parr - What Early sees as problems could be seen as opportunities. Restricted deeds are not significant.

Early - Study could be done to see what might be possible. Tax base study fo the unorganized borough could be done as we don't have any informational basis we need.

Branson - "Developed", "improved" federal land taxed in Kenai.

Early - Section 4 Statehood Act restricts ability to tax.Time frame for the job would be 3 years.Recording of districts and plat maps would be the starting point.

Parr - A 3 yr. study to decide how to go about it isn't necessary.
Early - Study would only need to take 1 year.Lack of information is the main problem.
Parr - Feasibility isn't the question, rather how to do it.
Early - Average school millage being reduced yearly. Could cost more to administer than would be received.

Zharoff - Bill is premature. P.1 line 24 and following needs to be changed. Dec. 18, 1991 should be date. Not talking about "land" which is exempt.

Clarence Antioklia, Ex. Director, SeaAlaska
Opposed to bill. SeaAlaska will be the largest land owner in unorganized borough. Secction 1C doesn't provide adequate protection Lands were to be conveyed immediately and exempt for 20 years. Delay in

COMMITTEE ACTION: No Action

TAPE # 9 10 SIDE 2 1 Footage 710-1564 00-298

conveyance should be noted. "Uninproved land" definition too broad. Asks if timber harvesting is covered in the bill along with roads connected with such operations. What is the purpose of taxation? Few services are being rendered in the villages.

Parr - Should SeaAlaska have different tax status than any other Corp. in the state? What is the definiton of "unimproved land" in ANCSA?

Antioklia - Wary of anything to do with taxation. Aimed at those areas not contributing to schools (Parr)

Tony Strong - Tlingit/Haida Director of Community Services
Need more time to review bill. Employment services (CETA) jobs being cut back. People couldn't pay taxes.

Parr - $10,000 exemption could be raised.

Strong - Land ownership almost impossible to identify.

Parr - Land owned by municipalities not taxable. Leasehold interest taxed on state land. Inequity needs to be addressed.

Strong - Income and sales taxes paid when people earn money. Potential of bill is that ability to pay may eventually mean that people lose their land.

Section 4

Statehood

Act

Alienation "Right"

Matures

no tax lien

occupants reconveyance

definition of "developed"

1991 stipulation only refers to "undeveloped land"

Revenue projections from taxation of the Unorganized Borough pursuant to House Bill 9.

1978-79 School Millages

Anchorage	5.87
Bristol Bay	2.70
Fairbanks	5.50
Haines	2.027
Juneau	6.85 *
Kenai	4.035
Ketchikan	4.25 **
Kodiak	5.00
Mat-Su	6.05
North Slope	1.59 *
Sitka	2.30 *
Total	51.172 divided by 11 (boroughs) equals 4.652 average.

* rates received by telephone
** rate by telephone, comment was 85% of rate is school (85% X 5 mills = 4.25)

Value Estimates

Method I

Average value per capita in organized areas (excluding oil & gas)	$25,369
Population of Unorganized Borough (include second class cities)	43,584
Average value per capita in Unorganized Borough (80% of organized)	20,295

$20,295 times 43,584 = $884,537,280

884,537,280 less vacant land exclusion (20%) = $707,629,824

Method II

Average population per parcel in organized borough	1.96
Average value per parcel in Unorganized Borough (80% of organized)	35,758.00
Parcels in Unorganized Borough	22,374.00

22,374 less 20% for vacancy exclusion = 17,899

17,899 times $35,758 = $640,032,442

Method III

Average value per parce' - 6 smallest first class cities	19,704
Parcels in Unorganized Borough	22,374

22,374 less 20% for vacancy exclusion = 17,899

17,899 times 19,704 = $352,681,896

Revenue Estimate

Method I - 707,629,824 @ 4.652 mills = $3,291,893

Method II - 640,032,442 @ 4.652 mills = $2,977,430

Method III - 352,681,896 @ 4.652 mills = $1,640,676

Our estimates of revenues range from a low 1,640,676 to a high of 3,291,893 and feel the final result would fall in that area. However, it should be noted that these figures are no more than estimations and could be far afield.

Specific Questions or Concerns

Six first class cities levy no property tax. Act as written seems to ignore them.

Eagle is a second class city that does levy a property tax. Shouldn't some provision be made for them to continue in some way?

