In the past, and it looks like again in the future, the problem will be in handling the fish. The land base processors have never been able to handle the run regardless of the size. There are too many boats at present and another 560 wouldn't even make sense.

I wish I could go into one of the major problems which is Japanese involvement in American processing and marketing of our Salmon, But that will come in the future.

It is important that you look to the future when the cycles are down and weigh the impact of 30% more permits in the Bay. It would really be a disaster!

I appreciate you taking the time to read this letter and hope you will consider the viewsof the fishermen when making your decision on Bill HB 665.

Yours Truly,

Nick Aliotti

ALVIN Osterback

I'm writing in regard to HB665 first of all I'm strongly opposed to any more gear. There has been more than enough time to apply for permits when they were being issued. It seems to me the real issue is high prices for permits if they weren't transferable about half the applicants would drop out & the fact of a couple good years seems to attract the other half. If in fact they were fishermen they would of made sure they applied when the rest of us did.

I fished Bristol Bay in 1972 the year used to base the amount of gear. what my question is where are all the boats coming from.

it seems every year theres more boats. I know for a fact theres many boats fishing with out perm.ts each year. it seems to me the law could be inforced instead of continuing to add more gear.

with the prices looking bad this year and maybe many years to come because of Japanese control and added gear I for one might a new boat last season and many more people with much larger investments than mine I just wonder how were gonna pay for our investments.

I would support Non-transferrable permits except to the immediate family I would certainly want to be able to give my sons my permit when I quit fishing.

thank you

Dennis Brown

Representative Alvin Odlerbeck

Dear Sir

as a 43 yr. Resident and 15 yr Cook Inlet Salmon fisherman I Respectfully Request you do Not Support H.B. 665.

I believe anyone who did Not apply with all previous opportunities has little Grounds to apply Now & know in the case of Cook Inlet we do Not Need any More Gear in the water to further reduce our already Severely restricted fishing time. add to that the dismal forecast both for runs and price in the Inlet & hope you can see why I feel as I do

Sincerely

Lionel S. Hardenson

March 27, 1980

Mr. Alvin Osterbeck;

Please do not vote for the increase in Limited Entry permits. An increase would cut fishing time and decrease the value of permits. There are plenty of permits issued already.

Thank youkindly,

Sincerely,

Clyde Smith

Juneau, Alaska 99811

Dear Alvin,

I am writing to you in regard to HB665 which allows late filing for limited entry permits.

In my opinion, all of the salmon fisheries of Alaska are troubled by too much gear. This has been a problem since statehood and before.

Since retiring from ADF&G, I spent the '77 season on a skiff in S.E. Alaska and the last 2 on a power troller. There are a lot of boats, more than enough to harvest the fish, in both of these fisheries.

I urge you not to support this bill. More gear will mean less fishing time for all.

Sincerely,
Stan Swanson

4-4-80

Representative Alvin Osterbach
Pouch V
Juneau, Ak.

Dear Mr. Osterbach,

I am writing to you about the bill #2663. I understand this will allow more people to file for limited entry permits.

As a powertroller in Southeast Alaska, I am concerned. Naturally I would not like to see many more permits in our fishery. We are already loosing fishing time yearly the way it is.

I hope you will fully consider the disadvantages and harm this bill will cause as well as the benefits.

Thank you,

Murray R. Hayes
Box C 8471
Ketchikan, Ak

April 2, 1980

Representative Alvin Osterback
Pouch V
Juneau, Alaska 99811

Dear Sir:

I am writing this letter in regard to HB665, "The late filer bill."

There is already plenty of fishing gear in most of our fisheries. Anything that would increase the amount of gear would result in a loss of fishing time.

On the surface it may look as if todays fishermen are getting rich, while in reality expenses are extremely high and most fishermen have very large mortgage and interest payments to make.

The market for salmon doesn't look very good at the present time. I'm sure that we are facing a sizable reduction in price.

With the above mentioned points in mind I am opposed to any legislation that would increase the amount of gear in Alaska waters.

Thank's for your consideration in this matter.

Sincerely,

Kenneth G. Tator

I WOULD LIKE TO VOICE MY STRONG OPPOSITION TO HOUSE BILL 665. WITH TH
E
PROJECTION FOR VERY LOW PRICES THIS YEAR, COUPLED WITH THE MARKETING
PROBLEMS ASSOCIATED WITH SALMON PRODUCTS AND A GENERAL EXCESS SUPPLY,
I FIND IT DIFFICULT TO ACCEPT ANOTHER APPLICATION PERIOD. THIS IS
DOUBLY TRUE WHEN YOU CONSIDR THAT THERE HAVE BEEN TWO PREVIOUS
APPLICATION PERIODS TO ENABLE INDIVIDUALS TO APPLY THAT HAD FAILED TO
DO SO. INSTEAD, I PROPOSE THAT A SYSTEM OF "USE YOUR PERMIT OR LOSE
IT" WOULD BE FAR MORE APPROPRIATE. THIS SYSTEM WOULD ENABLE OTHER
FISHERMEN TO ENTER THE FISHERY AND NOT DESTROY THE VALUE I HAVE PAID
TO ACQUIRE MY PERMIT BY FURTHER SATURATING THE FISHERIES WITH EXCESS
GEAR.

THANK YOU FOR YOUR CONSIDERATION.

Bert Nagel
Box 843
Petersburg, Alaska 99833

Representative Alvin Ostrchack

I wish to express my opposition to H.R. 665. The passage of this bill would threaten the economic viability of many current permit holders as well as put additional stress on fishery resources and their management.

I'm a Bristol Bay permit holder. Last year was a good season: the price was right and the fish were there. This year, however, things aren't quite so rosy. Sure, there'll be plenty of fish but the collapse of the Japanese salmon(as well as crab and herring) market will result in my earning 40 or 50 percent of what I did in 1979. Still, if I'm lucky, if none of my equipment breaks down, if the canneries don't put me on a catch quote, and if the fish pattern predictions are correct, I might make a living from the coming season, not much more.

One must not loose sight of the forest for the trees; one must look beyond a sequential year or two to measure the viability of any given fishery whether it be in Bristol Bay or Southeast. The Bristol Bay fishery is a cyclic boom and bust phenomenon which tends to repeat itself in 5 year intervals: one good year, [illegible] and three poor ones. On the good season, perhaps with the help of the mediocre year, the fisherman is expected to earn enough money to finance his operations over a five year period. From this vantage the [illegible] of the wealthy Bristol Bay fisherman quickly evaporates.

Allowing more people into the fishery would hurt on the good years but on the bad ones, on the ones when the fishermen get by on the skin of their teeth, the increased competition would be financially ruinous for many current permit holders.

Further, this bill is unsound from the standpoint of resource management and threatens to exacerbate the quality control problems now facing the industry. Better prepared this year than in 1979, the processors still admit that the fishermen can catch more fish than they will be able to handle. If the current permit holders can readily supply all the fish that can be processed and more, to add more fishermen to the fleet would only increase the harvesting of fish which would ultimately go to waste and rot. Such practices are ecologically criminal

I encourage you to vote no on H.R. 665; my vote goes to the man who does so.

Thank You,

B. Nagel

Bert Nagel

Dear Representative Alvin Osterbeck:

Regarding Bill HB665 to establish new application permits.

As you well know how things are this year, especially with a big run predicted, and we are looking at a dismal price projections for this coming year.

I understand considerable processors are cutting down on boats and many do not have a market. Also, the processors are using it as a wedge to keep prices down. Just imagine how many will suffer - also, by having less fishing time in future lean years.

Many of us have gone over our heads in debt by purchasing new boats and gear, as you will see in the bay this year. I know of two who purchased new boats and have no market.

Whoever did not apply for permits had two chances to do so in the past. They had equal opportunities.

Furthermore, I do not see where the Alaska Legislature should tell us how much we should ask for selling our business, because that's what it is - A BUSINESS!

Sincerely,

Juneau, Alaska 99801

Dear Sir:

I just received a letter from you folks and must say I'm appalled to think that legislation is trying to increase the entry permits.

I fought for limited entry knowing that someday I would have to pay for the privilege of making a living in Alaska and the entry program was necessary to help insure that living.

I feel I was cheated once in the beginning by having to serve two years in the military, one in Vietnam. I did this at the time with no reservations because I believed we were in a just war only to find out it was not. Those two years could have meant a free permit for me. I came home to no job but was "lucky" to have landed a job later on a fishing vessel in Southeast Alaska.

After that year, I had the fishing fever and still have. I spent eight years in the fishing industry and then decided to venture into my own business of gillnetting. I sold literally everything I had including home, vehicles and almost all personal effects that I had collected so as I could fish. I competed with almost 300 gillnetters (Free Pt.) for most of the year in an area that would support only half that number. After paying all depts, I was left with nothing which I accepted as dues especially for my first year of skippering.

Now I am being told that we stand a good chance of losing what we have because of a group of people who feel they deserve the right to fish. Where were they when limited entry began? I was working my rear off trying to get the money to operate a business and now I may lose what I have.

I don't understand why these special interest groups may get something for little or nothing, for something I paid for dearly and am still paying for. When will fare play mean something. What will happen to the fishermen in the end, the little guy who sweated blood for his opportunity to make a living. I've always been an optimist in my work - but find little to be optimistic about now.

I would like to donate money sincerely but I'm so broke that I'm having a tough time getting even enough money to start the fishing season.

Respectfully yours,

Representative Alvin Ostenback

April-9-1980

Dear Mr. Ostenback

May I have a moment of your time please to point up a few items of interest to consider before voting on HB-665.

By way of introduction, I am a resident of Auke Bay, Alaska and engaged in commercial fishing not part time but year around.

Limited Entry is here. You helped put it into effect. The year after its startup we were asked to prove we really wanted this program in its entirety. The choice was made. We wanted it to work just as it had been designed to do, limit the amount of gear in proportion to available stocks in each fishery.

As can be seen by the last several years fishery returns through Limited Entry, the control of amount of gear, is working. Our returning runs are building.

Bristol Bay this year will be a bonanza Remember Several years back, these fishermen were asking the state for financial disaster aid, because of poor returns.

Happy days were on the way up.

Since we now know that a plus has been made with the Entry program, lets look at that program further.

Reflecting then on these facts, how can we possibly think of undermining a good working program, Limited Entry. Devastating and far reaching results will follow if we allow this bill, HB-665 into law. Bill after Bill will be introduced for each one who has a special interest.

The Limited Entry program was voted on by <u>all of us</u>, it passed the test. Let us not now start tearing it down. Let us instead strengthen that program to help build those runs in each fishery. Above all make it work as it was intended to - by controlling the amount of gear in the fisheries.

Thank you -

Eugene K. Holmstrand
Box 373

APRIL 1, 1980

DEAR REP. OSTERBACK,

IN A YEAR WHEN THE PRICE OF FISH COULD BE HALF, THE COST OF FUEL DOUBLE, AND THE HEALTH OF MOST OF THE SALMON FISHERIES IS IN QUESTION, I FIND IT HARD TO BELIEVE THAT OUR LEGISLATURE IS CONSIDERING ISSUING MORE PERMITS. I REFER YOU TO HB 666, THE "LATE FILER" BILL PROPOSED BY NELS ANDERSON. THE PROBLEMS THAT WOULD ARISE IF SUCH A BILL WERE PASSED WOULD BE DEVISTATING AND FAR REACHING. JUST THE PROVING OF QUALIFICATIONS SEEMS AN IMPOSSIBLE TASK FOR EVEN INCOME TAX RECORDS ARE NOT AVAILABLE AFTER THIS LENGTH OF TIME. THEN TOO, CONSIDER BRISTOL BAY SET NET PERMITS WERE ISSUED AT "0" POINTS. YOU JUST HAD TO HAVE FISHED TO QUALIFY. THE NUMBERS OF PERMITS ISSUED WOULD HAVE NO BEARING ON WHETHER THAT PARTICULAR FISHERY COULD HANDLE THAT AMOUNT OF EXTRA GEAR.

IT SEEMS TO ME THAT ONE OF THE REASONS THIS TYPE OF LEGISLATION HAS BEEN INTRODUCED IS TO APPEASE THE PUBLIC BY ALLOWING MORE PERMITS TO BE ISSUED. IN THE LIMITED ENTRY BILL, PROVISIONS FOR JUST THAT HAVE ALREADY BEEN MADE. IF SUFFICIENT RECOVERY OF A FISHERY WARRENTS ADDITIONAL PERMIT MAY BE ISSUED. THE CRITERIA

MUST BE ESTABLISHED AS TO WHAT CONSTITUTES A RECOVERED FISHERY. BOTH BIOLOGICAL AND ECONOMICAL FACTORS HAVE TO BE CONSIDERED. AT PRESENT, THESE NEW-ISSUE PERMITS WOULD BE AUCTIONED OFF TO THE HIGHEST BIDDER. THIS STILL DOESN'T ADDRESS THE PROBLEM OF MAKING THESE PERMITS MORE AVAILABLE TO THE AVERAGE PERSON INTERESTED IN GETTING INTO THE FISHERY. I FEEL AN APPRENTICESHIP PROGRAM ALONG WITH A TARGETED LOAN PROGRAM COULD HELP SATISFY THIS NEED. "LATE FILERS" COULD APPLY FOR AN APPRENTICESHIP AND BE RANKED HIGH. FOR NAUTICAL AND FISHING EXPERIENCE WOULD BE IMPORTANT QUALIFICATIONS.

I URGE YOU TO CONSIDER THIS SERIOUSLY BEFORE A VOTE IS TAKEN ON HB 665.

SINCERELY,

Kerry J. Becker

NUKE BAY, ALASKA 99821

3/31/80

Representative Alvin Osterbeck
Juneau, Alaska

Dear Mr. Osterbeck,

I am writing to protest against passage of Bill HB 665, now before the state Legislature. Passage of this bill would undermine limited entry by allowing a flood of new permits into fisheries that are already overloaded with gear, suffering from reduced fishing time and facing a depressed market in 1980.

As a permit holding fisherman in Bristol Bay I am not looking for an unfair advantage - just some consistency and stability within the system.

Please give limited entry a chance to work by voting against HB665.

Sincerely,
David Goth
South Naknek,
Alaska

3-3-80

Dear Representative Osterback:

I am writing to you regarding HB 665 which would allow a large number of limited entry permits to enter into an already overcrowded fishery. I for one know because I have not been able to fish the Copper River Flats for the last two years and it looks like the same story this year. This is directly related to the amount of gear in that fishery. I know the Bristol Bay area produces a big year but they have been known to have some real lean ones too. Before gear must help that situation. Before we keep allowing more gear to come in. Let's see how this current limited entry works out. Before half of these recent applicants did not care about fishing, until the permit price went up, now everyone and their uncle wants to play fisherman. I really think we

some folks who missed out on permits that should be fishing today but there is already too many people in the zone already. Because of the value of their permit, it forces them to stay and fish harder. Next step is, the powers that be will start cutting down our fishing time, length of gear and the heart and spirit of the Alaskan fishermen who was out there long before limited entry came around. We need a break, we are all not getting big checks like many are led to believe. At this time I ask that you vote against allowing any significant amount of gear into the fisheries

Thankyou very much.

Registered 16 years Tom Keenan

Fisherman 14 years 2716 LORE RD.

ANCHORAGE AK 99507

P.S. Would you please discuss this with the other representatives or it is tough to contact each and everyone of them Thankyou

HB665

April 1, 1980

The Honorable Alvin Osterback
House of Representatives
Pouch V

RE: H B 665

Dear Mr. Osterback:

As the holder of entry permit S03A 56637K, I would like to express my objection to any change in limited entry laws that would materially increase the number of permits.

I am in the process of moving to Petersburg, and, of investing well over $100,000 in the salmon fishery. This investment could not be justified if it were not for limited entry.

While regulation of the catch maintains the resource, limited entry maintains a viable and efficient harvesting industry.

Last year's excesses in Bristol Bay did not reflect a deficiency in harvesting capability. Rather, they demonstrated deficiencies in transportation and processing of the catch. More gear in the fishery would only have aggravated the problems.

Poor price expectations for 1980, in part, reflect a glut of relatively poor quality fish processed in 1979. Accordingly, you might do well to emphasize quality assurance programs to protect this vital aspect of the industry.

Very truly yours,

R. W. Isett

Palatine, Illinois 60067

HB665

April 8, 1980

Dear Representative, A. Osterback:

I respectfully urge you to vote against bill HB665, known as the "late filer bill". This bill presently before the legislature, if passed would create 560 new drift permits in the Bristol Bay drift fishery alone.

On the surface this bill looks good, in that it would create over 1200 new jobs in the Bristol Bay area alone, while increasing state revenues from license fees and income taxes. This bill would be god sent if the salmon runs are good every year. Unfortunately, this is not so. Lets look back to 1972, 1973 and 1974. In these years over 95% of the fishermen lost money in this area. In 1972, for example, 200 to 300 fishermen went home early on the verge of bankruptcy. (Please review the reprint of Anchorage Daily News enclosed.)

Presently, the companies operating in the Bristol Bay area cannot process the fish fast enough to keep up with the fishermen we now have fishing in these waters. When this happens, the fishermen are put on limit or are told not to deliver fish until they can catch up. What would happen if we had 560 new permits?

I would urge the state of Alaska to attract mor companies to process the fish that are caught before we can think of adding more permits.

Very truly yours,

E. S. Bertelsen

E. S. Bertelsen

HB 665

Representative Alvin Osterback

We, the undersigned, wish to protest HB-665 (the Late Filer Bill, which will grant approximately 500 additional permits for Bristol Bay alone). We feel that there are more than enough units of gear already fishing in Bristol Bay. Also, there are over one hundred sixty-five (165) known fishermen without markets at present.

We also feel that this bill would benefit more outside fishermen than residents, because the ratio of present drift permits is much higher for outside fishermen. With the present number of permits, the fishermen can catch all the fish that the processors can handle on good years, and on poor years we are on the beach because of too many fisherman for the fish available.

If this Bill is passed, 500 additional permits would put everyone in the fishery on a poverty level in the poorer cycle years, which is 3 out of 5.

MEMORANDUM State of Alaska

TO: The Honorable Nels Anderson
Majority Leader
House of Representatives

DATE: February 25, 1980

FILE NO:

TELEPHONE NO:

FROM: The Commercial Fisheries Entry Commission

SUBJECT: HB 665: Additional Application Period for Limited Entry Permits

SUMMARY

Based upon data reflecting participation of gear licensees during the years 1969 to 1974, the Commission staff has determined that there are approximately 4,144 known eligible individuals who failed to file a timely application during the application periods for the 19 fisheries originally placed under limitation. An unknown number of fishermen who operated gear from 1960-68 were also eligible to apply.

There were 602 individuals known to be eligible to apply in the Arctic-Yukon-Kuskokwim (AYK) fisheries who did not file timely applications. Those 6 fisheries were limited in 1976 based upon fishing histories in the years 1970 through 1975.

Of the number who failed to file timely applications during the various application periods, 393 submitted late applications for the original 19 fisheries, and 69 submitted late applications for the AYK fisheries. These applications were ot accepted by the Commission.

Of the non-filers described above for the original 19 fisheries, 442 had pre-printed point totals at or above the current issuance levels for entry permits. In the AYK fisheries, 28 non-filers had pre-printed points at or above the issuance level.

The possible impacts of a new application period on selected fisheries is reflected by an analysis of the known non-filers in the Bristol Bay drift gill net and Kuskokwim gill net fisheries. We have estimated the probability of successfully verifying sufficient points to award a permit for all known non-filers with pre-printed histories. That analysis indicated a probability of 551[1] new permits being issued in the Bristol Bay drift fishery and 50[2] in the Kuskokwim fishery.

[1] 4 additional permits would be issued to non-filers with pre-printed points at or above the issuance level.

[2] 12 additional permits would be issued to non-filers with pre-printed points at or above the issuance level.

In determining the feasibility of providing a new application period we believe it is not possible or advisable to limit the affected class to less than all eligible applicants as defined in present law.

A large number of additional permits would likely have adverse effects on the economic health and stability of the fisheries, increase management burdens, be expensive for the State, and would cause considerable administrative burden. The precedential effect on future fisheries placed under limitation is of concern to us and the question of whether or not the new application period would affect limited herring fisheries should be considered. Also, it was impossible to determine the number of additional individuals who may be eligible to apply based upon participation from 1960 to 1968. Every eligible applicant would have an excellent chance of being awarded a permit in many of the set gill net fisheries.

Should the Legislature decide to provide a new application period, the Commission offers the following suggestions for consideration as possible statutory provisions:

1. permits be issued only to those who can demonstrate they would suffer significant economic hardship by exclusion from the fishery;
2. the new class of permits would be non-transferable;
3. evaluat on of the new applications be stayed until the original application process has been completed;
4. the new permits would be usable onl, in years when the predicted returns are higher than the average for the particular fisheries;
5. prohibit the award of multiple permits to the same applicant;
6. provide for permits awarded via point-pooling be non-transferable;
7. applicants under the new application period would not be eligible for interim-use permits pending the outcome of point verification;
8. provide that estates not be eligible to apply; and
9. provide that each provision of the new legislation be non-severable from the rest.

HISTORY

Nineteen (19) salmon fisheries were the first fisheries subject to entry limitation. They included all net fisheries (except those in the AYK region) and the statewide power troll fishery. After establishing a maximum number for each fishery, an application period began in November 1974 and ended in April 1975. Persons with known participation as gear licensees from 1969 to 1972 were sent "yellow cards" indicating that they were eligible to apply for permits and could use a detachable portion of the yellow card to request a pre-printed application from the Commission. Yellow cards were also made generally available throughout the State. Upon receipt of a yellow card, the Commission would print information about the applicant and as many points as could be determined from state records on an application form. (Points were pre-printed in the categories of past participation and consistent participation in 1969 through 1972, residency, and vessel ownership. No income dependence points were pre-printed.) These pre-printed applications were sent to the requestors at the addresses provided on the returned portions of the yellow cards. Any interested person could also obtain a blank application in any of the numerous locations around the state.

In 1976, the Commission brought under limitation the six salmon fisheries of the AYK region. All known eligible applicants, based upon participation data from 1970 through 1975, were mailed pre-printed applications at their last known address. The application period for these fisheries ran from March 10 to June 10, 1976.

Isakson

A Supreme Court ruling allowed those persons who were licensed gear operators for the first time in 1973 and 1974 to apply for entry permits in the original 19 fisheries. This so-called Isakson application period ran from January through September of 1977. People who had recorded landings as gear licensees during this period and who did not have recorded participation in the period 1969 to 1972 were sent application packets.

Non-Filers

Utilizing the computerized records of fishing histories from 1969-74 for the original 19 limited salmon fisheries and 1970-75 records for the AYK salmon fisheries, and the various application files of the Commission, we have estimated that at least 4,785 additional eligible applications could have been timely submitted in all salmon fisheries limited through 1976. A more detailed analysis follows:

Original 19

Commission records indicate that 4,142 applications could have been submitted by fishermen with fishing histories in the years 1969-74. Of that total, 442 have pre-printed point totals at or above the issuance levels for the various fisheries. The Commission also received requests for pre-printed applications from 1,817 people

without a history of participation during that time period. A more detailed breakdown of the status of various non-applicants follows:

1. 511 pre-printed applications were mailed to eligible applicants at their request, but were not returned to the Commission;

2. 2,306 known eligible applicants with fishing history during the period 1969-72 did not contact the Commission;

3. 934 persons who may have been eligible to apply during the Isakson application period did not return applications that were mailed to their last known addresses;

4. 181 applications with pre-printed points were returned late and were not accepted;

5. 279 applications were received late and not accepted from individuals for which the Commission had no computerized history of participation;

6. 1,817 individuals without computerized histories requested applications but did not return them;

7. 574 AYK applications were mailed with pre-printed history but were not returned to the Commission.

Bristol Bay Drift Gill Net

We have completed a probability analysis for the Bristol Bay drift gill net fishery to estimate how many eligible applicants that have pre-printed point totals below the issuance level for that fishery (17 points) might eventually verify sufficient points to receive a permit if a new application period was established. This was accomplished by determining the success rate of all applicants who

submitted applications with from 0 to 16 pre-printed points. Based upon that analysis, we estimate that 551 applicants would receive permits for this fishery. This total, plus four applications with more than 16 pre-printed points, could result in an additional 555 drift permits in the Bristol Bay fishery if another application period were opened utilizing the same standards of issuance as utilized in the original application period.

AYK

In the 6 AYK fisheries, 574 pre-printed applications were not returned to the Commission. As of January 21, 1980, an additional 28 applications with pre-printed points were returned late and were not accepted. Also, 41 applications with no pre-printed history were received late.

Of the 602 unaccepted and known eligible applications, 24 have sufficient pre-printed points to automatically receive a permit at present issuance levels. An additional 11 have point totals at a level insufficient to receive a permit at present but may eventually qualify for one depending upon the outcome of adjudications and appeals.

Kuskokwim Gill Net

We have completed a probability analysis for the Kuskokwim gill net fishery in the same manner as was explained for the Bristol Bay drift gill net fishery. Besides the 12 applications which currently have pre-printed points totals above the issuance level,

we have estimated that an additional 50 applications would eventually be awarded sufficient points to receive a permit. This makes a possible total of 62 additional permits in this fishery.

SUMMARY OF LATE APPLICATION DATA BY FISHERY

(Original Nineteen Fisheries)

Fishery	Eligible[1] Requested	Eligible[2] No Request	Received Late[3] Elig.	Inelig.	Total[4]	Automatic Issue[5] Resident	Nonresident	Total[6]

(6)

[1] Applications with pre-printed points for the years 1969 through 1972 which were requested on yellow cards and mailed to the applicants, but which were not returned to the Commission.

[2] Applications with pre-printed points for the years 1969 through 1972 which were not requested by the applicants, not mailed, and for which no "blank" applications were submitted.

[3] Applications received late and not accepted by the Commission. Eligible applications are those with pre-printed history for 1969 through 1972. Ineligible applications are those with no pre-printed history. Figures through January 21, 1980.

[4] Total applications in preceding four columns.

[5] Number of permits that would be automatically issued (at current point levels) to the preceding non-filers and late applicants if they were allowed to apply in a new application period. Residency was determined by the most current address on file with the Commission, 1969-1980.

[6] Total number of permits with pre-printed points above the current issuance levels.

SUMMARY OF LATE APPLICATION DATA BY FISHERY

(Arctic-Yukon-Kuskokwim Fisheries)

Fishery	Eligible[1] Applications Not Submitted	Eligible[2] Applications Submitted Late	Ineligible[3] Applications Submitted Late	Total[4]	Automatic[5] Issue
Upper Yukon Gill Net	18	1	6	25	0
Upper Yukon Fishwheel	20	5	14	39	0
Kuskokwim Gill Net	178	8	8	194	12
Kotzebue Gill Net	83	3	1	87	8
Lower Yukon Gill Net	191	9	7	207	6
Norton Sound Gill Net	84	2	5	91	2

[1] Mailed applications with pre-printed points for the years 1970 through 1975 which were not returned to the Commission.

[2] Applications with pre-printed points for the years 1970 through 1975 which were submitted late and not accepted.

[3] Applications with no pre-printed history which were submitted late and not accepted.

[4] Total of the preceding three columns.

[5] Total number of permits that would be automatically issued at current point levels if the applications were submitted in a new application period. Does not include the eleven applications which, if submitted, would be still pending a final decision in certain fisheries.

PROBABILITY OF PERMIT ISSUANCE TO ELIGIBLE LATE APPLICANTS
BY PRE-PRINTED POINT LEVEL FOR THE
BRISTOL BAY DRIFT GILL NET FISHERY

Pre-Printed[1] Point Level	Number[2] Awarded	Number[3] Denied	Total Number[4] Received	Percent[5] Awarded	Late and[6] Non-Applicants	Projected Awards
16	165	1	166	99.40%	9	8.95
15	89	0	89	100.00	3	3.
14	79	2	81	97.53	12	11.7
13	51	0	51	100.00	8	8.
12	46	2	48	95.84	5	4.8

2	19	22	41	46.35	80	37.1
0*	38	28	66	57.58	211	121.5
	1,030	207	1,237		846**	551

Pre-printed above issuance level: 4

TOTAL: 555

[1] Points were pre-printed based upon fishing data from 1969 through 1972 in the areas of past participation, consistent participation, residence, and vessel ownership. No points were pre-printed for the years 1960 through 1968 or income dependence and crewman participation in any year. In this fishery a very high percentage of fishermen were awarded income dependence points. (This factor, together with the 1960-1968 history, accounts for the high probability of permit issuance.)

[2] Actual number of applications awarded permanent entry permits.

[3] Actual number of applications denied permanent entry permits. This figure includes those applications still in the hearing and adjudication processes and those that were denied due to late submittal.

[4] Total number of applications received by the Commission for each point category below the present issuance level.

[5] Percent of the total applications received that were awarded permanent entry permits. This percent is the estimate of the probability of issuance of an entry permit at each point level.

[6] Number of eligible applications (with pre-printed history for the years 1969-1972) which were either not submitted or submitted late.

[7] Number of permits that would be awarded if the eligible non-applicants and late applicants submitted applications in a new application period, as projected by the probability of issuance of a permit at each point level below automatic issuance.

* Multiple Operators - more than one fisherman using the same ADF&G number. Individuals with no history other than as multiple operators were printed out at zero points.

**We believe there is a possibility of at least a 5% error in this estimate, due to an inability to verify the number of eligible non-filers using the application control log books.

PROBABILITY OF PERMIT ISSUANCE TO ELIGIBLE LATE APPLICANTS BY PRE-PRINTED POINT LEVEL FOR THE KUSKOKWIM GILL NET FISHERY

Point[1] Level	Number[2] Awarded	Number[3] Denied	Number[4] Pending	Total[5] Received	Percent[6] Awarded	Late and[7] Non-Applications	Projected[8] Awards
7[4]	6	0	1	7	86	2	1.7
6	31	6	4	41	76	21	16.0
5	86	27	10	123	70	24	16.8
4	5	5	0	10	50	7	3.5
3	15	73	30	118	13	69	9.0
2	2	21	0	23	9	26	2.3
1	1	38	0	39	3	25	.8
							50.1
						Pre-printed above issuance level:	12
						TOTAL:	62

[1] Points were pre-printed based upon fishing data from 1970 through 1975. Unlike the original nineteen fisheries, AYK fisheries points were pre-printed for all of the qualifying years.

[2] Actual number of applications awarded entry permits.

[3] Actual number of applications denied entry permits. This figure includes those applications still in the hearing and adjudication processes and those applications that were denied due to late submittal.

[4] Number of applications pending a final determination of the issuance point level in this fishery. At present, all applications with 6 or fewer points are denied, all applications with 8 or more points are awarded, and applications with 7 points are issued interim-use permits pending final determination of their eligibility for an entry permit.

[5] Total number of applications received by the Commission in each point category below the present issuance level.

[6] Percent of the total applications received that were awarded permanent entry permits. This percent is the estimate of the probability of issuance of an entry permit at each point level below automatic issuance.

[7] Number of eligible (with pre-printed history for the years 1970-1975) applications which were either not submitted or submitted late.

[8] Number of permits that would be awarded if the eligible non-applicants and late applicants submitted applications in a new application period, as projected by the probability of issuance of a permit at each point level.

EQUITY

This section will discuss several issues which bear heavily on the question of whether another application period is necessary or desirable. The Commission realizes the likely possibility that a class of fishermen may exist who, through no fault of their own, did not take full advantage of the application process because they did not comprehend the importance of the one-time-only application process, did not know that they could submit multiple applications, or were geographically located in such a place as to not hear of the implementation of limited entry. However, there is an even larger class of eligible fishermen who did not submit applications because of a conscious decision not to apply for as many reasons as there are members of this class. After several attempts to distinguish the first group from the second, the Commission is convinced that no fair and equitable way can be devised to allow a specific class of persons to apply while excluding others who are similarly situated. Additionally, we believe that use of the application process as a means of screening out otherwise eligible applicants is a misuse of the methodology utilized to limit entry into commercial fisheries. The major criteria should be the relative hardship realized by exclusion rather than who will and will not be allowed to apply.[1] Following is a discussion of several factors that will be affected by the passage of HB 665.

[1] The Commission obviously believes that the class of eligible applicants should be limited to gear operators, since they are the only class specifically addressed by the limited entry law.

Biological Impact

One of two prime considerations of entry limitation is to ease or arrest the growth of pressure of exploitation on a biological resource. At present, the salmon fisheries are subjected to greater fishing pressure than any time in recent history. This is due to the establishment of high maximum numbers, an overage of permit issuances due to court rulings, and increased individual fishing pressure through greater capital investment (resulting in higher efficiency) and increased average individual fishing time. Further issuance will increase management costs and uncertainty.

Economic Impact

The other primary consideration of entry limitation is to create an environment of economic stability which will not exist in an open entry fishery. Additional permits will increase the cost of harvesting the same number of fish (thus diminishing the value of a public resource) and could affect the value of existing permits which have been freely transfered. It should be noted that Bristol Bay has been declared a disaster area several times with the present level or fewer units of gear participating in the fishery.

Availability of Evidence

The establishment of relative hardship is accomplished by measuring several indicators in the two general areas of past participation and economic dependence, and ranking individuals by use of

a point system. Specific evidence is required to verify point claims. Valuable evidence is embodied in tax records, records of expenses, and records of gear and vessel ownership as of certain dates. Much documentary evidence that was available in 1975 at the close of the original application period will now no longer be available. Federal and State tax records for the crucial years of 1971 and 1972 have been destroyed or are in the process of being destroyed by the responsible government agencies.

Consequently the Commission would have to accept less conclusive evidence to treat new applicants in a manner similar to the original applicants, which would have the concomitant disadvantage of subjecting the system to more frequent occurrences of fraudulent claims. Should this indeed prove necessary, we believe that the estimate of an additional 555 permits in the Bristol Bay drift gill net fishery is realistically possible.

Low Issuance Levels

A number of set gill net fisheries had original permits issued at either very low point levels, or zero points in the cases of the Bristol Bay and Prince William Sound set net fisheries and the Kodiak beach seine fishery. If a new application period is established, these fisheries could realize phenomenal increases in effort now that there is general knowledge of the value of entry permits. The situation is exacerbated by the large, unknown number of fishermen who participated prior to 1969 and who did not submit original applications

because they had departed from the fisheries. It is safe to assume that a great number of those individuals would take advantage of a new application period.

Legal Issues

The Commission has defended in court both the notice provided of the application periods and the efficacy of the application assistance programs. In all three Superior Court rulings, the Commission efforts have been upheld. If the Legislature suggests that the necessity of the new application period is due to the failure of the Commission to fulfill its responsibility to supply adequate notice or assistance, it would destroy a precedent that we believe the Commission needs to preserve.

As presently drawn, the bill would allow the estates of all eligible applicants who have died since January 1, 1973 to apply during the new application process. Additionally, the passage of HB 290 provided for point pooling and would allow additional permits to be issued as a result of combining points from new and timely applications.

Expense

Another application process would cost a substantial amount for the Commission to administer, especially considering the great interest in the program at this time, and because of the high hearing rate that can be expected in response to the loss of otherwise verifying evidence.

600 Applications Still Pending

Another application period at this time could cause additional expense and uncertainty for those applicants from the original application period who are still awaiting a final decision from the Commission. At the least, we would hope that their interests would be provided for before giving special consideration to a new class of applicants who had the same application opportunities as the original applicants.

Late Application Handling

We have reviewed Commission records of late application handling at the close of the original application periods. After the regulatorily established deadlines, the Commission provided for a period when applications could be accepted for good cause. The Commission was very lenient in accepting applications during this period. There was a changing policy, however, if applications were received after the good cause period. After the original good cause period which ended in 1975, the Commission first responded to late applicants by saying that they had "no discretion" to accept late applications. Later, some applications were accepted through special showings. Most recently, we have utilized a two-part test to determine whether or not late applications should be accepted. Hence, all late applicants were not treated equally. This will be true of any quasi-judicial agency, however, just as a court of law develops new precedents in time.

Unequal Opportunity

Even though it would seem that late applicants might generally have the same opportunity as the original applicants, they would generally have an advantage over many of the original applicants. As the Commission has progressed through several hundred adjudications, and the courts have overturned some Commission regulations and interpretations, new rules have developed. Points that would not have been awarded under the original application program would now be available to new applicants. So long as the benefits of the new rules only accrued to a few, it did not dramatically affect the equities of the situation. However, a whole new class of applicants would all benefit from the new rules, to the comparative disadvantage of those who submitted timely applications and were denied permits.

One-Time-Only

While we may all wish to believe that giving everyone one more chance would provide for the ultimate fairness, it most probably would not be a one-time-only demand for such a second chance. Already, roe herring fisheries have been limited and some eligible fishermen missed the application deadline. Would this new application period apply to those individuals as well?

We also worry about the precedential considerations for all fisheries limited in the future. Will, or should, the fishing public expect the Legislature to provide one more opportunity to apply after each fishery is limited? It is clear that the greatest number of late and

non-applicants will be associated with the original salmon fisheries that were limited. As long as the present system is utilized, there will be some fishermen who do not file timely applications in the future when additional f sheries are limited. You may wish to reevaluate the use and necessity of the present application process to ameliorate future application deadline problems.

FURTHER CONSIDERATION

Should the Legislature decide that the equities lie with establishing a new application period, then we offer the following suggestions for your consideration to mitigate the possible negative impacts of such a decision.

Non-Transferrable Permits

Many fishermen advise the Commission that if they could get a permit they would not sell it, but only want to fish until retirement. If this attitude is embodied in the minds of those who would be served by the new application period, then non-transferrable permits would not be seen as detrimental. Additionally, non-transferrable permits would not interfere with the present system of free transfer of permits.

Should you wish to pursue this point in more detail, you might also consider providing a mechanism for the Commission to reissue these non-transferrable permits based upon some hardship ranking system, or simply to have them retire with the holder.

Should the Legislature decide that these permits are to be freely transferable, then you may wish to consider some way to recover for the State some portion of the windfall benefit which is being given to the late applicants.

Different Issuance Standards

The Commission believes that many fisheries would be drastically harmed if a new application period were established utilizing the same

standards of issuance as used in the original application periods. We feel it is imperative to raise the standards of issuance for this class of applicants.

AS 16.43.250(b) provides for the establishment of a class of persons who would suffer significant economic hardship if excluded from the fishery, and AS 16.43.270(a) directs the Commission to issue permits to every applicant in this class regardless of whether that would require issuing more than the maximum number established for a fishery. You may wish to consider requiring that a new applicant, in order to qualify for a permit, must meet the standards established by the Commission in implementing AS 16.43.250(b).

New Applications Considered After Final Classification of Original Applications

To ensure fair treatment for those applicants still awaiting final agency action on their applications, we request that you provide for evaluation of the new applications only after final evaluation of the timely submitted applications.

Special Use Standards

In addition to providing for non-transferable permits as suggested above, you may wish to consider limiting the use of permits issued under the new application period. One example would be to provide for the Commission, in conjunction with the Department of Fish and Game, to allow these permits to be fished in years when conditions are better than average for a particular fishery.

Prohibition of Awards of Multiple Permits

If it is the Legislature's intent to alleviate hardship with the passage of this legislation, you may wish to consider prohibiting the award of a permit to an applicant who has previously received a permit by application. To receive one permit by application indicates that the applicant was at least aware of the necessity to submit a timely application. Those applicants who for some reason were constrained from applying in all fisheries for which they were eligible most likely applied in the fishery that they were most interested in.

Point Pooling

The provisions of an amendment enacted last year would allow points from these new applications to be pooled with points on any other application submitted by that fisherman so long as the same gear type was involved. If it is the Legislature's intent to allow point pooling to be applicable to applications submitted under HB 665, we suggest that you consider providing for such permits to be non-transferable.

Ineligible for Interim-Use permits Pending Final Evaluation

Present legislation provides for the Commission to allow those applicants who still have a mathematical possibility of receiving an entry permit to fish in the pendency with an interim-use permit. We have found that the durational use of these interim permits is often a primary motive for pursuing an application which will more than

likely be denied. We strongly urge that the Legislature preclude the issuance of interim permits to new applicants who are awaiting final agency action.

Estates

We suggest that you consider changing the qualification characteristics from those presently provided for in AS 16.43.260. That language would allow the estates of all eligible fishermen who have died since January 1, 1973 (for the original 19 fisheries) or January 1, 1976 (for the AYK fisheries) to apply for entry permits. This change is especially valid if you wish to implement the suggestion of providing for non-transferable permits.

Non-Severability

Should you decide that some conditions be placed on any permits issued as a result of a late application period, and that those conditions are tantamount to achieving something resembling equity, then you may wish to add a non-severability clause to the conditions.

Buy-Back

It would seem quite evident that the 1973 Legislature believed that the Commission would initiate a buy-back program shortly after the salmon fisheries were limited. Now, seven years later, buy-back is still some time in the future. Should you decide to allow for additional permit issuance through a supplementary application period, we

would suggest that the Legislature consider the question of buy-back and when it might be appropriate to begin the process.

We hope that our comments are of some use. Please do not hesitate to ask if we may be of further assistance.

For an Act entitled; "An Act relating to the limitation of entry into various fisheries; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

Section 1. FINDINGS. The Legislature finds that

(1) many persons who are otherwise qualified for entry permits into certain fisheries have not received them solely because of their failure to submit an application to the Alaska Commercial Fisheries Entry Commission before the closing date for applications set by the Commission in accordance with AS 16.43.260(b);

(2) many persons whose past participation in and economic dependence upon certain fisheries, measured under AS 16.43.250 and the regulations promulgated thereunder, demonstrates that they would suffer hardship by exclusion from the fisheries, were not adequately notified of the nature of a limited entry fishery or the significance of the original application period;

(3) in order to prevent economic distress among fishermen and those dependent upon them for a livelihood, to regulate entry into the commercial fisheries without unjust discrimination, and to ensure that permits are awarded on the basis of hardship, as defined by AS 16.43.250, it is necessary to ensure that persons who were eligible for permits but who were not given adequate notice as to the nature of a limited entry fishery or the significance of the original application period are not denied permits solely because of a failure to apply in a timely fashion;

(4) the factors relevant to a determination in a given fishery as to whether adequate notice was given of the nature of a limited entry fishery and the significance of the original applfcation period are

(a) the percentage of eligible applicants who failed to timely file applications in the fishery,

(b) the average educational level of persons eligible to apply in the fishery and any cultural and language barriers to an understanding of the nature of a limited entry fishery or the significance of the application period,

(c) the communications system available during the application period to publicize limited entry and the closing date for applications, and

(d) the availability and effectiveness of outreach assistance in those areas in which such assistance would be reasonably necessary for the completion of applications;

fisheries, it is apparent that many persons were not adequately notified of the nature of a limited entry fishery and of the significance of the original application period, and that it is necessary to provide for a new application period in those fisheries in order to prevent economic distress among fishermen and those dependent upon them for a livelihood, to regulate entry into the commercial fisheries without unjust discrimination and to ensure that permits in that region are awarded on the basis of hardship as defined in AS 16.43.250;

(6) the number and percentage of eligible applicants failing to timely file applications for entry permits is significantly less in fisheries other than those in Bristol Bay, and insufficient information is available to determine the adequacy of notice in those fisheries, it is therefore necessary to establish a process for the Commission to investigate these fisheries for the purpose of making such a determination.

Section 2. PURPOSE. It is the purpose of this act to direct the Alaska Commercial Fisheries Entry Commission to accept applications for entry permits in the Bristol Bay salmon fisheries and to establish a process for determining whether adequate notice was given in the other salmon fisheries of the nature of a limited entry fishery and the significance of the original application, by reference to the factors listed in section 1 of this act, in order to prevent economic distress among fishermen and those dependent upon them for a livelihood, to regulate entry into the commercial fisheries without unjust discrimination and to ensure that permits are awarded on the basis of hardship.

Section 3 APPLICATIONS FOR ENTRY PERMITS IN BRISTOL BAY.

(a) Notwithstanding the provisions of AS 16.43.260(b), the Commission shall accept applications for entry permits for the Bristol Bay salmon fisheries from all persons who meet the eligiblity requirements of AS 16.43.260(a) but who failed to apply within the time period established by the Commission. Persons who have previously submitted applications to the Commission after the closing date but before the effective date of this Act shall be considered to have applied under this section. The application period established by this section shall open on the effective date of this act and close on December 31, 1980.

(b) The Commission shall process applications received under this Act in accordance with its regulations applicable to the fishery into which entry is sought, except that a reasonable period of time is to be afforded for the

submission of supporting evidence. Permits shall be issued to persons applying under this Act who demonstrate hardship equal or greater than that shown by persons previously issued permits in that fishery notwithstanding the fact that such issuance causes the maximum number established by the Commission under AS 16.43.230-240 to be exceeded. This section does not authorize the Commission to revoke a permit previously issued.

Section 4. APPLICATIONS FOR ENTRY PERMITS IN SALMON FISHERIES OTHER THAN BRISTOL BAY.

The Commission shall research each salmon fishery which is subject to limited entry as of January 1, 1980, for the purpose of determining whether adequate notice was given as to the nature of a limited entry fishery and the significance of the original application period, utilizing the factors set forth in section 1 of this Act. The Commission shall annually prepare a report to the Legislature recommending in which fishery a new application period should be established and the scope and extent of the application period. The Commission shall have researched all fisheries and made its recommendations pursuant to this section by January 1, 1983.

Representative Alvin Osterback
Pouch V
Juneau, Alaska 99811

Dear Alvin:

I have been trying to get my limited entry permit since 1974, when I was ill-advised by Commissioner Jay Stovall that I did not qualify. The enclosed letter is the latest sent to the Commission; it is in reply to their denial of my application. The second letter is a copy of the reason for my late application and outlines the tremendous amount of research I have accomplished while compiling data to support my claim. The third letter is one I finally received from former Commissioner Stovall after I had completed my application and had submitted it. I forwarded it onto the Commission, but was still denied a permit.

I know that I am not the only one that has fallen afoul of this bureaucratic bungle, so I am offering to share my information with you to assist other justified applicants. Please let me know if I can help clean this up; and, if you can do anything to expedite my hearing or issuance of a permit, please do.

Thank you for your attention to this matter.

Sincerely yours,

Richard H. Jensen

P. O. Box 578
Girdwood, Alaska 99587
April 17, 1980

Ms. Kathy Bailey
Application Technician
State of Alaska
Commercial Fisheries Entry Commission
Pouch KB
Juneau, Alaska 99811

Dear Ms. Bailey:

I have your letter of April 10 acknowledging the return of my check to Richard L. E. Jensen in Anchorage; also acknowledging that I am requesting an administrative hearing. In confirmation of this, I hereby resubmit my original check for $20.

The reason for this request is self-explanatory by examination of the sworn documents submitted with the application. I am entitled to a limited entry permit; and, except for the explicit ill-advice of one of the original commissioners who was engaged in traveling around the State advising and assisting groups of fishermen applicants, would have participated in the past five seasons. Without conjecture, I have been deprived of more than $300,000 income.

Instead of this participation, I have months of time and effort involved amassing proof of my claim to a right that was taken from me and immersed in a jungle of bureaucratic requirements that emerge as barrier after barrier in attempting to regain the original freedom. I will give you one example: After I first discovered the fact in late 1977 that others in like circumstances were seeking and receiving limited entry permits, I inquired of some of my friends in staff positions with Fish and Game. They admitted some knowledge of this situation, but could not tell me of the special circumstances, nor did they have limited entry applications or regulations. I talked then to some of the returning fishermen who were gearing up for the 1978 season. They confirmed the fact that the commission was issuing belated permits. I then wrote the commission; and after an exchange of letters, received an application along with regulations and instructions. This packet arrived three years, six months and 19 days after I originally contacted a commissioner in regards to acquiring same. I immediately set out to complete the application as per the instructions - line by line. Throughout the application, the emphasis is on point accumulation. The supporting data is all relevant to verifying these points. I spent months locating and digging through 24 years of business records; I spent more months going the alternate method of seeking affidavits from the best sources I knew. I still was

nowhere near the required 20 points last summer when I finally called Commissioner Ingraham. During our conversation, he casually mentioned that if I could prove fishing effort between 1960 and 1972; and in addition, provide the proof of being ill-advised by a representative of the commission, I quite likely could receive a permit; since few, if any, points were required for set net permits in Bristol Bay. "Stop, hold the phone and say that again"---he repeated the statement. I was flabbergasted! Nowhere on the application or in the instructions does it remotely indicate that the Bristol Bay set gill net fishery was so far under quota that any qualified applicant would be issued a permit. Had this been made evident, I could have submitted this application a week after I received it, e.g., August 1978.

Perhaps this frustrating example will in a slight way indicate the desire for some form of recourse.

Sincerely yours,

Richard H. Jensen

Enclosure: Personal check #1441 in amount of $20.

cc: Representatives Nils Anderson, Bill Miles and Alvin Osterback

P. O. Box 578
Girdwood, Alaska 99587
December 28, 1979

Commercial Fisheries Entry Commission
Pouch K B
Juneau, Alaska 99811

Gentlemen:

Along with my application, I submit this explanation concerning its tardiness. In late 1974, I took the responsibility for my family of staying abreast of the new limited entry law and its implementation. Therefore, this explanation is valid for Iris E. Jensen as well as Richard L. E. "Duffy" Jensen, my son, who are also applying.

In the first place, we did not receive any yellow cards put out by the Commission for requesting applications; nor did we get pre-printed applications which many fishermen received. In fact, I did not know of the information packets and application forms until several years later. My only source of information in 1974 was the newspapers, the radio and other fishermen (who were as confused as I).

However, sometime in December of 1974, I made a point of meeting with Commissioner Jay Stovall as he passed through Anchorage International Airport. We had lunch and I talked to him about getting our limited entry permits. He asked if we had fished during the 1969 through 1972 seasons. I told him "no"; and he said he was not sure, but that he thought we would not be eligible. Although he said that all the rules were not "cut and dried" as yet. As he left, I told him I would keep in touch. Meanwhile, we still received no official notice from the Commission. Which, in retrospect, indicates to me it was the Commission's opinion, at that time, that we were not eligible to fish in the Bristol Bay set net fishery. Had I received the packet, I could have read the criteria for myself. Moreover, I recall hearing via the news media reports from Juneau, that the fishing seasons of 1969 through 1972 were emerging as a critical period toward qualifying for permits; all of which supported Commissioner Stovall's original guessitimation.

Some weeks later, on January 17, 1975, to be exact, my wife and I went to Juneau for Governor Jay Hammond's inauguration. On January 19, I took advantage of the trip to visit Commissioner Stovall again and talk about our limited entry permits. We visited Jay in his home; and I explained that we wanted to continue fishing in the Bay and needed permits in order to do so. His response at that time was very positive; stating that if we had not participated in the fishery during the 1969 through 1972 season, we could not qualify for permits.

I reminded him that my son had been in Vietnam most of those years and while he was gone, I had paid our tidelands lease fees and maintained the sites and gear. He replied that leased sites would have no bearing on the issuance of a permit; he failed to mention, however, that military service would be an important factor. I was bitterly disappointed at this news and my wife and I had a lengthy discussion about the inequities of losing another of our rights which we had pioneered way back prior to statehood. She recalls my conversation with Commissioner Stovall and attests to its truthfulness by affidavit (Exhibit B1).

After this second meeting with Stovall, I resigned myself to the fact that we had been excluded from the fishery and notified my son, Duffy. Since we had known the Stovail family very well for 20 years, we had no reason to doubt his official advice--either then or now. Thus, the deadline of March 13, 1975, which I had noted on my desk calendar (Exhibit B2) came and went, as did the extended deadline of May 13, 1975. We had no applications on file; and furthermore, we did not seek an interim permit for that season since it was forecast to be a "scratch" year and we would have no permits for the following one anyway.

I never did receive anything from the Commission which gave us notice or recognized our possible eligibility for a permit, nor did I catch it in the newspaper legal notices. It was not until 1977, while I was in Bristol Bay during the fishing season, when I learned that late applications were being processed and set gill net permits were still being issued. This rekindled my interest and I talked to many of my friends who had fished with us. After some investigation, I found that many eligible applicants had missed getting permits for the same reason that I had. Specifically, they had been ill-advised by a representative of the Commission. In many cases in the Naknek/Kvichak area, this bad advice came from the agent assigned to the Bristol Bay Native Association who was designated to assist the local natives with their applications. (See Exhibit B)

By this time, Commissioner Stovall had left the Commission and I had no personal contact with him or the other commissioners; but, I talked to friends in the Department of Fish and Game about my chances of seeking a belated set net permit. They advised contacting the Commission directly, which I did on June 1978 (see Exhibit B3). I received a reply from Commissioner Garner (Exhibit B4) and after an exchange of letters (Exhibits B5, B6, B7) finally received a packet of limited entry instructions and application forms. Thus, for the first time, in July 1978, did I get a chance to see the requirements for a permit. As I read them, I realized that we had, indeed, been eligible to apply prior to the 1975 deadline; and I began wondering why we had been advised against it? What had happened to change the picture? These two questions had to be answered in order to reconcile the great difference between the written regulations and the spoken word.

I immediately set out to complete my application and compile the documentation to compute my points. The requirements were very confusing, but I learned that the Commission had scheduled a public hearing in Naknek and planned to attend it in order to get some assistance. October 12, 1978, was the hearing date; but the meeting generated more noise and confusion than information, and I left still with the impression that it took 20 points to qualify for a set net permit in Bristol Bay. One fact that emerged from the meeting that amazed me was the number of eligible fishermen who after four years did not have permits. I searched

through all of our old records diligently for supporting information, but found that most of them had been destroyed by wind and rain. Those that I found appear with the applications, however, most of the evidence is in the form of sworn affidavits. Compiling these has been a long, slow process.

Last summer, I visited the Anchorage office of Fish and Game seeking an affidavit and other information. A friend suggested a call to Commissioner Dave Ingraham. On November 28, 1979, I called the Commissioner in frustration over my application and the documentation necessary for my points. I explained my problems with the point scoring; he stopped me then, and asked two questions: No. 1 - Had we fished in Bristol Bay during the period 1960 to 1972? Upon receiving an affirmative answer, he asked question No. 2 - Had we filed a timely application, and if not, why not? I described the previous advice I had received from Commissioner Stovall on the two occasions I had talked with him in 1974 and early 1975. After my explanation, Commissioner Ingraham stated that if we were able to substantiate that one fact to the Commission, we might be granted permits, since very few points were required for set gill nets in Bristol Bay. This statement regarding the low-point requirements for Bristol Bay set nets completely surprised me, because according to inferences in the instructions, it would require a substantial point-showing to acquire any permit. Here, then, was another quandary. At any rate, Commissioner Ingraham ended by stating that if we could prove that we were, indeed, ill-advised, we quite likely could get permits.

I flew down to Bristol Bay on December 11, 1979, and spent a week talking to other fishermen about the problems they encountered while seeking their late permits. In all cases, I found confusion and outright ill-advice which had been passed out by various spokesmen for the Commission. For instance, quite a few fishermen who had first been in the set net fishery and then advanced to drift netting during the 1969-1972 period were told they could not qualify for their set net permits; although some fishermen have since received them. All of this brought back to mind the discrepancy I encountered between what I had been told as opposed to what the regulation read. There had to be an answer and I felt that I must resolve this mystery in order to satisfy the Commission that I had, indeed, been misinformed. I left the Bay with that intention.

I called Commissioner Stovall, whom still lives in Juneau and whom I have not seen in three or four years. I reminded him of the several conversations we had concerning our set net permits. He remembered the occasions, but did not remember telling me that we could not qualify. He said that in most cases, where there was any doubt, he had recommended filing anyway. That sounded like he was hedging, since his last advice to me had been a definite "no." I was again mystified and wondered if there was some kind of a conspiracy going on, or had the ground rules been changed somewhere along the way and the prudent advice changed accordingly. I think that I have established this is exactly what did happen, particularly in the case of the Bristol Bay set gill net fishery.

Several weeks after my telephone conversation with former Commissioner Stovall, I sought out Mr. Darwin Biwer who served on the Commission for four years. He joined the Commission in July 1973, three months after it was formed by legislative action. He was the state fisheries biologist until 1976, and thereafter, succeeded Allan Adasiak as Executive Director while continuing to serve as biologist

for the balance of his tenure. He told me that he had attended the preliminary hearings all over the state with Chairman Roy Rickey and other commissioners. He said that the resultant regulations and the overall point system which applies statewide were designed to fairly well screen out the non-professional fisherman who was not currently engaged in the fishery; in other words those who had not engaged in their fishery during the 1969 through 1972 seasons. And, he claims they did a pretty g f job except in Bristol Bay where there are very few professional fishermen. Here the Commission found, after the fact, that the point system allowed entry into the set gill net fishery of almost everybody who had fished during the entire qualifying period between 1960 and 1972. However, by the time this fact did emerge, the final application deadline of May 18, 1975, had long since past.

I have talked with Mr. Biwer at length on this point and he acknowledges that because of the above-misjudgement of the points required, the various representatives of the Commission could easily have ill-advised many fishermen who were, indeed, eligible to apply, that they "could not qualify," and with good conscience. He further admits that later as it became apparent to the Commission that the points required to qualify for a Bristol Bay set gill net permit were going to be very low, that a different word went out from the Commission to these fishermen.

It seems that the critical point here is found in the, quote, "those fishermen eligible to apply," unquote (all 1960 to 1972 participants); and those who, quote, 'could qualify for a permit," unquote, as deemed by the Commission (1969 to 1972 participants). In other words, it was the Commission's view that only current professional fishermen who could tally the higher points awarded for 1969-1972 participation would be able to get limited entry permits. This did not prove to be true. At that point in time, t s mistaken assumption thwarted not only us, but others as well. In our case, we received neither applications or notices from the Commission or any of the regulations. Furthermore, when we made great effort to seek out a commissioner who knew of our personal involvement in the Bristol Bay fishery, we were ill-advised that we 'did not qualify for a permit"; thus, we passed the deadline without a timely application on file. I believe that when former Commissioner Stovall is questioned about this application, and as he recalls those early days prior to implementation of the Act, he will agree that the possibility certain y existed for misinformation having been dispersed to interested applicants in the Bristol Bay set net fishery.

With this lengthy explanation, I rest my case.

Sincerely yours,

Richard H. Jensen

Girdwood, Alaska 99587

Dear Dick,

In answer to your letter of January 17, 1980, I thought I had better put some of my statements on this matter in a letter to you rather than by telephone. As you are aware, I will not be available for any Commission hearings from about March 15 to September 10. During this period I will either be in Bristol Bay or in transit to or from the Bay with the brine tender "Balena".

I do remember talking to you and discussing your Bristol Bay fishing history during your visit to Juneau for Govenor Hammond's first inauguration. At that time my personal feelings were that any one who had not fished commercialy after 1966 would stand very little, if any, chance of receiving a permit. I think that my statement to you was that "you had about the same chance as a snowball in Hell".

As we are well aware, it did not work out that way in the Bristol Bay set net fishery. Had you made application I am sure that you would have qualified for a permit, particularly in view of your owner hir of fishing equipment and the tideland lease from the State of Alaska on your set net site. At the time I left the Commission in 1977 we had not received enough applications to match the maximum number of permits to be issued in that fishery. Of more than twenty fisheries this was the only fishery where that occurred. All of the other fisheries received many more applications than there were permits to be issued.

I hope this will be of help to you and I am certainly sorry that my pessimism at the time influenced you in not making application before the dead line.

If I can be of any further help please feel free to call on me.

Sincerely,

Charles J. Stovall

BOARD EXECUTIVE COMMITTEE

RESOLUTION NO. 80-11

WHEREAS, many rural residents of the State of Alaska, in particular the Bristol Bay region have not received limited entry permits for which they were otherwise qualified, solely because of their failure to submit timely applications to the Commercial Fisheries Entry Commission; and,

WHEREAS, the individual persons failure to submit a timely application was due to factors beyond his or her control; namely, the lack of understanding by such individuals of their rights under the Limited Entry Act and of the need to submit an application or be forever barred from pursuing their livelihood; the shortness of the application period; the geographical remoteness of the communities in which such individuals lived from the centers of communication and application assistance, and the misinformation prevalent concerning the standards of eligibility for limited entry permits; and,

WHEREAS, these individuals are now prevented from participating in one of the few only occupations they have known, or that is available to them in their community; and,

WHEREAS, the State of Alaska has an obligation to rectify the injustice caused by the implementation of the Limited Entry Act.

NOW THEREFORE BE IT RESOLVED that the Bristol Bay Native Association supports House Bill 665 and the establishment of a new application period for limited entry permits.

SIGNED William P. Johnson
President
William P. Johnson

CERTIFICATION:

I, the undersigned secretary of said Association, do hereby certify that the Executive Committee is composed of 10 members, of whom 6 were present at a meeting this 27 day of February, 1980, and that the foregoing resolution was adopted by the affirmative vote of 6 members.

Bristol Bay fish run fails

Land group named

JUNEA (AP) — Gov. William Egan today announced the appointment of eight persons, four by the state and four by Interior Secretary Rogers Morton, to the new State-Federal Land-Use Planning Commission.

The commission was required under provisions of the Alaska Native Land Claims Settlement Act.

AMONG OTHER things, Egan said, the commission will help administer the settlement act, particularly in the identification of public easements across Native-selected lands for recreation and commerce.

Appointed by Egan were:

— Dr. Max Brewer, state Commissioner of Environmental Conservation and former long-time director of the Naval Arctic Research Laboratory at Barrow.

— Natural Resources Commissioner Charles Herbert, a minerals geologist.

— JAMES BURLYE, owner of a title insurance company in Palmer who once served on the Federal Alaska Rural Rehabilitation Corp. and was a member of the first state legislature and,

— Harry Carter of Kodiak, executive director of the Alaska Federation of Natives.

Egan said Morton had named

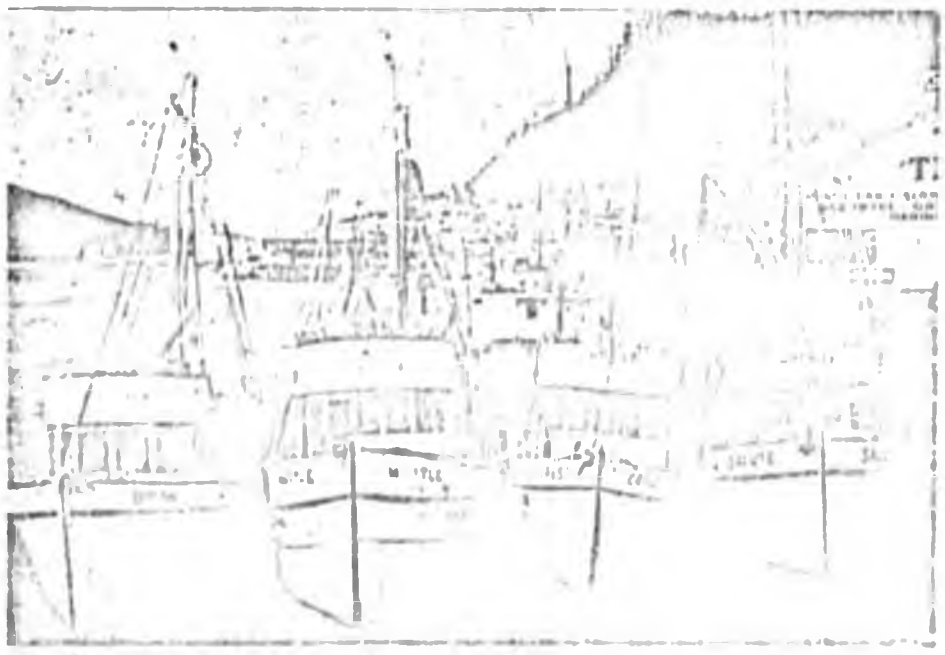
Bullets and bombs in



Alaska fishing boats, at a pier in a coastal fishing community. Commercial fishing is a major source of income in coastal towns from Southeastern to Southwestern Alaska. If fish runs during the short summer seasons do not achieve expectations, the economic base of coastal communities is severely threatened.

An analysis:
Half the salmon show up

By JOHN WISE
Daily News Fisheries Editor

Another fishing disaster now hits the Bristol Bay

Only about one half of the expected salmon of red salmon run to the rivers in the region that is normally Alaska's richest single fishery.

And this failure is on top of what had been forecast as a "poor year"

most Bristol Bay runs 2.3 million were taken in the commercial fishery and slightly under 2.7 million got past fishing gear to provide seed for future

An additional factor in the situation is the fact that there appears to be no additional escapement to add to spawning banks for the future even though fishing has been halted for

years or are at different from one that [illegible] for three years in the high area.

From the standpoint of the fishermen who depend on Bristol Bay salmon for their livelihood the present situation [illegible]

A preliminary survey indicates that "high boat" for the region will not exceed 4,000 salmon this season and the average catch is not known yet.

Tough winter ahead for salmon fishermen

By ALLAN FRANK
Daily News Staff Writer

The winter in Bristol Bay, regardless of the weather, is going to be the worst ever, according to state Senate President Jay S. Hammond, R-Naknek.

Hammond lives near the Naknek-Kvichak red salmon fishery that currently is producing more fear of the future than fish.

He runs the Lake Clark Lodge and a guiding service while his wife Bella handles a several thousand operation about two and a half miles from their home.

"The situation for commercial is an absolute bust, some people have taken less than 50 fish. The most any commercial has caught is 200 fish. In my 20 years down here, I've never seen it have so," Hammond said Friday.

"MY WIFE caught not over 150 fish in her net and my fishing partner's maybe 150. We know it's not going to be a poor year, but not like this. Last year, which was a poor year, my wife had about 5,000 to 6,000 fish. We're not even in the ballpark this year," he said.

Hammond said that boat owners, who must sell enough fish at 27 cents a pound to offset a minimum of $1,000 in expenses, were in a very tough spot.

"I've been trying to call Gov. Egan all day, but he's just coming back from Moose," Hammond said, "and the phones here aren't working too well.

"It's going to be a lean and rough winter here. I want the governor to come out to take a look at things to see what we can do to get it on a much broader base in the welfare programs among other things.

"[illegible] Many people on fishing are going to be really strapped. Most of the 6,000 Bristol Bay residents will be impacted by the poor run and as a result cannot, in real the economy machine that guided the Kenai and the Kuskokwim."

An average red salmon fisherman this year would be grossing around 27 cents a pound, and total salmon meal to catch about 1,350 fish before

Thanks to the Times

If today's Daily News looks different — it is. It was printed on the small press of the Anchorage Daily Times.

Early Friday, The Daily News press came to a halt. An electrical wiring problem was temporarily fixed, but not until after four pages were dropped from the Friday morning edition, creating a late morning delivery. The press [illegible] In fact, we borrowed one of the printing units that a small newspaper in Kodiak, who uses it evenings around the clock to meet its deadlines, was flown here from Los Angeles.

Meredith, our thanks to Robert B. Atwood, editor and publisher of the Daily Times, and all those at the Times who have been so helpful.

Board rules Garrigues

once served on the Federal Alaska Rural Rehabilitation Corp. and was a member of the first state legislature; and,

— Harry Carter of Kodiak, executive director of the Alaska Federation of Natives.

Egan said Morton had named:

Bullets and bombs in Belfast

By COLIN FROST
Associated Press Writer

BELFAST, Northern Ireland (AP) — British troops and Irish guerrillas firing rockets battled across Belfast Friday in some of the heaviest fighting the embattled city has seen.

Ten persons were killed in the battles Friday and early Saturday — a woman, five soldiers and four civilian men. The toll in three years of sectarian fighting rose to 416, with 225 killed this year alone.

THE WOMAN was killed in cross-fire between British troops and snipers as she stood in the doorway of her home.

A bomb planted in a car on Atlantic Avenue exploded, damaging six houses. Troops dispatched to the scene came under heavy sniper fire.

In London, the Ministry of Defense announced it was making a "substantial number" of additional armored vehicles in Northern Ireland. Each can carry a dozen troops.

BATTLES continued through the afternoon with concentrated assaults on two police stations in West Belfast and sniping attacks on many points in the city.

Bombs blazed here and fluttered in Britain and damaged the waterfront co-

(Continued on Page 2)

Half the salmon show up

By JOHN WEISS
Our Fisheries Editor

Another fishing disaster has hit the Bristol Bay.

Only about one half of the anticipated volumes of red salmon were in the runs in the region that is normally Alaska's richest single fishery.

And the half-runs is on top of what had been forecast as a "very poor" year. To make things worse, the fishing effort that had been mounted for the season was almost as large as that of 1971 which was a relatively "good" year.

The total of all Bristol Bay river systems' runs — harvests as well as escapement — was barely over five million red salmon, according to Larry VanRay, management biologist for the Alaska Department of Fish and Game.

This compares to a forecast published last fall by the department for total runs of 10.3 million reds.

It compares to roughly 40 million fish that constituted the big 1970 season — just about one eighth as much by the numbers but probably somewhat better than that because the individual fish were larger this year than those of the 1970 runs.

Of the five million fish in the current Bristol Bay runs 2.3 million were taken in the commercial fishery and slightly under 2.7 million got past fishing gear to provide seed for future.

An additional dismal feature in the situation is the fact that there is not to be no additional escaping fish to add to spawning stocks for the future even though fishing has been halted for more than a week in the major locations.

What caused the shortage of fish is being probed by the state scientists. There is some vague hope that couple of the salmon simply remained out in ocean pastures and that they could appear with runs that will come-on next season, but that's strictly speculation at this point.

"What we seem to be short of is the 'two-ocean' fish," VanRay said to King Salmon yesterday.

Indicators that had been relied on for the 10.3 million fish forecast anticipated that over half of the 1972 red salmon would be three "two-ocean" types which is a term used by biologists to describe a salmon that spends two years at sea as different from one that goes for three years in the high seas.

From the standpoint of the fishermen who depend on Bristol Bay salmon for the livelihood the present situation is dismal.

A preliminary survey indicates that "high boat" for the region will not exceed 4,000 salmon this season and the average catch is no better than 2,000. This figure are for a boat with a two-man crew and the cash yield involved in "gross stock" and not net earnings.

There were 2618 fishing units registered for the 1972 season and fairly less than 100 fewer than last year and are within 150 of the registration for the record 1970 harvesting effort.

The result of the excessive fishing effort coupled with the abnormally small show of fish makes it certain that there are more fishermen who failed to make canneries in Bristol Bay this season than those who made even a modest payday.

Data have not been gathered and totaled yet about the results from processors' standpoints. But it is certain

(Continued on Page 2)

"It's going to be a lean and rough winter here. I want the governor to come out to take a look at Garrigus to see what it's like this year. It will have a rough impact on the welfare programs, among other things.

"PEOPLE WHO rely totally on fishing are going to be really stopped. Most of the 4,000 Bristol Bay residents will be impacted by the poor run, and to a lesser extent, so will the cannery workers from Bethel, the Kodiak and the Peninsula," Hammond said.

As average red salmon (sockeye) this year weighs about six pounds or at 27 cents a pound, most boat owners need to catch about 1,500 fish before they begin to make any money.

About 1,700-1,800 boats, usually with crews of two, have been fishing in Bristol Bay this season as have about 700-800 setnetters, according to Hammond.

He estimates that about 40 per cent of the fishermen are non-residents and an additional 20 per cent reside in Alaska, but far from Bristol Bay.

"I KNOW of only two people with boats who will make their expenses. They lucked out and caught a couple of thousand fish," he said.

Nick Moscon and his son, Tommy, who fish from the 32-foot gillnetter Tommy M, were among the lucky fishermen.

"We didn't do very well, but we caught a few, probably 2,400 fish. We

Continued on Page 2)

working around the clock to correct the problem, was flown here from Los Angeles.

Meanwhile, our thanks to Robert B. Atwood, editor and publisher of the Daily News, and all those at the Times who have been so helpful.

Board rules Garrigues had conflict

By LINDA BILLINGTON
and PAM MILLSAP
Daily News Staff Writers

"I'm not surprised, but I had figured they'd just plain call my bids to the wall," said Borough Assemblyman James Garrigus Friday upon learning that a board of ethics had ruled he had a conflict of interest in clearing land for the controversial Carr's shopping center in Nunaka Valley.

The board, created by an ordinance which Garrigus ironically introduced, decided that the former assembly president should have disclosed his interest in the project before voting June 12 on an appeal by Nunaka Valley homeowners.

THE DECISION came about six hours after the four-member board held a public hearing on the Garrigus complaint, which was inaugurated by the valley property owners after they saw Garrigus clearing the land for the center.

However, the board, in a letter from board chairman Richard Albert, pointed out that the ordinance does not "specifically define just what private or financial interest would cause a conflict. Therefore, the board recommended that the Borough Assembly, which has the final word in the issue, not take any action against Garrigus. In addition, the board suggested that the ordinance be amended to clarify the muddy ethical waters.

Albert, who heads the board composed of Borough Chairman John Arpkhead and Assemblymen Ed Wilkinson and Don Mardi, declined to comment on the decision. Albert said only that the board would submit its report and recommendations to the assembly at the body's Monday meeting.

GARRIGUES maintained after the decision that the "main purpose of the board in here with me is to stop people from using their position as assemblymen from getting financial benefit doing business for the borough."

Regarding an amendment to disclose his interests in advance of doing business with a private firm before a contract is actually signed, he said, "would mean putting yourself in a really vulnerable position where your competitors are concerned."

Garrigus, who is running for the State House from District 19, said he thought he could continue with his campaign: "I don't feel what I did was out of line."

Chairwoman!

MIAMI BEACH, Fla. (AP) — Breaking with tradition, Democratic presidential nominee George McGovern chose a woman on Friday to become national chairman of the party he now controls.

Jean Westwood of West Jordan, Utah, who helped manage McGovern's campaign, was the Democrat's choice for the party's national chairman.

Lieutenant Governor Lawrence F. O'Brien, twice the party's chairman,

Police seek Paul McNutt in connection with deaths

City Police issued arrest warrants Friday for the "for questioning" of a man wanted for questioning in the double shotgun slaying of two Anchorage men, but so far the leads have proven to be dead ends.

A police spokesman Friday declined the specificity of the wanted man, Paul McNutt, also known as Paul Pritchard, being a suspect in the slayings. "We just think he has valuable information that could be very helpful in the case," he said.

Lt. Lt. STAROSTA for McNutt, a five-foot-nine-inch-tall and prosecution man, is highlighting the investigation of the deaths of Roy John Combs Jr., 33, and Donald Lee Haynes, 36. Both men were gunned down by a shotgun or shotguns in the back of Snow-

Ann on Spenard Road early Tuesday. Combs was part-owner of the club Haynes worked as a cook there.

Although several persons have called in to report knowledge of the 40 year-old McNutt, whose last known address was the Ventura Hotel, police information officer Sgt. Ron Otte said that followup on the calls had produced no new information. "Either he wasn't there or it was the wrong person."

McNutt had been pronounced wanted in the past for the theft of firearms and had been seen at the club several days before the shooting, according to a police investigator.

"We don't know if McNutt is in Anchorage or not," Otte said. "We don't even have any idea if he's in the

Smooth time!

By DON BAGBY

MIAMI BEACH — The Democratic National Convention has ended and officials and delegates say they are pleased at how smoothly things went.

"It's beautiful," said Convention Manager Richard Murphy, surveying the situation Friday.

PART OF the relative serenity and apparent good will prevailing here — despite two all night sessions last Monday and Tuesday — could be attributed to the convention's reform rules, which allow more delegates to participate in decision-making and provide important new outlets for letting off steam.

But what apparently has caused this convention to jell, in contrast to the violence and disorder of 1968, was an early general acceptance here of the inevitability of presidential candidate George S. McGovern.

The Convention floor, while not the model of decorum, seemed at times like a gigantic social gathering, with delegates and newsmen wandering around freely and relaxed. Their sense of vigilance reduced, convention planners accordingly eased back on the tight security precautions originally in force and allowed large

— ANCHORAGE Mayor George Sullivan, a transportation executive and former deputy U.S. Marshal at Nenana;

— Dr. Richard Cooley, an economist, geographer and geography and environmental studies program chairman at the University of California at Santa Cruz, and author of three books and various articles about Alaska, and,

— Joseph H. Fitzgerald, former state chairman of the Federal Field Committee for Development Planning in Alaska and coordinator for the Alaska Earthquake Recovery Program, now living at Seeley Lake, Mont.

COCHAIRMEN of the commission are Egan and Jack O. Horton, former Deputy Undersecretary of Interior, appointed to the new post by President Nixon last March. Egan's representative on the commission will be state Atty. Gen. John Havelock.

Egan said the commission's long-range charge is to undertake planning, based on public hearings and information supplied by government agencies, "which will help in determining the areas best suited for permanent federal ownership and what lands should be disposed of to private parties."

The goal, Egan said, is to insure that "economic growth and development is orderly, planned and compatible with the environmental objectives and the economic and social well-being of the residents of Alaska."

THE STATE effectively will have a veto over any recommendation issued by the commission. The claims act provided that the commission's recommendations will require concurrence of both the state and federal co-chairmen.

Egan called the new commission "one of the most important ever established as far as Alaska's orderly development is concerned." He praised the appointments who he said "together represent a vast storehouse of knowledge and expertise on Alaska's land use needs."

Cochran helps Pilots dump Hawaii 7-1

Greg Cochran, seldom used while at Arizona State University as a freshman, whose last effort as a Glacier Pilot was four innings of relief last Saturday, put in his bid for more work Friday night.

Only a second year pitcher, Cochran, relying on a fastball 75 per cent of the time, brushed aside the Hawaii All-Stars with three hits while his teammates pelted Ed Mason five times as much en route to a 7-1 victory at Mulcahy Park.

Cochran, now 1-1, experienced a first base bag, and Ernie Trebaito's shot that bounded off the Pilot's hurler and rolled behind the mound in the sixth, he breezed through the Lanes.

Meanwhile the Pilots, with three hits each from Roy Hyer, Mickey Aguirre and Dave Oliver, tagged Mason early, often and late, the exceptions being the eighth when Anchorage failed to push across at least one run.

Soap box derby today, pg. 18

Brief spasm of trouble only twice, once in the first inning when the Hawaiians scored their only run with the assistance of two base on balls, and in the fourth when with two down he walked Josh Ladra and gave up a double to Timmy Hamana. But he fanned center Ron Smock to end the frame and preserve the Pilots 3-1 lead.

In going the distance the 18-year-old Cochran, struck out seven and walked four. Except for Ladra's infield single in the second, Hamana's double that carried fair just inside the

numbers of non-delegates access to the floor with only the flimsiest of credentials required.

STREET demonstrators, including some diverse groups who have been camping in nearby Flamingo Park, were of good humor and although they marched from the park to the convention hall from time to time, they never attempted to gain entry or otherwise disrupt the proceedings.

A noisy contingent of New Left demonstrators, disturbed over McGovern's latest statement on Vietnam, marched on Wednesday to his headquarters hotel, the Doral, and occupied the lobby for several hours. The protesters did not appear to be angry at McGovern, only anxious to have reassurance of his position against maintaining a U.S. presence in Indochina. McGovern, electric bullhorn in hand, finally quieted them by appearing and answering their questions.

MONDAY NIGHT'S fight over the California delegation's credentials took the starch out of even the most vehement anti-McGovern partisans and removed all reasonable doubt over the direction of events here. By Wednesday only a handful of token candidates remained in the race against the South Dakotan, while Hubert H. Humphrey and Edmund S. Muskie, booed out before the balloting, urged party unity.

Half the salmon...

that the pack of canned red salmon is going to be substantially under what had been expected, a condition that could result in another increase in prices for a product that is already at an all-time record high of $48 per case.

Preliminary figures indicate that some Bristol Bay canners diverted salmon into freeze stocks this season which will affect the eventual canned pack with an additional reduction complicating the failure of the runs.

Tasks in summer, so far unconfirmed, that appear to state and federal authorities have been issued to alleviate an anticipated disastrous economic situation that will almost certainly confront communities in Bristol Bay that relied almost totally on the salmon fishing.

Tough winter in Bristol Bay...

(Continued From Page 1)

probably broke even, but there's a lot of people down here who probably didn't get that," Nick Mennen said.

"In the 24-hour fishing period we caught 1,100, and in the two 12 hour periods we went out we got 700 and 600. We knew it would be poor, but I thought we might get 3,500," he said.

KENNETH R. MIDDLETON, regional supervisor for the commercial fisheries division of the Alaska Fish and Game Department, said the anticipated harvest, presently 2.3 million fish, is "only 50 per cent of what we forecast."

The season in Bristol Bay will be reopen July 17, although Middleton said, the catch is expected to be minimal since the run usually has ended by then.

He added that hard winters and severe ice packs have been rough on salmon eggs and young fish, which may account for the bad run of sockeyes and the small (40,000) king salmon run which is off about 35-50 per cent.

Some fishermen feel that the high seas Japanese fishery, which took about 400,000 sockeyes, and interception of migrating Bristol Bay salmon by fishermen at False Pass also may have adversely affected the run.

MIDDLETON said Fish and Game Department scientists are trying to figure out what has caused the disaster in Bristol Bay. Hammond, Egan and others will be calculating how to offset the economics of "a grim winter."

The economic consequences already are apparent. Terry Shawdrick, who earns his daily bread by busing cannery workers and fishermen between King Salmon and Naknek, said business is way off.

"Business is down because most of the canneries were running limited operations. Already 200 to 300 independent fishermen have gone home and most of them were on the verge of not [illegible] broke," Shawdrick said. "All you can really say is, it was a bum year."

ter of Londonderry, the province's second largest city.

The British army, also joining in low-profile policy of the past three months, manned the Divis Street housing development, half a mile from Belfast's city center, searching for arms and gunmen of the Irish Republican Army. Troops stayed posted on the development's roofs and balconies to flush out snipers.

MORE THAN 700 troops on the western outskirts of the city fought a night-long battle with gunmen operating from the Roman Catholic area of a modern housing development.

The army claimed 35 gunmen were hit in battles throughout Belfast.

William Whitelaw, Britain's administrator for the province, told the House of Commons that 9,000 rounds were fired at troops from the Divis Street complex.

"ROCKET launchers have also been used in the area by terrorists for the first time," he said. Declaring this increased the risk of damage and casualties, Whitelaw announced he had ordered the army to "control the area from which the attacks were launched."

A clarification

The Daily News would like to clarify the Alaska Supreme Court action on reapportionment complaints by Eagle River as reported in Friday's edition.

Justice Robert Erwin met with Eagle River residents early Friday morning and agreed to hand carry the complaints to Juneau.

The court waived its rules to consider the complaints and stated reasons for denying the complaints in the court's final order.

Erwin then hand carried the written order from Juneau to Borough Assemblyman Ed Willis.

No chess replay

REYKJAVIK, Iceland (AP) — Bobby Fischer charged Friday that tournament organizers seemed to "upset and provoke me" deliberately, but an appeals committee rejected his request to replay the chess game he forfeited to Boris Spassky.

The world champion from the Soviet Union was awarded Thursday's second game in the championship match when Fischer refused to appear, staying in his hotel suite, because he objected to three moving picture cameras in the hall.

Thus Spassky, who won the first game, was 2-0 in the 24-game series. He needs 10 more points to retain the title. A victory counts one point and a draw half a point.

Fischer said that if the forfeit ruling were reversed and all cameras were removed he would go ahead with the match. The demand came despite the fact the movie and television rights allowed the Icelandic Chess Federation to offer a record $125,000 purse for both players.

Gunnalur Thoroarinsson, president of the Icelandic federation, said the cameras would be removed, but that Spassky's game point would stay. That still left the future of the champion-

was stopped by Fischer's disqualification, the organizers would not pay the loser's share. This meant that Fischer could not only lose his chances at the title but a great sum of money.

As the loser he would be entitled to $46,875 from the chess federation, $46,000 from a purse of about $125,000 offered by British financier James Slater, and $27,500 from television and movie rights.

In a statement issued by the Icelandic Chess Federation, Fischer charged that organizers "have upset and provoked me deliberately" by not telling him in advance that cameras would be present and invisible.

He previously had said he would play although he could not see or hear the cameras, knowing that there were three inside the partition.

Arthur Bisguier, Fischer's lawyer, who arrived in the morning from New York, announced upon the ruling. Asked if Fischer would appeal for the third game Sunday, he replied "I can't comment on that."

Vadim Zhukov, Spassky's second, and Viktor Ponarin, from the Soviet Sports Committee, urged strict application of the tournament rules.

These provide that the clock must be started if a player doesn't appear on time for a game and after one hour

IN THE HOUSE BY ANDERSON

HOUSE BILL NO. 665

IN THE LEGISLATURE OF THE STATE OF ALASKA

ELEVENTH LEGISLATURE - SECOND SESSION

A BILL

For an Act entitled: "An Act relating to late applications for limited entry permits; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. FINDINGS. The legislature finds that

(1) many persons who were otherwise qualified for limited entry permits have not received permits solely because of their failure to submit an application to the Alaska Commercial Fisheries Entry Commission before the closing date for applications set by the commission in accordance with AS 16.43.260(b);

(2) in order to prevent economic distress among fishermen and their dependents, to regulate entry into the commercial fisheries without unjust discrimination, and to ensure that permits are awarded on the basis of hardship, as defined in AS 16.43.250, it is necessary to ensure that persons eligible for permits are not denied permits solely because of a failure to apply in a timely fashion.

* Sec. 2. APPLICATIONS FOR LIMITED ENTRY PERMITS. Notwithstanding the provisions of AS 16.43.260 relating to closing dates for application periods, the Alaska Commercial Fisheries Entry Commission shall accept applications for limited entry permits, for those fisheries for which the application periods have closed, from all persons who meet the eligibility requirements of AS 16.43.260(a) but who failed to apply for limited entry permits for the fisheries within the time period established by the Alaska Commercial Fisheries Entry Commission for the fisheries. Persons who have previously submitted applications to the Alaska Commercial Fisheries Entry Commission after

the closing dates of the application perio for the fisheries, but before the effective date of this Act shall be considered to have applied under this section. The Alaska Commercial Fisheries Entry Commission shall process applications received under this section as if they had been submitted during the application period set by the commission, except that the commission shall afford an additional reasonable period of time for the submission of supporting evidence. The application period established in this section shall open on the effective date of this Act and shall close on December 31, 1980.

* Sec. 3. The Alaska Commercial Fisheries Entry Commission shall process applications received under sec. 2. of this Act in accordance with regulations applicable to the fishery into which entry is sought except as otherwise provided in sec. 2 of this Act. The Alaska Commercial Fisheries Entry Commission shall issue permits to persons applying under this Act who demonstrate hardship equal to that shown by persons previously issued permits. The Alaska Commercial Fisheries Entry Commission may issue permits in excess of the maximum number of permits established for a fishery under AS 16.43.-230 - 16.43.240 for the purposes of this section. This section does not authorize the Alaska Commercial Fisheries Entry Commission to revoke a permit previously issued.

* Sec. 4. This Act takes effect immediately in accordance with AS 01.10.-070(c).

To: House Resources Committee
re: HB 665
April 24, 1980
from: David B. Snyder, Alaska Legal Services, Dillingham
Fred Torrisi, Dillingham

a. The persons affected.

In 1975, the Commercial Fisheries Entry Commission began the implementation of a unique program of limiting entry into Alaska's fisheries. That year, 19 salmon fisheries were limited. Applications were accepted through May 18, 1975. Except for persons proving postal error or Commission misadvice, no-one who failed to apply for an entry permit by the deadline has been able to fish in any of these fisheries as a gear license holder since then.

A separate application period was established for the Arctic-Yukon-Kuskokwim areas in 1976. In this area also, a number of persons eligible for permits under the Limited Entry law failed to apply and lost forever their right to harvest salmon as a gear license holder.

It is our sincere belief that most of the persons who met the hardship standard for entry permits established by AS 16.43.250 but who failed to apply, were Alaska residents. The Commission, faced with the task of reaching thousands of widely scattered fishermen, mailed cards to those persons whose eligibility could be programmed on its computer, and issued press releases which were widely disseminated in newspapers and radio. But no radio station was in operation in Bristol Bay until after May 18, 1975, and no newspaper of general circulation exists even now.

In retrospect, it is apparent that a much longer application period should have been held. When the Alaska Native Claims Settlement Act was passed, 2 years was given to enroll everyone and Congress later passed a late application law to catch those who were missed. The Commission could have held the application period open for a long time while simply requiring that permits be obtained prior to actually fishing. Instead, understandably anxious to begin the final classification of applicants so that the issuance level of the point system could be determined, a shorter period was used (less than six months) and people missed the cut-off date.

The 1975 application period was fraught with problems. Former Commissioner Jay Stovall, in a letter dated February 5, 1980, recalls that he told an eligible set net fisherman in Bristol Bay that he had virtually no chance for a permit because he didn't have enough points. In fact, so few eligible persons applied in that fishery that everyone received a permit. Others recall hearing that 20 points were required for a permit; in fact, 20 points guaranteed a permit. This was the first year of a novel program and many mistakes were made.

The ADF&G forecast for the Bay in 1975 was very bad. Those electing not to fish often didn't realize that they needed to apply in order to fish in future years. After generations of applying for licenses annually, it took some families some time to realize what the concept of limited entry was all about.

The Commission did outreach to contact people, but it took hours just to complete one application even after one was familiar with the 40 page instruction booklet. The literacy rate in western Alaska is among the worst in the country.

and a large percentage of people either don't understand English at all, or speak it as a second language.

Older persons were especially likely to miss the deadline, because they didn't understand the fact that their daughters and sons would not necessarily be able to obtain permits on their own. Of the more than 200 late applicants represented by Alaska Legal Services, many are older Alaska Natives who do not read (or often speak) English.

Other persons failed to apply because they didn't get any notice at all. Some were away at school, others in the military. Still others filled out the cards requesting applications and thought that the card itself was the application. But whatever the reason, it is apparent that the less sophisticated, the poor and the uneducated were the ones most often losing the permits.

b. HB 665

The bill before the Committee does not change the point system or make anyone eligible for permits who was previously ineligible. It does not "open things up." What it does is allow the Commission to exceed the "maximum numbers" to accept late-filed applications, until December 31, 1980.

The "maximum numbers" represent the amount of gear in the water during the highest year between 1969 and 1972. For example, in the Bristol Bay drift fishery the maximum number was 1669 (although there are about 1700 permits issued for that fishery for various reasons including the Isakson Supreme Court decision). The optimum number of units of gear (AS 16.43.290) has not been determined for any fishery, nor has the buy-back authorized by AS 16.43.310 been implemented. It is possible that the optimum number may exceed the "maximum" number in some fisheries; the United Fishermen of Alaska are supporting a bill (HB 1015) to issue new permits in those fisheries which have "recovered" since 1975.

If the improved management techniques and the 200 mile limit do not result in Alaska's fisheries being able to support more gear (a questions perhaps as much related to marketing as biology), then the buy-back is the remedy--not denying permits to those who depend on fishing for their livelihood.

c. Testimony prior to 4/24/80.

Approximately 50 persons testified at the teleconference hearing held March 3, 1980, and no-one testified against the bill. Persons failing to apply explained what happened to them and the consequences during the last five years. Clearly this is a bill which will benefit these Alaskans far more than will the tax repeal or distribution of oil wealth; this bill will return to them their chosen occupation.

The letters and telegrams since that date have been somewhat divided on the bill, but in numbers they overwhelmingly support it due to the presence of numerous resolutions and petitions. Village councils of several western Alaska villages have passed resolutions supporting the bill, and the City of Togiak filed a petition signed by about a hundred residents. The Aleutian-Pribilof Island Association, Inc., the Kodiak Area Native Association, the lower Yukon-Kuskokwim Aquaculture Association, the Rural Alaska Resources Association

and the Bristol Bay Native Association all passed resolutions supporting the bill, and the Citizens' Participation Conference held in Juneau endorsed it as well. It is significant that organizations and municipalities of the region primarily impacted by the bill support it (in this writer's examination of the letters written against the bill, only two were found from residents of western Alaska).

d. The number of permits likely to be issued.

Anyone fishing as a gear license holder between 1960 and 1972 is eligible to apply for a permit. The point system is then used to determine if one will qualify for a permit. Because applications have not been processed for those not applying before the deadline, it is impossible to predict exactly how many new permits will be issued.

It is, however, possible to perceive certain factors and draw inferences with respect to the number of permits likely to result. Because the Commission has attempted to do this in its memorandum of 2/25/80 for the Bristol Bay drift gillnet fishery, some discussion of this fishery may be instructive.

According to computer records some 813 eligible applicants failed to timely apply for permits for this fishery. As noted earlier, many of these persons had the belief that 20 points were required for permits and elected not to apply. It is our opinion that the magnitude of the problem is illustrated by the fact that so many eligible persons failed to apply--but it does not follow that several hundred permits will be issued in this fishery if HB 665 becomes law.

The Commission memo states that its computer has information verifying only 9 eligible applicants at 17 points or more (the issuance level in this fishery), but goes on to postulate 551 will end up proving 17 points. This of course assumes that everyone applies in a second application period, an assumption clearly invalid, although it is again impossible to state exactly how many would in fact apply.

But more importantly, the Commission's second assumption is also erroneous. Although only 37 persons have more than 11 points (according to computer info), and 634 have less than 6 points, the Commission assumes 551 will obtain permits by projecting actual point totals by analogy to the class of persons who in fact applied in 1975. That correlation, while placing an upper limit on permit awards is clearly inapplicable directly to non-filers because many non-filers in fact made conscious decisions not to apply because they did not have very many points.

It is not a contradiction to say a) the application period failed because a lot of people failed to apply, and b) most of those people won't qualify for permits. In the ideal system, all eligible persons will apply and those who qualify will receive permits. But if two fishermen receive applications with -0- preprinted points and one has fished all his life and the other fished only one year, the former is far more likely to apply--leaving the latter on the computer run of eligible persons who failed to apply. For those who did not comprehend the nature of limited entry or received no actual notice--the persons this bill seeks to help--the correlation is true; but for that large group of more informed persons who knew they had little chance of qualifying for permits, it is not.

In three fisheries, so few applications were received that permits were issued at -0- points. We suggest that section 3 of the proposed bill be amended by adding, at the end of the second sentence, the words "except that no permit shall be issued to persons who would suffer only minor hardship from exclusion under AS 16.43.250(c)." This would require for example, that permits only be issued in the Bristol Bay set net fishery to those proving more than 6 points. Those suffering hardship were supposed to receive permits; those suffering only minor hardship can properly be excluded in those fisheries for which the maximum number has been reached.

e. Administrative burden on the Commission.

The Commission is administering a program of tremendous importance to Alaskans, and it should be funded in an amount sufficient to enable it to do its job. The amount of outreach assistance spent in Bristol Bay in 1975 was less than the present value of one drift gillnet permit there.

The fiscal note submitted with this bill includes a substantial amount to clear up the Commission's backlog of cases; if it is funded in the amount requested, it should be made clear that applicants under the new application period should receive permits to which they are entitled expeditiously.

f. Conclusion.

It is true that some persons will receive permits under this bill who consciously elected not to apply for them in the original application period. It is also true that in some years, in some fisheries, there will be an increased amount of gear in the water when there shouldbe less.But neither of these reasons is sufficient to refuse to award permits to the persons who testified at the teleconference and who inhabit virtually every village of southwestern Alaska. The "maximum numbers" are a completely arbitrary set of gear limitations which were selected as a starting point to limit entry; the Commission has yet to determine optimum numbers. While everyone excluded by limited entry may cry for a change, one group stands out as equitably entitled to their permits as the intended beneficiaries of the original act: those who would suffer hardship by exclusion from the fishery for which they were eligible. HB 665 would rectify this inequity. If the State's marketing efforts fail, or if the determination is made in a given fishery that the resource cannot support the number of units of gear in the water, then the buy-back provisions of the statute should be implemented. Neither of these conclusions is evident at this point, and it is unfair to penalize qualified fishermen by forever excluding them from the fishery.

MEMORANDUM

TO: Representative Nels A. Anderson, Jr.

FROM: David Snyder

RE: HB 665 - Limited Entry Late Applicants

DATE: March 6, 1980

I. The numbers of Eligible Applicants

The Commercial Fisheries Entry Commission has determined that there are a total of 3,904 individuals who, based upon their participation as gear license holders in the years 1969 - 1974, were eligible but failed to apply for limited entry permits in the original 19 salmon fisheries which came under limited entry in 1975. These persons would obviously not all apply under a new application period and would obviously not all qualify by demonstrating the requisite number of points in their respective fisheries.

Of this total, 934 persons were eligible to apply under the "Isakson" period (established following the Supreme Court's decision in the Isakson case). These were individuals who were gear license holders for the first time in 1973 or 1974 and who consequently have little chance of qualifying for permits except in three lowpoint fisheries. This is due to the fact that points were only awarded for a person's pre-1973 participation or investment in the fishery. Therefore, less than 3,000 persons would have realistic chances at obtaining permits in most fisheries.

Further, a very high number of these eligible persons (1182) are found in the two Bristol Bay fisheries. When those two fisheries are excluded, it becomes apparent that the number of potentially eligible applicants in the remaining 17 fisheries is very low (2970 - 1182 = 1798). Of course the number qualifying will be much lower due to an inability to prove the requisit points.

The reasons for the very high percentage of persons not applying in Bristol Bay can be attributed in large measure to language and cultural barriers prevalent in Bristol Bay which resulted in people not understanding the need to apply to continue to exercise their right to fish. There will obviously be a number of outside residents who will qualify for permits in Bristol Bay, but I think the chart at pages 8 or 9 of the Commission's memo to you graphically demonstrates the preponderance of residents in the automatic issuance pool should there be another application period. These overwhelming percentages hold true both in Bristol Bay and in the other fisheries statewide.

I believe further that higher percentages of residents are found at other higher point levels where an applicant has a realistic chance at proving sufficient points to be awarded a permit. This is due again in large measure to the greater sophistication and English speaking ability among Seattle and other outside fishermen who were most likely to have applied for a permit if they had a chance. Bristol Bay residents did not have sufficient knowledge to make this decision.

For these same reasons, the Commission's estimate for new entrants in the Bristol Bay drift fishery is inflated. That estimate is predicated upon the premises that the same percentage of persons qualifying during the original application period would also qualify under a new one and that all late applicants would apply. In addition, the total number of eligible late applicants used in the Commission's formula on page 11 should be 813 (derived from the table on page 9) rather than 846. This would further reduce the Commission's estimate of the number of persons actually able to qualify for a permit.

II. The Commission's Proposed Amendments

The Commission has suggested several possible amendments for consideration by the legislature. Most of the proposals suffer from the same defect. They establish classifications which would offend the equal protection clauses of the Alaska and United States Constitutions.

Notwithstanding that problem, some of the proposals are the result of an unrealized perception that too many new permits will be issued under a new application period. For the reasons outlined above, it appears that the only fisheries which potentially could experience a substantial increase are those in Bristol Bay; and the Commission's estimates there are most probably at least twice as high as would actually result. If the Commission decides in the future that the permit level of any particular fishery exceeds the "optimum number" of permits (figures which have not yet been set by the Commission) then the Commission could decide to implement the buy-back provision already authorized by the legislature.

The Commission proposes the following ideas:

a) Issuing permits to those who can demonstrate significant hardship (20 points). This provision would most assuredly be attacked in the Courts as a denial of equal protection under the law. It would establish two classes of persons; those who applied under the original application period and those who did not. Persons having the same fishing history and displaying the same degree of hardship if denied a permit (i.e. the same point total) would be denied a permit. For example in the Bristol Bay drift fishery, original applicants needed 17 points whereas new applicants would need 20 points.

a) continued

In order to be upheld, a legislative classification must be rational, or as the Supreme Court of Alaska has stated, must be fairly and substantially related to permissible governmental objective. It would be impermissible to treat similarly situated applicants differently, solely for the reason that they did not understand or know of the need to apply for a permit.

b) Non-transferable permits. This provision suffers from the same defect as the first proposal. It also is unnecessary as it does not address the question of issuance over the optimum number (if the Commission does set the optimum numbers and if permits have been issued over that number). Assuming that does become a problem, non-transferability will not solve it because natural attrition through death or retirement will take a long time to reduce the number of permits being fished. A buy back program would be the only way to quickly address this potential issue.

c) Making estates ineligible to apply. This would likewise raise grave equal protection questions.

d) Multiple permits to individuals. The same equal protection problems would obtain in treating new applicants differently.

e) Use of permits only during "good' years. This proposal calls for an evaluation of the "average" fish conditions (presumably projected returns, necessary escapement totals and the allowable catch figures) and an evaluation of the projected totals in each category for each separate fishery. This proposal would unreasonably increase management burdens.

f) Considering new applications only after the original application process was completed. This system would unreasonably delay the right of persons who are otherwise qualified to receive permits, from engaging in fishing. It has been almost 5 years since the original application period ended and it is probable that several more years will pass before all applications are finally decided.

g) Non-severability clause. This proposal is unnecessary as the bill is presently written. However, if the above provisions were adopted, non-severability would mean that the entire bill would be overturned.

h) Denying interim use permits until point verification was completed. This proposal seems to be directed towards easing the administrative burdens attendant upon a new application period. Rather than further delay the issuance of permits to eligible and deserving individuals, the legislature should insure that the Commission has adequate funding to process the applications expeditiously.

Dear Peter:

Enclosed you will please find two copies of each of the above listed plans per your request of 11 June 1979. Enclosed you will please also find a billing for

reproduction and postage charges.

Based on the 1975 cost of $1,900,000.00 for the 121 Ft. vessel, MARCO estimates that the current price would be $2,900,000.00. Please note that this estimate is current. If the construction was one year from now, the price could increase by approximately fifteen per cent (15%).

If you have any further questions, please do not hesitate to contact our office.

Very truly yours,

B. F. Jensen & Associates, Inc., P. S.

Ben Jensen

BFJ;ljw
Encl.

Harvesting fish and wildlife resources is big business; with an adequate state investment in management and enforcement, these resources will be renewable. Commercial fishermen operating from Kodiak and Dutch Harbor alone have invested about one billion dollars (400 boats x 2.5 million dollars per boat). Significant investments are also made in other statewide fisheries and in the developing bottomfish industry. Commercial fishing statewide produces about 400 to 500 million dollars in annual income. Estimates vary, but about half of that income stays in Alaska. Commercial fishing will produce an estimated $26 million in taxes and license fees for the state in FY-81.

Without calculating the value of sport fish and game harvested, the Alaskan economy significantly benefits from these user groups. Sport fishing contributes about 125 million dollars annually (250 thousand fishermen at 500 dollars average expenditure each); sport hunters contribute about 80 million dollars annually (80 thousand hunters spending an average of one thousand dollars each); the guiding industry contributes about 25 million dollars annually.

Fish and wildlife resources are a multi-billion dollar state asset which is primarily protected by voluntary compliance with management regulations. It is difficult to estimate the percentage of violations deterred by enforcement patrols. Only a small percentage of all potential violations are detected.

To prevent illegal harvesting and detect violations, enforcement officers must patrol where fishing or hunting is allowed or might occur. Without comparable equipment, it can't be done. There are specific evidence requirements for any violations detected so that illegal harvesting might be sucessfully prosecuted. Crabpots must be pulled and examined to see if they are being used illegally, and if so, confiscated for evidence.

Without an adequate state investment for enforcement equipment, officers will be unable to conduct routine patrols efficiently. Enforcement efforts have been hampered by motor breakdowns in the past when the fishery opening was very brief and timely enforcement critical.

It does not seem prudent to depend upon fishermen's short-run compliance with government rules to adequately protect the state's long-term potentially renewable resources. While voluntary compliance from law-abiding citizens has been the backbone of American society, recent economic pressures should cause decision makers to reassess the underlying philosophies about protecting the state's fish and wildlife resources. While the Department of Public Safety, Division of Fish and Wildlife Protection has been given the responsibility for enforcement, no commensurate spending authority has been provided. Without adequate equipment funding, there is a significant chance that enforcement will be both inefficient within available funds, and ineffective in protecting the potentially renewable resource.

PROJECT NARRATIVE

I. Project Need

1. Fisheries Value.

a. Shellfish harvest in the Bering Sea, off Kodiak and the Peninsula or Aleutians during 1978 totaled $172.4 million. Vessels and catch value will continue to increase.

b. The shellfish industry is a multi-billion dollar asset in the short-run (next 5-10 years) not counting direct or indirect taxes and overall economic value to coastal regions. (FY-81 fisheries taxes and license fees will generate a $26 million deposit to the State General Fund.)

2. Jurisdiction

a. The North Pacific Fisheries Management Council proposes management plans for Federal approval. Existing regulations and treaties prevail until pre-empted by Federal management plans implemented under the 200 mile law.

b. The National Marine Fisheries Service (NMFS) and USCG have Federal enforcement responsibility. Their authority has been extended to the State by a Co-operative Enforcement Agreement.

CONTINUATION OF NARRATIVE

c. Geographic boundaries of jurisdiction for the State are unchanged. The 3 mile limit remains within State boundaries. The 200 mile law (FCMA, PL94-265) Sec. 306 (a) says that it will not interfere with State jurisdiction (See Alaska Supreme Court Opinion # 1232-1-19-79 re: State Bering Sea jurisdiction over State fisherman) except via specified precedures. Foreign fishermen are still prohibited from fishing inside the twelve mile limit and must follow Federal management plan regulations while fishing inside the 200 mile limit.

d. General State management jurisdiction may not be sustained beyond three miles, but specific jurisdiction (over vessels registered in Alaska) will remain. Overlapping jurisdictions will occur, e.g. the Federal approval of hand trolling outside the 3 mile limit when hand trolling inside the 3 mile limit was closed. Though the Federal government would not recognize State jurisdiction, the State could prosecute a vessel registered in Alaska for violating its laws outside the three mile limit.

e. Since present Federal enforcement emphasizes foreign fishermen, domestic fishermen are virtually unregulated. As fuel costs and general inflation continue to impact USCG vessel operating budgets, no enforcement expansion can be expected. Under an existing agreement, the State may enforce Federal regulations on domestic fishermen. If no State enforcement capability exists over domestic (including Alaskan) fishermen, there will be little leverage to gain increased enforecement efforts from the Federal government.

3. Fisheries Management

Historic abundance has not returned, although a decline in key fisheries recently reversed. Several factors determine overall potential for each fishery to remain healthy and capable of optimum sustained yield. An important factor is enforcement. Without sufficient probability of detection, fisheries crimes will not be deterred. It is likely that the average undetected commercial fisheries violation grosses over $10,000 per crewmember.

CATEGORY NRTEC AGENCY Public Safety PROGRAM Fish & Wildlife Protection

PROJECT TITLE 120 Foot Patrol Vessel Kodiak

35b PROPOSED PROJECT ANALYSIS

REVISED DATE

000460

01-1035b (7/79)

4. Enforcement Coverage

a. Ideal coverage would be attained: 1. when 75% of the registered vessels in a fishery could be sighted and a third boarded during routine patrols in an open season, and 2. when combined aircraft/vessel patrols have a 50% probability of detecting any violation in a closed season.

b. While the formula for adequate coverage sounds nice and is patterned after USCG patrol standards designed to detect 50% of all violations and deter 80% of all potential violations, several practical problems are encountered. Efficiency not effectiveness is measured, though a more accurate proxy may not be available. There is no practical way to determine impact of increasing coverage upon violations deterred or detected. Within general plans, the vessel commander must use judgment to best use his patrol time and maximize deterrence.

c. Existing coverage, though not presented via detailed statistical analysis, is not adequate to protect a multi-billion dollar asset.

5. Assumptions

a. Laws (regulations) will continue as a basic tool of fisheries management. Economic incentives for fisheries violations will remain high or increase (relative inelasticity of demand for food).

b. User group pressures for optimum management (includes enforcement) will increase.

c. Enforcement capabilities must match those of the resource-user in order to patrol while vessels are fishing

- staff: training, experience
- equipment: seaworthiness, comms., range, speed, berthing, electronics, etc.

d. Cross deputization will not shift any substantial domestic enforcement burden to NMFS

- burden will remain with State for domestic fishermen
- the USCG will not contract with the State for enforcement of Akaskan fisheries

CONTINUATION FORM

CATEGORY NRMFC AGENCY Public Safety PROGRAM Fish & Wildlife Protection

PROJECT TITLE 120 Foot Patrol Vessel Kodiak

REVISED DATE

000461

DI 1033 (7/79)

e. Housing at Dutch Harbor will not be available for crewmember families thereby requiring that any major enforcement vessel use Kodiak as homeport.

f. Aircraft enforcement patrols encourage compliance, but cannot identify people involved in detected violations; vessels are needed to pull pots and verify shellfish violations.

g. There are normally no "crime scenes" to investigate after the violation has occurred; physical evidence of fisheries violations is not usually available for follow-up investigations.

h. Rarely can cases be successfully prosecuted with only circumstantial evidence, e.g. an early fishing citation based upon minimum time required for transit between strings of pots, pot pulling time, transit to processor under existing weather conditions in the specific vessel.

i. Inability to follow-up anonmyous tips about fisheries violations by actual investigation will tend to discourage violations being reported by uninvolved observers concerned about resource crimes.

6. Significant Background Relationships

a. Fish & Game Management biologists are consulted in local and regional enforcement planning, but research needs preempt enforcement concerns. Biologists aboard fishing vessels, by permission, would likely eliminate future research opportunities if violations were reported or enforcement emphasized. Fish ticket information about catch location is important for research or management needs even when catches are reported from closed areas, or are otherwise illegal.

Without voluntary catch location supplied by fisherman, statistical validity of research would suffer. Conflicts emerge because fish tickets are presently not available to enforcement staff unless obtained by warrant.

Even though ADF&G biologists are being trained in enforcement techniques, ADF&G staff cannot be programmed as a significant enforcement tool, which is not necessarily inappropriate given conflicting operational objectives.

CONTINUATION FORM

CATEGORY NRMEC AGENCY Public Safety PROGRAM Fish & Wildlife Protection

PROJECT TITLE 120 Foot Patrol Vessel Kodiak

01-1033 (7/79)

REVISED DATE

000462

b. The Board of Fisheries has significnat impact on enforcement. It would be difficult to overemphasize their impact on the practical aspects of regulation enforceability.

c. The Commercial Fisheries Entry Commission has significant impact on the practical aspects of enforcement which would be aided by: Limited entry cards with photos; elimination of pre-stamped fish tickets; elimination of duplicate cards at canneries; and similar enforcement-oriented approaches.

7. References discussing various aspects of commercial fishing, the 200 mile limit, Federal enforcement plans, and the State's economic interests can be provided upon request. The ADF & G Commercial Fisheries FY-81 policy budget submission contains much background information and statistics. Further research is being done and may be available to decision makers before FCC deliberations in the next session.

II. Project Description

1. The 120 foot twin screw steel hulled fisheries enforcement vessel will be basically built from specifications put out for bid in 1975 when the lowest bid exceeded available funds and the 100 foot "Vigilant" was purchased instead. Some modifications in design may be made based upon experience with the "Vigilant" and with other major enforcement vessels.

2. General requirements will include:

a. Seaworthiness, boarding capability, and small boat operations;

b. On deck pot storage capability (about 175 pots);

c. Fuel economy, endurance, adequate berthing;

d. Electronic gear (Loran, radar, aircraft radios, ship radios, etc.) with back-up capability;

e. Crab pot pulling gear.

III. Capital Cost

1. B.F. Jensen & Associates (Naval Architects - Marine Engineers) of Seattle made a June 18, 1979 cost extimate of $2,900,000 based upon Marine Construction and Design calculations. That firm was low bidder on the first steel hulled

CONTINUATION FORM

CATEGORY NRMEC AGENCY Public Safety PROGRAM Fish & Wildlife Protection

PROJECT TITLE 120 Foot Patrol Vessel Kodiak

REVISED DATE

000463

OI 1033 (7/79)

enforcement vessel. Inflation is estimated at 15% per year, and a factor of 10% is added to help insure that another cost-compromise does not result in a less-than-optimum enforcement vessel.

2. Detailed calculations:

$2,900,000	
x 1.15%	inflation 6-79 to 6-80
3,335,000	
x 1.05	inflation 6-80 to 10-80 (bid award)
3,501,750	
x 1.15	for cost overrun protection (5%); in-state vender preference (5%)
$4,027,000	and equipment outfitting (5%)
33,000	for Marine Architect assistance
$4,060,000	

IV. Estimated Operating Cost

1. FY-79 "Vigilant" operating costs are used to project operating costs for the new vessel:

Personal Services	$ 266,000	(6 positions)
Travel	7,000	
Contractual Services	46,000	
Commodities	66,000	($33,000 fuel)
Equipment	10,000	
	$ 395,000	
	100,000	(fuel use and cost difference)
	$ 495,000	

2. Shipyard overhaul/maintenance periods would be needed at least every 2 years at a minimum cost of $50,000.

3. Bering Sea patrols will likely produce seizure of 175 pots. (@ $500/pot = $87,500 deposited to the State General Fund if maximum number seized and transported). (Not included as off-setting revenue).

CONTINUATION FORM

CATEGORY NR&EC AGENCY Public Safety PROGRAM Fish and Wildlife Protection

PROJECT TITLE 120 Foot Patrol Vessel Kodiak

REVISED DATE 10/31/79

000464

V. Alternatives

1. More efficient use of existing vessels: Assuming that inflationary fuel costs are funded, no significant increase in efficiencies can be obtained from the present vessel. (Internal Audit agrees.)

2. Use of other vessels as enforcement platforms:

   a. USCG: Emphasizes foreign enforcement, virtually no domestic enforcement - although policy will theortically balance later. NMFS relies 100% on USCC for patrols.

   b. ADF&G: Research and enforcement needs are incompatible except on rare occasions.

   c. Charter: Peak season prices are prohibitive especially in view of recent budget cuts, serious intangible factors also contribute to owner reluctance to charter.

   d. Seizure: The '75 American Eagle violation is being pursued in the courts with no successful forfeiture to date. Courts may be unlikely to award vessels in view of recent cases where fines have been slight compared to cash value of the stolen fish. It would take a flagrant, major violation to evoke forfeiture of a major vessel.

   e. Aircraft: Without vessels, aircraft are useful for only certain types of enforcement, e.g. finfish area closures.

3. Crab pots fishing illegally total at least 8,000 and could be as high as 20,000. Unmarked pots fish year round (dead crab act as bait) and can be pulled virtually undetected by any boat able to sell crab thus harvested.

   There appears to be no short-run alternative except to pull unmarked pots, seize them, and transport them back to port for future sale. In the long run, the ability of the State enforcement vessel to selectively seize pots will likely encourage vessels to recover and mark pots left by vessels now sunk or for illegal fishing.

CONTINUATION FORM

CATEGORY NIMEC AGENCY Public Safety PROGRAM Fish & Wildlife Protection

PROJECT TITLE 120 Foot Patrol Vessel Kodiak

DI 1033 (7/78)

REVISED DATE

000465

4. This request would fund another vessel for the high-value shellfishery based from Kodiak and Dutch Harbor. The alternative of doing nothing cannot be recommended under any foreseeable circumstance. The "Vigilant" alone is providing some enforcement, but was a cost-compromise enforcement vessel. With 35,000 miles of coastline (twice that of the lower 48) and a multi-billion dollar fisheries asset, a second major enforcement vessel is a conservative estimate of need and was included in long range plans back in 1974.

5. If a suitable vessel were located, an existing 145-165 remodeling/outfitting contract may prove cost-effective without sacrificing enforcement mission or significantly increasing operating cost. This is not likely for several reasons, but the possibility will be explored.

6. Several sophisticated enforcement technologies are theoretically feasible and have been investigated by the Federal government (NMFS, USCG, Congress-Office of Technology Assessment), but no innovations will be implemented in the near future. Aircraft-vessel combined operations will continue to be standard for some time. The only known imminent change to USCG enforcement equipment is crab pot pulling gear for the 230' USCG Storis which patrols in the Bering Sea, although the USCG reserves the right to reprogram funds for other uses. Enforcement or equipment priorities are not dictated by the co-operative enforcement agreement.

PATROL VESSEL

The State of Alaska is soliciting bids for the construction of one (1) 121 foot Twin Screw Steel hulled Fisheries Patrol Vessel in accordance with the specifications entitled "Specifications for Construction of a 121 foot Patrol Vessel for State of Alaska, Department of Public Safety", B.F. Jensen & Associates, File No. 449 Dated August 1975.

Sealed bids shall be mailed or delivered to: Department of Administration, Division of General Services & Supply, 10th Floor, State Office Building, Pouch C, Juneau, Alaska 99811. Bids shall be received on or before 3:00 P.M. of the opening date in accordance with the instructions and conditions listed on Page Two (2) of this bid, at which time they will be opened publicly.

PLANS AND SPECIFICATIONS:

A set of plans and specifications may be obtained from the Office of B.F. Jensen & Associates, 101 Salmon Bay Office Building, 4215 21st Ave. West, Seattle, Washington 98199, upon receipt of $100.00 deposit per set. A refund of $65.00 ($35.00 non-refundable) will be paid for each set of plans and specifications returned to B.F. Jensen within 30 days after the bid opening date.

DELIVERY: The successful bidder will be required to deliver the vessel afloat at the Builder's Yard, United States West Coast Port. Delivery shall be made on or before August 15, 1976.

LIQUIDATED DAMAGES: It will be agreed between the successful bidder and the State of Alaska that actual damages will be assessed for the late delivery in the amount of one hundred ($100.00) dollars per day for each calendar day beyond August 15, 1976 to September 14, 1976 and three hundred ($300.00) dollars per day after September 14, 1976 until date of delivery.

BID GUARANTEE: The Bidder shall submit a bid bond, surety deposit, special notice account or certificate of deposit assigned to the State of Alaska in the amount of 5% of the bid. This guarantee must accompany the bid and those that fail to do so will be considered non-responsive. This shall be held as a guarantee that the bidders shall not withdraw said bid within sixty (60) days after said opening, and shall execute such further contractual documents, if any, as may be requested by the terms of the bid, as accepted, and give bonds with good and sufficient surety or sureties, as may be required, for the faithful performance and proper fulfillment of the resulting contract. Deposits or checks will be returned to the bidder upon completion of the sixty (60) day period.

THIS BID CONSISTS OF THREE (3) PAGES.

IMPORTANT: Bid must be complete. See reverse side for instructions, conditions, and requirements pertaining to Alaska Bidder preference and the Civil Rights Act. Any offer and acceptance resulting from this invitation to bid shall be expressly limited to the terms and conditions as shown on this form and its attachments.

BIDDER

BY AND FOR THE BIDDER

INSTRUCTIONS TO BIDDER:

1. All equipment offered must be new and of the latest model currently advertised to the general market, unless otherwise specified by this bid invitation.

2. Samples of items, when required, must be furnished at no cost to the State. On request, samples will be returned at the bidder's expense provided they were not consumed in testing.

3. Prices should be stated in units of quantity specified, with packing included.

4. Time of proposed delivery must be stated in definite terms if different from that stated by the State. If time varies for different items, the bidder shall so state. Delivery date is defined as the date upon which delivery is required at the ultimate destination.

5. If the item bid upon has a trade name or brand, such trade name or brand must be stated in the bid

6. All bids shall be submitted exclusive of Federal, State, and local taxes. However, if the bidder believes that certain taxes are properly payable by the State, he may list such taxes separately, in each case directly below the prospective item bid price.

7. Assignment of contract or subcontracts shall not be permitted, and claims of subcontractor due to cancellation of contract will not be recognized.

8. AWARDS Tentative award(s) will first be made on all formal competitive bids and will become final award(s) after five days therefrom, providing no protest has been received by the Department of Administration. This five-day period permits an aggrieved bidder to appeal, in writing, to the Department of Administration for hearing and redetermination of final award. Notice of appeal must be furnished (by the aggrieved bidder) to all interested parties. (Note: Formal competitive bids are defined as those issued for purchases of all materials, supplies, or services estimated to cost in excess of $1,000.)

9. Bidders are instructed to use this and attached for in submitting bids.

CONDITIONS

1. Formal bids will be rejected if not received at the issuing office prior to the time set for bid openings. If there is doubt that your bid will be received timely, telegraphic notices that the bid is in the mail will reserve the right to have your bid read when it is received. Such notices must be received at the office of the Division of General Services/Supply handling the bid prior to the scheduled bid opening hour, and the written bid must be post-marked no later than "AM" of the day of opening.

2. Where the description of an item includes both specifications and a brand name and number, the specification shall govern in case of conflict. Brand name and number are for reference as to the type and quality required and do not preclude offers of a comparable or better product, provided full specifications and descriptive brochures accompany the offer. Failure to include fully descriptive literature may be cause to reject the offer.

3. The State reserves the right to reject any and all bids, to waive minor deviations from the specifications, and to waive any informalities in bids received, whenever such rejection or waiver is in the best interest of the State, and unless otherwise specified by the bidder, to accept any items in the bid. It also reserves the right to reject the bid of a bidder who has previously failed to perform properly or complete on time contracts of a similar nature, or a bid of a bidder who is not in a position to perform to contract.

4. In case of error in the extention of prices in the bid, the unit prices will govern.

5. In case of default of the contractor, the State of Alaska may procure the articles or services from other sources and hold the contractor responsible for any excess cost occasioned thereby.

6. In case of damage to State property in fulfilling this contract, the contractor shall reimburse the State to the extent of such damage.

7. The contractor shall hold and save the State, its officers, agents and employees, harmless from liability of any nature or kind, including costs and expenses, for or on account of any or all suits or damages of any character whatsoever resulting from injuries or damages sustained by any person or persons or property by virtue of performance of this contract, unless such suits or damages arise from carelessness or negligence on the part of the State or its employees in the performance of their assigned duties. The State shall not be liable for any costs incurred by the bidder in bid preparation.

8. Time, in connection with discount offered, shall be computed from date of the delivery of the material at destination when final inspection and acceptance are at this point, or from date correct bill or invoice is received, whichever is later.

9. No officer or employee of the State of Alaska shall be admitted to any share or part of this contract or of any benefit that may arise therefrom unless it may be made with a corporation for its general benefit.

BIDDERS MUST COMPLY WITH CIVIL RIGHTS ACT

By signature on this form, the vendor indicates that he is complying with the applicable portion of the federal Civil Rights Act of 1964 and the Equal Opportunity Employment Act and the regulations issued thereunder by the State and federal Government. If any bidder fails to comply with the Act or the Regulations issued thereunder, the State reserves the right to terminate the contract.

5% ALASKA BIDDER PREFERENCE - (Alaska Statutes 37.05.730)

A bid shall be awarded to an Alaska bidder if his bid is not more than five percent higher than the lowest nonresident's bid. An Alaska bidder is defined as one who

(a) holds a current Alaska business license,

(b) submits a bid for goods or services under the name as appearing on his current Alaska business license,

(c) has maintained a place of business in the State of a period of six months immediately preceding the date of his bid.

Check the box on the front a indicates your eligibility.

PERFORMANCE BOND: The successful bidder will be required to furnish to the State of Alaska a performance bond equal to one hundred percent (100%) of the contract.

BIDDER'S PROTECTIVE CLAUSE: There shall be no obligation to deliver any or all of the products or services included in this invitation in the customary manner when such deliveries are prevented or hindered by acts of God, strike, or partial or total interruption or loss or shortage of transportation facilities, fire or lockout, commandering of raw materials, products, plants or facilities or by other similar or different acts of Civil or Military authorities or by other like causes beyond the control of the bidder.

AWARD: Award will be made to the low bidder meeting the specifications available from B.F. Jensen and providing suitable delivery time. The State of Alaska reserves the right to reject any or all portions of this Invitation to Bid in order to stay within appropriated funding.

PAYMENT SCHEDULE: Payments to the builder will be made in accordance with the following schedule:

a. Fifteen Percent (15%) upon execution of this agreement and contract.
b. Twenty-five Percent (25%) when the keel of the vessel is laid.
c. Twenty-five (25%) when the main and auxiliary engines are installed.
d. Twenty-five Percent (25%) when the vessel is completely ready for launching, including the completion of the Deck House.
e. Balance of the ten percent (10%) on delivery of vessel to State or the State's representative, upon acceptance in accordance with the specifications and drawings.

Dwg. No. 449-2 Sht 2 General Arrangements Foc'sle, Boat & Bridge Decks

Captain's Day Room and Captain's State Room

Drop window P&S noted to port in Captain's Day Room - Add "sloping".

Note to read: "Sloping Drop Window P&S.

(Note: The vessel to be provided with a total of three drop windows; one vertical sliding drop window in the galley, a sloping, sliding drop window in the Captain's Day Room and a sloping, sliding drop window in the Captain's State Room.)

INVITATION TO BID

ON

CONSTRUCTION

OF

121 FOOT PATROL VESSEL

FOR

STATE OF ALASKA

DEPARTMENT OF PUBLIC SAFETY

August 20, 1975
File No. 449

The following is an outline of information to include on the "Invitation to Bid".

1. General

The State of Alaska invites sealed bids with the intent of establishing a contract for the construction of one 121 foot, twin screw steel patrol vessel in accordance with the Specifications entitled: "Specifications for Construction of 121 foot Patrol Vessel for State of Alaska, Department of Public Safety," B.F. Jensen & Associates, File No. 449 dated August 1975.

2. General Characteristics of Vessel

Length Overall, Molded		121'-6"
Length on Design Waterline		110'-0"
Breadth, Molded		28'-0"
Depth, Molded		12'-6"
Draft, Amidship to Design Waterline		10'-0"
Power - Twin Screw Diesel		
Total Maximum SHP		2050
Compliments, Officers and Crew		~~12~~ 6
Weights and Capacities		
Diesel Fuel	Approx.	42,000 gal.
Potable Water	Approx.	5,000 gal
Lubricating Oil	Approx.	330 gal.
Gasoline (small boat fuel)	Approx.	850 gal.
Helicopter Fuel	Approx.	350 gal.

3. Plans and Specifications

A set of Plans and Specifications may be obtained from the office of B.F. Jensen & Associates, 101 Salmon Bay Office Building, 4213 21st Ave. West, Seattle, Washington 98199, upon receipt of a deposit of $100.00 per set, of which $65.00 will be refunded upon return of each set of Plans and Specifications ($35.00 non-refundable) within 30 days after the date of the opening of bids. Plans and Specifications are for use in preparing a bid in response to this invitation and are not to be used for any other purpose.

4. Bidding Time and Delivery of Bids.

Plans and Specifications available from the office of B.F. Jensen & Associates on or after September 2nd, 1975. Sealed Bids shall be mailed or delivered to Department of Administration, Division of General Services/Supply, 10th Floor, State Office Building, Pouch C, Juneau, Alaska 99811. Bids shall be received on or before 3:00 P.M. Pacific Daylight Savings Time, Friday, October 10th, 1975.

5. Building Time

Ten months from date of award.
Tentative award October 16, 1975 - Delivery August 15, 1976.

6. Performance Bond

Performance bond equal to one hundred per cent (100%) of the Contract.

7. Delivery of Vessel

Vessel shall be delivered afloat at Building Yard at United States West Coast Port.

8. Liquidated Damages

Liquidated damages in the amount of one hundred ($100.00) dollars per day for each calendar day beyond August 15, 1976 to September 14th, 1976 and three hundred ($300.00) dollars per day after September 14, 1976 until date of delivery.

IN THE HOUSE (also SB 344) BY THE RULES COMMITTEE BY REQUEST OF THE GOVERNOR

HOUSE BILL NO. 691

IN THE LEGISLATURE OF THE STATE OF ALASKA

ELEVENTH LEGISLATURE - SECOND SESSION

A BILL

For an Act entitled: "An Act providing for the issuance of general obligation bonds in the amount of $4,218,800 for the purpose of paying the cost of capital improvements for fisheries resources protection and enhancement facilities; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. For the purpose of paying the cost of capital improvements for fisheries resources protection and enhancement facilities, general obligation bonds of the state in the principal amount of not more than $4,218,800 shall be issued and sold. The full faith, credit, and resources of the state are pledged to the payment of the principal of and interest and redemption premium, if any, on these bonds. These bonds shall be issued under the provision of AS 37.15 as those provisions read at the time of issuance.

* Sec. 2. (a) If the issuance of these bonds is authorized by the qualified voters of the state, a special fund of the state to be known as the "1980 Fisheries Resources Facilities Construction Fund" shall be established, to which shall be credited the proceeds of the sale of bonds described in sec. 1 of this Act except for accrued interest and premiums.

(b) There is appropriated from the "1980 Fisheries Resources Facilities Construction Fund" to the Department of Public Safety the amount of $4,218,800, for the purchase of one 120-foot patrol vessel to be based at Kodiak.

Bob Stitzel Public Safety

* Sec. 3. If the issuance of these bonds is authorized by the qualified

voters of the state, the amount of $14,800 or as much of that amount as is found necessary is appropriated from the general fund of the state to the state bond committee to carry out the provisions of this Act and to pay expenses incident to the sale and issuance of the bonds authorized in this Act. The amounts expended from the appropriation authorized by this section shall be reimbursed to the general fund from the proceeds of the sale of the bonds authorized by this Act.

* Sec. 4. The amount withdrawn from the public facility planning fund for the purpose of advance planning for the improvements financed under this Act shall be reimbursed from the proceeds of the sale of bonds authorized by this Act.

* Sec. 5. The question whether the bonds authorized in this Act are to be issued shall be submitted to the qualified voters of the state at the next general election and shall read substantially as follows:

Proposition

State General Obligation Fisheries Resources Facilities Construction Bonds $4,218,800

Shall the State of Alaska issue its general obligation bonds in the principal amount of not more than $4,218,800 for the purpose of paying the cost of capital improvements for fisheries resources protection and enhancement facilities?

Bonds Yes [ ]

Bonds No [ ]

* Sec. 6. This Act takes effect immediately in accordance with AS 01.-10.070(c).

12-1.6LH

STATE OF ALASKA

JAY S. HAMMOND, GOVERNOR

DEPARTMENT OF PUBLIC SAFETY

DIVISION OF ADMINISTRATIVE SERVICES / POUCH N - JUNEAU 99811

February 4, 1980

The Honorable Bill Sumner
Senator, Alaska State Senate
Pouch V
Juneau, Alaska 99811

HB691

Subject: Senate Bill 344

Dear Senator Sumner:

The 120 foot patrol vessel referenced in Senate Bill 344 will be stationed in Kodiak to serve the Kodiak/Dutch Harbor areas. If the bond package is approved by the Legislature and the voters, we anticipate receipt of the vessel some time in September, 1981.

The priority enforcement project for this vessel will be in the crab fishery in the Kodiak/Dutch Harbor areas. The Alaska Department of Fish and Game and our Division of Fish and Wildlife Protection conservatively estimate that between 8,000 and 20,000 unmarked and unclaimed illegal pots fish the gulf and Bering Sea year-round. The toll these pots have on the resource is really unknown, and until now we have not had the ability to calculate, with any reasonable degree of success, what that toll is. We feel we will be able to do this with the new boat because it will be capable of carrying approximately 175 crab pots. This will give us two enforcement vessels operating in the Kodiak area, and coverage of the fisheries should increase substantially.

We feel that the primary purpose of the Division of Fish and Wildlife Protection is to provide the enforcement necessary to ensure the successful completion of Fish and Game's management plans. In the Kodiak area, as an example, we have been unable to provide the necessary level of enforcement due to a lack of adequate vessels to patrol the waters in and around Kodiak and Dutch Harbor. Upon receipt of this boat there is still no guarantee that all fishing violations or crabbing violations will be detected. However, the degree at which violations occur should be reduced substantially due to the fact that there are now more vessels operating in the area. As indicated above, the primary objective of this new vessel will be in the crab fishery but it will also be doing work in the salmon, shrimp and bottomfish fisheries as well. In addition, the vessel will play a large role in search and rescue missions that we conduct along the Chain.

The Department of Public Safety considered this 120 foot vessel its top capital budget priority, as evidenced by the Commissioner's list of priorities submitted to the Governor. I would like the opportunity, at your convenience, to meet and further discuss the potential uses and benefits of this vessel.

Sincerely,

Robert J. Stickles

POSITIONS

FULL TIME	0	0	6	6	6	
PART TIME			1	1	1	
TEMPORARY						

III ANALYSIS (See Fiscal Note Preparation Instructions, Section III)

Crewmember salary and benefit costs are: Lt. $60.0; 1st Sgt. $52.5; Cpl. $50.7; 2 troopers $47.8 each; Boat Engineer II $45.4; and a part-time cook $20.0. These costs include sea pay, similar to overtime and shift differential, to compensate crewmembers for shipboard duty. Both salary and other costs are comparable to the Vigilant's operating needs.

In contractual services, major items are: $55.0 for repairs & maintenance and $55.1 for insurance. In commodities, fuel use is estimated at 50 gallons/hour for 12 hours/day during 250 days at sea. The 150,000 gallons needed would cost $270.0 using $1.80/gallon as the price for diesel fuel.

Estimating vessel delivery on 9-1-81, major FY82 operating costs have been adjusted except for salary. Crew training is needed on other vessels until acceptance of the new vessel. Present costs are used for all expenses except fuel estimated at FY83 cost.

HB 691

STATE OF ALASKA

JAY S. HAMMOND, GOVERNOR

DEPARTMENT OF PUBLIC SAFETY

DIVISION OF ADMINISTRATIVE SERVICES / POUCH N – JUNEAU 99811

February 1, 1980

The Honorable Bob Mulcahy
Senator, Alaska State Senate
Pouch V
Juneau, Alaska 99811

HB691
Subject: Senate Bill 344

Dear Senator Mulcahy:

HB691
The 120 foot patrol vessel referenced in Senate Bill 344 will be stationed in Kodiak to serve the Kodiak/Dutch Harbor areas. If the bond package is approved by the Legislature and the voters, we anticipate receipt of the vessel some time in September, 1981.

The priority enforcement project for this vessel will be in the crab fishery in the Kodiak/Dutch Harbor areas. The Alaska Department of Fish and Game and our Division of Fish and Wildlife Protection conservatively estimate that between 8,000 and 20,000 unmarked and unclaimed illegal pots fish the gulf and Bering Sea year-round. The toll these pots have on the resource is really unknown, and until now we have not had the ability to calculate, with any reasonable degree of success, what that toll is. We feel we will be able to do this with the new boat because it will be capable of carrying approximately 175 crab pots. This will give us two enforcement vessels operating in the Kodiak area, and coverage of the fisheries should increase substantially.

We feel that the primary purpose of the Division of Fish and Wildlife Protection is to provide the enforcement necessary to ensure the successful completion of Fish and Game's management plans. In the Kodiak area, as an example, we have been unable to provide the necessary level of enforcement due to a lack of adequate vessels to patrol the waters in and around Kodiak and Dutch Harbor. Upon receipt of this boat there is still no guarantee that all fishing violations or crabbing violations will be detected. However, the degree at which violations occur should be reduced substantially due to the fact that there are now more vessels operating in the area. As indicated above, the primary objective of this new vessel will be in the crab fishery but it will also be doing work in the salmon, shrimp and bottomfish fisheries as well. In addition, the vessel will play a large role in search and rescue missions that we conduct along the Chain.

Attached is a fiscal note for operating the vessel, beginning in FY82.

The Department of Public Safety considered this 120 foot vessel its top capital budget priority, as evidenced by the Commissioner's list of priorities submitted to the Governor. I would like the opportunity, at your convenience, to meet and further discuss the potential uses and benefits of this vessel.

Sincerely,

Robert J. Stickles

Specification E-225-1

Revised 22 February 1980

1100 INTRODUCTION

It is the intent of these specifications to describe the construction, equipment and outfit of the MARCO 122' Basic Crab Vessel.

The vessel will be arranged especially for the North Pacific King crab fishery but is easily adapted to trawling, scalloping, and other fisheries. Particular attention has been given to the general safety and economy of the vessel's operation by providing adequate stability, freeboard and ease of maintenance.

1200 PRINCIPAL CHARACTERISTICS

Length, overall	122'-5"
Length, design water line	111' 4"
Beam, maximum	31' 10 1/2"
Beam, molded	30' 11"
Depth, molded amidships	14' 4"
Draft, aft, crabbing (approx.)	16' 0"
Hold Capacities:	
Crab tank volume, (uninsulated)	9,500 ft^3
Crab capacity (approx.)	220,000 lb
Tank Capacities:	
Fuel oil - normal	20,000 gal
- maximum	55,000 gal
- day tank	1,400 gal
Fresh water	4,000 gal
Lube oil	1,400 gal
Dirty oil	400 gal

1300 GENERAL ARRANGEMENT

General

The vessel will have the general arrangements and appearance as indicated on Drawings E225-1-1100-1E,-2E and -3C. The foc's'le and house have been kept well forward, thus reserving the maximum clear space aft for crab pot stowage.

Deck House

The foc's'le deck forward provides area for anchoring a ' mooring equipment and is protected by a flared bulwark of 4' 6" maximum height at stem. The captains quarters and toilet are in the house on this level with interior ladder access from foc's'le and up to pilot house. The pilot house, with bridge deck raised 4', is arranged with enclosed wings each side and with windows all around for good visibility of fishing operations. Two doors open aft from wings.

Fo'c'sle Area

The fo'c'sle contains three staterooms and crew's toilet, large stowage area forward, galley and mess areas. An anteroom is provided to separate the living areas from the main deck. Walk-in freezer is outboard to port. Access to the engine room is to port.

Main Deck

The main deck aft provides clear area for crab pot hauling and storage. Three hatches with bolted covers give access to fish holds.

The large deck area provides adequate space for future installation of trawling gear. The poop deck aft is 12" above main deck level.

Below the Main Deck

The hull is divided into five main areas by four watertight bulkheads, as follows:

Fore Peak: Chain locker

Engine Room: Contains the main engine, two auxiliary diesel generators sets, salt water circulating pumps, bilge pumps, hydraulic power systems, piping, air compressors, fresh and sanitary water pumps, freezer compressor, welding machine, etc..

Fish Holds: The three fish holds are formed by the engine room bulkhead, outboard longitudinal bulkheads, and three transverse bulkheads aft. The hold bottoms are steel plate, providing a clean and easily maintained surface. The double bottom tanks below the fish holds, and the wing tanks outboard of the holds are fitted for fuel oil.

Lazarette: The lazarette contains fuel tanks, steering gear, and stowage space for ship's gear.

Aft Peak: The aft peak tank is piped for ballast.

2100 HULL STRUCTURE

The entire hull is of welded steel construction, with longitudinal hull and deck framing supported by transverse watertight bulkheads and transverse web frames. Steel will be ASTM A-36 or equal.

All steel plating, framing and bulkheads are wheelabraded and coated with zinc weld-through primer before construction.

Hull and Fo'c'sle Scantlings

Stem	10" x 1 1/4" plate
Keel, center vertical - forward	3/4" plate
Keel, center vertical - aft	3/8" plate
Box keel side plates - aft	3/8" plate
Keel shoe - forward	10" x 1" plate
Keel shoe - aft	12" x 1" plate
Rudder shoe	12" x 2" flat bar
Horn bar	1 1/4" x 12" flat bar
Stern tube	12" Sch. 80 pipe
Stern frame	1 1/2" plate
Web frames	14" x 4" x 5/16" flg. plate
Floors	3/8" plate with 3" flg.
Longitudinal framing:	
Bottom	3 1/2" x 3 x 5/16" angle
Sides	3 1/2" x 3 x 5/16: angle
Main deck, aft	4" x 1/2" flat bar
Main deck, forward	3 1/2" x 3/8" flat bar
fo'c'sle deck	3 1/2" x 3/8" flat bar
Plating:	
Sides	3/8" plate
Bottom	3/8" plate
Transom	3/8" plate
Main deck	5/16" plate
Poop deck	5/16" safety tread plate
Fo'c'sle deck & aft bulkhead	1/4" plate
Bulwark & fo'c'sle side	5/16" plate
Bulwark cap main deck	3" x 6" x 5/16" rect. tubing
Bulwark cap forward	3" x 6" x 1/4" rect. tubing
Main deck guard	10" Sch. 80 pike (split in 1/2 sec.)
Tie rails	2 1/2" Sch. 80 pipe
Bulkheads:	
Upper plate	1/4" plate
Lower plate	5/16" plate
Fairing plate under davit	20" x 5/16" plate - 20' long - stb.
Bilge keel	/2" x 12" plate & 2" round bar
Bilge keel doubler	/2" x 12" plate
Tank drains	1" stainless steel pipe plugs in each built-in tank

2200 DECK/PILOT HOUSE

The entire deck house is of welded steel construction.

Deck House Scantlings

House front	1/4" plate
Bridge Deck	3/16" plate
Sides and aft bulkhead	3/16" plate
House top	3/16" plate
Interior bulkheads	3/16" plate
House front stiffeners	4 x 3 x 5/16" Angles
House side stiffeners	4 x 3 x 5/16" Angles
House after bulkhead stiffeners	3 x 2 x 1/4" Angles
House top stiffeners	3 1/2" x 5/16" flat bar

3100 MAIN PROPULSION MACHINERY

3110 Main Engine and Gear

Caterpillar D399 4-cycle diesel engine, turbo-charged and aftercooled, rated 1125 continuous BHP at 1225 rpm with 4.22 to 1 hydraulic reverse/reduction gear, Model 7261.

Engine is equipped with the following:

Engine mounted instruments
Oil and fuel filters (full flow and by-pass type)
Fresh water cooling with separate heat exchangers for jacket water and aftercooler water
Alarm sensors for low cooling water, low oil pressure, high water temperature and high gear oil temperature
Air starting
Main engine mounted on "Fabreeka" mountings and chocks

3120 Propeller Shaft, Bearings and Propeller

Shafting is hot rolled steel, AISI C1018, turned and polished intermediate shafts are approximately 6-7/16" diameter tail shaft is 7-1/2" diameter with stainless liners, protected with three layers of fiberglass tape and four coats of polyester resin between liners.

Intermediate shaft bearings are babbitted cast iron. Stuffing box is cast bronze.

Stern bearing is flanged type rubber.

Four blade stainless steel propeller is 86" diameter, with conical tail nut balanced, ground and polished. Propeller is installed with Neoprene O-ring, stainless gland ring and welded rope guard.

3130 Main Engine Controls and Instruments

Two-station single-lever Mathers Model AD-12, or equal, mechanical/pneumatic engine controls for throttle and clutch, with fully automatic proportional delay type shaft brake. Controls are located in pilot house, with one fast idle lever starboard side. Air starting and stopping is controlled in engine room.

Engine Room Instruments

Tachometer, engine oil temperature, engine oil pressure, jacket water temperature, fuel pressure, gear oil temperature, gear oil pressure, left and right manifold air temperature, left and right exhaust temperature, start air pressure.

3130 Controls and Instruments (Continued)

Wheel House Instruments

Tachometer, engine oil pressure, gear oil pressure, jacket water temperature, fuel pressure, starting air pressure.

3200 AUXILIARY MACHINERY

Two Caterpillar 3306 turbo-charged aftercooled diesel engines, driving 240-volt, 155 KW prime rated, 3-phase, 4-wire, 60-cycle generators.

Engine will be equipped with the following:

Engine-mounted instruments and automatic shut-down.
Lube and fuel oil filters
24-volt electric starters
PTO adapters for hydraulic pump drives

3300 NON-STRUCTURAL TANKS

400-gallon hydraulic oil tank with sight gage.
5-gal. main engine cooling expansion tank

200-gallon sewage holding tank
3-gallon oil storage tank, sight gage and valves for intermediate shaft bearing lubrication.

3400 PIPING SYSTEMS

3405 Main Engine Cooling

Fresh water cooling with heat exchanger and salt water pump. After cooler fresh water cooled with separate heat exchanger.

Auxiliary Engine Cooling

Fresh water cooling with heat exchanger and salt water circulating pumps.

3415 Sea Chests

Three sea chests fabricated of 16" diameter x 1/2" wall pipe are located in the engine room to serve to crab circulating system. A sea chest with separate suctions P/S of the keel provides water for engine cooling, salt water flushing, and wash down.

3420 Engine Exhaust Piping

Independent exhaust systems will be provided with silencers and stainless steel flexible connections, suitable for main and auxiliary engines. Exhausts discharge out after side of box mast.

3400 PIPING SYSTEMS (continued)

3425 Fuel piping

2" extra heavy black suction piping from after fuel tanks to engine room day tank.

Fuel strainer
Electric power transfer pump, 50 gpm, 5 hp Worthington 6 GAUM or equal, with automatic transfer to day tank on demand
Westphalia OTA-2-00-066 fuel oil centrifuge with independent transfer
Rotary hand transfer pump, 10 gpm, Blackmer or equal.
Standard black piping or Gates hose from day tank to engines with bronze gate valves for fuel filter.

