Originally, the intent of this category was to be a "catch-all" for anything accidently left out of the survey. It was used for miscellaneous facilities such as the Breast Cancer Detection Center in Fairbanks, the Kidney Machine Center in Anchorage, the health center at the University of Alaska in Fairbanks, the Anchorage Blood Bank, and the

health center in Anchorage run by the municipality, to name a few. Also, communicative disorders clinics are counted as diagnostic facilities. This was a category originally, and later was combined with diagnostic facilities for the print-out map. There are nine communicative disorders clinics in the state offering services such as hearing tests, hearing aid fittings, diagnostic evaluations of speech and hearing impairments, and diagnosis and treatment of otitis media. This group is represented by green squares on the map. This information was obtained from various sources. They include the Directory of Human Service Organizations, published by the Legislative Affairs Agency, the House HESS files, and the Department of Health & Social Services. For more specifics, one must refer to the coding sheets and code explanation book.

Doctors

According to the Alaska State Medical Association there are 551 physicians in Alaska. Of these, 360 are in private practice, 74 are with the military, 86 are with the United States Public Health Service, 12 are with other federal agencies (such as FAA, Native Health Corps, etc.), and 19 are with the State of Alaska. Besides the State Medical Association, the Division of Occupational Licensing was used as a data source. When known, a physician's specialty has been coded, but this is not reflected on either the map or the print-out. The only exception is for psychiatrists. These doctors were placed in a separate category and will be discussed in the section for overlay three. Orange dots were used for doctors on the map. Pursuant to AS 08.64.370. physicians employed by either the military or United States Public Health Service are exempt from state licensure.

Pharmacists

The Division of Occupational Licensing lists 157 licensed pharmacists in the state. It is not known how many of these are practicing. At least one pharmacist exists in every place there is a pharmacy in the state, but not vice versa. Pharmacists are shown as blue dots on the map. Pharmacists employed in federal institutions are exempt from licensure pursuant to AS 08.80.475.

OVERLAY III

Community Mental Health Centers

There are 20 Community Mental Health Centers throughout Alaska. With an emphasis on serving rural communities, the centers offer a wide range of services including outpatient care, counseling, follow-up after treatment, crisis intervention, education, planning, and consultation. The focus on these centers is to provide psychological assistance at a local level, minimizing institutionalization at Alaska Psychiatric Institute. Also, some psychological problems are not serious and can be easily treated at the local level. These centers appear as orange squares on the map. This data was obtained from the Division of Mental Health and Developmental Disabilities, DHSS.

Facilities for the Mentally Ill & Developmentally Disabled

In Alaska, there is one in-patient facility for the mentally ill and three in-patient facilities for the developmentally disabled. Alaska Psychiatric Institute is an in-patient treatment center located in Anchorage. It is owned and operated by the State of Alaska. Though its main purpose is for the mentally ill, API does treat some retarded individuals. The State of Alaska owns and operates Harborview Development Center for the developmentally disabled. Included are the mentally retarded, those suffering from severe cerebral palsy, epilepsy, or autism, or any condition resulting in impairment of general intellectual functioning, affecting a person's ability to function normally in society. Harborview's services include vocational-occupational training, recreational and physical therapy, psychological and social services and special education.

Harborview is in Valdez, Alaska. The two additional facilities for the retarded are in Anchorage. Hope Cottages operates two residential facilities for developmentally disabled children. Occasionally, hospitals will accept psychiatric patients, but they do so reluctantly as they are not official treatment centers. These facilities are represented by green triangles on the map. Information was obtained from the Division of Mental Health & Developmental Disabilities.

Psychiatrists

Psychiatrists are medical doctors specifically trained in psychiatry. There are 30 psychiatrists in Alaska, concentrated in the Anchorage area. They are represented on the map by purple dots. Data were obtained from the Alaska State Medical Association and the Division of Occupational Licensing.

Dentists

According to a survey conducted by the Alaska Dental Society in the fall of 1977, there are 220 practicing dentists in Alaska. They are shown on the map as brown triangles. Occupational Licensing has 370 licensed dentists, with 228 listing Alaskan addresses.

Optometrists

According to both the Division of Occupational Licensing and the Alaska Optometric Association there are 25 licensed optometrists in Alaska. Optometrists are individuals specifically trained to examine, diagnose and treat conditions or impairments of the vision system. Though commonly known as "doctors", optometrists are not medical doctors. (M.D.'s trained in this specialty are ophthalmologists). However, optometrists

do receive four years of specialized professional training after a minimum of two years of undergraduate college study. By Alaskan statute (AS 08.72.300), optometrists are allowed to diagnose optical deficiencies or deformities, prescribe or apply lenses, prisms, or ocular exercises for the correction or relief of the human eye. They are represented by purple triangles on the map.

Dispensing Opticians

The Division of Occupational Licensing lists 43 licensed opticians in Alaska. Their work includes preparing and dispensing lenses, spectacles, eyeglasses, or artificial eyes to intended wearers on written prescriptions from physicians or optometrists (AS 08.71.240.(3)). In other words, the patient has to go to either an optometrist or an ophthalmologist to get a prescription for glasses or contact lenses, and the dispensing optician fills the prescription. Dispensing opticians are shown as red triangles on the map.

Audiologists

There are 15 audiologists in Alaska, but not all are practicing. Information was obtained from the Alaska Speech and Hearing Association, since there is no licensing required for audiologists. (However, licensing legislation is currently pending.) Audiologists' work includes applying principles, methods, and procedures for measurement, testing, evaluation, prediction, consultation, counseling, instruction, and rehabilitation related to hearing and disorders of hearing. This specialty requires a graduate degree. Audiologists are represented by yellow dots on the map.

RECOMMENDATIONS

The data collected for this project have a variety of uses. There are numerous specialities that could be listed in a computer print-out. For example, if we wanted to know how many pediatricians there were in Southeastern Alaska, we could obtain a print-out of that category, with the proper computer program. Information exists concerning not only specialties, but geographic locations and special resources of facilities. Of course, not all information is as complete as others, but it can always be expanded.

The Department of Health & Social Services may be eligible to receive federal funds to collect statistics on health resources and facilities in Alaska. This Cooperative Health Statistics System is possible because of the 1974 Health Services Research, Health Statistics, and Medical Libraries Act - Public Law 93-641. Many of the health occupations in this program are included in the present survey. Dental hygienists, physical therapists, nursing home administrators, chiropractors, podiatrists, and veterinarians will also be included. In September of 1976, 45 states were at least in the developmental stages of data collecting. State Health Statistics Centers are usually in the health department of a state government. To be accepted into the program the center must meet specific criteria, including being able to obtain timely reliable and comprehensive data, use acceptable statistical ability, and establish plans for future expansion.

It is my recommendation that the data collected for this project be shared with the Alaska Department of Health & Social Services, providing they want it and the information could be of some benefit to them.

This project has future potential and could be useful for a number of organizations and purposes. The design for this data base has been set up and could easily be updated, annually, bi-annually, or once every two years.

INDEX TO ADDITIONAL PROJECT RESOURCES AND WHERE TO FIND THEM

1. A map showing distribution of facilities and professions - located in the house HESS Committee Room (112 Capitol Bldg.).
2. The completed coding sheets organized in labeled notebooks - located in the Legislative Affairs Agency, Research Division.
3. The keypunched data cards in three boxes in Legislative Research.
4. A computer print-out, communities listed by election district with amounts of facilities and professions tabulated - located in House HESS during the session, and Legislative Research.
5. A coding notebook, with code explanations and sources - located in Legislative Research.
6. A notebook with project correspondence, development, etc. located in Legislative Research.
7. A computer generated data tape, T01-31D-HREP(#3945-4) located in the data processing tape library, due to expire January, 1980.
8. The documentation of the tape generation and formating - located in Legislative Research.

MEMORANDUM

TO: R. D. Stevenson
Special Assistant
Department of Revenue

DATE: February 1, 1979

FILE NO:

TELEPHONE NO:

FROM: Gary L. Jenkins
Director
Audit Division

SUBJECT: House Bill No. 11

House Bill No. 11 would amend the State income tax statute by allowing taxpayers a deduction for the costs of child adoption. The amount of the deduction would be limited to $3,000. The Department of Revenue supports this bill as providing a reasonable tax deduction which would help to defray the costs of adoption.

We estimate that the annual revenue effect would be approximately $29,000. In estimating the costs of adoption which would be available for the tax deduction we have used information supplied by the Department of Health and Social Services. From that information it is estimated that the number of adoptions in the current year will be approximately 750. Of that total, approximately 70 percent are either step-parent adoptions or adoptions placed through the Department of Health and Social Services. For these adoptions the costs are relatively low and it is estimated that the average cost is about $250 per adoption. The remainder of adoptions are made through private agencies and the costs could range from $500 to $4,000, depending upon the agency used.

There would not be any added fiscal impact on the department.

III. ANALYSIS (See Fiscal Note Preparation Instructions, Section III)
This bill would change the residency requirement to any person who is 65 years of age and has lived in Alaska 25 years or who has intermittently maintained a domicile in the territor or state for a cumulative total of 30 years and has been physically in the state for five years immediately preceding his application and if periods cumulating 30 years are 12 months or more in length. There is no way of knowing how many recipients would be added to the program. The following figures are based upon an assumption of an immediate increase of 15% in the number of eligible recipients.

YEAR	RECIPIENTS		$		MO.		SUB-TOTAL
FY 1980	1120	x	150	x	12	-	2,016.0

JAY S. HAMMOND, GOVERNOR

DEPARTMENT OF ADMINISTRATION

OFFICE OF THE COMMISSIONER / POUCH C — JUNEAU 99811

465-2200

March 17, 1980

Honorable Thelma Buchholdt
Alaska State Legislature
Pouch V
Juneau, Alaska 99811

Dear Representative Buchholdt:

Re: House Bill 15 to Amend the Longevity Bonus Program

House Bill 15 would amend the eligibility requirements for the Longevity Bonus to include persons who, in addition to meeting the necessary minimum age of 65 and domicile in Alaska on or before January 3, 1959, have been domiciled in Alaska intermittently for a cumulative total of thirty years. The bill would also require that persons who qualify for the Bonus with intermittent domicile must be physically present in the state for five years immediately preceding application and that the periods of residency comprising the cumulative total of thirty years be for twelve months or more in duration.

There is no accurate data base on which to estimate the number of persons who would be affected by this bill. It is assumed, however, that appropriately 200 recipients would be added to the Program within a short period of time after the effective date and twenty-five persons added the second year. The fiscal note which applies to this bill assumes the present benefit payment of $150.00 per month and an effective date of July 1, 1980. Based upon these assumptions, the note provides for a total increase in benefits of $360,000 the first year and $405,000 thereafter. It also provides for an increase in personal services to accommodate the added workload in the Longevity Bonus office.

Although this legislation will enable a greater number of persons to receive the Bonus, the burden of verifying segments of domicile for twelve months or more in duration could be difficult for the applicants. Throughout the years, men and women have been drawn to Alaska for periods of short duration to avail themselves of employment or were assigned to tours of duty for military or government service. They rarely established permanent domicile or considered Alaska to be their home, but moved in and out of Alaska during the course of employment or the assigned period. Seldom did those people involve themselves in the development of Alaska, but remained here to satisfy their monetary goals and then left to continue domicile elsewhere, many of them intending to never return.

Is it the intention of the State to reward those people who periodically domiciled in Alaska in the same way it rewards those who had the tenacity and perseverance to remain and maintain continuous domicile in Alaska for at least twenty-five years? If so, the Department of Administration has no particular objection to the bill, except that it will be difficult and costly in man-hours to administer.

If this bill is passed, we recommend amending line 18, page 1, to read "...in the state continuously for five years..." This would clarify intent in the event of doubt.

Sincerely,

Sue S. Greene
Deputy Commissioner
Personnel Management

(2) a. ORGANIZATIONAL SUPPORT FOR BILL

(2) b. ORGANIZATIONAL OPPOSITION TO BILL

Increased administrative functions generated by applicants' need to verify intermittent segments of domicile in Alaska

(3) PROGRAM EFFECTS OF BILL

Increase the number of Longevity Bonus recipients by including persons who have intermittently maintained a domicile in the territory or state for a cumulative total of 30 years, provided he has been physically present in the state for 5 years immediately preceding application and periods of cumulative 30 years are for 12 months or more in length.

(4) FISCAL IMPACT: ☐ NONE ☒ FISCAL ANALYSIS ATTACHED

(5) AMENDMENTS PROPOSED:

"An Act relating to the Alaska Longevity Bonus"; Secs. AS 47.45.010(a); new section AS 47.45.010; and AS 47.45.170.

(6) COMMENTS:

The applicant's burden of verifying domicile segments for 12 months or more may be extremely difficult. Men and women have long been drawn to Alaska for periods of short duration because of employment opportunities in the fishing, mining, lumber and construction industries, for example; or were assigned to tours of duty in Alaska for military or government service. Rarely did they establish permanent domicile or consider Alaska their home, but regarded it as a temporary residence to be occupied during the course of employment or assignment. Seldom were they involved in the development of Alaska, but were more interested in the profits to be gained and soon left to continue domicile elsewhere, many of them intending never to return.

Is it the intention of the State to reward those who periodically domiciled outside of Alaska in the same way it rewards those who had the tenacity and perserverance to remain continuously for at least 25 years?

III. ANALYSIS (See Fiscal Note Preparation Instructions, Section III)

This bill would allow an unknown number of additional recipients to become eligible for the Alaska Longevity Bonus by including those who have a cumulative total of residency in Alaska of 30 years.

These persons must meet the following residency minimums to be eligible:

1. Intermittently maintained a domicile in the Territory or State of Alaska for a cumulative total of 30 years.

2. Must have been physically present in the State for 5 years immediately preceding date of application.

3. Periods of residency, for the cumulative total of 30 years, must have been for 12 months or more in length.

IV. DATE 02/26/80 PREPARED BY George T. Michael

AGENCY Administration

PHONE 465-4401

Original: Legislative Finance
cc: Budget and Management
Prime Sponsor (First Legislator Named)

33-001 (Rev. 12/79)

Although the number of additional recipients under this bill is not known, a consensus of those connected with the program is that probably 200 would be added within a short period after the effective date, and that perhaps 25 would be added the second year as others who are eligible find out about the revised residency requirements.

This fiscal note assumes an effective date of July 1, 1980, and that the bonus payments would remain at the present rate of $150 per month.

Due to the complexities of verifying intermittent segments of domicile in Alaska, an additional Benefits Assistant (Range 9) will be needed on the Lonevity Bonus staff. Inflation is computed at 10% per year on all costs for this position beyond FY81.

Additional Bonus Payments

Year	Additional Recipients		Bonus Payments		Months		Total Increase
FY 1981	200	x	$ 150	x	12	=	$360,000

BOARD OF EQUALIZATION

DEPARTMENT OF BUSINESS TAXES

ALCOHOLIC BEVERAGE TAX REGULATIONS

Regulation 2557. POWDERED DISTILLED SPIRITS.

Reference: Sections 32001 – 32556, Revenue and Taxation Code.

(a) IN GENERAL. The Alcoholic Beverage Tax Law and Alcoholic Beverage Tax Regulations apply with respect to powdered distilled spirits in the same manner and to the same extent as with respect to other distilled spirits. Tax will be paid at the same rate per wine gallon, and at a proportionate rate for any quantity, as for distilled spirits of the same proof strength in liquid form.

(b) RECORDS AND REPORTS. Transactions involving powdered distilled spirits, including any powdered alcoholic beverage containing powdered distilled spirits, must be stated by volume in wine gallons to the nearest one-hundredth of a gallon in all required records and reports. The importer, in the case of powdered distilled spirits imported into California packaged in containers for sale to the general public, and the rectifier in the case of powdered distilled spirits packaged within California shall:

(1) Label the outside of each case with the volume in wine gallons of the powdered product contained in the case and of the powdered product contained in each individual package within the case.

(2) Print on each invoice, credit memorandum, or similar document the total volume in wine gallons of the powdered product or products listed on that document.

(3) Print on each invoice, credit memorandum, or similar document the volume in wine gallons of the powdered product contained in each size case and in each individual package listed on that document.

(c) CONVERSION OF WEIGHT TO VOLUME. The weight of powdered distilled spirits, and powdered distilled spirits products, shall be converted to volume as follows:

(1) One pound equals .16 wine gallons;

(2) One ounce equals .01 wine gallons;

(3) One gram equals .000353 wine gallons.

History: Adopted May 4, 1978, effective June 21, 1978.

Mr. Sharman Haley
Research Analyst
Legislative Affairs Agency
Pouch Y - State Capitol
Juneau, Alaska 99811

Dear Mr. Haley:

We have received your letter of 10-30-78 requesting information on powdered alcohol.

Based on information we have received from the Bureau of Alcohol, Tobacco and Firearms, the powdered alcohol product has been approved and is presently being imported into the U.S. from Japan by Global Marketing, Inc. of Portland, Oregon. A taxing formula has been approved by BATF.

The base powder has the consistency of very fine sugar. It is comprised of droplets of grain neutral spirits encapsulated in "glister", a form of corn syrup. The bulk powder after having been imported in drums by Global will be sent to a rectifier in Orange County, California. Power Packaging, Inc., the rectifier, will add flavoring, blend, package and label the containers under the name "Sureshot". The types of products will be Vodka Sour, Vodka Sling, Screwdriver, Apricot Sour, Cappucino and possibly others.

It is our understanding that each can contains 2 5/8 ounces of alcohol powder at 22% alcohol by weight. When mixed with 5 ounces (one full can) of water a drink containing 6.8 fluid ounces at 22 proof will result. It is understood that the product will retail for $1.39 per can.

The product is currently being test marketed in Oregon, California and possibly some other states. California had to change its taxing guide lines to allow the sale of the product in that state. There is attached for your information a copy of the amended California regulation.

Sincerely,

George F. Bonifant
Director - International Trade

MEMORANDUM

SUBJECT: Powdered Alcohol (W.O. #5743-R)

TO: The Honorable Charlie Parr

FROM: Sharman Haley
Research Analyst

You requested information on powdered alcohol and the likelihood for marketing in Alaska. Attached you will find a letter from the Distilled Spirits Council of the United States describing the product.

Exclusive distribution rights for marketing powdered alcohol in Alaska have been awarded to K&L Distributors. I contacted the Anchorage office of K&L and was told that they are not pursuing the marketing of the product at this time, because they are not satisfied with the quality--in particular the taste of the cocktails. If and when the manufacturers improve the taste to the satisfaction of K&L, K&L plans to market powdered alcohol cocktails state-wide.

If you have any further questions please let us know.

Dear Joe:
Thanks for memo of Nov 29 on provisions adopted (H.C. 5743).
I'm old enough to remember "wine bricks" which were sharply marketed for a while during Prohibition days, until Fed's got a court ruling. Suspected your research didn't turn that up.
Please (or ask Bill Ginn to assign someone to) draft a bill to ensure that we can limit the powdered product if it is marketed in Alaska. (Encouraging material from Herman Kelly (California retire).
Many thanks -
Charlie Parr

RESEARCH AND BACK-UP ON HB79

STATEMENT ON SB 75/HB 79 FOR THE

ALASKA OPTOMETRIC ASSOCIATION

by

Boyd L. Walker, O. D.

My name is Dr. Boyd L. Walker. I am a licensed optometrist in Alaska and have been in full-time practice in the state since 1973. I am a member of the Alaska Optometric Association and the American Optometric Association.

I appreciate the opportunity to speak with you today regarding HB 79, SB 75, which pertains to the use of diagnostic pharmaceutical agents (DPAs) by qualified and licensed Doctors of Optometry.

As in any argument, there are two sides to the situation, and given the abilities of statisticians and researchers today one can find supportive evidence for any point of view on practically any subject one might wish to consider. That being the case, and since I feel that this issue is of utmost importance to the consumer of vision care in this state, I am going to state my case using only one reference. By doing so I hope to avoid the confusion and suspicion which may be created by using a myriad of references of possibly questionable integrity. This reference, which I shall place at your disposal should you wish to peruse it, is an independent report to the Congress of the United States, compiled by the U. S. Department of Health, Education and Welfare in July of 1976. This report was not in any way sanctioned by the optometric community, quite the contrary it was an investigative effort on the part of H.E.W. to determine what part an optometrist should play in the delivery of eye health care today. I believe that as elected representatives of the public, you each have a commitment to your constituents to make a decision based upon substantiated fact rather than upon emotion, heresay, or unfulfilled wishes of any special interest group. It is with that in mind that I present to you the following information.

I would like to begin by giving you a definition of the scope of optometry which is excerpted directly from page 21 of the H.E.W. Report to the Congress.

> "The institute of Medicine of the National Academy of Sciences, in describing primary health professions who are direct providers of patient care, defined optometry as follows: "The Doctor of Optometry (O.D.) is a health professional who performs eye examinations to determine the presence of visual, muscular, or neurological abnormalities, and prescribes lenses, other optical aids, or therapy, such as eye exercises to enable maximum vision. Optometrists are trained to recognize disease conditions of the eye and ocular manifestations of other diseases, and to refer patients with these conditions to the appropriate health professional."
>
> This definition, as well as available documentation on the utilization of optometric services, points to the optometrist's role as a provider of primary health care services. In this role, the optometrist functions as a principal point of contact within the health care system for persons having visual complaints, including certain numbers who have symptoms or conditions that require referral to other health practitioners."

As this points out, optometrists have an ability and a responsibility to recognize and refer pathological conditions of the eye. The diagnostic pharmaceutical agents which we are asking to use in this bill are nothing more than tools which will enhance our ability to discover possible pathology and refer the patient to the proper medical authority.

At this point I must stat that it is not the intent of optometrists to use these drugs indiscriminately on all patients, but rather only upon those patients in which it cannot clearly be determined that a pathological condition does not exist. The exception to this being the use of corneal anesthetics in the measurement of intraocular pressure. Our law as it now exists prevents the optometrist from using these agents which ophthalmologists use for the exact same reasons. This clearly limits the optometrists from doing that which he is ethically and legally bound, i.e. assuring that those

patients he sees have been screened for eye disease using the highest level of technology available today.

It has been argued that Optometrists do not have the professional training to allow them to administer diagnostic agents to their patients. Some would even argue the obvious and say that optometrists are not trained to detect pathological conditions of the eye. On page 95 of the H.E.W. Report to the Congress is found the following description of optometric education:

> "All optometry schools share certain basic curricular elements which follow at least two years (and for the majority of students four years) of undergraduate studies, predominately in the biological sciences.
>
> The basic elements include:
>
> - A biological science component.
> This includes gross and microscopic human anatomy, general human physiology, biochemistry, and pharmacological principles, all presented with emphasis on the visual system and related structures.
>
> - Physiological optics.
> Vision processes, visual stimuli, accommodation mechanisms, neurophysiological mechanism, ocular motility, binocular perception.
>
> - Pathology.
> Essentials of bacteriology and virology, principles of health and disease, tissue changes in pathology, ocular diseases and abnormalities, ocular manifestations of systemic disease.
>
> - Optics.
> Light, Lenses, optical systems, ophthalmic materials.
>
> - Professional orientation (health practice).
> Epidemiological procedures, the epidemiology of specific disorders, health care organization, public health, interpersonal relations, management of practice.
>
> - Clinical skills.
> Patient history, refraction, visual performance measurement, detection and diagnosis of visual anomalies and visually-related learning and perceptual disturbances, low vision rehabilitation, care of the aging patient, contact lens fitting.

A more complete listing of this common subject matter is found in attachment B to this Section. The catalogues of the schools provide stil' more detail."

Following is a copy of Attachment B, Section 1; I would like to call your attention to subsections (h) and (i).

ATTACHMENT B

BASIC ELEMENTS OF THE CURRICULUM OF SCHOOLS OF OPTOMETRY

1. Biological science knowledge base.

   a. Gross human anatomy and microscopic anatomy, with emphasis on head, neck, and thorax.

   b. Embryology, gross and microscopic anatomy of the human nervous system - concentrating on the central nervous system.

   c. General human physiology, including the study of the fundamental organ systems and the mechanisms which regulate body function. Emphasis is on the sensory, motor and cardiovascular systems.

   d. Basic concepts of general and cellular biochemistry, with study of nomenclature, structure, and reactions of organic molecules. Emphasis is on the visual system - tears, intraocular fluids, lens, retinal photochemistry, and actions of drugs upon these.

   e. Concepts of human genetics and genetic disorders, including the frequency and distribution of genetic disease, inheritance patterns, polygenic inheritance, chromosomal abberration syndromes, multifactorial genetics, and principles of genetic counseling.

   f. Gross and microscopic anatomy of the lids, orbit, orbital content, globe, muscles, nerves, and vessels, and embryology of the eye.

   g. Vegetative physiology of the eye, extraocular and intraocular fluids, corneal and lens metabolism, ocular circulation, retina and optic nerve metabolism.

   h. General pharmacological principles, methods of administration, various systemic drugs and their pharmacological action and side effects with emphasis on those that affect the visual system, such as cataractogenic and glaucoma-producing drugs.

   i. Pharmacology; uses, doses, contraindications, and adverse effect of drugs producing miosis, mydriasis, cycloplegia, accommodation, and ocular anesthesia. The pharmacology, use contraindications, and adverse effect of drugs commonly used in treating visual and ocular problems.

As you can see there is no shortage of educational opportunity for the optometrist to become well acquainted with human ocular conditions as well as the uses, contraindications, and side effects of the use of pharmaceutical agents.

To further demonstrate this very important point regarding the quality of the education which optometrists receive on the subject of pharmacology. I would like to read the testimony given before the Oregon State Legislature by Dr. Ronald H. Winters, Assistant Dean, and Associate Professor of Pharmacology and Toxicology at Oregon State University. Before reading this, I would like to clarify Dr. Winters' title. He is a pharmacologist, any by definition is one who studies drugs in all their aspects. From pharmacologists all health care professionals, including ophthalmologists, derive information regarding all aspects of drugs. See the following pages for his testimony.

School of Pharmacy
Oregon State University
Corvallis, Oregon 97331 (503) 754-3725

29 January 1975

In studying and evaluating the proposed legislation authorizing the use of diagnostic pharmaceutical agents (DPA's) by optometrists, three principal questions have emerged relative to my areas of expertise as an educator specializing in curricular design and as a pharmacologist: 1) is the overall curricular design utilized by the College of Optometry at Pacific University appropriate for the education and training of optometrists to use DPA's in their practice; 2) is the specific curricular component concerned with pharmacology appropriately constructed; 3) from the perspective of a pharmacologist, is the use of DPA's by optometrists a safe procedure likely to result in an overall improvement in patient care?

In the course of my efforts over the past three years to coordinate the redesign of the professional curriculum of the School of Pharmacy at Oregon State University, I have had considerable occasion to review the curricula of a large number of health profession schools, both in Oregon and elsewhere. Further, as my own graduate training in pharmacology was conducted largely at the University of Oregon Medical School in Portland, I am especially familiar with the curriculum of that institution, with emphasis on the pharmacology component. Finally, I have participated in a number of national and international meetings of professionals concerned with curricular design and implementation in many of the health-related fields. In comparing the curriculum of the College of Optometry at Pacific with the curricula of other health profession

schools utilizing a pharmacological component, I am convinced the approach developed by Pacific is both efficient and effective, and is clearly educationally sound. Moreover, that structure includes what I consider to be the sine qua non of proper instructional design--the competency of the graduate is evaluated in a series of prescribed and standardized formats (i.e., institutional, Oregon State Board of Optometry, and national board examinations) prior to the awarding of a license to practice. Thus, individuals who may have succeeded in passing individual courses but who have not adequately integrated the body of knowledge as a whole are not permitted access to the public as professionals. This safeguard, in my view, is instrumental in protecting the public, the institution, and the profession, and should stimulate your confidence in the proposal at hand.

Examination of the pharmacology component of the curriculum has also led me to a favorable conclusion. It is clear that the student is well-prepared for his first exposure to courses dealing with DPA's and other drugs, and is carried through this portion of his coursework in an effective manner. It is my judgment that a program designed to prepare practitioners to utilize DPA's must rest on a sound didactic base, capped by supervised clinical experience in the use of the agents in question. I feel strongly that a quality didactic base is offered at Pacific, and that passage of the proposed legislation will quickly result in the implementation of an appropriate clinical component as already outlined by the school.

The question of the relative safety and productivity of the proposed procedures must be addressed, and in my view, these two issues cannot be rationally separated; that is, neither safety nor efficacy are unidimensional characteristics, but instead are interrelated as a cost/benefit ratio or in medicine, a therapeutic index. Three important considerations relate to the expected safety in the use of DPA's by optometrists: 1) what agents are to be used; 2) what doses of these agents are to be employed; 3) how will these agents be administered? The four principal

categories of DPA to be used are miotics (agents that constrict the pupil), mydriatics (agents that dilate the pupil), local anesthetics (substances that reduce feeling in the cornea), and cycloplegics (agents that alter the ability of the eye to focus on near objects). The most salient pharmacological feature of these compounds is their relatively short duration of action, generally measured in minutes. If nothing else, this characteristic itself tends to minimize the likelihood of an adverse reaction simply because the drug is effectively inactivated by the body in relatively short order. Secondly, the doses to be utilized in diagnostic procedures are indeed very small. Using one to two drops of solutions of one-half to two and one-half percent strength in each eye provides the patient with a total dose far less than is obtained in many over-the-counter cold remedies readily available to the patient on only his/her discretion. Thirdly, by limiting the administration of these compounds to the topical route (dropped in the eye), it is not likely that more than twenty percent of the total dose will be absorbed into the blood for general circulation in the body. At that concentration level, these agents are essentially devoid of pharmacological activity. When coupled with the virtual absence of reported adverse reactions in states where this practice is common, one cannot help but conclude that the use of DPA's in the format proposed is extremely safe.

How much benefit is to be derived from this practice is, as I've said, the other side of the coin. In my judgment, the judicious use of DPA's will permit a substantial increase in the ability of the optometrist to detect potentially harmful diseases of the eye. By allowing this health-care professional to examine the patient more completely, the optometrist will be in a better position to refer to physicians (ophthamologists, internists, pediatricians, and family practitioners) those patients requiring further diagnosis and possible treatment. In view of the established fact that optometrists serve as the primary eye-care professionals for a majority of the population, it is apparent that the anticipated gain for the patient is large.

It would appear, therefore, that a near optimal situation prevails here: the proposed use of DPA's by optometrists is clearly both very safe and likely to be most effective in patient eye care. Further, it is evident that considerable planning has been conducted by the College of Optometry at Pacific, and that the school is ready, capable, and indeed has already begun providing educationally sound classroom instruction in the use of diagnostic pharmaceutical agents, with implementation of actual clinical instruction awaiting legislative approval. Thus, with the cost/benefit or therapeutic ratio a very favorable one to all parties concerned, I respectfully encourage the swift passage of the proposed legislation.

Ronald H. Winters, Ph.D.
Assistant Dean
Associate Professor of
Pharmacology and Toxicology

I would like to explain that Dr. Winters refers to Pacific University in his statement because it is the only optometry school in the Northwest, and therefore the one with which he has had direct experience. As the information I presented earlier indicates, all optometry schools provide similar training. It is apparent from his testimony that Dr. Winters realizes a potential risk involved with the use of any type of drug, but that with proper training this risk is far outweighed by the potential benefit to the eye care patient.

Finally and most importantly, as Dr. Winters mentioned, this bill limits the use of these DPAs to those individuals who can demonstrate by passage of a licensing examination that they are indeed capable of judicious use of the drugs. One such test of an individual's knowledge in this area is the National Board of Examiners in Optometry examination. This is a national examination which consists of eight separate subjects, one of which is Ocular Pharmacology. A discussion of this examination begins on page 91 of the H.E.W. Report to the Congress. This test will soon be a prerequisite to the taking of the Alaska State Board examination for licensure.

I am sure that much more can be said regarding the use of diagnostic pharmaceutical agents by optometrists. I have tried to avoid all but the crucial questions which are: (1) Does an optometrist have a responsibility to detect pathology of the human eye in the course of an examination? (2) Does an optometrist have an educational background that will allow him to safely administer these drugs to his patients? I feel that the answer is undeniably YES.

Apparently the consultants who collaborated to make the H.E.W. report possible, as a result of their extensive investigation of optometry reached the same conclusion. The following is excerpted from the RECOMMENDATIONS AND ADDITIONAL CONSIDERATIONS OFFERED BY STUDY CONSULTANTS of the H.E.W. Report to the Congress, page vii, second paragraph:

> "During the course of the study effort, a number of additional issues and concerns were identified by the expert consultants which, although important considerations, represent matters not directly responsive to the specific legislative charge as interpreted by the Department. These recommendations and comments, made unanimously by the consultants, are presented here to provide an opportunity to bring these matters to the attention of Department Agencies and the Congress. Because the following items go beyond the requirement of this report, the Department has not fully examined them and makes no recommendation at this time.
>
> 6. ...
>
> e. Joint development of appropriate revision to State licensure laws to permit use of diagnostic drugs (mydriatics and local anesthetics) by optometrists.
>
> While such joint endeavors are evident in various areas of the country, they need to be broadened and routinized."

At the present time 24 states have identified the need for the use of DPAs by optometrists, and to date there have been no reported incidences of malpractice arising from the use of these agents. Furthermore, no state which now permits the use of diagnostic pharmaceutical agents by optometrists has yet seen evidence that would convince them that this is not in the best interest of the public.

I therefore urge you to support Senate Bill 75 and House Bill 79 for the good of the people of Alaska.

Thank you for giving your consideration to this very important piece of legislation.

USE OF DIAGNOSTIC AGENTS

By

OPTOMETRISTS

in the

UNITED STATES ARMED FORCES

All three branches of the military, either in regulations or at local hospital options, require or allow optometrists to utilize diagnostic agents to aid them in their examinations.

1. UNITED STATES AIR FORCE

   Optometrist AFM 36-1 (C13)
   2. Duties and responsibilities
      a. "Conducts examinations of eye with or without the use of diagnostic drugs,". (enclosed)

2. UNITED STATES NAVY

   Change # 57 of U.S. Navy Medical department manual gives optometrists the right to use drugs for taking intraocular tension.

3. UNITED STATES ARMY

   (local Army post option)
   Ex. Modification of regulations providing for the optometric use of diagnostic drugs at the U.S. Army General Hospital, Fort Gordon, Geogia. "to include use of diagnostic drugs such as mydriatics, cycloplegics, and topical anesthetics". (enclosed)

OFFICER AIR FORCE SPECIALTY

OPTOMETRIST

★1. SPECIALTY SUMMARY

Conducts examinations of eye to determine visual efficiency and performance by means of instrumentation and observation; prescribes corrective procedures; and applies knowledge of optics and physiology to research and teaching activities.

2. DUTIES AND RESPONSIBILITIES

★ a. *Conducts examinations of eye:* With or without the use of diagnostic drugs, examines eye to ascertain presence or absence of defects or visual anomalies which can be corrected, remedied, or relieved by use of lenses, prisms, orthoptics, contact lenses, or other ophthalmic devices. Performs external and internal examination of the eyes and refers suspected and detected pathology to the appropriate medical specialties. Determines refractive errors such as myopia, hyperopia, or astigmatism and prescribes appropriate treatment for these and other visual problems. Ascertains through clinical tests, range of vision and ability and ease with which eyes maintain clear, comfortable, binocular vision at any distance of fixation.

b. *Prescribes treatment to conserve or improve vision:* Prescribes appropriate lenses to correct various errors of refraction. Prescribes and administers orthoptic or visual training in those instances where such procedures are indicated, as in ocular muscle imbalances, fusional problems, and as an adjunct in treatment of strabismus. Refers for medical treatment or surgery, those cases characterized by disease or injury. Examines and tests lenses for proper workmanship and conformance to prescription.

c. *Conducts research:* Plans and conducts research in broad areas of clinical optometry and physiological optics; such investigative studies to include, among others, physical standards, protective and corrective eye wear, examining methods and techniques, and perceptual problems associated with aeronautics and space flight.

d. *Directs optometry personnel:* Plans work assignments for optometry personnel including preparation and maintenance of optometric records. Observes and checks work of technicians to determine compliance with procedures governing optometric activities. Instructs optometry technicians in local operational procedures, and in the use and maintenance of ophthalmic instruments.

e. *Plans and directs occupational vision programs:* Plans, supervises, and participates in eye protection programs in accordance with AFR 160-112 and AFR 167-3. Identifies eye hazardous areas and occupations, and supervises visual screening of personnel in such areas. Arranges for professional services, and procurement and dispensing of safety eye wear for military personnel and civilian employees of the Department of the Air Force.

3. SPECIALTY QUALIFICATIONS

a. *Knowledge*: Knowledge of procedures and methods used in eye examinations, and examining and testing lenses is *mandatory*.

b. *Education*:

(1) Graduate of a college of optometry approved by the Surgeon General, USAF, is *mandatory*.

(2) Master's degree or Doctor of Philosophy degree in physiological optics is desirable for research and teaching assignments.

c. *Experience*: A minimum of 12 months' experience in optometry assignments is *mandatory*. It is *mandatory* that experience include conducting examinations of the eye to determine presence of visual defects; prescribing lenses and orthoptic therapy to correct, conserve, or improve vision; and examining and testing compliance to acceptable standards and conformance to prescription.

d. *Training*: None.

e. *Other*: State license to practice optometry is *mandatory*.

4. SPECIALTY DATA

a. *Grade Spread*: Second lieutenant through colonel.

b. *Related D.O.T. Job*:
Optometrist _____ 079.108

c. *Related DOD Occupational Group*: 6H

DEPARTMENT OF THE AIR FORCE
USAF SCHOOL OF AEROSPACE MEDICINE (AFSC)
BROOKS AIR FORCE BASE, TEXAS 78235

August 1975

OPTOMETRY PROGRESS REPORT

Optometry Seminar

Brooks AFB, Texas will host the 4th USAF Optometry Seminar from 30 September through 2 October 1975. The quotas have been allotted to the Major Air Commands, and contacts should be in process for selection of the attendees. If you have not received word about whether or not you can participate in this continuing education program, see your Administrative or Executive Officer. The TDY funding for attending is not from your organization's budget, so this should not be a deterent for approval.

Special Pay

Special pay legislation was not completed prior to the June 30, 1975 expiration date for the $100/mo. award to optometrists and veterinarians. The military members in these specialties on duty prior to 1 July 1975, continue to receive the special pay without interruption; however, the professionals that enter(ed) on active duty after that date will not unless legislation authorizes it. The DOD favors the special pay legislation, and the House Committee has favorably responded with a rider to the Appropriations Bill which will make the effective date retroactive to 1 July 1975. It is expected that this authority will run to 1 October 1977.

Drug Applications

Two years ago AFR 160-12, Professional Policies and Procedures, was revised to include the following, in paragraph 3g " ... Optometrists have the knowledge and skill necessary to perform the following functions:

(1) Performs complete visual examinations with or without the use of diagnostic drugs ... " USAF pharmacies will honor prescriptions from optometrists for ophthaine, mydriacyl, etc., in compliance with their needs for ophthalmic drugs for diagnostic purposes.

It is not unusual for optometrists at some of the smaller USAF Clinics where no ophthalmologist is assigned to work in close coordination with Flight Surgeons on Sick Call and physicians in Emergency Rooms in handling ocular disease and trauma dispositions. In these circumstances therapeutic ophthalmic drugs may be recommended by the optometrist and ordered by the

medical doctor from the pharmacy. If optometrists are enjoined to order therapeutics directly, it is highly recommended that approval for this action be in writing. Capt Steiner, at Webb AFB, TX, has been accorded this courtesy by the Pharmacy and Therapeutics Committee and may order: Neosporin ophthalmic; Blephamide ophthalmic; Garamycin ophthalmic; Sodium Sylamyd; Vasocon ointment; and Darvon, plain. Note that no steroid combination drugs were authorized. Dr Steiner is a former enlisted Air Force pharmacist, had a course in Pharmacology at the University of Houston Optometry College, and is well versed in drug effects, which was a major consideration in his award of direct drug therapeutic use at Webb AFB.

Contact Lenses and Occupational Vision

Air Force Regulation 161-31, Occupational Vision Program, prohibits the use of contact lenses in eye hazardous jobs except: "Special cases where persons must wear contact lenses for medical reasons will be considered on an individual basis." A request for reappraisal of this policy was made two years ago to permit the judgment of the local optometrist to weigh whether the usual eye protective device was inadequate, and the environment constituted a greater hazard to the contact lens wearer over others in the same situation, before restricting the wear of contact lens. No change in regulation resulted from this request.

A waiver of the prohibition was recently made at Kirtland AFB following advice by Lt Col Coker, Chief of Occupational Vision in the USAF Surgeon General's Office. This was a local waiver granted by the Occupational Vision Team when Maj O'Brien, Optometrist, indicated that in his professional judgment the patient's visual performance would be compromised with spectacles in climbing poles and stringing wire. The letter of waiver, forwarded through channels, concluded: "Additionally request that you take action through AFSC to request from HQ USAF/SGPA (the OPR of AFR 161-31) that AFR 161-31, para 3c(1) be amended to permit the Base Occupational Vision Team to locally authorize persons to wear contact lenses in eye hazard area when justified by particular medical reasons." The mechanism for issuing a waiver is now apparent, but the basic issue still seems unduly restrictive.

Federal Services Optometry Seminar

The AOA sponsored a Federal Services Optometry Seminar held in early April in Washington, DC. The attendees would form a "Who's Who" in AOA, AFOS, Military, Public Health and Civil Service Optometry. The issues addressed by the workshops were: Pay and Promotion; Optometry Corps; Vision Care Delivery; Clinic Evaluation; Education; Rationale for Federal Vision Care; Interprofessional Relations and Attitudes; and the Reserves.

MEDFG-HPS-S-Opt

Modification of USAGH Regulation 40-102

CO, USAGH
ATTN: AJGMD-HPS

Ch, Optometry Section
USAGH

4 October 72
MAJ Nichols/wl/2381

1. Recommend that consideration be given to the following modification of paragraph 10 (Optometrist Privileges) USAGH Regulation 40-102, dated 28 September 1971.

2. Optometrist Privileges:

Permission to conduct examinations of the eyes to ascertain the presence of absence of defects or visual anomalies, and prescribe the appropriate optometric therapy to correct, remedy or relieve such visual anomalies by the use of lenses, prisms, orthoptics, contact lenses, as outlined by AR 40-3, C-25 dated September 1971, AR 40-121, and SOP of Elective Contact Lens Program, Optometry Clinic, USAGH, Fort Gordon, Georgia, or other optometric procedures (to include use of diagnostic drugs such as mydriatics, cycloplegics and topical anesthetics) commensurate with training and experience. Refer patients for medical consultation, treatment or surgery when ocular manifestation of disease is detected.

3. The above modifications are suggested in accordance with AR 611-101, ch 23, 13 April 1970, AR 40-1, ch25, September 1971, and AR 40-121, paragraph 4-6.

1. In view of recent civilian interest in the role of the optometrist and the recent editorial addressed to The Army Surgeon General in the Journal of the AOA of which you are aware (Inclosure 1) a firm policy statement is in order setting forth the role of the Army optometrist.

2. Existing policy is stated as portions of correspondence of General Heaton (1968, Inclosure 2) and General Jennings (1971, Inclosure 3). No policy statement as such exists.

3. Your Consultants in Ophthalmology and Optometry agree that the proposed policy statement below is fair and represents the Army policy concerning the role of the optometrist.

POLICY STATEMENT

Army optometrists provide optometric patient services in accordance with accepted medical guidelines. They examine the eyes and adnexa, to include refraction and other procedures, prescribe lenses to correct refractive error and improve vision. They refer patients to physicians for diagnosis and treatment of suspected disease. They use topical anesthetics and cycloplegic drugs to perform tonometry and cycloplegic refractions. When using these drugs immediate medical care is available in the event of adverse reaction.

EDUCATIONAL QUALIFICATION OF ALASKAN OPTOMETRISTS

1. Statement on Pharmacology Training in Optometry in Oregon, 1975
   By: L. Levine, Ph.D.

2. Curriculum Comparison on Pharmacology between:

   Oregon Medical School
   Oregon Dental School
   Oregon College of Optometry

3. Association of Schools and Colleges of Optometry (ASCO)

   This study suggests pharmacology curriculum guidelines for continuing education courses for practicing optometrists. Should legislation pass, this guide would serve as a framework for setting up such a program.

4. 1973 National Board of Examiners in Optometry

   All applicants for Board certification to practice optometry in Oregon must pass all of the written sections of the National Boards with a minimum score of 70%.

   Enclosed copies of sections related to diagnostic agents:

	Hours of Testing
Ocular Pharmacology	1.0 hr.
Ocular Pathology	2.0 hrs.

   Other sections of the Boards not included but available upon request:

	Hours of Testing
Ocular Anatomy	2.0 hrs.
Visual Science I	2.5 hrs.
Visual Science II	2.5 hrs.
Theory and Practice of Optometry	2.5 hrs.
Theoretical Optics	3.0 hrs.
Ophthalmic Optics	2.5 hrs.
Social, legal, ethical, economic and professional aspects of optometry	1.0 hr.
	19.0 hrs. testing

5. List of the United States Optometric Colleges and Schools

Statement on Pharmacology Training in Optometry in Oregon

L. Levine, Ph. D.

The most revered and the most widely used textbook in the field of pharmacology in American medical and dental colleges is Goodmand and Gilman's "The Pharmacological Basis of Therapeutics". For example, during the current academic year (1974-1975), as in previous years, this "blue bible" of pharmacology is the required textbook for the pharmacology courses offered in both the University of Oregon Medical School and Dental School. (It may be noted that during the two occasions when a formal 2-hour course in Optometric Pharmacology was taught at the College of Optometry in Forest Grove, Goodman and Gilman was the required text. It may be of further interest that the senior author is a member of a long time Portland, Oregon family, and that his original professional training was in the field of Optometry.) The current (4th) edition of Goodmand and Gilman identifies the scope of the field of pharmacology as embracing "...the history, source, physical and chemical properties, compounding, biochemical and physiological effects, mechanisms of action, absorbtion, distribution, biotransformation and excretion, and therapeutic and other uses of drugs" (p.1). It is at once apparent that the totality of the discipline of pharmacology is very large, and that students and practitioners of health-related professions must generally limit their attention to drugs that are "useful in the prevention, diag-

nosis, and treatment of human disease, or in the prevention of pregnancy..." and to "chemical agents ... commonly responsible for household poisoning as well as enviornmental poisoning." (p.1).

Even to achieve these admittedly limited objectives, the student must give attention to a number of the classical subdivisions of pharmacology. These are listed in Goodman and Gilman (pp. 1,2) as (a) the physical and chemical properties of drugs, (b) pharmacodynamics, (c) pharmacotherapeutics, and (d) toxicology. Of these, pharmacodynamics has reference to "the study of the biochemical and physiological effects of drugs and their mechanisms of action." It is largely based on "...the subject matter and the experimental technics of physiology, biochemistry, microbiology, and pathology." Further, in pharmacodynamics "...Many basic principles of biochemistry and enzymology and the physical and chemical principles that govern the active and passive transfer and distribution of substances across biological membranes are readily applied..." On the other hand the term "pharmacotherapeutics" deals with "...Many drugs (which) stimulate or depress biochemical or physiological function in man in a sufficiently reproducible manner to provide relief of symptoms..." or are useful "...because they have only minimal effects on man but can destroy or eliminate parasites." (All quotes from Goodman and Gilman, Ch. 1).

From the foregoing it is obvious that mastery of the subject matter of pharmacology requires appreciable prior training in a number of important areas of human biology: anatomy, physiology, biochemistry, microbiology, and pathology. Further, for a study of drugs of consequence to the field of Optometry, specialized additional preparation in ocular anatomy, neurology, and ocular pathology are essential prerequisites. Thus on the one hand, the study of pharmacology cannot properly be undertaken early in a professional program since it presupposes a command of, and builds on the background provided by, several of the basic biological sciences. On the other hand, neglect of the study of pharmacology once the lengthy prerequisite preparation has been negotiated, fails to complete a logical sequence, and is irresponsible since it prevents delivery of the highest level of professional vision care to the public.

Inspection of the current catalogs of the University of Oregon Medical School and Dental School (1974-1975) reveals that the programs of study leading to the M.D. and the D.M.D. follow a rational progression of courses in the basic preclinical disciplines, which are necessary prerequisites to beginning the study of pharmacology. In both institutions, classroom and laboratory introduction to pharmacology is deferred until the second year and awaits prior or parallel training in gross and microscopic human anatomy,

bicchemistry, physiology, neuroanatomy, microbiology, and pathology. Since the medical and the dental practitioner will require clinical application of his pharmacological knowledge, it is sensible and appropriate that all of the preceding courses have practical components in the form of required laboratory work, and that the initial classroom and laboratory exposure to pharmacology is followed in succeeding terms with practical training in the use of drugs under immediate supervision of qualified faculty members.

The course of study presently required of all students in the College of Optometry in Forest Grove directly parallels and is equivalent to that of the Medical and Dental Schools as regards the number and level of the basic biological science courses relevant to the study of pharmacology. Currently, the program does not provide training in human anatomy, relegating that subject to the pre-optometry status, but provides more specialized morphological instruction in ocular anatomy and neuroanatomy. The curriculum includes core courses in physiological chemistry, physiology, neurology, microbiology, general and ocular pathology. All of these courses carry required laboratory work except physiological chemistry and microbiology, and all of these courses are completed before pursuing a required 2-semester hour lecture and demonstration class in Optometric Pharmacology.

Awaiting implementation, to complete the pharmacological

training of an optometrist, is a three-year old proposal for the development and suitable staffing of a Special Clinic in Pharmacology, which a student would enter after completion of the required two-hour lecture course. This Pharmacology Clinic would provide student clinicians with medically supervised practical experience in the use of topically-applied "eye drops", belonging to the group called Diagnostic Pharmaceutical Agents (DPA's), on themselves and on clinic patients.

Attached are (a) a synopsis of the biological science coursework offered in the Colleges of Optometry in the U.S., (b) a topical outline of the course in Optometric Pharmacology offered at the College of Optometry in Forest Grove, and (c) current curricula of Colleges of medicine, dentistry, and optometry in the State of Oregon.

The total learning experience leading to competence in optometric pharmacology is thus spread over all four years of the professional program. The faculty responsible for the teaching of the relevant basic biological science coursework all possess earned doctorates (Ph.D.'s) in the disciplines in which they provide instruction, hold memberships in the appropriate professional societies, and the majority are actively engaged in research programs in their specialized areas. The course in Optometric Pharmacology is staffed by a Ph.D. in Physiology, with extensive research experience

involving the experimental use of all classes of DPA's, with membership in the American Physiological Society and nomination for membership in the American Society for Pharmacology and Experimental Therapeutics (pending); a practicing O.D. with military experience in Viet Nam, during which he acquired extensive training in the use of all classes of DPA's from ophthalmological colleagues; and a practicing physician in Forest Grove with special interst and experience in ocular drugs. Thus the graduating O.D. is provided with all of the background and training necessary to equip him to deliver optimal vision care to his patients through the appropriate utilization of Diagnostic Pharmaceutical Agents.

CURRICULUM

COLLEGE OF OPTOMETRY 1974-1975

Courses in the Professional Curriculum

The duration of the regular professional curriculum in Optometry is four academic years and requires completion of 135 approved semester hours. This is preceded by a minimum of two years of pre-optometry.

First Professional Year

Optometry 333 Geometrical Optics	3
Optometry 334 Laboratory Geometrical Optics	1
Optometry 335 Ocular Anatomy and Physiology	3
Optometry 336 Laboratory-Ocular Anatomy	1
Optometry 337 Optometric Orientation	1
Optometry 338 Physical Optics	3
Optometry 339 Laboratory-Physical Optics	1
Optometry 340 Physiological Chemistry	3
Optometry 341 Laboratory-Physiological Chemistry	1
Optometry 342 Ophthalmic Optics	3
Optometry 343 Laboratory-Ophthalmic Optics	1
Optometry 344 Advanced Human Physiology	3
Optometry 345 Laboratory-Advanced Human Physiology	1
Optometry 346 Physiological Optics I	3
Optometry 347 Laboratory-Physiological Optics I	1
Optometry 348 Experimental Psychology	3
Optometry 349 Laboratory-Experimental Psychology	1
Optometry 399 Optometric Procedures I	3

Second Professional Year

Optometry 400 Optometric Procedures II/ Receiving Clinic	2
Optometry 401 Optometric Procedures III/ Receiving Clinic	3
Optometry 433 Bases of Pathology	3
Optometry 434 Laboratory-Bases of Pathology	1
Optometry 435 Physiological Optics II	3
Optometry 436 Laboratory-Physiological II	1
Optometry 437 Structure and Function of the Nervous System	3
Optometry 439 General and Ocular Pathology	2
Optometry 440 Ocular Pathology Detection and Visual Fields	3
Optometry 441 Optometry I/Theory and Methods of Clinical Refraction	3
Optometry 442 Optometry II/Basic Case Analysis	4
Optometry 444 Contact Lenses	3
Optometry 445 Laboratory-Contact Lenses	1

Third Professional Year

Optometry 518 Psychophysiology of Vision	3
Optometry 519 Psychology of Vision Laboratory	1
Optometry 520 Human Visual Perception	3
Optometry 521 Laboratory-Psychology II	1
Optometry 533 Optometry III/Advanced Case Analysis of Motor Dysfunctions	3
Optometry 534 Laboratory-Optometry III	1
Optometry 537 Visual Training I	3
Optometry 538 Laboratory-Visual Training	1
Optometry 539 Basic General Clinic I	1
Optometry 540 General Clinic II	2
Optometry 541 Optometry IV/Low Vision and Geriatrics	2
Optometry 542 Laboratory-Optometry IV	1
Optometry 545 Environmental Vision	3
Optometry 551 Optometry V/Strabismus and Amblyopia	3
Optometry 552 Laboratory-Optometry V	1

Fourth Professional Year

Optometry 633 National Problems of Health Care	3
Optometry 635 General Clinic III**	2-5
Optometry 639 Optometry VI/Advanced and Contemporary Clinical Procedures	2
Optometry 640 General Clinic IV	2-5
Optometry 641 General Clinic V.	2-6
Optometry 642 Optometric Pharmacology	2
Optometry 646 Specialty Clinics	1-4
Optometry 690 Research	2-6

*During the last three years and a half a minimum of 12 hours of general clinic is required. Only 6 hours of general clinic are shown. The remaining 6 hours may be scheduled whenever is convenient.

**Scheduled Summer between third and fourth years.

CURRICULUM DENTAL SCHOOL 1974-1975

First Year

	Credit Hours
Fall Interval	
*An 417, 418, 419, 421 Human Morphology	—

CURRICULUM

MEDICAL SCHOOL 1974-1975

The curriculum in medicine requires a total of seven years' work beyond high school. The first three years must be satisfactorily completed before admission to the Medical School in Portland. Since facilities for instruction provide for the acceptance of only a limited number of applicants, completion of premedical studies does not guarantee admission to the Medical School.

The four years spent in the Medical School in Portland are devoted to subjects of the regular four-year curriculum in medicine required by law.

The prescribed and recommended subjects for the three premedical years are described under *Admissions and Scholastic Regulations*. In the first, second, third, and fourth years at the Medical School there are 5,044 class hours of required work. Descriptions of courses are to be found under the several departmental headings.

Prescribed Work

First Year		Term Hours
Con 410	Cell Organization and Function	5
Con 411	Medical Genetics	2
Con 412	Developmental Biology	2
Con 413	Introduction to Patient Evaluation	3
Con 414	Immunology	2

A list of elective courses will be made available to every student.

* Includes holidays

ASSOCIATION OF SCHOOLS AND COLLEGES OF OPTOMETRY

Pharmacology Curriculum Guidelines for Continuing Education Courses

Prepared by the Council on Academic Affairs of the
Association of Schools and Colleges of Optometry,
Richard Hazlett, O.D.,
Chairman

December 1974

1730 M Street, N.W., Suite 411, Washington, D.C. 20036, (202) 833-3373

This Is The Recommended Content Of The Above Courses As Reported By The Council On Academic Affairs Of The Association Of Schools And Colleges Of Optometry

Pharmacology Curriculum Model

A Report of the ASCO Council on Academic Affairs

The role of the optometrist as a health care practitioner and a primary vision care provider has encouraged a movement in optometry to modify state optometry laws so that pharmaceutical agents can be utilized in the practice of optometry. This has also focused attention on the scope of the pharmacology programs in the schools and colleges of optometry. Sensing this attention, the Council on Academic Affairs of the Association of Schools and Colleges of Optometry (ASCO) selected a committee and prepared the following curriculum model to be utilized by the various schools and colleges in assessing the scope of their individual programs in pharmacology.

We want to thank the members of the committee who devoted considerable time and effort to this project. Dr. David Amos, private practice, Kansas City, Missouri, Dr. Freddy Chang, faculty member, School of Optometry, Indiana University, Dr. Siret Jannus, faculty member, Southern California College of Optometry; Dr. Jerry Rapp, faculty member, State University of New York, State College of Optometry, Dr. Tom Stelmack, faculty member, Illinois College of Optometry; and Dr. Jess Boyd Eskridge, faculty member, University of Alabama in Birmingham, School of Optometry.

GENERAL PHARMACOLOGY

I. Introduction to Basic Principles of Drug Action

A. Definitions
1. General Concepts
a. Definition of a drug
b. Absorption and elimination
c. First order kinetics
d. Biological half-like
e. Volume of distribution
f. Dosing concepts

B. Sources of Drugs
1. Naturally occurring
2. Synthetic
3. Semi-synthetic

C. Drug Classification
1. Site of action
2. Functional group
3. Nomenclature

D. Dosage forms
1. Oral
2. Parenteral
3. Suppositories
4. Sustained release

E. Pharmacodynamics - pharmacokinetics
1. Routes of administration
a. Enteral
b. Parenteral
c. Rectal
2. Absorption
a. Passive versus active transport
b. Acid—base characteristics
c. Lipid solubility
d. Molecular size and charge characteristics
3. Distribution
a. Lipid solubility
b. Free versus bond
c. Blood-brain barrier
d. Protein binding (plasma, tissue)
4. Metabolism
a. Oxidation - reduction
b. Hydrolysis
c. Acetylation
d. Conjugation
e. Other
5. Excretion
a. Renal
b. Lungs
c. Skin

F. Pharmacogenetics
1. Idiosyncratic effects
2. Inborn errors of metabolism

G. Mechanisms of drug action
1. Kinetics of drug action
a. Michaelis—Menten
b. Biological half-life
c. Dose—response curve
d. Volume of distribution
e. Maintenance of dose, dosing interval, loading dose
2. Receptors and acceptors
a. Primary versus secondary
3. Agonist and antagonist
4. Drug tolerance
a. Tachyphylaxis
b. Physiological
c. Psychological
5. Drug—Receptor Interactions
a. Synergism
b. Additivity
c. Potentiation
d. Inhibition

H. Evaluation of Drug Action
1. Animal Studies
a. ED_{50}
b. LD_{50}
c. Therapeutic index
d. Drug efficacy
e. Drug potency
2. Clinical Investigations
a. Host factors
b. Placebo effect
3. Legal Regulations
a. Laws and Rules
b. Agencies (federal and state)
4. Drug Standards
a. Bioassays

I. Prescription Writing
1. Composition of the prescription
2. Laws governing drug dispensing

J. Ethical Factors of Drug Use

K. Psychological Factors of Drug Use

II. Drugs Acting on the Peripheral Nervous System

A. Neurohumoral mediators

B. Autonomic drugs
1. Drug action on the parasympathetic system
a. Parasympathomimetics
1) a) Acetylcholine
b) Methacholine
c) Carbachol
d) Pilocarpine

2) Indirect acting
a) Physostigmine
b) Neostigmine
c) Edrophonium
d) Echothiophate
e) Diisofluorophosphate

b. Parasympatholytic
1) Anti-Muscarinic
a) Atropine
b) Scopolamine
c) Homatropine
d) Cyclopentolate
e) Tropicamide
2) Nicotinic
a) D-tubocurarine
b) Succinylcholine

2. Drugs Acting on the Sympathetic System
a. Sympathomimetics
1) Direct acting—alpha stimulators
a) Norepinephrine
b) Phenylephrine
c) Naphazoline
d) Tetrahydrozoline
e) Ephinephrine
2) Direct acting—beta stimulators
a) Isoproterenol
b) Epinephrine
3) Indirect acting
a) Ephredrine
b) Vasodilator—amphetamines
c) Parahydroxyamphetermine

b. Sympatholytics
1) Alpha blockers
a) Ergot alkaloids
b) Dibenzyline
c) Tolazoline
2) Beta blockers
a) Propranolol

c. Neuronal blocking agents
1) Guanethidine
2) Bretylium
3) Rauwolfia Alkaloids

3. Drugs Acting on Autonomic Ganglia
a. Ganglionic stimulants
b. Ganglionic blocking agents

C. Drugs Modifying Neuromuscular Transmission
1. Stimulating agents for transmission
2. Blocking agents of transmission

III. Autacoids

A. Histamines

B. Kinins

C. Prostaglandins

IV. Drugs Acting on the Central Nervous System

A. Stimulants
1. Amphetamines
2. Non-amphetamines

B. Anti-depressants
1. MAO inhibitors
2. Tricyclic antidrepressants
3. Sympathomimetic agents

C. Anti-convulsants
1. Barbiturates
2. Phenytoins
3. Miscellaneous

D. Anti-Parkinsonism
1. Levodopa
2. Anti-cholinergic

E. Anti-spasmodic agents
1. Anti-cholinergics
2. Gastric antacids

F. Sedatives and hypnotics
1. Barbiturates
2. Non-barbiturates

G. Psychotherapeutic agents
1. Phenothiazine derivatives
2. Thioxanthene derivatives
3. Benzodiazepine drugs
4. Miscellaneous agents

H. Analgesics
1. Narcotics
2. Non-narcotic

I. Alcohol and Related Agents
1. Alcohols
2. Disulfiram

J. Antipyretics and Anti-inflammatory (non-steroid)
1. Salicylates
2. Pyrazolon derivatives
3. Para-aminophenol derivatives

K. Drug Abuse
1. Opiates
2. Barbiturates and sedative-hypnotics
3. Amphetamines
4. Cannabinoids
5. Psychotomimetics

L. Drug Dependence

V. Anesthetics

A. Pharmacology of General Anesthesia
1. History and theory
2. Signs and stages
3. Mechanics
4. Gas anesthetics (nitrous oxide, cyclopropane, ethylene)
5. Volatile anesthetics (ether, holothane, chloroform)

B. Pharmacology of Local Anesthesia
1. Cocaine
2. Procaine

VI. Drugs Acting on the Cardiovascular System

A. Digitalis and allied cardiac glycosides

B. Diuretics
1. Thiazide derivatives
2. Carbonic anhydrase inhibitors
3. Osmotic agents
4. Miscellaneous

C. Anti-arrhythmic drugs
1. Quinidine
2. Local anesthetics
3. Miscellaneous agents

D. Anti-hypertensive drugs
1. Hydralazine
2. MAO inhibitors
3. Diuretic agents

E. Anti-coagulants
1. Heparin
2. Oral anti-coagulants
3. Miscellaneous agents

F. Vasodilators
1. Nitrates and nitrites
2. Theophyline compounds

G. Anti-atherosclerotic agents
1. Hyperlipidemic drugs
2. Female sex hormones
3. Nicotinic acid

VII. Hormones and Drugs Modifying Endocrine Activity

A. Pituitary Hormones and their actions
   1. Anterior pituitary hormones
   2. Posterior pituitary hormones

B. Thyroid hormones and anti-thyroid agents
   1. Thyroid hormone
   2. Anti-thyroid drugs

C. Insulin and other hypoglycemic agents
   1. Insulin
   2. Biguanides
   3. Sulfonylureas

D. Adreno-cortical hormones
   1. Glucocorticords
   2. Mineralocorticords
   3. Androgenic steroids

E. Gonadal hormones—oral contraceptives
   1. Estrogens
   2. Androgens
   3. Progesterone

F. Parathyroid hormones

G. Agents Affecting Immune Systems
   1. Corticosteroids
   2. Cytotoxic agents

VIII. Drugs Affecting Metabolic Activity

A. Antianemic drugs
   1. Iron
   2. Copper
   3. Cobalt
   4. Pyridoxine
   5. Vitamin B12
   6. Folic acid

B. Uricosuric drugs
   1. Colchicine
   2. Allopurinol

C. Vitamins, Minerals and Other Nutrients
   1. Fat-Soluble Vitamins
   2. Water-Soluble vitamins

D. Metals
   1. Heavy metals
   2. Heavy-metal antagonists

IX. Chemotherapeutic Agents

A. Introduction
   1. History of chemotherapy
   2. Mechanisms of action of chemotherapeutic agents

B. Antibiotics
   1. Synergism and antagonism
   2. Classification
   3. Methods of selection for clinical use

C. Sulfonamides
   1. Chemistry
   2. Classification
   3. Toxicity and hypersensitivity

D. Antiviral agents
   1. Idoxuridine
   2. Amantadine
   3. Miscellaneous agents

E. Anti-fungal agents
   1. Nystatin
   2. Amphotericin B
   3. Griseofulvin
   4. Miscellaneous agents

F. Anti-parasitic agents
   1. Ectoparasites
   2. Endoparasites
   3. Antimalarial

G. Drugs used in treatment of tuberculosis and leprosy
   1. Streptomycin
   2. Isoniazid
   3. Para-aminosalicylic acid
   4. Dapsone
   5. Ethambutol

H. Drugs used in the treatment of neoplasia
   1. Alkylating agents
   2. Anti-metabolites
   3. Hormonal agents
   4. Radioactive isotopes

I. Antiseptics and disinfectants
   1. Benzalkonium chloride
   2. Thimerosal
   3. Phenylmercuric nitrate

X. Over the Counter Medications

A. Types of drugs found in OTC preparations

B. Concentrations used

C. Potential hazards

XI. Toxicology

A. Adverse drug reaction
   1. Classification
   2. Frequency of occurrence
   3. Drug factors
   4. Patient factors
      a) Age
      b) Weight
      c) Race
      d) Pathological factors
      e) Other
   5. Drug contraindication in pregnancy and lactation

B. Environmental Factors
   1. Poisons
   2. Carcinogens
   3. Pollutants

XII. Principles of Immunopharmacology

A. Immunosuppressive agents

B. Cellular aspects of the immune response

C. Effector mechanisms and mediators in immune injury

D. Immunosuppressive and anti inflammatory drug action

OCULAR PHARMACOLOGY

I. Properties of Ophthalmic Preparations

A. Physical properties of ophthalmic solutions
   1. Tonicity
   2. PH
   3. Stability
   4. Sterility
   5. Viscosity
   6. Surface activity

B. Physical properties of ophthalmic ointments
   1. Tonicity
   2. PH
   3. Stability
   4. Sterility
   5. Viscosity
   6. Surface activity

C. Other dosage forms
   1. Suspension
   2. Time release systems

D. Packaging
   1. Single dose
   2. Multiple dose

II. Routes of Drug Administration

A. Topical
B. Subconjunctival injections
C. Retrobulbar injections
D. Intracameral and intravitreal injections
E. Iontophoresis
F. Other

III. Ocular Drug Pharmacodynamics and Pharmacokinetics

A. Absorption and penetration
B. Distribution
C. Metabolism
D. Routes of removal

IV. Techniques and Procedures in Clinical Administration

A. Pre-instillation
   1. Case history
   2. Ocular tissue integrity
   3. Angle evaluation
   4. Tonometry

B. Installation Techniques
   1. Solution
   2. Ointments
   3. Miscellaneous

C. Injections
D. Ophthalmic Prescription Nomenclature

V. Drugs Affecting the Autonomic Nervous System of the Eye (Mechanisms of Action, Indications, Precautions, Contraindications, Dosage, Adverse Reaction, and Side-Effects)

A. Sympathomimetics (Mydriatics)
   1. Direct acting
      a. Norepinephrine
      b. Epinephrine
      c. Phenylephrine
      d. Isoproterenol
   2. Indirect acting
      a. Cocaine
      b. Hydroxyamphetamine
      c. Ephedrine

B. Sympatholytics
   1. Alpha blockers
   2. Beta blockers

C. Neuronal blockers

D. Parasympathomimetics (Miotics)
   1. Direct acting
      a. Acetylcholine
      b. Methacholine
      c. Pilocarpine
      d. Carbachol
   2. Indirect acting (Anticholinesterases)
      a. Reversible (short acting)
         1) Physostigmine
         2) Edrophonium
         3) Neostigmine
      b. Irreversible (long acting)
         1) Demecarium
         2) Echothiophate
         3) Isofluorophosphate

E. Parasympatholytics (Cycloplegics—Mydriatics)
   1. Atropine
   2. Scopolamine
   3. Homatropine
   4. Cyclopentolate
   5. Tropicamide
   6. Oxyphenonium

VI. Pharmacological Diagnosis and Treatment of Neuro Muscular Disorders

VII. Local and Topical Anesthetics (Mechanisms of Action, Indications, Precautions, Contraindications, Dosage, Adverse Reactions, and Side Effects)

A. Cocaine
B. Procaine
C. Lidocaine
D. Tetracaine
E. Proparacaine
F. Benoxinate
G. Piperocaine
H. Butyn-Sulfate (Butacaine)

VIII. Miscellaneous Ophthalmic Preparations

A. Hyperosmotic Agents
B. Antihistamines
C. Ocular lubricants
D. Decongestants
E. Dyes
F. Irrigating Solutions
G. Vitamins
H. Ophthalmic Preparations in Contact Lens Wearing
I. Preservatives
J. Antiseptics

IX. Corticosteroids and Other Anti-Inflammatory Agents (Mechanisms of Action, Indications, Precautions, Contraindications, Dosage, Adverse Reactions, Side Effects)

X. Ocular Chemotherapeutic Agents (Spectrum, Mechanisms of Action, Indications, Precautions, Contraindications, Dosage, Adverse Reactions, and Side Effects)

A. Antibiotics
B. Sulfonamides
C. Antiviral
D. Anti-fungal
E. Antiparasitic
F. Germicidal

XI. Therapeutic Management of Ocular Disorders (Mechanisms of Action, Indications, Precautions, Contraindications, Dosage, Adverse Reactions, and Side Effects)

A. Diseases of the eyelids
B. Diseases of the lacrimal apparatus
C. Diseases of the conjunctiva
D. Diseases of the cornea
E. Diseases of the sclera
F. Glaucoma

22nd Annual Examination

NATIONAL BOARD OF EXAMINERS IN OPTOMETRY

Question Sheet for Part II, Section 6, OCULAR PHARMACOLOGY
Number of Test: 9

Tuesday, May 1, 1973 (1 hour) 9:00 - 10:00 p.m.

Instructions: Read carefully before starting. See also general instruction sheet. This examination consists of one group of 40 questions. On the answer sheet supplied with this examination, blacken the proper box to indicate the single best answer for each question. Be sure to indicate that this is test number 9.

1. The mechanism whereby neostigmine (Prostigmin) in small doses induces a pupillary constriction is because neostigmine
   a. stimulates formation and release of acetylcholine.
   b. reacts directly with receptor groups in the same fashion as acetylcholine.
   c. reacts with receptor groups to block them.
   d. blocks cholinesterase so acetylcholine can accumulate.
   e. activates cholinesterase to destroy acetylcholine more rapidly.

2. Epinephrine and norepinephrine are both released by stimulation of the sympathetic nervous system. To distinguish between them experimentally small doses may be intravenously injected into a suitably prepared experimental animal. Which effect list below would be seen with epinephrine, but not with norepinephrine?
   a. An increase in blood pressure
   b. A cutaneous vaso-constriction
   c. An increase in heart rate
   d. A decrease in gut tone and motility
   e. Bronchiolar dilitation

3. Which of the following mydriatics has the shortest duration of action when applied topically to the normal eye?
   a. homatropine
   b. atropine
   c. epinephrine
   d. phenylephrine
   e. oxphenonium

4. Which of the following side-effects might result from the topical application of epinephrine preparations?
   a. a decrease in heart rate
   b. palpitations
   c. rebound hyperemia
   d. both b. and c. above
   e. all of the above

5. Cocaine exhibits which two types of pharmacological activities?
   a. local anesthesia and miosis
   b. miosis and cycloplegia
   c. local anesthesia and mydriasis
   d. tachycardia and miosis
   e. none of the above

6. Which of the following pharmacological activities is (are) common to phenylephrine but not to atropine?
   a. mydriasis
   b. conjunctival decongestion
   c. cycloplegia
   d. both a. and c. above
   e. none of the above

7. When applied topically, drugs such as pilocarpine, isofluorphate and echothiophate can be expected to produce
   a. mydriasis
   b. cycloplegia
   c. mydriasis and cycloplegia
   d. miosis
   e. none of the above

8. Used in the management of ocular hypertension, acetazoleamide, dichlorphenamide and methazolamide are classed as
   a. carbonic anhydrase inhibitors
   b. anticholinesterases
   c. direct-acting cholinergic stimulants
   d. cholinergic inhibitors
   e. adrenergic stimulants

9. Prolonged use of topical corticosteroids is known to
   a. induce open-angle glaucoma in normal eyes and aggravate pre-existing glaucoma.
   b. intensify ocular inflammation of allergic origin.
   c. promote corneal scarring subsequent to traumatic injury.
   d. cause corneal pitting.
   e. none of the above

This examination consists of 4 pages. See that your copy is complete and that no questions are overlooked.

10. Which of the following drugs can be classed as a corticosteroid?
    a. phenylephrine
    b. tetrahydrozoline
    c. dexamethasone
    d. piperocaine
    e. antazoline

11. Many ophthalamic solutions contain small amounts of benzalkonium chloride (Sephiran) in order to
    a. solubilize the active drug.
    b. buffer the preparation to pH 7.
    c. render the preparation isotonic with tears.
    d. inhibit the growth of contaminating microbes.
    e. none of the above.

12. The term potency refers to
    a. the margin of safety of a drug
    b. the amount of drug required to produce a certain effect
    c. the ratio between the toxicity and efficacy of a drug
    d. the toxicity of a drug
    e. none of the above

13. The term therapeutic index refers to
    a. a classification of drugs by usage
    b. a measure of drug potency
    c. a measure of drug efficacy
    d. the ratio between the number of times a drug is used and the toxicity observed
    e. none of the above

14. Most drugs are broken down in the
    a. skin
    b. kidneys
    c. liver
    d. lungs
    e. none of the above

15. The term synergism refers to
    a. an effect greater than additive produced when two or more drugs are combined
    b. drug antagonism
    c. an additive effect produced by the combination of two or more drugs
    d. a long duration of drug action
    e. none of the above

16. Drugs cross biological membranes by the process(es) of
    a. active transport
    b. passive diffusion
    c. filtration
    d. all of the above
    e. none of the above

17. Local anesthetics act by
    a. producing an irreversible depression of neuronal conduction.
    b. facilitating neuronal depolarization.
    c. preventing neuronal influx of sodium ions.
    d. increasing the permeability of neuronal membrane to sodium ions.
    e. none of the above

18. Vasoconstrictors are often added to solutions of local anesthetics which are intended for injection in order to
    a. retard absorption.
    b. prolong the duration of action.
    c. decrease the chance of systemic toxicity.
    d. all of the above
    e. none of the above

19. The absorption of excessive amounts of topical anesthetic from mucosal surfaces may lead to
    a. marked sedation
    b. bronchial constriction
    c. hypertension
    d. central nervous system stimulation
    e. none of the above

20. Which of the following is not true concerning the use of tetracaine (Pontocaine) as a topical local anesthetic?
    a. duration of action is 10-20 minutes
    b. can produce superficial corneal epithelial lesions
    c. can be safely prescribed for routine home use by patients
    d. allergic reactions are known to occur
    e. all of the above

21. Which of the following is not true concerning cocaine?
    a. can produce marked topical anesthesia when applied to the cornea
    b. topical application produces miosis
    c. has been used in the differential diagnosis of Horner's syndrome
    d. can produce damage to the corneal epithelium
    e. all of the above

22. Drugs administered in the subconjunctival space cross through the sclera and into the eye primarily by
    a. facilitated diffusion
    b. active transport
    c. filtration
    d. passive diffusion
    e. phagocytosis

This examination consists of 4 pages. See that your copy is complete and that no questions are overlooked.

23. If a patient came to you and was lethargic and had pinpoint pupils, you might suspect that he had recently taken
    a. pentobarbital
    b. LSD
    c. marijuana
    d. morphine
    e. amphetamine

24. Methyl mercury, a compound which is causing great concern today as an environmental pollutant, can cause many diverse symptoms involving the eye. Which of the following has been soundly established as a characteristic of poisoning with this agent?
    a. pigmentary retinopathy
    b. concentric constriction of visual fields
    c. nystagmus
    d. oculogyric crisis
    e. glaucoma

25. Pilocarpine reduces intraocular pressure by the following mechanism:
    a. Drug inhibits the enzyme acetylcholinesterase.
    b. It inhibits the formation of aqueous humour.
    c. Drug acts directly on the ciliary muscles and iris sphincter. The contraction of these muscles helps to open canal of Schlemm. Hence, the pressure is reduced.
    d. It inhibits choline acetylase, the enzyme involved in the formation of aqueous humour.
    e. The drug causes a fall in intracranial pressure which helps to reduce IOP.

26. Miotic effect of echothiophate results from
    a. depletion of the neurotransmitter acetylcholine.
    b. irreversible inhibition of the enzyme acetylcholinesterase.
    c. short lived inhibition of the enzyme acetylcholinesterase.
    d. irreversible inhibition of monoamine oxidase.
    e. depletion of the neurotransmitter norepinephrine.

27. Which of the following drugs produce mydriasis without significant loss of accommodation?
    a. homatropine
    b. scopolamine
    c. tropicamide
    d. eserine
    e. phenylephrine

28. Side effects from the systemic absorption of atropine will include
    a. central nervous system stimulation, tachycardia, dry mouth.
    b. diuresis, salivation, marked fall in blood pressure.
    c. piloerection.
    d. fall in body temperature, diarrhea and vomiting.
    e. sweating.

29. Which of the following drugs acts through liberation of endogenous norepiphrine and recently was introduced for the diagnosis of Horner's pupil?
    a. P-OH-amphetamine
    b. methacholine
    c. procaine
    d. neostigmine
    e. D.F.P.

30. Chronic administration of which of the following drugs is reported to cause a rise in intraocular pressure?
    a. aspirin
    b. oral contraceptive
    c. epinephrine
    d. isoproterenol
    e. propranolol

31. All of the following groups of drugs are used in the treatment of hypertension. Which group of drugs is likely to produce miosis?
    a. Ganglionic blockers, like pentolinium
    b. Monoamine oxidase inhibitors, like Pargyline
    c. Diuretics, like chlorthiazide
    d. Norepinephrine depletors, like reserpine.
    e. Veratrum alkaloids, like Protoveratrines

32. Large, repeated doses of tranquilizers, like chlorpromazine used in psychiatry, can cause
    a. mydriasis.
    b. marked rise in IOP.
    c. complete loss of accommodation.
    d. vasoconstriction in iris.
    e. corneal pigmentation, stellate form cataract and retinopathy.

33. If 10% solution of phenylephrine is applied topically as a mydriatic in children, the systemic side effect will include
    a. central nervous system depression.
    b. marked rise in the systemic blood pressure.
    c. marked relaxation of skeletal muscle.
    d. loss of hair.
    e. urination, vomiting and diarrhea.

34. Acetazolamide, given orally, reduces intraocular pressure by
    a. reducing the formation of aqueous humour.
    b. its vasoconstrictor action which reduces the permeability of blood aqueous barrier.
    c. its action like physostigmine.
    d. opening the canal of Schlemm.
    e. reducing the protein content of aqueous.

35. A local anesthetic agent used in the differential diagnosis of Horner's syndrome and Raeder's paratrigeminal syndrome is
    a. procaine
    b. Holocaine
    c. cocaine
    d. Pontocaine
    e. Dorsacaine

36. Of the following agents, which one is not used in o-t-c ophthalmic decongestant preparations?
    a. naphazoline
    b. phenylephrine
    c. zinc salts
    d. tetrahydrazoline
    e. All are used for this purpose.

37. Which one of the following statements is true? Anticholinergic drugs such as Belladonna group of alkaloids used in the treatment of peptic ulcers
    a. have no ocular effects.
    b. may cause constriction of pupil.
    c. may induce spasm of accommodation.
    d. may produce conjunctival congestion.
    e. produce temporary loss of accommodation.

38. Which one of the following statements is not true?
    a. Acetazolamide or Diamox inhibits carbonic anhydrase.
    b. Diamox reduces intraocular tension in a glaucomatous eye.
    c. Diamox is a diuretic used in the treatment of glaucoma.
    d. Diuretics are generally useful in the treatment of glaucoma.
    e. Diamox produces myopia in some individuals.

39. Which one of the following statements is true?
    a. Chlorpromazine or thorazine is a drug with a wide safety margin and because of this reason, it is used extensively.
    b. Chlorpromazine and other drugs belonging to its group are used in the treatment of open angle glaucoma.
    c. Chlorpromazine does not cause any damage to the retina.
    d. Chlorpromazine is known to cause cataract.
    e. Chlorpromazine is stored in the choroid and pigment epithelium of the retina and may cause irreversible retinal damage.

40. In the case of a known open-angle glaucoma being treated with miotics, which one of the following drugs should be used to dilate the pupil for ophthalmoscopy?
    a. cyclopentolate
    b. phenylephrine
    c. homatropine
    d. scopolamine
    e. atropine

This examination consists of 4 pages. See that your copy is complete and that no questions are overlooked.

22nd Annual Examination

NATIONAL BOARD OF EXAMINERS IN OPTOMETRY

Question Sheet for Part II, Section 4, OCULAR PATHOLOGY
Number of Test: 3

Monday, April 30, 1973 (2 hours) 3:30 - 5:30 p.m.

Instructions: Read carefully before starting. See also general instruction sheet. This examination consists solely of multiple-choice questions. There are 100 test items. On the answer sheet supplied with this examination, blacken the proper box to indicate the single best answer for each question. Each question has a point value of 1. Total value is 100 points. Be sure to indicate that the number of this test is 3.

1. Which of the following is the most valid method of detecting acute glaucoma?
   a. tonometry (indentation type)
   b. ophthalmodynanometry
   c. tonometry (applanation type)
   d. visual-field testing
   e. ophthalmoscopy

2. Magnification of a visual-field defect can be obtained by
   a. viewing it with an indirect, binocular ophthalmoscope
   b. increasing the testing distance
   c. having the patient wear a +2.50 D lens
   d. having the patient wear a meridional magnifier axis 90
   e. none of the above is correct

3. The best biomicroscope illumination for discovery of posterior corneal endothelial opacities is
   a. retro-illumination
   b. direct illumination
   c. specular illumination
   d. indirect illumination
   e. sclerotic-scatter illumination

4. A patient has a bilateral field defect in which the left eye field has an inferior-nasal quadranopia and the right eye has a nasal hemianopia. The pathology is most likely located in or near the
   a. optic nerve
   b. retinal ganglion cell layer
   c. lateral geniculate body
   d. optic chiasma
   e. anterior optic tract

5. Which of the following is NOT a field defect associated with glaucoma?
   a. baring of the blind spot
   b. nasal step
   c. Guilstrand extension of the blind spot
   d. Seidel scotoma
   e. arcuate scotoma

6. A patient with a chemical burn of the eye should generally receive the following treatment: immediate
   a. referral to an ophthalmologist
   b. examination with the biomicroscope
   c. instillation of a miotic and lid closure
   d. irrigation of the eye with water or, if available, saline
   e. instillation of a mydriatic and anesthetic

7. Observation of the fundus with the yellow-green ophthalmoscopic filter is used for detecting
   a. hemorrhages
   b. drusen of the disc
   c. macular degeneration
   d. pigment spots
   e. venous pulsation

8. Which of the following hemorrhages is located near the ganglion-cell layer of the retina?
   a. circular-shaped
   b. subhyaloid-shaped
   c. flame-shaped
   d. streak or circular-shaped
   e. star or fan-shaped

9. Ptosis may occur in
   a. myasthenia gravis
   b. Horner's syndrome
   c. 3rd nerve paralysis
   d. senile patients
   e. all of the above are correct

10. Epicanthus inversus is
    a. an inversion of the outer canthal folds
    b. a recessively inherited autosomal characteristic
    c. a redundant skin fold originating from the lower lid
    d. associated with blepharochalasis
    e. a genetic defect of the temporal plica semilunaris

11. A hordeolum is a staphylococal infection of which glands?
    a. Zeis and Moll
    b. Meibomian
    c. Kraus
    d. Wolfring
    e. a and b both are correct

This examination consists of 9 pages. See that your copy is complete and that no questions are overlooked.

12. Nodular episcleritis usually
    a. is located deep to the conjunctiva which can be shown by movement of the conjunctiva
    b. is a chronic and recurrent condition
    c. doesn't affect vision even with prolonged duration
    d. is bilateral
    e. all of the above are correct

13. A patient with a progressive nuclear sclerosis generally will have
    a. iridodenesis
    b. increasing myopia
    c. increasing hyperopia
    d. increasing astigmatism
    e. increased long-wavelength absorption

14. Which of the following is characterized by retinal changes of cotton-wool patches, focal constrictions, hard exudates, retinal edema, and right-angle vessel crossings?
    a. arteriosclerosis
    b. diabetes
    c. hypertension
    d. polycythemia
    e. all of the above are correct

15. Asteroid hyalitis
    a. occurs in the posterior chamber and thus vision is not disturbed
    b. consists of dark spots that move when the eye moves
    c. has a dull appearance with focal illumination
    d. is another name for synchysis scintillans
    e. none of the above is correct

16. Cotton-wool exudates are
    a. pigment epithelium secretions
    b. microinfarcts in the nerve-fiber layer
    c. lamina vitrea changes which occur with age
    d. soft arteriolar secretions
    e. soft venule secretions, associated with cell-wall changes

17. Diabetic changes in the eye may include
    a. lens opacities
    b. neovascularization of retinal vessels
    c. degenerative changes in vessel walls
    d. microaneurysms
    e. all of the above are correct

18. There is profuse mucous discharge in
    a. catarrhal conjunctivitis
    b. vernal conjunctivitis
    c. follicular conjunctivitis
    d. purulent conjunctivitis
    e. allergic conjunctivitis

19. In retinal detachment
    a. the location is usually peripheral
    b. vessels in the detached area are normal in color
    c. there is usually progression in the temporal direction
    d. an associated retinal tear presents a greenish color
    e. all of the above are correct

20. Regarding tonography
    a. in normal eye the Po/C ratio will exceed 100
    b. the tonometer remains on the cornea for about 2 minutes
    c. a majority of untreated open-angle glaucomatous eyes will have a Po/C ratio of 140 or higher
    d. tonography is performed with an applanation tonometer
    e. all of the above are correct

21. Seborrheic blepharitis differs from staphlococcic blepharitis in that
    a. the former exhibits remissions and exacerbations
    b. loss of eye lashes is present in the latter
    c. the latter is associated with dandruff
    d. the former is usually caused by Morax-Axenfeld bacillus infection
    e. none of the above is correct

22. Dislocation of the lenses is a characteristic finding in
    a. Von Recklinghaussn's syndrome
    b. thyrotoxicosis
    c. Marfan's syndrome
    d. Sjogren's syndrome
    e. none of the above is correct

23. Regarding Hassal-Henle bodies,
    a. they are present in a majority of young persons
    b. they are best detected by use of the specular reflection technique in slit-lamp biomicroscopy
    c. they are caused by degeneration of corneal stroma
    d. they are caused by infiltration of fat droplets in Bowman's membrane
    e. both a and c are correct

This examination consists of 9 pages. See that your copy is complete and that no questions are overlooked.

24. Bilateral cecocentral scotoma with no other ocular symptoms or signs of fundus pathology is most likely caused by
    a. pituitary tumor
    b. cavernous sinus thrombus
    c. posterior cerebral hemorrhage
    d. tobacco amblyopia
    e. multiple sclerosis

25. Fundus examination of an infant's eyes shows a whitish macular area with a cherry-red fovea and a white, atrophic disc. This appearance could be caused by
    a. occlusion of central-retinal artery
    b. occlusion of central-retinal vein
    c. Tay-Sachs disease
    d. all of the above are correct
    e. only a and c are correct

26. A patient 40 years old complains of blurring. Fundus examination shows the foveal reflex is missing, and the macular area is slightly elevated. Field tests show a central scotoma. The contralateral eye is normal in appearance and function. The probable pathology is
    a. senile macular degeneration
    b. central serous retinopathy
    c. retrobulbar neuritis
    d. syphilitic uveitis
    e. retinitis pigmentosa

27. The visual aura in migraine is
    a. present in about 10 percent of migraine cases
    b. caused by vasodilation
    c. usually accompanied by recognizable fundus changes
    d. all of the above are correct
    e. none of the above is correct

28. Fundus examination shows a marked narrowing of retinal arteries and veins, a yellowish disc, and scattered pigment masses resembling bone corpuscles in shape. The patient complains of poor vision at night. The probable diagnosis is
    a. chorioretinitis
    b. retinoblastoma
    c. retinitis pigmentosa
    d. choroideremia
    e. all of the above could cause these signs and symptoms

29. Ophthalmoscopy shows a pale fundus in which arteries and veins are distended, tortuous, pale yellow in hue, and difficult to tell apart. Hemorrhages of various sizes occur, some with white centers. The diagnosis is
    a. leukemic retinopathy
    b. diabetic retinopathy
    c. occlusion of the central retinal artery
    d. nephritic retinopathy
    e. none of the above is correct

30. Fundus examination shows that the disc has hazy margins, an irregular surface, and is greyish in color. Field tests show no visual loss. The retinal blood vessels and the retina appear normal. The probably cause of the abnormally appearing disc is
    a. papillitis
    b. papilledema
    c. retrobulbar neuritis
    d. pseudopapillitis
    e. none of the above is correct

31. A patient complains of deep pain in one eye. The eye is sensitive to palpation. The optic disc is reddish and moderately elevated with indistinct margins. Field tests show a central scotoma. The probable diagnosis is
    a. glaucoma
    b. papillitis
    c. papilledema
    d. pseudo-optic neuritis
    e. occlusion of central retinal artery

32. Secondary glaucoma is frequently caused by
    a. iridocyclitis
    b. occlusion of central-retinal artery
    c. papillitis
    d. keratitis
    e. toxoplasmosis choroiditis

33. A patient exhibits fever, general malaise, and glossy red, edematous, demarcated patches involving the eyelids and adjacent facial skin. Probable diagnosis is
    a. dacryocystitis
    b. dacryoadenitis
    c. erysipelas
    d. atopic dermatitis
    e. obital cellulitis

34. After a few weeks of mild bilateral conjunctivitis, a severe conjunctivitis follows with swollen eyelids, opaque follicles on the upper palpebral conjunctiva. A vascular membrane invades the upper cornea. The patient probably has
    a. follicular conjunctivitis
    b. swimming-pool conjunctivitis
    c. vernal conjunctivitis
    d. trachoma
    e. syphilis

35. Sattler's veil refers to hazy vision caused by
    a. scratching of the corneal epithelium
    b. corneal subepithelial edema resulting from oxygen deprivation
    c. corneal stromal edema resulting from high intraocular pressure
    d. tears in Descemet's membrane
    e. Fuch's endothelial dystrophy

This examination consists of 9 pages. See that your copy is complete and that no questions are overlooked.

36. A patient complains of severe pain on one side of the face. Small vesicles are found on the skin of the upper eyelid. Corneal examination shows punctate white dots and reduced corneal sensitivity on the same side of the face. The probable diagnosis is
    a. chicken pox
    b. small pox
    c. Herpes Zoster ophthalmicus
    d. Herpes simplex
    e. tic douloureux

37. The Kayser-Fleischer ring
    a. is a circle of blood and pigment in the cornea
    b. indicates a dystrophy of endothelium of the cornea
    c. is caused by faulty sugar metabolism
    d. indicates a hereditary excessive absorption of copper by the alimentary tract
    e. all of the above are correct

38. A mature senile cataract is
    a. likely to cause increased intraocular pressure
    b. appears shrunken, with soft, milky cortex
    c. shows fine dust-like opacities scattered throughout the lens
    d. appears opaque, dull grey, amber or brown in color
    e. shows radiating opaque streaks from periphery toward the center of the lens

39. A layer of pigment granules deposited on the anterior lens surface after trauma is called
    a. Kayser-Fleischer ring
    b. Maxwell's ring
    c. Vossius' ring
    d. Soemmering's ring
    e. Krukenberg's spindle

40. Mittendorf's dot, situated on the posterior surface of the lens, is
    a. the earliest sign of posterior subcapsular cataract
    b. an unimportant congenital anomaly
    c. a significant sign of vitreous detachment
    d. a sign of synchysis scintillans
    e. a sign of retrolental fibroplasia

41. A patient has noticed for several weeks a gradual deterioration of vision. There is no ocular pain. The vitreous is cloudy; the fundus shows small yellow-grey, ill-defined foci of inflammation. The diagnosis is
    a. retinitis pigmentosa
    b. retinitis proliferans
    c. disseminated choroiditis
    d. diabetic retinopathy
    e. hypertensive retinopathy

42. A patient over 60 years of age has numerous white spherical bodies in the vitreous, which move when the eye moves and return to their original position when the eye is at rest. There are no signs of present or past inflammation. These bodies are
    a. cholesterol crystals
    b. muscae volitantes
    c. synchysis scintillans
    d. calcium-lipid soaps
    e. mutton-fat bodies

43. An aqueous flare would lead one to suspect
    a. glaucoma
    b. iritis
    c. posterior uveitis
    d. cyclitis
    e. brain tumor in the medulla

44. Which of the following ocular symptoms does NOT occur in multiple sclerosis?
    a. weak convergence
    b. ptosis
    c. loss of accommodation
    d. diplopia
    e. none of the above is correct

45. Severe deficiency of vitamin A in the diet or in intestinal absorption may cause
    a. Bitot spots on the conjunctiva
    b. grey indolent corneal ulcer
    c. xerophthalmia
    d. keratomalacia
    e. all of the above are correct

46. Retrobulbar neuritis often occurs as a complication of
    a. multiple sclerosis
    b. sinusitis
    c. pernicious anemia
    d. acquired syphilis, secondary stage
    e. all of the above are correct

47. A patient complains of seeing double, lids drooping, and difficulty in swallowing, particularly towards the end of the day. The probable diagnosis is
    a. Marfan's syndrome
    b. myasthenia gravis
    c. Graves' syndrome
    d. myotonic dystrophy
    e. multiple sclerosis

48. Itching eyes, stringy exudate containing eosinophiles, and many papillae on the upper tersal conjunctiva indicate
    a. catarrhal conjunctivitis
    b. membranous conjunctivitis
    c. vernal conjunctivitis
    d. gonorrheal conjunctivitis
    e. epidemic keratoconjunctivitis

This examination consists of 9 pages. See that your copy is complete and that no questions are overlooked.

49. The patient exhibiting bilateral congruent inferior hemianopia probably has a lesion in the
    a. ventral fibers
    b. upper lip of both calcarine fissures
    c. area between proximal parts of both optic nerves
    d. posterior communicating artery
    e. optic chiasma

50. Simple chronic glaucoma
    a. occurs most frequently in individuals whose IOP varies diurnally by 3-4 mm/Hg
    b. causes loss of vision by pressure on the fovea
    c. occurs in all individuals who have an IOP over 30 mm/Hg
    d. all of the above are correct
    e. none of the above is correct

51. In optic nerve atrophy associated with Leber's disease, the expected field defect is
    a. peripheral field contraction
    b. ring scotoma
    c. bitemporal hemianopia
    d. concentric blind spot enlargement
    e. centrocecal scotoma

52. One of your elderly patients complains of the transient loss of vision in one eye. His blood pressure is normal. His fundus appears normal on examination. The loss of vision
    a. was probably imaginary
    b. can be ignored
    c. was probably due to infarction
    d. may be a warning of possible central-retinal artery occlusion
    e. may be a warning of possible retinal detachment

53. You see a central-retinal artery occlusion a day after it occurred. The statement that "there is no need to refer this case because the damage has been done and nothing can be done for the patient" is
    a. true because a referral would be a waste of time and money
    b. false because vision may return with treatment
    c. false because with care the patient's other eye and perhaps life may be saved
    d. true because treatment is only effective if given within one hour

54. Bacterial conjunctivitis is most likely cause
    a. profuse tearing
    b. purulent discharge
    c. marked itching
    d. follicular formations
    e. membrane formations

55. A contact-lens patient telephones to say that his left eye is red, sore, and blurred. The right eye is without symptoms even though both lenses were overworn by six hours at a party. You should recommend
    a. leaving the lenses out a day before trying again
    b. rest, aspirin, closer adherence to the wearing schedule
    c. an eye exam to rule out iritis or glaucoma
    d. a refitting of the left lens
    e. none of the above is correct

56. Optic neuritis results in
    a. central scotoma
    b. peripheral constriction of the visual field
    c. cecal scotoma
    d. enlarged blind spot
    e. both a and b are correct

57. Your patient says he sees better in bright sunlight than indoors. He is also having increased difficulty reading. Which of the following cataracts is most likely to produce these symptoms?
    a. cuneiform cataract
    b. nuclear cataract
    c. cupuliform cataract
    d. nuclear sclerosis
    e. posterior polar cataract

58. A patient says he sees sparks and flashes in the lower field of the right eye. He also says that everything is cloudy in that area. If both symptoms are of recent origin, you would suspect
    a. retinitis
    b. Coats' disease
    c. angiospastic retinopathy
    d. retinal detachment
    e. atypical migraine

59. On fundus examination you notice whitish spots edged with pigment clumps scattered about the fundus. Visual-field examination shows multiple scotomas that are absolute. Your diagnosis is
    a. drusen deposits
    b. old, inactive disseminated chorioretinitis
    c. active, central choroiditis
    d. old, inactive central choroiditis
    e. active, disseminated chorioretinitis

This examination consists of 9 pages. See that your copy is complete and that no questions are overlooked.

60. The grayish or yellowish coloration of the lens seen using oblique illumination in most eyes in old age is due to
    a. discoloration of lens capsule
    b. sclerosis of lens fibers
    c. nuclear cataract
    d. reflection from the iris
    e. all of the above are correct

61. Diabetic retinopathy and retinal vein occlusion are alike in that both
    a. occur following hypertension
    b. result in blindness in 50% of the cases
    c. are the first signs of systemic diseases
    d. may result in neovascularization of the fundus and rubeosis iridis
    e. all of the above are correct

62. Using the direct ophthalmoscope and viewing through a red lens you would enhance which item in the fundus the most?
    a. hemorrhages
    b. edema
    c. pigment
    d. blood vessels
    e. optic nerve fibers

63. The prognosis of a retinal detachment is best if the cause of the detachment is
    a. vitreous detachment and traction on the retina
    b. retinal tear
    c. edema from toxemia of pregnancy
    d. diabetic retinopathy
    e. choroidal tumor

64. Which tumor primarily occurs before the age of 6 years?
    a. malignant melanoma
    b. lid epithelioma
    c. retinoblastoma
    d. all of the above are correct
    e. none of the above is correct

65. A conjunctival nevus should be referred for consideration of removal if it
    a. enlarges and becomes vascular
    b. produces irritation
    c. is chronically inflamed
    d. is cosmetically poor
    e. all of the above are correct

66. Which of the following is NOT true of choroidal nevi?
    a. frequently becomes malignant
    b. the retinal area appears flat
    c. often cause a field defect
    d. all of the above are correct as none are true statements
    e. none of the above is correct as all are true statements

67. Which of the following is NOT seen in absolute glaucoma?
    a. optic atrophy
    b. iris atrophy
    c. corneal edema
    d. vitreous hemorrhage
    e. intense pain

68. A lid pathology including hyperemic and swollen lid margins, foamy secretion, and which yields yellowish fluid with pressure on lid margin, indicates
    a. meibomianitis
    b. hordeolum
    c. angioneurotic edema
    d. tarsitis
    e. acute blepharitis

69. Occlusion of the central retinal vein may result in
    a. blanching of the retina
    b. pain at the onset
    c. hemorrhagic glaucoma
    d. all of the above are correct
    e. none of the above is correct

70. The most significant ophthalmoscopic finding in chronic simple glaucoma is the
    a. depth of the cup
    b. vessel displacement
    c. clarity of the disc margins
    d. size ratio between arteries and veins as they cross the disc margin
    e. width of the cup

71. The major cause of diplopia in the over 60 age group is
    a. orbital tumor
    b. multiple sclerosis
    c. cerebrovascular accident
    d. diabetes mellitus
    e. luxation of the lens

72. A patient has recently experienced a severe infection of an upper molar tooth. He now has swelling of the eyelids, exophthalmos, impaired ocular motility, and high fever. The probable diagnosis is
    a. thyrotoxicosis
    b. tenonitis
    c. iritis and secondary glaucoma
    d. orbital cellulitis
    e. scleritis

73. Aqueous flare, photophobia, and keratic precipitates indicate
    a. posterior uveitis
    b. anterior uveitis
    c. scleritis
    d. intraocular parasitic infestation
    e. angle-closure glaucoma

This examination consists of 9 pages. See that your copy is complete and that no questions are overlooked.

74. According to the Keith-Wagener-Barker classification of hypertensive retinopathy
    a. edema residues are first seen in group 2
    b. arteriovenous ratio may be 1:3 in group 2
    c. hemorrhages are present in group 1
    d. papilledema is present in group 3
    e. all of the above are correct

75. The usual first arteriovenous crossing defect in arteriosclerotic retinopathy is
    a. depression or elevation of the vein
    b. deviation of the vein
    c. concealment of tapering of the vein
    d. ~~banking of the vein distal to artery crossing~~
    e. increased arterial tortuosity near the crossing

76. Administration of large doses of corticosteroids over an extended period may cause
    a. nuclear cataract
    b. posterior subcapsular opacities in lens
    c. fine, superficial cortical lens opacities
    d. dense, disc-like opacity of the lens
    e. stromal opacities of the cornea

77. Which of the following may be a sign or symptom of malignant melanoma?
    a. hyperopic shift of refraction error
    b. relative scotoma
    c. metamorphopsia
    d. both a and b are correct
    e. all of the above are correct

78. The fundus reveals hemorrhage, edema, cotton-wool patches, generalized attenuation of the arterioles and papilledema. The diagnosis is
    a. hypertensive retinopathy grade IV
    b. arteriosclerotic retinopathy grade III
    c. diabetic retinopathy stage III
    d. hypertensive retinopathy grade III
    e. diabetic retinopathy stage IV

79. Retinal arterial pulsation seen in the fundus
    a. may be a normal variation
    b. may be associated with aortic regurgitation
    c. occurs when intraocular pressure is less than diastolic pressure
    d. occurs with retinal vein occlusion
    e. none of the above is correct

80. With regard to pseudo-optic neuritis
    a. the eye is usually highly myopic
    b. venous engorgement is present
    c. the blind spot is enlarged
    d. the cause is excessive glial tissue in the disc
    e. all of the above are correct

81. Disciform degeneration of the macula
    a. occurs most frequently in young people
    b. is caused by degeneration of the neuroglia cells of the retina
    c. does not affect visual acuity
    d. causes progressive contraction of the peripheral field
    e. none of the above is correct

82. Retinitis proliferans often occurs in
    a. syphilitic retinopathy
    b. diabetic retinopathy
    c. recurrent retinal hemorrhage
    d. all of the above are correct
    e. none of the above is correct

83. A patient has moderate conjunctival inflammation with the greatest injection in the lower fornix region. There is a nonprofuse watery or mucoid discharge, tearing, and itching. This is most likely
    a. bacterial conjunctivitis
    b. viral conjunctivitis
    c. fungal conjunctivitis
    d. chronic atopic (allergic) conjunctivitis
    e. ocular phemphigoid

84. Which of the following is true of perforated detachments of the retina?
    a. result from penetration of fluid from the vitreous space into the subretinal space
    b. rarely occur in a healthy eye, but do occur in an eye suffering from degenerative changes of myopia or aging
    c. only rarely occur at the macula even when a hole in the macula exists
    d. all of the above are correct
    e. only a and c are correct

85. Bitot's spots
    a. are found primarily in children as a result of malnutrition
    b. appear to be hard, dark masses deep to the conjunctiva in the episclera
    c. may be followed by marked corneal changes of softening, exfoliation of the epithelium, development of ulcers, and loss of transparency
    d. all of the above are correct
    e. only a and c are correct

86. Which of the following is NOT true of keratoconus?
    a. usually becomes manifest in youth
    b. is usually unilateral
    c. slit-lamp observation shows marked corneal thinning at the apex
    d. there is often a ring (Fleischer's ring from deposition of iron) around the cone
    e. none of the above is correct as all are true statements concerning keratoconus

87. Which of the following is NOT a senile or aging change of the cornea?
    a. Hassall-Henle bodies
    b. lipid arcus
    c. white limbus girdle
    d. all of the above are correct as none are aging changes
    e. None of the above is correct as all are aging changes

88. The patient's eye shows conjunctival swelling with considerable red hyperemia near the fornices; has a watery discharge mixed with mucus and leucocytes; and small papillae in the tarsal region of the lids. The patient reports a "foreign body" sensation. The probable diagnosis is
    a. acute catarrhal conjunctivitis
    b. chronic catarrhal conjunctivitis
    c. purulent conjunctivitis
    d. pseudo-membranous conjunctivitis
    e. acute angle-closure glaucoma

89. A vitreous detachment
    a. causes the patient to see floaters and occasional light streaks, usually in the temporal field
    b. ophthalmoscopically may appear as a hole in a membrane floating in front of the retina
    c. leads to retinal detachment in a majority of cases
    d. both a and b are correct
    e. a, b, and c are all correct

90. Vitreous detachment most commonly occurs
    a. anteriorly separating the vitreous from the lens
    b. posteriorly separating the vitreous from the posterior pole of the eye
    c. laterally separating the vitreous from the temporal ora
    d. superiorly separating the vitreous from the superior ora
    e. inferiorly separating the vitreous from the inferior ora

91. Which of the following is true of cataracts with diabetic patients?
    a. senile cataracts occur more frequently and at an earlier age as compared to nondiabetics
    b. the specific diabetic cataract occurs primarily in young persons
    c. the specific diabetic cataract typically shows opacities in the anterior and posterior cortex
    d. both a and c are correct
    e. a, b, and c are all correct

92. An early choroidal tumor or early serous pigmentary epithelial detachment is most likely to be revealed by a
    a. peripheral field loss detected by perimetry examination
    b. relative scotoma detected with the multiple pattern screener
    c. relative scotoma detected by tangent screen examination
    d. relative scotoma detected on the Amsler grid
    e. metamorphopsia detected on the Amsler grid

93. With regard to the swinging light test
    a. it is also called the pupillary release test
    b. a flashlight beam, in a dark room is passed alternately before the two eyes
    c. dilation of the pupil of the right eye as the light is shown into the right eye indicates that the direct light reflex for the right eye is weaker than the consensual light reflex from the left eye
    d. dilation of the pupil of the right eye as the light is shown into the right eye indicates that the retina or optic nerve of the right eye is deficient and possibly undergoing pathological changes
    e. all of the above are correct

This examination consists of 9 pages. See that your copy is complete and that no questions are overlooked.

94. With regard to topical anesthetics,
    a. the use of anesthetics retards repair of the corneal epithelium
    b. corneal anesthesia is produced by blockage of impulse conduction at nerve synapses
    c. while uncommon, allergic reactions are severe and require medical treatment
    d. both a and b are correct
    e. a, b, and c are all correct

95. Congenital ptosis is
    a. often associated with superior rectus palsy
    b. often associated with a miotic pupil
    c. usually unilateral
    d. all of the above are correct
    e. none of the above is correct

96. The Schirmer test measures
    a. corneal sensitivity
    b. corneal sensibility
    c. rate of aqueous production
    d. rate of aqueous outflow
    e. rate of tear formation

97. A chalazion
    a. is a painless swelling of the lid without gross inflammatory signs
    b. may disappear upon massage of the lids
    c. requires immediate removal if secondary infection is to be avoided
    d. a and b are both correct
    e. a, b, and c are all correct

98. Which of the following is true of closed-angle glaucoma?
    a. is most likely to occur in hyperopic eyes with a shallow anterior chamber
    b. may occur either as the result of an iris bombe or as the result of mydriasis bunching the iris into the filtration angle
    c. acute attacks usually occur suddenly without prodromal symptoms
    d. both a and b are correct
    e. a, b, and c are all correct

99. Studies by Armaly and other investigators indicate that there is a genetic basis for
    a. ~~high increase in intraocular~~ topical steroids pressure from topical steroids
    b. the cup-disc ratio of the optic nerve
    c. open-angle glaucoma
    d. both a and b are correct
    e. a, b, and c are all correct

100. Which of the following would counterindicate the use of neosynephrine for facilitating ophthalmoscopy?
    a. an aqueous space at the limbus equal to the corneal thickness
    b. an aqueous space at the limbus less than one-half of the corneal thickness
    c. a family history of open-angle glaucoma
    d. both a and b are correct
    e. a, b, and c are all correct

This examination consists of 9 pages. See that your copy is complete and that no questions are overlooked.

Statement of
Charles O. Wilson
Dean Pharmacy
Oregon State University

My interest in this bill is in the provision which it provides for a health professional, in this case the optometrist, to utilize his special knowledge to the fullest extent in order to benefit the patient.

As a pharmacist, and Dean of Pharmacy at Oregon State University, I have observed a primary service of a pharmacist lies in his ability to recognize disease states and to urge his ill customers to see a physician.

The need for services of a physician is not always known by an individual. This is the reason for today's mass testing for diabetes, hypertension, heart disease, and the reason why women are instructed to check themselves for breast cancer. These activities are all designed to bring the patient into the health-care system.

Optometrists can, through this legislation, offer a diagnostic service to eye patients and facilitate their entrance into the health-care system. There must be many people who, having a pathological eye condition unknown to them, seek the services of an optometrist for the fitting of glasses.

This Bill will make it possible for optometrists to carry out diagnostic procedures to identify any pathological condition during

the course of the examination for the fitting of glasses. On those accasions when a pathological condition is identified, the patient will be referred to an ophthalmologist for treatment.

I see in this Bill a very positive effect upon the practice of optometry and another means of mass eye examination for the prevention of blindness.

Charles O. Wilson

TESTIMONY

BY

PETER P. LAMY, PH.D., F.C.P.

Professor and Director
Institutional Pharmacy Programs
Chairman, Department of Pharmacy
Practice and Administrative Science

UNIVERSITY OF MARYLAND
SCHOOL OF PHARMACY

SENATE ECONOMIC AFFAIRS COMMITTEE

March 8, 1979

I am pleased to support the request by the Maryland Optometric Association for legislation which would allow board certified optometrists to use certain specified classes of topically administered pharmaceutical agents for diagnostic purposes.

Some Background Information:

I think it will be helpful to review very briefly the professional practice of optometrists in at least one other country:

In Britain, optometrists have been trained in and accustomed to the use of certain drugs in eye examinations for more than 50 years. In 1949, a select Committee under Lord Crook, a committee which included five physicians, unanimously concurred in the use of certain specified drugs by optometrists for eye examinations. British optometrists perform over 80% of the eye examinations in that country. The British position was reveiwed in 1970 by a joint committee of ophthalmologists and optometrists and they concluded that "it is proper for an optometrist to use appropriate drugs for eye examinations."

What is Needed:

The citizens of Maryland are entitled to a continuum of care, ranging from primary to specialized care, delivered in the best and most cost-efficient manner. As far as eye examinations are concerned, it is reasonable to envision a cycle with optometrists providing initial examination and triage, ophthalmologists having the opportunity to exert the full range and benefit of their extensive medical education in the treatment of eye diseases. As a matter of fact, a similar course of events is already taking place, with the great majority of patients already seeking out optometrists for an initial eye evaluation. Passage of this bill would give optometrists the opportunity to deliver more careful and valuable care to our citizens.

As a health professional greatly interested in the fields of geriatrics and gerontology, I might point out that the National Center for Health Statistics, in 1975, reported that approximately 50% of our elderly citizens suffer from impaired vision. Many of these do not seek help, often owing to economic constraints. As a matter of fact, the Central Maryland Health Systems Agency has reported that in Baltimore City, approximately 25% of the population would be classified as "gray area" persons, that is those who do not qualify for medical assistance but are simply too poor to look for adequate health care. An enlarged role for optometry which does not encroach on the role of ophthalmology would probably be greatly helpful to those citizens.

What Questions Must Be Answered?

It is clear that this bill must be viewed from a benefit-risk point of view. What would be patient benefit, what would be patient risk? As already outlined the benefits would seem to be large, both from an economic point of view and a health care point of view.

What about risk? The eye is a very sensitive organ. Blindness, precipitation of angle-closure glaucoma, and infection are probably the greatest risk when eye preparations are administered. YET, very few cases of glaucoma precipitated by dilation of the pupil are reported, in the range of 1:15,000 patients. It is difficult to envision blindness caused by a one-time application of the classes of drugs which are being discussed.

Sodium fluorescin solution, which is known to support the proliferation of bacteria easily, was routinely used by optometrists as well as ophthalmologists without causing a high incidence of eye infections.

On the other hand, the benefits from the topical use of drugs for diagnostic purposes far outweigh the risk to vision. There is simply no good way to obtain a satisfactory view of the interior of the eye unless the pupil is dilated. In addition, it is highly probable that optometrists, properly trained, and being able to practice in a more efficacious manner, will be able to recognize more eye abnormalities, which can and will then be referred to ophthalmologists, increasing public benefit and the level of public health.

Is This Bill Reasonable?

I believe it is.

The bill asked only that certain drugs could be used by optometrists in eye examinations. It does not ask that optometrists be granted the right to treat eye diseases.

The bill asked that only properly trained, and qualified optometrists be given this professional privilege. It specifically does not ask for a grandfather clause and, indeed, asks that optometrists can only be qualified after they have been trained and educated in the pharmacological action and proper use of these drugs.

Thus, weighing risks and benefits, I must believe that the benefits to the citizens of Maryland far outweigh the risks, and that is the reason why I support this bill.

Sincerely,

Peter P. Lamy, Ph.D., F.C.P.

STATEMENT

ALASKA BOARD OF EXAMINERS IN OPTOMETRY

ALASKA STATE

MANPOWER

regarding

VISION AND EYE HEALTH CARE

The optometrists of Alaska are geographically more evenly distributed so as to meet the needs of the people. Ophthalmologists are primarily concerned with eye surgery and, therefore, are concentrated around larger population areas where more extensive hospital facilities are available.

As the National Health Care program emerges, along with other increasing group insurance programs, the need for better referral channels must be established. Diagnostic agents can make pathology detection more effective and those referrals more accurate.

Enclosed are:

1. Alaska Distribution Map on Vision and Eye Health Care.

2. 1979 listing on:

    a. Resident Optometrists in Alaska (32)
    b. Resident Ophthalmologists in Alaska (17)

PROBABLE OBJECTION

Based on experience elsewhere opposition will probably come from ophthalmologists based on the alleged:

1. Adverse side effects of drugs and the incapacity of optometrists to deal with them.
2. Lack of qualification of optometrists in the use of these diagnostic agents.

AMERICAN ASSOCIATION OF OPHTHALMOLOGY

PUBLIC RELATIONS PAMPHLET "WHY DROPS"

Typically this pamphlet is displayed in ophthalmologists offices or handed out to other interested persons or groups.

1. The pamphlet states that drops must be used in order to perform an adequate visual and eye health examination.

   The following are quotes from the pamphlet:

   DROPS TO ENLARGE THE PUPILS:

   -"to look through the open door instead of through the keyhole".
   -"drops make it possible for him to study not only the lens through which the light must pass, but also the retina where the image is formed, and the optic nerve which transmits the picture to the brain."

   RELAX THE FOCUSING MUSCLE:

   -"This is often necessary to determine the TRUE degree of refractive error that has to be corrected by glasses."
   -"The use of these drops is especially important when examining children."
   -"When a physician examines a young child with strabismus (crossed eyes), it is essential..."

   ANESTHETIZE THE EYE:

   -"They are required for the all-important testing for glaucoma."

2. The pamphlet alleges that drops can not be used by optometrists but only by an ophthalmologist.

   The following quotes make their points:

   -"Of course, all drops are medicine and they can be prescribed only by a physician..."
   -"You should never let anyone else put anything in your eye."

3. The final statement from this pamphlet says: Drops..."are often the key to the prevention of blindness and even the saving of the eye itself."

   If the American Association of Ophthalmology feels strongly about all those points made in this pamphlet, and is able to recognize that 70% of the people in the United

States are seen by optometrists for eye care, what conclusions must have been reached? Are all those 70% seen by optometrists receiving poor eye care? Are plans being made to train more ophthalmologists? What positive efforts has ophthalmology made to correct this? If the answers to those questions are disheartening, is the only basis for this pamphlet one of economics, self esteem, or P.R.?

Alaskan optometrists are sincerely interested in improving the scope of their eye care to Alaskan residents. They are prepared to encompass quality educational standards as insurance that the usage of diagnostic agents by Alaskan optometrists will result only in improved vision and eye health care for the people of Alaska.

why drops?

Patients sometimes ask their eye physician, "Why do you use 'drops' when you examine my eyes?"

A clear answer to this question will help one understand the fundamentals of medical eye care and the relationship of his eyes to the health of his body.

"Drops" are of several kinds and they serve several important medical purposes.

One of the commonest uses of drops is to enlarge the pupils, so that the physician may examine more thoroughly the interior of the eye—to "look through the open door instead of through the keyhole." There, for the trained medical man to see, may be the first sign of disease elsewhere in the body. Drops make it possible for him to study not only the lens through which the light must pass, but also the retina where the image is formed, and the optic nerve which transmits the picture to the brain.

Such drops are particularly important in examining older people, who are prone to eye diseases, and often have a small pupil that becomes even smaller under the light of the examining instrument. Dilation of the pupil is necessary in examining the eye for suspected cataract, diabetes, hardening of the arteries, high blood pressure—to name a few examples. The effect of drops used merely to dilate the pupils lasts only a matter of hours, and frequently causes little or no blurring of vision.

A second common use of drops is to relax the focusing muscles in the eye. This is often necessary to determine the true degree of refractive error that has to be corrected by glasses. Because the focusing muscles in the eye are relaxed by these drops, the eye cannot focus and the vision is blurred until the effect of the drops wears off. These drops also cause the pupil to dilate; however, it is not the dilated pupil but the relaxed focusing muscle that causes blurring of vision. The use of these drops is especially important when examining children. When a physician examines a young child with strabismus (crossed eyes), it is essential to use drops that relax the focusing muscles in order to determine what corrective glasses are required.

A third use of drops is to anesthetize the eye, to permit the physician to perform certain diagnostic tests without discomfort to the patient. These drops cause little or no blurring of vision. They are required for the all-important testing for glaucoma. Anesthetic drops are also necessary for the relief of pain resulting from injury.

Finally, there are several ways in which drops are used in the treatment of the eye. Some drops are used to destroy bacteria, some to relieve inflammation within the eye, others to relieve a bloodshot condition, and still others to make the pupil small in order to lower the pressure within the eye. Drops to dilate the pupil are used in certain diseases to keep the muscles resting while the eye recovers, or to prevent complications which might develop if the muscles controlling the focus and the pupil were not kept at rest.

Of course, all drops are medicine and they can be prescribed only by a physician, who is licensed to practice medicine and surgery, and administered only by him or someone acting on his order. You should never let anyone else put anything in your eye. Sometimes drops are prescribed by your family doctor, to whom you can always turn for advice about your eyes. He or any other Doctor of Medicine can also tell you of a Doctor of Medicine who specializes in the eye—an ophthalmologist.

Whether or not drops of any kind are to be used is a decision for the attending physician. Only the Doctor of Medicine who examines your eyes can say whether drops are needed.

• • •

Why drops? Because they are useful medicines in the modern scientific care of the eyes—as useful in their place as any other drug or instrument that physicians have at hand for the relief of pain and the restoration of health. They are often the key to the prevention of blindness and even the saving of the eye itself.

These letters speak directly to the minimal adverse side affects and maximal benefit to the patient.

JAMES S. JORDAN, M. D.
SUITE 209-210
225 NO. WASHINGTON AVENUE
SCRANTON, PENNSYLVANIA 18503

May 8, 1973

Senator Robert J. Mellow
Mears Building
Scranton, Pennsylvania

Dear Senator Mellow:

I have been in practice as a Board Certified Ophthalmologist for 39 years. In all this time, I have never seen, nor have I read about, cardiac arrest due to the application of topical anesthetics, mydriatics, cycloplegics, atropine or miotics. In all my 39 years, I have never seen an Angle Closure Glaucoma due to the use of any of the dilator drugs, when used properly.

In doing some research, I have found the arguments against the use of drugs cannot possibly hold any truth with the exception of Angle Closure Glaucoma. However, with proper training in the educational requirements currently in effect at Optometric Colleges, the rick is minimal. The risk to the undetection of Glaucoma, however, is sizable when anesthesia is not used. If any Ophthalmologist were to be called to the stand to testify under oath, I am certain that he in all honesty would have to say that there are no risks to the topical use of these drugs.

Occasionally an eye may become injected, but the injection leaves within a matter of half an hour or so and I can't help but wonder how the test for Glaucoma can be performed comfortably and accurately without the use of topical anesthesia. I also wonder how you can get a very thorough look at the Fundus without the use of mydriatics in very small pupils. This is significant when one considers the fact that optometrists see 70% of the population.

In consulting Cardiologists, they are unaware of any incidents after the application of any of the above drugs wished to be used by the Optometrists. In researching the education of Optometrists, I have found out that they have had a Pharmacology course for many years and were taught the effect of drugs on the eye. They have been taught in most instances by Medical Doctors. An additional safety factor is written into the bill which will necessitate any

Optometrist who wishes to use these drugs routinely to take a transcript quality course in Pharmacology and Gonioscopy to "bone up" on their past training.

In the last year's entering class, approximately 80% of the Optometric students have had four years of college education with a Bachelor's or Master's degree before entering the Optometric College, which is in itself a four year program. Their program consists of General Anatomy, Ocular Anatomy, Physiology, General Ocular with a minimum of three years training in recognition of referal of pathological cases plus Histo Pathology. At present, the Pathology courses are taught by two Board Certified Ophthalmologists, Dr. Herbert Nevyas and Dr. Joseph Towland.

The Pennsylvania Academy of Ophthalmology and Otolaryngology has raised some opposition regarding Senate Bill 570 which provides for the use of diagnostic pharmaceutical agents by optometrists.

This opposition is not well founded, nor in my opinion for the general public's welfare. Patients, not individual or group self-esteem, should come first.

I would like to re-emphasize once again that there has never been a single death reported in the entire world's literature of a fatal reaction in a diagnostic office procedure of the type we are requesting in this legislature to my knowledge.

Sincerely,

James S. Jordan, M. D.

SCRANTON, PENNSYLVANIA 18503

In 1931, I received my Medical Degree from Jefferson Medical College. While at Jefferson, I was a member of the Alpha Omega Alpha Honor Society and upon graduation I received the HENRY M. PHILLIPS Award for the highest honors and excellence in medicine.

While serving my internship at Scranton State Hospital, I first became interested in diseases of the eye and pursued my interest at the University of Pennsylvania. I finished my residency at Wills Eye Hospital in 1935 and was President of the Wills Eye Hospital Society in 1948.

I was the founding President of the Diocesan Council of Catholic Men and have been on the executive committee of the National Council of Catholic Men at Washington, D. C. For my many accomplishments in this capacity, I was given the ST. THOMAS MORE Award by the national council, the 11th man to be so honored in the United States.

I was made a Knight of the Equestrian Order of the Holy Sepulcher of Jerusalem by the late Pope John XXIII and in June of 1972 I was invested into the Order of Malta by Pope Paul VI.

In 1956, I was named Chief of Surgery at Mercy Hospital in Scranton and served in that capacity until 1965. I am Chief of Ophthalmology at Mercy Hospital. In 1962 I was awarded the honorary degree of DOCTOR OF LAWS by the University of Scranton, in 1966 was elected President of the Advisory Board of Marywood College. Since 1969 I served as a member of its Executive Committee.

I am a member of the American Academy of Ophthalmology and Otolaryngology, a fellow of the American Board of Ophthalmology, the American Medical Association, and the Lackawanna Medical Society.

On February 2, 1973, I was presented with THE SILVER TRAY by Wills Eye Hospital on the occasion of the 25th silver anniversary of the annual clinical conference by the staff and society of Ex-Residents of the Wills Eye Hospital Society.

On April 30, 1973, I was awarded and admitted into the ALPHA SIGMA NU HONOR SOCIETY at the University of Scranton

Re: Senate Bill 1989

Dear Mr. Way:

This letter concerns Senate Bill 1989. Since you have had cataract surgery in your family in the past I feel you will have more than passing interest in this bill.

As I understand this bill permits optometrists to instill certain drops into their patients' eyes for diagnostic purposes only. I am strongly in favor of this bill; as a matter of fact several years ago on my own initiative I wrote to Assemblyman Gordon Duffy about proposing such a bill but apparently there was not much interest at the time.

The reason I am so strongly in favor of this bill is briefly this: fifth to sixty percent of all patients consult optometrists regarding their eyes and the fitting of glasses. In order to do a thorough examination of the retina, i. e. the posterior portion of the eye which is the all important anatomical segment, it is necessary to have a wide pupil so that the examining doctor can look around the corners, etc. It permits them to do as thorough an examination as the ophthalmologist can do. There are several conditions of the retina, which if recognized early can prevent serious sequela.

The ophthalmologists are of course opposed to this bill. However, I wish to go on record as saying that such opposition must be based on human frailities of jealousy and monetary consideration rather than the welfare of the

WILLOW AND FLORAL
VISALIA, CALIFORNIA

Re: Senate Bill 1989

patient. I know they will state that if you dilate certain eyes it is possible to produce an acute attack of glaucoma. In my thirty eight years of dilating tens of thousands of eyes I have never had this occur. Furthermore, if it did occur, it would be a blessing in disguise because such a patient would undoubtedly develop an acute attack of glaucoma later on under certain circumstances. Besides, this is no catastrophe because recognized reasonably early it can be corrected with medication and then surgery.

After all, optometrists are licensed by the State of California to perform certain aspects of eye examinations and why not help them do the best examination possible. It just makes good common sense.

If there is any further information you desire please let me know.

Very sincerely,

M. M. Goldstein, M. D.

George N. Zenovich
State Capitol
Sacramento, California

Dear Senator Zenovich:

As a practicing M.D., I would like to voice my support for SB 1989. Optometrists are members of a highly trained profession and at this time are doing an excellent job without the use of topically applied diagnostic drugs. Their diagnostic capabilities, however, would be greatly enhanced with the use of the above mentioned diagnostic drugs.

Prohibiting Optometry this addi_ion to their diagnostic capabilites is in some respects similar to denying a dentist the use of X-rays in his daily routine.

I urge serious consideration and passage of this bill. It is for the public benefit that the optometrist be able to use whatever he needs to diagnose ocular problems and refer to the proper medical practitioner. It should be remembered that approximately 70% of all visual examinations in California are done by optometrists and that the optometrist is many times the only Health Care Professional that is regularly seen.

Sincerely,

Robert E. Rowell, M.D.

Senator George N. Zenovich
State Capitol
Sacramento, CA 95814

Dear Senator Zenovich:

I have been asked by an optometrist acquaintance of mine to write you concerning SB 1989 (definition of optometry).

I support SB 1989. I am particularly interested in their ability to use pharmaceutical agents topically to assist in diagnosing disease. They should be permitted to do this. They do an excellent and professional job at the present time without the capability of using these pharmaceutical agents and permitting them the use of these agents would enable them to do their job even better. This is for the benefit of society and any argument that this bill could be construed to benefit optometrists and harm ophthalmologists or physicians is, to my mind, ridiculous.

Limiting optometrists from diagnosing disease by the use of topical pharmaceutical agents in the eyes would be like asking dentists to diagnose disease without x-ray. The optometrists are highly trained professionals and certainly have a great deal more knowledge about the eye plus much more sophisticated equipment than the average non-ophthalmologist physician who is permitted to use all sorts of agents in both diagnosis and treatment of eye disease, and I therefor cannot see why optometrists should not be permitted the use of pharmaceutical agents for diagnosis.

In summary, for the above reasons I support SB 1989.

Sincerely,

F. R. Williams, M.D.

MEADOWBROOK, PA. 19046

June 15, 1973

Dear Representative:

I would appreciate it if you would support Senate Bill 570, Printers No. 810. This bill would amend the Optometry Act to permit optometrists the use of diagnostic pharmaceutical agents when examining the patients' eyes.

I have been trained both as an optometrist and an ophthalmologist. As such, I am well informed as to the training of both eye care practitioners. I can assure you that the present day trained optometrists are well qualified, by virtue of their training in pharmacology and practical therapeutics, in the use and effects of diagnostic drugs.

By being permitted to use diagnostic pharmaceutical agents, optometry will be enabled to join with the other health care professions, such as dentistry and podiatry, to provide a more complete service to the citizens of the Commonwealth.

Please ask your friends to support this bill.

Sincerely,

Joseph C. Toland, M. D.

Burbank, Calif.

Dear Dr. Ervin:

I am writing to you in support of Senate Bill # 1989 presently being considered by the legislatures in Sacramento. It is my hope that you will pass on my views to whomever you deem appropriate.

Because of my experience in the treatment and epidemiologic aspects of high blood pressure control I have had the opportunity to work closely with optometrists trying to guide their efforts in detecting and referring patients with high blood pressure. The information gained from our recent experience as well as from the medical literature strongly demonstrates the importance of a funduscopic examination by whomever examines the patient's eyes. High blood pressure which is often not associated with any physical symptoms can be detected early on by changes in the retinal vessels. It is essential that optometrists who have the knowledge and experience in funduscopic examination be allowed to examine retinal vessels in the most appropriate way possible. Often this necessitates the use of medication for dilation of the pupils.

I will not mention the numerous other medical conditions that can be diagnosed through proper examination of the fundus, I will leave this for other authorities on the subject. It is obvious to all interested observers and those with knowledge of systemic disease that early detection for many conditions, hypertension being a prime example, often can delay or prevent the development of complications. It is essential, therefore, that those providing professional services for the patients be able to use all the available tools at their disposable.

Sincerely, yours,

Andrew Lewin

Pottstown, Pa. 19464

Dear Elmer:

This is to inform you that I have no objection to Senate Bill 570 P. N. 599. I support its passage.

I certainly do believe that optometrists should be permitted to use diagnostic drugs provided they have the proper training. Otherwise many types of ocular pathology could go undetected to the great detriment of the patient. This, I feel, makes passage of the bill definitely in the public interest.

Allergic or anaphylactic reactions to local anesthetics, mydriatics or cycloplegics are so rare that when it does occur, it is reported as an interesting case in the ophthalmological journals.

Naturally, I strongly maintain that the medical and surgical treatment of any and all types of pathologic conditions should remain in the domain of the ophthalmologist by virtue of his training in these fields.

Cordially,

Spencer I. Richmond, M.D.

July 5, 1974

Senator George N. Zenovich
State Capitol
Sacramento, CA 95814

Dear Senator Zenovich:

This letter is in support of SB 1989 which would give optometrists the right to use topical pharmaceutical agents for the sole purpose of the examination of the human eye or for any disease or pathological conditions. I am an ophthalmologist, certified by the American Board of Ophthalmology and a fellow of the American College of Surgeons, and I have been in private practice in California for twenty years.

In my experience, optometrists do a conscientious job in examination of the eye and do the best that they can, considering the fact that they are not allowed to use diagnostic medications, in the recognition of present pathological conditions that might require treatment. I think that the commongood would be served if they were allowed to use topical pharmaceutical agents for diagnostic purposes. One of the main benefits would be in the recognition of glaucoma which causes more irreversible blindness than any other condition in this country. Although optometrists now have instruments to test for glaucoma; nevertheless, this test is ordinarily uncomfortable or slightly painful unless a topical anesthetic is used on the cornea. The accuracy of the test is considerably improved if the patient cannot feel it and is therefore relaxed.

In my opinion, the possible benefits to the population from the use of dilating drops for diagnostic purposes by optometrists would far outweigh the dangers. There are a number of pathological conditions of the eyes as well as some ocular manifestations of systemic conditions which in many cases cannot be satisfactorily visualized and recognized without the use of dilating drops. I would be remiss, however, not to mention the fact that there would be an occasional adverse reaction in the form of an acute congestive glaucoma which can occur from the use of such drops. Due to the specialized nature of my practice, I have seen ten such cases during my twenty years of practice. I am sure this is far more than the ophthalmologist with the average type of practice would see. Of these ten cases, the vision was lost completely in one eye and two others required emergency surgery. The other seven all responded satisfactorily to medical treatment. Although thousands of cases would benefit for each possible adverse reaction; nevertheless, adverse reactions do occasionally occur and therefore adequate training of optometrists in prevention of such adverse reactions and in other recognition of them, so a prompt referrel to an ophthalmologist could be made, would be a must. I am sure that there would be several hundreds of thousands of people benefitted by the use of this and other types of diagnostic eye medications. There are some risks with the use of all types of drugs or medications, and in this case, the possible benefits would far outweigh the possible adverse reacions.

In summary, it is my opinion that the citizens of California would materially benefit, if optometrists were allowed to use topical pharmaceutical agents for the sole purpose of examination of the human eye for disease or pathological conditions and that the benefits from such use would far outweigh the danger of occasional adverse reactions.

Sincerely yours,

William P. Nelson, M.D.

Dear Senator Collier,

As a member and chairman of the Senate Finance Committee, I would like to urge you to give favorable consideration to Senate Bill 1989 (Zenovich). This bill would permit, under careful regulation and administration, the use of topical pharmaceutical agents by optometrists in the examination of the eye for any pathological condition.

This bill would allow more comprehensive eye evaluation by optometrists and appropriate referrals for further definitive study and treatment by the appropriate provider. I understand only those optometrists who have satisfactorily completed the appropriate courses will be eligible to use the topical pharmaceuticals.

I ask your support for SB 1989.

Sincerely,

H. J. Wall, M.D.
Fellow of the American College of Emergency Physicians- candidate to the American College of Surgeons

VI.

THE TOPICAL USE OF DRUGS FOR DIAGNOSTIC PURPOSES BY OPTOMETRISTS

ALBERT N. LEMOINE, JR., M.D., F.A.C.S.

My opinions and conclusions, as you will read, are not those of most ophthalmologists or organized medicine. These opinions are based on more than thirty years of experience in the practice of ophthalmology and medical education. Since 1950, more than half of my time has been devoted to academic ophthalmology as Professor and Chairman of the Department of Ophthalmology at the University of Kansas School of Medicine, with the remainder of the time in the private practice of ophthalmology, but involving a medical school environment. I do feel that it is important to realize that I have not limited my practice to a subspeciality in ophthalmology and that my associates and I have been more than ninety five (95) percent self supporting, receiving no federal funds and very little state monies. I am well aware of the problems of private practice, earning an income from patient care and not being limited to an Ivory Tower. Since 1971, I have not performed surgery nor had a private practice, but have devoted full time to administration, primarily in ophthalmology, and teaching. My teaching of ophthalmology over the past thirty years, has involved direct contact with paramedical students, nurses, undergraduate medical students, residents in ophthalmology and other specialities that relate to ophthalmology. I have also been involved in continuing education of physicians and ophthalmologists. I have had somewhat limited but direct experience in undergraduate and continuing education of optometrists.

It should be obvious that with this background my perception of the issues and problems of health care, health care delivery systems and the use of drugs by optometrists may be quite different from those of the average ophthalmologist in private practice. The opinions and conclusions that are expressed concerning the use of drugs for diagnostic purposes by optometrists are mine and should not be interpreted as those of the University of Kansas, the University of Kansas College of Health Sciences or any other organization of which I am a member.

Based on the testimony of previous hearings concerning the use of drugs by optometrists, and articles that have been published, there are in general seven areas that are repeatedly considered. I will list these areas and express my opinions and conclusions in each area followed by a brief summary.

I. THE TYPE OF DRUGS USED AND THE REASONS FOR THE USE OF THE DRUGS: I am in favor of the topical use of anesthetics, mydriatics and cycloplegics by optometrists for diagnostic purposes. I am unequivocally opposed to the topical or systemic use of drugs for therapeutic purposes by optometrists. In my opinion, there should not be a "grandfather clause" in legislation permitting the use of drugs by optometrists for diagnostic purposes. All optometrists who use such drugs should pass an examination that encompasses both the pharmacological action of the drugs, but in particular the clinical effects and side effects.

II. THE RISK TO THE PATIENT WHEN OPTOMETRISTS USE TOPICAL DRUGS FOR DIAGNOSTIC PURPOSES TO LIFE AND VISION: **In my personal experience, involving over one million outpatient and hospital patients, the majority involving the direct supervision of medical students and residents, I have never seen nor heard of a death or critical side effect when topical drugs were used for diagnostic purposes.** In addition, I have talked to many private practitioners and colleagues who are directors of ophthalmology training programs and have been unable to find anyone who has seen or heard of a verified death from the topical use of anes-

thetics, mydriatics or cycloplegics for diagnostic purposes. I am certain that somewhere there has been a death, but considering the millions of persons given topical drugs for diagnostic purposes, the risk is extremely low. The most common adverse side effect is an epithelial corneal abrasion following the topical use of an anesthetic for the measurement of the intraocular pressure, especially when the Schiotz tonometer is used. Although this will produce a temporary period of blurred vision and pain, I have never seen permanent loss of vision. This **must not** be confused with the use of a topical anesthetic for the removal of a foreign body that may produce a corneal ulcer and vision loss because this use of the topical anesthetic is for **therapy and not diagnosis.** The most serious threat to vision or blindness is acute closure glaucoma following pupil dilatation with the use of topical mydriatics or cycloplegics. It is unusual for blindness to result if an early diagnosis of angle closure glaucoma is made and treatment is provided. This condition is rarely difficult to diagnose, if one considers the possibility, and especially if one is limiting his practice to ocular and visual problems. The incidence of angle closure glaucoma, following pupil dilatation, is probably in the range of one in forty to fifty thousand persons who have had their pupils dilated. To me there are no other blinding conditions, secondary to the topical use of drugs for diagnostic purposes, that occur with any significant frequency. One of the most common objections to the topical use of drugs for diagnostic purposes by optometrists is that they will not recognize disease and seek consultation for definite diagnosis and therapy. **To me this is not germane to the issue of the use of drugs for diagnostic purposes because only the health care provider makes the diagnosis.** A failure of recognition of conditions where referral for definite diagnosis and/or treatment is serious. In my opinion, when an optometrist uses topical drugs for diagnostic purposes, he assumes exactly the same medical/legal responsibility as any other health care providers using drugs for the same purpose. In no manner can he or she be excused from the diagnostic error because he or she is an optometrist.

III. THE RISK OF COMPLICATIONS AS AGAINST BENEFITS: In my opinion, the benefits from the topical use of drugs for diagnostic purposes far outweigh the risk to life or vision. Despite all new instrumentation, there is no good way to obtain a satisfactory view of the interior of the eye unless the pupil is dilated. One area of controversy is the measurement of intraocular pressure by the use of a noncontact tonometer. In my opinion, the $4,000 cost of the instrument is not insignificant when one can obtain more accurate intraocular pressure measurements with one of the contact tonometers in a majority of the patients. In my experience, and that of the majority of ophthalmologists whom I have asked, the applanation contact tonometer is the most accurate instrument available to measure intraocular pressure.

IV. THE USE OF THE TERM **DIAGNOSIS**: It is my opinion that this word causes more difficulty than all other issues combined when there is a discussion of optometrists using topical drugs for diagnostic purposes. The basic difficulty is the failure for both groups to recognize and accept the fact that they use the term diagnosis in a different manner. The word itself covers a broad spectrum of concepts. One can correctly use the term diagnosis when defining what may be wrong with an automobile engine, the economic system, the weather, etc. To the physician and ophthalmologist the term diagnosis is used in a very restrictive manner. It is used to define a disease or process, usually as the initial step in treatment or ordering other diagnostic tests. Despite this restrictive use of the word in medicine, there frequently is not agreement as to the specific diagnosis in a particular patient. One of the most obvious examples in the area of ocular diagnosis is the term glaucoma. Although there is agreement that

there is nearly always an increase in the intraocular pressure (low tension glaucoma being an exception), there is not uniform agreement as to just what is abnormal pressure or what, if any other parameters, are necessary to make a specific diagnosis of glaucoma. While physicians and ophthalmologists use the word diagnosis as above, in my experience, most optometrists use the term diagnosis and the diagnostic terms (glaucoma, iritis, keratitis, etc.) in a different framework. The optometric diagnosis of disease may more accurately be defined as a deviation from the normal with referral indications for definitive diagnosis and therapy. In other areas, the optometric diagnosis may be just as definitive as the ophthalmologist, e.g. refractive errors, muscle paralysis, muscle imbalance, etc. To me the fact that a diagnostic term is not preceeded by a qualifying word, such as presumed, probable, possible, etc., does not present a serious problem. This is not true for most ophthalmologists and physicians who believe that to use specific diagnostic words is an invasion of their sphere of practice and expertise, which is definite diagnosis and therapy of ocular problems or problems of the visual system. It is at this point that I have strong personal convictions that many, if not most, of my colleagues in ophthalmology do not accept. **It is my firm belief that ophthalmologists have a serious obligation to the public in providing educational opportunities to all health care professionals, including optometrists, at both the undergraduate and continuing education level.** I am unable to comprehend that many of my colleagues do not wish to accept this responsibility in view of the ophthalmologists educational experiences in the diagnosis and treatment of problems involving the eye and visual system. **It is imperative that we educate all health care providers to recognize abnormalities where referral to an ophthalmologist for definitive diagnosis and therapy is indicated if needless blindness is to be avoided.** One cannot ignore the fact that there are more than 20,000 optometrists in active practice in the United States who are providing the initial or total eye care of a majority of the citizens. In rural states, the percentage is quite high because of the distribution of eye health care providers. Whether ophthalmologists like it or not, optometrists do and will continue to make diagnosis after an examination of a patient.

V. LEGISLATION PERMITTING OPTOMETRISTS TO USE TOPICAL DRUGS FOR DIAGNOSTIC PURPOSES IS THE FIRST STEP IN LEGISLATION TO USE DRUGS FOR THERAPY: I fail to see that this statement is germane to the present issue of the use of drugs for diagnostic purposes. In my opinion, the legislation permitting optometrists to use drugs for both diagnostic and therapeutic purposes, enacted in West Virginia, is not in the best interest of the public. There is no doubt that this law has provided a strong stimulus for organized medicine and ophthalmologists to unite against any legislation that will permit the optometrist to use drugs for any purposes. In my opinion, the present educational programs in optometric schools or their continuing education programs **do not** provide the necessary knowledge to use drugs for therapeutic purposes in any manner. I believe that the public will be endangered if optometrists are permitted to use drugs for therapeutic purposes, unless their education is essentially the same as that of a physician or osteopath. At the same time, I do believe that optometrists, at this time, should be able to use topical drugs for diagnostic purposes in order to enhance their ability to recognize ocular conditions where referral is indicated.

VI. LEGISLATION PERMITTING THE TOPICAL USE OF DRUGS FOR DIAGNOSTIC PURPOSES BY OPTOMETRISTS WILL OPEN THE DOORS TO USE OF DRUGS BY NONPHYSICIANS: It is obvious that this statement is not true because already legislation permits dentists and podiatrists to use both medicine and surgery for therapeutic purposes.

It is also true that nurse clinicians and physician assistants, in some states, are permitted to prescribe drugs, change drug dosage and perform minor surgical procedures. In each of the above instances there have been significant changes in the educational process of each group. In all instances there are definite restrictions as to what can be done and in none of these situations is there an open license to practice the healing arts as is true for the physician and surgeon or osteopath. Whether the future will bring about an alteration in the optometric education that would justify entering the areas of medical and surgical therapy of ocular problems, only time will tell. Because the eye and visual system may be involved in nearly, if not all, disease processes in the body, any type of restrictive license, such as in dentistry and podiatry, would be difficult to justify. In my opinion, the educational programs, to protect the public, would need to be essentially the same as an ophthalmologist. When one considers the vast demand for eye service is in the area of refraction and contact lenses and not medical and surgical treatment, the type of eye health care provider is significant. What is needed is more cooperative efforts to provide a team approach to eye health care, at least in the area of dense population concentration.

VII. THE DISTRIBUTION OF OPTOMETRISTS AND OPHTHALMOLOGISTS: Although this issue is rarely considered as a distinct entity beneath all discussions, it is important in the present legislative conflicts. All data indicates that there is a significant difference in the distribution of optometrists and ophthalmologists. Opthalmologists, in general, practice in urban and suburban areas, whereas, percentage-wise more optometrists practice in rural areas and the inner city. It is in the areas where there is a surplus of ophthalmologists and optometrists for the population that conflicts occur. If one is honest the primary conflict in this latter situation is economic.

In summary, on the issue of legislation for the use of drugs by optometrists, I support the following positions:

I. The topical use of drugs for diagnostic purposes, in specific anesthetics, mydriatics and cycloplegics by optometrists may provide significant benefits to the public with minimal danger to either life or vision. I find it difficult, if not impossible, to justify the inclusion of miotics for diagnostic purposes.

II. I am unequivocably opposed to the use of drugs, either topical or systemic, for the therapeutic purposes by optometrists.

III. I am opposed to any legislation that would "grandfather" the optometric use of drugs for diagnostic purposes by optometrists.

IV. Legislation should require the passage of an examination on the action of drugs and **in particular the clinical effects and side effects of drugs** used for diagnostic purposes before an optometrist is licensed to use them.

I hope that this lengthy response to the question of the use of drugs by optometrists is justified, because this is a highly complex issue, of concern to the public that has evoked extreme emotional response from both ophthalmology and optometry. In my opinion, the time has passed when we can retain the status quo and it behooves all involved (health care providers and members of the legislature) to carefully examine the facts and provide the best possible legislation for the public welfare at this time. If I can be of further assistance in this matter, please feel free to contact me.

Sincerely yours,

Albert N. Lemoine, M.D.

VII.

DR. HOWARD C. LUCAS, FLORIDA OPHTHALMOLOGIST TESTIMONY BEFORE THE SENATE ECONOMIC AFFAIRS COMMITTEE

Mr. Chairman, Members of the Committee:

Briefly my background is a medical degree from the Cornell Medical College in 1951 followed by two years rotating internship at Genessee Hospital, Rochester, New York. I then practiced general medicine for three years in Winter Haven, Florida. In 1957, I served a three year residency in Ophthalmology at the Institute of Ophthalmology, Columbia Presbyterian Medical Center, New York City. In 1960 I started my private practice of Ophthalmology in Winter Haven, Fla. and in 1961 was certified by the American Board of Ophthalmology.

You are here to decide the question of who has the right to use mydriatics, cycloplegics, and topical anesthetics, referred to as diagnostic pharmaceutical agents. The medical doctors claim squatters rights to the territory of diagnostic pharmaceutical agents, demand an absolute monopoly in their use. The optometrists feel that their patients would also benefit by using diagnostic pharmaceutical agents to make the eye examination more precise and complete.

The diagnostic pharmaceutical agents belong neither to the optometrists or the medical doctors. They are the property of the patients and should be used to benefit the patients who are your constituents. The proper question here is "Who is to be awarded the exclusive use of these agents to be administered for the benefit of the patients?" Both medical doctors and optometrists use the same tools, lenses, prisms, tonometers, biomicroscope, and ophthalmoscopes to determine the presence or absence of disease and the correct prescription for glasses. Enlarging the pupils with drops makes the examination easier and more precise in many cases. The use of topical anesthetics makes the measurement of intraocular pressure more accurate, and this facilitates the diagnosis of glaucoma.

The prime consideration here is what is best for the patient. Since both optometrists and medical doctors are performing similar examinations with the ultimate goal of arriving at the best refraction and diagnosis then both medical doctors and optometrists should be using the diagnostic pharmaceutical agents.

The next question is safety or danger of these diagnostic agents. I have been practicing ophthalmology for twenty-two years. I have not had any serious reaction to diagnostic pharmaceutical agents. The serious and lethal reactions as described by the medical doctors are not subtle or difficult to recognize. They describe convulsions, anaphylactic shock, strokes, cardiac arrest and death due to these agents. I have never had to do cardio-pulmonary resuscitation, call an ambulance, or send one of my patients to the morgue as a result of using diagnostic pharmaceutical agents.

It is true that these agents are dangerous if improperly administered such as being swallowed or injected, or multiple drops being used over a period of one hour or more. One or two drops in each eye, with the excess being blotted out with a tissue will not cause a serious reaction. This is not difficult to do. The optometrists know how to do this properly.

Here, the proper question is:

Why are certain medical doctors getting so many dangerous reactions to these diagnostic pharmaceutical agents?

The majority of medical doctors do not get serious reactions when using diagnostic pharmaceutical agents. Therefore, the ones who are getting the bad reactions must be doing something wrong. They should carefully and critically examine their techniques and take a refresher course in pharmacology to discover the cause of these bad reactions.

Diagnostic pharmaceutical agents, when properly used, are safe and essential to an adequate eye examination. Optometrists should use them.

Respectively submitted,

Howard C. Lucas, M.D.
560 Ave. K, S.E.
Winter Haven, Florida 33880

Distinguishing among eye specialists

dr. lester coleman

In this morning's mail were letters from two readers in different parts of the country. Both asked questions about optometrists and how they differ from medical eye specialists.

Ophthalmologists are medical doctors who have had special training in the medical and surgical aspects of diseases of the eye.

Optometrists are not M.D.s, yet they, too, have had excellent training. Their field is limited to the diagnosis and correction of defective vision. It does not include any aspect of surgery.

The eye is a remarkable index of diseases that may exist elsewhere in the body. Vascular disturbances, neurological problems and diabetes are only a few of the many conditions that are diagnostically recognized by a careful inspection of the eye. Intrinsic diseases of the eye itself — infections, glaucoma, cataract formations, viral infections, allergies and tumors — are treated by the ophthalmologist.

It should be pointed out that many skilled optometrists recognize when a problem exists and immediately refer their patients to an eye specialist for confirmation and treatment.

Dr. Coleman welcomes questions from readers. Please write to him in care of The Daily News, Pouch 6616, Anchorage 99502.

SUPPORTIVE LETTERS

MEDICAL DOCTORS AND OPTOMETRISTS INSIDE ALASKA

These letters speak of authorized use of diagnostic agents by optometrists throughout Alaska.

MEMORANDUM

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE
Public Health Service
Alaska Native Medical Center
P.O. Box 7-741
Anchorage, Alaska 99510
DATE: October 21, 1977

TO : SEE BELOW

FROM : ANC-EYE

SUBJECT: Use of Diagnostic Medications by Staff Optometrists

Drs. Donald E. Bigelow and James N. Matson, Staff Optometrists, conduct field eye clinics as part of the Eye Care Program. Often is is necessary to use cycloplegics in order to obtain a refraction on certain individuals and anesthetic drops to take ocular pressures. Both doctors are aware of the possibilities of provoking an acute angle closure glaucoma, or an allergic reaction by the use of these drugs. They have my permission to use these ocular diagnostic medications when they feel the medications are needed, and I take full responsibility for any adverse reactions that might occur.

Should an acute angle closure be provoked, the following steps should be initiated:

1. Pilocarpine Ophthalmic Solution, 4% 1 gtt. installed q. 15 min. 4 doses; then, q. hour x4 doses, or until pupil constricts. Once constricted, the patient should be maintained on Pilocarpine 1 gtt. O.U. q.i.d. until referred in for surgery.

2. Simultaneously, at the initiation of Pilocarpine, the patient should be given Diamox 250 mg. I.M. and Osmoglyn (if available) 6 oz. mixed with grapefruit juice P.O.
DIAMOX ONE TABLET EVERY SIX HOURS BY MOUTH-
3. He should be referred to ANMC as soon as possible for evaluation and surgery.

1 March 1978

Dr. Box
611 W. Willoughby
Juneau, AK 99801

Dear Dr. Box,

I was asked to write to you and give you the latest information from the Air Force that I have concerning the use of diagnostic drugs that we can use.

Air Force Regulation 36-1 (dated 1 March 1977) states on Page A27-37: OPTOMETRIST

2. Duties And Responsibilities
   a. Conducts Examinations of Eye: With or without the use of diagnostic drugs, examines eyes..... etc.

I know of no other regulation since then that states anything different. There is no place in the regulation that any of our professional activity is under the direct supervision of an ophthalmologist or other physician.

As you know, there are many places where the optometrist functions where there is no ophthalmologist assigned. At those locations the optometrist usually is called upon by the professional staff to do many of the more routine ophthalmological duties, because he knows more about these functions than do the other medical corps specialties. Even at locations such as Elmendorf where we have ophthalmological services, we can use diagnostic drugs and do minor ophthalmological services on our own, but we usually let the ophthalmologist or his technicians do these services.

I am licensed here in Alaska, and would appreciate being on the mailing list of any material associated with the changing of the optometric laws within the state. I am still a few years from retirement, but plan on coming back up here when I retire.

Rep. Randy Phillips
Pouch V
Juneau, AK 99811

Dear Rep. Phillips:

I am presently practicing with the Public Health Service at the A.N.S. Hospital in Anchorage and anticipate going into private practice in the very near future. I am interested in the progress of House Bill #664 and would like to urge you to support the passage of this legislation. I am a graduate of Pacific University, College of Optometry, which is in Forest Grove, Oregon. Oregon has had similar legislation to House Bill #664 for several years which, of course, is mandated that Pacific University provide experience in the use of these agents along with a complete pharmacological background for its graduating students. I've also been a medic in the Army and have had some experience with the various drugs and agents used in emergency medical treatment. It has been my experience with the Public Health Service and in the military that there are no serious adverse reactions from the agents optometrists will use and I've had experience as an observer in the military and, of course, first hand with the Public Health Service where the Alaskan Public Health Service optometrists have had directive from Dr. Dippé to use these agents both at the hospital clinic in Anchorage and whenever we are on bush eye clinics. These agents are used in the bush eye clinics by the optometrist as an independent practitioner with only telephone and mostly not very good radio contact with the Public Health Service Hospital in Anchorage which would be much poorer in case of emergency than the in office setting most private practicing optometrists in Alaska now enjoy. I also work directly with the ophthalmological staff at the A.N.S. Hospital in Anchorage and have heard the various arguments that have been presented concerning optometrists' ability to manage patients when they use these drugs and can say from personal experience that these arguments are a smoke screen and that the few minor side effects caused by some of these agents are relieved by either reducing the dosage or stopping the cycloplegic agent in the case of cycloplegia. I have had an opportunity to also work with the Public Health Service optometrist who has served with the Public Health Service for many years and have had discussions with the military optometrist in Anchorage and can find no instances where patients have suffered serious adverse affects from these drugs, but know from personal experience that they do aid in earlier detection

of eye disease. I also know from my close association with the ophthalmological community in Alaska that if any serious effect had occured in either the Public Health Service or military use of these agents your committee would have heard about it. The unexplainable morbid fear ophthalmologists have from optometrists granting the use of these drugs is ridiculous in my opinion and can only result in their possible fear of losing patients which I also don't understand because as I viewed the situation as a non-private practicing optometrist the ability of the doctor to make people like him and provide good services are what draw patients to offices and not whether or not they use eye drops. If the fear is based on loss of patients from ophthalmology offices, which is the only thing I can see could be the real source of their concern, then it certainly should not be a concern of the legislature. Again I would like to urge you to support the passage of House Bill #664 as it will aid the private sector optometric patient as it has aided the Public Health Service and military optometric patient.

Yours very truly,

James N. Matson, O.D.

DEPARTMENT OF THE ARMY
HEADQUARTERS, US ARMY MEDICAL DEPARTMENT ACTIVITY, ALASKA
FORT WAINWRIGHT, [redacted]
ALASKA 99703

AFZT-MD-CL

28 February 1978

STATEMENT

I am presently an Alaska licensed optometrist (#85) practicing in the U.S. Army at Fort Wainwright, Alaska. I have been here over three years, and in the military for over seven years. During all my years as a practicing optometrist in the U.S. Army, I have been authorized to use diagnostic pharmaceuticals in my practice. The use of diagnostic anesthetics, mydriatrics, miotics, and cycloplegics are required for flight physicals, tonometry, internal examinations, cycloplegic exams, etc., required by military regulations.

Upon arriving at Bassett Army Hospital here at Fort Wainwright in 1974, I submitted a request to the hospital Credentials Committee to use certain diagnostic drugs in my practice of optometry which was approved by the committee and endorsed by the Hospital Commander. In my experience in using diagnostic drugs on thousands of patients, I have never had an adverse drug reaction.

Robert P. Hammond

ROBERT P. HAMMOND, O.D.

RECOMMENDATION OF

LEGISLATIVE ADVISORY COMMITTEE OF

THE MUNICIPAL HEALTH COMMISSION

Primary Legislative Contact: _____
(907)

LEGISLATIVE REVIEW

pre-do pass

BILL NUMBER AND TOPIC: Senate Bill 75
House Bill 79

BRIEF SUMMARY: An Act relating to the practice of optometry. These bills are the same. They define the term "optometry" and define what is included in the practice. The bill also outlines the use of drugs for diagnosis.

BILL STATUS: House Bill 79 was introduced by Representatives Martin, McKinnon, Meekins, Miller and Parr, and was referred to Health, Education and Social Services and Judiciary Committees.

Senate bill 75 was introduced by the Rules Committee by request, and was referred to the senate Health, Education and Social Services and Judiciary Committees.

The series of questions below are presented to assist persons responsible for reviewing proposed legislation. Answering each question will help the reader to better understand the intent or meaning of a specific bill. Question #12 asks the Legislative Advisory Committee to formulate a recommendation, which will then be forwarded to legislators, lobbyists, other review bodies, etc., as appropriate. Action taken by this committee automatically sends the bill and comments through 1) Municipal Legal Department, 2) Municipal Administration, and 3) Municipal Health Commission, time permitting.

1. What is the time frame for influencing the bill's outcome by this committee or Commission? This legislative session

2. What does the bill do? Defines the term "optometry" and defines what is included in the practice; and outlines the use of drugs for diagnosis.

3. Who does it affect? Both the medical and consumer areas.

4. How much does it cost? Unable to determine

5. Is it directed to a specific geographic area? No
What area? _____

6. How would enactment of this bill effect Anchorage? IT WOULD INCREASE THE AVAILABILITY, IT ALSO ACTS AS A ALTERNATIVE INITIATIVE TO IMPROVE THE HEALTH SYSTEM, IT WOULD ALSO HELP REDUCE COST. IT WOULD ALLOW THE USE OF TOPICAL drugs IN OFFICES

September 2, 1979

7. Is it directed to a specific group? Yes
Which group? Optometrist.

8. How does it affect others? IT DOES NOT EFFECT OTHERS

9. What are its strengths? (1) ALLOW. USE OF TOPICAL DRUGS IN OFFICE (2) IT WOULD BE COST EFFECTIVE; (3) EDUCATIONAL REQUIREMENTS (4) INCREASE AVAILABILITY, (5) WOULD ACT AS AN ALTERNATE ENTERING POINT INTO HEALTH SYSTEM.

10. What are its drawbacks, weaknesses? NONE

11. Is the concept new? NO Are there precedents? YES
Where? IN THE LOWER 48 (24 STATES HAS PASSED THIS LAW)

12. Is there pending or existing legislation which is similar in focus, and/or which would impact implementation of this bill? proposed drug Bills is STATE LEGISLATION

13. How would this bill affect the Anchorage Health Services Plan? IT WOULD INCREASE AVAILABILITY, IT WOULD ACT AS AN ALTERNATE NATION ENTERING INTO THE HEALTH SYSTEM.

14. What is the Committee's recommendations? do PASS

15. What agencies or bodies should this committee notify regarding action on this Legislation? State RULES, HEALTH SOCIAL SERVICE MUNICIPAL ADMINISTRATN. HSA

REFERENCE QUOTATIONS FROM AUTHORITATIVE AND QUALIFIED PERSONS REGARDING USAGE OF DIAGNOSTIC AGENTS BY OPTOMETRISTS

A. SUBSTANTIATING MINIMAL RISKS TO ADVERSE DRUG REACTIONS

1. "In a series of more than 1000 patients anesthetized with benoxinate, no toxic effects were encountered, either locally or systemically."

   Havener, William H., M.D., M.S. (Ophth.), Ocular Pharmacology, P. 51.

2. "There have been no reported systemic toxic reactions in amounts used for topical anesthesia for the eye."

   Leopold, Irving, M.D., Ocular Therapy Vol. 1, p. 16

3. "None of the drugs I shall be discussing were available fifty years ago...they are all less toxic, less irritating and shorter acting than their predecessors."

   Garston, Mathhew J., O.D., "A Closer look at Diagnostic Drugs for Optometric Use", Massachusetts College of Optometry Boston, Mass.

4. "After having seen the use of local anesthetics discussed here in over 20,000 patients I have yet to see any adverse reactions. I have seen the dilating agents discussed here in over 10,000 patients and likewise have seen no ill effects. (this includes not causing an angle-closure glaucoma)."

   Garston, Matthews, J., O.D., ibid.

5. Seventy to eighty percent of drug reactions are predictable and most are preventable."

   "New England Journal of Medicine" Vol. 285, pg. 1361, June 1971 cited by Lyle W.M., O.D., "Relationship of Pharmaceuticals to Optometry", American Academy of Optometry, 1971.

6. "Abraham in 1933 surveyed the literature for reports of acute glaucoma produced after the use of mydriatics in patients previously free from clinical signs of glaucoma. He calculated an incidence of one case of acute glaucoma for each 18,400 instances of application of anticholinergic eyedrops for refraction of other eye examination.

In Abraham's data it was strikingly evident that age was an important factor in determining susceptibility to acute glaucoma from topical application of anti-cholinergic drugs. In nearly all instances of acute glaucoma the patients were over 30 years of age. Among patients younger than 30 years, Abraham found only four instances of this type of adverse effect in the literature. Also, it must be emphasized that the above one case in 18,400 patients was from a population group who were dilated without the aid of angle evaluation techniques."

Leopold, Irving, M.D. (ed.) Ocular Therapy, Vol. III, Chapter 4 "Conservatism in Glaucoma Management" by Robert Shafferf, M.D. and John Hetherington, Jr., M.D. p. 63

7. "Beach noted that increased intraocular tension from the use of a mydriatic does not occur one in 10,000 examinations."

   Lyle, W.M., O.D. Op. Cit.

8. "Havener says that a physician who dilates many eyes may expect to precipitate not more than one case of acute glaucoma in his lifetime."

   Havener, W. H., Synopsis of Ophthalmology cited by Lyle, W.M., O.D. ibid.

9. "It was reported in Australia that in only one case out of 12,000 can glaucoma be precipitated and then only in people who have a predisposition to react in that way to the drug."

   Parliament, 2nd Session, Vols. 59, 60, 73, Act. No. 34, 1963 the Optometrists Act. 1963, Cited by Lyle W.M., O.D. ibid.

10. "After the child is first examined, the doctor usually tells the mother to instill atropine drops or ointment into the child's eye...Atropine is used because it is the most powerful cycloplegic drug...One in 500 children develops a sensitivity reaction to this cycloplegic drug... The mother should not become alarmed; she should simply discontinue the drug."

    Abrahamson, Ira A. Jr., M.D. Know your Eyes, Medcom Press, 1972, pp. 76-77.

B. ESTABLISHING THE LARGER RISK TO THE PUBLIC HEALTH IF THESE DRUGS ARE NOT ADMINISTERED BY OPTOMETRISTS:

1. "Newell reports that there is more danger of missing a significant ocular of systemic disease by failing to dilate than there is of precipitating glaucoma by dilation."

   Newell, F.W. Ophthalmology, Principles and Concepts, 2nd Edition, C.V. Mosby Co. 1969, p. 140, cited by Lyle W.M., O.D., "Relationship of Pharmaceuticals to Optometry", American Academy of Optometry, 1971.

2. "In their role as the first line of defense against glaucoma and other vision-threatening conditions (Optometrists) must be free to utilize all appropriate tests if they are to continue to bear these responsibilities."

   "Should the patient be deprived of a variety of tonometry test, or of gonioscopy or of tonography because his optometrist was not permitted to utilize a broad spectrum of diagnostic procedures?" Cited by Lyle, W.M., O.D. Ibid p.6

3. "A recent opinion of the attorney general of New York State affirms that it is the duty of the optometrist to use his training to uncover any need for the patient to seek further medical advice."

   Forgotson, E.H. et al Report of the National Advisory Commission on Health Manpower, Vol II, Nov. 1967, U.S. Gov't Printing Office, cited by Lyle W.M. O.D., Ibid p.7

4. "...In view of the unavailability of appropriate medical services, for example in remote areas and in other unusual circumstances, there appears to be a need for optometrists to employ topical anesthetics...optometrists...in many cases... are the first trained person consulted."

   Anon, Joint Declaration on Behalf of Ophthalmologists and Ophthalmic Opticians (optometrists). The Ophthalmic Optician, Feb., 21, 1970 p. 173, cited by Lyle W.M., O.D. Ibid p.7.

5. "In those parts of the world where high quality vision care is generally available, 60% to 80% of this health service is the responsibility of optometrists."

   Lindsey A. Socialized Medicine in England and Wales, National Health Service, 1948-1961, University of North Carolina Press 1962.

6. Woodruff, M.E. "Statement Relating to the Effective Utilization of Optometry and Optometric Services in Fulfillment of the Aims and Objectives of the United States Dept. of HEW", American Optometric Assoc, 1964 cited by Lyle W.M., O.D., Ibid p. 11

7. "With regard of mydriatics, most ophthalmologists agree that any risk produced by employment of mydriatics is far outweighed by the potential risk from failure to see more of the fundus."

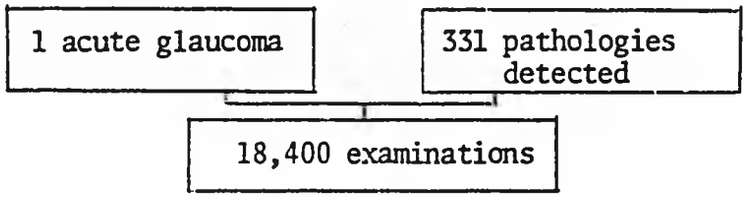
   Lyle, W.M., O.D., Ibid p. 13

8. "Teachers and research workers in the field of vision use mydriatics, miotics, cycloplegics, topical anesthetics and other drugs."

   School of Optometry, Faculty of Science, University of Waterloo, Optometry Education, "The practice and Services of Optometry in Ontario" Part 3 of a Brief supporting and supplementary to the College of Optometry's Brief Submitted to the Committee on the Healing Arts, Nov. 1967, cited by Lyle, W.M., O.D., "Relationship of Pharmaceuticals to Optometry", American Academy of Optometry, 1971.

ABRAHAM: One case of acute glaucoma for each 18,400 instances of application.

HEW: 1.79% of all eye examinations yield an eye pathology.



Safety factor for the one case of glaucoma precipitated:

include in the bill:

"Miotics for emergency use only."

NOT FOR PUBLICATION

THE USE OF DIAGNOSTIC DRUGS IN RHODE ISLAND - A SURVEY

by

Herbert L. Moss, O.D., F.A.A.O.
Associate Professor of Optometry
Pennsylvania College of Optometry

NOT FOR PUBLICATION

Additional remarks regarding the use of DPAs:

1. Greatest advantage to patients, pathology referrals increased, integrity of the profession increased.
2. Mydriatics and binocular ophthalmoscopy are the greatest benefit.
3. Uses ophthaine only for tonometry, hard contact lenses, and first aid.
4. Applanation tonometry with anesthesia is accurate and reliable. Stops over-referrals and promotes proper referral. Perfectly safe in trained hands.
5. Beneficial to patients. Speeds referral to proper practitioner without delay.
6. Patient acceptance is gratifying. I.O.P. measurements are easier, smoother, and faster.

SUMMARY

In summarizing the results of this survey, several generalizations seem to stand forth:

1. From the optometrists' viewpoint, the overall impact on practice and professional status has been positive to very positive.
2. The overall effect upon most segments of the public and other professions has been positive although not as much so with public health and elected officials.
3. The use of DPAs is higher as the age bracket of the patients increases and this could be anticipated because of the high usage of topical anesthetics in tonometry.

4. The 9.5% usage of mydriatics seems to be in keeping with the statistics on the usage of mydriatics in general ophthalmological practice.
5. The very low incidence of the use of miotics as a post-mydriatic also reflects the state of the art today.
6. In regard to the effect upon practice, it appears that DPAs tend to simplify optometric practice, but increased the time spent per patient in collateral activities.
7. DPAs seem to have increased the number of procedures and the variety of equipment that optometrists utilize.
8. One crucial issue raised during the legislative hearings was the supposed adverse reactions to DPAs that would occur. The responses to this survey indicate that those claims were totally unfounded.
9. One area that should be stressed is the increase in the referral rate across the board and particularly the increase in the referral for suspected glaucoma by more than two thirds of the responding optometrists.
10. The question of whether optometrists should become involved in limited ocular therapy brought a 72% favorable response. However, five of those responding in the affirmative made an unsolicited point that additional education and clinical training should be part of this activity.

In substance, it appears that the use of DPAs by optometrists in Rhode Island has been beneficial to all parties involved, even those who opposed the legislation, and that the concerns raised by the opponents were exaggerated.

CONCLUSION

We, the optometrists of Alaska at this point in our development, submit our qualifications in an effort to protect our patients against preventable eye disease. We must now close the gap between what the courts are demanding of us and what the laws are allowing of us.

With emerging national health care, we see only a future of increased visual and eye health care needs. We enthusiastically accept that with a sincere dedication. Yet, in so doing, we find ourselves in need of some diagnostic tools.

The optometry motto remains clearly in the minds of all Alaskan optometrists: "Next to life itself, God's greatest gift is sight."

1979--TESTIMONY BEFORE

HOUSE HES COMMITTEE

TESTIFYING

Dr. Sam McConkey: Physician and surgeon, diplomat of the American Board of Ophthalmology, Fellow in the American Academy of Ophthalmology, Practicing ophthalmologist in Fairbanks.

Dr. Marvin Grendahl: Physician and surgeon, Ph.D. in Physiology, Practicing ophthalmologist in Anchorage.

Dr. Roger Page: Physician and surgeon, board certified ophthalmologist, practicing ophthalmologist in Juneau.

Dr. Boyd Walker: Optometrist, private practice in Anchorage.

NO ALASKA OPTOMETRIST HAS BEEN TAUGHT BY A M.D. OR PH.D. OR OPHTHALMOLOGIST

Dr. McConkey speaking: "After reviewing the professionals and staff of their schools, I can tell you that not one optometrist in Alaska has had any pharmacology training from any M.D. or Ph.D. in pharmacology. I can tell you that not one optometrist in Alaska has had any instruction in anything that a full time M.D. on any staff and not one optometrist in Alaska has had any full or part time instruction either in class or in clinic study by an ophthalmologist."

THE TREND IS CLEAR, INFORMED PUBLIC AND LEGISLATURE WILL DECIDE. 31 STATES ALLOW DPA'S

Dr. McConkey speaking: "In 1977, 17 states defeated this form of legislation. There were four states that allowed it. In 1978, fifteen states said no. Two allowed. The trend is clear. That once an informed public and legislature is aware of the fact, it has been overwhelmingly defeated in legislature across the country."

Answer by optometric legislative committee--not on tape

Name of State	Date of Enactment
Rhode Island	July 16, 1971
Pennsylvania	March 1, 1974
Tennessee	May 8, 1975
Oregon	May 20, 1975
Maine	June 24, 1975

Louisiana	July 6, 1975
Delaware	July 10, 1975
*West Virginia	March 4, 1976
California	July 9, 1976
Wyoming	February 17, 1977
New Mexico	March 4, 1977
Montana	April 12, 1977 (at 10:10 a.m.)
Kansas	April 12, 1977 (at 2:00 p.m.
*North Carolina	June 3, 1977
Kentucky	March 29, 1978
Wisconsin	April 29, 1978
Nebraska	February 13, 1979
South Dakota	March 15, 1979
Utah	March 21, 1979
North Dakota	March 22, 1979
Arkansas	April 2, 1979
Nevada	May 25, 1979
Iowa	June 8, 1979

*Both diagnostic and theraputic

In addition, there are eight (8) other states that do not statutorily prohibit the use of DPAs by optometrists; several of these states have attorney general opinions (+favorable) (-unfavorable) on this point:

Alabama (AG-)
Florida (AG+)
Idaho (State Board Statement +)
Indiana (AG+)
Michigan
Minnesota
New Jersey (AG+)
Virginia (AG-)

DIALATING THE EYES IS NOT NECESSARY IN MAKING A DIAGNOSIS OF EYE DISEASE OR SUPPLYING CHILDREN WITH PROPER GLASSES CORRECTION. (CONTRARY TO DR. GRENDAHL'S TESTIMONY)

Dr. McConkey speaking: "Dialating the eyes is not a prerequisite of making a diagnosis of eye disease. The truth is that general practitioners and other physicians across the country routinely exam eyes thousands of days without dialating eyes that are quite capable of diagnosing problems that they see. Dialating the eye with drops is not a prerequisite to supplying children with the proper glasses correction.

WHY DO YOU DIALATE THE PUPIL?

Legislator's question to Dr. McConkey: "Can an adequate examination be made of the eye without dialating pupils, and if it can, as I think you indicated here, then why do you use, why do you dialate the pupil when you are examining the eye?"

MY OBLIGATION IS TO DETECT ANY ASPECT OF DISEASE AND DIALATING THE EYE GIVES ME A BETTER CHANCE.

Dr. McConkey's Answer: "To the first question, the answer is yes, an adequate exam can be done but the second part, why do I dialate the eye? My obligation is to detect any aspect of disease that might be present and in some cases of decreased vision, sometimes I can't even tell that even if dialating the eye but it would give me a better chance. You're suppose to know what to look for. Some of these conditions are very far peripheral and can't be seen easily but their vision is decreased. It certainly helps us in evaluating what the problem is, and I think I have an obligation with the first time patients to make sure that's what kind of base we are starting on."

DIAGNOSIS NOT IN OPTOMETRY LAW.

Dr. Grendahl speaking: "The state statutes in Alaska specifically limit the definition of optometry. Not only do they not use drugs, no language is put in there about diagnosis."

Answer by optometric legislative committee--not on tape

Sec. 08.72.300 Definitions.

(3) "Practicing optometry" means the diagnosis by mean or methods other than the use of drugs, of an optical

deficiency or deformity, visual or muscular anomaly of the human eye, or the prescription of lenses, prism or ocular exercises for the correction or relief of the human eye or the holding of oneself out as being able to do so;

IF DROPS ARE SO HAZARDOUS, WHY DO YOU USE THEM?

Legislator's question to Dr. Grendahl: "I hear considerable testimony on the hazardous nature of the drops in question and the question I have for you is that if, in fact, they're such a hazardous nature at the present time that you elect not to use it on many of the natives, why do you use it on anyone?"

YOU HAVE TO DIALATE TO SEE IF THE BACK OF THE EYE IS FREE OF DISEASE.

Dr. Grendahl's answer: "Let me describe the eye as a sphere, okay? Front aspect of it is a lens system. Back surface is a film. If a person comes in with a complaint of flashing lights or seeing spots, or a white curtain comes down over the eye. We have to dialate the eye with, like with the element in neosynophrin, in order to see that retinal detachment, okay? In order to see that retinal detachment you have to get way out to the periphery, way out to the front edge of the film. . . . So by dialating the eye fully we can get way out to the periphery but we need to know their systems. . . . That's why we use dialating drops in the eye for that instance."

YOU HAVE TO USE DROPS TO GET A PRESCRIPTION FOR A CROSS-EYED CHILD.

Another instance why we use dialating drops is that the patient comes in, a little child comes in with a crossed eye, okay? If a child has a crossed eye, we have to do a psychoplegic refraction. All that means is we put a drop in the eye not to dialate the pupil but to put the lens at the primary station. That way we can determine the whole

refractive error of the eye and determine the therapy. Number one would be to prescribe the whole psychoplegic refraction of the glasses. If they have the eye deviating in after the full psychoplegic refraction, with glasses prescribed, then surgery has to be done. . . . So that's why we as ophthalmologists use dialating eye drops.

IF DROPS ARE DANGEROUS, WHY DOES MY EYE DOCTOR USE THEM EVERYTIME ON MYSELF AND MY CHILDREN.

Legislator's question to Dr. Grendahl: "I wear glasses. I've had drops several times. My two children that I've taken in have their eyes examined. There was no black curtain or crossed eye or any of these particular things you've described and every, every time I've gone in, their eyes have been dialated, and I guess what I'm hearing is that the drops are very dangerous. All sorts of things can happen. . . . They've been used very frequently when I've gone in."

DIALATE EVERYONE OVER 52 YEARS OLD.

Dr. Grendahl's answer: "If you come into my office, if I don't see any indication to use the drops, I don't use them. I will use it though in someone that's over age, like 52 or 53. Why? Because the incidence of pathology in a 52 year old and older is higher, namely methostatic breast cancer, prostatic cancer, lung cancer. So in those cases, I will dialate everyone over that particular age, but for routine refraction, and if you were not in that age group, I wouldn't probably dialate your eye unless I saw some real reason to: visual imbalance, field imbalance, pupil abnormality, pigmentation of the iris. My only comment is that other physicians have other feelings about it."

PHYSICIAN ASSISTANTS DIAGNOSE AND PRESCRIBE MEDICINE.

Legislator's question to Dr. Page: "Is it not a fact that physician assistants in this state do diagnose and prescribe medicine without the same benefit of training as the medical doctor?"

Dr. Page's Answer: "That's true."

HOUSE BILL #79

"PRACTICE OF OPTOMETRY"

To Include

DIAGNOSTIC AGENTS

TABLE OF CONTENTS

I. WRITTEN TESTIMONY

1. GEORGE HALL, O.D.
President, Alaska Optometric Association

Doctor Hall represents approximately 95% of the state's optometrists. He shows how the diversity of the state's population and the need for vision care in remote areas make it essential that optometrists be allowed to use diagnostic agents.

2. ROBERT HOLCOMB, O.D.
Past President, Oregon Optometric Association

Doctor Holcomb represents approximately 80% of the Oregon optometrists. He indicates the concerned need to enact legislation which would allow optometrists an increase in their visual examination capabilities through the use of diagnostic agents.

3. WILLARD BLEYTHING, O.D., M.S.
Dean, College of Optometry
Pacific University

Doctor Bleything refers to the professional curriculum which presently qualifies optometrists to utilize diagnostic agents. Over 50% of Alaska's optometrists obtained their professional training at Pacific University.