COMMITTEE MINUTES

BILL NUMBER AND TITLE: HB 9 Act providing for assessment, levy and collection of a tax on developed land in the unorganized borough

ORIGINAL SPONSOR : Parr

OTHER SPONSORS:

RECEIVED FROM:

FURTHER REFERRALS:

MEMBERS PRESENT: Parker, Branson, Zharoff, Parr, Metcalfe, O'Connell

MEMBERS ABSENT: Carnev

INDIVIDUALS CONTACTED:

Obterback, Soboloff, C&RA, Clocksin, Anderson

WITNESSES TESTIFYING:

Parr - The intent of the bill is to equalize the tax burden. There should be a contribution for services received. The millage rate should reflect the costs for education .

Within the unorganized borough there are service stations, restaurants (37) lodges and hotels (90) and canneriers (30plus) none of which are currently taxed.

$10,000 exemption would be automatic . Native Village Corp. lands wiould be exempt.

At the present time REAA get $12 per pupil in Foundation money. State furnishes what would normally be the local contribution.

Eventual effect of the bill might be to encourage organization in the unorganized borough but that is not the intent of the bill.

Nels Anderson - Basically opposed to bill.
p. 1 l. 24-27 Date should be reconsidered. Dec. 18, 1991 should replace date. Points out that it will take a large amount of money to collect these revenues and that it might not match the amount of revenue actaully generated.

State of Alaska guarentees education. How it decides to fulfill this function is a decision of the state. 100% funding should come from the state. The purpose of the bill would then be moot.

Natives do not want a free lunch.

There are 1,600,000 acres which will be native owned and which are not to be subject to taxation. These should be noted in the bill. The title to these lands is restrictive. It can't be sold without BIA approval.

Policy making responsibiltiy should go with taxation. There should be a rural equalization board.

There are laws mandating organization of boroughs on the books. It should be remembered that there are financial burden which come with organization.

COMMITTEE ACTION: No action taken.

TAPE # 5 SIDE 1 Sections 1-680 Tape 5 Side 1 1030-1170

Health and Socail Services monthly reports show that 53-56% of the state's welfare caseload is in rural Alaska. The state would end up paying these taxes in many instances.

The Dept. of Revenue would have an impossible job trying to collect these revenues. It is difficult to even get to most of the lands we are talking about. Land ownership is unclear. Often the land is held in common by a village.

Are individual gardens (farms) considered improved? (Parr- all exemptions presently in the law would apply and farms are now exempt in the organized boroguh.)

Land ownership is not clear in the villages. (Early- Fed law requires that this title begin to be defined)

(Parr- Sec. 140 provides for equalizaiton procedure. Third Class borough is really independent school board. No additional costs would be involved that aren't involved in REAA now.)

Terry Early, State Assessor

Unimproved land owned by non-residents should be taxed. Private ownership disappears as people hold title to it.

p. 3 l. 17-18 (AS 34.10.070 was repealed) This section should refer to Title 29.

1980 implementation date would not be practical. It would take 3 years. Side benefit of bill would be that privately owned property could be catalogued. For purposes of bonding this is going to need to be done evenually.

Board of Equalization costs need fiscal note.

No central source for finding out ownership. Title problems abound, even in the organized boroughs.

Question of distinguishing between the improved and unimproved portions of land. Regulations would have to deal with this.

There are 90 second class cities in addition to villages. There are 6 first class cities in the unorganized borough which are not taxed.

Metcalfe--Exempt communities should levy themselves the amount which would be equal to the school levy.

Phil Wall, Administratice Director, Dept. of Revenue

Start up year not realistic.

Parker--The bill would be a major departure from current state policy. Might be a tie in with study to be done on local gov't in the interim.

Parr -- HB 9 concept introduced in previous sessions. CRA committee passed the bill on. CRA Committee did field work on the bill. Parr had made the suggestion that the $10,000 base exemption be raised but the CRA committee didn't deal with that.

III. ANALYSIS (See Fiscal Note Preparation Instructions, Section III)

This analysis is based on the assumption that the original mapping program and establishment of the necessary assessment data and files will be contracted for.

The additional staff included are only to supervise the original project and then maintain system after initial program.

(Continued on attached pages)

IV. DATE February 14, 1979 PREPARED BY: Terry L. Farley, State Assessor

AGENCY Department of Community & Regional Affairs

PHONE 561-1730

Original: Legislative Finance

cc: Budget and Management

Prime Sponsor (First Legislator)

33 001 (Rev. 10/78)

Note: Subsequent years are based on inflationary pressure on FY 80 except the $700,000 for professional fees has been projected to decrease to $100,000 in FY 83 assuming original establishment of maps and records to be complete by that time. Also the Equipment item has been reduced substantially after initial purchase.

Addjtional Comments: We would envision the process of setting up the administration as multiple step in nature. The first logical step would be an indepth study to establish proper procedure of implementing the administrative process. Subsequent steps at this point are tentative in nature and would be subject to revision at the conclusion of Step I.