Fuel transfer meter - 50 gpm 1 1/2" Gas Boy #4060
A fuel transfer manifold permits transfer of fuel from any tank except day tank, to any other tank.

Double primary filter for main engine.
Single primary filter for each auxiliary engine.

3430 Bilge Pump and Piping

Pumping will be done with two electric motor driven bilge pumps.

Pumps: Two 3" x 3" Flomax #15, self-priming, 270 gpm centrifugal pumps each direct connected to a 10 hp, 3600 rpm electric motor.

Piping: Bilge suctions with intake screens are provided in the following compartments and are connected to the bilge manifold in the engine room:

Aft Peak	2" pipe
Lazarette	3" pipe
Engine room	2 1/2" pipe
Shaft alley	2" pipe

A 1" discharge valve is provided on the main deck, with 1" by 100' wash-down and fire hose and flange adaptor for shore connection.

3435 Salt Water Flushing System

A 1/2 hp electric motor driven pressure set, Jacuzzi 5RM2AP/S with hydrocell, provides salt water for toilet flushing. Piping is galvanized.

3440 Fresh Water System

Pressure system: 1/2 hp electric motor driven fresh water pressure set, Jacuzzi 5RM2A/S with Aqua Genie located in the engine room.

3400 PIPING SYSTEMS (Continued)

3400 Fresh Water System (continued)

Piping: 1/2 " hot and cold fresh water galvanized piping and copper tubing to galley, toilets and washer. Hot and cold outlets are mounted at bulkhead #5 on Main deck.

Hot water heater: A 52 gallon, 4000 watt electric Sears or equal domestic type water heater is provided and piped to the galley sink, lavatories, showers and washer.

3445 Crab Tank Sea Water Circulating System

Pumps: Three Deming 6" x 6" #4021-6M A1, vertical centrifugal circulating pumps. Each pump rated 1600 gpm at 38' TDH with 25 hp electric motor.

Piping: Each crab tank is supplied through 6" galvanized pipe header and six 3" perforated plastic pipes each hold. All joints will be easily accessible for inspection. Check valves are installed in each circulating header to prevent loss of water from crab tank due to pump stoppage. The system is designed so that any tank can be circulated while one is pumping down. 6 " galvanized suction runs thru shaft alley. An emergency bilge suction in the engine room will be connected to one of the circulating pumps.

3450 Hydraulic System

The basic hydraulic system takes suction from the 400 gallon tank in the engine room. Oil for each pump passes through a 140 Micron suction strainer. The port and starboard auxiliary engines each drive two Vickers 3525 double pumps through Marco DP 26 HPD's. High pressure lines supply oil to anchor winch, crane, pot boom winch, pot rack, Kinghauler and line coiler, with a 3-position selector valve provided to recirculate oil to tank if no equipment is being operated. Another selector valve diverts oil to either the anchor winch or the boom winch - pot/rack - Kinghauler circuit.

Control valves for crane and pot/boom winch are located in engine room and operated remotely by hydraulic pilot-pressure valves at main deck and foc's'le deck consoles. Pilot control oil is provided by two electric motordriven 5 gpm Vickers pumps, one of which is for stand-by. The anchor winch control valve is mounted on the winch. Kinghauler/coiler valve and pot rack valves are located at starboard bulwark.

All return oil passes through two Gresen 10-Micron filters. Piping throughout will be pickled black pipe with suitable hose connections to pumps and driven equipment.

3400 PIPING SYSTEMS (Continued)

3455 Fills, Vents and Sounding

One 3" fuel fill pipe is located at frame 6 main deck, to starboard. 2" vents run into bulwark cap, with 3" screened outlet protected by foc's'le. Oil spill cofferdam is fitted around each fill and vent station.

Fuel oil day tank vents back to main fuel tanks.

Fresh water fill and vent are located port and starboard at foc's'le bulkhead. Fill is 2"; vent 1 1/2".

Three 2" vents lead from crab holds to weather deck at crane and at foc's'le bulkead.

3460 Drains

Galvanized pipe drains are connected to each sink and plumbing fixture. Trapped deck drains are provided in each interior wet space. Waterclosets drain to sewage tank. A 3" x 3" Cornell pump Model 3NLT-3-4 discharges sewage to deck flange or to lockable through-hull valve with automatic transrer system.

3465 Compressed Air System

Two electric driven air compressors, rated at 5 CFM free air to 180 psi with 1.5 hp motors are located in engine room with two 11 cu. ft. air receivers for 200 p i working pressure. An air outlet is provided in the engine room and on deck. Air is piped to wipers in pilot house and to horn on mast.

3470 Lubrication Systems

1/2" copper tube carries oil from 3-gallon tank in engine room fiddley to the four line shaft bearings.

Dirty oil system utilizes Worthington 3 GAM reversible rotary pump 15 GPM at 50 PSI with 2 HP electric motor. Oil may be pumped from main and auxiliary engines into dirty oil tank. The same pump discharges to shore connection flange on main deck.

3475 Crank Case Vents

Pipe vents shall run from engine crank cases to goosenecks along side mast.

3500 STEERING ARRANGEMENT

Rudder will be welded single plate type with 5 1/2" diameter steel rudder stock with continuous stainless steel liner (6" O.D.). Pintle is 4" diameter stainless steel turning in 4" I.D. 'Cutless' gudgeon bearing. Stuffing box is nylon bushed.

A Wagner Model T-19 manual hydraulic steering system with 7-1/2 HP electro-hydraulic power unit shall be installed. Electric stations are located at the starboard and port bridge wings and actuate solenoid valves at power unit. Solenoid valves may also be actuated by auto pilot.

Wagner D-16 helm pump with 36" mahogany wheel is mounted on centerline.

Emergency tiller is provided in Lazarette, with padeyes for owner furnished tackle.

Hydraulic lines shall be pickled black pipe with flexible hose at power unit and T-head unit.

3600 REFRIGERATION

A walk-in freezer of about 390 cu. ft. capacity shall be installed in the port aft corner of the foc's'le. There is an interior door in the anteroom for galley frozen stores and exterior door on deck for the bait section of the freezer. A 2 HP Lehigh compressor is located in the engine room and cools the space with cold plates.

3700 HEATING AND VENTILATION

Heating

Electric heaters shall be 2000 watt, flush mounted and located as follows:

Pilot house - two
Captain's Quarters - two
Crew's quarters - one each stateroom
Galley and Mess - three
Water closets - one each
Forward storeroom - one

Ventilation

Engine room air supply: Forced air supply through one 7000 CFM 2 hp axial fan 'Acrovent' or equal with intake located in after foc's'le overhead.

Engine room exhaust: Exhaust to be through uptake in mast.

3700 HEATING AND VENTILATION (Continued)

Pilot house: Natural ventilation through windows and interior doors.

Foc'sle air supply: Forced air supply through one 1280 CFM blower, Barry or equal, with intake in after foc'sle bulkhead and discharges in the crew's staterooms and Captain's stateroom. Mess and galley exhaust through 400 CFM Nutone fan in range hood. Each toilet has a 120 CFM Vent-Axia exhaust fan.

Lazarette air supply: Two ducts run between engine room and lazarette 750 CFM blower, Barry or equal, will be mounted in the engine room.

4100 ELECTRICAL LIGHT AND POWER

General

The vessel shall be equipped with a 125/216 volt 3 phase, 4 wire, 60 hertz electrical system. Motors over 1 hp shall be rated at 230 volts, but powered by 216 volt, 3 phase system. Normal lighting shall be 125 volt, single phase except fixtures greater than 1000 watts shall be 216 volt, single phase. Emergency engine room lighting shall be 24 volt DC.

Power Generating system

AC System: Two 155 kw prime rated 125/216 volt, 3 phase auxiliary diesel generators shall be provided, each capable of carrying the entire electrical load of the vessel (see section 3200).

DC Systems: Two 24 volt battery banks, each consisting of two 140 ampere hour 4-D (12-19) batteries with a 10 amp Ratelco charger # VM 24102, shall be supplied for the starting circuit of the auxiliary engines. Either battery bank may be selected to supply the alarm panel and engine room emergency lights. A 12 volt battery, charger and 12 volt power supplies for electronics are described in section 4200.

Power Distribution Equipment

Main Switchboard: A compact, marine type, drip proof, dead front split bus switchboard shall be provided in the engine room. Equipment provided in the board shall be as follows:

1. Main circuit breaker for each generator and for shore power.

2. All bus to be copper

3. Control section including panel style ammeter and voltmeter and reed type frequency meter for each generator.

4. Panelboard section including circuit breakers for pumps, blowers, 24 VDC battery chargers, welder, sodium vapor lights, engine room lights, and feeders to two branch circuit panelboards.

4100 ELECTRICAL (Continued)

5. Mechanical interlock preventing parallel operation of generators or feeding back into shore power electrical system.

6. Bus tie circuit breaker.

Shore Power: A 120/208 3 phase 4 wire shore power receptacle, Crouse Hinds # AREA 10476-S22, shall be mounted on the vessel. A 100 ' length of # 6/4 SO cord terminating in a Crouse Hinds # ACP 10477-S22 plug shall be furnished for connection to a shore power source.

Panelboards: Two branch circuit panelboards shall be provided for power distribution to the wheelhouse and the main deck. Panels shall be 225 AMP 42 circuit load centers, Square D # Q042W suitable for flush mounting. Two 40 AMP 2 Circuit panels, Square D # Z02S, shall be provided for the DC circuits supplying the main alarm panel.

Battery Switch: A 200 AMP knife switch shall be provided to disconnect each auxiliary engine circuit from its battery.

Conductors: Cables for feeders and branch circuits shall primarily consist of shipboard cable types SGA, SJ, BSP, or HOF. In dry interior locations multiconductor PVC of brake cable shall be acceptable. Welding cable or SO cord may be used for connection to equipment when flexibility is required.

Welding Cable: Two 75' lengths of # 1/0 welding cable shall be provided for welding leads.

Enclosures: All enclosures shall be suitable for the environment in which they are located. No hubs, holes, or knockouts shall be left open. Suction boxes and splice boxes located in wet locations shall be of weatherproof construction cast brass, aluminum, or glass polyester. Boxes in damp locations may be sheet steel Nema 12 phosphatized and painted. Junction boxes and outlet boxes in dry locations may be sheet steel with a close fitting cover.

Panelboards and motor starters situated in dry locations have Nema 1 enclosures.

Raceways: Electrical conduit, when use, shall be rigid.

Control Devices:

1. Across the line magnetic motor starters shall be provided for all three phase motors. Non-reversing starters shall be 600 volt 3 pole with 3 thermal overloads, Allen Bradley type # 709. Reversing starters shall be type # 705.

4100 ELECTRICAL (Continued)

2. Forward-off reverse selector switch for the dirty oil pump shall be Allen-Bradley # 800S-3SA.

3. Pushbuttons for the whistle solenoid shall be Cole-Hersee # M 608.

4. CO_2 switch is furnished as a part of the CO_2 fire extinquishing system.

5. Pressure switches for use with the salt water and fresh water pumps are furnished with the units. Pressure switches for the fuel oil transfer pump shall be Barksdale # DITA3SS.

6. Toggle switches shall be Bryant # 4801.

7. Relays for switching of the sodium lights shall be Allen-Bradley type # 702L.

8. Whistle solenoid shall be ASCO # 8211D2.

Wiring Devices:

1. Non-watertight toggle switches shall be heavy duty Bryant # 4801, 4802, or 4803 located as shown on the plans. A Bryant #4801-PLR shall be located in the anteroom by the freezer door. A Bryant # 4822 shall be used as a selector switch for the engine room emergency light.

2. Non-water tight duplex receptacles shall be Hubbell # 5252. Receptacles shall be located as follows:

1 - In anteroom
2 - In engine room
4 - In galley
1 - In mess area
8 - In pilot house
2 - In captain's Quarters
1 - In crew's toilet room
1 - In captain's toilet room
2 - In crew's stateroom
1 - In storeroom
1 - for refrigerator
1 - for washer
1 - In void under pilot house

3. Watertight toggle switches shall be cast brass manufactured by Pauluhn. A combination switch/receptacle located in the lazarette shall be Cat. # 2532. A combination switch/pilot light # 889 shall be located on the main deck next to the freezer door.

4. Watertight receptacle on the main deck shall be a Pauluhn # 2524.

5. Welding receptacle in the main deck locker shall be a Bryant # 9306.

POWER UTILIZATION EQUIPMENT

Navigation lights: shall be # 9S4461 located as follows:

Running lights - one port, one starboard.
Range light - one on mast
Stern light - one on aft side of mast
Anchor light - one on mast

Fishing Lights: Shall be Pauluhn # 767B one each red over white on mast.

Floodlights: High pressure sodium floodlights, shall be Widelight # TLS1000. Quartz floodlights shall be Widelight # L-1500, Floodlights shall be located as follows:
2 - 1500 w. Quartz - on mast for starboard working area and aft deck.
2 - 1500 w. Quartz - on mast facing outboard.
4 - 1000w. sodium - on mast platform facing forward.
Ballasts shall be located in engine room.

Watertight Deck Lights: Shall be cast brass with globe and guard. Location and type to be as follows:

2 - in freezer	- Pauluhn # 717B
2 - port and starboard deck	- Pauluhn # 776B
1 - forward deck light	- Pauluhn # 776D
4 - deck lights on house aft	- Pauluhn # 717B
2 - Lazarette(crab tank)	- Pauluhn # 717B

Interior Lights: Non-watertight lights shall be incandescent or fluorescent located as follows:

1 - in lazarette	- #77.4	- 2' fluor
13 - in engine room	- Metalux # VT240A	- 4' fluor
2 - in galley	- #77.5	-2' fluor
1 - in engine room stair well	- #77.4	-2' fluor
1 - in anteroom	- #77.5	-2' fluor
3 - in mess	- #77.5	-2' fluor
1 - in crew's head	- #77.5	- 2'fluor
1 - in crew's head	-#153.2	-mirror light
3 - in crew's quarters	-#77.5	-2' fluor
7 - in crew's quarters	-Swivelier # 59X-0188	-bunklight
1 - in storeroom	- #77.4	- 2' fluor
2 - in captain's head	- #77.5	- 2' fluor
1 - in captain's quarters	- #77.5	- 2' fluor
2 - in captain's quarters	- #77.5	- 2' fluor
2 - in wheelhouse	- # 77.5	- 2' fluor
1 - in wheelhouse	- # 141.2 w/red filter	- chart lt.
1 - in wheelhouse	- Guest # 910	- console lt.
1 - in wheelhouse	-# 77.5	- 2' fluor
2 - in wheelhouse stairwell	- Prescolite # WB 24	- incandescent
2 - in engine room	- #9546651	- 24v. emerg. lt.
2 - in wheelhouse void	- Pauluhn #729B	- incandescent
2 - in engine room (crab tank)	- #9546656	- incandescent

4200 ELECTRONIC EQUIPMENT

A. Radars

One Decca Model 916-48 mile mounted on mast platform.
One Decca Model 926-60 mile on lower mast bracket.
One magnifier and VRM on Model 926 (without interswitch).

B. Recording Sounder

Simrad Model EX 380 600 fathom range with 10 x 20 transducer.

C. Depth Indicator

Raytheon DE726B 120-fathom/360-foot with 7041K transducer.

D. Lorans

Two Northstar 6000 Dual Loran C with auto tracking.
8 foot whip antennas.

E. VHF radio-telephone

Raytheon Model 50A or Equal
25 watts output, 55 channel.
Morad VHF-156 antenna and mounts.

F. Main Single Side-band, radio telephone

Northern Model N-550 Single Sideband Radiotelephone, 150 watt P.E.P. output, 12/24 channel, with 10 Simplex A crystals, 9 simplex B Crystals, and 2 Duplex crystals. System to include RF gain and squelch option, Northern Model N-555 antenna coupler, Morad WH-17 antenna with M-6 antenna mounts. System operates on 115 volts A.C..

G. Auto Pilot

Sperry BT Magnetic Auto Pilot System, complete with magnetic compass, amplifier, interconnect cables, junction box, electronic box, steering selector control, two rudder angle indicators, rudder angle transmitter unit, heeling error tube, and two curved quandrantal arms with 3 inch spheres.

H. Gyrocompass

One Sperry Model SR-130 Gyrocompass System, consisting of master compass, static inverter, transmission unit, power adapter, interconnect cables, one standard repeater flush-mounted in console, and one 45° heading selector

I. Intercommunication System

4-station, Raytheon Model 350 master panel in pilot house.
Slave talk-back station in mess room.
Slave talk-back station in starboard stateroom.
Weatherproof talk-back station under fo'c'sle overhead.

4200 ELECTRONIC EQUIPMENT LIST (Continued)

J. Wind-Speed Indicator

Danforth White # M50SC

K. Emergency Radio-Telephone

Northern Model N-571 Single Sideband Radiotelephone. 100 watt P.E.P. output, 11/22 channel, with 6 Simplex A crystals, 4 Simplex B Crystals, and 1 Duplex crystals. System to include Northern Model N-700 Antenna Coupler, Morad WH-17 Antenna, with M-6 Antenna Mounts. System operates on 12 volts D.C. with a separate 10 volt sealed battery, and 6 AMP Ratelco battery charger.

L. C.B. Radio-Telephone

Cobra Model 21XIR or equal citizen band transceiver, 40 channel with M-6 antenna and mounts.

M. 12 Volt Power Supplies

Four Newman Model 115-12-6B or equal power supplies are provided for 12 volt equipment in the pilot house (except the emergency radio telephone).

4300 ALARMS

A master alarm panel will be mounted in the engine room with silencing switches and indicating lights for each of the following systems. A green light indicates normal operation and a red light indicates malfunction or non-operation. The alarm bell will be located in the anteroom. An additional alarm panel with red warning lights, is located in the pilot house, which indicates malfunction only.

Main Engine

High temperature, low oil pressure expansion tank low water level, and gear oil high temperature alarms.

Auxiliary Engine

High temperature and low oil pressure alarm, set to ring before automatic shutdown.

Bilge

High water sensors located in engine room and lazarette bilges.

Hydraulic Oil Tank

Low level alarm set for 200 gallons remaining.

Fuel Oil Day Tank

Low level alarm set below automatic fuel transfer.

Sewage Holding Tank

High level alarm.

4300 Alarms (Continued)

Flow Alarm

Three flow alarm senders for crab sea water system will be provided to work in conjunction with the basic alarm panel in the engine room.

Bearing Temperature

Install four main shaft bearing temperature sensors with readouts in engine room entry. Connect the system to main alarm bell.

4400 ANODIC HULL PROTECTION

Hull anodes will be 24-pound weld type cast with high purity zinc as supplied by Federated Metals Corporation or Bunker Hill Corporation. A total of 24 will be uniformly distributed on rudder, skeg, bottom, and bilge keels. One 12-pound zinc anode will be installed in each sea chest. Four 24-pound zincs will be welded in each crab tank. Three 1" Sentinal or equal pencil anodes are fitted in crab circulating pipes adjacent to pumps.

5000 JOINER, CARPENTER INSULATION

5100 JOINER AND CARPENTER WORK

Interior Bulkheads and Sheathing (General)

Joiner bulkheads will be 3/4" plywood
Sheathing will be 3/8" plywood
Galley, mess, Captain's and crew's staterooms and pilot house will be formica or equal; carpet will be behind crew's berths on bulkheads.
Overheads in quarters will be 24" x 24" Armashield, or equal.
All wood trim will be oiled teak.

5120 Pilot House

Steering console with autopilot, radar and sounder at starboard station.
Chart table with three chart drawers
Overhead will be 3/4" Formica faced plywood.
Captain's chair(starboard)

Captain's Quarters

One double berth starboard with 3 drawers underneath
One hanging locker
One table and settee with Naugahyde covered polyfoam cushions and 2 drawers underneath
One desk with fixed sliding chair
One single berth and hanging locker to port
One file cabinet

5160 Crew's Quarters

Three staterooms provided with the following:

Berths with 2 drawers under lower berths.
Hanging locker and stowage racks.
Bulkhead mirror

5150 Mess Room (Starboard aft)

Pedestal tables with Formica covering and condiment rack.
Dinette seat lockers with Naugahyde covered polyfoam cushions.
Storage shelf above dinette.

Galley (Starboard)

Formica covered counter.
Drawers and lockers with doors above and below counter top.
Locker over refrigerator.
Stainless behind stove units.

5100 JOINER AND CARPENTER WORK (Continued)

Captain's and Crew's Toilets

Built-in counter with stainless wash basin
Built-in medicine locker, mirror, soap dish, etc.
Shower with rod and curtain.
Overheads will be 3/3" formica faced plywood.
Anteroom

Stacked clothes dryer and washer are located at forward bulkhead.
Engine room entry will be lined with 1/4" perforated board.
Overhead will be 3/8" formica faced plywood.

5180 Forward Storeroom

The storeroom will have two storage shelves port, starboard, and forward, set in angle frames.

Lazarette

The lazarette will be fitted with 2 x 4 wood grating from forward bulkhead aft to the second web frame.

Shelving shall be provided port and starboard from forward bulkhead to after bulkhead, and shall be 3 feet deep and two courses high, with suitable sea rails.

5190 Main Deck

2 x 6 flat fir grating on main deck, between fo'c'sle deck and raised poop. Top surface will be flush with the hatches and poop. The grating will be free of surface obstructions which might snag pots.

Crab Holds

Removable fore and aft pen boards are located on the hold bottom below the outboard hatch coamings in each tank These boards are the full length of the holds and are 3" x 12" rough fir, three high.

5200 DOORS, PORTS, WINDOWS AND HATCHES

5210 Doors

Interior doors - 9 required, constructed of mahogany plywood faced with formica.
Two exterior doors in Pilot House - aluminum with two safety glass windows (Dutch door starboard side.).
One weathertight door in after fo'c'sle bulkhead with 6" fixed light
One weathertight aluminum door to engine room.

5200 DOORS, PORTS, WINDOWS AND HATCHES (Continued)

Ports and Windows

Front and side pilot house windows will be 1/2" heat tempered glass in aluminum frames. All others are 3/8" heat tempered glass.

2 - Vent top windows in Captain's quarters: 1-port, 1-starboard
2 - fixed windows located in captain's quarters starboard side.
17 - fixed windows located in pilot house.
2 - drop windows located in pilot house sides.
1 - Vent top and one fixed window located in mess aft.
4 - 8" fixed lights in hold bulkheads.

Hatches

3 - Steel flush, watertight main hatches, each with 20" galvanized Baier
1 - lazarette hatch 3 1'2 x 5' flush, bolted watertight with 20" galvanized Baier
2 - quick acting flush, watertight deck scuttles, 20" Baier or equal, for engine room and fo'c'sle crew escape.

Manholes

Bolted manholes shall be fitted in each built-in oil and fresh water tank, and to the forepeak void.

5300 INSULATION

Living Quarters

Hull and house sides exposed to weather in main deck living quarters, pilot house and captain's stateroom are sprayed with 1" Cafco or equal. Deck heads in main living quarters exposed to weather will be covered with 1" Microlite or equal, with F.S.K. vapor barrier. 1" Cafco will also be applied to outside of uptake in galley and pilot house.

Engine Exhausts

All engine exhaust pipes and silencers will be lagged with 1" Temp-Mat blanket throughout.

Freezer Compartment

Sides and overhead of freezer compartment are lined with 6" Spinglas and sheathed with 3/4" marine grade plywood. The bottom is insulated with 6" Foamglas and covered with 3/4" plywood and fiberglass.

Void under Holds

Polyurethane foam outboard of shaft alley (2 lbs./CF).

Forward Storeroom and Lazarette

The forward storeroom and lazarette above the waterline will be coated with Chemshield 1503R insulating paint, applied to 40 mils. thickness.

6100 PAINTING AND PREPARATION

Sandblasting and Painting Preparation

All steel plating, framing and bulkheads are wheel-abraded and inorganic zinc prime coated before construction. All exterior shell plating, decks, bulwarks, and crab tanks have the welded areas sandblasted to bright steel. All sandblasted surfaces are to be prime coated within two hours.

Painting Schedule

Bottom Paint:

1	Devran	230	Red/Brown	8 MILS
1	Devran	230	Black	8 MILS
1	Devran	216	Anti-Fouling	2 MILS

Hull Exterior:

2	Cathacote	302	Inorganic Zinc	2 1/2 MILS
1	Devran	201	Primer	2 MILS
1	Devran	229	Finish Coat	2 MILS

Deck (Under Grating and Inside of Bulwarks):

2	Catacote	302	Inorganic Zinc	3 MILS
1	Devran	201	Primer	2 MILS
1	Kel-Kote	206	Coal Tar Compound	To Cover

Foc'sle and P.H. Top (Non-Skid Areas):

1	Cathacote	302	Inorganic Zinc	3 MILS
1	Devran	201	Primer	2 MILS
1	Kel-Kote	206	Coal Tar Compound	To Cover

Crab Tanks

2	Devran	244 HS	Tank Coating	4 MILS (Each Coat)

Fresh Water Tanks:

1 Cement Wash

Interior (Exposed Steel):

1	Brolite	P-93	Zinc Chromate	1-2 MILS
1	Brolite		Flat Undercoat	4 MILS
1	Brolite		Gloss Finish	2 MILS

6100 PAINTING AND PREPARATION - Continued

Voids, Chain Locker:

1 Devran	201	Primer	2 MILS
1 Devran	230	Black Anti-corrosive	2 MILS

Spray one coat water base latex paint over Cafco insulation. Paint draft marks with contrasting color, port and starboard, fore and aft.

Paint name both sides of bow and on centerline aft, 3' logo on stem, and provide basic labels. One contrasting stripe will be applied around the pilot house.

6200 CEMENT AND SPECIAL COATINGS

Cement

Cement will be installed in bilge areas to facilitate drainage.

Deck Coverings

Main deck over engine room will be covered with 1" light weight aggregate and epoxy sub-base.

Exposed deck areas within the foc's'le and upper house shall be finished with 3-M 'Colorflake' or Armstrong 'Commendation' carpeting.

6300 GALLEY AND ACCOMMODATION EQUIPMENT

Ranges and Ovens	General Electric deluxe cabinet mount oven Model JKS 06 General Electric push button counter top range Model JP 651 Frigidaire electronic built-in oven, RWM7 Jenn-air counter top barbecue, Model 2360
Double Sink	Stainless steel, with trap and swing spout
Refrigerator	Frigidaire 17 cu. ft. with freezer, Model PCI 170T, 2 door
Waterclosets	Flush type in crew's and captain's toilets
Shower Stall	30" x 30" for each toilet with rod and curtain
Lavatories	Stainless steel in crew's and captain's toilets
Mattresses	polyfoam with cotton ticking
Washer and Dryer	Westinghouse stack type LA 170/DE 170

6400 DECK OUTFIT

6410 Mooring Equipment

Main anchor 2,000 lb. Navy or equal
120 fathoms 1-1/8" stud link chain, galvanized
11" diameter anchor roller
3 - closed chocks in bulwark aft
6 - closed chocks in foc's'le bulwark
4 - double bitts, 2 forward, 2 aft
2 - 100' x 2" polypropylene mooring lines
12 - 12" x 24" hinged aluminum freeing ports
4 - 30" cleats on foc's'le deck

6400 Deck Outfit (continued)

6420 Safety and Navigation Outfit

10 - life jackets
2 - ring buoys
8 - fire extinguishers. (1) 15# CO_2 and (2) 10# Dry chem in engine room; (1) 10# dry chem in ante room; (2) 2 1/2 #Dry chem in fo'c'sle (galley and quarters); (2) 2 1/2 # Dry Chem in pilot house and captains quarters.
2 - inflatable life rafts, Elliott or equal, 6-man capacity
Magnetic compass starboard side - 4" Ritchie DP60

Bronze bell 8"
Air horn, Cunningham Model 3A or equal
Three windshield wipers, air driven Trico or equal
Three defrosters, Arvin # 29H60
Install engine room fixed CO_2 system consisting of six 75 lb. bottles with remote control in anteroom and automatic blower shutdown.

6430 Ladders and Handrails

Inside ladders are provided to engine room, fo'c'sle deck, and pilot house.
Outside inclined ladders lead from main deck to fo'c'sle deck and from fo'c'sle deck to bridge wings port and starboard.
Vertical ladders are provided in lazarette and at engine room and fo'c'sle emergency escapes.
1 1/2" pipe handrails are fitted on fo'c'sle deck sides and aft.
1 1/4" pipe stormrails are fitted on deck house , sides, and front.
3/4" rungs are welded inside and outside mast.

6440 Masts and Booms

Masts

Main mast is tapered rectangular box shape, fabricated of 5/16" and 1/4" plate and built integral with deck house.
Suitable brackets are provided for radar antennas, range light, air horn, crab lights and radio antennae with 5' x 8' mast platform.

Pot Boom

Pot boom to starboard will be 28' x 6" pipe with 3" and 4" pipe adjustable strut.

6450 Running Rigging

Pot boom topping lift: 3/4" polypropylene, 5 parts with 6" wood blocks and 5/8" wire safety pendent.

Pot boom fall: 75' x 1/2" wire rope whip with 10" galvanized oval block, and fabricated 1 1/4" steel pot hook.

6400 DECK OUTFIT (Continued)

6460 Engine Room Outfit

Engine room floor plates will be aluminum diamond plate. A Steel work bench will be located in the forward part of the engine room with a 5" vise and drawers under. A stowage locker for miscellaneous fittings and filters will be provided. A Sears 230 amp welding machine will be wired to a receptacle in the main deck locker.

6500 DECK MACHINERY

Deck Machinery for a basic King Crab vessel will consist of:

Marco Model A5031 hydraulic anchor winch, with wildcat, single gypsy and local controls.

Rowe 8 ton crane to port with base raised 36", complete with Marco W3000 winch, 110' of 1/2" 6 x 37 wire cable and pot basket.

W3000 Marco winch for pot boom with 75' of 1/2" 6 x 37 wire.

6600 FISHING GEAR

The fishing gear for a basic King Crab vessel will be as follows:

Marco KingHauler J0111 with 5" galvanized pipe davit.

Marco J2111 KingCoiler.

Marco double-acting pot rack with 3" Sch. 80 galvanized pipe frame and two T-J 4" x 1 3/4" x 22" hydraulic cylinders. and manual dogs.
8' x 30' x 1/4" steel safety treat plate on deck grating fitted aft of pot rack.

Aluminum crab loading hopper.

MARCO SEATTLE
2300 West Commodore Way
Seattle, Washington 98199

SPECIAL CONDITIONS

In addition to the work described in the attached Specifications, the Builder will accomplish the following:

1) Upon completion of the hull, Builder shall arrange for Customs admeasurement through the U. S. Coast Guard. Builder will supply a Master Carpenter's Certificate and provide other necessary information to Purchaser as required for documentation. Upon assignment of official number, same will be marked into the vessel's structure and the name and hailing port shall be painted in accordance with Maritime Law.

2) Upon completion of the vessel, Builder will conduct dock and sea trials, testing all systems and equipment and demonstrating the vessel's capability to Purchaser's satisfaction. Fuel and lube oil for the trials will be supplied by Builder.

3) Builder will conduct an inclining test and provide a stability report to Purchaser.

4) At the time of acceptance, Builder will provide Purchaser with two sets of Marco standard general information books, which include basic instructions, major equipment lists with model and serial numbers, electrical and piping diagrams, arrangement plans, docking plan, propeller shafting and rudder details, together with manufacturers' instruction manuals where available.

5) Upon completion of trials and correction of any deficiencies, the vessel will be cleaned of all shipyard gear and debris, the painting touched up and the entire vessel left in shipshape condition.

6) The Builder will provide signal flags, bunting, flowers, champagne bottle and public address system for the christening of the vessel. An additional sum of $1,000 will be allowed for Purchaser's reception.

122' BASIC CRABBER

Addendum No. 1
to
Specification E-225-1
dated
22 February 1980

Reference drawings: E-225-3-1100-1-7, -2-7, -3-7, Rev. A

3300 Non-Structural Tanks

Delete the 200-gallon sewage holding tank.

3460 Drains

Delete the 3" x 3" Cornell Model 3NLT-3-4 sewage pump with automatic transfer system and 3" main deck discharge.

Substitute a Red Fox Model RF-05-MP USCG Type II marine sanitation device rated for 8 persons continuous and up to 12 intermittent (4-day duration).

Unit to be equipped with the following:

1) Air regulator and gauge to reduce ship's air supply to 4 SCFM at 2 PSI

2) High-level alarm sensor in the discharge sump

Install a 2"-dia. galvanized steel overboard discharge line with bronze gate and check valves. A 2"-dia. galvanized steel vent will be discharged 19' above the main deck at the after side of the mast.

5180 Forward Stateroom

Convert the forward storeroom into a 3-man stateroom complete with lockers and additional door to port. Relocate the fixed CO_2 bottles to the engine room.

A Plan for the Organization of Vocational and Technical Fisheries Education for the State of Alaska

A Plan for the Organization of Vocational and Technical Fisheries Education for the State of Alaska

Submitted to:
The State of Alaska
Office of the Governor
Bottomfish Coordinator
and the
Alaska Department of Education
Juneau, Alaska
October 19, 1979

By:
Richard S. Lee, Ph.D.
Lee, Pennington and Associates
Rural Route 3, Box 3997-A
Juneau, Alaska 99801
907-586-3056

PREFACE:

This report provides a brief overview of some of the problems of fisheries education in the State of Alaska. A complete analysis with a set of fully developed scenarios is, due to constraints of time, beyond the scope of this project. This is a brief outline of a possible organizational and communication network with which the State may maximize the efficiency of current efforts and resources and direct additional future development. It should be emphasized that no current efforts should be abandoned, but should be more fully developed in a coordinated fashion.

The material used in this report came from many sources. Much of it is the result of the author's impressions during four years as an Education Specialist for the Alaska Marine Advisory Program and from conversations with many people vitally interested in Alaska fisheries education. A letter signed by Ms. Marilou Madden (Department of Education) at the outset of this project elicited a wide variety of responses which have proven to be of great value in compiling this document. Funding for this report was provided by the Office of the Governor, through the Department of Commerce and Economic Development and the Department of Education.

Particular credit is due to Jim Edenso, Bottomfish Coordinator, Office of the Governor; Tony Mecklenberg and Richard Reynolds (Department of Commerce and Economic Development); John Doyle and Hank Pennington (Marine Advisory Program); and Jerry Hiley (Department of Education) for their help.

I. INTRODUCTION

The fishing industry in Alaska is of prime importance. Since fisheries are renewable resources, they supercede the long-term value of even oil and gas, which will eventually be depleted. The advent of the 200 mile limit law helps to insure the future conservation and proper management of our fish stocks through the foreseeable future. At the present time, Alaska is dependent on traditional fisheries for a very few of the potentially marketable species. The white fish resources have traditionally been harvested and processed only by foreign interests. Many other resources are currently underutilized or not harvested at all. However, the state's fishermen and processors, as well as investors, are carefully examining the white fish resource and other domestically underutilized resource fisheries to insure Alaska's status as a major producer of the world's seafood.

One of the major factors hindering, or at least slowing, the development of Alaskan fisheries, is the lack of a statewide coordinated fisheries education and training program. The past and current efforts at education and training in this vital field have been either sporadic or redundant, and often marred by an inability to satisfy the needs of the fishing industry.

Past problems have been addressed primarily at the local level. The needs of the fisheries community (e.g., fishermen, processors, etc.) have been approached most consistently by the Alaska Sea Grant Program through its subsidiary, the Alaska Marine Advisory Program, with aid from other state-supported programs. Since funds, personnel and time are limited, these programs are severely over-extended at present. Several of the state's community colleges have made various attempts to develop vocational or technical fisheries programs. In terms of investment of funds and effort, the most notable has been the Kodiak Community College. Both Juneau-Douglas and Prince William Sound Community College are either actively pursuing fisheries programs or are attempting to organize them. Sheldon Jackson, a private two-year college which is located in Sitka, has developed a successful vocational aquaculture program and is looking toward possible expansion in other areas of fisheries education.

Various rural high schools in the state have attempted to establish vocational or technical programs in either fisheries or aquaculture, but their rate of success has been rather low. There are several reasons for the lack of success in these programs. A high rate of teacher turnover, lack of involvement by local fishing community members, and academic ability of students, are among the reasons for a low rate of success in these programs.

The University of Alaska, through Sea Grant and other University branches, is also involved with fisheries education. Other than the extension oriented Marine Advisory Program, the University's efforts are primarily aimed at the more esoteric aspects of management and basic or applied marine and fresh water research - topics that are outside the scope of this report.

II. REVIEW OF EXISTING EFFORTS

A. Alaska Sea Grant Program

The University of Alaska Marine Advisory Program, under joint funding from the National Office of Sea Grant and the Cooperative Extension Service, has historically been the leading agency in fisheries education within the state. Sea Grant's effectiveness is limited in meeting the statewide demands because of underfunding and understaffing. While the Marine Advisory program represents an excellent effort (certainly the best in the state to date), it is severely limited both geographically and topically. The vast areas of southwestern, western and arctic Alaska are represented by only one agent supported on a nine-month contract. It is also of interest that he is the only member of the program staff that is fluent or even conversant in both English and any of the native languages.

The inevitable result of this understaffing is difficulty in focusing on the development and maintenance of long-range programs. Much of the effort must be expended in answering immediate and often unforeseen problems. Those workshops and fisheries institutes that have been carefully planned over an adequate time period have usually been effective and relevant. The biggest drawback is that there has not been enough of them.

It does not appear that the problems associated with underfunding and understaffing will be solved in the near future. As an example, for several years one of the greatest needs in the state fisheries has been for a gear specialist; associated, ideally, with the Marine Advisory Program. Yet, funding for this position has been impossible to secure. One answer to this problem could be the development of much broader cooperation and coordination with all other fisheries education entities within the state which would insure a more effective approach.

The Sea Grant Program outside of the Marine Advisory efforts, is also involved with pertinent fisheries education. Their mission is to perform applied research on scientific problems that impinge on any aspects of marine resource utilization, including, but not limited to, fisheries.

An example, is the on-going research program of Drs. Nishiyama and Niebauer and their students relative to the problems of the Kodiak shrimp populations. The information produced by this study will have strong implications both in shrimp management and more effective methods of shrimp fishing.

Much of the Sea Grant effort (as well as most of the other University efforts) is aimed at the higher education level with little relevance to vocational education for the average fisherman. Education of this sort is outside the realm of upper division university course work. The role of the Alaska Sea Grant Program (ASGP) is more appropriately in the training of research and management personnel.

B. Community Colleges

1. Juneau-Douglas Community College: JDCC is deeply committed to a fisheries technology program. Their current curriculum includes the following courses: small boat construction and repair; repair and maintenance of gas and diesel engines; and an assortment of regular classes and clinics (short courses). Courses are offered in welding, which stress repair and fabrication using all common techniques (e.g., oxy-acetylene, arc). Hydraulics maintenance and repair are also offered, and self-help programs on such topics as navigation and marine electronics are planned. (M. Metty, Personal Communication).

   In preparation for future development of their fisheries education program, JDCC has purchased a shoreside facility, formerly known as the "Northern Commercial Property." Although plans for its use are still undefined, it seems clear that this property will house JDCC's entire marine and fisheries programs. It is ideally located with a ways and a small boat yard for repair and maintenance of smaller commercial fishing vessels. It will be the only such facility in Alaska that is tied to an educational institution and thus presents some ideal and unique educational opportunities. One other similar facility is planned for Alaska, the Alaska Skill Center at Seward on the southcentral coast, discussed elsewhere in this report.

   In planning for future fisheries education, JDCC has advertised two openings for "gear specialists": one in the area of white fish fisheries; and one to be more of a generalist. The effort is constructive, but the needs do not seem well articulated. More appropriate at this juncture would be the creation of a single position of "fisheries education coordinator", whose primary function would be to clearly plan both present and future curriculum and facility needs relevant to the fishing industry. The fisheries education coordinator could then work to build the program around the two positions advertised at this time.

2. Prince William Sound Community College: PWSCC's efforts are still at the proposal stage, although the course outline is certainly impressive and comprehensive. The course descriptions indicate a strong attempt toward the development of a technical fisheries program similar to that found at the Rhode Island School of Fisheries. Dr. John Devens, Campus President, has told me that students are already signed up for this program; however, other than a fisheries coordinator, faculty and facilities are not in place. The PWSCC effort requires extensive funding, with both Federal and state support. Two factors are even more important than funding to insure the ultimate success of this program: (1) patient and long-term time allotment and (2) very careful selection of instructors for the program. Judging from the experience of the Rhode Island School of Fisheries, seven to ten years may be required to successfully establish and demonstrate the merits of a fisheries technical school. Without the exact combination of familiarity with the region fisheries and fishermen and the ability to communicate and teach on the part of every member of the faculty, the program cannot succeed.

3. Kodiak Community College: An ambitious program in fisheries technology was established at KCC in 1972. The program was expanded in 1974 to include a two-year course in seafood processing (Atkinson, 1974). Kodiak was envisioned by the University to be the ideal location for this program. There were indications of strong support for the concept throughout all phases of the industry, yet by 1978, the program was virtually dead. In my discussions with various representatives of the industry and the community college, the reasons for this appear to be: (1) the program was not structured to meet the needs of the industry in terms of format or content; (2) not enough time was allotted to bring the program to fruition; and (3) while the instructional staff was well qualified, in terms of their experience and academic ability, they were evidently unable to build a rapport with the various segments of the industry and to take direction from them in structuring the program. This last is of extreme importance, but it is also necessary to be able to go one step further and intuitively anticipate needs that the industry does not express.

   KCC has not lost its determination to take a strong lead in Alaskan fisheries education. A recent grant proposal has been submitted and funded to reimplement the program on a different level. The approach is to develop a multi-agency cooperative effort on an island-wide basis.

This will involve not only KCC, but also Kodiak High School's existing fisheries program, and all the region's village high schools. Much of the effort will be devoted to the development of modular material that can be used in or out of the classroom. Emphasis will not be restricted to the harvesting end of the fisheries but will also stress the many ancillary skills needed by today's modern fishermen to compete successfully in the business world. In conjunction with the University's Criminal Justice Center, a strong multi-level fisheries law component is being built-in. If the new Kodiak program lives up to its promise, it could serve as a model for all regional fisheries education development programs throughout the state.

4. Other Community Colleges: Kuskokwim Community College is in the process of organizing a land resources program, including fisheries and wildlife management, leading to an A.A. degree. The nucleus of their fisheries program will encompass the river fisheries of the river country of Western Alaska. Ketchikan Community College, Sitka Community College as well as others about the state, have expressed interest in various aspects of technical programs. Most offer some sort of marine technology programs, including small engine repair and maintenance as well as related courses.

5. Sheldon Jackson College: While Sheldon Jackson is a private college, and thus lies outside the domain of the community college system, it is practical to consider it within that province, for the purposes of this report. Since it is a two-year college, SJ's interest in fisheries are currently limited to salmon aquaculture, although both the staff and the administration have expressed interest in expanding into a much broader program, possibly including, training for the white fishery. (Charles Bovee, Personal Communication).

In its speciality, SJ provides the only upper level academic aquacultural training within Alaska. It is a successful program, but limited in potential by a rather small and defined job market available to graduates from the program. SJ draws students from all over the state, as well as from the lower 48 states. Courses include not only the standard fish husbandry and fish biology offerings, but also a strong "hands-on" approach to the hatchery work, and courses in mechanical equipment operation and maintenance, emergency medical care, and fish pathology. (Mel Sieffert, Personal Communication).

Due to the restricted job market, it is impractical for other two-year programs in the State to try and duplicate the aquacultural curriculum offered by SJ, unless, for some unforeseen reason, their program was to be discontinued.

C. Secondary Schools:

Secondary schools have expressed strong interest in both fisheries and aquaculture programs, but with few exceptions, most attempts at these programs have met with limited success.

In looking at these programs, one can find several common denominators that contribute to the lack of success: lack of experienced teachers; high rate of teacher turnover; and lack of information resources. Inadequate funding and lack of community support are also cited as reasons. Complicating the situation are factors unique to rural Alaskan schools such as poor communication within and between interested districts and individual teachers. Too often mistakes made in one region are simply repeated by other districts because there is no forum of interested parties that can initiate an exchange of ideas, experience and information.

Yet the secondary school fisheries picture is not entirely bleak. Several schools have made strong, sustained and successful efforts. For example, Ketchikan and Kodiak have long been leaders in the field of fisheries. Kake, Ketchikan and Sand Point have established hatchery programs that show good potential.

These specialized programs at the secondary level often miss a valid point. Too often competency in writing, reading and computation is slighted in favor of special interest courses. If we are going to train young Alaskans to take over our resources and industries, we cannot afford to slight their ability to communicate and to develop mathematical skills. They must be competent in these areas before they can enter the specialities. This does not preclude the use of fisheries as a vehicle to approach the basics. Indeed, every rural teacher should be encouraged to use all the resources at hand to individualize his or her curriculum and materials to local relevancy.

Another problem that may contribute to the failure of fisheries programs at the secondary level lies in the selection of student participants. If they are not highly motivated toward the fishing industry, they will be unable to extract the maximum benefit from the program. Ultimately, the program is apt to become a holding pen for students who are merely passing time.

D. Alaska Skill Center:

The Alaska Skill Center in Seward is a unique institution in the state. Although it presently does not offer fisheries courses, parts of the curriculum (e.g., welding, diesel, mechanics) are strongly applicable to the fishing industry. Many of the courses are open entry/open exit and all have definite practical orientation.

ASC is currently looking at participation in the development of the shipyard at the mouth of the 4th of July Creek. If implemented, this facility will directly influence the Alaska fishing industry as a training facility for future boatwrights and repairmen. However, it will not, and cannot, meet all the vocational or technical education needs in this area for the state. There will always be a strong need for the dissemination of this knowledge at the village level. For many rural residents it is impractical or undesirable to travel to Seward for their education. At the recent Aleutian-Pribilof Bottomfish Conference at St. Paul (September 1979), this idea was expresssed by many of the Aleut representative attending the meeting.

E. State Government:

In addition to the University system and the State Department of Education, the state government is becoming increasingly interested in fisheries education.

In the past year, the State Department of Commerce and Economic Development and the Office of the Governor have sponsored projects of an educational nature, including several white fish harvesting demonstration projects, fishing trials, and jointly sponsored with the Marine Advisory Program a class on white fish processing. The latter was held last in Kodiak in April 1979, involving personnel from Scandivania and conveyed up-to-date information on all phases of white fish processing. A processor's training manual (in press) has resulted from this course.

In the FY '81 budget request recently submitted by DCED are two line item requests directly relevant to fisheries education. The first is entitled Bottomfish Production Trials/Demonstration and requests monies from the general fund to provide demonstration projects in cooperation with the Alaska Fisheries Development Foundation. The second budget request deals with three phases of fisheries education: (1) to establish a fisheries education coordination committee; (2) to implement the training of a "cadre of qualified resident instructors"; and (3) direct involvement in fisheries education at the community college level. This is exemplary of the support needed to provide the impetus for an organized fisheries education and trainirg effort within Alaska, which in turn, will allow future generations of Alaskans to be masters of their own resources.

F. Alaska Fisheries Development Foundation has proposed a $90,000 budget for a training component in their planned ground fisheries demonstration project. In cooperation with the Marine Advisory Program, an on-board training program will be implemented. This program will be limited, by restricted bunk space on existing Alaska fishing vessels, and the rigors of utilization of new and unfamiliar fishing gear, economic constraints, etc. (AFDF, 1979). Yet even with all these restrictions, AFDF does offer a sound, if modest, start on this problem of training in this emerging field. The on-board efforts will be supplemented by workshops and media development and presentations in the primary fishing ports. This will include extensive news coverage and the development of specialized audio visual materials which may be used as a foundation for future training efforts.

III. ALASKAN FISHERIES EDUCATION NEEDS

The needs in Alaskan fisheries education can be viewed from several standpoints. Regional needs are quite diverse and these should be considered if one is establishing or bolstering fisheries in coastal or river-based fisheries. For example, the fishing communities of Southeastern Alaska and Kodiak can expect to harvest, process and market a much broader range of resources than the communities of the Arctic-Yukon-Kuskokwim regions. Yet certain common themes are prevalent throughout the state. One of these themes was best summed up by James Branson, Executive Director of the North Pacific Fisheries Management Council, during a recent conversation, "Our job would be many times simplified if the fishermen had, somewhere in their background, some strong knowledge about the resources." The state is embarking on a new bottomfish enterprise, one which is capturing the imagination of everyone from fishermen to bureaucrats. The question "what is a bottomfish?" remains very difficult for most to answer. The herring fishery is emerging as a very profitable operation in the Southern Bering Seacoast villages and other districts, but many fishermen know little of the basic biology of the resource. Throughout the state, salmon has been the richest of the traditional fisheries. However, the life histories of the five species are poorly understood by the average fisherman. In all schools, at all levels, one of the greatest needs is basic resource information. This may be approached in the schools by abandoning the textbooks which are traditionally oriented toward terrestrial botany and zoology, and training with a local marine ecosystems approach. This involves much greater innovative effort on the part of the teacher, but would prove more effective in the long run. An excellent example of this sort of program is that instituted by Ms. Lucile Holden of Ketchikan High School about nine years ago, and with which she is still working.

Another statewide need which has been expressed in almost all communities which I have visited is fiscal management; for business management, financial planning, taxes. Other fiscal matters are becoming increasingly important to insure the greatest rewards for their efforts. In today's increasingly complex and inflationary society, this will become even more important.

With the emerging white fish fishery, Alaska fishermen must learn to use modern and complex equipment and deal with non-traditional (for Alaskans) resources. Machines such as the new Mustad Autoline system, on-board heading and gutting equipment, and new advanced methods of on-board refrigeration must be mastered in order for the bottomfish fisherman to compete successfully on the world market.

Boat repair and fabrication, diesel mechanics, electronics and navigation all are becoming increasingly important to Alaska's successful fishermen. For the small boat fishermen, the skipper needs to be familiar with all of those skills, while on larger vessels, crew members with specialized skills in these fields are important, and at shore-based support facilities (such as the proposed Alaska Skill Center or the Juneau-Douglas Community College Boatyards), individuals with these skills will be in demand.

In examining Alaskan fisheries education needs, it is helpful to look at two possible "systems" approaches: vocational education and technical education. Ultimately, both approach the same goal of strong fisheries education and training for future members of the industry.

Vocational fisheries education may be best addressed by the community college system, the Alaska Skill Center and Sheldon Jackson College through a network which will be described later in this report. It should be directed toward specific needs, with materials which are modular in concept and format and suitable for delivery to either small audiences throughout a given region or on board a vessel for crew use. The new Kodiak Community College program can provide an excellent model for such a delivery system. The viability of this concept may be thoroughly tested with this program before implementation in other regions.

Technical education, on the other hand, should provide a resident a two or four year program leading to degrees in some aspect of commercial fisheries. An example of such a program is found at the University of Rhode Island Department of Fisheries and Marine Technology.

The technical approach to Alaskan fisheries education is highly desirable for Alaska. It does not, however, answer our immediate needs, due to the length of time required to put a technical school of fisheries into place and nurture it to success. Captain G.A. Motte, Chairman of Rhode Island's Department of Fisheries and Marine Technology, spoke of problems they encountered in getting started; at the outset, there was opposition from the skippers to hiring a classroom trained crewperson. It was difficult to convince students that it was a valid expense of time, money and effort to spend two, three, or four years in the classroom when he or she could be at sea, earning a paycheck.

In the ten years that the department has been in existence, the attitudes gradually changed. Now skippers demand that their prospective crew members have attended the URI program, and the waiting list calls for more candidates than the school can accept. As a result, they are highly selective in accepting students, though it has taken ten years to reach their present status.

Alaska needs to have a technical school of this type and caliber. It will not, however, answer our immediate problems. Even if all our fisheries education efforts were focused on this approach, we could not meet the immediate needs of our people and industry. This is not to say that we should not work toward this goal, but rather we should start today with a well-organized and strongly funded vocational education network. Even with an excellent, well-accepted technical school in place, the vocational network will still be extremely important. Because of Alaska's size and diverse needs, there should be no redundancy in ultimately approaching fisheries education from both directions. Besides, even the finest technical school can only answer the needs of a limited segment of future Alaskan fishermen. There will always be a majority of people who cannot afford, for one reason or another, to attend such a school, as well as people who need only courses on particular discrete topics. These people may be best served on an out-reach basis through the community college or other vocational programs.

The College of Fisheries, Navigation, Marine Engineering and Electronics in St. John's Newfoundland may serve as a useful example for Alaskans to consider. Newfoundland, located on the east coast of the continent, has much in common with Alaska. Fishing is a major industry; the ports are frequently small and remote and communication problems between population centers are similar to those of rural Alaska. While there is a strong on-campus program at St. John's, each year since the school opened in 1964 a third or more of the enrollment has been through the extension program of travelling schools.

While the majority of course offerings detailed in their "List of Programs" are offered principally at the St. John's campus, most of the courses are of one and two weeks duration and are designed to upgrade skills of people who are already in the industry.

It was not possible for Lee, Pennington and Associates' personnel to visit the St. John's campus due to the school's summer break. However, it would be highly desirable for us, or someone interested in Alaska fisheries education delivery systems to do so.

IV. ORGANIZING ALASKAN FISHERIES EDUCATION EFFORTS

Does Alaska's fisheries education effort need organization? In my mind, the answer is yes. We have too often seen programs attempted, only to watch them fail. We have witnessed duplicative efforts leading to redundancy because of poor communications. We have regions and schools which are unable to profit from mistakes or successes of other entities simply because they don't have knowledge of them. We have heard repeated requests from rural residents for stronger programs in fisheries, but no one seems to know where to find assistance to set up fisheries education programs, or how to maintain them at functional and efficient levels.

Currently, there are two major entities vitally interested in promotion of fisheries education within the State of Alaska: The Alaska State Department of Education and the University of Alaska. Other agencies and associations have also expressed interest and need. The various native associations and corporations, the Alaska Native Foundation, Alaska Fisheries Development Foundation, various state departments (e.g., Department of Fish and Game, Department of Commerce and Economic Development) and others, all have strong contributions to make. However, it would be an inefficient expense of effort and capital for all these entities to plunge into this effort without some form of organized coordination.

Since the two major organizations (DOE and U of A) in fisheries education approach this topic from rather different, or at least rarely overlapping approaches, it would be logical for representatives of their governing boards (the State Board of Education and the Board of Regents, respectively; as well as a representative from the Post-Secondary Commission) to form an oversight board to oversee the policy formulation for fisheries education. They, however, are not necessarily in touch with the needs of the industry, or the rural fisherman, and they haven't the time to follow up policy or delivery. To fill this role, a coordinating council, whose members would be appointed by the oversite board should be directly responsible for implementation at the state level. Members of this council should include at least one representative from the community college system, the Governor's Office, the Alaska Native Foundation, the Department of Education, the University of Alaska Sea Grant/ Marine Advisory Programs, and other interested groups.

The council should have a person in the role of secretary, to carry out the council's directives. It is desirable to have this person housed either within the community college system or the central office of the Department of Education. A major role to be carried out will be interfacing with the fisheries coordinators at the various community colleges and other institutions. A flow chart of this organization is presented. (Table 1).

On the next level fisheries coordinators should be responsible for developing and disseminating materials, not only within their own institutions, but also through the rural secondary schools of their region. In the village, it will be the role of the principal teacher or his or her designee to further disseminate the materials to skippers and other interested people.

Perhaps the most critical part in this scheme lies at the village level. It will require a great deal of grass roots effort to establish strong and effective liaisons between the village fishermen and the rest of the program. An accurate needs assessment for each village served within a region, with priorities for answering those needs, is extremely delicate and very important. It is essential, if this program is to work, that it demonstrates its ability to meet local needs very early in the program, and continue to do so. The proposed Kodiak Community College fisheries program offers an excellent opportunity to demonstrate this ability on a regional scale before the entire program is implemented statewide.

Needs at the village level may be communicated through the principal teacher and the coordinators, to the coordinating council. Furthermore, in this fashion, an effective talent bank system may be set up to operate on a statewide basis.

This talent bank would consist of a roster of people with definite skills for use throughout the State, much in the fashion of the present DOE Talent Bank. Funding for the fisheries education talent bank should be handled in a similar manner to or as a part of the DOE talent bank system.

While this organizational scheme would encompass most situations, demonstration projects and fishing trials conducted by the State and Alaska Fisheries Development Foundation are special cases. The need for projects of this nature can be communicated through the channels outlined above, and the coordination council and the local educational agency may be of great assistance in staging them. However, it may be more expeditious and advantageous to have them funded directly.

I believe, however, that one requirement must be written into each and every demonstration project: they must be designed to develop a local information core. Too often the Alaska fishing industry has had to (and will, in the future, have to) rely on out-of-state or foreign expertise, particularly in the white fish industry. Recognizing that we must take our expertise from whatever available resources, we should also be training a cadre of people within our own industry to not only use new equipment and fishing techniques, but also to pass this information on to other Alaskan fishermen, processors, and marketers. It is unlikely that we will ever be totally independent of out-of-state expertise. Indeed, it would not be in our best interest to become totally dependent on local expertise. It would, however, make good economic and educational sense to reduce this dependency gradually.

There is another possible approach to the reduction of dependence upon foreign and out-of-state expertise. This lies in the strengthening of the existing Marine Advisory Program, especially in the area of gear specialists. As mentioned earlier in this report, MAP has attempted to add a gear specialist to its staff, but funding has been unavailable. Most of the State demonstration projects include various specialized gear uses. Therefore, it would be in the best interest of the State and its fishing industry to directly fund at least one, and preferably three gear specialists for statewide service within MAP. While three gear specialists may seem extravagant, consider the expense in constantly importing outside knowledge to the vast reaches of the Alaska coastline. Again, the development of these specialists could be effectively aided by close involvement of the MAP with the coordinating council.

It should be realized, however, that merely adding to the Marine Advisory staff will not be sufficient to provide the needed fisheries education effort. This step should be regarded as a supportive measure to help fill the gaps while a completed and functional statewide fisheries education network is being developed. Subsequently, there will still be a need to maintain that Marine Advisory expertise throughout the state to supplement the proposed educational delivery system.

It is our recommendation that this proposal be implemented on a regional basis since Kodiak Community College has been awarded a grant to initiate a Regional Community College - community fisheries program, we suggest that Kodiak is the logical site to act as a model for future efforts. After one year of operation, the program should be expanded and initiated in another region, utilizing and adopting materials and experience developed in Kodiak. Further expansion could be accomplished step-wise each successive year.

The first year operating costs, though, partly depend on already appropriated funds (see attached Kodiak Community College project budget Table 2). The added funds needed will cover initiation of the state network, and preliminary work on needs assessment of individual regions to be served by the plan at a later date. These expenses should cover the selection of the five-member oversight board (Board of Education, Board of Regents, Post-Secondary Commission), as well as their attendant travel expenses; the selection, travel and meeting costs of a state fisheries education coordinator; and finally the costs of initial needs assessment and preparation for implementing the program in the successive regions. Possible funding patterns are outlined in Table 3.

V. PROPOSED BUDGET

1st Year Operation

1.	Oversight Board Expenses	$ 3,000
2.	Selection and Operational Expenses-Coordinating Committee	5,000
3.	Travel Coordination Committee	6,000
4.	State F. E. Coordinator	
	a. Salary	36,000
	b. Secretary	20,000
	c. Fringe at 17.5%	9,800
	d. Travel	7,000
	e. Communication	5,000
5.	Subsequent Needs Assessment (to be contracted)	60,000
	Total First Year	$151,800

2nd Year Operation

1.	Oversight Board	3,000
2.	Coordinating Committee	10,000
3.	a. State F. E. Coordinator salary	38,000
	b. Support	21,000
	c. Fringe at 17.5%	11,000
	d. Travel	8,000
	e. Communication	5,000

4.	Subsequent Needs Assessment	60,000
5.	Curriculum Development (contract)	60,000
6.	Community College Coordinator Salary	38,000
7.	Support	15,000
8.	Fringe	9,000
9.	Travel and per diem for regional teachers	4,000
10.	Community College Coordinator travel	3,000
11.	Supplies	11,000
12.	Evaluation	16,000
13.	Communication	4,000
14.	Printing	5,000
	Total Second Year	$321,000

Beyond the second year the Kodiak Community College program must be refunded to continue it. As a rough prediction it will cost approximately $200,000 a year to maintain the program. Using that figure in conjunction with the state advisors first year cost to estimate the total overall costs of runnning this program on a coastal statewide basis at the following locations: Ketchikan, Juneau, Prince William Sound, Kodiak, Kenai, the Aleutian Region, Bethel, Nome, and Barrow, one arrives at an annual cost of $1,800,000.

There are, however, some problems with using this estimate. For example, there is currently no community college in the Aleutian Region. It has been suggested that a fisheries extension center be placed at Dutch Harbor to act in this capacity. Expenses of running this sort of program in the Aleutian Region may be perceptibly higher than in other regions, but this will also be offset by lower costs at other centers, such as Nome or Barrow where the commercial fisheries, while potentially very important, will probably always remain at a far lower intensity than those of the more southern centers.

VI. SUMMARY

The Alaskan fishing industry is of vital importance to the future of this state. It stands on the edge of great expansion into new fisheries, new processing techniques, new markets, and new regions of the state. No longer is it a local cottage industry, but, instead, is now a rapidly growing multimillion dollar investment in which all Alaskans share directly or indirectly.

To allow this industry to provide maximum benefit for all of our citizens, be they producers, processors, marketers, investors, or consumers, we must initiate a coordinated fisheries education program, designed to (1) reach every portion of the state concerned with fisheries; (2) produce readily usable educational materials for all segments of the fishing industry statewide; (3) tailor these materials to local relevance; (4) make use of all available means to transfer out-of-state expertise into our educational system.

To accomplish these ends, Lee, Pennington and Associates recommends the following:

1. Setting up an educational and communications network consisting of:

    a. An oversight board consisting of two members of the Board of Education, two from the Board of Regents, and one from the Post-Secondary Commission;
    b. A coordinating council consisting of representatives from the community college system and all pertinent public and private agencies; and
    c. Developing a statewide coordinated vocational fisheries program which would be regionally specialized and associated with the community colleges, university extension centers or other suitable regional entities.

2. The materials developed by this effort be modular in nature, and be suitable for non-classroom teaching.

3. The Kodiak Community College Program be used as a model for this effort, and that this program be fully supported financially.

4. Using the Kodiak experience and materials, a similar program be instituted and fully supported in at least one other coastal community college during the following year. Thereafter, one or two new programs should be added each year.

5. Those agencies responsible for funding these programs should realize that, in order to be successful, there must be a long term commitment of time, funds and energy.

6. The Marine Advisory Program be strengthened by the addition of one to three gear specialists for statewide service.

7. Ultimately, the State should consider supplementing their vocational fisheries by the development of Technical Fisheries Education College, similar to Rhode Island's School of Fisheries.

Education Organization
Flow Chart

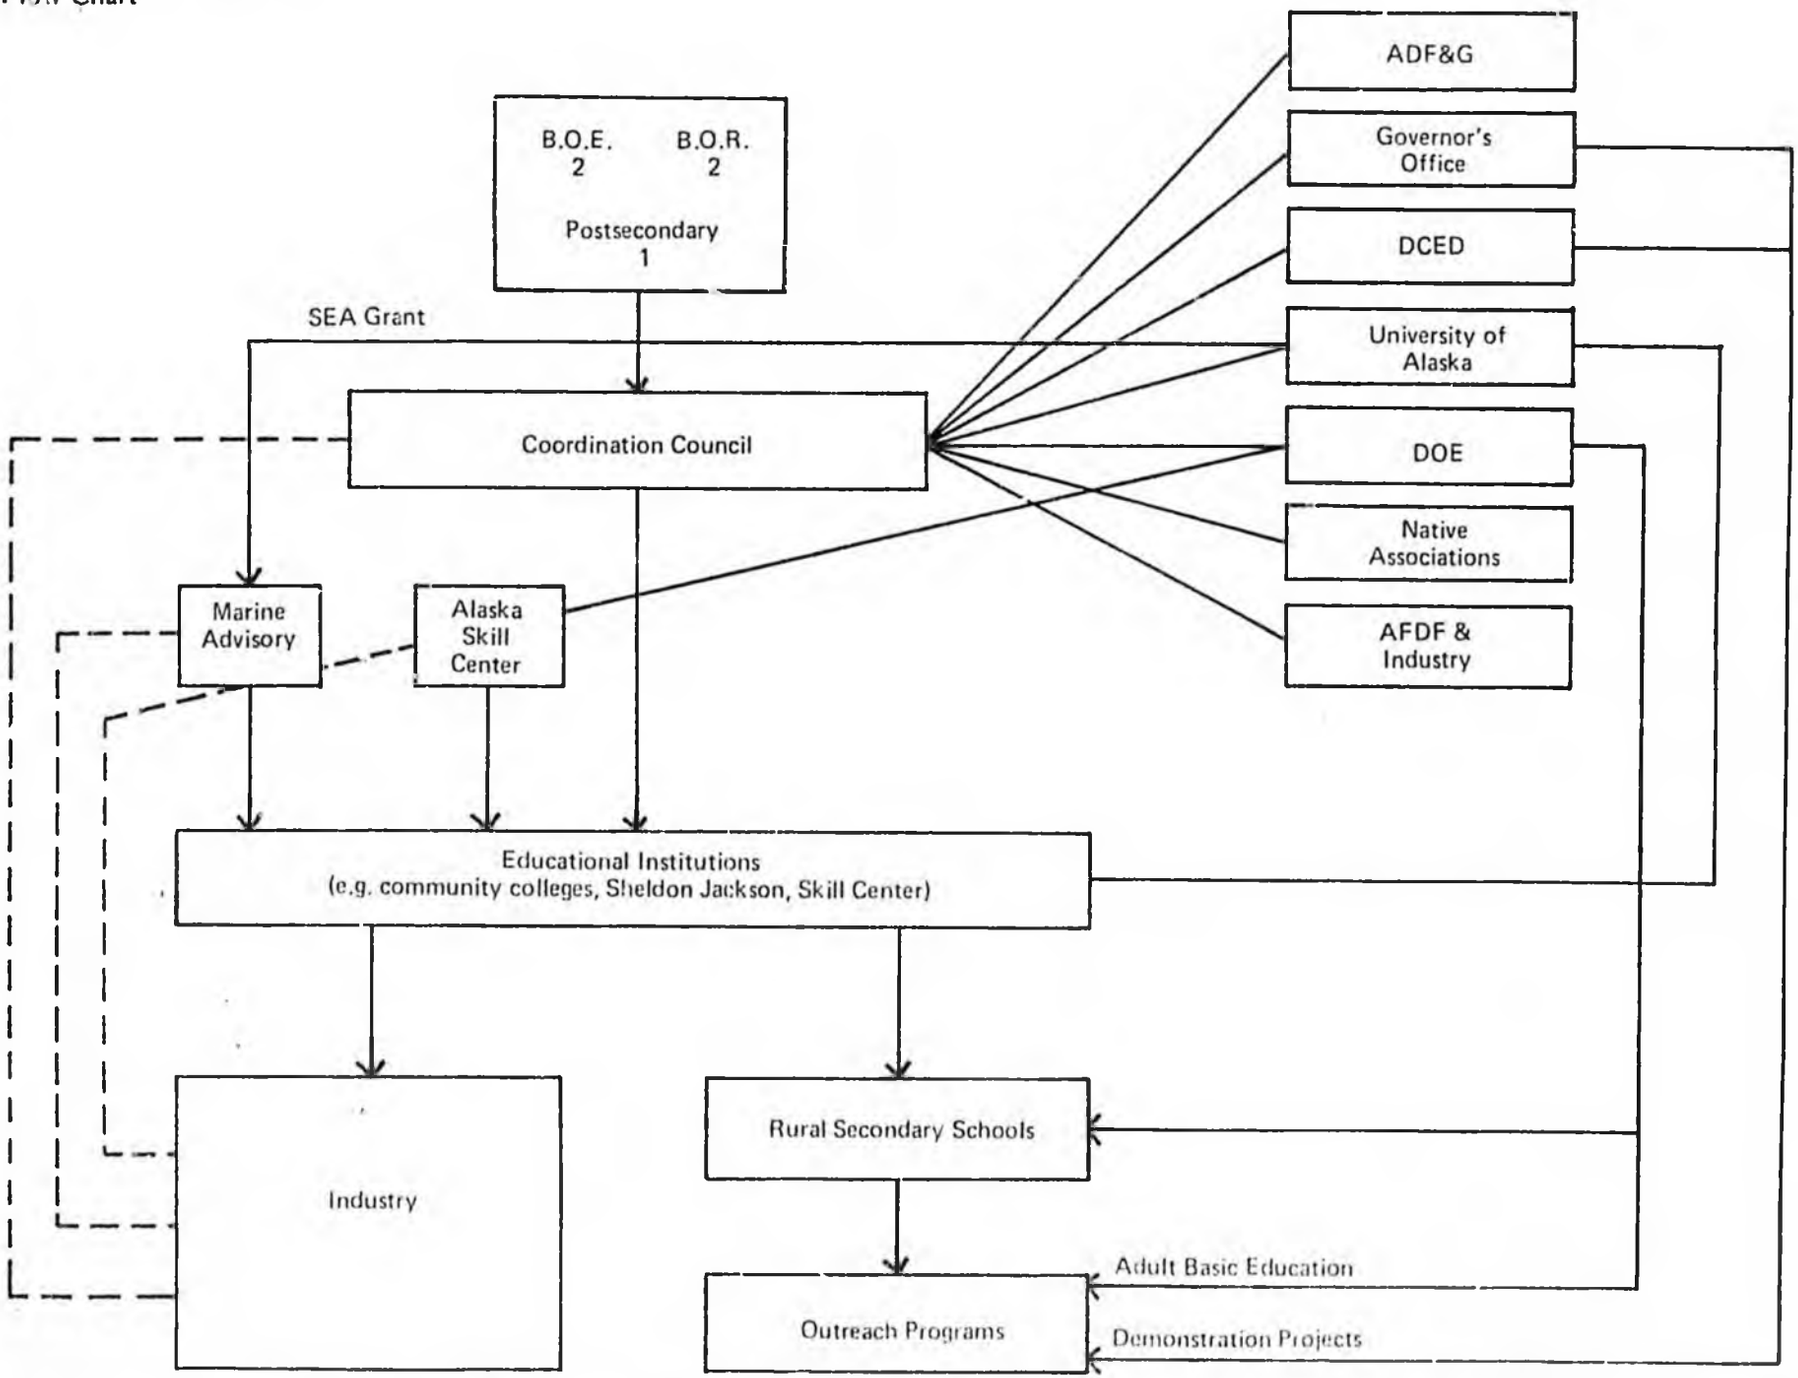

TABLE 2

KODIAK COMMUNITY COLLEGE FISHERIES PROGRAM BUDGET

State Budget Account Number	Account Title	Budget Amount Initial	Revised Date
310	Coordinator Salary - 18 months	$54,000.00	
330	Secretary Salary - 24 months	28,800.00	
350	Employee Benefits 17.5%	14,490.00	
400	Professional & Techincal Services		
	Project Initiator - 3 months	3,000.00	
	Technical Writers for Modules Curriculum Development	40,000.00	
	Contracted Service plus travel & per diem - NWRL & Criminal Justice Center		
	Substitutes for Teachers	1,350.00	
	Teachers Release Time (H.S.)	1,000.00	
426	Travel and Per Diem		
	6 villages on Kodiak Island Teachers Training	2,520.00	
	Coordinator Travel - Program Development & Implementation	2,700.00	
		1,500.00	
451	Supplies	5,000.00

LETTER OF INTENT BY THE
HOUSE RESOURCES COMMITTEE

CSHB 697 Section 1 (a)(1) states that one member of the Fisheries Educations Steering Committee is from the Department of Commerce and Economic Development and selected by the Commissioner. It is the intention of the House Resources Committee that if and when there is established within the Commerce Department an Office of Fisheries Development, the member of the Fisheries Education Steering Committee selected from the Commerce Department shall be from that Office of Fisheries Development and selected by the head of the Office of Fisheries Development.

Signed,

Representative Alvin Osterback,
Chairman, House Resources Committee

Alaska State Legislature

DATE: January 30, 1980

FILE NO:

Thru: Marshall L. Lind, Commissioner
Department of Education

TELEPHONE NO:

FROM: Gerald Hiley, Administrator
Adult and Continuing Education
Department of Education

SUBJECT: House Concurrent Resolution 38, Fisheries Education

In regard to subject resolution, we would like to supply you a copy of a fisheries education study completed by Dr. Richard Lee for the Bottomfish Coordinator's Office and the Department of Education.

Although the recommendations in this report are not exactly what you have suggested in your resolution, we feel both could be synthesized for the good of the fishing industry.

If you have any questions concerning this report, we would be most happy to discuss them at your convenience.

Dear Mr. Zharoff:

Please find attached a signed copy of my memorandum giving a section-by-section analysis along with the fiscal note on HB 767.

As you know, we discussed the bill this past week in your office. I would be happy to discuss HB 767 and the amendments to SB 112 with you at your convenience.

Sincerely,

Julius J. Brecht

MEMORANDUM State of Alaska

TO: Members of the Committee

DATE: February 22, 1980

FILE NO:

TELEPHONE NO:

FROM: Julius J. Brecht, Director
Division of Banking & Securities
Department of Commerce & Economic Development

SUBJECT: Section-by-Section Analysis of HB 767

This bill, at least in part, evolved out of discussions between Pat Dougherty (on contract for the Resources Committee to conduct a study of foreign investment in the Alaska seafood industry), the division staff, and myself. However, I have not had the opportunity to review and comment on the bill until now.

Much of the discussion of the intent of the bill centers on what constitutes "control" of a corporation sufficient to require reporting by an alien affiliate. Furthermore, there are jurisdictional questions as to whether the department can, as a practical matter, get corporation A doing business in Alaska to report on its affiliation with corporation B, located in some other state which is, in turn, affiliated with corporation C located in some other country. I have requested two opinions from the Department of Law in this regard, but have not as yet received them. Much of the analysis of whether or not the department can accomplish what the committee wants, i.e., disclosure of corporations C's involvement in A, using the example above, depends on those opinions. The opinions should be out within the next week or so.

Nevertheless, I do have the following specific comments regarding the provisions of the bill with the qualifications just discussed. The "Sec." number refers to the sections of the bill:

Sec. 1 (AS 10.05.250). This section makes a number of drafting style changes regarding the reorganization of a corporation, and, in addition, it requires a specific description of the nature of the affiliation between a surviving or controlling corporation and its alien affiliation. A similar requirement is imposed on domestic corporations at the time of incorporation (See, Sec. 3), foreign corporations in applying for a certificate of authority under AS 10.05 (See, Sec. 7), and on both domestic and foreign corporations at the time of submission of their corporate annual reports (See, Sec. 9). Presumably, one is to read the nature of the affiliation in the context of the definition of "affiliate" found at Sec. 14, however, there may be some difficulty in interpretation of this requirement on the part of the filer. See, Sec. 14 for further discussion.

Sec. 2 (AS 10.05.255(a)(3)). This provision requires that the articles of incorporation of a domestic corporation incorporating after the effective date of the bill must include reference to a code number identifying the nature of its business activity. A similar requirement is imposed by the bill on domestic and foreign corporations filing their annual corporate reports with the department (See, Sec. 8) and for applications for certificate of authority for foreign corporations wishing to do business in the State (See, Sec. 6). The proposed amendments submitted by the division to SB 112, include requiring that corporations furnish information on the "primary business activities" of the corporation in their biennial corporate reports. The division would very likely use the SIC code presently used by the Department of Revenue in issuing business licenses. However, I suggest that the provision on business activity not be specifically tied to a "code," i.e., I recommend that the approach taken in the amendments to SB 112 be used.

Sec. 3 (AS 10.05.255(a)(13)). This section requires that the articles of incoporation of a domestic corporation include a specific description of the nature of the affiliation between the corporation and its alien affiliates. See, Sec. 1.

Sec. 4 (AS 10.05.519(a)(1)). This section reduces the delinquency period from six to three months for purposes of the department to involuntarily dissolve a corporation. The amendments to SB 112 provide for a two-month period. That amendment is preferred.

Sec. 5 (AS 10.05.519(a)(6)). This section adds a new ground for the department to involuntarily dissolve a corporation and that being a misrepresentation of a material matter in an application, report, affidavit, or other document submitted under the chapter. It should be noted that similar language already applies to foreign corporations under AS 10.05.675(5). The provision of Sec. 519(a)(6) ties into AS 10.05.777 providing for interrogatories by the commissioner, and also will complement AS 10.05.783, providing that it is a misdemeanor to fail to answer truthfully such interrogatories. It should be noted that the amendments to SB 112 provide, in addition, that a domestic corporation may be involuntarily dissolved, if it is 30 days delinquent in filing a notice of change of an office, director, alien affiliate, or five percent shareholder.

Sec. 6 (AS 10.05.615(5)). This section requires that a foreign corporation, in applying for a certificate of authority to do business in Alaska, must give a code indicating the primary business activity of the corporation. See, Sec. 2 discussion. It should be noted that more than one code might apply to the operations of a corporation.

Sec. 15 (AS 10.05.825(20)). The definition of "person" is greatly expanded to include joint ventures, companies (i.e., unincorporated businesses), firms, societies, and estates. There may be some difficulty in applying this definition on a case-by-case basis. See, Sec. 14 for further discussion.

Sec. 16 (AS 10.05.825(22)). A new definition is provided for "alien" in an attempt to clean up the language of AS 10.05.702(8) and 825 (18). In addition, a definition of "state" is provided although I am not sure that it is needed.

Sec. 17. This section establishes the effective date of the bill as January 1, 1981. However, if the division is to be ready to process the additional corporate report data coming in at that time, additional personnel should be in place and familiar with the operation. I recommend that the effective date of the bill should be July 1, 1981.

In addition to the above comments, I would recommend that the definition of the "commissioner" be amended to mean "the commissioner of commerce and economic development or his designee." In this way the investigative responsibilities required by the bill can be handled directly by the division similar to the investigations conducted by the division in administering the Alaska Securities Act and the Alaska Uniform Lands Sales Practices Act.

Furthermore, at present, AS 10.05 does not prohibit an entity from holding itself out as a corporation when, in fact, it is not a domestic corporation or registered as a foreign corporation doing business in the state. The division has been made aware of at least one example where the term "Inc." is used by a business in Anchorage when, in fact, it is not registered under AS 10.05. This misrepresentation is not in the best interest of the Alaskan public. I recommend that appropriate language be added to make it unlawful for one to hold themselves out as incorporated when, in fact, they are not.

My comments on this bill have been necessarily brief. Several similar provisions are also found in the amendments to SB 112. It is my hope that the provisions of the two bills can be made compatible. I stand ready to discuss the bill at the convenience of the committee.

III. ANALYSIS (See Fiscal Note Preparation Instructions, Section III)

The above figures are based on a number of assumptions: 1) that approximately 10% of the business corporations or 1000 corporations have foreign affiliates (the division is aware of approximately 500 that have filed alien affiliate information, however, because of the confusion raised by the language of AS 10.05.702(8) and 10.05.825(18) there may be at least another 500 corporations that should file); 2) that the division could send out letters of inquiry to corporations on file that have not filed alien affiliate information either on a selective basis or to all of them asking specific questions about alien affiliation; 3) that the division could in addition review the filings of upwards of 100 to 200 corporations with some amount of detail; 4) that in addition the division could investigate in more detail and pursue upwards of 20 corporations that either resist or otherwise require comprehensive investigative effort to gain the information required by the bill; 5) that a clear definition of "control" can be devised in the best interest of the reporting corporations and the division in conducting investigations;

IV. DATE 2/22/80 PREPARED BY Julius J. Brecht, Director
AGENCY Division of Banking & Securities
PHONE 465-2521

cc: Budget and Management
Prime Sponsor (First Legislator Named)

33-001 (Rev. 12/79)

6) that the Department of Law can provide the legal support necessary to pursue discovery of corporate records located outside of the state and can demonstrate in actions brought in courts in other states that there exists sufficient control between the corporation doing business in Alaska and an affiliate once, twice, or more removed doing business in another country; 7) that the Department of Law would be responsible for its own expenses in supporting the division on the investigations.

The implementation of the program under the above assumptions would require a trained investigator, and two administrative/clerical people to process the filings and aid in investigations. The travel budget would be primarily for the investigator but also include allowances for witness travel for enforcement actions. The contractual budget includes provision for redesign and printing of forms and data processing revisions, maintenance, and operation of the on line data system with alien affiliate and other information required by the bill. The commodities/equipment budget would include necessities for the three new employees including a micro fiche reader.

* It should be pointed out that the division recommends that the bill become effective on July 1, 1980 rather than January 1, 1981. See, bill analysis. However, this fiscal note has been prepared using the January effective date.

TELEPHONE NO.

SUBJECT: House Bill No. 773

FROM: Gary L. Jenkins
Director
Audit Division

This bill would reinstate a requirement which had existed in chapter 75 of Title 43 whereby the Department of Revenue would be required to obtain the average wholesale price of canned salmon for a 5-month period of each calendar year. The results of the survey would then be reported to the Legislature not later than the 60th day of each regular session. The bill would put this requirement in Title 44 of the statutes which lists other general authorities and responsibilities of the Department of Revenue.

One problem with the placement of this law in Title 44 would be that there would be no enforceable penalties that could be asserted for failure of a fish processor to supply the requested information. It is recommended that some type of a civil penalty be established to ensure that we are able to obtain the necessary information.

The implementation of this function will require the addition of a seasonal Tax Examiner for a 2-month period.

The results of the survey would then be reported to the Legislature not later than the 60th day of each regular session. The bill would put this requirement in Title 44 of the statutes which lists other general authorities and responsibilities of the Department of Revenue.

One problem with the placement of this law in Title 44 would be that there would be no enforceable penalties that could be asserted for failure of a fish processor to supply the requested information. It is recommended that some type of a civil penalty be established to ensure that we are able to obtain the necessary information.

The implementation of this function will require the addition of a seasonal Tax Examiner for a 2-month period.

IN THE HOUSE BY THE RESOURCES COMMITTEE

CS FOR HOUSE BILL NO. 784

IN THE LEGISLATURE OF THE STATE OF ALASKA

ELEVENTH LEGISLATURE - SECOND SESSION

A BILL

For an Act entitled: "An Act relating to the maximum length of salmon net vessels."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. LEGISLATIVE FINDINGS. The legislature finds that

(1) overly efficient harvest of salmon by net vessels is detrimental to future fishing seasons and to the equitable distribution of the fishery resources in fisheries with a limited number of units of gear and a limited total catch per season;

(2) the limitations on the length of salmon net vessels imposed by AS 16.05.835 are designed to prevent overefficiency in harvest while still allowing as many fishermen as possible to participate in the fishery safely and with optimum efficiency;

(3) the state waters north and west of a line running 225 degrees true through Cape St. Elias are particularly vulnerable to overharvest of salmon if the limitations on length of vessels included in AS 16.05.835 are not imposed.

* Sec. 2. AS 16.05.835 is amended to read:

Sec. 16.05.835. MAXIMUM LENGTH OF SALMON <u>NET</u> [SEINE] VESSELS. <u>(a)</u> No salmon seine vessel may be longer than 50 feet, official Coast Guard register length, [AND 58 FEET OVERALL LENGTH] except

<u>(1)</u> vessels that have fished for salmon with seines in waters of the state before January 1, 1962, as 50-foot, official Coast Guard register length vessels; <u>and</u>

<u>(2) vessels that fish for salmon with seines in the south-</u>

New CS (version reported out of Resources) is section (b) only - everything else deleted

eastern waters of the state only.

(b) No vessel used to fish for salmon with a gill net in the waters of the state within Bristol Bay may be longer than 32 feet, overall length. For the purposes of this section, "overall length" means the overall length of the hull excluding rollers used for deployment or retrieval of anchors or nets.

(c) In (a) of this section, "southeastern waters of the state" means the waters of the state south and east of a line running 225 degrees true through Cape St. Elias.

JAY S. HAMMOND, GOVERNOR

BOARD OF FISHERIES/BOARD OF GAME
DEPARTMENT OF FISH AND GAME

SUBPORT BUILDING
JUNEAU, ALASKA 99801

TESTIMONY TO HOUSE RESOURCES COMMITTEE
ON CSHB 784
by
Gregory F. Cook, Executive Director
Boards of Fisheries and Game

The Board of Fisheries appreciates this opportunity to present testimony regarding the 32-foot boat limit for salmon fishing vessels in Bristol Bay.

In December 1979, the Board of Fisheries took action to repeal 5 AAC 06.341, effective December 31, 1981. This regulation had been the basis for the 32-foot limit in Bristol Bay. The Board's primary concern in taking this action was to allow fishermen to enhance their capability to improve the quality of fish delivered. The Board voted to not make this regulation effective until the 1982 fishing season in order to give individuals a chance to decide whether to change boat size and to acquire needed financing. In addition to allowing planning time for fishermen, this delay allows ship builders time for retooling.

Before making their decision the Board listened to extensive public testimony. The Board recognizes that this subject is highly emotional, yet it is important to analyze the issue as one of conservation and development of fishery resources. In all the testimony presented by Department biologists and the public, no real management purpose for the limit was described. On the other hand, there did seem to be valid arguments favoring repeal of the boat limit. These considerations, as noted above, centered on the need for improving the quality of fish sold from Bristol Bay and providing the means for this quality enhancement.

Several regulatory sessions of the Board of Fisheries are scheduled to occur before the repeal takes effect. If significant new evidence is presented to the Board showing a particular boat size to be uniquely advantageous, a new limit for the Bay could be enacted.

To summarize, the Board's action rests on these two premises: (1) the 32-foot boat limit does not significantly affect resource management in Bristol Bay; (2) removal of the limit will give fishermen greater flexibility to upgrade the quality of fish delivered in Bristol Bay and sold around the world.

Dear Representative Anderson:

At their regular November meeting, the Executive Committee of BBNA directed me to express their support of a 32-foot limitation for vessels participating in the salmon and herring fisheries in Bristol Bay.

As you know, many local people have already invested in 32-foot vessels because of the existing limitation in the salmon fishery; therefore, their investment must be protected. A 32-foot vessel can not successfully compete with a larger one; therefore an unfair burden would be placed on local people if larger boats were allowed to enter the Bristol Bay fisheries.

For these reasons, the Executive Committee supports the 32-foot limitation on vessels in Bristol Bay. Your support will be appreciated.

Subport Building
Juneau, Alaska 99811

Dear Sirs:

I understand that you are currently considering a repeal of the 32' limitation on vessel size for commercial salmon fishing use in Bristol Bay.

I hope you are not considering passing the repeal merely as a "favor" to Bristol Bay fishermen, without considering the long-term impacts you will be placing on the fishermen of Bristol Bay.

When I first thought of the repeal, I said "Why not?" I only thought of the comfort of fishing in a larger vessel. Now, after serious consideration, I believe that the repeal would not be in the best interest of the most numerous and typical Bristol Bay fishermen.

Probably the greatest impact the repeal would have in Bristol Bay would be the less fishing time the fishermen will face in the future.

The current fishing fleet of Bristol Bay is the most highly efficient fleet the salmon fishery has ever faced in history. We have seen the birth of the newer and faster fiberglass vessels in the Bay. The more compact and powerful engines, along with the hydraulic systems, the power reels and rollers, have led to the greater efficiency. We have also seen radars, depth fathometers and fish finders, along with the new "Loran C" installed in more and more of the vessels.

Probably the single factor which has most dramatically increased the efficiency of the Bristol Bay fleet in recent years has been the introduction of the "brailer system" of delivery. Soon, the days will vanish when the salmon are peughed singly from the vessels onto the tenders. The salmon are now handled by the hundreds in brails, dramatically cutting down the delivery time of fishermen, increasing their harvesting capability.

With the introduction of larger vessels in Bristol Bay, the efficiency of the fleet will increase even more dramatically. The main reason being that the larger vessels would be able to accomodate a larger number of crew members capable of "picking clean" 150 fathoms of gillnet full of fish in much less time than the usual two crewmembers you would find on most vessels in the Bay today. With the larger vessels, more space would become available for crew members to sleep in, move about in the cabin, and "pick" fish.

I have heard that if the repeal is passed, captains would immediately order larger vessels, and then hire low salaried college students from outside to help them "pick" their nets faster. I have also heard that more and more fishermen would take family members out fishing as crew members.

The purpose of having a larger number of crew members is to effectively "pick and clean" 150 fathoms of gillnet as soon as possible, so that the cleaned net could be set out again, catching more fish within a twelve hour period, especially if the fishing is heavy.

Another reason the efficiency of the fleet will be increased if larger vessels were allowed in the Bay is because the larger vessels would be able to accomodate more gallery supplies and fuel, allowing them to fish for extended periods, especially when the fishing is not heavy.

The efficiency of the fleet will also become apparent during the king season on the Nushagak River, noted for its king runs. The king salmon "run" up the river during high winds, and are commonly known as rough water fish. If larger vessels are introduced into Bristol Bay, they would be more capable of taking a larger number of king salmon since the larger vessels would be able to fish in more severe weather than the 32' vessels. While the 32' vessels must seek shelter during rough weather, the larger vessels could be harvesting more kings.

This same "pattern" of greater harvesting capability for larger vessels will also develop with the silver salmon season in Bristol Bay. The silver salmon, like the kings, "run" in rough weather also.

Probably the greatest advantage large vessel owners would have over 32' vessel owners will be felt in the red salmon season during rough weather. Weather in the Bay is highly unpredictable. There are seasons frequent with "bad" weather, and seasons with relatively calm weather. If there is a 30 to 35 mph wind present within the Bay during heavy red runs, the 32' vessels would be able to only harvest up to 1,500 reds to keep on the safe side. Yet, the larger vessels would be able to "take on" more reds in rough weather. Once again, the larger vessels would have an advantage over the smaller 32' vessels.

I strongly believe that the local Commercial Fisheries Division will seriously consider the efficiency and harvesting capability of the fishing fleet when the Department calls for an opening within the emergency order period. Instead of providing a twelve hour period to the fleet, the Department could very well begin granting six hour periods because of the increased harvesting capability of the fleet, and concern of the Department to obtain the needed escapement.

I am concerned that the Department could very well being imposing restrictions on the fishing time allowed to fishermen during the king season also. With more boats harvesting more kings, reds, and silvers, I am sure the Department will be more concerned about obtaining their escapement.

I believe that the greatest hardship that will be felt in Bristol Bay will be placed upon the hundreds of setnetters in the Bay. The setnetters of the Bay will be greatly impacted if the efficiency of the fleet is dramatically increased by the introduction of larger vessels. There are times when the setnetters "catch" reds moving into the beach, and if the efficiency of the fleet is substantially increased, it means less salmon moving into the beach to be caught by the setnetters.

Setnetting in Bristol Bay is not always profitable, especially during the bleak years. The increased efficiency of the fleet by the introduction of larger vessels would certainly mean less salmon for setnetters. Larger vessels would "scoop up" salmon schools near setnet sites in less time, affecting the amount of salmon to be caught and income to be made by the setnetters.

The statement that most fishermen in Bristol Bay will not begin purchasing larger vessels if the 32' limitation was repealed, must be closely considered. The passage of the Commercial Fishing Loan Program by the State Legislature has opened up an attractive and effective financing resource for the fishermen in Bristol Bay. The impact of the loan program has been far reaching, much greater impact is expected if the loan program receives additional funds.

The fishermen of Bristol Bay currently recognize the advantages of having a wider, higher, and more powerful 32' vessel. If one were to examine the type of vessels a number of highliners at the Columbia Wards Fisheries cannery in Ekuk have ordered, one would find that the vessels are higher, wider, and usually are accompanied by a more powerful and compact engine. One fishermen in Bristol Bay has recently ordered a 14' wide 32' vessel which will have a twin screw of 3208 Cats to power the vessel. I am sure wider vessels are being ordered in the Naknek/Kvichak River also.

The statement that the efficiency of the fleet will not be increased if larger than 32' vessels were introduced into the Bay must be carefully considered. The question of why more and more highliners are purchasing higher and wider vessels clearly reflects the greater holding capacity the fishermen would like to have in their vessels.

Once the fishermen of Bristol Bay being realizing the greater efficiency and harvesting capabilities of the larger vessels, they will immediately seek financial resources to purchase larger vessels, and if the loan program is reactived, they will take full advantage of the program.

In terms of the larger vessels providing benefits to fishermen interested in participating in the new emerging bottomfisheries in the Bering Sea, the only place they would probably use their larger vessels would be in the Togiak/Kulukak Bay herring fishery. For the fishermen of Bristol Bay to fully participate in the high seas bottomfisheries in the Bering Sea, they would need 100' to 150' vessels, which cannot be effectively used in the shallow based gillnet salmon fishery.

I have even heard that a number of the smaller purse seine vessels participating in the Togiak/Kulukak Bay herring fishery were more successful in the purse seine fishery than the larger vessels. I have heard directly from the Department of Fish and Game that one 28' vessel in the fishery was one of the highliners. I see the capability of Bristol Bay 32' vessels effectively competing in the herring fishery.

Another long-term impact which could result in Bristol Bay if larger vessels were permitted would be the possible request and granting of an extension to the lower limit line of fishing districts, especially in Nushagak and Naknek/Kvichak River districts.

As more and more larger vessels are introduced into the Bay, more fishermen will being "pushing" for an extension of the lower limit lines because with deeper draft vessels, such fishermen will say that the lower limit should be extended for safety reasons. The Bristol Bay fishing districts consists of much shallow water and sand bars, and the fishermen with larger vessels would want to fish in deeper water for safety reasons.

If the lower limit is extended, it would be the numerous setnetters and skiff fishermen who would be adversely affected by the extension. The larger vessels would be able to fish further out, catching the salmon as they move up the river systems.

Salmon stocks steadily "move" up the fishing districts; with many of the early stocks of salmon being caught at the lower limits. This situation exists within the Nushagak River, and,

without question, the larger vessels will have the most advantage of benefiting from an extended lower limit.

I have also heard that many of the "upriver" villagers would benefit from utilizing larger vessels for hauling oil and grubstakes during the fall. I believe this statement should be closely examined also. The river system to many of the upriver communities in Bristol Bay pose serious shallow water routes, and I am sure many of the villagers would not "rush into" purchasing larger vessels for hauling cargo to the villages.

I also believe that the Board of Fisheries must consider the physical situation of Bristol Bay, and consider the impacts expected with larger vessels existing in the Bay. Currently, a number of the canneries in Bristol Bay are facing serious storage facilities for their fishermen and vessels. The Peter Pan cannery in Dillingham was "forced" to deny the winter storage of vessels for a number of fishermen, resulting in the fishermen having to store their vessels outside facing the elements. If larger vessels are introduced, the storage problem will be compounded, and those fishermen who cannot afford to construct private warehouses will have to store their vessels outisde with little protection from vandalism. A number of vessels were recently vandalized in the Dillingham Boat Harbor because many of the fishermen had no place to store their vessels.

Consideration should also be given to the size of Dillingham Boat Harbor, the only man-made harbor in Bristol Bay which plays an important role to the protection of hundreds of vessels on the Nushagak River. If larger than 32' vessels were to being parking in the harbor, immediate work would need to be done to enlarge the harbor, otherwise the safety of many boats in the Nushagak River will become jeopardized.

I have heard that a number of fishermen who participate in the Togiak/Kulukak herring fishery with vessels larger than 32', and have purchased a Bristol Bay drift gillnet salmon permit have urged the passage of the repeal for the 32' limitation, so they can conveniently enter the Bristol Bay salmon fishery without purchasing a 32' vessel.

In conclusion, I believe that the introduction of larger vessels will solely benefit those fishermen who purchase or currently own larger vessels, and will certainly not benefit the 32' boat fishermen, skiff fisheries, and setnetters of Bristol Bay.

I urge you to vote against the repeal for the 32' limitation, and consider the number of fishermen it will adversely affect in Bristol Bay.

I hope you fathom my concerns.

Sincerely yours,

Andrew Golia

Back-Up Info on HB 784

Bristol Bay — A Report to the Alaska Board of Fisheries

By Greg Cook, Exec. Dir. of Bds of Fish & Game

Data Gathered April — Dec. 1979

INTRODUCTION

In December of 1978, the Lower Bristol Bay Advisory Committee proposed repeal of the 32-foot limit on salmon fishing vessels in Bristol Bay. 5 AAC 06.341. The Board tabled that proposal for further study. This report is based on a visit to Bristol Bay made in April, 1979, at the direction of the Board of Fisheries. The visit was made by Greg Cook, Executive Director of the Boards of Fisheries and Game. A total of 337 resident Bristol Bay fishermen were contacted in 15 villages. Also, the Western Alaska Cooperative Fishermen's Marketing Association, Jim McConnell, president of the Dillingham branch of the National Bank of Alaska, and several cannery managers were interviewed.

Public meetings were held in 15 different villages. Advance notice for the meetings was provided by Kay Larson of the Bristol Bay Native Association and Radio Station KDLG. I took minutes at each meeting and notes of each individual's testimony are on file in Juneau for inspection.

Meetings were conducted in the following manner: A statement of the issue was given, then the floor was opened for discussion. Translators were necessary in several villages. Each time a translator was needed, one local resident was able to serve in that capacity. I tried to summarize the arguments on each side of the issue when discussions seemed to be over. This often made people aware of more points of view and stimulated a renewal of discussion. This report is a product of those meetings.

VILLAGE BY VILLAGE SUMMARY

1. Dillingham; April 23; 20 people contacted; all opposed to changing the limit.

2. Togiak; April 24; 31 people contacted; all opposed to changing the limit.

3. Twin Hills; April 24; 30 people contacted; all opposed to changing the limit.

4. Manakotak; April 24; 27 people contacted; all opposed to changing the limit.

5. South Naknek; April 25; 12 people contacted; 11 people opposed to changing the limit, 1 favored the change.

6. North Naknek; 37 people contacted; all opposed to changing the limit.

7. Egegik; April 26; 32 people contacted; 30 opposed to changing the limit, 2 favored to changing to 36 feet.

8. Pilot Point; April 27; 14 people contacted; 7 people favored eliminating the limit, 3 opposed, 4 silent.

9. Port Heiden; April 27; 25 people contacted; all favored changing to 36 feet, but nothing larger.

10. Kokhanok; April 28; 9 people contacted; 7 opposed to the change, 2 favored changing (facetious).

11. Iliamna; April 28; 7 people contacted; all opposed to changing the limit.

12. New Halen; 26 people contacted; all opposed to changing the limit.

13. Koliganek; April 29; 29 people contacted; all opposed to changing the limit.

14. New Stuyahok; April 30; 24 people contacted; all opposed to changing the limit.

15. Ekwok; May 1; 14 people contacted; all opposed to changing the limit.

CONCLUSION

The controversy over the 32-foot limit is often emotional. Arguments on each side encompass social and economic, as well as biological issues. Much of the thinking is necessarily conjectural since vessels larger than 32-feet have never yet participated in the Bristol Bay salmon fishery. Judging from the intensity of the participation in the public meetings that form the basis of this report, the Board's decision on 5 AAC 06.341 will be closely watched by all Bristol Bay fishermen.

The vast majority of Bristol Bay resident fishermen who were contacted during the April, 1979, Board of Fisheries survey, strongly oppose any change in the 32-foot limit regulation. The biggest single reason expressed for their opposition was the anticipated effect that such a change would have on income distribution in Bristol Bay. Local resident fishermen are convinced that bigger boats would lead to a few rich operators profiting to the detriment of the majority of fishermen. "The rich will get richer and the poor will get poorer."

A recurring theme in the villages was fear of purse seine gear being introduced in the Bay. Allowing larger boats was seen as the first step towards allowing seine gear, moving fishing district boundary lines farther seaward, and eventually over-fishing and depleting the resource.

Support for changing the 32-foot limit was found exclusively on the Alaska Peninsula. Residents of Port Heiden favor a new limit of 36-foot vessels. They want slightly bigger boats for greater comfort and safety in rough weather. They do not advocate bringing in vessels larger than 36-feet. Residents of Pilot Point strongly advocate removal of any size limit whatsoever. They argue that this would enable fishermen to present a higher quality product during the salmon season, permit entry into other fisheries without necessitating purchase of a second vessel, and encourage true entrepreneurs.

SUMMARY OF ARGUMENTS FAVORING REPEAL OF THE 32-FOOT LIMIT

-- More efficient, carry more crew, gas and food, spend more time fishing and less time making deliveries, going for gas, etc.

-- Greater safety in rough weather.

-- Better ability to fish king salmon. Kings are a rough weather fish in Bristol Bay.

-- Increased comfort. Port Heiden people in particular feel this desire since they travel further than other Bristol Bay residents in order to reach an open fishing district.

-- Could be used in other areas of Alaska where 32-foot boats are inappropriate.

-- Could be used for other fisheries such as bottomfish, crab, herring.

-- More room would give space for a slush ice machine. This would encourage delivery of a higher quality product, allow for watertight compartments, and enable the fishermen to spread the fish out more so that they wouldn't get "squished."

-- Fishermen are now independent; there's no need to be tied to a cannery's apron strings either by history or because of canneries' unwillingness to renovate their storage facilities and docks.

-- Professional fishermen should have the latitude to develop as rapidly as they wish. "Laissez-faire" is the best approach.

-- 32-feet is too small to be versatile.

-- Greater fuel efficiency.

-- Financing would be easy at a rate of 4 3/4 percent interest (contact Alec Griechen for his loan source).

-- When people have big boats, canneries will build facilities to accommodate them.

-- It's cheaper to have one boat to use in all fisheries.

SUMMARY OF ARGUMENTS OPPOSED TO CHANGING THE 32-FOOT LIMIT

-- Puts 32-foot boats at a competitive disadvantage. Rich people will buy the bigger boats and get richer, poor people will end up with less fishing time and less fish.

-- Inability of small boats to fish as long before needing to resupply.

-- Would make Bristol Bay more attractive to outsiders since they could then use their bigger boats in Bristol Bay. This would result in outsiders buying out the limited entry permits held by local Bay residents.

-- 32-foot boats are fine for fishing herring. To say the bigger boats would be useful in bottom fishing is specious; no boat can fish the shallow water where the salmon run and at the same time be versatile enough to fish out on the high seas where the bottomfish are.

-- The Bay is too shallow for deep draft boats.

-- Deep draft boats can't go up the rivers. Villagers would be disadvantaged since upriver people would need a second boat in order to haul their supplies and travel up and down the river. While repealing the 32-foot limit would make one boat practical for outsiders, it would necessitate two boats for upriver people if they wanted to remain competitive.

-- A decrease in fishing time for small boats would result since larger vessels could take on more fish in rough weather and harvest the allowable catch quicker.

-- People in the villages can't afford bigger boats; they have no collateral for loans and banks just laugh at them when they try to get loans based on fishing ability. Upriver villages have an especially difficult time securing financing.

-- The Commercial Fisheries Entry Commission has studied the possibility of buying back permits in Bristol Bay and bigger boats would mean they'd buy back more permits.

-- 32-foot vessels now adequately harvest 100 percent of the resource. The real problem is inadequate processing capacity.

-- Shorter openings would result (because the fleet would be more efficient). This would hurt setnetters, 32-foot boat fishermen, and skiff fishermen.

-- Could lead to requests for changing the fishing boundary limits, thereby increasing the fishing pressure on mixed stocks.

-- There are not storage facilities adequate to accommodate larger vessels over winter. Existing storage facilites are already overcrowded and inadequate. Harbors are only designed for 32-foot vessels. More dredging would be required in Dillingham, the only harbor in Bristol Bay. Docks are old and cannot support the extra weight that bigger boats would require. Booms and hoists are barely adequate for lifting existing 32-foot boats; larger vessels would be too heavy for this equipment.

-- Fear that seiners would return to the Bay's salmon fishery.

-- Management of the fishery would be harder in weak years if efficiency of the fleet increases. For example, in one twelve hour period, 70 percent of the total allowable catch for a weak run year can now be taken.

-- Shorter openings would make problems for setnetters who really need a full tidal cycle in order to work their nets.

-- Salmon is the sole basis for the economy in Bristol Bay; few alternative employment opportunities exist.

-- There would be a serious decline in the value of existing 32-foot vessels.

-- There is no good reason for change; management is good now with the 32-foot boats.

-- New boats would just mean fishing harder to pay off the vessel; there would be no real increase in income for fishermen who only fish salmon.

-- Bigger boats will get a higher percentage of the fish available and leave less for the small boats who are even more income dependent on the fishery.

-- Larger boats would fish the kings harder; king returns are now strong.

-- Larger boats would want more fathoms of gear.

-- Canneries already have trouble processing in peak years. Changes in delivery patterns that would result from larger vessels could prove chaotic.

-- Bigger boats might mean that canneries would cease buying from some small operators since they could receive all the fish they could process from a more limited number of fishermen.

-- Bigger boats will mean a higher dropout rate as gill nets are hauled higher to reach the deck.

-- overcapitalization

-- It would complicate deliveries to salmon scows. Vessels tie up one behind the other and skiffs tied up to 50-foot boats tied up to skiffs will cause problems.

-- The Bristol Bay fishery is just now getting to the point where all the locals can really make a living from the fishery. Why should the Board change the fishery to benefit outsiders?

-- Fear of shorter openings.

-- Bristol Bay residents rarely own limited entry permits for other fisheries. They would have a hard time amortizing the investment in a larger boat since they would not be able to fish other areas of Alaska where limited entry has been instituted.

-- Small boats won't be able to compete with bigger, more stable boats in rough weather.

-- Who will want to buy 32-foot boats that are owned now if 36-foot or 40-foot boats with greater efficiency are allowed?

-- The 32-foot limit acts to equalize competition between skiff fishermen and big boats.

-- Bad-weather-and-fishermen's-strikes-are-the-prime-contributors-to escapement. If bigger boats are allowed to fish, this will complicate management.

-- A decrease in the amount of money made by locals will increase the number of locals that have to go on welfare and BIA assistance.

-- Larger vessels will mean an unequal rate of drift; this will result in more gear conflicts among drifters.

-- Big money will buy up the limited entry permits and more local people will end up sitting on the beach. Kids in the villages who don't have permits and who might benefit from an increase in the number of limited entry permits will never get them if an increase in boat size is allowed. A greater investment is required for a bigger boat. Village children who are potential beneficiaries of an increase in the number of permits will not get this opportunity if bigger boats become the norm.

-- Any change in size will act to frustrate the goal of limited entry: limiting the ability to take.

-- Entry into the fishery will be so expensive that it will become a virtual recreational fishery for doctors and lawyers.

-- All the support facilities of canneries are geared to 32-foot boats: hydraulics, docks, storage, parts inventories. Change will mean canneries will have to make massive capital investments.

-- Bristol Bay Borough could lose an important part of its tax base if boats are no longer stored in the Borough on the day that taxes are assessed.

-- Increased interception by Alaska Peninsula people and Sand Point people.

-- It will increase the number of requests for more gear types.

-- It will result in enforcement problems in the area since big boats could overnight there.

-- Outsiders on big boats will be able to fish continuously during the openings; small boats must deliver and lose fishing time.

-- Longer boats won't necessarily mean they will be any less beamy.

LETTER OF INTENT

HOUSE RESOURCES COMMITTEE

CSHB 784

The House Resources committee is reporting out CSHB 784 because it embodies the best possible salmon fishing vessel length limitations for all waters of the state and for both seine and gillnet vessels.

It is the intent of the committee to protect the salmon resources of the state, as well as the equitable distribution thereof, by maintaining the 58-foot salmon seine vessel length limit in the northern and western waters of the state. The nature of the resource in these waters, the historic participation patterns, and local factors such as availability of larger vessels and the desires of fishermen all require that the 58-foot limit be continued for these waters. The committee recognizes that length limitations on salmon seine vessels pre ent over-efficiency of harvest which results in shorter seasons and concentration of limited seasonal catches among few fishermen, i.e., those who can afford the bigger boats. These factors and considerations do not exist or apply with respect to the salmon resources and seine fisheries in other parts of the state as they do in the northern and western waters.

It is also the intent of the committee to perpetuate the historic 32-foot overall length limit on Bristol Bay gillnet vessels, which has previously been imposed only by regulation. This limit is desirable not only for the reasons mentioned regarding the seine vessel limit, but also because of the unique characteristics of Bristol Bay itself which make 32 feet the most efficient, as well as the safest, limit for gillnet vessels.

MEMORANDUM February 29, 1980

TO: Representative Alvin Osterback
Co-Chairman House Resources Committee

FROM: Peter B. Froehlich
House Research Agency

RE: Fishing Vessel Length (HB 784 and HCR 54) and Herring (proposed CS for HB 590)
Research Request No. 95

You recently asked this agency 1) to combine HB 784 and HCR 54 concerning fishing vessel length; 2) to write a letter of intent to accompany the revised bill; and 3) to review HB 590 concerning herring.

I have attached to this memorandum a proposed CS for HB 784 in response to request number 1) and a draft letter of intent in response to request number 2). Copies of the bill and letter also have been sent to Ken Vassar, Legislative Counsel, as you requested. Please note that the proposed CS for HB 784 includes a section entiteld "legislative findings" which states largely the same considerations as does the draft letter of intent. Because findings adopted by the entire legislature are of more weight than a letter of intent from one committee, you might consider whether, in your view, a letter is necessary or desirable.

I have also reviewed the proposed CS for HB 590 concerning herring. In my view, the bill would "work," in the sense that it would allow herring stripping and carcass disposal in the area described, notwithstanding existing AS 16.10.172 and 16.10.173.

Several observations and alternatives on drafting approach come to mind, however. First, in order to achieve codification of CSHB 784 in the Alaska Statutes, it could be drafted to amend AS 16.10.172 by adding the two subsections in Section 1 of the bill. This approach would be even more desirable for Section 2 of the bill which could be drafted to amend AS 16.10.173. The simplest approach to Section 2 of the bill would be to merely amend AS 16.10.173(e) by changing the January 1, 1979, cut-off date and, if desired, also the geographic description "Bering Sea (including bays, sounds, estuaries, and water of the state) north of 56° north latitude." In fact, it would be possible to accomplish the apparent purpose of proposed CSHB 590 by this means alone, omitting Section 1 and Sections 2(a) and (c).

In conclusion, the proposed CS bill is not in conflict with any "wanton waste" statute since the only statute on that subject (former AS 16.05.830) was repealed by ch. 73 SLA 1968. The only statutes with which consistency must be considered are AS 16.10.172 and AS 16.10.173 relating to herring specifically.

If any further questions arise on these matters, please contact me.

Introduced: 2/18/80
Referred Resources and
Judiciary

IN THE HOUSE BY RESOURCES

CS FOR HOUSE BILL NO. 784

IN THE LEGISLATURE OF THE STATE OF ALASKA

ELEVENTH LEGISLATURE - SECOND SESSION

A BILL

For an Act entitled: "An Act relating to the maximum length of salmon net vessels."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

Section 1. LEGISLATIVE FINDINGS. The legislature finds that

(1) overly efficient harvest of salmon by net vessels is detrimental to future fishing seasons and to the equitable distribution of the fishery resources in fisheries with a limited number of units of gear and a limited total catch per season;

(2) the limitations on the length of salmon net vessels imposed by AS 16.05.835 are designed to prevent over-efficiency in harvest while still allowing as many fishermen as possible to participate in the fishery safely and with optimum efficiency;

(3) the state waters north and west of a line running 225 degrees true through Cape St. Elias are particularly vulnerable to overharvest of salmon if the limitations on length of vessels included in AS 16.05.835 are not imposed.

Section 2. AS 16.05.835 is amended to read:

Sec. 16.05.835. MAXIMUM LENGTH OF SALMON NET [SEINE] VESSELS. (a) No salmon seine vessel may be longer than 50 feet, official Coast Guard register length, AND 58 FEET OVERALL LENGTH except

(1) vessels that have fished for salmon with seines in waters of the state before January 1, 1962, as 50-foot, official Coast Guard register length vessels; and

(2) vessels that fish for salmon with seines in the southeastern waters of the state only.

(b) No vessel used to fish for salmon with a gill net in the waters of the state within Bristol Bay may be longer than 32 feet, overall length. For the purposes of this section overall length means the straight line measurement between the extremities of the hull proper.

(c) In (a) of this section, "southeastern waters of the state" means the waters of the state south and east of a line running 225 degrees true through Cape St. Elias.

THE 32' LIMIT IN BRISTOL BAY

A REPORT TO THE

ALASKA BOARD OF FISHERIES

BY

GREG COOK, EXECUTIVE DIRECTOR

BOARDS OF FISHERIES AND GAME

Data Gathered In

April and December, 1979

HISTORICAL BACKGROUND

present controversy over methods and means of taking salmon in stol Bay emerges from a unique historical context. The passage that ows is excerpted from The Silver Fleece: An Economic Study of the stol Bay Region, April, 1958, Alaska Rural Development Board.

decline in numbers of fish has forced changes in methods of opera- n and the type of gear used. The early gill net boats were 25-foot umbia River double enders with a centerboard and a spirit sail. se boats were operated by two men--a netter and a boat puller. dually, the design of the boats improved, and in 1922 the first ered boats were brought into the Bay. The same year saw the opera- n of the first purse seiners in the area. These two developments ved to be extremely efficient fish catching devices, and Federal ulating authorities could foresee danger to the runs if they were mitted to become established. In addition, the cannery operators lized that their tight control over the fishery might be destroyed by e introduction of outside seiners and the power boats. As a result, tion was immediate and regulations were issued forbidding the use of rse seiners and power boats in Bristol Bay.

nce the sailboat was less maneuverable and much slower than the power ats, it was much less efficient in finding and catching fish. The sire to catch more fish eventually caused the canneries to seek ways d means of circumventing the restriction on power boats. The monkey at was the answer. This boat was essentially a tow boat which could e on to half a dozen or more sailboats and tow them to the fishing ounds. Thus rapid moves could be made by the sailboats and they came almost as mobile and efficient as power boats. Realizing that e purpose of the "sailboat only" regulation was being defeated by the nneries, the Fish and Wildlife Service removed this restriction in 1, permitting power boats up to 32 feet in length to operate in the y.

th the advent of power, a major economic revolution has been occurring Bristol Bay. Prior to 1951, private ownership of fishing boats and ear was almost unknown. The canneries owned the boats and gear and ired fishermen to man them, usually bringing the great majority from ie states. Locally hired fishermen were very much in the minority.

ie introduction of power boats provided a compact, efficient fishing chine that was not financially out of reach for a number of the more gressive local fishermen. The advantages of private ownership were mediately apparent to the fishermen, especially since the independent erators received considerably more for their fish than did the company shermen. As a result, the number of privately owned boats in the Bay, pecially on the Nushagak, has increased each year since 1951. This vement toward independent operation of fishing boats has greatly ncreased the bargaining power of the local people. They have become an nsistent voice at the annual hearings held by the Fish and Wildlife rvice to determine regulatory measures. In addition, as more local eople are able to become independent of a large cannery, they are able o come to much more equitable terms on the price of fish. As a result, he increase in independent fishermen has had far reaching effects on he Bristol Bay economy.

ECONOMIC INFORMATION

Data obtained from CFEC show the average price paid for Bristol Bay drift gill net entry permits. In 1975, those permits averaged $1,165; by 1978, the average price paid for a Bristol Bay limited entry permit was $21,638. Data are also available which show the average income of individuals who participated in the Bristol Bay drift gill net fishery. The average fisherman sampled in the CFEC survey earned 98 percent of his gross fishing income from salmon drift gillnetting; 77 percent of the total Bristol Bay drift gill net fleet grossed under $20,000 in 1976. See attached graph to assess the relative strength of the 1976 harvest.

One consideration in evaluating these data is the rapid rate of inflation which all Alaskans have experienced from 1976 until the present. Inflation at the present time is estimated to be in the neighborhood of 14 percent a year. Although 1976 was a weak year for red salmon, it was a high year for chums. Pink salmon in Bristol Bay are an even year fish so the pink salmon income component was significant in 1976. An additional factor which should be taken into consideration is the rise in prices paid for all salmon products since 1976.

In 1976, approximately 31 million sockeye were harvested in Bristol Bay. One and one-half million king salmon, three million pinks, eight and one-half million chums, and 100,000 coho.

From "The 32' Limit in Bristol Bay – A Report to the Alaska Board of Fisheries" By Greg Cook, Exec. Dir. of Bds of Fish & Game

Data Gathered April – Dec. 1979

INTRODUCTION

In December of 1978, the Lower Bristol Bay Advisory Committee proposed repeal of the 32-foot limit on salmon fishing vessels in Bristol Bay. 5 AAC 06.341. The Board tabled that proposal for further study. This report is based on a visit to Bristol Bay made in April, 1979, at the direction of the Board of Fisheries. The visit was made by Greg Cook, Executive Director of the Boards of Fisheries and Game. A total of 337 resident Bristol Bay fishermen were contacted in 15 villages. Also, the Western Alaska Cooperative Fishermen's Marketing Association, Jim McConnell, president of the Dillingham branch of the National Bank of Alaska, and several cannery managers were interviewed.

Public meetings were held in 15 different villages. Advance notice for the meetings was provided by Kay Larson of the Bristol Bay Native Association and Radio Station KDLG. I took minutes at each meeting and notes of each individual's testimony are on file in Juneau for inspection.

Meetings were conducted in the following manner: A statement of the issue was given, then the floor was opened for discussion. Translators were necessary in several villages. Each time a translator was needed, one local resident was able to serve in that capacity. I tried to summarize the arguments on each side of the issue when discussions seemed to be over. This often made people aware of more points of view and stimulated a renewal of discussion. This report is a product of those meetings.

VILLAGE BY VILLAGE SUMMARY

1. Dillingham; April 23; 20 people contacted; all opposed to changing the limit.

2. Togiak; April 24; 31 people contacted; all opposed to changing the limit.

3. Twin Hills; April 24; 30 people contacted; all opposed to changing the limit.

4. Manakotak; April 24; 27 people contacted; all opposed to changing the limit.

5. South Naknek; April 25; 12 people contacted; 11 people opposed to changing the limit, 1 favored the change.

6. North Naknek; 37 people contacted; all opposed to changing the limit.

7. Egegik; April 26; 32 people contacted; 30 opposed to changing the limit, 2 favored to changing to 36 feet.

8. Pilot Point; April 27; 14 people contacted; 7 people favored eliminating the limit, 3 opposed, 4 silent.

9. Port Heiden; April 27; 25 people contacted; all favored changing to 36 feet, but nothing larger.

10. Kokhanok; April 28; 9 people contacted; 7 opposed to the change, 2 favored changing (facetious).

11. Iliamna; April 28; 7 people contacted; all opposed to changing the limit.

12. New Halen; 26 people contacted; all opposed to changing the limit.

13. Koliganek; April 29; 29 people contacted; all opposed to changing the limit.

14. New Stuyahok; April 30; 24 people contacted; all opposed to changing the limit.

15. Ekwok; May 1; 14 people contacted; all opposed to changing the limit.

CONCLUSION

The controversy over the 32-foot limit is often emotional. Arguments on each side encompass social and economic, as well as biological issues. Much of the thinking is necessarily conjectural since vessels larger than 32-feet have never yet participated in the Bristol Bay salmon fishery. Judging from the intensity of the participation in the public meetings that form the basis of this report, the Board's decision on 5 AAC 06.341 will be closely watched by all Bristol Bay fishermen.

The vast majority of Bristol Bay resident fishermen who were contacted during the April, 1979, Board of Fisheries survey, strongly oppose any change in the 32-foot limit regulation. The biggest single reason expressed for their opposition was the anticipated effect that such a change would have on income distribution in Bristol Bay. Local resident fishermen are convinced that bigger boats would lead to a few rich operators profiting to the detriment of the majority of fishermen. "The rich will get richer and the poor will get poorer."

A recurring theme in the villages was fear of purse seine gear being introduced in the Bay. Allowing larger boats was seen as the first step towards allowing seine gear, moving fishing district boundary lines farther seaward, and eventually over-fishing and depleting the resource.

Support for changing the 32-foot limit was found exclusively on the Alaska Peninsula. Residents of Port Heiden favor a new limit of 36-foot vessels. They want slightly bigger boats for greater comfort and safety in rough weather. They do not advocate bringing in vessels larger than 36-feet. Residents of Pilot Point strongly advocate removal of any size limit whatsoever. They argue that this would enable fishermen to present a higher quality product during the salmon season, permit entry into other fisheries without necessitating purchase of a second vessel, and encourage true entrepreneurs.

SUMMARY OF ARGUMENTS FAVORING REPEAL OF THE 32-FOOT LIMIT

-- More efficient, carry more crew, gas and food, spend more time fishing and less time making deliveries, going for gas, etc.

-- Greater safety in rough weather.

-- Better ability to fish king salmon. Kings are a rough weather fish in Bristol Bay.

-- Increased comfort. Port Heiden people in particular feel this desire since they travel further than other Bristol Bay residents in order to reach an open fishing district.

-- Could be used in other areas of Alaska where 32-foot boats are inappropriate.

-- Could be used for other fisheries such as bottomfish, crab, herring.

-- More room would give space for a slush ice machine. This would encourage delivery of a higher quality product, allow for watertight compartments, and enable the fishermen to spread the fish out more so that they wouldn't get "squished."

-- Fishermen are now independent; there's no need to be tied to a cannery's apron strings either by history or because of canneries' unwillingness to renovate their storage facilities and docks.

-- Professional fishermen should have the latitude to develop as rapidly as they wish. "Laissez-faire" is the best approach.

-- 32-feet is too small to be versatile.

-- Greater fuel efficiency.

-- Financing would be easy at a rate of 4 3/4 percent interest (contact Alec Griechen for his loan source).

-- When people have big boats, canneries will build facilities to accommodate them.

-- It's cheaper to have one boat to use in all fisheries.

SUMMARY OF ARGUMENTS OPPOSED TO CHANGING THE 32-FOOT LIMIT

-- Puts 32-foot boats at a competitive disadvantage. Rich people will buy the bigger boats and get richer, poor people will end up with less fishing time and less fish.

-- Inability of small boats to fish as long before needing to resupply.

-- Would make Bristol Bay more attractive to outsiders since they could then use their bigger boats in Bristol Bay. This would result in outsiders buying out the limited entry permits held by local Bay residents.

-- 32-foot boats are fine for fishing herring. To say the bigger boats would be useful in bottom fishing is specious; no boat can fish the shallow water where the salmon run and at the same time be versatile enough to fish out on the high seas where the bottomfish are.

-- The Bay is too shallow for deep draft boats.

-- Deep draft boats can't go up the rivers. Villagers would be disadvantaged since upriver people would need a second boat in order to haul their supplies and travel up and down the river. While repealing the 32-foot limit would make one boat practical for outsiders, it would necessitate two boats for upriver people if they wanted to remain competitive.

-- A decrease in fishing time for small boats would result since larger vessels could take on more fish in rough weather and harvest the allowable catch quicker.

-- People in the villages can't afford bigger boats; they have no collateral for loans and banks just laugh at them when they try to get loans based on fishing ability. Upriver villages have an especially difficult time securing financing.

-- The Commercial Fisheries Entry Commission has studied the possibility of buying back permits in Bristol Bay and bigger boats would mean they'd buy back more permits.

-- 32-foot vessels now adequately harvest 100 percent of the resource. The real problem is inadequate processing capacity.

-- Shorter openings would result (because the fleet would be more efficient). This would hurt setnetters, 32-foot boat fishermen, and skiff fishermen.

-- Could lead to requests for changing the fishing boundary limits, thereby increasing the fishing pressure on mixed stocks.

-- There are not storage facilities adequate to accommodate larger vessels over winter. Existing storage facilites are already overcrowded and inadequate. Harbors are only designed for 32-foot vessels. More dredging would be required in Dillingham, the only harbor in Bristol Bay. Docks are old and cannot support the extra weight that bigger boats would require. Booms and hoists are barely adequate for lifting existing 32-foot boats; larger vessels would be too heavy for this equipment.

-- Fear that seiners would return to the Bay's salmon fishery.

-- Management of the fishery would be harder in weak years if efficiency of the fleet increases. For example, in one twelve hour period, 70 percent of the total allowable catch for a weak run year can now be taken.

-- Shorter openings would make problems for setnetters who really need a full tidal cycle in order to work their nets.

-- Salmon is the sole basis for the economy in Bristol Bay; few alternative employment opportunities exist.

-- There would be a serious decline in the value of existing 32-foot vessels.

-- There is no good reason for change; management is good now with the 32-foot boats.

-- New boats would just mean fishing harder to pay off the vessel; there would be no real increase in income for fishermen who only fish salmon.

-- Bigger boats will get a higher percentage of the fish available and leave less for the small boats who are even more income dependent on the fishery.

-- Larger boats would fish the kings harder; king returns are now strong.

-- Larger boats would want more fathoms of gear.

-- Canneries already have trouble processing in peak years. Changes in delivery patterns that would result from larger vessels could prove chaotic.

-- Bigger boats might mean that canneries would cease buying from some small operators since they could receive all the fish they could process from a more limited number of fishermen.

-- Bigger boats will mean a higher dropout rate as gill nets are hauled higher to reach the deck.

-- overcapitalization

-- It would complicate deliveries to salmon scows. Vessels tie up one behind the other and skiffs tied up to 50-foot boats tied up to skiffs will cause problems.

-- The Bristol Bay fishery is just now getting to the point where all the locals can really make a living from the fishery. Why should the Board change the fishery to benefit outsiders?

-- Fear of shorter openings.

-- Bristol Bay residents rarely own limited entry permits for other fisheries. They would have a hard time amortizing the investment in a larger boat since they would not be able to fish other areas of Alaska where limited entry has been instituted.

-- Small boats won't be able to compete with bigger, more stable boats in rough weather.

-- Who will want to buy 32-foot boats that are owned now if 36-foot or 40-foot boats with greater efficiency are allowed?

-- The 32-foot limit acts to equalize competition between skiff fishermen and big boats.

-- Bad-weather-and-fishermen's-strikes-are-the-prime-contributors-to escapement. If bigger boats are allowed to fish, this will complicate management.

-- A decrease in the amount of money made by locals will increase the number of locals that have to go on welfare and BIA assistance.

-- Larger vessels will mean an unequal rate of drift; this will result in more gear conflicts among drifters.

-- Big money will buy up the limited entry permits and more local people will end up sitting on the beach. Kids in the villages who don't have permits and who might benefit from an increase in the number of limited entry permits will never get them if an increase in boat size is allowed. A greater investment is required for a bigger boat. Village children who are potential beneficiaries of an increase in the number of permits will not get this opportunity if bigger boats become the norm.

-- Any change in size will act to frustrate the goal of limited entry: limiting the ability to take.

-- Entry into the fishery will be so expensive that it will become a virtual recreational fishery for doctors and lawyers.

-- All the support facilities of canneries are geared to 32-foot boats: hydraulics, docks, storage, parts inventories. Change will mean canneries will have to make massive capital investments.

-- Bristol Bay Borough could lose an important part of its tax base if boats are no longer stored in the Borough on the day that taxes are assessed.

-- Increased interception by Alaska Peninsula people and Sand Point people.

-- It will increase the number of requests for more gear types.

-- It will result in enforcement problems in the area since big boats could overnight there.

-- Outsiders on big boats will be able to fish continuously during the openings; small boats must deliver and lose fishing time.

-- Longer boats won't necessarily mean they will be any less beamy.

7/9

RESOLUTION NO. 79-7

A RESOLUTION REQUESTING THE STATE OF ALASKA'S BOARD OF FISH AND GAME NOT TO ALLOW AN INCREASE IN THE SIZE OF COMMERCIAL FISHING BOATS WITHIN BRISTOL BAY.

THE BOROUGH OF BRISTOL BAY, ALASKA RESOLVES:

WHEREAS, the people of Bristol Bay depend on the Salmon fishing for their livelihood and,

WHEREAS, currently no commercial fishing boat used for salmon fishing within Bristol Bay can exceed 32 feet in length and,

WHEREAS, allowing larger commercial fishing boats within the Bristol Bay fishery would deprive residents of their livelihood and,

WHEREAS, any changes in the allowable length of commercial fishing boats within the Bristol Bay would create undue economic hardship on the people of Bristol Bay.

THEREFORE BE IT RESOLVED that the Bristol Bay Borough Assembly hereby requests the Alaska Board of Fisheries, the Alaska Department of Fish and Game and the Division of Commercial Fisheries to restrict all Commercial Fishing Boats used in the harvest of all fish within Bristol Bay to a maximum length of thirty two (32) feet.

BE IT FURTHER RESOLVED that copies of this Resolution shall be sent to Governor Jay S. Hammond, Senator George Hohman, Representative Nels Anderson, Commissioner Department of Fish and Game, Director, Division of Commercial Fisheries, and members of the Alaska Board of Fish & Game.

Passed this 18th day of June, 1979.

Mayor

ATTEST:

Borough Clerk

RESOLUTION OF THE VILLAGE OF EKWOK

Date: 4/8/79
Time 3 O'clock
Place: V.C. House

Members present:

Phillip Akelkok, President
Tom Nelson, Vice-President
Luki Akelkok, Treasurer
Juanita Hurley, Secretary
Fred Hurley, Member
Wm. Hurley, Member

Members absent:
Alex Nelson
Mike Acouvak

Guests:
Tom Hurley
John Nickolai
John Yukluk
Robert Nelson

The meeting was called to order by Phillip Akelkok, their was talk on the repeal of the 32 ft. boats as to where we stood.

The Village of Ekwok is against bigger boats, all the fisherman of Ekwok are staying with 32 ft. boats.

A motion was made by Tom Hurley that as spokesman in behalf of the fisherman, they are all for staying with 32 ft. boats.

Seconded by Tom Nelson

Motion carried.

The resolution was discussed as to whether we want to go through as assistance through B.B.N.A. or B.I.A..
The vote was 6 for it and 1 against.

Discussed the phone hours, from 9-5 was agreed upon.

Discussed Board member for B.B.A.H.C.

Floor was opened for nominations for board members. a motion was made by Tom -Nelson that Jim Hurley be rep. for meetings.

Seconded by John Yukluk. Motion carried.

Fred Hurley was nominated for alternate by John Yukluk.

Seconded by Tom Nelson. Motion carried

Meeting adjourned.

WE THE UNDERSIGNED RESIDENTS OF TWIN HILLS HEREBY OPPOSE THE REPEAL OF THIRTY TWO (32) FOOT LIMITATION IN BRISTOL BAY.

Dear Sirs:

I understand that you are currently considering a repeal of the 32' limitation on vessel size for commercial salmon fishing use in Bristol Bay.

I hope you are not considering passing the repeal merely as a "favor" to Bristol Bay fishermen, without considering the long-term impacts you will be placing on the fishermen of Bristol Bay.

When I first thought of the repeal, I said "Why not?" I only thought of the comfort of fishing in a larger vessel. Now, after serious consideration, I believe that the repeal would not be in the best interest of the most numerous and typical Bristol Bay fishermen.

Probably the greatest impact the repeal would have in Bristol Bay would be the less fishing time the fishermen will face in the future.

The current fishing fleet of Bristol Bay is the most highly efficient fleet the salmon fishery has ever faced in history. We have seen the birth of the newer and faster fiberglass vessels in the Bay. The more compact and powerful engines, along with the hydraulic systems, the power reels and rollers, have led to the greater efficiency. We have also seen radars, depth fathometers and fish finders, along with the new "Loran C" installed in more and more of the vessels.

Probably the single factor which has most dramatically increased the efficiency of the Bristol Bay fleet in recent years has been the introduction of the "brailer system" of delivery. Soon, the days will vanish when the salmon are peughed singly from the vessels onto the tenders. The salmon are now handled by the hundreds in brails, dramatically cutting down the delivery time of fishermen, increasing their harvesting capability.

With the introduction of larger vessels in Bristol Bay, the efficiency of the fleet will increase even more dramatically. The main reason being that the larger vessels would be able to accomodate a larger number of crew members capable of "picking clean" 150 fathoms of gillnet full of fish in much less time than the usual two crewmembers you would find on most vessels in the Bay today. With the larger vessels, more space would become available for crew members to sleep in, move about in the cabin, and "pick" fish.

I have heard that if the repeal is passed, captains would immediately order larger vessels, and then hire low salaried college students from outside to help them "pick" their nets faster. I have also heard that more and more fishermen would take family members out fishing as crew members.

The purpose of having a larger number of crew members is to effectively "pick and clean" 150 fathoms of gillnet as soon as possible, so that the cleaned net could be set out again, catching more fish within a twelve hour period, especially if the fishing is heavy.

Another reason the efficiency of the fleet will be increased if larger vessels were allowed in the Bay is because the larger vessels would be able to accomodate more gallery supplies and fuel, allowing them to fish for extended periods, especially when the fishing is not heavy.

The efficiency of the fleet will also become apparent during the king season on the Nushagak River, noted for its king runs. The king salmon "run" up the river during high winds, and are commonly known as rough water fish. If larger vessels are introduced into Bristol Bay, they would be more capable of taking a larger number of king salmon since the larger vessels would be able to fish in more severe weather than the 32' vessels. While the 32' vessels must seek shelter during rough weather, the larger vessels could be harvesting more kings.

This same "pattern" of greater harvesting capability for larger vessels will also develop with the silver salmon season in Bristol Bay. The silver salmon, like the kings, "run" in rough weather also.

Probably the greatest advantage large vessel owners would have over 32' vessel owners will be felt in the red salmon season during rough weather. Weather in the Bay is highly unpredictable. There are seasons frequent with "bad" weather, and seasons with relatively calm weather. If there is a 30 to 35 mph wind present within the Bay during heavy red runs, the 32' vessels would be able to only harvest up to 1,500 reds to keep on the safe side. Yet, the larger vessels would be able to "take on" more reds in rough weather. Once again, the larger vessels would have an advantage over the smaller 32' vessels.

I strongly believe that the local Commercial Fisheries Division will seriously consider the efficiency and harvesting capability of the fishing fleet when the Department calls for an opening within the emergency order period. Instead of providing a twelve hour period to the fleet, the Department could very well begin granting six hour periods because of the increased harvesting capability of the fleet, and concern of the Department to obtain the needed escapement.

shorter openings

I am concerned that the Department could very well being imposing restrictions on the fishing time allowed to fishermen during the king season also. With more boats harvesting more kings, reds, and silvers, I am sure the Department will be more concerned about obtaining their escapement.

I believe that the greatest hardship that will be felt in Bristol Bay will be placed upon the hundreds of setnetters in the Bay. The setnetters of the Bay will be greatly impacted if the efficiency of the fleet is dramatically increased by the introduction of larger vessels. There are times when the setnetters "catch" reds moving into the beach, and if the efficiency of the fleet is substantially increased, it means less salmon moving into the beach to be caught by the setnetters.

Setnetting in Bristol Bay is not always profitable, especially during the bleak years. The increased efficiency of the fleet by the introduction of larger vessels would certainly mean less salmon for setnetters. Larger vessels would "scoop up" salmon schools near setnet sites in less time, affecting the amount of salmon to be caught and income to be made by the setnetters.

The statement that most fishermen in Bristol Bay will not begin purchasing larger vessels if the 32' limitation was repealed, must be closely considered. The passage of the Commercial Fishing Loan Program by the State Legislature has opened up an attractive and effective financing source for the fishermen in Bristol Bay. The impact of the loan program has been far reaching, much greater impact is expected if the loan program receives additional funds.

The fishermen of Bristol Bay currently recognize the advantages of having a wider, higher, and more powerful 32' vessel. If one were to examine the type of vessels a number of highliners at the Columbia Wards Fisheries cannery in Egegik have ordered, one would find that the vessels are higher, wider, and usually are accompanied by a more powerful and compact engine. One fisherman in Bristol Bay has recently ordered a 14' wide 32' vessel which will have a twin screw of 320B Cats to power the vessel. I am sure wider vessels are being ordered in the Naknek/Kvichak River also.

The statement that the efficiency of the fleet will not be increased if larger than 32' vessels were introduced into the Bay must be carefully considered. The question of why more and more highliners are purchasing higher and wider vessels clearly reflects the greater holding capacity the fishermen would like to have in their vessels.

Once the fishermen of Bristol Bay being realizing the greater efficiency and harvesting capabilities of the larger vessels, they will immediately seek financial resources to purchase larger vessels, and if the loan program is reactived, they will take full advantage of the program.

In terms of the larger vessels providing benefits to fishermen interested in participating in the new emerging bottomfisheries in the Bering Sea, the only place they would probably use their larger vessels would be in the Togiak/Kulukak Bay herring fishery. For the fishermen of Bristol Bay to fully participate in the high seas bottomfisheries in the Bering Sea, they would need 100' to 150' vessels, which cannot be effectively used in the shallow based gillnet salmon fishery.

I have even heard that a number of the smaller purse seine vessels participating in the Togiak/Kulukak Bay herring fishery were more successful in the purse seine fishery than the larger vessels. I have heard directly from the Department of Fish and Game that one 28' vessel in the fishery was one of the highliners. I see the capabilit, of Bristol Bay 32' vessels effectively competing in the herring fishery.

Another long-term impact which could result in Bristol Bay if larger vessels were permitted would be the possible request and granting of an extension to the lower limit line of fishing districts, especially in Nushagak and Naknek/Kvichak River districts.

As more and more larger vessels are introduced into the Bay, more fishermen will being "pushing" for an extension of the lower limit lines because with deeper draft vessels, such fishermen will say that the lower limit should be extended for safety reasons. The Bristol Bay fishing districts consists of much shallow water and sand bars, and the fishermen with larger vessels would want to fish in deeper water for safety reasons.

If the lower limit is extended, it would be the numerous setnetters and skiff fishermen who would be adversely affected by the extension. The larger vessels would be able to fish further out, catching the salmon as they move up the river systems.

Salmon stocks steadily "move" up the fishing districts; with many of the early stocks of salmon being caught at the lower limits. This situation exists within the Nushagak River, and,

THE FOLLOWING DOCUMENT(S) MAY NOT FILM LEGIBLY BECAUSE OF POOR QUALITY OF THE ORIGINAL.

[illegible] larger vessels will have the most advantage from an extended lower limit.

I have also heard that many of the "upriver" villagers [illegible] purchasing larger vessels for hauling oil [illegible] during the fall. I believe this statement should be closely examined also. The river system to many of the upriver communities in Bristol Bay pose serious shallow water hazards, and I am sure many of the villagers would not "rush into" purchasing larger vessels for hauling cargo to the villages.

I also believe that the Board of Fisheries must consider the physical situation of Bristol Bay, and consider the impacts associated with larger vessels existing in the Bay. Currently, a number of the canneries in Bristol Bay are facing serious storage facilities for their fishermen and vessels. The Peter Pan cannery in Dillingham was "forced" to deny the winter storage of vessels for a number of fishermen, resulting in the fishermen having to store their vessels outside facing the elements. If larger vessels are introduced, the storage problem will be compounded, and those fishermen who cannot afford to construct private warehouses will have to store their vessels outside with little protection from vandalism. A number of vessels were recently vandalized in the Dillingham Boat Harbor because many of the fishermen had no place to store their vessels.

Consideration should also be given to the size of Dillingham Boat Harbor, the only man-made harbor in Bristol Bay which plays an important role to the protection of hundreds of vessels on the Nushagak River. If larger than 32' vessels were to being parking in the harbor, immediate work would need to be done to enlarge the harbor, otherwise the safety of many boats in the Nushagak River will become jeopardized.

I have heard that a number of fishermen who participate in the Togiak/Kulukak herring fishery with vessels larger than 32', and have purchased a Bristol Bay drift gillnet salmon permit have urged the passage of the repeal for the 32' limitation, so they can conveniently enter the Bristol Bay salmon fishery without purchasing a 32' vessel.

In conclusion, I believe that the introduction of larger vessels will solely benefit those fishermen who purchase or currently own larger vessels, and will certainly not benefit the 32' boat fishermen, skiff fisheries, and setnetters of Bristol Bay.

THE PRECEDING DOCUMENT(S) MAY NOT FILM LEGIBLY BECAUSE OF POOR QUALITY OF THE ORIGINAL.

I urge you to vote against the repeal for the 32' limitation, and consider the number of fishermen it will adversely affect in Bristol Bay.

I hope you fathom my concerns.

Sincerely yours,

Andrew Golia

April 24, 1979

Mr. Greg Cook, Executive Director
Alaska Board of Fisheries
Alaska Department of Fish and Game
Subport Building
Juneau, Alaska 99811

Dear Mr. Cook:

Re: Opinion of 32' vessel length
in Bristol Bay

I would like to express my opinion on two proposals which would have repealed the 32-foot keel length regulation on Bristol Bay salmon drift gillnet vessels. First of all, qualifications are in order.

I have commercially fished salmon on the beach in Bristol Bay from 1957 to 1967, ten years. I have commercially fished salmon on a drift gillnet vessel in Bristol Bay from 1968 to the present, ten years. I do have a permanent commercial fisheries entry permit (which I have earned), and intend to use the permit until I transfer it to my son. I grew up in a fishing village which is in the heart of the Bristol Bay salmon fishery, South Naknek. Over the years, I have done nothing but listened and learned from elderly fishermen who resided in California, Oregon, Washington, and Alaska. I, for one, have the utmost respect for the professional fishermen who have fished in Bristol Bay, even before I was born.

As I stated before, the people of Bristol Bay are natural conservationists. When the typical Bristol Bay resident feels that a resource has become over-harvested, he would discontinue harvesting. I strongly feel that if the Bristol Bay residents were the only ones extracting the living fish and game resources, there would be absolutely no need for any regulatory authority in Bristol Bay. Since the fish and game resources in Alaska belong to the people of Alaska, we have regulatory authorities and many individuals participating in the harvests. I am thankful that you have taken the time to visit the people whom your Board's decisions most affect. It has been said before, and I am sure you have found out that the economy of Bristol Bay is based on its fishery industry.

Today, most Bristol Bay residents are thankful for the North Pacific Fisheries Management Council and the Alaska Board of Fisheries for practicing conservative management in the past and turning over the harvest of salmon to the U.S. residents. In the last three or four years the local reputation of the Alaska Department of Fish and Game has improved tremendously.

Finally, the fishing associations and the ADF & G are talking to each other. I belong to the Alaska Independent Fishermen's Marketing Association. The AIFMA has decided to assess themselves $17.50 per 50 fathoms for research and development. In the near future, I can see the ADF & G presenting proposals to AIFMA for which to futhur assist them with their management goals.

I think realistically that if the Alaska Board of Fisheries repeals the 32-foot keel length, not only will the Republican Administration be hurting themselves politically, but also the reputation of sound management and public relations of the Alaska Board of Fish, resulting in ADF & G's reputation falling back about 25 years. I think you will probably have an uprise in Bristol Bay. Why? Because we have a healthy fishery. If the Alaska Board of Fish does things like making the fishery too efficient to shorten our fishing time, you will see an uprise in Bristol Bay. When a commercial fishery becomes too efficient, the fishing is no longer a people fishery. As a result of the shorter fishing periods, the distribution of income will change drastically. Some people will make it, and some will not. I am sure you are aware of past and present management practices of the Alaska Board of Fish which have resulted in a very small group of fishermen benefiting, and many others not. I hate to see the old English tradition of class society come to Bristol Bay; the very rich and the very poor. I hope not, and do not think that this is the intent of our State and Federal Governments. Now at least we have a haphazard people fishery. To repeal the 32' keel length would have the same effect as putting more gear in the water. I don't think any sensible fishermen would want the effects of more gear in the water.

I think that if a few people can change the destiny of the Bristol Bay people, then something is drastically wrong and will have to be changed.

I think that the legislature went far enough by enacting a limited entry law and excluding many future Bristol Bay fishermen. I think the people are tired of having a few people telling them what to do and what not to do.

One final statement, I believe that if the Alaska Board of Fish repeals the 32-foot keel length, it would be contrary to the intent of the legislature when they enacted the limited entry law.

Sincerely yours,

Val N. Angasan

Editor's note. — The repealed section derived from § 27, art. I, ch. 94, SLA 1959.