4. RONALD H. WINTERS, Ph.D.
Assistant Dean, School of Pharmacy
Associate Professor of Pharmacology and Toxicology
Oregon State University

Doctor Winters has reviewed the pharmacology curriculum at Pacific University, College of Optometry, and found it to be appropriately constructed and the use of diagnostic agents by optometrists to be a safe procedure for the improvement of patient care.

II. SUPPLEMENTARY INFORMATION REGARDING HB #79 (OPTOMETRISTS DIAGNOSTIC AGENTS USAGE)

A. The Usage of Topical Eye Examination Drugs by Optometrists

By: Darrell B. Carter, O.D., Ph.D.
Clinical Professor of Optometry
School of Optometry
University of California

This paper was prepared to present to members of state legislatures and to other interested persons the reasons why optometrists desire legislative authorization for the use of ocular examination drugs.

B. Questions and Answers on the Optometry Bill (HB #79)

This summarizes and briefly answers the key questions most frequently asked.

C. Some Points Relative to the Use of Drugs by Optometrists

By: Leonard Levine, Ph.D.
Professor
College of Optometry
Pacific University, Oregon

Dr. Levine has received numerous grants to research the chemistry and physiology of diseases such as muscular dystrophy. He is highly respected as a professor as well as researcher in the areas of physiology and neurophysiology. In order to be effective as such, a special understanding of pharmacology is inherent.

He makes a number of important points relative to the use of drugs by optometrists.

D. Statutory and Judicial Aspects

1. House Bill #79

This bill would re-define A.S. 08.72.300(2) "OPTOMETRY" and (3) "Practicing Optometry".

Addition of a new A.S. § 08.72.305 "USE OF DRUGS FOR DIAGNOSIS".

A.S. 17.15 is amended by adding to Article 1, § 17.15.055 "Sales to Optometrists".

2. Complete Alaska Revised Statutes

3. Supreme Court of Oregon, 1947

State ex rel. Sisemore v. Standard Optical Co., 182 Or. 452-467

The following are some points made in this case:

a. An optical company cannot employ an optometrist because this interfers with the optometrists' trusted and fiduciary relationship with his patient.

b. Optometry must be classified a true "profession" and not a "trade".

". . . an optometrist . . . training enables him to diagnose pathological conditions . . . The fact that he is trained to diagnose pathological conditions in itself indicates that the optometrist is not a mere skilled craftsman or mechanic."

(The entire Supreme Court case may be obtained upon request.)

4. Civil Action No. F 76-35 Civ.

Ferdinard v. Board of Dispensing Opticians (page 104 and 105) defines "routine visual examination" as given by optometrists. The extensiveness the optometrist must examine for eye pathology is expressed.

d. External Examinations (lids, cornea, sclera, etc.)

e. Internal Ophthomoscopic Examination (media, fundus, etc.)

f. Ocular motility

g. Neurological integrity

k. Confrontation fields

l. Tonometry

5. Diagnostic Drugs Terminology Clarification from Oregon Law

a. Oregon Attorney General Opinion #5807 (1964) clarification regarding the term: DIAGNOSIS.

This Oregon Attorney General Opinion states that the "Practice of Optometry" includes pathology diagnosis. In addition, Oregon statutes governing the practice of medicine, do not prevent diagnosis by optometrists

after reference to the 1947 Supreme Court case, State ex rel. Sisemore v. Standard Optical Co., 182 Or. 452, Attorney General Thornton says:

". . . an optometrist, as a part of his services . . . has a duty to use his professional training, skill and knowledge, while he is performing his primary function, to determine whether his patient is afflicted with an abnormal or pathological condition of the eye . . . ."

b. Alaska Statutes Clarification regarding the term: DRUGS.

The inclusion into the Optometry Statutes of the term diagnostic pharmaceutical agents does not conflict with Chapter 64, Medicine.

Section 08.64.380 definitions:

(2) "Practice of medicine" or "Practice of Osteopathy" means:

(D) for a fee prescribing, directing, or recommending for the use of a person, a drug or medicine for the treatment, cure or relief of a disease, infirmity, bodily injury or defect; . . . .

Diagnostic drugs are not mentioned in the practice of medicine, only drugs or medicine for treatment are spoken to.

6. Report from the Secretary of the Department of Health, Education and Welfare (HEW), 1971

This report concerns itself with the optometrists' responsibilities for disease detection.

E. How the Diagnostic Agents relate to:

1. Other States:

Thirty-one states allow optometrists to use diagnostic agents. Other states are making legislative efforts.

2. Other Countries:

a. Within the large english speaking countries of Canada, Australia, and England, optometrists may use diagnostic drugs.

b. England's joint declaration February, 1970, by optometrists and ophthalmologists confirm the many beneficial years and announce the continuation for the usage of diagnostic agents by optometrists in the future.

3. The United States Armed Forces:

All branches of the military either allow or specify in their regulations that optometrists shall be permitted the usage of diagnostic drugs.

F. Educational Qualification by Oregon Optometrists

1. Statement on Pharmacology Training in Optometry in Oregon, 1975
By: L. Levine, Ph.D.

2. Curriculum Comparison on Pharmacology between:

Oregon Medical School
Oregon Dental School
Oregon College of Optometry

3. Association of Schools and Colleges of Optometry (ASCO)

This study suggests pharmacology curriculum guidelines for continuing education courses for practicing optometrists. Should legislation pass, this guide would serve as a framework for setting up such a program.

4. 1973 National Board of Examiners in Optometry

All applicants for Board certification to practice optometry in Alaska must pass all of the written sections of the National Boards with a minimum score of 70%.

Enclosed copies of sections related to diagnostic agents:

	Hours of Testing
Ocular Pharmacology	1 hr.
Ocular Pathology	2 hrs.

Other sections of the Boards not included but available upon request:

	Hours of Testing
Ocular Anatomy	2.0 hrs.
Visual Science I	2.5 hrs.
Visual Science II	2.5 hrs.
Theory and Practice of Optometry	2.5 hrs.
Theoretical Optics	3.0 hrs.
Ophthalmic Optics	2.5 hrs.
Social, legal, ethical, economic and professional aspects of optometry	1.0 hrs.
	19.0 hrs. testing

5. List of the United States Optometric Colleges and Schools

G. Oregon State University, School of Pharmacy statement
By: Charles O. Wilson, Ph.D.
Dean of Pharmacy
Oregon State University

Emphasis is on the importance of bringing the patient into the Health-Care System. He states:

> "This Bill will make is possible for optometrists to carry out diagnostic procedures to identify any pathological condition during the course of the examination . . ."

University of Maryland, School of Pharmacy statement
By: Peter P. Lamy, Ph.D., F.C.P.
Director of Pharmacy Programs
University of Maryland

Dr. Lamy concludes saying:

> "The benefits from the topical use of drugs far outweighs the risk to vision. There is simply no good way to obtain a satisfactory view of the interior of the eye unless the pupil is dilated."

H. Alaska Board of Examiners in Optometry

Just as all other regulatory responsibility on optometrists is placed with this Board, likewise, it would be charged with the additional responsibility of certification of optometrists for diagnostic drug use. This Board would see that not only the

educational course work had been completed but that through examination, a clear understanding of pathology and disease detection with the use of diagnostic agents does in fact exist.

I. Alaska Manpower Regarding Vision and Eye Health Care

The optometrists of Alaska are geographically more evenly distributed so as to meet the needs of the people. Ophthalmologists are primarily concerned with eye surgery and, therefore, are concentrated around larger population areas where more extensive hospital facilities are available.

As the National Health Care program emerges, along with other increasing group insurance programs, the need for better referral channels must be established. Diagnostic agents can make pathology detection more effective and resulting referrals more accurate.

Enclosed:

1. Alaska Distribution Map on Vision and Eye Health Care
2. 1979 listing on:
   a. Resident Optometrists in Alaska (32)
   b. Resident Ophthalmologists in Alaska (17)

J. Probable Objections to HB #79

K. American Association of Ophthalmology Public Relations Pamphlet on "Drops"

The emphasis is that only a proper examination can be made with eye drops. It then strongly states that only ophthalmologists are allowed to use them. The P.R. results are obvious.

L. Supportive Letters from Medical Doctors Outside of Oregon

These letters speak directly to the minimal adverse side affects and maximal benefit to the patient.

M. Supportive Letter from Medical Doctors and Optometrists Within the State of Alaska

These letters speak directly to the use of diagnostic agents by optometrists in the State of Alaska.

N. Reference Quotations from Authoritative and Qualified Persons Regarding Usage of Diagnostic Agents by Optometrists

1. Substantiating minimal risks to adverse drug reactions.

2. Establishing the larger risk to the public health by not having these drugs administered by optometrists.

O. Long-Term Study of the Use of Diagnostic Agents in Rhode Island by Optometrists

For eight years optometrists have been using diagnostic agents with the overall effect of increased number of referrals, with no adverse effects. The overall benefit to the patient was emphasized because of pathology detection and speedy, proper referrals. (Only summary and conclusion included. Further information can be had on request.)

P. Conclusion

The
ALASKA OPTOMETRIC ASSOCIATION
AFFILIATED WITH
AMERICAN OPTOMETRIC ASSOCIATION

PRESIDENT

I. My name is George L. Hall, O.D. I am a Doctor of Optometry. My education consists of a B.S. in Math and Biology in 1967 from Regis College, Denver, Colorado, and received my Doctorate of Optometry from the University of Houston in 1971. I have practiced full time in a group practice in Anchorage.

Today you are going to have to make a very difficult decision between two points of view from two well-meaning professions. There may be emotion and accusation in some of the statements made, but I urge you to decide on fact and fact alone.

By introduction of this bill, Optometry is asking to use a very limited number of drugs in furthering its attempt to provide the finest vision care to all Alaskans. We feel passage of this bill will enable early detection of pathology in all patients and at the same time provide a more efficient, less costly eye health care system. We intend to use these only in a limited diagnostic manner, and in no way, or at no time, intend to extend their use to theraputics. Don't be mislead by critics who see in our request to use diagnostic agents the desire of optometrists to treat pathologic conditions. Our sole aim is to improve our detection skills and refer--not treat. Diagnostic agents are not treating agents. We do not wish to practice medicine!

II. Major questions concerning HB 79.

1. Is the legislation necessary?

Statistics from the Health, Education and Welfare Department show that 52% to 58% of the population is estimated to have correctible vision disorders (Myopia, Hyperopia, Astigmatism, etc.).

The Better Vision Institute says that 45% of the population wears glasses and that one-third of those wearing them are in need of re-examination at any given time.

H.E.W. says that 63% of visual examinations last year were conducted by optometrists. Here in Alaska I feel the number may be as high as 75%.

H.E.W. says 17.9 per thousand patients have a condition that requires further medical care.

These statistics point to the need for this legislation since it is well known that many who seek vision care do not routinely seek general medical care, and, therefore, the optometrist is the first to see many pathological conditions which need to be referred for medical care.

It was for these, and other reasons that the Secretary of H.E.W. in 1971, Elliott Richardson, filed a report with the President and Congress which says in part ". . . the Optometrist is a primary entry point into the health care system since he sees the majority of patients seeking eye care in the nation."

In addition, the report contained the following language concerning optometry's role in the health delivery system.

> "Optometrists are trained to detect any departure from the optimally healtny eye. The scope of optometric services has expanded beyond basic clinical refractions, fabricating, and dispensing eyewear; now included are visual screening examinations, clinical instrumentation, contact lens fitting, visual training, orthoptics, low-vision aids for the partially sighted, artificial eyes, industrial visicn consultation and public and community health . . . The Optometrist is trained, and bound by professional ethics, to refer patients in whom indications of disease have been found, to a physician or other health practitioner for definitive diagnosis and appropriate medical, surgical, or other treatment."

H.E.W., in its desire to promote the highest quality of health care for the public, has made a number of policy decisions concerning optometry.

In its Health Professional Project Grant for 1975, it has mandated the optometric profession to ". . . devise, demonstrate, and implement provision for inter-discipline training which will encourage the use of health care teams, and to devise projects to develop affiliation between optometric training programs and medical, osteopathic, and other health professions training programs, and academic institutions, . . . including programs for cooperative interdisciplinary training in the use of the team approach to the delivery of health services."

Therefore, to the question "Is there a need for this legislation?", the answer we strongly feel is Yes!

In 1947, the Supreme Court of the State of Oregon in the case of Sisemore v. Standard Optical, 182 Or 452, 460-461, 188 and 309-312-313, has unequivocally answered the question. The court stated on page 460:

> As to the liability of Optometry in the area of diagnosis, the practice of Optometry is undoubtedly one of the subdivisions of the practice of medicine.

The court went on to say on page 461:

> While it is true that an optometrist is not permitted by law to treat diseases of the eye, nevertheless his training enables him to diagnose pathological conditions, and his duty requires him to refer the patient to a practitioner who is qualified to treat such conditions. The fact that he is trained to diagnose pathological conditions in itself indicates that the Optometrist is not a mere skilled craftsman. His failure to diagnose a pathological condition, with resultant delay or neglect in proper treatment therefore, might result in serious impairment of the patient's eyesight, or even in blindness.

In a letter from Robert Thornton, Attorney General, State of Oregon, dated May 12, 1964, to Mr. Howard Bobbitt, Executive Secretary, State Board of Medical Examiners, citing the same decision he says:

> It thus appears that the term practice of optometry as construed by our Supreme Court contemplates that an Optometrist as a part of the services he renders his patient, has a duty to use his professional training, skill and knowledge while he is performing his primary function, to determine whether his patient is afflicted with an abnormal or pathological condition of the eye which may require treatment by a person legally qualified to render such service. He is also required to advise such patient if he finds what appears to be a pathological condition so that the patient may seek treatment from a legally qualified person.

Therefore, the answer to the question of whether we as optometrists are qualified to detect pathology has been already, very explicitly, answered by the courts in Oregon and nationwide.

From our early beginnings as a profession, we have over the years vastly improved, through our educational institutions, the state of the art and science of optometry to a place where we are recognized now as a highly specialized member of the health care team devoted to the visual well being of the public.

Use of these drugs can aid in the early detection of both eye diseases such as retinal tears, glaucoma, cataract formation and in the systemic diseases such as diabetes, arterial sclerosis, high blood pressure or cancer, to name a few. According to literature put out by the American Association of Ophthalmology in which they answer the question of the necessity of using drops, the literature answers by stating that it enables the doctor to observe the first signs of eye disease or sometimes the first signs of disease elsewhere in the body. It goes on to say that these drops are especially useful in older people and children and are necessary to test for glaucoma. It closes by saying that these drops are "often the key to the prevention to blindness and even the saving of the eye itself."

It should be clear that <u>both the profession of optometry and the profession of medicine are in agreement on the value of these drops</u> even though there may be a few individuals who feel threatened by passage of this type of legislation.

The issue then stems not from whether these drops are safe or unsafe, good or bad, but on whether an optometrist is sufficiently trained to diagnose eye disease and to use these drugs in a proper manner.

I am certain that you will be told by a few ophthalmologists that only they should be able to use these drugs. They have chosen to ignore our responsibilities and our extensive training in what they refer to as medical subjects. They may tell you that these drugs could have some side affects such as increasing a patient's blood pressure, his heart rate, or result in an allergic reaction.

We do not disagree with the possibility of this happening but wish to point out that these reactions are considered in ophthalmological literature to be extremely rare. I would also like to point out that all optometry

students are being trained in contraindications for the use of these drugs and the bill provides that all practicing O.D.s who wish to use them must return for this additional schooling and re-certification by the State Board of Examiners.

It is also worthy to note that according to ophthalmological literature, one case of angle closure glaucoma will occur in every 18,400 patients whose eyes are dilated in a routine basis. Optometrists who will be dilating eyes, however, are trained to screen out those individuals for whom this procedure could be hazardous.

Along with this extremely minimal risk, however, should be mentioned the great benefits which will result. H.E.W. tells us that in those same 18,400 individuals there will be 329 cases of disease which, if undetected, could cause possible blindness or have other serious consequences. It is also interesting to note that our opponents have chosen not to complain about other professions such as dentistry who have similar training and responsibilities or medical emergencies and yet use stronger injectable drugs.

As stated previously, optometry conducts a great majority of visual examinations: 63% nationwide to possibly as high as 70-75% in Alaska. In my practice alone, there are five optometrists seeing between twenty to sometimes thirty people per day, and there are six to seven other practices in Anchorage just as busy not to mention the rest of the state where ophthalmolical density is even lower than it is in Anchorage. NOTE: Distribution may included.

In 80% of our patients there is little difficulty seeing the back of the pupil, but, in the rest, difficulty in seeing the retina can produce doubt; therefore a referral may be necessary.

On the one hand we are expected to continue to do a most thorough visual examination of our patients and are encouraged by governmental agencies such as H.E.W. to expand our efforts to work with other health care professions in providing wider health care.

On the other hand we are held legally responsible for the detection of pathological conditions but are denied the use of important aids to detect them for the Alaska Optometric Law excludes our employment of valuable tools such as diagnostic agents to aid in the detection of pathologic conditions in the eye.

We ask for relief from that situation.

affiliated with the american optometric association

Oregon Optometric Association

My name is Robert Holcomb, I am a Doctor of Optometry and President of the Oregon Optometric Association. The object of our Association as stated in our constitution is to improve the vision care and health of the public.

Before I get into the Association's reasons for supporting this bill I would like to clear up two areas of confusion. They have to do with the safety of these pharmaceuticals and with an optometrist's training in this area. So that you might have an opportunity to hear and question the top men in these fields, I have asked both the Deans of the College of Optometry Pacific University, Dr. Willard Bleything and the Assistant Dean of the Pharmacy School at Oregon State University, Dr. Ronald Winters, to speak to these points.

You have heard the facts about the relative safety of these drugs and the exstensive training of an Optometrist. I would now like to go into the detail about the two reasons that Optometrists wish to use these drugs. First of all, I am sure that every Doctor of both optometry and medicine would agree that it is in the interest of the public to have their eyes routinely examined for both vision problems and health problems which can be observed within the eye. Ophthalmologists have been saying for years that these drugs are necessary tools for the early detection of disease and for the evaluation of vision problems.

A few of the off hand remarks heard in earlier testimony expressed the opinion that the diagnosis of disease conditions is outside the scope of the practice of optometry. I respect the opinions of these individuals but wish to point out that they are only opinions in direct contrast to the law written as the Optometric Practice Act and interpreted by the highest court in our state, the Oregon Supreme Court. If I may quote from their decision handed down in the case of Sisemore versus Standard Optical "the practice of optometry is undoubtedly one of the subdivisions of the practice of medicine."

The court went on to say "his training enables him to diagnose pathological conditions ... his failure to diagnose pathological conditions with resultant delay or neglect in proper treatment therefore might result in serious impairment of the patients eyesight or even in blindness." The Attorney General has so informed the State Board of Medical Examiners. Despite this opinion of the Optometric Practice Act by the Supreme Court there are a few individuals who insist on issuing their own opinions.

The first reason for this bill then is simply that since Optometrists have the responsibility to detect disease they should have the tools with which to carry it out.

The second reason is that the use of these diagnostic agents would be in the interest of the public. Health Education and Welfare tells us the 63% of all vision examinations in the United States were conducted by O. D. s in 1974. H. E. W.

identifies optometry as an entry point into the health delivery system since we see many patients who routinely get vision examinations — but not physical exams.

The State of Oregon Department of Human Resources tells us that in 1974 85% of all Welfare patients were examined by Optometrists.

Use of these drugs can aid in the early detection of both eye diseases such as retinal tears, glaucoma, cataract formation and in the systemic diseases such as diabetis, arterial sclerosis, high blood pressure or cancer, to name a few. According to literature put out by the American Association of Ophthalmology in which they answer the question of the necessity of using drops, the literature answers by stating that it enables the Doctor to observe the first signs of eye disease or sometimes the first signs of disease elsewhere in the body. It goes on to say that these drops are especially useful in older people and children and are necessary to test for glaucoma. It closes by saying that these drops are "often the key to the prevention to blindness and even the saving of the eye itself."

It should be clear that both the profession of optometry and the profession of medicine are in agreement on the value of these drops even though there may be a few individuals who feel threatened by passage of this type of legislation.

The issue then stems not from whether these drops are safe or unsafe, good or bad, but on whether an Optometrists is sufficiently trained to diagnose eye disease and to use these drugs in a proper manner.

I am certain that you will be told by a few Ophthalmologists that only they should be able to use these drugs. They have in previous testimony chosen to ignore our responsibilities charged by the supreme court and our extensive training in what they refer to as medical subjects. They may tell you that these drugs could have some side affects such as increasing a patients blood pressure, his heart rate or result in an allergic reaction.

We do not disagree with the possibility of this happening but wish to point out that these reactions are considered in ophthalmological literature to be extremely rare. I would also like to point out that all optometry students are being trained in contraindications for the use of these drugs and the bill provides that all practicing O.D.s who wish to use them must return for this additional schooling and re-certification by the State Board of Examiners.

It is also worthy to note that according to ophthalmological literature one case of angle closure glaucoma will occur in every 18,400 patients whose eyes are dilated on a routine basis. Optometrists who will be dilating the eyes, however, are trained to screen out those individuals for whom this proceedure could be hazardous.

Along with this extremely minimal risk, however, should be mentioned the great benefits which will result. H.E.W. tells us that in those same 18,400

individuals there will be 329 cases of disease which if undetected could cause possible blindness or have other serious consequences. It is also interesting to note that our opponents have chosen not to complain about other professions such as dentristry who have similar training and responsibilities for medical emergencies and yet use stronger injectable drugs. If you have any questions we stand ready to answer them.

Robert Holcomb, O.D.
President
Oregon Optometric Association

TESTIMONY

House Bill 2740 Practice of Optometry to include Diagnostic Agents

Willard B. Bleything, O.D., M.S., Dean
Pacific University College of Optometry
Forest Grove, Oregon
April 22, 1975

My name is Willard B. Bleything and I am the Dean of the Pacific University College of Optometry, the only professional institution in the Northwest in the discipline of optometry. In addition to the Bachelor of Science (B.S.) degree I have a Doctor of Optometry degree (O.D.) from Pacific University along with a Master of Science degree (M.S.) in Clinical Optometry. I have been on the faculty of Pacific University and the USAF School of Aviation Medicine, Air University. My experience also includes sixteen years of private practice. Offices held include President of the Oregon Optometric Association, Oregon Board of Optometry (Examiners) and a member of the Professional Development Division, American Optometric Association. I am a Fellow of the American Academy of Optometry.

It is my pleasure to present these remarks on HB 2740. The bill is well constructed, technically sound and is consistent with the well-founded direction that public policy is taking in the other states. Most important of all, it is consistent with the best interests of the public welfare and the ways by which optometry better can serve public need. The legislature of Oregon first caused the profession of optometry to be recognized, licensed and regulated in 1925. The optometry law, much like that in each of the states prescribes the conditions by which a recent graduate from one of the schools and colleges of optometry, following rigorous and well tandardized inquiry by a multi-faceted written and practical board examination, is then licensed to practice

and is regulated in the practice.

Today the curriculum of the thirteen (soon to be fifteen) schools and colleges of optometry consists of an intensive four years of professional collegiate work preceded by a minimum of two years of pre-professional undergraduate collegiate experience. The vast majority of students are entering the optometric colleges with a bachelor's degree. Thus six, and in most instances eight years of university level education and training comprise the very substantial background of the modern optometrist. The number of qualified and acceptable applications for each seat available are better than thirteen to one with outstanding academic and personal credentials.

Our clinical program at Pacific University encompasses care in a variety of social and professional settings including a full scope general and specialty clinic on the main campus and in downtown urban Portland; a general practice clinic in the Albina Action Center and a geriatric-low vision clinic in the Masonic Home, Forest Grove. Students are also exposed to public health optometry in their involvement in visual screening clinics throughout the state serving more than 4,000 citizens annually in this activity alone. Many of these are conducted at the request of County Health Departments and local school districts. Incidentally, I must add that in more than thirty years of clinical operation encompassing hundred of thousands of patient-visits the institution has never experienced a malpractice suit-indeed a remarkable record in the field of health care. More than fifty professionals make up our faculty - all with earned doctorate degrees represent expertise as anatomists, physiologists, microbiologists, neuroanatomists, biochemists, clinical psychologists, optometrists, and ophthalmologists. To follow a general pattern it can be seen that the Ph.D. offers instruction in the basic sciences, the O.D., - Ph.D. combination offers

instruction in the visual sciences, and the O.D. and M.D. offer instruction in the clinical sciences. The optometric student thus gets formal transcript quality university level courses in Human Anatomy, Ocular Anatomy and Physiology, Human Physiology, Microbiology, Neurology, General Pathology and Ocular Pathology and Ocular Pathology Detection and Visual Fields, or a method of examining for and differentiating between various eye disease processes. They also receive a didactic comprehensive course in Pharmacology. All of this material is taught by doctorates in the appropriate disciplines parallel to the same professional positions of any health professions school. In addition to this one of the various specialty clinics during the clinical years is entitled Pathology Detection. Patients suspected of having pathological disorders are referred for consultation to this clinic. Presently this is staffed by a Board Certified Ophthalmologist (M.D.). Patients suspected of having conditions that may benefit from the services of a physician are referred to sources in the community for consultation. For example, over the past years Pacific University Optometric Clinic (Portland) has sent an average of two hundred and fifty patients per year to the Good Samaritan Hospital Devers Eye Clinic for consultation purposes.

During the past generation as optometric education significantly increased its scope of learning and competence with the attendant expansion of all knowledge in the sciences of health care it was recognized that the use of diagnostic pharmaceuticals would add a useful and important opportunity to render more comprehensive visual care services to the public it now serves. In recognition of this newer direction courses for the profession in core areas in the basic sciences were substantially strengthened.

The Bill proposed deserves the support of this legislative body.

1. Optometry is prepared educationally and intellectually to undertake the use of diagnostic pharmaceuticals in the practice of the profession.

2. Passage of the proposed legislation does not advance professional responsibilities of the scope of the license of the optometrist as a vision care practitioner. Rather it offers the public a more rational and intelligent use of the present educational expertise.

3. There is no fiscal implication in this legislation since the methods not the scope of legal responsibility would be advanced.

4. Like our professional counterparts in dentistry and podiatry, two professions outside the discipline of medicine, the use of pharmaceuticals with an appropriate knowledge and educational base have been well established in law and in practice. There is provision in this Bill for additional education. Pacific University College of Optometry stands ready to provide this additional education to the practicing community of optometry.

In looking into the future I close with this comment. Dr. Albert N. Lemoine, a physician, professor and chairman of the Department of Ophthalmology, University of Kansas Medical Center states, "The number of residents in training in ophthalmology programs will be reduced in the near future." He goes on to say,"One year of the optometric students educational experience should be where they can observe patients with disease. Optometry will be recognized as one of the primary care entrances to the eye health care system and especially in rural areas and smaller cities. Optometrists will be able to use topical drugs for diagnostic purposes in all or nearly all states and an increasing number of optometrists will be practicing in the multi-disciplinary setting." Dr. Lemoine goes on to say, and I quote "I realize that many of my

colleagues will not agree with the above position but if we are truly interested in the public welfare this should and can be done."

It seems there is general agreement among the educators in ophthalmology and optometry as to the new trends and mode of practice. We, as an institution, are committed to supplying these educational needs of the future. Legislative assistance is needed to carry out this commitment.

School of Pharmacy

Oregon State University

Corvallis, Oregon 97331 (503) 754-3725

29 January 1975

In studying and evaluating the proposed legislation authorizing the use of diagnostic pharmaceutical agents (DPA's) by optometrists, three principal questions have emerged relative to my areas of expertise as an educator specializing in curricular design and as a pharmacologist: 1) is the overall curricular design utilized by the College of Optometry at Pacific University appropriate for the education and training of optometrists to use DPA's in their practice; 2) is the specific curricular component concerned with pharmacology appropriately constructed; 3) from the perspective of a pharmacologist, is the use of DPA's by optometrists a safe procedure likely to result in an overall improvement in patient care?

In the course of my efforts over the past three years to coordinate the redesign of the professional curriculum of the School of Pharmacy at Oregon State University, I have had considerable occasion to review the curricula of a large number of health profession schools, both in Oregon and elsewhere. Further, as my own graduate training in pharmacology was conducted largely at the University of Oregon Medical School in Portland, I am especially familiar with the curriculum of that institution, with emphasis on the pharmacology component. Finally, I have participated in a number of national and international meetings of professionals concerned with curricular design and implementation in many of the health-related fields. In comparing the curriculum of the College of Optometry at Pacific with the curricula of other health profession

schools utilizing a pharmacological component, I am convinced the approach developed by Pacific is both efficient and effective, and is clearly educationally sound. Moreover, that structure includes what I consider to be the sine qua non of proper instructional design--the competency of the graduate is evaluated in a series of prescribed and standardized formats (i.e., institutional, Oregon State Board of Optometry, and national board examinations) prior to the awarding of a license to practice. Thus, individuals who may have succeeded in passing individual courses but who have not adequately integrated the body of knowledge as a whole are not permitted access to the public as professionals. This safeguard, in my view, is instrumental in protecting the public, the institution, and the profession, and should stimulate your confidence in the proposal at hand.

Examination of the pharmacology component of the curriculum has also led me to a favorable conclusion. It is clear that the student is well-prepared for his first exposure to courses dealing with DPA's and other drugs, and is carried through this portion of his coursework in an effective manner. It is my judgment that a program designed to prepare practitioners to utilize DPA's must rest on a sound didactic base, capped by supervised clinical experience in the use of the agents in question. I feel strongly that a quality didactic base is offered at Pacific, and that passage of the proposed legislation will quickly result in the implementation of an appropriate clinical component as already outlined by the school.

The question of the relative safety and productivity of the proposed procedures must be addressed, and in my view, these two issues cannot be rationally separated; that is, neither safety nor efficacy are unidimensional characteristics, but instead are interrelated as a cost/benefit ratio or in medicine, a therapeutic index. Three important considerations relate to the expected safety in the use of DPA's by optometrists: 1) what agents are to be used; 2) what doses of these agents are to be employed; 3) how will these agents be administered? The four principal

categories of DPA to be used are miotics (agents that constrict the pupil), mydriatics (agents that dilate the pupil), local anesthetics (substances that reduce feeling in the cornea), and cycloplegics (agents that alter the ability of the eye to focus on near objects). The most salient pharmacological feature of these compounds is their relatively short duration of action, generally measured in minutes. If nothing else, this characteristic itself tends to minimize the likelihood of an adverse reaction simply because the drug is effectively inactivated by the body in relatively short order. Secondly, the doses to be utilized in diagnostic procedures are indeed very small. Using one to two drops of solutions of one-half to two and one-half percent strength in each eye provides the patient with a total dose far less than is obtained in many over-the-counter cold remedies readily available to the patient on only his/her discretion. Thirdly, by limiting the administration of these compounds to the topical route (dropped in the eye), it is not likely that more than twenty percent of the total dose will be absorbed into the blood for general circulation in the body. At that concentration level, these agents are essentially devoid of pharmacological activity. When coupled with the virtual absence of reported adverse reactions in states where this practice is common, one cannot help but conclude that the use of DPA's in the format proposed is extremely safe.

How much benefit is to be derived from this practice is, as I've said, the other side of the coin. In my judgment, the judicious use of DPA's will permit a substantial increase in the ability of the optometrist to detect potentially harmful diseases of the eye. By allowing this health-care professional to examine the patient more completely, the optometrist will be in a better position to refer to physicians (ophthamologists, internists, pediatricians, and family practitioners) those patients requiring further diagnosis and possible treatment. In view of the established fact that optometrists serve as the primary eye-care professionals for a majority of the population, it is apparent that the anticipated gain for the patient is large.

It would appear, therefore, that a near optimal situation prevails here: the proposed use of DPA's by optometrists is clearly both very safe and likely to be most effective in patient eye care. Further, it is evident that considerable planning has been conducted by the College of Optometry at Pacific, and that the school is ready, capable, and indeed has already begun providing educationally sound classroom instruction in the use of diagnostic pharmaceutical agents, with implementation of actual clinical instruction awaiting legislative approval. Thus, with the cost/benefit or therapeutic ratio a very favorable one to all parties concerned, I respectfully encourage the swift passage of the proposed legislation.

Ronald H. Winters, Ph.D.
Assistant Dean
Associate Professor of
Pharmacology and Toxicology

THE USES OF TOPICAL EYE EXAMINATION DRUGS BY OPTOMETRISTS[1]

Darrell B. Carter, O.D., Ph.D.
Clinical Professor of Optometry
School of Optometry, University of California

Introduction

Eye examination drugs (topical anesthetics, mydriatics, miotics, and cycloplegics) are used by optometrists to facilitate the examination of patients' eyes for the possible presence of disease conditions or to aid in determining the refractive error of the eye. These drugs are for examination purposes only and are not for treatment.

Until about 1960, only a few optometrists in the United States used examination drugs as part of their examination procedure. Optometrists in England have used these drugs for over 25 years.

During the period of 1960 to the present time (1974), some optometrists have started to use these drugs whenever it is in the patients' benefit to do so. However, in only eight states (as of July 1974) are optometrists specifically authorized to use these drugs by either legislative act or by a ruling of the attorney general of the state.

At present, efforts are being made by optometrists in many states to secure legislative authorization of the use of these drugs for examination purposes only. The recent efforts by optometrists in the United States, Australia, Canada, and elsewhere to obtain legislative authorization for the use of examination drugs is not an attempt to enter into the field of therapy for ocular disease.

---

[1]This paper was prepared to present to members of state legislatures and to other interested persons the reasons why optometrists desire legislative authorization for the use of ocular examination drugs.

Optometrists recognize the desirability of limiting the scope of their practice to the correction of refractive errors of the eye and anomalies of binocular vision. The use of examination drugs is for the purpose of allowing more effective and earlier discovery of eye disease when such disease exists. Patients with the possible presence of eye disease or general disease are referred to an ophthalmologist or other physician for medical evaluation and care. In this way, the most efficient use of the skills of both optometrists and ophthalmologists is obtained.

Topical Anesthetics

Topical anesthetics are used primarily by optometrists to facilitate tonometry in evaluation of the eye for the possible presence of glaucoma. While tonometry can be done without anesthesia of the cornea, it is usually more accurate when done with anesthesia. Moreover, the most accurate tonometer, the Goldmann applanation tonometer, requires anesthesia of the cornea.

Some ophthalmologists have objected to the use of corneal anesthesia by optometrists. This objection is based on the assertion that these drugs can cause fatal heart or respiratory stoppage. Anesthetics are dangerous when injected.. The death rate in eye surgery by ophthalmologists is apparently about one in every 2000 to 5000 operations. While local injection into tissue is necessary in eye surgery by ophthalmologists, only topical (dropped on the surface) use of anesthetics is employed by optometrists. There are no reports of fatal reactions from eye topical anesthetics.[2]

There are three topical corneal anesthetic agents used by optometrists: tetracaine (trade name, Pontocaine), proparacaine (Ophthaine), and benoxinate (Dorsacaine). None of these three drugs are used for local injection anesthesia

---

[2] The real objection of ophthalmologists to the use by optometrists of pharmaceutical agents, including topical anesthetics, arises from economic and prestige reasons. Unfortunately, in the United States, strong economic rivalry over the examination of eyes for glasses and contact lenses have often resulted in economic and prestige considerations playing a major role in the attitudes of many members of both groups

These drugs are toxic and are dangerous if absorbed by the body in large quantities as could happen if these drugs were used topically on the throat. For example, 5 ml. of a 2% solution of tetracaine (the most toxic of the three drugs) is considered to be a potentially lethal dose if completely absorbed.[3] However, it should be understood that 5 ml. is 100 drops and that the strength used by optometrists is 0.5%. Thus, in using one drop of a 0.5% solution in each eye, the optometrist is using 1/200 of the potential lethal dosage. Moreover, drugs placed on the normal eye are very poorly absorbed (approximately one-fifth) into the blood stream. In topical use on the eye, the optometrist thus is using only 1/1000 of the potential lethal dosage. This is a wide safety margin.

Proparacaine and benoxinate are less toxic than tetracaine. According to James R. Householder, M.D., and John E. Harris, M.D.,[4] these drugs are safe for topical application to the eye. On Ophthaine, these authors state "there have been no reported systemic toxic reactions in amounts used for topical anesthesia for the eye." However, "the chemical structure would predict such reactions if large amounts were to be applied to a vascular area such as the upper respiratory tract," (page 100). On Dorsacaine, these two authors state "there has been no reported systemic toxic effects from its use in 1 cc. amounts," (page 99). One cc. is 10 times the dosage that is used by the optometrist in preparation for tonometry.

According to William Havener, M.D.[5] fatal reactions "occur from ignorant use of excessive quantities of anesthetic" (page 47). These rare reactions

---

[4] In Ocular Therapy, Mosby 1966. Edited by Irving Leopold, M.D.

[5] William Havener, M.D. Ocular Pharmacology, Mosby 1970

have occurred following anesthesia of the throat for throat or lung examination, or from injection of an anesthetic. Havener states "since generalized reactions to the topical application of anesthetic solutions are due to systemic absorption of excessive quantities of drug, such reactions are virtually nonexistent after topical ocular anesthesia," (page 47).

In England, optometrists have been using corneal anesthesia for over twenty-five years. No report of any fatality from ocular anesthesia by optometrists has been received by the British Ministry of Health during this entire period.

On rare occasions, patients faint because of apprehension of something being placed on the eye. Such fainting (syncope), has been mistaken for a toxic reaction. However, the patient quickly regains consciousness. In summary, the use by optometrists of anesthetics applied topically to the eye is an entirely safe procedure. Such use by optometrists will result in the saving of the eyesight of patients by allowing early detection of glaucoma.

Mydriatics and Miotics

Drugs which dilate the pupil are called mydriatics. The common mydriatic drugs are phenylephrine (Neosynephrine), hydroxyamphetamine (Paradrine), and tropicamide (Mydriacyl). The use of these drugs is to facilitate the ophthalmoscopic examination of the inside of the eye for pathological changes. Miotic drugs are used to shrink the pupil following the use of a mydriatic drug. The only miotic used by optometrists is pilocarpine.

Mydriatic drugs can produce an attack of angle-closure glaucoma (a special type of glaucoma) in a person with anatomical predilection. Before the use of mydriatic drugs, the eye should be examined with a biomicroscope for the presence of a narrowed angle, an anatomical abnormality. About two or three persons in 100 of those who are over 50 years of age have an anatomical narrowe angle such that they could have an attack of angle-closure glaucoma under

adverse conditions.[6] This two percent can be detected by prior examination and mydriatics should be avoided or used only under controlled conditions.

The actual incidence of angle-closure glaucoma is approximately 1 in 1000 (4 in 4123) persons in the general population over the age of 50, according to the careful study of Hollows and Graham.[7] The low incidence of actual angle-closure glaucoma compared with those who have narrow angles, 2 or 3 in 100, shows that the vast majority of individuals with a narrowed angle go through life without developing an actual attack, and thus do not suffer from their narrow angle.

Some ophthalmologists do not examine the eyes of patients for the presence of a narrowed angle prior to routine use of mydriatic drugs. The drug is instilled by a nurse prior to the patient seeing the ophthalmologist. This routine is justified on the basis that if a mydriatic drug will trigger an attack of angle-closure glaucoma, the patient is almost ready to experience an attack even without the mydriatic drug. The argument is made that it is better to trigger an attack while the patient is in a professional office and treatment for the attack can be quickly instituted. These ophthalmologists consider this to be a useful provocative test.

It has been estimated by S.V. Abraham, M.D.[8] that the use of a strong mydriatic - atropine or homatropine - (stronger than those used by optometrists) without prior examination for the presence of a narrowed angle would result in a glaucoma reaction in one in 4600 patients over the age of 30 and much less often for patients under 30 years of age. The incidence of glaucoma reaction

[8] S. V. Abraham, M.D. Mydriatic glaucoma. Archives of Ophthalmology, pp. 757-762, 1933.

is further reduced when mild mydriatics are used and when a miotic is used following the use of a mydriatic. While the author of this paper does not believe that optometrists should ever use mydriatic drugs without prior biomicroscopy study of the angle of the eye, it is obvious that adverse reactions are rare even without the precaution of prior examination of the eye.

It is possible, although quite rare, for an attack of angle-closure glaucoma to occur after use of a mydriatic drug even with prior screening by the optometrist for narrow angles. In these rare cases an optometrist will send the patient for medical care. The patient will have had the advantage of having his attack under conditions where medical care is available. In optometric use of mydriatics, with prior evaluation of the anterior angle and with use of the milder mydriatics, a glaucoma reaction can be expected no more than once in every 15,000 to 25,000 patients over 30 years of age. These attacks will only occur in persons who are in great danger of such an attack even without the use of the mydriatic drug. Discovery of the potentiality of angle-closure glaucoma will help save the vision of these patients.

The author strongly supports the use of mydriatic drugs by optometrists. The use of mydriatic drugs will enable earlier detection of retinal disease conditions. Such earlier detection will result in the saving of vision or even life. The potential of earlier detection of disease by the use of mydriatic drugs far outweights the very rare situation of a glaucoma reaction.

Cycloplegics

Cycloplegic drugs temporarily paralyze the accommodative mechanism of the eye and thus facilitate measurement of refractive error with some patients, chiefly children less than seven or eight years old. Rarely is the use of a cycloplegic desirable with an adult patient.

The only cycloplegic drug used by optometrists is the 1% solution of Cyclopentolate (Cyclogyl). There have been no reported serious side-effects

with the use of this drug. From its low toxicity, none would be expected. There have been a few literature reports of temporary (up to four hours) of faulty orientation and hallucinations in children following use of several drops of the 2% solution of cyclopentolate or repeated usage on several days of the 1% solution.[9] These temporary psychological disturbances have not been reported to occur with the use of one or two drops per eye of the 1% solution - the mode of usage by optometrists.

Summary

(1) The most efficient use of the skills of optometrists in supplying visi care will be obtained by the use of examination drugs by optometrists.

(2) Use of examination drugs by optometrists will allow earlier detection of eye disease and the saving of vision or even life.

(3) The use of drugs by optometrists is for facilitation of examination and not for treatment purposes.

(4) Patients with the possible presence of eye or general disease are referred by optometrists for medical evaluation and care.

HOUSE BILL #79

QUESTIONS AND ANSWERS ON THE OPTOMETRY BILL

1. Why was the "Diagnostic Agents" Bill introduced?

   a. In Oregon, May 12, 1964 (Attorney General Opinion No. 5807), the Attorney General said that an optometrist "has a duty to determine whether his patient is afflicted with an abnormal or pathological condition of the eye." (Reference to Supreme Court Case: State ex rel. Sisemore v. Standard Optical, 182 Or. 452.)

   b. In malpractice lawsuits throughout the nation, optometrists have been charged with the responsibility of eye disease detection.

   c. In 1971, the HEW Secretary Elliot Richardson said "Optometrists are trained to detect any departure from the optimally health eye. The scope of optometric services has expanded beyond basic clinical refractions."

   Optometry has been charged with the responsibility of a primary entry point to health care. This bill will increase the examination capabilities to allow better eye or systemic pathology detection for referral for medical diagnosis and treatment.

2. What is the current role of the optometrist in patient care?

   The optometrist is the general practitioner in the field of vision care. His emphasis is on the functional aspects of vision--the ability of a child to learn or a person to function optimally in his occupation or environment. However, in examining a patient he also makes a comprehensive internal and external examination of the eyes to detect evidence of eye or systemic diseases revealed through the eye for referral for medical diagnosis and treatment. This latter feature is particularly important to the many persons who due to various factors do not routinely seek medical care.

3. What is the experience of other states in the use of diagnostic agents by doctors of optometry?

   Since HEW Secretary Richardsons' statement, Rhode Island, Pennsylvania, Oregon, and twenty other states have enacted positive legislation. Other states which previously had no prohibitive laws and thus allow for the usage of diagnostic agents include: Florida, Idaho, Indiana, Minnesota, Nevada, and New Jersey.

New Jersey optometrists have had the right to use these agents since 1919. In that state "there have been no cases reported regarding any problems caused by optometrists using any of the diagnostic drugs." On the contrary, this report states "the use of diagnostic drugs by optometrists is definitely in the public interest."

4. What is the experience of the Armed Forces in the area of diagnostic agents used by optometrists?

All three branches of the military, either in the regulations or at local hospital options, require or allow optometric commissioned officers to utilize diagnostic agents to aid them in their examinations or aid or consult with other commissioned health professionals. In the critically important visual examinations of aviators, diagnostic agents have been widely utilized by optometrists.

5. What is the current educational background of an optometrist?

Alaskan optometrists presently receive eight years education in order to receive a doctor of optometry (O.D.) degree.

4 years undergraduate education
(Some applicants are admitted with a minimum of two years undergraduate.)
4 years professional optometric education
8 years total

Today's optometric education includes such scientific studies as: optics, pharmacology, disease processes, disease detection, microbiology, zoology, neurology, physics, physiology, anatomy, psychology and public health.

6. How do practicing optometrists keep up with advances?

To assure that optometrists who are currently in practice are kept abreast of new developments and techniques, the Alaska Board of Examiners in Optometry requires a minimum of twenty-four hours of continuing education every two years. The quality and certification of these courses is controlled by the state Board.

7. Are optometrists educated in the use of pharmaceutical agents for ocular examinations, including adverse reactions?

Yes. Pacific University, College of Optometry, in Forest Grove, Oregon, educates its students in pharmacology. Adverse reactions are covered in the courses which are taught by qualified experts. In addition, an important portion of the four-year professional curriculum covers pathology and related subjects.

8. Under this bill, would every optometrist be able to use diagnostic agents in eye examinations?

No. There would be no "grandfather" clause. Only those optometrists currently in practice who fulfill educational requirements set by the Board of Examiners in Optometry would be able to use such diagnostic agents.

9. Under this bill, what limited types of diagnostic agents would optometrists be able to use?

Only topically applied (placed on the eye, like "eye drops") diagnostic agents could be used for examination purposes. Other agents such as for treatment purposes could not be used.

Generically, these diagnostic agents would be limited to: dyes, anesthetics, mydriatics, miotics, and cycloplegics.

10. Will this bill permit an optometrist to make a definitive medical diagnosis?

No. The optometrist would retain his professional responsibility to recognize any abnormalities of a pathological nature, make a tentative diagnosis, and then refer the patient for definitive medical diagnosis and treatment.

11. What about adverse reactions to diagnostic agents?

According to medical literature, the possibility of adverse reaction on persons to whom these topical diagnostic agents are applied is considered rare or virtually non-existant. However, should a reaction occur, a physician would be consulted.

12. How often would an optometrist use diagnostic agents in examinations?

These agents would not be used routinely but only in those instances when considered appropriate in the examination for possible visual or pathological defects.

13. Do practitioners other than physicians use diagnostic agents?

Yes. Dentists and podiatrists not only use pharmaceutical agents for diagnostic purposes, but for treatment purposes as well. It may be worthwhile noting that the optometrists' educational foundation regarding pharmacology is comparable to the pharmacology background received by both dentists and podiatrists.

Some Points Relative to the Use of Drugs by Optometrists

by: Leonard Levine, PhD.
Professor
College of Optometry
Pacific University, Oregon

Dr. Levine has received numerous grants to research the chemistry and physiology of diseases such as Muscular Dystrophy. He is highly respected as a professor as well as researcher in the areas of physiology and neurophysiology. In order to be effective as such, a special understanding of pharmacology is inherent.

He makes a number of important points relative to the use of drugs by optometrists.

SOME POINTS RELATIVE TO THE USE OF DRUGS BY OPTOMETRISTS

Leonard Levine, PhD.

A. Optometrists have been using "drugs" both diagnostically and therapeutically for some time.

1. Optometrists routinely use a corneal dye, fluoroscein, as an aid to facilitate contact lens fitting. This is a substance not normally found in the body, hence a pharmaceutical agent, and its widespread use means that optometrists have already been involved with diagnostic pharmaceutical agents (DPA's).

2. Flexible contact lenses are classified as drugs by the Food and Drug Administration (FDA). Since optometrists fit these lenses, technically they are applying drugs to the eye for <u>therapeutic</u> purposes.

   a. Optometrists may also use flexible contact lenses for diagnostic purposes, as part of a gonioscopic procedure concerned with measurement of the internal angle of the eye.

3. Thus the question is not really the qualitative one of whether or not optometrists are to be allowed to use drugs, but rather the quantitative one relating to which and how much.

B. The public may now buy without prescription, examples of the types of drugs which optometrists wish to be allowed to use.

1. There are a number of ophthalmic preparations which are available to the lay public without prescription <u>ad libitum</u>, for treatment of certain ocular conditions, so-called "over-the-counter" (OTC) drugs. There are also a large number of other preparations for treatment of non-ocular conditions (such as allergies, colds, coughs, insomnia, motion sickness, and surface pain) which the public may buy in unlimited amounts without prescription. These preparations are usually intended for systemic administration, and contain one or more active ingredients which affect the ocular structures and/or vision.

2. The active ingredients of these OTC preparations include examples of all of the types of drug classes which optometrists wish to be allowed to use in a controlled manner for specific diagnostic purposes. The only exception is the drug class which causes the pupil to constrict, and optometrists would use this type only in a limited and specialized way.

C. The classes of DPA's which optometrists wish to use are:

1. Corneal dyes: Fluoroscein is an inocuous, non-prescription drug already used by optometrists in contact lens practice.

2. Local anesthetics: Optometrists wish to be able to use these kinds of drugs to permit them to check intraocular pressure in glaucoma screening, to measure the internal angle of the eye with a gonioscope as part of the check on the possibility of "narrow-angle" glaucoma, and in exceptional cases as an adjunct to contact lens practice. The purpose of the local anesthetic is to eliminate the corneal blink reflex for a few minutes while the diagnostic procedure is performed, and not for the elimination of pain per se, since none of the procedures employed by the optometrist is inherently painful. Optometrists wish to be able to use relatively few local anesthetics of very low risk, to be applied directly to the eye in the form of eyedrops, in a controlled fashion and with observance of any needed precautions to insure their patients' safety. Preferred agents are proparacaine and benoxinate.

   At least one OTC ophthalmic preparation (M-Z eyedrops, Tilden Yates) is available to the public without prescription which contains a concentration of a local anesthetic, piperocaine, which is approximately that sought by optometrists.

3. Mydriatic agents: Optometrists wish to use such drugs to cause the pupils of certain patients to dilate so that the interior of the eye may be examined with special instruments such as the opthalmoscope and the biomicroscope. Such diagnostic examinations are important in cases of cataract, glaucoma, and vision-threatening conditions of the

retina. But they are also important with respect to diagnosis and prognosis of systemic conditions such as diabetes mellitus and arterial hypertension.

Technically there are two classes of drugs which dilate the pupil by different mechanisms. The simpler of these acts directly on the dilating muscle, while the other acts by inhibiting the constricting muscle.

Optometrists need to be able to use drugs belonging to both catagories because the simpler drug type will not work satisfactorily in subjects with very dark eyes. The drug of choice in the first category is phenylephrine, an agent found in low concentration in many OTC ophthalmic preparations. It is also available without prescription in many non-ophthalmic preparations, in concentrations as high as 1% (NeoSynephrine nose drops, Winthrop), which is approximately the level at which optometrists wish to use it.

The other type of drug which optometrists wish to use for causing the pupil to dilate includes the specific agents, cyclopentolate and tropicamide. Both of these are synthetic products developed specifically for the purpose for which optometrists wish to use them, and are much safer and preferred to several naturally occuring substances, which have been widely used by ophthalmologists in the past. It should be noted that these latter, more dangerous drugs are all available to the public without prescription in OTC cough medicines and sleeping aids.

Thus optometrists seek only to use drugs of the types already on the market to the lay public without prescription, and to employ them in a controlled manner for specific diagnostic tests, entailing a minimum of risk to their patients.

4. Miotic Agents: The only other type of drug which optometrists wish to use is one which constricts the pupil. Drugs of this type would be used only to reverse the effect caused by a dilating drug following the diagnostic examination, in select patients. These are the limited number of patients in whom it is not desirable to allow the pupil to remain dilated for the several hours needed for the dilating drug to wear off.

The pupil contricting drugs which optometrists wish to use are physostigmine and pilocarpine. Both drugs have been widely in use as ophthalmic products for over 100 years, and are of low toxicity and high safety margin, especially in the way in which optometrists will use them.

D. British optometrists, whose professional training is on a lower level and less thorough than that of their counterparts in the U.S., have had legal entitlement to use all of the drugs sought here (and more) for many years, and have used them with intelligence and skill, the only effect on their patients being improved vision care.

STATUTORY AND JUDICIAL ASPECTS

1. House Bill #79

   This bill would re-define A.S. 08.72.300(2) "OPTOMETRY" and (3) "PRACTICING OPTOMETRY".

   Addition of a new A.S. § 08.72.305 "USE OF DRUGS FOR DIAGNOSIS".

   A.S. 17.15 § 3 is amended by adding to Article 1, § 27.25.055 "SALES TO OPTOMETRISTS".

2. Complete Alaska Revised Statutes

3. Supreme Court of Oregon, 1947

   State ex rel. Sisemore v. Standard Optical Co., 181 Or. 452-467

   The following are some points made in this case:

   a. An optical company cannot employ an optometrist because this interfers with the optometrists' trusted and fiduciary relationship with his patient.

   b. Optometry must be classified a true "profession" and not a "trade".

      ". . . an optometrists' . . . training enables him to diagnose pathological conditions . . . The fact that he is trained to diagnose pathological conditions in itself indicates that the optometrist is not a mere skilled craftsman or mechanic."

   (The entire Supreme Court case may be obtained upon request.)

4. Civil Action No. F 76-35 Civ., December 7, 1977

   Ferdinand v. Board of Dispensing Opticians (pages 104-105) defines "routine visual examination" as given by optometrists. The extensiveness the optometrist must examine for eye pathology is expressed.

   d. External Examination (lids, cornea, sclera, etc.)

   e. Internal Ophthomoscopic Examination (media, fundus, etc.)

   f. Ocular motility

g. Neurological integrity

k. Confrontation fields

l. Tonometry

5. Diagnostic Drugs Terminology Clarification from Oregon Law

a. Oregon Attorney General Opinion (1964) No. 5807 clarification regarding the term: DIAGNOSIS.

This Oregon Attorney General Opinion states that the "Practice of Optometry" includes pathology diagnosis.

In addition, Oregon Statutes governing the practice of medicine do not prevent diagnosis by optometrists after reference to the 1947 Supreme Court case (State ex rel. Sisemore v. Standard Optical Co., 181 Or. 452), Attorney General Thornton says:

> ". . . an optometrist, as a part of his services . . . has a duty to use his professional training, skill and knowledge, while he is performing his primary function, to determine whether his patient is afflicted with an abnormal or pathological condition of the eye . . ."

b. Alaska Statutes Clarification regarding the term: DRUGS.

The inclusion into the Optometry Statutes the terms: diagnostic agents, diagnostic drugs, or diagnostic pharmaceutical agents does not conflict with Chapter 64, Medicine. (Section 08.64.380 Definitions):

(2) "Practice of medicine" or "practice of osteopathy" means:

(D) for a fee prescribing, directing or recommending for the use of a person, a drug or medicine for the treatment, cure or relief of a disease, infirmity, bodily injury or defect, . . .

Diagnostic drugs are not mentioned in the practice of medicine. Only drugs or medicine for treatment are spoken to.

c. A.S. 17.15 § 3 addition to Article 1 "Sales to Optometrists" § 17.15.055.

Chapter 15, Drugs, is included to show how the addition of the amendment is necessary under Alaskan law.

6. Report from the Secretary of the Department of Health, Education and Welfare (HEW), 1971

This report concerns itself with the optometrists' responsibilities for disease detection.

Introduced: 1/24/79
Referred: Health, Education & Social Services and Judiciary

BY MARTIN, MCKINNON, MEEKINS, MILLER AND PARR

IN THE HOUSE

CS for HOUSE BILL NO. 79

IN THE LEGISLATURE OF THE STATE OF ALASKA

ELEVENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act relating to the practice of optometry."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 08.72.300(2) and (3) are amended to read:

(2) "optometry" is the employment of means or methods [, OTHER THAN THE USE OF DRUGS,] for the diagnosis of an optical deficiency or deformity, visual or muscular anomaly of the human eye, or the prescription or application of lenses, prisms or ocular exercises for the correction or relief of the human eye;

(3) "practicing optometry" means the diagnosis [, BY MEANS OR METHODS OTHER THAN THE USE OF DRUGS,] of an optical deficiency or deformity, visual or muscular anomaly of the human eye, or the prescription of lenses, prisms or ocular exercises for the correction or relief of the human eye, or the holding of oneself out as being able to do so;

* Sec. 2. AS 08.72 is amended by adding a new section to read:

Sec. 08.72.305. USE OF DRUGS FOR DIAGNOSIS. (a) No person practicing optometry may use drugs for diagnostic purposes unless he has

(1) passed the board's examination on the subject of pharmacology as it relates to optometry and the use of topically applied drugs; and

(2) completed courses and clinical experience approved by the board and offered by a recognized and accredited school or college of optometry and passed an examination, given by that school or college, which relates to topical application of drugs to the eye, including proper responses to reactions which may result from topical applications

of drugs to the eye.

(b) No person practicing optometry may administer drugs except for recognition of pathology and diagnosis of a vision anomaly.

(c) Topical anesthetics, mydriatics, miotics and cycloplegics may be used by a person practicing optometry under conditions approved by the board.

* Sec. 3. AS 17.15 is amended by adding a new section to Article 1 to read:

Sec. 17.15.055. SALES TO OPTOMETRISTS. A person licensed to practice optometry under AS 08.72 who has been authorized by the Board of Examiners in Optometry to use topically applied drugs under AS 08.72.305 may purchase topical anesthetics, mydriatics, miotics and cycloplegics.

ALASKA REVISED STATUTES

STATE OF ALASKA

BOARD OF EXAMINERS IN OPTOMETRY

OPTOMETRY STATUTE, AS 08.72.

OPTOMETRY REGULATIONS, 12 AAC 48.

****

Department of Commerce and Economic Development

Division of Occupational Licensing

Pouch D

Juneau, Alaska 99811

CHAPTER 72. OPTOMETRY LAW.

Article
1. Board of Examiners in Optometry (secs 08.72.010-08.72.100)
2. Licensing and Registration (secs 08.72.110-08.72.270)
3. Unlawful Acts (secs 08.72.275-08.72.290)
4. General Provisions (secs 08.72.300-08.72.310)

Article. 1. Board of Examiners in Optometry

Section
10. Creation of board of examiners
20. Membership of board and terms of office
30. Source of appointments
40. Qualifications
50. Power of board to adopt rules and regulations
60. Miscellaneous powers and duties of board
70. Applicability of Administrative Procedure Act
80. [Repealed]
90. Record of proceedings
100. [Repealed]

Sec. 08.72.010. Creation of board of examiners. There is created the Board of Examiners in Optometry. (sec 35-3-132 ACLA 1949)

Am. Jur., ALR and C.J.S. references.-41 Am. Jur., Physicians and Surgeons, sec 28.

Optometrist within statute relating to practice of medicine, 22 ALR 1173.

Constitutionality of stature prescribing conditions of practicing medicine as affected by discrimination against or in favor of optometrists, 37 ALR 682.

Constitutionality of statutes and validity of regulations relating to optometry, 98 ALR 905; 22 ALR2d 939.

Right of corporation, or individual not himself licensed, to practice optometry through licensed employee, 102 ALR 343; 128 ALR 585.

One who fills prescription under reciprocal arrangement with optometrist, as subject to charge of practice of optometry without license, 121 ALR 1455.

What constitutes practice of "optometry," 141 ALR 883.

70 C.J.S. Physicians and Surgeons secs 1, 3, 5, 6, 8, 10, 12.

Sec. 08.72.020. Membership of board and terms of office. The board consists of three persons, appointed by the governor. The term of each member is three years. One member only is appointed each year, except when vacancies for unexpired terms are filled. (sec 35-3-132 ACLA 1949)

Sec. 08.72.030. Source of appointments. The governor shall fill vacancies on the board by appointment for the unexpired term. (sec 35-3-132 ACLA 1949)

Sec. 08.72.040. Qualifications. A board member shall be a licensed, practicing optometrist residing in the state who has been a resident for at least three years. (sec 35-3-132 ACLA 1949)

Sec. 08.72.050. Power of board to adopt rules and regulations. The board shall adopt rules and regulations

(1) necessary for the proper performance of its duties;
(2) governing the applicants and applications for licensing;
(3) for the registration of optometrists;
(4) necessary to govern the practice of optometry. (sec 35-3-133 ACLA 1949)

Chapter contains sole powers of board.-The board, being purely a creature of the legislature, has no powers other than those contained in this chapter. Edmunds v. Board of Examiners in Optometry, 9 Alaska 462, aff'd, 9 Alaska 627, 106 P.2d 904 (1939).

And must be strictly construed.-This chapter and the powers invested in the board are to be stricly construed. Edmunds v. Board of Examiners in Optometry, 9 Alaska 462, aff'd, 9 Alaska 627, 106 P.2d 904 (1939)

Sec. 08.72.060. Miscellaneous powers and duties of board. (a) The board or a member designated by the board, may issue subpoenas, administer oaths and take testimony concerning any matter within its jurisdiction.

(b) The board may adopt a seal.

(c) The board shall elect a president and secretary from among its members.

(d) Repealed by sec 3 ch 59 SLA 1966.

(e) The board may define professional conduct and adopt rules of professional conduct.

(f) Repealed by sec 3 ch 59 SLA 1966. (secs 35-3-133, 35-3-140 ACLA 1949;am sec 3 ch 59 SLA 1966)

Effect of amendment.-The 1966 amendment repealed subsections (d) and (f).

Sec. 08.72.070. Applicability of Administrative Procedure Act. The board shall comply with the Administrative Procedure Act (AS 44.62).

Sec. 08.72.080. Compensation of board and secretary. Repealed by sec 3 ch 59 SLA 1966.

Sec. 08.72.090. Record of proceedings. The Department of Commerce shall keep a record of all proceedings including the name of each applicant for examination and registration. These records shall be open for public inspection. (sec 35-3-133 ACLA 1949;am ch 76 sec 1 SLA 1969)

Sec. 08.72.100. Bond of Secretary. Repealed by sec 3 ch 59 SLA 1966

Article 2. Licensing and Registration.

Section	Section
110. License required	191. Fees
120. Registration	200. [Repealed]
125. Registration of branch office	210. [Repealed]
130. Optometry register	220. [Repealed]
140. Qualifications for examination	230. Fees and disbursements
150. Application for and issuance of certificate	240. Revocation of registration certificate or exemption
160. Examination	250. Board action on revocation and renewal
170. Issuance of certificate by waiver of written examination	260. Revocation of license by court
180. [Repealed]	270. Practice not at place of business
190 [Repealed]	

Sec. 08.72.110. License required. No person not licensed as an optometrist may fit, sell, or dispose of or take, receive or solicit an order for fitting, sale or disposition of spectacles, eyeglasses or lenses for the correction or relief of an optical or visual defect of the human eye or sell spectacles, eyeglasses or lenses from house to house, or in the streets or highways. This chapter does not apply to the sale of toy glasses, goggles consisting of plano-white or plano-colored lenses or ordinary colored glasses, or complete ready-made spectacles and eyeglasses sold only as merchandise, or the sale or repair of eyeglass frames, or repair or replacement of lenses without pretense of adapting them to the eyes (sec 35-3-134 ACLA 1949)

Sec. 08.72.120. Registration. It is unlawful for a person to practice, or attempt, or offer to practice, optometry without first obtaining a certificate of registration from the board, and without filing the certificate with the clerk of the superior court in each judicial district in which he practices. (sec 35-3-135 ACLA 1949)

C.J.S. reference.-70 C.J.S. Physicians and Surgeons sec 10.

Sec. 08.72.125. Registration of branch offices. (a) The board may issue to an Alaskan licensee who maintains a full-time practice in the state but who serves other communities in the state on a part-time basis a branch office certificate of registration.

(b) It is unlawful for a person to practice, attempt or offer to practice, optometry in communities on a part-time basis without obtaining a branch office certificate of registration from the board, and without filing the certificate with the clerk of the superior court in each judicial district in which he maintains a branch office. The board shall prescribe in the regulations the factors to be considered in issuing a branch

office certificate of registration. (ch 76 sec 2 SLA 1969)

Sec. 08.72.130. Optometry register. The clerk of the superior court in each judicial district shall keep a record known as the "Optometry Register" and record the certificate of registration of each optometrist who files his certificate. The clerk shall charge the regular filing fee for registration. When an optometrist dies, or when his certificate is suspended or revoked, the clerk shall note that fact on the record. (sec 35-3-147 ACLA 1949)

Sec. 08.72.140. Qualifications for examination. The board shall admit to the examination a person who furnishes proof that

(1) Repealed (ch 76 sec 3 SLA 1969)

(2) he has normal color perceptions and a visual acuity of a standard of at least 20/40 in at least one eye as corrected;

(3) he is not afflicted with a contagious or infectious disease;

(4) he has had education equivalent to four years attendance at a state high school;

(5) he is a graduate of a recognized school or college of optometry;

(6) he is of good moral character. (sec 35-3-141 ACLA 1949; am sec 1 ch 95 SLA 1966; repealed (1) ch 76 sec 3 SLA 1969; am (2) ch 76 sec 4 SLA 1969; added (6) ch 76 sec 5 SLA 1969)

Effect of amendment.-The 1966 amendment substituted "is a graduate of recognized" for "has had professional training in optometry of not less than 2,000 hours in attendance at a reputable" in paragraph (5) and deleted former paragraph (6), which required a certificate of registration in the basic sciences.

Cited in Edmunds v. Board of Examiners in Optometry, 9 Alaska 627, 106 F.2d 904 (1939)

C.J.S. references.-53 C.J.S. Licenses sec 34; 70 C.J.S. Physicians and Surgeons sec 12.

Sec. 08.72.150. Application for examination and issuance of certificate. An applicant shall apply for the examination by filing an application with the department together with the examination fee at least 15 days before the examination. Upon successful completion of the examination by the applicant and payment of the fee, the board shall issue a certificate of registration as a licensed optometrist to the applicant. After the applicant has properly filed his certificate of registration he may practice optometry in the state. (sec 35-3-141 ACLA 1949;am ch 76 sec 6 SLA 1969)

Sec. 08.72.160. Examination. (a) The examination shall be written, practical, and oral in nature. The oral portion of the examination shall be recorded and retained for two years.

(b) An applicant who fails the practical or the oral portion of the examination may take a re-examination in that portion without paying an additional examination fee.

(c) An applicant who fails the written portion of the exam-

ination may take a re-examination in the written portion upon payment of an additional examination fee.

(d) An applicant who fails more than one portion of the examination must retake the entire examination and pay the full examination fee. (sec 35-3-141 ACLA 1949;am ch 76 sec 7 SLA 1969)

Sec. 08.72.170. Issuance of certificate by waiver of written examination. (a) The board may waive the written portion of the examination requirement to an applicant who:

(1) meets the qualifications of sec. 140 of this chapter;

(2) holds a current license by examination in another state, territory or foreign country and has been established in ethical optometric practice for at least three years before the application, or shows satisfactory evidence of having passed the written portion of the examination given by the National Board of Examiners in Optometry; and

(3) has not had a certificate or license revoked for cause in any state, territory or foreign country.

(b) No waiver of the practical or oral portions of the examinations may be given. (sec 35-3-142 ACLA 1949; repealed and enacted ch 76 sec 8 SLA 1969)

Cited in Edmunds v. Board of Examiners in Optometry, 9 Alaska 627, 106 F.2d 904 (1939).

Sec. 08.72.180. Annual renewal of license. Repealed by sec 7 ch 94 SLA 1968.

Sec. 08.72.181. Renewal of license and application. (a) To remain in force a license must be renewed biennially.

(b) An optometrist licensed in this state and serving in the military service of the United States, while in the discharge of his official duties, may maintain his eligibility to practice in this state without paying a renewal fee by registering his name and place of residence with the department.

(c) An application for license renewal shall contain the name, office and post office address, date and license number of the licensee, and other information the board considers necessary.

(d) Before a license may be renewed the licensee shall submit to the board evidence of 24 hours post graduate education as prescribed by regulations of the board. (ch 76 sec 9 SLA 1969)

Sec. 08.72.190. Fee for license by reciprocity. Repealed by ch 76 sec 10 SLA 1969.

Sec. 08.72.191. Fees. The following fees shall be imposed

under this chapter when applicable:

(1) examination fee	$35
(2) re-examination fee for written portion	25
(3) waiver of examination fee	25
(4) certificate fee	50
(5) biennial renewal fee	50
(6) branch office biennial registration fee	25

(ch 76 sec 11 SLA 1969)

Sec. 08.72.200. Examination fee. Repealed ch 76 sec 10 SLA 1969.

Sec. 08.72.210. Certificate fee. Repealed ch 76 sec 10 SLA 1969.

Sec. 08.72.220. Renewal fee. Repealed ch 76 sec 10 SLA 1969.

Sec. 08.72.230. Fees and disbursements. The department shall collect all fees and keep a record of each transaction, and shall remit to the Department of Revenue all money received. (sec 35-3-138 ACLA 1949; repealed and enacted ch 76 sec 12 SLA 1969)

Sec. 08.72.240. Revocation of registration certificate or exemption. The board may revoke a certificate of registration or exemption granted by it if the holder

(1) has violated a rule, order or regulation of the board; or

(2) has violated this chapter or is guilty of a crime; or

(3) is grossly incompetent, afflicted with a contagious disease, habitually drunk or guilty of unprofessional conduct. (sec 35-3-140 ACLA 1949)

C.J.S. references.-53 C.J.S. Licenses sec 44; 70 C.J.S. Physicians and Surgeons, secs 10, 15.

Sec. 08.72.250. Board action on revocation and renewal. In a proceeding for the revocation of a certificate of registration or for the annulment of registration the board shall make a complete written report of its findings, and if the board finds that any of the charges are sustained, the board may revoke the certificate of the accused, or annul his registration, or both. If the board annuls the registration, it shall transmit to the clerk of the judicial district in which the accused is registered as an optometrist, a certificate under its seal, certifying that his registration has been annulled. The clerk shall, upon receipt of the certificate, file it and mark the registration "annulled." The board may, after the expiration of one year, entertain an application for the renewal of a revoked certificate, in the same manner as an original application for a certificate and may exempt the applicant from the examination. (sec 35-3-140 ACLA 1949)

Full and substantial hearing. It is not necessary that the board follow technical legal procedure. A full and substantial hearing of the charges, where denied, is all that is required. Edmunds v. Board of Examiners in Optometry, 9 Alaska 462, aff'd, 9 Alaska 627, 106 F.2d 904 (1939)

Under this section the board may not entertain an application until the expiration of one year. Edmunds v. Board of Examiners in Optometry, 9 Alaska 627, 106 F.2d 904 (1939)

Order revoking renewal certificate cannot be set aside in a mandamus proceeding. Edmunds v. Board of Examiners in Optometry, 9 Alaska 627, 106 F.2d 904 (1939).

Conduct justifying treatment of charge as confessed.- Where a written complaint and notice were served on an optometrist requiring him to appear and answer charges against him by the board, but where no answer, denial or appearance was ever made, it was not incumbent upon the board to call any witnesses or receive any evidence in support of the charges, and the board was justified in treating the charge as confessed and entering its findings accordingly. Edmunds v. Board of Examiners in Optometry, 9 Alaska 462, aff'd, 9 Alaska 627, 106 F.2d 904 (1939)

Sec. 08.72.260. Revocation of license by court. A license may be revoked by the superior court upon proof of violation of law or for a cause for which the board may refuse admittance to its examination. The attorney general shall prosecute appropriate judicial proceedings upon request of a member of the board. (sec 35-3-146 ACLA 1949)

Sec. 08.72.270. Practice not at place of business. (a) A registered optometrist, who temporarily practices optometry away from his regular place of business, shall display his registration certificate and deliver to each patient or person fitted or supplied with glasses a receipt with his signature showing his permanent place of business or post office address, certificate number, and the amount charged. A licensee who fails to comply with any of the foregoing provisions for six months after issuance of the certificate shall forfeit his certificate.

(b) Nothing contained in this section shall be construed as permitting peddling or canvassing by licensed optometrists. (sec 35-3-136 ACLA 1949)

Article 3. Unlawful Acts.

Section		Section	
275.	Lenses and frames for eyeglasses and sunglasses	290.	Penalty
280.	Violations		

Sec. 08.72.275. Lenses and frames for eyeglasses and sunglasses. (a) No person may fabricate, distribute, sell, exchange, deliver or have in his possession with intent to distribute, sell, exchange or deliver eyeglasses or sunglasses unless they are fitted with plastic lenses or with glass lenses

which are tempered or case hardened. Glass lenses shall have a minimum thickness of two millimeters.

(b) No person may fabricate, distribute, sell, exchange, deliver or have in his possession with intent to distribute, sell, exchange or deliver eyeglasses or sunglasses having frames manufactured from cellulose nitrate or other highly flammable materials.

(c) A person who violates this section is punishable by a fine of not less than $50 nor more than $100. (1 ch 220 SLA 1968)

Revisor's note.-Section 2, ch 220, SLA 1968, provides: "The provisions of this bill take effect one year after date of passage." Legislative action on SCSHB 68 am (ch. 220, SLA 1968), was completed on April 14, 1968 and the bill was signed by the governor on May 6, 1968.

Sec. 08.72.280. Violations. No person may falsely personate a registered optometrist, nor buy, sell or fraudulently obtain a certificate of registration issued to another or advertise the practice of optometry in violation of rules of the board. Practicing or offering to practice optometry is sufficient evidence of a violation of this chapter. (sec 35-3-144 ACLA 1949)

Sec. 08.72.290. Penalty. A person who violates this chapter is guilty of a misdemeanor and is punishable by a fine of not less than $50 nor more than $500, or by imprisonment for a term of not less than 10 days nor more than 90 days, or by both. (sec 35-3-145 ACLA 1949)

C.J.S. reference.-53 C.J.S. Licenses secs 62 to 65.

Article 4. General Provisions.

Section 300. Definitions
Section 310. Short title

Sec. 08.72.300. Definitions. As used in this chapter

(1) "board" means the Board of Examiners in Optometry;

(2) "optometry" is the employment of means or methods, other than the use of drugs, for the diagnosis of an optical deficiency or deformity, visual or muscular anomaly of the human eye, or the prescription or application of lenses, prisms or ocular exercises for the correction or relief of the human eye;

(3) "practicing optometry" means the diagnois, by means or methods other than the use of drugs, of an optical deficiency or deformity, visual or muscular anomaly of the human eye, or the prescription of lenses, prisms or ocular exercises for the correction or relief of the human eye, or the holding of oneself out as being able to do so;

(4) "lenses" means conventional or contact lenses. (sec 35-3-131 ACLA 1949; am sec 2 ch 95 SLA 1966)

(5) "recognized school or college of optometry" is one which is approved by the American Optometric Association or one of its committees;

(6) "department" means the Department of Commerce. (sec 35 3-131 ACLA 1949;am sec 2 ch 95 SLA 1966;am by adding (5) & (6) sec 13 SLA 1969)

Effect of amendment.-The 1966 amendment added paragraph (4).

This chapter is a valid exercise of the legislative power. Edmunds v. Board of Examiners in Optometry, 9 Alaska 462, aff'd, 9 Alaska 627, 106 F.2d 904 (1939).

Sec. 08.72.310. Short Title. This chapter may be cited as the Optometry Law. (sec 35-3-150 ACLA 1949)

Board of Examiners In Optometry

TITLE 12. PROFESSIONAL AND VOCATIONAL REGULATIONS

CHAPTER 48. BOARD OF EXAMINERS IN OPTOMETRY

Section
10. Board membership
20. Biennial license
30. Branch office certificates
40. Display of certificate
50. When a practice is conveyed to another
60. Visual analyses records
70. Unprofessional conduct further defined
80. Definitions

12 AAC 48.010. BOARD MEMBERSHIP. The secretary shall notify the office of the governor of Alaska whenever a vacancy occurs. The secretary shall supply the governor with a list of all Alaska registered optometrists who have resided in Alaska for a period of three years or more, and are qualified as the statute provides, AS 08.72.040. (in effect before 7-28-59; am 5-19-62 and 10-20-62; am 9-10-65, Register 21; am 4-25-71, Register 37)

Authority: AS 08.72.030
AS 08.72.050(1)

12 AAC 48.020. BIENNIAL LICENSE RENEWALS AND REINSTATEMENT. (a) The post graduate education may be obtained any time within the two-year renewal period, but may not be carried over from one renewal period to the other.

(b) Courses that will be accepted are: educational courses given at the American Optometric Association Annual Convention or any AOA affiliate state optometric convention; seminars held by committees of the American Optometric Association or organized regional Optometric Extention Program Foundation seminars for educational purposes; post graduate courses offered by recognized schools or colleges of optometry. Other post graduate courses may be approved by the board if course titles, instructors' names, and a brief description of the course material is submitted to the board 30 days before the commencement of the educational program. Licensees who submit satisfactory proof that they were prevented from attending an educational program because of illness or other reasons may be exempted from this requirement. A form shall be provided with the biennial renewal application that must be validated by the instructor teaching the course. Correspondence courses will not be accepted as fulfilling the requirements of AS 08.72.101. (Eff. 4-25-71, Register 37)

Authority: AS 08.72.101

BOARD OF EXAMINERS IN OPTOMTRY

12 AAC 48.030. BRANCH OFFICE CERTIFICATES. (a) A branch office certificate may be issued for the purpose of serving some community in the state, which cannot support an optometrist and which can be shown to the satisfaction of the board to need the service of a licensed optometrist on a part-time basis may be issued a semi-annual branch office certificate of registration. The name of an associate practicing in a branch office shall appear on the entrance door to the office used and upon all stationery; no commercial name or designation may be used in connection with any branch office nor may such a practice have any commercial lay connections, nor may there be anything in the nature of "chain exploitation" of licenses. Nothing in this section requires an active licensee to obtain a branch office certificate for the purpose of rendering necessary optometric services for his patients confined to their homes.

(b) No branch office certificate will be issued in a community where a full time optometric practice is available and any certificate in force when a full-time practice is established will not be renewed.

(c) No branch office certificate will be required for a licensee to participate in bonafide vision and eye screening projects outside of his regular or branch office. Vision and eye screening projects must be organized under the auspices of an established service organization not composed primarily of optometrists.

(d) Optometrists who participate in vision and eye screening projects may not receive remuneration for their services other than for travel and living expenses and for emergency care as required. (in effect before 7-28-59; am 5-19-62 and 10-20-62; am 9-10-65, Register 21; am 4-25-71, Register 37)

Authority: AS 08.72.125(c)

12 AAC 48.040. DISPLAY OF CERTIFICATE. A licensee's registration certificate and renewal certificate shall be displayed in the office in which the holder practices oprometry, but not in such a manner that the certificate may be seen from the street. Every licensee, whenever requested, shall exhibit the certificate to a member of the board or person authorized to represent the board and shall notify the department or board of his address and changes of his address. (in effect before 7-28-59; am 5-19-62 and 10-20-62; am 9-10-65, Register 21, am 4-25-71, Register 37)

Authority: AS 08.72.050(4)

12 AAC 48.050. WHEN A PRACTICE IS CONVEYED TO ANOTHER. When an optometrist disposes of his established practice to a successor, the successor shall, within a reasonable time, remove from all signs, cards, stationery, and directories connected with the practice he has acquired or is acquiring, all words or phrases such as "successor to", "associate of", or words of like import.

BOARD OF EXAMINERS IN OPTOMETRY

Under no circumstates may the use of these signs, cards, stationery or advertising continue for more than two years. (in effect before 7-28-59; am 5-19-62 and 10-20-62; am 9-10-65, Register 21, am 4-25-71, Register 37)

Authority: AS 08.72.050(4)

12 AAC 48.060. VISUAL ANALYSES RECORDS. Every optometrist shall keep a record of examinations and visual analyses made and prescriptions issued and for whom the prescriptions were prepared. The record shall be preserved for a period of at least five years from the date services were rendered, except in the case of death of the patient. (in effect before 7-28-59; am 5-19-62 and 10-20-62; am 9-10-65, Register 21, am 4-25-71, register 37)

Authority: AS 08.72.050(4)

12 AAC 48.070. UNPROFESSIONAL CONDUCT. (a) "Unprofessional conduct", referred to in AS 08.72.240(3), includes:

(1) Soliciting patients by advertising of any nature or description regardless of means or media employed; however, upon the opening, reopening or removal of any office for the practice of optometry, an optometrist may publish, in local newspapers an announcement, which announcement shall be limited to a statement of his name, title, profession, degrees, address, telephone number and office hours; such an announcement may not be published for more than 90 days after the opening, reopening, or removal of the office; such an announcement may not exceed eight square inches in area.

(2) Displaying any spectacle, eyeglasses or eyeglass or spectacle frames or mountings, gogles, lenses, prisms, spectacle or eyeglass cases, opthalmic material of any kind, optometric instruments or optical tools or machinery, or any merchandise, material or displays of a commercial nature in office windows or reception rooms or display cases outside the office, where the display of the merchandise, material or display would make it visable from outside the office.

(3) Using display or bold face type or type that is in any way dissimilar in size, shape or color to that used for others of the healing arts in the same directory. Announcements in directories may not contain more than one specialty for each optometrist listed.

(4) Advertising regardless of means or media employed, the price or any type or style of opthalmic prosthetic device, or any of the materials entering into the assembling thereof, or the price of optometric professional services, when the service of prosthetic devices, of necessity must vary in quality and cost.

BOARD OF EXAMINERS IN OPTOMETRY

(5) Using "bait" advertising such as "low prices", "moderate prices", "discounts", "liberal credit terms", "glasses on credit", "guaranteed glasses", "satisfaction guaranteed", or words or phrases of similar import which are not in keeping with ethical practice of a learned profession.

(6) Using signs, whether painted, neon, decalcomania, colored or otherwise, and whether constructed in the form of eyes or structures resembling them, or frames or mountings for any type of opthalic prosthetic devices displayed in any manner or place connected with the practice of optometry.

(7) Using publicly, a sign, card, stationery or other publicity medium which fails to clearly identify the individual optometrist or optometrists engaged in practice in an office or practice location, or using a name other than the name under which the optometrist is licensed, including such designations as "optical company", "optical laboratory", or words or phrases of like import which are out of keeping with the use of the title "Doctor of Optometry" and the practice of optometry as a profession.

(8) Soliciting, personally or through agents, from house to house for the rendering of optometric services or advertising for sale prosthetic devices or materials including contact lenses or opthoptic aids or devices.

(9) Advertising self-styled superiority or the performance of services in a manner presumed to be superior, or the making of untruthful, improbable or impossible claims regarding treatments cures or values.

(10) Advertising by any means or media in a manner contrary to the professional standards, lending, leasing, renting or in any other manner placing his certificate of registration at the disposal of or in the service of any person not licensed to practice optometry in this state.

(b) A registered and licensed optometrist may not associate himself with a corporation or voluntary association for the practice of optometry, or in any manner practice the profession, on a salary or commission basis, or a corporation or voluntary association. However, this subsection does not prohibit professional incorporation under the Professional Corporation Act 10.45. The fact that an officer, trustee, director, agent, or employee or a corporation or voluntary association is a registered and licensed optometrist does not permit the corporation or voluntary association to do the acts prohibited in this section, nor is that fact a defense to the board action against any of the persons mentioned in this subsection for a violation of this section; however, this subsection does not apply to a partnership of two or more registered and licensed optometrists who practice under their own names.

BOARD OF EXAMINERS IN OPTOMETRY

(c) It is unlawful for a registered optometrist to practice his profession as an employee, lessee, or sublessee of a commercial or mercantile establishment or to practice his profession in connection with one, or to advertise either in person or through a commercial or mercantile establishment that he is a registered practitioner and is practicing or will practice optometry as an employee, lessee, or sublessee of a commercial or mercantile establishment or in connection with one. Nothing in this subsection prohibits the rendering of professional services to the officer and employees of a person, firm, or corporation by an optometrist, whether or not the compensation for the services is paid by the officers and employees or by the employer or jointly by all or any of them.

(d) No optometrist may practice in or on premises where any materials other than those necessary to render his professional services are dispensed to the public.

(e) No optometrist may display a sign containing other than his name, profession, one specialty, and office hours, which sign may be used only on office windows or at an entrance to his office. Letters may not be luminous or illuminated. (in effect before 7-28-59; am 5-19-62 and 10-20-62; am 9-10-65, Register 21, am 4-25-71, Register 37)

Authority: AS 08.72.050(4)

12 AAC 48.080. DEFINITIONS. Unless the content in this chapter otherwise states,

(1) "Act", "law" or "statute", refers to AS 08.72.;

(2) "regulations", referred to are those made by the board in keeping with AS 08.72.;

(3) "registration", means registration under AS 08.72.;

(4) "chain exploitation", means establishments that provide vision care in various locations either in one community or throughout a geographic area, where the service is provided by one or more than one optometrist in each or more than one location, and who is under the employ or have an agreement based on a lease, rental agreement partnership, stockholder, or other binding agreement; where control over these establishments are exercised by an individual or group of individuals.

(5) "established service organizations" means an organization who holds a charter from a parent organization whose primary established goal is public service without profit.

(6) "vision and eye screening projects" means a project organized with the intent of identification and referral of vision and eye disorders.

BOARD OF EXAMINERS IN OPTOMETRY

(7) "prescription" means a written formula prepared by a person licensed under AS 08.72 and which contains the following essential elements when applicable to eyeglasses, contact lenses or other visual therapy, dioptric power of spheres, cylinders and prisms, axis of cylinders and position of prism base; designation of inter-pupilary distances; size, base curve, power, color and type, when a contact lense; and the name of the patient, date of prescription and name and office location of prescriber. (in effect before 7-28-59; am 5-19-62 and 10-20-62; am 9-10-65, Register 21, am 4-25-71, Register 37)

Authority: AS 08.72.050

12 AAC 1100 - 12 AAC 1121 are repealed. (Eff. 4-25-71, Register 37)

Plaintiffs,

vs.

THE ALASKA BOARD OF DISPENSING OPTICIANS, et al.,

Defendants.

Civil Action No. F 76-35 CIV

CONSENT DECREE

All parties to the above entitled and numbered cause, through their undersigned counsel of record, do hereby consent to a final judgment being entered by the court herein upon the parties' agreement by consent as follows:

I

The defendant Board of Examiners in Optometry shall

ATTORNEY GENERAL STATE OF ALASKA
STATE CAPITOL
POUCH K, JUNEAU, ALASKA 99811
PHONE (907) 465-3600

not initiate administrative, civil or criminal enforcement or disciplinary action against any licensee who engages in the truthful advertisement of prices, terms of payment, discounts, comparative costs, credit terms, the availability and type of credit, and the valuation of ophthalmic prosthetic products and ophthalmic services unless such advertisements violate the relevant statutes or regulations of the Board restricting time, place or manner of such advertisements.

II

The defendant Board of Dispensing Opticians shall not initiate disciplinary action or revoke, suspend or deny the license of a person who engages in the truthful advertisement of prices, terms of payment, discounts, comparative costs, credit terms, the availability and type of credit, and the valuation of ophthalmic prosthetic products and opthalmic services unless such advertisements violate the relevant statutes or regulations of the Board restricting the time, place or manner of such advertisements.

III

Nothing contained in this Decree shall restrict or prohibit the authority of either the Board of Examiners in Optometry or the Board of Dispensing Opticians from establishing minimum standards for professional advertising and/or for initial routine vision examinations. Consistent with this Decree, nothing herein shall restrict or prohibit the authority of either of the aforesaid Boards from promulgating and enforcing regulations or enforcing statutes which otherwise impose restrictions upon their respective licensees who engage in deceptive or misleading advertising of ophthalmic prosthetic products and/or opthalmic services or which impose reasonable restrictions upon the time, place or manner of such advertisements.

ATTORNEY GENERAL, STATE OF ALASKA
STATE CAPITOL
POUCH K, JUNEAU, ALASKA 99811
PHONE: (907) 465-3600

IV

The Board of Examiners in Optometry within a reasonable period shall promulgate standards for professional advertising applicable to licensed optometrists practicing in the State of Alaska.

V

For purposes of this Consent Decree and until standards for professional advertising have been promulgated by the Board of Examiners in Optometry an advertisement for "routine vision examination" as it relates to licensed optometrists means that the licensed optometrist shall at a minimum adhere to the following standard:

A.

In the initial examination of the patient, the licensed optometrist shall make and record the following findings of the condition of the patient:

a. Complete Case History (ocular, physical, occupational, medical and other pertinent information);

b. Chief ocular complaint;

c. Aided and unaided visual acuity, at both near and far;

d. External Examination (lids, cornea, sclera, etc.);

e. Internal Opthalmoscopic Examination (media, fundus, etc.);

f. Ocular motility;

g. Neurological integrity;

h. Far Point Subjective Examination, Static retinoscopy and subjective refraction;

i. Near Point Subjective Examination; Dynamic retinoscopy and subjective refraction;

j. Test of accomodation and convergence and binocular coordination at far and near; test preferably made with phoropter;

k. Confrontation Fields.

1. Tonometry test.

B.

The Minimum Standards for Examination and Fitting of Contact Lenses which are necessary in order to insure an adequate examination of patient for whom a licensed optometrist signs or causes to be signed a prescription for a contact lens:

a. All items contained in the Minimum Standards for an Optometric Examination,

b. Slit Lamp Evaluation;

c. Fluorisine Examination;

d. Diagnostic Evaluation (for soft lenses);

e. Reexamination and reevaluation within the following periods of time:
Firm lenses - 3 months
Flexible lenses - 6 months.

VI

With the exception of the limitations contained in Paragraph I of this Decree, the Board of Examiners in Optometry shall continue to have and exercise all of the statutory authority conferred upon it by AS 08.72 and persons licensed under that chapter shall continue to enjoy all the rights and benefits inherent in their status as a licensee.

With the exception of the limitations contained in Paragraph II of this Decree, the Board of Dispensing Opticians shall continue to have and exercise all of the statutory authority conferred upon it by AS 08.71 and persons licensed under that chapter shall continue to enjoy all the rights and benefits inherent in their status as a licensee.

Nothing herein shall be construed to either expand or restrict the areas of professional practice which are set forth in AS 08.72 and AS 08.71. Nothing herein shall be

ATTORNEY GENERAL, STATE OF ALASKA
STATE CAPITOL
POUCH K JUNEAU ALASKA 99811
PHONE (907) 465-3600

construed as requiring the two Boards to promulgate identical standards for professional advertising in those areas where their respective fields of practice should overlap.

VII

For purposes of the interpretation and the implementation of this Decree, the following definitions shall control:

A. "Opthalmic prosthetic products" shall consist of eyeglasses, lenses, contact lenses, frames or any component thereof or any other device used for or incident to the correction of any visual anomaly.

B. "Ophthalmic services" consist of the measuring, fitting and adjusting of ophthalmic prosthetic products to the face and eyes.

C. "Routine vision examination" is the process of determining the refractive condition of a person's eyes or the presence of any visual anomaly by the use of objective and subjective tests.

CONCLUSION

A. Jurisdiction

The jurisdiction of this cause is to be retained by the court for the purpose of making such other and further orders as may become necessary. However, with respect to defendants Board of Examiners in Optometry and members thereof this decree shall be terminated and rendered null and void upon the expiration of 30 days following the subsequent promulgation of regulations by the said Board relating to the area of professional advertising practices. Furthermore, with respect to defendants Board of Dispensing Opticians and members thereof, this decree shall be terminated and rendered null and void upon the expiration of 30 days following the subsequent promulgation of regulations by the said Board or immediately upon the effective date of any amendments to the relevant provisions of AS 08.71 which may be enacted by the

ATTORNEY GENERAL, STATE OF ALASKA
STATE CAPITOL
POUCH K, JUNEAU, ALASKA 99811
PHONE (907) 465-3600

Alaska State Legislature.

B. Costs and Attorneys' Fees.

Defendants have agreed to pay reasonable attorneys' fees to plaintiffs counsel and the parties agree that all other costs and attorneys' fees incurred in the prosecution or defense of this action as of the date this Decree is entered shall be borne by each party respectively.

C. Notice Requirement.

Defendants further agree to notify all optometrists licensed under AS 08.72 and all dispensing opticians licensed under AS 08.71 of the terms of this Decree by mailing to each licensee a copy thereof within 60 days of the entry of this Decree.

WHEREAS, the parties having presented to the Court the instant Consent Decree and having consented to it serving as the final judgment of the Court in this cause;

IT IS ORDERED, ADJUDGED AND DECREED that judgment be and hereby is granted pursuant to Consent Decree as the final judgment of this Court with regard to this cause.

DATED at Anchorage, Alaska, this 13 day of December, 1977.

JUDGE OF THE UNITED STATES DISTRICT COURT

ATTORNEY GENERAL STATE OF ALASKA
STATE CAPITOL
POUCH K, JUNEAU, ALASKA 99811

OREGON STATE
ATTORNEY GENERAL OPINION
5807

Use of an electronic tonometer by an optometrist does not violate the provisions of the Medical Practice Act under ORS chapter 677.

No. 5807 May 12, 1964

Mr. Howard I. Bobbitt
Executive Secretary
State Board of Medical Examiners

You have requested an opinion as to whether the use by an optometrist of an instrument known as an electronic tonometer is a violation of the Medical Practice Act, ORS chapter 677.

You state that the facts indicate that an optometrist has been advertising that he uses an electronic tonometer which is a device that measures intraocular pressure by electronic means to detect certain pathological conditions but does not require use of any anesthetic or drug. The facts also indicate that other instruments have been in use by the optometric profession for many years, such as the Wolf scleral tonometer and Schiotz type tonometer.

It appears that intraocular pressure may be an indication of various pathological or abnormal conditions of the human eye and may affect "the scope of its functions."

Under the medical practice provisions of the Oregon law ORS 677.020 provides:

"*Except as provided in ORS 677.060* no person shall practice medicine or surgery in this state without being licensed so to do by the State Board of Medical Examiners." (Emphasis supplied)

ORS 677.030 provides in part:

"A person is regarded as practicing medicine and surgery if he does one of the following:

* * *

"(4) Offer or undertake to diagnose, * * * in any manner, or by any means, * * * any disease, illness, pain, * * * deformity, defect or abnormal physical * * * condition of any person."

ORS 677.010 (1)(c) defines the word "diagnose" as:

"* * * examine another person in any manner to determine the source or nature of a disease or other abnormal physical or mental condition, or to hold oneself out or represent that a person is so examining another person. * * *"

ORS 677.060 provides in part:

"This chapter shall not be construed to affect or prevent the following:

* * *

"(8) The practice of * * * optometry * * * by any person legally authorized by this state * * *."

It is clear, therefore, that ORS 677.060 (8) permits a duly authorized optometrist to render all services contemplated and included within the term "practice of optometry."

The phrase "practice of optometry" is defined in part in ORS 683.010 (2) as:

"'Practice of optometry' *means the employment of any means other than the use of drugs* for the measurement * * * of the human vision or the determination of the accommodative and refractive states of the human eye or the *scope of its functions in general* * * *." (Emphasis supplied)

It is to be noted that the only limitations imposed on an optometrist with respect to determining the "accommodative and refractive" state of the human eye or the "scope of its functions" is with respect to the use of drugs. Aside from drugs, an optometrist may use "any means" to make these determinations. Obviously an electronic tonometer is not a drug.

The crucial question implicit in your request is, what activities with respect to pathology of the eye are encompassed by the term "practice of optometry."

The Supreme Court of Oregon in State ex rel. Sisemore v. Standard Optical Company, (1947) 182 Or. 452, 460-461, 186 P. (2d) 309, 312-313, has unequivocally answered that question. The court stated at page 460:

"The practice of optometry is undoubtedly one of the subdivisions of the practice of medicine * * *."

The court went on to say at page 461:

"While it is true that an optometrist is not permitted by law to treat diseases of the eye, nevertheless his training enables him to diagnose pathological conditions, and *his duty requires him to refer the patient to a practitioner who is qualified to treat such conditions*. The fact that he is trained to diagnose pathological conditions in itself indicates that the optometrist is not a mere skilled craftsman or mechanic. His failure to diagnose a pathological condition, with resultant delay or neglect in proper treatment thereof, might result in serious impairment of the patient's eyesight, or even in blindness." (Emphasis supplied)

It thus appears that the term "practice of optometry" as construed by our Supreme Court contemplates that an optometrist, as a part of the services he renders his patient, has a duty to use his professional training, skill and knowledge while he is performing his primary function, to determine whether his patient is afflicted with an abnormal or pathological condition of the eye which may require treatment by a person legally qualified to render such service. He is also required to advise such patient if he finds what appears to be a pathological condition so that the patient may seek treatment from a legally qualified person. This does not mean that an optometrist has a duty to subject his patient in every possible type of examination for all manner of conditions, whether apparent or hidden. Nor does the "practice of optometry" allow an optometrist to so advertise that he indicates directly or indirectly that he examines and treats diseases of the eye. It is our understanding that the questioned advertising has been withdrawn and the optometrist reprimanded by the Oregon State Board of Examiners in Optometry. Within that area, defined as the "practice of optometry," the optometrist has the right to use any instruments or aids which in his professional judgment assist him in performing his functions, provided he is not administering "drugs."

It is, therefore, our opinion that the use of the electronic tonometer by an optometrist in the circumstances described herein is encompassed within the phrase "practice of optometry" and hence not prohibited by the provisions of the Medical Practice Act.

ROBERT Y. THORNTON,
Attorney General.
By Louis S. Bonney, Assistant

ALASKA CONSENT DECREE

Routine Visual Examination

ALASKA DRUG TERMINOLOGY RELATING TO USAGE OF

"DIAGNOSTIC AGENTS"

BY OPTOMETRISTS

The following reviews an accepted dictionary definition and the Alaska Statutes' definition regarding "drug" terminology.

Dorlands Medical Dictionary defines:

> DRUG: Any chemical compound or any non-infectious biological substance, not used for its mechanical properties, which may be administered to or used on or for patients, either human or animal, as an aid in the diagnosis, treatment, or prevention of disease or other abnormal condition, for the relief of pain or suffering, or to control or improve any physiological or pathological condition.

From this definition one could conclude that an accepted aspect of the usage of a "drug" is in "diagnosis". However, pertinent terminology regarding drugs does not make any reference to "diagnostic drugs, or agents."

OPTOMETRISTS Section 08.72.300 (3)

> (2) "Practice of optometry means the diagnosis, by means or methods other than the use of drugs . . ."

MEDICINE Section 08.64.380 Definitions:

> (No specific def or drug is given but intent can be recognized under the definition of practice of medicine)
>
> (2) Practice of medicine or practice of osteopathy means:
>
> (D) for a fee prescribing, directing or recommending for the use of a person, a drug or medicine for the treatment, cure or relief of a disease, infirmity, bodily injury or defect; . . .

To clarify Medicine's definition, Dorlands Medical Dictionary defines:

CURE: 1. The course of treatment of any disease, or of a special case. 2. The successful treatment of a disease or wound. 3. A system of treating diseases. 4. A medicine effective in treating disease.

PRESCRIBING: Giving instructions concerning the use of a remedy.

TREATMENT: The means employed in effecting the cure of disease.

RELIEF: The removal of anything distressing; the alleviation of pain or discomfort.

INFIRMITY: Weakness; a disease producing feebleness.

The point here is that the term "diagnostic agent" does not come within the boundaries of the definition of "drug" within the Alaska Statutes for medicine. From this, three conclusions can be drawn:

1. At present time, the current usage of diagnostic agents by optometrists does not infringe on the Alaska Medicine Statutes.

2. If positive "diagnostic agents" wording is added to the Alaska Optometrists Statutes, no infringement will exist upon the Alaska Medicine Statutes.

3. Positive "diagnostic agents" wording should be added to the Alaska Optometrists Statutes because while § 08.72.300, "Practice of Optometry means the employment of any means other than the use of drugs . . ." does not conflict with § 08.64.380 on Medicine, it does, however, conflict with an accepted dictionary definition: "Drug is any chemical . . . used . . . as an aid in the diagnosis . . ."

which are tempered or case hardened. Glass lenses shall have a minimum thickness of two millimeters.

(b) No person may fabricate, distribute, sell, exchange, deliver or have in his possession with intent to distribute, sell, exchange or deliver eyeglasses or sunglasses having frames manufactured from cellulose nitrate or other highly flammable materials.

(c) A person who violates this section is punishable by a fine of not less than $50 nor more than $100. (1 ch 220 SLA 1968)

Revisor's note.-Section 2, ch 220, SLA 1968, provides; "The provisions of this bill take effect one year after date of passage." Legislative action on SCSHB 68 am (ch. 220, SLA 1968), was completed on April 14, 1968 and the bill was signed by the governor on May 6, 1968.

Sec. 08.72.280. Violations. No person may falsely personate a registered optometrist, nor buy, sell or fraudulently obtain a certificate of registration issued to another or advertise the practice of optometry in violation of rules of the board. Practicing or offering to practice optometry is sufficient evidence of a violation of this chapter. (sec 35-3-144 ACLA 1949)

Sec. 08.72.290. Penalty. A person who violates this chapter is guilty of a misdemeanor and is punishable by a fine of not less than $50 nor more than $500, or by imprisonment for a term of not less than 10 days nor more than 90 days, or by both. (sec 35-3-145 ACLA 1949)

Article 4. General Provisions.

Section 300. Definitions
Section 310. Short title

Sec. 08.72.300. Definitions. As used in this chapter
(1) "board" means the Board of Examiners in Optometry;
(2) "optometry" is the employment of means or methods, other than the use of drugs, for the diagnosis of an optical deficiency or deformity, visual or muscular anomaly of the human eye, or the prescription or application of lenses, prisms or ocular exercises for the correction or relief of the human eye;
(3) "practicing optometry" means the diagnois, by means or methods other than the use of drugs, of an optical deficiency or deformity, visual or muscular anomaly of the human eye, or the prescription of lenses, prisms or ocular exercises for the correction or relief of the human eye, or the holding of oneself out as being able to do so;
(4) "lenses" means conventional or contact lenses. (sec 35-3-131 ACLA 1949; am sec 2 ch 95 SLA 1966)

(5) "recognized school or college of optometry" is one which is approved by the American Optometric Association or one of its committees;
(6) "department" means the Department of Commerce. (sec 35 3-131 ACLA 1949;am sec 2 ch 95 SLA 1966;am by adding (5) & (6) sec 13 SLA 1969)

Effect of amendment.-The 1966 amendment added paragraph (4).

This chapter is a valid exercise of the legislative power. Edmunds v. Board of Examiners in Optometry, 9 Alaska 462, aff'd, 9 Alaska 627, 106 F.2d 904 (1939).

Sec. 08.72.310. Short Title. This chapter may be cited as the Optometry Law. (sec 35-3-150 ACLA 1949)

Effect of amendment. — The 1974 amendment repealed paragraph (4).

Legislative committee report. — For report on ch. 127, SLA 1974 (SCSHB 817 am S), see 1974 House Journal, p. 657.

Sec. 08.64.380. Definitions. As used in this chapter

(1) "board" means the State Medical Board;

(2) "practice of medicine" or "practice of osteopathy" means

(A) maintaining an office or place of business for the purpose of treating the sick or injured for pay; or

(B) the public display of one's name and the letters "M.D.", "M.B." or "D.O." or the words "physician" or "osteopath" or "osteopathic physician", or "osteopathic surgeon", or "osteopathic physician and surgeon", or a specialist designation such as "surgeon" or "dermatologist", "psychiatrist", or the like; or

(C) the assumption or promulgation of a title which tends to show that the person is willing or qualified to diagnose or treat the sick or injured; or

(D) for a fee prescribing, directing or recommending for the use of a person, a drug or medicine for the treatment, cure or relief of a disease, infirmity, bodily injury or defect; or

(E) for a fee performing a surgical operation for the cure, relief or reduction of disease, bodily injury, deformity, or defect; or

(F) Repealed by § 1 ch 117 SLA 1971.

(3) "unprofessional or dishonorable conduct" means

(A) a violation of the provisions of AS 11.15.060 or regulations lawfully adopted by the State Medical Board concerning abortion procedures and practice;

(B) habitual overuse of alcoholic beverages or depressant, hallucinogenic or stimulant drugs, as defined in AS 17.12.150(3), or addiction to the use of narcotic drugs as defined in AS 17.10.230(13);

(C) conviction of an offense involving moral turpitude,

(D) advertising professional services to the public except for notice of opening, closing, or removing practice, and except for directories listing physicians in a community on a uniform and nondiscriminatory basis, containing only factual, truthful descriptions of physicians and their services;

(E) making untruthful or fraudulent statements in the application for examination, or deceiving or cheating during the examination for license, or procuring a license by deceit or fraud;

(F) violating the Controlled Substances Act (P.L. 91-513; 84 Stat. 1242) or any other federal law pertaining to medical practice and drugs;

(G) violating the principles of medical ethics of the American Medical Association and of the Alaska State Medical Association;

(4) Repealed by § 27 ch 148 SLA 1970.

(5) "department" means the Department of Commerce.

Article 2. Seizure of Conveyances Used in Narcotics Violations.

Section
60. Seizure and forfeiture of conveyance
70. Order for seizure and forfeiture
80. Hearing, forfeiture and sale
90. Limitations on seizure and forfeiture
100. Person having interest in conveyance may appear in proceeding
110. Definition of illegally possessed narcotic drug

Sec. 17.15.060. Seizure and forfeiture of conveyance. A vessel, vehicle, aircraft or other conveyance used in the transportation of an illegally possessed narcotic drug shall be seized and forfeited to the state. (§ 1 ch 104 SLA 1961)

Am. Jur. reference. — 17A Am. Jur., Drugs and Druggists, § 1 et seq.

Sec. 17.15.070. Order for seizure and forfeiture. The conveyance shall be seized and forfeited in a proceeding in rem by order of the court which issues the process under which the conveyance is seized, or the court before which the person or the conveyance is taken by the officer making the seizure. (§ 1 ch 104 SLA 1961)

Sec. 17.15.080. Hearing, forfeiture and sale. The court shall order an immediate hearing on the question of whether or not the conveyance was used in the transportation of an illegally possessed narcotic drug. The court shall hear evidence and determine the question as in civil cases. If the court finds from a preponderance of the testimony that the conveyance seized was being used for the transportation of an illegally possessed narcotic drug, it shall give judgment accordingly and declare the conveyance forfeited to the state. The conveyance shall be delivered to the Department of Public Safety under the court order, and sold at public auction. (§ 2 ch 104 SLA 1961)

Sec. 17.15.090. Limitations on seizure and forfeiture. (a) No conveyance used as a common carrier in the transaction of business as

a common carrier may be forfeited under §§ 60—110 of this chapter unless the owner or other person legally in charge of the conveyance was at the time of the illegal act a consenting party or privy to it.

(b) No conveyance may be forfeited because of an act or omission established by the owner of the conveyance to have been committed or omitted by another person while the conveyance was unlawfully in the possession of a person who acquired possession of it in violation of the criminal laws of the United States or this state.

(c) No conveyance may be forfeited under §§ 60—110 of this chapter, unless the owner of the conveyance was, at the time of the illegal act, a consenting party to the illegal act or privy to it. (§ 3 ch 104 SLA 1961)

Sec. 17.15.100. Person having interest in conveyance may appear in proceeding. A person holding a lien, mortgage or conditional sales contract on a conveyance seized under §§ 60—110 of this chapter may appear before the court in the proceeding for forfeiture to petition for remittance or mitigation of the forfeiture. The court shall remit or mitigate the forfeiture if it finds that the petitioner has an interest in the conveyance which he acquired in good faith and without knowledge or reason to believe that the conveyance was being or would be used in the transportation of an illegally possessed narcotic drug. (§ 3 ch 104 SLA 1961)

Sec. 17.15.110. Definition of illegally possessed narcotic drug. In §§ 60—110 of this chapter

(1) "conveyance" means a vessel, vehicle, trailer, aircraft or other conveyance used in the transportation of an illegally possessed narcotic drug;

(2) "illegally possessed narcotic drug" is a narcotic drug (A) possessed with intent to sell or offer for sale in violation of any law or regulation of the United States or this state, or (B) acquired, possessed, sold, transferred, or offered for sale in violation of any law of the United States or this state, or (C) acquired by theft, robbery or burglary;

(3) "narcotic drug" means a narcotic drug defined by the federal internal revenue laws and the regulation issued under them. (§§ 1, 4 ch 104 SLA 1961; am § 4 ch 225 SLA 1968)

could not say that the sentencing court was clearly mistaken in imposing a five-year sentence for selling amphetamines in violation of AS 17.12.010. Thurlkill v. State, Sup. Ct. Op. No. 1279 (File No. 2735), 551 P.2d 541 (1976).

Where defendant was convicted, upon his plea of guilty, of four counts of sale and one count of distribution of marijuana, the superior court was not clearly mistaken in imposing a sentence of five years, with two suspended, on each count, to be served concurrently, the court also having fined defendant $5000, suspending payment of $3000. Wolfe v. State, Sup. Ct. Op. No. 1301 (File No. 2766), 553 P.2d 472 (1976).

Sentence of three years imprisonment for selling LSD was not excessive. Aceveda v. State, Sup. Ct. Op. No. 1534 (File No. 2900), 571 P.2d 1013 (1977).

Where defendant was convicted of possession of an hallucinogenic drug with intent to sell or distribute and was sentenced to seven years, with execution of the sentence suspended for five years, defendant being placed on probation for 30 months on condition that he: (1) complete school; (2) be employed while not in school or incarcerated; and (3) report to a correctional institution in September 1976 to serve six months, subject to school release and credit for the 45 days he had already served, and this sentence was to run concurrently with the sentence for his conviction on an earlier offense, with probation in that case to be revoked by the judgment in the instant case, such sentence was not too lenient under the facts of the case. Clark v. State, Sup. Ct. Op. No. 1570 (File Nos. 2943, 2964), 574 P.2d 1261 (1978).

Sentence held excessive. — Imposition of two consecutive five-year terms for the sale of small quantities of marijuana was excessive. Salazar v. State, Sup. Ct. Op. No. 1404 (File No. 2567), 562 P.2d 694 (1977).

Case remanded for resentencing. — The supreme court remanded for resentencing where the trial court had improperly considered the goal of community condemnation of the offender in sentencing defendant to five years' imprisonment for possession of marijuana for the purpose of sale or distribution. Snyder v. State, Sup. Ct. Op. No. 1744 (File No. 3321), 585 P.2d 229 (1978).

Applied in Barrett v. State, Sup. Ct. Op. No. 1225 (File No. 2299), 546 P.2d 161 (1976); State v. Buckalew, Sup. Ct. Op. No. 1391 (File No. 3143), 561 P.2d 289 (1977).

Cited in State v. Erickson, Sup. Ct. Op. No. 1547 (File No. 3250), 574 P.2d 1 (1978).

Sec. 17.12.130. Forfeiture.

Difference between AS 11.45.040 and this section and AS 16.05.195. — Both this section and the fish and game forfeiture statute, AS 16.05.195, define broadly the property subject to forfeiture to include "accessories" and "paraphernalia," respectively, used to violate the law. Furthermore, both of them provide optional dispositions for forfeited property, unlike the gambling forfeiture statute, AS 11.45.040 which mandates destruction of property seized. One Cocktail Glass v. State, Sup. Ct. Op. No. 1437 (File No. 2729), 565 P.2d 1265 (1977).

Sec. 17.12.150. Definitions.

Cocaine does not appear specifically in paragraph (3). State v. Erickson, Sup. Ct. Op. No. 1547 (File No. 3250), 574 P.2d 1 (1978).

Quoted in State v. Buckalew, Sup. Ct. Op. No. 1391 (File No. 3143), 561 P.2d 289 (1977).

ELLIOT RICHARDSON, SECRETARY, DEPARTMENT OF HEALTH, EDUCATION AN WELFARE, FILLED A 1971 REPORT WITH THE PRESIDENT AND CONGRESS ON ADMINISTRATION OF THE HEALTH PROFESSIONS EDUCATIONAL ASSISTANCE ACT.

The report contained the following language concerning optometry:

"Optometrists are trained to detect any departure from the optimally healthy eye. The scope of optometric services has expanded beyond basic clinical refractions, fabricating and dispensing eyeware; now included are visual screening examinations, clinical intrumentation, contact lens fitting, visual training, orthoptics, low-vision aids for the partially sighted, artificial eyes, industrial vision consultation and public and community health. The most rapidly expanding area of service is in school consultation and remedial services for low achievers. The optometrist is trained and bound by professional ethics to refer patients in whom indications of disease have been found to a physician or other health practitioner for definitive diagnosis and appropriate medical surgical or other treatment."

ELLIOT RICHARDSON, SECRETARY, DEPARTMENT OF HEALTH, EDUCATION AN WELFARE, FILLED A 1971 REPORT WITH THE PRESIDENT AND CONGRESS ON ADMINISTRATION OF THE HEALTH PROFESSIONS EDUCATIONAL ASSISTANCE ACT.

The report contained the following language concerning optometry:

"Optometrists are trained to detect any departure from the optimally healthy eye. The scope of optometric services has expanded beyond basic clinical refractions, fabricating and dispensing eyeware; now included are visual screening examinations, clinical intrumentation, contact lens fitting, visual training, orthoptics, low-vision aids for the partially sighted, artificial eyes, industrial vision consultation and public and community health. The most rapidly expanding area of service is in school consultation and remedial services for low achievers. The optometrist is trained and bound by professional ethics to refer patients in whom indications of disease have been found to a physician or other health practitioner for definitive diagnosis and appropriate medical surgical or other treatment."

HOW THE DIAGNOSTIC AGENTS BI L IN ALASKA RELATES TO:

1. Other States:

Thirty-one states al ow optometrists to use diagnostic agents. Other states such as Alaska are currently making legislative efforts to broaden this.

2. Other Countries:

a. The large english speaking countries of Canada, Australia, and England all certify optometrists to use diagnostic drugs.

b. England's joint declaration (February, 1970) by the ophthalmologists and optometrists of England confirm the many beneficial years as well as pronounce the future continuation for the usage of diagnostic agents by optometrists.

3. The United States Armed Forces:

All branches of the military either allow or specifically state in the regulations that optometrists shall be permitted the usage of diagnostic agents or drugs.

HOW THE DIAGNOSTIC AGENT BILL IN ALASKA

RELATES TO OTHER STATES

1. Recent positive state law changes: (23 state law changes)

   a. Rhode Island enacted optometry redefinition law in 1971:

      Optometrists "shall be permitted to apply drugs topically to the eye for the purpose of detecting any disease or pathological condition of the eye."

   b. Pennsylvania enacted optometry redefinition law in 1974:

      Optometry shall include the use of "diagnostic pharmaceutical agents, known generically as cycloplegics, mydriatics, topical anesthetics and miotics."

   c. Iowa enacted optometry redefinition law most recently in June, 1979:

      Certified licensed optometrists may employ cycloplegics, mydriatics and topical anesthetics as diagnostic agents topically applied . . .

   d. Louisiana

   e. Oregon

   f. Delaware

   g. Maine.

2. States which have no prohibitive laws on diagnostic agent usage by optometrists:

   a. Florida

   b. Idaho

   c. Indiana

   d. Minnesota

   e. Nevada

   f. New Jersey

Total of (31) states allow the use of diagnostic agents by optometrists. Map showing dates--geographic locations.

3. Experience of states where diagnostic agents are used:

Letter enclosed from E.C. Nurock, Secretary-Treasurer, Department for Law and Public Safety, Board of Optometrists, State of New Jersey.

New Jersey optometrists have had the right to use these diagnostic agents since 1919. "In the state there have been no cases reported regarding any problems caused by optometrists using any of the diagnostic drugs. The use of diagnostic drugs by optometrists is definitely in the public interest."

RHODE ISLAND DEFINITION

(Enacted at 1971 Session)

Optometry is defined as the profession whose practitioners are engaged in the art and science of the evaluation of vision and the examination of vision and the examination and refraction of the human eye which includes:

The employment of any objective or subjective means for the examination of the human eye or its appendages;

The Measurement of the powers or range of human vision or the determination of the accommodative and refractive powers of the human eye or the scope of its functions in general and the adaptation of lenses, prisms, and/or frames for the aid thereof;

The prescribing, directing the use of or administering ocular exercises, visual training, vision training, or orthoptics, and the use of any optical device in connection therewith;

The prescribing of contact lenses for, or the fitting or adaptation of contact lenses to the human eye;

The examination or diagnosis of the human eye to ascertain the presence of abnormal conditions or functions; and

The topical application of drugs to the eye, to wit, mydriatics, miotics, and the use of topical anesthetics, provided, however, that no optometrist licensed in this state shall treat by the use of these drugs or attempt to perform any surgery and shall be used only for the purpose of detecting any diseased or pathological condition of the eye, or the effects of any disease or pathological condition of the eye, further provided however, that with respect to presently licensed optometrists, only presently licensed optometrists who

1. have satisfactorily completed a course in pharmacology, as it applies to optometry, at an institution accredited by a regional or professional accreditation organization which is recognized by the national commission on accreditation, with particular emphasis on the topical application of drugs to the eye for the purpose of detecting any diseased or pathological condition of the eye; or the effects of any disease or pathological condition of the eye, approved by the board of examiners in optometry and the chief of pharmacy of the department of health, and

2. have successfully completed an examination given by the board of examiners in optometry in conjunction with the chief of pharmacy of the department of health, shall be permitted to apply drugs topically to the eye for the purpose of detecting any diseased or pathological condition of the eye, or the effects of any disease or pathological condition of the eye. Said chief of pharmacy shall consult and advise the board of examiners in optometry with respect to that portion of the examination dealing with pharmacology.

PENNSYLVANIA REDEFINITION

(Enacted in early 1974)

Section 1. That the practice of optometry is hereby defined to be the employment of any means or methods, other than the use of surgery, or drugs, except diagnostic pharmaceutical agents, known generically as cycloplegics, mydriatics, topical anesthetics and miotics, which are administered topically for

The examination of the human eye and the analysis of ocular functions, or

The prescribing, providing, furnishing, adapting or employing any or all kinds and types of lenses and prisms, visual training, orthoptics, ocular exercises, and any and all preventive and corrective methods for the aid, correction or relief of the human eye, its associated structures, appendages and functions, other than the use of drugs or surgery:

The Secretary of Health shall designate the specific agents to be used under the above generic classification. Provided, however, that with respect to optometrists licensed at the time of the effective date of this amendatory act, only such licensed optometrists who

1. have satisfactorily completed a course in pharmacology, as it applies to optometry, by an institution accredited by a regional or professional accreditation organization which is recognized or approved by the National Commission on Accrediting or the United States Commissioner of Education, with particular emphasis on the topical application of diagnostic pharmaceutical agents to the eye for the purpose of examination of the human eye and analysis of ocular functions, approved by the State Board of Optometrical Examiners, and

2. who upon successful completion of such course shall be permitted by the State Board of Optometrical Examiners in Optometry to use diagnostic pharmaceutical agents topically in the practice of optometry.

Whenever an optometrist during the course of his examination shall determine the possibility of the existence of a pathological condition he shall advise the person of such opinion, and refer such person to physician for further evaluation.

SUBJECT: Iowa Legislation

FROM: Thomas E. Eichhorst, Counsel

On June 8, 1979, Iowa Governor Robert D. Ray, a Republican, signed into law Senate File 93. This law, entitled, "AN ACT RELATING TO THE USE OF DIAGNOSTIC PHARMACEUTICAL AGENTS BY OPTOMETRISTS" is enclosed.

The bill passed the Senate on March 7, 1979 by a vote of 29 to 17. It passed the House, as amended, on April 19, 1979, by a vote of 67 to 25. It was concurred in by the Senate on May 1, 1979 by a vote of 29 to 20.

Iowa is the twenty-third (23rd) state to enact legislation specifically authorizing optometrists to utilize pharmaceutical agents. Twenty-one (21) states authorize optometrists to utilize diagnostic pharmaceutical agents; two states authorize optometrists to utilize pharmaceutical agents for diagnostic and therapeutic purposes. The list (and dates of enactment) of these states is as follows:

American Optometric Association

SENATE FILE 93

AN ACT

RELATING TO THE USE OF DIAGNOSTIC PHARMACEUTICAL AGENTS BY OPTOMETRISTS.

BE IT ENACTED BY THE GENERAL ASSEMBLY OF THE STATE OF IOWA:

Section 1. Section one hundred fifty-four point one (154.1), Code 1979, is amended by adding the following new unnumbered paragraph:

NEW UNNUMBERED PARAGRAPH. Certified licensed optometrists may employ cycloplegics, mydriatics and topical anesthetics as diagnostic agents topically applied to determine the condition of the human eye for proper optometric practice or referral for treatment to a person licensed under chapter one hundred forty-eight (148) or one hundred fifty A (150A) of the Code. A certified licensed optometrist is an optometrist who is licensed to practice optometry in this state and who is certified by the board of optometry examiners to use diagnostic agents. A certified licensed optometrist shall be provided with a distinctive certificate by the board which shall be displayed for viewing by the patients of the optometrist.

Sec. 2. Section one hundred fifty-four point three (154.3), Code 1979, is amended by adding the following new subsections:

NEW SUBSECTION. A person applying to be licensed as an optometrist after January 1, 1980, shall also apply to be a certified licensed optometrist and shall, in addition to satisfactorily completing all requirements for a license to practice optometry, satisfactorily complete a course consisting of at least one hundred contact hours in pharmacology and receive clinical training as it applies to optometry with particular emphasis on the topical application of diagnostic agents to the human eye for the purpose of examination of

the human eye, and the diagnosis of conditions of the human eye, at an institution accredited by a regional or professional accreditation organization which is recognized or approved by the council on postsecondary accreditation or the United States office of education.

NEW SUBSECTION. A person licensed as an optometrist prior to the effective date of this Act who applies to be a certified licensed optometrist shall first satisfactorily complete a course consisting of at least one hundred contact hours in pharmacology as it applies to optometry including clinical training as it applies to optometry with particular emphasis on the topical application of diagnostic agents to the human eye and possible adverse reactions thereto, for the purpose of examination of the human eye and the diagnosis of conditions of the human eye, provided by an institution accredited by a regional or professional accreditation organization which is recognized or approved by the council on postsecondary accreditation or the United States office of education, and approved by the board of optometry examiners.

NEW SUBSECTION. In addition to the examination required by section one hundred fifty-four point three (154.3), subsection three (3) of the Code, a person applying to be a certified licensed optometrist shall also pass an examination prescribed by the optometry examiners in the subjects of physiology and pathology appropriate to the use of diagnostic pharmaceutical agents and diagnosis of conditions of the human eye, and pharmacology including systemic effects of ophthalmic diagnostic pharmaceutical agents and the possible adverse reactions thereto, authorized for use by optometrists by section one hundred fifty-four point one (154.1) of the Code.

Sec. 3. Chapter one hundred fifty-four (154), Code 1979, is amended by adding the following new section:

NEW SECTION. A certified licensed optometrist employing diagnostic pharmaceutical agents as authorized by this Act shall be held to the same standard of care in the use of such agents and in diagnosis as is common to persons licensed under chapter one hundred forty-eight (148) or one hundred fifty A (150A) of the Code in this state.

Sec. 4. Section one hundred fifty-five point twenty-two (155.22), Code 1979, is amended to read as follows:

155.22 EXCEPTIONS. Sections 155.20 and 155.21 do not apply to sales by wholesalers of drugs and medicines to licensed physicians, dentists, podiatrists or veterinarians

or to sales by wholesalers to certified licensed optometrists of those diagnostic pharmaceutical agents which are authorized for use by certified licensed optometrists pursuant to this Act.

Sec. 5. Section one hundred fifty-five point twenty-six (155.26), Code 1979, is amended by adding the following new unnumbered paragraph:

NEW UNNUMBERED PARAGRAPH. This section shall not apply to the possession by a certified licensed optometrist of those diagnostic agents which are authorized for use by certified licensed optometrists pursuant to this Act. The dispensing by pharmacists to certified licensed optometrists of those diagnostic agents which are authorized for use by certified licensed optometrists pursuant to this Act shall be permitted.

Sec. 6. This Act is effective January 1, 1980.

ACT 123

HOUSE BILL NO. 107

BY MESSRS. BREAUX AND J. JACKSON

AN ACT

To amend and reenact Paragraph (3) of Section 1041, Section 1051, and Paragraph (15) of Section 1061 of Title 37 of the Louisiana Revised Statutes of 1950 and to amend Section 1041 of Title 37 by adding thereto a new Paragraph to be designated as Paragraph (4) thereof, and to add a new Section to be designated as Section 1067 of Title 37 of the Louisiana Revised Statutes of 1950, relative to defining the practice of optometry; to provide for a definition of diagnostic pharmaceutical agent; to provide regulations for the examination required by applicants for a license as an optometrist; to provide for procedures regulating the employment of topical ocular diagnostic pharmaceutical agents by a licensed optometrist; and to provide with respect to the causes for refusal, suspension, or revocation of a certificate of license, and otherwise to provide with respect thereto.

Be it enacted by the Legislature of Louisiana:

Section 1. Paragraph (3) of Section 1041 and Section 1051 of Title 37 of the Louisiana Revised Statutes of 1950 are hereby amended and reenacted to read as follows:

§1041. Definitions

* * *

(3) "Optometry" means that practice in which a person employs or applies any means other than surgery, for the measurement of the powers and testing the range of vision of the human eye, and determines its accommodative and refractive state, general scope of function,

and the adaptation of frames and lenses, including contact lenses in all their phases, to overcome errors of refraction and restore as near as possible, normal human vision. The practice of optometry does not include the use of drugs or medication, except the use of topical ocular diagnostic pharmaceutical agents and then only by a licensed optometrist and in accordance with the provisions of this Chapter. The practice of optometry does not include the use of pharmaceutical agents, in the treatment of disease.

* * *

§1051. Examinations and educational requirements

Examinations given by the board shall be based upon subjects taught in approved schools and colleges of optometry, such as general anatomy, physics, chemistry, biology, physiology, anatomy and physiology of the eye, general physiology, general pathology, ocular pathology, ocular neurology, ocular myology, psychology, physiological optics, optometrical mechanics, vision therapy, visual field charting, orthoptics, clinical optometry, contact lenses, general pharmacology and ocular pharmacology as it applies to optometry with emphasis on the topical use of diagnostic pharmaceutical agents to the eye, and the applications of the general law of optics and refraction and such other materials and subjects as are essential in the practice of optometry. Examinations shall be conducted at least once annually on dates fixed by the board.

All written examinations held by the board and the answers of applicants shall be kept as records by the board for at least one year.

Section 2. Paragraph (4) of Section 1041 and Section 1067 of Title 37 of the Louisiana Revised Statutes of 1950 are hereby enacted to read as follows:

§1041. Definitions

* * *

(4) "Diagnostic pharmaceutical agent" means any chemical in solution, suspension, emulsion, or ointment base other than a narcotic which when applied topically to the eye, results in physiological

changes which permit more efficient, or otherwise facilitate, examination of the external eye or its adnexa or the evaluation of vision, or which is necessary to determine normal physiological function as part of an examination regimen.

* * *

§1067. Chemical agents used in examination, board authorization required

Prior to the employment of topical ocular diagnostic pharmaceutical agents by a licensed optometrist, that licensed optometrist must submit to the Louisiana State Board of Optometry Examiners, satisfactory evidence that the optometrist has successfully completed courses approved by the board, in pharmacology as they apply to optometry, with particular emphasis on topical application of diagnostic pharmaceutical agents to the eye.

Section 3. Paragraph 15 of Section 1061 of Title 37 of the Louisiana Revised Statutes of 1950 is hereby amended and reenacted to read as follows:

§1061. Causes for refusal, suspension, or revocation of certificate

* * *

(15) Using, prescribing, giving away, selling or offering for sale, or having in his possession any eye remedy, lotion, salve, or medicine of any kind or description, or practicing medicine or surgery for the use of carrying on the practice of optometry; provided, however, that this Paragraph shall not prevent the possession or use of topical ocular diagnostic pharmaceutical agents by a licensed optometrist in accordance with the provisions of this Chapter.

* * *

Section 4. If any provision or item of this Act or the application thereof is held invalid, such invalidity shall not affect other provisions, items or applications of this Act which can be given effect without the invalid provisions, items or applications, and to this end the provisions of this Act are hereby declared severable.

Section 5. Nothing in this bill shall in any way apply to a licensed physician or to any nurse, technician, or allied health personnel acting

under a physician's prescription, supervision, or direction nor to any screening, testing or teaching program conducted by the state of Louisiana or in any parish or city eye program.

Section 6. All laws or parts of laws in conflict herewith are hereby repealed, with the exception noted in Section 5.

CHAPTER_____

AN ACT

Relating to the practice of optometry; amending ORS 683.010, 683.040, 683.060 and 683.270.

Be It Enacted by the People of the State of Oregon:

Section 1. ORS 683.010 is amended to read:

683.010. As used in this chapter, unless the context requires otherwise:

(1) "Board" means the Oregon Board of Optometry.

(2) "Practice of optometry" means the employment of any means other than the use of drugs, except diagnostic agents, topically applied, known generically as cycloplegics, mydriatics, topical anesthetics, dyes such as fluorescein, and, for emergency use only, miotics, for the measurement or assistance of the powers or range of human vision or the determination of the accommodative and refractive states of the human eye or the scope of its functions in general or the adaptation of lenses or frames for the aid thereof, subject to the limitations of ORS 683.040.

(3) "Trial frames" or "test lenses" means any frame or lens used in testing the eye which is not sold and not for sale.

Section 2. ORS 683.040 is amended to read:

683.040. (1) Every person desiring to commence the practice of optometry in this state must show by satisfactory evidence that he is of good moral character and has graduated from a school of optometry which is recognized and approved by the board and which maintains a standard of four school years of at least nine months each.

(2) Every person desiring to commence the practice of optometry after January 1, 1976, or employ the use of diagnostic agents shall in addition to the requirements of subsection (1) of this section have satisfactorily completed a course in pharmacology, as it applies to optometry, by an institution accredited by a regional or professional accreditation organization which is recognized or approved by the National Commission on Accrediting or the United States Commissioner of Education, with particular emphasis on the topical application of diagnostic agents to the eye for the purpose of examination of the human eye and the analysis of ocular functions, approved by the Oregon Board of Optometry.

Section 3. ORS 683.060 is amended to read:

683.060. (1) Any person who has signified to the board his desire to be examined by it and who has filed proof that he is qualified under this chapter and the rules of the board to take such examination shall appear before the board at such time and place as the board may designate, and before beginning the examination the applicant shall pay $50 to the secretary of the board. At the examinations the board shall examine applicants in the anatomy of the eye, in the use of diagnostic agents as used topically, in normal and abnormal refractive and accommodative and muscular conditions and coordination of the eye, in subjective and objective

optometry, including the fitting of glasses, the principles of lens grinding and frame adjusting, and in such other subjects as pertain to the science and practice of optometry, such subjects to be enumerated in a publication by the board.

(2) The board may, in its discretion, accept the certificate of successful examination of the National Board of Examiners in Optometry in one or more areas of the examination in lieu of its written examination in such areas.

(3) If an applicant shall fail to pass a second examination, the board may permit additional examinations upon compliance by the applicant with the law and the rules of the board.

Section 4. ORS 683.270 is amended to read:

683.270. The powers and duties of the board are as follows:

(1) To organize and elect from its membership a president and secretary of the board, each of whom shall hold office for one year, or until the election and qualification of a successor.

(2) To adopt and use a common seal.

(3) To employ agents, attorneys and inspectors to secure evidence of, report on, and prosecute all violations of this chapter and to employ other necessary assistance in the carrying out of the provisions of this chapter, and to pay the same from the funds provided in this chapter.

(4) To hold regular meetings at least once a year at which an examination of applicants for certificates of registration shall be held at such places as the board shall from time to time designate, and special meetings upon request of a majority of the members of the board or upon the call of the president.

(5) To keep an accurate record of all proceedings of the board and of all of its meetings, of all prosecutions for violations of this chapter, and of all examinations held for applicants for certificates of registration, with the names and addresses of all persons taking examinations and their success or failure to pass such examinations. All the records of the board shall be public and shall be kept in the office of the board.

(6) To keep an accurate inventory of all property of the board and of the state in the possession of the board and to obtain a receipt therefor from its successor.

(7) To keep a register of optometrists which shall contain the names and addresses of all persons to whom certificates of registration have been issued in the State of Oregon, together with the date of the issuance of such certificate and the place or places of business in which each optometrist is engaged, and all renewals, revocations and suspensions thereof.

(8) To grant or refuse to grant certificates of registration as provided in this chapter and to revoke the certificate of registration of any optometrists for any of the causes specified in ORS 683.140.

(9) To designate diagnostic pharmaceutical agents for topical use in the practice of optometry from among the generic categories enumerated within subsection (2) of ORS 683.010. Said designation shall take place not later than January 1, 1976, and shall be with the advice and guidance of the Board of Medical Examiners for the State of Oregon.

[(9)] **(10)** To administer oaths and take testimony upon granting and revoking or suspending any certificate of registration.

[(10)] **(11)** To make rules not inconsistent with the laws of this state as are deemed necessary or proper to carry out the lawful powers and duties of the board, as may be necessary or proper to determine the qualifications of applicants for a certificate to practice optometry in this state, and to establish educational, moral and professional standards for such applicants, subject to the laws of this state. If an applicant fails to pass a second examination the board may adopt rules which may provide the required courses of study before further examination.

HOUSE BILL NO. 63

AS AMENDED BY

HOUSE AMENDMENT NO. 1

AN ACT TO AMEND CHAPTER 21 OF TITLE 24, DELAWARE CODE, RELATING TO THE USE OF DRUGS OR SURGERY IN EXAMINATIONS.

BE IT ENACTED BY THE GENERAL ASSEMBLY OF THE STATE OF DELAWARE:

Section 1. Amend §2116 of Chapter 21, Title 24, Delaware Code, by striking said section in its entirety and substitute a new section to read as follows:

"§2116. Use of Drugs or Surgery in Examinations

Nothing in this Chapter shall be construed as conferring on the holder of any certificate of registration for license, issued by the Board the right to make use of drugs or surgery in the treatment of eye diseases. He may employ topical ophthalmic drugs for diagnostic purposes only, the drugs that he may use for such diagnosis will be limited to the following four classes of drugs: Topical Anesthetics, Mydriatics, Cycloplegics and Myotics; provided however, that the Delaware State Board of Examiners in Optometry will include an examination on the subject of pharmacology as it relates to optometry and

the use of topically applied diagnostic drugs for all new applicants for licensure; further provided that no presently licensed optometrist shall be permitted to make use of topically applied diagnostic drugs until he shall have completed a refresher course in pharmacology as it relates to optometry and the use of topically applied diagnostic drugs given by an institution accredited by a regional or professional accrediting organization which is recognized by the National Commission on Accreditation, and is approved by the Delaware State Board of Examiners in Optometry."

PUBLIC LAW

STATE OF MAINE

IN THE YEAR OF OUR LORD NINETEEN HUNDRED SEVENTY-FIVE

S. P. 169 — L. D. 556

AN ACT to Further the Conservation of Vision.

Be it enacted by the People of the State of Maine, as follows:

Sec. 1. 32 MRSA § 2411, as enacted by PL 1973, c. 788, § 156, is repealed and the following enacted in place thereof:

§ 2411. Definitions

1. Practice of optometry. The practice of optometry is defined as any one or any combination of the following practices:

A. Eye examination. The examination of the eye and related structures to ascertain defects or abnormalities and to detect the presence of eye diseases.

B. Functional examination. The determination of the accommodative or refractive states of the human eye and evaluation of visual functions.

C. Correctional treatment. The correction of vision problems without the use of drugs, medicine or surgery by prescribing or adapting ophthalmic lenses, including contact lenses and other optical aids, and by using other corrective procedures to preserve, restore or improve vision.

D. Fitting of eyeglasses. The fitting, bending and adjusting of eyeglasses with ophthalmic lenses, except that this subsection shall not be considered as the practice of optometry providing the fitting, bending and adjusting is by order of and under the responsibility of an optometrist or ophthalmologist.

E. Replacement of lens. The replacement or duplication of an ophthalmic lens without a written prescription from a person licensed under the laws of this State to practice either optometry or medicine. . .

Nothing in this section shall be construed to prevent an optical mechanic from doing the merely mechanical work associated with adapting, fitting, bending, adjusting, replacing or duplicating of eyeglasses with ophthalmic lenses.

An ophthalmic lens within the means of this section shall be any spectacle lens or contact lens which has a spherical, cylindrical or prismatic power or value or any lens ground pursuant to a written prescription.

2. Optometrist. "Optometrist" means a person who has obtained a certificate of registration from the Maine State Board of Optometry and a license to practice optometry in the State of Maine.

3. Diagnostic drug. "Diagnostic drug" means a diagnostic pharmaceutical agent known generically as topical anesthetic and mydriatic which is

administered topically. The Commissioner of Health and Welfare shall designate the specific agents to be used under the generic classifications.

Sec. 2. 32 MRSA § 2419 is enacted to read:

§ 2419. Use of drugs

1. Diagnostic drugs. The use of diagnostic drugs is permitted only by an optometrist who has obtained a diagnostic drug license under section 2427 or who has passed the examination under section 2422.

2. Standards for use of diagnostic drugs. The following shall constitute the minimum standards for use of diagnostic drugs:

A. The optometrist shall complete or have completed a course in general and ocular pharmacology as it applies to optometry approved by the board.

B. The diagnostic drug shall be used solely for the purpose of detecting any pathological condition or functional abnormality of the eye.

C. Each use of a diagnostic drug shall be noted in writing and shall be made part of the permanent record of each examination and placed on file in accordance with section 2417, subsection 3.

Sec. 3. 32 MRSA § 2422, as enacted by PL 1973, c. 788, § 156, is amended by adding after the 2nd sentence 2 new sentences to read:

The board shall include an examination on the subject of general and ocular pharmacology as it relates to optometry and the use of topically applied diagnostic drugs for all new applicants for a certificate of registration and license. Presently licensed optometrists shall be permitted to use diagnostic drugs only if they obtained a diagnostic drug license under section 2427.

Sec. 4. 32 MRSA § 2427 is enacted to read:

§ 2427. Diagnostic drug license

Every presently licensed optometrist desiring to use diagnostic drugs shall:

1. Have satisfactorily completed a course and examination in general and ocular pharmacology as it applies to optometry approved by the board.

2. Upon satisfying the foregoing requirements, an optometrist shall be granted a diagnostic drug license.

Sec. 5. 32 MRSA § 2432, sub-§§ 13 and 14 are enacted to read:

13. If such person uses diagnostic drugs without first obtaining either a diagnostic drug license or passing the examination under section 2424 after the effective date of this Act;

14. If such person fails to display his diagnostic drug license issued under section 2427.

Sec. 6. 32 MRSA § 2446 is enacted to read:

§ 2446. Drugs

Any optometrist who uses diagnostic drugs, without first having obtained a license under section 2427 or being duly registered as provided in section 2421 and 2424 after the effective date of this Act shall be deemed guilty of a misdemeanor and shall be punished by a fine of not less than $50 nor more than $200.

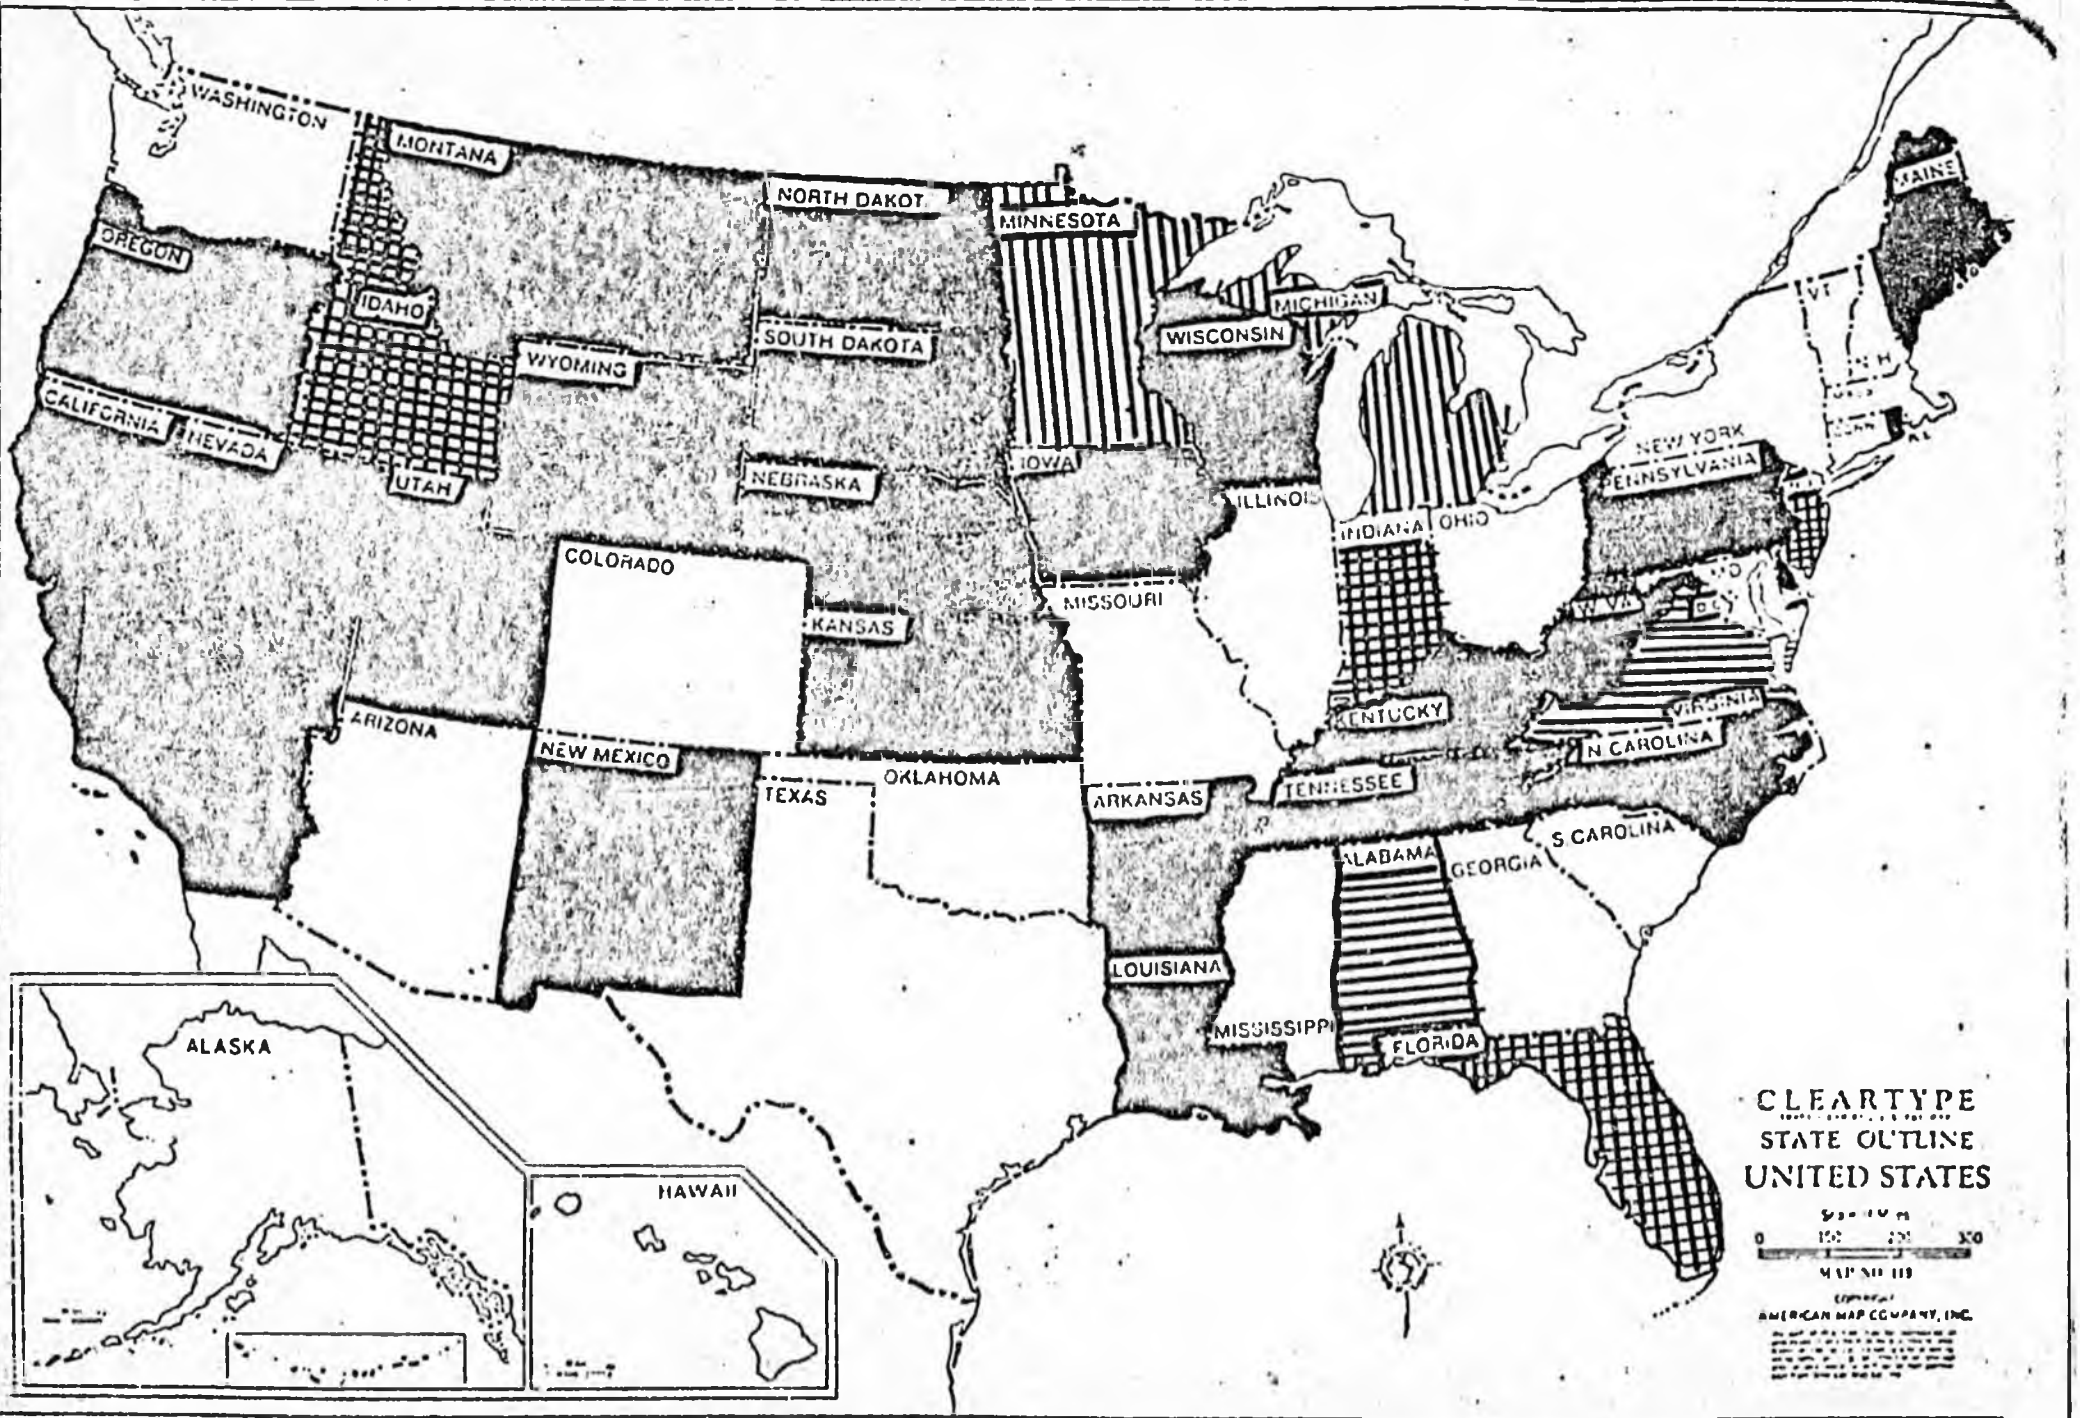
[In addition, there are eight (8) other states that do not statutorily prohibit the use of DPAs by optometrists; several of these states have attorney general opinions (+favorable) (-unfavorable) on this point: Alabama (AG-), Florida (AG+) Idaho (State Board Statement +), Indiana (AG+), Michigan, Minnesota, New Jersey (AG+), Virginia (AG-).]

For your information we are including an updated map showing geographically the utilization of pharmaceutical agents by optometrists as of June 8, 1979.

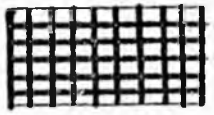
UTILIZATION OF PHARMACEUTICAL AGENTS BY OPTOMETRISTS

JUNE 8, 1979



UTILIZATION OF PHARMACEUTICAL AGENTS BY OPTOMETRISTS

Authorized by Optometrists by Statute



Permitted by Opinion of Attorney General or State Board Statement

No Statutory Prohibition

No Statutory Prohibition but Negative A.G. Opinion

ENGLAND, FEBRUARY 1970

JOINT DECLARATION ON BEHALF OF

OPHTHALMOLOGISTS AND OPHTHALMIC OPTICIANS (OPTOMETRISTS)

Following discussions between the General Optical Council, the Faculty of Ophthalmologists and the Joint Committee of Ophthalmic Opticians, the following declaration on matters relating to Hospital and the practice of orthoptics has been agreed on behalf of ophthalmologists and ophthalmic opticians.

1. Hospital Experience for Ophthalmic Opticians

It is desirable in the public interest that ophthalmic opticians should, in their pre-registration year and subsequently, have the opportunity of hospital experience to enable them, in the course of eye examinations, to widen their clinical experience in the recognition of deviations from the normal.

2. Contact Lenses - The Faculty accepts the policy of the General Optical Council in respect to the fitting of contact lenses.

3. Drugs

It is proper for an ophthalmic optician, if necessary, to use appropriate drugs for eye-examination or for first-aid treatment in emergencies.

(The following are examples of appropriate drugs for particular purposes:

a. Atropine - 1% or an alternative cycloplegic for refraction in children up to school-learning age.

b. An appropriate mydriatic and cycloplegic e.g. homatropine 1% for examination of the eye in older children and adults up to the age of 45.

c. A weaker mydriatic such as cyclopentolate hydrochloride 0.5% for patients over 45 years of age.

d. A miotic such as eserine 0.25% or pilocarpine 2% for use when required to overcome the effect of a mydriatic or cycloplegic.

e. In contact lens fitting a suitable local anesthetic such as amethocaine 0.5%).

On pages 8 and 9 of this issue, AOA Trustees Albert A. Bucar, O.D., of Antioch, IL, and Gerald J. Easton, O.D., of Coronado, CA, give some frank, honest and personal answers to questions posed during a recently-conducted AOA *News* interview session concerning their first year in office.

An interprofessional "Older Americans Health Fair Day" screening program is being offered May 5 in more than 200 communities throughout the nation. Doctors of optometry and members of the Auxiliary to the AOA will have the opportunity to participate since vision screening has been suggested as an important part of the program, which is being sponsored by the U.S. Administration on Aging, state and local Agencies on Aging, the Red Cross and the National Health Screening Council for Volunteer Organizations (NHSCVO). The event is one of several public service suggestions the AOA has offered in observance in next month's celebration of Older Americans Month. All suggestions are contained in a planning guide which has been distributed to state and auxiliary public information chairmen and state leaders. O.D.s and auxiliary members interested in participating in Older Americans Month and/or the May 5 event should contact their state association office, which has been furnished with a list of screening sites and local sponsors by the AOA through the NHSCVO.

The next issue of the AOA *News* will be an expanded one featuring several items of interest to doctors of optometry. Included in the May 1st issue will be the "Continuing Education Quarterly" supplement. Prepared by the Education & Manpower Division, this supplement will list about 150 continuing education courses which will be offered throughout the United States from July through September. The next issue of the *News* will be devoted partially to the upcoming AOA Congress. Numerous photos and articles, including highlights of the June 17-23 event, will be published. The May 1st issue also will contain several stories on membership services for association members, including results of the recent readership survey on the AOA *News*.

AOA News Apr. 15, 1979.

determined by the doctor involved, the FDA said, and it is recommending leaving the contact lenses in place for 30 days at a time under normal circumstances.

Europeans, Australians and Canadians have been able to buy prolonged-wear contact lenses for three to six years, with mixed results reported. A handful of people have gone blind in one eye or required corneal transplants because of serious infections caused by the lenses. A more significant proportion of wearers — half or more in some instances — stopped using the lenses. And, the lenses can be dropped and lost as easily as conventional ones, although manufacturers expect replacement of the lenses won't cost as much as the first pair.

Major companies and firms expected to be vying for a share of the anticipated market for the new lenses include Danker & Wohlk, Inc.; American Hospital Supply's subsidiary, Heyer-Schulte Corp.; Continuous Curve Contact Lenses, Inc.; Rynco Scientific Corp.; Dow Corning; Syntex Ophthalmics, and Cooper Laboratories, Inc.

Arkansas okays DPA legislation

LITTLE ROCK, AR — Gov. Bill Clinton has signed into law H.B. 843, making Arkansas the fifth state in the nation to specifically authorize optometrists to utilize pharmaceutical agents.

The April 2nd signature by Gov. Clinton makes Arkansas the fifth state this year to enact such legislation. An additional six states do not prohibit, either statutorily or administratively, such utilization.

According to Virgil L. Rhodes, O.D., of Manchester, TN, chairman of the AOA Statutory Definition Advisory Committee, the Arkansas law has special significance because a diagnostic pharmaceutical agent (DPA) bill was vetoed in 1977 by the previous governor.

The Arkansas bill was passed, in final form, by the state Senate by a 20 to 10 vote and in the state House of Representatives by a 77 to two vote.

DPA laws

(See map, page 4)

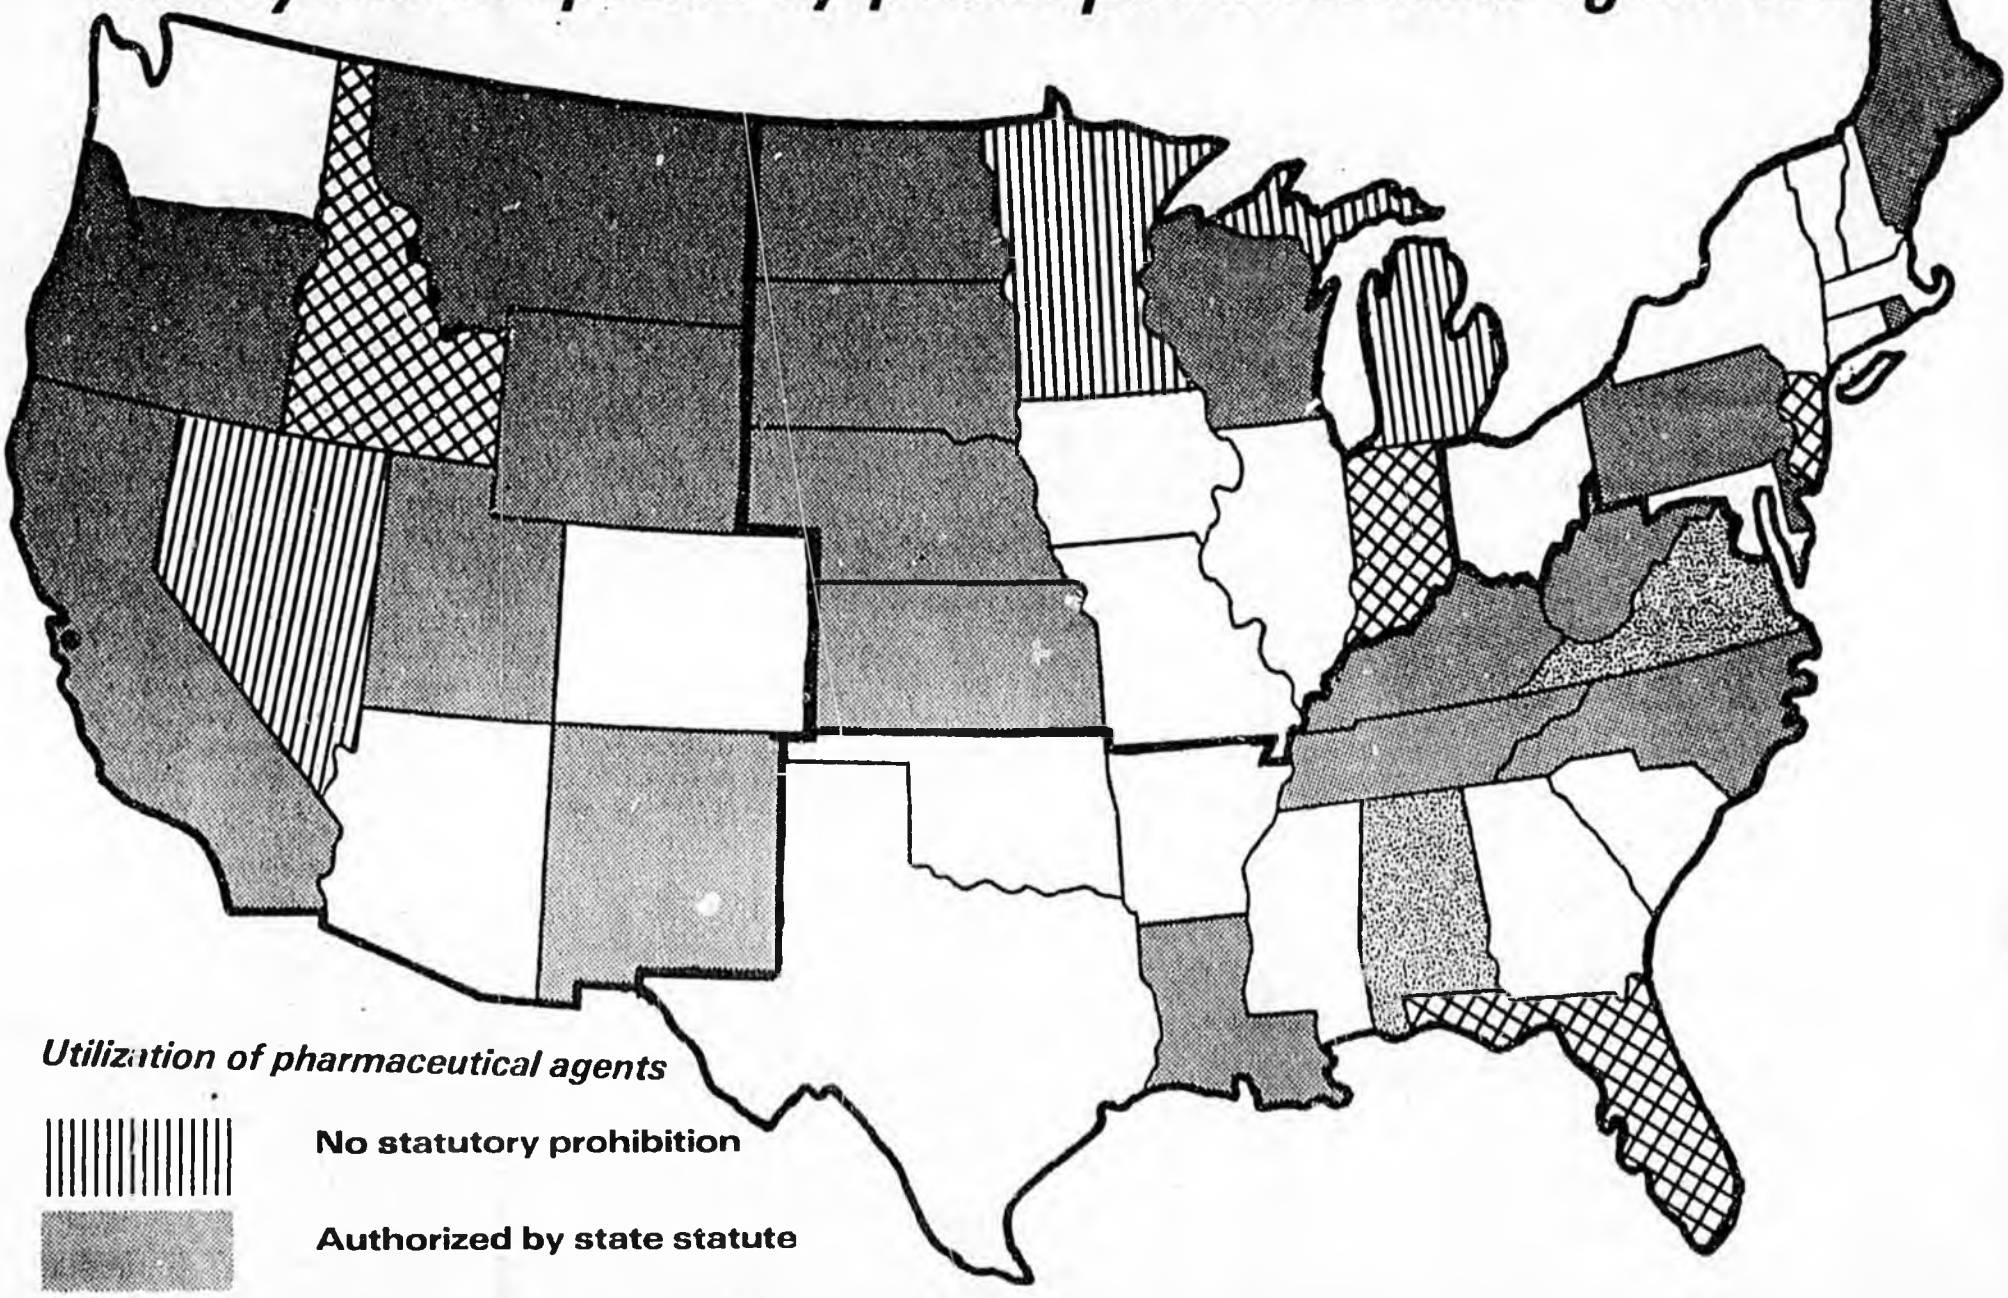
Diagnostic pharmaceutical agent (DPA) bills in North Dakota, South Dakota and Utah have become law, creating 20 states which specifically authorize the use of pharmaceutical agents by O.D.s. An additional six states do not prohibit, either statutorily or administratively, such utilization.

South Dakota became the 18th state when Gov. William J. Janklow signed into law S.B. 85, a measure which had passed the State Senate by a 22:11 vote and, in the House, by a 64:2 vote.

Utah's H.B. 98 became the 19th law on March 21, when the governor did not sign or veto the measure. The legislation had passed the State House by a 50:12 vote and by a 20:4 in the Senate.

North Dakota Gov. Arthur Link signed S.B. 2356 the following day, making the 20th such enactment. The bill passed the Senate earlier by a 41:7 vote and, in the House by an 85:10 vote.

Twenty states specifically permit pharmaceutical agent use



Utilization of pharmaceutical agents

- No statutory prohibition
- Authorized by state statute
- No statutory prohibition but negative attorney general opinion
- Permitted by opinion of attorney general or state board statement

Four successful enactments this year of legislation permitting the use of pharmaceutical agents by optometrists bring to 20 the number of states with laws specifically authorizing such usage. An additional six states do not prohibit such utilization, either statutorily or administratively. According to Virgil L. Rhodes, O.D., of Manchester, TN, chairman of the AOA Statutory Definition Advisory Committee, similar legislation is pending in 12 other states, with several pieces reported near passage. Bills in Arizona and Arkansas have been approved by their respective House of Representatives, while bills in Iowa and Oklahoma have been passed by their respective state Senates, Dr. Rhodes said.

In a related development, the Virginia Senate has decided not to vote on overriding Gov. John Dalton's recent veto of a bill which would have allowed O.D.s in the state to use diagnostic pharmaceutical agents. According to the Virginia Optometric Association, the State Democratic Caucus made the decision in a recent closed session, basing the action on the grounds the legislation was a health issue and not a political partisan one. The legislation, which was supported by more than 30 sponsors from the Virginia House of Delegates, had passed both legislatures by large majorities — by a 74 to 19 vote in the House and a 25 to 15 vote in the Senate. The bill was identical to legislation the Republican governor vetoed last year.

I spoke with Eldon Ulmer, President of the Board of Pharmacy, and he asked me to convey the following to you in response to your teletype to him last week.

RE House Bill 79 regarding optometrists and particularly their ability to prescribe legend drugs and pharmaceuticals, the Alaska Board of Pharmacy has not changed its position on this issue. The board is not primarily concerned with whether or not an optometrist should be given this priviledge, but rather, that the proposed bill in no way addresses the legal question of how they are to obtain legend drugs. Current Federal and State statutes do not permit pharmacists to fill prescriptions for legend drugs by any one but Medical Doctors, Veterinarians, and Dentists.

Re House Bill 101 and Senate Bill 65, the Uniform Controlled Substances Act, this is the number one legislative priority for the Board of Pharmacy, and the board supports it conceptually. However, the current bill is primarily a police bill, and needs to be ammended substantially to make it palatable to the industry. There is not enough language addressing the rights and responsibilities of professionals authorized to handle controlled substances. The Board of Pharmacy is pushing for a Uniform Controlled Substances Act that parallels the federal guidelines.

Dear Peter:

I received your letter and court brief regarding the optometric drug bill and have forwarded a copy to Rep. Thelma Buchholdt. She is the new chairperson of the Health, Education and Social Services Committee. As yet, no legislation has been introduced regarding this issue, however, I expect it will be soon.

Thank you for the information.

Sincerely,

Hugh Malone

Dear Hugh:

I gave the enclosed talk to the legislators present at our political meeting and I thought it would be helpful to you to receive a copy of it considering your vote of last session.

The case illustrates the fact that the optometric drug bill represents more than a political "power play" but in fact has and will mean loss of eyes of our fellow Alaskans. We have at least two other cases documented where vision was lost because of inadequate medical knowledge on the part of optometrists.

The judges decision clearly states that there is no reason why optometrists can be permitted to make medical diagnosis on a legal basis. In addition the testimony by the "professor of optometry" clear illustrates the lack of medical knowledge on the part of optometrist educators.

Sincerely,

Peter

Peter E. Cannava, M..D.

Hugh,
Please have one of your staff save the court brief as it will have to be used for the "HESS" committee hearings & also for future discussions I will have w you.
Good Luck this yr & I wish you a short 90 day session. P.

13Dec78.

American medicine has estabilished a tradition which dates back well over 200 years! Despite the ups and downs of certain aspects of American medicine the very basic integrity of the system has never and will never be challanged. This is fact because the system rests upon a foundation of sound scientific principle. American people may not like what type of treatment is offered them but they at least can rest assured that any prescription promulagated by our traditional medical system is based upon a scientific method, and those practitioner licensed with-in the system have completed a satisfactory curriculum approved by both private and governmental bodies who attest to the fact that medical practitioners are qualified to practice with the use of drugs and other modalities. In addition to the traditional modality of medical care there are two other broad categories of health care which our people choose to utilize. One is not based upon scientific methodology, cannot be supported by established objective data. Examples of these would be naturopathic healing and chiropractic.
The second category of non-medical health care sought by Americans is based upon scientific principles but is not traditionally associated w[illegible] medical education. Examples of those are psychology and optometry. In past years no major conflict has arisen between traditional medicine and other forms of health care. However, of late there is a movement on by non medical people to seek enactment of legislation which would grant them privileges which traditionally have been the provence of medical practitioners. Examples would include attempts by chiropractors to utilize medical facilities for laboratory testing and more germane to our state the attempt by optometry to seek legislation approved for their use of drugs within their practice.

Legislators must be aware of the short and long term implications of such legislation! Granting non-medical practitioners medical priveleges obscures the traditionally clear cut lines between the dicipline of medicine and the non-medical practices. Such obscuration of lines of deliniation serves to thoroughly confuse the public as to what type of health care is to be expected from each type of practitioner! In such confusion the public will have no clear concept of what type of "product" to expect of each health care practitioner. I wish now to focus upon a problem which confronted last years legislators and may surface again! Optometrists as you may be aware are non-medical practitioners by virture of their ancestory, training, current definition and as of several months ago defined by U.S. District judge for Alaska. They are requesting the legislature to grant them privilege of using drugs in their practice! Such a priviliege would have two fold effect and firstly it would set a precident with-in our state and open the door to all non-medical health personell to seek similar privilege. Secondly it would further endanger the people of Alaska to the risk of loss of sight because of the injudicious use of drugs and false sense of security the use of drugs imparts upon the recipients of such treatment. Indeed as time goes on I will supply you with case histories of Alaska residents who have lost eyes because they were lured into feeling they had been examined by eye physicians or ophthalmologists. I will also supply you with a legal suit prompted by such a loss of eye and additional pertinent information. I urge you not to grant non-medical health practitioners by legislation what they should rightfully earn by education that is the right to join the ranks of traditional medicine thru time honored institutions, estabilished testing procedures and time tested licensing procedures.

Governor's Veto Message

(Unofficial Copy)

December 15, 1978

Pursuant to Article 2 Section 16 of the Constitution of Ohio, I return herewith to the Clerk of the Senate for presentation to the Senate Amended Substitute Senate Bill 163 which I disapprove and have not signed. Amended Substitute Senate Bill No. 163 would expand the definition of the practice of optometry to allow the use by optometrists of specific diagnostic drugs to the eye in the form of eyedrops. If the specified drugs are used solely for the purpose of detecting disease and are of a specific level of potency the matter of health care is of vital concern they must insure to all Ohio citizens that they receive the highest quality health care possible. Health care is an area in which we can take no risks because any mistakes can bring tragic and irreversible results. We must be committed to our citizens to provide practitioners that are highly skilled individuals and who will at the same time provide the best health care at the lowest cost.

Optometrists have been doing an excellent job in working with the medical profession to bring quality eye care to Ohio citizens. The tools that the optometrists are presently using are not dangerous and are effective in screening for eye disease. However, Amended Substitute Senate Bill No. 163 would allow optometrists to use drugs in order to make a full diagnosis of the medical condition of the eye. If the individuals involved were properly trained this procedure would be in the best interest of Ohio citizens, however without proper training the bill would allow unwarranted risks without corresponding benefits. The drugs involved are dangerous and have a potential of causing a great deal of pain including blindness. The adverse reactions associated with these drugs are not common but they do occur and medical and emergency treatment must be administered in those instances. While this bill does provide for mandatory training of 180 clock hours this amounts to little more than a month of isolated training in a clinical use of the drugs involved. The goal of this legislation should be to build a working relation between optometrists and the medical community. The issue of using drugs should be an issue decided by the professions rather than by the legislature. Both professions have taken an oath to provide quality health care, they should work together toward that end. I pledge the aid of my office for that purpose. For the foregoing reasons I have vetoed Amended Substitute Senate Bill No. 163 and urge the General Assembly to sustain my veto.

Dear Mrs. Buckhodt:

HB 79 (optometric drug bill) has been sent to your committee for review. It is essential that you review the enclosed court decision concerning the loss of a young Alaskans eye due to optometric irresponsibility. As you will recall the issue last year was whether ot not optometrists were qualified to use dangerous drugs on the eyes of Alaskana. Judge Fitzgerald's decision should settle that question in the minds of Alaskans.

In addition you will find enclosed the Ohio Governors veto message of such a dangerous bill.

I would appreciate your response to the material.

Sincerely,

Peter E. Cannava, M.D.

Deputy

IN THE UNITED STATES DISTRICT COURT

FOR THE DISTRICT OF ALASKA

RECEIVED

OCT 24 1978

Parnish Law Office

ROBERT K. STEELE, as the Natural father and next friend of TIMOTHY R. STEELE, and ROBERT K. STEELE, individually,

Plaintiffs,

v.

UNITED STATES OF AMERICA,

Defendant.

NO. F 75-27 Civil

O P I N I O N

Timothy Steele is an eight year old boy whose father is a soldier in the United States Army. Timothy received medical care as a medical dependent at the Eye Clinic, Bassett Army Hospital, Fort Wainwright, Alaska, in 1973 and 1974. This litigation stems from a claim brought on Timothy's behalf by his father against the United States for loss of Timothy's right eye. The Federal Tort Claims Act [1] furnishes the required jurisdiction.

In October and November of 1973, Timothy's mother noticed Timothy's eyes crossing. On December 19, 1973, she took Timothy to the Eye Clinic, Bassett Army Hospital. There Timothy saw Dr. John Shank, an optometrist in charge of the clinic.

1/ 28 U.S.C. 1346(b). Plaintiffs' original complaint founded jurisdiction on the Federal Tort Claims Act but mistakenly cited the section as 1366(b).

Dr. Shank made an extended examination and diagnosed Timothy's eye condition as an accomodative esotropia correctable by eyeglasses. Following his examination of Timothy, Dr. Shank wrote Mrs. Steele a prescription for eyeglasses and made an appointment for her to return Timothy to the clinic January 29, 1974, for a checkup.

During the January visit to the clinic Timothy's mother reported to Dr. Shank that she thought the eyeglasses were helping since Timothy's right eye was not crossing as frequently. However, Dr. Shank's clinical record noted "no good reflex" in Timothy's right eye. The optometrist wrote a different prescription for eyeglasses and instructed Mrs. Steel to make a follow-up appointment for Timothy four months after Timothy would begin wearing the new eyeglasses.

By early May, Mrs. Steele noticed that Timothy frequently removed his eyeglasses. When questioned Timothy told her that sometimes he wasn't able to see well. An appointment at the eye clinic was scheduled for Timothy on June 10. When Dr. Shank examined Timothy on that date he found vision in Timothy's right eye limited to light perception. At this point Dr. Shank made an appointment for Timothy with ophthalmologist, Dr. Bruce Wolf, [illegible]

When Dr. Wolf examined Timothy on June 17th he found Timothy's visual acuity in the right eye limited to hand motion although capable of perceiving light. Essentially Timothy's right eye was blind. The doctor diagnosed Leucocoria, right eye, with right esotropia. In his medical opinion the inflammatory cause was a vitreous hemorrhage with possible involvement of toxocara canis or retinoblastoma. Since either disease was extremely serious, Dr. Wolf ordered a complete workup by a pediatrician hoping to rule out one or both. The pediatric workup proved negative and Dr. Wolf then arranged for ophthalmologist, Dr. William Kim, as consultan

Dr. Kinn, a highly qualified ophthalmologist, before opening a prac in ophthalmology at Fairbanks spent ten years as a military medical officer. His last three years of military service were spent at Fort Wainwright where he was chief of ophthalmology and supervised the optometrists assigned to Bassett Army Hospital.

On examination of Timothy July 9th, Dr. Wolf and Dr. Kinn observed a retinal detachment of the right eye with a sub-retinal tumor. "Tumor" in this context was defined as a mass rather than a malignancy. Their diagnosis was possible retinoblastoma, but toxocara canis was also to be considered. The doctors concluded specific tests were necessary so that the precise identity of the disease might be known.

Arrangements were made to airvac Timothy from Fairbanks to Letterman Army Medical Center at the Presidio in San Francisco. At Letterman, Timothy was examined July 12 by a team of medical doctors, including Dr. Michael Hogan who was internationally recogn in the field of ophthalmologic pathology.

On examination the medical team observed a retinal detachment involving a grayish yellow tumor. The doctors diagnosed the cause of the tumor as possibly retinoblastoma or toxocara canis. Eye condition at that point in time made it impossible to differentiate between either disease. Because of the danger of retinoblastoma, a particularly fast-spreading and life-threatening malignancy, the doctors recommended to Timothy's parents that his right eye be removed. Timothy's parents immediately consented to the operation and Major Bradley C. Black, a resident assigned to the ophthalmology unit at Letterman, performed the surgery.

After the eye was enucleated it was sent to the ophthalmolo pathology laboratory at the University of California, Berkeley, California, for examination. The laboratory report revealed total retinal detachment of the eye with giant reaction and massive disorganization of the retina. The pathological examination ruled out a

retinoblastoma but concluded the cause of the disease to be granulomatous retinitis,[2/] etiology unknown. Unlike as in most eye removals, an implant was not inserted into the socket of Timothy's right eye immediately following surgery as there was a substantial possibility that the pathology report might confirm retinoblastoma. The malignancy would necessarily require radiation treatment and a follow-up examination not possible with an implant. When the pathological report ruled out retinoblastoma Timothy was returned to surgery and an implant was placed in the socket.

Dr. Black continued to treat Timothy following the second operation until Timothy returned to Fairbanks. After Timothy returned to Fairbanks he was treated by Dr. Wolf who noted that Timothy's recovery was excellent with the exception of periodic socket inflammation.

Timothy returned in September to Letterman where a prosthesis was inserted into the eye socket with good cosmetic result. Probably the prosthesis will never appear similar to a natural eye since it could not be inserted immediately following the operation.

It is claimed in this litigation that the optometrist, Dr. Shank, failed to provide adequate care required of an optometrist when he treated Timothy in December of 1973 and January of 1974.

OPTOMETRIC RESPONSIBILITY

Dr. Shank graduated with a degree in optometry from Pacific University at Forest Grove, Oregon, in 1971. He was commissioned in the United States Army as a Captain in the medical services and during the summer of 1973 was assigned to Fort Wainwright, Alaska. In November of 1974 he left the Army and now is in the practice of optometry at Kodiak, Alaska.

2/. Retinitis is an inflammation which chiefly involves the retina. "Granulomatous" is a type of inflammation. Thus, the pathology conclusion was that of a general retinal inflammation of unknown origin.

When Dr. Shank made his first examination of Timothy's eyes on December 17, 1973, he recorded a brief history:

Hist: Past 2 years problem. Unable to see clearly. Father nearsighted. Age 4 was tested. Both eyes crossed. Patient complained of blurred vision. Headaches & dizziness. No allergies

In addition he also tested Timothy's unaided vision using a standard AO chart (pictures) for children. The best possible visual acuity when measured with an AO chart is 20/30. Dr. Shank recorded Timothy's visual acuity 20/30 OD and OS (both eyes). After dilating Timothy's eyes he made an internal examination and noted:

Internal Exam: Optic - Sclera Shows clearly OD: Distinct 10/10 Disc at 1:30 OD (R) Vitr. Impr. Lens Lenses

what this is

Upon completing the examination, Dr. Shank concluded that Timothy's eye problem was caused by an accomodative esotropia[3/] correctable by a prescription for eyeglasses. He did not think it necessary to refer Timothy to an ophthalmologist.

Dr. Willard Bleything, Dean of the College of Optometry, Pacific University, Forest Grove, Oregon, who was called as a government witness at trial, agrees with Dr. Shank. According to Dr. Bleything, the findings of Dr. Shank's December examination are entirely consistent with an accomodative esotropia, hence, there was no need to send Timothy to a medical doctor.

Refrac

3/ Estropia, meaning pointing inward.

