The project sponsors argue that the only review of the Operation Phase Rate should be by Commission action under Section 5 of the Natural Gas Act. 202/ The disadvantage of this approach is that the burden of proof would be placed upon the Commission and any redetermination of rate of return would have prospective effect only.

A third approach, discussed in more detail in Section II.B.3, is suggested in a paper prepared for the Alaska Gas Project Office by Professor Jerome Hass. 203/ This approach would tie or index the Operation Phase Rate to interest rates. As interest rates change, the Operation Phase Rate would adjust automatically. Though interest rates are an important guide to equity rates of return, this indexing would still not adjust for many other important factors affecting rates of return. Thus, an additional review of some sort would be necessary in addition to this formula which would tie the Operation Phase Rate to interest rates.

After evaluating the above three approaches, the Commission has determined that a periodic rate of return review is a superior approach. On a periodic basis, the project companies shall submit a Section 4 application

---

202/ Joint Initial Comments, Tab 3, Pt. 3.

203/ Hass Report at 14-16.

which shall justify the appropriate Operation Phase Rate to be applied during that prospective period. A portion of revenues collected during the period prior to a Commission determination of the appropriate rate of return for that period will be subject to refund pending a final disposition of the rate of return issue. The revenues subject to refund will be only those attributable to the rate of return on equity and associated taxes.

Though the Commission has determined that the tariffs shall provide for a periodic rate of return review, the Commission will not specify at this time the length of the period but will defer that decision to the final project certification proceeding after the submittal of a financing plan. The financing plan may contain information that is relevant to this determination. 204/

The Commission's disposition of this issue reflects a reasoned balancing of consumer protection and financing considerations. In their analysis of this issue, the project sponsors argued that three principles are critical in any future review of the Operation Phase Rate:

204/ A relevant precedent is the three-year review required in purchased gas adjustment clauses. A similar period does not seem unreasonable for this cost-of-service tariff but a final decision will not be made at this time.

(a) All matters affecting the rate should be considered not just capitalization as suggested by Staff.

(b) Any review must be limited to the Operation Phase Rate without express or implied review or reconsideration of the tariff or service agreement.

(c) Any review must not result in impairment of the project economics which formed the basis for investment.

The Commission agrees that any future review should generally abide by these principles, and that it should conduct its review specifically subject to (a) and (b). It is the Commission's intention that during any future rate of return review the proper impact of all matters that affect the return on equity would be considered. Further, it is the Commission's intention that any review of the Operation Phase Rate would be limited to establishing the proper level of that rate.

The Commission determination here to require review of the project's Operation Phase Rate is not a new

concept. 205/ The review procedure should in no way "result in impairment of the project economics which the basis for the investment," because there is no inference or intent in the review of the Operation Phase Rate to disallow from the project's cost of service any actual and proper expenses. 206/

205/ See, e.g., Southern Energy Company, Docket No. CP71-264, "Order Amending Prior Order" (February 13, 1978). In that case, the event that "triggered" a rate of return review was any change in equity capitalization in excess of two and one-half percentage points.

206/ While this Order sets out the Commission's position on matters which can currently be resolved, other details of regulatory oversight remain to be determined. For example, review of certain cost of service expenditures are of this nature. In this regard, the Commission may benefit from Canadian resolution of this common regulatory problem. As previously indicated, the Commission has conducted regulatory consultations with the NEB pursuant to Section 9 of the Agreement Between the United States of America and Canada on Principles Applicable to a Northern Natural Gas Pipeline. (See, Incentive Rate of Return for the Alaska Natural Gas Transportation System, Docket No. RM78-12, Revised Notice of Proposed Rulemaking, 5 n.1a (Sept. 15, 1978) (Erratum Notice, Oct. 6, 1978). The NEB is currently proposing that estimates of certain costs, such as operation and maintenance expenses, be submitted annually for review and approval prior to being incorporated in the transportation charge. (See, National Energy Board of Canada's "Proposed Method for the Regulation of the Tolls and Tariffs of the Foothills Pipeline," 7-8 (issued April 18, 1979)).

Pending further consideration of this matter, the Commission presently contemplates utilizing auditing procedures to determine proper accounting classification of costs in accordance with the requirements of

(Footnote continued on next page)

9. Certain Issues Raised by California

California questioned whether a payment delinquency charge under Section 6.4 of the tariffs would be computed at 125 percent of the interest rate applicable to delinquencies but any repayments to the shippers would be at 100 percent of the same interest rate. 207/ Alaskan Northwest and Northern Border answered in their reply comments that "the shipper would recover, with interest, any amounts paid to the transporter, including the penalty interest itself if the non-payment is excused by order or otherwise." 208/ No other party commented on the provision. The Commission accepts the clarification offered by the transporters.

206/ (Footnote cont'd).

the Uniform System of Accounts. General instruction (2)(e) thereof prescribes that only just and reasonable amounts may be included in the accounts. This audit effort, coupled with the Commission's remedial powers under the Natural Gas Act, may be sufficient to satisfy the requirement that all costs, including operation and maintenance expenses, be prudently incurred.

207/ California, Initial Comments at 7.

208/ Joint Reply Comments at 48 (emphasis in original).

Two other issues raised by California relate to whether the operation and maintenance expenses and company use gas claimed by the transporters will be subject to audit and verification. 209/ The Commission has addressed this matter in the lengthy footnote above, note 206, supra, and will not reiterate its reasoning here.

209/ California, Initial Comments at 6-7.

VII. PROCEDURAL MATTERS

This section considers certain procedural issues which have been raised in the course of this rulemaking. These include the relationship of this rulemaking to proceedings now underway to consider issues on construction of the Northern Border segment, the rationale for use of rulemaking procedures, and future Commission action under this Order.

A. Relation to Pre-Building

The purpose of this rulemaking is to (1) resolve outstanding issues concerning the Incentive Rate of Return mechanism for the Alaskan and Northern Border segments of ANGTS, and (2) resolve certain issues attendant to the Commission's approval of the tariffs submitted by Alaskan Northwest and Northern Border pursuant to the Commission's Order of February 22, 1979.

In Order No. 17, the Commission specified certain terms and conditions on a finding that both the Alaskan Northwest and Northern Border projects should be subject to an IROR mechanism. The Commission recognized that the specific values to be included in the IROR mechanism would be established in future proceedings.

By Order of February 22, 1979, the Commission required that the sponsors of the Alaskan and Northern Border segments of the ANGTS file proposed tariffs, to

facilitate a thorough evaluation of risk for financing purposes. The Alaskan Delegate's Report attached to the that Order recognized the possibility that certain of the southern segments of the ANGTS may be "pre-built" to transport Alberta gas, as well as the possibility that "charges may begin for these segments in advance of completion of the other segments." On March 12, 1979, Alaskan Northwest and Northern Border filed pro forma tariffs, pursuant to the Commission's Order. The tariff filed by Alaskan Northwest would apply to the transportation of Alaskan natural gas, whereas the Northern Border tariff would initially apply to the transportation of Canadian gas (if made available by the Canadian Government through approval of applications presently before the National Energy Board of Canada), and would undoubtedly require some modification once the transportation of Alaskan gas commenced.

The April 6 Notice indicated that the Commission would address each of the issues presented by the two filed tariffs with the exception that the depreciation rate reflected in Northern Border's tariff would be reserved for separate consideration in the "pre-build" proceeding in Docket Nos. CP78-123, et al. The Notice recognized the relationship between the depreciation rate and the financing of the prebuild facilities. In its initial comments,

Staff raises questions regarding the pre-building of certain Northern Border facilities to transport Canadian "bubble" gas. More particularly, Staff questions the need for the particular facilities contemplated, and raises a question as to whether the construction of temporarily excessive capacity or unnecessary facilities constitutes a fee or surcharge in violation of the President's Decision.

This rulemaking is not the appropriate place to determine the nature and size of facilities to transport Canadian gas. That is an issue to be addressed in Docket Nos. CP78-123, et al. The facilities authorized in that proceeding will have to be found to be necessary and required by the public interest. The depreciation rate found appropriate in Docket Nos. CP78-123, et al., will apply until modified by the Commission. In this rulemaking, we establish the tariff provisions applicable to the transportation of Alaskan and Canadian gas. While the issue of whether Canadian gas will be transported through certain "pre-build" facilities is still pending before both the NEB and this Commission, it is clear that before Alaskan gas can be transported through the Northern Border facilities the project sponsors will be required to show that the tariff provisions approved herein are appropriate for the transportation of Alaskan gas.

B. Rulemaking Procedures

This proceeding implements certain financial conditions stipulated in the President's Decision, and is necessary for, and related to, the construction and initial operation of the transportation system approved by the President's Decision. The proceeding, therefore, comes within the scope of the Alaska Natural Gas Transportation Act (ANGTA) (15 U.S.C. §§ 719-719m). For this reason, it is incumbent upon the Commission to proceed as expeditiously as possible.

Section 403(c) of the Department of Energy Organization Act (DOE Act) authorizes the Commission to utilize rulemaking procedures to establish rates and charges under the Natural Gas Act. The setting of the incentive rate, as well as the consideration of pro forma tariffs for the ANGTS, is an establishment of a "rate or charge" within Section 7 of the Natural Gas Act and, per force, Section 403(c) of the DOE Act. Rulemaking provides, in this instance, an expeditious procedure for resolving the issues. Accordingly, in performing its functions under ANGTA, pursuant to ANGTA's mandate for expedition, the Commission chose the rulemaking process authorized by Section 403(c) of the DOE Act.

We recognize that Section 403(c) is not without some limits. On its face, it requires "full consideration of the issues and an opportunity for interested persons to present their views." While this proceeding has been the focal point of numerous rounds of comments, reply comments and special studies, we recognize that the issues are both serious and complex. For that reason, the Commission is staying the effective date of this Order for a period of 60 days, to afford interested parties the opportunity to apply for rehearing. Such applications must be filed within 30 days of the date of issuance of this Order.

The Commission Finds:

(1) For the reasons set forth above, the Commission finds it necessary and appropriate and in the public interest, in administering the Natural Gas Act and the Alaska Natural Gas Transportation Act, to adopt and incorporate into the conditional certificates of public convenience and necessity issued by the Order of December 16, 1977 (Docket Nos. CP78-123, et al.), the terms and conditions set forth in the attachment to this Order.

(2) For the reasons set forth above, the Commission finds it necessary and appropriate and in the public interest, in administering the Natural Gas Act and the Alaska Natural Gas Transportation Act, to require the tariffs under which Alaskan Northwest Natural Gas Transportation Company and the Northern Border Pipeline Company will render service to conform to the conditions and requirements set forth and discussed above in this Order.

The Commission Orders:

(A) The terms and conditions set forth in the attachment to this Order shall be incorporated into the conditional certificates of public convenience and necessity issued by the Commission on December 16, 1977 in Docket Nos. CP78-123,

et al., to become effective 60 days from the date of issuance of this Order. These terms and conditions supplement and supersede the terms and conditions incorporated in the conditional certificates by the Commission's Order No. 17, issued in this Docket on December 1, 1978.

(B) No later than twelve months prior to initiating service, Alaskan Northwest Natural Gas Transportation Company and Northern Border Pipeline Company shall submit for Commission approval, tariffs modified to conform with the requirements set forth in this Order. This ordering paragraph number (2) shall become effective 60 days from the date of issuance of this Order.

(C) Parties to Docket No. RM78-12 may file petitions for rehearing of this Order within 30 days of the date of issuance of this Order, pursuant to the procedures set forth in section 1.34 of the Commission's Rules of Practice and Procedure.

(Department of Energy Organization Act, Pub. L. No. 95-91, 91 Stat. 565, E.O. 12009, 42 Fed. Reg. 46267 (Sept. 15, 1977); Natural Gas Act, 15 US §§ 717, et seq.; Alaska Natural Gas Transportation Act, 15 USC § 719(g); President's Decision and Report to Congress on the Alaska Natural Gas Transportation System, H.J. Res. 621, Pub. L. No. 95-158, 91 Stat. 1268 (1977).)

AGD 886219

Determination of Incentive Rate of Return, Tariff, and Related Issues) Docket No. RM78-12

Chairman Curtis, concurring,

Although I am willing to accept the vote of the majority, I want to note my preference for a marginal rate of 6% coupled with an 18% center rate. Because a marginal rate of 6% would exert greater incentive for cost containment than would result from an 8% marginal rate, I believe it is appropriate to account for this effect by a one-half point adjustment to the risk premium factor, thus yielding a center rate of 18%.

The IROR scheme adopted by the Commission would allow a lower rate of return as construction costs increase thereby creating an incentive to control costs during construction. The marginal rate represents the incentive portion of the IROR mechanism and is an important determinant of the overall rate of return on equity. I am concerned that the marginal rate of 8% selected by the Commission may provide too little incentive to control construction costs.

With an 18% center rate and a 6% marginal rate, the resulting IROR schedule would allow higher rates of return

than the majority's schedule for a cost performance ratio of 1.3 to one of 1.6, (or for about 30% above the center point) for cost performance ratios greater than 1.6, this schedule would yield lower rates of return on equity. If there is true expectation that the pipeline can be constructed within a cost performance ratio of 1.6, I would think the sponsors would prefer the higher returns.

Notwithstanding my preference for this alternative, I recognize that the question is one of judgment and have determined to abide by the determination of my colleagues on this matter, recognizing that the issue may be represented to the Commission in the course of the rehearing procedure set out in the rule.

Charles B. Curtis
Chairman

Comparison of Two Combinations
of Center Rates and Marginal Rates
in the IROR Schedule for
the Alaskan Segment of the Pipeline

Cost Performance Ratio	Allowed Rates of Return on Equity 1/ For a 17.5% Center Rate and an 8.0% Marginal Rate	For an 18% Center Rate and a 6% Marginal Rate	Column (2) minus Column (1)
	(1)	(2)	(3)
1.0	20.35%	21.60%	1.25%
1.1	19.23	20.18	.95

2.5	12.94	12.24	-.70

1/ Assumes a 1.3 CPR as the center point.

Terms and Conditions

1. Applicability

The Incentive Rate of Return (IROR) will apply to two of the three segments of the Alaskan Natural Gas Transportation System within the United States, as defined in the President's Decision and Report to Congress on the Alaska Natural Gas Transportation System (referred to hereinafter as the Decision). These segments are: (1) the portion of the system within the State of Alaska, and (2) the portion of the system from the United States/Canadian border near Monchy in the Province of Saskatchewan to a point near Dwight in the State of Illinois. In the following terms and conditions, the term "pipeline" refers to each of these two segments, and all terms and conditions herein apply to each.

2. Cost Performance Ratio

As required by the second finance term and condition of the Decision (at page 36), the rate of return on equity during the operating period of the pipeline will be increased if the pipeline is completed under projected cost and reduced if the pipeline is completed over projected cost. The relationship between projected cost and completed

cost will be determined by a Cost Performance Ratio. The Cost Performance Ratio is the ratio of the Deflated Actual Capital Costs (see Condition 3, below) to the Projected Capital Costs (see Condition 4, below).

3. Deflated Actual Capital Costs

The Deflated Actual Capital Costs will be determined at the start of operations as the sum of direct construction costs actually incurred in the construction of the pipeline after conversion into base-year prices (see Condition 5 below) plus a Finance Charge calculated from the Real Rate of Return (see Condition 6 below). The Finance Charge will be calculated quarterly, based on the Deflated Actual Capital Cost incurred prior to the beginning of the quarter. When a segment (see Condition 1, above) is completed and tested, accrual of the Finance Charge and any other costs in the Deflated Actual Capital Costs will cease for that segment.

4. Projected Capital Costs

The Projected Capital Costs will be determined at the start of operations as the sum of direct construction costs included in the Certification Cost and Schedule Estimate approved by the Commission pursuant to Condition 7, below, and after any adjustments for Changes in Scope (see

Condition 10, below) or resulting from design changes prior to the Final Design (see Condition 9, below) plus a Finance Charge calculated from the Real Rate of Return (see Condition 6, below). The Finance Charge will be calculated quarterly, based on the Projected Capital Costs estimated to be incurred prior to the beginning of the quarter.

5. Inflation Adjustment

The direct construction costs actually incurred, excluding interest during construction, will be deflated to base-year prices, where the base year will be that used in calculating the Certification Cost Estimate. The inflation index will be a composite index calculated as a weighted average of existing published indices or price data. The attached schedule (see Condition 18 below) contains the categories of cost to be used and the index or prices to be used for each category. When the project sponsors submit their Certification Cost Estimate, all projected costs will be divided into each of the cost categories for each year or quarter. The proportion of total costs in that year or quarter for each cost category will be used as the weight for that cost category. For any construction that occurs beyond the projected construction schedule for the project,

the weights specified for the last year of the projected construction period will be the weights used.

6. Real Rate of Return

The Real Rate of Return to be used to calculate the Finance Charge included in the Projected Capital Costs and the Deflated Actual Capital Costs shall be five percent (5%). The Real Rate of Return shall only be used in determining the Cost Performance Ratio in the IROR mechanism, and will not be used to calculate the allowance for funds used during construction (AFUDC) included in the rate base for cost of service.

7. Certification Cost and Schedule Estimate

Pursuant to the second finance condition in the Decision, the applicant for a certificate of public convenience and necessity for the pipeline shall submit to the Commission a Certification Cost and Schedule Estimate, adjusted to reflect any design changes resulting from the Agreement on Principles with Canada and any addendum thereto, for comparison with the capital cost estimates filed by Alcan with the Federal Power Commission on March 8, 1977. This estimate will include costs actually incurred prior to submission of the estimate. This Certification

Cost and Schedule Estimate will be submitted in 1978 or 1979 base-year prices and with costs set forth according to formats to be specified by the Commission (see Condition 8, below). The March 1977, cost estimate referred to in the second finance term and condition in the Decision must also be resubmitted in the same format, and recalculated in the same base-year prices for comparability with the certification estimate. An explanation of any significant differences between the March 1977 estimate, and the Certification Cost and Schedule Estimate, must be provided. The date of the base-year period for submitting costs may be determined by the applicant. With these estimates, the applicant shall also provide a Construction Plan and Pipeline Design which show the techniques and procedures the applicant proposes to use in constructing the pipeline, and provide a detailed description of the pipeline as it will appear when completed.

8. Cost Estimate Format

All cost estimates shall be submitted to the Commission according to a Cost Estimate Format to be determined by the Commission. Prior to submittal of the Certification Cost and Schedule Estimate, the applicant may submit to the Commission a proposal for the Cost Estimate Format. The

Cost Estimate Format will specify the functional categories or components into which the total cost estimate must be divided, according to the time period in which the costs are estimated to occur. The breakdown of costs shall be in sufficient detail such that the Commission may compare the various cost estimates and determine the reasonableness of any changes.

9. Final Design

After the submission to and acceptance of the Final Design by the Federal Inspector as required by the Decision, the Certification Cost and Schedule Estimate will be altered to reflect changes in quantities or types of materials, labor, and services, and changes in project development or construction schedule and construction techniques, resulting from changes in design or schedule (including changes in the time necessary to obtain the required government approvals and permits) between the time the Certification Cost Estimate was prepared and the approval of the Final Design. Prices of labor, materials, or services used in the Certification Estimate will not be altered unless the Final Design requires a type of labor or material input not assumed to be used in the Certification Estimate. In that event, base year

prices for that new type of input will be used to the extent practicable.

The project sponsors shall submit the revised Certification Estimate, including both an explanation of the alleged design or schedule change and an estimate of the change in costs or schedule, to the Federal Inspector. The Federal Inspector will approve or disapprove the inclusion in Projected Capital Costs of such changes in cost or schedule, pursuant to procedures to be determined by the Inspector, and his decision will be final. The Federal Inspector will promptly notify the Commission of his determinations, including an explanation of the respective changes in design and schedule, and the resultant changes in costs.

10. Change in Scope Mechanism

The Change in Scope Mechanism is applicable to changes caused by events that occur subsequent to the date on which the Federal Inspector approves the Final Design. The Projected Capital Costs shall be increased in an amount equal to the amount of cost increases attributable to Change in Scope events beyond the control of the project sponsors. Such Change in Scope events shall be limited to (1) wars, (2) any disaster declared by the President of the United

States pursuant to the Disaster Relief Act of 1974, Pub. L. No. 93-288, 88 Stat. 143, (3) major design changes compelled by changes in Federal or State laws or regulations applicable to natural gas pipelines enacted or adopted subsequent to the Federal Inspector's approval of the Final Design of the pipeline, (4) major changes in pipeline routing or capacity ordered by Federal or State Governments for the Alaska Natural Gas Transportation System from that approved by the Federal Inspector in the Final Design of the pipeline, and (5) delay in the issuance of a government permit or certificate necessary for completion of the pipeline system, when such delay (a) occurs subsequent to approval of the Final Design, (b) occurs through no fault of the project sponsors, and (c) causes significant cost increases. To the maximum extent practicable, cost increases attributable to Change in Scope events shall be calculated based upon the assumptions and parameters used to calculate the Certification Cost Estimate.

11. Change in Scope Procedure

Whenever the project sponsors believe a Change in Scope event (as defined above) has occurred, the project sponsors shall submit to the Federal Inspector an explanation of the alleged Change in Scope and an estimate of the increase in

Projected Capital Costs for the project. The Federal Inspector will approve or disapprove the inclusion of such increases in Projected Capital Costs, pursuant to procedures to be determined by the Inspector, and his decision will be final. The Federal Inspector will promptly notify the Commission of his determinations, including an explanation of the Change in Scope events and the resultant changes in costs.

12. Center Point

Based upon the findings of the President's Decision, the Center Point (CP) for the Alaska segment shall be calculated from the following formula:

Center Point = [1.3 x (March 1977 Cost Estimate + Finance Charge)]/[Certification Cost Estimate + Finance Charge]

where the March 1977 Cost Estimate is in base-year prices.

The Center Point for the Northern Border segment will be calculated from the following formula:

Center Point = [1.1 x March 1977 Cost Estimate + Finance Charge)]/[Certification Cost Estimate + Finance Charge]

where the March 1977 Cost Estimate is in base-year prices.

The base-year prices shall be those utilized in the preparation of the Certification Cost Estimate. For purposes of this condition, the March 1977 estimate and the Certification Cost Estimate shall include a Finance Charge calculated from the Real Rate of Return (see Condition 6, above).

At the time the Certification Cost Estimate is submitted to the Commission (see Condition 7 above), the Commission will consider adjustments to the value of the Center Point derived from the above formulas if a showing is made that unanticipated developments have altered the basic nature and scope of the project from that assumed in the preparation of the March 1977 estimate. If the project sponsors believe that a major change in the project has occurred, the sponsors, as part of their submission of a Certification Cost Estimate, should present: (a) the nature of the changes in the project subsequent to the President's Decision, including a detailed explanation of why the Certification Cost Estimate has changed from the March 1977 estimate; (b) the nature or benefit to the nation and to gas consumers of construction of the project in light of the revised cost estimates; and (c) the cost increases or cost overruns above the Certification Cost Estimate that may occur, including explanation and analysis of the contingencies for

which costs have and have not been included, the likelihood of such contingencies occurring, and their respective impact on costs.

13. Operation Phase Rate

The Operation Phase Rate is the rate of return on equity that will be allowed after the pipeline is in operation and after the one-time adjustment to the rate base has been made made. The Operation Phase Rate initially shall be 14 percent (14%) for the Alaska segment and 13 percent (13%) for the Northern Border segment.

14. IROR Formula

The Incentive Rate of Return shall be set equal to [(17.5)(CP) + B (A - CP)]/A for the Alaska segment and [(15)(CP) + B (A - CP)]/A for the Northern Border segment, where A is the Cost Performance Ratio (see Condition 2, above) and CP is the Center Point (see Condition 12, above).

15. Financing Plan

The financing plan submitted pursuant to the Commission's Regulations (18 CFR 157.14(a)(14)[1978]) as part of the application for a certificate of public convenience and necessity under Section 7 of the Natural Gas Act shall describe how the applicant proposes to finance

the estimated cost of the project and any overruns, and in particular the proportions of debt and equity financing to be used. If the actual proportions of debt and equity used to finance the project deviate significantly from the financing plan submitted to, and approved by, the Commission, the Commission reserves the right to alter these terms and conditions.

16. Cost of Service Calculations

The allowed rate of return on equity used to calculate cost of service during operation of the pipeline will be the Operation Phase Rate defined above in Condition 13. The rate used to calculate the equity portion of the allowance for funds used during construction shall be the Operation Phase Rate defined above in Condition 13. The rate base will include an allowance for funds used during construction, and will also include the one-time adjustment calculated pursuant to Condition 17 less the cumulative amortization thereof. The cost of service for the pipeline shall include amortization of the one-time adjustment on a straight-line basis over the project life. An amount equal to the one-time adjustment net of related accumulated provisions for amortization will be considered as common equity in the rate of return calculation.

17. Adjustment to Rate Base

Upon completion of construction and initial operation of the pipeline, a one-time adjustment to the rate base will be calculated in three steps. First, for each year in the assumed 25-year operating life of the pipeline, a revenue stream for equity will be derived assuming that the equity investment including AFUDC in the pipeline at the start of operation is fully recovered by depreciation over a 25-year period in equal annual installments at the end of each year, and that an annual return on equity is derived by applying the Incentive Rate to the depreciated equity investment at the beginning of each year. Second, the present worth of this revenue stream will be calculated using a discount rate equal to the Operation Phase Rate specified in Condition 13 above. Third, the difference between this present worth sum and the equity investment including equity AFUDC at the start of operations will be added to the rate base of the project and the equity investment. If the difference is negative, the rate base and the equity investment will be reduced by the difference.

Within six months after condition and testing of the pipeline, the one-time adjustment and a schedule of amortization of the adjustment must be submitted for

approval by the Commission. If the Commission reduces the one-time adjustment, the excess in transportation charges incurred during the intervening period will be subtracted from the one-time adjustment. Similarly, any shortfall will be added to the one-time adjustment.

HB 1

The Honorable Alvin Osterback, Chairman
House Resource Committee
Alaska State Legislature
Box 71
Sand Point, Alaska 99661

Dear Mr. Osterback:

The Board of Fisheries, during its December 1978/January 1979 meeting, again discussed Alaska Statute 16.05.835 relating to the maximum length of salmon seine vessels and Alaska Statute 16.10.120 relating to the use of drum or reel in the operation of purse seines.

During the 1977 session of the Ninth Legislature, House Bills 118 and 119 repealing these sections of the Alaska Statutes were introduced. The Board wrote to you on March 31, 1977, supporting enactment of this legislation, but neither bill passed during the two sessions of the Ninth Legislature.

House Bill 1, repealing AS 16.05.835 has been introduced this session by Representative Eliason, and the Board of Fisheries strongly urges passage. The Board also recommends introduction of legislation to repeal AS 16.10.120.

The position of the Board is that the size of salmon seine vessels and the use of drum seines are regulatory problems which should be resolved by the Board through appropriate action under the Administrative Procedure Act rather than by the Legislature by means of inflexible laws.

The intent of the Board, emphasized in all discussions, is to maintain the status quo with regard to these problems. The recommendation to repeal these statutes should not be construed as an endorsement by the Board that the restriction regarding the maximum size of salmon seine vessels and the prohibition against the use of drum seines should be eliminated. Any change to regulations would only be after careful consideration of the general welfare of the fishermen and the resource.

Your consideration of the Board of Fisheries' position and recommendation is appreciated.

Sincerely,

Greg Cook
Executive Director
Boards of Fisheries and Game

Dear Representative Osterback:

Our association has been actively pursuing the lifting of the 58' limit for the past two years. Once again at our annual meeting held in February, the Board of Directors voted unanimously to support House Bill #1 which would repeal the limit.

There are several factors which support taking such action:

1.) Restrictive measures on gear levels now exist through the implementation of the limited entry program. With this program in existence, the 58' limit no longer serves its original purpose..... to restrict large vessels from outside the state to fish Alaskan waters. The limited entry permit system provides established gear levels in area waters of the state.

2.) The repeal of the limit is widely accepted by area fishermen including trollers, seiners, and gillnetters as well as the United Fishermen of Alaska. Lifting the limit would be a popular step with a substantial portion of the fishing industry. Such action could only serve to enhance the industry particularly from an economic standpoint.

3.) The potential development of the bottomfish fishery in Southeast Alaska is viewed by fishermen as a means of supplementing income which is now based almost totally on one segment of the fisheries resource: salmon. Diversification is necessary for an industry to thrive. Lifting the limit would encourage the industry to remain healthy.

4.) Larger boats become a necessity in order to participate in an off-shore bottomfishery. Such fishing would occur during winter months when weather in the outside waters in high risk areas make it necessary to increase safety factors. Smaller boats are limited to operation within inside areas. To use boats, even 58 foot limit vessels, during this time frame would jeopardize not only loss of life but loss of an entire fishing operation.

5.) The utilization of vessels in the various fisheries is in itself limiting. The desire to build combination boats to fish seine gear and bottomfish gear is self-restrictive. A purse seine fisherman is not going to be able to operate as a purse seiner if his vessel is much over 80 feet long. Most Southeast area fishermen are considering boats not much over 65 to 70 feet in length. This added footage would be a benefit for additional fish storage. The amount of space available for fish holding on a vessel is crucial when dealing with bottomfish. It is a high volume fishery with low fish prices.

6.) By lifting the limit, U.S. fishermen would have the ability to enter the bottomfishery and compete with foreign fleets. Unless we are able to get larger boats, we will never be able to prevent the continuation of foreigners fishing in outside waters which we could be utilizing for the benefit of the Alaskan fishermen.

We urge the legislature to take quick and positive action to repeal the 58' limit. The fishing industry plays a vital role in the economy and growth of Alaska. Passage of House Bill #1 will serve to enhance the industry within the state and insure its continued development and expansion.

Sincerely,

Re: House Bill No. 1

Dear Representative Osterback:

The committee has before it House Bill No. 1 "An Act relating to the maximum length of Salmon Seine Vessels", the intent of which is to allow the seine vessels to exceed the maximum length.

In the past, we have opposed any bill that would raise the vessel sizes. Our opposition was based upon the fear that if the size limit is now increased, the fleet would have more carrying capacity and, in the years of a heavy run, the fleet would take more fish, and limits on catch would result more frequently than at present. We felt that the processors in Southeast do not have the capacity to handle a heavy run. Further, we felt that only a few holders of limited entry permits would be in a position to afford larger vessels, and the permit holders would be placed under pressures to sell their permits. If a fisherman is able to acquire a large vessel, he likely can afford to pay an exhorbitant amount of money for a permit. We felt that the local permit holder would easily be influenced to sell his permit if the price went up--which is likely. We felt that the likelihood is that out-of-state fishermen would be the chief benefactors if the vessel size is lifted. There would be more fuel costs.

We also considered the argument that there is a developing off-shore fishery for bottom fish which will likely affect vessel sizes sometime in the future. But, so far this possibility is several years away. At a time when processing plants are in place, then we may, at that time, re-evaluate our position.

If House Bill 1 passes now, and we discover that it was a mistake, it would be difficult, if not impossible to revert back to the present limit size.

If your committee will entertain House Bill No. 1, please be advised that the Alaska Native Brotherhood and the Tlingit and Haida Indians of Alaska are opposed to passage for the above reasons.

Respectfully submitted,

LEGISLATIVE AFFAIRS COMMITTEE

MEMORANDUM

DATE: February 8, 1980

TO: Attorney General Avrum Gross

FROM: Representative Alvin Osterback, Chairman, A.O.
House Resources Committee

House Resources has scheduled a hearing on HB 1 regarding maximum length for salmon seine vessels, for Tuesday, February 12 at 3:00 p.m. in room 118 of the Capitol Building.

We request that you have a member of your staff attend this meeting to provide legal counsel. We have already discussed this matter with Assistant Attorney General Ann Prezyna. In general what we need is an opinion of legal means and options concerning the adoption of various seine boat size limits for various parts of the state. Can or should this be done in one statute? Can we delegate the responsibility for size limit restrictions to the Board of Fisheries but bind restrictions to the particular area designations we want by a letter of intent? We request that your office have an attorney present at the Tuesday hearing to answer these and similar questions. Thank you.

Editor's note. — The repealed section derived from § 2", art. I, ch. 94, SLA 1959

Sec. 16.05.831. Waste of salmon. (a) It is unlawful for a person to waste salmon intentionally, knowingly, or with reckless disregard for the consequences. In this section, "waste" means the failure to utilize the majority of the carcass, excluding viscera and sex parts, of salmon which are to be

(1) sold to a commercial buyer or processor;

(2) utilized for consumption by humans or domesticated animals; or

(3) utilized for scientific, educational, or display purposes.

(b) The commissioner may authorize other uses of salmon upon request if he finds that to do so would be consistent with maximum and wise use of the resource.

(c) A person who violates this section or a regulation adopted under it is punishable by a fine of not more than $10,000, or by imprisonment for not more than six months, or by both. In addition, a person who violates this section is subject to a civil action by the state for the cost of replacing the salmon wasted. (§ 3 ch 89 SLA 1975; § 3 ch 99 SLA 1975)

Editor's note. — This section is set out as it appears in ch. 99, SLA 1975. Chapters 89 and 99, SLA 1975, are virtually identical except that ch. 99 contains a § 5, providing for an effective date of the act. Section 1, chs. 89 and 99, SLA 1975, provides, in subsection (b): "It is the intent of sec. 3 of this Act to control the waste of salmon resources."

Sec. 16.05.835. Maximum length of salmon seine vessels. No salmon seine vessel may be longer than 50 feet, official Coast Guard register length, and 58 feet overall length except vessels that have fished for salmon with seines in waters of the state before January 1, 1962, as 50-foot, official Coast Guard register length vessels. (§ 1 ch 252 SLA 1970)

HB1

Sec. 16.05.840. Fishway required. If the commissioner considers it necessary, every dam or other obstruction built by any person across a stream frequented by salmon or other fish shall be provided by that person with a durable and efficient fishway and a device for efficient passage for downstream migrants. The fishway or device or both shall be maintained in a practical and effective manner in the place, form and capacity the commissioner approves, for which plans and specifications shall be approved by the department upon application to it. The fishway or device shall be kept open, unobstructed, and supplied with a sufficient quantity of water to admit freely the passage of fish through it. (§ 30 art I ch 94 SLA 1959)

Sec. 16.05.850. Hatchery required. If a fishway over a dam or obstruction is considered impracticable by the commissioner because of cost, the owner of the dam or obstruction, in order to compensate for the loss resulting from the dam or obstruction shall, at his option: (1)

(4) better manage the fishery by providing a visible means of determining how much gear is actually being fished."

Sec. 16.10.130. Penalties for violation of § 120 of this chapter. A person who violates § 120 of this chapter is guilty of a misdemeanor and upon conviction is punishable by imprisonment for not more than six months, or by a fine of not more than $1,000 or by both. (§ 2 ch 26 SLA 1959)

Editor's note. — Section 4, ch. 103, SLA 1977, effective August 1, 1978, amended this section to read as follows: "**Sec. 16.10.130. Penalties for violation of §§ 120 — 125 of this chapter.** A person who violates §§ 120 — 125 of this chapter is guilty of a misdemeanor, and upon conviction is punishable by imprisonment for not more than six months, or by a fine of not more than $1,000, or by both.

Section 1, ch. 103, SLA 1977, provides: "INTENT. It is the intent of this Act to require positive identification of shellfish pots or buoys, or both, used in the taking of king crab within areas in which the Board of Fisheries has regulations limiting the total amount of gear allowed per vessel in order to

(1) more adequately enforce shellfish pot limits for king crab;

(2) assist in preventing the theft of gear;

(3) prevent the transfer of gear to prohibited areas; and

(4) better manage the fishery by providing a visible means of determining how much gear is actually being fished."

Article 3. Herring Spawn.

Section

140 — 170. [Repealed]

172. Legislative policy on utilization of herring

Section

173. Utilization of commercially taken herring

Secs. 16.10.140 — 16.10.170. Repealed by § 2 ch 91 SLA 1970.

Sec. 16.10.172. Legislative policy on utilization of herring. The legislature finds the following: (1) extensive and valuable herring populations are available for harvest in waters subject to the jurisdiction of the state; (2) commercial markets are available for herring processed in several forms; (3) one processing technique presently employed involves deliberately permitting decomposition of the herring carcass to allow for removal and subsequent sale of the roe product, with the consequence that the flesh is unusable and discarded. The legislature declares that the process referred to in (3) of this section is wasteful and does not constitute utilization of this resource for the maximum benefit of the people. Therefore, it is the policy of the legislature that this process should be eliminated to the fullest extent possible. (§ 1 ch 9 SLA 1977)

Effective date. — Section 2, ch. 9, SLA 1977, provides: "This Act takes effect January 1, 1978."

Sec. 16.10.173. Utilization of commercially taken herring. (a) It is unlawful for a person, as defined in AS 01.10.060 and including a joint venture, to waste or to cause to be wasted any commercially taken herring

(b) As used in this section, "waste" means the failure to use the flesh of commercially taken herring for reduction to meal, production of fish food, human consumption, food for domestic animals, scientific or educational purposes, or round herring bait. Normal, inadvertent loss of flesh associated with the uses described in this subsection which cannot be prevented by practical means does not constitute waste. The commissioner may authorize other uses of commercially taken herring not inconsistent with the intent of this section and § 172 of this chapter at his discretion upon receipt of a request accompanied by a detailed justification.

(c) For purposes of this section, "flesh" means all muscular body tissue surrounding the bony skeleton of the herring.

(d) The Board of Fisheries may adopt regulations under the Administrative Procedure Act (AS 44.62) it considers necessary for implementation of this section. The board may delegate its authority under this section to the commissioner.

(e) The provisions of this section do not apply to herring taken commercially in the Bering Sea (including appurtenant bays, sounds, estuaries, and water of the state) north of 56° North Latitude, until January 1, 1979. (§ 1 ch. SLA 1977)

Effective date. — Section 2, ch. 9, SLA 1977, provides: "This Act takes effect January 1, 1978."

Article 4. Migratory Fish and Shellfish.

Section
160. Legislative findings
190. Regulations
200. Unlawful taking prohibited
210. Unlawful sale or offer prohibited
220. Penalties for violation of §§ 200 and 210 of this chapter
230. Exemptions

Sec. 16.10.180. Legislative findings. The legislature finds and recognizes these facts:

(1) Migratory fish and migratory shellfish are present in commercial quantities inside and outside the territorial waters of the state.

(2) Migratory fish and migratory shellfish taken from the waters of the state are indistinguishable, in most cases, from those taken from the adjacent high seas.

(3) Substantial quantities of migratory fish and migratory shellfish move inshore and offshore intermittently and at various times during a given year and in so doing often enter and leave territorial waters of the state

Effect of amendment. — The 1975 amendment deleted "rule or" preceding "regulation" near the middle of the section and substituted "Board of Fisheries" for "board" near the middle and near the end.

Cited in Hjelle v. Brooks, 424 F. Supp. 595 (D. Alas. 1976).

Sec. 16.10.220. Penalties for violation of §§ 200 and 210 of this chapter. A person who violates §§ 200 and 210 of this chapter is guilty of a misdemeanor, and upon conviction is punishable by a fine of not more than $5,000 or by imprisonment for not more than one year, or by both. (§ 5 ch 121 SLA 1960)

Sec. 16.10.230. Exemptions. Sections 180 — 220 of this chapter do not apply to

(1) those species of salmon in international waters of the Pacific Ocean which are regulated by the International Pacific Salmon Fisheries Commission or by laws of the United States or rules or regulations promulgated under those laws;

(2) the use of nets for fishing for or taking salmon for the purposes of scientific investigation authorized by state law; and

(3) existing laws and regulations prohibiting the taking of salmon by means of nets on the high seas. (§ 6 ch 121 SLA 1960)

Article 5. Transportation of Fish and Shellfish.

Section

240 Transportation of King, Dungeness or Tanner crab

250 Penalty

Sec. 16.10.240. Transportation of King, Dungeness or Tanner crab. No person may take out of, ship, transport, or send from this state any live King crab, species Paralithodes camtschatica, live Dungeness crab, species Cancer magister, or live Tanner crab, species Chionoecetes bairdi, except that all of these species may be shipped live via air freight after pre-packaging. (§ 1 ch 33 SLA 1962; am § 2 ch 5 SLA 1966; am § 1 ch 14 SLA 1969)

Legislative committee reports. — For report on ch. 5, SLA 1966 (SB 182), see 1966 House Journal, pp. 50, 51. For report on ch. 14 SLA 1969 (HB 172 am S), see 1969 House Journal p. 216.

Sec. 16.10.250. Penalty. A person, association, or corporation violating § 240 of this chapter or contributing to or cooperating in the violation of § 240 of this chapter is guilty of a misdemeanor, and upon conviction is punishable by a fine of not more than $5,000, or by imprisonment for not more than one year, or by both. Each unlawful removal of live crab is a separate offense. Vessels and equipment used in or in aid of a violation of § 240 of this chapter may be seized and disposed of as provided in AS 16.05.190. Conviction under § 240 of this

Article 7. General Provisions.

Section	Section
905. Alien activities prohibited	930. Exempted activities
910. Penalty	940. Definitions
920. Certain acts made unlawful	950. Title of the chapter

Sec. 16.05.905. Alien activities prohibited. Alien persons not lawfully admitted to the United States are prohibited from engaging in commercial fishing activities or taking marine mammals in the territorial waters of the State of Alaska as they presently exist or may be extended in the future. (§ 1 ch 85 SLA 1964)

Sec. 16.05.910. Penalty. Any alien person who violates § 905 of this chapter is guilty of a misdemeanor, and upon conviction is punishable by a confiscation and forfeiture of the fishing vessel used in such violation, or by imprisonment of any such person for not more than one year, or by fine of not more than $10,000, or by all or any two of the foregoing punishments. (§ 2 ch 85 SLA 1964)

Sec. 16.05.920. Certain acts made unlawful. (a) Unless permitted by this chapter or by regulation made under this chapter, it is unlawful for a person to take, possess, transport, sell, offer to sell, purchase, or offer to purchase fish, game or marine aquatic plants, or any part of fish, game or aquatic plants, or a nest or egg of fish or game.

(b) No person may knowingly disturb, injure, or destroy a notice, signboard, seal, tag, aircraft, boat, vessel, automobile, paraphernalia, equipment, building or other improvement or property of the department used in the administration or enforcement of this chapter, or a poster or notice to the public concerning the provisions of this chapter, or regulation adopted under this chapter, or a marker indicating the boundary of an area closed to hunting, trapping, fishing or other special use under this chapter. No person may knowingly destroy, remove, tamper with, or imitate a seal or tag issued or used by the department or attached under its authority to a skin, portion, or specimen of fish or game, or other article for the purpose of identification or authentication in accordance with this chapter or a regulation adopted under this chapter. (§ 28 art I ch 94 SLA 1959; am § 3 ch 110 SLA 1970)

State may regulate extraterritorial fishing. — Paramount rights in the seabed and subsoil beyond the three mile limit were vested in the federal government. However, that principle of federal exclusivity does not preclude state regulation of fishery resources in the waters over that seabed. State v. Sieminski, Sup. Ct. Op. No. 1339 (File No. 2544) 556 P.2d 929 (1976).

Enforcement of the state's regulatory scheme in a case involving scallop fishing activities in extraterritorial waters was within the sphere of the state's prerogative to regulate extraterritorial fishing. State v.

Criterion in determining cost of license. — In determining the amount to be paid for fishing gear licenses, the criterion is the residence of the operator of the gear. 1959 Op. Att'y Gen., No. 38.

Sec. 16.05.680. Unlawful purchases. It is unlawful for a person, his agent, or his representative

(1) to have in his employ a fisherman who is not licensed under § 480 of this chapter,

(2) to purchase fish from a fisherman who is not so licensed, if the fisherman is not exempt under § 660 of this chapter from the license requirement of § 480 of this chapter without regard to the employment or purchase, or

(3) to purchase fish from an association which is not exempt under § 662 of this chapter. (§ 10 art III ch 94 SLA 1959; am § 2 ch 96 SLA 1963; am § 2 ch 73 SLA 1970)

Editor's note. — Section 11, ch. 105, SLA 1977, effective January 1, 1978, amended this section to read as follows: "It is unlawful for a person, his agent, or his representative

"(1) to have in his employ, in the harvesting, transporting or purchasing of fish, a fisherman who neither is licensed under § 480 of this chapter nor is the holder of a permit issued under ch. 43 of this title.

"(2) to purchase fish from a fisherman who neither is the holder of a permit issued under ch. 43 of this title, nor is exempt under § 660 of this chapter, or

"(3) to purchase fish from an association other than one to which a permit has been issued under § 662 of this chapter."

Sec. 16.05.685. Processing on commercial crab fishing vessels. (a) It is unlawful to process any species of crab on a commercial crab fishing vessel unless

(1) the vessel remains within one registration area from the time the crab is caught to the time of dock delivery;

(2) the operator of the vessel notifies the department of proposed changes in location before moving to another registration area; and

(3) the operator of the vessel provides quarters for inspectors of the department who may inspect the crab catch on the vessel at any time.

(b) The restrictions set out in (a) of this section do not apply to processing aboard the fishing vessel for and as donations to charity, for consumption aboard the vessel, or for dockside retail sales from the vessel.

(c) In this section,

(1) "process" means to butcher, cook, chill, or freeze crab for commercial use;

(2) "registration area" means a specific king crab registration area as designated by regulation of the Board of Fisheries and includes the Bering Sea shellfish area and the western Aleutian Islands king crab area. (§ 2 ch 70 SLA 1974; am § 12 ch 206 SLA 1975)

Effect of amendment — The 1975 amendment substituted "Board of Fisheries" for "Board of Fish and Game" in paragraph (2) of subsection (c).

IN THE HOUSE BY THE RESOURCES COMMITTEE

CS FOR HOUSE BILL NO. 20

IN THE LEGISLATURE OF THE STATE OF ALASKA

ELEVENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act relating to commercial fishing loans; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 16.10.310(a)(1)(C) is amended to read:

(C) corporations, partnerships, or joint ventures, 100 per cent of which are owned by individual commercial fishermen who have been state residents for a continuous period of five years immediately preceding the date of application for a loan under AS 16.10.300 - 16.10.370 and have had a crewmember or commercial fishing license under AS 16.05.480 or a permit under AS 16.43 for any one [THREE] of the past five years, and who actively participated in the fishery during that period, for the repair, restoration or upgrading of existing vessels and gear, for the purchase of gear, and for the construction and purchase of vessels; [.]

* Sec. 2. AS 16.10.320(a)(5) is amended to read:

(5) may not exceed 75 per cent of the appraised value of the collateral used to secure the loan, except that a loan granted under AS 16.10.111 for the purchase of an Alaska limited entry permit may not exceed an amount determined in accordance with (f) of this section.

* Sec. 3. AS 16.10.320(f) is amended to read:

(f) A loan may not be made to a borrower under AS 16.10.300 - 16.10.370 if it would result in a total indebtedness of the borrower to the commercial fishing revolving loan fund in excess of $200,000,

for loans covered under this act as qualified under ~~this act~~ AS sec. 16.10 of this chapter

borrower under AS 16.10.300 - 16.10.370 may use up to 49 per cent of the amount borrowed to refinance any outstanding loans of the borrower, regardless of the source of the loans [EXCEPT AS PROVIDED IN (c) OF THIS SECTION, NO MORE THAN ONE COMMERCIAL FISHING LOAN MAY BE MADE TO A PERSON FOR THE PURCHASE, CONSTRUCTION, REPAIR OR UPGRADING OF A FISHING VESSEL OR ITS GEAR]. A loan to an associate of the borrower is considered to be a loan to the borrower. For the purposes of this section, "associate of the borrower" means

(1) a corporation or other organization of which the borrower is an officer, director or partner, or is, directly or indirectly, the beneficial owner of 10 per cent or more of any class of equity securities;

(2) a person who is, directly or indirectly, the beneficial owner of 10 per cent or more of any class of equity securities of the borrower;

(3) a trust or other estate in which the borrower has a substantial beneficial interest or as to which the borrower serves as trustee or in a similar fiduciary capacity[;

(4) A RELATIVE OR SPOUSE OF THE BORROWER OR A RELATIVE OF THE SPOUSE, WHO HAS THE SAME HOME AS THE BORROWER;

(5) A PERSON DIRECTLY OR INDIRECTLY CONTROLLING, CONTROLLED BY, OR UNDER COMMON CONTROL WITH, THE BORROWER].

Sec. . AS 16.10.320 is amended by adding a new subsection to read:

(f) A loan granted under AS 16.10.333(a) for the purchase of an Alaska limited entry permit may not exceed 90 per cent of the appraised value of the collateral used to secure the loan; however, a loan granted under AS 16.10.333(a) for the purchase of an Alaska limited entry permit may be made in an amount up to 100 per cent of the appraised value of the collateral used to secure the loan if the borrower demonstrates to

the satisfaction of the commissioner, in accordance with regulations adopted under the Administrative Procedure Act (AS 44.62), financial hardship and, as a result of financial hardship, a need for a greater loan amount.

* Sec. 5. AS 16.10.335 is amended to read:

Sec. 16.10.335. DEFAULT AND FORECLOSURE. (a) If the debtor defaults upon a note for which a limited entry permit has been pledged as security under AS 16.10.333 or under AS 16.10.338, the commissioner shall provide the debtor, by registered or certified mail sent to his last known address on file with the commissioner, with a notice of default which includes

(1) a description of the security given for the note including the number assigned to the pledged permit by the commission;

(2) the date upon which the default occurred;

(3) the amount of arrearages as of the date of the notice, the total amount remaining on the note less unearned interest, and the amount of daily interest;

(4) a statement that the debtor may, within 15 days of the postmark date of the notice, request a hearing at which he may submit evidence showing he has not defaulted;

(5) a statement that the note may be reinstated if brought current within 60 days from the postmark date of the notice;

(6) a statement that the note may be paid in full less unearned interest within 90 days from the postmark date of the notice;

(7) the place where reinstatement or payment in full may be made; and

(8) a notice in at least 10-point bold type stating: "IMPORTANT: YOUR FAILURE TO REINSTATE OR PAY THIS NOTE IN FULL BY THE DATE SPECIFIED WILL RESULT IN A FORFEITURE OF ALL RIGHTS TO THE PERMIT

AND THE POSSIBILITY OF LEGAL ACTION BEING INSTITUTED AGAINST YOU."

(b) Upon the debtor's failure to reinstate or satisfy the note within the time specified in (a) of this section, his [EQUITABLE] interest in the permit is terminated by operation of law without further notice. Any entry permit cards issued to him under the permit shall be cancelled immediately upon receipt by the commission of a certificate of termination containing a copy of the notice required by (a) of this section issued by the commissioner.

* Sec. 6. AS 16.10 is amended by adding a new section to read:

Sec. 16.10.338. ENTRY PERMITS AS COLLATERAL. Alaska limited entry permits may be used as security for loans under AS 16.10.310(a). The provisions of AS 16.10.335 and 16.10.337 apply to Alaska limited entry permits pledged as security for loans in accordance with this section.

* Sec. 7. AS 16.43.170(a) is amended to read:

(a) Except as provided in AS 16.10.333 - 16.10.338 [AS 16.10.333 - 16.10.337], entry permits and interim-use permits are transferable only through the commission as provided in this section and AS 16.43.180 and under regulations adopted by the commission.

* Sec. 8. This Act is retroactive to July 1, 1978.

* Sec. 9. This Act takes effect immediately in accordance with AS 01.10.-070(c).

Editor's note. — As to legislative findings and the purposes of the enabling act, see §§ 1 and 2, ch. 159, SLA 1978, respectively, in the 1978 Temporary and Special Acts and Resolutions in Binder 9.

Sec. 44.54.010. Commercial Fishing and Agriculture Bank. (a) There is established the Commercial Fishing and Agriculture Bank. The bank is a public corporation and government instrumentality in the Department of Commerce and Economic Development but has a legal existence independent of and separate from the state. The exercise by the bank of the powers conferred by this chapter is considered an essential governmental function of the state. Except as otherwise provided in this chapter, the bank is subject to the provisions of AS 10.15.005 — 10.15.600.

(b) For the purpose of the initial funding of the bank's operations, the board of directors shall issue nonvoting, preferred shares of stock in the bank and shall determine the value of each share. The State of Alaska, through appropriate agencies, shall purchase the nonvoting, preferred shares initially issued by the bank. Shares purchased by the state shall be repurchased by the bank within 20 years after their purchase. If the bank fails to repurchase the shares within 20 years, the commissioner of commerce and economic development may dissolve the bank.

(c) After the board of directors has completed the necessary organizational matters described in §§ 30 and 40 of this chapter, the commissioner of revenue may purchase with funds from the general fund up to $2,000,000 of preferred stock of the bank during fiscal year 1979 at such time and with terms agreed upon by the commissioner and the board. (§ 3 ch 159 SLA 1978)

Sec. 44.54.020. Board of directors. The bank shall be managed by a board of directors consisting of five members. Initial appointments to the board shall be made by the governor. Thereafter, board members shall be elected by the shareholders. The board members shall annually elect a chairman from among themselves. The purpose of the board is to manage the assets of the bank. (§ 3 ch 159 SLA 1978)

Sec. 44.54.030. Articles of incorporation. Not later than November 1, 1978, the board of directors shall file with the commissioner of commerce and economic development articles of incorporation as provided in AS 10.15.340 — 10.15.355 except that any filing fees shall be waived. (§ 3 ch 159 SLA 1978)

Sec. 44.54.040. Bylaws. The board of directors shall adopt the initial bylaws of the bank. The power to alter, amend or repeal the bylaws is vested in the board of directors. The bylaws may contain provisions for the regulation and management of the affairs of the bank not inconsistent with this chapter or other provisions of law. (§ 3 ch 159 SLA 1978)

Sec. 44.54.050. Membership meetings. Upon filing the articles of incorporation, the board of directors, with the assistance of the commissioner of commerce and economic development or his designee, may hold public meetings throughout the state for the purpose of explaining to members of the commercial fishing and farming industries the functions of the bank and to encourage membership in the bank. (§ 3 ch 159 SLA 1978)

Sec. 44.54.060. Membership stock. (a) The board of directors shall issue shares of membership stock in the bank in the amounts and with the value determined by the board and stated in the articles of incorporation.

(b) Loans made to shareholders of the bank under the provisions of

this chapter shall be in accordance with a schedule of maximum amounts adopted by the board of directors based upon proportional ownership of shares. (§ 3 ch 159 SLA 1978)

Sec. 44.54.070. Executive director; staff. (a) The board of directors may hire and determine the salary of an executive director. The executive director shall be responsible for the ordinary business of the bank.

(b) The executive director, with the approval of the board of directors, may hire and determine the salary of staff reasonably necessary for the efficient performance of the duties of the bank. (§ 3 ch 159 SLA 1978)

Sec. 44.54.080. Exempt status. Employees of the bank are in the exempt service under AS 39.25. (§ 3 ch 159 SLA 1978)

Sec. 44.54.090. Term of office. The members of the board shall be appointed for terms of three years, and they may be reappointed. Terms shall be staggered. Initial terms shall be two members serving for one year, two members serving for two years, and one member serving for three years. (§ 3 ch 159 SLA 1978)

Sec. 44.54.100. Quorum. A majority of the members of the board constitutes a quorum for the transaction of business and the exercise of the powers and duties of the board. (§ 3 ch 159 SLA 1978)

Sec. 44.54.110. Compensation of board members. Members receive compensation at a rate determined by the board for each day the board meets if they attend the meeting and are entitled to per diem and travel allowances as provided by law for members of state boards and commissions. (§ 3 ch 159 SLA 1978)

Sec. 44.54.120. Bonds of the bank. (a) The bank may borrow money and may issue bonds for that purpose, including but not limited to bonds on which the principal and interest are payable

(1) exclusively from the income and receipts or other money derived from the project financed with the proceeds of the bonds;

(2) exclusively from the income and receipts or other money derived from designated projects whether or not they are financed in whole or in part with the proceeds of the bonds; or

(3) from its income and receipts or other assets generally, or a designated part or parts of them.

(b) Bonds shall be authorized by resolution of the board of directors, and be dated and shall mature as the resolution may provide, except that no bond may mature more than 30 years from the date of its issue. Bonds shall bear interest at the rate or rates, be in the denominations, be in the form, either coupon or registered, carry the registration privileges, be executed in the manner, be payable in the medium of payment, at the place or places, and be subject to the terms of redemption which the resolution or a subsequent resolution may provide.

(c) All bonds, regardless of form or character, shall be negotiable instruments for all the purposes of the Uniform Commercial Code.

(d) All bonds may be sold at public or private sale in the manner, for the price or prices, and at the time or times which the board of directors may determine.

(e) The superior court shall have jurisdiction to hear and determine suits, actions or proceedings relating to the bank, including suits, actions or proceedings brought to foreclose or otherwise enforce a mortgage, pledge, assignment or security of a holder of its bonds or by a trustee for or other representative of the holders. (§ 3 ch 159 SLA 1978)

Sec. 44.54.130. Trust indentures and trust agreements. In the discretion of the board of directors an issue of bonds may be secured by a trust indenture or trust agreement between the bank and a corporate trustee (which may be a trust company, bank, or national banking association, with corporate trust powers, located inside or outside the state) or by a secured loan agreement or other instrument or under a resolution giving powers to a corporate trustee by means of which the bank may

(1) make and enter into any and all the covenants and agreements with the trustee or the holders of the bonds which the board of directors may determine to be necessary or desirable, including, without limitation, covenants, provisions, limitations and agreements as to

(A) the application, investment, deposit, use and disposition of the proceeds of bonds of the bank or of money or other property of the bank or in which it has an interest;

(B) the terms and conditions upon which additional bonds of the bank may be issued;

(2) pledge, mortgage or assign money, leases, agreements, property or other assets of the bank either presently in hand or to be received in the future, or both; and

(3) provide for any other matters of like or different character which in any way affect the security or protection of the bonds. (§ 3 ch 159 SLA 1978)

Sec. 44.54.140. Validity of pledge. It is the intention of the legislature that a pledge made in respect of bonds shall be valid and binding from the time the pledge is made; that the money or property so pledged and thereafter received by the bank shall immediately be subject to the lien of the pledge without physical delivery or further act; and that the lien of the pledge shall be valid and binding as against all parties having claims of any kind in tort, contract or otherwise against the bank irrespective of whether the parties have notice. Neither the resolution, trust agreement nor any other instrument by which a pledge is created need be recorded or filed under the provisions of the Uniform Commercial Code to be valid, binding or effective against the parties. (§ 3 ch 159 SLA 1978)

Sec. 44.54.150. Nonliability on bonds. (a) Neither the members of the board of directors, the executive director, staff, nor a person executing the bonds is liable personally on the bonds or subject to personal liability or accountability by reason of the issuance of the bonds.

(b) The bonds issued by the bank may not constitute an indebtedness or other liability of the state or of a political subdivision of the state, except the bank, but shall be payable solely from the income and receipts or other funds or property of the bank. The bank may not pledge the faith or credit of the state or of a political subdivision of the state, except the bank, to the payment of a bond, and the issuance of a bond by the bank shall not directly or indirectly or contingently obligate the state or a political subdivision of the state to appl money from, or levy or pledge any form of taxation whatever to the payment of the bond. (§ 3 ch 159 SLA 1978)

Sec. 44.54.160. Pledge of the state. The state pledges to and agrees with the holders of the bonds issued under this chapter and with the federal agency or regional institution of the federal farm credit system which loans or contributes funds in respect of a project, that the state will not limit or alter the rights and powers vested in the bank by this chapter to fulfill the terms of any contract made by the bank with the holders or federal agency or regional institution of the federal farm credit system, or in any way impair the rights and remedies of the holders until the bonds, together with interest on them, with interest on unpaid installments of interest, and all costs and expenses in connection with any action or proceeding by or on behalf of the holders, are fully met and discharged. The bank is authorized to include this pledge and agreement of the state, insofar as it refers to holders of bonds of the bank in a contract with the holders, and insofar as it relates to a federal agency or regional institution of the federal farm credit system, in a contract with a federal agency or regional institution of the federal farm credit system. (§ 3 ch 159 SLA 1978)

Sec. 44.54.170. Exemption from taxation. The real and personal property of the bank and its assets, income and receipts are declared to be property of a political subdivision of the state and shall be exempt from all taxes and special assessments of the state or a political subdivision of the state, including, without limitation, all boroughs, cities, municipalities, school districts, public utility districts, and other taxing units. All bonds of the bank are declared to be issued by a political subdivision of the state, to be for an essential public and governmental purpose, and to be a public instrumentality, and the bonds, and the interest on them, the income from them, the transfer of the bonds, and all assets, income and receipts pledged to pay or secure the payment of the bonds, or interest on them, shall at all times be exempt from taxation by or under the authority of the state, except for inheritance and estate

taxes and taxes on transfers by or in contemplation of death. (§ 3 ch 159 SLA 1978)

Sec. 44.54.180. Bonds l[illegible] l investments for fiduciaries. The bonds of the bank are securities .. which all public officers and bodies of the state and all municipalities and municipal subdivisions, all insurance companies and associations and other persons carrying on an insurance business, all banks, bankers, trust companies, savings banks, savings associations, including savings and loan associations and building and loan associations, investment companies and other persons carrying on a banking business, all administrators, guardians, executors, trustees and other fiduciaries, and all other persons who are now or may hereafter be authorized to invest in bonds or other obligations of the state, may properly and legally invest funds including capital in their control or belonging to them. Notwithstanding any other provisions of law, the bonds of the bank are also securities which may be deposited with and may be received by all public officers and bodies of this state and all municipalities and municipal subdivisions for any purpose for which the deposit of bonds or other obligations of the state is now or may hereafter be authorized. (§ 3 ch 159 SLA 1978)

Sec. 44.54.190. Conflicts of interest. No member of the board of directors may vote on a transaction of the bank under this chapter if he is a party to the transaction. (§ 3 ch 159 SLA 1978)

Sec. 44.54.200. Reports and publications. The board of directors shall publish an annual report to the bank's shareholders. The report shall be made available to the public and shall include financial statements audited by independent outside auditors, a statement of the amount of money received by the bank from each source during the period covered, a statement of the bank's investments, a description of the bank's investment activity during the period covered by the report, an analysis of economic and other effects of investment decisions on the state's commercial fishing and agriculture industries, and any other information the board believes would be of interest to the governor, the legislature and the public. The board may also publish such other reports as it considers desirable to carry out its purposes. (§ 3 ch 159 SLA 1978)

Sec. 44.54.210. Powers of the bank. The bank may

(1) make variable rate or fixed rate loans to individuals who are residents and who are engaged in commercial agriculture or fishing, including harvesters, processors and marketers, or to corporations, partnerships or joint ventures primarily engaged in commercial agriculture or fishing, the majority interest of which is beneficially owned by residents of the state and a majority of the owners of which are residents of the state, if the recipient of the loan is a shareholder of the bank; however, the bank may make a loan under this paragraph to a corporation, partnership, or joint venture for the purchase of a new

or existing fishing vessel or for the repair or renovation of an existing fishing vessel, the primary purpose of which is to commercially harvest fishery resources, only if the corporation, partnership, or joint venture is wholly owned and controlled by residents of the state and if the recipient of the loan is a shareholder of the bank;

(2) make and alter bylaws necessary or desirable to carry out its corporate functions;

(3) establish amortization plans for repayment of loans, which may include extensions for poor fishing or farming seasons;

(4) enter into agreements with regional institutions of the federal farm credit system, private lending institutions, and other state agencies or agencies of the federal government, to carry out the purposes of this chapter;

(5) adopt, alter, and use a corporate seal;

(6) sue and be sued in the name of the bank;

(7) issue bonds to carry out any of its corporate purposes and powers;

(8) sell, lease as lessor or lessee, exchange, donate, convey or encumber in any manner by mortgage or by creation of any other security interest, real or personal property owned by it, or in which it has an interest, when, in the judgment of the board of directors, the action is in furtherance of its corporate purposes;

(9) incur secondary liability by guaranty or endorsement of the obligations of another corporation or legal entity when, in the judgment of the board of directors, the action is in furtherance of its corporate purposes;

(10) make loans as provided in (1) of this section in participation with financial institutions, and establish and regulate the terms of the loans;

(11) make contracts and execute instruments necessary or convenient in the exercise of its corporate powers;

(12) acquire by purchase, lease, bequest, devise, gift, the satisfaction of debts, or the foreclosure of mortgages, and hold, maintain, use, operate, and convey real or personal property;

(13) borrow money and issue secured and unsecured evidence of indebtedness for a corporate purpose or to fund, refund, pay, or discharge outstanding obligations, and enter agreements and contracts concerning these obligations;

(14) secure the payment of its obligations by pledge or mortgage or other lien on its contracts, revenues, income, or property;

(15) appoint officers, employees, trustees for certificate holders, and agents, and prescribe their powers and duties;

(16) provide technical services to shareholders; for the purposes of this paragraph, "technical services" includes services that will enhance the ability of the shareholder to obtain financial assistance from the bank;

(17) make loans, as provided in (1) of this section, secured by liens subordinate to valid first liens and security agreements granted to a private lending institution.

(18) participate with state departments and agencies in formulating policy and in planning for the development of commercial fishing and agriculture in the state;

(19) do what is necessary or desirable to carry out the corporate purposes and powers expressed or implied in this chapter. (§ 3 ch 159 SLA 1978)

Sec. 44.54.220. Transition. Upon the repurchase of all the nonvoting, preferred shares initially issued by the bank and purchased by agencies of the state, the provisions of this chapter lapse and the bank may proceed to operate as a private cooperative corporation under the terms of its bylaws and subject to the provisions of AS 10.15.005 — 10.15.600. (§ 3 ch 159 SLA 1978)

Chapter 55. Alaska Gas Pipeline Financing Authority.

Section
10. Creation of authority
20. Membership
30. Officers and quorum
40. Compensation
50. Staff
60. Legal counsel
70. Purpose of authority
80. General powers
90. Bonds of the authority
100. Submission of financial an Alaska impact plan
110. Legislative approval
115. Nomination of a member of the board
120. Trust indentures and trust agreements
130. Nonliability on bonds
140. Pledge of the state
150. Exemption from taxation
160. Bonds legal investments for fiduciaries
170. Regulations
180. Annual audit
190. Annual report
200. Definitions

Cross reference. — As to exemption of employees of the Alaska Gas Pipeline Financing Authority from the provisions of the State Personnel Act, see AS 39.25.110(21).

Effective date of chapter. — Section 4, ch 90, SLA 1978, makes this chapter effective June 30, 1978, in accordance with AS 01.10.070(c).

Editor note. — As to legislative findings relating to the passage of AS 44.55, see § 1, ch 90, SLA 1978 in the 1978 Temporary and Special Acts and Resolutions in Binder 9.

Sec. 44.55.010. Creation of authority. There is created the Alaska Gas Pipeline Financing Authority. The authority is a public corporation of the state. It is an instrumentality of the state within the Department of Revenue, but has a legal existence independent of and separate from the state. Exercise by the authority of the powers conferred by this chapter is an essential governmental function of the state. (§ 2 ch 90 SLA 1978)

Sec. 44.55.020. Membership. The membership of the authority consists of the commissioner of revenue, the commissioner of commerce

March 12, 1979

The Honorable Clem Tillion
President of the Senate
Alaska State Legislature

Re: CSSB 132

Dear Mr. President:

On March 9, 1979, you requested me, in my capacity as chairman of the Senate Judiciary committee, to review the captioned bill and to report to the Senate as to its constitutionality.

At the outset, I should state that the following comments are mine and mine alone; I do not profess to speak for the other members of the Judiciary committee. It should likewise be noted that I do not claim any special expertise in the field of constitutional law, nor have I had sufficient time to devote to the research which would ordinarily be entailed in analyzing this bill.

A close reading of CSSB 132 indicates two sections of the bill would run afoul of the Alaska Constitution. Those two are 43.75.136, providing for payments to the Commercial Fishing and Agriculture Bank, and 43.75.131, making increased refunds to local government.

Article IX, sec. 7 of the Alaska Constitution provides as follows:

> "The proceeds of any state tax or license shall not be dedicated to any special purpose except when required by the federal government for state participation in federal programs. This provision shall not prohibit the continuance of any dedication for special purposes existing upon the date of ratification of the constitution by the people of Alaska."

I was assisted in my efforts to check the constitutionality of the questioned sections of the bill by the opinions of two Attorneys General dated, respectively, April 4, 1969 and May 2, 1975. Both opinions not only considered the case law of this and other jurisdictions, sparse as it is, but they also reviewed the minutes of the Alaska Constitutional Convention and committees thereof. It is evident, in both these opinions, that the framers of our constitution did not want to have additional taxes earmarked or dedicated to special purposes.

A dedication of ten per cent of the fish tax existed at the time of the ratification of the Constitution, and the dedication clearly falls within the exemption. Problems arise when that ten per cent is increased, as in the instant bill, to thirty-three and one-third per cent. The issue of the constitutionality of increasing the percentage of an existing dedicated fund was not specifically addressed by either of the opinions reviewed. However, material contained in these opinions strongly suggests that increasing an existing dedicated fund was not intended by the Constitution.

It is equally clear that payments to the Commercial Fishing and Agriculture Bank and earmarking state tax revenue for the construction of docks, etc. by local governmental units would do violence to the Constitution of the State of Alaska.

The Attorney General's opinion of April 4, 1969 holds:

> "The proceeds of any state tax or license which must be shared with local governmental units are dedicated to a special purpose and are in violation of Article IX, sec. 7 of the Alaska Constitution."

The Attorney General's opinion of May 2, 1975 states:

> "Accordingly, it is our conclusion that the dedication of any source of public revenue: tax, license, rental, sale, bonus-royalty, royalty, or whatever is limited by the state Constitution to those existing when the Constitution was ratified or required for participation in federal programs."

Conclusion: CSSB 132, as written, is patently unconstitutional.

Respectfully submitted,

Robert H. Ziegler, Sr.
Chairman
Senate Judiciary Committee

IN THE HOUSE

HOUSE BILL NO. 40

IN THE LEGISLATURE OF THE STATE OF ALASKA

ELEVENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act relating to underutilized fish species."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 16.05.090 is amended by adding a new subsection to read:

(d) There is established in the Department of Fish and Game a section of underutilized fish species within the division of commercial fisheries.

* Sec. 2. AS 16.05 is amended by adding a new section to read:

Sec. 16.05.096. DUTIES OF SECTION OF UNDERUTILIZED FISH SPECIES. (a) The section of underutilized fish species shall

(1) compile existing data and conduct studies, either independently or in coordination with other agencies to accomplish the duties established in (2) - (4) of this subsection;

(2) encourage investment by private enterprise in the technological development and economic utilization of the underutilized fisheries resources;

(3) develop and maintain a comprehensive, coordinated state plan for the present and long-range enhancement and development of the state's underutilized fisheries;

(4) promote increased use of the underutilized fisheries food resources of Alaska waters and continental shelf areas;

(5) report annually to the legislature regarding its accomplishments under this section and proposals of plans and activities for the next fiscal year, not later than 20 days after the convening of each regular session.

(b) The commissioner shall, by regulation, define "underutilized fish species" for the purposes of this section.

Feb. 5, 1970

To: The House Resources Committee
Re: House Bill No. 42

Representatives:

As I will be unable to testify in person today I am submitting written testimony to make you aware of the ILWU's feelings in this matter.

An "Underutilized Fish Species Board" seems inappropriate to me at this time. I think the concept is a good one, and one which eventually should come into existence; however, in reviewing the purpose and goals of the Board as outlined in House Bill No. 42, I find that they are parallel to those goals and purposes of the Governor's Bottom Fish Task Force. Rather than see duplicate bureaucratic agencies, both involved in bottom fish development, both with parallel objectives, both with associated, combating budgets, vying for additional funding, I think it is of utmost importance -- particularly at this early stage of development -- for Alaska to house its' underutilized specie programs under one roof.

In that vein, I would advocate routing the anticipated $500,000 funding for the proposed "Underutilized Fish Species Board" to the Bottom Fish Task Force. If we can afford to fund a new Board then we can afford not to fund that Board, and instead to use that funding to provide additional funding to a committee already in existence for the same purpose and in need of additional funding.

Down the road a few years, at a time when we are beyond the infant stages of bottom fish development, an "Underutilized Fish Species Board" would probably be very valuable. At this time though, when development of an Alaskan bottom fish industry is still very much a hazy image on the horizon, we need to step forward as one, with all our weight on the same foot -- to consolidate, not to diversify.

H 60 (Rev. 12/78)

HB 46

January 15, 1979

Speaker of the House
Alaska State Legislature
Juneau, Alaska 99811

Dear Mr. Speaker:

Under the authority of art. III, sec. 18 of the Alaska Constitution, I am transmitting a bill to authorize the issuance of special harvest area entry permits to private non-profit hatcheries. These permits would enable hatchery operators to harvest and sell surplus fish returning to their facilities, with conventional gear, but without ordinary limited-entry permits. This would be accomplished under restrictions and conditions established by the Board of Fisheries and the Department of Fish and Game. Inefficiency and waste would be eliminated by such harvesting. Like the educational-entry permits authorized by sec. 10, ch. 123 SLA 1978, special harvest area permits will bridge a small gap in the limited entry law.

Sincerely,

S/JSH

Jay S. Hammond
Governor

Approves of HB48
with 3 points
— hatchery should have primary purpose of contributing to common property fisheries
— hatchery budgets should have review mechanism
— special harvest area should be available to common property harvest after brood stock and cost recovery

S. Southeast Reg. Aquaculture Assoc. take same stand as UFA.

Proposed amendment to House Bill 48.

Sec. 16. 43. 420. AUTHORIZED GEAR. For the purposes of harvesting salmon; in the special harvest area, a special harvest area permit holder may employ any fishing gear designated as legal gear in the applicable special harvest area by the Board of Fisheries. The Board of Fisheries may designate any gear as legal gear in the special harvest area not withstanding any other prohibition in Title 16.

SHELDON JACKSON COLLEGE HATCHERY STAFF SUPPORTS THE CONCEPT OF HOUSE BILL 48 OF ESTABLISHING A SPECIAL HARVEST AREA ENTRY PERMIT FOR HOLDERS OF PRIVATE NON-PROFIT HATCHERY PERMIT PROVIDED THAT

(1) SAID ENTRY PERMIT ELIMINATES RATHER THAN ADDS TO THE NECESSITY TO OBTAIN OTHER ENTRY, INTERIM-USE AND EDUCATIONAL PERMITS FOR THE PURPOSE OF HATCHERY HARVEST AND

(2) IT DOES NOT ELIMINATE THE ALTERNATIVE OF CONTRACTING WITH LIMITED ENTRY COMMERCIAL FISHERMEN TO HARVEST THE HATCHERIES FISH.

WE SUPPORT THIS CONCEPT ON THE BASIS OF LOGICAL COST EFFECTIVENESS IN SALMON HATCHER Y HARVESTING AND BROODSTOCK HANDLING WHICH BENEFITS BOTH THE HATCHERY AND THE COMMON PROPERTY FISHERY.

MEL SEIFERT, DIRECTOR

SJC AQUA-CULTURE PROGRAM

Chapter 43. Regulation of Entry into Alaska Commercial Fisheries.

Article
1. Creation of the Alaska Commercial Fisheries Entry Commission (§§ 16.43.010 — 16.43.080)
2. Powers and Duties of the Commission (§§ 16.43.100 — 16.43.120)
3. Requirements for Entry Permits (§§ 16.43.140 — 16.43.182)
4. Initial Issuance of Entry Permits (§§ 16.43.200 — 16.43.270)
5. Reduction to Optimum Number of Entry Permits (§§ 16.43.290 — 16.43.330)
6. General Provisions (§§ 16.43.350 — 16.43.380)

Legislative committee report. — For report on ch. 79, SLA 1973 (SCS CSHB 126 am S), see 1973 House Journal, p. 503; 1973 Senate Journal Supplement No. 15

Article 1. Creation of the Alaska Commercial Fisheries Entry Commission.

Section
10 Purpose and findings of fact
20 Alaska Commercial Fisheries Entry Commission
30 Term of office, vacancy
40 Quorum
50 Qualifications
60 Compensation of members of the Alaska Commercial Fisheries Entry Commission
70 Legal counsel
80 Employment of personnel

Sec. 16.43.010. Purpose and findings of fact. (a) It is the purpose of this chapter to promote the conservation and the sustained yield management of Alaska's fishery resource and the economic health and stability of commercial fishing in Alaska by regulating and controlling entry into the commercial fisheries in the public interest and without unjust discrimination.

(b) The legislature finds that commercial fishing for fishery resources has reached levels of participation, on both a statewide and an area basis, that have impaired or threaten to impair the economic welfare of the fisheries of the state, the overall efficiency of the harvest, and the sustained yield management the fishery resource. (§ 1 ch 79 SLA 1973)

Applied in Isakson v. Rickey, Sup. Ct. Op. No. 1267 (File No. 2550), 550 P.2d 359 (1976)

Sec. 16.43.020. Alaska Commercial Fisheries Entry Commission. (a) There is established the Alaska Commercial Fisheries Entry Commission as a regulatory and quasi-judicial agency of the state. The commission consists of three members appointed by the governor and confirmed by the legislature in joint session.

See pages from Supplement

[illegible] and may be designated chairman for successive two-year terms. (§ 1 ch 79 SLA 1973)

Sec. 16.43.030. Term of office; vacancy. (a) The members of the commission shall be appointed for terms of four years. Initial appointments shall be as follows: one member for two years, one member for three years, and one member for four years. The governor may remove a commissioner from office for cause including but not limited to incompetence, neglect of duty, or misconduct in office. A commissioner, to be removed for cause, shall be given a copy of the charges against him and afforded an opportunity to be publicly heard in person or by counsel in his own defense upon not less than [illegible] days notice. If a commissioner is removed for cause, the governor shall file with the lieutenant governor a complete statement of all charges made against the commissioner and his findings based on the charges, together with a complete record of the proceedings.

(b) A vacancy on the commission shall be filled by appointment by the governor and the appointment shall be confirmed by the legislature in joint session. A member selected to fill a vacancy shall hold office for the balance of the full term for which his predecessor on the commission was appointed.

(c) A vacancy on the commission does not impair the authority of a quorum of commissioners to exercise all the powers and perform all the duties of the commission. (§ 1 ch 79 SLA 1973)

Sec. 16.43.040. Quorum. Two members of the commission constitute a quorum for the transaction of business, for the performance of a duty or for the exercise of a power of the commission. (§ 1 ch 79 SLA 1973)

Sec. 16.43.050. Qualifications. The commission shall consist of three members with a broad range of professional experience, none of whom has a vested economic interest in an interim-use permit, entry permit, commercial fishing vessel or gear, or in any fishery resource processing or marketing business. (§ 1 ch 79 SLA 1973)

Sec. 16.43.060. Compensation of members of the Alaska Commercial Fisheries Entry Commission. Members of the commission are in the exempt service and shall receive an annual salary as established under AS 39.23. (§ 1 ch 79 SLA 1973; am § 5 ch 47 SLA 1974, am § 1 ch 148 SLA 1976; am § 2 ch 263 SLA 1976)

Effect of amendments. — The 1974 amendment wrote this section.

The first 1976 amendment deleted "payable in equal monthly installments" from the end of the section.

The second 1976 amendment substituted "as established under AS 39.23" for "equal to that of a district court judge payable in equal monthly installments."

matters arising in the discharge of its duties and represent the commission in suits to which it is a party. However, the commission may retain additional legal counsel as appropriate. (§ 1 ch 79 SLA 1973)

Sec. 16.43.080. Employment of personnel. (a) The commission may employ those persons necessary to carry out the purposes of this chapter. Employees of the commission are in the exempt service under AS 39.25.110.

(b) In addition to its staff of regular employees, the commission may contract for and engage the services of consultants, experts and hearing officers as necessary. (§ 1 ch 79 SLA 1973)

Article 2. Powers and Duties of the Commission.

Section
100. General powers
110. Regulations and hearing procedures
120. Application of Administrative Procedure Act

Sec. 16.43.100. General powers. (a) To accomplish the purposes set out in § 10 of this chapter the commission shall:

(1) regulate entry into the commercial fisheries for all fishery resources in the state;

(2) establish priorities for the application of the provisions of this chapter to the various commercial fisheries of the state;

(3) establish administrative areas suitable for regulating and controlling entry into the commercial fisheries;

(4) establish, for all types of gear, the maximum number of entry permits for each administrative area;

(5) designate, when necessary to accomplish the purposes of this chapter, particular species for which separate interim-use permits or entry permits will be issued;

(6) establish qualifications for the issuance of entry permits;

(7) issue entry permits to qualified applicants;

(8) issue interim-use permits as provided in §§ 210 — 220 of this chapter;

(9) establish, for all types of gear, the optimum number of entry permits for each administrative area;

(10) administer the buy-back program provided for in §§ 310 — 320 of this chapter to reduce the number of outstanding entry permits to the optimum number of entry permits;

(11) provide for the transfer and reissuance of entry permits to qualified transferees;

(12) provide for the transfer and reissuance of entry permits for alternative types of legal gear, in a manner consistent with the purposes of this chapter;

[illegible] of this chapter.

(b) The commission may do all things necessary to the exercise of its powers under this chapter, whether or not specifically designated in this chapter. (§ 1 ch 79 SLA 1973)

Editor's note. — Section 14, ch. 105, SLA 1977, effective January 1, 1978, added paragraph (14) to subsection (a). Paragraph (14) reads "(14) administer the issuance of commercial fishing vessel licenses under AS 16.05.490."

Sec. 16.43.110. Regulations and hearing procedures. (a) The commission may adopt regulations, consistent with law, necessary or proper in the exercise of its powers or for the performance of its duties under this chapter.

(b) The commission shall adopt regulations, consistent with due process of law, which govern practice and procedure and the conduct of all investigations, hearings and proceedings which it holds.

(c) Common-law rules of evidence apply to investigations, hearings and proceedings before the commission, except when the commission determines that their application is not required in order to assure fair treatment of all parties and that the evidence is relevant and of the sort on which responsible persons are accustomed to rely in the conduct of serious matters.

(d) The commission, each commissioner or an employee authorized by the commission may administer oaths, certify to all official acts, and issue subpoenas and other process to compel the attendance of witnesses and the production of testimony, records, papers, accounts and documents in an inquiry, investigation, hearing, or proceeding before the commission in any part of the state. The commission may petition a court to enforce its subpoenas or other process. (§ 1 ch 79 SLA 1973)

Sec. 16.43.120. Application of Administrative Procedure Act. (a) The administrative adjudication procedures of the Administrative Procedure Act (AS 44.62) do not apply to adjudicatory proceedings of the commission except that final administrative determinations by the commission are subject to judicial review as provided in AS 44.62.560 — 44.62.570.

(b) AS 44.62.010 — 44.62.320 and 44.62.640 apply to regulations adopted by the commission. (§ 1 ch 79 SLA 1973)

Article 3. Requirements for Entry Permits.

Section
140 Permit required
150 Terms and conditions of entry permit; annual renewal
160 Fees
170 Transfer of entry permits
180 Emergency transfers
182 Entry permit deductible as business expense

Sec. 16.43.140. Permit required. (a) After January 1, 1974, no person may operate gear in the commercial taking of fishery resources without a valid entry permit or a valid interim-use permit issued by the commission.

(b) A permit is not required of a crewman or other person assisting in the operation of a unit of gear engaged in the commercial taking of fishery resources as long as the holder of the entry permit or the interim-use permit for that particular unit of gear is at all times present and actively engaged in the operation of the gear.

(c) A person may hold more than one interim-use or entry permit issued or transferred under this chapter only for the following purposes:

(1) fishing more than one type of gear;

(2) fishing in more than one administrative area;

(3) harvesting particular species for which separate interim-use or entry permits are issued. (§ 1 ch 79 SLA 1973)

Applied in Isakson v. Rickey, Sup. Ct. Op. No. 1267 (File No. 2550), 550 P.2d 359 (1976)

Sec. 16.43.150. Terms and conditions of entry permit; annual renewal. (a) Each entry permit authorizes the permittee to operate a unit of gear within a specified administrative area.

(b) The holder of an entry permit shall have the permit in his possession at all times when engaged in the operation of gear for which it was issued.

(c) Each entry permit is issued for a term of one year and is renewable annually.

(d) Failure to renew an entry permit for a period of two years from the date of last renewal results in a forfeiture of the entry permit to the commission, except as waived by the commission for good cause.

(e) An entry permit constitutes a use privilege which may be modified or revoked by the legislature without compensation.

(f) An entry permit survives the death of the holder.

(g) An entry permit may not be:

(1) pledged, mortgaged, leased, or encumbered in any way;

(2) transferred with any retained right of repossession or foreclosure; or

(3) attached, distrained, or sold on execution of judgment or under any other process or order of any court.

(h) Upon the death of an entry permit holder, the permanent permit shall be transferred by the commission directly to the surviving spouse by right of survivorship unless a contrary intent is manifested. When no spouse survives, the rights of the decedent pass as part of his estate. (§ 1 ch 79 SLA 1973; am §§ 1, 2 ch 73 SLA 1977)

Effect of amendment. — The 1977 amendment inserted "leased" in paragraph (1) of subsection (g) and added subsection (h).

Sec. 16.43.160. Fees. (a) The commission shall establish annual fees for the issuance and annual renewal of entry permits or interim-use permits to reflect the cost of administering this chapter. Fees collected under this section shall be paid into the general fund.

(b) Annual fees established under this section shall be no less than $10 and no more than $100 and shall reasonably reflect the different rates of economic return for different fisheries.

(c) The holder of an entry permit or interim-use permit who has a net family income falling within the Federal Social Security Administration poverty guidelines, adjusted by the commission to reflect appropriate cost-of-living differentials, is subject to a maximum annual fee of $5. (§ 1 ch 79 SLA 1973)

Editor's note. — Section 15, ch 105, SLA 1977, effective January 1, 1978, amended this section to read as follows: (a) The commission shall establish annual fees for the issuance and annual renewal of entry permits or interim-use permits. Fees collected under this section shall be paid into the general fund, except for an amount equal to 60 per cent of the fee each permit holder would otherwise be obligated to pay for a crewmember license under § 480 of this chapter which shall be paid into the fishermen's fund under AS 23.35.060.

(b) Annual fees established under this section shall be no less than $10 and no more than $750 and shall reasonably reflect the different rates of economic return for different fisheries.

(c) The resident holder of an entry permit or interim-use permit who has a net family income falling within the Federal Community Services Administration poverty guidelines, adjusted by the commission to reflect appropriate cost-of-living differentials, is subject to a maximum annual fee of $15.

Sec. 16.43.170. Transfer of entry permits. (a) Entry permits and interim-use permits are transferable only through the commission as provided in this section and § 180 of this chapter and under regulations adopted by the commission.

(b) Except as provided in (c) of this section, the holder of an entry permit may transfer his permit to another person or to the commission upon 60 days notice of intent to transfer under regulations adopted by the commission. No sooner than 60 days nor later than 12 months from the date of notice to the commission, the holder of an entry permit may transfer his permit. If the proposed transferee, other than the commission, can establish present ability to participate actively in the fishery, the commission shall approve the transfer and reissue the entry permit to the transferee.

(c) If the number of outstanding entry permits for a fishery is greater than the optimum number of entry permits established under §§ 290 — 300 of this chapter, the holder of an entry permit who qualified for that entry permit in a priority classification designated under § 250(c) of this chapter may transfer his permit only to the commission. The transfer to the commission shall be made under the buy-back provisions of §§ 310 — 320 of this chapter.

(d) Repealed by § 9 ch 73 SLA 1977. (§ 1 ch 79 SLA 1973; am § 1 ch 126 SLA 1974; am §§ 3, 4, 9 ch 73 SLA 1977)

Effect of amendments. — The 1974 amendment, in subsection (b), substituted "60 days" for "six months" in the first and second sentences and "12 months" for "eighteen months" in the second sentence.

The 1977 amendment substituted "Entry permits and interim-use permits are" for "an entry permit is" at the beginning of subsection (a), deleted "and (d)" following "Except as provided in (c)" near the beginning of the first sentence of subsection (b), and repealed subsection (d), which provided for a five-year prohibition on transfer of entry permit if an applicant eligible for such permit under AS 16.43.260 so elected.

Cited in Isakson v. Rickey, Sup. Ct. Op. No. 1267 (File No. 2550), 550 P.2d 359 (1976).

Sec. 16.43.180. Emergency transfers. (a) The commission shall adopt regulations providing for the temporary transfer of entry permits and interim-use permits to alleviate hardship caused by illness, disability, or death of a permit holder so that another person may operate the transferor's vessel and gear, or another vessel and other gear if the transferor's has been destroyed or seriously damaged, for the remainder of the season, or in the case of illness or disability, for the duration of the illness or disability if that is shorter than the remainder of the season. Interim-use permits are otherwise nontransferable.

(b) The commission shall adopt regulations providing for the temporary transfer of an entry permit upon the death of the permittee pending final disposition of the permit as a part of the permittee's estate. (§ 1 ch 79 SLA 1973; am § 5 ch 73 SLA 1977)

Effect of amendment. — The 1977 amendment substituted the language beginning "entry permits and interim-use permits" for "an entry permit when sickness, injury, or other unavoidable hardship prevents the permittee from participating in the fishery" in the first sentence of subsection (a) and added the second sentence of that subsection.

Sec. 16.43.182. Entry permit deductible as business expense. An entry permit purchased under this chapter is deductible as a business expense as provided in AS 43.20.031(b). (§ 6 ch 73 SLA 1977)

Article 4. Initial Issuance of Entry Permits.

Section
290 Administrative areas
210 Interim-use permit, qualifications
220 Terms and conditions of interim-use permits
230 Designation of distressed fisheries
240 Determination of the maximum number of entry permits for initial issue
250 Standards for initial issue of entry permits
260 Application for initial issue of entry permits
270 Initial issuance of entry permits

Sec. 16.43.200. Administrative areas. (a) The commission shall establish administrative areas suitable for regulating and controlling

entry into the commercial fisheries. The commission shall make the administrative areas reasonably compatible with the geographic areas for which specific commercial fishing regulations are adopted by the Board of Fisheries.

(b) The commission may modify or change the boundaries of administrative areas when necessary and consistent with the purposes of this chapter. (§ 1 ch 79 SLA 1973; am § 30 ch 206 SLA 1975)

Effect of amendment. — The 1975 amendment substituted "Board of Fisheries" for "Board of Fish and Game" at the end of the second sentence of subsection (a).

Sec. 16.43.210. Interim-use permit; qualifications. (a) Pending the establishment of the maximum number of entry permits under § 240 of this chapter and the issuance of entry permits under § 270 of this chapter, the commission shall issue interim-use permits under regulations promulgated by the commission for each fishery, to all applicants who can establish their present ability to participate actively in the fishery for which they are making application, except as provided under (e) of this section.

(b) Before the issuance of the maximum number of entry permits for a given fishery, the commission may issue an interim-use permit to an applicant who may later become eligible for an entry permit under § 270 of this chapter.

(c) To the extent that the commissioner of fish and game authorizes it under AS 16.05.050(11), the commission may grant an interim-use permit to a person to engage in the commercial taking from a fishery on an experimental basis.

(d) The sustained yield management and economic health of the following fisheries is severly impaired as a result, among other factors, of too many units of gear participating in the commercial harvest:

(1) Bristol Bay registration area — drift gillnet fishery;

(2) Cook Inlet registration area — drift gillnet fishery;

(3) Prince William Sound registration area — drift gillnet fishery.

(e) For a fishery specified under (d) of this section, an interim-use permit may be issued for 1974 only to an applicant who has harvested the fishery resource commercially while holding a gear license issued under AS 16.05.536 — 16.05.670, before January 1, 1973. (§ 1 ch 79 SLA 1973)

Editor's note. — Alaska Statutes 16.05.536 and 16.05.620, referred to in subsection (e), were repealed by § 12, ch 71, SLA 1972, and § 2, ch 159, SLA 1968, respectively. Alaska Statutes 16.05.540 — 16.05.650 and 16.05.670, referred to in subsection (e), were repealed by § 19, ch 105, SLA 1977, effective January 1, 1978.

Sec. 16.43.220. Terms and conditions of interim-use permits. (a) The commission shall adopt regulations specifying the dates and places of application, the procedures to be followed in renewal of the

interim-use permit including the time, place of its renewal, and for any other purpose incident to the administration of interim-use permits for that fishery. An interim-use permit shall expire upon the final determination of the holder's eligibility for an entry permit.

(b) Repealed by § 9 ch 73 SLA 1977.

(c) The holder of an interim-use permit must have the permit in his possession at all times when engaged in the operation of the gear for which it was issued. (§ 1 ch 79 SLA 1973; am § 2 ch 126 SLA 1974; am § 9 ch 73 SLA 1977)

Effect of amendments. — The 1974 amendment, in subsection (b), deleted from the end of the first sentence provisions relating to causes of hardship and to the duration of a temporary transfer of an interim-use permit.

The 1977 amendment repealed subsection (b), which read "The commission shall adopt regulations for the temporary transfer of interim-use permits to alleviate hardship. Interim-use permits are otherwise nontransferable."

Sec. 16.43.230. Designation of distressed fisheries. Pending the determination of maximum numbers of entry permits under § 240 of this chapter and before the initial issue of entry permits under § 270 of this chapter, the commission shall designate as distressed fisheries those for which it estimates that the optimum number of entry permits will be less than the highest number of units of gear fished in that fishery during any one of the four years immediately preceding January 1, 1973. (§ 1 ch 79 SLA 1973)

Sec. 16.43.240. Determination of the maximum number of entry permits for initial issue. (a) Except as provided in § 270(a) of this chapter, the maximum number of entry permits for a distressed fishery designated under § 230 of this chapter shall be the highest number of units of gear fished in that fishery during any one of the four years immediately preceding January 1, 1973.

(b) When the commission finds that a fishery not designated as a distressed fishery under § 230 of this chapter has reached levels of participation which require the limitation of entry in order to achieve the purposes of this chapter, the commission shall establish the maximum number of entry permits for that fishery. (§ 1 ch 79 SLA 1973)

Sec. 16.43.250. Standards for initial issue of entry permits. (a) Following the establishment of the maximum number of units of gear for a particular fishery under § 240 of this chapter, the commission shall adopt regulations establishing qualifications for ranking applicants for entry permits according to the degree of hardship which they would suffer by exclusion from the fishery. The regulations shall define priority classifications of similarly situated applicants based upon a reasonable balance of the following hardship standards:

(1) degree of economic dependence upon the fishery, including but not limited to percentage of income derived from the fishery, reliance on

alternative occupations, availability of alternative occupations, investment in vessels and gear;

(2) extent of past participation in the fishery, including but not limited to the number of years participation in the fishery, and the consistency of participation during each year.

(b) The commission shall designate in the regulations those priority classifications of applicants who would suffer significant economic hardship by exclusion from the fishery.

(c) The commission shall designate in the regulations those priority classifications of applicants who would suffer only minor economic hardship by exclusion from the fishery. (§ 1 ch 79 SLA 1973)

Determinative factor in allocation of initial permits. — The legislative history rather clearly demonstrates that from the outset the framers of this legislation intended "hardship" to be the determinative factor in the allocation of the initial free limited entry permits. Isakson v. Rickey, Sup. Ct. Op. No. 1267 (File No. 2550), 550 P.2d 359 (1976).

Sec. 16.43.260. Application for initial issue of entry permits. (a) The commission shall accept applications for entry permits only from applicants who have harvested fishery resources commercially while participating in the fishery as holders of gear licenses issued under AS 16.05.530 — 16.05.670 before the qualification date established in (d) or (e) of this section.

(b) The commission shall establish the opening and closing dates, places and form of application for entry permits for each fishery. The commission may require the submission of specific verified evidence establishing the applicant's qualifications under the regulations adopted under § 250 of this chapter.

(c) When an applicant is unable to establish his qualifications for an entry permit by submitting the specific verified evidence required in the application by the commission, he may request and obtain an administrative adjudication of his application according to the procedures established in § 110(b) of this chapter. At the hearing he may present alternative evidence of his qualifications for an entry permit.

(d) Except as provided in (e) of this section, an applicant shall be assigned to a priority classification based solely upon his qualifications as of January 1, 1973.

(e) When the commission establishes the maximum number of entry permits for a particular fishery under § 240 of this chapter after January 1, 1975, an applicant shall be assigned to a priority classification based solely upon his qualifications as of January 1 of the year during which the commission establishes the maximum number of entry permits for the fishery for which application is made. (§ 1 ch 79 SLA 1973; am § 3 ch 126 SLA 1974)

Editor's note. — Alaska Statutes 16.05.536 and 16.05.620, referred to above, were repealed by § 12, ch. 71, SLA 1972, and § 2, ch. 159, SLA 1968, respectively. Alaska Statutes 16.05.540 through 16.05.650 and 16.05.670, referred to above, were repealed by § 19, ch. 105, SLA 1977, effective January 1, 1978.

Effect of amendment. — The 1974 amendment substituted "the qualification date established in (c) or (e) of this section" for "January 1, 1973" at the end of subsection (a).

Subsection (a) is unconstitutional. — Subsection (a), which limits applications for entry permits to persons holding gear licenses prior to January 1, 1973, violates the equal protection rights, guaranteed by the state and federal constitutions, of commercial fishermen who obtained gear licenses after January 1, 1973. Isakson v. Rickey, Sup. Ct. Op. No. 1267 (File No. 2550), 550 P.2d 359 (1976).

Holding a gear license before January 1, 1973, does not bear a fair and substantial relation to the purpose of the legislation, which is the segregation of hardship and nonhardship cases. Isakson v. Rickey, Sup. Ct. Op. No. 1267 (File No. 2550), 550 P.2d 359 (1976).

Because persons are automatically excluded from the class eligible to apply for permits, in spite of active participation and economic dependence upon the fishery, the January 1, 1973 classification is under-inclusive with respect to persons allowed to apply for permits. Because persons who have long since retired and have no economic dependence upon the fishery as of the cutoff date are allowed to apply for entry permits, the classification is overbroad with respect to those allowed to apply. Isakson v. Rickey, Sup. Ct. Op. No. 1267 (File No. 2550), 550 P.2d 359 (1976).

Purpose of provision in subsection (a) limiting applications. — In essence, the purpose of the provision in subsection (a) limiting applications for entry permits to those holding gear licenses prior to January 1, 1973, was to segregate hardship and nonhardship cases at the application phase of the permit issuance process. Isakson v. Rickey, Sup. Ct. Op. No. 1267 (File No. 2550), 550 P.2d 359 (1976).

Subsection (a) was not intended to modify the allocation policy of the legislation, but rather was adopted to further that policy by simplifying the ranking process. Isakson v. Rickey, Sup. Ct. Op. No. 1267 (File No. 2550), 550 P.2d 359 (1976).

When the act is viewed as a whole, it becomes apparent that the contested provision in subsection (a) was inserted because it was assumed that those persons who obtained gear licenses after January 1, 1973, would be unable to demonstrate the requisite hardship for an entry permit. Hence, for the sake of administrative convenience, it was decided that they need not even submit applications to the commission. Isakson v. Rickey, Sup. Ct. Op. No. 1267 (File No. 2550), 550 P.2d 359 (1976).

Sec. 16.43.270. Initial issuance of entry permits. (a) The commission shall issue entry permits, for each fishery, first to all qualified applicants in the priority classifications designated under § 250(b) of this chapter and then to qualified applicants in order of descending priority classification, until the number of entry permits issued equals the maximum number of entry permits established under §§ 230 — 240 of this chapter for each fishery, except that no person within a priority classification specified under § 250(b) of this chapter may be denied an entry permit.

(b) If, within the lowest priority classification of qualified applicants to which some entry permits may be issued, there are more applicants than there are entry permits to be issued, then the allocation of entry permits within that priority classification shall be by lottery.

(c) If, at the time entry permits are issued, some applicants are still appealing the findings of an administrative adjudication under § 260 of this chapter, a sufficient number of permits shall be reserved out of the permits to be issued to protect the rights of those applicants, assuming all the appeals will be resolved in favor of the applicants. In the event that all appeals are not resolved in favor of the applicants, the remaining

entry permits shall be allocated to the next most qualified applicants as provided in (a) and (b) of this section. (§ 1 ch 79 SLA 1973)

Article 5. Reduction to Optimum Number of Entry Permits.

Section
290. Optimum number of entry permits
300. Revisions of optimum number of entry permits
310. Establishment of buy-back funds
320. Administration of the buy-back program
330. Issuance of new entry permits

Sec. 16.43.290. Optimum number of entry permits. Following the issuance of entry permits under § 270 of this chapter, the commission shall establish the optimum number of entry permits for each fishery based upon a reasonable balance of the following general standards:

(1) the number of entry permits sufficient to maintain an economically healthy fishery that will result in a reasonable average rate of economic return to the fishermen participating in that fishery, considering time fished and necessary investments in vessels and gear;

(2) the number of entry permits necessary to harvest the allowable commercial take of the fishery resource during all years in an orderly, efficient manner, and consistent with sound fishery management techniques;

(3) the number of entry permits sufficient to avoid serious economic hardship to those currently engaged in the fishery, considering other economic opportunities reasonably available to them. (§ 1 ch 79 SLA 1973)

Sec. 16.43.300. Revisions of optimum number of entry permits. (a) The commission may increase or decrease the optimum number of entry permits for a fishery when one or more of the following conditions makes a change desirable considering the purposes of this chapter:

(1) an established long-term change in the biological condition of the fishery has occurred which substantially alters the optimum number of entry permits permissible applying the standards set out in § 290 of this chapter;

(2) an established long-term change in market conditions has occurred, directly affecting the fishery, which substantially alters the optimum number of entry permits permissible under the standards set out in § 290 of this chapter.

(b) If the commission decreases the optimum number of entry permits for a fishery, the number of entry permits may be reduced only under the voluntary buy-back provisions set out in §§ 310 — 320 of this chapter. (§ 1 ch 79 SLA 1973)

Sec. 16.43.310. Establishment of buy-back funds. (a) When the optimum number of entry permits is less than the number of entry permits outstanding in a fishery, the commission shall establish and administer a buy-back fund for that fishery for the purpose of reducing the number of entry permits to the optimum number within no more than 10 years, at a rate to be established by the commission.

(b) For each buy-back fund, the commission shall adopt regulations establishing annual assessments on holders of entry permits of not more than seven per cent of the gross value of the total annual catch attributable to a holder's entry permit, except that the holder of a permit who has made no commercial landings in a given year will be assessed the average assessed all other holders of the same type of permit in that year. Assessments will be paid into the specific buy-back fund for which they are collected.

(c) Assessments need not equal annual buy-back fund expenditures within a particular fishery but shall be continued until the buy-back fund for that fishery has been reimbursed. (§ 1 ch 79 SLA 1973)

Sec. 16.43.320. Administration of the buy-back program. (a) The commission shall adopt regulations providing for the purchase of entry permits, vessels, and gear at fair market value with money accumulated in the buy-back fund for each fishery. The buy-back program for a fishery shall terminate when the number of entry permits is reduced to the optimum and the buy-back fund has been reimbursed.

(b) When entry permits subject to the restrictions in § 250(c) of this chapter and the vessels and gear related to those permits are offered for sale to the commission, the commission shall purchase the permits and related vessels and gear at fair market value, if sufficient funds are available in the appropriate buy-back fund. (§ 1 ch 79 SLA 1973)

Sec. 16.43.330. Issuance of new entry permits. (a) When the number of outstanding entry permits for a fishery is less than the optimum number established under § 290 of this chapter, the commission shall issue new entry permits to applicants who are presently able to engage actively in the fishery until the optimum number is reached.

(b) The commission shall determine equitable methods of issuance, as appropriate, under (a) of this section that assure the receipt of fair market value for the permits issued. (§ 1 ch 79 SLA 1973)

Article 6. General Provisions.

Section
350. Applications of regulations of Board of Fisheries
360. Penalties
370. Recommendations to the legislature
380. Definitions

Sec. 16.43.350. Applications of regulations of Board of Fisheries. Nothing in this chapter limits the powers of the Board of Fisheries, including the power to determine legal types of gear and the power to establish size limitations or other uniform restrictions applying to a

certain type of gear. Holders of interim-use permits or entry permits issued under this chapter are subject to all regulations adopted by the Board of Fisheries. (§ 1 ch 79 SLA 1973; am § 31 ch 206 SLA 1975)

Effect of amendment. — The 1975 amendment substituted "Board of Fisheries" for "Board of Fish and Game" in the first and second sentences.

Sec. 16.43.360. Penalties. (a) A person who violates a provision of this chapter or a regulation promulgated under this chapter, upon conviction, is guilty of a misdemeanor and is punishable by a fine of not more than $5,000 for a first conviction; a fine of not more than $10,000 for a second conviction; and, for a third conviction, a fine of not more than $10,000 as well as forfeiture of all interim-use permits and entry permits held by him and permanent loss of eligibility for interim-use permits or for entry permits.

(b) A person who makes a false statement of a material fact in the application for an interim-use permit or an entry permit or in the application for a transfer under §§ 170 — 180 of this chapter, or a person who assists another by making a false statement of a material fact in support of the other person's application for issuance of an interim-use permit or an entry permit or transfer of an entry permit, upon conviction, is guilty of a misdemeanor and shall forfeit all interim-use permits and entry permits held by him and shall lose eligibility for interim-use permits and for entry permits for a period of five years.