Sec. 16.05.831. Waste of salmon. (a) It is unlawful for a person to waste salmon intentionally, knowingly, or with reckless disregard for the consequences. In this section, "waste" means the failure to utilize the majority of the carcass, excluding viscera and sex parts, of salmon which are to be

(1) sold to a commercial buyer or processor;

(2) utilized for consumption by humans or domesticated animals; or

(3) utilized for scientific, educational, or display purposes.

(b) The commissioner may authorize other uses of salmon upon request if he finds that to do so would be consistent with maximum and wise use of the resource.

(c) A person who violates this section or a regulation adopted under it is punishable by a fine of not more than $10,000, or by imprisonment for not more than six months, or by both. In addition, a person who violates this section is subject to a civil action by the state for the cost of replacing the salmon wasted. (§ 3 ch 89 SLA 1975; § 3 ch 99 SLA 1975)

Editor's note. — This section is set out as it appears in ch. 99, SLA 1975. Chapters 89 and 99, SLA 1975, are virtually identical except that ch. 99 contains a § 5, providing for an effective date of the act.

Section 1, chs. 89 and 99, SLA 1975, provides, in subsection (b): "It is the intent of sec. 3 of this Act to control the waste of salmon resources."

HB784

Sec. 16.05.835. Maximum length of salmon seine vessels. No salmon seine vessel may be longer than 50 feet, official Coast Guard register length, and 58 feet overall length except vessels that have fished for salmon with seines in waters of the state before January 1, 1962, as 50-foot, official Coast Guard register length vessels. (§ 1 ch 252 SLA 1970)

Sec. 16.05.840. Fishway required. If the commissioner considers it necessary, every dam or other obstruction built by any person across a stream frequented by salmon or other fish shall be provided by that person with a durable and efficient fishway and a device for efficient passage for downstream migrants. The fishway or device or both shall be maintained in a practical and effective manner in the place, form and capacity the commissioner approves, for which plans and specifications shall be approved by the department upon application to it. The fishway or device shall be kept open, unobstructed, and supplied with a sufficient quantity of water to admit freely the passage of fish through it. (§ 30 art I ch 94 SLA 1959)

Sec. 16.05.850. Hatchery required. If a fishway over a dam or obstruction is considered impracticable by the commissioner because of cost, the owner of the dam or obstruction, in order to compensate for the loss resulting from the dam or obstruction shall, at his option: (1)

Bill No. House Bill No. 811

Title "An Act relating to price disputes between fishermen and fish processors; and providing for an effective date."

Date February 29, 1980

Contact: Glenn Lundell
Deputy Commissioner

The change proposed in this bill will not have an adverse effect on mediation results as long as other steps are not precluded during that time period, such as fact gathering and analysis; meetings by the Governor, or designated representatives with industry and fishermen groups; and exertion of pressure on both groups by the Governor's Office.

However, it should not be expected that final agreements on price disputes will be reached that much earlier by beginning sooner because successful mediation relies heavily on the exhaustion of normal negotiation procedures, to the point that both parties have a strong incentive to participate. The principal benefit of earlier requests for mediation may be the exposure of pertinent facts bearing on prices and costs that much sooner.

The Department of Labor does not object to the change proposed, with recognition of the above factors, and the further understanding that mediation cannot involve the fish processing companies as a group under current federal anti-trust/price fixing laws.

AB835

Regulations promulgated under this section must be in accordance with the Administrative Procedure Act (AS 44.62). State v. Tanana Valley Sportsmen's Ass'n, Sup. Ct. Op. No. 1716 (File No. 3433), 583 P.2d 854 (1978).

While this section, which authorizes the Board of Game to adopt regulations providing for subsistence hunting, does not specifically refer to the Administrative Procedure Act (AS 44.62), it appears clear that it merely sets forth an additional purpose for which regulations may be promulgated. State v. Tanana Valley Sportsmen's Ass'n, Sup. Ct. Op. No. 1716 (File No. 3433), 583 P.2d 854 (1978).

Issuance of permits based on verbal instructions to agents held improper. — The issuance of permits for the killing of caribou in certain specified areas of the state based on verbal instructions to the permit agents as to the need of individual applicants does not conform to requirements of the Administrative Procedure Act (AS 44.62). State v. Tanana Valley Sportsmen's Ass'n, Sup. Ct. Op. No. 1716 (File No. 3433), 583 P.2d 854 (1978).

Nothing in the Administrative Procedure Act (AS 44.62) authorizes the Board of Game to impose requirements not contained in written regulations by means of oral instructions to agents. Such verbal additions to regulations involving requirements of substance are unauthorized and unenforceable. State v. Tanana Valley Sportsmen's Ass'n, Sup. Ct. Op. No. 1716 (File No. 3433), 583 P.2d 854 (1978).

Reasonable basis for Board of Game's quota of caribou to be killed. — See State v. Tanana Valley Sportsmen's Ass'n, Sup. Ct. Op. No. 1716 (File No. 3433), 583 P.2d 854 (1978).

Sec. 16.05.260. Advisory committees.

Article 3. Licensing of Sport Fishing and Hunting.

Section

340. License and tag fees

Sec. 16.05.340. License and tag fees.

(a) Fees for licenses and tags are as follows:

(1) Resident sport fishing license $10

However, the fee is 25 cents for a resident who is blind.

(2) Resident hunting license 12

(3) (A) Resident hunting and trapping license 15

(B) Resident trapping license 8

(4) Resident hunting and sport fishing license 22

(5) [Effective January 1, 1980] Resident hunting, trapping, and sport fishing license 25

However, the fee is 25 cents for the head of a family or a dependent member of his family or one solely dependent upon himself for support upon proof presented by the applicant that the applicant

(A) is obtaining or has obtained assistance during the preceding six months under any state or federal welfare program to aid the indigent, or

(B) has an annual family gross income of less than $5,600 for the year preceding application.

Feb.15,1980

Representative Al Osterback
House of Representatives
Juneau, Alaska
99811

Dear Mr. Osterback,

I have just attended a meeting of the Guide Licensing and Control Board in Juneau on Feb, 13 concerning possible additional curtailment of Guiding activities due to the apparent decline of our Brown Bear population in S.E. Alaska. The actual bear hunting season on Admiralty Island has now been shortened to 20 days for all practical purposes for spring hunting with the remaining area also shortened to about the same practical hunting time in spring and also curtailed sharply in fall. It would appear that only eliminating the guide business entirely or limiting the business to a small percentage of the existing guides, with a small quota divided proportionately, is about all that is really left for additional curtailment. Historically there has been about 60-80 Brown bear taken each year for the past 25 years in S.E. Alaska and this figure is the optimum amount the Dept. of Fish and Game feels can be harvested annually without depleting the Bear population to a dangerous level. The Dept. of Fish and Game would like to hold the level of Brown bear kill at no more than 60 Bear annually with a fifty fifty percentage of the tak e distributed between guided hunts (non resident) and resident hunters.

Each season it becomes apparent more and more new residents are actively participating in the bear hunting season to acquire a bear trophy. Until 1977 it cost a resident nothing to take a Brown bear tag and since then it costs only $25.00 for a resident, $250.00 for a non resident. There was general agreement among those present at the meeting that our Bear are being given to the public rather cheaply. If one can afford to spend several hundred dollars to have a trophy prepared by a taxidermist surely a Brown bear tag costing $100 for a resident hunter and a similar increase to $300 or more for a non-resident hunter is not too severe. This also will deter we feel the rapidly snowballing amount of resident hunters who each season participate more and more throughout the area. It also will possibly change the image of taking a Brown bear trophy even by a resident hunter to a respectable challenge of sportsmanship, and a privilege.

It is time the public realizes that our game in Alaska is not a never ending source of cheap hunting pleasure. Everyone knows that raising the cost of game tags is not a popular idea with one's constituents but it certainly is a much better alternative to limiting hunts than a permit system or drawing.

Marc Jensen, Chairman of the Guide Licensing and Control Board advised the guides present at their meeting to meet as a group with you when it might be convenient for you to give us an audience. However, as you know it costs almost an arm and a leg to remain each additional day in Juneau for each of us and nearly all guides were off and away to their respective towns when the meeting adjourned after public testimony except one or two local Juneau guides. I am hopeful my letter and possibly others from other guides would carry as much weight as would our interrupting your busy schedule to give us an audience where we all showed at once. Thank You.

III. ANALYSIS (See Fiscal Note Preparation Instructions, Section III)
After the last increase in fees in 1977, the number of nonresident tags sold decreased approximately 25% from the previous year although increased fees resulted in an overall 30% increase in nonresident big game tag receipts. Applying those figures to the currently proposed increase, anticipated sales for FY 1981 are:

	Tags Sold	Gross Receipts
FY 1981 (anticipated)	5,156	$ 1,560,435.00
FY 1980 (to date)	6,874	1,200,335.00
Difference	(1,718)	$ 360,100.00

Receipts have continued to increase at the rate of 5% (FY 1979) and 14% (FY1980 to date.)

MEMORANDUM March 26, 1980

SUBJECT: Nonresident alien hunters
CSSSHB 836

TO: House Resources Committee
ATTN: Mary Levan, AA

FROM: Kenneth E. Vassar
Legislative Counsel

Enclosed is the committee substitute you requested for sponsor substitute for House Bill 836. The fees for licenses established in this bill for nonresident aliens are generally higher than the fees for the same licenses for residents, and the fee for one type of license (hunting and trapping) is 20 times the fee for the same license for residents. I realize you are in a rush to receive this bill, so I have not conducted any research into the equal protection questions these fees raise; I believe that the United States Supreme Court has upheld state fees for fish and game licenses for nonresidents which were as much as seven times the fee for the same licenses for residents and has ruled unconstitutional fees for nonresident licenses which were 100 times the fee for resident licenses. Whether the court would uphold a nonresident fee which is 20 times the resident fee, I cannot say with certainty.

Also, I am confused by the special visitor's sport fishing license fee established in the bill. When would a nonresident alien be considered a visitor and thus eligible for this special fee rather than the general nonresident alien sport fishing fee established in the bill? I realize this simply parallels the special visitor's license already included in AS 16.05.340(a)(6), but I am not sure I understand that provision either.

TELEPHONE NO:

FROM: N. David Ziemer
Chief, Audit Services
Audit Division

SUBJECT: CS SS HB No. 836

This memorandum of fiscal impact has been prepared at the request of Mary Levan, Administrative Assistant to the House Resources Committee.

CS SS HB 836 would require nonresident hunters to use the services of registered guides while in Alaska. It would also raise both hunding and fishing fees for this class of visitor. From usage figures developed by the Alaska Professional Hunters Association, this bill would increase revenues by $240,820 each year. This increase was computed with two assumptions:

1. The number of nonresident - alien hunters will decrease 25% from current figures due to increased fees and the required use of a guide.

2. The number of nonresident - alien fishermen will remain the same.

There would not be any added fiscal impact to the Department of Revenue.

(6) COMMENTS

There is a conflict between 16.05.407 (e) (2) (b) and 16.05.940 (14) - Definition of resident. In 16.05.407 (e) (2) (b), it requires a person, who is not a citizen of the United States, to maintain a permanent place of abode in the State of Alaska for at least 36 consecutive months for the purpose of taking big game animals without the requirement of having an Alaska guide.

However, in 16.05.940 (14), an alien, who has maintained his permanent place of abode in the State for one year, is considered a resident for the purpose of this chapter. There was an amendment to paragraph (14) in 1974, substituting "one year" for "three years".

 SSHB836

Sec. 08.54.100. Qualifications for a master guide license. A person is entitled to be licensed as a master guide if he

(1) has legally hunted in the state for a part of each of 10 years during which time a substantial source of his income was from guiding or related activities directly contributing to his experience and competency as a guide;

(2) meets all the requirements of a registered guide and has been actively engaged in licensed guiding activities in the state for at least five years preceding application;

(3) has not been convicted of a violation of federal or state sport fishing, game or guiding laws or regulations within the preceding five years;

(4) has consistently performed in a superior manner as evidenced by required reports submitted to the board and by inquiries made by the board to at least two of the guide's clients of record; and

(5) meets additional qualifications which the board may require. (§ 1 ch 17 SLA 1973)

Editor's note. — Section 3, ch. 17, SLA 1973, provides: "A person licensed as a registered or master guide, class-A assistant guide or assistant guide as of March 14, 1973 shall, upon application, be issued a registered guide license, master guide license, class-A assistant guide license or assistant guide license, respectively."

Sec. 08.54.110. Qualifications for registered guide license. A person is entitled to be licensed as a registered guide if he

(1) is 21 years of age or more;

(2) is a resident of the state and maintains a permanent place of abode in the state;

(3) has practical field experience in the handling of firearms, hunting judging trophies, field preparation of trophies, first aid and photography;

(4) is familiar with the terrain and transportation problems in the district for which the license is requested;

(5) has passed the qualification examination prepared and administered by the board;

(6) has demonstrated to the board sufficient standards of competence and ethical conduct and has not been convicted of a crime involving moral turpitude;

(7) has legally hunted in the state for all or part of each of five years in a manner directly contributing to his experience and competency as a guide;

(8) has been licensed as and performed the services of an assistant guide in the state for a part of each of three years;

(9) submits a written recommendation to the board from a registered guide for whom the applicant has worked;

(10) is capable of performing the physical duties associated with guiding activities;

(11) has been favorably recommended in writing by two hunters that he has guided or assisted in guiding during each year of his three years as an assistant guide, wh[illegible]mendations have been solicited by the board from a list pr[illegible] applicant;

(12) meets additional q[illegible] which the board may require. (§ 1 ch 17 SLA 1973)

Cross reference. — See editor's note under AS 08.54.100.

Sec. 08.54.120. Qualifications for a class-A assistant guide license. A person is entitled to be licensed as a class-A assistant guide if he

(1) has been employed for at least one season as a licensed assistant guide;

(2) has had at least 20 years experience in the guide district in which he is to be employed; for the purposes of this paragraph physical presence at some time of the year during each of the 20 years constitutes adequate evidence of experience, and military service outside the state for no more than six years shall be accepted as part of the required 20 years experience;

(3) has been recommended in writing as qualified by a registered or master guide to the board. (§ 1 ch 17 SLA 1973)

Cross reference. — See editor's note under AS 08.54.100.

Sec. 08.54.130. Privileges and limitations of class-A assistant guides. A class-A assistant guide

(1) may not contract for hunts;

(2) shall be under the supervision of a registered or master guide who has contracted with the client for whom the class-A assistant guide is conducting the hunt;

(3) may take charge of a camp and conduct hunts from it without the registered or master guide necessarily being present in the area if the registered or master guide is physically present in the state and is actively supervising in guiding activities. (§ 1 ch 17 SLA 1973)

Sec. 08.54.140. Qualifications for assistant guide license. A person is entitled to be licensed as an assistant guide if he

(1) is 19 years of age or more;

(2) is a resident of the state;

(3) is favorably recommended to the board, in writing, by a registered guide;

(4) meets additional qualifications which the board may require;

(5) is in sound physical condition. (§ 1 ch 17 SLA 1973)

Cross reference. — See editor's note under AS 08.54.100.

Sec. 08.54.142. Qualification for transporter license (a) No person may engage in the activity of transporting unless he is licensed as a transporter under this chapter. A person may be licensed as a transporter if he

(1) is a resident of the state;

(2) is familiar with the terrain and transportation problems in the district or districts for which the license is requested;

(3) obtains a business license to do business as a transporter under AS 43.70.030.

(b) No person may engage in the activity of transporting by air without an air commerce certificate as required by AS 02.05.040. (§ 2 ch 106 SLA 1976)

Editor's note. — Section 1, ch. 106, SLA 1976, provides: "**Purpose.** It is the purpose of this Act to protect the safety of the citizens of the state and better manage and protect its resources by licensing persons who transport hunters for hire so that reasonable standards and guidelines will be met and activities affecting the state's game resources will be more accurately monitored and assessed."

Section 10, ch. 106, SLA 1976, provides: "Nothing in this Act gives a person licensed as a transporter a right as an air carrier which he does not otherwise hold under law."

Sec. 08.54.144. Restriction to transportation. (a) A licensed transporter may transport persons whose primary purpose is the taking of big game or the associated removing of big game meat and parts of big game, with the intent of receiving monetary or material remuneration for the transportation.

(b) Air carriers who transport persons between airports, landing strips or other landing areas officially listed in the United States government Flight Information Publication, Alaska Supplement, as revised, or the United States government Sectional Aeronautical Charts, as revised, are exempted from the license requirements for transporters under this chapter but shall comply with the reporting provisions as prescribed in AS 02.05.170(f).

(c) Master guides, registered guides, class A assistant guides or assistant guides are exempted from the license requirements for transporters under this chapter but shall comply with the reporting provisions as prescribed in AS 02.05.170(f). (§ 2 ch 106 SLA 1976)

Editor's note. — Section 10, ch. 106, SLA 1976, provides: "Nothing in this Act gives a person licensed as a transporter a right as an air carrier which he does not otherwise hold under law."

Sec. 08.54.146. Transporter report. A transporter shall maintain a record of (1) the names and addresses of all persons he transports; (2) the type of game transported; (3) an estimate of the quantity of meat

transported; (4) the date of transporting; and (5) if known, the locality where the game was taken. The report shall be submitted to the Department of Fish and Game within 90 days after transporting the game. After receiving a report required under this section, the Department of Fish and Game shall send a copy of it to the Department of Public Safety. (§ 2 ch 106 SLA 1976; am § 4 ch 133 SLA 1976)

Revisor's note (1976). — AS 08.54.146 was added by § 2, ch. 106, SLA 1976, and amended by § 4, ch. 133, SLA 1976. Since the two acts appear to be inconsistent, and ch. 106 is superseded by ch. 133, only the later enactment has been given effect here.

Effect of amendment. — Section 4, ch. 133, SLA 1976, substituted "ninety days" for "thirty days" in the second sentence.

Editor's note. — Section 10, ch. 106, SLA 1976, provides: "Nothing in this Act gives a person licensed as a transporter a right as an air carrier which he does not otherwise hold under law."

Sec. 08.54.150. Responsibility of registered or master guide for violations. A registered or master guide contracting for a hunt is equally responsible under § 200 of this chapter for a violation of a federal or state sport fish, game or guide statute or regulation committed by a class-A assistant guide or assistant guide while in the course of his employment. (§ 1 ch 17 SLA 1973)

Sec. 08.54.170. License fees. (a) License fees for engaging in the profession of guiding are:

(1) master guide license, annual	$75
(2) registered guide license, annual	75
(3) class-A assistant guide, annual	15
(4) assistant guide license, annual	10

(b) The license fee for a master guide, registered guide, class-A assistant guide or assistant guide license is in addition to the fee required for a hunting or fishing license.

(c) The license fee for a transporter is $10. (§ 1 ch 17 SLA 1973; am § 3 ch 106 SLA 1976)

Effect of amendment. — The 1976 amendment added subsection (c).

Editor's note. — Section 10, ch. 106, SLA 1976, provides: "Nothing in this Act gives a person licensed as a transporter a right as an air carrier which he does not otherwise hold under law."

Sec. 08.54.180. Examination fee. An applicant for a guide examination shall pay a fee of $25. (§ 1 ch 17 SLA 1973)

Sec. 08.54.185. Additional fees. In addition to the license and examination fees provided for under this chapter, master guides and registered guides are subject to fees imposed under AS 16.05.340(e). (§ 4 ch 268 SLA 1976)

Legislative committee report. — For report on ch. 268, SLA 1976 (FCCS HCS CSSSSB 335), see 1976 House Journal, p. 910.

Sec. 08.54.190. Expiration and renewal. (a) A master guide, registered guide, class-A assistant guide, assistant guide or transporter license expires on December 31, following issuance.

(b) No license may be issued to a class-A assistant guide or assistant guide who has failed to renew his license for two consecutive years unless he again meets the qualifications for initial issuance of the license.

(c) A master or registered guide who fails to renew a license is not required to requalify under § 100(2) or § 110(8) of this chapter, respectively. (§ 1 ch 17 SLA 1973; am § 12 ch 127 SLA 1974; am § 10 ch 106 SLA 1976)

Effect of amendments. — The 1974 amendment substituted "class-A assistant guide" for "class-A guide" in subsection (b).

The 1976 amendment substituted "assistant guide or transporter license" for "or assistant guide license" in subsection (a) and added "following issuance" to the end of that subsection.

Editor's note. — Section 10, ch. 106, SLA 1976, provides: "Nothing in this Act gives a person licensed as a transporter a right as an air carrier which he does not otherwise hold under law."

Legislative committee report. — For report on ch. 127, SLA 1974 (SCSHB 817 am S), see 1974 House Journal p. 657.

Sec. 08.54.200. Grounds for disciplining a licensee. (a) The board shall hold a hearing to determine if disciplinary action is necessary if

(1) complaints concerning the licensee have been filed with the board from three or more clients of separate parties; or

(2) a licensee has been charged with a violation of federal or state sport fish, game or guide statutes or regulations; or

(3) a licensee has been convicted of a violation of federal or state sport fish, game or guide statute or regulation.

(b) After a hearing, the board may revoke, suspend, or deny renewal of a license if the board finds that the licensee

(1) engaged in unethical activity, unsafe activity, or activity which adversely affects the natural resources of the state when such activity is unrelated to the legal and legitimate purposes of the contract hunt; or

(2) violated a provision of a federal or state sport fish, game or guide statute or regulation.

(c) After a hearing, the board shall revoke a license if the board finds that the licensee

(1) does not meet the qualifications specified by statute or regulation for the class of license held;

(2) is incompetent as a master guide, registered guide, class-A assistant guide, or assistant guide;

(3) has been convicted of two violations of federal or state sport fish, game or guide statutes or regulations.

(d) No person who is disciplined under this section may engage in any guiding or transporting activity during the period of license revocation

or disciplinary action. No person licensed under this chapter may hire or work for a guide whose license is suspended or revoked under this section.

(e) If the board revokes a license i shall notify the Department of Revenue, and the person whose license has been revoked shall return the license to the Department of Commerce and Economic Development. (§ 1 ch 17 SLA 1973; am § 2 ch 43 SLA 1975; am § 5 ch 106 SLA 1976; am § 47 ch 218 SLA 1976)

Effect of amendments. — The 1975 amendment substituted "Department of Commerce" for "Department of Fish and Game" in subsection (e).

The first 1976 amendment inserted "or transporting" in subsection (d).

The second 1976 amendment substituted "Department of Commerce and Economic Development" for "Department of Commerce" at the end of subsection (e).

Editor's note. — Section 10, ch. 106, SLA 1976, provides: "Nothing in this Act gives a person licensed as a transporter a right as an air carrier which he does not otherwise hold under law."

Sec. 08.54.210. Unlawful acts. (a) It is unlawful for

(1) a master guide, registered guide, class-A assistant guide, assistant guide or transporter to fail to timely report to the Department of Public Safety, division of fish and wildlife protection, and in no event later than 30 days, violations by a client of a state fish, game or guiding statute or regulation;

(2) a master guide, registered guide, class-A assistant guide, assistant guide or transporter to aid the commission of a violation of this chapter or of AS 16.05 or a regulation promulgated under either chapter, or permit the commission of a violation in his sight without attempting to prevent it, short of using force, and without reporting it;

(3) a person to guide or transport as defined in this chapter without being licensed under this chapter and without having the license in his actual possession; however, for purposes of transporting by air, in the case of a corporation, company, partnership or other business entity, the license may remain at the principal place of business of the business entity;

(4) a person to advertise as or represent himself to be a licensed master guide, registered guide, class-A assistant guide, assistant guide or transporter without being currently licensed, or to falsely advertise services;

(5) a person to guide as defined in this chapter without having a current valid hunting and fishing license in his possession.

(6) a master or registered guide to employ or have under his supervision more than three assistant guides at the same time.

(7) a person to guide as defined in this chapter without paying a fee as prescribed in AS 16.05.340(e).

(b) A person who violates (a)(1) — (6) of this section is guilty of a misdemeanor and upon conviction is punishable by a fine of not more than $1,000 or by imprisonment for not more than one year, or by both,

and may have his license revoked for a period up to five years. However, a person who engages in guiding or transporting activity during the period his license is suspended or revoked under this chapter is guilty of a felony punishable, upon conviction, by a fine of not more than $5,000 and by imprisonment for not less than one year nor more than three years. In addition to punishment for a felony, all guns, fishing tackle, boats, aircraft, automobiles or other vehicles, camping gear and other equipment and paraphernalia used in, or in aid of, guiding or transporting activity engaged in during the period of suspension or revocation shall be confiscated by persons authorized to enforce this chapter. A person who violates (a)(7) of this section, upon conviction, is subject to the same license revocation provision as for a violation of (a)(1) — (6) of this section and, in addition, is punishable by a fine of not more than $5,000, or by imprisonment for not more than one year, or by both. (§ 1 ch 17 SLA 1973; am §§ 3, 4 ch 43 SLA 1975; am § 6 ch 106 SLA 1976; am § 3 ch 133 SLA 1976; am §§ 5, 6 ch 268 SLA 1976)

Effect of amendments. — The 1975 amendment substituted "Department of Public Safety, division of fish and wildlife protection" for "Department of Fish and Game" in subsection (a)(1) and, in subsection (b), deleted "outfitting or" preceding "guiding activity," substituted "his license is suspended or revoked under" for "of disciplinary action under § 200(e) of," and inserted "upon conviction" in the second sentence, deleted "under § 200(e) of this chapter" following "for a felony," and substituted "guiding activity engaged in during the period of suspension or revocation" for "a violation of § 200(e) of this chapter" in the third sentence.

The first 1976 amendment, in subsection (a), substituted "assistant guide or transporter" for "or assistant guide" in paragraphs (1), (2) and (4), deleted "fish and game" following "division of fish and wildlife protection" in paragraph (1), inserted "or transport" near the beginning of paragraph (3). In subsection (b) the amendment inserted "by" preceding "imprisonment" in the first sentence, and inserted "or transporting" in the second and third sentences.

The second 1976 amendment added paragraph (6) of subsection (a).

The third 1976 amendment added paragraph (7) of subsection (a), and in subsection (b), inserted "(a)(1) — (6) of" in the first sentence and added the fourth sentence.

While none of the 1976 amendments gave effect to the others, all have been given effect in this section as it is set out in this Supplement.

Editor's note. — Section 10, ch 106, SLA 1976, provides: "Nothing in this Act gives a person licensed as a transporter a right as an air carrier which he does not otherwise hold under law."

Legislative committee report. — For report on ch. 268, SLA 1976 (FCCS HCS CSSSSB 335), see 1976 House Journal, p. 910.

Sec. 08.54.220. Injunction against unlawful action. When in the judgment of the board a person or corporation or other entity has engaged in an act in violation of § 130 and §§ 200 — 210 of this chapter or the regulations promulgated under them, the board may apply to the appropriate court for an order enjoining the act. Upon a showing by the board that the person is engaging in the act, the court shall grant injunctive relief or other appropriate order without bond. (§ 1 ch 17 SLA 1973; am § 5 ch 43 SLA 1975)

Effect of amendment. — The 1975 amendment substituted "§ 130 and §§ 200 — 210" for "§§ 100 — 200" and "them" for "§ 50 of this chapter" in the first sentence.

Article 3. General Provisions.

Section
240. Definitions

Sec. 08.54.240. Definitions. In this chapter

(1) "board" means the Guide Licensing and Control Board;

(2) "guide", "guides" or "guiding" means assisting another person to take game with the intent of receiving monetary or material remuneration for the services, by accompanying and directing that person personally or through a licensed assistant guide for the duration of a hunt, and not solely for the purpose of providing transportation services;

(3) "resident" means a person who maintains a place of residence within the state; has not claimed residency in another state for the immediately preceding 12 months; shows by all attending circumstances that his intent is to make this state his permanent residence;

(4) "unethical activity" means

(A) deception in any degree involving prospective or actual clients either before, during, or following contract hunts;

(B) misrepresentation either through private communication or public advertising of the nature, type, duration, cost, or other conditions of contract hunts.

(C) making a guaranty that a species or certain number of species of game will be taken on a contract hunt.

(5) "transporting" or the "activity of transporting" means conveying a person by any lawful means to an area for remuneration or material benefit in excess of normal operating costs, when the primary purpose of the person being conveyed is the taking of big game and the associated removing of big game meat and parts of big game after big game has been taken; big game as used in this paragraph means game which, if taken by a nonresident, would require a big game tag. (§ 1 ch 17 SLA 1973; am §§ 7, 8 ch 106 SLA 1976; am § 2 ch 133 SLA 1976)

Effect of amendments. The first 1976 amendment deleted "accompanying, guiding, or" preceding "assisting another person" near the beginning of paragraph (2), added the language beginning "by accompanying and directing that person" to the end of that paragraph, and added paragraph (5).

The second 1976 amendment added paragraph (4)(C).

Editor's note. — Section 10, ch. 106, SLA 1976, provides: "Nothing in this Act gives a person licensed as a transporter a right as an air carrier which he does not otherwise hold under law."

LEGISLATIVE AFFAIRS AGENCY

MEMORANDUM March 26, 1980

SUBJECT: Nonresident alien hunters
CSSSHB 836

TO: House Resources Committee
ATTN: Mary Levan, AA

FROM: Kenneth E. Vassar
Legislative Counsel

Enclosed is the committee substitute you requested for sponsor substitute for House Bill 836. The fees for licenses established in this bill for nonresident aliens are generally higher than the fees for the same licenses for residents, and the fee for one type of license (hunting and trapping) is 20 times the fee for the same license for residents. I realize you are in a rush to receive this bill, so I have not conducted any research into the equal protection questions these fees raise; I believe that the United States Supreme Court has upheld state fees for fish and game licenses for nonresidents which were as much as seven times the fee for the same licenses for residents and has ruled unconstitutional fees for nonresident licenses which were 100 times the fee for resident licenses. Whether the court would uphold a nonresident fee which is 20 times the resident fee, I cannot say with certainty.

Also, I am confused by the special visitor's sport fishing license fee established in the bill. When would a nonresident alien be considered a visitor and thus eligible for this special fee rather than the general nonresident alien sport fishing fee established in the bill? I realize this simply parallels the special visitor's license already included in AS 16.05.340(a)(5), but I am not sure I understand that provision either.

SSHB 836

Bill,

Here's the dope you wanted from the morgue on alien hunters.

But there's more.

A fellow here in town by the name of Bruno Zedler is a wealth of information on the foreign hunter and guide racket. He is ~~xxxxxxxxxx~~ a naturalized U.S. citizan and Alaskan from Germany and is familiar with the local guides who cheat by putting out too many hunters in too many spike camps and the germans who are booking hunts in germany and bringing their clients over here, hunting with them and going back.

He also knows of booking agents in Europe which arrange hunts here for guides who subsequently hire europeans to do the guiding. One guy, by the name of Hans, has hunted here for about three years without a guiding license. He worked, as did the Obwaller fellow mentioned in the articles, for one of the Brunners.

If you need more, call me. Also Bill Ballinger with the guide board is continueing the state probe into the case against Mort Mason, the fellow who hired Obwaller from Germany.

Foreign Guides Work Openly

By BILL BLESSINGTON
Times Outdoor Editor

A lack of game law enforcement and loose restrictions on alien hunters have allowed a full-blown international ring of foreign guides and clients to operate openly in Alaska without licenses or regard for wanton waste laws. NOV 1 1979

"I worked for one guide who had eight spike camps set up with individual guides," one German-speaking assistant guide told The Anchorage Times this week.

"And we had two other Germans guiding for us the whole season," he added.

The man, who asked that his name not be used, said he personally saw five moose and two caribou wasted by hunters, who left them in the field, or by the guide, who oversaw their operation and let the meat spoil next to a runway at their base camp. The nameless assistant guide is a 10-year resident of Alaska and was legally licensed to guide hunters this year under the supervision of a registered guide.

The incidents took place on the far side of the Alaska Range, between Lake Clark and Rainy Pass.

And from the same area came reports of at least two "freelance" German-speaking guides who packed their hunters in Europe and came over with them, departing Alaska at the end of the hunting season without benefit of licenses either to guide or do business.

Confirmation about the foreign guiding ring came from two other sources, one an Austrian professional hunter who guided in Alaska as an unlicensed assistant guide this year, and from a local hunter who gave three German-speaking men a ride in his plane.

The Austrian, Otto Obwaller of Fieberbrunn in the Tirol, was involved in apparent wanton waste of a moose which was left untouched after a German client cut the head off for the antlers.

Obwaller said he knew of three other Germans working for Alaskan guides this year. In addition, he admitted that this season was his third year working in Alaska as a pirate guide for two Alaskan registered guides. State law prohibits non-residents from guiding.

Local hunter Bill Hudak reported two weeks ago that he encountered three German-speaking men along a river just west of the Alaska Range in September. Two of the men were being guided by the third who told Hudak that their hunt had been arranged in Germany.

Two years ago, Obwaller said, he began working for a well-known Anchorage guide who paid him $60 a day and gave him a bonus for each animal his hunters bagged. Then, according to Obwaller's story, the guide had one other German professional hunter. Last year, said Obwaller, the guide employed an additional German as a guide for a total of three. "If somebody from the Fish and Game showed up," he said, "(the guide) told us to say that we were just packers."

Obwaller claimed he had a falling out with the guide over pay and didn't plan to return to Alaska this year. One of his former German speaking colleagues referred him to another Anchorage guide for this past season and Obwaller said he was paid $80 per day with a $200 bonus per animal.

German-speaking guides are in such high demand that a few local registered guides seem willing to take the risks connected with hiring them.

"A lot of the Germans who come over here to hunt are older people," said the anonymous assistant guide. "Many of them are in their 50s, 60s and 70s and they don't speak any English. They specifically ask for German-speaking guides."

"This registered guide charged between $4,000 and $6,000 per hunt," he continued. "I know that fellow had in excess of 20, maybe 25 hunters go through his camps in five weeks."

"And the state only gets between $100 and $250 per hunt for tags and fees. It's no wonder the state ain't got no money to go and enforce the laws."

"I was in camp for 47 days," he said, "and we never saw a protection officer."

Wanton waste is common, according to the assistant guide, because the foreign hunters don't know what to expect in Alaska and aren't familiar with the size of moose and caribou.

"I was in camp one day and two Germans hiked in with caribou racks on their backs. In the course of their conversation, I learned that they had no intention of salvaging the meat because of the distance."

"The hunters don't seem to have any judgment for the vastness of the area. They are in good shape because many of them come from Austria or Germany where they are very active and hunt in the mountains to stay in shape so they hunt a full eight hours away from camp in all directions. Then when they down a moose or something, there's no way they can salvage the meat be-

John Vania, regional game supervisor for the Alaska Department of Fish and Game, says the alien hunter problem has surfaced rapidly in the past year.

"Five or 10 years ago," he said, "the European hunter was the best hunter in the field. They took every scrap of meat out and they worked like heck for their game. They were really good hunters. NOV 1 1979

"Now, they can come over here cheap and instead of getting a lot more of the good hunters like we used to, we're getting a lot of slobs."

Vania has been requested by one legislator to prepare a bill that would put tighter controls on alien and non-resident hunters. NOV 1 1979

State officials are familiar with the alien guiding operations as well as international booking operations that bring large numbers of foreign hunters into the state seeking moose, caribou and black bear.

"There's one Swede who brings in a bunch of hunters every year," said game biologist Ray Cramer. "Last year he brought in 40 and I'm sure he brought in the same number this year. That's all he does — look for places to hunt and broker the ticket sales and collect the money from other Swedes. He goes all over the world."

Cramer said the booking agent was tough with his hunters about wanton waste and observing local laws. "He told me he went in to pick up two hunters who just had the moose racks and he gave them 24 hours to go back and get the meat or they would have to find their own way back to Sweden."

"They got the meat and took it to a village so it wasn't wasted," Cramer continued. "We put one protection officer on his operation for a season and he couldn't find any waste at all."

Vania says the increasing numbers of non-resident and alien hunters will eventually create friction between themselves and Alaskans seeking big game on smaller and smaller areas.

Are We Giving It Away?

By Bill Blessington
Times Outdoor Editor

OCT 1 1 1979

Only a week or so ago, this writer had the unfortunate experience of seeing the meat from a great Alaskan animal wasted.

A big moose — a trophy bull in the prime of his life — shot and left to rot. Only the antlers taken out of the woods, eventually stolen.

Its not the first time I've seen such waste but that makes it no easier.

Who did it? I can say and probably will have to under oath.

Who's ultimatly responsible? I don't know. The parties who pulled the trigger and cut the head off have left the country. When the moose was shot, it was done with the hunter's full knowledge of the laws about wanton waste. What can you do when you remind someone of the law and all they do is shrug? The licensed guide involved did what he could to arrange salvage of the meat as soon as he arrived on the scene.

It would be dead wrong to portray Alaska's hunters and guides as lawbreakers. The vast majority of them respect the law and go out of their way to make sure that game is taken fairly.

But a single incident such as the one I saw, despicable as it was, should not be taken out of context. The context, however, bothers me.

It's simply too easy to break the game laws in Alaska and get away with it. A very thin brown line of less than 70 men and women is the only buffer between the rip off artists or those who don't care and the game which most of us love.

I recently spent a couple of days at Lake Hood, watching planeloads of hunters return to town. The obvious non-residents, dressed in green wool with jaunty caps and tweeds, carried their caribou horns, moose racks and bags to waiting taxis.

But then something struck me as odd. Only baggage came off the planes. I failed to see any meat. It wasn't one plane, it was one after the other, as long as the pass was open.

It is possible that the meat was given to natives for their winter supply. It's also possible that a lot of it was eaten in camp by a crew of hungry hunters.

But it's also possible that Alaska is selling its game too cheaply. A policy which not only insults Alaskans and sportsmen but threatens the herds themselves.

Jack Carter bags 3 ducks

OCT 1 3 1979

ANCHORAGE NEWS

Jack Carter bagged three ducks during a full day of shooting Friday on the Knik River, one of his hunting partners reported.

The President's son — visiting the state for the first time ever — "hit just about every bird he shot at" during a generally slow day of hunting, said Brad Snodgrass of Palmer.

"It was a fair shoot," Snodgrass said. "We could have done a lot better...There were a lot of birds in the area but not many hunters out there to move them around."

Two Secret Service agents joined the 31-year-old Carter and two others for the hunt at a blind owned by Snodgrass. Before going out, Carter purchased the required $60 nonresident hunting license and a $7.50 duck stamp.

In all, Snodgrass said, the six-member party brought down "seven or eight" ducks.

Carter told The Daily News prior to the hunt that he hadn't done much duck hunting in his native state. "Georgia isn't on any of the flyways," he said.

The co-owner of a grain elevator in Calhoun, Jimmy Carter accompanied his wife, Judy, to Anchorage for her appearance as a keynote speaker before the Alaska Association of Community Education. As director of career education for the Palmer School District, Sr. Grass helped to host the Carters during their visit.

The Carters also delivered a round of speeches at area schools and interviews. They were scheduled to return home today.

Before leaving town, however, Carter was greeted by a blast from the Alaska Waterfowl Association, which issued a statement through secretary Dick White of Anchorage criticizing the duck hunt as being "in quite poor taste."

White said the association's board of directors were "quite incensed about the son of the President who has locked up our lands...coming up here to go duck hunting. It's the epitome of the ancient feudal landlord system."

President Carter's declaration of 17 national monuments in Alaska last December banned sport hunting on some 56 million acres of land, but allowed continued subsistence hunting. The Knik River area where his son hunted Friday was not affected by the presidential order.

Foreigners Flock To Alaska To

By BILL BLESSINGTON
Times Outdoor Editor

"Zie elk!"

"Zie elk!" OCT 1 1 1979

Less than 100 yards ahead of me was a fine specimen of Alaskan bull moose and a guide. Behind me, was an excited German hunter and his wife who had just spotted the animal in the gathering dusk.

The moose watched us, obviously nervous about the intrusion into his rutting ground. His antlers stood out like twin beacons above his head, their whitened tips and palms in contrast with the rain-soaked brush on a slight rise behind him.

The German, Conrad Wineber, slipped his pack to the ground and after being told to shoot by the guide, Austrian Otto Obwaller, moved ahead of us.

Wineber made no attempt to use cover as I stood frozen. He pushed ahead five yards and ran a round into the chamber of his 375 H & H.

"Shoot, shoot," said Obwaller.

The moose climbed up on top of a ten — foot bank in a single easy movement. He stood there glaring at us.

With an ear-splitting roar, the heavy Saur spoke. I listened for the "thwock" of the bullet hitting its' target. Another shot, a third shot, and still no sign that the moose had been hit.

The bull looked off into the brush and took a few steps, disappearing neatly in a scrub of alders and black spruce.

"I don't think he hit it, I didn't hear anything," I said to Obwaller.

The German moved forward, his excitement obvious.

When the guide and I reached the spot where the moose had been standing, there was no sign of blood or hair which would have indicated a hit. I briefly relaxed, thinking that my pack wouldn't get any heavier over the next four miles to a lake where we were scheduled to be picked up.

Off to my left, a small bull looked on, probably wondering what all this new noise had to do with the mating season.

Then another shot rang out forty yards away through the brush. A second shot came just a minute afterward.

"Conrad, zu nabst?" shouted Wineber's wife Erica.

"Ja, ja!" came the muffled reply.

The moose had fallen after being cleanly hit and travelling about 50 yards. The huge animal died quietly from the heart/lung shots.

The moose was not a gantic trophy as far as moose go, but it was a trophy nonetheless for Wineber, a chemist with a German industrial combine.

The brow tines were almost perfectly matched with five well-shaped points on each side. The palms of the antlers stretched 61 inches, both sides almost perfectly symmetrical.

After a photo session, Obwaller began preparing the trophy by severing the moose's head at the atlas joint.

The skinning of the head was to be left for the hunter. An eventual wall mount was planned in the European fashion where the entire skull is left attached to the antlers and mounted on a plaque.

The young bull was still circling us slowly, his curiousity obviously getting the better of his natural sense of wariness. At one point, he stood calmly thirty yards away and watched for several minutes without moving.

Without a sound, he finally moved off. The rutting ground his if he could defend it.

Moose hunting in Alaska has many scenarios. They range from unfortunate ones like this where the hunters did not salvage the meat to those involving horses, bulls standing next to the highway, riverboats and airboats, tent camps on riverbanks and airplanes.

Residents and non-residents alike hunted the woodland giants this year, most of them legally and a very few illegally.

But it is clear that several factors are compounding to increase the pressure drastically on Alaska's moose. Some of them have to do with laws, some of them with administrative decisions both here and in the Iron Curtain countries, some of them with international currency, some with terrorism, some with simple greed.

More and more areas are being closed to hunting in Alaska.

This year sportsmen were shut out of 41 million acres of the state where national monuments were created and placed under the control of the park service.

At the time of the action, President Carter indicated the measure would be temporary. But that term has become a lawyer's term. The net effect of the closure is permanent, at least as far as the Alaska hunter is concerned. And when hunting is closed in one area and left open in others, hunting pressure builds in the areas left open.

Although the D2 bills in Congress set up park preserves which may be open to hunting, a ringer is present in the word "may". If the Wrangells ever reopen to legal hunting, it will be only on a permit basis and, thanks to court rulings, Alaskans will likely get no preference for having their needs for hunting taken care of first.

More than likely, national permit drawings might be held for the white

OCT 1 1 1979

sheep, caribou and bears of the Wrangells. And that means tens of thousands of applications from anti-hunting and anti-gun groups who feel they can "save the animals" by foiling legitimate hunters.

The other major increase in hunting pressure in Alaska this year comes from the international scene.

Alaska is cheap and Alaska is a fad.

Hunting in Europe, according to guides, hunters and tourism officials, is expensive, if it is available at all.

"We just don't have the places to hunt that you do," explained Neils Tuxen of Denmark.

As a result, European hunters are used to paying top dollar for hunting and travelling long distances. Good hunting can still be found in some parts of Germany, Austria and the Scandanavian countries. But the best European hunting is behind the Iron Curtain, a fact which has not escaped the attention of tax collectors.

OCT 1 1 1979

"A good deer in Rumania costs about $10,000," explained one hunter.

"They have a very modest fee for a license and a guide but they charge you so many dollars per gram of horn."

"You literally go out on a hunt and when the guide points out the deer, you count dollars to make sure you have enough for the animal."

Animals taken under thge Eastern European system are "sold" to the hunters on the basis of a complicated formula involving weight and size of trophies. The bigger the buck, the bigger the bill.

Hunters, however, don't touch the meat, which is sold in butcher shops as a delicacy. For them, Alaskan wanton waste laws and the packing of meat are something new.

Another hunter said a bear hunt in Russia or Bulgaria could easily run as high as $12,000 when the costs of transportation, guides, lodging, trophy fees, licenses and duties were added up.

In Alaska, a non-resident hunter pays $2[illegible] for a tag which would allow him to take any big game animal in the state with the exception of musk ox.

During the past year, a constant downward valuation of the dollar in relation to European currencies has meant lower and lower air fares from Europe to Alaska. Additional savings are also realized by hunters who book two or three week hunts and travel on discount fares.

The net result, according to Bernd Guetschow, the German consul in Alaska, is "that hunting here in Alaska for Germans is cheaper than hunting 300 miles away in Eastern Europe."

"The cost of a guided hunt here is about $5,000," said Guetschow, "which compares with $7,000 or $8,000 there."

In addition to the financial attractiveness of the Alaskan hunt, there has been a closure of most of Africa to legal hunting. The great game herds of Kenya, Mozambique, Gabon and other third world nations have been decimated by poaching and fueled by escalating Asian prices for hides and horns.

The African countries where hunting is still allowed include South Africa and Rhodesia. In Rhodesia, armed guards with automatic rifles accompany hunters on jaunts for plains game. Many parts of South Africa are similarly stressed because of military priorities and terse border situations.

The Middle Eastern countries of Iran and Iraq have closed to sportsmen because of revolution and a growing distrust of foreigners.

Alaska, for now, has some good hunting left. How long the hunting will stay good is a matter of speculation but some signs are evident that the pressure is being felt.

OCT 1 1 1979

"It is exotic," said Guetschow and it has a great appeal to Europeans looking for a new place to hunt.

Carter shot three ducks, a mallard, a pintail and a scaup, during the day's hunt on the Knik River, Snodgrass said. The two Secret Service men didn't bag any game.

Carter came to Alaska with his wife, Judy, who was the keynote speaker before a community education conference in Anchorage. The couple left the state Saturday.

More Game Waste Reported

OCT 1 8 1979

"They just took the four legs off it and the cape and horns and the head."

Another incident of wanton waste of a moose by European hunters was reported in that fashion this week by Bill Hudok of Anchorage.

Hudok said the incident took place last month in the Swift River Valley, on the western slope of the Alaska Range.

Hudok and a friend were flying in Hudok's plane when they spotted three men in the valley. Hudok said he landed and the hunters offered to give him one of the moose's hindquarters for a ride down to a cabin they were using on the river.

"The fellow who was acting as a guide was a German," said Hudok. "He spoke real good English."

"They're just raping the country," he added.

"The rest of the carcass was just left there," Hudok said. "It was a good sized animal, a real trophy ..."

"I was under the impression that they were working with a guide, since they had the use of the cabin," he said. "One of the Germans was a game warden or field policeman back home and he gave me a little medal."

"The hunter who shot the moose said he probably spent 45,000 marks for the trip to get his trophy. He'd been here before but hadn't gotten a trophy."

Details of the incident have been reported to the Department of Public Safety. The state is continuing another investigation into the reported wanton waste of a bull moose by other European hunters in the Stony River area. That incident was reported in The Anchorage Times last week.

Under state law, wanton waste of game meat is a misdemeanor; so is guiding hunters without a license or operating as a guide inside another guide's exclusive guiding area.

Hunt Violations Net $100 Fines

Judge John Mason, in Anchorage District Court, fined two German hunters a total of $100 each for killing two moose over their limit and wanton waste.

According to Kenneth Rourke of Anchorage, who reported the incident to Fish and Wildlife Protection officers, the two hunters shot four moose some three miles off the Petersville Road in a swamp. Rourke and a department spokesman said the Germans had only two moose tags when the four bulls were killed.

"All they got was a $100 fine," said Rourke, who found one of the carcasses which had been left to spoil.

"The moose was not skinned and was left in the water for about two days when I found it," said Rourke.

The hunters, Hans-Peter Filtgen and Nanfred Ceraficki, were arrested as a result of Rourke's complaint. OCT 1 8 1979

In the Oct. 8 decision, Filtgen received a $500 suspended fine for killing an overlimit of moose and another $500 fine for wanton waste. All but $100 of the wanton waste fine was suspended by Judge Mason.

Ceraficki was fined $100 for killing the extra moose when $400 of a $500 fine was suspended.

A department spokesman said the case was complicated because the Germans apparently gave the meat from the kills to some other hunters they encountered in the field. The other hunters, according to Rourke, had no way of salvaging the meat.

"I think the person who pulls the trigger should be responsible for the meat," said Rourke.

Two of the bulls shot by the Germans were mulligans, or young bulls; a third had a rack of about 50 inches. According to Game Board member Daryl Farmen, who owns O & C Expediters, the larger rack was returned to the hunters by the judge the day after it was seized at his warehouse by enforcement agents.

Farmen said he has favored the concept of forcing non-resident aliens to employ registered guides for Alaskan hunts.

"At least it would make somebody responsible for their actions," he said, "and it would cut down on the numbers of them."

A guide's only restriction on non-residents would require an act of the state legislature.

Non-resident hunters are now required to have registered guides only when they hunt brown or grizzly bears and Dall sheep.

Rep. Vern Hurlbert, D-Sleetmute, said he expects further action in the legislature next year on requiring non-residents to have guides.

A tougher meat salvage law with the guide requirements for non-resident moose and caribou hunts in units 22, 23 and 19 A and C was passed by the House last session and is presently in Senate committee, according to Hurlbert.

"A moose in my opinion," he said, "is to hunt for subsistence, for meat. The taking of the horns should be incidental. It galls me to see our resources shattered like that," said Hurlbert.

Missing Hunter Found Dead

A 51-year-old German hunter was found dead Tuesday near the Kichatna River north of Rainy Pass.

Alaska State Troopers said the man, whose name has not been released, had been missing since Sunday morning. His body was found by a military helicopter at 4:30 p.m. Tuesday, troopers said.

OCT 4 1978

Cause of death was unknown this morning.

The victim reportedly walked away from his two-man camp at 6 a.m. Sunday and failed to return. His disappearance was reported to the Rescue Coordination Center Monday by Ketchum Air Service, troopers said.

A combined air-ground search was conducted by troopers, the rescue center and volunteers from the Alaska Rescue Group.

The German consulate in Seattle has been attempting to notify the victim's relatives in West Germany, troopers said.

Hunt Victim Identified; Exposure Caused Death

Alaska State Troopers have identified a German hunter found dead Tuesday north of Rainy Pass.

The body of Martin Brackelsberg, 40, was found by a rescue helicopter dispatched to the area when the man was reported missing from a hunting camp, troopers said.

OCT 5 1978

Autopsy results indicate Brackelsberg died of exposure, troopers said.

The victim was a resident of Darmstadt, West Germany.

Brackelsberg had been missing since 6 a.m. Sunday when he left his two-man camp near the Kichatna River, troopers said.

OCT 5 1978

Guided Alaskan Hunts Prove More Successful

"Hunt in Alaska!" OCT 1 1 1979

Big game hunters looking for adventure and a trophy in a foreign country have been flocking to Alaska in increasing numbers for the past three years.

Most of them take home at least one trophy, either a moose or caribou. A smaller number take home black or brown bears.

The marketing of hunting and game in Alaska is now a bigger business than ever before involving international booking agencies, travel agencies and advertising.

The big game guides, in some instances, support hundreds of thousands of dollars worth of loans and mortgages, airplanes, lodges, all terrain vehicles and camps.

There are three major ways in which Alaskans are cashing in on the growing number of non-resident hunters, the largest now being the air taxi operations which transport hunters to and from the field.

Probably the second largest business is the registered guide business where a hunter books a guide for an escorted hunt for a particular species. Guides are required for non-resident sheep and brown or grizzly bear hunters.

The third kind of business available to Alaskans is that of the game and hunter transporter. Anyone with a riverboat, weasel or airplane can, for a $10 fee, be licensed as a transporter and take hunters and their gear to and from hunting places.

For the Alaskan or out of state hunter on a budget, some good hunting experiences can be obtained with drop off hunts provided by air taxi operators and transporters.

Under this system, people are flown out for a fee ranging from $300 to $1,500 or more and dropped off in a likely looking spot for a specified period of time. Food, tents, camping gear and other services are available from most of the air taxi operators at additional cost.

Registered guides provide a more complete service in most instances by having an employee stay with the hunter during the hunts. The costs run from several thousand dollars for a guided moose hunt to over $6,000 for some guided brown bear hunts. It's not unusual for clients of registered guides to spend $10,000 or more for a hunt in Alaska, including air transport, new gear, the guide's fees and tips.

Transporters charge varying rates, depending upon their equipment, location and services. Their businesses usually involve aircraft, although more have sprung up in recent years with riverboats.

The problem for non-resident hunters is that some have purchased a pig in a poke because of loose use of the words "guide" and "outfitter".

What might be advertised as a guide service may in fact be a simple drop off hunt.

And a guide who supposedly cannot operate within another guide's hunting area can do so with impunity under the guise of a "transporter".

"You're almost a fool to get a guide's license anymore," said one guide.

"Its just too much bother to go through the five-or eight-year process, the examinations and the oral tests and then find out that there are no more exclusive guide areas left open."

Its no secret that guided hunters have a better success rate than resident Alaskans when it comes to bagging game.

In 1976, for example, Department of Fish and Game statistics from harvest reports indicate that 4,067 moose were killed by hunters statewide. Of that total, 636 were taken by non-residents who had a 52.7 percent success rate. The state's 15,000-odd hunters who reported that they hunted moose in 1976 had a success ratio of 21.3 percent, although residents took the vast majority of the total.

In 1977, an estimated 4,500 moose were legally taken. Non residents took roughly 12 percent of the total but their success rate was about 60 percent.

Last year, 5,171 moose were harvested legally and reported to the state. Non-residents again took a total of about 12 percent of the kill but with a 57 percent success rate.

For sheep, where a non-resident is required to have a guide, the diferenc in success rates is more obvious.

In 1976, non-residents had a success rate of 70 percent, residents 28 percent.

In 1977, non-residents had a success rate of 62 percent, residents 26 percent.

In 1978, non-residents had a success rate of 77 percent, residents 33 percent.

For brown and grizzly bears, 823 were taken in Alaska during the 1977-78 regulatory year.

This past spring, 337 of the great bears were taken, 62 percent of them by non-resident hunters with guides.

SUCH A TERRIBLE WASTE

OCT 1 1 1979

Otto Obwaller cuts the head off a moose shot just west of Merrill Pass. The moose was taken by a German hunter who left it to rot after skinning the head. Wanton waste of big game under Alaskan law is a misdemeanor.

'Keep Meat Dry, Cool'

Game Processer Explains Job

OCT 1 1 1979

"Don't ever get the meat wet and keep it cool," says Spiro George, the owner of George's Game Processing.

George, as he prefers to be called by his customers, has been in the food business for over 25 years and has been dressing moose, caribou and even ducks in Alaska for close to 20 years.

"The biggest moose I ever saw," he said ," was one that weighed 1,150 pounds when it came in through that door."

George pointed toward the door leading to another portion of his store at Mile 6 on the Old Seward Highway.

"The neck was so big they had to cut it in two different pieces and each of them weighed in at over 100 pounds."

"And you know what?", he asked. "They shot that moose right up off O'Malley Road, put it in the back of a truck and brought it down here."

Although it's not a service available at every neighborhood supermarket, George and two or three other butchers and sausage making firms in Anchorage, will handle a hunter's meat from the moment it comes back to town.

"We weigh everything when it comes in the door," explained George, who with his wife and son, do all the game processing themselves.

"A man works hard for that moose and I like to make sure he knows why there might be a difference between the weight when the meat comes in and when he takes it home."

George says if meat is well taken care of by hunters, then almost no waste will take place in the butcher shop. George says hunters should bring the meat to their butchers as soon as they come back from a trip, rather than trying to guess the best lenth of time for aging the meat.

As soon as the game is taken "the hunters should keep their meat in a cool, dry place," he said. "And they must use cloth bags to keep the flies and dirt off the meat."

George and other game processors charge by the pound for meat cutting, boning, sausage making and grinding.

Mooseburger, for instance, usually has a minimum of 20 percent suet added. The original meat has almost no fat and when ground, does not cook well unless fat is added.

"I have to ship in beef suet from Outside," said George, who also adds beef suet and pork fat to his sausage.

Hunters can have either Polish or summer sausage made from the game. George and the other sausage plants in Anchorage smoke the sausage on the premises and can adjust the receipes to make the sausage hotter or milder according to the taste of the customer.

When a large animal is processed, the hunter can expect to receive steaks, roasts and ground meat much like those obtained from cows.

Smaller animals are cut into roasts and chops, "but its only the name that's different," according to George.

Parker Cites Harm To Hunters

OCT 19 1979

Urban sportsmen will get the worst deal under subsistence provisions of D2 legislation, Walt Parker says.

"Its the urban sportsman who has taken it in the shorts, much more so than even the miners," said Parker, former member of the state Game Board and state co-chairman of the now defunct Federal-State Land Use Planning Commission.

He said sporting organizations basically failed in their congressional lobbying efforts to keep large areas of Alaska open to regulated hunting.

"The national organizations tried hard but it was just too big a game for them," he said. "They didn't back our management concept and lost out as a result."

The plan supported by the commission called for joi. t management of large tracts of land between federal, state and native owners.

Parker says the new national park and monument restrictions on hunting involve essentially only non-native hunters.

"The refuges were set up to take care of the subsistence needs of the natives," he said, "the conflict over the monuments is not with the natives because the monuments are in areas that were never used to any great extent by natives for subsistence purposes."

Parker denied that native leaders forged what one state official termed an "unholy alliance" with environmental groups, exchanging support for large park withdrawals for support on exclusive hunting and fishing rights for natives.

"It was a natural alliance rather than a political plot," said Parker of the seeming agreement between natives and environmentalists on some issues.

Some of the native support for federal oversight of fish and game management in the state was attributed by Parker to "a reaction against the failure of the Alaska Department of Fish and Game to meet the needs of some of the native groups."

"The natives were really dealing in their own interests and occasionally those interests coincided with the environmentalists."

Parker said sportsmen have lost hunting opportunities on 60 percent of the Dall sheep range in the United States as a result of the D2 bills. "And," he said, "they'll loose big on bear too." Parker said he expects drastic changes in hunting opportunities for sportsmen in the state within the next few years.

-- Hunting Response

Dear Editor: OCT 2 0 1979

I was in a sour mood. After a very long day as I read the front page of the Oct. 11 Times, I saw a notice that Outdoor editor, Bill Blessington, had witnessed the waste of a big game animal. And as I read the articles on page 52, I became increasingly incensed.

As an employee of a local airline for the past few years, I have witnessed an increasing number of antlers, taken from animals killed by foreign hunters, coming in from the bush. Even if the European full-skull mount were not in vogue, they would easily be recognizable; they accompanied no meat. With the no-hunting clause in the National Monument laws, us folks in Alaska's big cities are being unfairly restricted. I feel that most of us had come up here to live as self-reliant a life-style as possible, that the term "subsistence," therefore, had been unfairly interpreted by the state and federal governments for people who paid the highest taxes, the most for land and housing and had the least access to this state's wilderness acreage.

— Foreign hunters should be placed in a lottery system; the big-game-tag fee for lottery-drawn participants should be increased ten-fold; foreign hunters should be accompanied by registered guides on all big game hunts; hunting should be closed during the rut, to all hunters — approximately the month of October, as it would prevent the deaths of animals whose meat would balk a village do ; guides should be held strictly accountable for the meat of animals killed by their clients.

At this point, I am in a state of amazement. In Sunday's "Times", page A-8, a short article stated Jack Carter had killed three ducks. In Letters to the Editor of the same edition, a letter from the Alaska Waterfowl Association protested the projected ' unt, which had been written about in articles a few days prior. Monday's Letters to the Editor had an expression of concern about the deaths of three ducks, which (as an aside) happened to occur during open season and in an unrestricted area. Tuesday's front page photo actually showed Jack Carter at the scene of the crime.

If that is the pervasive mentality of us big city hunters, then the anti-hunting people and lock-up types might have a valid point after all.

W re is the outcry for the wasted mouse on the headwaters of the Stony River?

James L. Bachman Jr.
Muldoon

State Game Rules Apply

JUNEAU (AP) — Alaska's hunters should keep in mind that state game regulations still apply in national monuments, the Department of Fish and Game sa OCT 2 5 197

"A recent opinion by the Department of Law confirms that state laws and regulations still apply on monuments, unless more restrictive federal regulations have been adopted," said Commissioner Ron Skoog of the department.

"Federal agents, not state enforcement officers, will enforce (more restrict federal rules)," he added.

Hunting Fines

Dear Editor:

In recent weeks the Anchorage Times has contained several articles concerning violations of hunting regulations by European hunters. Wanton waste appears to be a habit shared by many foreign hunters visiting our state. In the most recent article two German hunters shot two moose over their allowable limit and left the meat to spoil. The honorable Judge John Mason slapped these naughty hunters on the fingers and fined each of them $100. He really taught them a lesson for violating our state's game regulations.

The following day the Anchorage Times carried an article about two local hunters who mistakenly shot two sheep which they thought were goats. These hunters carried legal permits for goats and, being honest hunters, took their "goat" horns to the Alaska Department of Fish and Game to be tagged as required under the conditions of the permit. They were each fined $250, forfeited their game, and had their hunting privileges suspended for one year. I would bet that Judge John Mason did not rule on this case, or if he did, he certainly has his priorities mixed up.

I will not expound on the punishment received versus the violation committed in the case of the two local hunters. However, I do feel that the violations committed by the two German hunters warranted a much, much stiffer punishment than was handed down by Judge Mason. The punishment in this case certainly did nto fit the crime. According to Mr. Hobbs' Letter to the Editor (Friday, October 26) the hunters were even allowed to keep the antlers.

NOV 2 1979

Judge Mason and other judges who hand down minor punishments for violations of fish and game regulations certainly do not have protection of our wildlife resources in mind. I think its time that our judges realize that Alaska's fish and wildlife resources are important on a local, national and international level as evidenced by the people who come to Alaska to harvest them. I suggest that everyone who feels that our judges are being too lenient on fish and game violators keep the names of these judges in mind when they come up for re-election.

Position Paper Review

Dave Hardy
Game Biologist III
Game Division

The enclosed position paper is being drafted by Game Division to address problems arising from unguided alien hunters. Before action can be taken, the following questions require legal review.

1. What actions must a person perform before he can be successfully prosecuted for guiding without a license?

2. If the State chose to pass legislation setting different tag fees and guide requirements for aliens as opposed to nonresident U.S. citizens, what court tests would it have to pass? How should the legislation be drafted so as to maximize the possibility of surviving judicial review?

We appreciate your attention to this matter and await your response at the earliest convenient time.

Assistant Attorney General
AGO - Anchorage

SUBJECT: Position Paper Review - Alien Non-Guided Hunts

You have requested the Department of Law to review the issue paper attached to your December 12, 1978 memorandum to Wilson Condon, Deputy Attorney General, regarding alien hunters. Specifically, your questions are:

Question No. 1. "What actions must a person perform before he can be successfully prosecuted for guiding without a license?"

Summary Answer: To be guilty of guiding without a license a person must aid or attempt to aid another person, personally or through an assistant, to hunt, pursue, capture or in any way disturb any species of game when done for monetary or material compensation.

To be guilty of transporting without a license a person must convey another person for the primary purpose of hunting big game or removing parts of big game taken, when the price charged for the service reflects more than the normal operating cost of the transportation.

Analysis. A. It is unlawful to guide without a license pursuant to AS 08.54.210(3). Prosecution for failure to have a current guide license or transporter license when engaging in certain activities is based upon AS 08.54.210(3):

> It is unlawful for a person to guide or transport as defined in this chapter without being licensed under this chapter and without having the license in his actual possession; however, for purposes of transporting by air, in the case of a corporation, company, partnership or other business entity, the license may remain at the principal place of the business entity; [Emphasis added.]

The definitions of "guide" and "transport" are critical to any prosecution for guiding or transporting without being licensed. The key language in the definition of "guiding" is "assisting another to take game".

B. Guiding is aiding another to take game for compensation. Attached is a copy of a memorandum from Tom Meacham, Assistant Attorney General, to William Bellingar, Guide Investigator, dated September 26, 1977, which gives a general interpretation of the definition of "guiding". I attach the memorandum for your reference.

The statutory definition of "guiding" is found in AS 08.54.240(2), which states:

> "Guide", "guides" or "guiding" means assisting another person to take game with the intent of receiving monetary or material remuneration for the services, by accompanying and directing that person personally or through a licensed assistant guide for the duration of a hunt, and not solely for the purpose of providing transportation services;

The language used in that definition is given further legislative definition as well as regulatory interpretation as discussed below.

The primary concept of the definition of "guide" is assisting another person to take for compensation. The term "take" is defined by the legislature in AS 16.05.940(18) which provides:

> "Take" means taking, pursuing, hunting, fishing, trapping, or in any manner disturbing, capturing, or killing or attempting to take, pursue, hunt, fish, trap, or in any manner capture or kill fish or game;

The term "take" is thus given a very broad meaning by the legislature, and apparently encompasses any intentional invasion of the habitat and peace of an animal, not limited to big game animals ("in any manner disturb...fish or game").

Although the term "take" is not defined in title 8, ch 54, (the title that covers licensing guides), it is

arguable that the definition of "take" provided in the Fish and Game Code, title 16, ch 5, applies to, or is to be given great weight in construing, the concept of "take" used in the guide licensing statutes and regulations. This is particularly true since there is no conflicting definition of "take" in the guiding laws or regulations (see, in contrast, the distinctly different definition of "resident" that appears in the Fish and Game Code and in the guide licensing title).

The term "take" can be given different emphasis depending on the context of the law. For example, the term "take" when used in a bag limit definition (cf. 5 AAC 81.310 - a hunter must "take" in accordance with bag limits) is likely to be construed by a court to mean actually killing, not merely hunting or pursuing. The need for this construction is obvious when one considers that otherwise a person would be guilty of "taking" an entire flock of birds merely by aiming his gun in their direction. United States v. Chew, III, 540 F.2d 759 (4th Cir. 1976). In Chew, a hunter was convicted of exceeding the bag limit on doves; the appellate court upheld the conviction but in so doing held that the definition of "take" (which was similar to Alaska's) was overly broad when read literally but could be reasonably construed when applied to someone who actually killed too many birds.

Putting together the definition of "take" with that of "guiding" the functions of guiding would appear to extend not only to the act of shooting or killing a game animal, but also to any activities associated with tracking or disturbing game for hire or attempting to do so while in the field.

C. Guiding is not limited to big game. "Guiding" refers to game, not just big game. "Game" is defined in AS 16.05.940(9) to mean:

> any species of bird or mammal, including a feral domestic animal, found or introduced in the state, except domestic birds and mammals;

The Board of Game has classified game as big game, fur animals, small game and unclassified game. 5 AAC 90.020. Thus, guiding activities include assisting in taking all game species for remuneration, although AS 16.05.407 only requires a nonresident hunter to be accompanied by a guide for hunting, pursuing or taking brown bear, grizzly bear, polar bear or sheep.

In summary, the statutory elements of "guiding" for purposes of criminal prosecution are: aiding or attempting to aid another person, either personally or through an assistant, to hunt, capture, pursue, or in any way disturb any species of game when done for compensation, either for money or goods

D. Guiding for purposes of guide licensing encompasses additional activities other than assisting in the take in the field. The concept of "guiding", for purposes of licensing and regulating the profession goes beyond the act of aiding another to "take" game for hire. Reading the guide statutes as a whole, the meaning of guiding is expanded to include additional responsibilities. 12 AAC 38.070 "Responsibility of Guide to his Client" provides that a guide must insure that his client has proper licenses and tags, that he take every reasonable measure to insure the safety and comfort of his clients, and that he have adequate first aid, food, shelter and transportation for his clients. Also 12 AAC 38.180 "Guiding Ethics" lists activities that are not condoned by the guide profession, including misrepresenting accommodations and rates, not cooperating with peace officers, making guarantees of success, failing to maintain an adequate camp and facilities, etc. Arguably, all these actvities, though they may not necessarily occur while in the field and hunting, must relate to a "contract hunt", i.e. a hunt for hire.

Putting all the above statutes and regulations together, it appears that a guide, in his professional capacity, performs many functions that go beyond the act of "guiding", i.e. hunting or attempting to direct a client to game. A guide is acting in his professional capacity when he writes letters describing his services, rates and accommodations. Similarly he acts in his professional capacity when he prepares the trophies, antlers, horns, etc. taken by his clients. Also a guide acts in his professional capacity when he insures that all meat of trophies are taken and salvaged in accordance with state law. A guide is not, however, legally "guiding" after the hunt is over (i.e. after game is killed), but he is still performing professional services encompassed by the broad licensing powers of the Guide Board -- he could be subject to civil disciplinary actions, not criminal prosecution.

In summary, when a guide performs any of the above-described activities associated with the professional guide, he is subject to disciplinary action against his professional license, but is not subject to criminal prosecution unless he violates a state fish and game or guide law or

regulation, fails to have a current hunting and fishing license, fails to report a violation by his client, or hires more than three assistants. AS 08.54.210.

E. It is unlawful to transport without transporter license. Transporter licenses are required pursuant to AS 08.54.142 and .144. "Transport" is defined in AS 08.54.210(5):

> "transporting" or the "activity of transporting" means conveying a person by any lawful means to an area for remuneration or material benefit in excess of normal operating costs, when the primary purpose of the person being conveyed is the taking of big game and the associated removing of big game meat and parts of big game after big game has been taken; big game as used in this paragraph means game which, if taken by a nonresident, would require a big game tag. [Emphasis added.]

The key concepts in this definition are (1) the person transporting is charging more than the tariff rate for air taxi flying or more than normal operating costs; (2) the primary purpose or intent of the person being transported is to hunt big game; (3) unlike the definition of "guiding", transporting is limited to big game.

Big game is defined in 5 AAC 90.020(3) to include:

> black bear, brown and grizzly bear, polar bear, bison, caribou, Sitka blacktail deer, elk, mountain goat, moose, musk oxen, mountain or Dall sheep, wolf and wolverine.

The definition of "transporting" further limits big game to those species for which a nonresident must have a tag. This refers to AS 16.05.340(9) "License and tag fees" which provides:

> A nonresident may not take a big game animal without previously purchasing a numbered, nontransferable, appropriate tag, issued to him as provided in (16) of this subsection.

The tags listed in AS 16.05.340(16) include black bear, brown or grizzly bear, polar bear, bison, caribou, deer,

elk, goat, moose, sheep, walrus, wolf and wolverine. The one species that does not appear both in 5 AAC 90.020(3) and AS 16.05.340(a) is musk oxen, which is hunted by permit only and tags are provided if a season is open. AS 16.05.350.

In summary, those activities for which a person must hold a current transporter license include:

> to convey a person for the primary purpose of hunting big game or to remove the parts of big game taken, when the price charged for the service reflects more than the normal operating cost of the transportation.

F. Example of guiding without a license A person who performs the above actions relating to transporting or guiding as it is defined for criminal cases without a license could be prosecuted under AS 08.54.210. By this analysis, an alien, for example, who offers a package hunt for Swedes or Germans for moose in Alaska and either personally or through an assistant, aids the hunters to take the game, and who charges for the service more than the normal operating costs of transportation to the field, is guilty of guiding and transporting without a license.

Question No. 2. If the state chose to pass legislation setting different tag fees and guide requirements for aliens as opposed to non-resident U.S. citizens, what court tests would it have to pass? How should the legislation be drafted so as to maximize the possibility of surviving judicial review?

Summary Answer: A state law that discriminated against aliens by charging them a higher hunting license fee would be subject to strict judicial scrutiny and would have to be the least drastic means of furthering a compelling state interest.

Analysis of this rather complex question requires several steps: (1) Who is an "alien"? (2) What is the basis for classifying aliens differently from U.S. citizens? (3) What state interest is protected?

A. Aliens Defined. An alien is defined generally as a citizen or subject of a foreign state or a foreign government (see Black's Law Dictionary, at 95 and DeCano v. State, 110 P.2d 627 (Wash. 1941)). The Board of Fisheries defines "alien" in 5 AAC 39.975 as:

> [A] person who is not a citizen of the United States, and who does not have a petition for naturalization pending before the district court.

An alien may be a resident alien or a non-resident alien, and may live legally in the United States even though he is not naturalized. Aliens living within the United States are granted certain protections (to make contracts, sue and be sued, be protected by law enforcement, etc.) and as a result they owe a temporary and local allegiance to the country in which they reside.

B. Basis of Challenge to Laws that Discriminate Against Aliens. Whether a law that discriminates against an alien will withstand constitutional scrutiny may depend on whether the alien is: (1) an alien not lawfully in the state; (2) a non-resident alien; or (3) a resident alien.

Probably a law prohibiting an alien not lawfully in the U.S. from taking fish and game would be upheld under a state's police powers. (See, e.g., AS 16.05.905, prohibiting aliens not lawfully admitted to the U.S. from engaging in commercial fishing or taking marine mammals in territorial waters.)

Laws or regulations that discriminate against a non-resident alien, a non-resident citizen, or a resident alien, are subject to attack under:

(1) Article IV § 2 of the U.S. Constitution - privileges and immunities;

(2) 14th Amendment of the U.S. Constitution - equal protection;

(3) Article I § 8 of the U.S. Constitution - commerce clause; or

(4) Article VI, U.S. Constitution - supremacy clause.

Analysis of the constitutionality of the law or regulation depends on which constitutional challenge is raised.

(1) Privileges and Immunities. A law or regulation aimed directly at aliens could not be overturned under the privileges and immunities clause, because that clause protects only citizens. Similarly, a law that discriminated against non-resident American citizens by restricting or prohibiting them from sport hunting might arguably withstand a privileges and immunities challenge on the grounds that sport hunting, unlike commercial fishing, is not a right of citizenship to be protected, but is merely a privilege.

The test applied by the U.S. Supreme Court to determine whether a law that discriminates against non-residents violates the privileges and immunities clause was set out in Toomer v. Witsell, 334 U.S. 385 (1948). The court there struck down a South Carolina shrimp fishing law that charged non-residents one hundred times the resident license fee for shrimping in its three-mile coastal waters. The court distinguished its earlier decision, McCready v. Virginia, 94 U.S. 391 (1876), (which had upheld a law allowing Virginia citizens only to plant oysters in state tidal waters) on the grounds that McCready involved non-migratory fish in inland waters and that it was based on an outdated "ownership" theory of fish game. The court then held that the ability to engage in commercial fishing is a right protected by the privileges and immunities clause, and that no law may discriminate against non-citizens (of the state) unless "there is something to indicate that non-citizens constitute a peculiar source of the evil at which the statute is aimed" Toomer, supra at 398.

In a subsequent case, the U.S. Supreme Court addressed a similar privileges and immunities challenge to a Montana law that charged non-residents a higher hunting license fee. The court in Baldwin v. State Fish and Game Commissioner, ___ U.S. ___, 98 S.Ct. 1852 (1978) upheld the scheme, on the ground that the privileges and immunities clause does not encompass recreational sport hunting:

> Some distinctions between residents and non-residents merely reflect the fact that this is a Nation composed of individual States, and are permitted; other distinctions are prohibited because they hinder the formation, the purpose, or the development of a single union of those states. Only with respect to those "privileges" and "immunities" bearing upon the vitality of the Nation as a single entity must the State treat all citizens, resident and non-resident, equally.... Equality in access to Montana elk is not basic to the maintenance or well-being of the Union. ___U.S. at 98 S.Ct. at 1861-62.

Thus the initial test for a privileges and immunities challenge is whether the law affects a right to engage in a livelihood or whether the activity is merely recreational and a sport. If the latter, a privileges and immunities challenge will not prevail.

(2) Equal Protection Under 14th Amendment. State laws that discriminate against aliens or non-residents must withstand a different test when challenged under the "equal protection" clause of the 14th Amendment.

First, the court must determine whether the class discriminated against is "inherently suspect" or if the law affects a "fundamental right." If so, the court will "strictly scrutinize" the intent and purpose of the law to establish whether there is a "compelling state interest" that necessitates the law and that the law is the least drastic means to further that interest. Dunn v. Blumstein, 405 U.S. 330 (1972). If the classification is not "suspect," and the right not "fundamental" the court will restrict its review of the law to a determination whether the law and the classification it establishes is "rationally related to a permissible state interest."

The Court in Baldwin, supra, at 1862 concluded that recreational hunting was not a "fundamental right" (for purposes of privileges and immunities analysis which protects a longer list of rights than does the equal protection clause. (Hicklin v. Orbeck, 565 P.2d 159, 168 n.16 (Alaska 1977), rev'd on the grounds ___U.S.___, 57 L.Ed.2d 397 (1978)). However, the class of aliens (regardless of residency) has been held to be a suspect class for state laws, though not federal laws. Mathews v. Diaz, 426 U.S. 67 (1976), Sugarman v. Dougall, 413 U.S.634 (1973) (civil service); Takahashi v. Fish and Game Commission, 334 U.S. 410 (1948) (commercial fishing); Frovlov v. Delo, 383 N.Y.S.2d 470 (N.Y. 1976) (hunting license). Thus, in order to uphold a law that discriminated between resident citizens and resident aliens, the state would have to show that distinguishing the class of aliens was necessary to further a compelling state interest. Frovlov, supra, at 472; Takahashi, supra at 416-17. A classification based solely on alienage must thus correspond to the class from which an "evil" is to be feared. Patsone v. Commonwealth of Pennsylvania, 232 U.S 138 (1914) (upholding a state law prohibiting aliens from killing game for sport and to that end making possession of shotguns by aliens unlawful).

It may thus be more difficult to demonstrate that a law directed at aliens only is directed at the primary source of the problem. The court in Takahashi, supra at 419 held:

> The protection of this section [8 U.S.C. § 41 relating to rights of all persons under U.S. Jurisdiction] has been held to extend to aliens as well as to citizens. Consequently the section and the Fourteenth Amendment on which it rests in part protect "all persons" against state legislation bearing unequally upon them either because of alienage or color...The Fourteenth Amendment and the laws adopted under its authority thus embody a general policy that all persons lawfully in this country shall abide "in any state" on an equality of legal privileges with all citizens under non-discriminatory laws. [Footnotes omitted.]

The court concluded that the power of a state to apply its laws exclusively to alien inhabitants is "confined within narrow limits." Takahashi, supra at 420.

Applying this language to an Alaska law that would bar aliens from hunting, or otherwise restrict their ability to engage in sport hunting, its validity would depend in part on whether the privilege of sport hunting is encompassed by the privileges citizens can also enjoy. Arguably, sport hunting is not such a privilege enjoyed by all citizens, but is a special privilege that may be restricted to state citizens in order to protect the resource. In Patsone v. Pennsylvania, 232 U.S. 138 (1914) (cited in Takahashi, supra at 410) the Supreme Court sustained, against Fourteenth Amendment due process and equal protection challenges, a state law barring aliens from hunting wild game in the interest of conserving game for citizens of the state. The distinction between the Patsone and Takahashi cases apparently was that in Patsone the court found no conflicting federal law or treaty, that the privilege of taking wild game was not a right of citizenship, and a state could keep game for its own citizens. (Citing Geer v. Connecticut, 161 U.S. 519 (1896)).

Takahashi, suggests that to earn a living by fishing is a right of citizenship, and that:

> To whatever extent the fish in the three-mile belt off California may be capable of ownership by California, we think that "ownership" is inadequate to justify California in excluding any or all aliens who are lawful residents of the state from making a living by fishing in the ocean off its shores while permitting all others to do so.

Based on the Takahashi case, it appears that a law directed at non-residents, rather than aliens (whether resident or non-resident), would be easier to justify.

Earlier analysis used to uphold state laws directed at non-residents (citizen or alien) relied on the theory of "state ownership" of fish and game resources. In re Eberle, 98 F. 295 (7th Cir. 1899) (upholding state law charging non-residents a much higher hunting license fee); State v. Tower, 24 A. 898 (Me. 1892) (upholding a state law forbidding non-residents from hunting in the state).

The "state ownership" theory is that the wild game (and fish) in a state is the property of the state under its "sovereign ownership." Patsone v. Pennsylvania, 232 U.S. 138 (1914) (no resident aliens may hunt deer); McCready v. Virginia, 94 U.S. 391 (1877) (state title to oysters in tide waters). This analysis has, in recent years, been severely eroded, although not overruled. Fish that migrate have been deemed not the state's property, Toomer v. Witsell, 334 U.S. 385 (1948) and state laws prohibiting aliens from commercial fishing in territorial waters, when the aliens held a federal gear license, have been stricken. Douglas v. Seacoast Products, Inc., 431 U.S. 265 (1977). Although the ownership theory has been deemed "but a fiction," Toomer v. Witsell, 334 U.S. 385, 402 (1948), and a "slender reed," Missouri v. Holland, 252 U.S. 416, (1920) nevertheless it has not been overruled.

Courts today have, however, tended to replace "ownership" concepts with the principle that under a state's police powers, the state is trustee of the fish and game within its borders and may take reasonable measures to protect and manage it. Baldwin, supra at 1864 (Burger concur.); State v. Kemp, 44 N.W.2d 214 (S.D. 1950), dis'd 340 U.S.923 (1951) (U.S. S.Ct.dis'd for want of "substantial federal question" a South Dakota law excluding non-resident from hunting migratory waterfowl.)

Alaska's supreme court has taken a similar approach to protection of its natural resources. The court in Hicklin v. Orbeck, 565 P.2d 159 (Alaska 1977) struck down the durational (one year) residency requirement for pipeline jobs, on the grounds that, under equal protection analysis, a "fundamental right" (travel or migration) was infringed upon and the law must be strictly scrutinized; however the court also upheld a non-durational residency provision, claiming the right to work is not a fundamental right, and therefore the law must merely "bear a fair and substantial relation to a permissible state interest." Hicklin, supra at 167. The court relied on McCready v. Virginia, 94 U.S. 391 (1877) and the Alaska Constitution Art. VIII § 2, that holds Alaska's natural resources for the benefit of her people, to conclude that the natural resources of the state "belong" to Alaskans "in a way that, in our federal system, Alaska's society and economy in general do not." Hicklin, supra, at 169. The United States Supreme Court reversed the state decision in Hicklin v. Orbeck, ___ U.S. ___, 57 L.Ed.2d 397 (1978), however, stating that Alaska's hire law violates

the privileges and immunities clause because the state failed to show that non-residents are "a peculiar source of the evil" and because the Alaska hire preference does not bear a substantial relationship to the problem. The Supreme Court further held that the theory of state ownership of its resources does not remove a law concerning that resource from the prohibitions of the privileges and immunities clause.

The analysis suggested by the above equal protection cases, assuming "strict scrutiny" is not used, is whether the state can present sufficient evidence that the discriminatory law is justified by problems that class creates. For example, the court in Baldwin, supra found that residents contributed to the feeding of elk, that non-resident hunting pressure threatened the resource, and that the law was supportable on these and similar grounds. In contrast, the court in Gullaney v. Anderson, 342 U.S. 415 (1952) struck down a territorial fishing law that required aliens and non-residents to pay higher fishing license fees; the court found no evidence that the higher fee represented actual compensation to the state for a higher enforcement burden, but did not rule out the possibility that this could be a legitimiate basis for discrimination. Thus the "rational basis" for the law was not established, and it failed constitutional scrutiny.

(3) Supremacy Clause: Art. VI § 2.
Constitutional challenges to discriminatory state laws based on the supremacy clause fall into two categories: first, laws directed at aliens that conflict with rights granted to aliens under federal laws or treaties; second, state laws that impinge upon a federally granted license or privilege. Both types of cases receive the analysis discussed by the court in Takahashi, supra: no law that conflicts with a treaty, or with a particular federal right or privilege, will survive U.S. Supreme Court scrutiny. Federal legislation pre-empts state law in fields that have been traditionally occupied by the states only where there is a manifest intent of Congress. This has been held to include federal vessel licenses to engage in fisheries. Douglas v. Seacoast Products, Inc., 524 ed.2d 204. See also Kleppe v. New Mexico, 426 U.S. 529 (1976) which struck down a state wild burro law that "conflicted" with a federal law protecting the animals on federal lands.

Assuming there is no overriding federal law involved, a state could pass a discriminatory law if it is based on, and rationally related to, a valid state interest. Since the Baldwin court has concluded that sport hunting is not a fundamental right of citizenship, a sport hunting law aimed at restricting non-residents or aliens would probably survive a challenge under the supremacy clause.

(4) Commerce Clause; Art. I § 8. A state law that restricted access by non-residents or aliens to a resource and thereby detrimentally affected interstate commerce, could be struck down under the commerce clause. For example, the court in Douglas v. Seacoast Products, Inc., ___U.S.___, 52 L.Ed.2d 304 (1977) held that Congress had the power to regulate the taking of fish in state waters where there was some effect on interstate commerce. The court struck down a Virginia law that limited the right of non-residents and aliens to catch fish in territorial waters.

It is unlikely that this analysis would find a similar sport hunting law invalid, since the Baldwin court has held sport hunting to be a purely recreational activity, not a source of livelihood.

Summary. Whether Alaska could pass a constitutionally supportable law or regulation that restricted the ability of non-residents or aliens from taking game would depend on whether the state could gather enough evidence showing the need to protect this resource and showing that the non-residents or aliens were a special threat.

The evidence to look at includes: the higher tax burden borne by state residents, which taxes support game management; the likelihood of enforcement problems generated by aliens or non-residents; the likelihood of non-residents or aliens not abiding by, or being familiar with, state game laws; dangers to non-residents and aliens unfamiliar with climate, terrain, wildlife habits [see attached article on point]; the need to limit the overall take of the species; protection of game and conservation purposes.

If the state simply charges a higher license fee to non-residents, the evidence to support this will be easy to supply. If only aliens are charged a higher fee, the burden will be much higher on the state. [The burden of proof is on the one who challenges the law, of course, but once the discrimination is established, the state must defend the classification.]

A second possibility for legislation would be to require all aliens to be accompanied by guides. If directed only at aliens and not non-resident citizens, it would be necessary to demonstrate that aliens present a different danger to the game (because of language barriers making it difficult to comprehend rules, training, allegiance to laws, culture, or other reasons).

The easier-to-justify approach would be to require all non-residents (aliens or citizens) to be accompanied by guides. The justification then would rest on: greater likelihood of violations due to unfamiliarity with laws; costs of enforcement and need to have the guide function as a person responsible for the legality of the hunt; danger to the non-resident who is not familiar with weather, terrain, and animals, and the likely cost to the state of aiding non-residents in distress.

One problem with the required guide approach is that as the law (AS 16.05.407) now stands guides are only required for brown bear, grizzly bear, polar bear and sheep. This makes it difficult to justify a guide requirement based on safety of the hunter, since it does not include goat, moose and other species that present as great or greater potential hazards to the hunter, in terms of terrain, weather, etc. Thus AS 16.05.407 would have to be expanded to include all species.

In State v. Jack, supra, the supreme court in Montana struck down a state law requiring guides for non-residents on national forest, wilderness or game refuge lands or state game refuges. The basis for the decision was that because the law did not apply to deer and antelope, it could not be based on legitimate safety needs, and therefore had no reasonable connection with the classification.

In conclusion, although the Supreme Court has severely eroded a state's sovereign ownership of game, it has not ruled out the possibility of establishing a constitutionally sound law reserving sport hunting to resident citizens. In order to draft a supportable resident law or regulation, the state or state board must demonstrate clearly that the purpose of the discriminatory law is strictly related to valid biological interests, essential state management goals and similar unimpeachable motives and that the law does not conflict with established federal laws or treaties.

ISSUE PAPER NO. DATE: _____

I. ISSUE:

The impact of unguided hunting for moose and black bear by large numbers of non-U.S. residents.

II. BACKGROUND:

Historically, various constraints have been placed on hunting activities of nonresidents, be they U.S. or foreign citizens. At present, nonresidents are required to purchase a nonresident license and nonresident tags for big game and are required to contract with a licensed guide to hunt sheep and brown/grizzly bear. These regulations do not differentiate between nonresidents and aliens (with some minor exceptions). Until two to three years ago, foreign hunters generally hired guides, and many still do. The small number of guided foreign hunters who formerly hunted moose, bear, goat or caribou was not significant.

For the preceding two seasons, beginning in fall 1976, and in the current season, large numbers (45 hunters in 1977) of hunters have been scheduled for moose (and occasionally black bear) hunts in the Innoko River drainage and the Koyukuk River drainage.

Year	No. hunters	No. camps	No. moose	No. blk. bear	Air taxi operator
1976	35	10+	20+	6	Anchorage-based charter outfit*
1977	45**	10+	28	3?	Chet Clark, Aniak
1978	15+	7***	?	?	Chet Clark, Aniak

* Vanderpool temporarily hauled hunters after 3 air crashes
** Includes Galena group of 12 hunters
*** Iditarod and Reindeer Lake

The general scheme has been that Oke Stena, a Swedish national who also arranges salmon fishing trips out of King Salmon in the summer, arranges for a group of hunters from a particular country (Sweden and Germany, so far) to come as a group to a "jumping-off place" such as Aniak and Galena. An Anchorage taxidermist, Louie Brunner, is apparently involved in some way also. Base camps are set up at various places, to which the foreign hunters are ferried by air taxi operators. The foreign hunters are not accompanied by an Alaskan guide or packer as far as I know, but according to Pete Shepherd, some of the hunters in 1977 were professional

hunters, or foresters from Sweden. Presumably, they do their own hunting, butchering and packing. According to Shepherd, most meat is given away, but in one season meat was being refused because it had not been well cared for. Shepherd estimates that the trips cost $3,500 to $4,000 +, which includes round-trip air fare from Sweden.

In 1976 most of the meat was disposed of by giving it to villagers. However, some was reportedly refused as unfit to eat. The 1977 meat was largely unaccounted for and some may have spoiled in the field. Nothing is known about the 1978 meat disposition.

Hunting activity and camps were rather widespread in 1976 and many conflicts resulted from this action. In 1977 more camps were put in the Iditarod River area, upper Stony and Galena area. Some were transported to the Paimiut drainage (Reindeer Lake) and several other large lakes in this area. In 1978 nearly all the activity was in the Iditarod River valley except one camp at Reindeer Lake.

III. CURRENT SITUATION:

As shown in Table 1, 1978 hunting pressure by aliens was down, but with increasing experience on the part of the organizers and increased knowledge of this opportunity abroad, we can foresee increased alien hunting activity in the future. Rural residents bitterly resent "outside" hunters, especially aliens. We can expect that this situation will bring increasing pressure for subsistence zones, regulations against aircraft, and other measures.

Questions and concerns resulting from this situation include:

(1) Does providing these services to hunters constitute guiding? Thus far, Fish and Wildlife Protection apparently does not feel that it is, because they have made no arrests on this basis. Again, according to Shepherd, Fish and Wildlife Protection obtained an informal opinion from the Attorney General's office that indicated "guiding" does not occur unless the guide accompanies the hunter and points out the game. It has been reported that an air taxi operator involved has performed these functions.

(2) The influx of numbers of hunters causes concern among local people, in part because they question the right of foreign hunters to so readily and cheaply hunt in Alaska, and partly because the influx of hunters is real or perceived competition to local hunters.

(3) ADF&G-Game is concerned that this inexpensive, wholesale importation of hunters, coupled with an almost unlimited demand for hunting in Alaska, could be detrimental to (a) local residents who want or need meat, and (b) populations of the hunted species. Thus far, these problems have been limited or non-existent, but the potential is clear, particularly since interior moose populations are generally low.

(4) There have been numerous unconfirmed (possibly exaggerated) reports

of game waste by these hunters. In two cases, Alaskans have claimed to have seen carcasses of one or more moose left in the field, with antlers removed. Such reports are characteristically long after the fact, and I know of none that have been confirmed by ADF&G or F&WP. There has also been concern that although aerially transported hunters may observe the letter of the waste law, considerable meat may still be left in the field. Reportedly meat from moose killed has been distributed to local people, but to what extent this have been done is poorly known. Apparently there was considerable effort to give away meat in Aniak in 19[illegible]5, but success in doing so was poor, reportedly because meat was "sour".

(5) Importing numbers of hunters has aggravated existing conflicts between local and fly-in hunters.

(6) Importing numbers of hunters may not be reconcilable with the new subsistence law.

IV. ACTIONS TAKEN:

Little action has been taken. Protection field officers have been contacted. The problem has been discussed within the Game Division and with some members of the public. No solutions have been found, aside from establishment of controlled use areas (sans fly-in hunting) by the Board.

In response to public demand, partially the result of alien hunting, the Board of Game has established the Paradise, Kalskag, and Koyukuk Management Areas, where use of aircraft is not allowed in moose hunting. A number of resolutions and complaints have been received from rural groups regarding this situation.

V. RECOMMENDATIONS FOR FUTURE ACTION:

1) The Division of Game should request answers from the Department of Law for the following:

a) Does any of the above constitute guiding without a license?
b) Can the State discriminate between nonresident U.S. citizens and license by legislation stipulating different tag fees, guide requirements, or other means for aliens?
c) Does the alleged equal protection extended to aliens in the U.S. include "equal rights" in terms of hunting privileges?

2) If legal opinions in (1) allow, the Department recommends that legislation be adopted that would require aliens to be guided by a registered guide when hunting any big game in Alaska.

3) The Department further recommends that both this Department and the Department of Public Safety closely monitor alien hunting activities in

Position Paper Review

Dave Hardy
Game Biologist III
Game Division

The enclosed position paper is being drafted by Game Division to address problems arising from unguided alien hunters. Before action can be taken, the following questions require legal review.

1. What actions must a person perform before he can be successfully prosecuted for guiding without a license?

2. If the State chose to pass legislation setting different tag fees and guide requirements for aliens as opposed to nonresident U.S. citizens, what court tests would it have to pass? How should the legislation be drafted so as to maximize the possibility of surviving judicial review?

We appreciate your attention to this matter and await your response at the earliest convenient time.

AGO - Anchorage

SUBJECT: Position Paper Review - Alien Non-Guided Hunts

You have requested the Department of Law to review the issue paper attached to your December 12, 1978 memorandum to Wilson Condon, Deputy Attorney General, regarding alien hunters. Specifically, your questions are:

Question No. 1. "What actions must a person perform before he can be successfully prosecuted for guiding without a license?"

Summary Answer: To be guilty of guiding without a license a person must aid or attempt to aid another person, personally or through an assistant, to hunt, pursue, capture or in any way disturb any species of game when done for monetary or material compensation.

To be guilty of transporting without a license person must convey another person for the primary purpose of hunting big game or removing parts of big game taken, when the price charged for the service reflects more than the normal operating cost of the transportation.

Analysis. A. It is unlawful to guide without a license pursuant to AS 08.54.210(3). Prosecution for failure to have a current guide license or transporter license when engaging in certain activities is based upon AS 08.54.210(3):

> It is unlawful for a person to guide or transport as defined in this chapter without being licensed under this chapter and without having the license in his actual possession; however, for purposes of transporting by air, in the case of a corporation, company, partnership or other business entity, the license may remain at the principal place of the business entity; [Emphasis added.]

The definitions of "guide" and "transport" are critical to any prosecution for guiding or transporting without being licensed. The key language in the definition of "guiding" is "assisting another to take game".

B. Guiding is aiding another to take game for compensation. Attached is a copy of a memorandum from Tom Meacham, Assistant Attorney General, to William Bellingar, Guide Investigator, dated September 26, 1977, which gives a general interpretation of the definition of "guiding". I attach the memorandum for your reference.

The statutory definition of "guiding" is found in AS 08.54.240(2), which states:

> "Guide", "guides" or "guiding" means assisting another person to take game with the intent of receiving monetary or material remuneration for the services, by accompanying and directing that person personally or through a licensed assistant guide for the duration of a hunt, and not solely for the purpose of providing transportation services;

The language used in that definition is given further legislative definition as well as regulatory interpretation as discussed below.

The primary concept of the definition of "guide" is assisting another person to take for compensation. The term "take" is defined by the legislature in AS 16.05.940(18) which provides:

> "Take" means taking, pursuing, hunting, fishing, trapping, or in any manner disturbing, capturing, or killing or attempting to take, pursue, hunt, fish, trap, or in any manner capture or kill fish or game;

The term "take" is thus given a very broad meaning by the legislature, and apparently encompasses any intentional invasion of the habitat and peace of an animal, not limited to big game animals ("in any manner disturb...fish or game").

Although the term "take" is not defined in title 8, ch 54, (the title that covers licensing guides), it is

arguable that the definition of "take" provided in the Fish and Game Code, title 16, ch 5, applies to, or is to be given great weight in construing, the concept of "take" used in the guide licensing statutes and regulations. This is particularly true since there is no conflicting definition of "take" in the guiding laws or regulations (see, in contrast, the distinctly different definition of "resident" that appears in the Fish and Game Code and in the guide licensing title).

The term "take" can be given different emphasis depending on the context of the law. For example, the term "take" when used in a bag limit definition (cf. 5 AAC 81.310 - a hunter must "take" in accordance with bag limits) is likely to be construed by a court to mean actually killing, not merely hunting or pursuing. The need for this construction is [illegible]us when one considers that otherwise a person would be [illegible]y of "taking" an entire flock of birds merely by aiming his g[illegible] in their direction. United States v. Chew, III, 540 F.2d 759 (4th Cir. 1976). In Chew, a hunter was convicted of exceeding the bag limit on doves; the appellate court upheld the conviction but in so doing held that the definition of "take" (which was similar to Alaska's) was overly broad when read literally but could be reasonably construed when applied to someone who actually killed too many birds.

Putting together the definition of "take" with that of "guiding" the functions of guiding would appear to extend not only to the act of shooting or killing a game animal, but also to any activities associated with tracking or disturbing game for hire or attempting to do so while in the field.

C. Guiding is not limited to big game. "Guiding" refers to game, not just big game. "Game" is defined in AS 16.05.940(9) to mean:

> any species of bird or mammal, including a feral domestic animal, found or introduced in the state, except domestic birds and mammals;

The Board of Game has classified game as big game, fur animals, small game and unclassified game. 5 AAC 90.020. Thus, guiding activities include assisting in taking all game species for remuneration, although AS 16.05.407 only requires a nonresident hunter to be accompanied by a guide for hunting, pursuing or taking brown bear, grizzly bear, polar bear or sheep.

In summary, the statutory elements of "guiding" for purposes of criminal prosecution are: aiding or attempting to aid another person, either personally or through an assistant, to hunt, capture, pursue, or in any way disturb any species of game when done for compensation, either for money or goods.

D. Guiding for purposes of guide licensing encompasses additional activities other than assisting in the take in the field. The concept of "guiding", for purposes of licensing and regulating the profession goes beyond the act of aiding another to "take" game for hire. Reading the guide statutes as a whole, the meaning of guiding is expanded to include additional responsibilities. 12 AAC 38.070 "Responsibility of Guide to his Client" provides that a guide must insure that his client has proper licenses and tags, that he take every reasonable measure to insure the safety and comfort of his clients, and that he have adequate first aid, food, shelter and transportation for his clients. Also 12 AAC 38.180 "Guiding Ethics" lists activities that are not condoned by the guide profession, including misrepresenting accommodations and rates, not cooperating with peace officers, making guarantees of success, failing to maintain an adequate camp and facilities, etc. Arguably, all these actvities, though they may not necessarily occur while in the field and hunting, must relate to a "contract hunt", i.e. a hunt for hire.

Putting all the above statutes and regulations together, it appears that a guide, in his professional capacity, performs many functions that go beyond the act of "guiding", i.e. hunting or attempting to direct a client to game. A guide is acting in his professional capacity when he writes letters describing his services, rates and accommodations. Similarly he acts in his professional capacity when he prepares the trophies, antlers, horns, etc. taken by his clients. Also a guide acts in his professional capacity when he insures that all meat of trophies are taken and salvaged in accordance with state law. A guide is not, however, legally "guiding" after the hunt is over (i.e. after game is killed), but he is still performing professional services encompassed by the broad licensing powers of the Guide Board -- he could be subject to civil disciplinary actions, not criminal prosecution.

In summary, when a guide performs any of the above-described activities associated with the professional guide, he is subject to disciplinary action against his professional license, but is not subject to criminal prosecution unless he violates a state fish and game or guide law or

regulation, fails to have a current hunting and fishing license, fails to report a violation by his client, or hires more than three assistants. AS 08.54.210.

E. It is unlawful to transport without transporter license. Transporter licenses are required pursuant to AS 08.54.142 and .144. "Transport" is defined in AS 08.54.210(5):

> "transporting" or the "activity of transporting" means conveying a person by any lawful means to an area for remuneration or material benefit in excess of normal operating costs, when the primary purpose of the person being conveyed is the taking of big game and the associated removing of big game meat and parts of big game after big game has been taken; big game as used in this paragraph means game which, if taken by a nonresident, would require a big game tag. [Emphasis added.]

The key concepts in this definition are (1) the person transporting is charging more than the tariff rate for air taxi flying or more than normal operating costs; (2) the primary purpose or intent of the person being transported is to hunt big game; (3) unlike the definition of "guiding", transporting is limited to big game.

Big game is defined in 5 AAC 90.020(3) to include:

> black bear, brown and grizzly bear, polar bear, bison, caribou, Sitka blacktail deer, elk, mountain goat, moose, musk oxen, mountain or Dall sheep, wolf and wolverine.

The definition of "transporting" further limits big game to those species for which a nonresident must have a tag. This refers to AS 16.05.340(9) "License and tag fees" which provides:

> A nonresident may not take a big game animal without previously purchasing a numbered, nontransferable, appropriate tag, issued to him as provided in (16) of this subsection.

The tags listed in AS 16.05.340(16) include black bear, brown or grizzly bear, polar bear, bison, caribou, deer,

elk, goat, moose, sheep, walrus, wolf and wolverine. The one species that does not appear both in 5 AAC 90.020(3) and AS 16.05.340(a) is musk oxen, which is hunted by permit only and tags are provided if a season is open. AS 16.05.350.

In summary, those activities for which a person must hold a current transporter license include:

> to convey a person for the primary purpose of hunting big game or to remove the parts of big game taken, when the price charged for the service reflects more than the normal operating cost of the transportation.

F. Example of guiding without a license A person who performs the above actions relating to transporting or guiding as it is defined for criminal cases without a license could be prosecuted under AS 08.54.210. By this analysis, an alien, for example, who offers a package hunt for Swedes or Germans for moose in Alaska and either personally or through an assistant, aids the hunters to take the game, and who charges for the service more than the normal operating costs of transportation to the field, is guilty of guiding and transporting without a license.

Question No. 2. If the state chose to pass legislation setting different tag fees and guide requirements for aliens as opposed to non-resident U.S. citizens, what court tests would it have to pass? How should the legislation be drafted so as to maximize the possibility of surviving judicial review?

Summary Answer: A state law that discriminated against aliens by charging them a higher hunting license fee would be subject to strict judicial scrutiny and would have to be the least drastic means of furthering a compelling state interest.

Analysis of this rather complex question requires several steps: (1) Who is an "alien"? (2) What is the basis for classifying aliens differently from U.S. citizens? (3) What state interest is protected?

A. Aliens Defined. An alien is defined generally as a citizen or subject of a foreign state or a foreign government (see Black's Law Dictionary, at 95 and DeCano v. State, 110 P.2d 627 (Wash. 1941)). The Board of Fisheries defines "alien" in 5 AAC 39.975 as:

> [A] person who is not a citizen of the United States, and who does not have a petition for naturalization pending before the district court.

An alien may be a resident alien or a non-resident alien, and may live legally in the United States even though he is not naturalized. Aliens living within the United States are granted certain protections (to make contracts, sue and be sued, be protected by law enforcement, etc.) and as a result they owe a temporary and local allegiance to the country in which they reside.

B. Basis of Challenge to Laws that Discriminate Against Aliens. Whether a law that discriminates against an alien will withstand constitutional scrutiny may depend on whether the alien is: (1) an alien not lawfully in the state; (2) a non-resident alien; or (3) a resident alien.

Probably a law prohibiting an alien not lawfully in the U.S. from taking fish and game would be upheld under a state's police powers. (See, e.g., AS 16.05.905, prohibiting aliens not lawfully admitted to the U.S. from engaging in commercial fishing or taking marine mammals in territorial waters.)

Laws or regulations that discriminate against a non-resident alien, a non-resident citizen, or a resident alien, are subject to attack under:

(1) Article IV § 2 of the U.S. Constitution - privileges and immunities;

(2) 14th Amendment of the U.S. Constitution - equal protection;

(3) Article I § 8 of the U.S. Constitution - commerce clause; or

(4) Article VI, U.S. Constitution - supremacy clause.

Analysis of the constitutionality of the law or regulation depends on which constitutional challenge is raised.

(1) Privileges and Immunities. A law or regulation aimed directly at aliens could not be overturned under the privileges and immunities clause, because that clause protects only citizens. Similarly, a law that discriminated against non-resident American citizens by restricting or prohibiting them from sport hunting might arguably withstand a privileges and immunities challenge on the grounds that sport hunting, unlike commercial fishing, is not a right of citizenship to be protected, but is merely a privilege.

The test applied by the U.S. Supreme Court to determine whether a law that discriminates against non-residents violates the privileges and immunities clause was set out in Toomer v. Witsell, 334 U.S. 385 (1948). The court there struck down a South Carolina shrimp fishing law that charged non-residents one hundred times the resident license fee for shrimping in its three-mile coastal waters. The court distinguished its earlier decision, McCready v. Virginia, 94 U.S. 391 (1876), (which had upheld a law allowing Virginia citizens only to plant oysters in state tidal waters) on the grounds that McCready involved non-migratory fish in inland waters and that it was based on an outdated "ownership" theory of fish game. The court then held that the ability to engage in commercial fishing is a right protected by the privileges and immunities clause, and that no law may discriminate against non-citizens (of the state) unless "there is something to indicate that non-citizens constitute a peculiar source of the evil at which the statute is aimed" Toomer, supra at 398.

In a subsequent case, the U.S. Supreme Court addressed a similar privileges and immunities challenge to a Montana law that charged non-residents a higher hunting license fee. The court in Baldwin v. State Fish and Game Commissioner, ___U.S.___, 98 S.Ct. 1852 (1978) upheld the scheme, on the ground that the privileges and immunities clause does not encompass recreational sport hunting:

> Some distinctions between residents and non-residents merely reflect the fact that this is a Nation composed of individual States, and are permitted; other distinctions are prohibited because they hinder the formation, the purpose, or the development of a single union of those states. Only with respect to those "privileges" and "immunities" bearing upon the vitality of the Nation as a single entity must the State treat all citizens, resident and non-resident, equally.... Equality in access to Montana elk is not basic to the maintenance or well-being of the Union. ___U.S. at 98 S.Ct. at 1861-62.

Thus the initial test for a privileges and immunities challenge is whether the law affects a right to engage in a livelihood or whether the activity is merely recreational and a sport. If the latter, a privileges and immunities challenge will not prevail.

(2) Equal Protection Under 14th Amendment. State laws that discriminate against aliens or non-residents must withstand a different test when challenged under the "equal protection" clause of the 14th Amendment.

First, the court must determine whether the class discriminated against is "inherently suspect" or if the law affects a "fundamental right." If so, the court will "strictly scrutinize" the intent and purpose of the law to establish whether there is a "compelling state interest" that necessitates the law and that the law is the least drastic means to further that interest. Dunn v. Blumstein, 405 U.S. 330 (1972). If the classification is not "suspect," and the right not "fundamental" the court will restrict its review of the law to a determination whether the law and the classification it establishes is "rationally related to a permissible state interest."

The Court in Baldwin, supra, at 1862 concluded that recreational hunting was not a "fundamental right" (for purposes of privileges and immunities analysis which protects a longer list of rights than does the equal protection clause. (Hicklin v. Orbeck, 565 P.2d 159, 168 n.16 (Alaska 1977), rev'd on the grounds ___U.S.___, 57 L.Ed.2d 397 (1978)). However, the class of aliens (regardless of residency) has been held to be a suspect class for state laws, though not federal laws. Mathews v. Diaz, 426 U.S. 67 (1976), Sugarman v. Dougall, 413 U.S.634 (1973) (civil service); Takahashi v. Fish and Game Commission, 334 U.S. 41[illegible] (1948) (commercial fishing); Frovlov v. Delo, 383 N.Y.S.2d 470 (N.Y. 1976) (hunting license). Thus, in order to uphold a law that discriminated between resident citizens and resident aliens, the state would have to show that distinguishing the class of aliens was necessary to further a compelling state interest. Frovlov, supra, at 472; Takahashi, supra at 416-17. A classification based solely on alienage must thus correspond to the class from which an "evil" is to be feared. Patsone v. Commonwealth of Pennsylvania, 232 U.S. 138 (1914) (upholding a state law prohibiting aliens from killing game for sport and to that end making possession of shotguns by aliens unlawful).

It may thus be more difficult to demonstrate that a law directed at aliens only is directed at the primary source of the problem. The court in Takahashi, supra at 419 held:

> The protection of this section [8 U.S.C. § 41 relating to rights of all persons under U.S. Jurisdiction] has been held to extend to aliens as well as to citizens. Consequently the section and the Fourteenth Amendment on which it rests in part protect "all persons" against state legislation bearing unequally upon them either because of alienage or color...The Fourteenth Amendment and the laws adopted under its authority thus embody a general policy that all persons lawfully in this country shall abide "in any state" on an equality of legal privileges with all citizens under non-discriminatory laws. [Footnotes omitted.]

The court concluded that the power of a state to apply its laws exclusively to alien inhabitants is "confined within narrow limits." Takahashi, supra at 420.

Applying this language to an Alaska law that would bar aliens from hunting, or otherwise restrict their ability to engage in sport hunting, its validity would depend in part on whether the privilege of sport hunting is encompassed by the privileges citizens can also enjoy. Arguably, sport hunting is not such a privilege enjoyed by all citizens, but is a special privilege that may be restricted to state citizens in order to protect the resource. In Patsone v. Pennsylvania, 232 U.S. 138 (1914) (cited in Takahashi, supra at 410) the Supreme Court sustained, against Fourteenth Amendment due process and equal protection challenges, a state law barring aliens from hunting wild game in the interest of conserving game for citizens of the state. The distinction between the Patsone and Takahashi cases apparently was that in Patsone the court found no conflicting federal law or treaty, that the privilege of taking wild game was not a right of citizenship, and a state could keep game for its own citizens. (Citing Geer v. Connecticut, 161 U.S. 519 (1896)).

Takahashi, suggests that to earn a living by fishing is a right of citizenship, and that:

> To whatever extent the fish in the three-mile belt off California may be capable of ownership by California, we think that "ownership" is inadequate to justify California in excluding any or all aliens who are lawful residents of the state from making a living by fishing in the ocean off its shores while permitting all others to do so.

Based on the Takahashi case, it appears that a law directed at non-residents, rather than aliens (whether resident or non-resident), would be easier to justify.

Earlier analysis used to uphold state laws directed at non-residents (citizen or alien) relied on the theory of "state ownership" of fish and game resources. In re Eberle, 98 F. 295 (7th Cir. 1899) (upholding state law charging non-residents a much higher hunting license fee); State v. Tower, 24 A. 898 (Me. 1892) (upholding a state law forbidding non-residents from hunting in the state).

The "state ownership" theory is that the wild game (and fish) in a state is the property of the state under its "sovereign ownership." Patsone v. Pennsylvania, 232 U.S. 138 (1914) (no resident aliens may hunt deer); McCready v. Virginia, 94 U.S. 391 (1877) (state title to oysters in tide waters). This analysis has, in recent years, been severely eroded, although not overruled. Fish that migrate have been deemed not the state's property, Toomer v. Witsell, 334 U.S. 385 (1948) and state laws prohibiting aliens from commercial fishing in territorial waters, when the aliens held a federal gear license, have been stricken. Douglas v. Seacoast Products, Inc., 431 U.S. 265 (1977). Although the ownership theory has been deemed "but a fiction," Toomer v. Witsell, 334 U.S. 385, 402 (1948), and a "slender reed," Missouri v. Holland, 252 U.S. 416, (1920), nevertheless it has not been overruled.

Courts today have, however, tended to replace "ownership" concepts with the principle that under a state's police powers, the state is trustee of the fish and game within its borders and may take reasonable measures to protect and manage it. Baldwin, supra at 1864 (Burger concur.); State v. Kemp, 44 N.W.2d 214 (S.D. 1950), dis'd 340 U.S.923 (1951) (U.S. S.Ct.dis'd for want of "substantial federal question" a South Dakota law excluding non-resident from hunting migratory waterfowl.)

Alaska's supreme court has taken a similar approach to protection of its natural resources. The court in Hicklin v. Orbeck, 565 P.2d 159 (Alaska 1977) struck down the durational (one year) residency requirement for pipeline jobs, on the grounds that, under equal protection analysis, a "fundamental right" (travel or migration) was infringed upon and the law must be strictly scrutinized; however the court also upheld a non-durational residency provision, claiming the right to work is not a fundamental right, and therefore the law must merely "bear a fair and substantial relation to a permissible state interest." Hicklin, supra at 167. The court relied on McCready v. Virginia, 94 U.S. 391 (1877) and the Alaska Constitution Art. VIII § 2, that holds Alaska's natural resources for the benefit of her people, to conclude that the natural resources of the state "belong" to Alaskans "in a way that, in our federal system, Alaska's society and economy in general do not." Hicklin, supra, at 169. The United States Supreme Court reversed the state decision in Hicklin v. Orbeck, ___ U.S. ___, 57 L.Ed.2d 397 (1978), however, stating that Alaska's hire law violates

the privileges and immunities clause because the state failed to show that non-residents are "a peculiar source of the evil" and because the Alaska hire preference does not bear a substantial relationship to the problem. The Supreme Court further held that the theory of state ownership of its resources does not remove a law concerning that resource from the prohibitions of the privileges and immunities clause

The analysis suggested by the above equal protection cases, assuming "strict scrutiny" is not used, is whether the state can present sufficient evidence that the discriminatory law is justified by problems that class creates. For example, the court in Baldwin, supra found that residents contributed to the feeding of elk, that non-resident hunting pressure threatened the resource, and that the law was supportable on these and similar grounds. In contrast, the court in Gullaney v. Anderson, 342 U.S. 415 (1952) struck down a territorial fishing law that required aliens and non-residents to pay higher fishing license fees; the court found no evidence that the higher fee represented actual compensation to the state for a higher enforcement burden, but did not rule out the possibility that this could be a legitimiate basis for discrimination. Thus the "rational basis" for the law was not established, and it failed constitutional scrutiny.

(3) Supremacy Clause: Art. VI § 2. Constitutional challenges to discriminatory state laws based on the supremacy clause fall into two categories: first, laws directed at aliens that conflict with rights granted to aliens under federal laws or treaties; second, state laws that impinge upon a federally granted license or privilege. Both types of cases receive the analysis discussed by the court in Takahashi, supra: no law that conflicts with a treaty, or with a particular federal right or privilege, will survive U.S. Supreme Court scrutiny. Federal legislation pre-empts state law in fields that have been traditionally occupied by the states only where there is a manifest intent of Congress. This has been held to include federal vessel licenses to engage in fisheries. Douglas v. Seacoast Products, Inc., 524 ed.2d 204. See also Kleppe v. New Mexico, 426 U.S. 529 (1976) which struck down a state wild burro law that "conflicted" with a federal law protecting the animals on federal lands.

Assuming there is no overriding federal law involved, a state could pass a discriminatory law if it is based on, and rationally related to, a valid state interest. Since the Baldwin court has concluded that sport hunting is not a fundamental right of citizenship, a sport hunting law aimed at restricting non-residents or aliens would probably survive a challenge under the supremacy clause.

(4) Commerce Clause; Art. I § 8. A state law that restricted access by non-residents or aliens to a resource and thereby detrimentally affected interstate commerce, could be struck down under the commerce clause. For example, the court in Douglas v. Seacoast Products, Inc., ___U.S.___, 52 L.Ed.2d 304 (1977) held that Congre s had the power to regulate the taking of fish in state waters where there was some effect on interstate commerce. The court struck down a Virginia law that limited the right of non-residents and aliens to catch fish in territorial waters.

It is unlikely that this analysis would find a similar sport hunting law invalid, since the Baldwin court has held sport hunting to be a purely recreational activity, not a source of livelihood.

Summary. Whether Alaska could pa s a constitutionally supportable law or regulation that restricted the ability of non-residents or aliens from taking game would depend on whether the state could gather enough evidence showing the need to protect this resource and showing that the non-residents or aliens were a specia threat.

The evidence to look at includes: the higher tax burden borne by state residents, which taxes support game management; the likelihood of enforcement problems generated by aliens or non-residents; the likelihood of non-residents or aliens not abiding by, or being familiar with, state game laws; dangers to non-residents and aliens unfamiliar with climate, terrain, wildlife habits [see attached article on point]; the need to limit the overall take of the species; protection of game and conservation purposes.

If the state simply charges a higher license fee to non-residents, the evidence to support this will be easy to supply. If only aliens are charged a higher fee, the burden will be much higher on the state. [The burden of proof is on the one who challenges the law, of course, but once the discrimination is established, the state must defend the classification.]

A second possibility for legislation would be to require all aliens to be accompanied by guides. If directed only at aliens and not non-resident citizens, it would be necessary to demonstrate that aliens present a different danger to the game (because of language barriers making it difficult to comprehend rules, training, allegiance to laws, culture, or other reasons).

The easier-to-justify approach would be to require all non-residents (aliens or citizens) to be accompanied by guides. The justification then would rest on: greater likelihood of violations due to unfamiliarity with laws; costs of enforcement and need to have the guide function as a person responsible for the legality of the hunt; danger to the non-resident who is not familiar with weather, terrain, and animals, and the likely cost to the state of aiding non-residents in distress.

One problem with the required guide approach is that as the law (AS 16.05.407) now stands guides are only required for brown bear, grizzly bear, polar bear and sheep. This makes it difficult to justify a guide requirement based on safety of the hunter, since it does not include goat, moose and other species that present as great or greater potential hazards to the hunter, in terms of terrain, weather, etc. Thus AS 16.05.407 would have to be expanded to include all species.

In State v. Jack, supra, the supreme court in Montana struck down a state law requiring guides for non-residents on national forest, wilderness or game refuge lands or state game refuges. The basis for the decision was that because the law did not apply to deer and antelope, it could not be based on legitimate safety needs, and therefore had no reasonable connection with the classification.

In conclusion, although the Supreme Court has severely eroded a state's sovereign ownership of game, it has not ruled out the possibility of establishing a constitutionally sound law reserving sport hunting to resident citizens. In order to draft a supportable resident law or regulation, the state or state board must demonstrate clearly that the purpose of the discriminatory law is strictly related to valid biological interests, essential state management goals and similar unimpeachable motives and that the law does not conflict with established federal laws or treaties.

April 8, 1980 Action Taken by Game Board, Spring Meeting 1980

from Bob Hinman, ADF&G, Game Division

Unit 22	Resident Sept. 1-Oct. 10 Apr. 25-May 25	One bear every four regulatory years, provided that the taking of cubs and sows accompanied by cubs is prohibited.
	Nonresident Sept. 1-Oct. 31 May 10-May 25	One bear every four regulatory years by drawing permit only, provided that the taking of cubs and sows accompanied by cubs is prohibited. 20 permits will be issued, 14 for the fall season and 6 for the spring season. See 5 AAC 81.055 and separate permit hunt supplement.
Unit 23	Resident Sept. 1-Oct. 10 Apr. 25-May 25	One bear every four regulatory years, provided that the taking of cubs and females accompanied by cubs is prohibited.
	Nonresident Sept. 1-Oct. 31 May 10-May 25	One bear every four regulatory years by drawing permit only, provided that the taking of cubs or sows accompanied by cubs is prohibited. 25 permits will be issued, 17 permits for the fall season and 8 for the spring season. See 5 AAC 81.055 and separate permit hunt supplement.

No other changes in seasons or bag limits in GMU 24, 25, or 26

Ralf

No change:

GMU 24: Permit by drawing in one portion; 40 permits; rest is open.
GMU 26C, portion of 25: 48 permits, not more than 10 in the Arctic Nati'l. Wildlife Range; rest of 25 is open.
GMU 26A: 24 permits by drawing. GMU 26B: 16 permits by drawing.

HB 876

or disciplinary action. No person licensed under this chapter may hire or work for a guide whose license is suspended or revoked under this section.

(e) If the board revokes a license it shall notify the Department of Revenue, and the person whose license has been revoked shall return the license to the Department of Commerce and Economic Development. (§ 1 ch 17 SLA 1973; am § 2 ch 43 SLA 1975; am § 5 ch 106 SLA 1976; am § 47 ch 218 SLA 1976)

Effect of amendments. — The 1975 amendment substituted "Department of Commerce" for "Department of Fish and Game" in subsection (e).

The first 1976 amendment inserted "or transporting" in subsection (d).

The second 1976 amendment substituted "Department of Commerce and Economic Development" for "Department of Commerce" at the end of subsection (e).

Editor's note. — Section 10, ch. 106, SLA 1976, provides: "Nothing in this Act gives a person licensed as a transporter a right as an air carrier which he does not otherwise hold under law."

Sec. 08.54.210. Unlawful acts. (a) It is unlawful for

(1) a master guide, registered guide, class-A assistant guide, assistant guide or transporter to fail to timely report to the Department of Public Safety, division of fish and wildlife protection, and in no event later than 30 days, violations by a client of a state fish, game or guiding statute or regulation;

(2) a master guide, registered guide, class-A assistant guide, assistant guide or transporter to aid the commission of a violation of this chapter or of AS 16.05 or a regulation promulgated under either chapter, or permit the commission of a violation in his sight without attempting to prevent it, short of using force, and without reporting it;

(3) a person to guide or transport as defined in this chapter without being licensed under this chapter and without having the license in his actual possession; however, for purposes of transporting by air, in the case of a corporation, company, partnership or other business entity, the license may remain at the principal place of business of the business entity;

(4) a person to advertise as or represent himself to be a licensed master guide, registered guide, class-A assistant guide, assistant guide or transporter without being currently licensed, or to falsely advertise services;

(5) a person to guide as defined in this chapter without having a current valid hunting and fishing license in his possession.

(6) a master or registered guide to employ or have under his supervision more than three assistant guides at the same time.

(7) a person to guide as defined in this chapter without paying a fee as prescribed in AS 16.05.340(e).

(b) A person who violates (a)(1) — (6) of this section is guilty of a misdemeanor and upon conviction is punishable by a fine of not more than $1,000 or by imprisonment for not more than one year, or by both,

and may have his license revoked for a period up to five years. However, a person who engages in guiding or transporting activity during the period his license is suspended or revoked under this chapter is guilty of a felony punishable, upon conviction, by a fine of not more than $5,000 and by imprisonment for not less than one year nor more than three years. In addition to punishment for a felony, all guns, fishing tackle, boats, aircraft, automobiles or other vehicles, camping gear and other equipment and paraphernalia used in, or in aid of, guiding or transporting activity engaged in during the period of suspension or revocation shall be confiscated by persons authorized to enforce this chapter. A person who violates (a)(7) of this section, upon conviction, is subject to the same license revocation provision as for a violation of (a)(1) — (6) of this section and, in addition, is punishable by a fine of not more than $5,000, or by imprisonment for not more than one year, or by both. (§ 1 ch 17 SLA 1973; am §§ 3, 4 ch 43 SLA 1975; am § 6 ch 106 SLA 1976; am § 3 ch 133 SLA 1976; am §§ 5, 6 ch 268 SLA 1976)

Effect of amendments. — The 1975 amendment substituted "Department of Public Safety, division of fish and wildlife protection" for "Department of Fish and Game" in subsection (a)(1) and, in subsection (b), deleted "outfitting or" preceding "guiding activity," substituted "his license is suspended or revoked under" for "of disciplinary action under § 200(e) of," and inserted "upon conviction" in the second sentence, deleted "under § 200(e) of this chapter" following "for a felony," and substituted "guiding activity engaged in during the period of suspension or revocation" for "a violation of § 200(e) of this chapter" in the third sentence.

The first 1976 amendment, in subsection (a), substituted "assistant guide or transporter" for "or assistant guide" in paragraphs (1), (2) and (4), deleted "fish and game" following "division of fish and wildlife protection" in paragraph (1), inserted "or transport" near the beginning of paragraph (3). In subsection (b) the amendment inserted "by" preceding "imprisonment" in the first sentence, and inserted "or transporting" in the second and third sentences.

The second 1976 amendment added paragraph (6) of subsection (a).

The third 1976 amendment added paragraph (7) of subsection (a), and in subsection (b), inserted "(a)(1) — (6) of" in the first sentence and added the fourth sentence.

While none of the 1976 amendments gave effect to the others, all have been given effect in this section as it is set out in this Supplement.

Editor's note. — Section 10, ch. 106, SLA 1976, provides: "Nothing in this Act gives a person licensed as a transporter a right as an air carrier which he does not otherwise hold under law."

Legislative committee report. — For report on ch. 268, SLA 1976 (FCCS HCS CSSSSB 335), see 1976 House Journal p. 910.

Sec. 08.54.220. Injunction against unlawful action. When in the judgment of the board a person or corporation or other entity has engaged in an act in violation of § 130 and §§ 200 — 210 of this chapter or the regulations promulgated under them, the board may apply to the appropriate court for an order enjoining the act. Upon a showing by the board that the person is engaging in the act, the court shall grant injunctive relief or other appropriate order without bond. (§ 1 ch 17 SLA 1973; am § 5 ch 43 SLA 1975)

Effect of amendment. — The 1975 amendment substituted "§ 130 and §§ 200 — 210" for "§§ 100 — 200" and "them" for "§ 80 of this chapter" in the first sentence.

(20) Unit 20, Fairbanks-Central Tanana: that area drained by the Tanana River and its tributaries north of Unit 13 and downstream from the boundary of Unit 12 to the confluence of the Tanana and Yukon Rivers and the tributaries draining into the south bank of the Yukon River from its confluence with the Tanana River to the Alaska-Canada boundary, including the Alaska drainage of the Ladue and Fortymile Rivers

(A) Subunit 20(A) – that portion of Unit 20 bounded on the east by the Delta River from the boundary of Unit 13 to the Tanana River; bounded on the north by the north bank of the Tanana River from the confluence of the Delta River downstream to the confluence of the Totatlanika River; bounded on the west by the Totatlanika River from its confluence with the Tanana River upstream to Dexter Creek, then up the East Fork of Dexter Creek to its source, then south along the divide between the Healy River and Wood River drainages along the west bank of Dean Creek to the south bank of the Yanert River, then downstream along the south bank of the Yanert River to Moose Creek, then up the east bank of Moose Creek and the East Fork of Moose Creek to the boundary of Unit 13;

(B) Subunit 20(B) – that portion of Unit 20 draining into the north side of the Tanana River between the Little Salcha River and the Tolovana River; the area represented includes the north drainages of the Little Salcha River, the entire drainages of the Chena and Chatanika Rivers, including Washington Creek and the Tatalina River, and the south drainages of the Tolovana River from its confluence with the Chatanika River to the Tanana River;

(C) Subunit 20(C) – that portion of Unit 20 not described as Subunit 20(A), 20(B), 20(D) or 20(E);

(D) Subunit 20(D) – that portion of Unit 20 draining into the south side of the Tanana River from the Delta River to the Unit 12 boundary;

(E) Subunit 20(E) – that portion of Unit 20 draining into the south bank of the Yukon River upstream from and including the Charley River drainage and including the Ladue River drainage within Alaska.

(21) Unit 21, Middle Yukon: that area draining into the Yukon River from the Paimiut-Kalskag portage upstream to but not including the Tozitna River drainage on the north side of the Yukon River and up to but not including the Tanana River drainage on the south side of the Yukon River; the Koyukuk River upstream to and including the Dubli River drainage;

(22) Unit 22, Nome: that part of the Seward Peninsula and adjacent mainland drained by all streams flowing into Kotzebue Sound, Bering Strait, and Norton Sound from but not including the Goodhope River drainage on the north, to but not including the Pastolik River drainage on the south; King, Little Diomede, St. Lawrence, Sledge, Stuart, and adjacent islands;

(23) Unit 23, Kotzebue Sound: that area drained by all streams flowing into the Arctic Ocean and Kotzebue Sound from Cape Lisburne on the north to and including the drainage into the Goodhope River on the south;

(24) Unit 24, Koyukuk: that area drained by the Koyukuk River and its tributaries upstream from but not including the Dubli River drainage;

(25) Unit 25, Fort Yukon: that area draining into the north bank of the Yukon River, including islands in the Yukon River, upstream from and including the Tozitna River drainage to the Alaska-Canada boundary;

(26) Unit 26, Arctic Slope: that area drained by all streams and rivers flowing into the Arctic Ocean between Cape Lisburne and the Alaska-Canada boundary; and the Firth River drainage lying within Alaska

(A) Subunit 26(A) – that portion of Unit 26 lying west of the west banks of the Colville and Anaktuvuk Rivers from the Arctic Ocean to Anaktuvuk Pass;

(B) Subunit 26(B) – that portion of Unit 26 lying east of Subunit 26(A) and west of the west banks of the Canning River and Marsh Fork of the Canning River between the Arctic Ocean and Carter Pass;

(C) Subunit 26(C) – that portion of Unit 26 lying east of Subunit 26(B).

Authority: AS 16.05.255(1),(2) and (7)

5 AAC 90.020. DEFINITIONS. In chs. 81 through 90 of this title

(1) "airport" means an Alaska airport listed in the Federal Aviation Agency Alaska Airman's Guide and chart supplement;

(2) "bag limit" means the greatest number of game species permitted to be taken by any one person in the unit or portion of a unit in which the taking occurs; however, additional numbers of a species may be taken in another designated open unit or portion of a unit where a greater limit on that species is prescribed; in no case may the total or cumulative bag for one person exceed the limit set for the unit or portion of a unit in which the additional game was taken;

(3) "big game animals" includes black bear, brown and grizzly bear, polar bear, bison, caribou, Sitka blacktail deer, elk, mountain goat, moose, muskoxen, mountain or Dall sheep, wolf and wolverine;

(4) "camp" means a structure erected for the purpose of providing overnight shelter and equipped with bedding and eating facilities for occupants;

(5) "closed season" means the time during which game may not be taken;

(6) repealed (7/2/75, Reg. 54).

(7) "cub bear" means a brown, grizzly or polar bear in its first or second year of life, or a black bear (including the cinnamon and blue color phases) in its first year of life;

(8) "fur animals" includes beaver, coyote, arctic fox, red fox, lynx, marten, mink and weasel, muskrat, land otter, sea otter, raccoon, red squirrel, flying squirrel, ground squirrel and marmot, wolf and wolverine, excepting domestically raised fur animals;

(9) "highway" means the driveable surface of any constructed road;

(10) repealed (7/2/75, Reg. 54);

(11) "motorized vehicle" means a motor-driven land, water or air conveyance;

(12) "open season" means the time during which game may lawfully be taken; each period of time prescribed as an open season includes the first and last days of the period prescribed;

(13) "poison" means any substance which is toxic or poisonous upon contact or ingestion;

(14) "raw ivory" means a walrus tusk (upper canine tooth) which has not been endowed with functional, cultural or aesthetic qualities by altering its natural form or surface through carving, drilling, cutting, filing, or engraving; raw ivory is not altered, in the connotation of this definition, by surface polishing or for a head mount; the latter consisting of ivory (tusks) in a skull or part of a skull;

(15) "regulatory year" means July 1 to June 30, inclusive;

(16) "seal pup" means a seal that weighs less than 50 pounds;

(17) "second degree of kindred" means the relatives who are parents, grandparents, children, grandchildren and sisters or brothers of the person acting as a guide;

(18) "small game" means all species of grouse, hares, rabbits, ptarmigan and waterfowl, and Wilson or jacksnipe;

(19) "three-quarter curl horn" means the horn of a mature mountain sheep, the tip of which has grown through three-quarters of a circle (270°) described by the outer surface of the horn, as viewed from the side;

(20) "transport" means shipping, carrying, importing, exporting, or receiving or delivering for shipment, carriage or export;

(21) "unclassified game" means all species of game not otherwise classified in these definitions;

(22) repealed (7/2/75, Reg. 54);

(23) "unit" means one of the 26 geographical areas listed under game management units in the

Feb.15,1980

Representative Al Osterback
House of Representatives
Juneau, Alaska
99811

Dear Mr. Osterback,

I have just attended a meeting of the Guide Licensing and Control Board in Juneau on Feb, 13 concerning possible additional curtailment of Guiding activities due to the apparent decline of our Brown Bear population in S.E. Alaska. The actual Bear hunting season on Admiralty Island has now been shortened to 20 days for all practical purposes for spring hunting with the remaining area also shortened to about the same practical hunting time in spring and also curtailed sharply in fall. It would appear that only eliminating the guide busiress entirely or limiting the business to a small percentage of the existing guides, with a small quota divided proportionately, is about all that is really left for additional curtailment. Historically there has been about 60-80 Brown bear taken each year for the past 25 years in S.E. Alaska and this figure is the optimum amount the Dept. of Fish and Game feels can be harvested annually without depleting the Bear population to a dangerous level. The Dept. of Fish and Game would like to hold the level of Brown bear kill at no more than 60 Bear annually with a fifty fifty percentage of the take distributed between guided hunts (non resident) and resident hunters.

Each season it becomes apparent more and more new residents are actively participating in the Bear hunting season to acquire a bear trophy. Until 1977 it cost a resident nothing to take a Brown bear tag and since then it costs only $25.00 for a resident, $250.00 for a non resident. There was general agreement among those present at the meeting that our Bear are being given to the public rather cheaply. If one can afford to spend several hundred dollars to have a trophy prepared by a taxidermist surely a Brown bear tag costing $100 for a resident hunter and a similar increase to $500 or more for a non-resident hunter is not too severe. This also will deter we feel the rapidly snowballing amount of resident hunters who each season participate more and more throughout the area. It also will possibly change the image of taking a Brown bear trophy even by a resident hunter to a respectable challenge of sportsmanship, and a privilege.

realizes that our game in Alaska is not a never ending source of cheap hunting pleasure. Everyone knows that raising the cost of game tags is not a popular idea with one's constituents but it certainly is a much better alternative to limiting hunts than a permit system or drawing.

Marc Jensen, Chairman of the Guide Licensing and Control Board advised the guides present at their meeting to meet as a group with you when it might be convenient for you to give us an audience. However, as you know it costs almost an arm and a leg to remain each additional day in Juneau for each of us and nearly all guides were off and away to their respective towns when the meeting adjourned after public testimony except one or two local Juneau guides. I am hopeful my letter and possibly others from other guides would carry as much weight as would our interrupting your busy schedule to give us an audience where we all showed at once. Thank You.

SUMMARY

(1) RELATED BILLS (SIMILAR OR CONFLICTING)

(2) OTHER AGENCIES AFFECTED BY BILL

(2) a. ORGANIZATIONAL SUPPORT FOR BILL

(2) b. ORGANIZATIONAL OPPOSITION TO BILL

(3) PROGRAM EFFECTS OF BILL

This will be a difficult law to enforce and it will not necessarily reduce the number of bears taken in units 22, 23, 24, & 26. These can easily be claimed from surrounding units bordering these areas. An established guide can easily employ several registered guides and cover their hunts as separate guide operations. The bear sealing certificates are the only records available presently that indicate the name of the guide who assisted in taking a brown bear. A guide's name may not appear on the sealing certificate if his client was a resident. This could stimulate an increase in the number of bears illegally shipped from the state without being sealed.

(4) FISCAL IMPACT ☒ NONE ☐ FISCAL ANALYSIS ATTACHED

(5) AMENDMENTS PROPOSED

AS 08.54.210(b) recommends a change in line 29 to read "shall be forfeited by the court..." instead of "shall be confiscated..." This provides some meaning and force to the penalty.

(6) COMMENTS

The intent could be improved by making a more specific statement regarding prohibited behavior so as to limit guilt to those directly involved.

SHB 878 Fees For Hunting Musk Oxen

AGU 125404

Hearing 7/8/80 - Reported out as CS SSHB 878

CSSSHB 878 "An Act relating to fees for hunting musk oxen."

This bill is intended to permit the Department of Fish and Game and the Board of Game to lower the resident tag fee for musk oxen in certain situations. There are presently 167 musk oxen counted on Nelson Island. This amount of musk oxen has been determined by the Department of Fish and Game to be too many for the habitat. Therefore, it is necessary for some of the musk oxen to be harvested. The people of Toksook Bay and the Central Bering Sea Fish and Game Advisory Committee, meeting in Toksook Bay, requested that the legislature lower the tag fee in order that they be given the opportunity to take these surplus musk oxen for their personal use. The Nelson Island area is very poor in red meat resources and the musk oxen would be a very beneficial supplement to their diet. Presently, the tag fee for residents makes the taking of musk oxen prohibitively expensive. Allowing the Board of Game to lower the tag fee and provide for an open season when a surplus exists would enable these villagers to take musk oxen while providing for a healthy and stable population on the island.

The people of Toksook Bay and the advisory committee decided that they would rather not have a sports hunt of musk oxen on the island. Rather than follow a plan similar to that on Nunivak Island, where local villagers take part in the guiding for musk oxen, the people of Toksook Bay requested that they and the other villagers of the Nelson Island area be able to harvest this surplus in the discretion of the Board of Game. This bill would provide for similar arrangements for other musk oxen herds. Something needs to be done at this time to provide for the welfare of

the musk oxen herd on Nelson Island, this bill provides for the flexibility to harvest the ~~suplus~~ surplus animals according to the desires of the people who have lived with the musk oxen since their transplant from Nunivak Island. It also should be noted ,however, that nothing in this bill is intended to require the Board of Game to reduce or eliminate the resident Big Game Tag for musk oxen in instances such as the Nunivak Island sport hunt in which the Board determines that the $500 resident tag is appropriate.

(A) for each sheep taken over a total of 5 and up to a total of 10 per season — $20;

(B) for each sheep taken over 10 and up to a total of 25 per seasor — $100;

(C) for each sheep taken over 25 per season — $500;

(4) caribou:

(A) for each caribou taken over 5 and up to a total of 10 per season — $20;

(B) for each caribou taken over 10 and up to a total of 25 per season — $100;

(C) for each caribou taken over 25 per seasor — $500. (§ 2 art II ch 94 SLA 1959; am § 1 ch 96 SLA 1959; am §§ 7 — 13 ch 131 SLA 1960; am § 1 ch 16 SLA 1963; am § 1 ch 29 SLA 1963; am § 2 ch 31 SLA 1963; am §§ 2, 3 ch 75 SLA 1964; am § 1 ch 83 SLA 1966; am § 2 ch 32 SLA 1968; am § 1 ch 4 SLA 1972; am §§ 1, 2 ch 180 SLA 1972;(am §§ 2, 3 ch 82 SLA 1974; am § 1 ch 198 SLA 1976; am §§ 1, 2 ch 268 SLA 1976)

Effect of amendments. — The 1974 amendment deleted "fur" following "Fish" in paragraph (15) of subsection (a) and, in subsection (b), inserted "including fur animals" in the first sentence and inserted the present second and third sentences.

The first 1976 amendment added subsection (d).

The second 1976 amendment so changed subsection (a) as to make a detailed comparison impracticable. The amendment also added subsection (e).

Legislative committee reports. — For report on ch. 32, SLA 1968 (HCSCSSB 50 am), see 1968 House Journal, p. 169. For report on ch. 198, SLA 1976 (CSSSSB 565), see 1976 Senate Journal, p. 987, 1976 House Journal, p. 1444. For report on ch. 268, SLA 1976 (FCCS HCS CSSSSB 335), see 1976 House Journal, p. 910.

Sec. 16.05.345. Musk oxen. The department shall issue big game tags for the taking of musk oxen if an open season is declared. The cost of these tags is $500 for residents and $1,000 for nonresidents. The department shall conduct a drawing for permits to take musk oxen. No person is eligible for more than one permit a year. Each application for a permit shall be accompanied by a $10 fee. (§ 1 ch 20 SLA 1969)

Legislative committee report. — For report on ch. 20, SLA 1969 (HB 119 am S), see 1969 House Journal, p. 154.

Sec. 16.05.350. Expiration of licenses and tags. Licenses and tags required under §§ 330 — 430 of this chapter, except the visitor's special sport fishing license and the resident trapping license, expire at the close of December 31 following issuance. The resident trapping license expires at the close of September 30 following the year of issuance. (§ 3 art II ch 94 SLA 1959; am § 1 ch 13 SLA 1964; am § 13 ch 71 SLA 1972)

Legislative committee report. — For report on ch. 71, SLA 1972 (HCSSB 383 am H), see 1972 House Journal, p. 896.

(6) Visitor's special sport fishing license — valid for the period inscribed on the license

(A) For 10-day license 15
(B) For one-day license 5
(7) Nonresident sport fishing license 30
(8) Nonresident hunting license 60
(9) Nonresident hunting and sport fishing license 90

A nonresident may not take a big game animal without previously purchasing a numbered, nontransferable, appropriate tag, issued to him as provided in (16) of this subsection. The tag shall be affixed to the animal immediately upon capture and shall remain affixed until the animal is prepared for storage, consumed, or exported.

(10) Nonresident hunting and trapping license 200
(11) Repealed by § 2 ch 32 SLA 1968.
(12) Repealed by § 2 ch 32 SLA 1968.
(13) Fur dealers:
(A) Resident fur dealer license 50
(B) Nonresident fur dealer license 200
(14) Taxidermists:
(A) Resident taxidermy license 75
(B) Nonresident taxidermy license 200
(15) Fish, fur or game farming license 100
(16) Nonresident big game tags:
(A) Bear, black, each 100
(B) [deleted]
(C) Bear, brown or grizzly, each 250
(D) Bear, polar, each 250
(E) Bison, each 250
(F) Caribou, each 200
(G) Deer, each 35
(H) Elk, each 125
(I) Goat, each 125
(J) Moose, each 200
(K) Sheep, each 250
(L) Walrus, each 250
(M) Wolf, each 50
(N) Wolverine, each 50
(17) Repealed by § 2 ch 32 SLA 1968.
(18) Resident tags for bear, brown or grizzly, each 25
(19) Resident or nonresident permit application fee (all species for which a limited drawing is conducted, except musk oxen) 5
(20) [Effective January 1, 1980] King salmon (Oncorhynchus tshawytscha) and steelhead trout (Salmo gairdneri) sport fishing permit (permit required north of Yakutat only) 5

A person who possesses a 25-cent license under (1) or (5) of this subsection may receive a king salmon and steelhead trout sport fishing

CSSSHB 878 "An Act relating to fees for hunting musk oxen."

This bill is intended to permit the Department of Fish and Game and the Board of Game to lower the resident tag fee for musk oxen in certain situations. There are presently 167 musk oxen counted on Nelson Island. This amount of musk oxen has been determined by the Department of Fish and Game to be too many for the habitat. Therefore, it is necessary for some of the musk oxen to be harvested. The people of Toksook Bay and the Central Bering Sea Fish and Game Advisory Committee, meeting in Toksook Bay, requested that the legislature lower the tag fee in order that they be given the opportunity to take these surplus musk oxen for their personal use. The Nelson Island area is very poor in red meat resources and the musk oxen would be a very beneficial supplement to their diet. Presently, the tag fee for residents makes the taking of musk oxen prohibitively expensive. Allowing the Board of Game to lower the tag fee and provide for an open season when a surplus exists would enable these villagers to take musk oxen while providing for a healthy and stable population on the island.

The people of Toksook Bay and the advisory committee decided that they would rather not have a sports hunt of musk oxen on the island. Rather than follow a plan similar to that on Nunivak Island, where local villagers take part in the guiding for musk oxen, the people of Toksook Bay requested that they and the other villagers of the Nelson Island area be able to harvest this surplus in the discretion of the Board of Game. This bill would provide for similar arrangements for other musk oxen herds. Something needs to be done at this time to provide for the welfare of

the musk oxen herd on Nelson Island, this bill provides for the flexibility to harvest the surplus animals according to the desires of the people who have lived with the musk oxen since their transplant from Nunivak Island. It also should be noted ,however, that nothing in this bill is intended to require the Board of Game to reduce or eliminate the resident Big Game Tag for musk oxen in instances such as the Nunivak Island sport hunt in which the Board determines that the $500 resident tag is appropriate.