In his testimony Dr. Bleything touched on the scope of training provided in a school of optometry. A significant part of optometric training is given over to recognition of diseases in the eye. In this case no one questions the principle requiring optometrists to refer their patients to medical doctors once disease is detected in the eye. In Timothy's case, however, Dr. Bleything would distinguish between an active vitreous hemorrhage and an inactive vitreous hemerrhage. He classifies an inactive vitreous hemorrhage as a scar and suggests referral to a medical doctor is indicated only in the event that an active vitreous hemorrhage were detected. It is implicit by this reasoning that to Dr. Bleything a scar is not an indication of existing disease. Scar tissue, according to Dr. Bleything's opinion, when old or inactive, is typically black. This is consistent with Dr. Shank's testimony that the vitreous hemorrhage detected in his December examination was old because it appeared black or dark.

OD's only need refer active hemorrhages ??

wrong Professor!

Actually a black or dark color in a vitreous hemorrhage has nothing at all to do with its age, but rather is a result of its magnitude or extent. The black or dark color indicates a lack of reflected light from the retina behind the hemorrhage. Blood in a vitreous hemorrhage is not black; it is only the shadow that appears black. Indeed, as Dr. Black states in his deposition, an old vitreous hemorrhage would appear as white strands in the vitreous and settle to the lower part of the vitreous. And Dr. Kinn testified that he had personally observed hemorrhages in the vitreous more than a year old which were red in color. He explained that a hemorrhage would appear to be black because it was sufficiently thick with blood to absorb all the light reflecting off the retina during an examination, not because of an innate darkness of color.

The interrelationship between optometric and medical responsibility is discussed in considerable depth in the scientific text referred to at trial, "The Optometric Profession," by Hirsch

& Wick. The text notes that responsibility for recognizing eye disease has not always been a part of optometry, nor indeed is it now a part of optometric services in parts of the world outside of the United States and English speaking countries. In some European countries an optometrist is expressly forbidden to examine the eye to determine whether it is healthy or not.[4/]

Some of the diseases which may be discovered by examination of the eye are brain tumors, diabetes, kidney disorders, hypertension, as well as some diseases caused by microorganisms such as tuberculosis. Optometrists study about these and other diseases in order to recognize eye manifestations of diseases. An optometrist should not attempt to complete a definitive diagnosis but recognize this responsibility is part of the practice of medicine. This principle is clearly stated in "The Optometric Profession."

> The difference between optometric and medical responsibility to the patient may be clarified by example. If an optometrist observes a hemorrhage in the fundus, he recognizes that it may be due to any of the diseases already enumerated. It also may have resulted from a vascular accident or from undue capillary fragility. The important consideration for the optometrist, however, is that he see and identify the hemorrhage. It is his responsibility to refer the patient to the appropriate medical practitioner for diagnosis and treatment of the disorder. The optometrist's understanding about disease is sufficient to recognize the various diseases that can cause hemorrhage. He does not attempt to differentiate between them. Medical technology has advanced so greatly in the past few decades that there are now many laboratory tests the physician can use in making the correct diagnosis. Disease is diagnosed by many procedures. The appearance of the eyeground is only one of them. The Optometric Profession

I am not persuaded with Dr. Bleything's reasoning that referral to a medical doctor ought to depend on whether the optometrist

---

4/ The Optometric Profession by Monroe J. Hirsch and Ralph E. Wick, (1968 edition) Chilton Book Co. at page 17.

has diagnosed a vitreous hemorrhage as active or inactive. The authors, Hirsch & Wick, suggest in their text that the important consideration is that the optometrist be able to see and identify the hemorrhage. It then becomes his responsibility to refer the patient to a medical doctor for diagnosis and treatment. Since Dr. Shank detected the vitreous hemorrhage of the right eye during his December examination, it was his immediate responsibility to promptly refer Timothy to a medical doctor. In point of fact, ophthalmological services were then readily available to military personnel at Fort Wainwright and to their dependents under a federal contract with Dr. Wolf.

Dr. Shank was aware of symptoms other than vitreous hemorrhage which are of significance to an optometrist. Esotropia in a child of four, Timothy's age in 1973, is a serious matter. Dr. Black states that esotropia in a four year old child is very rare. Most cases of congenital esotropia caused by muscle imbalance develop before age two. This condition is correctable by an operation on the muscles of the eyes. Accomodative esotropia, such as diagnosed by Dr. Shank in December, 1973, develops in most cases at age two to two and a half, although it occasionally develops as late as age four or five. This condition is correctable by eyeglasses and the esotropia usually corrects itself after eyeglasses are worn. An esotropia may also indicate some type of retinal or vitreous pathology in the visual axis. This will often involve a disease in the macula, the central part of the retina. This condition reduces visual acuity in the eye and as a result the eye turns inward. In Dr. Black's opinion the most important thing to rule out when a child does present an esotropia is retinal or vitreous pathology. But even more, when a vitreous hemorrhage is observed in a child, it is very important that retinoblastoma be immediately considered until that disease can be completely ruled out.

Dr. Wolf, who treated Timothy at Fairbanks before and after his hospitalization at Letterman, agrees with Dr. Black that Dr. Shank should have referred Timothy to an ophthalmologist in December. Dr. Wolf believes that referral to a medical doctor ought to have been made immediately when Dr. Shank learned of the esotropia from Timothy's mother. Dr. Kinn, who consulted with Dr. Wolf, also agrees that referral was indicated in December. Indeed, Dr. Zimmerman, an eminent ophthalmic pathologist, who testified for the government at trial, concurs that further investigation should have been undertaken at the time the lesion was observed in Timothy's right eye.

I am persuaded from credible, convincing medical opinion, as well as the scientific publication referred to, that Dr. Shank failed to meet the standards required of his profession when he examined Timothy in December of 1973. He knew that Timothy presented an esotropia and in the course of his examination he observed a vitreous hemorrhage in the right eye. An optometrist's responsibility is to observe during his eye examinations any manifestation of disease visible in the eye. Upon detecting disease in the eye, it is then his obligation and duty to the patient to make known what the optometrist has observed. In such cases he may not undertake to diagnose the disease, but should inform his patient that the matter is beyond his competence and advise the patient to see a qualified medical doctor. Certainly in January when Dr. Shank detected the poor reflex in Timothy's right eye, he should have sent Timothy to a medical doctor. Instead, he delayed making a referral to an ophthalmologist until after his last examination in June, 1974. By that time Timothy was essentially blind in his right eye and by then the retina had pulled away from the rear of Timothy's right eye. As it was to turn out, nothing thereafter could be done to restore the vision or to save the eye. Time had run out.

Several questions arise at this juncture. Was the disease which ultimately caused the eye to be removed present when Dr. Shank made his examination in December, 1973? What was the nature of the malady and could it have been diagnosed? Could the disease have been treated had it been timely discovered?

There is general agreement in the testimony of the physicians that the disease which brought about the removal of Timothy's right eye was present when Dr. Shank made his initial examination.

When Dr. Wolf examined Timothy in June, 1974, he diagnosed a vitreous hemorrhage with the possibility of either retinoblastoma or toxocara canis. The team of medical doctors who examined Timothy at Letterman Hospital in July considered four possibilities. The first was persistent hyperplastic primary vitreous, a congenital defect of the eye present at birth and generally noticed shortly after birth. With such a condition as persistent hyperplastic primary vitreous, the eye is usually a bit smaller. The front part of the eye is ordinarily not normal so there are distinguishing factors for that disease. The medical doctors at Letterman were able to rule out this possibility. They were also able to rule out a vitreous hemorrhage as a cause since the vitreous of the eye was fairly clear when the doctors made their examination. The two remaining considerations related to some type of inflammatory response, most probably either toxocara canis or retinoblastoma.

Retinoblastoma is an extremely dangerous malignancy, sometimes found in the eyes of young children. When diagnosed, retinoblastoma requires removal of the diseased eye to prevent the malignancy from escaping outside the eye, possibly through the optic nerve into the brain.

Retinoblastoma was ruled out in the University of California pathological report following examination of the eye after the operation. A negative finding of retinoblastoma eliminated any

need for radiation treatment. In Dr. Black's medical opinion the cause of the inflammation of Timothy's eye was probably toxocara canis. Dr. Black observed that although the larva was never found in the few sectionings of the eye, it is known that the larva may disintegrate or completely disappear in the eye.

Toxocara canis is a parasitic round worm frequently found in dogs. The eggs of the parasite may be ingested by children playing in dirt and the eggs hatch in the intestines of the child into a larva. The larva bores through the intestinal wall and enters the blood stream and is disseminated to different parts of the body. In every instance, with possible rare exception, the parasite is not able to complete its life cycle in a human host and the larva dies without developing into an adult worm. The most common locations where it has been found are in the liver or the lungs. Inflammation of the eye by toxocara is fairly rare. But when it does appear it tends to result in a massive inflammation which usually involves the retina and sometimes may intrude into other structures inside the eye. The presence of toxocara in the body often leads to visceral larva migrans syndrome. The child can have a fever and may have some type of lung disorder, his liver may be enlarged and tender and there may be some abnormalities in certain blood tests. However, an ocular toxocara inflammation frequently occurs without a visceral larva migrans syndrome occurring and some studies suggest that in only three or four percent of ocular toxocara inflammation is the syndrome present. With ocular toxocara, so long as the larva remains alive, there is usually not much effect on the eye. There may be a local inflammation in the retina or a small whitish elevated lesion in the retina at the site of the larva or where it penetrated the retina, but the stage at which the parasite usually becomes very damaging is when the larva dies and decomposes. This leads to an extensive lesion in the eye eventually.

resulting in a massive scar. If the larva is able to work itself into the vitreous cavity of the eye , it brings about an even more severe inflammatory process.

Dr. Iris Krupp of Tulane University in New Orleans, Louisiana, is a widely renowned expert in the field of parasitology. She began her work on toxocara as a graduate student in 1954. Since then, she, in association with several opthalmologists, has done extensive work in the detection and treatment of toxocara. She developed a reliable serologic test for the detection of toxocara which was announced in an article[5/] published in the "American Journal of Tropical Medicine" in May, 1974.[6/] After examining the medical records, including the pathology report, in Dr. Krupp's opinion the probability was 90 percent that the disease in Timothy's right eye was toxocara.

Ophthalmic pathologist Dr. Lawrence Zimmerman was a principal government witness at trial. He agreed that the University of California pathological report required that retinoblastoma be ruled out as a cause. However, he noted Dr. Helenor Foerster, a widely known ophthalmic pathologist also performed a pathological examination on Timothy's eye. Dr. Foerster has published a number of important scientific papers, one of which presented the initial description of toxocara infection of the eye. Dr. Foerster prepared a pathological report in connection with a paper which she presented to the Western Ophthalmic Club. In her report Dr. Foerster observed many pigment-

---

5/ Hemoglutination Test for the Detection of Antibodies Specific for Ascaris and Toxocara Antigens in Patients with Suspected Visceral Larva Migrans.

6/ Since the article did not appear until May, 1974, the physicians who treated or examined Timothy were probably not aware of Dr. Krupp's serological test.

laden macrophages and giant cells in the retina. Dr. Zimmerman believed this was significant since it implied substantial bleeding into the eye, or alternatively, that a foreign body containing iron might have been introduced into the eye. He postulated that bleeding may have been brought about by several causes, including persistent hyperplastic primary vitreous. In addition, Dr. Zimmerman suggested another possibility of the cause of the inflammation might be a low grade bacterial infection. He did not, however, conclusively rule out toxocara as a possible cause but noted that the larva was not found in either pathological examination. Also, in Dr. Zimmerman's opinion the iron pigment described by Dr. Foerster in her pathological report would not be characteristic of toxocara infection. For these reasons he discounted toxocara as the cause.

Dr. Zimmerman concluded that in this instance it is unlikely that the cause of Timothy's eye inflammation can ever be reliably known, hence the doctor's final diagnosis was chronic sclerosing endophthalmitis, cause undetermined.

It is true that the larva was not found during pathological examination. But as Dr. Fleck explained, the larva may decompose and disintegrate. The University of California pathological report following examination of the eye was prepared by Dr. Joseph Eliason, an ophthalmologist. In his deposition testimony Dr. Eliason stated the pathological diagnosis was granulomatous retinitis, etiology unknown. As stated above, this is a general inflammation involving the retina. Toxocara canis characteristically causes this type of inflammation although other causes are possible.

In the course of the pathological examination,

a technician prepared 30 to 40 sections from the eye. A section is less than a tenth of a millimeter and unless the entire eye is sectioned it is possible to miss the larva. In Dr. Krupp's opinion insufficient sections of the eye were examined to exclude the possibility that the larva was in the eye. Other possibilities suggested by Dr. Zimmerman that bleeding into the vitreous was caused by persistent hyperplastic primary vitreous were ruled out during the medical examination in July at Letterman, nor is there anything to suggest the possibility of a foreign metallic object as the cause of the inflammation.

I find on the basis of the testimony of the treating physicians, including Dr. Wolf, Dr. Kinn and Dr. Black, that toxocara canis was the probable cause of the inflammation in Timothy's right eye. The opinions of the treating doctors are substantially similar to the opinion of Dr. Krupp whose qualifications in this field are outstanding. I find in all probability the larva entered the eye through the retina prior to the time Dr. Shank made his examination in December of 1973. Probably the vitreous hemorrhage observed by Dr. Shank was caused by underlying lesion in the retina of the eye.

While it cannot be known with absolute certainty what an ophthalmologist would have done or been able to do if Timothy had been seen in December, 1973, Dr. Kinn testified that the ophthalmologist would have been immediately concerned with making a diagnosis. At that time the physician might have had some indication of a retinal lesion which would cause him to suspect either a granulomatous reaction or a retinoblastoma. The ophthalmologist would have been able to examine the

inflammatory cells were observed, the doctor could have concluded that an inflammatory reaction was present. In such circumstances a diagnosis of toxocara would be likely. Dr. Kinn explained that since the eye was functioning in December it would not have been prudent to remove the eye even if retinoblastoma was suspected. Rather, Dr. Kinn would recommend a therapeutic trial of steroids be undertaken and if the response would be favorable, then the eye not be removed. But if the mass continued to grow despite the treatment and if retinoblastoma could not be ruled out, it would be necessary to enucleate the eye.

Although in Dr. Zimmerman's opinion there is no recognized treatment for toxocara canis, in fact according to Dr. Krupp, the use of steroids in treating toxocara appeared in the medical literature as long ago as 1961. And since that time, Dr. Krupp maintains there have been numerous reports in the literature on the use of steroids. In her own right, Dr. Krupp has participated in treating approximately 20 cases involving ophthalmic toxocara. Her treatment for toxocara includes thiabendozole and steroids, generally used in combination. Thiabendozole is an anthelmintic medicine which kills the larva. The steroid is an anti-inflammatory agent which reduces the [illegible] of inflammation generally associated with toxocara. In each of the cases in which Dr. Krupp participated treatment was able to arrest the loss of vision at the stage it was when the patient was first seen. Results of treatment can usually be observed within three to four weeks. In the event a patient does not respond to treatment, retinoblastoma may be indicated.

7/ By Schneider at the Oxnard Clinic.

Dr. Black was also aware of several cases where inflammation of the eye was treated with steroids, and in isolated cases steroid treatment has decreased the inflammation, resulting in minimal scarring. But in Dr. Black's opinion in most instances toxocara is not seen by the ophthalmologist until it has been quite destructive. However, assuming that visual acuity in Timothy's right eye was 20/30 in December of 1973 and treatment with steroids was instituted, some vision might have been salvaged.

In Dr. Wolf's opinion if Timothy had been seen by an ophthalmologist in 1973, very possibly the eye could have been saved. Since a granulomatous inflammation is a cellular reaction to a foreign object, treatment would be taken to block the reaction. Steroids are a recognized form of treatment for granulomatous inflammation.

I find it probable that an ophthalmologist examining Timothy's right eye in December, 1973, would have diagnosed possible granulomatous reaction, toxocara canis or retinoblastoma. Although there was a lesion in the eye that to some extent impaired Timothy's vision, his visual acuity in the eye was 20/30, the best that could be measured on Dr. Shank's eye chart. The ophthalmologist under such circumstances would almost certainly institute a course of treatment involving steroids in order to reduce the inflammation. The treatment would have prevented further loss of vision and toxocara inflammation would have caused minimal scarring. The eye would have been saved.

Since the jurisdiction of the court is found under the Torts Claims Act, Alaska tort law controls. Richards v. U.S., 369 U.S. 1; U.S. v. English, 521 F.2d 63 (9th Cir. 1975).

The concept of liability arising out of negligence has been recently stated by the Alaska Supreme Court to be:[8/]

> It is elemental that in order for liability to be imposed in a negligence action, the plaintiff must establish a duty of due care owed him by the would-be defendant, a breach of that duty, and finally, that the injury was proximately caused by the breach of duty. Generally speaking, the duty of due care or ordinary care is the duty to act with that amount of care which a reasonably prudent person would use under the same or similar circumstances.
>
> Leigh v. Lindquist, 540 P.2d 492, 494 (1975).

Dr. Shank's failure to promtly inform Mr. and Mrs. Steele of the vitreous hemorrhage in their child's eye and his accompanying failure to refer Timothy to an ophthalmologist was a breach of the standard of care owed to Timothy Steele and his parents. I find Dr. Kinn's testimony as the duty owed to be especially persuasive. Not only is he a board certified ophthalmologist who continually deals with optometric referrals, but Dr. Kinn was previously chief of the eye clinic at Bassett Army Hospital for three years. During those years, he was in charge of the optometrists at the eye clinic and had overall responsibility for all medical and optometric care at the clinic. Additional evidence of the breach of the standard of care is found in the established text "The Optometric Profession." That authoritative work explicitly

---

8/ The standard of care required of medical doctors, osteopaths, and dentists is found at AS 09.55.540. Optometrists were not included. In 1976 the statute was broadened to include all health care providers. 34 Ch. 102 SLA 1976. The amendment was limited, however, to actions filed after the effective date, May 29, 1976. Since Steele v. U. S. was filed August 20, 1976, the amendment is not applicable.

states that an optometrist is bound not to try to differentiate between pathologies such as hemorrhages. Instead, an optometrist must refer the patient to a medical practitioner for prompt examination.

I conclude that competent optometric practice required that Timothy's parents be notified and that the child be referred. The failure to inform and refer was not a "judgment call" but a violation of the governing principles of professional standards.

Optometrist are trained to recognize symptoms of many diseases which may be discovered by eye examination. They are not permitted under recognized optometric standards to undertake a definite diagnosis but recognize this as the responsibility of a medical doctor. 9/ Obviously, it is foreseeable that failure to refer to a qualified medical practitioner, when required to do so, will result in delay of diagnosis and the institution of treatment; so it proved to be in Timothy's case. At the time the referral was finally made to an ophthalmologist, it was too late. Time had run out, and the only thing that could be done was to remove the eye.

I conclude that the plaintiff is entitled to recover in this action from the United States for the loss of Timothy's right eye.

DATED at Anchorage, Alaska, this 20th day of October, 1978.

JAMES M. FITZGERALD
United States District Judge

ALASKA STATE MEDICAL ASSOCIATION
1135 W. Eighth Avenue • Suite 6 • Anchorage, Alaska 99501 • (907) 277-6891

February 26, 1979

Respresentative Thelma Buchholdt, Chairman
House of Representatives
Health, Education, and Social Services Committee
Pouch V, Mail Stop #3100
Juneau, Alaska 99811

Dear Ms. Bushholdt:

The Alaska State Medical Association Legislative Committee has reviewed House Bill 79, an act relating to the practice of optometry.

Enclosed is a copy of correspondence relating to the issue during the 1978 Legislative Session. The position of the Association remains essentially the same, namely:

(1) We are unable to determine how this legislation will improve eye care or specifically benefit the public.

(2) Specifically, we know of no diagnostic use for the drug class, miotics, requested; in converse, their use would be appropriate for treatment of narrow angle glacoma, precipitated by a mydriatic/ cycloplegic use. This condition, we understand, is more prevalent amongst the Alaska natives than the general population, such that bush use of these drugs could carry increased risk.

(3) We approve the educational requirements added in the 1979 legislation. It follows that should the Legislature believe the proposed legislation is in the broad public rather than for special interest, no grandfather type clause should be allowed.

Sincerely,

W Fish

Winthrop Fish, M.D.
Chairman, Legislative Committee
Alaska State Medical Association

WF:mlm

Enclosure

February 14, 1978

Representative Charlie Parr
Chairman, House HFSS Committee
Alaska State Legislature
Juneau, Alaska 99801

Dear Representative Parr:

The Alaska State Medical Association Council has reviewed HB 664, An Act Relating To The Practice Of Optometry. We see no purpose identified or expressed within the substance of the Bill. We further see no areas where the public interest will be served by its passage and several areas where compromised eye care, duplication and cost increases are possible if not likely.

At the outset, please understand that the ASMA properly has no interest or intent to interfere with the practice of optometry in Alaska. However, if an enlargement of the scope of optometry into the sphere of medical practice is comtemplated, it reasonably becomes our concern for the welfare of the public, not a simple jurisdictional dispute.

Optometry by derivation, definition, tradition, training and current practice means measurement of the eye for refractive error and a prescription of corrective lenses. Current practices also allows dispensing and sale of lenses and spectacles by the prescribing optometrist.

The current statute defining optometry is unfortunate in that it suggests diagnosis of visual impairment, apart from refractive error, lies within the responsibility of optometry.

Non-refractive visual impairment may be a most difficult and subtle medical diagnostic problem, at times challenging the combined expertise of ophthalmologist, neurologist, radiologist, and internists, and requiring sophisticated diagnostic equipment. Causes range from simple cataracts to subtle brain tumor, from transient vascular insufficiency to obscure metabolic disorders. The visual problem may be the first and only lead to a serious medical disease. Almost all non-refractive visual impairments will come to confirmatory diagnosis and treatment by a physician. It goes without saying that missed or delayed diagnosis can have serious potential consequences.

Before extending the scope of optometry, well beyond refraction and the sale of contact lenses and spectacles, into the intricate area of complex ophthalmological diagnosis, we ask that you assure yourself of the following:

(1) That there is a clearly demonstrated and defined unmet public health problem, that this legislation will solve it, and it is the most appropriate solution.

(2) That the general level of training of the practicing optometrist in Alaska at present is at a standard which will preclude frequent mis-diagnosis, delay, duplication of expense and inappropriate trials of corrective lenses for non-refractive disorders of the eye.

(3) That the use of ophthalmologic drugs in the practice of optometry is free of risk.

(4) That the expanded drug use is necessary and essential to increased accuracy in refractive error diagnosis.

We feel the answers to the above are not obvious, we see no urgency to enact the legislation without the most careful study of the implications and therefore urge that you allow ample time for its consideration.

Sincerely,

WFish

Winthrop Fish, M.D.
Chairman, Legislative Committee

ASMA Legislative Committee

why drops?

"WHY DROPS?"

Patients sometimes ask their eye physician, "Why do you use 'drops' when you examine my eyes?"

A clear answer to this question will help one understand the fundamentals of medical eye care and the relationship of his eyes to the health of his body.

"Drops" are of several kinds and they serve several important medical purposes.

One of the commonest uses of drops is to **enlarge the pupils**, so that the physician may examine more thoroughly the interior of the eye—to "look through the open door instead of through the keyhole." There, for the trained medical man to see, may be the first sign of disease elsewhere in the body. Drops make it possible for him to study not only the lens through which the light must pass, but also the retina where the image is formed, and the optic nerve which transmits the picture to the brain.

Such drops are particularly important in examining older people, who are prone to eye diseases, and often have a small pupil that becomes even smaller under the light of the examining instrument. Dilation of the pupil is necessary in examining the eye for suspected cataract, diabetes, hardening of the arteries, high blood pressure—to name a few examples. The effect of drops used merely to dilate the pupils lasts only a matter of hours, and frequently causes little or no blurring of vision.

A second common use of drops is to **relax the focusing muscles** in the eye. This is often necessary to determine the true degree of refractive error that has to be corrected by glasses. Because the focusing muscles in the eye are relaxed by these drops, the eye cannot focus and the vision is blurred until the effect of the drops wears off. These drops also cause the pupil to dilate; however, it is not the dilated pupil but the relaxed focusing muscle that causes blurring of vision. The use of these drops is especially important when examining children. When a physician examines a young child with strabismus (crossed eyes), it is essential to use drops that relax the focusing muscles in order to determine what corrective glasses are required.

A third use of drops is to **anesthetize the eye**, to permit the physician to perform certain diagnostic tests without discomfort to the patient. These drops cause little or no blurring of vision. They are required for the all-important testing for glaucoma. Anesthetic drops are also necessary for the relief of pain resulting from injury.

Finally, there are several ways in which drops are used in the **treatment of the eye.** Some drops are used to destroy bacteria, some to relieve inflammation within the eye, others to relieve a bloodshot condition, and still others to make the pupil small in order to lower the pressure within the eye. Drops to dilate the pupil are used in certain diseases to keep the muscles resting while the eye recovers, or to prevent complications which might develop if the muscles controlling the focus and the pupil were not kept at rest.

Of course, all drops are medicine and they can be prescribed only by a physician, who is licensed to practice medicine and surgery, and administered only by him or someone acting on his order. You should never let anyone else put anything in your eye. Sometimes drops are prescribed by your family doctor, to whom you can always turn for advice about your eyes. He or any other Doctor of Medicine can also tell you of a Doctor of Medicine who specializes in the eye—an ophthalmologist.

Whether or not drops of any kind are to be used is a decision for the attending physician. Only the Doctor of Medicine who examines **your** eyes can say whether drops are needed.

* * *

Why drops? Because they are useful medicines in the modern scientific care of the eyes—as useful in their place as any other drug or instrument that physicians have at hand for the relief of pain and the restoration of health. They are often the key to the prevention of blindness and even the saving of the eye itself.

IN THE HOUSE

BY THE HEALTH, EDUCATION AND
SOCIAL SERVICES COMMITTEE

CS FOR HOUSE BILL NO. 79

IN THE LEGISLATURE OF THE STATE OF ALASKA

ELEVENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act relating to the practice of optometry."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 08.72.300(2) and (3) are amended to read:

(2) "optometry" is the employment of means or methods [, OTHER THAN THE USE OF DRUGS,] for the diagnosis of an optical deficiency or deformity, visual or muscular anomaly of the human eye, or the prescription or application of lenses, prisms or ocular exercises for the correction or relief of the human eye;

(3) "practicing optometry" means the diagnosis [, BY MEANS OR METHODS OTHER THAN THE USE OF DRUGS,] of an optical deficiency or deformity, visual or muscular anomaly of the human eye, or the prescription of lenses, prisms or ocular exercises for the correction or relief of the human eye, or the holding of oneself out as being able to do so;

* Sec. 2. AS 08.72 is amended by adding a new section to read:

Sec. 08.72.305. USE OF DRUGS FOR DIAGNOSIS. (a) No person practicing optometry may use drugs for diagnostic purposes unless he has

(1) passed the board's examination on the subject of pharmacology as it relates to optometry and the use of topically applied drugs; and

(2) completed courses and clinical experience approved by the board and offered by a recognized and accredited school or college of optometry and passed an examination, given by that school or college, which relates to topical application of drugs to the eye, including proper responses to reactions which may result from topical applications

of drugs to the eye.

(b) No person practicing optometry may administer drugs except for recognition of pathology and diagnosis of a vision anomaly.

(c) Topical anesthetics, mydriatics, miotics and cycloplegics may be used by a person practicing optometry under conditions approved by the board.

* Sec. 3. AS 17.15 is amended by adding a new section to Article 1 to read:

Sec. 17.15.055. SALES TO OPTOMETRISTS. A person licensed to practice optometry under AS 08.72 who has been authorized by the Board of Examiners in Optometry to use topically applied drugs under AS 08.72.305 may purchase topical anesthetics, mydriatics, miotics and cycloplegics.

* Sec. 4. AS 08.80.260(7) is amended to read:

(7) conviction of selling federal legend drugs without prescription of a licensed physician, surgeon, dentist, optometrist, or veterinarian;

KB79

REPORT TO THE CONGRESS: REIMBURSEMENT UNDER PART B OF MEDICARE FOR CERTAIN SERVICES PROVIDED BY OPTOMETRISTS

U.S. DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE • Public Health Service • Health Resources Administration

The Bureau of Health Manpower projects the overall number of active ophthalmologists in the United States to rise to 13,300 in 1980 and to 18,400 by 1990; this compares with projected levels of 22,000 and 28,200 for optometrists in the same time intervals. The proportion of ophthalmologists as a percent of total professional vision care manpower is projected to grow from 35 percent in 1973 to 38 percent in 1980 and 39 percent in 1990. These estimates should be interpreted cautiously, and should be undertaken in the context of written documentation available from the Bureau of Health Manpower. Available data preclude such projections on a detailed geographic basis.

More specific data indicates that in recent years many areas of the country, particularly non-metropolitan areas, are served only by optometrists. Approximately 40 percent of counties have an optometrist but no ophthalmol gist. Another 27 percent have neither.

Optometric Practice

The Institute of Medicine of the National Academy of Sciences, in describing primary health professions who are direct providers of patient care, defined optometry as follows: "The Doctor of Optometry (O.D.) is a health professional who performs eye examinations to determine the presence of visual, muscular, or neurological abnormalities, and prescribes lenses, other optical aids, or therapy, such as eye exercises to enable maximum vision. Optometrists are trained to recognize disease conditions of the eye and ocular manifestations of other diseases, and to refer patients with these conditions to the appropriate health professional."

This definition, as well as available documentation on the utilization of optometric services, points to the optometrist's role as a provider of primary health care services. In this role, the optometrist functions as a principal point of contact within the health care system for persons having visual complaints, including certain numbers who have symptoms or conditions that require referral to other health practitioners.

The scope of practice for optometry, similar to that for other health care providers, is difficult to define precisely. However, information is available from a number of sources to develop valid concepts of a profession's role and function. Such sources include State laws, judgments of courts concerning the responsibilities of practitioners, the usual and customary practices of the profession, and the objectives, content, and standards of education and training for the profession.

An examination of a variety of such sources suggests that optometry is a profession qualified to provide a broad range of services which are effective in patient management, including the management of aphakic and cataract patients. (See discussion in Part II of this report for detail on sources cited and information examined.) It is reasonable to infer that such services correspond to many specific

HB79

ATTACHMENT B

BASIC ELEMENTS OF THE CURRICULUM OF SCHOOLS OF OPTOMETRY

1. Biological science knowledge base.

   a. Gross human anatomy and microscopic anatomy, with emphasis on head, neck, and thorax.

   b. Embryology, gross and microscopic anatomy of the human nervous system - concentrating on the central nervous system.

   c. General human physiology, including the study of the fundamental organ systems and the mechanisms which regulate body function. Emphasis is on the sensory, motor and cardiovascular systems.

   d. Basic concepts of general and cellular biochemistry, with study of nomenclature, structure and reactions of organic molecules. Emphasis is on the visual system - tears, intraocular fluids, lens, retinal photochemistry, and actions of drugs upon these.

   e. Concepts of human genetics and genetic disorders, including the frequency and distribution of genetic disease, inheritance patterns, polygenic inheritance, chromosomal abberration syndromes, multifactorial genetics, and principles of genetic counseling.

   f. Gross and microscopic anatomy of the lids, orbit, orbital content, globe, muscles, nerves, and vessels, and embryology of the eye.

   g. Vegetative physiology of the eye, extraocular and intraocular fluids, corneal and lens metabolism, ocular circulation, retina and optic nerve metabolism.

   h. General pharmacological principles, methods of administration, various systemic drugs and their pharmacological action and side effects with emphasis on those that affect the visual system, such as cataractogenic and glaucoma-producing drugs.

   i. Pharmacology; uses, doses, contraindications, and adverse effect of drugs producing miosis, mydriasis, cycloplegia, accommodation, and ocular anesthesia. The pharmacology, use contraindications, and adverse effect of drugs commonly used in treating visual and ocular problems.

As is evident from the discussion above, the Department endorses the first recommendation. For reasons cited, however, Department endorsement of the second recommendation is viewed as inappropriate and premature at this time.

During the course of the study effort, a number of additional issues and concerns were identified by the expert consultants which, although important considerations, represent matters not directly responsive to the specific legislative charge as interpreted by the Department. These recommendations and comments, made unanimously by the consultants, are presented here to provide an opportunity to bring these matters to the attention of Department Agencies and the Congress. Because the following items go beyond the requirement of this report, the Department has not fully examined them and makes no recommendation at this time.

1. Refractive services for aphakic patients

Aphakic patients, specifically, should be considered as having special needs given their disabled condition. Refractive services for such patients represent non-routine and necessary services in the provision of prosthetic devices, i.e., lenses.

Study advisors recommend that consideration be given to extending coverage under Part B of Medicare to include refractive services for aphakic patients when provided by either ophthalmologists or optometrists.

2. Low vision services and aids

For those patients who have inoperable cataracts or have less than optimal results from cataract surgery, that is, those who have reduced visual acuity, low vision services and aids represent essential components of reasonable and necessary health care services for these patients.

Study advisors recommend that coverage under Part B of Medicare be extended to include the provision of appropriate low vision services and optical aids for the above-referenced patients, when provided by either ophthalmologists or optometrists.

3. Prevention, health maintenance, and health education

In the interests of health care cost advantages, effects on productivity, and the overall improvement of benefits that can be afforded our population, the expert consultants recommend that a more effective effort be made to improve preventive, health maintenance, and health education measures. While this is needed in all areas of health services, the vision/eye care field offers a particularly promising area for such approaches.

4. Other service provided by optometrists

Vision/eye care services currently covered by Part B of Medicare, when provided by ophthalmologists or other physicians, include eye conditions other than cataract and aphakia. Optometrists can provide appropriate services for some of these conditions. It is recommended that extension of reimbursement to include the services of optometrists for such appropriate conditions is a desirable subject for further consideration.

5. Administrative considerations

Also during the course of the study effort, expert advisors raised several concerns pertinent to the administration of the Medicare program. These issues, also applicable to other Medicare services, include the following: (a) inconsistent application of coverage and reimbursement policies by individual carriers, (b) the problem of payment duplication for services and reimbursement for similar diagnostic procedures when performed for specific individuals by more than one provider, and (c) need of improvement in coding and billing procedures for vision/eye care services.

6. Cooperative working relationships between vision/eye care professionals

It became clear during the course of this study that more effective working relationships between optometry and ophthalmology and other providers in the vision/eye care field would enhance patient care and result in improved services to individual patients. While improved interdisciplinary coordination applies to all the health disciplines and specialties, it is a problem of particular concern in the vision/eye care field. Such working relationships could be significantly strengthened by

a. Development of joint educational programs at the undergraduate and graduate levels, including rounds, clinics, conference, and meetings and publications.

b. Establishment of interdisciplinary clinics with optometrists and ophthalmologists working together.

c. Facilitation of referral of patients between the optometrist and the ophthalmologist when in the best interest of the patient.

d. Joint development of quality standards for service and materials by peer review mechanisms. By materials, particular reference should be assigned to varying quality of lenses and frames and the need for furnishing laboratory invoices of material costs for reimbursement.

e. Joint development of appropriate revision to State [illegible] laws to permit use of diagnostic drugs, [illegible] and local anesthetics by optometrists

While such [illegible] are sufficient in various areas of the country, they need to be broadened and reinforced.

Alaska State Legislature

House of Representatives

Committee on

Health, Education & Social Services

Official Business

Pouch V
State Capitol
Juneau, Alaska 99811

March 13, 1979

Ms. Maureen Roche
3311 Eureka Street #3
Anchorage, Alaska 99503

Dear Ms. Roche:

Thank you for your recent letter regarding HB-79, "An Act relating to the practice of optometry."

This bill did pass the House last year as HB-664 but was held up in Senate Rules. This year, the House Health, Education and Social Services Committee has held three hearings on the bill so far. We've heard testimony from both Optometrists and Optomologists and have had work sessions on the bill. We do plan to hold at least one more hearing on HB-79, which will probably be another work session to mark up the bill.

So, at this time, we are still giving consideration to HB-79, hence, your letter of suggestions will help.

I do appreciate your taking the time to write to me to express your feelings on this bill. I will keep your suggestions in mind when I make my vote.

Sincerely yours,

THELMA BUCHHOLDT
Chairman
house HESS Committee

TB/ch

3311 EUREKA St.#3
Anchorage, Ak.99503
March 3,1979

Dear Ms. Bucholdt,

It is my understanding that House Bill 79 is under view by your committee in the eleventh legislature-first session. If at all possible I would appreciate being informed as to the status of this "act relating to the practice of optometry".

My interest in this matter takes on a fervent stance due to the fact that I have been directly involved in the delivery of eye care services to to those recipients in the Bering Straits Region. In light of this Ifeel obligated as well as deeply concerned with this notion of introducing Sec.08.72.305 to the enactment of the legislature.

I need not inform you that we both share a vested interest in this matter since we are potential candidates of optometric services; let alone the populus that this bill will effect if passed.

This missive serves you in a genuine tone of concern since Alaska now is beseiged by the "drug bill", SEC. 08.72.305. Pursuant to this is the idea that health care, specifically, the medical health eye care aspect should be viewed under a microscope for what is to be understood as a redefinition of the scope of the optometrist. Or, if you would , a broadening of the defined scope of the optometrist. To wit... allowing the utilization of pharmaceutical agents (drugs). I beseechingly ask that you read the following paragraphs for the sole purpose of another outlook from a concern citizen, not to mention for the sake of the public whom you represent in this permissive matter of eye care.

The decision that confronts the legislative body is a precarious one. Due to the fact that a question mustbe brought forth & posed , what constitutes the optometrists in this state to utilize drugs in their non-medical profession.

An apparent exigency is prevalent to bring to attention the delination between the non-medical profession (optometrists-O.D.) & the medical profession, (ophthalmologists-M.D.). Both are distinguished in their own right & certainly are awarded the recognition & respect from our society. However the oohthalmologist has gone through an intense array of medical education & training for his endavour of the total encompassing diagnosis, treatment, & care of the eye. The optometrist need only attend a few years of schooling for gainful knowledge of a cognizance of an optical deficiency correctable as he sees it by administering & prescribing lenses &/or prisms. Hencefore, the medical profession is more adequately & better prepared for the entire entity of tending to the eye than the optometrist, merely by training & education. Be it stated here that the above mentionned was not meant in a derogatory fashion nor a demeaning one towards the optometric profession.

In conjunction with this is the question posed , why would a non-medical profession such as optometry effaciously invade the medical profession in medicine. Both are sciences,but, both are concerned with different concentrations intrinsically related to their science. Optometry was established with the initial purpose as a profession to aid in "vision improvement" acting as a liason for the ophthalmologists.

At this propitious time of concern with rising health care at an annual rate of 12% & an approaching make-up of 10% of the GNP the non-medical profession of optometry has sought an entrance into & engagement in being a medical provider of health care delivery by the pursuit of practicing ophthalmology .I can only surmise this from reflecting observations of the events & recent developments between these two professions & what is taking place in the state house / senate in Alaska.

This issue becomes sensitive not only for the reason that the eye as an organ is one of mans' most cherished & most relied upon senses but primarily how Alaska will handle, cope, & decide upon what constitutes the profession of optometry to utilize drugs in their profession. Advertently, how health care will be delivered to its constituents. All legislative powers are in throes of controlling this predicament. However, I fail to see how amending this bill will alleviate & eliminate the cost of medical care, let alone upgrade & enhance the quality of medical health eye care.

As with any service rendered in our society one seeks the quality of service for the least amount of cost to them. The same holds true in medicine. I believe as you might concur that a patient seeks a physician eye doctor for his knowledge, skill, ability,talent in his area of medicine with a degree of trust for all intents & purposes of effaciously being relieved of whatever objective &/or subjective sign &/or sympton that the individual had to seek the M.D. in the first place. For you to fully understand the topic in deliberation, this missive necessiates that you be privy to the condition of glaucoma. The example to be cited is stated in order to stress the full impact & seriousness of Sec. 08.72.305

Pertinent to this is the prevailing factor that Alaska is different than the other states that have considered the "drug bill" in regards to its recipients of eye care health services. For the Alaskan Natives are predisposed to the condition of glaucoma, particularly of the four types, narrow angle glaucoma This is due to their anatomical trait of a shallow anterior chamber.

I ask that you bear with me in a basic description of the eye & vocabulary related to it.

Affecting 1 out of every 100 people over 40 & being the second leading cause of blindness in the U.S.:glaucoma is an afflicting disorder. There exists within the eye an intricate drainage system, so established that the aqueous humor (fluid which aids in maintaining the shape of the eye & its nourishment for it) continuously leaves the eye through the drainage network. In the case of an individual afflicted with glaucoma the exit route is complicated.Basically, a squelching effect of that which is a composite of the angle of drainage in the anterior chamber of the eye becomes narrow,or more fluid is produced than what is considered the normal. Hence, the subsequent build-up of pressure within the eye. IT IS THIS intraocular pressure that jeopardizes the sight of an individual. For glaucoma is that injurious increase of pressure within the eye pressing on the optic nerve. The optic nerve being the running umbilical cord to the brain for the interpretation of vision. If you will, it is the M.D.'s insight & his ability to detect this disorder that is quite significant , whether or not the individual will maintain good vision. For this is an eye condition that is not curable, solely controllable with medication &/or surgery.

Narrow angle glaucoma may be precipitated when the pupil (black portion of the eye) dilates (enlarges) as it encounters darkness or after the administration of mydriatics (dilating drugs).

The latter precipitory factor arises when a doctor utilizes one of many mydriatic drugs during the course of an eye exam , fundus exam (viewing the posterior portion within the eye) & for evaluating refractive errors. (Sec. 08.72.305 2,c) Mydriatics facilitate examinations of that already mentionned.

A patient with an underlying condition of narrow angle glaucoma may be subjected to medication by the attending physician whether it be for any one of the mentionned eye examinations. In view of this, induced is the incidence of an attack of acute narrow angle glaucoma.. WHY? The iris, (colored portion of the eye) had been induced to dilate by the administered drug. Consequently, this inhibits the muscle to constrict therefore closing off the escape route for the aqueous fluid. What now ocurrs is excruciating & intense pain due to the escalating intraocular pressure upon the optic nerve. If not quickly tended to with the attention of rectifying the precarious situation by a counter effect of medication whether this be administered orally, or intravenously irreversible damage will ensue.

Obviously, at this point & time the reflexive resposes of the attending eye examiner is weighted with responsibilities of anothers vision AS you & your committee are weighted with the responsibility of answering what constitutes the optometrists in this state to utilize drugs in their non-medical profession. My faith lies herein with your time & consideration of Sec. 08.72.305.

Sincerely,

Maureen Rock

RE: HB79

Dear Mrs. Bucholdt;

Many legislators have asked about the harm which can come to Alaskans as a result of HB 79 (optometric drug bill). In addition to the Fairbanks case which you are well aware, please see the enclosed list of patients across the country whom have suffered as a result of optometrists attempting to practice medicine. A study of the individual cases is educational and provocative.

Sincerely,

Peter E. Cannava, M.D.

Massachusetts Widow

Vol. 1, No. 1, July 15, 1977

The first issue of THE PEN featured a tragic testimonial headlined "Massachusetts Widow: 'It Seems Bizarre.'" Excerpts follow:

Five years ago my husband began complaining about his eyesight. He decided to see an optometrist and he continued to do so for 2½ months. As his vision deteriorated at this time, he experienced headaches so violent they would awaken him from a sound sleep. I pleaded with him to see an ophthalmologist or some person with a medical background. He became increasingly irritated at my suggestions and I was forced to bow to his decision or submit to an unhappy home life.

As each day passed, before my eyes his personality changed; this sweet gentle man became verbally abusive and the general tenor of our home was unbearable. At that time our four children were 6, 7, 8, and 9 years old. They watched their father hold a cup of coffee, his hand tremors so pronounced he would spill it and leave the table in a terrible rage.

I pleaded again, to no avail. How does a wife forcibly take a grown man to a doctor? He *trusted*

SPECIAL ANNUAL PERSONAL EXPERIENCE REVIEW ISSUE

During its first year, THE PEN has published numerous carefully documented cases of eye damage resulting from attempts by non-medical practitioners to practice medicine. These four pages are a collection of selected excerpts of those cases which have prompted expressions of maximum interest from readers.

While there has been no official response or challenge from organized optometry, individual optometric lobbyists have advised legislators that these cases are "isolated instances." The steady flow of similar testimony pouring into PEN headquarters prompts us to suggest that the cases are not "isolated," but rather "the tip of an iceberg."

DANGER AND WASTE IN THE VA

Robert B. Nolan

•

Disabled Veteran

Vol. 2, No. 8, April 15, 1978
Vol. 2, No. 11, June 1, 1978

In these issues, a totally and permanently disabled veteran told how he got less than the deserved in-depth investigation into the problem of allowing VA optometrists medical functions. Mr. Nolan again found more evidence of danger and waste in the VA. Excerpts from the first story follows:

". . . The VA would not permit me to receive outpatient treatment from a private physician unless I lived 30 to 50 miles from a VA treatment center. I didn't, so I decided to pay for my own doctor and then go to the VA and see their M.D. for medication only.

"My wife called the VA in the federal building in downtown St. Petersburg for an appointment early in August of 1977. She told the girl on the phone that I needed an eye doctor because I had glaucoma.

"My first visit to the VA eye 'doctor' was August 22, 1977. I presumed that the doctor I saw was an M.D. ophthalmologist. His name was on the door and it said 'doctor.' . . .

"The 'doctor' finally tested my tension with a hand tonometer after the [illegible]

the optometrist. The optometrist changed his glasses three times - each prescription being for stronger lenses - during those 2½ months. Each time his eyesight and the pain was not even slightly improved by the change of glasses. He was told it would take time to get used to them. The optometrist never suggested he see a medical person.

His suffering increased to such a point he could not work or concentrate. I suggested a vacation and he agreed. . . . He now had a black patch over one eye "to rest it" prescribed by the optometrist.

I was frightened; I felt he was dying and I was helpless. After a few days of rest I gently broached the subject again and very unlike me, burst into tears. . . .

Our vacation was cut short because he was so ill. He insisted upon going to work when we got home, but surprised me by phoning from the hospital. He had seen an ophthalmologist who immediately spotted the problem and within minutes called in a neurosurgeon. The neurosurgeon admitted him to the hospital at once. I discovered later that when the ophthalmologist's *secretary* heard the symptoms over the telephone, she had insisted Dick come to the office immediately.

The neurosurgeon told me frankly he felt that Dick had a brain tumor. At our community hospital, tests were done in the next few days; the consensus was a brain tumor.

Surgery was at nine. . . .

Bad news it was, a malignant brain tumor called an astrocytoma. "I would give him about eighteen months," the doctor said, "but be prepared for some horrible times ahead." Twelve days later God mercifully took his beautiful soul and left his tired, worn body. . . .

In retrospect, it seems bizarre to me that when one (in this case the optometrist) realizes a situation is out of his control, that he wouldn't immediately make a referral, especially when seeing a patient suffer so much. ●

claimed her child's blurred vision could be cured with "more love and understanding at home" in a story headlined "O.D. Calls Diabetes A 'Lack of L. c'." Passages of that interview follow:

Dr. Gold: "Mrs. Cosgrove, why did you bring Barbara to me?"

Mrs. Cosgrove: "We were referred here by our family doctor who just found diabetes in Barbara. She is 11 years old. I told him I had just had her eyes checked by an optometrist."

Dr. Gold: "Do you mean Barbara was examined by an optometrist lately?"

Mrs. Cosgrove: "Yes, she failed the school vision test in November and they said to have an examination. He (the optometrist) has a great big sign out in front, that says 'Doctor,' and I thought he was one."

Dr. Gold: "What did he find?"

Mrs. Cosgrove: "He said there was nothing wrong with her eyes and when I asked him why she kept getting blurred vision, he told me that she was a nervous child and when she gets up-tight, her eyes get blurry. My reaction was to take her to a social worker, but he (the optometrist) told me she just needs more love and understanding at home and that there was no reason to do any more than see him again next year."

Dr. Gold: "Then what happened?"

Mrs. Cosgrove: "I thought I was some kind of a rotten mother with such a nervous child, and I cried that night."

Dr. Gold: "Did you pursue the blurred vision at that time?"

Mrs. Cosgrove: "During December, Barbara seemed to have the flu, but it didn't go away and by Christmas Eve, I real-

Continued on page 6

a hand tonometer after the eye test for glasses and said the pressure was 19 in each eye. I showed him the prescription I had received from Kenneth Safko, M.D., my own ophthalmologist, and he said, 'Wait until I xerox this as it is no good here. I will have to write my own prescription.'

"After copying Dr. Safko's prescription and putting it in my file, he wrote his own prescription and took it next door to get it co-signed. . . .

"On my way to the pharmacy with my wife, she looked at the prescription and said it didn't look right. We took it back and the 'doctor' changed it from pilocarpine to 3/4% carbachol with six refills. Another doctor (probably an M.D.) co-signed the new prescription. . . .

"On our next trip to the VA center, my wife asked the woman at the front desk if the doctor we saw was an M.D. and an ophthalmologist. The woman at the desk replied, 'Yes, he is a full-fledged doctor and an ophthalmologist fully qualified to treat eyes.' . . .

"When I finally got the glasses, sometime in late November or early December of 1977, I discovered I could see much better without them.

"On my next trip to the VA on December 19, 1977, I returned the glasses. The 'doctor' told me the reason the glasses had been so long coming was because he rejected them two or three times, since they were not to his prescription. When he took the glasses to the next office to check them, my wife and I looked at his diploma on the wall. It said 'Doctor of Optometry.' When I told him we thought he was an ophthalmologist, he became very angry and said, 'Do you question my qualifications?' I told him I certainly did question his qualifications to treat glaucoma or any other eye disease. He told me that the people at the front desk didn't know the difference between an ophthalmologist and an optometrist. I said, 'If this is true, what if my eyes need surgery?' He said if that were the case, I would have to go to the Tampa VA Hospital or the Bay Pines VA Hospital and some other doctor would operate. . . .

Totie Fields

•

Comedienne

Vol. 1, No. 8, Nov. 1, 1977

The following is a portion of an interview between TV-talk show host Merv Griffin and comedienne Totie Fields, during which she warned all diabetics to seek eye care only from ophthalmologists:

MERV: It was kept very quiet; but all of a sudden, about two months ago we all heard rumors that, now you were losing your eyesight from the diabetes.

TOTIE: It's true, it's true! — and you know why I want to talk about it?

MERV: Blue Cross must hate you!

TOTIE: They have lost so much money on me.

MERV: Have they?

TOTIE: Yeah, but you want to know? I didn't know it, Merv, I swear to you I saw 20/20! . . . this is what I want to make a point of, I went to an optometrist all the time and he said, "Totie you're doing wonderfully, everything is fine," . . . I've been a diabetic since I was nineteen years old, and you know how I watch myself; I weighed 200 pounds; all I ever thought about was eating. I swear to God they told me I couldn't eat and that was the end of it!!! I mean, I just ate myself into oblivion! I used to do a show and in the I did "Fight for Sight" — the benefit "Fight for Sight" for about five, six years in a row and that's the money that helped this whole thing! (applause) To get this discovery! Isn't that incredible? (applause) And you won't believe how I can see every wrinkle in your face, Merv, every wrinkle in your face, I never could see them before . . . ●

GLAUCOMA UNDETECTED

Mrs. Agnes Karrman

•

Connecticut Housewife

Vol. 1, No. 5, Sept. 15, 1977

Appearing in this issue of THE PEN under the headline "Conn. O.D. Tells Housewife: 'You Don't Have Glaucoma'," a Conn. woman told of an optometrist who failed to recognize her glaucoma. Excerpts follow:

"I was a nervous wreck before I visited the ophthalmologist that day in October, 1975, and then the bottom had just dropped out of everything. My fears had been justified because the ophthalmologist had just told me that I was suffering from far-advanced glaucoma. For some time I had experienced increasing difficulty with my vision. I couldn't read the paper without a magnifying glass. My eyes were constantly watering and sometimes I awakened at night with a headache. I could no longer see well enough to play the piano or organ.

"...Yet, despite these complaints, my optometrist had assured me for over a year there was nothing seriously wrong with my eyes.

meantime, my vision had continued to get worse and I could no longer enjoy any activities that required good eyesight.

"As I said earlier, my first visit to the ophthalmologist was a shocker. It was such a different examination! Not only did the ophthalmologist find that my pressure was higher than normal, he also found that my optic nerves had been severely damaged by this long-standing pressure and that my side vision had been destroyed. I could only see as though I were looking down a gun barrel . . . He discovered that I did have cataracts, but they were only a small part of my eye health care difficulties.

"The ophthalmologist's diagnoses and explanation of the extent of my problems not only added to my nervousness but made me very angry. I was angry with myself for not having listened to my sister's advice months ago to see an ophthalmologist and not an optometrist, and I was plenty angry with the optometrist! The doctor told me that an optometrist is not trained in medicine nor to diagnose or treat eye diseases. How can an optometrist act like an 'eye specialist' and flatly assure people that he is capable of this type of decision making? How can he keep peddling new glasses and sell eyewash types of eyedrops with implied assurance that they can cure? How can he stand by and literally watch one of his long-time customers go blind?" ●

EXTENSIVE EYE DAMAGE

Denton Livensparger

•

Double Jeopardy

middle I used to think where could I get a pizza around here; you know I thought of nothing but food, Mallomars if I could only eat a Mallomar! Oreos, you know I was an Oreo freak . . . Oh, I talk about them and my mouth gets filled with saliva!!! I saw a little thing floating in my eye like a little hair, you know, that you couldn't get rid of and so I went to an ophthalmologist. Diabetics should never go to an optometrist, they must go to ophthalmologists because they see behind the eye. He said, "Totie, you've got to go . . . the best man in the country is in San Francisco and you must get to him right away." The next morning I was there and this man was telling me I was going blind, and I said, "You're crazy! Why didn't anybody else . . ." Well, they were so busy worrying about everything else, no one thought of my eyes, and I've never (incidentally, no one's ever heard this story before) — Well, to make a long story longer . . . yeah! I want, because I really want diabetics to be so aware because this operation is only two years old, Merv, and ironically enough, my dad died blind, my brother died blind, and I would have. . . .

One day you get to that age where all the print is gone and the paper comes and you say why did they send me a white paper (laughter) — you know, and you'd go to the toilet and drop it on the floor and read it there (laughter) . . . you know what I mean. But, I can read proof! I mean, to open a menu and be able to see it without looking for my glasses is the most exciting thing, but I want you to know, everybody out there that is a diabetic, please, please go to an ophthalmologist . . . because you can be saved! You know the ironic part of this entire story,

"I had been going to an optometrist regularly for about seventeen years — ever since he had opened his office. He was always pleasant and the glasses he fitted for me were generally satisfactory. In 1974 I went to him complaining of blurred vision. He gave me new glasses but they didn't help. I went back to him and he told me that they were the right glasses and that I just hadn't allowed enough time to get used to them. I told him that I was worried about glaucoma because my brother had had surgery for glaucoma and is almost blind, and my sister was being treated for glaucoma by an ophthalmologist. She is doing well because her problem was discovered early. The optometrist assured me that he had checked for glaucoma and that I didn't have it.

"Several months later, because of increasing trouble with my vision, I returned to the optometrist . . . He again changed my glasses. At that visit I again voiced my fear of glaucoma and once again he assured me that my eye pressure was normal and that I didn't have glaucoma. He said my eyes were just tired. Well, the new glasses didn't help at all. They seemed to be no different than the previous pair he sold me . . .

". . . After another month and a half had passed I returned to the optometrist because my eyes pained at times and I often awoke at night with headaches. My vision was getting worse and my eyes watered constantly. This time I really pressed about my fear of glaucoma. He re-examined me and again sold me a pair of glasses — the third pair in less than a year! He told me that his $3,000 special instrument measured accurately for glaucoma and that a referral to an ophthalmologist was not necessary. In fact, he told me that I had nothing to worry about, that my eyes were perfectly clear. He said, *'You don't have glaucoma and you don't have cataracts.'* He gave me some eye drops to use three or four times a day. I used them regularly for the next four months until my sister finally persuaded me to see her ophthalmologist. In the

Vol. 2, No. 7, April 1, 1978

In a story headlined "Misuse of Drugs Plus Misdiagnosis Puts Floridian In Double Jeopardy," a Florida ophthalmologist told of how an optometrist missed signs of glaucoma and serious corneal abrasions requiring surgery in both eyes of a male patient. Excerpts follow:

"Misdiagnosis combined with the misuse of powerful drugs by untrained practitioners poses a frightening threat to public health and places our citizens in double jeopardy," says John D. Mallonee, M.D., a practicing ophthalmologist in Ft. Pierce, Florida. "The advanced years of many of our patients makes this menace even more serious and the public must be made aware of this grave danger," Dr. Mallonee said.

In support of his forthright statement, Dr. Mallonee detailed the following case history.

"On February 4, 1978, I first saw Denton Livensparger. This 65-year-old man came to my office of his own volition, and without referral. He told me he lived at 1196 Proctor Lane in Port St. Lucie, Florida, a nearby retirement community, and had been suffering severe pain in both eyes for some time. Mr. Livensparger voluntarily gave the following account of his experience to date."

"In early November 1977, I think it was the 8th," the patient said, "I went to see an optometrist about the pain I had in both eyes . . . I told them that for a long time, maybe nine or ten months, I felt as though I had something in both of my eyes, and that the pain was just getting worse all the time. After they examined me, they told me all I had was an eyelid infection and they gave me some antibiotic drops called Neodecadron. I went back again the next day and they told me I didn't have glaucoma, and all that was the matter with me was a minor eyelid infection that would clear up if I used the drops."

Protect The Public From Sub-Standard Eye Care

GLAUCOMA UNNOTICED

Mrs. Florence Hubbard

•

Blinded High School Student

Vol. 1, No. 2, Aug. 1, 1977

The following excerpts are from a byline story by a Massachusetts student headlined "'They Call Themselves Doctors' - . . Blinded High School Student," in which she told how an optometrist could not recognize advanced glaucoma.

"In August 1967 I was walking home from a friend's house when I knocked over a trash can because I didn't see it. A couple of days later I noticed that things looked blurry. I couldn't read signs or make out faces and when I looked at lights, there was a rainbow around them.

"I went to an optometrist in September and told him about all of this and that I had a throbbing pain in my eyes. My left eye was worse than my right eye. The optometrist asked me to read his eye chart but I couldn't see where it was. He examined my eyes and told me not to worry, he could help me. He said I had a lazy left eye and astigmatism, and he had just the cure for me — he was going to prescribe some glasses.

"Before the glasses were ready, the pain got much worse and my eyesight got more and more blurry. However, I trusted the doctor. I figured you go to a doctor and he knows how to treat you. I had always thought optometrists were doctors. They call themselves doctor.

"When I went in to get my glasses in October, I told him that my vision was much worse and he

Similar heartbreaking circumstances have accompanied many of the cases in PEN's growing file. Here's a random sampling.

● From the Wills Eye Hospital, a division of the Thomas Jefferson Medical School in Pennsylvania, - when a female patient complained of pain in the eye, an optometrist gave her an anesthetic drop to use. Later, he refused to see her. She developed a pseudomonas ulcer (infection) and the eye had to be removed.

● Also from Wills, a female patient told an optometrist that for seven years she had episodes of blurred vision brought on by reading. They usually lasted about an hour and when severe were associated with headaches. She was followed by an internationally famous optometrist throughout the seven years and was reassured nothing was wrong. Later, an M.D. found textbook symptomatology of chronic angle-closure glaucoma and advised immediate surgery on both eyes.

LED TO BLINDNESS

Charles B. Wilson

•

Arizona Steelworker

Vol. 1, No. 10, Dec. 1, 1977

The following are excerpts from the story of an Arizona man headlined "Arizona Steelworker 'Led To Blindness'," in which he told how an optometrist informed him he would eventually go blind, but gave no reason, and his misadventures with more optometrists:

"When I first thought I needed glasses 25 years ago, there was only one place to go in my home town in Ohio — and that was to an optometrist. He had the whole works — he gave examinations and sold glasses.

"He checked me one time, gave me glasses and then he said, 'In about 20 years, you're going to think you're going blind.'

"I asked him why, but he wouldn't give me a definite answer. He just said, 'Well, your eyes are going to change that much and you're going to think you're going blind.' To this day, I still don't know what he was talking about.

"I just figured it was my nearsightedness or the opposite, whatever that was. I wasn't bothered with anything until I came out here 17 years ago.

"I worked in a steel mill and once my glasses got all burned up in there, so I went to an optometrist in Mesa.

"He just checked my eyes like everyone else does. I got a new pair of glasses there.

"In the meantime, the Union got into the plan

got out the glasses and said, 'These should take care of you.'

"I went home with the glasses but they weren't helping. I was banging into desks at school, I kept banging into people, I couldn't see the blackboard. I must have called the optometrist about 10 times and he kept telling me I would be all right, that I was getting too worked up and making myself not see.

"When my mother and I went to see him the next day, my mother said he looked a little worried. He told us that I lacked something in my body, that I had a deficiency, and he would make an appointment for me with an ophthalmologist but not until after Christmas. He said I should go home and have a nice Christmas.

"When my mother and I went to the ophthalmologist on December 27, it was the first time I heard the word 'glaucoma.' He said I had all the classic signs.

"The ophthalmologist found that I had a pressure of 95 in both eyes — normal is 20, and total blindness is 100, he said.

"In April the pressure in my eyes went up again and this time the ophthalmologist thought it would be necessary to operate. By now my parents were so upset they had decided that they should be extra careful and get another opinion and I should go to Massachusetts Eye and Ear Infirmary. I did and it was decided I should have surgery on both eyes, to save what little sight I had left. I've lost 99 percent in my left eye and I have only the very center of the vision in my right eye — I can only see things that are straight ahead.

"After I got out of the hospital and began to feel better, my little eight-year-old cousin began to take me all around Gloucester by the hand so I could learn my way around. I still don't like going to new places and there are some things I can't do for myself. Once I set myself on fire trying to reach something over the gas stove and I didn't even know it. I was lucky my husband was home and saw it." ●

resident Larry Thompson, M.D. In a story headlined "Mrs. Oliver: 'I Told Him These Are My Eyes'," she told how a vision-center optometrist became annoyed when she told him the glasses he prescribed did not work:

Mrs. Oliver: "I came to University Hospital because I was getting this blindness, and I couldn't see. I was at church on the fourth Sunday in July, and I fell down those steps."

• • •

Dr. T: "You were seen for your eyes before coming here — when, back in February of 1977?"

Mrs. O: "Yes, it was February."

Dr. T: "And you were seen at - - - - Vision Center?" (an enterprise which employs optometrists, but has no medical personnel.)

• • •

Mrs. O: "Yes, I was there for glasses. They examined me but they didn't tell me anything. I asked the doctor why I couldn't see. The doctor got angry with me when I said I could not see out of my left eye like I should. I was trying to read the board, the letters and the numbers. And when he put the glass to my eye, I couldn't see and I told him that I couldn't see. He got very, very angry. He told me that he was doing the examination, not me. *I told him that these were my eyes and I should know whether I could see or whether I couldn't.*"

• • •

Dr. T: "OK, he prescribed new glasses for you at that time. After you got those glasses, you could not see with those glasses, is that correct?"

Mrs. O: "Yes. I went back to them again and had that left lens changed. It was supposed to have been changed."

Dr. T: "Did they ever measure the pressure in your eye, touch your eye with anything to measure the pressure?"

and the company had to furnish eyeglasses. So, another optometrist in Tempe gave me a cut-rate price for an eye examination, since I was an employee. It was a ridiculously low price. After that exam, I went to that optometrist all the time, about every two years. I went through this same routine for about 10 years.

"I started noticing that I was stumbling a lot out at the steel mill. I was falling and tripping over things, which I don't ordinarily do, I tried to get an appointment with the optometrist, but most of them in town were at a convention. I finally found one to examine my eyes.

"He examined me and said he saw something in one eye, but he admitted that he didn't know what it was. He recommended that I see an ophthalmologist.

(At this point, Mr. Wilson was asked whether or not the optometrist who checked him every two years for a decade ever checked anything besides his vision, such as his eye pressure.)

"No, sir, he never did anything like that. I figured I was getting a complete eye exam, like I'd had all of my life. He was called a doctor, and to me an eye doctor was an eye doctor.

"An ophthalmologist was just a long word as far as I was concerned! I'd never been around one, and where we came from there wasn't any. This last optometrist I asked point blank what was in my eye and he said he did not know and that he recommended my coming to see one of you fellas. He said you would have to 'lift the pupil up and look behind it and see what was in that eye.' ...

"Well, here I am. I was legally blind. Now I've had surgery to save what vision I had left, but I'm still in bad shape. I believe this other guy that I went to should have seen something and checked it. But I didn't know he should have looked into my eyes with all those lights and stuff that he didn't do it. He never gave me a pressure check or anything like that.

"So now I'm disabled. I was led to blindness for 25 years." ●

OPTOM-PSYCHIATRY

Continued from page 3

ized that she had lost her appetite and was losing weight; also she was always thirsty and urinating excessively, so I took her to our family doctor."

Dr. Gold: "What did he find?"

Mrs. Cosgrove: "He found diabetes. Her sugar was 790!" *(Normal is around 100)*

Dr. Gold: "Did the optometrist ever mention to you the possibility that variably blurred vision could be a sign of diabetes?"

Mrs. Cosgrove: "No, never. I don't think he should be allowed to be out there, on the street, calling himself a doctor! He doesn't know anything about disease. Why is he there? What's wrong?"

Dr. Gold: "Mrs. Cosgrove, do you give us your permission to publicize the danger to people inherent in Barbara's story?"

Mrs. Cosgrove: "Yes, I do."

Dr. Gold: "Thank you very much." ●

NEW YORK SPECIAL REPORT

The following case histories of optometric failure to recognize and refer medical eye patients were collected by Karl J. Marchenese, M.D. of Rochester. All patients except one were personally interviewed by Dr. Marchenese. Except where indicated, the source of information was the patient. All cases came to the attention of Dr. Marchenese within the past 12 months through his practice as an ophthalmology resident. The patients reported in this paper as incidents of failure to recognize or refer medical eye problems, outnumber appropriate referrals to the clinic by four to one.

● A young college student called a local HMO (prepaid health insurance in which the patients have little choice of physician) with complaints of an irritated red eye. He was seen the same

GOING BLIND

Continued from page 5

Mrs. O: "No."

Dr. T: "Did they ever suggest that you see a medical doctor?"

Mrs. O: "No, never."

Dr. T: "Do you feel that poor people — people that haven't had a lot of education — are at a particular disadvantage since they probably do not understand the difference between an optometrist and a medical eye doctor?"

Mrs. O: "I sure do think so. I was getting blind."

Dr. T: "Do you realize that you would have been totally blind in another couple of months if you had not come down here?"

Mrs. O: "I sure do." ●

EXTENSIVE EYE DAMAGE

Continued from page 4

Mr. Livensparger continued, "I took the drops just like they told me, but my eyes got even worse and I went back to see them on November 14. They told me just what they said before, that I had an eyelid infection that would go away if I kept taking the drops, even though I told them my eyes felt worse, not better. I continued using the medicine they gave me but it didn't help at all and I went back again to see them (the optometrists) on January 10th of this year.

"Again, they examined my eyes. They didn't mention glaucoma or pressure — just looked into my eyes with a light. They told me the medicine I was using wasn't doing the job and gave me something called Vasocidin. I used the new drops for about eight days and my eyes only got worse, so I went back again on the 18th of January. They said just keep using the new stuff and your infection will go away.

"Since I was getting worse all the time and the medicine wasn't helping, I thought I should see somebody else," Mr. Livensparger concluded.

"When I talked to Mr. Livensparger on Feb. 4," Dr. Mallonee said, "he told me, 'I have continuous pain in both of my eyes. I can't stand the light, and keep my eyes closed most of the time.

DANGER AND WASTE

Continued from page 3

found many had gotten the wrong glasses. One man didn't get bifocals and he had used them all of his life. This whole farce left me with little faith in the VA health care system. . . .

"On February 27, 1978, I returned to the VA and asked to see the M.D. I had seen on my last visit. I was told that he had retired, so they sent me to another M.D. This doctor assured me that he was an M.D. and an ophthalmologist, and when I told him of my previous experience, he agreed that optometrists should not treat eye disease, but explained that since he was new with the VA, he couldn't change the rules, and he didn't want to 'make waves.' He told me that he also co-signed prescriptions for the optometrists even though he never sees the patients. This doesn't seem right to me . . ." ●

TREATMENT DELAYED

Writes Iowa Legislature

Vol. 2, No. 2, Jan. 15, 1978

The following excerpts are from a story headlined "Damaged Patient Writes Lawmakers," which carried a letter that an Iowa woman wrote to the entire Iowa Legislature, reminding them that optometrists have no medical training:

"For the last 25 years my family has been going to an optometrist for our eye care needs.

"Some time after the most recent change of lenses, I began experiencing difficulty with my vision. Consequently, I reduced [illegible]

day by an "eye doctor" whom he believed was a physician but was in fact an optometrist. The optometrist diagnosed "iritis" and gave the patient a prescription for two therapeutic eye medications (homatropine and a steroid preparation) which was filled in the HMO pharmacy. The patient reports that the prescription had another physician's signature preprinted on it. The patient was examined only by the optometrist. He was subsequently examined by the optometrist four additional times over a six-month period. The optometric records were obtained and revealed that several therapeutic agents had been prescribed and no mention was made of consultation with or referral to a physician. Ocular examinations and evaluations for systemic disease were inadequate. The optometrist was unsure of the diagnosis, at times referring to "recurrent conjunctivitis" and "episcleritis" as well as iritis. Finally on the last visit the patient was referred to an ophthalmologist.

Comment: The optometrist clearly exceeded the limits of his licensure by attempting to make a medical diagnosis and prescribing therapy. It is illegal for an optometrist to fill in (and for an organization to provide) presigned prescription forms. It is inappropriate for an HMO to use an optometrist to care for patients with acute eye problems.

● A 73-year-old woman with diabetes was followed for 15 years by an optometrist who knew about her disease but referred her for a medical eye evaluation only when cataracts caused a significant deterioration in her vision. The patient had evidence of diabetic retinopathy (blood vessel disease of the back of the eye) which was more difficult to evaluate because of the presence of cataracts.

Comment: All patients with diabetes are at a significant risk of major ocular complications (including total blindness) and should have a medical eye examination at regular intervals. The examination requires special expertise which only the ophthalmologist can provide. Treatment is available for retinopathy at some stages.

because they water when I try to open them. The pain is bad, and I have it all the time.'"

Dr. Mallonee reported that his external examination revealed a very obvious problem. A condition existed whereby the patient's lower lids had turned in, causing the lashes of the lower lids in both eyes to rub against the corneas causing recurrent and chronic corneal abrasions. It was lashes rubbing on the cornea that gave the patient the feeling he had a foreign body in his eyes. He was in so much pain that he kept his eyes closed almost constantly since the abrasions were causing him severe pain.

"I found on further examination that much of the corneal tissue was gone due to the constant irritation," Mallonee said, "I also found early vertical cupping of the optic nerve head — an early sign of glaucoma.

"I recommended immediate surgery on both lower lids to eliminate the severe irritation. This has been done since and the patient is much better at this point in time. I also discontinued the medication prescribed by the optometrists, both of which cause glaucoma in susceptible patients. The eye pressure is now down, verifying that the long use of drugs had contributed to increased pressure. In addition, we performed a complete glaucoma work-up, which was clearly indicated." ●

● A 30-year-old woman was seen six weeks previously at work by an industrial nurse for complaints of a red, irritated eye. She was referred that day to a local HMO where she was seen by an "eye doctor" whom the patient thought was a physician, but was in fact an optometrist. He diagnosed an allergic problem, recommended "Sinutabs," and referred her to an internist in one to two weeks.

Comment: The patient was inappropriately evaluated by an optometrist for an acute eye problem. HMO's should not use optometrists to evaluate patients with acute eye problems without direct physician supervision.

and told him my sight in my right eye was blurred and that something was wrong. After his examination he told me my glasses were correct, the blood vessels were healthy, and further there were no signs of glaucoma or cataracts.

"I still believed that something was wrong in my right eye but believed the doctor must know, so accepted his diagnosis. However, as the difficulty continued and gradually increased, after five months I decided to consult a medical eye specialist. In his preliminary examination he immediately suspected glaucoma which was subsequently verified in both eyes and that the disease had been there for a long time. Also the cataracts are starting. I am informed that a considerable portion of my vision has been lost due to the delay of treatment and cannot be restored, all due to a false sense of security given me by my optometrist.

"My medical doctor tells me that an optometrist is not trained in medicine nor to diagnose eye diseases.

"Because of this lack of training, the optometrist, in my opinion, should be severely penalized when he tries to perform such services which could well end in blindness for his patient.

"I strongly urge you to give this matter your most rigid study and action."

Mrs. Jones later told her ophthalmologist that vision loss was not the only way she suffered due to the optometrist's bold attempts to practice medicine.

"I fell twice," she said, "broke my right arm near the shoulder and the second time my left wrist. I still can't see a step."

Her physician, Leo J. Plummer, M.D., reports that her glaucoma is currently under control, on a program of medications. The Des Moines ophthalmologist notes that dense and extensive visual defects in both eyes are permanent, and that it is necessary for her to learn to walk with her head down to avoid tripping. Dr. Plummer has noted that the drugs Iowa optometrists seek to use are not necessary for the trained physician to suspect, or in most cases, diagnose glaucoma. ●

the Medical Center / SCHOOL OF OPTOMETRY

February 27, 1979

Representative Thelma Buchholdt
Pouch V
Mail Stop Number 3100
Juneau, Alaska 99811

Dear Representative Buchholdt:

It is my understanding that the Legislature of the State of Alaska is considering legislation (HB 79, SB 75), sponsored by the Alaska Optometric Association, to authorize optometrists to use drugs for diagnostic purposes when qualified by the State Board of Optometry. A graduate of this School of Optometry, Dr. Aharon Sternberg of Anchorage, has written me about this matter and requested that I write you regarding the inaccurate statements contained in the letter from Dr. Sam A. McConkey to you on February 14, 1979.

First, I completely and wholeheartedly support the use of drugs for diagnostic purposes by optometrists. I believe this is in the public interest and an essential tool for the optometrist in the discharge of his moral, ethical and legal responsibilities for the early detection of ocular disease and ocular manifestations of systemic disease. This school has regularly provided, as part of its required curriculum, courses in general and ocular pharmacology for all optometry students from its beginning in 1969, as well as courses in general, systemic and ocular pathology. These courses (pharmacology and pathology) are presented by faculty of the Joint Basic Science Departments of the Medical Center, the School of Medicine and the School of Optometry include lecture, laboratory and clinical instruction.

I am enclosing a copy of our Bulletin for the year in which Dr. Sternberg graduated which is essentially the same as the previous four years. A casual look at the curriculum (pages 41-47, summarized on pages 48-49) and a look at the faculty, (pages 63-66) clearly indicates that Dr. McConkey is in error regarding the education of optometrists. Graduates of this institution have an extensive background in pharmacology and pathology taught by qualified faculty (O.D., M.D., Ph.D.).

This is not an Alaskan problem since optometrists in twenty-two states may now use drugs for diagnostic purposes and other states are seeking the privilege based on their qualifications and the needs of the public. I am sorry that the emotional response of some ophthalmologists leads them to circulating inaccurate information which tends to obscure the public interest.

AN AFFIRMATIVE ACTION / EQUAL OPPORTUNITY EMPLOYER

I hope this information will be of assistance to you in your deliberations on this matter.

Most sincerely,

Henry B. Peters
Dean

Enclosure

PRACTICE LIMITED TO THE EYE

February 27, 1979

Honorable Thelma Buchholdt
House of Representative
Pouch V
Juneau, Alaska 99811

Dear Representative Buchholdt:

Pending legislation in the form of House Bill No. 79 and Senate Bill No. 75 represents an attempt on the part of optometrists to gain, through legislation, the right to use drugs. This is a right heretofore granted only on the basis of educational qualifications for very sound reasons. Optometry is a measuring science and has no medical background. An optometrist is not clinically trained. They are not qualified by education to diagnose or treat disease.

However, should this legislation pass, the public will be deceived into believing that they are receiving medical evaluation by optometrists, a definite hazard to public safety. Numerous cases substantiate this. The latest case occurred in Alaska (Steele v. United States of America) and is explained by an enclosure.

I hope that you will oppose this legislation which would downgrade the quality of medical care for the people of Alaska by allowing intrusion into the field of medicine by those without medical training or expertise. It is a dangerous precedent. Absolutely no shortage of medical profession talent exists anywhere in Alaska to justify such a compromise of professional standards of care and treatment. The cost of eye examination by optometrists in many cases is higher than that of a physician (ophthalmologist).

I would be happy to discuss with you the particular risks inherent in the use of the various drugs which are indicated in this legislation, since I will be responsible for treating the various drug complications, should they occur in this area.

Also find enclosed the reports of vetoes of similar bills by the governors of Virginia and Ohio. These are well thought out conclusions by men who are only partial to public well-being. Your serious consideration and concern is appreciated.

Sincerely,

Robert N. Page, Jr., M.D.

RHODES OF OHIO: "WE CAN TAKE NO RISKS"

Ohio Governor Vetoes Optometric Drug Law

COLUMBUS, OHIO — On December 15, 1978, Governor James A. Rhodes of Ohio vetoed amended substitute S.B. 163, which would have permitted optometrists in Ohio to use diagnostic drugs. This marks the second time this year that a state governor has rejected optometric drug legislation in order to protect the citizens of his state.

The first veto came in Virginia when Governor John N. Dalton vetoed similar legislation, noting that, "There is reason for grave concern for patients' welfare where optometrists practice in isolation from medical backup."

Governor Rhodes echoed Governor Dalton's concern when he said in his veto message, "Health care is an area in which we can take no risks because any mistakes could bring tragic and irreversible results. We must be committed to our citizens to provide practitioners that are highly skilled individuals and who will at the same time provide the best health care at the lowest cost.

"Optometrists have been doing an excellent job in working with the medical profession to bring quality eye care to Ohio citizens. The tools that the optometrists are presently using are not dangerous and are effective in screening for eye disease."

He went on to point out that S.B. 163 "would allow optometrists to use drugs in order to make a full diagnosis of the medical condition of the eye. If the individuals involved were properly trained," the Governor said, "this procedure would be in the best interest of Ohio's citizens. However, without proper training, the bill would allow unwarranted risks without corresponding benefits. The drugs involved are dangerous and have the potential of causing a great deal of pain including blindness. The adverse reactions associated with these drugs are not common, but they do occur and emergency treatment must be administered in those instances."

Noting that he vetoed the bill despite the fact that it included a provision that would require optometrists to take 180 hours of mandatory training, Gov. Rhodes said, "This amounts to little more than a month of isolated training in a clinical use of the drugs involved."

Concluding his commentary, the Governor pointed out that the issue of using drugs was one that should not be decided by the legislature.

The veto in Ohio brings to 15 the number of states that have rejected optometric drug laws this year. In only two states, Kentucky and Wisconsin, were such laws passed in 1978.

WHY "THE PEN?"

The files of state and national medical associations, all learned societies concerned with the public health, overflow with a preponderance of evidence that the quality of health care is threatened by the precedent of Government encouraging the lowering of professional standards by allowing medical functions to practitioners with no medical education. Medicine accepts the responsibility to respond to epidemics. Death and trauma are resulting, and Doctors of Medicine can do no less than warn potential victims through the continuous presentation of this evidence. The public press of America, given the facts, is supporting this cause, and concerned physicians throughout the nation are pooling their knowledge and resources to package and present the truth through the PHYSICIANS EDUCATION NETWORK.

DR. ALLEN'S

DIAGNOSES

James H. Allen, M.D.; founding president, New Orleans Acad.my of Ophthalmology; professor of ophthalmology, Univ. of Iowa and Tulane Univ. for 30 years, Senior Surgeon, Tulane Univ.; awarded the prized Gold Medal of the Ophthalmology Section of AMA, 1976.

1979 — All Eyes On West Virginia

Prohibition — often referred to as "the noble experiment" — was repealed by government because it failed.

In the eyes of those West Virginia lawmakers who, in 1976, truly believed that to permit the use of drugs to optometrists would bring eye health care to more West Virginians, the optometric drug use law was a "noble experiment."

In the single remaining eye of Mrs. Dent, whose tragic deposition appears on page 3, the "noble experiment" of 1976 has failed. She is one of many human guinea pigs who have suffered and is among a vanguard of victims who will suffer as optometrists convince themselves that they are capable of diagnosing disease and providing treatment despite the total absence of medical education.

In the eyes of medical experts throughout the nation, the 1976 West Virginia optometric drug use law is a disaster. It is inconceivable that such a law can remain on the books when available evidence in 1978 has prompted lawmakers in 13 states, last year alone, to fail to pass similar, less dangerous optometric diagnostic drug use proposals.

In two more states, these proposals were lobbied through, only to be vetoed by conscientious governors. In the eyes of Governor James A. Rhodes of Ohio (see page 1), to allow Ohio optometrists the use of diagnostic agents "would allow unwarranted risk without corresponding benefits."

In the eyes of Governor John N. Dalton of Virginia, the eye health of Old Dominion residents was threatened by H.B. 205, a diagnostic drug use proposal less ominous than the extant West Virginia law. In his veto message of April 11, 1978, Governor Dalton said: "There is concern of legislative appointment of 'medical' responsibility and authority to non-medical personnel."

In the eyes of optometric leader Dean Henry B. Peters, O.D., of the School of Optometry at the University of Alabama in Birmingham, the reckless 1976 West Virginia law was the result of a "display of legislative machismo" on the part of overambitious optometrists. "The practice of medicine is an inappropriate goal for optometry" the Dean wrote, commenting on passage of the West Virginia law.

Dean Peters further stated, "Not one of our schools is prepared by either faculty resources or availability of clinical experiences to accept this challenge (treatment of eye disease at this time . . .); no such resources exist for 1,000 graduating optometrists this year nor are they in prospect."

In 1976, West Virginia lawmakers were told that modern optometric education made restrictions obsolete. In 1978, the six non-ophthalmic physicians who serve as the medical Advisory Board to the ultra-modern University of Alabama at Birmingham, where optometric education has high standards, took a close look at their curriculum. In their eyes, their own graduates, receiving the O.D. degree, are not qualified to treat disease or use drugs. Its October 18, 1978 resolution (confirming Dean Peters' conclusion about the inadequacy of optometric education) states in part:

"This education in no way prepares these graduates with the knowledge to prescribe or use drugs to treat eye disease. This training should not be viewed as a medical credential."

In 1976, optometrists argued that the new law would make eye care more available to rural residents. Rural residents know better than to take a horse to a blacksmith for colic, but unfortunately are unaware of the total absence of medical education in optometry.

In 1976, optometry promoted the conceptual myth of "primary care." We doubt that any thinking lawmaker would want his eye examined for disease by the least qualified. To place the optometrist in a position where he may overlook a fatal tumor is unfair to him as well as his patient, and to allow him to experiment with dangerous drugs will inevitably produce more unfortunate cases.

Mrs. Dent seeks repeal of the 1976 law. A growing Citizen's Committee seeks repeal. Medicine acknowledges its failure to present a coherent case in 1976, when confusion obfuscated the inherent danger to the public.

This is 1979. Since 1976, the motives of optometry to expand into medicine at the expense of the public health, by exploiting state legislatures have become apparent. Scores of legislative sessions have rejected these efforts, and West Virginia has the most dangerous law of all.

A mass of new incontrovertible evidence attesting to the danger of the 1976 law is ready for presentation. In the eyes of the presentors there is confidence that the 1979 West Virginia lawmakers will open their eyes and ears while taking a fresh look at eye health care.

M.D.s make mistakes. So do elected officials. To acknowledge them is statesmanlike.

The eyes of the nation are on West Virginia.

Misinformation Provided Magazine Readers

American housewives are warned that there is a dangerous paragraph of misinformation which appeared recently in national magazines. The advertisement promoted ignorance regarding the possibility of fatal malignancy in the eyes of children.

The advertisement, sponsored by the American Optometric Association, stated:

"On the other hand, if a child who is 18 months or younger momentarily turns one eye in or out, there is probably no cause for worry. At this stage of growth your child lacks what is referred to as internal organization. He just can't seem to make anything . . . hands, feet, legs . . . work together.

"In any of these cases, your family optometrist can diagnose problems or reassure you that your child is normal."

No cause to worry?

James H. Allen, M.D., former senior surgeon at Tulane University, worries about the complacency which may result from this advertisement reassurance.

"This ad is irresponsible," he said.

Dr. Allen advises, "A child begins to coordinate eye movements in the first six months of life but may occasionally turn one eye in or out up to 12 months of age. However, if there is a constant turning in or out of one eye even before one year of age or if there is intermittent turning in or out of one eye after 9 months to one year of age, the child should have a medical eye examination.

"There are several things that can interfere with the development of coordinated eye movements, the most dangerous thing being a malignant tumor of the retina of the eye — which must be diagnosed early if the child's life is to be saved.

"Other causes, although not likely to be fatal, could destroy much or all vision in one eye if not diagnosed and treated properly as early as possible.

"An optometrist is not trained adequately to diagnose diseases of the eye or disease affecting the body as a whole. Therefore, he cannot reassure parents that their child is normal. There are numerous recorded examples in which an optometrist failed to recognize or diagnose diseases or tumors of the eye with the result that vision was lost or the life of the patient lost." ●

OHIO GOVERNOR VETOES

Continued from page 1

Commenting on Governor Rhodes' veto message, Lawrence L. Young, M.D., President, Ohio Ophthalmological Society said, "All of medicine in Ohio is impressed with the thoroughness of the Governor's investigation which led to the veto of S.B. 163. He has correctly assessed the danger to the public and his message reflects his deep concern for the eye health of the citizens of our state."

To date, four state governors have carefully reviewed the pros and cons of optometric drug legislation and concluded that passage of such a law would endanger the health of their citizens. In each instance these chief executives have exercised the power of their veto to protect their constituents. ●

An Ophthalmologist is an

M.D.

an optometrist is not.

AN OPEN LETTER SEEKS REPEAL

W. Va. Eye Victim Deplores Optometric Care

A West Virginia supermarket cashier, who is blind in her left eye and who has a serious problem with her right eye, has made a public appeal through an open letter for repeal of West Virginia's optometric drug law.

In a signed deposition, Mrs. Laura Dent of South Charleston, WV, states, "If my optometrist had been qualified to diagnose and treat diseases of the eye, maybe this disease would have been caught in time and I could read with my left eye. The people who passed this law (West Virginia law permits optometrists to use drugs for diagnosis and treatment), should stop and think what they have done; apparently some of them have never had serious eye problems or they would have known better than to do such a thing."

Saying, "I am firmly against this law allowing optometrists to prescribe medications and treat diseases of the eye, because they are not qualified," Mrs. Dent emphasized she was not offering an opinion, but was speaking from experience. Mrs. Dent related that in May of 1975 she went to see an optometrist for a general eye examination. At that time, she points out, the optometrist prescribed new glasses and advised that there were no signs of glaucoma or any other diseases of the eye. Within two weeks, Mrs. Dent said, "I was seeing distorted. I phoned my optometrist and asked what could be the problem. I was told to come in and be checked. I went in and was told it was only astigmatism, to wear my glasses all the time, and the problem would be corrected.

"It did not improve, I continued to get worse. I phoned my optometrist back in three weeks and asked just how long it would take to improve, and also asked if my family doctor could help. I was told maybe so. I will phone him; go ahead and see him.

"I went straight to my family doctor; the optometrist did not phone him. My family doctor took one look at my eye and panicked. He said there was this tremendous deterioration in both eyes, he did not know what it was, but there definitely was a problem. He sent me straight to Dr. Rashid's office. Doctors Rashid and Toma (both ophthalmologists) checked my eyes and told me I had histoplasmosis (a disease caused by a parasitic fungus) and said it was presently active in my left eye. Since I had had numerous attacks in both eyes in the past, it was likely I had the disease all my life."

Mrs. Dent further relates that after six months of treatment, the condition did not improve and in September the laser was used to arrest the disease. She says, "It stopped the disease, but it did not save my vision. *Medical editor's footnote: Histoplasmosis is a chronic disease characterized by irregular active and inactive phases. Even during the inactive phases the lesions are easily seen. In the inactive phases, treatment is neither effective nor necessary. In the active phases, treatment is available and frequently helpful to retard or eliminate visual loss. Thus, the patient should be observed by a physician with an understanding of the disease process in order to minimize loss of visual function.* I have no central vision in my left eye; I have peripheral vision but I cannot read; I cannot watch TV or do any close work at all with my left eye." In June of 1978 Mrs. Dent suffered a repeat attack in her right eye. This time the laser was used and Mrs. Dent advises she "is in pretty good shape except for the fact that I have a small blind spot."

Noting that the diagnosis made by Doctors Rashid and Toma was confirmed by Dr. Finklestein at the Wilmer Eye Institute in Baltimore, Mrs. Dent says, "I have been told that there is no hope for my left eye and it could happen again at any time in the right eye."

Calling on the legislature to take action now, Mrs. Dent writes, "I wish you would reconsider and repeal this law because a lot of innocent people are going to suffer unknowingly and maybe even go blind because they are trusting an unqualified optometrist." ●

FOUNDER SALUTED BY AMA NEWS — PART III

Ochsner: "The Harder I Work, The Luckier I Get!"

The accomplishments of Alton Ochsner, M.D., PEN's International Advisory Board Chairman, are legend in the annals of American medicine. Terming PEN, "The most potent communications effort I have ever observed in medicine," Dr. Ochsner has said, "Ophthalmology — medicine's protectors of one of God's greatest gifts — eyesight — finds itself in the trenches, doing grim battle against a potential epidemic of ineptitude foisted on the American public by some legislators who have heard only the exaggerations and half truths of the optometric side of a non-argument."

Free-lance author Nancy Vance Hoffman, in an article titled "Alton Ochsner: 82 and Still Going Strong," which appeared in the AMA Journal on August 25, 1978, Vol. 240, No. 8, has captured the essence of this man's greatness. PEN wishes to express its appreciation to Ms. Hoffman and to the JAMA for permission granted to present this material in a series of articles.

"Alton Ochsner:
82 and Still Going Strong," Conclusion:

Genial, optimistic, Alton Ochsner says that if he had his life to live over again, he would do nothing differently. Nevertheless, what was his greatest disappointment? Huey Long's dictatorship over Charity Hospital, Tulane's only teaching hospital, in Ochsner's early days in New Orleans. A boy wonder, at 31 appointed as Tulane's professor of surgery, Ochsner came south from Wisconsin, where he had been associate professor. "My family didn't arrive for six months, and I literally lived in the hospital. I slaved — and I loved it. I gave it

ALTON OCHSNER, M.D.
PEN'S International Advisory Board Chairman

everything I had, developed a good teaching program as I had promised Dean Bass I would. Everything was going along fine." He pauses, shaking his head at the irony of Huey Long's heyday, and I didn't include his desire for revenge on me for refusing a doctor's desire for revenge on me for refusing a doctor's (the doctor) to the hospital staff. to appoint him (the doctor) to the hospital staff. He was incompetent." He shrugs. "And later, while I made rounds, a letter was stolen from the pocket of my coat while it was hanging in the doctor's room of the hospital."

The letter was from the Medical College of Virginia inviting Ochsner to be professor of surgery there. As chairman ex officio of Charity Hospital's board and harboring no love for Ochsner's probity, Huey Long presented the purloined letter as evidence of Ochsner's "disloyalty" to the hospital. "Then and there, that Saturday morning, I was kicked out of the hospital. For two years, I couldn't go near our only teaching hospital. I decided that I couldn't stay in Louisiana under those circumstances, that I would take a job at the University of Illinois. But C. Jeff Miller, Tulane's professor of gynecology and my mentor, dissuaded me."

How? "Dr. Miller said, 'You can't leave under fire. You've *got* to stick it out.' 'But, Dr. Jeff,' I protested, 'Look what's happened to me. I've given this place everything I have and see how they've responded.' Dr. Jeff was adamant. He wouldn't let me quit. Because of him, I stayed." The big Ochsner smile creases his remarkably unlined face: "Sticking it out was one of the best things that ever happened to me."

Despite a life he describes as blessed by "Presbyterian luck" (defined by Ochsner as, "If you do the right thing, no matter what happens, has been no stranger to Alton Ochsner. His first wife's long terminal illness and death was a devastating blow. In the early 1950s, he obtained some of the first Cutter polio vaccine, which he

Continued on page 4

OCHSNER *Continued from page 3*

administered to his grandchildren, as well as to many Ochsner pediatric patients. His daughter's eldest son contracted polio — possibly from the vaccine — and died. The intern who cared for the boy also got polio and both his legs remain paralyzed.

In those days, medicine had a few sharp peaks and lots of deep valleys. There were a few well-trained people, while the rest had almost no training at all. Today, medicine has progressed so that almost everyone is well-trained. By the late 1930s, New Orleans had lost its reputation as a major medical center.

"I saw that the city must do better medicine. And the only way to do this was through group practice. I had two ambitions: to build a medical referral center in the deep South that would give quality care reasonably, and to develop an institution that showed care and consideration — not only to the patient, but to the family." The Ochsner hospital maintains a Family Room, adjacent to the operating rooms and intensive care units, where families receive progress reports every half hour while a patient is in surgery and where coffee and doughnuts are dispensed.

"I went to five Tulane professors," Ochsner remembers. "Professors of otolaryngology, gynecology, orthopedics, and medicine. The surgeons were interested, but the medical man was not. This was in 1939, the end of the Depression. We had no money, only an idea. The banks wanted equity, not an idea. It looked as though we were going to have to give up." Alton Ochsner, however, doesn't give up easily; he persuaded Rudolph Hecht and the Hibernia Bank to finance that first Ochsner Clinic in an old building on Prytania Street.

Not every doctor was convinced that Ochsner's idea was a good one. On Good Friday in 1941, small leather pouches filled with thirty dimes were delivered to the five Ochsner Clinic founders' homes. Inside each pouch was an anonymous typewritten note: "To the Judases of the Orleans Medical Society." The local doctors felt threatened and resentful. Ochsner argues: "We have helped the local physicians, raised the level of New Orleans medicine so that it is much higher than when we founded this place." ●

THE PEN FORUM

Editors' Note: Optometry's burning desire to invade the field of medicine was blatantly displayed when the Board of Regents of New York State, a non-medical, politically-appointed body responsible for directing the policy of higher education in New York, was persuaded to endorse optometric drug legislation.

It is unthinkable that political appointees, whose duties and responsibilities are not directly related to the issue, and who have never been informed by medicine as to the ramifications of the issue, should take such a position.

It would appear that the 15-member Board of Regents has been manipulated by optometry into taking a public political stance which will not only endanger the eye health of every New Yorker, but one which could cause that august body considerable, unnecessary embarrassment. Alden Haffner, O.D., an optometrist, is the State University of New York Vice Chancellor for Health Sciences.

Recognizing that legislators across the nation might well view this interference as an optometric credential, unless challenged, PEN has asked ophthalmologists nation-wide to express their views to all involved. Following are but a few excerpts from the flood of letters sent to the New York State Regents, the Chancellor and the State Commissioner of Education:

"The recent decision by the Board of Regents to support the use of drugs by optometrists ill-serves the public welfare as it reflects a lack of objectivity concerning this very important issue. The Board of Regents should be in the forefront of the battle to prevent non-medical measuring practitioners such as optometrists from becoming quasi-physicians by legislative fiat. Our educational system has numerous checks and balances to insure first that only the most highly qualified applicants are admitted to medical school; thereafter a medical school curriculum and periodic examinations standardized on a national level further insures scholastic fitness. The proper application of textbook knowledge to actual clinical pathology continues for the ophthalmologist throughout one year of internship and three years of specialized residency training in the diseases and surgery of the eye. The back door approach to medical school — via legislative fiat — should be a concept flatly rejected by the Board of Regents. The medical education as I outlined above should remain as the prerequisite to the use of pharmacological agents in the eye — the taking of pharmacology courses in or out of optometry school is in no way a substitute. Any optometrist who desires to assume medical functions should apply to medical school and obtain the proper training."

Seymour R. Rosen, M.D.
Sunrise, Florida

"The most important objection to optometric use of drugs is that authorization to use drugs implies the ability to judge the information obtained from such use and use it to make a medical diagnosis. Just as the possession of a stethoscope does not make one a cardiologist, the use of drugs to dilate the pupil or numb the eye will not make the optometrist equivalent to a physician. Patients will, however, be misled into believing that the optometrist is in fact qualified to make medical judgments and serious errors in diagnosis with accompanying missed opportunities to save eyes and even lives will occur.

"One has only to observe the level of optometric care throughout the State to realize the crass commercialism of many of their establishments. A little over a year ago the New York Daily News published a series of articles highly critical of the quality of eye examinations and glasses provided by many optometrists. How can the Board of Regents approve a group, which is not as yet meeting the standards for which they are licensed, to take on responsibilities for which they are not qualified?"

J. S. Nauheim, M.D.
Merrick, New York

"The recent decision by the Board of Regents of the State of New York to support optometric drug use legislation is ill-advised and myopic. In taking this decision, the Regents are permitting a group (the optometrists) to legislate medical privileges rather than obtain the medical privileges by education as the physician has."

John B. Franklin, M.D.
Hartford, Connecticut

"It seems obvious that we cannot, at this time, compromise these standards. Your decision to support optometric drug laws is just such a compromise. It is the same as suggesting that chiropractors are as well qualified to practice medicine as are physicians. Even a school such as the University of Alabama in Birmingham, has recently defined the practice of optometry as a non-medical discipline. A resolution by the Physicians Advisory Board at the University of Alabama, states, 'This education in no way prepares these graduates with the knowledge to prescribe or use drugs to treat eye diseases'. I urge you, therefore, to reverse this decision and to serve the citizens of New York State by so doing."

William C. Frayer, M.D.
Philadelphia, Pennsylvania

"I am writing to protest the action of the Board of Regents of New York State endorsing optometric drug use. It is unthinkable that highly educated people could advocate the use of medications by untrained practitioners. Furthermore, the training of optometrists in diagnosing medical eye diseases is terribly inadequate so that misdiagnosis and delayed recognition of disease is a greater danger than the complications of the pharmaceutical agents. . . . Please reconsider this issue."

Thomas S. Harbin, Jr., M.D.
Atlanta, Georgia

"The support given to the optometric drug bill must have been made without due consideration for the possible effects the legislation would have.

"Last year this legislation was voted down in fourteen other states whose legislators were given factual information concerning this issue. Most of the states which had passed the bill previously are now considering recall of the bill after documenting the serious harm done by optometrists using medication during their eye exams. It is unfortunate that in the states that passed the law the public had to suffer because of the inappropriate action of the legislators."

Daniel W. Pieroni, M.D.
Sheffield, Alabama

UNITED STATES PHYSICIANS EDUCATION NETWORK

Statement of Purpose

PEN exists solely to utilize its resources and combined influence to present, promote, and promulgate, through communication outward, and communication inward, these simple truths:

- The American people must be protected by placing and keeping health care in the hands of experts, whose abilities are established by having reached a standard level of medical education.
- The logical minimum level of education necessary for leadership to protect the public in shaping the optimum health care delivery quality standards in the United States is the degree of Doctor of Medicine or Osteopathy, earned at a school of medicine or osteopathy — at an accredited institution of higher learning.
- Government at every level should cooperate with medicine in establishing these health safety standards.

Membership in PEN is available to any law-abiding citizen who subscribes to these truths, and desires to be informed, as well as to participate in informing the public at large.

VIRGINIA VETO MESSAGE

Governor John N. Dalton: "There Is Concern"

Virginia Gov. John N. Dalton's courageous action in failing to sign House Bill 205 into law deserves high praise from both medicine and the citizens of the Commonwealth. Gov. Dalton has reaffirmed to his constituents and to the people of this nation that only through "education, not legislation," can a person become competent enough to use drugs on the human body.

The following is Gov. Dalton's comment after vetoing the bill:

"The bill defines what constitutes the practice of optometry; and defines requirements of persons who desire to be certified in the use of diagnostic pharmaceutical agents that they be examined in general and ocular pharmacology and in the use of approved topically applied diagnostic pharmaceutical agents. Although paramedics, physician assistants, and nurse practitioners may administer drugs in specific instances, this is done (a) under the supervision of a physician, and/or (b) under specifically developed protocols regulating such procedures. Given the rare, but devastating effects of adverse reaction following administration of diagnostic agents, there is reason for grave concern for patients' welfare where optometrists practice in isolation from medical backup. There is concern over public misunderstanding that complete medical care has been effected after having an optometric examination. Finally, *there is concern of legislative appointment of 'medical' responsibility and authority to non-medical personnel* prior to this matter being carefully studied as to its impact in the Commonwealth."

Honorable John N. Dalton . . .

63rd Governor of Virginia

Gov. John N. Dalton, the 63rd governor of Virginia, took office on Jan. 14, 1978. A graduate of the College of William and Mary, he received his J. D. degree from the Law School of the University of Virginia in 1957.

Following graduation from law school, Gov. Dalton practiced law in Radford, Va. and began his political career in 1965 when he was elected to the Va. House of Delegates. After being re-elected to this post three times, he ran successfully for the State Senate in 1972. In 1973, he was elected lieutenent governor.

A 33rd degree Mason and an Eagle Scout, Gov. Dalton is a past-president of the Moneton District of Boy Scouts and a member of the Blue Ridge Council of Boy Scouts.

Eight States Reject Optometric Drug Law Petitions In 1978

Gov. Dalton's veto marks the seventh 1978 rejection of optometry's attempts to utilize legislative "clout" to invade medicine at the expense of the public health. Other states refusing optometrists the right to use drugs this year are Georgia, Mississippi, Missouri, South Dakota, Maryland and Oklahoma. At presstime, an optometric drug bill in Nebraska was reported to have "died on the calendar," bringing the total to eight.

So far this year, only Wisconsin and Kentucky patients face eye damage as a consequence of new optometric drug laws. In Kentucky, the law was passed and signed despite charges of impropriety, plus a call for a veto by the *Louisville Times.*

Unfortunately, the public health remains imperiled in several states: Massachusetts, New York, Ohio, South Carolina, Alaska, Hawaii, Iowa, and Arizona, where "the jury is still out."

WHY "THE PEN?"

The files of state and national medical associations, all learned societies concerned with the public health, overflow with a preponderance of evidence that the quality of health care is threatened by the precedent of Government encouraging the lowering of professional standards by allowing medical functions to practitioners with no medical education. Medicine accepts the responsibility to respond to epidemics. Death and trauma are resulting, and Doctors of Medicine can do no less than warn potential victims through the continuous presentation of this evidence. The public press of America, given the facts, is supporting this cause, and concerned physicians throughout the nation are pooling their knowledge and resources to package and present the truth through the PHYSICIANS EDUCATION NETWORK.

DR. ALLEN'S

DIAGNOSES

James H. Allen, M.D.: founding president, New Orleans Academy of Ophthalmology; professor of ophthalmology, Univ. of Iowa and Tulane Univ. for 30 years; Senior Surgeon, Tulane Univ.; awarded the prized Gold Medal of the Ophthalmology Section of AMA, 1976.

Governor Dalton — We Know That Any Veto Takes Both Courage And Conviction!

Being the captain of a ship is a lonely job — and in Virginia, like all states, the ultimate decision rests with the Governor.

During the past few weeks, Gov. John N. Dalton has faced the challenge of difficult decision-making as to whether all bills passed by the 1978 Virginia Legislature should be signed into law.

The intensity of the public outcry in Virginia against non-medical optometrists being allowed to use dangerous drugs and eye drops in the practice of their profession must have made the decision as to whether to sign House Bill 205 most difficult.

In protecting the public of Virginia, Gov. Dalton did far more than simply refuse to sign the bill. He presented his own conclusions (see page one) utilizing new phraseology which convinces us that the Governor is dedicated to the welfare of all Virginians. Speaking out in support of his veto, Gov. Dalton revealed that he reached the same conclusion as 46 major metropolitan newspaper editors who studied what is actually a simple issue. He came to the conclusion that, "There is concern of legislative appointment of 'medical' responsibility and authority to non-medical personnel prior to this matter being carefully studied as to its impact on the Commonwealth."

The Governor's conclusion is simple logic. Medicine in Virginia, in the early days of the 1978 legislature, did fail to meet the challenge and provide adequate information for careful study. When it was apparent, however, that many legislators actually believed that the petition of optometry to use drugs and eye drops would in some way be of benefit, medicine rallied to the challenge.

Prior to medicine's challenge, optometry found conscientious, but uninformed (on this issue) legislators easy prey for half truths, exaggerations, and even prevarications.

When medicine rallied its forces, however, an interested delegate commented that "ophthalmologists suddenly came out of the woodwork." Indeed they did, and medicine is so proud of them.

Ordinarily, ophthalmologists stay behind the woodwork in order to concentrate on providing medical care to a steady stream of people with serious eye problems who need and deserve full attention, treatment and cure.

The political scene is unfamiliar to medical people, and it took M.D.s some time to realize that the woodwork must give way when the public health is threatened by the body politic and that they must respond as they would to an epidemic.

By the time the issue reached the Senate floor, it was obvious that medical truths had changed the minds of many of the legislators.

The Governor is right — the measure deserves more study. Make no mistake. Medicine in Virginia welcomes further study, and so does PEN. The Virginia assembly was generous in allotting time to advocates of "both sides" and so was the Governor.

While it is difficult for us in medicine to acknowledge that there are "two sides" to this issue, we know that a preponderance of evidence is on our side and we intend and welcome the opportunity to present it on behalf of the people anywhere in the United States.

Finally, if Gov. Dalton had rendered an opposite verdict, we would have concluded that he, too, ignored the facts so obvious to the press of America, and REPEAL bumper strips would have been on the way to Virginia. The people of the Old Dominion deserve no less than insistence on high quality health care, and both medicine and the Governor have demonstrated high resolve to preserve just that!

Massachusetts Wins Committee Victory

On Tuesday, March 28, 1978, the Massachusetts Senate by voice vote, accepted the recommendation of the Joint Health Committee that the optometric drug bill (Senate S 402) **"ought not to pass."**

Medicine throughout Massachusetts is saluting the Senators for their caution and awareness of the necessity of protecting the public health.

A Health Care Committee report is on the House calendar for debate. The bill, having been filed in both houses, requires that each act independently on the Health Care Committee report.

No action in the House has been reported.

BULLETIN AT PRESSTIME

An optometric drug bill in Nebraska "died on the calendar," according to PEN Advisory Board member John Ramsell, M.D. of Omaha. Nebraska becomes the eighth state to protect patients from this threat this year.

UNITED STATES PHYSICIANS EDUCATION NETWORK

Statement of Purpose

PEN exists solely to utilize its resources and combined influence to present, promote, and promulgate, through communication outward, and communication inward, these simple truths:

- The American people must be protected by placing and keeping health care in the hands of experts, whose abilities are established by having reached a standard level of medical education.
- The logical minimum level of education necessary for leadership to protect the public in shaping the optimum health care delivery quality standards in the United States is the degree of Doctor of Medicine or Osteopathy, earned at a school of medicine or osteopathy — at an accredited institution of higher learning.
- Government at every level should cooperate with medicine in establishing these health safety standards.

Membership in PEN is available to any law-abiding citizen who subscribes to these truths, and desires to be informed, as well as to participate in informing the public at large.

THE PEN is a public newspaper, international in scope. Its readers include people from every walk of life. THE PEN is freestanding and independent of any national or state association, with the exception of its sponsor, Physicians Education Network, Inc. PEN, Inc. is a Florida non-profit corporation. Submissions to this newspaper are welcome and are published at the discretion of the editors. THE PEN does not accept paid advertising or paid subscriptions.

WOULD YOU LIKE TO RECEIVE THE PEN?

THE PEN, to be published 24 times annually, is an international publication — unique in that subscriptions cannot be purchased. Non-medical persons may petition THE PEN for a complimentary subscription. Just tell us who you are and why you are interested. Medical doctors can become subscribers by joining PEN as a dues-paying member (see application elsewhere in this issue). Elected officials — state or national — and executives of health care agencies can become subscribers upon request.

Industry Co-sponsors Portland Eye Exhibit

While medicine and ophthalmology concentrate on resisting the invasion of medicine at the expense of the public health, there are many painstaking efforts to provide education to encourage patients to protect themselves.

One such effort is a major new exhibit, the Sealy Ophthalmology exhibit, which opened Saturday, March 18, at the Oregon Museum of Science and Industry (OMSI), and promises to be a major tourist attraction this summer.

Funded by the Sealy Mattress Co., and enthusiastically supported by its president, Lloyd Rosenthal, the $30,000 display was co-sponsored by the Oregon Academy of Ophthalmology, which will be responsible for its annual maintenance costs. Under the leadership of OMSI's Exhibits Director Shabtay Levy more than a year of planning and construction has gone into the exciting display.

The focal point of the exhibit is a 3 ft. in diameter, stylized anatomical model of the human eye. The model demonstrates the anatomy and functions of the human eye, and also demonstrates some pathological disorders, such as cataract, glaucoma, retinal detachment and diabetes. The viewer can actually see how these diseases affect human vision.

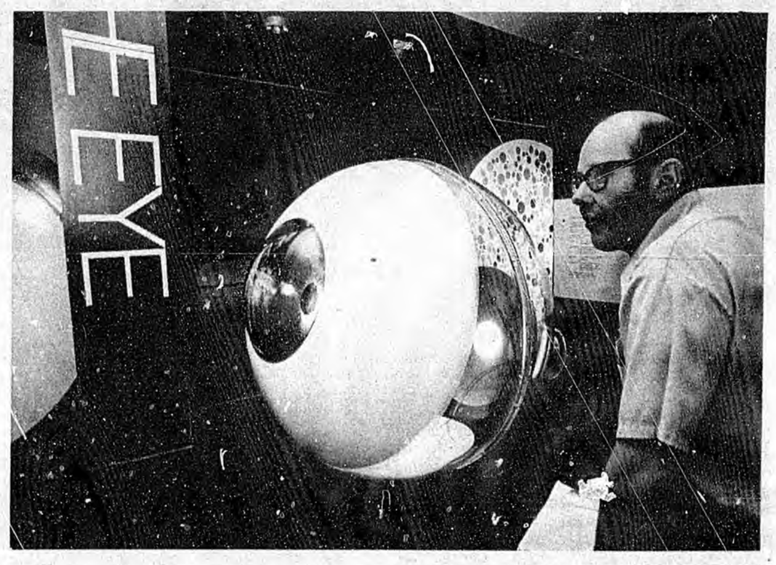
By pushing buttons, the viewer is able to activate functional parts of the exhibit to show how the iris changes its size related to changing levels of light. Supporting exhibits include visual acuity, peripheral vision, color vision, depth perception and even one which shows the viewer the pupil of his own eye dilating and contracting as light values change.

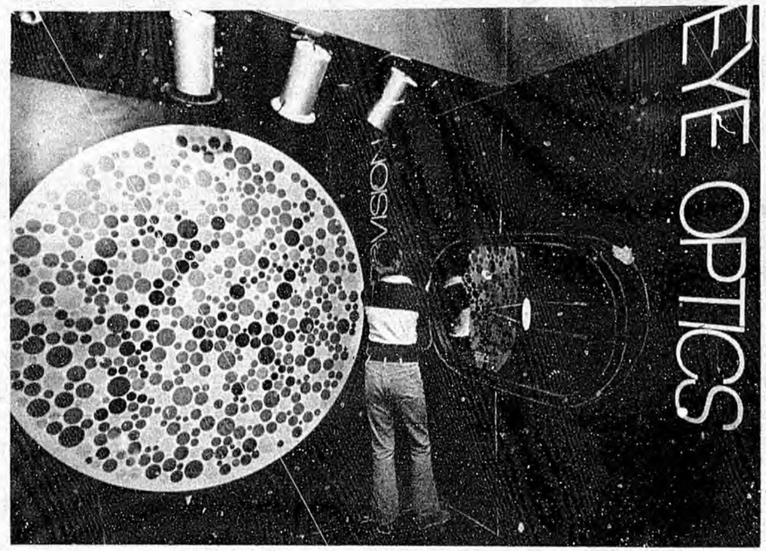
Under Mr. Levy's direction, and in cooperation with expert ophthalmologists, the entire concept, design and construction of the exhibit was completed by the OMSI Exhibits staff.

The Oregon Academy has prepared educational pamphlets complementary to the exhibit which cover various phases of eye care, including the "major difference" between ophthalmologists and optometrists, and advice on seeking out an ophthalmologist.

Members of the Oregon Academy of Ophthalmology working closely with the Exhibits staff include Merritt Linn, M.D., Donald Plumb, M.D., Robert Burns, M.D. and John Wobig, M.D., all of Portland.

The Sealy Ophthalmology exhibit opening is expected to be of great interest to the casual visitor to OMSI, and will be of special value for school tours and other interested groups for whom more detailed lectures and demonstrations will be offered.





The current "Book of Lists," a best seller, identifies PEANUTS, created by Charles Schulz, as the most popular cartoon strip in the world. At least creator Schulz, Lucy, Charlie Brown, Snoopy et al obviously know "The Major Difference," and hopefully, so do many of their readers. PEN is grateful to United Feature Syndicate, Inc. for permission to reprint this significant, educational, and as always, humorous, cartoon which has appeared in newspapers throughout the world.

Optometrists and Drugs

Optometrists are trained in four-year schools to fit glasses, using various optical methods to determine the kinds of lenses patients need for correction of vision problems. *Opthalmologists* have had more sophisticated training. Like optometrists, they fit glasses. But because they are physicians who have specialized in opthalmology after completing medical school, they are prepared to do a great deal more. For instance, they can use and prescribe drugs, treat eye diseases and do eye surgery.

Under current Maryland law, optometrists are not allowed to use drugs in their practice. But a bill now in the Maryland Senate would give them that right in certain cases. Optometrists make superficially plausible arguments in favor of the bill, pointing out that, with amendments they support, it would allow them to use only four types of drugs, all administered topically in the eyes, and only for diagnostic purposes; and that they would be required to take a minimum of 70 hours of training in pharmacology before they could use the drugs. They add that adverse side effects of the drugs are so rare as to be almost non-existent.

Unfortunately, say opthalmologists, the side effects are not all that rare. Allergies to the drugs might, in severe cases, result in death. Certain of the drugs can cause hallucinations, and others can result in detached retinas or acute glaucoma. Coping with these side effects requires the skills and equipment of a physician. A severe allergic shock reaction, for instance, might require adrenaline and cortisone injections which only a physician is qualified to administer. As the opthalmologists point out, 70 hours of training in pharmacology—as opposed to the 2,400 hours or more physicians receive—might not even qualify optometrists to recognize the side effects for what they are, let alone be able to treat them. The bill should be defeated

THE PEN FORUM

PEN has received more than 200 pieces of mail to Veterans Administration officials and congressmen from medical doctors concerning passage of Public Law 94-581, which gives measuring scientists with no medical training a primary health care role at VA hospitals throughout the country.

About 50 United States Senators and Representatives have responded to M.D.s' claims that raising optometrists to a primary health care level will jeopardize the public health.

The following letter to James H. Parker, Jr., M.D. of Wyomissing, Pa. from Rep. Gus Yatron is typical of letters from concerned congressmen received since the circular was signed Nov. 4, 1977:

Dear Dr. Parker:

Thank you for your recent letter expressing your continued interest and concern over the possibility of optometrists being allowed to take over part of the medical care of eye patients in the Veterans Administration.

Please be assured that I feel you have raised some valuable and serious points regarding such an action. Before such a proposal is approved, I feel that all possible questions pertaining to the adequacy of optometric education must be resolved. You can be certain that I will continue to scrutinize all of the implications and possible ramifications of this change, and that I will not endorse any action that could endanger the health of our nation's veterans. Additionally, I will not support any move to downgrade the quality of care offered in veterans' hospitals.

Sincerely,
Gus Yatron

PEN CHARTER MEMBER APPLICATION

This is my statement of intent to be an active member of the United States Physicians Education Network — I endorse and support the statement of purpose.

In providing my resources to guarantee the continuation of a strong and viable international entity I acknowledge and understand the following:

— That my membership in PEN will bring me a minimum of 48 mailings annually including 24 issues of a national publication as described, in keeping with the statement of purpose.

— That, as a Charter Member, I accept the responsibility of attempting to recruit members. I further understand that my state society will automatically be qualified for WATS line telephone consulting services and direct public relations advice and counseling, tailored to my state, as soon as either ten percent (10%) of the membership of my state society, or 20 members, (whichever is the least) are recruited.

I desire to inform and to be informed and to join this movement, and hereby pledge my support through dues, not to exceed $300 annually.*

— I understand that as a Charter Member, I will be issued a silver lapel emblem signifying my Charter status as soon as available after formation.

Visual and Medical

The Visual Part can be performed by an optometrist or an ophthalmologist.

The Medical Part can *only* be performed by a qualified medical doctor (an ophthalmologist).

When having your eyes examined you should know whether you are receiving a *complete* eye examination or only a part. When an optometrist (O.D.) examines a person's eyes he is qualified and licensed only to perform the visual part. He is not educated nor trained to perform the medical part.

When an ophthalmologist (M.D.) examines a patient's eyes, he performs both parts on an inter-related basis. He not only evaluates visual functions and performance, but also analyzes and diagnoses diseases and physiological disorders.

Ask the individual examining your eyes whether he is an O.D. (optometrist) or an M.D. (ophthalmologist). Only an ophthalmologist M.D. can perform a *complete* eye examination -- both visual *and* medical.

While the Massachusetts Society of Eye Physicians and Surgeons (MSEPS) energetically resists attempts to endanger the eye health of Bay State citizens, the MSEPS also endeavors to educate the public to protect themselves. The centerfold of a small but potent folder being circulated by medicine in Massachusetts is reproduced above with permission of the Society.

POSITION PAPER/Department of Health and Social Services

POSITION PAPER
ON
HOUSE BILL NO. 79

"An Act relating to the practice of optometry."

This bill would permit the use of selected drugs including topical anesthetics, mydriatics, cycloplegics and myotics by optometrists, and as such would delete from the definition of optometry the restriction against the use of drugs.

The intent of the bill would be to permit optometrists to use certain prescription drugs. This significantly increases the scope of optometry as presently defined and poses some increased risk and complications. The use of mydriatics is occasionally associated with the development of acute narrow angle glaucoma which may necessitate emergency surgery. The use of topical anesthetics are occasionally associated with acute, allergic reactions and some risks of danger to the cornea by foreign bodies. Recognizing the unusual, but definite risks and complicating reactions, the Department of Health and Social Services feels the use of prescription medications by optometrists would not be in the best interests of the public.

24 January 1979

Peter E. Cannava, M.D.
Box 1629
Soldotna, AK 99669

Dear Peter:

I received your letter and court brief regarding the optometric drug bill and have forwarded a copy to Rep. Thelma Buchholdt. She is the new chairperson of the Health, Education and Social Services Committee. As yet, no legislation has been introduced regarding this issue, however, I expect it will be soon.

Thank you for the information.

Sincerely,

Hugh Malone

Dear Hugh:

I gave the enclosed talk to the legislators present at our political meeting and I thought it would be helpful to you to receive a copy of it considering your vote of last session.

The case illustrates the fact that the optometric drug bill represents more than a political "power play" but in fact has and will mean loss of eyes of our fellow Alaskans. We have at least two other cases documented where vision was lost because of inadequate medical knowledge on the part of optometrists.

The judges decision clearly states that there is no reason why optometrists can be permitted to make medical diagnosis on a legal basis. In addition the testimony by the "professor of optometry" clear illustrates the lack of medical knowledge on the part of optometrist educators.

Sincerely,

Peter

Peter E. Cannava, M..D.

PEC/bc

Hugh,
Please have one of your staff save the court brief as it will have to be used for the "HESS" committee hearings & also for future discussions I will have w you.
Good Luck this yr & I wish you a short 90 day session. P

Given to Legislative Meeting 13Dec78. Copy to DRC

American medicine has estabilished a tradition which dates back well over 200 years! Despite the ups and downs of certain aspects of American medicine the very basic integrity of the system has never and will never be challanged. This is fact because the system rests upon a foundation of sound scientific principle. American people may not like what type of treatment is offered them but they at least can rest assured that any prescription promulagated by our traditional medical system is based upon a scientific method, and those practitioner licensed with-in the system have completed a satisfactory curriculum approved by both private and governmental bodies who attest to the fact that medical practitioners are qualified to practice with the use of drugs and other modalities. In addition to the traditional modality of medical care there are two other broad categories of health care which our people choose to utilize. One is not based upon scientific methodology, cannot be supported by established objective data. Examples of these would be naturopathic healing and chiropractic. The second category of non-medical health care sought by Americans is based upon scientific principles but is not traditionally associated with medical education. Examples of those are psychology and optometry. In past years no major conflict has arisen between traditional medicine and other forms of health care. However, of late there is a movement on by non medical people to seek enactment of legislation which would grant them privileges which traditionally have been the provence of medical practitioners. Examples would include attempts by chiropractors to utilize medical facilities for laboratory testing and more germane to our state the attempt by optometry to seek legislation approved for their use of drugs within their practice.

Legislators must be aware of the short and long term implications of such legislation! Granting non-medical practitioners medical priveleges obscures the traditionally clear cut lines between the dicipline of medicine and the non-medical practices. Such obscuration of lines of deliniation serves to thoroughly confuse the public as to what type of health care is to be expected from each type of practitioner! In such confusion the public will have no clear concept of what type of "product" to expect of each health care practitioner. I wish now to focus upon a problem which confronted last years legislators and may surface again! Optometrists as you may be aware are non-medical practitioners by virture of their ancestory, training, current definition and as of several months ago defined by U.S. District judge for Alaska. They are requesting the legislature to grant them privilege of using drugs in their practice! Such a priviliege would have two fold effect and firstly it would set a precident with-in our state and open the door to all non-medical health personell to seek similar privilege. Secondly it would further endanger the people of Alaska to the risk of loss of sight because of the injudicious use of drugs and false sense of security the use of drugs imparts upon the recipients of such treatment. Indeed as time goes on I will supply you with case histories of Alaska residents who have lost eyes because they were lured into feeling they had been examined by eye physicians or ophthalmologists. I will also supply you with a legal suit prompted by such a loss of eye and additional pertinent information. I urge you not to grant non-medical health practitioners by legislation what they should rightfully earn by education that is the right to join the ranks of traditional medicine thru time honored institutions, estabilished testing procedures and time tested licensing procedures.

Governor's Veto Message

(Unofficial Copy)

December 15, 1978

Pursuant to Article 2 Section 16 of the Constitution of Ohio, I return herewith to the Clerk of the Senate for presentation to the Senate Amended Substitute Senate Bill 163 which I disapprove and have not signed. Amended Substitute Senate Bill No. 163 would expand the definition of the practice of optometry to allow the use by optometrists of specific diagnostic drugs to the eye in the form of eyedrops. If the specified drugs are used solely for the purpose of detecting disease and are of a specific level of potency the matter of health care is of vital concern they must insure to all Ohio citizens that they receive the highest quality health care possible. Health care is an area in which we can take no risks because any mistakes can bring tragic and irreversible results. We must be committed to our citizens to provide practitioners that are highly skilled individuals and who will at the same time provide the best health care at the lowest cost.

Optometrists have been doing an excellent job in working with the medical profession to bring quality eye care to Ohio citizens. The tools that the optometrists are presently using are not dangerous and are effective in screening for eye disease. However, Amended Substitute Senate Bill No. 163 would allow optometrists to use drugs in order to make a full diagnosis of the medical condition of the eye. If the individuals involved were properly trained this procedure would be in the best interest of Ohio citizens, however without proper training the bill would allow unwarranted risks without corresponding benefits. The drugs involved are dangerous and have a potential of causing a great deal of pain including blindness. The adverse reactions associated with these drugs are not common but they do occur and medical and emergency treatment must be administered in those instances. While this bill does provide for mandatory training of 180 clock hours this amounts to little more than a month of isolated training in a clinical use of the drugs involved. The goal of this legislation should be to build a working relation between optometrists and the medical community. The issue of using drugs should be an issue decided by the professions rather than by the legislature. Both professions have taken an oath to provide quality health care, they should work together toward that end. I pledge the aid of my office for that purpose. For the foregoing reasons I have vetoed Amended Substitute Senate Bill No. 163 and urge the General Assembly to sustain my veto.

Dear Mrs. Buckhodt:

HB 79 (optometric drug bill) has been sent to your committee for review. It is essential that you review the enclosed court decision concerning the loss of a young Alaskans eye due to optometric irresponsibility. As you will recall the issue last year was whether ot not optometrists were qualified to use dangerous drugs on the eyes of Alaskans. Judge Fitzgerald's decision should settle that question in the minds of Alaskans.

In addition you will find enclosed the Ohio Governors veto message of such a dangerous bill.

I would appreciate your response to the material.

Sincerely,

Peter E. Cannava, M.D.

James A. Rhodes
Governor

February 14, 1979

Representative Thelma Buchholdt
Pouch V
Mail Stop Number 3100
Juneau, Alaska 99811

Dear Representative Buchholdt:

House Bill 79 (Senate Bill 75) relating to optometrists (nonphysicians) using medications has recently been introduced this session. I hope you can take a few moments from your busy schedule to read a brief summary of what I feel are important points as regards this legislation.

1. Optometrists are not physicians. No optometrist in Alaska has had any instruction in pharmacology or drug side effects from anyone with a Ph.D. or masters degree in pharmacology, no optometrist in Alaska has ever had any instruction in anything from a full-time M.D. on any optometric school staff, and no optometrist in Alaska has ever had any formal classroom or clinical training by an ophthalmologist (a physician with specialty training in eye disease and management).

2. Legislation, as presented, would let the Optometric Board evaluate the qualifications for drug use by optometrists. The Legislative Audit Performance Review of 11-1-78, noted:

   a. The state licensing examiner was asked not to attend the last examination given by the Optometric Board.

   b. The Audit Committee also found evidence of examination results being changed, regrading of examinations, and deletion of examination questions.

   c. The Audit Review was unable to find recent oral, written, or practical exam questions and answers.

   How can this Board, who has apparently compromised its integrity and responsibility given them by state statute but has also never had any experience in pharmacology, be expected to fairly pass on the qualifications of one of its own practitioners to use medicines in the eye.

3. The trend across the country is to defeat this sort of legislation. In 1977, this type of legislation was defeated in 17 states and passed in four; in 1978, it was defeated in 15 states and passed in two; and already in 1979, it has been defeated in one state and passed in none. This legislation is not beneficial to the public welfare, further confuses the consumer as to who he is entrusting the care of his eyes, and endangers the public at the hands of nonphysicians.

4. "Diagnostic drops" is a misnomer. The drugs don't diagnose - people diagnose. Dilating the eye is not a prerequisite to making a diagnosis of eye disease, dilating the eye is not a prerequisite to supplying children with the proper correction for glasses, and anesthetic drops are not a prerequisite for the diagnosis of glaucoma.

5. Optometrists (non-M.D.s) have no training in the management of side effects of these medications; e.g., myocardial infarction (there were seven cases of documented heart attacks due to these drugs in the United States in the past 12 months) or narrow angle glaucoma caused from dilating the eyes (there's an extremely high incidence of this condition in Alaskan natives).

6. Optometrists are not trained in the detection of pathology. An optometrist, currently a member of the Alaska Optometric Board, caused an eye to be lost in a four year old child because of his inability to recognize disease and refer the child in a timely fashion. Please find enclosed an issue of PEN newsletter which, in detail, describes Judge James Fitzgerald's findings in the Fourth Judicial District, U.S. District Court in the State of Alaska in October of 1978.

7. Let me suggest some appropriate amendments to this legislation if you feel it is in the public's best interest:

   a. There should be mandatory referral if the vision cannot be corrected to 20/20 in each eye in an adult or 20/30 in a child under eight years of age (this is a current law in England).

   b. There should be no "miotic drop" inclusions. No one considers miotic drops as a diagnostic drug.

   c. It would be appropriate to ensure the availability of malpractice insurance to optometrists to protect the public.

   d. There should be no grandfather clause.

   e. Any pharmacology or pathology testing should be done by the American Board of Ophthalmology. They are the most experienced group and the logical group to design such an examination.

   f. There should be mandatory referral, as per Dr. Alfred Lemoine who is often cited by optometry as an ophthalmologist in favor of diagnostic drug use by non-M.D. optometrists (see enclosure - 10 points in the history, 33 points in the clinical evaluation).

The regulation of the practice of the various professional and paraprofessional groups is not for the benefit of the licensee but for the benefit of the state and its people. No where does case law suggest that public protection will be qualified; i.e., that the risk may be increased a little bit but not a lot. The intent is protection and the language is explicit.

A disregard for excellence, as would result with passage of House Bill 79 (SB 75), as it is presented to you, will adversely affect the superior level of eye care currently offered to the citizens of Alaska. A little bit of this Bill is like a little bit of syphilis.

Thank you for the time you have taken.

Sincerely,

Sam A. McConkey, M.D.

SAM:ls

Submitted by
Dr. Sam McConkey

SUMMARY

Albert N. Lemoine, M. D., F.A.C.S.

There are ocular complaints obtained in the history and findings during an ocular examination that almost without exception are an indication for referral to an ophthalmologist for definitive diagnosis and therapy.

HISTORY

1. Rapid visual loss - over a period of minutes or hours.
2. Episodes of intermittent periods of reduced vision.
3. Sudden onset of "floating spots" in the field of vision.
4. Flashes of light in the visual field.
5. Defects in the field of vision, scotomas.
6. Distortion of objects or lines.
7. Rapid onset of visual haze with no specific complaint of decreased visual acuity.
8. Severe pain around the orbit or in the eye.
9. Prolonged severe pain in the occipital area.
10. Diplopia or visual confusion.

CLINICAL FINDINGS

1. Best corrected visual acuity 20/40 or less, unless they nave had a prior diagnosis by an ophthalmologist.
2. Any patient whose refractive error changes one half a diopter or more, especially on the hyperopic side, within ninety days except for children with myopia.
3. Masses of the lids or adnexa either with or without inflammatory signs.
4. Defects in the lid margin.
5. Redness that is most marked ir the 2 mm. zone adjacent to the cornea.
6. Any type of corneal clouding or infiltration either with or without congestion of the conjunctiva.
7. Cloudy anterior chamber.
8. Blood in the anterior chamber.
9. Small, poorly or nonreactive pupil.
10. Dilated, poorly or nonreactive pupil.
11. White pupil reflex.
12. Cataracts or lens opacities before the visual acuity is reduced to 20/40 or less.
13. Vitreous "floaters".
14. Blood in the vitreous.
15. Papilledema.

16. Optic atrophy, primary or secondary.
17. Larger or smaller than normal disc.
18. Abnormal disc cupping.
19. Dilated veins with or without retinal hemorrhage.
20. Narrowed arteries with or without retinal hemorrhage.
21. Any masses seen in the fundus, pigmented or nonpigmented.
22. Retinal hemorrhages, one or both eyes.
23. Pigment disturbance, either increase in pigment or decrease other than the dark fundus of the black race or lack of pigment in blond or albino patients.
24. Any areas of retinal elevation.
25. Retinal tears.
26. Presence of diplopia.
27. Nystagmus.
28. Scotoma.
29. Distortion of lines Amsler Grid or objects.
30. Any visual field defect other than blind spot.
31. Ptosis.
32. Intraocular tension of 22 or more on two or more occasions.
33. Exophthalmos, unilateral or bilateral.

Byron Perkins BP
Licensing Examiner

I spoke with Eldon Ulmer, President of the Board of Pharmacy, and he asked me to convey the following to you in response to your teletype to him last week.

RE House Bill 79 XXXXXXXXXXXXXXXXXXXXXXXXX regarding optometrists and particularly their ability to prescribe legend drugs and pharmaceuticals, the Alaska Board of Pharmacy has not changed its position on this issue. The board is not primarily concerned with whether or not an optometrist should be given this priviledge, but rather, that the proposed bill in no way addresses the legal question of how they are to obtain legend drugs. Current Federal and State statutes do not permit pharmacists to fill prescriptions for legend drugs by any one but Medical Doctors, Veterinarians, and Dentists.

Re House Bill 101 and Senate Bill 65, the Uniform Controlled Substances Act, this is the number one legislative priority for the Board of Pharmacy, and the board supports it conceptually. However, the current bill is primarily a police bill, and needs to be ammended substantially to make it palatable to the industry. There is not enough language addressing the rights and responsibilities of professionals authorized to handle controlled substances. The Board of Pharmacy is pushing for a Uniform Controlled Substances Act that parallels the federal guidelines.

March 7, 1979

Honorable Thelma Buchholdt
House of Representatives
Pouch V
Juneau, Alaska 99811

Dear Representative Buchholdt:

It has been brought to my attention that information in opposition to HB 79 has been distributed to all legislators. Some of this information contained in an ophthalmological tabloid newspaper entitled The Pen, although a sensational distortion of fact, demonstrates the responsibility of optometrists to detect and refer pathological eye conditions. The use of drugs (DPA's) requested by optometrists in HB 79 is simply a tool to help better serve the public, so that unfortunate incidents such as those described in The Pen will be more easily detected.

I urge you to consider the following facts prior to making a committment for or against this bill. These facts are excerpted directly from a report to the United States Congress by the U.S. Department of Health, Education and Welfare which I am enclosing.

1. It is the responsibility of optometrists to detect and refer pathological eye conditions.

2. Optometrists currently receive training in detection of ocular disease as well as in the use of pharmaceutical agents including management of side effects.

3. H.E.W. consultants on this report unanimously recommended that state licensure laws be revised to allow the use of diagnostic pharmaceutical agents by optometrists. (24 states now allow this practice)

If you have any questions regarding this bill or statements made in opposition to it, I would like to have the opportunity to respond with documented facts from objective sources. I appreciate the time you have taken to consider this very important legislation.

Thank you.

Sincerely,

Boyd L. Walker, O.D.

Boyd L. Walker, O.D.

BLW:ah

REPORT TO THE CONGRESS: REIMBURSEMENT UNDER PART B OF MEDICARE FOR CERTAIN SERVICES PROVIDED BY OPTOMETRISTS

U.S. DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE • Public Health Service • Health Resources Administration

The Bureau of Health Manpower projects the overall number of active ophthalmologists in the United States to rise to 13,300 in 1980 and to 18,400 by 1990; this compares with projected levels of 22,000 and 28,200 for optometrists in the same time intervals. The proportion of ophthalmologists as a percent of total professional vision care manpower is projected to grow from 35 percent in 1973 to 38 percent in 1980 and 39 percent in 1990. These estimates should be interpreted cautiously, and should be undertaken in the context of written documentation available from the Bureau of Health Manpower. Available data preclude such projections on a detailed geographic basis.

More specific data indicates that in recent years many areas of the country, particularly non-metropolitan areas, are served only by optometrists. Approximately 40 percent of counties have an optometrist but no ophthalmologist. Another 27 percent have neither.

Optometric Practice

The Institute of Medicine of the National Academy of Sciences, in describing primary health professions who are direct providers of patient care, defined optometry as follows: "The Doctor of Optometry (O.D.) is a health professional who performs eye examinations to determine the presence of visual, muscular, or neurological abnormalities, and prescribes lenses, other optical aids, or therapy, such as eye exercises to enable maximum vision. Optometrists are trained to recognize disease conditions of the eye and ocular manifestations of other diseases, and to refer patients with these conditions to the appropriate health professional."

This definition, as well as available documentation on the utilization of optometric services, points to the optometrist's role as a provider of primary health care services. In this role, the optometrist functions as a principal point of contact within the health care system for persons having visual complaints, including certain numbers who have symptoms or conditions that require referral to other health practitioners.

The scope of practice for optometry, similar to that for other health care providers, is difficult to define precisely. However, information is available from a number of sources to develop valid concepts of a profession's role and function. Such sources include State laws, judgments of courts concerning the responsibilities of practitioners, the usual and customary practices of the profession, and the objectives, content, and standards of education and training for the profession.

An examination of a variety of such sources suggests that optometry is a profession qualified to provide a broad range of services which are effective in patient management, including the management of aphakic and cataract patients. (See discussion in Part II of this report for detail on sources cited and information examined.) It is reasonable to infer that such services correspond to many specific

ATTACHMENT B

BASIC ELEMENTS OF THE CURRICULUM OF SCHOOLS OF OPTOMETRY

1. Biological science knowledge base.

   a. Gross human anatomy and microscopic anatomy, with emphasis on head, neck, and thorax.

   b. Embryology, gross and microscopic anatomy of the human nervous system - concentrating on the central nervous system.

   c. General human physiology, including the study of the fundamental organ systems and the mechanisms which regulate body function. Emphasis is on the sensory, motor and cardiovascular systems.

   d. Basic concepts of general and cellular biochemistry, with study of nomenclature, structure, and reactions of organic molecules. Emphasis is on the visual system - tears, intraocular fluids, lens, retinal photochemistry, and actions of drugs upon these.

   e. Concepts of human genetics and genetic disorders, including the frequency and distribution of genetic disease, inheritance patterns, polygenic inheritance, chromosomal abberration syndromes, multifactorial genetics, and principles of genetic counseling.

   f. Gross and microscopic anatomy of the lids, orbit, orbital content, globe, muscles, nerves, and vessels, and embryology of the eye.

   g. Vegetative physiology of the eye, extraocular and intraocular fluids, corneal and lens metabolism, ocular circulation, retina and optic nerve metabolism.

   h. General pharmacological principles, methods of administration, various systemic drugs and their pharmacological action and side effects with emphasis on those that affect the visual system, such as cataractogenic and glaucoma-producing drugs.

   i. Pharmacology; uses, doses, contraindications, and adverse effect of drugs producing miosis, mydriasis, cycloplegia, accommodation, and ocular anesthesia. The pharmacology, use contraindications, and adverse effect of drugs commonly used in treating visual and ocular problems.

As is evident from the discussion above, the Department endorses the first recommendation. For reasons cited, however, Department endorsement of the second recommendation is viewed as inappropriate and premature at this time.

During the course of the study effort, a number of additional issues and concerns were identified by the expert consultants which, although important considerations, represent matters not directly responsive to the specific legislative charge as interpreted by the Department. These recommendations and comments, made unanimously by the consultants, are presented here to provide an opportunity to bring these matters to the attention of Department Agencies and the Congress. Because the following items go beyond the requirement of this report, the Department has not fully examined them and makes no recommendation at this time.

1. Refractive services for aphakic patients

Aphakic patients, specifically, should be considered as having special needs given their disabled condition. Refractive services for such patients represent non-routine and necessary services in the provision of prosthetic devices, i.e., lenses.

Study advisors recommend that consideration be given to extending coverage under Part B of Medicare to include refractive services for aphakic patients when provided by either ophthalmologists or optometrists.

2. Low vision services and aids

For those patients who have inoperable cataracts or have less than optimal results from cataract surgery, that is, those who have reduced visual acuity, low vision services and aids represent essential components of reasonable and necessary health care services for these patients.

Study advisors recommend that coverage under Part B of Medicare be extended to include the provision of appropriate low vision services and optical aids for the above-referenced patients, when provided by either ophthalmologists or optometrists.

3. Prevention, health maintenance, and health education

In the interests of health care cost advantages, effects on productivity, and the overall improvement of benefits that can be afforded our population, the expert consultants recommend that a more effective effort be made to improve preventive, health maintenance, and health education measures. While this is needed in all areas of health services, the vision/eye care field offers a particularly promising area for such approaches.

4. Other service provided by optometrists

Vision/eye care services currently covered by Part B of Medicare, when provided by ophthalmologists or other physicians, include eye conditions other than cataract and aphakia. Optometrists can provide appropriate services for some of these conditions. It is recommended that extension of reimbursement to include the services of optometrists for such appropriate conditions is a desirable subject for further consideration.

5. Administrative considerations

Also during the course of the study effort, expert advisors raised several concerns pertinent to the administration of the Medicare program. These issues, also applicable to other Medicare services, include the following: (a) inconsistent application of coverage and reimbursement policies by individual carriers, (b) the problem of payment duplication for services and reimbursement for similar diagnostic procedures when performed for specific individuals by more than one provider, and (c) need of improvement in coding and billing procedures for vision/eye care services.

6. Cooperative working relationships between vision/eye care professionals

It became clear during the course of this study that more effective working relationships between optometry and ophthalmology and other providers in the vision/eye care field would enhance patient care and result in improved services to individual patients. While improved interdisciplinary coordination applies to all the health disciplines and specialties, it is a problem of particular concern in the vision/eye care field. Such working relationships could be significantly strengthened by

a. Development of joint educational programs at the undergraduate and graduate levels, including rounds, clinics, conference, and meetings and publications.

b. Establishment of interdisciplinary clinics with optometrists and ophthalmologists working together.

c. Facilitation of referral of patients between the optometrist and the ophthalmologist when in the best interest of the patient.

d. Joint development of quality standards for service and materials by peer review mechanisms. By materials, particular reference should be assigned to varying quality of lenses and frames and the need for furnishing laboratory invoices of material costs for reimbursement.

e. Joint development of appropriate revision to State licensure laws to permit use of diagnostic drugs (mydriatics and local anesthetics) by optometrists.

While such joint endeavors are evident in various areas of the country, they need to be broadened and routinized.

Eye-To-Eye 3/2/79

Currently before the House Health, Education and Social Services Committee is a bill (HB 79) which would allow optometrists to use certain drugs in eye drops for the purpose of making diagnoses. Optometrists could use these drugs only after completing an approved pharmacology course and passing an examination administered by the State Board of Optometry. The drugs involved would either open or paralyze the pupil of the eye or deaden pain.

Though the bill is relatively straightforward on the surface, it has acted to draw battle lines in the field of medicine in general and eye care in particular.

On one side of the line are optometrists, who historically view their profession as measuring the eye and fitting it with corrective lenses when needed. Optometrists in Alaska are required to have completed a six-year program through which they receive a doctor of optometry degree. They still may not prescribe drugs for the treatment of patients or perform surgery.

Optometrists argue that the use of the drugs would allow them to detect better problems with the eye. And as a result they argue, they could offer a higher level of service to their patients.

On the other side of the line are opthalmologists, who argue that as medical doctors who specialize in the treatment of diseases of the eye, they should retain the sole right to administer drugs, diagnostic or otherwise, to patients. Other branches of the medical profession generally agree. Ophthalmologists also point to the potential danger of adverse reactions of patients to the drugs.

To understand the basis for the argument it is essential to clear up the blurred distinction between the two professions. As we stated previously, the optometrist is not a medical doctor as such. An optometrist concentrates on detecting defects and faults in the eye and prescribing correctional lenses or exercises but not drugs or surgery. Historically, optometrists refer their patients to ophthalmologists should the problem be beyond the scope of their practice.

Ophthalmologists, on the other hand, are medical doctors, who after completing medical school continue to specialize in their field. To complete the entire program of medical school and the study of ophthalmology requires 12 years.

The crux of the problem, however, revolves around the drugs the optometrists are asking to use. There are four types: mydriatics, which open the pupil; cycloplegics, which open the pupil and paralyze the focusing mechanism; miotics, which constrict the pupil; and anesthetics, which take away the feeling.

In rare instances, though, complications can arise from the administration of these drugs. Some of them can even be dangerous. Nervous disorders, convulsions and death are known to have resulted from the administration of these drugs in rare cases, according to the Boston Globe.

But one person seems to be lost in the argument between optometrists and ophthalmologists—the patient. Will the optometrists' ability to use diagnostic drugs override the potential hazard of an adverse reaction to the drug? There is no black-and-white answer, but one conclusion can be drawn safely. The best-trained ophthalmologists in the state have agreed that the potential danger to the patient exists and that the bill under consideration contains inadequate safeguards to the public.

The question that has to be asked is if a patient of an optometrist does have an adverse reaction to one of these drugs, what would he do? Most sources agree that he would probably have to call a doctor—an ophthalmologist, to correct or treat the problem.

When it comes to the public's health, the Legislature, when approached with bills such as this, should take the prudent course and turn them away, unless there is overwhelming evidence that the public would benefit.

Without a doubt, the prudent course is to turn away HB 79.

Juneau, Alaska 98111

Dear Senator Buchholdt:

As a physician and surgeon I am most concerned about SB 75 and HB 79 which propose to give nonmedical eyecare practicioners (optometrists) the privilege of applying potent medications to the eye for diagnostic purposes.

The proposed bill lists only broad general categories of the desired eye medications, not specific drug names and concentrations. The classes of drugs include such potent substances as Cocaine, Atropine, Scopolamine, Phenylephrine and Phospholine Iodide. All these drugs when applied to the eye are readily absorbed into the bloodstream and are capable of producing a wide range of total body effects.

Cocaine, a topical anesthetic and mydriatic (dilater of the pupil) is a controlled substance which is subject to wide spread abuse by addicts and requires a controlled substance registration certificate to dispense. Atropine and Scopolamine are cycloplegic agents which paralyze the eye's focusing power and in sufficient doses produce irritability, hallucinations and even coma. Phenylephrin (a mydriatric) has the ability to raise the blood pressure markedly and to alter the rhythm of the heart and has been implicated in deaths in older people through strokes and in children through cardiac arrhythmias. Phospholine Iodide, a miotic which constricts the pupil, is used in the treatment of glaucoma (elevated pressure in the eye) and in certain cases of crossed eyes, the active ingredients are related to the active substance in certain insecticides and nerve gas. This medication has been shown to produce retinal detachments and cataracts. Miotics are a therapeutic class of drugs and are listed incorrectly in the proposed bills as diagnostic drugs.

The above are only a few examples demonstrating what potential dangers exist is the various classes of the drugs listed in the proposed bills. By allowing wide spread use of these drugs by nonmedical persons the overall risk to the general public of potentially serious effects or untoward reactions are markedly increased.

This type of legislation is not unique to Alaska. The initial nationwide optometric movement, in attempting to enter the practice of medicine, was successful and approximately 20 states have some type of optometric drug legislation. In the past 2-3 years as the full implications of such legislation became known optometric drug bills have been going down to defeat by about a 3 to 1 margin.

I would appreciate your support in helping prevent these bills from becoming law. I not only can but will readily answer any questions or document any items that I have commented on in this letter.

Sincerely yours,

James H. Patterson M.D.

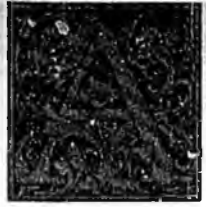
HB 11



ALASKA STATE MEDICAL ASSOCIATION

1135 W. Eighth Avenue • Suite 6 • Anchorage, Alaska 99501 • (907) 277-6891

February 26, 1979

Respresentative Thelma Buchholdt, Chairman
House of Representatives
Health, Education, and Social Services Committee
Pouch V, Mail Stop #3100
Juneau, Alaska 99811

Dear Ms. Bushholdt:

The Alaska State Medical Association Legislative Committee has reviewed House Bill 79, an act relating to the practice of optometry.

Enclosed is a copy of correspondence relating to the issue during the 1978 Legislative Session. The position of the Association remains essentially the same, namely:

(1) We are unable to determine how this legislation will improve eye care or specifically benefit the public.

(2) Specifically, we know of no diagnostic use for the drug class, miotics, requested; in converse, their use would be appropriate for treatment of narrow angle glacoma, precipitated by a mydriatic/ cycloplegic use. This condition, we understand, is more prevalent amongst the Alaska natives than the general population, such that bush use of these drugs could carry increased risk.

(3) We approve the educational requirements added in the 1979 legislation. It follows that should the Legislature believe the proposed legislation is in the broad public rather than for special interest, no grandfather type clause should be allowed.

Sincerely,

W Fish

Winthrop Fish, M.D.
Chairman, Legislative Committee
Alaska State Medical Association

WF:mlm

Enclosure

February 14, 1978

Representative Charlie Parr
Chairman, House HESS Committee
Alaska State Legislature
Juneau, Alaska 99801

Dear Representative Parr:

The Alaska State Medical Association Council has reviewed HB 664, An Act Relating To The Practice Of Optometry. We see no purpose identified or expressed within the substance of the Bill. We further see no areas where the public interest will be served by its passage and several areas where compromised eye care, duplication and cost increases are possible if not likely.

At the outset, please understand that the ASMA properly has no interest or intent to interfere with the practice of optometry in Alaska. However, if an enlargement of the scope of optometry into the sphere of medical practice is comtemplated, it reasonably becomes our concern for the welfare of the public, not a simple jurisdictional dispute.

Optometry by derivation, definition, tradition, training and current practice means measurement of the eye for refractive error and a prescription of corrective lenses. Current practices also allows dispensing and sale of lenses and spectacles by the prescribing optometrist.

The current statute defining optometry is unfortunate in that it suggests diagnosis of visual impairment, apart from refractive error, lies within the responsibility of optometry.

Non-refractive visual impairment may be a most difficult and subtle medical diagnostic problem, at times challenging the combined expertise of ophthalmologist, neurologist, radiologist, and internists, and requiring sophisticated diagnostic equipment. Causes range from simple cataracts to subtle brain tumor, from transient vascular insufficiency to obscure metabolic disorders. The visual problem may be the first and only lead to a serious medical disease. Almost all non-refractive visual impairments will come to confirmatory diagnosis and treatment by a physician. It goes without saying that missed or delayed diagnosis can have serious potential consequences.

Before extending the scope of optometry, well beyond refraction and the sale of contact lenses and spectacles, into the intricate area of complex ophthalmological diagnosis, we ask that you assure yourself of the following:

(1) That there is a clearly demonstrated and defined unmet public health problem, that this legislation will solve it, and it is the most appropriate solution.

(2) That the general level of training of the practicing optometrist in Alaska at present is at a standard which will preclude frequent mis-diagnosis, delay, duplication of expense and inappropriate trials of corrective lenses for non-refractive disorders of the eye.

(3) That the use of ophthalmologic drugs in the practice of optometry is free of risk.

(4) That the ex nded drug use is necessary and essential to increased accuracy in refractive error diagnosis.

We feel the answers to the above are not obvious, we see no urgency to enact the legislation without the most careful study of the implications and therefore urge that you allow ample time for its consideration.

Sincerely,

WFish

Winthrop Fish, M.D.

TUMOR OVERLOOKED

Mrs. Lois McWalters

•

Massachusetts Widow

Vol. 1, No. 1, July 15, 1977

The first issue of THE PEN featured a tragic testimonial headlined "Massachusetts Widow: 'It Seems Bizarre.'" Excerpts follow:

Five years ago my husband began complaining about his eyesight. He decided to see an optometrist and he continued to do so for 2½ months. As his vision deteriorated at this time, he experienced headaches so violent they would awaken him from a sound sleep. I pleaded with him to see an ophthalmologist or some person with a medical background. He became increasingly irritated at my suggestions and I was forced to bow to his decision or submit to an unhappy home life.

As each day passed, before my eyes his personality changed; this sweet gentle man became verbally abusive and the general tenor of our home was unbearable. At that time our four children were 6, 7, 8, and 9 years old. They watched their father hold a cup of coffee, his hand tremors so pronounced he would spill it and leave the table in a terrible rage.

I pleaded again, to no avail. How does a wife forcibly take a grown man to a doctor? He *trusted* the optometrist. The optometrist changed his glasses three times - each prescription being for stronger lenses - during those 2½ months. Each time his eyesig[illegible]d the pain was not even slightly improved by the [illegible]ge of glasses. He was told it would take time to get used to them. The optometrist never suggested he see a medical person.

His suffering increased to such a point he could not work or concentrate. I suggested a vacation and he agreed. . . . He now had a black patch over one eye "to rest it" prescribed by the optometrist.

I was frightened; I felt he was dying and I was helpless. After a few days of rest I gently broached the subject again and very unlike me, burst into tears. . . .

Our vacation was cut short because he was so ill. He insisted upon going to work when we got home, but surprised me by phoning from the hospital. He had seen an ophthalmologist who immediately spotted the problem and within minutes called in a neurosurgeon. The neurosurgeon admitted him to the hospital at once. I discovered later that when the ophthalmologist's *secretary* heard the symptoms over the telephone, she had insisted Dick come to the office immediately.

The neurosurgeon told me frankly he felt that Dick had a brain tumor. At our community hospital, tests were done in the next few days; the consensus was a brain tumor.

Surgery was at nine. . . .

Bad news it was, a malignant brain tumor called an astrocytoma. "I would give him about eighteen months," the doctor said, "but be prepared for some horrible times ahead." Twelve days later God mercifully took his beautiful soul and left his tired, worn body. . . .

In retrospect, it seems bizarre to me that when one (in this case the optometrist) realizes a situation is out of his control, that he wouldn't immediately make a referral, especially when seeing a patient suffer so much. •

SPECIAL ANNUAL PERSONAL EXPERIENCE REVIEW ISSUE

During its first year, THE PEN has published numerous carefully documented cases of eye damage resulting from attempts by non-medical practitioners to practice medicine. These four pages are a collection of selected excerpts of those cases which have prompted expressions of maximum interest from readers.

While there has been no official response or challenge from organized optometry, individual optometric lobbyists have advised legislators that these cases are "isolated instances." The steady flow of similar testimony pouring into PEN headquarters prompts us to suggest that the cases are not "isolated," but rather "the tip of an iceberg."

"Lack of Love"

Vol. 2, No. 3, Feb. 1, 1978

A Connecticut woman, interviewed by Jeffrey Gold, M.D. of New Haven, told how an optometrist claimed her child's blurred vision could be cured with "more love and understanding at home" in a story headlined "O.D. Calls Diabetes A 'Lack of Love'." Passages of that interview follow:

Dr. Gold: "Mrs. Cosgrove, why did you bring Barbara to me?"

Mrs. Cosgrove: "We were referred here by our family doctor who just found diabetes in Barbara. She is 11 years old. I told him I had just had her eyes checked by an optometrist."

Dr. Gold: "Do you mean Barbara was examined by an optometrist lately?"

Mrs. Cosgrove: "Yes, she failed the school vision test in November and they said to have an examination. He (the optometrist) has a great big sign out in front, that says 'Doctor,' and I thought he was one."

Dr. Gold: "What did he find?"

Mrs. Cosgrove: "He said there was nothing wrong with her eyes and when I asked him why she kept getting blurred vision, he told me that she was a nervous child and when she gets up-tight, her eyes get blurry. My reaction was to take her to a social worker, but he (the optometrist) told me she just needs more love and understanding at home and that there was no reason to do any more than see him again next year."

Dr. Gold: "Then what happened?"

Mrs. Cosgrove: "I thought I was some kind of a rotten mother with such a nervous child, and I cried that night."

Dr. Gold: "Did you pursue the blurred vision at that time?"

Mrs. Cosgrove: "During December, Barbara seemed to have the flu, but it didn't go away and by Christmas Eve, I real-

DANGER AND WASTE IN THE VA

Robert B. Nolan

•

Disabled Veteran

Vol. 2, No. 8, April 15, 1978
Vol. 2, No. 11, June 1, 1978

In these issues, a totally and permanently disabled veteran told how he got less than the deserved in-depth investigation into the problem of allowing VA optometrists medical functions. Mr. Nolan again found more evidence of danger and waste in the VA. Excerpts from the first story follows:

". . . The VA would not permit me to receive outpatient treatment from a private physician unless I lived 30 to 50 miles from a VA treatment center. I didn't, so I decided to pay for my own doctor and then go to the VA and see their M.D. for medication only.

"My wife called the VA in the federal building in downtown St. Petersburg for an appointment early in August of 1977. She told the girl on the phone that I needed an eye doctor because I had glaucoma.

"My first visit to the VA eye 'doctor' was Augus[illegible] 22, 1977. I presumed that the doctor I saw was a[illegible] M.D. ophthalmologist. His name was on the doo[illegible] and it said 'doctor.' . . .

"T[illegible]e 'doctor' finally tested my tension with [illegible] and said the pressure was [illegible] in each eye. I showed him the prescription I had received from Kenneth Safko, M.D., my own ophthalmologist, and he said, 'Wait until I xerox this as it is no good here. I will have to write my own prescription.'

"After copying Dr. Safko's prescription and putting it in my file, he wrote his own prescription and took it next door to get it co-signed. . . .

"On my way to the pharmacy with my wife, she looked at the prescription and said it didn't look right. We took it back and the 'doctor' changed it from pilocarpine to 3/4% carbachol with six refills. Another doctor (probably an M.D.) co-signed the new prescription. . . .

"On our next trip to the VA center, my wife asked the woman at the front desk if the doctor we saw was an M.D. and an ophthalmologist. The woman at the desk replied, 'Yes, he is a full-fledged doctor and an ophthalmologist fully qualified to treat eyes.' . . .

"When I finally got the glasses, sometime in late November or early December of 1977, I discovered I could see much better without them.

"On my next trip to the VA on December 19, 1977, I returned the glasses. The 'doctor' told me the reason the glasses had been so long coming was because he rejected them two or three times, since they were not to his prescription. When he took the glasses to the next office to check them, my wife and I looked at his diploma on the wall. It said 'Doctor of Optometry.' When I told him we thought he was an ophthalmologist, he became very angry and said, 'Do you question my qualifications?' I told him I certainly did question his qualifications to treat glaucoma or any other eye disease. He told me that the people at the front desk didn't know the difference between an ophthalmologist and an optometrist. I said, 'If this is true, what if my eyes need surgery?' He said if that were the case I would have to go to the Tampa VA Hospital or the Bay Pines VA Hospital and some other doctor would operate. . . .

"Talking to people in the waiting room, we

NETWORK TV WARNING

Totie Fields

•

Comedienne

V 1, No. 8, Nov. 1, 1977

The following is a portion of an interview between TV-talk show host Merv Griffin and comedienne Totie Fields, during which she warned all diabetics to seek eye care only from ophthalmologists:

MERV: It was kept very quiet; but all of a sudden, about two months ago we all heard rumors that, now you were losing your eyesight from the diabetes.

TOTIE: It's true, it's true! — and you know why I want to talk about it?

MERV: Blue Cross must hate you!

TOTIE: They have lost so much money on me.

MERV: Have they?

TOTIE: Yeah, but you want to know? I didn't know it, Merv, I swear to you I saw 20/20! . . . this is what I want to make a point of, I went to an optometrist all the time and he said, "Totie you're doing wonderfully, everything is fine," . . . I've been a diabetic since I was nineteen years old, and you know how I watch myself; I weighed 200 pounds; all I ever thought about was eating. I swear to God they told me I couldn't eat and that was the end of it!!! I mean, I just ate myself into oblivion!! I used to do a show and in the middle I used to think where could I get a pizza around here; you know I thought of nothing but food, Mallomars, if I could only eat a Mallomar! Oreos, you know I was an Oreo freak . . . Oh, I talk about them and my mouth gets filled with saliva!!! I saw a little thing floating in my eye like a little hair, you know, that you couldn't get rid of and so I went to an ophthalmologist. Diabetics should never go to an optometrist, they must go to ophthalmologists because they see behind the eye. He said, "Totie, you've got to go . . . the best man in the country is in San Francisco and you must get to him right away." The next morning I was there and this man was telling me I was going blind, and I said, "You're crazy! Why didn't anybody else . . ." Well, they were so busy worrying about everything else, no one thought of my eyes, and I've never (incidentally, no one's ever heard this story before) — Well, to make a long story longer . . . yeah! I want, because I really want diabetics to be so aware because this operation is only two years old, Merv, and ironically enough, my dad died blind, my brother died blind, and I would have. . . .

One day you get to that age where all the print is gone and the paper comes and you say why did they send me a white paper (laughter) — you know, and you'd go to the toilet and drop it on the floor and read it there (laughter) . . . you know what I mean. But, I can read proof! I mean, to open a menu and be able to see it without looking for my glasses is the most exciting thing, but I want you to know, everybody out there that is a diabetic, please, please go to an ophthalmologist . . . because you can be saved! You know the ironic part of this entire story, I did "Fight for Sight" — the benefit "Fight for Sight" for about five, six years in a row and that's the money that helped this whole thing! (applause) To get this discovery! Isn't that incredible? (applause) And you won't believe how I can see every wrinkle in your face, Merv, every wrinkle in your face, I never could see them before . . . ●

GLAUCOMA UNDETECTED

Mrs. Agnes Karrman

•

Connecticut Housewife

Vol. 1, No. 5, Sept. 15, 1977

Appearing in this issue of THE PEN under the headline "Conn. O.D. Tells Housewife: 'You Don't Have Glaucoma'," a Conn. woman told of an optometrist who failed to recognize her glaucoma. Excerpts follow:

"I was a nervous wreck before I visited the ophthalmologist that day in October, 1975, and then the bottom had just dropped out of everything. My fears had been justified because the ophthalmologist had just told me that I was suffering from far-advanced glaucoma. For some time I had experienced increasing difficulty with my vision. I couldn't read the paper without a magnifying glass. My eyes were constantly watering and sometimes I awakened at night with a headache. I could no longer see well enough to play the piano or organ.

"...Yet, despite these complaints, my optometrist had assured me for over a year there was nothing seriously wrong with my eyes.

"I had been going to an optometrist regularly for about seventeen years — ever since he had opened his office. He was always pleasant and the glasses he fitted for me were generally satisfactory. In 1974 I went to him complaining of blurred vision. He gave me new glasses but they didn't help. I went back to him and he told me that they were the right glasses and that I just hadn't allowed enough time to get used to them. I told him that I was worried about glaucoma because my brother had had surgery for glaucoma and is almost blind, and my sister was being treated for glaucoma by an ophthalmologist. She is doing well because her problem was discovered early. The optometrist assured me that he had checked for glaucoma and that I didn't have it.

"Several months later, because of increasing trouble with my vision, I returned to the optometrist . . . He again changed my glasses. At that visit I again voiced my fear of glaucoma and once again he assured me that my eye pressure was normal and that I didn't have glaucoma. He said my eyes were just tired. Well, the new glasses didn't help at all. They seemed to be no different than the previous pair he sold me . . .

". . . After another month and a half had passed I returned to the optometrist because my eyes pained at times and I often awoke at night with headaches. My vision was getting worse and my eyes watered constantly. This time I really pressed about my fear of glaucoma. He re-examined me and again sold me a pair of glasses — the third pair in less than a year! He told me that his $3,000 special instrument measured accurately for glaucoma and that a referral to an ophthalmologist was not necessary. In fact, he told me that I had nothing to worry about, that my eyes were perfectly clear. He said, *'You don't have glaucoma and you don't have cataracts.'* He gave me some eye drops to use three or four times a day. I used them regularly for the next four months until my sister finally persuaded me to see her ophthalmologist. In the meantime, my vision had continued to get worse and I could no longer enjoy any activities that required good eyesight.

"As I said earlier, my first visit to the ophthalmologist was a shocker. It was such a different examination! Not only did the ophthalmologist find that my pressure was higher than normal, he also found that my optic nerves had been severely damaged by this long-standing pressure and that my side vision had been destroyed. I could only see as though I were looking down a gun barrel . . . He discovered that I did have cataracts, but they were only a small part of my eye health care difficulties.

"The ophthalmologist's diagnoses and explanation of the extent of my problems not only added to my nervousness but made me very angry. I was angry with myself for not having listened to my sister's advice months ago to see an ophthalmologist and not an optometrist, and I was plenty angry with the optometrist! The doctor told me that an optometrist is not trained in medicine nor to diagnose or treat eye diseases. How can an optometrist act like an 'eye specialist' and flatly assure people that he is capable of this type of decision making? How can he keep peddling new glasses and sell eyewash types of eyedrops with implied assurance that they can cure? How can he stand by and literally watch one of his long-time customers go blind?" ●

EXTENSIVE EYE DAMAGE

Denton Livensparger

•

Double Jeopardy

Vol. 2, No. 7, April 1, 1978

In a story headlined "Misuse of Drugs Plus Misdiagnosis Puts Floridian In Double Jeopardy," a Florida ophthalmologist told of how an optometrist missed signs of glaucoma and serious corneal abrasions requiring surgery in both eyes of a male patient. Excerpts follow:

"Misdiagnosis combined with the misuse of powerful drugs by untrained practitioners poses a frightening threat to public health and places our citizens in double jeopardy," says John D. Mallonee, M.D., a practicing ophthalmologist in Ft. Pierce, Florida. "The advanced years of many of our patients makes this menace even more serious and the public must be made aware of this grave danger," Dr. Mallonee said.

In support of his forthright statement, Dr. Mallonee detailed the following case history.

"On February 4, 1978, I first saw Dentor Livensparger. This 65-year-old man came to my office of his own volition, and without referral. He told me he lived at 1196 Proctor Lane in Port St. Lucie, Florida, a nearby retirement community, and had been suffering severe pain in both eyes for some time. Mr. Livensparger voluntarily gave the following account of his experience to date."

"In early November 1977, I think it was the 8th," the patient said, "I went to see an optometrist about the pain I had in both eyes . . . I told them that for a long time, maybe nine or ten months, I felt as though I had something in both of my eyes, and that the pain was just getting worse all the time. After they examined me, they told me all I had was an eyelid infection and they gave me some antibiotic drops called Neodecadron. I went back again the next day and they told me I didn't have glaucoma, and all that was the matter with me was a minor eyelid infection that would clear up if I used the drops."

Protect The Public From Sub-Standard Eye Care

GLAUCOMA UNNOTICED

Mrs. Florence Hubbard

•

Blinded High School Student

Vol. 1, No. 2, Aug. 1, 1977

The following excerpts are from a byline story by a Massachusetts student headlined "'They Call Themselves Doctors' - . . . Blinded High School Student," in which she told how an optometrist could not recognize advanced glaucoma.

"In August 1967 I was walking home from a friend's house when I knocked over a trash can because I didn't see it. A couple of days later I noticed that things looked blurry. I couldn't read signs or make out faces and when I looked at lights, there was a rainbow around them.

"I went to an optometrist in September and told him about all of this and that I had a throbbing pain in my eyes. My left eye was worse than my right eye. The optometrist asked me to read his eye chart but I couldn't see where it was. He examined my eyes and told me not to worry, he could help me. He said I had a lazy left eye and astigmatism, and he had just the cure for me — he was going to prescribe some glasses.

"Before the glasses were ready, the pain got much worse and my eyesight got more and more blurry. However, I trusted the doctor. I figured you go to a doctor and he knows how to treat you. I had always thought optometrists were doctors. They call themselves doctor.

"When I went in to get my glasses in October, I told him that my vision was much worse and he got out the glasses and said, 'There should take care of you.'

"I went home with the glasses but they weren't helping. I was banging into desks at school, I kept banging into people, I couldn't see the blackboard. I must have called the optometrist about 10 times and he kept telling me I would be all right, that I was getting too worked up and making myself not see.

"When my mother and I went to see him the next day, my mother said he looked a little worried. He told us that I lacked something in my body, that I had a deficiency, and he would make an appointment for me with an ophthalmologist but not until after Christmas. He said I should go home and have a nice Christmas.

"When my mother and I went to the ophthalmologist on December 27, it was the first time I heard the word 'glaucoma.' He said I had all the classic signs.

"The ophthalmologist found that I had a pressure of 95 in both eyes — normal is 20, and total blindness is 100, he said.

"In April the pressure in my eyes went up again and this time the ophthalmologist thought it would be necessary to operate. By now my parents were so upset they had decided that they should be extra careful and get another opinion and I should go to Massachusetts Eye and Ear Infirmary. I did and it was decided I should have surgery on both eyes, to save what little sight I had left. I've lost 99 percent in my left eye and I have only the very center of the vision in my right eye — I can only see things that are straight ahead.

"After I got out of the hospital and began to feel better, my little eight-year-old cousin began to take me all around Gloucester by the hand so I could learn my way around. I still don't like going to new places and there are some things I can't do for myself. Once I set myself on fire trying to reach something over the gas stove and I didn't even know it. I was lucky my husband was home and saw it." ●

Similar heartbreaking circumstances have accompanied many of the cases in PEN's growing file. Here's a random sampling.

● From the Wills Eye Hospital, a division of the Thomas Jefferson Medical School in Pennsylvania, - when a female patient complained of pain in the eye, an optometrist gave her an anesthetic drop to use. Later, he refused to see her. She developed a pseudomonas ulcer (infection) and the eye had to be removed.

● Also from Wills, a female patient told an optometrist that for seven years she had episodes of blurred vision brought on by reading. They usually lasted about an hour and when severe were associated with headaches. She was followed by an internationally famous optometrist throughout the seven years and was reassured nothing was wrong. Later, an M.D. found textbook symptomatology of chronic angle-closure glaucoma and advised immediate surgery on both eyes.

GOING BLIND

Mrs. Anita Oliver

•

Baltimore Cook

Vol. 1, No. 10, Dec. 1, 1977

The following passages are from an interview between a blinded Baltimore [illegible] and ophthalmology resident Larry Thompson, M.D. In a story headlined "Mrs. Oliver: 'I Told Him These Are My Eyes'," she told how a vision-center optometrist became annoyed when she told him the glasses he prescribed did not work:

Mrs. Oliver: "I came to University Hospital because I was getting this blindness, and I couldn't see. I was at church on the fourth Sunday in July, and I fell down those steps."

•••

Dr. T: "You were seen for your eyes before coming here — when, back in February of 1977?"

Mrs. O: "Yes, it was February."

Dr. T: "And you were seen at - - - - Vision Center?" (an enterprise which employs optometrists, but has no medical personnel.)

•••

Mrs. O: "Yes, I was there for glasses. They examined me but they didn't tell me anything. I asked the doctor why I couldn't see. The doctor got angry with me when I said I could not see out of my left eye like I should. I was trying to read the board, the letters and the numbers. And when he put the glass to my eye, I couldn't see and I told him that I couldn't see. He got very, very angry. He told me that he was doing the examination, not me. *I told him that these were my eyes and I should know whether I could see or whether I couldn't.*"

•••

Dr. T: "OK, he prescribed new glasses for you at that time. After you got those glasses, you could not see with those glasses, is that correct?"

Mrs. O: "Yes. I went back to them again and had that left lens changed. It was supposed to have been changed."

Dr. T: "Did they ever measure the pressure in your eye, touch your eye with anything to measure the pressure?"

•••

Dr. T: "Did they ever measure the pressure in your eye, touch your eye with anything to measure the pressure?"

LED TO BLINDNESS

Charles B. Wilson

•

Arizona Steelworker

Vol. 1, No. 10, Dec. 1, 1977

The following are excerpts from the story of an Arizona man headlined "Arizona Steelworker 'Led To Blindness'," in which he told how an optometrist informed him he would eventually go blind, but gave no reason, and his misadventures with more optometrists:

"When I first thought I needed glasses 25 years ago, there was only one place to go in my home town in Ohio — and that was to an optometrist. He had the whole works — he gave examinations and sold glasses.

"He checked me one time, gave me glasses and then he said, 'In about 20 years, you're going to think you're going blind.'

"I asked him why, but he wouldn't give me a definite answer. He just said, 'Well, your eyes are going to change that much and you're going to think you're going blind.' To this day, I still don't know what he was talking about.

"I just figured it was my nearsightedness or the opposite, whatever that was. I wasn't bothered with anything until I came out here 17 years ago.

"I worked in a steel mill and once my glasses got all burned up in there, so I went to an optometrist in Mesa.

"He just checked my eyes like everyone else does. I got a new pair of glasses there.

"In the meantime, the Union got into the plan - - - -

OPTOM-PSYCHIATRY

Continued from page 3

ized that she had lost her appetite and was losing weight; also she was always thirsty and urinating excessively, so I took her to our family doctor."

Dr. Gold: "What did he find?"

Mrs. Cosgrove: "He found diabetes. Her sugar was 790!" *(Normal is around 100)*

Dr. Gold: "Did the optometrist ever mention to you the possibility that variably blurred vision could be a sign of diabetes?"

Mrs. Cosgrove: "No, never. I don't think he should be allowed to be out there, on the street, calling himself a doctor! He doesn't know anything about disease. Why is he there? What's wrong?"

Dr. Gold: "Mrs. Cosgrove, do you give us your permission to publicize the danger to people inherent in Barbara's story?"

Mrs. Cosgrove: "Yes, I do."

Dr. Gold: "Thank you very much." ●

NEW YORK SPECIAL REPORT

The following case histories of optometric failure to recognize and refer medical eye patients were collected by Karl J. Marchenese, M.D. of Rochester. All patients except one were personally interviewed by Dr. Marchenese. Except where indicated, the source of information was the patient. All cases came to the attention of Dr. Marchenese within the past 12 months through his practice as an ophthalmology resident. The patients reported in this paper as incidents of failure to recognize or refer medical eye problems, outnumber appropriate referrals to the clinic by four to one.

● A young college student called a local HMO (prepaid health insurance in which the patients have little choice of physician) with complaints of an irritated red eye. He was seen the same day by an "eye doctor" whom he believed was a physician but was in fact an optometrist. The optometrist diagnosed "iritis" and gave the patient a prescription for two therapeutic eye medications (homatropine and a steroid preparation) which was filled in the HMO pharmacy. The patient reports that the prescription had another physician's signature preprinted on it. The patient was examined only by the optometrist. He was subsequently examined by the optometrist four additional times over a six-month period. The optometric records were obtained and revealed that several therapeutic agents had been prescribed and no mention was made of consultation with or referral to a physician. Ocular examinations and evaluations for systemic disease were inadequate. The optometrist was unsure of the diagnosis, at times referring to "recurrent coniunctivitis" and "eposcleritis" as well as iritis. Finally on the last visit the patient was referred to an ophthalmologist.

Comment: The optometrist clearly exceeded the limits of his licensure by attempting to make a medical diagnosis and prescribing therapy. It is illegal for an optometrist to fill in (and for an organization to provide) presigned prescription forms. It is inappropriate for an HMO to use an optometrist to care for patients with acute eye problems.

● A 73-year-old woman with diabetes was followed for 15 years by an optometrist who knew about her disease but referred her for a medical eye evaluation only when cataracts caused a significant deterioration in her vision. The patient had evidence of diabetic retinopathy (blood vessel disease of the back of the eye) which was more difficult to evaluate because of the presence of cataracts.

Comment: All patients with diabetes are at a significant risk of major ocular complications (including total blindness) and should have a medical eye examination at regular intervals. The examination requires special expertise which only the ophthalmologist can provide. Treatment is available for retinopathy at some stages.

GOING BLIND

Continued from page 5

Mrs. O: "No."

Dr. T: "Did they ever suggest that you see a medical doctor?"

Mrs. O: "No, never."

Dr. T: "Do you feel that poor people — people that haven't had a lot of education — are at a particular disadvantage since they probably do not understand the difference between an optometrist and a medical eye doctor?"

Mrs. O: "I sure do think so. I was getting blind."

Dr. T: "Do you realize that you would have been totally blind in another couple of months if you had not come down here?"

Mrs. O: "I sure do." ●

EXTENSIVE EYE DAMAGE

Continued from page 4

Mr. Livensparger continued, "I took the drops just like they told me, but my eyes got even worse and I went back to see them on November 14. They told me just what they said before, that I had an eyelid infection that would go away if I kept taking the drops, even though I told them my eyes felt worse, not better. I continued using the medicine they gave me but it didn't help at all and I went back again to see them (the optometrists) on January 10th of this year.

"Again, they examined my eyes. They didn't mention glaucoma or pressure — just looked into my eyes with a light. They told me the medicine I was using wasn't doing the job and gave me something called Vasocidin. I used the new drops for about eight days and my eyes only got worse, so I went back again on the 18th of January. They said just keep using the new stuff and your infection will go away.

"Since I was getting worse all the time and the medicine wasn't helping, I thought I should see somebody else," Mr. Livensparger concluded.

"When I talked to Mr. Livensparger on Feb. 4," Dr. Mallonee said, "he told me, 'I have continuous pain in both of my eyes. I can't stand the light, and keep my eyes closed most of the time because they water when I try to open them. The pain is bad, and I have it all the time.' "

Dr. Mallonee reported that his external examination revealed a very obvious problem. A condition existed whereby the patient's lower lids had turned in, causing the lashes of the lower lids in both eyes to rub against the corneas causing recurrent and chronic corneal abrasions. It was lashes rubbing on the cornea that gave the patient the feeling he had a foreign body in his eyes. He was in so much pain that he kept his eyes closed almost constantly since the abrasions were causing him severe pain.

"I found on further examination that much of the corneal tissue was gone due to the constant irritation," Mallonee said. "I also found early vertical cupping of the optic nerve head — an early sign of glaucoma.

"I recommended immediate surgery on both lower lids to eliminate the severe irritation. This has been done since and the patient is much better at this point in time. I also discontinued the medication prescribed by the optometrists, both of which cause glaucoma in susceptible patients. The eye pressure is now down, verifying that the long use of drugs had contributed to increased pressure. In addition, we performed a complete glaucoma work-up, which was clearly indicated." ●

● A 30-year-old woman was seen six weeks previously at work by an industrial nurse for complaints of a red, irritated eye. She was referred that day to a local HMO where she was seen by an "eye doctor" whom the patient thought was a physician, but was in fact an optometrist. He diagnosed an allergic problem, recommended "Sinutabs," and referred her to an internist in one to two weeks.

Comment: The patient was inappropriately evaluated by an optometrist for an acute eye problem. HMO's should not use optometrists to evaluate patients with acute eye problems without direct physician supervision.

DANGER AND WASTE

Continued from page 3

found many had gotten the wrong glasses. One man didn't get bifocals and he had used them all of his life. This whole farce left me with little faith in the VA health care system. . . .

"On February 27, 1978, I returned to the VA and asked to see the M.D. I had seen on my last visit. I was told that he had retired, so they sent me to another M.D. This doctor assured me that he was an M.D. and an ophthalmologist, and when I told him of my previous experience, he agreed that optometrists should not treat eye disease, but explained that since he was new with the VA, he couldn't change the rules, and he didn't want to 'make waves.' He told me that he also co-signed prescriptions for the optometrists even though he never sees the patients. This doesn't seem right to me . . ." ●

TREATMENT DELAYED

Mrs. Clara Jones

●

Writes Iowa Legislature

Vol. 2, No. 2, Jan. 15, 1978

The following excerpts are from a story headlined "Damaged Patient Writes Lawmakers," which carried a letter that an Iowa woman wrote to the entire Iowa Legislature, reminding them that optometrists have no medical training:

"For the last 25 years my family has been going to an optometrist for our eye care needs.

"Some time after the most recent change of lenses, I began experiencing difficulty with my vision. Consequently I returned to my optometrist and told him my sight in my right eye was blurred and that something was wrong. After his examination he told me my glasses were correct, the blood vessels were healthy, and further there were no signs of glaucoma or cataracts.

"I still believed that something was wrong in my right eye but believed the doctor must know, so accepted his diagnosis. However, as the difficulty continued and gradually increased, after five months I decided to consult a medical eye specialist. In his preliminary examination he immediately suspected glaucoma which was subsequently verified in both eyes and that the disease had been there for a long time. Also the cataracts are starting. I am informed that a considerable portion of my vision has been lost due to the delay of treatment and cannot be restored, all due to a false sense of security given me by my optometrist.

"My medical doctor tells me that an optometrist is not trained in medicine nor to diagnose eye diseases.