Step Two would be setting up of a mapping program by region. Administratively, mapping of one region at a time would appear appropriate. This mapping program would involve a private contract with supervisory direction and controlled by professional staff to be added to the Department of Community and Regional Affairs.

Step Three would be listing, enumeration and calculation of data into preliminary appraised values (this should be done by geographic area and directly follow Step 2 in each area).

Step Four would be onsite review of finished product by professional staff of the Department of Community and Regional Affairs for acceptance or refusal of contractor's work.

Step Five would be the compilation of all data into final assessment roll and present to review board for their actions.

Step Six - At conclusion of Review process, final assessment roll would be compiled and presented to Revenue for collection.

As you can see, this process will be relatively time consuming, however, it appears to be the best and most logical approach to solution of the problem.

Also, it should be noted that even though some of the work is to be contracted, it is essential that professional staff be heavily involved from the onset to insure the quality of the finished product.

It would appear that another approach at least at the start would be a "Study of Taxation in the Unorganized Borough" to determine both feasability and cost of administering such a property tax. It is completely possible that the cost of administration could exceed the revenue produced at least for the first few years.

The Honorable Bill Parker
Chairman
House Community & Regional
Affairs Committee
Court Building, Room 628
Juneau, AK 99801

Dear Mr. Parker:

HOUSE BILL NO. 9

House Bill No. 9, an Act providing for assessment, levy and collection of a tax on developed land in the unorganized borough, was introduced in the House on January 24, 1979 and was referred to the House Community and Regional Affairs and Finance Committees.

For the consideration of the House Community and Regional Affairs Committee, I am enclosing a copy of a Fiscal Note prepared by Mr. P. A. Wall, Director, Administrative Services Division, Department of Revenue, concerning the proposed legislation.

Sincerely,

R. D. Stevenson
Special Assistant

LEGISLATIVE AFFAIRS AGENCY

MEMORANDUM March 22, 1979

SUBJECT: HB 9; Tax on developed lands in the unorganized borough

TO: Representative Bill Parker, Chairman
House Community & Regional Affairs Committee

FROM: Richard A. Bradley
Legislative Counsel

You have requested a sectional analysis of HB 9 by Representative Parr. HB 9 bears a close relationship to last session's HB 202, also by Representative Parr. Apart from the stylistic changes in the bill occasioned by the 1979 Legislative manual, the only change to HB 9 is found in the addition of (c) to AS 29.03.100.

§100(a): An annual tax is levied. The first year in which the tax would be levied is the 1980 tax year. As with other real property taxation, the tax is levied on the "full and true value" of "taxable real property" in the unorganized borough.

The unorganized borough is described in §100(a) as the area "outside home rule and first class cities." includes the areas of second class cities. Since the tax levied is measured by the tax for education in organized boroughs and since the second class cities neither levy taxes for nor provide education the classification is reasonable.

§100(b): This subsection establishes the exclusions from the tax levied under §100(a). Property excluded includes:

(1) unimproved lands. The exclusion owes at least part of its parentage to §21(d) of the Settlement Act. The latter section provides:

> Real property interests conveyed pursuant to this Act, to a Native individual, Native group, or Village or Regional Corporation which are not developed or leased to third parties, shall be exempt from State or local real property taxes for a period of twenty years after the date of enactment of this Act [December 18, 1971]: Provided, that municipal taxes, local real property taxes, or local assessments may be imposed upon leased or developed real property within the jurisdiction of any governmental unit under the laws of the State. . .

This provision explicitly prohibits the state and any municipality from levying a tax on property until it is "leased or developed real property" if it belongs to an organization established under the Settlement Act. HB 9 proceeds from the premise that the state should not [and very likely may not] classify property taxation according to ethnic ownership. Accordingly, the exemption is extended generally. The justification for the exemption can, of course, be defended on policy grounds quite apart from the requirements of the Settlement Act.

(2) real property exempt under AS 29.53.020. This exclusion relates to the exemptions generally available within municipalities, including the senior citizen exemption and others.

(3) real property exempted under AS 29.53.025(a). This provision relates to the exemption for residential property allowed to municipalities.

(4) real property exempted under AS 43.56 [Oil and Gas Exploration, Production and Pipeline Transportation Property Taxes] and AS 43.58 [Oil and Gas Reserves Ad Valorem Tax].

§100(c): As noted, this is the only departure from the content of HB 202 from the Tenth Legislature. It exempts "improvements to land" owned by a village corporation as well as the lands necessarily associated with the improvements for the five years from the effective date of the act.