CS FOR SPONSOR SUBSTITUTE FOR HOUSE BILL NO. 878

IN THE LEGISLATURE OF THE STATE OF ALASKA

ELEVENTH LEGISLATURE - SECOND SESSION

A BILL

For an Act entitled: "An Act relating to fees for hunting musk oxen."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 16.05.340(a)(16) is amended by adding a new subparagraph to read:

(O) Musk oxen, each 1,000

* Sec. 2. AS 16.05.340(a)(18) is amended to read:

(18) Resident <u>big game</u> tags: [FOR BEAR, BROWN OR GRIZZLY, EACH. . . . . 25]

<u>(A) Bear, brown or grizzly, each. . . . . 25</u>

<u>(B) Musk oxen, each . . . . . .500</u>

<u>However, the Board of Game may reduce or eliminate the fee for a resident big game tag for musk oxen for an open season.</u>

* Sec. 3. AS 16.05.345 is repealed and re-enacted to read:

Sec. 16.05.345. PERMIT APPLICATIONS. (a) If the Board of Game declares an open season for musk oxen and has not reduced or eliminated the $500 resident tag fee under AS 16.05.340(a)(18), the department shall conduct a drawing for permits to take the musk oxen. If the Board of Game declares an open season for musk oxen for which the Board of Game has reduced or eliminated the resident tag fee, the department shall issue permits to take the musk oxen in the order in which applications are received by the department. A person is not eligible for more than one musk oxen permit a year. The department may not charge a fee for an application for a musk oxen permit for an open season in which

the Board of Game has reduced or eliminated the resident tag fee under AS 16.05.340(a)(18). In all other cases the application fee for a musk oxen permit is $10.

(b) Except as provided in (a) of this section, the permit application fee for all species for which a limited drawing is conducted is $5.

* Sec. 4. AS 16.05.340(a)(19) is repealed.

Dear Mr. Osterback:

Re: House Bill No. 878

House Bill No. 878, an Act relating to fees for hunting musk oxen, was introduced in the House on February 15, 1980 and was referred to the House Resources Committee.

For the consideration of the House Resources Committee, I am enclosing copies of Fiscal Notes prepared by Linda Gene Lockridge, Fish and Game Licensing Section, Department of Revenue concerning the proposed legislation.

Sincerely,

R. D. Stevenson

H 60 (Rev. 12/78)

HB 879: An Act Relating to Limited Entry

This bill extends point pooling to the A-Y-K by including freshwater fisheries. If a person applied for two or more limited entry permits under AS 16.43.250 (d) but did not qualify for a permit (same kind of fish, same gear, but different areas), he can pool his points in the fisheries to obtain a permit in the fishery for which he is most qualified. The new section (f) states how, because of the different point threshold levels in salt and freshwater fisheries, a determination of eligibility would be made.

John Williams, of the Commercial Fisheries Entry Commission, has said that this bill would affect less than two dozen people, all of them gillnetters. These are people who traditionally have fished for a living, but have fished in more than one area and are not eligible for a permit in any one area, and so are now out of the fisheries. Since this bill adds so few new permits, it does not run contrary to the stated purpose of Limited Entry, which is to preserve the resource by limiting the number of fishermen. Williams knows of two people who have submitted multiple applicatons in the A-Y-K (one of these fished in Norton Sound and the Kuskokwim). He says it would take a computer search to see how many fished in Bristol Bay and the Kuskokwim or Yukon.

Jess Walters, also of the CFEC, called this bill "a great way to make sure people who have a long but mixed history in fishing can get into the fisheries." This bill does not add new people to the fishery, but is more a clean-up measure to take care of those who moved around, but still fished.

80
45
775

649,239
80,000
45,000
774,239

Information supporting the need for an Act entitled: "An Act making appropriations to the Arctic Environmental Information and Data Center, University of Alaska for socio-cultural research relating to whales and a study of the status of the beluga whale in the waters of Alaska; and providing for an effective date.

During the International Whaling Commission's (IWC) annual meeting in July 1979, a resolution pertaining to the coverage for small cetaceans, which includes beluga or white whales (Delphinapterus leucas) was introduced. Action was deferred to the 1980 IWC Annual meeting.

If the IWC should move to regulate beluga whales, the management, in all likelihood, would be subject to regulations established for aboriginal whaling since no known commercial harvests exist. The IWC expects that the following factors relating to the harvest of bowhead whales shall be documented:

1. The importance of the bowhead in the traditional diet;

2. Possible adverse effects of shifts to non-native foods;

3. Availability and acceptability of other food sources;

4. Historical take;

5. The integrative functions of the bowhead hunt in contemporary Eskimo society and the risk to the community identity from an imposed restriction on Native harvesting of the bowhead; and

6. To the extent possible, ecological considerations.

Should the beluga be subject to similar IWC requirements, little biological or socio-cultural data would be available for consideration in the development of a management regime. A report by V. Gurevich (1979) submitted to IWC notes that no unanimous opinion exists about the range of distribution on seasonal movements of the beluga. No data is available which documents the subsistence value of beluga to coastal inhabitants along the Arctic, Bering Sea, and Cook Inlet. This data would certainly appear necessary in view of possible regulatory actions and also because of pending outer continental shelf petroleum development which would have the potential of affecting beluga and beluga subsistence harvests.

March 31, 1980

HB 915: Marine Mammals management and research appropriation.

This bill provides monies for continuation of work by the Eskimo Walrus Commission for work on walrus and other marine mammmals, and also funding to the North Slope Borough for work with the Alaska Eskimo Whaling Commission on beluga and bowhead whale studies.

Particularly because of the impending 1982 OCS lease sale in the Norton Sound Basin, it is vitally important to have current data on the status of walrus herds. There is evidence now that the herds are experiencing the effects of population stress. The EWC is studying use and dependency of walrus and other marine mammals by Alaska Natives, including socio-economic as well as biological data.

In 1979 marine mammal management was returned to the federal governemnt, with the result that, under the Marine Mammal Protection Act, 1) there is no sport hunting of marine mammals (can only be taken by Natives); 2) marine mammals are to be taken for subsistence use; 3) meat cannot be wasted; 4) marine mammals cannot be taken if that resource is in danger of depletion; and 5) raw ivory can only be sold to Natives.

The federal government will return marine mammal management to the State if certain conditions are agreed upon; currently the feds and state are negotiating. Since Natives are the largest user group, the EWC could provide much-needed Native input.

The state is not enforcing marine mammal management now that the feds have control. The EWC is working on developing and implementing management regulations, enforced by village social pressure; as the AEWC has done with whales.

Now that the state involvement with walrus and other marine mammals has been curtailed, it is important to have some in-state group actively working on research, management and enforcement.

Norton Sound Fish & Game Advisory Committee has requested the resumption of marine mammal research, the assumption by the state of marine mammal management, and the allowance by the feds of sport hunting of walrus on guided hunts.

Monies to the North Slope Borough are for work with the AEWC on research and training programs on whales. In light of the delays of the Beaufort lease sale because of lack of scientific investigation on the impact of oil drilling on whales, the timing of these programs is critical. There has been much concern over the migration patterns and habitat of the bowhead and beluga whales. This program will study the effects of man-made noise, vibration, and other disruptions on whales, and will train and involve Natives in the scientific work.

A very rapid change has occurred in the hunting techniques and equipment used the past few years. There is a decline in the use of skin boats and an increase in aluminum boats. The C.B. radio is in common use for communication between hunters, knowledge of weather changes and as a safety factor. Other remarks on safety were that life preservers and flares should be standard boat equipment, and that boats should be sturdy, seaworthy, and safe for the hunt.

Hunters are frustrated and confused by the see- aw control of walrus management between the State and Federal agencies; and the resulting changes in procedures relating to management controls. This was apparent in the very large majority that favored control by the Eskimo Walrus Commission. The implication is that Native hunters are being used as pawns in the procedural disagreements between the State and Federal agencies.

ESKIMO WALRUS COMMISSION
KAWERAK, INC.
P.O. Box 948
Nome, Alaska 99762 (907) 443-5231

February 1,1980

I was hired by The Eskimo Walrus Commission on the 11th of July,1979 during their meeting held in Nome,Alaska as their Marine Mammal Research Specialist.

Using Mr. Charles H. Johnson's letter dated June 12th,1979 to Dr. Dave Hickok;I developed a rough draft questionaire. I used this very little, since it was not developed adequately in my initial trips to Wales and Little Diomede.I used the scratch pad for the most part on these two trips.

After talking with Ms. Rosita Worl of Arctic Information and Data Center in Nome, I developed a more comprehensive data gathering questionaire.This was also refined with the expertise of Mr. Caleb Pungowiyi, Mr. Charlie H. Johnson, and Mr. Guy Martin.

The majority of the people in my public meetings in the communities visited were reluctant to fill the data gathering questionaires, thinking it was for the Alaska Department of Fish and Game.After I explain to them the project was funded from the Alaska Legislative Body in Juneau for The Eskimo Walrus Commission; the people in the community visited would begin to offer to participate in the research project. When the people understood that they were finally recognized for their vast know--ledge in their subsistence life-style; their self-esteem was bolstered.Many would comment on how they were glad that one of their own was doing the research and not someone from Washington,D.C., or the "Lower 48".

The Time and Funding element is inadequate. When the people that have inhabited the land all their known history are expected to get an adequate picture of themselves in one year, only causes a debasing effect upon them.The recognition of their vast knowledge in their subsistence life -style should be honored by an on-going Monitor--Research position in the recognized representative body such as the Eskimo Walrus Commission.This also should be from one of their own to be relevant to the people represented.

REASON:

As I sent ninety (90) Marine Mammal Research Questionaires to the Community of Togiak, Alaska; the majority of the incomplete data gathering forms were sent back with comments such as:"Why do you want to ask so many questions?"."Are you writing a book?" "Why don't you come in person and ask these questions,then I can answer you in person".

RESULT:

I did not have adequate travel funding to travel in person to explain the project

ESKIMO WALRUS COMMISSION
KAWERAK, INC.
P.O. Box 948
Nome, Alaska 99762 (907) 443-2161

RESULT: (con't)

before asking them to fill out the marine mammal research questionaire. It is not only to gather data; but it demands a whole lot of on-going Public Relations that is desperately needed, just to be in good working relationship with the representa--tive body such as The Eskimo Walrus Commission.

On the brighter side, it is good to see your fellow-man relate to you with a sparkle in his eye;"I'm glad the people in Juneau are finally listening to us before they tell us what to do or not to do in our hunting!".

IS IT WORTH WHILE?

From my own viewpoint as the Marine Mammal Research Specialist I say; we are just beginning a relevant working relationship that has been lacking all these years.Let us keep the good wholesome working relationship going in our "Great Land!!".

Sincerely submitted I remain,

Mr. Carl M. Ahwinona, Sr.

POSITION STATEMENT

We in North West Alaska feel our marine and land animal resources are Very important to us. These resources represent part of an everyday way of life with many of us, not only for food, other subsistence needs and sport, but also for a "Living." Thus, we need to maintain, or where appropriate, increase these resources to facilitate continued utilization.

For this, we need adequate management and research and we feel the State is the proper agency to do so. This requires funding.

We don't want to be left out in the "cold" of N. W. Alaska funding for Fish & Game any longer. As I have said, these resources mean as much or more to the people of this area as any regional population in the world.

With your understanding, we recommend the following specifics:

1) Adequate surveillance of commercial crabbing and herring fishing efforts. We are very concerned about these northern Bering populations. The M. V. Vigilance should be available for patrol during these seasons. Air surveillance would also be helpful.

enforcement needs to be improved also with:

a. A boat that can be used safely along the coastal waters.

b. Air surveillance capability at least during some seasons.

ex. Spring bear hunting and fall bear and moose seasons. Unscrupulous guides could quickly deestimate both populations here because of the nature of the area.

3) A Crab Biologist position is needed in Nome in view of the new commercial harvest in the Northern Bering Sea.

4) Another more realistic crab count and continued research are also needed as some very strange things are happening to the crab population of this area.

5) Resume marine mammal research (Federal-State joint effort if necessary) and

a. Re-establish the Marine Mammal Biologist position in Nome.

b. Push for State control of all marine mammals.

6) Request federal government to allow sport hunting of walrus on guided hunts.

7) Modern fish counting equipment and techniques need to be employed in:

a. Salmon spawning streams for escapement and

b. Herring in the Northern Bering.

8) Another aerial survey of the Arctic caribou herd and continued close management are needed if the herd is ever to return to a significant size so a sizable yearly harvest can again be utilized.

9) Make certain adequate oil spill containment and clean-up capability is present if oil exploration and development occurs in the Bering Sea.

Groups to spearhead bowhead research

Associated Press

Representatives of the Alaska Eskimo Whaling Commission and the Acoustical Society of America will hold a five day meeting in San Diego starting Feb 25 to spearhead a comprehensive research program on the effects of offshore drilling on the endangered bowhead whale.

Eskimo hunters contend that sensitive bowheads could be forced fom their traditional migration paths by the underwater noise caused by offshore drilling. They say they fear a change in migration patterns could leave villages on Alaska's northern coasts without access to the bowhead, important to Eskimos both as a food source and a part of their traditional culture.

North Slope Borough spokesman Jon Buchholdt said the first two days will be devoted to determining what data is already available on underwater sound and the bowhead. The rest of the conference will used to write a protocal stating research objectives for the project and ways it will be accomplished.

Buccholdt claims federal research has been devoted only to justifying quotas imposed on Eskimo subsistence hunting by the International Whaling Commission. "They have wasted millions of dollars on research which is beside the point," he declared.

He said the government has failed to recognize Eskimo subsistence whaling as an industry in itself.

Buchholdt said North Slope Eskimos hope the research project can be incorporated in a settlement with oil companies wishing to drill offshore in the Beaufort Sea. The borough, environmentalists and other local governments in the area are suing to void the recent joint federal-state Beaufort Sea oil and gas lease sale on grounds drilling could threaten marine mammals in the area.

2-15-90

Walrus commission told of possible herd decline

ANCHORAGE (AP)—A U.S. Fish and Wildlife Service spokesman has warned the Eskimo Walrus Commission that increased commercial and industrial activity in the Bering Sea and Bristol Bay will contribute to a steep decline in walrus populations in the next 10 years.

Ted Schmidt, mammal and non-migratory bird coordinator for the Alaska Division of the Service, said the 1980 walrus population is at an all-time high of about 250,000, up from about 50,000 in 1955. He said the population fluctuates naturally, but there will be increased pressures in the next 10 years that may cut the herd to between 110,000 and 150,000 animals.

Schmidt said those pressures include commercial clam fisheries, and oil and gas extraction, plus the effect of increased boat traffic in herring fisheries.

"If the only thing we had to worry about was the present Native harvest, from a biological standpoint I wouldn't be too concerned," Schmidt said. "If you stopped hunting walrus entirely right now, the population is going to come down anyway due to these other factors."

Subsistence hunters will kill an estimated 10,000 walrus per year during the next few years.

Schmidt said the Fish and Wildlife Service believes there is a need for more cooperation between the federal government, the state and Alaska Natives. He said the Service has agreed to form a Pacific Walrus Technical Committee with the Eskimo Walrus Commission and the Alaska Fish and Game Department.

"What we would like to see is more cooperative and management research studies," Schmidt said.

Controversy exists in Alaska because management of walrus herds has been taken from the state and given to Fish and Wildlife under the Marine Mammals Protection Act.

Non-natives are prohibited from possessing or dealing in raw products such as seal skins and ivory. But there are no restrictions on Native subsistence hunting.

Schmidt said he would prefer not to see Native hunting increased. But if hunting remains at the current level between now and 1990, he said it will not adversely affect the walrus population.

In fact, Native subsistence hunting is an element in population control. Schmidt said that when walrus populations reach a high level, as is the case now, the animals "are more or less eating themselves out of house and home at a certain point."

He said there are "fewer healthy animals, lower fecundity and starvation, plus more incidence of disease."

A BILL

For an Act entitled: "An Act making appropriations to the Arctic Environmental Information and Data Center, University of Alaska for socio-cultural research relating to whales and a study of the status of the beluga whale in the waters of Alaska; and providing for an effective date.

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. The sum of $80,000 is appropriated from the general fund to the Arctic Environmental Information and Data Center, University of Alaska to continue the socio-cultural research relating to whales.

* Section 2. The sum of $45,000 is appropriated from the general fund to the Arctic Environmental Information and Data Center, University of Alaska to conduct a review of the historic use, distribution and life history of beluga whales in Alaska waters.

* Section 3. This Act takes effect immediately in accordance with AS 91.10.070 (c).

SUBJECT: Fish tax credit
CSHB 962

TO: House Resources Committee
Attn: Mary Levan, A.A.

FROM: Kenneth E. Vassar
Legislative Counsel KEV

Enclosed is the committee substitute you requested for House Bill 962. The change made in this committee substitute is to make the bill retroactive and applicable to the 1979 tax year. This change raises two questions:

(1) Apparently the intention is that the commissioner of revenue will rebate the amount of the credits which were not taken in 1979 but for which taxpayers would be eligible under this bill, but there is no mechanism in the bill to give the commissioner that power. How can he make these rebates without an appropriation or a fund to draw from?

(2) Assuming the commissioner is able to make the rebates, what effect does this have on the municipalities' share of the proceeds of the tax under AS 43.75.130? The tax credits are a reduction in the tax. Does this also mean the municipalities' shares will be reduced?

My understanding is that these questions will be addressed in the next committee of referral - the finance committee; however, I wanted to make sure you were aware of the questions.

Special Assistant
Department of Revenue

DATE: March 24, 1980

FILE NO:

TELEPHONE NO:

FROM: Gary L. Jenkins
Director
Audit Division

SUBJECT: House Bill No. 962

This bill provides for the establishment of fisheries industry trade associations which would be funded by the State of Alaska through the form of a special tax credit given to fish processors on their fish processing tax returns. Each processor would be allowed a credit on a dollar for dollar basis for contributions to the fishery association in an amount up to 15 percent of the fish processors' tax due.

There would appear to be a legitimate question regarding whether there is a clear need for the State of Alaska to directly fund trade associations for the fishing industry, an industry which, incidentally, is largely dominated by Japanese interests. The fishing industry is already provided income tax incentives to improve their processing facilities in the form of the investment credit, both at the federal and state levels. It should also be noted that any expenditures made by a processor which are in any way a business expense related to processing or marketing of fish products, are tax deductible under the corporate income tax. Further, it would seem logical that all processors would be putting forth maximum effort to produce a product which has the best possible appeal in the market place.

With regard to enhancing the quality of the product itself, the State of Alaska already has inspectors from the Department of Health and Social Services and the Department of Natural Resources working with processors in an effort to ensure proper quality of the product produced.

Inasmuch as every processor doing business in the State of Alaska could form a seafood association as defined in the proposed law, we are requesting one permanent full time Auditor position to handle the auditing functions provided for in the proposed Section 43.75.035(b)(8).

III. ANALYSIS (See Fiscal Note Preparation Instructions, Section III)

The above mentioned assumes that 7% of the taxpayer credits are naturally taken. The basis for the FY 81 data is the forecast in the Revenue Source book which incorporates catch and price projections.

The cost to the general fund in subsequent fiscal years is indeterminate but dependant on varying credits, harvests and prices. It is likely that there will be a slight increase over time in credits taken.

H 60 (Rev. 12/78)

Editor's note. — As to legislative findings and purpose relating to AS 43.75 see §§ 1 and 2, ch. 79, SLA 1979 in the 1979 Temporary and Special Acts and Resolutions and editor's note following AS 43.75.011.

Article 1. Taxe and Licenses.

Section		Section	
10.	[Repealed]	30.	Filing return and payment of tax
11.	Fisheries business license	50.	Violations and penalties
15.	Fisheries business tax	55.	Security for collection of taxes

Sec. 43.75.010. Fisheries business licenses.

Repealed by § 13 ch 79 SLA 1979, effective June 1, 1979.

Cross reference. — For present provisions covering the subject matter of the repealed section, see AS 43.75.011.

Editor's note. — The repealed section derived from § 1, ch. 82, SLA 1949; § 1, ch. 113 SLA 1951; § 1, ch. 146, SLA 1962; §§ 1, 2, ch. 84, SLA 1967.

State license tax on salmon canneries with its revenue sharing provision is not different in kind from general gross receipts tax of Alaska Business License Act. — See Liberati v. Bristol Bay Borough, Sup. Ct. Op. No. 1735 (File No. 3365), 585 P.2d 878 (1978).

There is no general prohibition against like municipal and state taxes. Liberati v. Bristol Bay Borough, Sup. Ct. Op. No. 1735 (File No. 3365), 585 P.2d 878 (1978).

Sec. 43.75.011. Fisheries business license. A person engaging or attempting to engage in a fisheries business shall first apply for and obtain a license as provided in AS 43.75.020. (§ 3 ch 79 SLA 1979)

Effective date. — Section 15, ch. 79, SLA 1979, makes this section effective June 1, 1979, in accordance with AS 01.10.070(c).

Editor's note. — Section 1, ch. 79, SLA 1979, effective June 1, 1979, provides: "FINDINGS. The legislature finds that the state has

"(1) funded and implemented several fisheries-related development programs;

"(2) funded and implemented fishery loan programs;

"(3) increased its fishery protection and management program;

"(4) funded and implemented a limited entry program; and

"(5) embarked on a program of encouraging the development of a bottom fishing industry."

Section 2, ch. 79, SLA 1979, effective June 1, 1979, provides: "PURPOSE. The purposes of this Act are to

"(1) insure that the state is able to continue its efforts toward overall fisheries-related development programs by raising additional revenue to pay for the programs;

"(2) make the imposition of the fisheries tax more uniform among fisheries businesses; and

"(3) provide funding for the development of new fisheries."

HB 962

Sec. 43.75.015. Fisheries business tax. (a) A person engaged in a fisheries business is liable for and shall pay the tax levied by this section on the value of each of the following fisheries resources processed during the year at the rate set out after each:

(1) salmon canned at a shore-based cannery — four and one-half per cent;

(2) salmon processed by a shore-based fisheries business, except salmon for which the tax is due under (1) of this subsection, and all other fisheries resources processed by a shore-based fisheries business — three per cent;

(3) fisheries resources processed by a floating fisheries business — five per cent.

(b) Instead of the taxes levied by (a) of this section, a person engaged in a fishery business which includes processing a developing commercial fish species is liable for and shall pay a tax equal to

(1) one per cent of the value of the developing commercial fish species processed by a shore-based fisheries business during the year; and

(2) three per cent of the value of the developing commercial fish species processed by a floating fisheries business during the year.

(c) A person engaging or attempting to engage in a fisheries business who first actually and physically processes the fishery resource is liable for and shall pay to the department the entire tax imposed by this section. In determining this tax liability, the person may not deduct from the value of the fishery resources processed the value of fishery resources that are canned or processed for other fisheries businesses, but shall include that value as part of the value of the fishery resources processed. (§ 3 ch 79 SLA 1979)

Effective date. — Section 15, ch. 79, SLA 1979, makes this section effective June 1, 1979, in accordance with AS 01.10.070(c).

Sec. 43.75.030. Filing return and payment of tax. (a) A person subject to the tax shall file a return stating the value of fisheries resources processed during the license year, computed as required by this chapter, and such other information as the department prescribes by regulation. The return shall show the license number and shall be signed by the taxpayer or his authorized agent, under penalty of perjury. If a receiver, trustee, or assign is operating the property or business, he shall file the return for the person. A tax due on the basis of such a return shall be collected in the same manner as if collected from the person of whose business he has custody and control.

(e) Every person engaging or attempting to engage in a business for which a license is required under this chapter shall keep records, make statements under oath, file returns, and comply with all regulations which the commissioner of revenue may prescribe.
(am §§ 5, 6 ch 79 SLA 1979)

Effect of amendment. — The 1979 amendment, effective June 1, 1979, substituted "fisheries resources" for "raw fisheries products" in the first sentence of subsection (a), deleted "AS 43.75.010 — 43.75.050 of" preceding "this chapter" in the first sentence of subsection (a) and in subsection (e), deleted "such" preceding

"records," preceding "statements," and preceding "returns" in subsection (e), and substituted "all regulations which" for "such regulations as" in subsection (e).

As the rest of the section was not affected by the amendment, it is not set out.

Sec. 43.75.050. Violations and penalties.

(f) A person who wilfully fails to obtain a license, pay a tax, make a return, keep or display a record, or supply the information at the time required by law or regulation, in violation of this chapter, is, in addition to other penalties provided by law, guilty of a misdemeanor, and upon conviction is punishable by a fine of not more than $1,000, or by imprisonment for not more than one year, or by both, together with the cost of prosecution.

(am § 7 ch 79 SLA 1979)

Effect of amendments.

The 1979 amendment, effective June 1, 1979, deleted "AS 43.75.010 — 43.75.055 of" preceding "this chapter" in subsection (f).

As the rest of the section was not affected by the amendment, it is not set out.

Sec. 43.75.055. Security for collection of taxes. Each applicant for a license under this chapter shall, in or with his application, state under oath the amount of each of the products which he expects to produce during the license year. The applicant shall further state the extent of lienable real property owned by the applicant in the state against which the tax may be collected and other information with respect to description, location and value of the property which the department prescribes. If the lienable value of the property is not equal to three times the amount of the tax for which the applicant will probably be liable under this section, the department may not issue the license until the applicant files with the department a surety bond approved by the attorney general in a penal sum equal to twice the probable amount of the tax for which the applicant will be liable, conditioned upon payment of the tax in full when due, with interest if not paid before delinquency. However, if the applicant purchases salmon for export from Alaska in the round, the amount of the bond is $50,000 unless the applicant is the owner of lienable real property in the state of a value of at least $50,000, and the bond must be conditioned upon payment to the fisherman of the full purchase price for the salmon and the payment of the tax in full when due. The department may waive the bond requirement if the applicant posts other security in the form of collateral acceptable to the department or prepays the estimated tax. (§ 4 ch 84 SLA 1967; am § 8 ch 79 SLA 1979)

Effect of amendment. — The 1979 amendment, effective June 1, 1979, added the present fourth sentence and added "or prepays the estimated tax" to the end of the present fifth sentence.

Special Assistant
Department of Revenue

DATE: March 24, 1980

FILE NO.

TELEPHONE NO.

SUBJECT: CS for House Bill No. 962

FROM: Gary L. Jenkins
Director
Audit Division

This bill provides for the establishment of fisheries industry trade associations which would be funded by the State of Alaska through the form of a special tax credit given to fish processors on their fish processing tax returns. Each processor would be allowed a credit on a dollar for dollar basis for contributions to the fishery association in an amount up to 15 percent of the fish processors' tax due.

There would appear to be a legitimate question regarding whether there is a clear need for the State of Alaska to directly fund trade associations for the fishing industry, an industry which, incidentally, is largely dominated by Japanese interests. The fishing industry is already provided income tax incentives to improve their processing facilities in the form of the investment credit, both at the federal and state levels. It should also be noted that any expenditures made by a processor which are in any way a business expense related to processing or marketing of fish products, are tax deductible under the corporate income tax. Further, it would seem logical that all processors would be putting forth maximum effort to produce a product which has the best possible appeal in the market place.

With regard to enhancing the quality of the product itself, the State of Alaska already has inspectors from the Department of Health and Social Services and the Department of Natural Resources working with processors in an effort to ensure proper quality of the product produced.

Inasmuch as every processor doing business in the State of Alaska could form a seafood association as defined in the proposed law, we are requesting one permanent full time Auditor position to handle the auditing functions provided for in the proposed Section 43.75.035(b)(8).

III. ANALYSIS (See Fiscal Note Preparation Instructions, Section III)

If the proponed bill H B 962 were made retroactive to December 31, 1978 instead of December 31, 1979, as it reads on March 17, 1980 the loss to the general fund would amount to an extra $ 750,000. If this were to be paid in FY 81 the total reduction in FY 81 would amount to approximately two million dollars.

COMPARISON OF CRUDE OIL TAX PROPOSALS

(Prepared by Minority Counsel, Senate Finance Committee)

	SENATE FINANCE COMMITTEE	HOUSE BILL	ADMINISTRATION
LOWER TIER OIL	75 percent of different between base price of $6.00 (adjusted for inflation) and the selling price Applies to released lower tier oil that is below 1.5 percent decline curve Tax phases out by 6 84	Same except tax rate is 60 percent	Tax rate is 50 percent decline curve is 2 percent
UPPER TIER OIL	60 percent of difference between base price of $13.00 (adjusted for inflation) and selling price Tax phases out between 1986 & 1990	Same	Same except tax rate is 50 per cent
NEWLY DISCOVERED OIL	Total exemption for oil discovered on a property which had no production in 1978 (DOE pricing definition)	50 percent of the difference between a base price of $17.00 per barrel (adjusted for inflation plus 2 percent per year) and the selling price up to $26.00 per barrel (adjusted for inflation plus 2 percent per year) and the selling price Tax is permanent Restrictive definition	50 percent of difference between $16 bbl (adjusted for inflation) & the selling price Tax is permanent
TERTIARY OIL	Total exemption for incremental tertiary production Producer can use actual decline rate for post 1978 months before project starts	50 percent of difference between $17.00 (adjusted for inflation plus 2 percent & selling price) Tax terminates on 12 31 90 Applies oil above a level determined by a decline curve of 1 percent a month until project starts 2.5 percent per month once project starts	Same as newly discovered apply only to oil produced by enhanced recovery on case by case basis
ALASKA NORTH SLOPE	Taxes Sadlerochit oil in as Upper Tier Oil (60 percent rate with $13 base price) modified pipeline tariff adjustment	50 percent of difference between a base price of $7.50 (adjusted for inflation and the selling price) Applies to oil from Strategic Reserve Adjustment for value of pipeline tariff	Originally no tax but later modified to tax in Tier 2
STRIPPER OIL	Exempts first 1,000 bbls day produced by independent producer 3 royalty holder Other stripper taxed at 60 percent tax rate on the difference of $16 base price & selling price	Taxed at 60 percent tax rate on the difference of $16 base price & selling price	Same as House bill but tax rate is 50 percent
MARGINAL OIL (deep stripper)	Taxed at 1/3 of 60 percent of difference between $13 and selling price Tax phases out between 1986 & 1990 definition includes high water cut oil	Same as Finance Committee but excludes high water cut oil	Same as House but rate is 50 percent
HEAVY OIL	Exempts oil with a specific gravity of 16 degrees or less	Heavy oil treated no differently from other oil	Recommended exemption after the House bill passed

OTHER CHANGES FROM HOUSE BILL

- Senate Finance Committee reduces net income limitation from 100 percent of net income from property to 90 percent
- Allows severance tax deduction for all oil including increases after March 1979 if applies to entire oil price
- Allows longer payment period of tax for independent refiners
- Entire tax phases out volumetrically at 3 percent per month when revenues collected reach 90 percent of anticipated total

DISCUSSION OF THE OIL AND GAS INCOME TAX LAWSUIT

The Oil and Gas Income Tax Act, AS 43.21, taxes oil and gas companies at the same rate as other corporations. However, it provides for a different method of determining the tax base (i.e., taxable income) from the regular corporate income tax. AS 43.21 combines the two basic approaches to the taxation of income of multistate corporations. On one hand, it incorporates "separate accounting," in which the income and expenses of a company's in-state activities are separately determined without regard to the corporation's out-of-state business, as if the in-state business were the only business the company engages in. This approach is applied to determine an oil company's taxable income from oil and gas production or pipeline transportation. On the other hand, AS 43.21 also utilizes the "apportionment" approach, whereby income from the corporation's worldwide activities is apportioned to in-state activities by applying a formula. Apportionment is used in AS 43.21 to determine a taxpayer's in-state income from sources other than oil and gas production and pipeline transportation.

The litigation over AS 43.21 questions whether it violates the due process clause, the equal protection clause and the commerce clause of the U.S. Constitution, as well as provisions of the Outer Continental Shelf Lands Act that limit state taxation of the OCS. The original case, brought by Atlantic Richfield and Sohio, presents eight counts in its cause of action. The State subsequently presented the same eight counts, but expressed in the negative, in a second lawsuit against all other taxpayers under AS 43.21 who filed and paid under protest. The eight counts are:

1. Duplicative taxation. Count I of the Arco suit alleges that AS 43.21 results in impermissible duplicative taxation by imposing an unapportioned tax on interstate income. In other words, it alleges that separate accounting for production income and pipeline income is unconstitutional. The plaintiffs point out that other states which use an apportionment formula might require the plaintiffs to include the Alaska-taxed income as part of the total apportionable income for purposes of those other states' income taxes. The combined result, the companies argue, could be that more than 100% of their income ends up being taxed by the states.

A case is currently pending before the U.S. Supreme Court, Exxon Corp. v. Wisconsin Dept. of Revenue, which may considerably affect the outcome of Count I in the Arco case. The issue there is whether separate accounting is constitutionally required instead of apportionment in cases where a corporation

has functionally separate operations (i.e., exploration, production and marketing) and some occur within the taxing jurisdiction and others are entirely outside it. If the Court requires separate accounting in Exxon, the State's position on Count I will be strengthened. If the Court upholds apportionment, then Exxon could seriously weaken our position, but not necessarily so; the exact effect would depend on the Court's reasoning and the language used in reaching its decision. The case is expected to be decided by the end of June.

Besides the basic question in Count I as to whether separate accounting is permissible in AS 43.21, there are also some issues of duplicative taxation in the application of the apportionment formula embodied in AS 43.21.040 for "other" income. For instance, although production and pipeline income earned in Alaska is already fully recognized under the separate accounting provisions, the income from similar activities occurring wholly outside Alaska is nevertheless included in the worldwide "pie" of income to be divided under apportionment. Similarly, a company engaged only in production in Alaska could still be subjected to apportionment of its "other" worldwide income simply because it charters tankers from a third party to ship its oil out of the state. Both of these problems would be dealt with in the Administration's "technical amendments" bill (HB 963), at a cost to the State of less than a million dollars in FY 81.

While these last two issues have relatively small dollars-and-cents consequences themselves, losing them in court could be serious. The legislative history of AS 43.21 shows that all antecedent versions of the bill in 1978 had severability clauses. The final version of AS 43.21 did not. One could argue from this fact that the Legislature wanted the entire Act to stand or fall together. If the courts agreed, then losing even these "minor" issues would lead to the downfall of the entire tax. The possibility of this outcome is, of course, significantly reduced by the general severability clause in AS 01.10.030, but not absolutely eliminated.

2. Equal protection. The second count in the Arco case alleges that AS 43.21 discriminates against interstate commerce and violates equal protection and due process. This is based on a comparison of the tax treatment of oil and gas companies under AS 43.21 vis a vis their previous treatment under AS 43.20, which is still afforded to all other corporations. This issue could not be entirely resolved, legislatively or by regulation, except by repealing AS 43.21 and going back to AS 43.20 as the tax for the oil industry. However, there are legislative and regulatory actions that could be taken that would eliminate differences between AS 43.20 and AS 43.21 that the industry regards as being the

most important. These relate to accelerated depreciation and the expensing of intangible drilling costs for wells in Alaska.

Depreciation is currently allowed for production equipment on a unit-of-production basis; that is, each barrel produced has the same amount of depreciation associated with it. This is a form of accelerated depreciation since production rates over the life of a field are greatest in the early years and fall off in later years. By regulation the Department of Revenue could authorize other forms of accelerated depreciation, such as those used for the IRS.

Depreciation for pipelines is strictly on a straight-line basis. This is because taxable pipeline income is tied by statute to the pipeline's net income as regulated by the Federal Energy Regulatory Commission (FERC). FERC uses straight-line depreciation.

Allowing accelerated depreciation does not affect the total amount of depreciation allowed as a deduction, it changes the timing. The effect is to reduce the tax liability in the early years and make up for it in later years. In the case of tax year 1980 (one quarter paid in FY80 and three quarters in FY81), the tax deferral from accelerated depreciation of production equipment would be $25 million. For pipelines it would be $36 million.

Intangible drilling costs are now required to be capitalized and depreciated on a unit-of-production basis as production equipment. Expensing such costs is the fastest possible form of accelerated depreciation. If only new drilling could be expensed, the tax deferral would be about $72 million for FY81.

3. Excessive, discriminatory taxation. In Count III of the complaint, plaintiffs alleged that the amount of taxes imposed by AS 43.21 bears no fair relation to services provided by the State. In doing so, they pointed out the large anticipated surplus of funds coming into the treasury, the high proportion of state revenues already being derived from sources other than AS 43.21, and the large amount of taxes that they will have to pay in addition under the oil and gas income tax.

4. Modification of leases. Count IV of the complaint alleges that Alaska, by enacting AS 43.21, unilaterally and unconstitutionally modified its oil and gas leases. This seems almost frivolous in light of the Alaska Constitution's specific prohibition against contracting away the State's taxation power; no lease provision could have abridged this power.

5. OCS income. The Outer Continental Shelf Lands Act forbids the states from taxing activites beyond their three-mile limits. Count V of the Arco/Sohio complaint alleges that AS 43.21.040, by including Alaska OCS property and payrolls in the formula for apportioning worldwide "other" income, violates this federal prohibition and is thus pre-empted under the supremacy clause of the U.S. Constitution. The dollars at stake in Count " are comparatively small at present, under $5 million a year. But this would change if there is significant new activity in the OCS of. Alaska. Also, an adverse ruling here could bear on the nonseverability issue.

6. Retroactivity. Count VI of the lawsuit raises a technical question as to procedure in the enactment of AS 43.21. Plaintiffs allege that the Act, which became law on July 6, 1978, cannot be made retroactive to the first of that year without the concurrence of two-thirds of the membership of each house of the Legislature. They further allege that such concurrence was not given by the Senate. This issue should, at most, affect receipts under AS 43.21 for only part of the 1978 tax year.

7. Regulations. The Department adopted regulations requiring payments of estimated taxes in installments in advance of the final due date for each year. Count VII alleges that the statutory authorization for "installments" means the Department could only adopt regulations allowing payments after the due date. The effect of losing this count would not be a loss in tax receipts finally collected, but only in the cash-flow timing of those receipts and the lost interest income from the prepayments. The lost interest would be $45.8 million a year if the annual tax receipts are $500 million.

8. Taxation of out-of-state income. Count VIII alleges that AS 43.21 taxes out-of-state income having no connection with Alaska. To some extent this repeats the Count I challenge to aspects of the apportionment formula. Besides being a sort of "catch all," this last count could also refer to AS 43.21.010, which subjects to the tax all corporations deriving income from the production of oil and gas from a lease or property "in or directly associated with the state". The underlined portion refers to leases in the OCS whose operations are supported from a base or staging area onshore in Alaska. There is a real constitutional "due process" question as to whether Alaska may tax a corporation having no contact with Alaska other than deriving income from a lease or property "directly associated" with the state. In addition, the provisions of the OCS Lands Act could apply to bar such taxation. HB 963 would eliminate this issue. Since there are at present no such corporations, the present revenue effect is nil. Again, a loss here could trigger far greater effects if nonseverability in fact applies to the Act.

AGO 785752

SETTLEMENT DISCUSSIONS
IN THE OIL AND GAS INCOME TAX LAWSUIT

In the course of administering AS 43.21, the Department of Revenue has had to adopt a considerable number (over 30 pages worth in the Administrative Code) of fairly technical, detailed regulations to clarify and interpret the Act. In order to adopt appropriate and workable regulations covering such complex and arcane matters as the leveraged leasing of oil tankers, there was considerable dialogue and discussion, both at hearings and in conferences, between the Department and various affected oil companies.

As the full range of policy considerations relating to the successful implementation of the tax was discussed, certain regulatory actions appeared which, in conjunction with some legislative amendments, presented a good promise of being a foundation for a settlement by which the basic validity of the tax would be acknowledged, while reserving for litigation a few narrow issues about the particulars of the application of the tax. The ongoing litigation of those issues would therefore not jeopardize the tax itself, nor would their adjudication one way or the other put major sums of money at risk.

These legislative and regulatory actions do not fall neatly into the categories of issues presented in the various counts given by Arco and Sohio in their lawsuit. In fact, a number of the actions do not even tie directly into any one count. In some cases, the proposed changes could be justified just on the basis of policy considerations, apart from any settlement possibilities. In this group of independently justifiable actions are:

1. The technical amendments proposed in HB 963. Reasons for them are given in Governor Hammond's transmittal letter. Their combined revenue effects are about $5 million a year.

2. Allow current amortization of estimated costs of terminating production operations, removing field facilities and restoring the site. There would be a "settling up" when these had happened to account for any over- or under-amortization. Reasons for this are: A) termination costs may be carried back only three years, which may not allow for them to be fully recognized; and B) this is already allowed in the case of pipelines, because of current FERC rulings. The revenue impact would be about $2 million a year currently.

Less clearly justifiable would be the elimination of the present limitations on interest expense and overhead costs that may be deducted against production income. It would be advisable in such a case to grant the Department clear authority to set aside undue charges for these items, especially if they result from intracorporate or less-than-arms-length transactions. With such safeguards, the present revenue effect would be about $3 500,000 a year.

The big dollars-and-cents issue in the settlement discussion was accelerated depreciation. This is really a tax deferral since the total amount of depreciation ultimately taken does not change, regardless of whether the depreciation is straight-line or accelerated. For tax year 1980, it would amount to $61 million -- $25 million for production equipment and $35 million for pipelines. Of course, interest would be lost on the money until it is recovered, and the payback in later years would be in dollars of reduced buying power.

Intangible drilling costs are merely an aspect of accelerated depreciation. Right now they are capitalized and depreciated on the same basis as production equipment. Allowing them to be expensed (i.e., fully deducted as they are incurred) is simply allowing the ultimate in accelerated depreciation. As with pipelines and production equipment, the tax loss now would be recovered eventually through reduced deductions later in the life of the field. But the impact today is still some $72 million for FY81, not counting forgone interest.

The discussions of these possibilities indicated that, in exchange for these considerations, the oil companies would dismiss the present lawsuit except for the issues regarding OCS and the use of "book" income for apportionment instead of taxable income as reported to IRS. The settlement would not extend to any future developments in federal law, either judicial or legislative, that would impair or annul the State's method of taxing income. Also they would reserve the right to challenge new regulations or interpretations as may arise which are not subjects of the present litigation.

THE ROLE OF THE WINDFALL PROFITS TAX IN THE OIL AND GAS INCOME TAX

The windfall profits tax is not recognized under AS 43.21 as an allowable deduction against production income. At present this has not become an additional basis for the oil companies' challenge to the oil and gas income tax, but it surely will be.

In thinking about the windfall profits tax, it is important to remember that it is not necessary to settle the lawsuit in order to deal with the windfall profits tax. It is separable from the settlement considerations. However, settlement is most unlikely if there is nothing done about the windfall profits tax.

The revenue implications of the windfall profits tax are far greater than the combined effects of all the other items involved in coming up with a settlement. In FY81 alone, the effect is $142.5 million; in FY82, another $378.4 million. By FY85 it will be almost $600 million a year.

In all settlement discussions through January of this year (when they were broken off), the windfall profits tax was recognized as a major factor for any settlement, but it was a subject whose discussion was postponed until Congress actually passed such a tax and we could see exactly what it was.

Department of Revenue Division E. 9th Ave. Anchorage, Ak., 99501	Alaska Department of Revenue Oil and Gas Corporate Income Tax Return	Employer Federal Identification Number:
This Return is due on or before the date specified in Regulation 15 AAC 12.700.	(Please Type or Print) Name Number and Street City State Zip Code	This Return is for the Tax Year Ended: __/__/__ See Regulation 15 AAC 12.820.

A complete copy of the following reports must be attached to this Return when filed: (a) Annual financial report to stockholders; (b) Federal Energy Regulatory Commission Form P, reporting Alaska oil pipeline activities only; (c) Alaska Public Utilities Commission Form APUC 2, reporting natural gas activities in Alaska (only). All questions and requests for information on page 2 of this Return must be answered.

Schedule A - Computation of Tentative Tax

1.	Taxable Production Income (Loss) - Schedule B		
2.	Taxable Oil Pipeline Income (Loss) - Schedule C		
3.	Taxable Gas Pipeline Income (Loss) - Schedule D		
4.	Taxable Apportioned Income (Loss) - Schedule E		
5.	Total, lines 1, 2, 3 and 4 (If less than zero enter -0- here and on line 7).....		
6.	Less: Net Loss Carryover(s)/Carryback(s) - Schedule F		
7.	Total Taxable Income (Loss)		
8.	Surtax Exemption. (See Sections 1561 and 1563 of the Internal Revenue Code)		
9.	Line 7 less line 8 - (If less than zero enter -0-).....		
10.	Income Tax Computation:		
	(a) 5.4% of line 7 (If less than zero enter -0-)		
	(b) 4.0% of line 9 (If less than zero enter -0-)		
	(c) Total, lines 10(a) and (b)		

		Date	Amount
11.	Estimated Tax Payments:		
	(a) First Quarter Estimated Payment		
	(b) Second Quarter Estimated Payment		
	(c) Third Quarter Estimated Payment		
	(d) Fourth Quarter Estimated Payment		
	(e) If an Extension has been granted for this Return, the amount paid at the time of Extension		
12.	Other Payments (Specify:).		
13.	Total Prepayments. Add lines 11(a),(b),(c),(d),(e), and line 12		
14.	Unpaid or Overpaid Tentative Tax. Line 10(c) less line 13; (If greater than zero pay this amount. If less than zero complete lines 15(a) and 15(b).)		
15.	If lines 14 is an overpayment (i.e. less than zero) indicate amount to be:		
	(a) Refunded:		
	(b) Applied to your estimated tax for next year:		

I declare under the penalties of perjury that I have examined this Return including accompanying schedules and statements, and to the best of my knowledge and belief, it is true, correct, and complete. If prepared by a person other than the taxpayer, his declaration is based on all information of which he has any knowledge.

Alaska Department of Revenue
Oil and Gas Corporate Income Tax Return

Questionnaire and Other Required Information.

A. Attach a schedule of the following information for each corporation included in this Return (Note; Place an asterisk by corporations doing business in Alaska and deriving income from oil and gas production in Alaska or Alaska OCS or deriving income from one or more oil or gas pipelines in Alaska; see also (B) this page);

(1) Name.
(2) Federal Employer Identification Number.
(3) Address.
(4) Date began doing business in Alaska.
(5) State or country in which business was incorporated or formed.
(6) State or country of commercial domicile.
(7) Percentage of voting stock owned by the parent company or by any other entity within the consolidated business (indicate each such stockholder's name and address).
(8) Net income of each corporation reported to stockholders for the period covered by this Return.

B. Did any corporation included in this Return and doing business in Alaska during the tax year, conduct through one or more non-corporate intermediaries operations that generated income for those intermediaries which would make them subject to tax under AS 43.21--if they had been corporations? _____. If the answer is yes, attach a schedule showing the following information:

(1) Name of each corporation which conducted business in this manner.
(2) Name of each intermediary.
(3) Type of intermediary (e.g., individual, estate, trust, partnership).
(4) Address of each intermediary.
(5) Federal Employer Identification Number or Social Security Number of each intermediary.
(6) Percentage of voting stock of each corporation listed in B.(1), above, which is directly or indirectly owned by each intermediary listed in B.(2), above.

C. Name, title, mailing address and phone number of the individual who should be contacted concerning an audit of this Return:_____

_____

D. Location(s) of principal accounting records:_____

_____

E. Location(s), if different than (D) above, of minutes of this year's meetings of the Board of Directors, Executive Committee and/or any other committee involved in the business operations of the parent corporation or non-corporate intermediary exercising direct or indirect control over the consolidated business:_____

_____

F. Name and address on the prior year's Return if different from this year. State the reason for the change (e.g., merger, name change, moved to new location, etc.,):_____

_____ AGO 785757

Instructions.

15 AAC 12.010. PERSONS SUBJECT TO THIS CHAPTER. A corporation doing business in the state and deriving income from one or more of the following sources is subject to the provisions of this chapter, even if that income is more than offset during a year by expenses associated with it:

(1) a production interest in one or more leases or properties in commercial production that are within the state;

(2) a production interest in one or more leases or properties in commercial production that are in areas within the United States and adjacent to the State of Alaska but not within this or any other state, and which are supported from a base of operations within this state;

(3) the transportation of oil or gas or both by means of a pipeline or pipeline system of which part or all is within the state.

15 AAC 12.020. TAXPAYERS HAVING INCOME FROM OTHER ACTIVITIES. A taxpayer deriving income from one or more sources in addition to any of those listed in sec. 10 of this chapter is subject to the requirements and income tax liability under AS 43.21 and this chapter only, for all of its income.

15 AAC 12.030. CONSOLIDATED BUSINESS. (a) A group of two or more corporations that are directly or indirectly controlled or at least 50-percent owned (directly or through one or more intermediaries) by one common person (corporate or otherwise) constitute a consolidated business for purposes of this chapter.

(b) The income, expenses and assets of a consolidated business include, respectively, all income, expenses and assets attributed to it under sec. 40 of this chapter.

(c) If a corporation or consolidated business is in turn itself controlled (by a means characteristic of ownership rather than through the exercise of general governmental powers such as laws, regulations, judicial decisions, proclamations and the like) or at least 50 percent owned by a sovereign, head of state, government or governmental agency, the consolidated business does not include the sovereign, head of state, government or governmental agency for purposes of this chapter.

15 AAC 12.040. ATTRIBUTION OF INCOME. (a) The income, expenses and assets of an enterprise involving undivided joint ownership must be attributed to the joint owners of that enterprise on the basis of their respective ownership interests, as may be modified by agreement among those joint owners. For purposes of this section, partnerships, joint ventures, trusts with joint beneficiaries and similar legal entities (but not a corporation) are enterprises involving undivided joint ownership.

(continued)

Instructions.

(b) If a corporation doing business in the state conducts, through one or more non-corporate intermediaries, operations that generate income for those intermediaries which would make them subject to tax under AS 43.21 and this chapter if they were corporations, then that corporation is presumed to derive income from those operations in the amount of the income earned by those intermediaries and therefore subject to tax under this chapter. Such a corporation's tax is calculated using the revenues and deductions of the intermediaries, as if the corporation were directly conducting the operations actually conducted by the intermediaries.

15 AAC 12.050. NET TAXABLE INCOME. (a) A taxpayer's 9.4-percent tax and 4-percent surtax under AS 43.21 and this chapter for a year are on the taxpayer's net taxable income for that year as determined under (b) of this section, except that the surtax will be computed on that net taxable income minus the surtax exemption specified in sec. 60 of this chapter.

(b) A taxpayer's net taxable income for a year is that taxpayer's taxable production income under sec. 100 of this chapter for that year, plus that taxpayer's taxable oil pipeline income under sec. 300 of this chapter for that year, plus that taxpayer's taxable gas pipeline income under sec. 400 of this chapter for that year, plus that taxpayer's taxable apportioned income under sec. 500 of this chapter for that year, and minus all net losses of that taxpayer that are being carried back or carried forward to that year from one or more other tax years in accordance with sec. 70 of this chapter. If the taxpayer's income under one or more of secs. 100, 300, 400 and 500 of this chapter reflects a loss, the total of the losses under those sections is offset against the total gain (if any) under the rest of those sections.

15 AAC 12.060. SURTAX EXEMPTION. A taxpayer's surtax exemption shall be calculated in accordance with AS 43.20.011(e) and AS 43.20.021(a). The surtax exemption for tax year 1978 is $20,000. The surtax exemption, if any, for tax years after 1978 will be an amount determined under AS 43.20.

15 AAC 12.610. NOTICE OF COMMENCEMENT OF TAXABLE ACTIVITY. A corporation not subject to tax under AS 43.21 and this chapter shall, within 30 days of the time it begins to derive income (even if that income is exceeded by the expenses involved) from any of the sources described in sec. 10 of this chapter, give written notice to the department of the fact that it has begun deriving income from those sources. This section applies only to those who, after the effective date of AS 43.21 and the original adoption date of this section, begin deriving income from any source described in sec. 10 of this chapter.

(continued)

Instructions.

15 AAC 12.700. RETURNS AND ASSESSMENTS. (a) A taxpayer reporting on a calendar year basis shall file, on or before April 15 of each year, a tax return on such forms as may be prescribed by the department, setting out all the information required in determining that taxpayer's net taxable income under this chapter for the previous year and the amount of tax due on that income.

(b) A fiscal-year taxpayer shall file, on or before the 15th day of the fourth month after the month in which the taxpayer's fiscal year ends, a tax return on such forms as may be prescribed by the department, setting out all the information required in determining that taxpayer's net taxable income under this chapter for the taxpayer's fiscal year last ended and the amount of tax due on that income.

(c) In its discretion, the department will grant a taxpayer an extension of as many as 60 days from the deadlines for filing returns specified in (a) and (b) of this section. An application for an extension must be on a form prescribed by the department, setting forth all the information required to support the application.

(d) Returns required under this section must be filed by the corporation deriving income (or to which income is attributed under sec. 40 of this chapter) from one or more of the sources described in sec. 10 of this chapter. Where two or more such corporations are parts of the same consolidated business, they shall file a single consolidated return.

(e) On or before August 15 (for fiscal-year taxpayers, the 15th day of the eighth month after the month in which the taxpayer's fiscal year ends), the department will assess the taxpayer and send the taxpayer a notice of assessment showing the amount of net taxable income under this chapter for that taxpayer during the previous year, the total amount of tax due under this chapter, and the amount (if any) of that tax remaining unpaid or overpaid. Returns and assessments under this section are subject to adjustment for three years from the date of the original notice of assessment.

15 AAC 12.710. PAYMENTS; INSTALLMENTS. (a) For the 1978 tax year, each taxpayer shall prepay its estimated tax under this chapter in an installment on or before March 15, 1979, which, when combined with the taxpayer's installment payments (if any) of estimated tax under AS 43.20 and Ch. 5 of this title made after December 31, 1977, brings the total prepaid tax to 100 percent of the tax and surtax on the taxpayer's total estimated 1978 net taxable income under this chapter, as that net taxable income is estimated and reported by the taxpayer at the time it makes the installment.

(b) For tax years after the 1978 tax year, each taxpayer shall prepay its estimated tax under this chapter in installments in accordance with the following schedule:

Instructions.

(1) On June 15 of each year (for a fiscal-year taxpayer, the 15th day of the sixth month after the start of the fiscal year), a first installment comes due that is equal to one-quarter of the tax and surtax on the taxpayer's total estimated net taxable income for that year under this chapter, as that net taxable income is then estimated and reported by the taxpayer.

(2) On September 15 of each year (for a fiscal-year taxpayer, the 15th day of the ninth month after the start of the fiscal year), a second installment comes due that, when combined with the first installment, brings the total prepaid tax to one-half of the tax and surtax on the taxpayer's total estimated net taxable income for that year under this chapter, as that net taxable income is then estimated and reported by the taxpayer

(3) On December 15 of each year (for a fiscal-year taxpayer, the 15th day of the 12th month after the start of the fiscal year), a third installment comes due that, when combined with the first two installments, brings the total prepaid tax to three-quarters of the tax and surtax on the taxpayer's total estimated net taxable income for that year under this chapter, as that net taxable income is then estimated and reported by the taxpayer.

(4) On March 15 of each year (for a fiscal-year taxpayer, the 15th day of the 15th month after the start of the fiscal year), a fourth installment comes due that, when combined with the first three installments, brings the total prepaid tax to 100 percent of the tax and surtax on the taxpayer's total estimated net taxable income under this chapter for the year in question, as that net taxable income is then estimated and reported by the taxpayer.

(c) If, because of unexpected events, a taxpayer has to revise its total estimated net taxable income downward so significantly that its prior installments that year under (b) of this section equal or exceed the amount to which the total prepaid tax is to be brought when the next installment comes due, then the taxpayer needs only to report the current estimate of its total tax for that year and does not need to make any further payment as an installment at that time. No refund will be made at that time as the result of a taxpayer's having a negative installment an apparent overpayment from its prior installments; however, if the condition of overpayment continues until the time of the department's assessment under sec. 700 of this chapter, the remaining overpayment will then be handled as an ordinary refund under sec. 720 of this chapter.

(d) At the time a taxpayer files its tax return required under sec. 700 of this chapter, the taxpayer shall pay the excess, if any, of its total tax over the amount already paid by the taxpayer in its installments under this section.

(continued)

Instructions.

(e) If the department's assessment under sec. 700 of this chapter shows a total tax for a taxpayer greater than the amount already paid by the taxpayer in its installments and its payment made at the time of filing its return under sec. 700 of this chapter for that year, the taxpayer shall pay the additional amount of tax on or before September 30 (for a fiscal-year taxpayer, the last day of the ninth month after the month in which the taxpayer's latest fiscal year ended).

(f) A payment of $50,000 or more must be made by wire transfer of funds, in accordance with the standard procedures required by the department for wire transfers. Payment of smaller sums may be by wire transfer, check, money order, or cash.

(g) Payments and reports required under this section shall be made on the same basis as returns required under sec. 700 of this chapter.

15 AAC 12.720. REFUNDS. (a) The department will refund to a taxpayer any overpayment of the taxpayer's tax for a year under this chapter on or before September 30 of the following year (in the case of a fiscal-year taxpayer, the last day of the ninth month after the month in which the taxpayer's fiscal year ended). The amount of the overpayment will be determined on the basis of the tax as determined by the department in its assessment under sec. 700 of this chapter for the year in question, unless the overpayment arises from a reduction in the assessment as the result of a subsequent audit by the department or a carry-back of a later year's net loss under sec. 70 of this chapter. In the case of such a reduction in a taxpayer's assessment, the refund by the department will equal that reduction. In addition, the department will simultaneously pay the taxpayer any interest due on the refund as computed in accordance with sec. 730 of this chapter.

(b) At its option, the taxpayer may elect to have the department apply the amount of a refund (including any interest) under this section as a credit against future payments of tax coming due under this chapter, instead of remitting the refund to the taxpayer.

15 AAC 12.740. CIVIL PENALTIES. For unpaid taxes to which paragraph (1),(2), or (3) of sec. 730(a) of this chapter applies, the civil penalty provided by AS 43.05.220 will be imposed beginning the day after the starting date specified in the applicable paragraph of that section. For unpaid taxes to which paragraph (4) of sec. 730(a) of this chapter applies, the civil penalty provided by AS 43.05.220 will be imposed beginning the 31st day after the department's written notice to the taxpayer of an increase in its assessment as the result of an audit by the department.

(continued)

Instructions.

15 AAC 12.820. FISCAL-YEAR TAXPAYERS. All taxpayers shall report and pay tax under this chapter on a calendar year basis unless they have received prior written authorization from the department to report and pay tax under this chapter on a fiscal year basis. The department, in its discretion, will grant such an authorization to a taxpayer, but only if the taxpayer's financial accounting is done on a fiscal year (as opposed to calendar year) basis. If granted, each such authorization by the department authorizes a taxpayer to report and pay tax under this chapter on the basis of only the fiscal year that is used for purposes of the taxpayer's financial accounting and not on the basis of any other fiscal year. A taxpayer thus authorized to use its financial accounting fiscal year is a "fiscal-year taxpayer".

Alaska Department of Revenue
Oil and Gas Corporate Income Tax Return

Taxable Production Income (Loss) Schedule B

1. Gross Production Revenue. (From Schedule B.1).....

2. Extraordinary Production Revenue or (Loss). (Total of the amounts entered on line 13 of the Schedules B.8 that are filed as part of this Return).....

3. Add amounts on lines 1 and 2.....

Deductions from Gross Production Revenue

4. Royalties. (Total of the amounts entered on line 3 of the Schedules B.9 that are filed as part of this Return).....

5. Production Taxes. (Total of the amounts entered on line 3 of the Schedules B.10 that are filed as part of this Return).....

6. Ad Valorem Taxes. (Total of the amounts entered on line 3 of the Schedules B.11 that are filed as part of this Return).....

7. Direct Operating Costs. (Total of the amounts entered on line 10 of the Schedules B.12 that are filed as part of this Return).....

8. Acquisition Costs. (Total of the amounts entered on lines 6, 21 and 43 of the Schedules B.13 that are filed as part of this Return)....

9. Development Costs. (Total of the amounts entered on lines 4, 21 and 47 of the Schedule B.14 that are filed as part of this Return)....

10. Exploration Costs. (The amount entered on line 10 of Schedule B.15)...

11. Uncapitalized Interest. (The amount entered on line 9 of Schedule B.16)

12. General Overhead and Administrative Expense. (The amount entered on line 23 of Schedule B.17).....

13. Total Deductions. (Add amounts on lines 4-12).....

14. Taxable Production Income. (Line 3 less line 13; enter also on Schedule A, line 1).....

AGO 785764

Instructions: Taxable Production Income

15 AAC 12.100. TAXABLE PRODUCTION INCOME. A taxpayer's taxable production income during a year equals the total of the taxpayer's gross production revenue (determined in accordance with secs. 110 -- 130 of this chapter) during that year for each lease or property in the state in which the taxpayer has a production interest, plus the total of the taxpayer's extraordinary production revenue (determined in accordance with sec. 140 of the chapter), if any, during that year for each lease or property in the state in which the taxpayer has a production interest, minus the total of the taxpayer's deductions for that year under secs. 200 -- 220 of this chapter, and minus the total of the taxpayer's extraordinary production loss (determined in accordance with sec. 140 of this chapter), if any, during that year for each lease or property in the state in which the taxpayer has a production interest.

15 AAC 12.110. GROSS PRODUCTION REVENUE. A taxpayer's gross production revenue during a year from a production interest in a lease or property is the value at the point of production of the taxpayer's gross share of the oil and gas produced from (or allocated to) that lease or property; however, oil or gas that is used, flared or unavoidably lost in the production operations for the lease or property or is injected into a reservoir in the course of the operations for the same field, may not be included in determining the taxpayer's gross production revenue from that or any other lease or property.

15 AAC 12.120. VALUE AT THE POINT OF PRODUCTION. (a) The value at the point of production for oil or gas produced from a lease or property is the sales price of that oil or gas, minus the reasonable cost of transportation (if any) from the point of production for that oil or gas to the sales delivery point for that oil or gas; except that in no event may the value at the point of production for a taxpayer's oil or gas exceed the ceiling price (if any) that is applicable to that oil or gas under a mandatory price control program.

(b) For purposes of this chapter, "sales price" means

(1) for a taxpayer's oil and gas sold in a bona fide, arm's length sale to a third party, the cash value of the full consideration given and received for that oil and gas, except in the case of a sale to which (f) of this section applies;

(2) for a taxpayer's oil not sold in a bona fide, arm's length sale to a third party, the total acquisition cost for imported oil of similar quality delivered F.O.B. at the gate of the refinery to which the taxpayer's oil is ultimately delivered, with an appropriate adjustment for differences, if any, in quality or in entitlements treatment between the two oils (wherever possible, such an adjustment will be based on market data involving bona fide, arm's length sales of comparable Alaskan oil and similar imported oil); and

(continued)

Instructions: Taxable Production Income

(3) for a taxpayer's gas not sold in a bona fide, arm's length sale to a third party, the volume-weighted average of the prices then being given and received under the terms of the sales contracts for significant quantities of gas (in terms of delivery rates or reserves committed, or both) which have been entered into or whose pricing provisions have been amended during the tax year or the two preceding years among all the bona fide, arm's length sales contracts (whether between third parties or not) applying to gas from the same field as the taxpayer's gas (or if there are no such contracts for that field, the counterparts of those contracts in the nearest field to that field), with an appropriate adjustment according to the ideal gas laws for any difference in the specified delivery pressure or temperature between the gas sold under the reference sales contracts and the taxpayer's gas.

(c) For purposes of this chapter, "sales delivery point" means

(1) for a taxpayer's oil and gas sold in a bona fide, arm's length sale to a third party, the point of delivery under the terms of the contract or agreement for that sale, except in the case of a sale to which (f) of this section applies;

(2) for a taxpayer's oil not sold in a bona fide, arm's length sale to a third party, the gate of the refinery to which that oil is ultimately transported; and

(3) for a taxpayer's gas not sold in a bona fide, arm's length sale to a third party, the point of delivery under the terms of the sales contract being used as the reference for the sales price of the taxpayer's gas under (b)(3) of this section.

(d) For purposes of this chapter, "point of production" means

(1) for oil, the automatic custody transfer meter or unit through which the oil enters into the facilities of a carrier pipeline or other transportation carrier; and in the absence of an automatic custody transfer meter or unit, the "point of production" for oil is the outlet flange of the tank gauge (or in the absence of a tank gauge, another mechanism or device to measure the quantity of oil that has been approved by the department for this purpose) through which the oil is tendered and accepted into the facilities of a carrier pipeline or other transportation carrier;

(2) for gas, the meter on, or nearest (measured along the course taken by the gas) to, the lease or property from which the gas is recovered, at which meter the sales stream of gas is measured with sufficient accuracy and at appropriate temperature, pressure and other condition for purposes of sale, regardless whether the particular gas in question is actually sold at that meter.

(continued)

Instructions: Taxable Production Income

(e) Notwithstanding anything to the contrary in (a) - (d) of this section, where a taxpayer's gas from a lease or property is run through a gas processing plant and part or all of the residue gas and extracted liquids are returned to that taxpayer, the "value at the point of production" for that gas is the total value of that residue gas and extracted liquids as they come out of the plant, less (1) a reasonable allowance (either withheld in kind by the plant operator or paid in cash to the plant operator) for the cost of processing that gas through the plant, (2) the reasonable cost of transportation, if any, from the point of production for that gas to the intake into the plant, and (3) the value of any residue gas returned to the taxpayer that is used, flared or unavoidably lost in the production operations for the lease or property or is injected into a reservoir in the course of operations for the same field.

(f) If a taxpayer sells its oil or gas to a third party in what would otherwise be a bona fide, arm's length sale but at the time of this particular sale the taxpayer expects to repurchase that oil or gas at a subsequent time and place, then that sale to the third party and the repurchase from the third party, if it occurs, must be disregarded and the oil or gas subject to that sale must be regarded as if it had remained the taxpayer's own oil or gas throughout the time between that sale and repurchase. In determining the value at the point of production in such a case, the reasonable cost of transportation between the point of sale for that sale and the point of repurchase must be determined as if the taxpayer were the shipper for purposes of sec. 130 of this chapter. This subsection does not apply if the taxpayer's expected repurchase does not in fact occur.

15 AAC 12.130. REASONABLE COSTS OF TRANSPORTATION. (a) In the case of transportation of oil or gas by a regulated carrier, the reasonable cost for that transportation is, for purposes of this chapter, the tariff on file with FERC or other regulatory agency having jurisdiction that is applicable to that transportation of the oil or gas by the carrier, from the point where that oil or gas is tendered into the facilities of the carrier to the point where it is delivered from the facilities of the carrier.

(b) In the case of transportation of oil by a tanker or other vessel that is not owned or effectively owned by the shipper of that oil,

(1) for a single voyage charter, the reasonable cost for that transportation is, for purposes of this chapter, the charter fee for that vessel, plus any voyage and port costs not included in that fee which are incurred with respect to that transportation during the term of the charter and which are borne by the shipper, plus the positioning cost, if any, borne by the shipper for that vessel;

(continued)

Instructions: Taxable Production Income

(2) for a consecutive voyage charter or a time charter, the reasonable cost for that transportation is, for purposes of this chapter, the charter fee for that vessel, plus any voyage and port costs not included in that fee which are incurred with respect to that transportation during the term of the charter and which are borne by the shipper, plus the positioning cost (amortized over the lesser of 36 months or the term of the charter in the case of a time charter, and amortized on the basis of the number of voyages in the case of a consecutive voyage charter), if any, borne by the shipper for that vessel;

(3) for a contract of affreightment, the reasonable cost for that transportation is, for purposes of this chapter, the affreightment fee specified in that contract, plus any voyage and port costs and any positioning costs not included in that fee which are incurred with respect to that transportation during the term of the contract of affreightment and which are borne by the shipper.

(c) In the case of transportation of oil by a tanker or other vessel that is owned or effectively owned by the shipper of that oil, the department may, at the request of a taxpayer (but in the department's sole discretion), authorize the taxpayer to use the fair market value of like transportation as the reasonable cost for the transportation in question. If the taxpayer's request is granted, the department, and not the taxpayer, will determine the fair market value of like transportation, on the basis of third-party time charters (that is, time charters in which the shipper does not own or effectively own the vessel) of one year or more which are reported to the department for like vessels; and when it makes its determination, the department will notify the taxpayer of it in the notice of assessment described in sec. 700 of this chapter. Two vessels will be considered like vessels for purposes of this chapter if the difference between them in deadweight tonnage is less than 10,000 deadweight tons and if they are both Jones Act vessels, or are both ODS vessels, or are both ODS vessels or are both COS/ODS vessels. If the department does not authorize the taxpayer to use fair market value of like transportation (as described in this subsection) as the reasonable cost for the transportation in question, then the reasonable cost for that transportation is, for purposes of this chapter, the taxpayer's actual cost for that transportation. This actual cost equals the sum of

(1) the voyage and port costs incurred with respect to that transportation,

(2) the positioning cost, amortized over 36 months, for that vessel, but only for placing that vessel into position before its employment in the Alaska trade and not for placing it into position after its employment in the Alaska trade for employment in another trade,

(continued)

Instructions: Taxable Production Income

(3) depreciation of the vessel; if the vessel is actually owned by the shipper, depreciation must be calculated in accordance with the applicable FASB Financial Accounting Standards for such owned assets; if the vessel is effectively owned by the shipper, depreciation must be calculated in accordance with FASB-13 from the standpoint of a lessee under a capital lease; and

(4) an amount which, when taken together with depreciation under (3) of this subsection, will provide a reasonable rate of return on the acquisition cost of the vessel over its expected life; for purposes of this paragraph,

(A) "acquisition cost" means the cost of the vessel which may be capitalized by its actual owner under generally accepted financial accounting principles, and

(B) "expected life" means the period of time used to calculate depreciation under (3) of the subsection.

(d) In the case of transportation of gas as LNG where not all of the LNG transportation facilities are subject to tariff regulation (by FERC or another agency of the United States, a state, a territory or possession of the United States or a foreign nation),

(1) when the shipper does not have or effectively have an ownership interest in the LNG transportation facility, the reasonable cost of transportation for that LNG transportation facility is, for purposes of this chapter, the amount charged to the shipper for that LNG transportation; or

(2) when the shipper has or effectively has an ownership interest in the LNG transportation facility, the department may, at the request of a taxpayer (but in the department's sole discretion), authorize the taxpayer to use the fair market value of like transportation as the reasonable cost for the transportation in question. If the taxpayer's request is granted, the department, and not the taxpayer, will determine the fair market value of like transportation, on the basis of third-party charters or leases (that is, charters or leases in which the shipper does not own or effectively own the LNG transportation facility in question) of three years or more which are reported to the department for like LNG transportation facilities; and if it makes such a determination, the department will notify the taxpayer of it in the notice of assessment described in sec. 700 of this chapter. If the department does not authorize the taxpayer to use fair market value of like transportation (as described in this paragraph) as the reasonable cost for the transportation in question, then the reasonable cost for that transportation is, for purposes of this chapter, the taxpayer's actual cost for that transportation. This actual cost equals the sum of

(A) the direct operating costs of the LNG transportation facility (in the case of an LNG tanker, its respective voyage and port costs) incurred with respect to the shipper's gas;

Instructions: Taxable Production Income

(B) depreciation of the LNG transportation facility; if the facility is actually owned by the shipper, depreciation must be calculated in accordance with the applicable FASB Financial Accounting Standards for the owner of such assets; if the LNG transportation facility is effectively owned by the shipper, depreciation must be calculated in accordance with FASB-13 from the standpoint of a lessee under a capital lease; and

(C) an amount which, when taken together with depreciation under (B) of this paragraph, will provide a reasonable rate of return on the acquisition cost of the LNG transportation facility over its expected life; for purposes of this subparagraph,

(i) "acquisition cost" means the cost of the LNG transportation facility which may be capitalized by its actual owner under generally accepted financial accounting principles, and

(ii) "expected life" means the period of time used to calculate depreciation under (B) of this paragraph.

(e) For purposes of this chapter, "voyage and port costs" for a vessel are

(1) costs actually incurred for fuel for the vessel while in port and at sea, stores and provisions for the vessel and for her captain and crew, wages and benefits of the vessel's captain and crew, routine maintenance, port and dock fees, storage costs, demurrage, tug and pilotage fees, marine agents' fees in port, lightering, transshipment charges, customs fees and duties, regular and customary gratuities that are also legal, insurance premiums actually paid, minor cargo losses or measuring differentials, loading and unloading inspection fees, Panama Canal transit fees, a reasonable management fee (to be pro-rated equally among vessels) for coordinating arrivals and departures into and out of ports for vessels owned, effectively owned or chartered by the shipper, and other reasonable costs associated with the operation or maintenance (or both) of the vessel; and

(2) in addition to the costs listed in (1) of this subsection, in the case of catastrophic loss or damage of a vessel transporting oil or LNG from Alaska or enroute to Alaska to take on oil or LNG, a portion of the loss (for loss or damage of the ship, for injury or loss of her captain or crew and for damage and clean-up due to spillage of part or all of her cargo, but not for the loss of the cargo itself) which is borne by the shipper as the result of that catastrophic loss or damage and which is not reimbursed by insurance or by a third party; this portion of the loss is determined by dividing the unreimbursed liability on the basis of deadweight tonnage among the vessels owned, effectively owned or chartered by the shipper to transport oil or LNG (whichever was lost) from Alaska.

(continued)

Instructions: Taxable Production Income

(f) A person "effectively owns", has "effective ownership" or "effectively has an ownership interest" in a vessel or LNG transportation facility for purposes of this section if either

(1) the vessel or LNG transportation facility is owned by another person comprising part of a consolidated business in which the first person is also a part; or

(2) the vessel or LNG transportation facility is the subject of a capital lease in which the person, or another person comprising part of a consolidated business in which the first person is also a part, is the lessee.

(g) For purposes of this chapter, the "positioning cost" for a vessel includes the costs not included in the charter for that vessel which are borne by the shipper for placing that vessel into position before the first voyage under that charter or the estimated costs to be borne by the shipper for delivering it up at a specified location after the last voyage under that charter, or both if the shipper is obligated under the terms of the charter or contract of affreightment to bear them both.

(h) A reasonable rate of return under (c) (4) or (d)(2)(C) of this section is presumed to be that internal rate of return (after federal income tax) on an investment which equals two percent plus the average annual national inflation rate (measured by the GNP deflator) during (1) the period between the time the commitment is made to construct or acquire the vessel or LNG transportation facility and the time when the vessel or LNG transportation facility has been received (or delivered) and is ready to be placed into service, or (2) if the period in (1) of this subsection falls entirely within a calendar year, that entire calendar year. At the request of a taxpayer or on its own motion, the department may replace this presumed rate of return with one based on the rate of return imputed to that investment or similar ones by the person owning or effectively owning the vessel or LNG transportation facility.

(i) The third party nature of an agreement between a shipper and a third party carrier regarding transportation costs is not affected during the term of that agreement by a subsequent consolidation of that shipper and carrier into a consolidated business, if, at the time they entered that agreement neither the shipper nor the carrier exercised, directly or indirectly, any control over the business affairs of the other as the result of, or in anticipation of, their subsequent consolidation into the same consolidated business.

Extraordinary Production Revenue or (Loss) Schedule B.8

15 AAC 12.140. EXTRAORDINARY PRODUCTION REVENUE OR (LOSS). (a) A taxpayer's extraordinary production revenue or loss for a lease or property is fully recognized for purposes of this chapter in the year in which it is realized. There is no carry-back or carry-forward of extraordinary production revenue or loss under this chapter to any other year. except to the extent that an extraordinary production loss may contribute to a taxpayer's net loss under sec. 70 of this chapter. Multiple realizations of extraordinary production revenue or loss by a taxpayer during a single year are cumulative, with revenues added to revenues and losses to losses, and with revenues and losses offset against each other.

Enter on line 1 the amount of any extraordinary operating revenues or losses resulting from a retroactive increase or decrease in a tariff or fee allowed to be charged by a regulated carrier for transporting this taxpayer's oil or gas produced from a lease or property in Alaska. Also, indicate the effective date(s) of any such retroactive changes and the period covered, by carrier below:

Effective Date:	Tariff or fee change: From	To	Period Covered: From	To	Volume subject to each change

Line 2. The amount of the extraordinary production revenue or loss is the amount of the change at the point of production offset by any corresponding changes in deductions.
Enter on line 2 any such changes in deductions. 15 AAC 12.140(d).

Enter on line 4 the amount of any extraordinary operating revenues or losses resulting from retroactive changes in the sales price in a bona fide arm's length sale of this taxpayer's oil or gas produced from a lease or property in Alaska. Also, indicate the effective date(s) of any such retroactive changes and the period covered, by carrier below:

Effective Date:	Sales price change: From	To	Period Covered: From	To	Volume subject to each change

Line 5. The amount of the extraordinary production revenue or loss is the amount of the change at the point of production offset by any corresponding changes in deductions. Enter on line 5 any such changes in deductions. 15 AAC 12.140(d).

AGO 785780

Extraordinary Production Revenue or (Loss) Schedule B.8

Catastrophic Losses

In the case of catastrophic loss of a taxpayer's oil or gas that has passed its point of production but for which the risk of loss has not shifted from the taxpayer to a common carrier or a third party, the taxpayer realizes an extraordinary production loss for that oil or gas. The amount of the taxpayer's extraordinary loss in such a case shall be the reasonable cost of transportation borne by the taxpayer for that oil or gas from its point of production to the point of its loss, plus the value at the point of production for that oil or gas but only to the extent that the value at the point of production for that oil or gas is included in the taxpayer's gross production revenue for the lease or property from (or to) which that oil or gas was produced (or allocated), and minus reimbursements to the taxpayer from insurance or from one or more third parties for that loss. 15 AAC 12.140(e).

Enter on line 9 the cost of transportation borne by the taxpayer for oil or gas lost in a catastrophe from its point of production to the point of the oil or gas catast. loss.

Enter on line 10 the value at the point of production for oil or gas lost in a catastrophe. Enter only the values for oil or gas that have been included in the taxpayer's gross production revenue.

Enter on line 11 reimbursements to the taxpayer from insurance or from one or more third parties for such catastrophic loss.

1. Retroactive Tariff Change: (a) Increased Cost .....
   (b) Decreased Cost .....

2. Resulting Change in Royalties Paid: (a) Increase .....
   (b) Decrease .....

AGO 785784

Deduction for Direct Operating Costs — Schedule B.12

15 AAC 12.240. DEDUCTION FOR DIRECT OPERATING COSTS. (a) The direct operating costs during a year that are incurred by or for a taxpayer for a lease or property in the state are a deduction in determining the taxpayer's taxable production income for that year.

(b) Before the commencement of commercial production from (or allocated to) a lease or property, the direct operating costs for that lease or property are (1) the costs for geological and geophysical work conducted on the lease or property after the taxpayer has acquired a working interest in the lease or property, (2) rentals and shut-in royalties paid in order to retain the lease or property, and (3) the costs for operations conducted on or near the lease or property in support of drilling and/or development operations for the lease or property but excluding the actual dri'ling costs and development costs themselves; however, if the lease or property is subject to an operating agreement in which at least one working-interest owner is a third party to the operator, then the direct operating costs for that lease or property are the costs (excluding drilling costs and development costs) that are incurred by the operator in operating that lease or property and which are reimbursable to the operator by the working-interest owners, under the terms of that operating agreement.

(c) After the commencement of commercial production from (or allocated to) a lease or property, the direct operating costs for that lease or property are the costs of operating the wells, facilities and equipment on or for the lease or property which directly result in or are necessary for the continued or enhanced production from (or allocated to) the lease or property and the costs of operations conducted on or near the lease or property in support of drilling and/or development operations for the lease or property but excluding the actual drilling costs and development costs themselves; however, if the lease or property is subject to an operating agreement in which at least one working-interest owner is a third party to the operator, then the direct operating costs for that lease or property are the costs (excluding drilling costs and development costs) that are incurred by the operator in operating that lease or property and which are reimbursable to the operator by the working-interest owners, under the terms of that operating agreement.

(d) No cost for the taxpayer's general overhead or administrative expense and no cost that is to be amortized or depreciated under secs. 250 and 260 of this chapter, respectively, may be included in a deduction under this section.

AGO 785786

Deduction for Acquisition Costs — Schedule B.13

15 AAC 12.250. DEDUCTION FOR ACQUISITION COSTS. (a) A taxpayer's acquisition costs for a lease or property in the state that has never had commercial production from (or allocated to) it from any zone are deferred for purposes of this chapter until either there is commercial production from (or allocated to) it or until the lease or property is abandoned without ever having had commercial production from (or allocated to) it.

(b) If a lease or property is abandoned, then the taxpayer's unamortized acquisition costs for that lease or property are a deduction in determining the taxpayer's taxable production income for the year in which the lease or property is abandoned. If only part of the lease or property is thus abandoned, the unamortized acquisition costs for that lease or property must be apportioned to that abandoned portion on the basis of acreage.

(c) A taxpayer's acquisition costs for a lease or property having commercial production from (or allocated to) it during a year must be amortized, and the amount of amortization that year for those acquisition costs is a deduction in determining the taxpayer's taxable production income for the year. Except for cases when (d) of this section applies, the amount of amortization in a year for a lease or property equals the taxpayer's unamortized acquisition costs as of the beginning of that year, multiplied by the ratio of the Btu-equivalents of the production from (or allocated to) that lease or property during the year, to the total number of the Btu-equivalents represented by the remaining proved reserves (both developed and undeveloped) of that lease or property as of the beginning of the year.

(d) During a year it may happen that a taxpayer transfers part or all of its production interest in a commercially producing lease or property to one or more third parties or receives part or all of a production interest in a lease or property as the result of a transfer from one or more third parties. In such a case, the taxpayer receiving the production interest and the taxpayer transferring the production interest shall each calculate its respective amortization of acquisition costs for that portion of the year preceding the transfer separately from its amortization of acquisition costs for that portion of the year following the transfer; and the sum of each taxpayer's respective amortization of acquisition costs for those two portions of the year will be a deduction in determining that taxpayer's taxable production income for that year. In calculating amortization for the portion of the year preceding the date of the transfer, the taxpayer shall use the procedure prescribed in (c) of this section, except that the ratio of the Btu-equivalents of production may include only the taxpayer's production from (or allocated to) the lease or property for the portion of the year preceding the date of the production-interest transfer. For that portion of the year following the transfer, the amount of amortization equals the taxpayer's unamortized acquisition costs as of the time immediately following the production interest transfer, multiplied by the ratio of Btu equivalents of the taxpayer's production from (or allocated to) the lease or property for the portion of the year on and after the date of the transfer to the total number of Btu-equivalents represented by the taxpayer's remaining proved reserves (both developed and undeveloped) of the lease or property as of the time immediately following the production-interest transfer.
(continued)

AGO 785787

Deduction for Acquisition Costs — Schedule B.13

(e) The amount of a taxpayer's unamortized acquisition costs for a lease or property as of a particular date equals the taxpayer's acquisition costs for its original production interest in the lease or property, plus the unamortized acquisition costs for each production interest in the lease or property transferred to the taxpayer on or before that date, and minus the sum of (1) the unamortized acquisition costs for each production interest in the lease or property transferred from the taxpayer on or before that date, (2) the cumulative amount (as of that date) of the taxpayer's acquisition costs for the lease or property that has been allowed under this section for amortization or abandonment, and (3) the taxpayer's standardized prior-tax amortization for the lease or property under sec. 630. of this chapter.

(f) A taxpayer amortizing its acquisition costs for a lease or property for financial accounting purposes on a basis other than a variant of unit-of-production amortization may apply to the department for authorization to use that other basis for purposes of calculating the deduction under this section. Upon a satisfactory showing that the taxpayer does use another basis for amortizing its acquisition costs for financial accounting purposes, the department may grant the requested authorization to the taxpayer. Until that authorization is granted in writing, the taxpayer shall follow the method prescribed in this section to amortize its acquisition costs for leases or properties in the state.

(g) The amount of a taxpayer's acquisition costs for a lease or property equals the taxpayer's net payments for

(1) cash bonus or comparable advance payment to acquire the lease or property;

(2) drilling costs for wells bottomed on the lease or property which were completed or abandoned no later than the completion of the discovery well for the field that includes the lease or property and which were spudded after the acquisition of the lease or property or in fulfillment of a condition or requirement to acquire or retain the lease or property;

(3) tax paid under AS 43.56 to the state (net of all credits and refunds for municipal ad valorem taxes on the same property) for property used on or for the lease or property after its acquisition and before the completion of the discovery well for the field that includes the lease or property or for property used in the drilling described in (2) of this subsection, and ad valorem and other taxes paid to one or more municipalities under AS 29.53 that were incurred for the drilling referred to in (2) of this subsection or for property or operations on or for the lease or property after its acquisition and before the completion of that discovery well;

Deduction for Acquisition Costs — Schedule B.12(a)

(4) that portion of the full consideration given by the taxpayer in acquiring a production interest in the lease or property which is properly attributable to the acquisition of the lease or property (as opposed to the wells, facilities and equipment on or in support of the lease or property which directly result in or are necessary for continued or enhanced production from (or allocated to) the lease or property);

(5) interest on capital borrowed from one or more third parties for any of the expenditures described in (1) - (4) of this subsection that was capitalized for purposes of the taxpayer's financial accounting; however, interest so capitalized may be recognized for purposes of this chapter at a rate not to exceed the composite cost of the taxpayer's borrowed capital from third parties as reflected in the taxpayer's financial accounting for the year in which the interest is capitalized.

Property or Lease Abandoned During the Year. 15 AAC 12.250(b).

Column (a): Enter the location of the abandoned property or lease.

Column (b): Enter the total acreage in the entire property or lease.

Column (c): Enter the total acreage in the property or lease abandoned during this year.

Column (d): Divide the acreage in column (c) by the acreage in column (b). Enter the quotient as a amount (Quotient should be to six figures) in this column.

Column (e): Enter the amount of the taxpayer's unamortized acquisition costs attributable to the total lease or property acreage in column (b).

Column (f): Multiply the amount in column (e) by the amount in column (d) and enter the product in column (f):

AGO 785792

Deduction for Development Costs — Schedule B.14

15 AAC 12.260. DEDUCTION FOR DEVELOPMENT COSTS. (a) A taxpayer's development costs for a lease or property in the state that has never had commercial production from (or allocated to) it from any zone are deferred for purposes of this chapter until either there is production from (or allocated to) it or until the lease or property is abandoned without ever having had commercial production from (or allocated to) it.

(b) If a lease or property is abandoned without ever having had commercial production from (or allocated to) it, then the taxpayer's undepreciated development costs for that lease or property are a deduction in determining that taxpayer's taxable production income for the year in which the lease or property is abandoned.

(c) Except for development costs to which (d) or (e) of this section applies, a taxpayer's development costs for a lease or property having commercial production from (or allocated to) it during a year must be depreciated, and the amount of depreciation that year for those development costs is a deduction in determining the taxpayer's taxable production income for the year. The amount of depreciation in a year for a lease or property equals

(1) the average between the taxpayer's undepreciated development costs for the lease or property as of the beginning of the year and those costs as of the end of the year; multiplied by

(2) the ratio of the Btu-equivalents of the production from (or allocated to) that lease or property during the year, to the total number of the Btu equivalents represented by the remaining proved development reserves for that lease or property as of the beginning of that year.

(d) A taxpayer's undepreciated development costs for wells of a lease or property that are abandoned during a year or for facilities or equipment for the lease or property which are removed during the year are excluded from the development costs that are to be depreciated that year under (c) of this section for that lease or property. Instead, the undepreciated development costs for those wells, facilities or equipment as of the beginning of the year, offset by their salvage value (if any), are a deduction in determining the taxpayer's taxable production income for the year in which they are removed.

(continued)

AGO 785793

Reduction for Development Costs — Schedule B.1

(e) During a year it may happen that a taxpayer transfers part or all of its production interest in a commercially producing lease or property to one or more third parties or receives part or all of a producing interest in a lease or property as the result of a transfer from one or more third parties. In such a case, the taxpayer receiving the production interest and the taxpayer transferring the production interest shall each calculate its respective depreciation of development costs for that portion of the year preceding the transfer separately from its depreciation of development costs for that portion of the year following the transfer; and the sum of each taxpayer's respective depreciation of development costs for those two portions of the year will be a deduction in determining that taxpayer's taxable production income for that year. In calculating depreciation for the portion of the year preceding the date of the transfer, the taxpayer shall use the procedure prescribed in (c) of this section, except that the ratio of the Btu-equivalents of production may include only the taxpayer's production from (or allocated to) the lease or property for the portion of the year preceding the date of the production-interest transfer. For that portion of the year following the transfer, the amount of depreciation equals the average of the taxpayer's undepreciated development costs as of the time immediately following the production-interest transfer and as of the end of the year multiplied by the ratio of Btu-equivalents of the taxpayer's production from (or allocated to) the lease or property for the portion of the year on and after the date of the transfer to the total number of Btu-equivalents represented by the taxpayer's remaining proved developed reserves of the lease or property as of the time immediately following the production-interest transfer.

(f) The amount of a taxpayer's undepreciated development costs for a lease or property as of a particular date equals the taxpayer's development costs as of that date for the wells, facilities and equipment for that lease or property that are then in place, minus the sum of (1) the cumulative amount (as of that date) allowed under this chapter for depreciation of the taxpayer's development costs for the lease or property and (2) the taxpayer's standardized prior tax depreciation for the lease or property under sec. 530 of this chapter.

(g) A taxpayer depreciating its development costs for a lease or property for financial accounting purposes on a basis other than a variant of unit-of-production depreciation may apply to the department for authorization to use that other basis for purposes of calculating the deduction under this section. Upon a satisfactory showing that the taxpayer does use another basis for depreciating its development costs for financial accounting purposes, the department may grant the requested authorization to the taxpayer. Until that authorization is granted in writing, the taxpayer shall follow the method prescribed in this section to depreciate its development costs for leases or properties in the state for purposes of this chapter.

(h) The amount of a taxpayer's development costs for a lease or property equals the taxpayer's net payments for

(1) drilling costs for wells drilled on or for the lease or property which were completed or abandoned after the completion of the discovery well for the field that includes the lease or property,

(continued)

Deduction for Development Costs — Schedule B.14(a)

(2) development costs for facilities and equipment on or in support of the lease or property that directly result in or are necessary for continued or enhanced production from (or allocated to) the lease or property,

(3) tax paid under AS 43.56 to the state (net of all credits and refunds for municipal ad valorem taxes on the same property) for property used in the drilling described in (1) of this subsection or described in (2) of this subsection, and ad valorem and other taxes paid to one or more municipalities under AS 29.53 that were incurred directly as the result of, and in the course of, the drilling described in (1) of this subsection and/or the installation or operation of the property described in (2) of this subsection,

(4) that portion of the full consideration given by the taxpayer in acquiring a production interest in the lease or property, which is properly attributable to the wells, facilities and equipment on or in support of the lease or property which directly result in or are necessary for continued or enhanced production from (or allocated to) the lease or property (as opposed to the consideration given for the lease or property itself),

(5) interest on capital borrowed from one or more third parties for any of the expenditures described in (1) - (4) of this subsection that was capitalized for purposes of the taxpayer's financial accounting; however, interest so capitalized may be recognized for purposes of this chapter at a rate not to exceed the composite cost of the taxpayer's borrowed capital from third parties as reflected in the taxpayer's financial accounting for the year in which the interest is capitalized.

Deduction for Uncapitalized Interest — Schedule B.16

15 AAC 12.280. DEDUCTION FOR UNCAPITALIZED INTEREST. (a) Subject to the limitation in (b) of this section, a deduction is allowed in determining a taxpayer's taxable production income during a year for interest paid to third parties by the taxpayer that year which was not capitalized by the taxpayer for financial accounting purposes.

(b) The deduction under (a) of this section for interest by a taxpayer for any year may not exceed an amount equal to the total interest of which the taxpayer is a part, multiplied by a fraction whose numerator equals the net book value (as of the end of the year) for financial accounting purposes of the taxpayer's real and tangible personal property of the type described in secs. 250 and 260 of this chapter (excluding the estimated value of the taxpayer's remaining oil and gas reserves), and whose denominator is the net book value (as of the end of the year) for financial accounting purposes of all real and tangible personal property (excluding the estimated value of remaining oil and gas reserves) worldwide of the consolidated business of which the taxpayer is a part.

Deduction for General Overhead and Administrative Expenses Schedule B.17

15 AAC 12.290. DEDUCTION FOR GENERAL OVERHEAD AND ADMINISTRATIVE EXPENSE. (a) Subject to the limitation in (b) of this section, a deduction is allowed in determining a taxpayer's taxable production income during a year, for the taxpayer's general overhead and administrative expense during that year which is properly allocated (on the basis of personnel time sheets, office space or another basis having general currency in the oil and gas industry) to (1) operations for leases or properties in the state, (2) acquiring leases or properties in the state, or (3) exploration in the state. Where general overhead and administrative expense is properly allocat , to an activity described in the preceding sentence that is conducted both within and outside the state, that general overhead and administrative expense must be allocated to in-state activity on the basis of the relative acreage involved in that activity which is in the state; however, the department will, in its discretion, authorize or require another basis for this allocation if that other basis is more appropriate than acreage.

(b) The deduction under (a) of this section for a taxpayer's general overhead and administrative expense for any year may not exceed the lesser of

(1) an amount equal to the taxpayer's own general overhead and administrative expense worldwide during that year, multiplied by a fraction whose numerator equals the net book value (as of the end of the year) for financial accounting purposes of the taxpayer's real and tangible personal property of the type described in secs. 250 and 260 of this chapter (excluding the estimated value of the taxpayer's remaining oil and gas reserves), and whose denominator is the net book value (as of the end of the year) for financial accounting purposes of all real and tangible personal property (excluding the estimated value of remaining oil and gas reserves) worldwide of the consolidated business of which the taxpayer is a part; or

(2) an amount equal to 12 cents for each barrel of the taxpayer's gross share of oil production during that year from leases or properties in the state, plus two cents for each Mcf of the taxpayer's gross share of gas production during that year from leases or properties in the state.

Oil Pipeline Income (Loss) Schedule C

General Instruction: A completed FERC Form P containing the operating income and expense pertaining to the pipeline transportation of oil in Alaska for the period covered by this Return must be attached to this Schedule.

Enter on Line 1 the total current operating revenue from the pipeline transportation of oil in Alaska during the period covered by this Return. This income is composed of all gathering, trunk, delivery, allowance oil, storage and demurrage, rental and incidental revenue, which must agree with the total on Schedule 300 of FERC Form P, attached.

Enter on Line 2 the total current operating expenses, excluding uncapitalized interest, incurred for the pipeline transportation of oil in Alaska during the period covered by this Return. The total of these expenses must agree with the total on Schedule 320 of FERC Form P, attached.

Enter on Line 4 all uncapitalized interest paid or accrued to third parties during the period covered by this Return on borrowed capital to construct or enlarge the facilities of Alaska oil pipelines. Attach a schedule of total amounts paid or accrued to each payee.

Enter on Line 5 all taxes paid or accrued during the period covered by this Return, except federal income and Alaska oil and gas corporate income taxes, related to carrier property, operations, privileges and licenses for oil pipeline transportation activities in Alaska. Attach a schedule of total amounts paid or accrued to each payee.

Enter on Line 8 any extraordinary operating revenues or losses as detailed on Schedule C.1.

Submit a completed Schedule C for each Pipeline Company.

1. Operating Revenues. (From Schedule 300, FERC Form P) .....
2. Operating Expenses. (From Schedule 320, FERC Form P) .....
3. Line 1 less line 2 .....

7. Line 3 less line 6 .....
8. Extraordinary Oil Pipeline Operating Revenue (Loss). (Schedule C.1, line 4) .....
9. Taxable Oil Pipeline Income (Loss). Amount on line 7 plus or (minus) amount on line 8 .....

AGI 785804

Alaska Department of Revenue
Oil and Gas Corporate Income Tax Return

Extraordinary Oil Pipeline Operating Revenue (Loss) Schedule C.1

Submit a completed Schedule C.1 for each Pipeline Company.

Enter on Line 1 the amount of any extraordinary operating revenue or (loss) resulting from a legally allowed retroactive increase or decrease in Alaska oil pipeline transportation tariffs during the period covered by this Return. The amount of the extraordinary operating revenue or extraordinary operating loss in such a case equals the difference between the operating revenue actually received under the tariff(s) previously charged and the operating revenue that would have been received under the tariff(s) as retroactively changed, during the period to which the change applies.

Indicate the effective date(s) of any such retroactive changes and the period covered by each.

Effective Date:	Tariff Change From	Tariff Change To	Period Covered From	Period Covered To	Volume subject to each change

Enter on Line 2 the amount of any catastrophic loss(es), during the period covered by this Return, related to Alaska oil pipeline property or the pipeline transportation of oil. The amount of those extraordinary operating losses equals the pipeline's costs, unreimbursed by insurance or from one or more third parties and not included in account 570 of FERC's Uniform System of Accounts for oil pipelines for damage to pipeline property, for repayment to shippers for lost oil, and for damage or clean-up of spilled oil. These extraordinary operating losses are fully recognized for purposes of this chapter in the year when the oil is lost.

Attach an explanation describing any losses claimed.

Enter on line 3 the costs of permanently terminating operations and/or removing part or all of the facilities and equipment of a pipeline. The amount of those extraordinary operating losses in a year equals the unreimbursed termination and removal costs for the pipeline that are actually incurred that year, offset by the salvage value (if any) of the removed facilities and equipment.

Operating Revenue or (Loss) Resulting From:

1. Retroactive Tariff Increase(s) or (Decrease(s)) .....
2. Catastrophic losses. (Attach schedule) ..... ( )
3. Termination Costs. (Attach schedule) ..... ( )
4. Extraordinary Oil Pipeline Operating Revenue (loss).

Extraordinary Gas Pipeline Operating Revenue (Loss) Schedule D.4

Submit a completed Schedule D.4 for each Pipeline Company.

Enter on Line 1 the amount of any extraordinary operating revenue or loss resulting from a legally allowed retroactive increase or decrease in Alaska gas pipeline transportation tariffs during the period covered by this Return.

The amount of the extraordinary operating revenue or extraordinary operating loss in such a case equals the difference between the operating revenue actually received under the tariff(s) previously charged and the operating revenue that would have been received under the tariff(s) as retroactively changed, during the period to which the change applies.

Indicate the effective date(s) of any such retroactive changes and the period covered by each:

Effective Date:	Tariff Change From	Tariff Change To	Period Covered From	Period Covered To	Volume Subject to each Change

Enter on Line 2 the amount of any catastrophic loss(es), during the period covered by this Return, related to Alaska gas pipeline property or the pipeline transportation of gas.

The amount of an extraordinary operating loss equals the pipeline costs, unreimbursed by insurance or from one or more third parti s and not included in the pipeline's operating expense already deducted, for damage to pipeline property, for repayment to shippers for lost gas, and for damage or clean-up resulting from the loss of the gas. Such extraordinary operating loss is fully recognized for purposes of this chapter in the year when the gas is lost.

Attach an explanation describing any loss claimed.

Enter on Line 3 the amount authorized or required by FERC to be included in account 182 (Extraordinary Property Losses) for a gas pipeline. The account 182 extraordinary property losses are fully recognized for purposes of this chapter in the year in which incurred (account 182 refers to the account of that number in both FERC's Uniform System of Accounts for Class A and B natural gas companies and the one for Class C and D natural gas companies).

AGO 785816

Alaska Department of Revenue
Oil and Gas Corporate Income Tax Return

Specific Instructions for Apportionment Factors.

1. Tankers and Other Marine Vessels. The property, payroll and sales factor numerator values emanating from tankers and other marine vessels must be determined as follows:

   (a) Property Factor Numerator. AS 43.20.071 (b) and (e).

      (i) Owned Marine Vessels. The numerator must be determined by multiplying the average original cost values of each vessel by the days-in-port factor of each vessel.

      (ii) Chartered Vessels. The net annual rental rate of each chartered vessel is multiplied by 8, and that product is then multiplied by the days-in-port factor of each vessel to determine the numerator value.

      (iii) The Average Original Costs of Leasehold Improvements on Board marine vessels must be multiplied by the days-in-port factor to determine the numerator value.

      (iv) Average Inventories (bunker fuel, stores, spare parts, etc.) on board each vessel must be multiplied by each marine vessel's days-in-port factor to determine the numerator value.

   (b) Payroll Factor Numerator. AS 43.20.071 (c) and (e). Compensation paid by the taxpayer to marine vessel employees must be multiplied by the days-in-port factor of each marine vessel to determine the payroll factor numerator.

   (c) Sales Factor Numerator. AS 43.20.071 (c) and (e). The taxpayer's operating revenues attributable to each marine vessel must be multiplied by the days-in-port factor of each marine vessel to determine the sales factor numerator.

   (d) Days-In-Port Factor Defined. The days in-port factor is determined by dividing the number of days-in-port in Alaska of the tanker or other vessel by the number of days-in-port everywhere. A day-in-port does not include time when a vessel is tied up due to repairs, strikes or seasonal inactivity. A day-in-port occurs when the vessel is tied up to a dock or wharf or when it is anchored offshore for purposes of loading or offloading cargo. A day-in-port is determined by dividing the number of hours in port by 24. AS 43.20.071.

(continued)

Specific Instructions Regarding
the Apportionment Factors.

2. PROPERTY IN TRANSIT. 15 AAC 10.171 (b). Property in transit between locations of the taxpayer to which it belongs must be considered to be at the destination for purposes of the property factor. Property in transit between a buyer and seller which is included by a taxpayer in the denominator of its property factor in accordance with its regular accounting practices must be included in the numerator according to the state of destination.

3. MOBILE OR MOVABLE PROPERTY. 15 AAC 10.171(c). The value of mobile or movable property such as construction equipment, trucks or leased electronic equipment which is located within and outside of this state during the tax period must be determined for purposes of the numerator of the factor on the basis of total time within the state during the tax period.

4. VALUATION OF RENTED PROPERTY. 15 AAC 10.191 (a). Property rented by the taxpayer must be valued at eight times its net annual rental rate. The net annual rental rate for any item of rented property is the annual rental rate paid by the taxpayer for that property, less the aggregate annual sub-rental rates paid by subtenants of the taxpayer. (See sec. 202 of this chapter for special rules where the use of that net annual rental rate produces a negative or clearly inaccurate value or where property is used by the taxpayer at no charge or rented at a nominal rental rate).

(b) Subrents are not deducted when the subrents constitute business income because the property which produces the subrents is used in the regular course of a trade or business of the taxpayer when it is producing that income. Accordingly there is no reduction in its value.

(c) "Annual rental rate" is the amount paid as rental for property for a 12-month period (i.e., the amount of the annual rent). Where property is rented for less than a 12-month period, the rent paid for the actual period of rental constitutes the "annual rental rate" for the tax period. However, where a taxpayer has rented property for a term of 12 or more months and the current tax period covers a period of less than 12 months (due, for example, to a reorganization or change of accounting period), the rent paid for the short tax period must be annualized. If the rental term is for less than 12 months, the rent may not be annualized because of the uncertain duration when the rental term is on a month-to- month basis.

5. SPECIAL RULES. 15 AAC 10.202(a). If the subrents taken into account in determining the net annual rental rate under sec. 191 of this chapter produce a negative or clearly inaccurate value for any item of property, another method which will properly reflect the value of rented property may be required by the commissioner of revenue or requested by the taxpayer.

In no case, however, shall such value be less than an amount which bears the same ratio to the annual rental rate paid by the taxpayer for such property as the fair market value of that portion of the property used by the taxpayer bears to the total fair market value of the rented property.

(L) If property owned by others is used by the taxpayer at no charge or rented by the taxpayer for a nominal rate, the net annual rental rate for that property must be determined on the basis of a reasonable market rental rate for that property.

Oil and Gas Corporate Income Tax Return

Net Loss Carryovers/Carrybacks — Schedule E

THIS SCHEDULE MUST BE COMPLETED IF A NET LOSS IS CLAIMED ON LINE 6 SCHEDULE A.

15 AAC 12.070. TREATMENT OF NET LOSSES REALIZED UNDER THIS CHAPTER.
(a) A taxpayer realizes a net loss under this chapter if the taxpayer's net taxable income under sec. 50 of this chapter for that year is less than zero.

(b) A taxpayer's net loss may be carried back not more than three tax years before the tax year for which it is realized (but in no event before the 1978 tax year) and may be carried forward if necessary as far as the seventh tax year following the tax year for which it is realized. This carrying back and carrying forward must be on a first-in, first-out basis; that is, the tax loss must first be carried back as an offset against the taxpayer's net taxable income, if any, for the third preceding tax year, and any remaining tax loss must next be applied as an offset against the taxpayer's net taxable income, if any, for the second preceding tax year, and so on until either the tax loss is fully used as offsets against the taxpayer's net taxable income or until it has been carried forward into the seventh year following the tax year in which the net loss is realized. Any net loss from a tax year still remaining after the seventh following tax year will be lost.

(c) If a taxpayer has net losses from more than one tax year that may be applied as offsets against the taxpayer's net taxable income for the same tax year, the net loss from the earliest of those tax years must first be applied, then the net loss from the second earliest of those tax years must be applied (assuming the earliest tax loss does not fully offset the net taxable income against which it is applied), and so on.

A TAXPAYER'S NET OPERATING LOSSES UNDER ALASKA STATUTE 43.20 ARE NOT RECOGNIZED UNDER THIS CHAPTER. 15 AAC 12.073(d).

Re: Income Tax Regulations
(AS 43.21)

To Recipients of Proposed Regulations:

Proposals which would amend existing oil and gas corporate income tax regulations have been distributed to you. The most recent set of proposals followed a published notice which related that set of proposals to an earlier one distributed late in October 1979. It has come to our attention that the most recent set of proposals inadvertently dropped a couple of paragraphs contained in the earlier draft. The unintended deletions, which are obvious in the context of the proposals, are contained in proposed sections 132(b)(3) and (4), 240, and 990(31) and (32). The deleted language is attached.

We apologize for any inconvenience this has caused you.

Sincerely,

Robert M. Johnson
Director

DILM

Proposed Regulation 132(b)(3) and (4) should read:

(3) when transportation of oil is by a tanker or other vessel that is owned or effectively owned by the taxpayer of that oil, the taxpayer's actual cost for that transportation, which is the sum of:

(A) voyage and port costs incurred with respect to that transportation;

(B) the positioning cost, amortized over 36 months, for that vessel but only for placing that vessel into position before its employment in the Alaska trade and not for placing it into position after its employment in the Alaska trade for employment in another trade,

(C) depreciation of the vessel; if the vessel is actually owned by the taxpayer, depreciation must be calculated in accordance with the applicable FASB Financial Accounting Standards for such owned assets; if the vessel is effectively owned by the taxpayer, depreciation must be calculated in accordance with FASB-13 from the standpoint of a lessee under a capital lease; and

(D) an amount, which when added to the amount of depreciation allowed under (C) of this paragraph, will provide a reasonable return on the acquisition cost of the vessel over its expected life; for purposes of this paragraph,

(i) "acquisition costs" means the cost of the vessel which may be capitalized by its actual owner under generally accepted accounting principles, but not including costs of improvements made after the date the vessel is placed in service by or on behalf of the taxpayer, and

(ii) "expected life" means the period of time used to calculate depreciation under (C) of this paragraph;

(4) in the case of transportation of gas as LNG

(A) where not all of the LNG transportation facilities are subject to tariff regulations (by FERC or other agencies of the United States, state or territory or a possession of the United States or a foreign nation) and when the taxpayer does not have or effectively have any ownership interest in the LNG transportation facility, the amount charged to the taxpayer for that LNG transportation;

(B) when the taxpayer has or effectively has an ownership interest in the LNG transportation facility, the taxpayer's actual cost for that transportation equalling the sum of:

(i) the direct operating costs of the LNG transportation facility (in the case of an LNG tanker, its respective voyage and port costs) incurred with respect to the taxpayer's gas;

(ii) the positioning cost, amortized over 36 months, for that vessel but only for placing that vessel into position before its employment in the Alaska trade and not for placing it into position after its employment in the Alaska trade for employment in another trade;

(iii) depreciation of the LNG transportation facility; if the facility is actually owned by the taxpaver, depreciation must be calculated in accordance with the applicable FASB Financial Accounting Standards for the owner of such assets; if the LNG transportation facility is effectively owned by the taxpayer, depreciation must be calculated in accordance with FASB-13 from the standpoint of a lessee under a capital lease; and

(iv) an amount which, when added to the amount of depreciation allowed under (iii) of this subparagraph, will provide a reasonable return on the acquisition cost of the LNG transportation facility over its expected life; for purposes of this subparagraph, "acquisition cost" means the cost of the LNG transportation facility which may be capitalized by its actual owner under generally accepted accounting principles, and "expected life" means the period of time used to calculate depreciation under (iii) of this subparagraph;

Proposed Regulation 240 should read:

15 AAC 12.240. DEDUCTION FOR DIRECT OPERATING COSTS. (a) The direct operating costs during a year that are incurred by or for a taxpayer for a lease or property in the state are a deduction in determining the taxpayer's taxable production income for that year.

(b) Before the commencement of commercial production from (or allocated to) a lease or property, the direct operating costs for that lease or property are:

(1) the costs for geological and geophysical work conducted on the lease or property after the taxpayer has acquired a working interest in the lease or property;

(2) rentals and shut-in royalties paid in order to retain the lease or property;

(3) drilling costs for wells bottomed on the lease or property; and

(4) the costs for operations conducted on or near the lease or property in support of drilling and/or development operations for the lease or property, but excluding the actual development costs themselves; however, if the lease or property is subject to an operating agreement in which at least one working-interest owner is a third party to the operator, the direct operating costs for that lease or property and the costs (excluding development costs but including drilling costs) that are incurred by the operator in operating that lease or property and which are reimbursable to the operator by the working-interest owners, under the terms of that operating agreement.

(c) After the commencement of commercial production from (or allocated to) a lease or property, the direct operating costs for that lease or property are:

(1) the costs of operating the facilities and equipment on or for the lease or property which directly result in or are necessary for the continued or enhanced production from (or allocated to) the lease or property;

(2) the costs of drilling and/or operating wells bottomed on the lease or property; and

(3) the costs of operations conducted on or near the lease or property in support of drilling and/or development operations for the lease or property but excluding the actual development costs themselves; however, if the lease or property is subject to an operating agreement in which at least one working-interest owner is a third party to the operator, then the direct operating costs for that lease or property are the costs (excluding development costs but excluding drilling costs) that are incurred by the operator in operating that lease or property and which are reimbursable to the operator by the working interest owners, under the terms of that operating agreement.

(d) No cost for the taxpayer's general overhead or administrative expense and no cost that is to be amortized or depreciated under secs. 250-260 of this chapter may be included in this section.

AGO 785824

Proposed Regulation 900(31) and (32) should read:

(31) "sales delivery point" means

(1) for a taxpayer's oil and gas sold in a bona fide, arm's-length sale to a third party, the point of delivery under the terms of the contract or agreement for that sale, except in the cause of a sale to which Sec. 132(d) of this chapter applies;

(2) for a taxpayer's oil not sold in a bona fide, arm's-length sale to a third party, th gate of the refinery to which that oil is ultimately transported; and

(3) for a taxpayer's gas not sold in a bona fide, arm's-length sale to a third party, the point of delivery under the terms of the sales contract being used as the reference for the sales price of the taxpayer's gas under Secs. 122 and 124 of this chapter.

(32) "sales price" is defined in Sec. 122 of this chapter.

Impact of Allowing Intangible Drilling Expenses as a Direct Deduction

You have asked for an analysis of the financial impact of allowing intangible drilling costs (IDCs) as a deduction to derive taxable production income under the Oil and Gas Corporate Income Tax Act (AS 43.21).

As you know, drilling costs (intangible or tangible) incurred by oil and gas producers are not specifically allowed as an operating expense deduction in deriving taxable production income. Intangible drilling costs are, however, an allowable deduction under § 263 of the Internal Revenue Code. Prior to enactment of the Oil and Gas Corporate Income Tax (AS 43.21), § 263 was incorporated by reference into the Net Income Tax Act (AS 43.20) which applied to the oil and gas producers. That incorporation by reference disappeared with enactment of AS 43.21. The law does not now specifically address IDCs, but does permit as deductions to derive oil and gas production income such items as dry hole expenses, interest expense not capitalized by the corporation up to a certain amount, and amortization of lease acquisitions. See, AS 43.21.020(b). Under the original regulations implementing that provision, "drilling costs" may be deducted to derive taxable production income only as a portion of acquisition and development costs. Those allowable costs are limited. 15 AAC 12.250 and 12.260. Operating expenses, which are generally deductible to the full extent of the expenses incurred, exclude "drilling costs."

The Department is presently proposing to promulgate regulations which would allow IDCs, as a drilling cost, to be directly deducted as an operating expense.1/ Such a change in regulations would impose a significant impact on taxes received. Our preliminary calculation of taxes paid under AS 43.21 indicates that, as an example, the 1978 tax base of $1,780,402,000 would drop by $672,653,000 or 38%.2/ The taxes produced would consequently drop by a similar percentage or approximately $63,596,000. While the tax benefit to the covered taxpayers is a decrease in tax obligations of 38% industry wide, some taxpayers, depending on their unique circumstances, would stand to save over 100% of their tax obligations (resulting in a net operating loss) while others would see only minor savings. However, a weighted average among all taxpayers clearly places the bulk of the tax savings at between 30 and 40%, as noted.

1/ Whether a regulation alone can permit this change is the subject of an opinion request to the Attorney General.

2/ Because of the nature of reporting taxes, the estimates of IDCs are based only on those reported under development cost deductions. 15 AAC 12.260. There also may be IDCs claimed under the present acquisition cost deductions (15 AAC 12.250) but these figures cannot be readily extracted. However, for purposes of calculating impact, the percentage figures, ratios and adjusted tax receipts would remain about the same as estimated or would show a slightly greater benefit for the taxpayer.

ALASKA STATE LEGISLATURE - HOUSE OF REPRESENTATIVES

REPRESENTATIVE JOE McKINNON
POUCH V, JUNEAU, ALASKA 99811

February 4, 1980

Thomas K. Williams, Commissioner
Department of Revenue
Pouch S
Juneau, Alaska 99811

Dear Tom:

Re: Proposed changes to 15 AAC 12; regulations on the Oil and Gas Corporate Income Tax

We are very concerned, as you know, over the proposed changes to the regulations on the Oil and Gas Corporate Income Tax (15 AAC 12). We urge you to postpone any action on these regulation changes until we have had more time to review them. Our specific concerns are the proposed changes to sections 240, 250 and 260, which provide for the direct deduction of drilling costs as operating costs. We are also concerned about allowing methods other than unit-of-production depreciation, which is the method specifically mentioned in the statutes.

During deliberations over the Oil and Gas Corporate Income Tax legislation, the Department of Revenue relied on work by Jerome M. Zeifman and Kenneth G. Ainsworth. In their January 1977 report entitled The Taxation of the Petroleum Industry Under Alaska's Corporate Income Tax, Ziefman and Ainsworth cite two major problems. The first was what they called an "eroded tax base". This was due to Federal tax subsidies historically provided to the petroleum industry. The second problem was that Alaska was using an apportionment formula, which did not fairly reflect the true amount of business being done in the state.

Both these problems stemmed from the fact that Alaska had delegated to Congress the responsibility for determining the corporate income tax base. By adopting certain provisions of the Internal Revenue Code, the State was inadvertantly

AGU 785828

adopting Federal deductions designed as tax subsidies. The most notable of these, as Ziefman and Ainsworth pointed out, was the "expensing of intangible drilling costs." Furthermore, by adopting an apportionment formula based on the Uniform Division of Income for Tax Purposes Act, the State was not taxing the petroleum industry on a manner which truly reflected their profits made in the State. The effect, as stated by Richard Kilgore of the Walter J. Levy Consultants Corporation before a joint House-Senate Resources Committee hearing on March 21, 1977, was "an effective rate of taxation instead of something like 9.4% a rate of taxation, roughly a quarter of that, two to two and a half percent."

That the intent of SCS CSHB 322 was to solve both of these problems is clear. In a letter dated July 5, 1978 to the House Speaker and Senate President, Governor Hammond wrote:

> Oil and gas corporations have been paying an effective tax rate substantially below the nominal tax rate of 9.4 per cent and substantially below what other local corporations would pay on the same income earned on the same assets in the state. The passage of this bill culminates three years of joint effort by the executive and legislative branches to rectify substantial defects in the former taxation scheme which, by incorporating various federally available tax loopholes and by using an inappropriate apportionment formula, allowed oil and gas corporations to avoid their fair share of the state tax burden. (1978 House Journal Final Supplement, p. 13).

To now reincorporate the "federally available tax loophole" of expensing of intangible drilling costs by regulation appears to be directly in conflict with the intent of AS 43.21. (ch 110 SLA 1978).

Plus, the fact that this proposed change to the regulations is of questionable legality is evident in the request for a legal opinion from Joseph K. Donohue, Deputy Commissioner of Revenue to Wilson Condon, Deputy Attorney General, dated November 2, 1979. The Department of Revenue claims the question of law centers around an interpretation of AS 43.21.020(c)(4), which defines operating expenses allowed as direct deductions. Under AS 43.21.020(c)(4), there is no specific reference to drilling costs. The Department has apparently mistakenly concluded that if drilling cost are not indirect costs, they may be deducted.

We would like to bring to the Department's attention AS 43.21.020(c)(8) which provides the only reference in the statutes which directly relates to "drilling costs." This subsection explicitly states that "dry hole" costs are allowed as direct deductions. We emphasize here that this apples only to "dry hole" costs and not drilling costs per se.

Returning to the legislative history on taxes in general, it is clear that SCS CSHB 322 was not the first attempt to rid the state tax base of "federally available tax loopholes." On February 25, 1975, Governor Hamm . wrote to the House Speaker regarding HB 208:

> I am submitting this bill for the purpose of closing certain corporate tax loopholes. The bill would eliminate the foreign tax credit, the depletion allowance, and the exemptions for domestic international sales corporations (DISC), and would place a limit on the amount of investment credit for Alaska income tax purposes. (1975 House Journal 295).

After the passage of CSHB 208 (Fi .. am S (ch 153 SLA 1975), the only other significant "tax loophole" left was expensing of intangibles.

We understand that a large measure of your concern arises from the current lawsuit over AS 43.21. We believe that many of the complaints in the lawsuit can be rendered moot by changes to the statutes which will have little impact on revenue. We remind you of the letter the Attorney General wrote to Governor Hammond on June 22, 1978, in which Avrum Gross concluded, that:

> We herefore simply reiterate our advice to the Department of Revenue and state that, in our view there are no constitutional or legal issues which would be fatal to the implementation of the new income tax.

I think you can understand our concerns. We are available at any time to discuss them with you further, and also to work with you on statutory changes to which address substantive legal points concerning the lawsuit over AS 43.21. Please send us a copy of the latest annual consolidated

report of state revenues and taxation policies required under AS 43.21.110.

Sincerely,

Joe

COMMENTS BY MARK L. HAZELWOOD
ON BEHALF OF THE ALASKA OIL AND GAS ASSOCIATION
AT HEARINGS ON PROPOSED ALASKA OIL AND GAS CORPORATE
INCOME TAX REGULATIONS
ANCHORAGE, ALASKA
JANUARY 24, 1980

INTRODUCTION

MY NAME IS MARK L. HAZELWOOD AND I AM AN ATTORNEY IN THE TAX DEPARTMENT OF ATLANTIC RICHFIELD COMPANY. I HAVE BEEN REQUESTED BY THE ALASKA OIL AND GAS ASSOCIATION (AOGA) TO PRESENT THE ASSOCIATION'S VIEWS REGARDING THE PROPOSED REGULATIONS ISSUED BY THE DEPARTMENT OF REVENUE ON DECEMBER 17, 1979 TO AMEND EXISTING REGULATIONS UNDER CHAPTER 21 OF TITLE 43 OF THE ALASKA STATUTES, THE ALASKA OIL AND GAS CORPORATE INCOME TAX.

INASMUCH AS THE ALASKA INCOME TAX HAS A SIGNIFICANT IMPACT ON OUR INDUSTRY'S ACTIVITIES IN THE STAT WE TRU T THAT OUR TESTIMONY AT THIS HEARING WILL EVIDENCE OUR CONTINUING INTEREST AND CONCERN NOT ONLY WITH RESPECT TO THE SUBJECT MATTER COVERED IN THE PROPOSED REGULATIONS BUT ALSO ALL OTHER ASPECTS OF THE OIL AND GAS CORPORATE INCOME TAX.

AOGA RECOGNIZES THE DIFFICULTIES ASSOCIATED WITH IMPLEMENTING THIS TAX LAW, CONSIDERING ITS UNIQUE AND COMPLEX NATURE, AND COMMENDS YOUR EFFORTS TO DRAFT AND ADOPT, WITHIN THE PARAMETERS OF THE EXISTING LAW, WELL-REASONED REGULATIONS. WE WELCOME THE OPPORTUNITY TO PRESENT OUR VIEWS AT THIS HEARING AND HOPE THAT OUR COMMENTS AND SUGGESTIONS WILL BE OF ASSISTANCE TO THE

AGO 785837

DEPARTMENT IN PROMULGATING FINAL REGULATIONS.

THE ASSOCIATION, BY PARTICIPATING IN THIS HEARING, DOES NOT CONCEDE, HOWEVER, THAT THE CORPORATE INCOME TAX LAW AS ENACTED IN CHAPTER 21 IS CONSTITUTIONAL OR OTHERWISE LEGAL IN OUR OPINION, CHAPTER 21 AS ENACTED IS UNCONSTITUTIONAL BECAUSE IT RESULTS IN IMPERMISSIBLE DUPLICATIVE TAXATION AND AN IMPROPER BURDEN ON INTERSTATE COMMERCE IN VIOLATION OF THE COMMERCE CLAUSE OF THE UNITED STATES CONSTITUTION AND BECAUSE IT VIOLATES THE RESTRICTIONS ON EXTRATERRITORIAL TAXATION EMBODIED IN THE DUE PROCESS CLAUSE OF THE FOURTEENTH AMENDMENT OF THE UNITED STATES CONSTITUTION AND ARTICLE I, SECTION 7 OF THE ALASKA CONSTITUTION. FURTHERMORE, WE BELIEVE CHAPTER 21 UNLAWFULLY DISCRIMINATES AGAINST MEMBERS OF THIS ASSOCIATION BY SUBJECTING THEM TO A METHOD OF TAXATION MORE BURDENSOME THAN THAT IMPOSED ON ANY OTHER INDUSTRY IN THE STATE THEREBY VIOLATING THE EQUAL PROTECTION OF THE LAWS AND THE DUE PROCESS CLAUSES OF THE UNITED STATES AND ALASKA CONSTITUTIONS. ACCORDINGLY, OUR COMMENTS AND SUGGESTIONS ARE OFFERED WITH THE UNDERSTANDING THAT PARTICIPATION IN THIS HEARING WILL NOT PREJUDICE ANY RIGHTS OF THE ASSOCIATION OR ANY OF ITS MEMBERS IN ANY COURT OR OTHER PROCEEDING TO CONTEND THAT CHAPTER 21 AND THE REGULATIONS ADOPTED PURSUANT THERETO ARE UNCONSTITUTIONAL OR INVALID.

AGO 785838

AOGA'S OBJECTIVE AT THIS HEARING IS TO ASSIST THE DEPARTMENT IN THE DEVELOPMENT OF REGULATIONS WHICH (1) WOULD RESULT IN A FAIR AND EQUITABLE INTERPRETATION OF THE STATUTE CONSISTENT WITH LEGISLATIVE INTENT, (2) WOULD PROMOTE EASE OF ADMINISTRATION TO ALLOW EACH TAXPAYER TO DISCHARGE ITS INCOME TAX LIABILITY WITH A REASONABLE DEGREE OF CERTAINTY BASED ON INFORMATION AVAILABLE TO THE TAXPAYER AND (3) WOULD AVOID THE PROSPECT OF FURTHER CONTROVERSY BETWEEN OUR INDUSTRY AND THE STATE OF ALASKA.

MOST OF OUR TESTIMONY TODAY WILL BE DEVOTED TO COMMENTS AND SUGGESTED CHANGES PERTAINING TO SPECIFIC SECTIONS OF THE PROPOSED REGULATIONS. WE DO NOT INTEND, HOWEVER, TO ADDRESS IN OUR ORAL TESTIMONY SUGGESTED WORD CHANGES WHICH ARE BELIEVED NOT TO BE OF A CONTROVERSIAL OR SUBSTANTIVE NATURE.

BEFORE TURNING TO THE PROPOSED REGULATIONS, WE FIRST WOULD LIKE TO MAKE TWO COMMENTS RELATIVE TO OUR OVERALL ASSESSMENT OF THE PROPOSED REGULATIONS. FIRST, AOGA IS DEEPLY CONCERNED ABOUT CERTAIN PROPOSED CHANGES TO THE DETERMINATION OF GROSS VALUE AT THE POINT OF PRODUCTION FOR A TAXPAYER'S OIL AND GAS. THE PROPOSED REGULATIONS PRESENT SERIOUS QUESTIONS CONCERNING (1) THE CONCEPT OF PREVAILING VALUE AS EMPLOYED BY THE DEPARTMENT ESPECIALLY WITH RESPECT TO ITS SCOPE OF APPLICATION, AND (2) THE POTENTIAL TAXATION OF ARTIFICIALLY CREATED INCOME IN CONTRAVENTION OF WELL-ESTABLISHED PRINCIPLES OF STATE INCOME

TAXATION. SUCH SERIOUS QUESTIONS, IF LEFT UNADDRESSED, INVITE CONTROVERSY AND INCREASE THE POTENTIAL OF FUTURE LITIGATION. WE BELIEVE CHANGES CAN BE MADE TO ELIMINATE THESE POTENTIAL PROBLEMS IN A MANNER WHICH IS CONSISTENT WITH THE UNDERLYING INTENT OF THE STATUTE AND WITH THE BEST INTERESTS OF BOTH THE STATE AND OUR INDUSTRY.

SECOND, AOGA IS ENCOURAGED BY THE DEPARTMENT'S ACTION IN PROPOSING REGULATIONS WHICH SPECIFICALLY AUTHORIZE DEDUCTIONS FROM BOTH GROSS PRODUCTION INCOME AND PIPELINE OPERATING REVENUES SIMILAR TO DEDUCTIONS ALLOWED TAXPAYERS UNDER CHAPTER 20, TITLE 43 OF THE ALASKA STATUTES. THIS IS CONSISTENT WITH THE STATUTE AND REPRESENTS A SIGNIFICANT STEP TOWARD MITIGATING THE DISCRIMINATORY TAXATION TO WHICH THE OIL AND GAS INDUSTRY CURRENTLY IS SUBJECTED EVEN THOUGH SUCH PROPOSALS AFFECT ONLY THE TIMING OF PAYMENT BUT NOT THE TOTAL AMOUNT OF TAXES ULTIMATELY TO BE PAID TO THE STATE OF ALASKA.

FOR THE CONVENIENCE OF THE DEPARTMENT, WE WOULD LIKE TO PRESENT COPIES OF OUR SUGGESTED CHANGES TO THE PROPOSED REGULATIONS AT THIS TIME. COPIES OF OUR TESTIMONY WILL BE FURNISHED AT THE CONCLUSION OF THIS PRESENTATION.

THIS CONCLUDES OUR INTRODUCTORY REMARKS AND I NOW WOULD LIKE TO BEGIN OUR DETAILED TESTIMONY WITH SECTION 120, "VALUE AT THE POINT OF PRODUCTION."

SECTION 120

WE BELIEVE THAT SUBSECTION (A) OF SECTION 120 IS NOT NECESSARY AND IS SOMEWHAT MISLEADING AND CONFUSING IN THE CONTEXT OF AN INCOME TAX. ACCORDINGLY, WE ARE SUGGESTING THAT IT BE DELETED AND THE SUBSEQUENT SUBSECTIONS RE-LETTERED.

THE GENERAL APPROACH OF THE REGULATIONS IS TO BEGIN WITH THE PRICE OR OTHER VALUE IN THE MARKET AND NET BACK TO THE POINT OF PRODUCTION BY AN ALLOWANCE FOR TRANSPORTATION COSTS AND, IN THE CASE OF GAS, CERTAIN OTHER COSTS. SUBSECTION (B) OF THE PROPOSED REGULATIONS REFLECTS THIS GENERAL APPROACH WHERE THE VALUE IS BASED ON THE SALES PRICE. IN THE DEPARTMENT'S PROPOSED REGULATIONS, PREVAILING VALUE AT THE POINT OF USE MAY BE SUBSTITUTED FOR SALES PRICE UNDER CERTAIN CIRCUMSTANCES. WE BELIEVE THAT APPROPRIATE LANGUAGE SHOULD BE INSERTED IN PARAGRAPH (1) TO REFLECT THE NETBACK CONCEPT IN SITUATIONS WHERE PREVAILING VALUE IS USED. OUR SUGGESTED LANGUAGE IS CONTAINED IN THE INDUSTRY DRAFT YOU HAVE BEFORE YOU.

A BRIEF EXPLANATION OF OUR SUGGESTED LANGUAGE IS IN ORDER. UNDER THE PROPOSED REGULATIONS, PREVAILING VALUE IS DETERMINED AT THE POINT OF USE OF THE OIL IN THE REFINING PROCESS. ANY NETBACK NECESSARILY MUST REFLECT TRANSPORTATION COSTS FROM THE POINT OF PRODUCTION TO THE POINT OF USE. IT WILL NOT ALWAYS BE TRUE THAT THE POINT OF DELIVERY BY THE SELLER WILL BE THE POINT

OF USE. THUS, IT IS NECESSARY THAT THE REASONABLE COSTS OF TRANSPORTATION ADJUSTMENT BE WORDED TO REFLECT A PROPER ALLOWANCE FOR ALL TRANSPORTATION, WHETHER PAID FOR BY THE SELLER OR ANOTHER PARTY. A SIMPLE EXAMPLE WILL ILLUSTRATE. IN A THIRD PARTY SALE CALLING FOR DELIVERY AT THE PORT OF VALDEZ THE PRICE THE PURCHASER WOULD PAY WOULD TAKE INTO ACCOUNT HIS COST OF TRANSPORTATION FROM THAT POINT TO THE INLET OF THE REFINERY. LIMITING THE COST OF TRANSPORTATION ADJUSTMENT TO TRANSPORTATION FROM THE WELL TO VALDEZ CLEARLY WOULD NOT ADEQUATELY REFLECT ALL TRANSPORTATION COSTS FROM THE POINT OF PRODUCTION TO THE INLET OF THE REFINERY. WE BELIEVE THE SUGGESTED LANGUAGE WILL APPROPRIATELY PERMIT A PROPER ADJUSTMENT FOR ALL TRANSPORTA ION.

THE TAX IMPOSED UNDER CHAPTER 21 IS GENERALLY RECOGNIZED AS AN INCOME TAX. WE SEE NO REASON OR STATUTORY BASIS FOR THE FLOOR INSERTED AS PARAGRAPH (2) IN THE PROPOSED REGULATION. WE FURTHER BELIEVE THAT ITS INCLUSION WOULD RAISE SERIOUS CONSTITUTIONAL IMPLICATIONS IN VIEW OF THE NATURE OF THIS TAX. ACCORDINGLY, WE SUGGEST THAT IT BE STRICKEN.

WE TURN NOW TO ONE OF THE MOST IMPORTANT PARTS OF OUR PRESENTATION TODAY, NAMELY THE CONCEPT OF PREVAILING VALUE AND ITS PLACE, IF ANY, IN THE ADMINISTRATION OF AN INCOME TAX LAW. SUBSECTION (C) OF THE PROPOSED REGULATIONS ADDRESSES THE QUESTION OF WHEN PREVAILING VALUE APPLIES.

WE CANNOT URGE TOO STRONGLY OUR BELIEF THAT PREVAILING VALUE AS A CONCEPT HAS NO PLACE IN INCOME TAX LAW. THE TAX, UNDER CHAPTER

21, WHICH IS IMPOSED AS AN INCOME TAX, MUST BE BASED IN ALL INSTANCES ON INCOME ACTUALLY REALIZED BY THE TAXPAYER AND NOT ON ARTIFICIALLY CREATED INCOME. WE ARE PARTICULARLY CONCERNED ABOUT THE APPLICATION OF ANY SUCH STANDARD AS PREVAILING VALUE ON A HINDSIGHT BASIS YEARS AFTER THE FACT. THIS IS PARTICULARLY TRUE IN TODAY'S MARKET WHERE PRICES MOVE RAPIDLY AND PROBABLY NOT IN ANY DISCERNABLE AND EASILY DEFINED PATTERN. WE BELIEVE THAT ANY SIGNIFICANT RELIANCE ON PREVAILING VALUE RAISES SUBSTANTIAL CONSTITUTIONAL QUESTIONS.

THE ASSOCIATION RECOGNIZES, HOWEVER, THAT THE DEPARTMENT IS CHARGED WITH THE RESPONSIBILITY OF PROMULGATING REGULATIONS WHICH DETERMINE A UNIFORM METHOD OF ESTABLISHING GROSS VALUE AT THE POINT OF PRODUCTION, AND THAT ONE OF THE OPTIONS AFFORDED BY THE GOVERNING LEGISLATION IS TO CONSIDER PREVAILING PRICE OR VALUE. IF PREVAILING VALUE IS TO BE RECOGNIZED IN THE REGULATIONS AT ALL, ITS USE SHOULD BE ON AN EXCEPTION BASIS ONLY. WE ARE CONCERNED, HOWEVER, THAT YOUR LANGUAGE MAY BE APPLIED INDISCRIMINATELY AND RESULT, FOR EXAMPLE, IN THE EXAMINATION OF EVERY TRANSACTION AGAINST A HYPOTHETICAL PREVAILING VALUE STANDARD. THE RESULT WOULD BE ENDLESS DISPUTES WITH TAXPAYERS ON A TRANSACTION BY TRANSACTION BASIS IRRESPECTIVE OF WHETHER THE TAXPAYER HAS FULLY AND CORRECTLY RECORDED AND REPORTED ITS REALIZATION FROM THE TRANSACTION.

THE PROPOSED REGULATIONS RELY ON A TWO PART TEST, WHICH

INVOLVES (1) A PRICE SUBSTANTIALLY LOWER THAN THE DEPARTMENT'S DETERMINATION OF PREVAILING VALUE AT THE POINT OF USE AND (11) THE EXISTENCE OF ONE OF FOUR CONDITIONS. WE DO NOT BELIEVE THAT THE FIRST THREE CONDITIONS REPRESENT REALISTIC TESTS. FURTHERMORE, AS PREVIOUSLY MENTIONED, WE FEEL THAT YOUR PROPOSAL WILL, IN APPLICATION, CAUSE YOUR AUDITORS TO TEST TRANSACTIONS AGAINST THE PREVAILING VALUE STANDARD AND THEN TO DETERMINE WHETHER ONE OF THE FOUR CONDITIONS APPLIES OR MIGHT APPLY. THIS APPROACH IS UNREALISTIC AND SHOULD BE OF ADMINISTRATIVE CONCERN TO THE DEPARTMENT.

THE ASSOCIATION IS CONVINCED THAT THE STATE WOULD BE ADEQUATELY PROTECTED BY LANGUAGE PERMITTING THE APPLICATION OF PREVAILING VALUE ONLY WHERE THE CIRCUMSTANCES SHOW FRAUD OR AN INTENT TO EVADE TAXES. AOGA'S SUGGESTED CHANGES SO PROVIDE.

WE RECOGNIZE THE DEPARTMENT'S RESPONSIBILITY TO AUDIT A TAXPAYER'S RETURN AND TO DETERMINE THAT THE RETURN PROPERLY REFLECTS THE AMOUNTS ACTUALLY REALIZED IN THE TAXPAYER'S TRANSACTIONS. AOGA IS CONCERNED, HOWEVER, THAT IF THE APPLICATION OF THE REGULATIONS GOES BEYOND ACTUAL REALIZATION OF INCOME AND THUS VIOLATES THE CONCEPTS OF INCOME TAXATION, THERE WILL BE FREQUENT AND SERIOUS CONFLICTS BETWEEN THE INDUSTRY AND THE STATE.

OUR FINAL COMMENT WITH RESPECT TO SECTION 120

RELATES TO SUBSECTION (D). THE SAME LANGUAGE IS CONTAINED IN SECTION 110 OF THE EXISTING REGULATIONS. TO AVOID DUPLICATION WE SUGGEST THAT SUBSECTION (D) BE STRICKEN.

SECTION 122

THE ASSOCIATION HAS NO COMMENTS WITH RESPECT TO SECTION 122 OF THE PROPOSED REGULATIONS OTHER THAN THE SUGGESTED TECHNICAL CHANGE AT THE END OF SUBSECTION (B)(1).

SECTION 124

AS WE STATED EARLIER IN OUR TESTIMONY, THE BASIC CONCEPT EMPLOYED IN THE REGULATIONS IS TO DETERMINE GROSS VALUE AT THE POINT OF PRODUCTION BY A NETBACK FROM THE POINT OF SALE OR USE. PREVAILING VALUE IS A SUBSTITUTE FOR SALES PRICE AND ITS DETERMINATION SHOULD NOT INVOLVE A NETBACK CALCULATION. TO CONFORM WITH SECTION 122, AND TO BE CONSISTENT WITH THIS CONCEPT, WE SUGGEST THAT THE LANGUAGE RELATING TO REASONABLE COSTS OF TRANSPORTATION IN SUBSECTIONS (A) AND (B) OF THE PROPOSED REGULATIONS BE DELETED.

SECTION 130

SECTION 130 OF THE PROPOSED REGULATIONS SPECIFIES TWO METHODS FOR DETERMINING THE REASONABLE COSTS OF TRANSPORTATION WHICH MAY BE DEDUCTED IN ARRIVING AT THE GROSS VALUE AT THE

POINT OF PRODUCTION. EXCEPT IN UNUSUAL CIRCUMSTANCES, THE PROPOSED REGULATIONS WILL LIMIT THE TAXPAYER'S TRANSPORTATION DEDUCTION TO THE ACTUAL COSTS DETERMINED UNDER SECTION 132. IN CASES WHERE THE UNUSUAL CONDITIONS SET FORTH IN SECTION 150(B) EXIST, THE TRANSPORTATION DEDUCTION WILL BE THE FAIR MARKET VALUE OF SUCH TRANSPORTATION DETERMINED IN THE MANNER PRESCRIBED IN SECTION 132. AS A PRACTICAL MATTER, ACTUAL COSTS WILL BE REQUIRED TO BE USED IN MOST, IF NOT ALL, CASES.

WE BELIEVE THAT TAXPAYERS SHOULD BE PERMITTED AN ELECTION TO USE FAIR MARKET VALUE IN LIEU OF ACTUAL COSTS. OUR PROPOSED LANGUAGE WOULD PROVIDE THE TAXPAYER WITH AN ELECTION WHICH COULD BE CHANGED ONLY UPON APPROVAL BY THE DEPARTMENT. WE THINK THIS CHANGE IS NECESSARY TO PREVENT THE INCOME (OR LOSS) OF THE TAXPAYER'S MARINE TRANSPORTATION OPERATIONS FROM IMPROPERLY INCREASING (OR DECREASING) THE GROSS VALUE AT THE POINT OF PRODUCTION. THE INCLUSION OF VALUE ADDED BY MARINE TRANSPORTATION IN THE GROSS VALUE AT THE POINT OF PRODUCTION IS INCONSISTENT WITH THE SEPARATE ACCOUNTING CONCEPT FOR TAXATION OF OIL AND GAS PRODUCTION INCOME UNDER CHAPTER 21.

THE PROVISION FOR A REASONABLE RATE OF RETURN ON THE ACQUISITION COST OF A VESSEL OVER ITS EXPECTED LIFE DOES NOT, IN AND OF ITSELF, REFLECT THE CURRENT INCOME ATTRIBUTABLE TO A VESSEL'S OPERATION. FURTHERMORE, THE INCLUSION OF VESSEL FACTOR DATA IN THE FACTORS USED TO APPORTION ALL OTHER INCOME

OF THE TAXPAYER SIMPLY COMPOUNDS THE INEQUITY. OUR PROPOSED LANGUAGE WOULD PROVIDE A TAXPAYER WITH AN ELECTION TO ADOPT THE FAIR MARKET VALUE APPROACH TO AVOID INCLUDING ANY INCOME (OR LOSS) ATTRIBUTABLE TO MARINE TRANSPORTATION IN THE GROSS VALUE AT THE POINT OF PRODUCTION CALCULATION AND WOULD HELP TO REDUCE FUTURE CONTROVERSIES IN THIS AREA. WHILE THE ARGUMENT FOR SUCH AN ELECTION HAS BEEN MADE BEFORE IN A PRODUCTION TAX CONTEXT, THE PRINCIPLE IS EVEN MORE SOUND IN AN INCOME TAX CONTEXT.

SECTION 132

WITH RESPECT TO SECTION 132 OF THE REGULATIONS, WE HAVE SEVERAL CHANGES TO SUGGEST. AOGA BELIEVES THE LIMITING LANGUAGE IN SUBPARAGRAPH (B) OF SUBSECTION (B)(3) SHOULD BE REMOVED BECAUSE IT IS NEITHER LOGICAL NOR EQUITABLE TO LIMIT POSITIONING COSTS TO ONE SIDE OF A TRANSACTION IF THE TAXPAYER IS OBLIGATED BY THIRD PARTY CONTRACT TO PAY POSITIONING COSTS UPON CESSATION OF USE OF A VESSEL IN THE ALASKA TRADE. MOREOVER, THE LANGUAGE WHICH WE SUGGEST BE DELETED IS INCONSISTENT WITH THE DEFINITION OF THE TERM "POSITIONING COST" SET FORTH IN SUBSECTION (G).

IN SUBPARAGRAPH (D)(I) OF SUBSECTION (B)(3), THE ASSOCIATION FEELS IT IS IMPORTANT THAT THE WORDS "BUT NOT", WHICH EXPRESSLY PROHIBIT THE INCLUSION OF COSTS OF IMPROVEMENTS IN THE DEFINITION OF "ACQUISITION COSTS", BE DELETED. TO DIFFERENTIATE BETWEEN ACQUISITION COSTS AND COSTS OF IMPROVEMENTS FOR PURPOSES OF CALCULATING DEPRECIATION AND RETURN ON INVESTMENT IS ILLOGICAL, INEQUITABLE AND INCONSISTENT WITH THE STATE'S

POLICY OF ENCOURAGING, IF NOT MANDATING, THE RETROFITTING AND FURTHER IMPROVEMENT OF TANKERS USED IN THE ALASKA TRADE. THIS PROVISION NOT ONLY DENIES THE TAXPAYER A RETURN ON ITS INVESTMENT IN IMPROVEMENTS, BUT ALSO DENIES THE TAXPAYER ANY DEPRECIATION ON THOSE IMPROVEMENTS BECAUSE OF THE INTERRELATIONSHIP OF THE DEPRECIATION AND RATE OF RETURN PROVISIONS OF THE REGULATIONS. WE CAN SEE NO RATIONALE FOR EXCLUDING THESE COSTS FROM THE CALCULATION OF REASONABLE TRANSPORTATION COSTS AND URGE THE REMOVAL OF THE LIMITATION. UNDER OUR SUGGESTED LANGUAGE, ANY DEPRECIATION OR RETURN ON INVESTMENT ALLOWED THE TAXPAYER WOULD BE LIMITED TO THAT WHICH IS ATTRIBUTABLE SOLELY TO THE EMPLOYMENT OF THE VESSEL IN THE ALASKA TRADE. FOR THE SAME REASONS NOTED ABOVE, WE HAVE INSERTED SIMILAR SUGGESTED CHANGES TO THE PROVISIONS COVERING THE TRANSPORTATION OF LNG.