"Because of this lack of training, the optometrist, in my opinion, should be severely penalized when he tries to perform such services which could well end in blindness for his patient.

"I strongly urge you to give this matter your most rigid study and action."

Mrs. Jones later told her ophthalmologist that vision loss was not the only way she suffered due to the optometrist's bold attempts to practice medicine.

"I fell twice," she said, "broke my right arm near the shoulder and the second time my left wrist. I still can't see a step."

Her physician, Leo J. Plummer, M.D., reports that her glaucoma is currently under control, on a program of medications. The Des Moines ophthalmologist notes that dense and extensive visual defects in both eyes are permanent, and that it is necessary for her to learn to walk with her head down to avoid tripping. Dr. Plummer has noted that the drugs Iowa optometrists seek to use are not necessary for the trained physician to suspect, or in most cases, diagnose glaucoma. ●

Don Hostak, Director
Div. of Occupational Licensing

02 13 79

Byron Perkins BP
Licensing Examiner

I spoke with Eldon Ulmer, President of the Board of Pharmacy, and he asked me to convey the following to you in response to your teletype to him last week.

RE House Bill 79 regarding optometrists and particularly their ability to prescribe legend drugs and pharmaceuticals, the Alaska Board of Pharmacy has not changed its position on this issue. The board is not primarily concerned with whether or not an optometrist should be given this privilege, but rather, that the proposed bill in no way addresses the legal question of how they are to obtain legend drugs. Current Federal and State statutes do not permit pharmacists to fill prescriptions for legend drugs by any one but Medical Doctors, Veterinarians, and Dentists.

Re House Bill 101 and Senate Bill 65, the Uniform Controlled Substances Act, this is the number one legislative priority for the Board of Pharmacy, and the board supports it conceptually. However, the current bill is primarily a police bill, and needs to be ammended substantially to make it palatable to the industry. There is not enough language addressing the rights and responsibilities of professionals authorized to handle controlled substances. The Board of Pharmacy is pushing for a Uniform Controlled Substances Act that parallels the federal guidelines.

cc: Eldon Ulmer, R.Ph.
Chairman, Board of Pharmacy

POSITION PAPER/Department of Health and Social Servic

POSITION PAPER
ON
HOUSE BILL NO. 79

"An Act relating to the practice of optometry."

This bill would permit the use of selected drugs including topical anesthetics, mydriatics, cycloplegics and myotics by optometrists, and as such would delete from the definition of optometry the restriction against the use of drugs.

The intent of the bill would be to permit optometrists to use certain prescription drugs. This significantly increases the scope of optometry as presently defined and poses some increased risk and complications. The use of mydriatics is occasionally associated with the development of acute narrow angle glaucoma which may necessitate emergency surgery. The use of topical anesthetics are occasionally associated with acute, allergic reactions and some risks of danger to the cornea by foreign bodies. Recognizing the unusual, but definite risks and complicating reactions, the Department of Health and Social Services feels the use of prescription medications by optometrists would not be in the best interests of the public.

Dear Sir:

Enclosed is a copy of a survey undertaken by myself in March 1979 on the use and experiences of ophthalmic pharmaceutical agents by all ophthalmologists in the state of Alaska.

The impetus for this survey to have been conducted was due to the fact of House Bill 79 in deliberation under the house Health, Education and Social Service committee. In view of this I believe that the resulting responses to questions two,four,five and six are significant indicators . To wit, pertinent information for the House HESS committee members material packets.

Upon your review of this survey, I would appreciate your consideration in submitting this as relevant data and information for the HESS committee members use &/or at their disposal.

Thank you for your time and consideration in this matter.

Sincerely,

Maureen C. Roche

A SURVEY

of the
EXPERIENCES IN THE USE OF
OPHTHALMIC PHARMACEUTICAL AGENTS

A survey was conducted in March, 1979 among the Ophthalmologists in the state of Alaska concerning their experiences utilizing dilating drops.

The format of that survey was patterned after a similar survey undertaken by the Texas Ophthalmological Association in 1976. In addition to the three questions posed by the Texas Ophthalmological Association, four more were composed for the survey undertaken in Alaska. A form was devised and mailed with an enclosed addressed envelope to all twenty three Alaskan Ophthalmologists as provided from the listings on record with the Alaska State Medical Association.

As of May 8, 1979 16 (71.8%) of the 23 survey forms had been returned and those responses compiled & calculated. Below is a summary of these seven questions and the results received.

Question 1. Do you see cases in your office that must be dilated cautiously & require close medical observation?

16 (100%) of all received survey forms had responded yes to this question.

In regards to this, several respondents reported that they were more concerned with cautious dilation in the native, elderly and infant individuals and group of peoples. One Ophthalmologist reported these individuals he sees are examined carefully with the slit lamp employing the goniscope lens prior to use of dilating agents.

Question 2. Have you had cases of acute angle closure glaucoma from dilating drops that required medical &/or surgical care?

13 (81.3%) of the 16 respondents answered yes they had cases of acute angle closure glaucoma from dilating drops that required medical &/or surgical

care. 3 respondents of the 13 that replied affirmatively reported that they had seen "several" and "a number" of such cases. Yet, no specific number was supplied. 1 respondent commented that he had not seen this ocurrence since his training. A total number of cases reported among these 13 respondents was three. Two of these cases required emergency surgery to remedy the situation.

2 of the 3 (18.8%) respondents whom replied no they had not seen cases of acute angle closure from dilating drops stated they employed the method of goniscopy frequently if "suspicious of the safety of dilation". And if dilation be needed after this it would be performed with weak agents that could be counteracted readily.

Question 3. If you are aware that a patient has extremely narrow angles anatomically, and must be dilated for further studies and evaluation of the retina...
a) Do you dilate them in your office?
b) Admit them to a hospital for dilation and observation?
c) Request for a consult &/or refer them to another Ophthalmologist?

15 (93.8%) responded a)they dilate their patients within their office. Of these affirmative responses various comments were reported such as: "dilate with a weak agent that is reversible","cautiously","with phenylephrine","dilate the patient in my office but do not let them leave my office until the pupil has returned to normal","usually","also prepare my patients for admission to a hospital if necessary". One respondent answering question 3 stated that he dilates his patients in his office and then stated "there is no way to predict what the patient will choose".

3 of the 15 replying affirmatively, revealed that they have offices in a hospital complex (2) or adjacent to a hospital complex (1).

1 respondent whom did not indicate whether or not he dilates patients in his office did state "if I have a patient with extremely narrow angles that appear occludable I admit the patient to the hospital and do peripheral iridectomies. Then I dilate and examine the peripheral fundus".

Question 4. Estimate or if able, specify the number of patients you see in a year with narrow angles potential &/or precipitated.

(93.8%) reported a specific number of cases. 1 respondent failed to give a specific number when reporting; "a couple a year". Therefore this response

was disregarded in the statistical analysis. These 15 Ophthalmologists supplied a total number of 1,130 cases they would see in a year of potential and/or precipitated narrow angles. The average figure 75.3 , is the number of patients PER Ophthalmologist responding,that would be seen a year with potential and/or precipitated narrow angles.

Question 5. From your use of topically applied pharmaceutical agents have you seen other side effects? (excluding narrow angle closure glaucoma)

(100%) of the respondents replied yes to this question.

Question 6. In conjunction with question #5, can you supply what pharmaceutical agents (mydriatics,cycloplegics, miotics and anesthetics either generic or brand name) have induced these side effects in some of your patients?
Please estimate by number or if able specify how many reactions have been induced by the said pharmaceutical agents in your practice for the year 1978.

Compilation of the data revealed 13 (81.3%) respondents citing reactions in the parasympathomimetic family. Of the cycloplegics used atropine and cyclogyl appeared to be the worst offenders for inducing reactions. 8 (50%) of the Ophthalmologists reported from their use of atropine such reactions as: "hypersensitivity","poisoning","confusion", "cardiac arrest","rash & fever","convulsions", and "hypertension". 9 (56.3%) of the Ophthalmologists cited reactions from the use of cyclogyl as: "sedation","aloofness","convulsions","hallucinations", "seizures","synocope" and "central nervous system reactions".

9 (56.3%) of the respondents reported reactions with the use of the agents in the sympathomimetic family. Neo-Synephrine (phenylephrine HCL) produced problems for 7 (43.8%) Ophthalmologists' patients. These were indicated as: "hypersensitivity reactions", "conjunctivitis","toxic keratitis","cysts", and "heart dis-rythmia". Euphoria had been induced in the adult patients of one Ophthalmologist from the use of 4% cocaine.

5 (31.3%) of the Ophthalmologists cited reactions induced from the miotics. These were reported as: "conjunctivitis","retinal detachments" and "hypersensitivity reactions".

From the use of anesthetics 11 (68.8%) cited allergic reactions from the use of ophthaine (proparacaine).

3 (18.8%) of the responding Ophthalmologists stipulated they had seen many side effects from the use of pharmaceutical agents but did not report on these reactions nor state from what agents these side effects were induced from.

Question 7. In your practice up to date, being as accurate as possible how many patients are legally blind?

325 legally blind cases were supplied from 11 (68.8%) of the respondents.One Ophthalmologist reported "several cases" in his practice. This response was not calculated in the statistical figures. Three respondents (18.8%) stated such information was not availab'e. One Ophthalmologist declared that 10% of his practice involved legally blind individuals.

SUMMARY and CRITIQUE

This survey had been initiated due to the current legislative situaion in Alaska. The introduction of the so-called "drug bill", (use of pharmaceutical agents:anesthetics,cycloplegics,miotics, and mydriatics by the Optometric profession) has been in deliberation within the state house HESS committee. The subject in deliberation became of interest so much so that conducting this survey was of utmost importance to determine any established relevancy, primarily through the use and experience of dilating drops. These deliberations provided the impetus to undertake this survey.

It is a known fact among the Ophthalmologists and few others that the Native Alaskan is predisposed to narrow angle closure glaucoma. With this in mind and the awareness that dilating drops have the potential to induce and precipitate such an attack of glaucoma; questions two & four were directed at seeking a

determinacy of this precarious situation. It would be fair to say predicated from the responses to these two questions that narrow angle closure glaucoma is quite a significant matter in Alaska and cannot be denied.

Examination of all responses lends additional support that medical supervision or personnel medically trained perform dilation in order to deal with the aforementioned and unmentioned side effects that may arise. Most all respondents in this survey had indicated that they could report and list more side effects from the use of ophthalmic pharmaceutical agents. However, they declined from the arduous task of listing the vast array of side effects.

The results of this survey were forwarded to these twenty three Alaskan respondents.

RE: HB 79

Dear Hugh:

There seems to be some confusion as to which drugs the optometrists are asking to use. That is one of the problems ophthalmologists see with the bill; it does not be specific as to drug but simply authorizes them to use broad classes of drugs. (anesthetics, mydriatics, cycloplegics) this of course will leave room for them to expand as they see fit rather than be limited to specific drugs as approved by the legislature.

Enclosed please find resolution from University of Alabama the optometrists claim that this institution qualifies them to use drugs on people. the resolution speaks for itself.

Sincerely,

Peter E. Cannava, M.D.

THE FOLLOWING DOCUMENT(S) MAY NOT FILM LEGIBLY BECAUSE OF POOR QUALITY OF THE ORIGINAL.

University of Alabama School of Medicine Physicians Advisory Board
Adopted - 10/18/78

WHEREAS, physicians from many states have expressed appropriate concern for the fact that the existence of certain courses in the University of Alabama School of Optometry may be described by political opportunists as qualifying Optometry School graduates to attempt to safely perform medical functions; and,

WHEREAS, this Board recognizes that occasional lectures on medical subjects to optometry students are intended only to enable them to more accurately detect eye diseases and refer to physicians; and,

WHEREAS, this Board also recognizes the inherent dangers in optometry graduates believing that such cursory briefings might equip them to attempt the practice of medicine; and,

WHEREAS, Dr. Henry B. Peters has publically stated that the practice of medicine is an "inappropriate goal for optometry",

NOW Therefore be it resolved,

The University of Alabama School of Medicine Physicians Advisory Board recommends that the following public statement be issued and released to the physicians who have expressed concern:

"The education of optometrists ('specialists in the art or profession of examining the eye for defects and faults of refraction and prescribing correctional lenses or exercises but not drugs or surgery')[1] at the University of Alabama in Birmingham is designed to teach optometry principles and to enlighten optometry students in the detection of disease so as to encourage appropriate referral to physicians. This education in no way prepares these graduates with the knowledge to prescribe or use drugs to treat eye disease. This training should not be viewed as a medical credential."

RE: HB 79

Dear Hugh:

There seems to be some confusion as to which drugs the optometrists are asking to use. That is one of the problems ophthalmologists see with the bill; it does not be specific as to drug but simply authorizes them to use broad classes of drugs. (anesthetics, mydriatics, cycloplegics) this of course will leave room for them to expand as they see fit rather than be limited to specific drugs as approved by the legislature.

Enclosed please find resolution from University of Alabama the optometrists claim that this institution qualifies them to use drugs on people. the resolution speaks for itself.

Sincerely,

Peter E. Cannava, M.D.

HB79

April 20, 1979

Rep. Thelma Buchholdt
Pouch V
Juneau, Alaska 99801

Dear Thelma,

Here is a little follow-up information in regard to our conversation of Friday, April 20.

South Dakota passed an Optometric Drug Bill into law early in March. The House supported the bill by a 64 to 2 vote and the Senate by a 22 to 11 vote.

March 21 saw Utah's drug bill become law, with a 50 to 12 vote in the House and 20 to 4 vote in the Senate.

North Dakota's Optometric Drug Bill became law on March 22 (House support of 41 to 7 and Senate support of 85 to 10).

The wide margin of support in these states indicates the great need for the Optometric usage of diagnostic pharmaceutical agents.

As I'm sure you are aware, our bill passed the House by an overwhelming margin last year, indicative of the faith in the Optometric community in this State.

I would greatly appreciate your help in expediting our bill through your committee this session. Thank you.

Yours truly,

Bill Faulkner

MUNICIPAL HEALTH COMMISSION

March 27, 1979

Thelma Buchholt, Chairman
Senate Health, Education &
Social Services Committee
Pouch V
Juneau, Alaska 99811

Dear Representative Buchholt:

The Municipal Health Commission has reviewed and made a recommendation on House Bill 79 that is presently in your committee.

The Municipal Health Commission is a 33 member, community based group of concerned citizens. The Commission reviews community health issues, grants, problems and legislation and makes recommendations to the Municipal, State and Federal governments and legislative bodies, the general public, and the Regional Health Systems Agency. The Commission membership must meet rigid legal requirements that assure broad demographic and occupational representation as well as a consumer majority.

Attached is the review and recommendation on House Bill 79 as approved by the Legislative Committee on March 7, 1979. We hope that your committee will consider our review and recommendation before making a decision on this bill.

Thank you very much.

Sincerely,

Charles Rigden, Chairman
Municipal Health Commission

LEGISLATIVE REVIEW

BILL NUMBER AND TOPIC: House Bill 79

BRIEF SUMMARY: An Act relating to the practice of optometry. This bill defines the term "optometry" and defines what is included in the practice. The bill also outlines the use of drugs for diagnosis.

BILL STATUS: House Bill 79 was introduced by Representatives Martin, McKinnon, Meekins, Miller, and Parr, and was referred to Health, Education and Social Services and Judiciary Committees.

The series of questions below are presented to assist persons responsible for reviewing proposed legislation. Answering each question will help the reader to better understand the intent or meaning of a specific bill. Question #12 asks the Legislative Advisory Committee to formulate a recommendation, which will then be forwarded to legislators, lobbyists, other review bodies, etc., as appropriate. Action taken by this committee automatically sends the bill and comments through 1) Municipal Legal Department, 2) Municipal Administration, and 3) Municipal Health Commission, time permitting.

1. What is the time frame for influencing the bill's outcome by this committee or Commission? This legislative session

2. What does the bill do? Allows optometrists to utilize certain classes of diagnostic drugs in their offices.

3. Who does it affect? Approximately 2/3 of the residents of Alaska who seek eye care.

4. How much does it cost? Will make no cost differences to the consumer.

5. Is it directed to a specific geographic area? No
What area? _____

6. How would enactment of this bill effect Anchorage? Enable the thirteen Anchorage area optometrists to utilize the diagnostic drugs.

September 6, 1979

March 1, 1979

Nebraska okays DPA usage

LINCOLN, NB — A signature by Gov. Charles Thone makes Nebraska the 17th state in the nation which has enacted legislation specifically authorizing optometrists to utilize diagnostic pharmaceutical agents (DPAs).

Gov. Thone, a former member of the U.S. House of Representatives, signed into law Legislative Bill No. 9 on February 13, the same day the state's one-house legislature passed the bill by a 33 to eight vote.

The legislation redefines and revises the 1943 state statues relating to the practice of optometry and changes state license requirements, in addition to authorizing the usage of DPAs in Nebraska.

The legislation specifies that no optometrist presently licensed in Nebraska "shall use pharmaceutical agents in the practice of optometry unless such person submits to the Board of Examiners in Optometry evidence of satisfactory

Carter proclaims 52nd SYVW

WASHINGTON, DC — To focus the attention of all Americans on the importance of good vision and the need for the public to take care of its eyes, President Jimmy Carter has proclaimed the week of March 4-10 as Save Your Vision Week (SYVW), the 52nd annual celebration of the national event.

"Good eyesight, like so many of life's blessings, is too often taken for granted," the President stated in an official proclamation. "Today, millions of Americans must cope with the burden of impaired vision. In many of

completion of all educational requirements as adopted by the (state health) department upon the recommendation of the Board of Examiners in Optometry, and has been certified by the department upon the recommendation of the Board of Examiners in Optometry as qualified to use pharmaceutical agents for diagnostic purposes."

With Nebraska's legislative action last month, there are 17 states with legislation authorizing optometrists to use DPAs, in addition to nine other states which do not statutorily prohibit the use of pharmaceutical agents.

According to Attorney D. John Pecorino, manager of Aetna's Marketing Department, Casualty & Surety Division. "We do not differentiate between states which have pharmaceutical agents and those which do not."

Currently, there are 16 states with legislation which specifically authorizes optometrists to utilize pharmaceutical agents. In addition, there are nine other states which do not statutorily prohibit the use of pharmaceutical agents.

According to Virgil L. Rhodes, O.D., of Manchester, TN, chairman of the AOA Advisory Committee on Statutory Definition, the recent Aetna reduction in malpractice coverage is important information for state legislators who are confronted by ophthalmological misinformation concerning DPA legislation.

Aetna reduces annual premium for insured AOA members

By RANDY L. WALLICK

HARTFORD, CT — More than two years of efforts between the AOA and the Aetna Life & Casualty Co. have prompted the Hartford based insurance firm to reduce professional liability rates for AOA members by 18 percent.

About two-thirds of all AOA optometrists insured for professional liability by Aetna will realize a premium reduction of $30 off the current annual primary professional liability premium of $168.

Aetna representatives state the rate reduction combines with several other improvements in the insurance program which are designed to provide AOA members with greater membership services and to make the insurance package more flexible and more competitive.

Coupled with the 18 percent reduction is the removal of surcharges for AOA optometrists. The routine 20 percent surcharge made for partnerships and/or professional corporations and the 25 percent surcharge made for employed optometrists have been removed by Aetna.

Effective February 1st, the program changes and the $30 premium reduction will be implemented upon renewal by the more than 6,000 AOA members currently enrolled in the Aetna program.

According to Ronald D. Solomon, O.D., of Colorado Springs, CO, chairman of the AOA Committee on Insurance, Aetna has agreed to provide special rates for property coverages written on a multiple account basis. "This can mean a possible 25 to 40 percent deviation from the normal price AOA members currently pay for protection," Dr. Solomon said.

According to Roger Detrich, Aetna's account executive for the improved AOA program, "Although we will seek these new rates on a nationwide basis, it is possible that in certain states our existing rates, because of the restrictions of state insurance regulations, are now below the new rates.

"Our insured optometrists in these states will realize no change or a slight increase," Detrich said. He added, however, "This will affect only a minority," he said.

Called one of the best benefit services in recent years, the new Aetna program stems from more than two years of efforts by the Committee on Insurance to gain lower rates for AOA optometrists.

Aetna, which has insured AOA members since 1970, attributes the new

SPECIAL TIMOTHY STEELE ISSUE

THE PEN...

PRO BONO PUBLICO

Published in the Public Interest by Ophthalmology

VOL. 3, No. 1 DEC. 15, 1978 - JAN. 1, 1979

FEDERAL JUDGE RULES AGAINST U.S.

Optometric "Primary Care" Results In Loss of Eye For Four-Year-Old Boy

In a landmark decision that could cause the army to re-examine its policy permitting optometrists to provide initial eye care treatment, Judge James M. Fitzgerald, United States District Judge for the District of Alaska, ruled that Timothy Steele, now an eight-year-old dependent of a soldier in the U. S. Army, was entitled to recover for the loss of his right eye.

> **"I conclude that the plaintiff is entitled to recover in this action from the United States for the loss of Timothy's right eye."** *JAMES M. FITZGERALD U.S. District Court*

Judge Fitzgerald's decision was rendered on October 20, 1978, in the case of Timothy R. Steele and Robert K. Steele, plaintiffs, vs. The United States of America, defendant. In his opinion, Judge Fitzgerald stated, "An optometrist's responsibility is to observe during his eye examinations any manifestation of disease visible in the eye. Upon detecting disease in the eye, it is then his obligation and duty to the patient to make known what the optometrist has observed. In such cases, he may not undertake to diagnose the disease, but should inform his patient that the matter is beyond his competence and advise the patient to seek a qualified medical doctor."

The litigation stemmed from a claim brought on Timothy Steele's behalf by his father against the United States for the loss of Timothy's right eye. Timothy Steele, as a four-year-old boy, was treated by John Shank, O.D., an optometrist in charge of the Eye Clinic at Bassett Army Hospital, Fort Wainwright, Alaska.

According to testimony in the case, it was in October and November of 1973 that Timothy's mother first noticed that his eyes were crossing. On December 19, 1973, she took him to Bassett Eye Clinic where he was seen by Dr. Shank.

During his examination, Dr. Shank measured Timothy's vision and found it to be normal. He then used drops to dilate the pupil and looked inside the eye. He diagnosed Timothy's eye condition as accommodative esotropia, which is correctable by eyeglasses. He wrote a prescription for eyeglasses and made an appointment for Timothy to return to the clinic on January 29, 1974, for a checkup.

On January 29, 1974, Timothy reported to Dr. Shank as requested. The optometrist wrote a different prescription for eyeglasses and instructed Mrs. Steele to make another appointment for Timothy four months after he would begin wearing the new glasses.

The testimony further reveals that in early May, Mrs. Steele noticed that Timothy frequently removed his glasses, saying sometimes he could not see well with them.

On June 10, 1974, Timothy was again examined by Dr. Shank and it was then that he discovered that the vision in Timothy's right eye was limited to light perception. At this point, Dr. Shank made an appointment for Timothy with ophthalmologist Bruce Wolf, M.D., of Fairbanks.

When Dr. Wolf, a medical doctor, examined Timothy on June 17, 1974, he found Timothy's visual acuity in the right eye limited to hand motions and capable of perceiving light. Essentially, his right eye was blind.

Recognizing the seriousness of the case, Dr. Wolf called in William Kinn, M.D., as a consultant. On July 9, 1974, Dr. Wolf and Dr. Kinn observed a retinal detachment of the right eye with a subretinal mass. Their diagnosis was possible retinoblastoma, but toxocara canis was also to be considered. Concluding that specific tests were necessary to identify the disease, Timothy was flown to Letterman Army Medical Center where he was examined on July 12, 1974.

At Letterman, it was determined that, because the danger of retinoblastoma, a fast-spreading, life-threatening malignancy, Timothy's eye should be removed. With parental consent, the surgery was performed by Major Bradley C. Black, M.D.

When the pathological report ruled out retinoblastoma, Timothy was returned to surgery and an implant was placed in the socket. Although recovery appeared to be good, Timothy continued to suffer from periodic socket inflammation.

In September of 1974, Timothy returned to Letterman Medical Center where a prosthesis was inserted in the socket. Testimony revealed that since the prosthesis could not be inserted immediately following the operation, it is unlikely that it will ever appear similar to a natural eye. ●

WHY "THE PEN?"

The files of state and national medical associations, all learned societies concerned with the public health, overflow with a preponderance of evidence that the quality of health care is threatened by the precedent of Government encouraging the lowering of professional standards by allowing medical functions to practitioners with no medical education. Medicine accepts the responsibility to respond to epidemics. Death and trauma are resulting, and Doctors of Medicine can do no less than warn potential victims through the continuous presentation of this evidence. The public press of America, given the facts, is supporting this cause, and concerned physicians throughout the nation are pooling their knowledge and resources to package and present the truth through the PHYSICIANS EDUCATION NETWORK.

A SAD SUMMARY:

- **When Timothy was four, his mother noticed his eyes crossing.**
- **A military dependent, he was taken to an army hospital where he was seen by an optometrist, instead of an M.D. (Current standard U.S. military procedure).**
- **The optometrist disregarded disease, infection or malignancy as causes and prescribed eyeglasses. Despite three visits, two pairs of eyeglasses and advancing blindness, Timothy was not referred to an M.D. ophthalmologist for six months, until after his right eye was blind.**
- **Ophthalmologists immediately recognized the probability of either retinoblastoma (malignancy) or toxocara canis (a parasitic worm infection), either of which is treatable in the early stages.**
- **The doctors recommended to Timothy's parents that the right eye be removed, because of the danger of an advanced life-threatening malignancy, as well as a hopelessly blind eye.**

THIS CHRISTMAS:

- **Timothy, 8, has an artificial eye which will never appear similar to a natural eye.**
- **YOU — The U.S. taxpayers have been found liable for the loss of Timothy's right eye. Who should provide primary care?**
- **Tell your legislators.**

DR. ALLEN'S

DIAGNOSES

James H. Allen, M.D.; founding president, New Orleans Academy of Ophthalmology; professor of ophthalmology, Univ. of Iowa and Tulane Univ. for 30 years; Senior Surgeon, Tulane Univ.; awarded the prized Gold Medal of the Ophthalmology Section of AMA, 1976.

TIMOTHY — WE'RE SORRY — WE'RE TRYING

In spite of the loss of his right eye, and the attendant loss of visual field and depth perception, perhaps the young Alaskan victim will grow up to have more "vision" than many U.S. officials. Nearsighted policy supported by these leaders guarantees that disasters like that which befell young Timothy Steele will continue to happen to our servicemen and women, their dependents, as well as our veterans.

The Timothy Steele case, while tragic, had a relatively happy outcome. The alternative probability — retinoblastoma — might well have resulted in death for the youngster because of the delay resulting from what optometry has designated "primary care."

The optometrist should not judged harshly. It is provable that his education did not equip him to attempt to cope with the problem Timothy presented.

The dean of the Pacific University College of Optometry, a government witness, displayed an identical ignorance of the medical facts and identified Timothy's treatment as proper medical care. It is ignorance and over-confidence at the upper level of optometric education that produces large numbers of sincere optometrists, convinced that they know much more about eye disease than they in fact do.

It would be wrong to blame the Eye Clinic, Bassett Army Hospital, or even the Medical Army leadership at Fort Wainwright. The fact that Timothy was seen first by a person with the right to use dangerous drugs to open his eye to look for what he had no training to see is the fault of the defendant — *THE UNITED STATES OF AMERICA.*

And that, dear reader, means that a Federal Court has ruled that Timothy's right eye was wasted by you . . . and me.

We have thus far failed to communicate simple logic, i.e., that a non-medical measuring scientist cannot be substituted for an M.D., no matter how critical the M.D. military manpower shortage may be.

If it takes a "Doctor Draft," so be it. The current policy of both the Military establishment and the Veteran's Administration in allowing optometrists to experiment with their own invention called "primary care" makes a travesty of Abraham Lincoln's determination "to care for him who shall have borne the battle, and for his widow, and his orphan."

Judge Fitzgerald handed down his landmark decision on October 24, 1978. During the same week, the Chairman of the U.S. House of Representatives Committee on Armed Services, Congressman Melvin Price of Illinois, was responding to concerned M.D.s across the land, as follows: *"We are also told that all military optometrists are bound by principles of acceptable and safe medical practice."*

Respectfully, Congressman Price, in the light of Judge Fitzgerald's opinion, and the disaster which has befallen Timothy, who is t lling you such nonsense?

Again respectfully, Mr. Chairman, would you really expect Robert K. Steele, as the "Natural father and next friend of Timothy R. Steele" to accept and/or respect the credibility of your informants?

Judge Fitzgerald has placed the responsibility on the American people, who look to you for leadership in this matter. We acknowledge that medicine has failed in the past to get the message to your military affairs committee, but perhaps the sad fate of Timothy Steele will at least serve the purpose of opening the eyes of your committee members to the grave danger which exists.

At this writing, a dollar value has not been placed on the loss of Timothy's right eye, but that monetary assessment, plus inevitable subsequent judgments resulting from the present policy of allowing optometrists to render medical services for which they are untrained, would serve to fund proper ophthalmologic care in the military, and provide some safeguards for the Timothys of tomorrow.

Author Provides Basic Information On Crossed Eyes

JOHN EDEN, M.D.
"The Eye Book"

A medical examination would have revealed the cause of Timothy's crossed eyes. No ophthalmologist would have depended on eyeglasses alone without further "medical detective work" in a case which presented crossed eyes starting at four years of age.

In **The Eye Book** *(Viking Penguin, Inc.) author John Eden, M.D. has provided basic information on crossed eyes as follows:*

Strabismus, or crossed eyes, is the second of the common childhood onset eye problems. Like amblyopia, it can seriously impair the visual learning process if uncorrected before age six. Strabismus describes two eyes that are not perfectly parallel when viewing an object. This does not mean that the eyes have to be straight ahead; they simply must be parallel to each other whichever way they are turned. But like lazy eye, "crossed eyes" is a misnomer. Although it is possible in one type of strabismus for the lines of sight (visual axes) to cross, they are not always crossed and certainly at no time do the eyes themselves cross. Some other common names for strabismus are "a cast to the eye" and "wall eyes," but these terms are even less correct than "crossed eyes."

Although strabismus is often very obvious, it is frequently impossible to spot with the naked eye. All the same, it is no more possible to be a little bit cross-eyed than it is to be a little bit pregnant. Any degree of strabismus will have the same visual effect; whether it is a slight or major deviation, the damage done to vision is the same. A particularly unfortunate bit of misinformation that contributes to the number of children who are seriously and permanently handicapped by strabismus is the notion that they will grow out of a tendency to cross their eyes. Although it is true that a certain amount of random divergence or convergence is common in infants, children past the age of one or one and a half should be able to hold both eyes in alignment. Crossed eyes after that age is not normal and cannot be left to improve on their own.

By the same token, you cannot give yourself strabismus. The often-heard warning that rolling your eyes or crossing them in play might make you permanently cross-eyed is completely fanciful. Your external eye muscles are meant to be used, and they are designed to move your eyes in all directions, as well as to hold them parallel to one another. You cannot misuse or overuse these muscles.

Like amblyopia, strabismus is damaging because the brain is constantly given an unacceptable visual message and that interferes with the development of visual skills. Use of the two eyes together is impossible since they are viewing different things. Never having had the chance to receive two similar messages, the brain is unable to learn to assemble a three-dimensional image. Without this learned skill, the individual will never have normal depth perception. And, of course, the deviant eye can become amblyopic.

There are several possible causes of strabismus, some better understood than others. And in some instances we cannot identify the cause at all. The most obvious one — that the eye muscles themselves are too weak to hold the eye in alignment — happens to be relatively uncommon. There is no question that there is a hereditary influence; children whose families have a history of strabismus will have a greater tendency to develop it. Another possible cause is a malfunction of the nerve connection to the external eye muscles. A

"TIME HAD RUN OUT"

Full Text of Federal Judge Fitzgerald's Decision

LONG BUT IMPORTANT

Judge Fitzgerald's opinion is lengthy, but you will find it interesting reading. State legislators will find it incontrovertible evidence that optometrists, who have no medical education, should *not* be allowed to experiment with eye drops and attempt to diagnose disease. U.S. SENATE AND HOUSE Military Affairs Committee members will find it MUST READING in terms of evaluating the use of optometrists in the military to provide "PRIMARY EYE CARE."

IN THE UNITED STATES DISTRICT COURT
FOR THE DISTRICT OF ALASKA

ROBERT K. STEELE, as the Natural father and next friend of TIMOTHY R. STEELE, and ROBERT K. STEELE, individually,
Plaintiffs,
v.
UNITED STATES OF AMERICA,
Defendant.

NO. F 75-27 Civil

OPINION

Timothy Steele is an eight year old boy whose father is a soldier in the United States Army. Timothy received medical care as a medical dependent at the Eye Clinic, Bassett Army Hospital, Fort Wainwright, Alaska, in 1973 and 1974. This litigation stems from a claim brought on Timothy's behalf by his father against the United States for loss of Timothy's right eye. The Federal Tort Claims Act[1] furnishes the required jurisdiction.

In October and November of 1973, Timothy's mother noticed Timothy's eyes crossing. On December 19, 1973, she took Timothy to the Eye Clinic, Bassett Army Hospital. There Timothy saw Dr. John Shank, an optometrist in charge of the clinic.

Dr. Shank made an extended examination and diagnosed Timothy's eye condition as an accomodative esotropia correctable by eyeglasses. Following his examination of Timothy, Dr. Shank wrote Mrs. Steele a prescription for eyeglasses and made an appointment for her to return Timothy to the clinic January 29, 1974, for a checkup.

During the January visit to the clinic Timothy's mother reported to Dr. Shank that she thought the eyeglasses were helping since Timothy's right eye was not crossing as frequently. However, Dr. Shank's clinical record noted "no good reflex" in Timothy's right eye. The optometrist wrote a different prescription for eyeglasses and instructed Mrs. Steele to make a follow-up appointment for Timothy four months after Timothy would begin wearing the new eyeglasses.

By early May, Mrs. Steele noticed that Timothy frequently removed his eyeglasses. When questioned, Timothy told her that sometimes he wasn't able to see well. An appointment at the eye clinic was scheduled for Timothy on June 10. When Dr. Shank examined Timothy on that date he found vision in Timothy's right eye limited to light perception. At this point Dr. Shank made an appointment for Timothy with ophthalmologist Dr. Bruce Wolf, close by in Fairbanks.

When Dr. Wolf examined Timothy on June 17th he found Timothy's visual acuity in the right eye limited to hand motion although capable of perceiving light. Essentially, Timothy's right eye was blind. The doctor diagnosed leucocoria, right eye, with right esotropia. In his medical opinion the inflammatory cause was a vitreous hemorrhage with possible involvement of toxocara canis or retinoblastoma. Since either disease was extremely serious, Dr. Wolf ordered a complete workup by a pediatrician hoping to rule out one or both. The pediatric workup proved negative and Dr. Wolf then arranged for ophthalmologist Dr. William Kinn, as consultant. Dr. Kinn, a highly qualified ophthalmologist, before opening a practice in ophthalmology at Fairbanks, spent ten years as a military medical officer. His last three years of military service were spent at Fort Wainwright where he was chief of ophthalmology and supervised the optometrists assigned to Bassett Army Hospital.

On examination of Timothy July 9th, Dr. Wolf and Dr. Kinn observed a retinal detachment of the right eye with a subretinal tumor. "Tumor" in this context was defined as a mass rather than a malignancy. Their diagnosis was possible retinoblastoma, but toxocara canis was also to be considered. The doctors concluded specific tests were necessary so that the precise identity of the disease might be known.

Arrangements were made to airevac Timothy from Fairbanks to Letterman Army Medical Center at the Presidio in San Francisco. At Letterman, Timothy was examined July 12 by a team of medical doctors, including Dr. Michael Hogan who was internationally recognized in the field of ophthalmologic pathology.

(Life-threatening Malignancy)

On examination, the medical team observed a retinal detachment involving a grayish yellow tumor. The doctors diagnosed the cause of the tumor as possibly retinoblastoma or toxocara canis. Eye condition at that point in time made it impossible to differentiate between either disease. Because of the danger of retinoblastoma, a particularly fast-spreading and life-threatening malignancy, the doctors recommended to Timothy's parents that his right eye be removed. Timothy's parents immediately consented to the operation and Major Bradley C. Black, a resident assigned to the ophthalmology unit at Letterman, performed the surgery.

After the eye was enucleated it was sent to the ophthalmologic pathology laboratory at the University of California, Berkeley, California, for examination. The laboratory report revealed total retinal detachment of the eye with giant reaction and massive disorganization of the retina. The pathological examination ruled out a retinoblastoma but concluded the cause of the disease to be granulomatous retinitis,[2] etiology unknown. Unlike as in most eye removals, an implant was not inserted into the socket of Timothy's right eye immediately following surgery as there was a substantial possibility that the pathology report might confirm retinoblastoma. The malignancy would necessarily require radiation treatment and a follow-up examination not possible with an implant. When the pathological report ruled out retinoblastoma Timothy was returned to surgery and an implant was placed in the socket.

Dr. Black continued to treat Timothy following the second operation until Timothy returned to Fairbanks. After Timothy returned to Fairbanks he was treated by Dr. Wolf who noted that Timothy's recovery was excellent with the exception of periodic socket inflammation.

Timothy returned in September to Letterman where a prosthesis was inserted into the eye socket with good cosmetic result. Probably the prosthesis will never appear similar to a natural eye since it could not be inserted immediately following the operation.

("Failed to provide adequate care")

It is claimed in this litigation that the optometrist, Dr. Shank, failed to provide adequate care required of an optometrist when he treated Tim-

TIMOTHY STEELE
. . . during infancy

Steeles Warn Other Parents

In an exclusive telephone interview with Timothy's parents who now live in Hawaii, where Army Sergeant Robert Steele is stationed at Schofield Barracks, PEN learned more of an unfolding tragedy.

Saying the subject was "extremely painful" to them, Sgt. and Mrs. Steele agreed to discuss the case because they wanted to warn other parents against relying on optometrists for "primary care."

Sergeant Steele told PEN that, confronted with a life-threatening alternate possibility, the family welcomed the diagnosis of toxocara canis, but he added, "We were pretty well under for about a week after they took out our boy's eye." The tragedy, Steele said, caused Timothy's mother great emotional stress that required medical treatment.

Confirming the words of attorney Nelson Parrish, Steele advised PEN that up until the time of this incident, Timothy had been a bright, well-adjusted youngster who could look forward to a promising future. Today, at nine years of age, Steele said Timothy is working hard to overcome his handicap and engage in normal activities, but despite his determination, he is encountering difficulties.

Timothy is ashamed of his condition, Steele said, and still suffers physically and psychologically. Mrs. Steele told PEN, "Timothy gets very upset if he finds out that other kids know he has an artificial eye — kids can be unkind."

While after five years, monetary damages have yet to be assessed, Mrs. Steele told PEN, "But nothing can replace Tim's eye." ●

From: Transactions of the American Ophthalmological Society — Vol. 67, 1969.

"It is well to consider that any child with strabismus (crossed eyes), and especially any child with strabismus and a poorly fixating eye, has retinoblastoma until proven otherwise."

Robert N. Ellsworth, M.D.
Director, Eye Tumor Clinic of
Edward S. Harkness Eye Institute
Columbia Presbyterian Hospital

JUDGE'S DECISION *Continued from page 3*

othy in December of 1973 and January of 1974.

OPTOMETRIC RESPONSIBILITY

Dr. Shank graduated with a degree in optometry from Pacific University at Forest Grove, Oregon, in 1971. He was commissioned in the United States Army as a Captain in the medical services and during the summer of 1973 was assigned to Fort Wainwright, Alaska. In November of 1974 he left the Army and now is in the practice of optometry at Kodiak, Alaska.

When Dr. Shank made his first examination of Timothy's eyes on December 17, 1973, he recorded a brief history:

Past six weeks mother thinks patient is cross-eyed. Father amblyopic. Age 4. Negative medical history. Rubs eyes after playing up close. Notices no real problem with depth. No allergies.

In addition he also tested Timothy's unaided vision using a standard AO chart (pictures) for children. The best possible visual acuity when measured with an AO chart is 20/30. Dr. Shank recorded Timothy's visual acuity 20/30 OD and OS (both eyes). After dilating Timothy's eyes he made an internal examination and noted:

Preliminary scoping shows opacity in right eye. Dilated with 10 percent Neo at 1430. Vitreous lesion in right eye caused from hemorrhage.

Upon completing the examination, Dr. Shank concluded that Timothy's eye problem was caused by an accomodative esotropia[3] correctable by a prescription for eyeglasses. He did not think it necessary to refer Timothy to an ophthalmologist.

Dr. Willard Bleything, Dean of the College of Optometry, Pacific University, Forest Grove, Oregon, who was called as a government witness at trial, agrees with Dr. Shank. According to Dr. Bleything, the findings of Dr. Shank's December examination are entirely consistent with an accomodative esotropia, hence, there was no need to send Timothy to a medical doctor.

In his testimony Dr. Bleything touched on the scope of training provided in a school of optometry. A significant part of optometric training is given over to recognition of diseases in the eye. In this case no one questions the principle requiring optometrists to refer their patients to medical doctors once disease is detected in the eye.

(Vitreous Hemorrhage)

In Timothy's case, however, Dr. Bleything would distinguish between an active vitreous hemorrhage and an inactive vitreous hemorrhage. He classifies an inactive vitreous hemorrhage as a scar and suggests referral to a medical doctor is indicated only in the event that an active vitreous hemorrhage were detected. It is implicit by this reasoning that to Dr. Bleything a scar is not an indication of existing disease. Scar tissue, according to Dr. Bleything's opinion, when old or inactive, is typically black. This is consistent with Dr. Shank's testimony that the vitreous hemorrhage detected in his December examination was old because it appeared black or dark.

Actually a black or dark color in a vitreous hemorrhage has nothing at all to do with its age, but rather is a result of its magnitude or extent. The black or dark color indicates a lack of reflected light from the retina behind the hemorrhage. Blood in a vitreous hemorrhage is not black; it is only the shadow that appears black. Indeed, as Dr. Black states in his deposition, an old vitreous hemorrhage would appear as white strands in the vitreous and settle to the lower part of the vitreous. And Dr. Kinn testified that he had personally observed hemorrhages in the vitreous more than a year old which were red in color. He explained that a hemorrhage would appear to be black because it was sufficiently thick with blood to absorb all the light reflecting off the retina during an examination, not because of an innate darkness of color.

The interrelationship between optometric and medical responsibility is discussed in considerable depth in the scientific text referred to at trial, "The Optometric Profession," by Hirsch & Wick. The text notes that responsibility for recognizing eye disease has not always been a part of optometry, nor indeed is it now a part of optometric services in parts of the world outside of the United States and English speaking countries. In some European countries an optometrist is expressly forbidden to examine the eye to determine whether it is healthy or not.[4]

Some of the diseases which may be discovered by examination of the eye are brain tumors, diabetes, kidney disorders, hypertension, as well as some diseases caused by microorganisms such as tuberculosis. Optometrists study about these and other diseases in order to recognize eye manifestations of diseases. An optometrist should not attempt to complete a definitive diagnosis but recognize this responsibility is part of the practice of medicine. This principle is clearly stated in "The Optometric Profession."

JUDGE JAMES M. FITZGERALD
U.S. District Judge - Alaska

"The difference between optometric and medical responsibility to the patient may be clarified by example. If an optometrist observes a hemorrhage in the fundus, he recognizes that it may be due to any of the diseases already enumerated. It also may have resulted from a vascular accident or from undue capillary fragility. The important consideration for the optometrist, however, is that he see and identify the hemorrhage. It is his responsibility to refer the patient to the appropriate medical practitioner for diagnosis and treatment of the disorder. The optometrist's understanding about disease is sufficient to recognize the various diseases that can cause hemorrhage. He does not attempt to differentiate between them. Medical technology has advanced so greatly in the past few decades that there are now many laboratory tests the physician can use in making the correct diagnosis. Disease is diagnosed by many procedures. The appearance of the eyeground is only one of them." *The Optometric Profession.*

I am not persuaded with Dr. Bleything's reasoning that referral to a medical doctor ought to depend on whether the optometrist has diagnosed a vitreous hemorrhage as active or inactive. The authors, Hirsch & Wick, suggest in their text that the important consideration is that the optometrist be able to see and identify the hemorrhage. It then becomes his responsibility to refer the patient to a medical doctor for diagnosis and treatment. Since Dr. Shank detected the vitreous hemorrhage of the right eye during his December examination, it was his immediate responsibility to promptly refer Timothy to a medical doctor. In point of fact, ophthalmological services were then readily available to military personnel at Fort Wainwright and to their dependents under a federal contract with Dr. Wolf.

Dr. Shank was aware of symptoms other than vitreous hemorrhage which are of significance to an optometrist. Esotropia in a child of four, Timothy's age in 1973, is a serious matter. Dr. Black states that esotropia in a four year old child is very rare. Most cases of congenital esotropia caused by muscle imbalance develop before age two. This condition is correctable by an operation on the muscles of the eye. Accomodative esotropia, such as diagnosed by Dr. Shank in December, 1973, develops in most cases at age two to two and a half, although it occasionally develops as late as age four or five. This condition is correctable by eyeglasses and the esotropia usually corrects itself after eyeglasses are worn. But esotropia may also indicate some type of retinal or vitreous pathology in the visual axis. This will often involve a disease in the macula, the central part of the retina. This condition reduces visual acuity in the eye and as a result the eye turns inward. In Dr. Black's opinion the most important thing to rule out when a child does present an esotropia is retinal or vitreous pathology. But even more, when a vitreous hemorrhage is observed in a child, it is very important that retinoblastoma be immediately considered until that disease can be completely ruled out.

Dr. Wolf, who treated Timothy at Fairbanks before and after his hospitalization at Letterman, agrees with Dr. Black that Dr. Shank should have referred Timothy to an ophthalmologist in December. Dr. Wolf believes that referral to a medical doctor ought to have been made immediately when Dr. Shank learned of the esotropia from Timothy's mother. Dr. Kinn, who consulted with Dr. Wolf, also agrees that referral was indicated in December. Indeed, Dr. Zimmerman, an eminent ophthalmic pathologist, who testified for the government at trial, concurs that further investigation should have been undertaken at the time the lesion was observed in Timothy's right eye.

(Credible Opinion Cited)

I am persuaded from credible, convincing medical opinion, as well as the scientific publication referred to, that Dr. Shank failed to meet the standards required of his profession when he examined Timothy in December of 1973. He knew that Timothy presented an esotropia and in the course of his examination he observed a vitreous hemorrhage in the right eye. An optometrist's responsibility is to observe during his eye examinations any manifestation of disease visible in the eye. Upon detecting disease in the eye, it is then his obligation and duty to the patient to make known what the optometrist has observed. In such cases he may not undertake to diagnose the disease, but should inform his patient that the matter is beyond his competence and advise the patient to seek a qualified medical doctor. Certainly in January when Dr. Shank detected the poor reflex in Timothy's right eye, he should have sent Timothy to a medical doctor. Instead, he delayed making a referral to an ophthalmologist until after his last examination in June, 1974. By that time Timothy was essentially blind in his right eye, and by then the retina had pulled away from the rear of Timothy's right eye. As it was to turn out, nothing thereafter could be done to save the vision or to save the eye. Time had run out.

Several questions arise at this juncture. Was the disease which ultimately caused the eye to be removed present when Dr. Shank made his examination in December, 1973? What was the nature of the malady and could it have been diagnosed? Could the disease have been treated had it been timely discovered?

There is general agreement in the testimony of the physicians that the disease which brought about the removal of Timothy's right eye was present when Dr. Shank made his initial examination.

When Dr. Wolf examined Timothy in June, 1974, he diagnosed a vitreous hemorrhage with the possibility of either retinoblastoma or toxocara canis. The team of medical doctors who examined Timothy at Letterman Hospital in July considered four possibilities. The first was persistent hyper-

Continued on page 5

JUDGE'S DECISION *Continued from page 4*

plastic primary vitreous, a congenital defect of the eye present at birth and generally noticed shortly after birth. With such a condition as persistent hyperplastic primary vitreous, the eye is usually a bit smaller. The front part of the eye is ordinarily not normal so there are distinguishing factors for that disease. The medical doctors at Letterman were able to rule out this possibility. They were also able to rule out a vitreous hemorrhage as a cause since the vitreous of the eye was fairly clear when the doctors made their examination. The two remaining considerations related to some type of inflammatory response, most probably either toxocara canis or retinoblastoma.

(A Dangerous Malignancy)

Retinoblastoma is an extremely dangerous malignancy sometimes found in the eyes of young children. When diagnosed, retinoblastoma requires removal of the diseased eye to prevent the malignancy from escaping outside the eye, possibly through the optic nerve into the brain.

Retinoblastoma was ruled out in the University of California pathological report following examination of the eye after the operation. A negative finding of retinoblastoma eliminated any need for radiation treatment. In Dr. Black's medical opinion the cause of the inflammation of Timothy's eye was probably toxocara canis. Dr. Black observed that although the larva was never found in the new sectionings of the eye, it is known that the larva may disintegrate or completely disappear in the eye.

Toxocara canis is a parasitic round worm frequently found in dogs. The eggs of the parasite may be ingested by children playing in dirt and the eggs hatch in the intestines of the child into a larva. The larva bores through the intestinal wall and enters the blood stream and is disseminated to different parts of the body. In every instance, with possible rare exception, the parasite is not able to complete its life cycle in a human host and the larva dies without developing into an adult worm. The most common locations where it has been found are in the liver or the lungs. Inflammation of the eye by toxocara is fairly rare. But when it does appear it tends to result in a massive inflammation which usually involves the retina and sometimes may intrude into other structures inside the eye. The presence of toxocara in the body often leads to visceral larva migrans syndrome. The child can have a fever and may have some type of lung disorder, his liver may be enlarged and tender and there may be some abnormalies in certain blood tests. However, an ocular toxocara inflammation frequently occurs without a visceral larva migrans syndrome occurring and some studies suggest that in only three or four percent of ocular toxocara inflammation is the syndrome present. With ocular toxocara, so long as the larva remains alive, there is usually not much effect on the eye. There may be a local inflammation in the retina or a small whitish elevated lesion in the retina at the site of the larva or where it penetrated the retina, but the stage at which the parasite usually becomes very damaging is when the larva dies and decomposes. This leads to an extensive lesion in the eye eventually resulting in a massive scar. If the larva is able to work itself into the vitreous cavity of the eye, it brings about an even more severe inflammatory process.

(Dr. Krupp's Testimony)

Dr. Iris Krupp of Tulane University in New Orleans, Louisiana, is a widely renowned expert in the field of parasitology. She began her work on toxocara as a graduate student in 1954. Since then, she, in association with several ophthalmologists, has done extensive work in the detection and treatment of toxocara. She developed a reliable serologic test for the detection of toxocara which was announced in an article[5] published in the "American Journal of Tropical Medicine" in May, 1974.[6] After examining the medical records, including the pathology report, in Dr. Krupp's opinion the probability was 90 percent that the disease in Timothy's right eye was toxocara.

Ophthalmic pathologist Dr. Lorenz Zimmerman was a principal government witness at trial. He agreed that the University of California pathological report required that retinoblastoma be ruled out as a cause. However, he noted Dr. Helenor Foerster, a widely known ophthalmic pathologist, also performed a pathological examination on Timothy's eye. Dr. Foerster has published a number of important scientific papers, one of which presented the initial description of toxocara infection of the eye. Dr. Foerster prepared a pathological report in connection with a paper which she presented to the Western Ophthalmic Club. In her report, Dr. Foerster observed many pigment-laden macrophages and giant cells in the retina. Dr. Zimmerman believed this was significant since it implied substantial bleeding into the eye, or alternatively, that a foreign body containing iron might have been introduced into the eye. He postulated that bleeding may have been brought about by several causes, including persistent hyperplastic primary vitreous. In addition, Dr. Zimmerman suggested another possibility of the cause of the inflammation might be a low grade bacterial infection. He did not, however, conclusively rule out toxocara as a possible cause but noted that the larva was not found in either pathological examination. Also, in Dr. Zimmerman's opinion the iron pigment described by Dr. Foerster in her pathological report would not be characteristic of toxocara infection. For these reasons he discounted toxocara as the cause.

Dr. Zimmerman concluded that in this instance it is unlikely that the cause of Timothy's eye inflammation can ever be reliably known, hence the doctor's final diagnosis was chronic sclerosing endophthalmitis, cause undetermined.

It is true that the larva was not found during pathological examination. But as Dr. Black explained, the larva may decompose and disintegrate. The University of California pathological report following examination of the eye was prepared by Dr. Joseph Elinson, an ophthalmologist. In his deposition testimony, Dr. Elinson stated the pathological diagnosis was granulomatous [illegible], etiology unknown. As stated above, this is a general inflammation involving the retina. Toxocara canis characteristically causes this type of inflammation although other causes are possible.

In the course of the pathological examination, a technician prepared 30 to 40 sections from the eye. A section is less than a tenth of a millimeter and unless the entire eye is sectioned it is possible to miss the larva. In Dr. Krupp's opinion, insufficient sections of the eye were examined to exclude the possibility that the larva was in the eye. Other possibilities suggested by Dr. Zimmerman that bleeding into the vitreous was caused by persistent hyperplastic primary vitreous were ruled out during the medical examination in July at Letterman, nor is there anything to suggest the possibility of a foreign metallic object as the cause of the inflammation.

I find on the basis of the testimony of the treating physicians, including Dr. Wolf, Dr. Kinn and Dr. Black, that toxocara canis was the probable cause of the inflammation in Timothy's right eye. The opinions of the treating doctors are substantially similar to the opinion of Dr. Krupp whose qualifications in this field are outstanding. I find in all probability the larva entered the eye through the retina prior to the time Dr. Shank made his examination in December of 1973. Probably the vitreous hemorrhage observed by Dr. Shank was caused by underlying lesion in the retina of the eye.

(Ophthalmic Procedure)

While it cannot be known with absolute certainty what an ophthalmologist would have done or been able to do if Timothy had been seen in December, 1973, Dr. Kinn testified that the ophthalmologist would have been immediately concerned with making a diagnosis. At that time the physician might have had some indication of a retinal lesion which would cause him to suspect either a granulomatous reaction or a retinoblas-

IRIS KRUPP, M.D.
Tulane University Professor

M.D. Expert Witness Comments...

Iris Krupp, M.D., of New Orleans, an authority on parasitology who testified as an expert witness in the Steele case, has issued a warning to PEN readers to seek an early medical eye examination if symptoms similar to Timothy's are noticed. Delay, as in Timothy's case, can result in blindness.

In a letter to the editor of PEN, Dr. Krupp, a Tulane University professor, indicates that early treatment with steroids and thiabendazole (an anti-parasitic drug) and/or the laser could save the eye of a patient with visceral larva migrans, which afflicted Timothy Steele.

Dr. Krupp also said that man is not a natural host for the roundworm of the dog (toxocara canis), but may affect children who have eaten dirt or food contaminated by fecal material of a dog containing the eggs of the parasite.

Once ingested, the eggs hatch and the larvae pass from the intestines into the blood stream and may settle in any organ of the child's body. Symptoms may include coughing and wheezing, excessive weariness, loss of appetite, seizures and changes in the ability to see.

Diagnosis can be made by studies of the blood and examination of the sites at which the larvae may be deposited.

Finally, Dr. Krupp emphasized that "It is extremely important that persons with ocular lesions be seen early by a physician experienced in the diagnosis and treatment of this infection, as delay may result in blindness." ●

A medical educator comments:

"In every patient with a misdirected eye and/or an abnormality in the eye, the possibility of a malignant tumor must be excluded."

Conclusion: Judge Fitzgerald's Ruling

Continued from page 5

toma. The ophthalmologist would have been able to examine the microscopic details with specific instruments and, if inflammatory cells were observed, the doctor could have concluded that an inflammatory reaction was present. In such circumstances a diagnosis of toxocara would be likely. Dr. Kinn explained that since the eye was functioning in December it would not have been prudent to remove the eye even if retinoblastoma was suspected. Rather, Dr. Kinn would recommend a therapeutic trial of steroids be undertaken and if the response would be favorable, then the eye not be removed. But if the mass continued to grow despite the treatment and if retinoblastoma could not be ruled out, it would be necessary to enucleate the eye.

Although in Dr. Zimmerman's opinion there is no recognized treatment for toxocara canis, in fact according to Dr. Krupp, the use of steroids in treating toxocara appeared in the medical literature as long ago as 1961.[7] And since that time, Dr. Krupp maintains there have been numerous reports in the literature on the use of steroids. In her own right, Dr. Krupp has participated in treating approximately 20 cases involving ophthalmic toxocara. Her treatment for toxocara includes thiobendazole and steroids, generally used in combination. Thiabendozle is an antihelmintic medicine which kills the larva. The steroid is an anti-inflammatory agent which reduces the mass of inflammation generally associated with toxocara. In each of the cases in which Dr. Krupp participated, treatment was able to arrest the loss of vision at the stage it was when the patient was first seen. Results of treatment can usually be observed within three to four weeks. In the event a patient does not respond to treatment, retinoblastoma may be indicated.

Dr. Black was also aware of several cases where inflammation of the eye was treated with steroids, and in isolated cases steroid treatment has decreased the inflammation, resulting in minimal scarring. But in Dr. Black's opinion, in most instances toxocara is not seen by the ophthalmologist until it has been quite destructive. However, assuming that visual acuity in Timothy's right eye was 20/30 in December of 1973 and treatment with steroids was instituted, some vision might have been salvaged.

In Dr. Wolf's opinion, if Timothy had been seen by an ophthalmologist in 1973, very possibly the eye could have been saved. Since a granulomatous inflammation is a cellular reaction to a foreign object, treatment would be taken to block the reaction. Steroids are a recognized form of treatment for granulomatous inflammation.

I find it probable that an ophthalmologist examining Timothy's right eye in December, 1973, would have diagnosed possible granulomatous reaction, toxocara canis or retinoblastoma. Although there was a lesion in the eye that to some extent impaired Timothy's vision, his visual acuity in the eye was 20/30, the best that could be measured on Dr. Shank's eye chart. The ophthalmologist under such circumstances would almost certainly institute a course of treatment involving steroids in order to reduce the inflammation. The treatment would have prevented further loss of vision and toxocara inflammation would have caused minimal scarring. The eye would have been saved.

Since the jurisdiction of the court is found under the Torts Claims Act, Alaska tort law controls. *Richards v. U.S.*, 369 U.S. 1; *U.S. v. English*, 521 F.2d 63 (9th Cir. 1975). The concept of liability arising out of negligence has been recently stated by the Alaska Supreme Court to be:[8]

> It is elemental that in order for liability to be imposed in a negligence action, the plaintiff must establish a duty of due care owed him by the would-be defendant, a breach of that duty, and finally, that the injury was proximately caused by the breach of duty. Generally speaking, the duty of due care or ordinary care is the duty to act with that amount of care which a reasonably prudent person would use under the same or similar circumstances.
>
> *Leigh v. Lindquist*, 540 P.2d 492, 494 (1975).

Dr. Shank's failure to promptly inform Mr. and Mrs. Steele of the vitreous hemorrhage in their child's eye and his accompanying failure to refer Timothy to an ophthalmologist was a breach of the standard of care owed to Timothy Steele and his parents. I find Dr. Kinn's testimony as the duty owed to be especially persuasive. Not only is he a board certified ophthalmologist who continually deals with optometric referrals, but Dr. Kinn was previously chief of the eye clinic at Bassett Army Hospital for three years. During those years, he was in charge of the optometrists at the eye clinic and had overall responsibility for all medical and optometric care at the clinic. Additional evidence of the breach of the standard of care is found in the established text "The Optometric Profession." That authoritative work explicitly states that an optometrist is bound not to try to differentiate between pathologies such as hemorrhages. Instead, an optometrist must refer the patient to a medical practitioner for prompt examination.

(Judge's Conclusion)

I conclude that competent optometric practice required that Timothy's parents be notified and that the child be referred. The failure to inform and refer was not a "judgment call" but a violation of the governing principles of professional standards.

Optometrists are trained to recognize symptoms of many diseases which may be discovered by eye examination. They are not permitted under recognized optometric standards to undertake a definite diagnosis but recognize this as the responsibility of a medical doctor.[9] Obviously, it is foreseeable that failure to refer to a qualified medical practitioner, when required to do so, will result in delay of diagnosis and the institution of treatment; so it proved to be in Timothy's case. At the time the referral was finally made to an ophthalmologist, it was too late. Time had run out, and the only thing that could be done was to remove the eye.

I conclude that the plaintiff is entitled to recover in this action from the United States for the loss of Timothy's right eye.

DATED at Anchorage, Alaska, this 20th day of October, 1978.

ss: James M. Fitzgerald
United States District Judge

---

1 28 U.S.C. 1346(b). Plaintiff's original complaint founded jurisdiction on the Federal Torts Claims Act but mistakenly cited the section as 1366(b).

2 Retinitis is an inflammation which chiefly involves the retina. "Granulomatous" is a type of inflammation. Thus, the pathology conclusion was that of a general retinal inflammation of unknown origin.

3 Esotropia, meaning pointing inward.

4 **The Optometric Profession** by Monroe J. Hirsch and Ralph E. Wick, (1968 edition) Chilton Book Co. at page 17.

5 Hemoglutination Test for the Detection of Antibodies Specific for Ascaris and Toxocara Antigens in Patients with Suspected Visceral Larva Migrans.

6 Since the article did not appear until May, 1974, the physicians who treated or examined Timothy were probably not aware of Dr. Krupp's serological test.

7 By Schneider at the Oxnard Clinic.

8 The standard of care required of medical doctors, osteopaths, and dentists is found at AS 09.55.540. Optometrists were not included. In 1976 the statute was broadened to include all health care providers. 31 Ch. 102 SLA 1976. The amendment was limited, however, to actions filed after the effective date, May 29, 1976. Since Steele v. U.S. was filed August 20, 1976, the amendment is not applicable.

EDEN: CROSSED EYES

Continued from page 2

common, more readily explainable cause is an uncorrected high degree of farsightedness. Remember that young people can correct farsightedness by using their near-focusing ability. This involuntary action plays a part in strabismus because when near-focusing muscles are used the eyes automatically converge to take in the near object. Notice that when you shift from looking at a far object

Strabismus.

to looking at a near one your eyes turn in a bit. This is a natural and normal reflex, but when a farsighted child uses the near-focusing muscles to view far objects clearly, his or her eyes may converge. The reflex is stronger in some than in others, so it does not mean that all children with uncorrected farsightedness will develop strabismus, but it is a possibility.

A disease that causes poor vision in one eye is another possible cause. If one eye sees quite badly, there is not much visual benefit to be gained from using it. The brain will not tell the nerves to tell the external muscles to hold the eyes parallel, and the defective eye may simply turn in or out because there is little reason for it to hold itself parallel to the other eye.

What difference does all this make? Is strabismus more than just a cosmetic problem, a matter of looking a bit odd because the eyes are crossed? Indeed it is. Binocular use is not a skill mechanically achieved; it must be learned in that ever-important period before age six. If strabismus is uncorrected during that time, the child will never be able to learn to use both eyes together. Correction after age six will improve appearance, but it cannot provide a second chance to learn binocularity. Likewise, if the strabismus has caused the deviant eye to become amblyopic, correction of the deviance after age six will not cure the ambiyopia.

Epicanthus.

Extremely misaligned eyes can be spotted by a parent or anyone looking at the child, but strabismus is often not that pronounced. An eye doctor, however, can readily discover strabismus during the routine eye examination and can determine how it should be treated.

A condition called *epicanthus* often causes parents of young children to suspect strabismus. At birth, a wide nose bridge normal to all babies is combined with an unusual eyelid fold that often makes it seem that one eye is turned in too far when the baby looks slightly to one side. In fact a large portion of the sclera is hidden by the *epicanthal fold*, but the eye is not turned in more than normal. This is an anatomical feature that is not at all related to strabismus, and it does not interfere with learning to see. The child may look abnormal, but he or she does not see abnormally. And in most cases, the epicanthus recedes as the child's nose narrows. ●

FOUNDER SALUTED BY AMA NEWS — PART II

Ochsner: "Treat The Whole Patient"

The accomplishments of Alton Ochsner, M.D., PEN's International Advisory Board Chairman, are legend in the annals of American medicine. Terming PEN, "The most potent communications effort I have ever observed in medicine," Dr. Ochsner has said, "Ophthalmology — medicine's protectors of one of God's greatest gifts — eyesight — finds itself in the trenches, doing grim battle against a potential epidemic of ineptitude foisted on the American public by some legislators who have heard only the exaggerations and half truths of the optometric side of a non-argument."

Free-lance author Nancy Yanes Hoffman, in an article titled "Alton Ochsner: 82 and Still Going Strong," which appeared in the AMA Journal on August 25, 1978, Vol. 240, No. 8, has captured the essence of this man's greatness. PEN wishes to express its appreciation to Ms. Hoffman and to the JAMA for permission granted to present this material in a series of articles.

"Alton Ochsner: 82 and Still Going Strong," Part II:

The trend in American medicine, as in American life, toward trying to get by with mere competence while not striving for excellence, worries Ochsner. "The other thing that worries me is that physicians rely too heavily on laboratory findings. I fear we are developing a group of competent technicians, treating disease but not treating the whole patient. I stress to our young people that they must sit down with a patient, take a complete history, do a careful examination, then evaluate the findings and arrive at a working diagnosis. After that, they should order laboratory tests. If the laboratory work confirms the clinical diagnosis, accept it. If it doesn't, disregard the laboratory findings and keep on looking. Sounds like heresy, I know, but it's true."

Ochsner remembers a South American woman (the Ochsner Medical Institutions draw many Latin American patients) who had been diagnosed as a hypochondriac with severe psychiatric problems. Although Ochsner protested, "I don't know anything about psychiatry," he saw the patient, became convinced that she had no more psychiatric difficulties than the rest of us, examined her and diagnosed her case as amebiasis. The laboratory test disagreed — as did the gastroenterologists. Ochsner insisted on instituting anti-amebiasis therapy. "Three days later she walked into my office and said, 'Doctor, I'm well for the first time in years.' What convinced me? Such things as tenderness over the appendix and the liver and listening carefully to the chronology of her symptoms: 'I wake up in the morning and I could whip my weight in anything. By ten o'clock, I can't drag one foot after the other.' This complete asthenia is characteristic of amebiasis. Doctors must listen to the patient, discard their hidebound preconceptions, track down every clue, have the courage of their convictions even when their peers oppose them. I can't emphasize this enough to students."

As Ochsner looks back at his diverse medical career, he believes that his most valuable contribution to medicine has been his teaching. "I'd like to be remembered as a teacher. As Tulane's professor of surgery, I've gotten my greatest satisfactions from teaching more than 3,600 medical students and from teaching our resident fellows here at the Ochsner Foundation Hospital." No student will ever forget those harrowing sessions in the "bull pen" with Alton Ochsner. At one of these "Why Clinics," as Ochsner dubs them, he was barraging a student with questions. "Why? Why? Why?" demanded Ochsner, forcing the student to analyze and defend every assumption that was not thought through. In a classic fight-or-flight response, the student fainted. When he was revived, Ochsner interrogated him just as vehemently — with one additional question: "Why did you faint?"

Who was his best student? "Mike DeBakey. Remarkable, brilliant." Ochsner considers DeBakey "indefatigable." As for himself: "I don't know if

ALTON OCHSNER, M.D.
PEN'S International Advisory Board Chairman

I have such prodigious energy. My friends say I work too hard. That's ridiculous. I love what I do. I have fun from the time I get up in the morning until I go to bed at night. I don't work hard; I put in long hours. I think that I'm basically lazy, but I'd be miserable if I didn't work." Ochsner insists that his fabled vigor comes from not wasting energy on disappointment or regret for the road not taken. "Then, too, I've never smoked. Tobacco is the most malevolent aging factor present today. Everybody gets older, but nobody has to get old. Chronological age is irrelevant to physical and mental age. Start with a good machine, take care of it, and it will last a long time.

How to age as well as Ochsner — or, at least, to try? "Three factors accelerate aging: tobacco, our modern sedentary life (people must exercise strenuously daily, until they're out of breath, huffing and puffing), and obesity." Ochsner himself eats sparingly, usually skips lunch, and never has permitted his trim body to lose the battle of the bulge. "If I ate what I wanted," he says, "I'd weigh 300 pounds."

What was Ochsner's most interesting case? An impossible question. Separating Siamese twins; the first successful resection of a saccular aneurysm of the aorta; a thyroidectomy on Tomas Gabriel Duque, then former President of Panama, in 1942, at Cordell Hull's request; surgery on the late jazz trumpeter Muggsy Spanier, who thanked him by writing the song, "Oh, Dr. Ochsner"; or treating Ben Hogan after an automobile accident. Six weeks after the accident, ready to be discharged from an El Paso Hospital, Hogan had suffered a pulmonary embolus, had received anticoagulation therapy, then had had a massive embolus five days later.

It was Mardi Gras time. After attending the Queen's supper, Ochsner had gotten to bed at 4 A.M., arisen at 5 A.M. and had worked all day until ten in the evening. He had finally fallen into bed, "dog-tired," when the phone rang. Could he fly to El Paso? Hogan was cyanotic and comatose. As soon as Ochsner saw Hogan he said, "He's got to have his cava tied — immediately" Ochsner remembers: "Hogan was bleeding profusely. His blood was absolutely incoagulable. His prothrombin time was 0. At noon, I began giving him protamine sulfate and vitamin K and blood transfusions. By midnight, his pro-time was 30%, but we couldn't wait any longer because he was sinking fast. I operated."

Ochsner flew home, got in at 8 A.M., went directly to the foundation hospital, and started work. Hogan got well and won touraments after that.

Ochsner postscripts: "People are reluctant to tie off the vena cava, because it seems like such a horrible procedure, but it's not. It can be a life-saving act." Why? "Most patients don't develop a fatal infarction after a nonfatal pulmonary infarct, so surgeons and internists both gamble that every patient won't have a fatal embolus. But every patient who's had a pulmonary embolus is a candidate for another one. He may be lucky and not have one, but it's dicey." Again, Ochsner repeats George Dock's dictum: the importance of being careful. "Many doctors will say wait until a patient has had two or three emboli, then ligate. In my opinion, that's playing Russian roulette. **All medicine is judgment. I can bring anybody in off the street and teach him how to cut and sew in three months. It's knowing when to operate and when not to operate."**

After teaching, Ochsner considers his most important contribution to medicine his work toward the establishment of a causal link between smoking and lung cancer and, subsequently, between smoking and its deleterious effects on the vascular system. "When I was a medical student in 1919, we admitted a patient with lung cancer to Barnes. As usual, the patient died, because the mortality was almost 100%. Dr. Dock had us witness the autopsy because he said that the condition was so rare that we'd never see another case as long as we lived. I didn't see another case for 17 years — until 1936. Then there were nine cases in six months. An epidemic. There had to be a cause. They were all men, all smoked cigarettes heavily, all began smoking in the first world war. When I researched the history of smoking, I found that very few cigarettes had been consumed prior to World War I.

"In 1936, I had the temerity to state — not suggest — that cigarettes caused this new plague." He sighs. "Not that anybody believed me or listened to me. Even in 1950, when I was president of the American Cancer Society, I used to have knock-down-drag-out fights with E. Cuyler Hammond [ScD], their chief biostatistician. [Dr. Hammond, vice-president for epidemiology and statistics, now agrees with Ochsner.] It took the American Heart Association even longer to take up the cudgels against cigarettes, though they are just as noxious to the vascular system as the respiratory system."

Part III of "Alton Ochsner: 82 and Still Going Strong" will appear in the next edition of THE PEN. ●

N.C. REPEAL RESOLUTION

The resolution of the Section on Ophthalmology of the North Carolina Medical Society, was inadvertently omitted in the December 1 issue of THE PEN. The complete text follows:

RESOLUTION:

WHEREAS, the medical doctors who are members of the North Carolina Ophthalmology Section of the North Carolina Medical Society are increasingly concerned about the jeopardy to the public health inherent in the 1977 law which allows the use of drugs with their inherent dangers by medically untrained optometrists; and,

WHEREAS, such drugs are unnecessary to the practice of optometry; and,

WHEREAS, AMA medical ethics Principle 10 mandates that physicians provide their efforts, resources and expertise to the benefit of the public welfare,

NOW THEREFORE BE IT RESOLVED, that the North Carolina Society of Ophthalmology in cooperation with the North Carolina Medical Society will have legislation introduced in the North Carolina Legislature for the purpose of repealing the 1977 optometric drug use law, and will publicly campaign for repeal, maintaining this action until such time as the mission is accomplished and the protection of the people of North Carolina is assured.

Passed May 5, 1978
Pinehurst, North Carolina

H. Maxwell Morrison, M.D.
President, Section Ophthalmology, NCMS
David B. Sloan, Jr., Secretary
Section Ophthalmology, NCMS

Steele's Attorney Comments On Case

O. Nelson Parrish of Fairbanks, Alaska, attorney for the plaintiffs Robert K. Steele and Timothy R. Steele, provided PEN with his reaction to the decision as rendered by Judge James M. Fitzgerald.

"I think," Nelson Parrish said, "that the essence of the court's decision is that optometrists, and schools of optometry (compared to ophthalmology) will not be allowed to set their own standards as to what they can and cannot do. The court's decision recognized that optometrists are not sufficiently trained to make the same kinds of decisions that ophthalmologist M.D.s can, and should make, in situations similar to that presented in Timothy's case."

Continuing, Parrish stated, "The U.S. Government was, in fact, contending throughout this trial that since we (the plaintiffs) did not present an optometrist to say that what the optometrist treating Timothy did was wrong, our case ought to be dismissed. The Government, in fact, moved for a 'directed verdict' (to throw our case out of court) on the grounds that only an optometrist can say what is or is not wrong about what another optometrist does."

When questioned by PEN as to the judge's reaction to this line of reasoning, attorney Parrish replied, "The judge rejected it by saying, in effect that since an optometrist is not fully trained to recognize dangerous situations, such as presented in this case, he could not then say what he did or did not do is right or wrong. Having arrived at that point, the court then in effect said it was going to accept the position of all the medical doctors who testified, including the government's doctor, that the boy should have been referred."

In concluding his comments, Nelson Parrish told PEN that this case had convinced him that, "optometrists, with no medical education, are attempting to pull themselves up by their own bootstraps, into an invulnerable position of unaccountability."

THE PEN FORUM

Public Service by Alabama M.D.s Draws National Praise

As reported in the December 1 issue of THE PEN, the Medical Advisory Board to the University of Alabama has passed a resolution which declares that University Optometry School graduates are not trained to attempt to practice medicine. This action, to protect the public, is being saluted by M.D.s throughout the nation.

Dear Dr. Hale:

I want to thank you for the public service rendered by the Medical Advisory Board to the University of Alabama for publicly defining the limited role of optometrists. Their efforts over the past several years have been to mislead the public into the scope of services that they provide. It is important to make every effort to protect the medical well-being of the public.

Please be assured of my best wishes.

Robert A. Wiznia, M.D.
New Haven, Connecticut

Dear Dr. Moore:

Let me express my appreciation to you and the other physician members of the Medical Advisory Board of the University of Alabama. Your courage in opposing the attempts by non-practitioners (optometrists) to get into the practice of medicine is commendable. Defining the role of optometry is a public service and the actions taken by the Medical Advisory Board will be of great help in our fight to protect the high quality of medical care in this country.

Joe H. Woody, M.D.
Charlotte, North Carolina

Dear Dr. Henderson:

I found it most gratifying to see that wisdom has prevailed in the resolution to define the limited role of optometry in medicine through your efforts and convictions. The valuable limited services of optometrists has been recognized by medicine and by ophthalmology alike. False claims and false advertising, as well as impersonating physicians by optometrists is totally alien to the medical arts. Your clear perception of the problem, and your action deserves many thank-yous from all physicians, patients, and the public at large.

Georges Birenbaum, M.D.
Lexington, Kentucky

Dear Dr. Pittman:

I congratulate you, as a member of the University of Alabama Medical Advisory Board, for speaking out forthrightly regarding optometric education at your University. The public and legislators around the country need to know that optometrists are not trained to assume a medical role. Your resolution is a godsend.

The American people owes you a debt of gratitude.

Charles B. Bobo, M.D.
Greenwood, South Carolina

Dear Dr. Henderson:

As a practicing ophthalmologist and a citizen I wish to congratulate you for the role you have played and the service you have rendered to the public in defining the limited role of optometry We all know at times it takes courage to stand up on your hind legs for what is right. But remember there is only one truth and all the local political and social pressures cannot alter that.

You have helped to open the eyes of the public as to the only proper role of optometry in vision care.

Walter C. Bullington, M.D
Charlotte, North Carolina

Dear Dr. Moore:

Today I received a copy of the resolution of the University of Alabama School of Medicine Physician Advisory Board concerning the education of optometrists at that institution.

It gives me a feeling of relief and appreciation that there are fellow medical doctors in this country who have the insight and understanding that is necessary to protect our lay population from the zealous political ambitions of those people who place ego and economics above personal ability in matters of the health care of this nation.

Please accept my thanks and appreciation for your efforts in this matter.

Jerome L. Byers, M.D., P.A.
Dallas, Texas

Dear Doctor Moore:

Congratulations to you for your great effort in defining the status of optometric education with regard to the practice of medicine in the resolution passed by the Medical Advisory Committee, at the University of Alabama School of Medicine.

It was a great public service to all of the people of our country.

James W. Clower, M.D.
Daytona Beach, Florida

Aloha, Doctor Pittman!

By publicly defining the limited role of optometrists, you and your colleagues on the University of Alabama Medical Advisory Board have done your patients a real service.

Thanks . . . or as we say in Hawaii,
Mahalo!

John M. Corboy, M.D.
Wahiawa, Hawaii

Dear Dr. Pittman:

Thanks for a job well done. Your recommendation in that we issue a public statement concerning the education of Optometrists is welcomed by all of us who understand the problems related to the eye. The resolution itself is a work of art, and describes optometric education exactly as it should be described.

Please know that your efforts are greatly appreciated.

R. H. Monahan, M.D.
St. Paul, Minnesota

UNITED STATES PHYSICIANS EDUCATION NETWORK

Statement of Purpose

PEN exists solely to utilize its resources and combined influence to present, promote, and promulgate, through communication outward, and communication inward, these simple truths:

- The American people must be protected by placing and keeping health care in the hands of experts, whose abilities are established by having reached a standard level of medical education.
- The logical minimum level of education necessary for leadership to protect the public in shaping the optimum health care delivery quality standards in the United States is the degree of Doctor of Medicine or Osteopathy, earned at a school of medicine or osteopathy — at an accredited institution of higher learning.
- Government at every level should cooperate with medicine in establishing these health safety standards.

Membership in PEN is available to any law-abiding citizen who subscribes to these truths, and desires to be informed, as well as to participate in informing the public at large.

THE PEN is a public newspaper, international in scope. Its readers include people from every walk of life. THE PEN is freestanding and independent of any national or state association, with the exception of its sponsor, Physicians Education Network, Inc. PEN, Inc. is a Florida non-profit corporation. Submissions to this newspaper are welcome and are published at the discretion of the editors. THE PEN does not accept paid advertising or paid subscriptions.

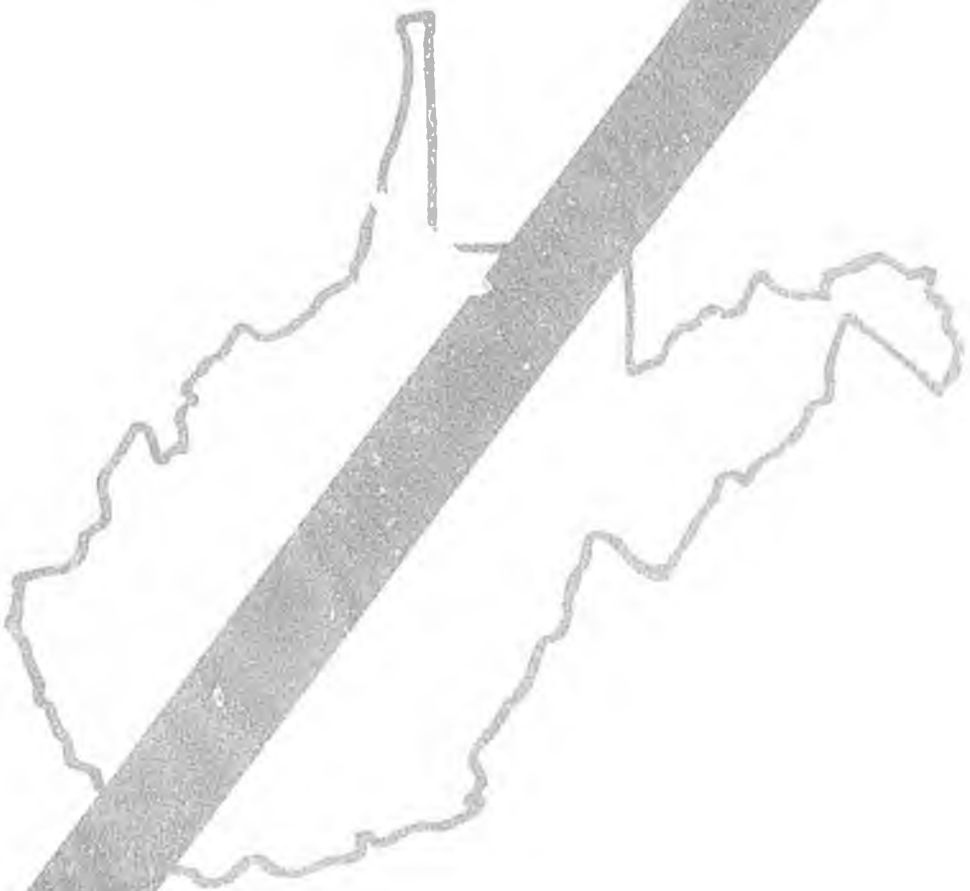
OPTOMETRY

1980

A Post Facto Report on
Enr. H.B. 1005 (1976)



Developed and Presented by

The West Virginia
Optometric Association

OFFICE OF THE
PRESIDENT
Freda J. Slaymaker, O.D.
P.O. Box 663
Charleston, West Virginia 25323
(304)342-3536

January 22, 1980

Dear Legislator:

This letter is an integral part of a report to you concerning the functioning of the 1976 updating of the West Virginia Optometry Law through H.B. 1005 which among other changes included diagnostic and therapeutic drug use by qualified optometrists.

To those of you who are "seasoned" legislators some of this is material of which you will perhaps be well aware. To those of you who have been recently elected, I will endeavor to provide you with as much pertinent material as possible without undue composition.

This law (H.B. 1005) has now been in effect since 1976 and has been functioning in the satisfactory manner as was intended by the legislature.

Optometrists have for over three and a half years been providing diagnosis and treatment to the many patients who live in the smaller towns in rural areas where no other eye care practioners are available except the local optometrist. He, along with his colleagues, has administered drugs to Thirty Thousand Six Hundred Forty-Nine (30,649) patients with a savings of Four Hundred Fifty Thousand (450,000) miles (greater details enclosed for the term involved in this report).

Educational courses are being made available to the optometrists of West Virginia on a continuing basis providing them with newer diagnostic and therapeutic methods of treatment as they occur.

The inclusion of the use of drugs by optometrists is still a major bone of contention by a number of ophthalmologists who, through their efforts and financing, have been sending what has been referred to as a "poisonous pen" letter (prepared by a public relations firm) to legislators of which you no doubt will be a recipient.

The enclosed letter from Dr. Butterfield contains results of the most recent survey conducted by the West Virginia Board of Optometry of those optometrists currently certified to use pharmaceuticals. This will provide you with greater details of the functioning of the law from the standpoint of drugs used and treatment instituted with far less travel time of which many indigent patients would not have the means and, thus, could not otherwise have received proper

treatment.

In submitting this report to you on behalf of the optometrists of the State of West Virginia we hope it will provide you with a better understanding of the results of your labor by supplying a means whereas the people of West Virginia are delivered an improved system of health care services.

Respectfully yours,

Freda J. Slaymaker

Freda J. Slaymaker, O.D.
President
West Virginia Optometric Association

WEST VIRGINIA BOARD OF OPTOMETRY

J. GORDON BUTTERFIELD, O.D.
SECRETARY-TREASURER
WEST VIRGINIA BOARD OF OPTOMETRY
111 BROOKS STREET
CHARLESTON, WEST VIRGINIA 25301

January 22, 1980

The Honorable W. T. Brotherton, Jr.
President, Senate of West Virginia
State Capitol Building
Charleston, West Virginia 25305

The Honorable Clyde M. See, Jr.
Speaker, West Virginia House of Delegates
State Capitol Building
Charleston, West Virginia 25305

RE: Report on Enrolled H.B. 1005 of 1976

Dear President Brotherton and Speaker See:

The purpose of this letter is to report to each of you and your respective bodies on the Enrolled H.B. 1005 enacted on February 20, 1976 by the Sixty-Second Session of the West Virginia legislature. As you may recall, this law expanded the statutory definition of "optometry" to include, among other things, the limited use of drugs prescribable for the human eye for both diagnosis and treatment, under carefully prescribed certification authority delegated to the West Virginia Board of Optometry. This Board has endeavored continuously and faithfully to both certify and monitor the use of drugs by optometrists practicing under the registration of this Board.

Recent information compiled from the one hundred seventeen (117) West Virginia registered optometrists now certified by this Board for drug usage is as follows:

a. A total of sixty-three (63) different drugs prescribable for the human eye have been employed by these West Virginia certified optometrists since the law was enacted.

b. Thirty Thousand Six Hundred Forty-Nine (30,649) individual patients have been seen by these optometrists and conditions such as infectious or allergic conjunctivitis, corneal abrasions and blepharitis (granulated eye lids) have been treated by those certified in the compilation.

c. The distance those patients who otherwise would have had to travel to geographical locations other than those of the treating optometrists for treatment by ophthalmologists or appropriate medical specialists to whom they formally were referred would have required that over 450,000 aggregate miles be traveled by the 30,649 patients.

d. Forty-six (46) different pathological conditions have been diagnosed and treated by these West Virginia certified optometrists.

Those 117 West Virginia optometrists who have been certified are widely dispersed throughout our state and are now faithfully and well providing expanded eye health care benefits to the people of West Virginia. IT SHOULD BE ADDITIONALLY NOTED THAT THERE HAS BEEN NO REPORT TO THIS BOARD OF ANY ADVERSE REACTION IN THE DIAGNOSIS AND TREATMENT RENDERED TO PATIENTS INVOLVED BY ANY WEST VIRGINIA CERTIFIED OPTOMETRIST.

There have been reports in the newspapers during the past few months of adverse reactions allegedly caused by optometrists. These alleged reports have all been made by one oththalmologist.

Registered letters sent to him by this Board seeking his cooperation in helping to identify and fulfill this Board's responsibility have been met with only silence. This Board, therefore, considers his alleged complaints to be just that.

Please be advised that this Board is quite aware of the full responsibility placed upon it by the legislature in the enactment of this law Enrolled H.B. 1005. This data was compiled in a continuing effort to support the trust which has been reposed in it. Each of you is encouraged to call upon this Board for any additional information which may be helpful.

Sincerely yours,

J. Gordon Butterfield, O.D.
Secretary-Treasurer

POSITION PAPER/Department of Health & Social Services

POSITION PAPER

SENATE BILL NO. 75
(Companion to House Bill No. 79)

"An Act relating to the practice of optometry."

This bill would permit the use of selected drugs including topical anesthetics, mydriatics, cycloplegics and miotics by optometrists and as such would delete from the definition of optometry the restriction against the use of drugs. All eight of these are drugs which are instilled directly into the eye. Mydriatics are drugs which cause the pupil to open widely while miotics cause the pupil to close down. Cycloplegics cause temporary paralysis of the muscles which control the shape of the lens.

Approximately 31 states now allow optometrists to use diagnostic topical drugs, either through specific enabling legislation or through the lack of specific prohibition. The issue of use of such drugs by optometrists has been controversial and in recent years certain states have given permission while it has been denied in other states. Those in favor of the use of drugs by optometrists argue that optometric services are more widely distributed than ophthalmologic services and that the optometrist serves as an entry point for primary eye care. The use of diagnostic drugs is said to expand the ability of the optometrist to recongize eye abnormalities and to increase medical referral for diagnosis and treatment. The optometric group also states that the drugs which are proposed rarely have adverse effects.

On the other hand, the medical group argues that the use of drugs would not materially improve the capacity of optometrists to recognize abnormalities. Optometrists are not expected to diagnose diseases of the eye, and if a departure from normal is noted, the patient is expected to be referred to a physician for diagnosis. If empowered to use diagnostic drugs, the concern on the part of the medical community is that the optometrists would be making diagnostic judgments which the physicians do not believe them qualified to make. Moreover, the medical community notes that adverse reactions, while admittedly rare for certain of the drugs, can have extremely serious consequences when they do occur. For example, they cite a higher rate of predisposition to a certain type of glaucoma in Alaska Natives and the possibility of precipitating an attack through use of mydriatics.

In some states which have permitted the use of diagnostic drugs, the permissive legislation has contained certain limitations, none of which appear in the current draft of the Alaska bill. For example, Rhode Island permits the use of mydriatics, miotics and topical anesthetics while Maine permits only the use of topical anesthetics and mydriatics. A bill which may still be under consideration in the Ohio legislature specifically prohibits use of pilocarpine (a drug which constricts the pupil), atropine and homatropine (drugs which dilate the pupil and temporarily paralyze accommodation of the lens) and 10% phenylephrine (a strong mydriatic). In Oregon, the Board of Optometry

is empowered to designate the diagnostic pharmaceutical agents for topical use, but provides that the designation shall be with the advice and guidance of the Board of Medical Examiners for the State of Oregon.

Some states define the type of training in pharmacology which would be required before an optometrist would be permitted to use diagnostic drugs. For example, Pennsylvania requires that the course given by an institution be accredited by a regional or professional accreditation organization recognized or approved by the Council on Postsecondary Accreditation or the United States Office of Education.

If the Legislature chooses to authorize use of certain drugs by optometrists, the Department of Health and Social Services suggests that definitions and restrictions similar to those in use in other states may be advisable, and that the professional opinion of the medical and optometric communities should be sought to insure the health and safety of the general public.

SECTIONAL ANALYSIS OF HOUSE BILL NO. 86

Section 1. Adds a new chapter to AS 08 (Business and Professions) entitled "Veterinary Practice Act." Each section of this new chapter will be analyzed separately.

ARTICLE 1. BOARD OF VETERINARY MEDICINE

Sec. 08.95.010. CREATION AND MEMBERSHIP OF BOARD. Creates a Board of Veterinary Medicine, composed of four veterinarian members and one public member, to replace the current Board of Veterinary Examiners.

Sec. 08.95.030. SOURCE OF APPOINTMENTS FOR VETERINARIAN MEMBERS. Directs the governor to appoint each veterinarian member of the board from a list of at least three candidates recommended by the Alaska State Veterinary Medical Association.

Sec. 08.95.040. BOARD MEETINGS. Requires the board to hold a regular annual meeting and permits the chairman to call other meetings.

Sec. 08.95.050. OFFICERS. Directs the board to elect a chairman, subject to the governor's approval, and a secretary to serve one-year terms.

Sec. 08.95.060. REPORT REQUIRED. Requires the chairman and secretary to submit a report on the actions of the board to the Department of Commerce and Economic Development at the end of each examining period.

Sec. 08.95.070. MEETING OF NATIONAL VETERINARY STATE BOARD OF EXAMINERS. Authorizes the board to send one of its members to the annual meeting of the National Veterinary State Board of Examiners at state expense.

Sec. 08.95.080. POWERS AND DUTIES OF THE BOARD. Directs the board to regulate the "practice of veterinary medicine" (as defined) in accordance with the Act, to adopt regulations implementing the Act, and to authorize the issuance, renewal, or reinstatement of a license, permit, or certificate of registration to any person entitled to it. Authorizes the board to adopt regulations interpreting, clarifying, and making specific the provisions of the Act. Directs that the powers granted to the board under the Act be liberally construed.

ARTICLE 2. LICENSING.

Sec. 08.95.200. LICENSE REQUIRED. Prohibits anyone but a licensed veterinarian from practicing veterinary medicine except

(1) a veterinarian licensed in another state consulting with a licensed veterinarian in this state;

(2) the holder of a temporary permit, acting under the direction of a licensed veterinarian, who has applied to take the veterinarian's examination;
(3) a veterinarian licensed in another state who holds a temporary permit to conduct the practice of a licensed veterinarian during his absence;
(4) a person performing tasks within his competence, other than diagnosis, prescription, or initiation of treatment, under the "general supervision" (as defined) of a licensed veterinarian and in accordance with board regulations;
(5) a person performing artificial insemination of animals, who holds a permit to do so;
(6) a person giving advice on livestock management or engaging in accepted livestock management practices in accordance with board regulations;
(7) a faculty member of a "veterinary school" (as defined) engaging in his official duties;
(8) a person lecturing, giving instructions, or performing demonstrations with the approval of the board, at a veterinary school, or in connection with a continuing education course or seminar sponsored by a veterinary school or approved by the board;
(9) a veterinary student performing duties or actions assigned by his instructors;
(10) a veterinary student acting under the general supervision of a licensed veterinarian;
(11) a person engaging in scientific research that reasonably requires experiments with animals;
(12) a person gratuitously giving emergency aid to animals;
(13) the owner of an animal and his regular, full-time employees caring for and treating the animal, unless ownership of the animal was transferred to avoid application of the Act or the employees were hired primarily to treat animals;
(14) a merchant or manufacturer selling at his regular place of business products used in the prevention or treatment of animal diseases;
(15) a person selling or applying a pesticide or herbicide;
(16) a governmental employee engaging in his official duties.

Sec. 08.95.220. QUALIFICATION FOR EXAMINATION. Sets out the qualifications for taking an examination to become a licensed veterinarian. These qualifications are substantially the same as under existing law except for a new provision allowing a person who was not graduated from a veterinary school to take the examination if he has passed the Education Commission for Foreign Veterinary Graduates examination in veterinary medicine.

Sec. 08.95.230. EXAMINATION FEE. Directs the Department of Commerce and Economic Development to establish a fee to accompany applications for licensing as a veterinarian, refundable if the applicant is found unqualified to take the examination.

Sec. 08.95.240. CONTENT OF EXAMINATION. Requires that the examination be in two parts, a national examination selected by the board and a state examination prepared by the board. Requires the examination to cover subjects and techniques commonly taught in veterinary schools and permits the board to require a practical demonstration of skills.

Sec. 08.95.250. EXEMPTION FROM NATIONAL EXAMINATION. Permits the board to exempt an applicant from the national examination who meets specified criteria involving years of practice as a veterinarian in another state and recent passing of a national examination.

Sec. 08.95.260. REEXAMINATION. Allows a person failing an examination to take a subsequent examination upon payment of the examination fee.

Sec. 08.95.265. INITIAL LICENSE AND RENEWAL FEES. Directs the Department of Commerce and Economic Development to establish a fee for issuance of a veterinarian's license and a fee for biennial renewal.

Sec. 08.95.270. TEMPORARY PERMIT TO PRACTICE WITH LICENSED VETERINARIAN. Permits a qualified applicant for a veterinarian's license who has not failed a veterinarian's examination to obtain a temporary permit to practice veterinary medicine under the direction of a licensed veterinarian, pending examination. Comment. The permit holder is required to be under the "direction" of a licensed veterinarian rather than his "general supervision." "General supervision" is defined in the Act but "direction" is not. The difference between these terms is not clear but might be made so by board regulation.

Sec. 08.95.280. TEMPORARY PERMIT TO TAKE OVER PRACTICE OF LICENSED VETERINARIAN. Allows a veterinarian licensed in another state, who would be qualified to take the veterinarian's examination in this state, to obtain a temporary permit, for no longer than 60 days, to conduct the practice of a licensed veterinarian during his absence. Directs the Department of Commerce and Economic Development to establish a fee for these temporary permits and any renewals that may be permitted by the board.

Sec. 08.95.290. REINSTATEMENT OF LAPSED LICENSE. Allows a veterinarian whose license has lapsed to have it reinstated without examination within three years of its lapsing.

ARTICLE 3. REGULATION OF PRACTICE OF VETERINARY MEDICINE.

Sec. 08.95.400. DISCIPLINE OF LICENSED VETERINARIANS. Authorizes the board to revoke or suspend the license of a licensed veterinarian or otherwise discipline a licensed veterinarian for specified reasons, including unprofessional conduct as defined in board regulations.

Sec. 08.95.410. REVOCATION AND SUSPENSION OF TEMPORARY PERMITS. Authorizes the board to revoke or suspend a temporary permit for a violation of the Act or a regulation adopted under it, whether committed by the permit holder or the licensed veterinarian with whom he is associated.

Sec. 08.95.420. ARTIFICIAL INSEMINATION OF ANIMALS. Directs the board to adopt regulations providing for issuance of permits to perform artificial insemination of animals. Authorizes the board to revoke or suspend such a permit for a violation of the Act or a regulation adopted under it.

Sec. 08.95.430. REGISTRATION OF VETERINARY TECHNICIANS. Directs the board to adopt regulations providing for the registration of "veterinary technicians" (as defined). Directs that these regulations require, for registration, the completion of college programs approved by the board, but permits the board to register veterinary technicians before July 1, 1981 who have been graduated from high school and completed two years of satisfactory work experience in lieu of college programs. Sets a fee of $25 for registration and biennial renewal. Authorizes the board to revoke or suspend a certificate of registration for a violation of the Act or a regulation adopted under it. Emphasizes that a veterinary technician must be under the general supervision of a licensed veterinarian. Provides that this section does not require a veterinary technician to become registered, but authorizes the board to impose such a requirement by regulation.

Sec. 08.95.440. STANDARDS OF PRACTICE. Authorizes the board to establish standards of practice, including continuing education requirements, for (1) licensed veterinarians and holders of temporary permits; (2) holders of permits to perform artificial insemination of animals; (3) persons giving advice on livestock management or engaging in livestock management; and (4) persons acting under the general supervision of licensed veterinarians. Authorizes the board to

(1) classify persons acting under the general supervision of licensed veterinarians; (2) limit or qualify the duties which may be performed by members of a class; (3) permit or require members of a class to be registered or licensed; (4) establish qualifications for registration or licensing of members of a class; (5) provide for renewal, revocation, and suspension of certificates or licenses of members of a class; and (6) set fees for issuing and renewing certificates or licenses of members of a class.

Sec. 08.95.460. RESPONSIBILITY OF LICENSED VETERINARIAN. Requires employees of a licensed veterinarian to be under his general supervision. Makes the licensed veterinarian responsible for the performance of any person required to be under his direction or general supervision.

ARTICLE 4. ENFORCEMENT.

Sec. 08.95.600. UNLAWFUL PRACTICE OF VETERINARY MEDICINE. Makes the unlawful practice of veterinary medicine a misdemeanor punishable by a fine of not less than $50 or more than $500 or imprisonment for not more than 90 days. Makes each day of unlawful practice a separate offense.

Sec. 08.95.610. NO RIGHT TO COMPENSATION FOR SERVICES UNLAWFULLY RENDERED. Provides that a person is not entitled to compensation for services constituting the practice of veterinary medicine that are unlawfully rendered.

Sec. 08.95.620. INJUNCTION. Authorizes the board to seek an injunction to restrain a person from practicing veterinary medicine unlawfully.

Sec. 08.95.630. REMEDIES CUMULATIVE. Declares that remedies for enforcing the Act are cumulative and independent.

Sec. 08.95.640. INVESTIGATIONS. Authorizes the board to conduct investigations to determine whether violations of the Act or regulations adopted under it have occurred.

ARTICLE 5. ABANDONMENT OF ANIMALS.

Sec. 08.95.800. Authorizes a licensed veterinarian or temporary permit holder to dispose of an animal, by sale or otherwise, left in his custody and abandoned. Provides that abandonment is considered to have occurred if the animal is unclaimed within 10 days after notice is sent to the owner or his agent.

ARTICLE 6. GENERAL PROVISIONS.

Sec. 08.95.900. DEFINITIONS. Defines principal terms used in the Act, including "animal," "general supervision," "practice of veterinary medicine," and "veterinary technician."

Sec. 08.95.910. SHORT TITLE. Designates AS 08.95 as the Veterinary Practices Act.

Section 2. Makes the Board of Veterinary Medicine subject to the centralized licensing law.

Section 3. Directs the Department of Commerce and Economic Development to provide investigative services to the Board of Veterinary Medicine to assist it in matters of professional discipline.

Section 4. Gives the Board of Veterinary Medicine a termination date of June 30, 1985 for purposes of the sunset law.

Section 5. Reenacts a portion of the sunset law as a new section in the Alaska Statutes. This reenactment has no substantive effect. It is necessitated by the inclusion of the Board of Veterinary Medicine in the sunset law.

Section 6. Provides for a lien on an animal for veterinary services.

Section 7. Makes the Board of Veterinary Medicine subject to the administrative adjudication provisions of the Administrative Procedure Act.

Section 8. Repeals the current laws relating to the practice of veterinary medicine and a portion of the sunset law. The repeal of a portion of the sunset law is of no effect, other than to eliminate a reference to the Board of Veterinary Examiners, because its reenactment as a new section is provided for in Sec. 5.

Section 9. Provides for the validity of a temporary license to practice veterinary medicine issued under law that is being repealed.

Section 10. Provides for the validity of a license to practice veterinary medicine issued under law that is being repealed.

Section 11. Authorizes the reinstatement of a lapsed license to practice veterinary medicine, within five years of its lapsing, which was issued under law that is being repealed.

Section 12. Directs that the members of the Board of Veterinary Examiners automatically become veterinarian members of the Board of Veterinary Medicine and serve until their terms on the former board would have expired.

Section 13. Directs that the title "Board of Veterinary Examiners" in the laws of the state be read as "Board of Veterinary Medicine." Provides for continuation of proceedings begun, orders issued, and regulations adopted under law that is being repealed. Directs that property of the Board of Veterinary Examiners be transferred to the Board of Veterinary Medicine.

Section 14. Makes this Act effective July 1, 1979.

Some major changes to existing practice act (AS 08.98) and increased costs in implementation.

(4) FISCAL IMPACT: ☐ NONE ☒ FISCAL ANALYSIS ATTACHED

(5) AMENDMENTS PROPOSED:

(6) COMMENTS:

The Division of Occupational Licensing opposes Secs. 1 through 14 of HB 86, "An Act relating to the practice of veterinary medicine; and providing for an effective date." Provisions in the Act for additional members, annual National meeting attendance, specialty permits (Sec. 420), and registration of technicians would entail substantial additional costs for regulation and administrative overhead. Many other aspects of the proposed Act are objectionable from the standpoint of standard statutory authority. These include, but are not limited to, (1) a requirement that board members be appointed only from a list submitted by the State association, (2) limits on voting power of public members,

(See reverse)

(3) a requirement that those applying for temporary permits may work only under supervision of a licensee, (4) that the board itself may conduct investigations, and (5) inappropriate revisions to AS 08.03 (Termination, Continuation and Reestablishment of Regulatory Boards).

We believe that the present practice act is workable but needs amendments. Appropriate recommendations have been made as a result of the Sunset review process that should be considered in increasing board efficiency. We do not believe, however, that the proposed new act would accomplish this nor would it be in the best overall interests of the public.

III. ANALYSIS (See Fiscal Note Preparation Instructions, Section III)

FY 80 travel includes funding for two additional board members transportation and per diem to attend presently budgeted board meetings of two a year. There will be one person making one out-of state trip per year to national organization. Contractual expense includes costs for a hearing per year. This includes costs for a hearing office and court reporters preparation, recording, and reporting of the hearings before and after organization. Inflation is computer @ 6% per year. A detailed analysis of expenditures is attached.

February 10,1979

Dear Sally,

A pleasure to hear from you! Thanks for sending along the Veterinary Prctice Act. I have been wondering where it stood these days. I reviewed it and discussed it at length with two Veterinarians, and have one suggestion and a question. The Vets agreed with my suggestion, but declined to write and represent themselves...sigh.

The suggestion: Page 3, Art. 2, Sec. 08.95.200 ...(15) now reads:

> "No person may practice veterinary medicine in this state who is not a licensed veterinarian except...(15) a person selling or applying a pesticide or herbicide."

I thought seriously of dropping out of school to start selling pesticides and doing sprays on the side! I think the intent is better reflected in this wording from the original draft of the act:

> "No person may practice veterinary medicine in this state who is not a licensed veterinarian. THIS ACT SHALL NOT BE CONTRUED TO PROHIBIT: ... (15) a person selling..."

My question concerns the "one public member" of the board (page 1,Art. 1, Sec.08.95.010), and also page 2, Sec.08.95.030. The bill states that the governor shall appoint each veterinarian member, etc. It does not, at this time, say who appoints nor who nominates the public member. I assume the governor appoints, but should it be specified? Hopefully the appointee would have some relevant experience and interest in the profession. I wouldn't object to the position myself!

Take care,

Tom

POSITION PAPER/Department of Health and Social Services

POSITION PAPER
ON
HOUSE BILL NO. 22

"An Act relating to the donation of blood by those who have reached the age of 17 years."

This bill has two medical considerations:

1. Is there a shortage of blood donors in Alaska that could be relieved by allowing 17 year old persons to donate without permission of their parents or guardians? Hospital blood banks could answer this question based on their experience. The Department of Health and Social Services could investigate this issue if it is desired by the Legislature.

2. Is a 17 year old a suitable blood donor?

   Yes, at this age an adolescent can safely donate blood under the same guidelines as an adult.

This bill also has a significant sociologic consideration:

Why should the age of majority be lowered for this particular reason?

Until there has been demonstration of a compelling reason under the first medical consideration or the sociologic consideration, the Department of Health and Social Services is neutral towards this bill.

Re: House Bill 22
Donation of Blood

Dear Representative Buchholdt:

This letter is in support of House Bill 22, which would permit 17 year olds to become blood donors without the need of obtaining specific written permission from their parents.

Many states have such legislation at this time and I am sure that Alaska blood banks and patients would benefit considerably by having this statutory privilege.

This identical bill was submitted to the previous Legislature, passed through the House and was approved by the Senate HESS Committee and was in the Senate Rules Committee at the time of adjournment. So, the bill has been considered before by the House HESS Committee and was approved.

The purpose of the bill is to permit 17 year olds to donate without the specific written permission of the parents. This substantially expands the number of young, healthy donors available for blood donations. Presently, a 17 year old may be inspired to donate blood but the simple complication of getting the

parents' written consent requires an extra trip to the blood bank and most of the donors then do not return.

Physically, there is no medical reason why a 17 year old is not physically able to donate a unit of blood. Each donor completes a medical questionnaire and takes a blood test and other medical tests prior to being approved as a donor.

The present system tends to delay and discourage the young people from joining in this community activity. All blood banks in Alaska are nonprofit operations. Permitting the young people to participate in this part of society that they can so well do builds in them a sense of belonging to the community, a community responsibility consciousness, and is in a sense a Junior Achievement program.

I can think of no reason why this privilege should not be extended to 17 year olds. Further, the blood banks would find this very helpful to them, and I have never heard any opposition to this program.

I hope that the Committee will again favorably consider this legislation.

Sincerely,

Mike Beirne/js

Dr. Mike Beirne
State Representative

HB

86

THE ALASKA STATE VETERINARY MEDICAL ASSOCIATION

BOX 631 • ANCHORAGE, ALASKA 99501

February 7, 1979

The Honorable Thelma Buchholdt
Pouch V
Juneau, Alaska 99811

Dear Ms. Buchholdt:

The Alaska State Veterinary Medical Association has written a new practice act, known as House Bill No. 86, that will be introduced this legislative session. The purpose of my letter is to give you an understanding of the bill.

We now have a veterinary practice act which was enacted in 1963 and has had no major revisions since then. We chose to write a new act rather than revise the old because in nearly all parts of the act changes have been proposed to clarify the intent. Writing a new act seemed the easiest way to accomplish this.

We have compared the content of the old act with the proposed act. In nearly all cases, the proposed act and the old act handle regulation and licensing of the profession in the same way. Notable exceptions are as follows:

The size of the Board of Veterinary Examiners was increased from three to five members. This was done because the present board size of three members often proved inadequate due to the absence of members for various reasons.

A public member was provided as one of the members of the Board to encourage representation of the public interest in regulation of the profession.

A section was included which defines the legal responsibilities of aides and trained technicians working under the direction of a veterinarian. The present act makes no mention of persons employed by veterinarians leaving it legally open to question as to whether or to what extent a veterinarian may use these people to aid in treatment of animals.

The new act provides for the examination and registration of Animal Health Technicians. Technicians are a relatively new profession employed by veterinarians to do a wide variety of technical tasks. Many technicians are presently employed in Alaska; however, there is no provision made for them in the present statutes.

Registration is necessary for up-to-date, immediate reference of all veterinary technicians engaged in animal care in the state with reference to qualifications, addresses, license status, etc. This provision allows the Board to adopt appropriate standards for those engaged in animal technology and the issuance of permits to such persons found competent.

Temporary licensing has been changed from the existing uncontrolled situation giving temporary licenses to all applicants who qualify for a license. Under the present law a person who has never passed a national or state examination can obtain a temporary unrestricted license to practice.

The new act proposes that two classes of temporary licenses be issued:

One type would be issued to any technician qualified to take the examination provided he work with a practitioner licensed in the state.

A second type would be issued for a 60-day period to a veterinarian who is licensed in another state. The license would allow the licensee to take over the practice of a veterinarian who is absent.

Examination of licensees has been changed to require a state exam and a national exam for every applicant unless the applicant has either (1) passed a National Board Examination in the last three years, or, (2) has been an active practicing veterinarian in another state. Persons qualifying would be required to to take only the state exam.

Presently, veterinarians who have "practiced" for five of the last seven years in another state may receive a license without exam. The problem with this is that the definition of "Veterinary Practice" is so broad that people involved with activities not commonly considered to be the active practice of veterinary medicine would qualify for license. Examples of this could include meat inspectors, animal consultants, and certain types of researchers. The new act would require all applicants to take the state exam.

The new act provides a legal means by which to cope with the problem of animals left in the care of veterinarians and later abandoned. This is a frequent problem that is not dealt with in the present act.

We would appreciate your support on this bill.

Respectfully,

Jon Thomas

Jon Thomas
President, ASVMA

Sec. 08.03.010. Termination, continuation and reestablishment of regulatory boards. (a) Boards listed in this subsection have a termination date of June 30, 1979:

(1) Board of Chiropractic Examiners (AS 08.20.010);
(2) Board of Dental Examiners (AS 08.36.010);
(3) State Medical Board (AS 08.64.010);
(4) Board of Nursing (AS 08.68.010);
(5) Board of Dispensing Opticians (AS 08.71.010);
(6) Board of Examiners in Optometry (AS 08.72.010);
(7) Board of Pharmacy (AS 08.80.010);
(8) Board of Veterinary Examiners (AS 08.98.010);
(9) Board of Psychologist and Psychological Associate Examiners (AS 08.86.010);
(10) Board of Nursing Home Administrators (AS 08.70.010);
(11) Physical Therapy Board (AS 08.84.010).

(b) Boards listed in this subsection have a termination date of June 30, 1980:

(1) Board of Public Accountancy (AS 08.04.010);
(2) Board of Barber Examiners (AS 08.12.010);
(3) Collection Agency Board (AS 08.24.011);
(4) Board of Hairdressing and Beauty Culture Examiners (AS 08.28.010);
(5) Board of Electrical Examiners (AS 08.40.010);
(6) State Board of Registration for Architects, Engineers and Land Surveyors (AS 08.48.011);
(7) Guide Licensing and Control Board (AS 08.54.010);
(8) Board of Marine Pilots (AS 08.62.010);
(9) Real Estate Commission (AS 08.88.011);
(10) Board of Welding Examiners (AS 08.99.010);
(11) Board of Governors of the Alaska Bar Association (AS 08.08.040).

(c) Upon termination, each board listed in (a) and (b) of this section shall continue in existence until June 30 of the next succeeding year for the purpose of concluding its affairs. During this period, termination does not reduce or otherwise limit the powers or authority of each board. One year after the date of termination, a board not continued shall cease all activities.

(d) The termination, dissolution, continuation or reestablishment of a regulatory board shall be governed by the legislative oversight procedures of AS 44.66.050.

(e) A board scheduled for termination under this chapter may be continued or reestablished by the legislature for a period not to exceed four years. (§ 2 ch 149 SLA 1977)

Jon Thomas, DVM
2639 Boniface Parkway
Anchorage, Alaska 99504

Dear Dr. Thomas,

Thank you for your telephone call of September 28th raising the question of bringing A.I. technicians under the Veterinary Practice Act. This question was raised in 1973 and I will attempt reaffirm my position at this time.

I would emphasize first that the A. I. technician is not practicing veterinary medicine, but is providing a breeding service whereby livestock owners in Alaska can use the technology of semen collection, preservation, and use and the advancements in animal genetics available to the livestock industry throughout our sister states in the lower 48. The A. I. technician is not trained or qualified to provide veterinary services and is in fact legally and ethically constrained from doing so. If we bring the A. I. technician under regulation by the veterinary medical profession, do we in fact reduce the stature of that profession to the level of the A. I. technician or do we attempt to raise the A. I. technician to the level of a veterinary practioner?

It is a temptation to emphasize the fact that technicians for the Matanuska Valley Breeders Association in cooperation with the University of Alaska are breeding cattle in very few major herds in addition to the University herd. However, this is irrelevant. If the public good requires regulation of the A. I. industry by the veterinary medical profession, that protection should be provided to all individuals irrespective of the total number involved.

At this time I know of no instance in the State of Alaska where semen is being collected and processed for use in artificial insemination. Therefore, by definition, all of the semen used in Alaska has been drawn, processed, and shipped from individuals and/or semen producing organizations in the lower 48. These organizations are expected to operate under the minimum standards of the National Association of Animal Breeders as well as state and federal laws where applicable. I believe that it might be of value to establish regulations relative to the importation of semen to insure that semen entering the State of Alaska would originate from responsible individuals and/or

organizations. This would limit the entry of disease organisms and/or genetic defects into the state of Alaska via frozen semen.

If you bring the A. I. technician under the Veterinary Practices Act, how would you propose to examine and license A. I. technicians? The use of a written examination exclusively is of very limited value because successful A. I. depends upon the acquisition and development of skills which can be obtained only through hands on or "arms in" experience. This is difficult to assess other than through the examination of field data. The direct contact of the A. I. technician with the animal to be inseminated may be of limited importance relative to other considerations. Disregarding the possibility of physical damage or the introduction of disease organisms, the most obvious manifestation of incompetence is failure to achieve conception. Areas of equal importance are the maintenance of an adequate semen inventory under satisfactory conditions of storage, the proper removal of semen units and their handling prior to insemination, accuracy in semen selection and records maintained, and the motivation and knowledge to use currently available knowledge in population genetics and animal breeding. I submit that these areas fall within the domains of the A. I. industry and animal science programs in animal breeding at major universities, and not in the area of veterinary medical practices.

I do not mean to imply that the A. I. industry and its adherents would not benefit from codes of ethics and performance which are presently being developed and applied within the industry itself, but that the veterinary medical profession may be mistaken in bringing that industry within the practice of veterinary medicine which veterinary control and regulation implies. I believes that we will make maximum progress in serving the livestock industry if the veterinary medical profession and professional and para-professional animal scientists work together in mutual respect and consideration.

Sincerely yours,

ARTHUR L. BRUNDAGE, Ph.D.
Professor of Animal Science
Member, American Registry of

School of Agriculture and Land Resources Management
Agricultural Experiment Station

October 19, 1978

Dr. Jon Thomas, D.V.M.
2639 Boniface Parkway
Anchorage, Alaska 99504

Dear Dr. Thomas:

Thank you for informing me of the possible legislative action concerning the regulation and issuance of permits to artificial insemination operators and technicians. At the present time, I do not believe the State of Alaska nor the level of livestock production within the state are ready for a possible restrictive regulation.

I am not familiar with similar regulations in other states, but the National Association of Animal Breeders (PO Box 1033, Columbia Missouri 65201) has established and published codes for animal identification, health and other rules governing the use of artificial insemination. This association was organized in 1946 and the members are former owned cooperatives and private corporations and the members account for approximately 95 percent of all semen used in the United States. The health code was set forth by an American Veterinary Medical Association committee. In addition, semen producing businesses must obtain a permit from the Purebred Dairy Cattle Association to keep accurate semen inventories before offspring from their bulls can be registered. Certified Semen Services, Inc., was organized in 1976 as a subsidiary of the National Association of Animal Breeders and has a primary objective to audit procedures for bull and semen identification used in A.I. and for the issuance of properly completed records each time a semen sale is made.

The regulations and codes set forth by the above organizations serve as guidelines for the breeding associations to maintain competence and standards of production for the animal breeding industry. However, honesty and accuracy is primarily a responsibility of the individual breeding organization.

An A.I. technician is an individual who is authorized to issue breeding receipts or sales invoices in the name of the A.I. business with which he is employed or affiliated and is only responsible to that business. The A.I. business accepts certain responsibilities for the actions of its technicians. This individual represents a company in the field and it behooves the company to have technicians trained in both the physical aspects of insemination as well as a working knowledge of breeding records, sire selection and breed registration requirements. Therefore, if we consider the role of the national organizations in relation to the A.I. businesses and the competitive aspect of the industry, any additional state regulation may not be complementary to the self imposed standards of performance now in effect.

Within the State of Alaska, I know of only one A.I. operator that has been conducting business without formal training. This technician's lack of knowledge and ability to inseminate livestock has limited his business with herd owners. The other state A.I. operator, Matanuska Valley Breeder's Association, is affiliated with American Breeder's Service and has sponsered through the company a week long training school in 1974 and is currently scheduling another school the last week of October, 1978. When technician training sessions are not offered within this state, their technicians are sent to a school in the Northwest.

A regulation of the type under consideration would be difficult and costly for the state to administer. A valid test to certify technicians would have to include both proof of physical training required to inseminate livestock and knowledge of breed registration requirements, sire selection and record keeping. Would this imply that veterinarians who have had training in the physical aspects of insemination become conversant on breeding and selection programs similar to A.I. trained technicians? What criteria would be used for a waiver of an examination: a university course in artificial insemination, successful completion of a school sponsered by one of the A.I. companies or a degree in veterinary medicine? Would the permit be issued through the mail or would it require a costly trip to a central location to take a qualifying examination?

Although this letter may have posed more questions than answers, I hope that the information and personal thoughts will be of assistance to you and your committee. If I can be of further service, please contact me.

Sincerely,

Dear Pat

I received your letter today regarding House Bill # 86. I concurr with your decision to oppose further regulation of Artificial insemination. Dr. Brundage and I both requested the Veterinary Assoc. ~~to~~ delete the A.I. Regulation, however, they chose otherwise. If the A.I. regulation is deleted ~~you may~~ would you consider ~~to~~ re evaluating # 86 on it remaining points? Thanks.

Sincerely,

Bert Gore

Mr. Tim Kelly
State Senator
State of Alaska
Pouch V
Juneau, Alaska 99811

Dear Senator Kelly:

Thank you very sincerely for your recent letter and enclosure of pending legislation relating to veterinary medicine. Your request that HB No.86 be reviewed for comments was much appreciated.

The following comments are those I would feel important to consider:

Article 2; Sec. 08.95.200 (page 4) #14 and #15:

Both of these paragraphs I feel allow "practice" by people other than those specificcally qualified for such practice. A mercant or salesperson does not normally have the expertize to provide professional, competent veterinary services to the public.

Article 2; Sec. 08.95.200 (page 4) #16

It would seem only reasonable that if the State of Alaska is dependant upon a person for professional services such as veterinary medicine, which in many aspects also encompasses public health measures, that we should expect that individual able and competent to pass a required examination to be certified to practice their profession within the boundaries of the State of Alaska.

Sec. 08.95.290 (page 7)

It appears this section would not necessarily cause the person to maintain skills and or competence to provide high quality services to the public at large.

It would be preferable to have anyone who allows their Alaskan license to practice lapse, re-take fully and and all tests required to return to practice within the State of Alaska, including the National Board and State Board examinations. This requirement of a re-establishing of competency would prevent the return to practice of an individual who had not continuously maintained professionalism.

Sec. 08.95.460 (page 11) Second Sentence:

It is my opinion this sentence should be reworded to read:

"The licensed veterinarian is responsible for the preformance of any person under the veterinarian's direction or general supervision by this chapter or a regulation adopted under it".

Sec. 08.95.800 (page 12) Part A - last sentence:

This sentence should be reworded to read:

"Disposal of an animal under this section does not in any manner relieve the owner of the financial obligation incurred for the treatment and disposition of the animal but does extinguish all rights for claiming ownership of the animal.

Sec. 11 (page 16)

I feel this person should also be required to take the full examination for renewal or re-instatement of a license to practice; for the same reasons listed in Article 2, Sec. 08.95.20 (page 4 #16) as corrected previously in these comments.

It is gratifying to be able to have an opportunity to comment on this practice act prior to it being made into law. We do appreciate your representation and services.

Respectfully,

James B. Leach III, D.V.M.

JBL/al

Thanks for this opportunity - basicly I feel the practice act (SB 56) is a good step forward and agree with it in general.

Thanks again

Representative Thelma Buchholdt
Chairperson
Health, Education and Social
Services Committee
House of Representatives
Pouch V
Juneau, Alaska 99811

Dear Mrs. Buchholdt:

The Legislative Affairs Committee of the Alaska State Veterinary Medical Association, as well as most members of the ASVMA, would like to go on record as to the following items concerning C.S. for House Bill 86 - The Veterinary Practice Act:

1) Board of Veterinary Medicine - (SEC. 08.95.010) - The formula of three (3) veterinary members and two (2) public members will probably not be an improvement over the present situation. A total of five (5) people would be an improvement if the total board were involved in doing all the necessary work involved with the board's activities, but we feel that the majority of the work load will fall on the three (3) veterinary members. At present this is not the ideal situation and we feel that an additional veterinarian as well as a public member would be a much more workable board.

2) Board Meetings - (SEC. 08.45.030) - No other board carries the restriction of having to have prior approval of the Department of Commerce and Economic Development for the chairman of the board to call additional meetings as needed. We are sure the situation will not present itself whereby the board would be denied permission to do so, but in light of the board's increased duties and responsibilities with passage of this Act, we feel they should have some responsibility in being able to call themselves together. We just do not feel these should be in the statutes.

3) Officers - (SEC. 08.95.040) - We would like to see a limit of two (2) conservative terms that an officer may serve on the board. This would encourage turnover and yet allow continuity.

4) Qualification for Examination - (SEC. 08.95.220) - We would like some type of statement added to qualifications that would take into account possible felony convictions, malpractice convictions, pending investigations, or other such type of acts that we feel are undesirable in professional people. Only two (2) present state practice acts do not carry any statement about good moral character. The present veterinary practice act does carry such a statement and we would like the proposed one also to carry one.

5) Temporary Permit to Practice Veterinary Medicine - (SEC. 08.95.275) - We feel this is too loosely written and may allow a legal precedence to be established whereby a temporary permit may be granted, the person fail either or both examinations and then legally try to get the license to practice through the fact that he once had such and now is being denied it. There is no means available to check on persons obtaining such a permit and establishing a "bush" practice whereby they would not be under any type of review. It does not take into consideration that some people can be granted such a permit who have not been in "active" practice for a long period of time or a very recent new graduate with no practice experience at all. We feel both situations may be undesirable as pertaining to the general public's welfare.

6) Power of Injunction and Power of Investigation - Loss of these two powers by the board leaves the board totally under the division of occupational licensing. We feel these two powers should be available to the board as well as the division of occupational licensing either cumulative or independently of one another. The present act carries the power of injunction by the board. Past situations have had too little and too slow a response. We feel the board should be able to act on its own merits if need be.

We look forward to your consideration of these statements as they pertain to the Veterinary Practice Act. Please feel free to request further input if need be.

Sincerely,

Harold R. Spalding DVM

Dear S.P.C.A. Members:

Enclosed you will find a copy of the latest Committee Substitute by the House Health, Education and Social Services Committee.

I have held off sending it because this is a work draft and there are amendments still to be added. But I thought you would want to look at what the committee is working with.

We plan to hold another hearing on the bill tomorrow and it may be passed out at that time. The committee, just last week, adopted the Committee Substitute to the bill so I'm sure there will be lots of changes by the time you receive this letter.

In any event, I thought this might help.

Sincerely,

Cynthia L. Hill

Sec. 08.03.010. Termination, continuation and reestablishment of regulatory boards. (a) Boards listed in this subsection have a termination date of June 30, 1979:

(1) Board of Chiropractic Examiners (AS 08.20.010);
(2) Board of Dental Examiners (AS 08.36.010);
(3) State Medical Board (AS 08.64.010);
(4) Board of Nursing (AS 08.68.010);
(5) Board of Dispensing Opticians (AS 08.71.010);
(6) Board of Examiners in Optometry (AS 08.72.010);
(7) Board of Pharmacy (AS 08.80.010);
(8) Board of Veterinary Examiners (AS 08.98.010);
(9) Board of Psychologist and Psychological Associate Examiners (AS 08.86.010);
(10) Board of Nursing Home Administrators (AS 08.70.010);
(11) Physical Therapy Board (AS 08.84.010).

(b) Boards listed in this subsection have a termination date of June 30, 1980:

(1) Board of Public Accountancy (AS 08.04.010);
(2) Board of Barber Examiners (AS 08.12.010);
(3) Collection Agency Board (AS 08.24.011);
(4) Board of Hairdressing and Beauty Culture Examiners (AS 08.28.010);
(5) Board of Electrical Examiners (AS 08.40.010);
(6) State Board of Registration for Architects, Engineers and Land Surveyors (AS 08.48.011);
(7) Guide Licensing and Control Board (AS 08.54.010);
(8) Board of Marine Pilots (AS 08.62.010);
(9) Real Estate Commission (AS 08.88.011);
(10) Board of Welding Examiners (AS 08.99.010);
(11) Board of Governors of the Alaska Bar Association (AS 08.08.040).

(c) Upon termination, each board listed in (a) and (b) of this section shall continue in existence until June 30 of the next succeeding year for the purpose of concluding its affairs. During this period, termination does not reduce or otherwise limit the powers or authority of each board. One year after the date of termination, a board not continued shall cease all activities.

(d) The termination, dissolution, continuation or reestablishment of a regulatory board shall be governed by the legislative oversight procedures of AS 44.66.050.

(e) A board scheduled for termination under this chapter may be continued or reestablished by the legislature for a period not to exceed four years. (§ 2 ch 149 SLA 1977)

Dear Dr. Spalding:

Thank you for sending me a copy of the Veterinary Practices Act, HB-86.

I am one of the co-sponsors of the bill and will work for its passage along with Representative Miles.

HB-86 is now in my committee, House Health, Education and Social Services, and we will review the bill as soon as our committee schedule permits.

Again, thank you for writing to me. I will let you know as soon as we schedule the bill as you may wish to testify or send some kind of back up for committee review.

Sincerely yours,

THELMA BUCHHOLDT
Chairman
House Health, Education and Social Services

Dear Mrs. Buckholdt,

Please find enclosed the final draft copy of the Veterinary Practice Act to be introduced by Bill Miller and Terry Martin. This is the form in which it was last written before introduction that I have in possession. Would you please go over it and get back in touch with me as to your comments? Our state association is backing this and there is to my knowledge no real opposition to it from within our profession. We would welcome your co-sponsoring it if you feel that you can do so.

I am sorry I contacted you so late before you were going to Juneau that we were not able to make connections here in Anchorage. Thank you and I look forward to hearing from you soon.

Sincerely,
Harold R. Spalding

SECTIONAL ANALYSIS OF HOUSE BILL NO. 86

Section 1. Adds a new chapter to AS 08 (Business and Professions) entitled "Veterinary Practice Act." Each section of this new chapter will be analyzed separately.

ARTICLE 1. BOARD OF VETERINARY MEDICINE

Sec. 08.95.010. CREATION AND MEMBERSHIP OF BOARD. Creates a Board of Veterinary Medicine, composed of four veterinarian members and one public member, to replace the current Board of Veterinary Examiners.

Sec. 08.95.030. SOURCE OF APPOINTMENTS FOR VETERINARIAN MEMBERS. Directs the governor to appoint each veterinarian member of the board from a list of at least three candidates recommended by the Alaska State Veterinary Medical Association.

Sec. 08.95.040. BOARD MEETINGS. Requires the board to hold a regular annual meeting and permits the chairman to call other meetings.

Sec. 08.95.050. OFFICERS. Directs the board to elect a chairman, subject to the governor's approval, and a secretary to serve one-year terms.

Sec. 08.95.060. REPORT REQUIRED. Requires the chairman and secretary to submit a report on the actions of the board to the Department of Commerce and Economic Development at the end of each examining period.

Sec. 08.95.070. MEETING OF NATIONAL VETERINARY STATE BOARD OF EXAMINERS. Authorizes the board to send one of its members to the annual meeting of the National Veterinary State Board of Examiners at state expense.

Sec. 08.95.080. POWERS AND DUTIES OF THE BOARD. Directs the board to regulate the "practice of veterinary medicine" (as defined) in accordance with the Act, to adopt regulations implementing the Act, and to authorize the issuance, renewal, or reinstatement of a license, permit, or certificate of registration to any person entitled to it. Authorizes the board to adopt regulations interpreting, clarifying, and making specific the provisions of the Act. Directs that the powers granted to the board under the Act be liberally construed.

ARTICLE 2. LICENSING.

Sec. 08.95.200. LICENSE REQUIRED. Prohibits anyone but a licensed veterinarian from practicing veterinary medicine except

(1) a veterinarian licensed in another state consulting with a licensed veterinarian in this state;

(2) the holder of a temporary permit, acting under the direction of a licensed veterinarian, who has applied to take the veterinarian's examination;
(3) a veterinarian licensed in another state who holds a temporary permit to conduct the practice of a licensed veterinarian during his absence;
(4) a person performing tasks within his competence, other than diagnosis, prescription, or initiation of treatment, under the "general supervision" (as defined) of a licensed veterinarian and in accordance with board regulations;
(5) a person performing artificial insemination of animals, who holds a permit to do so;
(6) a person giving advice on livestock management or engaging in accepted livestock management practices in accordance with board regulations;
(7) a faculty member of a "veterinary school" (as defined) engaging in his official duties;
(8) a person lecturing, giving instructions, or performing demonstrations with the approval of the board, at a veterinary school, or in connection with a continuing education course or seminar sponsored by a veterinary school or approved by the board;
(9) a veterinary student performing duties or actions assigned by his instructors;
(10) a veterinary student acting under the general supervision of a licensed veterinarian;
(11) a person engaging in scientific research that reasonably requires experiments with animals;
(12) a person gratuitously giving emergency aid to animals;
(13) the owner of an animal and his regular, full-time employees caring for and treating the animal, unless ownership of the animal was transferred to avoid application of the Act or the employees were hired primarily to treat animals;
(14) a merchant or manufacturer selling at his regular place of business products used in the prevention or treatment of animal diseases;
(15) a person selling or applying a pesticide or herbicide;
(16) a governmental employee engaging in his official duties.

Sec. 08.95.220. QUALIFICATION FOR EXAMINATION. Sets out the qualifications for taking an examination to become a licensed veterinarian. These qualifications are substantially the same as under existing law except for a new provision allowing a person who was not graduated from a veterinary school to take the examination if he has passed the Education Commission for Foreign Veterinary Graduates examination in veterinary medicine.

Sec. 08.95.230. EXAMINATION FEE. Directs the Department of Commerce and Economic Development to establish a fee to accompany applications for licensing as a veterinarian, refundable if the applicant is found unqualified to take the examination.

Sec. 08.95.240. CONTENT OF EXAMINATION. Requires that the examination be in two parts, a national examination selected by the board and a state examination prepared by the board. Requires the examination to cover subjects and techniques commonly taught in veterinary schools and permits the board to require a practical demonstration of skills.

Sec. 08.95.250. EXEMPTION FROM NATIONAL EXAMINATION. Permits the board to exempt an applicant from the national examination who meets specified criteria involving years of practice as a veterinarian in another state and recent passing of a national examination.

Sec. 08.95.260. REEXAMINATION. Allows a person failing an examination to take a subsequent examination upon payment of the examination fee.

Sec. 08.95.265. INITIAL LICENSE AND RENEWAL FEES. Directs the Department of Commerce and Economic Development to establish a fee for issuance of a veterinarian's license and a fee for biennial renewal.

Sec. 08.95.270. TEMPORARY PERMIT TO PRACTICE WITH LICENSED VETERINARIAN. Permits a qualified applicant for a veterinarian's license who has not failed a veterinarian's examination to obtain a temporary permit to practice veterinary medicine under the direction of a licensed veterinarian, pending examination. Comment. The permit holder is required to be under the "direction" of a licensed veterinarian rather than his "general supervision." "General supervision" is defined in the Act but "direction" is not. The difference between these terms is not clear but might be made so by board regulation.

Sec. 08.95.280. TEMPORARY PERMIT TO TAKE OVER PRACTICE OF LICENSED VETERINARIAN. Allows a veterinarian licensed in another state, who would be qualified to take the veterinarian's examination in this state, to obtain a temporary permit, for no longer than 60 days, to conduct the practice of a licensed veterinarian during his absence. Directs the Department of Commerce and Economic Development to establish a fee for these temporary permits and any renewals that may be permitted by the board.

Sec. 08.95.290. REINSTATEMENT OF LAPSED LICENSE. Allows a veterinarian whose license has lapsed to have it reinstated without examination within three years of its lapsing.

ARTICLE 3. REGULATION OF PRACTICE OF VETERINARY MEDICINE.

Sec. 08.95.400. DISCIPLINE OF LICENSED VETERINARIANS. Authorizes the board to revoke or suspend the license of a licensed veterinarian or otherwise discipline a licensed veterinarian for specified reasons, including unprofessional conduct as defined in board regulations.

Sec. 08.95.410. REVOCATION AND SUSPENSION OF TEMPORARY PERMITS. Authorizes the board to revoke or suspend a temporary permit for a violation of the Act or a regulation adopted under it, whether committed by the permit holder or the licensed veterinarian with whom he is associated.

Sec. 08.95.420. ARTIFICIAL INSEMINATION OF ANIMALS. Directs the board to adopt regulations providing for issuance of permits to perform artificial insemination of animals. Authorizes the board to revoke or suspend such a permit for a violation of the Act or a regulation adopted under it.

Sec. 08.95.430. REGISTRATION OF VETERINARY TECHNICIANS. Directs the board to adopt regulations providing for the registration of "veterinary technicians" (as defined). Directs that these regulations require, for registration, the completion of college programs approved by the board, but permits the board to register veterinary technicians before July 1, 1981 who have been graduated from high school and completed two years of satisfactory work experience in lieu of college programs. Sets a fee of $25 for registration and biennial renewal. Authorizes the board to revoke or suspend a certificate of registration for a violation of the Act or a regulation adopted under it. Emphasizes that a veterinary technician must be under the general supervision of a licensed veterinarian. Provides that this section does not require a veterinary technician to become registered, but authorizes the board to impose such a requirement by regulation.

Sec. 08.95.440. STANDARDS OF PRACTICE. Authorizes the board to establish standards of practice, including continuing education requirements, for (1) licensed veterinarians and holders of temporary permits; (2) holders of permits to perform artificial insemination of animals; (3) persons giving advice on livestock management or engaging in livestock management; and (4) persons acting under the general supervision of licensed veterinarians. Authorizes the board to

(1) classify persons acting under the general supervision of licensed veterinarians; (2) limit or qualify the duties which may be performed by members of a class; (3) permit or require members of a class to be registered or licensed; (4) establish qualifications for registration or licensing of members of a class; (5) provide for renewal, revocation, and suspension of certificates or licenses of members of a class; and (6) set fees for issuing and renewing certificates or licenses of members of a class.

Sec. 08.95.460. RESPONSIBILITY OF LICENSED VETERINARIAN. Requires employees of a licensed veterinarian to be under his general supervision. Makes the licensed veterinarian responsible for the performance of any person required to be under his direction or general supervision.

ARTICLE 4. ENFORCEMENT.

Sec. 08.95.600. UNLAWFUL PRACTICE OF VETERINARY MEDICINE. Makes the unlawful practice of veterinary medicine a misdemeanor punishable by a fine of not less than $50 or more than $500 or imprisonment for not more than 90 days. Makes each day of unlawful practice a separate offense.

Sec. 08.95.610. NO RIGHT TO COMPENSATION FOR SERVICES UNLAWFULLY RENDERED. Provides that a person is not entitled to compensation for services constituting the practice of veterinary medicine that are unlawfully rendered.

Sec. 08.95.620. INJUNCTION. Authorizes the board to seek an injunction to restrain a person from practicing veterinary medicine unlawfully.

Sec. 08.95.630. REMEDIES CUMULATIVE. Declares that remedies for enforcing the Act are cumulative and independent.

Sec. 08.95.640. INVESTIGATIONS. Authorizes the board to conduct investigations to determine whether violations of the Act or regulations adopted under it have occurred.

ARTICLE 5. ABANDONMENT OF ANIMALS.

Sec. 08.95.800. Authorizes a licensed veterinarian or temporary permit holder to dispose of an animal, by sale or otherwise, left in his custody and abandoned. Provides that abandonment is considered to have occurred if the animal is unclaimed within 10 days after notice is sent to the owner or his agent.

ARTICLE 6. GENERAL PROVISIONS.

Sec. 08.95.900. DEFINITIONS. Defines principal terms used in the Act, including "animal," "general supervision," "practice of veterinary medicine," and "veterinary technician."

Sec. 08.95.910. SHORT TITLE. Designates AS 08.95 as the Veterinary Practices Act.

Section 2. Makes the Board of Veterinary Medicine subject to the centralized licensing law.

Section 3. Directs the Department of Commerce and Economic Development to provide investigative services to the Board of Veterinary Medicine to assist it in matters of professional discipline.

Section 4. Gives the Board of Veterinary Medicine a termination date of June 30, 1985 for purposes of the sunset law.

Section 5. Reenacts a portion of the sunset law as a new section in the Alaska Statutes. This reenactment has no substantive effect. It is necessitated by the inclusion of the Board of Veterinary Medicine in the sunset law.

Section 6. Provides for a lien on an animal for veterinary services.

Section 7. Makes the Board of Veterinary Medicine subject to the administrative adjudication provisions of the Administrative Procedure Act.

Section 8. Repeals the current laws relating to the practice of veterinary medicine and a portion of the sunset law. The repeal of a portion of the sunset law is of no effect, other than to eliminate a reference to the Board of Veterinary Examiners, because its reenactment as a new section is provided for in Sec. 5.

Section 9. Provides for the validity of a temporary license to practice veterinary medicine issued under law that is being repealed.

Section 10. Provides for the validity of a license to practice veterinary medicine issued under law that is being repealed.

Section 11. Authorizes the reinstatement of a lapsed license to practice veterinary medicine, within five years of its lapsing, which was issued under law that is being repealed.

Section 12. Directs that the members of the Board of Veterinary Examiners automatically become veterinarian members of the Board of Veterinary Medicine and serve until their terms on the former board would have expired.

Section 13. Directs that the title "Board of Veterinary Examiners" in the laws of the state be read as "Board of Veterinary Medicine." Provides for continuation of proceedings begun, orders issued, and regulations adopted under law that is being repealed. Directs that property of the Board of Veterinary Examiners be transferred to the Board of Veterinary Medicine.

Section 14. Makes this Act effective July 1, 1979.

THE ALASKA STATE VETERINARY MEDICAL ASSOCIATION
BOX 631 • ANCHORAGE, ALASKA 99501

February 7, 1979

The Honorable Thelma Buchholdt
Pouch V
Juneau, Alaska 99811

Dear Ms. Buchholdt:

The Alaska State Veterinary Medical Association has written a new practice act, known as House Bill No. 86, that will be introduced this legislative session. The purpose of my letter is to give you an understanding of the bill.

We now have a veterinary practice act which was enacted in 1963 and has had no major revisions since then. We chose to write a new act rather than revise the old because in nearly all parts of the act changes have been proposed to clarify the intent. Writing a new act seemed the easiest way to accomplish this.

We have compared the content of the old act with the proposed act. In nearly all cases, the proposed act and the old act handle regulation and licensing of the profession in the same way. Notable exceptions are as follows:

The size of the Board of Veterinary Examiners was increased from three to five members. This was done because the present board size of three members often proved inadequate due to the absence of members for various reasons.

A public member was provided as one of the members of the Board to encourage representation of the public interest in regulation of the profession.

A section was included which defines the legal responsibilities of aides and trained technicians working under the direction of a veterinarian. The present act makes no mention of persons employed by veterinarians leaving it legally open to question as to whether or to what extent a veterinarian may use these people to aid in treatment of animals.

The new act provides for the examination and registration of Animal Health Technicians. Technicians are a relatively new profession employed by veterinarians to do a wide variety of technical tasks. Many technicians are presently employed in Alaska; however, there is no provision made for them in the present statutes.

Registration is necessary for up-to-date, immediate reference of all veterinary technicians engaged in animal care in the state with reference to qualifications, addresses, license status, etc. This provision allows the Board to adopt appropriate standards for those engaged in animal technology and the issuance of permits to such persons found competent.

Temporary licensing has been changed from the existing uncontrolled situation giving temporary licenses to all applicants who qualify for a license. Under the present law a person who has never passed a national or state examination can obtain a temporary unrestricted license to practice.

The new act proposes that two classes of temporary licenses be issued:

One type would be issued to any technician qualified to take the examination provided he work with a practitioner licensed in the state.

A second type would be issued for a 60-day period to a veterinarian who is licensed in another state. The license would allow the licensee to take over the practice of a veterinarian who is absent.

Examination of licensees has been changed to require a state exam and a national exam for every applicant unless the applicant has either (1) passed a National Board Examination in the last three years, or, (2) has been an active practicing veterinarian in another state. Persons qualifying would be required to to take only the state exam.

Presently, veterinarians who have "practiced" for five of the last seven years in another state may receive a license without exam. The problem with this is that the definition of "Veterinary Practice" is so broad that people involved with activities not commonly considered to be the active practice of veterinary medicine would qualify for license. Examples of this could include meat inspectors, animal consultants, and certain types of researchers. The new act would require all applicants to take the state exam.

The new act provides a legal means by which to cope with the problem of animals left in the care of veterinarians and later abandoned. This is a frequent problem that is not dealt with in the present act.

We would appreciate your support on this bill.

Respectfully,

Jon Thomas, DVM

Jon Thomas
President, ASVMA

February 10,1979

Dear Sally,

A pleasure to hear from you! Thanks for sending along the Veterinary Prctice Act. I have been wondering where it stood these days. I reviewed it and discussed it at length with two Veterinarians, and have one suggestion and a question. The Vets agreed with my suggestion, but declined to write and represent themselves...sigh.

The suggestion: Page 3, Art. 2, Sec. 08.95.200 ...(15) now reads:

> "No person may practice veterinary medicine in this state who is not a licensed veterinarian except...(15) a person selling or applying a pesticide or herbicide."

I thought seriously of dropping out of school to start selling pesticides and doing sprays on the side! I think the intent is better reflected in this wording from the original draft of the act:

> "No person may practice veterinary medicine in this state who is not a licensed veterinarian. THIS ACT SHALL NOT BE CONTRUED TO PROHIBIT: ... (15) a person selling..."

My question concerns the "one public member" of the board (page 1,Art. 1, Sec.08.95.010), and also page 2, Sec.08.95.030. The bill states that the governor shall appoint each veterinarian member, etc. It does not, at this time, say who appoints nor who nominates the public member. I assume the governor appoints, but should it be specified? Hopefully the appointee would have some relevant experience and interest in the profession. I wouldn't object to the position myself!

Take care,

Tom

Alaska Veterinary Society		Unknown

(3) PROGRAM EFFECTS OF BILL

Some major changes to existing practice act (AS 08.98) and increased costs in implementation.

(4) FISCAL IMPACT: ☐ NONE ☒ FISCAL ANALYSIS ATTACHED

(5) AMENDMENTS PROPOSED:

(6) COMMENTS:

The Division of Occupational Licensing opposes Secs. 1 through 14 of HB 86, "An Act relating to the practice of veterinary medicine; and providing for an effective date." Provisions in the Act for additional members, annual National meeting attendance, specialty permits (Sec. 420), and registration of technicians would entail substantial additional costs for regulation and administrative overhead. Many other aspects of the proposed Act are objectionable from the standpoint of standard statutory authority. These include, but are not limited to, (1) a requirement that board members be appointed only from a list submitted by the State association, (2) limits on voting power of public members,

(See reverse)

(3) a requirement that those applying for temporary permits may work only under supervision of a licensee, (4) that the board itself may conduct investigations, and (5) inappropriate revisions to AS 08.03 (Termination, Continuation and Reestablishment of Regulatory Boards).

We believe that the present practice act is workable but needs amendments. Appropriate recommendations have been made as a result of the Sunset review process that should be considered in increasing board efficiency. We do not believe, however, that the proposed new act would accomplish this nor would it be in the best overall interests of the public.

III. ANALYSIS (See Fiscal Note Preparation Instructions, Section III)

FY 80 travel includes funding for two additional board members transportation and per diem to attend presently budgeted board meetings of two a year. There will be one person making one out-of state trip per year to national organization. Contractual expense includes costs for a hearing per year. This includes costs for a hearing office and court reporters preparation, recording, and reporting of the hearings before and after organization. Inflation is computer @ 6% per year. A detailed analysis of expenditures is attached.

POSITION STATEMENT OF THE ALASKA HEALTH COALITION ON HB 86

"An Act Relating To The Practice Of Veterinary Medicine"

10000 people

The Alaska Health Coalition wishes to go on record as being strongly in support of HB 86, "An Act Relating To The Practice of Veterinary Medicine." The present statute, having been enacted in 1963, is no longer adequate. The proposed statute addresses the issues of veterinary employees, delegation of duties, temporary licensure, size of the board and inclusion of public representation, powers of the board and registration. The Coalition feels that the proposed act clarifies the intent of each section thereby simplifying interpertation and enforcement.

Of particular importance is the addition of two members to the board: a practicing veterinarian and a public member. A three person board, as the board is now composed,is impractical. Input is limited and the members are overburdened with the responsibilities of board function. The addition of two more persons would divide the workload more evenly, make the formation of subcommittees feasible, facilitate the decision-making process by increasing information input. Addition of a public member would bring the board into partial compliance with Governor Hammond's mandate that there be two public members on each regulatory board, and would assure some balancing of opinion in matters affecting the general population as well as those affecting veterinary practitioners.

The Coalition feels that the adoption of this bill will do much to assure competency to practice veterinary medicine in Alaska and will thereby protect the public and the animals which are being treated by veterinarians.

Respectfully submitted by

Jana Varrati, Coordinator
Alaska Health Coalition

ALASKA SPCA BOARD OF DIRECTORS VOTED UNANIMOUSLY RECOMMENDING VETERINARIAN BILL PROVIDE FOR RECIPROCITY REGISTRATION OF VETERINARIANS, SIMILAR TO PROCEDURES FOLLOWED BY OTHER PROFESSIONAL BOARDS SUCH AS ENGINEERS, ARCHITECTS, PHARMACISTS, etc.

ALSO THE SPCA REQUESTS YOUR COMMITTEE REVISE BILL NO. 86 TO DEFINE OTHER TRAINED PERSONS AS QUALIFIED TO ADMINISTER SHOTS, NOT UNDER DIRECT SUPERVISION OF REGISTERED VETERINARIAN. SPCA BOARD SUGGESTS TRAINED AND CERTIFICATED TECHNICIANS, NURSES, AND OTHERS BE QUALIFIED TO ADMINISTER SHOTS. MANY SITUATIONS ARISE IN BUSH REQUIRING EMERGENCY HUMANE TREATMENT.

WE DO NOT YET HAVE A COPY OF REVISED BILL.

WE TRUST THE COMMITTEE WILL PROVIDE FOR HUMANE PREVENTION OF PAIN IN SITUATIONS WHERE A VETERINARIAN IS NOT AVAILABLE.

THANK YOU FOR YOUR HELP.

SUBJECT: CSHB 86 (practice of veterinary medicine)

TO: House Health, Education and Social Services Committee
Attn: Shannon Garrett

FROM: Donna Spragg Pegues
Co-Revisor of Statutes

Enclosed you will find the requested committee substitute. We made the following necessary changes from the draft:

1. Effective date is changed from June 30, 1979 to June 30, 1980.

2. Section 5 relating to "sunset" of boards was eliminated because it was enacted in a different bill in 1979.

3. Section 4 relating to the sunset of the veterinary board is changed to reflect laws enacted in 1979.

4. The title to the bill is changed to add mention of the lien provisions in the amendment (in new Sec. 5) to AS 34.35.220. This addition was needed to insure that the subject of the bill is included in the title.

Please let me know if you have any questions.

HOUSE BILL NO. 86

IN THE LEGISLATURE OF THE STATE OF ALASKA

ELEVENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act relating to the practice of veterinary medicine; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 08 is amended by adding a new chapter to read:

CHAPTER 95. VETERINARY PRACTICE ACT.

ARTICLE 1. BOARD OF VETERINARY MEDICINE.

Sec. 08.95.010. CREATION AND MEMBERSHIP OF BOARD. There is created the Board of Veterinary Medicine, composed of four veterinarian members and ~~one~~ public member. Each veterinarian member shall be a licensed veterinarian who is a graduate of a veterinary school, is a resident of this state, and has been licensed to practice veterinary medicine in this state for a period of five years immediately preceding his appointment. No person may serve on the board who is, or was during the two years immediately preceding his appointment, a member of a faculty, board of trustees, or advisory board of a veterinary school. The public member is a voting member in all matters except those involving judgment of professional ability and skill.

Sec. 08.95.020. TERM OF OFFICE. Members of the board serve staggered terms of five years. An appointment to fill a vacancy occurring in an unexpired term is for the unexpired term. No person may serve consecutive five-year terms, but a person appointed for a term of less than five years is not disqualified by this section from being reappointed to a five-year term. Members serve until their successors are appointed and qualify.

Sec. 08.95.030. SOURCE OF APPOINTMENTS FOR VETERINARIAN MEMBERS. The governor shall appoint each veterinarian member of the board from a list of persons prepared by the Alaska State Veterinary Medical Association and submitted at least 30 days before the expiration of a term and not more than 60 days after a vacancy occurs in an unexpired term. The list shall contain not less than three recommended candidates for the appointment. The governor shall make the appointment within 30 days after receiving the list.

Sec. 08.95.040. BOARD MEETINGS. The board shall hold a regular annual meeting at the time and place fixed by rule of the board. The chairman of the board, with prior approval may call other meetings by giving notice as may be required by rule.

Sec. 08.95.050. OFFICERS. At its regular annual meeting, the board shall elect a chairman and secretary from among its members. The election of the chairman is subject to the approval of the governor. An officer of the board serves for a term of one year and until his successor is elected and qualifies, without limitation on the number of terms he may serve as an officer. The chairman shall preside at board meetings.

Sec. 08.95.060. REPORT REQUIRED. At the end of each examining period, the chairman and secretary shall submit to the department a report on the actions of the board.

Sec. 08.95.070. MEETING OF NATIONAL VETERINARY STATE BOARD OF EXAMINERS. The board may select one of its members to represent it at the annual meeting of the National Veterinary State Board of Examiners. This representation is authorized official business incident to the duties of the person selected as a member of the board.

Sec. 08.95.080. POWERS AND DUTIES OF THE BOARD. The board

(1) shall regulate the practice of veterinary medicine in

Covered by Dept. of Commerce

accordance with this chapter;

(2) shall adopt regulations implementing this chapter;

(3) may adopt regulations interpreting, clarifying, and making specific the provisions of this chapter; and implementing the intent of this chapter

(4) shall authorize the issuance, renewal, or reinstatement of a license, permit, or certificate of registration to any person entitled to it under this chapter or a regulation adopted under it.

(b) The powers granted to the board under this chapter shall be liberally construed.

ARTICLE 2. LICENSING.

Sec. 08.95.200. LICENSE REQUIRED. No person may practice veterinary medicine in this state who is not a licensed veterinarian except

(1) a veterinarian licensed in another state consulting with a licensed veterinarian in this state;

(2) the holder of a temporary permit under AS 08.95.270 acting under the direction of a licensed veterinarian;

(3) the holder of a temporary permit under AS 08.95.280 conducting the practice of a licensed veterinarian during his absence;

(4) a person performing tasks within his competence, other than diagnosis, prescription, or initiation of treatment, under the general supervision of a licensed veterinarian and in accordance with such regulations as may be adopted by the board;

(5) the holder of a permit under AS 08.95.420 performing artificial insemination of animals;

(6) a person giving advice on livestock management or engaging in accepted livestock management practices in accordance with such regulations as may be adopted by the board;

(7) a member of the faculty of a veterinary school engaging in his professional duties for that school;

(8) a person lecturing, giving instructions, or performing demonstrations with the approval of the board, at a veterinary school, or in connection with a continuing education course or seminar sponsored by a veterinary school or approved by the board;

(9) a student enrolled in veterinary school performing duties or actions assigned by his instructors;

(10) a student enrolled in veterinary school acting under the general supervision of a licensed veterinarian;

(11) a person engaging in bona fide scientific research which reasonably requires experiments with animals;

(12) a person gratuitously giving emergency aid to animals;

(13) the owner of an animal and his regular, full-time employees caring for and treating the animal, unless ownership of the animal was transferred to avoid application of a provision of this chapter or the employees were hired primarily to treat animals;

(14) a merchant or manufacturer selling at his regular place of business medicines, feed, appliances, or other products used in the prevention or treatment of animal diseases;

(15) a person selling or applying a pesticide or herbicide;

(16) an employee of the federal government, the state government, or a local government engaging in his official duties.

Sec. 08.95.210. EXAMINATION. The board shall hold at least two examinations each year. A person who passes the examination is entitled to be licensed as a veterinarian.

Sec. 08.95.220. QUALIFICATION FOR EXAMINATION. (a) A person is entitled to take the examination who

(1) is of good moral character;

(2) was graduated from a veterinary school or has passed the Education Commission for Foreign Veterinary Graduates examination in

veterinary medicine;

(3) has not had a veterinarian license revoked on grounds other than nonpayment of fees in another jurisdiction;

(4) has completed application forms and returned them to the department; and

(5) has paid the examination fee.

(b) If the board finds that an applicant is qualified under this section, it shall admit him to the next examination. If the board finds that an applicant is not qualified under this section, the secretary of the board shall notify the department in writing of that finding and the grounds for it.

Sec. 08.95.230. EXAMINATION FEE. The department shall establish a fee to accompany applications for licensing as a veterinarian. The department shall return an applicant's fee to him if he is found to be unqualified to take the examination, but in all other instances the examination fee is not refundable.

Sec. 08.95.240. CONTENT OF EXAMINATION. (a) The examination shall be in two parts: (1) a national examination prepared by the National Board of Veterinary Medical Examiners or other national veterinary competency examination selected by the board, and (2) a state examination prepared by the board. The examination shall be designed to test the examinee's knowledge of and proficiency in the subjects and techniques commonly taught in veterinary schools. To pass the examination, the examinee must demonstrate to the board that he has sufficient scientific and practical knowledge to practice veterinary medicine. The state examination may consist of a practical demonstration of skills as well as oral or written answers to questions.

(b) Each examinee must take the national examination and the state examination unless exempted by the board from the national examination

under AS 08.95.250.

Sec. 08.95.250. EXEMPTION FROM THE NATIONAL EXAMINATION. The board may exempt an applicant from taking the national examination who furnishes proof that he was graduated from a veterinary school and that he

(1) has for five of the seven years immediately preceding the filing of his application been a practicing veterinarian licensed in another state having licensing requirements, ~~at the time he was first licensed,~~ substantially equivalent to the present requirements of this chapter; or

(2) has within the three five years immediately preceding the filing of his application passed taken a national examination prepared by the National Board of Veterinary Medical Examiners or other national veterinary competency examination selected by the board.

Sec. 08.95.260. REEXAMINATION. A person who fails an examination may apply for a subsequent examination, but shall pay the examination fee each time he applies.

Sec. 08.95.265. INITIAL LICENSE AND RENEWAL FEES. (a) The department shall establish a fee for issuance of a veterinarian's license, payable at the time the license is issued. This fee is in addition to the examination fee.

(b) The department shall establish a fee for biennial renewal of a veterinarian's license.

Sec. 08.95.270. TEMPORARY PERMIT TO PRACTICE WITH LICENSED VETERINARIAN. (a) An applicant for licensing as a veterinarian who meets the requirements of AS 08.95.220(a) and has not failed a ~~veterinarian's~~ examination in this or another state is entitled to a temporary permit to practice veterinary medicine with a licensed veterinarian. The temporary permit may not be renewed and expires on the day after publi-

cation of the results of the first examination following the issuance of the permit. The application for the temporary permit shall be signed by the applicant and the licensed veterinarian with whom he will be associated. No fee may be imposed for the temporary permit. No person may receive more than one temporary permit under this section.

(b) The holder of a temporary permit under this section shall limit his practice of veterinary medicine to the practice of the licensed veterinarian with whom he is associated and shall be under the direction of that veterinarian.

Sec. 08.95.280. TEMPORARY PERMIT TO TAKE OVER PRACTICE OF LICENSED VETERINARIAN. A veterinarian licensed in another state who meets the requirements of AS 08.95.220(a)(1) - (3) is entitled to a temporary permit to conduct the practice of a licensed veterinarian during his absence. The temporary permit shall be valid for a period of no more than 60 days. It may be renewed at the discretion of the board. The department shall establish a fee for temporary permits and renewals of temporary permits under this section.

Sec. 08.95.290. REINSTATEMENT OF LAPSED LICENSE. A person whose license to practice veterinary medicine has lapsed is entitled to have his license reinstated without taking an examination unless his license has remained lapsed more than three years.

ARTICLE 3. REGULATION OF PRACTICE OF VETERINARY MEDICINE.

Sec. 08.95.400. DISCIPLINE OF LICENSED VETERINARIANS. The board may, after hearing, revoke or suspend the license of a licensed veterinarian or otherwise discipline a licensed veterinarian for

(1) fraud, misrepresentation, or deception in obtaining a license;

(2) an adjudication of mental incompetency by a court of competent jurisdiction;

(3) chronic drunkeness or habitual use of drugs;

(4) the use of advertising or solicitation which is false, misleading, or otherwise unprofessional under regulations adopted by the board;

(5) conviction or cash compromise of a felony or any crime involving moral turpitude;

(6) incompetence, gross negligence, or other malpractice in the practice of veterinary medicine;

(7) having professional association with or employing a person practicing veterinary medicine unlawfully;

(8) fraud or other dishonest conduct in applying or reporting diagnostic biological tests;

(9) failure to keep veterninary premises and equipment in a clean and sanitary condition;

(10) failure to report, as required by law, or making a false report of a contagious or infectious disease;

(11) fraud, other dishonest conduct, or gross negligence in the inspection of foodstuffs or the issuance of health or inspection certificates;

(12) cruelty to animals;

(13) revocation of a license to practice veterinary medicine by another state on grounds other than nonpayment of fees; or

(14) unprofessional conduct as defined in regulations adopted by the board.

Sec. 08.95.410. REVOCATION AND SUSPENSION OF TEMPORARY PERMITS. The board may, after hearing, revoke or suspend a temporary permit issued under AS 08.95.270 or 08.95.280 for a violation of this chapter or a regulation adopted under it committed by the holder of the permit or the licensed veterinarian with whom he is associated.

may delete

Sec. 08.95.420. ARTIFICIAL INSEMINATION OF ANIMALS. (a) The board shall adopt regulations providing for issuance of permits to perform artificial insemination of animals. The regulations may provide for renewal of a permit. The regulations shall establish qualifications for obtaining a permit, which may include passing an examination, and fees for issuing a permit and any renewal of it.

(b) A person meeting the qualifications established by the board and paying the required fee is entitled to permit to perform artificial insemination of animals.

(c) The board may, after hearing, revoke or suspend a permit to perform artificial insemination of animals for a violation of this chapter or a regulation adopted under it.

Sec. 08.95.430. REGISTRATION OF VETERINARY TECHNICIANS. (a) The board shall adopt regulations providing for the registration of veterinary technicians. The regulations shall establish qualifications for registration which shall include satisfactory completion of college programs approved by the board and may include passing an examination. However, the board may provide for registration, before July 1, 1981, of veterinary technicians who have not completed college programs but have completed at least two years of satisfactory experience in the employ of a veterinarian, or its equivalent as determined by the board, and have been graduated from high school. The regulations shall provide for renewal of registration biennially. The fee for registration and renewal of registration is $25.

(b) A person meeting the qualifications established by the board and paying the required fee is entitled to a certificate of registration as a veterinary technician.

(c) The board may, after hearing, revoke or suspend a certificate of registration as a veterinary technician for a violation of this

chapter or a regulation adopted under it.

(d) This section does not entitle a veterinary technician to do any act constituting the practice of veterinary medicine while not under the general supervision of a licensed veterinarian.

(e) This section does not require a veterinary technician to become registered, but such a requirement may be imposed by regulation adopted by the board under AS 08.95.440(a)(4).

Sec. 08.95.440. STANDARDS OF PRACTICE. (a) The board may adopt regulations establishing standards of practice for

(1) licensed veterinarians and holders of temporary permits under AS 08.95.270 and 08.95.280;

(2) holders of permits to perform artificial insemination of animals;

(3) persons giving advice on livestock management or engaging in livestock management; and

(4) persons acting under the general supervision of licensed veterinarians.

(b) Regulations adopted under (a)(4) of this section may

(1) classify persons acting under the general supervision of licensed veterinarians;

(2) limit or qualify the duties which may be performed by members of a class;

(3) permit or require members of a class to be registered or licensed;

(4) establish qualifications, which may include passing an examination, for registration or licensing of members of a class;

(5) provide for renewal and, after hearing, revocation or suspension of certificates of registration or licenses of members of a class; and

(6) establish fees for issuing and renewing certificates of registration and licenses of members of a class.

(c) Regulations adopted under this section may impose continuing education requirements as part of a standard of practice.

Sec. 08.95.460. RESPONSIBILITY OF LICENSED VETERINARIAN. An employee of a licensed veterinarian shall perform his duties under the general supervision of the licensed veterinarian. The licensed veterinarian is responsible for the performance of any person required to be under his direction or general supervision by this chapter or a regulation adopted under it.

ARTICLE 4. ENFORCEMENT

Sec. 08.95.600. UNLAWFUL PRACTICE OF VETERINARY MEDICINE. If a person is required by this chapter or a regulation adopted under it to have a license, permit, or certificate of registration in order to practice veterinary medicine, it is a misdemeanor for him to practice veterinary medicine without a currently valid license, permit, or certificate or in excess of the authority granted in it. Upon conviction, a person violating this section is punishable by a fine of not less than $50 or more than $500, or by imprisonment for not more than 90 days, or by both. Each day of unlawful practice is a separate offense.

Sec. 08.95.610. NO RIGHT TO COMPENSATION FOR SERVICES UNLAWFULLY RENDERED. If a person is required by this chapter or a regulation adopted under it to have a license, permit, or certificate of registration in order to practice veterinary medicine, he is not entitled to compensation for services which he renders, constituting the practice of veterinary medicine, without a currently valid license, permit, or certificate or in excess of the authority granted in it.

Sec. 08.95.620. INJUNCTION. When it appears that a person has engaged in or is about to engage in an act constituting a violation of

AS 08.95.600, the board may bring an action in the superior court to enjoin the act and enforce compliance with that section.

Sec. 08.95.630. REMEDIES CUMULATIVE. The remedies described in AS 08.95.600 - 08.95.620 and AS 08.01.087 are cumulative and independent.

Sec. 08.95.640. INVESTIGATIONS. The board may, upon its own motion, conduct investigations to determine whether violations of this chapter or regulations adopted under it have occurred. In connection with an investigation, the board may administer oaths, compel the attendance and testimony of witnesses, either before the board or by deposition, and compel the production of books, papers, records, and other documents.

ARTICLE 5. ABANDONMENT OF ANIMALS.

Sec. 08.95.800. ABANDONMENT OF ANIMALS. (a) A licensed veterinarian or holder of a temporary permit under AS 08.95.270 or 08.95.280 is entitled to humanely dispose of an animal, by sale or otherwise, which has been left in his custody and abandoned. Abandonment is considered to have occurred if the owner of the animal or his agent does not claim the animal within ten days after the licensed veterinarian or temporary permit holder sends written notice of his intent to dispose of the animal to the owner or agent, at his last known address, by registered or certified mail, return receipt requested. However, the licensed veterinarian or temporary permit holder may not dispose of an animal under this section if the owner or his agent claims the animal before the disposal occurs. Disposal of an animal under this section extinguishes all rights of the owner in the animal.

(b) A licensed veterinarian or holder of a temporary permit under AS 08.95.270 or 08.95.280 is not liable in civil damages for disposing of an animal under this section. Disposal of an animal under this section may not constitute grounds for discipline by the board.

ARTICLE 6. GENERAL PROVISIONS.

Sec. 08.95.900. DEFINITIONS. As used in this chapter, unless the context requires otherwise,

(1) "animal" means any animal other than man and includes mammals, birds, fish, and reptiles, wild or domestic, living or dead;

(2) "board" means the Board of Veterinary Medicine;

(3) "department" means the Department of Commerce and Economic Development;

(4) "general supervision" means that degree of control, by the veterinarian having actual charge of the case or animal, which will insure that the activities of the person under the general supervision of the veterinarian are within the scope of the orders, assignments, or prescriptions of the veterinarian;

(5) "licensed veterinarian" means a person who holds a currently valid license to practice veterinary medicine in this state;

(6) "practice of veterinary medicine" means

(A) to diagnose, treat, correct, change, relieve, or prevent animal disease, deformity, defect, injury, or other physical or mental conditions, including the prescription or administration of any drug, medicine, biologic, apparatus, application, anesthetic, or other therapeutic or diagnostic substance or technique and the use of any manual or mechanical procedure for artificial insemination, testing for pregnancy, or correcting sterility or infertility, or to render advice or recommendation with regard to any of the above;

(B) to represent, directly or indirectly, publicly or privately, an ability and willingness to do any act described in (A) of this paragraph;

(C) to use any title, words, abbreviation, or letters in

a manner or under circumstances which induce the belief that the person using them is qualified to do any act described in (A) of this paragraph;

(7) "veterinarian" means a person who has received a Doctor of Veterinary Medicine degree, or its equivalent as determined by the board, from a veterinary school or has passed the Education Commission for Foreign Veterinary Graduates examination in veterinary medicine;

(8) "veterinary school" means a veterinary college or division of a university or college that offers the degree of Doctor of Veterinary Medicine, or its equivalent as determined by the board, and conforms to the standards required for accreditation by the American Veterinary Medical Association;

(9) "veterinary technician" means a person who, for compensation, directly or indirectly performs an act requiring substantial specialized judgment and skill founded on formal education which provides knowledge and application of the principles of animal technology based on biological, physical, and social sciences in the care, treatment, or maintenance of health or prevention of illness of animals, but does not include a person licensed by the state to practice a healing arts skill.

Sec. 08.95.910. SHORT TITLE. This chapter may be known and cited as the Veterinary Practice Act.

* Sec. 2. AS 08.01.010(14) is amended to read:

(14) Board of Veterinary <u>Medicine</u> [EXAMINERS];

* Sec. 3. AS 08.01.050(a)(19) is amended to read:

(19) provide investigative services to the boards established under AS 08.20, AS 08.32, AS 08.36, AS 08.64, AS 08.68, AS 08.71, AS 08.72, AS 08.80, AS 08.84, [AND] AS 08.86, <u>and AS 08.95</u> for the purpose of assisting those boards in matters of professional discipline.

* Sec. 4. AS 08.03.010(c) is repealed and re-enacted to read:

(c) The Board of Veterinary Medicine (AS 08.95.010) has a termination date of June 30, 1985.

* Sec. 5. AS 08.03 is amended by adding a new section to read:

Sec. 08.03.020. TERMINATION, CONTINUATION, AND REESTABLISHMENT OF REGULATORY BOARDS. (a) Upon termination, each board listed in AS 08.03.010 shall continue in existence until June 30 of the next succeeding year for the purpose of concluding its affairs. During this period, termination does not reduce or otherwise limit the powers or authority of each board. One year after the date of termination, a board not continued shall cease all activities.

(b) The termination, dissolution, continuation or reestablishment of a regulatory board shall be governed by the legislative oversight procedures of AS 44.66.050.

(c) A board scheduled for termination under this chapter may be continued or reestablished by the legislature for a period not to exceed four years.

* Sec. 6. AS 34.35.220 is amended to read:

Sec. 34.35.220. PERSONS ENTITLED TO CARRIER, WAREHOUSE, AND <u>ANIMAL</u> [LIVESTOCK] LIENS. <u>(a)</u> The following persons shall have liens upon personal property for their just and reasonable charges for the labor, care, and attention bestowed and the food furnished, and may retain possession of the property until the charges are paid:

(1) a person who is a common carrier, or who, at the request of the owner or lawful possessor of personal property, carries, conveys, or transports the property from one place to another;

(2) a person who safely keeps or stores grain, wares, merchandise, and personal property at the request of the owner or lawful possessor of the property; and

(3) a person who pastures or feeds an animal [HORSES, CATTLE, HOGS, SHEEP, OR OTHER LIVESTOCK,] or bestows labor, care, or attention upon an animal, including veterinary services, [THE LIVESTOCK] at the request of the owner or lawful possessor of the animal [LIVESTOCK].

(b) As used in this secton, "animal" has the meaning ascribed to it in AS 08.95.900.

* Sec. 7. AS 44.62.330 is amended by adding a new paragraph to read:

(46) Board of Veterinary Medicine.

* Sec. 8. The following laws are repealed: AS 08.03.010(a)(8), (d), and (e); and AS 08.98.

* Sec. 9. A person who, on the effective date of this Act, holds a valid temporary license issued under former AS 08.98.180 is entitled to practice veterinary medicine until the results of the examination following the issuance of the license are published, so long as his temporary license is not revoked or suspended. Notwithstanding AS 08.95.200(2) and 08.95.270, enacted in sec. 1 of this Act, he is not required to practice veterinary medicine in association with or under the direction of a licensed veterinarian. In all other respects, he is fully subject to AS 08.95, enacted in sec. 1 of this Act.

* Sec. 10. A person who, on the effective date of this Act, holds a valid license issued under former AS 08.98.130 or 08.98.210 is considered to hold a license issued under AS 08.95.210 and is fully subject to AS 08.95, including provisions relating to renewal, revocation, suspension, and reinstatement of his license.

* Sec. 11. A person who, on the effective date of this Act, holds a license issued under former AS 08.98.130 or 08.98.210 which has lapsed is entitled to issuance of a license under AS 08.95.210 without taking an examination upon payment of the penalty and fees referred to in AS 08.01.100(b), unless his old license has remained lapsed more than five years at the time

he applies for the new license.

* Sec. 12. Notwithstanding AS 08.95.010 - 08.95.030, the members of the former Board of Veterinary Examiners on the day before the effective date of this Act automatically become veterinarian members of the Board of Veterinary Medicine. They serve until their terms of office on the former Board of Veterinary Examiners would have expired and until their successors are appointed and qualify.

* Sec. 13. Where the title "Board of Veterinary Examiners" appears in the laws of this state, it shall be read as the "Board of Veterinary Medicine". All litigation, hearings, investigations, and other proceedings pending under former AS 08.98 continue in effect and may be continued and completed notwithstanding the repeal of that chapter in this Act. Orders issued and regulations adopted under former AS 08.98 remain in effect until they expire by their own terms or until revoked, vacated, or otherwise modified under AS 08.95. Records, equipment, and other property of the former Board of Veterinary Examiners are transferred to the Board of Veterinary Medicine.

* Sec. 14. This Act takes effect July 1, 1979.

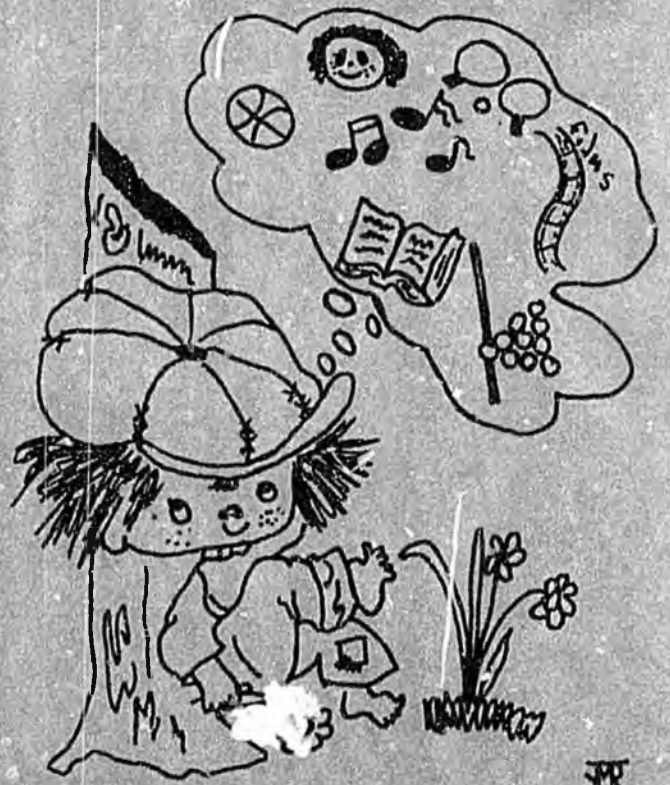
125

Sitka needs a

TEENAGE CENTER FOR YOUTH GROWTH

for the well-being of the Community



WHY?

YOUTH NEEDS A PLACE TO :

- socialize
- enjoy recreation
- gain a sense of competence
  - belongingness
  - usefulness
- develop through responsibility
  - leadership
  - employment
  - participation in community services

WHO?

ALL YOUTH !
Ages : 13 - 19 years

open to family participation
and members of the community...

The Sitka Teen Service Officew
is currently located in
the Franklin Building
office hours: 1-4 p.m.
Monday-Friday

For more information, telephone 7-3500

WHAT?

A TEEN CENTER
WOULD FUNCTION AS A :

Resource Center

Films on human relations skills
small library
pamphlets available on
alcohol
drugs
nutrition
health

With:
crisis intervention
youth employment services
referral services

Workshops :
career opportunities
communication skills
personality development
crafts and technical skills
laws, rights, and responsibilities

Recreation Center

volleyball
basketball
ping pong
dances
pool
etc!

STATE of ALASKA

MEMORANDUM

TO: Trink Morimitsu
Staff Aide for Representative
Thelma Buckholt
Alaska State Legislature

DATE: February 23, 1979

FILE NO:

TELEPHONE NO:

FROM: Barbara McPherson 465-3591
Juvenile Planner
Criminal Justice Planning Agency

SUBJECT: Youth Center Programs Funded by CJPA

In the past three years Law Enforcement Assistance Administration funds have been awarded to the following youth center programs:

Petersburg Youth Program
Ketchikan Youth Advocate Program
Cordova Youth Services Center
Nome Community Center
Hoonah Youth Center
Craig Youth Center
Seward Recreational and Training Center
Tyonek Youth Program
Gambell Youth Center

As we discussed by phone, these programs have not been formally evaluated in relation to their effect on preventing juvenile delinquency, but their performance in meeting grant objectives for the delivery of services is monitored regularlary. However, the majority of these projects are able to provide measurable data on the reduction of delinquency in their communities after the implementation of these programs:

1. In the first year of operation of the Cordova Youth Services Center juvenile arrests decreased 17% and a March 1977 letter from the Cordova Chief of Police states that street contacts between police and juveniles were "well below the normal and I feel that it is mainly because of the Eyak Youth Services Center facilities and activities."

2. In Petersburg in 1977 there were 25 juvenile delinquency petitions filed with Petersburg court compared to 50 in 1976. A March 1978 letter from the Petersburg Magistrate states that "this reduction in filing may not be attributed solely to the youth program but I cannot help but feel the center and its leadership were contributing factors."

3. Juvenile arrests decreased 57% in the first year of operation of the Hoonah youth center.

4. Juvenile violations as compiled by the local police department decreased 76% during the first year of operation of the Craig Youth Center.

5. The Ketchikan Youth Advocate Program tracked juveniles with previous high arrests records during their first four months of involvement with the youth program. Of the 15, ten showed a decrease in rate of arrests and 8 of those 10 were not arrested at all during the four month period.

The lack of community financial support for the ongoing operation of these programs has been a major problem in their continuation when they are no longer eligible for LEAA funds. The most important factor in the success of these programs has been quality staff who are committed to working with youth.

Dear Ms. Buchholdt:

I have been recently made aware of House Bill Number 125 that you are sponsoring. As President of the Bering Straits Native Association and Kawerak I would strongly lend my support to the construction and operation of multi-purpose Youth Centers in the bush area of the state.

Nome has had a Teen Center operated by the Nome Community Center since 1971. It has provided a commendable youth recreation and counseling services helping many adolescents. A stable source of funding from the Department of Resources would enable consistent and adequate services for the youth of Nome.

Such programs are a high priority in the bush areas where recreational opportunities are limited and alcohol abuse is frequent in the teen population.

It is my sincere hope you will pass this bill with an amendment to provide for consistent funding for those communities that already have access to youth facilities.

Sincerely,

Caleb Pungowiyi

Caleb Pungowiyi

March 2, 1979

Representative Thelma Buchholdt
Pouch V
Juneau, AK 99811

Dear Ms. Buchholdt:

I understand you are sponsoring House Bill #125. Youth Center programs provide very important services to teens who will be the future leaders of their community. I feel these services are especially needed in the bush areas to offer constructive alternatives to drug and alcohol abuse and to stimulate a sense of purpose and well-being.

The Community Center in Nome maintains a Teen Center which operates a successful program including recreational activities and counseling for adolescents. These youth who participate could continue to benefit from the Department of Resources.

I wish to express my support for Youth Centers to be constructed and operated in the Alaska bush areas, and I hope this bill will be passed. An ammendment should be written so the communities which already have access to facilities for youth will receive consistent funding.

Sincerely,

George Walters
President

March 2, 1979

Representative Thelma Buchholdt
Pouch B
Juneau, Alaska 99811

Dear Representative Buchholdt:

I write in behalf of your house bill no. 125 which was introduced on the 6th of February relating to multipurpose youth centers. We have been operating a comparable center in Nome for several years and have noted a major change in youth arrest records during this period. Juvenile arrests in the first year were down 32% and again in the second year another 42%. It is now apparent that we will be needing program funds after March of 1980, as our funding is deadlined at that time.

If there is anything additional that we may do to assist you with this bill, please do not hesitate to let us know.

Sincerely yours,

Leo B. Rasmussen
Mayor

NOME COMMUNITY CENTER INC.