§110: This section provides for the mill rate levy. It establishes the levy at an amount equal to the mill rates levied in boroughs in the state for the support of the borough school districts on the preceding January 1. The commissioner of revenue will determine the amounts.

§120: This provision states the conclusion that the "exemption laws" in AS 09 [e.g., AS 09.35.080] do not exempt property from taxation under HB 9. I advised the sponsor on the introduction of HB 202 that I considered the section unnecessary but included it because it was included in an earlier bill on the same subject. [Senator Orsini's SB 35 from the same session.] AS 29.53.020(d) confirms my view.

§130(a): This section provides that the state assessor will exercise the functions of the borough assessor under specified sections in AS 29.53.

§130(b): Second class cities may levy a limited property tax. AS 29.53.410. This provision grants the state assessor discretion to accept the assessment if he believes it to be accurate.

§130(c): Reassessment must be undertaken on a three year schedule.

§140: This section establishes the equalization process.

§150: This section directs the commissioner of community and regional affairs to adopt regulations for the equalization process which are consistent with the procedures established under AS 29.53.140 for municipal equalizations.

§160: This section establishes the date on which the tax is due and penalties and interest for late payments.

§170: This section provides that the tax together with any interest or penalties due constitute a lien on the property. Priority is accorded to tax liens due second class cities within the unorganized borough.

§180: A penalty section with relatively nominal penalties is established for false statements in returns.

§190: The Departments of Community and Regional Affiars and Revenue are given specific authority to adopt regulations.

§200: This section requires separate "BRU's" for this program, apart from any already utiiized by Revenue or C&RA for their existing programs.

§210: The commissioner of revenue will make an annual report to the legislature on the amount of funds derived from the program and its cost to the state.

§220: This section is designed to encourage areas of the unorganized borough to seek organization as a borough or city of the first class, that is, assume a level of government that is responsible for education. This policy is achieved in part by granting to any area establishing that level of government all the taxes collected under this law during that year, in addition to any money due under revenue sharing.

§230: The definitions of "real property" and "unimproved land" are established in straightforward fashion.

III. ANALYSIS (See Fiscal Note Preparation Instructions, Section III)

The reference on page 3, line 17 (AS 34.10.070-160) was repealed by Chapter 182, SLA 1979. A new enforcement provision is needed.

HB 9 sets up a new property tax system which requires the preparation of about 21,000 tax bills, tax bill mailout, remittance processing, maintenance and posting of accounts and transmittal of tax receipts to the Treasury. Section 29.03.160 sets a penalty of ten percent on delinquent taxes and interest at the rate of eight percent on unpaid taxes. The Fiscal Analysis includes a Revenue Enforcement Officer and a Tax Collection Specialist to administer the tax enforcement contained in this section.

III. ANALYSIS (See Fiscal Note Preparation Instructions, Section III)

This analysis is based on the assumption that the original mapping program and establishment of the necessary assessment data and file will be let out for contract.

The additional staff included are only to supervise the original project and then maintain the system after the initial program.

Time does not allow the program to start before FY'81 so no impact has been included for FY'80.

	FY'81
Sufficient Equipment to establish new personnel in environment condusive to work	$37,330

Note: Subsequent years are based on inflationary pressure on FY 81 except the $805,000 for professional fees has been projected to decrease to $115,000 in FY 84 assuming original establishment of maps and records to be complete by that time. Also the Equipment item has been reduced substantially after initial purchase.

Additional Comments: We would envision the process of setting up the administration as multiple step in nature. The first logical step would be an in depth study to establish proper procedure of implementing the administrative process. Subsequent steps at this point are tentative in nature and would be subject to revision at the conclusion of Step I.

Step Two would be setting up of a mapping program by region. Administratively, mapping of one region at a time would appear appropriate. This mapping program would involve a private contract with supervisory direction and controlled by professional staff to be added to the Department of Community and Regional Affairs.

Step Three would be listing, enumeration and calculation of data into preliminary appraised values (this should be done by geographic area and directly follow Step 2 in each area).

Step Four would be onsite review of finished product by professional staff of the Department of Community and Regional Affairs for acceptance or refusal of contractor's work.

Step Five would be the compilation of all data into final assessment roll and present to review board for their actions.

Step Six - At conclusion of Review process, final assessment roll would be compiled and presented to Department of Revenue for collection.

As you can see, this process will be relatively time consuming, however, it appears to be the best and most logical approach to solution of the problem.

Also, it should be noted that even though some of the work is to be contracted, it is essential that professional staff be heavily involved from the onset to insure the quality of the finished product.