(c) If a permit holder is convicted of a violation of AS 43.20.335 and the violation relates to income derived from commercial fishing under this title, he shall forfeit all interim-use permits and entry permits held by him and shall lose eligibility for interim-use permits and for entry permits for a period of five years.

(d) If a permit holder is charged by the state with violating a provision of this chapter or a regulation adopted under this chapter, he may not transfer, under § 170 of this chapter, any interim-use or entry permit he may hold, until after the final adjudication or dismissal of the charges. (§ 1 ch 79 SLA 1973; am § 7 ch 73 SLA 1977)

Effect of amendment. — The 1977 amendment added subsection (d).

Sec. 16.43.370. Recommendations to the legislature. (a) The commission shall submit an annual report to the legislature. The report shall include but not be limited to the following:

(1) a progress report on the reduction of entry permits to optimum levels;

(2) recommendations for additional legislation relating to the regulation of entry into Alaska commercial fisheries.

(b) The commission shall study alternative methods of permit transferability and report its findings and recommendations to the legislature before Janaury 15, 1975. (§ 1 ch 79 SLA 1973)

Sec. 16.43.380. Definitions. In this chapter

(1) "commission" means the Alaska Commercial Fisheries Entry Commission;

(2) "economically healthy fishery" means a fishery that yields a sufficient rate of economic return to the fishermen participating in it to provide for, among other things, the following:

(A) maintenance of vessels and gear in satisfactory and safe operating condition; and

(B) ability and opportunity to improve vessels, gear and fishing techniques, including, when permissible, experimentation with new vessels, new gear, and new techniques;

(3) "fishery" means the commercial taking of a specific fishery resource in a specific administrative area with a specific type of gear;

(4) "gear" means the specific apparatus used in the commercial harvest of a species, including but not limited to purse seines, drift gill nets, set gill nets, and troll gear;

(5) "person" means a natural person and does not include a corporation, company, partnership, firm, association, organization, business trust, or society;

(6) "present ability to actively participate" means the person applying for a permit is physically able to harvest fish in the fishery and has reasonable access to commercial fishing gear of the type utilized in that fishery;

(7) "priority classification" means the allocation of potential permit applicants into reasonable groupings of similarly situated applicants and the priority ranking of those groupings according to the extent to which they satisfy the standards of preference;

(8) "type of gear" means a customary and identifiable classification of gear and shall include

(A) those classifications for which separate regulations are adopted by the Board of Fisheries and for which separate gear licenses are required by AS 16.05.550 — 16.05.630; and

(B) distinct subclassifications of gear such as "power" troll gear and "hand" troll gear;

(9) "unit of gear" means the maximum amount of a specific type of gear which can be fished under a single gear license subject to regulations established by the Board of Fisheries defining the legal requirements for that type of gear. (§ 1 ch 79 SLA 1973; am §§ 32, 33 ch 206 SLA 1975)

Effect of amendment. — The 1975 amendment substituted "Board of Fisheries" for "Board of Fish and Game" in paragraphs (8)(A) and (9).

Editor's note. — Alaska Statutes 16.05.550 — 16.05.630, referred to in paragraph (8)(A), were repealed by § 19, ch 105, SLA 1977, effective January 1,

Chapter 43. Regulation of Entry into Alaska Commercial Fisheries.

Article
4A. Educational Entry Permits (§§ 16.43.275 — 16.43.285)

Article 2. Powers and Duties of the Commission.

Section
100. General powers

Sec. 16.43.100. General powers. (a) To accomplish the purposes set out in § 10 of this chapter the commission shall:

(1) regulate entry into the commercial fisheries for all fishery resources in the state;

(2) establish priorities for the application of the provisions of this chapter to the various commercial fisheries of the state;

(3) establish administrative areas suitable for regulating and controlling entry into the commercial fisheries;

(4) establish, for all types of gear, the maximum number of entry permits for each administrative area;

(5) designate, when necessary to accomplish the purposes of this chapter, particular species for which separate interim-use permits or entry permits will be issued;

(6) establish qualifications for the issuance of entry permits;

(7) issue entry permits to qualified applicants;

(8) issue interim-use permits as provided in §§ 210 — 220 of this chapter;

(9) establish, for all types of gear, the optimum number of entry permits for each administrative area;

(10) administer the buy-back program provided for in §§ 310 — 320 of this chapter to reduce the number of outstanding entry permits to the optimum number of entry permits;

(11) provide for the transfer and reissuance of entry permits to qualified transferees;

(12) provide for the transfer and reissuance of entry permits for alternative types of legal gear, in a manner consistent with the purposes of this chapter;

(13) administer the collection of the annual fees provided for in § 160 of this chapter;

(14) administer the issuance of commercial fishing vessel licenses under AS 16.05.490;

(15) issue educational entry permits to applicants who qualify under the provisions of §§ 275 — 285 of this chapter.

(b) The commission may do all things necessary to the exercise of its powers under this chapter, whether or not specifically designated in this chapter. (§ 1 ch 79 SLA 1973; § 14 ch 105 SLA 1977; am § 3 ch 123 SLA 1978)

Effect of amendments. — The 1977 amendment, effective January 1, 1978, added paragraph (14) to subsection (a).

The 1978 amendment, effective July 9, 1978, added paragraph (15) to subsection (a).

Article 3. Requirements for Entry Permits.

Section
150. Terms and conditions of entry permit; annual renewal
160. Fees
170. Transfer of entry permits
180. Emergency transfers

Sec. 16.43.150. Terms and conditions of entry permit; annual renewal.

(g) Except as provided in AS 16.10.333 — 16.10.337, an entry permit may not be:

(1) pledged, mortgaged, leased, or encumbered in any way;

(2) transferred with any retained right of repossession or foreclosure; or

(3) attached, distrained, or sold on execution of judgment or under any other process or order of any court.
(am § 6 ch 83 SLA 1978)

Effect of amendment. The 1978 amendment, effective July 1, 1978, added "Except as provided in AS 16.10.333 — 16.10.337" to the beginning of subsection (g).

As the rest of the section was not affected by the amendment, it is not set out.

Sec. 16.43.160. Fees. (a) The commission shall establish annual fees for the issuance and annual renewal of entry permits or interim-use permits. The amount paid by a permit holder under the provisions of AS 16.05.480 shall be credited by the commission toward payment of the fee charged under this section. No more than one credit may be obtained annually by a person.

(b) Annual fees established under this section shall be no less than $10 and no more than $750 and shall reasonably reflect the different rates of economic return for different fisheries.

(c) The resident holder of an entry permit or interim use permit who has a net family income falling within the Federal Community Services Administration poverty guidelines, adjusted by the commission to reflect appropriate cost-of-living differentials, is subject to a maximum annual fee of $15. (§ 1 ch 79 SLA 1973; am § 15 ch 105 SLA 1977; am § 4 ch 123 SLA 1978)

Effect of amendments. — The 1977 amendment, effective January 1, 1978, deleted "to reflect the cost of administering this chapter" from the end of the first sentence of subsection (a), added the exception to the end of the second sentence

of subsection (a), substituted "$750" for "$100" in subsection (b), inserted "resident" preceding "holder of an entry permit" in subsection (c), and substituted "Federal Community Services Administration for "Federal Social Security Administration" and "$15" for "$5" in subsection (c).

The 1978 amendment, effective July 9, 1978, and retroactive to January 1, 1978, in subsection (a), rewrote the second sentence and added the third sentence.

Sec. 16.43.170. Transfer of entry permits. (a) Except as provided in AS 16.10.333 — 16.10.337, entry permits and interim-use permits are transferable only through the commission as provided in this section and § 180 of this chapter and under regulations adopted by the commission. (am § 7 ch 83 SLA 1978)

Effect of amendment.

The 1978 amendment, effective July 1, 1978, added "Except as provided in AS 16.10.333 — 16.10.337" to the beginning of subsection (a).

As the rest of the section was not affected by the amendment, it is not set out.

Sec. 16.43.180. Emergency transfers. (a) The commission shall adopt regulations providing for the temporary emergency transfer of entry permits and interim-use permits when illness, disability, death, required military or government service, or other unavoidable hardship prevents the permit holder from participating in the fishery. To alleviate hardship pending a final determination of the permit holder's eligibility for an entry permit, the commission shall adopt regulations providing for the temporary emergency transfer of an interim-use permit issued under § 210(b) of this chapter.

(b) The commission shall adopt regulations providing for the temporary transfer of an entry permit upon the death of the permittee pending final disposition of the permit as a part of the permittee's estate. (§ 1 ch 79 SLA 1973; am § 5 ch 73 SLA 1977; am § 5 ch 123 SLA 1978)

Effect of amendment.

The 1978 amendment rewrote subsection (a).

Article 4A. Educational Entry Permits.

Section
275. Educational entry permits
277. Term and conditions of educational entry permit
279. Disposition of fish
281. Accounting of harvest
283. Adoption of regulations
285. Definition

Effective date of article. — Section 14, ch. 123, SLA 1978, makes this article effective July 9, 1978, in accordance with AS 01.10.070(c).

Sec. 16.43.275. Educational entry permits. (a) In addition to entry permits and interim-use permits, the commission may issue educational entry permits to public, private or denominational educational institutions accredited by the Department of Education or accredited institutions, career or vocational programs approved by the Alaska Commission on Postsecondary Education, or full-time nonprofit residential child care facilities licensed by the Department of Health and Social Services, division of social services, if

(1) the program is offered to students at the junior high school level or above;

(2) the issuance of a educational entry permit is reasonably necessary to the instruction of students under courses offered by the applicant for the educational entry permit;

(3) the program is offered by an institution which is located in the state and has been in operation for at least two years; and

(4) the institution offering the program is not a correspondence institution.

(b) An educational entry permit may only be used in a program conducted by the recipient of the permit for the purpose of training students in the methods of commercial fishing.

(c) The commission may issue educational entry permits notwithstanding the establishment of maximum or optimum numbers under §§ 240 and 290 of this chapter. (§ 10 ch 123 SLA 1978)

Sec. 16.43.277. Term and conditions of educational entry permit. (a) Educational entry permits may be applied for on an annual basis and shall be issued for a term of one year. The permits are nontransferable.

(b) A recipient may be issued an educational entry permit for each fishery in the administrative area the commission determines to be appropriate, considering the nature of the educational program and the location of the educational or vocational institution. The recipient of an educational entry permit may not be issued educational entry permits in more than one administrative area except as issued by the commission in its discretion upon good cause shown.

(c) An educational entry permit issued under § 275 of this chapter may be used by any agent or employee authorized by the recipient of the educational entry permit.

(d) Annual fees for educational entry permits shall be as specified by commission regulation under the authority of § 160 of this chapter. (§ 10 ch 123 SLA 1978)

Sec. 16.43.279. Disposition of fish. Fish caught under the authority of an educational entry permit are the property of the recipient of the permit. The recipient may sell the fish and use the proceeds to pay for the costs of the training program. Revenues generated from the sale of fish harvested under an educational entry permit shall be paid to the

general fund to the extent the revenues exceed costs of the training program. (§ 10 ch 123 SLA 1978)

Sec. 16.43.281. Accounting of harvest. The recipient of an educational entry permit shall report to the commission costs and earnings, amount of harvest, and other information the commission requires to monitor training programs of recipients of educational entry permits. (§ 10 ch 123 SLA 1978)

Sec. 16.43.283. Adoption of regulations. (a) Use privileges granted under §§ 275 — 285 of this chapter are subject to the regulations of the Board of Fisheries which may adopt regulations exclusively applicable to the use of educational entry permits.

(b) The commission shall publish regulations relating to the issuance of educational entry permits, establishing eligibility criteria for recipients of the permits, and such other matters as are reasonably necessary to implement §§ 275 — 285 of this chapter. (§ 10 ch 123 SLA 1978)

Sec. 16.43.285. Definition. For the purposes of §§ 275 — 285 of this chapter, the term "recipient" means the entity to which an educational entry permit is issued. (§ 10 ch 123 SLA 1978)

Article 6. General Provisions.

Section
355. Commission revocation of entry permits
360. Penalties

Sec. 16.43.355. Commission revocation of entry permits. (a) The commission may revoke an entry permit if a person knowingly supplies, assists in supplying, or fails to correct false information provided to the commission for the purpose of

(1) permit application; or

(2) permit transfer.

(b) Before revocation, the commission shall serve the permit holder personally or by certified or registered mail with a notice to show cause why the proposed action should not take place. The notice to show cause must

(1) be supported by an affidavit which may be made on information or belief setting out the facts which are the basis of the proposed action;

(2) provide for at least 30 days notice of the place, date, and time of the hearing where the permit holder may present evidence in opposition to the proposed action; unless waived in writing by the permit holder, the hearing place shall be held within the judicial district in which the permit holder resides if the permit holder resides in the state; the hearing place shall be at the discretion of the commission for those permit holders residing outside the state;

(3) specify the statutes or regulations violated;

(4) state with particularity the action proposed to be taken;

(5) indicate to the permit holder that his ability to permanently transfer the permit which is the subject of the revocation proceedings has been suspended as of the date of the notice and will continue to be suspended until the exhaustion of all administrative and judicial remedies; and

(6) provide other information the commission considers proper.

(c) A permit subject to revocation proceedings under this section may not be transferred after the date of the notice in (b) of this section pending exhaustion of all administrative and judicial remedies arising from action taken under this section.

(d) The revocation hearing shall be conducted before a quorum of commissioners and shall be presided over by a hearing officer appointed by the commission who shall rule on the presentation of evidence and other procedural matters. Within a reasonable time after the conclusion of the hearing, the hearing officer shall submit to the attending commissioners a proposed decision based on the record of the hearing and containing findings of fact, conclusions of law, and recommended action. The attending commissioners shall then review the hearing officer's proposed decision and adopt or amend or reject the contents of the proposed decision in the written decision of the commission. A copy of the commission decision shall be mailed to each party or his attorney by certified or registered mail.

(e) The failure of a permit holder properly served under (b) of this section to appear at the hearing is not grounds for setting aside any commission action taken. However, the commission may in its discretion order a continuance or second hearing.

(f) The effective date of the commission decision under this section is the date of the notice to show cause first served upon the permit holder under (b) of this section.

(g) The provisions of this section do not apply to the permit of a person who is a bona fide purchaser.

(h) Judicial review of commission determinations under this section is in accordance with AS 44.62.560 — 44.62.570; however, if a hearing de novo is granted under AS 44.62.570(d), the hearing may, in the discretion of the court, be had with a jury sitting if application for the jury hearing is filed with the court no later than 10 days after service of the notice of appeal. (§ 6 ch 123 SLA 1978)

Effective date. — Section 14, ch. 123, SLA 1978, makes this section effective July 9, 1978, in accordance with AS 01.10.070(c).

Sec. 16.43.360. Penalties. (a) A person who violates or assists in the violation of a provision of this chapter or a regulation promulgated under this chapter is, upon conviction, guilty of a misdemeanor and is

punishable by a fine of not more than $5,000 for a first conviction, and a fine of not more than $10,000 for a second or third conviction. Upon a third conviction, the person shall forfeit all interim-use and entry permits held by him and loses eligibility for future issuance or transfer of interim-use or entry permits for a period of three years. Upon a first or second conviction under this section, the court may in its discretion order a forfeiture of interim-use or entry permits held by him as well as a loss of eligibility for future issuance or transfer of interim-use or entry permits or order a suspension of fishing rights under interim use or entry permits held or to be held by him for a period of not more than three years.

(b) A person who knowingly makes a false statement of fact in the application for or renewal of an interim-use permit or an entry permit or vessel license application or renewal or in the application for a transfer under §§ 170 — 180 of this chapter, or a person who assists another by knowingly making a false statement of fact in support of the other person's application for issuance or renewal of an interim-use permit or an entry permit or vessel license is guilty of a misdemeanor and shall forfeit all interim-use permits and entry permits held by him and shall lose eligibility for interim-use permits and for entry permits for a period of three years and is punishable by a fine of not more than $5,000.

(c) Notwithstanding any other provision of this section, no interim-use or entry permit may be transferred while under suspension, without the consent of the commission.

(am §§ 7 — 9 ch 123 SLA 1978)

Effect of amendment.

The 1978 amendment, effective July 9, 1978, in the first sentence of subsection (a), inserted "or assists in the violation of," "is" preceding "upon conviction," and "or third," substituted "and" for a semicolon following "for a first conviction" and deleted the language providing a penalty for a third conviction from the end of that sentence. The amendment also added the second and third sentences of subsection (a), and in subsection (b), inserted "knowingly" near the beginning and near the middle, "or renewal of" near the beginning, "or vessel license application or renewal" near the beginning, and "or renewal" near the middle, deleted "a material" preceding "fact" near the beginning and near the middle, and substituted "vessel license" for "transfer of an entry permit, upon conviction" near the middle and "three years and is punishable by a fine of not more than $5,000" for "five years" at the end. Moreover, the amendment added subsection (c).

As the rest of the section was not affected by the amendment, it is not set out

PMS HON ALVIN OSTERBACK

CHA RMAN HOUSE RESOURCES COMMITTEE POUCH V

JUNEAU

THE PRINCE WILLIAM SOUND AQUACULTURE CORPORATION WISHES TO EXPRESS ITS FULL SUPPORT FOR HB48.

AS THE REGIONAL ASSOCIATION OF OUR AREA WE REPRESENT AS A MAJORITY ON OUR BOARD OF DIRECTORS OVER 500 COMMERCIAL FISHERMEN ORGANIZED UNDER THE CORDOVA AQUATIC MARKETING ASSOCIATION, AS WELL AS INDEPENDENT, COMMERCIAL, SPORT AND SUBSISTENCE FISHERMEN. OUR EFFORTS SINCE 1975 ARE DIRECTED TOWARD ACHIEVING COST-EFFECTIVE CONSTRUCTION AND OPERATION OF HATCHERIES TO SUPPLEMENT WILD SALMON STOCK FOR THE BENEFIT OF ALL FISHERMEN IN THE COMMON PROPERTY FISHERY. TO ACHIEVE A SELF SUSTAINING HATCHERY SYSTEM, WHICH WILL NOT BE A CONTINUOUS BURDEN ON THE ALASKAN TAXPAYER, EFFICIENT OPERATION OF PRIVATE NONPROFIT HATCHERIES IS ESSENTIAL.

THE NUMBER OF FISH NEEDED FOR SALE BY THE HATCHERY OPERATOR TO COVER COST OF OPERATIONS IS DIRECTLY RELATED TO THE COST OF OPERATING A HATCHERY. HB48 GIVES THE HATCHERY OPERATOR THE CHOICE OF WHO CAN HARVEST SURPLUSES IN THE MOST EFFECT MANNER- CHARTER FISHERMEN ARE IN MOST CASES NOT AVAILABLE DURING FISHING SEASONSFOR SPECIFIC LOW VOLUME HATCHERY SURPLUS HARVEST.

ALL NON PRIVATE PROFIT HATCHERIES, WHETHER REGIONAL ASSOCIATIONS OR SO CALLED NON-ASSOCIATED HATCHERIES, OPERATE UNDER THE SAME STATUTES AND REGULATIONS, NAMELY TO CONTRIBUTE TO THE COMMON PROPERTY FISHERIES. ALTHOUGH ALL NEEDED MECHANISMS OF ECONOMIC CONTROL AND MONITORING ARE NOT YET IN PLACE, EXISTING STATUTES REGULATIONS AND POLICIES MANDATE COMPLIANCE.

WE FEEL CONFIDENT WITH THE FISHERMEN OF PRINCE WILLIAM SOUND AND THE UNITED FISHERMEN OF ALASKA THAT PASSAGE OF HB48 IS AN IMPORTANT AND NEEDED STEP TOWARD ACCOMPLISHING OUR GOALS.

2 April 1979

The Honorable Alvin Osterback
Co-Chairman, House Resource Committee
Alaska House of Representatives
Pouch V
Juneau, AK 99811

Dear Mr. Osterback:

Per my promise to your committee during my February 8 testimony on HB 48, this is to provide the NSRAA position taken during their March 21-22 meeting.

Our Directors appreciated your willingness to hold HB 48 pending their input. Unfortunately, time constraints imposed by Senator Tillion's sixty-day rule necessitated a second hearing prior to March 21. It was also unfortunate that unanswered questions raised at the second hearing caused tabling of the bill. I must apologize to you and your committee for my absence at the second hearing; as it turned out, regional association testimonies would have been helpful.

While we understand why HB 48 was tabled, it's unresolved status will cause significant economic hardship to Prince William Sound Aquaculture Corporation (PWSAC) which is expecting to harvest its hatchery returns this year with a special harvest area entry permit. If after review of our input you support our position, we would appreciate your legislative assistance to make possible an efficient Prince William Sound harvest this year.

Our input takes the following format:

Position on HB 48
Legislative and Policy Ambiguities
HB 48 and Fish Traps

Position on HB 48

In my February 8 testimony, I emphasized that social controversies associated with the special permits may be resolved by providing opportunities to air the issues. In our March 21 discussion on HB 48 a number of concerns were raised and discussed in lively sessions.

After thorough explanation of the intent of HB 48, fishermen voted to support the bill.

Legislative and Policy Ambiguities

The debate over HB 48 was caused by a fundamental apprehension over whether hatchery programs will serve the best interests of common property fishermen. This apprehension was founded basically on two areas of ambiguity: primary purpose of hatcheries and hatchery budget review.

Primary Purpose of Hatcheries

Fishermen agree that hatcheries are needed to rebuild depressed salmon stocks, but they are not sure if successful hatchery programs will actually provide more fish to their fisheries. Under current interpretations of the law, hatcheries can serve such primary purposes as self-employment and research without showing a good probability of contributing fish to common property fisheries. To protect fishermen interests, NSRAA directors feel that all hatcheries, whether private or public, should have the primary purpose of contributing to the common property fishery.

Hatchery Budget Review

Private nonprofit hatcheries pay their own way by harvesting fish to recover "reasonable" costs of operation. "Reasonable" costs as defined in AS 16.10.450 are currently interpreted by the Alaska Department of Revenue and the federal Internal Revenue Service. Our Directors are concerned that these agencies lack the knowledge to evaluate budget items and that abuses are likely unless budget reviews are conducted by a knowledgeable group of individuals. In lieu of an established and acceptable budget review process, fishermen question whether abuses of the nonprofit status can be adequately controlled, and if not, whether our private nonprofit law is a de facto private profit law.

HB 48 and Fish Traps

Concerns that HB 48 might allow fish traps apparently contributed to your committee's action in tabling HB 48 at the March 13 hearing. This concern is shared by NSRAA directors. Accordingly, inquiries have been made with a number of legal sources. Our conclusion on this issue is as follows:

The language of HB 48, as it stands, contains no legislative intent to legalize fish traps. Prohibition on fish traps in Alaska dated from 1959 when the people of Alaska ratified ordinance number 3 per terms of Alaska constitution Article 15, section 24. Unless and until this clear prohibition against fish traps is appealed, fish traps for commercial purposes will remain illegal in Alaska. HB 48 contains no language which would constitute a clear expression of legislative intent to allow fish traps.

Our supportive position on HB 48 was based, in part, on the understanding that fish traps will not be allowed.

We hope our Association's position on HB 48 was adequately communicated. If you have any questions, please let me know. We intend to work with you and your committee to clarify ambiguities cited above and to develop a salmon restoration program designed for the needs of common property fishermen.

Sincerely,

Derek Poon, Ph.D.

Alaska Fishermen's Fund

WHAT IS THE FISHERMEN'S FUND?

The Fishermen's Fund was established in 1951 to provide for the treatment and care of Alaska licensed commercial fishermen who are injured or become ill while engaged in commercial fishing activities on shore in Alaska or in the territorial waters of the State. The territorial waters were defined on January 23, 1976 by the Attorney General's Office

> 5 AAC 36.010. Description of Area. The International water area includes all waters outside Alaska's three mile limit, i.e., beyond those described in 5 AAC 39.975(13) means the waters north and west of the International Boundary at Dixon Entrance including those extending three miles seaward.

The Fund is supported by sixty percent of the money collected from each crewmember fishing license issued, an equal amount of the money derived by the State from each commercial fisherman who is issued a permit. It is administered under the supervision of the Commissioner of Labor and with the assistance of the Fishermen's Fund Advisory and Appeals Council. The Council is composed of the Commissioner of Labor or his designee, who acts as chairman, and five members appointed by the Governor to represent the following districts:

District 1 Wrangell and areas south.

District 2 Areas north of Wrangell to include Yakutat

District 3 Areas west of Yakutat to East Coast of Alaska Peninsula, including Prince William Sound, Cook Inlet, and Kodiak.

District 4 Areas west of Alaska Peninsula to Cape Newenham, including Bristol Bay.

District 5 Areas north of Cape Newenham, including Kuskokwim, Yukon, Kotzebue, and the Arctic.

WHO IS ELIGIBLE FOR FISHERMEN'S FUND BENEFITS?

Fishermen's Fund benefits are available to commercially licensed fishermen who sustain an injury or disability as the result of an accident directly connected with their work on the fishing grounds, tying up the boat, storing gear, or repairing the boat or gear. Shopping trips to town, transportation to the boat, and falls that occur when the fisherman is returning to the boat for the night's rest are not usually covered.

Benefits are also available to fishermen who suffer a disease which is considered to be occupational with respect to the commercial fishing profession.

These diseases include hernias, heart attacks, varicose veins of the legs, bronchitis, pleurisy, pneumonia, rheumatism, arthritis, and musculoskeletal ailments such as bursitis, traumatic sciatica and tenosynovitis.

Excluded from the occupational category are the common cold, influenza, strep throat, tonsilitis, emotional disorders, peptic ulcers, epilepsy, diseases not common to both sexes, venereal diseases and any condition arising from an attempt by a person to injure himself or another. The exceptions would be bug bites which become infected due to the fish slime and ear infections which are caused by diving to repair boats or gear. Benefits are not paid for colds that develop into ear infections through normal exposure.

WHAT IS THE PROCEDURE FOR FILING A CLAIM?

When a commercial fisherman sustains an injury or suffers an illness which he believes will entitle him to Fishermen's Fund benefits, he should tell the doctor who treats him so claim forms may be completed. If the fisherman reports first to an emergency or out patient section of a hospital, he should advise hospital personnel that he may be entitled to benefits from Fishermen's Fund.

There are two Fishermen's Fund claim forms. One is the "Certificate of Eligibility" which the injured or ill fisherman completes and signs. The other is the "Physician's Report of Injury/Illness" which the doctor

completes with the assistance of the fisherman. These forms are printed on opposite sides of the same sheet of paper for convenience. See examples 1 and 2.

Most doctors and hospitals in Alaska have Fishermen's Fund forms which *must be completed to establish a claim*. If a fisherman is unable to obtain the proper forms in his area, he may write the Administrator of the Fishermen's Fund, P. O. Box 1149, Juneau, Alaska 99811.

At times it is necessary for the Administrator of the Fund to write a claimant to clarify a point concerning his claim. Usually such letters are necessary because the claim forms have not been completed with sufficient detail to establish the claimant's eligibility for benefits. It is essential for a claimant to respond as completely and promptly as possible to avoid delays in processing his claim.

All billings for expenses related to a claim should be sent to the Administrator of the Fishermen's Fund. If the claim is approved, benefits will be paid to the person, business, or institution which submitted the bills. If a fisherman pays for any expenses related to his injury or illness, he should obtain proper receipts and submit them to the Fund's Administrator for reimbursement. If expenses are advanced to the claimant and charged against his fishing settlement, a copy of the settlement could be accepted in lieu of any other receipt. Typical out-of-pocket expenses are transportation, prescriptions, and on occasion, hotel and meal costs.

In the event a claim is denied, all parties are notified with a written notice stating the reason for the denial. The denied claim is then scheduled for review at the next meeting of the Advisory and Appeals Council. The claimant is notified of the time and place of the Council's meeting in sufficient time to submit additional information supporting his claim. He may also make arrangements for a personal appearance before the Council.

Any inquiries concerning the Fishermen's Fund may be directed to the Commissioner of Labor, P. O. Box 1149, Juneau, Alaska 99811.

WHAT COVERAGE DOES THE FISHERMEN'S FUND PROVIDE?

Eligible fishermen are entitled to emergency treatment, transportation to the nearest place where approved medical facilities are available, medical, surgical and nursing care and hospitalization. They are entitled to reasonable transportation charges incurred to approved hospitalization and/or treatment including the cost of returning fishermen to their boat, home or another place that reasonably meets their convenience. A fisherman may also be entitled to assistance after discharge from the hospital during fishing season.

If dentures or eyeglasses are lost, they may not be replaced. However, if they are broken and physical injury is sustained necessitating medical attention, they may be replaced or repaired upon approval of the Fishermen's Fund Advisory and Appeals Council. If no physical injury is sustained and dentures or eye glasses are broken, replacement is not allowed.

Persons receiving benefits from the Fishermen's Fund shall be provided with the type and quality of treatment which will restore them to health and productivity, if possible. In this connection, the Department may enter into cooperative arrangements with State and Federal agencies, private clinics, and rehabilitation centers for the care and treatment of fishermen.

WHAT ARE THE LIMITS ON FISHERMEN'S FUND BENEFITS?

1. No benefits shall be paid for the care of any one person which involves a single injury or disability beyond a period of one year from the date of the initial allowance.

2. Benefits shall not be paid for medical care or hospitalization rendered prior to the ascertainable time of an injury, or prior to authorization in the case of disability by an occupational disease.

3. The total allowance for any one injury or disablement shall not exceed $2,500.

Exceptions to the above stipulations may be granted by the Commissioner of Labor with the unanimous approval of the Fishermen's Fund Advisory and Appeals Council.

CHAPTER 35. OCCUPATIONAL DISEASE DISABILITY

of 60 percent of the money derived by the state from each crewmember fishing license issued under AS 16.05.480, an equal amount of the money derived by the state from each commercial fisherman who is issued a permit under AS 16.43, and money appropriated to carry out the purpose of §§ 10-150 of this chapter. (§ 4 ch 100 SLA 1951; am § 1 ch 99 SLA 1955) (§ 1 ch 105 SLA 1977).

Cross reference. – For provisions as to special funds, see AS 37.05.155.

Sec. 23.35.070. Benefits. A fisherman, upon becoming disabled, is entitled to receive benefits as follows: Immediately after he sustains an injury or disability arising out of an accident directly connected with his operation as a fisherman, either ashore in the state or in the territorial waters of the state, or suffers an occupational disease, the fisherman is entitled to emergency treatment, transportation to the nearest place where approved medical facilities are available, medical care and hospitalization. (§ 5 ch 100 SLA 1951; am § 2 ch 99 SLA 1955; am § 1 ch 59 SLA 1957)

Sec. 23.35.080. Emergency treatment for cardio-vascular diseases. The department may pay the costs, within the maximum limitations, of emergency treatment, transportation, medical care and hospitalization, necessitated by a cardio-vascular disease, if the department determines that the disease is attributable, directly or indirectly, to the fishing endeavor. (§ 5 ch SLA 1951; am § 2 ch 99 SLA 1955; am § 1 ch 59 SLA 1957)

Sec. 23.35.090. Assistance after discharge. A fisherman is also entitled to such assistance after discharge from the hospital during period of convalescence as the department allows in consideration of the condition of the fund. (§ ch 100 SLA 1951; am § 2 ch 99 SLA 1955; am § 1 ch 59 SLA 1957)

Sec. 23.35.100. Transportation, hospital, nursing, medical and surgical expenses. The department may pay out of the fund all reasonable transportation charges incurred under §§ 80 and 90 of this chapter, including cost of returning the fisherman to his boat, to his home or to another place which reasonably meets with his

convenience, and the reasonable hospital, nursing, medical and surgical expenses incurred in his examination, treatment and care. (§ 6 ch 100 SLA 1951)

Money cannot be expended from the sick and disabled fishermen's fund for the payment of charges for medicine prescribed by chiropractors. 1961 Op. Att'y Gen., No. 23.

Since chiropractor cannot prescribe drugs or medicine. — It is illegal and criminal for a chiropractor, without additional qualifications, to prescribe drugs or medicine to sick or injured persons. 1961 Op. Att'y Gen., No. 23.

Sec. 23.35.110. Contracts for care. In carrying out §§ 10–150 of this chapter, the department may enter into contracts or other arrangements with hospitals and doctors in the state for furnishing care on an annual basis to persons entitled to benefits. (§ 6 ch 100 SLA 1951)

Sec. 23.35.120. Cooperation with other agencies. In providing care the department shall provide the type and quality of treatment which will restore the fisherman to health and productivity, if possible. The department may enter into cooperative arrangements with agencies of the federal government, other states and territories, and private clinics and rehabilitation centers for the care and treatment of fishermen. (§ 7 ch 100 SLA 1951)

Sec. 23.35.130. Duration of care. Except for compelling reasons, no compensation may be paid for the care of any one persons involving a single injury or disability beyond a period of one year from the date of initial allowance. (§ 7 ch 100 SLA 1951)

Liberal interpretation. — The legislature intended a relatively liberal interpretation of the act. 1959 Op. Att'y Gen., No. 5.

Scope of term "compelling reasons". — See 1959 Op. Att'y Gen., No. 5.

Sec. 23.35.140. Limitation on benefits. (a) Except for compelling reasons,

(1) no compensation may be paid for medical care

or hospitalization furnished before the ascertainable time of injury, or before authorization in the case of disability caused by an occupational disease;

(2) the total allowance for any one injury or disablement is $2,500.

(b) The total allowance for any one heart attack is $2,500. (§ 7 ch 100 SLA 1951, am § 1 ch 103 SLA 1965; am § 1 ch 166 SLA 1968)

Effect of amendments. — The 1965 amendment rewrote this section.

Prior to the 1968 amendment this section consisted of the language now contained in subsection (a).

Benefits in excess of $2,500. — There might be many very "compelling reasons" to raise the benefits above $2,500 under some circumstances. 1959 Op. Att'y Gen., No. 5.

Sec. 23.35.150. Definitions. In this chapter

(1) "commissioner" means the commissioner of labor;

(2) "council" means the Fishermen's Fund Advisory and Appeals Council;

(3) "department" means the Department of Labor;

(4) "fisherman" means a person who is licensed by the state to engage in commercial fishing under AS 16.05.480 or who is the holder of a permit issued under AS 16.43 and who, at the time injury is sustained or illness is contracted, is actually so engaged or is occupied in Alaska in preparing or dismantling boats or gear used in commercial fishing;

(5) "fund" means the Fishermen's Fund;

(6) "occupational disease" means hernia, varicose veins of the leg, the respiratory diseases, bronchitis, pleurisy, and pneumonia caused by or aggravated by the fishing endeavor, but excluding the common cold and influenza; rheumatism, arthritis and those musculoskeletal diseases (such as bursitis, traumatic sciatica, and tenosynovitis) directly caused by or

aggravated by the fishing endeavor; and does not include a disease not common to both sexes, venereal disease, or a condition arising out of an attempt of a fisherman to injure himself or another.

(7) "approved medical facilities" and "medical care" include the facilities of, or the care and treatment prescribed or performed by, a practitioner or chiropractic licensed by the state under AS 08.20. (§ 13 ch 64 SLA 1959; am § 1 ch 93 SLA 1960; § 4 ch 100 SLA 1951; am § 1 ch 99 SLA 1955; § 5 ch 100 SLA 1951; am § 2 ch 99 SLA 1955; am § 1 ch 59 SLA 1957; § 8 ch 100 SLA 1951; am § 1 ch 77 SLA 1962; am § 1 ch 51 SLA 1972)

Effect of amendment. — The 1972 amendment added paragraph. (7).

CHAPTER 55. FISHERMEN'S FUND

Section

10. Benefits
20. Pleadings
30. Appeals
40. Definitions

8 AAC 55.010. BENEFITS. (a) To be eligible for benefits from the fund a person must be a fisherman who, at the time an injury is sustained or illness is contracted, is licensed in his own name by the State of Alaska to engage in commercial fishing, and who is actually so engaged in Alaska or is occupied in Alaska in preparing or dismantling boats or gear used in commercial fishing.

(b) Benefits for respiratory diseases are limited to bronchitis, pleurisy and pneumonia caused by or aggravated by fishing endeavor.

(c) Unless required as a result of accidental bodily injury caused by the fishing endeavor, benefits may not be awarded for the following items:

(1) the services of a dentist,

(2) dental prosthetic appliances or the fitting of them;

(3) eye refractions and hearing examinations; or

(4) eye glasses and hearing aides or the fitting of them. (Eff. 3/28/74, Reg. 49)

Authority: AS 23.35.050
AS 23.35.070
AS 23.35.150(6)

8 AAC 55.020. PLEADINGS. (a) Proceedings before the council are commenced by filing an application, with the administrator, in writing which consists of the following:

(1) a certificate of eligibility completed by the fisherman on a form prescribed by the administrator; and

(2) a physician's report of injury or illness completed by the attending physician on a form prescribed by the administrator.

(b) A separate application shall be filed for each separate and independent occupational injury or occupational illness for which benefits are claimed.

(c) In addition to the restrictions provided by sec. 10 of this chapter, benefits may not be awarded unless

(1) applications are submitted within 60 days of the date of occupational injury or onset of occupational illness,

(2) responses to inquiries seeking clarification of and items on an application or of any item on a billing for services performed or goods supplied are submitted within 90 days after the date of inquiry, and

(3) price lists and fee determinations are submitted to the administrator within 30 days of the date requested.

(d) A request for an extension of duration of care, waiver of benefit limitations, assistance after discharge from a hospital or additional transportation allowances is called a petition. Petitions for extension of duration of care or waiver of benefit limitations shall cite those reasons believed to be sufficiently compelling to justify

granting the relief sought. Petitions for assistance after discharge from the hospital shall include the dates during which hospitalization occurred. Petitions for additional transportation allowances may be considered only for the purpose of providing specialized medical skills unavailable at the nearest approved medical facility. The petition shall include a written statement from the attending physician clearly defining the required specialized medical skill and the nearest place where it is available.

(e) Petitions under (d) of this section shall be submitted to the council for review and recommendations. (Eff. 3/28/74, Reg. 49).

Authority: AS 23.30.050

8 AAC 55.030. APPEALS. (a) The administrator shall submit a written notice to each fisherman whose application is denied stating the reasons for the denial.

(b) The council shall review each application which has been denied or referred to the council by the administrator. Each fisherman who has an application pending before the council shall be notified in writing, by the administrator of the time and place of a council session at least ten days prior to the session. Each fisherman may submit additional evidence to the council in support of his claim in writing, by personal appearance, or both.

(c) The administrator shall notify, in writing, each fisherman who has an application before the council of the council's decision on his application. The decision of the council is final. (Eff. 3/28/74, Reg. 49)

Authority: AS 23.30.040
AS 23.35.050

8 AAC 55.040. DEFINITIONS. In this chapter unless the context requires otherwise

(1) "administrator" means the individual responsible for the administration of the Fishermen's Fund program;

(2) "council" means the Fishermen's Fund Advisory and Appeals Council;

(3) "fund" means the Fishermen's Fund. (Eff. 3/28/74, Reg. 49)

Authority: AS 23.35.050

HB 49

STATE OF ALASKA

JAY S. HAMMOND, GOVERNOR

DEPARTMENT OF LABOR

OFFICE OF THE COMMISSIONER / BOX 1149 – JUNEAU 99811

February 16, 1979

The Honorable Alvin Osterback
Pouch V
Juneau, AK 99811

Dear Representative Osterback:

During the Resources Committee hearing on Tuesday, February 13, 1979, for House Bill No. 49, "An Act relating to the fishermen's fund," the committee requested additional information on the number of claims filed for injuries or illnesses occurring outside the three-mile limit or the "territorial waters." This information is attached.

Also, language for amending the bill to pay claims retroactively has been drafted which is as follows:

Change Title - ; and providing for an effective date.

Add:
*Section 2. The provisions of Section 1 of this Act apply retroactively to all claimants who filed timely claims for fishermen's fund benefits on or after January 23, 1976.

*Section 3. This Act takes effect immediately in accordance with the provisions of AS 01.10.070.

A proposed committee substitute of the bill is attached.

The Fiscal Note submitted for this bill has been reviewed and no changes are necessary at this time.

Thank you for the opportunity to comment. If you have any questions, please contact me at 465-2700 or Grace Wilson, Fishermen's Fund Officer, at 465-2790.

Sincerely,

Judy DuBois

Introduced: 1/24/79
Referred: Resources

IN THE HOUSE BY THE RESOURCES COMMITTEE

CS FOR HOUSE BILL NO. 49

IN THE LEGISLATURE OF THE STATE OF ALASKA

ELEVENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act relating to the fishermen's fund; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

Section 1. AS 23.35.070 is amended to read:

Sec. 23.35.070. BENEFITS. A fisherman, upon becoming disabled, is entitled to receive benefits as follows: Immediately after he sustains an injury or disability arising out of an accident directly connected with his operation as a fisherman, either within the state or in Alaska water [,THE TERRITORIAL WATERS OF THE STATE], or suffers an occupational disease, the fisherman is entitled to emergency treatment, transportation to the nearest place where approved medical facilities are available, medical care and hospitalization. As used in this section, "Alaska water" means the inland and territorial water of the state and the fishery conservation zone adjacent to the state established by sec. 101 of the Fishery Conservation and Management Act of 1976, P.L. 94-265 (16 U.S.C.).

Section 2. The provisions of [THIS ACT] are retroactively to all claimants who filed timely claims for fishermen's fund benefits on or after January 24, 1978.

Section 3. This Act is [IMMEDIATELY] effective [AND APPLICABLE] under the provisions of AS 01.10.070.

Passed CS replacing sec. 2 & 3 with those proposed by Rep Vezey but changing Oct. 1 to Sept. 1 for new application deadline

1979 Claims Pending Payment

SUBJECT: HB 49 Fishermen's Fund

TO: House Resources Committee

FROM: Kenneth E. Vassar
Legislative Counsel

You have requested a suggestion for language which would make the benefits provided in HB 49 applicable to fishermen who were disabled before the effective date of the bill. In accordance with your request, I would suggest the following:

> * Sec. 2. A fisherman who sustains an injury or disability arising out of an accident which (1) was directly connected with his operations as a fisherman; (2) occurred in the fishery conservation zone adjacent to the state established by sec. 101 of the Fishery Conservation and Management Act of 1976, P.L. 94-265 (16 U.S.C. 1801 et seq.); and (3) occurred on or after January 23, 1976, and before July 1, 1979, is entitled to benefits under AS 23.35.070 if he files an application with the administrator of the Fishermen's Fund established in AS 23.35.060 before October 1, 1979.
>
> * Sec. 3. This Act takes effect July 1, 1979.

III. ANALYSIS (See Fiscal Note Preparation Instructions, Section III)

Three years ago the Attorney General's Office ruled that the "territorial water" of the state is limited to three miles seaward. In the three years experience approximately $15,000 of claims have been denied by Fishermen's Fund. However, we do not believe this is an accurate history because knowledge of the law has stopped many claims from being filed.

It is our experience that the additional area will bring more large claims as those occurring on the high seas tend to be more serious in nature. Therefore, we are anticipating that the program costs will be $15.0 for the remainder of the FY79 and could rise as much as $35,000 in the FY80 and $5,000 each succeeding year.

No new positions are requested and administrative costs should not increase beyond the inflationary costs.

Funding is provided by the revenue collected from the sale of crewmember fishing licenses and an equal amount from permit holders, titled the Sick and Disabled Fishermen's Fund.

III. ANALYSIS (See Fiscal Note Preparation Instructions, Section III)

Three years ago the Attorney General's Office ruled that the "territorial water" of the state is limited to three miles seaward. In the three years experience approximatley $11,000 of claims have been denied by Fishermen's Fund. However, we do not believe this is an accurate history because knowledge of the law has stopped many claims from being filed.

It is our experience that the additional area will bring more large claims as those occurring on the high seas tend to be more serious in nature. Therefore, we are estimating that the program costs will be 15.0 for the remainder of the FY79 and could rise as much as $35,000 in the FY80 and $5,000 each succeeding year.

No new positions are requested and administrative costs should not increase beyond the inflationary costs.

Funding is provided by the revenue collected from the sale of crewmember fishing licenses and an equal amount from permit holders, titled the Sick and Disabled Fishermen's Fund.

HB49

January 15, 1979

Speaker of the House
Alaska State Legislature
Juneau, Alaska 99811

Dear Mr. Speaker:

Under the authority of art. III, sec. 18 of the Alaska Constitution, I am transmitting a bill relating to the fisherman's fund. Under the benefit provisions of the fisherman's fund as they currently exist, AS 23.35.010 - 23.35 150, an injured or disabled fisherman is only entitled to receive benefits if the fishing-related accident leading to his injury or disability occurred ashore in Alaska or within "the territorial waters of the state", which traditionally have been defined as extending only to the three-mile limit. In recognition of the facts that many Alaska-licensed fishermen fish offshore from Alaska but beyond the three-mile limit and that the federal government has now extended its fisheries jurisdiction to 200 miles offshore, I am proposing that AS 23.35.070 be amended to extend benefits to cover fishing-related accidents that occur inside the 200-mile fisheries conservation zone established under the Fishery Conservation and Management Act of 1976, P.L. 94-265.

Sincerely,

S/JSH

PETE BUIST PRESIDENT OF THE INTERIOR ALASKA TRAPPERS ASSOCIATION

January 23, 1979

Speaker of the House
Alaska State Legislature
Juneau, Alaska 99811

Dear Mr. Speaker:

Under authority of art. III, sec. 18, of the Alaska Constitution, I am transmitting a bill which would require that license fee receipts from the sale of trapping licenses be deposited in the Fish and Game Fund.

Receipts from trapping license sales generally go into the General Fund rather than the Fish and Game Fund. Apparently, this practice stemmed from a belief that the federal Pittman/ Robertson Act applied only to hunting, and not trapping, licenses.

However, an analysis of the Act demonstrates a concern with game management and conservation rather than the nuances of any distinction between "hunting" and "trapping." The term "hunting" is not even defined in the Act. Consequently, it appears that it would be permissible to permit trapping license fee receipts to be deposited into the Fish and Game Fund, and that a statutory provision to that effect would not be an unconstitutional dedicated fund (art. IX, sec. 7, Alaska Constitution).

Past failure to include trapping license fees is illogical. The difference between hunting and trapping is established only by regulation governing methods and means, and can be modified by the Board of Game at any time. Many species of game which can be taken under hunting regulations may also be taken under trapping regulations. Moreover, several existing management and research programs carried out with Pittman/Robertson and Fish and Game Fund money are directed at furbearers of primary interest to the trapping constituency.

This legislation would provide an additional $36,000 in the form of trapping license fee receipts to be included in the Fish and Game Fund. I urge enactment of this legislation.

Sincerely,

S/JSH

Re: House Bull No. 83

Dear Mr. Osterback:

House Bill No. 83, an Act relating to the raw fish tax, was introduced in the House on January 25, 1979 and was referred to the House Resources and Finance Committees. The bill was given a further referral on January 30, 1979 to the House Community and Regional Affairs Committee.

For the consideration of the House Resources Committee, I am enclosing a copy of a Fiscal Note prepared by Mr. Phil Wall, Director, Administrative Services Division, Department of Revenue concerning the proposed legislation.

Sincerely,

R. D. Stevenson
Special Assistant

JUNEAU ALASKA

May 1, 1978

TO: SENATOR GEORGE HOHMAN

FROM: REPRESENTATIVE NELS A. ANDERSON, JR.

SUBJECT: FISHERIES BIOLOGIST FOR BRISTOL BAY

In our continuting efforts to bring research and management closer to the areas served, it is imperative that the field workers on projects be stationed in the area where research is being conducted. The Arctic Char Predation project is an example of having personnel stationed in the area served.

The predation suppression program must be managed from Bristol Bay since the project needs year round attention. Moving personnel out of the area does not serve any useful purpose other than impede research at considerable non-productive cost.

Predation suppression, utilizing non-lethal methods, is a program that other areas could adopt as a model for saving salmon smolt as they migrate from their spawning streams.

The need to station Bristol Bay research personnel in Anchorage doesn't make sense. Data for computer analysis can be transmitted telephonically. Furthermore, the Bristol Bay area manager is currently understaffed.

There is a critical need to address the predation suppression program as well as the proposed Togiak herring fishery.

The Togiak herring commercial fishery is not researched to determine safe harvest quotas. Additional biological information must be acquired before major damage is done to the herring stock in Bristol Bay.

I believe that additional staff is needed and there is sufficient work for staff research in Bristol Bay.

Resolution From Nushagak Advisory Committee
to
State Board of Fisheries

Re: Creation of a Special Bering Sea Herring Budget.

Whereas: The Bering Sea Herring Fishery is a rapidly expanding industry with hundreds of participants; and

Whereas: The managers of this fishery are devoting time and budget dollars that were formerly invested in our valuable salmon fishery; therefore

Be It Now Resolved: That we of the Nushagak Advisory Committee respectfully request that special funding be established on a first priority basis for a Bering Sea Herring Research/Management Staff with an adequate budget to provide for best utilization of this valuable resource.

Signed: Leon C Braswell
Leon C. Braswell, Chairman
Nushagak Advisory Committee

Date: 22 Nov 78

cc: Representative Nels A. Anderson, Jr.
Commissioner Skoog
Governor Hammond

Resolution From Nushagak Advisory Committee
to
State Board of Fisheries

Re: Emergency Funding for 1979 Bering Sea Herring Research/Management

Whereas: It has come to our attention that the proposed budget for management of the Bering Sea Herring Fishery in the 1979 spring season was cut from the Fish and Game budget; and

Whereas: The money for this management effort will have to be pulled from the salmon budget; therefore

Be It Now Resolved: That we, of the Nushagak Advisory Committee, respectfully request that emergency funds be specifically appropriated to cover any and all expenses needed to adequately monitor this valuable resource. We recognize the budget limitations that have already been placed on the Department as a whole and feel it is not in the best interest of the salmon or herring resources to further squeeze an already tight budget to monitor a new and developing fishery.

PHONE (907) 842-5257

December 1, 1978

The Honorable Jay Hammond
Governor of Alaska
Pouch A
Juneau, Alaska 99811

Dear Governor Hammond:

As you well know, the salmon fishery is practically the only source of income for Bristol Bay residents. We are highly dependent on the effective and accurate management of this resource for our livelihood. For this reason our local management offices must have adequate funding.

We are requesting that $110,000 be put into capital budget for sonar equipment for the Nushagak fishery. This is not the first request that has been budgeted but other requests have been cut. Sonar equipment is something we desperately need in order to have an idea of the status of our fishery.

Herring is a growing fishery in the Bay and sure needs to be managed adequately. During the past season, it was managed by our salmon managers without any additional funds. This can not continue as it will result in poor management for both the salmon and herring.

It is imperative that the administration of the State of Alaska secure adequate funding for accurate and effective management of these two natural resources.

Sincerely yours,

BRISTOL BAY NATIVE ASSOCIATION, INC.

SALMON COUNTING

RESOLUTION NO. 79-01

WHEREAS, Most of the residents of Bristol Bay depend on the salmon industry as their only source of income; and

WHEREAS, The Nushagak River is one of the main tributories of Bristol Bay and is highly valuable as a salmon spawning ground; and

WHEREAS, There has been a cut back of Japanese commercial fishing activities which will affect the return of salmon to Bristol Bay and, thereby will greatly increase the need for the return to be accurately and speedily monitored and recorded; and

WHEREAS, An overescapement is possible and could adversely affect the salmon; and

WHEREAS, The Alaska Department of Fish and Game regulates activity in this commercial fishery and makes on-site and immediate decisions pertaining to allowable fishing times which affect local economy for an entire year and propagation the species. and

WHEREAS, The use of sonar equipment in the murky water of the lower Nushagak River will give faster and more accurate information as a basis for making these decisions.

NOW THEREFORE BE IT RESOLVED by the Executive Committee of Bristol Bay Native Association that the Alaska State Legislature appropriate special funding for the needed sonar system to be installed on the lower end of the Nushagak River; and

BE IT FURTHER RESOLVED by the Executive Committee that Alaska Department of Fish and Game receive regular funding to operate their counting towers with reliable personnel and for the needed length of time.

SIGNED Wayne F. Schroeder

CERTIFICATION:

I, the undersigned secretary of said Association, do hereby certify that the Executive Committee's composed of five (5) members, of whom 4 were present at a meeting this 10th day of October, 1978, and that the foregoing resolution was adopted by the affirmative vote of 4 members.

#B136

PROPOSAL FOR NUSHAGAK RIVER COUNTERS
Alaska Department of Fish and Game

INTRODUCTION

Sockeye salmon passing through the Nushagak Fishing district enter several trunk spawning streams where they are enumerated by Alaska Department of Fish and Game biologists through aerial surveys and/or counting towers. The accurate and prompt enumeration of salmon escaping the commercial fisheries is essential for efficient management of the various stocks contributing to the Nushagak district salmon runs. At present the Department operates visual counting stations in all of the major salmon producing river systems in the Nushagak district except in the main Nushagak river. Accurate enumeration of the escapement into the main Nushagak River has posed a special problem in past years with muddy water frequently interfering with visual counting operations. In some years, poor counting conditions have prevented biologists from obtaining any reasonable estimate of escapement at the tower sites. Due to the problems encountered, the Department closed the main Nushagak River counting tower camp in 1977 and initiated a post season aerial survey project to assess the escapement. Obviously this escapement information does not provide the prompt in-season data that is required to effectively manage the stocks returning to that system.

Sockeye salmon returning to the Nuyakuk River, a tributary of the main Nushagak River, are counted visually at the tower site down streamof the outlet of the Tikchik lakes where water clarity is acceptable. Unfortunately due to the length of the migration route, up the main Nushagak River and Nuyakuk Rivers the sockeye salmon usually take up to 14 days to move from the fishing district up to the counting tower. This delay in escapement enumeration presents a problem in effective management of the stocks.

This situation could be greatly improved if early enumeration of all salmon entering the lower portion of the main Nushagak River could be accomplished. As stated earlier, visual counting techniques are not suitable.

Side scanning sonar now presents another option to visual enumeration of migrating salmon. The equipment recently developed by the Bendix Corporation while under contract to the Department of Fish and Game consists of a single accoustic transducer positioned in the river in a manner to allow a narrow sonar beam to scan across the channel. The acoustic ecohes received by the transducer are processed by a shore based electronic control unit with salmon counts registered and printed at regular intervals. Side scanning sonar units are now in use in the Cook Inlet and Arctic-Yukon-Kuskokwim Rivers with good success where water conditions prevent visual counting.

OBJECTIVES

This proposal requests two side scanning sonar units and one year project operational costs to initiate a sonar escapement enumeration project on the lower portion of the main Nushagak River. The primary objective of this project would be to obtain an accurate in-season estimate of the daily passage of salmon migrating up the main Nushagak River. Second, our objectives would be to obtain samples from the migrating salmon to access the age class composition and stock identity through scale pattern analysis techniques.

PROJECT NARRATIVE

The Nushagak River sonar project will be the responsibility of the Bristol Bay research project leader, Division of Commercial Fisheries. One temporary fishery biologist I will act as crew leader over three temporary fishery technicians. Field supervision of the project will be shared by the research project leader and his assistant.

The funding requested in this proposal will allow the field operations to begin June 10 and continue through to late August. This time schedule should allow sufficient time for site location, camp set up and gear installation prior to any significant passage of migrating salmon. The August termination date should similarly provide enough time to enumerate the Nushagak River pink salmon stocks which follow the king and sockeye salmon runs.

Beach seining will be conducted concurrently with the sonar enumeration to provide scale samples for species composition, age class composition and stock separation. Seasonal total escapement data obtained from the sonar project will be compared to aerial survey escapement estimates flown after the season and visual counts recorded at the Nuyakuk River tower station. Depending on the site selected for the sonar enumeration, it may be possible on some occasions to directly compare sonar counts to visual counts when water conditions are suitable.

In addition to in-season applications, escapement data obtained from the project will be incorporated into the Bristol Bay catch and escapement data files and used with other data to evaluate optimum escapement levels for the salmon stock involved and to forecast future salmon runs.

The Nushagak River sonar project will be the responsibility of the Bristol Bay research project leader, Division of Commercial Fisheries. One temporary fishery biologist I will act as crew leader over three temporary fishery technicians. Field supervision of the project will be shared by the research project leader and his assistant.

The funding requested in this proposal will allow the field operations to begin June 10 and continue through to late August. This time schedule should allow sufficient time for site location, camp set up and gear installation prior to any significant passage of migrating salmon The August termination date should similarly provide enough time to enumerate the Nushagak River pink salmon stocks which follow the king and sockeye salmon runs.

Beach seining will be conducted concurrently with the sonar enumeration to provide scale samples for species composition, age class composition and stock separation. Seasonal total escapement data obtained from the sonar project will be compared to aerial survey escapement estimates flown after the season and visual counts recorded at the Nuyakuk River tower station. Depending on the site selected for the sonar enumeration, it may be possible on some occasions to directly compare sonar counts to visual counts when water conditions are suitable

In addition to in-season applications, escapement data obtained from the project will be incorporated into the Bristol Bay catch and escapement data files and used with other data to evaluate optimum escapement levels for the salmon stock involved and to forecast future salmon runs.

December 1, 1978

The Honorable Jay Hammond
Governor of Alaska
Pouch A
Juneau, Alaska 99811

Dear Governor Hammond:

As you well know, the salmon fishery is practically the only source of income for Bristol Bay residents. We are highly dependent on the effective and accurate management of this resource for our livelihood. For this reason our local management offices must have adequate funding.

We are requesting that $110,000 be put into capital budget for sonar equipment for the Nushagak fishery. This is not the first request that has been budgeted but other requests have been cut. Sonar equipment is something we desperately need in order to have an idea of the status of our fishery.

Herring is a growing fishery in the Bay and sure needs to be managed adequately. During the past season, it was managed by our salmon managers witnout any additional funds. This can not continue as it will result in poor management for both the salmon and herring.

It is imperative that the administration of the State of Alaska secure adequate funding for accurate and effective management of these two natural resources.

Sincerely yours,

BRISTOL BAY NATIVE ASSOCIATION, INC.

Kay E. Larson

(Mrs.) Kay E. Larson
Deputy Director

cc: Representative Nels Anderson, Jr.

Enclosure

BRISTOL BAY NATIVE ASSOCIATION
P.O. Box 179
Dillingham, Alaska 99576
By Executive Committee

SALMON COUNTING

RESOLUTION NO. 79-01

WHEREAS, Most of the residents of Bristol Bay depend on the salmon industry as their only source of income; and

WHEREAS, The Nushagak River is one of the main tributories of Bristol Bay and is highly valuable as a salmon spawning ground; and

WHEREAS, There has been a cut back of Japanese commercial fishing activities which will affect the return of salmon to Bristol Bay and, thereby will greatly increase the need for the return to be accurately and speedily monitored and recorded; and

WHEREAS, An overescapement is possible and could adversely affect the salmon; and

WHEREAS, The Alaska Department of Fish and Game regulates activity in this commercial fishery and makes on-site and immediate decisions pertaining to allowable fishing times which affect local economy for an entire year and propagation the species; and

WHEREAS, The use of sonar equipment in the murky water of the lower Nushagak River will give faster and more accurate information as a basis for making these decisions.

NOW THEREFORE BE IT RESOLVED by the Executive Committee of Bristol Bay Native Association that the Alaska State Legislature appropriate special funding for the needed sonar system to be installed on the lower end of the Nushagak River; and

BE IT FURTHER RESOLVED by the Executive Committee that Alaska Department of Fish and Game receive regular funding to operate their counting towers with reliable personnel and for the needed length of time.

SIGNED Wayne F. Shrader

CERTIFICATION:

I, the undersigned secretary of said Association, do hereby certify that the Executive Committee's composed of five (5) members, of whom 4 were present at a meeting this 6th day of October, 1978, and that the foregoing resolution was adopted by the affirmative vote of 4 members.

Secretary

** EXPENDITURE BREAKDOWN:

3 Man-months @ $1500 ea.	$ 4,500
Helicopter to bring men, boat & supplies to area & return.	3,000
Food & Subsistence for men	450
Small riverboat & motor	2,000
TOTAL	$ 9,950

** SCOPE OF OPERATIONS

The side-scanner sonar fish counter (valued at approx. $36,000) is already available at ADF&G offices at Soldotna. If these funds are approved, the counter would be installed on the Crescent River (also known as the Grecian River) near Tuxedni Bay on the Lower West Side of Cook Inlet.

Installation would be about June 1, 1979, with operations continuing through August 15.

** JUSTIFICATION

According to Gary Sanders and Tom Namvedt, ADF&G management biologists for Cook Inlet, it is estimated that five species of salmon run up the Crescent River, the most commercially valuable probably being an estimated run of some 30,000 sockeye escapement. This Crescent River broodstock "is the last sockeye run in Cook Inlet which has yet to be properly identified and properly managed," according to the biologists. "We want to know exactly what kinds of run are going up this river, and their timing."

Sanders and Namvedt stressed that the Crescent River run has been seeing increasingly heavy pressure from setnetters the past two seasons, but that ADF&G has insufficient data to properly manage openings and/or closings in the area.

They both give the Crescent River project a high priority for the summer of 1979 management program.

Copies in HB 290 HB 141

March 5, 1979

Representative Alvin Osterback
Co-Chairman, House Resources Committee
House of Representatives
Pouch V
Juneau, Alaska 99811

Dear Representative Osterback:

I would like to comment on two bills before the House Resources Committee dealing with the Limited Entry legislation and problems relating thereto, namely: HB 290 and HB 141, and urge passage of these bills.

First, HB 141 is perhaps the most important of the Limited Entry bills before the legislature in view of problems I see developing with the system, the major problem being the high price of permits which eventually will lead, in my opinion, to a system where permits are controlled by speculators and those people with money, while those people traditionally reliant on fishing for their livlihoods will be disenfranchized from the only occupation they know. In one village in Bristol Bay alone, for example, four permits have already been sold to people residing outside of the Bay area.

While the state continually proposes more liberal loan programs to purchase permits, even to the extent of using the permit itself as collateral, I don't believe that this is the answer. Alternative systems ought to be investigated in depth before so much money has been invested in permits that it is too late, even for the legislature, to change the system. When the state sold the limited entry program to the people in 1975 the problem of the young fisherman getting into the fishery was repeatedly raised. The State's answer to the people was to get the program implemented and change it at a later time. That time has come. I urge passage of HB 141.

With respect to HB 290, I recognize the inequities of the system to those fishermen who have fished various administrative areas yet do not have sufficient pointage in any one area to qualify for a permit. HB 290 appears to be the equitable solution to that problem. While I don't believe HB 290 will benefit clients served by this office, as most fishermen we serve fish only in Bristol Bay, I realize that other areas of the state differ. I would therefore, support such legislation.

Reviewing HB 290, however, seems to pose a possible problem which calls for another legislative solution, that being the problem with late applications. Would a fisherman have had to apply for permits in all administrative areas in order to cumulate points from that area under the proposed HB 290? If so, some fishermen who did not apply in certain administrative areas would not be allowed to cumulate those points. How about other fishermen who may not have applied in any administrative area due to insufficiency of points, yet under HB 290 could perhaps have cumulated enough points to get a permit in one area? Would they be allowed to benefit from HB 290 because they did not apply in the first place?

It would appear that HB 290 should be coupled with a legislative solution to the late application problem, which is particularly acute in the villages of the Bristol Bay and AYK areas. This office has failed in our attempt to achieve a judicial solution to this problem favorable to our clients and we ask for a legislative solution. While the Entry Commission may not necessarily agree, the major reason the problem is so acute in Bristol Bay and the AYK areas is because of the language and cultural differences of the people, and their lack of understanding of the system when it was first implemented.

Other than administrative problems attendant with a new application period, I can foresee two possible objections raised by the Commission for accepting late applications. First, the Commission may argue that they will have to issue more permits and thereby further exceed the maximum numbers initially established, and perhaps even threaten the fishery resource as a result. While it is true that maximum numbers would be further exceeded, these numbers are not etched in concrete and will eventually be revised either up or down when optimum numbers are established. I cannot see any threat to the fishery resource as Limited Entry, in my opinion, is only tangentially related to conservation purposes, that being with regard to easing the effect of errors in management of the resource by the Department of Fish and Game. Limited Entry is primarily an economic regulatory program which insures sufficient incomes for those people in the fishery to upgrade their vessels.

A late application bill would subject the applicants thereunder to the same point system as everyone else was subjected to. If the late applicant could not prove sufficient pointage then the applicant would simply not receive a permit.

Secondly, the Commission may further oppose a legislative solution to the late application problem particularly with respect to the set net fishery in Bristol Bay because permits are awarded at the zero (0) point level and because set net fishermen in Bristol Bay have begun what is called "leap frogging." There are two possible solutions to these problems. First, the Fish and Game Board could regulate against "leap frogging" so no matter how many set net permits were issued by the Commission there would be a natural limitation of fishermen by the numbers of sites available. Secondly, since the Commission lowered the point level at which permits would issue based upon the number of applications received, issuance of permits to late applicants could be restricted to those fisherpeople who achieve point levels on their applications within the top 813 applicants--the maximum number established by the Commission for the Bristol Bay set net fishery. For example, if the point level at which permits were issued to the highest-pointed 813 set net permit holders was 6 points, the denial level at which permits would initially be established would be 5 points, and the point level at which permits would issue would increase depending on the number of applications received during the application period. Only those late applicants, therefore, within the top 813 on the point scale would be issued permits.

Even though the Entry Commission has established interpretive regulations whereby some applicants who failed to file their applications timely can still get their applications accepted by the Commission and adjudicated under the point system, the restrictive interpretation of the regulations benefit only those people who can establish that they mailed their applications timely which was lost in the mail, or that they were ill-advised about the program by the Commission or its agents which directly caused that person not to submit an application. These regulations do not benefit Roy White of Egegik who returned in 1977 from four years of service in the Navy to find out that he could not fish anymore as a gear license holder; or William Wilson of Naknek who was released from jail in the fall of 1975 to learn the same; or those people who were away at school during the application period; or even those who simply did not plan to fish in 1975 in Bristol Bay because of poor predictions and did not understand nor had explained to them the difference between a permit and a gear license, the latter which was traditionally purchased on a year to year basis if that person planned to fish that year.

In summary, I strongly support HB 141 as the most important Limited Entry bill thus far proposed. In addition, recognizing the inequities of the system to fishermen who have

fished more than one administrative area yet cannot qualify for permits in any area, I support HB 290. I would, however, strongly urge a legislative resolution to the late application problem here in Bristol Bay.

I am available to more fully explain my views at your request.

Sincerely,

Study group is a legislative special committee consisting of 6 members: 3 appointed by the Speaker of the House; 3 appointed by the President of the Senate.

Committee staff to be located in legislative office space in Juneau.

SPECIAL LEGISLATIVE LIMITED ENTRY STUDY COMMITTEE

PURPOSE--PLAN OF WORK

The overall goal of the special legislative committee on limited entry is to recommend changes to the limited entry law which would improve the present system of commercial fisheries entry limitation. It is evident that the people of Alaska still want the program and that the intended impact is being realized; but there exists a need for the regulatory structure to better fit the actual circumstances and conditions inherent to Alaska's fisheries.

There are particular aspects of the present system which have aroused special concerns; the rapidly increasing value of permits beyond the purchasing of financing power of many Alaskans; the inability of many resident Alaskans to enter the salmon fisheries while substantial numbers of non-residents remain and continue to enter the fisheries; and the administrative burdens realized both by fishermen and the state in implementing the present limited entry schemes. While it is our intent to encourage a full scale reexamination of the Alaska limited entry system the strengths of our existing limited entry system such as intra-family transferrability provisions and the maintenance of equal opportunity to enter commercial fishing are very important to retain. The committee should look specifically at the problem areas previously mentioned, and to the greatest extent possible attempt to design a program which has the flexibility to adapt to the varied circumstances present in the various regions of Alaska. Lastly, any recommendation for changes to the limited entry system must be thoroughly, legally researched to be defensible in court.

The budget of the special committee is designed to minimize the costs of this investigation. The committee should take advantage of existing expertise in the Commercial Fisheries Entry Commission, the Alaska Department of Fish and Game, the Legislative Affairs Agency, and the Department of Commerce and Economic Development. Detailed legal analysis and related needs should be arranged through contracts.

LEGISLATIVE AFFAIRS AGENCY

MEMORANDUM

February 6, 1979

HB 159

SUBJECT: Commercial Fisheries and Agriculture Bank (CFAB) (Work Order # 6338)

TO: Representative Al Osterback

FROM: John Williams, Policy Analyst

You have asked that we briefly explain the intended functions of the Commercial Fisheries and Agriculture Bank (ch. 159, SLA 1978). The bank is fashioned after the federal farm credit system, in that it is a member owned and operated financial intermediary initially capitalized via governmental purchase of preferred stock (in this case, the State of Alaska.)

The bank is empowered to make loans for activities involving any aspect of Alaska's commercial fishing or agricultural industries. The law specifically mentions harvesting, processing, and marketing. To be eligible for a loan from the bank, the applicant must be a resident Alaskan (if a business, the majority of the owners and a majority of the voting stock) and involved in commercial fishing or agriculture. All loan recipients are required to participate in the bank, e.g., a minimum amount of stock must be held, usually expressed as a percentage of the loan principal. The initial preferred stock purchase by the state is to be repaid within 20 years.

CFAB is classified as a cooperative for purposes of the Bank for Cooperatives (a part of the farm credit system) and as an "other financial institution" for purposes of the Federal Intermediate Credit Bank (another portion of the farm credit system). Thus, the bank is eligible to sell its debt instruments to the farm credit system through either of these institutions. Additionally, it is expected that the bank will participate with the lending programs of the National Marine Fisheries Service, the state loan programs, and private financial institutions.

The Commissioner of Revenue is empowered to purchase $2 million of preferred stock in the bank during FY 79 (the funds will come from the renewable resources fund account). Presently, the Department of Commerce and Economic Development is contracting with Earl Coombs, Inc., to complete a financial needs analysis of the bank. That study is scheduled to be completed in May, 1979. Additionally, the firm of Wohlforth and

Flint has completed a set of bylaws and Articles of Incorporation for the bank (under contract from the Department of Commerce & Economic Development).

Please let us know if we may be of further assistance.

JW:lmk

by the Department of Community and Regional Affairs as security for loans made under this chapter.

(b) The commissioner of community and regional affairs may sell or transfer at par value to the Department of Revenue the mortgages and notes held by the Department of Community and Regional Affairs as security for loans made under this chapter. The Department of Revenue shall purchase all of these mortgages and notes offered, allowing the Department of Community and Regional Affairs a one-half of one per cent service fee. (§ 5 ch 152 SLA 1978)

Part 4. Independent State Boards, Associations, Commissions, and Corporations.

Chapter

Editor's note. — As to legislative findings and the purposes of the enabling act, see §§ 1 and 2, ch. 159, SLA 1978, respectively, in the 1978 Temporary and Special Acts and Resolutions in Binder 9.

Sec. 44.54.010. Commercial Fishing and Agriculture Bank. (a) There is established the Commercial Fishing and Agriculture Bank. The bank is a public corporation and government instrumentality in the Department of Commerce and Economic Development but has a legal existence independent of and separate from the state. The exercise by the bank of the powers conferred by this chapter is considered an essential governmental function of the state. Except as otherwise provided in this chapter, the bank is subject to the provisions of AS 10.15.005 — 10.15.600.

For HB 159

(b) For the purpose of the initial funding of the bank's operations, the board of directors shall issue nonvoting, preferred shares of stock in the bank and shall determine the value of each share. The State of Alaska, through appropriate agencies, shall purchase the nonvoting, preferred shares initially issued by the bank. Shares purchased by the state shall be repurchased by the bank within 20 years after their purchase. If the bank fails to repurchase the shares within 20 years, the commissioner of commerce and economic development may dissolve the bank.

(c) After the board of directors has completed the necessary organizational matters described in §§ 30 and 40 of this chapter, the commissioner of revenue may purchase with funds from the general fund up to $2,000,000 of preferred stock of the bank during fiscal year 1979 at such time and with terms agreed upon by the commissioner and the board. (§ 3 ch 159 SLA 1978)

Sec. 44.54.020. Board of directors. The bank shall be managed by a board of directors consisting of five members. Initial appointments to the board shall be made by the governor. Thereafter, board members shall be elected by the shareholders. The board members shall annually elect a chairman from among themselves. The purpose of the board is to manage the assets of the bank. (§ 3 ch 159 SLA 1978)

Sec. 44.54.030. Articles of incorporation. Not later than November 1, 1978, the board of directors shall file with the commissioner of commerce and economic development articles of incorporation as provided in AS 10.15.340 — 10.15.355 except that any filing fees shall be waived. (§ 3 ch 159 SLA 1978)

Sec. 44.54.040. Bylaws. The board of directors shall adopt the initial bylaws of the bank. The power to alter, amend or repeal the bylaws is vested in the board of directors. The bylaws may contain provisions for the regulation and management of the affairs of the bank not inconsistent with this chapter or other provisions of law. (§ 3 ch 159 SLA 1978)

Sec. 44.54.050. Membership meetings. Upon filing the articles of incorporation, the board of directors, with the assistance of the commissioner of commerce and economic development or his designee, may hold public meetings throughout the state for the purpose of explaining to members of the commercial fishing and farming industries the functions of the bank and to encourage membership in the bank. (§ 3 ch 159 SLA 1978)

Sec. 44.54.060. Membership stock. (a) The board of directors shall issue shares of membership stock in the bank in the amounts and with the value determined by the board and stated in the articles of incorporation.

(b) Loans made to shareholders of the bank under the provisions of

OFFICIAL BUSINESS

February 16, 1979

Re: HB 193, an act establishing regional boards of fish and game.

Dear Interested Persons:

I introduced HB 193 in the House of Representatives on February 13, 1979.

The bill establishes regional boards of fish and game within seven regions in the State of Alaska. In addition to the regional boards there is a "master board" which would sit with jurisdiction over the entire state. The "master board" would be made up the individual chairman for each of the seven boards.

Enclosed with this letter and copy of the bill is a press release of February 13, 1979 explaining some of my concerns and reasons for introducing the bill.

Because of the concerns of many of the Senators and Representatives for a short session in the Legislature this year, it will be necessary to act on this bill in very short order.

A hearing has been scheduled in the House Resources Committee, chaired by Rep. Alvin Osterback, on HB 193, Thursday, February 22nd at 3:00 in Room 118, Capitol Bldg.

If you have any concerns or comments to be made on the bill I would appreciate it if you would contact my office or write direct to the House Resources Committee. If you wish to give testimony on the bill, please contact Mary Levan, Administrative Assistant, House Resources Committee.

I would solicit your support in favor of the bill and request that you contact myself or my staff regarding questions you may have pertaining to the legislation.

Sincerely,

Terry Gardiner

PRESS RELEASE
February 13, 1979

A bill regionalizing the state's Fish and Game Boards is to be introduced today. The bill, prime sponsor of which is Rep. Terry Gardiner, D-Ketchikan, would replace the existing separate Board of Fisheries and Board of Game with seven regional boards overseeing both fisheries and game policies. A "master board" made up of the chairmen of the seven regional boards would have ultimate regulatory power over actions of the regional boards with powers to amend and to veto regional decisions.

Rep. Gardiner introduced the bill because of his concern over increasing complexity of the issues faced by the state boards of fisheries and game, such as bottomfishing, regional aquaculture development, declining and fluctuating game populations in some regions, and subsistence. He has become convinced that otherwise the only alternative is to create professional fish and game boards in the future.

The idea is not new. Bob Palmer, now special fisheries assistant to the Governor, introduced similar legislation in the early 1970's when he was in the Senate; it was passed by the Legislature but vetoed by then-Gov. Bill Egan. At the time, Rep. Gardiner opposed the idea, but factors have changed which have led him to believe the time has come for regionalization.

-more-

The seven regions of Alaska established under the bill are larger than many states; geographical boundaries are more logical than the present system, Rep. Gardiner believes, and regional boards will provide more expertise on regional problems. The local citizen will also have more input because the boards will meet in their own region yearly. Currently, the board travels from region to region in different years, making it more difficult and costly for people to testify.

Under provisions of the bill, the governor would have the same powers of appointment to fill board seats as now exists. The master board would have ultimate regulatory power, and can intercede in regional board decisions for three reasons:

1. compelling conservation reasons with powers to amend or veto;
2. in the event of disagreement between regional boards;
3. if the regional boards exceed their authority or are not in conformity with state policy or statutes.

Under existing law, the Legislature can annul all actions of the board, and this would not change. The Legislature remains the ultimate authority on state fish and game policy.

Under the concept of the bill, the state would revert to boards dealing with both fisheries and game issues. Rep. Gardiner feels that to separate the two at the regional level is unnecessary and would result in too many boards. The regional make-up would give sufficient expertise over both.

Co-sponsors of the bill include

Representatives: Branson, Duncan, Eliason, Meekins, Miller, Moss, Parker, and Rogers.

LEGISLATIVE AFFAIRS AGENCY

MEMORANDUM February 20, 1979

SUBJECT: Analysis of HB 193
(Work Order No. 6540)

TO: House Resources Committee

FROM: Kenneth E. Vassar, Legislative Counsel

You have requested an analysis of House Bill 193, "An Act relating to fish and game." Under the present system of fish and game management, there is a Board of Fisheries, which is empowered to regulate fisheries, and a Board of Game, which is empowered to regulate game. House Bill 193 would combine the functions of fish regulation and game regulation, but it would place those functions either in one of seven regional fish and game boards or in a master board of fish and game.

Sec. 16.05.256 of the bill, beginning on Page 2, line 29, enumerates the powers of the regional fish and game boards and of the master board. These are the same powers presently exercised by the Board of Fisheries and by the Board of Game, except that, as previously noted, the functions of fish regulation and game regulation are combined. The powers of the regional boards are limited to (1) establishing open and closed seasons; (2) establishing the means and methods for taking fish and game; (3) setting quotas and bag limits; and (4) establishing seasons, areas, quotas and methods for harvest of aquatic plants. All other regulatory powers currently exercised by the Board of Fisheries or by the Board of Game would be delegated to the master board. In addition, the master board has some power to amend or veto regional board regulations. The circumstances under which the master board may amend or veto a regional board regulation are listed in sec. 16.05.256(b) of the bill on page 4, lines 3 - 16. In the event of conflicts among regional boards, sec. 16.05.325 of the bill on page 5, lines 22 - 25, provides for submission of the conflict to the master board, and an amendment to AS 16.05.315, on page 10, lines 17 - 22, would allow joint meetings to resolve conflicts in regulations.

The remainder of the bill proceeds to amend each statutory reference to either the Board of Fisheries or to the Board of Game by deleting references to those boards and inserting references either to the regional boards or to the master board. It would be impossible to go any further into an explanation of these sections without producing a memo much longer than the bill itself.

Finally, sec. 50 of the bill, on page 17, would repeal AS 16.05.221 (establishing the Boards of Fisheries and Game), 16.05.251 (regulations of the Board of Fisheries), 16.05.255 (regulations of the Board of Game), and AS 39.05.060(a)(5) (appointment, qualifications, and terms of office of members of the Board of Fisheries).

STATE OF ALASKA

JAY S. HAMMOND, GOVERNOR

BOARD OF FISHERIES/BOARD OF GAME
DEPARTMENT OF FISH AND GAME

SUBPORT BUILDING
JUNEAU, ALASKA 99801

February 4, 1980

Honorable Alvin Osterback, Chairman
House Resources Committee
Alaska State Legislature
Pouch V
Juneau, Alaska 99811

Dear Mr. Osterback:

It's time I brought you up to date on the Regional Council system of Advisory Committees since Regional Councils are a part of each d-2 bill now before Congress.

In December 1979, the Board of Fisheries and the Board of Game met jointly for the purpose of considering changes to the Advisory Committee regulations. One proposal dealt with establishing boundary lines for the six Regional Councils established by Joint Board regulation in March 1979. After listening to extensive testimony from Advisory Committee representatives, the two Boards decided not to adopt fixed geographic boundaries for the Regional Council system.

Many Advisory Committees told the two Boards that their interests in fisheries placed them primarily in one region, but their interests in game resources were really more appropriate for a different region. Several Advisory Committees have interests that are extremely far-flung, and did not want to feel "left out" from any decisions they felt concerned them directly. Consequently, the Boards settled on a system of "floating boundaries" instead of fixed lines.

Under the "floating boundary" system for Regional Councils, the general area descriptions of Arctic, Interior, etc., chosen in March 1979, will still be used, and Advisory Committees from the general area who feel their interests are affected and consequently want to participate will be included in the deliberations for that Region. In this way, justice should be done to all the groups and areas concerned.

The solution reached by the Boards is a creative one. Their decision has met with approval from those Advisory Committees who have expressed their opinions. It should allow for a much more equitable system of representation than fixed boundaries which would, of necessity, be arbitrary. Floating boundaries should also prove consonant with the Alaska Constitution which states "Wherever occurring in the natural

state, fish, wildlife, and waters are reserved to the people for common use." (Alaska Constitution, Article VIII, Section 3)

If you have particular questions about this action by the Joint Boards of Fisheries and Game, or any other Board decision, I would be more than happy to try to respond.

Sincerely,

G Cook

Greg Cook

PRESENTATION TO THE HOUS. RESOURCES COMMITTEE

MARCH 6, 1979

by

NICK SZABO, CHAIRMAN
ALASKA BOARD OF FISHERIES

Mr. Chairman and members of the House Resources Committee. I am Nick Szabo, Chairman of the Board of Fisheries. I am not able to personally attend this hearing and have asked that my testimony be read for me at this time.

The management and allocation of the fish and game resources affect the lives of Alaskans in many different ways. House Bill 193 seeks to deal with the frustrations that have been experienced by many segments of the public. The goals of the bill are admirable but I fear the results may tend to aggravate the public's frustrations and lead to a more chaotic situation. Alaskans tend to be somewhat provincial by nature. The creation of seven regional regulatory systems will result in Alaska being divided into seven provinces each seeking the utmost autonomy. There will be the general tendency for one region to further the interests of its residents and attempt the exclusion of other Alaskan citizens. The State has promoted and encouraged the development of its fisheries. This has required fishermen that are willing to be mobile and versatile. Very few of these fishermen who are crucial to Alaska's development--restrict their activities to only one of the seven regions at the present time. House Bill 193 may tend to hamper their operation, and necessitate their attendance at each regional meeting they have an interest in.

The passage of the Fishery Conservation and Management Act, or [illegible] law, in 1976 [illegible] federal fisheries management system that

rode in on the emotion of the 200-mile limit. Alaska lost much of the direct management authority it enjoyed prior to this time. In order to salvage some semblance of the State's right to manage its own resources, it is crucial that Alaska have cohesive, unified management plans for its fisheries. Creation of seven regulatory agencies would result in total Federal management.

The system envisioned under House Bill 193 will necessitate more total meeting time than the present system. The members of the master board will not only have to attend the various regional meetings but also will have to spend the same amount of time presently spent on the statewide level arbitrating differences and appeals by the regions and various user groups. The money spent to support this system will not be cost effective in achieving the objectives of this bill, especially in light of public sentiment to promote government efficiency and reduced spending.

What then is the answer to the dilemma you face in improving public access and participation in fish and game management. Having spent twelve years working with advisory committees and four years on the Board of Fisheries, I feel I can speak with some authority on the subject.

The present system of 58 advisory committees and a Board of Fisheries and Board of Game has the potential of being the most effective system possible. The problem with the present system is that the 58 advisory committees were created and then left to fend for themselves. Only recently has even a small amount of money been appropriated for their direct support. Just as the Boards of Fisheries and Game, and the Legislature need support staff, it is inconceivable that advisory committees can function in a vacuum. The advisory committees that

are most discouraged and dissatisfied with the present system are those that have had the least support. They also have not had the benefit of all available information when making their decisions. Thus, they have made recommendations they sincerely felt were valid but were perhaps lacking in the understanding of all the issues and procedures. It is no wonder that when their advice did not ultimately receive Board approval, they felt discouraged and disenchanted with the system. On the other hand, I have seen advisory committees that function very effectively. They routinely receive Board approval of 90 percent of their recommendations. The members feel involved and are motivated by their effectiveness. These committees have been continuously supported and nurtured by local Fish and Game staff and have been treated as an important entity in the community.

I feel the most effective action the Legislature can take would be to bolster the present advisory committee system to the greatest extent possible. Advisory committee members need funding for travel and per diem to attend advisory committee meetings, State Board meetings, and other appropriate conferences. In addition there needs to be at least six additional full-time positions whose primary function would be to work with advisory committees in the field where local Fish and Game staff are not available.

Only by providing the advisory committees with the best advice on proper procedures and with complete information on which to base their decisions can the system function as it was intended.

Thank you.

March 7, 1979

Dear Representative Ottesbach:

I am a chignik fisherman / boat owner. I would like to express my views regarding HB 193.

1. Chignik should become a region separate from Kodiak

2. An amendment which would provide that all issues arising from entire exception of regulating fish and game within a region are to be resolved by the master board, should be enacted

3. An amendment which would make all regional boards advisory - statutes only would help

4. An amendment which disallows any board regional or master to allocate fish out side of the guide lines set historically by previous board decisions, would preclude any difficulty pertaining to boat by

Inasmuch as Chignik's economy is based on and derived from sockeye salmon which pass Cape Igvak, and Kodiak is supported by many fisheries, it is imperative that Chignik fishermen be allowed to harvest the salmon it's century and take what'em produces.

Please add me to your mailing list and keep me informed of all events concerning the Chignik fishery. Thank you for your time.

Sincerely yours.

Wallace W. Anderson

U.S. 589

SECTIONAL ANALYSIS BY REPRESENTATIVE GARDINER OF PERTINENT PORTIONS OF U.S. SENATE BILL 9 INTRODUCED BY SENATOR JACKSON 1/15/79

Sec. 805(a) one year after enactment of this act except as provided in ss(d) Secretary of the Interior shall establish:

1) 5 subsistence resource regions
2) local advisory committees within each region
3) a regional advisory council in each subsistence region

Each regional council shall be composed of residents of each region and have the following functions:

A) review and evalution
B) provide a forum for expression of opinion
C) encourage local and regional participation
D) prepare annual report which shall:
   1) identify current and anticipated needs
   2) evaluate current and anticipated needs
   3) recommedn a strategy for the management
   4) recommendations concerning policies---regulations to implement the strategy

(b) Secretary shall assign adequate qualified staff to regional advisory committees

(c) Secretary shall be guided by the annual report. Secretary shall follow advice of regional councils unless he determines in writing that:

- such advice is not supported by substantial evidence
- violates recognized principles of fish and wildlife conservation
- be detrimental to subsistence needs

(d) Secretary shall not implement the above if within one year from the date of this Act the State:

- establishes at least 5 regions
- adequately maintains its local fish and game advisory committee
- establishes a regional council in each region
- assigns staff and distributes available support data
- provides that the State rulemaking authority shall consider the advice of regional councils
- State may choose not to follow such advice it determines:
  - is not supported by substantial evidence
  - violates recognized principles of fish and wildlife conservation
  - detrimental to rural subsistence needs

(e)(1) Secretary may reimburse State from funds appropriated to Department of Interior for reasonable costs to implement regional councils

reimbursement shall not exceed 50% of costs

(2) payments shall not exceed 5,000,000 in any one fiscal year.

96TH CONGRESS
1ST SESSION

S. 9

IN THE SENATE OF THE UNITED STATES

JANUARY 15, 1979

Mr. JACKSON introduced the following bill; which was read twice and referred to the Committee on Energy and Natural Resources

A BILL

To designate certain lands in the State of Alaska as units of the National Park, National Wildlife Refuge, National Wild and Scenic Rivers, National Forest, and National Wilderness Preservation Systems, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. This Act may be cited as the "Alaska National Interest Lands Conservation Act".

TABLE OF CONTENTS

TITLE I—PURPOSES, DEFINITIONS, AND MAPS

Sec. 101. Purposes
Sec. 102. Definitions
Sec. 103. Maps

TITLE II—NATIONAL PARK SYSTEM

Sec. 201. Establishment of new areas
Sec. 202. Additions to existing areas
Sec. 203. General administration

TITLE VIII—SUBSISTENCE MANAGEMENT AND USE

FINDINGS

SEC. 801. The Congress finds and declares that—

(1) the continuation of the opportunity for subsistence uses by rural residents of Alaska, including both Natives and non-Natives, on the public lands and by Alaska Natives on their Native lands is essential to their physical, economic, traditional, and Native cultural existence;

(2) the situation in Alaska is unique in that, in most cases, no practical alternative means are available to replace the food supplies and other items gathered from fish and wildlife which supply persons dependent on subsistence uses;

(3) continuation of the opportunity for subsistence uses of resources on public and other lands in Alaska is threatened by the increasing population of Alaska, with resultant pressure on subsistence resources, by sudden decline in the populations of some wildlife species which are crucial subsistence resources, by increased accessibility of remote areas containing subsistence resources, and by taking of fish and wildlife in a manner inconsistent with recognized principles of fish and wildlife management;

(4) in order to fulfill the policies and purposes of the Alaska Native Claims Settlement Act and as a matter of equity, it is necessary for the Congress to invoke its constitutional authority over Native affairs and its constitutional authority under the property clause and the commerce clause to protect and provide the opportunity for continued subsistence uses on the public lands by Native and non-Native rural residents;

(5) the national interest in the proper regulation, protection, and conservation of fish and wildlife on the public lands in Alaska and the continuation of the opportunity for a subsistence way of life by the inhabitants of Alaska require that an administrative structure be established for the purpose of enabling people who have personal knowledge of local conditions and requirements to have a meaningful role in the management of fish and wildlife and of subsistence uses on the public lands in Alaska.

POLICY

SEC. 802. It is hereby declared to be the policy of Congress that—

(1) consistent with sound management principles, the utilization of the public lands in Alaska is to cause the least adverse impact possible on residents who depend upon subsistence uses of the resources of such

lands; consistent with management of fish and wildlife in accordance with recognized scientific principles and the purposes for each unit established, designated, or expanded by or pursuant to titles II through VII of this Act, the purpose of this title is to provide the opportunity for people engaged in a subsistence-oriented lifestyle to continue to do so;

(2) nonwasteful subsistence use of fish and wildlife and other renewable resources shall be the first priority consumptive use of all such resources on the public lands of Alaska, and where it is necessary to restrict taking in order to assure the continued viability of fish or wildlife population or the continuation of subsistence uses of such population, the taking of such population for nonwasteful subsistence uses shall be given preference on the public lands over other consumptive uses; and

(3) except as otherwise provided by this Act or other Federal laws, Federal land managing agencies, in managing subsistence activities on the public lands and in protecting the continued viability of all wild renewable resources in Alaska, shall cooperate with adjacent landowners and land managers, including Native corporations, appropriate State and Federal agencies, and other nations.

DEFINITIONS

SEC. 803. As used in this Act, the term "subsistence uses" means the customary and traditional uses by Alaska residents of wild, renewable resources for direct personal or family consumption as food, shelter, fuel, clothing, tools, or transportation, for the making and selling of handicraft articles out of nonedible byproducts of fish and wildlife resources taken for personal or family consumption, for barter, or sharing for personal or family consumption and for customary trade. For the purposes of this section, the term—

(1) "family" means all persons related by blood, marriage, or adoption, or any person living within the household on a permanent basis; and

(2) "barter" means the exchange of fish or wildlife or their parts, taken for subsistence uses—

(A) for other fish or game or their parts; or

(B) for other food or for nonedible items other than money if the exchange is of a limited and noncommercial nature.

PREFERENCE FOR SUBSISTENCE USES

SEC. 804. Except as otherwise provided in this Act and other Federal laws, the taking on public lands of fish and wildlife for nonwasteful subsistence uses shall be accorded preference over the taking on such lands of fish and wildlife for other purposes. Whenever it is necessary to restrict the

taking of populations of fish and wildlife on such lands for subsistence uses in order to protect the continued viability of such populations, or to continue such uses, such preference shall be based on—

(1) customary and direct dependence upon the populations as the mainstay of livelihood;

(2) local residency; and

(3) the availability of alternative resources.

LOCAL AND REGIONAL PARTICIPATION

SEC. 805. (a) Except as otherwise provided in subsection (d) of this section, one year after the date of enactment of this Act, the Secretary shall establish—

(1) at least five Alaska subsistence resource regions which, taken together, include all public lands. The number and boundaries of the regions shall be sufficient to assure that regional differences in subsistence uses are adequately accommodated;

(2) such local advisory committees within each region as he finds necessary at such time as he may determine, after notice and hearing, that the existing State fish and game advisory committees do not adequately perform the functions of the local committee system set forth in paragraph (3)(D)(iv) of this subsection; and

(3) a regional advisory council in each subsistence resource region.

Each regional council shall be composed of residents of the region and shall have the following functions:

(A) the review and evaluation of proposals for regulations, policies, management plans, and other matters relating to subsistence uses of fish and wildlife within the region;

(B) the provision of a forum for the expression of opinions and recommendations by persons interested in any matter related to the subsistence uses of fish and wildlife within the region;

(C) the encouragement of local and regional participation in the decisionmaking process affecting the taking of fish and wildlife on the public lands within the region for subsistence uses;

(D) the preparation of an annual report to the Secretary which shall contain—

(i) an identification of current and anticipated subsistence uses of fish and wildlife populations within the region;

(ii) an evaluation of current and anticipated subsistence needs for fish and wildlife populations within the region;

(iii) a recommended strategy for the management of fish and wildlife populations within the region to accommodate such subsistence uses and needs; and

(iv) recommendations concerning policies, standards, guidelines, and regulations to implement the strategy. The State fish and game advisory committees or such local committees as the Secretary may establish pursuant to paragraph (2) of this subsection may provide advice to, and assist, the regional advisory councils in carrying out the functions set forth in this paragraph.

(b) The Secretary shall assign adequate qualified staff to the regional advisory councils and make timely distribution of all available relevant technical and scientific support data to the regional advisory councils and the State fish and game advisory committees or such local committees as the Secretary may establish pursuant to paragraph (2) of subsection (a).

(c) The Secretary, in performing his monitoring responsibility pursuant to section 806 and in the exercise of his closure and other administrative authority over the public lands, shall be guided by the annual report and advice of the regional councils concerning the management of fish and wildlife on the public lands within their respective regions for

subsistence uses. The Secretary shall follow the advice of such councils unless he determines in writing that such advice is not supported by substantial evidence, violates recognized principles of fish and wildlife conservation, or would be detrimental to the satisfaction of subsistence needs.

(d) The Secretary shall not implement subsections (a), (b), and (c) of this section if within one year from the date of enactment of this Act, the State divides the public lands into at least five regions as set forth in subsection (a)(1); adequately maintains its local fish and game advisory committee structure; establishes a regional council in each region composed of residents of the region with duties and responsibilities analogous to those set forth in subsection (a)(3); assigns staff and distributes available support data to the local committees and regional councils as set forth in subsection (b); and provides that the State rulemaking authority shall consider the advice and recommendations of the regional councils concerning the taking of fish and wildlife populations on public lands within their respective regions for subsistence uses. The regional councils may present recommendations, and the evidence upon which such recommendations are based, to the State rulemaking authority during the course of the administrative proceedings of such authority. The State rulemaking authority may choose not to follow any recommendation which it determines is not supported by substan-

tial evidence presented during the course of its administrative proceedings, violates recognized principles of fish and wildlife conservation or would be detrimental to the satisfaction of rural subsistence needs. If a recommendation is not adopted by the State rulemaking authority, such authority shall make findings of fact detailing the basis for its failure to adopt the recommendation.

(e)(1) The Secretary may reimburse the State, from funds appropriated to the Department of the Interior, for reasonable costs relating to the establishment and operation of the regional advisory councils established by the State in accordance with subsection (d) and the operation of the State fish and game advisory committees so long as such committees are not superseded by the Secretary pursuant to paragraph (2) of subsection (a). Such reimbursement may not exceed 50 per centum of such costs in any fiscal year. Such costs shall be verified in a statement which the Secretary determines to be adequate and accurate. Sums paid under this subsection shall be in addition to any grants, payments, or other sums to which the State is entitled from appropriations to the Department of the Interior.

(2) Total payments to the State under this subsection shall not exceed the sum of $5,000,000 in any one fiscal year. The Secretary shall advise the Congress at least once in every five years as to whether or not the maximum pay-

ments specified in this subsection is adequate to ensure the effectiveness of the program established by the State to provide the preference for subsistence uses of fish and wildlife set forth in section 804.

FEDERAL MONITORING

SEC. 806. The Secretary shall monitor the provisions by the State of the subsistence preference set forth in section 804 and shall advise the State and the Committee on Interior and Insular Affairs of the House of Representatives and the Committee on Energy and Natural Resources of the Senate annually and at such other times as he deems necessary of his views on the effectiveness of the State in providing such preference, any exercise of his closure or other administrative authority to protect subsistence resources or uses, the views of the State, and any recommendations he may have.

JUDICIAL ENFORCEMENT

SEC. 807. In performance of his monitoring responsibilities required in section 806, if the Secretary and appropriate State agency are notified in writing by a local committee or regional council established by the Secretary or the State pursuant to section 805 that the preference for subsistence uses set forth in section 804 is not adequately provided in its region, setting forth the facts upon which such belief is based and detailing efforts to obtain timely relief through available State grievance procedures, the Secretary shall investigate

and report publicly on the results of his investigation. If the Secretary determines that the preference for subsistence uses is not adequately provided and that timely relief has not been obtained, he shall submit his views to the Governor and seek to ensure the adequate and timely provision of such preference through discussions with the State. The Secretary shall inform the committee or council which submitted the notification to him of the results of such discussions. If the Secretary determines that the State has failed to make adequate and timely provision for the preference for subsistence uses after having been provided a reasonable opportunity to do so and that such failure threatens the ability of subsistence-dependent Alaska residents to satisfy their subsistence needs, at the request of the committee or council which submitted the notification to him, the Secretary shall bring an action in the United States district court on behalf of such committee or council to require the State to take such actions as are necessary to provide such preference. Such action shall be assigned for hearing at the earliest possible date, shall take precedence over all other matters pending on the docket of the district court at that time and shall be expedited in every way by such court. Upon the filing of the complaint, if the pleadings indicate that the State has failed to adequately provide for the preference for subsistence uses, that such failure imminently threatens the ability of subsistence-dependent

residents to satisfy their subsistence needs, that immediate relief is necessary to assure that those residents who may have been adversely affected by such failure are provided a timely opportunity to satisfy such needs, and that immediate relief will not threaten the continued viability of fish and wildlife populations toward which such relief may be directed, the district court shall issue an order directing the State to show cause why the features of the State's provision of the preference which render such provision inadequate should not be enjoined and the State be directed to permit the taking of such fish or wildlife populations only for subsistence uses by those residents who have been adversely affected by the State's failure to provide for the preference. No order granting such temporary relief shall be issued until the State has been provided an opportunity for hearing, and such order shall provide that such taking for subsistence uses shall be subject to regulation by the State in a manner which adequately provides for the satisfaction of the subsistence preference requirement. The court shall provide relief, other than temporary relief, by directing the State to submit regulations which satisfy the subsistence preference requirement. When approved by the court, such regulations shall be incorporated as part of the final judicial order. Such order shall be valid only for such period as normally provided for the regulations at issue by State law. This section shall constitute the sole

Federal judicial remedy created by this title for a local committee or regional council which determines that the preference for subsistence uses set forth in subsection 804 has not been adequately provided by the State in its region.

PARK AND MONUMENT SUBSISTENCE RESOURCE COMMISSIONS

SEC. 808. (a) Within one year from the date of enactment of this Act, the Secretary and the Governor shall each appoint four members to a subsistence resources commission for each national park or monument within which subsistence uses are permitted by this Act. The regional council established pursuant to section 805 which has jurisdiction within the area in which the park or monument is located shall appoint four members to the commission each of whom is a member of either the regional council or a local committee within the region and also is a resident of a village within or adjacent to the park or monument or whose residents engage in subsistence uses within the park or monument. Within eighteen months from the date of enactment of this Act, each commission shall devise and recommend to the Secretary and the Governor a program for subsistence hunting within the park or monument. Such program shall be prepared using technical information and other pertinent data assembled or produced by necessary field studies or investigations conducted jointly or separately by the technical and administrative

personnel of the State and the Department of the Interior, information submitted by, and after consultation with the appropriate local committees and regional councils, and any testimony received in a public hearing or hearings held by the commission prior to preparation of the plan at a convenient location or locations in the vicinity of the park or monument. Each year thereafter, the commission, after consultation with the appropriate local committees and regional councils, considering all relevant data and holding one or more additional hearings in the vicinity of the park or monument, shall make recommendations to the Secretary and the Governor for any changes in the program or its implementation which the commission deems necessary.

(b) The Secretary shall promptly implement the program and recommendations submitted to him by each commission unless he finds in writing that such program or recommendations violates recognized principles of wildlife conservation, threatens the continued viability of wildlife populations in the park or monument, is contrary to the purposes for which the park or monument is established, or would be detrimental to the satisfaction of subsistence needs. Upon notification by the Governor, the Secretary shall take no action on a submission of a commission for sixty days during which period he shall consider any proposed changes

in the program or recommendations submitted by the commission which the Governor provides him.

(c) Pending the implementation of a program under subsection (a) of this section, the Secretary shall permit subsistence uses by local residents in accordance with the provisions of this title and other applicable Federal and State law.

COOPERATIVE AGREEMENTS

SEC. 809. The Secretary may enter into cooperative agreements or otherwise cooperate with other Federal agencies, the State, Native Corporations, other appropriate persons and organizations, and, acting through the Secretary of State, other nations to effectuate the purposes and policies of this title.

SUBSISTENCE AND LAND USE DECISIONS

SEC. 810. (a) In determining whether to withdraw, reserve, lease, or otherwise permit the use, occupancy, or disposition of public lands under any provision of law authorizing such actions, the head of the Federal agency having primary jurisdiction over such lands or his designee shall evaluate the effect of such use, occupancy, or disposition on subsistence uses and needs, the availability of other lands for the purposes sought to be achieved, and other alternatives which would reduce or eliminate the use, occupancy, or disposition of public lands needed for subsistence purposes. No such withdrawal, reservation, lease, permit, or other use, oc-

cupancy or disposition of such lands which would significantly restrict subsistence uses shall be effected until the head of such Federal agency—

(1) gives notice to the appropriate State agency and the appropriate local committees and regional councils established pursuant to section 805,

(2) gives notice of, and holds, a hearing in the vicinity of the area involved, and

(3) determines that (A) such a significant restriction of subsistence uses is necessary, consistent with sound management principles for the utilization of the public lands, (B) the proposed activity will involve the minimal amount of public lands necessary to accomplish the purposes of such use, occupancy, or other disposition, and (C) adequate steps will be taken to minimize adverse impacts upon subsistence uses and resources resulting from such actions.

(b) If the Secretary is required to prepare an environmental impact statement pursuant to section 102(2)(C) of the National Environmental Policy Act, he shall provide the notice and hearing and include the findings required by subsection (a) as part of such environmental impact statement.

(c) Nothing herein shall be construed to prohibit or impair the ability of the State or any Native Corporation to make land selections and receive land conveyances pursuant

to the Alaska Statehood Act or the Alaska Native Claims Settlement Act.

ACCESS

SEC. 811. The Secretary shall ensure that persons engaged in subsistence uses shall have appropriate access to subsistence resources on the public lands.

SNOWMOBILES AND MOTORBOATS

SEC. 812. Notwithstanding any other provision of this Act or other law, the Secretary shall permit on the public lands appropriate use for subsistence purposes of snowmobiles, motorboats, and other means of surface transportation traditionally employed for such purposes by local residents, subject to such regulations as are necessary to prevent waste, or damage to fish, wildlife, or terrain.

RESEARCH

SEC. 813. The Secretary, acting through the United States Fish and Wildlife Service and the National Park Service and in cooperation with the State and other appropriate Federal agencies, shall undertake research on fish and wildlife and subsistence uses on the public lands; seek data from, consult with and make use of, the special knowledge of subsistence users; and make the results of such research available to the State, the local and regional councils established by the Secretary or State pursuant to section 805, and other appropriate persons and organizations.

PERIODIC REPORTS

SEC. 814. Within four years after the date of enactment of this Act, and within every three-year period thereafter, the Secretary, in consultation with the Secretary of Agriculture, shall prepare and submit a report to the President of the Senate and the Speaker of the House of Representatives on the implementation of this title. The report shall include—

(1) an evaluation of the results of the monitoring undertaken by the Secretary as required by section 804;

(2) the status of fish and wildlife populations on public lands that are subject to subsistence uses;

(3) a description of the nature and extent of subsistence uses and other uses of fish and wildlife on the public lands;

(4) the role of subsistence uses in the economy and culture of rural Alaska;

(5) comments on the Secretary's report by the State, the local councils and regional councils established by the Secretary or the State pursuant to section 805, and other appropriate persons and organizations;

(6) a description of those actions taken, or which may need to be taken in the future, to permit the op-

portunity for continuation of activities relating to subsistence uses on the public lands; and

(7) such other recommendations the Secretary deems appropriate.