BOX 98 Nome, Alaska 99762
(907) 443-5259

TO: Alaska State Legislature Committee on Health,Education and Social Services

FROM: Nome Community Center, Box 98, Nome Alaska

SUBJECT: House Bill 125 "An Act relating to multipurpose youth centers"

The Nome Community Center has been asked to present testimony to you because we have operated a Youth Center in Nome since 1972. We would like to share with you the need for Youth Centers in the bush, the proven benefit youth and the community derive from Youth Centers and the overriding need for the State to comprehensively deliver recreational and counseling services to youth through the mechanism of Youth Center

NEED FOR MULTIPURPOSE YOUTH CENTERS IN ARCTIC ALASKA

There are three primary reasons why a youth center is important in Nome

1) Lack of adequate leisure time pursuits. There are no movie theatres, bowling alleys, commercial recreation halls or snack bars in Nome where the young people can meet one another to socialize. Other than the existing Youth Center no programs are presently avilable to provide constructive leisure activities for teens. When there is no Youth Center this group spends much time out wandering the streets of downtown Nome in search of companionship and "something to do". Concentration of the business and bars in town on Front Street means something to do is watching adults stagger from bar to bar.

2) Family problems. Many families must function under the burden of multiple problems: excessive alcohol use; separation and/or divorce; poor living conditions characterized by inadequate housing, large families and visiting relative; and general insecurity due to low educational levels and fluctuating incomes. Young people from this environment avoid their homes as much as possible. They take to the street in search of emotional committment and belonging among their peers. Before the Youth Center there was a growing marginally delinquent sub-culture which posited such values as hard drinking and fighting.

3) Dual culture environment. Eskimo youth are growing up in a non-native world with western standards of success, acciptable lifestyles and morality. The result is all too often very confued and alienated kids who belong to neither the old way of life or the new. Non-native youth must adjust to being a minority group. There is a potential for racial conflice without common leisure time and social pursuits.which is provided by the Youth Center.

EXISTING YOUTH CENTER PROGRAMS

The Nome Community Center provides a multitude of activities for youth at the Youth Center, school gyms and outdoors. These are all sponsored by the Youth Center Progra

Youth Center Activities. 30 to 60 youths come to the Youth Center each evening to play ping pong, pool or table games; watch T.V. sit quietly, read, do homework, or just interact with each other and the staff. Special times are set aside for films, discussion groups, guest speakers etc.

Gym Activities. Youth Center staff supervise basketball and volleyball for teens six nights of the week and afternoons on weekends and during summer. For gym programs we utilize either the grade school or high school gyms.

Ice Rink Activities. In the winter we operate and outdoor ice rink and warm-up shack from 3-9 daily. This is a very popular program among teens.

Day trips and overnight camping. We have taken 300 youths on day trips this past year. In the summer we go picnicing, hiking, berry picking and fishing. In the fall and winter there is hunting, cross-country skiing, and building snow caves.

Counseling for youth and parents. We have provided youth and their families with support and counseling in an effort to improve family and peer relations, reduce stress and substance abuse. This year there was 324 in depth youth counseling sessions and 100 sessions with parents and youth in their homes.

Agency Contacts. The Youth Center is a resource for agencies dealing with youth and we have had 275 agency contact this year.

EFFECTS OF YOUTH CENTER PROGRAM

Youth arrests have dropped dramatically since the youth program was adequately funded in 1977:

Youth Arrests by Year: Nome, 1974 through 1978

1974	1975	1976	1977	1978	Year
226	197	172	109	63	Number of youth arrests

Police Chief Ed Ward has stated he feels the drop in arrests is due to the presence of the Youth Center and Youth Center activites.

In December, 1978 we surveyed 60 adults to see if they felt the Youth Center was of benefit to the community and 82% replied affirmatively. The others stated they were either new in town and did not know of the Center or did not have youth.

WHY THE NEED FOR HOUSE BILL 125?

Alaska does not have a definite policy for youth programs. Services for youth are provided by a myrid of State Departments and some grants to agencies outside the State structure. The result of this is a fragmented, inefficient, possibly uneconomic and certainly ineffective approach to the needs and concerns of youth. It is time the State of Alaska recognizes the real need for consistent recreations, counseling and other services for youth in rural Alaska.

The Nome Youth Center has received only four years of funding during the past seven years of operation and none of that has come from the State of Alaska (1974 & 1975 Law Enforcement Assistance Agency; 1977, 1978 & 1979 National Institute of Drug Abuse. 1972, 1973 and 1976 volunteers only). The funding from LEAA and NIDA has been demonstration grants. That means that funding is only for a limited period of time with the theory that when the local community sees the effectiveness of the program it will pick up the program and provide local funding. This will never happen in bush Alaska where there is no community economic or tax base.

Youth need consisten not here today and gone tomorrow which is exactly what the current system fosters. Continuing to fund youth in a haphazzard manner creates a boom or bust program for kids. Just when they form attachments with a Youth Center staff member, the money runs out , no staff and one more youth who knew a real relationship with a stable adult was too much to hope for anyway. Youth need long term, reliable recreational and counseling programs sponsored by the State year after year.

We urge you as Legislators to speak up for the youth of Alaska by supporting the building and operation of multipurpose youth centers where they do not exist and the operation of youth centers and youth activities where they do exist.

TELEPHONE 747-3500

January 25, 1979

Thelma Bucholdt
Alaska State Legislature
Pouch V
Juneau, Alaska 99811

Dear Ms. Buchholdt:

I wish to personally thank you for promoting the construction of Youth Centers in Alaska. I had received a copy of youth bills presented and did review bill 530. I would ask that this bill be resubmitted and since our incorporation has been pursuing assistance for construction of a Family Developmental and Recreational Center with priorities given to teens, I would be glad to send over any documentary of need, problems with Sitka youth and any other information you feel would be helpful in order for this type of bill to pass.

This is a very urgent matter in order to lessen the amount of vandalism, delinquency, youth suicides, motorcycle and car youth deaths that is occurring extensively in Sitka. I have reviewed three reports concerning the needs of youth in Alaska completed by Social Service and the mental health. Now, who is going to listen enough to help our youth? Do these divisions waste their time gathering this information and is it useless, if no one can see the importance of trying any type of measures in order to save lives among our youth. Our Center plans to open many programs to assist youth with small problems before they grow into the court system and such drastic measures as suicide. Are they not the future of Alaska and aren't we showing they are really not important if we cannot assist them in fulfilling their life needs.

We have completed three sets of drawings for construction - one ranging for a multi use day care and teen center, another metal building for approximately $150,000. and a set completed by the City who put aside $1500. to have Graham Associates complete the building worth $400,000. The Assembly has awarded us use of property next to the Firehall, but has restricted a metal building there. We have on hand 6,660. raised by our teens in the last year and the City is holding $8,000. that has been raised in the last 15 years by teens and interested adults. We are not asking for the complete amount of money needed - but could possibly borrow from the Farmers Home Loan enough funds to purchase $51,000 worth of supplies if the Assembly would grant use of another property for a metal building. A bond issue did go to our residents - which failed - 400 voting for and 1,000 against. There are many many reasons why individuals voted against. Cost too high, other priorities such as a hopsital or art facility, condeming nature towards youth, not in favor of using the property awarded.

I see where legislative individuals do place projects for passage and award different State divisions, such as Community and Regional Affairs and the

Transportation and Public Facilities for construction purposes - $500,000, $180,000, $216,000. I also realize when the Northern Citys of Alaska are represented heavier - we in Southeast have a time winning our fight. I do hope that each and every legislature will think broad enough to consider promoting any project that is for the betterment of each youth life.

You see a Center can be a coverup and disguise to assisting youth without labeling their problem into mental health, criminal, or alcohol and drugs. We can save much money in the long run working on preventive methods then waiting for youth to have to leave their home and unable to cope because they are sinking.

I would appreciate you making a copy of this letter, if possible, and give every legislature one in order that I may promote the need of these projects within Southeast especially, which do not offer as many preventive measures to our youth. Even though youth have a chance to take part in sports - they still enjoy their leisure time and some that show interest are not good enough to participate or do not like competitive sports. What percentage then are school s catering too? Cannot we increase this percentage to serve more youth and give them a chance to improve their self image and realize each life is important and has value.

Please send me a complete copy of bill HB 530 and let me know how we can promote our project.

Thank you so much for the efforts you have made toward a well worth project.

Enclosed you will find documentation of our efforts, successes and failures toward building a strong program in Sitka.

Sincerely,

Nina R. Bernhardt

Nina R. Bernhardt
Coordinator

PS: I believe all possibilities of construction should be made as broad as possible. For instance, the mental health has a construction clause. Our program does completely work on mental health but yet restrictions are so heavy - it is useless to try there.

The Law Enforcement offers construction funds for anti-crime programs. We are promoting anticrime, but yet restrictions again cannot be met. It seems we should take the program and fit the funding into this and not make the programs fit into the State divisions, especially when the goals can be met.

If a loan with a low interest rate could be found where we could use our $14,000. and pay monthly ourselves could be sought, we would be interested. We are willing to help in all expenses and are not asking for a hand out without working ourselves. Many of the Sitka teens are involved with our program and do enjoy what we have offered so far.

WE WISH TO SHARE WITH YOU EFFORTS MADE TOWARD A TEEN PROGRAM AND CENTER.

Dear Sir:

The survey taken of teenagers from the Sitka school, grades 8 through 12th, of whether the Sitka Teenage Club should become active again has been completed and at this time we would like to share the information compiled with the residents of Sitka.

Out of 298 questionnaires completed, 266 teenagers voted yes to reactivating the club and 32 no. The main reasons for the students voting no were the fact if they had another building it would be too expensive, felt the Sportland and Rock was enough activity, students wouldn't take care of it, waste of time and money, too much competition for some other business people. To the question of what other programs would they like started for the teenagers in our area, the following were stated many times: priority was weekly dances and roller skating, indoor tennis (including lessons) gymnastics, miniature golf course, handball, camping out, picnics, hiking, volleyball, basketball, skateborading, mechanics course, workshops on drama, ballet, race track for motorcycles, youth employment jobs, soccer, potlucks, football, rock concerts.

To the question of "If the Sitka Teenage Club re-activated, could you see any advantage of having your own building? Although some of the following statements are similar in nature, we feel there is much value in the way they were worded: "Wouldn't have to pay rent, could have more things to do, would more likely take care of their own building, because we can put what we want in it. Because we wouldn't have to use the Centennial Building and we would be able to have events whenever we wants them, kids wouldn't get in trouble so much; can have a place to call our own; no one could kick us out of the building; you could set your own hours and do whatever you want; nothing to do, that's why some of us get into trouble; we would have a place to go and not bother people, more privacy; this could be their own responsibility and they would take more pride in keeping it in an orderly and clean manner; they would have more respect if they had their own place; our building could be decorated and looked after the way we want; where else could we get if we do not have our own building. If they have good rules and enforce them, then our own building would be great; well, people that tend to have nothing to do to get into trouble; give a place to go instead of running the streets; you could plan different activities and there could be different things going on all the time; we would have a place of our own and a place we could count on always; if we owned our own place, we could fix it up and take care of it; a roller rink could give another place for people to go and the high school could sponsor it; I would go to a building if it was close to town; if we had our own building, we wouldn't bother other people; a chance to meet a few more people and a place just to have fun or relax with friends; because it's hard to get a school gymnasium and the Centennial Building costs money; wouldn't have the problem of renting out another place; no hassles of reserving a building.

A meeting has been called for all Sitka teenagers interested in belonging to the Sitka Teenage Club. The meeting will be Sunday, October 24 at 2:30 p.m. in the upstairs of the Moose Lodge. The purpose of this meeting will be to review the Sitka Teenage Constitution and bylaws, the club rules, goals and objectives of the club, which all will be voted on election night to be held in the future. Nominations for the following officers will be taken president, vice-president, secretary, treasurer, sergeant at arms, and one year executives boy and girl from each age level — 13 through 18. Club members are asked to have a petition signed with 10 signatures for the individual they propose for a candidate. Two meetings have been held with charter members Jim Hanson, Leslie Schmidt, Mike Briggs, Joe Roth, Rus Wilson, Joan Valle, Daniel Karr. Any Sitka residents that would be interested in working with the teenagers as an advisor are welcome to come to the meeting.

Any Sitka Teenager between the ages of 13 and 18 may become a member of the Sitka Teenage Club by completing an application form, pay their year dues of $1.00 and agree to abide by the following Club rules. (1) No rowdiness or profane language (2) No smoking, (3) No one allowed into Club functions under the influence of liquor, (4) No drinking of liquor at Club activities, (5) The Club members shall be responsible for any damages to any building during Club sessions, (6) Penalty for breaking rules can be temporary expulsion or permanent suspension of membership and revoking of membership card, (7) Membership card will be shown before entrance to Club activities. Any Sitka Teenager that is interested in becoming a member may contact the following Teenage Officers: president, Terry Benneberg; vice president, Steve Craddick; secretary, Mary Howard; treasurer, Leslie Schmidt; sergeant at arms, Russ Wilson; or publicity chairmen, Mark Bovee or Spence Bovee. The object of the organization shall be to promote loyalty to members, responsibility and good fellowship and to carry out recreational and social events for members and to unify and strengthen the Club.

Teens Set Bake Sale

Sitka Teenage Club members are having a food sale at the National Bank of Alaska, Wednesday, between 12:30 and 3:30 p.m.

Featured will be pumpkin pie, fruit cake, rice krispie bars, Christmas cookies and many other items. A drawing of a winner for the Santa Claus carrot cake will be done at 3:30 and delivered to the individual. Someone will win this decorated Christmas cake for just 25 cents.

All Teen members, or anyone else that would like to donate in this fund raising drive for teen needs, is asked to leave their donations at the bank not later than 12 noon.

THANK YOU to the following from the Sitka Teenage Club.

- the Moose Lodge for the use of their upstairs area for our two disco dances.
- Mr. and Mrs. Bone, Miss Hadley and Velma Howard for chaperoning our dance.
- the following Teenage Members for donating to our food sale — Peggy Dieryck, Nicco Holt, Mary Ann Goodman, Debbie Bernhardt, Alberta Nelson, Jennifer Gomez, Marion Sutter, Sandy Jenny, Spence Bovee, Veronica Howard.
- Shirley Kimball for donating the Christmas Cake which was won by Doris Northrup.

CITY AND BOROUGH OF SITKA

RESOLUTION NO. 78-118

A RESOLUTION OF THE CITY AND BOROUGH OF SITKA INDICATING THAT THE ASSEMBLY IS SUPPORTIVE OF THE EFFORTS OF THE TEEN AGE CLUB TO PROVIDE A TEEN CENTER FOR SITKA.

WHEREAS, the history of the Sitka Teenage Club, which is recorded in the municipal office, indicates that many adults, teens, past mayors and assemblymen have worked toward a Teen Center in order to provide recreational and social opportunities for Sitka teens, and

WHEREAS, many residents and teens have seen the need for a Teen Center and have indicated that there is a need for such Center to the Assembly through written reports, surveys, resolutions, and other statements made at meetings -- such as at hearings in regard to use of Community Development Block Grant Funds, and

WHEREAS, the Sitka Teenage Club has been reactivated for a year and a half and has received a grant through the Alcohol and Drug Abuse Program to assist in the operation of the Sitka Teen Service office, hire a staff to promote recreational and social activities for all teens of the area, and

WHEREAS, the Assembly voted unanimously at their regular meeting held November 22, 1977, to give tentative approval for use of the property situated next to the Fire Hall for construction of a Teen Center,

NOW, THEREFORE, BE IT RESOLVED by the Assembly of the City and Borough of Sitka that it lend its supportive efforts to the Teen Age Club to provide a Teen Center for Sitka.

PASSED, APPROVED AND ADOPTED by the Assembly of the City and Borough of Sitka on this 14th day of MARCH, 1978.

Ben F. Grussendorf, Mayor

Rep. Thelma Bucholdt
Pouch V
Juneau Alaska 99810

Dear Representative Bucholdt,

I am writing in regard to your bill, HB 530, "an act relating to multipurpose youth centers." I endorse your effort to assist the development of services for young people. The need is great.

Our technical assistance project offers training to communities which wish to provide alternatives for their young people. At this time I am working with about 25 communities across the state which have recognized a need and want to meet that need locally. Their interest is in providing services locally that will prevent the necessity of state intervention through corrections or social services. For rural communities, state intervention often means that young people are removed completely from their home and town; many never return.

People who seek training from our project file an application which describes the problem in their community. It is clear from these applications that services for youth in most Alaska communities are nil. Even Fairbanks, with its share of the youth population, does not have an alternative program for young people which is specific to their needs. The Island counseling center works with young people, as does the crisis line, and Presbyterian Hospitality House is a placement facility, but even persons in these programs will tell you that there is a need for more.

Small communities are desperate for help. They describe a tragically high youth suicide rate, higher even than that for adults in Alaska. They describe young persons turning to alcohol and drugs (even in the Bush) for lack of anything else to do. One village mayor near Kotzebue wrote to say that in the recent past one

...RTER
...MBERS: Alaska Youth Advocates; Family Connection; Open Door Clinic

young girl had frozen to death driving a snowmachine drunk, and another young man in the village had shot himself through the heart. They were 15 and 16.

The smaller communities in Alaska have an advantage over us in Anchorage: they can see clearly what the problem is and they can tell more readily what needs to be done, and once that is done, if it is working. They say over and over again, that the need is for local recreational, counseling, and short-term placement facilities.

I would be happy to talk about these needs with you further. I enclose some samples of the applications for assistance which we have received. We are able to help these people plan and meet their own needs, but there must be funds made available so that they can implement these plans. Thank you.

Sincerely,

Barbara L. Hodgin
Technical Assistance Coordinator

POSITION PAPER/Department of Health & Social Services

HOUSE BILL NO. 125

"An Act relating to multipurpose youth centers."

This Bill provides for the construction and maintenance of multipurpose youth centers in each of the state's election districts. The Department of Health and Social Services supports the concept of multipurpose youth centers. In fact, the final report of the Division of Social Services Youth Services Task Force which was submitted to the Director in June, 1977, pointed to the need for community based services, recreation programs and youth facilities. During Fiscal Year 1979, the Division of Social Services provided some support to youth centers in Barrow and Craig through contractual agreements under the division's youth services program. The department views the establishment of youth centers to be in accordance with its attempts to provide more community based services which focus on prevention and early intervention.

The department opposes the assignment of the responsibility for services supervision (as outlined in Sec. 41.20.510, Function of Multipurpose Youth Centers) to the Department of Natural Resources. The department is particularly concerned about those services which obviously come under its purview: health examination, counseling, nutrition classes, protective services, and assistance in obtaining legal representation.

In summary, the department supports the concept of community multi-purpose youth centers but questions House Bill 125's assignment of responsibility for delivery of services which are in the scope of this department's responsibility to the Department of Natural Resources. It would appear that the Department of Natural Resources would have to increase staff to include professionals to coordinate and provide such a wide range of services, in addition to the provision of physical facilities. In view of the state's budget constraints, the department cannot support an increase in state spending which duplicates services.

III. Analysis

A & B. Assumptions and Program Summary

State acquisition, development, maintenance and operation of multi-purpose youth centers in every election district would entail the compensation of a large staff to include the following:

Land acquisition:	Realty Officer III (PG 18)	$38,000
	Realty Officer I (PG 13)	27,000
Land Facility Construction:	Civil Engineer I (PG 19)	40,000
and Maintenance	Civil Engineering Asst. II (PG 16)	32,000
Statewide Op.:	Social Services Fld Admin. (PG 23)	50,000
	Clerk Typist III (PG 8)	20,000
		$207,000
Multi-purpose Youth Center Operations:		
	20 Social Worker III (PG 16)	660,000
	20 Recreational Assistants (PG 11)	480,000
	20 Clerks (PG 6)	300,000
		1,440,000
	Total Personal Services (FY '80)	$1,647,000

Land Acquisition, building design and construction costs are based on the assumption that 1) land will be obtained through trades and transfers 2) construction costs for 1500 sq. ft. youth centers at $200 per square foot = $300,000 per center times 20 equals $6 million, and building design at 10% of construction costs equals $600,000.

Annual facility maintenance is estimated to cost 5% of initial construction costs which will equal $300,000 per year to be accomplished by contracts with local people.

C. Computations -- None.

February 7, 1979

Ms. Nina R. Bernhardt
Coordinator
Sitka Teenage Club, Inc.
P.O. Box 191
Sitka, Alaska 99835

Dear Ms. Bernhardt:

Thank you for your recent letter regarding Youth Centers in Alaska. I do appreciate hearing from someone actively involved in these projects and I would be happy to accept any documentation or information that you may wish to send me in this matter.

I am sending you a few copies of ~~HB 530, the bill I introduced last year, and copies of~~ (HB530 last year) HB-125, which I have introduced this session. ~~This bill is in the House Health and Social Services Committee.~~ At the present time, HB-125 is in the House Health and Social Services Committee, (HESS) of which I chair, and I am hopeful that we can get the bill ~~out of the Committee this session~~ passed by the House this session.

It might be helpful if you would ~~request~~ write to your legislators (Rep. Richard Eliason and Sen. Pete Meland) ~~to support the passage of this bill this year.~~ & request their support of this bill.

~~I am making~~ Copies of your letter will be distributed to ~~for all~~ the members of ~~this~~ the legislature ~~committee~~, in hopes that it may convince those who are not familiar with this problem to vote for passage of the bill.

Again, thank you for taking the time to write to me. If I can be of further assistance please do not hesitate to call on me. I will be looking forward to hearing from you again.

Sincerely yours,

~~REP.~~ THELMA BUCHHOLDT
Chairman
House HESS

SAMPLE BUDGET: TEEN DROP IN CENTER

The center provides counseling guidance through a center which also provides recreational opportunities. The center is open from 2-10 p.m. on school nights and 12-12 on weekends. Individual and family counseling is available. Individual counseling and educaitonal programs cover drugs, alcohol, employment opportunities, academic help, and personal problems.
The center draws youth through a number of activities including rap groups, organized field trips, study nights, and in-center activities of interest to teenagers, including sports, speakers, and a library.

The center is staffed by a director, an administrative assistant, three counselors, and a VISTA outreach worker. The VISTA outreach worker also does job opportunity development through contacts with local businessmen and state and local employment projects.

Personnel	Direct Cost	Match	Total
Director	15,600	0	15,600
Administrative Assistant	10,800	0	10,800
Counselor (CETA)	0	10,800	10,800
Counselor "	0	10,800	10,800
Counselor "	0	10,800	10,800
VISTA	0	4,200	4,200
Fringe	2,600	0	2,800
Facility Expense			
Rent (450 mo.)	5,400	0	5,400
Telephone (100 mo.)	1,200	0	1,200
Utilities (200 mo.)	1,200	1,200	2,400

Insurance	500	0	500
Brochures, advertising	500	0	500
	41,110	38,940	80,050

This project could serve could serve a community of three thousand, with a variety of opportunities for kids and parents. It relies heavily on local support through some cash and material donations, and relies on the community to seek CETA positions for staffing.

SAMPLE BUDGET: RESIDENTIAL PLACEMENT EMERGENCY PROGRAM

This project provides emergency placement and short-term counseling to children and youth who cannot remain in their own homes because of abuse, parental alcoholism, neglect, or imminent danger to themselves because thay cannot or will not return home. The primary focus is on short-term placement for protection.

The project provides an all-night drop-in center with two beds and back-up of 10 volunteer foster family placements. Referrals come from the police, social worker, health aide and youth themselves.

After a placement, young children will be referred to the social worker and may remain in placement or placed elsewhere. Older youth will be referred to counseling resources, a social worker, or school counselor for appropriate intervention.

It is anticipated that the majority of children and youth will return to their own homes with appropriate community resource support.

BY BUCHHOLDT

HOUSE BILL NO. 125

For an Act entitled: "An Act authorizing state aid to non-profit organizations, citizen, community or municipal organizations for the construction, program development and/or support of multi-purpose youth centers within each election district or for the expansion or continuation of such activities of centers that may already exist within each election district."

* To be established within the Department of Health and Social Services
* Application for a grant shall be made in the form required by the Commissioner
* Funds will be granted on a match basis to be gradually shifted from state to local funding (year 1-90% state, 2-80%, 3-60%, 4-50%, 5-30%. Programs that meet criteria for funding after 5 years will be funded 20% per year).
* Land for new sites shall be selected by the sponsoring organization or non-profit group within each district.
* Sponsoring organizations must document to DHSS that they will be able to comply with the funding formula.

Funds will be appropriated for the following reasons:

I. 1) to construct new facilities. Grants will be funded for this purpose only when the sponsoring organization documents that:

a) no centers presently exist in the district and need for such a center does exist

b) centers that do exist are inadequate to meet the needs of the youth of that district and such need is documented

c) related programs, not youth centers necessarily, are inadequate to meet the needs of that district

d) expanding existing teen centers or youth programs in the district would not adequately meet the needs of the youth of that district and such need is documented

e) no buildings are available that could be altered or renovated to serve the needs of youth in the district and such need is documented

2) to renovate, remodel or expand existing buildings not currently used as teen centers when need for such activity can be documented within the election district. Grants will be funded for this purpose when the sponsoring organization documents that:

a) centers that do exist are inadequate to meet the needs of the youth of that district and such need is documented.

b) related programs, not youth centers necessarily, are inadequate to meet the needs of that district

c) expanding existing teen centers or youth programs in the district would not adequately meet the needs of the youth of that district and such need is documented

3) to renovate, remodel or expand existing teen centers where it is documented that such additions would sufficiently meet the needs of the youths of that district and where it can be documented that existing teen centers do not meet the needs of the youth of the district as they currently exist. Grants will be funded for this purpose when the sponsoring organization documents that:

a) centers that do exist are inadequate under present circumstances to meet the needs of youth of that district and such need is documented.

b) related programs, not youth centers necessarily, are inadequate to meet the needs of that district and such need is documented.

II.

1) to fund programs for newly constructed teen centers. Grants will be funded for this purpose when the sponsoring organization can document that:

a) such programs will meet the needs of youth of that election district

b) such programs do not duplicate already existing services available in that district

c) programs that do exist in the district are inadequate to meet the needs of youth of that district

d) funding for such programs is not available from any other source or is available but in inadequate amounts

2) to fund programs for existing teen centers. Grants will be funded for this purpose when the sponsoring organization documents that:

a) programs seeking funding have met the needs of youth in that district

b) continued funding of the program would continue to meet the needs of youth of that district

c) increasing funding of existing programs for existing youth centers would increase their ability to meet the needs of youth of that district

d) funding for such programs is not available from any other source or is available in inadequate amounts

III.

1) To provide funds for the acquisition of equipment for newly constructed teen centers. Grants will be funded for this purpose when the sponsoring organization can document that:

a) such acquisitions would fill the needs of the youth served in the election district

b) existing equipment does not sufficiently meet the needs of youth in the election district

2) To provide funds for the acquisition of equipment for already existing teen centers. Grants will be funded for this purpose when the sponsoring organization can document that:

a) such acquisitions would fill the needs of the youth served in the election district

b) existing equipment does not sufficiently meet the needs of youth in the election district

DOCUMENTATION OF NEED

Each sponsoring organization shall provide the following information to the Department of Health and Social Services:

I.

1) to document the need to construct new facilities when youth centers do not already exist in the district.

a) number of youths in the district

b) number of youths center anticipates serving

c) documents from municipalities, townships or local governing bodies of the election district stating that youth centers do not exist

d) crime rate or high school drop-out rate or other indicators of need in the district

e) petition of support from youths in that district

f) documents of support from a majority of youth programs or services that operate in the election district stating need for a youth center

2) to document the need to construct new facilities or expand existing facilities when youth centers already exist in the election district

a.) number of youths in the election district

b.) number of youths served by the present youth center

c.) number of youths anticipated to be served by the new or expanded center

d.) crime rate or high school drop-out rate or other indicators of need in the district

e) petition of support from youths currently using existing youth center

f) petition of support from youths anticipating use of new or expanded youth center

g) documents from a majority of existing youth services or programs that operate in the election district stating the need for both the existing youth center and the new or expanded center

II.

1) to document the need for new programs-for each program component that requires funding:

a) description of program goals and methodology

b) number to be served

c) documentation that such a program was successfully operated in another location

d) letters of support from youths who anticipate being served

e) letters of support from a majority of agencies that operate related programs in the district

f) documentation that funding is unavailable from any other source

2) to document the need for existing programs

a) description of program goals, methodology, history

b) number of youths served

c) documentation of success: events, numbers attended, letters of support, statistical evidence that program had significant positive impact

d) documentation that program funding is unavailable from any other source

e) letters of support from a majority of related agencies that operate in the election district

3) to document the need for acquisition of equipment

a) description of equipment and anticipated use

b) number of youths served by equipment (where applicable)

c) documentation that program funding is unavailable from any other source.

DEFINITIONS

Youth - persons between the ages of 13-19.

multi-purpose youth center - a structure of part of a structure to be used specifically for youth activities such as recreation, counselling, classes, health care, socializing and other specified programs.

election district - one of 22 electoral districts in the state .

related programs - programs which involve youth, such as alcohol, drug, mental or physical health, usually sponsored by local, state, or federal agencies.

equipment - items such as recreational or medical equipment to be used for specified youth center programs.

HOUSE BILL 125-Relating to multi-purpose youth centers

SUMMARY SHEET

In many areas of Alaska, there is no place for youths to go for recreation, socializing, or counselling.

Many youths who experience family problems or must deal with the pressures of adjusting to two cultures seek escape.

The result:

* Alaska has the highest rate of residential alcoholism in the United States.

* The suicide rate of 16-19-year old in Alaska is 30% higher than the national average.

* Alaska juveniles account for 57% of all arrests for Part I crimes (murder, rape, robbery, aggravated assault)

* 33% of the state's total population are drug users; young people in school and out are the largest percentage of drug users.

The thrust of this bill is to offer alternatives to youths, to give them a place to go for recreation, counselling, and other services.

Youth centers can be effective in reducing juvenile delinquency:

1. In the first year of operation of the Cordova Youth Services Center, juvenile arrests decreased 17%. A March 1977 letter from the Cordova Chief of Police states that street contacts were "well below normal and I feel that it is mainly because of the Eyak Youth Services Center facilities."

2. In Petersburg in 1977 there were 25 juvenile delinquency petitions filed with Petersburg court compared to 50 in 1976. A March 1978 letter from the Petersburg Magistrate states that "this reduction in filing may not be attributed soley to the youth program but I cannot help but feel the center and its leadership were contributing factors."

3. Juvenile arrests decreased 57% in the first year of operation of the Hoonah youth center.

4. Juvenile violations as compiled by the local police department decreased 76% during the first year of operation of the Craig Youth Center.

5. The Ketchikan Youth Advocate Program tracked juveniles with previous high aresst records during their furst four months of involvement in the youth program. Of the 15, ten showed a decrease in rate of arrests and 8 of those 10 were not arrested at all during the four-month period.

6. The Mayor of Nome states that after the Nome youth center opened, juvenile arrests were down 32% in the first year and 42% in the second year.

(Statistics compiled by Barbara McPherson, Planner, Criminal Justice Planning Agency and Leo Rasmussen, Mayor of Nome).

Some $ figures:

Cost of processing juvenile offenders:

Treatment for 1 Day at McLaughlin Youth Center	81.99/day
Processing one juvenile case thru the courts (Jan. 78 average cost to state)	1,217.00/day

In 1978, over 6,000 juvenile court cases were processed.

IN THE HOUSE

BY THE HEALTH, EDUCATION AND SOCIAL SERVICES COMMITTEE

CS FOR HOUSE BILL NO. 125

IN THE LEGISLATURE OF THE STATE OF ALASKA

ELEVENTH LEGISLATURE - SECOND SESSION

A BILL

For an Act entitled: "An Act relating to grants for day care centers and multipurpose youth centers; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 44.47 is amended by adding new sections to read:

ARTICLE 8. GRANTS FOR DAY CARE CENTERS AND MULTIPURPOSE YOUTH CENTERS.

Sec. 44.47.312. DAY CARE CENTER AND MULTIPURPOSE YOUTH CENTER GRANTS. (a) There is established in the Department of Community and Regional Affairs a day care center and multipurpose youth center grant fund to provide state assistance in construction, rehabilitation and operation of day care centers and multipurpose youth centers. Within the limits of appropriations for the purpose, the Department of Community and Regional Affairs shall make grants available to nonprofit corporations and municipalities for construction, rehabilitation and operation of day care centers and multipurpose youth centers.

(b) A grant under this section may be made for only one center in a community but a day care center and a multipurpose youth center may be combined in a single center.

(c) Application for a grant shall be made in the form established by the commissioner of community and regional affairs.

(d) An application for a construction or renovation grant under this section may not be approved unless the applicant demonstrates

(1) the need for a center to serve the community;

(2) the absence or inadequacy of existing centers serving the community to meet the needs of the community;

(3) if the grant is for construction of a new facility, that the need cannot adequately be met by expansion or renovation of existing available facilities or that expansion or renovation of existing facilities would be less cost effective than construction of a new facility.

(e) An application for a grant for operation of a center may not be approved unless the applicant demonstrates that

(1) the center is appropriate to the demonstrated needs of the community;

(2) the center does not duplicate already existing services available in the community, or centers that exist in the community are inadequate to meet the demonstrated needs of the community.

(f) A grant for operation of a center may not exceed

(1) 100 percent of the total costs of operation for the first year for which a grant is made for operation of the center;

(2) 90 percent of the total costs of operation for the second year for which a grant is made for operation of the center;

(3) 80 percent of the total costs of operation for the third year for which a grant is made for operation of the center;

(4) 65 percent of the total costs of operation for the fourth year for which a grant is made for operation of the center;

(5) 50 percent of the total costs of operation for the fifth and suceeding years for which a grant is made for operation of the center.

(g) A grant may be made for acquisition of equipment for a center if the applicant demonstrates that the equipment meets needs of the community which cannot adequately be met with available existing equipment.

Sec. 44.47.314. GRANT AGREEMENTS. A grant may be made under AS 44.47.312 only in accordance with an agreement between the commissioner of community and regional affairs acting on behalf of the state and the recipient of the grant. The agreement may include terms agreed on by the parties and shall include in substance

(1) a statement of the program goals of the center and the method by which the goals are to be achieved;

(2) a system for evaluation of the program at periodic intervals;

(3) if a center is to be constructed or renovated through a grant, a covenant that the recipient of the grant will secure and retain title to the site of the center or that the recipient enjoys use of the center under a lease agreement for a term at least equal to the estimated life of the center;

(4) a method for insuring accountability for use of all grant money.

Sec. 44.47.316. As used in AS 44.47.312 - 44.47.316,

(1) "center" means a day care center or multipurpose youth center;

(2) "day care" means the care, supervision, and guidance of a child or children unaccompanied by a parent or legal guardian on a regular basis for periods of less than 24 hours a day;

(3) "day care center" means a facility the principal purpose of which is to provide day care for children;

(4) "multipurpose youth center" means a facility to provide persons up to 19 years of age with services and activities suited to their particular needs; the services and activities may include, but are not limited to, health examinations, legal assistance, recreation programs, general social activities, student tutoring programs, counseling,

nutrition classes, and protective services.

* Sec. 2. This Act takes effect immediately in accordance with AS 01.10.-070(c).

MEMORANDUM State of Alaska

TO: Marie Matsuno
Deputy Commissioner

DATE: April 28, 1980

FILE NO:

Through: Palmer McCarter
Director

TELEPHONE NO:

FROM: Terry L. Earley
State Assessor

SUBJECT: CS for HB 125

This bill proposes to establish within the Department of Community and Regional Affairs a grant program.

These grants would be to construct, rehabilitate and operate day care centers and multipurpose youth centers.

General Comments

The existing sections of this chapter deal strictly with low income families. This proposed bill would make subsidized day care facilities and youth centers available to the general populous. It also limits the number of centers receiving grants to one per community. Determining which center is eligible for a grant in large communities would be difficult to say the least.

Many villages and cities already have existing day care centers or youth centers or both. They would be eligible for grants for operation and also preclude construction grants for new facilities.

It appears that the concept advanced by this bill is sound. It also appears as though further study of the need being addressed and the desired affects should be studied further.

III. Analysis

A & B. Assumptions and Program Summary

State acquisition, development, maintenance and operation of multi-purpose youth centers in every election district would entail the compensation of a large staff to include the following:

Land acquisition:	Realty Officer III (PG 18)	$38,000
	Realty Officer I (PG 13)	27,000
Land Facility Construction:	Civil Engineer I (PG 19)	40,000
and Maintenance	Civil Engineering Asst. II (PG 16)	32,000
Statewide Op.:	Social Services Fld Admin. (PG 23)	50,000
	Clerk Typist III (PG 8)	20,000
		$207,000
Multi-purpose Youth Center Operations:		
	20 Social Worker III (PG 16)	660,000
	20 Recreational Assistants (PG 11)	480,000
	20 Clerks (PG 6)	300,000
		1,440,000
	Total Personal Services (FY '80)	$1,647,000

Land Acquisition, building design and construction costs are based on the assumption that 1) land will be obtained through trades and transfers 2) construction costs for 1500 sq. ft. youth centers at $200 per square foot = $300,000 per center times 20 equals $6 million, and building design at 10% of construction costs equals $600,000.

Annual facility maintenance is estimated to cost 5% of initial construction costs which will equal $300,000 per year to be accomplished by contracts with local people.

C. Computations -- None.

STATE
of ALASKA

MEMORANDUM

TO: Trink Morimitsu
Staff Aide for Representative
Thelma Buckholt
Alaska State Legislature

DATE: February 23, 1979

FILE NO:

TELEPHONE NO:

FROM: Barbara McPherson 465-3591
Juvenile Planner
Criminal Justice Planning Agency

SUBJECT: Youth Center Programs
Funded by CJPA

In the past three years Law Enforcement Assistance Administration funds have been awarded to the following youth center programs:

Petersburg Youth Program
Ketchikan Youth Advocate Program
Cordova Youth Services Center
Nome Community Center
Hoonah Youth Center
Craig Youth Center
Seward Recreational and Training Center
Tyonek Youth Program
Gambell Youth Center

As we discussed by phone, these programs have not been formally evaluated in relation to their effect on preventing juvenile delinquency, but their performance in meeting grant objectives for the delivery of services is monitored regularlary. However, the majority of these projects are able to provide measurable data on the reduction of delinquency in their communities after the implementation of these programs:

1. In the first year of operation of the Cordova Youth Services Center juvenile arrests decreased 17% and a March 1977 letter from the Cordova Chief of Police states that street contacts between police and juveniles were "well below the normal and I feel that it is mainly because of the Eyak Youth Services Center facilities and activities."

2. In Petersburg in 1977 there were 25 juvenile delinquency petitions filed with Petersburg court compared to 50 in 1976. A March 1978 letter from the Petersburg Magistrate states that "this reduction in filing may not be attributed solely to the youth program but I cannot help but feel the center and its leadership were contributing factors."

3. Juvenile arrests decreased 57% in the first year of operation of the Hoonah youth center.

4. Juvenile violations as compiled by the local police department decreased 76% during the first year of operation of the Craig Youth Center.

5. The Ketchikan Youth Advocate Program tracked juveniles with previous high arrests records during their first four months of involvement with the youth program. Of the 15, ten showed a decrease in rate of arrests and 8 of those 10 were not arrested at all during the four month period.

The lack of community financial support for the ongoing operation of these programs has been a major problem in their continuation when they [illegible] no longer eligible for LEAA funds. The most importa[illegible]tor in the success of these programs has been qua[illegible]ff who are committed to working with youth.

SAMPLE BUDGET: TEEN DROP IN CENTER

The center provides counseling guidance through a center which also provides recreational opportunities. The center is open from 2-10 p.m. on school nights and 12-12 on weekends. Individual and family counseling is available. Individual counseling and educaitonal programs cover drugs, alcohol, employment opportunities, academic help, and personal problems.
The center draws youth through a number of activities including rap groups, organized field trips, study nights, and in-center activities of interest to teenagers, including sports, speakers, and a library.

The center is staffed by a director, an administrative assistant, three counselors, and a VISTA outreach worker. The VISTA outreach worker also does job opportunity development through contacts with local businessmen and state and local employment projects.

Personnel	Direct Cost	Match	Total
Director	15,600	0	15,600
Administrative Assistant	10,800	0	10,800
Counselor (CETA)	0	10,800	10,800
Counselor "	0	10,800	10,800
Counselor "	0	10,800	10,800
VISTA	0	4,200	4,200
Fringe	2,600	0	2,800
Facility Expense			
Rent (450 mo.)	5,400	0	5,400
Telephone (100 mo.)	1,200	0	1,200
Utilities (200 mo.)	1,200	1,200	2,400

Insurance	500	0	500
Brochures, advertising	500	0	500
	41,110	38,940	80,050

This project could serve could serve a community of three thousand, with a variety of opportunities for kids and parents. It relies heavily on local support through some cash and material donations, and relies on the community to seek CETA positions for staffing.

SAMPLE BUDGET: RESIDENTIAL PLACEMENT EMERGENCY PROGRAM

This project provides emergency placement and short-term counseling to children and youth who cannot remain in their own homes because of abuse, parental alcoholism, neglect, or imminent danger to themselves because thay cannot or will not return home. The primary focus is on short-term placement for protection.

The project provides an all-night drop-in center with two beds and back-up of 10 volunteer foster family placements. Referrals come from the police, social worker, health aide and youth themselves.

After a placement, young children will be referred to the social worker and may remain in placement or placed elsewhere. Older youth will be referred to counseling resources, a social worker, or school counselor for appropriate intervention.

It is anticipated that the majority of children and youth will return to their own homes with appropriate community resource support.

DALE L. LUNSFORD
SUPERINTENDENT

March 16, 1979

Thelma Buchholdt
Alaska House of Representatives
Room 110 Capitol
Juneau, Alaska 99811

Dear Representative Buchholdt:

The citizens of the Bristol Bay Borough have been trying to correct some of the inadequacies of their high school by passing bond issues for part of the proposed additions to the school. On March 13, 1979 a referendum in the amount of $500,000 was passed by nearly a 2 to 1 margin.

The $500,000 will go toward construction on a shop facility in which auto mechanics, welding and metal work can be added to our curriculum. However, an unhoused music program including vocal music (which now meets in the girls locker room when PE classes are not using the room) and band (which meets in our small cafeteria room around lunch schedules and with very poor acoustics) needs to have an acceptable place to meet, practice and perform.

Your committee is holding HB 129 which would provide funding to build the music facility and perhaps the third phase of the proposal which is a swimming pool.

It would certainly be beneficial to the students in the Bristol Bay Borough if you and your committee could release House Bill 129 granting funds to the Bristol Bay Borough for additional school facilities.

Sincerely

Dale L Lunsford

MEMORANDUM

TO: R. D. Stevenson
Special Assistant
Department of Revenue

DATE: February 16, 1979

FILE NO:

TELEPHONE NO:

FROM: Gary L. Jenkins
Director
Audit Division

SUBJECT: House Bill No. 145

It is extremely difficult to estimate the actual dollar effect of the tuition credit proposed by HB 145 because of the almost total lack of information available regarding the number of students attending vocational schools and schools of higher education. In discussions with various personnel in the Department of Education, I was advised that last year's enrollment in private elementary and secondary schools in the State was 3,130 and that there is a possible 800 to 900 in other private schools on which they did not have information. The staff working with the higher education loan funds advised me there were approximately 3,000 students going to school on loans and they estimated that number could be as high as 50 percent of the total number of students going to schools of higher education. Last, I have assumed there are at least 1,000 students going to approved vocational schools.

Assuming there are 2,667 students in private elementary schools, 2,323 in secondary and vocational schools, and 6,000 in schools of higher education, the total potential cost of this tuition credit would be $9,083,090.

One serious problem I see with the bill is in the definition of "eligible educational institution". This definition states that it is a school which "meets accreditation or approval criteria established by the department by regulation". To allow us to effectively administer this law, if enacted, it is recommended that the requisite accreditation or approval criteria be specifically defined in the Statute or that they be established by the Department of Education rather than Revenue.

"*Sec. 21. AS 04.15.085 is amended to read

Sec. 04.15.085. CREDIT SALES OF INTOXICATING BEVERAGES. (a) No holder of a [RETAIL ALCOHOLIC BEVERAGE] license selling intoxicating beverages on a retail basis may sell intoxicating beverages other than for cash, paid promptly after receiving the beverage or the bill for it before the customer leaves the [THE VERBAL OR WRITTEN SOLICITATION FOR PURCHASE HAS BEEN RECEIVED WITHIN HIS] licensed premises; except that a hotel, boardinghouse or inn which offers lodging may sell intoxicating beverages to persons lodging there and include the charge for the beverage with the bill for lodging to be paid at the time the customer pays for the lodging.

(b) In this section "cash" means money or its equivalent, including negotiable paper or credit card voucher.

(c) A person who unlawfully sells intoxicating beverages on credit is guilty of a misdemeanor and upon conviction is punishable by a fine of not more than $500.

(d) Licensees who sell intoxicating beverages on a wholesale basis may extend credit for sale of intoxicating beverages to licensees who sell on a retail basis. However such credit may not be extended longer than 60 days from the date of purchase.

Delete "served to a large group of persons at" and insert "dispensed without charge to the guests attending a meal, reception, dance or other gathering held to celebrate"

POSITION PAPER/Department of Health and Social Services

POSITION PAPER HB 219

"An Act relating to alcoholic beverages; and proving for an effective date."

The State Office of Alcoholism and Drug Abuse supports the view that the primary mission of any Alcohol Beverage Control Board, is to protect the Public Health, Safety and Welfare. The secondary role of any such agency is to ensure the orderly process of licensure, fee collection, etc., from members of the Beverage Industry.

This bill contains a number of provisions, requested by citizens of Alaska through numerous public hearing processes, which are designed to refine Title 04 so that its principal aim is protection of the public health, safety and welfare in a way that also allows for maximum local control and flexibility in how the public health, safety and welfare is protected.

The assumption underlying this bill is that Alcoholism and Alcohol Abuse are epidemic in Alaska and that part of the reasons for that epidemic can be traced to excessive availability of beverage alcohol, which is, in turn, partly a function of the fact that no agency is able to effectively regulate the retail licensed beverage industry, in a way that protects the public health, safety and welfare, at the present time.

In order to correct this situation, this bill contains the following new provisions;

Section 2 creates a new class of retail licenses.

Section 3 creates a new class of retail licenses.

Section 4 prohibits sale of licensed beverages to persons in any community or election district that has, by referendum, voted itself "dry".

Or, any organized municipal entity, that has, by ordinance, prohibited mail order or telephone sales.

Section 6 describes the proposed new "Unlimited Community Liquor License".

Section 7 describes the proposed new "Limited Community Liquor License".

Section 8 and Section 9 include provisions which would strengthen the power of local elected officials and the public, to control the issuance or reissuance of licenses in their local communities.

Section 10 strengthens the power of the public to control the issuance or reissuance of licenses in the unorganized borough.

Section 13 provides a framework for local referenda to be conducted to decide questions of issuance of new licenses in areas where there are none now, in organized municipalities.

Section 14 provides a framework similar to Section 12 for the organized boroughs and the unorganized borough.

POSITION PAPER/Department of Health & Social Services

Section 14.10.439 provides a mechanism for reimbursing revenue lost from sales taxes to local governments which have voted for "no-sales."

Section 15 eliminates in-state advertising for beverage alcohol.

Section 16 prohibits soliciting drinks.

Section 17 strengthens and clarifies penalties to licensees who violate provisions of this act.

Section 18 sets out allowable conditions for possession of beverage alcohol in areas that have, through local referenda, voted "no-sale."

Section 19 establishes bootlegging as a felony in an area that has, by local referendum, established "no-sales", and greatly strengthens the penalty for violating the local referendum decision.

Section 20 sets out the penalities for illegal sale in violation of local referenda.

The Department of Health and Social Services supports this legislation as the thrust of the measure would empower citizens of Alaskan communities to exercise a variety of options regarding the sale, possession, and distribution of beverage alcohol in their locales.

HB 219
HB 219

Municipality of Anchorage

825 "L" STREET
ANCHORAGE, ALASKA 99501
(907) 264-4111

GEORGE M. SULLIVAN,
MAYOR

DEPARTMENT OF HEALTH AND ENVIRONMENTAL PROTECTION

April 19, 1979

Rep. Thelma Buchholdt
Alaska State Legislature
Pouch V
Juneau, Alaska 99811

Dear Representative Buchholdt: Thelma

The purpose of this letter is to share with you the process the Municipality of Anchorage has adopted to make Alcoholism, Drug Abuse, and Mental Health funds available to any agency wishing to compete for government funds in Anchorage.

In the Department, we write and submit a "Grant Request" to the State for Alcoholism, Drug Abuse, and Mental Health funds. The grant applications are reviewed by the local Municipal Health Commission and the Governor's Advisory Boards for these three components. They in turn make their recommendations to the Commissioner of Health and Social Service, who then notifies us of the grant awards.

While this effort is going on, the Municipality of Anchorage issues a "Request for Proposals" (RFP) asking for those interested in bidding for the various components to submit to the Municipality of Anchorage their proposal for contract funds in accordance with the criteria specified.

We have just completed a portion of this process and have notified both the successful and unsuccessful bidders. Naturally there are some whose proposals are not recommended. This has, in the past, caused some questions to be asked relative to the process. We have reviewed this process with the Municipal Health Commission which has, wholeheartedly endorsed it.

I realize that you, as an Anchorage Legislator, may receive calls of concern regarding the process, or the results. It seemed advisable, therefore, to send to you a "review" of our process, so if you should have questions you will have some background information.

The process is put into action by the Department developing the Request for Proposals (RFP). In December 1978, the Project Review Committee examined the Behavioral Health RFP and suggested modifications, which were made. The RFP's were published by the Purchasing Division on January 15, 1979.

The Purchasing Division held a pre-bid conference on February 9, 1979. Prospective bidders attended the conference. In the pre-bid conference, the Purchasing Division went through the Request for Proposal, page-by-page, providing prospective bidders the opportunity to question and comment on each item in the RFP. As a result of the pre-bid conference, clarifications were issued by the Purchasing Division.

All responses to the RFP's were submitted to the Purchasing Division by close of business March 2, 1979. The Purchasing Division forwarded the Proposals to the Behavioral Health Division after close of business that same day.

Each proposal was reviewed by the Behavioral Health staff utilizing the "Response to RFP Checklist" (Appendix "A").

The Proposal Review Committee, appointed by the Director, was composed of:

Paul Foutz, CPA
Price Waterhouse & Company

Lt. Ted Carlson
Anchorage Police Department

Richard Grant,
Region X
HEW, Seattle

Dr. Marjorie (Judy) Hill
Criminal Justice Planning Agency, Juneau
State of Alaska

Ron Kuczek, Manager
Cook Inlet Air Resources Management District

Dr. Raymond N. Fedje, Manager
Behavioral Health (Non-Voting Chai n)

The Committee was organized to provide for primary and secondary reviews of all proposals. Each member of the Committee, with the exception of the Chairman, was assigned the responsibility to be the primary reviewer of some proposals and secondary reviewer of other proposals. These assignments were made as detailed in the "Review Committee Process" (Appendix "B"). To assist the Review Committee members, they received, in advance, copies of the recent evaluations of the existing Division Contractors (sent to you on February 21, 1979).

The Review Committee met as scheduled March 12, 13, and 14 from 9:00 a.m. through 5:00 p.m. in the 5th floor Conference Room of the Community Health Building, 825 "L" Street, Anchorage, Alaska. All organizations submitting proposals were notifed of the time and place of the Committee's meetings and that the meetings were open to the general public. The Review Committee was convened by the Chairman, March 12, 1979, at 9:00 a.m. The members of the Review Committee were provided additional information which consisted of excerpts from the Alcoholism, Drug Abuse, and Mental Health Grant Applications which provided information on cost comparison, evaluation comparison, and analysis of the progress towards meeting the goals in the 1978 contracts for all current Contractors (Appendix "C").

The format utilized by the Review Committee is detailed in "Review Committee Process" (Appendix "B"). Each component of the RFP was addressed individually with analysis and discussion about each applicant's proposal to that component of the RFP. The staff reported on the results of the technical review, the Committee questioned staff, first and second readers of the proposals reported to the Committee, and the Committee discussed each proposal.

The Review Committee formulated questions which they intended to address to each bidder the following day. These questions were written down and the Chairman directed that each organization be informed of the questions which the Committee had formulated. In this manner, the organizations could be better prepared to address the Review Committee's questions during Program Testimony.

On Tuesday, March 13, 1979, each organization was given an opportunity to discuss its proposal(s) with the Review

Committee. The representative of the organizations made a short presentation concerning their organization and the program(s) their organization intended to provide, if selected. The representative then addressed the Review Committee's questions which had been forwarded to them the previous day and discussed any additional questions with the members of the Review Committee.

As a result of the discussion, the Committe appointed a special subcommittee to review the problems concerning the programmatic and fiscal reporting of the Anchorage Community Mental Health Services Component of the RFP. This committee met briefly with staff late Tuesday afternoon March 13, 1979 and again with staff and representatives of the Mental Health Center early Wednesday, March 14, 1979.

The morning session for Wednesday, March 14, 1979, was reserved for general public input on the review process and/or any additional testimony by the bidder organizations or the general public. Because the general public input sessions did not take as long as scheduled the Committee questioned staff about funds available for the contract year and other questions they had developed about the proposals.

The afternoon of Wednesday, March 14, 1979 was reserved for decision making and voting on the proposals. The Committee first utilized the "Proposal Selection Review Checklist" and the "Instructions for Scoring the Proposal Selection Review Checklist" in their decision making process for each proposal (Appendix "D"). The composite score of each proposal is summarized in Appendix "E", "Review Committee Composite Response to Request for Proposal".

Based on the Proposal Selection Review Checklist the Committee voted to accept or reject the proposals for further consideration.

Those proposals, selected by the Review Committee for further consideration, were then submitted to the following voting procedure:

1. Each component of the RFP was addressed separately.

2. For those components where there were no competing applications the Committee voted to accept the proposals.

3. For those components which had competing applications the Committee voted in the following manner (see Appendix "F" for sample ballot).

4. Each component of the RFP was addressed separately. The Committee voted using the sample ballot in Appendix "F". The Committee rated the Proposals from one to ten; ten being the highest possible score, one being the lowest. Proposals were rated on this system by each Committee member on each ballot for each component.

After the voting was completed the Committee discussed why they had voted the way they had and offered clarification to staff on how the outcome of the vote should affect future funding.

After the discussion was completed the Review Committee invited representatives of the bidder organizations and members of the general public present to comment on the review procedure and the decisions reached by the Review Committee.

Following public comment the Review Committee made specific recommendations about how the review process should be amended in the coming year.

The Review Committee Minutes are appended for your consideration (Appendix "G").

The Behavioral Health Division reviewed the recommendations of the Review Committee and from them formulated Staff Recommendations; these were forwarded to the Director for his consideration.

Appendix "H" is a composite of the Review Committee and staff recommendations.

On April 10, the Director advised the Behavioral Health Division Manager of his decision. This is reflected in Appendix "I".

On April 13, letters were sent to all the organizations who submitted bids.

On April 17, the Department met again with the Project Review Committee of the Municipal Health Commission. The above information was shared in detail to assure them the proper procedures were in fact followed. The Committee endorsed the Department's report.

The Department is now in the process of beginning negotiations, with the successful bidders; this will lead to contracts for all services requested.

It is anticipated, that the following Health Commission review of these contracts, the contracts will be presented to the Municipal Assembly for final approval early in June.

We hope that you are impressed with the conscientious efforts being made to be good stewards of government funds.

Sincerely,

Bert Hall

Robert A. (Bert) Hall

MEMORANDUM

TO: Representative Thelma Buchholdt

FROM: Representative Nels A. Anderson, Jr.

SUBJECT: HB 219

I have spoken to many people who work closely with our number one social problem - alcoholism - and I am convinced that HB 219 will help solve the problem. Also, excessive availability of alcohol is a problem that will be regulated by this bill.

The local community which has the desire to vote themselves "dry" would have the force of law behind them under this bill. There are few, if any, small villages in our State that have facilities to deal with people who are under the influence of alcohol. Giving more power to local areas to control availability will definitely reduce problems in communities that don't have means to care for people under the influence of alcohol.

I hope your committee will give this bill favorable consideration.

MEMORANDUM

TO: Representative Thelma Buchholdt

FROM: Representative Nels A. Anderson, Jr.

SUBJECT: HB 219 - Relating to Alcoholic Beverages

Thelma, I know you are well aware of the statewide concerns for problems relating to alcohol use and abuse. The focus has been on the legislature ever since the Governor first introduced his alcoholism package three years ago.

Increasingly, I am being approached by my constituents for support of a bill like HB 219. Most recently there have been several groups in Juneau, ie: Citizen's Participation Conference and ANCADA, who have expressed favor for the bill and suggested some modifications.

In short, I would like to see some legislation of this nature receive consideration this year. Many of us rural legislators are on record either privately or publically to get something done.

Anchorage, AK 99504

MEMORANDUM

To: HESS Committee, Alaska House of Representatives

From: Janette P. Adasiak, Public Member, State Medical Board

Re: HB 226 and 228

HB 226 - I am in favor of this bill.

HB 228 - The spirit in which it was written is commendable, but I am opposed to this bill because it is finding fault with the wrong parties. A recent article in the Anchorage Times reveals the reason why some Anchorage physicians (obstetricians in particular) are turning away medicaid patients is the length of time it takes to have claims processed--over a year in some circumstances. They also assert that the amount of compensation is inadequate. I cannot comment on that. However, if problems with the administration of the medicaid program could be worked out the problems addressed by HB 228 would cease to exist. A physician is a businessman like any other, and it would not be fair to force him by law into a practice that was not economical.

POSITION PAPER/Department of Health and Social Services

POSITION PAPER
ON
HOUSE BILL NO. 226

"An Act amending the definition of unprofessional conduct in the practice of medicine."

This bill would redefine the definition of unprofessional or dishonorable conduct in the practice of medicine by the addition two paragraphs.

(I) requires physician to disclose to the patient the nature of the patient's illness, injury and disease; and

(J) to prevent the wilful misrepresentation by a physician to a patient of the nature of the patient's illness, injury, or disease.

(I) attempts to substitute a simplistic legal mandate to a judgmental physician/ patient relationship and ignores the sensitive paitent/physician relationship involving interface of scientific knowledge and the art of practicing medicine and in the interpretation of the patient's overall well being. An example, a potentially suicidal patient does not immediately need to know his diagnosis and impacting the knowledge is a decision of the physician and patient's family.

Paragraph (J) would already seem to be adequately covered in the principles of medical ethics of the American Medical Association and the Alaska State Medical Association.

SEQUENCE OF CALCULATING THE ALLOWABLE CHARGE PAYABLE UNDER MEDICARE

A. ACTUAL CHARGE.

B. INDIVIDUAL FEE PROFILE.

1. PHYSICIAN'S CALCULATED CUSTOMARY CHARGE--MEDIAN OF CHARGES DURING THE PRECEDING CALENDAR YEAR.
2. PHYSICIAN'S CUSTOMARY CHARGE CONVERSION FACTOR FOR THE CATEGORY OF SERVICE MULTIPLIED BY THE RELATIVE VALUE UNITS FOR THE SERVICE.
3. THE 50TH PERCENTILE CHARGE LISTED ON THE PREVAILING CHARGE SCREEN.

C. PREVAILING CHARGE SCREEN.

1. PREVAILING CHARGE BY SPECIALTY (75TH PERCENTILE).
2. PREVAILING CHARGE WITHOUT REGARD TO SPECIALTY (75TH PERCENTILE).
3. PREVAILING CHARGE CONVERSION FACTOR FOR THE CATEGORY OF SERVICE MULTIPLIED BY THE RELATIVE VALUE UNITS FOR THE SERVICE.

INDIVIDUAL PRACTITIONERS

SECTION 447.34L INDIVIDUAL PRACTITIONERS: UPPER LIMITS OF PAYMENT.

(A) THIS SECTION APPLIES TO DOCTORS OF MEDICINE, DENTISTRY, OSTEOPATHY, PODIATRY, AND ANY OTHER INDIVIDUAL PRACTITIONER SERVICES THE AGENCY CHOOSES TO INCLUDE.

(B) THE AGENCY MUST NOT PAY THE INDIVIDUAL PRACTITIONER MORE THAN THE LOWEST OF --

(1) HIS ACTUAL CHARGE FOR SERVICE;

(2) HIS REASONABLE CHARGE FOR THE SAME SERVICE UNDER PART B, MEDICARE (PART 405, SUBPART D, OF THIS CHAPTER); OR

(3) HIS MEDIAN CHARGE FOR A GIVEN SERVICE.

(C) THE MEDIAN CHARGE FOR A GIVEN SERVICE IS DETERMINED FROM CLAIMS SUBMITTED DURING ALL OF THE CALENDAR YEAR PRECEDING THE FISCAL YEAR IN WHICH THE DETERMINATION IS MADE.

(D) THE AGENCY MUST NOT PAY MORE THAN THE HIGHEST OF --

(1) THE 75TH PERCENTILE OF THE RANGE OF WEIGHTED CUSTOMARY CHARGES IN THE SAME LOCALITY THAT ARE SET UNDER MEDICARE DURING THE CALENDAR YEAR PRECEDING THE FISCAL YEAR IN WHICH THE DETERMINATION IS MADE; OR

(2) THE PREVAILING REASONABLE CHARGE UNDER PART B, MEDICARE.

EXAMPLES:

THE PREVAILING CHARGE FOR A SPECIFIC MEDICAL PROCEDURE IS $100 IN A CERTAIN LOCALITY.

DOCTOR A'S BILL IS FOR $75 ALTHOUGH HE CUSTOMARILY CHARGES $80 FOR THE PROCEDURE.

DOCTOR B'S BILL IS FOR HIS CUSTOMARY CHARGE OF $85.

DOCTOR C'S BILL IS FOR HIS CUSTOMARY CHARGE OF $125.

DOCTOR D'S BILL IS FOR $100, ALTHOUGH HE CUSTOMARILY CHARGES $80 AND THERE ARE NO SPECIAL CIRCUMSTANCES IN THE CASE.

THE REASONABLE CHARGE FOR DOCTOR A WOULD BE LIMITED TO $75. THE REASONABLE CHARGE FOR A SERVICE CANNOT EXCEED THE ACTUAL CHARGE IF IT IS LOWER THAN THE PHYSICIAN'S CUSTOMARY CHARGE AND THE PREVAILING CHARGE FOR THE SERVICE IN THE LOCALITY.

THE REASONABLE CHARGE FOR DOCTOR B WOULD BE $85, BECAUSE IT IS HIS CUSTOMARY CHARGE AND IT DOES NOT EXCEED THE PREVAILING CHARGE FOR THE SERVICE IN THE LOCALITY.

THE REASONABLE CHARGE FOR DOCTOR C COULD NOT BE MORE THAN $100, I.E., THE PREVAILING CHARGE, IN THE ABSENCE OF ANY SPECIAL CIRCUMSTANCES WARRANTING A HIGHER CHARGE.

THE REASONABLE CHARGE FOR DOCTOR D WOULD BE $80, BECAUSE THAT IS HIS CUSTOMARY CHARGE. EVEN THOUGH HIS ACTUAL CHARGE OF $100 DOES NOT EXCEED THE PREVAILING CHARGE, THE REASONABLE CHARGE CANNOT EXCEED HIS CUSTOMARY CHARGE IN THE ABSENCE OF ANY SPECIAL CIR-

INDIVIDUAL PHYSICIAN FEE PROFILES COMPILED FROM CALENDAR YEAR CHARGES FOR USE DURING THE FOLLOWING YEAR.

MINIMUM OF THREE CHARGES FOR THE SAME SERVICE IS NEEDED TO CALCULATE A CUSTOMARY CHARGE FOR AN INDIVIDUAL PHYSICIAN.

PREVAILING CHARGE WITH ECONOMIC INDEX LIMITATION (FURNISHED BY THE MEDICAID BUREAU) IS SET AS THE UPPER LIMIT--THE 75TH PERCENTILE OF CHARGES.

FOUR CUSTOMARY CHARGES IS THE MINIMUM NUMBER OF SERVICES NEEDED TO CALCULATE THE PREVAILING CHARGE.

NEW PHYSICIANS ARE PAID BY THE 50TH PERCENTILE OF THE PREVAILING CHARGE WHERE IT DOES NOT EXCEED THE 75TH PERCENTILE.

CUSTOMARY CHARGE CONVERSION FACTOR FOR A CATEGORY OF SERVICE MAY ONLY BE CALCULATED WHERE AT LEAST SEVEN CUSTOMARY CHARGES FOR SERVICES HAVE BEEN MADE IN THE PARTICULAR CATEGORY OF SERVICE (MEDICINE, SURGERY, PATHOLOGY, X-RAY, ANETHESIA).

Medicaid Data

1978	OB/GYN Patient Days at Providence Hospital			4,406

MARIAN T. WITT, M.D.
3300 PROVIDENCE DRIVE
ANCHORAGE, ALASKA 99504

ALASKA CHAPTER
American Academy of Pediatrics

Letter to the Editor: Anchorage Daily News

Dear Sir:

In the Saturday Forum of February 3rd regarding Medicaid, Jaime Love stated that only 2 pediatricians in Anchorage see medicaid children. This is not true. All of the pediatricians in private practice in the Anchorage-Palmer area see such children and we presently number 15.

The number of pediatricians has not increased in recent years in proportion to the population growth of the city, hence acceptance of a new family into pediatric care may be neither automatic nor easy whether one is a medicaid recipient, a merchant or a bank president. All of us accept many new families, but at times when a saturation point is reached, families are referred elsewhere. Family practitioners, as their name implies, take care of many children, medicaid included, and do so capably. The children of our community are not being denied medical care whether medicaid or not.

The Amercian Academy of Pediatrics believes that every child needs a "medical home"; for an office-based familiar, constant setting where he may receive comprehensive high quality preventive health care and specialized care during episodic illnesses or accidents. This requires 7-day, 24 hour coverage by small groups of pediatricians and cannot be provided by health department clinics or emergency rooms.

With these concepts in mind, the American Academy of Pediatrics, has initiated dialogue with HEW financing administrators to seek more effective methods of providing a "medical home" for the eleven million children enrolled in medicaid. The estimated cost is 4.5 billion dollars!

If there is a problem then, it is not that we have forgotten our role as child advocates, it is simply that there are not enough hours in the day. We are trying; and can be found at any hour of the night at any Anchorage hospital caring for sick babies or children, without concern or knowledge of "means of payment."

Martha MacDermaid
Executive Director
Alaska State Medical
Association
1135 West 8th Avenue, Suite 6
Anchorage, Alaska 99501

January 23, 1979

Dear Ms. MacDermaid,

I am writing this letter to request an appearance before the Alaska State Medical Association at its April meeting to address the group on a very grave matter, that being the failure and refusal of many of our community's doctors to accept medicaid patients for treatment.

This request is made on behalf of the Alaska Public Interest Research Group, which is a citizens' organization whose membership numbers approximately six hundred Alaskans. Our main goal is to present the point of view of the consumer on various public concerns.

Although we are involved in a great number of issues, rarely has our organization confronted a problem as disturbing as the matter before us now. There is nothing so basic to our society, as physical health. In recent years the science of medicine has grown dramatically, conquering new diseases, inventing daring new methods of surgery, and implementing new technologies that bring undreamed of efficiencies to the healthcare system. In our country we have spent billions of dollars on medical research, the construction of hospitals, and the education of our physicians. Vast sums of this money come from the public sector. Hill-Burton funds and state revenue sharing dollars finance hospital construction. The federal government funds large and small research projects. The schools where our doctors are educated receive a number of subsidies. Some are direct, like the large government funding of research programs or the tuition itself. Medical schools are tax exempt so the private foundations, corporate donors, and individuals are able to write off contributions against income taxes. The students themselves benefit from a variety of government financial aid programs.

These expenditures are necessary -- necessary for our society to develop the new technology, to build the needed hospitals and health care facilities, and to train an adequate number of doctors. The expense of the undertaking is justified by our goal of bringing adequate medical treatment to the entire society. Without these subsidies few doctors could be trained. Hospitals would cost the consumer even more than they do today. Health care would be too expensive for the average citizen. Only the wealthiest of our society would be assured of proper medical care. This alternative is unacceptable.

So we have chosen to subsidize medical care at the public cost of billions of dollars. But we have stopped far short of a nationalized health care system. It is still firmly controlled by the private, for profit sector of our economy. Doctors are as much businessmen as healers. Of all the developed countries, only the United States and the government of South Africa have yet to provide its people with comprehensive national health insurance. The result is a patchwork system, financed through dozens of different medical insurance programs, health maintenance organizations, and public assistance for those who are indigent and have no medical insurance and no money to pay for health care.

The medicaid system is managed by a government bureaucracy. The State of Alaska runs the program within very detailed guidelines established by the federal government. Since its conception, medicaid has experienced administrative problems. The state has encountered significant delays in the payment of medical vouchers.

The response by individual physicians varies. Some continue to treat medicaid patients, others do not. Doctors with certain skills are more likely to reject medicaid patients than others. Obstetricians, gynecologists, and pediatricians are among those specialties which rarely accept medicaid patients today. For example, one young mother recently traveled to Anchorage from Kotzebue for an operation. A Public Health Service doctor had determined the existence of dysplasia on her cervix. He recommended a cone biopsy at the earliest possible date, to avoid a hysterectomy later.

She contacted the two doctors she had been referred to by the Kotzebue PHS doctor. They would not treat her, nor would six other Anchorage physicians. Some were not taking any new patients, but the majority refused treatment on the basis of her participation in the state medicaid program. Surely many of you can empathize with the distress this woman felt when she was refused treatment.

She and her husband were living in a rural area of the state, supporting themselves by seasonal construction work and living off the land the rest of the year. Their small cash income was enough to provide them with all their basic needs, but the operation was unexpected and they could not afford it. To be told you may have an early stage of cancer is unnerving enough. To

sign up for a public assistance program is a dehumanizing experience. But to beg doctors to treat you, simply because you are on welfare, and to be rejected by every doctor you contact, is more trauma than any Alaskan family should endure.

This woman, of course, is not alone. The present situation with the medicaid program can only be described as a crisis for poor people. It means that health care may not be obtainable if an individual or her/his loved ones get sick. It means being deprived of routine physicals and check-ups that other families have. It means that it is very difficult to find a pediatrician for your children - if you are poor. It means that you cannot get help from every doctor in the community, as the privately insured patient can. Your choices are limited to only those doctors who still treat medicaid patients. In short, it means that poor people have a second class health care system.

In defense of the medicaid program, it should be noted that the average turnaround time for billings is now less than 60 days. The reduction in payment of usual and customary fees, which may be the real underlying cause of physician disenchantment with the program, is mandated by the federal government. The paperwork is only that required by doctors in every other state.

Our organization is upset with the behavior of the medical community. It seems incredible that poor people who need medical treatment would be refused for any reason, let alone the stated grievances of the medical community. After all, physicians as a class are doing very well in Alaska. It is difficult to accept the judgment of those doctors who have turned their backs on medicaid patients, since it is the poor, and not the government bureaucracy, who suffer.

At one time the American Medical Association required each and every member to disregard the economic status of its patients in rendering its services. This standard was formally adopted by the AMA by its House of Delegates in 1934, in the mist of the great depression.

It stated:

> ABILITY OF PATIENT TO PAY.
>
> One of the strongest holds of the profession on public approbation and support has been the age-old professional ideal of medical service to all, whether able to pay or not. That ideal is basic in our ethics. The abandonment of the ideal and the adoption of a principal of service only when paid for would be the greatest step toward socialized medicine which the medical profession could take. All our arguments as to better service to the people, freedom of choice of doctors would be naught if such service were not available to a vast proportion of the people.

This ethic does not appear in more recent publications by the AMA. According to Bruce Nortell, of the AMA legal staff, the ability-to-pay ethic just "whithered away" in the late sixties after the medicaid and medicare programs were enacted.

But since the AMA ethics are only considered the minimum ethical standards for Alaskan doctors, the Alaska Medical Association should re-enact this ethic to address today's medicaid crisis. Certainly the sentiments expressed then are applicable today. For example, how can a medicaid patient have "free choice" when only few doctors in a certain specialty are treating medicaid clients?

While we live in a materialistic world today, with an economic system that encourages the relentless pursuit of self interest, it behooves us to reflect on this isolated activity of health care.

It is like no other commodity, in that no price can be placed on good health or the security of ones family. A profession that asks for the power of self government must consider the entire public responsibility it shoulders. For unless an internal remedy is forthcoming, people will look elswhere for relief. And such relief will be sought until poor people are accorded the same quality of health care as all others.

Sincerely,

DEAR PATIENT:

EFFECTIVE JANUARY 15, 1979 PENINSULA MEDICAL CENTER, INC. WILL NO LONGER ACCEPT MEDICAID OR GRM COUPONS FOR SERVICES WE PROVIDE.

WE ARE RELUCTANT TO TAKE THIS STEP, HOWEVER, WE HAVE NOT BEEN PAID BY THE DEPARTMENT OF WELFARE FOR MANY SERVICES WE PROVIDED IN THE PAST. OUR CLINIC CANNOT CONTINUE TO OPERATE BY EXTENDING CREDIT TO THE STATE OF ALASKA.

WE WILL BE GLAD TO CONTINUE SERVICE TO ALL PATIENTS WHO ARE WILLING TO ADHERE TO OUR CREDIT POLICY. IF YOU CANNOT PAY FOR YOUR VISIT AT THE TIME OF THE SERVICE, FINANCIAL ARRANGEMENTS MUST BE MADE IN ADVANCE.

AS FAR AS WE KNOW, THE OTHER PHYSICIANS IN THE AREA ARE STILL ACCEPTING COUPONS FOR MEDICAL SERVICES.

RECEIVED

December 4, 1978

Dr. Helen D. Beirne
Commissioner
Department of Health and Social Services
Pouch H-01
Juneau, AK 99811

Dear Commissioner Beirne:

This letter is giving formal notice that unless all past due accounts are paid by January 15, 1979, we will no longer provide medical service to Department of Welfare recipients. The current amount due us from the Department is in excess of $42,000 and some of these accounts are almost two years old. It is impossible for us to remain in business if we continue to provide service for any person or agency with such a poor payment record. We are far better off to provide service free to those people who cannot afford to pay. At least then we don't have all the hassle of repeated billings and record keeping which essentially reduces our return for your cliental to less than fifty cents (50¢) on the dollar of services. To begin with, practically all of our regular charges are discounted to a certain amount which amounts to an average of approximately thirty per cent. In addition, we have to wait excessively long for payment which increases the amount of staff time which is required to keep the records and keep sending statements. Thirdly, a number of charges are completely disallowed and for these we have no recourse. We will continue to provide service to those obstetrics patients that we have accepted to date, but will not accept new ones from 12/1/1978.

I am informed that the Department is out of funds and is in arrears of payment of their obligations to physicians in the State. If we had reasonable expectation that we could expect payment within a certain period of time and be paid for the amount of services rendered, we could conceivably borrow funds at approximately fourteen per cent interest until payment for services to DPW cliental is forthcoming. As it is now, our present financial position is such that we have to go to the local bank to borrow money to purchase new equipment which we feel is essential in providing quality medical care to the citizens of our community.

We regret having to take this step, but must do so in order to stay in business. It just isn't worth the time and trouble that we have to go through to serve DPW cliental which in the last two or three years has been a losing proposition financially.

Sincerely,

PAUL G. ISAAK, M.D.

STATE OF ALASKA

JAY S. HAMMOND, GOVERNOR

DEPT. OF HEALTH AND SOCIAL SERVICES

DIVISION OF PUBLIC ASSISTANCE / POUCH H 07 -- JUNEAU 99811

January 17, 1979

Paul G. Isaak, M.D.
Peninsula Medical Center
P.O. Box 569
Soldotna, Alaska 99669

Dear Dr. Isaak:

It has come to my attention that Peninsula Medical Center (PMC) has closed its doors to new Medicaid clients effective January 15, 1979.

The reasons for this closure appear to be as follows:

(1) Large unpaid accounts receivable from Medicaid for services prior to July 1, 1978 ("prior year bills").
(2) Excessive payment delays.
(3) Excessive costing down (adjudication) of PMC's billings.

I would like to clarify the current status of each of these problems compromising your participation in the Alaska Medicaid Program.

First, according to PMC records, we hold billings for services rendered prior to July 1, 1978, in the amount of $19,700. Based on PMC's average adjudication rate of 73% of amount billed, PMC can expect to receive approximately $14,400 once the Legislature approves supplemental funds to cover PMC's prior year bills and those of other provider's similarly situated. We regret the inconvenience this shortfall of Medicaid funds must have caused PMC; however, it occurred simply because there was a much greater demand for physician services than originally anticipated for FY78. To help relieve some of the cash flow difficulties which this shortfall caused PMC and other providers, Commissioner Helen Beirne sent written notification to each provider that our supplemental request to the Legislature would include "a sum for interest of one percent a month from the approximate date each billing would normally have been paid until the date it is actually paid". If a billing would normally have been paid in September 1978, but was not paid until February 1979, 5% interest would be due the provider for that billing in addition to the provider's normal rate of reimbursement.

Your second concern is promptness of billing. Although this agency did fall behind in processing billings during the first six months of 1978, payment timeframes were reduced to six weeks or less several months ago and have remained there since. For example, today we are processing physician

billings received on December 26, 1978. PMC's billings received here in late December (for October and November services) are being processed at this time. (Note: We also have a small group of resubmitted invoices in the amount of $2700 to replace some July-September 1978 billings apparently lost in transit. We are processing these now and a check will be mailed to PMC around January 30, 1979.)

Your third concern is the rate of reduction applied against PMC's billings. You state that an average 30% reduction is taken against PMC charges, and that some charges are totally disallowed. Our records reflect generally a 27% reduction against PMC claims, quite close to your 30% claim. Unfortunately, the rate of reimbursement to PMC is governed by federal regulations which in turn are tied to Medicare limits. Although we cannot reimburse at a rate higher than Medicare we do reimburse for a broader range of services than Medicare does. This leads me to believe that PMC charges which were disallowed must have lacked required prior authorization, or appeared to be a duplicate bill. If you will provide specifics of these disallowances, I will see that the circumstances are carefully researched.

Again, I would like to emphasize that the Division of Public Assistance regrets the hardships imposed on PMC as a result of our previous slow payment timeframes, and the delay in our settling PMC's prior year claims. I am indeed sorry that this occurred and the Department is making every effort to rectify this situation. In addition, several major changes have been made to preclude reoccurrence of these same problems in the future. These include:

(1) Revision of our budgeting procedures to more accurately predict funding needs.
(2) A complete review of our Medicaid payment system by federal experts, at our request, to isolate problem areas and to recommend improvements.
(3) Development of an acknowledgement system which will notify each provider that their billings were received, and advise them of the approximate date payment can be expected.

We are determined to implement these and other improvements to make this agency more responsive to providers statewide. It is my hope that in view of this commitment, PMC will reconsider its decision and once again serve all Medicaid clients on the Kenai Peninsula in need of medical attention.

Sincerely,

Rod Betit

RE: Taylor, Ola W.

Dear Mr. Betit:

Currently the Peninsula Medical Center, Incorporated of Soldotna is no longer accepting State Welfare patients because of poor compliance with contractural basis on the part of the State. However, the Clinic is continuing to provide health care for people who were previously under the program. It should be noted that in addition house calls are being made including one on Ola W. Taylor, a preterminal cancer patient, who is unable to come to the office. Of course, there has been no charge made to the patient or to the State.

Thank you.

Sincerely,

L Schlosstein MD

Lee Schlosstein, M.D.

CHANNEL 2 TV - "FOCUS 2"
Saturday, January 27, 1979
10:10 PM
Suzie Arnell, Newsperson TRANSCRIPT

ARNELL: Kristen Carnes lives with her husband and daughter outside a village on the Kobuk River outside of Kotzebue. They live the subsistence way mostly, which worked out fine until the couple learned Kristen had cancer and needed an operation.

KRISTEN CARNES: She came up to me on the street and said, "We've been looking for you." You see, we were camped out of town a ways so they couldn't find me. And she just said, "We've been looking for you. Your pap test showed some abnormal results and you may have cancer." At first I was really scared because they just kind of told me that I might have cancer. That was how I was told. I didn't feel any pain or hurt in my body, but I just felt panic that either I would have to have a hysterectomy, which would mean no more children and we very much want another child, or I had fears that I would die.

ARNELL: The Carnes immediately went on Medicaid and then found out that very few doctors would take it.

CARNES: We called about seven or eight doctors and a few of those were not accepting new patients, but I think we had four names altogether who just wouldn't take Medicaid patients at all. Doug said that when he called them, you know, he would mention at last, he would ask the doctor whether he would treat me and, you know, when and everything and then mention, do you take Medicaid, and there would be kind of a turnoff and they would say, no, we don't, sorry.

ARNELL: Meanwhile, she went to other doctors for second opinions. It always came back the same. The cancer was there and it seemed to be spreading. They all recommended a cone biopsy.

CARNES: Well, they just kind of go into the cervix like it's an apple and take a core out of it. And at first they stain it in order to know where to cut, then they cut out all the bad cells, hopefully. If they do have to take out a large cone, you may not be able to have children again because you could have a miscarriage; there's not enough cervix to hold the baby in. But usually, if they catch it quick enough, it's not a very serious operation and you're perfectly capable of having children. For a few months I've been thinking about it a lot and, yeah, worrying, sometimes trying not to worry because I hear that's bad. And, yeah, I was quite worried by this time. I really had made up my mind to have the surgery and wanted to get it as soon as possible.

ARNLLL: Finally, they found a Palmer doctor who took Medicaid, Dr. Carolyn Brown.

DR. CAROLYN BROWN: No, I don't care whether they're Medicaid or not.

ARNELL: But apparently many local doctors do. In November, 56 Anchorage doctors were surveyed by the Anchorage Municipal Planning Department. All are OB/GYNs. The Gehler report is startling. Only six doctors said that they accept Medicaid patients and most of those qualified their answers, saying they only accepted a few a month or during certain months of pregnancy. Eighteen doctors said flatly no, they do not accept Medicaid patients. Three doctors said that they sometimes did. And the majority---29--just didn't answer the questions at all. Doctors interviewed listed a series of complaints, the main one being that Medicaid cost the doctors money. They only get reimbursed for part of the bill and doctors say that the payments from the State take way too long in coming.

BROWN: I can appreciate why some physicians would not take Medicaid patients because if they're only paid 60 percent worth of that piece of paper for what their fee is, or 70 or 80 percent, and the physician may have his or her own overhead, I can appreciate why they would be upset at getting a piece of paper that's only worth 60, 70 or 80 percent of what they're about to deliver.

In our office, we've never had a payment come in in less than three months. We have stopped taking Medicaids as of the first of January in '78, and we hadn't taken any more coupons for the entire year and we had a substantial amount that they owed us at that time and they still owe us at the beginning of '79, the same substantial amount. So, that'll tell you where we stand with them.

BROWN: I often wonder if Medicaid patients don't often feel like they're treated as second-class citizens. And you take a very good person who works, who does what they can do to make ends meet, who is responsible to pay their bills and then, bingo, a disaster hits. And they can't really pay for that. So, they have to seek some way to do it. Maybe they don't have insurance and they don't have enough money in the bank and they're making ends meet. So, anyway, they end up going and asking for some assistance from welfare, medical assistance. They're handed a coupon. My experience in talking to Medicaid patients is that nobody explains what that coupon is for. The patient thinks that coupon is money. They think it's 100% of money. It's like solid gold. Then the patient goes to the physician's office, passes over the coupon, for those doctors who will take a coupon, and then assumes that everything is cared for. The physician

BROWN: (continued) then has got to wait six months, three months, six weeks--whatever it is--for the physician, before they're reimbursed and then only get between 60, 70 or 80 percent, if that much.

I would say it's pretty serious, you know, as far as our office is concerned. I know that they owe us quite a bit of money and the way I look at it is that we treat so many people on a credit basis that, in so many different groups and just like, the military with Champus and the Teamster organization, that it makes it very difficult during the month that no payments come in from any of the organizations and you got, you know, it makes it higher in health costs for doctors. They've got to cover that time somehow.

There is a longer time that goes by from the time the physician renders his service until the time they send the bill to us, then it takes us to get the money back to them once they send the bill to us.

BROWN: Obviously our expenses go on. We have staff, we have rents, we have bills, we have interests. These things have to be paid some way or another.

Say there are some months when not very much is coming in. I'm sure that a doctor, in order to cover his overhead, might have to take out a temporary loan on occasion which would again jack up the costs of the medical care to the other people.

That happens.

ARNELL: Hospitals get their fair share of Medicaid woes, too. Spokesman for Providence said some Medicaid patients never bring in their coupons. So the hospital never gets paid.

CHRIS BEARDSLEY, PROVIDENCE HOSPITAL: We have to bill within six months in order to get reimbursed for the coupons. That's the deadline which the Legislature has put down through regulations through the Department. And last year a bill came through, as I remember correctly, where they tried to reduce that time that we could bill Medicaid recipients. It didn't pass, thank goodness, but that would have really put a crunch on us.

Our total losses for the budget year of 1979, which are based on past history and fact, and these are losses due to contractual adjustments because of the Medicare and Medicaid programs, bad debts, charity allowances which we give, will exceed $2,300,000.

ARNELL: From ten to fifteen thousand persons in Alaska are on Medicaid at any one time. Last year the State shelled out some 26 million dollars for Medicaid. This year the figure is set at 31 million, and next year's projection is 41. But last year, reimbursement money for the doctors ran out faster than the fiscal year, leaving many doctors with bad debts from the State and bad tastes in their mouths about Medicaid.

What does the State say about the whole thing? Well, we decided to talk to the man who wrote the Medicaid bill, Fred McGinnis. McGinnis told us that the Medicaid fund itself was solvent last year; they just couldn't transfer money to pay back the doctors.

FREDERICK McGINNIS
DEPUTY COMMISSIONER
DEPT. HEALTH AND
SOCIAL SERVICES: There are rules that change from time to time as to what we can do with funds in one budget review unit or component over against another one. It was a very technical budgeting detail that created the problem. But now, that is not true for the 1979 year. It isn't a problem for this year. We can use money back and forth in the 1979 year, but we could not in the 1978 year. And that was the essential problem. When all those bills are paid and hopefully the Legislature will very soon appropriate the additional money to pick up the services for I believe it was April, May, June--that period in there--there still will be after all those are paid totally, there will be a surplus of some $600,000 in the fund.

Several times we run into problems both in the delay area where we'll send a claim in and they'll send it back with something that should be obvious, like for instance an OB claim where we'll send it in and say, the bill won't be for a total, it'll be care or routine lab work related to prenatal visits, etc., etc., and they'll send it back and say, What's the diagnosis for this patient?

McGINNIS: It is an enormously big business. People don't tend to think of it that way because they tend to think of one hospital, one clinic, one doctor's office. But when it all focuses for that number of people in one set of offices, it is an enormous flow of processing. So there will be mistakes. But the last I heard, that's true with other forms of businesses, too; not just the medical profession.

ARNELL: The State Medical Association met with the State this fall trying to iron out any snags and the State plans to get a computer soon to speed up claims. But how does all this really effect Medicaid patients, and how serious is it really?

I t ink there's really no excuse for it. I think it's an outrage that doctors will pick on poor people, poor people who are sick...

...which will instill a certain level of incentive into the Medicaid program. Incentive to the recipient as well as to the provider and that is the large thing that is missing, as far as I'm concerned.

BROWN: And when a Medicaid patient sees a physician, it is the patient's encounter with the physician; not Medicaid or the Juneau office or the Anchorage office. Therefore, the patient is accountable for that care which was rendered by the physician. I fail to see why we should treat Medicaid patients any different than we treat private carrier insurance patients, in that we bill the patient, it becomes his or her bill, for the difference. I don't understand why this can't be. I'm worried that it's against the law to do this. But I fail to understand why.

I think they're more frustrated than angry, because it puts them in a bad situation with the patients. You know, they feel bad because they can't understand why they can't get treatment and the doctors feel bad because they're not, they're working hard and they're doing a good job, but they're not getting paid for it and, you know, it's frustrating.

BROWN: We don't treat other people like that. Some of the private insurance companies don't treat people like that. They don't treat physicians like that. There's a system worked out.

CARNES: I don't usually go around telling people that I'm on welfare, but that's because I'm afraid of their coldness, I think. It hasn't been a pleasant experience at all and I would avoid it if I could next time. I'd say that the doctors and the patients--they're both the losers in this.

CHANNEL 13 TV NEWS
Saturday, January 27, 1979
6:30 PM
Beverley Michaelson, Newsperson TRANSCRIPT

MICHAELSON: (intro) Tonight on Channel 13, if you're a pregnant young woman looking for a doctor, you would have trouble finding one in Anchorage. If you're pregnant and on Medicaid, the problem would be even worse.

MICHAELSON: Kristy Carnes came to Anchorage from Ambler with her husband and daughter looking for help as a Medicaid patient. She had cancer of the cervix and needed a cone biopsy as soon as possible.

MRS. CARNES: If it isn't arrested now, it could become what they call evasive cancer, which would mean within a varying length of time, possibly a short time, I would have to have a hysterectomy and, if it got beyond the uterus, it could eventually kill me because it would get into other areas of the body.

MICHAELSON: What was your experience when you called? How many doctors did you call and what was the response and experience you had?

MR. CARNES: I think I called nine doctors in all and the experience I had varied. Some of them I think were just not taking new patients and others were very friendly and helpful, up to the point where I asked them whether they were accepting Medicaid patients, or whether they would accept Medicaid. At that point, they said, no, no sir, I'm sorry we're not. I had a feeling of coolness at that time.

MICHAELSON: Kristy Carnes was taken care of eventually in Palmer. But her situation raised the question in Anchorage-- Are other young women having this problem? Are they having problems getting medical help? Why is there a problem, and what is being done about it?

There are 16,000 people in the state who qualify for Medicaid, according to Rod Betit, Director of the Division of Public Assistance. Over 5,000 are in the Anchorage. None are Native because the Alaska Native Hospital cares for the Native population in the state. Among those who are on Medicaid include the disabled, blind, and many single mothers with dependent children. Is there a crisis in health care for these people on Medicaid?

DR. WINTHROP FISH: Not only is there not a health care crisis for the poor, but I believe it would be difficult to find a place in the United States where everybody--poor or well--is taken care of so well and with such good facilities and competent care.

MICHAELSON: Hugh Fleischer, Chairperson of the Board of the Alaska Public Interest Research Group, disagrees and he says there is evidence of a real health care problem for the poor in Anchorage.

HUGH FLEISCHER: We have a number of specific instances that we're familiar with in which patients who have reported to us about their own direct experience of having been refused any and all medical care based on the fact that they were Medicaid patients, and we know that is the policy of a number of physicians in the community. We've done a spot survey of a number of physicians and determined from their offices, from their own statements, that they were in fact not willing to provide medical care to Medicaid patients on the basis of that fact alone.

DR. JERRY LITTLE: I don't think there is a crisis as such. I think that there is a problem in certain areas in medicine in Anchorage and the Medicaid people being seen as soon as they'd like to be seen. But that is only part of the problem, in that there are a lot of people--Medicaid or non-Medicaid, insurance or non-insurance--who have trouble getting in to see certain physicians.

MICHAELSON: Those certain physicians--is there a particular area of them that is more pressed than others?

LITTLE: Offhand, I would have to think of the obstetrical field, gynecological field and the pediatrics. We need more of these doctors.

MICHAELSON: The crunch, as Dr. Little points out, is particularly bad for young women having babies and apparently even worse for Medicaid women having babies. Public Assistance personnel verify this, saying most of the complaints they get from Medicaid clients--and they do get complaints about not finding a doctor--are that, No. 1, doctors will not perform abortions on Medicaid patients and, second, they can't get prenatal care. Doctors and hospital personnel staunchly maintain, however, that if someone really needs medical care, he's going to get it.

If I were a Medicaid patient and I needed help, I needed to come for services right now, I thought, would I be able to walk into Providence Hospital and be seen?

CHRIS BEARDSLEY
PROVIDENCE HOSPITAL: Absolutely. We never turn away any patient. I don't think you would find an incident where anyone in an emergency or in an acute illness situation has been denied medical care.

MICHAELSON: That still doesn't help the woman who is having a baby and wants to be sure everything is okay. Medicaid patients, like everyone else, need care on something other than an emergency basis.

The next question is, Why aren't some doctors seeing Medicaid patients? There seems to be three major problems. One is payment that is too late and not enough. The second is paperwork and, last, federal regulations.

FISH: There is a problem of payment, of course. And that happens to be a matter of federal law and there's a very complicated payment rigamarole that is gone through in order to determine what percentage of what is billed will be actually eventually paid, and this varies from doctor to doctor depending on how long he's been here and what is known as a fee profile. More important recently has been the relative chaos in Juneau that has delayed the payments a great deal. So that we have a double problem. One is that the government asked, or desired, and planned to get into the practice--or at least the responsibility for providing care for the indigent or the poor. Then they set it out as a cut-rate system and then they delayed it. And then finally ran out of money altogether for a certain period of last year, so that they didn't pay at all.

MICHAELSON: Even though there was enough money in the Medicaid program for 1978 to pay the doctors those last few months of the fiscal year, the doctors did not get their money. I asked Mr. McGinnis, Deputy Commissioner of the Department of Health and Social Services, why that happened.

FREDERICK McGINNIS: It's simply because the Legislature appropriated the Medicaid in about six categories. One was nursing homes, one was hospitals, one was physician services, one was early periodic screening, and so forth. And we are limited to just those line items. We cannot change from one line item to the other. So, while the Medicaid fund has a surplus of $600,000 it's not on the right line item to be paid.

MICHAELSON: How then is there a shortfall at the end of the fiscal year? In other words, have you not been paid in previous years?

BEARDSLEY: Well, there have been...the last two or three years have been shortfalls in the General Relief Medical, Medicaid type funds and of course you're familiar with the different types of pools. So there is some tradition to this; it doesn't go back a long ways, but recently I would say...

MICHAELSON: Do you expect there to be a shortfall at the end of this fiscal year?

BEARDSLEY: If tradition follows, there will be.

MICHAELSON: According to the Department of Public Assistance in Juneau, the money for 1978 will be appropriated by the Legislature shortly and the doctors should receive payment within a few weeks. And, what is more, this shortfall problem should not occur this year because now the Medicaid money can be used where it is needed. Payment delay has been one problem; another problem, as Dr. Fish mentioned earlier, is that under Medicaid doctors, hospitals and other services don't get paid their entire fee.

Do you get paid for everything you bill?

BEARDSLEY: No. Medicaid and Medicare reimburse at a rate of somewhere in the neighborhood of 65 to 75 percent--occasionally 80 percent--of our costs. There are many bad debts. There is some charity care given. And the unreimburseable costs from both Medicare and Medicaid comes to a significant dollar amount here at the hospital and I'd say two million dollars a year that we lose. Contractual allowances, charity care and bad debts.

MICHAELSON: The doctors then are virtually guaranteed payment by Medicaid; not as quickly as they would like nor as much. But ther , among other patients, similar situations must occur and thes days uncollectable bad debts plague every businessman.

Do you find that there are other problems that you have besides the fact that you're not being paid on a timely basis?

BEARDSLEY: Well, on a timely basis, I would say you do run into the tradition where Medicaid patients, in order for us to get reimbursement, when they come for service, have to bring a coupon. And, if we don't get the coupon, we can't bill the State to reimburse us. And frequently--not all that frequently, but in a number of cases--the patient is getting free care and they don't take the liberty of bringing in the coupon, and we ask them to mail it back and sometimes they do, but many times they don't.

MICHAELSON: Which gets into the second and, in many doctors' opinions, the most severe of the problems--the hassle of additional paperwork with Medicaid patients.

LITTLE: If a private paying patient comes in and has an insurance form to fill out, we do not have an insurance clerk to assist. We have a routing slip that has all the information on it--the diagnostic code, the charge, the doctor's name, the patient's signature and so forth--and they just attach their copy of the routing slip to the insurance form and send it in. I think all but three insurance companies in the country accept these. If a Medicaid patient comes in, they have a complete separate form that we have to, one of our girls has to type up. We do not only have to put in the diagnostic code; you have to type out the diagnosis, the name of the diagnosis. Each one, each office, laboratory test that's done--all that has to be typed in. So there's an extra paperwork just in filling out the form.

MICHAELSON: There is one page to the Medicaid forms similar to most insurance claims. It takes one clerk one day to type all the Medicaid billing forms for six doctors for one month. But the doctors' business office says there's more time involved in dealing with returned forms, missing coupons and the like--all amounting to extra hassle.

Dr. McGinnis, who is the Deputy Commissioner of the Department of Health and Social Services, and others feel that the paperwork is not inordinate and represents a billing procedure that would be customary in any other type of business endeavor. What the doctors see is an increasing involvement in government in the way they're doing their business, and they don't like it.

FISH: Finally, more of a problem is the ever-increasing federal regulation that comes down because it's all tied to federal programs, and there are now a new set of regulations being fomented in Juneau and ready to go on...or ready to be actually implemented that will make the problem of taking care of somebody in the system. It's not the matter of the money but it's just that once you take on the system, why then you're involved with a great deal of paperwork, a great deal of hassle, rebilling...but more than that, even the threat of being prosecuted for criminal action under fraud and abuse laws that are becoming more and more strict. You've got to understand: we object to both Medicare and Medicaid at which time we customarily delivered if you want to call it charitable medicine. That was part of the tradition of medicine and we all did it. We objected politically and otherwise to the whole concept because we realized it would bring eventually tougher government regulations which bogs the system down and makes it difficult to deliver.

MICHAELSON: The Alaska Public Interest Research Group points out, however, that doctors and hospitals receive help from the federal government regularly in the form of research grants, subsidies to medical schools, and the financing of hospital construction. So they feel the doctors should take more responsibility for making federal programs like Medicaid work.

The next question: Are some of the problems between the medical community and the Medicaid program being solved?

FLEISCHER: The Department of Health and Social Services is working on the problem. The Governor recognizes that there is a problem. But still there is quite a time lag that can sometimes reach up into 90 to 120 days. That's awful hard to say, Bev, because there's a whole new ball game coming down and there's what is known as the State Health Plan, which is a big thick document superimposed on another big thick document called the State Medical Facilities Plan, which is terribly tough reading but seems to envision the State as going to set up in the next five years some sort of state health insurance where it's all under one lump program and so the whole thing is changing. If it's as bad as Medicaid when they get it, why then you will be a Medicaid patient along with the rest of us and will enjoy the benefits of it. I don't there there's any question about it. We understand that payments now are being made within 60 days of submission of billings to the State, and I don't think that's an unreasonable period of time for physicians to wait for a payment. It's certainly in accord with I think even private insurance coverage, or perhaps even better. So I don't really think that it even exists as a problem any more. There have been problems in the past, but we've been dealing with those problems. The fact of the matter is that the care is really owed to the community, to the poor people in this community, and the fact that there have been delays or hassles in payment should not be used as an excuse to refuse to treat poor people in Anchorage or in the state.

MICHAELSON: As the tugging and pushing goes on between the government and the doctors, the fact remains that there are many doctors in Anchorage who are not seeing Medicaid patients and, as a result, it is less likely that these people will receive the kind of medical care they may need.

And finally, and the most complex issue, is one that our nation is going to be dealing with for many years to come. That is, does the doctor have the right to refuse anyone who comes to him for help?

FLEISCHER: The doctors in our community really have an obligation to provide medical care to people who are so-called Medicaid patients, the poor people in Alaska. They're entitled to medical care along with all the other citizens in the state, and they're being denied it now because of the fact that they ar poor. I think that's wrong and we ask that it be changed.

FISH: I believe that we have an obligation to take-- I particularly feel I have an obligation to take care of a certain number of people who are not otherwise able to handle the situation. And a given number of these people are truly unfortunate and have no other access to medical care, and that happens to be my feeling. I do not believe, however, that it is, should ever be, a mandated thing that a person was forced to enter a system in which he didn't believe or didn't want.

SUBJECT: Community Survey on Obstetrical Services

DATE: December 26, 1978

MEMORANDUM

Enclosed you will find a cover letter and the Community Survey that was sent to all survey participants.

We would welcome your ideas and suggestions on any matters upon which you might wish to comment. Please call me at 278-3631.

Thank you.

December 12, 1978

(This is a copy of the cover letter sent
to all participants of the Childbirth survey.)

Dear:

On behalf of South Central Health Planning and Development, Inc., thank you for your willing participation in the enclosed community survey on Childbirth. I hope the information contained therein may be of some value to you and to your interest in childbirth.

As the interviews were being conducted, it became obvious that very few people are "neutral" about childbirth. It also became obvious that people who are involved in some way with childbirth want very much to communicate with others who are involved. The idea of a meeting of principal actors thus became almost inevitable. It was suggested that as a "disentangled" but not disinterested party, SCHPD Inc. might be an appropriate convener of such a meeting. Beyond saying that SCHPD, Inc. would be interested in a meeting or meetings which would attempt to deal with immediate, soluble problems, not much actual detail of possible agendas can be stated at this time.

Enclosed is an envelope addressed to SCHPD. If you are interested in participating in community meetings directed at some of the issues raised, please jot down your suggested agenda items--what subjects or problems on childbirth would you like to see addressed? You might also indicate best times for your participation (time of day, day(s) of week), and suggest other participants.

Again, thank you for your participation in this initial effort.

Very best regards,

Dennis P. DeGross
Health Planner

Encl.

CHILDBIRTH SURVEY: A LOOK AT OPINIONS ABOUT PRENATAL, DELIVERY, POSTNATAL CARE AND RELATED CONCERNS AS EXPRESSED BY VARIOUS REFERRAL AND SERVICE AGENCIES AND INDIVIDUALS IN ANCHORAGE.

Background:

In late October, medical staff from Anchorage Neighborhood Health Center, and staff from South Central Health Planning and Development, Inc. (the Health Systems Agency for South Central and Western Alaska) had discussions regarding reported claims that pregnant women (particularly women of lower economic means) were experiencing difficulty in obtaining necessary obstetrical services in Anchorage. These discussions raised the following questions:

1. Is there a shortage of obstetrical services (specialist and family practice)?

2. If there is a shortage, is it felt more in a particular economic segment of the population, such as among the poor?

3. Are Medicaid-eligible patients who are seeking OB services actually not able to obtain those services?

4. If enough prenatal work is not being performed in the community will that show up in the number and kind of unscheduled emergency deliveries being performed at the two hospitals or in any other form of "negative event" that can be documented?

5. Will a look at the volumn and quality of current home birth activities of the community reveal anything about who is not getting or who cannot afford prenatal care and delivery and hospital costs?

6. What new efforts are being put forth by physicians and hospitals, to meet the obstetrical needs of the community?

Summary of Results:

It was agreed that it would be an appropriate SCHPD, Inc. function to take a look at the community in the context of these questions, and attempt to establish some preliminary directions for future action.

The following statements are the results of interviews conducted by SCHPD Inc. staff. While they are anecdotal and hence, subjective, they would seem to confirm that some shortage of OB services does exist, and that the economically disadvantaged patients are those who are most likely to directly experience that shortage (Questions 1, 2, 3).

It is unclear from the interviews whether a scarcity of prenatal services is substantially manifesting itself in either an excessive number of unscheduled emergency room deliveries, or in other "negative event" results, such as toxemia of pregnancy, or stillbirth (question #4). That data may be retrievable with a concerted, well organized effort, and will be further explored with APRO and the two hospitals.

The interviews revealed a surprisingly substantial number of home births taking place in the Anchorage area (we estimate from 10 to 20 per month), but since many couples who choose home birth claim to do so for reasons other than finance, it is difficult to determine who has turned in that direction because they were unable to afford OB services (Question #5). One thing is clear, however, the current disdain expressed by physicians for home birth, and the lack of alternative "legitimizing controls" upon the practice, creates a potentially dangerous situation. The home birth people are a fact, albeit an unpleasant one in the eyes of the allopathic practitioners; the question is whether they (home birthers) will be allowed to continue activities as "outlaws", outside the pale of public and professional evaluation and control.

As for the efforts of the established medical system (Question #6) there are signs of change. More and more OB specialists are bringing OB nurse practitioners into their office practices, and the hospitals are beginning to discuss alternative modes of birthing. Recently, one OB specialist suggested that if each physician currently working in OB would take one Medicaid OB patient and one medically indigent OB patient per month, on a voluntary basis, the problem would probably clear up.

It has been reported that the OB section at Providence Hospital has appointed an informal committee to work with the Anchorage Neighborhood Health Center on some of these problems.

The interviews below were subjectively gathered, and are most certainly subjectively expressed. If as those of you who participated as interviewees read what we thought you said, you feel we have done violence to your intended meaning, please call, and we will circulate an errata among the participants. Copies of this report are being circulated to those people whose names appear on the list, which appears at the end of the interview section, in order that a sharing process among the principal actors may be started.

Copies are also being sent to all OB-Gyn practitioners and family practice physicians performing OB services, to Dr. Fred McGinnis, Deputy Commissioner of Alaska Department of Health and Social Services, and the administrators of all local hospitals, to the Alaska Professional Review Organization, and to all SCHPD, Inc. Board members.

At the end of the report is a survey of Anchorage OB-Gyns and family practitioners that was carried out by Jan Gehler, Human Resources Planner for the Municipal Planning Department. The survey has been invaluable to the conduct of this effort, and especially to various referral agencies in the community to whom such information is vital.

THE INTERVIEWS

Jerry Ekvall, Family Planning, Municipality

Jerry was quite aware of the difficulty in obtaining specialist services (OB-Gyn) for expectant mothers. She knows of very few who will take Medicaid patients, so she has been referring most Medicaid eligible and the medically indigent to the Anchorage Neighborhood Health Center. Jerry knew of one woman who could not afford physician or hospital costs who received no prenatal care prior to showing up at the hospital emergency room. Even though the ANHC is not able to provide the full range of OB services, referral is made because of concern that there would be more similar cases.

Cathy Bickerstaff, Planned Parenthood

Cathy has heard from many of the women who touch base with her that the OBs in town are not accepting new patients. She is quite certain that many OBs have said they won't accept Medicaid, and none will accept Medicaid for tubal ligations. She knows of a GP who will remove a uterus under Medicaid. She indicated it is becoming very difficult to obtain a legal abortion under Medicaid, but that legal abortions are difficult under normal economic circumstances, due to the limited access to services. She thinks a crucial issue is that it appears new patients are not being taken. Cathy is aware of the Medicaid snafu and is concerned that access to quality medical care for women will be seriously limited as a direct result.

Pam Albrecht and Evon Williams, Birthright

The belief of volunteers at Birthright is that a real crisis exists in obtaining adequate prenatal services for their clients--particularly among Medicaid qualified and the medically indigent. In an effort to determine which Obstetricians and Family Practice physicians would provide services for their clients, Birthright conducted a survey of all OB-Gyns and Family Practice physicians in August of 1978. With few exceptions, the results of that survey were similar to those of the enclosed survey, completed in mid-November by Jan Gehler, of the Municipal Planning Department. The Gehler survey was used to update the Birthright list (see attached).

Patty Boylan, Booth Memorial Home

It is Patty's impression that there is general difficulty in obtaining OB-Gyn services in Anchorage. She concedes that the extreme youth of the Booth Memorial Home client population may contribute to the reluctance by specialists to take them on as patients. Patty indicated that the Municipal Health Department had been very helpful in the past, in obtaining services. Patty was not particularly aware of a special problem with Medicaid.

Mrs. Wyrick, CHAMPUS Advisor, Elmendorf Hospital

Mrs. Wyrick definitely believes there is a shortage of OB services in Anchorage. She explained that only 60 deliveries per month can be performed at Elmendorf; any more than that must go into the civilian market under the CHAMPUS program. The patient is given a list of Obstetricians. Many OB specialists won't take OB patients, Mrs. Wyrick stated, and many who do seem to specialize in performing "C" Sections. Many OB specialists severely limit the number of patients they take, and very few will take CHAMPUS patients.

Jean Wolf, Community Health Nursing, Municipality

Community Health Nursing is usually not aware of a problem until they are put in the position of having to find OB services for one of their patients. Most of these referral problems involve Medicaid eligible, or medically indigent patients. The traffic has varied from one or two per day, to two to three per week. Referrals have been made to Anchorage Neighborhood Health Center for prenatal care, but most often, personnel from Community Health Nursing will stay on the telephone until a physician has been found who will take the patient.

Jean is aware that many home deliveries are being done in Anchorage, and while she is somewhat unsure as to the competence of current home delivery services, she indicated that there is a fairly large demand. Some women, either Medicaid eligible, or medically indigent, often experiencing the frustration of not obtaining physician services, simply say they will present themselves to an emergency room when it is time to deliver.

Jean acknowledged that, although the hospitals are probably "carrying" patients who are unable to pay, it is not common knowledge among the public that free services are available in a "crunch". Also, in the case of physicians who assert their willingness to accept charity cases--that fact may not be completely understood by the physician's reception personnel, who are motivated to keep the physician solvent, and who may thus discourage the charity patient.

Jean concurs with the majority medical opinion, which perceives home deliveries as basically dangerous; but on the other hand, she is sorry people who have no other alternative are forced to "sneak around" in order to deliver at home--the medical community is turning its back on this rather sizeable activity.

Jean believes a meeting of principle participants is needed in order to solve this community problem.

Gayle Stevens, Nurse, Open Door Clinic

Gayle said it has been very difficult to obtain obstetric services for their patients from time to time. It was particularly bad during the past summer--so bad that Open Door conducted a telephone survey of OB-Gyns, and Family Practice physicians, in order to determine who was taking new patients, who would provide prenatal care for home births (for those women who stated a determination to do that), who would accept Medicaid, and how much each charged for services. The results of the Open Door clinic survey were very similar to

those of the Gehler survey (see attached).

Open Door Clinic was doing some prenatal awhile back, but as the Anchorage Neighborhood Health Center began to take more prenatal visits, the number of such visits to the Open Door Clinic abated somewhat.

A considerable number of women are delivering their babies at home, but that activity is not seen as legitimate by, and is not under the control of, the established medical community. Home birth is a sizeable "in the closet" activity in Alaska.

A possible reason that physicians are reluctant to take Medicaid or CHAMPUS patients, is that the maximum allowable charges under those programs are considerably lower than their "usual and customary" charges.

William Compton, M.D., Providence Professional Bldg.

Dr. Compton agrees that there is a great demand for obstetrical services, but is unclear as to the extent of shortages. Obstetricians do have more than enough work. Many obstetricians are sliding toward elective gynecological work because it is less demanding than OB work.

Dr. Compton's own process is to see to the patient's care first, then deal with the money questions later. He thinks most patients fall into some form of financial capability, Medicaid, CHAMPUS, insurance, etc. On the other hand, he acknowledged that he has a tremendous accounts receivable situation, which he felt sure is the case with his colleagues.

See 11/9/79 Anch. Daily News clip

That physicians are somewhat reluctant to work with Medicaid and CHAMPUS is understandable, in light of the discrepancy which exists between the "maximum allowable" costs provided by those programs, and the real costs of services reflected in physician's "usual and customary" charges.

Dr. Compton indicated that the problem of obtaining OB services for Medicaid patients was not a new one, and that he favored an effort by obstetricians to voluntarily deal with the problem. He does not view current efforts by the Anchorage Neighborhood Health Center to provide additional prenatal services as ideal, since that agency has no OB-Gyn on staff, utilizes an OB consultant to the Nurse practitioners from several miles away, and will then expect emergency room, on-duty and on-call physicians to deal with crisis situations as women present themselves for delivery—all this without prior contact between patient and medical personnel.

Dr. Compton is of the opinion that home deliveries are extremely dangerous and does not support movement in that direction. He sees Providence Hospital's development of "birthing" rooms as a "maybe" compromise for families who want a more comfortable and relaxed birth experience.

Pat Vezina, Nurse, Labor and Delivery, Providence Hospital

Pat discussed the addition of the new "birthing" rooms at Providence Hospital. Except that a woman will not be moved from one room to another during

labor and delivery, she perceives that the new set up will offer minimal advantage over the existing system. The new rooms will require the same amount of staffing over time, so that, except that staff will have one less room to clean up, actual costs will not be much less than before. Of course, the rooms will be comfortably decorated in a much more homey atmosphere than previously. Naturally, if length of stay is reduced, that will substantially affect the cost for the patient, but it is not clear that length of stay will actually be reduced.

Pat suspects that the medically indigent have a good deal of trouble obtaining OB services. She estimated that several women per month show up at the emergency room for delivery without having had adequate prenatal care.

How much of the current "crisis" is related to the events surrounding Alaska Clinic is uncertain—Providence Hospital, in two months, delivered 169 babies each month, a record number.

The shortage of prenatal care is perhaps not acute, but is rather a distribution problem. Many physicians who are qualified to perform those services have moved over into elective gynecology, she stated.

Pat had a concern about the Anchorage Neighborhood Health Center's recent movement in the direction of providing additional prenatal care without delivery services. Agreements with emergency rooms notwithstanding, ERs are not in the delivery business—they don't always have the expertise. Physicians, on call or in house, will know very little about case histories of individual patients as they show up at the ER for delivery.

Pat believes some of the financial pressure, as well as reported shortages might be solved by the OB-Gyns employing more OB nurse practitioners/midwives in their practices. She was not sure this would solve the more severe financial difficulties experienced by some patients.

On the issue of home birth, Pat pointed out that she was a midwife in England, where she performed home deliveries, but where there was a mobile emergency capability especially set up for home birth. She has since discovered that in the time she has been away from England, that situation has changed—most deliveries now occur in the hospital there.

Most deliveries are normal, she said, and will present no special difficulty. She thought about 4 or 5% of deliveries will require technological intervention. A portion of that 4 to 5% can be successfully screened, so that the early detected problem could have been referred for a hospital delivery in the first place. Other serious problems (the remainder of this percentage) would not become obvious until labor and delivery had begun.

An impediment to the utilization of midwives in Providence Hospital, is that presently, only physicians and dentists are allowed to admit patients. There would need to be a change in hospital bylaws covering admitting practices, before nurse midwives could be utilized with any force.

William Ivey, M.D., Gynecologist, Alaska Hospital

Dr. Ivey did not address the question of whether or not there is a shortage of obstetrical services directly. He did say that obstetricians tend to get

bored with routine deliveries--because they are trained to deal with problems. He added that physicians in family practice could probably not allow themselves to become too heavily burdened by deliveries.

He believes there needs to be a less expensive service for routine OB, and that that may very well be in an increased utilization by the medical system, of nurse/midwives, but only in a hospital setting.

Jerry Travis, Director, Municipal Emergency Service

Jerry stated that his paramedics, up through Nov. 27, had responded to 91 calls that they classified as "OB-Gyn". He estimated that from 40% to 45% of those were births, some of which occurred in-transit in the vehicle. He did say there were no "code red" calls, which indicates that emergency personnel were primarily involved with completing the delivery.

Jerry stated that many of these responses involve economically indigent and minority (but non-Natives--he said they had had very few transports to ANS for Natives).

Judy Anderson, New Mother, Anchorage

Judy is very disappointed in the limited options available to the expectant mother in Anchorage. She is particularly critical of the hospital setting as a place to have babies, stating that hospital staff and physicians tend to be very authoritarian, which does not offer the woman any control in birthing.

Judy's notion of an ideal birthing center is a place where prenatal care, birth, and postnatal care occur. It has a "home-like" atmosphere, where the family (if desired), even children, may participate in the birthing. It is medically staffed to handle the unscreened emergencies, or has close access to that capability. Even "C" Sections might be performed there. The Birthing Center would not be available for the "pre-screened" serious complication.

Judy is of the opinion that what Providence Hospital is planning could in no way be called a Birthing Center. Doing everything in one room (birthing and after birthing) is only what every hospital should be doing anyway and should not be perceived as a great stride forward. Pictures on the wall do not make a birthing center, in her estimation, trained staff, and a major change in institutional attitude are required for that.

Judy is for home delivery as long as there is careful screening and competent personnel involved.

Peggy and Clay Newman, Homebirth Classes, Anchorage

Prenatal care is scarce for persons planning home birth, according to Peggy and Clay Newman. Currently, they utilize two or three physicians to provide prenatal services. However, since physicians tend to put patients

Freda Refuge, Information and Referral, Women's Resource Center

Freda says they have a log book full of women calling in for help in getting OB care. A lot of it is abortions but much is also prenatal care. She says there are also many complaints about not being able to get general medical care if you're Medicaid other than at ANHC. Referrals from there get "tough" as providers "won't accept Medicaid patients".

Rona Meyers, Home Birth Person, Anchorage

Rona, who is present at about five home deliveries each month, states that pregnant women are having extreme trouble in finding prenatal care in Anchorage. The Open Door Clinic has provided some, and most recently, Anchorage Neighborhood Health Center. She says she has far more demand for participation with couples wanting home delivery than she could ever handle. She screens couples intensively, therefore, and actually participates with only a small portion of those who approach her. She believes only about 40% of home deliveries are for financial reasons--the rest want to deliver in the home for other reasons.

Doris Williams, Ph.D., Naturopath, Anchorage

Dr. Williams is certain many expectant couples have been refused service, simply because the schedules of OB specialists are filled up and they aren't taking any more patients. However, she believes there is not so much a shortage of OB services in the community, as there is a limited choice.

Dr. Williams estimates that home birth may account for up to 5% of all deliveries in Anchorage. She said many who start out with the intention of delivering in the home, change their minds later--they may develop some fear about what they are doing, or they may develop complications which can only be dealt with in a hospital. In her estimation, roughly ½ of home deliveries are for reasons of finance—the remainder simply do not want to deliver in a hospital.

Judy Sharp, Social Services, Providence Hospital

Chris Beardsley, Public Relations, Providence Hospital

Mr. Beardsly believes there is a shortage of OB services if one is speaking exclusively about the number of OB-Gyns in the community, but thinks that by adding in family practitioners who are involved in delivering babies, that situation changes dramatically for the better. He thinks many people could get high quality care from family paractice physicians, but prefer a specialist, which adds to the problem, since, even among the OB-Gyn, a small number are in very high demand as opposed to others. He also stated that we might get a different picture of "shortage", if we knew whether a lot of "physician shopping" may be conducted by couples in their third trimester. The third trimester pregnancy would discourage some physicians from accepting a patient.

Judy was of the opinion that there definitely is a shortage of OB services in the community, and thought there might be a way information could be obtained from patient records, which would give the community a better understanding of how many women come into the emergency room or L and D, having had inadequate prenatal care through their gestation period. She personally could recall three

deliver at home, will refuse to continue as physician in the case. Many couples who are aware of the physician displeasure with home birthing will not inform their physician of their intention to deliver at home, thus risking the possibiljty that during prenatal some aspect of the developing pregnancy which would ordinarily rule against a safe home birth, might not be articulated.

The immediate future of the recently "stepped up" prenatal work being performed by Paula at the Anchorage Neighborhood Health Center is in doubt. From January through April, she will be attending Midwifery school in the Lower 48, during which time, prenatal care at the Center will have to be curtailed. What this will mean to the community is unknown.

SUMMARY OF SURVEY FINDINGS

N = 56 physicians (38 family practice; 16 OB-GYN)

	Family Practice	OB-GYN
Do you take OB patients?	13 Yes*	13 Yes 3 GYN only
(* one FP sees OB's for first visit only; then refers to OB-GYN)		
Are you currently accepting new OB's?	12 yes	9 yes most on limited basis; not before 3rd month.
Average waiting time first appointment?	2-4 weeks	4-6 weeks
Will you admit to either hospital?	5 both 7 only Providence 0 only Alaska	4 both 7 only Providen 2 only Alaska
Will you accept Medicaid patients?	2 limited (2-4/months) 0 unlimited	4 limited 1 unlimited
What is your deposit and/or fee for normal delivery?	Range for 1st visit deposit Range for full fee	$0 to $350 $550 to $750

NEW DATE FOR ANNUAL MEETING

The annual meeting of all AkPIRG members has been rescheduled. Originally planned for the 17th of January, the meeting will now be held January 25, 1979 at the Pioneer School house at 3rd and Eagle. The time of the meeting is set for 7:00 P.M..

(Continued on Page 3)

DOCTORS TO CANCER PATIENT - DROP DEAD -

Early in May, right before break up, Kristi Carnes, her husband Doug and their two year old daughter Annathea, borrowed a friends dog team and traveled 200 miles from their home, near Ambler, to Kotzebue. There Kristi and her family camped out while Doug found a construction job to earn some summer money to last the rest of the year.

In early June she visited the Kotzebue health clinic for a routine medical check-up. But the check-up was anything but routine. Kristi's Pap test indicated the presence of early stages of cancer.

Kristi then contacted Dr. Ed Vandenberg, who worked at the local Public Health Service hospital. He performed two separate biopsies. The diognosis was moderate to severe dysplasia - a cancerous growth on her cervix. The doctor recommended the surgical removal of part of her cervix, a procedure known as cone biopsy. The goal of the operation was to remove the cancerous growth before it spread to the uterus and other parts of her body. No doctors at the Kotzebue hospital had ever done it before, so a visit was planned to seek medical care elsewhere. Later in the year she visited her family in Chicago, and saw another doctor who performed four new biopsies which confirmed the earlier diagnosis. He as well recommended the cone biopsy at the earliest possible date.

(Continued on next page)

After Kristi and Doug paid their doctor bills, had some dental work done, paid off old debts, and bought provisions for the winter, they were nearly broke. Kristi then turned to medicaid, the state program which provides medical care to indigent people. Doug traveled to Anchorage, where he began contacting doctors. He explained Kristi's situation. She needed the cone biopsy operation, and she needed it soon, if she was to avoid a hysterectomy. Kristi was only 23 years old, and she and Doug planned on having another child. They didn't have any money for the operation, but they were approved for medicaid.

Doug talked with Dr. Orren. His office said they were sorry, but Dr. Orren did not take any medicaid patients. Doug was given the names of other doctors to call. When none of them panned out, Doug called Dr. Orren's office back and asked once more if he would treat his wife. The receptionist said that they were sorry, but they were not taking ANY medicaid patients.

Doug talked with eight other Anchorage doctors. None of them would treat his wife. Some said that they just were not taking any new patients, while others, like Drs. Renn, Stransky, and Guenther, said they would not see her because she was a medicaid patient.

But Doug and Kristi were lucky. Through a friend they found Carolyn Brown, a Palmer doctor who had no qualms about treating medicaid patients. But the implications of her experience are shocking. There are a large number of doctors in the Anchorage area who refuse to treat poor people on medicaid.

To find out why local doctors would refuse medical treatment to poor people, AkPIRG contacted Martha MacDearmaid, the Executive Director of the Alaska State Medical Association. She was very open in explaining the situation. Lots of doctors do not treat medicaid patients, and the reason is economic. The state is chronically late on its payments, and the doctors claim that the state only pays two-thirds their normal bill.

Kristi's situation was explained, and Ms. MacDearmaid said that there was probably some doctor who would treat her on medicaid, although some patients would undoubtably go without proper medical care due to the widespread doctors boycott of the medicaid program. She indicated that there had been some meetings with state officials regarding the problem, and expressed hope that the state would improve its record and the doctors would begin treating medicaid patients once again.

After all, she said, you have to remember that those doctors have to borrow money from banks at high interest rates to pay their bills, while waiting for the medicaid checks. Lately, Ms. MacDearment said, they have been paying 13 to 14 percent interest on those loans. And, business is business.

PRUDHOE BAY PRODUCIBILITY AND THE ALCAN GASLINE

(Ed. NOTE: The following article was written by Anchorage resident Jerry McCutcheon. Jerry has taken a keen interest in the issue of managing oil producing fields, so that proper conservation methods are employed to insure the full recovery of the oil. He has embarked on a one man crusade to convince state legislators and other public offices to consider these important issues.)

Of the 22 billion barrels of oil in Prudhoe Bay, 14 to 15 billion barrels are producible with current technology similar to that being used in the Swanson River Field on the Kenai Peninsula.

This fact can be established in the technical literature and is admitted by the oil companies. It requires the injection of gas from other sources and in an amount equal to that necessary to maintain the original pressure and that gas would have to be cycled through the reservoir 3 or 4 times.

If only the existing gas is reinjected but not cycled through the reservoir and the reservoir is water flooded to help maintain pressure in the 6th year, oil recovery falls to 9 billion barrels. Had the reservoir (Prudhoe Bay) been water flooded from the start of production the oil recovery would have been 9.6 billion barrels. For every 100 pounds of pressure that Prudhoe

ON
HOUSE BILL NO. 226

"An Act amending the definition of unprofessional conduct in the practice of medicine."

This bill would redefine the definition of unprofessional or dishonorable conduct in the practice of medicine by the addition two paragraphs.

(I) requires physician to disclose to the patient the nature of the patient's illness, injury and disease; and

(J) to prevent the wilful misrepresentation by a physician to a patient of the nature of the patient's illness, injury, or disease.

(I) attempts to substitute a simplistic legal mandate to a judgmental physician/ patient relationship and ignores the sensitive paitent/physician relationship involving interface of scientific knowledge and the art of practicing medicine and in the interpretation of the patient's overall well being. An example, a potentially suicidal patient does not immediately need to know his diagnosis and imparting the knowledge is a decision of the physician and patient's family.

Paragraph (J) would already seem to be adequately covered in the principles of medical ethics of the American Medical Association and the Alaska State Medical Association.

POSITION PAPER/Department of Health & Social Services

POSITION PAPER
ON
HOUSE BILL NO. 228

This bill is directed at resolving current difficulties in receiving medical care from Alaska physicians through the state/federal Medicaid program. The bill would expand the present definition of "non-professional or dishonorable conduct" under the state licensing provisions found at AS 08.64.380(3).

Essentially, the bill is designed to force physicians who receive public funds from any governmental source to see and treat Medicaid patients upon demand. House Bill 228 is designed to avert a crisis, such as the one that lead to the difficulties in receiving medical care under Medicaid and GR Medical in late 1978 and continuing to date.

These difficulties are the result of three factors:

(1) The Department's shortfall of funds for physicians services during FY 78. This shortfall occurred because the FY 78 Medicaid appropriation prevented transfer of available funds from one line item to another without specific legislative authorization. This system of legislative appropriation was changed in FY 79 and physicians are not experiencing any difficulty in receiving payments on current year bills.

(2) Slow turnaround of provider billings caused by an inefficient payment process. Currently, bills are paid within five weeks of receipt as compared to an average of three months in late 1978. This improvement resulted from additional temporary staff, not from a permanent improvement to the processing system. The Department is in the process of evaluating alternatives to the existing payment system.

(3) Costing-down of physician's bills paid by Medicaid and GR Medical.

House Bill 228 appears predicated on the following assumptions:

(1) Physicians should have continued to see and treat Medicaid/GR Medical clients in spite of the financial severity of the Department's shortfall of funds in FY 78 and its effect on their personal practice. (Note: Between Medicaid and GR Med, the Department fell 35% short in funds available for physicians services in FY 78.)

(2) That there are not other factors present in Alaska which may have contributed to this problem such as a shortage of doctors in certain areas of specialization.

(3) That this crisis cannot be adequately addressed by the Department through the administrative process, or by narrowing the scope of

POSITION PAPER/Department of Health & Social Services

House Bill 228 specifically to the Medicaid statute. House Bill 228 makes refusal to see Medicaid patients a violation of licensure rather than a violation of the contractual agreement between the physician and the Department. It therefore has the potential of adversely affecting physicians not currently enrolled as medical providers under Medicaid who may yet provide some public services such as those delivered in the correctional institutions.

The Department is presently involved in an independent study to determine whether this medical crisis will be largely resolved once the FY 78 supplemental is passed (House Bill 143) and pending bills are paid. Our study will attempt to ferret out those doctors who are in fact interested in seeing Medicaid patients without restriction, and determining if the resultant number of available doctors is adequate to cover all specialties. Until this effort is completed, the Department believes it premature to take a position on House Bill 228.

AkPIRG takes doctors to task

By SUZAN NIGHTINGALE
Daily News Staff Writer

The Alaska Public Interest Research Group says it will ask the Alaska State Medical Association to adopt a standard making it unethical to discriminate against Medicaid clients.

Many physicians around the state won't accept Medicaid patients because they don't like the state's management of the Medicaid system, which owes doctors between $500,000 and $1 million due to a 1978 budget shortage. Others say they don't want to deal with the paperwork required to treat Medicaid patients and complain that they are paid only a fraction of their total bill under the program.

BUT AkPIRG director James Love says the doctors are making poor people pay for state mistakes. "Sure the bureaucracy is screwed up," Love said, "but it's not the bureaucracy that's standing out in the halls unable to get medical care, it's people.

"We'd like the medical community to take responsibility for indigent people and health care. Their attitude is, 'It's not our fault,' but they enjoy special privilege and special status in this society and they have some responsibility for that."

Referring to the current refusal of some doctors to treat Medicaid patients, Love said if those doctors refused to treat people with insurance policies and concentrated only on cash patients, "there would be a hue and cry like you would not believe. The only reason that doesn't happen with Medicaid in this community is because they're poor people."

IN A LETTER sent to the medical association by AkPIRG board chairman Hugh Fleischer, the consumer group requested a meeting with the doctors to discuss the problem.

"The present situation with the Medicaid program can only be described as a crisis for poor people," that letter said.

In his letter Fleischer maintained that the medical profession itself has benefited from public programs in the form of grants, research, tax breaks and state-financed hospital construction, and so cannot turn its back on its public responsibility. "Our organization is upset with the behavior of the medical community. It seems incredible that poor people who need medical treatment would be refused for any reason, let alone the stated grievances of the medical community. Physicians, as a class, are doing very well in Alaska.

"ALASKA doctors deal with no more red tape regarding the Medicaid program than doctors elsewhere."

But at least one health care representative questioned that claim. Dan VanEaton, business administrator for the Alaska Clinic, said Monday that the state's Medicaid system was "a key reason" in the clinic's closure last year. VanEaton said the state owes the clinic, which treated an estimated 80 percent of the Medicaid patients in Alaska, $200,000.

"They've owed us $200,000 for seven months," VanEaton claimed. "And I'm certain, I'm certain, if and when the legislature ever appropriates a supplemental budget, they'll tell us they haven't processed the paperwork yet."

CAUSE OF the immediate health care crisis was a budget shortfall during fiscal year 1978 when the section of the Medicaid budget earmarked for doctors ran short. A new state law prevented public assistance officials from transferring funds from another section of the Medicaid budget without legislative approval.

With the legislature now in session, public assistance officials say they hope that transfer can be made soon, clearing up the backlog in 1978 Medicaid payments.

Fiscal year 1979 payments are being made.

Poor people are having trouble getting health care in Alaska, partially, doctors say, because the state's Medicaid system has burdened physicians with paperwork, expense and hassle. But what about the people who are turned away from office after office? What are the reasons? Where is the responsibility?

Medicaid

Do poor have a 'right' to care?

By JAMIE LOVE

To say that people should have proper health care is like saying they should have food to eat and a roof over their heads. Few will readily disagree, and there will be much nodding of heads.

That poor people should have the same rights to health care as others seems to most a reasonable goal, and one that many assume is already achieved. But the stark reality of today's world is much different. Yes we have a government program to provide health care to the poor: Medicaid. But no, poor people can't get health care through the Medicaid program. Doctors, or at least growing numbers of doctors, won't accept Medicaid patients.

This is of no small concern. Real people with serious medical problems can't get treatment;

— A woman comes from Kotzebue to Anchorage for an operation. She is told she has an early stage of cancer. No doctor in Anchorage will treat her.

— A woman sits in a hospital waiting room. She has an open wound and needs attention. She waits five hours but still no doctor will see her since she is on Medicaid. She leaves and goes home.

— Another who is pregnant has placenta previa. She may bleed to death. No doctor will see her.

— Several women are told by public health nurses they have toxemea, and are poisoning their unborn children. Doctors will not treat them because they are Medicaid patients.

Since the Alaska Clinic shut down last summer it has gotten tough. At one time many doctors treated Medicaid patients. Now it is few. In Anchorage, only two pediatricians. It is next to impossible to find an OB/GYN doctor who sees Medicaid patients. Other specialties are not yet as grim, but things are getting worse.

What is the problem?

— **Doctors complain that medicaid vouchers are not paid timely.** In fact, this is only a problem for those Medicaid billings from the last quarter of fiscal year 1978, which ended on June 30, last year. Doctor billings were higher than expected, and the money ran out. This will soon be solved by a special appropriation. When doctors bill for Medicaid services being performed today, however, payment is made within five to six weeks.

— **Doctors complain about the paperwork.** But, Alaskan doctors only fill out the same forms every other doctor in the country uses. They are not particularly long, and one clerk can prepare the monthly billings for six doctors in a single day.

— **Doctors complain because Medicaid only pays 70 percent of their billings.** Indeed, this is true for some doctors. But it is only the result of a formula that is required by federal law. That formula limits the fees doctors charge to average billings from the previous year. Doctors who charge high prices for care get their bills reduced, others don't.

Why don't doctors treat Medicaid patients? Some just don't like people on welfare. For the rest, it's a combination of the reduced fees and the chance to avoid the extra hassle. Plenty of patients to choose from, so why take Medicaid patients? Blue Cross offers a better deal.

And this is it. Adam Smith's invisible hand on the market. Doctors are looking after their own economic self interest. Medicaid patients just don't pay as well as others.

This is unacceptable. Health care is not just another snowmobile or Maytag washing machine. The doctor's boycott of the Medicaid program is the worst type of blackmail. The pitch is blunt. Your money or your life. And while doctors have been quick to say they don't like the system, they offer no alternatives. They say they treat charity cases, but check with the patients — they don't.

The doctors' solution for poor people is simple: Ignore them.

The community must deal with this crisis. If doctors in private practice refuse to see Medicaid patients, and if they can't be forced to treat them, the society has a responsibility to take over where the physician's professional ethics end. And speaking of ethics, I'd like to quote from an ethical standard the American Medical Association actually adopted in 1934:

"One of the strongest holds of the profession on public approbation and support has been the age-old professional ideal of medical service to all, whether able to pay or not. That ideal is basic in our ethics. The abandonment of that ideal and the adoption of a principal of service only when paid for would be the greatest step toward socialized medicine which the medical profession could take. . . .

Too often this ethic is honored in the breach, but the message remains the same.

James Love is director of the Alaska Public Interest Research Group.

Fable of a 'sick system'

2/3/79
AdN

By WINTHROP FISH, M.D.

When I was in medical school, a lovely lady obstetrician at the university gave free care to all the nurses, doctors' wives and such. She was very, very nice, very, very popular, and very, very free. In short order, she was exhausted, going broke, and had to leave. She was prologue.

The media of late has raised a modest hue and cry over the plight of the Medicaid recipients in Alaska, suggesting that perhaps medical care was not readily available to some. The ruckus seemed to stem from two sources: a self-appointed group protecting the public interest that appeared to suggest doctors were discriminating against Medicaid recipients; and some physicians who felt economic discrimination by the state Medicaid program.

"Suppose for the moment that once upon a time most grocers felt a centuries-old, charitable obligation to contribute to the community soup-kitchens . . ."

Both are right to a point although, in Alaska at least, the doctors' complaints are probably more valid. But, if either group were transported to the barrios of East Los Angeles, to the socio-economic scene there, and confronted Medi-Cal, their troubles here would seem trivial indeed. For both complaints are simply symptoms of a sick, sick system; both are indicators, early in Alaska, of at least two evolutionary outgrowths of this sick system: 1) inflation of medical costs; and 2) what the politicians never mention in public — rationing of medical care! To understand better, a little parable is in order.

Suppose for the moment that once upon a time most grocers felt a centuries-old, charitable obligation to contribute to the community soup-kitchens. Then, suppose that a couple of decades ago the government declared nutrition a basic human right and promised equal access and quality of food for all Americans, started a program supported by Social Security tax dollars, called Nutricare and Nutricaid for the old and poor respectively; formed a huge sprawling Nutricare Administration; and offered the states matching funds for the State Nutricaid programs. The states, as usual, naturally snatched at the "free" federal dollars.

The state Nutricaid recipients received food stamps, redeemable by the state government at 50 cents on the dollar. The Nutricare Administration made it an offense, punishable by fine or imprisonment, for grocers to charge Nutricaid recipients the difference. The stamps could purchase anything in the store — lobster, steak, caviar — as much as wanted. And since it was free, naturally they tended to want quite a lot. Then the Administration passed regulations forcing grocers accepting Nutricaid Stamps to undergo regular inspections; use a special billing system; employ personnel to audit food quality; put the burden of proof on the grocers that mark-ups were reasonable and food quality for Nutricaid recipients equal to the general public. Then, when the stamps were submitted by the grocers for redemption, payment was delayed for months or simply not paid because the state Nutricaid fund was depleted. Now, what do you suppose happened to the price of food? And who do you suppose paid?

Right! The grocers, naturally, were forced to cover Nutricaid losses and extra expenses by raising the price for everyone else. Thus, the general public paid twice: in skyrocketing Social Security taxes; and a second hidden tax of inflated food prices. And who was forced to curtail buying and economize? The Nutricaid recipient or the working public? And whom do you suppose the government blamed?

Right again! The administration not only blamed the grocers for the Nutrition cost crisis, it accused them of ripping off the Nutricaid system and sent out squads of undercover agents to ferret out fraud and abuse amongst the grocers.

The state, meanwhile, noting that it was expending far more to get the matching federal bucks than it had helping subsidize soup kitchens before Nutricaid, took the logical steps to control the state's spiraling Nutricaid costs. First, it cut its food stamp redemption to 25 cents on the dollar. But more important, it put price ceilings on all food sold to Nutricaid recipients. For instance, grocers could charge Nutricaid only $1 per pound for lobster which cost the general public $10 per pound. And to prevent abuse, inspections were set up to assure that Nutricaid lobster was not inferior and that two sets of scales were not used. The inspections usually closed the store for one working day per month.

And the grocers? Well, some of them didn't like it. Those in poor neighborhoods with mostly Nutricaid customers were even in financial difficulties with rent, supply and labor costs, and refused to participate in the Nutricaid Program. That provoked an immediate response from the Public Interest Groups who shrilled that the grocers were letting people starve.

To give an appearance of doing something, the Congress passed a nationwide ceiling on food costs, leaving labor and other commodity inflation running wild. The grocers, to stay alive, had to cut costs. But they had to retain all the employees needed to comply with the federal regulations. There was only one way to go. Most of the checkers, shelf-stockers, box boys and butchers went, as well as any plans for expansion, improvements, replacement or modernization.

". . . soon there was little on the shelves for those who could afford it; the lines outside the store stretched for miles so that the elderly or weak sometimes froze or starved to death . . ."

Soon there was little on the shelves for those who could afford it; the lines outside the store stretched for miles so that the elderly or weak sometimes froze or starved to death, thus reducing the demand on Nutricare and Nutricaid funds. And the steak, caviar and lobster? What little was left was in the Federal Commissaries.

Dr. Fish is an Anchorage physician who treats Medicaid patients.

State ponders the problems—and solutions

BY THE DEPARTMENT OF HEALTH AND SOCIAL SERVICES

Commissioner Helen D. Beirne and the staff of the Department of Health and Social Services are very concerned about the problems being experienced by Medicaid clients and providers in Alaska. Dr. Beirne and employees of several department divisions and offices are continuing to devote a great deal of time and energy to resolving issues related to the Medicaid system and improving communications between providers, consumers, and the State.

There are approximately 19,000 persons in the state who could participate in the Medicaid program by virtue of their eligibility for financial assistance under Aid to Families with Dependent Children (AFDC), Old Age Assistance (OAA), Aid to the Blind (AB), or Aid to the Disabled (AD) programs. Eligibility is determined by federal and state law on the basis of income.

The majority of Medicaid - eligible persons are AFDC clients. For nearly 80 percent of the cases on AFDC in March 1977, public assistance was the only source of income. Currently, the average monthly AFDC payment is $350, so it's evident that persons who are eligible for Medicaid are probably unable to obtain medical services without the assistance provided by the program.

The total Medicaid budget for current FY 79 is $38.5 million, of which $2.1 million is for physicians' services. Other line items or categories of the Medicaid budget include hospitals ($4.7 million), early screening programs ($1.5 million), nursing homes ($16.9 million), state institutions ($6.4 million), Indian Health Service ($6.4 million), and other services ($.5 million). At the end of FY 78, $2.7 million remained unspent in the Medicaid budget, principally in the nursing home line item. The amount owed to physicians for Medicaid and General Relief Medical services, however, was in excess of the amount budgeted by $1.1 million.

The Department of Health and Social Services has been unable to pay the physicians' invoices because the funds had been appropriated by specific, limited line item and were not transferable from the nursing home line item to the physicians' line item without Legislative authorization. The Department has submitted a request for a supplemental appropriation and expects the legislature to take action to solve this problem in the near future, at which time Alaska's Medicaid providers will be paid for FY 78 bills. The unusable funds lapsed on June 30, 1978 will more than offset the supplemental request.

Although the current year $2 million Medicaid budget for physicians' services is a small portion of the total Medicaid budget, the processing of bills from physicians requires the greatest expenditure of man - hours. The reason for this is that there are approximately 400 physicians enrolled in the Medicaid program, and individual bills are submitted for each patient. Also, the volume of claims has been increasing rapidly. In the AFDC Medicaid - eligible caseload alone, there was a 24 percent increase from 1976 to 1978.

As a result of this continually increasing volume of Medicaid claims and the fact that bills were being processed through a manual, non-computerized system, the Division of Public Assistance fell three to four months behind in the payment of bills from physicians who had treated Medicaid patients during FY '78. Only four bill processors handled invoices from all 400 physicians in the program.

However, this problem has been solved for the moment by employing additional temporary staff to pay physicians' bills. Now, bills are being paid within five to six weeks after receipt.

Bruce Vorteck, AMA Legal, Chicago

Rep. Bill Parker
Pouch V
Juneau, Alaska 99811

Dear Rep. Parker:

We are writing to inform you of a very serious matter which has recently come to our attention--the fact that many doctors in Anchorage will not treat patients who are on Medicaid. Consequently, we are asking the Alaska State Medical Association to adopt an ethical code which would require doctors to treat patients without regard to their ability to pay. This ethical standard was once endorsed by the American Medical Association but it was discarded in the late sixties. Enclosed is a copy of the letter which has been sent to the Medical Association explaining our position in greater detail.

We need your support. This is an important issue affecting the lives of many thousands of Alaskans. There are approximately 16,500 persons on the Medicaid rolls in the state of Alaska. It is becoming increasingly difficult for these people to find doctors who will care for them, even when an emergency exists.

In checking with doctors in the Anchorage area, we have found that the problem exists mainly in the areas of gynecology, obstetrics, pediatrics and family medicine. Since this is also where most of the demand exists, this problem probably affects the majority of those eligible for Medicaid. According to officials in the Municipal Health Department of Anchorage, many expectant mothers are not able to obtain critical prenatal care even when there is a history of problems. We have also heard of women who were dropped by their gynecologists and pediatricians because they are on Medicaid. Only two pediatricians in Anchorage treat Medicaid patients and one of those is at the Anchorage Neighborhood Health Center, a facility specifically set up to handle the health needs of low-income people. They cannot possibly handle the demands of all the children from low-income families in the Anchorage area.

We would like your support. Draft a letter to the Alaska State Medical Association explaining why you think this issue is an important one. It would be helpful, also, if you could send a copy of your letter to the Alaska Public Interest Research Group.

The problem of poor people going without proper medical care is too serious to be ignored or swept under the rug. We hope you will join us in our attempt to alter an inexcusable situation.

Thank you for your time.

Sincerely,

Rebecca E. Graham

Health Care: A Quiet Subject No Longer

By HELEN GILLETTE
Times Staff Writer

Health care — more specifically its availability to the poor — has become a matter of debate.

One activist group — Alaska Public Interest Research Group — insists that doctors are simply ignoring welfare patients.

Medical spokesmen deny the charge, but agree that Medicaid accounts are less attractive because the government foots only 70 to 75 percent of the bill, always pays late and requires excessive paperwork.

Theoretically, everybody in Alaska gets health care. People eligible for welfare — and there are 19,000 of them — are covered by Medicaid, with bills paid by government money, half federal and half state.

(This is separate from Medicare, an insurance program for the elderly administered, but not funded, by the government.)

A survey of doctors gives conclusive proof of general dissatisfaction with the Medicaid program. The surveyor comes away with the feeling that most of them would prefer not to see any Medicaid patients. For one thing, they have to settle for the 70 to 75 percent of the fee that government pays, since they are forbidden by law from collecting the rest from the patient.

The Alaska research group has claimed that a high percentage of Anchorage doctors simply do not treat Medicaid patients. "Doctors are looking after their own economic interests," director Jamie Love said. "Medicaid patients just don't pay as well."

Dr. C.J. Little, president of the Anchorage Medical Society, says it's not only Medicaid people who have trouble getting established with a physician. Anybody who's new to the community has this problem, he said, because there aren't enough doctors for the growing population.

This is particularly true for young pregnant women, "because we're very short of obstetricians, pediatricians and general practicioners in Anchorage."

One problem, he said, is that many of the 14 or so specialists in the field here are getting older and "have been delivering babies day and night for years. They're getting burned out and turning to the field of specialized gynecology."

A spot check of 10 Anchorage medical clinics by the Anchorage Times revealed that five said they will accept new Medicaid patients. Two said they will see only their ex-

First in state

Soldotna doctors opt out of Medicaid

By RONNIE CHAPPELL
Clarion Editor

On January 15 more than half of the doctors now serving the Central Peninsula area quit accepting Medicaid and General Relief Medical coupons as payment for medical treatment.

Other doctors around the state have limited the number of Medicaid patients they will treat, while others have quietly dropped out of the program.

The local physicians, however, are the first in Alaska to officially notify the State Department of Health and Social Services that they no longer plan to participate in the welfare program.

The doctors, all members of the Peninsula Medical Center, Inc. in Soldotna, are Paul G. Isaak, M.D.; Roy E. Benward, M.D.; Lavern R. Davidhizar, D.O.; Joseph A. Sangster, M.D. and Alexander B. Russell, M.D..

Approximately 10 - 15 percent of the center's total patient load will be affected by the policy change. Obstetric patients who have yet to deliver their babies and patients with chronic conditions who are already receiving treatment under the Medicaid program will not be.

In a letter sent to the center's Medicaid patients earlier this year, the doctors said, "We are reluctant to take this step, however, we have not been paid by the Department of Welfare for many services we provided in the past. Our clinic cannot continue to operate by extending credit to the State of Alaska."

The letter also informed patients "We will be glad to continue service to all patients who are willing to adhere to our credit policy. If you cannot pay for your visit at the time of service, financial arrangements must be made in advance. As far as we know, the other physicians in the area are still accepting coupons for medical services."

Two other local doctors, Elmer E. Gaede and Peter O. Hansen plan to continue participation in the welfare program, although both claim that it costs them money to do so.

"We plan to treat patients on an individual basis," said Sangster of the Peninsula Medical Center's policy change. "If a patient wants to receive treatment he will have to come talk to us and see what type of (financial) arrangements can be worked out."

"We have not and will not refuse to give emergency care," Sangster emphasized.

"What we want to do is let the individual asume responsibility for the service we provide," said Isaak. We don't intend to deny service, but we're not playing second fiddle to the state any more."

"A patient's obligation should be to us. When we provide a service and the state doesn't pay us, we're left holding the bag," he continued.

Medicaid patients who cannot pay for treatment at the time it is delivered will be treated like the center's other patients and asked to fill in a credit application - financial statement.

The doctors do not anticipate having to deny service to many patients seeking treatment, even if the patient can only make small weekly payments towards the cost of a relatively expensive proceedure.

According to Benward, "a good faith effort to pay," is what the clinic is seeking, even if the patient can only afford $10 a week.

Patients who receive service and then fail to make an effort to pay their bills will be denied treatment of "non-emergency" problems by the clinic.

Sangster predicts this will open up the center and its medical staff to charges of "denial of medical care" to which everyone believes they have a right.

Sangster pointed out that food, clothing and shelter are just as important to a person's well being as good medical care, and noted that no one expects a grocer or clothing retailer to give away food or clothing without receiving payment.

"The decision to opt out of participation in the state

(Continued on page 12)

...Doctors opt out of state

(Continued from page 1)

Medicaid program came after 2 and a half years of haggling with the State Department of Health and Social Services for the payment of bills submitted by the Peninsula Medical Center.

According to a Debbie Kimple, who heads the center's accounting department, some of the upaid bills date to May of 1976.

The doctors at the center refused to put a dollar figure on the unpaid balance owed them by the state, but called it "considerable."

Records in Juneau, however, show that the center is currently requesting payment of approximately $20,000 in Medicaid claims, a figure that is down substantially from December of 1978 when the total debt exceeded $40,000.

The state has acknowledged the fact that it owes the Peninsula Medical Center and other health care providers for Medicaid proceedures performed prior to July of 1978. In an undated memorandum sent to doctors this fall the Department of Health and Social Services advised physicians that letters of "Prior Year Debt Acknowledgement" were available if doctors found it necessary to "borrow against the amounts owed your" for the purposes of meeting operating expenses.

"Although we cannot at this time make payment to you we will make available for you a letter of debt acknowledgement to provide you support in borrowing from a lending institution," the memorandum said.

But more than just the state's inability to pay Medicaid

Medicaid program

claims within a reasonable time frame is bothering the five Soldotna doctors. Their complaints about the Medicaid system go right to the heart of the state program.

"It is an extremely cumbersome, inefficient bureacracy," charged Benward. The doctors claim that the paperwork required by the state requires the attention of a full time clerk, and that the amount of money paid by the state, when claims are paid, is insufficient to cover the cost of providing the service billed for.

"We havn't been able to meet expenses treating Medicaid patients," said Isaak.

"We're doing this (refusing to accept Medicaid coupons) because it is an economic necessity," added Benward.

Two other doctors in the area, Elmer Gaede and Peter Hansen bear out the claims of the Soldotna physicians.

"There's no question we're losing money doing it (treating Medicaid patients)" said Hansen. "It's a matter of to what degree you can take a loss."

Hansen, who has already had to go to the bank to borrow against his Medicaid debt to stay in operation notes that he "couldn't begin to accpet all of the Medicaid patients who come in" to his office. He plans to continue treating them on a limited basis.

Gaedes, of the Soldotna Medical Clinic, said he couldn't blame the five other Soldotna doctors "one bit" for pulling out of the program and added that "we discussed it ourselves."

Sangster said that the state routinely disallows proceedures performed for Medicaid patients while discounting the value of the proceedures they do pay for.

"If a service is disallowed we have no recourse," said Sangster, "and then we are only paid a certain percentage (70 to 75 percent) of what they do allow.

"The medical profession is the only profession that accepts payment at less than face value," Sangster said, pointing out that the price of potatoes is not dropped for citizens participating in the foodstamp program.

Sangster went on to charge that the claims submitted by the 300 doctors now practicing in the state were reviewed by "personnel who know nothing about medicine. Who don't even know the words on the claims or the code numbers."

Sangster points out that these people, who have no formal medical training, decide which proceedures are paid for and which are not.

The center's physicians also have an extreme lack of faith in the state's ability to process the Medicaid claims efficiently. They point to a November meeting with George Haas of the Department of Health and Social Services at which the problem of unpaid Medicaid balances was addressed.

Haas advised the health care providers assembled for the meeting that if they had not received acknowledgement of Medicaid claims submitted prior to October of 78 that "they would be wise to resubmit them because they had probably been lost."

Haas told the Clarion earlier this week he had made such a statement, and admitted that at one time the Department did have "quite a paper handling problem.

"A lot of invoices were disappearing between the time they were sent by the provider and by the time we got around to cutting the check," Haas said.

"We were aware of the fact that some of them could have been lost," Haas said, noting that since discovery of the problem the Department has "established more paper control."

Haas said that a number of accounts had been readjusted on the basis of resubmitted claims, but did not know exactly how many.

Even if the state promptly settles the $20,000 unpaid Medicaid balance due the Peninsula Medical Center, the center's member physicians doubt they will again participate in the program.

"I'm not in favor of continuing," said Sangster. "I'm tired of third party encroachment on the practice of medicine."

"We probably will not unless they change the system," added Isaak.

"We would eventually end up in the same situation," predicted Benward.

Editor's note: Tomorrow the Peninsula Clarion will publish a related story on the Medicaid program and it problems statewide. Included will be comments from Rod Betit, Acting Director of the Division of Public Assistance, Department of Health and Social Services and the results of a survey, conducted by the Alaska Public Interest Research Group, of doctors in the Anchorage area who were asked the question "Do you treat Medicaid patients?

Poll reveals many doctors won't take Medicaid patients

By RONNIE CHAPPELL
Clarion Editor

While the five member physicians of the Peninsula Medical Center in Soldotna are the first doctors in Alaska to officially notify the State Department of Health and Social Services that they no longer plan to accept Medicaid and General Relief Medical coupons as payment for medical treatment, they are by no means the first to get out of the state welfare program.

No one knows exactly how many of the state's 300 doctors have quietly limited or completely dropped their treatment of Medicaid patients, but a survey conducted by the Alaska Public Interest Research Group (APIRG) of doctors practicing in and around the Anchorage area reveals that the number could be extremely high.

"Essentially, we conducted a spot survey," said Hugh Fleischer, "asking doctors the basic question....do you take Medicaid patients?"

All told, of the 45 physicians polled, 33 or 73 percent replied "no."

Fleischer said that the doctors polled in the survey practiced medicine in the fields of Obstetrics-Gynecology, Pediatrics, Family Practice and General Practice.

Physicians practicing these specialties were picked, Fleischer said, because many of the patients using Medicaid are young women with "female problems related to child birth."

Fleischer said that APIRG's pollsters contacted 13 of the 14 Ob-Gyn specialists listed in the Anchorage phone book. Of those, only one accepted Medicaid patients....12 did not.

Fourteen of the 15 Pediatricians listed in the directory were polled....eight did not take Medicaid patients, six did. Of the 18 Family and General Practicioners contacted, only five accepted Medicaid patients.

n"An inordinate number of physicians contacted said they would not take Medicaid patients," Fleischer said.

While Fleischer could not say how many doctors around the state had quietly

(Continued on page 3)

Poll indicates doctors not

(Continued from page 1)

stopped participating in the program, he noted that in light of the findings of APIRG's survey, it was "a reasonable question to ask."

If the motives of the Anchorage doctors who quietly stopped accepting Medicaid patients mirror those of the five Soldotna physicians who officially notifed the State that they were pulling out of the welfare program, their dissatisfaction with Medicaid revolves around one crucial element.....money.

The local doctors claim:

(1) That the rate of reimbursement, which is usually only 70-75 percent of their normal charge, is insufficient to cover the cost of rendering treatment to Medicaid patients. According to the physicians at Peninsula Medical Center, they lose money on Medicaid patients, even when the state pays the claim.

(2) That claims for payment are arbitrarily disallowed by clerks at the state level who have no medical training and therefore, no basis for judgement when deciding which proceedures are appropriate and which are not. The doctors charge that the clerks disallow claims in a "haphazard" fashion so that they, as practicioners never know what they are going to be paid for and what they are not.

(3) That payment by the state is generally slow in coming, and that often they are forced to carry large Medicaid debts on their books.

(4) That the Department of Health and Social Services lacks the ability to efficiently and fairly handle the claims submitted by doctors treating any of the 16,000 patients around the state certified to receive Medicaid benefits.

And adding to all of this dissatisfaction with the program is the fact that the state did not have the money to pay all of the Medicaid claims submitted prior to July 1978.

According to Rod Betit, Acting Director of the Division of Public Assistance, of the State Department of Health and Social Services, there was money in the division's total budget to cover the claims, but a rigid budget structure prevented state officials from moving funds from categories with surplus monies, to those running deficits.

The Department acknowledged it's fiscal difficulty in an undated memorandum sent to physicians around the state earlier this year, advising them that when the "legislature convenes in January, the first order of business of this administration will be to request an appropriation to pay the amount owed you."

According to Betit, the estimated total owed the doctors of the state for services provided under both the Medicaid and General Relief Medical programs is approximately $1.5 million.....an average of $5,000 for each of the 300 doctors now working in Alaska.

Attached to that same memorandum was a notice from the Department to the effect that "although we cannot pay you, we will make available for you a letter of debt acknowledgement to provide you support in borrowing from a lending institution."

"The state owes us a lot of money and expects us to provide service when the funds for the service have not been authorized," said Dr. Peter Hansen of Kenai who still sees Medicaid patients on a limited basis.

According to Betit, the state is powerless, under the Medicaid program to up the rate of reimbursement allowed doctors for providing treatment to Medicaid patients.

accepting Medicaid

"The rate of reimbursement is determ...ed by the Federal government," Betit said, noting that rates were the same for Medicaid as they are for Medicare. The two programs do differ, however, in that Medicare claims are paid to the patient who then uses the funds to help reimburse the physician for the total amount charged for treatment. Under Medicaid, the burden for filing the claim is placed on the physician who must accept only a percentage of the amount due for the treatment rendered.

Betit does believe that the claims submitted by physicians are "ajudicated" fairly by the three clerk-technicians who go over each invoice to determine which charges are to be allowed and which are not.

According to Betit, these technicians spend about 20 minutes on each of the invoices submitted checking claims to make sure that (1) no duplicate proceedures were performed and charged for, that (2) authorized services were performed only by physicians in whose area of specialization the service lies, and (3) that pre-authorization was obtained for those services requiring it.

Betit said that whenever there is a question about a proceedure listed on a claim submitted by a physician, the proceedure is reviewed by the state's Medical Review Officer. Betit added that "no medical judgement" is required of the technicians.

When asked if, in his opinion, the system was fair and consistant with regard to the charges disallowed, Betit responded affirmatively.

Betit also said that the Department was working to streamline it's operations so that participating physicians could (1) expect payment of claims within 30 days of their submission, and (2) not find themselves waiting on payment from the state because funding for the program ran out before the end of the fiscal year.

According to Betit, representatives from the Federal Department of Health, Education and Welfare had been to visit the state office to offer suggestions on increased computerization of the adjudication and payment process.

"The current system is cumbersome and time consuming," Betit admitted. He added that under present circumstances 3 technicians were not enough to adjudicate the claims submitted.

It is doubtful, however, that any of the solutions now being considered by the Department of Health and Social Services will be satisfactory to the state's medical community.

As long as the practice of retro-active denial of claims continues, and as long as doctors only receive a percentage of the charges submitted to the state for the treatment of Medicaid patients, those qualifying for treatment under the welfare program are going to have trouble "getting in to see a doctor."

The issue is sure to come to a head later this year when APIRG goes before the Alaska State Medical Association to request that it urge it's membership to end the practice of denying treatment to Medicaid patients. Specifically, APIRG plans to ask the association to adopt language which used to be contained in the American Medical Association's code of conduct which deals with rendering of medical care to all persons "irrespective of their ability to pay."

"We're talking about medical care for 16,000 non-native, poor Alaskans," said Fleischer. "The only reason we have heard for not treating them is a financial one. We think that adoption of the measure would be consistant with the past history of the medical profession."

Fleischer also said APIRG was considering an appearance before the state legislature and was considering the introduction of bills designed to deal with the problem of physicians refusing to treat Medicaid patients.

When asked if APIRG was planning to propose a bill which would require physicians in the state to participate in the Medicaid program he replied by saying, "It's conceivable."

VOLUME 9 ISSUE 75 KENAI, ALASKA 25¢

Local pharmacies too

Hospital accepting Medicaid

By RONNIE CHAPPELL
Clarion Editor

While doctors around the state are refusing to accept Medicaid coupons as payment for medical treatment other health care providers involved with the program appear to be sticking with it.

To date, local pharmacies and the Central Peninsula General Hospital have yet to follow the lead of the five member physicians at the Peninsula Medical Center who are the first doctors in Alaska to officially notify the State Department of Health and Social Services they no longer plan to participate in the welfare program.

"We will continue to see them (Medicaid patients)," said Simon Hancock, administrator at Central Peninsula General.

According to Hancock, the Medicaid program for hospitals is similar to the one for doctors in that bills submitted are "adjudicated" or "costed down" before being paid by the state.

It is also similar, in that the state did not have ample funds to pay all of the claims submitted by Alaska hospitals prior to June 30, 1978.

According to Rod Betit, the acting Director of the Division of Public Assistance, a total of $160,000 is still owed st hospitals for claims submitted in the last fiscal year.

The Division is paying current charges submitted by Alaska hospitals, and hopes to get a supplemental appropriation from the state legislature to cover lasy year's outstanding debt.

According to Hancock, the state owes Central Peninsula General a total of $24,686 in outstanding Medicaid bills. Of that, $10,000 represents unpaid claims submitted prior to June 30, 1978.

The oldest charge dates back to April of last year.

While the debt is a large one, it has yet to work a financial hardship on the local hospital.

"We're fortunate in that we're not seeing a great percentage of Medicaid patients," said Hancock.

"Otherwise," he added, referring to Peninsula Medical Center, "we'd be hurting too."

Hancock went on to say that it was the hospital's policy to treat everyone, regardless of ability to pay.

This is especially true in the case of emergency medical treatment. Hancock emphasized that no patients are turned away. But the situation differs when it comes to "non-emergency" services and "elective surgery" such as having a hernia repaired.

In those cases, the key to hospital admission is held by local physicians.

This means, for example, that a woman in labor can report to the hospital emergency room and have her child delivered by the physician on call. She cannot, however, check into the hospital during the early months of pregnancy for tests or other types of pre-natal care unless she is admitted by one of the physicians on the hospital staff.

In terms of reimbursement, local pharmacies have fared much better than the other health care providers in the Central Peninsula area.

"From our standpoint, the reimbursement is fine," said Earl Mundell the owner of both Kenai and Soldotna Drug stores.

Unlike the claims submitted by doctors and hospitals, the bills turned in by Alaskan pharmacies are not "costed down" by the state before payment.

Doctors and hospitals in the state receive 70 to 75 percent of what they charge back from the state.

"Our system is set up so we bill the customary amount and receive that," said Judy Waring the pharmacist at Kenai Drug.

"Reimbursement on our prescriptions is pretty good," Waring added. "We submit our claims the first of the month and generally receive what we submitted."

But sometimes, the state witholds payment of some claims, making it necessary to resubmit the charges of some Medicaid patients.

"It makes for a lot of extra book work," said Mundell who noted last year he had to work through the Governor's office to obtain payment of some Medicaid claims dating back to 1972.

Mundell added that his drug stores would continue par-

(Continued on page 15)

....hospital taking Medicaid

(Continued from page 1)

ticipating in the Medicaid program as long as the state continued paying its bills.

The story is much the same at Carr's in Kenai where head pharmacist Gloria McConnell reports "no problems" with reimbursement under the program.

Carr's will continue to fill Medicaid prescriptions, McConnell said.

TELEPHONE NO:

SUBJECT: House Bill No. 231

FROM: Gary L. Jenkins
Director
Audit Division

It is extremely difficult to estimate the actual dollar effect of the tuition credit proposed by HB 231 because of the very limited information available regarding the number of students attending vocational schools and schools of higher education. In discussions with various personnel in the Department of Education, I was advised that last year's enrollment in private elementary and secondary schools in the State was 3,130 and that there is a possible 800 to 900 in other private schools on which they did not have information. The staff working with the higher education loan funds advised me there were approximately 3,000 students going to school on loans and they estimated that number could be as high as 50 percent of the total number of students going to schools of higher education. Last, I have assumed there are at least 1,000 students going to approved vocational schools.

Assuming there are 4,000 students in private elementary and secondary schools, 1,000 in vocational schools, and 6,000 in schools of higher education, the total potential cost of this tuition credit would be $16,500,000.

I do have some concern that there be some agency responsible for determining what might constitute an eligible educational institution. There would be a potential for abuse of this provision in that under the proposed definition anyone could set up what they call a school whether anything valid was taught or not and apparently payments made to them could be taken as a credit under this bill.

It also should be remembered that should this or a similar bill pass, it will most likely lead to a significant increase in private institutions in the State, which means the cost of the credit could increase at a very significant rate.

POSITION PAPER/Department of Health & Social Servi

HOUSE BILL 374

"An Act relating to equalizing the costs of full-time residential or nursing care."

It is generally acknowledged that older persons would rather live in their communities than be separated from familiar patterns and people. The advantages of keeping people in their own communities are numerous. Most people prefer it. It enhances morale and provides security. Persons receive more individualized care, and the family and friends of the elderly in turn tend to become more involved when older persons reside close by. It is often apparent that many older people perceive institutionalization, even in a Pioneer Home, as "punishment" for getting sick and feeble. They fear the isolation and loneliness, not to mention the boredom, that comes from being displaced to a new setting. The thought of "dying alone" becomes a frightening preoccupation. Persons should not have to leave their communities, even to enter a Pioneer Home, unless it is their personal preference or they have become too ill for the treatment capacities of their community facilities.

Alaskans have been generous with their financial resources in supporting the Pioneer Home program, but that program presently revolves around facilities in four communities in the State. Fiscal reality tells us that we cannot construct and operate Pioneer Home programs in every community or even in every geographical region of the State. The cost per client is simply too prohibitive.

Considerable State resources have also been committed to the five nursing homes and the long-term care units of seven general hospitals throughout the State. All of the twelve facilities presently available have adequate bed-space to accomodate additional nursing home patients. In addition, these twelve facilities are built to Medicare/ Medicaid standards and can draw upon the resources of those programs should the patient be eligible. It would be folly to duplicate these beds, or indeed to jeopardize the financial status of the seven general hospitals which depend on their long-term care units to a large degree to assure fiscal solvency.

The approach proposed by House Bill 374 appears much more rational. This proposal suggests that we respond to the needs of Senior Alaskans by dedicating resources to a

POSITION PAPER/Department of Health & Social Service

broader based pioneer program -- one that responds to the preference of the pioneer to remain in his own community, either in a residential setting or a nursing home, if a Pioneer Home is not accessible.

The Department is interested in maximizing the residential care component suggested in House Bill 374. Recent surveys demonstrate that a significant number of current nursing home placements in Alaska are institutionalized for social rather than medical reasons. Not only is such placement a terribly expensive over-reaction to the problems of these individuals, but it does not represent a satisfactory solution either for the person or for those concerned with his welfare. Non-medical residential care can provide such individuals with a protected atmosphere in a community setting as an alternative to 24-hour nursing/medical care. The Department feels that this kind of living arrangement will help maximize the person's ability to function as independently as possible while at the same time providing necessary guidance and assistance sufficient for independent living. House Bill 374 would offer an important source of revenue to provide such residential care for those individuals qualifying for the Pioneer Home program.

The Department of Health and Social Services is most enthusiastic about the thrust of House Bill 374 and looks forward to working with the sponsor and other legislators to enact this community-oriented approach to caring for pioneer Alaskans. The attached sheet illustrates some of our initial thoughts concerning House Bill 374. The Department of Health and Social Services will be happy to work with the Department of Administration to develop cost projections along the lines of the methodology suggested in the attachment. We will also be pleased to assist in suggesting at least some initial parameters for the program to keep fiscal projections reasonable.

Attachment

HOUSE BILL 374

I. Amendments:

1. Set limits on amount allowed for residential care (rather than "amount charged," establish limit of daily or monthly rate of $_____).

2. Set criteria for eligibility in addition to (1) thru (3) of 47.25.108, to add "at risk of institutionalization" (in residential or nursing home setting). Would reduce eligibles - approximately 10% "at risk"?

II. Cost Offsets:

1. Could draw Medicare/Medicaid reimbursement for nursing care in certified nursing homes to offset Pioneer Home expenditures for nursing home care for Medicaid eligibles.

2. If limits set on amount allowed for residential care, could offset daily rate in Pioneer Home for same residential care.

3. Increased occupancy levels in LTC units of 7 general hospitals would contribute to financial viability of those community hospitals.

4. Will contribute significantly to establishment of residential alternative care settings for <u>all</u> individuals by providing a mechanism for funding those with Pioneer status.

III. Determining Cost-Impact:

1. Establish potential eligibles

   a. Population over 65 by community
   b. Exclude communities with Pioneer Homes

2. Determine likely Pioneer Home eligibles from #1;

3. Determine population "at risk of institutionalization" from #2;

4. Multiply percent likely to enter residential care times daily rate limit;

5. Multiply percent likely to enter nursing care times daily rate in communities with LTC facilities (draw from surrounding areas);

6. Substract potential Medicaid offsets;

7. Subtract decrease in daily rates for residential care vs. Pioneer Home rates for residential care.

IV. Recommentation:

That HB 374 be referred to the Special Committee on Services to the Elderly proposed by SB 179 and funded by SB 177.

OR

Request reserach analyst from Legislative Affairs to work with the Department of Health and Social Services and Department of Administration in the interim to develop program and fiscal implications.

DEPARTMENT OF ADMINISTRATION

OFFICE OF THE COMMISSIONER / *POUCH C – JUNEAU 99811*

March 22, 1979

Honorable Thelma Buchholdt
Chairman, House Health, Education &
Social Services Committee
Alaska State Legislature
Pouch V
Juneau, Alaska 99811

Re: H B 374

Dear Representative Buchholdt:

Attached is some information you requested concerning the number of residents at the Pioneers' Homes and the cost per resident.

At this time we are still in the process of trying to determine the fiscal impact that this bill will have if passed. A number of areas are still unknown as to population of eligible applicants, the effect of Medicaid and Medicare, the net result of cost per care at effected facilities and potential impact on the existing program. We are working with the Department of Health and Social Services to answer these questions.

If you need more information or a clarification of the information presented, please let us know.

Respectfully,

Bill

W. R. Hudson
Commissioner

STATE OF ALASKA
DEPT. OF HEALTH AND SOCIAL SERVICES
OFFICE OF THE COMMISSIONER

JAY S. HAMMOND, GOVERNOR
POUCH H 01 – JUNEAU 99811

March 12, 1979

The Honorable Russ Meekins
Chairman, House Finance Committee
Alaska State Legislature
Pouch V
Juneau, Alaska 99811

Dear Mr. Meekins:

As per your request we submit a proposal for the Division of Public Assistance to start a Pilot Project Residential Care Program for thirteen (13) nursing home patients in the Anchorage area, and a Pilot Home Care Alternatives Project to prevent other individuals at high risk from entering nursing homes. The idea of the Residential Care Pilot Program is to identify persons currently in nursing homes who might wish to live in boarding care in the community if given supportive services to do so, to provide an alternative program to accomplish this goal, and to evaluate costs and savings potential from such a program at the end of a one-year period. (See attached project narrative.) The idea of the Home Care Alternatives Project is to identify persons currently in their own homes who, without intervention and service support would be in immediate risk of institutionalization or nursing home placement. (See attached project narrative.)

This amendment would transfer funds between Budget Request Units within the Division.

A summary of this amendment is as follows:

	TOTAL	FEDERAL	GENERAL FUNDS
Medicaid-Nursing Homes	(373.4)	(186.7)	(186.7)
General Relief-Residential Care	81.6		81.6
General Relief-Home Care	84.8		84.8
Old Age Assistance	20.3		20.3
TOTAL SAVINGS	(186.7)	(186.7)	-0-

Thank you for your consideration of this request.

Sincerely,

Helen D. Beirne

Helen D. Beirne

RESIDENTIAL CARE PROJECT NARRATIVE

It is generally acknowledged that older persons would rather live in their communities than in nursing homes. The questions have been: Can they adequately care for themselves in that environment, is their quality of life really improved, and does such an arrangement cost more or less than nursing home care?

Historically, there have been few options for the older person in Alaska who is no longer able to live independently. And persons of lower income who become unable to care for themselves currently have no recourse except either boarding homes, which generally do not provide personal care and services, or medical facilities, which are staffed and equipped for the treatment of illnesses rather than for social care. Often, for one reason or another, a nursing home or institution represents an expensive, unwanted, or even unnecessary over-reaction to the person's problems. People have had to go into nursing homes because there was no alternative. This does not represent a satisfactory solution either for the person or for those concerned with his welfare.

In response to this situation, the Alaska Department of Health and Social Services has developed an alternative residential care project. The project is designed to meet the needs of a specific group of people who are considered to have functional deficiencies in one or more of the following areas: economic, social, emotional or physical adjustment. The project will provide these adults who request the service with a protected atmosphere in a community setting as an alternative to 24-hour institutional or nursing/medical care. It is felt that this kind of living arrangement will help maximize the person's ability to function as independently as possible while at the same time providing necessary guidance and assistance to persons in those functional area that are insufficient for them to maintain independent living.

The aim of this pilot project is to develop a more humane as well as cost effective quality program with the primary focus being on social restoration rather than on medical/health care. It is a program specifically tailored to meet the needs of persons whose abilities to perform the essential activities of daily living are so impaired as to require a level of care beyond that available in an independent or room and board living situation, but whose disabilities are not such as to require 24-hour medical care. The desired result is a more satisfying and productive life for the individual. There is also a potential cost saving in that studies show a substantial number of such persons are now cared for in public or private institutions or nursing homes.

Funding for the project will consist of current state dollars already being spent on the identified pilot project population. Present state match monies already allocated through the State's Medicaid Program will be transferred to the General Relief fund and budgeted to the residential care project from the general fund.

RESIDENTIAL CARE PROJECT NARRATIVE

It is generally acknowledged that older persons would rather live in their communities than in nursing homes. The questions have been: Can they adequately care for themselves in that environment, is their quality of life really improved, and does such an arrangement cost more or less than nursing home care?

Historically, there have been few options for the older person in Alaska who is no longer able to live independently. And persons of lower income who become unable to care for themselves currently have no recourse except either boarding homes, which generally do not provide personal care and services, or medical facilities, which are staffed and equipped for the treatment of illnesses rather than for social care. Often, for one reason or another, a nursing home or institution represents an expensive, unwanted, or even unnecessary over-reaction to the person's problems. People have had to go into nursing homes because there was no alternative. This does not represent a satisfactory solution either for the person or for those concerned with his welfare.

In response to this situation, the Alaska Department of Health and Social Services has developed an alternative residential care project. The project is designed to meet the needs of a specific group of people who are considered to have functional deficiencies in one or more of the following areas: economic, social, emotional or physical adjustment. The project will provide these adults who request the service with a protected atmosphere in a community setting as an alternative to 24-hour institutional or nursing/medical care. It is felt that this kind of living arrangement will help maximize the person's ability to function as independently as possible while at the same time providing necessary guidance and assistance to persons in those functional area that are insufficient for them to maintain independent living.

The aim of this pilot project is to develop a more humane as well as cost effective quality program with the primary focus being on social restoration rather than on medical/health care. It is a program specifically tailored to meet the needs of persons whose abilities to perform the essential activities of daily living are so impaired as to require a level of care beyond that available in an independent or room and board living situation, but whose disabilities are not such as to require 24-hour medical care. The desired result is a more satisfying and productive life for the individual. There is also a potential cost saving in that studies show a substantial number of such persons are now cared for in public or private institutions or nursing homes.

Funding for the project will consist of current state dollars already being spent on the identified pilot project population. Present state match monies already allocated through the State's Medicaid Program will be transferred to the General Relief fund and budgeted to the residential care project from the general fund.

The pilot project's three basic components are living arrangements; older persons who have difficulty in everyday living because of the frailities of age or due to physical, visual or mental impairments; and program supplementation. In considering the living arrangement component, all personal and community resources available to the prospective client will be evaluated. All boarding homes in Anchorage have been contacted and prospective client profiles discussed with house managers. Four homes have expressed an interest in being utilized as a placement service, and have indicated that additional staff and personal care services will be incorporated into their existing programs to help accommodate these particular persons' needs. All residential care facilities shall be in compliance with regulations licensing adult care facilities currently being promulgated by the Department of Health and Social Services. (Authority: AS 47.35.020; AS 47.35.070)

With regard to the older person component, there are currently, approximately one hundred (100) nursing home patients who have been identified throughout the State of Alaska by the Department of Health and Social Services whose level of care needs appear residential rather than skilled or intermediate nursing. All twelve (12) nursing home facilities in the State have client representatives in this population. Since there are few or no alternative residential care facilities in the eleven (11) geographically distributed communities who have nursing homes, a statewide residential care project is felt to be unrealistic at this point in time. However, a pilot project in Anchorage, which has two nursing homes representing close to thirty percent (30%) of the identified population whose level of care needs appear residential, does seem feasible. Thirteen (13) provisionally identified nursing home patients have been profiled for a possible pilot project regarding alternate residential placements in the Anchorage area. Client profiles suggest that the needs of the persons considered for this project are largely social, with observation and supervision required in their activities of daily living. Medications are being taken by several of these persons, which will need to be monitored, and considerable social support and encouragement is required.

The third component of the project is program supplementation. Arrangements will be made for physician/nurse visits, medication monitoring, and supportive services as needed in the homes. The monitoring of medications may be done through use of the Anchorage community nursing program for this small pilot project or contracting with the Nursing Registry Program in Anchorage. The Division of Social Services is now recruiting to fill a new position in Anchorage in adult services, and this position will be utilized to provide client monitoring, assessment, case-planning, and supportive services in the homes and with client placements.

The three main components described, those of homes, individuals and program supplementation, come together through the Residential Placement Agency. This project will be co-located in the divisions of Public

Assistance and Social Services, and is responsible for: assessing and certifying clients; assessing and certifying homes; and assuring the appropriateness of placement; the continuing need for the provision of care; and service management activities of case-planning, case-monitoring, and follow-up. A distinctive feature of the Residential Care pilot project is that it offers a test of an approach to use positive incentives to stimulate improved living conditions for a very vulnerable group of persons. Participation in the project is voluntary, and all persons are "grandfathered" under the new State Medicaid regulations, if no alternative living arrangements are available or until discharged from nursing home so as to insure continued funding of care for these persons after the one-year demonstration project is completed.

Projected rates are approximately $900 per month per person for providing residential care services. Current rates being paid by Medicaid and the State for these same persons in the two Anchorage nursing homes are $2,010 and $3,090 per month. It is anticipated that the pilot project involving thirteen (13) persons might result in a net savings of up to $84,000, and that a future statewide program for 100 persons could conceivably save close to $1 million. It is expected that if the project is successful, State supplementals might be continued in expanding the program throughout the State.

Savings earned as a result of the Department's residential care program are planned to be utilized in a related pilot program to allow for supportive services to be provided to prevent the inappropriate or premature institutionalization of certain high risk individuals (see attached narrative for the Home Care Alternatives Project). Such services availability will be limited by the extent of the earned savings from the residential care project.