WITH RESPECT TO SUBSECTION (C) OF SECTION 132, WE SUGGEST THAT THE TERMS "AND (C)" BE ADDED FOLLOWING THE REFERENCE TO SECTION 130(B) TO CONFORM WITH OUR EARLIER SUGGESTION REGARDING THAT SECTION. WE ALSO SUGGEST THAT THE REGULATIONS PROVIDE THAT THE DEPARTMENT MAY AUTHORIZE TAXPAYERS TO USE ONE OF THE TWO METHODS FOR DETERMINING THE FAIR MARKET VALUE OF LIKE TRANSPORTATION. IN OUR PROPOSED SUBPARAGRAPH (A), WE HAVE ADDED LANGUAGE THAT WOULD MAKE CLEAR THAT THE THIRD PARTY CHARTERS UTILIZED FOR COMPARISON PURPOSES WOULD BE CHARTERS OF "LIKE VESSELS". IN OUR PROPOSED SUBPARAGRAPH (B), WE ARE SUGGESTING THE ADDITION OF AN ALTERNATIVE APPROACH WHICH WOULD UTILIZE

RATES PUBLISHED BY THE ASSOCIATION OF SHIPBROKERS AND AGENTS, U.S.A., INC. WE BELIEVE EITHER OF THESE STANDARDS SHOULD BE AVAILABLE FOR USE, WITH THE PERMISSION OF THE DEPARTMENT, IN DETERMINING FAIR MARKET VALUE FOR MARINE TRANSPORTATION.

SECTION 240

IN PRIOR HEARINGS, THE ASSOCIATION HAS ADVOCATED THAT COSTS INCURRED FOR AND IN SUPPORT OF DRILLING CONSTITUTE PROPER ITEMS OF DIRECT OPERATING COSTS UNDER THE STATUTE. WE ARE PLEASED TO NOTE THAT SECTION 240 OF THE PROPOSED REGULATIONS EXPRESSLY AUTHORIZES DEDUCTION OF THESE COSTS. WITH RESPECT TO SECTION 240(C) AS PROPOSED, WE HAVE SUGGESTED THE ADDITION OF TWO ITEMS TO BE INCLUDED AS DIRECT OPERATING COSTS AFTER COMMENCEMENT OF COMMERCIAL PRODUCTION. IN THE ASSOCIATION'S SUGGESTED LANGUAGE, THESE APPEAR AS PARAGRAPHS (1) AND (2) OF SECTION 240(C).

PARAGRAPH (1) SIMPLY ADDS THE COSTS OF GEOLOGICAL AND GEOPHYSICAL WORK CONDUCTED ON THE LEASE OR PROPERTY AND IS, IN ESSENCE, SIMPLY AN EXTENSION OF THE SAME TYPE OF DEDUCTION ALLOWED UNDER SUBSECTION(B)(1) WHEN SUCH WORK IS DONE PRIOR TO COMMENCEMENT OF COMMERCIAL PRODUCTION. WE SEE NO REASON FOR ALLOWING THESE TYPES OF COSTS BEFORE COMMERCIAL PRODUCTION COMMENCES WHILE NOT ALLOWING THEM AFTER COMMERCIAL PRODUCTION COMMENCES. ALTHOUGH IT IS PROBABLY TRUE THAT MOST OF THIS TYPE OF WORK OCCURS PRIOR TO THE COMMENCEMENT OF COMMERCIAL PRODUCTION, IT IS NOT UNCOMMON FOR A TAXPAYER TO ENGAGE IN "G&G" WORK ON A LEASE OR PROPERTY TO TEST CONDITIONS FOR OTHER POTENTIAL PRODUCTION THAT MIGHT EXIST AT DIFFERENT DEPTHS OR IN DIFFERENT AREAS FROM THE EXISTING PRODUCTION.

PARAGRAPH (2) OF SECTION 240(C) MERELY ADDS RENTALS

AND SHUT-IN ROYALTIES AS A DEDUCTIBLE COST. THE PROVISION BEING ADDED IS IN FACT IDENTICAL TO THE LANGUAGE OF PARAGRAPH (2) OF SECTION 240(B). AS IN THE CASE OF "G&G" WORK, WE SEE NO REASON WHY THIS ITEM SHOULD NOT ALSO BE DEDUCTIBLE AFTER COMMENCEMENT OF COMMERCIAL PRODUCTION. A LEASE AGREEMENT COULD PROVIDE FOR SHUT-IN ROYALTIES AND, WHILE IT MAY NOT BE A VERY COMMON SITUATION, THESE COULD BECOME PAYABLE IN THE EVENT OF AN EXTRAORDINARY SHUT-DOWN OF PRODUCTION.

OTHER THAN THE TWO CHANGES JUST NOTED, OUR DRAFT MAKES VERY MINOR CHANGES IN WORDING TO THE REMAINDER OF PROPOSED SECTION 240(C).

SECTION 250

ALTHOUGH SECTION 250 WAS NOT CONTAINED IN THE PROPOSED REGULATIONS, AOGA IS SUGGESTING THE ADDITION OF LANGUAGE TO SECTION 250(G)(2). EXCEPT FOR THE WORDS "NOT DEDUCTED UNDER SEC. 240 OF THIS CHAPTER", THIS PROVISION IS IDENTICAL TO SECTION 250(G)(2) OF THE EXISTING REGULATIONS. THIS PROVISION, WITH THE ADDED WORDS, HAS BEEN INSERTED TO ENSURE THAT ANY DRILLING COSTS NOT DEDUCTED UNDER SECTION 240 WILL REMAIN AS A PART OF THE "ACQUISITION COSTS" OF A LEASE OR PROPERTY AND BE SUBJECT TO A DEDUCTION FOR ABANDONMENT OR AMORTIZATION UNDER SECTION 250.

SECTION 260

SECTION 260 OF THE PROPOSED REGULATIONS PERTAINS TO THE DEDUCTION FOR DEVELOPMENT COSTS. SUBSECTION (c) OF THE REGULATION PROVIDES THAT AFTER THE COMMENCEMENT OF COMMERCIAL PRODUCTION THE TAXPAYER'S DEVELOPMENT COSTS FOR A LEASE OR PROPERTY MUST BE DEPRECIATED. THE PROPOSED REGULATIONS CONTAIN SEVERAL CHANGES IN THE METHODOLOGY HERETOFORE ALLOWED IN DETERMINING THE TAXPAYER'S DEPRECIATION DEDUCTION FOR DEVELOPMENT COSTS. THESE PROPOSED CHANGES ARE CONSISTENT WITH THE AUTHORITY GRANTED THE DEPARTMENT UNDER A.S. 43.21.020(c)(5). ALTHOUGH WE ARE SUPPORTIVE OF THE DEPARTMENT'S OBJECTIVES IN MAKING THE PROPOSED CHANGES, WE OFFER THE FOLLOWING COMMENTS AND SUGGESTIONS FOR YOUR CONSIDERATION.

IT FIRST SHOULD BE RECOGNIZED THAT, ALTHOUGH THE DEDUCTION FOR DEPRECIATION IS DERIVED FROM A MATHEMATICAL FORMULA, THERE ARE A MYRIAD OF INTRICACIES RELATING TO THE APPLICATION OF SUCH A FORMULA THAT CAN LEAD TO COMPLEX PROBLEMS. ACCORDINGLY, EXTREME CARE MUST BE EXERCISED SO AS TO ENSURE THAT INTENDED RESULTS ARE ACHIEVED. AS WRITTEN, THE PROPOSED REGULATION COULD LEAD TO UNINTENDED RESULTS. FOR EXAMPLE, THE REGULATIONS CORRECTLY DESCRIBE THE MANNER OF COMPUTING DEPRECIATION UNDER THE UNIT OF PRODUCTION, SUM OF THE YEARS-DIGITS, DOUBLE DECLINING BALANCE AND STRAIGHT-LINE METHODS OF DEPRECIATION. HOWEVER, THESE METHODS, WHEN USED IN

CONJUNCTION WITH THE OTHER PROVISIONS OF SECTION 260, POSE SIGNIFICANT PROBLEMS.

ONE PROBLEM ARISES FROM THE FACT THAT THE PROPOSED REGULATION IMPLICITLY, IF NOT EXPLICITLY, PROVIDES FOR A SINGLE OPEN-ENDED COMPOSITE ACCOUNT FOR PURPOSES OF COMPUTING DEPRECIATION. A COMPOSITE ACCOUNT IS ONE WHICH INCLUDES ALL THE ASSETS OF A BUSINESS IN ONE DEPRECIATION ACCOUNT. THE COMPOSITE ACCOUNT PROVIDED FOR IN THE PROPOSED REGULATIONS IS OPEN-ENDED BECAUSE IT INCLUDES ON A CUMULATIVE BASIS DEVELOPMENT COSTS THAT MAY HAVE BEEN INCURRED OVER SEVERAL TAXABLE YEARS. THE USE OF AN OPEN-ENDED COMPOSITE ACCOUNT CAN LEAD TO SUBSTANTIAL PROBLEMS IN DETERMINING THE DEPRECIATION DEDUCTIONS ALLOWED UNDER THE SUM OF THE YEARS-DIGITS, DOUBLE DECLINING BALANCE AND STRAIGHT-LINE METHODS OF DEPRECIATION BECAUSE THE ESTIMATED REMAINING LIFE OF THE COMPOSITE ACCOUNT IS CONSTANTLY CHANGING. FURTHERMORE, THE USE OF AN OPEN-ENDED ACCOUNT CAN RESULT IN MUCH HIGHER DEPRECIATION DEDUCTIONS THAN DEDUCTIONS CALCULATED USING CLOSED-END ACCOUNTS. A CLOSED-END OR "VINTAGE" COMPOSITE ACCOUNT IS AN ACCOUNT WHICH WOULD INCLUDE ALL OF THE TAXPAYER'S DEVELOPMENT COSTS FIRST ELIGIBLE FOR DEPRECIATION IN A PARTICULAR TAXABLE YEAR.

AS AN EXAMPLE OF THE DIFFERENCES BETWEEN THE TWO TYPES OF ACCOUNTS, ASSUME THAT A TAXPAYER HAD AT THE BEGINNING OF THE TAXABLE YEAR $1,000 OF DEVELOPMENT COSTS WHICH WERE FULLY DEPRECIATED AND THAT DURING THE TAXABLE YEAR HE INCURRED

AN ADDITIONAL $200 OF DEVELOPMENT COSTS WHICH WERE ELIGIBLE FOR DEPRECIATION. IN DETERMINING THE TAXPAYER'S DEPRECIATION DEDUCTION USING THE STRAIGHT-LINE METHOD AND ASSUMING A 10-YEAR USEFUL LIFE, THE DEPRECIATION WOULD BE CALCULATED AS FOLLOWS:

(1) IF AN OPEN-ENDED ACCOUNT IS USED, THE AVERAGE ORIGINAL DEVELOPMENT COSTS IN THE DEPRECIATION ACCOUNT WOULD AMOUNT TO $1100 WHICH IS THEN MULTIPLIED BY A 10% DEPRECIATION RATE, PROVIDING A DEPRECIATION DEDUCTION OF $110 IN THE FIRST YEAR BASED ON ONLY AN ADDITIONAL $200 OF DEPRECIABLE DEVELOPMENT COSTS.

(2) IF A CLOSED-END DEPRECIATION ACCOUNT IS USED, THE AVERAGE ORIGINAL DEVELOPMENT COSTS IN THE CURRENT YEAR VINTAGE ACCOUNT WOULD EQUAL $100 WHICH WHEN MULTIPLIED BY THE 10% DEPRECIATION RATE PROVIDES A DEDUCTION OF $10 IN THE FIRST YEAR.

THUS, THE EXAMPLE ILLUSTRATES THAT UNDER CERTAIN CIRCUMSTANCES THE USE OF AN OPEN-ENDED RATHER THAN A CLOSED-END DEPRECIATION ACCOUNT CAN RESULT IN SIGNIFICANTLY GREATER AMOUNTS OF DEPRECIATION.

ALTHOUGH THE USE OF AN OPEN-ENDED COMPOSITE ACCOUNT YIELDS GREATER DEPRECIATION DEDUCTIONS, THE ASSOCIATION RECOGNIZES THAT THIS RESULT IS UNINTENDED AND SUGGESTS THAT THE PROPOSED REGULATIONS SHOULD BE CHANGED. ACCORDINGLY, SECTION 260(D) OF AOGA'S SUGGESTED CHANGES PROVIDES THAT EACH TAXPAYER MUST ESTABLISH A CLOSED-END VINTAGE ACCOUNT FOR DEVELOPMENT COSTS FIRST ELIGIBLE FOR DEPRECIATION DURING THE TAXABLE YEAR. "DEVELOPMENT COSTS FIRST ELIGIBLE FOR

DEPRECIATION" DURING A PARTICULAR TAXABLE YEAR WOULD INCLUDE (1) DEVELOPMENT COSTS PAID OR INCURRED DURING THAT YEAR WITH RESPECT TO A LEASE OR PROPERTY THAT HAD COMMERCIAL PRODUCTION FROM (OR ALLOCATED TO) IT AND (2) DEVELOPMENT COSTS PAID OR INCURRED IN PRIOR TAXABLE YEARS WITH RESPECT TO A LEASE OR PROPERTY THAT FIRST HAD COMMERCIAL PRODUCTION FROM (OR ALLOCATED TO) IT DURING THAT TAXABLE YEAR.

AS AN ILLUSTRATION, SUPPOSE A TAXPAYER INCURS DEVELOPMENT COSTS ELIGIBLE FOR DEPRECIATION OF $10 MILLION IN 1982 AND $20 MILLION IN 1983. FOR THE TAXABLE YEAR 1982, THE TAXPAYER WOULD CALCULATE DEPRECIATION FOR ITS 1982 VINTAGE ACCOUNT BASED ON $10 MILLION OF DEVELOPMENT COSTS. FOR THE TAXABLE YEAR 1983, THE TAXPAYER WOULD CALCULATE DEPRECIATION SEPARATELY FOR THE 1982 VINTAGE ACCOUNT BASED ON $10 MILLION OF DEVELOPMENT COSTS AND FOR THE 1983 VINTAGE ACCOUNT BASED ON $20 MILLION OF DEVELOPMENT COSTS. IF THE TAXPAYER INCURRED $30 MILLION OF DEVELOPMENT COSTS IN 1984 FOR A LEASE OR PROPERTY WHICH WOULD NOT HAVE COMMERCIAL PRODUCTION FROM (OR ALLOCATED TO) IT UNTIL 1985, THE $30 MILLION WOULD FALL IN THE 1985 VINTAGE ACCOUNT FOR PURPOSES OF CALCULATING THE TAXPAYER'S DEPRECIATION.

ANOTHER PROBLEM PERTAINING TO THE CALCULATION OF DEPRECIATION USING A METHOD PRESCRIBED IN SECTION 260(c) AND AN OPEN-ENDED COMPOSITE ACCOUNT WILL OCCUR WHEN THE TAXPAYER

CHANGES ITS METHOD OF COMPUTING DEPRECIATION UNDER SECTION 260(D). THE EXAMPLE IN THE PROPOSED REGULATIONS MAKES IT CLEAR THAT IN SWITCHING TO THE STRAIGHT-LINE METHOD, IT IS INTENDED THAT THE TAXPAYER USE ITS AVERAGE ORIGINAL DEVELOPMENT COSTS IN DETERMINING ITS DEPRECIATION DEDUCTION. SUCH A DEDUCTION WOULD GREATLY EXCEED THAT WHICH WOULD BE CALCULATED USING THE UNDEPRECIATED BALANCE OF THE ACCOUNT DEPRECIATED OVER ITS REMAINING USEFUL LIFE. ACCORDINGLY, SECTION 260(E) OF AOGA'S SUGGESTED CHANGES PROVIDES, IN PART, THAT WHEN A CHANGE OF METHOD IS MADE FOR A VINTAGE ACCOUNT, ONLY THE TAXPAYER'S UNDEPRECIATED DEVELOPMENT COSTS (OFFSET BY SALVAGE VALUE, IF ANY) SHALL BE RECOVERED OVER THE REMAINING USEFUL LIFE OF THAT ACCOUNT USING THE NEW METHOD OF DEPRECIATION.

AOGA FURTHER RECOMMENDS IN SECTION 260(E) OF ITS SUGGESTED CHANGES THAT THE TERM "SALVAGE VALUE" BE DEFINED AS THE AMOUNT ESTIMATED TO BE REALIZABLE UPON THE DISPOSITION OF AN ASSET WHEN IT IS NO LONGER USEFUL IN THE TAXPAYER'S TRADE OR BUSINESS AND IS TO BE RETIRED FROM SERVICE BY THE TAXPAYER, BUT ONLY TO THE EXTENT THAT THE ESTIMATED SALVAGE VALUE OF A VINTAGE ACCOUNT EXCEEDS AN AMOUNT EQUAL TO 10% OF THE ORIGINAL DEVELOPMENT COSTS FOR THAT VINTAGE ACCOUNT. THE 10% ADJUSTMENT TO ESTIMATED SALVAGE VALUE IS INTENDED TO REDUCE CONFLICTS BETWEEN TAXPAYERS AND THE DEPARTMENT INASMUCH AS OUR EXPERIENCE INDICATES THAT MOST ASSETS USED IN ALASKA HAVE AN ESTIMATED

SALVAGE VALUE OF LESS THAN 10% AT THE TIME THEY ARE RETIRED FROM SERVICE. THIS SALVAGE ADJUSTMENT IS SIMILAR TO ONE CURRENTLY AFFORDED TAXPAYERS UNDER CHAPTER 20.

THE PROPOSED REGULATIONS DO NOT PROVIDE A DEPRECIABLE LIFE FOR DEVELOPMENT COSTS, WHICH IS ESSENTIAL TO THE CALCULATION OF DEPRECIATION UNDER THE STRAIGHT-LINE, SUM OF THE YEARS-DIGITS AND DOUBLING DECLINING BALANCE METHODS OF DEPRECIATION. AOGA RECOMMENDS IN SECTION 260(F) OF ITS SUGGESTED CHANGES THAT THE DEPRECIABLE LIFE BE DETERMINED BY USING THE LOWER LIMIT ASSET DEPRECIATION RANGE GUIDELINE LIFE SET FORTH IN IRS REVENUE PROCEDURE 77-10 (AS AMENDED OR SUPERSEDED) FOR THE ASSET GUIDELINE CLASS PERTAINING TO ASSETS USED IN THE EXPLORATION FOR AND PRODUCTION OF PETROLEUM AND NATURAL GAS DEPOSITS. WE FEEL THAT REFERENCE TO THIS REVENUE PROCEDURE IS APPROPRIATE INASMUCH AS IT CURRENTLY IS BEING USED TO DETERMINE USEFUL LIFE BY CHAPTER 20 TAXPAYERS. SECTION 260(F) OF OUR SUGGESTED CHANGES FURTHER PROVIDES THAT IF REVENUE PROCEDURE 77-10 (AS AMENDED OR SUPERSEDED) IS NULLIFIED DUE TO THE IMPLEMENTATION OF A FEDERAL CAPITAL COST RECOVERY ALLOWANCE, THE DEPRECIABLE LIFE FOR PURPOSES OF CALCULATING DEPRECIATION FOR DEVELOPMENT COSTS WOULD BE THE CAPITAL RECOVERY PERIOD THAT WOULD APPLY TO CHAPTER 20 TAXPAYERS FOR SIMILAR ASSETS.

SECTIONS 260(G) AND (I) OF AOGA'S SUGGESTED CHANGES ADD BACK REFERENCES TO DRILLING COSTS SO AS TO ALLOW EITHER AN ABANDONMENT LOSS DEDUCTION OR A DEPRECIATION DEDUCTION FOR

DRILLING COSTS OR COSTS RELATED TO DRILLING WHICH WERE NOT DEDUCTED UNDER SECTION 240 OF THE PROPOSED REGULATIONS. THIS IS CONSISTENT WITH OUR SUGGESTED CHANGES TO THE DEFINITION OF ACQUISITION COSTS UNDER SECTION 250 OF THE PROPOSED REGULATIONS.

AOGA HAS RECOMMENDED CHANGES IN SECTION 260(H) OF ITS SUGGESTED CHANGES TO MAKE IT CLEAR THAT, IN THE CASE OF A TRANSFER OF A PRODUCTION INTEREST OR PROPERTY DURING THE TAXABLE YEAR, THE TAXPAYER IS TO CALCULATE DEPRECIATION FOR THE PORTION OF THE YEAR PRIOR TO THE TRANSFER AND FOR THE PORTION OF THE YEAR AFTER THE TRANSFER USING ONE OF THE METHODS OF DEPRECIATION PRESCRIBED IN SECTION 260(G). FURTHERMORE, OUR SUGGESTED CHANGE IS DESIGNED TO MAKE IT CLEAR THAT PARAGRAPHS (1) AND (2) UNDERLYING SECTION 260(H) APPLY ONLY TO A TAXPAYER USING THE UNIT OF PRODUCTION METHOD OF DEPRECIATION.

SECTION 260(H) OF THE PROPOSED REGULATIONS HAS LIMITED APPLICABILITY IN CONSIDERATION OF THE METHODS OF DEPRECIATION AVAILABLE TO THE TAXPAYERS UNDER SECTION 260(C). ACCORDINGLY, AOGA RECOMMENDS THAT IT BE DELETED.

SECTION 260(J) OF AOGA'S SUGGESTED CHANGES PROVIDES A TRANSITION RULE FOR DEVELOPMENT COSTS FIRST ELIGIBLE FOR DEPRECIATION PRIOR TO JANUARY 1, 1979. THE TRANSITION RULE PROVIDES THAT DEPRECIABLE DEVELOPMENT COSTS INCURRED PRIOR TO JANUARY 1, 1979 ARE TO BE PLACED IN A CLOSED-END COMPOSITE

ACCOUNT. UNDER THIS SUGGESTED TRANSITION RULE, THE TAXPAYER WOULD SELECT ONE OF THE METHODS PRESCRIBED UNDER SECTION 260(C) AND DEPRECIATE ITS UNDEPRECIATED DEVELOPMENT COSTS OVER THE REMAINING USEFUL LIFE OF THE ACCOUNT CONSISTENT WITH THE CHANGE OF METHOD RULES PRESCRIBED UNDER SECTION 260(E). THE REMAINING USEFUL LIFE WOULD BE EQUAL TO 11 YEARS MINUS 1 YEAR FOR EACH TAXABLE YEAR AFTER 1977 TO THE BEGINNING OF THE TAXABLE YEAR. SECTION 260(J) IS DESIGNED TO PROVIDE A SIMPLE TRANSITION INTO THE NEW DEPRECIATION RULES PROVIDED UNDER SECTION 260 WITHOUT CREATING BURDENSOME ADMINISTRATIVE DIFFICULTIES FOR EITHER THE DEPARTMENT OR THE TAXPAYER.

AGO 785859

SECTION 320

THE ASSOCIATION HAS NO SPECIFIC COMMENTS WITH RESPECT TO SECTION 320 OTHER THAN TO SAY WE ARE PLEASED TO NOTE THAT, CONSISTANT WITH THE STATUTE, THE PROPOSED REGULATION INCOPPORATES THE TREATMENT AFFORDED FIPELINE DISMANTLING, REMOVAL AND RESTORATION COSTS BY THE FEDERAL ENERGY REGULATORY COMMISSION.

SECTION 710

AOGA RECOMMENDS THAT SECTION 710(F)(2)(A) BE AMENDED TO REFER SPECIFICALLY TO 9:00 A.M. JUNEAU TIME FOR NOTIFYING THE ALASKA STATE TREASURY OF THE AMOUNT OF THE TAXPAYER'S PAYMENT. THE ASSOCIATION FURTHER RECOMMENDS THAT SECTION 710(F)(2)(C) REQUIRING THE TAXPAYER TO MAKE ITS TAX PAYMENT IN ONE LUMP SUM FROM ONE BANK IS UNNECESSARY AND COULD POSSIBLY BE INCONVENIENT FOR TAXPAYERS MAKING SUBSTANTIAL PAYMENTS. THUS THIS PROVISION SHOULD BE DELETED. WE HAVE ALSO SUGGESTED CHANGES TO SECTION 710(F)(2)(D) OF THE PROPOSED REGULATIONS TO CLARIFY THE SITUATION WHEN THE DUE DATE IS NOT A BANKING DAY.

SECTION 900

SECTION 900(24) OF THE PROPOSED REGULATIONS PERTAINING TO THE DEFINITION OF THE TERM "POINT OF PRODUCTION" HAS BEEN REVISED TO CONFORM TO THE DEFINITIONS SET FORTH IN AS 43.55.140 (12)(A). UNDER OUR INTERPRETATION OF THE STATUTE, THE POINT OF PRODUCTION IN THE CASE OF OIL SHOULD BE THE FIRST POINT DOWNSTREAM OF THE WELL WHERE THE OIL IS ACCURATELY MEASURED IN

AGO 785860

A CONDITION OF PIPELINE QUALITY REGARDLESS OF WHETHER THERE IS A CUSTODY TRANSFER METER OR UNIT. IN THE CASE OF GAS, WE BELIEVE THAT THE DISTINCTION SET FORTH IN THE STATUTE BETWEEN GAS WELL GAS AND CASINGHEAD GAS SHOULD BE RECOGNIZED IN THE REGULATIONS.

AOGA ALSO SUGGESTS AS AN ADDITION TO THE DEFINITION OF SALES DELIVERY POINT UNDER SECTION 900(31) OF THE PROPOSED REGULATION, PARAGRAPH (C), WHICH APPARENTLY HAD BEEN INADVERTENTLY OMITTED. PARAGRAPH (C) PERTAINS TO A TAXPAYER'S GAS NOT SOLD AND DELIVERED IN A BONA FIDE, ARM'S-LENGTH SALE TO A THIRD PARTY.

IN LIGHT OF THE CHANGES MADE TO SECTIONS 240(B) AND (C) OF THE PROPOSED REGULATIONS RELATING TO COSTS OR AID IN SUPPORT OF DRILLING, WE HAVE INCLUDED IN OUR SUGGESTED LANGUAGE A DEFINITION OF THE TERMS "COSTS OF DRILLING" AND "DRILLING COSTS" TO INCLUDE COSTS WHICH ARE INCIDENT TO AND NECESSARY FOR DRILLING WELLS AND PREPARING WELLS FOR PRODUCTION.

EFFECTIVE DATE

AOGA RECOMMENDS THAT THE REGULATIONS BE MADE EFFECTIVE FOR TAX RETURNS FILED AFTER THE DATE THE REGULATIONS, WITH AMENDMENTS, ARE ADOPTED. PURSUANT TO OUR UNDERSTANDING OF THE GENERAL RULES OF ADMINISTRATIVE LAW, THE REGULATIONS MAY NOT BE GIVEN RETROACTIVE EFFECT ABSENT A CLEAR STATEMENT IN THE REGULATIONS EVIDENCING THIS INTENT.

May 19, 1980

Senator Clem Tillion
Senate President
Alaska State Legislature
Pouch V
Juneau, Alaska 99811

Re: Oil and Gas Corporate Income Tax

Dear Clem:

According to members of your chamber, there is a plan afoot to amend the State Oil and Gas Corporate Income Tax to provide a deduction for the Federal windfall profits tax. This will cost the Alaskan public some $8 billion by 1990 -- or $20,000 for every man, woman and child.

As near as can be determined through informal channels, proponents of tax relief for the oil industry are planning to spring this on the Legislature at the last moment, without the benefit of public hearings or input, in the form of a Senate amendment to a House bill, sending the issue immediately to the House for concurrence. Although this is a practice both chambers often resort to, it is hardly the manner in which a revenue issue of this magnitude should be handled. If Sohio, ARCO, and other major oil companies want tax relief, they should plead their case the same way as every other Alaskan group.

Sohio is selling this tax deduction disguised as a question of of form. In its view, it is necessary to make the changes in the state law to avoid double taxation. But the tax question is not just a technical issue, but a political one also, with many options. If we give them the exemption, we could raise the rate of taxation to make up the difference. Or, we could provide the exemption but raise the severance tax to 15%, where it backs out the Federal windfall profits tax. The industry's concern about taxation policy is a concern about the bottom line.

That line could be drawn higher or lower. The Federal windfall profits tax is aimed at a massive windfall that has been realized by the oil industry. Sohio's 1979 profits are up 164 percent over 1978, and 1980 revenues will reflect the benefits of decontrol. The industry's net after-tax revenues for 1980 should reach $3.6 billion, or enough money to provide $36,000 for 100,000 families. By 1983, industry profits are expected to top 5 billion dollars annually, or 20% more than Exxon's record $4.2 billion in earnings this year. These are staggering profits. This year's Prudhoe Bay net profit to the industry will equal 2.5% of all U.S. corporate profits earned in 1979, and 7 percent of all corporate dividends paid in the U.S. last year.

If we respond to this enormous windfall by lowering the oil company taxes, we will certainly be unique. The rest of the world, and indeed, even some states in the U.S., are considering or have already enacted tough new taxes.

Recent actions in Britian and Norway are a case in point. This is particularly interesting when one considers the different political climates of these countries compared to OPEC nations. One industry analyst notes that "[t]he North Sea is still generally viewed as offering about the world's most attractive economic and political climate for oil exploration. . .offering an unbeatable combination - free market pricing, political stability, and proximity to the world's biggest import market." It is doubly interesting to Alaskans because the British government is a large equity owner in Prudhoe Bay through BP's 53 % ownership of Sohio.

New policy directions taken by the Britons and Norwegians include the following:

1. Higher British Taxes.

> "Oil companies fear the [British] government may once again opt to raise its Petroleum Revenue Tax (PRT) on North Sea profits - 70% from 60% in its new budget this week. That would raise the government share of future oil price rises to 87.5% from 83% now and just 70% when the PRT was initiated in 1975.
>
> (Petroleum Intelligence Weekly, March 24, 1980)

2. Higher Norwegian taxes.

> "North Sea producers's profits per barrel could be slashed by as much as half by the new tax proposals, which are seen jumping Norway's 'take' to about 85% to 87% from 70% - 79% now. Oslo cites soaring world prices as justifying the rise.'
>
> (PIW, Feb. 25, 1980)

The increase in Norwegian taxes includes, among other things, Norway's "special" tax on North Sea profits of 35% to 25%. This "special" tax on profits is not deductable against the Norwegian corporate income tax of 50%. This, of course, is analogous to the situation where the State of Alaska's 9.4 percent tax on profits does not allow a deduction for the Federal Windfall Profits Tax.

3. British ownership of field development. When Margaret Thatcher's tory government was elected, she promised to trim the sails of the government owned British National Oil Corporation (BNOC). Subsquently, memoers of Ms. Thatcher's cabinent have expressed reservations about the government relinquishing its oil holdings. Now industry experts report that oil companies are unhappy about

> "the proposed British seventh-round licensing terms that would make British National Oil Corp. a co-licensee and continue its rights to 51% of all oil output."
>
> (PIW, March 24, 1980)

4. Norwegianization of field development.

> "Norway's new White Paper on oil policy is generally being interpreted as a blueprint for accelerating 'Norwegianization' of offshore oil resources and operations. While it is simply an advisory document to be debated in parliament, 'Norway for the Norwegians' is seen likely to be a popular political doctrine. . .
>
> The document is seen favoring greater use, where feasible, of 100% Norwegian equity in licenses reserved for the three principal Norwegian oil firms - state owned Statoil, state-controlled Norsk Hydro and privde Saga Petroleum. . .
>
> It's believed likely that unassigned acreage around promising North Sea oil and gas discoveries will go in the future to all-Norwegian ownership.
>
> (PIW, Feb. 2, 1980)

The tax question is an important one, and given both the recent price hikes and the worldwide reaction, it may make sense to take another look at whether the citizens of this state are getting their fair share. This will not be accomplished by pushing for an 8 billion dollar tax break for the industry in the dying moments of the legislature, with no debate or analysis. I urge you to use your influence to prevent this matter from comming before the Senate this year.

Sincerely,

ALASKA PUBLIC INTEREST RESEARCH GROUP

James Love
Director

Alaska net revenue as percentage of worldwide profits	10.7%
Reported taxes paid worldwide	22,870 million
Alaska tax and royalty payments as percentage of worldwide tax payments	2.4%

REPORTS FROM PETROLEUM INTELLIGENCE WEEKLY

BP's net income from Sohio tripled

Continuing to benefit largely from inventory profits and gains in Alaskan income, British Petroleum's 1979 profits more than tripled to $3.6 billion. Indicated fourth-quarter profits also nearly tripled to $9994 million. Sales and operating revenues for the year net of duties and sales tax rose a gentler 28% to $40.5-billion.

BP's net income from Sohio more than tripled to $1.05-billion as Sohio's share of Alaskan oil rose to 675,000 b/d from 579,000 b/d in 1978. BP has a 53% share in Sohio's net profits on Alaskan production between 600,000 and 1.05-million b/d.

March 17, 1980

December 24, 1979 Industry analysis of North Slope profits shows rate-of-return is 47% higher than average return earned by U.S. manufacturing industries. (before decontrol)

"North Slope profits are up more than 100% in 1979, with net after-tax margins now in the area of a handsome $6.20 a barrel, according to a Petroleum Intelligence Weekly analysis. Profits on Alaskan crude have been substantial right from the start of North Slope output in 1977. Even though the producers had some initial difficulty in lining up clients, profits in 1977 ranged from $1.70 to $2.70 a barrel. By early 1979, margins climbed to about $2.50 to $3, then rocketed to $4 in the second quarter, and $6 in the third quarter. . .

The present $7-plus per barrel profit on North Slope crude represents an annualized 22% return on the $14.5-billion invested in Alaska exploration, production and the pipeline, PIW calculates. This compares with a U. Inflation rate of 13% and the genral 15% return earned by U.S. manufacturing industries. In early 1979, the return on North Slope was a bare 10%.

If North Slope crude were 100% free to track runaway OPEC prices now, producers could easily raise selling prices as much as $10 a barrel This would boost after-tax profits by a heady $3.50-$4 a barrel, PIW calculates. Revenues of Alaska and the Federal Government would also climb. For every $1 price rise the companies profits would jump some 35 ¢ to 40 ¢ a barrel, Alaska would get 30 ¢ and the Federal Government 25 ¢, with the rest covering other costs.

Starting Jan. 1980, the price and profit outlook will depend on the combined effects of phased crude price decontrol and the final version of the pending new excise tax on the resulting 'windfall profits.'"

(Petroleum Intelligence Weekly, Dec. 24, 1979)

GOING TO THE WELL: 'BIG OIL' FIRMS FIND THAT OUTLETS FOR INVESTMENT OF THEIR LARGE EARNINGS ARE LIMITED

Wall Street Journal
April 9, 1980

Sun Oil Purchases Seagram Co.

Two months ago Jack Neafsey, senior vice president of Sun Co., the nation's 10th largest oil company, was voicing an extraordinary problem: With 1979 profits up by 69%, the company was practically in the position of having too much money to invest at once. The only constraint the company was facing, he said, was "the question of how many opportunities we can take on at one time."

Two days ago, Sun found a place for some of its expansive profits -- it offered $2.3 billion for the bulk of the U.S. oil and gas properties of Seagram Co. The proposed acquisition's price tag was second only to Shell Oil Co.'s $3.65 billion takeover of Belridge Oil Co. last year.

Exxon has problems spending it's money

For many large U.S. oil concerns the embarrassment of riches brought their way by last year's record profits is both an odd and a vexing problem. Even though their capital budgets are at record levels and far exceed their profits, these companies say they have more financial resources than they can profitably spend.

Exxon Corp., the world's largest oil concern, has a $7.5 billion spending program for this year, a 25% increase from last year's inital appropriation. But Exxon would like to spend even more, says Roger Meadrick, the deputy controller. 'We're not financially constrained from doing so,' he says. 'We're what you might call opportunity-limited.'

Money is no object

At Standard Oil Co. of California, Mobil Corp., Phillips Petroleum Co. and Getty Oil Co., capital spending is proceeding as though money were no object - which it isn't. "I've told our operating people that if they've got a sound oil and gas project they can handle, don't worry about the money - I'll find a way to get it," says Howard Bell, California Standard's vice president of finance.

. . .Spending money at home has public-relations value, of course. At one big oil company, there is the rumor that a 'political' percentage was tacked onto the bids that the firm submitted for a big offshore lease sale a few years back. After the tracts had been appraised, a company source says, 'word was going around that the suggested bids were sent up to the chairman's office, and he grossed them up because he wanted our spending figures to look bigger.'

California considers 10% surtax on oil industry profits.

At the top of the television screen, six pigs snuffle greedily in a trough; at the bottom, hugh profit figures from the oil companies make the sponor's porcine point. 'Sure, big oil companies have a right to reasonable profit,' says the announcer. 'But this year they're eating up more than their share.' A slogan - 'Tax Pig Oil' - flashes onto the screen, and as the voice-over continues, the 'P' fades into a 'B.' 'Let's stick it to Big Oil,' says the announcer. 'They've been sticking it to us for years.'

The Pig ad is a plug for Proposition 11, a California proposal to impose a 10 per cent surtax on oil-company profits. It will appear on the state ballot June 3.

Other states follow suit

Like Proposition 13, the tax slashing measure that inspired simil'ar initiatives in many other states, Prop 11 promises to reverberate far beyond California's borders. Connecticut has already enacted a 5 per cent tax on the gross receipts of big oil companies operating within the state, and at least half a dozen others are considering similar action.

Newsweek, May 19, 1980

Australia increases government "take", keeps 94% of OPEC windfall

Austalia's complex import-parity pricing formula for its 425,000 barrels daily crude oil production is making the government, not the producing companies, the big gainer from the sharp rise in OPEC prices. . .

The government 'take'* on domestic crude has increased as from Jan. 1 to nearly three quarters of the selling price - which PIW estimates at a weighted average $37.55 per barrel - up from two-thirds of an average $21.05 last July. The producers were left a mere 37 ¢ out of the $6.48 average Jan. increase, with the government taking $6.11. . .

* before deducting the state royalty, operating costs, depreciation, and Commonwealth corporate income tax. Thus not to be confused with net profit.

(PIW, March 17, 1980)

MEMORANDUM

TO: R. D. Stevenson
Special Assistant
Department of Revenue

DATE: March 26, 1980

FILE NO.

TELEPHONE NO.

FROM: Gary L Jenkins
Director
Audit Division

SUBJECT: House Bill No. 969

This bill would establish a salmon enhancement tax at 3 percent of the value of salmon sold to a processor. The processor will be charged with collecting tax at the time of purchase. There is one potential significant enforcement problem in that the legislation does not define how the value of the salmon is to be determined for purposes of the tax. It is recommended that the bill be amended to provide for the determination of value.

It is anticipated that there will be approximately 220 processors to process salmon. Each processor will be required to file a return on a monthly basis. To handle the initial review and processing functions, we will need two permanent full time Tax Examiner positions. To accomplish the audit functions, we will require the addition of one Revenue Auditor position.

The proposed Section 43.76.025(b) provides that the processor collecting the tax shall maintain records reflecting the location of the catch of the fishery resource. However, nowhere else in the proposed law is there any indication of what the processor is to do with this information. Is it intended that the monthly return to the Department of Revenue should account for the catch by location, or is the processor to send some type of report to the Department of Commerce and Economic Development? It is recommended that this subsection be modified to clearly state the intent with regard to this information.

III. ANALYSIS (See Fiscal Note Preparation Instructions, Section III)

The bill proposes a salmon enhancement tax of [illegible] percent of the value of salmon sold by a limited entry permit holder to each licensed processor. The tax is to be levied in areas where a qualified regional aquaculture association receives approval for such levy by the majority of the qualified permit holders in the area. The tax can be reduced or terminated by the Commissioner of Revenue upon recommendation of the Commissioner of Commerce and Economic Development and the regional association.

The above estimate is for those regional [illegible] entity which will levy mandatory assessments until the assessments are in place, involving [illegible] boards. The estimate is based on data obtained from those regions associated [illegible], and some catch and value statistics from the Department of Fish and Game. It is assumed that collections will not be committed until July 1, 1980.

Rep. Alvin Osterback, Co-Chairman
Rep. Bill Miles, Co-Chairman
House Resources Committee
Pouch V
Juneau, Alaska 99811

March 24, 1980

Dear Rep. Osterback and Rep. Miles,

I would like to thank you for the opportunity last Thursday to address the Resources Committee and also, thank you for the extra time you and the Committee took to listen to concerns about HRC 50.

Southern Southeast Regional Aquaculture was pleased to familiarize the Committee with our activities and many accomplishments. The Committee's concern for our fisheries and support for the private non-profit program is appreciated.

It is my understanding that three pieces of legislation were introduced Friday to get at the heart of some of the issues expressed at your hearings. I would urge your Committee's expedited consideration of HB 969, HB 970, and HB 971. I and my staff are available as needed to discuss these bills and the whole program.

Sincerely,

Ronald W. Wendte

AMENDMENTS TO HB 969

Page 2, line 18 — Change title. THREE PERCENT SALMON ENHANCEMENT TAX.

Page 2, line 20 — After "value of salmon" add: ",As defined in AS 43.75.140(7),"

Page 2, line 23 — After "(b) A" add: "three percent."

Page 3, line 2 — Add new section 43.76.011:

Sec. 43. 76.011 TWO PERCENT SALMON ENHANCEMENT TAX. (a) A person holding a limited entry permit under AS 16.43.010 - 16.43.380 shall pay a salmon enhancement tax at the rate of two percent of the value of salmon as defined in AS 43.75.140(7) the person sells to a processor licensed under AS 43.75.011. The processor shall collect the salmon enhancement tax at the time of the sale.

(b) A two percent salmon enhancement tax may only be levied or collected under (a) of this section

(1) in a region designated by the commissioner of fish and game for the purpose of salmon production under AS 16.10.375;

(2) if there exists in that region an association determined by the commissioner of fish and game to be a qualified regional association under AS 16.10.380; and

(3) if the qualified regional association approves the salmon enhancement tax under AS 43.76.015.

Page 3, line 3 Delete present section, add new section AS 43.76.015:

Sec. 43.76.015. ELECTION TO APPROVE OR TERMINATE SALMON ENHANCEMENT TAX. (a) A qualified regional association may conduct an election under this section after the commissioner of commerce and economic development approves:

(1) the form of the notice to be published by qualified regional association;

(2) the form of the ballot to be used in the election;

(3) the registration and voting procedures fo the approval or termination of the tax.

(b) The salmon enhancement tax is levied under AS 43.76.010 or AS 43.76.011 on the effective date stated on the ballot when:

(1) the tax is approved by a majority of all of the eligible interim and permanent limited entry holders voting in one single election in each region as established pursuant to AS 16.10.380 and;

(2) the election results are certified by the commissioner of commerce and economic development.

(c) The qualified regional association shall adopt the following procedures for conducting an election under this chapter;

(1) At least one public meeting shall be held not less than 30 days prior to the date the ballots must be postmarked to explain the reason for the proposed tax and

the registration and voting procedure to be used for the voting. Notice of the meeting shall be given by;

(a) mailing the notice to each person eligible to vote and;

(b) posting the notice in at least three public places within the region and;

(c) publishing the notice in at least one newspaper of general circulation in the region at least once per week for two consecutive weeks prior to the meeting.

(2) mail a ballot to each individual interim and permanent limited entry permit holder eligible to vote. The ballots shall be mailed to each eligible voter twice, once not more than 45 days and the second time not less than 15 days prior to the date the ballots must be postmarked to be counted. Procedures shall be adopted so that only one ballot from each eligible voter is counted.

(d) The ballot shall state the following;

(1) whether a tax should be levied under AS 43.76.010 or AS 43.76.011,

(2) the boundaries of the region in which the tax would be levied,

(3) th ective date for the levy of the tax,

(4) the date on which the ballots must be postmarked in order to be counted,

(e) The ballots shall be returned by mail and counted by the commissioner of commerce and economic development or

a person approved by the commissioner.

(f) The interim and permanent limited entry holders elgible to vote are those listed by the commercial fisheries entry commission as the legal owner of the permit 90 days prior to the date set that the ballots must be postmarked to be counted.

(g) An election to terminate a salmon enhancement tax shall be conducted under the same procedural requirement established under this section for an election to approve a salmon enhancement tax.

Page 5, line 13 Delete Sec. 43.76.020, replace with following:

Sec. 43.76.020. TERMINATION OF SALMON ENHANCEMENT TAX. (a) A salmon enhancement tax levied under AS 43.76.010 or AS 43.76.011 may be terminated by the commissioner of revenue upon majority vote at an election held under Sec. 015 of this section in the region in which the tax is levied.

(b) A salmon enhancement tax shall be terminated by the commissioner of revenue under (a) of this section following an election in a region if:

(1) a petition is presented to the commissioner of commerce and economic development requesting termination of the salmon enhancement tax which is signed by at least 25 percent of the number of persons who were qualified to vote under AS 43.76.015 in the election approving the salmon enhancement tax in the region;

(2) an election is held in accordance with AS 43.76.015; the ballot shall ask the question whether the salmon enhancemtn tax for the region shall be terminated. The ballot shall be worded so that a "yes" vote is for continuation of the salmon enhancement tax and a "no" vote is for termination o. the salmon enhancement tax;

(3) a majority of the people eligible to vote cast a ballot for the termination of the salmon enhancement tax;

(4) the qualifi d regional association provides notice of the election in accordance with AS 43.76.015 within two months after receiving notice from the commissioner of commerce and economic development that a valid petition under (1) of this subsection has been received.

Page 6, line 20 — After AS 43.76.010 add "or AS 43.76.011"

Page 6, line 25 — After "reflecting the" add "regional association identified pursuant to AS 16.10.375 in which the fishery resource was caught and shall report to the Department of Revenue by March 1 of each year the total value as defined in AS 43.75.140(7) of each species caught in each regional association area.

Page 6, line 25 — After (.) add: "and shall report ot the Department of Revenue by March 1 of each year."

Page 6, line 26 — Add new section (c):

(c) The tax collected under this chapter shall be deposited in the General Fund. The legislature may make appropriations based on this revenue to the department of commerce and

economic development for the purposes of providing funding for qualified regional associations. The legislature may base an appropriation for a region on the value of fisheries resources caught in that region rather than the value of the fisheries resources sold in that region, where those values differ.

April 16, 1980

The Honorable Terry Gardiner
Alaska State Legislature
House of Representatives
Pouch V
Juneau, Alaska 99811

Re: Constitutionality of HB 969
Salmon Assessments
Our file J-66-597-80

Dear Representative Gardiner:

You have asked for our comments on HB 969, relating to salmon fisheries enhancement. You requested our analysis both of the constitutionality of the bill as presently drafted, and in relation to Judge Compton's decision holding the old mandatory assessment program unconstitutional.

The present bill differs in every important respect from the mandatory assessment program. Judge Compton held that AS 16.05.530 is unconstitutional for the reasons that it is in fact a tax, and as a tax is improperly dedicated to a specific purpose; that the regional associations are not "service areas", and that the legislature may not delegate to either the associations or a commissioner the power to tax. As discussed in detail below, the present bill imposes a tax but does not dedicate it, makes no attempt to characterize regional aquaculture associations as service areas, and does not (with the suggestions below) improperly delegate the taxing power.

03-C0LH

Dedication

Under the mandatory assessment program, an association voted to impose an assessment, the assessment was then collected from all the fishermen in the area by the processors, and returned directly to the regional associations. The disbursal to the associations was made without any act by the legislature. The present bill imposes a tax, to be levied on a regional basis only after certain conditions are met. One of the conditions is a vote by a majority of the limited entry permit holders in the salmon fisheries in the region. Once the tax is imposed, it is collected by the processors and forwarded to the Department of Revenue (for deposit in the general fund). This bill clearly imposes the tax for the purpose of providing a revenue source for funding the aquaculture associations; however, the language of the bill makes it clear that the legislature is making no attempt to bind future legislatures to take that action. While this legislature, if it passes the bill, is expressing an intent to return by appropriation the tax moneys collected, it also recognizes that this expression of intent does not guarantee that the funds will be treated in a like manner in the future. The tax is simply not dedicated.

Earlier drafts of this bill contained additional language under the section entitled "Collection of Tax and Disposition of Proceeds" (43.76.025) which specifically directed that the proceeds from the tax would be deposited

in the general fund. We can see no good reason for deleting this language, and recommend that it be included again. While the bill as presently drafted certainly implies that the proceeds will be deposited in the general fund, specific language to that effect will strengthen the bill.

Delegation

The bill as drafted raises several delegation issues, none of which, in our opinion, is fatal to the bill (with the suggestions herein).

1. Tax on a condition. It might be argued that the provision allowing each association to vote on whether or not to impose the tax is an improper delegation to the association of the taxing power. However, the legislature here is doing the taxing, leaving only the imposition of the tax subject to the occurrence of some outside condition (i.e., the vote of the association). Legislation of this type is commonly upheld, and is not invalid simply because it is left to a vote of the persons affected to decide whether or not it should be imposed. The analysis of the relevant cases is that the legislature has the power to impose the tax without the consent of those affected, can impose it subject to whatever conditions it chooses, and thus can impose it subject to the condition that a majority of those affected approve it. See, Currin v. Wallace, 306 U.S. 1, 15, 16 (1938), U.S. v. Rock Royal Co-op, 307 U.S. 533, 577, 578 (1938). Similarly, the legislature has the power to limit

the duration of its legislation as it sees fit, and can likewise lift the imposition of the tax subject to a condition, here the vote of the association.

The other two conditions required before the imposition of the tax are in a sense delegated to the commissioner of fish and game: that the region be designated by him for the purpose of salmon production, and that there exist a regional association determined by him to be a qualified regional association. Delegations to executive departments are proper where sufficient standards are established, and in our opinion the standards set out in AS 16.10.375 and 16.10.380 are sufficient to make the delegation proper.

2. Reduction of tax. The bill as presently drafted provides that the tax may be reduced to a percentage less than three percent by several methods. The first two methods are discussed below, as they apply to termination; the third method is upon a majority vote by the association. This is the weakest section of the bill, for by leaving with the association the power to set the rate of the tax, a strong argument can be made that the association has been delegated the power to tax. The problem might be eliminated by including language which sets out precise standards for when an association could reduce the tax, and to what percentage,

but these standards might be difficult to draft.

It is our understanding that the objective of the reduction provision is to allow an association to set the rate at two percent, that is, that only two alternatives are contemplated: two percent or three percent. In fact, the old mandatory assessment section was amended to read that the assessment could be either two percent or three percent. As a practical matter, it is understood that the Cook Inlet Regional Association would choose to participate in a two percent tax, as that was the rate of the assessment in that region. As such, a cleaner method for removing the delegation problem would be to add another section to the bill which imposes a two percent tax, subject to the same conditions required for the three percent tax, and allow an association to elect to impose one tax or the other. Thus, an association can by election fulfill the condition of either the two percent tax or the three percent tax. The provisions for reduction of the tax should then be deleted.

3. Termination of tax. As noted briefly above, the same analysis that permits the imposition of the tax on a condition also permits the termination on a condition. The legislature has the power to enact a tax for a limited duration; it can condition that duration on the occurrence of an outside event. Thus, a vote by an association to terminate the tax is not an improper delegation.

However, the bill as presently drafted provides two additional methods for termination: upon the recommendation of the commissioner of commerce, and upon request of the association board of directors. While the second method might arguably be just as proper as a vote by the entire association, the first is probably an improper delegation to the commissioner of commerce, as there are no standards set out delineating when he should exercise that power. It is our understanding that a redraft of the bill is presently being prepared which eliminates these two provisions, and the bill will be better without them.

Service areas.

HB 969 does not designate regional aquaculture associations as service areas, and none of the problems that Judge Compton found with the mandatory assessment program in that area can arise.

Other problems.

The election procedures set out in proposed sec. 43.-76.015 of the bill call for voting at one of two public meetings or by mail. As written, the procedures are confusing, and we recommend that this section be redrafted.

Finally, Sec. 8 of the bill has the effect of repealing the tax imposed should the mandatory assessment provision (AS 16.10.530) be held constitutional by the Alaska Supreme Court. The original bill required that the holding be "as applied before July 13, 1979". CS for HB 969 now reads

that the holding be that "AS 16.10.530 does not violate the Constitution". Conceivably, the court might hold that AS 16.10.530 is constitutional, but not as previously applied. Under the committee substitute, then, the tax would be repealed but the old program could not be reinstated, and the association would be left without a source of funds.

Attached is a copy of the bill which incorporates our suggestions, with the exception of those referred to under "Other problems".

Sincerely,

AVRUM M. GROSS
ATTORNEY GENERAL

STATE OF ALASKA
THE LEGISLATURE

POUCH Y STATE CAPITOL
JUNEAU ALASKA 99811

LEGISLATIVE AFFAIRS AGENCY

MEMORANDUM April 11, 1980

SUBJECT: Salmon enhancement tax;
Grants to regional aquaculture associations
CSHB 969 and CSHB 970

TO: House Resources Committee
Attn: Mary Levan, A.A.

FROM: Kenneth E. Vassar
Legislative Counsel KEV

Enclosed is the committee substitute you requested for House Bill 970. I believe the language added in section 2 of this bill violates that part of Article II, sec. 13 of the state Constitution which provides:

Bills for appropriations shall be confined to appropriations.

I talked with John Sund about this problem, and he suggested that the language in section 2 might be added instead to House Bill 969. Unfortunately, when I talked to him, I had already sent your committee substitute for House Bill 969 back to you; and when I was able to call you about it, the committee had already reported that bill out of committee. Moreover, the committee has also already reported House Bill 970 out with the changes included in section 2.

I would suggest that House Bill 970 should be returned to its original form and the following amendments made to Committee Substitute for House Bill 969:

Page 7, after line 18

Insert the following new material:

* Sec. 6. A regional aquaculture association which receives money from an appropriation after April 1, 1980, shall return to the Department of Commerce and Economic Development, in the form and manner of payment

acceptable to the commissioner of commerce and economic development, the difference between the money received by the regional aquaculture association and the amount of the salmon enhancement tax (AS 43.76.010) collected in the region in which the regional aquaculture association operates if the salmon erhancement tax is repealed before the amount collected in the region equals or exceeds the amount of the money received by the regional aquaculture association. Payments received by the Department of Commerce and Economic Development under this section shall be deposited in the general fund.

Page 7, line 19

Delete "* Sec. 6" and insert "* Sec. 7"

Page 7, line, 21

Delete "* Sec. 7. Sections 1 - 4 and 7" and insert following.

"* Sec. 8. Sections 1 - 4, 6 and 8"

Page 7, line 23

Delete "* Sec. 8. Sections 5, 6 and 8" and insert the following:

"* Sec. 9. Sections 5, 7 and 9"

Finally, there is a significant problem with the title of Committee Substitute for House Bill 969. It does not express the special effective dates of the bill. Therefore, the following change should be made at page 1, line 6:

After "enhancement" add "; and providing for an effective date"

KEV:ljb

Enclosure

AMENDMENT NO. 1 HB 970

Page 1, line 16

Add the following language as a new section and renumber accordingly:

Sec. 2 If AS 43.76.010 (salmon enhancement tax) is repealed before taxes collected pursuant to that section are substantially equivilent to the amounts appropriated in Sec. 1 of this Act, the commissioner of commerce and economic development shall direct that regional aquaculture associations receiving appropriations pursuant to this Act shall offset the difference between taxes collected and appropriations received. Any necessary offset shall be in the manner and form acceptable to the commissioner.

RE: CS HB 416 and HB 980

CS HB 416 and HB 980 dealing with, respectiv ale of unpasteurized milk and the shelf life of eggs and milk has been given to Representative Miles for hearing in Resources Committee. Would you be willing to move them to Representative Osterback for Committee hearing, thus allowing the bills to be heard several weeks earlier?

HB 980

MILK INDUSTRY FOUNDATION

910 SEVENTEENTH STREET, N.W., WASHINGTON, D. C. 20006 (202) 296-4250

JOHN F. SPEER, JR.
EXECUTIVE VICE PRESIDENT

April 18, 1980

Commissioner LeRech
Department of Natural Resources
Juneau, Alaska 99801

Dear Commissioner LeRech:

The Milk Industry Foundation, the national trade association of processors of fluid milk and fluid milk products, in its normal routine of monitoring state legislation is very concerned with Alaska H.B.980 entitled "An Act Relating to Sales of Milk and Eggs".

The fear that we have with enactment of this bill would be the unavailability of fluid milk for the residents of Alaska. It seems almost impossible from a logistics standpoint of view to have milk delivered to all points of the state within 36 hours from the time of processing. Is this possible and if so, how can it be accomplished?

It appears that the legislature is concerned about the freshness of milk and eggs which seem to be the underlined purpose of H.B.980. If so, this proposal does not fit the laws and regulations of 20 of the lower 48 states which require open dating of fluid milk. The program which now exists is that of using a "Sell by" date This date is more meaningful to the consumer since it indicates a date after which the product should not be sold. For Alaska to require a "...date that processing was completed..." would not indicate to the consumer anytime for keeping the product and therefore would be meaningless.

Lastly, the bill indicates that the product shall not be sold after 10 days from date of processing. Again, most state regulations allow the processor to establish the length of time his products should be allowed in the marketplace. Some processors' products will adhere to the 10 day mandate, while other products may be able to with stand a longer shelf life. Unfortunately, if there is some mishandling, the products would not last the 10 days as provided. Again, what has been gained from mandating 10 days? The milk processing industry has been very concerned about the quality of the products available for consumer purchase. Two weeks ago a meeting was held by technical experts of the industry here in Washington to propose an open dating program that could that could be adopted by every state. Details of this program are being worked out and will have to be considered by the MIF Board of Directors prior to implementation. We would hope that we could work with you and your associates to develop a meaningful program for the citizens of Alaska.

April 18, 1980

We urge you to do whatever you can to see that H.B.980 is not enacted and that a more realistic approach can be taken to achieve what we hope your goal is, i.e., making available to all Alaskans an abundant supply of fluid milk and fluid milk products. Your indication of support would be appreciated.

Sincerely,

Austin Rhoads

(am § 13 ch 151 SLA 1978)

Effect of amendments.
The 1978 amendment added subsection (e).

As the rest of the section was not affected by the amendment, it is not set out.

Editor's note. — As to legislative intent, see § 1, ch. 151, SLA 1978, in the 1978 Temporary and Special Acts and Resolutions in Binder 9.

Legislative history report. — For report on ch. 151, SLA 1978 (SB 960), see 1978 House Journal, p. 1154.

Sec. 16.05.940. Definitions. In this chapter

(2) "commercial fisherman" means an individual who fishes commercially for, takes, or attempts to take fish, shellfish, or other fishery resources of the state by any means, and includes every individual aboard a boat operated for fishing purposes who participates directly or indirectly in the taking of these raw fishery products, whether participation is on shares or as an employee or otherwise; however, this definition does not apply to anyone aboard a licensed vessel as a visitor or guest who does not directly or indirectly participate in the taking; and the term "commercial fisherman" includes the crews of tenders or other floating craft used in transporting fish;

(17) "subsistence fishing" means the taking, fishing for, or possession of fish, shellfish, or other fisheries resources for subsistence uses with gill net, seine, fish wheel, long line, or other means defined by the Board of Fisheries;

(21) "vessel" means a floating craft powered, towed, rowed, or otherwise propelled, which is used for delivering, landing, or taking fish within the jurisdiction of the state, but for the purposes of this chapter does not include aircraft;

(26) "subsistence uses" means the customary and traditional uses in Alaska of wild, renewable resources for direct personal or family consumption as food, shelter, fuel, clothing, tools, or transportation, for the making and selling of handicraft articles out of nonedible by-products of fish and wildlife resources taken for personal or family consumption, and for the customary trade, barter or sharing for personal or family consumption; for the purposes of this paragraph, "family" means all persons related by blood, marriage, or adoption, and any person living within the household on a permanent basis;

(27) "barter" means the exchange or trade of fish or game, or their parts, taken for subsistence uses

(A) for other fish or game or their parts; or

(B) for other food or for nonedible items other than money if the exchange is of a limited and noncommercial nature.

MEMORANDUM April 18, 1980

SUBJECT: Recovery Entry Permits HB 1015
(Work Order Number 8488)

TO: House Resources Committee
Attn: Mary Levan, A.A.

FROM: Kenneth E. Vassar
Legislative Counsel

Enclosed is the bill you requested relating to recovery entry permits. Because there was insufficient time to address certain problems in the bill, you should know that some amendments to existing sections in AS 16.43 should be made since there is a conflict between those sections and some of the provisions of this bill. The particular sections which concern me are AS 16.43.100(a)(9) - (12), 16.43.150(f) and (h), 16.43.170 - 16.43.182, and 16.43.290 - 16.43.330. There may be other conflicting sections which I have not yet discovered.

KEV:ljb

Enclosure

4/15/80

WORK DRAFT #3

For an Act entitled: "An act relating to the limitation of entry into various fisheries: and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

Section 1. FINDINGS. The legislature finds that:

(1) there may have occured since 1975 a significant recovery in the biological condition of certain salmon fisheries, and there may have occured a significant improvement in the market conditions affecting certain salmon fisheries;

(2) these improved conditions may in certain fisheries persist for at least several more fishing seasons;

(3) it is not known whether these improvements are of such sufficient long term duration to allow the issuance of new entry permits under the authority of AS16.43.330;

(4) it is consistent with the objectives of AS16.43 for additional units of gear to be authorized in a fishery if significant improvement has occured and if that ~~geo~~ recovery is likely to ~~g~~ continue within the foreseeable future;

(5) manyindividuals currently engaged in commercial fishing as crewpersons cannot or have been unable to obtain an entry permit under the procedures of AS16.43.170(b).

Sec. 2. DECLARATION OF POLICY. It is the policy of this state and of this legislature to promote the conservation and the sustained yield management of Alaska's fishery resource and the economic health and stability of the commercial fisheries in the public interest and without unjust descrimination.

Sec. 3. PURPOSE. The purpose of this act is to provide a means for issuing recovery entry permits where significant improvements in fishery resources and marketing conditions have occured, such that additional units of gear may be sustained in the fishery.

Sec. 4. AS16.43 is amended by adding new sections to read:

ARTICLE 5A. ISSUANCE OF RECOVERY ENTRY PERMITS

Sec. 16.43.340. DETERMINATION THAT A FISHERY HAS RECOVERED. The commission shall designate a fishery as recovered when

(1) there has been a significant improvement in the biological condition of the fishery; and

(2) there has been a significant improvement in the marketing conditions affecting the fishery; and

(3) it appears reasonably likely that the conditions of recovery will continue for the near future.

Sec. 16.43.341. DETERMINATION OF THE NUMBER OF

RECOVERY ENTRY PERMITS TO ISSUE. (a) The number of recovery entry permits to be issued shall be based upon a reasonable balance of the following:

(1) the degree of recovery evidenced in the fishery;

(2) those standards set out in sec. 290(1) - (3) of this chapter, both as they apply to entry permit holders and to those who will receive recovery entry permits.

(b) The commission shall consult with the Alaska Department of Fish and Game when determining the number of recovery entry permits to be issued.

(c) The commision shall declare recovery entry permits available for issuance when the number that may be issued in a fishery exceeds 25 or exceeds 10% of the total number of outstanding entry permits for that fishery.

Sec. 16.43.342. APPLICATION FOR RECOVERY ENTRY PERMITS. (a) The commission shall establish the opening and closing dates, places and form of application for entry permits for each fishery. The commission shall may require the submission of specific verified evidence establishing the applicant's qualifications for a recovery entry permit.

(b) When an applicant is unable to establish his qualifications for a recovery entry permit by submitting specific verified evidence required in the application by the commission,

he may request and obtain an administrative adjudication of his application according to the procedures established in sec. 110(b) of this chapter. At the hearing he may present alternative evidence of his qualifications for an entry permit.

(c) An applicant shall be assigned to a priority classification based solely upon his qualifications on January 1 of the year the recovery entry permits are declared available for issuance by the commission.

Sec. 16.43.343. ALLOCATION OF RECOVERY ENTRY PERMITS.

(a) The commission shall accept applications for recovery entry permits only from applicants who

(1) harvested the fishery resource commercially in the fishery prior to the date established in sec. 342(c); and

(2) did not qualify for any entry permit under sec. 270 of this chapter; and

(3) do not and have not held an entry permit in any fishery, unless the applicant did so solely as a transferee under sec. 180 of this chapter.

(b) The commission shall adopt regulations establishing qualifications for ranking applicants under this section. The regulations shall define priority classifications of similarly situated applicants based upon a reasonable balance of the following standards:

(1) degree of economic dependence upon the fishery, including but not limited to percentage of income derived from the fishery, reliance on alternative occupations, availability

of alternative occupations, investment in vessels and gear; and

(2) extent of past participation in the fishery, including but not limited to the number of years participation in the fishery, and the consistency of participation during each year.

(c) The commission shall issue recovery entry permits to qualified applicants in the order of their descending priority classifications. If, within the lowest priority classification of qualified applicants to which some entry permits may be issued, there are more applicants than there are entry permits to be issued, then the allocation of recovery entry permits within that priority classification shall be by lottery.

(d) All other applicants shall be denied.

(e) To qualify for a recovery entry permit by reason of this section, the applicant must demonstrate at the time of permit issuance his present ability to engage actively in the fishery.

(f) To qualify for a recovery entry permit by reason of this section, the applicant must demonstrate at the time of permit issuance that he does not and has not held an entry permit in any fishery, unless the applicant did so solely as a transferee under sec. 180 of this chapter.

(g) Interim-use permits shall not be issued to those awaiting a final determination of their qualification for a recovery entry permit.

Sec. 16.43.344. TRANSFER OF RECOVERYENTRY PERMITS.

(a) Recovery entry permits issued under secs. 340-346 of this chapter may not be transfered pursuant to sec. 170(b) or sec. 180(b) of this chapter.

(b) The commission shall adopt regulations providing for the temporary transfer of recovery entry permits issued under secs. 340-346 of this chapter when illness, disability, required military or governmental service, or other unavoidable hardship ~~ggggg~~ prevents the permitee from participating in the fishery.

Sec. 16.43.345. REVERSION OF RECOVERY ENTPY PEPMITS.

(a) A recovery entry permit issued under secs. 340-346 of this chapter is a use privilege which may be modified or revoked without compensation.

(b) A recovery entry permit reverts to the commission upon the death of the permitee.

(c) A recovery entry permit reverts to the commission upon the failure of the permitee to actively harvest the fishery resource for a period of two consecutive calendar years. Grounds for a transfer under sec. 344(b) of this chapter does not exempt the permitee from this subsection.

Sec. 16.43.345. EXEMPTION FROM REVERSION REQUIPEMENT. The commission may waive the reversion requirement of sec. 345(c) of this chapter for good cause.

Sec. 5. This Act shall thae effect immediatly in accordance with AS01.10.070(c).

FROM Derrill L. Johnson
Director of Administration

SUBJECT: Fiscal Impact of Proposed HB 1015 "Recovery Entry Permits"

You asked that I analyze the fiscal impact of HB 1015. My impression is that the bill would require that all applications still active in any fishery that has achieved "recovery" be finally classified before applications are accepted for "recovery" permits. While several fisheries have not achieved recovery as I understand its meaning in the draft proposal, efficiency and fairness require that all backlog application processing be completed while the research is being conducted to determine where and in what form the recovery concept should be applied. Consequently, I propose that we again ask for legislative support to clean up the backlog as we d. in the fiscal analysis of HB 665 (attached).

Beyond that, it is speculative to project the costs of implementation since the number of fisheries, number of permits to be issued, and potential number of applicants is not subject to estimation. I would suggest that we propose instead to receive funding for two research analysts (plus support) to complete the necessary analysis and develop implementation strategies, and ask the Legislature to include legislative intent directing the Commission to propose incremental budget requests to the next Legislature. In addition to the request for $481.3 to process the backlog, the Commission shou[illegible] request the following fiscal support for HB 1015:

Personal Services

III. ANALYSIS (See Fiscal Note Preparation Instructions, Section III)
Operational funding for the Guide Licensing and Control Board would be required to include the establishment of two positions, an Administrative Assistant I (range 12) and a Clerk-Typist III (range 8) and associated costs. These two positions would be located in Anchorage under the Director of the Fish & Wildlife Protection Division, and would provide administrative and clerical support to the Board. Travel costs are estimated for five members of the Board plus the Administrative Assistant for three meetings (approximately twelve days each) annually. The costs shown for FY81 also include office equipment for the new positions and an audio recording system to be used to document testimony and Board actions in cases of license suspension, revocation, or denial which are litigated. Dollar amounts shown after FY81 include a 7% inflation factor.

If the Board membership is increased, travel costs will be correspondingly higher than the estimates indicated.

JUSTIFICATION:

The Department currently does not have sufficient clerical staff to adequately administer the Guide Licensing and Control Board.

This position will be responsible for all administrative duties required and would process and issue approximately 1,500 guide licenses annually as well as preparing the Guide Register for public distribution annually and maintaining all Board records. The incumbent will also be required to arrange and attend all Board meetings to provide support as necessary and ensure proper documentation of all Board activities.

JUSTIFICATION:

The Department currently does not have sufficient clerical staff to adequately administer the Guide Licensing and Control Board.

This position would be responsible for all clerical support to the Board, including transcriptions of Board meetings for use in possible hearings and litigations. At present, some of this work is being accomplished by the Director's staff to the detriment of other duties and obligations. Approximately 15,000 financial remuneration statements submitted by guides annually are currently being filed by professional level investigators, decreasing their time available for program operations.

Some of the functions, in part, are currently being accomplished by the Dept. of Commerce. When the Board is transferred to this Department, however, clerical support will not be transferred. Denial of this position will result in program ineffectiveness, as professional level staff will have to be diverted to clerical work as indicated above.

CS FOR HOUSE BILL NO. 1032

IN THE LEGISLATURE OF THE STATE OF ALASKA

ELEVENTH LEGISLATURE - SECOND SESSION

A BILL

For an Act entitled: "An Act relating to guide licensing; continuing the existence of the Guide Licensing and Control Board, repealing regulations relating to exclusive guide license areas, and amending the law relating to the board's powers and responsibilities; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

Section 1. AS 08.54.010 is amended to read:

Sec. 08.54.010. CREATION AND MEMBERSHIP OF BOARD. There is created in the division of fish and wildlife protection, Department of Public Safety, the Guide Licensing and Control Board consisting of five [SEVEN] members. Three [NO MORE THAN THREE] members of the board shall be master guides or registered guides actively involved in guiding [HAVE A GUIDE LICENSE]. The other members shall have a general knowledge of the game resources of the state but may not (1) be employed in guiding; (2) be associated by legal contract with a guide except as a consumer of the services provided by the guide; or (3) have a direct financial interest in a guide business. A minimum of 10 years residence in the state is required for all members of the board.

Sec. 2. AS 08.54.020 is amended to read:

Sec. 08.54.020. APPOINTMENT AND TERM OF OFFICE. The members of the board shall be appointed by the governor and confirmed by the legislature for staggered terms of three years or until their successors are appointed. [INITIAL TERMS ARE AS FOLLOWS: THREE MEMBERS FOR ONE YEAR,

Rick - Please check the wording of the new sections. I particularly wondering about the last line of section 4 - does that wording take care of your intent? I won't turn the new CS in to the Chief Clerk until you let me know. If this version is not satisfactory I'll take it back to Guthrie for a re-write. Thanks, Mary Levan

two members for two years, and two members for three years.) A member may be removed at the pleasure of the governor. A person may not be appointed to the board for more than two consecutive terms.

* Sec. 3. AS 08.54.030 is amended to read:

Sec. 08.54.030. CHAIRMAN OF BOARD. The board shall annually elect one of its members as chairman and one of its members as vice-chairman. A person elected as chairman may not serve for more than two consecutive years.

* Sec. 4. AS 08.54 is amended by adding a new section to read:

Sec. 08.54.035. QUORUM. Three members of the board constitute a quorum for the conduct of business. However, regulations may only be adopted with the affirmative vote of a majority of the full membership of the board. ?

* Sec. 5. AS 08.54 is amended by adding a new section to read:

Sec. 08.54.047. LIMITATION ON AUTHORITY OF BOARD. The board may not limit the number of licensed operating guides allowed to guide in an area of the state to the exclusion of other guides licensed to guide in the guide district in which the area is located.

* Sec. 6. AS 08.54.170(a) is amended to read:

(a) License fees for engaging in the profession of guiding are:

(1) master guide license, biennial [ANNUAL] . . .	$200	[$75]
(2) registered guide license, biennial [ANNUAL] .	$200	[75]
(3) class-A assistant guide, biennial [ANNUAL] .	$ 30	[15]
(4) assistant guide license, biennial [ANNUAL] .	$ 30	[10]

* Sec. 7. AS 08.54 is amended by adding a new section to read:

Sec. 08.54.132. WAIVER. The qualifying examination required to be passed by persons seeking a license under AS 08.54.130 and 08.54.110 shall be administered twice a year in both Juneau and Anchorage.

* Sec. 8. AS 08.54.170(a) is amended to read:

(a) A master guide, registered guide, class-A assistant guide, or assistant guide [OR TRANSPORTER] license expires on December 31 of the calendar year following the calendar year in which the license was issued [FOLLOWING ISSUANCE].

* Sec. 9. AS 08.54.190(b) is amended to read:

(b) No license may be issued to a class-A assistant guide or assistant guide who has failed to renew his license for four [TEN] consecutive years unless he again meets the qualifications for initial issuance of the license.

* Sec. 10. AS 08.54.200(a) is amended to read:

(a) The board shall hold a hearing to determine if disciplinary action is necessary if

(1) complaints concerning the licensee have been filed with the board from three or more clients of separate parties within the past five years; or

(2) [A LICENSEE HAS BEEN CHARGED WITH A VIOLATION OF FEDERAL OR STATE SPORT FISH, GAME OR GUIDE STATUTES OR REGULATIONS; OR]

(3) a licensee has been convicted of a violation of federal or state sport fish, game or guide statute or regulation.

* Sec. 11. AS 08.54.200(c) is amended to read:

(c) After a hearing, the board shall revoke, suspend, or deny renewal of a license if the board finds that the licensee

(1) does not meet the qualifications specified by statute or regulation for the class of license held;

(2) is incompetent as a master guide, registered guide, class-A assistant guide, or assistant guide;

(3) has been convicted of two violations of federal or state sport fish, game or guide statutes or regulations within the past five years.

* Sec. 12. AS 08.54.210(a)(1) is amended to read:

(1) a master guide, registered guide, class-A assistant guide, or assistant guide [OR TRANSPORTER] to fail to timely report to the Department of Public Safety, division of fish and wildlife protection, and in no event later than 10 days, violations by a client of a state fish, game or guiding statute or regulation;

* Sec. 13. AS 08.54.210(a)(2) is amended to read:

(2) a master guide, registered guide, class A assistant guide, or assistant guide [OR TRANSPORTER] to aid the commission of a violation of this chapter or of AS 16.05 or a regulation adopted [THEREUNDER] under either chapter, or permit the commission of a violation in his sight without attempting to prevent it, short of using force, and without reporting it;

* Sec. 14. AS 08.54.210(a)(4) is amended to read:

(4) a person to advertise as or represent himself to be a licensed master guide, registered guide, class-A assistant guide, or assistant guide [OR TRANSPORTER] without being currently licensed, or to falsely advertise services;

* Sec. 15. AS 44.41.020 is amended to read:

Sec. 44.41.020. DUTIES OF DEPARTMENT. (a) The Department of Public Safety shall administer functions relative to the protection of life and property.

(b) The Department of Public Safety shall administer the Guide Licensing and Control Board established under AS 08.54.010.

* Sec. 16. AS 08.03.010(c) is amended by adding a new paragraph to read:

(2) Guide Licensing and Control Board (AS 08.54.010) -- June 30, 1984.

* Sec. 17. The terms of the members of the Guide Licensing and Control Board appointed under AS 08.54.020 terminate on the effective date of this

Act. The governor shall appoint members to the board for the following initial terms: one member for one year, two members for two years, and two members for three years.

* Sec. 18. 12 AAC 38.051 - 12 AAC 38.059 are compiled.

* Sec. 19. AS 05.01.010(20); AS 08.03.010(b)(7); AS 08.54.340(a)(2), 08.54.108(5), 08.54.110(12), 08.54.142, 08.54.144, 08.54.146, 08.54.170(c), 08.54.240(5); and AS 16.05.340(c) are repealed.

* Sec. 20. This Act takes effect immediately in accordance with AS 01.10.-070(c).

BILL	LETTER/PHONE	INFORMED	HEARING DATE
HCR 9	3/5/79	Commerce Dept. - Julius Brecht, Dir. of Banking Division to testify	3/8/79
	3/8	John Williams, Leg. Affairs	3/8

December 15, 1978

The Honorable Terry Gardiner
House of Representatives
Pouch J
Juneau, Alaska 99811

Dear Mr. Gardiner:

I recently read Pat Dougherty's article on the Alien Disclosure Law in the December 7-13, 1978 issue of the Alaska Advocate. An insert entitled "Division thwarts alien disclosure law" appeared in that article relating to this division's administration of the law and is enclosed for your information.

I believe the insert is inaccurate and does not clearly state what steps the division has in fact taken to administer the law since its enactment in 1975.

The following steps are taken as a matter of course to ensure that the requirements of AS 10.05.255, 10.05.615 and 10.05.707 relating to alien affiliates are met.

1. When articles of incorporation for a domestic corporation are received, they are reviewed by the Corporations Section within this division pursuant to AS 10.05.255. If the 5% shareholder or alien affiliate requirements are not met (no reference to alien affiliates in the articles or otherwise disclosed), a letter is mailed to the person requesting the filing of the articles stating that alien affiliates must be disclosed, or if there are none, disclose that fact. The articles would, of course, be rejected if any of the other requirements of AS 10.05.255 were not met. In addition the requestor is informed that the articles will be held in the Corporations Section for 30 days awaiting his response. However, if after 30 days the required information is not received, the articles are returned to the requestor.

Similar steps are taken regarding the 5% shareholder requirement.

2. When application for certificate of authority is received from a foreign corporation, it is reviewed pursuant to 10.05.615. Every item must be completed, including the alien affiliate and 5% shareholder requirement. If any item on the application is omitted, the application is returned to the sender with a letter of explanation.

3. Annual reports are reviewed for completeness pursuant to AS 10.05.702. Every item on the report form is checked for answers, including the alien affiliate and 5% shareholder requirements. If the report is not completed, it is returned to the sender along with a letter of explanation. In previous years, when any item was omitted the report was accepted and a letter was sent requesting the additional information.

As a further inducement to corporate officers to provide correct information on future annual reports, a paragraph will be added to the reports in the next publication informing the officer filling out the form of the penalties imposed upon officers and directors by AS 10.05.796 for nondisclosure or falsification of information on the annual report filed with the department.

Recently, the division completed the conversion of a portion of its data base to an on-line computer automated system. Thirty-five types of information on each of the approximately 12,000 corporations on file with the division are now maintained in the State's computer in Juneau, enabling the division to provide vastly improved maintenance of the files and quicker response to requests from the public including members of the press. It may be possible depending on funding to have computer terminals elsewhere in the State from which requestors can obtain up-to-date information on corporations on file with the division.

Last month, the annual reports were addressed by computer. The computer is also used to generate several special reports, including a list of those corporations with alien affiliates, those with 5% shareholders, those with the same state of domicile, those with the same purpose, and various others. It will also produce the Corporate Directory, which previously was compiled using a "mag card" typewriter and took approximately two man-months just to type. Now the report can be procuded overnight. In addition, various certificates relating to corporations are also produced.

In summary, I believe that the division has administered the law in question in a reasonable and professional fashion. I would be happy to discuss this matter with you further at your convenience. I look forward to seeing you in Juneau next month.

Sincerely,

Julius J. Brecht
Director

JJB/slplw

STATE OF ALASKA

JAY S. HAMMOND, GOVERNOR

DEPARTMENT OF COMMERCE & ECONOMIC DEVELOPMENT

DIVISION OF BANKING, SECURITIES, SMALL LOANS & CORPORATIONS

POUCH D
JUNEAU, ALASKA 99811

March 9, 1979

Honorable Alvin Osterback
Chairman
House Resources Committee
Pouch V
Juneau, Alaska 99811

Dear Mr. Osterback:

RE: HCR-9

In my testimony before the House Resources Committee yesterday, I indicated that I had a copy for the committee of a letter which I had sent to Rep. Terry Gardiner regarding the article on foreign affiliates which appeared in the December 7-13, 1978 issue of the Alaska Advocate. Please find a copy of that letter dated December 15, 1978 enclosed.

I would also like to take this opportunity to express again that the division has, in my view, uniformly administered the foreign affiliate reporting requirement of AS 10.05.702(9) and has not devised nor used a definition of "affiliate" different from that stated in AS 10.05.825(18).

Unfortunately, Mr. Williams, who appeared after me at the hearing yesterday apparently did not grasp these simple points. The Alaska Advocate article was incorrect in this regard as well. Some of the confusion on their part stems from the annual report form used by the department. A copy is enclosed for your information.

I believe that if you review the department's corporation annual report form, you will conclude that Item 10 of that form simply is not in any way a definition. It simply restates the language of AS 10.05.702(9). It is true that there was an ambiguity regarding foreign affiliates in the 1977 annual report forms. However, that problem has been remedied in the present form.

The only change contemplated with regard to foreign affiliates on republication of the annual report forms next year, is to make specific reference to AS 10.05.786 which sets out the penalties for a false filing with the department.

08-H14L11

The department is enforcing the foreign affiliate law by the only effective means available:

1. rejecting articles of incorporation which do not address the issue;

2. refusing to register foreign corporations which do not address the issue in their filings, and

3. rejecting annual reports of both foreign and domestic corporations that do not respond to Item 10 of the annual report form.

I can emphasize with the committee's interest in obtaining information of foreign affiliates in the fishing industry. I stand ready to answer further questions that the committee may have on foreign affiliates and invite you and the committee members to inspect the corporations filing office within this division at your convenience.

Sincerely,

Julius J. Brecht
Director

CORPORATION ANNUAL REPORT

Dear Corporation Taxpayer:

Enclosed is your corporate franchise tax statement and the annual report form to be completed and returned to this office before February 1. The corporation franchise tax is $50.00 for domestic corporations and $100.00 for foreign corporations (incorporated outside the State of Alaska). Tax and report must be submitted together. Tax will not be accepted without completed report.

Please follow the instructions printed on the reverse side of the form. The instruction numbers coincide with the numbered spaces on the face of the annual report.

To avoid assessment of late filing fees and penalties please file timely and attach remittance as required. Thank you for your cooperation.

Article 8. Annual Reports.

Section
702. Contents of annual report
705. Filing of annual report of domestic and foreign corporations

Sec. 10.05.702. Contents of annual report. The annual report shall set out

(8) the name and address of each affiliate which is a nonresident alien or a corporation whose place of incorporation is outside the United States and the percentage of outstanding shares controlled by each affiliate

(9) the name and address of a person owning at least five per cent of the shares, or five per cent of any class of shares, and the percentage of the shares or class of shares owned by that person.

(am § 5 ch 145 SLA 1975; am § 14 ch 176 SLA 1976)

Effect of amendments. — The 1975 amendment added paragraph (8).

The 1976 amendment, effective January 1, 1977, added paragraph (9).

As the rest of the section was not affected by the amendments, it is not set out.

Legislative committee report. — For report on ch. 145, SLA 1975 (CSSB 376 am H), see 1975 Senate Journal, p. 1028.

Sec. 10.05.705. Filing of annual report of domestic and foreign corporations. (a) The annual report of a domestic and foreign corporation shall be filed with the department and is due January 2 of each year. It is delinquent if not filed on or before February 1. Delinquent returns are subject to the penalty prescribed in § 771 of this chapter. However, the first annual report of a domestic or foreign corporation shall be filed with the commissioner and is due January 2 of the year succeeding the calendar year in which its certificate of incorporation or its certificate of authority, as the case may be, was issued by the commissioner.

(b) Proof to the satisfaction of the commissioner that before February 1 the report was deposited in the United States mail in a sealed envelope, properly addressed with postage prepaid, is compliance with (a) of this section.

(c) If the commissioner finds that the report conforms to the requirements of this chapter, he shall file it. If he finds that it does not conform to the requirements of this chapter, he shall promptly return it to the corporation for necessary corrections. If the report is corrected to conform to the requirements of this chapter and returned to the commissioner in sufficient time to be filed before April 1 of the year in which it is due, the penalties for failure to file the report within the time provided in § 771 of this chapter do not apply. (§ 119 ch 126 SLA 1957; am § 1 ch 99 SLA 1969)

Due: Between January 2 and February 1 the annual report must be filed with the DEPARTMENT OF COMMERCE AND ECONOMIC DEVELOPMENT. The reports and tax payments are made within the prescribed time if postmarked on or before the due date.

INSTRUCTIONS FOR FILING ANNUAL REPORTS
(Numbers correspond with report)

All items are required by law. **THE REPORT MUST BE COMPLETE IN FULL OR IT WILL BE RETURNED UNFILED FOR COMPLETION.**

1 & 3 All corporations must maintain a registered agent and office in the State of Alaska. This agent and office are designated in the Articles of Incorporation. Any change must be reported to this department using a Change of Registered Agent and/or Office. Forms are available for this purpose and must be submitted with the appropriate filing fee.

4 Be descriptive of type of business. If manufacturing please note also.

5 List all officers and directors giving complete mailing addresses. At least three officers are required by Alaska Statutes. The same individual cannot be President and Secretary.)

6 List number of authorized shares by class (common preferred). This is the same as amount authorized in the Articles of Incorporation or Amended Articles.

7 Requires the reporting of all shares of capital stock which have been issued to date.

8 Stated Capital [illegible] A, B, & (C)

9 "Alien" means [illegible] which is a nonresident alien or a [illegible] the United States and the percentage of [illegible]

The report must be signed by **one** officer and the **corporate** seal impressed.

REMEMBER:
1. RE[illegible]
2. BE[illegible]
3. B[illegible] FROM THIS OFFICE
W[illegible] C PERIOD.
4. [illegible] ARE PROVIDED.
X[illegible] FILE COPY

[illegible] the specified time for a corporation [illegible] involuntary dissolution action.

Sec. 10.05.825. Definitions. In this chapter, unless the context otherwise requires,

(1) "commissioner" means the commissioner of commerce and economic development;

(3) "department" means the Department of Commerce and Economic Development;

(18) "affiliate" means a person that directly or indirectly through one or more intermediaries controls, or is controlled by, or is under common control with, a corporation subject to this chapter;

(19) "controls" (including "controlling", "controlled by" and "under common control with") means the possession, direct or indirect, of the power to direct or cause the direction of the management and policies of a person, whether through ownership of voting securities, by contract, or otherwise;

(20) "person" means an individual, a corporation, a partnership, an association, a joint-stock company, a trust where the interests of the beneficiaries are evidenced by a security, an unincorporated organization, a government, or a political subdivision of a government;

(21) "reorganization" means a "reorganization" as that word is defined by § 368(a)(1)(A)—(D) of the Internal Revenue Code of 1954 as it exists on the effective date of this Act.

(am § 6 ch 145 SLA 1975; am § 62 ch 218 SLA 1976)

Effect of amendment.

The 1975 amendment added paragraphs (18) through (21).

The 1976 amendment substituted "commissioner of commerce and economic development" for "commissioner of commerce" in paragraph (1) and "Department of Commerce and Economic Development" for "Department of Commerce" in paragraph (3).

As the rest of the section was not affected by the amendments, it is not set out.

Editor's note. — Section 7, ch. 145, SLA 1975, provides: "It is the intent of the legislature to adopt the definitions for 'affiliate' and 'control' as those terms are in use and have been interpreted by the United States Securities Exchange Commission on the effective date of this Act."

Legislative committee report. — For report on ch. 145, SLA 1975 (CSSB 376 am H), see 1975 Senate Journal, p. 1028.

scribed time if postmarked on or before the due date.

American Fisheries Society

March 20, 1980

The Honorable Hugh Malone
House of Representatives
Pouch V
Juneau, Alaska 99811

Dear Representative Malone:

Thank you for the opportunity to comment on House Concurrent Resolution 50. The American Fisheries Society is an international organization of over 8,000 fisheries, aquatic science professional, lay and student members. Chartered in 1870, the American Fisheries Society is the world's oldest and largest scientific group dedicated to the advancement of fisheries science and the conservation of renewable aquatic resources. As time was short it was impossible to canvass the entire Alaskan membership. It was possible to contact 29 percent of the membership by phone, and 86 percent of those members contacted were in favor of HC 50 and 9 percent were against the resolution with 5% having no opinion. Most of the membership contacted had not seen your letter of March 7. This testimony will attempt to summarize, those thoughts expressed most often by the members.

Several of the members expressed concern that if this resolution passed it would preclude involvement or participation by individuals and groups now currently invloved in the salmon enhancement program. The entire issue is extremely complex and it is not the intent of the Alaska chapter of the American Fisheries Society to prevent or discourage participation from others in the salmon program. The concern of the members centers around the quality of the program and not individual "territory" of the participants. The comment most frequently mentioned was that "the salmon resource in Alaska is a public resource, should remain that way and should be managed as such." The salmon resource is extremely valuable to the State and management of that resource should only be done by qualified professionals hired specifically for that purpose. Along this same line of thinking were comments that proper checks, balances and adequate review is absolutely necessary if this publicly owned renewable resource is to be properly managed to the benefit of all.

It is generally felt that adequate "grass roots" public (user) participation is a necessary element in the check and balance system. Presently there are adequate and numerous avenues for any person or group to influence the allocation and management process. Allocation of harvest cannot and should never be placed solely in the hands of the users or the managers.

The Board of Fisheries does a remarkably fine job of handling the allocation of the salmon resource. Current statutes require Regional Aquaculture Associations to jointly develop Regional Comprehensive Plans with the Department of Fish and Game. This process is adequate and can work nicely as evidenced by the recently completed draft Regional Comprehensive Plan for Southeast Alaska.

Almost all those members contacted expressed their concern that the complexity of the science of dealing with the salmon ecosystem is not appreciated fully by many lay people. The ecosystem is dynamic, extremely complex and not fully understood. Salmon husbandry is a valid and viable tool with which the salmon ecosystem can be positively influenced for man's benefit. The techniques employed, however must be carefully and scientifically interwoven with the natural ecosystem so that possible negative impacts are reduced or eliminated. The final area about which opinions were expressed was user participation. The concept of "those who benefit most should pay most" is well established in Alaska and seems well accepted by the fishing community. Through existing statutes, participation is required for planning and allowed for enhancement facilities (hatcheries.) In order to finance this participation, however, the users are left largely to their own devices to collect revenue. The social, institutional and legal barriers have prevented this concept from working efficiently.

In summary, the fisheries professionals feel that the salmon resource is a public resource and should be managed accordingly. They feel that there should be one salmon program. This position is not meant to preclude participation by any individual group or agency. However, the staff hired to implement that program must be highly trained professionals. The right "mix" of disciplines is absolutely necessary. Proper checks, balances and control through the legislative and implementation process cannot be compromised. It is unfair and certainly ineffecient to expect the resource users to remove all the barriers and provide their own mechanism to participate in the salmon program financially. The legislature should provide the legal framework to allow financial participation by those who benefit most from the salmon resource and wish to participate in the salmon program.

On behalf of the Alaska Chapter of the American Fisheries Society I wish to thank you and the House Resources Committee for the opportunity to provide this testimony.

Sincerely,

S.A. Moberly, President
Alaska Chapter, American Fisheries Society

AMERICAN FISHERIES SOCIETY

The American Fisheries Society is an international organization of 7,000 fisheries and aquatic science professional, lay, and student members. Chartered in 1870, AFS is the world's oldest and largest scientific group dedicated to the advancement of fisheries science and the conservation of renewable aquatic resources. The Society's executive offices are headquartered in the Washington, D.C. area with its subunits operating throughout most of North America.

To achieve its goals, AFS has a far-reaching program of activities that include:

- Publication and distribution of fisheries science materials
- Support of expanded and improved fisheries research
- Improvement of fisheries science education
- Strengthening of fisheries scientists' professional standards
- Improved social recognition and economic compensation for fisheries scientists
- Effort toward the elimination of aquatic pollutants
- Improvement and extension of fish culture practices and development
- Identification and control of fish health problems
- Management of fisheries resources for optimum sustainable yield
- Preparation for and conduct of fisheries conferences and meetings
- Provision of information to support scientifically sound fisheries policies

AFS is a nonprofit, tax-exempt corporation controlled by the membership, governed by an elected Executive Committee and presided over by an elected President. The Society holds membership meetings at widely scattered North American locations in August or September of each year, where members who are unable to attend may be represented by proxy.

Geographically, the Society is partitioned into four Divisions, with these in turn divided into a total of 38 local Chapters. In addition, the Society has several disciplinary Sections. New Sections and Chapters are added as the need arises. Membership in these is optional and generally requires a small additional dues payment.

SECTIONS
(AFS Interest-Discipline Groups)

Fish Health

Fish health professionals who foster research, organize conferences, share fish health news, certify inspectors, and maintain a roster of fish health specialists.

Fish Culture

AFS members advancing aquacultural science and technology through research, workshops, publications, and a registry of qualified fish culture professionals.

Fisheries Administrators

Policy makers concerned with sport and commercial fishing regulations, aquatic environments, endangered species, fish stocking, fisheries research and training.

Water Quality

Pollution control and research professionals improving performance standards, focusing attention on water quality problems, and establishing a registry of water quality experts.

RETURNS ON YOUR MEMBERSHIP INVESTMENT

Publications:

This bimonthly scientific journal of AFS has been published continuously since 1870. It contains reports of fisheries and aquatic science research.

Other Publications:

Members receive an annual membership directory. They may purchase copies of monographs, conference proceedings, and other fisheries publications, most at special member prices. (See end panel of this brochure.)

Support of More Equitable Salary Structure for the Fisheries Biologist

Organized Environmental Activism in Support of Aquatic Resources

AFS represents its members in written and verbal testimony before legislative and administrative bodies considering important aquatic environmental issues.

The Society strengthens professional standards by certifying fisheries scientists, stimulating professional ethics, and providing forums for the exchange of scientific and management information.

MEMBERSHIP ELIGIBILITY

Membership is open to anyone interested in the progress of fisheries science and education and the conservation and management of fisheries resources.

Act now to become a part of the world's largest fisheries society!

TESTIMONY SUBMITTED TO HOUSE RESOURCE COMMITTEE
ON HOUSE CONCURRENT RESOLUTION NO. 50

Gentlemen:

I regret that I can not be present to testify, but I am frantically trying to get my boat ready for fishing on April 1. On the other hand, I don't know why it should be necessary to testify. It seems that we fishermen have followed the legislature's lead in forming our self-help program, and you keep asking us to come back and tell you that we are really serious, that in fact we took your legislation serious. All I can say is, hell yes we're serious.

I feel that the aquaculture associations have proven themselves. I am speaking for Sitka, since I'm familiar with that Association since we kicked the idea around over three years ago, and I know how it works. I would like to tell you what we have accomplished. Perhaps Dr. Loon will be reading this letter, so I'll be brief so that I can sit down.

We can show you more impressive progress in many programs. I'll tell you about some of them.

For starters, fishermen demonstrated their support by voting to assess themselves 1¢ to support the associations. For another, we conducted the most thorough public involvement program to date to find out

what fishermen want before we started spending money. This information not only helped us in planning our projects, but we gave the information to you in writing in the comprehensive regional salmon plan. Phase I of the Plan was just finished and we'll be giving you all copies soon.

As for this comprehensive salmon plan, which we did jointly with SSRAA and ADF&G through the Regional Planning Team you created a couple years ago, this Association put the first draft together, pulling in everyone's ideas -- fishermen, Fish and Game, Forest Service, sportsmen, you name it. I want to say Fish and Game really got on the ball for us. By successfully writing the first draft, which you probably know is the roughest work, we proved how we can get everyone to talk to us and work with us. SSRAA followed up with much hard work in putting the Plan into good shape. I think when you see it, you'll agree that it is the best salmon plan you've ever seen written for our region in Southeastern.

Another project all of us fishermen are really proud of is the lake and stream survey program to do echo lake stocking in a big way. We were lucky to hire the best expert in this field to design and run the project for us. Dick Crone, who started the whole program at Little Port Walter years ago, and who is writing a book on it right now, put this project together for us last year. He apparently impressed people because we got lots of help. Fish and Game stepped in and gave us equipment and boats, and helped us track down sockeye we missed. The [illegible], which was two years ago, the first [illegible] with [illegible] and [illegible] and produced [illegible] 40,000

worth of help, in manpower, boat and airplane travels, and all sorts of other things. The Forest Service and Fish and Game will help us again this year, with the Forest Service throwing in $60,000 this time. Of course, we fishermen could not possibly do this job without that kind of help, but you can see how we worked as a middleman and got everybody pointed in the same direction.

We are planning two hatcheries, one at Salmon Creek in Juneau for chum and coho salmon, and one in Sitka Sound to produce young coho to stock in the lakes we choose. Both hatcheries are what we call "cheapies" -- we wanted them to produce the most fish for the least money. Prince William Sound and Sheldon Jackson have already proven that inexpensive hatcheries do work.

We've done all of this in spite of the fact that we received very little money, because the lawsuit froze-up what was collected. We have survived day to day on small loans and grants from the State and a small amount of assessment money. We could never have survived under such conditions without fishermen support, including the loans of donated hours for organization and planning, and work such as surveying spawning streams. Also, it's taken lots of public support, cooperation and freebies from agencies, free positions from agencies such as CETA and VISTA, and an exceptional and dedicated staff, in particular our general manager Derek Poon. You know, for awhile we had five bookkeepers working, and four of them were paid for by federal programs. Our staff is pretty good at doing a lot with very little, and as long as our organization [illegible] much of [illegible] that will continue.

The aquaculture associations were created by State law, and encouraged and supported by the State. We have come a long way in the face of many obstacles. I feel the State has a moral obligation to see this program through. If they drop the ball just as we are on the verge of putting some fish in the water, they are going to face a bunch of goddamn mad fishermen.

Here's a program that won't [illegible] the taxpayer a nickel once it gets going. In a year of budget surpluses and requests for handouts on all sides, here is one group which only asks for the right to do something for themselves. We are not asking for public monies to fund our entire program, or our organization would have no justification. If our original assessment monies had come to us, as was voted on, this hearing would never have been necessary. With the legal problems that have developed with the assessment, we have depended on state loans and grants as front monies to carry us through, and it looks like one more round will be needed. But once the legal roadblocks are removed, grants will no longer be necessary.

You told us we should help ourselves, and we told the fishermen out there that we'll do just that - to put more fish in the water. I hope you'll help us live up to our word.

Thank you,

Dexter D. Hyde
President, [illegible]

March 20, 1980

Statement for NMFS, Auke Bay Laboratory
Concerning HCR-50

Mr. Chairman, Members of the House Resources Committee: My name is Bill Heard. I am Coordinator of the Salmon Aquaculture Research Program at the Auke Bay Laboratory. This Laboratory is under line authority of the Northwest and Alaska Fisheries Center, one of four regional research centers of the National Marine Fisheries Service (NMFS). The Laboratory also works and coordinates closely with the NMFS Alaska Regional Office headquartered here in Juneau. I would like to read a prepared statement before your group regarding some of the issues raised in your covering letter of March 7, 1980, introducing HCR No. 50.

I wish to emphasize that I will only address some of the issues--specifically those that speak to matters of (1) technological aspects of salmon aquaculture; (2) overall welfare of Alaska's salmon resources; and (3) the high level of professionalism needed in managing Alaska salmon including the planning, design, implementation and integration of sound, rational aquaculture programs into comprehensive management plans. Most issues raised in the proposed resolution and letter speak almost totally to socio-political aspects of aquaculture, matters in which my agency does not have a direct role. NMFS does not manage lands in Alaska nor do we manage the fisheries within the State's waters. NMFS is directly involved in the Offshore Troll Fishery involving principally chinook and coho salmon by virtue of the Fishery Conservation and Management Act of 1976. Also NMFS is directly concerned with interception issues, notably those involving the United States and Canada where salmon originating in one country are caught by the other.

NMFS's primary role in Alaska aquaculture is one of supportive research; of providing sound technical and scientific support for orderly development of balanced hatchery and enhancement programs carefully integrated into comprehensive management approaches. Our Laboratory currently operates two experimental aquaculture facilities: at Auke Creek near Juneau and at Little Port Walter on the south end of Baranof Island. Both have been involved for the past decade with formal cooperative research programs between ADF&G and NMFS. A considerable volume of scientific research results on aquaculture in Alaska has resulted from these arrangements, touching such varied subjects as salmon egg incubator design, incubator substrate materials, fungus control, saltwater rearing pens, lake stocking, short-term rearing, floating raceways, brood stock development, terminal harvest strategies, vaccine testing, release time and size studies, and direct comparisons and interactions between wild and hatchery salmon. Additionally our staff has participated in the State's sockeye rehabilitation project at Lake Nunavaugaluk in Bristol Bay and we have had informal research and advisory arrangements with Regional Aquaculture Associations as well as small non-association hatchery operators. Much of our research emphasis has been recently redirected toward the ecology of young salmon in estuaries, to learn the causes of variable marine survival in both wild and hatchery produced fish. Along with our programed research, we frequently make technical comments on questions addressed to us from State and private hatcheries. Although NMFS as an agency is not involved in production hatchery programs in Alaska we will not hesitate to express concern and caution when aquaculture developments or practices are not founded on the best available technology or appear to jeopardize some portion of the salmon resource.

Specifically addressing some of the issues raised in the covering letter:

(1) Are we in danger of replacing wild with artificial stocks?

Mr. Chairman, in my opinion, it would be a very sad day for Alaska if this prospect ever became even a remote possibility. Unlike many other states and countries of the North Pacific Rim, Alaska is not yet forced into either hatchery salmon or no salmon. We must all strive to maintain this option by vigilance in protecting habitat and ecosystems that produce our wild salmon resources. Careful management by the stock concept can ensure continuation of wild stocks in concert with enhancement and development of artificial stocks.

The single most important salmon management principle that has slowly evolved over the years is the stock concept. This principle emphasizes the unique nature of each individual stock of salmon and seeks to adjust the harvest according to the strength of each stock. Weak stocks thus receive needed protection while strong stocks are more intensively harvested. The importance of hereditary and environmental factors in the evolution of wild stocks and wild stock interaction with artificial stocks must be foremost in decisions for management actions. Although the history of our salmon runs has been one of wide fluctuations, Alaska as yet has not suffered extensive irreplaceable habitat losses, as a result of industrialization, urbanization, watershed deterioration, or impounding of streams and rivers.

The core issue is not whether to focus only on natural or artificial production but how best to blend the two together to minimize the impact on wild stocks. Given increased understanding and improvements in aquaculture technology, the option to skillfully apply this knowledge should not be lost. In 1980 something between 2.5 and 3.0 billion juvenile salmon will be released from aquaculture programs around the Pacific Rim. Less than 5 percent of that amount will come from Alaska. Given the near certainty that ocean rearing areas of most Alaska salmon are not now fully utilized and given the fact that other states and nations are striving to increase their use of the available ocean carrying capacity for salmon it is important and logical for Alaska to field an active, effective aquaculture effort. Conversely, however, Alaska cannot afford indiscriminant and cavalier construction of hatcheries or other enhancement schemes. Skillful application requires scientific and social finesse in determining the appropriateness of (1) species emphasis at each location, (2) specific technology to use, (3) scope of production, (4) siting parameters, (5) harvesting strategies, and (6) interactions between other stocks and species in addition to interactions between competing user groups--all issues for which this committee is seeking answers.

(2) How many hatcheries are enough? Are we moving too fast with aquaculture efforts?

Many people do feel Alaska is trying to go too far too fast with its salmon hatchery programs. Certainly the decade of the 1970's could be called a "Decade of Hatchery Development" in the State. Perhaps the 1980's should be directed toward a "Decade of Hatchery Performance and Evaluation." The number of hatcheries and other enhancement programs and the rate of their development should be consistent with proven scientific and technical knowledge and our demonstrated ability to apply this knowledge to integrated management schemes that maintain and enhance our all-important wild stocks.

How can we maximize the benefits of artificial salmon production without jeopardizing wild stocks and yet continue to rebuild depressed natural runs? There are many aspects to this question but two principles go a long way toward achieving this goal. First we must minimize direct interaction between hatchery and wild stocks. Secondly when interactions do occur, we must carefully bias effects of the interaction in favor of the natural runs.

Hatcheries or other enhancement programs can have many positive effects on Alaska salmon fisheries, but perhaps two are most significant. A well planned, properly located and successful hatchery will produce returning fish; some will be available for harvest in existing fisheries, but of more importance are the special fisheries that may be required in terminal areas and the use of the fish after hatchery stocks separate from other stocks. Most Alaska hatcheries will be located at or near

tidewater and on simple stream systems, avoiding complicated upstream hatchery stock-wild stock mixtures in major rivers. Secondly, because hatchery stocks can sustain greater harvest rates than wild stocks, well thought-out management strategies are critical in dealing with mixtures of wild and hatchery fish. Both the fisheries manager and the fishermen he regulates will become increasingly aware of the necessity to adjust harvests to the strength of individual stocks. Thus hatcheries may be expected to cause further movement away from mixed stock fisheries toward more precise management of individual stock units. Each hatchery or enhancement project, if properly designed and evaluated becomes an important research tool in broader our total understanding of salmon dynamics and management. Our ability to deal with mixtures of wild and hatchery fish, the limitations of terminal harvest strategies along with maintaining high standards of industry product quality will likely self-limit Alaska hatchery development.

(3) Are biological questions being adequately addressed? What about disease control, hatchery siting, brood stock development, and separation of stocks?

Mr. Chairman, these are all vital technical matters that must be effectively dealt with before Alaska can have a successful aquaculture program. I have already touched on stock separation and hatchery siting. Disease control and brood stock development are equally important. Although our Laboratory does not specialize in disease research, we are proud of our cooperative role in helping to develop a comprehensive fish disease program in the State. Regarding brood stock development for hatcheries, most NMFS

research scientists in Alaska tend to be cautious and conservative on this matter mostly out of concern over possible detriment to wild stocks. Unfortunately the time required to develop brood sources for a specific hatchery is, in many people's minds, not consistent with reality. However, if Alaska is to maintain and manage aquaculture programs as discrete entities and avoid adverse interactions with wild stocks, we must proceed with caution in developing hatchery brood stocks. What are the best and most scientifically sound approaches to brood stock development? Should we try to develop a hatchery brood quickly perhaps with large transplants of eggs in a short time frame? Or should we opt for developing brood more slowly, allowing time to integrate resultant returns into the genetic makeup of the stock? How fast will genetic traits of a given stock be adapted or modified to a specific hatchery environment? Unfortunately technology can't give pat answers to these questions because of the many complex and poorly understood biological phenomena involved. Our advice in the absence of complete knowledge is to make full use of the information that is available, proceed cautiously, and tend towards adaptation and development of a local stock even though it may be more expensive and require more time.

To summarize some of these points: (1) hatcheries and related aquaculture developments in Alaska should not threaten wild stocks of salmon; management by the stock concept ensures continuation of wild stocks yet allows careful development of artificial stocks; (2) the number of hatcheries and other enhancement programs and the rate of their development should not exceed a demonstrated ability

to apply available technology and research information to management schemes that preserve and enhance wild stocks; (3) many important, unanswered questions concerning basic biological phenomena must be dealt with, frequently on a site specific or individual project basis before salmon enhancement in Alaska can reach its fullest potential.

Mr. Chairman, the complexities of these issues bring me to the last item I wish to address--that of professionalism in our fisheries. Whatever socio-political provisions the Legislature decides are appropriate for salmon aquaculture in Alaska, you should be constantly aware that aquaculture involves extremely complex biological matters that call for the highest levels of professional competence. Our salmon, as a public resource held in trust for all, deserve nothing less than the most competent, highly trained, experienced professional biologists, geneticists, pathologists, managers, culturists, engineers, and technicians available. The resource must be managed by capable responsible public agencies sensitive to both needs of the users and of the resource. And if we err let it be in favor of the resource, not the user, nor a particular social institution. To do less would be a disservice to our heritage.

DRAFT

House Concurrent Resolution No. 50, requesting the governor to suspend the issuance of grants and loans for fisheries enhancement, proposes two moratoriums-- one on grants to regional aquaculture associations and a second on loans to regional aquaculture associations until a legal assessment of fishermen is established and sufficient collateral is guaranteed to secure loans.

The state, over the last decade, has embarked on an ambitious program of fisheries enhancement and development. The current wealth of the state provides us with the opportunity to continue and expand this effort. However, before we automatically proceed, it might be wise to take a close look at the existing efforts and determine whether they should be continued in the same manner or whether changes in direction and emphasis should be made.

The House Resources Committee will hold a hearing on HCR 50 on Tuesday, March 25 at 3 p.m. in Juneau. As sponsor of the resolution, I'd like to have it serve as a basis for discussion of aquaculture purposes and direction in general, and I invite your participation. If you cannot attend the hearing, I would appreciate your written comments and would make them available to all members of the committee. The following questions may provide a framework for your comments.

1) What should be the areas of responsibility of the regional aquaculture associations, the "Mom and Pop" non-profit hatcheries, and the state's Division of Fisheries Rehabilitation, Enhancement, and Development? Which entities should be building and operating hatcheries, fertilizing lakes, clearing streams, controlling predation, etc?

2) Where are there needs for greater cooperation between the private non-profit hatcheries and associaitons and F.R.E.D.? How can cooperation be fostered, and what degree provides for the greatest efficiency?

3) What limits should be placed on the non-profit hatcheries and regional associatons? How accountable are they now to the fishermen, the public, and the resource, and how can this be improved?

4) What should the role of commercial fishermen be in providing for fishery resources? What control should they exert over those resources?

5) Who is more responsive to the fishermen, the public, and the resource-- F.R.E.D. or the regional associations? Which represents the best state investment?

6) Where should the emphasis be placed in aquaculture programs? What are the relative benefits of hatcheries, rehabilitation efforts, and enhancement projects?

7) How many hatcheries are enough? What will be the effects, biologically and economically, of producing more and more salmon?

8) Are the biological questions being adequately addressed by the state and the regional associations? How are the problems of disease control, hatchery siting, brood stock supplies, and separation of stocks being handled?

9) Are we in danger of replacing wild with artificial stocks? What are the ramifications of this?

10) How will aquaculture programs-- state-run and private-- pay their way? How will costs be recovered? Are hatchery harvests appropriate?

11) Are we moving too fast with aquaculture efforts?

What would be lost by slowing expansion down and perfecting what we already have?

12) Where are the lines drawn between biological and political management? How can existing problems be mitigated and future ones adverted?

- Hugh Malone

To: Mr. Chairman, Members of the House Resources Committee, and Representative Hugh Malone

From: St. James Bay Aquaculture Association
Rob McMahon

Subject: Hearing on HCR 50

St. James Bay Aquaculture Association is a group of Alaskans who are in the process of forming a private non-profit hatchery. The following are our statements concerning HCR 50. The questions were suggested by Hugh Malone as a spring board for commenting, but our group decided we might express our feelings by commenting on each question. Several of the questions require considerable detail to answer. Others are essentially unanswerable at this time; therefore, our statements are only brief overviews.

1. The entire area of salmon enhancement should be considered an opportunity for all Alaskans who wish to participate in and enjoy the benefits of what can become one of this state's greatest renewable resources. Persons, whether they call themselves "regional association" or a private non-profit hatchery can create a stable food source for export. Their efforts will provide an income for commercial fishermen, fish processors, local business, and the state. Sports-fishing and tourism will also be enhanced. No one group should infinge upon the opportunity of others to enjoy what can easily become Alaska's greatest industry. However, ground rules should be made and enforced to prevent, ignorant, non caring, or avarice people from playing havoc with salmon stocks and other hatchery operators. For example, every effort should be made to prevent indescriminent mixing of stocks which destroy the natural inclination

of fish to return to their home stream. The tragedy that occurred in the Columbia River drainage should be prevented in Alaska. Selective breeding should be outlawed until certain kinds can be proved safe. The genetic integrity of each stream should be maintained as much as possible. When any bonafide hatchery obeys the ground rules, they should have the freedom to develop salmon production for their area.

The state's FRED division should continue to maintain an overview of enhancement possibilities and proceed with their own hatcheries where they feel hatcheries are needed. They should set a good example of intelligence and good science for others to follow. Perhaps the greatest function the FRED division can perform is in the area of enhancement of the three high risk salmon, the red, silver, and king salmon. Perhaps in most cases, non-profit hatcheries will not attempt to propogate any one of these three species until they have developed a secure base with chum and pink salmon. Technology developed by FRED could be passed on to the non profit hatcheries.

2. To promote the greatest degree of cooperation between the three enhancement groups, there should exist an easy way for each group to communicate with the others. Good communication is the key to working out differences, for sharing ideas, and to treat each other fairly. No one group should be discriminated against by not having an equal opportunity to express their views. Perhaps the FRED division should become a central co-ordinator for funneling information between hatchery groups. Cooperation provides for the greatest degree of efficiency.

3. Non profit hatcheries and associations should always be accountable to fishermen, the public, the resource, the streams or lakes they use, the natural wildlife that also use salmon, the ocean environment they are using to rear salmon, and to various state agencies. Poorly managed hatcheries can create a host of problems. For example, they can spread disease and propogate strays. Salmon enhancement could become big business, and, like any business, should be responsible to whoever, or whatever they affect. Three limitations that may help control enhancement programs are:

   1) set strict guidelines for salmon farming
   2) prevent any group from having preferencial treatment at the expense of others
   3) prevent big business from eventually monopolizing all salmon enhancement.

4. Eventually, commercial and sports fishermen should enjoy a consistant and bountiful harvest of hatchery produced salmon. Since the sole support for non-profit hatcheries is to sell excess fish returning to the hatchery, perhaps fishermen could work with management biologists to ensure hatcheries get enough returns to meet expenses.

5. Because we intend to become a successful private non-profit hatchery, we feel we are as capable of showing as much responsibility to fishermen, the public and the resource as anyone. However, we feel the FRED division could probably best serve sportsmen and salmon trollers by producing silver and king salmon since these are expensive to produce and are a high risk fish. In many cases, only well

established associations or private non-profit hatcheries would dare attempt to rear these fish in numbers. This is equally true for the red salmon. Since FRED is tax supported, they are in a position to afford the facilities and develop the technology to rear these three species. Our own group could produce enough silver salmon which the streams could support naturally, but we wouldn't attempt large scale culture of this species until we had succeeded with pink and chum salmon.

Perhaps another job FRED division could undertake is to rehabilitate depressed streams by means of portable hatcheries. The hatcheries would remain on a stream long enough to produce enough fish which the stream can support naturally, then move to another stream.

6. Emphasis on aquaculture programs should include at least two concepts. First, build salmon stocks to consistent harvest levels to provide a reliable industry for the state. This industry includes tourism as well. Second, return depressed streams to their former levels.

7. The state of the art has not been reached to say how many salmon the ocean can support or what the effects will be on other life forms with too many salmon in the ocean. These are important concerns and should be addressed.

Economically, it may be possible to glut existing markets with too many salmon. However, American fishermen and processors have never developed the great potential market for salmon that exists in the U.S. and the world.

8. We do not know how well biological problems are being addressed. We hope they are being taken seriously by all concerned. Professional biologists and hatchery operators alike should be constantly aware of the biological consequences of mixing stocks, selective breeding, and other manipulations they perform on salmon.

9. A hatchery system may, theoretically, automatically replace wild stocks with artificial stocks. For example, a hatchery may promote the existence of young salmon that normally would not survive. These salmon are given the opportunity to survive and mate. A hatchery may mix early spawners with late spawners and thus destroy a stock separation that existed naturally in the stream. Selective breeding may be very bad. All of the biological problems of poor salmon ranching are not fully understood, so it seems a good idea to attempt to breed hatchery fish as much as possible as nature had done.

10. Hatcheries must be assured that part of the run will return to the stream in order for the hatchery to pay their expenses and collect brood stock.

11. Aquaculture efforts are moving too slowly. Salmon harvests are down in many areas. Yearly returns are not consistent, which is difficult for the fisherman, processors and related industries. Hatcheries help to assure consistency in the industry.

12. Political management should never supercede what is true, or fair, or honest. Politicians should weigh their decisions on the findings of competent and unbiased salmon biologists, planners, economists and other professionals.

This testimony was not heard due to lack of time

American Institute of Fishery Research Biologists

An association incorporated in 1958 to establish and maintain high professional standards by recognition of achievement and competence.

Alaska District, Box 265, Auke Bay, AK 99821

Mr. Chairman Malone and Members of the House Resources Committee

I am Bruce Wing, Director of the Alaska District of the American Institute of Fishery Research Biologists. The Institute is an international organization of professional fishery biologists dedicated to the application of sound biological principals and the results of biological research to fisheries management and to improving the quality of professional fishery management and research. Currently we have about 50 members in Alaska representing academic, federal, state and private organizations. We are independent of the American Fisheries Society, although most of our members belong to both organizations.

All the questions of your covering letter to HCR-50 have been topics of thought and private discussion by our members. The questions are complex and many extend beyond biological technology and theory into the sociological and political arenas, thus generating strongly divergent opinions. Consequently, the Alaska District of AIFRB has not developed a consensus within the short time available. Many of the thoughts and opinions of our membership have been given by previous speakers or will be presented by following speakers.

As the representative of a group which acts in a conservative and deliberate mode after considerable debate, the rapidity of this resolution is of concern to our membership. We are worried that its final effects may

extend beyond its stated concerns and its objective of preventing wasteful expenditure of public funds.

In your cover letter to the proposal you listed 12 sets of questions. The first five are in the realms of economics, sociology and politics, not in biology. However, whoever ultimately receives responsibility for maintaining and increasing our salmonid fisheries must realize that we are not working with backyard garden plots. It is mandatory that the activities be conducted with the best professional expertise available and that the quality of the professionals continues to increase.

There always will be some conflicting opinions and a certain amount of competiveness between the several entities involved in salmonid fishery enhancement activities. Our concern with this resolution is that it may ulimately breakdown the present lines of communications and cooperation that have been developed in the past few years. Alaska appears to be ahead of other states in developing programs in which potentially conflicting resource users and managers work cooperatively.

Question sets 6 through 9 are being addressed by many of our members in their daily work. Because we are dealing with a complex biological and physical environment, simplistic answers are not reliable. Present research efforts are at a low level. We definitely need more research activities and time to evaluate the results of present and past aquaculture actions. Observations on one or two cycles of fish are not adequate for evaluating the effectiveness of any enhancement method. There is a natural tendency to rush from a preliminary experiment to full scale if

the first results are promising. This results in failure to evaluate interactions and natural variation. Thus when the next cycle is less than expected, we look for sources of blame or error rather than understanding. Enhancement activities should be treated as long term research experiments and monitored as part of research programs.

To quickly finish, we are concerned that this resolution may have the effect of endangering the present cooperation in research efforts between the existing entities (the aquaculture associations, Department of Fish and Game, National Forest Service, National Marine Fisheries, University of Alaska, etc.) and make more difficult future cooperative research programs.

Thank you.

Bruce L. Wing Ph.D.

CPC SUBSISTENCE WORKSHOP

Issue: Limited Entry

Whether to allow the filing of applications for limited entry permits by those persons who did not file in a timely manner and to provide for the allowance of additional limited entry permits in the Upper Yukon Fishery.

The discussion of these two limited entry issues occupied a great portion of the work of the workshop. The late filing bill, HB 665, sponsored by Rep. Anderson, came under attack by both the Limited Entry Commission and the United Fishermen of Alaska. They explained that there would be too many new fishermen allowed into the salmon fisheries which have not recovered as is popularly believed. On the other hand, it was brought out that there were many problems with the initial application period and that the people who missed filing should be given the opportunity to file at this time. It was felt by the participants that it would be beneficial to rural Alaskans if the application period was reopened. HB 665 was favorably recommended 21-1.

As to SB 187, the Upper Yukon Limited Entry Bill, the participants recommended against its passage 7-6. The failure of the bill to adequately address the allocation problems that would be caused by more permits in the upper positions of the river was the primary cause for this opposition to the bill.

Issue: Aquaculture

Whether to stop financial support for aquaculture associations until the legislature was more certain of the financial responsibility of these organizations.

The participants voted 19-0 against the passage of HCR 50 which calls for the moratorium on grants to aquaculture associations feeling that these programs were very worthwhile and while the legislature has an interest and is taking a close look at the associations, this was much too drastic a response to the perceived problem.

Kuskokwim Aquaculture Assoc. on HCR50

1. In my opinion one of the primary reasons for the Private Non-Profit hatchery program and the importance of its sucess is that our economic system does not allow for cost efficient governoment operations in the process of renewing a renewable resource. The general public should not have to pay for government projects that do not provide a direct return benefit to them as tax payers.

The creation of the F.R.E.D. Division in the Alaska Department of Fish and Game has been in most cases a valuable asset to the states economy. Through research and the application of aquaculture and fisheries enhancement projects, government agencies (F.R.E.D. Division and N.M F.S.) have not only proven the feasability of the salmon enhancement efforts, but through their sucesses and failures have provided a basic model for productive salmon enhancement in Alaska. Government agencies in our economy should stay within the framework of research, education and regulation.

The means for the transition of salmon production to the private sector were provided through the legislative creation of the PNP program. Because of the Superior Court decision ruling "mandatory assessments" Section 16.10.530 unconstitutional, the PNP program appears to be in a precarious situation. Section 16.10.520 (c) reads:

> All loans must be secured by collateral satisfactory to the commissioner, including but not limited to a first deec of trust, assignment of lease and leasehold improvements, sale of surplus fish from the hatchery, or royalty assessments from fishermen levied under AS 16.10.530-AS 16.10.540.

Because one of the five listed collateral arrangements was ruled out, I see no reason to let the PNP program falter. We need to focus on the final product, a statewide system of Private Non-Profit hatcheries and enhancement projects providing the fisheries resource with optimal harvests and future security in the industry. I believe the means for this final product are already here and that the problem is in their interpretation. The F.R.E.D. Division did not have to depend on a royalty assessment for their projects and neither should we. No one can just throw up a facility any were, at least not the P.N.P. outfits. The permit application process is very thorough in the review of any proposed production project and any approved project in all likelihood will be successful. It is extremely important to get the P.N.P program off to a good healthy start. The first deed of trust, a promissory note as to the sale of suplus hatchery fish and the likelihood of successful voluntary assessments when hatchery returns become evident, are sufficient means of securing the much needed start up loans. I would like to see some legislation allowing the state to "loan" existing facilities to the associations enabling the state to be payed off for the facility while at the same time providing for a smooth faster transition.

2. The need for greater cooperation between P.N.P. groups, associations, and the F.R.E.D. Division is very important. On the surface I think the cooperation has improved. There are however questions which need to be answered in regards to this cooperation. Considering that the F.R.E.D. Division is the agency responsible for providing both assistance and regulation to the P.N.P program and considering the financial position of the F.R.E.D. Divison in light of the afforementioned cost effective and public funding problems and considering the possibility that the sucess of the P.N.P. program might directly endanger the F.R.E.D. Division, There appears to be a possible conflict of interest in the assigned role of the F.R.E.D. Division in regards to the sucessful initiation of the P.N.P Program.

3. The non-profit hatcheries and regional associations have more than enough limitations through the regulations imposed on them by the Alaska Department of Fish and Game. The state regulations provide adequate means of control.

4. In any renewable resource situation it stands to reason that the industries which rely directly on the resource as their means of support should commit themselves towards the rejuvination of the resource when ever possible. The timber industry has learned that replanting a harvested area is not only responsible management, but also very profitable. In the fishing industry where many species particulary salmon, have two to eight year harvest replenishment cycles, the idea of industrial rejuvination is even more practical.

The P.N.P. Program provides the fishing industry with an efficient method of activating such a committment.

5. It is imperative that the state of Alaska does not view the F.R.E.D Division and the P.N.P. Programs as a wrestling match. The best investment for the state would be to place in effect a step by step transition period of ten years at which time all major salmon production projects would be run by P.N.P. organizations. Both the F.R.E.D. Division and the P.N.P. organizationsshould be equally responsive to the fishermen, the public, and the resource. The F.R.E.D. Division should focus on research and regulation of fisheries enhancement programs. There are many other species of commerically feasable fish, the rehabilitation, enhancement, and development of which need to be evaluated and demonstrated.

6. The need for flexibility in fisheries enhancement programs is critical. In many cases egg eyeing stations, habitat improvement, on site artificial spawning, lake stocking or lake fertilization projects will be more cost effective than multimillion dollar hatcheries. The flexible use of any and all of these enhancement methods will play a large roll in the sucess of the P.N.P. progam.

7,8,9. The production of any renewable resource has various problems which must be addressed. The idea behind fisheries enhancement should be to allow the fishermen optimal harvest while the same time minimizing the impact on the available stocks by insuring adequate maximum yield escapement.

There are many guidelines to follow in any fisheries enhancement project. So long as these guidelines are followed major problems are minimized. It must be remembered that so long as artificial spawning is carefully done to avoid genetic problems and proper disease control is utilized, a hatchery reared salmon upon its return as an adult is essentially as wild as its native cousins or it never would have survived its life in the ocean.

The case of wild versus hatchery reared salmon is a valid problem which is clouded over with misconceptions of past genetic or disease tragedies. As a virgin stand of timber the value of an original native stock is important. Equally important is the need for people to understand that an original native stock can be supplemented without danger to insure its survival. This can and should be done only when necessary. In the event that an original native stock is severly depleted or destroyed then the following natchery runs must replace the original native runs. Even in these cases a "wild" run can be maintained by allowing a percentage

for natural up stream reproduc tion.

10. P.ivate aquaculture programs will achieve cost recovery through the sale of surplusfish, the sale or utilization of spawned carcasses, and voluntary assessment by the fishermen and the processors.

11. Aquaculture eff rts in our state are moving too slow. When private aquaculture efforts have available to them smoother start up proceedures then the pace will be about right. The permit application review process perhaps could be improved. The formation through the Board of Fisheries of a fisheries enhancement body would probably be a valuable asset to the state. So long as projects are not politically bulldozed into existance and go thruogh the existing channels no harm will come from stepping up the pace. Fisheries enhancement in Alaska needs to advance at a steady pace. The mechanics to advance too fast do not even exist so long as existing regulations stay in place. However, at the same time to advance too slowly with overcaution being the rule rather than the exception many of the states valuable fisheries resources can and are being jepordized. In view of the fact that it takes years of planning, permit applications and biological evaluations of any enhancement project together with the number of years for construction and the initial returns of any given projects, the period of time from planning to production, can amount to ten years or more. This fact makes too slow a pace for enhancement hazardous to the fisheries resource.

12. In any industry the more money involved dictates a proportionally thinner line between biological and political management of the related resource. Fisheries has a thin line which allows all too often for depletion of the resource. This is yet another reason to insure the success of the salmon enhancement effort.

March 19, 1980

Representatives Bill Miles and Alvin Osterback
Co-Chairmen
House Resources Committee
Pouch V
Juneau, Alaska 99811

RE: HCR 50

Gentlemen:

The Alaska Trollers Association strongly opposes HCR 50, and would like to go on record in the strongest terms in support of both private, non-profit and state supported aquaculture.

The salmon resources of southeastern Alaska are in trouble. Not only have management problems and destruction of habitat reduced the stocks, but pressure from our neighbors in Canada and along the west coast of the U.S. may further reduce the number of fish necessary to maintain a viable fishing industry in Alaska.

By far the most constructive reaction to this admittedly complex situation is aquaculture. Yet aquaculture is by no means yet an exact science, and its diverse problems and unknown areas are best served by a diversity of approach to their solution. An example of this is the spring chinook: none of the groups in Alaska have a completely workable approach, and any reduction in the various solutions being contemplated can only make a solution more difficult to reach.

There has been good cooperation between FRED facilities and those in the private sector. While state facilities can offer stability and long-term certainty of funding, the flexibility of private facilities may allow quicker results. For example, SSRAA will be releasing its first batch of cohos this spring from a completely new facility.

We urge the legislature to invest in the future of Alaska's salmon industry by supporting both state-funded and private aquaculture efforts.

Sincerely,

Lewis Schnaper
Executive Director

TESTIMONY BY W. I. "BOB" PALMER
BEFORE THE HOUSE RESOURCES COMMITTEE
MARCH 20, 1980

BACKGROUND

I. RESPONSIBILITIES

A. STATE RESPONSIBILITIES

1. ENHANCEMENT AND REHAB PROJECTS OF ALL KINDS.

2. WORK WITH REGIONAL ASSOCIATIONS TO DEVELOP COMPREHENSIVE PLAN

3. WORK WITH REGIONAL ASSOCIATIONS TO IDENTIFY BEST REGIONAL ASSOCIATION HATCHERY SITES; TO DESIGN HATCHERIES; IDENTIFY AND MAKE AVAILABLE SUFFICIENT BROODSTOCK; TO DEVELOP AND IMPLEMENT SATISFACTORY HARVEST MANAGEMENT PLAN; TO INSURE THAT ONLY DISEASE-FREE JUVENILES ARE RELEASED; TO ENTER INTO JOINT VENTURES WITH REGIONAL ASSOCIATIONS FOR LAKE FERTILIZATION, STREAM REHAB AND SIMILAR PROJECTS; TO FURNISH PRIVATE-SECTOR TECHNICAL ASSISTANCE AS TIME AND EXPERTISE ARE AVAILABLE.

4. TO MANAGE STATE-OWNED HATCHERIES SO THAT IN THOSE CASES WHERE THERE IS ADEQUATE GENETIC SEPARATION OF STOCKS AND THE HATCHERY STOCKS CAN BE MANAGED TO PRODUCE A HIGH-QUALITY PRODUCT FOR HUMAN CONSUMPTION, THEN THE STATE HATCHERY MANAGER SHOULD BE DIRECTED SO THAT APPROXIMATELY [illegible] OF THE PRODUCTION IS AVAILABLE FOR THE COMMERCIAL FISHERY TO

HARVEST (AS WITH NATURAL STOCKS) AND THE OTHER THIRD HARVESTED BY COMMERCIAL FISHERMEN UNDER CONTRACT TO THE STATE, WITH THE MAJOR SHARE OF THE REVENUES OBTAINED GOING TO THE STATE'S GENERAL FUND TO PAY FOR THE OPERATING COSTS, INCLUDING DEBT SERVICE, OF THE HATCHERY AND RETURN ADDITIONAL MONIES TO BENEFIT OF ALL ALASKANS.

SINCE ALL ALASKANS HAVE PAID FOR THE STATE HATCHERY FACILITIES AND LIMITED ENTRY PERMITS ONLY A FEW TO BENEFIT DIRECTLY FROM THE HARVEST BY COMMERCIAL FISHERMEN, OTHER ALASKANS SHOULD BE ABLE TO BENEFIT [illegible] OPEN ONLY IS FEASIBLE. I MUST EMPHASIZE THAT THE LOCATION OF HATCHERY FACILITIES WILL HAVE LITTLE TERMINAL HARVEST AND GENERATION OF REVENUES [illegible] FEASIBLE. IN EXPANSION THIS POLICY, ONLY THOSE STATE HATCHERIES WHERE [illegible] ONLY FOR THOSE STATE HATCHERIES WHERE TERMINAL HARVESTS OF RETURNING ADULTS IS FEASIBLE.

[illegible] THE DIVISION OF COMMERCIAL FISHERIES; TO INCREASE AND IMPROVE THE IDENTIFICATION OF INDIVIDUAL [illegible]

FISHERIES CAN MORE ADEQUATELY PROTECT AND PRESERVE THE NATURAL STOCKS.

(IN A MIXED STOCK FISHERY, WHICH INCLUDES LARGE NUMBERS OF HATCHERY FISH, IT IS [illegible] TO OVERHARVEST THE NATURAL RUNS THAT ARE INTERMINGLED IN SUCH A [illegible].)

b. CHECK JUVENILES BEFORE RELEASE TO INSURE DISEASE-FREE STOCKS.

c. REGIONAL ASSOCIATION RESPONSIBILITIES

1. WORK WITH THE DEPARTMENT OF FISH AND GAME TO DEVELOP A COMPREHENSIVE PLAN FOR THE REGION WHICH CONTAINS THE FOLLOWING ELEMENTS:

A. SHORT- AND LONG-TERM HARVEST GOALS BY SPECIES;

B. DETERMINATION OF NATURAL PRODUCTION TO REACH THOSE GOALS;

C. DETERMINATION OF ARTIFICIAL PRODUCTION TO REACH THOSE GOALS;

D. IDENTIFICATION OF ENHANCEMENT POTENTIALS (LAKE FERTILIZATION, ETC.)

E. DETERMINATION OF INDIVIDUAL PROJECTS NEEDED TO PRODUCE GOALS ESTABLISHED FOR ARTIFICIAL PRODUCTION;

F. DETERMINATION OF WHETHER STATE OR REGIONAL ASSOCIATIONS WILL CONSTRUCT EACH SPECIFIC FACILITY CALLED FOR BY THE PLAN AS APPROVED BY THE REGIONAL ASSOCIATION AND THE COMMISSION;

6. MANAGEMENT STRATEGIES FOR HARVEST OF RETURNING ADULTS.

2. DEVELOP AN INCOME STREAM (TAX, VOLUNTARY ASSESSMENT, OR MANDATORY ASSESSMENT) TO PROVIDE COLLATERAL FOR LOANS TO CONSTRUCT REGIONAL ASSOCIATION FACILITIES AND TO PROVIDE OPERATING FUNDS FOR REGIONAL ASSOCIATION ACTIVITIES.

3. DEVELOP COMPETENT CORPORATE MANAGEMENT OF THE REGIONAL ASSOCIATIONS AND DEMONSTRATE COMPETENT MANAGEMENT OF THE FACILITIES CONSTRUCTED AND OPERATED.

4. ABIDE BY THE TERMS OF THEIR PERMITS FOR EACH FACILITY AND ESPECIALLY IN OBTAINING APPROVAL OF THE STATE PATHOLOGIST PRIOR TO ANY RELEASE OF YOUNG FISH FROM THE HATCHERY.

C. [illegible] AND POP FACILITIES

1. ABIDE BY THE TERMS OF THEIR PERMITS.

2. KEEP ACCURATE RECORDS OF PRODUCTION, EXPENSES AND REVENUES.

3. [illegible]

4. CONTRIBUTE TO THE STATE'S ECONOMY BY PRODUCING MORE FISH AND EMPLOYMENT.

5. EXPLORE NEW CULTURE TECHNIQUES AND TECHNOLOGIES.

D. ALL ENTITIES SHOULD BE BUILDING HATCHERIES. STATE ON ITS OWN OR IN A JOINT VENTURE WITH A REGIONAL ASSOCIATION SHOULD BE INVOLVED #FERTILIZING LAKES, ETC.

II. I'M NOT AWARE OF A LACK OF COOPERATION ON FRED'S PART.

III. REGIONAL ASSOCIATION "LIMITS" SHOULD ULTIMATELY BE DEFINED BY THE REGIONAL COMPREHENSIVE PLAN -- ITS ACCEPTED GOALS AND PLANS FOR "WHAT" IS "DOING WHAT".

[illegible] AND POP "LIMITS" ARE IMPOSED BY THE REGISTRATION PROCESS AND BY THE DEVICE FOR ANY INCOMPATIBILITY WITH THE REGIONAL COMPREHENSIVE PLAN.

THEY ARE COMPLETELY ACCOUNTABLE THROUGH THE REGISTRATION PROCESS, THEIR ANNUAL REPORTING REQUIREMENTS, THE NON-PROFIT STATUS AND THE ABILITY OF THE [illegible]

COMMERCE AND REVENUE TO MONITOR NON-PROFIT CORPORATIONS AND AUDIT THEIR BOOKS IF NECESSARY TO PREVENT ABUSE.

IV. UNDER LIMITED ENTRY, THE FISHERMEN SHOULD PLAY A LARGE ROLE IN PROVIDING FOR THE EXPANSION OF THE FISHERY.

THEY CANNOT REASONABLY EXPECT TO HAVE THE FISHERY REBUILT THROUGH STATE HATCHERY AND OTHER ENHANCEMENT FACILITIES THAT ARE CONSTRUCTED AND OPERATED BY GENERAL FUND MONIES, WHILE BENEFITTING ONLY A SMALL MINORITY. THEREFORE, THE FISHERMEN SHOULD EITHER BUILD THE FACILITIES THEMSELVES AND HARVEST THE RETURNING ADULTS AS THEY SEE FIT OR AGREE THAT WHERE POSSIBLE, RETURNING ADULTS TO STATE FACILITIES SHOULD BE HARVESTED SO THAT THE FISHERMEN SHARE THE BENEFITS WITH THE OTHER ALASKANS WHO ARE PAYING THE BILLS.

THE COMMERCIAL FISHERY SHOULD HAVE ACCESS TO ALL OF THE FISH RETURNING TO [illegible] WHERE THEY HAVE ESTABLISHED THAT THEY CAN HARVEST ONLY MIXED STOCK FISHERY. THERE SHOULD BE SOME REASONABLE EXPECTATION OF ACHIEVEMENT THAT WILL ASSURE ADEQUATE RETURNS TO THE FISHERY TO MEET GROWTH [illegible] OF.

V. WHO IS MORE RESPONSIVE -- REGIONAL ASSOCIATIONS OR FRED -- IS A "PEOPLE" PROBLEM AND A VARIABLE SUBJECT TO GREAT CHANGE. IT IS MUCH TOO EARLY TO DETERMINE WHICH REPRESENTS THE BEST STATE INVESTMENT, AND IRRELEVANT. IF ALASKA IS TO KEEP PACE WITH THE OTHER SALMON-PRODUCING NATIONS OF THE NORTH PACIFIC AND MAINTAIN ITS SHARE OF THE COMMON PASTURAGE IN NORTH PACIFIC WATERS, THERE IS MORE THAN ENOUGH TO BE DONE BY REGIONAL ASSOCIATIONS AS WELL AS FRED FACILITIES.

IN ALL THE EUPHORIA OVER LARGE BRISTOL BAY RUNS EXPECTED IN 1980, WE TEND TO FORGET THE DEPLORABLE RETURNS EXPECTED THIS YEAR IN COOK INLET AND NUMEROUS OTHER FISHERIES THROUGHOUT ALASKA. THAT, COUPLED WITH A DISASTROUS PRICE DROP THIS YEAR, IS GOING TO WRITE BANKRUPTCY FOR MANY, MANY ALASKAN FISHERMEN THIS YEAR.

VI. WE DON'T KNOW YET -- THE TECHNOLOGY IS STILL DEVELOPING.

WE DO KNOW THAT THE NEW GENERATION OF HATCHERIES ARE COST EFFECTIVE AND SHOULD BE CONTINUED AND INCREASED. ALL PROVEN METHODS SHOULD BE INCORPORATED, INCLUDING THE OPPORTUNITIES OFFERED UNDER SECTION 1608, IN THE COMPREHENSIVE PLANS FOR FISHERIES.

-/-

VII. STABILIZED PRODUCTION OF AT LEAST 100 MILLION HARVEST PER YEAR IS NOT TOO MUCH. THE COMPREHENSIVE PLAN SHOULD PROVIDE THE REQUIRED MIX OF NATURAL PRODUCTION PLUS VARIOUS ENHANCEMENT TECHNIQUES TO ARRIVE AT THAT GOAL.

THE DECADE OF THE 30'S PRODUCED A NUMBER OF RUNS IN EXCESS OF 100 MILLION HARVEST. THERE IS NO REASON TO BELIEVE THAT THE OPEN OCEAN HAS DECREASED IN ITS PRODUCTIVE CAPACITY.

THE REST OF THE WORLD IS RAPIDLY INCREASING ITS STOCKS OF SALMON. THE PORTION PRODUCED BY HATCHERIES IN ALASKA WILL NOT HAVE A SIGNIFICANT IMPACT ON WORLD PRICES. IF WORLD PRICES DECLINE AND WE HAVE NOT INCREASED OUR HARVESTS, THEN OUR FISHERMEN WILL BE IN EVEN MORE SERIOUS FINANCIAL STRAITS.

ALASKAN PRODUCTION OF SALMON MUST KEEP PACE WITH THAT OF THE OTHER SALMON-PRODUCING NATIONS. WE HAVE ONLY [illegible] OPTIONS TO CHOOSE FROM.

VIII. YES, BIOLOGICAL QUESTIONS ARE ADEQUATELY BEING ADDRESSED. THE DETAILS OF THOSE ANSWERS I'LL LEAVE WITH THE DEPARTMENT.

IX. [illegible]

THE ALASKA DEPARTMENT OF FISH AND GAME IS TO PROTECT WILD STOCKS BY HARVESTING, IN ANY MIXED STOCK FISHERY, AT A LEVEL LOW ENOUGH TO PROTECT THE WEAKEST OF THE MAJOR NATURAL RUNS REPRESENTED IN THAT MIXED STOCK FISHERY.

THIS IS THE REASON FOR INSURING THAT HATCHERIES ARE LOCATED FAR ENOUGH AWAY FROM STREAMS SUPPORTING SIGNIFICANT WILD STOCKS THAT THERE WILL BE ADEQUATE "TEMPORAL SEPARATION" BETWEEN THE WILD AND HATCHERY STOCKS AFTER THEY LEAVE THE MIXED STOCK FISHERY.

[illegible] AFTER SEPARATION [illegible] MIXED STOCK FISHERY. IT IS RECOGNIZED THAT THIS MAY NOT BE POSSIBLE IN ALL [illegible] AS WHEN [illegible] THE TECHNOLOGY EXISTS. HOWEVER, [illegible] SCIENCE IN THE VERY INFANCY OF [illegible] SIGNIFICANT BREAKTHROUGHS ARE TAKING PLACE AROUND THE WORLD EVERY YEAR, INDEED PROBABLY EVERY MONTH, AS THIS SCIENCE AND TECHNOLOGY EVOLVES. AND THE MORE PEOPLE WE GET INVOLVED THINKING ABOUT AND RESEARCHING THESE [illegible] -- ESPECIALLY THE PRIVATE SECTOR WITH [illegible] -- THE

THE FASTER WILL THE EVALUATION OF THE SCIENCE AND TECHNOLOGY OCCUR.

AI. NO, WE ARE NOT MOVING TOO FAST.

LITTLE PORT — 2800% VARIATION

March 7, 1980

House Concurrent Resolution No. 50 (attached), requesting the governor to suspend the issuance of grants and loans for fisheries enhancement, proposes two moratoriums-- one on grants to regional aquaculture associations and a second on loans to regional aquaculture associations until a legal assessment of fishermen is established and sufficient collateral is guaranteed to secure loans.

The state, over the last decade, has embarked on an ambitious program of fisheries enhancement and development. The current wealth of the state provides us with the opportunity to continue and expand this effort. However, before we automatically proceed, it might be wise to take a close look at the existing efforts and determine whether they should be continued in the same manner or whether changes in direction and emphasis should be made.

The House Resources Committee will hold a hearing on HCR 50 on Thursday, March 20, at 3 p.m. in Juneau, in Room 118 of the Capitol. As sponsor of the resolution, I'd like to have it serve as a basis for discussion of aquaculture purposes and direction in general, and I invite your participation. If you cannot attend the hearing, I would appreciate your written comments and would make them available to all members of the committee. The following questions may provide a framework for your comments.

1) What should be the areas of responsibility of the regional aquaculture associations, the "Mom and Pop" non-profit hatcheries, and the state's Division of Fisheries Rehabilitation, Enhancement, and Development? Which entities should be building and operating hatcheries, fertilizing lakes, clearing streams, controlling p·eda-tion, etc.?

2) Where are there needs for greater cooperation between the private non-profit hatcheries and associations and F.R.E.D.? How can cooperation be fostered, and what degree provides for the greatest efficiency?

3) What limits should be placed on the non-profit hatcheries and regional associations? How accountable are they now to the fishermen, the public, and the resource, and how can this be improved?

4) What should the role of commercial fishermen be in providing for fishery resources? What control should they exert over those resources?

C 800

5) Who is more responsive to the fishermen, the public, and the resource-- F.R.E.D. or the regional associations? Which represents the best state investment?

6) Where should the emphasis be placed in aquaculture programs? What are the relative benefits of hatcheries, rehabilitation efforts, and enhancement projects?

7) How many hatcheries are enough? What will be the effects, biologically and economically, of producing more and more salmon?

8) Are the biological questions being adequately addressed by the state and the regional associations? How are the problems of disease control, hatchery siting, brood stock supplies, and separation of stocks being handled?