A notice of the report shall be published in the Federal Register and the report shall be made available to the public.

REGULATIONS

SEC. 815. Each Secretary shall prescribe such regulations as are necessary and appropriate to carry out their respective responsibilities under this title.

LIMITATIONS, SAVINGS CLAUSES

SEC. 816. Nothing in this Act shall be construed as—

(1) granting any property right in any fish or wildlife or other resource of the public lands or as permitting the level of subsistence uses of fish and wildlife on such lands to be significantly expanded beyond the level of such uses occurring during the ten-year period before January 1, 1978. No privilege which may be granted by the State to any individual with respect to subsistence uses may be assigned to any other individual;

(2) permitting any subsistence use of fish and wildlife on any portion of the public lands (whether or not within any conservation system unit) which was permanently closed to such uses on January 1, 1978,

or as vesting elsewhere than in the Secretary any authority to manipulate habitat on any portion of the public lands;

(3) enlarging or diminishing the responsibility and authority of the State of Alaska for management of fish and wildlife on public lands except as specifically provided in this Act, or as amending the Alaska constitution; or

(4) modifying or repealing the provisions of any Federal law governing the conservation or protection of fish and wildlife, including the Fur Seal Act of 1966 (80 Stat. 1091; 16 U.S.C. 1151–1187), the Endangered Species Act of 1973 (87 Stat. 884, 16 U.S.C. 1531–1543), the Marine Mammal Protection Act of 1972 (86 Stat. 1027; 16 U.S.C. 1361–1407), the Act entitled "An Act for the Protection of the Bald Eagle", approved June 8, 194[illegible] (54 Stat. 250; 16 U.S.C. 742a–754), the Migratory Bird Conservation Act (45 Stat. 1222; 16 U.S.C. 703 et seq.), the Federal Aid in Wildlife Restoration Act (50 Stat. 917; 16 U.S.C. 669–669i), the Fishery Conservation and Management Act of 1976 (90 Stat. 331; 16 U.S.C. 1801–1882), the Federal Aid in Fish Restoration Act (64 Stat. 430; 16 U.S.C. 777–777K), or any amendments to any one or more of such Acts.

CLOSURE TO SUBSISTENCE USES

SEC. 817. (a) All national parks and monuments in Alaska shall be closed to the taking of wildlife except for subsistence uses to the extent specifically permitted by this Act. Subsistence uses and sport fishing shall be authorized in such areas by the Secretary and carried out in accordance with the requirements of this title and other applicable laws of the United States and the State of Alaska.

(b) Except as specifically proved otherwise by this section, nothing in this title is intended to enlarge or diminish the authority of the Secretary to designate areas where, and establish periods when, no taking of fish and wildlife shall be permitted on the public lands for reasons of public safety, administration, or to assure the continued viability of a particular fish or wildlife population. Notwithstanding any other provision of this Act or other law, the Secretary, after consultation with the State and adequate notice and public hearing, may temporarily close any public lands (including those within any conservation system unit), or any portion thereof, to subsistence uses of a particular fish or wildlife population only if necessary for reasons of public safety, administration, or to assure the continued viability of such population. If the Secretary determines that an emergency situation exists and that extraordinary measures must be taken for public safety or to assure the continued viability of a particular fish or

wildlife population, the Secretary may immediately close the public lands, or any portion thereof, to the subsistence uses of such population and shall publish the reasons justifying the closure in the Federal Register. Such emergency closure shall be effective when made, shall not extend for a period exceeding sixty days, and may not subsequently be extended unless the Secretary affirmatively establishes, after notice and public hearing, that such closure should be extended.

TITLE IX—IMPLEMENTATION OF ALASKA NATIVE CLAIMS SETTLEMENT ACT AND ALASKA STATEHOOD ACT

CONVEYANCES TO VILLAGE CORPORATIONS

SEC. 901. (a) "CORE" TOWNSHIPS, ETC.—(1)(A) Except to the extent that conveyance of a surface estate would be inconsistent with section 12(a), 14(a), 14(b), or 22(l) of the Alaska Native Claims Settlement Act, subject to valid existing rights and section 903(a) of this Act, there is hereby conveyed to and vested in each Village Corporation for a Native village which is determined by the Secretary to be eligible for land under sections 11 or 16 of the Alaska Native Claims Settlement Act, and which did not elect to acquire a former reserve under section 19(b) of such Act, all of the right, title and interest of the United States in and to the surface estate in the public lands, as defined in such Act, in the township or townships withdrawn pursuant to section

Sectional Analysis by Representative Gordon of pertinent portions of U.S. Senate Bill 9 introduced by Senator Jackson. 1/15/79.

Sec 805(a) - one year after enactment of this act except as provided in 805(d) Secretary of the Interior shall establish.

~~(b)~~ ~~regions~~.

(1) 5 ~~regions~~ subsistence resource regions

(2) local advisory committees within each region.

(3) a regional advisory council in each subsistence region

Each regional council shall be composed of residents of each region and have following functions.

(A) ~~com~~review and evaluation

(B) provide of forum for expression of opinion

(C) encourage local and regional participation

(D) Prepare ANNUAL report which shall

(i) identify current and anticipated needs

(ii) evaluate current and anticipated needs

(iii) recommend a strategy for the management

(iv) recommendations concerning policies ... regulations to implement the strategy.

(b) Secretary shall assign adequate qualified staff to regional advisory committees

(c) Secretary shall be guided by the annual report.

Secretary shall follow advice of regional councils unless he determines in writing that

- such advice is not supported by substantial evidence
- violates recognized principles of fish and wildlife conservation
- be detrimental to subsistence needs

~~(d)~~

(d) Secretary shall not implement the above if within one year from the date of this Act the State:

- establishes at least 5 regions
- adequately maintains its local fish and game advisory committee
- establishes a regional council in each region
- assigns staff and distributes available support data.
- provides that the State ~~makes~~ rule making authority shall consider the advice of regional councils
- State may choose not to follow such advice if determines
  - is not ~~supported~~ supported by substantial evidence
  - violates recognized principles of fish and wildlife conservation
  - detrimental to rural subsistence needs.

(e)(1) Secretary may reimburse State from funds appropriated to Dept of Interior for reasonable costs to implement ~~this~~ regional councils

-reimbursement shall not exceed 50% of costs and ~~not to exceed~~ ~~5,000,000 in a~~.

(2) payments shall not to exceed 5,000,000 in any one ~~Each~~ Fiscal year.

COMMITTEE STATE LEGISLATURE 0288

JUN

ALASKA CONSERVATION SOCIETY URGES ESTABLISHMENT OF REGIONAL FISH AND GAME BOARD WITH COORDINATIVE AND ADVISORY POWERS AND SUPPORT FUNDING OF POSITIONS PROVIDING TECHNICAL HELP TO LOCAL ADVISORY COMMITTEES. LETTER FOLLOWS

R B WEEDEN PRESIDENT ALASKA CONSERVATION SOCIETY

TELEGRAM

RCA ALASKA COMMUNICATIONS, INC.
PHONE. [illegible]
JUNEAU, ALASKA [illegible]02

14021 NL KODIAK ALASKA 77 03-13 330P AST

PMS REPRESENTATIVE ALVIN OSTERBACK

JUN

KODIAK FISH AND GAME ADVISORY COMMITTEE OPPOSES HB193 CREATING REGIONAL FISH AND GAME BOARDS. REGULATORY AUTHORITY FOR FISH AND GAME SHOULD REMAIN WITH THE BOARD OF FISH AND BOARD OF GAME. THE PRESENT ADVISORY COMMITTEE SYSTEM PROVIDES A VIABLE FORUM FOR LOCAL AND REGIONAL INPUT ON FISH AND GAME MATTERS. HB193 WOULD CREATE AN UNWIELDY, EXPENSIVE AND UNNECESSARILY PROVINCIAL REGULATORY SYSTEM DETRIMENTAL TO THE FISH AND GAME RESOURCES AND TO THE INTERESTS OF THE CITIZENS OF ALASKA.

KODIAK FISH AND GAME ADVISORY COMMITTEE

PUBLIC OPINION MESSAGE (LEGISLATIVE BRANCH ONLY)

To District II Representatives

From Maynard L. Watson

Business or Organization

Address Star Route A Box 27-A, Anchorage 99507 Zip

Phone 349-2007

MESSAGE:

I am against HB 193 and HB 304.

PUBLIC OPINION MESSAGE (LEGISLATIVE BRANCH ONLY)

1 of 6

Attn: Marlene

To To Representative Munson

From James M. Crouch

Business or Organization

Address Box 1548-H, SRA, Anchorage 99507 Zip

Phone 344-5562

MESSAGE:

I am definitely against HBs 193 and 304. It looks to me like a waste of the taxpayers money.

PUBLIC OPINION MESSAGE (LEGISLATIVE BRANCH ONLY)

To Representatives Meekins, Parker, Brown, Freeman, McKinnon, ~~Ross, Hanson and~~ O'Connell

From Linda Faro

Business or Organization

Address 2911 West 35th Avenue, Anchorage 99503 Zip

Phone 243-1526

MESSAGE:

I am strongly opposed to HB 193 because it will lead to fractionalizing of the wildlife resources management which would be detrimental to the Alaska public.

PUBLIC OPINION MESSAGE (LEGISLATIVE BRANCH ONLY)

To Bill Miles, C. V. Chatterton, Pat Carney, Sam Cotten

From Barbara Holby

Business or Organization

Address Box 153, Wasilla 99687 Zip

Phone 376-2203

MESSAGE:

Please do not pass HB 193. Vote for substitute bill HB 304.

PUBLIC OPINION MESSAGE (LEGISLATIVE BRANCH ONLY)

2 of 6

To Representative Pat Carney and Senator Jay Kerttula

From Kathy Nolan

Business or Organization

Address P. O. Box 742, Wasilla 99687 Zip

Phone

MESSAGE:

I urge you to support HB 228. Adequate health care is necessary for all, regardless of income. Urge your colleagues to support HB 228 also. HB 193 is a very prejudiced bill. Please do not support this bill. It will only encourage nepotism.

PUBLIC OPINION MESSAGE (LEGISLATIVE BRANCH ONLY)

To Representatives Meekins, Parker, Brown, Freeman, McKinnon, Moss, Munson, and O'Connell

From James L. Mauney

Business or Organization

Address Box 8765, Indian 99540 Zip

Phone 653-8202

MESSAGE:

I strongly oppose HB 193. I think this is a step backwards leading to discriminatory management of our resources.

PUBLIC OPINION MESSAGE (LEGISLATIVE BRANCH ONLY)

5 of 6

To Chairman Ostebeck & Members of Resources Comm.

From Bob Strange

Business or Organization self

Address 5838 Rowan Ave Zip 99507

Phone 344-3224

MESSAGE:

Regarding HB 193 - I Am Totally opposed to this Bill and do not see where it would do any good. The only thing this Bill will do is create an untenable mess.

PUBLIC OPINION MESSAGE (LEGISLATIVE BRANCH ONLY)

To Ray Metcalfe

From Howard B Jones

Business or Organization

Address SRA Box 4587-A (District 11) Zip 99507

Phone 344-1358

MESSAGE:

Please Vote Against HB 193: This Bill will destroy the Fish and Game Resources in Alaska.

PUBLIC OPINION MESSAGE (LEGISLATIVE BRANCH ONLY)

6 of 6

To Joyce Munson

From Harold B Jones

Business or Organization

Address SRA Box 1680-A (District 11) Zip 99707

Phone 344-1358

MESSAGE:

Please Vote Against HB 153: Because it will Drive our State into Seven Separate Areas with A Disadvantage of Postage & Cost Increases.

Use HB 304 As A Model Bill.

LADIES AND GENTLEMEN OF THE ALASKA LEGISLATURE, I AM Terry Shortleff,
P.O. Box 968 Eagle River 99577
~~2238 PARSON~~, ~~ANCHORAGE~~, ALASKA, AND I HAVE A STATEMENT FROM 115
CONCERNED ALASKAN CITIZENS.

THE 10TH LEGISLATURE PASSED HB 960 WHICH WAS SUBSEQUENTLY SIGNED INTO LAW. THIS BILL, WHICH GIVES SUBSISTENCE USERS PRIORITY HUNTING AND FISHING RIGHTS IS CONTRARY TO THE ALASKA STATE CONSTITUTION. SO FAR, NO DEFINITION OF SUBSISTENCE USER HAS EVEN BEEN DEVELOPED, AND NOW THE 11TH LEGISLATURE MUST ACT ON FURTHER PROPOSED LEGISLATION USING THE SAME TERM.

WE, THE URBAN HUNTERS AND FISHERMEN, VIEW OURSELVES AS SUBSISTENCE USERS BECAUSE FISH AND GAME OBTAINED BY US ARE USED TO SUPPLEMENT OUR FAMILIES DIETS. IT IS WIDELY RECOGNIZED THAT ALMOST ALL FAMILIES IN THE BUSH DO NOT EXIST SOLELY ON FISH AND GAME PRODUCTS EITHER BUT SUPPLEMENT THEIR DIETS WITH COMMERCIAL FOODSTUFFS. BOTH THE URBAN AND THE BUSH USER ARE EQUALLY EFFICIENT IN OBTAINING THESE FISH AND GAME RESOURCES ALSO AS BOTH EMPLOY BOATS EQUIPPED WITH GASOLINE POWERED ENGINES, SNOW MACHINES, HIGH-POWERED RIFLES AND AIRPLANES TO NAME BUT A FEW.

BECAUSE OF THESE FACTORS THEN, THE TERM SUBSISTENCE USER SHOULD APPLY EQUALLY TO ALL ALASKAN RESIDENTS OR BE DROPPED ALTOGETHER BECAUSE THE POTENTIAL FOR ABUSE AND FACTIONISM IS FRIGHTENING AND DIVISIVE.

AS A LOGICAL STARTING POINT IN CONSERVING ALASKA FISH AND GAME RESOURCES FOR ALASKA'S PEOPLE, WE SUGGEST THAT A NON-RESIDENT QUOTA SYSTEM BE INITIATED WHEREBY NON-RESIDENTS SHALL BE LIMITED BY A QUOTA SYSTEM ESTABLISHED BY THE ALASKA DEPARTMENT OF FISH AND GAME WITH THE PRIMARY OBJECTIVE OF SUSTAINED YIELD FOR ALL ALASKA'S RESIDENTS.

Public Statements about HB193 -

(All generally against it)

The intent of house bill 193 is regional control of Alaska's fish and game resources. That intent of regional control is good because of the vast area of Alaska and it's varied fish and game resources.

The weakness of the bill and it's glaring deficiency is the fragmentation of regulatory authority. Our fish and game laws now are cumbersome and nightmarishly legalistic. This bill would not only continue this trend, but would expand regulatory authority from one to seven boards, each with authority to set bag limits, seasons, and area uses. Ones inability to decipher existing regulations would pale to the myraid of regulations seven separate boards would enact.

Instead of a progressive fish and game policy aimed at conserving for the best use of all, we would be faced with a jumble of regulations aimed at preserving fish and game resources for a narrow few. The lock-out of sport users would be, in our opinion, the final impact of this bill. This is not acceptable.

We are against any bills, such as house bills 199 and 960 that give special interests, like subsistence, priority without garantees that sport use would be protected.

House bill 304 could be an acceptable alternative to the above mentioned legislation if preference for subsistance was omitted or protection of sport use was added.

Ladies and Gentlemen of the Alaska Legislature:

I am Ronald J. Minn, 778 Norman St. Anchorage Alaska and I am a concerned citizen. In regards to H.B. 193 I am opposed to turning over the fish, game and waters of the Great State of Alaska to the so called subsistence fanatics only.

As a tax payer and sportsman I am aware of my responsibility to our great state and furthermore I am also aware of my constitutional rights guaranteed to me in the Alaska State Constitution.

Therefore I sincerely ask the members of the Alaska Legislature to guarantee our rights as Alaska citizens to share in all fish, game and waters of the State of Alaska and eliminate the "subsistence first" concept.

I authorize Larry Baker to read this on my behalf.

Respectfully
Ronald J. Minn
778 Norman St
Anchorage Alaska 99504

LADIES AND GENTLEMEN OF THE ALASKA LEGISLATURE, I AM LARRY BARNES, 2230 PAXSON, ANCHORAGE, ALASKA, AND I HAVE A STATEMENT FROM 25 CONCERNED ALASKAN CITIZENS.

THE 10TH LEGISLATURE PASSED HB 960 WHICH WAS SUBSEQUENTLY SIGNED INTO LAW. THIS BILL, WHICH GIVES SUBSISTENCE USERS PRIORITY HUNTING AND FISHING RIGHTS IS CONTRARY TO THE ALASKA STATE CONSTITUTION. SO FAR, NO DEFINITION OF SUBSISTENCE USER HAS EVEN BEEN DEVELOPED, AND NOW THE 11TH LEGISLATURE MUST ACT ON FURTHER PROPOSED LEGISLATION USING THE SAME TERM.

WE, THE URBAN HUNTERS AND FISHERMEN, VIEW OURSELVES AS SUBSISTENCE USERS BECAUSE FISH AND GAME OBTAINED BY US ARE USED TO SUPPLEMENT OUR FAMILIES DIETS. IT IS WIDELY RECOGNIZED THAT ALMOST ALL FAMILIES IN THE BUSH DO NOT EXIST SOLELY ON FISH AND GAME PRODUCTS EITHER BUT SUPPLEMENT THEIR DIETS WITH COMMERCIAL FOODSTUFFS. BOTH THE URBAN AND THE BUSH USER ARE EQUALLY EFFICIENT IN OBTAINING THESE FISH AND GAME RESOURCES ALSO AS BOTH EMPLOY BOATS EQUIPPED WITH GASOLINE POWERED ENGINES, SNOW MACHINES, HIGH-POWERED RIFLES AND AIRPLANES TO NAME BUT A FEW.

BECAUSE OF THESE FACTORS THEN, THE TERM SUBSISTENCE USER SHOULD APPLY EQUALLY TO ALL ALASKAN RESIDENTS OR BE DROPPED ALTOGETHER BECAUSE THE POTENTIAL FOR ABUSE AND FACTIONISM IS FRIGHTENING AND DIVISIVE.

AS A LOGICAL STARTING POINT IN CONSERVING ALASKA FISH AND GAME RESOURCES FOR ALASKA'S PEOPLE, WE SUGGEST THAT A NON-RESIDENT QUOTA SYSTEM BE INITIATED WHEREBY NON-RESIDENTS SHALL BE LIMITED BY A QUOTA SYSTEM ESTABLISHED BY THE ALASKA DEPARTMENT OF FISH AND GAME WITH THE PRIMARY OBJECTIVE OF SUSTAINED YIELD FOR ALL ALASKA'S RESIDENTS.

WE ALSO RECOGNIZE THAT REGIONAL ADVISORY COUNCILS SHOULD FURNISH INPUT TO THE BOARD OF FISHERIES AND BOARD OF GAME IN KEEPING WITH THE SUSTAINED YIELD OBJECTIVE. FULL REGULATORY AUTHORITY, HOWEVER, MUST REMAIN WITH THE BOARD OF GAME AND THE BOARD OF FISHERIES.

CHAIRMAN AND MEMBERS OF THE HOUSE RESOURCES COMMITTEE--I AM Terry Shurtleff [redacted], P.O. Box 968 Eagle River [redacted] AK [redacted] 99577, AND I HAVE A STATEMENT FROM 45 CONCERNED ALASKAN CITIZENS.

WE SEE HOUSE BILL 193 AS A BLATANT ATTEMPT TO PLACE CONTROL OF ALL OF ALASKAN FISH AND GAME RESOURCES IN THE HANDS OF REGIONAL INTERESTS TO THE DETRIMENT OF THE URBAN USER OF THESE RESOURCES.

AS TAXPAYERS, VOTERS AND RESIDENTS OF ALASKA, WE CONSIDER OURSELVES AS CO-OWNERS AND BENEFICIAL USERS OF THESE RESOURCES AS WELL. THE CONCEPT OF THE SUBSISTENCE USER (WHATEVER HE IS) BEING PLACED ABOVE THE REMAINDER OF ALASKAN RESIDENTS AND GIVEN PRIORITY RIGHTS TO ALASKA'S FISH AND GAME RESOURCES IS SHAMEFUL. THOSE WHO SUBSCRIBE TO THIS CONCEPT ARE ATTEMPTING TO USURP THE CONSTITUTIONAL RIGHTS OF THE MAJORITY OF ALASKA'S CITIZENS.

WE FERVENTLY BELIEVE THAT ALL ALASKANS MUST SHARE EQUALLY IN THE DISTRIBUTION AND USE OF OUR PRECIOUS FISH AND GAME RESOURCES. WE INSIST THAT OUR REPRESENTATIVES AGGRESSIVELY PURSUE THEIR CONSTITUENTS' BEST INTERESTS AND CONSTITUTIONAL RIGHTS. WE WILL BE WATCHFUL THAT OUR LEGISLATORS VOTE AGAINST HB 193.

IN ADDITION, WE URGE THAT THE 11TH LEGISLATURE / TO CORRECT THE MISTAKE IN JUDGMENT MADE WHEN HB 960 WAS PASSED BY THE 1 LEGISLATURE, AND TAKE ACTION TO ABOLISH IT.

WE VIEW HB 304 AS A REASONABLE BILL PROVIDING THAT AUTHORITY TO REGULATE FISH AND GAME REMAINS RESPECTFULLY WITH THE BOARD OF FISHERIES AND BOARD OF GAME. THERE SHOULD BE NO AMENDMENTS TO THIS BILL WHICH TRANSFERS THEIR EXISTING AUTHORITY OR ANY PORTION THEREOF IN REGULATING ALASKA FISH AND GAME RESOURCES. FURTHERMORE, HB 304 SHOULD BE AMENDED AS FOLLOWS: SECTION I INTENT, LINE 2, THE WORDS, "AND THE CONTINUATION OF THE UNIQUE LIFESTYLE OF MANY RURAL AND OTHER ALASKAN RESIDENTS," SHOULD BE REMOVED AS IT ADDS NOTHING OF SUBSTANCE TO THE BILL. ADD THE FOLLOWING WORDS TO THE END OF SECTION I. INTENT: "NOTHING IN THIS ACT SHALL BE CONSTRUED TO BE A TRANSFER OF REGULATORY AUTHORITY FROM THE BOARD OF FISHERIES AND BOARD OF GAME." PAGE 5, LINE 14, THE WORDS, "CONSISTENT WITH THE PREFERENCE FOR SUBSISTENCE" MUST BE OMITTED.

BECAUSE OF ALASKA'S POOR FISCAL POSTURE, NO RESIDENT SERVING ON ANY FISH AND GAME ADVISORY BOARD, SUBBOARD, ETC., SHALL RECEIVE A SALARY NOR PER DIEM. ACTUAL TRAVEL EXPENSES SHOULD BE REIMBURSED BY THE STATE.

MR. CHAIRMAN (1) MARCH 6, 197

My name is David R. Stanclift
1906 Logan Anch. Ak.

I've been an Alaska Resident for 6 years and have truly enjoyed and benefited from the hunting and fishing here. It is in part what keeps me here in Alaska as well as the opportunities for my family to grow and in turn appreciate these things with me. I believe that the majority of the residents here in Anchorage have similar feelings in regard to fishing and hunting.

I speak for 16 registered voters and myself when I say that we support the state constitution in that the fish and wildlife here is a resource to be managed and maintained by all Alaskans, not divided up into seven groups to be managed by all serving local interests.

We believe House Bill # 123 is at best a loosely worded open ended fiscally irresponsible piece of legislation. The regional board comprised of 5 board members who are well informed a fish and wildlife in any particular area should have the right or power to set policies that will affect everyone in this state.

If there ever has been an open invitation for preferential treatment. This act does them all.

Who anyone considered who Gov. Hammond is going to appoint to these boards? The time involved to ensure that board members are un-biased and dedicated to representing the voting majority of the state is mind boggling.

It would then be up to the legislature to make doubly sure ~~sure~~ that each one of these board members are qualified and again truly represent the voter majority.

Do you the listeners believe that the taxpayers of this state want to foot the bill for the expenditures of these board members who at the bill states can call as many meetings as they deem necessary at ~~at~~ any ~~least~~ no specified locality.

We feel there has to date been no satisfactory definition of the term subsistence used given at the Federal or State Level. There are as many exceptions to the rule as there are politicians who try to define the term. There are people who live here in Anchorage that are in reality subsistence users, but because they choose to make their residence here are considered exceptions.

It's time that we say no to all interests who advocate preferential treatment ~~to~~ a group that doesn't exist on a desirable basis.

Furthermore concerning this bill - it's time that some of our urban representives start looking hard at who they are representing.

There is no question that this Bill could give preferential ~~given~~ treatment to the bad communities if not absolute control of the fish and wildlife resources in their respective areas. These resources do not now and should not ever belong exclusively to ~~them and until they~~ do these user groups. The constitution is clear on this!

We hope ~~that~~ our urban representatives in Juneau are not naive enough to believe that their support of this Bill is in our best interest!

We find this bill totally unacceptable. ~~as a~~ ~~matter of principle~~

The only people qualified to determine the term subsistence user should be the legislature via the voting majorities in their districts.

CHAIRMAN AND MEMBERS OF THE HOUSE RESOURCES COMMITTEE--I AM LARRY A. BARNES, 2230 PAXSON, ANCHORAGE AK 99504, AND I HAVE A STATEMENT, ~~FROM~~ ~~CONCERNED ALASKAN CITIZENS~~, [redacted]

I SEE HOUSE BILL 193 AS A BLATANT ATTEMPT TO PLACE CONTROL OF ALL OF ALASKAN FISH AND GAME RESOURCES IN THE HANDS OF REGIONAL INTERESTS TO THE DETRIMENT OF THE URBAN USER OF THESE RESOURCES.

AS A TAXPAYER, VOTER AND RESIDENT OF ALASKA, I CONSIDER MYSELF A CO-OWNER AND BENEFICIAL USER OF THESE RESOURCES AS WELL. THE CONCEPT OF THE SUBSISTENCE USER (WHATEVER HE IS) BEING PLACED ABOVE THE REMAINDER OF ALASKAN RESIDENTS AND GIVEN PRIORITY RIGHTS TO ALASKA'S FISH AND GAME RESOURCES IS SHAMEFUL. THOSE WHO SUBSCRIBE TO THIS CONCEPT ARE ATTEMPTING TO USURP THE CONSTITUTIONAL RIGHTS OF THE MAJORITY OF ALASKA'S CITIZENS.

I FERVENTLY BELIEVE THAT ALL ALASKANS MUST SHARE EQUALLY IN THE DISTRIBUTION AND USE OF OUR PRECIOUS FISH AND GAME RESOURCES. WE INSIST THAT OUR REPRESENTATIVES AGGRESSIVELY PURSUE THEIR CONSTITUENTS' BEST INTERESTS AND CONSTITUTIONAL RIGHTS. I WILL BE WATCHFUL THAT OUR LEGISLATORS VOTE AGAINST HB 193.

IN ADDITION, I URGE THAT THE 11TH LEGISLATURE ACT TO CORRECT THE MISTAKE IN JUDGMENT MADE WHEN HB 960 WAS PASSED BY THE 10TH LEGISLATURE, AND TAKE ACTION TO ABOLISH IT.

I VIEW HB 304 AS A REASONABLE BILL PROVIDING THAT AUTHORITY TO REGULATE FISH AND GAME REMAINS RESPECTFULLY WITH THE BOARD OF FISHERIES AND BOARD OF GAME. THERE SHOULD BE NO AMENDMENTS TO THIS BILL WHICH TRANSFERS THEIR EXISTING AUTHORITY OR ANY PORTION THEREOF IN REGULATING ALASKA FISH AND GAME RESOURCES. FURTHERMORE, HB 304 SHOULD BE AMENDED AS FOLLOWS: SECTION I INTENT, LINE 2, THE WORDS, "AND THE CONTINUATION OF THE UNIQUE LIFESTYLE OF MANY RURAL AND OTHER ALASKAN RESIDENTS," SHOULD BE REMOVED AS IT ADDS NOTHING OF SUBSTANCE TO THE BILL. ADD THE FOLLOWING WORDS TO THE END OF SECTION I. INTENT: "NOTHING IN THIS ACT SHALL BE CONSTRUED TO BE A TRANSFER OF REGULATORY AUTHORITY FROM THE BOARD OF FISHERIES AND BOARD OF GAME." PAGE 5, LINE 14, THE WORDS, "CONSISTENT WITH THE PREFERENCE FOR SUBSISTENCE" MUST BE OMITTED.

BECAUSE OF ALASKA'S POOR FISCAL POSTURE, NO RESIDENT SERVING ON ANY FISH AND GAME ADVISORY BOARD, SUBBOARD, ETC., SHALL RECEIVE A SALARY NOR PER DIEM. ACTUAL TRAVEL EXPENSES SHOULD BE REIMBURSED BY THE STATE.

Date: 3/6/79 Subject: HB 193 Location: Anchorage

Anchorage Daily News, Tuesday, March 6, 1979—7

Today in Anchorage

Public input on House Bill 193 relating to fish and game boards, is sought by the House Resources Committee in an audio teleconference starting at 12:45 p.m. at the Legislative Information Office, 1024 W. Sixth Ave. Area residents interested in testifying should register in advance by calling 278-3659. Observers are welcome.

—PAID ADVERTISEMENT—

ATTENTION!

ALL SPORTS HUNTERS AND FISHERMEN

There are presently two bills before the 11th Legislature that will have tremendous impact on the future of sports hunting and fishing in Alaska. These two bills are House Bills 193 and 199. In a letter dated February 20, 1979 Representative Ramona L. Barnes, District 10, states, "I am concerned that residents of the local area do not understand the ramifications of these bills, and to date most Anchorage area legislators have received little, if any, communication from you on the potential allocation of [illegible]s, away from recreational and sport use." During the second session of the 10th Legislature, [illegible]use Bill 960 was passed and signed into law by Governor Hammond. This legislation gives subsist[illegible]ers priority hunting and fishing rights.

Now HB 193 and 199 establish the system whereby this will be possible.

All sports hunters and fishermen should get a copy of both bills and read them carefully. You may pick them up (free of charge) at the Legislative Affairs Agency located at 1024 W. 6th Street, Anchorage, Alaska. Next, let your legislators know what you think of the bills. Remember, legislators are in Juneau to represent their constituents. When they receive no communication from you we feel they can only assume that you are not interested enough to take the time to let them know what your feelings are regarding an issue. Sometimes we get the impression that our legislators will somehow take care of our interests without any input from us. As of February 16, 1979 there were at least 240 bills before the legislature. All of these bills are classified as to content and recommendation. Once a bill leaves this initial committee with a substantial "do-pass" recommendation by a majority of those on the committee it is well on its way to becoming law. After all it is only reasonable that every single legislator cannot become an expert on every single bill. He or she must rely heavily upon the recommendations of their colleagues unless their constituents at home communicate different recommendations. The degree of involvement of a particular legislator is directly proportional to the amount of interest displayed by their constituents.

Let's take a brief look at HB 193 to see why we as sports hunters and fishermen should be interested.

HB 193 divides Alaska into seven regional areas, each with its own regional board of fish and game. Each regional board will consist of five members. In addition, a master board of fish and game will also be formed consisting of the chairman of each regional board. The only qualifications to be a regional board member is to "be well informed about the fish and game resources of the region to which is appointed." It goes on to outline the authority the master board would have and it appears that either the Alaska Department of Fish and Game will be reduced substantially in scope and authority or will serve in an advisory capacity to the master board. It is readily apparent that seven completely different licenses, set of regulations, tags, seasons, means of taking fish and game and bag limits are possible. This bill will also give the master and the regional boards the authority to determine at will "which users and what methods should be termed subsistence uses, users, and methods. The bill clearly states that subsistence users shall have priority use of fish and game resources. All taxpayers should also take note that while all these board members receive no salary they will receive any travel expenses incurred plus $100 per day per diem allowance from the time they leave their residence until they return to that residence. There are no time limits on travel, no limits on the number of days spent at a meeting, conference, etc. except that there shall not be less that two per year. The bill also states that each board may call a meeting as it considers necessary. Either the chairman or a majority of the board may call a meeting. One of the most objectionable parts of the bill, which is also part of the subsistence law passed last year, states a board may adopt regulations providing for subsistence hunting in a game management unit or subunit or portion of a unit or subunit upon the written petition of not less than 25 interested residents of an area which is requested for establishment as a subsistence area within a game management unit or subunit. Once a subsistence area is designated by the board it means a hunting area in which only subsistence hunting of the affected species is permitted and which is managed for maximum food potential.

The implications of HB 193 are staggering. An important state-wide teleconference on the bill will be held between 11 state-wide locations (Anchorage is one location) at the House Resources Committee on March 6, 1979 at 1:00 P.M. Those wishing to testify should call Judy Hopkins at 278-3668. The location of the teleconference is the Legislative Information Office, 1024 West 6th Ave., Anchorage, Ak. Remember you can get free copies of House Bill 193 and 199 there. They also offer free telex service to all legislators from that location. The days are long gone when the sports hunter or fisherman could assume that his constitutional rights would stand unchallenged by special interest groups. Unless you are willing to fight for your rights you are going to find them eroding one by one.

This ad paid for by concerned sporthunters of Alaska. For more information on the organization of Alaska sporthunters now being formed, call Dave Stanclift at 279-6301. Dave Stanclift treasurer, 1902 Logan, Anch., AK 99502.

8—Anchorage Daily News, Tuesday, March 6, 1979

TELECONFERENCE

A teleconference on fish and game boards will begin at 12:45 p.m. Tuesday at the Legislative Information Office, 1024 W. Sixth Ave. Judy Hopkins has more details at 278-3008.

FOR IMMEDIATE RELEASE

REGIONAL FISH AND GAME BOARDS CONSIDERED

The House Resources Committee, chaired by Representative Alvin Osterback, will hold teleconference hearings on HB 193, relating to fish and game, Tuesday, March 6 starting at 12:45 p.m. at the Legislative Information Office, 1024 West Sixth Avenue. Public comment is invited; witnesses should register in advance by calling 278-3668.

The bill, sponsored by House Speaker Terry Gardiner and nine Representatives, would establish seven regional fish and game boards and a master board of fish and game. The powers of the regional boards would be limited to establishing open and closed seasons, establishing the means and methods for taking fish and game, setting quotas and bag limits, and establishing seasons, areas, quotas and methods for harvest of aquatic plants. All other regulatory powers currently exercised by the Board of Fisheries or the Board of Game would be delegated to the master board, which would have some amendment and veto powers over regional board regulations. Procedures are established for resolving conflicts among regional boards.

The Honorable Alvin Osterback
Chairman, House Resources Committee
Alaska State Legislature
Pouch V
Juneau, Alaska 99811

Dear Senator Osterback:

This is to advise you that I support HB 304 and the development of regional councils without regulatory authority over HB 193 establishing regional boards. The strengthening of the Advisory Committee system through the regional councils and through funding of travel and per diem for Advisory Committee Chairmen will be highly beneficial to the management of Alaska fish and wildlife.

Thank you for the opportunity to comment.

Sincerely,

Herman Schroeder

DATE: February 26, 1979

SUBJECT: HB 193 - Fish and Game Management

The following are proposed changes in HB 193. This follows up my oral testimony of February 22.

1. p.2, line 14. Add a new sentence:
"The governor shall designate the chairman of each regional board."

Explanation: As Representative Gardiner explained, the governor should have more control over who sits on the Master Board. The Committee might also consider adding a state residency requirement to assure that the board members are familiar with the region. Another problem, one I did not address in my oral testimony, is that board members are selected before boundaries are established. See p.2, lines 4-8. It will be difficult to assess the knowledge that candidates have of the regions until the boundaries are set.

2. p.3, line 6. After "purposes;" add:
"the classifications may be made on a regional basis, and fish or game may be classified in more than one category;"

Explanation: A certain fish may be a sport fish in one region and a subsistence fish in another. The same goes for game. Therefore, duplicate and regionalized classifications should be encouraged.

3. p.3, line 11. After "state," delete:
"exercising predation control measures considered necessary to the resources of the state".

Explanation: Although I did not testify on this proposed change, it seems that predation control might be more effective on the regional level. Such controls are rarely imposed statewide. The recently announced wolf kill which the Commissioner, on behalf of the Game Board, has authorized to protect subsistence hunting of moose is a good example of a decision better made on a regional level.

4. p.3, line 20. The term "native or exotic fish or game" should be defined.

5. p.3, lines 21-22. This subsection (b) needs to be clarified. I don't know what is meant by "additional qualifications . . . for gear licenses."

6. p.3, line 26. After "allowed;" insert:
"however, this paragraph does not apply to permits issued or transferred under ch. 43 of this title."

Explanation: This language is in the present law(AS 16.05.251 (a) (12) and excludes the limited entry permit system from the Board of Fisheries' authority. Unless a policy decision is made to allow the new Master Board to regulate limited entry permits, this language should be inserted.

7. p.3, line 29. Add a new subsection (9) and renumber accordingly:
"(9) setting apart fish and game reserve areas refuges, and sanctuaries in the waters or on the lands of the state over which it has jurisdiction, subject to the approval of the legislature."

Explanation: Present law gives the Fisheries and Game Boards the authority to set apart reserve areas, etc. AS 16.05.251 (a) (1) and .255 (a) (1). There is no reason not to grant the power here.Consideration should be given, however, to obtaining input from the appropriate regional board before such a reserve or refuge is created.

8. p.3, line 29. Add a new subsection (10) and number accordingly:
"(10) establishment of marking and identification requirements for means used in pursuit, capture and transport of fish and game."

Explanation: This is currently a responsibility of the Board of Fisheries for fish. Statewide uniformity in marking of harvested fish and game certainly makes sense, so the Master Board should have this authority for fish and game both.

9. p.4, line 5. Delete "if" and insert:
"for the following reasons. The board may make no decision amending or vetoing any regional board regulation unless the board's action is based upon specific written findings of fact and a written statement of the reasons for the action."

Explanation: This language is based on similar language regarding subsistence hunting zones. AS 16.05.257 (i) (1978 Supp.). It is good policy to require written decisions so people know the basis of those decisions.

10. p.4, line 15. After "section" delete the rest of the sentence.

Explanation: The phrase is redundant. See p.4, line 4.

11. p.4, line 21. Before "fish and game" add:
"the taking of"

Explanation: The subsection is taken from existing law except that the above language was dropped. AS 16.05.251 (a) (2). Presumably this was only a drafting or typographical error.

12. p.4, line 28. Add a new subsection (5):
"(5) other purposes provided by law."

Explanation: The four responsibilities listed here are not exhaustive. Where other duties appear in the law, the boards should have the regulatory authority to carry them out. Examples of other duties are at p.6, lines 17 and 19 (subsistence hunting zones); p.8, line 9 (advisary committees); and p.12, line 10 (regulating public nuisances).

13. p.4, line 28. Add a new subsection (b):
"(b) exercise predation control measures considered necessary to the resources of the region."

Explanation: See amendment #3.

14. p.5, lines 4 and 12. Delete "the" and insert "each regional".

Explanation: As I pointed out in my testimony, it is not clear whether the Master Board or the regional boards have authority to implement the subsistence preference. I have proposed that it be the regional boards for each region. The Master Board would still retain a veto power. See p.4, lines 3-16. However, the important point is that it be clear which board is being referred to.

15. p.5, line 19. Add a new subsection (f) as follows:
"(f) Regulations adopted by regional boards are of general application."

Explanation: In order to be a binding regulation which appears in the Alaska Administrative Code, the regulation must be of "general application". Although these regulations apply only to activities within the region, they must be considered "of general application" in order to be enforcible. See AS 44.62.640 (a) (2).

16 p.5, line 19. Add a new subsection (g) as follows:
"(g) Two or more regional boards may adopt joint and uniform regulations relating to fish or game populations which migrate between or among those regions."

Explanation: On p.4, lines 8-12, the Master Board may veto or amend regulations to establish uniformity of regulation for migrating species. However, there is no affirmative grant of power to encourage inter-regional management plans. Cooperation among regional boards should be encouraged.

17. p.5, line 23. After "regulations", add:
"affecting species migrating between or among those regions".

Explanation: The Master Board authority to veto conflicting regulations is limited to species migrating between or among regions. See p.4, lines 9-10. Therefore, to be consistent it should be only those conflicts which are left for resolution by the Master Board.

18. p.7, line 21. Change "the" to "that".

Explanation: For clarity. No regional board should be able to change the boundaries of an area within another region.

19. p.8, line 12. Delete "in the state designated by the individual boards: and insert:
"within the region represented by that board".

Explanation: If regional boards are to have the authority to create advisary committees, that authority should be limited to places within the appropriate region. This was presumably a drafting oversight.

20. p.8, lines 14 and 28. Before "boards" insert:
"regional"

Explanation: See amendment #14. It must be made clear which boards have the powers granted here. On line 28, it is possible that the Master Board should establish procedures for advisary committee closures. Once again, the important thing is to make it clear.

21. p.9, line 6. Change "of" to "on".

Explanation: Typographical error.

22. p.10, lines 9-10. Delete "consider" and insert:
"review"
and before the word "before" insert:
"pursuant to AS 16.05.256 (b)"

Explanation: This section should not be read to grant a new veto over regional regulations which is separate from that in section 256 (b) - p.4, lines 3-16. The amendments will clarify the veto power.

23. p.13, line 2. I suggest the regional board with responsibility for Nunivak Island should have the responsibility for musk oxen.

24. p.13, lines 23-24. The amendment proposed there is not necessary. It was already adopted as a part of Chapter 151, SLA 1978. See AS 16.05.940 (17) (1978 Supp.).

25. p.14, line 12. After "section" insert"
"to the appropriate regional board or"

Explanation: This section deals with waste of herring while harvesting roe. Since the problem occurs only in certain regions, those regional boards may be best able to solve the problem. Another alternative is to grant the authority to the regional boards in the first place.

26. p.15, line 11. After "16.10.470.", insert a new sentence as follows:
"However, no permit for the construction or operation of a salmon hatchery may be issued without advance notice to the appropriate regional board."

Explanation: The regional boards should have some say on the construction of fish hatcheries in their regions.

27. p.17, line 14. Add a new section, as follows:
"Sec.51. Effective Date. This Act is effective _____."

Explanation: Although I don't suggest a specific effective date, one should be made. First, section 226(b) of this bill (p.2, lines 4-8) requires that boundaries be set within six months after board members are appointed. Second, the subsistence legislation from last year was not implemented as quickly as it could have been. Apparently, almost no action was taken by the department until the October effective date. Therefore, I recommend an immediate effective date for some portions of the bill (membership and boundaries) and some strong encouragement not to unnecessarily delay the implementation of this new system.

UNITED FISHERMEN OF ALASKA

MAILING ADDRESS & OFFICE

TO: HOUSE RESOURCES COMMITTEE
FROM: SHARI GROSS
DATE: MARCH 6, 1979
RE: HB 193 - FISH AND GAME MANAGEMENT

The following are proposed changes in HB 193. Since biological considerations are of paramount importance to fishermen, and since this legislation provides no overall coordinated policies for the state, we advocate that provisions be made for a comprehensive management plan established by the master board. The Regional Boards would have to follow management schemes in conformity to the comprehensive state plan.

1. page 2, line 13. Change "five" to "seven"

   Explanation: If Regional Boards are to have management responsibilities for all user groups, a five person board from the large-sized regions being considered does not appear adequate.

2. page 2, line 14. Add a new sentence: "The Governor shall designate the chairman of each regional board."

   Explanation: The Governor should have more control over representation on and directions given by the Regional Boards.

3. page 2, line 15. After "be" add: "a resident of and"

   Explanation: Nothing in the bill now requires that members of the regional boards be residents of the regions which they would be representing.

4. page 2., line 17. delete (b) and add;
   "The Governor shall appoint a seven person master board consisting of one person from each region, but none of whom are members of the regional boards."

   Explanation: One of the main concerns with the regional management system is that local political pressures will circumvent good biological decisions. By putting some distance between membership on the regional and master boards, this concern may be somewhat alleviated. A second purpose to this amendment is that persons serving as chairmen of regional boards and also as members of the master board would be tied up in meetings throughout most, if not all, of the year.

5. page 2, line 21. after "of" add: "the master board and the"

   Explanation: no provision regarding length of terms for the master board is included in the bill

6. p. 2, line 22. Change "two-year," to "four year" with initial appointments staggered accordingly.

   Explanation: A two year term is not long enough to allow for the depth of experience and knowledge required to adequately serve a region on a management basis.

7. p. 5 line 22, delete between"

   Explanation: the words "between" and "among" are redundant

The final amendment which the UFA advocates requires drafting of a section (4) to be added on page 4 under powers of the master board. We believe there should be a provision for appeal of regional management council decisions by users from within a region beyond the three specified provisions given in HB 193. Perhaps a system of petitions for appeal should be considered. If added, provision would also have to be included on page 5 within the section dealing with "Conflicts".

MEMORANDUM

TO: House Resources Committee

FROM: Don Clocksin

DATE: February 26, 1979

SUBJECT: HB 193 - Fish and Game Management

The following are proposed changes in HB 193. This follows up my oral testimony of February 22.

1. p.2, line 14. Add a new sentence:
"The governor shall designate the chairman of each regional board."

Explanation: As Representative Gardiner explained, the governor should have more control over who sits on the Master Board. The Committee might also consider adding a state residency requirement to assure that the board members are familiar with the region. Another problem, one I did not address in my oral testimony, is that board members are selected before boundaries are established. See p.2, lines 4-8. It will be difficult to assess the knowledge that candidates have of the regions until the boundaries are set.

2. p.3, line 6. After "purposes;" add:
"the classifications may be made on a regional basis, and fish or game may be classified in more than one category;"

Explanation: A certain fish may be a sport fish in one region and a subsistence fish in another. The same goes for game. Therefore, duplicate and regionalized classifications should be encouraged.

3. p.3, line 11. After "state," delete:
"exercising predation control measures considered necessary to the resources of the state".

Explanation: Although I did not testify on this proposed change, it seems that predation control might be more effective on the regional level. Such controls are rarely imposed statewide. The recently announced wolf kill which the Commissioner, on behalf of the Game Board, has authorized to protect subsistence hunting of moose is a good example of a decision better made on a regional level.

4. p.3, line 20. The term "native or exotic fish or game" should be defined.

5. p.3, lines 21-22. This subsection (b) needs to be clarified. I don't know what is meant by "additional qualifications . . . for gear licenses."

6. p.3, line 26. After "allowed;" insert:
"however, this paragraph does not apply to permits issued or transferred under ch. 43 of this title."

Explanation: This language is in the present law(AS 16.05.251 (a) (12) and excludes the limited entry permit system from the Board of Fisheries' authority. Unless a policy decision is made to allow the new Master Board to regulate limited entry permits, this language should be inserted.

7. p.3, line 29. Add a new subsection (9) and renumber accordingly:
"(9) setting apart fish and game reserve areas refuges, and sanctuaries in the waters or on the lands of the state over which it has jurisdiction, subject to the approval of the legislature."

Explanation: Present law gives the Fisheries and Game Boards the authority to set apart reserve areas, etc. AS 16.05.251 (a) (1) and .255 (a) (1). There is no reason not to grant the power here.Consideration should be given, however, to obtain no input from the appropriate regional board before such a reserve or refuge is created.

8. p.3, line 29. Add a new subsection (10) and number accordingly:
"(10) establishment of marking and identification requirements for means used in pursuit, capture and transport of fish and game."

Explanation: This is currently a responsibility of the Board of Fisheries for fish. Statewide uniformity in marking of harvested fish and game certainly makes sense, so the Master Board should have this authority for fish and game both.

9. p.4, line 5. Delete "if" and insert:
"for the following reasons. The board may make no decision amending or vetoing any regional board regulation unless the board's action is based upon specific written findings of fact and a written statement of the reasons for the action."

Explanation: This language is based on similar language regarding subsistence hunting zones. AS 16.05.257 (i) (1978 Supp.). It is good policy to require written decisions so people know the basis of those decisions.

10. p.4, line 15. After "section" delete the rest of the sentence.

Explanation: The phrase is redundant. See p.4, line 4.

11. p.4, line 21. Before "fish and game" add:
"the taking of"

Explanation: The subsection is taken from existing law except that the above language was dropped. AS 16.05.251 (a) (2). Presumably this was only a drafting or typographical error.

12. p.4, line 28. Add a new subsection (5):
"(5) other purposes provided by law."

Explanation: The four responsibilities listed here are not exhaustive. Where other duties appear in the law, the boards should have the regulatory authority to carry them out. Examples of other duties are at p.6, lines 17 and 19 (subsistence hunting zones); p.8, line 9 (advisary committees); and p.12, line 10 (regulating public nuisances).

13. p.4, line 28. Add a new subsection (b):
"(b) exercise predation control measures considered necessary to the resources of the region."

Explanation: See amendment #3.

14. p.5, lines 4 and 12. Delete "the" and insert "each regional".

Explanation: As I pointed out in my testimony, it is not clear whether the Master Board or the regional boards have authority to implement the subsistence preference. I have proposed that it be the regional boards for each region. The Master Board would still retain a veto power. See p.4, lines 3-16. However, the important point is that it be clear which board is being referred to.

15. p.5, line 19. Add a new subsection (f) as follows:
"(f) Regulations adopted by regional boards are of general application."

Explanation: In order to be a binding regulation which appears in the Alaska Administrative Code, the regulation must be of "general application". Although these regulations apply only to activities within the region, they must be considered "of general application" in order to be enforcible. See AS 44.62.640 (a) (2).

16. p.5, line 19. Add a new subsection (g) as follows:
"(g) Two or more regional boards may adopt joint and uniform regulations relating to fish or game populations which migrate between or among those regions."

Explanation: On p.4, lines 8-12, the Master Board may veto or amend regulations to establish uniformity of regulation for migrating species. However, there is no affirmative grant of power to encourage inter-regional management plans. Cooperation among regional boards should be encouraged.

17. p.5, line 23. After "regulations" add:
"affecting species migrating between or among those regions".

Explanation: The Master Board authority to veto conflicting regulations is limited to species migrating between or among regions. See p.4, lines 9-10. Therefore, to be consistent it should be only those conflicts which are left for resolution by the Master Board.

18. p.7, line 21. Change "the" to "that".

Explanation: For clarity. No regional board should be able to change the boundaries of an area within another region.

19. p.8, line 12. Delete "in the state designated by the individual boards: and insert:
"within the region represented by that board".

Explanation: If regional boards are to have the authority to create advisary committees, that authority should be limited to places within the appropriate region. This was presumably a drafting oversight.

20. p.8, lines 14 and 28. Before "boards" insert:
"regional"

Explanation: See amendment #14. It must be made clear which boards have the powers granted here. On line 28, it is possible that the Master Board should establish procedures for advisary committee closures. Once again, the important thing is to make it clear.

21. p.9, line 6. Change "of" to "on".

Explanation: Typographical error.

22. p.10, lines 9-10. Delete "consider" and insert:
"review"
and before the word "before" insert:
"pursuant to AS 16.05.256 (b)"

Explanation: This section should not be read to grant a new veto over regional regulations which is separate from that in section 256 (b) - p.4, lines 3-16. The amendments will clarify the veto power.

23. p.13, line 2. I suggest the regional board with responsibility for Nunivak Island should have the responsibility for musk oxen.

24. p.13, lines 23-24. The amendment proposed there is not necessary. It was already adopted as a part of Chapter 151, SLA 1978. See AS 16.05.940 (17) (1978 Supp.).

25. p.14, line 12. After "section" insert"
"to the appropriate regional board or"

Explanation: This section deals with waste of herring while harvesting roe. Since the problem occurs only in certain regions, those regional boards may be best able to solve the problem. Another alternative is to grant the authority to the regional boards in the first place.

26. p.15, line 11. After "16.10.470.", insert a new sentence as follows:
"However, no permit for the construction or operation of a salmon hatchery may be issued without advance notice to the appropriate regional board."

Explanation: The regional boards should have some say on the construction of fish hatcheries in their regions.

27. p.17, line 14. Add a new section, as follows:
"Sec.51. Effective Date. This Act is effective _____."

Explanation: Although I don't suggest a specific effective date, one should be made. First, section 226(b) of this bill (p.2, lines 4-8) requires that boundaries be set within six months after board members are appointed. Second, the subsistence legislation from last year was not implemented as quickly as it could have been. Apparently, almost no action was taken by the department until the October effective date. Therefore, I recommend an immediate effective date for same portions of the bill (membership and boundaries) and some strong encouragement not to unnecessarily delay the implementation of this new system.

LEGISLATIVE AFFAIRS AGENCY

MEMORANDUM February 21, 1979

SUBJECT: Regional Fish and Game Boards: (HB 193)

TO: House Resources Committee

FROM: Kenneth E. Vassar, Legislative Counsel KEV

You have requested a suggestion for language which would establish all land on the Alaska Peninsula, Aleutian Chain and Pribilof Islands west of a line extending south from Cape Kumlik and all of the Bering sea as a separate region for the purposes of House Bill 193 and which would establish Kodiak as another separate region. In accordance with your request, I would suggest the following:

Page 1, line 25

Delete all material and insert the following:

(1) All land on the Alaska Peninsula, Aleutian Chain and Pribilof Islands west of a line extending south from Cape Kumlik and the Bering Sea;

Page 2, line 4

Insert the following:

(8) Kodiak.

KEV:nem

Diann

Alvin may want to add Kenai area to this new Kodiak region

HB304

HOUSE BILL NO. 304
SUGGESTED REVISIONS
REAL ALASKA COALITION

For an Act entitled: "An Act establishing Fish and Game Resource Regions, Local Fish and Game Committees, and Regional Fish and Game Council; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Sec. 1. INTENT. The legislature finds that the proper regulation, protection, and conservation of fish and wildlife and the continuation of the unique lifestyle of Alaska residents require that an administrative structure be established for the purpose of enabling people with personal knowledge of local conditions and requirements to have a more meaningful advisory role in the management of fish and wildlife in Alaska.

* Sec. 2. AS 16.05 is amended by adding new sections to read:

Sec. 16.05.222. FISH AND GAME RESOURCE REGIONS. For the purpose of the conservation and management of the fish and wildlife resources of the state, there are created five fish and game resource regions, the exact boundaries of which must be established by the Board of Fisheries and the Board of Game, acting jointly.

(Sec. 16.05.223. LOCAL FISH AND GAME COMMITTEES has been deleted totally.)

Sec. 16.05.224. REGIONAL FISH AND GAME COUNCILS. (a) The Board of Fisheries and the Board of Game, acting jointly, shall establish a regional fish and game council within each fish and

attn: * is where a revision was made; some revisions were 1 word whereas others were (1) sentences or sections

game resource region, composed of the chairpersons of the local fish and game committees within its region.

(b) The Boards of Fish and Game shall assign a coordinator to each region to distribute all relevant support data and coordinate activities of Regional Council and Land Advi[illegible] Committees and attend all Fish and Game Board hearings on behalf of their respective regions.

(c) Each regional fish and game council may upon agreement of the majority of the members and approval of the Boards of Fisheries and Game:

(1) hold public meeting on fish and wildlife matters;

(2) review, make recommendations, and assist the department, in consultation with its local fish and game committees and appropriate federal agencies, in developing plans for the conservations, regulation, management, and use of the fish and wildlife resources within its region.

(3) perform other duties which may be specified by the boards by regulation.

(d) The regional fish and game councils may present recommendations concerning the conservation, regulation, management, and use of fish and wildlife resources within their respective regions, and the evidence upon which the recommendations are based, to the local advisory committes during the course of their administrative proceedings. The committee, individually or jointly, may choose not to follow any such recommendation which it is determined during the administrative proceedings is not supported by substantial evidence, violates recognized principles of fish and wildlife conservation, or would be

inconsistent with the constitution or the laws of the State of Alaska or the United States.

* Sec. 4. IMPLEMENTATION. (a) In view of present state fiscal constraints, the Board of Fisheries, Board of Game, and the department shall implement AS 16.05.223 and 16.05.224, enacted in sec. 2 of this Act, within the fish and game resource regions established by AS 16.05.222, also enacted in sec. 2 of this Act, in accordance with the following schedule, measured from the effective date of the Act:

(1) no less than one region within one year;

(2) no less than three additional regions within two years; and

(3) all regions within three years.

(b) During the implementation period stated in (a) of this section, all existing local advisory committees in other regions shall continue to function under the present regulations.

* Sec. 5. CONSTRUCTION. If any provision of this Act is incompatible with AS 16.05.260, the provision of this Act governs.

* Sec. 7. Sec. 6 of this Act takes effect three years after the effective date of the remaining sections of this Act. The remaining sections of this Act take effect immediately in accordance with AS 01/10.070(c).

EXPLANATION OF THE REVISIONS TO HOUSE BILL 304

(Note: All references to lines are from original HB-304.)

1. Line 12, There is no reason to distinguish between rural and other Alaska residents.

2. Line 15, The word advisory was added to better reflect the role of the public.

3. Line 18, "and development" was deleted because it was not considered appropriate to develope fish and game.

4. Line 19 and 20, The number of regions was revised to conform to the existing five game management regions. Actually the number of regions should be left up to the Boards so the best boundaries can be drawn to allow management of the resources of game, sport, and commercial fish. These boundaries may not be the same for basic management reasons. In fact, at present, there are three separate systems drawn by ADF&G for management.

5. Line 21 of page 1 and Line 1 - 28 of page 2, Since the boundaries are to be established by the Boards all area definition has been omitted.

6. Line 29 of page 2, Lines 1 - 29 of page 3, and Line 1 - 2 of page 4, The existing advisory committee system should remain as detailed in AS 16.05.260. The Boards have authority to deal with advisory committees now and will be making changes in their joint meeting of March 1979.

7. Line 8 - 11 of page 4, Paragraph (b) was deleted and new wording was added to allow for a coordinator in each region as determined by the Boards. We feel this may be the single most important factor to permit better local input to the Fish and Game regulatory system.

8. Line 12 of page 4, To better control what and when the Regional Councils meet, etc., we believe the Boards shall be given an oversight authority.

9. Line 18 - 25 of page 4, Since the regulatory powers of the councils are deleted, this wording is not needed. These councils are advisory only and should serve to advise and educate the local advisory committees.

10. Line 2 - 3 of page 5, As the councils are to serve the advisory committees, it was necessary to revise this wording.

11. Line 10 - 16 of page 5, Paragraph (e) is no longer required since the Councils are to serve the advisory committees.

12. Line 3 - 3 of page 6, This language concerns local advisory committees. Since no change is recommended in the existing system, Sec. 6 and Sec. 7 are not required.

The following motions were considered by the Southeast Interim Regional Advisory Committee at their March 9, 1979, meeting in Juneau, concerning HB 304. The motions were made to strengthen the bill and the power of the existing local Advisory Committees.

MOTION: To amend Sec. 16.05.223. LOCAL FISH AND GAME COMMITTEES. (d) to read:

Each committee shall hold public meetings on fish and wildlife matters, review regulatory proposals, (MAY) shall make recommendations to its regional fish and game council, the Board of Fisheries, and the Board of Game, and (MAY) shall participate in the review and development of management plans for the conservation and use of fish and wildlife resources within its region. If a regional council, the Board of Fisheries, or the Board of Game chooses not to follow a committee recommendation, that council or board shall inform the committee which made the recommendation of its reasons for not following the recommendation.

MOTION: To amend Sec. 16.05.224. REGIONAL FISH AND GAME COUNCILS. (a) to read:

The Board of Fisheries and the Board of Game, acting jointly, shall establish a regional fish and game council within each fish and game resource region, composed of the chairpersons or designee of the local fish and game committees within its region.

MOTION: To delete the present wording of Sec. 16.05.224. REGIONAL FISH AND GAME COUNCILS. (e) and replace with alternate wording reading:

Each region shall set forth regulations for subsistence use to conserve and manage their own resources in cooperation with the Department of Fish and Game.

MOTION: To add new wording reading Sec. 16.04.224. REGIONAL FISH AND GAME COUNCILS. (f):

Any Advisory Committee shall have the power of emergency closure of a set area within the boundaries if there is no objection from any other Advisory Committee within the region. In the case of any objection, the majority of participating Advisory Committees will decide.

MOTION: To amend Sec. 4. IMPLEMENTATION. (a) to read:

(IN VIEW OF PRESENT STATE FISCAL CONSTRAINTS,) the Board of Fisheries, Board of Game, and the Department shall implement AS 16.05.223 and 16.05.224, enacted in sec. 2 of this Act, within the fish and game resource regions established by AS 16.05.222, also enacted in sec. 2 of this Act, in accordance with the following schedule, measured from the effective date of this Act:

(1) (NO LESS THAN ONE REGION) all regions within one year;
(2) (NO LESS THAN THREE ADDITIONAL REGIONS WITHIN TWO YEARS: AND)
(3) (ALL REGIONS WITHIN THREE YEARS.)

Respectfully submitted by:

Ann Lowe

Ann Lowe, Chairman
Southeast Interim Regional Advisory Council

A M E N D M E N T

Offered in the HOUSE By Gardiner

TO: CS FOR HOUSE BILL NO. 193

Page 2, line 2:

Delete "and Cook Inlet" and insert in its place "Cook Inlet, and Shelikof Strait"

Page 2, line 3:

Delete "Cape Douglas at the base of" and insert in its place "Portage Bay on"

Page 2, line 4:

After "including" insert "Trinity Islands and"

Delete "Shuyak Island" and inser in its p'ace "Trinity Islands"

Page 2, lines 7 - 19:

Delete all material and insert the following:

(3) Western Alaska: The Alaska Peninsula westward from Portage Bay; Chirikof and Shumagin Islands, and all other adjacent offshore islands; the Aleutian Islands and the Pribilof Islands; the area northward and northwestward from the King S mon River drainage, including all land drained by water flowing into Bristol Bay, the land within the boundaries of the Calista Regional Corporation; Nunivak and St. Matthew Islands, and all other islands along the coast; and the adjacent coastal water seaward to the limit of the state's juris iction.

Renumber following paragraphs accordingly.

H.B. 193 - PROBLEM AREAS

PAGE 1, LINE 22

Any regions established for the purpose of fish and game management and public input should be left largely to the discretion of the Dept. and the Board of Fish and Board of Game rather than the legislature.

PAGE 2, LINE 9

Two boards serve our purposes much better than one as has been recentl demonstrated. Just 4 years ago we decisively concluded to separate the boards. That decision has served us well.

PAGE 3, LINE 12

Administrative appointment of, in this case, 35 members to regional boards places an extremely weighty political finger on the scales. This could lead to abrupt changes, thus encouraging confusion and lack of continuity with changes in administration, as well as an undue burden on the Governor and legislature.

LINE 17

Would ensure that regional advocacy carry through to the master boards - a decided disadvantage in light of the overall responsibility and universal oversight expected of the master boards.

LINE 21

The member ship terms would tend to prevent members from gaining the necessary knowledge to make reasonable decistons in light of the short 2 vear term.

LINE 29

The master boards should be the only boards impowered to adopt or reject regulations. That covers all of pages 3, 4, and most of page 5.

PAGE 5, LINE 19-----

Providing legal assistance to a total of 7 or 9 boards meeting some 500 - 600 days would be fiscally irresponsible.

PAGE 6, LINE 6 THROUGH LINE 7 ON PAGE 8

Delete - some reason - (master boards should make decisions)

PAGE 8, LINE 9

This would tend to turn the local committees into puppets of the regional board, with the regional boards designating proposals.

The biggest disadvantage to this entire section hoswver, is that it would restrict local input and prevent local advisory commisttees from ever dealing directly with the master boards. This would restrict rather than improve local input.

PAGE 9, LINE 2

Places biological decisions directly in the political arena - a decided disadvantage

LINE 24

Fiscally irresponsible, could end up with a full-time payroll of 35 persons, plus their travel expenses

PAGE 11, LINE 25

Goes beyond the necessary scope of this legislation

PAGE 12 THROUGH PAGE 17

Primarily refers to technical changes, to which we have already objecte

CONCLUSION: In its present form H.B. 193 is unacceptable. Additionally it would be impractical to try to modify this bill in such a way as to make it ammendable to the purposes of ensuring local input and proper fish and game management.

M E M O R A N D U M

TO: House Resources Committee

FROM: Don Clocksin

DATE: February 26, 1979

SUBJECT: HB 193 - Fish and Game Management

The following are proposed changes in HB 193. This follows up my oral testimony of February 22.

1. p.2, line 14. Add a new sentence:
"The governor shall designate the chairman of each regional board."

Explanation: As Representative Gardiner explained, the governor should have more control over who sits on the Master Board. The Committee might also consider adding a state residency requirement to assure that the board members are familiar with the region. Another problem, one I did not address in my oral testimony, is that board members are selected before boundaries are established. See p.2, lines 4-8. It will be difficult to assess the knowledge that candidates have of the regions until the boundaries are set.

2. p.3, line 6. After "purposes;" add:
"the classifications may be made on a regional basis, and fish or game may be classified in more than one category;"

Explanation: A certain fish may be a sport fish in one region and a subsistence fish in another. The same goes for game. Therefore, duplicate and regionalized classifications should be encouraged.

3. p.3, line 11. After "state," delete:
"exercising predation control measures considered necessary to the resources of the state".

Explanation: Although I did not testify on this proposed change, it seems that predation control might be more effective on the regional level. Such controls are rarely imposed statewide. The recently announced wolf kill which the Commissioner, on behalf of the Game Board, has authorized to protect subsistence hunting of moose is a good example of a decision better made on a regional level.

4. p.3, line 20. The term "native or exotic fish or game" should be defined.

5. p.3, lines 21-22. This subsection (b) needs to be clarified. I don't know what is meant by "additional qualifications . . . for gear licenses."

6. p.3, line 26. After "allowed;" insert:
"however, this paragraph does not apply to permits issued or transferred under ch. 43 of this title."

Explanation: This language is in the present law(AS 16.05.251 (a) (12) and excludes the limited entry permit system from the Board of Fisheries' authority. Unless a policy decision is made to allow the new Master Board to regulate limited entry permits, this language should be inserted.

7. p.3, line 29. Add a new subsection (9) and renumber accordingly:
"(9) setting apart fish and game reserve areas refuges, and sanctuaries in the waters or on the lands of the state over which it has jurisdiction, subject to the approval of the legislature."

Explanation: Present law gives the Fisheries and Game Boards the authority to set apart reserve areas, etc. AS 16.05.251 (a) (1) and .255 (a) (1). There is no reason not to grant the power here.Consideration should be given, however, to obtaining input from the appropriate regional board before such a reserve or refuge is created.

8. p.3, line 29. Add a new subsection (10) and number accordingly:
"(10) establishment of marking and identification requirements for means used in pursuit, capture and transport of fish and game."

Explanation: This is currently a responsibility of the Board of Fisheries for fish. Statewide uniformity in marking of harvested fish and game certainly makes sense, so the Master Board should have this authority for fish and game both.

9. p.4, line 5. Delete "if" and insert:
"for the following reasons. The board may make no decision amending or vetoing any regional board regulation unless the board's action is based upon specific written findings of fact and a written statement of the reasons for the action."

Explanation: This language is based on similar language regarding subsistence hunting zones. AS 16.05.257 (i) (1978 Supp.). It is good policy to require written decisions so people know the basis of those decisions.

10. p.4, line 15. After "section" delete the rest of the sentence.

Explanation: The phrase is redundant. See p.4, line 4.

11. p.4, line 21. Before "fish and game" add:
"the taking of"

Explanation: The subsection is taken from existing law except that the above language was dropped. AS 16.05.251 (a) (2). Presumably this was only a drafting or typographical error.

12. p.4, line 28. Add a new subsection (5):
"(5) other purposes provided by law."

Explanation: The four responsibilities listed here are not exhaustive. Where other duties appear in the law, the boards should have the regulatory authority to carry them out. Examples of other duties are at p.6, lines 17 and 19 (subsistence hunting zones); p.8, line 9 (advisary committees); and p.12, line 10 (regulating public nuisances).

13. p.4, line 28. Add a new subsection (b):
"(b) exercise predation control measures considered necessary to the resources of the region."

Explanation: See amendment #3.

14. p.5, lines 4 and 12. Delete "the" and insert "each regional".

Explanation: As I pointed out in my testimony, it is not clear whether the Master Board or the regional boards have authority to implement the subsistence preference. I have proposed that it be the regional boards for each region. The Master Board would still retain a veto power. See p.4, lines 3-16. However, the important point is that it be clear which board is being referred to.

15. p.5, line 19. Add a new subsection (f) as follows:
"(f) Regulations adopted by regional boards are of general application."

Explanation: In order to be a binding regulation which appears in the Alaska Administrative Code, the regulation must be of "general application". Although these regulations apply only to activities within the region, they must be considered "of general application" in order to be enforcible. See AS 44.62.640 (a) (2).

16. p.5, line 19. Add a new subsection (g) as follows:
"(g) Two or more regional boards may adopt joint and uniform regulations relating to fish or game populations which migrate between or among those regions."

Explanation: On p.4, lines 8-12, the Master Board may veto or amend regulations to establish uniformity of regulation for migrating species. However, there is no affirmative grant of power to encourage inter-regional management plans. Cooperation among regional boards should be encouraged.

17 p.5, line 23. After "regulations", add:
"affecting species migrating between or among those regions".

Explanation: The Master Board authority to veto conflicting regulations is limited to species migrating between or among regions. See p.4, lines 9-10. Therefore, to be consistent it should be only those conflicts which are left for resolution by the Master Board.

18. p.7, line 21. Change "the" to "that".

Explanation: For clarity. No regional board should be able to change the boundaries of an area within another region.

19. p.8, line 12. Delete "in the state designated by the individual boards: and insert:
"within the region represented by that board".

Explanation: If regional boards are to have the authority to create advisary committees, that authority should be limited to places within the appropriate region. This was presumably a drafting oversight.

20. p.8, lines 14 and 28. Before "boards" insert:
"regional"

Explanation: See amendment #14. It must be made clear which boards have the powers granted here. On line 28, it is possible that the Master Board should establish procedures for advisary committee closures. Once again, the important thing is to make it clear.

21. p.9, line 6. Change "of" to "on".

Explanation: Typographical error.

22. p.10, lines 9-10. Delete "consider" and insert:
"review"
and before the word "before" insert:
"pursuant to AS 16.05.256 (b)"

Explanation: This section should not be read to grant a new veto over regional regulations which is separate from that in section 256 (b) - p.4, lines 3-16. The amendments will clarify the veto power.

23. p.13, line 2. I suggest the regional board with responsibility for Nunivak Island should have the responsibility for musk oxen.

24. p.13, lines 23-24. The amendment proposed there is not necessary. It was already adopted as a part of Chapter 151, SLA 1978. See AS 16.05.940 (17) (1978 Supp.).

25. p.14, line 12. After "section" insert"
"to the appropriate regional board or"

Explanation: This section deals with waste of herring while harvesting roe. Since the problem occurs only in certain regions, those regional boards may be best able to solve the problem. Another alternative is to grant the authority to the regional boards in the first place.

26. p.15, line 11. After "16.10.470.", insert a new sentence as follows:
"However, no permit for the construction or operation of a salmon hatchery may be issued without advance notice to the appropriate regional board."

Explanation: The regional boards should have some say on the construction of fish hatcheries in their regions.

27. p.17, line 14. Add a new section, as follows:
"Sec.51. Effective Date. This Act is effective _____."

Explanation: Although I don't suggest a specific effective date, one should be made. First, section 226(b) of this bill (p.2, lines 4-8) requires that boundaries be set within six months after board members are appointed. Second, the subsistence legislation from last year was not implemented as quickly as it could have been. Apparently, almost no action was taken by the department until the October effective date. Therefore, I recommend an immediate effective date for same portions of the bill (membership and boundaries) and some strong encouragement not to unnecessarily delay the implementation of this new system.

LEGISLATIVE AFFAIRS AGENCY

M E M O R A N D U M February 21, 1979

SUBJECT: Regional Fish and Game Boards: (HB 193)

TO: House Resources Committee

FROM: Kenneth E. Vassar, Legislative Counsel KEV

You have requested a suggestion for language which would establish all land on the Alaska Peninsula, Aleutian Chain and Pribilof Islands west of a line extending south from Cape Kumlik and all of the Bering sea as a separate region for the purposes of House Bill 193 and which would establish Kodiak as another separate region. In accordance with your request, I would suggest the following:

Page 1, line 25

Delete all material and insert the following:

(1) All land on the Alaska Peninsula, Aleutian Chain and Pribilof Islands west of a line extending south from Cape Kumlik and the Bering Sea;

Page 2, line 4

Insert the following:

(8) Kodiak.

Cook Inlet Fishermen's Council
Position on HB 193

(Telephoned in by Lottie Edelman 3/10/79)

The Cook Inlet Fishermen's Council approves the concept of HB193 with the following amendments:

- The regional boards shall be made up of residents of the region.
- Regional bds. shall consist of 7 members with terms of 4 years, alternating.
- A system for appeals from advisory committees to the regional bd. and from regional bds. to the master bd. shall be set up in the bill.
- Regional bds. shall be given authority to limit keel length of boats if HB1 passes.
- Local advisory committees shall be upgraded.
- The regional boards shall be representative of all user groups (sport fish, commercial fin fish, commercial shell fish, subsistence, guides, hunters, and trappers.

TESTIMONY ON HOUSE BILL 304 AND HOUSE BILL 193
MARCH 6, 1979
TOM SCARBOROUGH, EXECUTIVE DIRECTOR
REPRESENTING ALASKA WILDLIFE FEDERATION AND SPORTMEN'S COUNCIL, INC.

Alaska Wildlife Federation and Sportmen's Council is a statewide organization representing recreational and sportmen interests. It is also affiliated with the National Wildlife Federation and has closely aligned views on the subject of Regional Control of Fish and Game Management.

I have reviewed both House Bill - 304 and House Bill - 193, which are bills on Regional Boards, and selected 304 as the most appropriate vehicle to use for markup. Alaska Wildlife and Sportmen's Council favors the regional concept that I will descuss in detail. We are opposed to a system which grants regulatory power to a Regional Board or Council. We favor a concept which will upgrade the local advisory system thereby allowing better input and communication between the public and the Boards of Fish and Game.

Essential in this concept is an advisory committee coordinated for each of the regions as defined jointly by the Boards of Fish and Game. We recommend these advisors work directly for the Boards and not for the Commissioner of Alaska Department of Fish and Game.

Secondly, we would like to see the chairmen of the local advisory committees meet at least twice a year to discuss mutual interest within their region. This would then form a line of communication not presently in existence. This group of local committee chairmen could be called a Regional Council. The Council should not be required to review or draft proposals, but should only function to better inform the local committees.

TESTIMONY ON HOUSE BILL 304 AND HOUSE BILL 193
MARCH 6, 1979
TOM SCARBOROUGH, EXECUTIVE DIRECTOR
REPRESENTING ALASKA WILDLIFE FEDERATION AND SPORTMEN'S COUNCIL, INC.

I will provide the committee with a suggested amended review of 304 to insert in the record which contains the concepts I have previously given in this testimony.

POSITION STATEMENT "REGIONAL SYSTEMS"

Sportsmen, trappers, guides & others who live in wilderness Alaska have long realized the importance and value of local knowledge and input into the regulatory process of fish and game management.

Our staunch opposition to certain regional board proposals which would create unweildly and ineffective bureacrasies, de-centralize state rule-making authority, and dilute direct local input; have often been interpreted as blanket opposition to any "regional system." Such is not the case however, as we are indeed in favor of increasing the efficiency and effectiveness of the local committees and feel a regional system can be designed which will accomplish that goal. We favor, and place a high priority on passage of legislation creating such a system in the first session of the eleventh legislature.

The following brief synopsis of points necessary in an advantagious regional system, and an unacceptable one should already outline our position.

BASIC CHANGES NEEDED-EFFECTIVE REGIONAL SYSTEM

1.) Regions should be created, representatives of local commities should sit on a regional council (or board) to communicate to each other specific local concerns.

2.) Professional Assistance - full time regional advisory coordinators should be incorporated, for each region.

3.) Financial assitance to provide for transportation costs should be incorporated.

4.) The existing local advisory committee system should be used as the foundation upon which to build a more effective system.

UNACCEPTABLE CONCEPTS

1.) ANY de-centralization of master board rule-making authority.

2.) Requirements that newly created "regional boards" comprehensively review proposals, or in any way dilute local input.

3.) Requirements which combine the two existing master boards.

4.) Establishment of systems which will unduly hamper the effectiveness of professional fishery and wildlife managers and likewise impair proper resource management.

5.) Creation of administrative or travel systems that are fiscally irresponsive.

TESTIMONY RE: FISH AND GAME REGIONAL SYSTEMS

3/6/79

KEN FANNING
REAL ALASKA COALITION

We favor enacting legislation which will create a "regional system" that will improve local advisory input to the promulgation of fish and game regulations.

We urge your committee to use HB 304 as a markup vehicle to that end.

We wish to clearly define what we feel would provide an effective regional system, and will forward to your committee our complete recommendations for such. We would also like to include in your hearing record our line by line suggested improvements and amendments to HB 304, our comprehensive evaluation of HB 193 and our position statement regarding regional systems.

Basically, we feel a comprehensive overhaul of the existing system, including regionalization, assignment of regional advisory committee coordinators, an improved system of communication and financial assistance to carry out these improvements would be extremely beneficial. We heartily endorse legislation which will accomplish that without creating an unwieldly bureaucratically irresponsible administrative structure.

Our current system is the most publicly oriented fish and game advisory system in the United States. In fact, it is so painstakingly democratic that it takes the very time frame in which it works.

This is not to say, however, that substantial changes are not necessary in order to improve the effectiveness of that system. Indeed, they are through correspondence, personal communication and in response to extensive public hearings in the

KEN FANNING
TESTIMONY
3/6/79

past two years, the thirty-nine (39) member groups of the Real Alaska Coalition have thoroughly evaluated alternative systems, and the conclusions reached are contained in our testimony today.

---Rule making authority should be limited to the Master Boards of Fish and Game.

---Chairmen of local committees could and should meet with other chairmen within their regions to discuss mutual and individual areas of concern.

---Input from individuals and local committees should be directed to the Master Boards.

---Professional assistance in the form of regional advisory committee coordinators should be incorporated.

---Let's make any transition in a manner which is fiscally responsive and beneficial to the fish and wildlife resources.

In conclusion, we urge you to use HB 304 as a mark-up vehicle, and we urge you to pass out of committee as expeditiously as possible regional system legislation which meets the criteria we have suggested.

A proposal for the Southeast Alaska Regional Resources Council

March 7, 1974

To the Alaska House of Representatives Resources Committee

by Eric Jorden
Sitka F & G Advisory Committee

Introduction.

Having studied 4 proposals before you

1. Covens Hammonds Bill HB #304
2. Terry Gardiners Bill HB #143
3. A proposal by the Joint Boards of Fish & Game to be considered at their meeting March 24-28, 1974.
4. The Sitka Plan

I have concluded that you will find as I have found that no one proposal is satisfactory by itself. To recommend one unsatisfactory proposal over another one when the possibility of recommending an approved not passed proposal exists would be a real waste of your combined experience & knowledge.

I propose that the Southeast Regional Resources Council take a bold and meaningful step and propose a synthesis of the best parts of the various proposals offered.

Here is my recommended synthesis: You might consider using it as a model.

1. Advisory Committees

The proposal by the Boards of Fish & Game retains community advisory committees which should be a cornerstone of the Alaska Fish & Game Regulatory Process.

I recommend the section on Advisory Committees as proposed by the Joint Boards of Fish & Game be written into the legislation.

II Regional Councils & Boards

Boundary - I believe Yakutat should decide wether to be in S.E. or South Central. I hope they will choose to be in S.E. I recommend adoption of the Governors proposal for the S.E. Boundaries.

Composition - 3 of the 4 proposals before you provide for the Regional Councils to be composed of the Chairman or his designee of all the Advisory Committees in the region. I believe this approach will involve a great expense to bring the people together. The Governors solution, creating subregions, is not acceptable to me for reasons of travel logistics and costs. I would hope that all communities in S.E. would have an active advisory committee. A quick look at the possibilities

Hyder

5 boys over 20 committees in S.E. which might be eligible for an Advisory Committee. The logistics & costs of bringing all these people together twice a year would be too great to justify on the basis of coordinations & recommendations.

Tony Gardiners proposal to have the Governor appoint 5 people to the Regional Board, leaves the advisory committees completely unrepresented on the Regional Board.

I recommend a compromise or synthesis. Each Regional council (Board) consist of 5 (7) members appointed by the Governor from a list of nominees submitted by the Fish & Game Advisory Committees in the Region, (No advisory

committee may nominate more than two (2) candidates) and confirmed by a majority of the membership of the Legislature meeting in joint session.

This proposal would give Advisory Committees direct input into who served on the Regional Councils, yet would retain the Governor and Legislature perogative to make the appointments.

Powers of the Regional Council (Board)

After a great deal of thought I have decided that the only way to justify the expense of conducting regional councils (boards) is by willing of justifying the committment of time by the regional council members is to grant them regulatory powers. I recommend adoption

of HB 193 version of the divisions of regulatory powers between the Master and Regional Boards.

I have concluded, based on some experience organizing and working with regional groups that without regulatory powers there will be problems getting the most qualified people to serve on regional councils and problems in achieving quorums.

Staff- I support the funding of Regional Coordinator positions for each region. These people would work directly for the Regional Board in their Region or for the Executive Director to the Board of Fish & Game. They would work to coordinate the work of the regions advisory committees and organize meetings of the Regional Council.

IV Master Boards

I recommend retention of the present Master Boards of Fish & Game.

Composition - I would propose that the Governor fill any vacancies in these Boards from a list of nominees submitted by the Regional Boards, subject to confirmation by the legislature.

Powers - I believe HB 193 provides the best model for division of powers between the Regional & Master Boards however some additional language giving the Master Board clear authority to amend & veto any regulation might be added.

Thankyou - Confident on your efforts. I am truly sorry I am unable to attend but recent injuries require me to spend a great deal of time at home resting.

Alaska Conservation Society

Incorporated in 1960

P.O. Box 80192 College Branch, Fairbanks, Alaska 99708

8 March 1979

Hon. Alvin Osterback
Hon. Bill Miles
Cochairmen
House Resources Committee
Alaska State Legislature
Junea 99801

Dear Reps. Osterback and Miles:

At least two bills (HR 193, HR 304) are being considered by your committee as proposals to establish regional fish and game boards. This is very important legislation. We'd like you to know the Alaska Conservation Society's approach to this issue.

We are guided by the thought that the much-needed improvement in local involvement in fish and game regulation must not be carried so far as to jeopardize sound conservation and allocation decisions reflecting the entire citizenry's interests.

We firmly believe that rural pople historically have not been heard clearly enough nor paid their share of attention in fish and game regulation making. The increasing vigilance and activity of rural people, plus the State's very wiase policy of placing subsistence as the top consumptive use of wildlife, will assure partial correction of that imbalance.

However, the Society feels more is needed. We support 1) the establishment of six or seven regional fish and game boards with coordinative and advisory powers; 2) the appropriation of funds to establish a full-time technical assistant to local advisory committees (one coordinator per region). These positions should not be administered by the Alaska Department of Fish and Game.

Our members feel that with effective operation of regional boards and vigorous support of local advisory committees, the remainder of the present regulatory system can be left intact and will operate satisfactorily.

We want actual regulation-making to remain with Statewide boards. Only in this way, we believe, can the inevitable conflicts among local and regional proposals be ironed out. Also, the expected high emphasis on wildlife use and allocation of harvest which will dominate local and regional concerns, can be put in proper balance with conservation needs by the statewide boards. These boards should incorporate all perspectives on fish and wildlife: subsistence use, recreational use, commercial uses, protection,wildlife watching, and scientific/educational.

We hope your committee will consider these views as it works with the regional boards guestion this year. We do need a just and fiar resolution soon.

Sincerely yours,

Robert B Weeden

THE PENINSULA MARKETING ASSOCIATION WOULD LIKE TO EXPRESS OPPOSITION TO HB193 IN ITS ENTIRETY AT PRESENT. WOULD LIKE TO SEE HEARINGS TAKE PLACE THROUGHOUT THE STATE TO SET THIS UP IN THE BEST INTEREST OF ALL PARTIES CONCERNED. IN FAVOR OF DELAYING UNTIL NEXT YEAR.

DICK JACOBSEN PRESIDENT PENINSULA MARKETING ASSOC.

FINAL REPORT
ALASKA DEPARTMENT OF FISH AND GAME
OPTIONS FOR MODIFYING PRESENT REGULATORY SYSTEM
JUNE 20, 1978

During the final months of 1977 and the first part of 1978, the Alaska Department of Fish and Game held a series of public meetings in which the subsistence issue, the present fish and wildlife regulatory system, and various alternatives to the latter were examined by members of the general public, representatives of other agencies, private enterprise, local and regional Native organizations, concerned citizen groups, and others.

The meetings were prompted initially by a growing concern about the efficiency and fairness of the current regulatory system in allocating the State's fish and wildlife to the various user groups. In addition, proposed Federal law for the management of subsistence taking on Federal land, embodied in HR 39, was considered a cause for concern by State officials.

In summary, Alaska's size, its widely dispersed yet increasing population, changing land-use and ownership patterns, the increasing complexity of and competition among consumptive and nonconsumptive uses, and the finite nature of the fish and wildlife resource have made it essential that serious consideration be given to modifying the existing regulatory system and making it more effective in coping with the widespread changes taking place in the State.

PROCEDURES

Public meetings were held in seven Alaskan communities: Anchorage (Dec. 28-29, 1977), Fairbanks (Feb. 9-10, 1978), Petersburg (Feb. 16, 1978), Bethel (Feb. 27-March 2, 1978), Kodiak (March 9-10, 1978), Juneau (April 21-22, 1978), and Galena (April 24-26, 1978). During the first two sessions (Anchorage and Fairbanks) workshop groups were formed to discuss the various options and issues involved. In later meetings a general discussion format was adopted, with periods of time being devoted to the examination of each facet of the proposed options. In each meeting, participants were given a verbal overview of the issues and proposed changes before discussion began.

Proposed changes in the organization of the Department of Fish and Game were discussed first. It was stressed that these changes were separate from and in addition to the proposed changes in the regulatory system. A detailed discussion of the present regulatory system was followed then by a thorough review of three possible options for changes in the system. The options were chosen to present a broad and thought-provoking base from which to begin discussion.

The current regulatory system, briefly stated, consists of two seven-member boards (Fisheries and Game). Members are appointed by the Governor and have

the authority to make regulations setting seasons, areas, quotas and bag limits, and to deal with other matters as provided by AS 16.05.

Regulations are made in accordance with the Administrative Procedures Act (AS 44.62). The Boards are aided by 55 Local Advisory Committees, which meet to discuss issues, present testimony, make recommendations and prepare regulatory proposals for submittal to the Boards. These Committees do not have regulatory authority, but are empowered to issue emergency closures of established seasons and must approve any antlerless moose season proposed for their area.

The first option presented was that of retaining the present two-Board system, but modifying it to place greater emphasis on local and regional concerns. Among the elements considered for inclusion in an improved system were the creation of additional advisory committees, payment of travel expenses incurred by members attending meetings of their committees, payment of travel and per diem expenses for a delegate from each local committee to State Board meetings, the provision of support staff located in the Department but working for the Boards, training for advisory committee members, and payment of duplicating, advertising and other clerical costs incurred by the committees.

A second option presented to participants was that of establishing a number of Regional Councils in addition to existing Local Advisory Committees and State Boards. Under this plan, Regional Councils would be required to consider all proposals relevant to their regions, and to submit them to the appropriate Board with specific recommendations for adoption, rejection or adoption with amendments. The Boards would retain regulatory authority, but would be constrained to follow the recommendations of Regional Councils unless there existed overriding reasons why they should not. Should the latter be the case, the Boards would so inform the appropriate Council(s) in writing, including a statement of the rationale for rejecting the recommendation. An appeal process also would be provided, by which a majority of council chairmen could overturn a Board decision.

The third option presented was a proposal to place regulation-making authority in the hands of Regional Boards, thereby eliminating the existing State Boards. In this system, local committees would work directly with Regional Boards. As this option was discussed, it became clear that some oversight power would be needed to arbitrate conflicting regional proposals, and this concept was included as part of the presentation. The influence of proposed State legislation dealing with this option led to the proposal of 12 regions, with boundaries coinciding with those of the 12 in-State regional Native Corporations created under ANCSA (Alaska Native Claims Settlement Act).

In all meetings, the issue of subsistence use also was discussed. Current Federal and State legislation on subsistence was reviewed thoroughly. Discussion centered on the definition of the concept of subsistence use and on proposed criteria for

establishing an individual's eligibility for subsistence hunting and fishing privileges. The issue was particularly complicated by the active status of legislation dealing with it. As legislative concepts were refined, the nature of the presentation changed with them.

RESULTS

To a large extent, participants in this series of meetings were polarized between support for the existing system of regulation with some modifications, and support for the establishment of Regional Boards with regulatory authority. The middle path, that of adding Regional Councils to the current system, drew little support. It was generally perceived as a possible compromise, but as less desirable than whichever extreme was supported by the individual participant. However, despite the effect of polarization, it was evident that a number of generalities could be drawn using information gained during the meetings. Specific summaries on these meetings are attached as Appendices I, II, III, and IV.

Subsistence

A majority of those participating were strongly in favor of establishing a system which would be more responsive to subsistence needs. Subsistence was seen as a high priority use by most of those involved. However, the definition of subsistence use remained largely a matter of individual preference. A large number of persons indicated that efforts toward defining the term must be made before meaningful regulations could be established. Most concerns were expressed for the future. Few problems were identified for most species at the present time.

Few people could agree on the income ranges suggested for subsistence-use eligibility criteria, and many disagreed entirely with that concept. There was, on the other hand, general agreement that such criteria should take into account the concept of subsistence harvesting for personal use. In addition to use for human consumption, use for trade and barter but not necessarily for cash sales drew substantial support.

It should be noted that the Alaska Growth Policy Council (AGPC) also held public involvement sessions regarding the subsistence issue at various locations around the State. Results of the AGPC program differed in a number of aspects from those obtained by the Department. This disparity may be attributable to the effect of substantially different presentations. (See Appendices V(A) and V(B).)

Improvement in Local Advisory Committees

Many persons felt that the key to improving the system lies in the local committees, regardless of the three main options. Participants repeatedly stressed a need for

additional support, in the form of staff positions and funding. It was felt that local committees could not work at peak efficiency without better coordination between committees and improved communication with the Boards. For the same reason, there was heavy support for funding which would allow travel to Board sessions by a representative of each local committee.

Costs

The cost of either improving the present system or establishing a new one was a primary concern at all meetings. However, there was general agreement with an observation made at several meetings which indicated that a real commitment to adequate funding must be made in order for any system to function properly. Repeatedly, inadequate funding was identified as a prime cause of the present system's failings.

The FY (fiscal year) 1978 budget request for the existing system was $320,000. The projected total cost of establishing Regional Councils in addition to the existing system is over $683,000, or more than $363,000 over the cost of the present system. Costs for less extensive modifications to the existing system would vary, depending on the extent of the program. A proposal to form 12 Regional Boards (HB 725) was introduced in the second session of the Tenth Alaska Legislature, with a fiscal note identifying the cost of that program as $512,000 for the first year, and approximately $500,000 per annum in succeeding years.

"Red Tape"

Participants generally showed strong resistance to unnecessary increases in "red-tape bureaucracy." The complexity of the present system, and the inconvenience experienced by individuals wishing to submit comments on regulatory proposals, were cited as problems.

Timing

Time delays were linked to bureaucratic complexity. Given the nature of the resources involved, regulations should in many cases be established by a certain time of year. This is a difficult task even under the existing system, requiring several months to complete the regulatory cycle. Changes in the regulatory system are likely to extend the time required for making regulations. Such changes could cause two or more of the three main processes (regulation-making for game, finfish and shellfish) to occur concurrently, increasing the need for the additional staff time necessary to complete the processes in a timely manner.

Conflicting Regulations

It was apparent from the beginning of the public meeting program that participants were cognizant of the inherent dangers of conflicting regulations -- particularly for

migratory species. Conflicts were seen as the probable result of establishing different systems on Federal and State land or of giving Regional Boards regulatory authority under the Administrative Procedures Act. Almost all participants agreed that some type of oversight body necessarily would have to be included in the proposal for Regional Boards. Such a body could act as either mediator or arbitrator in the event of conflicts.

Information, NPFMC and Other Problems

A need for an expanded information program within the Department of Fish and Game was identified by individuals at several meetings. It was felt that information being provided to the public was inadequate and, although individuals recognized that a sophisticated information and education program is costly, they supported additional efforts in this area.

Some concern was voiced over the possibility of changes in the State's relationship with the North Pacific Fisheries Management Council (NPFMC) and other such entities. It was the feeling of a number of persons that the State's role in these areas could suffer if the Regional Board approach was pursued.

Finally, the proposed regional boundaries presented for the Regional Council proposal and the Regional Board concept drew some criticism. The proposed Region IV (encompassing the Yukon/Kuskokwim drainages) was felt by a few individuals to be too large. On the other hand, the Regional Board proposal called for 12 regions, and was felt by many to have the potential for increasing regional factionalism.

CONCLUSION

The effect of Congressional (d)(2) legislation on fish and wildlife management in Alaska cannot be discounted. To a very real degree, Congressional action relating to subsistence management on Federal land could determine the nature of the State's management system as well. Congressional concern must be alleviated by any system used on Federal lands, and it is apparent that efficiency in dealing with the needs of the resource requires a single system for all lands in Alaska.

The problems which have prompted the introduction of legislation in the State Legislature also must be recognized and dealt with. The public also, in meeting with the Department to discuss fish and wildlife management in Alaska, has reiterated the same needs and concerns. The fish and wildlife regulatory system must become more responsive to local needs, especially as related to the continuation subsistence hunting and fishing.

In addition, the problem of ensuring the timely and efficient promulgation of regulations must be addressed by whatever system is chosen for implementation.

Increases in costs and staffing must be kept to a minimum, but must provide the increased efficiency and responsiveness required. Finally, adverse impacts on the State's role in inter-agency and inter-governmental activities must be minimized.

RECOMMENDATIONS

The Department of Fish and Game, in an effort to deal with the above concerns in the most effective manner, has proposed an improved system for the adoption of regulations by the existing State Boards (Fisheries and Game) and for the development of subsistence and management plans, utilizing increased public participation on local and regional levels.

After review by the Governor's Office, the proposal will be presented to the Boards of Fisheries and Game for their consideration and action in accordance with the provisions of the Administrative Procedures Act. If the Boards concur, the plan could be operational by late 1978.

The proposal calls for the retention of the existing Local Advisory Committees, which would act at the "grassroots" level to apprise local residents of various activities, regulatory changes or proposals and other issues, and would serve as the primary forum for individuals wishing to respond to proposals or issues.

In addition to the local committees, the proposal calls for the creation of five Regional Resource Councils, each representing a specific geographic area. Each Regional Resource Council would be composed of the chairmen of all Local Advisory Committees within the respective region. Regional Resource Councils would function to:

1. Develop proposed subsistence-use plans and subsistence-related regulatory proposals for their areas;

2. Develop proposed criteria for determining eligibility for participation in subsistence use harvests,

3. Identify broad area concerns dealing with subjects such as allocation, access, habitat improvement and protection, wildlife management plans, and harvest strategies;

4. Mediate resolutions to conflicting regulatory proposals submitted by Local Advisory Committees in their areas, and

5. Make recommendations to the Boards on regulatory proposals.

The existing State Boards would be retained as the primary regulatory bodies, empowered to adopt regulations under the provisions of the Administrative Proce-

dures Act.

To support and improve attendance at local, regional, and statewide meetings, the Department proposes that the State reimburse travel expenses incurred as a result of the following:

1. Local Advisory Committee members attendance at local committee meetings;

2. Attendance of local committee chairmen (or designees) at Regional Resource Council meetings;

3. Participation of Regional Resource Council delegates in meetings of the Boards of Fisheries and Game.

The Department proposal also recommends the establishment of up to five regional staff coordinator positions in the Department, and the appropriation of the requisite funding for those positions. The coordinators would work closely with Local Advisory Committees and Regional Resource Councils on the following:

1. The preparation and review of regulatory proposals and the transmittal of recommendations to the Boards;

2. The preparation of subsistence management plan proposals; and

3. The review of management plans in conjunction with appropriate Department biologists.

The proposal further provides that the Departments of Fish and Game and Public Safety are to make available technical and scientific data and expertise as requested, that the Department of Law is to provide legal assistance regarding the regulatory process to Regional Resource Councils to the maximum extent permitted by available funds, and that the staff of the Boards of Fisheries and Game is to work closely with regional staff coordinators, Local Advisory Committees, and Regional Resource Councils.

Finally, the proposal specifies that Local Advisory Committees and Regional Resource Councils cooperate in the preparation of Subsistence Resource Management Plans to be presented to the Boards for action. Subsistence use will continue to be the highest priority use of the fish and wildlife resource. The plans will contain the following elements:

1. An identification of current and anticipated subsistence uses of the region;

2. An evaluation and de[illegible]ation of subsistence needs;

3. The identification of users, zones and other elements and concepts which must be recognized in such a plan;

4. Proposed subsistence management strategies for the region; and

5. Proposals for policies, standards, guidelines and regulations necessary to implement the subsistence management strategies identified by the plan.

APPENDIX I:

SUMMARIZATION OF COMMENTS RECEIVED FROM PUBLIC MEETINGS ANCHORAGE, FAIRBANKS, BETHEL, PETERSBURG, KODIAK, JUNEAU, GALENA

Subject: Advisory Committees, Regional Councils and Master Boards

The working groups discussed the proposed revision of the system for the adoption of Fish and Game regulations by the Alaska Board of Fisheries and Game and the development of subsistence and fish and wildlife management plans. This would be accomplished by formalized means of local and regional public participation. Should a new system be instituted as proposed, the following suggestions were made:

1. The membership of Local Advisory Committees should be held to 5-11 persons for greater efficiency and flexibility.

2. The provisions for removal of committee or council members should be improved.

3. The lottery process proposed for selection of Regional Council members is too indiscriminating. Popular election was proposed as an alternative.

4. Appointments to Advisory Committees should be made by the Joint Boards to avoid "cronyism."

5. Nonconsumptive user-groups should receive a greater degree of recognition and attention.

6. Although there are obvious problems with the "one man-one vote" concept, population concentrations must be recognized and dealt with as well as geographical areas.

7. There is a ten year residency requirement for Council members, but the proposal calls for only five violation-free years. These requirements should be the same. The view that ten years is too long for a residency requirement was also expressed.

8. The level or importance of the violation (see above) should be considered. Perhaps "conviction" could be substituted for "violation."

9. Rather than having three non-voting members from resource agencies, Councils should have the option of being able to draw on a technical advisory team with as large a membership as necessary.

10. Special provisions should be made for joint meeting of Regional Councils, when necessary.

11. Funding for Advisory Committees and Regional Councils should cover travel and per diem for members and should provide for staff positions and clerical costs. Funding should also be sufficient to cover unscheduled but necessary joint meetings of Councils or Committees.

12. Travel of Advisory Committee chairmen, or their alternates, to Board meetings should be encouraged as well as funded.

13. Separate Game Boards should be formed for the northern and southern parts of the State.

14. A separate region should be created for the Yukon-Kuskokwim-Delta area.

15. The Region IV Council should deal exclusively with fisheries. Other provisions should be made for game.

16. Regional Councils should prepare comprehensive management plans for all regional fish and wildlife.

17. Information and Education efforts should be made a priority.

18. Time requirements of system are prohibitive.

19. Advisory Committee members should be used more as unpaid staff - not just to make recommendations.

20. As opposed to full Regional Council proposal, Advisory Committee chairmen could meet at least once a year on a regional basis to discuss problems. If any area poses real difficulties, both sides could send representatives to Board meetings.

21. There is a need to ensure that each local area of each region is represented.

22. Meetings should be held in each village to explain new regulations when they appear.

23. Greater representation should be given to interior Alaskan villages on Boards.

24. Four of seven Board members should be from rural areas.

25. Advisory Committees should establish set meeting times and locations to aid participation by non members.

26. Advisory Committees should be trained so they can assume stronger role

APPENDIX II:

SUMMARIZATION OF COMMENTS RECEIVED FROM PUBLIC MEETINGS ANCHORAGE, FAIRBANKS, BETHEL, PETERSBURG, KODIAK, JUNEAU, GALENA

Subject: Retention of the Present Board System

The working groups examined the question of retaining the present regulatory system of Advisory Committees and two Boards - Fisheries and Game, who have the final authority to promulgate regulatory proposals. Should the present system be retained, the following modifications were suggested:

1. Travel and per diem should be paid to Local Advisory Committee chairmen (or their alternates) to attend Board meetings.

2. The Boards of Fisheries and Game should hold meetings in various areas on issues pertaining exclusively to these areas.

3. Advisory Committees should, where applicable, be increased to 15 members to ensure full representation of geographical areas and user groups.

   NOTE: The opposite view was also expressed, i.e., Advisory Committees should be reduced to 5-11 members for greater efficiency.

4. Subsistence should be more fully provided for.

5. Local Advisory Committees should be paid travel and per diem when meeting locally.

6. Staff support and necessary funding should be provided to Local Advisory Committees.

7. ADF&G staff and/or Fish and Wildlife Protection Officers should provide Local Advisory Committees, on request, with status reports on locally significant stocks or species or any other requested information on local issues.

8. ADF&G staff support should include Regional Advisory Committee Coordinators to work with Advisory Committees in each region.

9. Board members should be more carefully selected to ensure full representation of geographical areas and user groups.

10. Advisory Committee proposals should receive a level of consideration commensurate with that of staff proposals before the Boards.

11. The Commissioner of the Department of Fish and Game should be appointed by and serve at the pleasure of the Boards of Fisheries and Game.

12. The Board of Game should hold (5) public meetings and (2) regulatory meetings similar to the Board of Fisheries.

13. Advisory Committees should have the power to request reconsideration of Board decisions.

14. Advisory Committee training is necessary for them to assume a stronger role in system.

15. Information and Education efforts should be given a great deal more emphasis.

16. Advisory Committee chairmen should get together in regional groups at least once per year to discuss problems. If problems cannot be resolved, representatives should be sent to Board meetings.

17. Establishing a firm schedule for input/output could improve Advisory Committees' responses.

18. A Division of Subsistence should be added to the present system.

APPENDIX III:

SUMMARIZATION OF COMMENTS RECEIVED FROM PUBLIC MEETINGS ANCHORAGE, FAIRBANKS, BETHEL, PETERSBURG, KODIAK, JUNEAU, GALENA

Subject: Regional Councils with A.P.A. Authority

The working groups were primarily concerned with local use of the resources although realizing the potential problems in completely delegating responsibility to the region. Individuals advocating the proposal for Regional Councils with A.P.A. (Administrative Procedure Act) authority offered the following suggestions and comments:

1. At least 12 regions are needed.

2. Regional boundaries should not be set before the completion of an in-depth study.

3. A statewide review panel, consisting of one member for each Regional Council, should be established to review regulations for uniformity.

4. Statutory establishment of a two-tier system of authority is preferable.

5. Regional wildlife management plans and subsistence management plans would have to be developed.

6. Regional Councils should be elected rather than appointed by the Governor.

7. A system would have to be devised for adjudicating problems arising from boundary and/or resource allocation disputes among regions.

8. Adequate funding to administer this program is needed.

9. There is a need for regional staffs separate from Central State staff.

10. Information and Education should be made a priority.

11. Advisory Committee members should be used more as unpaid Alaska Department of Fish and Game staff.

12. The State's role in N.P.F.M.C. could be seriously threatened by regional control.

13. HB 915 could create a situation where enforcement of Fish and Game regulations is endangered. (i.e., subsistence as a basis for defense.)

14. It would be necessary to ensure that all local areas and all user groups are represented on Regional Boards.

15. Meetings to explain new regulations should be held in each village.

16. Advisory Committees should be trained so they can assume stronger role.

17. Four of seven Regional Board members should be from rural areas.

18. Definite standard times and locations should be established for Advisory Cominittee meetings.

APPENDIX IV:

SUMMARIZATION OF COMMENTS RECEIVED FROM PUBLIC MEETINGS
ANCHORAGE, FAIRBANKS, BETHEL, PETERSBURG, KODIAK, JUNEAU, GALENA

Subject: Subsistence

The working groups discussed the issue of subsistence hunting and fishing in general. Participants registered the following comments:

1. The public strongly supported subsistence as a cultural lifestyle that has been in existence since "time immemorial." Pride in tradition and need for the types of food obtained from subsistence hunting and fishing were repeatedly stressed.

2. There is too much emphasis on commercial use of the resources.

3. Subsistence regulations should be established only on an area-by-area basis.

4. Several witnesses took exception to the proposed $5,000 income limit being proposed as one of the criteria which would quality a person to subsistence hunt and fish. Preferred figures ranged from $10,000 to $35,000.

5. Lenient criteria could lead to an influx of low-income subsistence seekers from "Lower 48" states. This should be avoided.