SUMMARY OF COSTS:::NURSING HOMES--RESIDENTIAL CARE

	Patients	Gross Billings	(3rd Party Receipts)	Total	Funding Federal	Funding GF
Nursing Homes	108	2988462	(194400)[a]	2794062	1397031	1397031
(Residential Care)	108	1166400[c]	(488592)[b]	677808		677808
COST SAVINGS in MEDICAID				2116254	1397031	719223
+ Additional OAA Expense[d]				168480		168480
NET SAVINGS				2284734	1397031	887703
Nursing Homes	13	396755[e]	(23400)[a]	373355	186678	186677
(Residential Care)	13	140400[c]	(58812)[b]	81588		81588
COST SAVINGS IN MEDICAID				291767	186678	105089
+ Additional OAA Expense[d]				20280		20280
NET SAVINGS				312047	186678	125369

NOTES:
a. An average of $150 per month is used for each patient.
b. Most patients, if they were not in a nursing home, would be eligible for SSI and State Supplemental payments up to $377 per month. Very few patients would be eligible for the Longevity Bonus. For this summary, the amount of $377 has been used.
c. Estimated costs of residential care:
   Boarding costs - $750 per month
   Medical/social - $150 per month
   TOTAL $900 per month
d. Average OAA payments - $130 per month
e. Careage House: 7 patients @ $24455 annually
   Nakoyia: 6 patients @ $37595 annually

HOME CARE ALTERNATIVES PROJECT

NARRATIVE

The Department of Health and Social Services has determined that the comprehensive, coordinated care necessary to assist individuals in avoiding inappropriate institutionalization is not always readily accessible in Alaska. Often this is largely due to the funding mechanisms available. Existing funding sources are willing to reimburse expensive, highly skilled medical/nursing care. They are less willing to reimburse less expensive, less technical, but often more satisfying preventive and supportive care. This bias toward institutional care is apparent even when institutional admittance is purely for social reasons rather than medical reasons. (Social reasons include such things as: 1) a person being alone and unable to care for themselves; 2) the vacation of the family or friend, thus requiring nursing home admission; 3) personal choice; 4) the family of the person not being able to provide care to the person; 5) the family not willing to provide the necessary care. Medical reasons include such things as: 1) a terminal illness case requiring constant medical attention; 2) 24-hour nursing care requirements; 3) rehabilitation therapy, etc.)

Some 200 persons were admitted to nursing homes or long-term care units of general hospitals in Alaska in 1978. Approximately 100 of the current 469 nursing home residents have been identified as institutionalized for social rather than medical reasons. The Department feels that the high number of placements for social reasons are inappropriate and/or premature.

The state of Alaska has demonstrated a willingness to meet the needs of Senior Alaskans requiring services. The question is whether to provide those services in an instititution (nursing home) or in the individual's community or home.

There is no doubt that nursing homes must be considered as a component in the total service continuum designed to meet the needs of senior Alaskans. But continual increases in Medicaid expenditures and the negative psychological impact of premature and/or inappropriate nursing home placements suggest that alternatives should be developed and tested.

Most of those admitted to nursing homes are recipients of Medicaid assistance which covers their costs of care while institutionalized. Even those few who might pay their own way upon entering a nursing home will likely require Medicaid assistance eventually as personal resources are rapidly exhausted by exorbitant daily nursing home rates. Daily nursing home rates in Alaska run from a low of $42.[illegible] to a high of $228.00. Medicaid assistance costs are shared on a ratio of 50% federal dollars to 50% state dollars. Thus inappropriate or premature placements are very expensive to both the state and federal government.

In order to reduce the inappropriate and/or premature nursing home admissions and to more appropriately utilize state dollars being spent on the care of senior Alaskans, the following pilot project is proposed.

The Department requests that 84.8 general fund monies be diverted from the state share of the Medicaid-Nursing Home FY 80 budget. These monies will be utilized to fund a pilot project to demonstrate that the coordinated intake process and delivery system can provide community-based services to senior Alaskans to prevent inappropriate and/or premature admissions to nursing homes for social reasons. The objectives of the proposed pilot project are:

Objectives:

1. Through community-based supportive services, reduce the number of inappropriate and/or premature admissions of senior Alaskans to nursing homes (for social reasons), to the satisfaction of those being served. (Community-based services include such things as homemaker services, home-delivered or senior center meals, transportation, home health services, companion programs, respite care, etc.)

2. Limit the number of those individuals served by the funding available as a result of the diversion of Medicaid monies stemming from the Residential Care Project (see attached).

3. Prevent an increase in state nursing home expenditures for those senior Alaskans served during the project. (State expenditures refers to state funds required to match federal dollars under the Medicaid program.)

The 84.8 of diverted State Medicaid-Nursing Home monies will be used to purchase services needed to assist senior Alaskans in high risk of social nursing home admission if intervention does not take place.

An existing employee within the Department's Division of Social Services will have primary responsibility for developing a coordinated intake process and service delivery system to offset the premature and/or inappropriate institutionalization of senior Alaskans participating in the project. The Project Director will implement the Home Care Alternatives Project along the lines of the general Standards, Procedures and Guidelines enumerated in Attachment 1.

Predicted Outcomes of the Home Care Alternatives Project:

Should this pilot project be approved, the following positive outcomes will result:

1. There will be an impact on the number of senior Alaskans institutionalized, in that the number of premature and/or inappropriate nursing home placements will be reduced.

2. There will be a greater effort to place individuals in settings where their needs can best be served.

3. There will be better and proper utilization of existing services.

4. There will be a heightened awareness of those services to be phased down or out.

5. There will be reduction in the duplication of services or in the payment for unneeded or dependence-creating services.

6. The freedom of senior Alaskans will be increased as a result of the options offered the participants in the project. As independence is increased, the individual's dignity and sense of self-worth will be heightened, thus improving the quality of life for senior Alaskans.

ATTACHMENT 1

STANDARDS, PROCEDURES AND GUIDELINES

HOME CARE ALTERNATIVES PROGRAM

I. Criteria for Admission to Home Care Alternatives Project:

a. Resident of the State of Alaska.

b. Sixty (60) years of age or older or handicapped or disabled.

c. Client must be in high risk of social nursing home admissions if intervention does not take place (0-90 days). Client determined to be medical crisis candidates will not be accepted.

d. Private physicians must be contacted to determine:

1. high-risk category, and

2. appropriateness of Home Care Alternatives Project in relationship to the client.

e. Initial assessment must be completed on each candidate by an Assessment Team. The Assessment Team will be composed of a Social Worker and a Registered Nurse.

f. If the Assessment Team determines that the client is an appropriate admission to the Home Care Alternatives Project, then the Assessment Team must develop a complete individual case plan for the client. Individual assessments and care plans must be submitted to the Project Director immediately after completion.

g. All informal support systems presently in place must be retained (family, friends, church, etc.). The Home Care Alternatives Project should not replace informal support systems already in place.

h. Alternative services for the family, friends, etc., may be supplied if indicated by the assessment (i.e., respite care).

i. When deemed necessary by the Assessment Team, services may begin immediately. Services to be reimbursed by the Home Care Alternatives Project must be authorized by the Project Director on the basis of the care plan submitted. The Project Director may authorize a care plan by telephone.

j. Follow-up visits must be made within 10 working days after services begin and at least every 30 days from the first follow-up visit. Follow-up visists will include: monitoring of services; appropriateness of services; quality of services; changes in client's condition.

k. Persons who are currently patients in nursing homes may be considered for the Home Care Alternatives Project if the following conditions are met:

1. The client is inappropriately placed at the time of referral to the Assessment Team, and

2. The physician approves of alternative placement.

II. Donations/Fees:

a. Client donations and fees will be accepted and considered Project income. A sliding fee schedule will be devised according to the ability to pay. Fees will be payable to the Project fund to be established within the General Relief BRU.

b. Services Provided with Older Americans Act Funding and Title XX Funding: Services available under Titles III and VII of the Older Americans Act and under Title XX will not be reimbursed by the Home Care Alternatives Project. Such services will be reported by cost of unit service to enable collection of accurate cost data for the project. In the event services normally available under Title III or VII or under Title XX are not available due to over-subscription or lack of resources, similar services may be acquired from other sources and reimbursed by the project. Alternative project clients will be placed in appropriate Title III and VII or Title XX programs when slots become available.

III. Staff Responsibilities:

a. Assessment Team Functions (Social Worker and Registered Nurse):

1. Initial Assessment

2. Case Plan Development

3. Arrangement and coordination of services

4. Follow-up visits

A. First follow-up visit within 10 working days after services have begun.

B. Follow-up visits every 30 days.

5. Reassessment within 90 days of initial assessment and every 90 days thereafter, unless case plan calls for more frequent assessments.

6. Requests for reimbursement filed monthly with Project Director.

b. Project Director Functions:

1. Provide funds to reimburse services provided in support of program activities in accordance with approved case plan.

2. Maintain individual assessment and case plans in a separate file.

3. Review care plans and authorize services as necessary.

4. Monitor clients and services on a random basis each quarter.

5. Provide technical assistance as requested.

IV. Case Plan Management:

Case management is a process to coordinate services for the elderly. With respect to the Home Care Alternatives Project, case management will provide access to the entire services system and insure the coordinated delivery of multiple services to individual clients at high risk of institutionalization. Basic to case management is an initial broad-based assessment of the client's needs. In addition, the case management process involves insuring that a service plan is written which considers all available services solutions, assures that the client is re-examined at regular intervals. Thus the goals of the case management process are: 1) To facilitiate access to a complete continuum of care ranging from home care to institutional care; 2) To facilitate choice of the most appropriate service alternatives for the client's unique conditions and concerns; 3) To ensure the coordinated delivery of services to each clients; and 4) to ensure periodic review of the appropriateness of the service being provided.

Social Services

Scott M. Matheson, Governor, State of Utah
Anthony W. Mitchell, Ph.D., Executive Director

The Alternatives Program For the Elderly

Louise P. Lintz, Model Projects Director

DATE: July 1, 1978 - June 30, 1979

P O M E Summary & Program Goals

BACKGROUND STATEMENT

With the prospect of a thirty-five million dollar expenditure for nursing home care for the fiscal year 1977/78, the Utah State Legislature, in March of 1977, mandated to the Utah State Department of Social Services the responsibility to study Alternative to Nursing Home Care for the Elderly. This responsibility was then charged to the Utah State Division of Aging. A seventy member task force was organized to carry out this mandated study.

In addressing the legislative concerns and as a part of the overall study, the task force conducted a survey of nursing home patients to determine why people entered nursing homes. Of the 168 persons studied in the survey, it was learned that not all admissions were made because of medical needs. Forty of the 168 persons surveyed, or 24%, were admitted to nursing homes for social reasons instead of medical reasons. (Social reasons were defined as and included such things as: 1) a person being alone; 2) the vacation of the family or friend, thus requiring nursing home admission; 3) personal choice; 4) the family of the person not being able to provide care to the person; and 5) the family not willing to provide the necessary care. Medical reasons were defined as and included such things as 1) a broken bone; 2) a terminal illness case; 3) nursing care requirements; 4) rehabilit-

Division of Aging

P.O. Box 2500, Salt Lake City, Utah 84110

tion therapy, etc.)

Note: For purposes of this memo, it is important to note that of the forty admits for social reasons, twenty-six were on Title XIX, Medicaid Assistance (a medical program for certain low-income qualifying individuals which pays all medical costs). This study also showed that the comprehensive, coordinated care necessary for avoiding inappropriate institutionalization of the elderly is not readily available. The ease with which a person can be permanently institutionalized contrasts with the difficult negotiation through the complex, fragmented, and uncoordinated system necessary to maintain a person at home. This disparity parallels that between abundant institutional beddage, and sparse social and life-support services in communities; between the willingness of third party payers to reimburse expensive, highly skilled, crisis-oriented medical care, and their reluctance to reimburse less expensive, less technical, preventive and supportive care; between the clear single assessment process to obtain institutional care, and the obscure, multi-agency, multi-assessment process to obtain non-institutional care; and between the concentration on highly skilled medical services and the lack of attention accorded preventive and supportive services such as transportation and nutrition, that are vital to maintenance of good health and independence.

PROBLEM

According to the admission study for the elderly in nursing homes in Utah, there is an average of forty admissions per month to nursing homes for those reasons defined above as social reasons. The task force concluded that these admissions to nursing homes were inappropriate and/or premature. Study results indicate that the reason for these inappropriate and/or premature placements was the result of a lack of available services to deal with the identified needs in the home of the person, or a lack of knowledge of or about the available services in the community. Twenty-s of the forty persons admitted to nursing homes for social reasons were recipients of Medicaid assistance to pay for their nursing home care. (It is important to note

that, according to the Utah Health Care Association, 96% of all long-term care patients will eventually require Medicaid assistance as their own resources are exhausted.) Medicaid assistance costs are shared on a ratio of 69% paid by the Federal Government with 31% State money required as matching funds in order to receive the 69% Federal dollar amount. The cost to the State alone for the 26 new persons (average) per month receiving Medicaid assistance of $535,000 per year (31% of total), not to mention the other 69% of the cost paid by the Federal Government. These inappropriate and/or premature placements are very expensive to the State and to the Federal Government.

In order to reduce the inappropriate and/or premature nursing home admissions and to more appropriately utilize the State dollars being spent on care of the elderly, the following objectives are made.

OBJECTIVES

1) Through community-based in-home services, reduce the number of inappropriate and/or premature admissions of elderly persons to nursing homes (for social reasons) by twelve persons per month, to the satisfaction of those being served. (The number of twelve persons per month was selected for the first year because of the limitation of funding. In-home/community based services include such things as homemaker services, home-delivered meals, transportation, home repair, home-health and nursing services, companion programs, etc.)
2) Prevent any increase in State expenditures for these elderly patients during the first year, and, within the second year, cut the State expenditure by 25%. (By State expenditure, we are referring to the State money that would be required to match the Federal dollars under Medicaid--the 31%. The 69% Federal money would be eliminated entirely.)

METHODS

1) A pre-admittance screening team will be established by the Project Director to explore alternative care with each individual being considered for social

admission to a nursing home.

2) An individual case plan will be developed showing the exact service requirements, providers, and cost, in order to maintain each individual in his/her own home.

3) Purchase of service agreements/vouchers will be prepared to cover the cost for the individual if existing resources are not adequate to cover the need.

4) All case management files will be retained in the Utah Division of Aging, and the Project Director will insure that monthly progress notes are recorded and that monthly reports on the total project are available to the Division, Department of Social Services, and the State Board of Aging.

5) Based on the project results, recommendations will be made to the Utah State Legislature for their further action.

EVALUATION - Recommendations for Program Measurement

The following steps will be accomplished in order to evaluate the project effectiveness;

1) Documentation of 144 individuals (per year) who would have been admitted to nursing homes for social reasons and who, because of the project, have been maintained in their own homes receiving community-based, in-home services.

2) No increase in the projected State fund expenditure (see objective number two).

3) Administration of a service satisfaction questionnaire on the quality of care and satisfaction to the older persons receiving services under the project.

4) Evaluation of the quality and completeness of service rendered, on the service provider, by the project director on a random basis to determine quality of care and whether or not service is adequate. (For example, if the service rendered was homemaker service--is the home kept clean, is there clean linen on th bed, is the client/patient receiving proper skin care, is their any sign of decubitus ulcers, etc.?)

LIMITATIONS OF THE PROPOSED MEASURES AND SPECIAL ATTENTION REQUIREMENTS

Although there are many limitations and difficulties with any attempt at [illegible] the following appear to be among the most significant:

1) In order for the above measures to be truly indicative and useful, the costs of all required services must be taken into account. It needs to be recognized at the outset that different geographical areas will require more or less money for the same service. For example, the wage scales will vary from one location to another. Travel distances may make one service more costly to deliver in one area than another. It may be useful to look at the difference between service provision in urban vs. rural areas.

2) Whenever client satisfaction is measured, care has to be taken in order to produce accurate measurement results. It would not be advisable to have the individual rendering the service administer the client/patient satisfaction questionnaire. This should be done by a different individual, or through a mail-in form, where the client/patient identity is not traceable. (A special telephone number could be given for individual complaints on service satisfaction during the course of the project.) The client/patient should be assured of the confidentiality of his/her response, and that service continuation will not be connected in <u>any</u> way to his response.

3) In the evaluation of the quality of care rendered by the service provider, attention should be given to make sure that this is carried out on a random basis so as not to indicate harassment. Although the main focus of this evaluation will be to assure adequate services, care should be taken to assure that there is not unnecessary service which would create more of a dependency on the part of the client/patient. Finally, the evaluation process should be as complete as is possible and reasonable so that the important considerations are not neglected.

4) Possibly, one of the more significant limitations of the proposed measurements is the multiple criteria problem. Although there is a major advantage in considering multiple variables, sometimes these variables or measures can be in conflict. For example, we have established measurements of client/patient

satisfaction and that of cost containment. What if the costs go up in the provision of community-based, in-home services, but at the same time client/patient satisfaction is significantly improved? Which then becomes the more important measurement--the dollar savings or the client/patient satisfaction, quality of life, independence, etc?

5) There is also a generalizability problem. Even if the various measurement problems can be solved, a problem still arises as to how widely one can generalize the resulting evaluation criteria to other situations and organizations.

6) Whenever one attempts to quantify something for measurement purposes, there arises the measurement precision problem. Quantification or measurement is often made difficult, due to the complexity and magnitude of the concept under study. Also, how consistent are such measures over time? In addition, are we sure that we are making the proper level of analysis? Have we been too broad, or indeed too narrow, in our measurements and evaluation?

For the purposes of the first year of the study, it would appear that the measurements outlined above would be adequate. However, over time, additional measurements should be instituted to take into consideration such things as the increased demands (and resultant increased cost) in home care resulting from project encouragement of the use of community-based in-home services.

PREDICTED POSITIVE OUTCOMES OF THE MEASURES

Several positive outcomes should develop as a result of the above measures. First of all, cost measurements will indicate whether or not project objectives have been accomplished at a higher, lower, or for the same approximate cost, thus enabling better judgments on an economic basis. Client satisfaction and preferences will also be determined as a result of the measures, thus giving the Department and Division a better idea of effective and appropriate service delivery methods. Finally, the measurements proposed should help indicate the kinds of services that need to be developed further (or reduced, as the case may be) and whether or not

in-home community-based service is a viable alternative to institutionalization.

PREDICTED POSITIVE OUTCOMES OF THE PROJECT

It was the consensus of the task force that there is no question but that services should be provided to meet the needs of those requiring such services. The choice is whether to provide these services in an institution (nursing home) or in the individual's community or home. The study, previously referred to, indicates that nursing homes should be considered as a part of the total service continuum to meet certain medical needs; however, continual increases in Medicaid expenditures and the negative psychological impact of premature and inappropriate nursing home placements demand that alternatives be further developed and tested. If this is carried out, the following positive outcomes are predicted:

There will be a tremendous impact on the institutionalization of the State's elderly. There will be a greater effort to place client/patients in settings where their needs can best be serviced. The number of inappropriate and premature nursing home placements will be reduced. There will be a better and proper utilization of existing services. The State Social Services will also have a better idea of those services that need further development or conversely to be phased down or out. It is also anticipated that there will be a reduction in the duplicatio of services or for the paying of unneeded and dependence-creating services.

When services are rendered at the proper level of requirement, and in a manner to allow for a choice on the part of the client/patient, there is obviously an increase in freedom. Independence, which is much too often denied the State's elderly, is increased or maintained as well as the person's dignity and feeling of self-worth. Quality of life then takes on a renewed meaning for those people who, before, were forced to accept fewer choices and options.

/cc

ALTERNATIVES PROGRAM
STANDARDS, PROCEDURES, AND GUIDELINES

A. Criteria for Admission into the Alternatives Program:

1) Resident of the State of Utah

2) 60 years of age or older

3) Client must be in high risk of social nursing home admissions if intervention does not take place (0 - 90 days). Clients determined to be medical crisis candidates will not be accepted.

4) Private physicians must be contacted to determine:

   a) high-risk category, and

   b) appropriateness of Alternatives Program in relationship to the client.

5) Initial assessment must be completed on each candidate by the Assessment Team. The Assessment Team will be composed of an Area Agency on Aging designee and a Registered Nurse.

6) If the Assessment Team determines that client is an appropriate admission to the Alternative Program, then the Assessment Team must develop a complete individual case plan for the client.

7) All informal support systems presently in place must be retained (family, friends, church, etc.). The Alternatives Program should not replace informal support systems presently in place.

8) Alternative Services for the family, friends, etc., may be supplied if indicated by the assessment (e.g., Respite, Payment for care in the home of another, etc.).

9) Individual assessments and case plans must be submitted to the State Division of Aging immediately after completion.

10) When deemed necessary by the Assessment Team, services may begin immediately; however, services to be reimbursed must be authorized by the State Division of Aging within a time period of 14 calendar days from the date of initial assessment. Case plans must be received by the State Division of Aging before they will be approved. The State Division of Aging may authorize a case plan by telephone.

11) Completed case plans must be received by the State within 7 calendar days of the initial assessment.

12) Follow-up visits must be made within 10 working days after services begin and again every 30 days from the first follow-up visit, except when the Assessment Team determines that an emergency exists, a follow-up visit will be made in advance of ten working days.

13) Follow-up Visits must include:

a) monitoring of services (e.g., service connections and coordination),

b) appropriateness of services,

c) quality of services, and

d) changes in client's condition.

14) Persons who are currently patients in nursing homes may be considered for the Alternative Program if the following conditions are met:

a) The client is inappropriately placed at the time of referral to the Assessment Team, and

b) the physician approves of alternative placement.

B. Donations/Fees:

1) Each client should be encouraged to donate to the program. All donations are voluntary.

2) Donations and fees will be considered Project Income and will be transferred to the State Division of Aging or considered as partial payment to the contractee for services provided if they are made directly to a member of the Assessment Team. Donations made to non-alternative funded services will be treated as non-alternative Project Income.

3) Sliding scale fee schedule will be used for those persons whose monthly income exceeds 74% of the state's median income (see attached fee schedule). Fees will be assessed by the Assessment Team to the client. Fees are payable to the Area Agency on Aging and will be treated as alternative Project Income.

4) Fees will be assessed for the entire package of services, not for individual services.

5) Exception to the above #4 will apply when the service is provided by a Title XX program. Fees assessed will then be paid to Title XX (e.g., Division of Family Services, Homemaker Program) when applicable.

6) When a Title XX service is required by the case plan, a signed Title XX group eligibility form must accompany the case plan when it is submitted to the State.

7) Services may be provided for those clients above the allowable sliding scale income level; however, fees assessed will be determined on an individual basis with each individual who is above the sliding scale income level. The Assessment Team will determine what fees should be assessed.

8) Assets will not be considered for eligibility in the program.

C. Services Provided with Older Americans Act Funding:

Services available under Titles III and VII will not be reimbursed by the Alternatives Program. These services must be reported by cost of unit service so that accurate cost data can be developed. In the event services normally available under Title III or VII are not available due to over-subscription of existing programs, then similar services will be acquired from other sources and reimbursed by the State. Alternative clients will be placed in appropriate Title III and VII programs when slots become available.

D. Services Provided with Title XX Funding:

Services available under Title XX will not be reimbursed by the Alternatives Program. These services must be reported by cost of unit so that accurate cost data can be developed. In the event services normally available under Title XX are not available due to over-subscription of existing programs, then similar services will be acquired from other sources and reimbursed by the State. Alternative clients will be placed in appropriate Title XX programs when slots become available.

E. Area Agency Responsibilities:

1) Initial Assessment

2) Case Plan Development

3) Arrangement and Coordination of Services

4) Follow-Up Visit

   a) First Follow-Up Visit within 10 working days after services have begun except when the Assessment Team determines that an emergency exists, a follow-up visit will be made in advance of ten working days.

   b) Follow-Up Visits every 30 days

5) Reassessment within 90 days of initial assessment and every 90 days thereafter, unless case plan calls for more frequent assessments.

6) Requests for Reimbursement filed monthly.

F. State Division of Aging Responsibilities:

1) Provide money (cash assistance) to project in support of project activities in accordance with the State Division of Aging approved case plan services.

2) Individual Assessment and Case Plan will be maintained on each individual in a separate file.

3) Case plans will be reviewed and services authorized, if approved, within 7 days after being received in the State Division of Aging office and returned to the Area Agency on Aging with any changes made by the Project Director.

4) Monitoring of clients and services will be conducted on a random basis quarterly.

5) Technical Assistance will be available as requested.

6) Authorization of requests for reimbursement to the Utah State Finance Department monthly in accordance with the individual approved case plan.

THE ALTERNATIVE PROGRAM

CASE MANAGEMENT

DEFINITION

Case management is a process to coordinate services for the elderly. Done for and with a selected sub-set of clients, it provides access to the entire services system and insures the coordinated delivery of multiple services to individual clients. Basic to case management is an initial broad-based assessment of the client's needs. In addition, the case management process involves insuring that a service plan is written which considers all available service solutions, that the client is actually connected to service, and that the progress of the client is re-examined at regular intervals.

GOALS

The goals of the case management process are: 1) to facilitate access to a complete continuum of care ranging from home care to institutional care; 2) to facilitate choice of the most appropriate service alternatives for the client's unique conditions and concerns; 3) to ensure the coordinated delivery of services to each client; and, 4) to ensure periodic review of the appropriateness of the service being provided.

CASE MANAGEMENT COMPONENTS

DEFINITIONS

Needs Assessment	is the collection of information about a person's situation and functioning which allows identification of the client's problems in the major functional areas.
Service Plan	is an agreement between the client and worker regarding client problems identified, goals to be achieved and services to be pursued in support of goal achievement.
Arranging for Service	is contacting service providers and negotiating with them for the delivery of needed services to the client in the manner prescribed in the service plan.
Reassessment	is the scheduled re-examination of the client's situation and functioning to identify changes which occurred since the initial assessment to measure progress toward the goals outlined in the service plan and to assure that the services are being delivered. In so doing, the case manager determines whether the service plan needs to be updated and the pattern of service delivery changed.
Recording	All pertinent information regarding each client will be recorded in an individual case file, maintained at the State Division of Aging and guaranteeing the confidentiality of each person and file.

THE ALTERNATIVES PROGRAM

MAJOR SERVICE GOALS

Upon completion of assessment, determine which of the following categories or goals are most applicable to the major purpose of the Alternative Program.

Enter this on the bottom of the assessment sheet.

Goal Category I: refers pr' arily to those clients with episodes of illness or conditions in which the major purpose of the Alternatives Program is elimination of the problem or problems (Short term care). Full independence anticipated.

Example of Goal:

a) Complete recovery from illness or disability.

b) Satisfactory adjustment to a major crisis.

c) Adequate learning re: nutrition, health practices and procedures.

Goal Category II: refers to clients with problems that are expected to continue but ultimate objective is to assist the client or family to provide the necessary care without the Alternatives Program.

Example of Goal:

a) Client or family or family substitute competent in total client care.

b) Client or family competent to seek help as indicated.

Goal Category III: refers to clients with conditions or problems in which rehabilitation or improvement can be anticipated.

Example of Goal:

a) Rehabilitation to optimum level of function and activity - physical, social, and emotional.

b) Reduced pain and disability.

c) Disease brought into control.

d) Client referred to and accepted by another agency which is meeting client's needs for rehabilitation.

Goal Category IV: refers to clients who need alternatives assistance in maintenance care.

Example of Goal:

a) Maintenance level of ADL.

b) Prevent regression and complications.

c) Retard disease progression.

d) Detect early signs of deviation from normal or status quo.

Goal Category V: refers to clients in terminal stages of illness.

Example of Goal:

a) Prevent premature institutionalization.

b) Achieve satisfactory level of comfort and dignity at home during terminal stages.

c) Delay hospitalization or nursing home placement until family unable to meet needs.

326 Fourth Street - Apt. 38D
Juneau, Alaska. 99801.
20 March 1979.

The Committee on Health, Education
and Social Services
House of Representatives
State of Alaska.

May I add my strong support of
House Bill No. 374 now before the
Eleventh Legislature of the House?

For an Act entitled: "An Act relating
to equalizing the costs of full-time
residential or nursing care."

I approve completely this far-
sighted and hopeful legislation
to insure the complete care of aged
or aging persons according to the
amendment of Section 1. 47-25, by
adding new sections to qualify
and safeguard the Act:

New Sections 47.25.103
" 47.25.105
and three provisions concerning
eligibility.

As a recipient of Homemaker care
I am encouraged that full care may
be added as needed by many persons
fulfilling State of Alaska requirements.

Sister Trinity B.S.I.
(Sarah Swift-Carter).

FROM ROSE PALMQUIST, PRESIDENT, OLDER PERSONS ACTION GROUP 276-4041

HB 374, EQUALIZING COSTS OF RESIDENTIAL OR NURSING CARE, DOES NOT ADDRESS THE REAL PROBLEM WITH PIONEERS HOMES VS. OTHER INSTITUTIONAL CARE. THE BEST FIRST APPROACH IS HOME CARE, AND AFTER THAT, EVALUATION OF OTHER CARE RESOURCES. REGARDING THE PIONEERS HOMES, THE LEGISLATURE SHOULD ADDRESS THE NECESSITY FOR A SLIDING SCALE OF FINANCIAL CONTRIBUTION BY THE RESIDENTS TOWARD THE END THAT THE RESIDENTS PAY WHAT THEY CAN AFFORD BEFORE THE TAXPAYERS PICK UP THE TAB. MANY RESIDENTS OF PIONEERS HOMES AMASS ASSETS FOR THEIR HEIRS WHILE IN THE HOMES. THIS PROBLEM COULD BE CORRECTED BY A CHANGE OHE RULES WITHIN THE DIVISION OF PIONEERS BENEFITS AND WOULD NO DOUBT RESULT IN FEWER APPLICATIONS FOR ADMITTANCE INTO THE HOMES. THUS, THE PROBLEM THAT HB 374 ADDRESSES COULD BE RESOLVED WITHOUT ADDITIONAL LEGISLATION.

ALTERNATIVES PROGRAM
STANDARDS, PROCEDURES, AND GUIDELINES

A. Criteria for Admission into the Alternatives Program:

1) Resident of the State of Utah

2) 60 years of age or older

3) Client must be in high risk of social nursing home admissions if intervention does not take place (0 - 90 days). Clients determined to be medical crisis candidates will not be accepted.

4) Private physicians must be contacted to determine:

   a) high-risk category, and

   b) appropriateness of Alternatives Program in relationship to the client.

5) Initial assessment must be completed on each candidate by the Assessment Team. The Assessment Team will be composed of an Area Agency on Aging designee and a Registered Nurse.

6) If the Assessment Team determines that client is an appropriate admission to the Alternative Program, then the Assessment Team must develop a complete individual case plan for the client.

7) All informal support systems presently in place must be retained (family, friends, church, etc.). The Alternatives Program should not replace informal support systems presently in place.

8) Alternative Services for the family, friends, etc., may be supplied if indicated by the assessment (e.g., Respite, Payment for care in the home of another, etc.).

9) Individual assessments and case plans must be submitted to the State Division of Aging immediately after completion.

10) When deemed necessary by the Assessment Team, services may begin immediately; however, services to be reimbursed must be authorized by the State Division of Aging within a time period of 14 calendar days from the date of initial assessment. Case plans must be received by the State Division of Aging before they will be approved. The State Division of Aging may authorize a case plan by telephone.

11) Completed case plans must be received by the State within 7 calendar days of the initial assessment.

12) Follow-up visits must be made within 10 working days after services begin and again every 30 days from the first follow-up visit, except when the Assessment Team determines that an emergency exists, a follow-up visit will be made in advance of ten working days.

13) Follow-up Visits must include:

a) monitoring of services (e.g., service connections and coordination),

b) appropriateness of services,

c) quality of services, and

d) changes in client's condition.

14) Persons who are currently patients in nursing homes may be considered for the Alternative Program if the following conditions are met:

a) The client is inappropriately placed at the time of referral to the Assessment Team, and

b) the physician approves of alternative placement.

B. Donations/Fees:

1) Each client should be encouraged to donate to the program. All donations are voluntary.

2) Donations and fees will be considered Project Income and will be transferred to the State Division of Aging or considered as partial payment to the contractee for services provided if they are made directly to a member of the Assessment Team. Donations made to non-alternative funded services will be treated as non-alternative Project Income.

3) Sliding scale fee schedule will be used for those persons whose monthly income exceeds 74% of the state's median income (see attached fee schedule). Fees will be assessed by the Assessment Team to the client. Fees are payable to the Area Agency on Aging and will be treated as alternative Project Income.

4) Fees will be assessed for the entire package of services, not for individual services.

5) Exception to the above #4 will apply when the service is provided by a Title XX program. Fees assessed will then be paid to Title XX (e.g., Division of Family Services, Homemaker Program) when applicable.

6) When a Title XX service is required by the case plan, a signed Title XX group eligibility form must accompany the case plan when it is submitted to the State.

7) Services may be provided for those clients above the allowable sliding scale income level; however, fees assessed will be determined on an individual basis with each individual who is above the sliding scale income level. The Assessment Team will determine what fees should be assessed.

8) Assets will not be considered for eligibility in the program.

C. Services Provided with Older Americans Act Funding:

Services available under Titles III and VII will not be reimbursed by the Alternatives Program. These services must be reported by cost of unit service so that accurate cost data can be developed. In the event services normally available under Title III or VII are not available due to over-subscription of existing programs, then similar services will be acquired from other sources and reimbursed by the State. Alternative clients will be placed in appropriate Title III and VII programs when slots become available.

D. Services Provided with Title XX Funding

Services available under Title XX will not be reimbursed by the Alternatives Program. These service must be reported by cost of unit so that accurate cost data can be developed. In the event services normally available under Title XX are not available due to over-subscription of existing programs, then similar services will be acquired from other sources and reimbursed by the State. Alternative clients will be placed in appropriate Title XX programs when slots become available.

E. Area Agency Responsibilities:

1) Initial Assessment

2) Case Plan Development

3) Arrangement and Coordination of Services

4) Follow-Up Visit

   a) First Follow-Up Visit within 10 working days after services have begun except when the Assessment Team determines that an emergency exists, a follow-up visit will be made in advance of ten working days.

   b) Follow-Up Visits every 30 days

5) Reassessment within 90 days of initial assessment and every 90 days thereafter, unless case plan calls for more frequent assessments.

6) Requests for Reimbursement filed monthly.

F. State Division of Aging Responsibilities:

1) Provide money (cash assistance) to project in support of project activities in accordance with the State Division of Aging approved case plan services.

2) Individual Assessment and Case Plan will be maintained on each individual in a separate file.

3) Case plans will be reviewed and services authorized, if approved, within 7 days after being received in the State Division of Aging office and returned to the Area Agency on Aging with any changes made by the Project Director.

4) Monitoring of clients and services will be conducted on a random basis quarterly.

5) Technical Assistance will be available as requested.

6) Authorization of requests for reimbursement to the Utah State Finance Department monthly in accordance with the individual approved case plan.

THE ALTERNATIVE PROGRAM

CASE MANAGEMENT

DEFINITION

Case management is a process to coordinate services for the elderly. Done for and with a selected sub-set of clients, it provides access to the entire services system and insures the coordinated delivery of multiple services to individual clients. Basic to case management is an initial broad-based assessment of the client's needs. In addition, the case management process involves insuring that a service plan is written which considers all available service solutions, that the client is actually connected to service, and that the progress of the client is re-examined at regular intervals.

GOALS

The goals of the case management process are: 1) to facilitate access to a complete continuum of care ranging from home care to institutional care; 2) to facilitate choice of the most appropriate service alternatives for the client's unique conditions and concerns; 3) to ensure the coordinated delivery of services to each client; and, 4) to ensure periodic review of the appropriateness of the service being provided.

CASE MANAGEMENT COMPONENTS

DEFINITIONS

Needs Assessment	is the collection of information about a person's situation and functioning which allows identification of the client's problems in the major functional areas.
Service Plan	is an agreement between the client and worker regarding client problems identified, goals to be achieved and services to be pursued in support of goal achievement.
Arranging for Service	is contacting service providers and negotiating with them for the delivery of needed services to the client in the manner prescribed in the service plan.
Reassessment	is the scheduled re-examination of the client's situation and functioning to identify changes which occurred since the initial assessment to measure progress toward the goals outlined in the service plan and to assure that the services are being delivered. In so doing, the case manager determines whether the service plan needs to be updated and the pattern of service delivery changed.
Recording	All pertinent information regarding each client will be recorded in an individual case file, maintained at the State Division of Aging and guaranteeing the confidentiality of each person and file.

THE ALTERNATIVES PROGRAM

MAJOR SERVICE GOALS

Upon completion of assessment, determine which of the following categories or goals are most applicable to the major purpose of the Alternative Program.

Enter this on the bottom of the assessment sheet.

Goal Category I: refers primarily to those clients with episodes of illness or conditions in which the major purpose of the Alternatives Program is elimination of the problem or problems (Short term care). Full independence anticipated.

Example of Goal:

a) Complete recovery from illness or disability.

b) Satisfactory adjustment to a major crisis.

c) Adequate learning re: nutrition, health practices and procedures.

Goal Category II: refers to clients with problems that are expected to continue but ultimate objective is to assist the client or family to provide the necessary care without the Alternatives Program.

Example of Goal:

a) Client or family or family substitute competent in total client care.

b) Client or family competent to seek help as indicated.

Goal Category III: refers to clients with conditions or problems in which rehabilitation or improvement can be anticipated.

Example of Goal:

a) Rehabilitation to optimum level of function and activity - physical, social, and emotional.

b) Reduced pain and disability.

c) Disease brought into control.

d) Client referred to and accepted by another agency which is meeting client's needs for rehabilitation.

Goal Category IV: refers to clients who need alternatives assistance in maintenance care.

Example of Goal:

a) Maintenance level of ADL.

b) Prevent regression and complications.

c) Retard disease progression.

d) Detect early signs of deviation from normal or status quo.

Goal Category V: refers to clients in terminal stages of illness.

Example of Goal:

a) Prevent premature institutionalization.

b) Achieve satisfactory level of comfort and dignity at home during terminal stages.

c) Delay hospitalization or nursing home placement until family unable to meet needs.

Subject: HB 374 Today 1:00 Room 112 Capitol J Rudderow

The passage of this Bill into law will enable many older persons to remain in their own homes as long as possible and help hold families together.

For 8 years, I was Director of Alaska Homemaker-Home Health Aide Service. Our basic funding originally was from the Older Americans Act, Office of Aging. In 1974-75, this agency served statewide 253 older Alaskans. By age groups there were

Age	Number
55-60	12
60-65	20
* 65-70	131
70-75	25
75-80	18
80-85	20
85-90	12
90-95	10
95-100	2
100-113	3
	253

J. Duncan –
H. Biggs – HSS
Elgee – Admin
Sr Bills – Retirement
Finance – Lack –

With a combination of quality homemaker-home health aide service and local nursing homes re-imbursed from the pioneer fund, Senior Alaskans can remain in their own homes & our Communities

as long as possible. This plan would be less beneficial for human beings; and, per person, less expensive for government.

... elderly woman said, "I ... away from my home and family and ... died soon after ... age. Her grand daugh... great grand daughter pleaded unsuccess... ... to keep her at home - we hi... as near as that they could visit. Often ... money in the black or an - home care ... patients & and their agency members ...

	Total	$ 139,920
Benefits: .2383 % plus $141.32 per mon/per person		45,211
		$ 185,131
8% FY 81		$ 199,941
8% FY 82		$ 215,936

ATTACHMENT B
HB 374
Schedule of Costs for Residential & Nursing Care

The potential eligible population is estimated to be approximately 10,000 people.

National statistics indicate that 5% of this population will need nursing care and 9% will need some sort of alternative care.

Presently (as of Feb. 1979) 409 people are receiving nursing care statewide and 284 people are receiving residential care at the Pioneers' Homes.

5% of 10,000 equals 500 people. 409 people are receiving nursing care which indicates that 91 people (500-409= 91) need nursing care. 9% of 10,000 equals 900 people. 284 people are receiving residential care which indicates that 616 people (900-284 = 616) need some sort of residential care.

The rates for nursing care and residential care as provided by the Department of Health and Social Services indicates a rate of $88 per day for nursing care and $900 per month for residential care. The Pioneers' Home presently charge $275.00 per month for nursing care and $225.00 per month for residential care. This will reduce the rates for nursing care to $79.00 per day and residential care to $675.00 per month.

Nursing Care Costs

(As of Feb. 1979)	91 people X $79/day X 365/days =	$ 2,623.9
FY 80	10% inflation factor =	$ 2,886.4
FY 81	10% inflation factor =	$ 3,175.0
FY 82	10% inflation factor =	$ 3,492.5

Residential Care Costs

*FY 80	616 people X $675/mo. X 12 mo. =	$ 4,989.6
FY 81	10% inflation factor =	$ 5,488.6
FY 82	10% inflation factor =	$ 6,037.4

Municipality of Anchorage

POUCH 6-650
ANCHORAGE, ALASKA 99502
(907) 264-4431

GEORGE M. SULLIVAN,
MAYOR

OFFICE OF THE MAYOR

March 26, 1979

Thelma Buchholdt
House of Representatives
Pouch V
Juneau, AK 99811

Dear Representative Buchholdt:

Under provisions of Section 504 of the Rehabilitation Act of 1973 the U.S. Congress mandated that no otherwise qualified handicapped individual in the United States shall solely by reason of his or her handicap be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any program or activity receiving Federal financial assistance. The implementation of Section 504 is now being enforced by all Federal Departments. In June of 1978, the U.S. Department of Transportation issued guidelines for enforcement of Section 504 which are predicated on a new definition of a handicapped person. This Federal interpretation is much more liberal than the current definition used by the Municipality of Anchorage for our handicapped program. It will undoubtedly require future expansion of our present program in order for the Municipality to comply with Section 504 guidelines.

Supplemental handicapped transportation (demand responsive, curb to curb service) as set forth by the current Municipality of Anchorage specifications was started January 1, 1977 on a six month contractual trial basis with a budget of $22,000. Completion of this trial program indicated a strong need for continuing this type of supplemental service. As a result of this demonstration project the program was funded by the Municipality of Anchorage for the remainder of 1977. In 1978, $75,000 was budgeted for this program and the same amount likewise was budgeted for 1979. To date all funding for this program has come from the Municipality's general fund as opposed to the Senior Citizen Transportation Program which has been heavily funded by State grants.

Ridership for Transportation of the Handicapped Program in 1978 was 13,223. The present operation is sub-contracted to Far North Transportation, Inc. Each handicapped applicant with a supplemental card (issued by the Municipality of Anchorage) is entitled to the use of this service daily between the hours of 7:00 a.m. and 7:00 p.m. Transportation needed for special occasions such as plays, dinners, etc. are available by special request between the hours of 7:00 p.m. and 11:00 p.m. This is a service demand transportation program with a 24-hour advance call for demand response. There is one unit available with a lift for those patrons with wheelchair needs. During the first part of May the Municipality anticipates the delivery of two additional wheelchair lift units. At present there are approximately 350 handicapped supplemental passes issued in the Anchorage area based on the criteria above.

One of the main elements of the handicapped program has been the Municipality's definition of handicapped eligibility, which has used the following criteria:

1. Non-ambulatory disability requiring the use of wheelchairs;
2. Semi-ambulatory disability requiring the use of braces or crutches or other prosthetic devices;
3. Functional blindness.

The Federal government in effect now will require us to expand our definition. The following is an exerpt from the Federal Register, dated June 8, 1979:

> Under Section 504 the handicapped person means any person who (1) has a physical or mental impairment that substantially limits one or more major life activities, (2) has a record of such an impairment, or (3) is regarded as having such an impairment. As used in this definition (1) "Physical or mental impairment" means any physiological disorder or condition, cosmetic disfigurement, or anatomical loss affecting one or more of the following body systems: neurological, musculoskeletal, special sense organs, respiratory, including speech organs, cardiovascular, reproductive, digestive, genito-urinary, hemic and lymphatic, skin and endocrine, or any mental retardation, organic brain syndrome, emotional or mental illness, and specific learning disabilities. The term "physical or mental impairment" includes, but is not limited to, such diseases and conditions as orthopedic, visual, speech, and hearing impairments, cerebral palsy, epilepsy, muscular dystrophy, multiple sclerosis, cancer, heart disease, mental retardation, emotional illness, drug addiction, and alcoholism.
>
> "Major life activities" means functions such as caring for one's self, performing manual tasks, walking, seeing, hearing, speaking, breathing, learning, and working.
>
> "Has a record of such an impairment" means has a history of, or has been classified, or misclassified, as having a mental or physical impairment that substantially limits one or more major life activities.
>
> "Is regarded as having an impairment" means has a physical or mental impairment that does not substantially limit major life activities but that is treated by a recipient as constituting such a limitation; has a physical or mental impairment that substantially limits major life activity only as a result of the attitudes of others toward such an impairment; or has none of the impairments set forth in the preceding paragraphs of definition, but is treated by a recipient as having such an impairment.

By altering our Transportation of the Handicapped Program to include all handicapped persons meeting the Section 504 definition, the Municipality of Anchorage expects to quadruple our present ridership. Utilizing Section 504 criteria, it is estimated that in the Anchorage area there is in excess of 6,000 potential handicapped riders. Considering the additional equipment on order as well as the projection of available handicapped riders using the new criteria, the Municipality would need a 1980 budget in excess of $260,000 in order to maintain the same level of service. We plan to maximize the load

factor and reduce the cost per passenger, which hopefully would reduce the total 1980 budget to approximately $200,000.

As a result of past discrimination of handicapped persons, and the Federal mandate of Section 504, which requires correction of these discrepancies, the Municipality plans to commit itself to comply with these new regulations and urges the State of Alaska to jointly fund our Transportation of the Handicapped Program with a grant of $100,000. The Municipality will match this amount. This action will help distribute in an equitable manner State and local government's financial obligation to the handicapped and will enable the program to be partially funded by the State similar to the State's current funding of the Transportation of the Elderly Program. Your legislative support of this proposed joint program is requested.

Sincerely,

George M. Sullivan
Mayor

Municipality of Anchorage

MEMORANDUM

DATE: January 2, 1979

TO: Opportunities For The Handicapped Commission

FROM: Douglas Weiford, Municipal Manager

SUBJECT: Proposed Definitions of the term "Handicapped"

Listed below are three definitions of the term "handicapped". Please review and discuss the language of each definition and comment with regard to its suitability to the Municipality's transportation program for the handicapped.

1. "Physical Handicap" means any physical disability, infirmity, malformation, or disfigurement which is caused by bodily injury, birth defect, or illness including epilepsy, and includes any degree of paralysis, amputation, lack of physical coordination, blindness or visual impediment, deafness or hearing impediment, or physical reliance on a guide dog for the blind, wheelchair, or other remedial appliance or device.

   Source: 6 AAC 30.170(B) (current Alaska Human Rights Commission definition.

2. "Handicapped" means any person who is unable to use the mass transportation system without special facilities by reason of a physical or mental impairment or disability and has been so certified by a doctor licensed by the State of Alaska.

   Source: New.

3. "Handicapped Persons" means those individuals who by reason of illness, injury, congenital malfunction, or other permanent or temporary incapacity or disability, including those who are non-ambulatory wheelchair bound and those with semi-ambulatory capabilities, are unable without special facilities or special planning or design to utilize mass transportation facilities and services as effectively as persons who are not so affected.

   Source: 49 USC 609.3 (current UMTA definition).

IN THE HOUSE

BY THE HEALTH, EDUCATION AND SOCIAL SERVICES COMMITTEE

CS FOR HOUSE BILL NO. 374

IN THE LEGISLATURE OF THE STATE OF ALASKA

ELEVENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act relating to equalizing the costs of full-time residential or nursing care."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 47.25 is amended by adding new sections to read:

Sec. 47.25.103. CONTRACTUAL AGREEMENTS. (a) The commissioner of administration shall enter into contractual agreements with licensed institutions providing full-time residential or nursing care for the elderly to provide care to Alaska residents eligible under AS 47.25.108. A contractual agreement under this section shall provide for payment of the full daily (or monthly equivalent) charges by the institution for each eligible patient, less the amount charged under AS 47.25.030 for the equivalent level of care for a patient at the Alaska Pioneers' Home. The commissioner shall enter into an agreement under this section with the type of institution that is consistent with an individual's treatment needs.

(b) In this section the phrase "institution providing full-time residential care" means an institution

(1) that provides minimum basic care and protective supervision of residents of the institution;

(2) that does not routinely provide nursing or other medical services; and

(3) that is licensed under AS 47.35.020.

Sec. 47.25.108. ELIGIBILITY. A person is eligible to receive contractual services under AS 47.25.103 if

(1) he is eligible for admission into the Alaska Pioneers' Home under AS 47.25.010 - 47.25.110;

(2) he is not eligible for benefits from any source that would pay for the cost of full-time residential or nursing care;

(3) he resides more than 50 miles, by highway, from the Alaska Pioneers' Home, or he cannot be admitted to the Alaska Pioneers' Home because the home is full to capacity; and

(4) he is at risk of being institutionalized outside of his community if care is not provided under AS 47.25.103.

Social Worker	(1/2)	12,210
Social Worker	(1/2)	12,210
Social Worker	(1/2)	12,210
Administrative Assistant II	(1)	24,420
Clerk Typist III	(1)	16,856
Subtotal		$197,115
Benefits: 21% plus $127 per month/person		58,158
Total FY 81		$255,273
Total FY 82		$280,800
Total FY 83		$308,880

Inflation of 10% per year is assumed.

ATTACHMENT B
H.B. 374
Schedule of Costs for Residential & Nursing Care

The potential population of people in Alaska over 65 years of age is estimated to be approximately 12,000 people. However, not all these people would qualify under the eligibility requirements of H.B. 374, particularly the 15-year residency. The total number of people which would be eligible is approximately 10,000.

National statistics indicate that 5% of this population will need nursing care and 9% will need some sort of alternative care. Alaskan experience is somewhat higher due to inclement weather and the fact that more elderly Alaskans are not able to benefit from having a family nearby. A figure of 8% is more realistic for nursing care and 12% for residential care.

Presently 644 people are receiving nursing care from privately operated or municipal facilities and 154 are in Pioneers' Homes, for a total of 798 people presently receiving nursing care. Two hundred eighty-eight people are currently receiving residential care in Pioneers' Homes.

Eight percent of 10,000 eligible people equals 800 people. Seven hundred ninety-eight people are presently receiving nursing care, which indicates that substantially all people needing nursing care are receiving that care through some means.

Twelve percent of 10,000 people equals 1,200 people. Two hundred eighty-eight people are presently receiving residential care in the Pioneers' Homes. The number of needy persons receiving residential care in private homes is not known, but it is presumed to be negligible. Therefore, it is believed that 912 eligible people could benefit from residential care in Alaska.

The rates for nursing and residential care as provided by the Department of Health and Social Services averaged $2,670 per month per person for nursing care and $1,000 per month per person for residential care.

The above figures are based on present experience. It is believed that need will grow at approximately 5% per year due to the following:

1. More elderly people will be retiring in Alaska in the future due to improvements in services and benefits to the elderly.

2. H.B. 374 will make it possible to obtain care which has not been available in the past due to economic hardship.

Therefore, a 5% per year growth rate is projected.

Additional Cost of H.B. 374

Residential Care

FY 81 912 people x 105% x $1,000 x 12 + 10% inflation = $12,640,320
FY 82 FY 81 + 5% increased need + 10% inflation = $14,599,569
Fy 83 FY 82 + 5% increased need + 10% inflation = $16,862,501

M9/C

POSITION PAPER/Department of Health & Social Services

POSITION PAPER
ON
HOUSE BILL NO. 374

"An Act relating to equalizing the costs of full time residential or nursing care."

House Bill 374 amends the statutes to allow the Commissioner of Administration to enter into contracts with private residential and nursing care providers to purchase services for certain senior Alaskans who are eligible for Pioneer Home benefits. These eligible persons must meet:

1. All eligibility requirements for admission into the Alaska Pioneer Homes, including being age 65 or over and having at least 15 years of continuous Alaska residency immediately prior to admission;

2. Are not eligible for benefits from any sources (including Medicare, Medicaid or private medical insurance) that would pay for the cost of full-time residential or nursing care; and

3. Do not reside less than 50 highway miles from a Pioneer's Home that has bed space available and could admit the individual.

The Department of Adminis ration would pay for the fees charged by the facility less the monthly contribution of $225-$250 that pioneers are required to contribute if they are able to pay towards their cost of care.

General Overview

Most social scientists, health professionals, and seniors themselves acknowledge the advantage of keeping older persons in their communities and preferably in their own homes. Remaining in the community, even in cases of where the person is in an institution, enhances the senior's morale and provides security of familar settings and being close to family and friends. Too often in Alaska seniors are not given the choice of remaining in their home community when they become in need of medical or social support services, because the services they need are often unavailable or unaffordable. House Bill 374 would increase the access to residential and nursing home care for certain pioneer Alaskans who were unable to receive them from the Pioneer's Home Program due to unavailable bed space in a Pioneer's Home facility within 50 highway miles from the person's home community.

Discussion Items

1. There are many pioneers living in communities outside of the towns where Pioneer's Homes are located. In some cases such as in Juneau and Bethel, there are facilities with available bed capacity which could provide the care that these pioneers need. Presently, the

POSITION PAPER/Department of Health & Social Services

Pioneer's Home Program is limited to the provision of care only on Pioneer Home facilities and the program is not designed to purchase care from local community resources. Relocation of seniors to a Pioneer's Home in a different community at this time in the older person's life may cause a hardship on the patient, as well as his/her family.

2. There are many pioneers, as well as other seniors, who are financially unable to pay for the purchase of care in a local facility. Costs of residential care can sometimes run from $800-$1,200 a month, while nursing home care costs are considerably higher at $1,500-$4,000 a month. Senior pensions of over $625 a month are inadequate to purchase the care, but make the person financially ineligible for coverage by Medicaid or other public assistance programs.

3. Insurance coverage for residential or nursing home coverage is extremely limited. Most policies, if they cover nursing care services, at all limit coverage to 30 days of care. Also, the care generally must be necessary in place of more costly hospital care services. Residential care, since it generally does not include medical services, is not reimburseable by virtually all insurance and assistance programs to our knowledge (including Medicaid and Medicare).

4. The Department of Health and Social Services has experienced a few cases this fiscal year of pioneers who are eligible for Pioneer's Home admission, but are in need for specialized or intensive medical care that is unavailable at the Pioneer's Homes facility. These persons who are determined "too sick" to be appropriately placed in Pioneer's Homes are currently receiving care in private nursing facilities. Often the person's resources are inadequate to cover the nursing home bill, yet they are over income to be eligible for public assistance. The bill would have to be amended to allow coverage of these individuals.

5. House Bill 374 provides for the Department of Administration to base reimbursement rates on the fees charged. Our experience through Medicaid, General Relief-Medical, and Social Services programs has found that providers often charge amounts in excess to their actual allowable costs under the program. Also, allowing fees charged by providers to be reimburseable would provide no incentive for cost containment by the residential and nursing care facilities. We would recommend the Committee consider linking the rates paid under H.B. 374 to the state fees allowed under Medicaid for nursing homes or under the Division of Social Services for residential care.

6. The legislature is currently considering the passage of the Older Alaskan's Commission through H.B. 618 and S.B. 328. This Commission was designed to address these long range aging issues. It may be

POSITION PAPER/Department of Health & Social Services

appropriate, in light of the significant change of direction of H.B. 374, to reserve judgement until such a issue could be formally addressed by the Commission and/or Governor's Advisory Committee on Aging and Pioneer's Home Board.

7. In many areas of Alaska, especially in the remote ones, pioneers may still be required to leave their communities to receive care even if H.B. 374 were passed. Residential care and nursing home services are generally only available in urban areas and rural regional centers. This bill, though, may serve as an important catalyst to encourage private enterprise to develop facilities in those areas in the future by providing an important source of continuing revenue to pay for operating expenses.

Department's Position

The Department of Health and Social Services recognizes the need addressed in House Bill 374 and is supportive of the concept of increasing the availability of services to permit seniors to remain in their local communities.

Rod Betit 2/20/80

Rod Betit, Director — Date

Division of Public Assistance

Last year interest in this bill was one of several factors influencing the development of the Interim Committee on Elderly Services. As you are aware, one of the major recommendations of that interim work has been the legislation to establish the Older Alaskans Commission. Because we believe HB 374 to represent a significant change in direction for the Pioneers' Home Program, as originally designed by the Legislature, we believe that it deserves review and recommendation from the Pioneers' Home Board and Commission. Thus we first urge passage of the Older Alaskans Commission bill now in House Finance Committee.

The concept of dollars following the person eligible for entrance to a Pioneers' Home is not altogether undesirable, but it is fraught with several concerns that suggest it should be addressed in a comprehensive approach.

The program for the elderly are all creatures of the Legislature and can, of course, take new directions as desired by the Legislature. We would, however, urge an orderly approach to the new directions of services such as would be more readily available to you through the work of the Pioneers' Home Board and Commission during the next year or two.

A question must be raised regarding priorities when a bill with expensive price tags is addressed. As I read the testimony collected across the State by the Interim Committee on Services to the Elderly, high priority goes to finding a mechanism to assist the elderly and disabled who "fall through the cracks" of existing services and assistance programs, providing more home and health aide services to all elderly citizens, not just those meeting Pioneers' Home Program qualifications.

If there is sufficient need to address the needs of clients for whom HB 374 was designed prior to the establishment of the Commission and a comprehensive review, then we would recommend a less costly and more efficient approach through HB 781. The approach would be more efficient because the administrative framework and expertise exist in Health and Social Services and the Catastrophic Illness statute to which HB 781 applies is a logical vehicle. Further, the benefits would address a broader base of clients, not just pioneers.

Thus, the Department of Administration would urge (1) passage of HB 618 and the establishment of the Commission for planning and recommending the future direction of elderly services (2) involvement of the Pioneer Home Board with the Commission in that review and planning, and (3) if an interim measure is needed, the passage of HB 781 to cover both pioneer and other elderly clients.

III. ANALYSIS (See Fiscal Note Preparation Instructions, Section III)

This fiscal note is based on initiation of a pilot project which would serve Southeastern Alaska only and provide for residential care only. In a recent review of need for skilled nursing care, it became apparent that substantially all of the elderly people in Alaska who need nursing care are receiving that care through some means, although there were a few cases where the person had some sort of difficulty financially in paying for necessary services. These cases generally fell into the category of having too much income to qualify for state or federal assistance, but not enough income to fully cover cost of services where special or intensive care is necessary.

Office of the Governor, Keith Specking

33-001 (Rev. 10/78)

Rationale for Determining Costs for Residential Care

The population of people in Southeastern Alaska over 65 years of age is estimated to be approximately 2,207 people. However, not all these people would qualify under the eligibility requirements of H.B. 374, particularly the 15-year residency. The total number of people which would be eligible in Southeastern Alaska is approximately 265.

These figures were arrived at by analyzing the statistics of an existing program for the elderly, the Alaska Longevity Bonus Program. February 1980 recipients of the Longevity Bonus were 2,006 in Southeastern Alaska, and 5,736 for the balance of the state. This gives a baseline of data which indicates that 26% of the state's total population over 65 have resided in Southeastern Alaska continuously for at least 25 years, the minimum for eligibility for the Alaska Longevity Bonus. This is twice the average of the population of all ages, which is 5,400 in Southeastern to 362,000 for all the rest of the state, according to most current statistics of the Department of Labor.

The minimum length of continuous residence in Alaska to be eligible for benefits under H.B. 374 is only 15 years. Therefore, it is assumed that the percentage of eligible population would be approximately 10% higher than the Longevity Bonus statistics, or 36% of the people 65 years of age and older residing in the state because of the lesser residency requirements. This is considered to be a conservative figure, since not all people over 65 and eligible have applied for and receive the Longevity Bonus.

National statistics indicate that 9% of the population 65 and older will need residential or alternative care. Alaskan experience is higher due to more inclement weather and the fact that more elderly Alaskans are not able to benefit from having a family nearby to assist them. A figure of 12% is more realistic.

Ten percent added to 2,006 (Longevity Bonus recipients) equals 2,207 people. Twelve percent of 2,207 elderly people equals 265 people. Sixty-seven residents are presently being cared for in the Sitka Pioneers' Home and a nominal amount in other facilities. Beginning approximately January 1, 1982, fifteen to twenty residents will be cared for at the Ketchikan Pioneers' Home.

Rates for residential care average $1,000 per month per person, according to the Department of Health and Social Services.

The above figures are based on present experience. It is believed that need will grow at approximately 5% per year due to the following:

1. More elderly people will be retiring in Alaska in the future due to improvements in services and benefits to the elderly.

2. H.B. 374 will make it possible to obtain care which has not been available in the past due to economic hardship.

Therefore, a 5% per year growth rate is projected.

Cost of Residential Care

FY 81 — 265 people less 67 people (cared for at Sitka Pioneers' Home) x 105% x $1,000 x 12 months + 10% inflation = $2,744,280

FY 82 — FY 81 less 10 people (20 people cared for at Ketchikan Pioneers' Home for 6 mo.) + 5% increased need x $1,000 x 12 mo. + 10% inflation = $2,605,680

FY 83 — FY 82 + 5% increased need + 10% inflation = $3,009,560

Personal Services Costs

Social Worker (Juneau) (R16)	1	26,538
Social Worker (Ketchikan) (R16)	1/2	13,269
Administrative Assistant II (R14)	1	23,070
Clerk Typist III (R8)	1	16,020
Subtotal Salaries		$148,569
Benefits: 21% of salaries plus $127/mo. per person		$ 39,581
Total FY 81 Salaries & Benefits		$188,150
Total FY 82 Salaries & Benefits		$203,876
Total FY 83 Salaries & Benefits		$223,416

Salaries are computed in accordance with the State's new salary schedules (C.S.S.B. 182) for the period July 1, 1980, through December 31, 1981. Inflation of 10% per year is assumed for salaries after December 31, 1981.

Other Program Costs	FY 81 Costs
Travel: This would fund travel for one full-time social worker in Juneau and one half-time social worker in Ketchikan. These workers would travel to all cities and villages with a population of at least twenty-five persons where assistance is needed in relation to this program. Travel is also needed for the program coordinator. Travel between Juneau and the larger cities would be needed at the outset of the program and thereafter once a year (Yakutat, Sitka, Petersburg, Wrangell, Ketchikan) in monitoring the program.	$ 29,872
Contractual Services: Office and program operating expense, such as telephones, postage, copying, printing, etc., for the staff of two full-time and five part-time personnel. Only a small allowance is included for office space under the assumption that most personnel would be operating in already existing state office space.	$ 11,000
Commodities: Office supplies for office and field staff.	$ 2,700
Equipment: Initial outfitting of new positions with office furnishings and equipment.	$ 7,000

If H.B. 374 is approved and the Department of Administration is funded for this pilot project, it is proposed to RSA these funds to the Department of Health and Social Services, for the staff to be their staff, and for them to operate the program. This program fits precisely into the type of social services programs operated by that department.

Ten percent inflation is included in "other" program costs for years beyond FY 81.

PART TIME		1	1	1	1	1
TEMPORARY						

III. ANALYSIS (See Fiscal Note Preparation Instructions, Section III)

This fiscal note is based on initiation of a demonstration project which would serve Southeastern Alaska only and provide for residential and nursing care of those who are eligible to enter Pioneer's Homes under AS 47.25.010-110, are not eligible for benefits from any source that would pay for the cost at full-time residential and nursing care, who reside more than 50 miles from the Alaska Pioneer's Home, and do not wish to enter the Pioneers' Home.

The number of elderly Alaskans who would benefit from this bill is unknown at the present time. The Department of Health and Social Services has some indication that some need exists, but cannot quantify that need.

Original: Legislative Finance
cc: Budget and Management
Prime Sponsor (First Legislator Named)

Prepared by: George Michael Date: March 25, 1980
Division/Office: Pioneers' Home PH: 465-4401
Department of Administration

33-001 (Rev. 12/79)

Residential Care

This demonstration project would verify the scope of need, and develop residential care capability in the private sector where virtually none now exists in Southeastern Alaska.

This fiscal note is based on the assumption that only seven (7) slots would be developed during FY 81, that twice that number of slots would be available and utilized during FY 82, and that the number of slots would increase by five (5) per year after FY 82.

Rates for residential care average $1,000 per month per person in FY 80. One thousand dollars, less $225 per month payable by the recipient under AS 47.25.030 would result in a net cost to the State of $775 per month per person.

Inflation at the rate of 10% per year is included throughout this fiscal note.

Cost of Residential Care

FY 81	7 slots X $775 X 12 mo. + 10% inflation	=	$ 71,610
FY 82	14 slots X $853 X 12 mo. + 10% inflation	=	157,634
FY 83	19 slots X $938 X 12 mo. + 10% inflation	=	235,250
FY 84	24 slots X $1,032 X 12 mo. + 10% inflation	=	326,938
FY 85	29 slots X $1,135 X 12 mo. + 10% inflation	=	434,478

Nursing Care

Based on statistics of the Department of Health and Social Services, a total of 23 vacant nursing beds are available in Southeastern Alaska at the present time. It is assumed that one-half of these beds would be filled in FY 81, and all 23 would be filled by FY 82.

The average cost for nursing care in FY 80 is $3,422 per month per person. Three thousand four hundred twenty-two dollars, less $275 per month payable by the recipient under AS 47.25.030 would result in a net cost to the State of $3,147 per month per person for FY 81. It should be noted that overall cost of care in the Pioneers' Homes is $2,110 per month per person for FY 81.

Cost of Nursing Care

FY 81	12 beds X $3,147 X 12 + 10% inflation	=	$ 498,485
FY 82	23 beds X $3,462 X 12 + 10% inflation	=	1,051,063
FY 83	23 beds X $3,808 X 12 + 10% inflation	=	1,156,109
FY 84	23 beds X $4,189 X 12 + 10% inflation	=	1,271,780
FY 85	23 beds X $4,610 X 12 + 10% inflation	=	1,399,596

Administrative Costs

At the outset, a Program Coordinator would be required to develop the program, contact prospective providers of residential and nursing care to encourage development of capacity in existing and/or new facilities, and guide those providers by setting standards, providing information relative to licensing, determining standard operating procedures, etc. When the program is up and running, the Program Coordinator will have the responsibility for successful continuation of the program.

A Social Worker is needed on a half-time basis to advise and assist the eligible elderly persons in obtaining benefits and with personal problems.

A Clerk Typist is needed for clerical support of the Program Coordinator and Social Worker.

		FY 81 Cost
Personal Services		$ 74,413
Salaries - Program Coordinator (R-18)	$29,580	
Social Worker III (R-16)(1/2)	12,792	
Clerk Typist III (R-8)	15,324	
Subtotal	$57,696	
Benefits	16,717	
Total Salaries and Benefits	$74,413	
Travel		14,000
For Program Coordinator and Social Worker		
Contractual Services		10,000
Office and program operating expenses		
Commodities		1,500
Office supplies for office and field staff		
Equipment		4,800
Outfitting of new positions with office furnishings and equipment		
Total Administrative Cost		$104,713

If House Bill 374 is approved and the Department of Administration is funded for this pilot project, it is proposed to RSA these funds to the Department of Health and Social Services to operate the program.

TESTIMONY ON HOUSE BILL 391

"An Act relating to competition by the University of Alaska with private businesses."

TO: House Committee on Health Educational and Social Services and Judiciary

Mrs. Thelma Buchholdt, Chairperson

BY: Donald E. Slone
902 West International Airport Road
Anchorage, Alaska 99502 (276-3033)

Thank you for this opportunity to testify before your committee on House Bill 391. My name is Don Slone. I'm a professional engineer and a partner in an architectural/engineering firm in Anchorage.

My comments relate primarily to the Arctic Environmental Information and Data Center (AEIDC) and, secondarily, to other governmental agencies. This is not because I'm out to undermine AEIDC but because it is a University agency I'm familiar with. In fact, I feel AEIDC provides an important function, but for reasons they may either control or not control, they find it necessary to do work in areas that compete directly with my business.

The problem is that their ability (or need) to compete with private business is not well defined. Because of this and the legislative authority given to the University of Alaska to be "contract and be contracted with" the State's Ombudsman does not investigate complaints of competition with private businesses.

There is something morally wrong, though, when a public agency is allowed to acquire work on a competitive or even speculative basis. It is even worse when they maintain this is necessary to obtain the funding to support their staff level.

Any time a governmental agency attempts to procure work on a competitive basis, it tells me that my tax dollars are being used improperly. It is especially frustrating when such agencies are directly competing with my livelihood. I am, in those instances, quite literally supporting the competition.

And why? Because they are less costly or more efficient? I don't believe so. I expect other testimony here today will comment directly on the fallacy of governmental efficiency and subsidized rates; so I won't.

Instead, I'd like to state that the proposed House Bill 391, while being a step in the right direction, is inadequate because it attacks the symptom instead of the problem. The 20% cost differential tries to address the symptoms. The problem is that they are allowed to, or even have to, compete in order to function as a viable entity.

In AEIDC's case I feel they are placed in a competitive position by two factors:

First, they are apparently underfunded for the mission they feel they must fulfill.

Secondly, they are frequently asked by other governmental agencies to perform services they were not established to provide.

This creates pressure from both ends. Too much work and not enough dollars. They must then attempt to acquire other funds to keep up the staff level necessary for the inflated work load.

The solutions then seem apparent: remove both the ability and the need to compete.

I encourage you to expand this Bill to be something more than a monetary scale for measuring what is fair and not fair. What is "20% higher"? Is it based on a lump sum price? And if so, out of whose pocket does a cost overrun come? From the employees of the state or the state taxpayers? We know what happens in private industry.

Instead expand it to include:

1. clear legislative definition of agency purpose; and

2. restrictions against any competition with private businesses.

Care must be taken in writing a bill that tries to be a cure-all. There is the possibility of a backlash in trying to be too protective as was the case with the lien law. Perhaps have a statement of total non-competition intent is sufficient. Such action would provide the basis for the State's Ombudsman to investigate complaints.

The executive branch should be asked to establish administrative policy to use private enterprise whenever possible. Regulations must be implemented which delineate when governmental agencies can ask others to provide services and when those agencies should solicit proposals from private businesses. This will go a long way in limiting the "empire building" the State is often accused of.

As I said when I began, these comments relate to all governmental agencies. To AEIDC's credit, they seem to be a cost-conscience organization and try to avoid competition. It does not always happen. Usually pressure must be executed first. What we should do with this Bill is address the problem and not the symptoms. There are better uses for our tax dollars than funding our own demise.

Thank you.

February 9, 1979

Representative Thelma Buchholdt
Pouch V
Juneau, AK 99811

Dear Representative Buchholdt:

I have attached a copy of a letter to Commissioner McAnerney explaining my concern about Arctic Environmental Information and Data Center's (AEIDC) ability to use tax dollars to compete with private enterprise on a project for which the Department of Community and Regional Affairs recently solicited letters of interest.

I objected on the basis that AEIDC uses taxpayer's money to compete for work that can be done by private Alaskan businesses. The State's Ombudsman's Office has informed me that it has no jurisdiction over the situation, and suggested recourse through the legislature.

Apparently when the University created AEIDC it was not their intent for AEIDC to compete with private enterprise. Nor was that the legislature's intent when it funded AEIDC in 1972 for arctic data collection and library services.

Statutory authority allows the University of Alaska to "contract and to be contracted with." It is through this loop hole that AEIDC, as a subpart of the University, has been providing services in areas that Alaskan businesses can and should be fulfilling. In the absence of clear legislative intent and executive authority, AEIDC has been operating under informal University administrative policy. I would like your assistance in clarifying this situation through the legislature.

The State's Ombudsman has a file and list of numerous complaints on this matter that may provide you a greater understanding of the concern by the State's taxpayers and businesses. If I can provide additional information, please contact me. Thank you for your assistance.

Sincerely yours,

CONSTRUCTION SYSTEMS MANAGEMENT, INC.

TESTIMONY ON HOUSE BILL 391

"An Act relating to competition by the University of Alaska with private businesses."

TO: House Committee on Health Educational and Social Services and Judiciary

Mrs. Thelma Buchholdt, Chairperson

BY: Donald E. Slone
902 West International Airport Road
Anchorage, Alaska 99502 (276-3033)

Thank you for this opportunity to testify before your committee on House Bill 391. My name is Don Slone. I'm a professional engineer and a partner in an architectural/engineering firm in Anchorage.

My comments relate primarily to the Arctic Environmental Information and Data Center (AEIDC) and, secondarily, to other governmental agencies. This is not because I'm out to undermine AEIDC but because it is a University agency I'm familiar with. In fact, I feel AEIDC provides an important function, but for reasons they may either control or not control, they find it necessary to do work in areas that compete directly with my business.

The problem is that their ability (or need) to compete with private business is not well defined. Because of this and the legislative authority given to the University of Alaska to be "contract and be contracted with" the State's Ombudsman does not investigate complaints of competition with private businesses.

There is something morally wrong, though, when a public agency is allowed to acquire work on a competitive or even speculative basis. It is even worse when they maintain this is necessary to obtain the funding to support their staff level.

Any time a governmental agency attempts to procure work on a competitive basis, it tells me that my tax dollars are being used improperly. It is especially frustrating when such agencies are directly competing with my livelihood. I am, in those instances, quite literally supporting the competition.

And why? Because they are less costly or more efficient? I don't believe so. I expect other testimony here today will comment directly on the fallacy of governmental efficiency and subsidized rates; so I won't.

Instead, I'd like to state that the proposed House bill 391, while being a step in the right direction, is inadequate because it attacks the symptom instead of the problem. The 20% cost differential tries to address the symptoms. The problem is that they are allowed to, or even have to, compete in order to function as a viable entity.

In AEIDC's case I feel they are placed in a competitive position by two factors:

First, they are apparently underfunded for the mission they feel they must fulfill.

Secondly, they are frequently asked by other governmental agencies to perform services they were not established to provide.

This creates pressure from both ends. Too much work and not enough dollars. They must then attempt to acquire other funds to keep up the staff level necessary for the inflated work load.

The solutions then seem apparent: remove both the ability and the need to compete.

I encourage you to expand this Bill to be something more than a monetary scale for measuring what is fair and not fair. What is "20% higher"? Is it based on a lump sum price? And if so, out of whose pocket does a cost overrun come? From the employees of the state or the state taxpayers? We know what happens in private industry.

Instead expand it to include:

1. clear legislative definition of agency purpose; and

2. restrictions against any competition with private businesses.

Care must be taken in writing a bill that tries to be a cure-all. There is the possibility of a backlash in trying to be too protective as was the case with the lien law. Perhaps have a statement of total non-competition intent is sufficient. Such action would provide the basis for the State's Ombudsman to investigate complaints.

The executive branch should be asked to establish administrative policy to use private enterprise whenever possible. Regulations must be implemented which delineate when governmental agencies can ask others to provide services and when those agencies should solicit proposals from private businesses. This will go a long way in limiting the "empire building" the State is often accused of.

As I said when I began, these comments relate to all governmental agencies. To AEIDC's credit, they seem to be a cost-conscience organization and try to avoid competition. It does not always happen. Usually pressure must be executed first. What we should do with this Bill is address the problem and not the symptoms. There are better uses for our tax dollars than funding our own demise.

Thank you.

DARBYSHIRE & ASSOCIATES
community planning and management services

January 14, 1980

The Honorable Thelma Buchholdt
House of Representatives
State of Alaska
Pouch V
Juneau, Alaska 99811

Dear Representative Buchholdt:

Thank you for inviting us to express our views on the most desirable relationship between state research projects, the University of Alaska, and the private consulting community. While we acknowledge a need for universtiy-level research, the role of the university should be clearly spelled out if the state and its citizenry, and the university and its students, are to benefit. This letter outlines some of the considerations that we feel should be taken intc account in defining the most effective role for the university's research agencies.

As a starting point, I would like to examine what has transpired to date. Historically, the state has wisely authorized and funded a variety of university research agencies (e.g. ISER, AEIDC, etc.). These actions were founded on good intentions and a need to fill a specific research requirement. Unfortunately, such research organizations don't seem to be able to exist for the sole purpose of accomplishing their initial charge. Once in existence, they become dynamic organizations that must develop credibility. Thus, they move to take on more responsibilities, consulting projects, staff, office space, etc. In the process, the administrators gain recognition, climb up the professional/professorial ladder, justify salary increases, and gain professional mobility.

AEIDC is a prime example of this phenomena. Authorized by the legislature in 1971, AEIDC was initially charged with the responsibility to serve as a repository for arctic environmental information and data. Further, the legislature appropriated $100,000 for the first year's operation of the organization.

420 L street, suite 403 / anchorage, alaska 99501 (907)-272-5443

Since 1971, AEIDC has grown substantially. To quote Mr. Foster F. Diebold in his correspondence of March 22, 1979 (he was then President of the university) to the Honorable Glenn Hackney: "In 1977-78 their appropriation was $520,400. $176,388 was paid for rent. The balance of their budget came from contractual funds received through grants and contracts. Thus, in effect, state monies covered 27% of their budget." In other words, 73 percent of AEIDC's budget ($1,405,000) came from consulting work over and above that which they received directly from the legislature. This made AEIDC one of the largest consulting firms in the state in 1977-78.

Such growth and personal aggrandizement would not be all that bad <u>if</u> the state were to equally gain something. But, does the state save money because the university can do the research cheaper, do it better, or do it faster? No, the university doesn't do its research work for the state or federal government for less than private consulting firms. They do it for the same price or more! This, when their basic existence and core administrative, accounting, bookkeeping, personnel, recruiting, and office space are being completely paid for by the state! In essence, then, the state ends up paying <u>more</u> to use the university research organizations than if they were to use private consulting firms.

As to the question of getting better work from the university, I don't think you will find this to be the case either. Rather than comment on this personally, however, I suggest you contact any of the state agencies who have used the university as consultants in the past for their evaluation of the products they received.

It has been suggested that there is a proposal to set up a system whereby the university would have the first right of refusal on all state contracting/consulting work. If the university decided that they didn't want to, or couldn't do the work, then, and only then, would the request for consulting services be available to the private sector. If this is true, I would strongly caution against the adoption of such a proposal. Oh - the problem of competition between the university and the private sector would certainly be defused. But the negative ramifications would be <u>devastating</u> for the state.

First, with the volume of consulting work that is to be done in the state over the foreseeable future, we would see the growth of a university research bureacracy like you wouldn't believe! Secondly, the state would end up paying far more for its research consulting needs than necessary. For instance, our firm is now completing a community profiles project for the Department of Community and Regional Affairs. Our budget for this project totals $208,000. According to information we have received, AEIDC said they would do the job for $260,000. If the proposed system would have been in existence, we would not have had a chance to bid on the project and the state would have unnecessarily spent $52,000.

Finally, there is one heck of a lot of technical and intellectual capability outside of the university. If the proposed system were activated, it would severely limit the use of this capability.

Frankly, I'm not sure how this problem will ever be resolved. It is our opinion, however, that the following policies should be examined in determining the ultimate role for the university's research organizations:

- Historically, universities have been centers for higher learning; places for the gathering and dissemination of knowledge in advanced fields of study; and have provided facilities for teaching and research.

- The university should involve itself in the research of issues that have statewide interest and concern.

- The university should seek to develop required research capabilities that do not now exist in the state or private sector.

- The university's research capabilities should be directly funded by the state through adequate legislative appropriations. This would give the university the freedom from investigative restriction that exists when research is conducted under contract.

- The university should do research as part of its education system to assist students rather than getting students to fit into a mold that their contractual obligations require.

Maybe a solution to the problem would be for state agencies to publish a notice of intent to request proposals in house and allow private firms an opportunity to demonstrate their ability to provide such services. The state would then reserve it's option to go public if the contracting agency felt that the in-house request for proposal had not resulted in a satisfactory response.

My own suggestion would be to adopt HB 391 by amending Sec. 14.40.045 by deleting the last words of the paragraph that state "at a price no more than 20 per cent higher than that submitted by the university." This should, however, be followed up with an appropriation of funds to permit the university to carry out its necessary and desired research programs.

What has come to pass is a system where the Alaska consulting community finds itself in a situation where they are competing for their livelihood with the state through its university system. Needless to say, competing for one's livelihood against state organizations who are set up, funded and operated with our own tax dollars doesn't make us too happy. Especially when it is remembered that if we don't get the work, we don't make an income and will eventually be forced out of business. However if the university doesn't get the work, they still have a job, get paid, accrue vacation time, and have another shot at securing additional work.

We appreciate this opportunity to be heard on the matter, and we stand ready to provide additional information as required.

Respectfully submitted,

Ralph R. Darbyshire
President

THOMAS DOWELL, JR. PH. D.

Chairman and Members of the House Committee on Health, Education and Social Services
Pouch V
Juneau, Alaska 99811

Dear Madam Chairman and Committee Members;

I wish to thank the members of the Committee for the opportunity to talk to them on the telecommunication network on April 6, 1979 in reference to H. B. 391.

During the hearing Representative Chatterton commented that the question of constitutionality of the bill being considered may be raised in the Judiciary Committee with, I presume, particular emphasis probably being placed on the propriety of the legislature interfering with the policy-making authority of the Board of Regents and University administrators.

Not being a lawyer, I become uncomfortable when I am told, as I have been in this case, that what the law says and what it means are not necessarily the same. However, I still wonder, as I look at Alaska Statutes, Chapter 40, Section 14.40.040. General powers of the university. This section apparently indicates that the legislature " ..created and established a corporation to be called the University of Alaska. It may in that name

(1) sue and be sued;
(2) receive and hold real property;
(3) contract and be contracted with;
(4) adopt, use and alter a corporate seal;
(5) do and have done all matters necessary for the purpose of any function set forth in this chapter.

If that says to you what it says to me, the Alaska legislature created the University corporation and authorized it to have certain powers. It seems to me that if the legislature created the corporation and authorized it to have certain powers, the legislature can modify that charter and those powers.

This bill would not impinge upon academic freedom, nor would it direct the University in the conduct of its primary goal. The University was created to pursue the gevernmental taks of providing education in accordance with an express mandate of the constitution, Article VII Section 2. State University. The University of Alaska is hereby established as the state university and constituted a body corporate. It shall have title to all real and personal property now orhereafter set aside for or conveyed to it. Its property shall be administered and disposed of according to law.

None of the powers authorized under Section 14.40.040. address education. Curriculum is addressed in Section 14.40.060.

I believe the powers of the corporation can be modified by changing Section 14.40.040, paragraph (3) to read

> (3) contract and be contracted with, provided that such contracts may not permit the University to compete with private business;

Such a change would not prevent the University from contracting with suppliers, faculty, construction contractors working on University property or lands, or other similar contractors. I believe this was the type of contract the legislators had in mind in writing such a clause into Section 14.40.040., and the change I suggest would not limit that authority. It would eliminate the activities this bill addresses while not conflicting with the University's role in education.

In my testimony I said that if research institutes depend upon competition with private business for their survival, then they are not research institutes and should not survive. Mr. Darbyshire indicated the problem these institutes have. They have grown in size as a result of their activities in the private sector and have lost sight of research in order to maintain staff. The solution to this problem is to reduce staff and maintain only their research activities.

This is a problem many universities have faced with declining enrollment. I know first-hand because I worked in pure and applied research in the Center for Advanced Computation, Department of Computer Science, University of Illinois. When our research funds were reduced staff was reduced. We did not market nor compete in the private sector. Although dire threats of extinction were made, the Center still exists and is engaged in education and pure research.

Under the powers now held by the University it can enter into any field it chooses to. If it wanted to it could build an airline for its Aviation Tech program, open a bakery for its Food Technology program or maintain a staff of highly competent graphics specialists to prepare presentation material for industy and academia. Of these three options, so far only the last is on the market.

It is important that the Committee recognize the distinction between interference in the educational and/or policy process and modifying corporate authority. Only the latter need be addressed. I believe it is only a clarification of previous legislative intent. I can't imagine the free-spirited members of the legislature in 1949 creating a corporate entity that would compete with them in business.

If the modifications to the corporate powers are considered in this context, the need for threats of budgetary control or other distasteful situations which serve neither the public nor the University well can be avoided.

Sincerely,

Thomas Dowell

Thomas Dowell, Jr., Ph. D.

were underway this year, there are many aspects of rural Arctic education that may not be fully covered. For this reason, the interim committee worked with the Alaska Native Foundation in the fall to put together a plan consisting in part of the following:

a). Review of programs of teacher training and cultural institutes of other circumpolar nations, and how they have dealt with

(1). materials development;
(2). teacher and administrator training;
(3). scheduling and alternative "tracking" for students;
(4). curriculum and program design, including provision for diverse student interests and career plans; and
(5). delivery systems

b). How all of the above could be used in Alaska as models to upgrade our teacher training and administrator program for Native and non-Native Alaskans.

The work project with the Alaska Native Foundation is much more complicated and has to be continued during the first few months of this legislative session. The interim funds for this project had been set aside, and should be reflected in the budget lapsing into the General Fund.

3). An assessment of what may be unfair competition by the University of Alaska research with private enterprise (HB 391) received an informal commitment from the President of the University that right serve as partial solution to this apparent problem of the private sector; the solution might be that those projects which could not be done by the U. of A. research on its own and are put out to bid by the State of Alaska should be left to be done by private businesses with the lowest bid. Further expression

Jay Barton
President

UNIVERSITY OF ALASKA
FAIRBANKS ALASKA 99701

February 29, 1980

TO: Representative Thelma Buchholdt

FROM: Jay Barton
President

RE: HB 391: "An Act relating to competition by the University of Alaska with private businesses" - Fiscal Note

At your request, we have made an initial analysis of the potential impact HB 391, "An Act relating to competition by the University of Alaska with private businesses", would have on the University of Alaska. Time constraints mandated that this initial assessment focus on the University of Alaska - Fairbanks, and the Organized Research units in reviewing the magnitude of current State contracts. In analyzing current budgeted Federal receipts (grants and contracts), your requirement for immediate information has mandated that we focus on the University of Alaska - Fairbanks; Organized Research units; and Rural Education. (Please note: Additional Federal Receipts, in the amount of $7,302.4, are budgeted to be received by UAA, UAJ, Community Colleges and the Cooperative Extension Service.) We assume that the figures presented below primarily reflect grants and contracts awarded on a competitive basis; some proportion of funds received through grants and contracts undoubtedly have also been awarded on a sole-source basis. An assessment of which grant and contract funds received by the University were bid upon by private firms, at a price no more than 20% higher than our proposals, would require analysis by the entities awarding such grants and contracts.

STATE-FUNDED CONTRACTS

State contracts awarded UAF and Organized Research in the period of July 1, 1979, through December 31, 1979.

AEIDC	$104.8
ISER	125.0
Institute of Water Resources	60.6
Cooperative Wildlife Research Unit	30.0
Department of Engineering	37.2
Library	2.0
Museum	33.6
Safety	2.0
School of Business & Management	6.0
Agricultural Experiment Station	10.0
Department of Geology	6.5
Sea Grant Program	12.1
Cross Cultural Education	3.0

To: Representative Thelma Buchholdt
From: Jay Barton
Re: HB 391
Date: February 29, 1980

State-Funded Contracts (7/1/79 - 12/31/79) - continued

Cooperative Fisheries Research Unit	$ 19.0
Conferences & Institutes	15.3
College of Arts & Sciences	26.7
Institute of Marine Science	1.0
TOTAL	$494.8
Annualized: $494.8 X 2 =	$989.6

Time constraints have precluded development of a similar breakout of funds for the Division of Community Colleges, Rural Education and Extension; the University of Alaska, Juneau; and the University of Alaska, Anchorage. It is important to note, however, that the Alaska Department of Education currently contracts with many of the Community Colleges to provide Adult Basic Education instruction.

FEDERALLY-FUNDED GRANTS AND CONTRACTS

From FY80 Authorized Budget (FCC).

	Federal Receipts	GFM	Total
Organized Research	$37,134.3	$1,502.1	$38,636.4
REA-Research & Professional Centers	518.9	---	518.9
UAF-Research & Professional Centers	165.0	---	165.0
TOTAL	$37,818.2	$1,502.1	$39,320.3

In summary, two points should be made concerning HB 391 fiscal impact on the University:

1. Normal conduct of business is to award grants and contracts to the lowest responsible and responsive bid. In normal practice, bids are called for to be unconditional. HB 391 in practical effect requires any bid by the University of Alaska to be unresponsive to bid requests by requiring a self-imposed condition on all our bids. The University would effectively be prohibited from bidding on grants and contracts at all, because most parties (i.e. all parties except State of Alaska agencies) seeking bids would not tolerate such a condition.

2. It is accurate to state that virtually all grants-and-contracts' activity of the University of Alaska could be jeopardized by HB 391. Furthermore, the Bill speaks strictly to dollar amounts of competing bids, and does not speak to the scope or qualitative ability of competing bids, an issue of absolutely critical importance to funding sources.

HB

401

TESTIMONY OF PATRICK PLETNIKOFF ON H.B. 728
MOBILE DENTAL CLINIC
April 7, 1978

Throughout the dental feasibility study conducted by APIA for the Aleutian/Pribilof area, it was very early apparent that massive efforts were made by Public Health Dental Units to deliver service to the people of this area over the past few years. However, the records show that these efforts were often uncoordinated, equipment very often arriving days late after the professional staff had arrived and in some cases when the dentist was ready to leave or had already left. One could criticize the Public Health's efforts to deliver dental care in almost the same wording as Dr. Douglas Smole, Chief, Service Unit Dental Program used in his criticism of our plan to use mobile units combined with supervisory professionals and overwhelming numbers of volunteers who want to help free of charge. I quote him here "one shot" programs have no potential for continuing success when they deal with disease processes as multifactorial as dental diseases. Furthermore, one shot programs are usually not cost effective."

The records clearly show that the one shot approach is in fact the approach most often followed by the PHS Dental Program.

In 1974, 1975, 1976, and 1977, the records clearly indicate that the one shot a year plan was the plan used and the same plan is anticipated for 1978.

Let's explain the facts.

ATKA - Village received a total of 9 days dental service with a single dentist from 1974 through 1978 and even at that the dentist waited for his equipment to arrive and in one case decided to talk about good dental health to the children instead because he had no equipment.

FALSE PASS - Received 9 days of dental care from 1974 through 1978. The 1974 trip was aborted due to weather and another attempt was made in March of the following year.

KING COVE - From 1974 through 1978 the average days of service for dental treatment was 10 days a year for a population of over 270 people. 7 evenings were devoted to night emergency treatment of adult teeth in 1974 and the dentist was told by his superiors the program emphasis was for children's teeth, not adults. Even with this increased number of days of service the reports read (rampant cares) decay out of control, and once again the late arrival of equipment needed to treat patients.

BELKOFSKI - Children were transported to King Cove when the dentist was there for emergency care. No opportunity was available for adults or out of school youth beyond grade 8 to have dental assistance.

NIKOLSKI - From 1974 through 1978, 5' days of service was delivered to children. A planned trip for November of 1976 was attempted again the next year in May.

NELSON LAGOON - 1974 to 1978, 9 days of service. An aborted trip in November was attempted again 6 months later.

SAND POINT - 1974 to 1978, almost 20 days a year of dental service was available except for the days equipment was late in coming and the time spent trying to find a place to have a clinic. The dental staff had to clean out an old building in order to set up at all, and the portable equipment arrived 3 days later leaving 4 of the 9 days for treatment. Community response was reported as very poor. Obviously little pre-planning was done to involve the communtiy.

UNALASKA - Public Health reports a population of 104-252. The dentists say 500 year around. An average of 11 days service per year since 1974 with the usual late arrival of equipment reported by the dentists. A flouride program in the water system seems to be helping here.

A private practitioner in May of 1976 delivered emergency care for a 7 day period. The previous October, over 100 adults requested emergency treatment.

ST. PAUL - Reported population, 419. Although this community had more days care per year than all the other villages from 1974 to 1977, reports were of rampant dental disease, high sugar consumption and little or no community dental plan. Lack of coordination with school; 30 children reported as not showing for check ups in one period.

ST. GEORGE - Average of 6.4 days a year since 1974 of dental care by a dentist for a community of 154 people. Emphasis on children's teeth.

We cannot over emphasis our intention in our request for support of this program of dental care for the Aleutian/Pribilof people. We do not have as a goal the embarrassment of PHS, Indian Health Service of private practitioners. We appreciate all past efforts to check dental disease in our islands. The records clearly show that the present system is not working satisfactorily and a new approach is needed. We ask only that the new approach be given the support it deserves. The worst that can happen is the communities will get a little more dental care and the mobile unit can be used by any agency wantint to use it for delivery of service to our area.

The best that can happen is that we will have discovered and tested a new funtional, less expensive way to bring dental health care to bush Alaska and other areas will be using the money they now waste on poor programs to duplicate this method of service.

South Central District Dental Society

P.O. BOX [illegible] 3-487
ANCHORAGE, ALASKA-99508 99501

March 17, 1978

Representative Alvin Osterback
Alaska State Legislature
Pouch V
Juneau, Alaska 99811

RE: HB 728 - mobile dental clinic

Dear Representative Osterback:

The South Central District Dental Society is deeply concerned that state funds be spent for services to specific, designated, select geographic groups. This would set a precedent of legislating public tax monies to provide health care for a group limited by race and geographical location.

It appears that the Aleut-Pribilof Corporation did not assess rural area resources already available to meet the area's dental needs. Furthermore, it seems no cost effective studies were performed, nor did the Aleut-Pribilof Corp. and the Indian Health Service coordinate in planning the project referred to in the bill.

The proposal of $200,000.00 appropriates $100,000.00 for transportation and $100,000.00 for equipment. We are concerned that no appropriations were made for manpower evaluation and licensing - or continuation of the project in successive years.

If, however, the funds are allocated, fixed facilities and equipment should be used in preference to a mobile unit. This would allow more equipment in more areas for the same dollar amount. As many as 20 communities could be served with permanent equipment.

Federal and state funds are currently being used in cost effective programs which provide services for the dentally needy, further, the continuity of licensed voluntary manpower is available within the state. Services may be provided through a multiplicity of funding sources such as: Indian Health Service, private insurance, Medicaid, General Relief Medical, and native health corporations.

In view of the above information, it seems apparent, that, in the interest of all Alaskans, the proposed legislation be further investigated. Please contact our lobbyist, Mr. Henry Pratt, for any additional information and assistance.

Sincerely,

William F. Pell, D.D.S., President
South Central District Dental Society

REPLY TO SOUTHCENTRAL DISTRICT
DENTAL SOCIETY LETTER OF 3-17-78

To: William P. Fell, DDS, President
South Central District Dental Society

The letter signed by Dr. William Fell of the South Central District Dental Society was reviewed with interest and amazement. Why should the South Central Dental Society be concerned with an area of the State they do not serve nor have any intention of serving with dental care?

The statement that this program would provide health care for a group limited by race and geographical location is indeed erroneous by design. Nowhere in the proposed bill is health care limited to any one race. When it comes to geography, of course this demonstration project is designed geographically to demonstrate a solution to a problem of geographic delivery of service. Almost every bill out of the hopper has a geographic area of service or demonstration.

The Aleutian/Pribilof Association did assess rural area resources already available to meet the area's dental needs and found all sources committed, over committed and over spent and underfunded. When it comes to cost effective studies, the Dental Association should be willing to pass over this snake pit. Private dentists from the South Central Region occasionally contracted to deliver service were so far out of reach price wise that cost effectiveness would be a joke.

For instance, one dentist billed us $30,000 for 10 days of service. That's 25% of the total PHS allotment for the entire area for a year.

The system we anticipate with this unit has proven itself over and over again as cost effective. We don't need to study the study anymore. The State of California found it so cost effective even Ronald Reagan made the support of the mobile dental units a part of the regular State budget every year to solve the dental problems of farm workers and their children.

We do not know where Dr. Fell gets his figures on cost of the unit and delivery of service. The correct figures are attached.

So far as continuation of the project over the years, we as a district have applied for self management of dental health care funds allotted to our district and have a long time commitment from the dental school to stick with us over the years ahead. We will not be returning every year for additional funding as some people have suggested.

Most of our communities lack even basic housing at this time for families. To suggest fixed facilities be built by the State for dental care is really uninformed. Does the good doctor know what it costs the State for a 900 sq. ft. building for schools in the bush? He is talking about millions, not thousands for his plan.

What does the doctor mean when he says "The continuity of licensed voluntary manpower is available within the State." Is he suggesting his organization will volunteer dental services? If so, we accept and will make the mobile dental unit available to them for that purpose.

As our program develops we will need all the help we can get and hope we will be able to count on Dr. Fell and his association for consulting and direct service.

Yours Sincerely,

ALEUTIAN/PRIBILOF ISLANDS ASSOCIATION, INC.

Patrick Pletnikoff
Executive Director

PP:alp

SPECIAL NOTE

On the strength of various legislators' commitments to this project and our own faith in the legislature, the University of California has begun work on the dental bus already, so it will be completed in time to be operational this summer. Their students picked up the shell bus in Michigan and drove it back to school on their Easter Vacation.

We are told they have over 80 volunteers wanting to serve Alaska. It would be an embarrassment to have this Bill fail.

Recommendations

It is the recommendation of this consulting agency based on the information gathered to date that there are a number of alternatives to solving the problems of delivery of dental health care to the Aleutian/Pribilof Islands.

It should be understood that this area is the most expansive geographical area in the State covering over 1,000 air miles from Kodiak Island to the Pribilofs and that, although great, efforts have been made under limited budgeting restraints by the Indian Health Service and other agencies to provide care the task was almost impossible. Without a rather dramatic community dental health education program coupled with the availability of a number of practioners, the task may never be accomplished.

Alternative I

Establish a dental unit in each of the 11 villages and bring in a dentist when needed.

Most villages have enough dental problems to require the presence of a dentist 100% of the year. The cost for such a program would be prohibitive due to State regulations and standards for building a dental health clinic coupled with the problem of getting a single dentist to work alone in one of these isolated villages as a life work.

Estimated cost of this plan would be approximately $350,000 for each of the 11 villages served or approximately $4 million without staff or equipment.

Alternative II

Fly in with 3 or 4 dentists with portable equipment, set up a clinic in the school or church and recruit students and townspeople to have their teeth repaired.

(1) Housing would be required for staff of professionals and support staff.

(2) Auxiliary x-ray developing tanks, etc. would be set up in some available building.

(3) Although the equipment for portables is good it does take up badly needed school space and it is more difficult to find things to work with under such conditions. The program is usually viewed as an intrusion because it displaces space and often staff to meet its goals as another extra in an already crowded school program.

(4) The availability of the numbers of staff necessary to complete satisfactorily the work needed is remote - other areas of the State are also in need and would suffer if staff were diverted to the Aleutian area needs.

Alternate III

Is the development of a complete mobile multi-seated and work station dental clinic completely outfitted as a large city facility not dependent on old buildings or the availability of space dedicated to the school program. Such a program has been tried previously and successfully carried out by the University of California Dental School under the direction of Dr. Stark and Dr. Solberg.

Visitation to the University of California Dental School and to its operational unit working in the Sacramento Valley fields for migrant workers' children. The willingness of the Unversity to commit for such a project as this was explored and the possibilities look good for such an arrangement to be made similar to the porject now serving the migrant workers and .

This program operates as follows:

1. Advance staff do surveys of the community to be served.

2. Massive school and community programs of information and education are are initiated prior to the arrival of the mobile unit. Charts, posters and public lectures and films on diet health and tooth care are conducted.

3. Dental mobile unit arrives staffed by 3 University of California staff dentists and dental graduates awaiting their final licensure. Also a part of the team are dental hygienists who assist and work wi h the unit.

4. The complete unit operates steadily often rotating in other volunteers as needed.

5. Volunteers are paid only a per diem subsistence allowance and transportation costs. They would receive additional credit for added clinical experience.

6. A periodontist would also spend time in the unit and a good possibility of a follow up prosthetic unit to work over the year on dentures be good.

At present the Aleutian people have no qualified personnel to deliver dental health needs to their people and the Public Health Service delivers only emergency type care to this area.

Due to the over 1,000 miles one must travel in order to cover the distance of the Aleutian/Pribilof area -- and the isolation of the communities -- there is not adequate space or facilities to do quality dental work and as a result very little restorative work is done. The pattern has been to extract rather than repair.

With the mobile dental unit we are designing, we will be able to move this total working clinic from one place to another and recruit quality personnel to staff it.

The Aleutian/Pribilof Islands people have no funds at this time to develop this unit and provide the service.

Unless we have these facilities we will not be able to recruit the volunteer dentists and hygienists to work on our people.

Our objectives are to design and build a mobile dental vehicle equipped with three chairs -- total service units comparable to any funds in a large city setting; to equip a step van to follow for the x-ray unit and hygienists and records; to staff the vehicles with volunteer dentists supervised by the professional staff of the University of California Dental School; to also staff the vehicles with volunteer hygienists and trained dental assistants; and to deliver full dental health service to all our people and to then make our units available to other Native groups in need in Alaska.

Methods of delivery of dental care to isolated areas have been examined throughout this country as well as in Canada and countries abroad; specialist in California and in British Columbia recommended unanimously a full mobile dental clinic which could be moved about from place to place as needed. All experts also are in agreement a short term summer program will not meet the needs of the Aleutian/Pribilof islands people. Neither the consultants nor officials from A/PIAI have ever contemplated a three to four week program as interpreted by Commissioner Helen Bierne.

Such conclusions are politically motivated and reflect a total lack of research on the part of her unit.

It is clearly the intention of A/PIAI and the volunteer dentist to develop a year round program of delivery of dental care -- beginning with clinical repair and graduating to specialized areas and ultimately using the facilities for a prosthetic follow through.

Children's rotten teeth continue to drain down their throats poisoning their systems and the older folks continue to suffer from swollen tongues and extreme malaclusion and deformity leading ultimately to warped speech patterns and systemic discord while politicians scheme out ways to protect themselves against criticism for non-delivery of service the public has been paying them to deliver.

The mobile dental system tried and tested and proven in the migrant labor areas of California and in refugee camps in Israel are not pursued with the idea of embarassing anyone. What has or

has not been done in the past is history all are willing to forget.

We want to get on with the show. Surely our legislators would not be opposed to seeking alternative methods of solving this old problem.

We are not talking about 200 million dollars worth of service.

We are talking about 200,000 which we believe will deliver 2 million dollars worth of care. Is Alaska so affluent we can afford to pass up such opportunities? We are anxous as Mrs. Bierne to see permanent dental facilities in every village in Alaska -- and some day in the future this may be possible through a subsidized program of building dental facilities in isolated areas and providing incentives to young dentists to practice in these isolated areas. Perhaps some of our young professional volunteers will want to fill these vacancies in the future after a volunteer exposure to this area.

In the meanwhile our people need dental care now.

For answers to the ill informed comments about the impossibility of moving this mobile unit from place to place in the islands one needs only to look at the equipment being moved about in the islands now and since World War II. Oil drills, heavy equipment, portable fish processing equipment and millions of barrels of fuel oil as well as prefabricated homes are moved about as easy as moving a sheel barrel and none has even suggested it was not possible.

All the Doubting Thomas' are welcome to stop by this next year, sit in our new mobile unit and have their teeth cleaned.

SOME QUESTIONS YOU MIGHT HAVE

Question

How long will the dentists use the unit?

Answer

We have a long term commitment from the University of California Mobile Dental Clinic to serve Alaska as long as we want their services.

The unit will be staffed with a dentist year round. This summer a team of three dentists, one supervising professor, two dental technicians and one x-ray technician will work for six weeks -- then throughout the year a licensed dentist will do follow up work The following summer a new team will return for another six weeks time frame.

In addition to the teams from the University of California operating their summer program we have a number of volunteer dentists from around the country who are willing to donate their time and services for two weeks to a month at a time. One association has 180 members all willing to participate.

Question

What kind of unit is it and how will it be transferred to the Chain?

Answer

The unit is a G.M.C. 26' motor home stripped. Then refitted at the University of California as a dental clinic. When completed it will be just like a three chair dental office in a large city complete with cabinetry, overhead lights, delux dental chairs and all of the support equipment needed to do a good job.

It will be transported by sea to St. Paul Islands this summer. Next summer it will be moved to the Aleutians, possibly Unalaska or Sand Point by SeaLand. At this time, moves are contemplated for Unalaska, Sand Point, and Cold Bay as needed.

Question

How will the dentists be licensed?

Answer

There are at least two ways -- (1) they can be employed by PHS for a dollar a year and assigned to the Aleutian/Pribilof Islands Association (The State law permits this); or (2) the State Department of Commerce also can license the dentists in remote areas not presently served by dentists (within a 50 mile radius).

Question

How long will the unit be in the Aleutian area?

Answer

We anticipate that after two years the unit could be moved to other remote areas of the State as requested -- we have long term consultants to staff throughout the State.

The dental program will serve anyone who is identified as in emergency need of dental care regardless of who they are. Our hygienist staff will work closely with village health aides to locate people in greatest need first and to repair on a priority basis, teeth which would be soon lost without immediate treatment.

Question

If you will primarily be serving Native Americans, why doesn't the Indian Health Service fund the program?

Answer

The primary responsibility for ensuring the protection of public health in Alaska is the State of Alaska. While this is not an overwhelming problem in the urban areas of our State where dentists establish their practices, it is almost non-existent in the rural areas.

While the Indian Health Service has a special responsibility for the health care of Native Americans, it is not capable of providing the most basic dental services to Alaska Natives.

of ALASKA MEMORANDUM

TO Commissioner Helen Beirne
Dept. Health & Social Services
Juneau

DATE January 12, 1978

FILE NO

TELEPHONE NO 278-4668

FROM Frederick McGinnis
Deputy Commissioner
Dept. Health & Social Services
Anchorage

SUBJECT Request by Aleutian/Pribilof Islands Association, Inc.: Permit Request--Dental Services for Aleutian Chain

Consistent with numerous other recent activities on the part of the Aleutian/Pribilof Islands Association to improve health and social services to the residents of the Aleutian Islands, information was sought from my office today with regard to our Department's assistance to the citizens of the Aleutian Islands for improved dental services.

Mr. Frank Peratrovich, Deputy Director of the Association, raised the question as to whether our Department is in the position to assist consistent with the applicable Alaska Statute--AS 08.36.271, Permits for Isolated Areas. For convenience a copy of the statute is attached (Attachment No. 1).

It is my understanding that the Aleutian/Pribilof Islands Association's plan is to secure the services of dentists on a voluntary basis mostly, if not entirely, from other states to render the services. The Public Health Service will be asked by the Association to employ the dentists at a nominal salary for technical purposes. The dentists apparently will meet the Alaska statutory requirements provided in AS 08.36.110 with latest amendments (see 1976 Supplement Amendments for 08.36.110).

It is in the knowledge of the A/PIA and their legal counsel that "the Department of Health and Social Services shall designate as isolated areas those specific placesand regions remote...". (AS 08.36.271(a))

It is their impression that "the Board shall, upon recommendation of the Department of Health and Social Services, issue an annual permit authorizing...". (AS 08.36.271(b))

It is my understanding that the Association is considering requesting a slight amendment to AS 08.36.271 if necessary to accomplish certain goals but, at this time, it is not certain if such will be required.

RECOMMENDATION: It is recommended that

(1) the Department officials concerned give strongest support to the proposed plan being developed by the Aleutian/Pribilof Islands Association, Inc. in their goals of addressing this extremely long neglected need to improve the dental health of the citizens of the Aleutian Chain.

(2) the Department of Health and Social Services, after consultation with the Department of Law, release the attached suggested letter (Attachment No. 2) and the attached suggested "Designation of Isolated Areas" (Attachment No. 3).

gether with the registration fee. The division of occupational licensing shall, as soon as practicable, issue a registration certificate valid for the years for which issued. Each licensee shall keep the registration certificate beside or attached to his license. Failure to receive the registration form does not exempt a dentist from biennial registration. (§ 12 art III ch 186 SLA 1955; am § 9 ch 155 SLA 1968; am § 7 ch 121 SLA 1972)

Effect of amendment. — The 1972 amendment substituted "division of occupational licensing" for "central licensing section" in the first and third sentences.

Sec. 08.36.260. Branch office registration. A licensee who practices in an established office with an address other than that address for which his biennial registration certificate is issued shall obtain a branch office registration certificate for each office. (§ 13 art III ch 186 SLA 1955; am § 10 ch 155 SLA 1968)

Sec. 08.36.270. Permits for isolated areas.

Repealed by § 3 ch 26 SLA 1965; § 5 ch 93 SLA 1965.

Sec. 08.36.271. Permits for isolated areas. (a) The Department of Health and Social Services shall designate as isolated areas those specific places and regions remote from major population centers which are not served by dentists licensed under this chapter and which have a geographical location which works financial hardship, extended loss of time, or arduous and costly travel upon residents needing dental care.

(b) The board shall, upon recommendation of the Department of Health and Social Services, issue an special permit authorizing the treatment of residents in an area designated under (a) of this section, who are not entitled to dental care by the state or federal government, by a dentist employed by the United States Public Health Service or qualified member of the armed services who serves in that area. (§ 1 ch 93 SLA 1965; am § 11 ch 155 SLA 1968; am § 6 ch 104 SLA 1971)

Sec. 08.36.280. Temporary permit. (a) The board may issue a one year temporary permit without examination to an applicant to practice dentistry in a locality requested by the applicant if the locality is of the type specified in (2) of this subsection and the applicant

(1) meets the requirements of § 110 of this chapter;

(2) desires to practice dentistry in a city or rural village which does not have a resident licensed dentist in active general practice;

(3) has a license in good standing to practice dentistry in a state, territory, district or possession of the United States;

(4) tenders and pays the fee prescribed in § 290(6) of this chapter.

STATE OF ALASKA

JAY S. HAMMOND, GOVERNOR

DEPT. OF HEALTH AND SOCIAL SERVICES

OFFICE OF THE COMMISSIONER / POUCH H 01 – JUNEAU 99811

January 16, 1978

Dental Examiners Board
937 Eighth Avenue
Fairbanks, Alaska 99701

Attention: Sydnor L. Stealey, President

Gentlemen:

Re: Designation by Department of Health and Social Services of Aleutian Islands as Isolated Area

It has recently come to the attention of the Department of Health and Social Services that, through the initiatives of certain Alaska Native organizations, improved dental services for citizens of the villages of the Aleutian Islands may be arranged. Such plans envision the utilization of dentists falling under the general coverage of AS 08.36.271(a) and (b).

Consistent with the provisions of AS 08.36.271, the Department of Health and Social Services encloses at this time the appropriate formal designation by the Department for the region involved in the emerging plans.

In line with the specific provision of AS 08.36.271(b), the Department of Health and Social Services hereby recommends to the Board the issuance of annual permits to the dentist applicants meeting the qualifications of applicants contained in AS 08.36.110, with latest amendments. The specific and individual applications related to this recommendation will be filed in accordance with your procedures.

It is our understanding that qualified applicants shall be granted annual permits under the conditions contained in the statutes and consistent with the recommendation contained herein.

Sincerely yours,

Helen Beirne
Commissioner

OFFICE OF THE COMMISSIONER
POUCH H 01 – JUNEAU 99811

January 16, 1978

DESIGNATION OF ISOLATED AREAS

by

STATE OF ALASKA, DEPARTMENT OF HEALTH AND SOCIAL SERVICES

In accordance with the provisions of Alaska Statutes 08.36.271, Permits for Isolated Areas, the Department of Health and Social Services hereby designates as isolated areas the entirety of the Aleutian Islands Chain of the state of Alaska, including any and all specific villages and communities of the Aleutian Chain.

Such designation is made solely for the purposes served by the provisions of the Alaska Statute cited above, and for dental services as provided in the cited statute.

Helen Beirne, Commissioner

Law Offices of
JAMES E. COLLINTINE
805 W. 3rd Avenue
Anchorage, Alaska 99501
Phone. 276-8144

January 11, 1978

Mr. Frank Peratrovich
Deputy Director
Aleutian/Pribilof Islands Association, Inc.
430 C Street, Suite 303
Anchorage, Alaska 99501

Dear Frank:

This responds to your request for my opinion as to whether or not A/PIA, under a contract which it has assumed from the IHS under P.L. 93-638, can employ dentists in the Aleutian area who are not licensed to practice dentistry under Alaska law. Unfortunately, at this point, the answer is not clear. Attached are copies of the relevant Alaska Statutes.

Under A.S. 08.36.271 the State Department of Health and Social Services is to designate isolated areas of the State which are not served by licensed dentists. Then, the Alaska Board of Dental Examiners shall, upon recommendation of the Department of Health and Social Services, issue an annual permit to a dentist employed by the United States Public Health Service. Hence, it appears that dentists need not be licensed to practice in Alaska if they are employed by the Public Health Service. As you suggested, perhaps there is some way that you can arrange to have the dentists under your contract employed by the Public Health Service. This would neatly solve the problem.

Another approach might be to have your dentists apply for a temporary permit from the Board of Dental Examiners to practice dentistry in Alaska. This approach is provided for in A.S. 08.36.280, a copy of which is attached. Basically, this provision provides that the Board may issue a one year temporary permit to a person not licensed in Alaska to practice dentistry in a rural area if:

> (a) the applicant is of good moral character, and is a graduate of a dental college approved by the Council on Dental Education of American Dental Association at the time of graduation, and holds a D.D.S. or D.M.D. degree, or the equivalent; and
>
> (b) the applicant has a license in good standing to practice dentisry in a State, territory, district or possession of the United States.

At first glance it would appear that your dentists could receive a temporary permit from the Board of Dental Examiners. However, I just spoke with Martha Dearborn of the Alaska Dental Society (phone 279-9144), and John Beard (phone 277-3213) who is an attorney who sits on the Board of Dental Examiners. Both persons told me that in December of 1977 the Board of Dental Examiners voted not to issue any further temporary permits. Mr. Beard stated that the Board felt that A.S. 08.36.280 was a "permissive, rather than a "mandatory" statute.

I feel that the determination by the Board of Dental Examiners not to issue temporary permits in Alaska is erroneous. In my opinion, if an applicant meets the legal requirements he is entitled to practice dentistry in Alaska under a temporary permit pursuant to A.S. 08.36.280. We could challenge the Board in Court. However, it will probably be best to have your dentists first apply to the Board of Dental Examiners for a temporary permit and obtain a formal decision from the Board. Note that the attached statute provides that the Board shall grant or deny an application for a temporary permit within sixty (60) days after it is received. After the applications are submitted we can request an oral hearing before the Board whereby we would attempt to put forward a compelling argument to pursuade them to accept the applications. They are free to reverse their December 1977 ruling to the effect that no further temporary permits will be granted in Alaska. If they do not, depending on what A/PIA wants to do, we can then take them to Court.

As you stated, another approach, and possibly the best might be for A/PIA to approach the Alaska Legislature and attempt to have the attached statutes changed. However, we do not know how long this will take. Mr. Milne has just informed me that he will send me a memorandum on what should be included in the amendment to the dentistry laws. I will then draft a proposed bill.

In summary, the quickest approach would probably be for A/PIA to have the dentists employed by the United States Public Health Service. In the alternative, the dentists could apply for a temporary permit pursuant to A.S. 08.36.280. Third, A/PIA should attempt to have the dentistry statutes amended to more realistically conform to the needs of the rural populace.

If you have any questions please do not hesitate to call.

Sincerely,

James F. Vollintine

Health and Social Services shall designate as isolated areas those specific places and regions remote from major population centers which are not served by dentists licensed under this chapter and which have a geographical location which works financial hardship, extended loss of time, or arduous and costly travel upon residents needing dental care.

(b) The board shall, upon recommendation of the Department of Health and Social Services, issue an annual permit authorizing the treatment of residents in an area designated under (a) of this section, who are not entitled to dental care by the state or federal government, by a dentist employed by the United States Public Health Service or qualified member of the armed services who serves in that area. (§ 1 ch 93 SLA 1965; am § 11 ch 155 SLA 1968; am § 6 ch 104 SLA 1971)

Sec. 08.36.280. Temporary permit. (a) The board may issue a one year temporary permit without examination to an applicant to practice dentistry in a locality requested by the applicant if the locality is of the type specified in (2) of this subsection and the applicant graduate of dental college; D.D.S. or D.M.D.

(1) meets the requirements of § 110 of this chapter;

(2) desires to practice dentistry in a city or rural village which does not have a resident licensed dentist in active general practice;

(3) has a license in good standing to practice dentistry in a state, territory, district or possession of the United States;

(4) tenders and pays the fee prescribed in § 290 (6) of this chapter. [125.00].

(b) The board may authorize a temporary permittee to practice dentistry in more than one city or rural village of the type specified in (a) (2) of this section.

(c) The board may annually renew a temporary permit upon written application of an applicant and upon payment of the prescribed fee if the applicant has not committed an act which is a ground for revocation in § 310 of this chapter, but in any case, within two years from issuance of his first temporary permit, the applicant must pass a board exam.

(d) A temporary permit may be revoked, suspended or annulled, or the permittee may be reprimanded, censured or disciplined by the board in the same manner and for the same cause as a licensed dentist under § 310 of this chapter.

(e) The board shall grant or deny an application for a temporary permit within 60 days after it is received. (§ 15 art III ch 186 SLA 1955; am § 4 ch 26 SLA 1965; am §§ 8, 9 ch 121 SLA 1972)

Sec. 08.36.285. Licensing a permittee.
Repealed by § 10 ch 121 SLA 1972.

Editor's note. — The repealed section derived from § 5, ch. 26, SLA 1965.

Sec. 08.36.290. Fees and penalties. The board shall impose and collect the following fees and penalties:

(1) for the issuance of an original license, $30;

(2) for the examination of an applicant, $50;

(3) for re-examination of an applicant, $50;

Sec. 08.36.271. Permits for isolated areas. (a) The Department of Health and Social Services shall designate as isolated areas those specific places and regions remote from major population centers which are not served by dentists licensed under this chapter and which have a geographical location which works financial hardship, extended loss of time, or arduous and costly travel upon residents needing dental care.

(b) The board shall, upon recommendation of the Department of Health and Social Services, issue an annual permit authorizing the treatment of residents in an area designated under (a) of this section, who are not entitled to dental care by the state or federal government, by a dentist employed by the United States Public Health Service or qualified member of the armed services who serves in that area. (§ 1 ch 93 SLA 1965; am § 11 ch 155 SLA 1968; am § 6 ch 104 SLA 1971)

Sec. 08.36.280. Temporary permit. (a) The board may issue a one year temporary permit without examination to an applicant to practice dentistry in a locality requested by the applicant if the locality is of the type specified in (2) of this subsection and the applicant

(1) meets the requirements of § 110 of this chapter;

(2) desires to practice dentistry in a city or rural village which does not have a resident licensed dentist in active general practice;

(3) has a license in good standing to practice dentistry in a state, territory, district or possession of the United States;

(4) tenders and pays the fee prescribed in § 290 (6) of this chapter.

(b) The board may authorize a temporary permittee to practice dentistry in more than one city or rural village of the type specified in (a) (2) of this section.

(c) The board may annually renew a temporary permit upon written application of an applicant and upon payment of the prescribed fee if the applicant has not committed an act which is a ground for revocation in § 310 of this chapter, but in any case, within two years from issuance of his first temporary permit, the applicant must pass a board exam.

(d) A temporary permit may be revoked, suspended or annulled, or the permittee may be reprimanded, censured or disciplined by the board in the same manner and for the same cause as a licensed dentist under § 310 of this chapter.

(e) The board shall grant or deny an application for a temporary permit within 60 days after it is received. (§ 15 art III ch 186 SLA 1955; am § 4 ch 26 SLA 1965; am §§ 8, 9 ch 121 SLA 1972)

Sec. 08.36.285. Licensing a permittee.
Repealed by § 10 ch 121 SLA 1972.

Editor's note. — The repealed section derived from § 5, ch 26, SLA 1965.

Sec. 08.36.290. Fees and penalties. The board shall impose and collect the following fees and penalties:

(1) for the issuance of an original license, $30;

(2) for the examination of an applicant, $50;

(3) for re-examination of an applicant, $50;

Mobile dental clinics, inside full sized buses, have been bringing much needed dental care to the children of migrant farm laborers in California since 1968. In 1971 the pioneering program was expanded overseas and next month they will go to Israel, Greece, Yugoslavia and Kenya.

A Busload Of Mercy

ONE OF THE most difficult things in the world to do is to try and help people—you're immediately suspect.

But if helping people is what you want to do and your motives and intentions are honest, untinged with a personal gain or greed—then you find a way. Dr. Marvin M. Stark, a Los Altos dentist, is one of those people who finds a way.

Dr. Stark very much believes that the future of the world depends on the welfare and happiness of children. In his own way, with the help of faculty colleagues and students at the University of California, San Francisco, Dr. Stark has been eliminating needless pain in children in California and overseas for several years.

Dr. Stark's way is with a bus—a mobile dental clinic complete with four treatment chairs, the latest equipment for providing complete dental treatment, an auxiliary unit for x-ray equipment and a laboratory. Since 1968 mobile clinics have been traveling the dusty trails of the migrant farm workers, stopping wherever they did to give aid to their children. In 1971 the program was expanded overseas to Israel and then to Greece the following summer. This year it will expand even more to Yugoslavia and Kenya.

A CHILD'S visit to one of the mobile clinics is frequently also his first visit to a dentist. The friendly attitude on the part of the dental students soon allays any apprehension on the part of the children. The mobile clinic operates in each area for several days. The first day a dentist, interpreter and several assistants visit the location to orientate the children and their parents. A puppet show on dental hygiene is followed by the distribution of toothpaste, brushes and mouthwash. The mobile clinic is explained and the people are told it will be coming the following day.

When the bus arrives the children are all examined and given prophylaxis and flouride treatment. Treatments are scheduled based on priorities determined from the examinations and x-rays. If the children require additional treatment, further appointments are made. Many of the dentists participating do not speak the various languages so an interpreter explains such things as Novocain is "a medicine to make your tooth and lip go to sleep. It will go away in a couple of hours."

The story of the mobile clinics is a remarkable one in many ways. It dates back to 1965 when Drs. Stark, Ronald Nicholson, Kenneth Soelberg and Robert Weis, professors of dentistry at the University of California

By Mary Gottschalk

Medical Center in San Francisco, found themselves with a house trailer left over from a UC dental project. They gave the trailer back to UC along with the concept of converting it into a dental clinic to treat children in Head Start schools and institutions for the handicapped.

THE HOUSE trailer was a success and the idea for a mobile clinic in the form of a large bus to provide sorely needed service to the children of migrant farm laborers seemed to be the next step. The buses in California are under the sponsorship of UC and funds for their operation come from the State of California's Bureau of Community Services and Migrant Education. In its first five years of operation alone, the clinic buses, which now number three, treated upwards of 15,000 children in the agricultural valleys of California. It is an on going program that this summer will be in Ventura, the Woodland Davis area, and areas such as Salinas, Soledad and San Joaquin.

With such a successful program underway in California why not just sit back – why branch out? Dr. Stark sees it as a "natural offshoot" of the United States program. But more than that, it is a "20th century covered wagon" filled with pioneers who want to earn friends for their country. In Dr. Stark's own words "There is no better way of making friends with people than by healing their children."

The first overseas bus, in 1971, went to Israel. It was a project that involved more than a year of preparatory work, not the least of which was raising the $100,000 it took to purchase and outfit the first bus and to ship it to Israel.

THE MONEY did not come from any government sources or corporations – it was money donated by individuals who shared in Dr. Stark's vision of the mobile clinic and what it could accomplish. Dr. Nicholson, a friend and faculty colleague for many years, gives the credit for the bus – the concept and the reality – to Dr. Stark.

Along with the charisma necessary to raise large sums of money, Dr. Stark has unbounded determination to see a project of this magnitude through to its fruition. He is also a man of vision. He recently found a helicopter pilot and now he is on the lookout for a helicopter to outfit as a clinic and visit remote areas that are inaccessible to motor vehicles. Some people might think "good luck" but with Dr. Stark nothing is an impossibility.

The overseas experiences are not easy to describe. Different things stand out in the minds of each participant. Gladys Stark, Dr. Stark's wife, perhaps best expresses the emotion and impressions of those who have experienced the trip first hand.

"THE CHALLENGE at first was an adventure into a new land, culture, language and people. There were many unknowns – would we be able to communicate? Where would we live, especially in a country where people wait years for a tiny apartment? Could we adjust to new customs, new foods, extreme hot temperatures? Could we be of service? Would a war torn people appreciate or realize we were trying to help in a new and different way by bringing dental care and education? All of these uncertainties made our first trip a very precarious one.

"Nevertheless we went and in spite of innumerable obstacles, we saw, we did, we accomplished a great deal and came home with many impressions. One in particular was our tremendous admiration for the courage and industriousness of the pioneering Israelis who but a few years ago took this impossible desert wasteland, interspersed with malaria swamplands, and transformed it into beautiful, green, fertile farmlands capable of producing the finest crops in the world.

"Another overwhelming impression was the lilliputian, tiny size of the country. As one drives the length of Israel, which can be done in six to eight hours, on either side of the road Arab lands are visible. Looking at a map the many Arab countries with their huge expanses of vast uninhabited territories which they may never use is quite apparent. However their determination to have these few square miles of land, Israel, is an obsession.

"THE REWARDS were many. We were able to communicate. English is the second language taught in the schools. The diverse cultural backgrounds of the people exposed us to a fascinating mix of customs and languages. Besides Hebrew, we heard French, Russian, Italian, German, Polish, Spanish, Arabic and Yiddish. We were able to start a worthwhile dental health program. The needs were great. Institutions for the handicapped and retarded, kibbutzim, Druze and Arab villages, deprived sectors of Tel Aviv and Jerusalem overflowed with children in need of dental care and education.

"Often the days were long and arduous, the heat unrelenting. Still the rewards predominate. We found friends everywhere – not only because of what we were doing directly, but also because we were a group who came so far specifically to give unselfishly. At first the American dental group was suspect. What were our motives? Later as the word spread through the kibbutzim and villages, the doors opened widely and they remain open today with letters arriving daily requesting our speedy return."

For Dr. Bill Moore, who went to Israel the second year in 1972, the memories include treating a small boy one morning who had arrived at the clinic on his horse. The child spoke only Hebrew so communication was

Dr. Marvin M. Stark of Los Altos treats a woman in need of dental care at a mental institution in Israel. Dr. Stark is the single force behind the idea of a mobile dental clinic and he is the man who made it a reality for over 15,000 California children and people overseas.

A small child receives dental treatment from a senior dental student at a migrant farm workers' camp in the San Joaquin Valley. A faculty member from the University of California Medical Center supervises. Mobile dental clinics have aided over 15,000 children since they began operating.

non verbal. At the lunch break Dr. Moore noticed the boy beckoning him to come out. He did and the boy gave him a ride on his horse to show his appreciation.

OTHER PARTICIPANTS recall their invitation to a Yemenite wedding. The wedding had over a year of preparation in it and the invitation to attend was extended to the entire group of 60 participating in the dental care program.

Dr. Weis had some apprehensions about his family which included a six-month old baby. There are no such things as disposable diapers in Israel, so the family filled their suitcases with them. They found their hosts very concerned about their comfort and welfare.

For Santa Clara dentist Dr. George Mednick, the mobile clinic experience changed his life. While participating in the Israel program the first three summers, Dr. Mednick met his wife Tamar, an Israeli living in a kibbutz. He was further influenced by the program to become a children's specialist. In addition to his private practice, Dr. Mednick is also a part time instructor at the UC Medical Center.

Mark and Marina Bogdan of Palo Alto have also been active volunteers with the project since its inception. Mark started when he was an undergraduate at the University of Santa Clara, where many of the student volunteers come from. Marina volunteered when she was a dental hygiene student at UC. Mark and Marina were married last year and will continue their participation this summer with the program in Yugoslavia.

The mobile clinics are staffed by American students and dental instructors for only five weeks of the year, in late summer. To make sure they do not sit idle at other times, they are affiliated with institutions such as universities or municipalities. While they are there, the American group shares their methodology and skills with the dentists of the host countries. Those countries then operate it the rest of the year and it becomes a lasting goodwill project.

THE STUDENTS come from across the United States, not only from California. Participants have included students from Kentucky, Maryland, Michigan, Texas and Ohio. The host countries provide room and board and tender loving care to the participants, but no salary. Each person is responsible for raising the $1,000 it will cost them in transportation costs overseas.

The project is an expensive one, but the money involved is carefully spent. Drs. Stark and Soelberg, as well as volunteer students, spend many of their weekends at the J. W. Cross Co. in Mountain View working on the buses. Owners Dr. James Cross and Gordon Nelson allow them to store the buses there. Dr. Soelberg is the chief designer of the interiors and a minimum of 2,000 man hours goes into the outfitting of each bus. Bud Heintz and Bob Farry of University Electric in Santa Clara and Hank Heckman of Floorcraft Co. in San Jose have donated much of their time and skills in aiding the project as well.

Even now, buses are being worked on, supplies are being wrapped for shipping and money is being sought. There are still many long hours of preparation work left, to be followed by long hours of service in a foreign land. But as Gladys Stark has said, "I along with our extended family can say as Virgil's Aeneas: 'Many of these things I saw, and some of them I was.' " ◻

UNIVERSITY OF CALIFORNIA, SAN FRANCISCO

BERKELEY • DAVIS • IRVINE • LOS ANGELES • RIVERSIDE • SAN DIEGO • SAN FRANCISCO — SANTA BARBARA • SANTA CRUZ

SCHOOL OF DENTISTRY SAN FRANCISCO, CALIFORNIA 94143

MARVIN H. STARK, D.D.S.
Date of Birth: March 14, 1921

PRESENT APPOINTMENTS:

Professor of Operative Dentistry and Oral Biology
University of California
School of Dentistry
San Francisco, California

Lecturer
Microbiology
University of California
School of Medicine
San Francisco, California

Consultant to Chief Health Officer, Dept. of Health, State of California.

EDUCATION:

A.B. Microbiology. University of California Los Angeles, 1948

D.D.S. University of California San Francisco, 1952

Research Fellowship, Harvard School of Dental Medicine, 1952-53

PRIVATE PRACTICE:

General Dentistry, 1954 to present

Assistant Director, Dental Clinic, Santa Clara County Hospital

Visiting Staff, O'Connor Hospital, San Jose, California

MEMBERSHIP IN:

International Association for Dental Research
Northern California Academy of Endodontists
Omicron Kappa Upsilon
Fellow, American College of Dentists
American Dental Association
American Association of Dental Schools
American Men of Science
Fellow, International College of Dentists

Marvin M. Stark, D.D.S.

Appointments

A. Visiting Professor, University of Cartegena, Colombia, South America., 1967

B. Member, Board of Director, American Cancer Society. Santa Clara Coutny, 1956-1962.

C. Pre-Dental Advisor, University of California
1. Berkeley, 1950-1954
2. Los Angeles, 1954-1964

D. Member, Health Advisory Committee, State Board of Education.

E. Member, Board of Director, University of California, Santa Cruz Association.

F. Consultant to:
1. Shering Corporation, Special Seminar of Pulp Capping, 1960.
2. Johnson & Johnson, 1964-1967
3. Pascal Company, Seattle, Washington. 1964-present.
4. Barnes Hind Co. Sunnyvale, Calif. 1962-present

G. Project Head Start Program and Peace Corps, July and August, 1965-66, for dental examinations.

H. Consultant, U.S. Naval Hospital Oak Knoll California.1966-67-68

I. Volunteer, S.S.HOPE Ship, Cartagena, Colombia, 1967.

J. Consultant, Tulare County School District, California Migrant Farm Children Program-Dental Project, Summer 1968

K. Chairman, California State Dental Association Research Committee, 1970 to present.

L. Member, Foothil Junior College, Dental Hygiene Advisory Committee-1970

M. Consultant, Vick Chemical Company, Mount Vernon, New York 1969-present.

N. Consultant, State of California Dept. of Education, Bureau of Community Service and Migrant Education.

O. Faculty, Postgraduate Education, University of Southern Calif.

P. Chairman,ProjectedClinics in Color and Sound, U. C. Alumni meeting, January 1970.

Q. Board of Trustess, California College of Podiatric Medicine, 1970-1973

R. Visiting Professor, Tel-Aviv University, Faculty of Continuing Education, Dental Division. Tel-Aviv, Israel, 1971-7

APPOINTMENTS continued

S. Special Consultant, Ministry of Health, Israel, 1973.

T. Consultant on Scientific Material, California Dental Association, 1974-present

U. Special Consultant, Dr. Jerome Lackner, Director of Health, State of California. 1976-77

V. Personal Consultant in Dental Health to Director of Health, Jerome Lackner, State of California. 1977

W. Nominated: For Public Service Award, U.C.S.F awarded by the Chancellor for outstanding community service. 1975, 1976, 1977

COMMITTEES: University of California School of Dentistry

1. Bachelor Science Committee
2. Admissions Committee
3. Curriculum Committee
4. Building Committee
5. Chairman, Welfare and Memoriae, Academic Senate Committee
6. Director, Mobile Clinic Program, U.C. project developed to provide treatment for underprivileged children utilizing a mobile clinic staffed by faculty-supervised dental students.

PATENTS:

1. The use of acridines as caries-disclosing agents
2. Artilk, articulating paper to disclose inequalities in occlusion
3. Dental cavity liner and method of restoring carious teeth

PATENTS APPLIED FOR: 1976

1. New capsule dispenser for amalgam
2. Special digital pulp tester
3. Unique crown remover
4. Pliers for inserting pins
5. Spot-welded band kit
6. Plaque remover and interdental stimulator
7. Dental Amalgam Well; a device to reduce mercury vapor

RESEARCH IN PROGRESS: 1976

1. Evaluation of varying concentrations of epinephrine-saturated cords in the control of hemorrhage. A unique blood pressure device is being used to evaluate changes in blood pressure and heart rate.

2. Evaluation of currently used amalgams in extracted teeth. Effects of polishing and the effects of dilute acid in alkali will be determined with the scanning electron microscope.

3. Effects of finishing and polishing on composites will be evaluated utilizing radioactive materials to determine marginal leakage.

4. Evaluation of currently used die stones and their compatability with hydrocolloid impression materials.

5. Reinforced gutta percha---histological evaluation.

6. Evaluation of currently available high speed handpieces; ease of sterilization and bur removal.

7. Evaluation of mercury leakage from pre-proportioned and conventional amalgam capsules.

8. Clinical, two-year evaluation of modern amalgam and composite restorative materials in deciduous teeth.

9. Evaluation and development of new desensitizing paste.

10. Evaluation of mercury leakage around dental operatories.

11. Special testing on sterility of syringes.

PRODUCER:

1. Abre La Boca - 1969

   28 minute, color and sound, 16 mm documentary movie describing the Mobile Clinic Program in the San Joaquin Valley of California.

   Funds for the film obtained from a grant from the Vick Chemical Company.

   Purchased by the American Dental Association for their film library for national distribution.

2. Las Manos Que Ayudan - 1970

   26 minute, color and sound, 16 mm documentary which graphically portrays U.C.S.F. dental students providing dental care to migrant children, and depicts the social and educational benefits to the students and the children.

   Funds for the film obtained from a grant from the ADA.

   On file in the ADA film library for national distribution.

3. Chalutz - 1971

   15 minute, color and sound, 16 mm documentary describing the free dental care being provided to Israeli children both Arab and Jew in an effort to promote international goodwill through the medium of dentistry.

   Winner of 1971 CINE Golden Eagle Award. Entered as U.S. representative of educational films in international film festivals.

   Funds for the film obtained from grant from the California Dental Association, $8,000.

   On file in the Library of Congress.

   On file in the ADA film library for national distribution.

4. Aliyah - 1972

   10 minute, color and sound, 16 mm documentary showing dental students under faculty supervision treating Israeli children on a mobile clinic in the Gaza Strip, and in the kibbutzim and moshavim of northern Israel as well as in schools for the handicapped.

   Funds for the film were obtained from a $5,000 grant from a private individual.

   Winner of the 1972 CINE Golden Eagle Award.
   On file in the Library of Congress film library.
   On file in the ADA film library for national distribution.

MOBILE CLINICS: (California)

The following grants were obtained from the California State Department of Education to subsidize the Mobile Clinic program in California:

1969	$ 40,835
1970	210,000
1971	113,000
1972	99,000
1973	91,920
1974	98,900
1975	117,210
1976	120,053
1977	78,467

TOTAL TO DATE $969,385.

These clinics have operated in the State of California from as far north as Marysville and south to Santa Barbara.

To date approximately 25,000 children have received restorative care and instruction in prevention in these clinics. Approximately one-third of the students in the senior class serve in the these clinics each year providing dental care to the children of migratory farm workers.

These clinics have motivated a substantial number of students to proceed on to graduate work in Pedodontics.

MOBILE CLINICS: (Overseas)

A non-profit public foundation has been established which has IRS approval as a Charitable Trust 509A classification. The State of California has assigned a non-profit status to this corporation.

To date $590,000 has been contributed to this foundation from private source during the past 5 years.

Two clinics were built by Marvin Stark and his associates and are currently operating in Israel treating both Arab and Israeli children.

One mobile clinic was established in Greece in 1971.

One mobile clinic was established in Yugoslavia in 1975.

To date approximately 100 students have served in the clinics in Israel, Greece, and Yugoslavia, and at least 3,000 children have received restorative treatment in these clinics. Dental students from the Universities of California, Michigan, Southern California, Connecticut, Maryland, Case Western, and University of the Pacific have volunteered their service and provided their own transportation. The foundation provides living accomodations for the students.

MOBILE CLINICS OVERSEAS (continued)

SPECIAL APPOINTMENT: Chief Purchasing Consultant for the Kibbutz Movement. Responsible for assisting with design and equipment for dental clinics for 275 kibbutzim in Israel.

MOBILE CLINICS:

1971: Israel

1972: Israel, Greece

1973: Israel, Greece

1974: Israel, Greece, Yugoslavia

1975: Israel, Yugoslavia

1976: Israel, Greece, Yugoslavia

1977: Israel, Greece

AWARDS:

Myrtle Wreath Award: Presented to H. Stark and family by the San Francisco Chapter of Hadassah for their humanitarian work in providing mobile dental clinics in Israel. Jan. 1977

MOBILE CLINICS: (overseas)

Future Plans

1. Plans are currently underway to develop a program for Ankara, Turkey in conjunction with UNICEF.

2. Another clinic is in the formative stages for Cebu City, Philippines.

All construction and design of the mobile clinics in California and overseas have been accomplished by Kenneth Soelberg, Ronald Nicholson, and Marvin Stark and student volunteers.

As a result of the California mobile clinic grants from the Department of Education, the Regents of the University of California currently own:

1. 40 foot General Motors transit coach outfitted as a complete 4 chair dental clinic.

2. 40 foot General Motors transit coach outfitted as a complete dental clinic.

3. 30 foot General Motors, transit coach outfitted as a complete three-chair dental clinic.

4. Four support vehicles (transport personnel and supplies)
   a. Chevrolet Carryall (2)
   b. GM Rallywagon
   c. Chevrolet Step-Van

5. X-ray equipment, and all other equipment necessary to operate 11 chairs in the field.

ADDITIONAL GRANTS:

From private industry:

1. $26,000, Johnson & Johnson, 1960.
2. $15,000, Vick Chemical Co.
   Kerr Mfg. Co.

STUDENTS SPONSORED: During the past 8 years the following students have recieved financial aid in graduate training:

1. Molly Green---University of Michigan, Pedodontics
2. Ernest Peterson---University of Indiana, Dental Materials
3. George Mednick---University of Michigan, Pedodontics
4. Michael Meyer---University of California, Orthodontics
5. Joseph Schmutz---University of California, Pedodontics
6. William Nielsen---University of California, Pedodontics
7. Ralph Zotovich---University of California, Pedodontics
8. Larry Ford ---Western Reserve University, senior student
9. Mark Bogdan---University of Detroit, dental student
10. Also sponsored---foreign students, all financial arrangements made for the student and provided for 3 years of education for the student.

FACULTY SPONSORED: The following dentists for abroad have received assistance with transportation, room and board while at U.C.S.F.

1. Ljobomir Orlic, Split, Yugoslavia
2. Daniel Kempler, one year post graduate training from Hebrew University, Jerusalem, Israel
3. Herb Judes, Head, Operative Dentistry, Tel Aviv University, Israel
4. David Assif, Tel Aviv University, Israel
5. Amos Buchner, Chairman Oral Pathology and Oral Medicine, Tel Aviv University, Israel

Dental Breakthrough
for Bush Alaska

Senior Year dental students pose with their professors in front of the new mobile dental clinic — the first of its kind in Alaska. Paid for by the State of Alaska as the result of H.B. 728 which passed the House then cleared Senate HESS and was ultimately funded through Governor Hammond's discretionary budget.

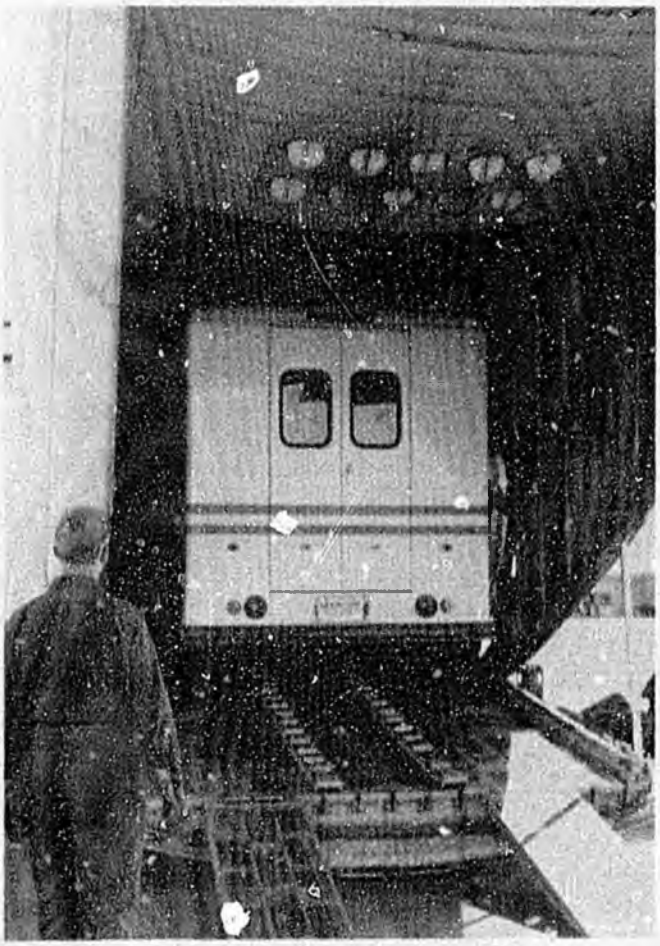
No clinic — mobile or stationery in the world is any better equipped or more modern than the new unit.

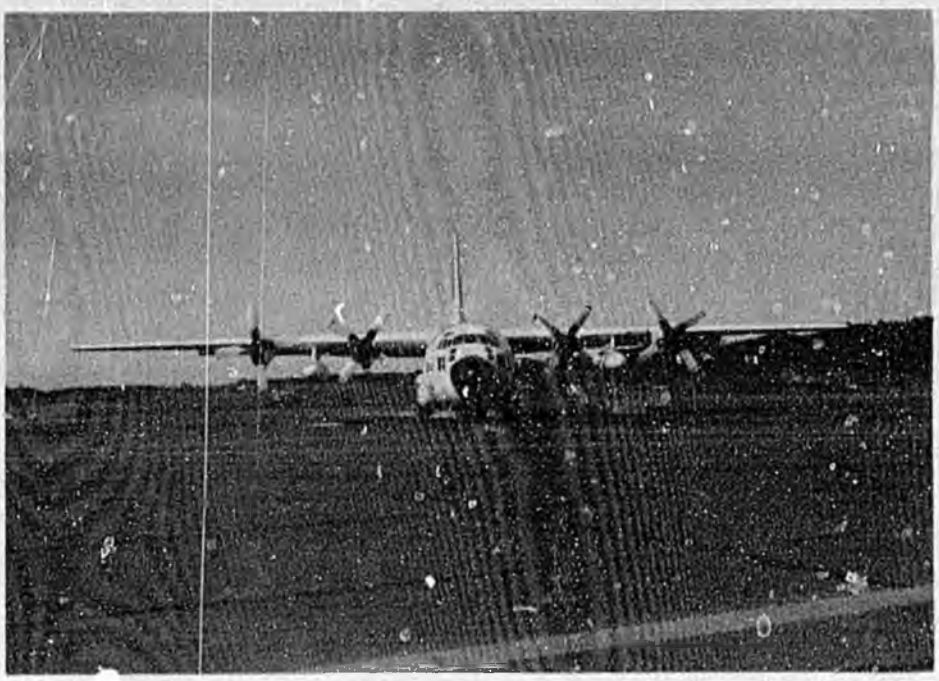
"There is no better feeling of worthwhile accomplishment than to leave a village knowing a whole lot of kids will no longer suffer from tooth aches."

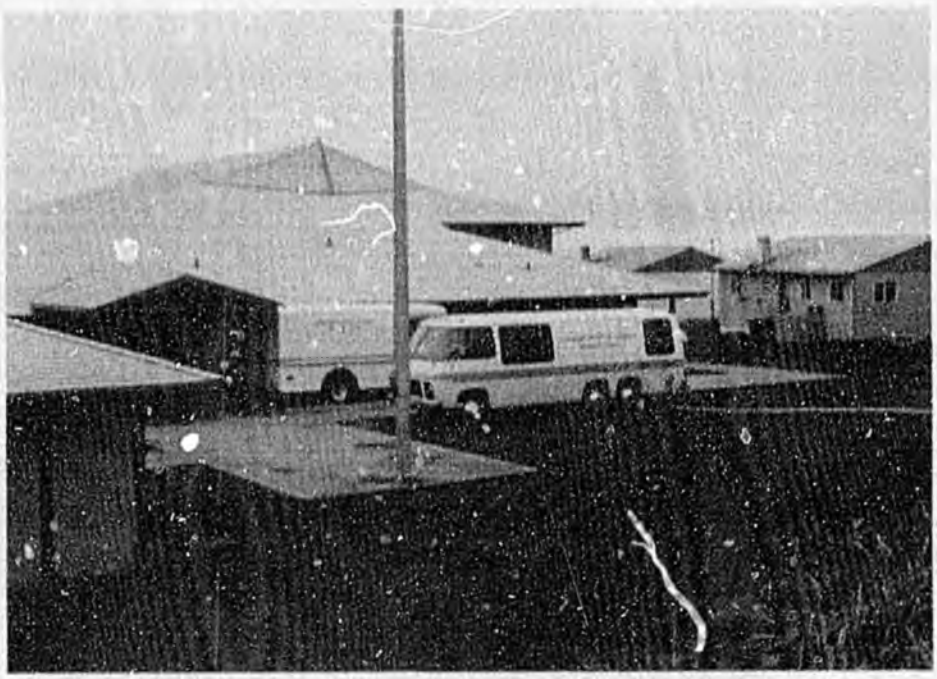
Dr. Kenneth Soelberg of the Stark Foundation joins in for the ribbon cutting ceremony, accompanied by Dr. Stolpe of PHS; Dr. Fred McGinnis, Deputy Commissioner for the State Department of Health and Social Services; Ralph Eluska, Deputy Director of APIA; and Jessie Dodson, Special Assistant to Governor Hammond.

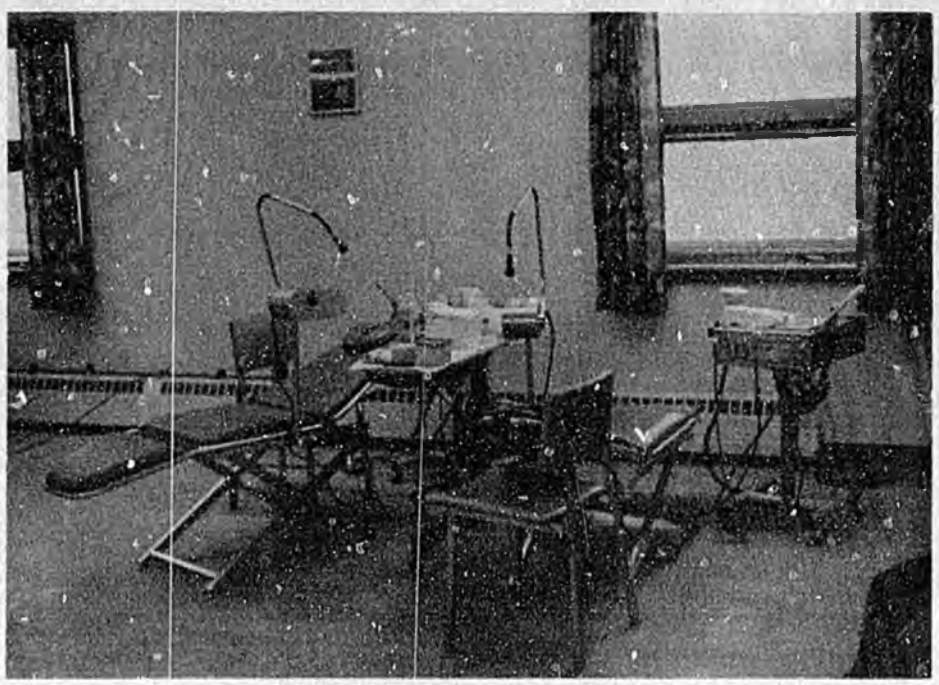
The mobile clini has every feature available for comfort and efficiency — including stereo music to listen to while being treated, air load levelers for bumpy spots in the road and heaters strategically located throughout the unit.

Pressing time and a missed barge bring the Coast Guard to the rescue. They delivered the companion support unit to St. Paul when there was no place else to turn for help.









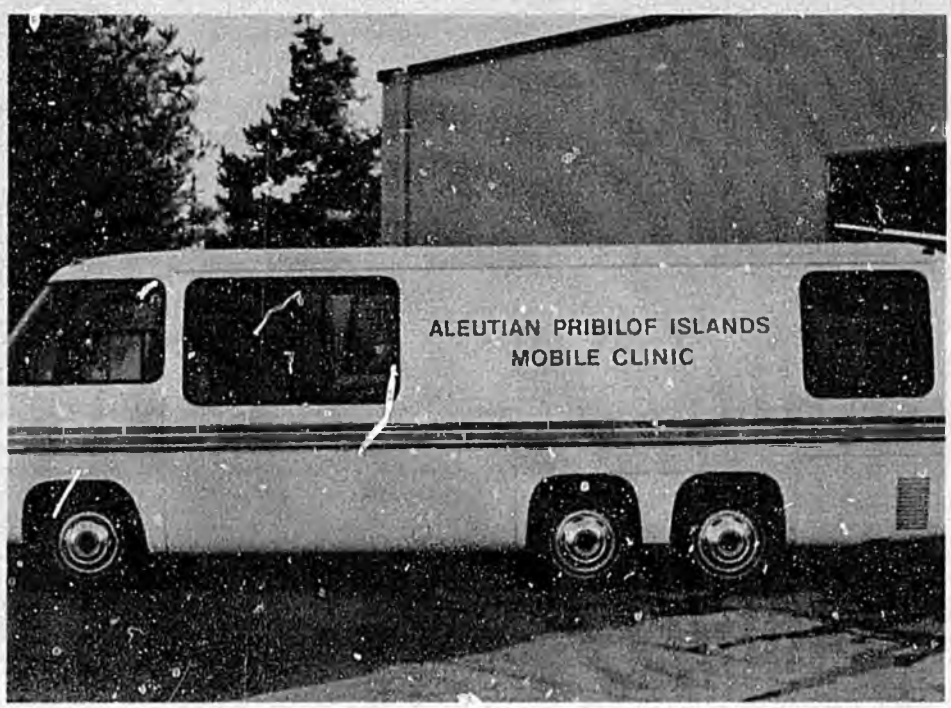
Hygienists outside working at auxilliary units cleaned teeth and did preliminary examinations and screening.

With so many volunteers we were able to set up auxilliary hygiene units outside the mobile clinic which allowed us to serve more peopie.

Every patient had thorough x-ray examinations so as to not miss any hidden cavities.

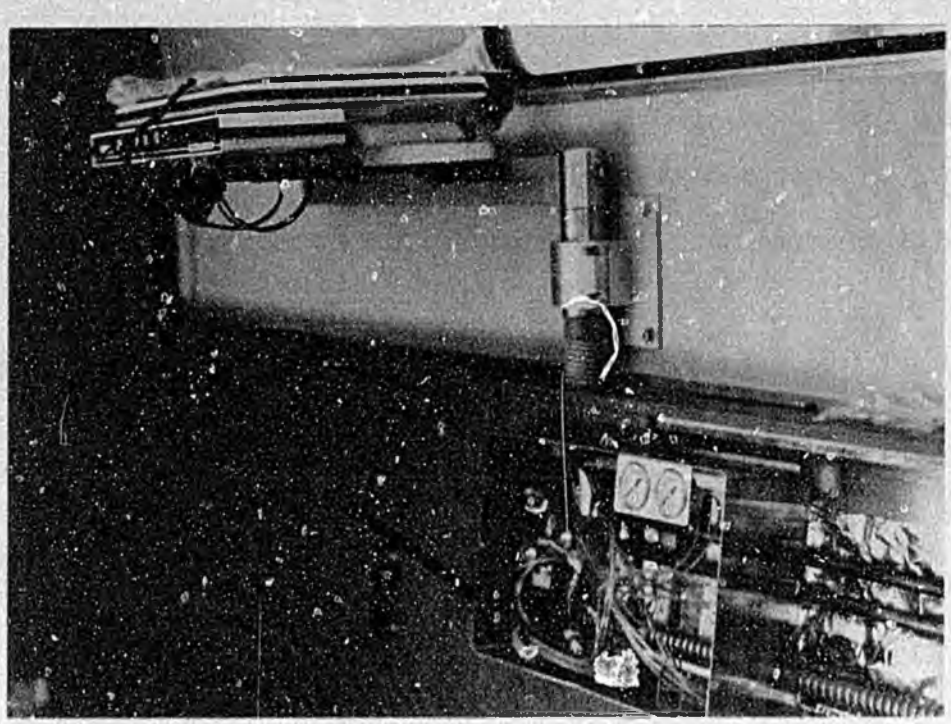
Dental Health is a Family Affair.

First class procedures were the watch word — full dental dams and quality techniques were applied to every patient.

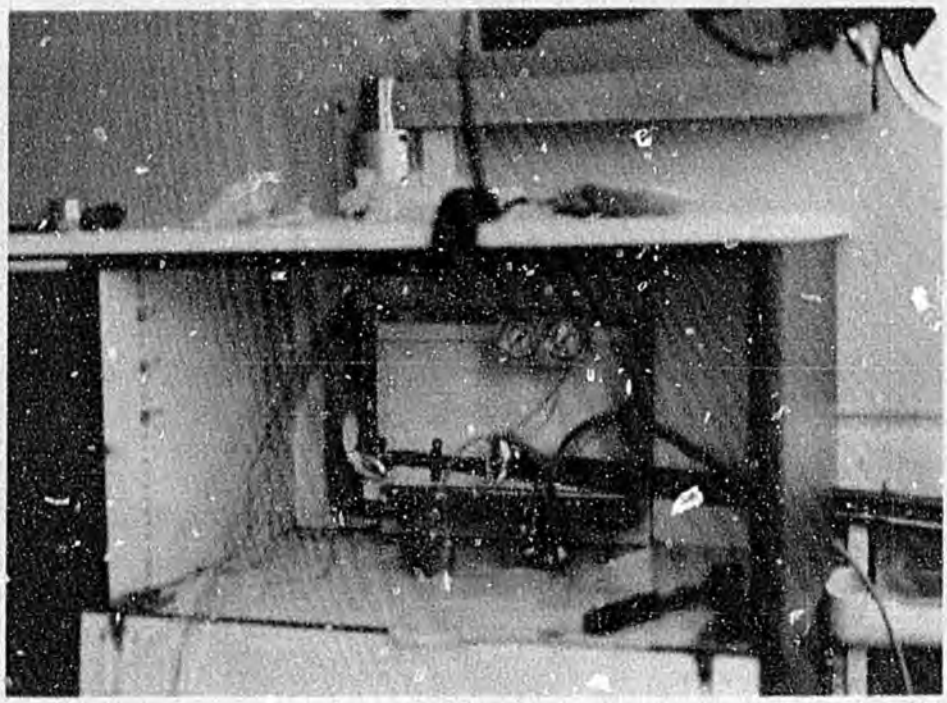


Working together is the only solution to the delivery of health care services to bush Alaska.

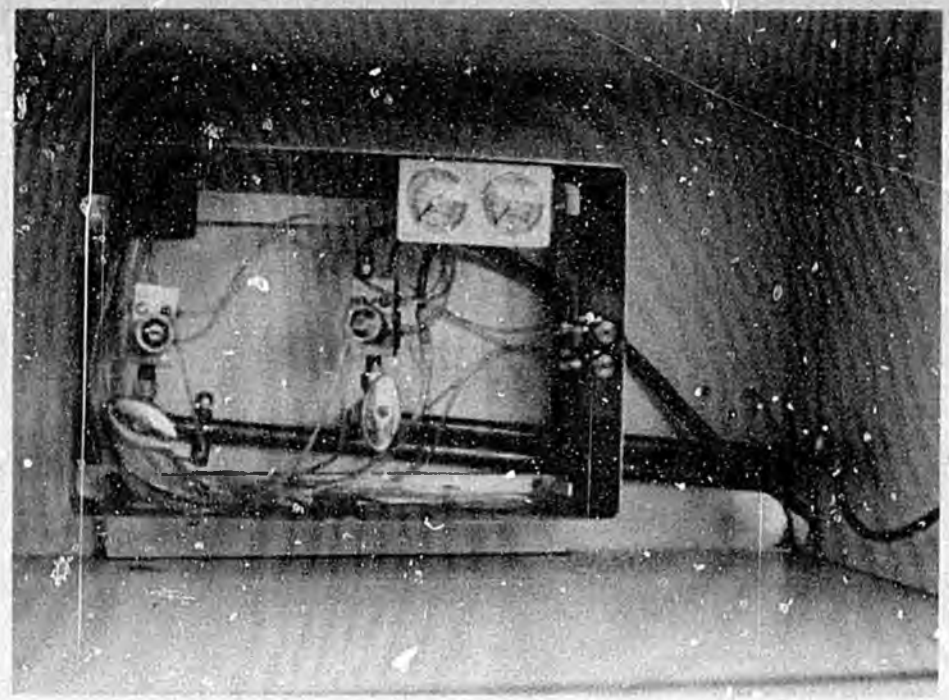
Students and professors built the unit from scratch cutting the cost by at least 25%.



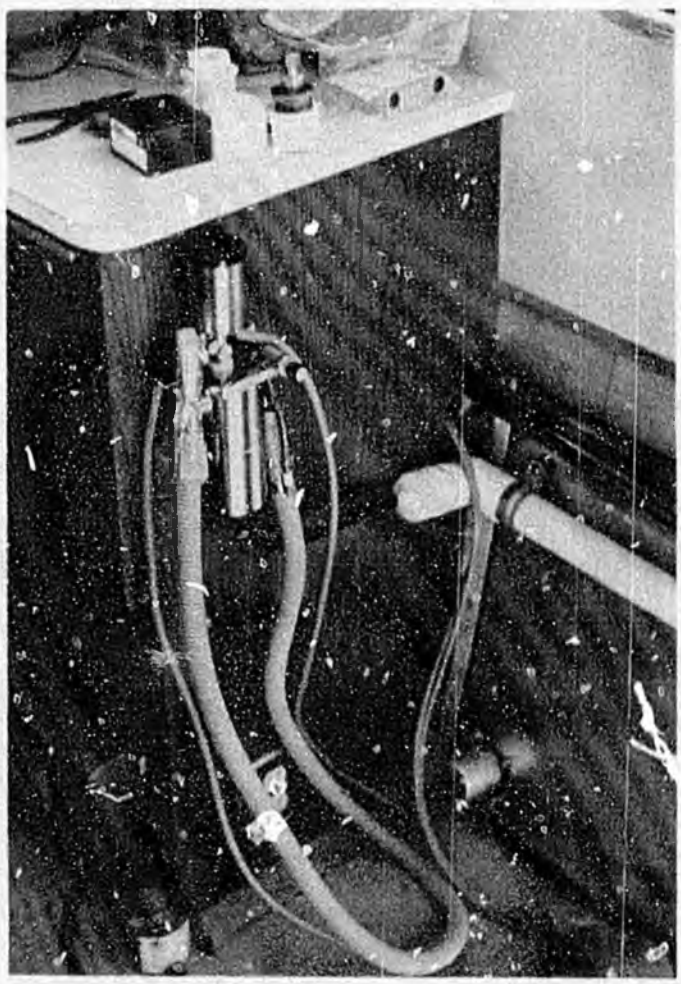
The x-ray system is wall mounted and swings out where needed.

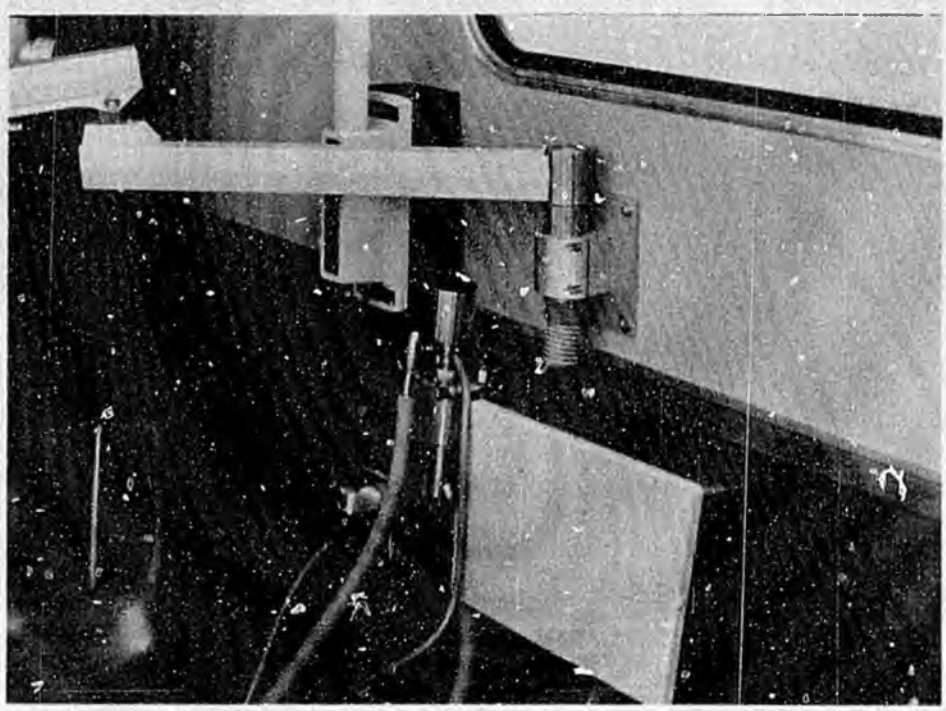


Plumbing and wiring were major undertaking for this modern unit.

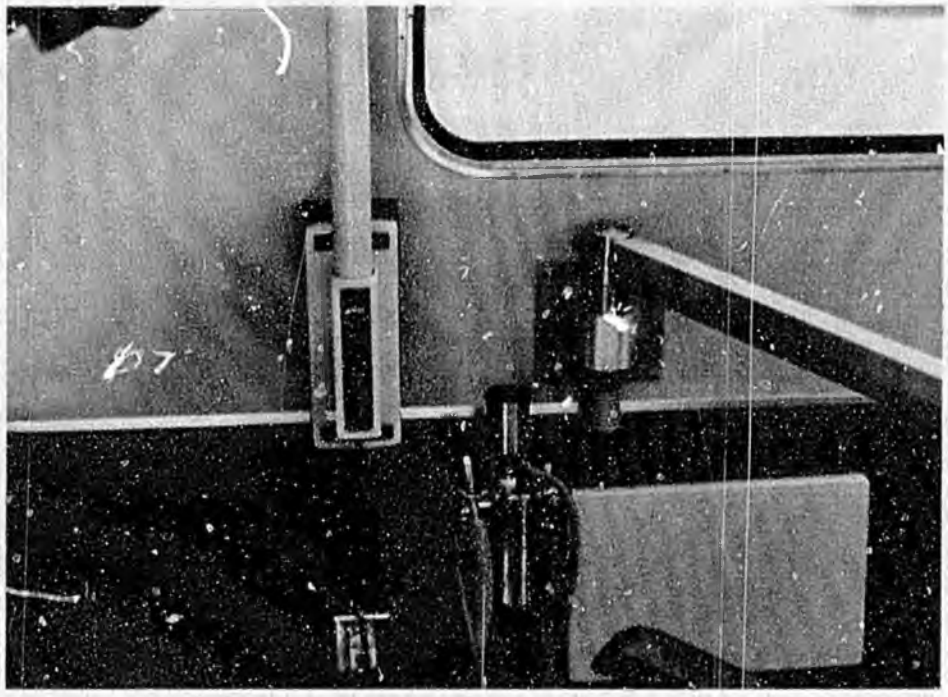


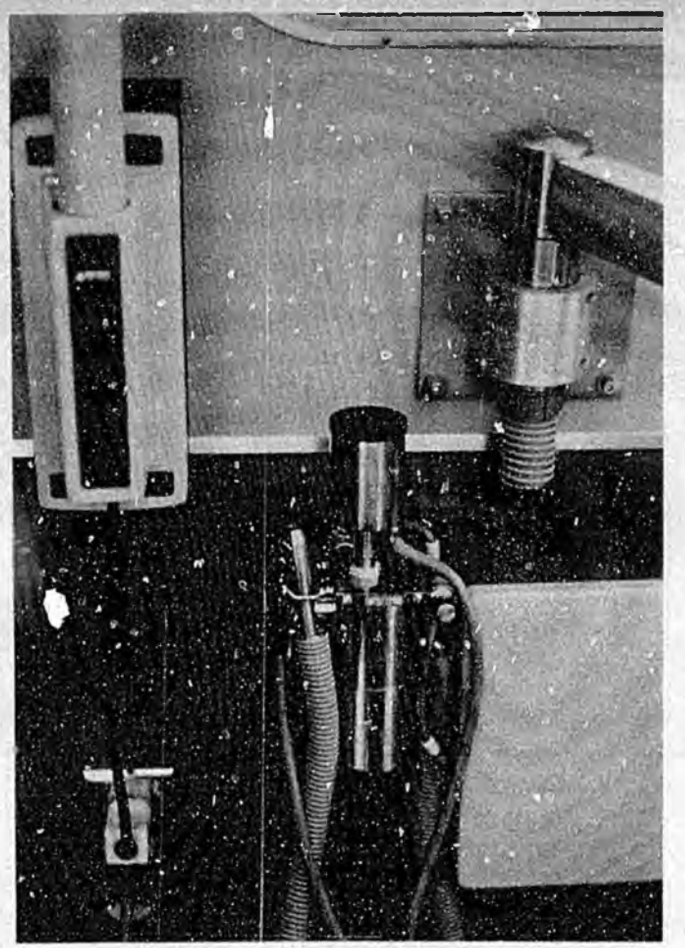
Dental Equipment hookups can be very technical — a challenge to any plumber.



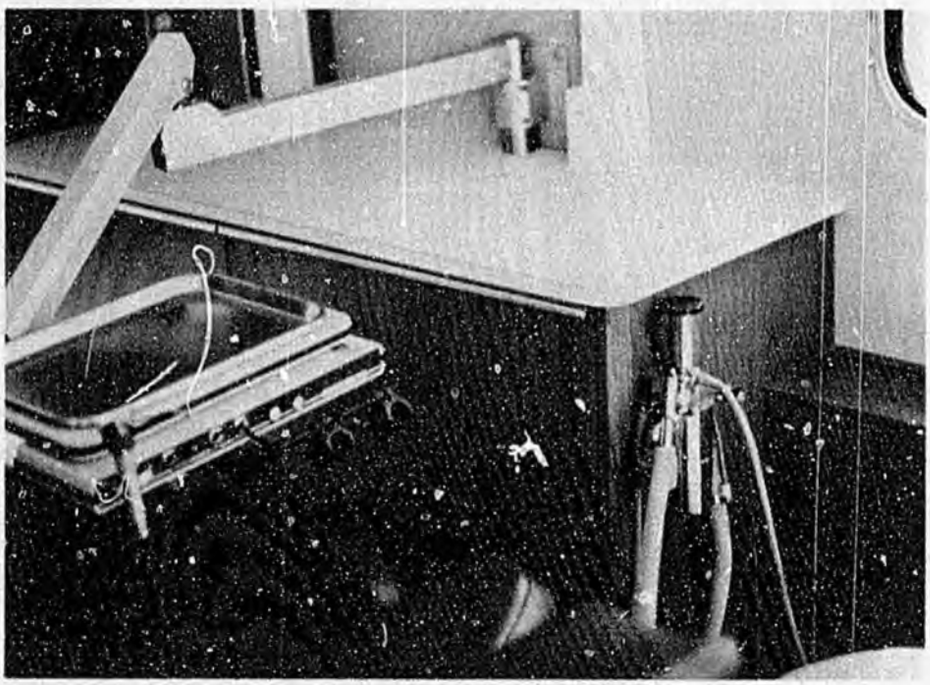


All equipment swings out and can be secured for the road.

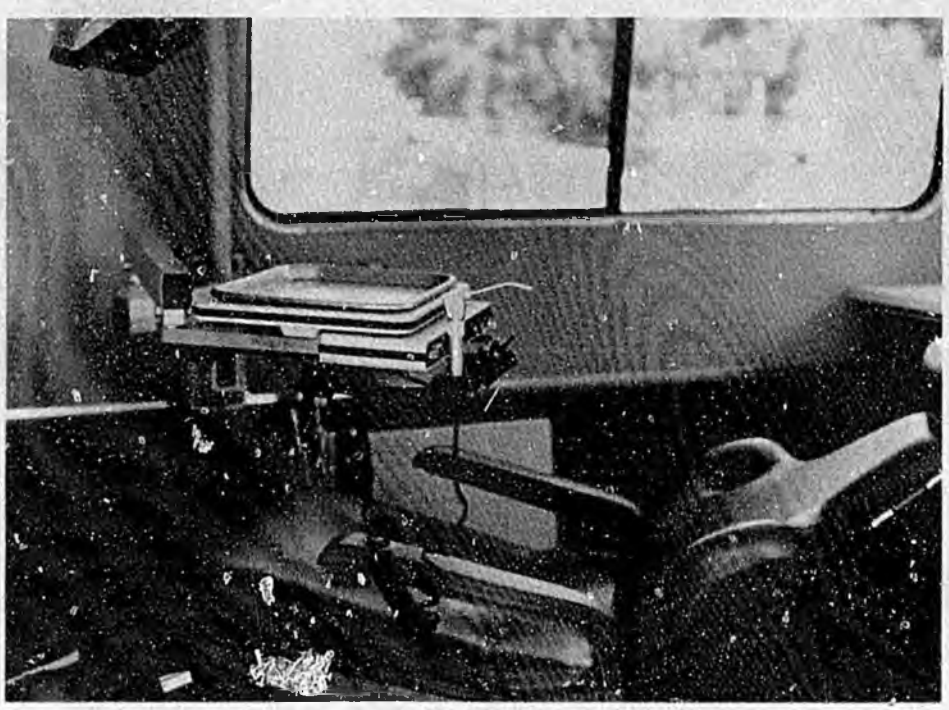




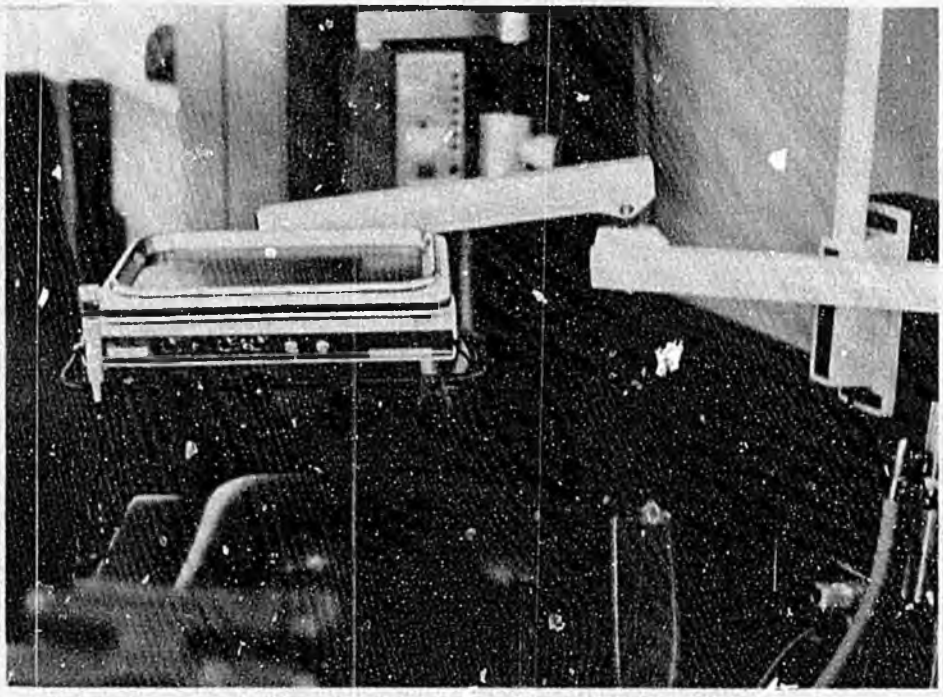
The stereo system and ear phones takes the patients mind off the drill and needles that frighten most patients. The Cukaracha Technique works well with kids.

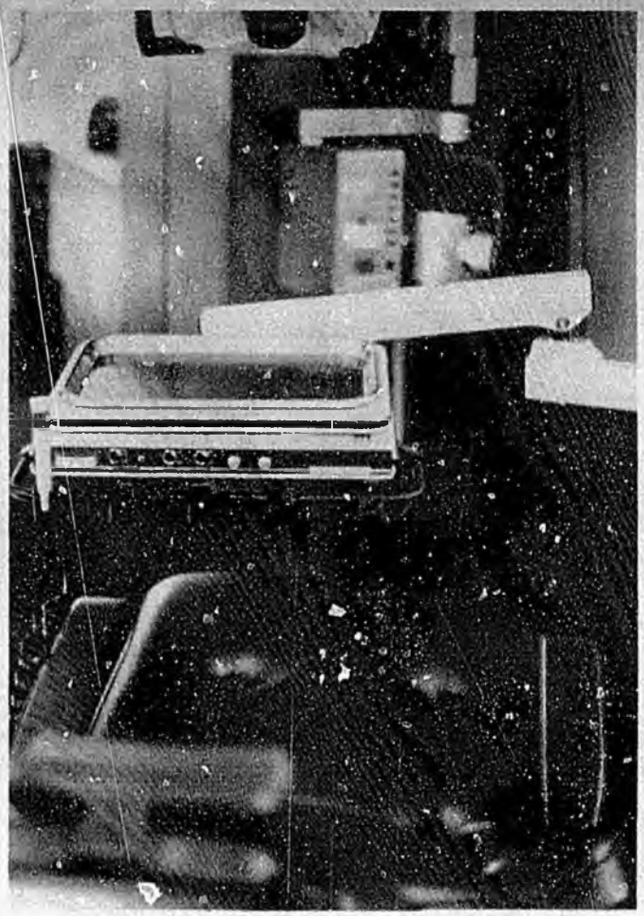


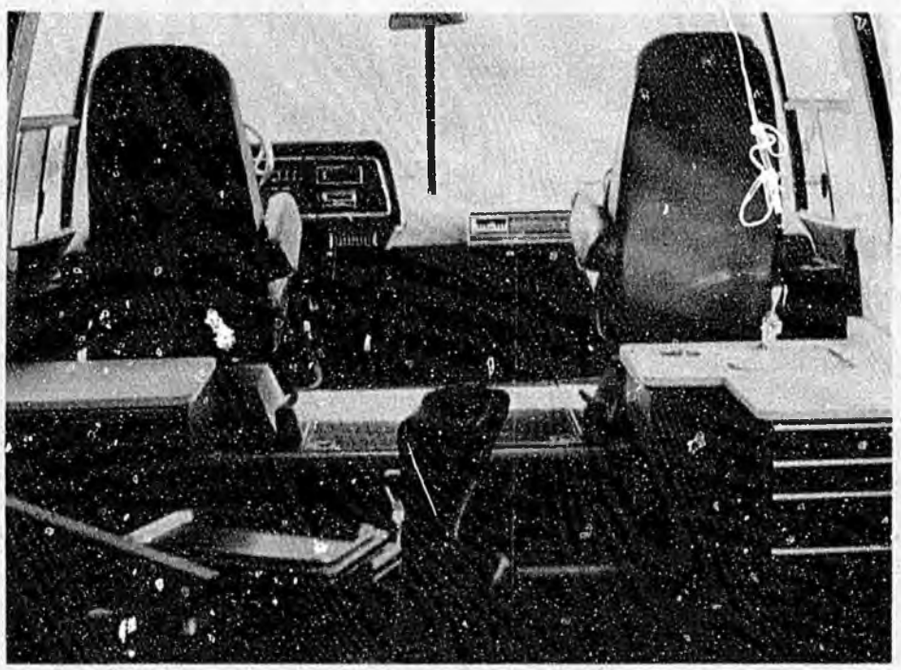
All of the equipment is the very latest and best.



These Siemens chairs are the best in the world — and better than many dental offices now have.

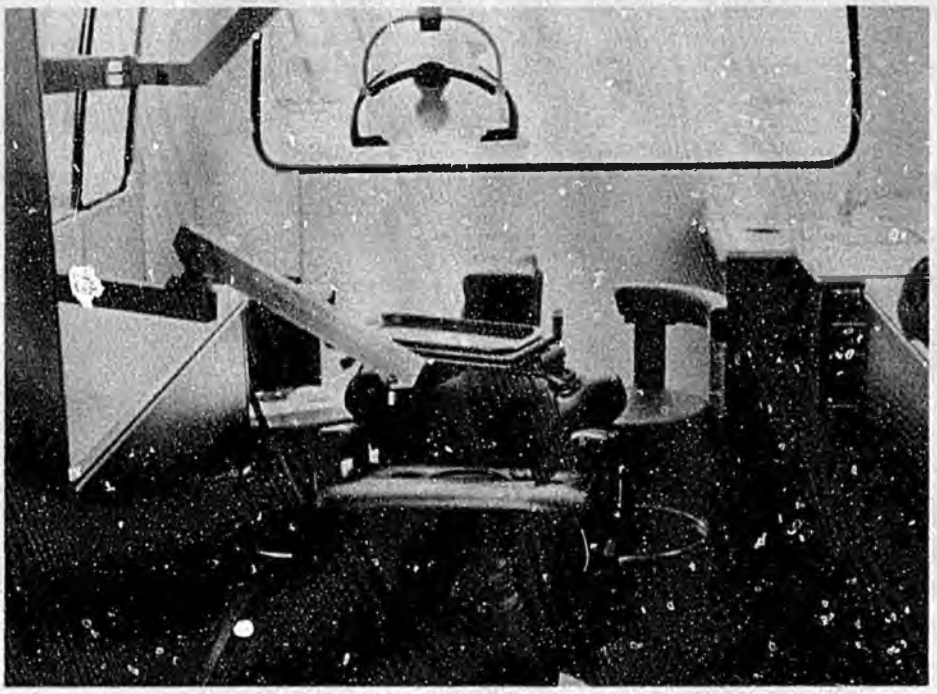






The spaciously designed drivers area allows plenty of room to operate and great viewing advantage through large picture like windows.