9) Are we in danger of replacing wild with artificial stocks? What are the ramifications of this?

10) How will aquaculture programs-- state-run and private-- pay their way? How will costs be recovered? Are hatchery harvests appropriate?

11) Are we moving too fast with aquaculture efforts? What would be lost by slowing down and perfecting what we already have?

12) Where are the lines drawn between biological and political management? How can existing problems be mitigated and future ones averted?

Sam McDowell on ACRSO
March 30, 1980

Re: Three Comment Resolutions #50
Answers and Suggestions from
Sam. E. McDowell President T.V.L.A.
Alaska Fisheries Resources Committee Chairman

- Answers to Questions -

(1) Regional associations must be completely open to public meeting of their finances, and accountable to commissioner of ADF&G.

(2) Aquacultural associations could recommend projects and furnish first hand fisherman input to ADF&G for consideration and final management decisions of our public resources.

(3) In the end foremost the Commissioner of ADF&G must have final decision on all phases of operations, funding and etc for non-profit hatcheries and regional associations.

(4) They should pay their way through assessments on our common property resources. It should be understood that the resource is paying for its own enhancement. Additionally it should be clearly understood that this resource belongs to all Alaskans, and the commercial fishermen have only a special privilege not an absolute right.

March 20, 1980

Re: House Amendment Resolution #50

(5) The State agencies are the most responsive to the fisherman, the public, and the resource.

Their responsibility first to the resource is the law, and when they are responsible to the resource they are automatically responsible to the publics and fishermen.

(6) Rehabilitation must be the first goal. This includes both proper fish harvest and escapement.

Stream and habitat enhancement should be highest of priorities and native stocks must be protected.

Hatcheries should be considered only after all facts [redacted] are considered and found not to be in conflict with native stocks.

(7) Biological data should be gathered on native stocks as to effect of over-harvest and over-escapement before anymore hatchery salmon is dumped into systems that have native stocks.

(8) No, there is not enough known on the effects of hatchery stock enhancement on native stocks to allow Non-Profit hatcheries to proceed without being under total control by ADF&G.

Seperation of stocks will cause future major conflicts between fishermen and Non profit hatcheries without being under complete control by ADF&G on location of hatchery!

Re: House Concurrent Resolution 450

(9) Yes, And it could prove to be a total disaster to our Common property resources, And the pressure of economics can make this happen.

(10) They won't, if we continue to allow funding to be allocated on a political instead of a professional basis.

Payment for rehabilitation and enhancement should be supported by assessment or tax on the resource.

No, hatchery harvest will cause major conflicts And management problems.

(11) Yes, we are moving too fast, And should stop all funding for Non-profit hatcheries until state hatchery programs are perfected.

First we must learn to manage our Native Stocks through Stream enhancement And etc, before we create additional problems with hatchery Stock management.

(12) Proper representation by the total public is a must if Salmon enhancement is going to survive the test of time.

Political management must be curtailed And allow our professional RDF & biological management staff manage our Common property fishery resources.

Recommendations

(1) Recall all Grants, loans and or public funding from the Cook Inlet Aquaculture assn.

Request a complete line item audit be submitted to commissioner of ADF+G for all Non-Profit Aquaculture associations to account for funding.

Our observations of past management Policies of C.I.A.A. convinces us C.I.A.A. Assoc has failed for the following reasons.

They resist the entry of additional benefited State certified commercial fisherman organizations.

Those in control of the Cook Inlet Aquaculture assn dictatorially oppose those interests other-than their own. Including commercial fishermen in other districts of Cook Inlet.

They proceed to spend State money on plans that don't agree with A.D.F+G. Plans that could cause serious management problems.

They have lost the support of the largest percentage of Cook Inlet fishermen.

Until C.I.A.A. can show they have support from the largest percentage of these fishermen no additional funding should be granted.

We are convinced the short sighted selfish management Policy of C.I.A.A. is not in the best interest of Cook Inlet Common property fishery resources, and must be stopped!

HCR 50

An Analysis of Selected Elements of the Alaskan Salmon Resource Development Program

A Report to the
Aquaculture Policy Study Group
of the Alaska Legislature

By the Firms of:

MILLER AND ASSOCIATES, INC.,
LEONARD LANE AND ASSOCIATES AND,
MR. WILLIAM R. WILKERSON, ATTORNEY, LAW FIRM OF
EISENHOWER, CARLSON, NEWLANDS,
REHA, HENRIOT & QUINN

December 1, 1979

EXECUTIVE SUMMARY

This report sets forth the contractors' findings and recommendations resulting from an analysis of selected elements of the Alaskan Salmon Resource Development Program. This study does not address either the role of the small private or potential role for large for-profit corporations in the state salmon aquaculture program. Care must be exercised to ensure that policy or statutory changes to the state aquaculture program as a result of this report do not have an adverse effect on small non-regional hatchery operations.

Chapter I of the report addresses the need and provides a means for conducting micro and macro economic analyses of the Alaskan salmon fishery. The report recommends that a Return on Investment technique be used by the regional associations to evaluate potential aquaculture projects. The ROI technique is a means for ensuring that sufficient returns will accrue to the project to contribute to the fishery as well as provide the means through a terminal area harvest for the project to eventually become economically self-sufficient.

A second micro economic analysis technique is recommended for government aquaculture projects. This Cost Benefit Analysis technique differs from the ROI method in several important respects. Regional associations, because of their need to repay loans and remain financially solvent, count as "losses", those aquaculture produced salmon caught by domestic non-association members because no revenue accrues to the association from these prior interceptions. Government agencies,

which have a broader constituency, count prior interceptions by domestic fishermen as "benefits" in their calculations of the value of an aquaculture project. In addition, government agencies are not usually dependent upon assessment fees or revenues from terminal area harvests to provide the income necessary to continue in operation.

A second significant difference in the two micro economic evaluation techniques is the value of the catch used in each formula. Ex-vessel prices are used in the ROI analysis because it is the amount association members are paid for their harvest, and it would be the price paid to the association for fish harvested and sold from a terminal area.

Because the intent of a cost benefit analysis is to measure the benefits created by an aquaculture project, the first wholesale price of salmon is recommended for use because it is more reflective of the total value (harvesting and processing) to the domestic economy than ex-vessel prices.

In Chapter I, explicit recognition is given to the need, from an economic point of view, to recognize not only the different stages in the life of a salmon where artificial means can be employed to enhance survival but also the different methods, their attendant costs, as well as differing survival rates which can be employed in salmon propagation. As this analysis indicates, there are a significant number of economic trade-offs which should be considered in the selection of a propagation method.

In addition to the micro economic analysis models, Chapter I recommends the establishment of at least three macro economic evaluation techniques. Whereas the micro economic evaluation models are designed to be applied to specific projects, the purpose of the macro techniques is to provide the state with the economic tools necessary to measure the value of the fishery from a statewide or regional basis. Based upon analyses and information from these models, the state could explicitly formulate an economically sound basis for the fisheries development program.

Chapter II sets forth sources and methods for financing salmon aquaculture programs.

Prior to discussing the financing recommendations it seems appropriate to clarify a misconception about the financial structure of the regional aquaculture corporations. They are non-profit, meaning they cannot sell stock and raise risk capital from speculators. They have three primary sources for financing: fishermen and processors; terminal area harvests in which the association uses part of the harvest to pay operating costs and repay loans; and the state.

Currently all state operated propagation facilities are supported by state appropriations. It is the recommendation of this chapter that ultimately all regional and state production facilities be operated on an economically self-sufficient basis. We do not believe that the regional associations, even if the mandatory assessment were re-enacted, will have adequate revenues available to them to build enough facilities over the next decade to make a significant contribution to the harvestable

number of salmon. We believe an additional state investment in the program, over the next decade, could significantly expand the production capability of the regional associations and allow them to develop to the point where they can assume the managerial and financial responsibility for operating both regional as well as state production facilities. Such an investment will provide two substantial benefits to the state: increased tax revenues and citizen employment from an expanded and more stable fishery and reduced operating costs because the cost of operating state production hatcheries would be shifted from state sources to the primary beneficiaries of the production.

Chapter II discusses the relative advantages and disadvantages of six alternative means for making up the revenue lost as a result of the successful court challenge of the mandatory assessment. As of this writing, option #3, which would provide for a state collection of a regional tax has been reviewed for its constitutional considerations and is being prepared in draft from for further discussion by the Fisheries Council.

Chapter II also contains recommendations regarding the state aquaculture loan program. If a replacement revenue is found for re-establishing the assessment revenue, and if some new revenue stream could be established to provide for the orderly expansion of regional aquaculture programs, then the state aquaculture loan program should be modified as follows:

(a) The $3.0 million loan limitation should be removed;
(b) The loan should be limited to capital construction costs (as defined in Chapter 168, Laws of 1978);
(c) The term of the construction loan should be established at 20 years;
(d) The deferment period should be increased from six years to a maximum of 10 years.

Other recommendations contained in Chapter II include establishing common aquaculture cost categories and a source of funds and applications model. Establishment of common cost categories would aid both the regional associations and the state by providing planning and analysis information. The source and applications of funds model is a standard financial planning technique not only for matching revenue streams to cost categories but is also used as a means for relating long range production expansion to sources for financing the expanded production.

Chapter III contains a discussion of institutional problems and alternative means which could be implemented to overcome these problems. Four general categories of needs are discussed in the chapter. These are: the need to develop means for ensuring that the salmon, shellfish and bottomfish elements of the Alaskan fishery are managed, at least from an overall policy point of view, on an integrated basis; the need to improve coordination among federal, state and regional associations in developing the Alaskan fishery; the shifting of the aquaculture loan program to ADF & G; and, the need to expand and provide for increased coordination of an Alaskan fisheries research program.

The chapter sets forth a variety of alternative means for meeting the identified needs.

In order to improve coordination and provide for a balanced policy management approach over all of the elements of the Alaskan fisheries, the report recommends the establishment of an Alaskan Fisheries Resource Development Program which encompasses all species. Several options are set forth for achieving this balanced management approach including: an Alaskan fisheries resource development coordinator within the Office of the Governor; establishing lead agency responsibility for the Alaskan Fisheries Resource Development Program; and, establishing a separate office or agency for the program. The assignment of ADF & G as the lead agency over the fishery is the preferred option.

With regard to the need to improve coordination and cooperation among the various elements of the fishery, the report contains a number of optional ways of achieving this need. This includes: enacting a legislative mandate which requires cooperation in certain activities; providing a one stop permitting process for both state and regional fisheries development activities; the use of cooperative agreements between ADF & G, regional associations and federal agencies; the expansion and strengthening of ADF & G regional staffs to improve coordination and support to regional associations; the establishment of a continuing regional association structure to improve coordination among association members; as well as a number of other possible options.

This aerial photograph of SSRAA's Central Incubation Facility (CIF) shows hatchery buildings, rearing ponds and raceways. The facility is located six miles south of Ketchikan and has a capacity of 28.16 million eggs.

SSRAA's board of directors, composed of 21 members, represents commercial, sport and subsistence fisheries, as well as those of processors, municipalities, Chambers of Commerce and native corporations. The board meets monthly to discuss ongoing activities and to make decisions on proposals.

Much of the field camp work is labor intensive. Here, crews at a completely floating camp on Carroll Inlet (30 miles from Ketchikan) check ripeness of female chum salmon to ensure that eggs are ready for extraction.

Eggs and milt are removed at the remote camps and are flown in ice chests to Herring Cove where they are unloaded and taken a short distance to the Central Incubation Facility.

SSAA board directors Ed Linkous (troller representative) and Lee Burger (sportfish representative) take a close look at coho salmon which have recently emerged from eggs. Thirteen of the 21 board directors are commercial fishermen and there is a shared interest between sport and commercial fishermen.

Coho salmon seem undaunted by the presence of a hand in their rearing pond. This spring SSRAA will release 550,000 coho smolt and about 2.5 million chum, the results of eggs taken in 1978 and 1979.

This coho smolt, shown in relationship to a man's hand, is about six weeks away from being released to sea. These fish have been reared by SSRAA now for 17 months.

One of the last steps of the hatchery work for SSRAA involves removing the fry from raceways and then putting them into tanks which are placed on barges and towed to remote camps. This photo, taken March 19, marks SSRAA's first of many egg releases.

PROPOSED 1980 LAKE FERTILIZATION AND STUDY SITES

HCR50

Alaska House of Representatives

HUGH MALONE

POUCH V
JUNEAU

P. O BOX 9
KENAI
99611

March 7, 1980

House Concurrent Resolution No. 50 (attached), requesting the governor to suspend the issuance of grants and loans for fisheries enhancement, proposes two moratoriums-- one on grants to regional aquaculture associations and a second on loans to regional aquaculture associations until a legal assessment of fishermen is established and sufficient collateral is guaranteed to secure loans.

The state, over the last decade, has embarked on an ambitious program of fisheries enhancement and development. The current wealth of the state provides us with the opportunity to continue and expand this effort. However, before we automatically proceed, it might be wise to take a close look at the existing efforts and determine whether they should be continued in the same manner or whether changes in direction and emphasis should be made.

The House Resources Committee will hold a hearing on HCR 50 on Thursday, March 20, at 3 p.m. in Juneau, in Room 118 of the Capitol. As sponsor of the resolution, I'd like to have it serve as a basis for discussion of aquaculture purposes and direction in general, and I invite your participation. If you cannot attend the hearing, I would appreciate your written comments and would make them available to all members of the committee. The following questions may provide a framework for your comments.

1) What should be the areas of responsibility of the regional aquaculture associations, the "Mom and Pop" non-profit hatcheries, and the state's Division of Fisheries Rehabilitation, Enhancement, and Development? Which entities should be building and operating hatcheries, fertilizing lakes, clearing streams, controlling predation, etc.?

2) Where are there needs for greater cooperation between the private non-profit hatcheries and associations and F.R.E.D.? How can cooperation be fostered, and what degree provides for the greatest efficiency?

3) What limits should be placed on the non-profit hatcheries and regional associations? How accountable are they now to the fishermen, the public, and the resource, and how can this be improved?

4) What should the role of commercial fishermen be in providing for fishery resources? What control should they exert over those resources?

C 200

5) Who is more responsive to the fishermen, the public, and the resource-- F.R.E.D. or the regional associations? Which represents the best state investment?

6) Where should the emphasis be placed in aquaculture programs? What are the relative benefits of hatcheries, rehabilitation efforts, and enhancement projects?

7) How many hatcheries are enough? What will be the effects, biologically and economically, of producing more and more salmon?

8) Are the biological questions being adequately addressed by the state and the regional associations? How are the problems of disease control, hatchery siting, brood stock supplies, and separation of stocks being handled?

9) Are we in danger of replacing wild with artificial stocks? What are the ramifications of this?

10) How will aquaculture programs-- state-run and private-- pay their way? How will costs be recovered? Are hatchery harvests appropriate?

11) Are we moving too fast with aquaculture efforts? What would be lost by slowing down and perfecting what we already have?

12) Where are the lines drawn between biological and political management? How can existing problems be mitigated and future ones averted?

J Malone

This testimony was not heard on 3/20/80 due to lack of time

TESTIMONY PRESENTED TO THE

HOUSE RESOURCES COMMITTEE HEARING
ON HCR 50
MARCH 20, 1980

MY NAME IS CURT KERNS. I'M THE CHAIRMAN OF THE ALASKA FISHERIES COUNCIL, ON LEAVE OF ABSENCE FROM THE UNIVERSITY OF ALASKA, AS THE AQUACULTURE EXTENSION AGENT FOR THE PAST THREE YEARS. PRESENTLY, I'M WITH THE PRINCE WILLIAM SOUND AQUACULTURE CORPORATION. I'M A CERTIFIED FISHERIES SCIENTIST BY THE AMERICAN FISHERIES SOCIETY. FOR THE PAST TEN YEARS, MY EDUCATION AND EXPERIENCE HAVE BEEN DIRECTED TOWARDS SALMON RANCHING.

THE PACIFIC SALMON IS THE DOMINANT FISH OF THE SURFACE WATERS OF SOME 2,500,000 SQUARE MILES OF THE SUBARCTIC PACIFIC. BUT THIS MOST MAGNIFICENT OF ORGANISMS IS TIED INEXORABLY TO LAND, TO FRESH WATER BY ITS REPRODUCTIVE PHASE. THE AVAILABLE EVIDENCE SUGGESTS THAT IT MAY VERY WELL BE THIS FRESH-WATER PERIOD THAT IS THE LIMITING FACTOR TO SALMON POPULATIONS -- EVEN DURING THE HISTORICALLY HIGH HARVEST PERIOD OF 1936 TO 1939. WHY ELSE, IT IS REASONED, WOULD SALMON METABOLIZE ALL THE CALORIES NECESSARY TO SWIM, IN SOME CASES, 1500 MILES UP RIVER, FEEDING LITTLE, JUST TO FIND A COUPLE OF SQUARE YARDS OF SPAWNING GRAVEL?

THE ENERGY USED IN MIGRATING UPSTREAM COULD BE BETTER USED IN PRODUCTION OF MORE EGGS AND MILT IF SPAWNING GROUNDS WERE AVAILABLE CLOSER TO SALTWATER, THUS PRODUCING MORE FRY. FISHERIES SCIENTISTS HAVE IN YEARS PAST DISCUSSED THIS POINT, AND WILL CONTINUE FOR YEARS TO COME.

WHILE FISHERIES BIOLOGISTS CONTINUE THE DEBATE, I SUGGEST THAT WE PAY VERY CLOSE ATTENTION TO WHAT OTHER NORTH PACIFIC RIM COUNTRIES ARE DOING: JAPAN'S 1979 CHUM SALMON HARVEST, BASED ALMOST EXCLUSIVELY ON HATCHERY PRODUCTION, WAS 18 MILLION FISH. HER INCUBATION CAPACITY IS APPROXIMATELY 1.2 BILLION WITH NEW WAYS CONSTANTLY BEING SOUGHT TO INCREASE THAT NUMBER. RUSSIA'S HARVEST IS STEADILY RISING, LARGELY DUE TO DRAMATICALLY INCREASED HATCHERY PRODUCTION -- WHICH IS SLIGHTLY IN EXCESS OF THAT OF JAPAN'S. AS RUSSIA DOES NOT HAVE THE WATER LIMITATIONS THAT JAPAN HAS, HER PLANNED HATCHERY PRODUCTION FOR THE YEAR 2,000 IS ABOUT 3 BILLION. IN 1977, THE SAKHALIN ISLAND HATCHERIES ALONE PRODUCED 844 MILLION PINK AND CHUM SALMON FRY. INCIDENTALLY, ONE SAKHALIN HATCHERY IN 1976, THE KALINSKY, HAD A RETURN OF APPROXIMATELY 1 MILLION CHUMS. THE STREAM THE HATCHERY IS ON IS ABOUT TWO FEET WIDE AT ITS NARROWEST. CANADA HAS EMBARKED ON A PROGRAM TO DOUBLE HER SALMON CATCH TO 50 MILLION SALMON.

THE PASTURES OF THE PACIFIC MAY NOT YET BE FULL. BUT WITH THE RAPID ADVANCES BEING MADE IN BIOTECHNOLOGY, NUTRITION, PATHOLOGY, AND OTHER AQUATIC SCIENCES, AS SURELY AS WE SIT HERE TODAY, THEY WILL BE. THAT DAY MAY BE 20 OR 30 YEARS HENCE, BUT THEY WILL BE FILLED. THEN AN INTERNATIONAL CONFERENCE ILL BE CALLED. EACH NATION (CHINA AND KOREA WILL BE PRESENT BY THEN) WILL SEEK TO "GRANDFATHER" IN THEIR EXISTING SHARE. WE ARE LITERALLY IN A RACE FOR THE PASTURES OF THE PACIFIC.

GIVEN THAT SALMON SUPPORT THE UNITED STATES' SECOND MOST VALUABLE FISHERY; THAT 80 TO 90 PERCENT OF THE U.S. CATCH ORIGINATES FROM ALASKA; THAT ALASKA IS ADJACENT TO IMPORTANT NORTH EASTERN PACIFIC SALMON GRAZING PASTURES, AND THAT ALASKA HAS THE VAST MAJORITY OF AVAILABLE WATER SUPPLIES IN THE UNITED STATES SUITABLE FOR SALMON CULTURE -- ALASKA HAS THE MOST IMPORTANT ROLE OF ANY AREA IN NORTH AMERICA TO PLAY IN THE DEVELOPMENT OF SALMONID RESOURCES.

BASED UPON REVENUES FROM THE COMMERCIAL CATCH AND FROM NON-RENEWABLE RESOURCES, ALASKA HAS THE FUNDS NECESSARY TO CARRY OUT THIS ADVANCEMENT. WE CAN RESTORE THE RUNS TO HISTORICAL LEVELS, PERHAPS EVEN SOMEDAY PRODUCE MULTIPLES OF THOSE HISTORICALLY HIGH CATCHES. THE STABILIZATION AND GROWTH THAT THE ALASKA SALMON

RESOURCE DEVELOPMENT PROGRAM CAN BRING, WILL MAKE A SIGNIFICANT CONTRIBUTION TO THE ECONOMY BENEFITING ALL ALASKANS IN SOME WAY FOR THE GENERATIONS TO COME.

OVER FIVE YEARS HAS GONE BY SINCE THE ENABLING LEGISLATION WAS PASSED IN ALASKA. WHILE IT MAY SEEM AS IF LITTLE HAS CHANGED, THAT LITTLE PROGRESS HAS BEEN MADE AND THERE REMAINS YET EVER SO MUCH TO BE DONE -- WE HAVE MADE SIGNIFICANT ADVANCES. FIVE YEARS AGO, OUR INCUBATION CAPACITY WAS ABOUT 25 MILLION EGGS. BY THE END OF THIS YEAR, IT WILL APPROACH THREE-QUARTER BILLION. IN 1975, 58,000 ADULT FISH RETURNED. IN 1979, CONSERVATIVE ESTIMATES, BASED ON MARKED FISH RECOVERY, PLACE THE RETURNS IN EXCESS OF 1,300,000.

ALASKA HAS EMBARKED UPON A SIGNIFICANT SOCIAL EXPERIMENT WHEN WE CREATED THE PRIVATE NON-PROFIT CONCEPT, AND THE REGIONAL ASSOCIATIONS. UNION CARBIDE, WEYERHAEUSER, AND CROWN ZELLERBACH WISH WE HAD PROCEEDED SOMEWHAT DIFFERENTLY. BUT TO CONTINUE AT ALL, WE MUST HAVE THE PRESENT DIVERSITY OF EFFORT. TO KILL THE REGIONAL ASSOCIATIONS OR THE PUBLIC SECTOR IS TO DOOM OUR ENTIRE EFFORT.

THE PATH HAS NOT BEEN SMOOTH, AND THE THE WORK TO BE DONE IS YET GREAT. BUT FOR THE SAKE OF THE RESOURCE, FOR THE SAKE OF TODAY'S AND TOMORROW'S ALASKANS, WE MUST

CONTINUE. CAREFULLY, RESPONSIBLY, EVEN CAUTIOUSLY. BUT WE MUST CONTINUE.

March 20, 1980

Representative Hugh Malone
Alaska House of Representatives
House Resources Committee
Pouch V
Juneau. Alaska 99811

Dear Mr. Malone:

Thank you for the opportunity to discuss the State of Alaska's private fisheries enhancement and development program.

As a representative of the private non-profit Douglas Island Pink & Chum hatchery corporation, I have attached a summary of the Kowee Creek Hatchery activities since 1975. The 6 million fry release hatchery was constructed and operated with private funds until 1979; at which time a $3,100 CETA grant was received to assist in our first hatchery return egg-take.

A second hatchery is now being constructed at Sheep Creek, located south of Juneau. This 20 million fry release facility is being financed with the assistance of the Fisheries Enhancement Loan Program. I believe this facility will go on record as being the most cost-efficient hatchery financed by the State of Alaska.

The Prince William Sound Regional Aquaculture Association has been, I believe, one of the major guiding lights to the non-profit fisheries enhancement program and their beliefs and concerns are heavily endorsed. Hopefully, any decision made by the House Resource Committee will carefully weigh the consequences it will have to the private sector, both regional and non-regional.

Again, I thank you for the opportunity to provide a brief accounting of our activities and to endorse our support of the Prince William Sound Aquaculture Association.

Sincerely,

Ladd Macaulay, President
Douglas Island Pink & Chum Co., Inc.

ANNUAL REPORT

PRIVATE NON-PROFIT HATCHERY

HATCHERY NAME/LOCATION	KOWEE CREEK HATCHERY DOUGLAS ISLAND SOUTHEAST ALASKA
PERMIT HOLDER NAME/ADDRESS	DOUGLAS ISLAND PINK & CHUM CO., INC. BOX 630 DOUGLAS, ALASKA 99824
NAME/PHONE	LADD MACAULAY 907-586-9511

This is the fourth annual report prepared for the benefit of the public, federal government, state government and corporate members. The following is a brief summary of our last four years activity:

YEAR: 1976

Dollars Spent	Species	(1976) Females taken	(1976) Eggs	Location	(1977) Fry Release	Adult Return
	Chum	40	120,000	Haines	60,000	
	Chum	26	48,000	Fish Creek	26,000	
$ 3,757.35		66	168,000		86,000	Ø

YEAR: 1977

Dollars Spent	Species	(1977) Females taken	(1977) Eggs	Location	(1978) Fry Release	Adult Return
	Chum	52	135,980	Fish Creek		
	Chum	9	32,894	Youngs Bay		
	Pink	862	1,732,612	Fish Creek		
$ 14,464.78		923	1,901,486		1,773,791	Ø

YEAR: 1978

Dollars Spent	Species	(1978) Females taken	(1978) Eggs	Location	(1979) Fry Release	(1979) Adult Return
	Chum	182	462,098	Fish Creek		
	Chum	10	25,390	Sawmill Creek		5
	Pink	1,397	2,370,709	Fish Creek		20,000
$ 3,952.44		1,589	2,858,197		2,100,000	20,005

YEAR: 1979

Dollars Spent	Species	(1979) Females taken	(1979) Eggs	Location	(1980) Fry Release	(1980) Adult Return
	Chum	106	318,000	Fish Creek		
	Chum	12	36,000	Sawmill Creek		
	Chum	4	12,000	Sheep Creek		
	Pink	1,452	2,178,000	Kowe Creek		
	Pink	415	622,500	Fish Creek		
$ 8,679.11		1,989	3,166,500		2,375,000 (EST.)	20,000 (EST.)

TOTAL DOLLARS	TOTAL FEMALES	TOTAL EGGS	TOTAL FRY RELEASE	TOTAL ADULT RETURNS
$31,003.68**	4,567	8,094,183	3,959,791*	20,000

*The estimated 1980 fry release of 2,375,000 is not included.
**Figure includes $200.00 spent in 1975.

SUMMARY OF CASH RECEIVED AND CASH EXPENDED AS OF DECEMBER 31, 1979

Short term loan	$ 340.00
Cash in bank 1/1/79	1,747.53
Assessments received	3,050.00
CETA grant	3,184.00
Sale of brood stock	973.40
Refund of over-payment on bill	28.18
TOTAL CASH RECEIVED	$ 9,323.11
Cash in bank 12/31/79	$ 694.00
TOTAL EXPENDITURES	$ 8,629.11
TOTAL ASSESSMENTS RECEIVED	$27,175.00
TOTAL ASSESSMENTS OUTSTANDING	$ 175.00

EXPENDITURES	1975	1976	1977	1978	1979	TOTAL
Operational Costs	$200.00	$ 607.17	$ 489.74	$ 327.36	$4,733.95	$ 6,358.22
Equipment	———	792.34	5,335.33	3,266.23	3,532.07	12,925.97
Temporary Facility	———	2,221.28	268.33	———	———	2,489.61
Permanent Facility	———	136.56	8,371.38	358.85	363.09	9,229.88
TOTAL COSTS	$200.00	$3,757.35	$14,464.78	$3,952.44	$8,629.11	$31,003.68

I.R.S. STATUS: Ms. Ruth Lane, for I.R.S., per a telephone conversation on 2/19/80, has confirmed that the corporation has been classified as 501-C-3. A 501-C-4 classification prior to the C-3 status has also been recognized. Written confirmation is forthcoming.

OPERATING BUDGET FOR 1979

Two CETA employees were hired during the months of July, August and part of September for egg taking purposes. All other work was performed on a volunteer basis.

FACILITY CONSTRUCTION

The Kowee Creek Hatchery is still not considered 100% complete. The insulated cave doors were hung and the concrete flume leading from the cave has been extended. Two of the main intake pipes, the electrical wiring and the front entry to the cave have yet to pass corporate inspection.

INCUBATORS

The NOPAD Incubator has been used for four years and its' performance has been more than satisfactory. No other incubator design is being considered at this time.

MORTALITY

No significant mortalities occurred this year. Less than a 10% loss is anticipated for the total chum egg take and a 20-25% loss is anticipated for the total pink egg take.

ANNUAL MANAGEMENT PLAN

The migration routes of both the pink and chum were not studied in 1978. All that can be stated at this time is that the Kowee Creek pink salmon arrived on site seven days after the pink salmon appeared at Fish Creek. (see attachment)

HARVEST MANAGEMENT OF SURPLUS FISH

It has been estimated that between 20,000 and 30,000 adult pink salmon returned to the mouth of Kowee Creek during the month of August. The return was from the 1.8 million fry release of 1978. It should be noted that 2.4 million eggs had been taken from Fish Creek and none from Kowee Creek in 1978. In 1979, however, 2.2 million pink salmon eggs were taken from Kowee Creek and only .6 million from Fish Creek.

The weir that was designed for Kowee Creek was not constructed. The cost of materials would have been over $5,000 and it was decided that wire fencing and sandbags would serve the same purpose. The results were neither satisfactory nor economical. The salmon broke through the fencing more than once and the majority were never harvested. In 1980, a floating pen arrangement is being considered for harvesting and holding purposes.

Only brood stock pink salmon were harvested in 1979 and that was by the use of a dip net. The use of a herring net and ripening pens were also an integral part of the harvesting efforts. After harvesting, the pink salmon were hauled by truck to a local cold storage plant where some were canned for experimental purposes and others sold for crab bait use. Samples of smoked fillets were also sent to Japan. Further marketing use of brood stock salmon is being planned for 1980.

In summary, the elimination of the egg picking stage, the 1½% adult pink slamon return at Kowee Creek, the issuance of the Sheep Creek Hatchery permit and the brood stock market samples sent to Japan are major indicators of the steady contribution and growth of our private non-private corporation.

DECLARATION AND SIGNATURE

I declare that the information given in this is, to my knowledge, true, correct and complete.

STATE OF ALASKA
THE LEGISLATURE

LEGISLATIVE AFFAIRS AGENCY

MEMORANDUM February 15, 1980

SUBJECT: Salmon seine vessel length
(Work Order Number 8028)

TO: Representative Alvin Osterback

FROM: Kenneth E. Vassar
Legislative Counsel

Enclosed is the resolution you requested asking the Board of Fisheries to adopt regulations imposing limitations on the lengths of salmon seine vessels in the state waters around Kodiak, Shumagin Island and the Alaska Peninsula. Your request came with no back-up material, and in order to meet the personal bill deadline, I decided to fill in the "whereas" clauses of the resolution as best I could. You should be aware, however, that I cannot say that these "whereas" clauses are factually correct. Specifically, I do not know that the state waters around Kodiak, Shumagin Islands and the Alaska Peninsula would be especially vulnerable to overharvesting of salmon if no limitation on the length of the salmon seine vessels existed in those waters. Moreover, I think you should be aware that there is no present need for the regulations requested by this resolution since the limitation on the length of salmon seine vessels is presently imposed statewide by AS 16.05.835. I know that there is a bill to repeal that law and that your committee has discussed the bill; therefore, I added the last "resolved" clause of the resolution requesting that the regulations take effect if AS 16.05.835 is repealed.

to be appropriate, be installed and maintained in working order on each such vessel;

(D) duly authorized United States observers be permitted on board any such vessel and that the United States be reimbursed for the cost of such observers;

(E) any fees required under section 204(b)(10) be paid in advance;

(F) agents be appointed and maintained within the United States who are authorized to receive and respond to any legal process issued in the United States with respect to such owner or operator; and

(G) responsibility be assumed, in accordance with any requirements prescribed by the Secretary, for the reimbursement of United States citizens for any loss of, or damage to, their fishing vessels, fishing gear, or catch which is caused by any fishing vessel of that nation;

and will abide by any other monitoring, compliance, or enforcement requirement related to fishery conservation and management which is included in such agreement.

(3) The foreign nation and the owners or operators of all of the fishing vessels of such nation shall not, in any year, exceed such nation's allocation of the total allowable level of foreign fishing, as determined under subsection (e).

(4) The foreign nation will—

(A) apply, pursuant to section 204, for any required permits;

(B) deliver promptly to the owner or operator of the appropriate fishing vessel any permit which is issued under that section for such vessel; and

(C) abide by, and take appropriate steps under its own laws to assure that all such owners and operators comply with, section 204(a) and the applicable conditions and restrictions established under section 204(b)(7).

(d) TOTAL ALLOWABLE LEVEL OF FOREIGN FISHING.—The total allowable level of foreign fishing, if any, with respect to any fishery subject to the exclusive fishery management authority of the United States, shall be that portion of the optimum yield of such fishery which will not be harvested by vessels of the United States, as determined in accordance with the provisions of this Act.

(e) ALLOCATION OF ALLOWABLE LEVEL.—The Secretary of State, in cooperation with the Secretary, shall determine the allocation among foreign nations of the total allowable level of foreign fishing which is permitted with respect to any fishery subject to the exclusive fishery management authority of the United States. In making any such determination, the Secretary of State and the Secretary shall consider—

(1) whether, and to what extent, the fishing vessels of such nations have traditionally engaged in fishing in such fishery;

(2) whether such nations have cooperated with the United States in, and made substantial contributions to, fishery research and the identification of fishery resources;

(3) whether such nations have cooperated with the United States in enforcement and with respect to the conservation and management of fishery resources; and

(4) such other matters as the Secretary of State, in cooperation with the Secretary, deems appropriate.

(f) RECIPROCITY.—Foreign fishing shall not be authorized for the fishing vessels of any foreign nation unless such nation satisfies the

Public Law 94-265 ~~Fisheries Conservation~~ Fisheries Conservation and Management Act of 1976

Sec. 201. Foreign Fishing

Contradicts Participation in International Halibut Convention

J Williams

Public Law 94-265
94th Congress, H. R. 200
April 13, 1976

An Act

To provide for the conservation and management of the fisheries, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act, with the following table of contents, may be cited as the "Fishery Conservation and Management Act of 1976".

Fishery Conservation and Management Act of 1976. 16 USC 1801 note.

TABLE OF CONTENTS

Sec. 2. Findings, purposes, and policy.
Sec. 3. Definitions.

TITLE I—FISHERY MANAGEMENT AUTHORITY OF THE UNITED STATES

Sec. 101. Fishery conservation zone.
Sec. 102. Exclusive fishery management authority.
Sec. 103. Highly migratory species.
Sec. 104. Effective date.

TITLE II—FOREIGN FISHING AND INTERNATIONAL FISHERY AGREEMENTS

Sec. 201. Foreign fishing.
Sec. 202. International fishery agreements.
Sec. 203. Congressional oversight of governing international fishery agreements.
Sec. 204. Permits for foreign fishing.
Sec. 205. Import prohibitions.

TITLE III—NATIONAL FISHERY MANAGEMENT PROGRAM

Sec. 301. National standards for fishery conservation and management.
Sec. 302. Regional fishery management councils.
Sec. 303. Contents of fishery management plans.
Sec. 304. Action by the Secretary.
Sec. 305. Implementation of fishery management plans.
Sec. 306. State jurisdiction.
Sec. 307. Prohibited acts.
Sec. 308. Civil penalties.
Sec. 309. Criminal offenses.
Sec. 310. Civil forfeitures.
Sec. 311. Enforcement.
Sec. 312. Effective date of certain provisions.

TITLE IV—MISCELLANEOUS PROVISIONS

Sec. 401. Effect of law of the sea treaty.
Sec. 402. Repeals.
Sec. 403. Fishermen's Protective Act amendments.
Sec. 404. Marine Mammal Protection Act amendment.
Sec. 405. Atlantic Tunas Convention Act amendment.
Sec. 406. Authorization of appropriations.

SEC. 2. FINDINGS, PURPOSES AND POLICY

16 USC 1801.

(a) FINDINGS.—The Congress finds and declares the following:

(1) The fish off the coasts of the United States, the highly migratory species of the high seas, the species which dwell on or in the Continental Shelf appertaining to the United States, and the anadromous species which spawn in United States rivers or estuaries, constitute valuable and renewable natural resources.

TITLE II—FOREIGN FISHING AND INTERNATIONAL FISHERY AGREEMENTS

SEC. 201. FOREIGN FISHING. 16 USC 1821.

(a) IN GENERAL.—After February 28, 1977, no foreign fishing is authorized within the fishery conservation zone, or for anadromous species or Continental Shelf fishery resources beyond the fishery conservation zone, unless such foreign fishing—

(1) is authorized under subsection (b) or (c);

(2) is not prohibited by subsection (f); and

(3) is conducted under, and in accordance with, a valid and applicable permit issued pursuant to section 204.

(b) EXISTING INTERNATIONAL FISHERY AGREEMENTS.—Foreign fishing described in subsection (a) may be conducted pursuant to an international fishery agreement (subject to the provisions of section 202(b) or (c)), if such agreement—

(1) was in effect on the date of enactment of this Act; and

(2) has not expired, been renegotiated, or otherwise ceased to be of force and effect with respect to the United States.

(c) GOVERNING INTERNATIONAL FISHERY AGREEMENTS.—Foreign fishing described in subsection (a) may be conducted pursuant to an international fishery agreement (other than a treaty) which meets the requirements of this subsection if such agreement becomes effective after application of section 203. Any such international fishery agreement shall hereafter in this Act be referred to as a "governing international fishery agreement". Each governing international fishery agreement shall acknowledge the exclusive fishery management authority of the United States, as set forth in this Act. It is the sense of the Congress that each such agreement shall include a binding commitment, on the part of such foreign nation and its fishing vessels, to comply with the following terms and conditions: Terms and conditions.

(1) The foreign nation, and the owner or operator of any fishing vessel fishing pursuant to such agreement, will abide by all regulations promulgated by the Secretary pursuant to this Act, including any regulations promulgated to implement any applicable fishery management plan or any preliminary fishery management plan.

(2) The foreign nation, and the owner or operator of any fishing vessel fishing pursuant to such agreement, will abide by the requirement that—

(A) any officer authorized to enforce the provisions of this Act (as provided for in section 311) be permitted— Post, p. 358.

(i) to board, and search or inspect, any such vessel at any time,

(ii) to make arrests and seizures provided for in section 311(b) whenever such officer has reasonable cause to believe, as a result of such a search or inspection, that any such vessel or any person has committed an act prohibited by section 307, and Post, p. 355.

(iii) to examine and make notations on the permit issued pursuant to section 204 for such vessel;

(B) the permit issued for any such vessel pursuant to section 204 be prominently displayed in the wheelhouse of such vessel;

(C) transponders, or such other appropriate position-fixing and identification equipment as the Secretary of the department in which the Coast Guard is operating determines

Secretary and the Secretary of State that such nation extends substantially the same fishing privileges to fishing vessels of the United States, if any, as the United States extends to foreign fishing vessels.

(g) PRELIMINARY FISHERY MANAGEMENT PLANS.—The Secretary, when notified by the Secretary of State that any foreign nation has submitted an application under section 204(b), shall prepare a preliminary fishery management plan for any fishery covered by such application if the Secretary determines that no fishery management plan for that fishery will be prepared and implemented, pursuant to title III, before March 1, 1977. To the extent practicable, each such plan— Post, p. 346.

(1) shall contain a preliminary description of the fishery and a preliminary determination as to the optimum yield from such fishery and the total allowable level of foreign fishing with respect to such fishery;

(2) shall require each foreign fishing vessel engaged or wishing to engage in such fishery to obtain a permit from the Secretary;

(3) shall require the submission of pertinent data to the Secretary, with respect to such fishery, as described in section 303(a)(5); and

(4) may, to the extent necessary to prevent irreversible effects from overfishing, with respect to such fishery, contain conservation and management measures applicable to foreign fishing which—

(A) are determined to be necessary and appropriate for the conservation and management of such fishery,

(B) are consistent with the national standards, the other provisions of this Act, and other applicable law, and

(C) are described in section 303(b)(2), (3), (4), (5), and (7).

Each preliminary fishery management plan shall be in effect with respect to foreign fishing for which permits have been issued until a fishery management plan is prepared and implemented, pursuant to title III, with respect to such fishery. The Secretary may, in accordance with section 553 of title 5, United States Code, also prepare and promulgate interim regulations with respect to any such preliminary plan. Such regulations shall be in effect until regulations implementing the applicable fishery management plan are promulgated pursuant to section 305. Regulations.

SEC. 202. INTERNATIONAL FISHERY AGREEMENTS. 16 USC 1822.

(a) NEGOTIATIONS.—The Secretary of State—

(1) shall renegotiate treaties as provided for in subsection (b);

(2) shall negotiate governing international fishery agreements described in section 201(c);

(3) may negotiate boundary agreements as provided for in subsection (d);

(4) shall, upon the request of and in cooperation with the Secretary, initiate and conduct negotiations for the purpose of entering into international fishery agreements—

(A) which allow fishing vessels of the United States equitable access to fish over which foreign nations assert exclusive fishery management authority, and

(B) which provide for the conservation and management of anadromous species and highly migratory species; and

(5) may enter into such other negotiations, not prohibited by subsection (c), as may be necessary and appropriate to further the purposes, policy, and provisions of this Act.

(b) TREATY RENEGOTIATION.—The Secretary of State, in cooperation with the Secretary, shall initiate, promptly after the date of enactment of this Act, the renegotiation of any treaty which pertains to fishing within the fishery conservation zone (or within the area that will constitute such zone after February 28, 1977), or for anadromous species or Continental Shelf fishery resources beyond such zone or area, and which is in any manner inconsistent with the purposes, policy, or provisions of this Act, in order to conform such treaty to such purposes, policy, and provisions. It is the sense of Congress that the United States shall withdraw from any such treaty, in accordance with its provisions, if such treaty is not so renegotiated within a reasonable period of time after such date of enactment.

(c) INTERNATIONAL FISHERY AGREEMENTS.—No international fishery agreement (other than a treaty) which pertains to foreign fishing within the fishery conservation zone (or within the area that will constitute such zone after February 28, 1977), or for anadromous species or Continental Shelf fishery resources beyond such zone or area—

(1) which is in effect on June 1, 1976, may thereafter be renewed, extended, or amended; or

(2) may be entered into after May 31, 1976;

by the United States unless it is in accordance with the provisions of section 201(e).

(d) BOUNDARY NEGOTIATIONS.—The Secretary of State, in cooperation with the Secretary, may initiate and conduct negotiations with any adjacent or opposite foreign nation to establish the boundaries of the fishery conservation zone of the United States in relation to any such nation.

(e) NONRECOGNITION.—It is the sense of the Congress that the United States Government shall not recognize the claim of any foreign nation to a fishery conservation zone (or the equivalent) beyond such nation's territorial sea, to the extent that such sea is recognized by the United States, if such nation—

(1) fails to consider and take into account traditional fishing activity of fishing vessels of the United States;

(2) fails to recognize and accept that highly migratory species are to be managed by applicable international fishery agreements, whether or not such nation is a party to any such agreement; or

(3) imposes on fishing vessels of the United States any conditions or restrictions which are unrelated to fishery conservation and management.

16 USC 1823.

SEC. 203. CONGRESSIONAL OVERSIGHT OF GOVERNING INTERNATIONAL FISHERY AGREEMENTS.

Transmittal to Congress.

(a) IN GENERAL.—No governing international fishery agreement shall become effective with respect to the United States before the close of the first 60 calendar days of continuous session of the Congress after the date on which the President transmits to the House of Representatives and to the Senate a document setting forth the text of such governing international fishery agreement. A copy of the document shall be delivered to each House of Congress on the same day and shall be delivered to the Clerk of the House of Representatives, if the House is not in session, and to the Secretary of the Senate, if the Senate is not in session.

(A) revoke such permit, with or without prejudice to the right of the foreign nation involved to obtain a permit for such vessel in any subsequent year;

(B) suspend such permit for the period of time deemed appropriate; or

(C) impose additional conditions and restrictions on the approved application of the foreign nation involved and on any permit issued under such application.

Any permit which is suspended under this paragraph for nonpayment of a civil penalty shall be reinstated by the Secretary upon the payment of such civil penalty together with interest thereon at the prevailing rate.

(c) REGISTRATION PERMITS.—The Secretary of State, in cooperation with the Secretary, shall issue annually a registration permit for each fishing vessel of a foreign nation which is a party to an international fishery agreement under which foreign fishing is authorized by section 201(b) and which wishes to engage in fishing described in subsection (a). Each such permit shall set forth the terms and conditions contained in the agreement that apply with respect to such fishing, and shall include the additional requirement that the owner or operator of the fishing vessel for which the permit is issued shall prominently display such permit in the wheelhouse of such vessel and show it, upon request, to any officer authorized to enforce the provisions of this Act (as provided for in section 311). The Secretary of State, after consultation with the Secretary and the Secretary of the department in which the Coast Guard is operating, shall prescribe the form and manner in which applications for registration permits may be made, and the forms of such permits. The Secretary of State may establish, require the payment of, and collect fees for registration permits; except that the level of such fees shall not exceed the administrative costs incurred by him in issuing such permits.

SEC. 205. IMPORT PROHIBITIONS. 16 USC 1825.

(a) DETERMINATIONS BY SECRETARY OF STATE.—If the Secretary of State determines that—

(1) he has been unable, within a reasonable period of time, to conclude with any foreign nation an international fishery agreement allowing fishing vessels of the United States equitable access to fisheries over which that nation asserts exclusive fishery management authority, as recognized by the United States, in accordance with traditional fishing activities of such vessels, if any, and under terms not more restrictive than those established under sections 201 (c) and (d) and 204 (b) (7) and (10), because such nation has (A) refused to commence negotiations, or (B) failed to negotiate in good faith;

(2) any foreign nation is not allowing fishing vessels of the United States to engage in fishing for highly migratory species in accordance with an applicable international fishery agreement, whether or not such nation is a party thereto;

(3) any foreign nation is not complying with its obligations under any existing international fishery agreement concerning fishing by fishing vessels of the United States in any fishery over which that nation asserts exclusive fishery management authority; or

(4) any fishing vessel of the United States, while fishing in waters beyond any foreign nation's territorial sea, to the extent that such sea is recognized by the United States, is seized by any foreign nation—

(A) in violation of an applicable international fishery agreement;

(B) without authorization under an agreement between the United States and such nation; or

(C) as a consequence of a claim of jurisdiction which is not recognized by the United States;

he shall certify such determination to the Secretary of the Treasury.

(b) PROHIBITIONS.—Upon receipt of any certification from the Secretary of State under subsection (a), the Secretary of the Treasury shall immediately take such action as may be necessary and appropriate to prohibit the importation into the United States—

(1) of all fish and fish products from the fishery involved, if any; and

(2) upon recommendation of the Secretary of State, such other fish or fish products, from any fishery of the foreign nation concerned, which the Secretary of State finds to be appropriate to carry out the purposes of this section.

(c) REMOVAL OF PROHIBITION.—If the Secretary of State finds that the reasons for the imposition of any import prohibition under this section no longer prevail, the Secretary of State shall notify the Secretary of the Treasury, who shall promptly remove such import prohibition.

(d) DEFINITIONS.—As used in this section—

(1) The term "fish" includes any highly migratory species.

(2) The term "fish products" means any article which is produced from or composed of (in whole or in part) any fish.

TITLE III—NATIONAL FISHERY MANAGEMENT PROGRAM

16 USC 1851.

SEC. 301. NATIONAL STANDARDS FOR FISHERY CONSERVATION AND MANAGEMENT.

(a) IN GENERAL.—Any fishery management plan prepared, and any regulation promulgated to implement any such plan, pursuant to this title shall be consistent with the following national standards for fishery conservation and management:

(1) Conservation and management measures shall prevent overfishing while achieving, on a continuing basis, the optimum yield from each fishery.

(2) Conservation and management measures shall be based upon the best scientific information available.

(3) To the extent practicable, an individual stock of fish shall be managed as a unit throughout its range, and interrelated stocks of fish shall be managed as a unit or in close coordination.

(4) Conservation and management measures shall not discriminate between residents of different States. If it becomes necessary to allocate or assign fishing privileges among various United States fishermen, such allocation shall be (A) fair and equitable to all such fishermen; (B) reasonably calculated to promote conservation; and (C) carried out in such manner that no particular individual, corporation, or other entity acquires an excessive share of such privileges.

(5) Conservation and management measures shall, where practicable, promote efficiency in the utilization of fishery resources; except that no such measure shall have economic allocation as its sole purpose.

From:
Fishery Management Plan for the Groundfish Fishery in the Bering Sea / Aleutian Island Area
by North Pacific Fishery Management Council
Nov., 1979

11.0 OPTIMUM YIELD (OY)

There are four categories of species and species groups (Annex VI) that are likely to be taken by the groundfish fishery of this region, to each of which the optimum yield concept is applied somewhat differently:

1. Prohibited Species -- those species and species groups which must be immediately returned to the sea by vessels operating in the groundfish fishery. Records of catch of each species must be maintained.

2. Target Species -- species and species groups which are commercially important, targeted upon by the groundfish fishery, and for which a sufficient data base exists that allows each to be managed on the basis of its own biological, social, economic, and ecological merits. A specific OY applies to each species or species group. Records of catch of each species must be maintained.

3. Other Species -- species and species groups which currently are of only slight economic value and not generally targeted upon. This category, however, contains species with economic potential or are important ecosystem components, but sufficient data is lacking to manage each separately. Accordingly, a single OY, equal to 5 percent of the combined OY's for the "Target Species", applies to this category as a whole. Records of catch of this category as a whole must be maintained.

4. Non-specified Species -- species and species groups of no current or foreseeable economic value and which are taken by the groundfish fishery only as an accidental bycatch to target fisheries. Virtually no data exists which would allow population assessments, but occasional records from U.S. observers aboard

ORIGINAL

foreign vessels and from U.S. research vessels show no noticeable decline in abundance. The OY for this category is that amount which is taken incidentally while fishing for target species, whether retained or discarded. No record of catch is necessary. (Note: If observer or enforcement records show that any species in this category is being actively targeted upon or that the abundance of any species is becoming substantially reduced, that species will be transferred to either the Target Species or Other Species category and subject to an absolute OY.)

With the expectation over the near term of only a modest domestic involvement in this fishery (see Section 12.0 below), and having identified no social or economic reasons for reducing the yield of stocks in this fishery below ABC, Optimum Yield for all but the "Non-specified" species will be considered equal to ABC, as shown in Annex I.

It should be noted, especially by foreign participants in the fishery, that such economic factors as higher catch rates or greater average size than can be expected when production is at the level of ABC, or limited seasonal availability to this fishery by domestic fishing vessels could be introducted as OY considerations if they are considered necessary for U.S. fishery development, and can be shown to not have an unreasonable impact on the U.S. consumer.

ORIGINAL

13.0 ALLOCATIONS BETWEEN FOREIGN AND DOMESTIC FISHERMEN

13.1 Reserve

As mentioned in Section 12.2 and Annex II, U.S. participation in the fishery in the near future is expected to consist of a relatively modest catch for crab bait and limited pilot efforts for foodfish production.

In order to prevent OY's from being exceeded without preventing unexpected domestic fishery development; i.e. an unanticipated increase in U.S. catching capability and intent, 500 mt or 5 percent of the OY (whichever is the greater) of each species will be held in reserve for allocation late in the year on the basis of domestic need. Specific reserve amounts are shown in Annex III.

Unless specifically withheld by the NMFS Regional Director acting with the advice of the Council, up to 25 percent of the reserve of each species will be released to TALFF every two months, beginning with the end of the second month of the fishing year, with the intention that by the end of the eighth month of the fishing year, all of the reserve will either be made available to foreign fishermen or reserved for domestic use.

13.2 Total Allowable Level of Foreign Fishing (TALFF)

The initial TALFF for each species shall be determined by the equation TALFF = OY - DAH - Reserve. TALFF may increase during the year as reserves are apportioned between domestic and foreign fishermen, or if after reassessment during the year it is found that not all of it will be used by U.S. processors and harvesters, DAH may be released to TALFF. Initial TALFF's are shown in Annex III. The estimation of DAH is shown in Annex II.

ANNEX III -- Derivation of Total Allowable Level of Foreign Fishing (TALFF) (Metric Tons)

Reference: Species group	Sub-area 1/	Annex I ABC = OY	Section 13.1 Reserve	Annex II Initial DAH	Initial TALFF
Pollock	Bering Sea	1,000,000	50,000	19,550	930,450
Pollock	Aleutian	100,000	3/	--	100,000
Yellowfin sole		117,000	5,850	2,050	109,100
Turbots		90,000	4,500	1,075	84,425
Other flatfishes 2/		61,000	3,050	1,300	56,650
Pacific cod		58,700	2,935	24,265	31,500
Pacific ocean perch	Bering Sea	3,250	162	1,380	1,708
Pacific ocean perch	Aleutian	7,500	375	1,380	5,745
Other rockfish		7,727	00	1,550	5,677
Sablefish	Bering Sea	3,500	350	700	2,450
Sablefish	Aleutian	1,500	150	700	650
Atka mackerel		24,800	1,240	100	23,460
Squid		10,000	500	50	9,450
Others		74,249	3,712	2,000	68,537
Total		1,559,226	73,324	56,100	1,429,802

*1/ BS Bering Sea (Statistical Areas I, II, III combined).

AL Aleutian Island Area (Statistical Area IV).

2/ Excluding Pacific halibut.

This OY calculated for the offshore pollock population in deep water is discussed in Annex I (p. A-13). No reserve is considered necessary at this time since there is little U.S. capability for a pelagic trawl fishery and resource abundance on the continental shelf is expected to keep any U.S. effort on that component identified as "B.Sea."

Includes territorial waters.

CSSB332 & HR18

GOLDEN NORTH BOWHUNTERS ASSOCIATION

BOX 254
Fairbanks, Alaska

CHARTERED BY: NATIONAL FIELD ARCHERY ASSOCIATION AND ALASKA STATE ARCHERY ASSOCIATION

March 20

Represtative Osterback
Pouch V
Juneau, Ak. 99811

Dear Mr. Osterback:

This letter is in opposition to CSSB332 now before your committee. Instead of locking up even more Alaska land, we feel our legislators should be providing more opportunities for all Alaskan's. The People of this state have had their fill of lock-ups, and to think this will be forgotten at election time would be a mistake. The members of the Golden North Bowhunters and other sportmen's groups will make sure it is not.

Instead of just opposing this bill, we are offering an alternative. We have a proposal before the Game Board to open the Pipeline Closed Area to archery only hunting. We ask you to consider this approach, then let the Board decide. We feel this would best suit the needs of all Alaskan's for additional recreation. First, an arrow would pose no danger to the Pipeline itself. Due to the inherent difficulties of bowhunting, the actual harvest is minimal. Anyone, young or old, male or female, can learn to shoot a bow. We are no more a "special interest group." than those who dip at Chitna or use fly fishing only areas. Almost all bowhunters hunt with a rifle also, especially here in Alaska. It is the challenge that attracts and holds bowhunters.

We ask you to check the harvest rates,(success is usually 2-4%) and other satistics available. In states that keep records, more deer are killed on the highways than by archers. This includes states with 3 or 4 month seasons. When comparing Alaska's low animal density to deer populations outside, even lower success would be expected.

Before you close the door, please take the time to check into these ideals. The bow and arrow was important to both the Alaska Native and other non-natives early in their history. It is a cultural heritage of all Alaskans.

Sincerely
Charles D Allen

5AAC 81.070 (Alaska Administrative Code No.) Regulation book page no. 15

Purpose of proposal TO OPEN THE TRANSALASKA PIPELINE CLOSED AREA TO ARCHERY ONLY HUNTING.

Suggested wording of Proposed Regulation (append if lengthy): BIG GAME MAY BE HUNTED ONLY WITH BOW AND ARROW IN THAT AREA KNOWN AS THE TRANSALASKA PIPELINE CLOSED AREA DURING SEASONS ESTABLISHED FOR THE GAME UNITS INVOLVED.

Justification: THIS PROPOSAL IS DESIGNED TO PROVIDE SPORT HUNTING OPPORTUNITIES ALONG THE PIPELINE CORRIDOR WHILE LIMITING THE AMOUNT OF GAME HARVESTED. DUE TO THE INHERENT DIFFICULTY OF BOWHUNTING, MAXIMUM RECREATIONAL DAYS CAN BE ENJOYED WITH MINIMUM IMPACT TO THE RESOURCE. THIS PROPOSAL RECOGNIZES THAT THE ORIGINAL CLOSURE WAS FOR AESTHETIC, NOT BIOLOGICAL REASONS. BOWHUNTING WOULD MAINTAIN THIS CONCEPT BY EMPHASIZING THE FREEDOM TO PARTICIPATE IN THE HUNTING EXPERIENCE, EVEN WHEN SUCCESS IS LOW, IN TERMS OF NUMBER OF ANIMALS TAKEN. THIS PROPOSAL WOULD MAINTAIN PIPELINE INTEGRITY, AS AN ARROW WOULD POSE NO THREAT TO THE STEEL PIPE.

CONFIDENTIAL

ALASKA COMMERCIAL OPERATORS
1978 ANNUAL REPORT

In accordance with Alaska Department of Fish and Game regulations, annual reports of purchase and/or commercial processing of raw fishery products for 1978 must be submitted to the Department no later than January 31, 1979. Please (1) accurately complete all applicable portions of these forms and (2) please return them in the prepaid envelope. If you did not process and/or buy fish in 1978, please state so on pages 1 and 9 and return those pages to this office.

As in the past we require a separate annual report for each plant location, floating cannery, or freezer ship. We would also like you to report all production separately for each company that does processing for you. Do not include joint or custom production that you do for other companies. Form A is for your own company's production and Form B is to be used for companies who do joint or custom production for you. Joint or custom production which you perform for other companies will not be reported on Form A or Form B as the company you did production for will be reporting that information on their own Form B.

Additional forms may be obtained by contacting:

State of Alaska
Department of Fish and Game
Subport Building
Juneau, Alaska 99801
Attn: Lori J. Svensson

or phone Ms. Lori J. Svensson
(907) 465-4150

Thank you for your cooperation.

December 15, 1978

Dear Processor:

Enclosed is your 1979 Intent To Operate form. In accordance with Alaska Department of Fish and Game Regulations, Intent To Operate forms must be filed with the Department before any commercial buying or processing operation for fishery resources can commence.

Please be sure to fill in your form or forms accurately and completely, and to file multiple forms if you will be operating in different areas of Alaska. Completed forms should be placed in the enclosed prepaid envelope(s) and returned to the Department by January 15, 1979. If you have any questions, please contact:

Alaska Department of Fish and Game
Computer Services Section
Subport Building
Juneau, Alaska 99801
Attn: Ms. Lori J. Svensson
Phone: 907-465-4150

Thank you.

Sincerely,

Carl L. Rosier

Ronald O. Skoog
Commissioner

STATE OF ALASKA DEPARTMENT OF FISH AND GAME

INTENT TO OPERATE 1979

I. COMPANY NAME AND ADDRESS:

If your address as listed is in error or missing, please print or type the correct company name and address below.

_____

_____

_____

II. GENERAL INFORMATION: Check the following type of operation for which you are filing this Intent to Operate form. Only one type of operation should be indicated. If you have more than one plant or buying location at which different species of fish or shellfish are bought and/or processed, additional forms must be filed, one for each location. Additional forms can be obtained by contacting the nearest Department of Fish and Game office.

THIS OPERATION IS: (check one only)

_____ Shore Base Buyer (only)

_____ Floating Cannery*

_____ Freezer Ship*

_____ Shore Based Fresh, Frozen, or Cured Processor

_____ Shore Based Cannery

_____ Fresh Processor

_____ Floating/Flying Buyer*

_____ Combination Cannery and Fresh, Frozen, or Cured Process

*If this is a floating operation, the following vessel information must be included. An Intent to Operate form must be filed for each vessel that buys or processes fishery resources.

Vessel Name: _____

Keel Length: _____ Net Tonage: _____

Intended area(s) of operation are: (i.e.: Southeastern, Bristol Bay, Kodiak, Chignik, Cook Inlet, etc.):

_____

Home Port: _____

If this form is for a shore based operation, please give the location of the plant or buying station:

_____

If any aircraft will be used in transporting raw or finished fishery products, please give the anticipated total number and types of aircraft that will be used:

_____

The Department receives many requests to publish a list of Alaskan commercial processors and/or buyers. Would you like your firm included in such a list? _____ Yes _____ No

III. SPECIES/PRODUCT INFORMATION; Please indicate what type of operation is involved in your processing of each of the species. For example, if you buy and freeze and smoke king salmon, your form should look like this:

Salmon:	Buyer	Cannery	Fresh	Frozen	Cured	(specify method)
King	X			X	X	smoked

SPECIES	TYPE OF OPERATION(S)					
Salmon:	Buyer	Cannery	Fresh	Frozen	Cured	(specify method)
King						
Red						
Coho						
Pink						
Chum						
Roe						
Shellfish:						
King crab						
Dungeness						
Tanner						
Shrimp						
Scallops						
Other(specify):						
Miscellaneous:						
Bait Herring						
Food Herring						
Sac Roe Herring						
Herring Roe On Kelp						
Halibut						
Sablefish (Black Cod)						
Pacific Cod						
Other Fish (specify):						

PLEASE RESPOND TO THE FOLLOWING QUESTIONS IN AS COMPLETE A MANNER AS POSSIBLE.

1. List the quantity and location of all your fish ticket imprinting machines.

Number	Location

2. Is your company name presently embossed on a plate for your machines? If so, please print company name and any other data on your present plates.

Plate embossed now?:

_____ Yes

_____ No

Information embossed on plates:

_____

_____

_____

3. If you do not ordinarily file an Annual Report, please list the name(s) and location(s) of the company(s) whose Annual Report(s) will include your catch information.

Company	Location

_____

_____

Name and title of person filling out this form: (Please print or type)

Name: _____

Signature: _____

Title: _____

Phone: _____

CONFIDENTIAL

ALASKA COMMERCIAL OPERATORS
1978 ANNUAL REPORT

FORM A - (Catch and Production Performed by Your Company, Exclusively for Your Company)

FORM A - This report should represent catch and production for only your company. Form A should be completed for each plant location. DO NOT include joint or custom production performed by you or for you in this report. Form B will be used to list all joint or custom production which was performed for your company by another company.

COMPANY NAME AND ADDRESS:

If it is in error or missing, please print or type the correct company name and address below:

_____

_____

_____

DID YOU PROCESS/BUY FISH IN 1978? _____ YES _____ NO

(If you checked YES, please complete the rest of this report. If you checked NO, please return only pages 1 and 9.)

1. TYPE OF OPERATION THIS REPORT COVERS (Check only one)

_____ Shore Based Buyer Only

_____ Floating or Flying Buyer Only

_____ Freezer Ship

_____ Combination Cannery, Fresh, Frozen and Cured

_____ Fresh Processor

_____ Shore Based Cannery

_____ Freezer Ship

_____ Other (describe) _____

_____

II. PLANT OR BUYING STATION INFORMATION: (Remember a separate report must be filed for each plant or buying location)

If this form is for a shore based operation, please give the location of the plant or buying station:

_____

Please give the number of employees at a season peak: _____

III. AIRCRAFT INFORMATION:

If any aircraft were used in transporting raw or processed fishery products, please give the total number and types of aircraft that were used.

_____

_____

_____

IV. VESSEL INFORMATION: (Only if this report is for a floating operation)

An Annual Report Form must be filed for each vessel that processes fishery resources, and for each area in which the vessel operated, e.g. if the vessel operated in the Kodiak area for part of the season and moved to the Bering Sea area, you must file separate reports for those operations.

Vessel Name: _____

Keel Length _____ Net Tonnage _____

Number of employees at season peak (crew) _____

Area(s) of operation were: (i.e. Southeastern, Bristol Bay, Kodiak, Chignik, etc.)

_____

_____

Home Port: _____

V. PRICE PAID TO FISHERMEN IN 1978:

If you purchased any raw fishery product you must complete this section.

Indicate the total amount paid to the fisherman, in dollars, including the value of any bonuses (e.g. cash, ice, fuel, groceries and so forth). Also indicate the total number of pounds purchased. The dollar value of any bonuses, if any, (not including the price paid for the fish alone), should be indicated separately in the space on the far right.

Salmon: The information for all species of salmon must be given by gear type. Please be careful to indicate your purchases under the proper gear.

Gear/Species	Total $ Paid (including bonus)	Total Pounds Purchased	Total $ Bonus
Troll:			
Kings	$ _____	lbs. _____	$ _____
Reds	_____	_____	_____
Coho	_____	_____	_____
Pinks	_____	_____	_____
Chums	_____	_____	_____
Gillnet:			
Kings	$ _____	lbs. _____	$ _____

_____	_____	_____	_____
_____	_____	_____	_____
_____	_____	_____	_____
_____	_____	_____	_____

VI. FRESH/FROZEN PRODUCTION: Salmon and Miscellaneous Fish

Fresh/frozen production is only that quantity of raw fishery products that were sold or held for the fresh/frozen market, NOT those fish that were frozen and then later canned, cured, etc.

Species	Fresh or Frozen (specify)	Total Net Weight	Total Wholesale Value
Kings	_____	lbs. _____	$ _____
Reds	_____	_____	_____
Cohos	_____	_____	_____
Pinks	_____	_____	_____
Chums	_____	_____	_____
Salmon Eggs/Roe	_____	_____	_____
Herring (Bait)	_____	_____	_____
Herring Fillets	_____	_____	_____
Herring Sac Roe	_____	_____	_____
Herring Roe on Kelp	_____	_____	_____
Halibut	_____	_____	_____
Sablefish (Black Cod)	_____	_____	_____
Pacific Cod (Grey Cod)	_____	_____	_____
Ling Cod	_____	_____	_____
Smelt	_____	_____	_____
Sheefish	_____	_____	_____
Whitefish	_____	_____	_____
Other Fish (specify)			
_____	_____	_____	_____
_____	_____	_____	_____
_____	_____	_____	_____
_____	_____	_____	_____
_____	_____	_____	_____

VI. FRESH/FROZEN PRODUCTION (continued): Shellfish

Species	Fresh or Frozen (specify)	Total Net Weight	Total Wholesale Value
King Crab/Whole	_____	_____ lbs.	$ _____
King Crab/Sections	_____	_____	_____
King Crab/Meat Only	_____	_____	_____
Dungeness/Whole	_____	_____	_____
Dungeness/Sections	_____	_____	_____
Dungeness/Meat Only	_____	_____	_____
Tanner/Whole	_____	_____	_____
Tanner/Sections	_____	_____	_____
Tanner/Meat Only	_____	_____	_____
Scallops	_____	_____	_____
Shrimp/Whole	_____	_____	_____
Shrimp/Tails	_____	_____	_____
Clams (Bait)	_____	_____	_____
Clams (Food)	_____	_____	_____
Abalone	_____	_____	_____
Other Shellfish(specify)			
_____	_____	_____	_____
_____	_____	_____	_____
_____	_____	_____	_____
_____	_____	_____	_____
_____	_____	_____	_____
_____	_____	_____	_____
_____	_____	_____	_____
_____	_____	_____	_____

VII. CANNED PRODUCTION:

The canned production must be given by can size for each species. For example, if you produced both ½ and 1 lb. canned king salmon there must be an entry for each can size.

Indicate <u>every</u> product that you canned. This includes <u>SALMON EGGS/ROE</u>, etc.

Species of Fish	Net Weight Can Size	SMK = Smoked CON = Conventional	Cans per Case	Total Number of Cases	Total Wholesale Value of Finished Product

VIII. MISCELLANEIOUS PRODUCTION:

Any type of fishery product not covered under the fresh/frozen or canned production categories must be entered here.

Species of Fish	Type of Production (Smoked-Kippered Pickled-Salted Reduction-Bait Meal-Oil-Etc.)	Total Net Weight of Product	Total Wholesale Value of Finished Product

IX. JOINT OR CUSTOM PRODUCTION:

Please list the processors for whom you do joint or custom production. DO NOT include that production anywhere in this report or in the report for Form B. It will be reported by the company who is having the production done for them.

Name Of Company You Do Processing For	Location Of Company

Comments: (Give any comments or additional information on this form)

I hereby certify that all information made on or in connection with this report is true and complete to the best of my knowledge and belief.

Signature: _____

Name & Title: (please print or type) _____

Phone: _____

INTRODUCTION

The statistics presented in this leaflet were compiled by the Computer Services Section of the Department of Fish and Game. This statistical leaflet is partially financed by the Commercial Fisheries Research and Development Act (P.L. 88-309 as amended), project number 5-34-D-3, contra number 04-6-208-41056. The data from which these statistics were calculated were obtained from the commercial fishing industry. Fish tickets, which are completed each time a commercial fisherman sells fish, are the department's source of catch data. The statistics shown in the catch tables (Part I) were summarized from approximately 30C,000 fish tickets completed in 1975. The production tables (Part II) were compiled from the 1975 Alaska Commercial Processors' Reports.

Weights listed in the catch tables (Part I) represent landed weights as reported to the Department on fish tickets. Values listed in the catch tables represent the value of the catch to the fishermen (dollars paid to the fishermen). All catch statistics are presented by region or area of catch, except halibut which is reported by region of landing. The production tables (Part II) present the weights of the finished products and their wholesale values (value to the processors). All production statistics are presented by region or area where the processing took place. Due to intrastate shipment of the catch before processing, the production statistics for a given area will not necessarily reflect the catch for that area.

TOTAL COMPANIES 2)		41	71	74	186
NUMBER EMPLOYEES 3)		1,746	4,542	3,659	9,947

1) Totals adjusted to eliminate duplication caused by floating processors operating in two or more regions and by individual plants processing more than one species of fish and/or shellfish and/or producing more than one type of product.
2) Adjusted for companies having more than one plant.
3) Represents employees in processing and excludes fishermen.

TABLE 14 - 1975 Summary of Production with Wholesale Values

IN THE SENATE BY THE RULES COMMITTEE

CS FOR SENATE BILL NO. 51 (Rules)

IN THE LEGISLATURE OF THE STATE OF ALASKA

ELEVENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act relating to the confidential nature of certain reports required by the Department of Fish and Game."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 16.05.815 is repealed and re-enacted to read:

Sec. 16.05.815. CONFIDENTIAL NATURE OF CERTAIN RECORDS. Reports required by regulations of the department concerning the landing of fish, shellfish, or fishery products, and annual statistical reports of buyers and processors required by regulations of the department, insofar as they are in the form of individual records, are confidential. A report may be released to the individual operator whose fishing activity is the subject of the report and to the National Marine Fisheries Service as required for preparation and implementation of North Pacific Fisheries Management Council fishery management plans, and to the legislative auditor, the Department of Revenue and the Commercial Fisheries Entry Commission to assist them in carrying out their statutory responsibilities. Reports which do not identify individual fishermen, buyers, or processors may also be released to the University of Alaska and to the Department of Commerce and Economic Development in conjunction with research and statistics projects. However, the commissioner may not release a report if he determines that to do so would abuse the intent of this section, and he may limit or condition any release to insure that confidentiality is maintained. Confidential reports held by the department, or received from the department by the agencies and organizations mentioned in this section, may not be communicated or distributed

in the form of individual records to any other agency, organization, or individual unless required by a court order signed by a superior court judge.

Editor's note. — The repealed section derived from § 6, ch. 75, SLA 1964.

Legislative committee report. — For report on ch. 32, SLA 1968 (HCSCSSB 50 am), see 1968 House Journal, p. 169.

Sec. 16.05.800. Public nuisances. A net, seine, lantern, snare, device, contrivance, and material while in use, had and maintained for the purpose of catching, taking, killing, attracting, or decoying fish or game, contrary to law or regulation of a board or the commissioner, is a public nuisance and is subject to abatement. (§ 25 art I ch 94 SLA 1959; am § 5 ch 131 SLA 1960; am § 13 ch 206 SLA 1975)

Effect of amendment. — The 1975 amendment substituted "a board" for "the board."

Sec. 16.05.810. Burden of proof. The possession of fish, or game or a part of fish or game, or a nest or egg of a bird during the time the taking of it is prohibited is prima facie evidence that it was taken, possessed, bought, or sold or transported in violation of this chapter. The burden of proof is upon the possessor or claimant of it to overcome the presumption of illegal possession and to establish the fact that it was obtained and is possessed lawfully. This section does not apply

(1) during the first full 10 days after the time when a taking is prohibited, except as provided in (3) of this section,

(2) if the fish or game or part of fish or game is in a preserved condition whether frozen, smoked, canned, salted, pickled or otherwise preserved, or

(3) with respect to crab aboard a commercial crab fishing vessel, during the first full three days after the time when a taking is prohibited (§ 26 art I ch 94 SLA 1959; am § 1 ch 42 SLA 1974)

Effect of amendment. — The 1974 amendment added "except as provided in (3) of this section" to the end of clause (1) and added clause (3).

Sec. 16.05.815. Confidential nature of certain reports. Reports required by regulations of the department concerning the landings of fish, shellfish or fishery products, and annual statistical reports of buyers and processors required by regulation of the department are confidential and shall not be released in the form of individual records by the department except to the Department of Revenue and to the Commercial Fisheries Entry Commission, or in conformity with a court order. (§ 1 ch 117 SLA 1970; am § 1 ch 117 SLA 1974)

Effect of amendment. — The 1974 amendment inserted "and to the Commercial Fisheries Entry Commission" and deleted "except" preceding "in conformity with a court order" near the end of the section.

SOUTHEASTERN ALASKA

FOR THE WEEK ENDING SEPTEMBER 24, 1978
FALL CHUM RETURNS TO PURSE SEINE DISTRICTS ARE STILL BELOW NORMAL AND NO PURSE SEINE FISHERIES WERE OPEN FOR THE WEEK. THE LYNN CANAL DRIFT GILLNET CHUM CATCH IS 30% BELOW THE 10-YEAR CUMULATIVE AVERAGE. THERE WAS A HEAVY EFFORT FOR A ONE DAY OPENING IN THE CANAL. TAKU WAS CLOSED DUE TO THE POOR CHUM RUN.
STIKINE AND PRINCE OF WALES AREAS WERE OPEN 2 DAYS TO HARVEST THE COHO RUN. THE PORTLAND CANAL WAS OPEN 3 DAYS, WITH ONLY THREE VESSELS FISHING.

PRINCE WILLIAM SOUND

FOR THE WEEK ENDING SEPTEMBER 24, 1978-
THE TOTAL CUMULATIVE COHO CATCH IN BOTH THE COPPER RIVER AND BERING RIVER DISTRICTS IS THE HIGHEST SINCE 1971. ESCAPEMENTS APPEAR TO BE GOOD.

COOK INLET

NO NARRATIVE THIS WEEK.

BRISTOL BAY

NO NARRATIVE THIS WEEK.

ARCTIC-YUKON-KUSKOKWIM

FOR THE WEEK ENDING SEPTEMBER 24, 1978-
THE PERIOD ENDING 9/24 MARKED THE END OF THE COMMERCIAL SALMON SEASON IN 1978 FOR THE UPPER YUKON. THE COMMERCIAL FALL CHUM AND COHO QUOTAS WERE TAKEN IN BOTH SUBDISTRICTS 5 AND 6 DURING THE PAST WEEK, AND BOTH WERE CLOSED ACCORDINGLY. THE CATCH FOR THIS WEEK WAS TAKEN IN ONLY 48 HOURS OF FISHING.
THE FALL CHUM/COHO RUN IN THE TANANA RIVER APPEARS TO HAVE BEEN AT OR ABOVE AVERAGE. THE PERCENTAGE OF COHO TAKEN COMMERCIALLY WAS WELL ABOVE AVERAGE, PERHAPS BECAUSE THE FALL CHUM RUN WAS LATE THIS

3/29/79 - Do Pass as HCSSB 71

4/9/79 - Re-referred to Resources

Waived referral 4/26/79

January 23, 1979

The Honorable Clem Tillion
President of the Senate
Alaska State Legislature
Juneau, Alaska 99811

Dear Mr. President:

Under the authority of art. III, sec. 18, of the Alaska Constitution, I am transmitting a bill relating to the issuance of free licenses to persons who are 60 years of age or more and who have been residents for 30 years of more.

Existing law provides for a license exemption for these persons with respect to hunting, trapping, and sport fishing licenses. However, since no license is required, there is no easy means for fish and wildlife protection officers to distinguish, in the field, between those who fall under the exemption and those who have simply failed to purchase required licenses. This legislation would provide for the issuance of licenses without fee to eliminate this enforcement problem. I urge enactment of this legislation.

Sincerely,

S/JSH

Jay S. Hammond
Governor

(SB71 carries a Zero fiscal impact)

SENATE RESEARCH CENTER

April 5, 1979

Representative Alvin Osterback
House of Representatives
Pouch V
Juneau, Alaska 99811

Dear Sir:

I have researched your question on fish privilege fee and landing taxes and I believe that RCW 75.32.033(2) answers your question. For your convenience, I have enclosed a copy of the entire chapter of Washington law, including RCW 75.32.033, that deals with privilege fees. No major changes to these laws are now being considered by the Washington Legislature. Please contact me if I can be of any further service in this matter.

Sincerely,

Brian Edie

101 SENATE OFFICE BUILDING OLYMPIA, WASHINGTON 98504 TELEPHONE (206) 753-6828

SUBSTITUTE SENATE BILL NO. 2368

State of Washington
46th Regular Session

By Committee on Natural Resources
(Originally sponsored by
Senators Newschwander, Bausch
and Odegaard)

Read first time February 22, 1979, and passed to second reading.

AN ACT Relating to revenue; amending section 75.32.030, chapter 12, Laws of 1955 as last amended by section 20, chapter 327, Laws of 1977 ex. sess. and RCW 75.32.030; and amending section 75.32.080, chapter 12, Laws of 1955 as amended by section 27, chapter 327, Laws of 1977 ex. sess. and RCW 75.32.080.

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF WASHINGTON:

Section 1. Section 75.32.030, chapter 12, Laws of 1955 as last amended by section 20, chapter 327, Laws of 1977 ex. sess. and RCW 75.32.030 are each amended to read as follows:

Canners, curers, freezers, wholesale dealers and retail dealers of food fish and shellfish, other than oysters, and manufacturers of food fish and shellfish byproducts, other than oyster byproducts, but not including any person with respect to the growing, processing or dealing in any manner with food fish which are raised from eggs or fry, and are under the physical control of the grower at all times until being sold or harvested, (1) shall pay a privilege fee equal to five percent of the primary market value on all fresh or frozen chinook, coho, and chum salmon, or parts thereof, which they receive, handle, deal in, or deal with as original receiver in the state; (2) shall pay a privilege fee equal to three percent of the primary market value on all fresh or frozen pink and sockeye salmon, or parts thereof, which they receive, handle, deal in, or deal with as original receiver in the state; and (3) shall pay a privilege fee equal to two percent of the primary market value on all other fresh or frozen food fish and shellfish, or parts thereof, except oysters, which they receive, handle, deal in or deal with, as original receiver in the state: PROVIDED, That any person or sales agency selling fresh or frozen food

fish or shellfish, or parts thereof, to purchasers of food fish or shellfish residing outside the state of Washington which had been previously landed in the state, shall be responsible for and shall pay the privilege fees herein provided.

Sec. 2. Section 75.32.080, chapter 12, Laws of 1955 as amended by section 27, chapter 327, Laws of 1977 ex. sess. and RCW 75.32.080 are each amended to read as follows:

The fish sales tax provided for herein shall be deducted from the payments made by the original receiver to the person selling the food fish or shellfish to the original receiver, and the original receiver shall collect the taxes and remit them to the director.

"Original receiver" means the person first receiving, handling, dealing in, or dealing with the fresh or frozen food fish or shellfish within the jurisdiction of the state of Washington as a canner, curer, freezer, retail dealer, wholesale dealer, byproducts manufacturer, or branch plant. A person furnishing such services who has no ownership or interest in the fresh or frozen food fish or shellfish, other than a lien for services furnished, shall not be classified as an "original receiver", and the person shall not be subject to the fish sales taxes or privilege fee taxes after the effective date of this 1979 act.

SUBSTITUTE SENATE BILL NO. 2388

State of Washington
46th Regular Session

By Committee on Natural Resources
(originally sponsored by
Senators Newschwander, Rausch
and Odegaard)

Read first time February 22, 1979, and passed to second reading.

AN ACT Relating to revenue; amending section 75.32.030, chapter 12, Laws of 1955 as last amended by section 20, chapter 327, Laws of 1977 ex. sess. and RCW 75.32.030; and amending section 75.32.080, chapter 12, Laws of 1955 as amended by section 27, chapter 327, Laws of 1977 ex. sess. and RCW 75.32.080.

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF WASHINGTON:

Section 1. Section 75.32.030, chapter 12, Laws of 1955 as last amended by section 20, chapter 327, Laws of 1977 ex. sess. and RCW 75.32.030 are each amended to read as follows:

Canners, carers, freezers, wholesale dealers and retail dealers of food fish and shellfish, other than oysters, and manufacturers of food fish and shellfish byproducts, other than oyster byproducts, but not including any person with respect to the growing, processing or dealing in any manner with food fish which are raised from eggs or fry, and are under the physical control of the grower at all times until being sold or harvested, (1) shall pay a privilege fee equal to five percent of the primary market value on all fresh or frozen chinook, coho, and chum salmon, or parts thereof, which they receive, handle, deal in, or deal with as original receiver in the state; (2) shall pay a privilege fee equal to three percent of the primary market value on all fresh or frozen pink and sockeye salmon, or parts thereof, which they receive, handle, deal in, or deal with as original receiver in the state; and (3) shall pay a privilege fee equal to two percent of the primary market value on all other fresh or frozen food fish and shellfish, or parts thereof, except oysters, which they receive, handle, deal in or deal with, as original receiver in the state: PROVIDED, That any person or sales agency selling fresh or frozen food

licenses by issuing such licenses only to those boats whose owners can prove by means of good and sufficient documentary evidence that the boat was licensed pursuant to RCW 75.28.095 between January 1, 1974, and January 1, 1977. No charter boat shall be entitled to more than one charter boat license.

Such boats shall be entitled to receive and renew the charter boat license for each year during the period from May 28, 1977 through December 31, 1980. A charter boat license for which no application is made to the department or which is not renewed in any year automatically expires and shall not be renewed further.

Nothing herein shall be construed to be contrary to the provisions of Title 75 RCW or any rule promulgated thereunder. All such charter boat licenses shall be transferable. [1977 1st ex.s. c 106 § 2.]

RCW 75.30.030 Charter boats under construction or purchased between April 16, 1976 and May 28, 1977. In addition to the charter boat licenses issued pursuant to RCW 75.30.020, the department shall issue a charter boat license to any charter boat which was under construction or purchased in good faith between April 16, 1976, and May 28, 1977. [1977 1st ex.s. c 106 § 3.]

RCW 75.30.040 Duty of department to evaluate and recommend phase II approach. On and after May 28, 1977, the department, in cooperation with representatives of the charter boat industry, shall continually evaluate the provisions of RCW 75.30.010, 75.30.020, and 75.30.030 and recommend to the legislature prior to January 1, 1980, a phase II approach to regulate gear entry into this state's charter boat fishery. [1977 1st ex.s. c 106 § 4.]

RCW 75.30.050 Advisory board of review. The director shall appoint a three member advisory board of review to hear cases as provided in RCW 75.30.060. The members of such review board shall be nominated by the charter boat fishing industry, shall serve without pay, and shall serve at the discretion of the director of

the department of fisheries. The members of such review board shall be reimbursed for travel expenses as provided in RCW 43.03.050 and 43.03.060 as now existing or hereafter amended. The director may promulgate rules concerning the operation of such review boards in accordance with chapter 34.04 RCW. [1977 1st ex.s. c 106 § 5.]

RCW 75.30.060 Hearings. Any person aggrieved by a decision of the department made pursuant to the terms of this chapter may voluntarily request that a board of review be impaneled to hear such person's case.

The board of review may make such other recommendations and determinations as are consistent with the terms of this chapter.

Hearings before review boards shall be informal, the rules of evidence shall not be applicable to the proceedings, and the records shall be kept thereof as provided by chapter 34.04 RCW. After the presentation of a case each review board shall inform the director and the initiating party in writing concerning whether or not the review board recommends that the charter boat license be issued and the reason for such recommendation. Upon receipt of the review board's findings the director may order such relief as the director deems appropriate under the circumstances.

Nothing in this section shall be construed: (1) To impair an aggrieved person's right to proceed under chapter 34.04 RCW; or (2) to impose any liability on members of a review board for their action pursuant to this section. [1977 1st ex.s. c 106 § 6.]

Chapter 75.32 RCW
PRIVILEGE FEES AND FISH SALES TAXES

Sections

75.32.001 "Primary market value" defined.
75.32.003 "Food fish and shellfish" includes parts.
75.32.020 Privilege fees and fish sales taxes required.

75.32.030	Canners, processors, dealers——Privilege fees.
75.32.033	Credits against privilege fees owed under RCW 75.32.030.
75.32.035	Rules as to proof required for credits claimed under RCW 75.32.033.
75.32.051	Oyster canners, processors, dealers——Privilege fee.
75.32.055	Fish sales tax——Imposed——Rates——Exemptions.
75.32.065	Payment of privilege fees and fish sales tax——Food fish or shellfish handled by original receivers——Sales to nonresident purchasers.
75.32.080	Collection of fish sales tax by original receiver——"Original receiver" defined.
75.32.090	When privilege fees and fish sales taxes due and payable——Returns.
75.32.101	Delinquent payments——Penalties——Interest——Lien——Date of filing governed by postmark.
75.32.110	Director may make rules, etc., to insure payment of fees and taxes.
75.32.115	Audits——Rules and procedures.
75.32.120	Penalty for violations.
75.32.130	Director may require bond after wilful violation——License revocation for failure.

RCW 75.32.001 "Primary market value" defined. "Primary market value" as used in this chapter means the ex-vessel price paid by the purchasers of food fish and shellfish to the seller at the point where ownership or title to the food fish or shellfish passes. [1965 ex.s. c 71 § 1.]

RCW 75.32.003 "Food fish and shellfish" include parts. As used in this chapter, the terms food fish and shellfish also include parts of food fish and shellfish. [1977 1st ex.s. c 327 § 25.]

Severability——Effective date——1977 1st ex.s. c 327: See notes following RCW 75.18.100.

RCW 75.32.020 Privilege fees and fish sales taxes required. In addition to all other taxes, licenses or fees

provided by law there shall be paid to the state of Washington by those engaged in the fishing industry in this state the privilege fees and fish sales taxes as provided for in this chapter. [1977 1st ex.s. c 327 § 19; 1955 c 12 § 75.32.020. Prior: 1949 c 107 § 1, part; Rem. Supp. 1949 § 5780-60, part.]

Severability——Effective date——1977 1st ex.s. c 327: See notes following RCW 75.18.100.

RCW 75.32.030 Canners, processors, dealers——Privilege fees. Canners, curers, freezers, wholesale dealers and retail dealers of food fish and shellfish, other than oysters, and manufacturers of food fish and shellfish byproducts, other than oyster byproducts, (1) shall pay a privilege fee equal to five percent of the primary market value on all fresh or frozen chinook, coho, and chum salmon, or parts thereof, which they receive, handle, deal in, or deal with as original receiver in the state; (2) shall pay a privilege fee equal to three percent of the primary market value on all fresh or frozen pink and sockeye salmon, or parts thereof, which they receive, handle, deal in, or deal with as original receiver in the state; and (3) shall pay a privilege fee equal to two percent of the primary market value on all other fresh or frozen food fish and shellfish, or parts thereof, except oysters, which they receive, handle, deal in or deal with, as original receiver in the state: *Provided*, That any person or sales agency selling fresh or frozen food fish or shellfish, or parts thereof, to purchasers of food fish or shellfish residing outside the state of Washington which had been previously landed in the state, shall be responsible for and shall pay the privilege fees herein provided. [1977 1st ex.s. c 327 § 20; 1963 ex.s. c 10 § 1; 1955 c 212 § 12; 1955 c 12 § 75.32.030. Prior: 1953 c 207 § 6; 1951 c 271 § 34; 1949 c 107 § 1(1); Rem. Supp. 1949 § 5780-60(1).]

Severability——Effective date——1977 1st ex.s. c 327: See notes following RCW 75.18.100.

RCW 75.32.033 Credits against privilege fees owed under RCW 75.32.030. The following amounts may be credited against the amount of privilege fees owed under RCW 75.32.030 by a canner, curer, dealer, freezer, or manufacturer:

(1) In respect to each transaction in which the fish sales tax is collected pursuant to RCW 75.32.080, as now or hereafter amended, and a privilege fee is owed, the amount of the sales tax collected shall be credited against such privilege fee.

(2) Any sales tax, catch tax, landing tax, or other tax or fee on food fish or shellfish, or parts thereof, purchased by an original receiver, as defined in RCW 75.32.080, as now or hereafter amended, in another state and imposed on the receiver by such state shall be credited against the amount of privilege fees owed in respect to such food fish or shellfish, or parts thereof. [1977 1st ex.s. c 327 § 23.]

Severability——Effective date——1977 1st ex.s. c 327: See notes following RCW 75.18.100.

RCW 75.32.035 Rules as to proof required for credits claimed under RCW 75.32.033. The director shall adopt rules specifying the proof required for credits claimed under RCW 75.32.033 and the manner in which the credits shall be taken. [1977 1st ex.s. c 327 § 24.]

Severability——Effective date——1977 1st ex.s. c 327: See notes following RCW 75.18.100.

RCW 75.32.051 Oyster canners, processors, dealers——Privilege fee. Canners, curers, freezers, wholesale dealers and retail dealers of oysters, and manufacturers of oyster byproducts, shall pay a privilege fee equal to one cent per gallon or bushel on Pacific oysters, and six and one-half cents per gallon or bushel on Olympia oysters, New Washington oysters, or Kumamoto oysters which they receive, handle, deal in, or deal with as original receiver in this state: *Provided*, That any person or sales agency selling fresh or

frozen oysters, or parts thereof, previously taken in the state to purchasers of food fish or shellfish residing outside the state of Washington, shall be responsible for and shall pay the privilege taxes herein provided. [1977 1st ex.s. c 327 § 21; 1955 c 212 § 13.]

Severability——Effective date——1977 1st ex.s. c 327: See notes following RCW 75.18.100.

RCW 75.32.055 Fish sales tax——Imposed——Rates——Exemptions. (1) Except as provided in subsection (2) of this section, there is hereby imposed a fish sales tax on the privilege of selling food fish or shellfish, or parts thereof, to an original receiver as defined in RCW 75.32.080, as now or hereafter amended. The tax shall be as follows:

(a) Two and one-half percent of the primary market value on all fresh or frozen chinook, coho, and chum salmon, or parts thereof;

(b) One and one-half percent of the primary market value on all fresh or frozen pink and sockeye salmon, or parts thereof;

(c) One percent of the primary market value on all other fresh or frozen food fish and shellfish, or parts thereof.

(2) The sales tax prescribed in this section shall not apply to sales of shellfish, or parts thereof, taken from a licensed oyster or clam farm or to sales of food fish or shellfish, or parts thereof, taken from a licensed fish farm. [1977 1st ex.s. c 327 § 22.]

Severability——Effective date——1977 1st ex.s. c 327: See notes following RCW 75.18.100.

RCW 75.32.065 Payment of privilege fees and fish sales tax——Food fish or shellfish handled by original receivers——Sales to nonresident purchasers. (1) The privilege fees and fish sales taxes provided for in this chapter shall be paid on all fresh or frozen food fish or shellfish handled by the original receivers regardless of where the fish or shellfish were caught: *Provided*, That no fee or tax shall be paid on frozen food fish or frozen

shellfish or on food fish or shellfish which has been packaged for retail sales and that has been previously landed in another state, territory, or country.

(2) Any person or sales agency selling fresh or frozen food fish or shellfish previously landed in this state to purchasers of food fish or shellfish residing outside this state shall be responsible for and shall pay the privilege fees and fish sales taxes. [1977 1st ex.s. c 327 § 26.]

Severability——Effective date——1977 1st ex.s. c 327: See notes following RCW 75.18.100.

RCW 75.32.080 Collection of fish sales tax by original receiver——"Original receiver" defined. The fish sales tax provided for herein shall be deducted from the payments made by the original receiver to the person selling the food fish or shellfish to the original receiver, and the original receiver shall collect the taxes and remit them to the director.

"Original receiver" means the person first receiving, handling, dealing in, or dealing with the fresh or frozen food fish or shellfish within the jurisdiction of the state of Washington as a canner, curer, freezer, retail dealer, wholesale dealer, byproducts manufacturer, or branch plant. [1977 1st ex.s. c 327 § 27; 1955 c 12 § 75.32.080. Prior: 1953 c 207 § 8; 1951 c 271 § 36; 1949 c 107 § 1(5), part; Rem. Supp. 1949 § 5780–60(5), part.]

Severability——Effective date——1977 1st ex.s. c 327: See notes following RCW 75.18.100.

RCW 75.32.090 When privilege fees and fish sales taxes due and payable——Returns. The privilege fees and fish sales taxes herein provided for are due and payable in quarterly installments, and the fees and taxes accruing during each quarterly period shall become due on the first day of the month immediately following the end of the quarterly period, and shall be paid on or before the last day of that month. The following shall constitute the quarterly periods to be utilized:

(1) January, February, March;
(2) April, May, June;
(3) July, August, September;
(4) October, November, December.

On or before the day payment is required as provided above, the person paying the privilege fees and fish sales taxes to the department shall prepare a return under oath upon such forms and setting forth such information as the director may require, and transmit the same to the director together with a remittance for the fees and taxes which are due. Any person that is subject at any time of the year to the privilege fee provisions set forth in this chapter shall file a return each quarter of the year showing whether or not any fees or taxes are due. [1977 1st ex.s. c 327 § 28; 1967 c 193 § 1; 1963 ex.s. c 9 § 1; 1955 c 12 § 75.32.090. Prior: 1949 c 107 § 2; Rem. Supp. 1949 § 5780–61.]

Severability——Effective date——1977 1st ex.s. c 327: See notes following RCW 75.18.100.

RCW 75.32.101 Delinquent payments——Penalties——Interest——Lien——Date of filing governed by postmark. In the event payment of fees and taxes provided for under this chapter is not received by the fifteenth day of the month in which the fees and taxes become due, the fees and taxes shall become delinquent and the schedule of penalties stated below shall be invoked. A return or remittance which is transmitted to the director by United States mail shall be deemed filed or received on the date shown by the post office cancellation mark stamped upon the envelope containing it. The following shall be the schedule of penalties to be assessed for delinquent payments of such fees and taxes:

(1) Sixteen through thirty days after due date——Add ten percent of total fees and taxes due but not less than one dollar.

(2) Thirty-one through sixty days after due date——Add twenty percent of total fees and taxes due but not less than two dollars.

(3) Sixty-one through ninety days after due date——Add twenty-five percent of total fees and taxes due but not less than three dollars.

(4) Ninety-one days or more after due date——Add twenty-five percent of total fees and taxes due (but not less than three dollars) plus eight percent interest per annum computed on the sum of the total fees and taxes due and the percentage penalty.

The delinquent fees and taxes together with the applicable penalties and accrued interest thereon shall constitute a first lien upon the cannery, packing plant, buildings, scows, boats, vehicles and other equipment used by the person or business owing the fees and taxes in the taking, handling, dealing in, dealing with, or processing of food fish or shellfish. [1977 1st ex.s. c 327 § 29; 1963 ex.s. c 9 § 2.]

Severability——Effective date——1977 1st ex.s. c 327: See notes following RCW 75.18.100.

RCW 75.32.110 Director may make rules, etc., to insure payment of fees and taxes. The director shall have the authority to promulgate such rules, regulations, and orders, and to require such reports as in his judgment shall be necessary to insure the payment of the fees and taxes herein required. [1977 1st ex.s. c 327 § 30; 1955 c 12 § 75.32.110. Prior: 1949 c 107 § 4; Rem. Supp. 1949 § 5780-63.]

Severability——Effective date——1977 1st ex.s. c 327: See notes following RCW 75.18.100.

RCW 75.32.115 Audits——Rules and procedures. The department or its designee may audit any original receiver as defined in RCW 75.32.080, as now or hereafter amended, for the purpose of assuring the collection of privilege fees and fish sales taxes provided for in this chapter, or for the purpose of collecting unpaid fees and taxes. The director may adopt rules and procedures to govern the collection of any fees and taxes under this chapter. [1977 1st ex.s. c 327 § 31.]

Severability——Effective date——1977 1st ex.s. c 327: See notes following RCW 75.18.100.

RCW 75.32.120 Penalty for violations. In event any person wilfully violates the provisions of this chapter, or any of the rules, regulations, or orders of the director made pursuant to this chapter, he is guilty of a gross misdemeanor and subject to a fine, or imprisonment, or both. [1955 c 12 § 75.32.120. Prior: 1949 c 107 § 5; Rem. Supp. 1949 § 5780-64.]

RCW 75.32.130 Director may require bond after wilful violation——License revocation for failure. In event any person wilfully violates any of the provisions of this chapter or the rules, regulations, and orders of the director made pursuant to the provisions of this chapter, the director shall have the authority to require such person to post a bond, in an amount not to exceed five thousand dollars, conditioned upon his faithful performance of the provisions of the chapter and the rules, regulations, and orders of the director made pursuant to this chapter, and in event such person fails to post such a bond within thirty days after the same is demanded by the director, the director shall forthwith cancel and revoke any license or licenses to engage in the fishing industry that such person was theretofore issued by the state of Washington. [1955 c 12 § 75.32.130. Prior: 1949 c 107 § 6; Rem. Supp. 1949 § 5780-65.]

Chapter 75.36 RCW
SEIZURE AND FORFEITURE OF PROPERTY FOR VIOLATIONS

Sections

75.36.010 Seizure of property without warrant——Where authorized——Deposit of cash bond in lieu.

CHAPTER 155

AN ACT

Relating to shared taxes; amending Subsec. (C), Sec. 35.4.17, ACLA 1949, as last amended by Sec. 2, Ch. 197, SLA 1959; amending Sec. 43.3.6, ACLA 1949, as last amended by Sec. 6, Ch. 142, SLA 1960; amending Sec. 6, Ch. 116, SLA 1949, as last amended by Ch. 53, SLA 1951; amending Ch. 43, SLA 1949; repealing Ch. 66, SLA 1953; and providing for an effective date.

(2nd S.C.S.H.B. 122)

Be It enacted by the Legislature of the State of Alaska:

Section 1. Subsec. (C), Sec. 35.4.17, ACLA 1949, as last amended by Sec. 2, Ch. 197, SLA 1959, is amended to read:

(C) Disposition of Funds. All moneys collected or due the state for licenses under the provisions of this Act shall be deposited with the commissioner of revenue and covered into the general fund; all such moneys derived from the licenses issued excluding wholesale licenses within incorporated boroughs and all classes of cities shall be refunded semi-annually to said organized boroughs and all classes of cities; provided, however, that in the event of the failure of the officers of said organized boroughs and all classes of cities to actively enforce all of their ordinances, the law of the United States, the Laws of the State of Alaska, and those regulations relative to the manufacture and sale of intoxicating liquors in the State of Alaska, the commissioner of revenue may deny said refund and no further moneys will be paid to said local government units until the enforcement of such laws and regulations is actively resumed within them.

Sec. 2. Sec. 43.3.6, ACLA 1949, as last amended by Sec. 6, Ch. 142, SLA 1960, is amended to read:

Sec. 43.3.6. Distribution of Tax. One-half of the proceeds of the gross revenue from the tax herein provided, excluding distributors' fees, penalties, and less the amount duly determined to have been spent by the state in its collection, shall be refunded to organized boroughs and cities of the first, second, and third classes by action of the legislature in the proportion that such revenue was earned within them, and the balance shall be retained by the state and covered into its general fund.

Sec. 3. Sec. 6, Ch. 116, SLA 1949, as last amended by Ch. 53, SLA 1951, is amended to read:

Sec. 6. 75 percent of the tax on mechboards collected from sales thereof within organized boroughs and cities of the first, second, and third classes shall be refunded to such local government units, and the balance shall be deposited in the general fund of the State of Alaska.

Sec. 4. Sec. 11, Ch. 44, SLA 1949, is amended to read:

Sec. 11. Disposal of Money. All moneys collected by the commissioner of revenue under this Act shall be covered into the general fund of the state, provided, that the commissioner of revenue shall refund to organized boroughs and all classes of cities, incorporated and independent school districts, and public utility districts 50 percent of all such money collected from within said local government units.

Sec. 5. Ch. 66, SLA 1953, is repealed.

Sec. 6. The commissioner of revenue shall pay to each organized borough, city of the first, second, and third classes, incorporated or independent school district, and public utility district 10 percent of the amount of tax revenue collected from within such municipality or district from taxes levied by Ch. 97, SLA 1949, as last amended by Ch. 102, SLA 1955, and Ch. 82, SLA 1949, as last amended by Ch. 113, SLA 1951.

Sec. 7. This Act takes effect on January 1, 1962.

Became law without signature April 19, 1962

CHAPTER 156

AN ACT

Relating to employee contributions and refunds payable under the Alaska Employment Security Act; and providing for an effective date.

(S.B. 218)

Be It enacted by the Legislature of the State of Alaska:

Section 1. Subsec. (b), Sec. 501, Art. V, Ch. 5, ESLA 1955, as amended by Sec. 16, Ch. 169, SLA 1957, and Sec. 7, Ch. 60, SLA 1960, is amended to read:

(b) Contributions with respect to wages paid on or after January 1, 1955, for employment shall accrue and become payable by each individual who performs service in employment for each calendar year in which such services are subject to this Act.

The contributions required from each such individual, in accordance with regulations prescribed by the commissioner, shall become payable, be deducted from his wages by his employer, and be held in trust by the employer for the commissioner until such time as such employee contributions are required by regulation to be deposited with the commissioner. Such funds shall not be subject to garnishment or attachment in any fashion, and in the event of lien, judgment, or bankruptcy proceedings, shall not be considered as assets of the employer. Any employer who shall fail to make such deductions from the wages of his employees shall himself be liable to the commissioner for the payment of such required contributions, which shall be collected from him in the same manner as is provided for the collection of employer contributions.

If any employer shall convert to his own use or otherwise misappropriate any funds so held in trust he shall be required to pay to the commissioner for deposit in the clearing account the amount so converted or misappropriated, together with a penalty equal to five times that amount but not less than $25. In addition, if such conversion or misappropriation is willful, he shall be guilty of a misdemeanor and, upon conviction thereof, shall be fined not more than $200, or imprisoned for not more than 60 days, or both.

Each employer shall maintain a record of the amount so deducted from the wages of each of his employees, and shall furnish a statement of such deductions to each employee at such times and in such manner as the commissioner shall prescribe by regulation. No such deduction shall be made from those wages in excess of the first $7,200 of wages paid to an employee during any calendar year. In the event that an employee earns wages totaling in excess of $7,200 in one calendar year in the employ of two or more employers, or in the event that any one employer through error shall have made such deductions from his wages in excess of $7,200 during any one calendar year, the amount of such deductions in excess of those required by this Act shall be refunded to the employee by the commissioner upon application therefor in accordance with regulations prescribed by him, provided that such application is made during the calendar year immediately following the calendar year in which such deductions were made.

Sec. 2. This Act takes effect on the day after its passage and approval or on the day it becomes law without such approval.

Approved April 19, 1962

of Liquor Control, this earmarking provision called for cooperation in enforcement of liquor regulations. Only those cities cooperating with the Board in enforcing liquor rules and regulations were considered eligible for the 60 percent grant.

In 1937 the Legislature enacted into law a schedule of liquor licenses. The licensing program established at that time followed the pattern established by the Federal license earmarking. All license fees are granted to the cities where collected. Cities are prohibited from levying additional taxes on liquor establishments, although they may provide additional regulations not inconsistent with Territorial law.

Raw Fish Tax

As originally enacted in 1949, the raw fish tax included no earmarking provisions. However, in 1953 a law was passed providing that 10 percent of the revenues collected from salmon canneries within the boundaries of local government units was to be granted to the units.[52] Cities, school districts, and public utility districts receive grants under the terms of the 1953 law.

The raw fish tax applies to crab and clam canneries and herring processing plants as well as salmon canneries. Only the revenues from the tax on salmon canneries are earmarked for the local governments. During 1955 a total of $68,196 were granted to cities, school districts and public utility districts from the raw fish tax on salmon canneries.

Amusement and Gaming Devices

Since 1948, 50 percent of the license fees collected on amusement and gaming devices within incorporated cities have been paid to the cities where collected.[53] In 1955 the cities received $26,463 from this source. Amusement and gaming devices had been first licensed by the Territory in 1941 but were in no way earmarked at that time.

Under the terms of the current law a municipality which levies additional license taxes on such devices loses its right to the Territorial 50 percent grant.

SSB 2388

SPONSORS: Committee on Ways and Means
(Originally Sponsored by Senators Newschwander, Bausch and Odegaard)

COMMITTEE: Ways and Means

Modifying the privilege fees on certain producers of food fish.

ANALYSIS OF FIRST SUBSTITUTE AS OF FEBRUARY 22, 1979

ISSUE:

Under current law the privilege tax on food fish and shellfish must be paid by all processors and dealers of fish. The tax is utilized to retire salmon run enhancement bonds. Proponents believe that certain growers, processors and dealers should be exempt from this tax.

Proponents further believe that the definition of "original processor", who is the person required by statute to collect fish sales and privilege tax fees, should be limited.

SUMMARY:

The bill exempts from payment of privilege taxes the grower, processor and dealer of food fish which are raised from eggs or fry and are under the physical control of the grower at all times until harvested. The fish that this class of growers produce never enter the natural fishery. The fish are typically marketed when they reach pan-size and compete primarily in markets outside the state.

Further the bill limits the definition of "original purchaser" to exclude persons handling or dealing in or with fresh fish who have no ownership or marketing interest in them. This class of persons includes those typically furnishing services such as warehousing, canning or freezing. Thus, the responsibility for collection is shifted to the person first purchasing and receiving the fish.

FISCAL IMPACT:

Section 1 would reduce estimated revenues for the 1979 through 1981 biennium by $2.3 million. Section 2 would have no revenue impact since it is a shift in responsibility for collection of the tax to entities which can be contacted, audited and monitored.

Washington State Senate
Senate Committee on Ways and Means
February 19, 1979

STAFF REPORT ON SENATE BILL NO. 2388

Title:

Modifying the Privilege Fees on Certain Producers of Food Fish

Original Sponsors:

Senators Newschwander, Bausch and Odegaard

Summary:

Exempts from privilege fees (tax on food fish or shell fish) the grower, processor or dealer in food fish which are raised from eggs or fry and under the physical control of the grower at all times until harvested.

Redefines "original receiver" as the person first purchasing and receiving and excludes a person furnishing services but who has no ownership interest in the food fish or shellfish.

Impact:

The 1977 legislature enacted legislation to impose privilege fees and sales taxes on salmon, other food fish and shell fish in addition to all other taxes, licenses, and fees currently imposed. Receipts from such fees are to be used first for the payment of principal and interest on bonds authorized for the construction and improvement of salmon hatcheries and other salmon propagation facilities (bond authorization of $31.5 million). Any remaining revenues are to be used for salmon enhancement purposes.

The attached excerpt from the Department of Fisheries' 1979 report to the legislature on salmon license and privilege tax revenues indicates the taxes were not imposed on salmon aquaculture until this year. It might also be noted that licensed oyster, clam or fish farms are exempt from the fish sales tax under RCW 75.32.055(2). Section 1 of this bill would exempt an aquaculturist who maintains complete control of the fish which never enter or become a part of the natural fishery from the privilege fees.

Section 2 redefines "original receiver" and shifts the responsibility for collecting the fish sales tax from persons furnishing services (such as warehousing, canning, freezing, etc.) and who have no ownership or interest in the fish to the person first purchasing and receiving, handling or dealing with the fish.

Fiscal Impact:

Section 1 would reduce estimated revenues for the 1979-81 biennium by $2.3 million. Section 2 would have no revenue impact if it is a shift in responsibility for collection of the tax to entities which can be contacted, audited and monitored.

Excerpt: Report to the Legislature on Salmon License and Salmon Privilege Tax Revenues, Wa State Dept. of Fisheries, 1979.

In accordance with RCW 75.48.090, t.. Washington Department of Fisheries (WDF) is herewith submitting its report on the revenues received from the sport and commercial salmon license sales and from salmon privilege taxes for the fiscal year ending June 30, 1978; and estimates of the revenues to be received for the current and ensuing fiscal years. Also included are estimates of the amounts required from these revenues for the payment of principal and interest on the bonds authorized by Chapter 75.48 RCW, Salmon Enhancement Facilites Bond Issue, and a progress report on the current salmon enhancement programs.

Although we estimate that a large balance is available for additional enhancement, the Department is not requesting any totally "new" enhancement facilities. We agree with the Office of Financial Management that decisions on further expansion of salmon production should be deferred until the Federal involvement question is clarified. In addition, our agency, in a joint effort with the House Natural Resource Committee, is undertaking a hatchery evaluation study that should provide a basic production strategy for at least the next ten years and we feel it is essential to complete this before asking for major production expansion.

Compiled from ADF&G and NMFS statistics

The State of Alaska allowed serious overfishing of our king crab stocks during the past decade. Predictions based on guesstimates proved too rosy, and management techniques and quota systems have improved, and the king crab catch is on the upswing again. It was an expensive lesson, for if we hadn't seriously depleted some of the stocks back in the sixties, we would likely have a higher sustained yield harvest level today.

One would hope that Alaska had learned, but apparently we haven't, for the same pattern of overfishing and undermanagement of our shrimp and tanner crab stocks is taking place today. The shellfish program of Fish and Game is underfunded, while at the same time the lucrative resource is undertaxed.

Alaska produces about of our nation's shrimp harvest. Kodiak's 1971 shrimp harvest produced 82,000,000 pounds of shrimp with a value of $16,000,000 when leaving town, yet the state spent $90,000 'managing' the resource, and collected only $32,000 in fish tax revenues. This year's production dropped thirty per cent to 58,000,000 pounds, and some of the grounds have already been seriously overfished. Fish and Game has developed the basic management techniques, but it doesn't have the funds to implement them.

Now some of the fishing pressure is moving westward to the Chignik-Sand Point area where the expected harvest this year will be 30,000,000 pounds, about a third of the entire American Pacific Coast catch. Yet due to lack of funding there is no management program at all, and the valuable stocks are being subjected to the familiar free-for-all.

And the same destructive development pattern is taking place with the booming tanner crab fishery, except that with the greatly increased fishing capacity it's happening at an accelerated rate. Fish and Game has no tanner crab program. At the request of the Cordova fishermen a quota was guessed at for the Prince William Sound area, but the Kodiak area has no quota, and along with the entire state, no size or mesh limits. No attempt is being made to inventory the tanner crab stocks or to derive the needed basic management data.

The management of our fisheries is the responsibility of the State. No one else can do this with our competitive, unlimited entry, enterprise system, unless the federal government should step in and take over fisheries management, and I'm sure then we would squeal. It is the task of the legislature to provide the funds for adequate management of our fisheries, deriving the funds through realistic taxation of the resource if necessary. Crab and shrimp fishermen are making a good living but feel a major concern is that our resources are being so undermanaged that we won't be able to make a living in the future.

Fishermen have a saying that goes, 'you can't make a season on the grub pile'. It sort of tells the cook not to be too penny-pi on the food, because is going to be determined primarily the amount of fish caught, and good food can be particularly desirable when the fishing is heavy. The same type of concept holds true with management--if the fishing industry isn't willing to spend the few dollars necessary to properly take care of our fish, very likely won't have enough fish to catch in the future.

STATE OF WASHINGTON

SENATE COMMITTEE ON WAYS AND MEANS

MEMORANDUM

DATE: February 27, 1979

TO: Eleanor Brand, Senior Research Analyst

FROM: Richard Armstrong, Staff Counsel

SUBJECT: SSB 2388--Effective Date

Section 2 of SSB 2388 provides that persons who handle or deal in fresh or frozen food fish or shellfish and who have no ownership or marketing interest in such fish are exempt from fish sale taxes or privilege fee taxes. Existing law is vague as to whether such persons are now subject to the above taxes and this amendment clarifies legislative intent.

On page 2, line 22 and 23 of SSB 2388 it is explicitly stated that no taxes will be imposed "after the effective date of this 1979 act". Amendment 26 of the State Constitution is clear that a bill, unless it has an emergency clause, takes effect ninety days after the adjournment of the session. And it is a rule of law that exemptions from taxation are strictly construed, and no exemption will be granted unless specifically provided for by statute. Budget Rent-A-Car v. Department, 81 Wn. 2d 171 (1972).

Therefore, it is my opinion that the words "after the effective date of this 1979 act" are superfluous, since no tax relief could be granted to those persons qualifying under the amendatory language of the bill until the bill takes effect ninety days after adjournment.

Herring	270,000	2,000,000	2,700	13,500
Herring roe				200,000
Total seafood	$84,170,000	$197,900,000	$2,470,100	$6,748,900

1973 PROJECTED FISH PROCESSOR TAX REVENUES

Revised Budget Estimate		$2,200,000
20% Revenue Sharing (actually 13%)		286,000
Net to State		1,914,000
Proposed Increases		
King Crab	2,096,000	
Shrimp	316,000	
Halibut	280,000	
Others	387,000	
Roe	1,200,000	
Total Increases		4,279,000
Total Proposed Revenues		6,193,000
40% Revenue Sharing (actual 25%)		1,548,000
Net to State		4,645,000
Net Increase to State		2,731,000

In 1971 under 20% revenue sharing only 13% was actually shared with the communities. Less than 40% of proposed revenues would be actually shared. The $1,000,000 collected at Adak, for instance, would go solely to the state.

SALMON

The present tax on canned salmon is 3% of the value of the pack, with the value determined as the average wholesale price over the preceding five years. This is roughly equivalent to 6% of the value to the fishermen. Shore-based processors purchasing salmon for purposes other than canning, such as fresh or frozen production, pay a tax of 1% of the value to the fishermen. Freezerships and other floating cold storages pay a tax of 4% of the value to the fishermen, except that if they remain in the same location for more than one year, they pay at the shore-based rate of 1%. SB169 does not change these rates.

CRAB

Crab canneries, both shore-based and floating, presently pay a tax of 2% of the value of the raw crab. Crab purchased for fresh or frozen production, as most crab are, is taxed at the rate of 1% for shore-based and 4% for floaters. SB169 proposes taxing all crab at the rate of 5% for shore-based processors and 20% for floating processors.

There are several reasons for taxing the floating processors at the considerably higher rate. Unlike the past, when floaters were needed, the crab processing industry today has more than adequate capitalization. A shore-based plant makes significant contributions to the local economy through property taxes, construction and maintenance costs, providing more steady jobs, etc. A floater has the competitive advantage of being able to locate closer to the grounds than a shore-based plant, and so is able to purchase crab at a considerably lower price during a quick season. For instance, the town of Kodiak is on the north end of the island while the heavy king crab fishing the last few seasons has been at the south end. Last year crab was selling for as little as 32 cents at the south end while at the same time it was as high as 40 cents in town. The 15% differential, about 4½ cents, would tend to diminish these advantages.

But probably the most important reason for the higher tax on floaters is that they traditionally move into the new or more distant grounds first and get the 'cream of the crop'. It is at these times, before the stocks are fully- or over-harvested, that an impact of management dollars is needed to inventory the stocks and find the right sustained yield harvest levels. This is presently lacking. Protection is also needed in these areas, where it is particularly expensive.

King crab is Alaska's one monopoly and our most lucrative fishery, and it makes sense to use a small part of this wealth for better management of our present and developing fisheries.

SHRIMP

Shore-based shrimp processors presently pay a tax of one per cent of the value to the fishermen, while a floating processor pays 4%. SB169 proposes raising this to 5% for shore-based and 20% for floaters.

New floaters have recently been moving into the Chignik-Sand Point area, yet the state has no management or protection program.

The proposed tax on shrimp is actually quite low since the value to the fishermen is such a relatively low percentage of the first wholesale value. An amount equal to all the additional tax revenues from shrimp is very badly needed for the neglected resource.

HALIBUT

The present tax on halibut purchases by cold storages is 1% of the value to the fishermen. SB169 proposes raising the rate to 3%.

In the past there were good arguments for a low tax on halibut, but these are no longer valid with today's high prices. The large halibut boat will fish steadily until he has a load or up to three weeks before selling his fish. Roundtrip running time from the Kodiak area, which is in the midst of the major grounds, to Seattle is 10 to 12 days. Back in 1967 when the price was 16 cents in Kodiak and 25 cents in Seattle, a boat running to Seattle would receive 10% more money for his catch. Last year, with a price of say 70 cents in Kodiak and 77 cents in Seattle, he would receive only 10% more for his catch, while the increased running time would lengthen the time of his trip by maybe 50%. Seattle, formerly the major American buyer, has had a sharp decrease in landings the past several years, and in 1972, when the halibut price was 100% above 1971 prices, Seattle's already small landings decreased 300%.

Many halibut fishermen had very lucrative seasons this year. Additionally, halibut fishermen, unlike all other fishermen, do not have to pay Alaska income tax on any earnings from fish caught outside three miles, as most halibut reportedly are.

ROE PROCESSOR TAX

SB169 proposes that the roe processor pay a tax of 25 cents per pound of roe processed. The value of the salmon presently taxed as determined by the canned salmon tax does not includd the value of the roe. Salmon roe processors reported to Fish and Game that they received $1.25/lb from the 1971 roe pack. Japanese market reports show that when the roe reached the Tokyo wholesale market in the fall of 1971, it was worth about $3.25/lb. Freight and market fees are only about $.25/lb, so I reckon that the roe was worth about $3.00/lb when leaving Alaska.

People's opinions differ as to where the burden of this tax will fall. Twenty-five cents per pound on roe would produce revenues equal to about 1½% of the first wholesale value of the entire salmon production. This burden would be on all processors equally--cold storages and canners alike. The next question is how much of the tax will be passed back onto the fishermen. The vast majority of salmon are sold by the fishermen in the round. When the roe became extremely valuable instead of a waste product, fishermen did not see a corresponding raise in prices. I see no reason why when these extra profits are taxed that the burden should fall completely back onto the fishermen. I feel it will probably be shared by all segments of the industry.

Many salmon fishermen are interested in rehabilitation of the runs, improved management, and hatcheries of some type. With the lack of oil money, I feel the industry should be willing to pay for the investment in the resource. It seems reasonable to 'tax eggs to hatch eggs'. It should all pay off many times over in the long run.

REVENUE SHARING

Under the existing law, 20% of the fish tax revenues are shared with the local governments in which they are collected. In 1971 only 13% of gross revenues were shared, because considerable amounts are collected in unorganized areas. SB169 proposes sharing 10% with the local governments. This would work out to actually sharing only about 25%. For instance, the million dollars collected from the Adak king crab catch with the increased floater tax would go only to the state.

Fishing communities have special tax problems. Our industry produces much wealth, but usually so little of it stays in the local community. Fishing boats and floating processors are difficult to tax. Sales and property taxes are paid largely by the resident, while the transient makes his money and heads South. Ninety-five percent of Alaska's fish are processed by Outside-owned corporations, so their profits don't stay in the community. It is difficult to tax a salmon boat, for only the local boat can be taxed, and the tax could be the last straw on a bad year.

Seafood money flows into the local economy mainly through the local fishermen and cannery workers, and these two groups have a difficult time passing on direct taxes. It is more fair to get the same number of dollars by taxing the fish, for then the local tax burden is shared by the whole industry, including the Outsiders.

Other areas of the state have industries that provide buildings, heavy equipment, pipelines, oil platforms, steadier payrolls, etc, that can be more easily taxed with local taxes. Fishing communities spend money trying to provide the services for an industry which is difficult to tax locally. The help of the state through revenue sharing of the fish tax is needed in order for our fishing communities to tax the wealth of our industry.

Foster and Marshall recently did a tax study for Kodiak to determine how the town can raise the money needed to pay for the new high school addition and swimming pool. It recommended raising the sales tax from 3% to 5% and taxing the fishing boats full value. The increased shared revenues under SB169 would provide about the same amount of dollars. It's an 'either-or' situation for Kodiak.

SUMMARY

'Tax' is too often considered a dirty word---everybody wants to avoid it, particularly politicians. But taxes are a necessary part of democracy and capitalism. They are the way of appropriating part of the wealth to serve those needs of industry and society that cannot be served by free enterprise alone. It's easy under socialism or communism, for then all the revenues from production go directly to the government, but I don't think we are interested in that.

Completely unrestricted free competition in the harvesting of fish doesn't work. Even though to a few fishermen at times management may seem to be an evil, management is absolutely necessary, and we should work to make sure that it's as effective as possible.

In eight years time in Kodiak I have lived through inadequate management of two major fish stocks, king crab and shrimp, and have twice experienced the results of overfishing, and now it's happening all over again with tanner crab. For several years I fished tremendously rich shrimp and king crab grounds--the prices were low, but the volume was great, and we did well. But now some of those grounds are seriously depleted or practically barren. The prices went up to help compensate for the lower volumes, but think how much richer we would all be if we had had adequate management.

I don't put all the blame on Fish and Game. Some of their managers probably made some mistakes, but they can't work without tools. The king crab and shrimp budgets have been terribly small. It costs money to gather the research data and inventory the stocks.

The blame lies with all of us--processors, fishermen and the state--we've neglected management until the resource gets in trouble. Our fisheries have fantastic potentials if we only pay them the necessary attention. The responsibility of management rests with the state. I love fishing--it's my way of life--but I enjoy it much more when I feel I'm harvesting, rather than raping, the resource.

[illegible] area	2.91 to 3.[illegible]	3.[illegible] to 3.[illegible]
[illegible] area	2.[illegible] to 3.[illegible]	3.[illegible] to 3.[illegible]

It is important when discussing taxes to keep in mind the magnitude of the dollars involved, and to relate the rates to the tax base on which it is applied. It means little to say that a tax is doubled or tripled unless we know the amount of dollars that is doubled or tripled. Three times nothing is nothing. Three times one is three, which is something. But three times three is nine, which may be a lot. Some of the existing tax collections are so low that to double or triple them isn't a lot.

. Take the 1972 Kodiak king crab catch as an example:
First wholesale value was about $10,000,000.
15,000,000 lbs @ $.35/lb equals $5,250,000 value to fishermen

present tax rate of 1% produces $52,500
proposed rate of 5% produces $262,500

Tax as related to price: 1% of $.35 is $.0035/lb , about a third of a cent
5% of $.35 is $.0175/lb , a cent and three-fourths
increase is $.014/lb , a little less then a cent and one half

That means if the tax increase were to be completely passed back onto the fishermen, that it would decrease the price of king crab by $.014/lb. If the processor and/or the consumer were to absorb half of the increase, then the amount it would cost the fishermen would be $.007/lb , or about three quarters of a cent. It would take only a 2% increase in future king crab harvests as a result of improved management and protection from the investment of the tax dollars in the resource, in order to pay the fishermen back for the increased taxes. Lower local taxes and/or community improvements as a result of the revenue sharing would be an added bonus.

Some other rates as related to price:

1972 Kodiak shrimp harvest(first wholesale value about $11,000,000)
50,000,000 lbs @ $.0525/lb = $2,625,000 value to fishermen

	Tax as related to price
Present rate 1% = $26,250	1% of $.0525 = .000525
Proposed rate 5% = $131,250	5% of .0525 = .002625

1972 Kodiak halibut landings
about 9,000,000 lbs @ $.60/lb = $5,400,000 value to fishermen

	Tax as related to price
Present rate 1% = $54,000	1% of $.60 = $.006
Proposed rate 3% = $162,000	3% of .60 = .018

1959 Opinions of the
Attorney General, No. 14

March 26, 1959

Reversed in part as to sharing of taxes with local units of government by Opinion 31, December 2, 1960

The Honorable Hugh J. Wade
Acting Governor of Alaska
Federal Building
Juneau, Alaska

Re: Effect of Section 7 of Article IX of the Constitution upon Existing Dedicated Funds

Dear Governor Wade:

I have your request for an opinion of March 14, 1959, in which you ask advice concerning the status of several dedicated funds in light of my opinion to you of March 11.

In that earlier opinion, I discussed the meaning of Section 7, Article IX of the Constitution. At page 3 of that opinion, it was stated that no action by the Legislature which tends to increase or decrease either the percentage or total of dedicated funds would be possible. At page 5, it was stated that the Legislature has no power to raise or lower the dedication by increasing the tax, or the rate of dedication.

The effect of such action by the Legislature will now be discussed:

(a) When the Legislature raises the tax, the excess tax simply goes into the General Fund.

(b) When the rate of dedication is raised or lowered, such action raising the rate of dedication is null and void as unconstitutional.

(c) When the purpose for which the dedication is set aside is altered the action changing the purpose of the dedication is null and void as unconstitutional.

(d) When the tax is lowered the entire dedication falls and all tax proceeds are covered into the General Fund. This last result is compelled by a realization that the lowering of the tax irretrievably lowers the dedication because

insufficient revenues are available to maintain the present uses of the dedication. Since the only power retained by the Legislature with respect to a dedication (other than administrative directions in the management of the dedication) is the power of repeal, such legislative action is tantamount to a repeal of the dedication.

Review of the following dedications were requested.

1. The Fish and Game Fund established by Section 10, Chapter 62, SLA 1957. This dedication was created subsequent to the date of adoption of the Constitution; hence, there is no grandfather clause for this fund within the exception clause. However, this fund is protected by the fact that Federal law requires dedication of fishing and hunting licenses. (See 16 U.S.C. 669 and 16 U.S.C.A. 777). However, other license proceeds which are dedicated to the Fish and Game Fund, such as game licenses, bird hunting licenses and fur dealers' licenses, should not be so dedicated since no Federal law is involved. Such proceeds would be covered into the General Fund. (Since this was also before statehood, mention of game licenses is made in the Alaska Game Law which is Federal law established by 16 U.S.C.A. 1043, et seq.)

2. Your attention is directed to Chapter 131, SLA 1957, which authorizes liquor license moneys to be incorporated within municipal collections. Such dedication is permissible because it is a constitutional exception under Section 13-4-17, ACLA 1949. However, Chapter 131 unconditionally includes some of the license fees. You are advised that only the amount charged for the various licenses from upon the date of ratification of the Constitution (April 24, 1956) may be refunded to the cities. The others must be covered proceeds into the General Fund. All license fees due or to become due on or before January 3, 1959, may be refunded to the cities which collected pursuant to the foregoing. These remarks only pertain upon licenses granted or otherwise levied upon subsequent to that date.

3. Your attention is also directed to Chapter 175, SLA 1957, which raises the school tax from $7.50 to $10.00. This sum is dedicated to the School Fund (see § 37-4-12, ACLA 1949). You are advised that the increase, or $2.50, must be covered into the General Fund. However, since this annual tax is due on January 1 of each year, you are advised that the taxes for the year 1959 may be covered in whole to the School Fund.

cc:

The Honorable Hugh J. Wade
Acting Governor of Alaska

4. The next tax to be considered is the tax upon aviation fuel. As to what effect the change of the rate of tax upon aviation fuel, as found in Chapter 134, SLA 1957, has upon collection of the tax upon aviation fuel imposed by [illegible] 4(a)-2-2(a) and (b), ACLA 1949, as amended, has upon the collection of the proceeds by the Aeronautical Revolving Fund, as found in 4(a)-2-2 (e), ACLA 1949, as amended, you are advised that the entire collection is thereby allocated and is a nullity.

[illegible] 1957 changes the tax upon aviation fuel [illegible] 4(a)-2-2 (a) and (b) [illegible] aviation fuel imposed by [illegible] fuel sold [illegible] 4(a)-2-2 (b) [illegible] fuel sold [illegible] 4(a)-2-2 (a) [illegible] Revolving Fund [illegible]

[illegible] 1957, [illegible] 4(a)-2-2 (a) and (b) [illegible] 4(a)-2-2 (e)

1959 Opinions of the
Attorney General, No. 9

March 17, 1959

The Honorable John A. McNees
Alaska State Senator
Senate Chambers
Federal Building
Juneau, Alaska

Re: Review of Senate Bill No. 94 as Regards Opinion of March 11, 1959

Dear Senator McNees:

Pursuant to your request on March 17, 1959, for a review of Senate Bill No. 94 in light of my opinion of March 11, 1959, to determine if the [illegible] geographical allocations for which the highway fund is to be disbursed in that bill contravenes Article IX, Section 7 of the Constitution, you are advised that the answer is in the negative.

As stated in the opinion of March 11, existing dedications may be continued but may not be revised upward or commanded by means of altering the tax, the rate of collection or the purpose for which the dedication will be used. You are advised that the purpose of the dedication of the taxes on motor fuels contained in subsection G of Section 44-9-2, ACLA 1949, as amended, is public highways. That purpose will not be changed by Senate Bill No. 94. The proposed act deals merely with the geographical allocation of funds and the administration thereof within the already existing general purpose. It would be contrary to the intent of the Constitutional Convention to assume that each and every county in existing dedications is frozen until repealed. For instance, necessary changes in the administration, as contemplated by the constitutional reorganization of the executive branch of government, necessitates a change in the agency which will expend the funds. Consequently, inasmuch as the proposed alteration goes to the geographical area of expenditure rather than to the

special purpose of the dedication, it does not contravene the Constitution.

Very truly yours,

J. GERALD WILLIAMS
Attorney General

March 11, 1959

Reversed in part as to
Sharing of Taxes with Local
Units of Government by Opin-
ion No. 31, December 2, 1960.

The Honorable Hugh J. Wade
Acting Governor of Alaska
State Capitol
Juneau, Alaska

Re: The Prohibition Against Dedicated Funds Contained in Article IX, Section 7 of the Constitution of the State of Alaska.

Dear Governor Wade:

I have for consideration your request of February 27, 1959, for an opinion on § 7, Article IX of the Constitution. You have specifically requested whether an increase in the tax on gasoline used in the aviation industry in Alaska could constitutionally be diverted to the Aviation Fund or whether the excess must go into the general fund.

Section 7 reads as follows:

> "DEDICATED FUNDS. The proceeds of any state tax or license shall not be dedicated to any special purpose, except when required by the federal government for state participation in federal programs. This provision shall not prohibit the continuance of any dedication for special purposes existing upon the date of ratification of this constitution by the people of Alaska."

Inasmuch as this problem is related to a wide variety of complex revenue dedications which are now law or proposed law and since the problem is basic to state financing, the scope of this opinion is broadened beyond the question at hand to a general review of § 7 of the Constitution.

This section has been diligently researched by recourse to the minutes of the Constitutional Convention of 1955-1956.

The typed transcripts have been used wherever available. However, § 7 was introduced on the floor of the Convention on the morning of January 17, 1956, and no transcripts are available. For that morning session, the tape recordings of the debates of the delegates were listened to. References to the tapes so as to provide both pertinent quotations and their context would be impossible without extending this opinion to unmanageable length. However, references will be made to the tapes by giving the foot of tape at which the pertinent discussion transpires and then summarizing the occurrences, leaving the context to be verified from the original by interested persons.

To grasp the problem examination of the reasons behind § 7 and the evils to be avoided, thereby, will be necessary.

Prior to the Convention, the Public Administration Service was employed by the Alaska Statehood Committee to prepare Constitutional Studies for the convention delegates. See Vol. 3 of the Constitutional Studies, Sec. IX, pp 27-30. Among the reasons such a prohibition as is found in § 7 was recommended are the following:

1. Flexibility of budgeting.
2. Financial control.
3. Lack of relationship between the tax and purpose.

Percentages of dedicated funds as compared to total revenue were cited for various states.

Listening to the tape recordings of the morning session of January 17, 1956, impels the conclusion that the delegates were desirous of eliminating dedications so that the Legislature would have the greatest flexibility in allocating tax revenues on a basis of need. It was stated that, as a matter of compromise, a grandfather clause had been included in § 7 to permit all dedications existing on the date of ratification of the Constitution (April 24, 1956) to continue. An amendment to this clause, offering a change from the date of ratification to the effective date of the Constitution was defeated. (See the transcripts pp 57 et seq. on January 28, 1956.)

Other than the grandfather clause which permits existing dedications, there is a further exception to the prohibition. Any dedications "required" for participation in Federal programs are permitted. Federal conservation statutes presently require certain license fees to be diverted to special purposes in order for states to receive matching funds. (For instance, see 16 USCA 669 and 16 USCA 777.) Only those dedications which

the "required" will be permitted. Any attempted dedication of funds after April 26, 1956, which is not absolutely required for participation in Federal programs must be covered into the general fund, any statute not withstanding.

The prohibition against dedications should be read in conjunction with § 7 of Article XI of the Constitution which deals with restrictions on the initiative and referendum. Therein it is stated that the initiative and referendum shall not be used to create or apply to dedications of "revenue." Note that the prohibition in § 7, Article IX is against dedications of "proceeds of any state tax or license." This seeming contradiction is resolved by reference to the typed transcripts at page 31 of January 28, 1956. There it was explained to be the intent that "revenues" is a broader term than "tax or license" and means all proceeds coming to the State. Consequently, it is proper for a legislature to dedicate any revenues that are proceeds of neither taxes or licenses.

The grandfather clause is stated as an exception to the general prohibition in the following language:

> ". . . this provision shall not prohibit the continuation of any dedication for special purposes existing upon the date of ratification. . . ."

The question you pose is whether or not the rate of the dedication can be raised. In other words, if a tax proceed or a portion thereof is dedicated to a special purpose, may the rate of tax be or the proportion of the proceeds be raised, thereby increasing the amount of dedicated funds.

It is my opinion that no action by the Legislature is permissible which would (1) tend to increase or decrease the percentage of the total tax and license proceeds which are dedicated, or (2) which would tend to increase or decrease the amount of proceeds which are dedicated.

The exception permits only the "continuation" of dedications "existing" on the date of ratification. To raise the aviation gas tax from 5 to 7 cents and dedicate the whole 7 cents would constitute another and further dedication of tax proceeds. The only prior existing dedication is one for 5 cents and not one for 7 cents. To permit existing dedications to be raised would "open up" all of them existing upon the date of ratification. The purpose of the prohibition would be defeated. Existing dedications could be raised to inordinate percentages of the total [illegible], thus avoiding the financial responsibility sought by the constitutional framers.

The foregoing opinion is born out by the taped recordings of the Convention proceedings. (Refer to tapes 2, 3 and 4 of January 17, 1956.)

At foot 540, tape 3, Delegate Johnson proposed to amend the present § 7 by striking the words, "prohibit the continuance of" and inserting in their place the words "apply to."

At foot 600, tape 3, Delegate Ralph Rivers spoke in favor of the amendment because he felt it would permit repeal and re-enactment of existing dedications. Delegates Johnson and Nolan at foot 640, tape 3, indicated their understanding of the amendment was that the Legislature would be powerless to repeal an existing dedication. (Note: Delegates Johnson and Rivers were for the amendment, but disagree as to its meaning. However, both they and Delegate Nolan indicate that the section without the amendment could not be repealed and re-enacted at a later date.)

At foot 55, et seq., tape 4, Delegate Victor Rivers says Delegate Johnson's amendment should be supported because it would permit existing dedications to be raised, lowered, replaced or eliminated by the Legislature. He stated that the amendment would therefore give greater flexibility than the present wording.

At foot 125, tape 4, Delegate Nerland stated that he spoke for the Committee on Finance and Taxation, and that it was their intent that present dedications be allowed until repealed; but that once it was repealed, it could not be later re-enacted.

At foot 215, tape 4, this amendment was defeated 40 to 13.

At foot 330, tape 4, Delegate Ralph Rivers offered an amendment to § 7 which would delete the words "the continuance of."

Delegate Ralph Rivers at foot 345, says the present wording freezes the exact rates of the dedications allowed upon the date of ratification of the Constitution. He advocated his amendment so as to give more flexibility. He stated that his amendment would not allow the rate to be raised but would allow it to be lowered or temporarily discontinued.

At foot 395, tape 4, Delegate Cognill supported the amendment to § 7 because if adopted, it would permit the dedication to be temporarily done away with or suspended downward; thereby allowing the Legislature more flexibility for growth or decline in financial problems.

At foot 420, tape 4, Delegate Gray challenged the amendment on the grounds that it was, in substance, the same amendment as the earlier one offered by Delegate Johnson at foot 540 of tape 3.

Delegate Ralph Rivers answered Delegate Gray by saying that the purpose of Delegate Johnson's amendment was to permit doubling the dedications or the rate involved, and the purpose of his own amendment was to permit lowering of rates while still prohibiting the rates from being raised by the Legislature. Delegate Ralph Rivers' amendment was also defeated, leaving § 7 substantially as it appears in the Constitution after redrafting by the Committee on style and drafting.

Consequently, the intent of the drafters of the Constitution of the State of Alaska, was to permit the continuance of existing dedications at the then existing rates until the Legislature saw fit to exercise the only power retained in relation to them: that is, the power to repeal.

A dedication must be continued, if at all, in exactly the same form. Any attempted alteration short of repeal is unlawful. A dedication encompasses (1) proceeds or part of the proceeds of a tax or license (2) set aside at a certain rate (3) for a particular purpose. The Legislature has no power to raise or lower the dedication by increasing or decreasing the tax or license fee or the rate thereof which is set aside. Also, there is no power to broaden or reduce the purposes for which an existing dedication is made, for to do so is to alter the dedication itself.

I have for further consideration, two questions submitted by the Director of the Legislative Council. For purposes of continuity and clarity, these questions and their answers will be set out herein.

(1957)

The first question is whether H.B. 12[illegible], which is substantially a re-enactment of Ch. 10, SLA 1[illegible], the Alaska Property Tax Act, violates § 7 of the Constitution by providing in § 4 of the bill that the tax levied by the State shall be turned over to the local political subdivision wherein collected.

You are advised that it is my opinion that such a provision violates the Constitution and is a prohibited dedication. This is a tax proceed which at the time it is collected is earmarked for a special purpose (political subdivisions). There is, however, nothing to prevent such legislature from annually making an appropriation to the political subdivisions of the monies already collected under the Act. To be sure, this is the

express intent of the constitutional framers: that each obligation of government be judged both on its own merits and in comparison with the merits of others in the computation of the budget. (See page 31 et seq. of the written transcripts from the January 24, 1956, session of the Convention for the proposition that a dedication is present when a tax proceed is earmarked from the time it is collected.) Also note that at foot 116, tape 3, it is indicated that the return of liquor license fees and business license fees to political subdivisions constituted a dedication, but since they were earmarked at the time of ratification, they would continue to be dedicated.

The second problem posed by the Director of the Legislative Council is whether or not the raw fish tax refund to political subdivisions could be raised from the present 10% to 50%. In view of the foregoing expressions, the answer is in the negative.

You are further apprised that since the ratification date of the Constitution was April 26, 1956, all dedications made in the 1957 session of the Territorial Legislature are nullities as of January 3, 1959. Any monies due and owing prior to January 3rd may be covered to their earmarked purposes, but receipts due and owing after that which fall into the prohibited category must be covered into the General fund. Also note that any repeal or repeal and re-enactment of a dedication during that session takes the dedication from under the protection of the grandfather clause and a re-enactment either in 1957 or later is a nullity unless the dedication is required by the Federal Government for participation in Federal programs.

Very truly yours,

J. GERALD WILLIAMS

Re: CSSB 132 (FINANCE), relating to fish-processing taxes

Dear Senator Tillion:

In your letter of March 12, 1979, you requested that this office review AS 43.75.131 and 135 as proposed in the above-referenced bill in light of the comments of Senator Ziegler, Chairman, Senate Judiciary Committee, who raised substantial concerns regarding the constitutionality of these provisions under Article 9, Section 7 of the Alaska Constitution. That provision states:

> The proceeds of any state tax or license shall not be dedicated to any special purpose, except as provided in section 15 of this article or when required by the federal government for state participation in federal programs. This provision shall not prohibit the continuance of any dedication for special purposes existing upon the date of ratification of this section by the people of Alaska.

AS 43.75.130 and 135 in the present fish processing tax chapter presently provide that the "commissioner of revenue shall pay to each organized borough and each city of the first class [twenty percent] of the amount of tax revenue" collected under this chapter. Since § 130 was originally enacted in 1962 (§ 6, ch. 155, SLA 1962) and § 135 in 1963 (§ 1, ch. 89, SLA 1963) neither of the refund provisions qualify under the grandfather clause in the second sentence of the constitutional provision. This mandatory language ("shall pay") was carried over into the new proposal AS 43.75.131 which requires the following distributions:

1. Subsection (a) states that "the department shall pay to each borough and to each city of the first class an amount equal to 33 and 1/3 percent of the amount of tax revenue collected" under AS 43.75.

2. Subsection (a) also requires that the tax revenue be shared equally between city and boroughs when the city is located within a borough.

3. Subsection (b) states that "one-half of the revenue shared . . . shall be used for docks or other fisheries related development programs."

It is our opinion that Senator Ziegler's concerns are well-founded and that the language in AS 43.75.131 as written might well be found to be facially invalid under the state constitutional provision prohibiting the dedication of funds. Even with the mandatory language of the existing statute, the Department of Law has always construed these provisions as (1) requiring an appropriation and (2) that each subsequent legislature has the discretion as to whether or not to make such an appropriation for the purposes stated in the underlying statute. Thus, any such formula is advisory only and operates as an expression of the policy of the enacting legislature and nothing more. However, Senator Ziegler is quite correct in that the advisory nature of such language should be made more express so that the language of the provision would not become subject to a challenge that on its face the provision violates the intent of the constitutional provision.

We therefore recommend that proposed AS 43.75.131 and 136 as stated in CS for SB 132 (FINANCE) Section 3 be modified as follows:

> AS 43.75.131. REFUND TO LOCAL GOVERNMENTS. The legislature may, in its discretion, annually appropriate to each borough, each city of the first class, each municipality unified under AS 29.68.240--29.68.440 an amount equal to 33 and 1/3 percent of the amount of the tax revenue collected in the municipality from taxes levied in this chapter. In the case of tax revenue collected inside a city within a borough, the legislature may, in its discretion, divide the revenue to be shared equally between the city and the borough.

[Subsection (b) should be deleted in its entirety.]

AS 43.75.136. PAYMENTS TO COMMERCIAL FISHING AND AGRICULTURE BANK. The legislature may in its discretion annually appropriate an amount equal to 33 and 1/3 percent of the amount of tax revenue levied under this chapter to the Commercial Fishing and Agriculture Bank established in AS 44.54.010 until that bank is fully capitalized as determined by the commissioner of commerce and economic development based upon the estimated capital needs of the bank.

In addition to the safeguard which I mentioned in our meeting this morning, I would further recommend that sec. 12 of the Act be modified as follows:

EFFECT OF REVENUE SHARING PROVISIONS AND TRANSITIONAL RULES. The tax paid for the 1978 calendar year may be shared in accordance with AS 43.75.130 and AS 43.75.135 as those sections read before repealed by this Act. The tax paid for the 1979 calendar year and for each succeeding calendar year may be shared in accordance with AS 43.75.131, added by sec. 3 of this Act, depending upon the judgment of each subsequent legislature and upon the amounts properly appropriated for this purpose. It is recognized by this legislature that AS 43.75.131 and 136 are advisory only, that they have no binding effect on future legislatures, and that future legislatures will be free to disregard the formula outlined in the sections.

In addition, it is suggested that the reporting committee issue a letter of intent along with the proposed committee substitute, a draft of which is attached to this letter.