6. Subsistence should be defined on basis of personal use only.

7. Barter and trade, but not necessarily sale, of subsistence-caught resources were supported as necessary to obtain food that may not be available in the immediate area. Several persons testified that rules and regulations would not prevent them from taking what they felt was necessary.

The following motions were considered by the Southeast Interim Regional Advisory Committee at their March 9, 1979, meeting in Juneau, concerning HB 304. The motions were made to strengthen the bill and the power of the existing local Advisory Committees.

MOTION: To amend Sec. 16.05.223. LOCAL FISH AND GAME COMMITTEES. (d) to read:

Each committee shall hold public meetings on fish and wildlife matters, review regulatory proposals, (MAY) shall make recommendations to its regional fish and game council, the Board of Fisheries, and the Board of Game, and (MAY) shall participate in the review and development of management plans for the conservation and use of fish and wildlife resources within its region. If a regional council, the Board of Fisheries, or the Board of Game chooses not to follow a committee recommendation, that council or board shall inform the committee which made the recommendation of its reasons for not following the recommendation.

MOTION: To amend Sec. 16.05.224. REGIONAL FISH AND GAME COUNCILS. (a) to read:

The Board of Fisheries and the Board of Game, acting jointly, shall establish a regional fish and game council within each fish and game resource region, composed of the chairpersons or designee of the local fish and game committees within its region.

MOTION: To delete the present wording of Sec. 16.05.224. REGIONAL FISH AND GAME COUNCILS. (e) and replace with alternate wording reading:

Each region shall set forth regulations for subsistence use to conserve and manage their own resources in cooperation with the Department of Fish and Game.

MOTION: To add new wording reading Sec. 16.04.224. REGIONAL FISH AND GAME COUNCILS. (f):

Any Advisory Committee shall have the power of emergency closure of a set area within the boundaries if there is no objection from any other Advisory Committee within the region. In the case of any objection, the majority of participating Advisory Committees will decide.

MOTION: To amend Sec. 4. IMPLEMENTATION. (a) to read:

(IN VIEW OF PRESENT STATE FISCAL CONSTRAINTS,) the Board of Fisheries, Board of Game, and the Department shall implement AS 16.05.223 and 16.05.224, enacted in sec. 2 of this Act, within the fish and game resource regions established by AS 16.05.222, also enacted in sec. 2 of this Act, in accordance with the following schedule, measured from the effective date of this Act:

(1) (NO LESS THAN ONE REGION) all regions within one year;
(2) (NO LESS THAN THREE ADDITIONAL REGIONS WITHIN TWO YEARS: AND)
(3) (ALL REGIONS WITHIN THREE YEARS.)

Respectfully submitted by:

Ann Lowe

Ann Lowe, Chairman
Southeast Interim Regional Advisory Council

March 9, 1979

The Honorable Alvin Osterback
Chairman, House Resources Committee
Alaska State Legislature
Pouch V
Juneau, Alaska 99811

Dear Senator Osterback:

This is to advise you that I support HB 304 and the development of regional councils without regulatory authority over HB 193 establishing regional boards. The strengthening of the Advisory Committee system through the regional councils and through funding of travel and per diem for Advisory Committee Chairmen will be highly beneficial to the management of Alaska fish and wildlife.

Thank you for the opportunity to comment.

Sincerely,

Herman Schroeder

Re: HB193
HB304

March 5, 1979

Alaska State House
Juneau, Alaska

Rep. Peterkacke

Dear Rep. Branson,

I haven't written to you yet and with the session slipping by I realize I better get to it.

I am on the Board of Directors of the Prince William Sound Aquaculture Corporation, and my husband is a Commercial Fisherman in the Prince William Sound-Copper River Delta area. This puts salmon on the top of my list and that is the concern that I am writing to you about today.

I'm sure you are very familiar with the Cook Inlet Salmon War. This is a conflict that grows more heated every year, with the Anchorage sports fishermen pitting themselves against the Cook Inlet commercial fishermen. During the Board of Fisheries meetings on proposed regulations this winter, the sports fishermen gained an impressive victory with the right to the King salmon run that spawns in the lower Susitna River. 1978 was a good year for the commercial fishermen in Cook Inlet, the first they've had in many years. Over the length of these lean years, their fishing time has been continually eroded, to the point that many commercial fishermen cannot make salmon fishing their sole occupation.

I was talking to a Fish and Game Advisory Boardmember yesterday, and we got to talking about subsistence. He told me he had just finished reading all the proposed regulations (about 2" worth) on subsistence, and that the gist of them seemed to be that the fish are going to be divided up on the following basis: First and best use of the fishery resource goes to subsistence fishermen; Second priority goes to the sports fishermen; Third to the commercial fishermen.

It is my firm opinion that we cannot afford to divide Alaskans on this issue. If the dwindling resource has gotten to the point that one user group is cut back so that a second user group can harvest what they need, it is high time to put on the big push for a renewed capacity. I think all Alaskans should have as many salmon as they want or need, be it for their own larder, their dog team, for their weekend fishing trips, for the tourists, or for sale to the highest bidder. Salmon are one of our bigger renewable resources. Let's renew them! Let's have more involvement in stream and lake enhancement for the wild stocks; let's have increased hatchery capacity for the domestic stocks.

This brings me to the Susitna power project. I have written Senator Gravel twice on this issue, and I would also like to stress to you, Margaret, the prime importance of a peaceful co-existence between dams and salmon. Given the intensity of feelings on both sides of the salmon issue, let's unite and have dams and fish together!

As you know, hatcheries need a continuous supply of water throughout the winter. What better source than a dam? Of course the water must be suitable in terms of temperature and bacteria. Let's find out how the upper Susitna measures up. The best scientists stress the need to maintain a separation of wild and domestic stocks in terms of maintaining a wild gene pool that is not interfered in by the mingling of interspawning with hatchery bred stocks. Let's find out if the upper Susitna is suitable for a hatchery, in light of this. Senator Gravel tells me there is no wild run on the upper Susitna River.

On the Columbia River, once a major salmon producer, there is a continuous barrage of obstacles to the inmigrating and outmigrating salmon. On the way up, most of the dams have no fish ladders. On the way down, the fry are swept through giant turbines, and only the small and lucky survive. In addition to these problems there is also the lack of a continuous supply of water throughout the winter when the dams withhold water from the river to meet other priorities. Believe it or not, these intrepid salmon actually make it into the lower reaches of this maze of opposition in small numbers, and the Columbia River still has a wild run. Imagine how many salmon there could be if they were actually encouraged, or at least accomodated. If you know anything about this region's salmon problems, you know the dwindling resource has pitted Indian against White in an all out battle for the rights to fish.

This [illegible] infringed on [illegible] Zoo, and in our area (Prince William Sound-Copper River Delta) it continues unabated. The local viewpoint for Limited Entry. Everyone was scared to death that Judge Boldt's decision would send [illegible] fishermen to Alaska in droves, thus impacting our already well utilized salmon runs. We never got the chance to find out what would have happened because Limited Entry [illegible].

I dread the thought of salmon ever entering any further than they already have. At the present time there are subsistence fish wheel permits being used to take fish for resale in Anchorage. There are also accusations floating around that there are more Limited Entry permits being fished than allowable by law.

We've got to clear up the law breaking. This would be a conservation effort, much the same as turning down the thermostat saves fuel. Then we've got to unite on the issue of enough salmon for everyone. Alaska can certainly produce unlimited numbers of salmon, but now that man is here it is our duty to see that we preserve and enhance Alaska's salmon producing capacity.

As a further note on the definition of subsistence, it is my opinion that subsistence is the quantity of wildlife it takes to live on. By this I mean the amount one puts on the table to eat is one's subsistence harvest. In these days of snow machines, one can hardly call caribou and salmon for dog teams subsistence. Nor do I call selling fish to obtain money for utilities a subsistence use. I would like to reiterate my earlier statement here though that I think all Alaskan's should have a right to as many salmon as they need for whatever purpose, be it commercial, sport, or subsistence. We are definitely going to have to come to some conclusions as to the differences between these user groups, and which uses of the resource qualify as which group. I hope that when the definition of subsistence is decided, that it does not become tied up in restrictions as to who has the right to a subsistence harvest and who does not. Every Alaskan has the right to put wild meat on his table regardless of Race or Income. I feel pretty strongly about that.

To get back to the Susitna power project, in the hearings and debates coming up on this issue, let's give equal consideration to another idea. Let's look into the feasibility of building a tide water electric project that would span Turnigan Arm and harness those tremendous tides there. In addition, we could kill two birds with one stone and get ourselves a Kenai c uaeway built on top of the dam. What do you think of that idea?

In closing I might say that with the limited session we cannot really afford to spend so much time organizing the House and Senate. In view of the time wasted, it will take a concerted effort to address all the crucial issues facing our State at this time and not be tempted to put them off until next year.

Good luck.

Sincerely,

Christine Honkola

SEC. 16.05.256

(A) #5 - This PART should be worded SO IT does NOT RESTRICT THE USE OF FRESH OR FROZEN SALMON EGG AS BAIT.

SEC. 16.05.256

(E) #1 This should apply only to Commercial Fishermen (AS A purely subsistence life style NO longer EXISTS, and THE only people who RELY SOLELY ON FISH AS A direct dependance are THOSE WHO FISH Commercially -

TRIBES and THEIR Federal hands IS how it should be. THESE historically dependent peoples from this LIFESTYLE) MASTER board should NOT be dominated by Commercial Fishermen. REGIONAL boards should REFLECT a balanced membership. (Native people + white people, so THAT each IS directly ASSOCIATED (connected to natives) Locally we find THAT the ADVISORY board REFLECTS primarily THE Antler WHICH WAS started only approximately one YEAR AGO.

ALSO AS IS THE CASE NOW - NO one SERVES on THE advisory board for more LENGTH of TIME IF he or she agrees with THE Fish + Game Biologist whether They be right or wrong. (Total) MEMBERS of THESE boards should NOT be DISTINGUISHED by living to be VERY OLD.

March 7, 1979

The Honorable Margaret Branson
State House Representative
Juneau, AK 99801

Dear Margaret:

I am very concerned over the bills concerning subsistence hunting and the formation of regional game boards. I think my position is shared by most sportsmen not living in the bush.

I do feel that bush people need an advantage over city people in being able to collect their yearly meat supplies, but this can be done by means other than excluding city hunters.

I have lived in a bush village (Yakutat) where we had alot of pressure from out of town hunters. They could not compete with the local people because, by living there, we were able to take full advantage of local conditions, (i.e. weather and migration patterns).

As an example, last fall I planned a trip to Kodiak to do some deer hunting over the Thanksgiving holidays. My friends in Kodiak reported plenty of deer and good hunting success. I spent my three days sitting in a Kodiak hotel room, weathered in, plus an additional day because I could not even get back home. Shortly after I returned home, the weather cleared and the local people had a couple of nice days for some highly successful hunting.

This sort of thing gives the local hunters a tremendous and well deserved advantage. My trip wasn't an isolated case, as it has happened to me more than not, and from listening to other hunters, we all share the same fate.

If local seasons are set to give local residents the advantage in weather and local migratory patterns, I don't see why, with their intimate familiarity of the area, they should need to totally exclude urban hunters.

I see the local game boards creating very tense racial and territorial disputes such as already exist to some degree in some areas. The local advisory board system, of which I am Seward's secretary, can be made to work, but I would expand the state boards so that each area has adequate representation on those boards.

In conclusion, I must say that I am opposed to a regional board system and that subsistence hunting should not exclude state residents.

Respectfully yours,

Bob Estes

Included in this fiscal note are the Advisory Committee's associated costs, the Regional Board costs, Departmental costs and the reductions to the current Master Board system.

Advisory Committee

Currently there are 26 committees which operate in rural areas that receive reimbursement for travel expenses, but no per diem. To make the process work better a limited amount of per diem should be added to reduce the financial burden to the individual.

Assume
- 26 Committees receive local travel
- 390 possible members (15 x 26 = 390)
- 1/3 would travel 390 - 3 = 130
- $100.00 average per ticket
- 4 meeting per year, 3 days each
- per diem at the rate of $55.00 per day

Calculation

travel	130 x 4 x $100 =	$52,000	
	130 x 4 x 3 x $55 =	85,800	
	Subtotal	$137,800	$137,800

- miscellaneous $100.00 expenses for 58 Committees

58 x 100 =	5,800	
Subtotal	5,800	$ 5,800

- no additional costs for the Department to interface with Advisory Committees (note: current advisory costs backed out later)

Total $143,600

Regional Boards

All cost detail listed for one region then multiplied by six to reflect total.

Assume
- 1 secretary R-10 for Board = $20,800
  9 m/m temporary support for meetings = 13,400
  Subtotal $34,200 — $ 34,200

- average 9 Chairpersons or designees to Board meetings
- 3 meetings per year (2 required, 1 special)
- 14 days per meeting
- $200.00 average per ticket
- per diem at the rate of $55.00 per day

Calculation

travel	9 x 3 x 200 =	$5,400	
per diem	9 x 3 x 14 x 55 =	20,790	
	Subtotal	$26,190	$ 26,190

Assume

- 7 Board members
- 3 meetings per year
- 14 days per board meeting
- $200.00 per ticket
- $100.00 each day per diem

Calculation

travel	7 x 3 x $200 =	$4,200	
per diem	7 x 3 x 14 x $100 =	29,400	
	Subtotal	$33,600	$ 33,600

- contractual services: printing, leases, legal notices, rent, communications, etc... $10,000
- commodities and supplies 1,000
- equipment 2,000

	Subtotal	$13,000	$ 13,000
		Subtotal	$106,990
		extended for 6 regions	x 6
		Total	$641,940

Departmental Costs

There will be added costs to have staff support at the Regional Board meeting. This will be full regulatory support and staff at all regional meetings.

Assume

- 27 people to each Regional Board meeting
- 3 meetings per year
- 14 days per meeting
- $200.00 per ticket
- per diem at $55.00 per day

Calculation

travel	27 x 3 x $200 =	16,200	
per diem	27 x 3 x 14 x $55 =	62,370	
	Subtotal	$78,570	$ 78,570
		extended for 6 regions	x 6
		Total	$471,420

New Positions

New positions required to interface with six regulatory authorities in addition to master board. (All positions with benefits)

Assume			
- 1 Fisheries Biologis. IV	R-20	39,400	
- 1 Game Biologist III	R-18	34,200	
- 2 Biologist II's	R 16	60,400	
- 2 Administrative Asst.	R-12	45,200	
- 2 Clerk Typists III's	R-8	36,400	
- 2 Clerk II's	R-7	34,800	
- 1 Accounting Clerk III	R-10	20,900	
Subtotal		$271,300	$ 271,300
- preliminary estimate of Department of Law costs (awaiting detail)			250,000
			521,300

Summary

Advisory Committee	$ 143,600	
Regional Boards	641,940	
Departmental Costs	471,420	
New Positions	521,300	
Subtotal	$1,778,260	$1,778,260
Master Board would be less expensive		
- reduce Boards' cost	(35,100)	
- backout existing Committee	(95,500)	
Subtotal	(130,600)	(130,600)
Total		$1,647.660

COMMITTEE SUBSTITUTE HB 193

Costs included in this fiscal note cover support to the Advisory Committees, Regional Councils with staff support, and Board meetings with Council and Committee involvement.

Advisory Committee

Currently there are 26 Committees which operate in rural areas that receive reimbursement for travel expenses, but no per diem. To make the process work better, a limited amount of per diem should be added to reduce the financial burden to the individual.

Assume
- 26 Committees receive local travel
- 390 possible members (15 x 26 = 390)
- 1/3 would travel 390 ÷ 3 = 130
- $100.00 average per ticket
- 4 meetings per year, 3 days each
- per diem at the rate of $55.00 per day

Calculation

travel 130 x 4 x $100 =	$52,000	
per diem 130 x 4 x 3 x $55 =	85,800	
Subtotal	$137,800	$137,800
- miscellaneous expenses ($100.00) for 58 Committees		
58 x $100 =	$ 5,800	
Subtotal	$ 5,800	5,800
- less current Committee support costs		(95,500)
Net Increase		$ 48,100

Regional Council

Included here are the costs for the Advisory Committee chairpersons to attend with travel and per diem, the Coordinator with support costs, and the operational costs for the Council.

Assume
- 58 Advisory Committee Chairpersons
- 2 meetings per year
- 4 days per meeting with travel
- average travel ticket at $200.00
- per diem rate of $55.00 per day

Calculation

travel 58 x 2 x $200 =	$23,200	
per diem 58 x 2 x 4 x $55 =	25,520	
Subtotal	$48,720	$ 48,720

- 6 Resource Specialists range 16 =	188,850		
- travel and per diem (est.) =	36,000		
- temp. support 30 man/months =	35,850		
- contractual: rent, phone, etc. =	9,000		
- equipment: desks, chairs =	6,000		
Subtotal	$275,700		$275,700
		Total	$324,420

Departmental Support Costs

Included in these costs are the additional dollars for travel and per diem to give staff support to Regional Councils and the additional demands on the Boards' current staff.

Assume
- 6 regions
- 10 staff from Department per meeting
- 2 meetings per year
- 4 days per meeting
- $200.00 per travel ticket
- per diem at $55.00 per day

Calculation

travel 6 x 10 x 2 x $200 =	$24,000	
per diem 6 x 10 x 2 x 4 x $55 =	26,400	
Subtotal	$50,400	$ 50,400

Travel and per diem of Executive Director to meet with regions.

Assume
- 2 circuits per year
- 24 days per circuit
- $1,000.00 per travel ticket per circuit
- per diem at $55.00 per day

Calculation

travel 2 x $1,000 =	$2,000		
per diem 2 x 24 x 55 =	2,640		
Subtotal	$4,640		$ 4,640
		Total	$ 55,040

Board Costs With Regional Chairperson

Included in these costs are travel and per diem for Regional Council chairpersons to Board or special authorized meetings.

Assume
- 6 Council chairpersons
- 5 meetings per year
- 10 days average length per meeting
- $100.00 per day per diem
- $200.00 average per travel ticket

Calculation

travel 6 x 5 x $200 =	$6,000	
per diem 6 x 5 x 10 x $100 =	30,000	
Subtotal	$36,000	
		$ 36,000
Total		$ 36,000

Note: If all advisory Committe chairpersons attended Board meetings with travel and per diem of $55.00/day, costs would be calculated as follows:

58 x 5 x $200 =	$58,000	
58 x 5 x 10 x $55 =	159,500	
Subtotal	$217,500	
minum above	(36,000)	
Total	$181,500	
Grand Total		$463,560

REGARDING HB193, WE ARE AGAINST THE REGIONALIZATION OF FISH AND GAME. IF WE HAVE TO HAVE REGIONALIZATION WE ARE DEFINATELY AGAINST KODIAK ISLAND BEING IN THE ANCHORAGE REGION. IF KODIAK AND ANCHORAGE ARE REGIONALIZED TOGETHER REPRESENTATIVE OSTERBACK WILL LOSE ALL THE VILLAGES ON KODIAK ISLAND. IF KODIAK IS SEPARATED FROM THE SAN POINT WESTWARD REGION THE NEXT STEP WILL BE TO SEPARATE THE SAND POINT CHIGNIK REGION FROM THE ALEUTIAN BRISTOL BAY REGION. IF SAND POINT CHIGNIK REGION IS SEPARATED FROM THE ALEUTIAN BRISTOL BAY REGION, THEN SAND POINT AND CHIGNIK WILL LOSE THE FALSE PASS SALMON FISHERIES. PLEASE DO NOT LET THIS BILL OUT OF YOUR COMMITTEE.

REGARDING HB193, WE ARE AGAINST THE REGIONALIZATION OF FISH AND GAME. ON FEBRUARY 27TH, 1979 WE SENT A LETTER TO SENATOR BOB MULCAHY OUTLINING IN DETAIL OUR REASONS FOR THIS OPPOSITION. PLEASE CONTACT HIM FOR A COPY OF THIS. IF SOME FORM OF REGIONALIZATION IS FORCED ON US, KODIAK DEFINITELY SHOULD NOT BE INCLUDED WITH ANCHORAGE. THIS WE CANNOT LIVE WITH. OUR NATURAL AREA OF USE IS THE KODIAK ALEUTIAN AREA. AS KODIAK FISHERMEN IT IS ILLEGAL TO GO INTO KACHEMAK BAY, SO REGIONALIZING US WITH THAT AREA WOULD BE ILLOGICAL. WE REQUEST THAT OUR STRONG OPPOSITION TO THIS BILL BE MADE KNOWN.

WE WISH TO EXPRESS OUR CONCERN REGARDING BILLS CSSSHB193 AND SSHB193 BOTH OF WHICH WOULD SET UP REGIONAL BOARDS OF FISH & GAME.

BOTH BILLS PARTICULARLY SSH-193 WOULD BE DISASTROUS FOR SOUND AND EQUITABLE MANAGEMENT OF FISHERIES RESOURCES.

IF ENACTED SUCH A BILL WOULD, ONE, CREATE A HOPELESS BUREAUCRATIC MAZE IN THE REGULATION OF FISHERIES. TWO, IN INSTANCES WHERE THERE ARE STRONGLY DIVERGENT VIEWS WITHIN THE SAME REGION THE MINORITY WOULD LOSE THE PROTECTION OF A MORE BROADLY BASED BOARD. AND THIRD, THE EXPENSE OF OPERATING THE SIX BOARDS WOULD BE HUGE PARTICULARLY SINCE THE EXISTING SYSTEM IS SUPERIOR TO THE ONES PROPOSED.

Representative Alvin Osterback
Alaska State House
Pouch V
Juneau, AK 99811

RE: HB 193 - Establishing Regional Boards and Areas
HB 199 - Establishment of a Division Subsistence within the Dept. of Fish & Game

Dear Representative Osterback:

I strongly urge that no laws be passed that give a priority use-right of our fish and game resources to a small segment of the State's residents.

Dividing the State into regions where only residents of the region would qualify for subsistence usage of the resource will do just that and, in reality, disenfranchise the vast majority of Alaskans from a basic lifestyle ingredient--the supplementing of their food needs via hunting and fishing.

I've lived in Alaska for 35 years and raised 4 children from birth to adulthood. Fish and game were a constant major element of our family diet over this entire period even though I have never drawn an unemployment or welfare check in my life.

Are we now going to allocate the privilege of utilizing this resource only to those who choose not to enter the mainstream of productive economic life for whatever reason? This resource belongs to all Alaskans--not the 10 to 15% that live in the bush areas.

I urge your support to protect the urban citizens of this State and assure their continued right to utilize the fish and game resources for their own consumption if they so choose.

Sincerely,

Bert M. Sharp

III. ANALYSIS (See Fiscal Note Preparation Instructions, Section III)

The impact of this change would raise the pay range of the Section Chief from range 24 to range 26, Division Director and increase the range of the Assistant Chief from range 22 to range 23, Deputy Director.

Range 26 with benefits = $54.7
Range 24 with benefits = 48.9
Difference = $ 5.8

Range 23 with benefits = $45.5
Range 22 with benefits = 42.2
Difference = $ 3.3

TOTAL change 5.8 + 3.3 = 9.1

Bill drafted by [illegible]

AS HF. 75: 060

Logical distinction between
[illegible] and land-based [illegible]
for taxation purposes

Makes [illegible] tax on [illegible]
[illegible] for [illegible]).

This section relates to the license tax imposed on salmon canneries. Territory of Alaska v. Arctic Maid, 16 Alaska 126, 140 F. Supp. 190 (D. Alas. 1956), aff'd, 366 U.S. 199, 81 S. Ct. 929, 6 L. Ed. 2d 227 (1961).

Qualifying as taxpayer under duress. — One need not incur the risk of penalties, while the validity of the tax is being ascertained judicially, in order to qualify as a taxpayer under duress. State v. Wakefield Fisheries, Inc., Sup. Ct. Op. No. 779 (File Nos. 1397, 1398), 495 P.2d 166 (1972).

For cases construing former p[illegible]ons similar to repealed subsection (e), see Territory of Alaska v. Arctic Maid, 16 Alaska 126, 140 F. Supp. 190 (D. Alaska 1956), aff'd, 366 U.S. 199, 81 S. Ct. 929, 6 L. Ed. 2d 227 (1961); Schlothan v. Einstoss, 17 Alas. 253 (1957), aff'd, 276 F.2d 806 (9th Cir.), cert. denied, 362 U.S. 990, 80 S. Ct. 1079, 4 L. Ed. 2d 1022 (1960); Schlothan v. Territory of Alaska, 276 F.2d 806 (9th Cir.), cert. denied, 362 U.S. 990, 80 S. Ct. 1079, 4 L. Ed. 2d 1022 (1960).

Applied in Territory of Alaska v. American Can Co., 14 Alaska 534, 117 F. Supp. 819 (D. Alas. 1954); Territory of Alaska v. Arctic Maid, 15 Alaska 667, 135 F. Supp. 164 (D. Alas. 1955).

Quoted in Territory of Alaska v. Craig Enterprises, Sup. Ct. Op. No. 14 (File No. 3), 355 P.2d 397 (1960).

Sec. 43.75.055. Security for collection of taxes. Each applicant for a license under this chapter shall in or with his application state under oath the amount of each of the products which he expects to produce during the license year. The applicant shall further state the extent of lienable real property owned by the applicant in the state against which the tax may be collected and other information with respect to description, location and value of the property which the department prescribes. If the lienable value of the property is not equal to three times the amount of the tax for which the applicant will probably be liable under this section, the department may not issue the license until the applicant files with the department a surety bond approved by the attorney general in a penal sum equal to twice the probable amount of the tax for which the applicant will be liable, conditioned upon payment of the tax in full when due, with interest if not paid before delinquency. The department may waive the bond requirement if the applicant posts other security in the form of collateral acceptable to the department. (§ 4 ch 84 SLA 1967)

HB 227

Article 2. Cold Storages and Other Fish Processors.

Section
60. Fisheries business licenses
70. License application and fee
80. Duty to pay tax and keep records
90. Violations and penalties
95. Security for collection of taxes

Sec. 43.75.060. Fisheries business licenses. A person engaging or attempting to engage in any of the following lines of business in connection with the state's commercial fisheries shall first obtain a license.

(1) Shore-based cold storages and other fish processors, except salmon canneries, herring processing plants, crab canneries, and clam canneries otherwise licensed shall pay an annual license tax equal to one per cent of the value of the raw halibut, halibut livers and viscera,

salmon and bottom fish, shellfish or other fishing resource bought or obtained for processing through freezing, salting, or other method. The value of the raw material under §§ 60 — 90 of this chapter is the actual price paid for it, including indirect considerations such as fuel or supplies furnished by the processor or offsets to the cash value for gear furnished. The value applies to the raw material procured in company-owned or subsidized boats operated by employees of the processor or under lease or other arrangement.

(2) Freezer ships and other floating cold storages shall pay an annual license tax equal to four per cent of the value of the raw halibut, halibut livers and viscera, salmon and bottom fish, shellfish, or other fishing resource bought or obtained for processing through freezing, salting, or other method, or the taking of crab for export without such processing. The value of the raw material under §§ 60 — 90 of this chapter is the actual price paid for it including indirect considerations such as fuel or supplies furnished by the processor or offsets to the cash value for gear furnished. The value applies to the raw material procured in company-owned or subsidized boats operated by employees of the processor or under lease or other arrangement.

(3) In (1) of this section, "shore-based cold storages and other fish processors" mean those cold storages and processing plants which are permanently attached to the land or have remained in the same location for a period of not less than one calendar year. Any cold storage or processing plant removed from the state is a floating cold storage under (2) of this section from the day of removal.

(4) Cold storages and fish processing plants which are not shore-based under (3) of this section are "floating cold storages" under (2) of this section.

(5) The person, firm, or corporation engaging or attempting to engage in the above lines of business who actually and physically processes the above fishery resources shall be liable for and shall pay to the department the whole tax imposed by this section. In determining this tax liability the person, firm, or corporation may not deduct from the value of the raw fishery resources processed the value of any raw fishery resources processed for other persons, firms, or corporations, but shall include this as a part of the value of the raw product obtained for processing. (§ 1 ch 97 SLA 1949; am § 1 ch 116 SLA 1951; am § 1 ch 102 SLA 1955; am § 1 ch 88 SLA 1966; am § 3 ch 84 SLA 1967)

History of section. — See State v. Wakefield Fisheries, Inc., Sup. Ct. Op. No. 779 (File Nos. 1397, 1398), 495 P.2d 166 (1972), State v. Reefer King Co., Sup. Ct. Op. No. 1344 (File Nos. 2605, 2606, 2607), 559 P.2d 56 (1976).

Effect of 1966 amendment. — Prior to the 1966 amendment, the legislature based solely on the movements and locations of the vessels. State v. Reefer King Co., Sup. Ct. Op. No. 1344 (File Nos. 2605, 2606, 2607), 559 P.2d 56 (1976).

Prior to 1966, the primary distinguishing feature of the "floating" processor was its method of processing its catch, rather than its movement in the waters. At that time, the higher four percent tax was directed only at floating freezer or "cold storage" ships which took crab for export without processing it in Alaska. All other processors, both ashore and afloat, were taxed at the lower rate of one percent. State v. Reefer King Co., Sup. Ct. Op. No. 1344 (File Nos. 2605, 2606, 2607), 559 P.2d 56 (1976).

Characterization of legislative intent in State v. Wakefield Fisheries, Inc., no longer meaningful. — The characterization of the legislative intent in State v. Wakefield Fisheries, Inc., Sup. Ct. Op. No. 779 (File Nos. 1397, 1398), 495 P.2d 166 (1972), which was based on an earlier version of this section, is no longer meaningful since this section was amended to remove the distinction between types of processors and to widen the class of processors to be subject to the higher tax. State v. Reefer King Co., Sup. Ct. Op. No. 1344 (File Nos. 2605, 2606, 2607), 559 P.2d 56 (1976).

This section imposes no burden on interstate commerce, or any artificial rigidity on the salmon industry, by requiring the catching of salmon in Alaska and imposing restrictions on the shipment of fish out of Alaska prior to canning. Territory of Alaska v. Arctic Maid, 16 Alaska 126, 140 F. Supp. 190 (D. Alas. 1956), aff'd, 366 U.S. 199, 81 S. Ct. 929, 6 L. Ed. 2d 227 (1961).

This section, which imposes a higher tax upon "floating" processors than upon "shore-based" processors, is not unconstitutional as applied to floating processors on the ground that it violates the commerce clause of the United States Constitution. State v. Reefer King Co., Sup. Ct. Op. No. 1344 (File Nos. 2605, 2606, 2607), 559 P.2d 56 (1976).

Since the classification of processing ships as "floating" processors is based not upon their interstate movement, but upon their movement within Alaskan waters, for the purposes of application of this section, there is no interstate movement, and, therefore, there is no burden nor even an incidental impact upon interstate commerce. State v. Reefer King Co., Sup. Ct. Op. No. 1344 (File Nos. 2605, 2606, 2607), 559 P.2d 56 (1976).

The higher tax was directed at those particular floating processors who could otherwise evade local regulation and taxation, yet exploit a valuable state resource. State v. Wakefield Fisheries, Inc., Sup. Ct. Op. No. 779 (File Nos. 1397, 1398), 495 P.2d 166 (1972).

It was the 1966 amendment to the statute

Nor does it affect fish laws of United States. — The imposition by the Alaska legislature of license taxes under this section relating to the commercial fisheries of Alaska to provide revenue does not in any way alter, amend, modify, or repeal the existing fish laws of the United States applicable to Alaska. Territory of Alaska v. Arctic Maid, 16 Alaska 126, 140 F. Supp. 190 (D. Alas. 1956), aff'd, 366 U.S. 199, 81 S. Ct. 929, 6 L. Ed. 2d 227 (1961).

Classification of section does not deny equal protection. — The classification which imposes different tax rates on "floating" and "shore-based" processors does not constitute a violation of the federal and state guarantees of equal protection. State v. Reefer King Co., Sup. Ct. Op. No. 1344 (File Nos. 2605, 2606, 2607), 559 P.2d 56 (1976).

It was not arbitrary for the legislature to conclude that "shore-based" processors, with at least a year's commitment to one location, were to be preferred over floating processors, which distributed economic benefits over several locations. State v. Reefer King Co., Sup. Ct. Op. No. 1344 (File Nos. 2605, 2606, 2607), 559 P.2d 56 (1976).

The distinction between mobile and stationary processors can easily be characterized as a tax incentive, to encourage "shore-based" processors, and in this light, the tax differential bears a fair and substantial relationship to the goal of encouraging societal contributions of the type made by "shore-based" processors, especially since conversion from "floating" to "shore-based" is a simple matter of remaining in one location for a calendar year. State v. Reefer King Co., Sup. Ct. Op. No. 1344 (File Nos. 2605, 2606, 2607), 559 P.2d 56 (1976).

It is valid legislative classification. — Imposing a tax of one per cent on the value of fish taken on the line of business of shore-based cold storages, while imposing a four per cent tax on the line of business of freezer ships and other floating cold storages is a valid legislative classification. Territory of Alaska v. Arctic Maid, 16 Alaska 126, 140 F. Supp. 190 (D. Alas. 1956), aff'd, 366 U.S. 199, 81 S. Ct. 929, 6 L. Ed. 2d 227 (1961).

And there is no discrimination in this section between residents and nonresidents. Territory of Alaska v. Arctic Maid, 16 Alaska 126, 140 F. Supp. 190 (D. Alas. 1956), aff'd, 366 U.S. 199, 81 S. Ct. 929, 6 L. Ed. 2d 227 (1961).

Nor between freezer ship operators and local canners under §§ 43.75.010 —

This section relates to the license tax imposed on salmon canneries. Territory of Alaska v. Arctic Maid, 16 Alaska 126, 140 F. Supp. 190 (D. Alas. 1956), aff'd, 366 U.S. 199, 81 S. Ct. 929, 6 L. Ed. 2d 227 (1961).

Qualifying as taxpayer under duress. — One need not incur the risk of penalties, while the validity of the tax is being ascertained judicially, in order to qualify as a taxpayer under duress. State v. Wakefield Fisheries, Inc., Sup. Ct. Op. No. 779 (File Nos. 1397, 1398), 495 P.2d 166 (1972).

For cases construing former provisions similar to repealed subsection (e), see Territory of Alaska v. Arctic Maid, 16 Alaska 126, 140 F. Supp. 190 (D. Alaska 1956), aff'd, 366 U.S. 199, 81 S. Ct. 929, 6 L. Ed. 2d 227 (1961); Schlothan v. Einstoss, 17 Alas. 253 (1957), aff'd, 276 F.2d 806 (9th Cir.), cert. denied, 362 U.S. 990, 80 S. Ct. 1079, 4 L. Ed. 2d 1022 (1960); Schlothan v. Territory of Alaska, 276 F.2d 806 (9th Cir.), cert. denied, 362 U.S. 990, 80 S. Ct. 1079, 4 L. Ed. 2d 1022 (1960).

Applied in Territory of Alaska v. American Can Co., 14 Alaska 53, 117 F. Supp. 819 (D. Alas. 1954); Territory of Alaska v. Arctic Maid, 15 Alaska 667, 135 F. Supp. 164 (D. Alas. 1955).

Quoted in Territory of Alaska v. Craig Enterprises, Sup. Ct. Op. No. 14 (File No. 3), 355 P.2d 397 (1960).

Sec. 43.75.055. Security for collection of taxes. Each applicant for a license under this chapter shall in or with his application state under oath the amount of each of the products which he expects to produce during the license year. The applicant shall further state the extent of lienable real property owned by the applicant in the state against which the tax may be collected and other information with respect to description, location and value of the property which the department prescribes. If the lienable value of the property is not equal to three times the amount of the tax for which the applicant will probably be liable under this section, the department may not issue the license until the applicant files with the department a surety bond approved by the attorney general in a penal sum equal to twice the probable amount of the tax for which the applicant will be liable, conditioned upon payment of the tax in full when due, with interest if not paid before delinquency. The department may waive the bond requirement if the applicant pos[t] other security in the form of collateral acceptable to the departmer[t] (§ 4 ch 84 SLA 1967)

HB 227

Article 2. Cold Storages and Other Fish Processors.

Section
60. Fisheries business licenses
70. License application and fee
80. Duty to pay tax and keep records
90. Violations and penalties
95. Security for collection of taxes

Sec. 43.75.060. Fisheries business licenses. A person engaging or attempting to engage in any of the following lines of business in connection with the state's commercial fisheries shall first obtain a license.

(1) Shore-based cold storages and other fish processors, except salmon canneries, herring processing plants, crab canneries, and clam canneries otherwise licensed shall pay an annual license tax equal to one per cent of the value of the raw halibut, halibut livers and viscera,

salmon and bottom fish, shellfish or other fishing resource bought or obtained for processing through freezing, salting, or other method. The value of the raw material under §§ 60 — 90 of this chapter is the actual price paid for it, including indirect considerations such as fuel or supplies furnished by the processor or offsets to the cash value for gear furnished. The value applies to the raw material procured in company-owned or subsidized boats operated by employees of the processor or under lease or other arrangement.

(2) Freezer ships and other floating cold storages shall pay an annual license tax equal to four per cent of the value of the raw halibut, halibut livers and viscera, salmon and bottom fish, shellfish, or other fishing resource bought or obtained for processing through freezing, salting, or other method, or the taking of crab for export without such processing. The value of the raw material under §§ 60 — 90 of this chapter is the actual price paid for it including indirect considerations such as fuel or supplies furnished by the processor or offsets to the cash value for gear furnished. The value applies to the raw material procured in company-owned or subsidized boats operated by employees of the processor or under lease or other arrangement.

(3) In (1) of this section, "shore-based cold storages and other fish processors" mean those cold storages and processing plants which are permanently attached to the land or have remained in the same location for a period of not less than one calendar year. Any cold storage or processing plant removed from the state is a floating cold storage under (2) of this section from the day of removal.

(4) Cold storages and fish processing plants which are not shore-based under (3) of this section are "floating cold storages" under (2) of this section.

(5) The person, firm, or corporation engaging or attempting to engage in the above lines of business who actually and physically processes the above fishery resources shall be liable for and shall pay to the territory the whole tax imposed by this section. In determining this tax liability the person, firm, or corporation may not deduct from the value of the raw fishery resources processed the value of any raw fishery resources processed for other persons, firms, or corporations, but shall include them as a part of the value of the raw product obtained [illegible] (§ 4 ch 97 SLA 1949; am § 1 ch 116 SLA 1951; am § 1 ch 102 SLA 1955; am § 1 ch 88 SLA 1966; am § 3 ch 84 SLA 1967)

History of section — See State v. Wakefield Fisheries, Inc., Sup. Ct. Op. No. 779 (Dec. Nos. 1397, 1398), 495 P.2d 106 (1972); Reefer King Co. Sup. Ct. No. 754 (Dec. Nos. 2005, 2006, 2007) (1976).

Effect of 1966 amendment — [illegible]

The higher tax was directed at those particular floating processors who could otherwise evade local regulation and taxation, yet export a valuable state resource. State v. Wakefield Fisheries, Inc., Sup. Ct. Op. No. 779 (Dec. Nos. 1397, 1398), 495 P.2d 106 (1972).

STATE OFFICE BUILDING / POUCH SA - JUNEAU 99811

February 26, 1979

The Honorable Alvin Osterback
Co-Chairman
House Resources Committee
Room 118 - Capitol Building
Juneau Alaska

Dear Mr. Osterback:

HOUSE BILL NUMBER 227

House Bill number 227, an Act relating to fisheries business licenses, was introduced in the House on February 15, 1979 and was referred to the House Resources and Finance Committees.

For the consideration of the House Resources Committee, I am enclosing a copy of a Fiscal Note prepared by Mr. Gary Jenkins, Director, Audit Division, Department of Revenue concerning the proposed legislation.

Sincerely,

R. D. Stevenson
Special Assistant

STATE
of ALASKA

MEMORANDUM

TO: R. D. Stevenson
Special Assistant

DATE: February 26, 1979

FILE NO:

TELEPHONE NO:

FROM: Gary L. Jenkins
Director, Audit Division

SUBJECT: HB 227

This bill would eliminate the 4 percent rate on fish processors who do not qualify as shore based. Passage of this bill would result in a loss of revenue to the State of approximately $1,000,000, $50,000 of which is shared back to communities in which the processing is done.

There will be no additional costs of administration due to this proposed bill.

It should be noted that there is a minor technical error in the bill on lines 16 and 17. The reference to Sec. 60-90 of the chapter have been modified and the words "of this Chapter" have been omitted. If this was a deliberate change, perhaps the committee will want to show those changes in correct format.

accounting for and custody of state revenues which are only incidental to the Department's regulation and management of the fish and game resources of the State of Alaska.

THEREFORE IT IS ORDERED

"1. All duties, functions and powers relative to the collection, accounting for and custody of state revenues, which are only incidental to the regulation and management of the fish and game resources of the State of Alaska, at present performed by the Department of Fish and Game, are transferred to the Department of Revenue.

"2. The Department of Revenue shall be deemed and held to constitute a continuation of the Department of Fish and Game with the same force and effect, as to the transferred functions, powers and duties as if the functions, powers and duties had not been transferred.

"3. All funds appropriated to the Department of Fish and Game prior to the transfer of those functions, powers and duties attributable to the transferred functions, powers and duties are transferred to appropriate line items in the appropriation of the Department of Revenue.

"4. This order shall become effective at a date hereafter to be designated.

"Dated November 24, 1961"

Alaska's fish and game laws are applicable as federal law on military reservations. 1964 Op. Att'y Gen. No. 2.

Hunting or fishing at a military reservation must be in accord with Alaska laws regulating seasons, bag limits, methods of taking, etc. 1964 Op. Att'y Gen. No. 2.

But military personnel are not required to comply with licensing requirements while on reservation. 1964 Op. Att'y Gen., No. 2.

Since AS 16.05.940(14) does not grant special resident privileges to military personnel, which is a requisite for requiring them to purchase licenses for use on military reservations under 10 U.S.C. 267(a)(2), they cannot be required to do so. 1964 Op. Att'y Gen., No. 2.

A.L.R. reference. — Applicability of state fishing license laws or other public regulations to fishing in private lake or pond, 15 A.L.R.2d 734.

Sec. 16.05.335. Complimentary licenses. The commissioner of revenue shall annually, at the request of the governor, provide him with not to exceed 50 complimentary fishing and hunting licenses and appropriate big game tags which the governor may distribute to distinguished visitors to Alaska at his discretion for their use in any one season during their visits to the state. The complimentary license for sport fishing or hunting or both shall be inscribed by the governor with the inclusive dates for its authorized use. The governor shall advise the Department of Fish and Game on any complimentary issuances, which information shall be available to the public. (§ 1 art II ch 94 SLA 1959; am § 1 ch 61 SLA 1962; am § 1 ch 31 SLA 1963; am § 1 ch 6 SLA 1965)

Sec. 16.05.340. License and tag fees. (a) Fees for licenses and tags are as follows:

(1) Resident sport fishing license	$10
However, the fee is 25 cents for a resident who is blind.	
(2) Resident hunting license	12
(3) (A) Resident hunting and trapping license	15
(B) Resident trapping license	3
(4) Resident hunting and sport fishing license	22
(5) Resident hunting, trapping, and sport fishing license	25

However, the fee is 25 cents for the head of a family or a dependent member of his family or one solely dependent upon himself for support upon proof presented by the applicant that the applicant (A) is obtaining or has obtained assistance during the preceding six

For HB229

months under any state or federal welfare program to aid the indigent, or (B) has an annual family gross income of less than $3,600 for the year preceding application.

(6) Visitor's special sport fishing license — valid for the period inscribed on the license

(A) For 10-day license 15

(B) For one-day license 5

(7) Nonresident sport fishing license 30

(8) Nonresident hunting license 60

(9) Nonresident hunting and sport fishing license 90

A nonresident may not take a big game animal without previously purchasing a numbered, nontransferable, appropriate tag, issued to him as provided in (16) of this subsection. The tag shall be affixed to the animal immediately upon capture and shall remain affixed until the animal is prepared for storage, consumed, or exported.

(10) Nonresident hunting and trapping license 200

(11) Repealed by § 2 ch 32 SLA 1968.

(17) Repealed by § 2 ch 32 SLA 1968

(18) [illegible] for bear, brown or grizzly, each 25

(19) Resident or nonresident permit application fee (all species for which a limited drawing is conducted, except musk oxen) 5

(20) The commissioner of fish and game may issue without cost a [illegible] and [illegible] for animals subject to the

Effect of amendment. — The 1976 amendment added the third sentence.

Legislative committee report. — For report on ch. 268, SLA 1976 (FCCS HCS CSSSSB 335), see 1976 House Journal, p. 910.

Sec. 16.05.400. Persons exempt from license requirement. (a) A license is not required of a resident or nonresident person under the age of 16 years for sport fishing nor shall a license be required of any resident under the age of 16 for hunting or trapping.

FOR HB 229

(b) A sport fishing, hunting or trapping license is not required of a resident who is 60 years of age or more and has been a resident for 30 consecutive years or more, as long as he remains a resident. (§ 9 art II ch 94 SLA 1959; am § 3 ch 180 SLA 1972)

Sec. 16.05.405. Taking game by proxy for the blind. (a) A resident holding a valid hunting license may take moose, caribou, deer, or elk under a hunting license issued to a blind resident in accordance with (b) of this section if the resident has the license of the blind person in his actual possession.

(b) A resident hunting license indicating that the purchaser is blind may be obtained from the Department of Revenue upon payment of the fee prescribed in § 340 of this chapter and upon presentation of either an affidavit of the applicant stating that he cannot distinguish light from darkness or an affidavit signed by a licensed physician or a licensed optometrist stating that the applicant's central visual acuity does not exceed 20/200 in the better eye with correcting lenses or that his widest diameter of visual field subtends an angle no greater than 20 degrees. (§ 1 ch 3 SLA 1967)

Sec. 16.05.407. Nonresident hunting game animals must be accompanied by guides. (a) It is unlawful for a nonresident to hunt, pursue or take brown bear, grizzly bear, polar bear or sheep in this state, unless personally accompanied by a person who is licensed as a master guide, registered guide or assistant guide by the department, or who is personally accompanied by a resident Alaskan over 19 years of age who is the spouse of or is related by blood within and including the second degree of kindred. A person who applies for a nonresident big game hunting for the taking of an animal specified in this section shall first apply to the state, on a form provided by the state, an affidavit stating that he will be accompanied on his hunt by a person who is qualified under the terms of this section. A person who falsifies the required affidavit is guilty of perjury.

(b) It is unlawful for a nonresident to import polar bear into this state unless personally accompanied by a person who is licensed as a master guide, registered guide or assistant guide by the department.

(c) A nonresident who violates (a) of this section is guilty of a misdemeanor and upon conviction is punishable by imprisonment for not

(3) within that portion of the Polly Creek razor clam beach bounded on the north by a line beginning at a beach marker approximately one-half mile (0.8 km) south of the mouth of Polly Creek and extending seaward 135°, and on the south by a line beginning at a beach marker approximately one and one-half miles (2.4 km) south of the mouth of Polly Creek and extending seaward 135°;

(4) on the western Copper River delta and in Orca Inlet in the Prince William Sound area.

(e) Prior to taking clams with hydraulic clam diggers in an area of intended operation a permit shall be obtained from the commissioner. An application for permit shall specify the location of intended operation, the proposed duration of operation, and detailed specifications of the gear. An application shall be refused or a permit restricted or terminated by the commissioner if he finds that the operation of the gear may injure or jeopardize the continued viability of clams and other resources inhabiting the area of intended operation.

Authority: AS 16.05.251(2) and (4)

5 AAC 38.055. GEAR FOR SCALLOPS. (a) Scallops may be taken by trawls or scallop dredges.

(b) Scallop dredge rings with less than four-inch (101 mm) inside diameter shall not be carried aboard scallop fishing vessels.

Authority: AS 16.05.251(4)

5 AAC 38.060. GEAR FOR OCTOPI AND SQUID. Legal gear as defined in 5 AAC 39.105, including pot gear as described in chs. 31, 32, 34 and 35 of this title, may be used to take octopi and squid.

Authority: AS 16.05.251(4)

5 AAC 38.061. SEASON FOR OCTOPI AND SQUID. There is no closed season for octopi and squid.

Authority: AS 16.05.251(2)

5 AAC 38.062. PERMITS FOR SEA CUCUMBERS, SEA URCHINS AND SEA SNAILS. Prior to taking sea cucumbers, sea urchins or sea snails, a permit shall be obtained from the commissioner. An application for a permit shall specify the location of the intended operation, the proposed duration of the operation, detailed specifications of the proposed gear, and an estimate of desired harvest. An application shall be refused, or a permit refused or terminated by the commissioner if he finds that the operation of the gear may injure or jeopardize the continued viability of sea cucumbers, sea urchins or sea snails, or other resources inhabiting the area of intended operation.

Authority: AS 16.05.251(2),(4),(5), (7),(10) and (12)

5 AAC 38.065. PERMITS FOR OYSTERS. A permit shall be obtained from the commissioner before any oysters or oyster spat are transported into the state. An affidavit from the supplier of oysters or oyster spat stating that the shipment is free of predaceous or parasitic forms of animal life must accompany the application for permit.

Authority: AS 16.05.250(7),(10) and (14)

5 AAC 38.068. CORAL HARVESTING. Coral may be taken under the terms of a permit issued by the commissioner. An application for a permit shall specify the location of intended operation, the proposed duration of operation, and detailed specifications of the gear. An application may be refused or a permit restricted or terminated by the commissioner if he finds that the operation of the gear may jeopardize the continued viability of coral or other resources inhabiting the area of intended operation.

Authority: AS 16.05.251(7),(10) and (12)

5 AAC 38.070. REGISTRATION DOCUMENTS. A vessel being registered for miscellaneous shellfish pursuant to sec. 20 of this chapter shall, if properly licensed and otherwise in compliance with regulations, be issued a registration certificate. The registration certificate shall be signed by the registrant, kept immediately available at all times during fishing operations and shall be shown upon request to any authorized representative of the Department of Fish and Game or the Department of Public Safety.

Authority: AS 16.05.250(3),(7) and (14)

MISCELLANEOUS SHELLFISH FISHERY

209. 5 AAC 38.055. GEAR FOR SCALLOPS. (b) Permit the use of scallop dredges with rings less than four inches in diameter for taking scallops in the Bering Sea.

The proposed regulation reads as follows:

5 AAC 38.055. GEAR FOR SCALLOPS.

(b) Scallop dredge rings with less than four inch (101mm) inside diameter may not be used or carried aboard scallop fishing vessels except as follows:

(1) scallop dredges with rings of three inches (76mm) or greater inside diameter may be used from vessels fishing in the Bering Sea;

(2) scallop fishing vessels in the Gulf of Alaska in transit to or from the Bering Sea may carry aboard scallop dredges and scallop dredge rings with three inch (76mm) or greater inside diameter.

Justification: This proposal is presented for the Board's consideration in light of recent interest in this fishery by a commercial catcher-processor.

Proposed by: Staff

209. 5 AAC 38.055. GEAR FOR SCALLOPS. (b) Permit the use of scallop dredges with rings less than four inches in diameter for taking scallops in the Bering Sea.

Sec. 16.20.010. Legislative recognition. The legislature recognizes that

(1) the state has jurisdiction over all fish and game in the state except in those areas where it has assented to federal control;

(2) the state has not assented to federal control of fish and game in those areas which were set apart as National Bird and Wildlife Refuges while the state was a United States territory;

(3) special recognition of the value to the state and the nation of areas of unspoiled habitat and the game characteristic to it will be demonstrated by designating as state game refuges those federal lands which were National Bird and Wildlife Refuges or Ranges at the time that Alaska achieved statehood. (§ 1 ch 114 SLA 1960)

Am. Jur. reference — 24 Am. Jur. Game, § 10.

Sec. 16.20.020. Purpose. The purpose of this chapter is to protect and preserve the natural habitat and game population in certain designated areas of the state. (§ 1 ch 114 SLA 1960)

Sec. 16.20.030. Refuges established. (a) Those land areas now included in the National Wildlife Refuge System which are cited in this subsection are designated as state game refuges, and the board shall assign them appropriate refuge names.

(1) Aleutian Islands Refuge (except Umnak, Unalaska, Akun, Akutan, Sanak, and Tigalda Islands);

(2) Bering Sea Refuge (St. Matthews and Hall Islands, and Pinnacle Islet in Bering Sea);

(3) Bogoslof Island Refuge;

(4) Chamisso Island Refuge;

HB304

March 9, 1979

The Honorable Alvin Osterback
Chairman
House Resources Committee
Alaska Legislature, Pouch V
Juneau, Alaska 99811

Dear Mr. Osterback:

Please be advised that I support HB 304 and the development of regional councils without regulatory authority over HB 193. Increased involvement of Advisory Committees through the regional councils and through funding of travel and per diem for the Advisory Committee Chairmen, will be most beneficial to making good decisions on the fish and wildlife resources of Alaska.

I appreciate the opportunity to comment.

Sincerely,

Chris Goll, Jr.
Anchorage

March 9, 1979

The Honorable Alvin Osterback
Chairman, House Resources Committee
Alaska State Legislature
Pouch V
Juneau, Alaska 99811

Dear Senator Osterback:

This is to advise you that I support HB 304 and the development of regional councils without regulatory authority over HB 193 establishing regional boards. The strengthening of the Advisory Committee system through the regional councils and through funding of travel and per diem for Advisory Committee Chairmen will be highly beneficial to the management of Alaska fish and wildlife.

Thank you for the opportunity to comment.

Sincerely,

Herman Schroeder

HB304

HOUSE BILL NO. 304
SUGGESTED REVISIONS
REAL ALASKA COALITION

For an Act entitled: "An Act establishing Fish and Game Resource Regions, Local Fish and Game Committees, and Regional Fish and Game Council; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Sec. 1. INTENT. The legislature finds that the proper regulation, protection, and conservation of fish and wildlife and the continuation of the unique lifestyle of Alaska residents require that an administrative structure be established for the purpose of enabling people with personal knowledge of local conditions and requirements to have a more meaningful advisory role in the management of fish and wildlife in Alaska.

* Sec. 2. AS 16.05 is amended by adding new sections to read:

Sec. 16.05.222. FISH AND GAME RESOURCE REGIONS. For the purpose of the conservation and management of the fish and wildlife resources of the state, there are created five fish and game resource regions, the exact boundaries of which must be established by the Board of Fisheries and the Board of Game, acting jointly.

(Sec. 16.05.223. LOCAL FISH AND GAME COMMITTEES has been deleted totally.)

Sec. 16.05.224. REGIONAL FISH AND GAME COUNCILS. (a) The Board of Fisheries and the Board of Game, acting jointly, shall establish a regional fish and game council within each fish and

Attn: * is where a revision was made; some revisions were 1 word whereas others were sentences or sections

game resource region, composed of the chairpersons of the local fish and game committees within its region.

(b) The Boards of Fish and Game shall assign a coordinator to each region to distribute all relevant support data and coordinate activities of Regional Council and Land Advisory Committees and attend all Fish and Game Board hearings on behalf of their respective regions.

(c) Each regional fish and game council may upon agreement of the majority of the members and approval of the Boards of Fisheries and Game:

(1) hold public meeting on fish and wildlife matters;

(2) review, make recommendations, and assist the department, in consultation with its local fish and game committees and appropriate federal agencies, in developing plans for the conservations, regulation, management, and use of the fish and wildlife resources within its region.

(3) perform other duties which may be specified by the boards by regulation.

(d) The regional fish and game councils may present recommendations concerning the conservation, regulation, management, and use of fish and wildlife resources within their respective regions, and the evidence upon which the recommendations are based, to the local advisory committes during the course of their administrative proceedings. The committee, individually or jointly, may choose not to follow any such recommendation which it is determined during the administrative proceedings is not supported by substantial evidence, violates recognized principles of fish and wildlife conservation, or would be

inconsistent with the constitution or the laws of the State of Alaska or the United States.

* Sec. 4. IMPLEMENTATION. (a) In view of present state fiscal constraints, the Board of Fisheries, Board of Game, and the department shall implement AS 16.05.223 and 16.05.224, enacted in sec. 2 of this Act, within the fish and game resource regions established by AS 16.05.222, also enacted in sec. 2 of this Act, in accordance with the following schedule, measured from the effective date of the Act:

(1) no less than one region within one year;

(2) no less than three additional regions within two years; and

(3) all regions within three years.

(b) During the implementation period stated in (a) of this section, all existing local advisory committees in other regions shall continue to function under the present regulations.

* Sec. 5. CONSTRUCTION. If any provision of this Act is incompatible with AS 16.05.260, the provision of this Act governs.

* Sec. 7. Sec. 6 of this Act takes effect three years after the effective date of the remaining sections of this Act. The remaining sections of this Act take effect immediately in accordance with AS 01/10.070(c).

EXPLANATION OF THE REVISIONS TO HOUSE BILL 304

(Note: All references to lines are from original HB-304.)

1. Line 12, There is no reason to distinguish between rural and other Alaska residents.

2. Line 15, The word advisory was added to better reflect the role of the public.

3. Line 18, "and development" was deleted because it was not considered appropriate to develope fish and game.

4. Line 19 and 20, The number of regions was revised to conform to the existing five game management regions. Actually the number of regions should be left up to the Boards so the best boundaries can be drawn to allow management of the resources of game, sport, and commercial fish. These boundaries may not be the same for basic management reasons. In fact, at present, there are three separate systems drawn by ADF&G for management.

5. Line 21 of page 1 and Line 1 - 28 of page 2, Since the boundaries are to be established by the Boards all area definition has been omitted.

6. Line 29 of page 2, Lines 1 - 29 of page 3, and Line 1 - 2 of page 4, The existing advisory committee syster should remain as detailed in AS 16.05.260. The Boards have authority to deal with advisory committees now and will be making changes in their joint meeting of March 1979.

7. Line 8 - 11 of page 4, Paragraph (b) was deleted and new wording was added to allow for a coordinator in each region as determined by the Boards. We feel this may be the single most important factor to permit better local input to the Fish and Game regulatory system.

8. Line 12 of page 4, To better control what and when the Regional Councils meet, etc., we believe the Boards shall be given an oversight authority.

9. Line 18 - 25 of page 4, Since the regulatory powers of the councils are deleted, this wording is not needed. These councils are advisory only and should serve to advise and educate the local advisory committees.

10. Line 2 - 3 of page 5, As the councils are to serve the advisory committees, it was necessary to revise this wording.

11. Line 10 - 16 of page 5, Paragraph (e) is no longer required since the Councils are to serve the advisory committees.

12. Line 3 - 3 of page 6, This language concerns local advisory committees. Since no change is recommended in the existing system, Sec. 6 and Sec. 7 are not required.

February 26, 1979

The Honorable Terry Gardiner
Speaker of the House
Alaska State Legislature
Juneau, Alaska 99811

Dear Mr. Speaker:

Under the authority of art. III, sec. 18 of the Alaska Constitution, I am transmitting a bill which provides for the establishment of Regional Fish and Game Councils and Fish and Game Resource Regions. It also provides for the improvement of the local fish and game committee system.

This bill draws from the best elements of other proposed legislation, and from my own administrative proposal which was prepared by the Department of Fish and Game after considerable public review. It is nearly identical to a draft produced recently by the Alaska Federation of Natives, Inc.

The bill establishes six Fish and Game Resource Regions with Regional Fish and Game Councils and provides for establishment of local fish and game committees with mutually exclusive geographic areas of interest.

Each local committee area would be a local, contiguous, and relatively uniform area in terms of habitat and life-style. Committee members would be knowledgeable local residents, appointed by the joint boards. The chairpersons of local committees would comprise the regional councils.

The regional councils and the local committees would be responsible for expressing to the joint boards local views regarding management plans, regulations, and other fish and wildlife concerns, and for presenting recommendations to the boards to which the boards must respond.

To ensure that this proposed system will work, one section provides for funding to cover travel and per diem costs of council and committee members, a crucial lack in

the past. In view of current state fiscal problems, however, I am proposing that only one region be implemented during FY 80, with the others following later.

Sincerely,

S/JSH

Jay S. Hammond
Governor

HB 304

Ombudsman

MEMO

Date: March 9, 1979

77

To: Representative Bill Miles, Co-chairman;
Representative Alvin Osterback, Co-chairman;
and members, House Resources Committee

From: Frank Flavin, Ombudsman

Subject: House Bill 304

Attached is a report of our findings concerning an investigation of the Anchorage Fish and Game Advisory Committee. The problems revealed here are reflective of the types of problems experienced by any advisory group that lacks the full support of the agency concerned.

If Fish and Game advisory committees are to be expanded or strengthened I would recommend that the administrative support required by the Department of Fish and Game be clearly spelled out.

The language in Section 2, AS 16.05.224 (b), page 4, lines 8-11 of HB 304, is a good start but the inclusion of a training program for the committees and councils and an annual reporting requirement on the types of assistance provided would be helpful.

I also feel that the Department should be directed to assist local boards in determining user groups who must be represented on the local boards. [Sec. 2, AS 16.05.223 (c), page 3, lines 15-22 of HB 304].

Finally, the advisory committee concept as set out in this bill reduces the objectivity of the advisory committee by their dependence on the Department for both data and administrative assistance. As an alternative to our first two suggestions, it may be advisable to establish an independent advisory committee coordinator's office attached to the Department of Fish and Game but independent, or through another vehicle such as the Public Forum.

Commissioner Ronald Skoog
Department of Fish and Game
Subport Building
Juneau, Alaska 99811

Re: Ombudsman Complaints A78-0305, A78-0328, A78-0329 and A78-0332 (Pending)

Dear Commissioner Skoog:

In March, 1978, this office received the above-captioned complaints from individuals in the Anchorage area alleging that some of the activities of the Anchorage Area Fish and Game Advisory Committee are conducted in violation of the Alaska Administrative Code or in a manner that is not consistent with good principles of public administration.

During the course of our review of the activities of the Anchorage Area Fish and Game Advisory Committee, representatives of the Ombudsman's Office observed one of the Committee's public hearings, interviewed individual committee members, interviewed members of the public interested in the Committee's activities, and met with officials of the Department of Fish and Game, including Commissioner Ronald Skoog. One formal hearing was held by this office in connection with this investigation, and a thorough review was made of the Committee's records. Near the end of our inquiry, a private meeting was held with members of the Anchorage Committee for the purpose of exchanging views, reviewing our preliminary findings, and obtaining further input from the Committee members regarding recommendations to improve the process for public input and access to the Committee.

Pursuant to AS 16.05.260, some 50 area advisory committees have been established in various communities throughout Alaska to provide public input to the Boards of Fisheries and Game on fish and game matters. The area advisory committees hold public hearings and meetings, make recommendations to the Boards of Fisheries and Game on proposed regulations, and provide a valuable public forum on the management of fish and game resources. Due to geographical distances and demographic differences between Alaskan communities throughout the State, there have been considerable variations in the manner in which the area advisory committees function and the amount of community involvement in each committee. During our investigation, we have endeavored to keep these factors in mind. We also recognize that committee members are unpaid volunteers who donate their time and have very limited resources at their disposal. As far as we have been able to ascertain, our investigation of the Anchorage area committee is the first in depth and critical evaluation by an independent agency of a Fish and Game advisory committee anywhere in the State. Even though each Fish and Game advisory committee functions autonomously, we believe that some of our findings regarding the Anchorage Committee may have relevance to Fish and Game advisory committees in other parts of the State.

The following are the specific allegations that were made regarding the Anchorage Area Advisory Committee, and our findings. At the end of this report, we will set forth recommendations which we believe will help to resolve some of the problems we found during the course of our investigation.

ALLEGATION 1: The composition of the Anchorage Area Advisory Committee is not representative of the resource user groups in the Anchorage area.

Finding: Indeterminate.

According to the Alaska Administrative Code, "Each advisory committee shall be composed of persons well informed on the fish and game resources of the locality . . . and shall be representative, in so far as possible, of the resource user groups of the general area." (5 AAC 96.020). In attempting to evaluate the facts concerning this allegation, we found that there is no clear definition of what constitutes a user group, no generally accepted criteria for delineating the constituency of each user group, and no clear figures on how many people in the Anchorage area are in each resource user group. While the number of residents with fishing and hunting licenses in the Anchorage area are available, there are no figures available on the number of non-consumptive users there are. Indeed, there is no generally accepted definition of non-consumptive user groups. In addition, there is a significant

overlap between residents who both hunt and fish, between people who hold commercial and sport fishing licenses, and even between people who have both consumptive and non-consumptive interests. Without more precise definitions of terms, more information on the nature of constituencies in various groups and more data on the numbers of each group, it is not possible to make a completely accurate determination of this allegation.

To date, the Anchorage Area Advisory Committee has made no systematic attempt to identify what resource user groups there are in the Anchorage area or how many people there are in each group. In other words, it is difficult to determine just who the Committee actually represents other than the members themselves. Many of the committee members contend that the Anchorage Committee represents all interests while several other members and a number of people in the community claim the Committee only represents a narrow cross section of user groups in the Anchorage area.

It is possible to make some tentative observations on the current make-up of the Committee's membership, based on how Committee members themselves defined their own interests in interviews with an Ombudsman investigator and on the basis of letters of nomination which many of the Committee members wrote when they were seeking election to the Committee. Based on this criteria, the present Committee membership appears to be disproportionately represented by individuals who identify themselves as sports hunters and/or sports fishermen. Thirteen of a total of fifteen members identify themselves in this category as consumptive users. The remaining two members of the Committee identify themselves as primarily non-consumptive users. Among the majority of consumptive users, however, there is some overlapping of interests. Two are engaged in commercial fishing at least part of the year, and one of these is closely related to a professional guide. A third individual earns a small part of his living as a wildlife photographer, as well as being an avid hunter. Two other consumptive sport users have strong ties to environmental groups or frequently vote with the two non-consumptive users, depending on the issues raised in the proposal. Thus the Anchorage Committee appears to be dominated by consumptive sports users, while commercial users and non-consumptive users constitute small minorities. There is no representative of subsistence users on the Committee, nor is there any representation of Native groups or associations, even though these groups are significant economic and cultural factors in the Anchorage area.

Several committee members take the position that user groups should only be represented to the extent that such users attend the Committee's meetings. Under such a criteria, these members claim, the Anchorage Committee is fully representative of the area user groups. However, this criteria appears inaccurate if

one makes a comparison between the number of people testifying on several controversial regulation proposals last winter and the votes of the Committee members on those same proposed regulations. At the Committee's hearing on March 15, 1978, approximately half of the people who testified on the proposal to close the Eagle River drainage area to hunting and trapping supported the proposal. The Committee, however, voted by a 9-3 margin to keep the area open to hunting. At the telecommunications hook-up several weeks later, which allowed Anchorage residents to testify before the Game Board Hearing in Fairbanks, the vast majority of people who testified favored closing the Eagle River area to hunting and trapping.

The views expressed on this one issue alone, as well as the Committee's vote, does not necessarily indicate that the Anchorage Committee is unrepresentative of local user groups. There has been, however, a considerable increase in the number of non-consumptive users who have been attending committee meetings in the last two years, while there has been little or no change in the proportional representation of non-consumptive users on the Anchorage Committee. As Alaska's principal urban center, Anchorage probably has the largest proportion of non-consumptive users of any community in the State. However, without clear criteria for identifying resource user groups and the numbers of their constituents in the community, it is difficult to make more than tentative observations as to whether or not the Anchorage Area Advisory Committee is representative of the resource user groups in the area.

In the immediate future, the continued growth of Anchorage as an urban center will continue to place increasing pressure on fish and wildlife resources in this area. As the pressure on the resources continues to mount, it is likely that a greater number and variety of resource user groups will attempt to obtain representation on the Committee. It seems likely that the debate over how the resources should be managed will become more intense. Since the Anchorage Area Committee, like other area fish and game advisory committees, selects its own new members, this office believes that the Committee should give greater consideration to defining which resource users there are in the community and making a more sustained effort to see that the Committee's membership is as representative of the resource users as possible (See Recommendations at the end of this report).

ALLEGATION 2: During the past two years, some of the meetings of the Anchorage Area Advisory Committee have been held in private homes rather than in public places.

Finding: Partially Justified/Rectified.

The Alaska Administrative Code does not prohibit fish and game advisory committee meetings from being held in private homes. In many Alaskan communities, such meetings are routinely held in private residences with no adverse consequences. However, in a large metropolitan community such as Anchorage, holding public meetings in private homes can have adverse consequences. First of all, a private residence may not have the facilities to accommodate the number of people who might want to attend the meeting. Access might also be a factor discouraging attendance. Another factor of concern stems from the polarity of views and feelings engendered by different philosophies on how resources should be managed. Conducting public meetings in private homes could discourage the expression of diverse views if a participant does not feel comfortable in the home of someone who holds strong contrary views. For these reasons, public meetings and hearings should be held, as a matter of good public administration, in public places where there are sufficient facilities, good access, and a setting which encourages the widest possible expression of viewpoints and opinions.

Such facilities are not available in many Alaskan communities, but they are available in Anchorage. In the last two years, there have only been two meetings of the Anchorage Committee that were held in private homes. One was a continuation of a meeting held at a local junior high school when the building had to be vacated after 11 p.m. The other meeting in a private home took place on short notice when there was not time to arrange for a public meeting place and to get out sufficient advance publicity. Both of these meetings were held in 1977, and since that time, all of the Committee's meetings have been held in public places. As a result, we find that this is no longer a serious concern, and that the problem has been fully rectified by the Committee.

ALLEGATION 3: During the past two years, meetings of the Anchorage Area Advisory Committee have not been adequately publicized in advance.

Finding: Justified/Partially Rectified.

The Alaska Administrative Code (5 AAC 96.050 Bylaw Number 16) requires that all meetings and hearings of the advisory committees shall be advertised in the locality where the committee is organized. The Anchorage Area Advisory Committee holds essentially two different kinds of meetings: 1.) public meetings, usually in the evenings, to which it tries to give public notice, and 2.) breakfast or executive meetings in which there is no public notice. The latter meetings are usually held in the early morning hours on an irregular basis and are used primarily as planning sessions.

The most serious problem with providing adequate notice for the first category of meetings was a lack of funds to pay for the advertising. Committee members frequently used public service announcements or submitted stories to the local newspapers, but in a community the size of Anchorage, mass advertising is also necessary to inform the public of upcoming meetings. In the past, some Committee members have paid for advertising out of their own pockets, and it has only been in the last year that funds became available from Juneau. The amount and exact source of those funds, however, was never made clear to the Committee. As of July 1, 1978, the Committee has been allocated $500.00 for expenses, which include advertising. While there has been some improvement in giving public notice of meetings during the last six months, there still have been lapses of coordination within the committee in arranging for adequate public notice of their regular meetings.

The executive or so-called "breakfast" meetings have never been advertised. There has been a diversity of opinion among Committee members as to whether these meetings are "public" in nature, but the Alaska Administrative Code clearly states that "Meetings and hearings of this advisory committee shall be open to the public." These meetings have not been given public notice as required in the regulations, and the public does not have the opportunity to observe or participate if it is not given adequate prior notice of when and where the meetings will be held. The Regulations require that the meetings be open to the public, but this does not necessarily mean that the public can participate. The Anchorage Committee may hold sessions where the public is not able to participate, but the public must be able to observe. The amount of publicity required for executive meetings would be considerably less than for the Committee's regular meetings. [Note: AS 44.62.310 provides that agency meetings (including committees) be open to the public and that reasonable public notice be afforded. See specifically AS 4462. 10(b) in regard to executive sessions.]

ALLEGATION 4: There are no minutes for many of the Anchorage Advisory Committee's meetings which were held during the last two years.

Finding: Partially Justified.

The Alaska Administrative Code (5 AAC 96.050 Bylaw Number 14) requires that "Minutes shall be kept of all meetings of the committee." In our investigation of this allegation, we found that during 1977, minutes were kept for many, if not all of the executive or "breakfast" meetings, but there were no minutes kept for many of the publicly held meetings. For the first one-third of 1978, there are minutes of the publicly held meetings, but no

minutes were taken at the executive meetings held during that period of time. When the Committee held a meeting for the purpose of showing a film or sponsoring a speaker, there has generally been no minutes taken for that meeting. As a result, there is no record of when many of the Committee's meetings were held, which Committee members were present, how many members of the public attended and what transpired at the meeting. In addition, we found that the minutes were scattered among more than two members of the Committee, and the minutes of several meetings were "lost" or "misplaced."

Minutes of the meetings serve a variety of functions. These include providing information on the scope of the Committee's activities, public interest and participation in the Committee's activities, and information about the attendance and participation of Commi ee members. The minutes also provide new committee members with a valuable resource about past Committee activities as well as ideas for programs and educational activities that the Committee might wish to sponsor in the future. And finally, the minutes of the meetings provide the Advisory Committee Coordinator's office with information about new members and as well as data on which to base decisions about providing funds to advisory committees. We find that the Committee has not kept a satisfactory record of their activities as required by the Administrative Code.

ALLEGATION 5: Nomination of new members to the Anchorage Advisory Committee have, on occasion, been held in private homes rather than in public places.

Finding: Unsupported.

We have found no evidence that nominations for new members were made in meetings not held in public places.

ALLEGATION 6: Election of new members to the Anchorage Area Advisory Committee have, on occasion, been held in private homes rather than in public places.

Findings: Partially Justified/Rectified.

In our investigation of this allegation, we found that the Anchorage Area Advisory Committee held a meeting on February 2, 1977 for the purpose of voting on nominations for new members which had been received at a publicly held meeting two weeks earlier. At the meeting on February 2, there were seven or more vacant positions available on the Committee, and the Committee voted to elect all seven persons who had been nominated.

For the same reasons listed in our findings on Allegation 2, we find that meetings of the Anchorage Committee should be held in public places rather than in private homes. While all of those nominated were elected to the Committee, meeting in a

private home for this purpose may have stiffled the opportunity for anyone present at the meeting to question the qualifications of any of the nominees. In any case, we found no evidence of such a situation and this incident does not appear to be a serious one. Nomination and election of new members in 1978 were held at public meetings, and the Committee has made clear its intention to hold nominations and election of new members in public places in the future.

ALLEGATION 7: Members of the public have been unable, despite repeated requests to obtain copies of minutes of meetings of the Anchorage Committee.

Finding: Justified.

During the last year and a half, several complainants made a number of requests to examine the minutes of the Anchorage Committee's meetings. Several of these requests were in writing, although most of these requests were made verbally to the Committee's chairman, Ted Forsi. Mr. Forsi promised to bring the minutes to the Committee's meetings for public inspection, but when he repeatedly failed to do so, the complainants concluded that either no minutes were being kept or they were being withheld for some unspecified purpose.

As a part of our investigation, this office made a formal written request to Mr. Forsi on March 31, 1978 to examine the Committee's minutes. Six weeks later, and after several verbal reminders, the minutes were still not made available. Mr. Forsi stated that the minutes were scattered between his home and office, and he had not had time to get them together. When asked for a specific date when the minutes would be available, Mr. Forsi, refused to give a date and indicated that our request was a low priority. At that time, pursuant to AS 24.55.170(2), it was necessary to issue a subpoena for the minutes. They were finally made available to this office on May 22.

While Mr. Forsi told the complainants that the minutes had been available in his office for their inspection, this apparently was not the case. In any event, we find that the records of the Committee's meetings should be available for public inspection at the Committee's regular meetings. Copies of the minutes of the Committee's meetings should also be available for public inspection at the local Fish and Game Department office.

ALLEGATION 8: Members of the public have been unable, despite repeated requests to the Chairman, to obtain copies of or inspect letters of nomination for new members of the Anchorage Committee.

Finding: Justified.

As in Allegation 7, several members of the public asked to inspect letters of nomination that had been submitted to the Committee by individuals who sought to be elected to the Committee. The request to inspect the minutes was made for the purpose of attempting to evaluate the criteria used by the Committee for selecting new members. The Chairman, Mr Forsi, denied the request, but when the matter was discussed by the whole Committee, it was decided that the letters should be available for inspection. Mr. Forsi promised the complainants that he would bring the letters of nomination to subsequent meetings of the Committee, but he did not do so. When this office made a written request to the Chairman of the Committee to inspect the letters of nomination, we encountered the same problems in securing access to these documents as in examining the Committee's minutes. Access to the letters was obtained by this office only after the issuance of a subpoena.

ALLEGATION 9: The Anchorage Advisory Committee had no vice chairman for an unusual length of time.

Finding: Unsupported.

The term of the former vice chairman of the Anchorage Committee, George Elledge, expired in December 1977. The Committee postponed election of a new vice chairman until after the election of new members to the Committee in early 1978. This was not completed until February, and a new vice chairman, Bruce Griggs, was elected in April. We find that the Committee's decision to wait until new members had been elected before selecting a new vice chairman was reasonable and based on practical considerations.

ALLEGATION 10: The Anchorage Area Advisory Committee has not submitted annual reports or copies of its minutes of meetings to the Game Board as required by State regulations.

Finding: Justified.

In our investigation of this allegation, we found that the Anchorage Committee does not send the Coordinator either a year-end annual report or complete copies of the minutes of its meetings. According to the Committee's Chairman, a year-end report or regular submission of Committee minutes to the Coordinator's office is unnecessary. The only official business which the Committee conducts, according to Mr. Forsi, is the Committee's votes on proposed fish and game regulations. Copies of the Committee's recommendations, he added, are sent to the Fish and Game Boards and constitute "in essence our annual report" of the Committee's activities.

The Alaska Administrative Code (5 AAC 96.050) requires that each area advisory committee submit an annual written report of

its activities for the year to the Advisory Committee Coordinator. This requirement may also be met, according to the Regulations, if minutes of each meeting and all changes in membership status are submitted to the Coordinator on a regular basis after each meeting throughout the year. We find that the Anchorage Committee has not met the requirements of the Administrative Code. Failure to meet the reporting requirements not only prevents the Coordinator's office from knowing about the scope of the Committee's activities and the extent of public interest in fish and game management, it also prevents the Coordinator from receiving information on which to base funding of Committee activities.

ALLEGATION 11: Meetings of the Anchorage Area Advisory Committee are not conducted in accordance with Roberts Rules of Order.

Finding: Justified.

Section 5 AAC 96.050 Bylaw Number 18 states that advisory committee "meetings shall be conducted according to the latest edition of Roberts Rules of Order." Chairman Ted Forsi claims that he follows Roberts Rules in conducting most of the Committee's formal meetings. When he was asked by an investigator from this office whether he had a copy of Roberts Rules, Mr. Forsi said he did not. Under subsequent questioning, he demonstrated a lack of knowledge of and familiarity with Roberts Rules. There are several procedural matters in the Committee's meetings which could be improved upon if the guidelines set down in Roberts Rules were utilized. One improvement, for example, would be for the Committee to formally adopt the minutes of the previous meeting at each new meeting.

ALLEGATION 12: Public testimony of the Anchorage Area Advisory Committee hearing on March 15, 1978 at Romig Junior High School was not recorded.

Finding: Unsupported.

There is no requirement in the Alaska Statutes and Administrative Code that public hearings have to be recorded. It is however, common practice among State agencies to record public meetings and hearings. The Anchorage Area Committee does not have the resources or equipment to record testimony made at its public hearings. It also does not have the resources to transcribe tape recordings of testimony. If the Committee does obtain additional resources in the future, or if recording equipment along with clerical staff to transcribe the recordings is made available through the local Fish and Game Department office, then the Committee might wish to consider whether it would be desirable to record testimony at its hearings. It is certainly useful to have a complete record before making decisions, but the Committee would no doubt wish to weigh the advantages against the disadvantages of possibly discouraging citizens from testifying.

ALLEGATION 13: Deliberations and voting on proposed game regulations by the Anchorage Area Advisory Committee at its March 15, 1978 hearing were held at such a late hour that it made it difficult or impossible for members of the public to attend that portion of the hearing.

Finding: Justified/Rectified.

At the Committee's March 15 hearing, testimony was heard from 7 p.m. to 11 p.m. on 265 proposals that had been submitted to the Game Board. At approximately 11 p.m. the Committee began its deliberations and voting on the various proposals, starting with the two proposals on which there had been the most public testimony. At approximately 11:25 p.m. the meeting was adjourned to a nearby restaurant because the auditorium that had been used up to that point was supposed to be vacated by 11 p.m. Deliberations and voting continued at the restaurant until approximately 3 a.m.

Several Committee members and a number of people in the audience opposed adjourning the meeting to another location because of the late hour. They requested that the deliberations and voting be continued on the following evening or at another suitable time. The Committee Chairman and a majority of the members of the Committee opposed meeting on another night because of schedule conflicts. As a result, approximately twenty people, who had stayed until 11:30 p.m. to listen to the deliberations and voting, did not attend the rest of the meeting held at the restaurant because of the late hour.

We find that the Committee did not allot sufficient time for testimony, deliberations and voting on the 265 proposals. We find that after 11:30 p.m. or midnight is an unreasonable hour to hold a public meeting. The holding of deliberations and voting at such a late hour serves to discourage public attendance at that part of the meeting. We believe that this problem could have been avoided by better planning and scheduling on the part of the Committee. The Committee has indicated to this office that they intend to schedule their hearings in the future on Saturdays or over two evenings when there are a large number of proposals for consideration. We believe that such a solution will afford a reasonable opportunity for public testimony as well as an opportunity for the public to observe the voting.

ALLEGATION 14: The Anchorage Advisory Committee extends special privileges at its hearings to Dave Harkness, the Area Biologist for the Department of Fish and Game; privileges that are not accorded to members of the public or to other agencies concerned with wildlife resources. Through this special status, Mr. Harkness is able to exercise considerable influence with the Anchorage Committee in opposing public proposals which run counter to the philosophies or policies of the Department of Fish and Game.

Finding: Partially Justified.

In our investigation of this allegation, we did not find any evidence of inappropriate conduct or wrongdoing on the part of Mr. Harkness. We did find a serious problem, however, with the procedure established by the Committee for receiving testimony at its hearings. We find that the procedure utilized by the Committee at its March 15, 1978 hearing on game regulation proposals was unfair, and it is on the basis of this particular problem that we find the complaint to be partially justified.

The area advisory committee system was set up to provide public input into the formulation of fish and game regulations. The advisory committees are supposed to be autonomous, and it was for this reason that the Alaska Administrative Code specifically prohibits Fish and Game Department personnel from being members of the advisory committees. However, the Fish and Game Department, as the agency responsible for collecting data and managing the resources, provides a significant amount of input into advisory committee hearings through the comments and presentations of local employees who attend advisory committee meetings.

At the hearing on March 15, 1978, the Anchorage Area Committee set down guidelines to limit the amount of time that each individual could testify due to the large number of people at the meeting. People in the audience were not allowed to make comments or ask questions of the person testifying. At the end of a person's alloted time, Committee members could ask the person questions, but people in the audience were not allowed to ask questions or make comments. This ground rule would have been reasonable had it been universally enforced. On a number of occasions, Dave Harkness, who was seated in the audience, was allowed to make comments on the testimony of individuals who were testifying. On two occasions, Mr. Harkness's comments were solicited by individual members of the Committee, while on several other occasions, his comments were unsolicited. In at least three of these cases, his comments directly contradicted the testimony of persons who had the floor. Mr. Harkness was the only individual allowed to make comments from the audience on another person's testimony. The Chairman of the Committee did not identify Mr. Harkness, and it was not clear whether Mr. Harkness was speaking as a private citizen or an employee of the Fish and Game Department. At no time during the hearing did Mr. Harkness or any other Fish and Game employee appear in front of the room to give testimony in the manner prescribed for other individuals. Mr. Harkness was also allowed to participate in the deliberations of the Committee prior to voting, a privilege that was not extended to other people in the audience.

We find that to afford Fish and Game Department employees the opportunity to interrupt and refute another person's testimony is unfair and improper. The Committee did not adhere to its own guidelines set forth at the outset of the meeting in which members of the audience were prohibited from making comments on the testimony of the individual who holds the floor. By soliciting Mr. Harkness' comments from the audience or allowing him to refute comments of the person testifying, the Committee places the Fish and Game Department Representative in an adversarial role against individuals giving testimony that conflicts with data provided by the Department or policies advocated by the Department. Such a procedure serves to intimidate the public and to discourage people from actively participating in the Committee hearing process. Since the opportunity to refute testimony of individuals or participate in the committee's deliberations was not granted to other individuals or representatives of other agencies, we find that the procedure utilized at the March 15 hearing provided Mr. Harkness with a special status inconsistent with the purpose of the advisory committee system.

The principal issue here is not one of limiting the input of Fish and Game Department personnel at advisory committee meetings, but rather the procedures and timing utilized to facilitate participation by the Fish and Game Department representatives. Fish and Game Department employees had the opportunity to make their own presentation before the Committee in the same manner as other individuals. Given the fact that the Fish and Game Department has much of the available data on the resources, it is not unreasonable for the Committee to provide a longer interval of time for Fish and Game people to make their presentation. Fish and Game employees should not have the right to interrupt and refute a person's testimony whenever they feel that person's testimony is erroneous or misleading. Committee members had the opportunity, under the guidelines set up at the beginning of the meeting, to ask questions of the person testifying to clarify any facts or points that might be unclear. We find that this provided a sufficient safeguard against misleading or erroneous data being given at the hearing. Fish and Game officials are not afforded the opportunity to interrupt and comment upon each person's testimony at the hearings of the Fisheries and Game Boards, and they should not be afforded such a privilege by area advisory committees.

OBSERVATIONS:

While this investigation has revealed some serious problems with the manner in which the Anchorage Area Advisory Committee conducts some of its activities, in some ways, it is surprising the Committee has done as well as it has in view of the complexity

of its tasks and the lack of procedural guidance and support from the Advisory Board Coordinator's office in Juneau. Committee members are not paid for their time, have limited resources, and can hardly be expected to bring with them to the Committee a background in public administration. We find that the Anchorage Committee, and by inference, other area advisory committees could benefit by greatly increased support and guidance from the Department. Following our recommendations to the Anchorage Committee, we are including a separate list of recommendations to the Advisory Committee Coordinator. We believe that these recommendations if adopted, will provide greater support and more information to the various advisory committees, and enable them to be more effective in carrying out their tasks.

RECOMMENDATIONS to the ANCHORAGE AREA ADVISORY COMMITTEE:

1. We recommend that the Anchorage Committee in cooperation with the Coordinator's office make a study to define and identify the resource users groups in the Anchorage area, as well as the constituencies and numbers of individuals in each user group. The purpose of this recommendation is to clarify what groups of resource users in the area the Committee does and should represent. It would seem likely that the Committee would make such an assessment periodically to assess changing patterns in resource user groups in the local area.

2. We recommend that the Anchorage Area Committee make a sustained effort to recruit and select new members to the Committee that represent resource users who are not currently represented or who are currently underrepresented.

3. We recommend that all meetings of the Anchorage Area Committee be given adequate public notice pursuant to 5 AAC 96.05.050 Bylaw Number 16.

4. We recommend that the Anchorage Area Committee make greater use of the resources available at the local Fish and Game Department office for the purpose of giving advance notice for their meetings. These resources would include access to mailing lists, posting notices at the Fish and Game Office and use of the office's telephone recorded message to the public.

5. We recommend that the Anchorage Committee make greater utilization of resources in the community for giving public notice of their meetings, such as posting notices in sporting goods stores and sending notices to local sportsmen's organizations, environmental groups, etc.

6. We recommend that the Anchorage Committee keep minutes of all of its meetings, including information on members present at each meeting, an estimate of the number of other people attending and a brief sketch of major issues discussed and any significant decisions made by the Committee.

7. We recommend that the Anchorage Committee have a copy of all the minutes of its meetings available for public inspection at all regular committee meetings.

8. We recommend that the Anchorage Committee make arrangements with the local Fish and Game Department office to post notices and to maintain copies of the Committee's minutes for public inspection.

9. We recommend that upon request, letters of nomination be made available for public inspection at regular Committee meetings. To avoid any misunderstanding, we also recommend that the Committee advise prospective nominees that the letters of nomination will be public documents and will be available to the public for inspection upon request.

10. We recommend that the Anchorage Committee submit either an annual report of its activities or copies of its meetings to the Advisory Committee Coordinator as required by State Regulations.

11. We recommend that the chairman or vice chairman of the Anchorage Committee obtain a copy of Roberts Rules of Order and utilize them as the basis for conducting Committee meetings.

12. We recommend that the Anchorage Committee restructure the guidelines for public testimony at its hearings in such a manner as to give both members of the public and employees of the Fish and Game Department ample opportunity to testify without being placed in unnecessarily adversarial roles.

RECOMMENDATIONS for the ADVISORY COMMITTEE COORDINATOR'S OFFICE:

1. We recommend that the Advisory Board Coordinator make a comprehensive survey of resource user groups throughout the State before setting guidelines for user group representation for advisory committees Statewide. Such a survey should include a polling of members of each committee as to the resource user groups in their local area, as well as to what extent those groups are represented by the Committee. Any guidelines established should give recognition to the vast differences between communities as well as regional differences.

2. We recommend that the Advisory Board Coordinators provide assistance to the local area committees in identifying resources that are available to the committees from local Fish and Game offices. These resources might include postage and mailing,

clerical assistance, posting of notices in Department Offices, utilization of telephone message recorders, and access to audio equipment for hearings and meetings when necessary.

3. We recommend that the Advisory Board Coordinator provide each advisory committee member with a resource handbook which explains the function of advisory committees and includes the relevant statutes and regulations. Other useful information which could be provided in the handbook would be an explanation of requirements for notifying the public of all meetings, requirements for making committee minutes and other documents available to the public on request, outline the basic concepts of Roberts Rules of Order, and basic statutory requirements concerning public meetings and records, etc.

4. We recommend that the Advisory Committee Coordinator's Office solicit budget requests from each committee annually in time for the committees to make their requests before the final budget requests are made by the Coordinator's office.

RECOMMENDATIONS for the LOCAL FISH AND GAME DEPARTMENT OFFICE IN ANCHORAGE:

1. We recommend that the Anchorage Office of the Fish and Game Department consult with the local advisory committee as to the possibility to making the following resources available to the local advisory committee:

a. facilities for posting notices and maintaining copies of committee minutes for public inspection;
b. use of the Office's recorded telephone message for giving public notice of committee meetings and activities;
c. use of Office clerical staff and mailing for committee business;
d. availability of audio and recording equipment for the committee's public hearings.

Since this report of the findings of our investigation includes formal recommendations by this office, may we please have a response from the Department and Committee within a reasonable length of time. Normally, a period of 30 days is provided, but given the time of year and the fact that the Anchorage Committee does not meet frequently during this time of year, we are willing to extend that length of time for the Advisory Committee, if you require more time to respond to our recommendations. Should you wish to discuss any part of this report, please feel free to call me at 276-4011. I am willing to undertake further discussions and negotiations, if necessary to reach reasonable and workable solutions to the Committee's problems.

Sincerely,

Frank Flavin

CHAIRMAN

H 60 (Rev. 12/78)

HB 306

February 27, 1979

The Honorable Terry Gardiner
Speaker of the House
Alaska State Legislature
Juneau, Alaska 99811

Dear Mr. Speaker:

Under the authority of art. III, sec. 18, of the Alaska Constitution, I am transmitting at the direction of Governor Jay S. Hammond a bill revising Alaska's fisheries tax.

This bill standardizes the tax rate and tax base for the fishery tax statute at six per cent of the raw value regardless of the species of fish being processed or method of processing.

Currently the tax statute contains several different rates and tax bases depending upon the type of fish processed and the type of processing used. For example, salmon canneries are currently taxed the heaviest based upon three per cent of the average wholesale price during the last five years. Freezer ships and floating cold storages are taxed at four per cent of the raw value while other canneries are taxed at two per cent of the raw value. Shore-based cold storages on the other hand are taxed at only one per cent of the raw value. This bill more equitably imposes a single rate for all processing operations and raises the rate to six per cent.

It is estimated that this change will raise approximately an additional 12 million dollars in the first year. The bill proposes to use this additional revenue to fund fishery enhancement projects at both the state and municipal level.

First of all, the bill provides that 1/3 of the revenue collected in a municipality will be shared with that municipality. Of that amount, 1/2 is general revenue sharing while the other 1/2 must be used for docks and other fishery enhancement programs. It is estimated that all municipalities will receive more revenue sharing under this bill than under current law by at least two times and in most cases by even more.

Secondly, the bill provides that 1/3 of the revenue may be appropriated by the legislature to the Commercial Fishing and Agriculture Bank until the bank is fully capitalized based upon the projected capital needs of the bank. This will provide badly needed capital for funding resident fishermen and fish processing needs. Without additional funding as proposed in this bill, it is doubtful that the state can afford additional appropriations into the Commercial Fishing and Agriculture Bank or other fishery enhancement projects this year.

Thirdly, the bill provides that the remaining 1/3 of the revenue would go to the general fund to maintain the present level of general fund revenues to the state.

I am concerned, under our present fiscal condition, about providing a funding source for future fishery enhancement programs in the state and this bill would provide that source at both the state and municipal level while at the same time making a badly needed reform of the outdated fishery tax statute.

Sincerely,

S/KD

III. ANALYSIS (See Fiscal Note Preparation Instructions, Section III)

It is estimated that this bill will raise an additional 12 million dollars and bring total fish tax collections to 20 million dollars. These collections will be split evenly among the general fund, revenue sharing to municipalities, and the commercial fishing and agriculture bank, until fully capitalized. It is estimated that revenue sharing to municipalities would be increased by about 4 million dollars as shown in the attached breakdown. It would also allow an annual appropriation to the commercial fishing and agriculture bank of approximately 7 million dollars. Revenue to the general fund would be increased by approximately 1 million dollars and then by a greater amount when the commercial fishing and agriculture bank is fully capitalized. A breakdown of the distribution of revenues is shown in the attached pages.

III. ANALYSIS (See Fiscal Note Preparation Instructions, Section III)

It is estimated that this bill will raise an additional 12 million dollars and bring total fish tax collections to 20 million dollars. These collections will be split evenly among the general fund, revenue sharing to municipalities, and the commercial fishing and agriculture bank, until fully capitalized. It is estimated that revenue sharing to municipalities would be increased by about 4 million dollars as shown in the attached breakdown. It would also allow an annual appropriation to the commercial fishing and agriculture bank of approximately 7 million dollars. Revenue to the general fund would be increased by approximately 1 million dollars and then by a greater amount when the commercial fishing and agriculture bank is fully capitalized. A breakdown of the distribution of revenues is shown in the attached pages.

February 27, 1979

The Honorable Terry Gardiner
Speaker of the House
Alaska State Legislature
Juneau, Alaska 99811

Dear Mr. Speaker:

Under the authority of art. III, sec. 18, of the Alaska Constitution, I am transmitting at the direction of Governor Jay S. Hammond a bill revising Alaska's fisheries tax.

This bill standardizes the tax rate and tax base for the fishery tax statute at six per cent of the raw value regardless of the species of fish being processed or method of processing.

Currently the tax statute contains several different rates and tax bases depending upon the type of fish processed and the type of processing used. For example, salmon canneries are currently taxed the heaviest, based upon three per cent of the average wholesale price during the last five years. Freezer ships and floating cold storages are taxed at four per cent of the raw value while other canneries are taxed at two per cent of the raw value. Shore-based cold storages on the other hand are taxed at only one per cent of the raw value. This bill more equitably imposes a single rate for all processing operations and raises the rate to six per cent.

It is estimated that this change will raise approximately an additional 12 million dollars in the first year. The bill proposes to use this additional revenue to fund fishery enhancement projects at both the state and municipal level.

First of all, the bill provides that 1/3 of the revenue collected in a municipality will be shared with that municipality. Of that amount, 1/2 is general revenue sharing while the other 1/2 must be used for docks and other fishery enhancement programs. It is estimated that all municipalities will receive more revenue sharing under this bill than under current law by at least two times and in most cases by even more.

Secondly, the bill provides that 1/3 of the revenue may be appropriated by the legislature to the Commercial Fishing and Agriculture Bank until the bank is fully capitalized based upon the projected capital needs of the bank. This will provide badly needed capital for funding resident fishermen and fish processing needs. Without additional funding as proposed in this bill, it is doubtful that the state can afford additional appropriations into the Commercial Fishing and Agriculture Bank or other fishery enhancement projects this year.

Thirdly, the bill provides that the remaining 1/3 of the revenue would go to the general fund to maintain the present level of general fund revenues to the state.

I am concerned, under our present fiscal condition, about providing a funding source for future fishery enhancement programs in the state and this bill would provide that source at both the state and municipal level while at the same time making a badly needed reform of the outdated fishery tax statute.

Sincerely,

S/KD

Kent Dawson
Executive Assistant
to the Governor

HB 306

Article 1. Salmon Canneries and Certain Fish Processors.

Section
10. Fisheries business licenses
20. Application for license
30. Filing return and payment of tax
50. Violations and penalties
55. Security for collection of taxes

Sec. 43.75.010. Fisheries business licenses. (a) A person engaging or attempting to engage in any of the following lines of business in connection with the state's commercial fisheries shall first obtain a license on the basis of the following license taxes which are hereby levied.

(1) Salmon canneries, both shore-based and floating, shall pay an annual tax equal to three per cent of the value of the raw fish purchased or obtained for canning during the year. For the purpose of this license, the raw fish value of each kind of salmon is considered to be a dollar value equal to the average wholesale price obtained for the finished product by Alaska salmon canneries during the months of August, September, October, November and December of the last five years immediately preceding the license year. Salmon received by salmon canneries and diverted for purposes other than canning are valued at the average prevailing price on the fresh fish market for that fish and are subject to an annual license tax of one per cent of the value.

(2) Herring processing plants in the business of canning, curing, salting, freezing, or making meal or oil or other processed products including sale of bait herring by either processing plant or bait herring fisherman shall pay an annual license tax equal to one per cent of the value of the raw herring. The value of the raw material under this license is the actual price paid for the herring including indirect considerations such as fuel or supplies furnished by the processor or offsets to the cash value for gear furnished. This value applies to herring caught in company-owned or subsidized boats operated by employees of the processor or under lease or other agreement.

(3) Crab canneries, both shore-based and floating shall pay an annual license tax equal to two per cent of the value of the raw crabs. The raw crab value for the purpose of this license is the actual price paid for the raw crab either by cash or its equivalent according to (2) of this section for herring processing plants.

(4) Clam canneries shall pay a license tax equal to two per cent of the value of the raw clams, with the value to be determined according to (3) of this section for crab canneries, on razor clams. Butter clams are taxed in the same manner at the rate of one per cent of the value of the raw clams.

(b) "Wholesale price" includes all receipts whether in the form of money, credits, or other valuable considerations received from the sale of the finished product without deduction for the cost of property sold, the cost of the material used, insurance costs, labor or service costs, label and labeling costs, transportation and storage cost, interest paid,

taxes, losses, or any other expense except cash discounts allowed on sales not to exceed one and one-half percent, commissions actually paid to independent brokers not to exceed five per cent, and swell allowance not to exceed one-tenth of one per cent.

(c) The person, firm, or corporation engaging or attempting to engage in the above lines of business who actually and physically cans or processes the above fishery resources shall be liable for and shall pay to the department the whole tax imposed by this section. In determining this tax liability the person, firm, or corporation may not deduct from the value of the raw fishery resources canned or processed the value of any raw fishery resources canned or processed for other persons, firms, or corporations, but shall include this as a part of the value of the raw product obtained for canning or processing. (§ 1 ch 82 SLA 1949; am § 1 ch 113 SLA 1951; am § 1 ch 146 SLA 1962; am §§ 1, 2 ch 84 SLA 1967)

Revisor's note. — Section 1 ch 113 SLA 1951 began "Subsection (a) of Section 1 of Chapter 82, Session Laws of Alaska 1949, is hereby amended to read as follows:" and after these words appeared subsection (a), incorporating the rate amendment, but eliminating a paragraph numbered (1) which appeared in ch 82 SLA 1949. Section 1 ch 146 SLA 1962 makes a similar amendment, again without mentioning the paragraph numbered (1). This paragraph appears in AS 43.75.010 as the last sentence of subsection (1) and is included in the revision on the assumption that there was no legislative intention to omit it.

Effect of amendment. — The 1967 amendment substituted "three per cent" for "six per cent" in the first sentence of subsection (a) (1), deleted "50 per cent of" preceding "the average wholesale price" in the second sentence of such subsection, inserted "the last five years immediately preceding" in such sentence, and added subsection (c).

A tax on the business of catching and canning salmon is not a property tax. Pacific Am. Fisheries v. Territory of Alaska, 2 F.2d 9 (9th Cir. 1924), aff'd, 269 U.S. 269, 46 S. Ct. 110, 70 L. Ed. 270 (1925).

"Canning" is activity of salmon canners which is taxed. — Under this section the salmon cannery activity which is taxed is that of "canning," whether the raw fish are "purchased or otherwise obtained." Arctic Maid v. Territory of Alaska, 277 F.2d 120 (9th Cir. 1960), rev'd on other grounds, 366 U.S. 199, 81 S. Ct. 929, 6 L. Ed. 2d 227 (1961).

No discrimination in favor of local canners against freezer ships. — As between the tax laid on local canners by this section and those laid on "freezer ships," by AS 43.75.060 there is no discrimination in favor of the former and against the latter. Alaska v. Arctic Maid, 366 U.S. 199, 81 S. Ct. 929, 6 L. Ed. 2d 227 (1961).

Since tax on freezer ships did not exceed six per cent. — No matter how the tax on "freezer ships" is computed, it did not exceed the six per cent tax on local canners imposed by this section. Alaska v. Arctic Maid, 366 U.S. 199, 81 S. Ct. 929, 6 L. Ed. 2d 227 (1961).

And any difference does not violate commerce clause. — If there is a difference between the taxes imposed on freezer ships and the taxes imposed on their competitors, they are not so "palpably disproportionate" as to run afoul of the commerce clause. Alaska v. Arctic Maid, 366 U.S. 199, 81 S. Ct. 929, 6 L. Ed. 2d 227 (1961).

For case discussing priority of claims for license taxes under prior law in a bankruptcy proceeding, see In re King Salmon Fisheries Co., 7 Alaska 97 (1923).

Constitutionality of former provisions taxing salmon canneries on basis of number of cases packed. — See Territory of Alaska v. Pacific Am. Fisheries, 7 Alaska 160 (1924), aff'd, 2 F.2d 9 (9th Cir. 1924).

aff'd, 269 U.S. 269, 46 S. Ct. 110, 70 L. Ed. 270 (1925).

Applied in Schlothan v. Territory of Alaska, 276 F.2d 806 (9th Cir. 1960), cert. denied, 362 U.S. 990, 80 S. Ct. 1079, 4 L. Ed. 2d 1022 (1960); Territory of Alaska v. Arctic Maid, 16 Alaska 126, 140 F. Supp. 190 (D. Alas. 1956), aff'd, 366 U.S. 199, 81 S. Ct. 929, 6 L. Ed. 2d 227 (1961).

Am. Jur. reference. — 51 Am. Jur., Taxation, § 594.

Sec. 43.75.020. Application for license. (a) Application for a license shall be filed with the Department of Revenue and accompanied by an initial fee of $25. A separate initial fee is required for each plant specified in the application covered by the license. The application shall contain the name of the applicant, the line of business to be licensed, place of business, and other facts which the department prescribes. The applicant shall state that he agrees to pay the license tax, and that he will make a return and pay the tax at the time provided by law.

(b) Upon receipt of the application in proper form accompanied by the initial fee, the department shall issue the license as of the date the application is filed or mailed, and the applicant may carry on the business from the date the application was actually made. (§ 2 ch 82 SLA 1949)

Sec. 43.75.030. Filing return and payment of tax. (a) A person subject to the tax shall file a return stating the value of raw fisheries products processed during the license year, computed as required by §§ 10 — 50 of this chapter, and such other information as the department prescribes by regulation. The return shall show the license number and shall be signed by the taxpayer or his authorized agent, under penalty of perjury. If a receiver, trustee, or assign is operating the property or business, he shall file the return for the person. A tax due on the basis of such a return shall be collected in the same manner as if collected from the person of whose business he has custody and control.

(b) The return shall be made on the basis of the calendar year to the Department of Revenue at Juneau before April 1 after the close of the calendar year.

(c) The department may prescribe regulations for the granting of a reasonable extension of time for filing and may grant an extension of time for filing.

(d) The tax shall be paid before April 1 after the close of the calendar year.

(e) Every person engaging or attempting to engage in a business for which a license is required under §§ 10 — 50 of this chapter shall keep such records, make such statements under oath, file such returns, and comply with such regulations as the commissioner of revenue may prescribe.

(f) When the department considers it is necessary, it may require a person, by notice served upon him, to file a return, make such statements under oath, or keep and display to it such records as it considers

sufficient to show the tax for which the person is liable. If a person fails to file a return as prescribed by law or by regulation, or makes, wilfully or otherwise, a false or fraudulent return, the department shall make the return from the information which it can obtain. A return made by the department is prima facie good and sufficient for all legal purposes. (§ 3 ch 82 SLA 1949; am §§ 2, 3 ch 146 SLA 1962)

Applied in Schlothan v. Territory of Alaska, 276 F 2d 806 (9th Cir.), cert. denied, 362 U.S. 990, 80 S. Ct. 1079, 4 L. Ed. 2d 1022 (1960).