All equipment is designed to swing into place when and where needed.



That's it! We're all ready to go. All we need is legislation which allows Volunteer Dentists to give of their time and effort working with students of dentistry and dental hygiene fixing kids teeth in Alaska.

Your help is appreciated.

In Appreciation:

Our special thanks go to the Marvin M. Stark Research Foundation, an International organization dedicated to the health of children everywhere — for their unfailing devotion to the idea of delivery of voluntary health care to Alaska's isolated bush residents. They built the units, they drove them to Alaska and they staffed and operated the clinic as unpaid volunteers. They waded through unbelievable red tape and took a whole lot of bureaucratic abuse just so they could be of service. We apologize for the reception they got from the State Dental Board and other self serving professionals.

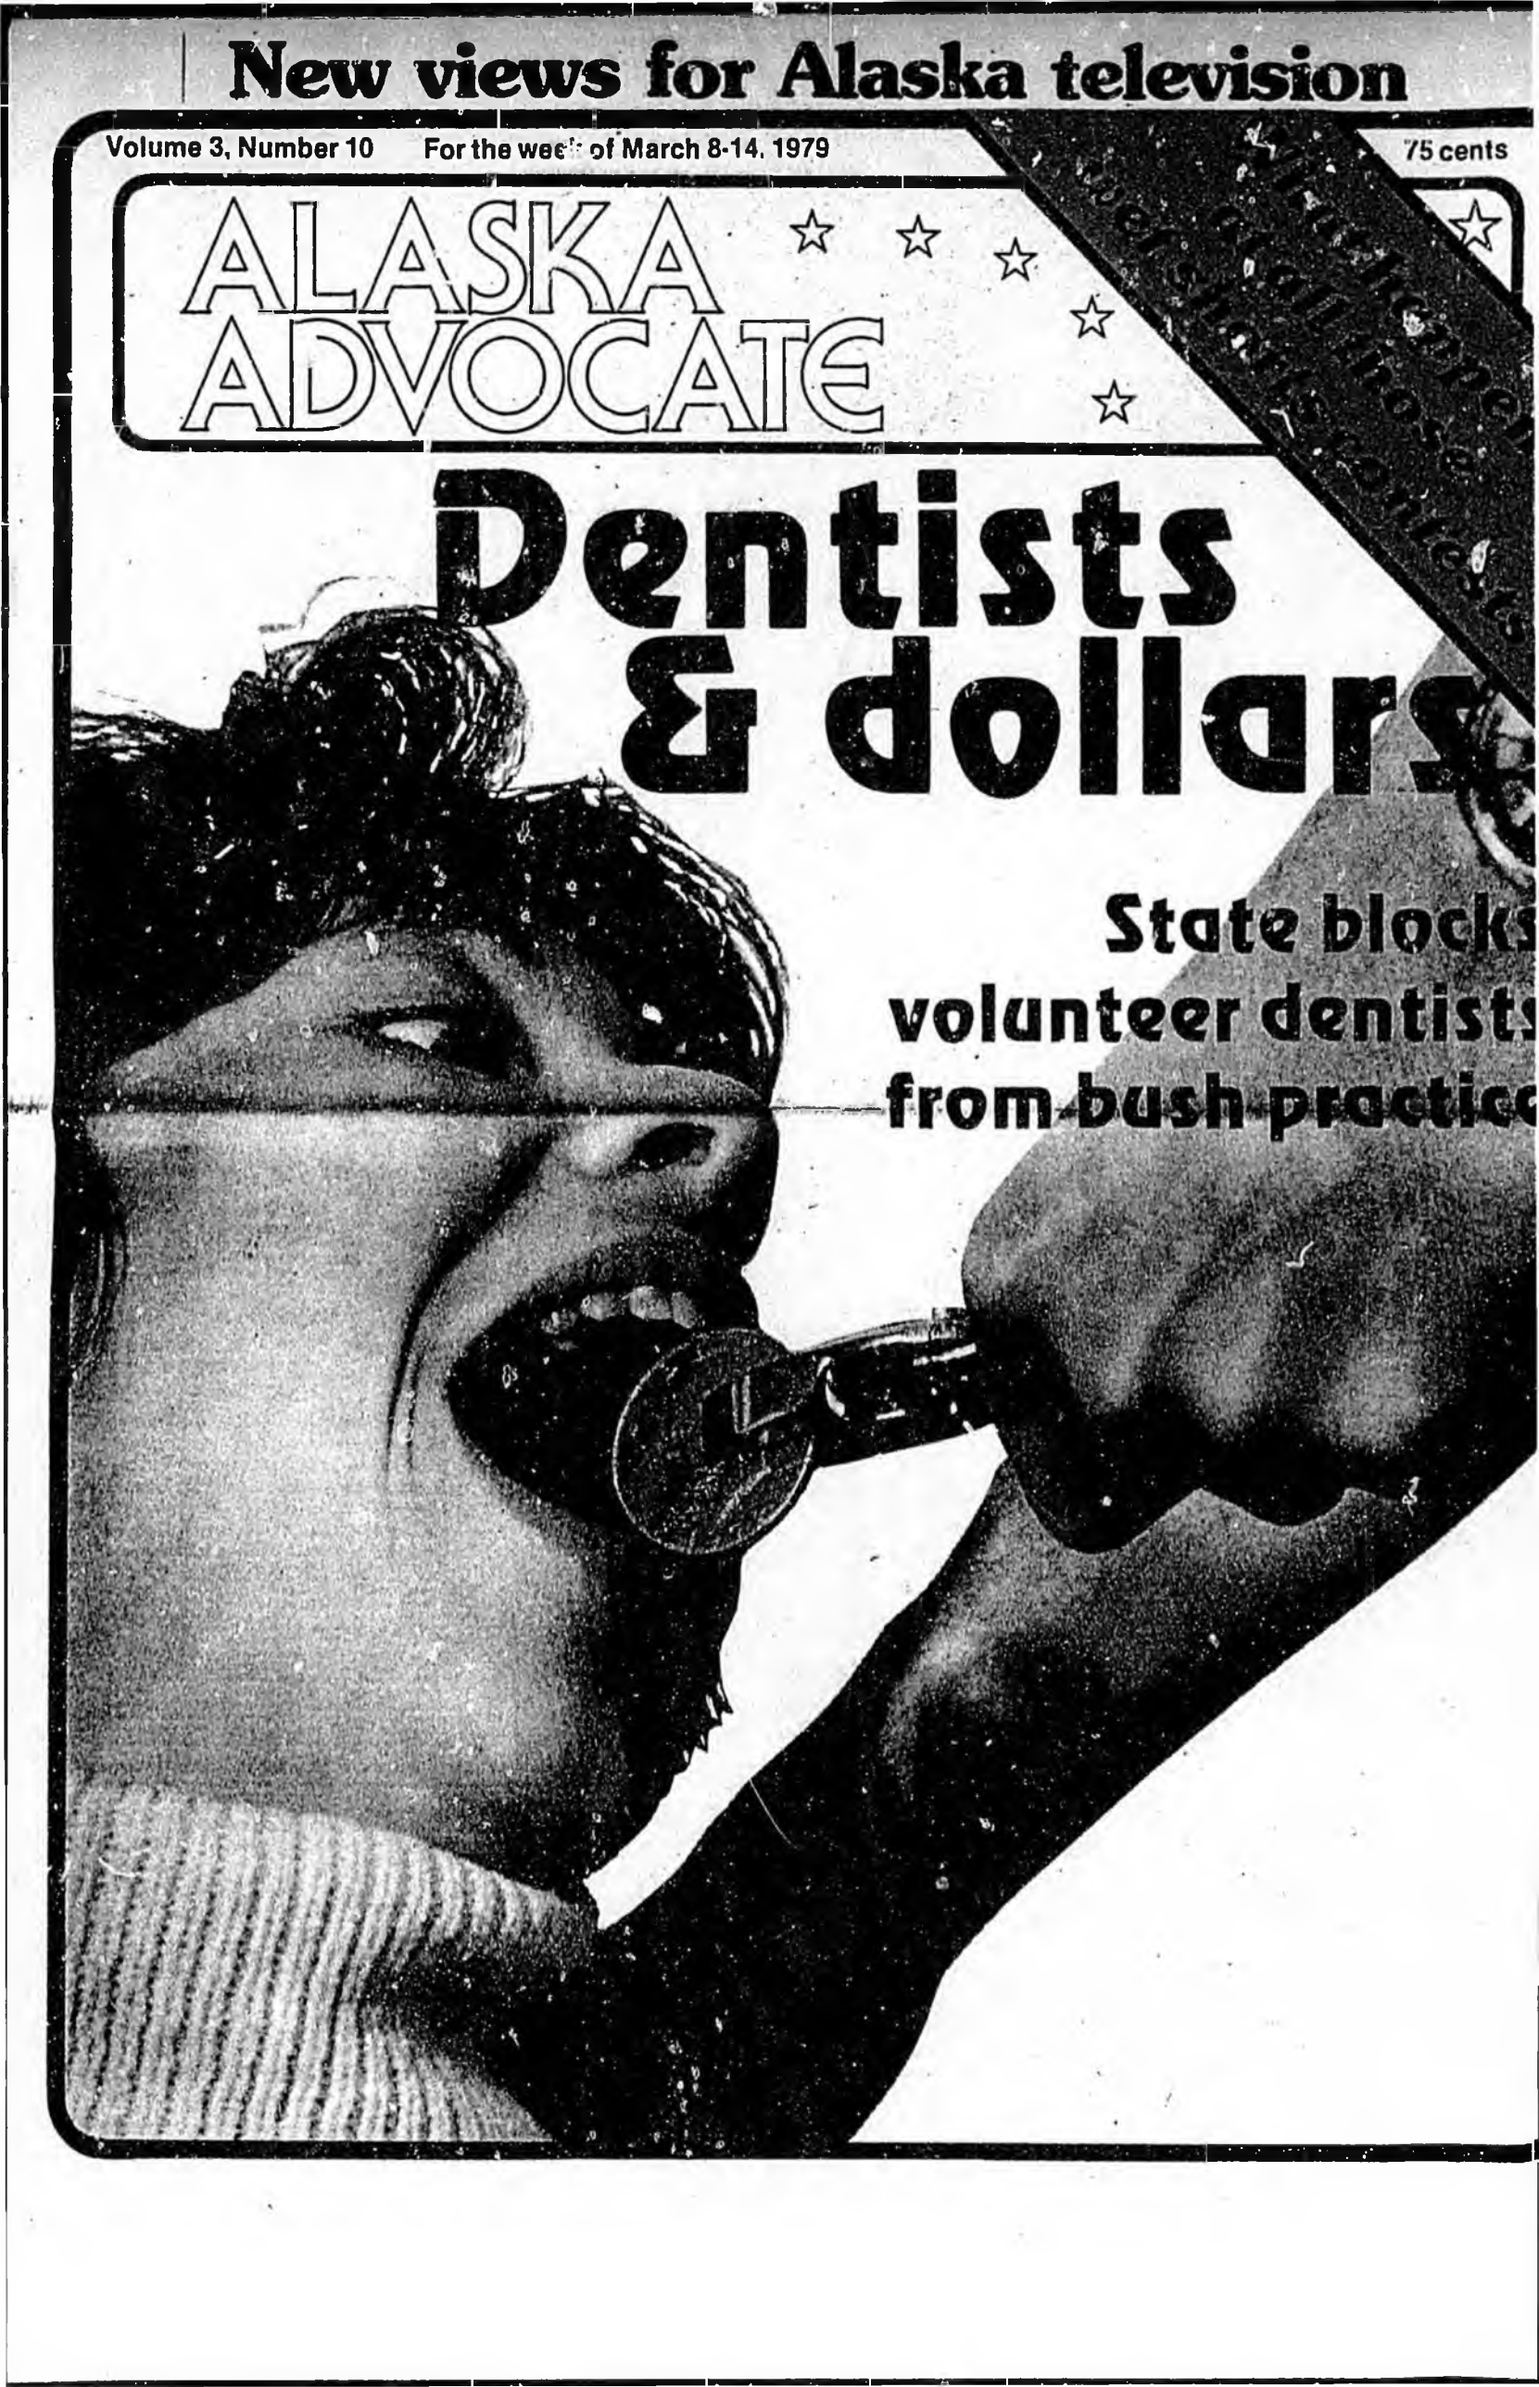
State blocks volunteer dentists from bush practice



Examining dollars & dentists

Volunteer dentists who try to help in the bush have been blocked by rules that keep them out

by Bill Lazarus

Anchorage

While Aleuts suffer from a lack of basic dental care, state laws and the state dental board are blocking volunteer efforts to provide needed services.

Professors from reputable dental schools have volunteered to work on the Aleutian Chain for free. Fourth-year dentistry students working with the professors also have offered services, under a program developed by the Aleutian/Pribilof Islands Association.

But the program is floundering because the professors and students apparently can't get permits to practice from the Alaska Board of Dental Examiners. The dentist-dominated board is responsible for licensing dentists to work in the state.

"Professors aren't necessarily competent dentists," says Arthur Hansen, president of the dental board. He says the board is trying to protect Alaskans by insuring that only capable dentists practice in Alaska.

Officials at the Aleutian/Pribilof Islands Association, however, suspect an additional motivation: greed. They say the state board may view volunteer dentistry as undercutting private practice in the Bush.

Many private Alaska dentists contract with the U.S. Public Health Service to work in villages across Alaska. The work days tend to be long, but the pay is excellent. According to a small, random sample of 1978 health service data, individual earnings vary greatly, but on the average a dentist makes more than $1,000 a day while working in the Bush.

One health service official says that on a 10-day stay in Ft. Wainwright five years ago, Dr. Hansen earned some $22,000. Another official suggests the stay was probably 12 days.

Hansen says he doesn't recall how much he made, but he defends the figures. He says that since he worked double time in the village, he really worked about 20 normal days. That's a working month, he adds, pointing out that he makes more money in a month at his Fairbanks office. Generally, "I probably earn 25 percent less when I go to the villages than when I go to my own office," he says.

Public Health Service officials say that Bush fees are essentially the same as the office fees, except that at times money is provided to pay travel and lodging expenses.

The Public Health Service also employs its own dentists to work in the Bush. Between this and the private contracting, health service officials say, most dental needs of Bush children are met. They admit, however, that in many villages basic care for adults is not provided, because the service does not have the money.

"All we're trying to do is to get dental care out to rural Alaska where it's not being provided," says Pat Pletnikoff, executive director of the Aleutian/Pribilof Islands Association. "Right now we're just right in the middle of a pissing match. We have two people who want to come up now (the chairman and assistant chairman of the children's dentistry department at the University of California Dental School at San Francisco) ...but we can't get the permits issued for them to come and practice in Alaska."

"There is no provision in the Alaska statutes to do what they are trying to do," says Hansen. He points out that only dentists licensed in other states—and not students—are legally able to obtain special, one-year permits to work in Bush Alaska without going through the licensing procedure. (In states with dental schools, senior students are able to practice dentistry under supervision of a licensed dentist. But Alaska has no dental school and no such provision).

Besides, Hansen says, the Aleuts and their volunteers "haven't even made an attempt to apply for a permit."

The catch is that in December 1977 the board decided not to issue any more Bush permits. The one person holding a permit "had abused it," says board member John Beard. "He was practicing in an area that he wasn't supposed to be practicing in and he was doing bad work."

Other than obtaining a special permit, there are only two ways a dentist can legally practice in Alaska: he can pass an exam and gain a license from the dental board, or he can work for the Public Health Service. Federally employed dentists do not need to be licensed by the state, but they only earn $30,000 a year.

Passing the licensing exam is no easy task. Although the test is supposed to be simple, 13 of 25 people who took it last year flunked. Eighteen of the would-be Alaska dentists were already licensed in other states, but nearly half of those practicing dentists failed the clinical portion of the exam, which is judged by the dental board. This test is given only once a year.

Hansen says it's "hard to answer" questions about why so many established dentists failed. He suggests that "we have far fewer (malpractice) problems in Alaska...I think this quality has come about because our standards may be a bit higher."

A legislative audit completed earlier this year looks at the situation differently.

"Presently there is a dental manpower shortage noted in several areas of Alaska. Board policies are restricting the entry of qualified dentists and are not in the public's best interests...

"The Board's clinical examination has several deficiencies...first noted several years ago...(which) have not been corrected," the audit report says.

The report also says no instances of "deliberate grading bias" were found. It notes, however, that "a potential conflict of interest...exists when Alaska Board members who are practicing dentists grade the performance of applicants who represent potential competition."

In a written response to the audit, Hansen maintains, "There is no conflict of interest in the grading system. This is a serious charge to make especially by a lay person regarding a profession he knows little or nothing about."

He also says no shortage of dentists exists and "adequate numbers" of dentists are willing to travel to the Bush.

Only four dentists live in Alaska rural areas with a total population approaching 60,000. Alaska has 260 dentists: 200 private practitioners, 28 military dentists and 32 with the Public Health Service. Although very few dentists live in the Bush, the dentist population ratio in Alaska beats the national average of one dentist for every 2,186 people.

In its own response to the legislative audit, the House Commerce Committee voted recently to put the dental board on two years probation and urged the board to make it easier for dentists to practice in the state. The committee opted to dismantle several professional boards under Alaska's "sunset" law, but a final decision awaits a full vote of the legislature.

Despite the legislative recommendation, Hansen says he is not certain he would support legislation allowing student dentists to work under their professors in Alaska. He also says he is not sure he would support issuing permits to the

[continued on page 16]

Dentists

[continued from page 5]

dentistry professors who want to work with the Aleuts.

"I don't know whether we feel that we would have enough control over the situation...to insure quality work. In remote areas anything can go on and nobody's going to see it," he says. He adds that he is speaking for himself, not the board.

The predicament facing the Aleuts is not new. Last spring their association applied for a $200,000 state grant to buy a mobile dental clinic and to pay for the transportation and housing of volunteer dental students and professors. Representatives of the Alaska Dental Association unsuccessfully lobbied against the proposal.

Then last summer, in conjunction with the proposal, a group of four professors, six dental students and four dental hygienists came from California to work on the Pribilof Islands. But because of licensing problems, the group spent about 10 days in Anchorage doing nothing.

"They forced (the volunteer program) on people...They never cleared it through normal channels," says Hansen.

Jim Milne, a consultant through the Public Health Service after learning that the board had decided not to issue any permits. As volunteers for the federal government, the professors and students would not need approval from the state board.

Milne says the Public Health Service earlier agreed to take the volunteers under its wing, but later balked. Only after pressure was applied in Washington, D.C., he says, did the service agree to accept the volunteers, who then left Anchorage and spend about two and a half weeks treating 220 islanders.

Dr. John Stolpe, chief of dentistry for Public Health Service in Alaska, says the service did not flip-flop on the matter. He says the Aleuts approached the service about the matter only shortly before the volunteers arrived in Alaska.

Whatever the case, the health service now says it won't accept the dental volunteers.

According to Stolpe, who worked with the volunteers last summer, the problem is not the quality of the service. "From a technical standpoint, I found their services to be totally satisfactory...They are a young, enthusiastic group of people. They established a very good rapport with people in the (Pribilof) Public Health Service takes the volunteers, it will be in charge of the program. Instead, he says, it's better for the Aleutian/Pribilof Islands Association to keep control of the program and to obtain permits from the dental board.

Stolpe also says some paperwork requirements have not been met by the association and that, despite the volunteer help, the program cost more than the services provided.

Milne says the volunteer program saved money. He charges that the Public Health Service is just responding to pressures from Alaska dentists not to take the volunteers.

In light of the recent legislative recommendations, Milne says the association now will apply to the dental board for a temporary Bush permit for the volunteer dentists. He says it doesn't make sense for a dentist who might work here for only part of one summer, to go through the cost and burden of taking the licensing examination.

Even if application is made, the outlook doesn't look good for issuance of the permits.

The legislative audit itself criticizes the "double standard" of allowing unlicensed dentists to work under special permit in the Bush but not in urban areas. It recommends that either Hansen says the board is studying the possibility of reciprocal license agreements with other states but suggests it is likely to recommend that it judge some applicants on the basis of their credentials. This would "allow for close Board scrutiny of an applicant, thus assuring the same degree of quality," he says.

Board member John F. Kobylarz, a Soldotna dentist, disagrees with the primary recommendation of the audit. "Nowhere in (Alaska law)...is the Board charged with encouraging dentists to practice in Alaska. I think the State in its powers should protect the consumer, not try to coddle the citizen from birth to death," he writes.

The dental board is made up of five dentists, one dental hygienist and one person not associated with the dental profession, a mix Hansen claims "adequately represents the public interest."

John Beard, the one public member of the board, says licensing is "protectionist" and the board ought to be dismantled. An Anchorage lawyer with Libertarian leanings, Beard suggests that judging of dentists should be left to the marketplace and that even graduation more traditional point of view. She says she understands why the public might view the dental board as protecting the state's dentists from competition. But, she insists, the state exam is necessary. "Come to the next clinical dental examination. I think you would have your eyes opened. Just having a certificate from a dental school does not mean that you are competent," she says.

Varrati questions the wisdom of allowing students and professors to practice in Alaska. "Let them come up and take the board (exam)," she says. "I don't think we have remarkably high standards...We have one of the simpler exams...I wouldn't like to see someone who fail[ed] practice in the state."

"Either something is wrong with the dental schools or we have the best dental program in the entire world. I have the feeling that (the high failure rate) is related to the economics of competition," says Bob Worl, who served as health director of the North Slope Borough for three years.

Alaska dentists, he says, have volunteered work in the Bush and "it's very tough to say it's all black or white in terms of altruism or the economics involved. It's a real mixed bag."

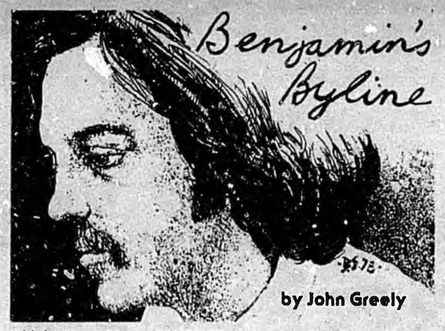
State blocks volunteer dentists from bush practice



Juneau

Perhaps it's cabin fever. Maybe it's just a hangover from the eclipse. But a lot of people have been getting unset lately over Alaska's image.

If you've been reading Vogue Business Week or any number of newspaper reports from Washington, D.C., you might get the idea that the composite Alaskan in 1979 drives a bulldozer to work, climbs glaciers in the nude, slays multinational oil companies in the morning and shoots wolves in the afternoon.

Now that's one hell of an image. If my folks didn't know me better, they might think their son had gone out with the sun.

So for the sake of the image-conscious (if not the relatives) let's take a few lines to examine this composite:

Bulldozers—I've always been fascinated by bulldozers, ever since they came through my childhood neighborhood to build the freeway. They returned a few years ago to make the freeway bigger and the old neighborhood smaller, but now I live in Juneau and there isn't a freeway in sight.

However, as we've been told by Ron. Morris Udall of Arizona and others, bulldozers are "poised on the border" waiting to invade the state.

Udall's right, of course, but for Alaskans living 100 miles from the nearest road, it's nothing to get hysterical about. In fact, most of the bulldozers on the border are really pointed the other way, waiting to build the gas pipeline through Canada. So, if there's anybody who should be concerned about bulldozers in Alaska, it's the Canadians.

Beating Big Oil—An image dredged up by developers to counteract the bulldozer hysteria portrays the oil industry as Alaska's whipping boy. *Business Week* magazine (Feb. 26) is the latest organ to grind out this tune.

Business Week even went so far as to suggest that because of state tax increases in recent years, the oil industry might be cool to taking on our government as a partner in some ventures. Of course, the magazine could find no one from Northwest Alaska Pipeline Co. or the Alaska Petrochemical Corp. to back up that notion.

Northwest, for example, wants the state to cough up a bundle to help build the gas pipeline. The consortium might have found a willing partner, except state officials are holding back while they study the feasibility of the project. In turn, the feasibility of the project hinges on decisions by the gas owners, who aren't budging.

So, the question seems to be, who is whipping whom? Alaskans may take a lash to the big boys now and then, but the beating is certainly returned. Any bets that the first $1 gallon of gasoline was sold in Alaska five years ago?

Sex on Ice—A $150,000 ad placed in *Vogue Magazine* last month raised some ire because it attempted to entice tourists to Alaska with full-color shots of lots of female skin displayed in such unlikely places as Ruth Glacier ("Lovely name for an icedream.")

For state officials pondering the Northwest partnership, the Vogue ad might have been pause for thought; it was the product of another deal jointly financed by industry (the Alaska Visitors Association) and government.

Instead, the protests generally revolved around the idea of using sex to sell Alaska.

What those protests ignore, of course, is that the tourist industry has been using sex to sell Alaskans for years now. No, not to take off our clothes at home, but in some place like Tahiti.

So, the Vogue ad might be viewed as something of a boost for Alaskans to spend their vacation money in Alaska. If not, we at least will have another way to tell who the tourists are this season—they'll be the ones with no clothes on.

Wolf Killers—So much has been written about this image in the last few years that I hesitate to add any more. So whenever somebody asks me about the state's plan to knock off another 170 wolves to save the moose of Western Alaska, I just point to Gov. Jay Hammond (a veteran wolf hunter in those areas in the 1950s) and say, "Oh, that's just the start of the 1998 campaign."

To... joke, a lot of people nod knowingly because, somehow, that's the only image that makes sense.

TV CHANGES

What do you want on TV tonight? Opera? Children's programming without commercials? How about Don Young, live and in color direct from Capitol Hill in Washington? All of this is possible when cable television comes to Alaska's big cities. The fast-changing medium could multiply the goodies available on the tube, but also may hurt the state's conventional TV stations and movie theaters.

quarterfinalist competition and will be teaching music, opera specifically, when he returns to Anchorage in June to settle permanently.

Only when you have a large enough skilled musical population can you skim off a cream experienced enough to produce a good show. But enthusiasm does not automatically make quality, a fact Lee Salisbury knows. He calls it a luxury to be able to choose from many qualified singers here rather than having to work with whatever you've got.

During their own time Gilbert & Sullivan were so popular that they were always fighting "pirated" versions of their works produced without royalty or permission. To avoid this happening in the U.S., they spirited the company here secretly, complete with aliases, a midnight ship boarding, and concealment of their destination from family and friends. To prevent the rival producer from furnishing his production, they pursuaded Liberty's store not to sell Japanese silks to him, and Carte himself bought all the Japanese costumes in Paris. They succeeded in opening two days before the "pirate" and ran for 430 performances in New York City.

Gilbert and Sullivan were sometimes a reluctant team. Separately they were failures—Sullivan eternally yearning for recognition in the "serious" musical world and Gilbert never finding another partner as stimulating (or as difficult) as Sullivan. Gilbert wrote the lyrics first, giving them to Sullivan only a few months before opening date. The collaborative tradition in light operas has continued, with bread-and-butter teams like Rogers and Hammerstein, and Lerner and Lowe carrying on.

Operetta is a diminutive term and Gilbert and Sullivan light operas are not diminutive forms. They are exciting as music, captivating as social commentary, enthralling in their humanistic themes. Better yet they are simply fun. Gilbert might have been talking seriously about himself when Pooh-Bah says, "I am a particularly haughty and exclusive person, of pre-Adamite ancestral descent...I can trace my ancestry back to a protoplasmal primordial atomic globule. Consequently, my family pride is something inconceivable."

The production plays in Anchorage March 8 through 11.

If you're going to be in Haines April 25-28, take a look at what's happening at ASCTA's festival. It's a great way to see nine Alaska theater performances in short order. Since the theater holds only 200 people, I recommend contacting Mimi Gregg, Box 75, Haines 99827, phone 766-2116 (work) or 766-2425 (home) about tickets.

If you can't get to Haines, check out the local performances. But don't stop at being part of the audience...see what it's like to participate in community theater.

Virtu

[continued from page 9]

competition will be Ella Gerber of New York. She has considerable theater experience as an actress, director and playwright, and is listed in *Who's Who in the American Theatre*.

The first festival competition in 1973 was won by the Juneau-Douglas Little Theatre for its performance of Edward Albee's "In A Chicago Abyss." The Fairbanks Drama Association won in 1975 with cuttings from a James Thurber production. In 1977 "The Audition," a play written and directed by Gerry Wilson, brought winning honors to the Kodiak Community Theatre.

Winner of the Alaska festival competition goes on to regional competition in Portland, Ore., against Washington and Oregon. Alaska has always come in second in regional competition. The regional winner goes on to Memphis, Tenn., for national competition. Both regional and national competitions are sponsored by American Community Theatre.

Each group has only two hours stage rehearsal time in Haines. This year, ASCTA requires that the competing productions be performed at least once before a local audience prior to the festival. Local arts calendars for recent months indicate the nine community theater groups are doing just that.

Only eight persons from each group are funded to participate in the festival. Half is paid by ASCA, half by theater match. Additionally, each group must sell at least a full page of advertising for the festival program.

During the festival, ASCTA's board of directors meets and elects a seven-member executive board. The 11-member general board has delegates from each of the ASCTA community theater organizations. Any adult amateur community theater, or a university or college theater with a community governing board, is eligible to join ASCTA. Actors and actresses who are active members of Actors Equity, or who receive more than half their income from acting may not participate in the festival.

Cable

[continued from page 4]

many people assume that cable's pay-to-watch status makes advertising unnecessary, commercials will be included on at least four of the 14 channels initially planned for the Fairbanks system. A similar proportion probably will be included in the Anchorage system selected by the APUC.

By law, over-the-air commercial stations distributed by cable will run with advertising spots intact. As for programming generated specifically for cable TV, industry sources say first-run movies and entertainment specials offered as parts of extra-cost, premium packages are inviolate and will run uninterrupted.

On the basic service, cable industry sources say advertising in addition to the commercials already on the regular over-the-air stations will be light and unobtrusive.

John McCaw, vice-president of Frontier ColorCable, Inc., winner of an APUC certificate to build a Fairbanks cable system, says his company will reserve one channel for advertising that it will sell itself. Some of the prospective Anchorage operators expect to put commercials on more than one channel, but all predict the ads will be few because of little demand by advertisers.

Dark clouds have peeked over the horizon for those who oppose commercials on cable, however. A widely quoted study predicts advertisers "will start becoming interested on a broad scale" when cable reaches 30 percent of all American homes with television sets. The report says the benchmark will occur within two years (the medium already reaches 20 percent of all TV homes, or more than 18 percent of all homes).

Perhaps an ominous portent is found in the experience of actor Dan Aykroyd, who as a cast member on NBC's "Saturday Night Live" regularly parodies the hard-sell electronic huckster. Aykroyd learned his pitchman act as a real-life salesman for a cable TV station in his native Canada.

Over-the-air commercial broadcasters are concerned as well. A recent report by their national association claims cable will transmit "deceptive and irresponsible advertising" as well as "borderline pornography...subversive propaganda...the outpourings of the lunatic fringe." Broadcasters clearly are worried about loss of advertising dollars.

Recently the management of Juneau's KINY-TV, the capital city's lone commercial broadcast television station, cut back programming by 40 hours a week. KINY management cited ad revenue competition from the local cable operation as a reason for the reduction.

In Anchorage, commercial broadcasters formally opposed a 1973 bid to bring cable to town. They claimed the proposed system would duplicate their services and jeopardize free TV; the plan later died after a newspaper investigation revealed its ties to a reputed organized crime figure.

The three local TV stations also have been reluctant to sell advertising to Visions, the local pay-TV station, after it began over-the-air service in late 1977.

The local broadcasters have not come out against the new round of Anchorage cable proposals, opting instead to wait and see.

Cable industry sources insist that the new service will tend to increase all kinds of TV viewing. One local observer says the mass appeal of over-the-air broadcasting will continue to hold a large market share: "People will watch 'Laverne and Shirley' no matter what else is on." However, this experienced Anchorage broadcaster also predicts the competition provided by cable will force the commercial telecasters to improve, and in the long run could force one of the three Anchorage stations out of business.

The record shows that competition does spur the improvement of the commercial broadcasters' performance. Improvements last year in the programming and operations of the Anchorage TV stations coincided with the arrival of Visions, although several other factors probably had more impact.

Broadcasters agree that the introduction of cable TV likely will produce an intensified scramble for viewers that will further the trend toward beefed-up local programming and generally tightened operations.

Anchorage movie theaters also have been upgraded in recent months. Their traditionally poor treatment of customers seems to have run headlong into Visions' widely praised efforts in programming first-run movies.

The dominant Wometco-Lathrop chain frequently waited six months or longer after a film's initial release before putting it—sometimes in a very poor-quality copy—on one of its nine Anchorage screens. Although the company still receives complaints about its selection of films, the lag on several major releases has been eliminated.

Wometco-Lathrop vice-president Hugh McCauley of Anchorage denies that the arrival of Visions has speeded up the chain's film-buying process, saying he ordered the switch 18 months ago without knowing the pay-TV station soon would begin operations.

McCauley also dismissed as "far-fetched" any predictions that cable TV will make theaters unprofitable. A well-known study concludes that by 1985 cable and other innovations will combine to do just that. Other observers say the neighborhood movie house will survive, if only to give teenagers a place to meet and neck.

What worries broadcasters and theater operators is cable TV's capacity to entertain, but the medium is able to do much more than that. McCaw says the Fairbanks system will be capable of bi-directional cable or "two-way television." The intense competition for the right to build the Anchorage system virtually insures that the winner will boast even more state-of-the-art features.

Subscribers can use a bi-directionally equipped television to protect their residences with security systems, to purchase commodities from their living rooms and even to vote from their easy chairs—in short, to talk back to their TV sets.

An experimental system boasting all these features now operates in Columbus, Ohio.

Although the capacity for such futuristic services will be engineered into both Anchorage and Fairbanks systems, they still are at least a few years away from operation. Still farther down the road—perhaps 10 or 15 years—is direct satellite-to-home transmission by use of special antennas, which could threaten cable the way cable threatens over-the-air broadcasting.

Whatever the next stage in this technological revolution, TV's role in American life is expected to grow. The average household operates its set six hours, 17 minutes a day, the latest Nielsen survey shows, and that figure is sure to rise. Not only will people watch more television, but the expanded choice of programming probably will have them watching it alone as each viewer finds a congenial show. This implies a continuing growth in sales of TV sets as typical households buy two or three rather than one.

The future of cable TV is uncertain for more reasons than the impending advances of satellite transmission. Capital-intensive and heavily regulated, the industry is likely to be affected greatly by turns in the economy and the outcome of current congressional consideration of communications legislation. However, one bet is sure: Alaskans interested in money could do worse than to jump into the tube business.

Examining dollars & dentists

Volunteer dentists who try to help in the bush have been blocked by rules that keep them out

by Bill Lazarus

Anchorage

While Aleuts suffer from a lack of basic dental care, state laws and the state dental board are blocking volunteer efforts to provide needed services.

Professors from reputable dental schools have volunteered to work on the Aleutian Chain for free. Fourth-year dentistry students working with the professors also have offered services, under a program developed by the Aleutian/Pribilof Islands Association.

But the program is floundering because the professors and students apparently can't get permits to practice from the Alaska Board of Dental Examiners. The dentist-dominated board is responsible for licensing dentists to work in the state.

"Professors aren't necessarily competent dentists," says Arthur Hansen, president of the dental board. He says the board is trying to protect Alaskans by insuring that only capable dentists practice in Alaska.

Officials at the Aleutian/Pribilof Islands Association, however, suspect an additional motivation: greed. They say the state board may view volunteer dentistry as undercutting private practice in the Bush.

Many private Alaska dentists contract with the U.S. Public Health Service to work in villages across Alaska. The work days tend to be long, but the pay is excellent. According to a small, random sample of 1978 health service data, individual earnings vary greatly, but on the average a dentist makes more than $1,00[illegible] a day while working in the Bush.

One health service official says that on a 10-day stay in Ft. Wainwright five years ago, Dr. Hansen earned some $22,000. Another official suggests the stay was probably 12 days.

Hansen says he doesn't recall how much he made, but he defends the figures. He says that since he worked double time in the village, he really worked about 20 normal days. That's a working month, he adds, pointing out that he makes more money in a month at his Fairbanks office. Generally, "I probably earn 25 percent le s when I go to the villages than when I go to my own office," he says.

Public Health Service officials say that Bush fees are essentially the same as the office fees, except that at times money is provided to pay travel and lodging expenses.

The Public Health Service also employs its own dentists to work in the Bush. Between this and the private contracting, health service officials say, most dental needs of Bush children are met. They admit, however, that in many villages basic care for adults is not provided, because the service does not have the money.

"All we're trying to do is to get dental care out to rural Alaska where it's not being provided," says Pat Pletnikoff, executive director of the Aleutian/Pribilof Islands Association. "Right now we're just right in the middle of a pissing match. We have two people who want to come up now (the chairman and assistant chairman of the children's dentistry department at the University of California Dental School at San Francisco) ...but we can't get the permits issued for them to come and practice in Alaska."

"There is no provision in the Alaska statutes to do what they are trying to do," says Hansen. He points out that only dentists licensed in other states—and not students—are legally able to o[illegible] in special, one-year permits t[illegible] work in Bush Alaska [illegible]ithout going through the licensing procedure. (In states with dental schools, senior students are able to practice dentistry under supervision of a licensed dentist. But Alaska has no dental school and no such provision).

Besides, Hansen says, the Aleuts and their volunteers "haven't even made an attempt to apply for a permit."

The catch is that in December 1977 the board decided not to issue any more Bush permits. The one person holding a permit "had abused it," says board member John Beard. "He was practicing in an area that he wasn't supposed to be practicing in and he was doing bad work."

Other than obtaining a special permit, there are only two ways a dentist can legally practice in Alaska: he can pass an exam and gain a license from the dental board, or he can work for the Public Health Service. Federally employed dentists do not need to be lic[illegible]sed by the state, but they c[illegible]y earn $30,000 a year.

Passing the licensing exam is no easy task. Although the test is supposed to be simple, 13 of 25 people who took it last year flunked. Eighteen of the would-be Alaska dentists were already licensed in other states, but nearly half of those practicing dentists failed the clinical portion of the exam, which is judged by the dental board. This test is given only once a year.

Hansen says it's "hard to answer" questions about why so many established dentists failed. He suggests that "we have far fewer (malpractice) problems in Alaska...I think this quality has come about because our standards may be a bit higher."

A legislative audit completed earlier this year looks at the situation differently.

"Presently there is a dental manpower shortage noted in several areas of Alaska. Board policies are restricting the entry of qualified dentists and are not in the public's best interests...

"The Board's clinical examination has several deficiencies...first noted several years ago...(which) have not been corrected," the audit report says.

The report also says no instances of "deliberate grading bias" were found. It notes, however, that "a potential conflict of interest...exists when Alaska Board members who are practicing dentists grade the performance of applicants who represent potential competition."

In a written response to the audit, Hansen maintains, "There is no conflict of interest in the grading system. This is a serious charge to make especially by a lay person regarding a profession he knows little or nothing about."

He also says no shortage of dentists exists and "adequate numbers" of dentists are willing to travel to the Bush.

Only four dentists live in Alaska rural areas with a total population approaching 60,000. Alaska has 260 dentists: 200 private practitioners, 20 military dentists and 32 with the Public Health Service. Although very few dentists live in the Bush, the dentist population ratio in Alaska beats the national average of one dentist for every 2,186 people.

In its own response to the legislative audit, the House Commerce Committee voted recently to put the dental board on two years probation and urged the board to make it easier for dentists to practice in the state. The committee opted to dismantle several professional boards under Alaska's "sunset" law, but a final decision awaits a full vote of the legislature.

Despite the legislative recommendation, Hansen says he is not certain he would support legislation allowing student dentists to work under their professors in Alaska. He also says he is not sure he would support issuing permits to the

Alaska news and tidbits from across the state

by Clifford John Groh, with staff reports

Anchorage:

Educational executives from Missoula, Miami and Buffalo are among the five finalists for the presidency of the University of Alaska.

The five were chosen from a list of 90 original candidates for a job that has turned over twice in the past two years.

Named as finalists by the university's Board of Regents were Jay Barton, vice-president and provost for academic affairs at West Virginia University; William Carlson, president of the University of Wyoming; Lawrence Pettit, former commissioner of higher education with the Montana University system; Albert Somit, executive vice-president and president of political science at State University of New York at Buffalo; and Clyde Wingfield, executive vice-president for academic affairs and provost, University of Miami.

The regents voted at a special meeting in Anchorage to bring the finalists to Alaska soon for a six-day look at the system.

UA President Foster Diebold will end his term by previous agreement early this summer.

Fairbanks:

The Fairbanks police union is suing to force reinstatement of six employees laid off by the city in an economy drive.

The Fairbanks Police Department Employees Association lawsuit charges that the layoffs of five patrolmen and a secretary violated the union's contract. The suit, filed in state superior court, also complains that the city took the action without consulting the union or attempting to find another cost-cutting move that would avoid layoffs.

City Manager Bob Wolting said the layoffs were necessary to cut the police department's budget by $245,000, a move mandated by an ordinance passed last May that requires this year's city spending be held to last year's levels.

Wolting told the *Fairbanks Daily News-Miner* that nothing in the contract prevents reducing the police force.

Ketchikan:

The second of three unions striking the First City's pulp mill has settled on a contract and returned to work.

Members of the International Brotherhood of Electrical Workers have accepted a three-year pact with the Louisiana-Pacific mill. The new pact provides 15 members of the IBEW with terms similar to those earlier approved by the 40-member Union of Operating Engineers.

The IBEW contract provides for a 10 percent wage hike during the first year, retroactive to June 1, 1978, a 9 percent increase in the second year, and 8 percent in the third year.

Meanwhile, members of the Association of Western Pulp and Paper Workers, the 400-member union that has been striking since Sept. 15, said talks would not take place until later this month. The union said its representatives were tied up in other negotiations in Washington.

Shorts

[continued from page 8]

it all off while playing bagpipes, most participants at this Amateur Night forego any elaborate talent show. Constant cries of "Fluff that muff" from a juiced-up cross-section of GIs, tourists and run-of-the-mill locals appears to deter the nudeniks from doing much more than jiggling their flesh.

The crowds overlap at the "Wet Shorts" contest held at the other end of town, but the atmosphere is decidedly less sadistic than the scene at PJ's. Instead of a jeering, pressure-filled degradation ritual, every Monday night the Roadhouse puts on a raunchy version of a high-school popularity contest. In this "Splash for Cash" competition, well-formed young men go offstage to strip down to baby blue trunks with "WET SHORTS" imprinted on the back. (Women get their own chance for the $101 prize the next night, when the Muldoon tavern sponsors a "Wet T-Shirt" contest.)

When the men return to the dance floor that doubles as a stage, eager women with bottles of cold water spray the stretchy material until it clings tightly to the contestants' genitals.

The guys then do their stuff, dancing to the repetitive disco lyric, "Push, push in the bush." The most popular entrants are obvious—they garner not only cheers and applause, but also ice cubes and dollar bills stuffed down their flimsy undies by admiring women who approach from the audience.

Roadhouse manager Dennis Smith says the contest is judged by the announcer's reading of crowd reaction. No independent evaluators are used, he said, because, "They'd kill the judges."

Dentists

[continued from page 5]

dentistry professors who want to work with the Aleuts.

"I don't know whether we feel that we would have enough control over the situation...to insure quality work. In remote areas anything can go on and nobody's going to see it," he says. He adds that he is speaking for himself, not the board.

The predicament facing the Aleuts is not new. Last spring their association applied for a $200,000 state grant to buy a mobile dental clinic and to pay for the transportation and housing of volunteer dental students and professors. Representatives of the Alaska Dental Association unsuccessfully lobbied against the proposal.

Then last summer, in conjunction with the proposal, a group of four professors, six dental students and four dental hygienists came from California to work on the Pribilof Islands. But because of licensing problems, the group spent about 10 days in Anchorage doing nothing.

"They forced (the volunteer program) on people...They never cleared it through normal channels," says Hansen.

Jim Milne, a consultant for the Aleuts, admits the association had not applied to the dental board for special permits for the volunteers. He says the association decided to work through the Public Health Service after learning that the board had decided not to issue any permits. As volunteers for the federal government, the professors and students would not need approval from the state board.

Milne says the Public Health Service earlier agreed to take the volunteers under its wing, but later balked. Only after pressure was applied in Washington, D.C., he says, did the service agree to accept the volunteers, who then left Anchorage and spend about two and a half weeks treating 220 islanders.

Dr. John Stolpe, chief of dentistry for Public Health Service in Alaska, says the service did not flip-flop on the matter. He says the Aleuts approached the service about the matter only shortly before the volunteers arrived in Alaska.

Whatever the case, the health service now says it won't accept the dental volunteers.

According to Stolpe, who worked with the volunteers last summer, the problem is not the quality of the service. "From a technical standpoint, I found their services to be totally satisfactory...They are a young, enthusiastic group of people. They established a very good rapport with people in the (Pribilof) community...I enjoyed working with them. I thought they were sincere and worked quite hard," he says.

But Stolpe says if the Public Health Service takes the volunteers, it will be in charge of the program. Instead, he says, it's better for the Aleutian/Pribilof Islands Association to keep control of the program and to obtain permits from the dental board.

Stolpe also says some paperwork requirements have not been met by the association and that, despite the volunteer help, the program cost more than the services provided.

Milne says the volunteer program saved money. He charges that the Public Health Service is just responding to pressures from Alaska dentists not to take the volunteers.

In light of the recent legislative recommendations, Milne says the association now will apply to the dental board for a temporary Bush permit for the volunteer dentists. He says it doesn't make sense for a dentist who might work here for only part of one summer, to go through the cost and burden of taking the licensing examination.

Even if application is made, the outlook doesn't look good for issuance of the permits.

The legislative audit itself criticizes the "double standard" of allowing unlicensed dentists to work under special permit in the Bush but not in urban areas. It recommends that either the permit system be done away with (and licensing made easier) or that it be applied statewide.

In his audit response, Hansen says the dental board recommends the permit system be eliminated. He says the board is studying the possibility of reciprocal license agreements with other states but suggests it is likely to recommend that it judge some applicants on the basis of their credentials. This would "allow for close Board scrutiny of an applicant, thus assuring the same degree of quality," he says.

Board member John F. Kobylarz, a Soldotna dentist, disagrees with the primary recommendation of the audit. "Nowhere in (Alaska law)...is the Board charged with encouraging dentists to practice in Alaska. I think the State in its powers should protect the consumer, not try to coddle the citizen from birth to death," he writes.

The dental board is made up of five dentists, one dental hygienist and one person not associated with the dental profession, a mix Hansen claims "adequately represents the public interest."

John Beard, the one public member of the board, says licensing is "protectionist" and the board ought to be dismantled. An Anchorage lawyer with Libertarian leanings, Beard suggests that judging of dentists should be left to the marketplace and that even graduation from dental school should not be required to practice dentistry in Alaska.

Jana Varrati, a dental hygienist on the board, has a more traditional point of view. She says she understands why the public might view the dental board as protecting the state's dentists from competition. But, she insists, the state exam is necessary. "Come to the next clinical dental examination. I think you would have your eyes opened. Just having a certificate from a dental school does not mean that you are competent," she says.

Varrati questions the wisdom of allowing students and professors to practice in Alaska. "Let them come up and take the board (exam)," she says. "I don't think we have remarkably high standards...We have one of the simpler exams...I wouldn't like to see someone who failed practice in the state."

"Either something is wrong with the dental schools or we have the best dental program in the entire world. I have the feeling that (the high failure rate) is related to the economics of competition," says Bob Worl, who served as health director of the North Slope Borough for three years.

Alaska dentists, he says, have volunteered work in the Bush and "it's very tough to say it's all black or white in terms of altruism or the economics involved. It's a real mixed bag."

However, taking a broad perspective, he says, "The problem is that the system is set up so that a guy is a fool if he doesn't make a killing."

Pat Pletnikoff - Ex. Director

Says the program was working last summer in Pribilof Island - was very cost effective. They took care of everyones teeth.

Problem: they're trying to modify the regulations - change the statutes so that they can bring practitioners from out-of-State. These people are volunteers. Pat says this program has been implemented in California, Isreal & Greece. People donate their services. The Board of Examiners (dental) & local practitioners aren't going for it. They feel threatened economically.

Aleut Corp. wants 1 yr. temporary permits (would rather have permanent) So that they can convince the program.

Dear Jim:

Enclosed you will find two copies of Rep. Osterback's bill on dentistry.

I have just spoken with Rep. Osterback and he was wondering if you were planning to come down to testify on this bill, or planning to send down any written information as back up. I told him I did not know. You might want to call him at his office: 465-3715.

Thanks for calling.

Dear Member of House HESS;

I would like to express my support for the Dental Board in their endorsement of the concept of "licensure by endorsement."

I am familiar with this type of licensure thru the veterinary licensure system. We have a similar provision in our practice act whereby a veterinarian can become licensed by providing proof of licensure in another state of the US having licensure requirements substantially similar to the Alaska requirements, and also providing proof of having been an active practitioner for at least 5 of the last 7 years.

To me this is an effective method allowing experienced candidates to be readily licensed. To my knowledge this provision has not been abused in the veterinary field.

I think it is important that the law read "has practiced for 5 of the last 7 years." This avoids blanket licensure of candidates who have 5 years of practice time but who may not have practiced in the last 10 years and thus would be out of date.

Please let me know if I can be of service.

Sincerely,

Jon Thomas, DVM

1D

MEDIOCRITY A SUBSTITUTE FOR QUALITY?*

Gentlemen, here in my hands I hold some recent news releases and editorials referring to the current problem of defective, substandard merchandise and services as well as the prevalent trend of ignoring the basic fundamental requirements for character.

Let me take time to read one or two.

Under the headline, "Apparel Industry Feeling Pinch of Defective Goods," we read that "Industry officials attribute the problem to a chain of failures that stretches from the fabric mill at one end through the dyeing and finishing industry and the garment maker to the retail shop."

Here is another. The U. S. Chamber of Commerce Chief, Winton M. Blount, warns of "A rising tide of consumer dissatisfaction with shoddy merchandise and services and with advertising and merchandising techniques will result in increasing government restraints unless businesses learn to police themselves."

From an editorial in the Texaco Star, I read the following: "Those suspected of violating the basic tenets of loyalty, honesty and ethics have been prosecuted to the fullest extent of the law." "There have been those who have criticized such a policy on the basis that 'permissiveness' is rampant in our society, and that such wrongdoing should be dismissed or treated lightly as simply a sign of the times."

We are all aware of the number of new model automobiles with defective parts that had to be recalled by the factories in the last two or three years.

Now, let me read you the conclusion of a survey made by D. L. Moore and J. L. Stewart and published in the Journal of Prosthetic Dentistry, April, 1967, under the title "Prevalence of Defective Dental Restorations."

"More than one-third of the operative effort was consumed in replacing defective restorations."

What does this mean? It means that no business today is immune to the philosophical disease of "Acceptable Mediocrity" which has us all writhing with the fear and fever of a full scale epidemic. It means that dentistry too has been caught up in the fearful tide.

---

*Presented by Roy A. Fetterman, D. D. S. at the Eighty-fifth Annual Meeting of the American Association of Dental Examiners, October 25-26, 1968, Miami Beach, Florida.

It means that we, the public, which is complaining about the defective goods and below-standard services, is that same public producing the defective goods and below-standard services. It is time we the public start the cure for this debilitating disease before we become so weak we cannot stand. The prevention for this disease is no mystery. It is a three part vaccine called "Basic tenets of Loyalty, Honesty and Ethics." For some strange reason, man has, over the centuries, fought the use of this vaccine with more vigor than he has the use of fluorine in his water.

Because of the public complaints of the misuse of the fee scale by many of our profession in conjunction with a flagrant lack of ethics and poor services, the affairs of our profession and its services are gradually slipping from the hands of those most qualified with dental knowledge to handle them and into the hands and control of political arsonists. Unfortunately, the public hears little of the ethical sincere members of our profession.

"The evil that men do lives afterthem;
The good is oft interred with their bones;"
So said Anthony at the funeral of Caesar.

It behooves these sincere and loyal members of the profession to seriously start a cure for those among us who are affected by the disease of "Acceptable or Permissive Mediocrity." In addition, we need the development of some sound preventive program aimed at those not yet infected as well as the students soon to join our ranks.

But first, we must each put our own professional house in order lest we be not qualified to judge another.

With all honesty and sincerity, I wish to say that I consider this opportunity to speak to you today as a singular honor, for you gentlemen are looked upon by the rest of the members of the profession, as well as by a large segment of the balance of the populace, as the ultimate in dental wisdom, dental ability and dental ethics. You are the supreme court of the Dental Profession.

Upon your shoulders rests the responsibility of judging whether or not our dental schools have properly prepared a man to represent our profession. Upon your shoulders rests the responsibility of deciding whether or not these graduates will be of service to the public. You, gentlemen, are the highest tribunal of a fairly new and very necessary profession.

If I should tread upon the toes of an individual or a school, I say "If the shoe fits, put it on." I have nothing to gain politically nor financially by this appearance before you. I seek only help from the members of our profession to restrengthen the foundations upon which our profession has been based; to shore up the walls which have been weakened by the philosophies of speed and mediocrity; and restore the roof of dedication to dentistry and its service to mankind.

I feel it is reasonable to expect to find all the categories of dental education amalgamed into a harmonious and efficient medium of services offered the public by honest and enthusiastic men loyal to their profession as well as to their patients, offering the best services their ability and dental training can produce. This is our Ideal. The target is perfection which seems always just a little out of range. We must keep our sights upon it lest it slip from view over the horizon. We must keep this idea on the horizon and encourage our young people, as part of their training, to push on towards it. Enthusiasm and hope for the future will be their motivation and only we, by our example, can give them this.

I have many thoughts on the subject of our young people as who does not, so many ideas for improvements I feel could be beneficial in the teaching programs for those we are preparing to send out to practice dentistry, but of course time today does not permit me to say all I wish to say on this subject. Sufficient time will be used if I do as it was suggested that I do and give you my evaluation of the average Dental graduate in Operative Dentistry; his attitude, ability and training as based upon my experiences teaching failing senior students and men who have been unable to pass the California State Board.

Several years ago, I had the responsibility and rewarding experience of diagnosing and correcting the problems of seniors of U.S.C. Dental School who were in danger of not graduating because of their weaknesses in Operative Dentistry. It was here with my "Goon Squads" as the members affectionately called themselves, that I acquired the nickname, "Whispering Roy."

This experience became the foundation upon which I later based my instruction for the refresher course I have taught for the last nine years. This course, which is offered by the University of California Extension Division, is held twice a year for nine weeks in the spring and nine weeks in the fall, and the classes average from 10 to 20 students.

Over the last nine years, I have instructed 285 men. These men have ranged in age from 24 to 68 years and their graduating dates have ranged from 1924 to 1967. They represent 44 schools of the United States, Canada and Europe. Among them are OKU men, members of the Dean's list and of the specialities. Some have failed the California Board once, some twice, or even more. Some come for help before even attempting to take the Board.

All of these men and women, including those of my goon squads, suffered from the same thing, the lack of knowledge of the Basic Fundamental Principles of Cavity Preparation.

Those who fail the board have a long list of reasons why they failed the operative portion but not one of which even suggests that it was because of their lack of knowledge on this subject.

In 1961, I had the honor of being asked to audit the California Board and I can honestly say that the complaints of discrimination of school or race can be dismissed. I agree that a man who has been practicing one of the specialties for years and then attempts to take an operative exam is going to have difficulties and a man unaccustomed to doing foils is going to have a tough time putting in a foil, and I'll not argue that it is possible to have a bad break, a bad patient or a bad cavity, etc. on any examination, but these are the exceptions.

After observing silently, by request, for a whole day, I agree wholeheartedly with the board member who said to me, "We do not fail these men, they fail themselves." It was obvious here. So many lacking the knowledge of these important Basic Fundamentals and the ability to apply them properly.

Nine years ago, with no other magic than the desire to share the best of what I had learned in school and, in subsequent years, from men such as Ernie Jones, George Hollenbeck and Dave Shoeshone; as charter members and director of the Jones Gold Foil Study Club of U.S.C.; 25 of the last 33 years on the staff at U.S.C.; many years of association with Dr. Rex Ingraham; many years of practical experience and Rex Ingraham's Atlas of Gold Foil and Rubber Dam Procecures, I set to work. I know I had my work cut out for me because I was expected to teach these men in nine days of instruction what they had missed along the road of four years in dental school or had forgotten in years of practice. Teach them enough to enable them to pass the board.

To me, however, just trying to teach them enough to pass the board seemed as futile an effort as that made by the hunter just shooting at the spot on the

hill where the four point buck stood before he vanished over the horizon.

I'm not "Whispering Roy" any more. I'm now the "Ogre," but at the end of the course they almost all tell me they learned more in nine weeks about Operative Procedures than they did in four years of dental school. I sincerely hope I have sent each on his way with the word Operative Dentistry wrapped and tied securely with enthusiasm and quality.

Of the 17 classes, only two have passed 100% on the first try. The remaining classes have averaged about 85% passage of the board on the first try following the refresher course. Most pass it on the second try. I say most because there are some I never hear from after their completion of the course.

My first class was rather a flub since I had no one with whom to confer on a course of teaching, but it was not long before I was quite aware of the needs of these men. At the end of the class, some of the men said they did not think they had improved too much, in fact they did not think they were too bad to start with. I had to find some way to measure their improvement, so I started a procedure with the fourth class which I have continued to this time.

Each student is asked to prepare a Cl. II on the distal of the upper right second bicuspid on his typodont and bring it to class the first evening. Before I start to lecture, I collect and keep these prepared teeth until the end of the course, at which time each man makes another preparation and turns it in.

The operative shortcomings of these men I feel can pretty well represent those of many others as well and help to explain why so many of us spend a large percentage of our operative time doing over work at the expense and comfort of the patient, to say nothing of the time wasted for both dentist and patient.

No doubt you wonder why I teach only the Cl. II in a bicuspid. Nine teaching days is not enough time to make finished operators on all types of preparations. With minor modifications, the Gold Foil preparation becomes an alloy preparation. Then, too, I must remember that most of these men are primarily interested, when they come, in learning just enough to pass the board. Concentrating on one preparation seems to be the answer.

Before I show you my slides of these prepared teeth, let us refresh our memories on the definition of a cavity preparation from the book entitled

"Operative Dentistry" by G. V. Black, the acknowledged "granddad" of Operative Procedures.

> "The mechanical treatment of the injuries to the teeth produced by dental caries as will best fit the remaining part of the tooth to receive a filling, restoring original form, giving it strength, and preventing recurrence of decay in the same surface."

Now let us have a little review of the seven fundamental principles that are general to the "mechanical treatment of the injuries of teeth produced by dental caries."

1. Outline Form. This may be defined as the form of the area of the tooth surface to be included within the outline or enamel margins of the finished cavity. This would include all pits and fissures on the occlusal surface.

   On proximal cavities, this means that the whole of the habitually unclean areas should be included within the outline of the cavity. This will often require that sound enamel and dentine be cut away to obtain correct outline form and is known as extension for prevention of the recurrence of the decay.

2. Resistance Form. This is that shape given to a cavity intended to afford such a seat for the filling as will best enable it to withstand the stress brought upon it by mastication. The resistance form consists of a flat seat for the filling, cut at right angles with the long axis of the tooth. In proximo-occlusal cavities the gingival wall of the proximal portion is cut flat and in the horizontal plane with definite angles. The step is also given a flat horizontal seat.

3. Retention Form. This is the provision for preventing the filling from being displaced. A large part of this is provided for by the Resistance Form, but it is further required that provision be made that will prevent the filling from being thrown out of the cavity by such lateral or tipping force as may be brought against it. This is accomplished by making the occlusal step in the form of a dove tail, and by shaping certain of the opposing walls that they will be strictly parallel or slightly undercut.

4. Convenience Form. This may require certain modifications in the general form of the cavity to render the form more convenient for placing the filling material.

   A second order of convenience form consists of sharpening the internal line and point angles. These are necessary for starting gold foil and assist in starting and securing the first portions of an alloy filling.

5. Remove remaining carious decay.

6. Finish the enamel wall.

7. Make the toilet of the cavity.

Now, let us look at the "before and after" pictures and see if you agree with me when I say the men who made the preparations did not understand the rules we just finished reviewing.

First, I will show slides of my class of November 1961 and those teeth with red dots represent the work of students who graduated from dental school in June, 1961.

(show slides)

By 1967, the California State Board approved the Cl. V restoration as an acceptable Gold Foil procedure, so now I have them cut a Cl. V as well as a Cl. II before class starts. In the fall of 1967 and the spring of 1968, I had 31 students in my two classes and there were 12 1967 graduates in this group. I would like to show you slides of the work of these 1967 graduates and see if you agree with me in my contention that they are no better operators than the 1961 students.

(show slides)

Some of you gentlemen passed these men when they took the board in your state.

Just for emphasis, let me enumerate a few of the major problems which beset these men:

1. Cutting the cavity square in the tooth.

2. Getting the gingival seats flat and at right angles to the long axis of the tooth.

3. Recognizing the proper buccal and lingual extension.

4. Recognizing decay.

5. Recognizing the difference between dentine and enamel.

6. Visualizing the finished preparation in advance.

There are other problems too, some of which are particular to individuals and others general to all.

1. Do not know how to sharpen hand instruments.

2. Lack complete knowledge of Finger Rest Position.

3. Have no understanding of the names of the hand instruments as they relate to their use.

4. One 1962 graduate had never prepared a MOD alloy. (It took him five hours to prepare and fill his first cavity for my course.)

5. Lack of knowledge of the use of and practice of using rubber dam.

6. Double jointed men have great difficulty holding and controlling handpiece and hand instruments.

7. One student had been practicing for 23 years and had never used a hand instrument.

8. One student was using the palm thumb grasp on his contra-angle trying to prepare an upper tooth.

At the opening of this paper, I made mention of a report on a survey made by D. L. Moore and J. L. Stewart on the "Prevalence of Defective Dental Restorations." In the same article was also the result of a similar survey made in 1936 by P. J. Brekhus and printed under the title, "Your Teeth" and published by the University of Minnesota Press. These two reports suggest that there has been no improvement in the failure rate of restorations in the last thirty years.

In other words, the percentage of poor operators has remained about static be they past or recent graduates in spite of the high speed handpieces, visual aids, closed circuit T. V., four-handed dentistry, etc.

I believe that my findings from teaching my refresher course might well be used to contribute evidence to this fact.

Now I submit to you my evaluation of the recent graduates, as well as all the others whom I have taught the operative portion of the Refresher Course in Dentistry offered by the University of California Extension Division during the 1960-1968 period.

They are inadequately prepared with an understanding of the basic Fundamental Principles of Operative Dentistry and insufficiently trained in the application of these principles. In addition, I feel that the lack of demonstrative pride in the profession made manifest by many instructors in addition to their permissive attitude toward the students have combined with the weak training to produce too many dentists who substitute Mediocrity for Quality either by accident or intent.

Before I move on to suggested teaching procedures which I feel could help to take better advantage of the potential of each student, I wish to enumerate a few complaints of recent graduates.

1. Some schools issue hand instruments which are too large and cumbersome.

2. Students resent smart and irrelevant remarks made by instructors.

3. Several said they had received the lectures on the basic principles but no one had insisted they produce them on the clinic floor.

4. One student had been an instructor in the operative department of an Eastern school for two years and was told by the head of the department that they do not use Rex Ingraham's book because it just can't be done the way Rex says it should be done.

5. All recent graduates complain they do not get enough help from the instructors.

6. Lack of interest in the student, especially in the freshman and sophomore years. Seem to resent interruptions by students.

Would you care to guess what pertinent question is often asked me? "Can the State Board examiners do what they ask of the students?" Can you, gentlemen? Are you qualified to judge whether or not a man knows the basic principles of Operative Dentistry or are you just someone's political favorite for the appointment? These are the frank questions asked by our young people and, in many cases, for good reason.

Now that we have aired the shortcomings and complaints of the members of our profession and those about to become a part of the profession, let us turn our thoughts to how we can begin to correct these problems. How are we going to improve our service to our students so that they, upon graduation, can more efficiently fulfill their social obligations to the public?

I believe that our dental education, like the garment industry, will often find that the cause of the defective merchandise, in this case the poor dentist, began back at the "fabric mill" so to speak. Inasmuch as we cannot return the poor graduate for a refund, we are stuck with him and, only too often, his practicing of the 8th Fundamental of Cavity Preparation or the "Stickum Form" as this technique is so aptly named by my good friend and fellow teacher, Dr. Rene Eidson. In case some of you are not familiar with this form, here is the recipe. Take one large burr, use it sparingly and stickum full of filling material.

It would seem, then, that we should be more critical of our selection of students.

Right now, I wish to make it clear that I am not overlooking the fact that there are two branches of dentistry - the medical and the mechanical. In spite of the current practice of de-emphasizing the mechanics of dentistry even to the point of speaking of us as "dental physicians" just as though there is some kind of stigma connected with being a mechanic or engineer, I still say that dentistry is primarily a mechanical profession. In the same breath, I might add that I feel that a fine surgeon doing transplants is a mechanic also.

However, regardless of the present philosophy, the fact remains that most dental practitioners spend the greatest amount of their time doing Restorative Dentistry. If you remember Black says, in his definition of a Cavity Preparation, "The mechanical treatment of...." etc.

So, since we now know that the graduate dentist is going to spend most of his time doing operative, which is a mechanical procedure, then logically the candidate for dental school should be selected on his mechanical interests

and experience as well as scholastic standing. Did he ever have a Hot Rod to keep running? Has he had any art, mechanical drawing, machine shop or wood shop? I would choose a man with a lower grade average but who had enthusiasm for the profession and a background in some mechanical skills over a man with high academic scholastic record but no background of any mechanical training.

Only one man in my last class of twenty knew what I was talking about when I suggested that each one should look upon his hand and the handpiece it holds as a "milling machine."

Another point which I wish to make on the selection of these students is a closer check on the useability of the hands. Some of my students seemed to be having great difficulty in developing good control of their instruments and I discovered that these men are double jointed. Their knowledge of the subject was adequate but their attempts at applying this knowledge was very frustrating to them. I have devised a very simple test to determine whether or not this condition is present in a candidate. If it is, I feel he should be advised of it and warned of the difficulties which lie ahead. Perhaps consultation as to entering one of the less mechanical specialty fields after graduation might be considered as beneficial to the man as well as the public and the profession.

What good is the theory if you cannot put it into practice?

Another point I feel very strongly about is that teachers should have that long lost "right" to "flunk" a student restored to them. The instructor working with the student is the one most likely to know his strengths and weaknesses, not the head of the department nor the Dean. There is nothing but good to be gained by repetition of an operation, a course, a semester or a year.

The new concept of teaching operative by preparing an area in a tooth in the typodont once and then going right to the mouth of a patient is a frightening thought to me. One of the schools which teaches this theory graduated its first class this year. I have one of the students enrolled in my fall class at this moment. It will be most interesting to observe this graduate work. How will he compare with the 1963 graduate who had never put in a MOD alloy? It took him five hours to make and fill his first preparation in my class.

I feel there should be a national re-evaluation of the teaching staffs of our dental schools. True, the dental education program is also suffering from

a shortage of teachers so it is than all the more important that each one be performing to his or her maximum performance. This then means teaching the teacher to teach. Faculty study groups taught by someone from another section of the nation, such as UCLA is now doing, could be a great help in standardizing the instruction in our dental schools throughout the nation.

With few exceptions, in my opinion, the average graduate student is not qualified to go right into teaching on the operative floor. He lacks the experience of solving problems that arise that do not look like those pictured in the book. An instructor should be able to quickly appraise a preparation or filling, or whatever, and aid the student in making any corrections necessary. If the instructor is a recent graduate, he is likely to teach students the same mistakes he is making, as indeed of course any other instructor is likely to do.

A teacher must be flexible, creative and enthusiastic and be aware that the methods to teach some students will not work on others. The trick is to find out why some are not doing well and correct the cause. This takes time, of course, but results are usually gratifying to student, teacher, educational institution and the public.

Too often, I have found that my students do not see or understand the relationship of an instrument to its use. For instance - the pulling action of the hoe or the chopping action of the hatchet, etc. So often we who know these things so well forget to pass these seemingly unimportant bits of information on to our students. A recent letter from my nephew who is a sophomore at one of the dental schools advises me, "the amount you taught me really put me ahead. We received an instrument case this year chucked full of stuff. They (the other students) have no idea what that stuff is. Here we are rolling into the third week and they are really having a time of it."

During the ADA meeting in Dallas, I had about a dozen senior students ask me what I mean by hollow grinding a gold knife. I reciprocated with a question. How many of them knew the difference between a splitting axe and a chopping axe. Not one did. The difference between these two axes are mechanical necessities for improving the ease and efficiency of their use for a specific job.

To know terms but not their meanings is like reciting the Lord's Prayer and not understanding the meaning of the words.

Almost all of my students have been unable to sharpen their hand instruments. If a man cannot sharpen his own insturments, I feel he is truly handicapped. How often as I work I step into my lab to sharpen up the edge of a chisel or a hoe or of what have you. You can't work with dull instruments - which brings up a point. I have found that many of my operators do not know that part of their difficulties in cavity preparation are the result of dull instruments. Some have told me they used the same instruments for the two years in school without having to sharpen them.

A real puzzler is the lack of understanding of the Finger Rest Position. Recently, I asked instructors from U.S.C., U.C.L.A. and Loma Linda if they teach Finger Rest Position, per se, and their answers were all the same. No. They say they assume that anyone who can hold a pen or a pencil can hold a handpiece. I feel that in teaching there is no room for assumption except for the assumption that the student knows nothing about the subject or portion of the subject you plan to teach him.

One day, I observed a student using the palm thumb grasp on his contra-angle handpiece preparing an upper tooth. When I suggested he try the pen grasp he said he never had. Before he completed the course, he made the change and commented on how much easier it was to use a handpiece properly. An alert and interested instructor should have corrected this for him years ago.

Unfamiliarity with the use of the rubber dam is a very serious problem. I found one of my students, a recent graduate, struggling with a rubber dam which kept buckling over the tooth he was trying to work on. He could not recognize his problem which was simply that he had put the dam to place and then turned it a quarter of a turn, thus placing the top and bottom of the dam to the sides. Try it some time. You'll have a hell-of-a-time working on the tooth.

I have been told by many of my students that they were never made to use the rubber dam.. My experiences with these students does much to substantiate a report by Dr. Robert E. Going entitled "Study Finds GP's Avoid Rubber Dam Technique." This report in turn confirms an earlier observation by Dr. Leon Ireland that "probably no other technique, treatment or instrument used in dentistry is so universally accepted and advocated by the recognized authorities and so universally ignored by the practicing dentists."

From the same article just referred to, Dr. Going states "Frequently,

the student's concepts relate entirely to the instructor's enthusiasm for or against the procedure. The quantity and quality of teaching the technique varies greatly among schools and among individual instructors within schools."

On these findings, then, we might surmise that in spite of all their weak excuses for not using rubber dam, the real reason so many men to not is becuase they were never thoroughly convinced by their instructors of the true importance of its use. This, then, brings us to one of the complaints of many of my students. They would like to have had more explanation and help from the instructors. They feel they waste time having to find out too many things by themselves. At one school, it is assumed that the seniors know all there is to know and that the instructor's role is only to act as a checker.

There is nothing that irritates an elder more than a smart-aleckyounster. If you are one of these irritated elders, just don't forget that that smart-aleck youngster learned his "smartness" from some smart - aleckadult. I find that many of my students have remarked about senseless smart - remarks made by an instructor on a serious subject. The student in question asked the instructor to check his cavity preparation which the instructor did, punctuating his observation with the remark, "It looks like a chicken with its head cut off." The student said this left no doubt in his mind that the cavity was bad but he was not told how to correct it.

All I have said this afternoon adds up to a need. A need for more carefully selected students and better prepared instructors with a more uniform teaching program on a national basis. A staunch stand by our state boards against the lowering of their standards, no matter how much the political pressure piles up, is needed.

When I was going to dental school 36 years ago, all that was required for entrance was a "C" average and $300.00. In fact, the $300.00 was of more importance than the "C." U.S.C. Dental School had "Little Caesar" as we called Dean Louie Ford. We feared him, made snide remarks about him behind his back, but held him in awe and respected him as being the man at the helm. On the scene as part of his crew, either full time or part time, to prod us, coerce us and inspire us were men like Ernie Jones, George Hollenbeck, Don Smith, Jim Hickson, Doug Dyer, and others. These men were our idols and they were all men of experience and able to practice what they preached. They were unwavering in their belief in the truth of the importance of the fundamentals as the foundation for future improvements in techniques.

Most of you know I am a member of The American Academy of Gold Foil Operators and, naturally, a great advocate of foils. I am aware that the subject of Gold Foils is treated very lightly by many of the dental schools and this grieves me. I am in firm agreement with the philosophy of Ernie Jones which is that doing Gold Foil work is one of the best dental exercises there is for a dentist.

For foil to be a success, strict attention to the application of the fundamentals is an absolute must. This is not so of many other filling materials we use. It was his contention that the good habits formed in doing foil work would carry over into all other fields of the profession.

One of the currently stressed concepts of education today is that of "Continuing Education." Of course, this is nothing new but just being stressed anew. G. V. Black once said, "The professional man has no right to be other than a continuous student." Percy T. Phillips also made a similar statement when he said, "To protect the quality of dental service, the professional man must be a lifelong student of dental science and dental technology. His education must never stop."

Unfortunately, the type of continuing education in which the average dentist is most interested today is some new technique - a way to do it faster, easier, so he can make more money at it. Often the glamour of a new slant on an old subject influences us at the expense of attention to the underlying principles upon which these new concepts are based. I am in favor of continuing education 100%, but I feel we are terribly in need for some Continuing Review as a part of the program.

No matter how many new concepts there may be on the subject of castings, alloys, endontia, etc., the basic principles remain the same. For the new alloys or the improved castings to be successful, the underlying preparation of the tooth must be right. The basic concept of root canals has not changed; the opening of the canal, its reaming out, sterilization and the filling clear to the apex. The new medicaments have undoubtedly been a wonderful aid, especially to the careless operator. Without a thorough understanding of the old and proven knowledge, one cannot well understand and apply the new.

Many of these courses in new techniques in Operative presuppose that the operator knows how to make a proper cavity preparation, but from my observation of the recent graduates as well as men who have been in practice and I have taught in my refresher course, this is far from being a fact. Ask a lab man about the quality of the preparations sent to him - the finish

lines and tapers - the quality of impressions.

It grieves me greatly to see the pressures, political and otherwise, our boards are currently experiencing on the subjects of Reciprocity, changing of the Dental Practice Act, and licensing of Lesser Trained Personnel.

I feel that total reciprocity would be disastrous. No serious thought is needed to foresee what would happen if this were to take place. There would be a mad move of practitioners into the western states - the supposed land of "milk and honey," where the action and the money is, leaving less desirable areas devoid of dental care. Soon, some other kind of control or distribution of practitioners would be initiated and my guess is it would be Federal control. That would be one more step down the road away from the control of our own lives and of that of our profession.

California has been plagued with requests for Reciprocity time and time again. One of the members of the California Board recently told me that they require only the minimum to pass the board now. How far down are we supposed to go with our standards to meet those less qualified? How much better it would be to help those unqualified ones to either climb up and join the rest or be eliminated.

I see no wrong with dental teams as long as they function within the Dental Practice Act, but the suggestions that there be a change in this Act is the most frightening threat we have had yet. I fear that once we have opened the lid and released the "plagues" from the "Pandora's Box" we will close the lid and shut away forever the "hope" for quality. If we cannot turn out uniformly trained quality operators in four years of schooling, what hope do we have for those turned out in two or less?

Once again I say if a greater effort were made to properly select, train and motivate our men to produce quality restorations of maximum serviceability, we could better serve society by reducing the necessity of having to do over work improperly done and thus reduce the seeming need for Lesser Trained Personnel.

I, as a representative of the majority of the ethical Dental Practitioners of this glorious country, urge you to hold firmly to a positive line and do not let yourselves become "Permissive," taking the easy way out by allowing the few weak, incapable and incompatible ones to control the majority who are hard-working and dedicated.

While on the subject of relaxing standards, I wish to read you two letters.

One is addressed to a Dr. Rengstorff, a former student of one of my classes. It is from the House of Representatives, Alaska State Legislature. The second is Dr. Rengstorff's reply.

"Dr. P. V. Rengstorff
2321 West Lawn Avenue
Madison, Wisconsin 53711

Dear Doctor Rengstorff:

I am making a study of Professional Licensing Board procedures in support of my legislation to liberalize and simplify licensure in this state. I hope you will assist me.

It appears from the skimpy files available in the newly established central licensing section of our Department of Commerce (1966 legislation) that you applied for licensure in this state and were denied.

Please tell me your side of the story. It is my contention that the Board is limiting the number of dentists permitted to enter the state on an arbitrary basis, rather than for substantial cause. The law authorizes the Board to determine qualifications of the applicants and to pass everyone who is qualified, who in effect would not endanger the public. Under the cloak of high quality many are refused licensure we believe.

Therefore we wish to make a test case, in the courts if necessary, and to simplify and liberalize the licensing procedures. For example, the practical examination could be given by any American Dental Association approved dental school, etc.

The State Legislative Council is also studying this area. Further, more, the Department of Commerce is in the process of completing a study of its own, coupled with an audit by the Legislative Audit Committee, the results of this becoming available in January of this coming year.

Trusting you can be helpful to us in this most important work, I am

Sincerely yours,

Dr. Mike Beirne, Member
House of Representatives
Alaska State Legislature"

"Alaska State Legislature
Representative
Michael F. Beirne, M. D.
P. O. Box 4-1539
Anchorage, Alaska

Dear Doctor Beirne:

Upon graduating from Marquette School of Dentistry in 1964 I drove to Anchorage for the purpose of taking the dental board. I failed the dental board held in July of that year. In September of 1964 I joined the United States Public Health Service with which organization I served until September of 1966. In July of 1965 I failed the board for a second time. The Board advised me to take a refresher course in operative dentistry as the quality of my work fell below that of the other applicants. Many of the applicants each year come from the West Coast dental schools, e.g. Oregon, Washington, and the California dental schools. It is generally acknowledged in dentistry that the most proficient dental operators in the country are graduates of West Coast dental schools. These dental schools work with good equipment, hire excellent instructors, and demand their students to produce a high quality restoration. Because I was committed to PHS duties I did not at that time take the Board's advice concerning a refresher course. I took the dental board in Alaska for the third time in 1966, and again failed. In the Spring of 1967 I enrolled in a nine-week postgraduate, dental refresher course given by the University of California at Los Angeles. This course is given to help the non-West Coast dental school graduate pass the California Dental Board. In July of 1967 I took the Alaskan Dental Board for the fourth time. This time I earned by Alaskan license.

I have prefaced my remarks about the Alaskan dental board by tracing my board experiences because if anyone has a right to harbor bitterness towards the Alaskan Board it is I. But, on the contrary, I feel a deep gratitude towards the Alaskan Dental Board. They indirectly compelled me to become a competent dental operator. The nine weeks at U. C. L. A. taught me things that four years at Marquette never did.

At the beginning of the U. C. L. A. course each dentist was asked to prepare two dentiform teeth, one for placement of a gold foil and another for an amalgam. These were collected and held by the instructor. At the termination of the course we were asked to prepare two dentiform teeth again, one for a foil and one for an amalgam. We were then presented with both sets. The results of nine weeks training were remarkable. The first attempts might have been done with my pocket knife. The second preparations were beautiful.

My contention is that Marquette failed in teaching me the basic rules of operative dentistry. I don't understand why the Alaskan Dental Board should be punished for the failings of the applicant's school. Through four Alaskan dental boards I was able to compare my work with the work of graduates of other dental schools. Only this year was I able to point with pride at my gold foil, or gold inlay, or silver amalgam when a graduate of, say, Southern California or Oregon asked to see it.

The statement that the Alaskan Board limits the number of licenses on an arbitrary basis, rather than for substantial cause, simply is not true. As I recall, each year perhaps 70% of the applicants received licenses. This percentage of success compares favorably with other Western state dental boards. In fact, this year three applicants were allowed to take another one-half day to recast their faulty gold inlays, as their first casting just didn't fit. If anything, the Alaskan Board is more than fair in their examination. If the applicant can do the work he will receive a license.

Alaska is unique in that it is able to profit by the past [illegible] of other states. This is true in conservation, commercial fishing, and forestry as well as in dentistry. In Wisconsin and in California, both states which I have lived in and am licensed in, I have seen some horrible examples of dentistry. The people of Alaska deserve high quality dentistry. I am in full agreement with the Alaskan Board of Dental Examiner's licensing procedures. They are doing the people of Alaska a fine service. It is not the fault of the Board that Nome or Big Delta cannot retain a full time resident dentist.

The burning college liberal too often defends the status quo once he is out of school and enjoying financial solvency. Lest you might think my success in this year's board has blunted any previous crusading spirit, let me assure you this is not the case. Never after my three failures did I blame the Alaskan Board. Marquette was unable to teach me the principles of sound dentistry. Only after I was drilled in these principles last Spring was I able to pass the Alaskan Board.

In your letter you say that you are "making a study," yet as I read further it seems like your conclusions have already been established. You state in your letter you are out to abolish the Alaskan Dental Boards. I hope the time I have taken to write this letter has not been wasted, and that is used in your study, rather than dismissed. Perhaps because you lead me to doubt your objectiveness I have taken the liberty to send courtesy copies of this letter to the State Legislative Council and to the Alaskan

Board of Dental Examiners.

I thank you for allowing an expert in the field of recent Alaskan dental boards the opportunity to tell his side of the story.

Sincerely

Peter V. Rengstorff, D.D.S."

* * * * * * * * * * * *

With the support of strong young men such as Dr. Rengstorff to back me up, I say that Mediocrity is not a substitute for Quality any time nor anywhere. As the pendulum begins its swing away from the current philosophies, I would like to see dentistry as the first island of Quality rising from the modern sea of Mediocrity. I, as an individual, am trying hard to do all I can to help this come about. When the going is made difficult by those with attitudes such as that advanced by one of my students who stated that if he were to do dentistry the way I teach it he would have to double his prices or live lower on the hog. I re-read letters such as this one from Dr. Hashimoto, one of my students,

> "We really received a good stimulus to reviewing our concept of operative dentistry. I think it should be done periodically to keep us humble and alert. In this era of ultra high-speed, stress on the fundamentals is especially important and valuable before we go 'hogwild' zipping out mediocre preparations and restorations. I think your efforts were particularly meaningful to those of us going into general practice and I am sure we will pay even more attention to quality, particularly after receiving a clear insight on how to do it."

To those who have escaped that insidious disease "Acceptable Mediocrity," I say "cheers." Keep up your small preventive booster doses of that all important vaccine, the Basic Tenets of Loyalty, Honesty and Ethics, combined with continuous learning or reviewing.

To those who have willingly or unwillingly succumbed to the disease, I say "we pit you" but there is still hope for you providing you want to be healed. We need you, too, to help us shore up the sagging walls of our dental "houses."

It is never too late and it is not later than you think. Today, everyone has almost twice as much time in a lifetime to attempt to realize his desires than did those of not too long ago. For most, the drudgeries of life have been erased, sickness reduced to a minimum, and we have been given an opportunity to pick and choose from an endless number of topics about which to learn, things to do and places to go that we have become, as F. Scott Fitzgerald once said, "That most limited of all specialists, the 'well rounded man.'"

However, if you look at the philosophies on time there is much truth in these words I read some place recently:

> "If you don't have time to do it right,
> When will you have time to do it over?"

Thank you, gentlemen, for your time and respectful attention. I wish to leave you with these words of wisdom entitled "Horse Sense." This has nothing to do with dentistry but might well be applied by many of our dissenters of today; those who would willfully destroy the basic tenets of Loyalty, Honesty and Ethics rather than build upon them.

Horse Sense

A horse can't pull while kicking.
This fact I merely mention.
And he can't kick while pulling,
Which is my chief contention.

Let's imitate the good old horse
And lead a life that's fitting
Just pull an honest load, and then
There'll be no time for kicking.

MEDIOCRITY A SUBSTITUTE FOR QUALITY?

FAILURES ON CLINICAL EXAMINATIONS - REMEDIATION

Roy A. Fetterman, D.D.S. F.A.C.D.
Instructor of Operative Dentistry - General Refresher Course
University of California Extension Division

Ten years ago I had the pleasure of addressing those attending the Eighty-Fifth Annual Meeting of the American Association of Dental Examiners in Miami, Florida. The title of my paper at that time was "Mediocrity, a Substitute for Quality." I have granted your association permission to re-print that paper and copies will be available at the conclusion of this session.

The substance of that paper was based on my experiences years ago while helping to correct the problems of senior students of U.S.C. Dental School who were in danger of not graduating because of their weakness in Operative Dentistry, subsequent years on the Operative Department Staff of U.S.C., and my more current experiences teaching the Operative Dentistry portion of a refresher course offered by the University of California Extension Division.

I doubt that many of you were present in the audience that day ten years ago but if you were, will you please raise your hand? I just wish to congratulate you on your continued contribution of time and energy in the interest of our profession.

This past July I addressed the meeting of the Western Conference of Dental Examiners and Dental School Deans on the subject of whether or not specialists should be required to submit to a General Dental State Board Examination for Licensure. Believe me when I say that the study involved for that paper increased my respect for, and understanding of, the problems of state boards tenfold.

I have now been teaching the Refresher Course for 18 years and in addition have tutored dentists for the states of Alaska, Nevada, and Arizona. All of these dentists were prospective clinical failures or had already achieved that status. I was once invited to audit the California State Board after which the President remarked to me, "We do not fail these men. They fail themselves."

Presented at 95th Annual Meeting of the American Association of Dental Examiners. October 19, 1978 aboard the Queen Mary Hyatt Hotel in Long Beach, California.

Since my last appearance before you, I have had the very special experience of having been a guest of the South African Prosthedontics Society with the opportunity to lecture on Operative Dentistry for a week at each of the three Dental Schools of that country. I also demonstrated the preparation and completion of a Gold Foil at two of the schools. Delivering the Fifth Fred Hossack Lecture on "Principles and Problems of Dentistry" was one of the greatest honors I have ever received. Professor Hossack has been associated with the South African Dental Schools for close to sixty years.

Speaking of honoring men from our profession, many of you have by now received your new ADA Journal and read the article which reminds us that 1978 marks the 60th year since the dedication of a statue to G. V. Black in Lincoln Park, Chicago. In South Africa I was pleasantly surprised to see Dr. Black honored with his name over the door to the Operative Clinic of the University of Witwatersrand in Johannesburg.

Last, but far from the least of my credits, is my association with the Jones Gold Foil Study Club. I am proud to remind you that I am the only remaining active Charter Member, my membership years now totaling 42. With Rex Ingraham and Jack Seymour I share the honor of teaching the club.

As you can gather from my varied experiences, I have had the opportunity to see and analyze many clinical failures.

In my 41 years as a General Practitioner and Instructor of Operative Dentistry, I note that the problems of the dentist remain the same. Namely, people still get holes in their teeth and still develop periodontal diseases. No new permanent or everlasting filling materials have as yet been developed and those materials we have are still only as good or equal to the ability and the workmanship of the dentist who prepares the cavity and places the restoration, plus the degree of care the Oral Cavity receives from the patient.

Working in close association with state boards, I am aware that the majority of the failures on the clinical examinations are those Operative procedures performed upon patients. These failing dentists often become the students I have to teach and, without exception, be they newly graduated, members of the armed forces, foreign educated, out of state educated or instructors in a dental school, they have one common problem. That is their lack of knowledge and understanding of the Basic Fundamentals of Cavity Preparation as outlined by G. V. Black.

In a few minutes I shall show you slides of Class II preparations, made by students before they had received my first lecture, and those prepared at the conclusion of the

refresher course. You will note that improvement is commensurate to each man's ability to learn and perform.

The subject of clinical failure is one of concern to many people. The failing dentist, the public, the school, the instructors, the profession, the state board and the Government. Since this is a national meeting, I assume the topic of this paper, which was suggested by B. J. Crawford, your Secretary Treasurer, is one of national concern. Articles on this subject may be found throughout the various publications of our profession but as yet no writer has printed a solution to the problem of Failures on Clinical Examinations.

I have already stated that I believe the major cause of clinical failures to be the operator's lack of knowledge of the Basic Fundamentals as well as his inability to demonstrate and use these principles. There is no doubt that there are other contributing causes for these failures as well as for the weak performances of the "near" failures.

I list six catagories which I believe are more or less contributory to failures on clinical examinations and which we might reasonably expect to alter and thus reduce the incidence of these failures.

1. Government Involvement
2. School Attitude
3. Student Selection
4. Student Attitude
5. State Boards
6. Public Attitude

Please note that I place Government Involvement in the number one position, for in recent years the dictates of the Government have really determined the attitude of the schools and the students as well as the selection of freshmen students and the performance of the State Board. The Public knows little about our profession and its problems but demands a finger in the pie because it is the Public's money which is used to educate and examine dentists. However, the Public is more concerned with possible racial discrimination and the "rights" of the candidates than with their ability or the quality of their work, thus interfering with the educational process and the true purpose of the State Board, which is to protect the people from unethical and unqualified dentists by means of "admission to licensure, renewal of licensure, and discipline."[1]

Let us just briefly study these catagories.

Government Involvement is based on money. Both State and Federal funds provide a significant portion of typical dental school finances today but with this financial aid comes a long

list of attached "strings" or controls. True, the Federal funds do aid with research grants and numerous other special programs common to dental schools, but there has also been an establishment of dictatorial "goals such as shorter (three year) programs, increased production of new dentists (larger classes), and the creation of more socially sensitive dentists (off campus training programs)." [2] These are all priorities which have been established by the Federal Government and pursued through its agencies.

There are many less obvious pressures such as affirmative action policies, the 1974 Federal "open records law," etc. No doubt many of these changes have improved the performance of some schools but they have also added administrative burdens to schools, consuming important money and time resources which I feel could be better used to improve educational programs.

Federal Legislation requires curriculum changes in all schools seeking basic grants and the selection of faculty too may be influenced by the Government, but unfortunately funds for salaries to attract experienced and qualified instructors seems not forthcoming, forcing the schools to use recent graduates or prevail upon unpaid part time instructors such as members of study clubs, etc. Just this summer members of the Jones Gold Foil Study Club gave time teaching at U.S.C.

Dental education has become so sophisticated compared to the days when I was taking my training that the schools can seemingly no longer survive on tuition and clinical income and are forced to accept the State and Federal funds with all the strings. It is very understandable that the schools often find themselves literally in "bondage" to the Government.

"As the scope of the modern dental practice changes, so does that of the schools. In recent years, schools have added time to their programs for Oral Medicine, Behavioral Sciences, Patient (and Auxiliary) Management, Hospital Dentistry, Physical Diagnosis, Periodontology, Community Dentistry, Clinical Orthodontics, Oral Biology, and many other disciplines which were not taught at all nor as extensively in the past. Naturally, these additions have almost universally produced a concomitant decrease in the percentage of time and effort allocated to the traditional dental courses." [3] Operative Dentistry and its Basic Fundamentals in particular have suffered.

In an attempt to up-grade the "image" of dentistry and remove it from the "cottage industry" catagory, some schools are stressing the medical aspect of the curriculum, also at the expense of the mechanical aspect. I think this very shortsighted philosophy on the part of those schools.

Let me quote from my paper which I delivered in South Africa. "We always have been a very important segment of the medical field entrusted with the responsibility of caring for a rather small area of the body called the Oral Cavity. We are learned in the art of prevention, healing and the relationship of the health of this cavity to the health of the whole body. We are engineers with the technical knowledge of a Civil Engineer and the Mechanical Skills of a fine Watch Maker. We are Artists able to sculpt in wax, cast in metals, and create functional appliances to replace lost natural dentition. We are salesmen teachers, educating our patients in their roll of prevention. We are researchers constantly looking for new ways to eradicate the problems of caries and periodontal involvement so as to spare man the painful dental experience."

We have truly come a great distance since powdered bones, hoofs, crabs and eggshells were mixed with honey and used as a dentifrice.

One very, very important fact to be considered in explaining clinical failures is the method of selecting freshmen students.

"Due to the lack of any better means of ranking applicants, many schools still rely far too heavily upon pre-dental grade point averages and Dental Admissions Test scores."[4] These high grade point averages may indicate that the student concentrated upon intellectual development, which is important, but dentistry is a mechanical procedure whether or not one likes the term mechanical, so, in addition to a high I.Q. and 4.0 grade point average, the dental student absolutely must have considerable mechanical skill and problem solving ability.

Regardless of what the Government says, we are not all equal in learning ability or speed or mechanical ability. How can we be when we do not even all walk, talk, or cut our teeth at the same age? A patient recently expressed "equality" in this manner: "We are all born with an equal opportunity to prove our inequality."

From an article by Dr. Robert Barkley entitled "The Dilemma of Dental School Admissions," come the following revelations. "Early indications from testing senior dental students from several schools with the new selection vehicle reveal that a sizeable percentage is below average and probably should never have been selected to study dentistry, regardless of how high their GPA was."[5] Once more from the same article: "With all of the people they have tested, four years of teachers college has never yet made an effective teacher from a freshman whose 'profile' was that of an ineffective teacher."[6]

It is reasonable to believe this would be true in the case of dental freshmen, too.

How well I remember the oft' repeated remark one of my instructors used to make: "We spoil a lot of shoe salesmen trying to make dentists of them" There is no doubt that student attitude is a contributing factor in clinical failures. However, I dislike placing the blame for this entirely upon the shoulders of the student. I recently read the following quote some place: "Members of the younger generation are alike in many disrespects."

We have been hearing complaints for many years regarding student open criticism of authority, insistance on determining curriculum, complaints about quality of instructors, lack of respect for peers, etc.

What else would one expect from a product of a permissive society which advocates base and violent entertainment, refuses to obey such a simple law as a proven safer speed limit, expects the medical profession to keep it alive for free, preserve its teeth for free, has little respect for others, lacks refinement and good manners, and generally feels that any discipline of its so-called "freedoms" is a violation of its human rights?

While lecturing on Operative Dentistry before a senior class at UCLA a few years ago, I felt that the time I took from my office to give to these students was wasted. Not only did the students show their disrespect by just sauntering in during my lecture, but they brought with them coffee and doughnuts to eat and drink while I lectured. Evidence that they really thought there was nothing more they needed to learn. Reminded me of the man who once said, "Don't bother me with the facts. My mind is already made up."

In recent years, the seniors at U.S.C. decided they had had all of the Prosthetics instruction they needed and rebelled against the remainder of the course. The sequel to this action was the failure of the Prosthetics portion of the state examination by a number of them.

Continued attitudes such as these are certainly not conducive to a professional image or production of quality clinical dentistry on either a board examination or within a practice.

No doubt you wonder why I have included the State Board in the listed categories. I feel that the boards, too, must shoulder their share of the responsibility for clinical failures.

We expect a graduate to have "gained knowledge, clinical skills, a level of professional judgment, an appreciation of the role of the dentist in the community, a concern for the oral health of all people and a level of professional maturity."[7] The only subject from this list on which the dentist will be judged by the board is Clinical Skills, and this without benefit of ever seeing the candidate at work.

Unfortunately, at this date, there has been no standardization for the teaching of clinical skills among the dental schools or for the judging on state board examinations. In other words, no agreement has ever been made within these bodies as to just what specifically constitutes a good or just acceptable preparation and completed procedure. Without a relatively standard model of the ideal to refer to either mentally or in actuality, how can one man make a fair assessment of another man's work? Only a grade of 75%, a very average grade, is required to pass a board examination, but the question is - 75% of what?

Almost all of the dentists I have worked with have passed a board examination in some state prior to their trying the California, Arizona, Nevada or Alaska examination and may take two of the western boards, thus assuring themselves more than one place to practice. These men and women, you can understand, are well qualified to make the statement that there is a difference in the quality of work accepted by the various state boards. If this is so, then this lack of standardization causes unjust criticism of the boards.

I repeatedly hear it argued that it is the responsibility of the state board to keep the incompetent out of the profession but I disagree with this thinking. Keeping the incompetent out of the profession is the duty of the schools. It is they who decide who may graduate and receive that DDS or DMD degree. A state board can only, hopefully, keep the incompetent out of its own state.

Let me cite an example of what can happen under the present system. Several years ago, a middle-aged, out-of-state dentist took the refresher course after having failed the California board several times. He made little improvement during the course and continued to fail the board until his total was twelve. The cause of his failure was mechanical exposure. You wonder what happened to this man? I have been told he returned to the state from which he had come and continued on in practice. Are not the people of his state entitled to the same protection from practitioners such as he as are the people of California?

Actually, the responsibility of the state board today is two-fold. As already mentioned, the protection of the Public

from the incompetent and unreputable dentist, and now the protection of the dentist from the public.

I refer you to the top of the cover of the October 9th issue of People Magazine where you will read these words: "Malpractice: When and How to Sue Your Doctor."

Now, board members must be concerned about what the dentist can be held accountable for by the public. In other words, what can he be sued for? Certainly not on his knowledge of the use of Auxiliaries nor his knowledge of Patient Management, Community Dentistry and other such programs but - on his Oral Diagnosis, Treatment Planning and Clinical Skills. All the more reason why you board members must be very sure of those you pass.

In listing the six catagories referred to earlier, I had great difficulty deciding whether Government Involvement or Public Attitude should be in the #1 position. To be a "Public," and I use the word facetiously, is very confusing because each of us is a seller as well as a buyer, a plaintiff as well as a defendant, and a voter who influences the Government Policies. Are we then the cause of our own ills and seeking a cure?

Incongruous as it is, it is the Government-Public which pressures the schools to admit lesser qualified students, while in the same breath saying we are all equal; which pressures you gentlemen to drop the minimum passing grade for all of those so-called "equal" dentists and license some of them, regardless of the quality of their work, thus flooding the market and reducing dental costs. It is this same Government-Public which is so quick to accuse members of the medical profession for neglect, poor judgment, poor workmanship, and high costs yet it, itself, produces all manner of inferior services and materials under the philosophy or attitude of "It's good enough."

As the number of malpractice suits increase, there has been a corresponding increase in the use of Peer Review board effort trying to mediate between dissatisfied patients and those members of our profession who are being accused, thus reducing the number of cases reaching the courts. The malpractice lawyer responsible for the article in the October 9th issue of People Magazine states, "They (the Drs.) should police themselves."[9] We might say in return, Plumbers, mechanics, etc. police yourselves.

The public has advocated the lowering of entrance requirements to accommodate below average freshmen who graduate as below average dentists and who, more often than not, fail the state clinical examination. Eventually, these poorer students will pass a board and then the public will complain about his inferior quality of dentistry and sue him for malpractice.

The same public who joyously accepts the prepaid dental programs with its impersonal and assembly-line approach to dental programs may also be affecting clinical failures in a sense since fewer patients visit the dental school clinics and thus each student finds it more and more difficult to find patients and perfect his clinical skills.

SHOW SLIDES HERE

In remediation, I cannot pretend to give you solutions to the various influencing causes of Failures on Clinical examinations and I doubt that anyone else can either or it would have been done before now. Through lack of personal experience within the schools and boards, most of us must depend upon reading the published papers and reports of those closely involved.

I am most qualified from experience to discuss the inadequacies of clinical skills as the major cause of failures, but I have done considerable reading and given much thought to bringing you what I hope you find acceptable discussion on the six contributing catagories I have listed.

The following information from the July 1978 issue of the Journal of American College of Dentists indicates that schools, like so many businesses, seem no longer able to survive without either State of Federal financial aid.

"We have found that neither the N.Y.U. dental school nor the one at Columbia - the two under private auspices in the State - can attract adequate amounts of gifts and grants to cover operating deficits, meaning special treatment must be accorded to those institutions by the State."[10]

As we read the report on N.Y.U., etc.,we learn that U.S.C. dental school is going to receive over a million dollars less aid in the coming year. I assume this unequal distribution of funds is happening across the country. Time will soon show just how capable the administrators are at the schools which are to receive less.

It seems that less aid from the Government with a corresponding reduction of attached "strings" is our only hope to bring about the return of more of the responsibility of administration of the schools to those members of the profession, educators, state board, etc. who are familiar with the needs of the profession and the needs of dental education. These people must not compromise their principles and they must continue to try to hold the line against any increased encroachment by the Government into the territory of Dental Education.

Certainly, it is time to reverse the trend of the "permissive" attitude in all schools and the philosophy of "It's good enough." I believe that people in general yearn to be able to say "It is good" and I am sure that in their hearts most of the students wish to excel, be they able or not. The opposite of permissive is dictatorial, I am told, but there must be a workable and happy medium some place in-between where the transfer of that wonderful, indestructible and never-ending supply of knowledge from instructor to student can be accomplished with a minimum of stress and resentment.

To achieve this is, to my thinking, a mark of a good teacher.

In 1975 Dr Rex Ingraham circulated among deans, representatives of the restorative disciplies of the west coast dental schools, as well as state board members of the western states, an Opinion survey regarding clinical failures. Many of us here today have had for years the same complaints as those listed in the survey. Now that the shortcomings of the clinical training of dental students is a reality, recognized by the deans, heads of departments, etc., perhaps constructive action to correct some of the obvious problems will finally be taken.

From the Ingraham report we read the following: "Inadequate inservice training of the technique and clinical teaching staffs is probably one of the greatest failures of the undergraduate educational system." "To this date, a truly successful approach to this universal problem has not been developed by dental education."[11]

Since most instructors in the dental schools have not had any teaching training and only a DDS or DMD degree is required, I feel they should all belong to participating study clubs relative to their particular fields. G. V. Black believed that "no man has a right to be other than a continuous student."

From my paper delivered in South Africa three years ago, I quote the following taken from a report by C. C. Alpert entitled, "A Dental Examiner's View of Dental Education." "...new and very logical concepts in teaching are taking place at the University of Kentucky College of Dentistry. It is now required that all courses be reviewed periodically and that all faculty members submit to some form of evaluation."[12]

Dr. Ingraham has personally told me of the inservice training meetings he is having with his faculty members, an obvious indication of the desire of Dr. Ingraham and the faculty to provide the students of U.S.C. Dental School with the best training possible.

The schools keep trying. This phrase reminds me of my admonition to my students during their struggle to master a procedure. "Keep stirring." This refers to the story of our first astronaut to land on the moon where he was met by the beautiful Moon Maiden, etc., etc.

Since time does not allow me to read the whole report by Dr. Ingraham, I shall only read you a small portion and recommend that each of you make an effort to read the entire article which may be found in the April 1977 issue of the Journal of The American College of Dentists and is entitled "Is Clinical Preparation Adequate?"

One of the questions of this important survey asks -

"According to your observation, have there been changes between the years 1960 and 1975 in the level of competency of dental graduates in those clinical skills traditionally evaluated by state board examiners?" 83% agreed there have been changes.

Also, according to the survey, 76% agree the highest standard of performance was in the early 1960's and the lowest in 1972 to 1974. An uptrend was noted, starting in 1974, continuing into 1975.

65% of the educators polled agree there is a correlation between levels demonstrated by undergraduate students and performance of the graduates on the state boards.

In 1960 and 1962, 100% of the class from U.S.C. passed the California State Board. By the years 1972 and 1973, those passing the board totaled 90% of the classes. By 1974 an uptrend was observed and in 1975, 96% passed.

Dr. Ingraham lists the following factors which he considers to be contributory to the decline over the 15 year period just referred to, and includes the percentage of those questioned who agree.

1.	General administrative leniency	81%
2.	Lenient attitude of clinical teachers	81%
3.	Poor student attitude	90%
4.	Less clinical demonstration by highly skilled staff	63%
5.	Accelerated three year program	89%

In an article entitled, "Responsibility of Educators," S. P.Hazen questions: "Today, educators are told that our graduates are not as competent as those in the past. What standards of comparison are being used? What perspective is being taken on what a graduate should be today as compared to that of the past?"[13]

Dr. Hazen's question regarding the standard of comparison is a good one and one that I doubt anyone can answer. However, Dr. Ingraham's report certainly substantiates the current feeling that many of our graduates are not as competent as they should be and he now has statistics to prove this point.

The following is another small portion from the same survey listed under Open-ended Comments, etc. and lists reasons for clinical failures.

1. Lack of attention to detail by the daily clinical staff.
2. Lack of sufficient competent clinical staff members.
3. Younger, inexperienced clinical staff members.
4. Use of high speed; less use of hand instrumentation.
5. Lack of clinical judgment by the student.
6. Student's time divided into too many sub-requirements: team preventive dentistry, mini clinics, DAU, etc.
7. Too much emphasis on biological;not enough on clinical applications.
8. All schools seem to be in a trend to put less emphasis on clinical teaching; end result is an inferior clinical operator.
9. Lowering the student grade point admission level to accept the minority and then the faculty are requested to bring these students up to the average of the class which is next to impossible. End result - inferior training of students all the way through school and inferior practitioners after graduation.

I have a number of my own ideas for suggested changes in the school attitude within the realm of instruction, discipline having been mentioned already. That every student should have to achieve a certain level of proficiency before being allowed to graduate is, in my mind, very important. Regardless of the amount of extra time required, if the student needs it let him have it, and this does not infer that the slow learner cannot achieve. It takes him a little longer,

Two very successful dentists who were my freshmen classmates did not graduate with me. One repeated his Junior year and the other repeated every year with the exception of the senior one.

Entry to dental school at the time of my schooling required a "C" GPA and $300.00 plus one year of pre-dental training. The failure rate between the freshman and senior years was 50%. Today, the entering freshman more often than not has four years of pre-dental. He has been seasoned in the learning process, has maturity, travel experience, and a great diversity of knowledge to his credit. Note that I say knowledge and not education. I like the following quote from Ralph Waldo

Emerson: "The things taught in colleges and schools are not an education but the means of education."

Among my students I have found evidence of an abundant amount of enriching knowledge but a lack of very important information pertinent to their chosen profession, such as Finger Rest Position, Instrument and Handpiece Grasp, all of which I must correct. When inquiring of local dental schools if they teach these techniques per se, the answer has generally been "no." The men whom I questioned say they assume anyone who can hold a pen can hold a handpiece correctly, and yet we all know that the handpiece and hand instruments are not held in the same manner in which we hold a pen or pencil to write. No instructor has a right to assume anything where the student is concerned except that he comes to the school knowing nothing about dentistry.

Most of those I have taught do not understand when I say they should learn to think of their hand and handpiece as a "milling machine" as I explain the proper movement of the handpiece. They do not understand the significance of the names of their hand instruments nor the meaning of the identifying numbers of the hand instrument nor how to sharpen these instruments. In fact, most state that they were not taught how to sharpen their hand instruments and some even say they never sharpened them during four years of dental school. Some have told me they never use a hand instrument! Rather appalling revelations,don't you think? Why did these dentists fail the clinical portion of the state board? Not hard to understand.

To see Gold Foil becoming an endangered species makes me very sad as you may guess. This is due almost directly to the attitude of schools since someone decided that Gold Foil should be replaced with the easier to master and cheaper composite with its cosmetic beauty.

Dr. Ernest Jones, the first Dean of the University of Washington Dental School and former head of the Operative Department at U.S.C., was a Foil man and he made Foil men of many students during his teaching years. It was his opinion that the mastery of that procedure is the greatest disciplinary training for the dentist and he could prove that to the student. There is no cement nor any other crutch upon which to rely for the successful Foil. It all depends upon the skill of the operator.

I would like to see the Gold Foil restored to its rightful place in the dental school curriculum in place of some of the extraneous courses which might be moved to the Continuing Education Program.

Unfortunately, students are now told that the Foil is no longer a practical restoration, is too time consuming, and too difficult a procedure. It is a fact that the prepaid dental plans refuse to pay for Gold Foils because of the cost, unaware, apparently, that the properly placed and cared for Foil will outlast the alternate composite filling many times, preserve the tooth and save money. Isn't that what dentistry is all about?

Ten years ago, I made use of the following comment from a Gold Foil survey made by the Medical University of South Carolina. "The time needed to develop the necessary clinical skills and the asset of good judgment simply rules out the waste of the clinical hours required to develop a competent skill in the use of the 'least' useful of dental materials."[14]

At the death of my mother, age 88, two anterior teeth held Gold Foils placed there by a traveling dentist when she was 18 years of age. My wife has 8 clearly visible Foils in her anterior teeth, ranging in age from 12-39 years. Can you beat that for economy and service?

I have a question for you. If a traveling practitioner of so long ago with, at most, one year of dental training, could master the Basics and the use of the compacted gold filling, why should we ask any less of the student of today with his very superior pre-dental education and four times as much dental education?

Other than the reinstatement of the Gold Foil in the dental education program throughout the United States, nothing would make me happier to hear that the schools were adapting a standard of quality for a good, not just acceptable, cavity preparation and completed filling. How much easier this would make the student's lot, the instructor's teaching, and the state board's judging.

Ten years ago, I stated my thought on student selection and I have not changed my thinking on that subject. Dr. G. V. Black's definition of a Cavity Preparation begins with these words: "The mechanical treatment of ...., etc." Since the Generalist will spend most of his time doing Operative Dentistry which is a mechanical procedure, then logically the selection of the freshman should be partially predicated on his mechanical interests and experiences as well as his scholastic standing. Has he ever had a Hot Rod to keep running, or has he had any mechanical drawing, machine shop, wood shop, or art courses would be questions asked of him.

I have noticed some of my students having great difficulty developing good control of their instruments and I discovered that in some cases these men are double jointed. Usability of

the hands is vital in the selection of a freshman student. A very simple test will reveal if this condition is present and I think it should be a part of the freshman selection criteria.

Yesterday and today's dissatisfaction with the present admissions test is finally leading to new and elaborate experiments in seeking a better way of screening freshmen for entry to dental school. Dr. Ingraham tells me that U.S.C. has returned to the use of the carving test as part of the selection criteria.

If you have not read Dr. Robert Barkley's paper entitled, "The Dilemma of Dental School Admissions," you should. It may be found in the April 1976 issue of the Journal of the American College of Dentists.[15] The following quote is from that article:

> "A major breakthrough may be approaching. A handful of innovative U.S. Dental Schools are currently evaluating a revolutionary new selection process that may not only help solve the admissions dilemma, but may actually take a major step toward remaking the dental profession."

All good news and action which should in time reduce the incidence of Failures on Clinical examinations.

Every time I prepare a new paper from a requested Topic I rediscover my "inadequacies" and this paper has been no exception. As usual, my wife and I have spent many hours in discussion and analyzation of the subject matter, but this category of Student Attitude has proven to be the most demanding in thought and the most illusive in "remediation."

Just a page or two ago I read from the Ingraham report that 90% of those polled felt that Student Attitude was a contributing factor in the decline of clinical competency. Whenever, and wherever, dentists involved with education or state boards gather sooner or later the subject of student attitude and selection comes up and much time is spent in discussion and general complaints of these "misguided and mis-selected folk." These discussions so often infer that every student is obnoxious and unwilling to accept discipline, etc. This cannot be so for even in a barrel of apples there are only a very few "rotten" ones.

I asked Dr. Ingraham if he could give me an estimate of the number of disturbing students in a class. He gave an answer of 15-20%. The importance of his answer is that more than 80% are really trying to "receive" the knowledge they came to get.

Earlier, I quoted from a report on a new method for selecting students which mentioned that it had been determined

that a large number of students of a senior class tested were way below the average and should never have been selected for dental school. Could this group be part of those who cause the inharmony? Are their own inadequacies and frustrations the cause of their rebellion?

Dr. Ingraham now thinks so. He feels that the reinstating of the carving test added to other new ideas for selection of freshmen may reduce the number of poor performers and thus decrease the number of students with the so-called poor attitude.

A resentful and rebellious attitude is not the exclusive property of the undergraduate student. Many of my refresher students are lax in attendance and some are very resentful as they do not understand why, since a school did grant them degrees and a state board did issue them licenses, they cannot pass the California board examination. It is my unpleasant duty to tell them the painful truth, which is that the quality of their work does not meet the standards set by the boards of the western states. Many argue with me about the techniques I teach, telling how they were previously taught and how they would do the procedure, etc. I have a stock answer. "You have already tried your way and failed." One older man told me that if he had to practice dentistry the way I advocate he would have to double his prices or live lower on the "hog." I must add that most of those I have tutored on a private basis are usually receptive and hard working.

Over the years, my students, too, have complained of instructors they have had. So what's new? They complain about incompetent instructors, obnoxious instructors, unavailability of instructors when they are needed to help on the clinic floor plus the fact that a lecturer may advocate a certain procedure in the classroom but the same procedure may not be followed in the clinic. Now, hold onto your hats. I have even had complaints in reverse about discipline with the comment that they had heard about certain procedures but were never "made" to use them!

To my point of view, the proper "first day" could make all the difference in the world in the future attitude of a student. I asked Dr. Ingraham if U.S.C. has an orientation period for the entering freshmen and he says they do. I assume that this then is the practice of most dental schools.

My first day in dental school so many years ago is just a blur with the exception of the following statement made by Dean Ford: "Gentlemen, take a look at your neighbor because next year one of you will not be here." Attitudes were certainly formed at that moment.

Judging by the problems with students just reviewed and

the new and positive steps being taken to correct these problems, 1979 should bear witness to tremendous strides made by students in the field of clinical skills and the harmonious giving and taking of knowledge between competent instructors and eager students.

Board members will not believe how many times I have been asked if the members of the boards can produce the same quality work expected of the candidates taking the boards. How would you men and women answer that question?

Once again we come up against the Government, for, of course, members of the state board are appointed by the Governor. As in the case of one of my colleagues who is an Orthodontist, members who have not actually practiced any Operative Dentistry for years may be appointed to the board. Unfortunately, few are as conscientious as my neighbor, willing to admit their inadequacies and ask for aid. My neighbor asked me to give him some "refreshing" and I did. Now I understand that there are complaints that he is too tough a grader.

Some of the boards are taking interesting steps to improve the system of evaluating the candidates. The Nevada and Hawaii boards are considering having me give their members a participating review course in Operative Dentistry. If this comes about, the students will not have to wonder if board members can produce what they require from the board candidates.

The California Board and the Central Regional Boards have held workshops and each member has been asked to evaluate pre-prepared teeth and defend his reasoning.

It is tragic that no way has ever been devised to test a man on his ethics. One of my students once asked me, "How do you give a man a conscience?" If any of you have an answer to that question, I shall be glad to hear it.

"The measure of a man's character is what he would do if he knew he would never be found out." (Thomas MacCaulay)

From an article in the September-October CDS Newsletter comes the following: "Mr. Gilbert Laws of the United Rubber Workers stated that essentially labor wants quality dental treatment at a fair price."[16]

There is nothing new nor profound in the statement from United Rubber Workers. The desire for quality service in all realms has ever been the sentiment of us all and there is no good reason why we should not expect quality service for our money. If each of us gave quality service while earning our wages, this philosophy would travel the proverbial "full circle" and in time return quality to each of us.

It is my personal opinion that quality dentistry cannot be found in the prepaid clinic and never will be as long as "speed" is the rule and the operator required to produce 10.8 surfaces of alloy per hour and rewarded with a bonus if he does more than that. If this be the desire of the people, then perhaps we should train dentists for quality private practice and others for the prepaid clinic.

To be assured the possibility of quality dentistry, the Government-Public must learn to accept the judgment of those who are knowledgeable of and involved with the dental education process and return to them and the schools the responsibility of training dentists whom the state boards can reasonably expect to pass and license. This means, then, that the schools must be allowed to set the admissions criteria, graduation standards, etc. without public interference.

In addition, this same Government-Public must believe that the responsibility of the state board is to protect the public. It must give the boards free reign to once again pass or fail board candidates on the merit of their skill, without public intervention such as they have now.

To this date, the Government-Public's forcing of the admittance of unqualified freshmen to the schools and the school policy of "all pass" has not been a success. Once again, I refer to Dr. Ingraham's report and the statement concerning the lowering of the student GPA level to accommodate the minority student and the futile request that the faculty bring these students up to class average. "End result - inferior training of students all the way through school and inferior practitioners after graduation."[17]

These inferior practitioners have no doubt been among those who have failed the clinical examinations and their failing is due directly to the current philosophy of the public that changes the rules to accommodate everyone.

CONCLUSION

Now, in conclusion we agree that clinical failures on the state board are still an unpalatable reality. Whether or not the incidence of these failures will diminish in the future remains to be seen.

As this paper goes to print, I have received calls from two out-of-state students wishing to be tutored. One tells me that eleven graduates of one school took the California and Arizona boards and all failed but one.

It is still my opinion that the main cause of these failures is the lack of proficiency in the clinical skills. The student does not know nor does he understand the application of the Basic Fundamental Principles of Cavity Preparation.

In this paper we have explored six factors which I feel are contributory to the above stated main cause of the clinical failures, namely, Government Involvement, School Attitude, Student Selection, Student Attitude, State Board and Public Attitude, and discussed their relationship to the problem.

I think the future looks promising in its relationship to the reduction of failures on the dental state board examinations. We have learned much from our involvement with the Government. We enjoyed the money to spend but not the string attached and we found that the Government way is not the better way.

We now see some of our schools with a new attitude enthusiastically accepting the challenge of creating a better learning institution with less money to spend; the selection of students based upon their abilities as related to the needs of the dental profession in addition to their GPA; new philosophies developing pertaining to the control of students attitudes and training of instructors; state board members searching out ways to make their judging fair and protection of public and dentists effective.

Hopefully, the attitude of the Public will mellow to a less accusing, more receptive and understanding one.

May there be less need for Malpractice suits or even the enforcing of the "ordinance in South Foster, Rhode Island which provides that a dentist who extracts the wrong tooth must have a corresponding tooth pulled by the village blacksmith, or pay a fine."[17]

When all is said and done, let us remember ".... the truth is that more and better medical care is available for the sick in the United States than anywhere else in the world."[18]

And, "The fact is that for two hundred years we have had for the most part a unified profession. We have achieved the finest dental health care for most people at the most reasonable cost. The American people have the finest oral health in the world."[19]

Grant/Contract Documents:

Approval & Routing Sheet

Funding Source CSA - '79 "221" grant

Brief description of attached document HESS Dental Advocacy Contract with Aleutian/Pribilof Is. Association for $15,060

Grant/Contract # (if any) _____
Grant/Contract period Mar. 12, 1979 to June 30, 1979

Approval Required:

Department Head [signature] Date 3/19/79

Controller/Ch Acct [signature] Date 3/19/79

Executive Director [signature] Date 7-19-79

This form shall be completed prior to final approval by the Executive Director.

The completed form will be released to the Chief Accountant by the Dept. Head after all signatures are affixed by the Executive Director.

OBJECTIVE: Have legislation enacted which will allow for volunteer dental service in Alaska.

STRATEGY:

1. Compile and distribute at least 100 informational kits explaining the concept and advantages of the Mobile Dental Unit and utilization of qualified volunteer services. Kit to consist of pertinent documents, articles, pamphlets, photographs, etc.
2. Draft and distribute press releases based on (1) above.
3. Organize and conduct at least 8 meetings with groups involved with rural health services, i.e. - educators in health training, Native organization staffs, state employees. Show "Open Your Mouth" film and provide information on the advantages of the Mobile Dental Unit and utilization of qualified volunteers.
4. Make contact with legislators and explain need for amendments to Alaska Statutes which will enable volunteers to practice in Alaska. Testify as appropriate.

OBJECTIVE: Complete preparations for resumption of services this summer utilizing Mobile Dental Unit.

STRATEGY:

1. Travel twice to San Francisco and meet with representatives of the Stark Foundation; negotiate '79 schedule, etc. Also meet with at least one other volunteer group during these trips to ascertain if they can provide help.
2. Make detailed plans for volunteer manpower during summer '79. Seek additional private foundation funds for transportation and for per diem support of volunteers traveling to the Aleutians.
3. Coordinate plans with PHS/IHS, to include:
   a) Travel once to Washington DC to explain the program and elicit support.
   b) Advise the Anchorage IHS service unit of the ongoing status of the project.
   c) Arrange with Anchorage IHS service unit appropriate format for gathering data -- undergo orientation with PHS on forms, records, documentation so as to generate data which will facilitate proper tracking of clients.

4. The APIA shall organize at least one meeting involving representatives of State of Alaska-DHSS, Indian Health Service, Dental Examiners Board, and other appropriate individuals in order to refine the strategy and logistics of resuming services this summer.

DENTAL SERVICES ADVOCACY PROGRAM

CONTRACT FOR SERVICES

THIS AGREEMENT made and executed the day and year hereinafter last written, by and between the RURAL ALASKA COMMUNITY ACTION PROGRAM, INC., an Alaska corporation, hereinafter called "Grantee," and Aleutian/Pribilof Islands Association, hereinafter called "Contractor," consistent with RurAL CAP Grant 00919-T-79/02 effective January 1, 1979, as modified.

W I T N E S S E T H:

The parties come in consideration of the mutual covenants herein contained agree as follows:

1. Contractor Responsibilities. The Contractor shall perform all duties and liablilties under this agreement in a satisfactory and proper manner as determined by the Grantee.

2. Board of Directors. Contractor shall maintain a Board of Directors whose members shall represent the respective communities or subregional areas from which they are elected or designated by a representative community body. The Board of Directors shall speak for and communicate with the respective communities or subregional areas they represent. Contractor agrees that it will conduct at least one full board meeting during program year 1979 (January 1, 1979 to September 30, 1979) and at least three additional meetings of either the full Board of Directors, or the Executive Board, or any combination thereof. Contractor agrees to notify Grantee in writing of all meetings of Contractors full Board of Directors at least fourteen (14) days prior to such Board meeting. Contractor further agrees to notify Grantee in writing of any and all Executive Committee meetings with said notification being provided to Grantee

at the same time as notice is provided to Executive Committee members. Minutes of all meetings of Contractor's Board and/or Executive Committee shall be submitted to Grantee not later than twenty-one (21) days after adjournment of such meeting.

3. Target Area Reports and Representation to the Grantee.

(a) Where the Bylaws of the Grantee provide for the Contractor to fill one seat on the Grantee's Board of Directors then, pursuant to Grantee's Bylaws, the Contractor shall ensure that one person (local to the region, and preferably a member of the Contractor's Board) will be designated to serve on Grantee's Board and attend Grantee's Board meetings. The Contractor shall also designate one alternate (also local to the region and preferably a member of the Contractor's Board) to fill said seat on the Grantee Board when the regular representative is unable to do so. At any regular meeting of the Grantee's Board the Contractor's representative to that Board shall be prepared to present a Target Area Report which shall, at a minimum, explain the following:

(i) The progress the Contractor is making and problems encountered in fulfilling the goals of the work program as outlined in Appendix A attached.

(ii) The progress the Contractor is making and problems encountered in fulfilling the goals of any other program Contractor is operating with Grantee funds.

(iii) Public issues which significantly affect the low-income population in the region.

The report shall be specific and shall convey a clear understanding to the Grantee's Board of the status of the Contractor's program,

with associated accomplishments and problems.

(b) The Contractor's designee to the Grantee's Board of Directors shall submit a subsequent report to the Contractor's Board of Directors and Executive Committee at the earliest available time after any meeting of the Grantee's Board of Directors. The report shall inform Contractor's Board and Executive Committee members of issues discussed and actions taken by the Grantee Board.

4. Approved Work Program and Period of Performance. Contractor shall perform all activities described in the approved work program and budget which are attached hereto and made a part hereof as Appendix A (Work Program) and Appendix B (Budget). Such activities are embodied in RurAL CAP Grant 00919-T-79/02, as modified, and shall be performed between March 12, 1979 and June 30, 1979, according to the timetable in Appendix A.

5. Payment and Reimbursement Procedure. Of the funds available for Contractor's program, Grantee shall advance to Contractor the sum of Nine thousand three hundred and xx/100 _____ DOLLARS ($ 9,300.00 _____), within 5 days of contract execution, which amount shall be used by Contractor to initiate the program described herein. All subsequent sums payable to Contractor shall be paid on the reimbursement method and must be substantiated by submitting the following documents:

(a) Copies of all checks disbursed for reimbursable expenses;

(b) Copies of all invoices, time sheets and other supporting documents substantiating each disbursement.

(c) Other documentation required by the Grantee or specified in the "Rural Cap/CSA Contractors Notebook.

Contractor agrees to furnish Grantee with copies of all such documents supportive of a reimbursement request on or before the 10th calendar day of each month, which documents shall reflect all costs incurred by Contractor during the preceding calendar month. Grantee shall reimburse Contractor for all allowable expenditures substantiated by the foregoing documentation within ten (10) days after receipt of such documentation from Contractor, but in no event shall Grantee pay to Contractor, during any single calendar month an amount greater than N/A DOLLARS ($_____), (or _____%) of the total sum designated for Contractor's budget, unless expressly approved by Grantee's Controller.

The Grantee is not liable for Contractor incurred costs which conflict with CSA or Grantee regulations or policies. It is the responsibility of the Contractor to make obligations and spend funds consistent with such regulations and policies.

The Contractor will in no case exceed in expenditure or in commitment the total obligation dollar amount agreed upon with the Grantee, as outlined in Appendix B. The Contractor is fully responsible for any and all overexpenditures and for any disallowable and disallowed costs which it may incur.

6. Progress Reports. Contractor shall be required to prepare and submit two (2) written work program progress reports. Such reports shall detail Contractor's progress toward accomplishing the goals stated in the work program. All information contained in such reports shall be specific and will quantify data wherever possible. Reports shall be submitted according to the following schedule:

1) First Report - due May 4, 1979	Covering period March 12 through May 4.
2) Second Report - due July 6, 1979	Covering period May 7 through June 30.

Grantee may provide report forms to the Contractor in advance of each report due date, and if this occurs the report shall be submitted on such forms. Contractor shall maintain a filing system which contains documentation of progress made toward the accomplishment of goals stated in the work program.

7. Monitoring. It is agreed that Grantee, its agents and employees shall have the right to enter program areas and offices of Contractor at any reasonable time for the purpose of examining work in progress and administrative records in order to conduct such monitoring as is necessary for providing technical and administrative assistance and to insure compliance with this agreement. Where such monitoring by the Grantee necessitates the active involvement of the Contractor's staff, Grantee shall provide reasonable notice to the Contractor in order that the Contractor may fully participate in the monitoring activities.

8. Non-Federal Share. Contractor, its agents, or employees shall provide One thousand six hundred seventy three and xx/100 DOLLARS ($1,673) or the equivalent thereto, as its non-federal share requirement and shall document such contributions on forms approved by the Grantee. For purposes of this agreement, this non-federal share requirement shall be provided in accordance with the non-federal share budget attached hereto and incorporated herein as Appendix B.

9. Modification of Work Program and Budget.

(a) Work Program. A modification of the Contractor's work program (Appendix A) requiring written amendment is defined as any major change, including additions, deletions, or substantive rewriting of one or more goal statements. A work program amendment shall require approval by Contractor's Board or Executive Committee and submission in writing of an amended work program form to Grantee with attached narrative justification. Grantee retains the right to approve or disapprove any modification of the work program. Grantee Executive Director shall review and process any proposed work program amendment within 14 days of receipt and shall notify Contractor of said approval or disapproval. If Grantee disapproves a work program amendment, Grantee shall provide written justification for such disapproval.

(b) Budget. A budget change requiring written amendment is defined as any change which increases or decreases the amount in any cost category, as outlined in Appendix B, by an amount greater than $1,000. Grantee specifically reserves the right to render final approval of all proposed budget modifications. Grantee Executive Director shall review and process any proposed budget amendment within 14 days of receipt of such and shall notify Contractor of approval or disapproval. In the event Grantee disapproves a budget amendment, Contractor shall be provided written justification from Grantee.

(c) Fixed Budget Total. The total amount of federal funding available under this agreement is Fifteen thousand sixty and xx/100 Dollars ($15, 060). The parties to this contract understand and agree that in no case shall Contractor increase the approved total federal share, or decrease the approved total non-federal share for the budget year.

10. Delegate Agency Status. For purposes of CSA statutes, regulations, and directives the Contractor shall be considered a Delegate Agency of the Grantee as defined in CSA regulation.

11. Compliance with Approved Program and Laws. Contractor and Grantee agree to comply with all laws, rules, and regulations, federal, state and municipal, which are now, or in the future may be applicable to their businesses, equipment and employees engaged in or in any manner connected with Contractor's performance hereunder. All activities authorized by this contract shall be performed by Contractor in accordance with the approved work program (Appendix A) and approved budget (Appendix B), the Grant conditions and relevant Community Services Administration (CSA) directives.

12. Nondiscrimination. Contractor and Grantee hereby agree that no person shall, on the ground of race, color, religion, sex, age, handicap or national origin by excluded from pa ticipation in, be denied the benefits of, or be otherwise subject to discrimination in determining eligibility to participate in the program, as required by General Conditions Governing Grants under Titles II, III - B and VII of the Economic Opportunity Act of 1964, as amended.

13. Assignment or Subleasing. Contractor may not assign or sublease its interest hereunder to any other party without the prior written consent of Grantee, and Contractor agrees that any violation of this covenant will, at the option of Grantee, work immediate forfeiture of Contractor's interest hereunder.

14. Default or Termination. The Grantee may, by giving at least fifteen (15) days written notice specifying the effective date, terminate this contract in whole or in part for cause, which shall include: (1) failure, for any reason, of the Contractor to fulfill in a timely and proper manner its obligations under this contract,

including compliance with the approved program and attached conditions, and such statutes, Executive Orders, and CSA directives as may become generally applicable at any time; (2) submission by the Contractor to CSA or to the Grantee of reports that are incorrect or incomplete in any material respect; (3) ineffective because of inadequate program activity, or improper use of funds provided under this contract; and (4) suspension or termination by CSA of the grant to the Grantee under which this contract is made, or the portion thereof delegated by this contract when required by CSA direction. If the Contractor is unable or unwilling to comply with such additional conditions as may be lawfully applied by CSA to the grant or to the Grantee, the Contractor shall terminate the contract by giving reasonable written notice notice to the Grantee, signifying the effective date thereof. In such event the Grantee may require the Contractor to ensure that adequate arrangements have been made for the transfer of the delegated activities to another Contractor or to the Grantee. In the event of any termination, all property and finished or unfinished documents, data, studies, and reports purchased or prepared by the Contractor under this contract shall be disposed of according to CSA directives, and the Contractor shall be entitled to compensation for any unreimbursed expenses reasonable and necessarily incurred in satisfactory performance of the contract. Notwithstanding above, the Contractor shall not be relieved of liability to the Grantee for damages sustained by the Grantee by virtue of any breach of the contract by the Contractor and the Grantee may withhold any reimbursement to the Contractor for the purpose of set-off until such time as the exact amount of damages due the Grantee from the Contractor is agreed upon or otherwise determined.

It is further understood by the parties to this agreement that when written notification of termination for cause is given by the Grantee's Board, the Contractor shall have the opportunity, within the 15-day time limit, to take such corrective action as may be necessary. If such action that Contractor may take is deemed adequate by the Grantee for correcting the cause of termination, then the Grantee shall not terminate the agreement. It is the policy of the Grantee to terminate an agreement only as a last resort.

In the case where action to terminate this agreement occurs, the Contractor reserves the right to appeal such action, consistent with CSA Notice 6441-1.

15. Covenant Against Contingent Fees. The Contractor warrants that no person or selling agency or other organization has been employed or retained to solicit or secure this contract upon an agreement or understanding for a commission, percentage, brokerage, or contingent fee. For breach or violation of this warrant the Grantee shall have the right to annul this contract without liability or, in its discretion, to deduct from the contract or otherwise recover full amount of such commission, percentage, brokerage, or contingent fee, or seek such other remedies as legally may be available.

16. Waiver. The failure of either party in one or more instances to insist upon strict performance of any of the covenants or conditions of this agreement, or to exercise any privilege conferred, shall not be construed as a waiver or relinquishment of the effect of any such covenant, conditions or privilege, but the same shall be and remain in full force and effect.

17. Prior Agreement. This agreement supercedes all contracts arrangements, commitments and offers of every kind or nature, oral or written, at any time heretofore made by the parties.

18. Modification. No modification or amendment hereto shall be binding upon either of the parties unless in writing, signed by both parties.

19. Indemnification. Contractor agrees that it will save harmless and indemnify the Grantee from and against all liability and claims for damages and/or suits arising out of Contractor's performance of this agreement.

20. Applicable Laws. This agreement and the relationship of the parties hereto shall be governed by and interpreted in accordance with the laws of the State of Alaska and of the United States.

21. Status of Contractor. Contractor represents that it is a duly registered non-profit corporation incorporated under the laws of the State of Alaska and in all ways is in good standing in accordance with State law.

22. Independent Contractor. It is expressly understood that Contractor is an independent Contractor and neither it nor its agents or employees are employees of the Grantee. The actual performance and supervision of performance hereunder shall be under the control and direction of the Contractor; provided, however, that Grantee being interested in results to be obtained, is to be kept at all times fully informed of Contractor's activities in this regard. Contractor warrants that Contractor is an employer, as that term is defined in the Federal Insurance Contributions Act and the Unemployment Compensation laws of the state or states in which the work is to be performed and Contractor's identification account numbers are as follows:

Federal_____ State_____

23. Insurance Requirement. Contractor agrees to carry and maintain at all times during the time of this contract, general

liability insurance, in an amount not less than Three Hundred Thousand Dollars ($300,000).

24. This agreement incorporates all terms of Appendices A and B.

IN WITNESS WHEREOF, this Agreement has been executed and delivered this _____ day of _____, 1979.

ALASKA STATE DENTAL HYGIENISTS ASSOCIATION

TESTIMONY OF LOISANN G. REEDER
Given at Legislative Hearings on HB 401
March 29, 1979

I am presenting testimony on behalf of the Alaska State Dental Hygienists' Association. My testimony pertains only to Lines 13 - 29 on Page 1, and Lines 1 - 5 on Page 2, of HB 401. This is the portion of the bill relating to dental hygiene licensing requirements. My association is aware of, and in sympathy with, the problems which have developed due to the gap in policy in the statutes which presently does not allow dental hygiene students and their supervising faculty to perform in clinical dental school study programs in remote areas of our state. As such, we are in support of HB 401, amended to read as follows:

- SEE ATTACHMENT -

Respectfully submitted,

Loisann G. Reeder

Loisann G. Reeder, Chairperson
Legislative Committee

ALASKA STATE DENTAL HYGIENISTS' ASSOCIATION

SUGGESTED AMENDMENTS TO HB 401

Sec. 08.32.010. LICENSE REQUIRED. No person may practice, offer or attempt to practice, or advertise or announce oneself as prepared or qualified to practice dental hygiene without a license except

(1) bona fide, full-time students of dental hygiene who have completed one year of clinical study at a dental hygiene school which requires at least a two-year course and is accredited by the Commission on Accreditation of Dental and Dental Auxiliary Education Programs of the American Dental Association who are

(A) enrolled in a clinical program sponsored by, and forming a part of, the course of study at the school, and which has been registered with, and awknowledged by, the board;

(B) practicing dental hygiene in an area designated as "remote" by the Department of Health and Social Services, on an unpaid basis under the direct supervision of a dentist member of the faculty of the school, or the direct supervision of a dental hygienist member of the faculty in conjunction with the indirect supervision of a dentist member of the faculty; and

(C) (SAME - no changes)

(2) dental hygienist members of the full-time faculty at a dental hygiene school which requires at least a two-year course and is accredited by the Commission on Accreditation of Dental and Dental Auxiliary Education Programs of the American Dental Association who are

(A) engaged in a clinical program sponsored by, and forming a part of, the course of study of the college, and which has been registered with, and awknowledged by, the board; and

(B) supervising and/or practicing dental hygiene in an area designated as "remote" by the Department of Health and Social Services, on an unpaid basis under the indirect supervision of a dentist member of the faculty.

(3) A person practicing dental hygiene under the licensing exemptions as stated in (1) and (2) of this section shall be subject to all provisions of this act and other applicable laws which govern the practice of dental hygiene by licensed practitioners.

Dear Mrs. Buchholdt:

Pursuant to our discussion concerning our need for legislation to allow volunteer dentists to serve in our remote areas under permits issued by the State Department of Health and Social Services, we are sending you a packet of materials to bring you up to date and also on the cover a suggested Statute change which will take away the right to issue permits from the self serving dentists and put that authority with the Health Department instead

Sincerely yours,

Pat Pletnikoff

An Act

Providing for the Practice of Dentistry by Certain Students

Be it enacted by the Legislature of the State of Alaska,

Section 1. A.S.08.36.350 is amended by adding at the end thereof:

(7) Bona fide students of dentistry in pursuit of clinical studies as provided by A.S.08.36.275.

Section 2. Title 8, Chapter 36, of the Alaska Statutes is amended by adding thereto, the following new section:

Section 08.36.275. Practice of Den istry by Certain Students. A license is not required of a bona fide full time dentistry student who, during the period of his enrollment and as part of his course of study, engages in a clinical program which is:

1. Performed under the direct supervision of a:
   A. Member of the faculty of the institution offering the program who is either a professor, associate professor, assistant professor or instructor, or,
   B. A dentist holding a permit or license from the State of Alaska pursuant to A.S.08.36.220, 240, 280, or 285.
2. Sponsored by an institution which files with the board on forms to be provided for this purpose:
   A. Evidence of full insurance coverage and protection afforded all participants in the program from claims under A.S.09.55.535, et seq.

B. A waiver of venue and consent to submit to the jurisdiction of the Alaska State Courts in any suit arising from the practice of dentistry by any participant in such program.

3. Offered by a dental college approved by the Council on Dental Education of the American Dental Association, and the American Association of Dental Examiners.

Phil Smith, Executive Director
Rural Alaska Community Action Program
P. O. Box 3-3908
Anchorage, Alaska 99501

Dear Phil:

We were pleased to be invited to submit an application for an Advocacy Network Contract since we had been left out of your last funding cycle.

This dental program is really badly needed and I think we can swing it through the legislature with a little of this kind of help.

Hopefully you will be able to see your way to fund this little package.

Sincerely yours,

Patrick Pletnikoff
Executive Director

Enclosure

Application for a Network Advocacy
Contract for the Aleutian/Pribilof Islands Association

Anyone who has worked more than even a few weeks in rural Alaska becomes aware of the tremendous dental health problems of the people who live there. PHS and the Native Health Service are responsible only for Native dental health problems and they are unable under their present structure and budget to meet the growing need for care.

Alaska is not alone with its problems of delivery of adequate dental service to pockets of poverty - isolated communities and disadvantaged groups. Nor are they alone in their attempts to solve these problems through conventional channels only to be crushed by insecure schizophrenic professional organizations who fear public programs and volunteer services threaten their livlihood. Even Native adults living in Anchorage have a five year waiting list to sit out before they can get dental care.

Frustrated, angry and desperate for help, APIA staff began l-oking around the country to see how others were solving their rural dental health problems. The most impressive program was operated by the University of California Dental School out of San Francisco, particularly aimed at solving the dental health problems of the migrant farm laborers of California. They have an impressive record of 8 years of service and are now a permanent part of the State health budget. The program is quite simple - socially conscious dentists on staff work with students of the U of C dental school in their senior year of dental school aboard mobile clinics which bring dental health care to the people where they live and

work. It is true they had a head on collision with the dental societies of California, local, regional and state who were worried about their personal income being threatened by these units offering free services, however time and performance healed the breaches and the units continue to fill a tremendous need.

Not only does this operation not threaten private dentistry, but it complements private practice. People become more aware of dental health - prevention and care and as a result whole generations of people choose a private dentist when they can afford one and make room in their lives and budgets for dental health care services.

Hundreds of bush Alaskans are now going to a private dentist when they can as a result of the dental health awareness that has taken place over the years through the public service units like PHS and Indian Health Service.

Alaska's Rural Problems of Dental Health Care Delivery

1. The need is there and demonstrated by at least 2 organizations as intolerable: (a) APIA, (b) Cook Inlet Native Association, (c) North Slope Natives.

APIA - developed a plan with the University of California in San Francisco Dental School for delivery of health care through a mobile clinic approach. The same as was used in California. This mobile clinic became operational this summer and accomplished more than the PHS program over a 5 year period and at no cost to PHS.

Cook Inlet Native Association - hired a full time dentist right under the nose of PHS in the city of Anchorage, ordered equipment and supplies and built a dental clinic. Surely they did

not do this if there was not need for it as the dental society claims.

What are the Problems?

The problems are PHS and the Alaska Dental Society who are in bed together massaging each other's ego.

Facts

Alaska has no dental school.

Alaska has no provision for licensing or allowing volunteers in training to practice dentistry in Alaska without being in violation of the laws the Dental Society fostered.

The State Public Health Service designated the Aleutian area a distressed isolated area in order to qualify the area for issuance of emergency permits for outside dentists to practice dentistry.

The Dental Society over rode the State health services, ruling that no dentist from outside the State could practice dentistry, even free.

Federal law allowed that the APIA dental program could operate under the umbrella of the PHS or the Armed Forces, but PHS refused to allow us to operate.

This summer the dental volunteer team of 22 people arrived ready to work all summer on kids' teeth under the supervision of the U. C. Dental professors only to be told they would be arrested if they tried to deliver service. The Dental Society refused to allow temporary permits to be issued and the PHS only after pressure from Washington allowed us to operate under their wing for the limited summer program.

Facts (continued)

We have 200,000 worth of mobile dental equipment we are willing to share with the rest of rural Alaska once we get through all the legal hurdles and roadblocks put in our way by the Alaska Dental Society and the Public Health Service.

PHS dentists anticipating retirement soon from PHS intend to obtain Alaskan licenses from their cooperative bedfellows in the Dntal Society and then contract with PHS for delivery of dental services at the outrageous prices contract dentists get for their services in bush Alaska.

The head of the bush dentistry program for the State Dental Society contracted last year at Wainright, Alaska for $45,000 for two-week long sessions.

The same fellow wants to kill off our mobile dental clinic.

We need legislation now to allow volunteer licensed dentists and students supervised by their professors in quality dental schools to practice dentistry in the State of Alaska without violating any laws and without going through the self serving dental society.

We want to design such legislation, generate support for passage early in the session and get our mobile clinic back on the road fixing people's teeth this winter. We feel the $15,000 advocacy grant would be of tremendous assistance in our efforts to improve the dental health of rural Alaska.

Newwork Advocacy Program

Budget

Personnel	
Primary advocate - ½ time for 3 mo.	3,500
Secretary	1,000
Travel and per diem	
Per diem - 20 days @ $50	1,000
Travel - 4 round trips to Juneau	684

Mr. Herb Rhodes, Publisher
The Great Lander
3110 Spenard Road
Anchorage, Alaska 99503

Dear Mr. Rhodes:

Your editorial outlining the abuses of the State Bid System was frankly unfair and inaccurate with reference to the Mobile Dental Lab for serving the unmet needs of the Aleutian/Pribilof area.

1. Both the House and Senate approved of the Dental Measure. You claimed they defeated the measure. The House had a floor vote in which it passed unanimously and the Senate Finance Committee gave it a "do pass" vote.

2. The money was intended by the legislature to be appropriated however more programs were approved than the Governor had money for so he was put in the position of making a choice of the best programs approved. He approved this one because it had merit and would bring to the State many times more value than the $200,000 appropriated in volunteer services helping the Native people who needed dental care the PHS was not able or willing to deliver.

3. The Mobile Dental Unit was designed by the staff of the University of California Dental School and built by them, a task only they could accomplish - no other vendor has the capability of building and delivering the unit except the Siemens Company in West Germany and their unit, not half as good as what we got, costs twice as much.

The Department of Health and Social Services did not ever order anything nine months ahead of the time money was appropriated for the unit or even afterwards. The Aleutian/Pribilof Islands

Association, Inc., a non-profit corporation, was given a contract for the development of the units and delivery of them. They made the purchase of the base unit through an Alaskan auto dealer, Alaska Sales & Service, who gave the unit to them "at cost" with no profit whatever, which could never have happened on a bid.

The size of the unit does not limit their versatility at all. They were carefully planned and are near perfect - far superior to anything ever before developed. The reason a Hercules aircraft was used to move a unit to the Pribilofs was because a jealous, hypocritical money grabbing group prevented the delivery of "free" dental services for personal reasons, refusing to issue the permit to practice causing the units to miss the pre-arranged transportation donated by SeaLand to the islands.

The staff was very adequately housed and transported as planned. AFIU housed the volunteers while in Anchorage and they were efficiently delivered by Reeve Aleutian to their destination. Your reporting was prejudiced, biased and irresponsible. If you are really interested in what services are or are not provided to the Natives of this State, do a little honest research before you print. The Chairman of the Bush Dentistry Committee of the Dental Association was paid $44,000 for two stints to a bush community by the Indian Health Service last year - could this be a clue as to why they did not want to license volunteers? There is a really good story here, but you missed it completely.

As to the adequacy of dental services to bush Alaska, tell that to the toddlers, the people with swollen tongues from poor dental care and those whose decay causes drainage down their throats all their lives. Forty-five Alaskans out of 100 must conduct their business, work or study enduring dental pain or with essential teeth missing because it's cheaper to fly to Europe for dental care than to stay home and mortgage life and limb to pay for treatment.

Do you think the Aleutian/Pribilof Islands Association would have sought out dental assistance from out of State if their people were receiving adequate care? Do you think for a minute the Cook Inlet Native Association would have hired their own dentist and invested in a dental office right under the nose of PHS if the service was adequate? Do you think for a moment that we would have had requests for service from our volunteer mobile unit from five areas of the State if their needs were being met? Thank God Governor Hammond is not the kind of person to give in to the political pressures that were brought to bear on him by the PHS personnel and the Alaskan Dental Association and their lobbyists in Juneau - he's got guts and our people are getting their teeth fixed. Can that garbage you are peddling and send

it to a more appreciative audience. You may or may not have a legitimate beef on your loss of a printing job, but attacking our dental project is sure not the way to correct it. We would give serious consideration to supporting legislation which takes government at all levels out of the printing business and puts it back with private enterprise because we feel the taxpayer should not be put in th position of competing with his own money for work.

Sincerely yours,

State Purchasing Scandal --

'Tis Your Money...And Here's How the State Wastes It!

Two weeks ago the Great Lander went to war with the state of Alaska on its bid and purchase procedures. We declared that the state was ignoring the low award bid procedure as prescribed by law -- worse yet that thousands and even millions were going out with no bids at all -- many to Outside firms leaving Alaskan vendors and taxpayers holding the bag.

As one prime example, the court system admitted to 49 violations amounting to $62,000 in form buying alone. An appeal for public information has kept our telephone ringing. And we hope it continues, through the day and into the Arctic night.

Here are some of the incidents brought to light in a single week:

Radio Equipment. Fred Jones of General Electric, in Anchorage, says the state has purchased approximately $1,500,000 worth of mobile radio equipment since 1973 without bid. He says a contract held by Motorola expired that year and that pleas to Don Harris, head of state transportation, and to Mel Holverston, of the division of communications, for a bid procedure have gone unheeded. "They pay lip service to us and that is all," Jones declares. He says that the state without a bid system has been getting only a 15 percent discount from list price on the radios. Normally, a contract discount would allow 20 to 40 percent off the standard price. He estimates the state in four years has paid $300,000 more for mobile radios than it should have under a formally bid contract. He says he and other suppliers can list 53 violations of state purchasing laws that require competitive bid during the past four years.

Mailing Contract. A contract for approximately $117,000 was placed with a Hawaiian firm for the January through July period. The contract was originally placed in Seattle, but later changed to Hawaii. Bids were asked on this but Ken O'Brien of the American Mailing Equipment Co. of Anchorage says state officials felt no one in Alaska could do this work. O'Brien says his firm advised the state it could be ready in a week. When he inquired into the expiration of the Hawaiian contract, which was to end in July, state officials said a call would be made for new bids. It is now September and O'Brien reports he has never been notified by the state of a call for bids as promised.

Rehabilitation Project. A registered engineer named Louie Overstreet reports he bid $56,000 to conduct a feasibility study on rehabilitating Lynden Arms apartments for the state. He says the contract was awarded to a firm that bid $65,000 -- $8,000 more than his own bid. Overstreet was told by state officials that the other firm offered more "expertise" than his organization.

Floor Covering. Jerry Willis, who has been here since 1955, says he was the only bidder on a state contract to re-carpet the International Airport. The ... Forms, an Outside firm, who entered a higher bid.

Regular Prnting. The Anchorage Printing Co. with a bid of $128,000 was low bidder on a state call to print its elections pamphlets. The state went into negotiation with Craftsmen Press of Seattle the following day and awarded that firm the job. Formal bids were never cancelled and re-advertised as required by law. Anchorage Printing was also low bidder by $9,000 on the Capital Site Commission tabloid, but the work went to Craftsmen Press after the state changed the required paper shortly before bid openings, thus eliminating sufficient time to ship the newly called for paper stock north.

School Bus Contract. Bud Goodyear of the Susitna Sentinel says that in May of this year the State Department of Education at Palmer considered accepting a school bus contract that was not the lowest offer. Goodyear reports that the Mat Su Borough officials quickly rectified the system and demanded that new bids be requested.

Mobile Dental Lab. When both the Senate and House defeated a measure for a $200,000 mobile dental lab for the Aleutians, the appropriation was slipped through in the governor's capital budget. The two units were purchased without bid as required by state law and are reportedly so large they can only be moved to the Aleutians in a Hercules cargo plane at $1750 an hour. Indications are the units had to be ordered by the Alaska Department of Health and Social Services at least nine months before the money was ever okayed.

The size of the units limits their versatility and insiders say dental care was already being provided Alaskan natives to the westward. No provision was made for a staff and their lodgings or transportation. A team came from the Stark Foundation in California to serve with the units, but Outside dentists are not allowed to practice in Alaska.

Form Printing. K and R Printing, now called Printmore, says it has fought the state for years to get form printing out on bid in the court system. The state ...

September 20, 1978

G. H. Ivey, Director
Alaska Area Native Health Service
Anchorage, Alaska

Dear Mr. Ivey:

Thank you for your letter of September 12, 1978 in which you point out what appeared to you to be inaccuracies in my letter of August 7th.

It was our impression PHS was in some way associated with the U of A Dental Hygiene Program which was why I specifically asked how this training activity was covered legally, thinking that if they had found a way to square with the Statutes we might use the same route. I don't recall anyone at our meeting ever saying that PHS was not in fact a sponsor so I just assumed they were. I apologize for the misinterpretation. In any case, how are they covered?

The statement about covering the expenses of PHS supervisor of our program was in fact made by Dr. Smole. At least that's the way we heard it.

On Page 2 you call our attention to the fact that the Aleutian Islands area had been declared a remote area under the State Statutes and that there would be no difficulty for volunteer dentists and hygienists to receive permits to practice in Alaska. As you know that was the intention of the legislation but this intention was by-passed by the State Dental Board when their board met on December 16th and decided to stop issuing any temporary permits to practice in Alaska. We did not know of this decision by the Alaska Dental Board until May of this year and we are certain the legislators did not know of this short circuit either.

It is difficult to understand why the Alaska Dental Society an the Alaska State Board of Dentistry would be upset with PHS because they cooperated with us on this project. We very much appreciate your strength of conviction and dedication to servic which prompted you to help us out when we had no place else to turn.

The reason we have contacted other health organizations in regai to this project was to ascertain if there was sufficient need ar interest for establishing a health support training program at AMU, since we would not alone have students in sufficient number to make up a class or a program.

We were told by the Dentist at Cook Inlet they might want to train several for their new unit, and we have also spoken with the Chugach group. There is not anything confidential or secretive about our inquiries nor has there ever been. As a matter of fact, I would think your service unit might want to be involved in not only the planning of such a program but in the hands on clinical experience as well since we expect many of those who complete the program to seek employment in the bush areas when the demand is sufficient to employ them.

As to future planning of mobile dentistry project, we are now ready to sit down and talk with you and your staff concerning where we want to function next, record keeping and cooperation. If we are to function to everyone's advantage, we will not want to be operating in competition with your schedule; rather, we would like to complement your efforts and you likewise.

As to a full time coordinator being hired this is not yet the case. However, we have asked Terry Buterin, a young Aleut man from St. Paul to spend some time with the unit, learn what he can and to then decide if he wants to pursue a training program at UCF Dental School, leading to a special certificate in mobile dentistry. He seems very excited about the potential for such a program and we will attempt to get it off the ground. It is possible at that time we might want to petition for a budgeting change to reflect this change of scope of our previously designed program and activities.

We are very pleased with your expressed willingness to work with us further this year.

Our hope is that we can move the unit from the Pribilofs this month and become operational with the following staffing by November 1st.

The UCSF Dental School has agreed to furnish us with a graduate periodontist who will supervise two dental students and a hygienist in training to be rotated each month until the summer program begins again. The cost of this phase of the program would be about $24,000 for the rest of the year including air fare and per diem.

We would appreciate having your thoughts on this and meeting with you and your staff to discuss the details at your earliest convenience.

Thanks again for your help on the Pribilofs project this summer. We look forward to meeting with you soon.

I talked with Dr. Soelberg and he says all the records were left in the stap van. If you want them sent to your office we can arrange this when we move the unit.

Sincerely yours,

PUBLIC HEALTH SERVICE
HEALTH SERVICES AND MENTAL HEALTH ADMINISTRATION

September 12, 1978

Refer to A-D (A-DE)

ALASKA AREA NATIVE HEALTH SERVICE
BOX 7-741
ANCHORAGE, ALASKA 99510

Dr. Fredrick McGinnis
Deputy Director
Alaska Department of Health
and Social Services
McKay Building
Anchorage, Alaska 99501

Dear Dr. McGinnis:

This agency has received a copy of a memorandum dated August 7, 1978, from Dr. J. D. Milne, Dental Project Consultant, Aleutian Pribilof Island, Assn. The memorandum was in relation to a meeting between Aleutian Pribilof Island, Assn., the Alaska Native Health Service and Senator Gravel's office. I would like to take the opportunity to point out to you the inaccuracy of some statements in Dr. Milne's memorandum.

The U. S. Public Health Service is not associated with the University of Alaska Dental Hygiene program, nor do the students in this program practice under the auspices or the federal government. In the past, the Alaska Native Health Service, has trained persons in dental assisting in association with Sheldon Jackson College.

Dr. Milne also stated, "they will consider allowing us to operate under this direct supervision... and added that we would have to pay for their supervision". The Alaska Native Health Service is always interested in supporting individuals and organizations committed to the improvement of the health of the Alaska Native people. We do not, nor have we in the past required payment for our support. In fact, in most instances we provide financial assistance. In this project we were not included in the planning or arrangements for what we were assured was a State of Alaska Program.

Dr. Milne implied the Alaska Native Health Service was not willing to employ volunteers. Persons providing volunteer services within the federal health system must meet all the requirements of federal employees performing the same health care. Having met those requirements, volunteer employees are entitled to all of the benefits of the federal government, save those relating to compensation (salary, retirement etc). We must accept responsibility for the individuals themselves as well as the services they provide. We cannot place individuals in "nominal employment", in order to circumvent state statutes as we were requested by Aleutian Pribilof Island, Assn.

RECEIVED
SEP 19 1978
Aleutian/Pribilof Islands
Assn., Inc.

Further, it was our understanding that the State Department of Health and Social Services had declared the Aleutian Pribilof Islands a remote area under State Statutes and there would be no difficulty for volunteer dentists and hygienists to receive permits to practice in Alaska. We were assured the Aleutian Pribilof Island, Assn Mobile Dental Project did not involve the Alaska Native Health Service. It was a project authorized by the legislature of the State of Alaska to be carried out under applicable state statutes and with the support of appropriate state agencies.

As you know, this did not occur. My reasons to reverse an earlier decision to not become involved and to employ the volunteers under federal regulations authorizing volunteer employment were:

1. The Alaska Native Health Service has a committment to support Alaska Native Health organizations such as the Aleutian Pribilof Island Assn.

2. We have a responsibility for the health of Alaska Native people. If this project failed because of licensing problems, the persons to suffer would be potential recipients of care..

3. Considerable State of Alaska funds had been expended for the purchase of equipment and the expenses of the several volunteers from California. If we did not employ the individuals in our program these expenditures would have been wasted entirely.

4. The dentists, dental hygienists and other volunteers were found to be well qualified, sincere and concerned individuals. Their efforts and time would have been similarily wasted.

5. The people of St. Paul and St. George supported this program and requested our assistance.

Even though my decision has resulted in a serious breach in our relations with the Alaska Dental Society and the Alaska State Board of Dentistry,

I feel the care being provided compensates for the expenditure of federal funds and the use of federal authority. It is my request that your office provide assistance to the Aleutian Pribilof Island Assn., in securing proper licensure and/or permits for volunteer personnel to practice in Alaska in the future. I would also appreciate being kept advised by your office of future plans and operations of this project.

Sincerely,

G. H. Ivey
Director
Alaska Area Native Health Service

Dr. Glen Olds
President
Alaska Methodist University
Anchorage, Alaska

Subject: APIA Dental Program

Dear Dr. Olds:

We would like to propose the following program be developed at AMU to serve the health support requirements of bush Alaska. We feel we could furnish a number of students from the Aleutian as well as from other native organizations such as Chugach and Cook Inlet.

Cook Inlet is planning a dental facility designed to accommodate 3 chairs with a demand for at least 2 assistants and perhaps 2 hygienists. The APIA facility could easily use 6 such persons for the summer months and one in each village during the year.

We would be happy to assist AMU in a search for funding of such a project should you be interested in pursuing it further.

Naturally, such students would need an operational facility available for training. For this purpose our mobile clinic would be available as well as the new Cook Inlet Dental Unit. Our mobile unit then would become an important element of your training program and essential to your operation. As an institution of higher learning you would be legally able to operate the mobile clinic either alone or in consort with the University of California Dental School of U.S.C. or any other school you might be comfortable with. Emery was suggested as a possibility at one time and the Stark Foundation would have no objection to this whatever.

Please find enclosed the Alaska Statutes which were obviously designed to meet the bush needs for dentistry. However, since

that time steps have been taken by the dental association and the examining board to circumvent this intention. As an example the board decided last year in its December meeting to abolish temporary permit issuance totally.

We are also sending you a fairly complete run down on what has taken place with this program and the bases touched since its inception. You will readily see that it has been an uphill vested interest battle politically as volatile as the AMI Program. It is only fitting and proper that we join forces to combat these anti social groups who are more worried about lining their pockets than delivery of service.

Sincerely yours,

ALEUTIAN/PRIBILOF ISLANDS ASSOCIATION, INC.

Sec. 08.36.010. Creation and membership of board. There is created the Board of Dental Examiners, referred to in this chapter as the board, consisting of seven members. Five members shall be qualified resident dentists who have been engaged in the practice of dentistry in the state for five years immediately preceding appointment, one member shall be a dental hygienist licensed under AS 08.32, and one member with no direct financial interest in the health care industry. (§ 1 art II ch 186 SLA 1955; am § 2 ch 155 SLA 1968; am § 8 ch 102 SLA 1976)

Effect of amendment. — The 1976 amendment substituted "seven members" for "five members" at the end of the first sentence and rewrote the second sentence.

Editor's note. — Section 1, ch. 155, SLA 1968, provides: "Purposes. The practice of dentistry in the state is hereby declared to affect the public health, safety and welfare and to be subject to regulation and control in the public interest. It is further declared to be a matter of public interest and concern that the dental profession merit and receive the confidence of the public and that only qualified dentists be permitted to practice dentistry in the state. All provisions of this chapter relating to the practice of dentistry and dental hygiene and to the registration of dental laboratories shall be liberally construed to carry out these objects and purposes."

Am. Jur., ALR and C.J.S. references. — 41 Am. Jur., Physicians and Surgeons, §§ 13, 23.

Dentist as within statutes pertaining to physician or surgeon, 115 ALR 261.

70 C.J.S. Physicians and Surgeons §§ 1 to 5.

Sec. 08.36.020. Appointment and term of service of members. Members of the board are appointed by the governor, subject to confirmation by the legislature in joint session. Each board member serves for a term of five years, and until his successor is appointed and qualified. The term begins on February 1. An appointment to a vacancy

is for the unexpired term. (§ 2 art II ch 186 SLA 1955; am § 1 ch 59 SLA 1964; am § 9 ch 102 SLA 1976)

Effect of amendment. — The 1976 amendment deleted "assembled" from the end of the first sentence and deleted the former fifth through eighth sentences, which related to a list of names from which appointments were to be made.

Sec. 08.36.030. Election of officers. The board shall elect a president and a secretary from among its members, each to serve for a term not to exceed two years. (§ 3 art II ch 186 SLA 1955; am § 1 ch 121 SLA 1972)

Sec. 08.36.040. Meetings. The board shall meet as often as, and at the times and places, necessary to conduct its business. (§ 3 art II ch 186 SLA 1955)

Sec. 08.36.050. Quorum. A majority of the board constitutes a quorum for the transaction of business. (§ 4 art II ch 186 SLA 1955)

Sec. 08.36.060. Expenses and salary.
Repealed by § 3 ch 59 SLA 1966.

Sec. 08.36.070. General powers. The board shall have, but not by way of limitation, the following powers and duties:

(1) to examine and issue licenses to applicants;

(2) to register licensed dentists in good standing;

(3) to submit an annual report of its proceedings to the governor and to members of the Alaska Dental Society, containing a statement of money received and disbursed;

(4) to affiliate with the American Association of Dental Examiners, and pay annual dues to the association;

(5) to hold hearings, revoke, annul, or suspend the license of a person who violates this chapter or the rules and regulations of the board;

(6) to supply forms for applications, licenses, permits, certificates, and other papers and records;

(7) to enforce the provisions of this chapter and make, alter, or amend the rules and regulations necessary or desirable to make the provisions of this chapter effective. (§ 5 art II ch 186 SLA 1955; am § 6 ch 69 SLA 1970)

Legislative committee report. — For report on ch. 69, SLA 1970 (HB 564), see 1970 House Journal Supplement No. 2, p. 7.

Sec. 08.36.080. Applicability of Administrative Procedure Act. The board shall comply with the Administrative Procedure Act (AS 44.62).

Sec. 08.36.090. Records and reports.
Repealed by § 3 ch 59 SLA 1966.

Sec. 08.36.091. Records and reports. The board shall maintain

(1) a record of its proceedings;

(2) a register containing the name, office and home addresses, and other information considered necessary by the board, of each person licensed as a dentist or dental hygienist, and a register of the licenses revoked by the board, and information on the status of each licensee. (§ 3 ch 155 SLA 1968)

Article 2. Examination and Licensing.

Section
100. License required
110. Qualifications of applicants
115. Malpractice insurance
120. Photograph and filing date of application

150. Examination in out-of-state dental schools
160. Contents of examination
170. Partial examination
180. Re-examination
190. Grading of examination
200. Waiver of written examination
210. Waiver of examination by reciprocity
220. Issuance of license by reciprocity
230. Practice outside the state
240. Issuance of license; recordation; display
244. License to practice as specialist required
246. Qualification for a specialist license
247. Limitation of special practice
248. Suspension or revocation of specialty licenses
250. Biennial registration
260. Branch office registration
270. [Repealed]
271. Permits for isolated areas
280. Temporary permit
285. [Repealed]
290. Fees and penalties
300. [Repealed]

Sec. 08.36.100. License required. No person, except those specifically exempted from the application of this chapter, may practice, or attempt to practice, dentistry without a license or permit, and a current certificate of registration. (§ 1 art III ch 186 SLA 1955; am § 4 ch 155 SLA 1968)

ALR and C.J.S. references. — Unlicensed dentist's right to recover for services, 30 ALR 860; 118 ALR 661.

Right of corporation or individual not himself licensed, to practice dentistry rough licensed employees, 103 ALR 1240.

Constitutionality and construction of statutes or regulations prohibiting one who has no license to practice dentistry from owning, maintaining, or operating an office therefor, 20 ALR2d 808.

70 C.J.S. Physicians and Surgeons §§ 6 to 23.

Sec. 08.36.110. Qualifications of applicants. An applicant for a license to practice dentistry may apply to the board for an examination and license by submitting information that he is

(1) Repealed by § 25 ch 245 SLA 1970.

(2) of good moral character;

(3) Repealed by § 10 ch 127 SLA 1974.

(4) a graduate of a dental college approved by the Council on Dental Education of the American Dental Association at the time of graduation, and holds a D.D.S. or D.M.D. degree or the equivalent;

(5) Repealed by § 1 ch 36 SLA 1970. (§ 2 art III ch 186 SLA 1955; am § 1 ch 26 SLA 1965; am § 1 ch 36 SLA 1970; am § 7 ch 69 SLA 1970; am § 25 ch 245 SLA 1970; am § 10 ch 127 SLA 1974)

Effect of amendment. — The 1974 amendment repealed paragraph (3).

Legislative committee reports. — For report on ch. 69, SLA 1970 (HB 564), see 1970 House Journal Supplement No. 2, p. 7. Chapter 245, SLA 1970 (HCSSB 399 am H), was identical to CSHB 406 (Jud.). For report on CSHB 406 (Jud.), see 1970 House Journal Supplement No. 6.

For report on ch. 127, SLA 1974 (SCSHB 817 am S), see 1974 House Journal, p. 657.

Sec. 08.36.115. Malpractice insurance. If medical malpractice insurance for dentists becomes unavailable on the voluntary market and the director of insurance finds, after public hearing, that the unavailability is impairing the delivery of dental services to the public, the director of insurance may require all persons licensed under this chapter to carry medical malpractice insurance and to purchase their insurance from the Medical Indemnity Corporation of Alaska established under AS 21.88. If a finding of unavailability of insurance on the voluntary market and impairment of services has been made under this section, purchase of medical malpractice insurance from the Medical Indemnity Corporation of Alaska is a condition of licensure under this chapter. The provisions of this section are satisfied if the licensee's employer maintains insurance for him from the Medical Indemnity Corporation of Alaska. (§ 10 ch 102 SLA 1976)

Sec. 08.36.120. Photograph and filing; date of application. Each applicant shall submit a recent unmounted, autographed photograph of himself. Applications shall be filed at least 30 days before the date scheduled for an examination. (§ 2 art III ch 186 SLA 1955)

Sec. 08.36.130. Examination. An examination shall be given at times and places determined by the board to be convenient and economical for the applicants and the state. At least once each year the board shall appoint from its membership an examination committee of at least three persons. The examination committee shall conduct an examination at least once a year and report the results to the board for official action. (§ 3 art III ch 186 SLA 1955; am § 5 ch 155 SLA 1968)

Sec. 08.36.140. Out-of-state examination. If an applicant requests the board to hold an examination outside the state, the board may require the applicant to pay the transportation costs to the members of the committee conducting the examination. (§ 3 art III ch 186 SLA 1955)

Sec. 08.36.150. Examination in out-of-state dental schools. The examination committee, with the approval of the board, may conduct an examination in the clinic of an approved dental school within the continental limits of the United States and admit to the examination a dental student in his last year of school who would otherwise be eligible

for admission to examination and licensing in the state upon completion of his education. (§ 3 art III ch 186 SLA 1955)

Sec. 08.36.160. Contents of examination. The examination shall be clinical and written and of such a character as to test in a satisfactory manner the qualifications of the applicant to practice dentistry. The examination shall consist of the following:

(1) The subjects of the written examination shall be selected in accordance with the trend of dental education as determined by the Council of Dental Education of the American Dental Association.

(2) The applicant shall give demonstration of his skill in operative and the prosthetic dentistry or any procedures as recommended by the American Association of Dental Examiners. (§ 4 art III ch 186 SLA 1955; am § 6 ch 155 SLA 1968)

Sec. 08.36.170. Partial examination. A student at least 19 years of age who has satisfactorily completed regular courses of instruction in dentistry in at least two different school years at an approved dental school, and who is certified by the dean of the college as having satisfactorily completed the subjects included in section 1 of the examination may take section 1 of the examination. If the student passes section 1 and subsequently takes the full examination, the requirements of section 1 are waived. (§ 5 art III ch 186 SLA 1955)

Sec. 08.36.180. Re-examination. An applicant shall pass each subject of each section of the examination with a score of at least 75 per cent. If an applicant fails in one subject in each section, he may be re-examined in that subject. If an applicant fails in more than one subject in any section, he shall be re-examined in the whole section. If an applicant fails the examination or any section of it on two separate occasions, the board shall refuse to examine him further until he produces evidence satisfactory to the board that he has pursued further study in preparation for the examination. (§ 6 art III ch 186 SLA 1955)

Sec. 08.36.190. Grading of examination. Upon the conclusion of the written examination and as soon as practicable, the papers shall be rated by an examiner. The examiner shall prepare a report in duplicate on each written examination and a report in duplicate on each practical examination. The examiner shall forward one copy of each report on each candidate to the secretary of the board and one copy to the division of occupational licensing. The secretary shall prepare a composite report on each applicant and file one copy of his report with the division of occupational licensing. As soon as practicable the division of occupational licensing shall notify each candidate of the results of the examination. (§ 7 art III ch 186 SLA 1955; am § 2 ch 121 SLA 1972)

Sec. 08.36.200. Waiver of written examination. The board may waive the requirement for written examination for an applicant who holds a certificate from the National Board of Dental Examiners that

he has passed the theoretical or written examination given by the national board. (§ 8(a) art III ch 186 SLA 1955)

Sec. 08.36.210. Waiver of examination by reciprocity. The board may waive the requirement for written examination for a graduate of an approved dental school who has been licensed, and has been in legal and reputable practice of dentistry in a state, territory, district or possession of the United States which has requirements for licensing, and give reciprocal rights, equivalent to those of this state, if the applicant meets the requirements of § 110 of this chapter. (§ 8(b) ar' III ch 186 SLA 1955; am § 3 ch 121 SLA 1972)

Sec. 08.36.220. Issuance of license by reciprocity. If an applicant having the qualifications contained in §§ 110 and 210 of this chapter has been engaged in the practice of dentistry for a period of five years in the state, territory, district or possession of the United States, immediately preceding his application to practice in the state, the board may license the applicant without examination. (§ 9 art III ch 186 SLA 1955; am § 2 ch 26 SLA 1965; am § 7 ch 155 SLA 1968; am § 4 ch 121 SLA 1972)

Sec. 08.36.230. Practice outside the state. A dentist licensed to practice in this state and residing and practicing dentistry outside of this state, may maintain his eligibility to practice in this state by biennially registering his name and place of residence with the division of occupational licensing. If the dentist fails to register, the board may reinstate his license without examination upon payment of a penalty of $25, payment of all delinquent registration fees, and presentation of proof of active practice at his place of residence, certified by the dental board having jurisdiction at his place of residence, or, if there is no board, by evidence satisfactory to the board. (§ 10 art III ch 186 SLA 1955; am § 5 ch 121 SLA 1972)

Sec. 08.36.240. Issuance of license; recordation; display. The board shall issue a license to each successful applicant who has paid the required fees. The holder of a license shall register it in the office of the clerk of the superior court in the judicial district of his place of residence. The licensee shall display the license in a conspicuous place where he practices. (§ 11 art III ch 186 SLA 1955; am § 6 ch 121 SLA 1972)

Sec. 08.36.244. License to practice as specialist required. No licensed dentist may hold himself out to the public as being especially qualified in a branch of dentistry by announcing through the press, sign, card, letterhead or printed matter, or any means of public advertising, using such terms as "specialist," or inserting the name of the specialty, or using other phrases customarily used by qualified specialists that would imply to the public that he is so qualified, without first securing a specialist's license as provided in this chapter. (§ 8 ch 155 SLA 1968)

Sec. 08.36.246. Qua cation for a specialist license. (An applicant for a specialty license must

(1) possess a license to practice dentistry in the state, and

(2) have completed two or more academic years of advanced education in the specialty.

(b) The provision of (a) (2) of this section does not apply to dentists who have limited their practice exclusively and who ethically announced limitation of practice in accordance with American Dental Association policy before July 23, 1968. (§ 8 ch 155 SLA 1968)

Sec. 08.36.247. Limitation of special practice. (a) No specialty license may be issued unless the applicant presents proof satisfactory to the board that he is qualified to practice that specialty.

(b) This section may not be construed as limiting or preventing a licensed and qualified dentist from performing, without a specialty license, dental acts or services to the public in any of the branches of dentistry, except that no dentist may administer a general anesthetic to a patient without a valid permit as required by regulations of the dental examiners board. (§ 8 ch 155 SLA 1968)

Sec. 08.36.248. Suspension or revocation of specialty licenses. The board may suspend or revoke a specialty license upon any grounds set out in § 310 of this chapter, and the procedure for suspensions and revocations shall be the same as for the revocation or suspension of a regular license to practice dentistry. (§ 8 ch 155 SLA 1968)

Sec. 08.36.250. Biennial registration. At least 60 days before January 1 of every other year, the division of occupational licensing shall mail a form for biennial registration to each licensed dentist. Each licensee shall complete the form and return it together with the registration fee. The division of occupational licensing shall, as soon as practicable, issue a registration certificate valid for the years for which issued. Each licensee shall keep the registration certificate beside or attached to his license. Failure to receive the registration form does not exempt a dentist from biennial registration. (§ 12 art III ch 186 SLA 1955; am § 9 ch 155 SLA 1968; am § 7 ch 121 SLA 1972)

Sec. 08.36.260. Branch office registration. A licensee who practices in an established office with an address other than that address for which his biennial registration certificate is issued shall obtain a branch office registration certificate for each office. (§ 13 art III ch 186 SLA 1955; am § 10 ch 155 SLA 1968)

Sec. 08.36.270. Permits for isolated areas.

Repealed by § 3 ch 26 SLA 1965; § 5 ch 93 SLA 1965.

Sec. 08.36.271. Permits for isolated areas. (a) The Department of Health and Social Services shall designate as isolated areas those specific places and regions remote from major population centers which

are not served by dentists licensed under this chapter and which have a geographical location which works financial hardship, extended loss of time, or arduous and costly travel upon residents needing dental care.

(b) The board shall, upon recommendation of the Department of Health and Social Services, issue an annual permit authorizing the treatment of residents in an area designated under (a) of this section, who are not entitled to dental care by the state or federal government, by a dentist employed by the United States Public Health Service or qualified member of the armed services who serves in that area. (§ 1 ch 93 SLA 1965; am § 11 ch 155 SLA 1968; am § 6 ch 104 SLA 1971)

Sec. 08.36.280. Temporary permit. (a) The board may issue a one year temporary permit without examination to an applicant to practice dentistry in a locality requested by the applicant if the locality is of the type specified in (2) of this subsection and the applicant

(1) meets the requirements of § 110 of this chapter;

(2) desires to practice dentistry in a city or rural village which does not have a resident licensed dentist in active general practice;

(3) has a license in good standing to practice dentistry in a state, territory, district or possession of the United States;

(4) tenders and pays the fee prescribed in § 290 (6) of this chapter.

(b) The board may authorize a temporary permittee to practice dentistry in more than one city or rural village of the type specified in (a) (2) of this section.

(c) The board may annually renew a temporary permit upon written application of an applicant and upon payment of the prescribed fee if the applicant has not committed an act which is a ground for revocation in § 310 of this chapter, but in any case, within two years from issuance of his first temporary permit, the applicant must pass a board exam.

(d) A temporary permit may be revoked, suspended or annulled, or the permittee may be reprimanded, censured or disciplined by the board in the same manner and for the same cause as a licensed dentist under § 310 of this chapter.

(e) The board shall grant or deny an application for a temporary permit within 60 days after it is received. (§ 15 art III ch 186 SLA 1955; am § 4 ch 26 SLA 1965; am §§ 8, 9 ch 121 SLA 1972)

Sec. 08.36.285. Licensing a permittee.
Repealed by § 10 ch 121 SLA 1972.

Editor's note. — The repealed section derived from § 5, ch. 26, SLA 1965.

Sec. 08.36.290. Fees and penalties. The board shall impose and collect the following fees and penalties:

(1) for the issuance of an original license, $30;

(2) for the examination of an applicant, $50;

(3) for re-examination of an applicant, $50;

(4) for biennial registration, $40;
(5) for each branch office biennial registration, $40;
(6) for a temporary permit, $25;
(7) Repealed by § 7 ch 94 SLA 1968.
(8) for re-instatement as provided in § 230 of this chapter a penalty of $10;
(9) for a specialty license, $30;
(10) for a duplicate license, $10. (§ 16 art III ch 186 SLA 1955; am § 7 ch 94 SLA 1968; am § 12 ch 155 SLA 1968)

For history of taxation of profession of dentistry, see United States v. Dasher, 9 Alaska 719 (1940).

Sec. 08.36.300. Deposit of fees and payment of expenses. Repealed by § 3 ch 59 SLA 1966.

Article 3. Unlawful Acts.

Section
310. Grounds for revocation of license
320. Order of reprimand, suspension and revocation
325. Limits or conditions on license; discipline
330. Injunction
340. Penalties

Sec. 08.36.310. Grounds for revocation of license. A license and registration may be revoked, suspended, or annulled, or the licensee may be reprimanded, censured, or disciplined by the board after hearing when he

(1) secures a license through deceit, fraud, or wilful misrepresentation of a material fact;
(2) is convicted of a crime involving moral turpitude;
(3) has a chronic or persistent inebriety or addiction to habit-forming drugs which renders him incompetent to continue the practice of dentistry;
(4) commits wilful or gross malpractice or wilful or gross neglect in the practice of dentistry;
(5) hires, supervises, permits or aids unlicensed persons to practice dentistry;
(6) is insane or has a contagious or infectious disease making him an improper person to continue in the practice of dentistry;
(7) practices or offers to practice dentistry under a name other than the name in which the license is issued;
(8) uses the name of a company, association, corporation, trade name, dental clinic, or business name in connection with the practice of dentistry;
(9) knowingly practices in the employment of or in association with a person who is practicing in an unlawful manner;

(10) uses an advertising solicitor or free-publicity press agent;

(11) wilfully deceives or attempts to deceive the board with reference to any matter under investigation by it;

(12) advertises professional superiority;

(13) advertises free dental work or free examination;

(14) advertises prices for professional service;

(15) advertises to perform any dental operation painlessly;

(16) advertises by means of a large display, glaring light sign, or sign containing as a part of it the representation of a tooth, bridgework, or any portion of the human head;

(17) advertises by a medium other than the carrying or publishing of a modest professional card or the display of a modest window or street sign at the licensee's office containing the name, address, profession, office hours, telephone number and specialty;

(18). permits the use of his name as a dentist by others in the sale or advertisement of products;

(19) violates a provision of this chapter or a regulation of the board promulgated under authority of this chapter;

(20) advertises as a specialist in any branch of dentistry, unless he devotes a major portion of his practice to that branch;

(21) engages in the practice of fee-splitting;

(22) engages in unprofessional conduct;

(23) obtains a fee by fraud;

(24) directly or indirectly advertises or solicits for dental hygiene business;

(25) advertises as a specialist in a branch of dentistry without first obtaining a specialty license;

(26) fails to report a death that occurred on premises used for the practice of dentistry to the office of the secretary-treasurer of the board within 72 hours;

(27) administers a general anesthetic without a valid permit required by regulations of the dental board. (§ 1 art IV ch 186 SLA 1955; am §§ 13—15 ch 155 SLA 1968)

Cross reference. — As to malpractice actions, see AS 09.55.530—09.55.560.