Sincerely,

AVRUM M. GROSS
ATTORNEY GENERAL

Enclosure

bcc: Art Peterson

It is the intent of this committee that the revenue shared with the local municipalities pursuant to AS 43.75.131 be used for docks and other fisheries related projects. It is believed that such improvements would operate as an incentive to the development of a bottomfishing industry in the state as well as to improve and further develop the fisheries currently being exploited. This committee recognizes that AS 43.75.131 and 136 merely reflect the policy of the current legislature and that future legislatures would be free to disregard the formula set forth therein. Future legislatures should examine the extent to which municipalities which have received these revenues have made reasonable efforts to meet the demand for fishery related facilities. If future legislatures find that needed fisheries development programs have not been implemented, the revenue sharing program reflected in AS 43.75.131 should be reevaluated.

Subject: COMMITTEE SUBSTITUTE FOR SENATE BILL NO. 132 (relating to fisheries taxes) - Conclusion on by Senate Judiciary Committee Chairman

President Tillion referred the above message to the Rules Committee this date.

Official Business

Senate

Committee on Judiciary

Pouch V
State Capitol
Juneau, Alaska 99

March 12, 1979

The Honorable Clem Tillion
President of the Senate
Alaska State Legislature

Re: CSSB 132

Dear Mr. President:

On March 9, 1979, you requested me, in my capacity as chairman of the Senate Judiciary committee, to review the captioned bill and to report to the Senate as to its constitutionality.

At the outset, I should state that the following comments are mine and mine alone; I do not profess to speak for the other members of the Judiciary committee. It should likewise be noted that I do not claim any special expertise in the field of constitutional law, nor have I had sufficient time to devote to the research which would ordinarily be entailed in analyzing this bill.

A close reading of CSSB 132 indicates two sections of the bill would run afoul of the Alaska Constitution. Those two are 43.75.136, providing for payments to the Commercial Fishing and Agriculture Bank, and 43.75.131, making increased refunds to local government.

Article IX, sec. 7 of the Alaska Constitution provides as follows:

> "The proceeds of any state tax or license shall not be dedicated to any special purpose except when required by the federal government for state participation in federal programs. This provision shall not prohibit the continuance of any dedication for special purposes existing upon the date of ratification of the constitution by the people of Alaska."

I was assisted in my efforts to check the constitutionality of the questioned sections of the bill by the opinions of two Attorneys General dated, respectively, April 4, 1969 and May 2, 1975. Both opinions not only considered the case law of this and other jurisdictions, sparse as it is, but they also reviewed the minutes of the Alaska Constitutional Convention and committees thereof. It is evident, in both these opinions, that the framers of our constitution did not want to have additional taxes earmarked or dedicated to special purposes.

A dedication of ten per cent of the fish tax existed at the time of the ratification of the Constitution, and the dedication clearly falls within the exemption. Problems arise when that ten per cent is increased, as in the instant bill, to thirty-three and one-third per cent. The issue of the constitutionality of increasing the percentage of an existing dedicated fund was not specifically addressed by either of the opinions reviewed. However, material contained in these opinions strongly suggests that increasing an existing dedicated fund was not intended by the Constitution.

It is equally clear that payments to the Commercial Fishing and Agriculture Bank and earmarking state tax revenue for the construction of docks, etc. by local governmental units would do violence to the Constitution of the State of Alaska.

The Attorney General's opinion of April 4, 1969 holds:

> "The proceeds of any state tax or license which must be shared with local governmental units are dedicated to a special purpose and are in violation of Article IX, sec. 7 of the Alaska Constitution."

The Attorney General's opinion of May 2, 1975 states:

> "Accordingly, it is our conclusion that the dedication of any source of public revenue: tax, license, rental, sale, bonus-royalty, royalty, or whatever is limited by the state Constitution to those existing when the Constitution was ratified or required for participation in federal programs."

Conclusion: CSSB 132, as written, is patently unconstitutional.

Respectfully submitted,

Ziegler

Robert H. Ziegler, Sr.
Chairman
Senate Judiciary Committee

Re: CSSB 132 (FINANCE), relating to fish-processing taxes

Dear Senator Tillion:

In your letter of March 12, 1979, you requested that this office review AS 43.75.131 and 135 as proposed in the above-referenced bill in light of the comments of Senator Ziegler, Chairman, Senate Judiciary Committee, who raised substantial concerns regarding the constitutionality of these provisions under Article 9, Section 7 of the Alaska Constitution. That provision states:

> The proceeds of any state tax or license shall not be dedicated to any special purpose, except as provided in section 15 of this article or when required by the federal government for state participation in federal programs. This provision shall not prohibit the continuance of any dedication for special purposes existing upon the date of ratification of this section by the people of Alaska.

AS 43.75.130 and 135 in the present fish processing tax chapter presently provide that the "commissioner of revenue shall pay to each organized borough and each city of the first class [twenty percent] of the amount of tax revenue" collected under this chapter. Since § 130 was originally enacted in 1962 (§ 6, ch. 155, SLA 1962) and § 135 in 1963 (§ 1, ch. 89, SLA 1963) neither of the refund provisions qualify under the grandfather clause in the second sentence of the constitutional provision. This mandatory language ("shall pay") was carried over into the new proposal AS 43.75.131 which requires the following distributions:

SLH

1. Subsection (a) states that "the department shall pay to each borough and to each city of the first class an amount equal to 33 and 1/3 percent of the amount of tax revenue collected" under AS 43.75.

2. Subsection (a) also requires that the tax revenue be shared equally between city and boroughs when the city is located within a borough.

3. Subsection (b) states that "one-half of the revenue shared . . . shall be used for docks or other fisheries related development programs."

It is our opinion that Senator Ziegler's concerns are well-founded and that the language in AS 43.75.131 as written might well be found to be facially invalid under the state constitutional provision prohibiting the dedication of funds. Even with the mandatory language of the existing statute, the Department of Law has always construed these provisions as (1) requiring an appropriation and (2) that each subsequent legislature has the discretion as to whether or not to make such an appropriation for the purposes stated in the underlying statute. Thus, any such formula is advisory only and operates as an expression of the policy of the enacting legislature and nothing more. However, Senator Ziegler is quite correct in that the advisory nature of such language should be made more express so that the language of the provision would not become subject to a challenge that on its face the provision violates the intent of the constitutional provision.

We therefore recommend that proposed AS 43.75.131 and 136 as stated in CS for SB 132 (FINANCE) Section 3 be modified as follows:

> AS 43.75.131. REFUND TO LOCAL GOVERNMENTS. The legislature may, in its discretion, annually appropriate to each borough, each city of the first class, each municipality unified under AS 29.68.240--29.68.440 an amount equal to 33 and 1/3 percent of the amount of the tax revenue collected in the municipality from taxes levied in this chapter. In the case of tax revenue collected inside a city within a borough, the legislature may, in its discretion, divide the revenue to be shared equally between the city and the borough.

[Subsection (b) should be deleted in its entirety.]

AS 43.75.136. PAYMENTS TO COMMERCIAL FISHING AND AGRICULTURE BANK. The legislature may in its discretion annually appropriate an amount equal to 33 and 1/3 percent of the amount of tax revenue levied under this chapter to the Commercial Fishing and Agriculture Bank established in AS 44.54.010 until that bank is fully capitalized as determined by the commissioner of commerce and economic development based upon the estimated capital needs of the bank.

In addition to the safeguard which I mentioned in our meeting this morning, I would further recommend that sec. 12 of the Act be modified as follows:

EFFECT OF REVENUE SHARING PROVISIONS AND TRANSITIONAL RULES. JAY S. HAMMOND, GOVERNOR

DEPARTMENT OF REVENUE

OFFICE OF THE COMMISSIONER / POUCH S – JUNEAU 99811

March 8, 1979

The Honorable Alvin Osterback
Co-Chairman
House Resource Committee
Alaska State Legislature
Pouch V
Juneau, AK 99811

Dear Representative Osterback:

You have requested the Department of Revenue look at fish tax receipts that would be collected if a tax rate based on the effective current canned salmon rate was applied uniformly.

The breakdown of revenues on the attached sheets is based on a tax rate of 4.45 percent. This rate was arrived at by taking the raw value of salmon used by canneries, $121,758,700 (based on Fish And Game Catch Estimates) and dividing it by the FY 1978 tax collected from canneries, $5,420,438.

The total amount of revenue that would be collected using a 4.45 percent rate would be $15,205,850. A further breakdown of this total is attached for your information.

Sincerely,

John R. Messenger
Acting Commissioner

III. ANALYSIS (See Fiscal Note Preparation Instructions, Section III)

It is estimated that this bill will raise an additional 12 million dollars and bring total fish tax collections to 20 million dollars. These collections will be split evenly among the general fund, revenue sharing to municipalities, and the commercial fishing and agriculture bank, until fully capitalized. It is estimated that revenue sharing to municipalities would be increased by about 4 million dollars as shown in the attached breakdown. It would also allow an annual appropriation to the commercial fishing and agriculture bank of approximately 7 million dollars. Revenue to the general fund would be increased by approximately 1 million dollars and then by a greater amount when the commercial fishing and agriculture bank is fully capitalized. A breakdown of the distribution of revenues is shown in the attached pages.

State Capitol
Juneau, Alaska 99811

Official Business

Date: 4/3/79
TO: C&RA Committee
FROM: Rep. Bill Parker, Chairman
RE: CSSB 132 Relating to Fisheries Taxes

For your background information, below are listed the various versions of the section of SB 132 related to "refund to local governments."

Existing Law -- AS 43.75.130 Attached

Senate Bill No. 132 -- Original version introduced on 2/12/79 by Sen.Kerttula
Attached

CS SB132 -- Offered 3/8/79 by Community and Regional Affairs Committee

Sec. 43.75.131 REFUND TO LOCAL GOVERNMENTS. (a)The department shall pay to each borough, to each city of the first class, and to each municipality unified under AS 29.68.240 - 29.68.440, an amount equal to 3. 1/3 per cent of the amount of tax revenue collected in the municipality from taxes levied in this chapter. In the case of tax revenue collected inside a city within a borough, the revenue to be shared shall be divided equally between the city and the borough.
(b) One-half of the revenue shared with a borough or city of the first class shall be used for docks or other fishery enhancement projects and those expenditures must be certified and reported to the department annually no later than January 30.

CS SB132 (Finance) Offered 3/12/79 by the Finance Committee

Same as in CS SB132 by C&RA (See above)

CS SB 132 (Rules) Offered 3/17/79 by the Rules Committee

Sec. 43.75.131 TAX SHARING WITH MUNICIPALITIES. The legislature may annually appropriate to each borough, to each city of the first class, and to each municipality unified under AS 29.68.240 - 29.68.440, an amount equal to 33 1/3 per cent of the amount of tax revenue collected in the municipality from taxes levied in this chapter. If tax revenue is collected in a city within a borough, the legislature may divide the tax revenue appropriated under this section between the city and the borough.

If a receiver, trustee, or assign is operating the property or business, he shall make the return for the person. A tax due on the basis of such return shall be collected in the same manner as if collected from the person of whose business he has custody and control. The requirements for time and place of payment of tax, and the obligation to keep records and make the records available to the commissioner of revenue are the same as those prescribed in the business license tax law for salmon canneries. (§ 2 ch 190 SLA 1959)

Sec. 43.75.120. Violations and penalties. (a) The liability to file returns and pay interest and deficiency assessments, and the subjection of property to liens is the same as prescribed in the business license tax law for salmon canneries.

(b) A violation of §§ 100 — 120 of this chapter or the regulation... is ued under §§ 100 — 120 of this chapter is a misdemeanor subject to punishment as prescribed in the business license tax law for salmon ca.neries. (§ 3 ch 190 SLA 1959)

Article 4. General Provisions.

Section
130. Refund to local governments
135. Additional refund to boroughs and cities

Sec. 43.75.130. Refund to local governments. The commissioner of revenue shall pay to each organize' borough and each city of the first class 10 per cent of the amount of tax revenue collected in the borough or city from taxes levied by §§ 10 — 90 of this chapter. (§ 6 ch 155 SLA 1962; am § 75 ch 69 SLA 1970; am § 10 ch 218 SLA 1976)

Effect of amendment. — The 1976 amendment substituted "city of the first class" for "city of the first, second, and third classes."

Legislative committee report. — For report on ch. 69, SLA 1970 (HB 564), see 1970 House Journal Supplement No. 2, p. 7.

Sec. 43.75.135. Additional refund to boroughs and cities. In addition to the payment allowed in § 130 of this chapter, the commissioner of revenue shall pay to each organized borough 10 per cent of the amount of tax revenue collected in the borough from taxes levied by §§ 1' — 90 of this chapter and shall pay to each city of the first class loca.ed in the unorganized borough 10 per cent of the amount of the tax revenue collected in the city from taxes levied by §§ 10 — 90 of this chapter. (§ 1 ch 89 SLA 1963; am § 1 ch 120 SLA 1969; am § 11 ch 218 SLA 1976)

Effect of amendment. — The 1976 amendment substituted "city of the first class" for "city of the first, second, and third classes."

SENATE FINANCE COMMITTEE
March 10, 1979
10:00 a.m.

Chairman Sackett called the meeting to order at 10:00 a.m. Senators Dankworth, Bennett, Hackney, Sackett, Ray and Hohman were present. Also presnet were: Dr. Sherman Carter, VP for Finance, U of A, Don McKnight and Russell Clark from ADF & G, Jack Utton, Director of Natural Resources, Tanana Chiefs, Bob Palmer, Special Projects, Office of the Governor, Jim Farmer, Executive Director, Koyukon Development Corporation, and Robert Shelley, Analyst, Budget & Management. PRESENT

Senator Sackett advised that the purpose of the meeting was that of a bill session. He then brought up SB 132 (An Act relating to the refund of raw fish tax receipts to local government). He advised the committee that a CS had been prepared which included an amendment offered by Senator Tillion. Chairman Sackett explained the changes made by the CS. SB 132

Senator Hohman moved that CS SB 132 be passed from committee with individual recommendations. CS SB 132 passed as follows: senators Hackney, Bennett, Dankworth and Sackett voted do pass. Senators Hohman and Ray voted no recommendation. MOTION

Senator Sackett moved that SB 62 (supplemental appropriations to Special Projects Office, Office of the Governor, to fund Delta Agricultural Development Project) be brought before the committee for discussion. It was so ordered. SB 62

Senator Sackett introduced Bob Palmer, Special Projects director to give testimony on the bill. Mr. Palmer offered information regarding the bill, and gave information to the committee that had been requested in a previous meeting. Senator Hohman had questions concerning the contract dates. Mr. Palmer stated that 30% of the work had to be completed by May 1980, 60% completed by May 1981, and total preparation and ready for planting had to be completed by May 1982. When asked if they were going to stick by the contract dates, Mr. Palmer replied "most definitely!" He said there might be a couple who would not make the contract date, but he felt most of them would. CONTRACT DATES

Senator Sackett explained that a CS had been prepared for the bill. The changes were explained. Senator Hohman made a motion that CS SB 62 be passed from committee with individual recommendations. There being no objection, it was so ordered. CS SB 62 passed as follows: Senators Hohman, Hackney, Bennett, Dankworth and Sackett voted do pass. Senator Ray voted do not pass unless amended MOTION

STATE of ALASKA

MEMORANDUM

12

TO: Hon. Sterling Gallagher
Commissioner
Dept. of Revenue

DATE: July 6, 1977

FILE NO:

TELEPHONE NO:

FROM: Avrum M. Gross
Attorney General

BY: Rodger W. Pegues
Assistant Attorney General

SUBJECT: Municipal revenue sharing, fish processing taxes; our file J-66-687-77

This responds to your request for our opinion on the proper interpretation and application of AS 43.75.130 and 135, which provide for sharing of certain revenues with organized boroughs and first class cities.

AS 43.75.130 was enacted in 1962 and, since amended, reads as follows:

> The commissioner of revenue shall pay to each organized borough and each city of the first class 10 per cent of the amount of tax revenue collected in the borough or city from taxes levied by §§ 10 -- 90 of this chapter.

AS 43.75.135 was enacted in 1963 and, since amended, reads as follows:

> In addition to the payment allowed in § 130 of this chapter, the commissioner of revenue shall pay to each organized borough 10 per cent of the amount of tax revenue collected in the borough from taxes levied by §§ 10 -- 90 of this chapter and shall pay to each city of of the first class located in the unorganized borough 10 per cent of the amount of the tax revenue collected in the city from taxes levied by §§ 10 -- 90 of this chapter.

Under a literal reading of these two sections, as pointed out by the Legislative Audit Division, an organized borough, whether or not there is a first class city within it, would receive 20 percent of the revenue collected from sources within it. However, a literal reading does not arrive at the result the legislature appears to have intended. To better understand how these two statutes came to read as they do, one should read the latter as it was enacted in 1963 before being amended to include cities:

> Additional Refund to Boroughs. In addition to the payment allowed in sec. 130 of this chapter, the commissioner of revenue shall pay to each organized borough 10 per cent of the amount of tax revenue collected in the borough from taxes levied by secs. 10 -- 90 of this chapter.

§ 1, ch. 89, SLA 1963.

What happened was that the 1962 statute gave cities 10 percent of the taxes collected within them and organized boroughs 10 percent of the taxes collected within them. Of course, many cities are within organized boroughs, and the taxes collected within those cities are then collected within both. The result was that a city would get the 10 percent if the tax was collected within its limits and so would the borough, for a total local share of 20 percent. */ If the tax were collected solely within a city, i.e., one not in a borough, it would get 10 percent. If the tax were collected from outside the city limits in an organized borough, then the borough would get the 10 percent and nothing went to the city. In other words, the local people got 10 or 20 percent of the tax revenue based entirely on the locus of the tax source and the existence of both a city and an organized borough.

This result was patently unintended and unfair. The tax was to be shared with those municipal entities which levied a local tax to support schools and was designed to reduce their tax burden. Where there is a city and an organized borough, the residents in both pay the same local taxes for schools.

The 1963 Legislature passed ch. 89 to provide for a borough to get an additional 10 percent share when the city did not receive a share so that the total local share would be 20 percent. Finally, in 1969, the statute was again amended to provide the same for cities. In that way, the total local share was uniformly set at 20 percent.

*/ Of course, the original statute could have been interpreted to have a different result, i.e., it could have been viewed as not giving an organized borough any share of the tax collected from within first class cities within the borough. This would have resulted in a total local share of 10 percent. Arguably, the legislature may orginally have intended this result. However, the agency interpreted the statute otherwise and the subsequent acts of the legislature tend to ratify the agency's view.

which--in all likelihood--was what was eventually intended by the legislature.

Our analysis is buttressed by a contempory agency construction. Under the legislation as originally enacted, when taxes were collected from a source within a city in an organized borough, the Department of Revenue gave both 10 per cent. If they were collected from a source outside the city, the borough got 10 percent and the city, nothing.

After the 1963 enactment, in the first situation given above, both continued to get 10 percent, for a total local share of 20 percent. But in the second situation given above, the borough now got 20 percent, i.e., an additional 10 percent, bringing the total local share in that situation up to an equal 20 percent.

After the 1969 amendment (to give cities as well as organized boroughs an additional 10 percent), the department continued to split 20 percent between the city and the borough when the tax source was a city within a borough (i.e., 10 percent to each), to give the borough 20 percent when the source was within the borough but outside of any city, and then to give a city which was not in an organized borough 20 percent as well. We perceive this latter amendment as tantamount to the ratification of the agency's interpretation. In effect, the legislature said, "Do the same for cities outside of boroughs."

While the precise language and history of the statute are obscure, we believe that the department's practical, longstanding and consistent interpretation of the statute and the legislature's apparent ratification of that interpretation are pretty much conclusive. Accordingly, and despite the literal terms of the statute, the department should continue to apply it as it has been doing.

STATE OF ALASKA

JAY S. HAMMOND, GOVERNOR

DEPARTMENT OF REVENUE

OFFICE OF THE COMMISSIONER / POUCH S – JUNEAU 99811

March 9, 1979

The Honorable John C. Sackett
Chairman
Senate Finance Committee
Alaska State Legislature
Pouch V
Juneau, Alaska 99811

Dear Senator Sackett:

CS SB 132 would reform the Alaska fishery taxes by making them more equitable and uniform among types of processing while at the same time raising additional revenue for the state and municipalities for fishery enhancement programs.

Our present fish tax structure can be traced back to 1949 and has been changed little since that time. The tax structure contains different tax values and rates according to fish species being processed and the manner of processing. These different rates and values are shown in Attachment 1. Although this tax structure may have been appropriate in 1949, the tax structure as applied to today's economics is extremely unequitable and inefficient and bears no relationship to the value of the resource harvested or the economics of the business.

The fish tax structure we are proposing first of all standardizes the tax at a rate of 6 percent of the raw value of the product for all species, and ~~all methods of~~ processing. Under this bill an additional $12 million would be raised the first year and the total of $20 million would be divided equally between the general fund, the commercial fishing and agriculture bank, and revenue sharing to municipalities.

Secondly, and as important as standardizing the tax structure, the legislation we are proposing will enable the state and municipalities to continue funding fishery enhancement programs, by making an additional amount of revenue available for the development of our

04-02LH

fishery industry. Specifically additional funding would be available to the Commercial Fishing and Agricultural Bank for fishermen and processor loans and additional revenue sharing would be available to fishing communities. The specific amount of this funding is shown in Attachment 2 and 3.

The State has placed a strong emphasis on Renewable Resource Development. Appropriations for fish enhancement programs alone have totaled approximately $90 million dollars since FY 1977, $30.5 million of which has been for operating expenditures and another $58.4 million for capital expenditures. Since FY 1973 fishery loans has totalled $48 million including $13 million in FY 1978.

We are all concerned about the state's financial condition. This additional funding will insure that money is available for future fishery enhancement programs.

When the Commercial Fishery and Agricultural Bank goes into operation this year it will have a beginning appropriation of $2 million. With the $6.8 million that would be appropriated with this legislation it is estimated that the bank would be able to make approximately $54 million in loans in its first year of operation. Resident processors as well as fishermen will be able to take advantage of the bank and sums large enough to help a developing bottom fishery will be available within the state.

Municipalities, too, are facing fiscal problems. The amounts of revenue sharing available to municipalities in this legislation will help solve those problems and in some cases enable municipalities to implement projects on their own without having to rely on the passage of general obligation bonds to fund their docks and fish enhancement programs.

Sincerely,

John R. Messenger
Acting Commissioner

EXISTING FISH TAX RATES

CANNERIES

FY 78 Receipts = $5,420,438

Salmon - 3% of average wholesale price of canned product during months of August - December of five years preceding license year

If figured on raw value would be an effective tax rate of 4.45%

III. ANALYSIS (See Fiscal Note Preparation Instructions, Section III)

If a tax rate of 4.45 percent is used as a base, an additional $7 million would be raised bringing the total fish tax collections to $15.2 million. These collections will be split evenly among the general fund, revenue sharing to municipalities, and the commercial fishing and agriculture bank, until fully capitalized. It is estimated that revenue sharing to municipalities would be increased by about 3 million dollars as shown in the attached breakdown. It would also allow an annual appropriation to the commercial fishing and agriculture bank of approximately 5 million dollars. With a 4.45 percent rate, revenue to the general fund would decrease by about $1 million dollars, but would increase considerably when the commercial fishing and agriculture bank is fully capitalized in a few years. A breakdown of the distribution of revenue is shown on the attached pages.

CHAPTER 218, Sec. 11 Session Laws of Alaska 1976

Sec. 10 AS 43.75.130 is amended to read:

Sec. 43.75.130 REFUND TO LOCAL GOVERNMENTS. The commissioner of revenue shall pay to each organized borough and each city of the first class 10 per cent of the amount of tax revenue collected in the borough or city from taxes levied by secs 10 - 90 of this chapter.

Sec. 11. AS 43.75.135 ADDITIONAL REFUND TO BOROUGHS AND CITIES. In addition to the payment allowed in sec. 130 of this chapter, the commissioner of revenue shall pay to each organized borough 10 per cent of the amount of tax revenue collected in the borough from taxes levied by secs 10 - 90 of this chapter and shall pay to each city of the first class located in the unorganized borough 10 per cent of the amount of the tax revenue collected in the city from taxes levied by secs 10 - 90 of this chapter.

Dept of Revenue Guideline

TO SHARE RAW FISH TAX

Raw Fish tax should be shared as soon as possible after July 1 of each year. This tax is shared with boroughs, home rule cities and first class incorporated cities only.

A. Incorporated cities within an unincorporated borough receive 20%
B. First class cities in an incorporated borough receive 10%
D. The organized borough [outside of any city] receives 20%
C. The organized borough of a first class city receive 10%
E. Tax collected outside of any borough is not shared.
F. Penalty and Interest only is not shared

BILL NUMBER AND TITLE: CSSB 132 relating to fisheries tax

ORIGINAL SPONSOR : Kertulla

OTHER SPONSORS: C&RA Substitute
Finance CS, Rules CS (final version)

RECEIVED FROM:

FURTHER REFERRALS:

MEMBERS PRESENT: Parker, O'Connell, Metcalfe, Branson, Zharoff

MEMBERS ABSENT: Carney, Parr

INDIVIDUALS CONTACTED:

WITNESSES TESTIFYING:

Rep. Parker -- Announced that the C&RA Committee would concentrate on the local governnment provisions of the fisheries taxes bill.

Ernie Haugen -- Abrupt raise. Original SB 132 only dealt with refund to local governments. Present bill is such an expansion of original bill that no one knows what it is all about. It will have a dramatic impact on local employment. The 6% tax will send the fishermen to Prince Rupert to sell fish. A tax incentive should be considered. Fully supports the idea of a tax study of the whole fisheries taxation question. The industry would cooperate in putting together a workable tax structure.

John Messenger, Acting Commissioner of Revenue
Concentrating remarks on revenue sharing section. Proposal in CSSB132 is different than original bill. Constitutional question was discussed by Messenger. Administration of current program was discussed.

Branson questions why second class cities are not receiving revenue monies based on the fish tax. Response from Jack Chenoweth is that originally, from the time of statehood, first, second and third class cities received revenue, but in 1972 a change was made with the reclassification of cities and the second class cities were eliminated as they do not have educational functions and the original designated fund justification was tied to education.

Rep. Zharoff expressed concern with the lack of an incentive fishermen would have to sell fish on-shore. With the emphasis on fresh, and frozen products, there would be an impetus set up for operations to move off shore.

COMMITTEE ACTION: Another hearing scheduled on 4/6/79 as a "mark-up" session.

TAPE # 6 SIDE 2 Sections 32-812

Rick Lauber, Alaska Manager of the Alaska Seafood Processors

Ak. Seafood Processors handle 65% of fish processed in the state. Dedicated fund provision --10% of the dedicated fund is constitutional. Additonal 10 questionable. By repealing the original provision, the municipalities would not be in a safe position. It might be acceptable to add 10% or so on top of the 10% specified in current law.

Lauber questions revenue sharing projections saying they are only estimates and the accuracy of them is questionable. There won't be a change in the revenue sharing entitlement of a community which depends on canned salmon at the present time.. A 5 or 10X increase is most questionable.

The bill is touted as an aid to bottomfish development . SB won't do that as revenue sharing is based on present processing within communities. There is no guarentee that bottomfish will locate in the same places. Yakatat and Sitka would be likely places to share in revenue but they wouldn't get enough and would still come to the state for additional money.

The current tax system is not necessarily outdated. The value of fish has risen and so the tax has also risen accordingly The given figures should be checked for accuracy.

Any increases of the tax on the bottomfish industry would preclude the industry's ever developing. Bottomfish is part of an international market so the prices have to be kept marketable.

There should be consideration given to the idea of a tax incentive for the bottomfish industry.

The Legislature should stand behind the fish study bill, HB 36, which was passed by the House.

Ginney Chitwood , Executive Director of the Municipal League

No position on the increase in the raw fish tax. Concerned about removing the constitutional dedication of funds to the municipality. Gross business license tax repeal is a case in point. The corporate income tax was to take its place. The municipalities have never received the 150% promised. Nor the 10% of corporate income promised. Again, revenue sharing is not funded at 100% by the legislature (or Gov.)

Sen. Mulcahy -- Greatest concern is the impact this bill would have on communities. Outdated information on figures is being used. the projections are not accurate. Income is substantially greater than that shown.

The Commerce Committee considered SENATE BILL NO. 94 (relating to occupational licensing fees) and reports it back as follows: Senator Bradley, Chairman and Senator Sturgulewski signed "do pass". Senators Ferguson and Stimson signed "no recommendation". Senator Kelly signed "do not pass". SB 94

SENATE BILL NO. 94 was referred to the Finance Committee.

The Resources Committee considered SENATE BILL NO. 113 (waste of wild food animals) and reports it back as follows: Senator Sumner, Chairman and Senators Dankworth, Mulcahy and Fahrenkamp signed "do pass". SB 113

SENATE BILL NO. 113 was referred to the Rules Committee.

The Community and Regional Affairs Committee considered SENATE BILL NO. 132 (refund of raw fish tax receipts to local government) and recommends it be replaced with COMMITTEE SUBSTITUTE FOR SENATE BILL NO. 132, entitled: SB 132

"An Act relating to fisheries taxes; and providing for an effective date."

and reports it back as follows: Senator Sturgulewski, Chairman and Senators Kelly and Stimson signed "do pass". Senator Rodey signed "no recommendation". Senator Mulcahy signed "do not pass". The Committee further attaches a letter of intent.

SENATE BILL NO. 132 was referred to the Finance Committee.

Letter of intent accompanying SENATE BILL NO. 132 follows:

The Senate Community and Regional Affairs Committee has adopted and passed Committee Substitute for Senate Bill 132 which has a referral to the Senate Finance Committee.

Testimony, received by the Committee, indicates the need for further investigation on the economic ramifications of this legislation, with particular emphasis on the development of bottom fisheries.

By Senate Community and Regional Affairs Committee

Chairman

Vice-Chairman

SENATE FINANCE COMMITTEE
March 9, 1979
8:35 a.m.

Chairman Sackett convened the meeting at approximately 8:35 a.m. All committee members were present with the exception of Senator Sumner. Also in attendance were Senators Kerttula, Mulcahy, Tillion, and Stimson, as well as the Governor's Legislative Assistant Keith Specking, Garrey Peska, Administrative Assistant to the Finance Committee, representatives of the media, and individuals listed on the attendance sheet appended to these minutes. PRESENT

Chairman Sackett moved that SB 132 (Act relating to the refund of raw fish tax receipts to local government) be brought up for discussion, advising that Senate President Tillion and Mr. Specking were present to testify concerning the bill. SB 132

Senator Tillion advised that the legislation allows foregiveness of property taxes to municipalities equal to the amount paid for fishery development. He directed committee attention to page 2 of the fiscal note accompanying SB 132, advising that page 2 sets forth current distribution of shared taxes as well as proposed distrit ions un'er the subject bill.

Under the above legislation, fisheries would be taxed at basically the same rate for all species. Such taxation would not increase the general fund by a significant amount, but it would make funds available for development of fishery programs.

Senator Tillion advised committee members of the existence of a $1.684 million fisheries development bank formed last year, advising that funding in the bank can be leveraged through the Spokane Bank of Cooperatives. Development funding covers vessel loans as well as improvements ashore. He further stated that taxes do not fall evenly throughout Alaska. Senator Tillion advised that 60% of the crab caught in Alaska is caught by non-resident fishermen, while nine years ago Alaskans caught 90%. The greatest amount of crab is now caught by fishermen coming out of Seattle.

The program requires five years' residency in Alaska in order to be eligible, during three of which the individual must have participated in Alaskan fisheries. Senator Tillion advised that for the state's long-term good it will be

more beneficial to effect the increased tax now rather than maintain the status quo.

Senator Ray questioned whether revenue derived from the anticipated tax increase would be placed in the renewable resources fund, and Senator Tillion responded "no, last year we formed the bank and put $2 million into it set up as the Alaska Commercial Fishing and Agriculture Bank under the bank of cooperatives system set up by the federal government."

Mr. Keith Specking next appeared before the committee to comment on the proposed bill (copy of Mr. Specking's verbatim testimony attached to these minutes). KEITH SPECKING

Following Mr Specking's testimony, and in response to a question from Senator Ray, Senator Tillion demonstrated the effect of increased revenue sharing under the proposed legislation, advising that where the Haines Borough currently receives $32 thousand, under the subject bill it would receive $106 thousand. Basically, what the state hopes to do through increased revenue sharing is to develop its fisheries industry and take back what has been lost to Seattle. Increased funding will enable local municipalities to float revenue bonds to finance dock improvements. The fisheries industry will thus be bearing the cost of improvements rather than the general public.

Senator Mulcahy next appeared before the committee advising that the subject bill will have "the biggest impact on fisheries that has ever come along." He stated that problems with the legislation center on the fact that there has not been adequate time to develop information, receive input, or conduct research. He further stated that everyone knew the administration was considering a raw fish tax, but no one knew it would be anything as large as the proposed bill. In some areas of the industry the bill would effect a 500% tax increase. SENATOR MULCAHY

Senator Mulcahy stated that he believed everyone would agree that there is only one established fishery industry in Alaska--the salmon industry. Therefore the tax in this area is sometimes higher than other fishery areas experience. Some fishery areas are new and need a chance to "develop and get on their feet." Future development appears to be in bottom fisheries. Other areas of the industry have peaked out and are now functioning at a lower level.

Senator Mulcahy alluded to problems in the bottom fish industry revolving around big foreign fleets and cheaper labor markets in foreign countries. If Alaska is going to develop a bottom fish industry, it is going to have to give the on-shore development plant a break. The Bering Sea and Continental Shelf could be the sea port of Alaska if it is only allowed to develop.

He further advised that enactment of SB 132 would kill attempts by Senator Stevens to get $2 million in funding at the national level, adding that he didn't believe a short-term moratorium would be sufficient since investors will look to a longer term.

Senator Mulcahy allowed that the current tax structure needs looking into. However, he advised that "the name of the game in resource development is that it is going to cost the state something during development." Another thing, he advised, that has helped to develop the fleet is "the existing federal tax set up. A boat owner can take money out of income tax, set it aside, and put it back into the industry."

New fishing vessels over 100 feet in length have primary as well as secondary processing capabilities. SB 132 is going to have a substantial impact on crab processing in Alaska. Senator Mulcahy further advised that he believed the numbers connected to the legislation to be understated, saying that he felt the raw fish tax "is going to generate more than anticipated," and ultimately the state will be hitting the consumer and the fisherman a lot harder than anticipated with the subject bill. He stated that with the fuel tax added on top of the raw fish tax, he felt the state would be placing the crab industry in a bad position, particularly after the peak is over.

Making reference to the Combs (sp?) Report, Senator Mulcahy advocated a bottom fishery industry without tax for the next 10 to 12 years. He further advised that Alaska may end up with 20% of the processing conducted on shore while the remaining (73%) is processed at sea.

Senator Mulcahy further advised that he had no objection to eliminating the Seattle fleet, but feared that under the proposed bill, bottom fisheries would be damaged in Alaska. He stated that impact from the legislation is sufficient enough to demand a good hard look, adding that Alaska will not have a second chance at this industry.industry.

Senator Mulcahy made reference to the fishing industry in the Pribilof Islands and the local desire to get something "going on shore." Under the proposed bill, Senator Mulcahy advised that he could not see how the local effort "would have a chance to get started."

In response, Senator Tillion advised that if Alaska is going to develop a domestic fisheries industry (small boat) it needs financing for development. He added that the small fleet could properly conduct the harvest, but it needs a source of financing. He further attested to the need for Alaskans to get something out of the fishing industry. The subject bill would provide funding assistance to fisheries and to municipalities. He concluded by stated that without funding, there is no way Alaska is going to develop its fisheries.

Senator Ray again raised questions concerning use of revenue generated by the fish tax, and Senator Tillion advised that language contained in federal regulations would allow for a cooperative effort through the Spokane Bank permitting leveraged use of agricultural funds in the Spokane Bank. Two years ago, the federal government expanded the agriculture bank to include fisheries, allowing Alaska to use agriculture funds from other states. Senator Kerttula expanded upon the above statement, advising that since Alaska has such a small percentage of agricultural development, it is allowed to use agricultural funding for fishery projects.

Chairman Sackett advised that SB 132 would be held in committee for review at a later time.

SB 132
HELD OVER

The Chairman next moved that SB 62 (Act making a supplemental appropriation to the special projects office, Office of the Governor, to continue funding the Delta agricultural development project) be brought up for discussion, advising that Bob Palmer from the Governor's Office was before the committee to testify. Mr. Palmer advised that last year the legislature appropriated first-phase funding for the project. Such funding provided money for the clearing operation which is now underway as well as money for the elevator and other items. The administration emphasized that last year's appropriation was for the first phase, and that the administration would be back before the legislature seeking funding for the second phase.

THE SENATE

HOUSE CS FOR CS FOR SENATE BILL NO. 132

IN THE LEGISLATURE OF THE STATE OF ALASKA

ELEVENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act relating to fisheries; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. FINDINGS. The legislature finds that the state has

(1) funded and implemented several fisheries-related development programs;

(2) funded and implemented fishery loan programs;

(3) increased its fishery protection and management program;

(4) funded and implemented a limited entry program; and

(5) embarked on a program of encouraging the development of a bottom fishing industry.

* Sec. 2. PURPOSE. The purposes of this Act are to

(1) insure that the state is able to continue its efforts toward overall fisheries-related development programs by raising additional revenu to pay for the programs;

(2) make the imposition of the fisheries tax more uniform among fisheries businesses; and

(3) provide funding for the development of new fisheries project

* Sec. 3. AS 43.75 is amended by adding new sections to read:

Sec. 43.75.011. FISHERIES BUSINESS LICENSE. A person engaging o attempting to engage in a fisheries business shall first apply for and obtain a license as provided in AS 43.75.020.

Sec. 43.75.015. FISHERIES BUSINESS TAX. (a) A person engaged i a fisheries business is liable for and shall pay a tax equal to

(1) two and one-half per cent of the value o a developin commercial fish species processed by his fisheries business during t year; and

(2) five per cent of the value of a fishery resource, exc a developing commercial fish species, processed by his fisheries bus ness during the year.

(b) A person engaging or attempting to engage in a fisheries business who actually and physically processes the fishery resource liable for and shall pay to the department the tax imposed by this section. In determining this tax liability, the person may not ded from the value of the fishery resource processed the value of fishe resources canned or processed for other fisheries businesses, but s include that value as part of the value of the fishe y resources ca or processed.

Sec. 43.75.131. TAX SHARING WITH MUNICIPALITIES. ( ) The fisheries tax revenue account is established in the general fund. amount to carry out the provisions of (b) of this section may he appropriated annually by the legislature to the account. If the a in the account is insufficient to provide each municipality its sh authorized by (b) of this section, the money which has been approp shall be distributed pro rata among the eligible municipalities.

(b) The department shall pay to each borough, to each city c first class, and to each municipality unified under AS 29.68.240 - 29.68.440, an amount equal to 16 2/3 per cent of the amount of tax revenue collected in the municipality from taxes levied in this cl except that if tax revenue is collected in a city within a borough department shall pay an amount equal to 8 and one-third per cent amount of tax revenue collected in the city within the borough to city and the same amount to the borough.

Sec. 43.75.136. PAYMENTS TO COMMERCIAL FISHING AND AGRICULTURE BANK. The legislature may annually appropriate 33 1/3 per cent of the amount of tax revenue collected under this chapter to the Commercial Fishing and Agriculture Bank established in AS 44.54.010 until the ban is fully capitalized as determined by the commissioner of commerce and economic development based upon the estimated capital needs of the ban

Sec. 43.75.140. DEFINITIONS. In this chapter

(1) "department" means the Department of Revenue;

(2 "developing commercial fish species" means those speci of fish and shellfish annually designated by the commissioner of fish and game under AS 16.0.050(12);

(3) "fisheries business" means a person who engages in processing fisheries resources for sale by freezing, cooking, salting, other method and includes but is not limited to canneries, cold stor ages, freezer ships, and processing plants;

(4) "fishery resource" means fin fish, shellfish and fis by-products, including but not limited to salmon, halibut, herring, crab, clam, cod, shrimp, and pollock;

(5) "value" means the actual price paid for the fisheri resource by the fisheries business including indirect consideratio as fuel, supplies, or gear, except that "value" means the market v of the fishery resource if procured in company-owned or subsidized operated by employees of the fisheries business or under lease or arrangement.

* Sec. 4. AS 43.75.100 is repealed and re-enacted to read:

Sec. 43.75.100. TAX IMPOSED ON TAKING OF FISHERY RESOURCE. person taking, purchasing, or otherwise acquiring a fishery reso covered by this chapter which has not been subject to the tax im AS 43.75.015 who sells the fishery resource to a fisheries busin

outside the taxing jurisdiction of the state is subject to the tax s
out in AS 43.75.015 on the value of the fishery resource sold.

* Sec. 5. AS 43.75.030(a) is amended to read:

(a) A person subject to the tax shall file a return stating th
value of [RAW] fisheries <u>resources</u> [PRODUCTS] processed during the
license year, computed as required by [AS 43.75.010 - 43.75.050 OF] t
chapter, and such other information as the department prescribes by
regulation. The return shall show the license number and shall be
signed by the taxpayer or his authorized agent, under penalty of per-
jury. If a receiver, trustee, or assign is operating the property o
business, he shall file the return for the person. A tax due on the
basis of such a return shall be collected in the same manner as if
collected from the person of whose business he has custody and contro

* Sec. 6. AS 43.75.030(e) is amended to read:

(e) Every person engaging or attempting to engage in a business
for which a license is required under [AS 43.75.010 - 43.75.050 OF] t
chapter shall keep [SUCH] records, make [SUCH] statements under oath,
file [SUCH] returns, and comply with <u>all</u> [SUCH] regulations <u>which</u> [A
the commissioner of revenue may prescribe.

* Sec. 7. AS 43.75.050(f) is amended to read:

(f) A person who wilfully fails to obtain a license, pay a tax,
make a return, keep or display a record, or supply the information a
the time required by law or regulation, in violation of [AS 43.75.01
43.75.055 OF] this chapter, is, in addition to other penalties provi
by law, guilty of a misdemeanor, and upon conviction is punishable b
fine of not more than $1,000, or by imprisonment for not more than o
year, or by both, together with the cost of prosecution.

* Sec. 8. AS 43.75.055 is amended to read:

Sec. 43.75.055. SECURITY FOR COLLECTION OF TAXES. Each applic

for a license under this chapter shall, in or with his application, state under oath the amount of each of the products which he expects to produce during the license year. The applicant shall further state the extent of lienable real property owned by the applicant in the state against which the tax may be collected and other information with respect to description, location and value of the property which the department prescribes. If the lienable value of the property is not equal to three times the amount of the tax for which the applicant will probably be liable under this section, the department may not issue the license until the applicant files with the department a surety bond approved by the attorney general in a penal sum equal to twice the probable amount of the tax for which the applicant will be liable, conditioned upon payment of the tax in full when due, with interest if not paid before delinquency. However, if the applicant purchases salmon for export from Alaska in the round, the amount of the bond is $50,000 unless the applicant is the owner of lienable real property in the state of a value of at least $50,000, and the bond must be conditioned upon payment to the fisherman of the full purchase price for the salmon and the payment of the tax in full when due. The department may waive the bond requirement if the applicant posts other security in the form of collateral acceptable to the department or prepays the estimated tax.

* Sec. 9. AS 43.75.110 is amended to read:

Sec. 43.75.110. DUTY OF TAXPAYER AND PAYMENT OF TAX. A person subject to taxes under AS 43.75.100 - 43.75.120 shall make a return stating the value of [RAW] fisheries resources [PRODUCTS] taken, purchased, or otherwise acquired during the license year for sale to fisheries businesses [FREEZER SHIPS, FLOATING COLD STORAGES, OR FLOATING CANNERIES] outside of the taxing jurisdiction of the state computed as required by AS 43.75.100 - 43.75.120, and other information to carry

the provisions of AS 43.75.100 - 43.75.200 as may be prescribed by the department. The return shall contain the license number and shall be signed by the taxpayer or his authorized agent, under penalty of perjury. If a receiver, trustee, or assign is operating the property or business, he shall make the return for the person. A tax due on the basis of such return shall be collected in the same manner as if collected from the person of whose business he has custody and contro The requirements for time and place of payment of tax, and the obliga tion to keep records and make the records available to the commission of revenue are the same as those prescribed in AS 43.75.011 - 43.75.0 [THE BUSINESS LICENSE TAX LAW FOR SALMON CANNERIES'

* Sec. 10. AS 43.75.120 is amended to read:

Sec. 43.75.120. VIOLATIONS AND PENALTIES. (a) The liability t file returns and pay interest and deficiency assessments, and the sub jection of property to liens is the same as prescribed in AS 43.75.0 43.75.050 [THE BUSINESS LICENSE TAX LAW FOR SALMON CANNERIES].

(b) A violation of AS 43.75.100 - 43.75.120 or the regulations issued under AS 43.75.100 - 43.75.120 is a misdemeanor subject to pu ment as prescribed in AS 43.75.011 - 43.75.050 [THE BUSINESS LICENSE LAW FOR SALMON CANNERIES].

* Sec. 11. AS 16.05.050 is amended by adding a new paragraph to read

(12) not later than October 31 of each year, provide to t commissioner of revenue the names of those fish and shellfish speci which he designates as developing commercial fish species; a fish o shellfish species is a developing commercial fish species if, withi specified geographical region,

(A) the optimum yield from the harvest of the spec has not been reached; or

(B) a substantial portion of the allowable harvest

the species has been allocated to fishing vessels of a foreign nation.

* Sec. 12. AS 43.18 is amended by adding new sections to read:

ARTICLE 5. GRANTS FOR FISHERIES PROJECTS.

Sec. 43.18.500. GRANTS FOR FISHERIES PROJECTS. (a) The fisheri facilities grant account is established in the general fund. An amour to carry out the provisions of (b) of this section may be appropriate annually by the legislature to the account.

(b) Within the limits of legislative appropriations for this purpose, the commissioner may make grants to municipalities receiving shared fisheries tax revenues under AS 43.75.131. A grant provided under this section may not exceed the amount which the municipality entitled to receive under AS 43.75.131 during the fiscal year in whi payment of a grant is requested. The commissioner may make a grant municipality under this section only if the municipality demonstrat the commissioner's satisfaction that the grant will be used on a fisheries project.

(c) In this section,

(1) "commissioner" means the commissioner of ;

(2) "fisheries project" means a dock or comparable faci which may be used for the transfer or transportation of fishery products, including all utilities necessary to service the fisher project.

(3) "municipality" means a borough, home rule or first city, or a municipality unified under AS 29.68.240 - 29.68.440;

* Sec. 13. AS 43.75.010, 43.75.060, 43.75.070, 43.75.080, 43.75.09 43.75.095, 43.75.130, and 43.75.135 are repealed.

* Sec. 14. TRANSITION. The taxes paid for the 1978 calendar year AS 43.75 shall be shared with municipalities in accordance with AS 43

nd 43.75.135, as those sections read before repeal by this Act. The taxes paid for the 1979 calendar year and for each succeeding calendar year may be shared with municipalities in accordance with AS 43.75.131, added by sec. 3 of this Act.

* Sec. 15. TREATMENT OF HALIBUT. For purposes of AS 16.05.050(12), adde by sec. 11 of this Act, halibut is designated a developing commercial fish species. The designation of halibut as a developing commercial fish specie ceases when the commissioner of fish and game no longer designates halibut a species of which there is a significant supply and for which there is a developing commercial market.

* Sec. 16. A municipality which would receive less money under the provisions of AS 43.75.131, added by this Act than it received for the last fiscal year under the provisions of AS 43.75.130 and AS 43.75.135, repealed by this Act, shall, until June 30, 1982, be entitled to receive an amount equal to that received for the fiscal year ending June 30, 1978 under the former provisions of AS 43.75.130 and 43.75.135, in accordance with those provisions.

* Sec. 17. This Act is retroactive to January 1, 1979.

* Sec. 18. This Act take effect immediately in accordance with AS 01.070(c).

Position Paper Concerning H.B. 306/S.B. 132

SUMMARY

Any equitable fisheries business tax must establish a differential among the various species and types of processing. For example, the frozen salmon industry is currently experiencing an unusual period in its history, in which most of the profits from each season must be used to finance plant renovation in order to increase the overall product quality and remain competitive in world markets. Therefore, the imposition of a substantially higher tax rate at this time would seriously impair the ability of these packers to continue the necessary upgrading of their facilities and processing techniques to compete in foreign markets.

There is a need for the commercial fishing industry to contribute sufficient revenue to the General Fund to cover State expenditures for commercial fisheries. However, estimates of the current taxable ex-vessel value of Alaska's commercial fisheries have been consistently understated due to the lack of current data and the rapid increase in ex-vessel prices over the past few years.

A summary of total estimated 1979 ex-vessel value and tax yield, by species, is attached The problems experienced in obtaining this data and the time needed to obtain the additional information and perform the analyses necessary to formulate an equitable tax bill cannot be overemphasized. Therefore, a more detailed analysis of the industry should be performed before any substantial change is made in the present tax structure or rate.

Prepared by Environmental Services Limited for Salamatof Seafoods, Inc., Kenai, Alaska, 12 April 1979.

DISCUSSION

Proposed Six Percent Tax Rate

General

As reflected in the existing fisheries tax statute (AS 43.75), the state has in the past recognized the different cost structures and needs for certain minimum rates of return in the various sectors of the processing industry. It is apparent, however, that the commercial fishing industry has undergone considerable changes in the thirty years since the present law was written, and therefore, some alteration of the existing tax structure is necessary. However, the proposed six percent across-the-board tax on gross receipts (ex-vessel value) is not reflective of either the differences in net profitability in the processing of various fish and shellfish species, or of the current necessity for certain minimum rates of return in the various sectors of the industry.

The Frozen Salmon Industry

For example, the salmon processing industry has been experiencing radical changes in the last several years and has been forced to undertake major investments to upgrade its facilities in order to meet the demands of the Japanese market. Historically, the salmon industry in Alaska consisted of canneries producing high quality canned salmon. However, today's market is not very favorable for canned salmon, and therefore an increasing number of processors are converting from canning to freezing facilities in order to remain competitive on world markets and to produce a product which is marketable at a fair rate of return. This is an unusual period for the industry in that it has been necessary to reinvest a substantial amount, if not all of the profits from the last several good seasons for plant expansion, renovation, and upgrading of facilities and processing techniques.

Financing

Although certain segments of the industry have made adequate profits during the last few years, these profits have not been sufficient to fully fund the improvements necessary to maintain the competitive position of the packers. Considerable quantities of outside capital, in the form of long term loans have also been needed to finance these facilities. Although comprehensive data is not available, we have sufficient evidence from several smaller, shore-based Alaskan processors to indicate that the proposed six percent raw fish tax rate would reduce their profits sufficiently to make domestic financing from commercial banks considerably more difficult, if not impossible, to obtain. In the past, many Alaskan processors in this position have been forced to seek foreign financing (primarily Japanese) to facilitate plant renovation. It is likely that if an excessive tax rate is imposed this pattern will continue, even after the Commercial Fishing and Agriculture Bank is capitalized, as it will not be able to provide all of the capital presently needed by the industry.

Other Species and Types of Processors

The differential effects of the proposed tax on the various sectors of the industry and on the Alaskan economy, in general, are not well known. Clearly, some species and types of processing operations in some areas of the state may be in a position to pay a higher tax rate; however, further analysis is needed to determine the potential impacts before an equitable tax structure can be established.

State Expenditures for and Revenues from Commercial Fisheries

State revenues from the commercial fishing industry should offset any State expenditures directly subsidizing the industry, if a healthy economic balance is to be maintained. However, the industry should not be financially responsible for supporting local revenue sharing programs or other disbursements from the General Fund which do not directly benefit commercial fisheries.

Present state and local taxes paid by the industry include revenue from several sources in addition to the present tax on raw and wholesale seafood products. These include state corporate income taxes from fish processors, local property taxes on shore-based plants, local raw fish sales taxes as high as three percent in some areas, and personal income taxes from an increasing number of persons employed in the commercial fishing industry.

A detailed table showing ex-vessel value and estimated tax yield from the proposed raw fish tax, by species, is attached. The 1978 and 1979 values presented in this table are substantially higher than those used in previous projections of revenue from the proposed fisheries tax. This is primarily due to two major factors: (1) the most recent comprehensive catch and value data readily available from ADF&G is for 1975 and therefore it was necessary to construct a composite picture of the 1978 and projected 1979 catch and value data based upon existing but unconsolidated ADF&G information; and (2) the ex-vessel prices of many species have experienced a rapid increase over the past few years, a factor which was not reflected in any readily ascertainable data.

On the other hand, state expenditures for commercial fisheries programs have generally been overstated. In a table prepared by the Research Division, Legislative Affairs Agency (16 March 1979), the State expenditures for commercial fisheries for FY 1979 total approximately $28 million. However, several adjustments must be made to this table in order to more accurately present the actual State expenditures for these commercial fisheries programs. The State revenue from commercial fishing gear licenses and crew member licenses should be subtracted from the total expenditures, and adjustments must be made to reflect the percentage of the budget of the Department of Revenue, Fish and Game Licensing Division, and the Department of Fish and Game, F.R.E.D. Division, which are spent for purposes other than commercial fisheries. The net expenditures, then, for these programs total approximately $22 million, rather than the $28 million, previously stated.

Another important consideration in assessing State expenditures which directly or indirectly benefit the commercial fishing industry, is that many of these expenditures are for development programs which have not yet reached the point where they accrue returns in excess of the required expenditures. This is true of such recent State programs as fisheries enhancement, ports and harbors, and bottomfish development. Thus, while present expenditures for these programs may appear to be high, future State revenues resulting from benefits to the commercial fishing industry and other effected industries should equal, if not exceed, State expenditures.

Notes

Catch is given in thousands of pounds; ex-vessel value and tax yield are given in thousands of dollars.

1978 catch figures are from actual ADF&G Preliminary Catch Reports.

1979-1 salmon projections are based on ADF&G 1979 forecasts.

1979-2 salmon projections are based on ADF&G forecasts with a 24% factor added to account for historical low forecasts (1973-1978).

1979 (1 and 2) catch projections for all other species are based on ADF&G and International Pacfic Halibut Commission Projections.

Price estimates for 1978 and 1979 are based on ADF&G and processing industry estimates and projections.

Prepared by Environmental Services Limited for Salamatof Seafoods, Inc., Kenai, Alaska, 12 April 1979.

Re: Teleconference CS FOR CS FOR SENATE BILL 132

Dear Alvin

Attached are copies of the testimony given by Mayor Don Gilman, Kenai Peninsula Borough and myself, over the teleconferece, to the House Resources Committee on CS FOR CS FOR SENATE BILL 132 May th. 10th, 1979.

We request that you give deep consideration to the objections to the present bill, that are expressed in this testimony.

Yours truly,

Lottie Edelman

Lottie Edelman, Pres.
Kenai Pen. Fishermen's Coop. Assn.

April 10, 1979

TESTIMONY ON CS FOR CS FOR SENATE BILL 132

Mr. Chairman, Members of the Committee, fellow teleconference participants. My name is Don Gilman, Mayor, of the Kenai Peninsula Borough. My testimony on CS for Cs for Senate Bill 132 will concentrate on two items: the effects of this proposed legislation on municipalities and the local fishing community as it exists today.

This bill or any substitute for it eliminates a dedicated tax which has been in place since 1949. It places the burden of distributing the tax to the legislature through the appropriation process. Regardless of the good intentions of this legislature, there is no assurance to the municipalities that the appropriations will be made. The provision in one version which would make 1/2 the share to the municipality subject to the judgment of the Commissioner of Community and Regional Affairs to require municipalities to provide fisheries projects will work against the limited power second class borough. Frankly, we feel that these provisions are a clear signal of legislative intent to determine when, where and how fisheries projects will happen.

We have just completed a two hour session with a group of processors and fishermen to try to determine the effects at the local level. There will be some additional testimony from members of this group. In general, the following concerns were expressed:

1. Several local plants have just gone through or are committed to, major expansions of $1,000,000 or more. Much of this capacity will be in freezer operations which would receive a 500% tax increase under one provision and 400% under another provision. The effects are uncertain but appear onerous on the surface.

2. Will this tax drive processing of current catch offshore? No one seems to know.

3. Can the bottom fishing industry attract the necessary capital for onshore processing with this level of taxation during its infancy?

The group which met came to one conclusion: While there may need to be adjustments in the fish tax the local industry does not understand its ramifications. Therefore, we recommend that an interim committee be appointed to conduct a study into the matter and hold public hearings in the major fishing communities, these findings to be reported to the next session of the legislature. We further recommend that the study be made as if the tax were in place in order to determine the 1979 effect and add credibility to the economic analysis which must be made.

Kenai, Alaska
April 10, 1979

Re: Tele-conference
CS FOR CS FOR SENATE BILL 132

Mr. Chairman and members of the Resources Committee, I am Lottie Edelman, Pres. Kenai Pen. Fishermen's Coop. Assn. and Legislative Chairman for the Cook Inlet Fishermen's Council. The Council is an organization made up of representatives of various commercial fishermen's organizations within Cook Inlet.

We would prefer this bill be postpned until next session and public hearings held throughout Alaska, also that the proposed study of fisheries taxes be made. If a tax bill is to be passed this session we would suggest the following alternative be considered:

1. Tax should be on the first wholesale and not on "ex-vessel"value.

2. 2% on frozen fin-fish and shell fish.
   1% on bottom fish from shore based plants.
   4.5% on canned fin-fish
   6% on all fin-fish and shell-fish from floating operations

If the present 1% ex-vessel tax, on frozen fin-fish, were based on the 1st wholesale value,for tax purposes, it would nore than double the State revenue on frozen fin-fish.

If the State initiates the 2% on frozen fin-fish, that we have suggested, it would increase the revenue to the State more than 500%.

The ex-vessel price throughout the State varies drastically on like fishery products, which wholesale on like markets for the same price. Basing the tax on first whole-sale would not place a heavier tax burden on areas where ex-vessel prices are the highest but would more equalize it. For example, Cook Inlet red salmon were $1.50 per lb. and Bristol Bay red salmon at .70 or .75 cents per lb. The heavier tax burden at ex-vessel, would be on the Cook Inlet fishermen.

Alaska is just getting into her own as far as freezing facilities. They are expanding very rapidly, this is a very lucritive market and has been the leading factor of higher fish prices to our fishermen.

Many of the expansions are very large and expensive. Several plants in the Cook Inlet area are investing millions of dollars this year for expansion, fish will be brought from the Westward, Bristol Bay and various other parts of Alaska to be frozen here. There should be some tax credit or tax incentative for modernization and facality expansions written into this bill.

The original bill for raw fish tax, was passed in 1949. Therefore when we became a State it carried with it the "grand-father" rights for a dedicated funding of a portion of the collected tax, to municipalities. In no way should the original law be amended to exclude this or nulify the "grand-father" rights.

Rep. Alvin Osterback
Alaska State Legislature
Pouch V
Juneau, AK 99811

Dear Representative Osterback:

Our Association is severely concerned about the negative impact H.B. 306, relating to the institution of a 6% raw fish tax, would have on the coastal fishing communities of Alaska. This tax would provide a very negative pressure on the price fishermen receive for their product, increase operating costs to the processors, and add inflationary pressures to the consumer prices of fish products which are presently approaching prohibitive levels. In view of the present and future economic situation in the U.S., with increasing inflation, further devaluation of the dollar, and predictions of recession, most State and Federal tax legislation indicates an attempt and need to give tax relief, especially to the producer.

The institution of this tax would give positive impetus to the development of off-shore processors, and off-shore tender processors, both which would erode the present tax base we have in coastal communities in Alaska. Given the present tax situation, we at least can see future development and expansion of shore based processors, which greatly benefit the local community in employment levels, local markets for fishermen (especially small boat operations), local support activities to the processor and fishermen, tax base, etc. I would hope that responsible fiscal policy would attempt to give a favorable economic climate to aid in the healthy development of the processing industry and primary producers. This would of course, benefit the industry, therefore the State, its citizens, and its revenues.

This tax would have its greatest impact on the small boat fishermen. Many of these small boat operations are marginally operative in that they do not care to be highline operations, but attempt to be self-supportive and independent businessmen. As such, they benefit the State in that they provide employment for themselves, their crew; and product to the processors to be sold to state, national and international markets. This tax would lower the capital formation opportunities which any boat operator needs to remain competitive in a highly competitive industry, and to expand in an industry where the need for expansion and higher efficiency is a reality. Larger vessels would likewise suffer.

With the many opportunities provided for the State, vis-a-vis the fishing industry, with the implementation of the 200-mile fisheries conservation zone, we must not erode the climate presently existing which gives hopes of healthy shore-based processing expansion needed to develop the Alaskan fishing industry to the point of being able to harvest the rich resources of presently under-utilized species. This expansion into the bottomfish resources of the State will add to the State commerce, tax base and tax revenues, provide many jobs, provide

opportunities for investment on-shore, allow our entrance into the foreign controlled markets for bottomfish species, and finally begin to rid ourselves of massive foreign fishing off Alaska's shores. These objectives cannot be met with the implementation of more taxes on raw fish values.

The fishing industry in Alaska pays its way very well, and in so doing benefits the State. If there is concern regarding questionable expenditures relating to the fishing industry, I respectfully suggest that the objective of responsible fiscal management would be to evaluate into which programs State monies are being directed, and into which geographical locations these monies are being directed; and then evaluate their return to the State.

I would hope that more information be presented and studied before a tax measure of this far-reaching magnitude be considered. Thank you.

Respectfully,

Jeffrey R. Stephan

4/3/79

Dear Mr. Osterback and Mr. Miles;

The Greater Sitka Chamber of Commerce urges your opposition to the proposed increase in the Raw Fish Tax. Our position is that the enactment of such a tax would, on a long range basis, produce a loss of employment and subsequent revenues that would far more than off-set that portion of the tax that would come to a municipal government.

Sincerely,

David R. Knapp

March 16, 1979

Senator George Hohman
Representative Nels A. Anderson, Jr.
Pouch V
Juneau, Alaska 99811

Dear George and Nels:

(CS Senate Bill 132)

This letter is in protest of House Bill 306 (Fisheries Taxes). We ask you as our Senator and Representative to use all of your efforts in having this Bill defeated.

Why does the State Administration and some legislators want to tax the fish processors to fund State programs to the detriment of the fishermen? The fishermen and the consumers will be paying this tax indirectly for the fish processor. This means lower fish prices for the fishermen and higher prices for the consumer.

This Bill (306) discourages development of the fisheries. I don't see how the State can say they encourage development when taxation of this sort is placed on them before any development occurs. It doesn't make sense.

It seems to me the State of Alaska should have learned their lesson with the taxation they placed against the oil industry when one speaks of encouraging development.

Many fishermen in Bristol Bay come from small villages that will not benefit from this taxation proposal but will be paying their fair share to the local governments and the State of Alaska.

We must keep in mind that we cannot run off half cocked into programs we can't afford nor should we place taxation on

industries without first studying the impacts in greater detail. It will be a grave mistake should this legislation pass.

I ask that you keep me informed of the status of this Bill.

Sincerely,

Harold H Samuelsen

HB 306

AN [illegible] COMPANY

March 10, 1979

Honorable Alvin Osterback
Alaska House of Representatives
Pouch V
Juneau, AK 99811

RE: HP 306

Dear Alvin;

On behalf of Pacific Pearl Seafoods, which has six seafood canneries operating in Alaska as well as one floating processor, I would like to use this letter to voice our vehement objections to the above-mentioned House bill, the purpose of which is to raise the tax on raw fish from 1% to 6%:

1) On the east coast of the United States, American canner crab meat is already being undersold by the Canadians ($5.4./lb vs. $4.30/lb.). The proposed increase in the raw fish tax would only serve to up the American crab price by an additional 16¢, thus furthering the gap between the two and handicapping an American industry so as to be uncompetitive.

2) Far from promoting the development of a bottomfish fishery, an increase in the raw fish tax across the board would only inhibit such a growth. The 6% raw fish tax would be more than the profit margin in such a high volume - low profit fishery. So, if the promoters of HB 306 are really interested in strengthening the bottomfish potential in Alaska, it would seem they are going about it in a very inefficient way. I might add that the bottomfish industry is going to be a very essential part of this State's future fisheries resources. It is in the interest of Alaska that everything possible be done to advance the bottomfish industry, which this proposed raw fish tax increase does not do.

3) Such a drastic increase in the raw fish tax, rather that adding to the State's coffers, could very possibly end up bringing the State less monies. Why should floating processors fish in State waters and be taxed so exorbitantly when they can go outside State boundaries and not be taxed at all?

4) There are definite legal questions concerning just what constitutes the State's territorial boundaries. For instance, the International Halibut Commission said that a state cannot tax anything past a three-mile limit.

PACIFIC PEARL SEAFOODS
P.O. BOX 826
KODIAK, ALASKA 99615

This bill, if passed, is going to effect several thousands of Alaskans involved in various aspects of the fisheries industry. Therefore, it is particularly essential that it not be rushed through the House committees without the public and fishing industry being give an opportunity to speak out on it.

Respectfully,

Charles L. Jensen

CLJ:cmb

Cordova District Fisheries Union

Headquarters: Box 939, Cordova, Alaska

March 23, 1979

Honorable Alvin Osterback
Chairman, House Resources Commit ee
House of Representatives
Pouch V
Juneau, Alaska 99811

Dear Representative Osterback:

As an organization comprised of mostly resident Alaska inshore and near shore fishermen, we strongly object to the manner and haste that SB 132 was rammed through the Senate.

We respectfully request that all members of the House take the approach of slowing things down and assessing the impact of this particular tax increase on the commercial fishing industry and the State of Alaska.

While no one can deny the need for increased revenues under the State's present financial dilemma, we feel that this piece of legislation cannot legally or practically fulfill the desires of its unlisted sponsors, and will, in fact, actually be detrimental to the development of an Alaska land-based bottomfish industry.

We had requested the Senate to table the bill for the year to allow time for passage of HB 36 and the ensuing study it funds. We had also asked that the Alaska Fisheries Tax Law study include an assessment of the impact of SB 132 on the fishing industry and the State. Our position is not one of just opposing a tax increase. We are sincerely concerned about our ability to remain year-round Alaskan residents. We need land-based fishing operations to help us as individuals support the small coastal communities we live in. In our opinion, the State of Alaska cannot benefit if it creates a situation that heavily taxes the Alaska land-based industry and creates that same tax dodging incentive for offshore development.

We will end up seeing the low volume, small production areas that are struggling now at best, carrying the bulk of the tax burden, while the heavy volume, large boat production is being carried on totally offshore and out of the State's taxing jurisdiction.

Unfortunately for the small operator in the salmon and crab fishery, the statewide publicity of the high value catches made by a few people in a few cases has created an image of every fishermen being rich. It only takes a few moments of research to find that these image-creating incidents grossly misrepresent the average.

For example, in 1978, a Prince William Sound gillnetter fishing the 18-week season averaged approximately $20,000 gross. After one cranks in the factor for investments in boats and gear, fuel, groceries, insurance, etc., the average fishermen doesn't have much to take home to feed his family.

The same falls true for the Prince William Sound salmon seiner who last year averaged less than $14,000 per boat--subtract expenses and crew shares, etc. The majority of the Prince William Sound Tanner crab fleet are small boats which scratch out 50 to 100,000 pounds of crab from November to May--hardly a real money maker, but a means of fishing in the wintertime and making enough to cover the household bills and keeping the kids in school clothes.

I'm not trying to cause you to tearstain this letter, but I am trying to impress the fact that the vast majority of Alaskan resident fishermen do not fall into the high dollar income bracket that many automatically assume. I do want to emphasize that a few cents per pound taken away from a small producer's profit margin is much more detrimental to that family's existence than the same few cents per pound to a high volume producer.

We urge that all House members take a real hard look at the impact of this bill before allowing it to move. We feel confident that no one wants to create a situation which, on top of the existing high costs of living in rural Alaska, forces the residents who are managing to hang on year-round to become non-residents just because they can't quite afford to live here anymore.

Some hardline questions need to be answered before this bill is passed and serious damage is done.

(1) Who will end up paying the tax increase? (Onshore or offshore processors?) (Resident or non-resident fishermen?)

(2) Can the State legally tax offshore processors or harvesters? (This is probably the most important question that needs to be addressed. The Department of Law thinks not and apparently the oil industry thinks not.)

(3) What incentive will this tax increase create to develop land-based industry?

(4) How hard will it impact the small producer?

(5) In actual long-range dollars and cents, will the State benefit or will this end up being a superficially attractive bomb?

We can see no benefit to the State if this tax pushes all the major fishery production offshore.

We can see no benefit if the bulk of the tax burden ends up being paid by Alaskan residents involved in marginal fisheries.

It has been my personal sad experience to have observed members of our organization who have lived and fished in the Prince William Sound area for many years, forced to pack up their families and move to the Lower 48 because they could not afford to live in Cordova. In discussing this problem with other representatives of coastal communities, it appears that this same problem is occurring statewide. It would seem that the State should be creating reasons for residents to stay in Alaska, not forcing them out.

The bottom line has got to be, if a tax increase is not beneficial to the State, it certainly should not be passed. This one appears to be actually detrimental.

Sincerely,

Bob Blake
Chairman

* Sec. . AS 43.75.130 is amended to read:

Sec. 43.75.130. REFUND TO LOCAL GOVERNMENTS. The commissioner of revenue shall pay to each organized borough, to [AND] each city, and to each municipality unified under AS 29.68.?) - 29.68.440, ~~20~~ 13 1/3 [OF THE FIRST CLASS 10] per cent of the amount of tax revenue collected in the municipality [BOROUGH OR CITY] from taxes levied by AS 43.75 [AS 43.75.010 - 43.75.-090]. If tax revenue is collected in a city within a borough, the department shall pay an amount equal to ~~10~~ 16 2/3 per cent of the amount of revenue collected in the city within the borough to the city and the same amount to the borough.

Not adopted by C&RA

* Sec. . AS 43.18 is amended by adding new sections to read:

ARTICLE 5. GRANTS FOR FISHERIES PROJECTS.

Sec. 43.18.500. GRANTS FOR FISHERIES PROJECTS. (a) The fisheries facilties grant account is established in the general fund. An amount to carry out the provisions of (b) of this section may be appropriated annually by the legislature to the account.

(b) Within the limits of legislative appropriations for this purpose, the commissioner may make grants to municipalities receiving shared fisheries tax revenues under AS 43.75.130. A grant provided under this section may not exceed 13 1/3 per cent of the amount of revenue collected in the municipality from the tax levied and collected under AS 43.75. The commissioner may make a grant to a municipality under this section only if the municipality demonstrates to the commissioner's satisfaction that the grant will be used on a fisheries project.

(c) In this section,

(1) "commissioner" means the commissioner of [ ];

including maintenance

(2) "fisheries project" means a dock or comparable facility which may be used for the transfer or transportation of fishery products, including all utilities necessary to service the project;

(3) "municipality" means a borough, home rule or general law city, or a municipality unified under AS 29.68.240 - 29.68.440;

RE: HB 306/SB 132

Dear Representative Osterback:

A large percentage of our travel business is fisheries oriented, stemming from employees at the canneries and from fishermen. Therefore, anything that would serve to reduce the fisheries business would also serve to reduce a substantial volume of our business.

The proposed increase in the raw fish tax from one to six percent that is now being considered is just such a step that could seriously harm a fishing community like Kodiak. This increased raw fish tax will be passed on to the local fishermen as well as any Seattle-based fishermen and it will be passed on to the consumer, who is already paying extravagant prices for Alaskan seafood.

It is hard to conceive how Alaskan legislatures could think that such a bill is in the Alaskan interest when the effects of it can be so readily envisoned as being detrimental to those Alaskan people and businesses that are to a large part dependent on the fisheries industry.

There also appears to be some doubt as to whether this tax could be collected by the State should offshore processors move out more than three miles from the shore.

Hopefully, you and the other legislatures will allow the public to speak out on this matter since it concerns the livelihoods of so many Alaskans.

Respectfully,

Liane Dierich

4/3/79

Dear Mr. Osterback and Mr. Miles;

The Greater Sitka Chamber of Commerce urges your opposition to the proposed increase in the Raw Fish Tax. Our position is that the enactment of such a tax would, on a long range basis, produce a loss of employment and subsequent revenues that would far more than off-set that portion of the tax that would come to a municipal government.

Sincerely,

David R. Knapp

Raw Fish Tax { SB 132 / HB 306

Fish tax study - HB36

Pacific Pearl

AN Amfac COMPANY

April 10, 1979

The Honorable Alvin Osterback
House of Representatives
Pouch V
Juneau, Alaska 99811

Dear Mr. Osterback:

Pacific Pearl Seafoods strongly objects to passage of House Bill No. 306 which would increase the Alaska Raw Fish Tax to 6%. The proposed legislation would have a substantial, adverse impact on the Alaskan seafood industry and those communities, employees, fishermen and allied local businesses associated with the target industry. Moreover, the pending legislation is being supported on the basis of the inaccurate, false assumption that "the seafood industry is not paying its way."

Pacific Pearl Seafoods is a wholly owned subsidiary of Amfac - a Hawaiian based diversified service company. Amfac is a domestic, publically owned corporation. Pacific Pearl operates seven seafood processing plants in the State of Alaska: Seldovia, Kodiak (2 plants), Sand Point, Captains Bay (Unalaska), Dutch Harbor, and a floating processor the M/V Akutan (generally located at the village of Akutan). These seven plants employ approximately 600 people on a one-shift basis and up to 1,000 when operated on two shifts. The company produces frozen and canned Alaskan seafoods. A significant majority of the company's annual production is sold domestically under the Pacific Pearl and Wakefield labels.

The proposed tax increase will have a devastating market impact - particularly in the domestic segment which already evidences strong signs of price resistance. The market impact in major export markets (especially Japan) will be much less severe provided the dollar does not strengthen appreciably against the Yen. In any case, the proposed legislation will have a distinct market impact which will probably manifest itself by "forcing" increased sales to the Japanese market in the near term. In my opinion this would place the industry in a position of even greater depencence on a foreign economy - promoting an imbalance which I fear is already to the domestic industry's detriment.

PACIFIC PEARL SEAFOODS
BELLEVUE OFFICE PARK
1350 116th AVENUE N.E.
BELLEVUE, WASHINGTON 98004
(206) 453-4000 TELEX 32-0948

Pacific Pearl

The exemption corridor for Alaskan bottomfish is interesting but unquestionably will deter domestic development and investment in the facilities necessary to enter this business. Any individual or organization contemplating the major capital investments which will be necessary to develop this business will undoubtedly include the proposed tax in a proforma evaluation of the investment. An eventual 6% Raw Fish Tax on these species for which there is virtually worldwide supply and demand and where most producers operate on relatively narrow margins (as a percent of sales) will go a long way toward making Alaskan production noncompetitive.

As to the argument that industry is not paying its own way, this is simply not true! State and local businesses are already realizing substantial tax revenues because of the seafood industry. Consider not only the existing raw fish tax but also:

- existing property taxes;
- state personal income taxes levied on boat workers, plant employees, and management;
- income taxes collected from local businesses, whose existence depends almost entirely on the fishing industry, and their employees;
- In addition to the foregoing tax revenues, many communities in Alaska are substantially supported by the "local cannery," which builds roads, provides public services, acquires public transportation, etc., etc.

It is easy to criticize - but that is not our intent in opposing H.B. 306. We feel this is a very complex issue whose resolution could significantly affect Alaska and Alaskans both now and in the future. Surely an issue such as this deserves thorough and intense study.

Rather than acting on the emotional issues involved, we propose action on the proposal simply be delayed a few months in order to complete a comprehensive study which analyzes the three affected areas:

1. Tax Revenues

2. The seafood industry's real contribution to the state and many of its local communities.

3. The financial impact of the 6% fish tax on the Alaskan seafood industry.

Pacific Pearl

We believe the welfare of both the industry and the State of Alaska would best be served by thoughtful consideration of all the issues involved. This can only occur on the basis of a thorough analysis and understanding of all the facts which would be provided by the recommended study.

Sincerely,

William K. Deshler
President

March 23, 1979

Honorable Alvin Osterback
Chairman, House Resources Committee
House of Representatives
Pouch V
Juneau, Alaska 99811

Dear Representative Osterback:

As an organization comprised of mostly resident Alaska inshore and near shore fishermen, we strongly object to the manner and haste that SB 132 was rammed through the Senate.

We respectfully request that all members of the House take the approach of slowing things down and assessing the impact of this particular tax increase on the commercial fishing industry and the State of Alaska.

While no one can deny the need for increased revenues under the State s present financial dilemma, we feel that this piece of legislation cannot legally or practically fulfill the desires of its unlisted sponsors, and will, in fact, actually be detrimental to the development of an Alaska land-based bottomfish industry.

We had requested the Senate to table the bill for the year to allow time for passage of HB 36 and the ensuing study it funds. We had also asked that the Alaska Fisheries Tax Law study include an assessment of the impact of SB 132 on the fishing industry and the State. Our position is not one of just opposing a tax increase. We are sincerely concerned about our ability to remain year-round Alaskan residents. We need land-based fishing operations to help us as individuals support the small coastal communities we live in. In our opinion, the State of Alaska cannot benefit if it creates a situation that heavily taxes the Alaska land-based industry and creates that same tax dodging incentive for offshore development.

We will end up seeing the low volume, small production areas that are struggling now at best, carrying the bulk of the tax burden, while the heavy volume, large boat production is being carried on totally offshore and out of the State's taxing jurisdiction.

Unfortunately for the small operator in the salmon and crab fishery, the statewide publicity of the high value catches made by a few people in a few cases has created an image of every fishermen being rich. It only takes a few moments of research to find that these image-creating incidents grossly misrepresent the average.

For example, in 1978, a Prince William Sound gillnetter fishing the 18-week season averaged approximately $20,000 gross. After one cranks in the factor for investments in boats and gear, fuel, groceries, insurance, etc., the average fishermen doesn't have much to take home to feed his family.

The same falls true for the Prince William Sound salmon seiner who last year averaged less than $14,000 per boat--subtract expenses and crew shares, etc. The majority of the Prince William Sound Tanner crab fleet are small boats which scratch out 50 to 100,000 pounds of crab from November to May--hardly a real money maker, but a means of fishing in the wintertime and making enough to cover the household bills and keeping the kids in school clothes.

I'm not trying to cause you to tearstain this letter, but I am trying to impress the fact that the vast majority of Alaskan resident fishermen do not fall into the high dollar income bracket that many automatically assume. I do want to emphasize that a few cents per pound taken away from a small producer's profit margin is much more detrimental to that family's existence than the same few cents per pound to a high volume producer.

We urge that all House members take a real hard look at the impact of this bill before allowing it to move. We feel confident that no one wants to create a situation which, on top of the existing high costs of living in rural Alaska, forces the residents who are managing to hang on year-round to become non-residents just because they can't quite afford to live here anymore.

Some hardline questions need to be answered before this bill is passed and serious damage is done.

(1) Who will end up paying the tax increase? (Onshore or offshore processors?) (Resident or non-resident fishermen?)

(2) Can the State legally tax offshore processors or harvesters? (This is probably the most important question that needs to be addressed. The Department of Law thinks not and apparently the oil industry thinks not.)

(3) What incentive will this tax increase create to develop land-based industry?

(4) How hard will it impact the small producer?

(5) In actual long-range dollars and cents, will the State benefit or will this end up being a superficially attractive bomb?

We can see no benefit to the State if this tax pushes all the major fishery production offshore.

We can see no benefit if the bulk of the tax burden ends up being paid by Alaskan residents involved in marginal fisheries.

It has been my personal sad experience to have observed members of our organization who have lived and fished in the Prince William Sound area for many years, forced to pack up their families and move to the Lower 48 because they could not afford to live in Cordova. In discussing this problem with other representatives of coastal communities, it appears that this same problem is occurring statewide. It would seem that the State should be creating reasons for residents to stay in Alaska, not forcing them out.

The bottom line has got to be, if a tax increase is not beneficial to the State, it certainly should not be passed. This one appears to be actually detrimental.

Sincerely,

Bob Blake
Chairman

Raw fish

Rep. Alvin Osterback
Alaska State Legislature
Pouch V
Juneau, AK 99811

Dear Representative Osterback:

Our association is severely concerned about the negative impact H.B. 306, relating to the institution of a 6% raw fish tax, would have on the coastal fishing communities of Alaska. This tax would provide a very negative pressure on the price fishermen receive for their product, increase operating costs to the processors, and add inflationary pressures to the consumer prices of fish products which are presently approaching prohibitive levels. In view of the present and future economic situation in the U.S., with increasing inflation, further devaluation of the dollar, and predictions of recession, most State and Federal tax legislation indicates an attempt and need to give tax relief, especially to the producer.

The institution of this tax would give positive impetus to the development of off-shore processors, and off-shore catcher processors, both which would erode the present tax base we find in coastal communities in Alaska. Given the present tax situation, we at least can see future development and expansion of shore based processors, which greatly benefit the local community in employment levels, local markets for fishermen (especially small boat operations), local support activities to the processor and fishermen, tax base, etc. I would hope that responsible fiscal policy would attempt to give a favorable economic climate to aid in the healthy development of the processing industry and primary producers. This would of course, benefit the industry, therefore the State, its citizens, and its revenues.

This tax would have its greatest impact on the small boat fishermen. Many of these small boat operations are marginally operative in that they do not care to be highline operations, but attempt to be self-supportive and independent businessmen. As such, they benefit the State in that they provide employment for themselves, their crew; and product to the processors to be sold to state, national and international markets. This tax would lower the capital formation opportunities which any boat operator needs to remain competitive in a highly competitive industry, and to expand in an industry where the need for expansion and higher efficiency is a reality. Larger vessels would likewise suffer.

With the many opportunities provided for the State, vis-a-vis the fishing industry, with the implementation of the 200-mile fisheries conservation zone, we must not erode the climate presently existing which gives hopes of healthy shore-based processing expansion needed to develop the Alaskan fishing industry to the point of being able to harvest the rich resources of presently under-utilized species. This expansion into the bottomfish resources of the State will add to the State commerce, tax base and tax revenues, provide many jobs, provide

opportunities for investment on-shore, allow our entrance into the foreign controlled markets for bottomfish species, and finally begin to rid ourselves of massive foreign fishing off Alaska's shores. These objectives cannot be met with the implementation of more taxes on raw fish values.

The fishing industry in Alaska pays its way very well, and in so doing benefits the State. If there is concern regarding questionable expenditures relating to the fishing industry, I respectfully suggest that the objective of responsible fiscal management would be to evaluate into which programs State monies are being directed, and into which geographical locations these monies are being directed; and then evaluate their return to the State.

I would hope that more information be presented and studied before a tax measure of this far-reaching magnitude be considered. Thank you.

Respectfully,

Jeffrey R. Stephan

HB 306

PacificPearl

AN Amfac COMPANY

March 10, 1979

Honorable Alvin Osterback
Alaska House of Representatives
Pouch V
Juneau, AK 99811

RE: HB 306

Dear Alvin;

On behalf of Pacific Pearl Seafoods, which has six seafood canneries operating in Alaska as well as one floating processor, I would like to use this letter to voice our vehement objections to the above-mentioned House bill, the purpose of which is to raise the tax on raw fish from 1% to 6%:

1) On the east coast of the United States, American tanner crab meat is already being undersold by the Canadians ($5.25/lb vs. $4.30/lb.). The proposed increase in the raw fish tax would only serve to up the American crab price by an additional 16¢, thus furthering the gap between the two and handicapping an American industry so as to be uncompetitive.

2) Far from promoting the development of a bottomfish fishery, an increase in the raw fish tax across the board would only inhibit such a growth. The 6% raw fish tax would be more than the profit margin in such a high volume - low profit fishery. So, if the promoters of HB 306 are really interested in strengthening the bottomfish potential in Alaska, it would seem they are going about it in a very inefficient way. I might add that the bottomfish industry is going to be a very essential part of this State's future fisheries resources. It is in the interest of Alaska that everything possible be done to advance the bottomfish industry, which this proposed raw fish tax increase does not do.

3) Such a drastic increase in the raw fish tax, rather that adding to the State's coffers, could very possibly end up bringing the State less monies. Why should floating processors fish in State waters and be taxed so exorbitantly when they can go outside State boundaries and not be taxed at all?

4) There are definite legal questions concerning just what constitutes the State's territorial boundaries. For instance, the International Halibut Commission said that a state cannot tax anything past a three-mile limit.

PACIFIC PEARL SEAFOODS
P O BOX 826
KODIAK, ALASKA 99615
(907) 486-5734 TELEX 090-25-355

This bill, if passed, is going to effect several thousands of Alaskans involved in various aspects of the fisheries industry. Therefore, it is particularly essential that it not be rushed through the House committees without the public and fishing industry being give an opportunity to speak out on it.

Respectfully,

Charles L. Jensen

Senator George Hohman
Representative Nels A. Anderson, Jr.
Pouch V
Juneau, Alaska 99811

Dear George and Nels:

(CS Senate Bill 132)

This letter is in protest of House Bill 306 (Fisheries Taxes). We ask you as our Senator and Representative to use all of your efforts in having this Bill defeated.

Why does the State Administration and some legislators want to tax the fish processors to fund State programs to the detriment of the fishermen? The fishermen and the consumers will be paying this tax indirectly for the fish processor. This means lower fish prices for the fishermen and higher prices for the consumer.

This Bill (306) discourages development of the fisheries. I don't see how the State can say they encourage development when taxation of this sort is placed on them before any development occurs. It doesn't make sense.

It seems to me the State of Alaska should have learned their lesson with the taxation they placed against the oil industry when one speaks of encouraging development.

Many fishermen in Bristol Bay come from small villages that will not benefit from this taxation proposal but will be paying their fair share to the local governments and the State of Alaska.

We must keep in mind that we cannot run off half cocked into programs we can't afford nor should we place taxation on

industries without first studying the impacts in greater detail. It will be a grave mistake should this legislation pass.

I ask that you keep me informed of the status of this Bill.

Sincerely,

Harold H. Samuelsen

Example of <u>real</u> cost impact of 6% tax:

Kodiak price for live crab $1.79/lb.

Recovery of 20% for saleable meat @ 6% tax - end up paying a real tax of 52¢/lb. on crabmeat

---

Example of figures in one area on <u>one</u> fishery:

$ value of crab caught in Dutch Harbor and Bering sea in 1978 = $ 224,672,525

@ present (Canned) 2% tax that generates revenue of $ 4,493,450

@ 6% tax $ 13,480,351

That area would be paying an <u>extra</u> yearly tax on crab of $ 8,986,901

Rep. Alvin Osterback
Pouch V
Juneau, AK 99811

Dear Representative Osterback:

Our Association is opposed to S.B. #132, which raises the raw fish tax from 1% to 6%. We understand that there is talk of reducing the originally proposed 6% tax to a lower figure. We feel that any change in the present raw fish tax structure would be harmful to the Alaskan communities which depend on a healthy fishing industry for their prosperity.

We have heard that the justification for an increase in the tax is to rectify a situation where presently the fishing industry allegedly does not pay its way. We dispute that allegation strongly. We feel that the fishing industry contributes at least its share to the total Alaskan economy. There have been no figures presented which substantiate the claims that the industry does not pay its way. These claims are weak and ill-founded. The actual benefits and revenues derived from the industry are substantial. We need only look at the actual dollars in revenues collected from and created through the fishing industry in Alaska to see the existing benefits which accrue to the State from this industry.

An increase in the raw fish tax would definitely have a negative effect on prices to the fishermen and drive up prices to the consumer. Higher consumer prices do not help expand the domestic and foreign markets for Alaska seafood products. A higher tax would decrease the amount of investment capital available to the industry for expansion, and increase the foreign involvement and investment in both the processing and harvesting sectors. Incomes and benefits to employees of both sectors would suffer. Contrary to the current propaganda, there is no easy money or windfall profits in the fishing business.

We have been told that we want more loans from the State. We don't! We can get money from the private sector of the economy if we need it. We do not want this tax justified by illegitimate claims that we want State money.

We want to expand the fishing industry to its potential on shore. We do not want to drive the business off-shore. We hope to expand the tax base, not diminish it. We respectfully request that you vote against the increase in raw fish tax.

Sincerely,

Jeffrey R. Stephan
Manager

Rep. Alvin Osterback
Pouch V'
Juneau, Ak. 99811

Dear Legislator:

Enclosed on legal-size paper are resolutions adopted at the Resource Development Council's annual meeting of the statewide board of directors. The two resolutions on letter-size paper were adopted last Friday, April 13 at a meeting of the executive committee.

Resolutions adopted by either our statewide board or the executive committee set the parameters for activities by the staff and members. We felt you would want to have this information in your reference files. The resolutions are explicit in their statement of the Council's position on a number of issues pertinent to your work.

Sincerely,

RESOURCE DEVELOPMENT COUNCIL
for Alaska, Inc.

Paula Easley

Unanimously adopted by Executive Committee, Resource Development Council
April 13, 1979

FISHERIES SEVERANCE TAX

WHEREAS legislation has been introduced, acted upon by the Alaska Senate and is under review by the House of Representatives to impose a 6% severance tax on all fish caught and processed within Alaskan waters, and

WHEREAS the intended purpose of the proposed legislation is to assure that the fisheries industry pays its "fair share" of taxes,

NOW THEREFORE BE IT RESOLVED that the RESOURCE DEVELOPMENT COUNCIL for Alaska, Inc. urges that the Eleventh Legislature take no action this session on the proposed severance tax for the following reasons:

(1) the Department of Revenue has not produced adequate information concerning the amounts of tax revenue being contributed by the fisheries industry and its employees and this information is critical to an accurate analysis of what the fisheries industry's "fair share" actually is;

(2) a long-range analysis of the impact of the severance tax on the infant bottomfish industry has not been completed;

(3) a flat rate of tax upon deliveries would unfairly burden certain segments of the fisheries industry such as the shellfish industry whose percentage of tax would greatly increase because it would be taxed on a large part of shellfish having no value;

(4) a detailed analysis has not been done of the effect of lost revenues to the state and communities due to fish processors moving from shore-based operations to floating processor operations outside state taxing jurisdiction;

(5) no detailed study has been completed as to potential revenue losses resulting from direct deliveries to ports such as Prince Rupert and/or Seattle, thereby removing certain fishermen from Alaskan taxing jurisdiction;

(6) the overall impact on the long-range development and stability of Alaska's fisheries industry would be jeopardized by the severance tax in that it would encourage foreign joint ventures outside Alaska's taxing jurisdiction;

(7) questions concerning the constitutionality of the proposed legislation should be resolved prior to implementation of any legislation affecting the fisheries resource, and finally,

(8) the Resource Development Council believes this issue is of such critical importance to Alaska's long-range economic stability that it must have full public review throughout the state before any action is taken.

HAINES RESOLUTION

WHEREAS, builders and consumers in Alaska import from other states and Canada nearly all of the wood-based building products utilized in Alaska, at a cost of millions of dollars per year, and Alaska has vast quantities of underutilized natural timber resources which properly managed are renewable resources, and

WHEREAS, the State of Alaska, along with the federal government and private corporations, particularly Alaska Native Corporations, is one of the major timberland owners in Alaska, and

WHEREAS, the Alaska Forest Resources and Practices Act, an extension of the Constitution of the State of Alaska, states, among other things, "The forest resources of Alaska are among the most valuable natural resources of the state, and furnish timber and wood products, . . ." and,

WHEREAS, the Alaska Legislature, in 1978, passed an Act, signed into law by the Governor, June 17, 1978, mandating negotiated timber sales from State Lands for manufacturing firms located in areas of high unemployment, having an underutilized timber manufacturing capacity; and an underutilized allowable cut of state timber, and

WHEREAS, the community of Haines, which has for more than 20 years based its economy strongly on the timber products industry has a high level of unemployment, and even worse, has lost over 700 residents in the past three years, due to lack of timber for local mills, and

WHEREAS, the U. S. Forest Service, in a 1976 report, published for the State of Alaska, estimated the allowable cut of timber of all species in the Haines area from State lands, at more than 35 million board feet per year from lands classified timber lands or resource management, by the State of Alaska, and

HAINES RESOLUTION (continued)

WHEREAS the only surviving sawmill facility in Haines, the Schnabel Lumber Company, capable of handling more than 50 million board feet of logs per year, has been shut down since late 1977 because of an artificial shortage of logs caused by state and federal internal conflicts in resource use policy, and

WHEREAS the State of Alaska has wasted valuable time in controversy with the local community of Haines over publishing of its land use plan, which has affected consummation of a long-term timber sale as mandated by law, and

WHEREAS preliminary economic study has shown that a long-term timber sale in the Haines area should be in the volume of 15 million board feet per year, and

WHEREAS the same economic studies also show this is only enough timber to operate the mill at one shift, and not enough to make the mill profitable enough to attract further venture and long-term capital, and

WHEREAS the economic studies take into consideration the complementary and competing uses of the forest resource and recognize that the sustained yield of timber is far in excess of the contemplated sale volumes, and

WHEREAS the State of Alaska has other timber resources in the Cape Yakataga area that could be economically utilized to bring the Haines mill to full production and meet the mandate of Alaska law,

THEREFORE, the Resource Development Council Executive Committee unanimously RESOLVES that

(1) the State of Alaska forthwith publish the Haines Land Use Plan, under the terms agreed upon between the State and the Haines Coalition, representing the majority of citizens in the Haines area,

(2) the State of Alaska complete negotiations and sign with the Schnabel Lumber Company, a long-term timber sale for 15 million board feet per year for 25 years with stumpage rates to be reevaluated every five years, and

(3) the State of Alaska, in order to meet the law of the State, begin preparing a second long-term timber sale to compensate the local Haines economy for timber removed from its timber base for other purposes,

AND BE IT FURTHER RESOLVED that copies of this resolution be transmitted to the Governor of Alaska, the Commissioner of Natural Resources and the Alaska Legislature.

Dated this 13th day of April, 1979.

RESOURCE DEVELOPMENT COUNCIL for Alaska, Inc.

Resolutions of Annual Meeting

March 31, 1979

Resolution 1

ECONOMIC IMPACTS OF LEGISLATION

BE IT RESOLVED that the RESOURCE DEVELOPMENT COUNCIL urges the Alaska State Legislature and Administration to evaluate cost/benefit ratios of existing laws; to subject proposed laws to economic impact review; and to accompany all proposed regulations with supporting economic data.

AND BE IT FURTHER RESOLVED that the RESOURCE DEVELOPMENT COUNCIL supports the State of Alaska's efforts to eliminate unnecessary permits and regulations imposed upon the private sector and pledges its assistance in the collection of data to streamline the regulatory process.

Resolution 2

LAND CLASSIFICATION

WHEREAS, the United States Government is the largest single land owner in the State of Alaska, and

WHEREAS, large tracts of federal land have already been closed to multiple use by the recent actions of the federal government and previous reservations, and

WHEREAS, the State of Alaska has selected some federal lands pursuant to the Statehood Act and shall be selecting more and

WHEREAS, natural resources of these lands have the potential for being a source of great social and economic benefit to the state and nation, and

WHEREAS, much of the land selected by the State already is known to have or may have valuable natural resources,

THEREFORE BE IT RESOLVED that the RESOURCE DEVELOPMENT COUNCIL for Alaska, Inc. strenuously urge the State of Alaska to refrain from classifying land to management systems which foreclose exploration and utilization of natural resources and prohibit traditional multiple uses of said lands.

Resolution 3

COASTAL ZONE MANAGEMENT

WHEREAS, the Congress of the United States has enacted a Coastal Zone Management Act and federal regulations and guidelines have been established; and

WHEREAS, the Legislature of the State of Alaska has enacted the Coastal Management Act of 1977 with the intent of allowing the local participation and control of coastal areas; and

WHEREAS, the Legislature has adopted regulations, standards, and guidelines as mandated in the enabling statute; and

WHEREAS, these regulations will control the development and use of all land (whether privately or governmentally owned) within whatever is determined to be the "coastal area";

THEREFORE BE IT RESOLVED that the RESOURCE DEVELOPMENT COUNCIL for Alaska, Inc. will continue to work for Coastal Zone policies that (1) protect private land owners from any form of inverse condemnation; (2) preserve the concept of local government control of planning, zoning and subdivision powers as opposed to state or federal control; (3) permit, not stifle, orderly growth consistent with reasonable environmental controls to protect coastal waters; (4) take into account both environmental impact and economic impact; and (5) insure that Alaska's coastal resources will be used to meet the needs of this and succeeding generations of Alaskans.

Resolution 4

COAL

WHEREAS, the State of Alaska has enormous coal resources, perhaps as much as the entire continental United States combined; and

WHEREAS, the sulphur content in much of Alaska's coal is exceptionally low, a potential significant environmental advantage; and

WHEREAS, President Carter's national energy plan specifies federal policy should stimulate the use of coal; and

WHEREAS, the federal government is spending, and wisely so, large sums of money for research and development on coal processing technology to make clean fuels from high sulphur coals in other states;

THEREFORE the RESOURCE DEVELOPMENT COUNCIL for Alaska, Inc., resolves to request that appropriate federal agencies, especially the Department of Energy, direct more research and development funding support to coal processing (including cleaning and upgrading, high and low Btu gasification, liquefaction and solvent refining, and conversion to coke and/or chemicals) of Alaska's coals in concert with interested industrial organizations, the State of Alaska and the University of Alaska; and to oppose resource taxation fees that jeopardize the economic viability of Alaskan coal ventures.

Resolution 5

UNEMPLOYMENT

WHEREAS, the RESOURCE DEVELOPMENT COUNCIL for Alaska, Inc. desires the orderly development of all the State's resources, and

WHEREAS, the citizens of Alaska are themselves a major resource, and

WHEREAS, unemployment is unconscionably high, and seasonal, and

WHEREAS, lead times involved in resource development projects are lengthy and project approvals never assured,

THEREFORE BE IT RESOLVED that the RESOURCE DEVELOPMENT COUNCIL for Alaska, Inc. encourage expansion of the private sector to stimulate employment, diversification of the Alaskan economy, vertical integration of industry and more responsive action by the legislature and administration to reduce unemployment --without enlarging the bureaucracy -- to utilize Alaska's abundant human resources.

Resolution 6

AGRICULTURE

WHEREAS, a sound and sustained agricultural production, processing and marketing industry is necessary to the healthy economic life and future well-being of Alaska, and

WHEREAS, agriculture, as a resource management tool, could provide a large percentage of the state's basic consumer needs in food, fiber, industrial raw materials and aesthetic products at a reasonable price and influence positively the transporation, meat, fertilizer and shipping industries throughout the state, and

WHEREAS, agricultural use of state land can serve to protect the integrity of watersheds, establish open space for the enjoyment of all persons, stimulate the economy, promote wind and erosion control programs, and open tracts of land for private cultivation, all of which will increase the productive capacity of the land to sustain the agricultural, livestock and forestry industries in the state;

THEREFORE BE IT RESOLVED that the RESOURCE DEVELOPMENT COUNCIL for Alaska, Inc. will encourage vertical integration of the agricultural industry, support expansion of transportation facilities which will benefit agricultural industries, assist individual or group farmers as may be appropriate, and to encourage the State of Alaska to make available one million acres of state land to Alaskan farmers by the year 1990.

BE IT FURTHER RESOLVED that the RESOURCE DEVELOPMENT COUNCIL for Alaska, Inc. will work to secure state assistance in the development of agricultural processing (including fertilizer production, utilization of surplus industrial heat and marketing and clearing programs) to expand the scope of agriculture within the state.

Resolution 7

TAXATION POLICIES

WHEREAS, Alaska's economic and taxation policies may hinder the creation of a productive economic base and the establishment of long-term skilled employment for the citizens of the state; and

WHEREAS, state taxation should not rise beyond the point where small enterprises are no longer able to function economically in Alaska and where larger corporations decline to make long-term investments in the state; and

WHEREAS, taxation policies should be designed to meet existing or clearly defined projected needs rather than short-term maximization of state revenues; and

WHEREAS, new or additional taxes on resources may deter exploration and severely limit the availability of jobs and energy resources within Alaska;

THEREFORE BE IT RESOLVED that the RESOURCE DEVELOPMENT COUNCIL for Alaska, Inc. urges that the elected officials of the State of Alaska take steps to create employment through sound economic policies and to promote taxation policies that are applied fairly and impartially on an industry-wide basis and free capital for business and industry expansion.

Resolution 8

FISHERIES

WHEREAS, the fishing industry continues to be a mainstay of Alaska's economy; and

WHEREAS, passage of the Fishery Conservation and Management Act of 1976 is expected to result in a new era for Alaskan commercial fisheries and dramatically increase the value of fisheries exports; and

WHEREAS, the economic success of both the energy and fishing industry is of great importance to the state of Alaska and the resources can occur in the same waters;

THEREFORE BE IT RESOLVED that the RESOURCE DEVELOPMENT COUNCIL for Alaska, Inc. will serve as a communication link between the energy and fishing industries to promote educational services, environmental safeguards and technological improvements to both developments; and work for joint industry cooperation with respect to infrastructure facilities and utilization of work forces.

BE IT FURTHER RESOLVED that the RESOURCE DEVELOPMENT COUNCIL will support state and federal legislation that protects American processors from unfair foreign factory ship competition, reimburses American fishermen whose gear has been damaged by foreign vessels and revitalizes the American fisheries industry through aquaculture programs; and financial assistance, incentives and education to enable fishermen to increase capacities to harvest, process and market currently underutilized species.

Resolution 9

RESOURCE EXPLORATION

WHEREAS, the Alaska Regional Energy Resource Planning Project report, funded by the U. S. Department of Energy and administered by the State of Alaska, recommended the immediate expansion of surface and subsurface exploration activities, and

WHEREAS, the analysis of Alaskan resource estimates indicates that the extent and location of energy and mineral resources are not fully known, and

WHEREAS, without adequate knowledge of the magnitude, quality and location of resources, critical energy-related and land-related questions cannot be properly addressed by government and private decisionmakers; and

WHEREAS, the American system is to gain adequate information and knowledge on a subject prior to the decisionmaking process and not deliberately to avoid the collection of data prior to decisionmaking,

THEREFORE BE IT RESOLVED that the RESOURCE DEVELOPMENT COUNCIL for Alaska, Inc. urges the federal and state government to allow private industry to move swiftly with major exploration programs, to identify Alaska's resources so decisions can be based on knowledge.

Resolution 10

ROADLESS AREA REVIEW AND EVALUATION (RARE II)

WHEREAS, the U. S. Department of Agriculture has recommended to President Carter on January 4, 1979 that 15 million acres of national forest lands be designated wilderness; and

WHEREAS, excluding Alaska's land withdrawals, more than one-third of the nation's public lands have already been withdrawn from mineral and timber exploration and development,

THEREFORE BE IT RESOLVED that the RESOURCE DEVELOPMENT COUNCIL for Alaska, Inc. continue its efforts to encourage the U. S. Congress to recognize the unemployment and inflationary impacts of massive forest land withdrawals and to provide that the majority of the nation's forest lands be managed for traditional multiple-use purposes; and further to oppose transfer of the U. S. Forest Service to a new Department of Natural Resources.

Resolution 11

HYDROELECTRIC POWER

WHEREAS, oil and natural gas, as nonrenewable resources, are becoming more valuable for higher priority uses than the production of energy; and

WHEREAS, the RESOURCE DEVELOPMENT COUNCIL for Alaska, Inc. believes hydroelectric power development is in the best long-range interests of the people of Alaska;

THEREFORE BE IT RESOLVED that the RESOURCE DEVELOPMENT COUNCIL for Alaska, Inc. will work to support development of small hydropower projects to serve communities throughout Alaska.

BE IT FURTHER RESOLVED that the RESOURCE DEVELOPMENT COUNCIL for Alaska, Inc. calls upon the State of Alaska and the United States Congress to support and expedite the development of hydroelectric power projects on the Upper Susitna River, Bradley Lake and other future potential hydroelectric sites to meet the long-range energy needs of Alaskans, and evaluation of the hydropower potential of Lake Chakachamna as an interim energy source.

Resolution 12

TRANSPORTATION

WHEREAS, the State of Alaska is largely undeveloped and lacks adequate transportation systems; and

WHEREAS, adequate transportation systems would facilitate the economic and convenient movement of people and goods to and from all regions of the state and lower living costs for Alaska's citizens; and

WHEREAS, the potential for development of minerals, timber, petroleum, fisheries, agriculture, recreation and tourism are dependent upon adequate transporation networks;

THEREFORE BE IT RESOLVED that the RESOURCE DEVELOPMENT COUNCIL for Alaska, Inc. reaffirms its position concerning the immediate opening and free use of the North Slope Haul Road and will explore the feasibility and potential for (1) developing the Copper River Highway in its entirety, constructing the Whittier access road, the Knik and Turnagain Arm crossings and other related highway improvements as required; (2) extending the Alaska Railroad eastward and into other geographic areas to enhance resource development and quality of life; (3) encouraging continuing development of airfield construction throughout Alaska, upgrading of navigational aids and continuing competitive nature of airline service for passengers and freight; (4) encouraging, at an accelerated rate, development of harbor and port facilities; (5) encouraging continuing efforts of private enterprise to increase waterborne transportation systems into and within the State; and (6) promoting the coordinated planning of all transportation systems and facilities to support planned resource development within the state.

Resolution 13

INSTATE USE OF ROYALTY GAS

WHEREAS, the State of Alaska has been directed to vigorously pursue utilization and processing of its royalty gas within Alaska to benefit Alaskans in accordance with Session Law of Alaska, Chapter 146 of June 23, 1977; and

WHEREAS, it has been a major project of the RESOURCE DEVELOPMENT COUNCIL to assure that Alaska's royalty gas and gas liquids are not committed to interstate commerce but rather are dedicated to the development of a petrochemical industry, when feasible, in order to provide long-term stable employment and products for instate use and export;

NOW THEREFORE, the RESOURCE DEVELOPMENT COUNCIL for Alaska, Inc. resolves to commit whatever resources are necessary to bring about proposals from industry for development of petrochemicals; to encourage legislative and administrative support for such development; and to continue to provide educational services relating to this industry.

Resolution 14

FORESTRY

WHEREAS, Alaska holds 16 percent of the nation's forested lands including over 28 million acres of commercial woodlands; and

WHEREAS, productivity, stand composition, tree species, and size class compare favorably with forest areas in Ontario, northern Michigan, Wisconsin and Minnesota; and

WHEREAS, multiple use is a strategy of deliberate land management for two or more purposes managed in a compatible manner to provide both economic and wild land benefits; and

WHEREAS, our nation will be more and more dependent upon renewable resources as time passes and technology progresses; and

WHEREAS, forestry is the science, practice and art of managing and using for human benefit, forest lands and natural resources that occur on and in association with forest lands, including trees, other plants, wildlife, minerals, soil and water, and related air and climate; and

WHEREAS, this nation needs the export capabilities of Alaska to reverse the dangerous imbalance of import payment our nation is currently experiencing;

THEREFORE, the RESOURCE DEVELOPMENT COUNCIL for Alaska, Inc. resolves to insure that land-use options remain open and that forested lands classifications be made for those lands where social, economic and managerial benefits will promote efficient use of natural resources and increased public benefits.

BE IT FURTHER RESOLVED that the RESOURCE DEVELOPMENT COUNCIL for Alaska Inc. will oppose exports of round logs from State of Alaska lands without prior promulgation of regulations governing round log exports.

Resolution 15

OIL AND GAS LEASING

WHEREAS, Alaska oil and gas development has added significantly to the economy and culture of the state; and

WHEREAS, these accomplishments were achieved under a leasing program conducive to encouraging additional commitments to Alaska by the oil and gas industry; and

WHEREAS, the legislature passed a new oil and gas leasing law which requires the Commissioner of Natural Resources to establish a 5-year leasing schedule; and

WHEREAS, the new leasing law also gives the Department of Natural Resources broad latitude in experimenting with new leasing methods in addition to allowing the continued usage of the old method of competitive bonus bidding with a fixed royalty rate; and

WHEREAS, the Commissioner has presented to the legislature the required 5-year schedule of lease sales which provides, among other things, for a major sale covering the shallow waters of the Beaufort Sea for December, 1979; and

WHEREAS, in reliance on the state's announcements, the oil industry has spent huge sums of money obtaining competitive geological data in preparation for a December, 1979 sale; and

WHEREAS, a move is afoot in Juneau to delay the sale and have the State of Alaska assume the risk of drilling a well or wells to prove or disprove the existence of commercial quantities of oil or gas in the sale area before the lands are put up for sale under some undetermined, exotic, and unproven bidding method; and

WHEREAS, the RESOURCE DEVELOPMENT COUNCIL does not believe it to be in the best interest of the State to risk tax dollars in exploration efforts which can be funded by the competitive private sector, nor to use the first major lease sale in five years as an experimental testing ground for theoretical bidding methods;

THEREFORE BE IT RESOLVED that the RESOURCE DEVELOPMENT COUNCIL for Alaska, Inc. urges the State to do everything in its power to hold the Beaufort lease sale on schedule and to stick to proven competitive sale methods that will protect the citizens of Alaska from carrying the risk of failure to find oil or gas in commercially economic quantities.

Increased raw fish taxes appear likely

by John Greely

Unless adjournament of the Legislature comes first, a bill boosting all raw fish taxes in Alaska for the first time since statehood is likely to be on the books just in time for summer fishing.

Legislation increasing the tax to 5 percent on most species of commercially caught fish was moving towards approval in both houses, despite opposition from fishermen, processors and some legislators.

However, because of that opposition, the tax hike was being diluted by a series of exemptions and credits which proponents say may mean a net tax reduction for some fishermen, particularly salmon gillnetters and seiners in Southeast Alaska.

That a raw fish tax increase would be debated seriously in the Legislature might be a surprise to the fishermen, who were heartened in January by the election of two of their colleagues as president of the Senate and speaker of the House. Since then, in what is one of the biggest letter-writing campaigns to hit the capital in years, fishermen and others have protested the tax hike.

Rep. Dick Eliason, a Sitka Republican and commercial fisherman, summarizes the feelings of many in the industry when he says, "up until we discovered oil, fish carried this state. We've done our duty (in paying taxes)."

Yet, Senate President Clem Tillion and House Speaker Terry Gardiner maintain the tax hike is required for many reasons, not the least to continue the state's fisheries loan program at or above its current level.

"If we don't pass this bill," says Gardiner, "the fishermen's loan program just won't go."

Says Tillion more bluntly, "The fisheries have been spoiled so long with a free ride that they don't want any kind of an increase...That's just not reasonable. There's more involved in this game than just the fishermen."

While it hasn't been a "free ride" for fishermen, raw fish taxes have not changed substantially for 30 years. Put on the books in 1949, the tax ranges from as low as one percent of the value of raw salmon delivered to cold storages to as high as 4 percent of salmon delivered to floating processors.

Taxes have remained stable during some of the lean fishing years of the late 60s and early 70s as well as during the more recent record-breaking years in the crab and salmon fisheries. And, the raw fish tax has not changed despite tens of millions of dollars in new ports, hatcheries and low-interest loan programs created by the state.

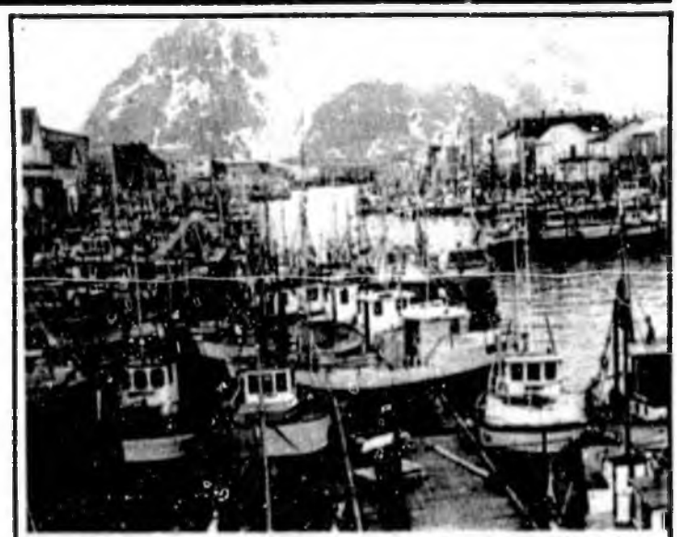
With another good year forecast for crab and salmon fishermen in 1979, supporters of a tax increase seem to have picked the politically right time to strike.

Under a bill sponsored by Gov. Jay Hammond that passed Tillion's Senate on a 15-4 vote March 17, the tax would increase to 6 percent across the board, producing a whopping 500 percent tax hike on some species.

That bill, Tillion said later, was a "rough" version designed to "get the industry's attention."

And, get attention it did. But, by the time much opposition was mounted in the Senate, it was too late.

Rick Lauber, a lobbyist representing the Pacific Seafood Processors Association, complained that Tillion used some fast footwork to remove the bill from the normal chain of committees it would have to pass through on its way to a full vote of the Senate.



The cod fishing fleet of Henningsvaer, Norway is dominated by small boats, largely because trawlers and seiners are prohibited in the area. More pictures and a short text on the three-nation bottom fish tour by ten Alaska fishermen on page 6. In May, the Fisherman plans detailed coverage of the trip. Rodger Painter photo.

A special report on

Bottom fishing in Scandanavia

in the May Alaska Fisherman

Lauber is right on that score. Barely a week after Hammond introduced the bill in the House, Tillion condensed it to the form of an amendment, which he tacked onto a related bill in the Senate Committee on Community & Regional Affairs. By doing that, the Halibut Cove Republican bypassed his Natural Resources Committee, where "Tillion couldn't get it (the bill) out of," says Lauber.

As it was, the Community & Regional Affairs panel gave the tax bill a lukewarm endorsement, saying there was "a need for further investigation on the economic ramifications of this legislation, with particular emphasis on the development of bottom fisheries."

Then, when the bill emerged a few days later from the Senate Rules Committee, Chairman Bob Ziegler, D-Ketchikan, objected that it was "patently unconstitutional" because the bill attempts to set aside some of any tax money collected for special purposes—such as fishermen's loans. (Article IX of the state constitution prohibits tax or license fees from being "dedicated to any special purpose except when required by the federal government....")

Those arguments—and more—were to be examined closely by the House Resources Committee, already the scene of political fighting between urban and rural legislators over another key fishery issue (see story, page 1). As the **Alaska Fisherman** was going to press, the tax issue was being tackled on these fronts:

HOW HIGH?

Raw fish taxes always have been graduated on a scale that, in general, gives a break to low-value fish and shore-based processors. Twelve years ago, when the schedule was amended last time, taxes on floating processors were increased to 4 percent of raw value, largely because many off-shore plants escape property taxes and laws encouraging resident hire.

In his original bill, Hammond joined Tillion in trying to adopt a uniform tax rate (6 percent) and a single tax base (raw value) for all species of fish and types of processors. The governor called the current structure "outdated" and "badly in need of reform."

But, shortly after the bill passed out of the Senate, Tillion began talking about an increase only to 5 percent. And, the uniformity he sought was fast giving way to reality.

As Gardiner explained the probable refinements, "People want to see some kind of exemption for developing fisheries...and we have to protect the on-shore plants."

> **"The fisheries have been spoiled so long with a free ride that they don't want any kind of an increase...That's just not reasonable."**
>
> —Senate President Clem Tillion

In addition, for those commercial salmon fishermen who have voted in recent years to turn over an additional 3 percent of their catch as an assessment to pay for building regional hatcheries, Tillion and Gardiner were fashioning a credit to absorb some of the shock of a higher raw fish tax.

Depending on the fishery and the amount of the credit, Tillion says, it could mean that some salmon fishermen would actually end up paying one-half of one per-

(Continued on page 8)

Regionalization plan approved by Boards

by Laury Roberts and John Greely

The state boards of Fisheries and Game have taken the lead in establishing regional management of the state's fish and wildlife, following an apparent breakdown in legislative efforts.

On a 12 to 1 vote April 7, the joint boards adopted regulations setting up six regional fish and game advisory councils, similar to a bill laid to rest in the House Rules Committee the preceding day. The regulations were drafted by Ron Skoog, commissioner of the Alaska Department of Fish and Game, and based partially on a House bill sponsored by Rep. Rick Halford, (R-Chugiak). The new provisions do not define specific boundaries for the regional councils, nor require the statewide boards of Fisheries and Game to follow regulations submitted by the councils.

Originally, the House Resources Committee looked at two regionalization bills. One measure, offered by House Speaker Terry Gardiner (D-Ketchikan), proposed six boards with full regulatory control of fish and game. Another bill, sponsored by Gov. Jay Hammond, set up six advisory boards.

Over the objections of Bush legislators, the committee approved the Halford substitute, which resembled Gov. Jay Hammond's bill, and moved it to the Rules Committee. Then, late last week, the committee agreed to adopt a compromise version drafted by House Majority Leader Nels Anderson (D-Dillingham). That draft proposed seven regional advisory councils and laid out the specific circumstances under which the master boards could refuse to adopt regulations offered by the councils.

But the Rules Committee got stuck on language which would allow the statewide boards to reject council proposals if any class of user would be discriminated against. "Part of the reason the new language is offered by myself is to address two fears," said Rep. Sam Cotten (D-Eagle River). "The Natives fear a loss of subsistence use and urban users are afraid they can't use rural resources."

Anderson, however, stood by what he called his "bottom line" version and refused to capitulate on Cotten's proposed language. Under Anderson's draft, statewide boards could reject council submissions under only three circumstances: that it did not carry written justification from the council; would jeopardize maintenance of stocks; or was unconstitutional or in conflict with existing regulations.

The Rules Committee meeting set for

Bottomfish

Log

This column is a continuing addition to the Alaska Fisherman provided through the Governor's Office, Jim Edenso, Bottom Fish Coordinator. The primary purpose of the column will be to assist in keeping individuals who are presently involved in the bottom fisheries or who are considering involvement abreast of recent changes and happenings within the scope of Alaska bottom fish development. Included will be projects in operation and proposed which will assist in the development effort.

The Fishery Conservation and Management Act of 1976 was amended in August 1978 to provide a preference for U.S. fish processors to process domestically harvested fish. The intent of this amendment was to allow foreign vessels to buy fish from U.S. vessels only if it was determined that domestic processors could not process that fish. For example, the National Marine Fisheries Service (NMFS) recently determined, when reviewing applications from the Republic of Korea to buy fish harvested in the Gulf of Alaska by U.S. boats, that the domestic harvest of bottom fish in that area exceeded domestic processing capacity and approved the Korean applications.

On March 13, 1979, a public hearing was held in Washington, D.C. to consider regulations to implement the joint venture amendment to the Fishery Conservation and Management Act of 1976. NMFS is specifically interested in determining the type of information U.S. fish processors should be required to report to establish the level of domestic fish processors. NMFS also is attempting to determine the circumstances in which such information should be considered and whether Regional Councils should be given access to price, market and other data reported by U.S. fish processors.

William W. Solomon, representing the National Food Processors Association (NFPA), testified in response to NMFS's request for comments on the interim final regulations. NFPA, a non-profit trade association with approximately 600 members, has canning and frozen food operations in 44 states. Their members pack close to 95 percent of the entire national production of canned seafoods.

The following is extracted from Mr. Solomon's written testimony.

Regarding the information which U.S. processors should be required to report:

"NFPA believes that it is appropriate under the 1978 amendments to ask processors to report certain information which relates directly to their capacity and intent to process certain species. On the other hand, NFPA believes that neither price nor marketing information should be furnished by processors. As for marketing data, NMFS has failed to articulate how this highly confidential information is possibly relevant to assessing capacity and intent. NFPA urges that the needs of NMFS and simple fairness require that comparable data be required from foreign processors in support of their applications for foreign processing permits."

Regarding the circumstances in which data from processors should be considered:

"NFPA believes that data submitted by processors should be used by the Secretary (of Commerce) or the (regional) Councils solely to evaluate domestic processing capacity and intent. Further, NFPA believes that in the absence of convincing evidence to the contrary, the capacity and intent submissions by processors should be presumed to be correct. The 1978 amendments do not represent a subsidy to the domestic processing industry but rather an opportunity. If processors do not accurately project their capacity they stand to suffer financial loss. Further, NFPA members recognize that failure to furnish accurate data would undermine their credibility and threaten the continued support for domestic processor preference."

Regarding whether regional councils should be given access to data recorded by U.S. fish processors in unaggregated form and what confidentiality provisions are required:

"NFPA believes that the councils should not have data submitted to them in unaggregated form. The FCMA does not simply prohibit data submitted to the Secretary from being made public, but also prohibits it from being released except in aggregate or summary form. NFPA urges that such data not be transmitted to the Councils unless and until a compelling need for it is established in a rule-making proceeding. As a related matter, we urge NMFS to move ahead on the promulgation of detailed conflict-of-interest rules for Council members and their staff. In short, the issue of what kind of data should be provided to Regional Councils depends on whether NMFS promulgates adequate confidentiality and conflict-of-interest rules. NFPA believes that such rules are necessary at this time."

(NOTE: The use of these quotes was approved by William W. Solomon.)

Underlogging settlement brings $225,000 in fines

Kodiak—Charges of under reporting its catch have been dropped against the 180-foot Japanese trawler Fukui Maru following an out of court settlement in which the vessel's owners agreed to pay $225,000 in fines plus costs.

Settlement was reached nearly a month after the Fukui Maru, which is one of two ships owned by the Fukui Ken Company, a Japanese fishermen's co-operative, and was released on a $350,000 bond.

The Fukui Maru was seized Feb. 18 in the Bering Sea after a routine Coast Guard boarding party from the cutter Morgenthau found 18 metric tons of herring in the vessel's hold, but less than a ton reported in the logs.

The Fukui Maru was escorted to Kodiak by the Morgenthau where it remained in custody of the U.S. Marshal until March 2 when it was released on bond.

At the time bond was posted Anchorage-based U.S. Attorney Alexander Bryner said the $350,000 value of the bond was close to the value of the vessel.

Negotiations between the U.S. Attorney's office in Anchorage and the Hoko Fish Co., Ltd., were continuing, as of April 6, on the charges of underlogging catch filed against the 367-foot Japanese trawler Tsuda Maru.

The Tsuda Maru was seized Jan. 26 in the Bering Sea after a boarding party from the Coast Guard cutter Mrogenthau found more Pacific cod, squid and "other flounder" in the hold than had been reported in the ship's log. Three charges of underlogging its catch were filed against the Tsuda Maru by the U.S. Attorney in Anchorage.

The Tsuda Maru also was charged with one count of inflating its logged catch on Jan. 26. After its arrival in Kodiak, a fourth charge of underlogging was filed when an inventory of the surimi on board indicated the vessel may have taken a half million pounds more of pollock than was recorded in the vessel's log.

The Tsuda Maru was released on a $350,000 bond in late February, but remained in Kodiak until March 2. The U.S. Attorney had requested that bond for the Tsuda Maru be set at somewhere near the value of the vessel, estimated to be about $4 million.

"PEGGY JO'S CAT 398 ENGINE HAS GONE THROUGH 13 YEARS OF THE WORST WEATHER IN THE WORLD WITHOUT A MAJOR OVERHAUL, AND STILL LOOKS READY FOR 13 MORE."

Oscar Dyson,
Captain and Owner
Peggy Jo
Kodiak, Alaska

"I'm Oscar Dyson, and this other fellow is one of my King Crabs."

"If there was a better engine than a Caterpillar, believe me I'd have it in *Peggy Jo*. But there isn't.

"I'll tell you why I'm glad—I mean grateful—I've got a Cat 398 in her. Last year in the Bering Sea we had one of the worst storms ever. The barometer was below 28. The winds were 125 miles an hour. The seas were 50 to 70 feet. We waited around a little longer than we should have, but when we saw what was happening, we had to make a fast run for little Amak Island. Had to hide behind it, jogging around like jumping beans for two days, until the seas went down.

"I can't give my Cat 398 all the credit for getting there. It took luck, too. But with a Cat engine, I just don't feel so much at the mercy of the seas.

"NC Marine took these pictures here of *Peggy Jo* getting dockside service on Lake Union in Seattle. That Seattle! I feel safer in the Bering Sea than I do in Seattle traffic, I'm not kidding. But we're here having a little re-building done and a little prettying up. The Cat 398 engine is still fine, shows no signs of deterioration in the block or anywhere else. We're getting a new Cat 3306 auxiliary generator, because we need more electrical power aboard.

"You know, I've only had about a week of down time in 13 years, and it didn't even have anything to do with the engine. Hit a log and stripped one of our gears. I was way out in Dutch Harbor. In just a few days, NC flew us the reverse gear parts we needed out of Seattle, and we were back in business.

"Talk about business, *Peggy Jo* was one of the first ships outfitted for all kinds of fishing. Crabbing. Long lining for black or gray cod or halibut. Dragging for bottom fish. Last season, we were mainly into crabbing. Caught 1,100,000 lbs. of tanner crab, and 400,000 lbs. of King Crab. Pretty good, huh?

"Some newer crabbers don't know this, but the *Peggy Jo* had the first hydraulic crane ever put on a fishing boat. We had the first automatic pot dumper. We helped develop the pot puller most crabbers use now. I suppose you could say me and the *Peggy Jo* were pioneers in the crabbing business. It's, of course, helped a lot having a company like NC Marine behind us all these years.

"Here's me and my partner, Selden Nelson, and our new Cat 3306."

"One year in the Crab Festival in Kodiak, I shared first prize with another fellow. That's because they had two ways of measuring the crabs in the contest. I had the crab with the largest carapace—about 12½ inches. The other fellow had the crab with the largest leg spread—about 73 inches. One inch more than mine. Each of our crabs weighed 20 pounds.

"But, nowadays, to keep up with inflation, we don't have time to horse around. Or should I say crab around.

"Just get me talking about crabbing, or *Peggy Jo*, or Kodiak, or Cat engines, or the Bering Sea or NC Marine, and I just can't stop."

Subsistence regs adopted by joint Boards

by Rodger Painter

Anchorage—Guidelines governing subsistence use of fish and wildlife have been adopted by the Alaska Boards of Fisheries and Game with surprisingly little acrimony or fanfare.

A formal policy statement fashioned by the boards earlier this month closely follows a legislative mandate to give subsistence users the priority when allocating scarce resources.

Importantly, the policy and "procedure for implementation" of the subsistence priority would handle the allocations on the basis of local residency. Identification of individual users would be avoided until after sport and commercial interests have been cut out of the fishery or hunt.

The subsistence priority could radically alter long-standing fish and game management practices, and members of both boards have, in the past, expressed strong opposition to language in the legislation approved last year.

Of particular concern to board members has been the lack of a clear definition of subsistence, and the deliberate avoidance of basing the priority on economic need.

After days of conflicting public testimony and lengthy debates, the boards unanimously voted to adopt a policy statement authored by Tom Lonner, the newly appointed director of the Alaska Department of Fish and Game's subsistence section.

Lonner has wide support among Bush leaders, and several subsistence advocates expressed satisfaction with the policy and the apparent willingness of the boards to work with Lonner.

The subsistence issue is so complex, however, it wasn't easy to keep the guidelines simple and flexible. In fact, the boards appeared to be headed towards adoption of a resistant approach to subsistence during initial deliberations.

A more restrictive policy statement lost by a one-vote margin before Lonner's version was accepted, and another key decision was not to limit subsistence to present levels.

Game Board members Sam Harbo and Jim Readen urged adoption of a policy defining a subsistence user as someone who takes fish and wildlife for "home consumption."

"We should put the federal government on notice that every Alaskan is a subsistence user," Rearden said. "I think we should develop state subsistence laws and if the federal government doesn't like it, too bad."

But, Lonner argued that "all Alaskans are not subsistence users, although all Alaskans should be potential subsistence users."

Fisheries Board Chairman Nick Szabo fought hard for an amendment aimed at "preserving the (subsistence) status quo."

Szabo's proposal said subsistence "should be confined to areas and/or species and stocks where such use has traditionally and customarily occurred prior to adoption of this policy."

Expressing concern about state land disposal programs that may attract many Alaskans to rural areas, Szabo said, "I don't think this new wave should enjoy the subsistence priority that other people have had for hundreds of thousands of years."

Lonner called the amendment "very limiting," since it would block the use of alternative resources when traditional subsistence stocks were low and prevent adjustment to changing use patterns.

"I sympathize with the intent of the amendment, but I don't think it fits" with the intent of subsistence laws, Readen said. "Subsistence is a living thing, and it shouldn't be limited to what it is today or what it was yesterday."

Szabo's amendment failed by a wide margin.

Public testimony was diverse, ranging from sport fishermen claiming the subsistence legislation is discriminatory, to Natives who said they were being ignored in the development of regulations. The demands, understandably, were conflicting.

In written testimony titled "Alaska blackmail—fish and wild-life style," Sam McDowell and Dale Bondurant of the Izaak Walton League called the subsistence priority "patently wrong."

"The unequal right of choice of one group, at the expense of another, to use a public resource is discrimination," the pair said. "This discrimination, whether it is based on race or more ambiguously called life style or tradition, is unacceptable."

Victor Burgess, speaking on behalf of the Southeast Native village of Hydaburg, urged the boards to consider the economic dependence rural residents have on resources through commercial fishing for generations.

"In reviewing and studying this issue the Hydaburg people have firmly concluded that they live a subsistence lifestyle now as they did in the past," Burgess said. "Further, they feel that it is not conceivable that there can be a definition of subsistence which does not include the economic aspects of the use of the resources."

Byron Haley of Fairbanks said he has been a resident of the state for 31 years, during which time he has always hunted and fished for personal consumption.

"...I believe in a true sense that I am a subsistence user," Haley said. "However, there are some proposals on subsistence that would say I would not qualify as a subsistence user because I live in a city and not a rural area, and that I do not qualify under 'customary and traditional' use, although I have been hunting and fishing for meat and fish for the table since I was old enough to do so."

One Board member, Sidney Huntington of Galena, even got into the act by submitting testimony in which he said he felt "run into the ground by subsistence users of all categories.

"I am being misunderstood by leaders of the Tanana Chiefs, RuralCAP, and other agencies, including the environmentalists, and some of the general public, both Native and non-Native," said Game Board member Huntington. "Subsistence as it has been used in the past was and is one of the better ways of life.

"By putting subsistence regulations into effect you are going to lose the right we have been practicing from the beginning of time...Those that will suffer are the lonely group of people who have in the past taken and used the resources to fulfill their needs when needed and when the resource was available."

What most subsistence users asked was

Tom Lonner

essentially to be left alone to continue t life style to which they have become customed. Lonner probably put it b when he told the Boards, "In many wa the less that is done, the better."

"...We are encouraging the Boards, their deliberations at this meeting, adopt very general definitions and regu tions concerning subsistence, and de further refinements until the section c provide you with research-bas evidence," Lonner said. "In approach the forty or so proposed regulations subsistence, the subsistence section fou the proposed concepts and metho tended to be extreme solutions problems. These solutions were either vague and general or too restrictive."

The real test, most observers agre came when the Boards split into separ meetings to consider proposed regulatio for hunting and fishing.

The Board of Fisheries devoted c siderable time to formulation of provisio dealing with barter of subsistence fish, a came up with a "working paper." T proposal limited the barter of fish tak for subsistence to trade for other fish game items in all areas of the state, exc Bristol Bay and the Arctic-Kuskokwi Yukon region.

Barter in Bristol Bay was expanded allow for trade for food, clothing, fuel a ammunition, but restrictions were plac on rainbow trout, grayling and unproc ed salmon, under the working paper. the A-Y-K area, the proposal restrict barter further to limit trade to betwe residents of the same subdistrict.

Nunam Kitlutsisti, a Native group, a the Rural Alaska Community Acti Program attacked the proposals as be "too restrictive."

"The Board has seen fit, for so reason, to place regulations limiti barter," said a critique of the work paper by the two groups. "We take exc tion with these regulations. It is our fe ing that barter will be self-regulating, a that the Board should not anticip abuses that very well may not occur."

The proposals eventually were p poned, despite the misgivings of Szabo, anticipate quite a few problems with p

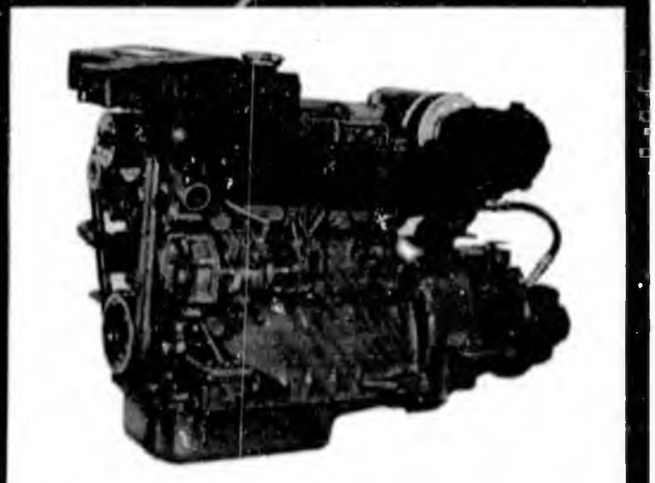
LUGGER

"THE FISHERMAN'S DIESEL"



LUGGER, the diesel designed for the commercial fisherman.

Using John Deere base engines, Luggers have the common sense design, conservative ratings and cast iron construction needed for rugged, commercial fishing use.

Lugger diesels are warmed over, high-speed truck engines. John Deere's heavy-duty, low RPM, high torque industrial diesels. On this strong foundation we have built an engine line with the features you have asked for:

- Cast Iron Cooling System
- Heat Exchanger or Keel Cooled
- Minimal Belts, Hoses & Gaskets
- 30 HP Front Power Take Off
- Quiet, Smooth Operation
- Easy Access to Service Points
- Simple Electrical System
- Cast Iron Exhaust Manifolds
- Water Cooled Turbochargers

There are four Lugger models, from 80 to 150 HP. The 4276T above produces 100 HP at 2200 RPM and 264 ft. lbs. torque at 1400 RPM.

Look over a Lugger. You'll see the heavy-duty dependability you've always wanted in your fishing vessel.

Exclusive king crab fishery nixed by Board of Fisheries

Anchorage—A stepped up drive to impose exclusive area registration on the Kodiak king crab fishery has been turned down by the Alaska Board of Fisheries.

The move was designed to keep the burgeoning Bering Sea fleet off Kodiak's recovering king crab stocks by limiting boats registering for the Kodiak area to that fishery for the season. Board members expressed concern the proposal would serve to lock boats into the fishery during poor years.

The board also increased the king crab pot limit for Kodiak to 100, up from 75, and lifted pot limits for seferal other crab fisheries.

The pot limit and exclusive area registration have become perennial Kodiak king crab issues at the board's annual shellfish meetings, but this year the area limitation effort generated more interest than usual.

Small boat fishermen solidly endorsed holding the pot limitation at 75 and imposing exclusive registration for Kodiak, while larger vessel interests opposed both proposals.

Although the Kodiak fish and game advisory committee came out in favor of both measures, committee spokesman Dave Woodruff cautioned the board that big boat fishermen were absent when the endorsements were made.

Woodruff said the small boat fishermen fear the Bering Sea king crab fishery is going to collapse and the fleet of large vessels will scoop up the Kodiak quota.

Both sides agreed with a statement by Cary Painter of Kodiak, who owns a 107-foot crabber, that the pot limit is "winked at by small and big boats; the big boats may wink two or three times."

Board members expressed much skepticism about retaining ceilings on crab pots because experience has shown pot limits to be unenforceable, and tried to accomodate both sides by increasing the number of legal pots.

In addition to increasing the Kodiak king crab pot limit to 100, the board lifted king crab pot limits for Cook Inlet and Prince William Sound, and dungeness limits for Cook Inlet. Pot limits for Southeast king crab and Prince William Sound dungeness were retained.

On the area registration issue, several board members echoed comments by Kodiak crabber Harold Jones who said exclusive areas are like "fences built to keep people out, but also work to keep in people who want to get out very badly."

The board dealt with the area registration issue by setting all king crab openings on the same date, which should keep the Bering Sea fleet out of other areas.

In other issues relating to crab, the board:

•Set Sept. 10th as the date the Bering Sea fleet can set baited pots on the fishing grounds, and scheduled tank inspections for Sept. 15. In 1978, the fleet was allowed to put unbaited pots with the doors tied closed on the fishing grounds before tank inspections, but most of the pots were fishing on the early date and the fishermen who followed the letter of the law lost out on an estimated $250,000 in crab.

•Set king crab harvest guidelines for the Bering Sea at 60 million to 110 million pounds (up from 60-90 million pounds in 1978); 16-26 million pounds for the Dutch Harbor management area (9-13 million pounds); and 20-30 million pounds for Kodiak (7-15 million pounds).

Scandanavian bottom fish tour considered successful

The bright lights and history of Copenhagen weren't enough to convince the ten weary Alaska fishermen from returning home on schedule.

After two weeks of 6:30 a.m. wakeup calls, countless airports, busrides, boat trips, briefings in corporate board rooms, tours, and more fish than most Alaskans eat in a year, they were ready to go home.

There was complete agreement that the trip was a success, despite the hectic pace, and that it will materialize into something tangible.

The tour covered such diverse fisheries as the 12-century-old cod fishery in the Lofoten Islands where small boats proliferate, to industrial fisheries where 200-foot vessels can harvest up to 800 tons of capelino in one set of a seine or 500 tons of blue whiting in one haul of a huge midwater trawl.

The fabled riches of the Bering Sea king crab fleet pale in comparison with 110-foot Danish shrimpers who can gross up to $1 million in a two-week trip to Greenland. In the Faroe Islands, where fisheries account for 90 percent of the gross national product, a few ancient 25-foot boats still jig for codfish by hand, while huge purse seiners travel hundreds of miles to fish capelin and blue whiting.

Computers that can draw line sketches of three-masted sailing ships of the 15th Century complete with rigging...mechanical long-line systems capable of fishing 25,000 hooks a day...machines that electronically imitiate the ancient motions of a jog fisherman...automatic gutting machines.

Schools for fishermen...processing operations ranging from a tiny lumpfish caviar plant north of the Arctic Circle to a Danish plant processing 6 million pounds of shrimp a year and 160,000 cans of marinated mackrel a day...trawl and net factories...naval architects.

The list goes on and on. Much of what was included can't be directly related to the development of bottom fish in Alaska, but all of it contributed to a good understanding of what is possible with the 3 million tons of fish harvested from the North Sea each year.

And, more importantly, the fishermen came away with a better understanding of just what Alaska needs to do to develop fisheries on the 2 million tons of groundfish harvested by foreign fishermen each year in the Bering Sea alone.

The Alaska Fisherman will publish a special section of articles and pictures on the Scandanavian tour next month.

—Rodger Painter

Western shrimp plan called 'retrenching'

Anchorage—The Board of Fisheries has given approval to a Western Alaska shrimp management plan described by its chief architect as a "retrenching."

Seven areas were put on emergency opening status, guideline harvest levels drastically cut back and the Department of Fish and Game directed to protect immature stocks.

"Essentially the plan calls for a retrenching," said Kodiak biologist Marty Eaton. "Some areas, we feel, have been exploited at too high a rate.

"Fishermen are going to have to start thinking differently about the fishery," Eaton said. "We're going to have a four or five month fishery...it will have to go towards a lower volume, higher quality product."

Until recently, the Western Alaska shrimp fishery definitely was high volume.

In 1976, for instance, 67 million pounds of shrimp was taken from the Chignik-South Peninsula area and the Kodiak district harvest was 51.4 million ponds. In contrast, the 1979-80 guideline harvest levels for the entire Western area was set at 26.2 million to 58.5 million pounds.

Biologists are going to "try for a certain escapement level through controlled fisheries that are closely monitored," Eaton said. The seven areas placed under emergency openings will be surveyed a couple times a year for assessment of "biomass levels."

Most of the seven areas "will not support a commercial fishery at current biomass estimates," Eaton told the board. "Our plan is to bring the stocks up to the level to support an industry—we don't want to kill the industry."

Eaton's comments were directed towards a management plan offered by Kodiak fisherman Junior Cross and backed by a number of processors. Cross said the problem in Western Alaska is one of a "depressed industry and not stocks.

"The board has to look past the resource a little to consider the health of the industry as a social economic factor," Cross said. "The reason the fishermen don't think there is an emergency in the fishery is that we think the shrimp are relocating."

Saying the shrimp fishery is "over-regulated to an extreme," Cross offered a plan calling for Western Alaska shrimp to be managed as a unit. The season should be opened on May 1 and the fishery should be closed earlier than March 1, only if the catch per unit effort (CPUE) dropped below a certain point, he said.

The department would have to wait until catches dropped below a CPUE equal to 500 pounds of shrimp for an hour drag for ten consecutive days before closing the fishery, Cross said. In addition, he said, it should be make illegal to sell undersized shrimp.

The deregulation plan would serve to spread the effort of the fleet and break the trend towards a concentration of gear into a "pulse fishery," Cross said.

Eaton maintained, however, that Cross' plan could work towards shifting the effort on the healthiest stocks.

"The fleet will not disperse with areawide openings," Eaton said. Fishermen "know where the stocks are healthy and they will tune in on those shrimp."

The board discussed Cross's plan at length during a special shrimp workshop, but finally voted to approve Eaton's proposals.

Placed on emergency opening status were the following shrimp management sections: Inner Marmot; Kiliuda Bay; Two Headed Island; Marmot Island; Stepovak Bay; Unga Straits; and Beaver Bay.

Most other major shrimping sections are to be opened June 1 and closed by the end of September, unless quotas are taken earlier.

The board also directed Fish and Game biologists to "discourage the taking of shrimp less than two years of age." The directive ordered the staff to "take whatever action necessary" to protect immature stocks.

In other action regarding shrimp, the board adopted a management plan for Kachemak Bay aimed at spreading the fishing effort throughout the fall and winter.

Fish and Game biologists said health of the stocks in the Bay is threatened by the trend towards a "pulse" fishery similar to Western Alaska where the fleet descends on a bay and scoops up the quota in a few days.

What had always been a ten-month fishery suddenly became a three-month fishery last year when the Kodiak fleet started relocating to Kachemak Bay, according to Homer biologists.

The board adopted a plan splitting the 5-million-pound quota for Kachemak Bay into three 1.7 million pound units to be taken from July 1 to Sept. 30; Oct. 1 to Dec. 31; and Jan. 1 to March 31. In addition, the staff is going to attempt through emergency closures and openings to break the quota down into weekly increments.

Ted Ronak of the Homer fish and game advisory committee said the new vessels are taking the shrimp in Kodiak and the local plant was suffering.

The weekly effort plan "creates jobs; it spreads the effort over a longer time and brings home the bacon and beans during the winter time," Ronak said.

One Kachemak Bay shrimper charged the plan was designed "more to protect the fishermen than the fish."

"There's a whole lot of pressure on Kodiak fishermen not to say anything about this (Kachemak Bay shrimp management plan) at this meeting," said Adolph Curry of Homer. "They holler about taking shrimp to Kodiak, but nothing is ever said about taking crab and herring from Prince William Sound and Kodiak to Homer."

Relax, you can keep your catch for eating

Commercial fishermen who keep part of their catch for personal use or to give away to friends will be relieved to know the practice is now legal under state law.

Under a regulation adopted by the Alaska Board of Fisheries March 30, commercial fishermen will be allowed to keep part of their catch for "subsistence."

Most fishermen who read the proposal before the meeting were perplexed, as everyone has always assumed that once you catch a fish it's your personal property. Everyone, that is, except for the state attorney general's office.

Board Chairman Nick Szabo shared the dismay of the audience as he explained that a state lawyer apparently had rendered an opinion questioning the legality of not selling fish caught under a commercial permit.

A staff member of the Alaska Department of Fish and Game clarified that the opinion was oral and not a fully researched and official legal interpretation. The lawyer, explained the staffer, suggested that fishermen were required to sell their commercially caught fish and shellfish and that personal use must be handled under subsistence regulations.

The proposal was considered with a wraft of proposed regulations designed to comply with a legislative mandate to make subsistence the priority use of fish and wildlife.

The need for setting down the right of personal use in black-and-white legalese later became clear when proposals closing subsistence fishing to permit holders during commercial openings.

After trimming off several qualifiers, the board, by a 6-0 vote, adopted a proposal saying:

"SUBSISTENCE FISHING BY COMMERCIAL FISHERMEN. Commercial fishermen may retain fish or shellfish from their commercial catch for their personal use in any area."

fish tax

(Continued from page 1)

Senate President Clem Tillion is a former commercial fisherman who says the industry ought to pay its own way. Paul Helmar photo.

cent to one percent less in combined raw fish taxes and aquaculture assessments.