Sec. 43.75.050. Violations and penalties. (a) Repealed by § 3 ch 166 SLA 1976.

(b) Repealed by § 3 ch 166 SLA 1976.

(c) If a part of a deficiency in the tax is due to fraud with intent to evade tax, 50 per cent of the total amount of the deficiency, in addition to the deficiency, shall be assessed and collected.

(d) Repealed by § 3 ch 166 SLA 1976.

(e) Repealed by § 4 ch 94 SLA 1976.

(f) A person who wilfully fails to obtain a license, pay a tax, make a return, keep or display a record, or supply the information at the time required by law or regulation, in violation of §§ 10 — 55 of this chapter, is, in addition to other penalties provided by law, guilty of a misdemeanor, and upon conviction is punishable by a fine of not more than $1,000, or by imprisonment for not more than one year, or by both, together with the cost of prosecution.

(g) A person who wilfully makes and subscribes a return which he does not believe to be true and correct as to every material matter is guilty of a felony, and, upon conviction, is subject to the penalty prescribed for perjury.

(h) In this section "person" includes an officer, agent, or employee of a corporation or a member, agent, or employee of a partnership who, as an officer, agent, employee, or member, is under duty to perform the act in respect to which the violation occurs. (§ 4 ch 82 SLA 1949; am § 1 ch 17 SLA 1968; am §§ 1, 2 ch 55 SLA 1968, am § 4 ch 94 SLA 1976; am § 3 ch 166 SLA 1976)

Cross references. — For civil penalty imposed for failure to file a return or report, or pay the full amount of a tax, or a portion of a deficiency of the tax, see AS 43.05.220. As to interest on taxes, see AS 43.05.225. For provisions creating a lien for unpaid taxes or license fees, see AS 43.10.035.

Effect of amendments. — The first 1976 amendment repealed subsection (e), which made a tax under this article and the penalties and interest on the tax a lien, and provided generally for such lien.

The second 1976 amendment repealed subsections (a), (b) and (d), which provided for an additional amount to be added to the tax for failure to file a return within the time prescribed by law or regulation due to wilful neglect, for a penalty if the tax is not paid when due, and for the assessment and collection of interest on the amount determined as the deficiency in the tax, respectively.

Legislative committee report. — For report on ch. 55, SLA 1968 (HB 484), see 1968 House Journal, p. 324.

This section relates to the license tax imposed on salmon canneries. Territory of Alaska v. Arctic Maid, 16 Alaska 126, 140 F. Supp. 190 (D. Alas. 1956), aff'd, 366 U.S. 199, 81 S. Ct. 929, 6 L. Ed. 2d 227 (1961).

Qualifying as taxpayer under duress. — One need not incur the risk of penalties, while the validity of the tax is being ascertained judicially, in order to qualify as a taxpayer under duress. State v. Wakefield Fisheries, Inc., Sup. Ct. Op. No. 779 (File Nos. 1397, 1398), 495 P.2d 166 (1972).

For cases construing former provisions similar to repealed subsection (e), see Territory of Alaska v. Arctic Maid, 16 Alaska 126, 140 F. Supp. 190 (D. Alaska 1956), aff'd, 366 U.S. 199, 81 S. Ct. 929, 6 L. Ed. 2d 227 (1961); Schlothan v. Einstoss, 17 Alas. 253 (1957), aff'd, 276 F.2d 806 (9th Cir.), cert. denied, 362 U.S. 990, 80 S. Ct. 1079, 4 L. Ed. 2d 1022 (1960); Schlothan v. Territory of Alaska, 276 F.2d 806 (9th Cir.), cert. denied, 362 U.S. 990, 80 S. Ct. 1079, 4 L. Ed. 2d 1022 (1960).

Applied in Territory of Alaska v. American Can Co., 14 Alaska 534, 117 F. Supp. 819 (D. Alas. 1954); Territory of Alaska v. Arctic Maid, 15 Alaska 667, 135 F. Supp. 164 (D. Alas. 1955).

Quoted in Territory of Alaska v. Craig Enterprises, Sup. Ct. Op. No. 14 (File No. 3), 355 P.2d 397 (1960).

Sec. 43.75.055. Security for collection of taxes. Each applicant for a license under this chapter shall in or with his application state under oath the amount of each of the products which he expects to produce during the license year. The applicant shall further state the extent of lienable real property owned by the applicant in the state against which the tax may be collected and other information with respect to description, location and value of the property which the department prescribes. If the lienable value of the property is not equal to three times the amount of the tax for which the applicant will probably be liable under this section, the department may not issue the license until the applicant files with the department a surety bond approved by the attorney general in a penal sum equal to twice the probable amount of the tax for which the applicant will be liable, conditioned upon payment of the tax in full when due, with interest if not paid before delinquency. The department may waive the bond requirement if the applicant posts other security in the form of collateral acceptable to the department. (§ 4 ch 84 SLA 1967)

Article 2. Cold Storages and Other Fish Processors.

Section		Section	
60	Fisheries business licenses	90	Violations and penalties
70	License application and fe	95	Security for collection of taxes
80	Duty to pay tax and keep records		

Sec. 43.75.060. Fisheries business licenses. A person engaging or attempting to engage in any of the following lines of business in connection with the state's commercial fisheries shall first obtain a license.

(1) Shore-based cold storages and other fish processors, except salmon canneries, herring processing plants, crab canneries, and clam canneries otherwise licensed shall pay an annual license tax equal to one per cent of the value of the raw halibut, halibut livers and viscera,

salmon and bottom fish, shellfish or other fishing resource bought or obtained for processing through freezing, salting, or other method. The value of the raw material under §§ 60 — 90 of this chapter is the actual price paid for it, including indirect considerations such as fuel or supplies furnished by the processor or offsets to the cash value for gear furnished. The value applies to the raw material procured in company-owned or subsidized boats operated by employees of the processor or under lease or other arrangement.

(2) Freezer ships and other floating cold storages shall pay an annual license tax equal to four per cent of the value of the raw halibut, halibut livers and viscera, salmon and bottom fish, shellfish, or other fishing resource bought or obtained for processing through freezing, salting, or other method, or the taking of crab for export without such processing. The value of the raw material under §§ 60 — 90 of this chapter is the actual price paid for it including indirect considerations such as fuel or supplies furnished by the processor or offsets to the cash value for gear furnished. The value applies to the raw material procured in company-owned or subsidized boats operated by employees of the processor or under lease or other arrangement.

(3) In (1) of this section, "shore-based cold storages and other fish processors" mean those cold storages and processing plants which are permanently attached to the land or have remained in the same location for a period of not less than one calendar year. Any cold storage or processing plant removed from the state is a floating cold storage under (2) of this section from the day of removal.

(4) Cold storages and fish processing plants which are not shore-based under (3) of this section are "floating cold storages" under (2) of this section.

(5) The person, firm, or corporation engaging or attempting to engage in the above lines of business who actually and physically processes the above fishery resources shall be liable for and shall pay to the department the whole tax imposed by this section. In determining this tax liability the person, firm, or corporation may not deduct from the value of the raw fishery resources processed the value of any raw fishery resources processed for other persons, firms, or corporations, but shall include this as a part of the value of the raw product obtained for processing. (§ 1 ch 97 SLA 1949; am § 1 ch 116 SLA 1951; am § 1 ch 102 SLA 1955; am § 1 ch 88 SLA 1966; am § 3 ch 84 SLA 1967)

History of section. — See State v. Wakefield Fisheries, Inc., Sup. Ct. Op. No. 779 (File Nos. 1397, 1398), 495 P.2d 166 (1972); State v. Reefer King Co., Sup. Ct. Op. No. 1344 (File Nos. 2605, 2606, 2607), 539 P.2d 56 (1976).

Effect of 1966 amendment. — Prior to the 1966 amendment, the legislature intended to distinguish between types of processes as well as locale of the operation. The higher tax was directed at those particular floating processors who could otherwise evade local regulation and taxation, yet exploit a valuable state resource. State v. Wakefield Fisheries, Inc., Sup. Ct. Op. No. 779 (File Nos. 1397, 1398), 495 P.2d 166 (1972).

"It was the 1966 amendment to the statute which first created a distinction between "shore-based" and "floating" processors

based solely on the movements and locations of the vessels. State v. Reefer King Co., Sup. Ct. Op. No. 1344 (File Nos. 2605, 2606, 2607), 559 P.2d 56 (1976).

Prior to 1966, the primary distinguishing feature of the "floating" processor was its method of processing its catch, rather than its movement in the waters. At that time, the higher four percent tax was directed only at floating freezer or "cold storage" ships which took crab for export without processing it in Alaska. All other processors, both ashore and afloat, were taxed at the lower rate of one percent. State v. Reefer King Co., Sup. Ct. Op. No. 1344 (File Nos. 2605, 2606, 2607), 559 P.2d 56 (1976).

Characterization of legislative intent in State v. Wakefield Fisheries, Inc., no longer meaningful. — The characterization of the legislative intent in State v. Wakefield Fisheries, Inc., Sup. Ct. Op. No. 779 (File Nos. 1397, 1398), 495 P.2d 166 (1972), which was based on an earlier version of this section, is no longer meaningful since this section was amended to remove the distinction between types of processors and to widen the class of processors to be subject to the higher tax. State v. Reefer King Co., Sup. Ct. Op. No. 1344 (File Nos. 2605, 2606, 2607), 559 P.2d 56 (1976).

This section imposes no burden on interstate commerce, or any artificial rigidity on the salmon industry, by requiring the catching of salmon in Alaska and imposing restrictions on the shipment of fish out of Alaska prior to canning. Territory of Alaska v. Arctic Maid, 16 Alaska 126, 140 F. Supp. 190 (D. Alas. 1956), aff'd, 366 U.S. 199, 81 S. Ct. 929, 6 L. Ed. 2d 227 (1961).

This section, which imposes a higher tax upon "floating" processors than upon "shore-based" processors, is not unconstitutional as applied to floating processors on the ground that it violates the commerce clause of the United States Constitution. State v. Reefer King Co., Sup. Ct. Op. No. 1344 (File Nos. 2605, 2606, 2607), 559 P.2d 56 (1976).

Since the classification of processing ships as "floating" processors is based not upon their interstate movement, but upon their movement within Alaskan waters, for the purposes of application of this section, there is no interstate movement, and, therefore, there is no burden nor even an incidental impact upon interstate commerce. State v. Reefer King Co., Sup. Ct. Op. No. 1344 (File Nos. 2605, 2606, 2607), 559 P.2d 56 (1976).

Nor does it affect fish laws of United States. — The imposition by the Alaska legislature of license taxes under this section relating to the commercial fisheries of Alaska to provide revenue does not in any way alter, amend, modify, or repeal the existing fish laws of the United States applicable to Alaska. Territory of Alaska v. Arctic Maid, 16 Alaska 126, 140 F. Supp. 190 (D. Alas. 1956), aff'd, 366 U.S. 199, 81 S. Ct. 929, 6 L. Ed. 2d 227 (1961).

Classification of section does not deny equal protection. — The classification which imposes different tax rates on "floating" and "shore-based" processors does not constitute a violation of the federal and state guarantees of equal protection. State v. Reefer King Co., Sup. Ct. Op. No. 1344 (File Nos. 2605, 2606, 2607), 559 P.2d 56 (1976).

It was not arbitrary for the legislature to conclude that "shore-based" processors, with at least a year's commitment to one location, were to be preferred over floating processors, which distributed economic benefits over several locations. State v. Reefer King Co., Sup. Ct. Op. No. 1344 (File Nos. 2605, 2606, 2607), 559 P.2d 56 (1976).

The distinction between mobile and stationary processors can easily be characterized as a tax incentive, to encourage "shore-based" processors, and in this light, the tax differential bears a fair and substantial relationship to the goal of encouraging societal contributions of the type made by "shore-based" processors, especially since conversion from "floating" to "shore-based" is a simple matter of remaining in one location for a calendar year. State v. Reefer King Co., Sup. Ct. Op. No. 1344 (File Nos. 2605, 2606, 2607), 559 P.2d 56 (1976).

It is valid legislative classification. — Imposing a tax of one per cent on the value of fish taken on the line of business of shore-based cold storages, while imposing a four per cent tax on the line of business of freezer ships and other floating cold storages is a valid legislative classification. Territory of Alaska v. Arctic Maid, 16 Alaska 126, 140 F. Supp. 190 (D. Alas. 1956), aff'd, 366 U.S. 199, 81 S. Ct. 929, 6 L. Ed. 2d 227 (1961).

And there is no discrimination in this section between residents and nonresidents. Territory of Alaska v. Arctic Maid, 16 Alaska 126, 140 F. Supp. 190 (D. Alas. 1956), aff'd, 366 U.S. 199, 81 S. Ct. 929, 6 L. Ed. 2d 227 (1961).

Nor between *freezer* ship operators and local canners under AS 43.75.010. — As between the tax laid on local canners by AS

43.75.010 and those laid on "freezer ships," by this section there is no discrimination in favor of the former and against the latter, for no matter how the tax on "freezer ships" is computed, it did not exceed the six per cent tax on the local canners. Alaska v. Arctic Maid, 366 U.S. 199, 81 S. Ct. 929, 6 L. Ed. 2d 227 (1961).

And any difference is not invalid under the commerce clause. — If there is a difference between the taxes imposed on these freezer ships and the taxes imposed on their competitors, they are not so "palpably disproportionate" as to run afoul of the commerce clause. Alaska v. Arctic Maid, 366 U.S. 199, 81 S. Ct. 929, 6 L. Ed. 2d 227 (1961).

The tax imposed by this section is an occupation tax. Alaska v. Arctic Maid, 366 U.S. 199, 81 S. Ct. 929, 6 L. Ed. 2d 227 (1961).

It is computed on the "value" of the fish bought or obtained for processing through freezing. Alaska v. Arctic Maid, 366 U.S. 199, 81 S. Ct. 929, 6 L. Ed. 2d 227 (1961).

"Value" is the measure of the tax, not the taxable event. — Alaska v. Arctic Maid, 366 U.S. 199, 81 S. Ct. 929, 6 L. Ed. 2d 227 (1961).

The taxable event is "prosecuting" the "business" of "freezer ships and other floating cold storages." Alaska v. Arctic Maid, 366 U.S. 199, 81 S. Ct. 929, 6 L. Ed. 2d 227 (1961).

In freezer ship operations there is a preliminary local business being conducted, an occupation made up of a series of local activities which the state can constitutionally reach. Catching the fish or obtaining them in other ways from the local market is but an extension of the freezer ship's operations within Alaska's waters. Alaska v. Arctic Maid, 366 U.S. 199, 81 S. Ct. 929, 6 L. Ed. 2d 227 (1961).

The process of gathering fish either through the catcher boats that are a part of a freezer ship fleet or through independent operators is a "local activity." Alaska v. Arctic Maid, 366 U.S. 199, 81 S. Ct. 929, 6 L. Ed. 2d 227 (1961).

Which state may tax. — Alaska's jurisdiction to tax freezer ship operations within her territorial waters — whether those activities are taking fish or purchasing fish taken by others — is clear. Alaska v. Arctic Maid, 366 U.S. 199, 81 S. Ct. 929, 6 L. Ed. 2d 227 (1961).

Where some of the fish taken by freezer ship operators were taken in Alaska's waters or otherwise acquired there, the freezer ship operators were engaged in business in Alaska when they operated their freezer ships. Alaska v. Arctic Maid, 366 U.S. 199, 81 S. Ct. 929, 6 L. Ed. 2d 227 (1961).

"Freezer ships" and "factory ships" distinguished. — See State v. Wakefield Fisheries, Inc., Sup. Ct. Op. No. 779 (File Nos. 1397, 1398), 495 P.2d 166 (1972).

The test contained in subsection (3) is clear and unequivocal. A broad reading of this provision is not demanded. State v. Reefer King Co., Sup. Ct. Op. No. 1344 (File Nos. 2605, 2606, 2607), 559 P.2d 56 (1976).

The type of attachment contemplated by subsection (3) is some palpable physical attachment or a permanent berthing. State v. Reefer King Co., Sup. Ct. Op. No. 1344 (File Nos. 2605, 2606, 2607), 559 P.2d 56 (1976).

Vessel situated in such a manner as to permit pedestrian access from land onto the processing vessel would meet this test. State v. Reefer King Co., Sup. Ct. Op. No. 1344 (File Nos. 2605, 2606, 2607), 559 P.2d 56 (1976).

Removal of vessels for repairs. — Removal of vessels from the state for drydock repairs does not require reclassification under the higher rate of taxation. State v. Wakefield Fisheries, Inc., Sup. Ct. Op. No. 779 (File Nos. 1397, 1398), 495 P.2d 166 (1972).

Removal of vessels for periodic repairs and maintenance should not destroy the continuity of the period during which the vessels are deemed to be at fixed locations for one calendar year. State v. Wakefield Fisheries, Inc., Sup. Ct. Op. No. 779 (File Nos. 1397, 1398), 495 P.2d 166 (1972).

Processors disqualified from "shore-based" status. — Where, in addition to the yearly trips to Seattle for maintenance, the processors also sailed among several Alaskan communities to conduct their processing operations, they were disqualified from "shore-based" status under this section. State v. Reefer King Co., Sup. Ct. Op. No. 1344 (File Nos. 2605, 2606, 2607), 559 P.2d 56 (1976).

To the extent that the continued operations of a processing vessel demand out-of-state ship maintenance, vessel movement will not be deemed to eliminate a processor's "shore-based" status. But a processor which engages in the type of activity as do processors sailing among several Alaskan communities to conduct their processing operations cannot expect to be able to claim "shore-based" status. State v. Reefer King Co., Sup. Ct. Op. No. 1344 (File Nos. 2605, 2606, 2607), 559 P.2d 56 (1976).

No showing that state selectively enforced this section against certain floating processors. — See State v. Reefer King Co., Sup. Ct. Op. No. 1344 (File Nos. 2605, 2606, 2607), 559 P.2d 56 (1976).

Applied in Arctic Maid v. Territory of Alaska, 277 F.2d 120 (9th Cir. 1960), rev'd in 366 U.S. 199, 81 S. Ct. 929, 6 L. Ed. 2d 227 (1961).

Am. Jur. reference. — 51 Am. Jur., Taxation, § 594.

Sec. 43.75.070. License application and fee. (a) Application for a license shall be filed with the Department of Revenue and accompanied by an initial fee of $25. A separate initial fee is required for each plant specified in the application. The application shall contain the name, the line of business, place where the business is to be carried on, and other facts which the department prescribes. The applicant shall state that he agrees to pay the license tax, make a true return, and pay the tax at the time provided by law.

(b) Upon receipt of the application in the proper form accompanied by the initial fee, the department shall issue the license as of the date the application is filed or mailed, and the applicant may carry on the business from the date the application was actually made. (§ 2 ch 97 SLA 1949)

Sec. 43.75.080. Duty to pay tax and keep records. The requirements for making returns, the time and place for payment of tax, and the obligation to keep records and make them available to the department are the same as prescribed in the business license tax law for salmon canneries. (§ 3 ch 97 SLA 1949)

Sec. 43.75.090. Violations and penalties. (a) The liability to file returns and pay interest and deficiency assessments, and the subjection of property to liens are the same as prescribed in the license tax law for salmon canneries.

(b) A violation of §§ 60 — 95 of this chapter or the regulations issued under §§ 60 — 95 of this chapter is a misdemeanor subject to punishment as prescribed in the business license tax law for salmon canneries. (§ 4 ch 97 SLA 1949; am § 1 ch 30 SLA 1968)

Cross reference. — See note to AS 43.75.050.

Legislative committee report. — For report on ch. 30, SLA 1968 (HB 412), see 1968 House Journal, p. 144.

Qualifying as taxpayer under duress. — One need not incur the risk of penalties, while the validity of the tax is being ascertained judicially, in order to qualify as a taxpayer under duress. State v. Wakefield Fisheries, Inc., Sup. Ct. Op. No. 779 (File Nos. 1397, 1398), 495 P.2d 166 (1972).

Sec. 43.75.095. Security for collection of taxes. Each applicant for a license under this chapter shall in or with his application state under oath the amount of each of the products which he expects to produce during the license year. The applicant shall further state the extent of lienable real property owned by the applicant in the state against which the tax may be collected and other information with respect to

description, location and value of the property which the department prescribes. If the lienable value of the property is not equal to three times the amount of the tax for which the applicant will probably be liable under this section, the department may not issue the license until the applicant files with the department a surety bond approved by the attorney general in a penal sum equal to twice the probable amount of the tax for which the applicant will be liable, conditioned upon payment of the tax in full when due, with interest if not paid before delinquency. However, if the applicant purchases salmon for export from Alaska in the round, the amount of the bond shall be $50,000 unless the applicant is the owner of lienable real property in the state of a value of at least $50,000, and the bond shall be conditioned upon payment to the fisherman of the full purchase price for the salmon and the payment of the tax in full when due. The department may waive the bond requirement if the applicant posts other security in the form of collateral acceptable to the department or prepays the estimated tax. (§ 5 ch 84 SLA 1967)

Article 3. Taking of Fisheries Products Which Are Sold Outside Taxing Jurisdiction.

Section
100 Tax imposed on taking of fisheries products
110 Duty of taxpayer and payment of tax
120 Violations and penalties

Sec. 43.75.100. Tax imposed on taking of fisheries products. A person taking the fisheries products enumerated in §§ 10 — 50 or 60 — 90 of this chapter who sells the products to freezer ships, floating cold storages or floating canneries outside the taxing jurisdiction of the state is subject to the tax set out in §§ 10 — 50 of this chapter for the fisheries products enumerated in §§ 10 — 50 of this chapter, and is subject to the tax set out in §§ 60 — 90 of this chapter for the fisheries products enumerated in §§ 60 — 90 of this chapter. (§ 1 ch 190 SLA 1959)

Am. Jur. references. — 11 Am Jur, Commerce, § 119, 51 Am Jur, Taxation, §§ 302, 306

Sec. 43.75.110. Duty of taxpayer and payment of tax. A person subject to taxes under §§ 100 — 120 of this chapter shall make a return stating the value of raw fisheries products taken during the license year for sale to freezer ships, floating cold storages, or floating canneries outside of the taxing jurisdiction of the state computed as required by §§ 100 — 120 of this chapter, and other information to carry out the provisions of §§ 100 — 200 of this chapter as may be prescribed by the department. The return shall contain the license number and shall be signed by the taxpayer or his authorized agent, under penalty of perjury.

If a receiver, trustee, or assign is operating the property or business, he shall make the return for the person. A tax due on the basis of such return shall be collected in the same manner as if collected from the person of whose business he has custody and control. The requirements for time and place of payment of tax, and the obligation to keep records and make the records available to the commissioner of revenue are the same as those prescribed in the business license tax law for salmon canneries. (§ 2 ch 190 SLA 1959)

Sec. 43.75.120. Violations and penalties. (a) The liability to file returns and pay interest and deficiency assessments, and the subjection of property to liens is the same as prescribed in the business license tax law for salmon canneries.

(b) A violation of §§ 100 — 120 of this chapter or the regulations issued under §§ 100 — 120 of this chapter is a misdemeanor subject to punishment as prescribed in the business license tax law for salmon canneries. (§ 3 ch 190 SLA 1959)

Article 4. General Provisions.

Section
130. Refund to local governments
135. Additional refund to boroughs and cities

Sec. 43.75.130. Refund to local governments. The commissioner of revenue shall pay to each organized borough and each city of the first class 10 per cent of the amount of tax revenue collected in the borough or city from taxes levied by §§ 10 — 90 of this chapter. (§ 6 ch 155 SLA 1962; am § 75 ch 69 SLA 1970; am § 10 ch 218 SLA 1976)

Effect of amendment. — The 1976 amendment substituted "city of the first class" for "city of the first, second, and third classes."

Legislative committee report. — For report on ch. 69, SLA 1970 (HB 564), see 1970 House Journal Supplement No. 2, p. 7.

Sec. 43.75.135. Additional refund to boroughs and cities. In addition to the payment allowed in § 130 of this chapter, the commissioner of revenue shall pay to each organized borough 10 per cent of the amount of tax revenue collected in the borough from taxes levied by §§ 10 — 90 of this chapter and shall pay to each city of the first class located in the unorganized borough 10 per cent of the amount of the tax revenue collected in the city from taxes levied by §§ 10 — 90 of this chapter. (§ 1 ch 89 SLA 1963; am § 1 ch 120 SLA 1969; am § 11 ch 218 SLA 1976)

Effect of amendment. — The 1976 amendment substituted "city of the first class" for "city of the first, second, and third classes."

STATE OF ALASKA

JAY S. HAMMOND, GOVERNOR

DEPARTMENT OF REVENUE

OFFICE OF THE COMMISSIONER / POUCH S - JUNEAU 99811

March 8, 1979

The Honorable Alvin Osterback
Co-Chairman
House Resource Committee
Alaska State Legislature
Pouch V
Juneau, AK 99811

Dear Representative Osterback:

You have requested the Department of Revenue look at fish tax receipts that would be collected if a tax rate based on the effective current canned salmon rate was applied uniformly.

The breakdown of revenues on the attached sheets is based on a tax rate of 4.45 percent. This rate was arrived at by taking the raw value of salmon used by canneries, $121,758,700 (based on Fish And Game Catch Estimates) and dividing it by the FY 1978 tax collected from canneries, $5,420,438.

The total amount of revenue that would be collected using a 4.45 percent rate would be $15,205,850. A further breakdown of this total is attached for your information.

Sincerely,

John R. Messenger
Acting Commissioner

04-02LH

III. ANALYSIS (See Fiscal Note Preparation Instructions, Section III)

If a tax rate of 4.45 percent is used as a base, an additional $7 million would be raised bringing the total fish tax collections to $15.2 million. These collections will be split evenly among the general fund, revenue sharing to municipalities, and the commercial fishing and agriculture bank, until fully capitalized. It is estimated that revenue sharing to municipalities would be increased by about 3 million dollars as shown in the attached breakdown. It would also allow an annual appropriation to the commercial fishing and agriculture bank of approximately 5 million dollars. With a 4.45 percent rate, revenue to the general fund would decrease by about $1 million dollars, but would increase considerably when the commercial fishing and agriculture bank is fully capitalized in a few years. A breakdown of the distribution of revenue is shown on the attached pages.

RESOLUTION 79-9

A RESOLUTION IN OPPOSITION OF HB 306 - RAW FISH TAX

WHEREAS, HB 306 has been introduced which would standardize the raw fish tax at 6% of raw value regardless of species of fish being processed or the method of processing, and

WHEREAS, the fishing industry is the major economy of Seldovia and this industry is presently depressed in this area, and

WHEREAS, increases in taxation of this industry will bring harm to processor and fisherman alike, and will further depress the economy of our area,

NOW, THEREFORE, BE IT RESOLVED, by the City Council of the City of Seldovia, that this municipality hereby urges a vote of Do Not Pass on HB 306, and any related Senate bills.

PASSED AND APPROVED THIS _____ day of March, 1979.

HB 306

March 9, 1979

Rep. Alvin Ostenback

In response to House Bill 306 and Senate Bill 132 - Raw Fish Tax

We strongly object to the proposed increase in the Raw Fish Tax and the way it is being handled. We feel that above and beyond disagreeing with the terms of this bill, even more outrageous is the denial of due process of law presently taking place. (In regard to the butchering and railroading of Senate Bill 132.)

Already crippled by excess licenses, permits, taxes and other regulations, this behind-the-back attack on the fisheries could be the death blow for the Alaskan fishing industry.

In effect, this Bill would force the progressive Alaskan fishermen to become part of the Seattle-based fleet in an effort to maintain even a minimal profit margin. Although legislative action at this date indicates otherwise, the fisheries represent a major industry with a heavy impact on the continued economic stability of this state.

With the passage of this Bill, the presently under-utilized bottomfish fishery will never get off the ground as a shore-based fishery, and at best, would never come close to reaching its full potential.

We request you, our representative, to make known our extreme disapproval of the terms and concepts set forth in this Bill, and our disappointment in the way it is being handled.

Thank you for your consideration in this matter.

I am,

Alvin R Burch

CSSB132

KODIAK AREA CHAMBER OF COMMERCE

HB306

March 9, 1979

AN OPEN LETTER TO THE GO'ERNOR OF ALASKA AND THE MEMBERS OF THE STATE LEGISLATURE:

Gentlemen:

The Kodiak Area Chamber of Commerce strongly opposes the proposed increase in the Raw Fish Tax, and deplores the ram-rod methods used to push this measure into law.

The increased tax will have a most serious impact on the economy of Kodiak and all the other fishing communities in the State. It will not only immediately affect the fishermen and the processors, it will be most detrimental to every person in the fishing communities, and the snow-ball effect will ultimately ower the economy of the entire State and all its citizens.

The carrot on the stick, calling for returning a larger percentage of the tax to local governments, is an obvious ploy designed to gain support from Legislators representing districts that would benefit financially. While they grab the free lunch carrot, Kodiak and the other fishing communities are being beaten with the stick.

The Chamber urges the Legislators to stop all debate on this issue until public hearings are held in all fishing communities, including Kodiak, in order to more fully understand the impact on the fishing communities and the ultimate effect the increased Raw Fish Tax will have on the economy of the State.

Sincerely,

Art Jordan, Manager
KODIAK AREA CHAMBER OF COMMERCE

March 10, 1979

Senator Robert Mulcahy
Alaska State Senate
Pouch V
Juneau, AK 99811

RE: SB 132/HB 306

Dear Senator Mulcahy:

We are writing this letter to state our strong objections to the above-mentioned bill which would up the raw fish tax to 6% from its present 1%.

First of all, the most obvious fact is that the increase is so pronounced as to raise the question why the jump of 5%? But beyond that is the point that we as individuals are for less taxation regardless of the limitation in services. If Proposition 13 in California last year was any example, we certainly aren't the only ones for less taxation.

There is a theory which we believe is very valid, namely that government can't tax a company. Companies only pass any taxes on to the consumer by marking up the price of their product. A solution to the problem of inflation is not further taxation, which was stipulated as being one of the reasons that this bill was initiated in the first place.

Most of the seafood that comes from Alaskan fisheries (i.e. crab and shrimp) are already very high-priced products, barely in competition with the same foreign products. This proposed increase in the fish tax should help substantially in putting Alaskan seafood products out of the market completely. Being a luxury item, people in the United States are going to stop buying it if the price becomes too exorbitant.

Alaska's fishery resources are extremely important to a good many people in this State: fishermen and their families, cannery employees, and all the services and suppliers connected with seafood processing. To see Alaska's fisheries become too inhibited or slow down all together would certainly not help the State or the livelihoods of those who derive their income from fisheries.

As far as providing revenue to the municipalities, Kodiak for one is an example of a city who has more than enough money at present. A fact that was made clear in the arguments the City used in trying to persuade the Joint Committee on Community and Regional Affairs that it should be allowed to annex parts now in the borough. We sincerely hope that you take a good look at this bill and consider just how destructive it could be.

Sincerely,

Cynthia M. Pistorese
Secretary (Pacific Pearl Seafoods)

HB 306 "Quadriplegics" CS

CSSB 132

March 12, 1979

The Honorable Clem Tillion
President of the Senate
Alaska State Legislature

Re: CSSB 132

Dear Mr. President:

On March 9, 1979, you requested me, in my capacity as chairman of the Senate Judiciary committee, to review the captioned bill and to report to the Senate as to its constitutionality.

At the outset, I should state that the following comments are mine and mine alone; I do not profess to speak for the other members of the Judiciary committee. It should likewise be noted that I do not claim any special expertise in the field of constitutional law, nor have I had sufficient time to devote to the research which would ordinarily be entailed in analyzing this bill.

A close reading of CSSB 132 indicates two sections of the bill would run afoul of the Alaska Constitution. Those two are 43.75.136, providing for payments to the Commercial Fishing and Agriculture Bank, and 43.75.131, making increased refunds to local government.

Article IX, sec. 7 of the Alaska Constitution provides as follows:

> "The proceeds of any state tax or license shall not be dedicated to any special purpose except when required by the federal government for state participation in federal programs. This provision shall not prohibit the continuance of any dedication for special purposes existing upon the date of ratification of the constitution by the people of Alaska."

I was assisted in my efforts to check the constitutionality of the questioned sections of the bill by the opinions of two Attorneys General dated, respectively, April 4, 1969 and May 2, 1975. Both opinions not only considered the case law of this and other jurisdictions, sparse as it is, but they also reviewed the minutes of the Alaska Constitutional Convention and committees thereof. It is evident, in both these opinions, that the framers of our constitution did not want to have additional taxes earmarked or dedicated to special purposes.

SSB 174

A dedication of ten per cent of the fish tax existed at the time of the ratification of the Constitution, and the dedication clearly falls within the exemption. Problems arise when that ten per cent is increased, as in the instant bill, to thirty-three and one-third per cent. The issue of the constitutionality of increasing the percentage of an existing dedicated fund was not specifically addressed by either of the opinions reviewed. However, material contained in these opinions strongly suggests that increasing an existing dedicated fund was not intended by the Constitution.

It is equally clear that payments to the Commercial Fishing and Agriculture Bank and earmarking state tax revenue for the construction of docks, etc. by local governmental units would do violence to the Constitution of the State of Alaska.

The Attorney General's opinion of April 4, 1969 holds:

> "The proceeds of any state tax or license which must be shared with local governmental units are dedicated to a special purpose and are in violation of Article IX, sec. 7 of the Alaska Constitution."

The Attorney General's opinion of May 2, 1975 states:

> "Accordingly, it is our conclusion that the dedication of any source of public revenue: tax, license, rental, sale, bonus-royalty, royalty, or whatever is limited by the state Constitution to those existing when the Constitution was ratified or required for participation in federal programs."

Conclusion: CSSB 132, as written, is patently unconstitutional.

Respectfully submitted,

Ziegler

(6) COMMENTS:

This bill would pose a problem to enforcement. It would require that a court of law prove that a marker is new or old. Fishermen could use this bill as an excuse to fish in closed waters.

What is considered a marker? In Kodiak, rocks were painted white 10 years ago, and used to denote closed areas. The regulations denote each closed area and the markers are used to assist commercial fishermen of where the closed areas are located. The solution is for Fish & Game to update those markers that are in use and are necessary to the individual fisheries.

16.05.785 would be under Article 6 - Miscellaneous Provisions

III. ANALYSIS (See Fiscal Note Preparation Instructions, Section III)

There would be no fiscal impact, provided the intent of the Legislature is to have the requirement applied to only the markers established by the Board of Fisheries by regulation or change in regulation, and does not apply to emergency orders or regulations used in season to manage the fisheries. Furthermore, it is recognized that the Department should do a better job when changing markers as requred by the Board of Fisheries regulatory action.

MEMORANDUM April 30, 1980

SUBJECT: Handtrolling Entry Permits
Amendments to CSSSHB 350

TO: Representative Jim Duncan
Attn: Dale Staley, A.A.

FROM: Kenneth E. Vassar
Legislative Counsel

RECEIVED
MAY 5 1980
BUDGET/AUDIT
COMMITTEE

Enclosed are the amendments you requested for CSSSHB 350. The amendments provide for a preference right to handtrolling permits reissued by the commission for people who qualify for the longevity bonus and for residents of areas designated by the commission as economically dependent upon the handtrolling fishery. The instructions you gave me were not clear as to how this preference right should be implemented. You will note that the amendments make this an absolute preference by requiring the commission to reissue the entry permits first to the applicants who qualify for the longevity bonus, then to the residents of the areas designated as economically dependent upon the handtrolling fishery, and finally to the other applicants. The preference right of residents of areas economically dependent upon the handtrolling fishery, as you requested, is limited to a number of permits equal to 50 percent of the permits reissued since the last application period. The details of these provisions may need to be revised; please let me know if they do not comply with your intent.

I am concerned about some constitutional questions these amendments would create if incorporated in the bill. The amendments establish special treatment for various categories of people; i.e., persons who qualify for the longevity bonus and residents of certain areas of the state. It is true that the voters approved a constitutional amendment several years ago to allow limited entry in Alaska; however, within that limited entry system, the requirements of the equal protection clause, the prohibition against exclusive rights

or special privileges of fishery, and the prohibition against local and special legislation still apply. With regard to each of these constitutional provisions, the question which arises is, what legitimate state interest is fairly and substantially related to the classifications created in the legislation.

Is there a legitimate state interest served in allowing the issuance of entry permits to people who qualify for the longevity bonus limited only by the number of those people who qualify to apply for the permits; that is, limited only by the number of them who are able to presently participate in the fishery? Is there any indication that this class of people suffer a greater hardship from being excluded from the fishery than other people? It should be noted that the criteria for ranking applicants for reissuance in the bill do not prohibit people who qualify for the longevity bonus from demonstrating hardship along with other applicants. Therefore, this amendment will benefit only those people who, by the terms of the bill itself, do not demonstrate hardship from being excluded from the fishery to the same extent as other applicants who would otherwise receive a permit. The same questions and comments apply to the special preference given to people who live in a certain area of the state. There are already criteria in the bill which take into consideration the fact that some people in some areas of the state will be more dependent upon the fishery than others. This special preference will not be limited to assisting those people, but will apply to anyone who lives in a particular area of the state. Again, the amendment will benefit only those who cannot otherwise show hardship from being excluded from the fishery to the same extent as other applicants who would otherwise be entitled to a permit.

Finally, the constitutional provision which specifically allows the state to create a limited entry system contains language which expresses the purpose for which such a system may be created. That language should be noted. Article VIII, sec. 15, Constitution of the State of Alaska provides in part:

> This section does not restrict the power of the State to limit entry into any fishery for purposes of resource conservation, to prevent economic distress among fishermen and those dependent upon them for a livelihood and to

promote the efficient development of aquaculture in the State. (Emphasis added).

Are these amendments aimed at preventing economic distress "among fishermen"? They are not so limited in their effect.

Insert the following new material:

"Sec. 16.43.235. DESIGNATION OF AREAS ECONOMICALLY DEPENDENT UPON THE HANDTROLLING FISHERY. For the purposes of AS 16.43.274(g)(2), the commission shall designate areas of the state which, in the commission's determination, are economically dependent upon the handtrolling fishery. In making its determination, the commission shall consider

(1) the number of residents of the area whose incomes are, in whole or in part, from handtrolling;

(2) the availability of other types of employment in the area; and

(3) other factors the commission considers relevant to its determination."

Page 6, line 7 beginning with "order of descending prior-" through line 9: Delete all material and insert the following in its place:

"the following order:

(1) first, to applicants who qualify for a bonus under AS 47.45.010 in order of descending priority classification until all applicants who qualify for a bonus under AS 47.45.010 have been issued an entry permit; if necessary, the commission shall issue new entry permits for the handtrolling fishery in excess of the maximum number or optimum number established for the handtrolling fishery under AS 16.43.240 or 16.43.290 to provide all applicants who qualify for a bonus under AS 47.45.010 with an entry permit under this paragraph;

(2) then, if additional entry permits are available for reissuance under this subsection, to applicants who are residents of areas designated under AS 16.43.235 as economically dependent on the handtrolling fishery in descending order of priority classification; however, the number of entry permits reissued under this paragraph may not exceed 50 percent of the number of permits initially issued for the fishery under AS 16.43.270 or reissued since the last application period held under (e) of this section, whichever is later;

(3) finally, if there are entry permits still available for reissuance under this subsection, to the remaining applicants in order of descending priority classification until the next application period or until all the applicants have received an entry permit for the handtrolling fishery."

IN THE HOUSE BY THE RESOURCES COMMITTEE

CS FOR SPONSOR SUBSTITUTE FOR HOUSE BILL NO. 350

IN THE LEGISLATURE OF THE STATE OF ALASKA

ELEVENTH LEGISLATURE - SECOND SESSION

A BILL

For an Act entitled: "An Act relating to limited entry permits for the hand-trolling fishery."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. FINDINGS AND PURPOSE. (a) The legislature finds that

(1) ~~the existing limited entry system has worked extremely well in the other fisheries of the state, but~~ the salmon handtrolling fishery is unique because of the large number of participants in the fishery, its marginal profitability, the high rate of turnover of participants in the fishery, the use of the fishery by participants for entry into the commercial fishing industry, and the use of the fishery by participants to generate supplemental income;

(2) the establishment of nontransferable entry permits will allow entry into the handtrolling fishery without allowing market prices to develop for the entry permits;

(3) the low capital cost of entering the handtrolling fishery will encourage people who lack experience in commercial fishing and who lack the desire to make commercial fishing a substantial part of their livelihood to apply for entry permits for handtrolling; therefore, in order to promote safety among those who receive entry permits for handtrolling and to prevent economic distress among fishermen, it is appropriate to include in the criteria for ranking applicants for entry permits for handtrolling considerations relating to past participation in the handtrolling fishery and experience as a crewmember in the waters where handtrolling is regulated.

(b) The purpose of this Act is to preserve the unique nature of the

salmon handtrolling fishery and to avoid market prices for entry permits issued for the handtrolling fishery by allowing a large number of participants in the fishery, by allowing a continued high rate of turnover among the participants and by preventing transferability of entry permits issued for the handtrolling fishery.

* Sec. 2. AS 16.43.150(h) is amended to read:

(h) Except as provided in (i) of this section, upon [UPON] the death of an entry permit holder, the entry [PERMANENT] permit shall be transferred by the commission directly to the surviving spouse by right of survivorship unless a contrary intent is manifested. When no spouse survives, the rights of the decedent pass as part of his estate.

* Sec. 3. AS 16.43.150 is amended by adding new subsections to read:

(i) An entry permit issued for the handtrolling fishery shall be forfeited to the commission

(1) upon the death of the permit holder unless the permit holder has designated an individual under AS 16.43.181 and the designated individual demonstrates present ability to participate in the handtrolling fishery at the time of the permit holder's death;

(2) upon failure of the permit holder to verify significant active participation in the handtrolling fishery each season to the commission in accordance with regulations adopted by the commission, unless the failure is waived by the commission for good cause.

(j) The commission shall prepare an application form for a waiver for good cause under (i)(2) of this section and shall distribute the application form to each holder of an entry permit for the handtrolling fishery. The commission shall include with the application form a statement explaining "good cause" for the purpose of (i)(2) of this section.

(k) An entry permit issued for the handtrolling fishery may be

voluntarily transferred to the commission, without compensation.

(l) In (i) of this section,

(1) "significant active participation" shall be defined by regulation of the commission as a minimum number of verified landings of fish caught by handtrolling; the regulations may require not less than three landings nor more than 10 landings in each season;

(2) "good cause" means the inability of the permit holder to actively participate in the fishery as a result of serious injury or illness of the permit holder, the loss of the use of the permit holder's fishing vessel as a result of sinking, destruction or extensive mechanical breakdown, or service in the military ~~or in a state or federal elective office~~.

* Sec. 4. AS 16.43.170(b) is amended to read:

(b) Except as provided in (c) and (e) of this section, the holder of an entry permit may transfer his permit to another person or to the commission upon 60 days notice of intent to transfer under regulations adopted by the commission. No sooner than 60 days nor later than 12 months from the date of notice to the commission, the holder of an entry permit may transfer his permit. If the proposed transferee, other than the commission, can establish present ability to participate actively in the fishery, the commission shall approve the transfer and reissue the entry permit to the transferee.

* Sec. 5. AS 16.43.170 is amended by adding a new subsection to read:

(e) Notwithstanding the provisions of (a) - (c) of this section, an entry permit for the handtrolling fishery is transferable only to the commission, except as provided in AS 16.43.180(a).

* Sec. 6. AS 16.43.180(b) is amended to read:

(b) The commission shall adopt regulations providing for the temporary transfer of an entry permit issued for any fishery except the

handtrolling fishery upon the death of the permittee pending final disposition of the permit as a part of the permittee's estate.

* Sec. 7. AS 16.43 is amended by adding a new section to read:

Sec. 16.43.181. DESIGNATION OF INDIVIDUAL BY HOLDER OF ENTRY PERMIT FOR HANDTROLLING. (a) The commission shall allow an applicant for or a holder of an entry permit for handtrolling to designate in his application and in each renewal of the entry permit the individual to whom the entry permit shall be reissued in the event of his death. The commission shall immediately reissue the permit, upon the death of the permit holder, to the individual designated by the permit holder under this section, ~~if the individual demonstrates present ability to participate in the handtrolling fishery at the time of the permit holder's death.~~

(b) In an application form or a renewal form for an entry permit for handtrolling, the commission shall include a statement that an individual designated under (a) of this section is required to demonstrate present ability to participate in the handtrolling fishery at the time of the permit holder's death to receive a permit under (a) of this section.

* Sec. 8. AS 16.43 is amended by adding a new section to read:

Sec. 16.43.274. ISSUANCE AND REISSUANCE OF HANDTROLLING PERMITS. (a) The commission may not issue an entry permit for the handtrolling fishery unless the applicant has demonstrated his present ability to participate actively in the handtrolling fishery under regulations adopted by the commission.

(b) An entry permit for the handtrolling fishery which is forfeited to the commission under AS 16.43.150(d) or (i) or 16.43.360, transferred to the commission under AS 16.43.150(j) or revoked by the commission under AS 16.43.355, shall be promptly reissued by the com-

mission to an applicant who

(1) applied for an entry permit for the handtrolling fishery during the initial application period established under AS 16.43.260(b);

(2) harvested fishery resources commercially while participating in the handtrolling fishery as a holder of a gear license or an interim-use permit before the qualification date established under AS 16.43.260(e);

(3) demonstrates present ability to participate in the handtrolling fishery; and

(4) was not previously issued an entry permit for the handtrolling fishery.

(c) Entry permits shall be reissued under (b) of this section to applicants in order of descending priority classification as provided in AS 16.43.270(a).

(d) If within the lowest priority classification of applicants to whom entry permits for the handtrolling fishery may be reissued under (b) of this section, there are more applicants than there are entry permits to be reissued, the allocation of entry permits within that priority classification shall be by lottery.

(e) After all the applicants described in (b) of this section have been issued entry permits for the handtrolling fishery, the commission shall establish annual application periods for the reissuance of entry permits for the handtrolling fishery.

(f) The commission shall adopt regulations to rank applicants who apply for an entry permit for handtrolling during an application period established under (e) of this section. The regulations shall define priority classifications of similarly situated applicants based on a reasonable balance of the following hardship standards:

(1) availability of alternative occupations;

(2) past participation in the handtrolling fishery;

(3) demonstrated need for alternative sources of income, taking into consideration the applicant's gross income, age, number of dependents and other factors;

(4) commercial fishing experience, including experience as a crewmember, in the area of the handtrolling fishery.

(g) After ranking the applicants under (f) of this section, the commission shall promptly reissue entry permits for the handtrolling fishery which are forfeited to it under AS 16.43.150(d) or (i) or 16.43.360, transferred to it under AS 16.43.150(j), or revoked by it under AS 16.43.355, and which are not withheld by the commission to reduce the number of outstanding entry permits to the optimum number established under AS 16.43.290 - 16.43.300. The commission shall reissue the entry permits to the applicants in order of descending priority classification until the next application period or until all the applicants have received an entry permit for the handtrolling fishery.

(h) Notwithstanding (e) of this section, if the commission reissues entry permits for the handtrolling fishery to all the applicants who applied during the most recent application period before the scheduled time for the next application period, the commission shall promptly open a new application period in place of the next scheduled application period.

(i) An application for the reissuance of an entry permit for handtrolling lapses at the time a new application period is opened under (e) or (h) of this section.

(j) If, upon appeal under AS 44.62.560 of a final action of the commission on an application made during an application period established under (e) of this section, a final judgment of the superior court is entered which requires the commission to rank the appellant in a

priority classification which would have entitled the appellant to receive an entry permit in the year in which he made the application, the commission shall issue the appellant an entry permit in the application period immediately following the entry of the final judgment. The number of entry permits available for reissuance under (g) of this section shall be reduced by the number of entry permits issued in accordance with this subsection.

* Sec. 9. AS 16.43.300(b) is amended to read:

(b) If the commission decreases the optimum number of entry permits for a fishery, other than the handtrolling fishery, the number of entry permits may be reduced only under the voluntary buy-back provisions set out in AS 16.43.310 - 16.43.320.

* Sec. 10. AS 16.43.300 is amended by adding a new subsection to read:

(c) The commission may review and adjust the optimum number of entry permits for the handtrolling fishery at four-year intervals. If the optimum number of entry permits for the handtrolling fishery exceeds the maximum number of entry permits established under AS 16.43.240, the commission shall issue additional entry permits in accordance with the procedure described in AS 16.43.274.

* Sec. 11. The Alaska Commercial Fisheries Entry Commission shall prepare and submit a report to the Fourteenth Legislature by February 10, 1985. The report shall include the commission's comments and recommendations relating to the implementation of this Act. If, between the effective date of this Act and January 1, 1985, the average annual number of entry permits reissued under AS 16.43.274 is less than 25 percent of the total number of entry permits for the handtrolling fishery issued under AS 16.43, the Alaska Commercial Fisheries Entry Commission shall include in its report recommendations for legislation to increase the rate of reissuing entry permits for the handtrolling fishery.

IN THE LEGISLATURE OF THE STATE OF ALASKA

ELEVENTH LEGISLATURE - SECOND SESSION

A BILL

For an Act entitled: "An Act relating to limited entry permits for the handtrolling fishery."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. FINDINGS AND PURPOSE. (a) The legislature finds that

(1) the existing limited entry system has worked extremely well in the other fisheries of the state, but the salmon handtrolling fishery is unique because of the large number of participants in the fishery, its marginal profitability, the high rate of turnover of participants in the fishery, the use of the fishery by participants for entry into the commercial fishing industry, and the use of the fishery by participants to generate supplemental income;

(2) the establishment of nontransferable entry permits will allow entry into the handtrolling fishery without allowing market prices to develop for the entry permits;

(3) the low capital cost of entering the handtrolling fishery will encourage people who lack experience in commercial fishing and who lack the desire to make commercial fishing a substantial part of their livelihood to apply for entry permits for handtrolling; therefore, in order to promote safety among those who receive entry permits for handtrolling and to prevent economic distress among fishermen, it is appropriate to include in the criteria for ranking applicants for entry permits for handtrolling considerations relating to past participation in the handtrolling fishery and experience as a crewmember in the waters where handtrolling is regulated.

(b) The purpose of this Act is to preserve the unique nature of the

salmon handtrolling fishery and to avoid market prices for entry permits issued for the handtrolling fishery by allowing a large number of participants in the fishery, by allowing a continued high rate of turnover among the participants and by preventing transferability of entry permits issued for the handtrolling fishery.

* Sec. 2. AS 16.43.150(h) is amended to read:

(h) Except as provided in (i) of this section, upon [UPON] the death of an entry permit holder, the entry [PERMANENT] permit shall be transferred by the commission directly to the surviving spouse by right of survivorship unless a contrary intent is manifested. When no spouse survives, the rights of the decedent pass as part of his estate.

* Sec. 3. AS 16.43.150 is amended by adding new subsections to read:

(i) An entry permit issued for the handtrolling fishery shall be forfeited to the commission

(1) upon the death of the permit holder unless the commission allows the permit to be transferred to a dependent of the permit holder in accordance with AS 16.43.180(c);

(2) upon failure of the permit holder to verify significant active participation in the handtrolling fishery each season to the commission in accordance with regulations adopted by the commission, unless the failure is waived by the commission for good cause.

(j) An entry permit issued for the handtrolling fishery may be voluntarily transferred to the commission, without compensation.

(k) In (i) of this section,

(1) "significant active participation" shall be defined by regulation of the commission as a minimum number of verified landings of fish caught by handtrolling; the regulations may require not less than three landings nor more than 10 landings in each season;

(2) "good cause" means serious injury or illness of the

permit holder or the loss of the use of his fishing vessel as a result of sinking, destruction or extensive mechanical breakdown.

* Sec. 4. AS 16.43.170(b) is amended to read:

(b) Except as provided in (c) and (e) of this section, the holder of an entry permit may transfer his permit to another person or to the commission upon 60 days notice of intent to transfer under regulations adopted by the commission. No sooner than 60 days nor later than 12 months from the date of notice to the commission, the holder of an entry permit may transfer his permit. If the proposed transferee, other than the commission, can establish present ability to participate actively in the fishery, the commission shall approve the transfer and reissue the entry permit to the transferee.

* Sec. 5. AS 16.43.170 is amended by adding a new subsection to read:

(e) Notwithstanding the provisions of (a) - (c) of this section, an entry permit for the handtrolling fishery is transferable only to the commission, except as provided in AS 16.43.180(a) and (c).

* Sec. 6. AS 16.43.180(b) is amended to read:

(b) The commission shall adopt regulations providing for the temporary transfer of an entry permit issued for any fishery except the handtrolling fishery upon the death of the permittee pending final disposition of the permit as a part of the permittee's estate.

* Sec. 7. AS 16.43.180 is amended by adding a new subsection to read:

(c) To alleviate hardship and prevent economic distress among those dependent on holders of entry permits for handtrolling, the commission shall adopt regulations providing for the temporary emergency transfer of an entry permit issued for handtrolling upon the death of the permit holder. A temporary emergency transfer under this subsection may be made by the commission only to a dependent of the permit holder and shall expire no later than the first application period held

under AS 16.43.274(e) at least one full season after the death of the permit holder. In adopting regulations under this subsection, the commission may require an applicant for or a holder of an entry permit for handtrolling to designate in his application and in each renewal of the entry permit the dependent to whom the entry permit shall be transferred in the event of his death.

* Sec. 8. AS 16.43 is amended by adding a new section to read:

Sec. 16.43.274. ISSUANCE AND REISSUANCE OF HANDTROLLING PERMITS. (a) The commission may not issue an entry permit for the handtrolling fishery unless the applicant has demonstrated his present ability to participate actively in the handtrolling fishery under regulations adopted by the commission.

(b) An entry permit for the handtrolling fishery which is forfeited to the commission under AS 16.43.150(d) or (i) or 16.43.360, transferred to the commission under AS 16.43.150(j) or revoked by the commission under AS 16.43.355, shall be promptly reissued by the commission to an applicant who

(1) applied for an entry permit for the handtrolling fishery during the initial application period established under AS 16.43.260(b);

(2) harvested fishery resources commercially while participating in the handtrolling fishery as a holder of a gear license or an interim-use permit before the qualification date established under AS 16.43.260(e);

(3) demonstrates present ability to participate in the handtrolling fishery; and

(4) was not previously issued an entry permit for the handtrolling fishery.

(c) Entry permits shall be reissued under (b) of this section to applicants in order of descending priority classification as provided in

AS 16.43.270(a).

(d) If within the lowest priority classification of applicants to whom entry permits for the handtrolling fishery may be reissued under (b) of this section, there are more applicants than there are entry permits to be reissued, the allocation of entry permits within that priority classification shall be by lottery.

(e) After all the applicants described in (b) of this section have been issued entry permits for the handtrolling fishery, the commission shall establish annual application periods for the reissuance of entry permits for the handtrolling fishery.

(f) The commission shall adopt regulations to rank applicants who apply for an entry permit for handtrolling during an application period established under (e) of this section. The regulations shall define priority classifications of similarly situated applicants based on a reasonable balance of the following hardship standards:

(1) availability of alternative occupations;

(2) past participation in the handtrolling fishery;

(3) demonstrated need for alternative sources of income, taking into consideration the applicant's gross income, age, number of dependents and other factors;

(4) commercial fishing experience, including experience as a crewmember, in the area of the handtrolling fishery.

(g) After ranking the applicants under (f) of this section, the commission shall promptly reissue entry permits for the handtrolling fishery which are forfeited to it under AS 16.43.150(d) or (i) or 16.43.360, transferred to it under AS 16.43.150(j), or revoked by it under AS 16.43.355, and which are not withheld by the commission to reduce the number of outstanding entry permits to the optimum number established under AS 16.43.290 - 16.43.300. The commission shall

reissue the entry permits to the applicants in order of descending priority classification until the next application period or until all the applicants have received an entry permit for the handtrolling fishery.

(h) Notwithstanding (e) of this section, if the commission reissues entry permits for the handtrolling fishery to all the applicants who applied during the most recent application period before the scheduled time for the next application period, the commission shall promptly open a new application period in place of the next scheduled application period.

(i) An application for the reissuance of an entry permit for handtrolling lapses at the time a new application period is opened under (e) or (h) of this section.

(j) If, upon appeal under AS 44.62.560 of a final action of the commission on an application made during an application period established under (e) of this section, a final judgment of the superior court is entered which requires the commission to rank the appellant in a priority classification which would have entitled the appellant to receive an entry permit in the year in which he made the application, the commission shall issue the appellant an entry permit in the application period immediately following the entry of the final judgment. The number of entry permits available for reissuance under (g) of this section shall be reduced by the number of entry permits issued in accordance with this subsection.

* Sec. 9. AS 16.43.300(b) is amended to read:

(b) If the commission decreases the optimum number of entry permits for a fishery, <u>other than the handtrolling fishery,</u> the number of entry permits may be reduced only under the voluntary buy-back provisions set out in AS 16.43.310 - 16.43.320.

* Sec. 10. AS 16.43.300 is amended by adding a new subsection to read:

(c) The commission may review and adjust the optimum number of entry permits for the handtrolling fishery at four-year intervals. If the optimum number of entry permits for the handtrolling fishery exceeds the maximum number of entry permits established under AS 16.43.240, the commission shall issue additional entry permits in accordance with the procedure described in AS 16.43.274.

* Sec. 11. The Alaska Commercial Fisheries Entry Commission shall prepare and submit a report to the Fourteenth Legislature by February 10, 1985. The report shall include the commission's comments and recommendations relating to the implementation of this Act. If, between the effective date of this Act and January 1, 1985, the average annual number of entry permits reissued under AS 16.43.274 is less than 25 percent of the total number of entry permits for the handtrolling fisher ssued under AS 16.43, the Alaska Commercial Fisheries Entry Commission shall include in its report recommendations for legislation to increase the rate of reissuing entry permits for the handtrolling fishery.

MEMORANDUM State of Alaska

TO: The Honorable Jim Duncan
House of Representatives

DATE: April 17, 1980

FILE NO:

TELEPHONE NO:

FROM: Robert J. Simon
Chairman
Commercial Fisheries Entry
Commission

SUBJECT: Fiscal Note Revision of CS for SS HB 350 - Limited Entry for Hand Troll

Following is a chronological outline of steps leading to regulation of entry into the salmon handtroll fishery:

1. Discussion of ranking system with hand troll associations.

2. Draft proposed point system regulations.

3. Hold public hearings on the proposed regulations in mid-summer of 1980.

4. Adopt regulations before January 1, 1981.

5. Promulgate entry limitation regulations in the hand troll fishery.

6. Develop applications and establish an application period for entry limitation in the hand troll fishery.

7. Begin issuing permanent entry permits.

The Commission anticipated implementing entry limitation in the first half of FY 81 under existing law. The operating budget request includes FY 1981 implementation costs under our existing legislation. The Bill would establish an entirely new system. It would impose an additional administrative workload due to increases in the applications processed and hearings required, and the need to respond rapidly to annual permit and applicant classification demands. First-year funding is requested for expediting the application process and development work preparatory to the new transfer system.

The original fiscal note (see Attachment A) was developed for a full fiscal year based on draft CS SS HB 350. Under the current draft of HB 350 the Commission has revised this estimate and believes that $140.1 (see Attachment B) of the original $426.7 will be needed in FY 81.

At this funding level, the Commission is concerned about a bottleneck that likely will occur if a substantial portion of permit forfeitures and annual application hearings must be adjudicated by the full Commission. Consequently, we ask that you consider amending HB 350 to provide for special adjudicatory procedures for hand troll forfeiture and reissuance hearings. 1/

By January 1981, the Commission will have a much better idea of the total workload attributable to the implementation of HB 350 and will be better able to analyze its total fiscal impact which can be addressed in the Governor's FY 82 budget document. Meanwhile, our best estimate for FY 82 fiscal impact is $426.7 plus inflationary factors.

Attachments

1/ We suggest the following language:

AS 16.43.100(a) is amended by adding the following:

(16) utilize administrative law judges to adjudicate the forfeiture and reissuance of hand troll entry permits.

ATTACHMENT A

MEMORANDUM State of Alaska

TO: Robert J. Simon
Chairman
Commercial Fisheries Entry
Commission

DATE: March 14, 1980

FILE NO:

TELEPHONE NO:

FROM: Derrill L. Johnson
Director of Administration
Commercial Fisheries Entry
Commission

SUBJECT: Financial Analysis of CS for SS HB 350 - Limited Entry Permits for Handtrolling

You asked that I prepare a preliminary estimate of the incremental costs should the draft CS for SS HB 350 be enacted. I utilized the following assumptions:

1. We will receive approximately 10,000 hand troll applications to be reviewed and classified in FY 81 (5,000 will make application based upon initial eligibility; 5,000 will want to register for the permit recipient list);

2. over 800 hearings will be held in issuing the original permanent permits;

3. there will be a permit turnover rate of 30% each licensing year;

4. 150 hearings will be held each year to determine if good cause prevented a permit holder from achieving active participation; and

5. Section 10 will be deleted.

This estimate doesn't provide for application assistance or other professional services.

It is my understanding that the current version of HB 350 is to be amended in a manner which may affect the fiscal impact. I hope this memoradum will suffice until a formal fiscal note is required. Because of the complexity of this bill and the short time allowed to complete this estimate, I believe there could be a 10% adjustment factor in the final figure of $426.7 (see attached), even if the bill is not amended.

Director of Administration
Commercial Fisheries Entry
Commission

SUBJECT: Financial Analysis of CS for SS HB 350 - Limited Entry Permits for Handtrolling

You asked that I prepare a preliminary estimate of the incremental costs should the draft CS for SS HB 350 be enacted. I utilized the following assumptions:

1. We will receive approximately 10,000 hand troll applications to be reviewed and classified in FY 81 (5,000 will make application based upon initial eligibility; 5,000 will want to register for the permit recipient list);

2. over 800 hearings will be held in issuing the original permanent permits;

3. there will be a permit turnover rate of 30% each licensing year;

4. 150 hearings will be held each year to determine if good cause prevented a permit holder from achieving active participation; and

5. Section 10 will be deleted.

This estimate doesn't provide for application assistance or other professional services.

It is my understanding that the current version of HB 350 is to be amended in a manner which may affect the fiscal impact. I hope this memoradum will suffice until a formal fiscal note is required. Because of the complexity of this bill and the short time allowed to complete this estimate, I believe there could be a 10% adjustment factor in the final figure of $426.7 (see attached), even if the bill is not amended.

SUMMARY OF SEALASKA CORPORATION'S COMMENTS
FOR SC SPONSOR SUBSTITUTE FOR HOUSE BILL NO. 350
AN ACT RELATING TO LIMITED ENTRY PERMITS FOR THE HANDTROLLING FISHERY

TECHNICAL COMMENTS:

On page one line 10 and 11, we recommend deletion of the words "the existing limited entry system has worked extremely well in the other fisheries of the State, but"

on page one, lines 23 and 24, we recommend deletion of the word "in order to promote safety among those who receive entry permits for handtrolling and"

Or we recommend in lieu of that amendment deletion of all of section 3 on lines 20-28.

On page 2 pertaining to section 3 AS 16.43.150 the amendment adding new subsections under sub (i)(1) on lines 15, we recommend deletion of the words " unless the commission allows"

COMMENT

We are concerned about the involvement of the commission in the event of a death of a permit holder. In conjunction with AS 16.43.150 (h) it is our opinion that a permit should be transferred to a spouse by right of survivorship unless a contrary intent is outlined in a will. Where no will exists and the spouse does not utilize the permit then the right of a heir or a dependent should be provided by the legislature in statute without the involvement of the commission.

On page 2 and 3 starting with lines 29 on page 2 and lines 1 and 2 on page 3, the definition of "good cause" should be amended to provide for notice procedures and forms of that notice to be provided by the commission.

On page 4 on line 10 and then also on lines 24 and 25 are the words "demonstrated his present ability"

COMMENT: we recommend that this clause be defined in more specific terms.

It is our opinion that this clause is broad in its effect and has the potential for problems in terms of judgement by the commission and potential for discrimination.

On page 5 section F lines 11-22 we recommend the addition of an additional subsection:

Subsection 5 - Preference to applicants of legislatively designated fishery economic development areas.

Comment: We are concerned that residents of rural areas and areas of economic dependence on fisheries resources will not have the opportunity under this procedure of ranking applicants and methods of distributing reissued permits to receive fair consideration. The result being that very few permits will go into the areas where fishing actually takes place.

On page 7, sections 10 and 11 lines 1-17, discusses the optimum number of entry permits, however, it never establishes the optimum number to be legislatively designated or regulatorily designated. It is our understanding that by agreement between the fisheries commission and the governor or some other combination of public officials agreement, a number of 2150 permits have been set. We strongly suggest that the legislature set the number of permits to be administered. Our support would be of a number of 2150 which we understand the Limited Entry Commission has tentatively set.

Our last suggestion, we are not sure where we should put in the legislation, deals with elderly applicants. In essence our suggestion goes as follows: applicants who are 65 years or older have preference for receipt of permits. These permits are not transferable nor are they subject to provisions for transfer after death. These permits would revert back to the commission. Additionally, permits granted to elderly persons would be over and above the limit established by the legislature or the Limited Entry Commission.

Sealaska Corporation supports passage of this legislation and supports the concept of no saleable handtroll permits. We urge the legislature to adopt SC for Sponsor Substitute for HB 350 and consider these suggested amendments.

AMENDMENTS

Offered in the HOUSE

TO: CSSSHB 350

Page 4, between lines 12 and 13:

Insert the following new material:

"(c) This section does not apply to entry permits issued, under AS 16.43.274(g)(1), in excess of the maximum or the optimum number of entry permits for the handtrolling fishery under AS 16.43.240 or 16.43.-290."

Page 4, line 13:

Delete "a new section" and insert "new sections"

Page 4, between lines 13 and 14:

Insert the following new material:

"Sec. 16.43.235. DESIGNATION OF AREAS ECONOMICALLY DEPENDENT UPON THE HANDTROLLING FISHERY. For the purposes of AS 16.43.274(g)(2), the commission shall designate areas of the state which, in the commission's determination, are economically dependent upon the handtrolling fishery. In making its determination, the commission shall consider

(1) the number of residents of the area whose incomes are, in whole or in part, from handtrolling;

(2) the availability of other types of employment in the area; and

(3) other factors the commission considers relevant to its determination."

Page 6, line 7 beginning with "order of descending prior-" through line 9: Delete all material and insert the following in its place:

"the following order:

(1) first, to applicants who qualify for a bonus under AS 47.45.010 in order of descending priority classification until all applicants who qualify for a bonus under AS 47.45.010 have been issued an entry permit; if necessary, the commission shall issue new entry permits for the handtrolling fishery in excess of the maximum number or optimum number established for the handtrolling fishery under AS 16.43.240 or 16.43.290 to provide all applicants who qualify for a bonus under AS 47.45.010 with an entry permit under this paragraph;

(2) then, if additional entry permits are available for reissuance under this subsection, to applicants who are residents of areas designated under AS 16.43.235 as economically dependent on the handtrolling fishery in descending order of priority classification; however, the number of entry permits reissued under this paragraph may not exceed 50 percent of the number of permits initially issued for the fishery under AS 16.43.270 or reissued since the last application period held under (e) of this section, whichever is later;

(3) finally, if there are entry permits still available for reissuance under this subsection, to the remaining applicants in order of descending priority classification until the next application period or until all the applicants have received an entry permit for the handtrolling fishery."

NOTICE TO LOCAL FISH & GAME ADVISORY COMMITTEES AND SOUTHEASTERN MUNICIPALITIES

On Thursday, April 17, at 3:00 pm, the House Resources Committee will again take up the issue of limited entry permits for handtrollers. The meeting will be in Room 118 in the Capitol Building in Juneau. Committee Substitute for Sponsor Substitute for House Bill 350 has been re-drafted and this new version is enclosed for your consideration. Several important changes have been made in the bill and the Resources Committee is interested in hearing your views on them. If you wish to present written testimony, please send it right away to Rep. Alvin Osterback, Chairman, House Resources Committee, Attention: Mary Levan, Pouch V, Juneau, Ak 99811.

If you plan to attend the hearing and wish to testify in person, please notify this office in advance at 465-3715 or 465-3781.

I do not believe there is any "free Lunch". The fish of U.S. waters are the property of all U.S. citizens and they should be allowed under our constitution to harvest them under existing law. This negates limited entry.

The only fair equitable management plan is to pre-regulate fisheries effort, divide it into the allowable take and announce the fishing time in each fishing period. Economics will control the fleet when a maximum amount of effort, it shuts down. Nobody squawks. And so with fish - it was entirely optional on the part of every person to enter the fishery. If the resource is limited, somebody is going to get "frozen out" and that so be it.

The present plan of limited entry has been inequitable, unworkable and illegal under the us Constitution.

Sincerely

Robert T Beach

Dear Mr. Stokes:

This is to confirm that we have put SSHB 350, regarding limited entry for handtrollers, on the House Resources Committee calendar for Tuesday, March 18, 1980. The meeting will be at 3:00 p.m. in Room 118 of the Capitol. Representative Eliason wanted me to notify you in writing of this planned hearing of the bill.

If your Association has anything to submit to the Committee in writing, please get it to us a while in advance so we can get it xeroxed and distributed to the members' files.

We'll see you on the eighteenth.

Sincerely,

Mary Levan

P.O. Box 154
Hoonah, Alaska 99829
Tele. No. 945-3302

April 7, 1980

The Honorable Alvin Osterback
Alaska House of Representatives
Pouch V - M.S. 3100
Juneau, Alaska 99811

Dear Representative Osterback:

The residents of Hoonah, and others similarly situated, are concerned about the commerical salmon hand troll in the rural communities of the Southeast. It appears that the various approaches to the hand troll need to be coordinated. I say this because of the following factors:

(1) The Legislature has before it, several measures that address the hand troll issue as pertains to limited entry. Most notably is that of House Bill No. 350 -- which attempts to address the manner in which the State will address its application as a policy -- once, the CLEC imposes limited entry;

(2) the Commercial Limited Entry Commission has also been active on this issue. The Commission has announced that limited entry will be imposed eventually at 2150 permits. That decision still stands;

(3) the Department of Fish & Game too has become engaged in regulating, or attempting to regulate the hand troll in a series of actions. At least two or three of their own issued regulations were overturned on their own action -- when public pressure was brought to the public attention. Some hand trollers say they would accept limited entry if ADFG issued little or no regulation, not both. Those who favor limited entry went along with the latest regulation of reduction of gear. ADFG has also imposed a 8 day opening - 6 day closure as a means of control of harvest. Virtually all actions ADFG has taken has been modified.

(4) the North Pacific Fisheries Management Council too has its concern of the cape fisheries in the troll fishery. The Council is concerned over the Chinook Salmon enroute to Canada, Washington and Oregon, and has recommended a substantial reduction of the take on the Fairweather grounds.

Joint hearings, or separate, have centered on several factors. ADFG, with overall fishery management responsibility dissemmates between what it terms as user groups. The rural Co munities of Angoon, Hoonah and Kake claim that all approaches affect the rural communities adversely. These three communities were upset over the 8-6 opening and closure. Hoonah now says 130 limited entry hand troll permits will severely injure the lifestyle and wreck its economy. The three stress that so far, all focus has been on the urban communities.

Against that backdrop then, we would like to call upon the Resources Committee Chairman of the Senate and House, Commercial Limited Entry Commission, Alaska Department of Fish & Game and the North Pacific Fisheries Management Council to meet as a panel in a formal session on April 18 and 19, at Hoonah in the Hoonah ANB Hall. Further, that the emphasis be on the rural Southeast communities that would be affected by any action at all.

We have notified preliminarily all hand trollers and they are very pleased that this may occur. If you would notify me that this is in the works, I will call the principles who will arrive from Angoon and Kake, and possibly Hydaburg, of the hearing, and preparations on the ANB Hall will begin.

Thank you in advance for your interest on trying to resolve this seemingly complex problem.

Respectfully,

ALASKA NATIVE BROTHERHOOD
HOONAH CAMP 12

COMMITTEE ON NATURAL RESOURCES
POUCH V • JUNEAU, ALASKA 99811

April 11, 1980

Richard Dalton, Sr.
Alaska Native Brotherhood
P.O. Box 154
Hoonah, AK. 99829

Dear Mr. Dalton:

Thank you for your letter of April 7 and your invitation to come to Hoonah to discuss the issues affecting handtrollers. I agree that these issues are very complex and that the actions taken by the legislature, Entry Commission, and Fish and Game Department concerning handtrolling will have important impacts on the people of southeast, particularly in villages. I do regret to say, however, that it is impossible for me to attent your proposed meeting for several reasons. The legislature has been informed that no out of Juneau meetings will be authorized by the Speaker of the House or the Senate President after April 1. Also, as we are nearing the end of the session we're having meetings, floor sessions, and budget hearings constantly and I cannot be away from the Capital during this hectic time. I'm sorry your invitation came so late in the session and was such very short notice as I do understand your concerns and would like to meet with you. I do however want to assure you that the House Resources Committee has not heard only the urban side of these issues. We have worked hard to speak with many village people and understand the issues involved from their points of view. We have been involved in much redrafting of Representative Duncan's bill (SSHB 350) concerning limited entry for handtrollers in an effort to come up with a revised version of the bill which would help to insure the involvement of village people in handtrolling to make sure that future permits will go to rural people. It is a difficult problem to resolve especially because there is little or no agreement between villages and we even hear lots of opposing ideas coming from people from the same towns. We have gone out of our way to keep southeast villages informed of meetings and action concerning SSHB 350. Before our first hearing we sent notifications to over 150 people. Again this week, as soon as the new version of the bill was finished we sent copies of it (along with an invitation to testify or send written opinions) to over 160 people including each member of every local Fish and Game advisory committee in southeast and

CO-CHAIRMEN
REP. ALVIN OSTERBACK (465-3719) • REP. BILL MILES (465-3779)
VICE-CHAIRMAN
REP. FRED ZHAROFF
REP. PAT CARNEY • REP. C.V. "CHAT" CHATTERTON • REP. SAM COTTEN
REP. DICK ELIASON • REP. JACK FULLER • REP. RICK HALFORD

all southeastern mayors. Very few people have sent us any constructive ideas for the revising of the bill or alternative solutions to handtrolling problems. As I understand it, if some version of this bill does not pass the legislature within the next couple of weeks, the Entry Commission will enact a regular limited entry program within the next year, so that any future entry into handtrolling will be by purchase of a permit on the open market as in all other limited entry fisheries.

Time is short and probably it is already too late to get any bill through both the House and Senate yet this year. But we want to know how you and other village people feel about these options.

Please feel free to call or write to me or my staff or other members of the House Resources Committee. We hope that Hoonah will let us know before Thursday's meeting how you feel about the newest version of CSSSHB 350 or will have someone at the hearing to express your opinions.

Again I am sorry not to be able to attend your meeting.

Best personal regards,

Alvin Osterback

HAND TROLL

Limited Entry Commissioners:

The years 1975 through 1978 being considered for points for hand troll permits, I recommend past participation be the first to be used to qualify.

1. Those that fished the four years;

2. That State and Federal tax returns filed by individuals be used in giving economic points (all their income);

3. No points be given for vessel ownership, unless they use all four years of vessel ownership (points be same for each of the four years);

4. The only fish to be considered be salmon;

   (a) Not halibut or any other species caught.

   (b) The State is trying to cut down the amount of salmon caught (not halibut) in the hand troll fleet.

   (c) The people not depending on fishing want halibut thrown in to bring up their poundage (bigger vessels).

   (d) A $25,000 cruiser (n.s. a little skiff (handtroller) the small vessel cannot handle halibut in any amount.

   (e) I do not want to see someone that fished only 1978 get enough points to get a permit, some that only fished three years be denied.

   (f) It happened before. Some that fished 1972 only got 21 points. Need 6 points for vessel ownership (no other year could you get vessel points). Also sold all their gear, vessel in 1972, and got investment back and still got a permit to fish again or sell (Xmas).

I wish to point out something at this time. Under the Statute it says this for past participation, "<u>years fished</u>." No place does it say year or years fished.

The devil in me writes the following. How many people do you know in Juneau that handtroll that are working for the legislators, or family, Department of Fish and Game, City Police, State Troopers, Forest Service, Coast Guard, businessmen, Bureau of Indian Affairs? It's simpler to check the register in the Federal Building for agencies, right? Ah! Yes! Don't forget the lawyers working for the State and private lawyers.

Yes, I'm on the side of the hand troller that makes his living at it. I'll help you all I can. Now you see whey I wanted limited entry out and some sections redone in 1976. I knew what was going to happen. The price of permits going up and up. Fish prices started major jumps from 1967 til present. (Court Cases 166+)
200 mile limit I was positive would be in, and is.

World demand for fish.

I have a habit of looking 10 to 20 years from the present.

The people that want tax write-offs look elsewhere.

Give the little guy a break.

Testimony by phone from Eric Jordan, Secretary, Sitka Fish and Game Advisory Committee.

Following are results of meeting and responses of members.

3 - in favor of SSHB 350
5 - opposed
2 - in favor with changes
2 - in favor if Hand Trollers favored it

On the issue the comments were communicated:

Two persons favored the bill with changes

One person felt he could support it if the number of permits could be reduced.

One person gave these specific objections:

1. Section 1(h) line 10 - eliminate the portion that does not allow the permit to be inherited by spouse. Family should be able to inherit.
2. Page 1, line 20, delete number 1.
3. Line 25, page 1 , Board of Fisheries should determine "substantial quantity" rather than the Commission.
4. Page 2, line 20 - 21 - delete "issued for any fishery except a handtrolling fishery upon the death of the permittee".
5. Page 2, line 29, change "may" to "shall".
6. Page 3, line 2 insert "hand trollers" before gear licensing.
7. Page 3, line 14 - use "immediately" instead of "promptly"
8. Line 21, - add "handtrollers" in front of gear license.
9. Line 17-18-19, Page 4 - Opposed to this section, should be same as for other fisheries.
10. Page 4, line 22 - delete "other than a handtroller"

Two persons, not handtrollers, would favor the bill if the handtrollers favored it.

Henry Benson, Chairman, Sitka Community Association and Chairman, Tribal Council

The whole act does not relate equally between power and hand trollers. It forces handtrollers to be productive and discriminates. He is opposed because the State has not documented where handtrolling is a threat to the fishing industry. Before State passes this legislation, it should prove that handtrolling is damaging the fisheries All or most are part time fishermen. People who fish part time and work the rest of the time should not be penalized to favor the person who fishes part time and vacations the rest of the year. Alaskans should have an advantage, especially those born in Alaska, in entering and remaining in the fishery.

He is opposed to handtrollers being singled out for regulation and legislation. Fails to see how this legislation meets any conservation goals.

Eric Jordan - Personal Comments

A handtroller who has earned a permit should be able to sell it and get into other fisheries. He favors a freely transferable permit. Regulation and legislation have jeopardized small handtrolling operations. They need the means to get into other fisheries to imporve income. He is opposed to State control of permits, ex. determining who gets them and who doesn't.

Of those responding to a questionaire mailed in the Sitka area, (approx 50 people) 70% favored a freely salable permit and 30% favored a non transferable permit.

116

Apr. 18, 1979

Dear mr. OSTERBACK

Please find enclosed, the thought and preparation of The Southeast Hand Troll Assocation which led to Mr Duncan introducing House Bill 350. This bill lacks a section dealing with reissuance of permits by the Limited Entry Commission. Mr Duncan is aware of this problem and has assured us that the reissuance section can be added in committee.

Thank you,

Eric Robinson

Eric Robinson

Sec./Tres. SE Hand Troll Assoc.

ANNUAL MEETING OF THE SOUTHEAST HANDTROLL ASSOCIATION

March 2 and 3, 1979

Minutes of the meeting and proposal for
amendment to limited entry law for
Handtrolling if Handtrolling is included

Juneau, Alaska

ANNUAL MEETING
SOUTHEAST HANDTROLL ASSOCIATION

Meeting called to order at 3:00 P.M., Friday, March 2, 1979 at Chuck Porter's house (regular meeting place not available until Saturday, March 3, 1979).

Members present: Fred Shewey, Ketchikan; Ken Proctor and Mick Diamond, Sitka; Kelly St. Clair, Hoonah; Jim Lockhart, Hydaburg; Chuck Porter, Chairman; Dick Woodward, Secretary-Treasurer; Eric Robinson, Juneau. Absent: Chuck Peadra, Wrangell.

First item was to recess official meeting and go into informal discussion.

The subject of continuance of the Southeast Handtroll Association (SHA) was brought up by the Chairman. All agreed it was essential to continue and so the subject was dropped.

Secretary-Treasurer gave existing balance of $1.600.00 and advised that Hoonah and Juneau had yet to pay their 1979 dues. Hoonah advised that their dues were on the way, as did Juneau, so all present were in good standing.

The Chairman asked what the members wanted to do in reference to payment of expenses for the out of town representatives. The vote was unanimous to pay the return air fare, plus hotels for those so lodged, plus pay for no host dinner on Saturday night.

It was also voted to pay return air fare for another Ketchikan representative, Jim Jones. The basic theme of all was to help the smaller communities attend by paying part of their expenses whenever possible.

The Chairman advised that we may be having guests attend. No one objected.

The membership then voted to forgive past debts due SHA. The vote was unanimous.

Various ideas were discussed as to how to make the Association more active and responsive. They were:

1) Sending out a monthly news bulletin.

2) Setting up another Association meeting early in the fall before proposal time.

3) Each community should cross-reference the others with copies of their monthly meetings.

The Chairman asked for an expression on Limited Entry from each. The responses follow:

Ketchikan: Yes, no alternative.

Sitka: Yes, on the concept. no other alternative.

Juneau: Yes. no alternative.

Hydaburg: No, Period.

Hoonah: Yes, 100% against, but no alternative.

Wrangell: absent.

The only other alternatives to Limited Entry brought out ranged from gear reduction to sport rods only to more fish. Gear reduction to sport rods only was unacceptable to the majority.

Meeting recessed till 9:00 A.M. Saturday morning.

Meeting called to order at 9:00 A.M., Saturday, March 3, 1979. Same members present.

The Chairman introduced guest speaker John Garner, Chairman of the Limited Entry Commission.

His talk was on the present status of where Limited Entry is in reference to Handtrolling; what problems we can expect; and, what legislation is necessary in order to change the existing law to conform to what we felt was necessary to eliminate the severe deficiencies found in it.

The changes to be made were:

1) Transferability:

   a) Permit remains property of the State.

   b) State issue and re-issue.

   c) Need "use it or lose it" provisions.

   d) Need "ready, willing, and able" provisions.

2) Other criteria:

   Retired persons and military.

3) Moritorium on Handtroll transfers so as not to snarl up - possible Limited Entry transition.

Some added comments were:

He hoped to have the first draft of proposed regulations by late summer of 1979. This would be followed by a couple of months for public digestion, followed by public hearings.

Tentative cut-off date for eligibility is 1-1-79. However,

if unable to complete by 1-1-80, then the cut-off date would be 1-1-80.

The previous Limited Entry program history was 12 years, later revised to 15.

The existing law requires a reasonable balance to be struck between participation and economic dependence but can shift emphasis from one to the other depending on public desires.

He then answered questions from the floor.

After Garner's presentation, the group took up the sample Limited Entry program for discussion.

The net result was adoption of the attached. A summary follows:

1) Basic criteria.

2) Expanded criteria definition, except under the "ready, willing, and able clause", the group agreed to the concept only and did not use the 3 items as listed.

And, finally, specific points of the program.

It should be noted that a point system was not set up. In lieu of this, we recommended to the Commission that they establish a point system based on a percentage of each criteria as follows:

Past participation	50%
Economic dependence	25%
Investment-vessel, gear	12%
Domicile	13%

They also recommended under new criteria the following:

That pioneers, as defined by the State, be given a lifetime permit, not includeable in the optimum number.

Hoonah asked if there was some way that a community could retain the same number of permits as under the initial issuance number rather than have reversion going to another community.

It was felt that this was a good idea, but it would not work equitably and also would tend to defeat the fast turn-over in the program.

The group also did not like the idea of being required to specify which type of gear a person wanted to fish when he made the initial application (i.e. this choice would be a "forever" choice of gurdie or rod and reel).

The meeting adjourned at 6:00 P.M..

A. BASIC CRITERIA:

1. Initial issuance at a level that will insure all Commercial Handtroll fishermen, having a history of Commercial Handtrolling in any one year out of at least the past five years, would be considered under this system as having met the basic requirements for application.

2. All permits remain the property of the State of Alaska under a "non-sale provision".

3. That all permits issued, be issued on a "use it or lose it" basis to those who are "now ready, willing, and able" to enter into or continue in the fishery.

4. That an "optimum" number of desired permits be established by the Limited Entry Commission/Department of Fish and Game and that this "optimum" number be reached through an attrition factor.

B. BASIC CRITERIA EXPANDED COMMENTS:

1. Initial Issuance Level - This level, when established, should be such that all Handtroll fishermen who are seriously engaged in the Commercial harvesting of salmon by Handtrolling be assured that they will receive a Limited Entry permit. When considering the term "serious" it is interpreted to mean one who in fact did sell at least 500 pounds during a given season.

2. Non-Sale Provision - This provision is required to prevent speculative application for permits by those who may be qualified but are no longer involved in the fisheries and would not normally reapply for an interim use permit in the future. Additionally, this provision is required to enable a method of reaching the optimum number desired by the means of attrition which in turn permits eventual new entry by re-issuance of permits to new applicants.

3. Use It or Lose It Provision - This aspect is also needed to enable reduction through attrition to optimum levels. This term is intended to mean a person who does not use his permit during any one fishing season without good cause, such as physical disability, loss of boat, district or area closures, etc.. Additionally, this is intended to be an additional vehicle which will enable permit re-issuance in a rapid fashion.

"Use it" is defined as a minimum of 500 pounds of salmon sold during one season.

4. Optimum Desired Participation Level - If required, this optimum level would permit management to adjust the level of participation to that which would be in the best interest of the fisheries and is intended to be a level which could be adjusted up when the condition of the fisheries permit and should be examined annually for permitted adjustment.

5. Permit Re-Issuance - Once initial issue has been accomplished and optimum number established, all permits would then revert to the State of Alaska and become dormant. In order for permits to become dormant the following criteria would have to be established to allow attrition.

   a. Death of permit holder.

   b. Voluntarily returned.

   c. Conviction of a serious fisheries violation.

   d. Use it or lose it criteria not met (dormancy).

   Once optimum number is reached, those permits that become available below the optimum are then re-issued to new applicants by means of an established application procedure and waiting list. New applicants would then be selected from the top of the list and issued the next available permit provided they are "ready, willing, and able" to enter into the fishery. Applicants would be assigned to the waiting list on a first come, fist serve basis.

6. Ready, Willing, and Able - All persons, desiring a permit at time of initial issuance and then re-issuance, must be in a posture that would permit active participation within the fisheries within a reasonable length of time after notification.

LIMITED ENTRY PROGRAM

To be based on:

1. Non-saleable permits. They remain the property of the State.

2. Past participation and economic dependency.

3. The State issue and re-issue.

4. Fisherman ready, willing, and able to fish (concept).

5. Hardship clause but must show past participation history in this or other fishery.

6. Permit must be fished annually. Minimum poundage 500 pounds or reverts back to the State for re-issuance (unless unable due to good cause - good cause needs to be defined and pro d).

7. Permit reverts to the State

   a. by death of the holder,

   b. by conviction of a fishery offense,

   c. donated back,

   d. or, by use it or lose concept.

8. In lieu of setting up criteria for a point system, it was decided to set up guideline proposals as follows and let the commission establish a point system based on the following percentages:

   a. Past participation: 50%

   b. Economic dependence 25%

   c. Investment-vessel, gear 12%

   d. Domicile 13%

9. Additionally, under a new section for retired persons, under initial issuance:

   a. would be given a permit to handtroll and not be counted in the optimum number, upon reaching pioneer status as such is defined by the State. Such a permit is for a lifetime and subject to the same reversion clauses as regular permits.

PROPOSALS FOR CONSIDERATION

1. The initial number of permits issued should consider active participants in the Handtroll fishery for the last five years.

2. The optimum number of permits for Handtrolling should be reached through attrition as described in the proposal.

3. The requested amendments to the existing Limited Entry Law are intended to insure: a reasonable turnover of Handtroll permits to allow new entry to the fishery, that speculators efforts would be frustrated to a position of non-participation and that the individual economic situation of persons interested in entering the Handtroll fishery would not exclude them. i.e. a large price tag on the Handtroll permit.

4. That the concept of ready, willing and able be defined; the intent is described in the proposal.

5. The present surf line closures for Handtrolling are discriminatory and should be repealed.

6. That the Department of Fish and Game be granted the ability to incorporate volunteer public help in projects of enhancement and rehabilitation of natural stocks that are, by definition (the standards and terms used for the jurisdiction of restrictions and regulation on the user group), endangered.

November 2, 1979.

HAND TROLL

Limited Entry Commissioners:

The years 1975 through 1978 being considered for points for hand troll permits, I recommend past participation be the first to be used to qualify.

1. Those that fished the four years;

2. That State and Federal tax returns filed by individuals be used in giving economic points (all their income);

3. No points be given for vessel ownership, unless they use all four years of vessel ownership (points be same for each of the four years);

4. The only fish to be considered be salmon;

   (a) Not halibut or any other species caught.

   (b) The State is trying to cut down the amount of salmon caught (not halibut) in the hand troll fleet.

   (c) The people not depending on fishing want halibut thrown in to bring up their poundage (bigger vessels).

   (d) A $25,000 cruiser (n.s. a little skiff (handtroller) the small vessel cannot handle halibut in any amount.

   (e) I do not want to see someone that fished only 1978 get enough points to get a permit, some that only fished three years be denied.

   (f) It happened before. Some that fished 1972 only got 21 points. Need 6 points for vessel ownership (no other year could you get vessel points). Also sold all their gear, vessel in 1972, and got investment back and still got a permit to fish again or sell (Xmas).

I wish to point out something at this time. Under the Statute it says this for past participation, "<u>years fished</u>." No place does it say year or years fished.

The devil in me writes the following. To: Rep Eciason / House Resources
Re: HB350

I would like to comment on HB 350, Jim Duncan's handtroll limited entry bill. I am a professional handtroller; fishing has made 90% of my income for the past three years.

Many people have commented on the dislocations and hardships that will be forced on rural communities by increasing regulation of the hand-troll fishery. It is this regulation of fishing areas and times that has made us embrace limited entry as the only alternative to a fishery made up entirely of part-time recreational fishermen. However, I have seen no comment on the equal hardships that non-transferable permits will cause to the people of Alaska, especially those in the rural communities. Non-transferable permits would be "frozen" -- for all practical purposes unavailable to new entrants, however serious their intent or

limited their choice of livelihood.

Even if the very liberal recommendation of 2100 permits were adopted, we can, I think, safely assume that the waiting list will have around 3000 names the first year, since over 5000 permits were issued last year. With increasing interest in the fisheries and increasing population, how rapidly will that figure grow? (It may become a popular lottery, since banks have already shown that credit is virtually guaranteed to a permit holder.) How long will the wait be; how often will a permit become available? It is reasonable to assume that once gained, a permit will not be released lightly. Only the naive will not realize that to avoid permanent loss of his permit a fisherman might buy his 500-pound quota from another fisherman, or fish for only a few days. (And

raising the quota will only increase pressure on the fish stocks and on fishermen with genuine hardships.) It is clear that even those who sign up immediately will wait a long time, probably many years, to get a permit, because there is no incentive for anyone to let his go — he would have nothing to gain and everything to lose.

Who does stand to gain? Certainly not the taxpayers, who foot the bill for verifying quotas, sniffing out frauds, adjudging special cases, and administering lists. The Entry Commission is unwieldy enough without a parallel bureaucracy-within-a-bureaucracy. Certainly not the rural communities, which must see their youth go to the cities to find jobs because their names won't come up for years. Certainly not the professional fishermen, since the applicant with only a casual

interest is just as likely to be next on the list as the applicant who is serious about fisling as a vocation. Certainly not the Alaskan fisherman who can no longer keep a permit in the family but must surrender it to the state to dole out to someone, perhaps from out-of-state, who happens to hold the next number.

If the legislature wants to do something about the high price of permits, consider an addition to the fisheries loan program. That would be a legal way to give preference to ~~state~~ Alaska residents, rural residents, the needy, those already fishing, or whomever the legislature specifies.

On the surface, non-transferability looks great; in practice, everybody loses. Please look beneath ~~beneath~~ the surface and vote against HB 350

Jamie Dorn Chevalier
Box 830 Sitka

Testimony by phone from Eric Jordan, Secretary, Sitka Fish and Game Advisory Committee.

Following are results of meeting and responses of members.

3 - in favor of SSHB 350
5 - opposed
2 - in favor with changes
2 - in favor if Hand Trollers favored it

On the issue the comments were communicated:

Two persons favored the bill with changes

One person felt he could support it if the number of permits could be reduced.

One person gave these specific objections:

1. Section 1(h) line 10 - eliminate the portion that does not allow the permit to be inherited by spouse. Family should be able to inherit.
2. Page 1, line 20, delete number 1.
3. Line 25, page 1 , Board of Fisheries should determine "substantial quantity" rather than the Commission.
4. Page 2, line 20 - 21 - delete "issued for any fishery except a handtrolling fishery upon the death of the permittee".
5. Page 2, line 29, change "may" to "shall".
6. Page 3, line 2 insert "hand trollers" before gear licensing.
7. Page 3, line 14 - use "immediately" instead of "promptly"
8. Line 21, - add "handtrollers" in front of gear license.
9. Line 17-18-19, Page 4 - Opposed to this section, should be same as for other fisheries.
10. Page 4, line 22 - delete "other than a handtroller"

Two persons, not handtrollers, would favor the bill if the handtrollers favored it.

Henry Benson, Chairman, Sitka Community Association and Chairman, Tribal Council

The whole act does not relate equally between power and hand trollers. It forces handtrollers to be productive and discriminates. He is opposed because the State has not documented where handtrolling is a threat to the fishing industry. Before State passes this legislation, it should prove that handtrolling is damaging the fisheries. All or most are part time fishermen. People who fish part time and work the rest of the time should not be penalized to favor the person who fishes part time and vacations the rest of the year. Alaskans should have an advantage, especially those born in Alaska, in entering and remaining in the fishery.

He is opposed to handtrollers being singled out for regulation and legislation. Fails to see how this legislation meets any conservation goals.

Eric Jordan - Personal Comments

A handtroller who has earned a permit should be able to sell it and get into other fisheries. He favors a freely transferable permit. Regulation and legislation have jeopardized small handtrolling operations. They need the means to get into other fisheries to improve income. He is opposed to State control of permits, ex. determining who gets them and who doesn't.

Of those responding to a questionaire mailed in the Sitka area, (approx 50 people) 70% favored a freely salable permit and 30% favored a non transferable permit.

March 14, 1980

To the House Resources Committee:

We truly regret being unable to attend your hearing on the 18th. We submit this written testimony on Sponsor Substitute for House Bill 350.

My husband and I fish commercially for our total income; we gillnet, longline, jig, crab, as well as handtroll. My husband began handtrolling commercially in 1963. We feel limited entry for handtrolling is necessary, although regrettable.

Our comments begin with Page 1, lines 22 through 29, which deal with the waivers for non-landings. Although it is difficult to be specific and enumerate all instances in legislation, we find this passage overly vague. How does the commission decide just what constitutes a substantial quantity of fish? Will it be a fixed figure, or will it change every year, based on the resource's expected return? Also, who on the commission decides what is "good cause" for failing to catch enough fish? We ourselves are vitally interested in knowing how much of our income must be derived from handtrolling alone. Last year, approximately 15 % of our income (and 1/6 of our time) came from trolling; yet 100% of our earnings came from our fishing efforts.

Regarding the issuance of permits, Page 3, lines 6 through 26, especially section (b)(4). Under this ruling, if a person ever loses his permit, for whatever reason, he is ineligible to ever receive another. This seems a little harsh; there are few mistakes we may make in life that have such a final consequence.

These are our main comments at this time. We will wait to see the outcome of this hearing before we contribute other testimony. We urge you to examine this bill thoroughly so as to make the fairest decisions possible.

Thank you,

Russ and Alice Bartoo

Gentlemen -

A recent conversation with Ron Miller of the Limited Entry commission office seemed to indicate that the commissions intent relating to "hand trolling" is to ultimately reduce the permanent permits to the number which the Commission shall determine as sufficiently restrictive to assure those determined to participate to do so profitably. This line of reasoning falls neatly within the confines created by the advocates of the "inevitable" rigidly planned and controlled economy.

The term "hand troller" as currently applied, refers

to the least efficient of all methods of taking salmon. Available statistics would have to be skewed drastically to allow them to show any but an occasional "hand troller" who nets better than 40%-60% of his gross over a period of years.

To my mind, with prevailing energy conditions and escalating engine capacities, there is no way "hand trolling" can be justified as a subsidized operation, especially under the auspices of proposals which arbitrarily preclude an authentic hand troller's participation.

I have been denied an interim permit on grounds of not having participated during the years 1975-79

In 1907. I hand trolled from a plywood skiff with no power other than oars and became convinced it is still possible for a willing back to make a substantial portion of a subsistance income via this method, for a lifestyle geared to this type operation. It bothers me considerably that anyone can be given or assume authority to deny me the right to try an unsubsidized simple way of living.

I have recently completed a 15'-4" dory designed to be powered exclusively manually and am having difficulty seeing justice in proposals bent on creating a preserve for inefficiency through policy attempting to discourage

the indissoluble correlation between "right" and "need."

Are we actually this far down the tube?

Sincerely,

Bert E. Stewart

MEMORANDUM

TO: Rep. Alvin Osterback, Chairman
House Resources Committee

FROM: Rep. Jim Duncan

DATE: February 22, 1980

SUBJECT: House Bill No. 683 and
Sponsor Substitute for House Bill No. 350

I would like to request a hearing on House Bill No. 683, Relating to Fishing Vessels for Charter Purposes, and the Sponsor Substitute for House Bill No. 350, Relating to Limited Entry Permits for Handtrolling, at your earliest convenience.

Thank you for your consideration.

Dear Sir

The Alaska Native Brotherhood, Camp #1 of Sitka, Alaska opposes HB 350 regarding limited entry permits for handtrolling.

The main objection is the use or lose provision. The act does not deal equally with handtrollers as it does with other fisherman. If you must impose limited entry, standardise it, same provisions for all limited entry fisheries, all use or lose, or delete the provision. There were some bad mistakes made in implimenting limited entry, let not make even worst ones for handtrollers, look at fisheries as whole, not just how can we cut the handtroll fisheries.

The problem with the use or lose as written, it defeats the intent of helping out the real fisherman, the people from the small communities, i.e., Hoonah may have 100-150 permits initially, but, what happens if someone dies. His permit is turned back in, taken out of Hoonah, and since the larger communities like Juneau, Sitka, Ketchikan, etc. will have a lot of applicants for permits on file, the permit turned in by Hoonah will most likely be issued to someone from the larger communities. This will keep up until your lose or use systems runs the small villages out of the handtroll business instead of protecting them. If you must use a use or lose system, then allot them by communities, i.e., if someone turns one in from Hoonah, it will be reissued to someone from Hoonah, etc., etc. There should also be the ability to pass on your permit to another member on your family, like a son or daughter.

Another point, everyone states concern about over-fishing, fishing-out an area, so you propose limites, either on gear or area, then, you turn right around and say, if you don't use your permit and catch a lot of fish I will take it away and give it to someone who will catch a lot of fish!?!

Much is made to do about many of the handtrollers being part time fishermen. Yet in reality, all fishermen are part time fishermen, with the exception of the very few, mostly handtrollers, who fish for Kings year-round. In fact the only people that can afford to buy a power troll permit are the people with good paying jobs. For instance, a lot of the teachers in the small villages and the larger communities, hold power troll permits. They teach for nine months, fish for 3 months, and yet you only point to the fact that some hand trollers have other jobs besides fishing. Another example, Rep. Eliason spends his winters in Juneau, and not for free, in fact got a raise this year, and still claims to be a full time fisherman? No one can convice us that permit holders from

out of state sit around all winter when they go home. A large part of the fishermen that go north, like to Bristol Bay are people with better than "low income" salaries, they take 2 weeks to a month vacation, go north and fish, and brag about how they earned 25-40 thousand dollars on their vacation! But, if a handtroller dare make 3-6 thousand a year during his off time, you think its wrong.

Many times the issues include the depletion of stock, your solutions always seem to start with controlling the fisheries that constitute 10% or less of the troll fisheries. Common sense will tell you that maybe you'd have more luck at putting more limitations on the part that produces 90% of the impact.

Constitutional rights, and equality are big issues nationally. Delete all portions that require handtrollers to turn in their permits upon death, or limited use, etc., or, apply the provisions to all troll fisheries.

Consider this, many of the people born and raised in Alaska grow up fishing. But, because it is almost impossible to survive on fishing alone, and to make use of our education, many of the people find year round jobs during critical years of the family. Like myself, I was born in Glacier Bay. I grew up fishing, starting with hand trolling. When I say hand trolling I am talking about trolling by rowing, and with a cotton line. I started when I was 5-6 years old with my dad, graduated to going by myself, using a 5 horse johnson outboard, eventually went power trolling with my uncle, seining with my uncle or dad, gill netting with my grandfather in Haines, etc., etc. Presently I work with THS, I have a daughter in college, another a senior in high school who wants to go to college, another a freshman in high school, and a son in 7th grade. I work in health services, a service much needed in this state, I also serve in many public service offices, i.e., ANB, state health comp. planning, organizing HSA, etc. In doing so I am busy year around and for now my fishing time is limited. Under your guidelines I stand a chance of losing my permit. I think I have the right to serve the people in much the same way Rep. Eliason does in Juneau, he does his thing part time, I do my year around for now, but, in 3-5 years I plan to return home, or retire from full time employment, my children will have finished school, etc., then I will be more of a full time fisherman. But, it sound like you will try to take my permit if I don't use it enough. Yet to the public you are saying, there are too many fisherman, and the fisheries are over-fished, to us you say, I will take your permit if you do not fish enough, and give it to someone who will add to our problems of fishing [redacted] an over-fished fisheries!?!

The ANB wants to protect the people who are born fisherman, are fishermen because they love it, and even if they are doing something else right now that takes up their time, they are Alaskans who live here, will be here thorough the good and the bad times. Many of your so called fishermen from out of state are fortune hunters, just like the gold miners that came with the gold rush, when the gold is gone, they will be gone. The true Alaskan fishermen will still be here, still trying to live a life they love. For once protect the Alaskans' rights, current legislation seems to worry more about everybody else's rights first, what about ours?

Ref: Proposed CS FOR SS FOR HB 350

March 17,1980

To the House Resource Committee

Gentlemen;

My name is Chuck Porter and I am representing the Juneau Hand Troll Association. Before getting into the bill, I believe some background is in order. The Board of Fisherys has for the past Three years been very concerned about the rapid growth of the Hand Troll fleet which is presently, an open fishery.

They therefore in 1978, directed the Limited Entry Commission to begin putting the wheels in motion to put Limited Entry into the Hand Troll fishery effective 1979 and further, that the number of permits be a maximum of 600.

To give you an idea of active participants. In 1975, 1094 boats sold fish. 1976, 1237 boats, 1977,1894 boats, 1978, 2604 boats. As you can see, that 600 number would have left the majority of existing users out of the fishery. It should be noted here, that the reasoning behind the Boards 600 figure was that according to statistical data, that many boats caught the so called allocation or quota alloted to the Hand Troll Fishery.

Fortunately during 1978, the Limited Entry Commission undertook a series of surveys throughout South East Alaska to determine what kind of a fishery the Hand Trollers wanted and more particularly, try to determine the make up of the participants... We are attaching a copy of their results and conclusions as it more aptly describes the situation, [redacted] " After evaluating the management problems and hearing the desires of the fishermen, we cannot agree that your management plan to drastically reduce the size of the fleet and allow full developement of highly efficient Hand Troll operations (ie the 600 number) is the best solution. Instead, it is our proposal to work toward a different goal, that is, to maintain the historical character of this fishery while at the same time providing for a professional fishery. Hand Trolling has been a small scale, low

* WE quote a portion of their presentation to the Board.

investment, low return fishery, generally attracting participants who either utilize the fishery to sustain lifestyle, or as a fishing outlet for young and older residents and others who depend upon it to supplement their income. We therefore recommend a number between 2000 and 2500 permits". Unquote. The actual number settled upon was 2150.

With this background in mind, we now come to the bill before you. The contents were derived from many meetings and idea exchanges with various communities and individuals throughout South East Alaska. It is by no means a 100% concurrence and the main reason is the transferability clause. This bill [redacted] among other things, PROPOSES a non sale or non transferable permit

Our organization and many others believe that this clause is vital, if this is to continue as an entrance level fishery and this is why we wish you to thoughly understand the differences.

For example, under existing law, initial issuance will go to Estates, THEY will go to fishermen who qualify, but have left the fishery for one reason or another, or will go to speculators who have qualified just to get a permit to sell.