Sec. 08.36.320. Order of reprimand, suspension and revocation. The board may, by a majority vote, evidenced by the signatures of the members on the order, reprimand a licensee or revoke or suspend a license. (§ 5 art IV ch 186 SLA 1955)

Sec. 08.36.325. Limits or conditions on license; discipline. (a) In addition to actions under §§ 310 and 320 of this chapter, upon a finding that by reason of demonstrated problems of competence, experience, education, or health, the authority to practice dentistry should be limited or conditioned or the practitioner disciplined, the board may censure, place on probation, restrict practice by specialty, procedure or facility, require additional education or training, or revoke or suspend a license.

(b) The Administrative Procedure Act (AS 44.62) applies to any action take by the board under this section. (§ 10 ch 102 SLA 1976)

Sec. 08.36.330. Injunction. The board may sue in its own name in a competent court to enjoin any person from doing an act consituting a violation of this chapter. (§ 7 art IV ch 186 SLA 1955)

Sec. 08.36.340. Penalties. A person who violates any provision of this chapter for which no specific penalty is provided, is guilty of a misdemeanor and is punishable by a fine of not more than $500, or by imprisonment for not more than six months, or by both. (§ 8 art IV ch 186 SLA 1955)

Article 4. General Provisions.

Section
350. Application of chapter
360. Practice of dentistry defined

Sec. 08.36.350. Application of chapter. This chapter applies to a person who practices, offers or attempts to practice dentistry in the state except

(1) dental surgeons or dentists in the military service in the discharge of official duties;

(2) licensed dental hygienists in the performance of duties authorized by law;

(3) dentists in the employ of the United States Public Health Service, United States Veterans' Administration, Alaska Native Service, or Department of Health and Social Services, in the discharge of official duties;

(4) clinicians demonstrating at meetings of dentists approved by the board;

(5) physicians and surgeons;

(6) dentists in the employ of the United States Public Health Service providing care by authority of a permit issued under § 271 of this chapter. (§ 2 art I ch 186 SLA 1955; am § 2 ch 93 SLA 1965; am § 6 ch 104 SLA 1971)

Sec. 08.36.360. Practice of dentistry defined. A person engages in the practice of dentistry who

(1) performs or holds himself out to the public as being able to perform dental operations;

(2) diagnoses, treats, operates on, corrects or attempts to correct, or prescribes for, a disease, lesion, pain, injury, deficiency, deformity, or physical condition, malocclusion or malposition of the human teeth, alveolar process, gums or jaws and adjacent tissues;

(3) performs or attempts to perform an operation incident to the replacement of teeth;

(4) furnishes, supplies, constructs, reproduces, or repairs prosthetic dentures, bridges, appliances or other structures to be used and worn as substitutes for natural teeth, except on prescription of a duly licensed and registered dentist and by the use of impressions or casts made by a duly licensed and registered dentist;

(5) uses the word "dentist" or "dental surgeon" or the letters D.D.S. or D.M.D. or other letter or title which represents him as engaging in the practice of dentistry;

(6) extracts or attempts to extract human teeth;

(7) owns, manages or operates a place where the acts and things described in this section are performed or done. (§ 1 art I ch 186 SLA 1955)

Chapter 40. Electrical Administrators.

Article
1. Board of Electrical Examiners (§§ 08.40.005—08.40.080)
2. Licensing (§§ 08.40.090—08.40.180)
3. General Provisions (§§ 08.40.190—08.40.200)

Cross reference. — As to electrical contractors, see AS 08.18.026.

Article 1. Board of Electrical Examiners.

Section
05. Purpose of chapter
10. Creation and membership of board
20. Appointment and term of office
30. Chairman of board
40. Board meetings
45. Categories of licenses
50. Regulations
60. Examinations
70. Inspection or investigation by board
80. Compensation of board members

Sec. 08.40.005. Purpose of chapter. The purpose of this chapter is to protect the safety of people and property in the state from the danger of improperly installed electrical wiring and equipment, by providing a procedure to assure

(1) the public that persons responsible for making electrical installations in this state are qualified; and

(2) a sufficient number of persons are so qualified. (§ 2 ch 53 SLA 1977)

Sec. 08.40.010. Creation and membership of board. There is hereby created a Board of Electrical Examiners consisting of three members

STATE

MEMORANDUM

DATE: January 12, 1978

FILE NO:

TELEPHONE NO: 278-4668

TO: Commissioner Helen Beirne
Dept. Health & Social Services
Juneau

THRU: Frederick McGinnis
Deputy Commissioner
Dept. Health & Social Services
Anchorage

SUBJECT: Request by Aleutian/Pribilof Islands Association, Inc.: Permit Request--Dental Services for Aleutian Chain

Consistent with numerous other recent activities on the part of the Aleutian/Pribilof Islands Association to improve health and social services to the residents of the Aleutian Islands, information was sought from my office today with regard to our Department's assistance to the citizens of the Aleutian Islands for improved dental services.

Mr. Frank Peratrovich, Deputy Director of the Association, raised the question as to whether our Department is in the position to assist consistent with the applicable Alaska Statute--AS 08.36.271, Permits for Isolated Areas. For convenience a copy of the statute is attached (Attachment No: 1).

It is my understanding that the Aleutian/Pribilof Islands Association's plan is to secure the services of dentists on a voluntary basis mostly, if not entirely, from other states to render the services. The Public Health Service will be asked by the Association to employ the dentists at a nominal salary for technical purposes. The dentists apparently will meet the Alaska statutory requirements provided in AS 08.36.110 with latest amendments (see 1976 Supplement Amendments for 08.36.110).

It is in the knowledge of the A/PIA andtheirlegal counsel that "the Department of Health and Social Services shall designate as isolated areas those specific places and regions remote...". (AS 08.36.271(a))

It is their impression that "the Board shall, upon recommendation of the Department of Health and Social Services, issue an annual permit authorizing...". (AS 08.36.271(b))

It is my understanding that the Association is considering requesting a slight amendment to AS 08.36.271 if necessary to accomplish certain goals but, at this time, it is not certain if such will be required.

RECOMMENDATION: It is recommended that

(1) the Department officials concerned give strongest support to the proposed plan being developed by the Aleutian/Pribilof Islands Association, Inc. in their goals of addressing this extremely long neglected need to improve the dental health of the citizens of the Aleutian Chain.

(2) the Department of Health and Social Services, after consultation with the Department of Law, release the attached suggested letter (Attachment No. 2) and the attached suggested "Designation of Isolated Areas" (Attachment No. 3).

OFFICE OF THE COMMISSIONER
POUCH H 01 – JUNEAU 99811

January 16, 1978

Dental Examiners Board
937 Eighth Avenue
Fairbanks, Alaska 99701

Attention: Sydnor L. Stealey, President

Gentlemen:

Re: Designation by Department of Health and Social Services of Aleutian Islands as Isolated Area

It has recently come to the attention of the Department of Health and Social Services that, through the initiatives of certain Alaska Native organizations, improved dental services for citizens of the villages of the Aleutian Islands may be arranged. Such plans envision the utilization of dentists falling under the general coverage of AS 08.36.271(a) and (b).

Consistent with the provisions of AS 08.36.271, the Department of Health and Social Services encloses at this time the appropriate formal designation by the Department for the region involved in the emerging plans.

In line with the specific provision of AS 08.36.271(b), the Department of Health and Social Services hereby recommends to the Board the issuance of annual permits to the dentist applicants meeting the qualifications of applicants contained in AS 08.36.110, with latest amendments. The specific and individual applications related to this recommendation will be filed in accordance with your procedures.

It is our understanding that qualified applicants shall be granted annual permits under the conditions contained in the statutes and consistent with the recommendation contained herein.

Sincerely yours,

Helen Beirne
Commissioner

DESIGNATION OF ISOLATED AREAS

by

STATE OF ALASKA, DEPARTMENT OF HEALTH AND SOCIAL SERVICES

In accordance with the provisions of Alaska Statutes 08.36.271, Permits for Isolated Areas, the Department of Health and Social Services hereby designates as isolated areas the entirety of the Aleutian Islands Chain of the state of Alaska, including any and all specific villages and communities of the Aleutian Chain.

Such designation is made solely for the purposes served by the provisions of the Alaska Statute cited above, and for dental services as provided in the cited statute.

NIGHTLETTER - May 4, 1978

Sent to:

Glen Hackney, Chairman, Senate HESS Committee
Rep. Alvin Osterback
Rep. Frank Ferguson

PLEASE BE ADVISED THAT ALL OPPOSITION TO OUR DENTAL PROJECT, H.B. 728 HAS BEEN WITHDRAWN BY THE ALASKA NATIVE HEALTH SERVICES. FOLLOWING IS A COPY OF THEIR LETTER:

Dear Mr. Pletnikoff:

The project description of your Mobile Dental Project has been received and reviewed by the Alaska Native Health Service. The review was done by four experienced professionals within and without the dental field. Upon completion of the individual reviews, an Ad Hoc Committee of Area Office and Service Unit personnel considered carefully all of the information available about your project. It is our conclusion the Aleutian Pribilof Island Association Mobile Dental Project does not constitute a project proposal for Alaska Native Health Service participation. At the present time the Aleutian Pribilof Island Association Mobile Dental Project involves only the State of Alaska and the U. S. Bureau of Indian Affairs.

As an Indian health agency, I would be remiss in not supporting a program aimed at the improvement of the general health and dental health of the Alaska Native people. The Aleutian Pribilof Island Association Mobile Dental Project has my support subject to the following conditions and recommendations:

1. My support does not constitute any future commitment by the Alaska Native Health Service for additional expenditures of funds or personnel.

2. The medical (or dental) services provided carries no threat of detriment to the health of the recipients of care.

3. The project is accepted and desired by the people in the communities of the Aleutian chain and the Pribilof Islands.

4. The Aleutian Pribilof Island Association coordinate the services provided by this project with the dental program of the Anchorage Service Unit.

It is my sincere wish that this project will result in improved dental care to the Alaska Native people in the Aleutian Pribilof Region. I urge you to take advantage of the experience and knowledge of members of my staff in completing the planning of the project and your dental feasibility study. I will look forward to a successful cooperative program.

Sincerely,

G. H. Ivey
Director
Alaska Area Native Health Service

UNITED STATES GOVERNMENT

memorandum

REPLY TO ATTN OF: Chief, Service Unit Dental Program - ANMC

SUBJECT: APIA Dental Feasibility Studies

TO: Community Relations Officer, ANMC

The attached information should enable you to answer APIA questions about dental activities in this Service Unit.

1. COSTS: (Attachments # 1)

a) Costs of field trips, by village, are listed. This includes dates, duration of trip, costs of freight and names of dental personnel traveling. This should serve to show typical costs of Aleutian trips.

b) In a usual fiscal year our dental teams have been providing 29-32 team weeks in the APIA region including overtime. An exception to this was F.Y. 1977. Less time was spent as a result of two mid-year dentist resignations resulting in trip delays to bring replacements on duty. Copies of our F.Y. 1978 field trip schedules have been provided APIA previously. A revised version is attached. See attachment # 2.

c) Teams traveling usually consist of a Commissioned Officer grade O-4 and a dental assistant GS-4. The APIA proportion can be calculated from team work weeks spent in the APIA region and the following information. Average Annual Salaries for those IHS dental team employees including Base Pay, COLA, SHA, incentive pay, quarters and subsistence are :

CO-4- $25,750
GS-4- $14,645

Overtime costs are currently averaging $6.89/hr for the dental assistants. No overtime is paid to salaried Commissioned Officers. Current overtime experience averages 16 hours per field trip week for each team member.

d) The Anchorage Service Unit dental supply budget for F.Y. 1978 is $29,600 . We have no way of identifying what portion of that amount is used in the Aleutian-Pribilof region. Based upon a porportion population a "guesstimate" would be in the $1500-$2000 range.

e) Our teams use portable field equipment that costs about $4500 per set-up at Gov. prices. Portable x-ray units, when available, in safe portable form, cost another $2000-$3000. Hand instruments cost another estimated $1000 per portable unit. This equipment weighs about 700 lbs and does not include lab support equipment and complete instrumentation and supply for specialty services.

Buy U.S. Savings Bonds Regularly on the Payroll Savings Plan

OPTIONAL FORM NO. 10
(REV. 7-76)
GSA FPMR (41 CFR) 101-11.6
5010-112

2. The level of care provided and frequency of visits by dental teams for the past three years are shown on attachment # 3. These data also include references to level of specific preventive programs, community efforts, travel difficulties etc.

   Basic care consists of routine services with the exception of specialty care like prosthetics and orthodontics and periodontal surgery. Examinations, fluoride treatments, prophylaxsis and oral hygiene instructions, fillings, stainless steel crowns, extractions, pulpotomies, minor surgical procedures and palliative treatments make up the bulk of basic care provided.

3. All age groups are treated. The main emphasis is on pre-schoolers and students. In some instances available dental-team time has exceeded adult demand for care. Complete prosthetic and orthodontic treatment of high quality cannot be provided during visits of short duration due to lack of lab support, time and equipment. Considerable prosthetic care has been provided however during longer trips such as to St. Paul and St. George. More manpower to allow more frequent visits by the same dentist would be desirable.

   Computer printouts are attached which show services provided by age group and village during Fiscal Years 76 and 77. F.Y. 77 printouts for King Cove, Nikolski, False Pass and Belkofski are missing. A retabulation and separate computer run has been requested to recapture that data. Individual patient exam records could be used as an interim source of information. I'll be available to explain the printouts if necessary.

   Computer printouts are also available that reflect epidemiological data and services required by patients examined. It is important to note that these data are probably under-reported since the large sample of examinations are for younger age groups. In addition clinicians tend to under-report specialty service requirements that they are unable to provide in portable-intermittant clinics. The net result in my opinion is that the report of level of services required is not 100% accurate for older age groups. Disease rates and services requirements of patients seen at ANMC may provide a more accurate picture. This is because a larger sample of adult patients is seen and a broader scope of services is provided at the ANMC fixed facility. Such information can be duplicated from printouts or microfiche. I believe that personal explanation of the data would be beneficial and less confusing.

4. Other sources of funding would include :

   a) Dental benefits for those under age 21 in families who are eligible for Medicaide.

   b) Employees benefit plans that include dental coverage, ~~Dental~~ Dental Plan etc.

   c) Veterans benefit for those who have been recently discharged or who have service connected disabilites.

   d) Personal dental insurance coverage.

   e) Private funds.

   f) Corporation funds for contract dental care.

   g) State grants for community programs, such as H_2^O Fluoridation.

   h) Grants from private foundations.

   i) Volunteer programs.

   j) National Health Service Corps.✓

5. The greatest un-met dental needs are :

   a) The need for consistent effective community involvement in meaningful preventive programs such as :

      - Community H_2^O fluoridation.

      - School centered fluoride rinse and fluoride tablet programs.

      - Periodic topical fluoride gel programs by Health Aides et.als.

      - Community and family attention to nutrition and limitation of refined carbohydrate consumption.

      - Continuing integration of dental health information into school curriculum.

   b) Increased corrective services for adults especially in larger villages.

   c) Increased specialty services for younger patients.

d) Continuing evaluation of quality of care at clinical and community levels.

6. To accomplish the above the expertise and resources of several agencies need to be coordinated. The needs can be best met by co-operative efforts to overcome travel obstacles and the lack of adequate facilities and manpower. The more frequent presence of familiar dental personnel, working in facilities equipped to provide a broader range of service, has the greatest potential for overcoming disease backlogs and most importantly has the best chance of getting communities involved in preventing disease. One shot programs have no potential for continuing success when they deal with disease processess as multifactorial as dental disease. Furthermore one shot programs are usually not cost effective.

I hope these thoughts contribute to the APIA efforts. I look forward to cooperative efforts toward total program improvement.

Memorandum

To: Dental Feasibility File

From: Patrick Pletnikoff, Executive Director

Date: April 10, 1978

Subject: Meeting with IHS Personnel Regarding Dental Project

A meeting was held this date with the following to discuss the Dental Project:

1. Dr. Nielsen
2. Dr. Douglas Smole
3. Dr. John Stope
4. Mr. Ken Isaac
5. Mr. Elmo Strickland
6. Mr. Jeff Trenton
7. Mr. Perry Smith, BIA Area Office

The purpose of this meeting was to discuss the problems, concerns, and progress made to date regarding our dental feasibility study as well as our proposed programs in the dental field. We also discussed the lack of information being provided IHS in the total project. Mr. Perry Smith represented the Area Office of the BIA and discussed the proposal we submitted requesting funding from BIA.

In essence, BIA will fund our proposal request when IHS does the following:

1. Agree to monitor and provide technical assistance to our dental project.

2. Agree with the scope of work that we propose in our mobile dental project.

Information is being provided IHS to Dr. Smole for review concerning our mobile dental program. We have set a date of 4/18/78 as a final review date. At this time, IHS should provide a letter to BIA indicating that they will support our program in all aspects.

The meeting ended with all agreeing to support a program we wish to develop and implement.

Information will be provided IHS this date to Dr. Smole.

PP:alp

TESTIMONY IN SUPPORT OF THE MOBILE DENTAL HEALTH SERVICE FOR THE ALEUTIAN/PRIBILOF AREA OF ALASKA PRESENTED BY PATRICK PLETNIKOFF, EXECUTIVE DIRECTOR

When I was a child and my father before me, statistical surveys were being conducted concerning the conditions of the children's teeth. The studies go on and the teeth fall out before the final report is in. Last year's cavities are this year's candidates for false teeth. We don't want money for another study of what needs to be done. Anyone living in bush Alaska knows the deplorable conditions of the dental health of these people. Many people find it less expensive to fly to Switzerland to have their teeth fixed and easier than getting care at home. Unfortunately, most of us are not able to afford the trip or to be away from our families long enough to get our teeth fixed in that way.

One thing we don't want this project to be is a threat or an attack on any one group of professionals. We know most everyone is doing the best they can with what they have to work with given the vast area they must serve. What we do want to do is provide a pilot project demonstration of still another way of dealing with the problem. It has worked in other places and we believe it will work here. Once we have things under control in the Aleutian/Pribilof area we will be happy to move the equipment to other parts of the State where the need is great -- we have that kind of long term commitment also from Dr. Stark and the University of California Dental School in San Francisco.

At present the Aleutian people have no qualified personnel to deliver dental health needs to their people and the Public Health Service delivers only emergency type care to this area.

Due to the over 1,000 miles one must travel in order to cover the distance of the Aleutian/Pribilof area -- and the isolation of the communities -- there is not adequate space or facilities to do quality dental work and as a result very little restorative work is done. The pattern has been to extract rather than repair.

With the mobile dental unit we are designing, we will be able to move this total working clinic from one place to another and recruit quality personnel to staff it.

The Aleutian/Pribilof Islands people have no funds at this time to develop this unit and provide the service.

Unless we have these facilities we will not be able to recruit the volunteer dentists and hygienists to work on our people.

Our objectives are to design and build a mobile dental vehicle equipped with three chairs -- total service units comparable to any funds in a large city setting; to equip a step van to follow for the x-ray unit and hygienists and records; to staff the vehicles with volunteer dentists supervised by the professional staff of the University of California Dental School; to also staff the vehicles with volunteer hygienists and trained dental assistants; and to deliver full dental health service to all our people and to then make our units available to other Native groups in need in Alaska.

Methods of delivery of dental care to isolated areas have been examined throughout this country as well as in Canada and countries abroad; specialist in California and in British Columbia recommended unanimously a full mobile dental clinic which could be moved about from place to place as needed. All experts also are in agreement a short term summer program will not meet the needs of the Aleutian/Pribilof islands people. Neither the consultants nor officials from A/PIAI have ever contemplated a three to four week program as interpreted by Commissioner Helen Bierne.

Such conclusions are politically motivated and reflect a total lack of research on the part of her unit.

It is clearly the intention of A/PIAI and the volunteer dentist to develop a year round program of delivery of dental care -- beginning with clinical repair and graduating to specialized areas and ultimately using the facilities for a prosthetic follow through.

Children's rotten teeth continue to drain down their throats poisoning their systems and the older folks continue to suffer from swollen tongues and extreme malaclusion and deformity leading ultimately to warped speech patterns and systemic discord while politicians scheme out ways to protect themselves against criticism for non-delivery of service the public has been paying them to deliver.

The mobile dental system tried and tested and proven in the migrant labor areas of California and in refugee camps in Israel are not pursued with the idea of embarassing anyone. What has or

has not been done in the past is history all are willing to forget.

We want to get on with the show. Surely our legislators would not be opposed to seeking alternative methods of solving this old problem.

We are not talking about 200 million dollars worth of service.

We are talking about 200,000 which we believe will deliver 2 million dollars worth of care. Is Alaska so affluent we can afford to pass up such opportunities? We are anxous as Mrs. Bierne to see permanent dental facilities in every village in Alaska -- and some day in the future this may be possible through a subsidized program of building dental facilities in isolated areas and providing incentives to young dentists to practice in these isolated areas. Perhaps some of our young professional volunteers will want to fill these vacancies in the future after a volunteer exposure to this area.

In the meanwhile our people need dental care now.

For answers to the ill informed comments about the impossibility of moving this mobile unit from place to place in the islands one needs only to look at the equipment being moved about in the islands now and since World War II. Oil drills, heavy equipment, portable fish processing equipment and millions of barrels of fuel oil as well as prefabricated homes are moved about as easy as moving a sheel barrel and none has even suggested it was not possible.

All the Doubting Thomas' are welcome to stop by this next year, sit in our new mobile unit and have their teeth cleaned.

SOME QUESTIONS YOU MIGHT HAVE

Question

How long will the dentists use the unit?

Answer

We have a long term commitment from the University of California Mobile Dental Clinic to serve Alaska as long as we want their services.

The unit will be staffed with a dentist year round. This summer a team of three dentists, one supervising professor, two dental technicians and one x-ray technician will work for six weeks -- then throughout the year a licensed dentist will do follow up work. The following summer a new team will return for another six weeks time frame.

In addition to the teams from the University of California operating their summer program we have a number of volunteer dentists from around the country who are willing to donate their time and services for two weeks to a month at a time. One association has 180 members all willing to participate.

Question

What kind of unit is it and how will it be transferred to the Chain?

Answer

The unit is a G.M.C. 26' motor home stripped. Then refitted at the University of California as a dental clinic. When completed it will be just like a three chair dental office in a large city complete with cabinetry, overhead lights, delux dental chairs and all of the support equipment needed to do a good job.

It will be transported by sea to St. Paul Islands this summer. Next summer it will be moved to the Aleutians, possibly Unalaska or Sand Point by SeaLand. At this time, moves are contemplated for Unalaska, Sand Point, and Cold Bay as needed.

Question

How will the dentists be licensed?

Answer

There are at least two ways -- (1) they can be employed by PHS for a dollar a year and assigned to the Aleutian/Pribilof Islands Association (The State law permits this); or (2) the State Department of Commerce also can license the dentists in remote areas not presently served by dentists (within a 50 mile radius).

Question

How long will the unit be in the Aleutian area?

Answer

We anticipate that after two years the unit could be moved to other remote areas of the State as requested -- we have long term consultants to staff throughout the State.

The dental program will serve anyone who is identified as in emergency need of dental care regardless of who they are. Our hygienist staff will work closely with village health aides to locate people in greatest need first and to repair on a priority basis, teeth which would be soon lost without immediate treatment.

Question

If you will primarily be serving Native Americans, why doesn't the Indian Health Service fund the program?

Answer

The primary responsibility for ensuring the protection of public health in Alaska is the State of Alaska. While this is not an overwhelming problem in the urban areas of our State where dentists establish their practices, it is almost non-existent in the rural areas.

While the Indian Health Service has a special responsibility for the health care of Native Americans, it is not capable of providing the most basic dental services to Alaska Natives.

Law Office of
JAMES F. VOLLINTINE
805 W. 3rd Avenue
Anchorage, Alaska 99501
Phone: 276-8144

January 11, 1978

Mr. Frank Peratrovich
Deputy Director
Aleutian/Pribilof Islands Association, Inc.
430 C Street, Suite 303
Anchorage, Alaska 99501

Dear Frank:

This responds to your request for my opinion as to whether or not A/PIA, under a contract which it has assumed from the IHS under P.L. 93-638, can employ dentists in the Aleutian area who are not licensed to practice dentistry under Alaska law. Unfortunately, at this point, the answer is not clear. Attached are copies of the relevant Alaska Statutes.

Under A.S. 08.36.271 the State Department of Health and Social Services is to designate isolated areas of the State which are not served by licensed dentists. Then, the Alaska Board of Dental Examiners shall, upon recommendation of the Department of Health and Social Services, issue an annual permit to a dentist employed by the United States Public Health Service. Hence, it appears that dentists need not be licensed to practice in Alaska if they are employed by the Public Health Service. As you suggested, perhaps there is some way that you can arrange to have the dentists under your contract employed by the Public Health Service. This would neatly solve the problem.

Another approach might be to have your dentists apply for a temporary permit from the Board of Dental Examiners to practice dentistry in Alaska. This approach is provided for in A.S. 08.36.280, a copy of which is attached. Basically, this provision provides that the Board may issue a one year temporary permit to a person not licensed in Alaska to practice dentistry in a rural area if:

> (a) the applicant is of good moral character, and is a graduate of a dental college approved by the Council on Dental Education of American Dental Association at the time of graduation, and holds a D.D.S. or D.M.D. degree, or the equivalent; and
>
> (b) the applicant has a license in good standing to practice dentisry in a State, territory, district or possession of the United States.

At first glance it would appear that your dentists could receive a temporary permit from the Board of Dental Examiners. However, I just spoke with Martha Dearborn of the Alaska Dental Society (phone 279-9144), and John Beard (phone 277-3213) who is an attorney who sits on the Board of Dental Examiners. Both persons told me that in December of 1977 the Board of Dental Examiners voted not to issue any further temporary permits. Mr. Beard stated that the Board felt that A.S. 08.36.280 was a "permissive, rather than a "mandatory" statute.

I feel that the determination by the Board of Dental Examiners not to issue temporary permits in Alaska is erroneous. In my opinion, if an applicant meets the legal requirements he is entitled to practice dentistry in Alaska under a temporary permit pursuant to A.S. 08.36.280. We could challenge the Board in Court. However, it will probably be best to have your dentists first apply to the Board of Dental Examiners for a temporary permit and obtain a formal decision from the Board. Note that the attached statute provides that the Board shall grant or deny an application for a temporary permit within sixty (60) days after it is received. After the applications are submitted we can request an oral hearing before the Board whereby we would attempt to put forward a compelling argument to pursuade them to accept the applications. They are free to reverse their December 1977 ruling to the effect that no further temporary permits will be granted in Alaska. If they do not, depending on what A/PIA wants to do, we can then take them to Court.

As you stated, another approach, and possibly the best might be for A/PIA to approach the Alaska Legislature and attempt to have the attached statutes changed. However, we do not know how long this will take. Mr. Milne has just informed me that he will send me a memorandum on what should be included in the amendment to the dentistry laws. I will then draft a proposed bill.

In summary, the quickest approach would probably be for A/PIA to have the dentists employed by the United States Public Health Service. In the alternative, the dentists could apply for a temporary permit pursuant to A.S. 08.36.280. Third, A/PIA should attempt to have the dentistry statutes amended to more realistically conform to the needs of the rural populace.

If you have any questions please do not hesitate to call.

Sincerely,

James F. Vollintine

REPORT OF NATIVE EDUCATION CONSULTING & TRAINING ASSOCIATE
ON DENTAL FEASIBILITY STUDY FOR THE ALEUTIAN/PRIBILOF AREA

Consultants for the Aleutian/Pribilof Islands Association have spent many hours visiting with dentists interested in donating some of their valuable time to work with the people of the Aleutian/Pribilof Islands on their dental problems.

One particular group visited and planned with is the University of California Dental School at San Francisco - Mobile Dental Lab Unit headed by Dr. Marvin Stark and by Dr. Kenneth Soelberg his associate.

Films on the entire mobile dental program were reviewed and an on site visit to a migratory farm workers camp where children were being treated was made. Particularly impressive was the quality of care delivered. No Park Avenue Dental office would be more conscientious, kind and caring no matter what was paid yet their volunteer dentists, hygienist and support staff worked deligently and painstakingly with no payment whatsoever. Full dental dams were used, full sterile technique and leaded aprons for X-ray for both patients and operator were mandatory and every child was treated with flouride. The hygienists gave instructions concerning dental health, tooth care and diet.

After several days of exploring the needs of the Aleutian/Pribilof Islands and the Dr. Stark Mobile Dental Program, we finally arrived at a consensus.

1. The dental team agreed to serve the Aleutian/Pribilof Islands area. Three senior staff dentists expressed a willingness to be a part of the project - supervising graduate and senior year dental students as they volunteered services to the people of the Aleutians area.

2. An examination of the area to be served resulted in our selecting St. Paul and St. George as our first target area. The units would start there and spend the entire summer bringing the entire community up to standard care level. It was planned to do follow up on this period with a periodontics and a prosthetic unit which would take care of the prosthetic needs identified by the clinic team. While the clinic was operational the local health aides would be given comprehensive instruction by the dental hygienists on tooth and mouth care and help them design a year round dental health program for the schools.

Both St. Paul and St. George would be treated in St. Paul. St. George people would be transported to St. Paul for ease of delivery of service.

3. Prior to clinic time publicity would go out to the communities to be served. Plenty of notice would be available in order to give people time to plan and be ready for treatment. When the unit arrives people will be examined and given prophylaxis and flouride treatment. Treatments are scheduled based on priorities determined from examinations and X-rays. For those requiring additional treatment, further appointments are made.

4. If proper arrangements can be made a follow up periodontist (child specialist) will spend 3-6 months at the unit along with a crew of prosthetic technicians who will manufacture teeth prescribed by the clinic team.

Housing

Housing and board will need to be furnished for the entire team (usually seven at a time).

Transportation

All volunteers would be furnished round trip transportation and a per diem payment large enough to cover food and living expenses.

Facilities

It is possible to set up an entire unit in a school room, hall or church but it would be far batter to have a mobile unit much like the bus they have been working with since it is compact and so efficient to work with. The recommendation made by the team is that we purchase a G.M.C. motorhome unit stripped - which the team will equip themselves with special chairs, suction, X-ray, lights, etc. Cabinet work would be done under their supervision in Palo Alto. When the entire unit is complete it will be shipped to our summer clinic site at St. Paul in the Pribilof Islands.

It is our recommendation the unit be moved next to Sand Point and then to Cold Bay and Unalaska and the patients be transported

to the central site for treatment.

Once the Aleutian/Pribilof Islands have been worked thoroughly, the unit could be made available for other parts of the State where needed.

IN THE HOUSE

HOUSE BILL NO.

IN THE LEGISLATURE OF THE STATE OF ALASKA

TENTH LEGISLATURE - SECOND SESSION

A BILL

For an Act entitled: "A mobile dental clinic for isolated Alaskans."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

Section 1. The sum of $200,000 is appropriated from the general fund to the Department of Health and Social Services to be allocated as follows:

FY 78 (1) To the Aleutian/Pribilof Islands Assoc., Inc., for purchase of a mobile dental clinic (a GMC motor home, equipped with three complete dental work units - cabinets and fixtures) $100,000

(2) Funding for supplies movement and operation of the dental unit for a period of one (1) year $100,000

Said dental unit to be made available to other areas of the State through the Aleutian/Pribilof Islands Association, Inc., as it becomes available after meeting the crisis need of the Aleutian/Pribilof area.

Section 2. The unexpended and unobligated portion of this appropriation lapses into the general fund June 30, 1979.

Section 3. This act takes effect immediately in accordance with AS-01-10-070(c).

Dear Pat:

I was very pleased to learn of your acquisition of a mobile dental unit. The pedodontic specialty training programs at U.C.S.F. and U.S.C. have been looking for such a facility to staf with specialty students and instructors on a rotating basis. I would like to discuss this with you.

Sincerely,

Merle E. Morris

Mr. Ralph Eluska
Deputy Director
Aleutian Pribilof Island, Assn.
430 C Street Suite 303
Anchorage, Alaska 99510

Dear Mr. Eluska:

The purpose of this letter is to report to you the substance and conclusions of the meeting held on Monday, August 7, 1978. In addition, I will list for your information the conditions of Alaska Native Health Service participation in health corporation health care programs. Participating in the meeting were:

Representing Aleutian Pribilof Island, Association:

Mr. Ralph Eluska, Deputy Director
Dr. James Milne, Consultant to APIA

Representing Senator Gravel's office:

Ms. Beverly Long, Special Assistant

Representing the Alaska Native Health Service:

Mr. Robert Singyke, Executive Officer
Mr. Charles Watson, Chief, Office of Personnel
Dr. John Stolpe, Chief, Area Dental Services Branch
Dr. David Jones, Ass't Chief, Area Dental Services Branch
Dr. Douglas Smole, Chief, Service Unit Dental Program, Anchorage

The request to nominally "hire" Aleutian Pribilof Island, Assn., volunteer personnel to staff a Mobile Dental project presented to the Alaska Native Health Service by Mr. Marc Grober on June 5, 1978, was not accepted. The reasons for this decision were presented and are the subject of a separate letter to Aleutian Pribilof Island, Assn., dated August 4, 1978. Briefly the reasons can be stated as follows:

1. The government must assume liability for the acts of its employees including employees under a Volunteer Service Agreement. In order to assume this liability, day to day supervision must exist.

2. Volunteers are considered employees of the Federal government

for the purposes of the benefits provided by 5 U.S.C 8101, for work related injuries and diseases.

3. Volunteers are covered by the Tort Claims provisions of Title 23 U.S.C.

4. The circumstances proposed by Aleutian Pribilof Island, Assn., do not meet the definition of a Federal employee.

5. "Nominal hire", by the government would result in circumvention of the Alaska statutes relating to the licensing and dental practice.

6. The coordination and personnel workload required to qualify and place on volunteer agreements as many as 25 - 40 individual volunteers would be unreasonable.

The Alaska Native Health Service would be remiss in not supporting a dental program aimed at the improvement of the general health of the Alaska Native people. In a previous letter to Aleutian Pribilof Island, Assn., based upon the circumstances outlined in the information provided in your proposal titled, Aleutian Pribilof Islands, Association Mobile Dental Project, it was concluded the project does not constitute a project for our participation. Health care programs must meet specific conditions to assure the support and participation of the Indian Health Service. These conditions can be summarized as general conditions and personnel requirements. These conditions and requirements are found in Federal laws, Federal regulations and Indian Health Service policies and are listed below:

General Conditions:

1. Support of a program by the Alaska Native Health Service does not constitute any future committment of additional expenditures of funds or personnel.

2. Medical (or dental) services provided carries no threat or detriment to the health of the recipients of care.

3. The project is accepted and desired by the people in the communities involved. Evidence of this acceptance must be provided in writing from the appropriate village council or governing body.

4. The services are planned and coordinated with the dental program in the Service Unit having responsibility for the health of the community.

5. Where specific Service Unit resources are requested, the program

be approved by resolution of the Service Unit Health Board and/or Regional Health Corporation Board of Directors.

6. The personnel appointed as Federal employees meet the definition of a government employee which includes:

   a. Intent to become a Federal employee.
   b. Work under the direct supervision and control of Department (HEW) officials.
   c. Work under a formal appointment.
   d. Work in a Department facility.
   e. Volunteers may supplement, but not take the place of personnel employed through usual procedures.
   f. In accordance with the provision of an established volunteer service program.
   g. Selection of individual volunteers will be the responsibility of Department officials.
   h. Records of actual service performed by each volunteer must be maintained.

Personnel Requirements for Appointment: In general the personnel requirements for the appointment of a volunteer employee are similar to those for permanent employment, and are:

1. U.S. citizenship, volunteers are not required to be U.S. citizens.

2. Dentists must be graduates of an accredited dental school and submit evidence of graduation.

3. Dentists must be licensed in one of the states or District of Columbia and submit evidence of licensure.

4. The individual must intend to become a Federal employee.

5. An application or request should be submitted.

6. A resume' of training and experience is required.

7. Evidence of satisfactory medical condition may be required.

8. The term of appointment must be determined.

Aleutian Pribilof Island Assn., representatives stated that the immediate problem they face is the fact that the Mobile Dental Unit will be arriving in Alaska on or about August 14, 1978. Volunteer dentists and

students from the University of California San Francisco School of Dentistry will arrive with the unit. A method must be sought which will allow them to work for the period August 15 to September 30, 1978.

In summary, the recommendations agreed upon at the meeting, in general, encompassed both the long range solution to the problems of licensing and a short range solution to the immediate problem.

1. The Aleutian Pribilof Island Assn., will arrange a meeting with the Alaska Board of Dental Examiners and IHS representatives to explore the possibility of receiving some type of licensure by the State of Alaska for the dental personnel of the Aleutian Pribilof Island Assn. project.

2. Depending on the results of the above meeting, IHS will attempt to provide support for the immediate operation of the Aleutian Pribilof Island Assn. project as available personnel and scheduled activities permit.

3. The Alaska State Board of Dental Examiners and Alaska Dental Society shall be made aware of any arrangements which IHS makes to provide interim supervision of the Aleutian Pribilof Island Assn. project.

Sincerely,

John R. Stolpe, D. D. S. M. P. H.
Chief, Area Dental Services Branch

David Jones, DDS
Assistant Chief
Area Dental Services Branch
Box 7-741
Anchorage, Alaska 99510

Dear Dr. Jones:

As you are aware, we are now approaching the fruition of a dream I think we all share, intensive remedial and prophylactic dental care in the Aleutians, through the use of our mobile dental unit.

In our earlier discussions you offered that IHS might consider "hiring" our instructor and student dentists so that they might be able to practice in the bush.

To my knowledge, the best way in which these personnel can practice with the mobile dental unit project, under the current statutes, is to be in the employ of IHS (see AS 08.36.350.(3)). Though we have prepared legislation to alter the statutory scheme, enactment is far beyond the time at which the project will be ready to roll.

We are asking that you nominally "hire" our personnel for the term of their tour of duty with the unit. As I am sure there is a maze of paper work that would be required before we could begin such a program, I'd like you to put me in touch with the proper person to work out the necessary details. I, of course, am at your disposal.

I hope in this way we can provide "dentists" to bush communities at no cost to IHS or ANS. As I think that is a common goal I look forward to your affirmative response.

Please, let's get together at your earliest convenience.

Sincerely yours,

Marc Grober

To: Gerald H. Ivey, Director
Alaska Area Native Health Services

From: Patrick Pletnikoff, Executive Director

Date: February 6, 1979

Subject: Letter of Commitment to Plan

This is a letter of commitment to plan and implement any future operations of the mobile dental clinic with the Service Unit Director of the Anchorage Service Unit of IHS.

This letter will serve to inform you that we are ready and waiting to talk to you and your staff about our plans for use of the dental clinic in the months ahead. We really should have a meeting soon to discover what areas of coverage need immediate attention and what our priorities will be.

Although efforts will be made to obtain licensure through the State Legislature we want to be sure our people will be allowed to work this summer.

An early meeting would be appropriate for all concerned.

Thelma Buchholdt
Pouch V
Juneau, Alaska 99811

Subject: Support H.B. 401

Dear Ms. Buchholdt:

You may already be aware of the efforts of the Aleutian/Pribilof Island Association to bring adequate dental health care to the people of the Aleutian Islands, but we want you to know more about our mobile dental clinic and the problems we have had in getting authorization from the State Dental Board needed to allow our volunteer dentists and dental students in training to offer their services in Alaska. The Dental Board wants no permits to practice issued even though the present law specifies they are to issue permits - as a matter of fact, they refuse to issue any permits at all.

Last summer we had 22 volunteers standing by waiting to get permission to volunteer their services - we finally ran the program through the United States Public Health Service. The present law and contrived conditions which exist in Alaska prevent any volunteer who would fix kids teeth without charge from practicing.

Representative Osterback has submitted a bill this session which will exempt volunteer dental personnel from permit requirements thus paving the way for a new summer program of dental health care aboard the mobile unit. Your support of H.B. 401 is essential to the health care of all bush Alaskans. Your Yes vote on this measure is essential this session.

Thousands of Alaskans go to work every day of their lives with a tooth ache or in need of dental care because the cost of dentistry is prohibitive. Some fly to Europe for dental work because it's cheaper than staying home and having the work done by an Alaskan dentist.

Eventually of course, over pricing, indifference and greed will move the citizenry to action - and dentistry will become a publicly supported element of our society. In the meanwhile we need your support now of H.B. 401 so we can bring in the sensitive socially conscious volunteers who want to come to Alaska for a few weeks to improve the overall dental health of our people.

Sincerely yours,

Patrick Pletnikoff
Executive Director

Mr. Herb Rhodes, Publisher
The Great Lander
3110 Spenard Road
Anchorage, Alaska 99503

Dear Mr. Rhodes:

Your editorial outlining the abuses of the State Bid System was frankly unfair and inaccurate with reference to the Mobile Dental Lab for serving the unmet needs of the Aleutian/Pribilof area.

1. Both the House and Senate approved of the Dental Measure. You claimed they defeated the measure. The House had a floor vote in which it passed unanimously and the Senate Finance Committee gave it a "do pass" vote.

2. The money was intended by the legislature to be appropriated however more programs were approved than the Governor had money for so he was put in the position of making a choice of the best programs approved. He approved this one because it had merit and would bring to the State many times more value than the $200,000 appropriated in volunteer services helping the Native people who needed dental care the PHS was not able or willing to deliver.

3. The Mobile Dental Unit was designed by the staff of the University of California Dental School and built by them, a task only they could accomplish - no other vendor has the capability of building and delivering the unit except the Siemens Company in West Germany and their unit, not half as good as what we got, costs twice as much.

The Department of Health and Social Services did not ever order anything nine months ahead of the time money was appropriated for the unit or even afterwards. The Aleutian/Pribilof Islands

Association, Inc., a non-profit corporation, was given a contract for the development of the units and delivery of them. They made the purchase of the base unit through an Alaskan auto dealer, Alaska Sales & Service, who gave the unit to them "at cost" with no profit whatever, which could never have happened on a bid.

The size of the unit does not limit their versatility at all. They were carefully planned and are near perfect - far superior to anything ever before developed. The reason a Hercules aircraft was used to move a unit to the Pribilofs was because a jealous, hypocritical money grabbing group prevented the delivery of "free" dental services for personal reasons, refusing to issue the permit to practice causing the units to miss the pre-arranged transportation donated by Sealand to the islands.

The staff was very adequately housed and transported as planned. AMU housed the volunteers while in Anchorage and they were efficiently delivered by Reeve Aleutian to their destination. Your reporting was prejudiced, biased and irresponsible. If you are really interested in what services are or are not provided to the Natives of this State, do a little honest research before you print. The Chairman of the Bush Dentistry Committee of the Dental Association was paid $44,000 for two stints to a bush community by the Indian Health Service last year - could this be a clue as to why they did not want to license volunteers? There is a really good story here, but you missed it completely.

As to the adequacy of dental services to bush Alaska, tell that to the toddlers, the people with swollen tongues from poor dental care and those whose decay causes drainage down their throats all their lives. Forty-five Alaskans out of 100 must conduct their business, work or study enduring dental pain or with essential teeth missing because it's cheaper to fly to Europe for dental care than to stay home and mortgage life and limb to pay for treatment.

Do you think the Aleutian/Pribilof Islands Association would have sought out dental assistance from out of State if their people were receiving adequate care? Do you think for a minute the Cook Inlet Native Association would have hired their own dentist and invested in a dental office right under the nose of PHS if the service was adequate? Do you think for a moment that we would have had requests for service from our volunteer mobile unit from five areas of the State if their needs were being met? Thank God Governor Hammond is not the kind of person to give in to the political pressures that were brought to bear on him by the PHS personnel and the Alaskan Dental Association and their lobbyists in Juneau - he's got guts and our people are getting their teeth fixed. Can that garbage you are peddling and send

it to a more appreciative audience. You may or may not have a legitimate beef on your loss of a printing job, but attacking our dental project is sure not the way to correct it. We would give serious consideration to supporting legislation which takes government at all levels out of the printing business and puts it back with private enterprise because we feel the taxpayer should not be put in the position of competing with his own money for work.

Sincerely yours,

ALEUTIAN/PRIBILOF ISLANDS ASSOCIATION, INC.

State Purchasing Scandal --

'Tis Your Money...And Here's How the State Wastes It!

Two weeks ago the Great Lander went to war with the state of Alaska on its bid and purchase procedures. We declared that the state was ignoring the low award bid procedure as prescribed by law -- worse yet that thousands and even millions were going out with no bids at all -- many to Outside firms leaving Alaskan vendors and taxpayers holding the bag.

As one prime example, the court system admitted to 49 violations amounting to $62,000 in form buying alone. An appeal for public information has kept our telephone ringing. And we hope it continues, through the day and into the Arctic night.

Here are some of the incidents brought to light in a single week:

Radio Equipment. Fred Jones of General Electric, in Anchorage, says the state has purchased approximately $1,500,000 worth of mobile radio equipment since 1973 without bid. He says a contract held by Motorola expired that year and that pleas to Don Harris, head of state transportation, and to Mel Holverston, of the division of communications, for a bid procedure have gone unheeded. "They pay lip ... Forms, an Outside firm, who entered a higher bid.

Regular Printing. The Anchorage Printing Co. with a bid of $128,000 was low bidder on a state call to print its elections pamphlets. The state went into negotiation with Craftsmen Press of Seattle the following day and awarded that firm the job. Formal bids were never cancelled and re-advertised as required by law.

QUESTIONS AND HONEST ANSWERS ON THE MOBILE CLINIC

1. Why was the unit stuck out on St. Paul all winter?

   Answer Because we were told by the State enforcement people we would be arrested if we operated it. They took down the license number of the vehicles and names and addressed of all volunteers then threatened them with arrest.

2. Why was most of the work done outside the Van?

   Answer It was not. Though large numbers were examined outside the parent van, some cleaning was also done in this manner on portable units which were an integral part of an operating system. Without the parent operative units outside van service would not have been practical. Our system allowed 7 chairs to operate all at the same time saving time and allowing for a flow of screened patients to the operative unit.

3. Was the mobile concept cost effective?

   Answer No it was not because we had to feed and house all of the volunteers for 14 days while we went through all the red tape getting started.

   As it turned out we accomplished over $100,000 worth of dental services. It could have been $200,000 without all the interference.

4. Did APIA apply for licenses or permits?

   Answer We were prevented from applying for anything by the dental board. We were informed that there was no application procedure or way to apply since the board had met in December and decided not to issue any permits to anyone no matter what the legislation says.

   Dr. Hanson and Dr. Wright re-stated this information in the APIA offices. Dr. Hanson said there would never be any permits issued to anyone as long as he had anything to say about

it no matter what the Legislature decided nor how the present law read.

5. Is there any other way to qualify?

   Answer No!

6. How do the present hygienists in training qualify for permits?

   Answer They do not qualify. They operate illegally but are not bothered by the dental board for some unknown reason.

7. Is there a record of what was accomplished before the unit arrived in St. Paul?

   Answer Yes there is. It was a buck shot hit and miss attempt.

   St. Paul: Reported population of 419. Although this community had more dental days care per year than all the other villages from 1974 - 1977, reports from visiting dentists were of rampant dental disease, high suger consumption and little or no community dental plan. Lack of coordination with the school program. 30 children reported as not showing for check ups in one period. Floridation system broken down for 3 years.

   St. George: Average of 6.4 days of care a year since 1974. For a community of 154 people - emphasis on children's teeth only.

AFTER THE UNIT OPERATED

1. New health attitude about dental care. Everyone in town was served. Mothers brought their children. Relatives brought their friends. The floridation unit was repaired. A total community dental health program was started. All examinations were documented together with x-rays and completed charts furnished by the PHS Dental Service Unit. Records left behind for the next visiting PHS dentist were so complete the next group of PHS dentists were able to pick up where the volunteers left off. This was indeed a good demonstration of how effective the 2 agencies could work together without the outside interference of the Dental Union and the State Dental Board. As a result of this joint venture, St. Paul has the best dental health in all of bush Alaska.

With the elimination of red tape, delays and political pressures, every $20,000 spent for transportation and room and board for volunteers will produce $100,000 worth of excellent dental treatment and care.

We cannot over emphasize our intention in our request for support of this program of dental care for the Aleutian/Pribilof people. We do not have as a goal the embarassment of PHS, Indian Health Service or private practitioners. We appreciate all past efforts to check dental disease in our islands. The records clearly show that the present system is not working satisfactorily and a new approach is needed. We ask only that the new approach be given the support it deserves. The worst that can happen is the communities will get a little more dental care and the mobile unit can be used by any agency wanting to use it for delivery of service to our area.

The best that can happen is that we will have discovered and tested a new functional, less expensive way to bring dental health care to bush Alaska and other areas will be using the money they now waste on poor programs to duplicate this method of service.

When the units were here for inspection by the dentists, Dr. Hanson walked right past the units refusing to even look inside. Let's not depend on this kind of open mind to make a decision on this service.

The Myth of Professional Licensing

STANLEY J. GROSS *Indiana State University*

ABSTRACT: *The public and most professionals believe that occupational licensing protects service consumers against charlatans and incompetents. This review of historical, economic, and sociological research indicates a specious association between licensing and the competence of practitioners. Rather, the evidence reveals licensing to be a mystifying arrangement that promises protection of the public but that actually institutionalizes a lack of accountability to the public. The collusion between the state and the professions is maintained by myth. Acknowledging the failure of licensing is preparatory to defining the problem of how to protect the public.*

Licensing is presently a "hot" issue for psychologists, social workers, and counselors (Forster, 1977; Hardcastle 1977; Matarazzo, 1977; Prest, 1976; Swain, 1975). The helping professions are following in the footsteps of the health and legal professions in attempting to gain legal sanction for autonomous practice, expecting to gain similar status for these professions as well as the approval of third-party payers. Though the several helping professions are at different points in their progress from registration to certification to licensing[1] in each of the 50 states, there is an almost universal assumption that licensing is a "good thing." This myth is most often expressed as a belief that "licensing protects the public against incompetent practitioners." This largely uncritical stance appears to be the attitude of the vast majority of the public and professionals alike. Even highly critical consumer-oriented groups (Adams, 1975) appear mystified by the licensing notion, believing it to be an initial screening device for determining quality service.

This article examines the research and scholarly opinion related to the incredibly varied licensing system that results from the collaboration between the state and the professions. Licensing is used in the literature to refer both to the arrangement whereby practice is restricted as well as to all collaboration between a state and a profession, including registration and title certifications. This article is not concerned with professionally controlled credentialing arrangements that do not benefit from association with restrictive legislation. It focuses on those occupations that have gained autonomy as the result of licensing statutes. Excluded from this analysis are occupations for which autonomy is precluded either by statutes that write in a subservient role for the professional (e.g., as in nursing) or by institutions that maintain control of the service setting (e.g., as in school teaching).

A great deal of the research on which this article is based focuses on the medical profession, but this is appropriate. Medical licensure is the model that other professions aspire to, so experience with that model is instructive. Unfortunately, there is little research referring specifically to psychologists or other helping professionals, the history of such arrangements being so recent. It is possible, though not likely, that some of the conclusions might be different for them.

The history of licensing in the health professions centers on the attempts of special interests to impose or to sabotage a monopoly on the practice of healing. Licensing has been the instrument used to restrict practice to professionals, who have claimed it was in the public interest to do so. There is no good evidence to support these claims. Of the evidence found, some is inconclusive or insufficient on some points, but mainly the research refutes the claim that licensing protects the public. This knowledge is crucial to the current debate yet

---

Requests for reprints should be sent to Stanley J. Gross, Graduate Studies in Education, Indiana State University, Terre Haute, Indiana 47809.

[1] Friedman (1962) defines them as follows: *Registration*—"individuals are required to list their names in some official register if they engage in certain kinds of activities. There is no provision for denying the right to engage in the activity to anyone who is willing to list his name" (p. 144). *Certification*—"the governmental agency may certify that an individual has certain skills but may not prevent, in any way, the practice of an occupation using these skills by people who do not have such a certificate" (p. 144). *Licensing*—"requires some demonstration of competence . . . and anyone who does not have a license is not authorized to practice and is subject to a fine or a jail sentence if he does engage in practice" (p. 145).

Copyright 1978 by the American Psychological Association, Inc.

is almost completely ignored outside of the scholarly disciplines used in this investigation which are devoted to the study of such phenomena.

Though reference is made in this article to professional self-interest and lack of accountability to the public, no implication that individual practitioners or professional associations are deliberately or intentionally self-serving is intended. In fact, one reason for this article is that practitioners as well as the public are mystified, such mystification being an important contribution to and evidence for the existence of a system of thinking, feeling, and behaving that maintains licensing. The difference between what people believe to be true about licensing and what is cited in this article indicates that the belief is maintained by myth and argues for the necessity of the consciousness raising attempted herein. The article reviews the historical antecedents of current licensing arrangements, relates the guild-like structure of professions to the licensing charter, examines the effectiveness of state licensing boards—particularly their actions to maintain professional self-interest, considers the centrality of the license to the entire system, and explores the supposed link between licensing and quality service.

Historical Antecedents

In the 13th century, Frederick II, Emperor of the Holy Roman Empire, wrote the first medical practice law. Its provisions included (a) examination by a teacher of medicine, (b) punishment for offenders by confiscation of goods and a year in prison, (c) three years devoted to the study of logic, (d) one year of practice under the direction of an experienced physician after five years of study, (e) the setting of fees, (f) free care of the poor, and (g) a prohibition on a physician owning an apothecary shop (Derbyshire, 1959).

Krause (1977) points to a pattern, dating from ancient Egypt and Greece, of a medical practice hierarchy that differentiated the curers of the masses and the curers of the elite. At the top of this hierarchy was temple medicine with its priests serving the aristocracy. At the next level were the community practitioners who practiced a fee-for-service medicine for those who could afford it, which served as the model for practice today. At the bottom was folk medicine practiced in an oral tradition, often by women. Ehrenreich and English (1973) described these practitioners:

> Women have always been healers. They were the unlicensed doctors and anatomists of western history. They were abortionists, nurses and counsellors. They were pharmacists, cultivating healing herbs and exchanging the secrets of their uses. They were midwives, travelling from home to home and village to village. For centuries women were doctors without degrees, barred from books and lectures, learning from each other, and passing on experience from neighbor to neighbor and mother to daughter. They were called "wise women" by the people, witches or charlatans by the authorities. (p. 3)

Ehrenreich and English (1973) also noted the dichotomy in medical practice that emerged in 13th-century Europe, where "witches" practiced among the people while the ruling classes were served by university-trained physicians. Licensing laws came into vogue as the means "to prohibit all but university-trained doctors from practice" (Ehrenreich & English, 1973, p. 17). Though the effectiveness of these laws was limited because of the great need for service and the inability and unwillingness of university-trained physicians to serve the masses, it is important to note this early reliance on the authority of the state to legitimate an occupation. This attempt to monopolize medical practice in situations of imbalance between need and available service was unrealistic given the large number of unlicensed medical advisors and would eventually lead to a temporary abandonment of licensing in the 19th century in the United States (Kett, 1968).

Licensing laws were used as an exclusionary technique in France during the 14th century (Ehrenreich & English, 1973). As the result of the requirement for university training, the practice of healing was restricted to the upper classes, to men, and to those in the favor of the Church (which controlled the universities), most of whom were ecclesiastics (Spector & Frederick, 1952). By the 16th century as the universities became more secularized, the university-trained professionals no longer were compelled to take religious orders. Emerging from the grip of the church, the associations of physicians became similar to craft guilds. These, however, were not destroyed by the impact of commercialism, centralized governments, and laissez-faire economics, as the craft guilds and the feudal system were to be (Spector & Frederick, 1952).

As occupations, professions were a special case, first in serving the social elite and later in being populated by the elite. Professions, like land, broke the direct connection between work and income for the English gentleman, permitting him to make a considerable sum of money without engaging in a "despised" trade. Gerstle and Jacobs (1976) concluded, "One could carry on commerce

by sleight of hand while donning the vestments of professional altruism" (p. 3).

In the United States, a flood of legislation prior to 1800 gave the power to regulate medical practice to the guildlike associations of professionals, the state medical societies (Spector & Frederick, 1952). The development of medical schools at about the same time instituted a two-tiered hierarchy of regular medical practice that included those trained through apprenticeship only and those who added medical school to their qualifications. Both categories were licensed, though Shryock (1967) has observed that legislatures were more impressed with the latter group. Three parallels with the present day were evident prior to the 19th century. First, licensing was associated with the interests of the dominant elite—the Church and aristocracy in Europe and the commercial class in America (Reiff, 1974). Second, sanctioning power was given to guildlike professional organizations as the means by which these interests were to be maintained. Third, admission to the guild maintained the profession's upper-class identification by requiring where it could and otherwise preferring a period of prolonged university training unavailable to the lower classes.

The second quarter of the 19th century brought about surprising changes in these developments in the United States. In response to the egalitarian sentiment of the times, there was a wholesale deregulation of the professions of law and medicine. By the time of the Civil War, "no effective state licensing system was in operation" (Spector & Frederick, 1952, p. 191). The popular rhetoric explaining this eventuality has a modern sound. It included complaints that the professions (a) made things so complicated that intelligent persons who ordinarily could be expected to take responsibility for themselves could not argue in a court of law or obtain the information needed to properly take care of themselves, (b) were monopolies in restraint of trade, (c) maintained a subordinating class system that hoarded privileges and blocked the entry of the lower classes, and (d) retarded developments and blocked talent in nonorthodox realms of practice (Tabachnik, 1976). More fundamentally, the demands of a growing population and an expanding frontier ushered in a wave of democracy and individualism (Spector & Frederick, 1952) and a popular health movement (Ehrenreich & English, 1973) that upset the machinery by which professional practice was controlled. The professions then became more socially inclusive as the society became more egalitarian.

Beginning in the 1870s, however, the bar associations and the medical societies began promoting a relationship between competence and licensing that culminated in our present complex system (Tabachnik, 1976). In effect, the professions, no longer able to call upon the class system to maintain their privileged status, turned toward government to secure public confidence and a monopoly of skill (Gerstle & Jacobs, 1976). In the 20th century, the trends have been (a) for licensing to include an ever greater number of occupations, (b) for the type of licensing to go from title certifications to compulsory licensing of practice, and (c) for the raising and tightening of standards—including moving from an apprentice system to one centering training in educational institutions, lengthening the period of training, and adding internships after training (Spector & Frederick, 1952). Though there have been some reactions to professional dominance expressed during the last decade by client revolts and by pressures toward community control, the present strength of professional power makes "threats to established patterns of dominance appear minimal" (Gerstle & Jacobs, 1976, p. 18).

Profession as Guild

Gerstle and Jacobs (1976) described a craft guild as follows:

> They restricted competition, set prices, defined the quality of raw materials and craftsmanship, controlled entrance and training, and enacted detailed ordinances touching on the craftsman's relations with fellow members, non-members, members of other guilds, future members, dependent workers, and consumers. (p. 2)

Though professionals may wish to deny any similarity between their associations and guilds because of the crass commercialism or the association with unionism suggested by the guild label, the analogy is helpful in understanding the centrality of licensing to professional practice. The charter of autonomy is given to the professional via the licensing arrangement on the basis of public acceptance of the idea of professional expertise and altruism (Haug & Sussman, 1969). The charter is essential. Without it, professionals would not be able to control the potentially shorable knowledge that is the basis of their expertise, nor would they bother to guide practitioners to make the costly pretense of the altruistic ideal (Haug & Sussman, 1969; Reiff, 1974). To maintain the charter,

the professional must mystify the public by making the service appear to be expert and difficult.

Modern professionals conceal their economic interests, but these are nonetheless apparent in professional procedures. Reif (1974) describes the professional as an entrepreneur dealing with knowledge as a commodity, "supplying man with holding for a price service as a form of labor" (p. 455). According to Krause (1977), for physicians "the key variable is power gained through possession of the medical skill. The power is legitimized —made official—through licensing laws which prohibit others from practicing medicine" (p. 35). Controlling the knowledge, making it a commodity, creates a scarcity economy over which the professionals have monopolistic control. Though there is talk about a free market, "Health care providers themselves are not responsive to market pressures exerted by consumers, because demand levels are not determined by consumers but by physicians" (Carlson, 1979, p. 857). By having absolute control over the spigot, professionals can arrange things so that they themselves are benefited rather than their clients. For example, Carlson (1970) points to the choice of a fee-for-service system as opposed to a prepayment system. In a fee-for-service system, services, "the need for which is determined by the providers of those services, are continuously bought by users" (p. 858). According to Carlson (1970), this induces inelasticity in demand by restricting user choice and leads to increases in costs. The alternative, prepayment, gives providers and consumers a common goal—maintenance of health. Krause (1977) points out that in a fee-for-service system it is to the physicians' economic advantage to overtreat who is ill, while in a prepayment system it is to their advantage to underdefine this group.

The charter of autonomy includes the necessity to define the terms of practice and "legal, moral, and intellectual mandate to determine for the individual and society at large what is bodily, moral, ethical, deviant, normal or abnormal" (Reif, 1974, p. 452). Thus, a system of logic and perception may be erected which organizes ethics and rationalization to protect professionals from the effects of their decisions. Those dependent on them suffer from their mistakes, ignorance, self-deception, and bias, since professionals have the right (indeed the mandate) to define when a mistake has been made. In this way a situation is created in which feedback from experience is so limited that self-corrective action is unlikely. These trappings of power led Gerstle and Jacobs (1976) to observe the "shift of emphasis on the part of professionals from control over the quality of the product or service to control of price" (p. 9). Such power is widely emulated, so much so that many want their occupations to become professions. Gerstle and Jacobs (1976) observed that the mystique of the professional is considered so socially useful for so many purposes that there is no consideration that it could be a liability.

The Boards

The mechanism by which monopolistic control is maintained is the state licensing board. The charter is, in effect, given to a public body by a state legislature, and its members are generally appointed by the state's governor. On the surface it appears that these boards would act in the public interest, but in fact, they are "captured" by the profession they are supposed to regulate. In most cases, particular professions proposed the licensing law establishing the board, their representatives negotiated with the legislators during its passage, and their representatives fill a majority, if not all, of the seats on the board (Cohen, 1975). Shimberg (1976), in reviewing the effect of "sunset" laws, indicates that even when public members are included they often become coopted. Using "umbrella" agencies to supervise a number of professional boards in a state has not made these boards more accountable. Pfeifer (1974) also found inclusion of the lay public on boards to have little observable effect on their accountability.

"If there is a tie between competence and licensing, there ought to be some evidence of that tie in the work of licensing boards. Unfortunately, there is not. As Cohen and Mirke (1974) have suggested, in addition to assessing initial competence, the boards should monitor continuing competence and should discipline errant practitioners. A related public interest matter is the availability of licensed professionals. Boards ought to be active, according to Cohen and Mirke (1974), in affecting the redistribution of practitioners and in developing new patterns of utilization of related professionals. Referring to health care personnel supply and demand, Krause (1977) concludes, "Self-interest of the crudest sort still plays a role in the way these issues are handled. As usual, the needs of the consumer are pushed aside" (p. 193). Licensing boards do very little in these areas and instead restrict themselves to the administration of

entry examinations. Even in this role they do poorly, measuring minimal competence only (Cohen & Miike, 1974).

So, what do licensing boards do? Pfeffer (1974), reviewing the limited research, concluded, "Occupational licensing operates to restrict entry and enhance occupational incomes" (p. 104). He reported observed relationships (a) between the enactment of licensing laws and the decline in the numbers of training institutions and trainees, (b) between the control of competitive behavior among professionals and an oversupply of professionals (to maintain the illusion of professional dominance), and (c) between the restrictiveness of a profession and its independence from local economic conditions. In this regard, Krause (1977) reports that the number of medical school graduates was held constant from the 1930s to the 1960s despite rapid population growth. Moore (1961) found that restrictions on entry benefit the practitioners in the field at the time the restrictions are imposed. He reported the imposition of citizenship requirements for regulated occupations in Illinois in 1939, at a time when there was a large influx of trained practitioners from Europe.

The particular means of controlling entry is the manipulation of the examination pass rate. Maurizi's (1974) study of 18 occupations indicated that

> a 10 percent increase in excess demand (applications) generates a decrease in the pass rate varying, primarily from 1 percent to 10 percent depending on the occupation, and that a 10 percent increase in average practitioner incomes produces up to a 10 percent decrease in the pass rate . . . . The power of the licensing boards is often used to prolong the period of higher incomes resulting from increases in excess demand for the services of the occupation in question. (p. 412)

Maurizi (1974) suggested that over the long run the increase in income at the time restrictions were imposed would attract more new entrants, which in turn would result in a decline in income for members of a profession if entry restrictions were not manipulated. The relationship between restriction imposition and income is apparently not all that certain. Maurizi (1974) said his data had no power to explain the relationship for half of the occupations he studied. Pfefier (1974), studying three occupations, found no evidence of a relationship between the licensing of an occupation per se and the incomes of its practitioners. He did find, however, a relationship between examination failure rates and incomes—the higher the proportion of successful applicants, the lower the income (Pfeffer, 1974). Cohen and Miike (1974) and Krause (1977) report the practice of permitting foreign physicians to practice in chronic-disease hospitals and mental hospitals—either ignoring citizenship requirements or lowering passing examination grades for those who will work in less desirable settings or in geographical areas of high need.

Licensing Is the Key

It has been observed that licensing has rarely been sought by the public; rather, it has been sought by the professionals who wished to be licensed (Cohen, 1975; Friedman, 1962). In effect, the legal mechanisms of the state legitimize the occupation. Freidson (1970) observed,

> The foundation on which the analysis of a profession must be based is its relationship to the ultimate source of power and authority in modern society—the state. In the case of medicine, much, though by no means all, of the profession's strength is based on legally supported monopoly over practice. This monopoly operates through a system of licensing that bears on the privilege to hospitalize patients and the right to prescribe drugs and order laboratory procedures that are otherwise virtually inaccessible. (p. 83)

Hardcastle (1977) calls the need for legal protection an "expedient of an occupation on the make" (p. 14). The occupation becomes "made," ironically, as a profession through the use of public institutions and in opposition to the public interest. Friedman (1962) called the results of licensing "unendurable" even in medicine where the case for licensing was the strongest.

Though there is no evidence of any relationship whatsoever between licensing and the quality of care, the likelihood of licensing laws being removed is remote. Carlson (1970) describes licensing as going from a presumed remedy to a problem: "Licensure would likely fall of its own weight except for a reverence for professionalism" (p. 860). Licensure statutes are defended vigorously because their loss to the professions means (a) the loss of a captured board that acts in their interest free of the influence of outsiders and (b) the loss of the power given to the profession as the result of making the violation of the professional monopoly punishable as a crime (Pfeffer, 1974). So licensure is terribly important to the professionals, and yet the public is gullible (Moore, 1961), loosely organized, and lacking expertise when compared to the highly motivated trade and professional groups (Shimberg, 1976). The result is the maintenance of self-serving licensing systems regardless of their justice or usefulness.

The existence of licensing laws indicates a shift of opinion in the last century from the notion that people know what is best for themselves to the notion that "society" is the best judge (Moore, 1961). In this regard, Krause (1977) observes that the public does not judge expertise. Technically incompetent general practitioners have as many patients as competent ones. The conclusion is thus made by many that the public cannot protect itself and that licensing is, therefore, a necessity. However, the control of information by professionals does not permit a testing of the capacity of consumers to take care of themselves. The belief that information is the key to quality care is supported by the necessity, even with licensing statutes, for individuals to gain a considerable amount of information in order to effectively choose a therapist (Gross, 1977).

This complex structure surrounding licensing permits professionals to hide from the public's view their dependence on the licensing statute. Fortunately, it isn't really that necessary for the integrity of the profession, but it is for monopolistic economic control. There are several professions (e.g., university professors, dietitians, librarians, engineers) that are generally unlicensed partly because they practice in institutions. Goode (1960) suggests that pressure for licensing is greatest for occupations that deal with clients as individuals and where competence cannot be easily demonstrated. Reviews of licensing suggest that certification and registration arrangements would accomplish the protection of the public as well as the compulsory licensing of practice would (Friedman, 1962; Moore, 1961). Professional associations credential practitioners and accredit training programs without dependence on state law. More than 100 years ago it was recognized that the licensing laws had provided the professions with their power, so it was these laws that became the target for attack (Tabachnik, 1976). This may not happen in this century, but it is useful and important to note that the problem of licensing is brought about through the complicity of state governments (Gerstle & Jacobs, 1976; Tabachnik, 1976).

There is a rather strong push currently to reform licensing laws (e.g., national credentialing, institutional licensure; Cohen, 1970; Roemer, 1973). Though it is appealing to believe that there is hope for the system, the fact that professionals would remain in control in the alternatives suggested is discouraging. The crucial aspects of the problem, the absence of accountability and the maintenance of the monopoly, would not change (Illich, 1976). Further, the underlying reason for reform is obscured by the hope of reform. According to Krause (1977), the grip of physicians on maintaining control of their work is weakening under pressure from new technology and new specialty occupations. The old craft-guild model is not up to controlling it all without some help from the state legislature. The help might follow the pattern of nurse licensing laws in which the nurse's subservience to the physician is written into the law (Krause, 1977), or new laws may be suggested that institutionalize the physician as the manager of a system of health service delivery. In these ways, then, "reform" aids the physician to adapt to the problem of role obsolescence. Still, licensing is the key.

Licensing and Quality

The link between licensing and competence is the basis for societal support for licensing arrangements. I have questioned that link. It is instructive to add the evidence that licensing does not seem to be effective in preventing incompetent practice, and in the specific case of medicine with which we are most concerned, there isn't much interest in the discipline of incompetent practitioners. Derbyshire (1969), a former president of the Federation of State Medical Boards, intensively studied the problem of discipline and estimated that 5% of America's doctors are unfit to practice. He also reported that 38 states do not even specify professional incompetence as a reason for disciplinary action.

The political nature of this problem is revealed by the contrasting views of the action of the state boards in the area of discipline. Derbyshire (1969) apparently conducted two studies of state board disciplinary actions. Referring to the first study, he is vague about the number of incompetents, but of the 1,000 disciplinary actions taken over a 5-year period, he says *many* were because of incompetence. He goes on to say,

> Critics have said this is not a significantly high number. But if one makes a modest estimate that each of these physicians treats an average of 800 new patients every year, this means that 800,000 people have fallen into the hands of unscrupulous or incompetent physicians during the five year period. Viewed in this light the "insignificant" figure assumes important proportions. (Derbyshire, 1969, p. vii)

Shryock (1967), also referring to the first study,

thinks the number is *not large* and wonders how effective the board actions were but concludes that "the medical members of the boards were making *some* effort at professional self-discipline in the public interest" (p. 114; emphasis added). Cohen (1973), on the other hand, referring to Derbyshire's (1969) later study of 938 board actions over a 4-year period says "*only* 400 were based upon some form of incompetence" (p. 3; emphasis added). Krause (1977), having reviewed studies of discipline, is not specific, but he takes a stronger stand: "The most striking finding of all studies is the near total avoidance of any policing of peers by the licensing board members even in cases of extreme malfeasance" (p. 284). Since physicians are autonomous, they can and do determine the extent to which professional incompetence is defined as a social problem. The lack of action on this problem indicates that it is to their self-interest to obscure the problem.

Board staffs, according to Cohen (1973), are inadequate to carry out investigations, and the statutory provisions for such investigations are marked by ambiguity and a lack of precision. Malpractice suits appear to be the only effective feedback technique available that is likely to affect the physicians' willingness to consult and to refrain from procedures for which they are unqualified (Klaw, 1975). Krause (1977) reports that one half of all surgical operations are performed by physicians untrained or inadequately trained in surgery. Since physicians are permitted under licensing laws to use procedures for which they have not been trained, the likelihood is that economic motives (earning higher fees, losing a patient to another doctor) will maintain the threat posed by the incompetent physician. Federally mandated Peers Standards Review Organizations pose more problems than prospects for change (Laptzin, 1974; Newman & Luft, 1974; Zitrin & Klein, 1976). Israel (1973) has commented, "Among the features hindering effective implementation (of the review process) is the tradition of autonomy in private practice, and the associated reluctance of physicians to interfere in each others' practices and to be publicly critical of each other" (p. 130).

There are some who see licensing as the determiner of incompetence. Illich (1973, 1976) has been articulate about health delivery systems creating dependency on physicians. This dependency, which reduces the ability of people to care for themselves, is joined with a mystification by which people ignore the possibility that they could care for themselves. Iatrogenic disease is a major factor in iatrogenic (physician-caused) illness, which is variously estimated (a) to include from 50% of all illness (Illich, 1976) to 20% of medical patients (Stuart, 1970), (b) to jeopardize one third of hospitalized patients (Walker, 1973), and (c) to more than double the length of hospital stays (Stuart, 1970). Those who want to see licensing laws changed to permit "paraprofessionals" to perform licensed medical functions describe licensing laws as restricting the productivity of personnel (Roemer, 1973), locking practitioners into activities prescribed by statute which are not in accord with their abilities (paraprofessionals can do many tasks better than physicians but are not permitted to), and escalating health care costs (Carlson, 1970).

The experience with deprofessionalization in the second quarter of the 19th century is viewed differently in different quarters. Tabachnik (1976) reports that in America, deprofessionalization stimulated the growth of medical schools, increased the number of doctors, raised average standards, and was not as bad as the then-leaders of American medicine expected it to be. Shryock (1967), on the other hand, treats it as a calamity—a time of rampant quackery and deterioration in the quality of practice. It is never clear in his analysis if quality is related to incompetence or to the social class and educational background of the physicians.

In summary, licensing arrangements do not seem to be providing the structure for effective solutions to the problems of delivering quality care in the health and helping services. Instead, the evidence overwhelmingly supports the conclusion that licensing maintains a structure that is in the self-interest of the service giver and in opposition to the public interest. Licensing actually results in the institutionalization of a lack of accountability to the public. This information may cause some to question a collusion between the state and the professions which is justified in altruistic terms but which appears not to merit public confidence. This information has not been introduced into any of the debates about licensing in the professional literature. Acknowledging this information can be the first step toward a clearer definition of the problem of how to protect the public and maintain professional integrity.

John Adcox
Newhalen CSC Chairman
Box # 6
Iliamna, Alaska 99606

Ms. Thelma Buckholdt
Chairman- Health, Education, Social Services
Alaska State Legislature
Pouch V Room 112
Capital Building
Juneau, Alaska 99811

Dear Ms. Buckholdt,

I would like to impress upon you, the importance of the passage of House Bill # 419.

At this time, Newhalen School is inadequately operating with the number of students enrolled. There are not enough classrooms, no library, inadequate gym, less than one half the size of a regular gym, shop too small to operate power tools already on hand and the kitchen for this number of students is entirely too small.

Ms. Buckholdt, we are not just saying this to try to get something that we don't really need. The things I've mentioned are real and urgently needed. House Bill # 419 would really make an improvement on the quality of education that our children could get. Just having MORE SPACE for a Science Lab, Library and Special Ed. facilities would really be a big help.

Presently, we're threatened with a law suit, because one Special Ed. Student doesn't have adequate space in which to be instructed. House Bill # 419 would help eliminate this problem.

So Ms. Buckholdt, I strongly and sincerely ask your help. Please help us with our problem. I am also calling on Rep. Nels Anderson and Gov. Jay Hammond for their support on this request.

I know this letter is brief, but I'm sure you're busy and this is why I've come right to the point.

Alaska State Legislature
Pouch V
Room 112 Capitol Building
Juneau, Alaska 99811

Dear Ms. Buckholdt:

Due to the fact that the Newhalen/Iliamna Communities are growing quite rapidly at the present time we wish to express our complete support of House Bill 419. The additional financial support is a realistic need for the Newhalen/Iliamna High School.

We would certainly hope that the children in the bush are considered important enough to get this House Bill 419 and Senate Bill 199 approved. The monies would be well spent for a worthwhile cause.

Your support for HB 419 and SB 199 would be greatly appreciated.

Thank you for your consideration in this matter!

Respectfully,

Roy F. Erhart

Dear Ms. Buchholdt:

The Bristol Bay Native Corporation supports Dillingham's efforts in getting a new elementary school building and remodeling of the high school. These facilities are badly needed in light of the present run-down conditions.

We urge that you make every effort to resolve these conditions.

Should you have any questions of me, please don't hesitate to contact me at 842-5261 in Dillingham.

Best regards,

Harold H. Samuelsen

MEMORANDUM

TO: HOUSE HESS

FROM: Representative Nels A. Anderson, Jr.

SUBJECT: Village School Concern

Enclosed are copies of letters I've received from the Iliamna-Newhaler communities on their concerns for their school.

Community School Committee
Newhalen, Alaska 99606

Representative Nels A. Anderson, Jr.
Alaska State Legislature
Pouch V
Juneau, Alaska 99811

Dear Nels,

We, the people of the Iliamna-Newhalen Communities, are writing to you expressing concern for our school.

We have alloted to us, from our school district, $930,000.00 for a new addition. After Architectual fees, soil samples and the many other expenses that come off the top, we will be working with approximately $730,000.00 for our new school. This would not permit us to have a regulation sized gym and this is one thing that we desperately need. Many sporting events composed of all the schools in our district are held here in Newhalen and there just isn't enough room. We also need more classroom space than what they're trying to give us, as many good courses can't be offered due to lack of space. This would not even be enough space so that we could havw a Library.

The concern is justified Mr. Anderson. Why build a building that you know is too small to begin with. Nondalton was given a 2½ to 3 Million Dollar school this past year and next year Newhalen will have more students enrolled than Nondalton. There are at least six new families moving into our immediate area this summer, and most of them have school age children.

Nels, there must be a way that you could help us obtain more funding for a bigger school. We have seen the educational bills that you've run through the Legislature, and you've really done an excellent job.

Nels, thanks for your time and concern while reviewing this letter, and I hope that there is some way that you can find to help our school out. Please feel free to visit our villages when you have the time.

Thanks again for your concern,

I Remain,

John Adcox
President--Newhalen Local C.S.C.

Iliamna Village Council
Iliamna, Alaska 99606
February 28, 1979

Representative Nels A. Anderson, Jr.
Alaska State Legislature
Pouch V
Juneau, Alaska 99811

Dear Mr. Anderson:

We, the Village Council of Iliamna, are asking for your support to acquire more funds for a school project in our area. We have been informed by our school district that we have available $930,000 for a gymnasium. After architectual fees are subtracted, we will have approximately $700,000. The square foot will cost about $145, giving us a gym three-quarter of the normal size.

Since our school has grown so fast (doubled in five years) and to all indications, will continue to grow as fast, we feel if we are going to have a gym built, it should be built to the proper size now.

As you know, village life can be pretty hard on our young people. With no other facilities to go to in the evenings and on week-ends for recreation, they have nothing but leisure time on their hands. This, many times, gives them more opportunities to get into drugs, alcohol, or other undesirable behavioral problems. Therefore, we strongly feel that a gym is not only a necessity during school, but after school as well.

Nondalton is a good example. The gym is used every night. The older people love going down just to sit and watch the younger people play ball.

There is so much we need here. A larger kitchen, a library, and more classrooms. We invite you to come and look over our school complex! You will see for yourself the future needs of this area.

Thank you for your good representation. We have looked over carefully all the bills you have sponsored, and feel confident you will be our greatest asset in acquiring the matching or supplemental funding that will be needed.

We are hoping to hear from you.

Sincerely,

Iliamna Village Council

Representative Nels A. Anderson
Alaska State Legislature
Pouch, State Capitol
Juneau, Alaska 99811

Dear Mr.Anderson:

I am writing you to express a concern I have about the Newhalen,Iliamna new high school. It is my understanting that approximately $1,300,000 was allocated for this project. It seems that the Lake & Peninsula School District has taken some of this money to use at a different site. Leaving us here in Newhalen,Iliamna with $930,000. This amount will not meet our present and future needs.

To my knowledge the Lake and Peninsula District has not made a needs assessment for our communities. The Community School Committee has tried in every way to let the School District know what the needs are but the District dosen*t seem to want to listen. The Superintendent was present during one meeting with the project director and the community.

Last year the School District put in a new 16* x 20* shop to serve 18 high school students and the district knew before they built it that it wouldn*t meet the studerts needs. At the same time they also put in a Multi-Purpose room for the total school which also didn*t meet the needs of the students. These two projects cost approximately $95,000.

Now they are trying to cut the budget for the new high school and put in something that won*t meet the needs of the students. I have always felt that the objective of the School District is to provide students with an education and facilities to accommodate a curriculum that will prepare our young people for later life.

It is my sincere hope that you can help us here in Newhalen, Iliamna recover the total money that was appropriated for the High School or help us locate additional money from another source so we can build a facility to meet the needs of the students rather than trying to piece mistakes together which never will meet their needs.

I am a member of the Newhalen, Iliamna Community School Committee and also a concerned parent. Any and all help you can give us will be appreciated. Thank you.

Sincerely,

F.C. Avril

M E M O R A N D U M January 30, 1980

SUBJECT: Analysis of certain school collective bargaining cases.

TO: Representative Thelma Buchholdt
Chairman, House HESS Committee

FROM: Billy G. Berrier
Director
Division of Legal Services

You have requested an analysis of Kenai Peninsula Borough v. Kenai Peninsula Ed, 572 P.2d 416 (Alaska 1977) and Kenai Peninsula Borough Sch. Dist. Etc, 590 P.2d 437 (Alaska 1979).

I am enclosing an analysis of the 1977 case from the Report of Examinations of Court Decisions, 1978 prepared by the Legislative Affairs Agency.

As an added note on the case, the Court expressed some dissatisfaction with AS 14.20.550 and AS 14.20.610 saying:

> "An examination of the other specific items listed above yields equally indefinite answers. We are confronted, then, with a situation in which the legislature has not spoken with clarity and concerning which we possess no expertise. We can only conclude that salaries, fringe benefits, the number of hours worked, and the amount of leave time are negotiable. In view of the concerns expressed on pages 419, 420 supra, we conclude that the other specific items listed on page 422 are, under the existing statutory language, non-negotiable.
>
> "It would be helpful if the legislature, through future enactments, provided more specific guidance on a number of the items which the unions seek to negotiate. Lacking that guidance, however, we cannot confidently say that the legislature intended any of these items to be bargainable. We cannot, therefore, read the statutes expansively as to the scope of what is negotiable."

The 1979 case involved the labor relations policy adopted by the Kenai Peninsula Borough School Board which included a provision that the District would not negotiate (1) with any individual who was not an employee of the School District nor (2) with an employee organization affiliated with any state or national labor union.

Two questions were involved. The first question was whether the restriction violated the rights of the employees under the first amendment to the United States Constitution.

The Court held that these restrictions on affiliation and choice of bargaining representative were unconstitutional. After examination of the facts and case law, the court stated:

> "As we read these decisions they posit a constitutional framework in which employees are free to organize and select an advocate, and from that guarantee of collective strength then lobby their various legislatures for particular rights in the employer/employee relationship. See, e.g., Atkins v. Charlotte, 296 F.Supp. 1068, 1077 (W.D.N.C. 1968). The virtue of that view is its consistent emphasis on freedom of action, and its antagonism to coercion. And within that perspective it does not follow at all, that once bargaining rights are successfully secured, as in the instant case, the constitutional rights disappear.
>
> "We affirm the superior court's judgment that the School District's policy restrictions on affiliation and choice of bargaining representative are violative of first amendment freedoms guaranteed to the non-certificated school employees."

The second question was whether these portions of the policy were severable, that is whether the remaining parts are so independent that it may be presumed that the district would have enacted the valid parts without regard to the invalid parts. The majority found the provision severable in context. Justice Rabinowitz dissented from this part of the decision finding the provisions "a paramount part of the structure upon which the Board's labor policy rested."

Copies of the decisions are enclosed.

KENAI PENINSULA BOROUGH SCHOOL DISTRICT, Appellant,

v.

KENAI PENINSULA BOROUGH SCHOOL DISTRICT CLASSIFIED ASSOCIATION, Appellee.

No. 3800.

Supreme Court of Alaska.

Feb. 16, 1979.

An association recognized by a school district as the employee bargaining agent brought suit to compel the district to resume negotiations. The State of Alaska Superior Court, Third Judicial District, Peter J. Kalamarides, J., granted summary judgment to the association, finding restrictive provisions on the school board's labor policy unconstitutional but severable. The school district appealed. The Supreme Court, Matthews, J., held that: (1) the school district's asserted interest in needing to exercise prospective control over vigor with which its noncertificated employees would be represented at the bargaining table was not a paramount interest which would override the fundamental right of employees to freely choose their representative, and the district's policy restrictions on affiliation and choice of bargaining representative were violative of the Fifth Amendment freedoms guaranteed to such employees, and (2) the unconstitutional restrictions were severable, leaving remainder of the policy intact and enforceable.

Affirmed.

Rabinowitz, J., dissented in part and filed opinion.

1. Constitutional Law ⇐91

Right of employees to self-organization and to select representatives of their own choosing without restraint or coercion by employer emanates from protections afforded by First Amendment. AS 23.40.250(5); National Labor Relations Act, § 2(2) as amended 29 U.S.C.A. § 152(2); U.S.C.A. Const. Amend. 1.

2. Labor Relations ⇐86, 88

Right to affiliate with union of one's choice is right of public employee as well as private employee. AS 23.40.070, 23.40.250(5); National Labor Relations Act, § 2(2) as amended 29 U.S.C.A. § 152(2); U.S.C.A. Const. Amend. 1.

3. Labor Relations ⇐88

Public employees are free to join national as well as local unions, and such freedom has been covered by state Public Employment Relations Act. AS 23.40.070, 23.40.250(5); National Labor Relations Act, § 2(2) as amended 29 U.S.C.A. § 152(2); U.S.C.A.Const. Amend. 1.

4. Labor Relations ⇐86

Employee's freedom in affiliation and his right to freely choose his or her representative at bargaining table are inseparable under National Labor Relations Act. AS 23.40.250(5); National Labor Relations Act, § 2(2) as amended 29 U.S.C.A. § 152(2).

5. Constitutional Law ⇐91
Labor Relations ⇐88

Right of school district's noncertificated employees to select representatives of their own choosing for collective bargaining, whether from local or national organizations, without restraint or coercion by the employer was grounded firmly in First Amendment. AS 23.40.070, 23.40.250(5); National Labor Relations Act, § 2(2) as amended 29 U.S.C.A. § 152(2); U.S.C.A. Const. Amend. 1.

6. Constitutional Law ⇐82(1)

Government may not confer statutory right or benefit and withdraw it when beneficiary exercises constitutional prerogative, nor may government confer right and condition it unconstitutionally in same breath. U.S.C.A.Const. Amend. 1.

7. Constitutional Law ⇐82(11)

Government may not require individual to relinquish rights guaranteed him by First Amendment as condition of public employment. AS 23.40.070, 23.40.250(5); National Labor Relations Act, § 2(2) as amended 29

U.S.C.A. § 152(2); U.S.C.A.Const. Amend. 1.

8. Labor Relations ⇐177

Test of constitutionality of school district's labor policy's restrictions was not rational relationship test, but, rather, to override presumpt. e First Amendment right, it was necessary that school district's interest be paramount interest of vital importance, and burden was on school district to show existence of such paramount interest. AS 23.40.070, 23.40.250(5); National Labor Relations Act, § 2(2) as amended 29 U.S.C.A. § 152(2); U.S.C.A.Const. Amend. 1.

9. Constitutional Law ⇐275(5)
Labor Relations ⇐88

School district's asserted interest in needing to exercise prospective control over vigor with which its noncertificated employees would be represented at bargaining table was not paramount interest which would override fundamental right of employees to freely choose their representative, and district's policy restrictions on affiliation and choice of bargaining representative were violative of First Amendment freedoms guaranteed to such employees. AS 23.40.070, 23.40.250(5); National Labor Relations Act, § 2(2) as amended 29 U.S.C.A. § 152(2); U.S.C.A.Const. Amend. 1.

10. Labor Relations ⇐364

In determining severability of school district's labor policy, portions of which had been found unconstitutional, it was necessary first to determine whether constitutional portions, standing alone, could be given legal effect, and secondly to identify primary purpose and determine whether such purpose could be achieved with invalid provisions stricken. AS 23.40.250(5).

11. Labor Relations ⇐364

Unconstitutional restrictions in school district's labor policy were severable, leaving remainder of policy intact and enforceable. AS 23.40.250(5).

Stephen C. Hillard, Allen McGrath, and Chris J. Rigos, of Graham & James, Anchorage, for appellant.

William Jermain, of Jermain, Dunnagan & Owens, Anchorage, for appellee.

OPINION

Before BOOCHEVER, C. J., and RABINOWITZ, CONNOR, BURKE and MATTHEWS, JJ.

MATTHEWS, Justice.

On February 17, 1975, the Kenai Peninsula Borough School Board adopted a comprehensive labor relations policy by which it bound itself to recognize and bargain collectively with an organization to be formed by a majority of the non-certificated school employees of the District, *e. g.*, secretarial, custodial, and cafeteria personnel. The policy stipulated that the District would not negotiate (1) with any individual who was not an employee of the School District, nor (2) with an employee organization affiliated with any state or national labor union.[1]

The appellee Association was duly organized and subsequently recognized by the District on February 21, 1977, as the employee bargaining agent. One month later, after negotiations had not progressed to its satisfaction, in part because the School District would not permit an employee consultant into the negotiating room, the Association affiliated with the Kenai Peninsula

1. The recognition paragraph of the policy reads:

> The Kenai Peninsula Borough School District will recognize, for the purpose of discussing and negotiating mutually satisfactory agreements on specified matters pertaining to their employment, the Kenai Peninsula Borough School District classified employee group which on a certain date has, as bona fide members, a majority of the total classified staff employed by the district on that date and which files a certified list of such members with the Superintendent of Schools. The Kenai Peninsula Borough School District will negotiate only with employees of the district. The Board will not recognize for the purpose of negotiations, any union or association which is not made up exclusively of Kenai Peninsula Borough School District employees nor will the Board negotiate with a local association affiliated with a state or national union.

Federation of Teachers, itself an affiliate of the American Federation of Teachers. The District then refused to negotiate further, demanding that the Association disaffiliate from the Kenai Peninsula Federation. The Association brought suit, seeking to compel the District to resume negotiations.

On September 19, 1977, Judge Peter J. Kalamarides granted summary judgment to the Association, finding the aforementioned restrictive provisions both unconstitutional and severable from the rest of the labor policy, and ordered the District to resume negotiations. The School District appeals from both judgments. We affirm.

I

It is conceded for purposes of this litigation that the right of the non-certificated school employees to compel their employer to bargain collectively arises solely out of the labor relations policy enacted by the District. These employees are not among those within the ambit of the National Labor Relations Act, 29 U.S.C. § 152(2) (1970), or the Alaska Public Employment Relations Act, AS 23.40.250(5), and the Association, in the face of much contrary authority, does not seek to establish such a right in the federal constitution. *See, e. g., University of New Hampshire Chap. of Am. Ass'n. of Univ. Profs. v. Haselton*, 397 F.Supp. 107, 109 (D.N.H.1975); *Atkins v. Charlotte*, 296 F.Supp. 1068, 1077 (W.D.N.C.1969).

The first question that confronts us then, is whether the School District can grant non-certificated employees the right to bargain collectively and simultaneously decree whom the employees may send to the bargaining table as their representative, and with whom they may affiliate to effectuate their right under the labor policy. We hold that the first amendment prohibits such restrictions.

[1] Forty-two years ago, the Supreme Court asserted that:

> [In] safeguard[ing] the right of employees to self-organization and to select representatives of their own choosing for collective bargaining or other mutual protection without restraint or coercion by their employer. . . . [the National Labor Relations Act goes no further than to safeguard] a fundamental right. . . . Hence the prohibition by Congress of interference with the selection of representatives for the purpose of negotiation and conference between employers and employees, 'instead of being an invasion of the constitutional right of either, was based on the recognition of the rights of both.'

NLRB v. Jones & Laughlin Steel Corp., 301 U.S. 1, 33–4, 57 S.Ct. 615, 622–623, 81 L.Ed. 893, 909–10 (1937) (citations omitted). The associational right so identified emanates from the protections afforded by the first amendment. *See Brotherhood of Railroad Trainmen v. Virginia*, 377 U.S. 1, 5, 84 S.Ct. 1113, 1116, 12 L.Ed.2d 89, 93 (1964).

[2, 3] It can no longer be disputed that the right to affiliate with the union of one's choice is the right of the public employee as well as the private employee. *Lontine v. VanCleave*, 483 F.2d 966, 967 (10th Cir. 1973); *Orr v. Thorpe*, 427 F.2d 1129, 1131 (5th Cir. 1970); *American Federation of State, County, & Munic. Employees v. Woodward*, 406 F.2d 137, 139 (8th Cir. 1969); *McLaughlin v. Tilendis*, 398 F.2d 287, 288 (7th Cir. 1968); *O'Brien v. Leidinger*, 452 F.Supp. 720 (E.D.Va.1978). *See Thomas v. Younglove*, 545 F.2d 1171, 1172 (9th Cir. 1976); *Lodge 1858, American Federation of Gov't. Employees v. Paine*, 141 U.S. App.D.C. 152, 164, 436 F.2d 882, 894 n.72 (1970). It is implicit in the cases just cited, that public employees are free to join a national as well as a local union, for in each case the petitioning employees had, in one manner or another, in fact affiliated with a national organization. *Accord, Atkins v. Charlotte*, 296 F.Supp. 1068 (W.D.N.C.1968). We have recognized that same freedom for employees covered by the Alaska Public Employment Relations Act, AS 23.40.070. *State v. Petersburg*, 538 P.2d 263, 267 (Alaska 1975).

[4, 5] We can find no sound basis for distinguishing an employee's freedom in affiliation from the right to freely choose his

or her representative at the bargaining table. The two are inseparable under the National Labor Relations Act, *see General Electric Co. v. NLRB*, 412 F.2d 512, 517 (2d Cir. 1969), in the Supreme Court's identification of fundamental rights in *NLRB v. Jones, supra*, and would seem to be similarly inseparable in fact. A powerful incentive in affiliating with a national union is the effective advocacy thereby secured. Governmental interference with a labor organization's ability to effectively assert its members' legal rights has been held to be an unconstitutional impairment of associational freedoms. *United Mine Workers v. Illinois State Bar Ass'n.*, 389 U.S. 217, 221–222, 88 S.Ct. 353, 355–356, 19 L.Ed.2d 426, 430–1 (1967); *Brotherhood of Railroad Trainmen*, 377 U.S. at 6, 84 S.Ct. 1113, 12 L.Ed.2d at 93. We thus find the conclusion inescapable that the right of the District's non-certificated employees to "select representatives of their own choosing for collective bargaining," be they from local or national organizations, "without restraint or coercion by their employer," is grounded firmly in the first amendment. *NLRB v. Jones, supra.*

[6, 7] The School District does not dispute this conclusion. Instead it argues that the employees represented by the Association are still quite free to join the Kenai Federation. All they cannot do is both affiliate and retain the "privilege" to bargain collectively.

Essentially the District is reiterating Holmes' observation that "[t]he petitioner may have a constitutional right to talk politics, but he has no constitutional right to be a policeman." *McAuliffe v. Mayor of New Bedford*, 155 Mass. 216, 29 N.E. 517 (1892). In the first amendment area the distinction between right and benefit has long been dead. A government may not confer a statutory right or benefit and withdraw it when the beneficiary exercises a constitutional prerogative. Neither may it confer a right and condition it unconstitutionally in the same breath. Numerous cases in the past twenty-five years have made these propositions irrebuttable. *See, e. g. Elrod v. Burns*, 427 U.S. 347, 361, 96 S.Ct. 2673, 2683, 49 L.Ed.2d 547, 558 (1976), and the cases cited therein. *Accord, State v. Wylie*, 516 P.2d 142, 146 (Alaska 1973). As the Supreme Court recently stated in *Abood v. Detroit Board of Education*, 431 U.S. 209, 234, 97 S.Ct. 1782, 1799, 52 L.Ed.2d 261, 283 (1977):

> [A] government may not require an individual to relinquish rights guaranteed him by the First Amendment as a condition of public employment.

[8] The District is thus left with the task of persuading us that the interests embodied in the labor policy's restrictions outweigh the value of the associational freedoms impinged. The School District would have this court scrutinize its restrictive provisions only for a "rational relationship" to the interests it asserts are at stake here. But a "rational connection . . . will not suffice." *Thomas v. Collins*, 323 U.S. 516, 530, 65 S.Ct. 315, 322, 89 L.Ed. 430, 440 (1945). To override a presumptive first amendment right the School District's interest must be "paramount, one of vital importance." *Elrod*, 427 U.S. at 362, 96 S.Ct. at 2684, 49 L.Ed.2d at 559; *Woodward*, 406 F.2d at 140; *McLaughlin*, 398 F.2d at 290. And even if the School District's "purpose be legitimate and substantial, that purpose cannot be pursued by means that broadly stifle fundamental personal liberties when the end can be more narrowly achieved." *Shelton v. Tucker*, 364 U.S. 479, 488, 81 S.Ct. 247, 252, 5 L.Ed.2d 231, 237 (1960).

The burden is on the School District to show the existence of such a paramount interest. *See Elrod*, 427 U.S. at 362, 96 S.Ct. 2673, and the cases cited therein. In its argument below the School District justified the non-affiliation provision by its interest in avoiding negotiations "conducted by outsiders." In this court it has added others: avoiding the 'rigidity in demands," the escalation of "employee relations tensions," and the "test cases" mind-set allegedly characteristic of national unions. Since "uniquely local interests" are involved, the District desires "negotiations

[that] are uniquely local in character." Finally, it argues that as a public employer it must be allowed to recognize that "[s]trong union demands may either exceed the capacity of the democratically-controlled budget process . . . or they may overwhelm a management negotiator not constrained by ordinary 'profit' motivations."

[9] The essence of the District's asserted interest is that it needs to exercise prospective control over the vigor with which its non-certificated employees will be represented at the bargaining table. We can see in this no more than a bald assertion that will lead to too much labor unrest if public employees are permitted to exercise their first amendment rights. We rejected such a contention with regard to public employees covered by the Public Employment Relations Act, *State v. Petersburg, supra*, and we reject the contention here. To construe the School District's interest here as so paramount as to override the fundamental right to freely choose one's representatives, would render the latter right illusory, for it is difficult to imagine a context in which public employees could then successfully assert it.[2]

In contending that it should be permitted to constrict the Association's effectiveness as it sees fit, the School District points to the many decisions finding that public employees cannot compel collective bargaining without statutory authority, and to those permitting restraints on the right to strike. However, those cases which uphold the aforementioned restraints take great pains to distinguish the rights in issue here.

> The right to strike, because of its more serious impact upon the public interest, is more vulnerable to regulation than the right to organize and select representatives for lawful purposes of collective bargaining which this Court has characterized as a 'fundamental right' and which, as the Court has pointed out, was recognized as such in its decisions long before it was given protection by the Labor Relations Act.

International Union Local 232 v. Wisconsin Employment Relations Board, 336 U.S. 245, 259, 69 S.Ct. 516, 52[illegible], 93 L.Ed. 651, 666 (1948) (citations omitted). *See also United Federation of Postal Clerks v. Blount*, 325 F.Supp. 879, 883 (D.D.C.), *aff'd mem.*, 404 U.S. 802, 92 S.Ct. 80, 30 L.Ed.2d 38 (1971).

As we read these decisions they posit a constitutional framework in which employees are free to organize and select an advocate, and from that guarantee of collective strength then lobby their various legislatures for particular rights in the employer/employee relationship. *See, e. g., Atkins v. Charlotte*, 296 F.Supp. 1068, 1077 (W.D. N.C.1968). The virtue of that view is its consistent emphasis on freedom of action, and its antagonism to coercion. And within that perspective it does not follow at all, that once bargaining rights are successfully secured, as in the instant case, the constitutional rights disappear.

We affirm the superior court's judgment that the School District's policy restrictions on affiliation and choice of bargaining representative are violative of first amendment freedoms guaranteed to the non-certificated school employees.

II

[10] Having decided that portions of the School District's labor policy are unconstitutional, we must now decide whether these may be severed, leaving the remainder of the policy intact and enforceable.

In determining questions of severability, we make two inquiries. *Lynden Transport, Inc. v. State*, 532 P.2d 700 (Alaska 1975). First we must determine whether the unconstitutional portions of the policy, standing alone, can be given legal effect. *Id.* at 713. The School District concedes that they can, and no further discussion is necessary.

2. We note that the District has incorporated in its labor policy other means of dealing with the problems it fears a strong union will create, means which do not impinge on associational freedoms. For example, the labor policy forbids all forms of work stoppages, significantly constricts the scope of mandatory bargaining subjects, and stipulates that any agreement reached by the negotiators will only be advisory to the school board.

Second, we must identify the primary purpose of the labor policy, and determine whether this purpose can be achieved with the invalid provisions stricken. *Id.* at 714–15. "The test . . . is whether the remaining parts are so independent and complete that it may be presumed that the [School District] would have enacted the valid parts without regard to the invalid part." *Jefferson v. State*, 527 P.2d 37, 41 (Alaska 1974). It is not dispositive that the stricken portions constitute a fragment of a paragraph. *Lynden Transport, supra; Speidel v. State*, 460 P.2d 77 (Alaska 1969).

[11] We find that the primary purpose of the labor policy is stated in its preamble:

> [T]he Board wishes to maintain its long tradition of fair play with its employees by enacting a policy which will set the stage for harmonious and cooperative relations between the Board and its classified employees and to protect the public by assuring orderly and uninterrupted operations of the district.

After striking only the unconstitutional restrictions of the policy, the superior court concluded that the purpose articulated in the preamble could still be fulfilled. We concur.

The policy adopted by the school board contains more than just the language authorizing collective bargaining and limiting affiliation rights. The recognition paragraph states that the association may not limit membership on the basis of race, religion, creed, sex, or marital status. It prohibits making membership in the association or payment of dues a condition of employment. It prohibits strikes or slowdowns by association members and requires that the association assist in preventing these where possible. Beyond the recognition section, other sections of the labor policy lay down the conditions an association must meet before it will be deemed by the school board to have been authorized by the school employees to represent them. The section titled "Scope of Bargaining" narrowly limits what the association can discuss in negotiations, and prohibits negotiations on "inherent managerial policy", which includes but is not limited to

> the functions and programs of the Board, standards of services, the district budget, utilization of technology, the organizational structure of the schools and the selection and direction of personnel, including work hours, assignments, transfers, job descriptions, promotions based on merit with seniority a secondary factor, the determination of other hiring and dismissal or demotion procedures.

Other sections of the policy cover, among other things, what will happen if the parties cannot agree in negotiations, disputes procedures, and the duration of any labor agreement. All of these provisions of the labor policy apply regardless of whether the association is affiliated with a non-local organization or not.

Given the detailed nature of the labor relations policy when read as a whole, we conclude that the superior court properly found that the non-affiliation clause is severable. The primary purpose of the policy is clearly stated in the preamble. There the school board said that it wished to preserve "harmonious relations" with its classified employees and assure smooth operation of the school district. Although the non-affiliation clause may be considered an important part of the structure the board created to achieve these goals, deleting the clause will leave virtually all of the labor policy intact. Since the school board obviously considered collective bargaining important to the maintaining of good relations with its classified employees, we cannot assume that it would not have enacted the constitutional portions, had it known that two restrictions would be found unconstitutional.

AFFIRMED.

RABINOWITZ, Justice, dissenting in part.

I am in agreement with the court's holding that those portions of the School District's labor policy which place restrictions on affiliation and choice of bargaining representative are violative of the first amendment rights of non-certificated school em-

ployees. My disagreement with the court's opinion centers on the majority's conclusion that the non-affiliation clause is severable.

In discussing presumptions of separability and inseparability in *Lynden Transport, Inc. v. State*, 532 P.2d 700, 711–12 (Alaska 1975), we quoted, with approval from *Carter v. Carter Coal Co.*, 298 U.S. 238, 312, 56 S.Ct. 855, 873, 80 L.Ed. 1160, 1189 (1936), where the Supreme Court said in part:

> Under the statutory rule, the presumption must be overcome by considerations which establish 'the clear probability that the invalid part being eliminated the Legislature would not have been satisfied with what remains.'

In my view, non-affiliation is a paramount part of the structure upon which the Board's labor policy rested. Before the remainder of the policy had any applicability, the employees' organization had to meet the recognition requirement. I think it apparent that the non-affiliation clause was intended as a mandatory requirement for it embodies one of the two explicit requirements found in the recognition paragraph—the other being proof of majority representation. Thus, I conclude that it cannot be fairly said that the Board viewed the non-affiliation requirement as severable, "independent," or "non-essential." [1]

1. In short, I have concluded that the burden of proof adopted in *Lynden Transport, Inc. v. State*, 532 P.2d 700, 711–12 (Alaska 1975), as applied in the instant case, leads to the result that the non-affiliation clause was not severable. In reaching this conclusion, I assume arguendo that there is a statutory presumption of severability with regard to the Board's labor policy, but find that the record establishes the "clear probability" that the Board "would not have been satisfied" with the labor policy without the non-affiliation clause.

KENAI PENINSULA BOROUGH SCHOOL DISTRICT and Kenai Peninsula Borough, Appellants,

v.

KENAI PENINSULA EDUCATION ASSOCIATION, Appellee.

ANCHORAGE BOROUGH EDUCATION ASSOCIATION, Appellant,

v.

GREATER ANCHORAGE AREA BOROUGH, ANCHORAGE BOROUGH SCHOOL DISTRICT, Appellee.

MATANUSKA-SUSITNA SCHOOL DISTRICT, Appellant,

v.

MATANUSKA-SUSITNA EDUCATION ASSOCIATION, Appellee.

Nos. 2470, 2492 and 2563.

Supreme Court of Alaska.

Dec. 9, 1977.

In two separate actions, teachers' associations sued school district and boroughs to compel collective bargaining in good faith. In third action, school board sought declaratory judgment that certain issues were not bargainable. Appeals were taken from judgments of the Supreme Court, Third Judicial District, Kenai and Anchorage District, James A. Hanson, Victor D. Carlson and C. J. Occhipinti, JJ., ruling in favor of school boards in one action, in favor of teachers' union in another, and in third action, in favor of board on some issues and union on others. The Supreme Court, Connor, J., held that: (1) salaries, fringe benefits, number of hours worked and amount of leave time are negotiable and (2) relief from nonprofessional chores, elementary planning time, paraprofessional tutors, teacher specialists, teacher's aides, class size, pupil-teacher ratio, teacher ombudsman, teacher evaluation of administrators, school calendar, election of instructional materials, use of secondary department heads, secondary teacher preparation and planning time and teacher representation on school board advisory committees are nonnegotiable.

Affirmed in part, reversed in part.

1. Labor Relations ⇐178

Questions concerning public school teachers' salaries, number of hours to be worked and amount of leave time are all so closely connected with economic well-being of individual teacher that they are negotiable and subject to collective bargaining under statutes governing negotiation with certificated employees and legal responsibilities of school board. AS 14.20.550, 14.20.610.

2. Labor Relations ⇐178

Following specific items pertaining to public school teachers are, under existing statutory language, nonnegotiable: relief from nonprofessional chores; elementary planning time; paraprofessional tutors; teacher specialists; teacher's aides; class size; pupil-teacher ratio; teacher ombudsman; teacher evaluation of administrators; school calendar; selection of instructional materials; use of secondary department heads; secondary teacher preparation and planning time, and teacher representation on school board advisory committees. AS 14.20.550, 14.20.610.

3. Labor Relations ⇐179

As to matters which affect educational policy and are therefore not negotiable, there is implicit in statutes governing negotiation with certificated employees and legal responsibilities of school board intention that school boards meet and confer with union and it is desirable that boards consider teacher proposals on such questions. AS 14.20.550, 14.20.610.

4. Statutes ⇐216

Even if it were placed in evidence, reliance upon privately expressed opinion is

letter of a former legislator in construing statutes governing negotiation with certificated employees and legal responsibilities of school board would be impermissible, and therefore resort to letter as means of legal interpretation was therefore error in action in which collective bargaining requirements for public school teachers was in issue. AS 14.20.550, 14.20.610.

Allen McGrath and John R. Snodgrass, Jr., of Graham & James, Anchorage, for School Districts.

John R. Strachan, Anchorage, for Education Associations.

Before BOOCHEVER, Chief Justice, and RABINOWITZ, CONNOR, ERWIN and BURKE, Justices.

CONNOR, Justice.

These cases present important questions of labor law and constitutional law concerning the collective bargaining requirements for teachers in the public schools. Two of these cases are before us because the teachers' associations (the unions) have sued school districts and boroughs (the school boards) to compel collective bargaining in good faith under AS 14.20.550. In the third, a school board seeks a declaratory judgment that certain issues are not bargainable. The school boards, while not disputing the unions' right to collective bargaining on a number of employment-related issues, contend that they should not be forced to bargain collectively on various items which they regard as affecting educational policy. Educational policy, the school boards contend, must be determined only by the public through the legislature and, by delegation, through the school boards. We will examine the more specific issues later in this opinion. They include such items as class size and the use of teacher specialists and para-professionals. Of the three trial courts which passed on the matter, one ruled in favor of the school boards,[1] one ruled in favor of the teachers' union,[2] and one split the various items, ruling for the board on some and the unions on others.[3]

I. *Introduction*

To facilitate the understanding of our more detailed legal discussion later in this opinion, we will summarize at the outset the contentions of the parties. The statutes at issue in this litigation are AS 14.20.550 and .610, which provide:

"Sec. 14.20.550. *Negotiation with certificated employees.* Each city, borough and regional school board, shall negotiate with its certificated employees in good faith on matters pertaining to their employment and the fulfillment of their professional duties. (§ 1 ch 18 SLA 1970; am § 3 ch 71 SLA 1972; am § 21 ch 124 SLA 1975)."

"Sec. 14.20.610. *Legal responsibilities of boards.* Nothing in §§ 550–600 of this chapter may be construed as an abrogation or delegation of the legal responsibilities, powers, and duties of the school board including its right to make final decisions on policies. (§ 1 ch 18 SLA 1970)."

The boards contend, using labor cases from the private sector, that the requirement of collective bargaining in good faith is a term of art in labor law. Unlike a simple "meet and confer" requirement, to negotiate in "good faith" entails a duty to make concessions. Thus, management does

1. *Anchorage Borough Ed. Ass'n v. GAAB. Anchorage Borough School Dist.*, No. 2492 (hereinafter Anchorage).

2. *Kenai Pen. Borough Sch. Dist. and Kenai Pen. Borough v. Kenai Pen. Ed. Ass'n*, No. 2470 (hereinafter Kenai).

3. *Matanuska-Susitna Sch. Dist. v. Matanuska-Susitna Ed. Ass'n*, No. 2563 (hereinafter Mat-Su).

not have the final decisions on matters subject to good faith collective bargaining, since if management adheres to its determined policies, it violates the law.

The school boards contend that the submission of educational policies to a good faith collective bargaining requirement would remove the final decisions on such matters from the boards, contrary to the intent of the legislature expressed in AS 14.20.610. The boards contend that to require bargaining on questions of educational policy would also contravene the Alaska Constitution, art. VII, § 1, which makes education the exclusive domain of the legislature.[4] *See Macauley v. Hildebrand*, 491 P.2d 120 (Alaska 1971). Delegation of part of the decision-making power on educational policy to labor unions is unconstitutional, they urge, because the union is a private organization, unaccountable to the public. The union can use the power for its own ends, and is under no duty to foster educational policies which are in the general public interest.

The unions argue that such delegation is perfectly proper, and that there is no delegation of decision-making power inherent in a labor negotiations requirement. They further argue that they represent professional employees, and that their participation in good faith collective bargaining labor negotiations is an attempt by the legislature to provide professional advice to school boards on the management of the schools. They assert that this is a legislative policy judgment, in no way inimical to the Alaska Constitution. Also relying on labor cases, they discount the importance of any "management prerogative" to determine educational policy under AS 14.20.610, and assert that labor's concerns with working conditions override any management prerogative as to basic policy.

The unions argue that the Alaska teachers' collective bargaining statutes are more comprehensive than those found elsewhere, and hence the scope of bargaining should be interpreted broadly. The school boards assert that the Alaska Constitution as interpreted in *Macauley v. Hildebrand, supra*, is more adamant than provisions in other states in placing education firmly within the legislative prerogative. Therefore, collective bargaining must yield across a wide range of issues affecting educational policy.

II. *Scope of the Duty to Bargain*

If we were to look to the law concerning bargaining between labor unions and private employers, we would conclude that the scope of negotiable issues is broad. The law relating to the private sector has always contained, and still does contain, uncertainties. But the general trend has been to require that employers bargain in good faith on a wide range of items with respect to wages, hours, and other conditions of employment, without regard to whether the employers consider the items bargained for to be within the prerogatives of management.[5] Moreover, some cases hold that for an employer or a union to avoid being found to have bargained in bad faith, the parties must make some reasonable effort to compose their differences. While the good faith standard of collective bargaining

4. Alaska Constitution, art. VII, § 1 states:
"The legislature shall by general law establish and maintain a system of public schools open to all children of the State, and may provide for other public educational institutions. Schools and institutions so established shall be free from sectarian control. No money shall be paid from public funds for the direct benefit of any religious or other private educational institution."

5. *Fibreboard Paper Products Corp. v. N. L. R. B.*, 379 U.S. 203, 85 S.Ct. 398, 13 L.Ed.2d 233 (1964) (management decision to subcontract out the work of some employees must be bargained); *International Ladies' Garment Workers Union v. N. L. R. B.*, 150 U.S.App.D.C. 71, 463 F.2d 907 (1972) (decision to relocate the business to another state subject to bargaining); *Royal Typewriter Co.*, 209 N.L.R.B. 1006, 1012 (1974) (decision to close a plant subject to bargaining). *But see General Motors Corp.*, 191 N.L.R.B. 951 (1971), *aff'd sub nom., International Union, United Auto. A. & A. Imp. Wkrs. v. N. L. R. B.*, 152 U.S.App.D.C. 274, 277, 470 F.2d 422, 425 (1972) (decision to sell part of business not bargainable).

does not compel either party to make concessions, intransigent positions, adopted in an effort to avoid any agreement, are disfavored.[6] Thus a legal determination that a matter is subject to good faith collective bargaining may narrow the policy-making powers of an employer by curtailing any absolute directives on his part.

When we turn to employment in the public sector, and particularly in education, the question of what is properly bargainable is thrown into more doubt. If teachers' unions are permitted to bargain on matters of educational policy, it is conceivable that through successive contracts the autonomy of the school boards could be severely eroded, and the effective control of educational policy shifted from the school boards to the teachers' unions. Such a result could threaten the ability of elective government officials and appointive officers subject to their authority, in this case the school boards and administrators, to perform their functions in the broad public interest.[7]

Recently the United States Supreme Court had occasion to comment upon the differences between collective bargaining in the public and private sectors. In *Abood v. Detroit Board of Education*, 431 U.S. 209, 227–28, 97 S.Ct. 1782, 1795–96, 52 L.Ed.2d 261, 279–80 (1977), the Court, speaking through Mr. Justice Stewart, observed:

> "A public employer, unlike his private counterpart, is not guided by the profit motive and constrained by the normal operation of the market. Municipal services are typically not priced, and where they are they tend to be regarded as in some sense 'essential' and therefore are often price inelastic. Although a public employer, like a private one, will wish to keep costs down, he lacks an important discipline against agreeing to increases in labor costs that in a market system would require price increases. A public-sector union is correspondently less concerned that high prices due to costly wage demands will decrease output and hence employment.
>
> The government officials making decisions as the public 'employer' are less likely to act as a cohesive unit than are managers in private industry, in part because different levels of public authority—department managers, budgetary officials, and legislative bodies—are involved, and in part because each official may respond to a distinctive political constituency. And the ease of negotiating a final agreement with the union may be severely limited by statutory restrictions, by the need for the approval of a higher executive authority or a legislative body, or by the commitment of budgetary decisions of critical importance to others.
>
> Finally, decisionmaking by a public employer is above all a political process. The officials who represent the public employer are ultimately responsible to the electorate, which for this purpose can be viewed as comprising three overlapping classes of voters—taxpayers, users of particular government services, and government employees. Through exercise of their political influence as part of the electorate, the employees have the opportunity to affect the decisions of government representatives who sit on the other side of the bargaining table. Whether these representatives accede to

6. *Sign and Pictorial Union Local 1175 v. N. L. R. B.*, 136 U.S.App.D.C. 144, 149, 419 F.2d 726, 731 (D.C.Cir. 1969); *N. L. R. B. v. General Electric Co.*, 418 F.2d 736, 756–62 (2d Cir. 1969), *cert. denied*, 397 U.S. 965, 90 S.Ct. 995, 25 L.Ed.2d 257 (1970); *N. L. R. B. v. McLane Co.*, 405 F.2d 483, 484 (5th Cir. 1968); *N. L. R. B. v. Reed & Prince Mfg. Co.*, 205 F.2d 131, 134–35 (1st Cir. 1953), *cert. denied*, 346 U.S. 887, 74 S.Ct. 139, 98 L.Ed. 391 (1953) ("the employer is obliged to make *some* reasonable effort in *some* direction to compose his differences with the union"; emphasis in original); *Majure v. N. L. R. B.* 196 F.2d 735 (5th Cir. 1952). *See generally* Swerdlow, Freedom of Contract in Labor Law, 51 *Tex.L.Rev.* 1 (1972).

7. As one commentator has noted, "what is in the best interest of the students and the community is not always in the best interests of teachers." Rund, Symposium on Teacher Bargaining: Commentary, 50 *Ind.L.J.* 344, 350 (1975).

a union's demands will depend upon a blend of political ingredients, including community sentiment about unionism generally and the involved union in particular, the degree of taxpayer resistance, and the views of voters as to the importance of the service involved and the relation between the demands and the quality of service."

In a concurring opinion in that case Mr. Justice Powell noted the similarity between a public sector union and a conventional political party:

"The ultimate objective of a union in the public sector, like that of a political party, is to influence public decisionmaking in accordance with the views and perceived interests of its membership. Whether a teachers' union is concerned with salaries and fringe benefits, teacher qualifications and in-service training, pupil-teacher ratios, length of the school day, student discipline, or the content of the high school curriculum, its objective is to bring school board policy and decisions into harmony with its own views. Similarly, to the extent that school board expenditures and policy are guided by decisions made by the municipal, state and federal governments, the union's objective is to obtain favorable decisions—and to place persons in positions of power who will be receptive to the union's viewpoint. In these respects, the public sector union is indistinguishable from the traditional political party in this country."

431 U.S. at 256, 97 S.Ct. at 1810, 52 L.Ed.2d at 298.[8]

The legislature was evidently cognizant of this concern when it enacted AS 14.20.550 and .610, stating two goals which apparently conflict. We must now proceed to interpret what we believe the legislature meant by these provisions.

The school boards initially argue that to make matters of school operation and educational policy subject to collective bargaining amounts to an unconstitutional delegation of governmental power to the unions.

While courts in an earlier era often held laws unconstitutional on the ground that they delegated legislative power to private persons or groups, *e. g., Carter v. Carter Coal Co.*, 298 U.S. 238, 311, 56 S.Ct. 855, 80 L.Ed. 1160 (1936), the trend has been to uphold such delegations, even when the power is delegated to a group with an economic interest in the decisions to be made. *E. g., United States v. Rock Royal Cooperative, Inc.*, 307 U.S. 533, 577–78, 59 S.Ct. 993, 83 L.Ed. 1446 (1939) (cooperative marketing program from agricultural products); *Agricultural Prorate Comm'n v. Superior Court*, 5 Cal.2d 550, 55 P.2d 495, 504–06 (Cal.1936) (same); *Potter v. New Jersey Supreme Court*, 403 F.Supp. 1036, 1039–40 (D.N.J. 1975), *aff'd*, 546 F.2d 418 (3d Cir. 1976) (requirement that attorneys have graduated from law schools accredited by the American Bar Association). *See generally*,

8. The holding of the majority in *Abood* was that a union shop or agency shop agreement for public employees, requiring all employees in the bargaining unit to make financial contributions to the union, did not violate the first amendment rights of employees who objected to the union. The same rule obtains for unions in the private sector. Although Justice Powell concurred in the majority's decision to remand the case for further proceedings, he disagreed with this constitutional holding. Unlike the majority, he felt that the differences between public and private employment compelled a holding that agency shop or union shop agreements in the public sector are forbidden by the first amendment.

See generally Rehmus, Constraints on Local Governments in Public Employee Bargaining, 67 *Mich.L.Rev.* 919 (1969); Shaw and Clark, The Practical Differences Between Public and Private Sector Collective Bargaining, 19 *U.C.L.A.L.Rev.* 867 (1972); Summers, Public Sector Bargaining: Problems of Government Decisionmaking, 44 *U.Cinn.L.Rev.* 669 (1975); Summers, Public Employee Bargaining: A Political Perspective, 83 *Yale L.J.* 1156 (1974); Wellington & Winter, The Limits of Collective Bargaining in Public Employment, 78 *Yale L.J.* 1107 (1969); Project, Collective Bargaining and Politics in Public Employment, 19 *U.C.L.A.L.Rev.* 887, 1010-51 (1972).

1 K. Davis, Administrative Law Treatise § 2.14 (Supp.1970) (collecting cases). *See also* 1 *Id.* § 2.15 (1958).

Furthermore, the statute merely requires the school board to negotiate with the union. It does not require the board to accept any particular proposal the union might offer. It does not require, and probably does not permit, the board to delegate to the union the sole power to make any decision. Therefore, cited cases invalidating outright grants of governmental power to private groups, *e. g., Hetherington v. McHale*, 458 Pa. 479, 329 A.2d 250 (1974), and *Bayside Timber Co. v. Bd. of Supervisors*, 20 Cal.App.3d 1, 97 Cal.Rptr. 431 (1971), are not apposite.

The cases in other states rejecting the argument that collective bargaining with teachers' unions is an unconstitutional delegation of power, all involve statutes which fairly narrowly constrict either the scope of bargainable issues, or the school boards' duty to accede to union proposals, or both. *Chicago Div. of Ill. Ed. Ass'n v. Board of Ed.*, 76 Ill.App.2d 456, 222 N.E.2d 243, 251 (1966); *Joint School Dist. No. 8 v. Wisc. Emp. Rel. Bd.*, 37 Wis.2d 483, 155 N.W.2d 78, 83 (1967); *State v. City of Laramie*, 437 P.2d 295, 300 (Wyo.1968) (firemen). In this opinion, we similarly construe the Alaska statute. A statute defining the scope of collective bargaining as broadly as the union would have us do, might well present a more troubling constitutional question. But we find no constitutional infirmity in AS 14.20.550 and .610. The delegation of power problem still bears upon our task of statutory interpretation, however, for in interpreting the relevant statutes we will not readily assume that the legislature intended to divest the school boards of their power to determine matters of educational policy and school system management.

Courts in other jurisdictions have considered problems similar to those which we confront here. It is instructive, though not determinative, to look to the case law of other jurisdictions as an aid to interpretation.

The court in *Dunellen Bd. of Education v. Dunellen Ed. Ass'n*, 64 N.J. 17, 311 A.2d 737 (1973), dealt with a conflict between a requirement to bargain about "terms and conditions" of employment (without further definition) and the broad managerial power over schools entrusted to local school boards. The court noted that "terms and conditions" of employment without further definition does not furnish a dispositive guideline. It held that the decision whether to consolidate chairmanships of the social studies department and English department was not a subject of mandatory bargaining. It was a matter predominately of educational policy and thereby fell within the exclusive prerogative of management.[9]

National Ed. Ass'n of Shawnee Mission, Inc. v. Board of Ed., 212 Kan. 741, 512 P.2d 426 (1973), is closely analogous to the case at bar. There the teachers' association negotiated under a statute which permitted it to "participate in professional negotiation with boards of education . . . for the purpose of establishing, maintaining, protecting or improving terms and conditions of professional service." The state constitution, like Alaska's, gave the legislature the power to provide for public schools. The negotiations reached an impasse after the board took the position that all matters, whether negotiable under the statute or not, were of a policy nature subject to unilateral change by the board and could not be incorporated into a contract, while the teachers asserted that nearly everything pertaining to school operations was negotiable.

9. The teachers' unions in the case at bar argue that *Dunellen* was overruled by later legislation. The statute in question dealt with only a limited aspect of bargaining; and *Dunellen* has been followed by the courts despite the statutory amendment. *See, e. g., Galloway Tp. Bd. of Ed. v. Galloway Tp. Ed. Ass'n*, 135 N.J.Super. 269, 343 A.2d 133 (1975).

On appeal the Kansas Supreme Court was confronted with the same problem that we are: how to frame a test which would delimit those matters which are bargainable from those which are not. The Kansas court held that salaries, vacations, and sick leave are negotiable. In so doing it pointed out that the term "policy" is not helpful, because even salaries are a matter of policy. It drew the following distinction:

> "The key, as we see it, is how direct the impact of an issue is on the well-being of the individual teacher, as opposed to its effect on the operation of the school system as a whole." 512 P.2d at 435.

While the *Shawnee Mission* case represents a commendable attempt to balance competing claims, it does not provide a test which is useful in determining the negotiability of specific subjects. In other words, it does not provide any comforting guidance in determining how, in the last analysis, the balance should be weighed between the school boards and the teachers.

Put another way, a matter is more susceptible to bargaining the more it deals with the economic interests of employees and the less it concerns professional goals and methods. Bargaining over the latter topics presents particular problems because there is less likely to be any politically organized interest group other than the union concerned with these issues. The salaries of public employees have a direct financial effect on the taxpayers; on the other hand, a question such as teacher evaluation of administrators is unlikely to have any impact sufficiently direct to be discernible by laymen. Furthermore, it is such an abstract and abstruse subject that it is unlikely that any appreciable portion of the public will either understand it or care greatly about it. In such circumstances, the risk that effective power over the governmental decision will come to rest with the union is significantly greater. Moreover, it is more likely that there will be disagreements among union members on questions of this nature than on "bread and butter" issues; the risk that minority viewpoints within the union will not be meaningfully represented in the bargaining is a real one. *See* Summers, *supra*, 83 *Yale L.J.* at 1181–82, 1194–95. *But see* Wollett, The Coming Revolution in Public School Management, 67 *Mich. L.Rev.* 1017 (1969) (argues that these subjects should be bargainable).

III. *Specific Issues*

[1] We will now consider the Alaska situation in more detail. At the outset it appears to us that questions concerning salaries, the number of hours to be worked, and amount of leave time are all so closely connected with the economic well-being of the individual teacher that they must be held negotiable under our statutes. The troubling question is what other items are bargainable.

[2] The various trial courts in these cases considered such items as (1) relief from non-professional chores, (2) elementary planning time, (3) para-professional tutors, (4) teacher specialists, (5) teacher's aides, (6) class size, (7) pupil-teacher ratio, (8) a teacher ombudsman, (9) teacher evaluation of administrators, (10) school calendar, (11) selection of instructional materials, (12) the use of secondary department heads, (13) secondary teacher preparation and planning time, and (14) teacher representation on school board advisory committees.

The testimony adduced in the trial courts does not provide us with much enlightenment as to why any of these items should fall on one side of the line or another. Realistically the two areas, i. e., (1) educational policy, and (2) matters pertaining to employment and professional duties, merge into and blend with each other at many points. Logically and semantically it is nearly impossible to assign specific items to one category and not the other. Certain examples may make this point more clearly.

In the *Mat-Su* case the teachers have asked for a planning period of 45 minutes "to be taken during the academic portion of the day." Were this merely a request for planning time, it might be considered negotiable. The demand that it be during the academic portion of the day, however, presents an additional complication: whether, as a matter of educational policy, elementary school children should have one teacher with them throughout the day or whether they are old enough to be taught by different people. This presents a basic educational decision. While the amount of paid time available to a teacher for preparation of lesson plans affects the teacher directly, the demand that such time be available "during the academic portion of the day" presents a policy question.

Similarly, the question of class size affects directly the amount of work a teacher must perform. But the determination of optimum class size is quite basic to school policy and management, and potentially has a substantial impact on the school district's personnel expenditures. A number of courts have found this to be clearly non-negotiable. *See National Ed. Ass'n of Shawnee Mission, Inc. v. Board of Ed.*, 512 P.2d 426, 435 (Kan.1973); *West Irondequoit Teachers Ass'n v. Helsby*, 35 N.Y.2d 46, 358 N.Y.S.2d 720, 315 N.E.2d 775, 777–78 (N.Y. App.1974); *School Dist. of Seward Ed. Ass'n v. School Dist. of Seward*, 188 Neb. 772, 199 N.W.2d 752, 759 (1972); *City of Biddeford v. Biddeford Teachers Ass'n*, 304 A.2d 387, 403 (Me.1973).

An examination of the other specific items listed above yields equally indefinite answers. We are confronted, then, with a situation in which the legislature has not spoken with clarity and concerning which we possess no expertise. We can only conclude that salaries, fringe benefits, the number of hours worked, and the amount of leave time are negotiable.[10] In view of the concerns expressed on pages 419, 420 *supra*, we conclude that the other specific items listed on page 422 are, under the existing statutory language, non-negotiable.

It would be helpful if the legislature, through future enactments, provided more specific guidance on a number of the items which the unions seek to negotiate. Lacking that guidance, however, we cannot confidently say that the legislature intended any of these items to be bargainable. We cannot, therefore, read the statutes expansively as to the scope of what is negotiable.

[3] As to matters which affect educational policy and are, therefore, not negotiable, we believe that there is nevertheless implicit in our statutes the intention that the school boards meet and confer with the unions. It is desirable that the boards consider teacher proposals on such questions. This will encourage teachers to give the boards the benefit of their expertise, and to make their positions known for the board's use in establishing educational policy.

[4] One minor question remains. In the *Kenai* case the trial court, in construing the statutes, relied upon the privately expressed opinion, by means of a letter, of a former legislator. The legislator's opinion was not a matter of public record, subject to judicial notice, nor was it introduced in evidence. Even if it were placed in evidence, reliance upon it would be impermissible under *Alaska Public Employees Ass'n v. State*, 525 P.2d 12, 16 (Alaska 1974). Resort to the letter as a means of legal interpretation was, therefore, error.

AFFIRMED IN PART, REVERSED IN PART.

10. In the list of proposals submitted in the *Kenai* case, for example, it appears that some 38 of the 47 proposals would come within the categories of items we have concluded are negotiable. These items are set forth in the appendix to this opinion.

APPENDIX

LIST OF NEGOTIABLE AND NON-NEGOTIABLE ITEMS

Those items which are non-negotiable are as follows:

1. Relief from Non-Professional Chores [11]
2. Class Size and Teacher Load
3. Ombudsman
4. Evaluation of Administrators
5. Teacher Aides
6. Para-Professionals
7. PTR Formula
8. Specialists
9. Calendar

Those items which are negotiable are:

1. Recognition
2. Negotiation Procedures
3. Grievance Procedures
4. Salary Schedule Conditions
5. Salary Schedule
6. Automatic Cost of Living
7. Extra Curricular and Extra Duty
8. Extended Contract
9. Additional Educational Employment
10. Life Insurance
11. Health Insurance
12. Liability Insurance
13. Automobile Allowance
14. Tuition/In-Service Workshops
15. Reimbursement for Physical Examinations
16. Sabbatical Leave
17. Career Development
18. Administrative Leave
19. Personal Leave
20. Sick Leave and Bereavement
21. Personal and Sick Leave for Half-Time Employees
22. Unpaid Leave of Absence
23. Maternity Leave
24. Political Leave
25. Duty-Free Lunch
26. Teacher Preparation Periods
27. Monthly Planning Time
28. In-Service Days
29. Discretional Materials
30. Personnel Files
31. Teacher Transfer
32. Teacher Retention
33. Job Openings
34. Reduction of Staff
35. Teacher Contracts
36. Association Rights and Privileges
    (a) Information
    (b) Release Time for Meetings
    (c) Use of School Buildings
    (d) Use of School Equipment
    (e) Supplies
    (f) Mail Facilities
    (g) Subcontracting
    (h) Non jeopardy
    (i) Exclusive Rights
    (j) KPEA Professional Leave
    (k) Dues Deduction/Continuing Membership
    (l) Other Deductions
    (m) Conformity to Law
    (n) School Board Agenda
    (o) Preliminary Draft of Budget
37. Agreement Print-up and Dissemination
38. Duration on Contract

11. In the *Kenai* case this item was described in the negotiating document as follows:

"RELIEF FROM NON-PROFESSIONAL CHORES

The Board and Association acknowledge that a teacher's primary responsibility is to teach and that his energies should be utilized to this end, therefore, they agree as follows: Teachers shall not be required to perform the following duties:

A. Non-instructional assignments, including but not limited to, supervising of cafeterias, sidewalks, bus loading, or unloading, or playgrounds of more than fifteen (15) minutes daily.

B. Collecting money from students.

C. Cumulative record cards and other clerical and/or custodial functions."

These matters seem so closely related to school board policy as to be non-negotiable. We do not pass upon other conceivable non-professional functions. We also do not know what is specifically meant by "custodial" functions, and do not, therefore, pass upon that aspect of this item.

AS 14.20.550

NEGOTIATION WITH CERTIFICATED EMPLOYEES. Each city, borough and regional school board, shall negotiate with its certificated employees in good faith on matters pertaining to their employment and the fulfillment of their professional duties.

AS 14.20.610

LEGAL RESPONSIBILITIES OF BOARDS. Nothing in §§ 550 - 600 of this chapter may be construed as an abrogation or delegation of the legal responsibilities, powers, and duties of the school board including its right to make final decisions on policies.

The court was asked to declare what issues pertaining to public school teachers are, under existing statutory language, subject to negotiation under collective bargaining and what matters are educational policy and thus non-negotiable. The court noted that educational policy and matters pertaining to employment and professional duties merge into and blend with each other at many points. The court took into account the many factors which figure into the balance of power between public employee unions and public employers in finding that a matter is more susceptible to bargaining the more it deals with the economic interests of employees and the less it concerns professional goals and methods. The court noted that bargaining over the latter topics presents particular problems because there is less likely to be any politically organized interest group other than the union concerned with these issues. Utilizing this standard, the court felt it could conclude that salaries, fringe benefits, the amount of hours worked, and the amount of leave time are negotiable, but that other issues, such as (1) relief from non-professional chores, (2) elementary planning time, (3) para-professional tutors, (4) teacher specialists, (5) teacher's aides, (6) class size, (7) pupil-teacher ratio, (8) a teacher ombudsman, (9) teacher evaluation of administrators, (10) school calendar, (11) selection of instructional materials, (12) the use of secondary department heads, (13) secondary teacher preparation and planning time, and (14) teacher representation on school board advisory committees were non-negotiable in light of the necessity of preserving the school board's effective control of educational policy.

THE SUPREME COURT OF THE STATE OF ALASKA

KENAI PENINSULA BOROUGH SCHOOL DISTRICT,

Appellant,

v.

KENAI PENINSULA BOROUGH SCHOOL DISTRICT CLASSIFIED ASSOCIATION,

Appellee.

File No. 3800

O P I N I O N

[No. 1802 - February 16, 1979]

Appeal from the Superior Court of the State of Alaska, Third Judicial District, Anchorage, Peter J. Kalamarides, Judge.

Appearances: Stephen C. Hillard, Allen McGrath, Chris J. Rigos, Graham & James, Anchorage, for Appellant. William K. Jermain, Jermain, Dunnagan & Owens, Anchorage, for Appellee.

Before: Boochever, Chief Justice, Rabinowitz, Connor, Burke and Matthews, Justices.

MATTHEWS, Justice.
RABINOWITZ, Justice, dissenting in part.

On February 17, 1975, the Kenai Peninsula Borough School Board adopted a comprehensive labor relations policy by which it bound itself to recognize and bargain collectively with an organization to be formed by a majority of the non-certificated school employees of the District, e.g., secretarial, custodial, and cafeteria personnel. The policy stipulated that the District would not negotiate (1) with

any individual who was not an employee of the School District, nor (2) with an employee organization affiliated with any state or national labor union.[1]

The appellee Association was duly organized and subsequently recognized by the District on February 21, 1977, as the employee bargaining agent. One month later, after negotiations had not progressed to its satisfaction, in part because the School District would not permit an employee consultant into the negotiating room, the Association affiliated with the Kenai Peninsula Federation of Teachers, itself an affiliate of the American Federation of Teachers. The District then refused to negotiate further,

---

1. The recognition paragraph of the policy reads:

> The Kenai Peninsula Borough School District will recognize, for the purpose of discussing and negotiating mutually satisfactory agreements on specified matters pertaining to their employment, the Kenai Peninsula Borough School District classified employee group which on a certain date has, as bona fide members, a majority of the total classified staff employed by the district on that date and which files a certified list of such members with the Superintendent of Schools. The Kenai Peninsula Borough School District will negotiate only with employees of the district. The Board will not recognize for the purpose of negotiations, any union or association which is not made up exclusively of Kenai Peninsula Borough School District employees nor will the Board negotiate with a local association affiliated with a state or national union.

demanding that the Association disaffiliate from the Kenai Peninsula Federation. The Association brought suit, seeking to compel the District to resume negotiations.

On September 19, 1977, Judge Peter J. Kalamarides granted summary judgment to the Association, finding the aforementioned restrictive provisions both unconstitutional and severable from the rest of the labor policy, and ordered the District to resume negotiations. The School District appeals from both judgments. We affirm.

I

* It is conceded for purposes of this litigation that the right of the non-certificated school employees to compel their employer to bargain collectively arises solely out of the labor relations policy enacted by the District. These employees are not among those within the ambit of the National Labor Relations Act, 29 U.S.C. §152(7) (1970), or the Alaska Public Employment Relations Act, AS 23.40.250(5), and the Association, in the face of much contrary authority, does not seek to establish such a right in the federal constitution. See, e.g., University of New Hampshire Chap. of Am. Ass'n. of Univ. Profs. v. Haselton, 39 F.Supp. 107, 109 (D.N.H. 1975); Atkins v. Charlotte, 296 F.Supp. 1068, 1077 (W.D.N.C. 1969).

"The first question that confronts us then, is whether the School District can grant non-certificated employees the right to bargain collectively and simultaneously decree whom the employees may send to the bargaining table as their representative, and with whom they may affiliate to effectuate their right under the labor policy. We hold that the first amendment prohibits such restrictions.

Forty-two years ago, the Supreme Court asserted that:

> [In] safeguard[ing] the right of employees to self-organization and to select representatives of their own choosing for collective bargaining or other mutual protection without restraint or coercion by their employer. . . . [the National Labor Relations Act goes no further than to safeguard] a fundamental right. . . . Hence the prohibition by Congress of interference with the selection of representatives for the purpose of negotiation and conference between employers and employees, 'instead of being an invasion of the constitutional right of either, was based on the recognition of the rights of both.'

NLRB v. Jones & Laughlin Steel Corp., 301 U.S. 1, 33-4, 81 L.Ed. 893, 909-10 (1937)(citations omitted). The associational right so identified emanates from the protections afforded by the first amendment. See Brotherhood of Railroad Trainmen v. Virginia, 377 U.S. 1, 5, 12 L.Ed.2d 89, 93 (1964).

** It can no longer be disputed that the right to affiliate with the union of one's choice is the right of the public employee as well as the private employee. Lontine v. VanCleave, 483 F.2d 966, 967 (10th Cir. 1973); Orr v. Thorpe, 427 F.2d 1129, 1131 (5th Cir. 1970); American Federation of State, County, & Munic. Employees v. Woodward, 406 F.2d 137, 139 (8th Cir. 1969); McLaughlin v. Tilendis, 398 F.2d 287, 288 (7th Cir. 1968); O'Brien v. Leidinger, 452 F.Supp. 720 (E.D.Va. 1978). See Thomas v. Younglove, 545 F.2d 1171, 1172 (9th Cir. 1976); Lodge 1858, American Federation of Gov't. Employees v. Paine, 436 F.2d 882, 894 n.72 (D.C. Cir. 1970). It is implicit in the cases just cited, that public employees are free to join a national as well as a local union, for in each case the petitioning employees had, in one manner or another, in fact affiliated with a national organization. Accord, Atkins v. Charlotte, 296 F.Supp. 1068 (W.D.N.C. 1968). We have recognized that same freedom for employees covered by the Alaska Public Employment Relations Act, AS 23.40.070. State v. Petersburg, 538 P.2d 263, 267 (Alaska 1975).

We can find no sound basis for distinguishing an employee's freedom in affiliation from the right to freely choose his or her representative at the bargaining table. The two are inseparable under the National Labor Relations Act, see General Electric Co. v. NLRB, 412 F.2d 512, 517 (2d

Cir. 1969), in the Supreme Court's identification of fundamental rights in NLRB v. Jones, supra, and would seem to be similarly inseparable in fact. A powerful incentive in affiliating with a national union is the effective advocacy thereby secured. Governmental interference with a labor organization's ability to effectively assert its members' legal rights has been held to be an unconstitutional impairment of associational freedoms. United Mine Workers v. Illinois State Bar Ass'n., 389 U.S. 217, 221-222, 19 L.Ed 2d 426, 430-1 (1967); Brotherhood of Railroad Trainmen, 377 U.S. at 6, 12 L.Ed.2d at 93.* We thus find the conclusion inescapable that the right of the District's non-certificated employees to "select representatives of their own choosing for collective bargaining," be they from local or national organizations, "without restraint or coercion by their employer," is grounded firmly in the first amendment. NLRB v. Jones, supra.

The School District does not dispute this conclusion. Instead it argues that the employees represented by the Association are still quite free to join the Kenai Federation. All they cannot do is both affiliate and retain the "privilege" to bargain collectively.

Essentially the District is reiterating Holmes' observation that "[t]he petitioner may have a constitutional

right to talk politics, but he has no constitutional right to be a policeman." McAuliffe v. Mayor of New Bedford, 29 N.E. 517 (Mass. 1892). In the first amendment area the distinction between right and benefit has long been dead. A government may not confer a statutory right or benefit and withdraw it when the beneficiary exercises a constitutional prerogative. Neither may it confer a right and condition it unconstitutionally in the same breath. Numerous cases in the past twenty-five years have made these propositions irrebuttable. See, e.g. Elrod v. Burns, 427 U.S. 347, 361, 49 L.Ed.2d 547, 558 (1976), and the cases cited therein. Accord, State v. Wylie, 516 P.2d 142, 146 (Alaska 1973). As the Supreme Court recently stated in Abood v. Detroit Board of Education, 431 U.S. 209, 234, 52 L.Ed.2d 261, 283 (1977):

> [A] government may not require an individual to relinquish rights granted him by the First Amendment as a condition of public employment.

The District is thus left with the task of persuading us that the interests embodied in the labor policy's restrictions outweigh the value of the associational freedoms impinged. The School District would have this court scrutinize its restrictive provisions only for a "rational relationship" to the interests it asserts are at stake here. But a "rational connection . . . will not suffice." Thomas v. Collins, 323 U.S. 516, 530, 89 L.Ed. 430, 440 (1945). To

override a presumptive first amendment right the School District's interest must be "paramount, one of vital importance." Elrod, 427 U.S. at 362, 49 L.Ed.2d at 559; Woodward, 406 F.2d at 140; McLaughlin, 398 F.2d at 290. And even if the School District's 'purpose be legitimate and substantial, that purpose cannot be pursued by means that broadly stifle fundamental personal liberties when the end can be more narrowly achieved." Shelton v. Tucker, 364 U.S. 479, 488, 5 L.Ed.2d 231, 237 (1960).

The burden is on the School District to show the existence of such a paramount interest. See Elrod, 427 U.S. at 362, and the cases cited therein. In its argument below the School District justified the non-affiliation provision by its interest in avoiding negotiations "conducted by outsiders." In this court it has added others: avoiding the "rigidity in demands," the escalation of "employee relations tensions," and the "test cases" mind-set allegedly characteristic of national unions. Since "uniquely local interests" are involved, the District desires "negotiations [that] are uniquely local in character." Finally, it argues that as a public employer it must be allowed to recognize that "[s]trong union demands may either exceed the capacity of the democratically-controlled budget process . . . or they may overwhelm a management negotiator not constrained by ordinary 'profit' motivations."

The essence of the District's asserted interest is that it needs to exercise prospective control over the vigor with which its non-certificated employees will be represented at the bargaining table. We can see in this no more than a bald assertion that it will lead to too much labor unrest if public employees are permitted to exercise their first amendment rights. We rejected such a contention with regard to public employees covered by the Public Employment Relations Act, State v. Petersburg, supra, and we reject the contention here. To construe the School District's interest here as so paramount as to override the fundamental right to freely choose one's representatives, would render the latter right illusory, for it is difficult to imagine a context in which public employees could then successfully assert it.[2]

In contending that it should be permitted to constrict the Association's effectiveness as it sees fit, the School District points to the many decisions finding that public employees cannot compel collective bargaining

---

2. We note that the District has incorporated in its labor policy other means of dealing with the problems it fears a strong union will create, means which do not impinge on associational freedoms. For example, the labor policy forbids all forms of work stoppages, significantly constricts the scope of mandatory bargaining subjects, and stipulates that any agreement reached by the negotiators will only be advisory to the school board.

without statutory authority, and to those permitting restraints on the right to strike. However, those cases which uphold the aforementioned restraints take great pains to distinguish the rights in issue here.

> The right to strike, because of its more serious impact upon the public interest, is more vulnerable to regulation than the right to organize and select representatives for lawful purposes of collective bargaining which this Court has characterized as a 'fundamental right' and which, as the Court has pointed out, was recognized as such in its decisions long before it was given protection by the Labor Relations Act.

International Union Local 232 v. Wisconsin Employment Relations Board, 336 U.S. 245, 259, 93 L.Ed. 651, 666 (1948)(citations omitted). See also United Federation of Postal Clerks v. Blount, 325 F.Supp. 879, 883 (D.D.C.), aff'd mem., 404 U.S. 802, 30 L.Ed.2d 38 (1971).

As we read these decisions they posit a constitutional framework in which employees are free to organize and select an advocate, and from that guarantee of collective strength then lobby their various legislatures for particular rights in the employer/employee relationship. See, e.g., Atkins v. Charlotte, 296 F.Supp. 1068, 1077 (W.D.N.C. 1968). The virtue of that view is its consistent emphasis on freedom of action, and its antagonism to coercion. And within that perspective it does not follow at

all, that once bargaining rights are successfully secured, as in the instant case, the constitutional rights disappear.

** We affirm the superior court's judgment that the School District's policy restrictions on affiliation and choice of bargaining representative are violative of first amendment freedoms guaranteed to the non-certificated school employees.

f

Having decide that portions of the School District's labor policy are unconstitutional, we must now decide whether these may be severed, leaving the remainder of the policy intact and enforceable.

In determining questions of severability, we make two inquiries. Lynden Transport, Inc. v. State, 532 P.2d 700 (Alaska 1975). First we must determine whether the constitutional portions of the policy, standing alone, can be given legal effect. Id. at 713. The School District concedes that they can, and no further discussion is necessary.

Second, we must identify the primary purpose of the labor policy, and determine whether this purpose can be achieved with the invalid provisions stricken. Id. at 714-15. "The test . . . is whether the remaining parts are so independent and complete that it may be presumed that the

[School District] would have enacted the valid parts without regard to the invalid part." Jefferson v. State, 527 P.2d 37, 41 (Alaska 1974). It is not dispositive that the stricken portions constitute a fragment of a paragraph. Lynden Transport, supra; Speidel v. State, 460 P.2d 77 (Alaska 1969).

We find that the primary purpose of the labor policy is stated in its preamble:

> [T]he Board wishes to maintain its long tradition of fair play with its employees by enacting a policy which will set the stage for harmonious and cooperative relations between the Board and its classified employees and to protect the public by assuring orderly and uninterrupted operations of the district.

After striking only the unconstitutional restrictions of the policy, the superior court concluded that the purpose articulated in the preamble could still be fulfilled. We concur.

The policy adopted by the school board contains more than just the language authorizing collective bargaining and limiting affiliation rights. The recognition paragraph states that the association may not limit membership on the basis of race, religion, creed, sex, or marital status. It prohibits making membership in the association or payment of dues a condition of employment. It prohibits strikes or slow-downs by association members and requires

that the association assist in preventing these where possible. Beyond the recognition section, other sections of the labor policy lay down the conditions an association must meet before it will be deemed by the school board to have been authorized by the school employees to represent them. The section titled "Scope of Bargaining" narrowly limits what the association can discuss in negotiations, and prohibits negotiations on "inherent managerial policy", which includes but is not limited to

> the functions and programs of the Board, standards of services, the district budget, utilization of technology, the organizational structure of the schools and the selection and direction of personnel, including work hours, assignments, transfers, job descriptions, promotions based on merit with seniority a secondary factor, the determination of other hiring and dismissal or demotion procedures.

Other sections of the policy cover, among other things, what will happen if the parties cannot agree in negotiations, disputes procedures, and the duration of any labor agreement. All of these provisions of the labor policy apply regardless of whether the association is affiliated with a non-local organization or not.

Given the detailed nature of the labor relations policy when read as a whole, we conclude that the superior court properly found that the non-affiliation clause is severable. The primary purpose of the policy is clearly

stated in the preamble. There the school board said that it wished to preserve "harmonious relations" with its classified employees and assure smooth operation of the school district. Although the non-affiliation clause may be considered an important part of the structure the board created to achieve these goals, deleting the clause will leave virtually all of the labor policy intact. Since the school board obviously considered collective bargaining important to the maintaining of good relations with its classified employees, we cannot assume that it would not have enacted the constitutional portions, had it known that two restrictions would be found unconstitutional.

AFFIRMED.

RABINOWITZ, Justice, dissenting in part.

I am in agreement with the court's holding that those portions of the School District's labor policy which place restrictions on affiliation and choice of bargaining representative are violative of the first amendment rights of non-certificated school employees. My disagreement with the court's opinion centers on the majority's conclusion that the non-affiliation clause is severable.

In discussing presumptions of separability and inseparability in Lynden Transport, Inc. v. State, 532 P.2d 700, 711-12 (Alaska 1975), we quoted, with approval from Carter v. Carter Coal Co., 298 U.S. 238, 312, 80 L. Ed. 1160, 1189 (1936), where the Supreme Court said in part:

> Under the statutory rule, the presumption must be overcome by considerations which establish 'the clear probability that the invalid part being eliminated the legislature would not have been satisfied with what remains.'

In my view, non-affiliation is a paramount part of the structure upon which the Board's labor policy rested. Before the remainder of the policy had any applicability, the employees' organization had to meet the recognition requirement. I think it apparent that the non-affiliation clause was intended as a mandatory requirement for it embodies one of the two explicit requirements found in the recognition paragraph -- the other being proof of majority representation.

Thus, I conclude that it cannot be fairly said that the Board viewed the non-affiliation requirement as severable, "independent," or "non-essential."[1]

---

1. In short, I have concluded that the burden of proof adopted in Lynden Transport, Inc. v. State, 532 P.2d 700, 711-12 (Alaska 1975), as applied in the instant case, leads to the result that the non-affiliation clause was not severable. In reaching this conclusion, I assume arguendo that there is a statutory presumption of severability with regard to the Board's labor policy, but find that the record establishes the "clear probability" that the Board "would not have been satisfied" with the labor policy without the non-affiliation clause.

Alaska Supreme Court Decision on Scope of Negotiations Under Teacher Bargaining Law

File No. 2563

(No. 1537 - December 9, 1977)

Appeals from the Superior Court of the State of Alaska, Third Judicial District, at Kenai, No. 2470, James A. Hanson, Judge; at Anchorage, No. 2492, Victor D. Carlson, Judge; at Anchorage, No. 2563, C.J. Occhipinti, Judge.

Appearances: Allen McGrath and John R. Snodgrass, Jr., of Graham and James, Anchorage, for School Districts. John R. Strachan, Anchorage, for Education Associations.

Before: Boochever, Chief Justice, Rabinowitz, Connor, Erwin, and Burke, Justices.

CONNOR, Justice.

These cases present important questions of labor law and constitutional law concerning the collective bargaining requirements for teachers in the public schools. Two of these cases are before us because the teachers' associations (the unions) have sued school districts and boroughs (the school boards) to compel collective bargaining in good faith under AS 14.20.550. In the third, a school board seeks a declaratory judgment that certain issues are not bargainable. The school boards, while not disputing the unions' right to collective bargaining on a number of employment-related issues, contend that they should not be forced to bargain collectively on various items which they regard as affecting educational policy. Educational policy, the school boards contend, must be determined only by the public through the legislature and, by delegation, through the school boards. We will examine the more specific issues later in this opinion. They include such items as class size and the use of teacher specialists and paraprofessionals. Of the three trial courts which passed on the matter, one ruled in favor of the school boards,[1] one ruled in favor of the teachers' union,[2] and one split the various items, ruling for the board on some and the unions on other.[3]

I. Introduction

To facilitate the understanding of our more detailed legal discussion later in this opinion, we will summarize at the outset the contentions of the parties. The statutes at issue in this litigation are AS 14.20.550 and .610, which provide:

"Sec. 14.20.550. Negotiation with certificated employees. Each city, borough and regional school board, shall negotiate with its certificated employees in good faith on matters pertaining to their employment and the fulfillment of their professional duties. (§1 ch 18 SLA 1970; am §3 ch 71 SLA 1972; am §21 ch 124 SLA 1975)."

"Sec. 14.20.610. Legal responsibilities of boards. Nothing in §§550-600 of this chapter may be construed as an abrogation or delegation of the legal responsibilities, powers, and duties of the school board including its right to make final decisions on policies. (§1 ch 18 SLA 1970)."

The boards contend, using labor cases from the private sector, that the requirement of collective bargaining in good faith is a term of art in labor law. Unlike a simple "meet and confer" requirement, to negotiate in "good faith" entails a duty to make concessions. Thus, management does not have the final decisions on matters subject to good faith collective bargaining, since if management adheres

to its determined policies, it violates the law.

The school boards contend that the submission of educational policies to a good faith collective bargaining requirement would remove the final decisions on such matters from the boards, contrary to the intent of the legislature expressed in AS 14.20.610. The boards contend that to require bargaining on questions of educational policy would also contravene the Alaska Constitution, art. VII, §1, which makes education the exclusive domain of the legislature.[4] See Macauley v. Hildebrand, 491 P.2d 120 (Alaska 1971). Delegation of part of the decision making power on educational policy to labor unions is unconstitutional, they urge, because the union is a private organization, unaccountable to the public. The union can use the power for its own ends, and is under no duty to foster educational policies which are in the general public interest.

The unions argue that such delegation is perfectly proper, and that there is no delegation of decision making power inherent in a labor negotiations' requirement. They further argue that they represent professional employees, and that their participation in good faith collective bargaining labor negotiations is an attempt by the legislature to provide professional advice to school boards on the management of the schools. They assert that this is a legislative policy judgment, in no way inimical to the Alaska Constitution. Also relying on labor cases, they discount the importance of any "management prerogative" to determine educational policy under AS 14.20.610, and assert that labor's concerns with working conditions override any management prerogative as to basic policy.

The unions argue that the Alaska teachers' collective bargaining statutes are more comprehensive than those found elsewhere, and hence the scope of bargaining should be interpreted broadly. The school boards assert that the Alaska Constitution as interpreted in Macauley v. Hildebrand, supra, is more adamant than provisions in other states in placing education firmly within the legislative prerogative. Therefore, collective bargaining must yield across a wide range of issues affecting educational policy.

II. Scope of Duty to Bargain

If we were to look to the law concerning bargaining between labor unions and private employers, we would conclude that the scope of negotiable issues is broad. The law relating to the private sector has always contained, and still does contain, uncertainties. But the general trend has been to require that employers bargain in good faith on a wide range of items with respect to wages, hours, and other conditions of employment, without regard to whether the employers consider the items bargained for to be within the prerogatives of management.[5] Moreover, some cases hold that for an employer or a union to avoid being found to have bargained in bad faith, the parties must make some reasonable effort to compose their differences. While the good faith standard of collective bargaining does not compel either party to make concessions, intransigent positions, adopted in an effort to avoid any agreement, are disfavored.[6] Thus a legal determination that a matter is subject to good faith collective bargaining may narrow the policy making powers of an employer by curtailing any absolute directives on his part.

When we turn to employment in the public sector, and particularly in education, the question of what is properly bargainable is thrown into more doubt. If teachers' unions are permitted to bargain on matters of educational policy, it is conceivable that through successive contracts the autonomy of the school boards could be severely eroded, and the effective control of educational policy shifted from the school boards to the teachers' unions. Such a result could threaten the ability of elective government officials and appointive officers subject to their authority, in this case the school boards and administrators, to perform their functions in the board public interest.[7]

Recently the United States Supreme Court had occasion to comment upon the differences between collective bargaining in the public and private sectors. In Abood v. Detroit Board of Education, ___U.S.___, 52 L.Ed.2d 261, 279-80 (1977), the Court, speaking through Mr. Justice Stewart, observed:

"A public employer, unlike his private counterpart, is not guided by the profit motive and constrained by the normal operation of the market. Municipal services are typically not priced, and where they are they tend to be regarded as in some sense 'essential' and therefore are often price inelastic. Although a public employer, like a private one, will wish to keep costs down, he lacks an important discipline against agreeing to increases in labor costs that in a market system would require price increases. A public sector union is correspondently less concerned that high prices due to costly wage demands will decrease output and hence employment.

The government officials making decisions as the public 'employer' are less likely to act as a cohesive unit than are managers in private industry, in part because different levels of public authority - department managers, budgetary officials, and legislative bodies - are involved, and in part because each official may respond to a distinctive political constituency. And the ease of negotiating a final agreement with the union may be severely limited by statutory restrictions, by the need for the approval of a higher executive authority or a legislative body, or by the commitment of budgetary decisions of critical importance to others.

Finally, decision making by a public employer is above all a political process. The officials who represent the public employer are ultimately responsible to the electorate, which for this purpose can be viewed as comprising three overlapping classes of voters - taxpayers, users of particular government

services, and government employees. Through exercise of their political influence as part of the electorate, the employees have the opportunity to affect the decisions of government representatives who sit on the other side of the bargaining table. Whether these representatives accede to a union's demands will depend upon a blend of political ingredients, including community sentiment about unionism generally and the involved union in particular, the degree of taxpayer resistance, and the views of voters as to the importance of the service involved and the relation between the demands and the quality of service."

In a concurring opinion in that case Mr. Justice Powell noted the similarity between a public sector union and a conventional political party:

"The ultimate objective of a union in the public sector, like that of a political party, is to influence public decision making in accordance with the views and perceived interests of its membership. Whether a teachers' union is concerned with salaries and fringe benefits, teacher qualifications and in-service training, pupil-teacher ratios, length of the school day, student discipline, or the content of the high school curriculum, its objective is to bring school board policy and decisions into harmony with its own views. Similarly, to the extent that school board expenditures and policy are guided by decisions made by the municipal state and federal governments, the union's objective is to obtain favorable decisions - and to place persons in positions of power who will be receptive to the union's viewpoint. In these respects, the public sector union is indistinguishable from the traditional political party in this country." 52 L.Ed.2d at 298.[8]

The legislature was evidently cognizant of this concern when it enacted AS 14.20.550 and .610, stating two goals which apparently conflict. We must now proceed to interpret what we believe the legislature meant by these provisions.

The school boards initially argue that to make matters of school operation and educational policy subject to collective bargaining amounts to an unconstitutional delegation of governmental power to the unions.

While courts in an earlier era often held laws unconstitutional on the ground that they delegated legislative power to private persons or groups, e.g., Carter v. Carter Coal Co., 298 U.S. 238, 311 (1936), the trend has been to uphold such delegations, even when the power is delegated to a group with an economic interest in the decisions to be made. E.G., United States v. Rock Royal Cooperative, Inc., 307 U.S. 533, 577-78 (1939)(cooperative marketing program from agricultural products); Agricultural Prorate Comm'n v. Superior Court, 55 P.2d 495, 504-06 (Cal. 1936)(same); Potter v. New Jersey Supreme Court, 403 F. Supp. 1036, 1039-40 (D.N.J. 1975), aff'd, 546 F.2d 418 (3d Cir. 1976) (requirement that attorneys have graduated from law schools accredited by the American Bar Association). See generally, 1 K. Davis, Administrative Law Treatise §2.14 (Supp. 1970) (collecting cases). See also 1 Id. §2.15 (1958).

Furthermore, the statute merely requires the school board to negotiate with the union. It does not require the board to accept any particular proposal the union might offer. It does not require, and probably does not permit, the board to delegate to the union the sole power to make any decision. Therefore, cited cases invalidating outright grants of governmental power to private groups, e.g., Hetherington v. McHale, 329 A.2d 250 (Pa. 1974), and Bayside Timber Co. v. Bd. of Supervisors, 97 Cal. Rptr. 431 (App. 1971), are not apposite.

The cases in other states rejecting the argument that collective bargaining with teachers' unions is an unconstitutional delegation of power, all involve statutes which fairly narrowly constrict either the scope of bargainable issues, or the school boards' duty to accede to union proposals, or both. Chicago Div. of Ill. Ed. Ass'n v. Board of Ed., 222 N.E.2d 243, 251 (Ill. App. 1966); Joint School Dist. No. 8 v. Wisc. Emp. Rel. Bd., 155 N.W.2d 78, 83 (Wisc. 1967); State v. City of Laramie, 437 P.2d 295, 300 (Wyo. 1968) (firemen).

In this opinion, we similarly construe the Alaska statute. A statute defining the scope of collective bargaining as broadly as the union would have us do, might well present a more troubling constitutional question. But we find no constitutional infirmity in AS 14.20.550 and .610. The delegation of power problem still bears upon our task of statutory interpretation, however, for in interpreting the relevant statutes we will not readily assume that the legislature intended to divest the school boards of their power to determine matters of educational policy and school system management.

Courts in other jurisdictions have considered problems similar to those which we confront here. It is instructive, though not determinative, to look to the case law of other jurisdictions as an aid to interpretation.

The court in Dunellen Bd. of Education v. Dunellen Ed. Ass'n., 311 A.2d 737 (N.J. 1973), dealt with a conflict between a requirement to bargain about "terms and conditions" of employment (without further definition) and the broad managerial power over schools entrusted to local school boards. The court noted that "terms and conditions" of employment without further definition does not furnish a dispositive guideline. It held that the decision whether to consolidate chairmanships of the social studies department and English department was not a subject of mandatory bargaining. It was a matter predominately of educational policy and thereby fell within the exclusive prerogative of management.[9]

National Ed. Assn'n of Shawnee Mission, Inc. v. Board of Ed., 512 P.2d 426 (Kansas 1973), is closely analogous to the case at bar. There the teachers' association negotiated under a statute which permitted it to "participate in professional negotiation with boards of

education . . . for the purpose of establishing, maintaining, protecting or improving terms and conditions of professional service." The state constitution, like Alaska's, gave the legislature the power to provide for public schools. The negotiations reached an impasse after the board took the position that all matters, whether negotiable under the statute or not, were of a policy nature subject to unilateral change by the board and could not be incorporated into a contract, while the teachers asserted that nearly everything pertaining to school operations was negotiable.

On appeal the Kansas Supreme Court was confronted with the same problem that we are: how to frame a test which would delimit those matters which are bargainable from those which are not. The Kansas court held that salaries, vacations, and sick leave are negotiable. In so doing it pointed out that the term "policy" is not helpful, because even salaries are a matter of policy. It drew the following distinction:

"The key, as we see it, is how direct the impact of an issue is on the well-being of the individual teacher, as opposed to its effect on the operation of the school system as a whole." 512 P.2d at 435.

While the Shawnee Mission case represents a commendable attempt to balance competing claims, it does not provide a test which is useful in determining the negotiability of specific subjects. In other words, it does not provide any comforting guidance in determining how, in the last analysis, the balance should be weighed between the school boards and teachers.

Put another way, a matter is more susceptible to bargaining the more it deals with the economic interests of employees and the less it concerns professional goals and methods. Bargaining over the latter topics presents particular problems because there is less likely to be any politically organized interest group other than the union concerned with these issues. The salaries of public employees have a direct financial effect on the taxpayers; on the other hand, a question such as teacher evaluation of administrators is unlikely to have any impact sufficiently direct to be discernible by laymen. Furthermore, it is such an abstract and abstruse subject that it is unlikely that any appreciable portion of the public will either understand it or care greatly about it. In such circumstances, the risk that effective power over the governmental decision will come to rest with the union is significantly greater. Moreover, it is more likely that there will be disagreements among union members on questions of this nature than on "bread and butter" issues; the risk that minority viewpoints within the union will not be meaningfully represented in the bargaining is a real one. See Summers, supra, 83 Yale L.J. at 1181-82, 1194-95. But see Wollett, The Coming Revolution in Public School Management, 67 Mich. L. Rev. 1017 (1969) (argues that these subjects should be bargainable).

III. Specific Issues

We will now consider the Alaska situation in more detail. At the outset it appears to us that questions concerning salaries, the number of hours to be worked, and amount of leave time are all so closely connected with the economic well-being of the individual teacher that they must be held negotiable under our statutes. The troubling question is what other items are bargainable.

The various trial courts in these cases considered such items as (1) relief from non-professional chores, (2) elementary planning time, (3) paraprofessional tutors, (4) teacher specialists, (5) teacher's aides, (6) class size, (7) pupil-teacher ratio, (8) a teacher ombudsman, (9) teacher evaluation of administrators, (10) school calendar, (11) selection of instructional materials, (12) the use of secondary department heads, (13) secondary teacher preparation and planning time, and (14) teacher representation on school board advisory committees.

The testimony adduced in the trial courts does not provide us with much enlightenment as to why any of these items should fall on one side of the line or another. Realistically the two areas, i.e., (1) educational policy, and (2) matters pertaining to employment and professional duties, merge into and blend with each other at many points. Logically and semantically it is nearly impossible to assign specific items to one category and not the other. Certain examples may make this point more clearly.

In the Mat-Su case the teachers have asked for a planning period of 45 minutes "to be taken during the academic portion of the day." Were this merely a request for planning time, it might be considered negotiable. The demand that it be during the academic portion of the day, however, presents an additional complication: whether, as a matter of educational policy, elementary school children should have one teacher with them throughout the day or whether they are old enough to be taught by different people. This presents a basic educational decision. While the amount of paid time available to a teacher for preparation of lesson plans affects the teacher directly, the demand that such time be available "during the academic portion of the day" presents a policy question.

Similarly, the question of class size affects directly the amount of work a teacher must perform. But the determination of optimum class size is quite basic to school policy and management, and potentially has a substantial impact on the school district's personnel expenditures. A number of courts have found this to be clearly non-negotiable. See National Ed. Ass'n. of Shawnee Mission, Inc. v. Board of Ed., 512 P.2d 426, 435 (Kan. 1973); West Irondequoit Teachers Ass'n v. Helsby, 315 N.E.2d 775, 777-78 (N.Y. App. 1974); School Dist. of Seward Ed. Ass'n v. School Dist. of Seward, 199 N.W.2d 752, 759 (Neb. 1972); City

of Biddeford v. Biddeford Teachers Ass'n, 304 A.2d 387, 403 (Maine 1973).

An examination of the other specific items listed above yields equally indefinite answers. We are confronted, then, with a situation in which the legislature has not spoken with clarity and concerning which we possess no expertise. We can only conclude that salaries, fringe benefits, the number of hours worked, and the amount of leave time are negotiable.[10] In view of the concerns expressed on page 7-10 supra, we conclude that the other items listed on page 17 are, under the existing statutory language, non-negotiable.

It would be helpful if the legislature, through future enactments, provided more specific guidance on a number of the items which the unions seek to negotiate. Lacking that guidance, however, we cannot confidently say that the legislature intended any of these items to be bargainable. We cannot, therefore, read the statutes expansively as to the scope of what is negotiable.

As to matters which affect educational policy and are, therefore, not negotiable, we believe that there is nevertheless implicit in our statutes the intention that the school boards meet and confer with the unions. It is desirable that the boards consider teacher proposals on such questions. This will encourage teachers to give the boards the benefit of their expertise, and to make their positions known for the board's use in establishing educational policy.

One minor question remains. In the Kenai case the trial court, in construing the statutes, relied upon the privately expressed opinion, by means of a letter, of a former legislator. The legislator's opinion was not a matter of public record, subject to judicial notice, nor was it introduced in evidence. Even if it were placed in evidence, reliance upon it would be impermissible under Alaska Public Employees Ass'n v. State, 525 P.2d 12, 16 (Alaska 1974). Resort to the letter as a means of legal interpretation was, therefore, error.

AFFIRMED IN PART, REVERSED IN PART.

APPENDIX

LIST OF NEGOTIABLE
AND NON-NEGOTIABLE ITEMS

Those items which are non-negotiable are as follows:

1. Relief from Non-Professional Chores
2. Class Size and Teacher Load
3. Ombudsman
4. Evaluation of Administrators
5. Teacher Aides
6. Para-Professionals
7. FTE Formula
8. Specialists
9. Calendar

Those items which are negotiable are:

1. Recognition
2. Negotiation Procedures
3. Grievance Procedures
4. Salary Schedule Conditions
5. Salary Schedule
6. Automatic Cost of Living
7. Extra Curricular and Extra Duty
8. Extended Contract
9. Additional Educational Employment
10. Life Insurance
11. Health Insurance
12. Liability Insurance
13. Automobile Allowance
14. Tuition/In-Service Workshops
15. Reimbursement for Physical Examinations
16. Sabbatical Leave
17. Career Development
18. Administrative Leave
19. Personal Leave
20. Sick Leave and Bereavement
21. Personal and Sick Leave for Half-Time Employees
22. Unpaid Leave of Absence
23. Maternity Leave
24. Political Leave
25. Duty-Free Lunch
26. Teacher Preparation Periods
27. Monthly Planning Time
28. In-Service Days
29. Discretional Materials
30. Personnel Files
31. Teacher Transfer
32. Teacher Retention
33. Job Openings
34. Reduction of Staff
35. Teacher Contracts
36. Association Rights and Privileges
    (a) Information
    (b) Release Time for Meetings
    (c) Use of School Buildings
    (d) Use of School Equipment
    (e) Supplies
    (f) Mail Facilities
    (g) Subcontracting
    (h) Non Jeopardy
    (i) Exclusive Rights
    (j) KPEA Professional Leave
    (k) Dues Deduction/Continuing Membership
    (l) Other Deductions
    (m) Conformity to Law
    (n) School Board Agenda
    (o) Preliminary Draft of Budget
37. Agreement Print-up and Dissemination
38. Duration of Contract

N.L.R.B., 379 U.S. 203 (1964) (management decision to subcontract out the work of some employees must be bargained); International Ladies' Garment Workers Union v. N.L.R.B., 463 F.2d 907 (D.C. Cir. 1972) (decision to relocate the business to another state subject to bargaining); Royal Typewriter Co., 209 N.L.R.B. 1006, 1012 (1974) (decision to close a plant subject to bargaining). But see General Motors Corp., 191 N.L.R.B. 951 (1971), aff'd sub nom. International Union, United Auto. A. & A. Imp. Wkrs. v. N.L.R.B., 470 F.2d 422, 425 (D.C. Cir. 1972) (decision to sell part of business not bargainable).

[6]Sign and Pictorial Union Local 1175 v. N.L.R.B., 419 F.2d 726, 731 (D.C. Cir. 1969); N.L.R.B. v. General Electric Co., 418 F.2d 736, 756-62 (2d Cir. 1969), cert. denied, 397 U.S. 965 (1970); N.L.R.B. v. McLane Co., 405 F.2d 483, 484 (5th Cir. 1968); N.L.R.B. v. Reed & Prince Mfg. Co., 205 F.2d 131, 134-35 (1st Cir. 1953), cert. denied, 346 U.S. 887 (1953) ("the employer is obliged to make some reasonable effort in some direction to compose his differences with the union"; emphasis in original); Majure v. N.L.R.B., 198 F.2d 735 (5th Cir. 1952). See generally Swordlow, Freedom of Contract in Labor Law, 51 Tex. L. Rev. 1 (1972).

[7]As one commentator has noted, "what is in the best interest of the students and the community is not always in the best interests of teachers." Rand, Symposium on Teacher Bargaining: Commentary, 50 Ind. L.J. 344, 350 (1975).

[8]The holding of the majority in Abood was that a union shop or agency shop agreement for public employees, requiring all employees in the bargaining unit to make financial contributions to the union, did not violate the first amendment rights of employees who objected to the union. The same rule obtains for unions in the private sector. Although Justice Powell concurred in the majority's decision to remand the case for further proceedings, he disagreed with this constitutional holding. Unlike the majority, he felt that the differences between public and private employment compelled a holding that agency shop or union shop agreements in the public sector are forbidden by the first amendment.

See generally Rehmus, Constraints on Local Governments in Public Employee Bargaining, 67 Mich. L. Rev. 919 (1969); Shaw and Clark, The Practical Differences Between Public and Private Sector Collective Bargaining, 19 U.C.L.A. L. Rev. 867 (1972); Summers, Public Sector Bargaining: Problems of Government Decisionmaking, 44 U. Cinn. L. Rev. 669 (1975); Summers, Public Employee Bargaining: A Political Perspective, 83 Yale L.J. 1156 (1974); Wellington & Winter, The Limits of Collective Bargaining in Public Employment, 78 Yale L.J. 1107 (1969); Project, Collective Bargaining and Politics in Public Employment, 19 U.C.L.A. L. Rev. 887, 1010-51 (1972). Supp. 1036, 1039-40 (D.N.J. 1975), aff'd, 546 F.2d 418 (3d Cir. 1976) (requirement that attorneys have graduated from law schools accredited by the American Bar Association). See generally, 1 K. Davis, Administrative Law Treatise §2.14 (Supp. 1970) (collecting cases). See also 1 Id. §2.15 (1958).

[9]The teachers' unions in the case at bar argue that Dunnellen was overruled by later legislation. The statute in question dealt with only a limited aspect of bargaining; and Dunnellen has been followed by the courts despite the statutory amendment. See, e.g., Galloway Tp. Bd. of Ed. v. Galloway Tp. Ed. Ass'n, 343 A.2d 133 (N.J. Super. 1975).

Dear Representative Buchholdt

It is our understanding that House Bill 453 is scheduled for a hearing before the Health, Education & Social Services Committee, which you chair, on January 28, 1980.

H.B. 453 is very important to every non-certificated school district employee throughout the state. As we explained to you in our letter of November 1979, we strongly support legislation which would bring classified employees under the protection of the Public Employment Relations Act, which H.B. 453 does.

Thank you for scheduling a hearing for this bill. We will be closely monitoring the progress of H.B. 453 and stand ready to provide you with any information you may need.

Sincerely

TOTEM ASSOCIATION OF EDUCATIONAL
SUPPORT PERSONNEL

January 18, 1980

Representative Thelma Buchholdt, Chairperson
House Committee on Health, Education and Social Services
Pouch V
Juneau, Alaska 99811

Dear Representative Buchholdt:

Our organization has been informed that H.B. 453 is scheduled for committee hearing on January 28, 1980.

H.B. 453 is very important to our organization and to all non-certificated employees of school districts throughout the State of Alaska. Therefore we support H.B. 453 most vigorously, and urge its passage.

The intent of the legislature when the Public Employment Relations Act was enacted was to create an orderly process by which public employees could collectively resolve problems. The law provides for a problem-solving mechanism which results in acceptable agreement. The law also defines unfair labor practices and provides that mechanism for resolving such charges. Under PERA, finality to the collective bargaining process and related concerns is provided either through binding arbitration or the right to strike. Non-certificated school district employees do not have the above provisions of law available to them. Equity requires that this small group of public employees also be afforded recognition as provided by the Public Employment Relations Act.

We would like to take this opportunity to thank you for your concern in this matter. If we can assist you in gaining passage of this legislation, please so advise.

Sincerely

Iola Harris,
President

THE LEGISLATURE OF THE STATE OF ALASKA
ELEVENTH LEGISLATURE

Dear Representative:

Like most Alaska voters, I believe that a worker should not be forced to join or support a union in order to get or keep a job.

Please cast your every vote against H.B. 453 - or any other bill that would force teachers and education employees to pay a union in order to work.

I'll be very interested to hear from you on your stand concerning this issue.

Sincerely yours,

Sharon Dowell

(6) For the purposes of This Section The arbitrators shall be selected in This manner. The Teachers shall apoint one of the Panel of arbitrators. The school board shall apoint One of The arbitrators and One shall be elected From the school district boundrys on an at large basis. All Three members shall be Resedences of The district.

PROPOSED AMENDMENT TO HB 453
Offered by the Seventh Day Adventist Church

On page 1, line 17, after " . . . agreement.", insert the following:

However, agreement involving union security including an all union agreement or agency agreement must safeguard the rights of non-association employees, based on bona fide religious tenents or teachings of a church or religious body of which such employee is a member. Such employee must pay an amount of money equivalent to regular union dues and initiation fees and assessment, if any, to a non-religious, non-union charity mutually agreed upon by the employee affected and the representative of the employee's bargaining organization to which such employee would otherwise pay dues. The employee shall furnish written proof that this has been done.

TESTIMONY OF LORI SEARS, NEA-ALASKA BEFORE THE JOINT MEETING OF THE HESS COMMITTEE - April 7, 1979

Working Conditions for Teachers

As a result of the narrow view School Boards are taking on items that are negotiable and the 1977 Supreme Court decision, we are seeking the inclusion of working conditions as negotiable items between teachers and their school boards.

The recent DOE Task Force report on Regional High Schools cited the high teacher turnover, among other things, as an interruption in the educational process of rural children. We believe that that high turnover, in part, is due to teachers not being properly informed of the demands placed upon them that are beyond the normal duties of a classroom teacher.

Many accept a teaching position and then discover their duties include additional non-instructional duties that have not been spelled out in the teaching contract or the negotiated agreement. Some of the activities required of teachers by districts are:

- Repair and maintain the school's generators
- Be present at all Community School Committee meetings, Parent advisory meetings for: Indian Education, Johnson O'Malley, Title I and Special Ed
- Supervise and handle paperwork (tends to be massive) for: janitors, cooks, and aides
- Supervise lunch hours
- Provide/supervise community recreation and/or activities like: town movies, dances, PE activities in the gym
- Emergency repairs to schools (if the roof leaks, fix it)
- Haul freight to school from airport or river

In our urban areas, the greatest working condition is the number of students one is required to teach without regard for the type of student who is to be instructed. With mainstreaming of the exceptional child being an intregal part of our classrooms, teachers are finding classloads to be excessive when three or four severely handicapped youngsters are placed in already crowded classrooms. We support the education of all exceptional children in the least restrictive environment, but we do not feel proper attention has been given to the problems the classroom teacher faces when mainstreaming is done without regard to class size.