At a 50 percent credit, for example, the fishermen who now pays a combined tax-assessment of 7 percent would pay 6.5 percent (5 percent on raw value, plus 1.5 percent assessment).

Such a development might calm Rep. Eliason's fear that some regional aquaculture associations could be forced to close down because their members faced high combined taxes.

"That's what really hurts about this bill," Eliason said. "We thought we had an understanding with the Governor's Office on the aquaculture associations...This tax may mean some associations will fold up because three percent and six percent is nine percent, and that's too high."

Especially hard hit by the tax bill would be fishermen and processors who might not qualify for any of the suggested credits. In the worst case, for example, the salmon fleet which sells its catch to a shore-based cold storage, would see taxes go up by 400 to 500 percent, a hike Lauber calls "devastating."

Of course, the processor simply can pass the increased taxes to the fishermen, but "in some fisheries," Lauber warns, "if we try to pass this along, we're running the strong chance of the market collapsing on us."

The veteran lobbyist also was not impressed by proposed exemptions for "developing fisheries," such as ground fish.

"Nobody's going to invest $15 million in a fish plant when there's a moratorium on taxes which could be lifted at any time," he said.

Replies Tillion: "We can't allow a multi-million dollar industry (groundfish) to develop tax free just because it's got political clout."

And, the Senate president adds: "As long as commercial fisheries pays less to the (state) general fund than fishermen are taking out of it, we can't answer the sport fishermen who complain about subsidies...Inefficient or otherwise, the state spends about $28 million (a year) on the Division of Commercial Fisheries and the FRED Division...We, in turn, collect $8 million from the fisheries themselves" through raw fish taxes.

Thus, the tax bill was an attempt to close that $20 million gap. It was estimated that the 5 percent version would raise about that much extra income.

"With that much money and some cutbacks in FRED," Tillion says, "the fishermen will be paying their own way."

WHY NOW?"

The board of directors of the United Fishermen of Alaska has urged the Legislature to delay the tax bill entirely while a comprehensive study of all fisheries taxes in the state is launched later this year.

Shari Gross, executive director of the UFA, explained that fishermen are fearful a large tax hike could hamper bottom fish development.

"The finances for development of bottomfish are so delicate that they should be studied before the tax is levied," Gross said. "We have to be careful so we don't encourage the development of floating processors operating off-shore or the delivery of bottom fish to Seattle, which is a likely prospect."

The state has to create a "favorable climate" for developing an onshore bottom fish industry, Gross stressed, adding, "which isn't to say a bottom fish industry has to pay its own, but first it has to be here."

Lauber told the Alaska Fisherman that "if a decent effort is made to study this issue, we (processors) won't try to block it (a tax increase) next year.

"We've had this tax since statehood. What difference does one more year make?" the lobbyist asked.

The main answer to his question was supplied by the Department of Revenue in January, when it suspended all state loan programs—including the Fisheries Revolving Loan Fund—because of a severe shortage of loose cash in the treasury.

Gardiner and Tillion cite figures which show that without a tax hike, about $15 million would be available for vessel loans this year, far below the estimated $40 million in applications received last year and roughly half of the $27 million in loans actually approved.

"A tax study isn't going to help us with our main problem—money. We have to deal with that," says Gardiner, a gillnetter from Ketchikan.

Likewise, Tillion points out, the state loan program isn't used by the non-resident fisherman or the Alaskan with a big boat. "They can get their money in Seattle," he says. "Hell, I've got five boats. I don't need the loan program, either."

But the "little guy," Tillion says, "depends on this money. He can't afford to sit on the beach for a season because he can't get a loan."

WHAT'S THE CATCH?

As Tillion suggests, much of the tax hike is aimed at non-resident fishermen. "We sent $500 million worth of fish to Japan last year and another $200 million down south. For that, we collected $8 million in taxes. Doesn't that sound wrong to you?" he says.

In particular, Tillion was shooting in the direction of the king crab fishery, where 60 percent of last year's 120 million pound statewide catch was harvested by non-residents, according to his figures.

Non-resident salmon fishermen, meanwhile, might be forced to file a state income tax return to collect proposed fish tax credits under another Tillion/Gardiner amendment that was being drafted.

But, both legislators said they were trying to be careful not to drive resident and non-resident fishermen alike to processors outside the state's three mile limit. Tillion said he believed Washington state's 5 percent tax on chinook, sockeye and chum salmon would prevent much of an exodus.

Just to make sure, however, the Senate version of the tax bill included a proposed $50,000 bonding requirement for any fishermen exporting salmon in the round.

New from Stephens Engineering

Today's most advanced SSB radiotelephone family

After 20 years of designing SSB radiotelephones for other companies we are proud to introduce our own product family.

When we decided to introduce our own complete family of SSB radiotelephones, it wasn't a decision we took lightly. There were a lot of products already available. And some were pretty good.

But we are always thinking several years ahead with our designs and the result is the most complete state-of-the-art radiotelephone family available anywhere today. The Stephens SSB radiotelephone family is compact, rugged and reliable.

Our products range from the SEA 103, a 2-5 MHz, 75 watt radiotelephone for the small boat operator, to the sophisticated SEA 106 with double phase-lock frequency synthesis. At 384 channels, 2-23 MHz, 125 watts, it's *the* radiotelephone for professionals, but actually simple enough for anyone to use.

Get in touch with us and we'll send you complete technical and pricing information. Just circle the reader service number, call, or write.

Kodiak voices united opposition to taxes

Kodiak—The reaction of the fishing industry to proposed increases in the state's raw fish tax was the swiftest in this island community that has long prided itself as the fishing capital of Alaska.

Mail bags leaving Kodiak have been filled with letters opposing the fish tax, and almost every organization in the community has issued a formal protest.

On record opposing the tax proposal are the Kodiak Island Borough, City of Kodiak, Kodiak Area Chamber of Commerce, Alaska Shrimp Trawlers, United Fishermen's Marketing Association and all 14 processing plants in Kodiak.

One Kodiak processor estimated the proposed increases would cost his plant $1 million a year.

Jeff Stephan, manager of the United Fishermen's Marketing Association, who went to Juneau to lobby against the tax legislation, charged the increase was being "railroaded through."

Other fishing communities didn't appear to be aware of the bill at first, Stephan said. "Kodiak is the only community which has mobilized in opposition to the bill."

But, by early April opposition to the proposed hike had began to snowball. Kodiak Sen. Bob Mulcahy said over 1,500 messages of protest had been sent to legislators from across the state.

Ketchikan representatives expressed fears that the proposed five percent raw fish tax would drive the processing industry to Prince Rupert.

Other objections to the raw fish tax raised in Kodiak included fears that the tax would kill any hope of developing an onshore processing industry. At this point profits from bottomfish processing are negligible and the proposed five percent tax was viewed as a death blow.

Processors have pointed out that with recovery rates from shellfish often in the 20 percent range, a five percent tax on the raw product actually represents a tax of 25 percent on the meat recovered from the raw product.

If the raw fish tax increase is passed, most of the revenues raised will come from Kodiak and Dutch Harbor which had combined raw fish landings valued at nearly $200 million in 1978, according to National Marine Fisheries Service figures. The third largest port in Alaska, Ketchikan, had $26.4 million in fish landings in 1978.

—Chris Blackburn

fish tax

(Continued from preceding page)

In addition, to keep Southeastern halibut fishermen from taking more of their landings to Prince Rupert, B.C., Tillion and Gardiner were flirting with the idea of leaving that species' tax at the current one percent.

Beyond those and other suggested exemptions, the Legislature was faced with deciding how the tax revenue should be divided. Under existing law, 30 percent of the money is returned to the cities and boroughs in which it is collected and the rest flows into the state treasury.

A new formula adopted by the Senate last month would increase the local government share to a full one-third of all raw fish taxes, leaving another third for the state treasury. The remaining one-third would be set aside for the newly created Commercial Fisheries and Agriculture Bank, a move labeled by Sen. Ziegler as unconstitutional.

Tillion, however, may have sidestepped potential legal problems by avoiding a flat dedication of the tax money to local governments and the Fish and Ag. Bank. Instead, both would be subject to an annual vote of the Legislature.

This optional feature of the bill left municipal leaders and some fishermen nervous. As the **Kodiak Mirror** editorialized, "Even if the state did decide to distribute the funds in the way the bill describes, nothing would prevent the state at any future time from redistributing the funds."

Gardiner was quick to discount those worries and point to a lucrative loan program that would be opened up by giving the money to the Fisheries and Agriculture Development Bank.

The bank, created by the Legislature at Gardiner's urging last year, is associated with the Spokane Bank of Cooperatives. Through this bank, the new state agency can attract seven dollars for every one it has, Gardiner said.

"So, if we take a third of the raw fish taxes—say $8 million or so—and 'leverage' it seven times, we'll have $56 million to loan for fishermen," he said.

The Fish and Ag. Bank's board of directors, appointed by Hammond earlier this year, held its first meeting in late March, but with the tax bill pending it has yet to get off the ground.

However, most observers at the Capitol were betting that some kind of tax hike, most likely to 5 percent, would win narrow approval of the House.

The only possible stumbling block appeared to be Tillion's desire to adjourn the legislative session by the end of April. Asked which item had his top priority—the tax hike or adjournment—the Senate president replied, "I wouldn't wait two extra hours for this bill."

But with Gardiner and Hammond joining Tillion in supporting the tax hike, the chances appeared good that he wouldn't have to wait.

RELIABILITY

Being one of the few engines in the world built strictly for marine use, Sabb diesels are engineered for maximum reliability with the very minimum of operating cost and maintenance.

The engines are known throughout the world for their tough power and great propelling force. Each is equipped with a built-in 2:1 reduction gear which enables full use of engine power and the most effective RPM of a large propeller. The precision ground gears provide smooth running at all speeds. Removable "wet-type" cylinder liners provide effective cooling and allow for easy overhaul without removal of the engine from the boat. The fuel is injected by self-cleaning needle valves into a swirl chamber which ensures smooth running at all RPMs. They will idle for days with no problem. All engines have sturdy diaphragm water pumps that are not sensitive to water impurities and require no maintenance or lubrication. Geared hand starting of all Sabb diesels insures that even electrical failure will not stop you. Sabb engines come in sizes suitable for boats 18' to 50'.

Homer group withdraws from Cook Inlet Council

Anchorage—An umbrella group of Cook Inlet fishermen's associations has been jolted by the withdrawal of the Homer-based North Pacific Fisheries Association.

Five fishermen's groups formed the Cook Inlet Fishermen's Council last August to fashion a united public relations campaign, but the effort apparently fell victim to struggle with sport fishermen over salmon allocations.

In announcing the withdrawal at the Alaska Board of Fisheries meeting March 28, Dan Flynn said the Homer group found "that with the diversity of our membership we are not being fully represented."

Flynn noted that while Homer fishermen include crabbers, shrimpers, seiners, bottom-fishermen and drift gillnetters who operate from Prince William Sound to the Bering Sea, the other groups on the council are predominantly set net salmon fishermen.

NPFA board of directors member Ted Rozak said the energies of the council were too oriented towards the dispute over Cook Inlet salmon, and "we couldn't make our views count."

Flynn also said NPFA "can not condone some of the present decisions of the council," and cited recent attacks on the board of fisheries and some of its members by council spokesmen.

"We find ourselves affected by the adverse publicity" generated by council tactics, Flynn said. "We don't feel that the methods currently being used are acheiving the original goals of the council."

Rozak agreed, saying the Homer group has learned confrontation tactics "haven't accomplished what we've been trying to do for the past 10 years, so we've decided to change our tactics."

Alex Shadura, president of the council, said NPFA had given "no prior indication they were dissatisfied."

Shadura said as far as he was concerned the announced withdrawal was only speculation as he had received "no official notification yet.

"I think it was foolish what they did," Shadura added. "They're doing themselves more damage" than the council by refusing to work with the other four associations.

Shadrua also defended the council's involvement in the salmon dispute with sport fishermen, saying, "The concerns of one are the concerns of all."

An official with one of the four remaining associations also expressed dissatisfaction with the actions of the council and said the matter will be brought before the association's board of directors.

Some 90 fishermen belong to NPFA. Remaining council members are the Kenai Peninsula Fishermen's Cooperative, which represents 150 setnetters and drift fishermen, and the predominantly set-net groups Fisherman's Fund (Nimilchik), Commercial Fishermen of Cook Inlet and Cook Inlet Fishermen's Association.

Board lifts hand troll restrictions for Sitka

Anchorage—The Alaska Board of Fisheries has lifted hand troll closures no. Sitka, but turned down similar appeals from Elfin Cove fishermen.

The board granted a petition from the Sitka fish and game advisory committee to rescind regulations restricting hand trollers in Sitka and Salisbury Sounds to eight-day-on, six-day-off fishing periods.

Similar fishing periods in Icy Straits and near Ketchikan were left in effect.

The closures and other fishing cutbacks for hand trollers were passed at the board's January meeting in an effort to put a lid on the burgeoning fleet. The commercial Fisheries Entry Commission is studying the fishery for possible inclusion under limited entry.

The board took the action to lift restrictions near Sitka April 6 under its emergency powers, making it possible for area hand trollers to fish seven days a week when the season opened April 15.

In declaring an emergency, board members cited the impact the mobile Sitka hand troll fleet would have on the neighboring communities of Tenakee Springs and Angoon if the closures weren't lifted. Board members also noted the restrictions in Salisbury and Sitka Sounds did little to protect the threatened coho stocks moving through Icy Straits.

Coho escapements to major spawning systems in the northern Panhandle, where the hand troll fleet concentrates, ranged from 68.7 to 96.6 percent of the total 1978 run, according to Fish and Game tagging studies. But, most cohos travelling through Sitka and Salisbury Sounds are not destined for the troubled streams, according to state biologists.

In addition, the board's January restrictions were aimed at cutting back the hand troll effort from 35 percent to 20 percent of the total commercial troll catch of cohos. The Department of Fish and Game estimates Sitka hand trollers caught some 14 percent of the total troll catch in District 13 during 1978.

Some 200 people turned out for an informal board hearing in Sitka on the hand troll petition during March, and board member Jim Beaton said he came away from the meeting convinced the January regulations were "a little faulty.

"It was forcefully made very clear to me that the highly mobile (Sitka) fleet would greatly impact the rural areas we were trying to protect," said Beaton, a long-time Southeast fisherman. "There is no hard core evidence the hand trollers are adversely affecting those stocks."

Gordon Jensen of Petersburg agreed with Beaton, saying, "I didn't realize the extent of how much the fleet would shift to the inside areas."

The only board member voting against declaring the emergency was chairman Nick Szabo, who urged the board to use its emergency powers only in cases "of a real emergency and not to react to political pressure."

The board declined to declare an emergency for a petition submitted by Elfin Cove fishermen which called for a small area near the community to be opened for all trollers seven days a week.

Pat Fisher of Elfin Cove stressed the small fishing area was needed by the community because it was totally dependent upon fishing and the closures could severely affect the entire local fleet.

But, Beaton and Fish and Game staffers said the Three Hill Island area opening requested by Elfin Cove contained a major trolling area in the Icy Strait corridor.

"We'd be inviting a lot of boats in a little area," Jensen said.

"I have no doubt it would give Elfin Cove and Hoonah fishermen some relief, but I wonder if it would give this 66 percent fishing mortality figure some relief," Szabo said.

The board scheduled the Elfin Cove petition for a hearing at its December meeting.

Beaton stressed the Sitka action should not be "misconstrued as the board backing off the 20 percent figure, or from its intent to further cut back (hand trollers). It just gets into a question of how far, how fast."

—*Rudger Painter*

LUGGER
"THE FISHERMAN'S DIESEL"

LOW R.P.M. & HIGH TORQU

SAE HP, DIN HP, PSHP, Continuous HP, Intermittant HP and Rated HP. This is engineering gibberish. To you, the fisherman, all that counts is whether a Lugger can push your boat better than another engine. Lugger can.

Boat performance is influenced by horsepower, torque, RPM, gear reduction and propeller size. All Luggers have low RPM levels, high torque curves and conservative horsepower ratings. They use smaller gear reductions and swing larger propellers (less slippage) than competitive engines. Here is an example.

In a 32 foot boat the Lugger 6414T, producing 150 HP at 2200 RPM, swings a 21 - 17 four-blade at 2250 RPM through a 1.5:1 gear. In the same boat a competitive V-8, claiming 210 HP at 2800 RPM, swings a 22 - 18 three-blade at 2700 RPM with a 2:1 gear. The Lugger turns nearly the same wheel 150 RPM faster than the competition's engine which claims to have 60 more horsepower.

Lugger's low RPM design gives you quiet operation with less vibration. The low RPM and low piston speed mean lower thermal engine stress, less engine wear and longer life. The engine isn't thrashing itself to death at high speed.

Lugger's high torque curves means loads will have less effect on performance. That's important when you're running against the tide with a deck load of fish.

Lugger... the fisherman's diesel, has the power to get there and the torque to bring it home.

EDITORIAL

The increasing complexity of commercial fishing in Alaska is never more evident than it is at a meeting of the Alaska Board of Fisheries.

As new fisheries develop and competition for fisheries resources increase, the maze of regulations facing the board becomes more difficult to negotiate. Board meetings have become marathon sessions during which hundreds of proposals are considered and days of testimony from the public and staff solicited.

Proposed regulations are couched in the strange language of legalese and bureaucratese that even those who write, interpret and promulgate the regulations are at a loss to decipher. It is a world where acronyms like OSY, MSY and CPUE proliferate, and where cutting off the tail of a salmon is described as "removal of both lobes of the caudal fin."

Those who regularly attend board meetings have become accustomed to the gobbledygook of regulatory language, and have even become to expect the equally strange legal interpretations generated by statutes.

The most calloused of board observers, however, were puzzled by a proposal at the recent shellfish meeting in Anchorage, and the reaction to its justification can be described simply as dismay.

The proposal read:

5 AAC 39.680. SUBSISTENCE FISHING BY COMMERCIAL FISHERMEN. Commercial fishermen may retain fish or shellfish from their commercial catch for their personal use in any area if such retension is consistent with the restrictions set forth in sec. 890 of this chapter, except where the regulations in chapters 3-39 of this title specifically prohibit subsistence fishing during open commercial fishing seasons, or from commercially licensed or registered fishing vessels in particular areas, or by specified types of gear.

Now, everyone in the seafood industry and the seemingly hordes of bureaucrats who regulate commercial fishing has always assumed that once you land a fish, it's your personal property. Just about everyone, that is.

Imagine the incredulity of the audience when Chairman Nick Szabo tried to explain that apparently a lawyer in the state attorney general's office had ruled commercial fishermen must sell their catches.

A staffer with the Department of Fish and Game clarified that the assistant AG had rendered an oral interpretation of statutes suggesting that fishermen are required to sell their commercially caught fish and shellfish. Fish for personal consumption or to give to friends must be taken under subsistence regulations, the attorney said.

Sometimes, it seems, the regulatory process is being carried to an extreme. A commercial fisherman can't legally stick a few fish in the freezer or, even, pop one in the frying pan in the galley of his fishing vessel? Ah c'mon guys.

Just the same, the need to set down the right of personal use in black-and-white legalese later became clear as the board waded through a stack of proposals designed to bring commercial fishing statutes in compliance with the legislative subsistence mandate. Legal havoc could have resulted from regulations prohibiting commercial fishermen from subsistence fishing during hours and after open commerical periods without the regulation.

So, after trimming off the qualifiers, the board adopted the personal use provision by a 6-0 vote. I guess fishermen should thank the board for giving them back their fish.

The UFA's Corner

by Shari Gross
Executive director of the UFA

Since returning from Europe, I have been barraged with the same question from nearly everyone I've encountered: "Was the trip a success?" My answer has been a consistent and resounding, "Yes!"

The fact that it was a whole lot of fun, in addition to being very educational, makes the response all the more sincere. Perhaps it isn't the best tactic to start off by saying how much fun we had, but I might as well get that small embarrassment out of the way. It was wonderful fun.

The 14 Alaskans on the trip were a diverse group in almost every respect: age, area of residence, philosophy, type of fishery and politics. During the two weeks together, however, we shared many unforgettable experiences that helped establish some very warm friendships.

The hectic pace of the schedule is difficult to relate, and it may be sufficient to say most of the group felt like they needed a vacation after returning to the States. We squeezed almost everything conceivable into the 15 days overseas, including tours of smoking, freezing, salting and canning plants, net and trawl factories, a huge diesel assembly line, a ship research laboratory, shipyards and countless industrial board rooms for long discussions.

And, of course, we went out on boats. We had on-board demonstrations of Danish and Scottish seining, automatic longlining, trawling and jigging. The only on-board demonstration we missed was bottom gillnetting, which we viewed from another vessel. The North Sea lived up to its reputation for ferocity both days we had set aside for bottom gillnetting demonstrations, and we had to settle for detailed descriptions and diagrams.

We opted for short demonstrations of fishing techniques in most cases as going out on an extended fishing trip would have meant missing other very important aspects of the Scananavian bottom fishing industry. Demonstrations were sufficient, however, as all of the fishermen in the group knew what a netful of fish looks like.

Since the May issue of the **Alaska Fishermen** will be filled with stories and photos of what we observed, I will concentrate on one aspect of the trip, the direct benefits of the time, money and energy invested in the tour.

In response to the question of whether the fishermen are going to jump right into bottom fishing with large investments, the answer is a direct "no." A couple of the ten now are involved in bottom fishing part time and several more have longer range plans for easing into the new fisheries.

For the first time, however, fishermen who are leaders in coastal communities across the state have a full understanding of the potential of bottom fishing and a good idea of what needs to be done to develop the industry. It is safe to say the ten were enthused by what they saw, and that most are destined to become proselytizers and educators for fishermen, chambers of commerce, community leaders and others interested in bottom fish development.

That may be somewhat abstract when trying to measure something like "success," but it is important. If bottom fishing is to develop in Alaska, we need to at least have enthusiasm, interest and involvement by fishermen. I think we'll see more and more of this, and it will be partly because these ten fishermen are meeting and talking to people in their respective communities. The ten fishermen will be conducting public workshops to provide information about the trip and to answer questions about what they saw and what needs to be done with bottom fish in their area.

The educational process will be taken a step further when most Alaskans get their first chance to learn just what this fuss over "bottom fish" is all about through the airing of a 30-minute television program in more than 30 communities spread across the state. In about six weeks, the independent public television program "Alaska Review" plans a special on the Scandenavian trip and the bottom fish potential in Alaska. The ten fishermen plan to arrange special showings in their communities and the program will be available to anyone else interested.

I am trying to arrange a special showing for the governor, and several legislators have expressed interest in viewing the program. This is the kind of beginning needed to generate more action in developing bottom fish in the state.

The group met formally in Copenhagen shortly before our return to Alaska to summarize what we had seen, and to discuss potential roles for themselves, the UFA, and the government. We came up with a number of conclusions and recommendations, which we agreed to transmit to the Governor.

Perhaps the most important, and the best place to begin is in the area of policy. We believe that the state should have a developed and publicized development policy. Is it the State's policy to assist with new harbors and ports? With the building of drydocks? With quality control and training centers? Is it the policy of this administration to have a person on its staff who has overall leadership responsibilities for this program? Does the state want to develop liasons with nations other than Japan? What are the programs which have been designed to implement these policies? Which harbors? What communities?

We want renewed direction given to the Bottom Fish Task Force. The task force should be reconstituted to include industry people; its present make-up is, with one exception, of bureaucrats. Persons who know the most and can

Editor:

Within the next 3-5 years, off-shore fishing for a variety of species in the bottomfish and mid-water trawl industry will become a reality. This has become particularly evident to those of us fishermen who were so fortunate as being selected by UFA to visit the Scandinavian countries during March 1979. These countries depend on bottomfishing and mid-water trawling for as much as 5% - 90% of their gross national product.

However, it is important that efforts made by "whomever" in the development of this new fishery have access to the best vessel design, machinery, fishing gear, fishermen, and processing people in that industry. For we must always keep in mind that our off-shore fishery is one of the only protein rich areas left in the world.

During the past two years several attempts have been made to establish a central office in Denmark. This concept has been discussed with several fishermen in the Aleutian, Shumagin, and Bering Sea areas. If this office could provide us with information and contacts pertaining to all aspects of the off-shore industry, we would support this effort very strongly.

Listed below are several areas we feel this office could assist us in:

1. developing strong local and statewide fishermen's organizations
2. techniques for quality control starting with harvesting, delivery, processing and marketing
3. developing conservation/management techniques to ensure a consistent and abundant annual harvest in all species
4. creating antional boundary protection against foreign fishermen and local poaching
5. developing vessel design, including deck hardware and techniques in holding fish catches the longest and maintaining a quality catch, especially with mid-water species such as blue whiting, pollack and kaplin
6. gear manufacturing, testing, and availability
7. processing of both consumer and reduction food stuffs
8. marketing
9. availability of experts to assist in both long and short range employment efforts for fish harvesting, processing, quality control and marketing

Please feel free to utilize this information as substance in lobbying for a Denmark office. It is certainly a strategic location for the bottom and mid-water trawl industry, as well as other areas of interest involving various industries besides commercial fishing.

Sincerely,
David O. Osterbark
Board Member, Peninsula Marketing Assoc.

Letters, do we ever love letters—even if they're not love letters

Alaska Fisherman

Editor:

I was very disappointed in quite a number of items in Rutger Painter's interview with me in Petersburg (March, **Alaska Fisherman**). I very truly hope that my statements that were made and put to press were lack of notes on your part during our interview; quite a number of items were in error or lack of completion.

The main item I'm concerned about is the statement I made about the capabilities of the canneries on the lower coast. The canneries below I said could and can process twice the amount of fish that P.F.I. (editor; Icicle Seafoods) can here because of doing it for a hundred years.

What was and is meant by what I said is:

If you could combine the machinery and technology that P.F.I. in Petersburg has with the experience of the plants below as you say the "lower 48" our marketing and products would be unlimited. Which comes to the statement the difference between here and there is—quote "a knife or a saw." The other errors were—me dragging for 25 years is wrong—10 years in bottom fishing—10-15 in salmon & albacore & crab. Gary Westman is from Blain Wash. His boat is 72 feet. My boat is 84, and so on.

I feel you should conduct a more thorough resume next time and not have these mistakes happen again for everyone's benefit.

Thank you.
Dusty Anderson
Petersburg

Editor:

On behalf of the Southeast Alaska Seine Boat Owners & Operators Association, I would like to thank United Fishermen of Alaska for sponsoring this year's Salmon Conference. The continuation of such meetings is most helpful to insure communication among the various aspects of the fishing industry. I was pleased to have a somewhat structured meeting with an agenda being provided beforehand. This allowed those of us attending to be prepared for discussion.

We look forward to participating in next year's meeting.

Sincerely,
SOUTHEAST ALASKA SEINE BOAT OWNERS & OPERATORS
Michele Zerbetz
Executive Director

USE THE ALASKA FISHERMAN CLASSIFIEDS—WE REACH ALL OF ALASKA'S FISHERMEN

ufa's corner

(continued from preceding page)

contribute on a practical level to ideas and programs should be included: fishermen and processors. There has been confusion, too, as to who serves as chairman of the committee. We would like to see the state include a person who has overall responsibility to coordinate, lead and direct the governor's policies. One, who, quite naturally would act as chairman of the various task forces. There is considerable confusion now as to who is in charge, and we fear that is leading to confused policies and programs.

Along these same lines, we would like to see an active Alaska-Danish Advisory Group. That group travelled to Scandanavia in October but it has not met since. Nor have its members received any communications from the chairman (nor do they even know the name of the chairman) or been asked for input and advice. An Alaska office in Copenhagen is important; the governor should support it and should design his budget to reflect that support. There is much to benefit from a liason between Alaska and Scandanavia. Those countries have developed an efficient industry which results in a high standard of living for its people. The openness, directness, and support the Scandanavians have given us is refreshing. We question why at this time Alaska is emphasizing expanded relations with the Orient, rather than developing other, additional contacts and markets.

Two other areas of interest to us are training centers and quality control. We urge the state to develop programs for both. We would like to see a highly developed training center here in Alaska. We are running the risk of sponsoring fragmented programs of short duration and mediocre quality by decentralizing small-scale programs throughout the university system. We would prefer to see a centralized program located in one place in Alaska where fishermen or prospective fishermen and crew can learn many skills. The importance of quality control to market bottom fish was obvious to us all. Fishermen and processors need to be re-educated to handle the fish more carefully and the state should direct industry to establish and take responsibility for a program for quality control.

The matters of financing, loan programs, tax incentives, and fish-taxes are complicated in nature. Programs should be developed which encourage industry, yet produce a return to the state which is sufficient to finance its cost. Fishermen would like to participate in shaping those programs.

There is another important thing we learned over in Scandanavia: the benefit that comes to fishermen when they are organized. Those people are really organized. And the reason they are able to be is that they have money. Lots of it. They get it by being assessed 2 percent of their gross earnings to their organizations. They have weekly newspapers, large staffs, and office buildings. They conduct independent research on marketing and other areas of concern, lobby, and are represented on major policy boards and commissions. They play a much more major role in the shape of their industry than we do over here, and it is because they can afford it.

The UFA has grown in size, strength, and stature these past couple of years. But, to continue to do so, and to be able to reach out in new directions is going to cost money, and obviously only the fishermen can and should pay for that. This year our only means of revenue is from membership dues. I hope that by next year we can institute a voluntary assessment for fishermen to the UFA. This will require cooperation from processors to collect and deposit the dues. Of course a commitment in spirit and wallet must come from fishermen. The ten fishermen, by the end of the trip, were not proudly declaring the "wonderful independence of Alaska fishermen." It is no longer smart to play that role—too much is happening in fisheries today, for us not to join together and work towards common goals. To be independent is to be powerless.

Gearmatic

AROUND THE RIM

Kodiak

The catch per unit effort of Kodiak's bottomfish fleet (trawlers in the 70-foot class) equals the catch per unit effort of Japanese medium sized trawlers (vessels in the 150 to 170-foot class) according to National Marine Fisheries Service Surveillance and Enforcement personnel.

Some of the Kodiak double rigged trawlers are even exceeding the Japanese medium sized trawler catch per unit effort, the federal Surveillance and Enforcement office in Kodiak said.

Both the demand for bait by Kodiak's tanner crab fishermen, and the demand for food fish by the two processing plants in Kodiak with filleting lines, set a new record in Kodiak for bottomfish landings in March—over 1 million pounds of pollock alone.

During all of 1978 the Kodiak trawlers landed only 2.3 million pounds of bottomfish. Another 500,000 pounds is estimated to have been sold at sea for bait. Last year the Department of Fish and Game did not require fish tickets for bottomfish landed and sold at sea, but this year fish tickets are being required for all bottomfish landings.

"And we're doing it without help from anybody," added trawler Oral Burch from the vessel Dawn. Kodiak's trawlers have been developing their gear and locating their fishing grounds without the aid of federal or state bottomfish development programs.

Two men were lost at sea, two Kodiak vessels lost and two holed during the last week in February.

The 138-foot landing craft Alaska Roughneck went down off Bold Cape near Cold Bay Feb. 28. Crewmen Gene Love and Dan Bernard were lost at sea.

The King Cove vessel Seven Seas was able to pick the other two crewmen, Bruce Campbell and Don Rude, out of the water shortly after the Alaska Roughneck capsized. Campbell, who had been wearing a survival suit, suffered hypothermia and a back injury.

The Alaska Roughneck's troubles began the afternoon of Feb. 28 when it ran aground on Ilnask Island north of King Cove.

The crew made temporary repairs to the vessel and continued on toward King Cove, keeping a 20 minute radio schedule with the Kodiak Coast Guard Communications Station. Their progress was also monitored by canneries, boat skippers and other owners of single side bands radios in Kodiak.

An hour later the Alaska Roughneck radioed it had encountered heavy seas and was in danger of rolling over. At 2:55 p.m. a crewman from the Alaska Roughneck radioed, "Mayday, Mayday, Mayday. We're going over."

A second voice then came over the radio, "He's capsizing. He's capsizing."

In the process of rescuing Campbell and Rude the Seven Seas sustained damage after hitting floating debris. The Seven Seas took the two survivors into King Cove and the Golden Star then took the survivors on to Cold Bay where they could be evacuated by jet.

Shortly after 8 p.m. Feb. 28 the 83-foot crabber Sirius with six persons on board went on the rocks at Douglas Reef in the north end of Shelikof Strait.

Two hours later the vessel requested Coast Guard assistance, but the Kodiak Air Station's large H-3 helicopters were not available and a helicopter was launched from Elmendorf Air Force Base near Anchorage.

Meanwhile the vessel Sea Wife made several passes on the Sirius, but was unable to get a line on the vessel as its bow was underwater. The 179-foot Polar Shell arrived on the scene two hours later and sent its diver out to try to get a line on the Sirius.

With the situation becoming critical, the Kodiak Coast Guard Air Station launched one of its small H-52 helicopters which arrived on the scene shortly after 1 a.m. and was able to pick up all six men aboard the Sirius as well as Polar Shell diver Tom E. Moragan.

No injuries were reported among the crewmen. Coast Guard officials said it was "quite a feat" for the small helicopter to get seven men aboard. The helicopter was piloted by Lt. Cdr. William Criswald. Co-pilot was Lt. Michael Roberts and crewman was AD-1 King David.

The Sirius later disappeared and Marine Surveyor Norm Holm said the vessel is presumed to have been broken up and sunk by pounding waves.

An Feb. 26 the 39-foot Teresa Marie, owned by Randy Christensen, went on the beach at the North end of Whale Island, north of Kodiak. The Coast Guard cutter Citrus was diverted to pick up the two men aboard the Teresa Marie.

While passing through the Ouzinkie Narrows on its way back to Kodiak the Citrus struck two unmarked, submerged rocks. Water poured in through two large holes, one 27 feet by 5 inches and one 11 feet long by 3½ feet wide at its widest, at the rate of 1300 gallons per minute.

The forward hold completely flooded and water filled the magazines and food storage lockers. Water washed over the cutter's bow before the flooding was brought under control by 18 pumps.

Kodiak divers Dennis Lecours and John Stella were taken to Ouzinkie by the tug Kodiak King to assist with repair work. The Citrus was able to limp into Quzinkie where it remained for a week being repaired.

The Teresa Marie sustained a badly damaged hull, but was filled with styrofoam logs and refloated.

On March 17 Pan Alaska's 80 foot crabber Pacific Price went down in flames at Uyak Bay. All four men aboard, skipper Bruce Putnam and crewmen Randy Butler, Wayne Ammmon and Brad Hall, all of Kodiak, were able to abandon ship in their liferaft. They were picked up shortly after radioing a May Day message by the Cougar.

The Fish and Game research vessel Resolution went on the rocks near Shuyak Island at the north end of Afognak Island April 3. The Resolution was being used to count tagged sea lions at the time of the accident.

The Afognak Logging Company tug Cygnet came on the scene and was able to get a line on the Resolution, which was starting to lay over on its side as the tide went out. The Cygnet held the Resolution upright until it would be refloated on high tide.

Department of Fish and Game Vessels Supervisor Carl Lehman had high praise for the Cygnet's skipper Ron Rusher.

"He acted in a prompt, seaman-like manner," Lehman said, "and did a fine job. He has my admiration. We really appreciate it."

—Chris Blackburn

Simrad's new 603:

The low-priced echosounder for inshore and coastal fishermen.

Simrad's new Skipper 603 is the affordable echosounder for the inshore and coastal fisherman.

The 603 easily detects and records single 24" long fish at depths in excess of 100 fathoms. Includes extra built-in features like digital bottom readout. Switchable fathom, meter and foot scale.

Skipper 603 is a six-inch recorder with a choice of 300 watts through a high performance 33° ceramic transducer or 500 watts with a powerful 19° ferrite transducer. Twelve basic and phased ranges from 0-25 to 600 fathoms.

Send this coupon for more information on the Skipper 603 and Simrad's new 802 750 watt echosounder.

regionalization

(Continued from page 1)

the following day was cancelled when Anderson and Cotten failed to reach agreement. "We couldn't work out a compromise, so we decided to hold off until it settled down," said Anderson.

Meanwhile, the joint boards meeting in Anchorage were considering adopting Skoog's draft only as a working paper. But, following a phone call from Juneau, Greg Cook, Executive Director of the boards, announced: "It looks like there will be no bill this year out of the Legislature. In urging the boards to adopt Skoog's compromise as a regulation, Cook said the Legislature had indicated willingness to look at funding whatever the boards enact.

The failure to adopt a regionalization scheme "will be picked up as another example of indecisiveness from Alaska," said Skoog, referring to threats of federal imposition of regional management under (c)(2) legislation if the state doesn't approve its own plan this year.

Gardiner, on the other hand, said his regionalization bill "wasn't predicated on what's going on in Washington, D.C."

In his view, the process of deciding fish and game issues "has turned into a madhouse in which no citizen has real input." The winter meeting of the Board of Fisheries lasted 22 days and "it's only going to get worse," he says. "What that means is that only people with money can impact the system."

Gardiner maintains that many issues such as opening dates and gear requirements could be more easily handled at the regional level.

In addition, he said, regionalization would dilute some of the influence of the Department of Fish & Game, which "now has an inordinate amount of weight in decisions that are not biological."

Senate President Clem Tillion, meanwhile, predicted that only a bill patterned after the governor's more limited approach to regionalization could pass the Senate.

"I do think the local areas should have more say," Tillion said. "But I believe any bill should be aimed at satisfying the federal requirement, not the Native element."

Tillion also said a final d-2 bill adopted by Congress would not contain a strict requirement for federal oversight, "other than judicial review, which everybody seems to agree with, anyway."

That opinion, however, hadn't spread to other legislators who labored over the regionalization bill for most of March and early February. And, like the legislators involved with the issue, the joint boards spent most of their time trying to devise a system of checks and balances between the proposed regional councils and the statewide boards.

Several board members were strongly opposed to points in Skoog's draft setting out procedures under which regional proposals could be rejected. Finally that entire entire section was deleted and the regulations approved.

Although the regulations do not meet Anderson's declared "bottom line," Anderson said he was "quite pleased" with the board's action. "It's a very positive step forward," Anderson said. "It could be interpreted by some legislators that it's a necessary action to take. It could end their resistence."

"This may give us a strategic advan-

Nels Anderson

tage," he added. "Then we'll be able to put in the sections that are necessary." Anderson said he will still push for language that will require the boards to adopt regional council submissions except under certain circumstances, "otherwise we're just creating another bureaucratic level."

The establishment of regionalization by regulation rather than statute allows the boards to meet in the fall to define exact boundaries and "fine tune" the procedures.

But Anderson said the board's action does not preclude a legislative tactic, and added, "We'll probably give it another try."

the rim

(Continued from preceding page)

3Kb. Compared with last season's catch of 140 tons, this winter's 1,000 ton catch is impressive. Most of the herring were caught in midwater trawls as the herring were generally too deep for seines. According to the Department of Fish and Game, next year's plans call for an earlier opening and for a lower guideline harvest level for Orca Bay to encourage fishing on the west side of the sound.

Herring gillnetting is closed in PWS this year but there are some hopes that a possible 40 limited entry permits will be issued before the next season. The Board of Fish closed the gill net herring season for further study because of concern that herring stocks might be over-fished. A committee of Cordova fishermen have been working on a possible point system to use in establishing limited entry.

Kodiak tanner crab quota reached in only 38 days

Kodiak—The tanner crab fleet took only 38 days to harvest a little over 28.5 million pounds of tanner crab.

The season which opened Jan. 5 but did not get underway until Feb. 16 following settlement of a prolonged price dispute, closed March 26.

Closure of the Kodiak tanner season was the second closure, the first being in Cook Inlet, in Alaska to be conducted under the new federal-state joint management program for species fished both inside and outside the state three-mile limit.

On March 16 the Kodiak Department of Fish and Game announced that closure of the Kodiak tanner crab on March 26 had been recommended to the National Marine Fisheries Service Regional Director in Juneau.

A week later the Department received approval from the National Marine Fisheries Service and the closure was officially announced.

The off-shore area south of Kodiak in the Semedi Island region has been left open and some crabs were still being harvested there in April.

In late February and early March Kodiak crabbers working the north end of Shelikof Strait were plagued by ice floes breaking loose in Kamishak Bay and drifting around Cape Douglas.

Some crabbers reported losing a dozen pots or more to ice floes despite hasty pot pulling and retreat. The ice floes this year coming out of Kamishak Bay ranged up to 60 feet long.

Last year a mammoth ice floe 17 miles long headed out of Kamishak Bay and caused a mad scramble to move several hundred thousand dollars worth of pots out of its way.

—Chris Blackburn

Bering Sea tanner fleet is fishing

Anchorage—Bering Sea tanner crab fishermen accepted a 52 cent a pound offer from processors on March 14, more than two months after the price dispute began.

The price was up sharply from last year's 38 cents a pound mark for Bering Sea tanners, but well below the 65 cents originally asked by fishermen represented by the North Pacific Fisheries Vessels Owners.

Sig Jaeger, director of the Seattle-based fisherman's group, said the increased price was influenced by rise of the Japanese yen and a projected fall in harvest rates of bairdi tanners. Japanese buy nearly all of the tanner crab produced in Alaska.

The emerging opilio tanner fishery should get a substantial boost as a result of a 30 cent price offered by processors in Unalaska.

Jaeger, interviewed during a state Board of Fisheries meeting in Anchorage, said the length of the price dispute was no surprise since the major Unalaska processors have been asking for delayed season openings for tanners.

"There were no strong negotiations until after March," Jaeger noted. "There have been strong expressions by the Japanese that they didn't want crab processed until after March."

Jaeger suggested that the late openings requested by the Unalaska processors have as much to do with the Japanese influence in "Dutch," as they do with the higher recovery rates cited by processors.

"The Japanese have their own fleet fishing on opilio, which is in direct competition with bairdi on the market," Jaeger said.

In fact, Jaeger said, the Japanese mothership fleet began harvesting opilios in the Bering Sea in mid-February this year, some three weeks sooner than normal.

The Japanese not only control the tanner crab market, but own large percentages of Bering Sea processors (See October edition of the **Alaska Fisherman**). Some of the Bering Sea tanner fleet is going after opilio tanners after the bairdi quota is filled, but it's likely to be a few years before the Japanese are squeezed out of the fishery.

Trawl surveys by the National Marine Fisheries Service in the Bering last year indicated a sharp drop in bairdi tanner populations, with mid-point harvest guidelines set at 43 million pounds. Some 66 million pounds was harvested in 1978.

The projected harvest decline, Jaeger said, helped the fishermen in price negotiations since market prices generally rise when supplies taper off.

After two weeks of fishing, Jaeger said, the Bering Sea tanner fleet was averaging some 60 crab per pot, but the catch per unit effort (CPUE) was expected to decline with exploitation. The 1978 CPUE was 51 and the 1977 average 60.

If the CPUE drops off as expected and "present trends hold, it would indicate the NMFS trawl survey was a pretty fair index of the strength of the stocks," Jaeger said.

Cold Storage workers strike in Southeast

Workers at six Southeast cold storage plants went out on strike April 9, leaving some tanner crab and black cod fishermen without a market.

The strike also could affect a Sitka herring roe fishery scheduled to be opened by emergency order as the Fisherman went to press.

The walkout at the six cold storages came after two major Southeast cold storages signed contracts with the International Longshoremen's and Warehousemen's Union (ILWU). The contracts with Petersburg Fisheries Inc. and New England Fish Co. (Ketchikan) called for wage increases totalling some 32 percent over the next three years.

ILWU Alaska president Larry Cotter said the contracts provide ILWU workers with the "best cold storage wages in the state." After putting in 1200 hours, the workers will get $8.70 an hour this summer (up from $8 under the old contract), $9.35 in 1980 and $10.10 in 1981. The starting wage will go up to $5.95 an hour, under the new contracts.

The union is seeking similar contracts with Juneau Cold Storage, Pelican Cold Storage, Whitney Fidalgo in Petersburg, Craig Fisheries, Cordova Bay Fisheries in Hydaburg and E.C. Phillips & Sons, Inc., in Ketchikan.

Cotter also was preparing to begin negotiations for cannery and cold storage workers in Cordova following the March 25 merger of the Copper River and Prince William Sound Cannery Workers Union with the ILWU. Between 125 and 400 cannery workers are employed in Cordova, Cotter said.

The ILWU membership voted in March 93 percent in favor of striking should talks with the processors break down. Cotter had hoped the settlements with PFI and NEFCO would prompt the other cold storages to settle.

The PFI & NEFCO contracts include wage increases totaling 32 percent over the three year period, about 11 percent a year, Cotter said.

Health and welfare benefits will double to 58 cents per hour by the time the contracts expire, and pension benefits now 22 cents per hour will increase to 40 cents over that time, Cotter said.

PFI and NEFCO will be able to bring in double shifts "only if the day shift worker has had the opportunity to work 12 hours," Cotter said. "That protects the annual income of the year-round workers and accomodates the company's desire for the double shift."

"We didn't get every single thing we wanted. We wanted a little bit more money. But we avoided a strike and I think the contract is fair to both sides."

Before the agreement was reached, Cotter said, "We're not going to wait a hell of a long time" to decide to strike, but added, "We're going to do everything we can to avoid a strike."

NEWS SHORTS

Permit and license renewals are slow

The state has issued a reminder to fishermen to renew their entry permits and vessel licenses before the salmon season starts.

As of April 5, only 57 percent of commercial salmon and herring entry permits and 55 percent of vessel licenses had been renewed for 1979. Valid 1979 permit cards must be shown before fishermen can sell their catches, and vessels licensed prior to engaging in fishing.

Applications can be obtained from the Commercial Fisheries Entry Commission, commercial license vendors or from local Alaska Department of Fish and Game offices. The commission warns fishermen to allow a minimum of three weeks for delivery of permits and licenses, both of which are processed in Juneau.

Stikine hydro potential studied by Canadians

Preliminary studies of potential hydroelectric sites in the Stikine and Iskut Rivers are being conducted by the British Columbia Hydro and Power Authority. According to B.C. Hydro the studies will continue for at least two years and no final decision on whether to build dams on the rivers will be made until the early 1980's.

The Iskut is the largest tributary of the Stikine, joining it just a few miles upstream from the Alaska border northeast of Wrangell. The Stikine is a major southeast Alaska salmon spawning habitat.

Watercraft fuel tax hike bill hits snag

Unless there is a "miracle," a bill that proposes an increase gasoline taxes to 19 percent of the retail value will not be considered by the state Senate this year. Commerce Committee chairman, Sen. Brad Bradley (R-Anchorage) said the bill will not move because it would not increase taxes for watercraft as much as other fuel taxes.

Motor fuel taxes would have gone from eight to 15 cents this year and to 19 percent of the value in 1980, while watercraft fuel taxation would have gone from five cents a gallon to six percent of the value.

Soviet joint venture gains endorsements

Two fisheries councils have recommended that a joint U.S.-Soviet fishing venture be allowed to process seven metric tons of Alaska bottom fish.

Marine Resources Co., Inc., jointly owned by Bellingham Cold Storage and the Soviet agency Sorbyflot, hopes to process about 6,000 tons of cod, pollock, perch, sablefish and other species west of Kodiak. The proposal has been endorsed by both the North Pacific Fisheries Management Council and the Pacific Fisheries Management Council, representing western states.

While the company plans to have about 14 U.S. trawlers delivering hake taken off the coast of Washington to Soviet processors, the Alaska project must still be approved by the Department of Commerce.

Marine sanctuaries put on hold by NOAA

Proposals for marine sanctuaries in Alaska coastal waters have been put on hold by the National Oceanic and Atmospheric Administration. The "political climate" in the state, stirred by debate over Alaska lands legislation pending in Congress, has been cited as a factor in the postponement, according to Nancy Foster, deputy director of the sanctuaries program.

Several conservation, scientific and government groups have already recommended a number of areas in Alaska coastal waters for sanctuary status. Those locations include the Beaufort Sea, Bering

Straits, Kotzebue, the Yukon delta, Cook Inlet, Bristol Bay, Prince William Sound, waters adjacent to Kodiak Island, and five small inlet and fjord areas in southeast Alaska.

The 1972 Marine Protection, Research and Sanctuaries Act allows the federal government to set aside coastal areas of ecological, conservational, or recreational value that are threatened by development.

Initial hearings in Alaska on proposed sanctuaries will not be held until at least next fall.

Halibut phase-out signed

A pact providing for a two-year phase out of Canadian harvest of halibut off the Alaska coast has been signed by Secretary of State Cyrus Vance and Canadian ambassador Peter Powe.

Under the new treaty British Columbia fishermen will get two million pounds of Alaska halibut this year and one million pounds in 1980.

Japanese seafood trade is bypassing Seattle

Direct trade of frozen Alaska seafood to Japan began in March, eliminating Seattle as the primary export point. Thanks to the 200-mile limit, Japan-bound shipments of fish from Alaska tripled between 1977 and 1978.

"The demand for direct service has always been there," said Jim Hinchcliffe, head of Sea-Land's new trade service. "The difference was the 200-mile limit."

While the chief economist of the Port of Seattle says the revised route is bad news for that city, Alaska processors will likely benefit. According to John Naylor of the New England Fish Co., direct shipment to Japan should save the firm two to four cents a pound in export costs.

Stevens introduces fisheries loan bill

Legislation amending the 1916 Shipping Act to ease up state loans to Alaskan fishermen has been introduced by U.S. Sen. Ted Stevens. Under the law the state cannot act as an agent in administering fishing loans. Presently such loans are made by the Rainier Bank in Washington state.

The proposed amendment would allow the state to qualify to hold preferred mortgages, which could translate into lower interest rates for resident Alaskan fishermen. Loan holders must now pay a one-half of one percent trust fee to the bank. Rainier collected $200,000 in fishing loan fees last year. That money could be saved if the state administered the loans.

Fisherman's relief bill signed into law

A measure allowing fishermen injured or disabled while working within the 200-mile limit to receive compensation from the fishermen's fund has been signed into law by Gov. Jay Hammond.

Previously, only fishermen hurt while within the state's three-mile limit were eligible for fund benefits. But Kodiak Superior Court Judge Roy Madsen ruled last fall that a fisherman injured outside of Alaska coastal waters was entitled to compensation.

First herring opening enjoys good roe count

Ketchikan—About 92 gillnet boats took 530 tons of roe herring at Kah Shakes Cove, 40 miles south of Ketchikan, in late March during the first opening in the state.

A 585-ton quota was set, according to herring research specialist Dennis Blankenbeckler, a Fish and Game biologist in Ketchikan who kept tabs on the fishery. The fishery opened at 4 a.m. Thursday, March 29, and closed Saturday, March 31 at 11 a.m., he said.

Percentage of roe ranged from eight to 15 in the ripe fish, averaging about 11, "which is good," Blankenbeckler said. Two-fifths of the quota had been taken by Friday afternoon, less than 36 hours after the 55-hour fishery opened.

Cold storages in the Ketchikan area were buying the fish for between $1,500-$3,000 per ton, depending on the percentage of roe, Blankenbeckler said.

Roe herring usually spawn in the Kah Shakes area bout April 1, on kelp in shallow water near the shore, Blankenbeckler said. Fishermen vote on when to set nets, the best time being when the fish move in to spawn and the water turns milky with semen, but before fish are spawned out. The milky water prevents the fish from seeing the nets, Blankenbeckler said.

The 1978 quota, nearly the same as this year's, was not caught, he said, due to many spawn outs. "The quality was not there," he said.

Fish and Game biologists monitored the take of the boats. Blankenbeckler said 104 had interim limited entry permits to fish for roe herring. Calculations of the catch included those in nets and not yet at the tenders, but were still "preliminary," he said.

Research biologists were also on the Fish and Game boat to gather data on age, quality and location, and will try to determine the number of eggs laid and the escapement, which, in turn, determines the 1980 quota, he said.

The next Southeast opening, restricted to purse seiners, will be in Sitka Sound. Testing done there during the Kah Shakes opening showed fish were at two to five percent maturity. Blankenbeckler estimated the roe herring fishery would not open until mid-April.

Openings in Cascan Bay and Lower Lynn Canal are unlikely, according to an ADF&G release.

—Laura Zahn

Herring prices go up

Kodiak—Herring promises to be a bigger money fishery than ever this year. Herring with a roe recovery of 10 percent has brought as much as $4,500 a ton off Canada and $3,000 a ton off Southeast Alaska.

The Prince William Sound herring fishery for roe opened April 7 at 6 a.m. Ralph Pirtle, Prince William Sound Department of Fish and Game management biologist said over 100 boats were expected to be on the grounds for the opening.

This year in Prince William Sound Fish and Game is opening the season and monitoring the fishery, but letting the boats decide when the roe count is high enough to fish.

Last year the Prince William Sound herring fishery was opened and closed according to the expected roe recovery as herring schools moved into the area.

"It was a fiasco," Pirtle said. While the boats sat and waited, the herring swam deep and eluded the net. Closed areas were opened to keep the prince William Sound herring fishery from being a complete disaster. The season ended with a 1200-ton harvest.

This year the harvest level is 2500 tons in Prince William Sound.

"We want to intercept the herring in open water," Pirtle said.

The Kodiak herring season opens May 1 with a harvest level of 1600 tons—800 tons from the west side of Kodiak and Afognak Island area, and 800 tons from the south end and east side, combined, of Kodiak.

An additional 400 ton harvest level has been set for the Kukak section of the Mainland District and another 400 ton harvest level for herring in the rest of the Mainland District.

For the first time herring fishermen are required to register with the Department of Fish and Game for the area they intend to fish. The new regulation was passed by the Board of Fisheries last winter.

—Chris Blackburn

the rim

(Continued from page 15)

PWS processors and fishermen are working to establish rules that will improve the quality of landed fish. The rules under consideration are (1) a maximum time between fish deliveries restricted to 24 hours with fish tickets marked with date and time of deliveries; (2) puncturing the skin or flesh of a fish will be prohibited, use of pugks entirely prohibited; (3) use of detergents or biocide containing phenol prohibited. These rules are still under consideration and are subject to approval by the processors and the Cordova Aquatic Marketing Association board.

Junior Cross, skipper of the Captain Joe and Mel Wirk, skipper of the Alert signed contracts with the state of Alaska to conduct a bottomfish trawl survey in the Gulf of Alaska. The study is expected to last 30 fishing days. $90,000 is being provided by the state to guarantee the income for the two vessels on a sliding scale basis; as the daily deliveries go up the state funding goes down. During the first two weeks of the project some deliveries were made to Cordova and Valdez processors. Lately some problems concerning the price paid for fish have arisen and the vessels are not now fishing.

The tanner crab catches for the vessels fishing in the Gulf have improved lately. Catches within PWS are still low. Latest predictions indicate a "fair" season.

As one of the ten fishermen participants in the recent Norway, Denmark and Faroe Island trip, I would like to say thank you to the UFA for making the trip possible. All of us brought back a wealth of information. I encourage fishermen to question me or my fellow travelers about the fishing techniques we saw.

—Connie Taylor

(Continued from preceding page)

lobbying in support of d-2 lands legislation in the Ketchikan area.

The Alask[illegible] Trollers Association, the Southeast Seine Boat Owners and Operators Assn., and the Community Fishermen's Co-Op want to send five to seven fishermen to Washington, D.C., to lobby for legislation when the d-2 bill is on the House floor.

The groups want to protect three major producing rivers in the Misty Fiords National Monument area.

Louisiana-Pacific Corp., Ketchikan division, will probably end up paying the state of Alaska money for a chlorine spill in Ward Creek last April that killed about 1,000 fish.

Whether the money will be paid in an out of court settlement or whether the state will go to court to get it will be decided in April, according to assistant attorney general John Tillinghast. While he would not release the amount of the proposed settlement, he said it was enough to cover rehabilitation costs.

While a water pipeline to LPK's pulp mill was being cleaned with a calcium huporhloride solution last April, a valve apparently leaked and the system overflowed, killing all the fish and other organisms for about one-third of the stream. Fish suffocated from the chemical, which is similar to that used to clean swimming pools.

Bottom fishermen participating in the state's $150,000 Ketchikan study had more luck in one week than in over 100 other fishing days combined.

More than 9,000 pounds of red snapper, were hooked by two longliners, Fred Athrop and Leroy Miller. Athrop's Auk hauled in 4,500 pounds and Miller's Velvet carried about 5,000 pounds to two local processors who pay 30 cents a pound for the tasty rockfish.

After 147 days of fishing by several of the 10 fishermen participating in the study, which equals one-fifth of the program, 18,000 pounds of fish were landed. "That's not as good as we hoped, but over half of that was brought in the last week," said Marvin Yoder, borough administrator of the project.

Athorp's catch the first trip out was 1,100 pounds for 10 days, he said, which was "really poor. A respectable trip for three men would be 8,00010,000 pounds.

Fishing is still not up to that level, and he blames it on bait which he thinks was not processed soon enough.

Athorp said while long-line fishing showed "quite an improvement," gillnetters were still having bad luck. Gillnetters have been fishing only in bays because the weather has been too poor to set out into the current, Athorp said.

Both Miller and Athorp received minimum wages from the "incentive" program, which pays the skippers according to the amount of fish caught, Yoder said. The more caught, the less state money is paid. The incentives were designed to make the trips worthwhile if catches were poor, Yoder said.

New England Fish Company began to prepare a site for a 120x50 foot cold storage building in mid-March. The new cold storage should be in operation in early July, according to NEFCO Ketchikan manager Mike Cusack.

A survey of the Keta River by U.S. Borax officials is being planned for this summer, after their Quartz Hill molybdenum exploration camp opens in late May or early June.

The survey is the first step in designing a fish habitat enhancement program, which officials pledged to do Oct. 31, 1978 in Ketchikan in conjunction with their mining project on Boca de Quadra, 40 miles east of Ketchikan.

"We have plenty of time," said Eugene Smith, manager of environmental affairs for Borax. The program can't be used until a decision by assistant secretary of agriculture Rupert Cutler is changed to allow Borax to build a controversial 18.9 mile road along parts of the river.

The mine site itself could be prohibited under strong Alaska lands legislation, but under a compromise bill, reintroduced this year, the mine would be in a special management area outside the Misty Fiords National Monument.

If Cutler reversed his decision and the compromise bill becomes law soon, the program and road construction could start as early as fall or next summer, Smith said, but he indicated that time schedule is not likely.

Fish hatcheries, weirs, ladders, spawning channels and other enhancement techniques could be used in the Misty Fiords national monument area if the compromise d-2 still passes this year.

The d-2 bill has passed the U.S. House Interior Committee, but must pass another House committee and the full House before being considered by the Senate. The aquaculture provision is not final, according to Ron Wendle, Southern Southeast Regional Aquaculture Association spokesman.

Bar Harbor will be increased by 350 moorage spaces by October, courtesy of the U.S. Army Corp of Engineers, the state and the City of Ketchikan.

Bids have been opened for contruction of the multi-million dollar project, the lowest of which was $1.3 million. Two concrete floating breakwaters will enclose a 25-acre area when the project is complete.

—Laura Zahn

subsistence

(Continued from page 4)

p's trading high value resources for non-traditional items," Szabo said.

Another item discussed in depth but not acted upon was the establishment of a fourth resource-user category of "personal use."

The proposed classification was designed to handle situations like the politically volatile Copper River dip net fishery. A subsistence fishery on Copper River salmon runs dates back hundreds of years, but it wasn't until a road to Chitina was improved in 1969 that a conflict arose.

Suddenly, it became easy to drive from Fairbanks or Anchorage to dip net sockeye salmon and the number of permits doubled to 3,000 in one year. In two years, the dip net subsistence catch tripled, and commercial fishermen downstream in Prince William Sound and subsistence fishwheel fishermen upstream became concerned. Last year it reached a critical point when the commercial fishery was severely cutback and the dip net was held to an average harvest.

Commercial fishermen promoted the "personal use" classification, while some board members favored putting the dip net fishery under sport regulations. Both tactics were later abandoned in favor of a management policy limiting the dip net harvest to specific level pegged to estimated escapement.

The conflict was a test for the flexibility of the board's subsistence policies as the fishery could easily fall under either subsistence or sport classifications, and since no need criteria was ever attached to qualification as a subsistence user.

The only other tough subsistence issue tackled by the Fisheries Board was providing for a subsistence salmon net fishery in Cook Inlet. The Board voted to put the subsistence openings in the middle of the commercial season, and, to compound the gear conflicts, failed to open additional fishing areas.

Commercial fishermen aren't likely to welcome subsistence fishermen onto their privately owned or leased setnet sites (drifting for subsistence was prohibited) during the six week commercial season, even though subsistence and commercial openings fall on different days of the week. In addition, many commercial fishermen and Department of Fish and Game staffers expressed concern about subsistence staying within legal quotas while fishing a setnet during the peak of the salmon runs.

Cook Inlet subsistence fishermen appear to have only extremely limited accessible beaches parallel to the road system on the Kenai Peninsula to choose from.

Although it wasn't used as a justification for the timing of the openings, the subsistence fishery is scheduled to fall within the same six-week time frame as commercial fishing. The board of Fisheries has limited commercial fishing in upper Cook Inlet to between July 1 and August 15 to settle a long-standing allocation struggle between sport and commercial fishermen.

WANTED

AS A CREWMEMBER. I can save you money. I want to learn the crab industry with the eventual goal of owning a boat. Professionally, I am a Detroit diesel factory trained and certified mechanic. I am knowledgeable in welding and hydraulic repair. For the past year I have been training automotive mechanics in the use of electronic engine performance test equipment. Other skills I can offer include training in first aid and certification in CPR. I have had small business administration experience and am a college graduate in business administration. I am willing to make a long term commitment, in order to attain my goal of learning the crab industry. I am resourceful, hard working, dependable. References upon request. Kirby Duke, 2343 North 115th Street, Wauwatosa, Wisconsin, 53226, or phone (414) 258-2525.

WHY SHOULD YOU JOIN THE UFA????

When you're trying to make a living in the short fishing seasons, you have little time to keep on top of the political issues affecting your livelihood. It is necessary, however, to have a watchdog and advocate for your interests. Processors have well-paid, fulltime lobbyists to represent their concerns. Foreign interests are well-represented as well. Are you? Fisheries managers and politicians who control the fisheries resources make their decisions based upon the input they get from various interest groups. Are you represented? Make sure you are not left out in the cold...

JOIN THE UFA
ADVOCATE FOR ALL
ALASKA FISHERMEN

The UFA has a fulltime lobbyist in the state capital, and seats on a number of these governmental bodies, represent commercial fishermen who fish in Alaska waters. In addition, the UFA follows political developments, like the court challenge to limited entry, and is actively involved in promoting development of bottomfishing.

THERE ARE OTHER BENEFITS TOO

- ***Health insurance for dependents***
- ***Legal plan that pays for the cost of joining the UFA during your initial visit with a lawyer.***
- ***The ALASKA FISHERMAN, the only Alaska-based newspaper for commercial fishermen.***
- ***A fulltime administrative staff to assist you.***

AND IT ONLY COSTS $50 A YEAR

Please enclose $50 for one year's membership

Fisheries bills move in state legislature

by John Greely

Juneau—While a tax increase and city-bush fight over management dominated fisheries news this month, the Legislature moved quietly on other issues affecting the industry.

Seven of more than 30 separate bills related to fisheries to be introduced during the session were approved by the House in generally non-controversial fashion. Each of the seven bills was waiting for Senate action in mid-April.

The bills touched on these issues:

LIMITED ENTRY—Amid a general uproar over limited entry (see the March issue of the Alaska Fisherman), a major review of the six-year-old law was in the works. Pushed by House Majority Leader Nels Anderson, D-Dillingham, House Bills 141 and 142 would turn over $125,000 to a yet-to-be-named consultant to study the social and economic impact of the law. Possible changes that should be studied, Anderson says, include "the rapidly increasing costs of permits" and "administrative burdens."

For about a dozen fishermen who were denied permits because of those "administrative burdens," House Speaker Terry Gardiner pushed through his chamber last month a bill that would allow them to count points accululated in several fisheries in order to meet the minimum number needed for a permit in one fishery. John Garner, a member of the Commercial Fisheries Entry Commission, endorsed HB290 as a cure for a "pretty obvious deficiency in the law."

VESSEL LOANS—Another Gardiner bill, HB20, would allow salmon fishermen to use their limited entry permits as collateral for a vessel loan. The measure won approval of the House despite arguments that a pending lawsuit before the State Supreme Court could reduce or eliminate the value of the permits. Under current law, fishermen already can use their boats as collateral for buying permits and "by taking the reverse approach as well, it will be easier for Alaska residents to get into the fisheries," Gardiner says.

The same bill includes an amendment raising to 90 percent the state's limit on collateral requirements for permit loans. Under current law, a loan to buy a permit cannot exceed 75 percent of the value of the collateral.

HB20 also would remove an obstacle which some fishermen have faced when trying to refinance a state loan for buying a new vessel. The amendment would allow fishermen with outstanding state loans to borrow up to $500,000 in total from the fisheries revolving loan fund, and use up to 40 percent of the amount borrowed to refinance existing loans. Juneau Democrats Mike Miller and Jim Duncan joined Gardiner in sponsoring this bill.

REGIONAL HATCHERIES—While a legal challenge has been raised to the 2 percent assessments imposed by regional acqualture associations, Gardiner has proposed that the assessments be called "royalty assessments," instead. His legislation, HB359, is aimed at answering questions raised in court about the legality of such non-governmental agencies as non-profit hatchery groups "taxing" fishermen, voluntarily or otherwise.

At the same time, HB359 would set up a means for fishermen to end their voluntary contributions to the regional associations. Under the bill, if at least 10 per cent of an association's membership requested a vote, the commissioner of fish and game would be authorized to require a vote on the question of continuing the assessment. Before that election could be held, however, the state would have to determine that no financial obligations related to the assessments were outstanding.

In addition, HB359 would allow any fisherman now paying an assessment to request the commissioner of fish and game to reduce or terminate the payments, if they are found to be "unreasonable or no longer needed by the regional association to meet the purposes" of the law.

The bill also would restrict the Alaska Board of Fisheries' control over regional hatcheries to management of harvests of returning runs, leaving the commissioner of fish and game with sole authority over all other activities, such as egg takes and management of natural runs for brood stocks.

Gardiner maintains the "role of the Board of Fisheries as envisioned by the original legislation was to regulate the harvest of salmon returning to the waters of the state." The involvement of the board, he said, makes the process inefficient and cumbersome.

However, the present statute gives the board authority to "promulgate regulations necessary to implement" nearly all phases of regional aquaculture activities.

FOREIGN INVESTMENT—Prodded by the Alaska Fisherman's probe into foreign investment in Alaska fisheries (see October issue), the Legislature was moving toward approval of an updated investigation of the situation. The main question seemed to be who would handle the study.

A $43,000 appropriation requested by the Legislative Council would turn the study over to an independent investigator. The Hammond administration, meanwhile, was pushing for the study to be handled in-house.

Richard Eakins, director of the Division of Economic Enterprise, has told legislators that since early this year, the agency has been working with the U.S. Departments of Commerce and State to look into the extent of foreign ownership in domestic fisheries.

"When you get into the multi-national corporations, such as the Japanese are," Eakins said, "we (the state) don't have the horsepower to get through it... Plus, it really is a national question."

Jim Edenso, bottomfish coordinator for the governor, has set aside about $15,000 for state participation in the proposed joint study, which might include as partners the University of Alaska.

Edenso indicated one reason he and other administration officials were reluctant to see the Legislature handle the study was that it might "inhibit capital investment (in Alaska), which we don't want to do."

Nonetheless, the House passed in mid-March a resolution authorizing a separate study by the Legislature of all foreign fishing and processing interests in the state and its waters. As one legislator remarked at the time, "I don't care who does the study. Maybe we should have both studies done."

In 1975, the Legislature beefed up laws requiring the reporting of any major foreign ownership interests in Alaska, but the Department of Commerce has not enforced the law very vigorously.

news shorts

(Continued from page 19)

the hatchery, built by the Alaska Dept. of Fish and Game, will be entered in national competition.

A gravity-fed water supply system minimizes need for external water and the power supply was engineered to safeguard it from breakdowns and outages. The hatchery, which opened last fall, can handle 2 million eggs daily using movable incubators.

Reduction in high seas salmon harvest asked

In spite of protests from commercial fishermen that proposed reductions in the take of Pacific Ocean salmon will hurt business, Interior Secretary Cecil Andrus said even more cutbacks are needed.

Recently the Pacific Regional Fishery Management Council outlined restrictions on the Northwest fleet in its salmon harvest for this years season, set to begin in May. But, in a February letter to Commerce Secretary Juanita Kreps, Andrus says "significant reductions" are necessary to protect diminishing wild stocks and to provide "a more equitable allocation" of fish between the inside and outside fisheries and "a realistic fishery for treaty Indians."

It is now up to Kreps to approve the council's recommendations or to abide by Andrus' recommendation of tighter restrictions.

INTRODUCING

The "SEAHORSE" winch

HYDRAULICALLY OPERATED WORM GEAR WINCH

MODEL: S4-5
6½" Drum Diameter

MODEL: S4-8
4" Drum Diameter

The Seahorse utility worm gear winch is available in two models: Model S4-5 has a rated capacity of 5000 pounds and Model S4-8 has a rated capacity of 8000 pounds. Both sizes of this winch have been tested per SAE specification J706a

Features of this winch are:
- Fabricated and Galvanized Drum
- Automatic Brake on Worm Gear
- 16:1 Gear Reduction Ratio
- SAE "A" Motor Mount Adapter and Shaft Coupler included

YOUR STRONGEST DECK HAND

THE MINI POWER BLOCK

FROM

RAPP HYDEMA SYD

The Mini Power Block has been developed as a versatile tool for the fisherman, utilizing the experience gained throughout the world's fisheries. The hydraulic components used were chosen for their reliability. All other parts are of the highest quality.

Apart from the cast iron combined motor/valve all the cast parts are made in sea water resistant aluminum. Other parts are made of stainless steel which makes the Mini Power Block practically maintenance free.

The combined pump and oil tank is mounted on an adjustable frame. Prefitted pressure and return hoses (each 4 meters) are also included. The Mini Power Block can either be delivered with a ball shaped or flat rubberized sheave. The Mini Power Block is suitable for gill-netting, line hauling and pot hauling and is ready to operate when it is fitted and the pump is powered.

MINI POWER BLOCK SPECIFICATIONS:
PULLING WIRE - max. 635 lbs.
POWER REQUIRED - 3½ horsepower
WEIGHT OF UNIT - 83½ lbs.
PUMP SPEED - 1000 rpm working, 3600 rpm idling
SPEED OF PULL - 0 to 98 ft. per minute
WORKING PRESSURE - 600 to 1800 lbs. per sq. in.

Dept. AF

April 2, 1979

Ms. Shari Gross
Executive Secretary
United Fishermen of Alaska
197 S. Franklin
Juneau, Alaska 99801

Dear Ms. Gross:

Within the next 3-5 years, off- shore fishing for a variety of species in the bottomfish and mid- water trawl industry will become a reality. This has become particularly evident to those of us fishermen who were so fortunate as being selected by UFA to visit the Scandinavian countries during March 1979. These countries depend on bottomfishing and mid-water trawling for as much as 5% - 90% of their gross national product.

However, it is important that efforts made by "whomever" in the development of this new fishery have access to the best vessel design, machinery, fishing gear, fishermen, and processing people in that industry. For we must always keep in mind that our off- shore fishery is one of the only protein rich areas left in the world.

During the past two years several attempts have been made to establish a central office in Denmark. This concept has been discussed with several fishermen in the Aleutian, Shumagin, and Bering Sea areas. If this office could provide us with information and contacts pertaining to all aspects of the off- shore industry, we would support this effort very strongly.

Listed below are several areas we feel this office could assist us in:

1. developing strong local and state-wide fishermens' organizations
2. techniques for quality control starting with harvesting, delivery, processing and marketing
3. developing conservation/management techniques to ensure a consistent and abundant annual harvest in all species.
4. creating national boundary protection against foreign fishermen and local poaching
5. developing vessel design, including deck hardware and techniques in holding fish catches the longest and maintaining a quality catch, especially with mid-water species such as blue whiting, pollack and kaplin
6. gear manufacturing, testing, and availability
7. processing of both consumer and reduction food stuffs
8. marketing
9. availability of experts to assist in both long and short range employment efforts for fish harvesting, processing, quality control and marketing

Please feel free to utilize this information as substance in lobbying for a Denmark office. It is certainly a strategic location for the bottom and mid-water trawl industry, as well as other areas of interest involving various industries besides commercial fishing.

Sincerely,

David O. Osterback

David O. Osterback

Telegrams
on Raw Fish Tax
Issue - Passed 1979

(CSSB 132
HB 306)

North Pacific Fisheries Association, Inc.

HEADQUARTERS:
BOX 796 • HOMER ALASKA 99603

March 27, 1979

House of Representatives
House Resource Committee
Juneau, Alaska

Chairman & Committee Members:

The North Pacific Fisheries Association, a Homer based organization, is concerned over the Committee substitute for Senate Bill 132 and House Bill 306 which deals with a six percent tax on raw fish.

We request that this bill not be passed until an indepth study on the industries taxes is completed.

It is entirely possible that this kind of increase will break most small processors and increase the number of floating processors operating outside the three mile limit. Thus costing the State more revenue than gained.

Sincerely,

Roseleen Moore

Roseleen Moore, Secretary

THE HONORABLE ALVIN OSTERBACK
ALASKA STATE HOUSE OF REPRESENTATIVES
POUCH V
STATE CAPITAL BUILDING
JUNEAU, ALASKA 99811

WE WISH TO EXPRESS OUR STRONG OPPOSITION TO H.R.39 AS IT RELATES TO ANY CHANGE IN VESTING OF ACCUMULATED APPROPRIATIONS FOR WATER PROJECTS OR H.R.39 TO "DEPRIVE OF THE VALUE OF ALL FEDERAL EXPENDITURES PROCESSED IN THE FISHERIES' BUDGETS DURING THE YEAR".

WE FEEL THE FISH PROCESSING INDUSTRY HAS PAID ITS FAIR SHARE OF TAXES TO THE STATE OVER THE YEARS AND SO SUCH INCREASES IS UNWARRANTED.

OUR COMPANIES HAVE AND ARE CONTINUING TO EXPEND VERY LARGE CAPITAL SUMS IN THE EXPANSION OF FACILITIES AND THE CONSTRUCTION OF NEW SEWAGE AND FLOATING PROCESSING PLANTS TO UTILIZE THE UTILIZATION OF TRADITIONAL SPECIES AND THE ABILITY TO WORK OUT OF UNDER-UTILIZED SPECIES. ANY FURTHER INCREASES IN TAXES ON FISHERIES' RESOURCES AT THIS TIME AS CONTEMPLATED IN H.R.39 CAN ONLY WORK TO THE DETRIMENT AND DELAY OF SUCH PROJECTS.

WE URGE YOUR CAREFUL CONSIDERATION AND OPPOSITION TO H.R.39. IF PASSED H.R.39 CAN ONLY RESULT IN A REDUCTION OF INVESTMENT IN SHORE FACILITIES AND THE DEVELOPMENT OF UNDERUTILIZED SPECIES OF THE STATES' TAXING JURISDICTION.

WE TRUST THAT HEARINGS WILL BE HELD WITH SUFFICIENT NOTIFICATION SO THAT PACIFIC SEAFOOD PROCESSORS ASSN. REPRESENTATIVES WILL HAVE AN OPPORTUNITY TO PARTICIPATE AND ADVISE THE MEMBERS OF THE ASSN.

PETE TYNES, GILLNETTER

P. O. Box 844
Kodiak, AK 99615

Representative Alvin Osterback
Alaska House of Representatives
Pouch V
Juneau, AK 99811

RE: HB 306/SB 132

Dear Representative Osterback:

As one of many suppliers to the several canneries in the Kodiak area, I am very concerned about the consequences of the above-mentioned House and Senate bills regarding a five percent rise in the raw fish tax.

Supposedly, the purpose of this increase is to penalize the Seattle-based fishermen who fish in the Bering Sea, but the penalties derived from this tax to the Alaskan fishermen and the Alaska fisheries industry could be substantially more harmful in the long-run.

If the canneries are taxed out of business, my company will suffer a definite set-back around this area. As many of the suppliers in Kodiak can testify, during the last crab strike, their business was greatly reduced when the processors and fishermen weren't producing. This proposed increase in the raw fish tax can only deter the economy of a fishing community such as this one.

Surely, there must be a more reasonable means of penalizing Seattle-based fishermen without doing such harm to an Alaskan industry as vital as fisheries.

Sincerely,

Danny O'Neill
Technical Representative
Pacific Chemical

Representative Joe Hayes
Senator Pat Rodey
Senator John Butrovich

Gentlemen:

This request is in response to action taken at a March 1977 meeting of the GUIDE LICENSING AND CONTPOL BOARD, in which a resolution was passed giving Master Guide Slim Moore, an honorary master guide's license for life.

In order to implement that resolution, enclosed is the pertinent information that should be sufficient to have their action implemented. Slim would be very pleased and honored to have this, as he approaches his 80th birthday April 8.

For your information ten Master Guides received that designation the first year--Carl Lane, Juneau; Marc Jensen, Juneau; Jay Hammond, Lake Clark; Hal Waugh (decd) Fairbanks; Alf Madson, (decd) Kodiak; Slim Moore, Fairbanks; Bud Branham and Dennis Branham, both of Rainy Pass; Don DeHart, (decd) Slana; and Bob Busby, Harding Lake.

I have known Slim for over 25 years, and he is an honorable man. To keep himself busy, Slim raises most of the food that he and his wife use, with enough left over for friends who stop by during harvest time. Slim has a method of expressing himself, with his sense and humor and story telling, that it is a delight and privilege to any listener who has the opportunity to be around, when he talks of his true experiences of a lifetime of hunting. Pat used to deliver papers in Soenard where Slim lives now.

Attached are copies of articles which appeared in different magazines during some of the span of his hunting years. If there is other information that you think necessary, please let me know and I will get it. Slim's address is 4106 Arkansas Drive, 99503; phone 272-0924.

Yours very truly,

Helen A. Butcher

SB211

SLIM MOORE, MASTER GUIDE

In 1964 the State of Alaska upgraded its ranks of big game guides. The system had been getting a poor reputation through unethical practices of guides who were exploiting the Great Land, and Slim Moore was one of the ten who received the Master Guide designation that first year. Others were Carl Lane, Marc Jensen, Jay Hammond, Hal Waugh, Alf Madsen, Bud and Dennis Branham, Don DeHart, and Bob Busby.

A Master Guide had to meet all the requirements of a Registered Guide, in addition to having legally hunted in Alaska for a part of each of 10 years during which his principal source of income was from guiding or related activities. He must have held a Registered Guide license and have been actively engaged in guiding for at least 5 years. He must not have been convicted of violating federal or state fishing, game or guiding laws within the preceding 5 years, and he must have consistently performed in a superior manner as evidenced by reports submitted to the department, and by inquiries made by the Alaska Guide Licensing and Control Board to at least two of the guide's clients of record, in addition to other qualifications which the board may require.

During the March 1977 meeting of the GUIDE LICENSING AND CONTROL BOARD, he following motion was passed unanimously; "RESOLVED, that master guide "Slim" Moore, after 45 years in the guiding industry was retiring, and would be an honorary master guide for life." According to Board Member Chuck Keim, the entire audience stood up and applauded. To implement this resolution will take legislative action.

M. W. (Slim) Moore, Grand Old Man of Alaska Guides, was awarded the first Simon-Waugh Award for excellence in 1974. This award is given by the Alaska Professional Hunters Association each year to guides who have dedicated their lives to guiding, have always believed in fair chase, and have contributed to the profession's excellence. In Slim's years of guiding, no complaint has ever been recorded, and he is the only living guide who has retired from a lifetime occupation as a guide.

Slim arrived in Alaska in 1926 from Texas and in 1931 booked his first hunt--three of the trophies later made the second edition in 1937 of the Boone and Crocket record book. He has trapped, packed with horses, used dog teams, and guided or hunted in almost every corner of the state except the panhandle. He guided the hunt which the record book shows two hunters' names (1950 Johnson and Brennan) for a sheep that neither knew who shot it, so both agreed to claim the distinction. When fur prices were low in 1930 and there was no demand for packers, Slim moved back to Fairbanks to his trade as an electrician lineman. In 1952 he and his wife, Margaret, took over Summit Lake Lodge on the Richardson Highway and operated it for ten years before moving to Anchorage in 1963.

Slim is a member of Pioneers Igloo #15, the Alaska Professional Hunters Association, and a retired member of the IBEW union. When the Denali Highway was completed from Paxson to Cantwell, Slim was instrumental in getting the north side of the road closed to all hunting; and he still follows the hearings and testifies from his long experiences regarding the regulation of game in the State.

Slim retired in 1977, which lead to the resolution passed at the March 1977 Guide Licensing and Control Board. Demonstrating his character, Slim felt he should release his guiding territory so that it could be reassigned.

(copies of several articles which have appeared throughout the years are attached. I can send a Polaroid picture of Slim wearing the Simon-Waugh award, which is a carved powder horn, carved in Fairbanks in April 1974)

Submitted by

279-6448 or 277-6202

FURTHER RESOLVED that those guides qualifying for Subunit C be granted exclusive guide areas with joint usage for those areas that overlap.

Those guides applying for exclusive guiding areas in game management Unit 9, Subunit C, were;

Alfred Burnett	Grenold Collins	Ray Foldager
K. H. Jensen	Ed King	William D. Morrow
Jack Myers	Robert L. Myers	John Pangborn
Richard Sjoden	Reinhold Thiele	Denny Thompson
Ben White		

After discussion and on motion duly made, seconded and carried unanimously it was

RESOLVED that Ed King, Jack Myers, Denny Thompson and Ben White agree to a corridor of two and one-half (2 1/2) miles on both sides of the branch on Alkagnok River for common or shared usage within the boundaries of their exclusive areas. Ben White, Denny Thompson and Edward King have no conflict on their exclusive guiding areas. Denny Thompson and Jack Myers do have a conflict. Jack Myers will readjust his map, pulling back his boundaries so they are no longer in conflict.

After discussion and on motion duly made, seconded and carried unanimously it was

RESOLVED that master guide "Slim" Moore, after 45 years in the guiding industry was retiring, and would be an honorary master guide for life.

After discussion and on motion duly made, seconded and carried unanimously it was

RESOLVED that Richard Herscher did not hold a qualified registered guide license at this time, and that Mr. Herscher could petition the board for an exclusive guiding area at such as he obtained his license.

Mr. Ray Loesche then addressed the board (Mr. Loesche's guide license is revoked). Mr. Loesche stated he was putting the board on notice that if he had to take it to every court in the land, he would prove that what the Guide Licensing and Control Board was doing by assigning of exclusive guide areas was illegal.

After discussion and on motion duly made, seconded and carried unanimously it was

RESOLVED that a permanent permit be assigned to those guides in Unit 9, Subunit E, who applied by November 1, 1976, having in the last five years three Statements of Financial Remuneration on file and/or had in the last five years three Bear Camp registrations;

FURTHER RESOLVED that a temporary permit would be assigned to those guides applying in Unit 9 Subunit E, by November 1, 1976, who had in the last five years two (2) Statements of Financial Remuneration on file and/or had in the last five years two (2) Bear Camp registrations, and/or had a written statement from three registered guides that they had conducted hunts in Unit 9 in the last five years;

Slim:
There was a unanimous vote of the Board, and the entire audience stood up and applauded you.
Charlie Kosin

Grand old man of Alaska guides

By SALLY W. JONES
Daily News Staff Writer

As near as anyone can figure, Slim Moore's been guiding big game hunters in Alaska for, oh, say, about 200 years.

In truth, however, Moore has been guiding since 1931, and at 76 is the oldest active guide in Alaska. He has been given the Alaska Professional Hunters' Association first Simon-Waugh Award for excellence.

Clark Engle, head of the association, said the award will be given each year for guides "who have dedicated their lives to guiding, have always believed in fair chase" and have contributed to the profession's excellence. "We will keep this award on a high plane," Engle said soon after Moore was given the powder horn trophy.

AS HE RELAXED at Engle's home Sunday, Moore was talking about not renewing his master guide's license this year. "I don't take a new client anymore — I'm afraid I wouldn't be able to keep up with him," he said with a chuckle.

Moore booked his first hunt in 1931.

It was the hunter's first hunt, also, and the result was three trophies — two sheep and a goat — that were to make the next Boone and Crockett record book in 1937.

Since that hunt, he's taken hunters to seek nearly every game animal Alaska has to offer.

HIS KNOWLEDGE of Alaska wildlife has come with the intimacy no biologist could hope to gain from books, test tubes or laboratories.

He guides for the Alaska brown bear on Kodiak Island and the Kenai Peninsula and for moose, caribou and Dall sheep in the Nelchina-Upper Susitna, Wrangell Mountains, and Fairbanks-Central Tanana game management units.

He maintains permanent hunting camps in the peninsula and Nelchina

Slim Moore with his award

reurin' and tendin' his garden — I've never been a vegetarian before." — his tone has the ring of nonconviction.

SLIM MOORE lives big game. He talks of grizzlies as if the big bears were as predictable as the tides. Yet he respects their beauty, power and cunning. He talks of sheep and his theory that the Dalls in lime-rock areas grow the largest curls, from the lime in their diet.

And he talks of how Alaska's game has changed during his 49 years of hunting here.

"The sheep are coming back — there was a sheep epidemic in the '30s and '40s, in the '50s they went all out on (controlling) wolves, and the moose exploded; the bear have gone to the bottom of the barrel and Kodiak may end up to be the brown's last stronghold."

WHEN MOORE started guiding, packhorses were the mode of transportation and a 30-day hunt was the rule. Today, the aircraft hounds the bear and the hunter wants his trophy bagged in 10 days. "Overhunting," Moore said.

And he talks of the Outsiders who seek the majestic brown and grizzly.

"I had one fella' who was really nervous," Moore grins. "He shot the bear, we walked to it and I leaned on its stomach (in order to expel stomach gas.)

The carcass let out a "wruumphhh."

"That man high-tailed it out of there so fast I nearly had to cut the tree down to get him down," Moore says with a mischievous straight face.

THE HUNTING stories he and Engle swap for endless hours — "they get better with the telling," Moore said — reveal as nothing else could why Moore moved to Alaska before the Depression.

"I always liked to hunt and fish," Moore said. "And it was hard getting away from farmers with pitchforks when they saw me fishing in their alfalfa fields." Outside, he was an electrician on constant vacation.

In his early years here, he provided pack trains for gold-seekers, led his pack train for federal Geological Survey work, trapped an 80-mile line and found odd jobs until that day when a client was referred to him in 1931.

"I came to Alaska when I was in my 20's — figuring I'd get this hunting and fishing thing out of my system here," Moore said.

But he never did get it out of his system — "I keep putting it off one more year" he said, and mumbled something about maybe getting that license renewed for one more year . . .

Slim Moore

Thirty Years on an Alaskan Guide

by
Jim Rearden

← Veteran woodsman Moore sharpens a beaver-skinning knife in his comfortable log cabin home high in the remote fastness of his Alaska Range hunting country.

"DON'T let him chase me too far," the guide told his hunter.

A wounded grizzly had fled snarling into the brush. The guide proposed to go in and get the bear to chase him into the open, so the hunter could get a clear shot.

Before the amazed hunter could object, the long-legged guide crashed into the brush and disappeared. Shortly the guide came legging it out of the thicket, occasionally peering over his shoulder at the bear, which, sure enough, was chasing him. Though unnerved, the hunter managed to shoot the bear and end the chase.

Sounds foolhardy, but it wasn't. The guide knew exactly what he was doing. His name was and is Slim Moore, and he is regarded by many who are qualified to judge as one of the greatest of all Alaskan guides.

Another top-notch guide, Warren Tilman of Fairbanks, remarked to me, "Slim's like a hungry Indian when he gets on a good trophy's trail. He stays with it until his hunter quits or gets it."

Slim—he is called nothing else, and has even been listed as such in a telephone directory—and his wife, Margaret, own and operate Summit Lake Lodge, 3,210 feet above sea level in the glacier-hung reaches of the wild Alaska Range. The paved Richardson Highway winds past their door.

It was thirty degrees below zero on a recent winter's day when I pulled off the highway in front of the snow-banked log cabin the Moores call home. Slim, shrugging into a parka, came out to welcome me. Tall—he's six feet two—craggy faced, with bushy brows, a magnificent head of silver hair and piercing blue eyes, he looks every inch the big game guide.

Though I had intended to visit the Moores only a few days, I stayed a week, yarning with Slim, looking over his pictures, snowshoeing with him and outdoor-loving Margaret in search of ptarmigan.

Slim enjoys hunting any kind of game. I have seen him happy as a kid just hunting ptarmigan. Brown and grizzly bears are his favorite game, however. "They have a little bit of fight-back," he says.

Sometimes they have a little too much "fight-back."

Once while guiding the well-known outdoorsman, Fred Hollander, on the Kenai Peninsula, Slim came upon a small grizzly digging out a parka squirrel. All they could see were the bear's round rump and a shower of dirt.

"Wanta see something funny?" Slim asked.

He yelled and beat his leg with his hat, thinking the bear would run—and the south end of a bear rapidly moving north is a ludicrous sight.

But the bear bounced out of the hole,

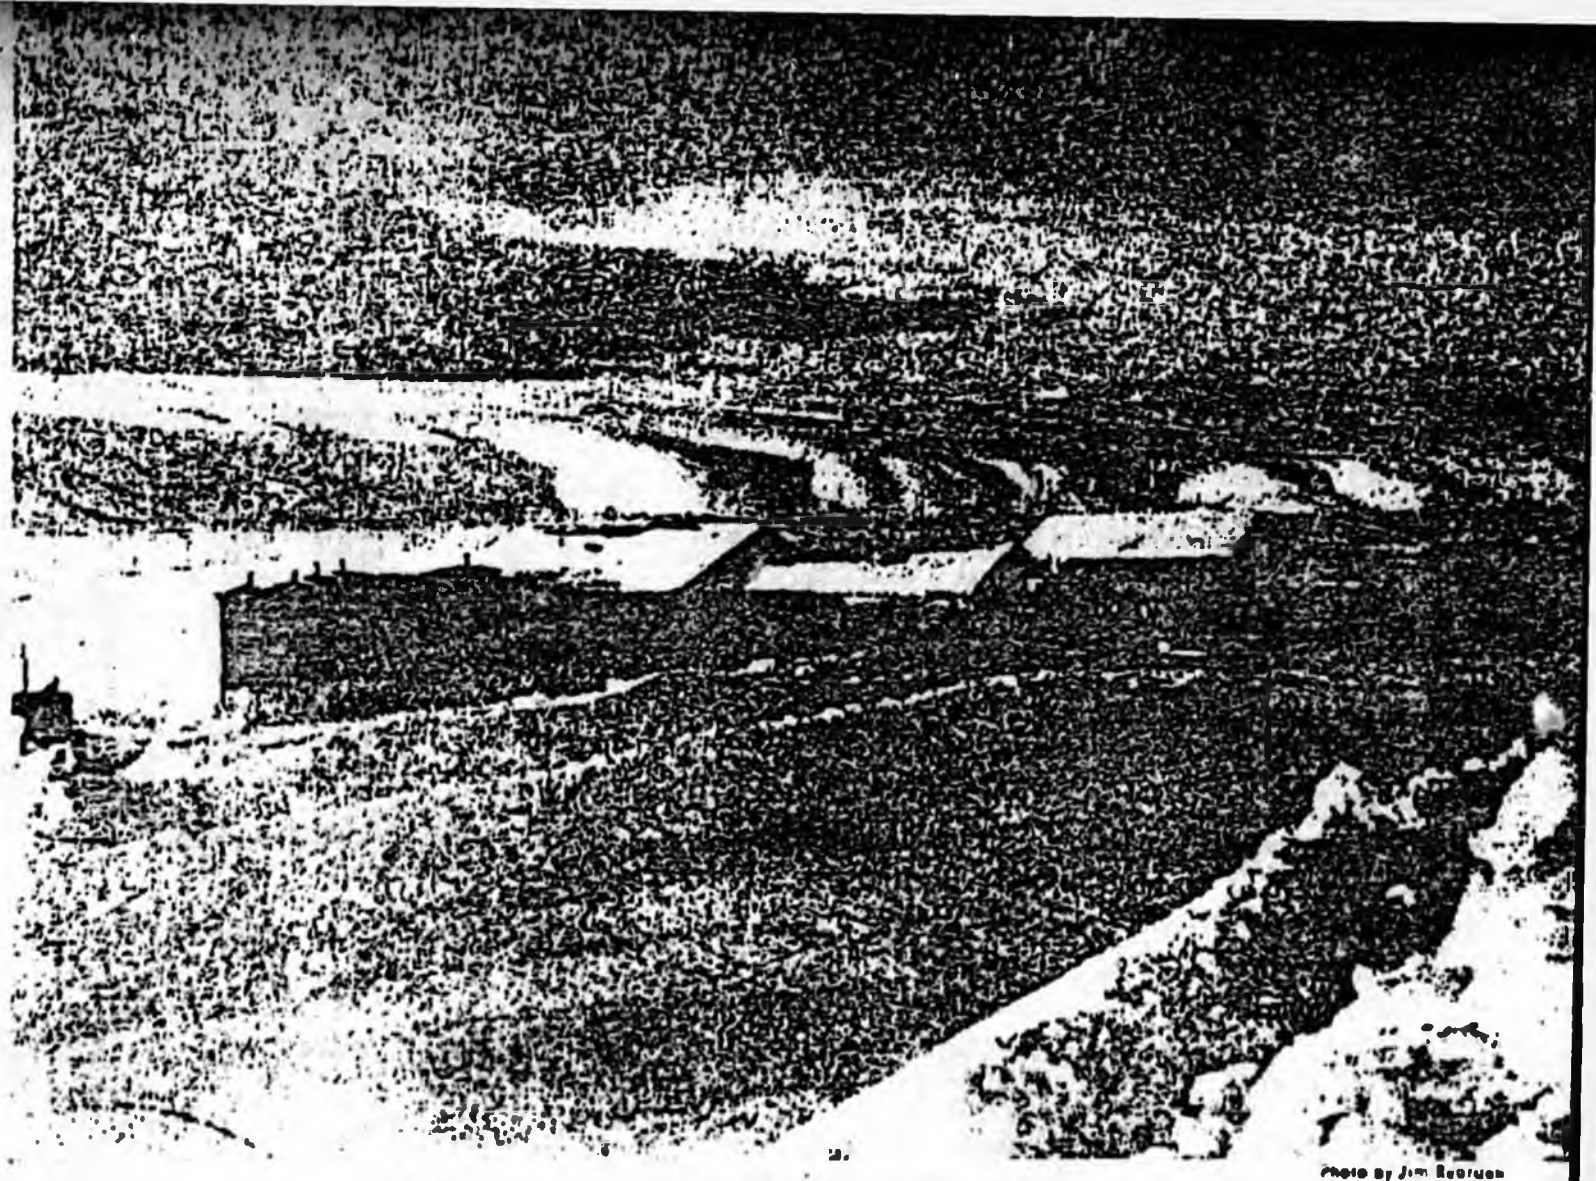

Photo by Jim Rearden

Guide Moore and his wife, Margaret, operate Summit Lake Lodge on the Richardson Highway in Interior Alaska for hunters, fishermen, "just plain travelers" and a host of friends.

took one look at the men, peeled his lips back and charged. It took a few fumbling moments for Slim to lift his rifle from his packboard and shoot. When the bear lay dead a few yards from them, Hollander turned to Slim and demanded angrily, "What 'n hell was so funny?"

Slim won't estimate the number of brown and grizzly bears that have charged him. He maintains it is unusual for a bear to charge, but when a man has hunted as much as he, there are bound to be exceptions. At various times he has described to me six "exceptions."

One occurred when he was hunting alone—and the story shows what kind of outdoorsman is this soft-talking big guide. It happened in October. Slim headed downriver from Paxson's Lodge, a landmark a few miles from where his Summit Lake Lodge now is, hunting a bear for sled-dog feed.

He found tracks and followed them until the bear jumped about two hundred yards away. At Slim's shot the animal reared, dropped, and spun into a canyon.

The bear printed a bloody hole in the snow where it fell, but it was on its feet and legging it for distant places when Slim got there. His shot had struck the flesh of a foreleg. Slim trotted up the trail following the wounded grizzly's tracks and blood sign where they crossed a five-thousand-foot mountain—despite eighteen inches of snow and his lack of snowshoes.

Hours later, slogging toward the Tangle Lake country, he managed to get within five hundred yards of the bear. He sat down, aimed carefully, and hit it again, this time in a heel.

Now he started to gain. The grizzly limped into a big draw, and Slim guessed that he would cut left and follow a deep cut. He ran across the bend and the animal was plodding along directly below him as he reached the rim.

"Where do you think you're goin' now?" Slim yelled. The big grizzly turned and charged, snarling. Slim waited as the animal clawed up the side of the draw. When it was about seventy-five feet away he shot it through the shoulder hump, killing it instantly.

It was nearly dark and Slim was fourteen miles from his starting point—with a five-thousand-foot peak between himself and home. He had no food nor bedding. He skinned the bear quickly, dragged the eight-foot-square hide to a level spot and curled up in it, using the head for a pillow and throwing the unskinned feet over him to hold the cover in place. The temperature dropped to zero that night, but he was warm.

"It made a nice blanket," he recalled, "though it did smell fishy."

Late the next day, on his way home around the mountain, he shot the heads off two spruce hens with his .30-'06, built a fire, cooked the birds and ate them—the first food he'd had since breakfast the previous day. The grizzly meat had smelled too fishy for his taste.

Two hunters divided honors on this record sheep taken during a hunt with Moore.

In November he returned with his dog team for the bear carcass. A heavy snow was falling. He tied his team and approached on foot, rifle ready. It never pays, in Alaska, to approach meat incautiously, even in winter. If a bear finds meat, he hates to leave it.

Slim missed the bear by about a hundred yards. The thick snow was whipping about in a steady glacier wind. He circled a bit, working uphill. A sudden rift in the storm let Slim glimpse the location of the carcass—and he saw an animal lying beside it, covered lightly with snow. Slim thought it another bear. He was downhill from it—a bad tactical position. He craned his neck and walked back and forth, trying to determine where the animal's head was. Then a camp robber, a northern jay, flew down and lit on the bear carcass.

A big wolf got up, shook off snow and reached for the bird. Slim snapped off a shot, knocking the wolf down. At the noise of the rifle the hillside exploded with wolves, leaping from the snow and had been curled in the snow around the bear.

One great gray-maned wolf ran toward Slim, ears pinned back, and swung aside to pass him. Letting it go for the moment, he fired five quick shots and rolled three of the others dead. He crammed more shells into his empty rifle, swung around, and made a spectacular shot at the receding form of the gray that had sprinted by him. He had killed five out of the six.

"You know," he told me disgustedly, "I could have killed four of 'em with one shot as they lay in their beds, if I'd been on the ball. Four of 'em were in perfect line when I slapped that one that got up to chase the jay off. I'll never have a chance like that again."

Slim came to Alaska from Texas in 1926, for a short stay that has turned into a long one. He has trapped, packed with horses, guided or hunted in almost every corner of the state except the panhandle. Though he has guided many famous men, he won't talk about those who are living. He feels that their hunts are part of their private lives, and he has no right to publicize them.

Two he will name are Wiley Post, the famed flyer who was killed with Will Rogers near Barrow, and Fred Hollander, the wealthy sportsman-naturalist-photographer. He guided Hollander on several hunts.

A big, powerful man, Slim is known for his stamina on the trail and for his packing ability. He once ran down and killed a healthy wolf, almost with his bare hands.

It happened years ago, near Summit Lake. A wolf got into one of his traps, broke the chain, and got away with the trap.

A week later Slim was checking [illegible] .30-30 rifle. A[illegible] he neared Paxson's Lake he picked u[illegible] a timber wolf track and followed i[illegible] thinking perhaps it was the one tha[illegible] had escaped. He followed the trail t[illegible] the lake's edge and saw a black anima[illegible] running across the ice about three hun[illegible] dred yards away.

It was too far off to expect to hit [illegible] with the .30-30, but he pitched a fe[illegible] rounds at it anyway. Just as it went int[illegible] the brush, it looked as if it up-ended a[illegible] a shot. Slim ran after it.

He found drops of blood in the snow[illegible] where the wolf had entered the brush[illegible] so he was sure it was hit. Somehow h[illegible] mixed a .32 Special shell with the fod[illegible] der for the .30-30, and the rifle jammed[illegible] It was useless.

The wolf ran into deep, loose snow[illegible] and the tall man, on snowshoes, gained[illegible] until he got within feet of the frantic[illegible] brute. Every turn the wolf made al[illegible] lowed Slim to cut across and gain more[illegible] As he charged by a ten-foot-high "gee[illegible] pole" spruce, he broke it off to use as[illegible] a club.

Slim Gives Chase

The wolf tried to hide under thick spruce trees. Slim followed him, punching him out with the pole, driving him farther through the deep snow. Finally he forced the growling animal into a clearing. Slim gave it all he had then, his snowshoes flying until he was right behind the wolf.

"Hayuuuuuuuuh!" he screamed, to fluster it.

The wolf turned with a snarl to face Slim, lips curled, mane up. Slim slammed the spruce club across its back and the club broke. He dropped it and climbed right on top of the surprised wolf.

"He sure gave me a rough time, trying to get out from under," Slim laughed. "I think I invented a new dance step trying to stay balanced on him."

After a few furious moments of tumbling and kicking in the four-foot-deep snow, the wolf managed to work his head up between the snowshoes, mouth open, big teeth popping and slamming against the hardwood and babiche. His roars and growls had Slim's hair on end. Slim did the only thing he could think of. He shoved the gun barrel into its mouth and "kept shovin' and twistin' and shovin' and twistin'." The gun sight tore the wolf's lungs apart and it soon died.

Slim's shot hadn't touched the wolf. The toes were gone from one of its feet and the foot was bleeding slightly. Otherwise the animal was whole and healthy until Slim climbed on top of it.

"Some tell that story and claim I had hold of both ends of my .30-30 when I was through with that wolf," he chuckled.

During his years of guiding, Slim has led hunters to "around a dozen" caribou, sheep, bears and mountain goats that have been listed in various Boone

Slim and the Johnson-Brennan trophy Dall Sheep ram at the scene of the kill high in the Alaska Range in 1950.

doesn't know the exact number. "It's just in recent years that we've been paying much attention to records," Slim says, "and it's a great thing, too. Hunters are now after the best trophies, which is as it should be."

One of the finest records for which Slim is responsible, a Dall ram which now stands sixth from the top, is unique in being the only trophy in the book credited to two men.

Slim led the two, Phil Johnson and "Honest John" Brennan—both from Fairbanks and both now dead—to the top of a little ridge in the rugged, rock-ribbed, snow-capped Johnson River country and pointed out three snow-white rams about two hundred yards across a canyon. Two of the rams were feeding. The third was lookout.

"When I put glasses on that third one I couldn't pull 'em off," Slim said. "My eyes ran out like the eyes of a snail. I'd never seen anything so nearly perfect as that head!"

Slim told the hunters to be sure to kill the big one. They crouched behind rocks and matched coins to see who got the first shot. Phil Johnson won. He took careful aim and overshot. His bullet exploded on a rock behind the huge ram, causing it to leap toward the hunters.

Brennan then undershot, which turned the ram back. Then Johnson overshot again, and the confused ram whirled once more.

Whose Trophy?

Five or six shots were fired before anything was hit—and then it was a small ram that collected a slug. Then one of the men connected with the big ram. It dropped dead. But who had hit it?

No one was sure. The men, good friends, decided to claim it jointly, and that's the way it appears in the Boone and Crockett records. The beautifully mounted head of this magnificent sheep is on display in a Fairbanks bank.

Slim has an interesting theory to account for broomed or broken-tipped horns found commonly on sheep. "It may sound hill-billy," he said, "but I have an idea that horn gets in the way of its vision. You'll notice that a wide, sweeping horn is seldom broomed. Those with a tight curl that comes right next to the eyes are the ones that most often are broomed."

This man Moore has an appreciation of nature and the out-of-doors that goes far beyond enjoyment of hunting and fishing. You sense it in his stories, and in his half-spoken thoughts. This is probably the reason he is the guide's guide in Interior Alaska. When he depended upon pack horses for a living, often when business was slow he'd take a few nags, pick a spot on the map and go there alone just to see what it looked like.

One of Slim's hunters who shot this black bear in 1937 posed Moore with his trophy.

One of his favorite areas was the McClaren River country, a couple of days' travel from Summit Lake. There, high in the wild Alaska Range, he enjoyed sitting on the lush hillsides watching moose, caribou and grizzly bears move about the rich basin and across the mountains as far as he could see.

"I felt wealthy amidst all that game, all by myself," he says today. "Times like that, I wouldn't have traded places with anyone alive."

The Denali Highway to McKinley Park now winds through the McClaren country, and anyone can drive there. Slim was instrumental in having a huge block on the north side of this new road closed to all hunting, for it is so open that the abundant game would have little chance against hunters.

It was a sad day for Slim when, in 1938, he had to abandon his packing and trapping and move to town. Low fur prices and few packing jobs—hence little money—forced the move. He went to Fairbanks and got a job as an electrician-lineman, a profession he had followed before coming to Alaska. He continued to guide and work as a lineman until 1952, when he took over Summit Lake Lodge.

How does a guide consistently lead hunters to outstanding trophies? It obviously isn't luck. Slim's explanation is surprisingly simple. "When I want a big trophy for a hunter," he said thoughtfully, "I try to figure out where climate and food conditions are best for that animal to grow big. Mild weather, long growing seasons and plenty to eat are all-important, in my opinion.

"And when you want to know where the game is in an area, there's one basic thing you can usually depend upon. It reminds me of the two Africans trailing a jeep, thinking they were after two big snakes. After about forty miles they held a council of war and decided they

—please turn to page 39

Although fur prices are "not too good" Slim still keeps his trapline in operation and his holes for beaver sets open.

...ing down. During our flight to the lake we saw thousands of caribou, but very few moose and no bulls that would go over a forty-five or fifty-inch spread.

We hiked about five miles before Ken spotted three or four cows in a small wooded area. With the cows in sight we thought surely a bull must be in the general vicinity, as they were deep in the rut at this time. With but six hours of light left on the last day of the moose season, we decided to hunt this area.

The cows, having seen us, jogged on some hundred yards or so and stopped on the edge of a small thicket, where they stood watching us. Shortly, not fifty yards from the cows, we saw a bull, but by no means a trophy animal. His rack would have gone only forty or forty-five inches.

Good Show

We sat back, however, to view the performance which was about to begin. The bull snorted, bellowed, pawed the ground, charged the young cows and did everything else possible to prove his bullishness. He would nudge the cows with his rack just enough to prod them along a bit, but not making any real attempt to injure them. The cows paid very little attention to this timely display of bullish emotion, so the young bull retreated dejectedly into the bushes.

We sat there a few moments and surveyed the area, trying to decide which direction to take. Suddenly Ken nudged me, saying nothing but pointing to the far end of the thicket. There, standing partially concealed in the brush, was a moose with a rack bigger than any I had ever seen. Ken whispered that it must be at least a seventy-inch spread—and my only concern was to raise my scope-sighted .300 Weatherby, flip off the safety, and place the cross-hairs on the animal's chest bone.

I think all the ill luck of the last few days flashed before me but this was no time for recapitulations. I took a long, deep breath, held it, and squeezed. Now, I can't even remember hearing the rifle go off. All I remember is seeing the animal fall as if his legs had melted beneath him.

We ran up to take a look at our prize—and it more than compensated for all the previous frustrations. With the steel tape which the guide always carries, we found the rack measured seventy-two and one-half inches, and it was very symmetrical. The moose must have weighed between sixteen and seventeen hundred pounds.

Last Chance

I looked at my watch. It was now four p.m. Our moose had met his fate in the last hour of the moose season.

I think it only fair to give credit where credit is due. My rifle is a souped-up wildcat of a standard .300 ...ercy of South Gate, California. It drove a 180-grain Nosler bullet, which has the best-controlled expansion of any bullet I have yet used.

The impact and effectiveness of such a gun-and-cartridge combination is best shown by the condition of the dead animal. The breast bone was shattered, the heart and great vessels were torn loose, and the center attachment of both lungs was shot away. These were driven through the diaphragm and into the abdomen, rupturing the stomach and intestines. We recovered the bullet intact and expanded perfectly in the animal's left hip.

Being a gun crank and something of an amateur ballistician, I was particularly interested in the performance of this gun and cartridge and the effect on the animal. I have killed many large animals, but never with such devastating force. Mr. Weatherby makes one fine cannon.

We finished the hunt on caribou, which afforded no problem whatever. Two of my three caribou were killed with this same rifle, one at 650 yards and one at 725.

Back in Anchorage, the moose was measured by Bert Klineberger of Jonas Brothers, who is the Boone and Crockett Club representative. Its preliminary measurements showed a symmetrical rack of 72½ inches, and the animal pointed out at a total of 232 points plus, according to the Boone and Crockett method of recording.

That put my moose among the twelve largest ever taken in Alaska—and one of my caribou booked in the top thirty barren ground caribou.

Next time I get everything correlated so I can go hunting, if everything clicks at the outset I'll probably be apprehensive. All in all, I never experienced a more frustrating beginning nor a more wonderful ending than I did with my one-day moose hunt. ▲

Slim Moore

(Continued from page 19)

were wasting their time. They hadn't found any dung, so they didn't know what the snakes fed on, so they didn't know how to hunt them.

"I'm like those Africans. I want to know what animals are eating. When I know that, I know where to hunt them."

It is for this reason that Slim examines the stomach contents of almost every animal he kills.

Twenty or thirty years ago, most hunters who came to Alaska were retired businessmen, and pack trips after game lasted a month or even two. Today, hunters expect to get the same trophies in ten days or two weeks. They hunt from airplanes, crawler vehicles, even cars.

Despite this, and despite the great change in economics over the years, a guide's pay in Alaska has remained

SLIM MOORE, MASTER GUIDE

In 1964 the State of Alaska upgraded its ranks of big game guides. The system had been getting a poor reputation through unethical practices of guides who were exploiting the Great Land, and Slim Moore was one of the ten who received the Master Guide designation that first year. Others were Carl Lane, Marc Jensen, Jay Hammond, Hal Waugh, Alf Madsen, Bud and Dennis Branham, Don DeHart, and Bob Busby.

A Master Guide had to meet all the requirements of a Registered Guide, in addition to having legally hunted in Alaska for a part of each of 10 years during which his principal source of income was from guiding or related activities. He must have held a Registered Guide license and have been actively engaged in guiding for at least 5 years. He must not have been convicted of violating federal or state fishing, game or guiding laws within the preceding 5 years, and he must have consistently performed in a superior manner as evidenced by reports submitted to the department, and by inquiries made by the Alaska Guide Licensing and Control Board to at least two of the guide's clients of record, in addition to other qualifications which the board may require.

During the March 1977 meeting of the GUIDE LICENSING AND CONTROL BOARD, the following motion was passed unanimously; "RESOLVED, that master guide "Slim" Moore, after 45 years in the guiding industry was retiring, and would be an honorary master guide for life." According to Board Member Chuck Keim, the entire audience stood up and applauded. To implement this resolution will take legislative action.

M. W. (Slim) Moore, Grand Old Man of Alaska Guides, was awarded the first Simon-Waugh Award for excellence in 1974. This award is given by the Alaska Professional Hunters Association each year to guides who have dedicated their lives to guiding, have always believed in fair chase, and have contributed to the profession's excellence. In Slim's years of guiding, no complaint has ever been recorded, and he is the only living guide who has retired from a lifetime occupation as a guide.

Slim arrived in Alaska in 1926 from Texas and in 1931 booked his first hunt--three of the trophies later made the second edition in 1937 of the Boone and Crocket record book. He has trapped, packed with horses, used dog teams, and guided or hunted in almost every corner of the state except the panhandle. He guided the hunt which the record book shows two hunters' names (1950 Johnson and Brennan) for a sheep that neither knew who shot it, so both agreed to claim the distinction. When fur prices were low in 1938 and there was no demand for packers, Slim moved back to Fairbanks to his trade as an electrician lineman. In 1952 he and his wife, Margaret, took over Summit Lake Lodge on the Richardson Highway and operated it for ten years before moving to Anchorage in 1963.

Slim is a member of Pioneers Igloo #15, the Alaska Professional Hunters Association, and a retired member of the IBEW union. When the Denali Highway was completed from Paxson to Cantwell, Slim was instrumental in getting the north side of the road closed to all hunting; and he still follows the hearings and testifies from his long experiences regarding the regulation of game in the State.

Slim retired in 1977, which lead to the resolution passed at the March 1977 Guide Licensing and Control Board. Demonstrating his character, Slim felt he should release his guiding territory so that it could be reassigned.

(copies of several articles which have appeared throughout the years are attached. I can send a Polaroid picture of Slim wearing the Simon-Waugh award, which is a carved powder horn, carved in Fairbanks in April 1974)

of Indian Creek and Falls Creek are closed to the taking of Dall sheep. The department shall retain the authority to set limited seasons, by permit only, and in consultation with the Division of Parks, to adjust severe imbalances in game animal populations;

(14) the Westchester Lagoon waterfowl nesting and observation area: all lands and waters on Chester Creek between Arctic Boulevard and Turnagain Arm are closed to hunting and trapping and to the use of motorized vehicles off designated roadways and travel routes;

(15) Otter Island (one of the Pribilof Islands–Unit 10) administered by the U.S. Department of Commerce National Marine Fisheries Service, is closed to all hunting;

(16) the Moose River closed area (Sterling–Unit 15A): on and within ¼ mile of the Moose River between the Kenai National Moose Range boundary and the Sterling Highway is closed to the taking of waterfowl.

5 AAC 81.260. INTERIOR-ARCTIC ALASKA (UNITS 17-26). The following areas are closed areas:

(1) the Birch Lake closed area (near Fairbanks–Unit 20): on and within ½ mile of Birch Lake (closed to the taking of big game only);

(2) the Harding Lake closed area (near Fairbanks–Unit 20): on and within ½ mile of Harding Lake (closed to the taking of big game only);

(3) the Lost Lake closed area (near Fairbanks–Unit 20); on and within ½ mile of Lost Lake (closed to the taking of big game only);

(4) Repealed.

(5) the Healy-Lignite closed area (near Healy–Unit 20C): beginning at the confluence of Lignite Creek and the Nenana River, thence upstream along Lignite Creek to its confluence with Sanderson Creek, thence in a straight line southerly to the confluence of Healy Creek and Coal Creek, thence in a straight line southerly to Dora Peak (63°49'N and 148°42'W), thence in a straight line westerly to the confluence of Healy Creek and Moody Creek, thence downstream along Healy Creek to the Nenana River, thence downstream along the Nenana River to the point of beginning, is closed to all hunting;

(6) the Prudhoe Bay closed area (near Prudhoe Bay–Unit 26): beginning at a point 70°22'N latitude and 148°00'W longitude, thence south approximately 14 miles to a point at 70°10'N and 148°00'W, thence west approximately 15 miles to a point at 70°10'N and 148°40'W, thence north approximately two miles to a point at 70°12'N and 148°40'W, thence west approximately eight miles to a point at 70°12'N and 148°56'W, thence north approximately two miles to a point at 70°15'N and 148°56'W, thence west approximately 12 miles to a point at 70°15'N and 149°28'W, thence north approximately 12 miles to a point at 70°26'N and 149°28'W, thence east approximately 14 miles to a point at 70°26'N and 148°52'W, thence south for approximately two miles to a point at 70°24'N and 148°52'W, thence east for approximately 16 miles to a point at 70°24'N and 148°11'W, thence south for approximately two miles to a point at 70°22'N and 148°11'W, thence east approximately six miles to the point of beginning at 70°22'N and 148°00'W, is closed to the taking of big game only;

(7) Sledge Island (Unit 22) and the waters within one mile of it are closed to walrus hunting;

(8) the trans-Alaska pipeline corridor closed area (north of the Yukon River-Units 24, 25 and 26): the area within a strip five miles on both sides of the trans-Alaska pipeline alignment from the Yukon River to Prudhoe Bay is closed to the taking of big game only.

March 20

Represtative Osterback
Pouch V
Juneau, Ak. 99811

Dear Mr. Osterback:

This letter is in opposition to CSSB332 now before your committee. Instead of locking up even more Alaska land, we feel our legislators should be providing more opportunities for all Alaskan's. The People of this state have had their fill of lock-ups, and to think this will be forgotten at election time would be a mistake. The members of the Golden North Bowhunters and other sportmen's groups will make sure it is not.

Instead of just opposing this bill, we are offering an alternative. We have a proposal before the Game Board to open the Pipeline Closed Area to archery only hunting. We ask you to consider this approach, then let the Board decide. We feel this would best suit the needs of all Alaskan's for additional recreation. First, an arrow would pose no danger to the pipeline itself. Due to the inherent difficulties of bowhunting, the actual harvest is minimal. Anyone, young or old, male or female, can learn to shoot a bow. We are no more a "special interest group," than those who dip at Chitna or use fly fishing only areas. Almost all bowhunters hunt with a rifle also, especially here in Alaska. It is the challenge that attracts and holds bowhunters.

We ask you to check the harvest rates,(success is usually 2-4%) and other satistics available. In states that keep records, more deer are killed on the highways than by archers. This includes states with 3 or 4 month seasons. When comparing Alaska's low animal density to deer populations outside, even lower success would be expected.

Before you close the door, please take the time to check into these ideals. The bow and arrow was important to both the Alaska Native and other non-natives early in their history. It is a cultural heritage of all Alaskans.

Sincerely
Charles D. Aller

5AAC 81.070 (Alaska Administrative Code No.) Regulation book page no. 15

Purpose of proposal TO OPEN THE TRANSALASKA PIPELINE CLOSED AREA TO ARCHERY ONLY HUNTING.

Suggested wording of Proposed Regulation (append if lengthy): BIG GAME MAY BE HUNTED ONLY WITH BOW AND ARROW IN THAT AREA KNOWN AS THE TRANSALASKA PIPELINE CLOSED AREA DURING SEASONS ESTABLISHED FOR THE GAME UNITS INVOLVED.

Justification: THIS PROPOSAL IS DESIGNED TO PROVIDE SPORT HUNTING OPPORTUNITIES ALONG THE PIPELINE CORRIDOR WHILE LIMITING THE AMOUNT OF GAME HARVESTED. DUE TO THE INHERENT DIFFICULTY OF BOWHUNTING, MAXIMUM RECREATIONAL DAYS CAN BE ENJOYED WITH MINIMUM IMPACT TO THE RESOURCE. THIS PROPOSAL RECOGNIZES THAT THE ORIGINAL CLOSURE WAS FOR AESTHETIC, NOT BIOLOGICAL REASONS. BOWHUNTING WOULD MAINTAIN THIS CONCEPT BY EMPHASIZING THE FREEDOM TO PARTICIPATE IN THE HUNTING EXPERIENCE, EVEN WHEN SUCCESS IS LOW, IN TERMS OF NUMBER OF ANIMALS TAKEN. THIS PROPOSAL WOULD MAINTAIN PIPELINE INTEGRITY, AS AN ARROW WOULD POSE NO THREAT TO THE STEEL PIPE.

Recommendations of the State Range Planning Committee

In FY 1980 the Game Division received a legislative appropriation of $15,000 to establish a State Range Planning Committee consisting of representatives from most major communities within the State. This committee, with directions from Game Division's Hunter Safety Coordinator, was to assess the needs for shooting facilities in cities and towns throughout Alaska and to make recommendations regarding aquisition and development of apropriate shooting facilities. The committee's findings and recommendations are as follows:

The third meeting of the State Range Planning Committee was held December 20, 1979 in Anchorage. The purpose of the meeting was to determine cost of designating, acquiring, and developing indoor and outdoor shooting facilities.

In most communities of the state the Range committee agreed to allot up to $2500 and technical assistance to all the smaller villages and communities desiring to designate new or formalize existing shooting areas. Also, this money could be used to develop portable indoor shooting items that could be used for student training.

The committee determined that a transportable 80' x 30' prede-igned building would be adequate to meet the needs of most communities for indoor shooting facilities. These would have 5 shooting points for smallbore shooting only and are estimated to cost $300,000 each.

The need for shooting facilities both indoor and outdoor was examined and cost determined for each community of the State with a population over 1,000 people. The cost figures for each community and the total cost are presented in Appendix B.

The committee's actions so far has identified 14 existing outdoor ranges and 12 indoor ranges located in 25 major communities and 116 small communities and villages. Some of these facilities are unusable or unavailable to the general public. The committee's recommendation to offer technical and financial assistance applies to about 155 communities and includes nearly 200 individual development projects.

of ALASKA

MEMORANDUM

TO: State Range Planning Committee

DATE: January 16, 1980

FILE NO:

TELEPHONE NO:

FROM: Jack Alexander
Hunter Safety Coordinator
Division of Game
Anchorage

SUBJECT: Recommendations for shooting facilities.

Attached are the recommendations for shooting facilities as determined at the December 20, 1979 meeting of the Range Planning Committee. Please look them over carefully and compare with your notes. The figures have changed some, but not much. Let me know if you don't agree or have any changes or suggestions to make.

I discussed Izaak Walton League Range development with Maurice Oswald of D.O.W.L. Engineering, who is doing the design work on their development plans. It was Mr. Oswald's opinion that realignment of the Izaak Walton League Range would eliminate any safety hazards currently associated with the Birchwood airstrip.

I'll get the wording for a proposed bond put together in the next week or so and forward it to each of you for your input.

The third meeting of the State Range Planning Committee was held December 20, 1979 in Anchorage. The purpose of the meeting was to determine cost of designating, acquiring, and developing indoor and outdoor shooting facilities.

In most communities of the state the Range committee agreed to allot up to $2500 and technical assistance to all the smaller villages and communities desiring to designate new or formalize existing shooting areas. Also, this money could be used to develop portable indoor shooting items that could be used for student training.

The committee determined that a transportable 80' X 30' predesigned building would be adequate to meet the needs of most communities for indoor shooting facilities. These would have 5 shooting points for smallbore shooting only and are estimated to cost $300,000 each.

The need for shooting facilities both indoor and outdoor was examined and cost determined for each community of the State with a population over 1,000 people. The cost figures for each community and the total cost are presented in Appendix B.

The committee's actions so far has identified 14 existing outdoor ranges and 2 indoor ranges located in 25 major communities and 116 smaller communities and villages. Some of these facilities are unusable or unavailable to the general public. The committee's recommendation to offer technical and financial assistance applies to about 155 communities and includes nearly 200 individual development projects.

LETTER OF INTENT
HOUSE RESOURCES COMMITTEE
SUBSTITUTE FOR SCR 22

It is the intent of this committee to designate $9,000 of the $134,000 fiscal note on SCR 22 for limited entry seminars in Norton Sound and Kotzebue. This includes $5,500 for six weeks of staff time, travel, per diem and other expenses to conduct seminars in Nome and Unalakleet and $3,500 for a seminar in Kotzebue, using the same staff.

Senator John Sackett
Chairman,Senate Finance Committee
Alaska State Senate
Juneau

Dear Senator Sackett:

I understand that your resolution SCR 22 will have a fiscal note which will provide for a study of of limited entry on the Upper Yukon. Senator Ferguson and I are also interested in having limited entry work done in our areas during the interim. Since the Kotzebue Sound and Norton Sound fisheries are small scale fisheries like the Upper Yukon fishery it may be reasonable to have funding for all of these limited entry projects in one place i.e. SCR 22.

In the Norton Sound area, I intend to have limited entry seminars in Nome and Unalakleet. It would cost $5,500 to conduct these seminars. This figure includes six weeks of staff time and travel ,per diem and other expenses. A Kotzebue seminar would cost $3,500,using the same staff.

If appropriate, would you please include $9,000 in the fiscal note for SCR 22 to cover these limited entry seminars in Norton Sound and Kotzebue.

Thank you.

Sincerely,

John G. Fuller

MEMORANDUM State of Alaska

TO: Keith Specking
Legislative Assistant
Office of the Governor

DATE:

FILE NO:

March 22, 1979

TELEPHONE NO:

FROM: John N Garner
Chairman

SUBJECT: Fiscal Note

The Commission is not able to prepare a fiscal note on SCR 22 because the requirements of the study contemplated are not clear to us.

Based on a 1970 census, the estimated village population in the Upper Yukon region is approximately 5,000. In order for the Commission to conduct the study required by SCR 22, for which no official state records exist, some method of survey may be appropriate. If the intent of SCR 22 is to direct the Commission to survey the entire population, a substantial fiscal impact would result.

Costs associated with personal interviewing techniques in rural areas are $25 or more per interview. If the entire population is surveyed, the cost could amount to approximately $125,000. Should a representative sample of the population prove sufficient, such as heads of households, or if existing data in the possession of other agencies proves useful, the cost would be substantially reduced.

An approach utilizing community meetings and knowledgeable persons from other agencies would significantly reduce the fiscal requirement. It is expected the cost under this approach should be no more than $10,000.

The Commission would also be appreciative of further clarification specifically with regards to the time period and capacity of participation contemplated by the resolution.

Make up a fiscal note for $125,000

IN THE SENATE 1/66. BY SACKETT

HOUSE CS FOR

SENATE CONCURRENT RESOLUTION NO. 22

IN THE LEGISLATURE OF THE STATE OF ALASKA

ELEVENTH LEGISLATURE - FIRST SESSION

Relating to the limited entry program.

BE IT RESOLVED BY THE LEGISLATURE OF THE STATE OF ALASKA:

WHEREAS art. VIII, sec. 15 of the Alaska Constitution provides that the state may "limit entry into any fishery for purposes of resource conservation, to prevent economic distress among fishermen and those dependent upon them for a livelihood"; and

WHEREAS A.S. 16.43 establishes the Alaska Commercial Fisheries Entry Commission and states the legislative purpose as promoting the conservation and sustained-yield management of the fisheries and the economic health and stability of the commercial fisheries by regulating and controlling entry into the commercial fisheries in the public interest and without unjust discrimination; and

WHEREAS under A.S. 16.43.240(b) the commission is authorized to limit entry into certain fisheries when it finds that a fishery has reached such levels of participation that a limitation of entry to that fishery is required in order to achieve the purposes of A.S. 16.43; and

WHEREAS A.S. 16.43.240(b) does not specify a formula for the Commission to determine the maximum number of permits authorized when limiting entry into a fishery under that section; and

WHEREAS in 1976, pursuant to A.S. 16.43.240(b), the Commission decided to limit commercial fishing in the area known as Upper Yukon and set the maximum number of permits for the Upper Yukon as the number of units of gear fished in the Upper Yukon during 1975; and

WHEREAS, major commercial fishing markets did not develop for many areas of the Upper Yukon fishery until after 1970; and

WHEREAS, past participation in the commercial fishery of the Upper Yukon that led to a high degree of economic reliance upon the commercial fishery included barter and sale of fresh, smoked, and dried fish products within the region and indirect sales through intermediaries to fish buyers; and

WHEREAS, past participation in and economic reliance upon the operation of gear in the commercial fishery of the Upper Yukon was not restricted to persons holding a gear license or a fishwheel registration; and

WHEREAS, it appears that some persons who have participated for many years in the Upper Yukon commercial fishery and had a high degree of economic reliance upon the fishery may have been excluded from receiving an entry permit; therefore

BE IT RESOLVED that the Alaska Commercial Fisheries Entry Commission is respectfully requested to determine which interested persons with past participation in and economic reliance upon the operation of gear (including the barter and sale of fresh, smoked and dried fish products) in the commercial fishery of the Upper Yukon, regardless whether those persons held a gear license or a fishwheel registration, have not been issued a permit; and be it

FURTHER RESOLVED that the Alaska Commercial Fisheries Entry Commission is respectfully requested to determine whether the maximum number of permits set for the Upper Yukon fishery is consistent with the objectives of A.S. 16.43; and be it

FURTHER RESOLVED that the Legislative Limited Entry Study Committee established pursuant to HB 141 and HB 142, with the cooperation of the Alaska Commercial Fisheries Entry Commission, is respectfully requested to determine

whether controlling entry into the commercial fisheries i the Upper Yukon has resulted in any unjust discrimination and to determi what options are available to the legislature to correct any unjust discrimination; and be it

FURTHER RESOLVED that the Alaska Commercial Fisheries Entry Commission and the Legislative Limited Entry Study Committee established pursuant to HB 141 and HB 142 are respectfully directed to repo their findings and conclusions within the first 10 days of the second session of the Eleventh Legislature.

SCR 67 - NEFCO Bankruptcy

Back-Up info:

- State of urgency - asks bankruptcy judge in Seattle to move ahead.
- Trustee of NEFCO (Sam Rubinstein) wants state to be able to step in & request judge to hurry proceedings along faster than Bankruptcy Act sets out so NEFCO facilities can be leased out right away
- A.G.'s office says state already doing everything it can & is inappropriate for state to become a party to proceedings now - will be creditor in case eventually
- Ask judge to make finding that due to emergency nature of situation, does not need to notify every one of the several thousand creditors
- Sealaska Corp (Byron Malloff) wants to lease facilities for this season. Sackett introduced this resolution at urging of Sealaska

Alaska faces a critical situation with regard to fish processing capabilities this summer. The first major opening for fishing will occur in the Bristol Bay which commences June 9, less than a month away. New England Fish Company has historically been an important element in the processing of fish in every major fishing region in our State.

For example, without Nefco facilities available, processing capacity in Bristol Bay alone, where a banner year is forecast, will be reduced by at least one point two million fish. The same may be expected in the Kodiak area where the absence of an operational plant at Uganik would reduce processing capability by an estimated one to three million fish. In my judgement, the inoperability of Nefco facilities this fishing season would have a devastating social and economic effect.

Therefore, on behalf of the citizens of Alaska, I request expeditious action on the disposition of the facilities belonging to Nefco so that their capacity will not be lost this season. The State of Alaska is ready to offer you any appropriate assistance you desire.

Sincerely,

Jay S. Hammond

SENATE CONCURRENT RESOLUTION NO. 67

IN THE LEGISLATURE OF THE STATE OF ALASKA

ELEVENTH LEGISLATURE - SECOND SESSION

Directing the state to take measures to protect Alaskan interests in NEFCO Bankruptcy.

BE IT RESOLVED BY THE LEGISLATURE OF THE STATE OF ALASKA:

WHEREAS New England Fish Company, (NEFCO) has commenced bankruptcy proceedings by petition filed April 23, 1980, in the United States Bankruptcy Court, Western District of Washington, No. 80-00864; and

WHEREAS NEFCO owns and operates facilities for the harvesting, processing, distribution, marketing and related aspects of the fisheries resource in every major fishing region of the State of Alaska, either in sole proprietorship, partnership or joint venture with other entities; and

WHEREAS there is a substantial probability that the continuing operation of these fishery-related facilities may be prevented by the bankruptcy proceedings; and

WHEREAS, in the event of closure of these fishery-related facilities, the economy of every community in which the facilities are located or transact business would be harmed due to inability to market or process fisheries resources which are produced locally, and by lack of seasonal employment opportunities in a year which is expected to be difficult for the fishing industry in Alaska; and

WHEREAS the nature of the problem requires immediate action if widespread harm is to be averted;

BE IT RESOLVED by the Alaska State Legislature that the governor is requested to direct the attorney general to take actions, including but not necessarily limited to appearances, intervention, petition or assistance to

May 14, 1980

The Honorable Alvin Osterback
Co-Chairman, House Resources
Committee
Alaska State House of Representatives
Pouch V
Juneau, Alaska 99811

Dear Representative Osterback:

On May 12, 1980, the Senate considered and passed Senate Concurrent Resolution No. 67, "Directing the State to take Measures to Protect Alaskan Interests in NEFCO Bankruptcy". We understand your Committee is considering a similar resolution.

Sealaska Corporation is seriously concerned about the current bankruptcy of New England Fish Company and the potential impact this may have on the remaining fish processors in Alaska. As you know, Sealaska Corporation now owns Ocean Beauty Seafoods. We therefore request your Committee to consider the resolution as soon as possible and urge your support of its passage in the House.

During the past several days, officials of our Corporation have been in contact with the court-appointed trustee handling the NEFCO bankruptcy and as a result, we are convinced that unless the court understands the urgency of this matter, the court action may take several months. Our assessment is that any processor that plans to operate the NEFCO facilities this fishing season must begin preparation within a matter of days.

The Senate recognized the urgency of time and therefore made the Resolution a special order of business on May 12, 1980. Similarly, the Governor also recognized the urgency and therefore sent a telegram to the Trustee (copy attached). We are hopeful that with similar House action, the Court may respond timely and as a result, arrangements can be made for the NEFCO facilities to operate this year.

If Sealaska Corporation can assist in any way, please call on us.

Sincerely,

Byron I Mallott

JAY S. HAMMOND
GOVERNOR

STATE OF ALASKA
OFFICE OF THE GOVERNOR
JUNEAU

January 30, 1979

The Honorable Ted Stevens
United States Senate
260 Russell Building
Washington, D.C. 20510

Dear Senator Stevens:

On behalf of the State of Alaska, I strongly urge your support for favorable action on a bill similar to S. 291, which you introduced on January 18, 1977. S. 291 would amend the Shipping Act of 1616 (46 U.S.C. 801) in order to provide that a state, the District of Columbia, the Commonwealth of Puerto Rico, and a territory of the United States shall be considered to be a citizen of the United States for the purposes of such act.

The bill, if it had passed, would have allowed any state, Alaska included, to proceed to create and hold preferred ship mortgages.

The amendment of 46 U.S.C. 801 would completely cover our needs since 46 U.S.C. 922(a)(5) refers back to 46 U.S.C. 888, which in turn refers back to 46 U.S.C. 801-803 for the definition of a citizen. Moreover, the amendment of 46 U.S.C. 801 would cover a state's ownership interest as well as mortgage interest in a vessel in the event a preferred ship's mortgage had to be foreclosed.

I sincerely appreciate this opportunity to present my views on S. 291, and urge your support for similar legislation during the current session of Congress.

Sincerely,

Jay S. Hammond
Governor

S. 247

To amend the Shipping Act, 1916, in order to provide that a State, the District of Columbia, the Commonwealth of Puerto Rico, and a territory or possession of the United States shall be considered a citizen of the United States for the purposes of such Act.

IN THE SENATE OF THE UNITED STATES

JANUARY 29 (legislative day, JANUARY 15), 1979

Mr. STEVENS introduced the following bill; which was read twice and referred to the Committee on Commerce, Science, and Transportation

---

A BILL

To amend the Shipping Act, 1916, in order to provide that a State, the District of Columbia, the Commonwealth of Puerto Rico, and a territory or possession of the United States shall be considered a citizen of the United States for the purposes of such Act.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 1 of the Shipping Act, 1916 (46 U.S.C. 801), is amended by adding the following definition: "The term 'citizen of the United States' also includes a State, the District of Columbia, the Commonwealth of Puerto Rico, and a territory or possession of the United States".

Re: Commercial Fishing Loan Program,
Alaska Statutes §§ 16.10.300-.370

Dear Mr. Jeans:

You have asked us to determine whether vessel mortgages held by the Alaska State Development Corporation, (the "Corporation"), would be valid preferred ship mortgages. We have reviewed the State enabling legislation describing the operation of the Corporation, the Shipping Act of 1916, as amended, the Ship Mortgage Act of 1920, as amended, (both codified in Title 46 of the U.S. Code), and the legislative histories and federal court interpretations of the two federal statutes. For the reasons set forth below, we are not able to assure you with certainty that vessel mortgages held by the Corporation will be valid preferred ship mortgages.

We began by considering whether ship mortgages held by the Corporation would be "valid" in the first instance. We next considered whether the mortgages, if valid, would be entitled to the "preferred" status set out in the Ship Mortgage Act. Section 1 of this letter discusses the validity of the proposed mortgages, Section 2 relates to their preferred status, and Section 3 contains our recommendations.

Section 1: Validity

Two sections of the Shipping Act discuss the validity of ship mortgages. Both sections prohibit mortgages of U.S. flag vessels to non-citizens. Each of the two statutory sections renders prohibited mortgages invalid and provides substantial criminal penalties for violators. The two sections are 46 USC §§ 808 and 835.

Section 808 of Title 46 of the U.S. Code (§ 9 of the Shipping Act) provides in part that:

> "...it shall be unlawful, without the approval of the Secretary of Commerce, to sell, mortgage, lease, charter, deliver, or in any manner transfer... to any person not a citizen of the United States... any vessel or any interest therein owned in whole or in part by a citizen of the United States and documented under the laws of the United States..."

Section 835 of Title 46 (§ 37 of the Shipping Act) provides in part that:

> "...during any national emergency, the existence of which is declared by proclamation of the President, it shall be unlawful, without first obtaining the approval of the Secretary of Commerce...to sell, mortgage, lease, charter, deliver, or in any manner transfer, or agree to sell, mortgage, lease, charter, deliver, or in any manner transfer, to any person not a citizen of the United States...any vessel documented under the laws of the United States, or any interest therein..."

At the present time a Presidentially proclaimed state of national emergency is in effect.

Both of the statutes referred to above prohibit the granting of vessel mortgages to any person who is not a "citizen of the United States." 46 USC § 802 (§ 2 of the Shipping Act) is the statutory section which defines the "citizenship" of a corporate mortgagee for both 46 USC §§ 808 and 835. Section 802 provides, in pertinent part, that:

> "(a) Within the meaning of this chapter no corporation...shall be deemed a citizen of the United States unless the controlling interest therein is owned by citizens of the United States, and...unless its president or other chief executive officer and the chairman of its board of directors are citizens of the United States and unless no more of its directors than a minority of the number necessary to constitute a quorum are non-citizens and the corporation itself is organized under the laws of the United States or of a State, Territory, District, or possession thereof...

> (b) The controlling interest in a corporation shall not be deemed to be owned by citizens of the United States (a) if the title to a majority of the stock thereof is not vested in such citizens free from any trust or fiduciary obligation in favor of any person not a citizen of the United States; or (b) if the majority of the voting power in such corporation is not vested in citizens of the United States; or (c) if through any contract or understanding it is so arranged that the majority of the voting power may be exercised, directly or indirectly, in behalf of any person who is not a citizen of the United States; or, (d) if by any other means whatsoever control of the corporation is conferred upon or permitted to be exercised by any person who is not a citizen of the United States."

The question becomes whether the Corporation meets the requirements of Section 802. In order to do so, the Corporation would have to show, pursuant to § 802(a), that (1) its President is a citizen of the United States, (2) its Chairman of the Board of Directors is a citizen of the United States, (3) the number of non-citizens on the Board are less than the number necessary to constitute a quorum, and (4) the Corporation is organized under the laws of a State. It appears to us that the Corporation can comply with these requirements.

Section 802, however, contains an additional "controlling interest" test defined primarily in § 802(b) which requires the Corporation to show that the Corporation's voting power is not exercised in behalf of a non-citizen. Since the voting power of the Corporation is exercised in behalf of the State itself, we are faced with the problem posed originally by the Alaska Attorney General in that it is not clear that the State is a citizen.

The rather specific provisions of Section 802 together with other relevant sections of the Shipping Act, lend little support to the argument that a State should be considered a citizen of the United States. If anything, the language and the legislative history indicate that the Congress was simply not thinking of States when it enacted the statute.

Additionally, we have found no reported court cases which discuss whether a State is a citizen of the United States for purposes of Section 802. The only federal cases on the general question of State citizenship involve other sections of federal law unrelated to the Shipping Act. In those unrelated cases, however, the courts have consistently held that a State is not a "citizen," Illinois vs. City of Milwaukee, Wisconsin, 406 U.S. 91 (1972).

We conclude that the Corporation does not clearly qualify as a U.S. citizen and thus ship mortgages held by the Corporation may be invalid. To summarize:

1. The citizenship of the Corporation turns on the citizenship of the party in whose favor the corporate voting power is exercised, i.e., the State;

2. It is not clear that the State is a citizen; and

3. Therefore, it is not clear that the Corporation is a citizen.

The Secretary of Commerce can, however, approve an otherwise prohibited mortgage to a non-citizen. The authority for this approval is found in both 46 USC §§ 808 and 835. That special approval could be sought and possibly obtained on a blanket basis from the Secretary. Since the policy behind Sections 808 and 835 was to insure that aliens not obtain significant ownership interests in vessels documented under U.S. laws, we are confident that the Secretary would look favorably upon a request for approval because the proposed mortgages certainly are not contrary to the policy of the Act. If the request were made and approval obtained, the mortgages would thereafter be valid.

Section 2: Preferred Status

While the Corporation's mortgages would be valid if the approval of the Secretary of Commerce were obtained, they would not be entitled to first-lien preferred status unless the provisions of the Ship Mortgage Act were satisfied. 46 USC § 922 (§ 30 of the Ship Mortgage Act) provides in pertinent part:

> "A valid mortgage which...includes the whole of any vessel of the United States...shall have... preferred status...if -
>
> [t]he mortgagee is a citizen of the United States and for the purposes of this section the Reconstruction Finance Corporation shall, in addition to those designated in sections 888 and 802 of this title, be deemed a citizen of the United States."

The preferred status of the Corporation's mortgages thus depends again on the citizenship definition in 46 USC § 802 (§ 888 merely refers to § 802). As we set out in the first part of this letter, it is not clear that the Corporation is a citizen for purposes of Section 802 and therefore we are not able to assure you that the mortgages will enjoy preferred status even if made "valid" by approval by the Secretary of Commerce. As you can see by comparing the text of § 922 to the texts of §§ 808 and 835, the Secretary of Commerce does not have statutory authority to grant preferred status to mortgages (§ 922) in the same fashion as she can validate otherwise unlawful mortgages (§§ 808 and 835).

Section 3: Recommendations

Several avenues are open to the State. The avenues (which are not mutually exclusive) are: administrative, judicial, legislative, and contractual.

Administratively, an application to the Secretary of Commerce could be made asking for approval of the mortgages themselves pursuant to 46 USC §§ 808 and/or 835. Simultaneously, the Secretary could be asked to grant preferred status to the mortgages as a matter of general administrative discretion. As we indicated above, we suspect that the Secretary would approve the mortgages pursuant to 46 USC §§ 808 and/or 835. We have no way of predicting whether the Secretary would also grant preferred status to the mortgages although we are not confident that she would react favorably. The defect in the approach is that even if the Secretary did designate the mortgages as preferred, the designation might not survive subsequent challenge because the Secretary has no statutory authority to grant preferred status to otherwise non-preferred mortgages. Such a designation would have little or no effect. We do not recommend the administrative approach.

Judicially, an effort could be made to obtain a declaratory judgment from a federal court clarifying the status of the Corporation (or the State) as a citizen. It is difficult to predict what the outcome of such a lawsuit would be. This approach suffers from a similar defect as the administrative approach in that, even if successful, a subsequent challenge to a mortgage might reach a different result because the declaratory judgment would serve as precedent but would not necessarily be binding. In addition, the judicial avenue would be time consuming; we do not recommend it.

The legislative approach is more simple, and would be entirely satisfactory if successful. The approach involves seeking a legislative change in Title 46 of the U.S. Code such that the States of the United States were clearly included within the citizen category. Changes in federal law are, of course, not achieved without some difficulty, and we are mindful that the avenue has already been tried without success. Nevertheless, the change should be non-controversial and many Senators and Congressmen interested in maritime and fisheries matters would likely be interested in offering their support. If the amendment were obtained, the State itself could freely take valid preferred ship mortgages and could operate its commercial fishing loan program free from constraints. We recommend that you attempt to obtain the amendment because it would provide a complete solution and because we think the Congress would react favorably. We estimate that the legislative approach would entail an expenditure of $5,000 - $10,000 in legal fees.

The last avenue is one which is designed to improve the present situation and eliminate as many of the current difficulties as possible without obtaining any action by the government. The contract under which the trust program is being currently operated could be refined such that your State agency took additional responsibility for servicing the loans. The Trustee's role would become nominal only to conform to the requirements of the Shipping Act. If you should decide not to pursue the legislative remedy we would then recommend that you attempt to alter your contractual arrangement with the Trustee.

If you should have any questions concerning the foregoing, please feel free to call. Kindest regards.

Sincerely yours,

MUNDT, MacGREGOR, HAPPEL,
FALCONER & ZULAUF