Future costs of permits will become prohibitive for new entrants, especially for those who need them the most. By that we refer to people in rural areas, young people, retirees and so on.

The non sale provision takes away the monetary incentive [redacted], thus the eligible who have left the fishery, the estates, the speculators, would not apply, thus leaving those permits for the serious and active. The fishery would remain a low entrance level one, that accomodates its historical place.

We have also examined the following:

1. Sellable, Closed End: Permit would be sellable but with a price limit set.

2. Sellable, Closed End Contract: Price would be set by the State and sale would be by State Contrart with purjury clause. Comment: On both of the above,

there would be no way to police under the table money and eventually we would be back to where we are now.

3. Sellable, Open or Closed: Thru a State loan program, wherein the State would loan the money for a permit on contract to permitee, thus only thru such loan program could a permit transfer. The comment on this one is too much manpower, paperwork, and cost to the State. Time consuming and so forth. Also price could fluctuate.

We therefore concluded that the non sale provision is the simplest and least costly to the State and a fair way to go.

This bill also has these added features.

1. The State is charged the responsibility for issuance and reissuance.
2. Permits would revert to the State upon death of the holder, unless willed prior to.
3. They may be voluntarily returned.
4. Permits must be activly fished annually or they revert. We realize this latter clause may cause apprehension due to forcing a fishermen to fish, so we point out to you the intent, that this provision is envisioned to mean something very minimal, like FOUR landings per season. This does not cause damage to the resourse, nor does it burden the holder. The reason for this clause is that we are attempting to structure as rapid a turnover as possible in order for new entrants to be able to get into the fishery in a relative short time. The historical turnover rate of 47%, coupled with the above features should enable a maximum of 4 year wait down to 2 years. In fact we are betting on it because there is also a clause herein that if the annual turn over rate is not 25% plus average for the first four years, the commission is directed to come back to you with amendments.

This session will be the last chance we have to structure a change such as proposed. The alternatives to not passing it, are grim.

Limited Entry will be imposed under existing law, (ie Saleable Permits). We hope that between the history of existing permit costs and problems and the base information we have outlined herein, you will understand that there will be an

outward migration of permits to the highest bidder. Thus in a few short years you will indeed, be looking at a highly efficient Hand Troll fleet of 600 boats. Meanwhile, those that need them most will be on the beach, the State will be facing the problems of what these people can do for alternate occupations and of course worst of all, what to do about future entry, for the yound, the old, the retiree, the rural people?

The other alternative is equally as bad. There could be no Limited Entry in which case the resulting regulatory measures would be so drastic there would be no point in fishing.

We therefore urge you to please give favorable consideration to this bill and we thank you for your time.

Chuck Porter
Juneau Hand Troll Association

Limited Entry Commission

HAND TROLL PRESENTATION TO THE BOARD OF FISHERIES
DEC. 1979

The Commission appreciates the opportunity to be here today. Our purpose is to discuss with you the complex problem of managing the hand troll fishery. This particular fishery highlights the necessity of the Commission, the Board, and the Department coordinating management policies. We appreciate the recommendations received from the Board in the past regarding limitation of this fishery and other fisheries; and hope that our recommendations to the Board will be accepted in the same vein.

To summarize quickly, when the majority of the salmon fisheries were brought under entry limitation, the hand troll fishery was specifically segregated from power troll and left open to entry. From 1975 to 1978, the number of active hand trollers increased annually -- 1,094 in 1975, 1,237 in 1976, 1,849 in 1977, and 2,604 in 1978. Through those same years, the hand troll share of the troll fishery harvest has increased from 13% to 28%, measured by poundage. The preliminary data for 1979 shows that approximately 2[illegible]% of the total troll harvest was taken by hand trollers.

During the spring of 1978, the Commission held several joint hearings with the Board in Southeastern communities regarding the hand troll fishery. Public comment at that time was generally opposed to limitation. In the 1978 season, the Board began a series of management measures to try to ensure a historical allocation of the troll catch, beginning with closing all outside waters to hand trolling. Despite the closure, the hand troll portion of the troll catch increased sharply. Consequently, for 1979, the Board further restricted hand troll effort by adding a series of closures in inside waters in an attempt to implement a tacit policy of an 80/20 split of the coho troll catch.

At the December, 1978 Board meeting, the Commission announced that it intended to propose limitation of the fishery in 1979. On September 14, after receiving management recommendations from the Department of Fish and Game, the Commission proposed limitation of the hand troll fishery, beginning in 1980, with a maximum number of 1,100. That proposal was advanced on September 21, 1979. Eight public hearings were held by the Commission with the public comment period closing on November 9, 1979.

At the time the Commission advanced the proposed regulation, we had received recommendations from the Board and the Department of Fish and Game. The Board recommended a maximum number of no greater than 600, by which you indicated to us a desire to significantly decrease the size of the fleet, so that the professional hand trollers that remained could be subject to the same management policies as applied to power trollers, and still not harvest more than 20% of the troll catch. The Department stated that the maximum number should not exceed 1,000 to avoid the necessity of excessive regulation to maintain historical harvest balances. The Department referenced expected efficiency gains in the fleet after limitation, a concern also raised by you in your recommendation.

The Commission proposed maximum number of 1,100 was chosen based upon the input from the Board and Department, plus the Commission's own research. Our intent was to use the fishing seasons from 1975 forward as the predominate indicators of hardship when the hand troll fishery was limited. As a practical matter, the Commission cannot use maximum numbers outside the boundaries of participation established during the most recent years. Thus, we chose the smallest effort level in recent years as our proposal.

Attached to your copies of this presentation is a summary of the public input received by the Commission during the public comment period. It seems quite apparent to us that the news release issued by the Board shortly before the first Commission public hearing greatly influenced the testimony. Prior to the news release, many viewed entry limitation as a mechanism for removing some of the restrictions imposed in the recent past. After the news release, many people testified that if limitation of the fishery would not ease management restrictions, they would prefer that it be left open to entry. Most comments we received favored removal of the restrictions plus an increase in the proposed maximum number, which would exacerbate the management problems you face today.

The Commission has now evaluated all comments and data available at this time. It is very apparent that no simple answer exists which will satisfy the management concerns of the Board, the Department, and ourselves; and at

the same time satisfy the wishes and desires of the Southeastern hand trollers. The very best that can be accomplished in the near future is to prevent the situation from becoming more complicated. We want everyone to understand that the Commission does not have a solution that will be all things for all people. It is our wish, though, to undertake a beginning in what will by necessity be an involved system of slowly working toward a fair and practical management framework. A reasonable result can only be achieved with full agreement between the Board and the Commission, close coordination of our respective regulatory powers, and with the understanding of hand trollers, power trollers, gillnetters, and seiners.

With that prelude, we come before you today to ask for your cooperation in the implementation of a management strategy for the hand troll fishery. After evaluating the management problems and hearing the desires of the fishermen, we cannot agree that your management plan to drastically reduce the size of the fleet and allow full development of highly efficient hand troll operations is the best solution. Instead, it is our proposal to work toward a different goal -- that is, to maintain the historical character of the hand troll fishery while at the same time providing for a professional fishery. Hand trolling has been a small scale, low investment, low return fishery generally attracting participants who either utilize the fishery to sustain a particular lifestyle, or as a fishing outlet for young and older residents of Southeast and others who depend upon the bulk of their income from land-based occupations.

The fishery has generally been referred to as an entry level fishery. The distinguishing characteristic of this fishery is the prohibition of mechanical assistance other than hand power to place and retrieve gear. The definition of such a fishery suggests a special circumstance, particularly in the present environment of highly automated commercial fishing operations. We believe the special circumstance to be very indicative of the essence of this fishery. It is in fact a fishery purposefully defined as a low cost, relatively low return fishery tailored to social desires of those people who have historically partaken of the opportunities it presents. We must assume that those who have developed hand troll operations nearly as efficient as

power trollers have done so because of power troll limitation, or through reinvestment of hard-earned income from hand trolling in the past for the purpose of maximizing the benefits to be accrued in the future. Without some efforts at this time to prevent further efficiency increases, history tells us that limitation of the fishery will almost force those permits that remain to maximize their efficiency within the regulatory framework that dictates their operation. This would in fact seem to be contrary to the Board's statements to the Commission of maximizing the number of permits to be held by residents of rural communities. Rural residents have limited access to wellpaying jobs and mortgageable property. Hence, even if the Commission were to succeed in initially issuing a high percentage of permits to rural residents, those permits would through time tend to migrate to residents of urban communities IF large amounts of capital investment are necessary to remain competitive.

Preliminary analysis does suggest that profits earned in limited fisheries are being reinvested into more efficient operations. That same trend of efficiency increase can be demonstrated in the hand troll fleet. Since 1975, the numbers of permits fished has steadily increased along with the average number of weeks fished and the number of fish caught per week by each active permit holder. Much of this can be attributed to the widespread conversion to hand gurdies, and some must be attributed to the recent entry of more of the larger scale, more aggressive and versatile hand troll operations.

Our proposal is the antithesis of your present management policies. Rather than use regulatory powers to limit the vessel or gear efficiency of the hand troll fleet, time and area closures have been utilized almost exclusively to date. Our suggestion is to combine our respective regulatory powers to limit the efficiency of hand troll operations, through such means as entry limitation, gear restrictions, vessel restrictions, and tying permits to geographic areas; and to use closures as a mechanism for in-season adjustments. Considering the dearth of management data available, it is impossible at this time to identify any particular combination of these restrictions to accomplish a specific goal. Nonetheless, we must begin now to implement some combination of these management restrictions at a profitable, entry level

hand troll fishery is to be maintained and made available to a reasonable number of users.

If you agree to work with us in the development of this management policy, the Board should develop a formal policy, including not only the desired structure of the fishery, but also including a statement of the relationship to the power troll fishery. If you wish to allocate the troll harvest between these two fleets, we need to know what that allocation will be so that we can develop an optimum number analysis. Such a policy will also be a determinant in the establishment of an initial maximum number.

In 1973, the Legislature turned down a proposal by then Governor Egan to limit fisheries by initially establishing a maximum number which would have been synonymous with the present law definition of optimum number. That amendment to the Egan administration bill must be interpreted as a desire by the Legislature to buy fishermen out of a fishery, rather than to ruthlessly eliminate them without compensation. As if to reiterate that point, they specifically identified three salmon fisheries that were distressed and specified that the initial maximum number was to be equivalent to the largest number of participants in any of the four most recent years prior to enactment of the law. Although they allowed the Commission broad authority in the establishment of maximum numbers in other fisheries, we feel compelled to follow the basic example established at that time.

In the attachments which you have to this presentation, you will find in Table 17 a breakdown of participation since 1975. Considering the particular patterns of participation in this fishery, we believe that a maximum number in the range of 2,000 to 2,400 will allow all hand trollers with present dependence on this fishery ample opportunity to qualify for a permanent permit if the fishery were limited in 1980. Should we resolve to mutually develop a management program including entry limitation for hand trolling, we would propose that ranges of participants should be considered for management purposes until a reduction can be accomplished either through buy-back or attrition.

This proposal recognizes the necessity of diminishing the original number of permanent permits to an optimum level to minimize the necessity of time and area closures and thus ensure an opportunity to realize reasonable earnings. We do not believe that closures can be eliminated in the near future even if this management proposal is implemented. While we realize that time/area closures are anethema to most of the hand troll fleet, we foresee no mechanism at this time for their elimination -- with the exceptions of Draconian reductions in the number of gear units or removal of allocation guidelines. Without entry limitation, the severity of management restrictions will by necessity be greater.

Reduction from the initial maximum number can be accomplished by two mechanisms. The first is as provided for in present law by using assessments against hand troll gross earnings to purchase permits on the open market. The second would involve some combination of non-transferability and attrition and would require legislative amendment. Such a bill was introduced last year at the request of the Southeast Hand Trollers Association, and has also, been suggested by Governor Hammond as a modification of the Entry Commission's enabling legislation. Limitation of the hand troll fishery in 1980 would not preclude legislative review of this issue because of the timing that would by necessity be followed. The Commission does not yet have access to completed 1978 and '79 participation data. Also, it i not like that a massive fish ticket editing process presently being conducted by Commission staff for the years 1975-78 will be completed before March. Consequently, permanent, transferable permits could not be made available until late in 1980 at the earliest. This would allow the Legislature the entirety of the upcoming session to review the pros and cons of the two distinctly different procedures.

In summary, we are proposing a joint use of Board and Commission regulatory power, to shape the future of the hand troll fishery. Those who would be most adversely impacted by these proposed changes are persons who have invested in relatively large scale operations, capable of high seas fishing and possessing great mobility. It is definitely not our intention to purposefully single out those individuals as the culprits of the hand troll fleet. We would hope that through discussions among the Board, the Commission, and

other interested parties that a mechanism might be developed to "grandfather" those operations that have established themselves as models of the efficient hand troller.

The Commission has met with representatives from the Department of Fish and Game on a number of occasions to discuss the possibilities of implementing a management plan along the lines suggested to you today. While we have mutually agreed in principle to this approach, time constraints precluded us from working on a detailed management proposal to present to you today. It is our hope that you will be able to agree to this approach and to develop an appropriate management regime to accomplish our mutual objective.

Thank you.

Respectfully submitted,

Commercial Fisheries
Entry Commission

December 6, 1979

December 8, 1979

ALASKA BOARD OF FISHERIES

We support a 2,150-permit limited entry program. This program should accommodate mobile, two-line hand trollers. This fishery would have a floating allocation of approximately 20-25 percent. We support a four-line limit on power trollers, except north and west of Cape Spencer outside three miles where a six-line limit will be imposed. We endorse inseason management for both the hand and power troll fishery. Low cost permits within the hand troll fleet are requested.

IN THE HOUSE BY DUNCAN AND ELIASON

SPONSOR SUBSTITUTE FOR HOUSE BILL NO. 350

IN THE LEGISLATURE OF THE STATE OF ALASKA

ELEVENTH LEGISLATURE - SECOND SESSION

A BILL

For an Act entitled. "An Act relating to limited entry permits for handtrolling."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 16.43.150(h) is amended to read:

(h) Upon the death of an entry permit holder, the entry [PERMANENT] permit shall be transferred by the commission directly to the surviving spouse by right of survivorship unless a contrary intent is manifested or unless the entry permit was issued for handtrolling. When no spouse survives, the rights of the decedent pass as part of his estate unless the rights relate to an entry permit that was issued for handtrolling.

* Sec. 2. AS 16.43.150 is amended by adding new subsections to read:

(i) An entry permit issued for handtrolling shall be forfeited to the commission

(1) upon the death of the permit holder;

(2) upon failure of the permit holder to verify to the commission the landings of a substantial quantity of fish caught by handtrolling each season in the fishery for which the entry permit was issued, except as waived by the commission for good cause.

(j) [redacted], "[redacted]" [redacted] minimum amount of fish which a fisherman must catch to demonstrate an intent to make commercial fishing by handtrolling a substantial part of his occupation. The commission shall establish the minimum amount by regulation for each handtroll fishery for which entry permits have been

issued.

(k) An entry permit issued for handtrolling may be voluntarily transferred at any time to the commission, without compensation.

* Sec. 3. AS 16.43.170(b) is amended to read:

(b) Except as provided in (c) and (e) of this section, the holder of an entry permit may transfer his permit to another person or to the commission upon 60 days notice of intent to transfer under regulations adopted by the commission. No sooner than 60 days nor later than 12 months from the date of notice to the commission, the holder of an entry permit may transfer his permit. If the proposed transferee, other than the commission, can establish present ability to participate actively in the fishery, the commission shall approve the transfer and reissue the entry permit to the transferee.

* Sec. 4. AS 16.43.170 is amended by adding a new subsection to read:

(e) Except as provided in AS 16.43.180(a) and notwithstanding the provisions of (a) - (c) of this section, an entry permit for handtrolling is transferable only to the commission.

* Sec. 5. 16.43.180(b) is amended to read:

(b) The commission shall adopt regulations providing for the temporary transfer of an entry permit issued for any fishery except a handtrolling fishery upon the death of the permittee pending final disposition of the permit as a part of the permittee's estate.

* Sec. 6. AS 16.43.260(a) is amended to read:

(a) The commission shall accept applications for entry permits other than entry permits for handtrolling only from applicants who have harvested fishery resources commercially while participating in the fishery as holders of gear licenses issued under AS 16.05.536 - 16.05.-670 before the qualification date established in (d) or (e) of this section. The commission may accept applications for entry permits for

handtrolling from any applicant but shall give priority to those who have harvested fishery resources as holders of gear licenses or interim-use permits before the qualification date established in (e) of this section.

* Sec. 7. AS 16.43 is amended by adding a new section to read:

Sec. 16.43.274. ISSUANCE AND REISSUANCE OF HANDTROLL PERMITS. (a) The commission may not issue an entry permit for handtrolling in a fishery unless the applicant has demonstrated his present ability to participate actively in the handtroll fishery under regulations adopted by the commission.

(b) An entry permit for handtrolling which is forfeited to the commission under AS 16.43.150(d) or (i) or 16.43.360, transferred to the commission under AS 16.43.150(j) or revoked by the commission under AS 16.43.355, shall be promptly reissued by the commission to an applicant who

(1) submitted an application for an entry permit for handtrolling in the fishery during the initial application period established under AS 16.43.260(b);

(2) harvested fishery resources commercially while participating in the handtroll fishery for which the entry permit was issued as a holder of a gear license or an interim-use permit before the qualification date established in AS 16.43.260(e);

(3) demonstrates present ability to participate in the handtroll fishery for which the entry permit was issued; and

(4) was not previously issued an entry permit for handtrolling in the fishery.

(c) Entry permits shall be reissued under (b) of this section to applicants in order of descending priority classification as provided in AS 16.43.270(a).

(d) If within the lowest priority classification of applicants to which some entry permits for handtrolling may be reissued under (b) of this section, there are more applicants than there are entry permits to be reissued, then the allocation of entry permits for handtrolling within that priority classification shall be by lottery.

(e) After all the applicants described in (b) of this section have been issued entry permits for handtrolling in a fishery, entry permits for handtrolling in the fishery shall be reissued to other applicants in the order in which their applications were received by the commission.

(f) If more than one application was received by the commission on the latest date for which entry permits for handtrolling in a fishery are to be reissued, then the allocation of permits among the applications received that day shall be by lottery.

* Sec. 8. AS 16.43.290 is amended by adding a new subsection to read:

(b) The commission shall establish the optimum number of entry permits for handtrolling in a fishery within two years after issuance of the first entry permit for handtrolling in the fishery. The optimum number of entry permits for handtrolling may never be less than the maximum number established under AS 16.43.240 for the fishery.

* Sec. 9. AS 16.43.300(b) is amended to read:

(b) If the commission decreases the optimum number of entry permits for a fishery, <u>other than a handtroll fishery,</u> the number of entry permits may be reduced only under the voluntary buy-back provisions set out in AS 16.43.310 - 16.43.320.

* Sec. 10. AS 16.43.300 is amended by adding a new subsection to read:

(c) The commission shall review the optimum number of entry permits for a handtroll fishery at two-year intervals. If the optimum number of entry permits for a handtroll fishery exceeds the maximum number of entry permits established under AS 16.43.240 for the fishery,

the commission shall issue additional permits in accordance with the procedure described in AS 16.43.274(b) - (f).

Chapter 43. Regulation of Entry into Alaska Commercial Fisheries.

Article

1 Creation of the Alaska Commercial Fisheries Entry Commission (§§ 16 43 010 — 16 43 080)
2 Powers and Duties of the Commission (§§ 16 43 100 — 16 43 120)
3 Requirements for Entry Permits (§§ 16 43 140 — 16 43 182)
4 Initial Issuance of Entry Permits (§§ 16 43 200 — 16 43 270)
5 Reduction to Optimum Number of Entry Permits (§§ 16 43 290 — 16 43 330)
6 General Provisions (§§16 43 350 — 16 43 380)

Legislative committee report. — For report on ch 79 SLA 1973 (SCS CSHB 126 am S), see 1973 House Journal p 503, 1973 Senate Journal Supplement No 15

Article 1. Creation of the Alaska Commercial Fisheries Entry Commission.

Section

10 Purpose and findings of fact
20 Alaska Commercial Fisheries Entry Commission
30 Term of office; vacancy
40 Quorum
50 Qualifications
60 Compensation of members of the Alaska Commercial Fisheries Entry Commission
70 Legal counsel
80 Employment of personnel

Sec. 16.43.010. Purpose and findings of fact. (a) It is the purpose of this chapter to promote the conservation and the sustained yield management of Alaska's fishery resource and the economic health and stability of commercial fisheries in the public interest and without unjust discrimination

(b) The legislature finds that commercial fishing for fishery resources has reached levels of participation on both a statewide and an area basis, that have impaired or threaten to impair the economic welfare of the fisheries of the state, the overall efficiency of the harvest, and the sustained yield management of the fishery resource (§ 1 ch 79 SLA 1973)

Access to Alaska's Fishery Sub. Ct.
Op. No. 1, 3rd Judicial Dist., 2/5/91, 5/3/91, 5/9/91

Sec. 16.43.020. Alaska Commercial Fisheries Entry Commission. (a) There is established the Alaska Commercial Fisheries Entry Commission as a regulatory and quasi-judicial agency of the state. The commission consists of three members appointed by the governor and confirmed by the legislature in joint session

(b) The governor shall designate one member of the commission as chairman of the commission. The member designated shall serve as chairman for a term of two years, and may be designated chairman for successive two-year terms. (§ 1 ch 79 SLA 1973)

Sec. 16.43.030. Term of office, vacancy. (a) The members of the commission shall be appointed for terms of four years. Initial appointments shall be as follows: one member for two years. Initial appointments shall be as follows: one member for two years, one member for three years, and one member for four years. The governor may remove a commissioner from office for cause including but not limited to incompetence, neglect of duty, or misconduct in office. A commissioner, to be removed for cause, must be given a copy of the charges against him and afforded an opportunity to be publicly heard in person or by counsel in his own defense upon not less than 10 days notice. If a commissioner is removed for cause, the governor shall file with the lieutenant governor a complete statement of all charges made against the commissioner and his findings based on the charges, together with a complete record of the proceedings.

(b) A vacancy on the commission shall be filled by appointment by the governor and the appointment shall be confirmed by the legislature in joint session. A member selected to fill a vacancy shall hold office for the balance of the full term for which his predecessor on the commission was appointed.

(c) A vacancy on the commission does not impair the authority of a quorum of commissioners to exercise all the powers and perform all the duties of the commission. (§ 1 ch 79 SLA 1973)

Sec. 16.43.040. Quorum. Two members of the commission constitute a quorum for the transaction of business, for the performance of a duty or for the exercise of a power of the commission. (§ 1 ch 79 SLA 1973)

Sec. 16.43.050. Qualifications. The commission shall consist of three members with a broad range of professional experience, none of whom has a vested economic interest in an interim use permit, entry permit, commercial fishing vessel or gear, or in any fishery resource processing or marketing business. (§ 1 ch 79 SLA 1973)

Sec. 16.43.060. Compensation of members of the Alaska Commercial Fisheries Entry Commission. Members of the commission are in the exempt service and shall receive an annual salary as established under AS 39.23. (§ 1 ch 79 SLA 1973, am § 5 ch 47 SLA 1974, am § 1 ch 148 SLA 1976, am § 2 ch 263 SLA 1976)

Effect of amendments. — The 1974 amendment rewrote the section.

The first 1976 amendment deleted "payable in equal monthly installments" from the end of the section.

The second 1976 amendment substituted "as established under AS 39.23 for" for "equal to that of a district court judge, payable in equal monthly installments."

Sec. 16.43.070. Legal Counsel. The attorney general is the legal counsel for the commission. He shall advise the commission in legal matters arising in the discharge of its duties and represent the commission in suits to which it is a party. However, the commission may retain additional legal counsel as appropriate. (§ 1 ch 79 SLA 1973)

Sec. 16.43.080. Employment of personnel. (a) The commission may employ those persons necessary to carry out the purposes of this chapter. Employees of the commission are in the exempt service under AS 39.25.110.

(b) In addition to its staff of regular employees, the commission may contract for and engage the services of consultants, experts and hearing officers as necessary. (§ 1 ch 79 SLA 1973)

Article 2. Powers and Duties of the Commission.

Section
100 General Powers
110 Regulations and hearing procedures
120 Application of Administrative Procedure Act

Sec. 16.43.100. General powers. (a) To accomplish the purposes set out in § 10 of this chapter the commission shall

(1) regulate entry into the commercial fisheries for all fishery resources in the state;

(2) establish priorities for the application of the provisions of this chapter to the various commercial fisheries of the state;

(3) establish administrative areas suitable for regulating and controlling entry into the commercial fisheries;

(4) establish, for all types of gear, the maximum number of entry permits for each administrative area;

(5) designate, when necessary to accomplish the purposes of this chapter, particular species for which separate interim-use permits or entry permits will be issued;

(6) establish qualifications for the issuance of entry permits;

(7) issue entry permits as provided in §§ 210 — 220 of this chapter;

(8) establish, for all types of gear, the optimum number of entry permits for each administrative area;

(10) administer the buy-back program provided for in §§ 310 — 320 of this chapter to reduce the number of outstanding entry permits to the optimum number of entry permits;

(11) provide for the transfer and reissuance of entry permits to qualified transferees;

(12) provide for the transfer and reissuance of entry permits for alternative types of legal gear in a manner consistent with the purposes of this chapter;

(13) administer the collection of the annual fees provided for in § 160 of this chapter;

(14) administer the issuance of commercial fishing vessel licenses under AS 16.05.490;

(15) issue educational entry permits to applicants who qualify under the provisions of §§ 275—285 of this chapter.

(b) The commission may do all things necessary to the exercise of its powers under this chapter, whether or not specifically designated in this chapter. (§ 1 ch 79 SLA; § 14 ch 105 SLA 1977, am § 3 ch 123 SLA 1978)

Effect of amendments. — The 1977 amendment effective January 1, 1978, added paragraph (14) to subsection (a).

The 1978 amendment, effective July 9, 1978, added paragraph (15) to subsection (a).

(8) issue interim-use permits as provided in §§ 210-220 of this chapter;

Sec. 16.43.110. Regulations and hearing procedures. (a) The commission may adopt regulations consistent with law necessary or proper in the exercise of its powers or for the performance of its duties under this chapter.

(b) The commission shall adopt regulations, consistent with due process of law, which govern practice and procedure and the conduct of all investigations, hearings and proceedings which it holds.

(c) Common-law rules of evidence apply to investigations, hearings and proceedings before the commission, except when the commission determines that their application is not required in order to assure fair treatment of all parties and that the evidence is relevant and of the sort on which responsible persons are accustomed to rely in the conduct of serious matters.

(d) The commission, each commissioner or an employee authorized by the commission may administer oaths, certify to all official acts, and issue subpoenas and other process to compel the attendance of witnesses and the production of testimony, records, papers, accounts and documents in an inquiry, investigation, hearing, or proceeding before the commission in any part of the state. The commission may petition a court to enforce its subpoenas or other process. (§ 1 ch 79 SLA 1973)

Sec. 16.43.120. Application of Administrative Procedure Act. (a) The administrative adjudication procedures of the Administrative Procedure Act (AS 44.62) do not apply to adjudicatory proceedings of the commission except that final administrative determinations by the commission are subject to judicial review as provided in AS 44.62.560 — 44.62.570.

(b) AS 44.62.010 — 44.62.320 and 44.62.640 apply to regulations adopted by the commission. (§ 1 ch 79 SLA 1973)

Article 3. Requirements for Entry Permits.

Section
140 Permit required
150 Terms and conditions of entry permit, annual renewal
160 Fees
170 Transfer of entry permits
180 Emergency transfers
182 Entry permit deductible as business expense

Sec. 16.43.140. Permit required. (a) After January 1, 1974, no person may operate gear in the commercial taking of fishery resources without a valid entry permit or a valid interim use permit issued by the commission.

(b) A permit is not required of a crewman or other person assisting in the operation of a unit of gear engaged in the commercial taking of fishery resources as long as the holder of the entry permit or the interim use permit for that particular unit of gear is at all times present and actively engaged in the operation of the gear.

(c) A person may hold more than one interim use or entry permit issued or transferred under this chapter only for the following purposes:

(1) fishing more than one type of gear;

(2) fishing in more than one administrative area;

(3) harvesting particular species for which separate interim use or entry permits are issued. (§ 1 ch 79 SLA 1973)

Applied in Kaldveer v. Rippey, Sept. [illegible]
Op. No. 1267 (File No. [illegible]) [illegible]

Sec. 16.43.150. Terms and conditions of entry permit; annual renewal. (a) Each entry permit authorizes the permittee to operate a unit of gear within a specified administrative area.

(b) The holder of an entry permit shall have the permit in his possession at all times when engaged in the operation of gear for which it was issued.

(c) Each entry permit is issued for a term of one year and is renewable annually.

(d) Failure to renew an entry permit for a period of two years from the date of last renewal results in a forfeiture of the entry permit to the commission, except as waived by the commission for good cause.

(e) An entry permit constitutes a use privilege which may be modified or revoked by the legislature without compensation.

(f) An entry permit survives the death of the holder.

(g) Except as provided in AS 16.10.333 — AS 16.10.337, an entry permit may not be

(1) pledged, mortgaged, leased, or encumbered in any way;

(2) transferred with any retained right of repossession or foreclosure; or

(3) attached, distrained, or sold on execution of judgment or under any other process or order of any court. (am § 6 ch 83 SLA 1978)

(h) Upon the death of an entry permit holder, the permanent permit shall be transferred by the commission directly to the surviving spouse by right of survivorship unless a contrary intent is manifested. When no spouse survives, the rights of the decedent pass as part of his estate. (§ 1 ch 79 SLA 1973, am §§ 1, 2 ch 73 SLA 1977)

Effect of amendment. — The 1978 amendment, effective July 1, 1978, added "Except as provided in AS 16.10.333 — 16.10.337" to the beginning of subsection (g).

As the rest of the section was not affected by the amendment, it is not set out.

Sec. 16.43.160. Fees. (a) The commission shall establish annual fees for the issuance and annual renewal of entry permits or interim use permits. The amount paid by a permit holder under the provisions of AS 16.05.480 shall be credited by the commission toward payment of the fee charged under this section. No more than one credit may be obtained annually by a person.

(b) Annual fees established under this section shall be no less than $10 and no more than $750 and shall reasonably reflect the different rates of economic return for different fisheries.

(c) The resident holder of an entry permit or interim use permit who has a net family income falling within the Federal Community Services Administration poverty guidelines, adjusted by the commission to reflect appropriate cost of living differentials, is subject to a maximum annual fee of $15. (§ 1 ch 79 SLA 1973, am § 15 ch 105 SLA 1977, am § 4 ch 123 SLA 1978)

Effect of amendments. — The 1977 amendment, effective January 1, 1978, added "to reflect the cost of administering the program" at the end of the first sentence of subsection (a), substituted "$750" for "$100" in subsection (b), and substituted "Federal Community Services Administration poverty guidelines, adjusted by the commission to reflect appropriate cost of living differentials" for "Federal Social Security Administration guidelines" in subsection (c).

The 1978 amendment, effective July 1, 1978, and retroactive to January 1, 1978, substituted "$15" for "$5" in subsection (c).

Sec. 16.43.170. Transfer of entry permits. (a) Except as provided in AS 16.10.333 — 16.10.337 entry permits and interim-use permits are transferable only through the commission as provided in this section and § 180 of this chapter and under regulations adopted by the commission.

(b) Except as provided in (c) of this section, the holder of an entry permit may transfer his permit to another person or to the commission upon 60 days notice of intent to transfer under regulations adopted by the commission. No sooner than 60 days nor later than 12 months from the date of notice to the commission, the holder of an entry permit may transfer his permit. If the proposed transferee, other than the commission, can establish present ability to participate actively in the fishery, the commission shall approve the transfer and reissue the entry permit to the transferee.

(c) If the number of outstanding entry permits for a fishery is greater than the optimum number of entry permits established under §§ 290—300 of this chapter, the holder of an entry permit who qualified for that entry permit in a priority classification designated under § 250(c) of this chapter may transfer his permit only to the commission. The transfer to the commission shall be made under the buy-back provisions of §§ 310—320 of this chapter.

(d) Repealed by § 9 ch 73 SLA 1977. (§ 1 ch 79 SLA 1973, am § 1 ch 126 SLA 1974, am §§ 3, 4, 9 ch 73 SLA 1977, am § 7 ch 83 SLA 1978)

Effect of amendment.

The 1978 amendment, effective July 1, 1978, added "Except as provided in AS 16.10.333—16.10.337," to the beginning of subsection (a).

As the rest of the section was not affected by the amendment, it is not set out.

Sec. 16.43.180. Emergency transfers. (a) The commission shall adopt regulations providing for the temporary emergency transfer of entry permits and interim use permits when illness, disability, death, required military or government service, or other unavoidable hardship prevents the permit holder from participating in the fishery. To alleviate hardship pending a final determination of the permit holder's eligibility for an entry permit, the commission shall adopt regulations providing for the temporary emergency transfer of an interim use permit issued under § 210(b) of this chapter.

(b) The commission shall adopt regulations providing for the temporary transfer of an entry permit upon the death of the permittee pending final disposition of the permit as a part of the permittee's estate. (§ 1 ch 79 SLA 1973, am § 5 ch 73 SLA 1977, am § 5 ch 123 SLA 1978)

Effect of amendment.

The 1978 amendment rewrote subsection (a).

Sec. 16.43.182. Entry permit deductible as business expense. An entry permit purchased under this chapter is deductible as a business expense as provided in AS 43.20.011(h). (§ 9 ch 73 SLA 1977)

Article 4. Initial Issuance of Entry Permits.

Section
200 Administrative areas
210 Interim use permit; qualifications
220 Terms and conditions of interim use permits
230 Designation of distressed fisheries
240 Determination of the maximum number of entry permits for initial issue
250 Standards for initial issue of entry permits
260 Application for initial issue of entry permits
270 Initial issuance of entry permits

Sec. 16.43.200. Administrative areas. (a) The commission shall establish administrative areas suitable for regulating and controlling entry into the commercial fisheries. The commission shall make the administrative areas reasonably compatible with the geographic areas for which specific commercial fishing regulations are adopted by the Board of Fisheries.

(b) The commission may modify or change the boundaries of administrative areas when necessary and consistent with the purposes of this chapter. (§ 1 ch 79 SLA 1973; am § 30 ch 206 SLA 1975)

Effect of amendment. — The 1975 amendment substituted "Board of Fisheries" for "Board of Fish and Game" at the end of the second sentence of subsection (a).

Sec. 16.43.210. Interim-use permit; qualifications. (a) Pending the establishment of the maximum number of entry permits under § 240 of this chapter and the issuance of entry permits under § 270 of this chapter, the commission shall issue interim use permits under regulations promulgated by the commission for each fishery, to all applicants who can establish their present ability to participate actively in the fishery for which they are making application, except as provided under (e) of this section.

(b) Before the issuance of the maximum number of entry permits for a given fishery, the commission may issue an interim use permit to an applicant who may later become eligible for an entry permit under § 270 of this chapter.

(c) To the extent that the commissioner of fish and game authorizes it under AS 16.05.050(a)(11), the commission may grant an interim use permit to a person to engage in the commercial taking from a fishery on an experimental basis.

(d) The sustained yield management and economic health of the following fisheries is severely impaired as a result, among other factors, of too many units of gear participating in the commercial harvest:

(1) Bristol Bay registration area — drift gillnet fishery;

(2) Cook Inlet registration area — drift gillnet fishery;

(3) Prince William Sound registration area — drift gillnet fishery.

(e) For a fishery specified under (d) of this section, an interim use permit may be issued for 1974 only to an applicant who has harvested the fishery resource commercially while holding a gear license issued under AS 16.05.510(a) — 16.05.570. Before January 1, 1977. (§ 1 ch 79 SLA 1973)

Editor's note. — Alaska Statutes 16.05.536 and 16.05.620, referred to in subsection (a), were repealed by § 12 ch 71 SLA 1972 and § 2 ch 159 SLA 1978, respectively. Alaska Statutes 16.05.540 — 16.05.650 and 16.05.670, referred to in subsection (a), were repealed by § 19 ch 105 SLA 1977, effective January 1, 1978.

Sec. 16.43.220. Terms and conditions of interim-use permits. (a) The commission shall adopt regulations specifying the dates and places of application, the procedures to be followed in renewal of the interim-use permit including the time, place of its renewal, and for any other purpose incident to the administration of interim-use permits for that fishery. An interim-use permit shall expire upon the final determination of the holder's eligibility for an entry permit.

(b) Repealed by § 9 ch 73 SLA 1977.

(c) The holder of an interim-use permit must have the permit in his possession at all times when engaged in the operation of the gear for which it was issued. (§ 1 ch 79 SLA 1973; am § 2 ch 126 SLA 1974; am § 9 ch 73 SLA 1977)

Effect of amendments. — The 1974 amendment, in subsection (b), deleted from the end of the first sentence provisions relating to causes of hardship and to the duration of a temporary transfer of an interim-use permit.

The 1977 amendment repealed subsection (b), which read: The commission shall adopt regulations for the temporary transfer of interim-use permits to alleviate hardship. Interim-use permits are otherwise nontransferable.

Sec. 16.43.230. Designation of distressed fisheries. Pending the determination of maximum numbers of entry permits under § 240 of this chapter and before the initial issue of entry permits under § 270 of this chapter, the commission shall designate as distressed fisheries those for which it estimates that the optimum number of entry permits will be less than the highest number of units of gear fished in that fishery during any one of the four years immediately preceding January 1, 1973. (§ 1 ch 79 SLA 1973)

Sec. 16.43.240. Determination of the maximum number of entry permits for initial issue. (a) Except as provided in § 270(a) of this chapter, the maximum number of entry permits for a distressed fishery designated under § 230 of this chapter shall be the highest number of units of gear fished in that fishery during any one of the four years immediately preceding January 1, 1973.

(b) When the commission finds that a fishery not designated as a distressed fishery under § 230 of this chapter has reached levels of participation which require the limitation of entry in order to achieve the purposes of this chapter, the commission shall establish the maximum number of entry permits for that fishery. (§ 1 ch 79 SLA 1973)

Sec. 16.43.250. Standards for initial issue of entry permits. (a) Following the establishment of the maximum number of units of gear for a particular fishery under § 240 of this chapter, the commission shall adopt regulations establishing qualifications for ranking applicants for entry permits according to the degree of hardship which they would suffer by exclusion from the fishery. The regulations shall define priority classifications of similarly situated applicants based upon a reasonable balance of the following hardship standards:

(1) degree of economic dependence upon the fishery, including but not limited to percentage of income derived from the fishery, reliance on alternative occupations, availability of alternative occupations, investment in vessels and gear,

(2) extent of past participation in the fishery, including but not limited to the number of years participation in the fishery, and the consistency of participation during each year

(b) The commission shall designate in the regulations those priority classifications of applicants who would suffer significant economic hardship by exclusion from the fishery

(c) The commission shall designate in the regulations those priority classifications of applicants who would suffer only minor economic hardship by exclusion from fishery (§ 1 ch 79 SLA 1973)

Determinative factor in allocation of initial permits. — The legislative history rather clearly demonstrates that from the outset the framers of this legislation intended "hardship" to be the determinative factor in the allocation of the initial free limited entry permits Isaakson v Rickey, Sup Ct Op No 1267 (File No 2550), 550 P 2d 359 (1976)

Sec. 16.43.260. Application for initial issue of entry permits. (a) The commission shall accept applications for entry permits only from applicants who have harvested fishery resources commercially while participating in the fishery as holders of gear licenses issued under AS 16 05 536 — 16 05 670 before the qualification date established in (d) or (e) of this section

(b) The commission shall establish the opening and closing dates, places and form of application for entry permits for each fishery The commission may require the submission of specific verified evidence establishing the applicant's qualifications under the regulations adopted under § 250 of this chapter

(c) When an applicant is unable to establish his qualifications for an entry permit by submitting the specific verified evidence required in the application by the commission, he may request and obtain an administrative adjudication of his application according to the procedures established in § 110(b) of this chapter At the hearing he may present alternative evidence of his qualifications for an entry permit

(d) Except as provided in (e) of this section, an applicant shall be assigned to a priority classification based solely upon his qualifications as of January 1, 1973

(e) When the commission establishes the maximum number of entry permits for a particular fishery under § 240 of this chapter after January 1, 1975, an applicant shall be assigned to a priority classification based solely upon his qualifications as of January 1 of the year during which the commission establishes the maximum number of entry permits for the fishery for which application is made (§ 1 ch 79 SLA 1973, am § 3 ch 126 SLA 1974)

Editor's note — Alaska Statutes 16 05 536 and 16 05 620 referred to above were repealed by § 12 ch 71 SLA 1972 and § 11 ch 159 SLA 1968 respectively Alaska Statutes 16 05 510 through 16 05 650 and 16 05 670 referred to above were repealed by § 19 ch 105 SLA 1977 effective January 1, 1978

Effect of amendment — The 1974 amendment substituted "the qualification date established in (d) or (e) of this section" for "January 1, 1973" at the end of subsection (a)

Subsection (e) is unconstitutional — Subsection (e) which limits applications for entry permits to persons holding gear

licenses prior to January 1, 1973, violates the equal protection rights, guaranteed by the state and federal constitutions, of commercial fishermen who obtained gear licenses after January 1, 1973. Isakson v. Rickey, Sup. Ct. Op. No. 1267 (File No. 2550), 550 P.2d 359 (1976).

Holding a gear license before January 1, 1973, does not bear a fair and substantial relation to the purpose of the legislation, which is the segregation of hardship and nonhardship cases. Isakson v. Rickey, Sup. Ct. Op. No. 1267 (File No. 2550), 550 P.2d 359 (1976).

Because persons are automatically excluded from the class eligible to apply for permits, in spite of active participation and economic dependence upon the fishery, the January 1, 1973 classification is under-inclusive with respect to persons allowed to apply for permits. Because persons who have long since retired and have no economic dependence upon the fishery as of the cutoff date are allowed to apply for entry permits, the classification is overbroad with respect to those allowed to apply. Isakson v. Rickey, Sup. Ct. Op. No. 1267 (File No. 2550), 550 P.2d 359 (1976).

Purpose of provision in subsection (a) limiting applications. — In essence, the purpose of the provision in subsection (a) limiting applications for entry permits to those holding gear licenses prior to January 1, 1973 was to segregate hardship and nonhardship cases at the application phase of the permit issuance process. Isakson v. Rickey, Sup. Ct. Op. No. 1267 (File No. 2550), 550 P.2d 359 (1976).

Subsection (a) was not intended to modify the allocation policy of the legislation, but rather was adopted to further that policy by simplifying the ranking process. Isakson v. Rickey, Sup. Ct. Op. No. 1267 (File No. 2550), 550 P.2d 359 (1976).

When the act is viewed as a whole, it becomes apparent that the contested provision in subsection (a) was inserted because it was assumed that those persons who obtained gear licenses after January 1, 1973 would be unable to demonstrate the requisite hardship for an entry permit. Hence, for the sake of administrative convenience, it was decided that they need not even submit applications to the commission. Isakson v. Rickey, Sup. Ct. Op. No. 1267 (File No. 2550), 550 P.2d 359 (1976).

Sec. 16.43.270. Initial issuance of entry permits. (a) The commission shall issue entry permits, for each fishery, first to all qualified applicants in the priority classifications designated under § 250(b) of this chapter and then to qualified applicants in order of descending priority classification, until the number of entry permits issued equals the maximum number of entry permits established under §§ 230 — 240 of this chapter for each fishery, except that no person within a priority classification specified under § 250(b) of this chapter may be denied an entry permit.

(b) If, within the lowest priority classification of qualified applicants to which some entry permits may be issued, there are more applicants than there are entry permits to be issued, then the allocation of entry permits within that priority classification shall be by lottery.

(c) If, at the time entry permits are issued, some applicants are still appealing the findings of an administrative adjudication under § 260 of this chapter, a sufficient number of permits shall be reserved out of the permits to be issued to protect the rights of those applicants, assuming all the appeals will be resolved in favor of the applicants. In the event that all appeals are not resolved in favor of the applicants, the remaining entry permits shall be allocated to the next most qualified applicants as provided in (a) and (b) of this section. (§ 1 ch 79 SLA 1973)

Article 4A. Educational Entry Permits.

Section
275 Education entry permits
277 Term and conditions of eductional entry permit
279 Disposition of fish
281 Accounting of harvest
283 Adoption of regulations
285 Definition

Article
4A Educational Entry Permits (§§ 16.43.275 — 16.43.285)

Effective date of article. — Section 14, ch. 123, SLA 1978 makes this article effective July 9, 1978, in accordance with AS 01.10.070(c).

Sec. 16.43.275. Educational entry permits. (a) In addition to entry permits and interim-use permits, the commission may issue educational entry permits to public, private or denominational educational institutions accredited by the Department of Education or accredited institutions, career or vocational programs approved by the Alaska Commission on Postsecondary Education, or full-time nonprofit residential child care facilities licensed by the Department of Health and Social Services, division of social services, if

(1) the program is offered to students at the junior high school level or above;

(2) the issuance of an educational entry permit is reasonably necessary to the instruction of students under courses offered by the applicant for the educational entry permit;

(3) the program is offered by an institution which is located in the state and has been in operation for at least two years; and

(4) the institution offering the program is not a correspondence institution.

(b) An educational entry permit may only be used in a program conducted by the recipient of the permit for the purpose of training students in the methods of commercial fishing.

(c) The commission may issue educational entry permits notwithstanding the establishment of maximum or optimum numbers under §§ 270 and 290 of this chapter. (§ 10 ch. 123 SLA 1978)

Sec. 16.43.277. Term and conditions of educational entry permit. (a) Educational entry permits may be applied for on an annual basis and shall be issued for a term of one year. The permits are non-transferable.

(b) A recipient may be issued an educational entry permit for each fishery in the administrative area the commission determines to be appropriate, considering the nature of the educational program and the location of the educational or vocational institution. The recipient of an educational entry permit may not be issued educational entry permits in more than one administrative area except as issued by the commission in its discretion upon good cause shown.

(c) An educational entry permit issued under § 275 of this chapter may be used by any agent or employee authorized by the recipient of the educational entry permit.

(d) Annual fees for educational entry permits shall be as specified by commission regulation under the authority of § 180 of this chapter. (§ 10 ch. 123 SLA 1978)

Sec. 16.43.279. Disposition of fish. Fish caught under the authority of an educational entry permit are the property of the recipient of the permit. The recipient may sell the fish and use the proceeds to pay for the costs of the training program. Revenues generated from the sale

of fish harvested under an educational entry permit shall be paid to the general fund to the extent the revenues exceed costs of the training program. (§ 10 ch 123 SLA 1978)

Sec. 16.43.281. Accounting of harvest. The recipient of an educational entry permit shall report to the commission costs and earnings, amount of harvest, and other information the commission requires to monitor training programs of recipients of educational entry permits. (§ 10 ch 123 SLA 1978)

Sec. 16.43.283. Adoption of regulations. (a) Use privileges granted under §§ 275 — 285 of this chapter are subject to the regulations of the Board of Fisheries which may adopt regulations exclusively applicable to the use of educational entry permits.

(b) The commission shall publish regulations relating to the issuance of educational entry permits, establishing eligibility criteria for recipients of the permits, and such other matters as are reasonably necessary to implement §§ 275 — 285 of this chapter. (§ 10 ch 123 SLA 1978)

Sec. 16.43.285. Definition. For the purposes of §§ 275 — 285 of this chapter, the term "recipient" means the entity to which an educational entry permit is issued. (§ 10 ch 123 SLA 1978)

Article 5. Reduction to Optimum Number of Entry Permits.

Section
290 Optimum number of entry permits
300 Revisions of optimum number of entry permits
310 Establishment of buy back funds
320 Administration of the buy back program
330 Issuance of new entry permits

Sec. 16.43.290. Optimum number of entry permits. Following the issuance of entry permits under § 270 of this chapter, the commission shall establish the optimum number of entry permits for each fishery based upon a reasonable balance of the following general standards:

(1) the number of entry permits sufficient to maintain an economically healthy fishery that will result in a reasonable average rate of economic return to the fishermen participating in that fishery, considering time fished and necessary investments in vessels and gear;

(2) the number of entry permits necessary to harvest the allowable commercial take of the fishery resource during all years in an orderly, efficient manner and consistent with sound fishery management techniques;

(3) the number of entry permits sufficient to avoid serious economic hardship to those currently engaged in the fishery, considering other economic opportunities reasonably available to them. (§ 1 ch 79 SLA 1973)

Sec. 16.43.300. Revisions of optimum number of entry permits. (a) The commission may increase or decrease the optimum number of entry permits for a fishery when one or more of the following conditions makes a change desirable considering the purposes of this chapter:

(1) an established long-term change in the biological condition of the fishery has occurred;

which substantially alters the optimum number of entry permits permissible applying the standards set out in § 290 of this chapter;

(2) an established long-term change in market conditions has occurred, directly affecting the fishery, which substantially alters the optimum number of entry permits permissible under the standards set out in § 290 of this chapter.

(b) If the commission decreases the optimum number of entry permits for a fishery, the number of entry permits may be reduced only under the voluntary buy-back provisions set out in §§ 310 — 320 of this chapter. (§ 1 ch 79 SLA 1973)

Sec. 16.43.310. Establishment of buy-back funds. (a) When the optimum number of entry permits is less than the number of entry permits outstanding in a fishery, the commission shall establish and administer a buy-back fund for that fishery for the purpose of reducing the number of entry permits to the optimum number within no more than 10 years, at a rate to be established by the commission.

(b) For each buy-back fund, the commission shall adopt regulations establishing annual assessments on holders of entry permits of not more than seven per cent of the gross value of the total annual catch attributable to a holder's entry permit, except that the holder of a permit who has made no commercial landings in a given year will be assessed the average assessed all other holders of the same type of permit in that year. Assessments will be paid into the specific buy-back fund for which they are collected.

(c) Assessments need not equal annual buy-back fund expenditures within a particular fishery but shall be continued until the buy-back fund for that fishery has been reimbursed. (§ 1 ch 79 SLA 1973)

Sec. 16.43.320. Administration of the buy-back program. (a) The commission shall adopt regulations providing for the purchase of entry permits, vessels, and gear at fair market value with money accumulated in the buy-back fund for each fishery. The buy-back program for a fishery shall terminate when the number of entry permits is reduced to the optimum and the buy back fund has been reimbursed.

(b) When entry permits subject to the restrictions in § 250(c) of this chapter and the vessels and gear related to those permits are offered for sale to the commission, the commission shall purchase the permits and related vessels and gear at fair market value, if sufficient funds are available in the appropriate buy-back fund. (§ 1 ch 79 SLA 1973)

Sec. 16.43.330. Issuance of new entry permits. (a) When the number of outstanding entry permits for a fishery is less than the optimum number established under § 290 of this chapter, the commission shall issue new entry permits to applicants who are presently able to engage actively in the fishery until the optimum number is reached.

(b) The commission shall determine equitable methods of issuance, as appropriate, under (a) of this section that assure the receipt of fair market value for the permits issued. (§ 1 ch 79 SLA 1973)

Article 6. General Provisions.

Section

350. Applications of regulations of Board of

Section

370. Recommendations to the legislature

Fisheries
355 Commission revocation of entry permits
360 Penalties
380 Definitions

Sec. 16.43.350. Applications of regulations of Board of Fisheries. Nothing in this chapter limits the powers of the Board of Fisheries, including the power to determine legal types of gear and the power to establish size limitations or other uniform restrictions applying to a certain type of gear. Holders of interim-use permits or entry permits issued under this chapter are subject to all regulations adopted by the Board of Fisheries (§ 1 ch 79 SLA 1973; am § 31 ch 206 SLA 1975)

Effect of amendment. — The 1975 amendment substituted "Board of Fisheries" for "Board of Fish and Game" in the first and second sentences.

Sec. 16.43.355. Commission revocation of entry permits. (a) The commission may revoke an entry permit if a person knowingly supplies, assists in supplying, or fails to correct false information provided to the commission for the purpose of

(1) permit application; or

(2) permit transfer.

(b) Before revocation, the commission shall serve the permit holder personally or by certified or registered mail with a notice to show cause why the proposed action should not take place. The notice to show cause must

(1) be supported by an affidavit which may be made on information or belief setting out the facts which are the basis of the proposed action;

(2) provide for at least 30 days notice of the place, date, and time of the hearing where the permit holder may present evidence in opposition to the proposed action; unless waived in writing by the permit holder, the hearing place shall be held within the judicial district in which the permit holder resides; if the permit holder resides in the state, the hearing place shall be at the discretion of the commission for those permit holders residing outside the state;

(3) specify the statutes or regulations violated;

(4) state with particularity the action proposed to be taken;

(5) indicate to the permit holder that his ability to permanently transfer the permit which is the subject of the revocation proceedings has been suspended as of the date of the notice and will continue to be suspended until the exhaustion of all administrative and judicial remedies; and

(6) provide other information the commission considers proper.

(c) A permit subject to revocation proceedings under this section may not be transferred after the date of the notice in (b) of this section pending exhaustion of all administrative and judicial remedies arising from action taken under this section.

(d) The revocation hearing shall be conducted before a quorum of commissioners and shall be presided over by a hearing officer appointed by the commission who shall rule on the presentation of evidence and other procedural matters. Within a reasonable time after the conclusion of the hearing, the hearing officer shall submit to the attending commissioners a proposed decision based on the record of the hearing and containing findings of fact, conclusions of law, and recommended action. The attending commissioners shall then review the hearing officer's proposed decision and adopt or amend or reject the contents of the

proposed decision in the written decision of the commission. A copy of the commission decision shall be mailed to each party or his attorney by certified or registered mail.

(e) The failure of a permit holder properly served under (b) of this section to appear at the hearing is not grounds for setting aside any commission action taken. However, the commission may in its discretion order a continuance or second hearing.

(f) The effective date of the commission decision under this section is the date of the notice to show cause first served upon the permit holder under (b) of this section.

(g) The provisions of this section do not apply to the permit of a person who is a bona fide purchaser.

(h) Judicial review of commission determinations under this section is in accordance with AS 44.62.560 — 44.62.570, however, if a hearing de novo is granted under AS 44.62.570(d), the hearing may, in the discretion of the court, be had with a jury sitting if application for the jury hearing is filed with the court no later than 10 days after service of the notice of appeal. (§ 6 ch 123 SLA 1978)

Effective date. — Section 14, ch 123, SLA 1978, makes this section effective July 9, 1978, in accordance with AS 01.10.070(c).

Sec. 16.43.360. Penalties. (a) A person who violates or assists in the violation of a provision of this chapter or a regulation promulgated under this chapter is, upon conviction, guilty of a misdemeanor and is punishable by a fine of not more than $5,000 for a first conviction, and a fine of not more than $10,000 for a second or third conviction. Upon a third conviction, the person shall forfeit all interim use and entry permits held by him and loses eligibility for future issuance or transfer of interim use or entry permits for a period of three years. Upon a first or second conviction under this section, the court may in its discretion order a forfeiture of interim use or entry permits held by him as well as a loss of eligibility for future issuance or transfer of interim use or entry permits or order a suspension of fishing rights under interim use or entry permits held or to be held by him for a period of not more than three years.

(b) A person who knowingly makes a false statement of fact in the application for or renewal of an interim use permit or an entry permit or vessel license application or renewal or in the application for a transfer under §§ 170 — 180 of this chapter, or a person who assists another by knowingly making a false statement of fact in support of the other person's application for issuance or renewal of an interim use permit or an entry permit or vessel license is guilty of a misdemeanor and shall forfeit all interim use permits and entry permits held by him and shall lose eligibility for interim use permits and for entry permits for a period of three years and is punishable by a fine of not more than $5,000.

(c) If a permit holder is convicted of violation of AS 43.20.335 and the violation relates to income derived from commercial fishing under this title, he shall forfeit all interim use permits and entry permits held by him and shall lose eligibility for interim use permits and for entry permits for a period of five years.

(d) If a permit holder is charged by the state with violating a provision of this chapter or a regulation adopted under this chapter, he may not transfer, under § 170 of this chapter, any interim use or entry permit he may hold, until after the final adjudication or dismissal of the charges.

(e) Notwithstanding any other provision of this section, no interim-use or entry permit may be transferred while under suspension, without the consent of the commission.
(§ 1 ch 79 SLA 1973; am § 7 ch 73 SLA 1977; am §§ 7 — 9 ch 123 SLA 1978)

Effect of amendment.

The 1978 amendment, effective July 9, 1978, in the first sentence of subsection (a) inserted "or assists" after "the violation of", substituted "preceding" for "upon", "conviction" and "or" for "and", "third" for "a", substituted "and" for a semicolon following "for a first conviction" and deleted the language providing a penalty for a third conviction from the end of that sentence. The amendment also added the second and third sentences of subsection (a), and in subsection (b), inserted "knowingly" near the beginning and near the middle, "or renewal of" near the beginning, "or vessel license application or renewal" near the beginning and "or renewal" near the middle, deleted a material preceding "fact" near the beginning and near the middle and substituted "vessel license for transfer of an entry permit upon conviction" near the middle and "three years and is punishable by a fine of not more than $5,000" for "five years" at the end. Moreover, the amendment added subsection (e).

As the rest of the section was not affected by the amendment, it is not set out.

Sec. 16.43.370. Recommendations to the legislature. (a) The commission shall submit an annual report to the legislature. The report shall include but not be limited to the following:

(1) a progress report on the reduction of entry permits to optimum levels;

(2) recommendations for additional legislation relating to the regulation of entry into Alaska commercial fisheries.

(b) The commission shall study alternative methods of permit transferability and report its findings and recommendations to the legislature before January 15, 1975. (§ 1 ch 79 SLA 1973)

Sec. 16.43.380. Definitions. In this chapter

(1) "commission" means the Alaska Commercial Fisheries Entry Commission;

(2) "economically healthy fishery" means a fishery that yields a sufficient rate of economic return to the fishermen participating in it to provide for, among other things, the following:

(A) maintenance of vessels and gear in satisfactory and safe operating condition; and

(B) ability and opportunity to improve vessels, gear and fishing techniques, including, when permissible, experimentation with new vessels, new gear, and new techniques;

(3) "fishery" means the commercial taking of a specific fishery resource in a specified administrative area with a specific type of gear;

(4) "gear" means the specific apparatus used in the commercial harvest of a species, including but not limited to purse seines, drift gill nets, set gill nets, and troll gear;

(5) "person" means a natural person and does not include a corporation, company, partnership, firm, association, organization, business trust, or society;

(6) "present ability to actively participate" means the person applying for a permit is physically able to harvest fish in the fishery and has reasonable access to commercial fishing gear of the type utilized in that fishery.

(7) "priority classification" means the allocation of potential permit applicants into reasonable groupings of similarly situated applicants and the priority ranking of those groupings according to the extent to which they satisfy the standards of preference;

(8) "type of gear" means a customary and identifiable classification of gear and shall include

(A) those classifications for which separate regulations are adopted by the Board of Fisheries and for which separate gear licenses are required by AS 16.05.550 — 16.05.630; and

(B) distinct subclassifications of gear such as "power" troll gear and "hand" troll gear;

(9) "unit of gear" means the maximum amount of a specific type of gear which can be fished under a single gear license subject to regulations established by the Board of Fisheries defining the legal requirements for that type of gear. (§ 1 ch 79 SLA 1973; am §§ 32,33 ch 206 SLA 1975)

Effect of amendment. — The 1975 amendment substituted "Board of Fisheries" for "Board of Fish and Game" in paragraphs (8)(A) and (9).

Editor's note. — Alaska Statutes 16.05.550 — 16.05.630 referred to in paragraph (8)(A) were repealed by § 19, ch 105 SLA 1977, effective January 1, 1978. Alaska Statute 16.05.620 had previously been repealed by § 2, ch 159 SLA 1968.

TITLE 20.

Chapter 05.

COMMERCIAL FISHERIES ENTRY COMMISSION

January 1980

CHAPTER 05
COMMERCIAL FISHERIES ENTRY COMMISSION

Article
1 Permits and Vessel License Required (20 AAC 05.010–20 AAC 05.130)
2 Fishery Identification System, Administrative Areas and Annual Fees (20 AAC 05.200–20 AAC 05.240)
3 Designated Fisheries (20 AAC 05.300–20 AAC 05.320)
4 Interim-use Permits (20 AAC 05.400–20 AAC 05.430)
5 Issuance of Entry Permits (20 AAC 05.500–20 AAC 05.579)
6 Priority Classification Point System (20 AAC 05.600–20 AAC 05.670)
7 Transfer of Entry and Interim-use Permits (20 AAC 05.700–20 AAC 05.770)
8 Administrative Hearings and Adjudications (20 AAC 05.800–20 AAC 05.855)
9 Miscellaneous Provisions (20 AAC 05.900–20 AAC 05.990)

ARTICLE 1
PERMITS AND VESSEL LICENSE REQUIRED

Section
10 (Repealed)
20 (Repealed)
30 (Repealed)
40 (Repealed)
50 (Repealed)
60 (Repealed)
100 Permit required to operate gear
110 Permit required to possess fish or shellfish
115 Personal identification required
120 Incidental taking of fishery resources
130 Vessel license required

20 AAC 05.010. ADMINISTRATIVE AREAS. Repealed 12/18/74.

20 AAC 05.020. FEES. Repealed 12/18/74.

20 AAC 05.030. APPLICATION PROCEDURES. Repealed 12/18/74.

20 AAC 05.040. ANNUAL RENEWAL. Repealed 12/18/74.

20 AAC 05.050. TEMPORARY TRANSFER. Repealed 12/18/74.

20 AAC 05.060. NOTIFICATION OF LOSS OR THEFT. Repealed 12/18/74.

20 AAC 05.100. PERMIT REQUIRED TO OPERATE GEAR. (a) It is unlawful for any person to operate gear, within water subject to the jurisdiction of the state, for the commercial taking of any fishery resource without a valid interim-use or entry permit card issued by the commission authorizing him to operate that type of gear in that fishery unless waived by the commission for good cause.

(b) Repealed 1/1/78.

(Eff. 12/18/74, Reg. 52; am 1/1/78, Reg. 64)

Authority: AS 16.43.100(b)
AS 16.43.110(a)

20 AAC 05.110. PERMIT REQUIRED TO POSSESS FISH OR SHELLFISH. (a) It is unlawful for any person to possess, within water subject to the jurisdiction of the state, any fish or shellfish, taken for a commercial purpose, aboard a fishing vessel commonly used for taking that species of fish or shellfish unless the person has in his possession a valid interim-use or entry permit card allowing him to take the fish or shellfish in his possession with the gear with which the vessel is equipped unless waived by the commission for good cause.

(b) As used in this section, a "commercial purpose" includes any sale, purchase, trade, gift, or any portion of a commercial transaction.

(Eff. 12/18/74, Reg. 52; am 1/1/78, Reg. 64)

Authority: AS 16.43.100(b)
AS 16.43.110(a)

20 AAC 05.115. PERSONAL IDENTIFICATION REQUIRED. (a) Any person who is in possession of an interim-use or entry permit card issued by the commission shall, upon request of any officer authorized by the State of Alaska to enforce this chapter, present personal identification to the officer to establish that the card is in the possession of the person to whom it was issued. The interim-use or entry permit card is not sufficient proof of identity.

(b) Presentation of sufficient proof of identity to the officer within two weeks of the date of request satisfies the requirements of (a) of this section. (Eff. 12/27/79, Reg. 72)

Authority: AS 16.43.100(b)
AS 16.43.110(a)

20 AAC 05.120. INCIDENTAL TAKING OF FISHERY RESOURCES. (a) In Administrative Area B (Statewide) holders of valid interim-use permits for salmon hand troll gear and holders of valid entry permits for salmon power troll gear may take halibut or any other fishery resource with that gear.

(b) No person may take salmon without a valid entry permit or interim-use permit authorizing the taking of salmon.

(c) No person may take King, Tanner or Dungeness crab without a valid interim-use or entry permit authorizing the taking of each of those species of crab.

(d) During the halibut seasons established by the International Pacific Halibut Commission, holders of valid entry permits or interim-use permits authorizing the taking of halibut may take incidentally caught bottomfish and black cod.

(e) The incidental taking of fishery resources not specifically authorized or prohibited in (a) — (d) of this section is authorized for holders of valid interim-use or entry permits so long as the total poundage of all incidental species does not exceed 20 percent of the total weight of each landing.

(f) The provisions of (a) — (e) of this section are not construed as contrary to regulations of the Alaska Board of Fisheries or the Alaska Department of Fish and Game. (Eff. 6/28/74, Reg. 54; am 4/20/76, Reg. 58; am 12/27/79, Reg. 72)

Authority: AS 16.43.100(a)(3)
AS 16.43.100(b)
AS 16.43.110(a)
AS 16.43.350

20 AAC 05.130. VESSEL LICENSE REQUIRED. It is unlawful for any person to operate a fishing vessel required to be licensed under AS 16.05.490 which does not display a valid vessel license as required by sec. 958 of this chapter. (Eff. 1/1/78, Reg. 64)

Authority: AS 16.05.450(b) AS 16.43.100
AS 16.05.490 AS 16.43.100(a)
AS 16.05.510

ARTICLE 2.
FISHERY IDENTIFICATION SYSTEM, ADMINISTRATIVE AREAS AND ANNUAL FEES

Section
200. Fishery identification system
210. Fishery resource codes
220. Gear codes
230. Administrative areas
240. Schedule of annual fees

20 AAC 05.200. FISHERY IDENTIFICATION SYSTEM. (a) For the purpose of issuing interim-use permits and entry permits, administering the collection of annual fees, and other purposes required for the administration of AS 16.43, a fishery identification system is established.

(b) Each fishery is identified using a four-place letter and number code with the first place being a single letter indicating the fishery resource, the second and third place being a two-digit number indicating the type of gear, and the fourth place being a single letter indicating the administrative area. (Eff. 12/18/78, Reg. 521)

Authority: AS 16.43.100(a)(3)
AS 16.43.100(b)
AS 16.43.110(a)
AS 16.43.140(c)
AS 16.43.150(a)
AS 16.43.200(a)
AS 16.43.280(3)

20 AAC 05.210. FISHERY RESOURCE CODES. The letter code from the following schedule will be used to indicate the specific fishery resource for which an interim-use or entry permit is issued.

Code	
A	Abalone
C	Black Cod
M	Bottomfish
D	Dungeness Crab
F	Freshwater Fish
H	Halibut
G	Herring

Code
L Herring Spawn
K King Crab
R Razor Clam
S Salmon
P Shrimp
T Tanner Crab
Z Other
(Eff. 12/18/74, Reg. 52; am 1/21/78, Reg. 65; am 12/27/79, Reg. 72)

Authority: AS 16.43.100(a)(5)
AS 16.43.110(a)
AS 15.43.140(c)

20 AAC 05.220. GEAR CODES. (a) A number code from the following schedule will be used to indicate the specific type of gear for which an interim-use or entry permit is issued

Code
01 purse seine (hand or power)
02 beach seine
03 drift gill net
04 set gill net
05 hand troll
06 longline (vessel under five net tons)
07 otter trawl
08 fishwheel
09 pot gear (vessel register length 50' or less, or undocumented vessel)
15 power troll
17 beam trawl
18 shovel
21 pound*
22 dredge
26 jig
34 herring gill net
37 pair trawl
61 longline (any vessel)
91 pot gear (any vessel)
99 other

*A herring pound permit allows the incidental use of other gear which operated in compliance with a pound permit issued by the commissioner of the Alaska Department of Fish and Game.

(b) Holders of gear code 61 and 91 permits shall notify the commission of any change of vessel used by the permit holder. (Eff. 12/18/74, Reg. 52; am 4/30/76, Reg. 58; am 1/1/78, Reg. 64; am 12/27/79, Reg. 72)

Authority: AS 16.43.100 AS 16.43.140(c)
AS 16.43.110(a) AS 16.43.300(4)

20 AAC 05.230. ADMINISTRATIVE AREAS. (a) For the purpose of issuing interim-use permits and entry permits for all waters subject to the jurisdiction of the State of Alaska, the administrative areas described in the schedule below are established. A letter code from the following schedule will be used to designate the specific administrative area for which an interim-use permit or entry permit is issued.

(1) Administrative Areas

(A)

Code
Letter Name and Description

A Southeastern Alaska Area — all waters between the longitude of Cape Fairweather and the International Boundary at Dixon Entrance.

B Statewide Area — all waters subject to the jurisdiction of the state.

D Yakutat Area — all waters of and adjacent to the Pacific Ocean between the longitude of Cape Suckling and the longitude of Cape Fairweather.

I Prince William Sound Area — all waters of and adjacent to the Pacific Ocean between the longitude of Cape Fairfield and the longitude of Cape Suckling.

H Cook Inlet Area — all waters of and adjacent to the Pacific Ocean north of a line extending east from Cape Douglas to the longitude of Cape Fairfield.

K Kodiak Area — all waters of and adjacent to the Pacific Ocean east of the longitude of Kilokak Rocks at 57° 11' 25" North latitude, 156° 20' 13" West longitude and south of a line extending east from Cape Douglas to the longitude of Cape Fairfield including Kodiak, Afognak and adjacent islands.

Code Letter	Name and Description
I	Chignik Area — all waters on the south side of the Alaska Peninsula between a line extending southeast from Kupreanof Point and the longitude of Kilokak Rocks
M	Alaska Peninsula-Aleutian Islands Area — 1) all waters of and adjacent to the Bering Sea south of the latitude of Cape Menshikof including the Pribilof Islands and 2) all waters of and adjacent to the Pacific Ocean west of a line extending southeast from Kupreanof Point excluding those waters of the Kodiak (K) and Chignik (I) administrative areas
P	Upper Yukon Area — all drainages and watersheds of the Yukon River upstream of the Bonasila River to the Canadian border.
T	Bristol Bay Area — all waters of and adjacent to Bristol Bay westward to a line between Cape Newenham and Cape Menshikof and continuing seaward between the latitude of Cape Newenham and the latitude of Cape Menshikof
U	Southern Alaska Area — all waters of and adjacent to the Arctic Ocean and Chukchi Sea west of 141° West longitude and north of latitude of Point Hope
V	Port Clarence Area — all waters between the latitude of Cape Prince of Wales and the latitude of Cape Douglas
W	Kuskokwim Area — all waters between the latitude of Cape Romanzof and the latitude of Cape Newenham including Nunivak and the St. Matthew Islands and excluding waters of Administrative Area T (Bristol Bay)
X	Kotzebue Area — all waters between the latitude of Point Hope and the latitude of Cape Prince of Wales
Y	Lower Yukon Area — all waters between the latitude of Canal Point Light at 63° 2' South latitude 162° 26' West longitude and 62° South latitude and all drainages and watersheds of the Yukon as far upstream as the Bonasila River
Z	Norton Sound Area — all waters between the latitude of Cape Douglas and the latitude of Canal Point Light including St Lawrence Island

(B) Where regulations of the Board of Fish and Game allow

(i) salmon set gillnet entry permits issued for Administrative Area E (Prince William Sound) are valid in all waters of and adjacent to the Pacific Ocean between the longitude of Cape Fairfield and the longitude of Icy Cape;

(ii) salmon set gillnet and salmon drift gillnet entry permits issued for Administrative Area T (Bristol Bay) are valid in Area T and, prior to June 15 and after August 1 of each year, in all waters of and adjacent to Bristol Bay between the latitude of Cape Menshikof and 160° West longitude

(2) Special King Crab Administrative Areas

Code Letter	Name and Description
A	Southeastern Alaska Yakutat Area — all waters of and adjacent to the Pacific Ocean between the longitude of Cape Suckling and the International Boundary at Dixon Entrance
E	Prince William Sound Area — all waters of and adjacent to the Pacific Ocean between the longitude of Cape Fairfield and the longitude of Cape Suckling
H	Cook Inlet Area — all waters of and adjacent to the Pacific Ocean north of a line extending east from Cape Douglas to the longitude of Cape Fairfield
K	Kodiak Area — all waters of and adjacent to the Pacific Ocean east of the longitude of Cape Kumlik and south of a line extending east from Cape Douglas to the longitude of Cape Fairfield
M	Alaska Peninsula Area — all waters of and adjacent to the Pacific Ocean between the

Code Letter	Name and Description
	longitude of Scotch Cap Light and the longitude of Cape Kumlik including all waters of Isanotski Strait and Bechevin Bay south of a line from Chunak Point to Cape Krenitzen
O	Dutch Harbor Area — all waters south of 54° 36' North latitude between 172° West longitude and the longitude of Scotch Cap Light.
P	Bering Sea Area — all waters of and adjacent to the Bering Sea, Chukchi Sea and Arctic Ocean, north of 54° 36' North latitude
R	Adak Area — all waters south of 54° 36' North latitude between 179° 15' West longitude and 172° West longitude
S	Western Aleutians Area — all waters south of 54° 36' North latitude and west of 179° 15' West longitude

(3) Herring Purse Seine Administrative Areas

(A) Herring purse seine administrative areas, excluding areas B and P, are as follows

Code Letter	Name and Description
A	Specific Southeastern Alaska Area — all water of Lynn Canal north of the latitude of Shrine of St Teresa and south of the latitude of Sherman Rock, excluding all water of Berner's Bay within a line from Pt St Mary to Pt. Bridget and all water of Seymour Canal north of 57° 37' North latitude and all water of and adjacent to the Pacific Ocean south of the latitude of Neva Point and north of a line projected southwest of Cape Ommaney and west of Baranof Island
C	General Southeastern Alaska Area — all water between the latitude of Cape Fairweather and the International Boundary at Dixon Entrance which is not part of area A
D	Yakutat Area — all water of and adjacent to the Pacific Ocean between the longitude of Cape Suckling and the longitude of Cape Fairweather
E	Specific Prince William Sound Area — all water encompassed by a line from a point on Knowles Head at 60° 42' North latitude, 146° 40' West longitude, then west to a point at 60° 42' North latitude, 146° 58' 30" West longitude, then north to a point at 60° 50' North latitude, 146° 58' 30" West longitude, then west to a point at 60° 50' North latitude, 147° 20' West longitude, then north to a point at the mainland at 60° 53' 45" North latitude, 147° 20' West longitude, all water encompassed by a line beginning at a point 60° 35' North latitude, 146° 58' 30" West longitude, then southeasterly to a point at 59° 40' North latitude, 147° 40' West longitude, then westerly to a point at 59° 46' North latitude, 148° 04' West longitude, then northerly to a point at 60° 15' 30" North latitude, 147° 32' West longitude, then northerly to the point of beginning
G	General Prince William Sound Area — all water of and adjacent to the Pacific Ocean between the longitude of Cape Fairfield and the longitude of Cape Suckling which is not a part of area E
H	Cook Inlet Area — all water of and adjacent to the Pacific Ocean north of a line extending east from Cape Douglas to the longitude of Cape Fairfield
J	Westward Area — all water specified as administrative areas K, L, M, T, U, V, W, X and Z in subsection (a)(1)(A) of this section

(4) General Herring Administrative Areas

(A) General herring administrative areas apply to harvest of the herring fishery resource with all types of gear except purse seine gear

(B) General herring administrative areas are those administrative areas specified in subsection (a)(1) of this section except that

areas B, K, L, M, P, T, U, V, W, X, Y and Z are excluded, and an additional area J is established as follows:

Code Letter	Name and Description
J	Westward Area — all waters specified as administrative areas K, L, M, T, U, V, W, X, Y and Z in subsection (a)(1)(A) of this section

(b) Each administrative area listed in (a)(1) of this section shall include all freshwaters of Alaska draining into the ocean between the points on the coastline which designate the boundaries of the administrative area, unless otherwise provided in the description of the administrative area in (a)(1) of this section. (Eff. 12/18/74, Reg. 52; am 5/12/75, Reg. 54; am 4/9/76, Reg. 58; am 2/25/77, Reg. 61; am 1/21/78, Reg. 65)

Authority: AS 16.43.100
AS 16.43.110(a)
AS 16.43.200

20 AAC 05.240 SCHEDULE OF ANNUAL FEES. (a) The annual fee for the issuance or annual renewal of an interim-use or entry permit is established as shown in the following schedule:

Category	Resource, Gear and Area Code	Annual Fee: Resident	Annual Fee: Nonresident
I	K91Q	$250	$750
II	K91D K91H K91K K91M K91R T91B K09Q P07B J22B	200	600
III	D91B K09S K29M K29A K29H D29M	150	450
IV	S01 (all areas) G01 (all areas, except C, D and G) B61B K91A K91E K09A K09E C61B P17B S03 (all areas) C91B C09B S15B S02K	$75	$225
V	S04 (all areas) P09B D09B S08P G21B	40	120
VI	(all others)	20	60

(b) Except as provided in sec. 120 of this chapter, a separate permit is required for each separate fishery resource, gear, and administrative area.

(c) For the purpose of this section, "resident" means a person who, for 12 consecutive months immediately before permit application or renewal, has maintained a permanent place of personal abode within the state and who has not been registered to vote in any other jurisdiction; however, any member of the military service who has been stationed in the state for 12 consecutive months will be considered a resident under this section, and the spouse or dependent children of any such resident or member of the military service will likewise be considered a resident. (Eff. 12/27/79, Reg. 72)

Authority: AS 16.43.100
AS 16.43.110(a)
AS 16.43.140(b)
AS 16.43.150
AS 16.43.160(b)(2), (4) and (5)

Editor's Note: 20 AAC 05.240 is based on a former version of 5 AAC 05.230.

ARTICLE 3
DESIGNATED FISHERIES

Section
300. Distressed fisheries
310. Other designated fisheries
320. Maximum number of entry permits

20 AAC 05.300. DISTRESSED FISHERIES. The commission designates the following as distressed fisheries based upon its estimate that the optimum number of entry permits for these fisheries will be less than the highest number of units of gear fished in these fisheries during any one of the four years immediately preceding January 1, 1973

Salmon Fisheries
(1) Southeastern Alaska (A)
drift gillnet fishery*

(2) Prince William Sound (E)
drift gillnet fishery

(3) Cook Inlet (H)
drift gillnet fishery
set gillnet fishery

(4) Kodiak (K)
purse seine fishery

(5) Alaska Peninsula Aleutian Islands (M)
drift gillnet fishery

(6) Bristol Bay (T)
drift gillnet fishery
set gillnet fishery

*In area A the drift gillnet fishery is below the set gillnet fishery

(Eff. 12/[illegible]/74, Reg. [illegible] am 4/7/75, Reg. [illegible])
Authority: AS 16.43.110(a)
AS 16.43.210

20 AAC 05.310. OTHER DESIGNATED FISHERIES. (a) The commission designates the following fisheries as those which have reached levels of participation which require the limitation of entry

Salmon Fisheries
(1) Southeastern Alaska (A)
purse seine fishery

(2) Yakutat (D)
set gillnet fishery

(3) Prince William Sound (E)
purse seine fishery
set gillnet fishery

(4) Cook Inlet (H)
purse seine fishery*

(5) Kodiak (K)
beach seine fishery
set gillnet fishery

(6) Chignik (L)
purse seine fishery

(7) Alaska Peninsula Aleutian Islands (M)
purse seine fishery*
set gillnet fishery

(8) Statewide (R)
power troll fishery

(9) Kuskokwim (W)
gillnet fishery

(10) Kotzebue (X)
gillnet fishery

(11) Lower Yukon (Y)
gillnet fishery

(12) Upper Yukon (P)
gillnet fishery
fishwheel fishery

(13) Norton Sound (Z)
gillnet fishery

*In area T and area M, the purse seine fishery includes the beach seine fishery.

Herring Fisheries

(1) Specific Southeastern Alaska (A)
purse seine fishery

(2) Specific Prince William Sound (E)
purse seine fishery

(3) Cook Inlet (H)
purse seine fishery

(4) Southeastern Alaska (A)
gillnet fishery*

*In area A, the herring gillnet fishery includes the set gillnet and drift gillnet fisheries.

(b) As used in this article, "power troll" means the taking of a salmon fishery resource with troll lines operated by nonmanual gurdys. (Eff 12/18/74, Reg. 52, am 4/9/76, Reg. 58, am 2/25/77, Reg. 61, am 1/21/78, Reg. 65, am 4/10/78, Reg. 66)

(Authority: AS 16.43.100(b)
AS 16.43.110(a)
AS 16.43.240(b))

20 AAC 05.320 MAXIMUM NUMBER OF ENTRY PERMITS. The maximum number of entry permits for each of the fisheries designated under sec. 300 and 310 of this chapter is established as follows:

Salmon Fisheries	Maximum Number of Entry Permits
(1) Southeastern Alaska (A)	
purse seine fishery	195
drift gillnet fishery	459
(2) Yakutat (D)	
set gillnet fishery	150
(3) Prince William Sound (E)	
purse seine fishery	238
drift gillnet fishery	511
set gillnet fishery	32
(4) Cook Inlet (H)	
purse seine fishery	68
drift gillnet fishery	545
set gillnet fishery	686
(5) Kodiak (K)	
purse seine fishery	355
beach seine fishery	31
set gillnet fishery	183
(6) Chignik (L)	
purse seine fishery	80
(7) Alaska Peninsula Aleutian Islands (M)	
purse seine fishery	111
drift gillnet fishery	155
set gillnet fishery	77
(8) Bristol Bay (T)	
drift gillnet fishery	1669
set gillnet fishery	803
(9) Statewide (B)	
power troll fishery	895
(10) Kuskokwim (W)	
gillnet fishery	810
(11) Kotzebue (X)	
gillnet fishery	214
(12) Lower Yukon (Y)	
gillnet fishery	637
(13) Upper Yukon (P)	
gillnet fishery	90
fishwheel fishery	126
(14) Norton Sound (Z)	
gillnet fishery	195

Herring Fisheries	Maximum Number of Entry Permits
(1) Specific Southeastern Alaska (A) purse seine fishery	35
(2) Specific Prince William Sound (E) purse seine fishery	55
(3) Cook Inlet (H) purse seine fishery	68
(4) Southeastern Alaska (A) gillnet fishery	110

20 AAC 05.400. INTERIM-USE PERMIT REQUIRED. (a) An interim-use permit is required under secs. 100 and 110 of this chapter for any commercial fishery not designated in secs. 300 and 310 of this chapter.

(b) For all applicants for interim-use permits except for a herring spawn fishery, there is a rebuttable presumption that the applicant is unable to participate actively in the fishery if

(1) for set net permits, the applicant has not attained his or her 10th birthdate; and

(2) for all other permits, the applicant has not attained his or her 16th birthdate. (Eff. 12/18/74, Reg. 52; am 12/27/79, Reg. 72)

20 AAC 05.510 TIME OF APPLICATION (a) The application period for entry permits for those fisheries designated in sec. 300 or 310 of this chapter will be from December 19, 1974, through 12:00 midnight March 18, 1975.

(b) The application period for entry permits for those fisheries designated in sec. 310(a)(9)-(13) of this chapter will be from March 10, 1976 until midnight June 10, 1976.

(c) The commission will consider only those entry permit applications that are received on or before the closing date for application for that fishery.

(d) If an application contains errors, omissions or insufficient supporting evidence, the commission will indicate this to the applicant and will give the applicant a reasonable amount of time to correct any defects or insufficiencies in his application.

(e) The commission may extend the time for receipt of an application for a period not to exceed 60 days for good cause shown.

(f) The application period for entry permits for those fisheries designated in secs. 300 and 310(a)(1)-(8) of this chapter for those individuals who harvested salmon commercially in one of these fisheries as a gear license holder for the first time in 1973 or 1974 will be from January 15, 1977 through midnight September 30, 1977. The commission will in its discretion extend the time for receipt of an application for a period not to exceed 30 days for good cause shown.

(g) The application period for entry permits for herring fisheries (1)-(3) designated in sec. 310(a) of this chapter will be from February 25, 1977 through April 25, 1977.

(h) The application period for entry permits for the Southeastern herring gillnet fishery is from March 15, 1978 until midnight June 15, 1978. (11) 12, 18, 74, Rg 52 am 4/9/76, Rep 11/2/76, Rg 52, 78, 74, Rg 61 am 6/14/77, Rg 61 am 10/7/78, Rg 66)

20 AAC 05.520 EVIDENCE OF QUALIFICATIONS. (a) Every applicant shall have the burden of establishing his qualifications for an entry permit. Specific evidence will be requested on the application form for that purpose. The commission may at any time require an applicant to submit additional evidence in affidavit or other form relating to his qualifications.

(b) To the extent practicable, the commission will provide each applicant with a summary compiled from state records and other reliable sources which will indicate, for those years from 1969 to the qualification date, those years that the applicant participated in each fishery as a gear license holder, the consistency of participation each year, the annual catch value of the fishery resource, and vessel ownership. If any. If the applicant verifies the information on this summary is correct, the commission will, subject to the provision of sec. 505(d) of this chapter, accept the information on this summary as sufficient evidence of the facts stated. The applicant may contest the accuracy of any information included in this summary and may supplement this information by establishing additional facts regarding his qualifications with other evidence.

(c) An applicant may be required to submit copies of, or authorize access to, his state and federal income tax returns for the appropriate years, or evidence establishing that he was not required to file, or his Fisherman's Annual Information Report, as a primary source of evidence in support of his application. Tax returns and related information submitted by an applicant are confidential and will not be disclosed in any manner without the express consent of the applicant. When a copy of a tax return is no longer needed by the commission for the purposes for which it was requested, the copy will be destroyed.

(d) Evidence offered by the applicant for an entry permit will be accepted by the commission within the following time limits:

(1) Evidence in support of those applications which were to be submitted to the commission within the time limitations of sec. 510(a) of this chapter will be considered by the commission if received on or before July 1, 1978, unless the applicant is notified otherwise.

(2) Evidence in support of those applications which were to be submitted to the commission within the time limitations of sec. 510(b) of this chapter will be considered by the commission if received on or before September 1, 1978, unless the applicant is notified otherwise.

(3) Evidence in support of those applications which were to be submitted to the commission within the time limitations of sec. 510(f) of this chapter will be considered by the commission if received on or before September 1, 1978 unless the applicant is notified otherwise.

(4) Evidence in support of those applications which were to be submitted to the commission within the time limitations of sec. 510(g) of this chapter will be considered by the commission if received on or before May 1, 1978 unless the applicant is notified otherwise.

(5) Evidence in support of those applications which were to be submitted to the commission within the time limitations of sec. 510(h) of this chapter will be considered by the commission if received on or before December 31, 1978 unless the applicant is otherwise notified.

(e) A commission decision upon evidence submitted under (d) of this section does not constitute a determination for which the applicant may request and receive an administrative hearing under sec. 805 of this chapter if the applicant has already received the opportunity to request and receive an administrative hearing under sec. 805(b)(1) of this chapter. 20 AAC 05.530. APPLICATION BY DECEDENT'S ESTATE. (a) If an individual eligible to apply for an entry permit for any fishery designated in sec. 300 or 310(1) - (8) of this chapter should die on or after January 1, 1975, the authorized representative of his estate may apply for an entry permit for that fishery in the name of the decedent within the application period set out in sec. 510 of this chapter. An entry permit so acquired becomes part of the decedent's estate and may be transferred in accordance with the provisions of sec. 750 of this chapter.

(b) If an individual eligible to apply for an entry permit for any fishery designated in sec. 310(9) - (11) of this chapter should die on or after January 1, 1975, the authorized representative of his estate may apply for an entry permit for that fishery in the name of the decedent, within the application period set out in sec. 510 of this chapter. An entry permit so acquired becomes part of the decedent's estate and may be transferred in accordance with the provisions of sec. 750 of this chapter.

(c) If an individual eligible to apply for an entry permit for herring fisheries (1), (2) and (3) designated in sec. 310(a) of this chapter dies after December 31, 1975, the authorized representative of his estate may apply for an entry permit for that fishery in the name of the decedent within the application period set out in sec. 510(g) of this chapter. An entry permit so acquired becomes part of the decedent's estate and may be transferred in accordance with the provisions of sec. 750 of this chapter.

(d) For fisheries not specified in (a) - (c) of this section, if an individual eligible to apply for an entry permit dies on or after the qualification date established in AS 16.43.260(e), the authorized representative of his estate may apply for an entry permit for that fishery in the name of the decedent within the application period set out in sec. 510 of this chapter. An entry permit so acquired becomes part of the decedent's estate and may be transferred in accordance with the provisions of sec. 750 of this chapter. (Eff. 12/18/74, Reg. 52, am 5/20/76, Reg. 58, am 2/25/77, Reg. 61, am 4/30/78, Reg. 66)

AS 16.43.260(a)

20 AAC 05.540. PRIORITY CLASSIFICATION OF APPLICANTS. (a) The commission will assign each applicant to a priority classification according to the point system established in secs. 600 - 660 of this chapter.

(b) if the applicant is assigned to a priority classification designated in sec. 640(a) of this chapter as involving significant economic hardship, the commission will either issue the entry permit or send a notice to the applicant indicating that he will receive an entry permit.

(c) If the applicant is assigned to a priority classification not designated in sec. 640(a) of this chapter as involving significant economic hardship, the commission will send a notice of classification to the applicant setting forth the commission's findings of fact with respect to the applicant and the date on or before which a request for a hearing must be received if the applicant disagrees with the commission's determination of his priority classification. (Eff. 12/18/74, Reg. 52)

Authority: AS 16.43.100(b) AS 16.43.260(d)
AS 16.43.110(a) AS 16.43.270(a)

20 AAC 05.550 ISSUANCE OF ENTRY PERMITS. (a) The commission will issue entry permits to all applicants assigned to the priority classifications designated in secs. 600 - 660 of this chapter as involving significant economic hardship.

(b) [illegible]er of permits issued to applica[illegible] to priority classifications designated [illegible]olving significant economic hardship equals or exceeds the maximum number of permits established for the fishery, the commission will immediately send a notice of classification to all remaining applicants and indicate that their applications are denied and will refund all fees submitted by those applicants who do not file a request for a hearing pursuant to sec. 805 of this chapter.

(c) If the number of permits issued to

applicants assigned to priority classifications designated as involving significant economic hardship is less than the maximum number of permits established for the fishery, the commission will issue the remaining permits to applicants in the order of descending priority classifications up to the maximum number less the number required to be reserved to protect the rights of applicants who are still contesting the commission's initial determination or appealing the findings of an administrative adjudication. All other applicants not issued an interim-use permit under (e) or (f) of this section will be issued a notice of denial.

(d) If, at the end of all administrative hearings and judicial appeals, the number of permits remaining to be issued is less than the number of applicants in the highest priority classification to which permits have not been issued, the commission will allocate the permits to the applicants within that classification by lottery.

(e) Permits will be reserved to protect the rights of applicants who are still contesting the commission's initial determination or appealing the findings of an administrative adjudication. When such reservations are made, the commission will determine, on the basis of its original classifications and subsequent adjudications, which applicants would be eligible for entry permits but for the administrative process. The commission may issue interim-use permits to those applicants if it finds that the administrative delay would otherwise preclude participation in the fishery. If the group of potentially eligible applicants includes any who fall within a classification that would require a lottery for their selection, interim-use permits will be issued to all applicants within that classification.

(f) The commission may issue an interim-use permit to an applicant for an entry permit if it finds that administrative delay would otherwise preclude participation in the fishery.

(g) Applicants issued interim-use permits under (e) or (f) of this section or under any other process of law are subject to all buy-back assessments required under AS 16.43.110(a) and (b) if they are ultimately unsuccessful in receiving an entry permit.

(h) Interim-use permits issued under (e) or (f) of this section shall expire upon the commission's final determination of the holder's eligibility for an entry permit.

(i) When the maximum number of entry permits has been issued for a fishery, the commission will immediately notify all remaining applicants that their applications are denied and will refund all fees submitted with those applications. (Eff. 12/18/74, Reg. 52, am 4/9/76, Reg. 58)

20 AAC 05.575. APPLICATION FOR EDUCATIONAL ENTRY PERMITS (a) Application for educational entry permits must be made upon forms required by the commission and must be accompanied by a written statement from the appropriate governmental agency acknowledging that the applicant is accredited, approved, or licensed as required by AS 16.43.275.

(b) Before permit issuance the applicant shall, upon forms provided by the commission, state the anticipated budget of the fishing activities for which permit application is made.

(c) Before April 1 of the year following permit issuance and before subsequent permit issuance, whichever occurs first, the applicant shall provide copies of all fish tickets for fish harvested under each permit, and, upon forms provided by the commission, shall state

(1) actual operating expenditures under each permit, and

(2) total earnings from fishing activities under each permit.

(d) Failure to submit required information to the commission will, in the commission's discretion, result in permit issuance being withheld, denied, revoked or suspended. (Eff. 12/27/79, Reg. 72)

670 Definitions

20 AAC 05.600 PRIORITY CLASSIFICATION SYSTEM (a) For each fishery for which a maximum number of entry permits has been established under sec. 320 of this chapter, the commission will adopt regulations defining priority classifications in terms of a point system for ranking applicants for entry permits. These priority classifications will be based upon a reasonable balance of the hardship standards of degree of economic dependence upon the fishery and extent of past participation in the fishery. The commission will use the following classification system and the guidelines set out in secs. 610 and 620, except for those fisheries where special circumstances are found to require modification of the classification system considering the number of applicants, the variance in their qualifications, the history of the fishery, and the purposes of AS 16.43.

(b) A point scale from 0 — 40 will be established, with 20 points assigned for each of the two hardship standards (1) economic dependence and (2) past participation.

(c) The commission will assign an applicant to one of the 41 priority classifications designated by the numbers 0 through 40, based on the total points to which his qualifications as of the qualification date entitled him under sec. 630 of this chapter. The higher the total number of points, the greater the degree of hardship the applicant would suffer by exclusion from the fishery.

(d) The commission will designate

(1) an upper range of priority classifications of those applicants who would suffer significant economic hardship by exclusion from the fishery, and therefore will receive entry permits as required by AS 16.43.270(a); and

(2) a lower range of priority classifications of those applicants who would suffer only minor economic hardship by exclusion from the fishery and an entry permit originally issued to them by the commission pursuant to AS 16.43.250(a) may therefore have certain restrictions placed upon its transfer as required by AS 16.43.270(c).

(e) The designations made in (d) of this section may leave a middle range of priority classifications that are not subject to either the significant or minor economic hardship provisions of AS 16.43. (Eff. 12/18/74, Reg. 52, am 3/25/77, Reg. 61)

Authority: AS 16.43.100(a) AS 16.43.110(a)
AS 16.43.100(b) AS 16.43.250(a)

20 AAC 05.610 PAST PARTICIPATION. The standard of past participation in the fishery includes the number of years participation in the fishery and the consistency of participation. The commission will determine an applicant's extent of past participation as of the qualification date

established under AS 16.43.260(d) or (e), and will apply the above two factors as follows:

(1) the commission will rank an applicant based on the number of years participation by considering the number of years the applicant has harvested the fishery resource commercially while participating as a gear license holder and his number of years participation as a crewman, with greater weight being given to participation in recent years as a gear license holder;

(2) the commission will rank an applicant based on consistency of participation by considering the number of weeks of the season in which the applicant harvested the fishery resource commercially while participating as a gear license holder. This factor will be given less weight than the number of years of participation (Eff. 12/18/74, Reg. 52)

Authority: AS 16.43.100(a)(6)
AS 16.43.100(b)
AS 16.43.110(a)
AS 16.43.250(a)(2)

20 AAC 05.620 ECONOMIC DEPENDENCE. The standard of economic dependence upon the fishery includes a consideration of percentage of income derived from the fishery, reliance on alternative occupations, availability of alternative occupations, and investment in vessels, gear and set net sites. The commission will determine an applicant's economic dependence as of the qualification date established under AS 16.43.260(d) or (e) and will therefore give primary weight to evidence from the years immediately preceding the qualification date and will consider the above four factors as follows:

(1) the commission will rank an applicant based on the two factors of percentage of income derived from the fishery and reliance on alternative occupations by considering the relation between "annual catch value" and "nonfishing occupational income," expressed as an "income dependence percentage" as these terms are defined in sec. 66(l) of this chapter. Points for income dependence will be awarded only to applicants who harvested the fishery resource commercially while participating as a gear license holder during a year in which income dependence is claimed. A higher income dependence percentage indicates a higher degree of economic dependence upon the fishery;

(2) the commission will rank an applicant based on the factor of investment in vessels, gear and set net sites if the applicant, on the qualification date, was the owner of a vessel, gear or set net site used or to be used in the fishery for which he is applying, or, if the applicant at any time between his last landing in the fishery and the qualification date was the owner of a vessel, gear or set net site used in the fishery, so long as the applicant had fished consistently in the year prior to the qualification date. In the case of a set net site the commission will consider the owner to be the person or persons who could rightfully exercise the power to sell or transfer the set net site according to the accepted customs and usages of the area. In cases where a vessel, gear or set net site was owned jointly or in a corporate capacity, an applicant's points will be determined by multiplying his percentage of ownership interest times the total number of points possible. Fractional points will round off to the nearest whole number, with .5 rounding off to the lower whole number;

(3) the commission will rank an applicant based on the factor of availability of alternative occupations according to his place of domicile (Eff. 12/18/74, Reg. 52)

Authority: AS 16.43.100(a)(6)
AS 16.43.100(b)
AS 16.43.110(a)
AS 16.43.250(a)(10)

20 AAC 05.630 POINT SYSTEM FOR DESIGNATED FISHERIES. (a) Past Participation. Up to a maximum of 20 points will be awarded an applicant for past participation in the fishery applied for based on the following schedule:

(1)

Year Fished as a Gear License Holder		Continuity of Participation as a Gear License Holder (required minimum number of years fished is shown in (c)(1) of this section)
Year	Points	Points
1972	3	2
1971	3	2
1970	2	1
1969	2	1

(2) one point for each additional year of actual participation as a gear license holder in the fishery applied for from 1965 through 1968;

(3) one point for each additional year of actual participation as a gear license holder in the fishery applied for from 1960 through 1964 provided the applicant participated as a gear license holder in the fishery applied for during at least one year from 1965 through 1972;

(4) one point from each year of actual participation as a crewman from 1965 through 1972 in the fishery applied for. Points for crewmen participation and points for participation as a gear license holder may not be claimed in the same year.

(5) if unavoidable circumstances exist such that an applicant's past participation in the fishery is not realistically reflected by points awarded for past participation for the years 1960 through 1972, the commission may award an applicant up to a maximum of 10 points upon a special showing of past participation during the years 1960 through 1972.

(b) to receive credit for past participation as a gear license holder an applicant must have harvested the resource commercially while participating as a gear license holder in a given year.

(b) Economic Dependence. Up to a maximum of 20 points will be awarded an applicant for economic dependence on a fishery based on the following schedule:

(1) income dependence percentage based on harvesting the fishery resource while participating as a gear license holder in the fishery applied for as shown for each fishery in (c)(2) of this section. (Maximum of 10 points possible.)

Year	Minimum Percentage	Points
1973	Percentage A from schedule in (c)(2) of this section	4
1974	Percentage B from schedule in (c)(2) of this section. (In the Prince William Sound purse seine and set net fishery, percentages A and B use the year 1970.)	2
1975	Percentage C from schedule in (c)(2) of this section	6
1976	Percentage D from schedule in (c)(2) of this section. (In the Prince William Sound purse seine	3

fishery, percentages C and D use the year 1971.)

(2) if special circumstances exist such that an applicant's income dependence is not realistically reflected by his income dependence percentage for the years 1971 and 1972, the commission may award an applicant up to a maximum of 10 points based on a special showing of income dependence;

(3) investment as of the qualification date in vessel, gear or set net site used or to be used in the fishery for which application is being made. Applicants for the Southeastern drift gillnet fishery who participated in the Southeastern set gillnet fishery may claim points for the ownership of a set gillnet site, set gillnet gear, drift gillnet gear or drift gillnet vessel as of the qualification date. (Maximum of 6 points possible.)

(A) owns vessel (does not include set net skiffs) ..... 6 points

(B) owns set net site ..... 6 points

(C) owns gear ..... 3 points
(Gear must include the net in salmon net fisheries. In the troll fisheries, gear includes the lines, leaders and lures);

(4) availability of alternative occupations in applicant's place of domicile as of the qualification date. (Maximum of 4 points possible.)

(A) domicile in a census district or county with a population that is more than 80% rural or has a total population of under 10,000 as of the 1970 census ..... 4 points

(B) domicile in a census district or county with a population that is more than 40% rural or has a total population of under 25,000 as of the 1970 census ..... 2 points

(C) domicile in a census district or county with a population that is 40% or less rural or has a total population of 25,000 or more as of the 1970 census ..... 0 points

(D) an applicant from a zero or two point area may receive up to the maximum of four points through a special showing that there is neither a road nor adequate daily transportation service from the applicant's domicile to other potential areas of employment in his census district.

(c) The commission will use the following schedules in determining an applicant's points for consistent participation and income dependence.

(1) consistent participation

Salmon Fisheries	Minimum Number of Weeks Fished To Show Consistent Participation			
	1969	1970	1971	1972
Southeastern Alaska (A)

AS 16.43.250(a)(1)
AS 16.43.250(a)(2)

20 AAC 05.640 DESIGNATION OF SIGNIFICANT AND MINOR HARDSHIP CLASSIFICATIONS. (a) The commission designates the priority classifications 1 through 40 as classifications of applicants who would suffer significant economic hardship by exclusion from the fishery, and therefore will receive entry permits as required by AS 16.43.270(a).

(b) The commission designates the priority classifications 0 through 5 as classifications of applicants who would suffer only minor economic hardship by exclusion from the fishery, and an entry permit originally issued to them by the commission pursuant to AS 16.43.250(c) may therefore have certain restrictions placed upon its transfer as required to AS 16.43.170(c). (Eff. 12/18/74, Reg. 52)

Authority: AS 16.43.100(a)(2)

AS 16.43.250(c)

20 AAC 05.650 SPECIAL RULES FOR USE OF THE POINT SYSTEM. (a) All eligible applicants for any designated fishery will receive 0 points for any year in which there was an administrative closure for the entire season.

(b) An applicant who is eligible to apply for an entry permit under the terms of AS 16.43.260(a) and whose participation in a fishery was interrupted by his first enlistment or draft period of military service will be awarded the maximum number of points for past participation for the fishing seasons missed due to that military service as follows. If the applicant did not harvest the fishery resource commercially while participating as a gear license holder prior to the commencement of the military service, then the applicant will receive crewmen participation points for the fishing seasons missed; if the applicant harvested the fishery resource commercially while participating as a gear license holder prior to the commencement of the military service, then the applicant will receive the maximum number of points for past participation for the fishing seasons missed.

(c) To use the special showing provisions in sec. 630(a)(4) (for past participation), (b)(1) (for income dependence) and (b)(4)(D) (for availability of alternative occupations) of this chapter, an applicant must claim a specific number of points and must submit documentation of the facts and circumstances surrounding the claim along with his application for an entry permit. Where necessary, the commission will request additional explanation

or documentation of the facts and circumstances surrounding the claim before making its determination.

(d) Due to the season-long administrative closure of the Prince William Sound purse seine fishery in 1972, those persons who can show that they were the owner or part-owner of a purse seine vessel and would have fished as a purse seine gear license holder in Prince William Sound for the first time in 1972 but for the closure of that fishery are eligible to apply for an entry permit for that fishery. (Eff. 12/18/74, Reg. 52 am 4/7/75, Reg. 54)

20 AAC 05.653 PRIORITY CLASSIFICATION SYSTEM FOR THOSE FISHERIES DESIGNATED IN SEC. 310(a)(9)-(13) OF THIS CHAPTER. (a) The commission finds that special circumstances (set out in detail in the findings of October 20, 1975, which accompanied the proposed regulations) exist requiring the use of the priority classification system in sec. 656 of this chapter for those fisheries designated in sec. 310(a)(9)-(13) of this chapter.

(b) For each fishery for which a maximum number of entry permits has been established in sec. 320(10)-(14) of this chapter a point system is used for ranking applicants for entry permits.

(c) A point scale of 0-24 is established.

(d) The commission will assign an applicant to one of 25 priority classifications designated by the numbers 0-24, based on the total points to which his qualifications, as of the qualification date entitled him under sec. 656 of this chapter. The greater the degree of hardship the applicant would suffer by exclusion from the fishery, the higher the total number of points. (Eff. 12/9/76, Reg. 58)

Authority: AS 16.43.100(a)(1)-(2) and (6)
AS 16.43.100(b)
AS 16.43.110(a)
AS 16.43.250(a)

20 AAC 05.656 POINT SYSTEM FOR FISHERIES DESIGNATED IN SEC. 310(a)(9)-(13) OF THIS CHAPTER. (a) Past Participation. Up to a maximum of 16 points will be awarded to an applicant for past participation in the fishery applied for based upon the following schedule:

(1) Year fished as a gear license holder*	Schedule (a)**	Schedule (b)**
1975	4	3
1974	3	3
1973	3	3
1972	3	3
1971	2	2
1970	1	2
	16	16

*In the Upper Yukon fisheries, where gear licenses have not been required, only the operation of a boat listed in the commercial fishery as described in sec. 535 of this chapter may qualify for the points listed in the schedule in this subsection.

**Schedule (a) is to be used in all fisheries designated in sec. 310(a)(9)-(13), except the Kotzebue pilot fishery, for which schedule (b) is to be used.

(2) If unavoidable circumstances exist such that an applicant was unable to participate in the fishery during 1974 or during 1975 the commission will in its discretion award the applicant up to a maximum of seven points upon a special showing of past participation.

(b) Economic Dependence. Up to a maximum of eight points will be awarded an applicant for economic dependence on a fishery based on the schedule in this subsection.

(1) Income dependence percentage or maintaining occupational income based on harvesting the fishery resource while participating as a gear license holder in the fishery applied for in 1974 and 1975 is shown in the following schedule:*

Salmon Fishery	Criteria	1975 Points	1974 Points
Kuskokwim (W) gillnet fishery	Income dependence percentage in excess of 60%, or nonfishing occupational income less than $3,000	4	2
	Income dependence percentage in excess of 30%, or nonfishing occupational income less than $6,000.	2	1
Kotzebue (X) gillnet fishery	Income dependence percentage in excess of 80%, or nonfishing occupational income less than $2,000	4	2
	Income dependence percentage in excess of 60%, or nonfishing occupational income less than $4,000	2	1
Lower Yukon (Y) gillnet fishery	Income dependence percentage in excess of 60%, or nonfishing occupational income less than $3,000	4	2
	Income dependence percentage in excess of 30%, or nonfishing occupational income less than $6,000	2	1
Upper Yukon (P) gillnet fishery	Income dependence percentage in excess of 60%, or nonfishing occupational income less than $3,000	4	2
	Income dependence percentage in excess of 30%, or nonfishing occupational income less than $6,000	2	1
Upper Yukon (P) fishwheel fishery	Income dependence percentage in excess of 60%, or nonfishing occupational income less than $3,000	4	2
	Income dependence percentage in excess of 30%, or nonfishing occupational income less than $6,000	2	1
Norton Sound (Z)	Income dependence percentage in excess of 60%, or nonfishing occupational income less than $3,000	4	2
	Income dependence percentage in excess of 30%, or nonfishing occupational income less than $6,000	2	1

*In the Upper Yukon fishwheel fishery, where gear increases have not been required, only the operation of a fishwheel in the same general fishery as described in sec. 555 of this chapter may qualify for the points listed in this subsection.

(2) If unavoidable circumstances exist such that an applicant's income dependence upon the fishery is not realistically reflected by his income dependence in 1974 and 1975, the commission may in its discretion award an applicant up to a maximum of six points based on a special showing of income dependence.

(3) Points will be awarded for investment in fishing gear as of the qualification date *

(A) Owns vessel or gear or both 1 point
(B) Owns fishwheel 1 point

*A maximum of one point may be claimed under this paragraph.

(4) Points will be awarded for availability of alternative occupations in the applicant's place of domicile as of the qualification date.

(A) One point will be awarded an applicant whose domicile is in a census district or county with a population that is 80 percent or more rural or has a total population of under 10,000 as of the 1970 census.

(B) Zero points will be awarded an applicant whose domicile is in a census district or county with population that is less than 80 percent rural or has a total population of more than 9,999.

(C) An applicant from a zero point area may receive one point through a special showing that there is neither a road nor an adequate daily transportation service from the applicant's domicile to other potential areas of employment in his county or census district. (Eff 4/9/76, Reg. 58)

AS 16.43.250(c)

20 AAC 05.660. DEFINITIONS. In secs. 600 through 660 of this chapter

(1) "annual catch value" means the number of pounds of any species of fish caught by an applicant in the fishery for which he is applying, as derived from fish tickets, during a given year, multiplied by the average price per pound paid for the species in that fishery during the year, or the gross amount actually received for the calendar year from harvesting the fishery resource commercially while participating as a gear license holder in the fishery for which he is applying;

(2) "income dependence percentage" means the annual catch value divided by the sum of the annual catch value and the nonfishing occupational income, with the result multiplied by 100;

(3) "nonfishing occupational income" means that portion of earned income that comes from sources other than commercial fishing. It includes gross wages, salaries, professional fees and other amounts received as compensation for personal services actually rendered including cost of living allowances. In the case of an applicant engaged in a trade or business other than commercial fishing, the net profits of such trade or business shall be included as nonfishing occupational income. Pensions, interest, dividends, other investment income, and income received directly from participating in any fishery as a gear license holder or crewman will not be included;

(4) "qualification date" means January 1, 1973, except that in the case of fisheries for which the commission establishes the maximum number of entry permits after January 1, 1975, the qualification date is January 1 of the year during which the commission establishes the maximum number of entry permits for a fishery;

(5) "gear" means the fishing apparatus necessary to harvest the fishery resource commercially. (Eff. 12/18/74, Reg. 52)

Authority: AS 16.43.100(b)
AS 16.43.110(a)

20 AAC 05.662 PRIORITY CLASSIFICATION SYSTEM FOR HERRING FISHERIES (1)-(3) DESIGNATED IN SEC. 310(a) OF THIS CHAPTER. (a) The commission finds that special circumstances exist (set out in detail in the findings of February 1977) requiring the use of the point system in sec. 664 of this chapter for herring fisheries (1)-(3) designated in sec. 310(a) of this chapter.

(b) For each herring fishery for which a maximum number of entry permits has been established in sec. 320 of this chapter, a point system is used for ranking applicants for entry permits.

(c) A point scale of 0 - 9 is established for areas A-1 and H.

(d) A point scale of 0 - 8 is established for area E-1.

(e) The commission will assign an applicant to a priority classification based on the total points to which his qualifications as of the qualification date entitled him under sec. 664 of this chapter. The greater the degree of hardship the applicant would suffer by exclusion from the fishery, the higher the total number of points. (Eff. 2/25/77, Reg. 61)

Authority: AS 16.43.100(a) AS 16.43.110(a)
AS 16.43.100(b) AS 16.43.250(a)

20 AAC 05.664 POINT SYSTEM FOR HERRING FISHERIES (1)-(3) DESIGNATED IN SEC. 310(a) OF THIS CHAPTER. (a) Past Participation. Points will be awarded to an applicant for past participation in the fishery applied for based on the following

(1)

Past Participation as a Herring Purse Seine Interim-Use Permit Holder	Adm. Areas A-1 and H	Adm. Area E-1
Year	Points	Points
1976	2	2
1975	2	1
1974	1	1
Maximum Allowable Award	5	4

(2) If unavoidable circumstances existed such that an applicant was unable to participate during any of the years 1974 through 1976, the commission will in its discretion award an applicant the appropriate point(s) allowable under (a)(1) of this section, upon a special showing of past participation.

(3) "Past participation," for purposes of this section, mean

(A) the commercial taking of the herring resource in herring administrative areas A-1, E-1 or H with a herring purse seine, interim-use permit and appropriate licenses; or

(B) being on the fishing grounds in herring administrative areas A-1, E-1 or H, with the appropriate vessel, gear licenses, and interim-use permit with the intention of taking the herring resource during the time the season was open and the herring resource was harvested.

(b) Economic Dependence. A maximum of four points will be awarded to an applicant for economic dependence on the fishery.

(1) A maximum of three points will be awarded for investment in vessel and gear as of the qualification date (December 31, 1976).

(A) Ownership of a purse seine vessel used or to be used in the herring purse seine fisheries will result in the owner being awarded one point.

(B) Ownership of a herring purse seine used or to be used in the herring fisheries will result in the owner being awarded two points.

(2) One point will be awarded for availability

of alternative occupations if an applicant's domicile as of the qualification date and according to the 1970 U.S. Census, is in a census district or county with a population of 25,000 or less (Eff. 2/25/77, Reg. 61)

Authority: AS 16.43.100(a) AS 16.43.110(a)

20 AAC 05.666. DESIGNATION OF SIGNIFICANT AND MINOR HARDSHIP CLASSIFICATIONS. For the herring fisheries (1) — (3) designated in sec. 310(a) of this chapter, the commission designates

(1) priority classifications of applicants with six or more points as those who would suffer significant economic hardship by exclusion from the fishery and therefore will receive an entry permit;

(2) priority classifications of applicants 0 through 2 are those who would suffer only minor economic hardship by exclusion from the fishery and an entry permit originally issued to them by the commission pursuant to AS 16.43.250(c) may therefore have certain restrictions upon its transfer as required by AS 16.43.170(c) (Eff. 2/25/77, Reg. 61)

Authority: AS 16.43.100(a) AS 16.43.250(b)
AS 16.43.110(a) AS 16.43.250(c)

20 AAC 05.667. PRIORITY CLASSIFICATION SYSTEM FOR SOUTHEASTERN HERRING GILLNET FISHERY. (a) The commission finds that special circumstances exist (set out in detail in its findings on this herring gillnet fishery dated January 1978) requiring the use of the point system in sec. 668 of this chapter for the Southeastern herring gillnet fishery.

(b) A point scale of 0 — 21 is established for the Southeastern herring gillnet fishery.

(c) The commission will assign an applicant to a priority classification based on the total points to which he qualifications as of the qualification date entitle him under sec. 668 of this chapter. The greater the degree of hardship the applicant would suffer by exclusion from the fishery, the higher the total number of points. (Eff. 4/30/78, Reg. 66)

Authority: AS 16.43.100
AS 16.43.110(a)
AS 16.43.250(a)

20 AAC 05.668. POINT SYSTEM FOR THE SOUTHEASTERN HERRING GILLNET FISHERY. (a) Past Participation. Up to a maximum of 18 points will be awarded to an applicant for past participation in the fishery based on the following:

(1) **Past Participation as a Herring Gillnet Operator**

Year	Sub-Area	Points
1977	Juneau	3
	Kah Shakes	3
	Other	1
1976	Juneau	2
	Chatk Bay	2
	Gambier Bay	2
	Pybus Bay	2
	Kasaan	2
	Helm Bay	2
	Kah Shakes	2
	Other	2
1975		2
1974		2
1973		1
1972		1

Past Participation as a Crewman

Year	Points
1977	1
1976	1
1975	1
1974	1

(2) For purposes of this subsection, no more than six points may be claimed for participation as a herring gillnet operator in 1977, nor no more than six points as a herring gillnet operator in 1976. Points may not be claimed as an operator and as a crewman in the same year.

(3) If unavoidable circumstances exist such that an applicant's past participation in the fishery is not realistically reflected by points awarded for past participation for the years 1972 through 1977, the commission may award a maximum of 18 points upon a special showing of past participation during the years 1972 through 1977.

(4) For purposes of this subsection, "past participation" means

(A) the commercial taking of the herring resource in herring administrative area A with a gillnet, while holding the appropriate licenses and/or permit; or

(B) being on the fishing grounds in the sub-area with vessel, gear, licenses and interim-use permit and with the ability to and intention of commercially harvesting the herring resource during the time the season was open and the herring resource was harvested; or

(C) being on the fishing grounds in the sub-area during the time when a season opening was anticipated by appropriate Department of Fish and Game personnel but did not materialize, with vessel, gear licenses and interim-use permit and with the ability and intention of commercially harvesting the herring resource.

(5) For purposes of this subsection, sub-areas are as follows:

Sub-area	Statistical Chart Area*
Juneau	111-50 & 115-10
Chatham Bay	112-80 & 113-10
Gambier Bay	110-24
Sylvus Bay	110-22
Kassan	102-60
Helm Bay	101-90
Kah Shakes	01-23
Other	All portions of administrative area A not included above, excluding waters of the Metlakatla Indian Reservation

*As defined by regulations of the Board of Fisheries.

(6) For purposes of this subsection, a person demonstrating the following is presumed to be an "operator" of herring gillnet gear:

(A) had a gear license for herring gillnet gear; and

(B) had the appropriate interim-use permit; and

(C) was licensed to operate the vessel from which that unit of gear was fished; and

(D) had the immediate right to control the vessel and unit of gear being operated.

(7) For the purposes of this subsection, a unit of gear is the aggregate amount of gear operated from a single vessel. The maximum number of participation points available to credit the operation of a unit of gear may not exceed the amount which can be claimed by a single operator.

(8) The commission will, in its discretion, consider other evidence relevant to "operator" status. Where two or more individuals claim to have operated the same unit of gear, the commission will, in its discretion, determine who was the operator based upon all available evidence. If unable to determine which individual was the operator, the commission will award the available operator points proportionally.

(h) Economic Dependence. Up to a maximum of five points will be awarded an applicant for economic dependence on the Southeastern herring gillnet fishery based on the following:

(1) a maximum of four points will be awarded an applicant for investment in vessel and gear:

(A) Ownership of a vessel used or to be used in the commercial gillnet harvest of herring:

(i) one point if owned on May 19, 1977; and

(ii) one point if owned on December 31, 1977.

(B) Ownership of gear used or to be used in the commercial gillnet harvest of herring (available in addition to points claimed in (A) of this subsection)

(i) one point if owned on May 15, 1977; and

(ii) one point if owned on December 31, 1977.

(C) In cases where a vessel or gear is owned jointly or in a corporate capacity, an applicant's points will be determined by multiplying the percentage of ownership interest times the total number of points possible, except in cases where the applicant is the only individual with an ownership interest in the vessel or gear who has applied and been found eligible to apply for a Southeastern herring gillnet permit, in which case the applicant will receive the total number of points possible.

(2) One point will be awarded for availability of alternative occupations in the place of the applicant's domicile as of the qualification date when the place of domicile is in a census district or county with a population that is 50 percent or more rural or has a total population of 25,000 or less as of the 1970 census. ARTICLE 7
TRANSFER OF ENTRY AND INTERIM-USE PERMITS

Section
700 Requirements for transfer
710 Notice of intent to transfer
720 Application for transfer
730 Transfer and reissuance of entry permits
741 Lease or retained right of repossession prohibited
735 Designation of agents by commission
740 Emergency transfers
750 Transfer on death of the holder
760 Administrative hearings
770 Definitions for secs. 700 - 770

20 AAC 05.700. REQUIREMENTS FOR TRANSFER. (a) The holder of an entry or interim-use permit may transfer that permit only through the commission in accordance with secs. 700 - 727 of this chapter.

(b) It is a violation of this chapter for any permit holder to allow another to use his or her permit without first transferring the permit through the commission in accordance with secs. 700 - 727 of this chapter. The permit holder and the unauthorized transferee will be subject to penalties as provided in AS 16.43.360. (Eff. 12/18/74, Reg. 52, am 12/27/79, Reg. 72)

Authority: AS 16.43.100(a)(11)
AS 16.43.110(a)
AS 16.43.170
AS 16.10.339

20 AAC 05.710. NOTICE OF INTENT TO TRANSFER. (a) The holder of an entry permit not subject to the restrictions of AS 16.43.110(c) or (d) may establish a filing date, effective date, and expiration date for the transfer of his entry permit by filing a notice of in-

tent to transfer with the commission on a form supplied by the commission. The holder need not name a proposed transferee when filing a notice of intent to transfer. The commission will return a copy of the notice of intent to transfer together with a statement of the filing date, effective date, and expiration date for transfer of an entry permit.

(b) A holder may revoke a notice of intent to transfer any time prior to the filing of an application to transfer by filing his written notice of revocation of intent to transfer with the commission.

(c) A holder may file a renewed notice of intent to transfer at any time after the effective date of a notice of intent to transfer. A renewed notice shall simply extend the expiration date if filed over 60 days prior to the expiration date of the previous notice of intent to transfer.

(d) Any person who has applied for an entry permit under sec. 500 of this chapter may file with his application, or later, a notice of intent to transfer an entry permit. The effective date for purposes of transfer shall be the date of the original issuance of the entry permit, or the date 60 days after the filing of the notice, whichever is later. (Eff. 12/18/74, Reg. 52)

Authority: AS 16.43.100(a)(11)

AS 16.43.170(b)
AS 16.43.170(c)
AS 16.43.170(d)

20 AAC 05.720. APPLICATIONS FOR TRANSFER. (a) An application for the transfer of an entry permit may be filed with the commission on or after the effective date and must be filed with the commission on or before the expiration date of the notice of intent to transfer.

(b) Application for the transfer of an entry permit must be made to the commission on a form provided by the commission. The application must be signed by the applicant and the proposed transferee. The applicant and the proposed transferee must certify to facts establishing the present ability of the proposed transferee to participate actively in the fishery, and will be required upon request to produce documentation of those facts and such other information as the commission finds necessary.

(c) An application for the transfer of an entry permit may be withdrawn only upon the written request of both the applicant and the proposed transferee. (Eff. 12/18/74, Reg. 52)

Authority: AS 16.43.100(a)(11)
AS 16.43.110(a)
AS 16.43.170(b)

20 AAC 05.730. TRANSFER AND REISSUANCE OF ENTRY PERMITS. (a) Subject to the provisions of secs. 731 — 740 and 990(b) of this chapter, the commission will approve a request to transfer an entry permit and reissue an entry permit to the proposed transferee if the applicant and proposed transferee (other than the commission) comply with sec. 720(a) and (b) of this chapter.

(b) When the proposed transferee is a loan applicant with the Department of Commerce and Economic Development or the Alaska Commercial Fishing and Agricultural Bank, the commission will approve the request to transfer an entry permit and reissue an entry permit to the proposed transferee when final loan approval has been given by the Department of Commerce and Economic Development or the Alaska Commercial Fishing and Agricultural Bank.

(c) If the commission determines that the proposed transferee's present ability to participate actively in the fishery has not been established, it will so notify the applicant and the proposed transferee, giving its findings of fact and conclusions.

(d) For purposes of this chapter, there is a rebuttable presumption that the proposed transferee is unable to participate actively in the fishery if

(1) for set net permits, the proposed transferee has not attained his or her 10th birthdate, and

(2) for other permits, the proposed transferee has not attained his or her 16th birthdate. (Eff. 12/18/74, Reg. 52, am 12/27/79, Reg. 72)

AS 16.43.170

20 AAC 05.731. LEASE OR RETAINED RIGHT OF REPOSSESSION PROHIBITED. (a) A request for a permanent transfer of an entry permit is presumed to be pursuant to a lease or retained right of repossession if the proposed transferee or a member of the proposed transferee's immediate family has, within the two years immediately preceding the filing of the request to transfer, held and caused to be permanently transferred a permit for the same fishery as that currently requested. The commission will refuse to approve a request for transfer which is presumed to be pursuant to a lease or retained right of repossession unless

(1) where the entry permit to be transferred is the identical permit previously transferred by the proposed transferee, or member of the proposed transferee's immediate family, the presumption is rebutted by clear and convincing evidence; or

(2) where the entry permit to be transferred not the identical permit, but is for the same fishery as the permit previously transferred by the proposed transferee, the presumption is rebutted by a preponderance of the evidence.

(b) For the purposes of this section, the term "lease or retained right of repossession" does not include gratuitous transfers of an entry permit or approved emergency transfers under AS 16.43.150.

(c) A request for permanent transfer to a person who held that same permit during any [illegible] of the calendar year in which the request for permanent transfer is considered filed will be denied. (Eff. 12/27/79, Reg. 72)

Authority: AS 16.10.333 AS 16.43.100
AS 16.10.339 AS 16.43.150

20 AAC 05.735. DESIGNATION OF AGENTS BY COMMISSION. (a) The commission will in its discretion, designate agents for the purpose of receiving and reviewing notices of intent to transfer and requests for transfer.

(b) Properly completed notices of intent to transfer and requests for transfer received under this section must be date stamped and forwarded to the commission. Properly completed forms are received by the commission on the date received by a designated agent of the commission. (Eff. 12/27/79, Reg. 72)

Authority: AS 16.10.333
AS 16.10.339
AS 16.43.170(a)

20 AAC 05.740. EMERGENCY TRANSFERS. (a) A holder of an entry or interim-use permit under this section or sec. 750(b) of this chapter may apply for an emergency transfer of the entry or interim-use permit to another person by making application to the commission on a form provided by the commission.

(b) The commission will grant an emergency transfer of an entry or interim-use permit if the proposed transferee is not a permit holder in the fishery and is presently able to participate actively in the fishery, and if it is established that illness, disability, death, required military or government service, or other unavoidable hardship prevents the transferor from participating in the fishery.

(c) Where illness, disability, or death precludes communication by the transferor, the commission will, in its discretion, authorize the emergency transfer of an entry or interim-use permit upon application by a person other than the transferor. Such a transfer is subject to revocation at any time upon application by the transferor.

(d) Unless further restricted by the transferor, or otherwise limited by the commission, an emergency transfer will be effective for the remainder of the calendar year.

(e) The proposed transferor and transferee of an emergency transfer under this section shall provide information and executed releases for information the commission determines is reasonably necessary to establish the basis upon which the emergency transfer is requested. Sufficient proof to verify the basis of the transfer must be submitted when the transfer request is made.

(f) An emergency transfer of an entry permit will be approved in favor of a loan applicant securing a period of interim commercial financing if the holder has on file with the commission a notice of intent to transfer and the loan applicant has been issued a letter of loan commitment by the Department of Commerce and

Economic Development or the Alaska Commercial Fishing and Agricultural Bank. Emergency transfers under this subsection expire on the date of formal loan approval and transfer of the permit to the Department of Commerce and Economic Development or the Alaska Commercial Fishing and Agricultural Bank. (Eff. 12/18/74, Reg. 52, am 12/27/79, Reg. 72)

20 AAC 05.750. TRANSFER ON DEATH OF THE HOLDER. (a) An entry permit survives the death of the holder and will be transferred by the commission directly to the surviving spouse by right of survivorship unless a contrary intent is expressed by the holder.

(b) When no spouse survives the decedent or the rights to the permit otherwise pass to the estate, the authorized representative of the deceased holder's estate may apply for an emergency transfer of an entry permit pending final disposition of the permit as a part of the holder's estate by making application to the commission on a form provided by the commission. The emergency transfer must be to a person who is not a permit holder in the fishery and who can establish the present ability to participate actively in the fishery. The commission will approve an application for an emergency transfer under this subsection if the representative establishes that the holder is deceased and that the representative is authorized to request the transfer. Unless further restricted by the authorized representative, an emergency transfer after the death of the holder is effective for the remainder of the year. The authorized representative may annually renew an entry permit and apply for subsequent emergency transfers if he can establish that the permit has not been finally disposed of as part of the deceased holder's estate.

(c) The authorized representative may make final disposition of the entry permit under secs. 700 — 770 of this chapter upon demonstrating authorization for that action from the appropriate judicial authorities, except that a person named to receive that permit by distribution from the estate, rather than by sale from the estate, will receive that entry permit without being subject to the requirements of sec. 730(c).

20 AAC 05.760. ADMINISTRATIVE HEARINGS. Either the holder of an entry or interim-use permit, the authorized representative of the holder, or the authorized representative of a deceased holder's estate may request an administrative hearing and adjudication under the provisions of secs. 800 –855 of this chapter to contest a determination by the commission under secs. 700 — 750 of this chapter. (Eff. 12/18/74, Reg. 52, am 12/27/79, Reg. 72)

Authority: AS 16.43.110

20 AAC 05.770. DEFINITIONS FOR SECS. 700 — 770. In secs. 700 — 770 of this chapter

(1) "transfer" means any conveyance or attempted conveyance of the permit by the holder or any attempt by the holder to authorize another to use the entry permit for the operation of gear in the fishery. It does not include a contract or agreement to convey a permit in the future.

(2) "filing date" means the date upon which a document is delivered to the commission, except that a request to transfer will be considered filed upon the expiration of 60 days following the filing date of the notice of intent to transfer or when delivered to the commission, whichever occurs last.

(3) "effective date" means the date 60 days after the filing date of the notice of intent to transfer, or the date of expiration of a prior notice of intent to transfer, whichever occurs last.

(4) "expiration date" means the date 12 months after the filing date.

(5) "present ability to participate actively" means the person is physically able to harvest fish in the fishery and has reasonable access to commercial fishing gear of the type utilized in that fishery.

(6) "holder" means the person to whom the entry permit is issued;

(7) "authorized representative" means the personal representative duly appointed to administer the estate of a deceased entry permit holder pursuant to the provisions of AS 13.16.245 et seq. or pursuant to comparable provisions of the laws of the jurisdiction of the deceased holder's estate;

(8) "disability" means a serious impairment or loss of physical function;

(9) "illness" means a disease or ailment of such a character as to seriously affect the general soundness and healthfulness of the somatic system and not a mere temporary indisposition which does not tend to undermine or weaken the constitution;

(10) "immediate family" means spouse, child, stepchild, parent, step-parent, brother, step-brother, sister, step-sister, parent-in-law, son-in-law, daughter-in-law, brother-in-law and sister-in-law;

(11) "required governmental service" includes service at the federal, state, or local level required by law or which, if voluntarily performed, is not the permit holder's primary occupation; service without compensation, or service for which only stipend, per diem or expenses are paid is prima facie evidence that the service provided is not the permit holder's primary occupation;

(12) "required military service" means any service in the Armed Forces of the United States or the several states including related branches of service or substituted service where that service is required by law, or voluntary service during time of war or other national or local emergency. (Eff. 12/18/74, Reg. 52, am 12/27/79, Reg. 72)

20 AAC 05.800. MATTERS COVERED. The provisions of secs. 800 - 890 of this chapter apply to all matters presented to the commission for administrative hearing and adjudication. (Eff. 12/18/74, Reg. 52)

Authority: AS 16.43.100(b) AS 16.43.110(b)
AS 16.43.110(a) AS 16.43.120(a)

20 AAC 05.805. REQUEST FOR AN ADMINISTRATIVE HEARING. (a) An applicant or other party may request an oral or written administrative hearing by filing a request for a hearing with the commission. The request for a hearing must contain a statement of why the commission's determination should be changed and indicate which findings of fact, interpretation of regulation, or interpretation of statute the party believes to be in error. An administrative hearing will be granted upon the determination that the written request for a hearing demonstrates a genuine issue in contention.

(b) The following schedule governs requests for a hearing.

(1) Application classification or denial. The request for a hearing must be received on or before the 45th day following the mailing date of the notice of classification or notice of denial, whichever was earlier.

(2) Ineligibility for the reduced annual fee under sec. 220(b) of this chapter. The request for a hearing must be received on or before the 45th day following the date that the notice of ineligibility for the reduced annual fee was mailed to the applicant.

(3) Transfer of an entry permit under secs. 700 - 770 of this chapter, or of an interim-use permit under sec. 420 of this chapter. The request for a hearing must be received on or before the 45th day following the date that the notice of denial was mailed to the holder and the proposed transferee.

(4) All other commission determinations. The request for a hearing must be received on or before the 45th day following the mailing of the written notice of the commission's determination.

(c) Failure to request a hearing following a determination by the commission as set out in subsection (b) of this section, precludes further administrative consideration except as provided in subsection (d) of this section.

(d) The commission may adjust administrative errors affecting a commission determination during or after the period for requesting a hearing, upon written notice to the applicant or other party. Such adjustment is subject to an administrative hearing for an additional period specified in subsection (b) of this section. (Eff. 12/18/74, Reg. 52)

Authority: AS 16.43.100(b)
AS 16.43.110(a)
AS 16.43.110(b)

20 AAC 05.810. NOTICE OF HEARING. In all cases where an administrative hearing is granted, the commission will determine the time and place of hearing and deliver or mail a notice of hearing to the applicant or other party at least 30 days before the hearing. The applicant or other party may waive the 30-day notice requirement. (Eff. 12/18/74, Reg. 52)

Authority: AS 16.43.100(b) AS 16.43.110(b)
AS 16.43.110(a) AS 16.43.120(a)

20 AAC 05.815. SCOPE OF HEARING. The applicant or other party may present relevant evidence at the hearing, including testimony, affidavits, and documents, in support of the contentions for which the hearing was granted. Depositions, affidavits, and documents that have been stipulated to by the applicant or other party and the commission prior to the hearing will also be entered into the record. (Eff. 12/18/74, Reg. 52)

Authority: AS 16.43.100(b) AS 16.43.110(b)
AS 16.43.110(a) AS 16.43.120(a)

20 AAC 05.820. RULES OF EVIDENCE. (a) Oral evidence may be taken only upon oath or affirmation.

(b) Common law rules of evidence apply except when the hearing officer determines that their application is not required in order to assure fair treatment of the applicant or other party and that the evidence offered is relevant and of the sort on which responsible persons are accustomed to rely in the conduct of serious matters.

(c) The applicant or other party and the hearing officer may

(1) call and examine witnesses;

(2) introduce exhibits;

(3) cross-examine opposing witnesses on matters relevant to the issues even though the matter was not covered in the direct examination. If the applicant or other party does not testify, he may be called and examined by the hearing officer.

(d) The applicant or other party shall bear the burden of proving by a preponderance of the evidence that a determination of the commission is erroneous. (Eff. 12/18/74, Reg. 52)

Authority: AS 16.43.100(b) AS 16.43.110(b)
AS 16.43.110(a) AS 16.43.120(a)
AS 16.43.110(c)

20 AAC 05.825 SUBPOENAS, DEPOSITIONS, AFFIDAVITS AND DOCUMENTS. (a) At the request of an applicant or other party for good cause shown or upon its own motion, the hearing officer may issue subpoena and subpoena duces tecum to compel production of testimony or other evidence at a hearing. The issuance of subpoenas will be governed by the provisions of AS 44.62.430.

(b) In accordance with the provisions of AS 44.12.440 the hearing officer may order that the testimony of a material witness be taken by deposition.

(c) Documents or affidavits intended to be used at a hearing should be submitted to the commission by mail or at a prehearing conference so that they may be stipulated to whenever possible. (Eff. 12/18/74, Reg. 52)

Authority: AS 16.43.100(b) AS 16.43.110(d)
AS 16.43.110(a) AS 16.43.120(a)

20 AAC 05.830 CONTINUANCES. For good cause shown and at his discretion the hearing officer may order the continuance of a hearing. (Eff. 12/18/74, Reg. 52)

Authority: AS 16.43.100(b) AS 16.43.110(b)
AS 16.43.110(a) AS 16.43.120(a)

20 AAC 05.835 DEFAULT. If an applicant or other party does not appear at an oral hearing that has been granted, the hearing officer, unless good cause is shown, may act upon the evidence presently at his disposal without notice to the applicant or other party. (Eff. 12/18/74, Reg. 52)

Authority: AS 16.43.100(b) AS 16.43.110(b)
AS 16.43.110(a) AS 16.43.120(a)

20 AAC 05.840 HEARING OFFICER'S WRITTEN RECOMMENDATIONS. The hearing officer shall prepare a written recommendation in a form which may be adopted as the decision in the case. A copy will be served on the applicant or other party. (Eff. 12/18/74, Reg. 52)

Authority: AS 16.43.110(b) AS 16.43.110(b)
AS 16.43.110(a) AS 16.43.120(a)

20 AAC 05.845 ADMINISTRATIVE ADJUDICATION. (a) The commissioners will adjudicate the matter before them on the basis of the material previously filed with the commission by the applicant or other party, evidence presented at the hearing or introduced into the hearing record, matters officially noticed by the hearing officer under the procedures of AS 44.62.480 and the written recommendation of the hearing officer.

(b) The applicant or other party will be given two weeks from the date of mailing of the hearing officer's written recommendations to submit written comments on that recommendation. If the applicant or other party desires an opportunity to make an oral presentation to the commissioners, he must make the fact known to the commission within the two-week period. Any presentation to the commissioners shall be limited to the record before them and no commissioner may vote unless he has heard any additional oral presentation.

(c) If an applicant or other party fails to act within the two-week period, or fails to appear at the time and place scheduled for oral presentation, the commissioners will grant a second opportunity only upon good cause shown.

(d) The commissioners may adopt the hearing officer's written recommendation in its entirety or in part. If the recommendation is not adopted in its entirety, the commissioners may decide the case upon the record or request additional evidence.

(e) A case requiring additional evidence will be referred to a hearing officer to take that evidence. The hearing officer shall prepare a second written recommendation based upon additional evidence and the original record of the earlier hearing. A copy of the second recommendation will be given to the applicant or other party, and the commissioners will resume the adjudication.

(f) The commissioners' decision will be written and contain findings of fact and determinations of the issues presented.

(g) A decision is effective and final 30 days after it is hand delivered or mailed to the applicant or other party unless a reconsideration

is ordered within that time. (Eff. 12/18/74, Reg. 52)

Authority: AS 16.43.100(b) AS 16.43.110(b)
AS 16.43.110(a) AS 16.43.120(a)

20 AAC 05.850. RECONSIDERATION. (a) The commissioners may order a reconsideration of their decision on their own motion or on petition of the applicant or other party. A petition for reconsideration by the applicant or other party shall set forth specifically the grounds upon which the petitioner believes the decision to be erroneous or specify new evidence he believes will have a substantial bearing on the decision.

(b) The power to order a reconsideration expires 30 days after the hand delivery or mailing of a decision to the applicant or other party. If no action is taken on a petition for reconsideration within the time allowed for ordering reconsideration, the petition is considered denied.

(c) The commissioners may reconsider a matter in the original record or order a supplementary hearing in accordance with sec. 845(e) of this chapter. (Eff. 12/18/74, Reg. 52)

20 AAC 05.920. PERMIT FILES. The commission will maintain a file of interim permit and entry permit information. The file will contain information pertaining to but not limited to the following:

(11) issuance of the permit to the named applicant

(12) annual renewal of the permit

(13) any assessment

(14) payment of any assessment

(15) forfeiture of the permit.

(16) application for temporary transfer of the permit

(17) temporary or emergency transfer of the permit to the named person

(18) notice of intent to transfer the permit

(19) revocation of notice of intent to transfer the permit

(110) application for transfer of the permit

(111) withdrawal of application for transfer of the permit

(112) reissuance of the permit to named person (Eff. 12/18/74, Reg. 52)

Authority: AS 16.43.100(b)
AS 16.43.110(a)

20 AAC 05.930 CONFIDENTIAL RECORDS AND INFORMATION. (a) Except as provided in (b) of this section the books, records, papers, files, and writings of the commission are public records and are open to inspection by the public during regular office hours.

(b) The following information is confidential and shall not be open to inspection by the public unless waived by the appropriate party:

(1) communications relating to personnel matters and medical or other personal information which under governing personnel practices of the State of Alaska are not public information;

(2) information and data relating to the commission's budget and legislative proposals prior to the time they are acted upon by the governor and the legislature;

(3) communications between legal counsel and the commission or its staff regarding matters requiring confidential legal advice or assistance;

(4) reports concerning the landings of fish, shellfish, or fishery products, annual statistical reports of buyers and processors required by regulation of the Department of Fish and Game, data obtained from research conducted by the Commercial Fisheries Entry Commission in establishing maximum and optimum numbers, and information derived from those reports and that data, except when presented in a manner that prevents the identification of particular reports, data or persons;

(5) copies of state and federal income tax returns provided by an applicant for an interim use permit or entry permit, other statements relating to personal income by such an applicant, information relating to specific monetary transactions between an applicant or permit holder and the commission, and information derived from such reports and statements, except information presented in a manner that prevents the identification of particular reports or persons;

(6) notices of intent to transfer an entry permit or requests to transfer, along with any documents submitted to the commission in support of or related to a request, presented in such a manner as to allow identification of the individual parties to the transaction, after the completion of a transfer, the recipient for transfer is no longer subject to the confidential restrictions of this section. AS 44.17.030

20 AAC 05.940 DESIGNATION OF SALMON SET GEAR PERMITS BY AREA. A person who holds salmon net gear permits for more than one administrative area or his authorized agent shall designate upon a form provided by the commission the single area in which he desires to salmon net fish in that year as required by 5 AAC 39.115, adopted by the Alaska Board of Fisheries. The area so designated must be an area for which the person

holds a valid salmon net permit. (Eff. 5/21/78, Reg. 66)

Authority: AS 16.43.100
AS 16.43.110(a)
AS 16.43.140(c)

20 AAC 05.942. REDESIGNATION OF SALMON NET GEAR PERMITS BY AREA. (a) A person who holds salmon net permits in more than one administrative area and has designated an area of intended fishing as provided in sec. 940 of this chapter may, before the initial annual opening of the salmon net fishery designated, redesignate the area in which he intends to fish.

(b) Redesignation, as provided in (a) of this section, may occur only once each calendar year, unless this limitation is waived by the Department of Fish and Game for good cause.

(c) A person desiring to redesignate the area of intended salmon net fishing as provided in (a) of this section shall submit to the commission

(1) any salmon net permit cards issued by the commission for that year;

(2) a writing indicating the area of intended redesignation which is dated and signed by the permit holder or his authorized agent as provided in sec. 960 of this chapter; and

(3) the appropriate permit renewal fees for the permit corresponding to the redesignated area, if not previously renewed for that year.

(d) Redesignation under this section supersedes the original designation as if the original designation had never been made. (Eff. 5/21/78, Reg. 66)

Authority: AS 16.43.100
AS 16.43.110(a)
AS 16.43.140(c)

20 AAC 05.944. ISSUANCE OF PERMIT CARDS FOR DESIGNATED SALMON NET AREA. (a) A person who holds salmon net permits in more than one administrative area may annually renew all permits so held.

(b) A person who holds salmon net permits in more than one administrative area and who has designated the area of intended salmon net fishing as provided in secs. 940 or 942 of this chapter will be issued a permit card only for the salmon net area so designated. (Eff. 5/21/78, Reg. 66)

Authority: AS 16.43.100
AS 16.43.110(a)
AS 16.43.140(c)

20 AAC 05.950. AREA REGISTRATION OF SALMON NET FISHING VESSEL. (a) A person who owns a commercial fishing vessel to be used to take salmon with net gear, or his authorized agent, shall complete the area registration required by 5 AAC 39.120 by designating upon the vessel license application or renewal form in the space provided by the commission, the vessel's single area of intended salmon net operation for that year.

(b) As used in this section, the term "area" means any one of those areas defined in 5 AAC 39.120(d) except that

(1) in registration area T, vessel registration is also required for a fishing district as specified in 5 AAC 06.350;

(2) in registration areas M, Y, and Z, vessel registration is also required for a fishing subdistrict as specified in 5 AAC 03.370. (Eff. 1/1/78, Reg. 64)

Authority: AS 16.05.480(5) AS 16.43.100
AS 16.05.540 AS 16.43.110(a)

20 AAC 05.952. AREA REREGISTRATION OF SALMON NET FISHING VESSEL. (a) If a person who owns a salmon net fishing vessel or his authorized agent desires to reregister the vessel for a different salmon net registration area as provided in 5 AAC 39.120, he will be issued a new vessel license area tab for the area of reregistration upon receipt by the commission of

(1) a written certification or personal affidavit stating that the vessel has not been used for salmon net fishing in the original area of registration; and

(2) a properly completed reregistration form supplied by the commission

(3) any license area tabs for that vessel previously issued by the commission for that year or

(2) an authorization from the commissioner of the Department of Fish and Game, or his authorized agent stating that a vessel has been lost through sinking, destruction, or extensive mechanical breakdown, or that the vessel operator has suffered serious injury, sickness, or death during open season and

(A) a properly completed reregistration form supplied by the commission

(B) any license area tabs for that vessel issued by the commission for that year

(b) Reregistration under (a)(1) of this section may occur only once each calendar year unless this limitation is waived by the commission for good cause. (Eff. 1/1/78, Reg. 64)

Authority: AS 16.05.450(b) AS 16.43.100
AS 16.05.530 AS 16.43.110(a)

20 AAC 05.954 ISSUANCE OF VESSEL LICENSE AREA TAB. (a) A fishing vessel which has been registered in an area of intended salmon net operation as provided in sec. 950 or 952 of this chapter will be issued a vessel license area tab by the commission for the single area selected for that year.

(b) The vessel license area tab is part of the vessel license and must be affixed to the vessel license at all times of vessel operation.

(c) No vessel owner or operator may possess for each vessel, and no vessel may display, more than one vessel license area tab. (Eff. 1/1/78, Reg. 64)

Authority: AS 16.05.450(b)
AS 16.05.530
AS 16.43.110(a)

20 AAC 05.958 VESSEL LICENSE. (a) A commercial fishing vessel license issued by the commission will include

(1) a number plate

(2) a tab designating the year to be fished, and

(3) in the case of a salmon net fishing vessel, an area tab designating the registration area valid for the area to be fished.

(b) The number plate, year tab, and area tab must be permanently affixed to the vessel for display unless waived by the commission for good cause. (Eff. 1/1/78, Reg. 64)

Authority: AS 16.05.450(b) AS 16.43.100(a)
AS 16.05.520 AS 16.43.110(a)

20 AAC 05.960 POWER OF AUTHORIZED AGENT. (a) By submitting to the commission all properly completed forms required, together with the appropriate fees, an authorized agent may renew an entry permit, renew an interim-use permit, make initial application for an interim-use permit and apply for or renew a vessel license on behalf of his principal.

(b) Unless waived by the commission for good cause, the power of the authorized agent must appear in a dated writing signed by the principal.

(c) Writings sufficient to confer representative power upon the agent include, but are not limited to

(1) power of attorney

(2) letters testamentary

(3) letters of guardianship,

(4) personal affidavit in a summary administrative proceeding, or

(5) marriage certificate.

(d) Unless the written authorization specifically states the contrary or is declared irrevocable by a court of competent jurisdiction, all authorizations are revocable in the same manner and form with which they were created.

(e) The commission will, after a hearing as provided in secs. 800 - 850 of this chapter, refuse to accept an agent's actions on behalf of his principal if the commission finds that the agent consistently, intentionally, or through gross negligence has either supplied false information to the commission or omitted necessary or required information, forms, or fees. Upon such a commission finding, the agent may not thereafter represent any principal before the commission for the period of time the commission specifies.

(f) Nothing in this section affects the ownership of a permit nor confers upon the agent the power to transfer a permit on behalf of the principal.

(g) For the purpose of this section, "principal" means a permit holder, interim-use permit applicant, or vessel owner, represented by the agent. (Eff. 1/1/78, Reg. 64)

Authority: AS 16.05.530
AS 16.43.100
AS 16.43.110(a)

20 AAC 05.980. ASSISTANCE BY DESIGNATED AGENT. (a) Annual applications or renewals under secs. 410 and 560 of this chapter will be accepted by the commission from agents designated by the commissioner of revenue who assist in the completion of annual application or renewal forms. An agent so appointed by the commissioner of revenue may retain 15 percent of the permit fee collected for assisting in the completion of an application or renewal form.

(b) As used in this section, "assist in completion of" means to aid in supplying information which is substantial, material, and necessary for the completion of the application or renewal form, but does not include

(1) assistance in dating or signing the form; or

(2) performance of acts which would normally occur after completion of the application or renewal form, including, but not limited to

(A) addressing envelopes to the commission;

(B) stamping envelopes;

(C) inserting completed forms in envelopes for mailing;

(D) delivering the envelope and form to a United States Post Office station for mailing;

(E) duplication of information supplied by the commission to the applicant or permit holder; or

(F) designation of the salmon net area to be fished under sec. 940 or 942 of this chapter.

(c) On a daily basis as assistance is rendered, designated agents shall forward to the commission completed permit forms together with all fees, less 15 percent if appropriate, and a completed accounting form supplied by the commission. (Eff. 1/1/78, Reg. 64; am 5/21/78, Reg. 66)

Authority: AS 16.05.460 AS 16.43.110(a)
AS 16.05.470(b) AS 16.43.220(a)
AS 16.43.100

20 AAC 05.985. TIME OF PERMIT RENEWAL AND VESSEL LICENSE APPLICATION. (a) Subject to the limitations of secs. 100, 110, 130, and 560 of this chapter, permits may be renewed and vessel licenses applied for at any time after the appropriate forms are made available by the commission. The date of permit renewal or vessel license application is the date upon which the commission receives the renewal or application form substantially completed, along with the appropriate fees.

(b) The commission will issue a permit card or vessel license only upon the filing of a permit renewal or vessel license application form substantially completed together with the appropriate fees, except as waived by the commission for good cause shown. (Eff. 1/1/78, Reg. 64)

Authority: AS 16.05.450(b)
AS 16.43.100
AS 16.43.110(a)

20 AAC 05.990. APPRAISED VALUE. (a) The commission will determine appraised values of entry permits on a quarterly basis to carry out the purposes of AS 16.10.333 – AS 16.10.339. Requests for interim-reevaluation of appraised values will not be considered except from the Department of Commerce and Economic Development.

(b) Appraised values will be based upon the best information available to the commission as compiled from request to transfer forms which are completed by all proposed permit transferees and other sources the commission considers appropriate. Failure of the transferee to com-

plete the request-to-transfer form will result in refusal to issue the entry permit card and the transferee will not be considered as holding a currently valid entry permit card for purposes of this chapter. (Eff. 12/27/79, Reg. 72)

Authority: AS 16.10.339
AS 16.43.170

CHAPTER 10. PROFESSIONAL TEACHING PRACTICES COMMISSION

Sections

10. Coverage
20. Code of ethics and teaching standards
30. Distribution of handbook

20 AAC 10.010. COVERAGE. All members of the teaching profession (as defined in AS 14.20.370) are obligated to abide by the code of ethics and the professional teaching standards adopted by the Professional Teaching Practices Commission. (Eff. 1/30/75, Reg. 53)

Authority: AS 14.20.480

20 AAC 10.020. CODE OF ETHICS AND TEACHING STANDARDS. The code of ethics and professional teaching standards of the Professional Teaching Practices Commission as well as the commission's bylaws, procedures and forms are contained in Alaska State Professional Teaching Practices Commission Handbook for Alaskan Educators (1974 Edition). This handbook is adopted by reference. (Eff. 1/30/75, Reg. 53)

Authority: AS 14.20.450
AS 14.20.460

Editor's note: Additional copies of the handbook adopted in 20 AAC 10.020 and mentioned in 20 AAC 10.010 are available from the Professional Teaching Practices Commission, 1001 West 70th Avenue, Anchorage, Alaska 99502, or from the Department of Education, Pouch F, Alaska Office Building, Juneau, Alaska 99811.

20 AAC 10.030. DISTRIBUTION OF HANDBOOK. Copies of the Alaska State Professional Teaching Practices Commission Handbook for Alaskan Educators shall be conspicuous and available at every educational institution in the state whose employees are members of the teaching profession as defined in AS 14.20.370. (Eff. 1/30/75, Reg. 53)

Authority: AS 14.20.460

Editor's note: Additional copies of the handbook adopted in 20 AAC 10.020 and mentioned in 20 AAC 10.010 are available from the Professional Teaching Practices Commission, 1001 West 70th Avenue, Anchorage, Alaska 99502, or from the Department of Education, Pouch F, Alaska Office Building, Juneau, Alaska 99811.

TESTIMONY BEFORE HOUSE RESOURCES COMMITTEE HB 359

by

Greg Cook, Executive Director
Boards of Fisheries & Game

March 15, 1978

MR. CHAIRMAN, MEMBERS OF THE COMMITTEE

MY NAME IS GREG COOK, EXECUTIVE DIRECTOR FOR THE BOARD OF FISHERIES AND BOARD OF GAME. I WOULD LIKE TO ADDRESS SECTION 8, OF THIS BILL, SINCE IT WILL RESULT IN A MAJOR CHANGE IN THE ADMINISTRATION AND REGULATION OF AQUACULTURE IN ALASKA.

SECTION 8, REPEALS AS 16.10.440 (b). THIS SECTION OF EXISTING LAW GRANTS BROAD REGULATORY AUTHORITY TO THE BOARD OF FISHERIES. THE BOARD OF FISHERIES, ACTING UNDER THIS SECTION OF EXISTING LAW, HAS BEEN ACTIVLLY INVOLVED IN THE AQUACULTURE PROGRAM BY ISSUING PERMITS, SELECTING SITES FOR HATCHERIES, DECIDING ON THE BOUNDARIES OF THE SPECIAL HARVEST AREAS, AND ENSURING THAT THE FINANCIAL REPORTING REQUIREMENTS OF AS 16.10.470 ARE MET. OTHER REGULATORY POWERS ARE ALSO VESTED IN THE BOARD.

THE BOARD OF FISHERIES HAS PLAYED A POSITIVE ROLE IN THESE AREAS IN THE PAST. THE BOARD'S DELIBERATIONS HAVE INCLUDED MUCH PUBLIC TESTIMONY. FOR EXAMPLE, AT THE JANUARY 1979 MEETING IN JUNEAU, 12 MEMBERS OF THE PUBLIC TESTIFIED. IN JUNEAU THE PUBLIC ALSO WAS ABLE TO HEAR PERTINENT DEPARTMENT OF FISH AND GAME STAFF REPORTS, TESTIMONY FROM OTHER STATE AND FEDERAL AGENCY OFFICIALS, AND THE OPINIONS LEADING TO THE FINAL SIONS.

THE PRIVATE NONPROFIT AQUACULTURE PROGRAM IN ALASKA IS NEW. PRIVATE NONPROFIT AQUACULTURE HAS ENGENDERED CONSIDERABLE PUBLIC DEBATE AND PUBLIC PARTICIPATION IN THE DECISION MAKING PROCESS. BROAD INVOLVEMENT

BY THE BOARD OF FISHERIES INSURES THAT THE PUBLIC WILL BE HEARD ON THESE QUESTIONS.

THE BOARD OF FISHERIES HAS PROVIDED A PUBLIC FORUM FOR DISCUSSION OF THE CONCERNS OF THE CITIZENS OF ALASKA. THE BOARD OF FISHERIES IS A RESPONSIBLE GROUP AND WHILE THEY ARE NOT IMMUNE FROM PRESSURE, THEIR STATUS AS PRIVATE CITIZENS AND THE FACT THAT THEIR DELIBERATIONS ARE PUBLIC, MAKES THEM LESS SUSCEPTIBLE TO SPECIAL INTERESTS THAN DEPARTMENT PERSONNEL

THE BOARD OF FISHERIES' INVOLVEMENT IN THE PERMITTING PROCESS HAS ALSO BEEN BENEFICIAL. BY DECIDING TO APPROVE OR DISAPPROVE OF PERMITS FOR PRIVATE HATCHERIES, THE BOARD IS, IN EFFECT, MAKING AN ALLOCATION DECISION. THE FOLLOWING EXAMPLE MAY PERHAPS CLARIFY HOW THIS OCCURS:

IMAGINE A PRIVATE HATCHERY IS PROPOSED TO BE BUILT ON RIVER "A." THEY WISH TO RAISE HUMPIES AND HARVEST THEM WITH GILL NETS. NEREBY THERE IS A SIGNIFICANT SPORT FISHERY FOR COHO. IF THE PRIVATE HATCHERY IS BUILT, AND A NET FISHERY IS BEGUN, THERE WILL BE AN INCIDENTAL CATCH OF COHO SALMON THAT WILL REDUCE THE SPORT FISHERY. SHOULD THIS PRIVATE HATCHERY BE BUILT? ALLOCATION DECISIONS OF THIS TYPE HAVE TRADITIONALLY BEEN MADE BY THE BOARD OF FISHERIES, SINCE THE BOARD MEETS IN PUBLIC AND RECEIVES TESTIMONY FROM ALL INTERESTED PERSONS.

THE EFFECT OF HB 359 AS IT CURRENTLY STANDS IS TO REMOVE THESE DE FACTO ALLOCATION DECISIONS FROM THE BOARD OF FISHERIES. IT WOULD REDUCE THE AMOUNT OF PUBLIC INVOLVEMENT IN THE AQUACULTURE PROGRAM--A PROGRAM WHICH IS INTENDED TO CONTRIBUTE TO THE COMMON PROPERTY FISHERY WITHOUT ADVERSELY AFFECTING NATURALLY OCCURRING STOCKS.

IT IS, OF COURSE, THE PREROGATIVE OF THE LEGISLATURE TO DETERMINE THE LEVEL OF PUBLIC INVOLVEMENT IN THE PRIVATE NONPROFIT BUSINESS OF AQUACULTURE. MY TESTIMONY BEFORE THIS COMMITTEE IS INTENDED SIMPLY TO REMIND YOU OF SOME OF THE BENEFITS TO THE PUBLIC--AND COINCIDENTALLY, TO THE DEPARTMENT OF FISH AND GAME AS WELL--WHICH HAVE RESULTED FROM THE INVOLVEMENT OF THE BOARD OF FISHERIES BY VIRTUE OF THE BROAD REGULATORY AUTHORITY OF AS 16.10.440 (b).

Cordova District Fisheries Union

Headquarters: Box 939, Cordova, Alaska

April 9, 1979

HB 359

Representative Terry Gardiner
Speaker of the House
Pouch V
Juneau, Alaska 99811

Dear Terry:

By the time this letter reaches you, certain decisions will have been made which might or might not make my comments inappropriate or unnecessary. However, because I do have to be on the fishing grounds rather than in Juneau expressing my views, I do hope that my negative reactions to what I understand are possible proposed amendments to HB 359 will be considered. This is not just for the immediate future, but for over the long haul unless we find that reasonable compromises regarding the Board of Fisheries role in the hatchery permitting, brood stock and harvest allocation system are in fact impossible.

I personally feel, with no disrespect intended, that portions of HB 359 which are aimed at stripping all authority from the Alask Board of Fisheries during the process of developing the PNP hatchery system not only verges on, but is, premature paranoia.

After sitting through last December's Board session on the PNP discussion, etc., I can appreciate much of the Regional Corporations' concerns and fears of what roles the Board might play and how they could create significant problems for PNP development. However, even though I don't live and breathe PNP, I am reasonably aware of these concerns and have spent an appreciable amount of time addressing these problem areas with various Board members on my own.

I also attended the portion of this past Board meeting which addressed these issues of concern and during which the Board actually reviewed a permit application and addressed the brood stock problem. Personal at present, I am very much satisfied with the role the Board is playing as expressed by their decision, attitudes, and associated actions on the evening of April 6.

It would be in the best interest of all concerned to review the last tapes of the Board meeting to see if your fears are justified. I sincerely feel they are not.

I think I have a pretty good feel for the PNP concerns since I am a member of the PWS Regional Planning Team and on PWSAC's board. I can also relate to the average fisherman off the street's attitude, which unfortunately is often falsely based due to being uninformed, primarily caused by the nature of the beast.

I sincerely feel that the Board has a role to play in the process, especially in the conflict areas. The Board is still sorting out just what particular areas these entail, but they have come a long way since December. To legislate their role now is definitely premature and unnecessary.

For the most part, it is my opinion that the really controversial issues must be settled by the Board. Let them take the heat, because the Regional PNP associations cannot stand the losses that will be sustained if they are the conflict decision makers.

Sincerely,

Bob Blake

March 12, 1979

Alvin Osterback, Co-chairman
Committee on Natural Resources
Alaska State House of Representatives
Pouch V
Juneau, Alaska 99811

re: HB 360

Dear Representative Osterback:

As I mentioned in my letter of February 1,1979, a significant number of rural Alaskans failed to obtain limited entry permits to which they were entitled solely because their applications were not timely filed. In an area in which the availability of alternative occupations is minimal, this situation is intolerable economically as well as equitably.

House Bill 360, referred to Natural Resources and Judiciary last week, solves this problem. There is no expense involved, although the Entry Commission will necessarily have to process additional applications. The number of new permits issued will be extremely small in most fisheries, as it was the rare person who had enough points yet still failed to apply. The problem is that these rare persons didn't understand what was happening and are now permanently excluded from the only jobs realistically available to them. I hope you are able to support HB 360 and move it quickly to the House floor.

Please feel free to call or otherwise contact me on this. I am well acquainted with the Commission's position on this subject and would be happy to discuss any problems you may see in the bill.

Thank you for your consideration of this.

Sincerely,

FJT

Frederick Torrisi

96TH CONGRESS
1ST SESSION

S. 1957

To amend the Federal Boat Safety Act of 1971 to improve recreational boating safety and facilities through the development, administration, and financing of a national recreational boating safety and facilities improvement program, and for other purposes.

IN THE SENATE OF THE UNITED STATES

OCTOBER 30 (legislative day, OCTOBER 15), 1979

Mr. EAGLETON introduced the following bill; which was read twice and referred to the Committee on Commerce, Science, and Transportation

---

A BILL

To amend the Federal Boat Safety Act of 1971 to improve recreational boating safety and facilities through the development, administration, and financing of a national recreational boating safety and facilities improvement program, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Recreational Boating Safety and Facilities Improvement Act of 1979".

RECEIVED

Office of

approved State vessel numbering system is necessary for full eligibility for Federal funds allocated and distributed under this section;

"(2) a cooperative boating safety assistance program with the Coast Guard in that State;

"(3) sufficient patrol and other activity to insure adequate enforcement of applicable State boating safety laws and regulations;

"(4) an adequate State boating safety education program;

"(5) the designation of a State lead authority or agency, which would implement or coordinate the implementation of the State recreational boating safety and facilities improvement program supported by Federal financial assistance in that State, including the requirement that the designated State authority or agency submit required reports in the form prescribed by the Secretary; and

"(6) a facilities improvement program describing boating facility projects, including but not limited to: acquisition of title, or any interest in riparian or submerged land; and capital improvement of riparian or submerged land for the purpose of increasing public access to the waters of the United States, and such an-

cillary facilities as are necessary to insure the safe use of those facilities."

(c) Allocation and distribution of funds under this section is subject to the following conditions:

"(1) Of the total funds available for allocation and distribution, one-third shall be allocated each year for recreational boating safety programs and two-thirds shall be allocated for recreational boating facilities improvement programs.

"(2) Of the funds available for allocation and distribution for recreational boating safety programs, one-third shall be allocated equally among eligible States. One-third shall be allocated so that the amount each year to each eligible State will be in the same ratio as the number of vessels numbered in that State, under a numbering system approved under this Act, bears to the number of vessels numbered in all eligible States. The remaining one-third shall be allocated so that the amount each year to each eligible State shall be in the same ratio as the State funds expended or obligated for the State boating safety program during the previous fiscal year by a State bears to the total State funds expended or obligated for that fiscal year by all eligible States.

"(3) Of the funds available for allocation and distribution for recreational boating facilities improvement programs, one-third shall be allocated each year, equally among eligible States. The remaining two-thirds shall be allocated so that the amount each year to each eligible State will be in the same ratio as the number of vessels numbered in that State bears to the number of vessels numbered in all eligible States.

"(4) The amount received by any State under this section in any fiscal year may not exceed one-half of the total cost incurred by that State in the development, administration, and financing of that State's recreational boating safety and facilities improvement program in that fiscal year.

"(5) No allocation or distribution of funds under this section may be made to any State for the maintenance of boating facilities under an approved State recreational boating safety and facilities improvement program.

"(6) The Secretary is authorized to expend from the funds available for allocation or distribution in any fiscal year those sums, not to exceed two percent of the funds available, as are necessary for the administration of this Act.".

(5) Section 27 is amended to read as follows:

"ESTABLISHMENT OF NATIONAL RECREATIONAL BOATING SAFETY AND FACILITIES IMPROVEMENT FUND

"SEC. 27. There is in the Treasury of the United States a fund known as the National Recreational Boating Safety and Facilities Improvement Fund, consisting of such amounts as may be credited to it as provided in this section. There shall be covered into the fund the amounts specified in section 209(f)(5) of the Highway Revenue Act of 1956 (70 Stat. 397), as amended. Amounts in the fund shall be available, as provided in appropriation Acts, for making expenditures after September 30, 1980, and before October 1, 1984, for the purposes of section 26 of this Act.".

(6) In section 28 by striking subsections (a) and (d) and redesignating subsections (b) and (c) as (a) and (b), respectively.

(7) In section 29 by adding, following the words "boating safety", the words "and facilities improvement" and following the words "costs of" the first time they appear, the word "land,".

(8) Section 30 is amended to read as follows:

"AUTHORIZATION OF APPROPRIATIONS FOR STATE RECREATIONAL BOATING SAFETY AND FACILITIES IMPROVEMENT PROGRAMS

"SEC. 30. For the purpose of providing financial assistance for State recreational boating safety and facilities im-

provement programs, there is authorized to be appropriated $30,000,000 for each of the fiscal years beginning with fiscal year 1981 through fiscal year 1984, those appropriations to remain available until expended.".

(9) Section 31 is amended—

(a) in subsection (a) to read as follows:

"(a) Amounts allocated and distributed under section 26 of this Act shall be computed and paid to the States as follows: The Secretary shall determine, during the last quarter of a fiscal year, on the basis of computations made pursuant to section 29 of this Act and submitted by the States, the percentage of the funds available for the next fiscal year to which each eligible State shall be entitled. Notice of the percentage and of the dollar amount, if it can be determined, for each State shall be furnished to the States at the earliest practicable time. If the Secretary finds that an amount made available to a State for a prior year is greater or less than the amount which should have been made available to that State for the prior year, because of later or more accurate State expenditure information, the amount for the current fiscal year may be increased or decreased by the appropriate amount.";

and

(b) in subsection (c) by adding, following the word "safety" wherever it appears, the words "and facilities improvement".

(10) Section 32 is amended—

(a) by striking in subsection (a) the words "boating and boating safety" and inserting in lieu thereof the words "boating safety and facilities improvement."; and

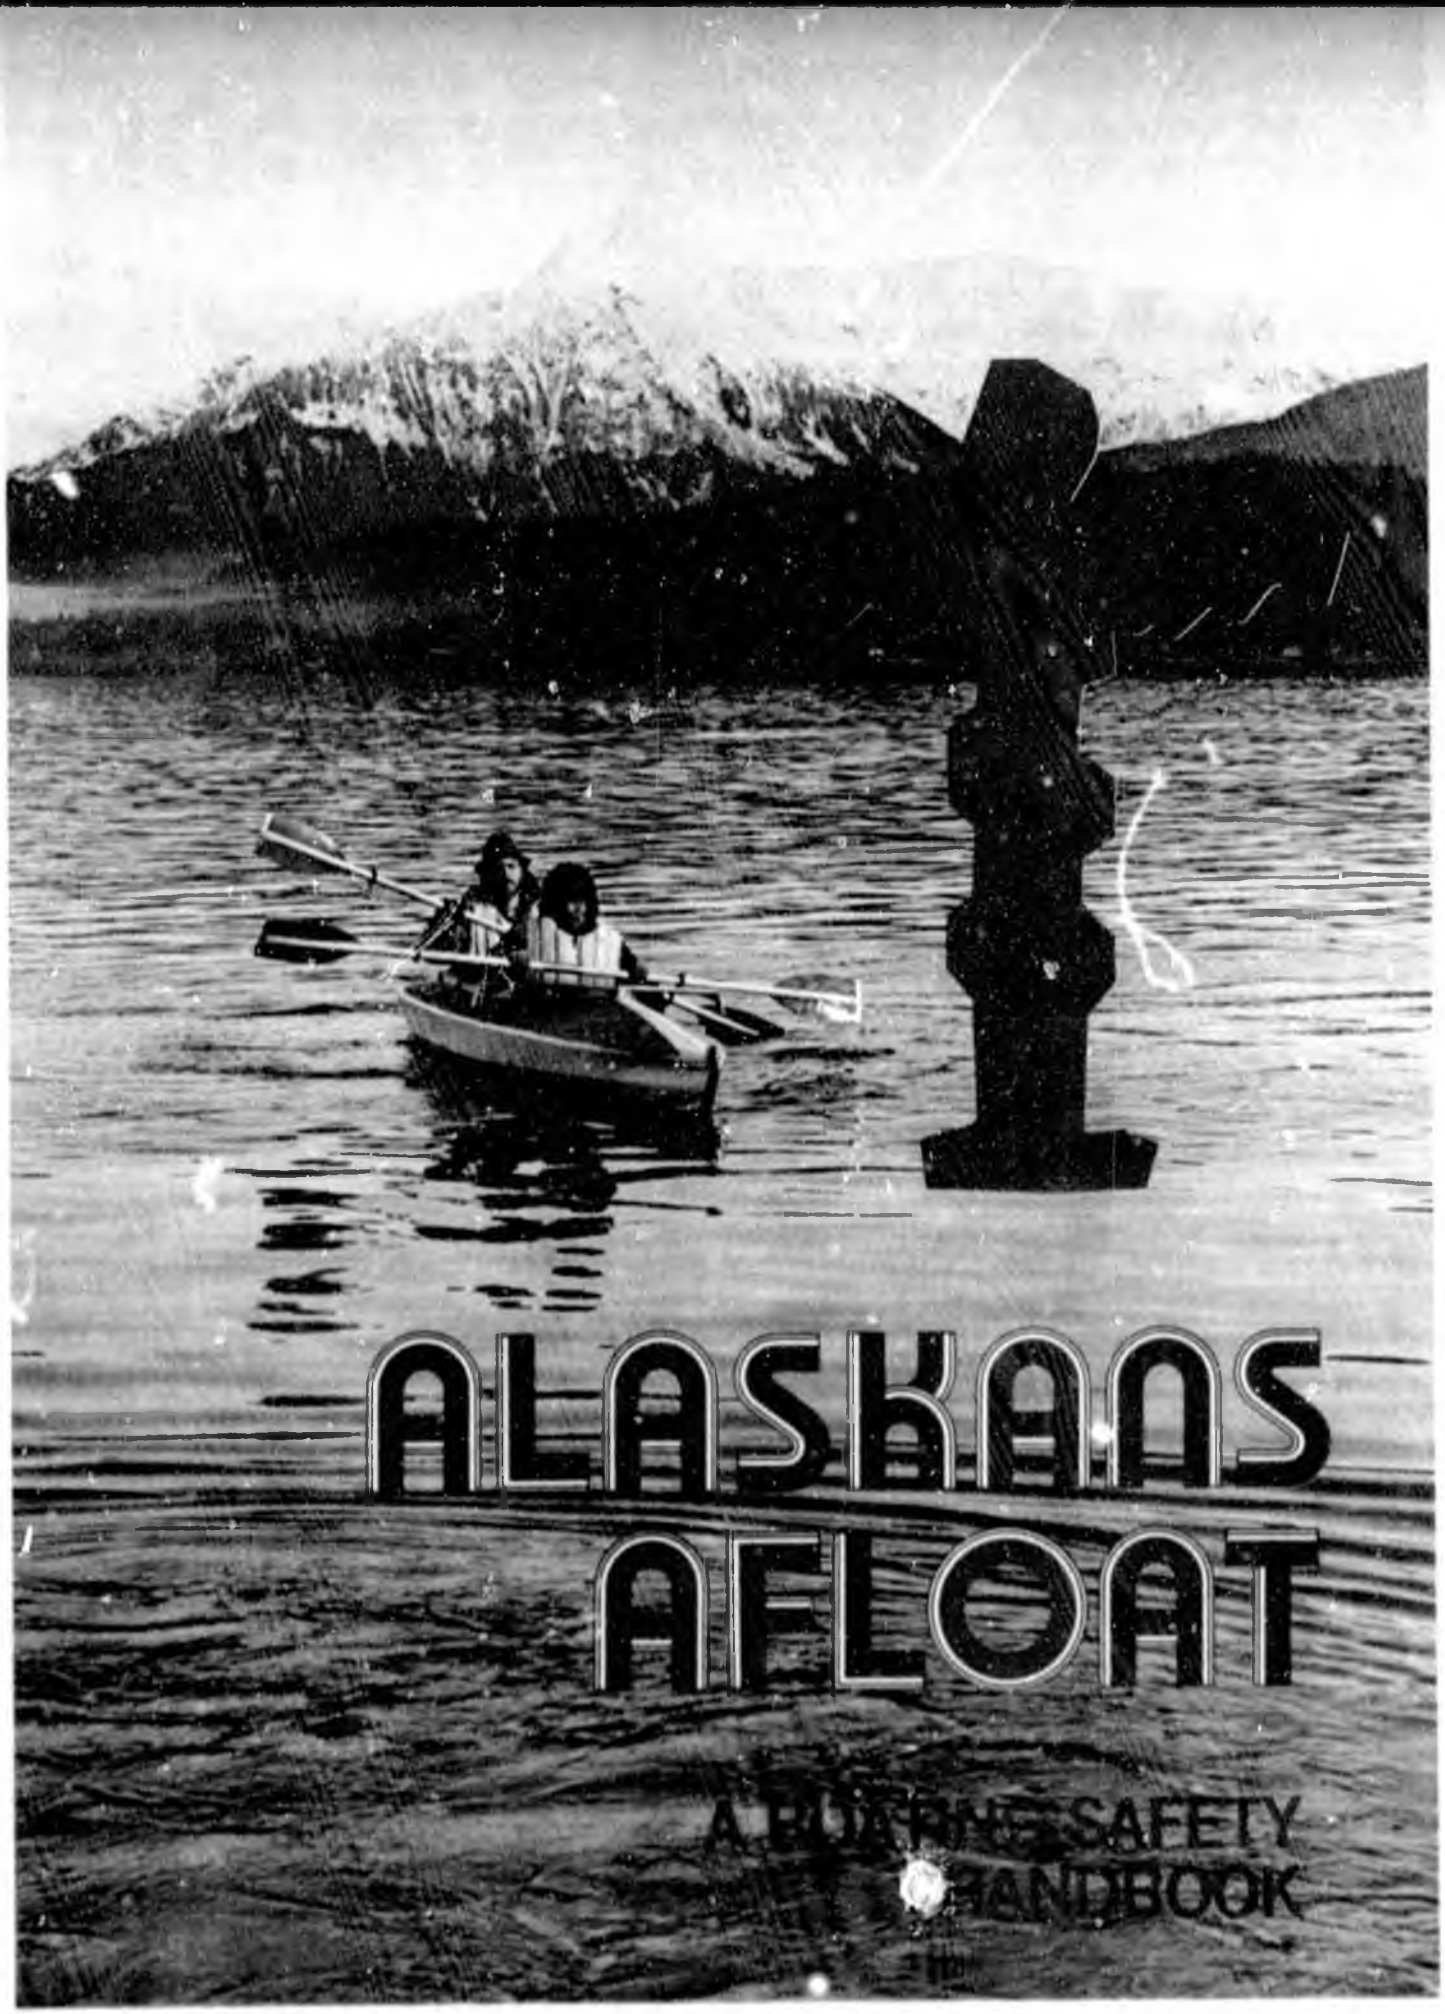
(b) by adding in the first sentence of subsection (b) following the word "safety" the words "and facilities improvement".

SEC. 3. Section 209(f)(5) of the Highway Revenue Act of 1956 (70 Stat. 397), as amended, is amended to read as follows:

"(5) TRANSFERS FROM THE TRUST FUND FOR SPECIAL MOTOR FUELS AND GASOLINE USED IN MOTORBOATS.—The Secretary of the Treasury shall pay from time to time from the trust fund into the recreational boating safety and facilities improvement fund provided for in section 27 of the Federal Boat Safety Act of 1971 (85 Stat. 213), as amended, amounts as are determined by him equivalent to the taxes received, on or after September 30, 1980, under section 4041(b) of the Internal Revenue Code of 1954, as amended, with respect to special motor fuels used as

fuel for the propulsion of motorboats and under section 4081 of that Code with respect to gasoline used as fuel in motorboats. No amounts may be transferred under this section if the transfer would result in increasing the amount in the recreational boating safety and facilities improvement fund to a sum in excess of $30,000,000. The Secretary shall transfer any remaining amounts received into the trust fund from the above sources and not transferred in accordance with the foregoing provision, as determined by him in consultation with the Secretary of Commerce, into the land and water conservation fund provided for in title I of the Land and Water Conservation Fund Act of 1965.".

○



ALASKANS
AFLOAT
A BOATING SAFETY
HANDBOOK

WELCOME ABOARD!

Welcome aboard! The course of study you are about to embark upon is the first of its kind to be used in Alaskan schools. Boating means many things to different people—skiing, fishing, sailing, camping and just plain cruising. Boating is now the nation's most popular form of family recreation.

Almost 200,000 boaters enjoy our State waters annually. Unfortunately, some of those who were out to have a good time never made it back. Many boaters are killed or seriously injured each year. In fact, the accident rate in Alaska is the highest in the nation.

We think that you will find this course to be informative, as well as enjoyable. If you put forth the effort to understand the few basic regulations and practices that affect boating in Alaska, you too can enjoy our waterways without becoming an accident statistic.

So, when you take to the water please keep in mind what you learn from this course, and occasionally refreshen yourself, so that you will truly become a Better Alaskan Boater!

Sincerely,

George P. Asche

BOATING SAFETY

Boating as an occupation and family sport is growing with each passing day. Our modern industrial technology has given us more leisure time than ever before in our history and, as the population continues to grow, demands for food also mount, thus increasing the need for fishermen.

The purpose of this course is to introduce to all owners and operators of water craft safety requirements and safe practices in the operation and navigation of their boats. The secret of boating safety is keeping out of trouble rather than getting out of trouble after you get into it.

Unfortunately, it is a fact that some of our boaters do manage to get into trouble afloat and, in some cases, end up as "statistics" in the local press.

In 1977, for example, nationally there were 6,815 reported boating accidents involving 8,554 vessels. These accidents resulted in 1,054 fatalities, 1,332 personal injuries and over 11.5 million dollars in property damage. These numbers aren't quite as impressive in Alaska but when you consider that we have 1.7% of the national fatalities with only 0.3% of the registered boats in the nation, you can see we have more than our share. A lot of lives, injuries and money! Can this be prevented? The answer is an emphatic yes! Most boating accidents are the result of a lack of basic knowledge on the part of the boater. Common causes of boating accidents are:

1. Engine too powerful or too heavy
2. High speed turns
3. Overloading
4. Riding on the bow or gunwales
5. Damage from wakes
6. Lack of Personal Flotation Devices
7. Explosion and fire resulting from fuel leaks or spills.
8. Drinking and improper use of drugs

Capsizing

The record shows that year after year more lives are lost as the result of vessels capsizing than any other type of casualty. In most cases it's the operator who is to blame. Improper loading and overloading are the principal reasons for capsizing and ignoring weather warnings ranks next.

When loading your boat, weight should be evenly distributed from *bow* (front) to *stern* (back) and *athwartships* (from side to side). The more weight you put into a boat, the deeper it sinks into the water, thus reducing the amount of *freeboard*. The more you reduce the freeboard, the greater the tendency to swamp or capsize. If a boat is over-loaded or improperly loaded it will usually be difficult to steer. Many boats today have a capacity plate, generally on the instrument panel where it can be easily seen, which indicates its weight-carrying capacity.

Water Conditions

The first factor to consider is the anticipated sea-state or water conditions. It is logical to deduce that if rough water is expected, less weight should be carried. At selected locations in and near boating areas, storm warnings may be displayed by flag hoists or lights. Display points may be Coast Guard stations, marinas, lighthouses or municipal piers.

Activities

The second factor to consider would be the activity in which you expect to engage while under way. Standing up in a small boat is not especially dangerous if it is done carefully in calm water conditions and if the boat is not too heavily laden. By standing up you will change the center of gravity of the boat and if the hull is being buffeted about appreciably, it could cause the boat to capsize or for you to fall overboard. Other factors would be the weight of the equipment, fuel, tools, food and other gear which will be carried.

(Photo courtesy SEATTLE TIMES)

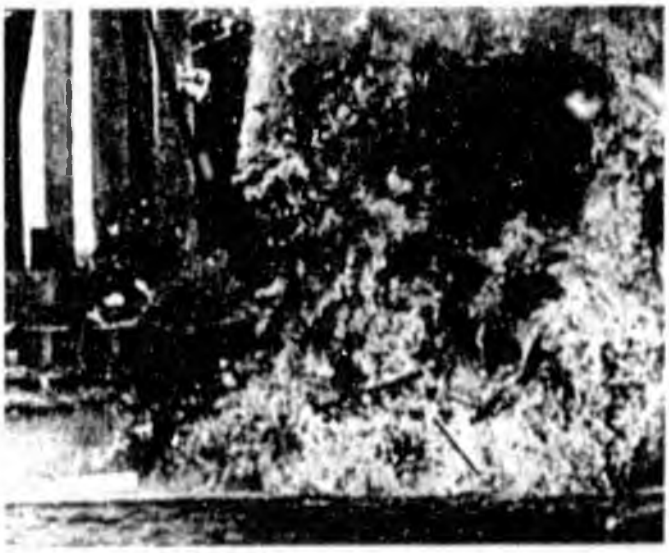
Improper Loading — Result Swamping

Falls Overboard

Falls overboard and vessel sinkings are the second and third major types of casualties resulting in boating fatalities. As a boat operator, you must recognize these dangers and learn how to avoid them. As stated previously, improper loading and overloading are the principal causes of falls overboard and vessel capsizings.

Collisions

The most common type of accident while cruising is collision with another vessel. Failure to maintain an efficient forward lookout, or careless and negligent operation on the part of the operator, are the major causes of most collisions. The second most common type is collision with a fixed object. There is little excuse for this type of accident but in 1977, 3,619 vessels collided with other vessels and 1,063 vessels collided with fixed objects.



Fires and Explosions

Fires and explosions resulted in the most property damage in 1977. A number of things can cause a fire aboard your boat. Among these are careless smoking, spontaneous combustion caused by oil or gasoline soaked rags or paper left aboard (instead of being disposed of on shore), an electrical short, a flame-up of the galley stove or ignition of spilled or leaking gasoline.

Personal Flotation Devices

All federal laws require at least one Coast Guard approved *personal flotation device* aboard and readily available for every person on board the boat. In 1977, over 1,000 persons drowned in boating accidents. Of these, almost half were known to have had personal flotation devices available. Eighty percent of the victims did not use the available devices or used them improperly. Of those who drowned, 20 percent were known not to have had personal flotation devices available and in the case of 30 percent of the victims, it is not known whether or not a person flotation device was available. Most boaters comply with the law which requires them to have an adequate number of Coast Guard approved personal flotation devices aboard. However, in all too many cases these devices were stowed in places where they could not be grabbed quickly when needed. In numerous other instances, nobody knew how to use them. Personal flotation devices are effective only when available and properly used. These devices should be treated as though your life may well depend on them.

Hunting and Fishing

Hunters and fishermen often use their boats as a form of conveyance rather than for boating

enjoyment. Many of them are not aware of the potential dangers of boating and, as a result, it is estimated that in the last few years hunters and fishermen have been involved in approximately 30 percent of all boating accidents. Hunters and fishermen often become so engrossed in their sport that they forget all about the weather. If they happen to notice the weather, they may think they can beat the weather and make it back safely to shore. Hunters and fishermen are well advised to wait in sheltered waters until sea conditions improve before attempting to return home. It could save their lives!

Fishermen may get fishing lines tangled around the propeller, rudder, outboard engine or anchor line. In attempting to disengage these lines they often lean too far over the side, with the result that falls overboard are commonplace.

A hunter should be careful about standing up in a small boat to shoot. The recoil could knock him overboard. Most high-powered rifles and shotguns recoil considerably and should be fired from a sitting position in a small boat. By using common sense most tragedies might be averted.

Water Skiing

Water skiing is increasing in popularity in all parts of the country. Water skiing is a sport. It takes skill, not showing off, to become a good skier. Horseplay brings with it danger to the boat, the skier and anyone in the area. Showing off is the chief cause of accidents in what could be the safest water sport. It can be very safe if the skier wears a Coast Guard approved personal flotation device and the boat operator knows what he is doing.

Skin Diving

An important flag is commonly seen on our waters. It has a red-orange background with a white diagonal stripe from corner to corner. This is the diver's flag. When you see it flying from a boat, or from a float, do not approach too closely or attempt to pass between the flag and the nearby shore. This flag indicates that there are divers down in the area and it requests you to keep clear.

Swimming

Some boaters use their boats as swimming and diving platforms. It is usually best to anchor the boat before the swimming party begins. If yours is a shallow draft boat (one which can float in very shallow water), the wind could cause the boat to drift away at a good rate of speed. One person should remain aboard to act as a life guard and to see that the anchor does not drag. Before anyone dives in, the best swimmer aboard should enter the water cautiously to determine the depth as well as inspect the bottom for underwater obstructions.

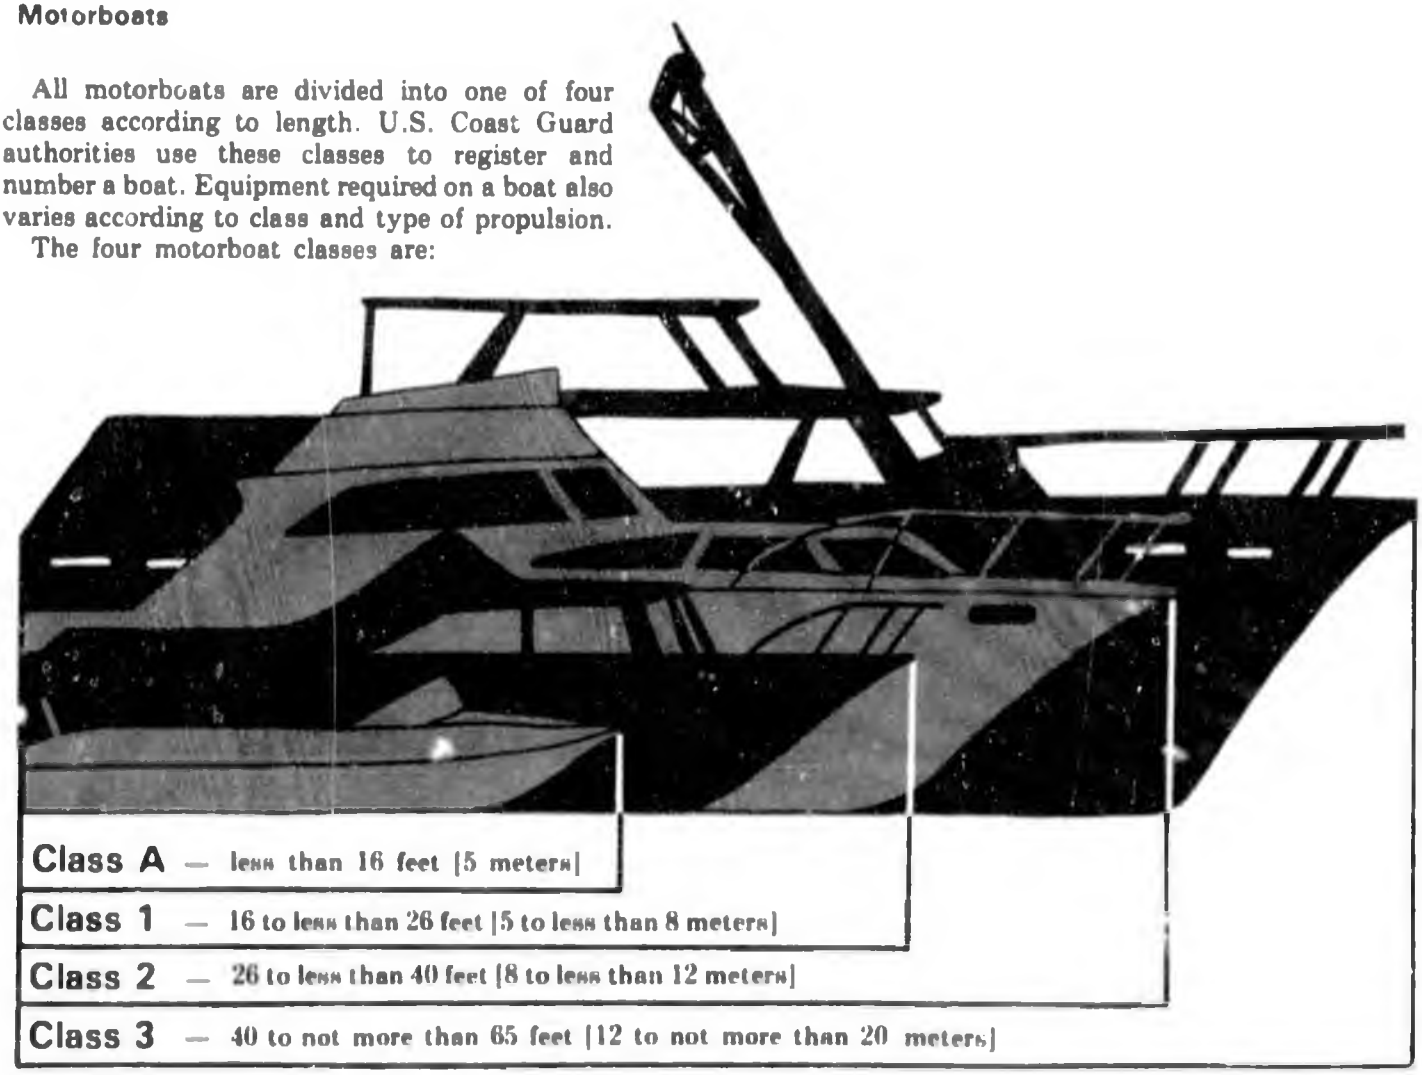
Part I

CLASSIFICATION

Motorboats

All motorboats are divided into one of four classes according to length. U.S. Coast Guard authorities use these classes to register and number a boat. Equipment required on a boat also varies according to class and type of propulsion.

The four motorboat classes are:



Class A — less than 16 feet [5 meters]

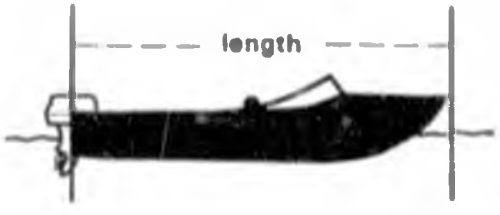
Class 1 — 16 to less than 26 feet [5 to less than 8 meters]

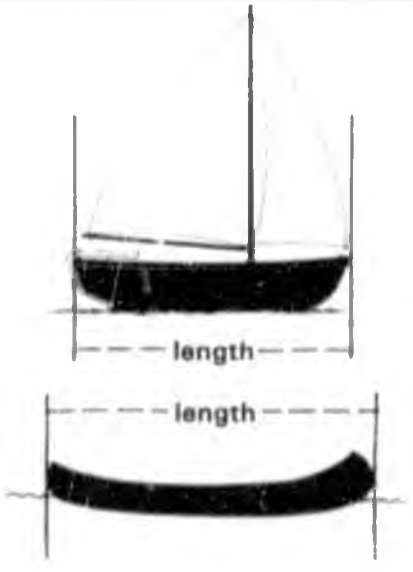
Class 2 — 26 to less than 40 feet [8 to less than 12 meters]

Class 3 — 40 to not more than 65 feet [12 to not more than 20 meters]

How To Measure Length

A boat's length is measured from end to end, parallel to the centerline. Measurement is from outside planking or plating. Outboard motor brackets, fittings or attachments are not included. Some examples of length measurements are:





WATERCRAFT

Within each class are many types of boats. A safe boater must consider the craft's size, shape, proportions, seaworthiness, use and capacity. Many boats have motors. Others are used in sports where power is not needed.

There are many personal decisions to make about brand, cost and materials. Wood, steel, aluminum, fiberglass and ferro-cement are all used in boat building. All have good qualities. Choose the right one to fit your boating needs.

Runabouts

The majority of recreational motorboats are under 26 feet (Classes A and 1) and may be powered by an inboard, outboard or inboard/outdrive motor. The runabout is ideal for water skiing, fishing and cruising.

Canoes

Canoes, usually "people-powered," can be equipped with a small, low horsepower motor on a side mount. Canoes are most often double-ended, pointed at both bow (front) and stern (back). Some have outriggers or motor mounting brackets. Canoes with square sterns that form a motor transom are usually classified as boats with numbers. Canoes are generally round-bottomed. They can be very unstable if not used properly.

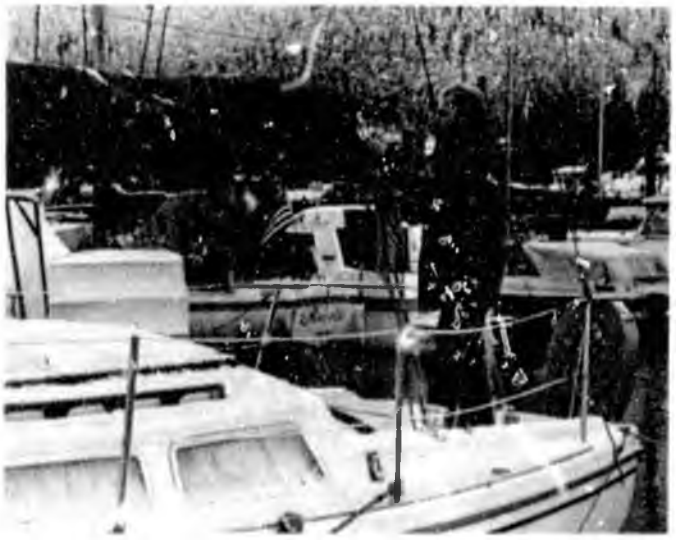
Kayaks

Kayaks are also people-powered. Most modern kayaks are constructed of canvas, fiberglass or wood. They are light and strong, gliding easily through the water. Kayaks have closed decks with cockpit areas for one or two people.

Inflatables

Inflatables are made from neoprene coated fabric to protect from heat and saltwater. Inflatables are easy to move from place to place. They can be pumped up quickly with a foot pump. Inflatables are very buoyant and quite stable. They should have several air chambers (or compartments) so that the boat will still float even if one of the chambers is punctured by accident. Be careful not to drag inflatable boats or scrape them on rocks or rough surfaces. Inflatables may be constructed for use with or without power.

WATERCRAFT



Sailboats

Recreational sailing falls into three main classifications: day sailing, cruising and racing. Boat hulls are designed to meet the specific requirements of each category. Many types, sizes, and rigs (sail and mast arrangement) are available to the sailor. Some sailboats also have power. All sailboats respond in the same basic ways to the forces of wind and water.

Cruisers

A cruiser is a motorboat with overnight accommodations. These include sleeping berths (bunks), a dinette, a head (lavatory) and a galley (kitchen).

Cruisers generally start at not less than 18 feet in length and run on up to 50 feet or more. The largest are usually referred to as motor yachts. Two basic types of cruisers are the express cruiser, which has the main cabin occupying the front half of the boat and a large after deck and steering station in the rear, and the sedan cruiser that features a very long cabin enclosing almost the entire boat.

Express cruisers are better for fishing and activities where a large open deck is important while a sedan cruiser makes a more practical live-aboard boat. Frequently a manufacturer builds the sedan and express models on the same hull with identical power and performance. Either may be equipped with a command bridge.

Day Cruisers

Day Cruisers are small express type cruisers with the forward cabin area limited to a couple of bow bunks and storage area. Many in the 18 to 24-foot sizes have a head and limited galley area. A large open deck makes this type of boat excellent for fishing and other water sports.

WATERCRAFT

Fishing Boats

Sportfishing boats are generally large express cruisers specifically outfitted for fishing in the ocean or large open waters. Commercial fishing boats are likewise outfitted, however, they are built more rugged and less for speed and more for carrying large amounts of fuel and water for several days underway, as well as having large storage bins for the caught fish.

Motor Sailer

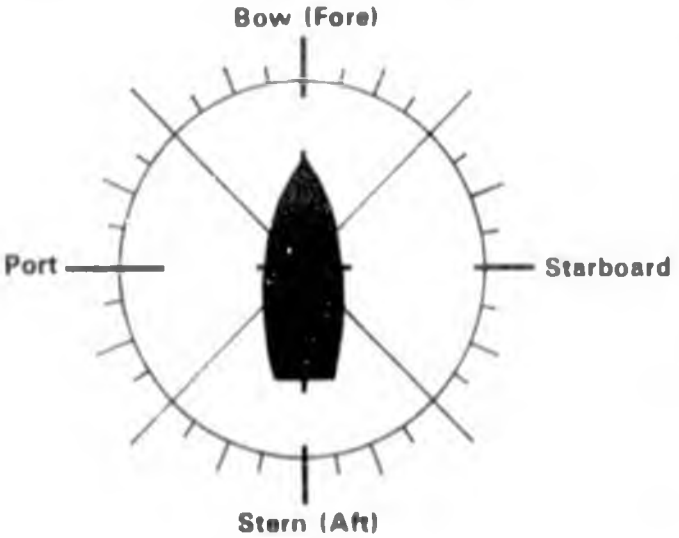
Motor sailers are half motorboat and half sailboat. Sails, smaller than those used on a similar sized sail boat supply the power when there is wind, or are used to steady the boat in heavy seas. Medium inboard power, often diesel, gives good cruise speed without assistance from the wind and sails. The *beam* is generally broad making a deep *keel* unnecessary for stability.

Motor Yacht

Motor yachts are like luxurious homes on large boat hulls. Most major yachts have large fuel and water tanks for long offshore cruises. Each section, such as galley, head, lounge and staterooms can be equipped with all the shoreside conveniences.

Sailor's Terms

Distinguishing between port (left) and starboard (right) is at once the most basic and most confusing for many students. Remember that "port" and "left" match up as four-letter words, while "right" and "starboard" have more letters. Port and starboard colors follow the same rule: port is red (short); starboard is green (longer). Port, left and red are all short words. Starboard, right and green are longer words.



SAILOR'S WORKSHEET 1

1. What is a motorboat? _____

2. Boats are classified according to _____.

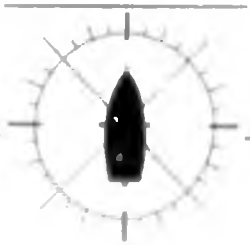
3. Class A boats are less than _____ feet long.

4. Class 3 boats are _____ feet or over.

5. Materials used for making boats include: _____.

6. What are the best materials for making a boat? _____

7. Identify Stern, Bow, Port, Starboard, Fore, Aft.



_____ _____ _____ _____

8. Motors are most often located in the _____ of boats.

9. Give one advantage and disadvantage of an inflatable boat.

   Advantages: _____

   Disadvantages: _____

10. A boat's port side is on the _____

11. A boat's starboard side is on the _____

12. Identify the following boats:

_____

_____

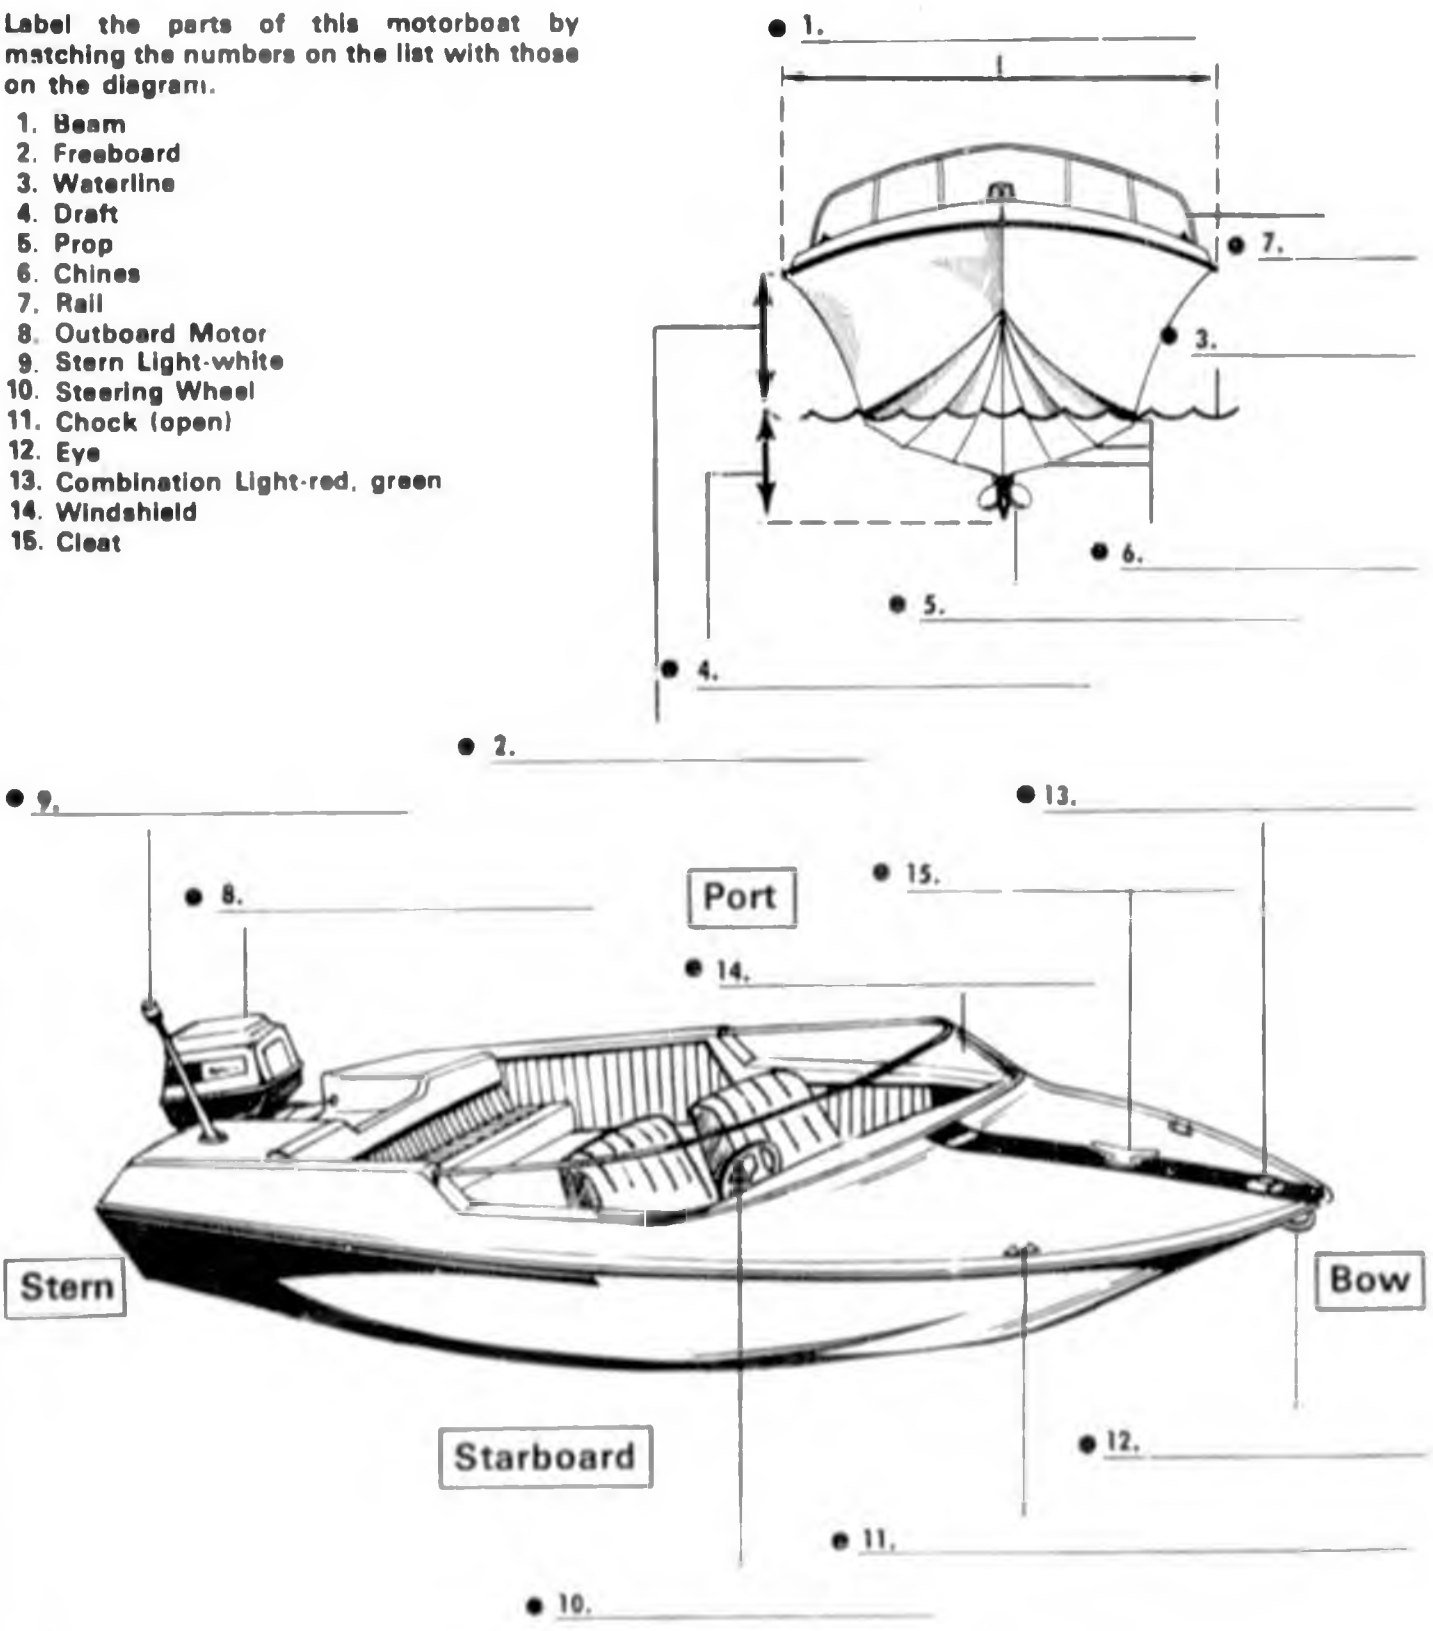
_____

_____

SAILOR'S LANGUAGE

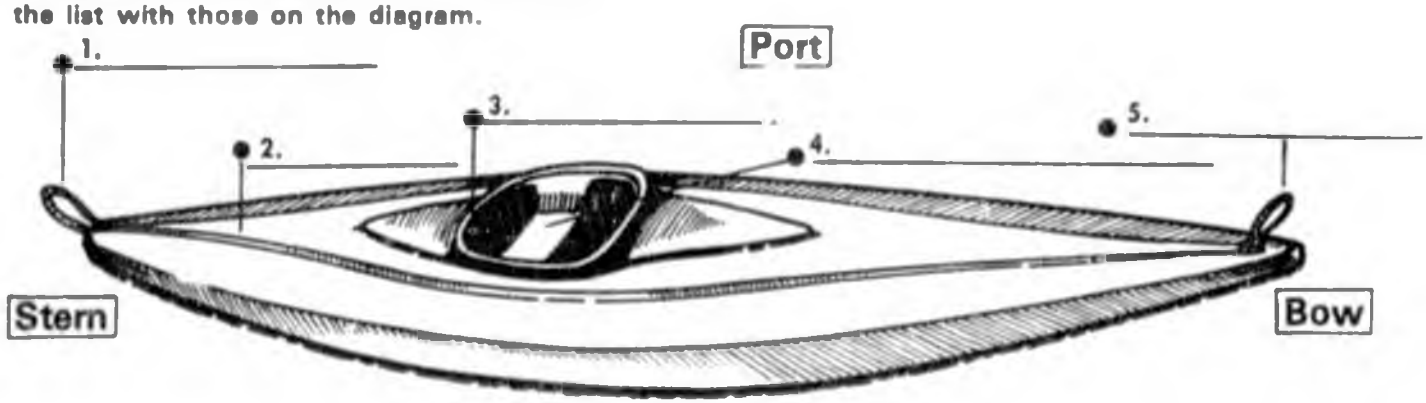
Label the parts of this motorboat by matching the numbers on the list with those on the diagram.

1. Beam
2. Freeboard
3. Waterline
4. Draft
5. Prop
6. Chines
7. Rail
8. Outboard Motor
9. Stern Light-white
10. Steering Wheel
11. Chock (open)
12. Eye
13. Combination Light-red, green
14. Windshield
15. Cleat



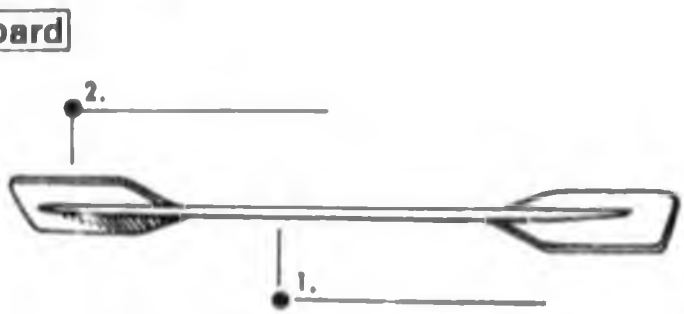
SAILOR'S LANGUAGE

Label the parts of the kayak, kayak paddle and inflatable by matching the numbers on the list with those on the diagram.



Kayak

1. Stern grab loops
2. Deck
3. Molded cockpit lip
4. Cockpit seat
5. Bow grab loops

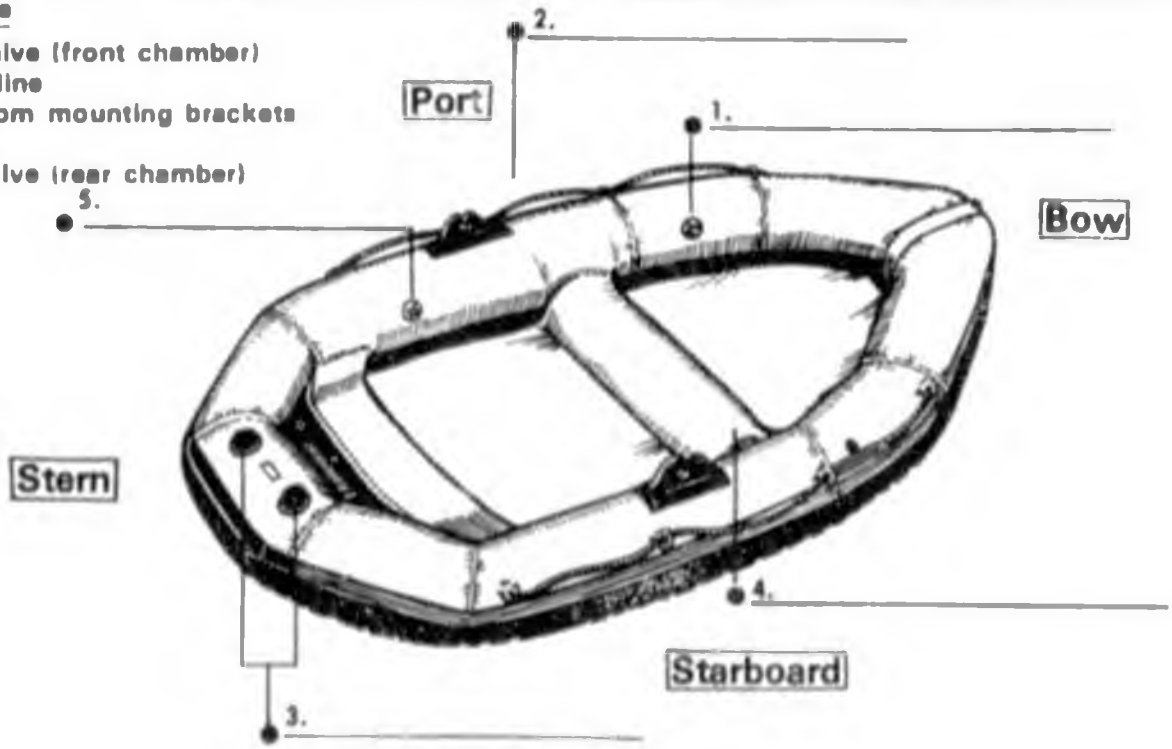


Kayak Paddle

1. Shaft
2. Blade

Inflatable

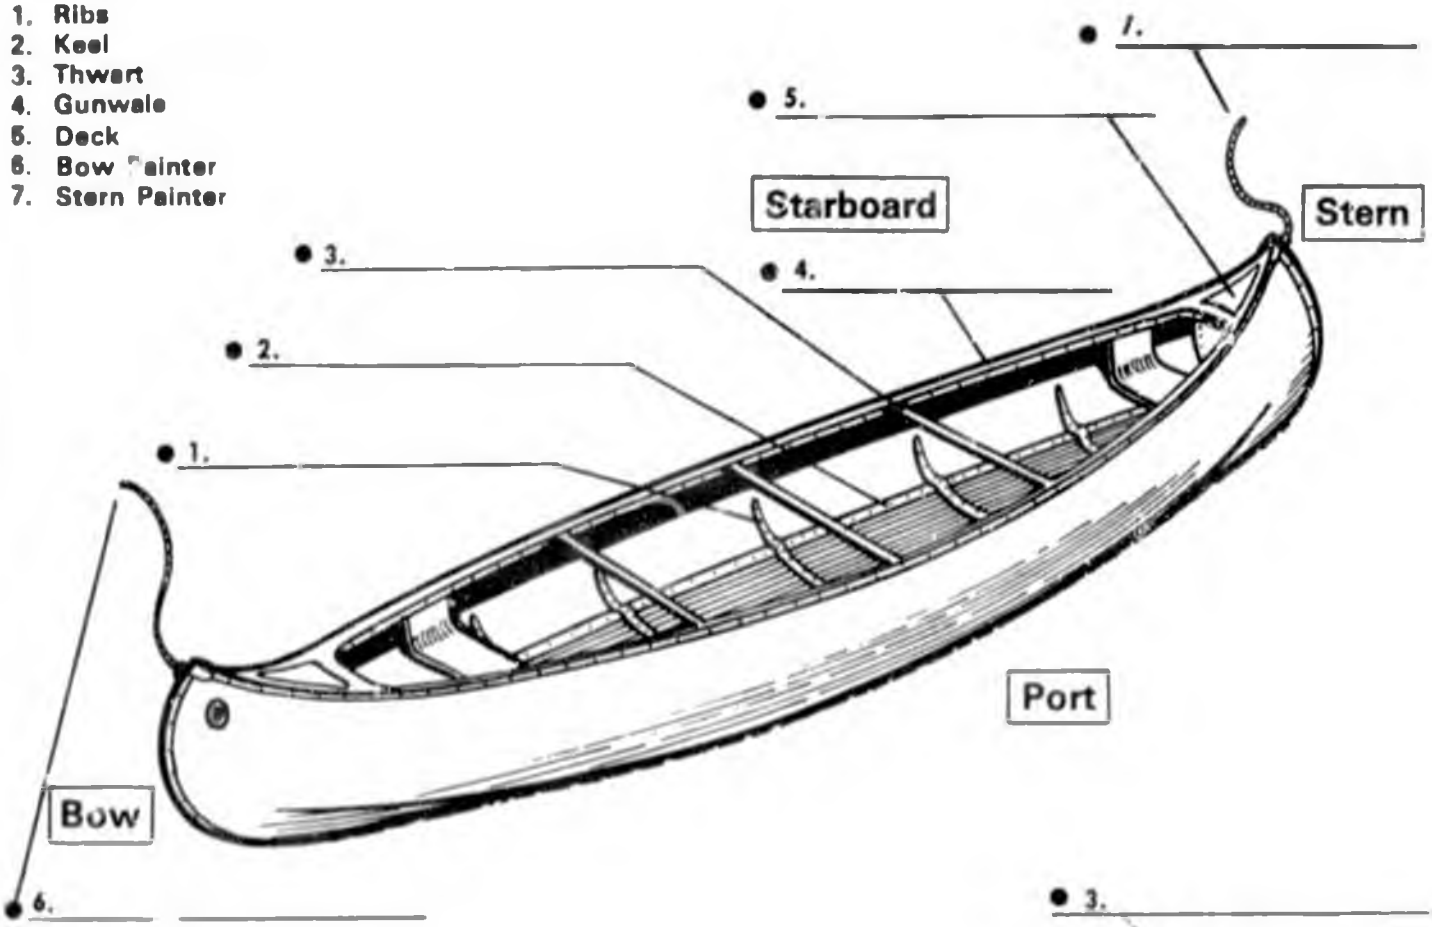
1. Air valve (front chamber)
2. Grab line
3. Transom mounting brackets
4. Seats
5. Air valve (rear chamber)



SAILOR'S LANGUAGE

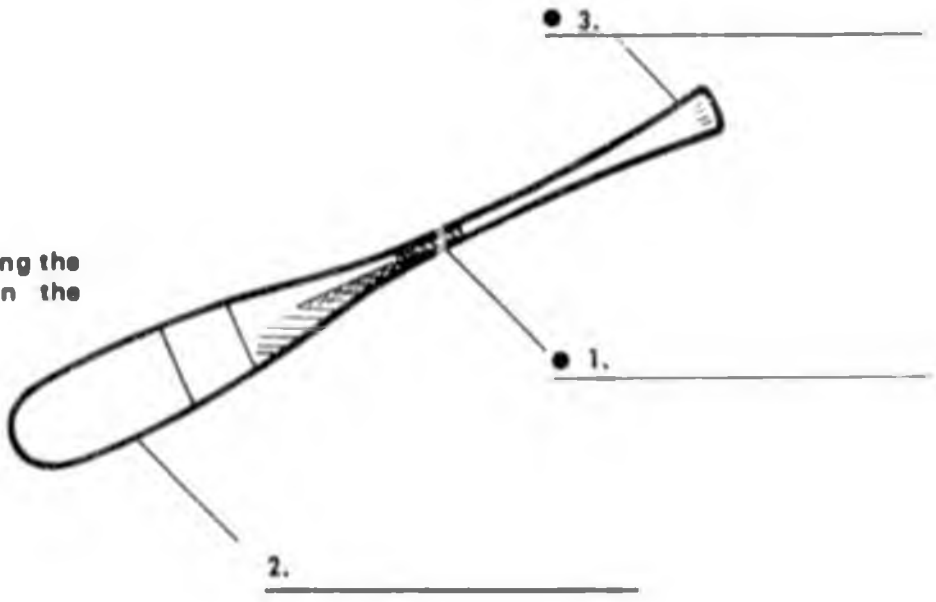
Label the parts of this canoe by matching the numbers on the list with those on the diagram.

1. Ribs
2. Keel
3. Thwart
4. Gunwale
5. Deck
6. Bow Painter
7. Stern Painter



Label the parts of this paddle by matching the numbers on the list with those on the diagram.

1. Shaft
2. Blade
3. Grip



RIVER RUNNING FUN

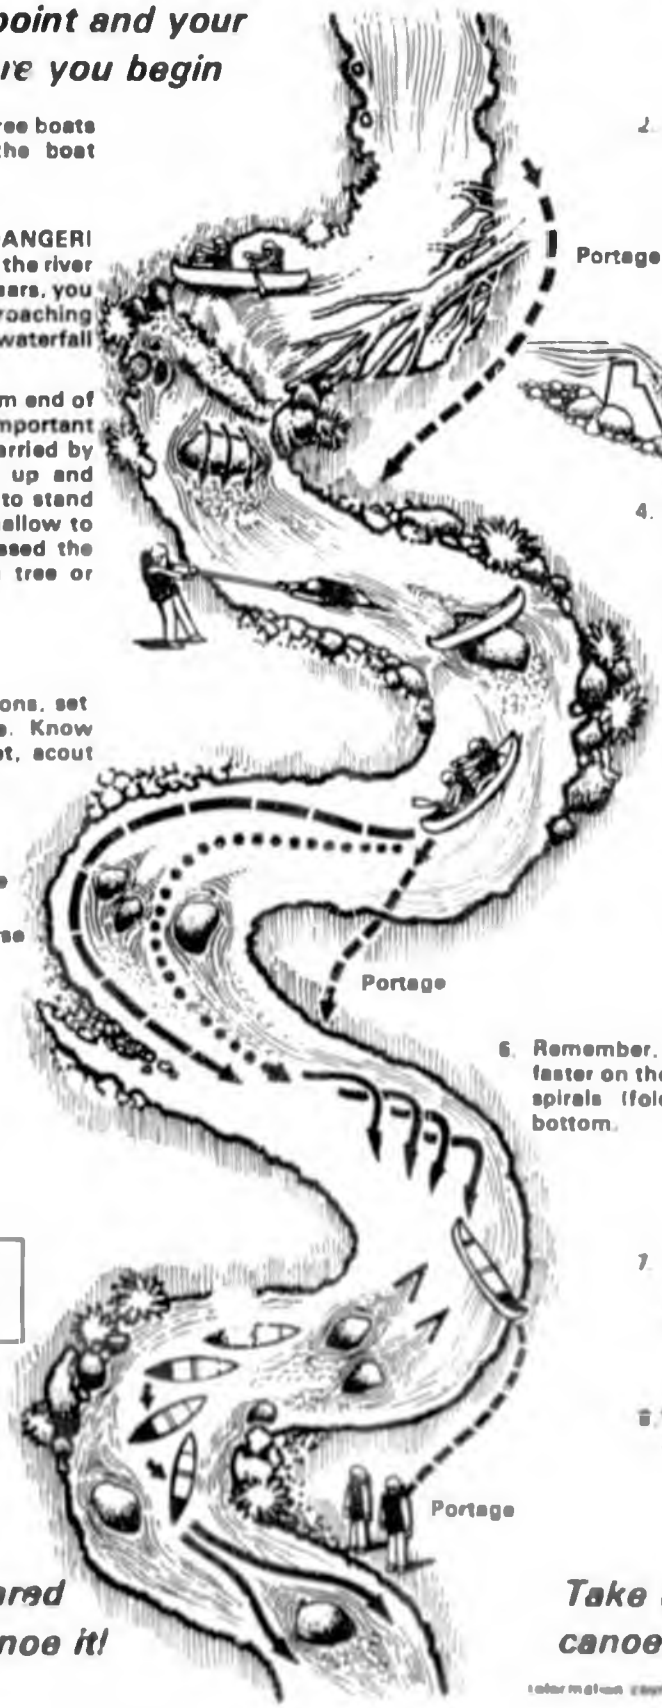
Know your put-in point and your take-out point before you begin

1. Travel in at least groups of three boats while on the river. Keep the boat behind you in sight.

DANGER!
If the river disappears, you may be approaching a waterfall

3. Capsized? Stay at the upstream end of the canoe. Your life is more important to save than equipment. If carried by the current, keep your toes up and your feet together. Never try to stand up unless the water is too shallow to swim. If a heaving line is tossed the rescuer should belay it (to a tree or boulder).

5. When you approach obstructions, set your course well in advance. Know how to approach. If in doubt, scout from shore.



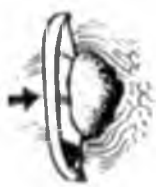
▬ ▬ ▬ ▬ High water course

● ● ● ● ● ● Normal level course

2. Things to avoid: flow through hazards, waterfalls, low dams, high rapids and hydraulics. Even in slow water these can be very dangerous.

HYDRAULIC
Water circulates back and forces a canoe downward

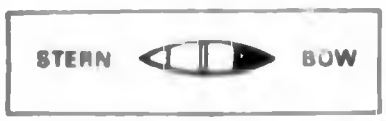
4. When striking an obstruction sideways, lean the canoe downstream, but don't get caught between the canoe and the obstruction. With the upstream gunwale up, the canoe will be easier to remove from the rock.



Upstream gunwale up

Downstream gunwale up

6. Remember, the river current is usually faster on the outside of a bend. It also spirals (folds under) down to the bottom.



7. Upstream V's indicate rocks. Downstream V's with haystacks indicate gaps between rocks.

8. When leaving, secure all equipment and carry trash out with you.

If you are not prepared to swim it; don't canoe it!

Take a Red Cross sponsored canoeing course

Information courtesy American Red Cross

RIVER RUNNING FUN

River Running

River float trips in canoes, kayaks and rafts are becoming more and more popular throughout the entire nation.

The float trip season generally lasts from May to September or longer where a warmer climate permits. Mid-summer, after the spring run-off has filled rivers and streams, is the time when most trips occur. Temperatures ranging from 60-90 degrees F (16-32 degrees C) in the daytime and 40-70 degrees F (4-21 degrees C) at night are suitable for float trips.

The adventurous may float in an assortment of scenery, from meandering rivers through flatland forests to cascading mountain streams. Distances range from day trips less than 10 miles to voyages lasting weeks over hundreds of miles. A field of additional sports are available for the floating enthusiast including fishing, camping, swimming and hiking.

But whatever the schedule and wherever the trip takes place, the floater will find fascinating geological formations, an abundance of wildlife, historical sights and perhaps lots of cold spray.

Basic safety rules are as important for enjoyable river running as for powerboating or sailing. Use the following points as a guide for your next, or first float trip.

1. Wear an approved P.F.D. Be sure each passenger has his/her own P.F.D of correct size.
2. Don't overload the boat with either passengers or gear.
3. Check out your equipment before starting out. An inflatable raft with several air chambers will tend to remain afloat longer if a chamber is punctured.
4. Be familiar enough with the route to plan for proper paddles and/or motors. Pack appropriate camping gear, first aid supplies, warm, easily dried clothing, insect repellent, fishing gear and license, food, tarps and camera. Do not forget to waterproof your personal gear.

5. Be sure of your skills by starting with an easy run. If possible go with experienced river runners to learn the basic strokes and movements of the craft through various types of water.
6. Do not boat alone. Three boats is the usual minimum for a white water run.
7. Fasten down all ropes so that there is no danger of becoming entangled in case you overturn.
8. Beach your vessel overnight a safe distance from the river's edge and tie it securely to a tree or large rock in case of flash flooding, etc. Then carry it back to the water, do not drag it.
9. Stop, get out of your boat, and look over from shore all rapids and other danger spots. If in doubt, carry your boat around the difficulty.
10. Beware of overhanging trees, log jams, brush piles and other obstacles that the water flows through rather than around. You can be pinned against them, possibly under the water, by the force of the current. Pass them on the safety side. Do not grab limbs or debris to control the boat's direction. That's a quick way to swamp!
11. Do not try to run dams. You can be trapped in the recirculating current at the bottom.
12. If you overturn, stay on the upstream side of your boat so that you will not be crushed between it and a rock. In most cases stay with the boat since it won't sink.
13. But cold water can be paralyzing on both mind and body. Get out of it quickly. Do not lose your life trying to save your boat.
14. Stay alert to changing weather conditions while on the water. Get out onto shore before a storm hits.

SAILBOATS

Sailboat Parts

Sailboats have four basic parts: a *hull*, *sail(s)*, *centerboard* (or *keel*) and *rudder*.

Hulls are designed to float a load and move through the water easily. They also help balance the boat when wind applies pressure to the sail.

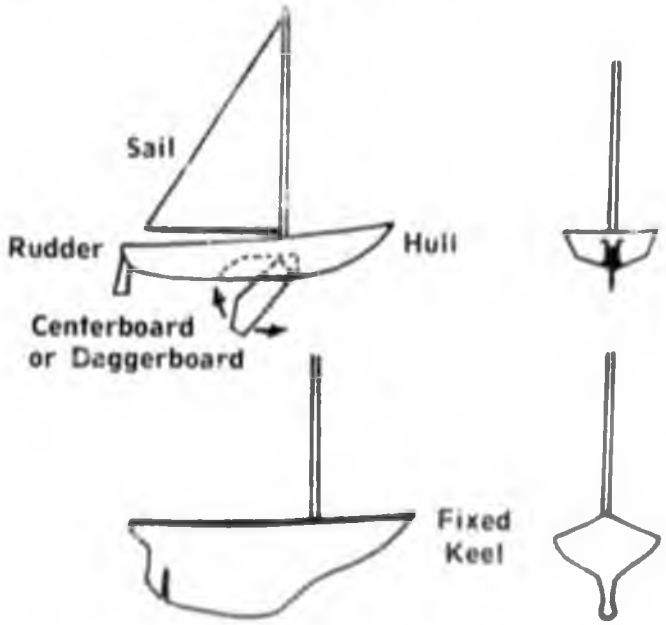
Larger boats have heavy *ballast* or weight packed into the bottom of the boat to prevent tipping. Smaller boats rely on the weight of passengers.

Sails convert wind pressure into movement of the hull. This is done through design, material, craftsmanship, and proper operation and maintenance. Most sails on recreational and competitive boats are made of synthetic material. Because synthetic fibers are damaged by sunlight, sailors must remove the sail or cover it when not in use.

Small sails may be folded after they are dry. They should not be wrinkled. This prevents air from flowing smoothly over the sail's surface.

All sailboats have a stabilizer called a **centerboard** or **keel**. This helps prevent tipping over or capsizing. It also keeps the boat from sliding sideways (leeway) when going across the wind.

Small sailboats use a centerboard. It may be raised or lowered into the water as needed.



Larger sailboats use a **fixed keel**. The keel is part of the hull. It carries additional weight, usually lead or cement. The weight of the keel offsets pull from the sail. Centerboards and keels also help turn a sailboat.

The **rudder** is located at the stern (back) of a boat. It is used to steer the sailboat. Small sailboats have wooden or metal bars called tillers fastened to the top of the rudder. A tiller is the same as a steering wheel on a motorboat. When the tiller is moved to one side, the rudder moves the boat to the opposite side. A sailboat must be moving for the rudder to work.

Why A Sailboat Sails

Two principles are at work when a boat sails. A boat sailing downwind or running is being pushed by wind. A boat sailing against the wind or beating is being pulled by wind. A boat sailing with the wind *abeam* [**reaching**] is using both principles. Reaching is the fastest and easiest way to sail.

When sailing there is a gradual change from one principle to the other. Therefore, sailors must have a constant awareness of wind and its direction. Developing this feeling is essential and difficult for a beginner to master. **Starboard tack** means the wind is passing over the right side of the boat. **Port tack** means the wind is passing over the left side of the boat.

Looking at the illustrations at the bottom of the next page it is easy to see the way sailboats move closer or further away from the direction of the wind. Manuevers closer to the direction of the wind start with a **beat**. When beating as near as possible into the wind at about 45 degrees, the boat is **close-hauled**.

As a boat sails away from the wind it moves on a **close reach** and then a **reach** when abeam to the wind. As it moves further from the wind it enters a **broad reach** and then a **run**. For the last two manuevers the wind is almost directly behind the boat.

To turn a sailboat's bow through the direction of the wind is called a *come about*. An example of this is changing *tack* from one reach to another by sailing the bow through the wind.

Turning the boat from one **broad reach** to the other by moving the stern through the wind is termed *jibing*. The boom on the mainsail must be hauled in when a boat jibes. A wildly swinging boom can knock someone from the deck or tip the boat over. This type of knockdown is called an uncontrolled jibe.

Boats can also change tack from a **broad reach** by coming about with the bow into the wind. This method takes longer, but it is safer for an inexperienced sailor.

A constant hazard to the sailboater is a knockdown. It is most likely to happen when sailing on a reach at right angles to the wind, especially if the boat is moving slowly. A strong gust of wind can blast the sails over and onto the water if an unwary skipper has the main sheet and jib cleated tightly.

SAILBOATS

Sailboat Equipment

Required equipment on a sailboat depends on the laws applicable in your area. Federal requirements are outlined on page 40, but each state may have additional requirements. Equipment also varies according to the boat's classification.

Sailors may decide to carry more than the minimum required equipment. They should judge local wind and water conditions and their skills.

The following equipment is recommended. It may also be required in your area. Check local laws.

1. **Personal Flotation Device** for each person on board. Weak swimmers and non-swimmers should wear one at all times.
2. **Bailer.** Water in the bilge decreases stability. Use a sponge, can or pump.
3. **Lights.** (See page 35.) Also check local laws.
4. **Paddles or Oars** to use when sails are lowered or during periods of calm. Sailboats with auxiliary power should also carry one of these.
5. **Anchor** to keep from being drifted away by currents, tides or high winds.
6. **Extra Line** in addition to a bow line permanently attached to the craft.
7. **Boathook** to use when pushing off during a landing. Also to pick up mooring lines.

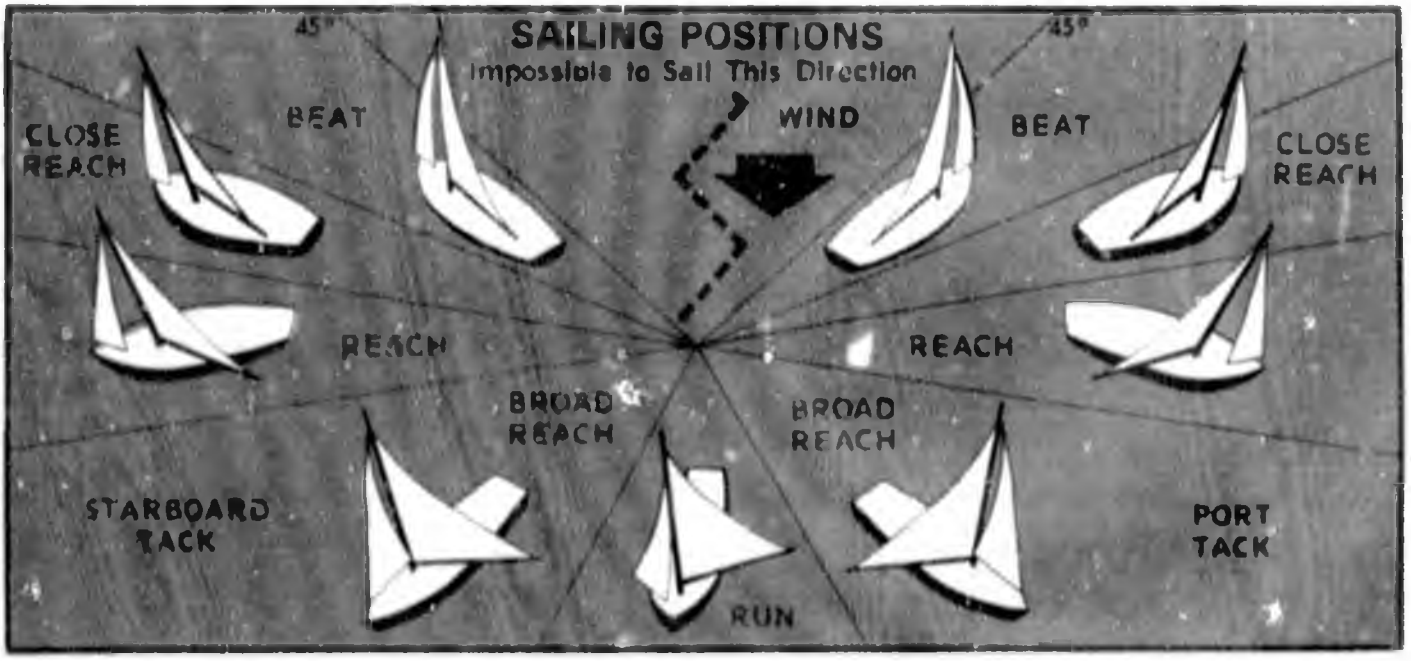
Rules of the Road

Sailors must know the rules of the road in their areas. The rules outline procedures for meeting other boats to prevent collisions. (Also see pages 59-62). Under these rules sailboats have the right of way over motorboats unless they are the overtaking vessel, then they must keep out of the way of the other vessel. Canoes, rowboats and other "people-powered" vessels have the right of way over sailboats. Boats operating with sail and power are classified as motorboats.

When two sailboats meet, the *give-way* [*burdened*] vessel must stay clear of the *stand-on* [*privileged*] vessel. The following situations apply under Inland rules of the road.

1. A sailboat running free, (with wind dead astern), must keep clear of one close hauled, (sailing close to the wind, on a beat).
2. A sailboat close hauled on the port tack, (with wind coming over the port bow or beam), must keep clear of one close hauled on the starboard tack, (with wind coming over the starboard bow or beam).
3. When both boats are running free on opposite tacks, the vessel with the wind on the port side must keep clear.
4. If both boats are running free on the same tack, the boat to *windward* must keep clear.

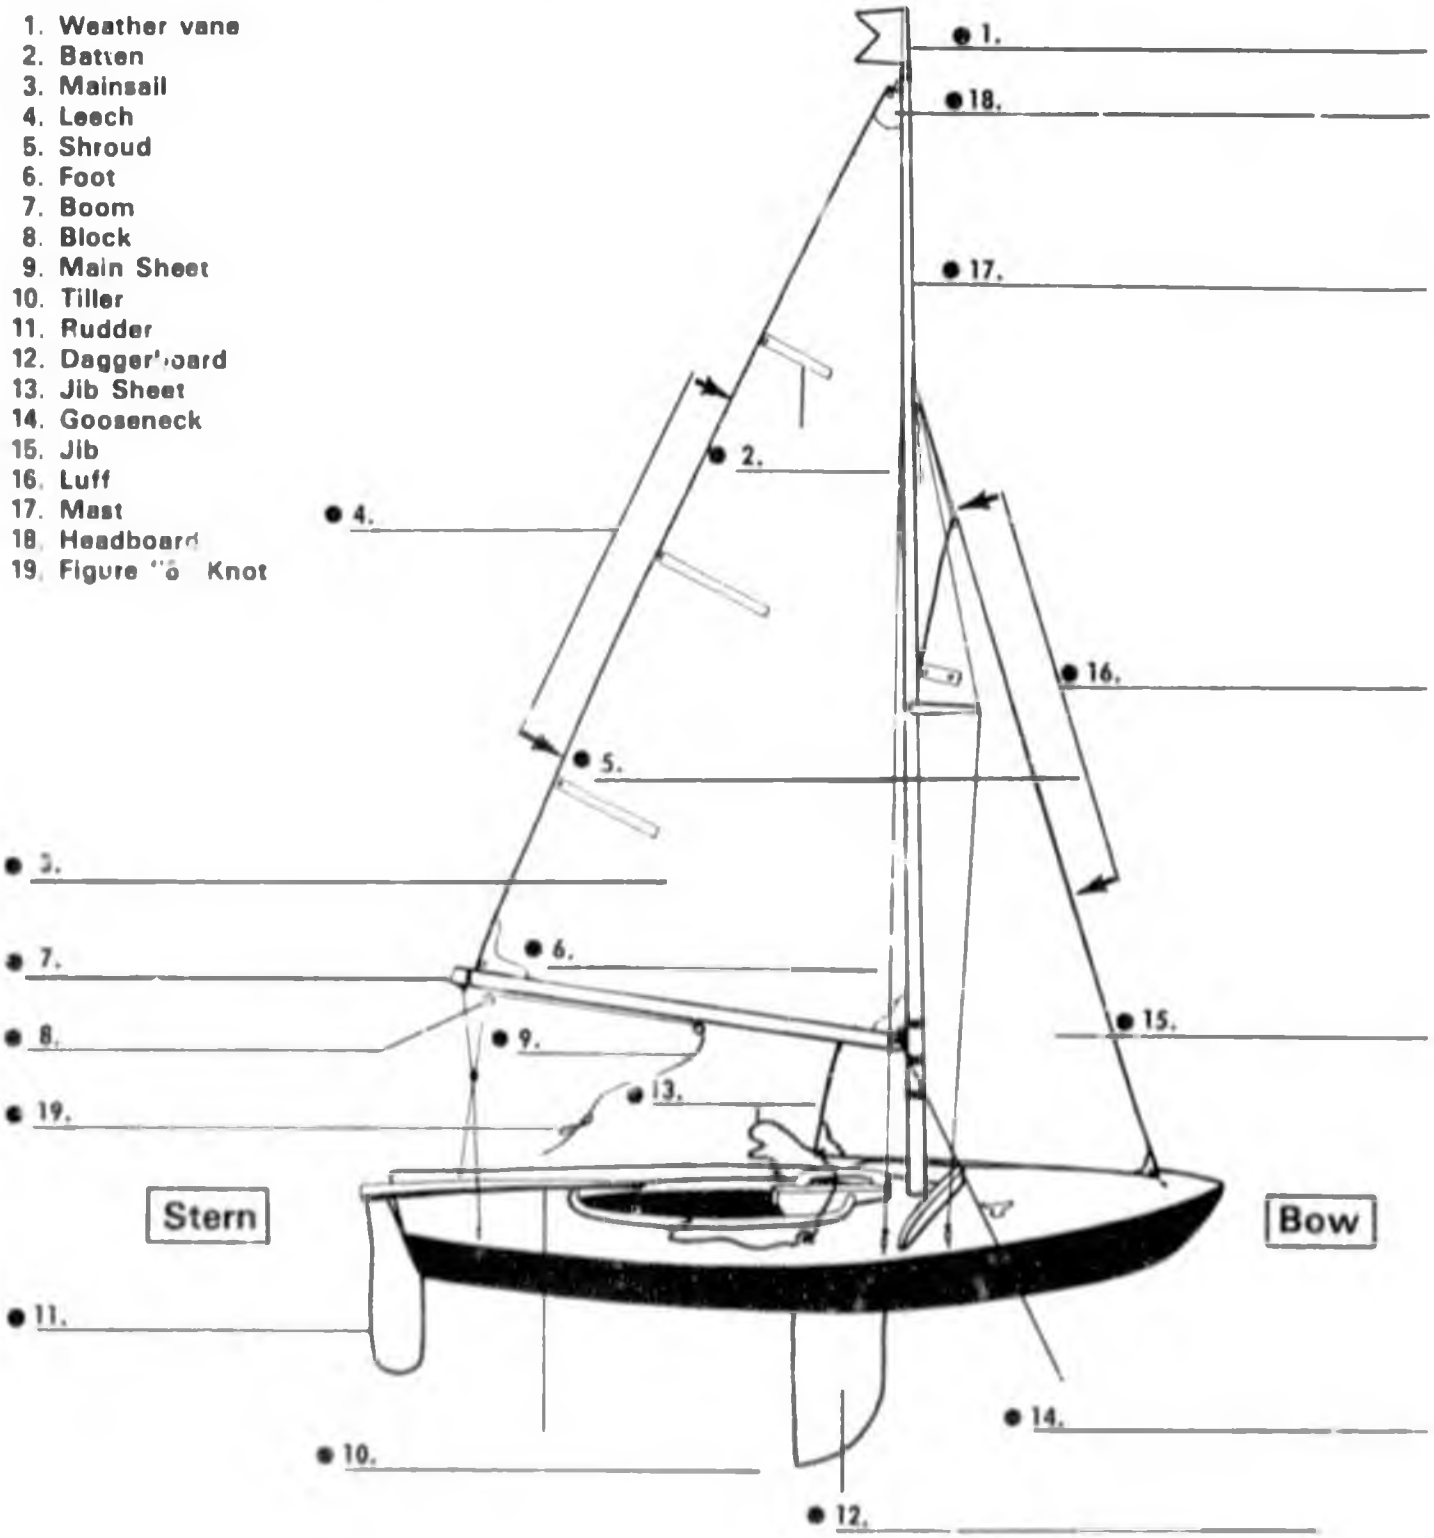
Under International Rules, a boat on the starboard tack always has the right of way. If both boats are on the same tack, the one to *leeward* [*downwind*] has the right of way. If a sailboat with the wind on the port side sees a sailboat to the windward and does not know whether it has the wind on the port side or on the starboard side, it must keep out of the way.



SAILOR'S LANGUAGE

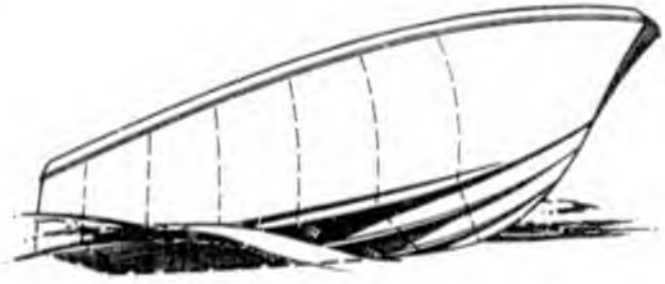
Label the parts of the sailboat by matching the numbers on the list with those on the diagram.

1. Weather vane
2. Batten
3. Mainsail
4. Leech
5. Shroud
6. Foot
7. Boom
8. Block
9. Main Sheet
10. Tiller
11. Rudder
12. Dagger board
13. Jib Sheet
14. Gooseneck
15. Jib
16. Luff
17. Mast
18. Headboard
19. Figure "8" Knot

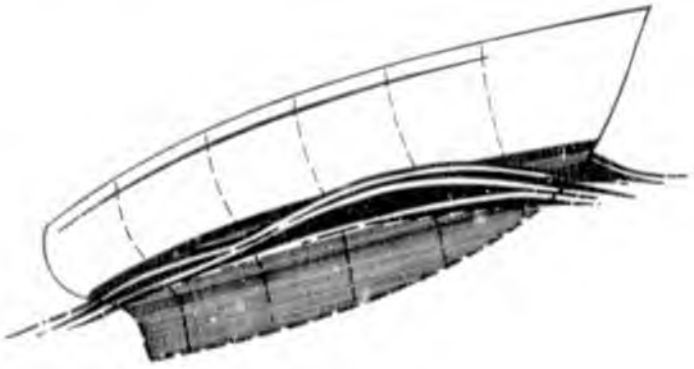


BOAT HULLS

Planing Hull



Displacement Hull



Basic Boat Hulls

Boat hulls are either **displacement** or **planing**. These two types include all the boats that have ever been built. A *planing* hull slides across the water at high speed. More power makes it go even faster. A *displacement* hull ploughs through the water even when more power is added.

How a boat is to be used, and generally the speed at which it is to operate, decides whether it should be a displacement or planing type hull.

Six common hull designs that include planing and displacement hulls are:

1. Flat bottom
2. Round bottom
3. V-bottom
4. Deep V
5. Cathedral
6. Catamaran

Flat bottom square-sided, boats include boxy, home-made utility boats, racing runabouts and deluxe 40 foot houseboats. Flat bottoms plane easily.

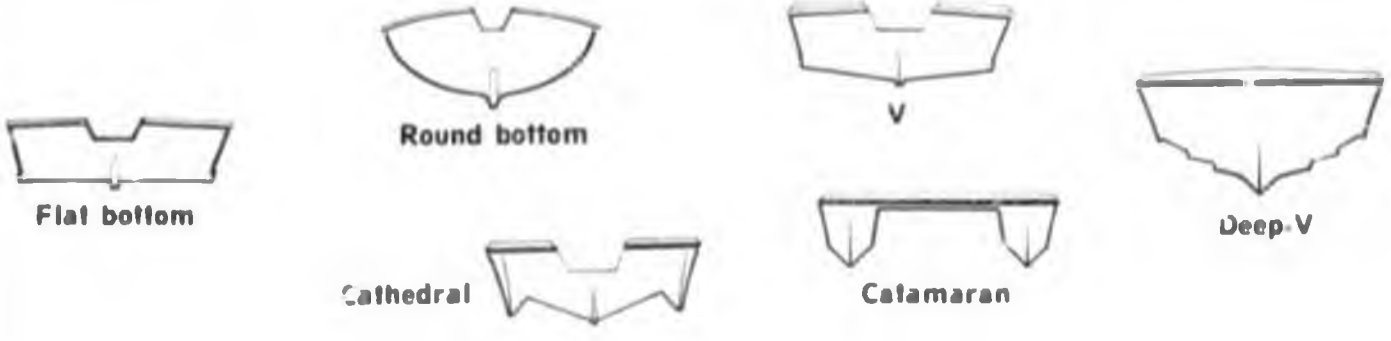
Round bottom boats move easily at slow speeds. They have a great tendency to roll unless they have a large flat area near the stern. Canoes, tugboats and some fishing boats have round bottoms and displacement hulls.

The V-bottom is an improvement over the flat bottom because it is more stable and rides better in rough water. It can be either a planing or displacement hull depending on the design.

The Deep-V is a hull with a sharp or deep V bottom that has been promoted extensively in recent years. It planes well with a stern-drive and offers a very comfortable ride in rough water.

Cathedral hulls are a combination of deep-V and catamaran. See the illustration below. The twin "tunnels" along each side of the main hull trap spray and water to cushion the ride as well as to hold down spray when planing through waves. The cathedral hull design is popular on many fiberglass lines of boats.

Catamaran hulls were probably first used for stability. Any kind of float or raft supported on two pointed logs uses the basic catamaran design. The twin-hulled design can be either planing or displacement, depending on the shape of the two hulls used. In sailboats the twin hulls are normally displacement, but in power boats they are usually planing type bottoms.



REGISTRATION and NUMBERING

Registration

The Federal Boating Safety Act of 1971 requires all undocumented vessels equipped with machine propulsion to be numbered in its state of principal use. This number will be issued by the state where the boat is principally used on a registration form much the same as that for an automobile. If the state does not have an approved numbering system, which Alaska does not, then the Coast Guard will issue the number.

There are certain exceptions to the rule:

1. Boats propelled manually.
2. Certain public vessels (enforcement and rescue).
3. Vessels documented by the United States Coast Guard.
4. Foreign vessels.
5. Ship's lifeboats used solely for lifesaving purposes.
6. Vessels having valid registration in the state of its principal use and not remaining in Alaska over 90 days.
7. Vessels used exclusively for racing.

Registration forms may be obtained from any post office, marina, U.S. Coast Guard Boating Safety Team (P.O. Box 2471, Anchorage, AK 99510) or Boating Safety Office (P.O. Box 3-5000, Juneau, AK 99802).

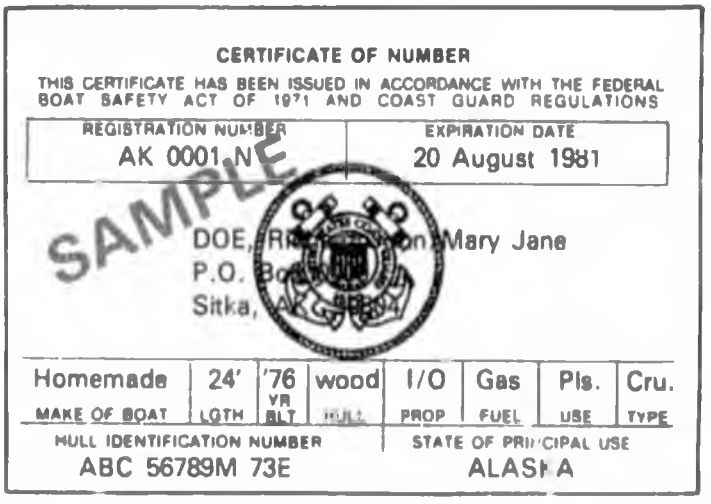
How to Register

Applications to register must be sent to the Boating Safety Office in Juneau. Upon receipt of the required information and the $6.00 fee, the requester will receive a Certificate of Numbers, a set of Registration stickers and information on how to properly apply them to your hull. The boat registration number is the number (beginning with AK) shown in the certificates.

Certificate of Number

The Certificate of Number must be available for inspection on the vessel whenever it is being used on the water. Proper display of the current registration stickers on the vessel next to the AK number is required to permit enforcement officers to determine, without boarding, that the vessel is currently registered.

In addition, personal ID may be required by law enforcement officers.



CERTIFICATE OF NUMBER

THIS CERTIFICATE HAS BEEN ISSUED IN ACCORDANCE WITH THE FEDERAL BOAT SAFETY ACT OF 1971 AND COAST GUARD REGULATIONS

REGISTRATION NUMBER	EXPIRATION DATE
AK 0001 N	20 August 1981

SAMPLE

DOE, R[illegible] Mary Jane
P.O. B[illegible]
Sitka, A[illegible]

Homemade	24'	'76	wood	I/O	Gas	Pls.	Cru.
MAKE OF BOAT	LGTH	YR BLT	HULL	PROP	FUEL	USE	TYPE

HULL IDENTIFICATION NUMBER	STATE OF PRINCIPAL USE
ABC 56789M 73E	ALASKA

The Certificate of Number also has several other purposes:

1. Helps the owner identify the boat if stolen.
2. Provides way to identify boat being driven recklessly.
3. Allows a person to operate the boat in other states without other numbering.
4. Helps identify the owner of a boat that has caused damage, been lost or drifted away.
5. Makes it possible to enforce water laws.
6. Encourages boat operators to use boats carefully because they can be identified by their boat number.

Registration Fees

Original Registration	$6.00
Transfer of Ownership	$6.00
Duplicate Certificate	$1.00
Duplicate Stickers	$.25
Renewal of Number (tri-annually)	$6.00

Display of Numbers and Stickers

The number must be displayed properly on the boat. The law requires:

1. The numbers are to be read from left to right.
2. They must be displayed on the forward half of each side of the bow of the boat.

REGISTRATION and NUMBERING

3. Numbers must be in bold, block letters of good proportion.
4. They must not be less than three inches high.
5. They must be of contrasting color to the boat hull or background.
6. They must be as high above the waterline as practical.
7. No number other than the number assigned can be displayed on the forward half of the vessel.
8. Letters must be separated from numbers by spaces or hyphens.
9. Validation decals must be displayed within six inches of the number.

AK-0001-N
OR
AK 0001 N

Notification Requirements

The owner is required to notify the Coast Guard Boating Safety Office in Juneau in writing when ever any of the following takes place:

1. The vessel has been destroyed or abandoned. Notice must be given within 15 days and be accompanied by the Certificate of Number and Certificate of Ownership.
2. The owner's address has been changed. Notice must be given within 30 days.
3. Stolen boat. If a numbered vessel is stolen, the owner or legal owner of the vessel should notify the Coast Guard Boating Safety Office, as well as the enforcement authorities, as soon as possible.
4. The owner shall also notify the Coast Guard if a vessel reported to be stolen is recovered.

☐ ORIGINAL NUMBER ☐ RENEWAL OF NUMBER

☐ TRANSFER OF OWNERSHIP ☐ CHANGE OF STATE OF PRINCIPAL USE

MAIL TO: BOATING SAFETY DIVISION
U. S. COAST GUARD
P. O. BOX 3-5000
JUNEAU, ALASKA 99802

SIGNATURE:

I DECLARE under the penalties prescribed in 18 USC 1001, to the best of my knowledge and belief that I own the vessel described herein and that the description and all matters stated herein are true and correct.

PRIVACY ACT STATEMENT

In accordance with 5 USC 552a(e), the following information is provided to you when supplying personal information to the U. S. Coast Guard.
1. AUTHORITY which authorized the solicitation of the information: The Federal Boat Safety Act of 1971, 46 USC 1451, 1466, 1467
2. PRINCIPAL PURPOSE(s) For which information is intended to be used: Principally used when boat owners are applying registration of undocumented vessel, equipped with propulsion machinery of any type and to have numbers issued by the proper issuing authority in the state in which the vessel is principally used.
3. THE ROUTINE USES Which may be made of the information: (1) For statistical purposes showing alphabetically and numerically the boats have registered. (2) For public inquiry from other states, credit unions, individuals concerned with the purchase of a vessel from someone else. (3) For office to transfer or renew boat registration.
4. Whether or not DISCLOSURE of such information is mandatory or voluntary (Required by law or optional) and the effects on the individual, if any, of not providing all or any part of the requested information: Disclosure of this information is voluntary, but failure to furnish required information would result in non-issuance of a valid certificate of number.

INSTRUCTIONS (Print or Type)

Complete all numbered items. Numbers 2,3,6 and 11-15 are self-explanatory. Special instructions for specific items are as follows:
1 & 4: Name and address of owner only. List additional owners in the space provided below these instructions.
5: Hull Identification Number (assigned by manufacturer). If the boat has a number permanently on the hull, list it here.
7: Manufacturer of engine. Insert name of company that built the engine. If built by the owner or builder is unknown, so state.
8. Manufacturer of Boat. Insert name of company that built the boat. If built by owner or builder is unknown, so state.
9. Length in Feet. Insert length of vessel (to nearest inch) measured from end to end and over the deck, excluding the sheer.
10. Year Built. Insert year built (or model year), if known. If the year is unknown, so state.
16: Reason for Application. Insert 'X' in appropriate box. If application is for a new number as a result of lien holder possession, attach a signed statement explaining the possession in detail. If the Application is for Transfer of Ownership, the reverse of this form must be filled out by the seller and forwarded with this application.

RESPONSIBILITY

Your Responsibility As a Boater

You may be held responsible for any damage your boat may cause or any injuries suffered by your passengers or others. For instance, if you pass close to a cruiser at high speed and your wake rocks this vessel so that the dishes in the galley are broken, you may be held responsible. If this should happen when hot foods are being prepared or served on board the cruiser and someone suffers serious burns as a result of the violet in a negligent rocking caused by your wake, you may be held liable. You could be summoned into court and equitable civil damages assessed against you. In addition, you might also be cited for operating a motorboat in a negligent manner.

Overloading

Negligent and Grossly Negligent Operation

Negligent operation is the failure to exercise that degree of care necessary under the circumstances to prevent the endangering of life, limb or property of any person. Negligent operation may be caused by the operator's ignorance, inattention, indifference or general careless ness.

Grossly negligent operation implies extreme forms of negligence. Gross negligence is an absence of all care. The term means that the operator of a boat knows that a certain act can create an unreasonable risk of harm, even though he does not necessarily intend to cause harm.

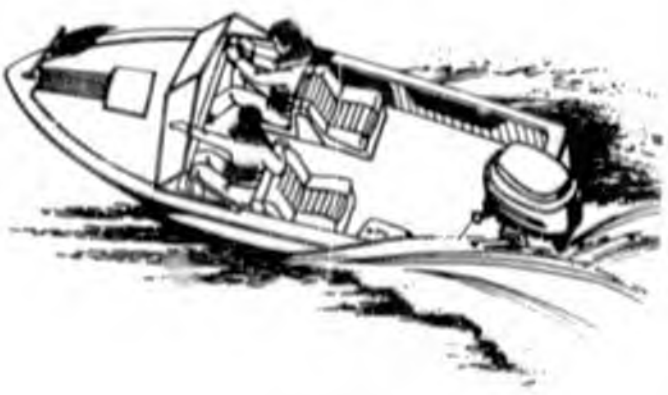
Examples of such operation include but are not limited to:

1. Excessive speed in close proximity to other boats in narrow winding channels or rivers.
2. Excessive speed during periods of reduced visibility.
3. Operating under the influence of intoxicants, drugs, etc., recognizable by erratic operation.
4. Failure to properly moor a vessel which becomes loose and causes damage to another vessel, property or person.

Regarding Speed

Excessive speed can create a dangerous wake causing other boats in the vicinity to ship water, loose equipment or in other ways receive damage. This wake can also threaten the safety of persons in nearby boats. This kind of operation can endanger life, limb and/or property.

Riding on Decks and Gunwales



Speeding

RESPONSIBILITY

Accidents

Boating Accident Reports are used by the U.S. Coast Guard to identify problem areas and major causes of boating mishaps. The reports are confidential and cannot be used in legal matters.

The operator of a vessel involved in an accident shall:

1. Give assistance to other persons involved.
2. Give his name, address, and identification of his boat in writing to any person injured or to the owner of any property damaged in the accident.
3. When a person dies or disappears from a vessel, the operator shall, without delay, by the quickest means available, notify the U.S. Coast Guard Boating Safety office and the nearest enforcement agency having jurisdiction over the waterbody.
4. If there is death or injury to a person, or if there is damage to property of more than $100, the operator shall submit a written report of the accident to the U.S. Coast Guard.

This report shall be made within five days after the accident. In the case of an injury, it must be submitted within 48 hours. Accidents involving death or disappearance must be reported within 24 hours.

Forms are available through harbormaster offices and may also be obtained by writing to the Coast Guard Boating Safety Division, P.O. Box 3-5000, Juneau, AK 99802.

Failure to comply with the above requirements is punishable by a fine up to $500.

Voicing A Complaint

In the case of harrassment or operating negligence by some other party, you have the right and the responsibility to make a complete and accurate report to one of several agencies: city police, Department of Public Safety, harbormaster, State Department of Fish & Game, state troopers and the U.S. Coast Guard.

When reporting, include date, time, description of boat (color, hull design and classification) boat registration numbers, witnesses (names and addresses) and photographs if possible.

RESPONSIBILITY

DEPARTMENT OF TRANSPORTATION U. S. COAST CG-3865 (Rev. 5-75)	BOATING ACCIDENT REPORT	FORM APPROVED OMB No. 04-R3012

The operator of every vessel involved is required to file a report in writing whenever a boating accident results in loss of life; loss of consciousness; medical treatment or disability in excess of 24 hours or property damage in excess of $100. Reports in death and injury cases must be submitted within 48 hours; reports in other cases are required within 5 days. All reports must be submitted (a) to the state where the vessel number is issued (b) if the vessel has no number, where the vessel is principally used (c) the state where the casualty or accident occurred, if it occurred outside the state where the vessel is numbered or the place where the accident occurred. See addresses on reverse.

SAILOR'S WORKSHEET 2

1. Name the two basic kinds of hulls.

_____

2. _____ hulls skim along on top of the water.

3. _____ hulls plow through the water.

4. Flat bottom boats: (a) plane (b) plow through water.

5. Round bottom boats are made to go: (a) fast (b) slow.

6. Most _____ have typical displacement hulls.

7. Displacement hulls are made to go at: (a) fixed (b) variable (c) unlimited speeds.

8. Why do boats have numbers?

_____

9. Where can you go to get a Certificate of Number?

_____

10. Boat numbers read from _____ _____ on the port side of the boat and from

_____ on the starboard side of the boat.

11. What must you do if you sell your boat?

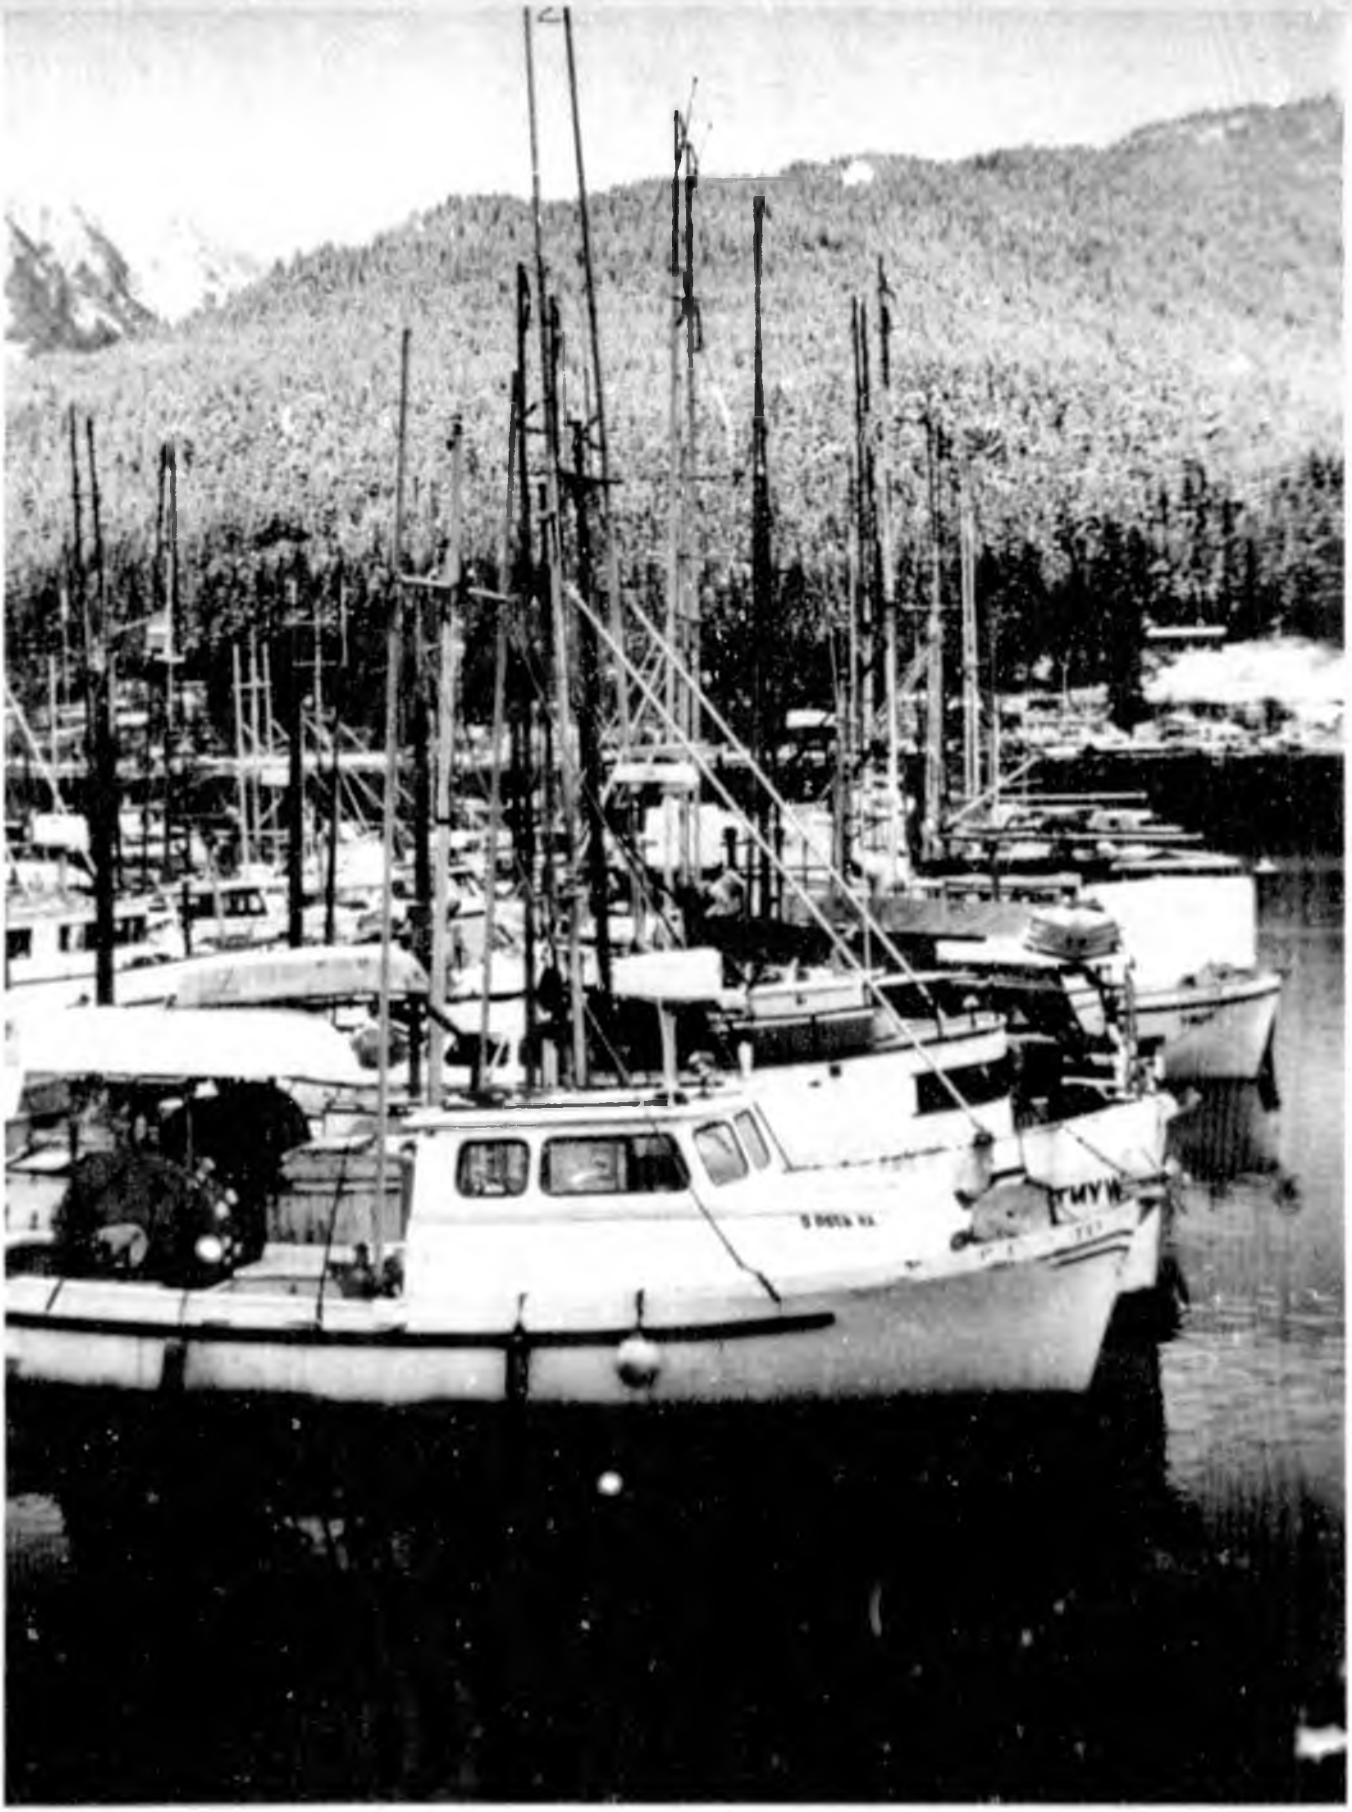
_____

12. How big are the numbers on your boat supposed to be?

_____

13. Write your state identification code.

_____



Part II

PERSONAL FLOTATION DEVICES

Personal Flotation Devices

You are required by Federal Regulations to have at least one Coast Guard approved Personal Flotation Device (PFD) for each person in your boat. You may not use your boat unless all your PFD's are in serviceable condition, are readily accessible, are legibly marked with the Coast Guard approval number and are of an appropriate size for each person on board.

There are several types of personal flotation devices [PFDs] which are one of the boater's most important pieces of safety equipment. They should be kept in serviceable condition and always be readily available.

Vests should be worn by all children and non-swimmers when underway. They should fit snugly.

Life Preserver - Type I

Type I PFD's may use kapok, fibrous glass and/or unicellular plastic foam. They are often jacket or bib design.

Both jackets and bibs come in child and adult size and are marked as such. A snug fit is very important. All approved life preservers are international orange in color.

Type I PFD's contain more than 20 pounds of buoyancy. They are the least comfortable to wear, but the most effective for long exposure and in rough water.

The Type I life preserver is designed to hold the wearer in such a position that, even if injured or unconscious, he will not drown. It has a righting moment which turns the person from a face down position to a face up position.

Buoyant Vest - Type II

Type II buoyant vests come in several designs and colors. Materials are similar to those used in life preservers.

A Type II PFD contains at least 15.5 pounds of buoyancy. It is not as effective as a Type I device in rough water or for long periods. However, a Type II device is more comfortable to wear and it still has a righting movement.

Both Type I and Type II PFD's are designed to turn an unconscious person face up or slightly backward in the water. Properly worn, they will keep a persons' head and shoulders above water.

Neither a life preserver nor buoyant vest is intended as a swimming aid. A PFD is not a water toy.

Type III Devices

Ski Vests are Type III PFD's. They are more comfortable than other PFD types and have at least 15.5 pounds of buoyancy. They are designed for use in water skiing. A ski vest may not turn an unconscious person upright in the water. It should keep a conscious person in a vertical or slightly backward position.

Float coats, canoe vests, sailing vests and hunting vests are also Special Purpose Devices or Type III. These vests are more comfortable so that the boater always wears a personal flotation device while on the water. They will float a person's head out of the water in an emergency such as falling overboard or capsizing.

Throwable Devices - Type IV

Type IV devices include buoyant cushions and ring buoys. Throwable devices provide adequate support for a person in the water or in an emergency. They have a minimum of 16.5 pounds of buoyancy. They do not give the protection available from a life preserver or a buoyant vest.

Buoyant cushions are not recommended to use by children or non-swimmers. They are difficult to hang onto in the water. Do not wear a buoyant cushion for jumping into the water. Hold onto the cushion while entering the water. NEVER wear a cushion on the back. This tends to force the wearer's face into the water.

PERSONAL FLOTATION DEVICES

NEVER use a buoyant cushion as a boat fender.

Ring Life Buoys are Type IV devices used more on cruisers than on runabouts. They should always have about 50 feet of line to attach to the grab rope.

Only Coast Guard-approved personal flotation devices are legal. ALWAYS purchase Coast Guard-approved Personal Flotation Devices. They begin with the number 160.... Most approved devices are comparable priced with so-called improved types. Check the label for designating Coast Guard approval. The information provided on the label is important.

The Coast Guard has not approved ski belts. They do not assure upper body support and may become loose or shift position on the body.

Inflated preservers are not approved. They can be punctured or ruptured easily. Their protection is very uncertain.

Survival Suits

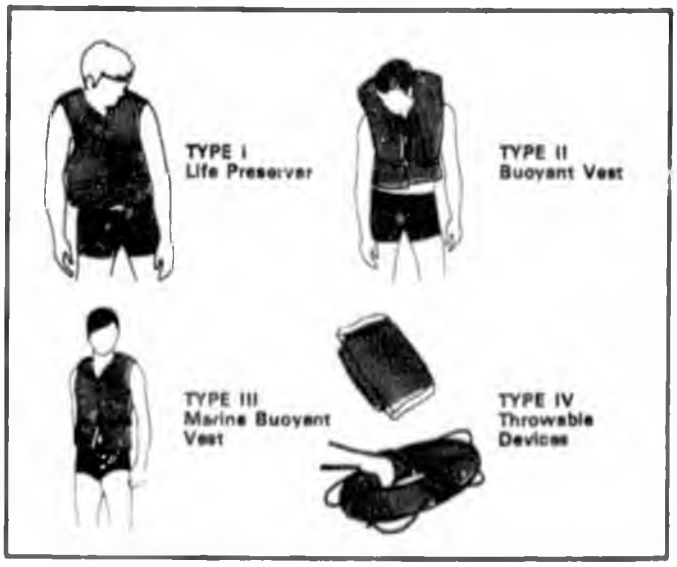
Survival suits and wet suits also are not Coast Guard approved for flotation, but are highly recommended for use in Alaskan waters in addition to using an approved PFD. These suits generally do not have self righting characteristics which will turn an unconscious wearer from a face down position to a vertical or backward position. Survival suits are also quite cumbersome when working on the deck of your boat.

Mandatory Regulations

1. Boats sixteen (16) feet or over in length must be equipped with one Type I, II, or III (wearable) for each person on board, plus one Type IV (throwable) in each boat.
2. Boats less than sixteen (16) feet in length and all canoes and kayaks must be equipped with one Type I, II, III or IV Personal Flotation Device for each person on board.

A skier is considered a person on board in both of these cases.

PFD Classifications



Checking Your PFD

Buoyancy means the force necessary to keep a person's head and chin out of the water while he's afloat. Most people don't have enough natural buoyancy. The difference must be made up by a life preserver. Buoyancy changes with body weight, clothes and breathing.

Test your PFD periodically in shallow water. Keep arms and legs below the surface and assume a relaxed position. In a sitting position in the water note the floating position of your head and chin. Be sure to dry before storing.

Most over-the-shoulder flotation devices have three compartments filled with kapok or similar material. This material is contained in a plastic bag, covered with a canvas-like material. Each of these compartments must be airtight. Check for this by pushing the two ends of the bag toward the middle. If air escapes from the bag, throw it away.

Examine the straps to make sure they are attached. The buckle and metal fastener must be functional.

Most buoyant cushions have three sealed plastic compartments. Check the straps and fabric.

If PFD's become badly torn, stiff or heavy, they should be destroyed and replaced immediately. Life preservers will last many years if given reasonable care. Always dry completely before putting away. Stow in a dry, well-ventilated, easily accessible place. Airing and sun drying is the best. NEVER stow near oil or grease. During winter storage, remove from boat and stow at home.

LIGHTS

Lights

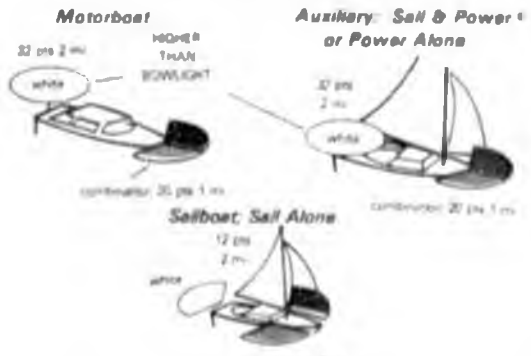
By law, lights are to be exhibited when underway between sunset and sunrise. Light placement and requirements vary with the size and type of boats. There are two types of lighting requirements. These are the **Inland Rules** and the **International Rules**. The Inland apply only to inland waters. The International may be used on inland waters by motorboats and required on the high seas (pg. 59).

All watercraft must display combinations of white, red and green lights shown below. No other lights which can be mistaken for these lights may be displayed.

DEFINITION: **"10 pts. 1 mi." means that the light can be seen by another vessel through an arc of 10 points for a distance of 1 mile.**

VESSELS USING ONLY INLAND WATERS

LESS THAN 26 FEET



NOTE: Auxiliary sailboats under sail alone need not show the 12 pt. stern light but may in lieu of carry, ready at hand, a flashlight or lantern to be exhibited in sufficient time to prevent collision or the appropriate international lights may be shown for a vessel of its size.

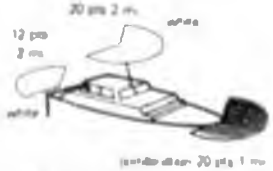
26 FEET TO NOT MORE THAN 65 FEET

EXCEPTIONS: (1 Western River Rules) sidelights for vessels under sail must be visible for 3 miles. (1 Great Lakes Rules) sailing vessels may show a white light in lieu of a stern light upon that portion of the vessel which is being approached by another vessel.

VESSELS USING INTERNATIONAL WATERS

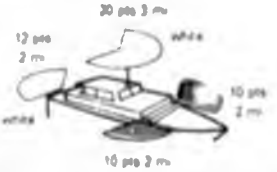
LESS THAN 12 METERS

Carried at Least 1 Meter Higher than Colored Lights



12 TO 20 METERS

Carried at Least 2.5 Meters Above the Gunwale



NOTE: A power driven vessel of less than 7 meters in length and whose maximum speed does not exceed 7 knots may in lieu of the lights prescribed above exhibit an all around white light. Such vessel shall, if practicable, also exhibit sidelights. All vessels less than 20 meters may display either seperate colored sidelights or combined lanterns. All vessels under power, whether under sail or not, are to be considered power driven vessels.

VESSELS UNDER SAIL ALONE

Vessels Under 20 Meters

OPTIONAL for all sailing vessels

OPTIONAL for sailing vessels less than 12 meters (comb red, green and white light 32 pts.)

A sailing vessel of less than 7 meters in length or a vessel under oars shall, if practicable, exhibit the lights prescribed above. If she does not, she shall have ready at hand an electric torch or lighted lantern showing a white light which shall be exhibited in sufficient time to prevent collision.

NOTE: Sidelights of vessels less than 12 meters must be visible for at least 1 mile.

ANCHORED OR ROWING

POWER BOATS under 65 feet and all sailing vessels at anchor must display anchor lights except those under 65 feet in "special anchorage areas". An anchor light is a white light visible to a boat approaching from any direction and is displayed in the fore part of the vessel.

ROWING BOATS, whether under oars or sail, shall have ready at hand a lantern showing a white light which shall be temporarily exhibited in sufficient time to prevent collision.

WHEN ANCHORED

Power-driven vessels and sailing vessels less than 20 meters in length at anchor must display anchor lights. Vessels less than 7 meters in length shall not be required to display anchor lights unless anchored in or near a narrow channel, fairway or anchorage or where other vessels normally navigate. An anchor light is a white light visible for 2 miles to a boat approaching from any direction.

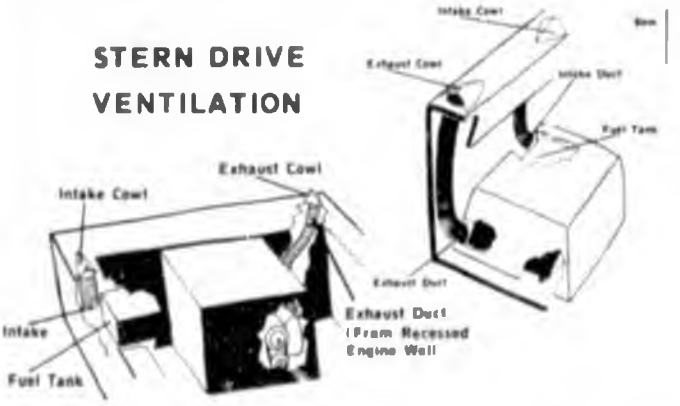
ADDITIONAL EQUIPMENT

Carburetor Backfire Flame Arrestors

Internal combustion engines at times backfire. To safeguard against fire, all motorboats, except outboards and diesels, must have a Coast Guard approved *carbuerator backfire flame arrestor.*

Ventilation

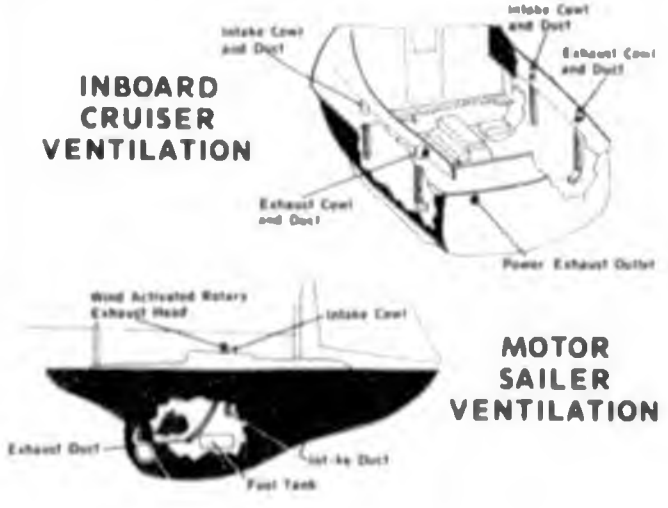
Regulations require ventilation of motorboats if engine and fuel compartments are closed. However, a ventilation system is not required if the boat does not trap explosive or flammable vapors.



Intake ducting must extend from *cowls* at least midway to *bilge , or at least below carburetor air intake level. Also, exhaust ducting must extend from lower bilge to cowls in the atmosphere.*

Mufflers

Noise from a poorly muffled or unmuffled motor disturbs others. More important, it can prevent the motorboat operator from hearing voices, signals or sounds that might alert him to danger.



Whistles and Horns

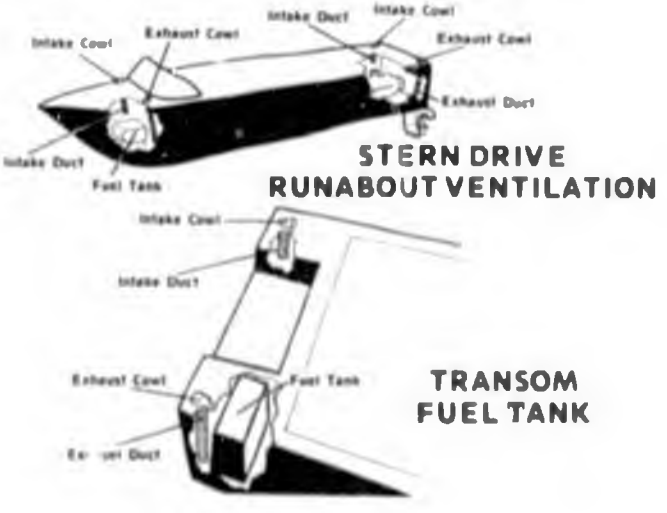
Every motorboat 16 feet (5 meters) and over must have a whistle or horn. Federal regulations specify the type required.

Bells

Boats 26 feet and over must be equipped with a bell that gives a clear tone when struck. When at anchor during fog, mist, falling snow or heavy rainstorms, the boater must ring the bell rapidly about five seconds at one minute intervals. This must be done whether day or night.

Illegal Equipment

Safety patrols and emergency craft are the only boats allowed to use sirens or flashing blue lights.



FIRE

Fire Extinguishers

Fire and explosion causes more total property loss on boats than any other mishap.

When gasoline leaks or spills, the vapors are heavier than air. They collect in the lowest part of the boat, usually the bilge. This vapor is more explosive than gunpowder. One cup of gasoline creates vapors more destructive than 15 sticks of dynamite. Never use matches or flames of any type near gas pumps, lines or tanks.

Boat fires also may be caused by electrical wiring. Usually the current overloads the wire. The wire gets hot and sets the insulation on fire. An extinguisher must be able to put out this fire without giving the user a shock.

Caution: The use of water to extinguish a petroleum fire will usually cause a boat fire to spread.

Law Concerning Extinguishers

All motorboats shall carry fire extinguishers approved by the U.S. Coast Guard. Exceptions are outboard motorboats less than 26 feet in length without permanently installed fuel tanks and which do not have spaces in which explosive or flammable fumes can collect. The minimum size of fire extinguishers approved for use on motorboats are hand portable, either B-I or B-II classification, and are listed below:

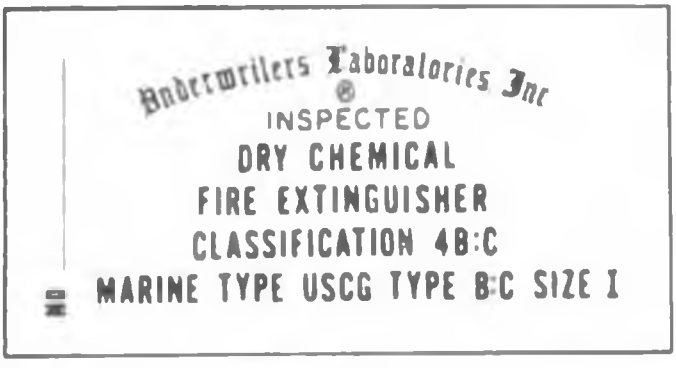
Class of motorboat	*Without fixed system in machinery space*	*With fixed system in machinery space*
A (less than 16 ft.)	1 B-1	None
1 (16 to under 26 ft.)	1 B-1	None
2 (26 to under 40 ft.)	2 B-1 or 1 B-II	1 B-1
3 (40 to 65 ft.)	3 B-1 or 1 B-II and 1 B-1	2 B-1 or 1 B-II

Approved Extinguishers

All extinguishers must be readily accessible (preferably not stowed next to common fire sources), and they must be kept in a serviceable condition. REMEMBER, the number required by law is the minimum. Extra extinguishers provide additional safety.

In addition to labels or any other markings, the extinguisher must bear the label of a testing laboratory which will include either Coast Guard approval numbers or specify "Marine Type USCG." All Carbon tetrachloride extinguishers and others of toxic vaporizing-liquid type such as chlorobromomethane are not approved and are not accepted as required fire extinguishers on any motorboats.

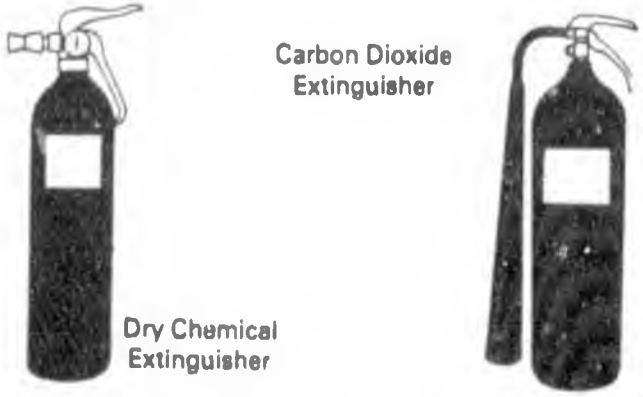
Classification (type-size)	B-1	B-II
Dry Chemical (minimum lbs.)	2	10
Foam (minimum gals.)	1¼	2½
Carbon Dioxide (minimum lbs.)	4	15
Freon Type (minimum lbs.)	2½	None



Types

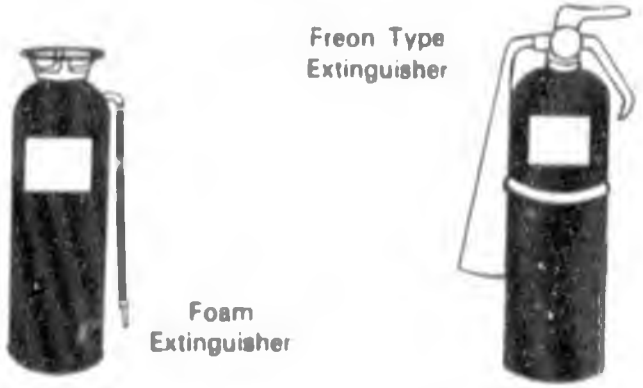
Dry Chemical: Dry chemical extinguishers have two basic parts; a cylinder containing the extinguishing agent, and the valve assembly. The chemical is kept under pressure, and in most cases a gauge or visual indicator is attached to the valve assembly or cylinder to show the expellent charge. Some extinguishers manufactured prior to June 1, 1965 do not have visual indicators, and must be weighed semi-annually to determine their serviceability. Such extinguishers must have a service tag attached indicating service within the last six months. All dry chemical extinguishers should be frequently examined by the boatman for signs of leakage (dry chemical in the nozzle, etc.). During this check, the boater should remove extinguishers from their brackets and shake them vigorously to loose any chemical that might be compacted.

FIRE



Carbon Dioxide Extinguishers: CO2 extinguishers have three basic parts; body, valve assembly and discharge horn. These extinguishers are checked by weighing only. If the total extinguisher weight (gross weight) is reduced by more than 10 percent of the net weight marked on the extinguisher, it is not sufficiently charged and is no longer acceptable. This type of extinguisher is best for use in closed areas and is effective on all types of fires. It is not harmful to clothing, mechanical or electrical parts.

Foam Extinguishers: Foam extinguishers have four basic parts; the tank, ring top, head stopple and inner container. These extinguishers are required to be serviced annually. Periodic checks by the boater should include visual examination of the water level in the tank and the hose. These extinguishers are not recommended for electrical fires.



Freon Extinguishers: Freon extinguishers have four basic parts; body, valve assembly, visual gauge and discharge horn. The freon extinguisher, like the CO2 does not harm clothes, electrical or mechanical parts. These extinguishers should be periodically checked for corrosion and obstructions in the discharge horn. Freon type extinguishers are effective on all types of fires and are best for use in closed areas.

Fire Prevention

The best time to become concerned with fire is before it happens. Almost everyone knows something about fire prevention but many boaters have a false sense of security with all of the water around. Remember, MOST FIRES ARE PREVENTABLE. Here are a few easy checks and precautions:

1. Keep your entire fuel system in good condition. Check tanks, lines, connections, fuel pump and carburetor periodically for leakage. If a leak is spotted, stop the flow, wipe up the spill, discard the cloth in a safe place, ventilate the area until the smell of gas is gone...then get underway. LISTEN TO YOUR NOSE!
2. When fueling your boat, turn off all electrical and internal fuel systems (heaters, stoves, refrigerators). Pilot lights and galley stoves have caused many deaths at the fuel dock. Before leaving the fuel dock, all boat spaces should be ventilated. If your boat is equipped with a blower, make sure that it is run five minutes before you depart.
3. KNOW HOW TO USE YOUR EXTINGUISHERS. All hands should read the instructions for use printed on the extinguisher. If a fire occurs, determine its source. Do not discharge the extinguisher merely in the general direction of the fire, but rather at the base of the fire, in sweeping motions. This is the most effective action to suffocate the fire at its source.

The Fire Triangle

Fuel, heat and oxygen are necesary for fire. Eliminate any one and the fire will go out. Fires are usually extinguished by cooling, smothering or both. The dry chemical, carbon dioxide and foam fire extinguishers do both. For oil and grease fires, direct these agents at the base of the fire.

The three types of fires are combustible materials such as rags or wood; combustible liquids such as gasoline or alcohol; and electrical. Dry chemical, carbon dioxide, foam and freon extinguishers may be used on any of these fires. The most common fire extinguisher is carbon dioxide.

Never use water on a gasoline, oil, grease or electrical fire. Water will spread the first three elements. Since water is a conductor you may receive a damaging shock from an electrical fire. Water can be used to extinguish burning wood, mattresses, rags, paper, rubbish and alcohol.

FIRE

What are the three elements of the fire triangle?

The Fire Triangle

Eliminate any one and the fire will go out.

OXYGEN

Even if a fire appears to be out, it may smolder for a long while and start up again. If possible, soak burning materials over the downwind side of the boat. When the emergency is ended, retrieve refuse to avoid littering the waters.

Follow these steps if fire breaks out underway:

1. Slow or stop the boat. Wind from the boat's motion fans the flames.
2. Keep the fire downwind. If the fire is aft, head the bow into the wind.
   If forward, put the stern into the wind.
3. If the motor catches fire, shut off fuel supply immediately.
4. Display distress signal.
5. Fight the fire.

These actions help prevent the fire from spreading to other parts of the boat.

Before fire breaks out, plan ahead. Decide what should be done to combat a fire in any part of the boat. Always be sure safety equipment is in good working order.

Fueling

Extremely hazardous conditions exist and are often encountered when fueling. Safety rules should be rigidly observed. **When taking on gasoline, all engines should be stopped, galley flames extinguished, hatches, windows and ports secured and electrical devices shut off.** No smoking should be allowed. Diesel fuel, being less flammable, is not as hazardous as gasoline, however, observing the same safety rules is advisable and should contribute to development of "the safety habit".

The gasoline nozzle should contact the fillerpipe deck flange at all times during fueling to prevent the possibility of explosion associated with the spark of static electricity. (Similar precautions should be observed when fueling tanks used with outboards.) The fillerpipe deck flange should be connected to the boat's ground system. Static electricity is generated internally throughout the length of the gas hose by the motion of gasoline and by atmospheric conditions. Modern fuel pump equipment has been designed to prevent this discharge and the danger is, therefore, less than in the past, however, safety precautions are still considered an absolute necessity.

Space should be allowed for fuel expansion. The tank should not be filled to capacity. Approximately five percent should be allowed, based on the average of fuel expansion. It is not necessary to mathematically compute the fuel expansion, experience can be the controlling factor.

When the fueling operation has been completed, any spillage should be wiped up immediately. Exhaust blowers should be operated for a minimum of five minutes before starting engines. This is sometimes difficult to accomplish when the dock is crowded and other boats are waiting to fuel.

It is important to be thoroughly familiar with the

FIRE

dangers of handling gasoline and the necessary precautions to reduce the risk of fire. Become acquainted with the most effective means of extinguishing a gasoline fire. **Gasoline explosions and fires are the leading cause of property damage and one of the significant causes of loss of life and injury on small boats.** Gasoline is used as fuel on the majority of motorboats now in operation, and the boat operator constantly faces the potential hazards of gasoline fire or explosion.

The following Rules for Fueling are reprinted from a publication of the National Fire Protection Association and should be thoroughly learned by every boat operator:

1. Fuel tanks should be properly installed and vented overboard.
2. Fueling should be completed before dark except in emergencies.
3. Whenever a boat is moored at service dock for fueling:
   a. Do not smoke, strike matches or throw switches;
   b. Stop all engines, motors, fans and other devices liable to produce sparks;
   c. Put out all lights and galley fires.
4. Before starting to fuel:
   a. See that the boat is moored securely;
   b. Close all ports, doors and hatches;
   c. Ascertain definitely how much additional fuel the tanks will hold.
5. During fueling:
   a. Keep the nozzle of the hose, or can, in contact with the fill opening to guard against possible static spark;
   b. See that no fuel spillage p[illegible] into the hull or bilges.

Student Activity: Which equirements apply to your boat?

Coast Guard Requirements / Minimum Required Equipment

EQUIPMENT	CLASS A (less than 16 ft) (less than 5m)	CLASS 1 (16 to less than 26 ft.) (5 to less than 8m)	CLASS 2 (26 to less than 40 ft.) (8 to less than 12m)	CLASS 3 (40 to not more than 65 ft.) (12 to not more than 20m)
BACK FIRE FLAME ARRESTOR	One approved device on each carburetor of all gasoline engines installed after April 25, 1940, except outboard motors			
VENTILATION	At least two ventilator ducts fitted with cowls or their equivalent for the purpose of properly and efficiently ventilating the c[illegible]ngers of every engine and fuel tank compartment of boats constructed or decked over after April 25, 1940, using gasoline as fuel or other fuels having a flash point of 110° or less			
PERSONAL FLOTATION DEVICES (PFD)	One approved Type I, II, III or IV device, for each person on board or being towed on water skis, etc.	One approved Type I, II or III device aboard for each person and, in addition, one throwable Type IV device		
BELL, WHISTLE,	All boats must be able to produce navigational signals under rules of the road	Whistle — one hand, mouth, or power operated, audible at least ½ mile	Bell — one, which when struck, produces a clear, bell like tone of full round characteristics One hand or power operated, audible at least 1 mile	One power operated, audible at least 1 mile
FIRE EXTINGUISHER PORTABLE When NO fixed fire extinguishing system is installed in machinery space(s)	At least one B I type approved hand portable fire extinguisher. (Not required on outboard motorboat less than 26 feet in length and not carrying passengers for hire if the construction of such motorboats will not permit the entrapment of explosive or flammable gases or vapors.)		At least two B I type approved portable fire extinguishers, OR At least one B II type approved portable fire extinguisher.	At least three B I type approved portable fire extinguishers, OR at least one B I type Plus one B II type approved portable fire extinguisher.
When fixed fire extinguishing system is installed in machinery space(s)	None	None	At least one B I type approved portable fire extinguisher	At least two B I type approved portable fire extinguishers, OR at least one B II type approved portable fire extinguisher
	B I Type Approved Hand Portable Fire Extinguishers contain Foam, 1½ up to 2½ gallons, or Carbon Dioxide, 4 up to 15 pounds, or Dry Chemical, 2 up to 18 pounds, or Freon 2½ lbs.		B II Type Approved Portable Fire Extinguishers contain Foam, 2½ gallons, or Carbon Dioxide, 15 pounds, or Dry Chemical, 10 pounds.	

MAINTENANCE

Take Care of Your Boat

"Take care of your boat and it will take care of you," is more than just a saying. Marinas, service stations for boats, can be a long way apart. There are no phone booths on the water and passing traffic can't always be counted on. The boater must know how to do things for himself.

To finish a boat trip the way you planned it, two things must happen: The boat must float and the engine must run. Unless you've already capsized, the first problem you'll see to indicate the danger of sinking is water in the bilges, or bottom, of the boat.

Find out where it's coming from — fast! Get life-saving and survival gear ready first. Then find the leak. Check all hull fittings quickly. Be sure you already know what and where they are.

The leak could be coming from: engine water intake, head intake, and discharge, depth finder transducer, rudder post, propeller shaft, bilge pump or galley drains. If the engine water intake line is broken, or any part of the cooling system has sprung a leak, running the engine can pump water into the boat.

If the leak is from a hole in the hull, plug the hole with blankets, clothes or even magazines. If possible, cover the hole with plastic sheeting or a plastic bag from the outside. Head for shore or nearest boat.

Don't wait for an emergency. Take preventive care of your boat. An annual inspection should be made for loose fittings on the hull. Engine and propeller units should be checked regularly.

Whenever you have your boat out of the water check underwater parts for damage. Before you start your engine look for signs of needed repairs.

Check for oil in the bilges every time you set out. Check the dipstick to be sure oil level is high enough. Beware if it goes over the full mark or drops quickly. Watch oil for discoloration or beads of water.

Make sure batteries are properly filled and cables are free of corrosion. A simple cotterpin missing from shift or throttle controls can cause an accident.

Use your nose every time you lift an engine cover or raise a hatch. Sniff for: gasoline, propane, butane, electrical shorts, overheated engine or transmission, stagnant water in the bilges. These smells signal a need for maintenance.

Before you push the starter, run the blower for five minutes with engine hatch open. Whenever you push the starter or turn the key, listen to the engine as it cranks and begins to fire. If it sounds "different" from usual, there may be trouble somewhere.

You don't have to be a trained mechanic to find a problem. Listen, smell, watch and feel. Your boat's talking to you when it doesn't steer properly, shifts hard, backfires or is sluggish.

If you think you have a problem, ask your mechanic or another boater. You'll soon learn to identify important problems and be able to correct many of them yourself. With good maintenance and regular inspection, your boat will be safe and more enjoyable for you and your crew.

Fuel Saving Tips

MAINTENANCE

1. Keep engine well-tuned.
2. Use correct propeller and check it for damage. A nicked or bent propeller slows down the boat and may damage the engine.
3. Be sure engine matches boat. Check mounting for proper tilt.
4. Use proper oil mix in motor. Pour fuel carefully. Reset cap tightly. Keep vent screws closed when not operating to prevent evaporation. Don't overfill to allow for heat expansion.
5. Keep hull clean to reduce friction.

ON THE WATER

1. Drain all water before starting out.
2. Distribute weight properly. Unload excess gear. Don't overload with passengers.
3. Shut off engine when at dock or at rest.
4. Drive in straight line-turns increase motor load.
5. Don't jam throttle ahead at take-off. Plane smoothly and quickly, then throttle back to three-fourths when boat is planed. Most boats operate as well at three-fourths throttle and use half as much fuel. Also applies to water skiing.
6. Plan fishing spots ahead of time. Use trolling motor for minor changes in location.

SAILOR'S WORKSHEET 3

1. Gasoline vapors can be as explosive as _____.
2. Most fires aboard a boat are caused by _____.
3. Where should you fill portable outboard fuel tanks? _____
4. Boat windows, doors and other openings should be: (a) open (b) shut during refueling.
5. What are the three elements of the fire triangle?

_____

6. Fire extinguishers aboard a boat must be kept _____.
7. What are some things you can do to protect your boat against fire? _____

_____

_____

8. What should you do if you spill gasoline aboard a boat? Why?

_____

9. When must a boat show lights? _____
10. How are fire extinguishers classified?

_____

11. A backfire flame arrestor helps reduce the chance of _____.
12. The use of a boat whistle, horn and bell, and signals, indicate (name five):

_____

13. What do the letters PFD signify? _____
14. What is the requirement for PFD's on a boat 16 feet or over? _____

_____

15. Name and describe 4 different types of Coast Guard approved life saving devices:

_____

16. What should you do with a PFD that has become badly torn, stiff or heavy.

_____

17. The survival suit is (a) an approved PFD (b) not an approved PFD.

TRAILERING

Trailer Safety

Your boat trailer is an important part of your boating equipment. All too often, the trailer does not receive the attention that it deserves and demands. After selecting the proper trailer for your boat, continual care in hitching, towing and maintaining is necessary. If any of these areas are neglected, you may be endangering the safety of your boat, your car, your family and yourself.

Normally, the length of the boat determines the length of the trailer. The beam (width) determines the width of the trailer. The boat should fit snugly on the trailer when it is cranked up to the winch support. There should be proper support for the boat's bottom. Most trailers have adjustable rubber rollers with nylon bushings or wooden chocks which are cushioned. These help absorb road shocks and prevent transmission of the shocks to the boat's hull. These supports must be aligned properly to prevent warping the hull.

The first time the boat is placed on the trailer, the rollers and supports should be adjusted to conform to the boat's bottom, and the bolts tightened securely. After the initial adjustments are made, they will probably not need further attention except to check the bolts from time to time to be certain that they haven't worked loose.

Proper tie downs should also be considered in choosing a trailer. Sufficient support for each side of the hull is essential to prevent the boat from shifting while it is on the trailer.

Trailer Load

The trailer must be strong enough to carry the weight that will be placed on it. The load capacity of a boat trailer should not be exceeded. Most trailers will have a data plate that states the maximum load capacity and the correct specifications for the tires. If your trailer does not have such a plate, consult other sources or your dealer for this information. Remember, the "load" placed on a trailer includes the weight of the boat, the engine and all gear that is loaded into the boat. Equal distribution of items placed inside the boat is of vital importance

While trailering, many boaters haul most of their gear in their boats. If this is done, the load should be distributed so that the heaviest items are placed on the bottom of the boat, directly over a supporting roller or chock. The gear should be secured carefully to keep it from shifting around.

Hitching the Trailer

Trailer hitches come in a variety of shapes and sizes. Most boat trailers connect to a ball hitch that is bolted or welded to the towing vehicle. Clamp-on-bumper hitches are not recommended for heavy loads or continual towing. Special heavy duty equalizing hitches are a necessity for trailer tongue weights (the weight a loaded trailer places on the hitch of the towing vehicle) of 250 pounds or greater. The trailer hitch itself should match the size of the ball hitch; NEVER use a ball hitch that is too small. Solid steel ball hitches are preferable.

Tongue Weight

Too much weight on the hitch will cause "tail dragging" of the towing vehicle, impairing steering and raising headlights into the eyes of oncoming traffic. Too little or negative weight on the hitch, and the trailer will sway or "fishtail". The solution to proper distribution is often adjusting the wheel carriage either forward or back. If the carriage cannot be adjusted, relocate movable gear. If this fails to correct the problem, consider another trailer of different design.

Couplings

The coupling hitch on the trailer should have a lock or provisions to prevent loosening due to vibration. Lubricate the hitch for longer wear, quiet turns and to prevent corrosion.

Safety Chains

The trailer must be equipped with at least one, preferably two, safety chains. They should be strong enough to control the trailer if the regular hitch or coupling breaks. Hook the chains in the form of an "X" to the frame of the towing vehicle. Use a bolt to secure the safety chain to the tongue. The chain must have a breaking strength of at least the gross weight of the trailer; solid link chain is best.

Lights

Alaska state law requires two red taillights on the rear that may be combined with the stop and turn signals. Vehicles over 80 inches in width require

TRAILERING

clearance lights. If lights are dunked, waterproof light fixtures should be used. If water is allowed to enter, the lamp may crack and short out the entire lighting system. Water also promotes contact corrosion. Always carry spare lamps. The wire coupling to the towing vehicle should be high enough to stay dry. Never rely on the trailer hitch for ground connection. Four-pole connectors should be used.

Tires should ALWAYS be inflated to manufacturer's recommended pressure. Always carry a spare wheel, jack and bearings that fit the boat trailer. If wheel bearings are always dunked, waterproof bearings and caps should be considered. If water is allowed into the hub, lubricating grease will float away and bearings will burn out or seize, causing damage and a safety hazard. Waterproofed bearings should be inspected prior to each boating season, others more often. Special care should be given when traveling on unimproved roadways with small-diameter wheels.

Car Carrying

1. Protect car top with a carrier or cushion material.
2. Alaska state law requires:
   a. The driver's vision must not be obscured.
   b. The boat being carried may not extend more than 3 feet in front and no more than six feet beyond the rearmost limits of the body of the vehicle.
   c. The vehicle and boat's height may not exceed 13½ feet; total width may not exceed 8 feet.
   d. The object carried may not obscure the vehicle's front or rear lights.
   e. The boat must be tightly secure and visual to all traffic (reflectors, flags, lights).

Towing

Boat trailers must be licensed just as automobiles. Alaska, like most states, has regulations pertaining to trailer ownership and operation. Periodic vehicle inspections made by law enforcement agencies also include boat trailers. Particular emphasis is placed on lights and reflectors, towing hitches, brakes, safety chains, size limitations and weight.

Extra caution is necessary when towing any trailer. The heavier the rig, the more time required to accelerate, pass and stop. For this reason, the maximum speed for vehicles with trailers is 55 miles

per hour. A long rig requires a larger turning radius. Curbs and obstructions should be given wide clearance. Most boats on trailers obstruct the rear view of the driver. When this happens, an additional rear view mirror on the right side of the towing vehicle is required by law. The trailer boatman should be familiar with traffic and highway laws relating to the towing of trailers.

Trailering Hints

The simplest precautions, if observed, will make trailering a boat a pleasant and relaxing experience. The first emphasis would be that the car is capable of the pull required.

Avoid sudden stops. Always allow extra following distance.

If you are passed, air turbulence from a large vehicle will push the trailer to the right. DON'T BRAKE. This gust will move along the trailer immediately and will tend to correct the sway. If you are not traveling at the average speed of traffic on the highway, pull over at the first safe chance to allow others that may be following to pass.

When passing, remember that the trailer adds weight and will reduce acceleration, with this in mind, more room is needed for overtaking. Always change lanes smoothly to avoid whipping the trailer.

Trailer wheels and car wheels do not follow in the same path. One must steer wider on corners and the trailer will stay clear of the curb or other vehicles. On curves, stay well on your side of the center line.

Practice backing maneuvers in an open area. When backing, do not rush. Remember that the trailer will turn in an opposite direction than the car. AVOID

TRAILERING

OVERSTEERING. It is a good idea to have someone outside of the car to help give directional guidance.

If a car engine should ever overheat, do not remove the radiator cap, have the engine idle rapidly to increase air flow. Remember to shut off your air conditioning until the idling temperature returns to normal. Cold water should not be poured over or into a hot engine. Transmission coolers are recommended for towing heavy loads, for long distances or during hot periods.

Launching and Retrieving

Prepare boat for launching at the top of the ramp or parking facility. Remove all tie-down straps, check boat plugs and fasten boat painter. Do not release winch line until boat is in the water. Back trailer to the left if possible; backing left gives better launching visibility. Avoid dunking wheel bearings where possible. Never leave the towing vehicle unattended on the ramp with only the parking brake set. If vehicle must be left while on the ramp, set transmission in "park" or first gear, in addition.

In retrieving your boat, make sure that the boat is properly placed on the trailer. Secure winch line to the bow eye. Pull trailer up steadily to prevent spinning the wheels.

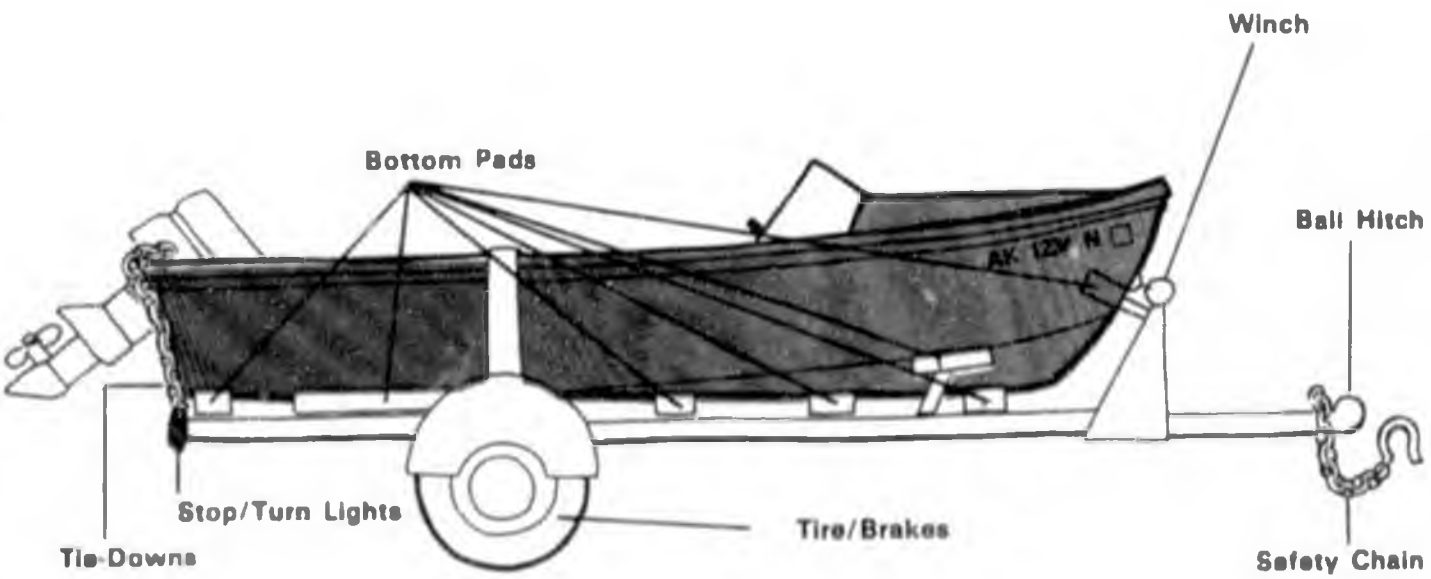
Trailer Safety Precautions

Before leaving home:

1. Be sure that the boat is secured properly on the trailer.
2. Inspect all lines, tie-downs and the winch. Tighten as necessary and replace any that show signs of fraying or strand separation.
3. Determine that all trailer lights are operating satisfactorily.
4. Test the braking system.
5. Inspect the hitch and safety chain.
6. Check tires: pressure, lug bolts and the possible need of tire rotation.

On the road:

1. Drive carefully, allowing for the extra length of the car and trailer when negotiating turns and when passing.
2. Allow more time for stopping.
3. Watch speed limits.
4. Pull well off the road periodically and walk completely around the rig. Examine the tires, the wheel bearings for overheating, test the tie-downs and check any gear which is being carried in the boat.



SAILOR'S WORKSHEET 4

1. List at least four parts to check before pulling a boat trailer.

   _____

2. Trailers give support to the boat's:

   (a) rigging (b) cockpit (c) bottom

3. Light items (a) may (b) may not be carried in the boat when trailering.

4. The ball hitch used on the towing vehicle should match the size of the _____ hitch.

5. The best method to attach a towing hitch, would be to the car's: (a) frame (b) bumper.

6. Why is a safety chain on your trailer hitch necessary?

   _____

7. When pulling a boat trailer you should carry a _____

8. List two ways you can care for your trailer tires. _____

   _____

9. To safely and legally tow a boat and trailer which obstructs the rear view, an additional mirror on the

   _____ side of the car is required.

10. Trailer wheels do not follow the path of car wheels, so you must steer _____ on corners.

11. You need more room to pass other cars when towing because _____

    _____

12. When towing a trailer one should avoid stopping _____ and be sure to allow

    plenty of _____ between you and the car ahead.

13. If your car engine overheats while you are towing a boat you should _____

    _____

14. The vehicle and boat may not be higher than _____ nor wider than _____

15. Be sure the car top boat does not extend more than _____ in front of the vehicle.

16. The car top boat may not extend more than _____ beyond the rearmost limits of the body of the vehicle.

17. Give two examples of assuring that the boat is visible.

    _____

Part III

NAVIGATIONAL AIDS

Navigational aids or signposts are similar to traffic signs. They help guide boaters on bodies of water by:

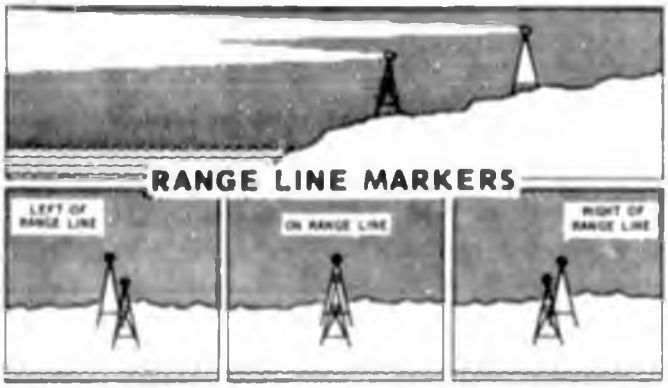
1. Finding location
2. Warning of danger
3. Guiding the boat from place to place
4. Pointing out special marine situations

Aids may be natural structures. Usually, they are artificial markers. They may be floating or non-floating. They are installed and maintained by the U.S. Coast Guard, state or local agencies.

Natural aids are land features such as high peaks, bluffs or beaches. They can also be manmade structures like tall buildings or bridges.

Artificial markers may be lighted or unlighted. Different shapes, sizes and colors mean different directions. Markers are found in the water and along the shore. All boaters should memorize the navigational aids that apply to the waters they travel.

Visual aids include minor and range lights, lighthouses, buoys, signs and daymarks. Electronic and audio signals include radio beacons and fog signals.



Minor Lights

These structures may be painted similarly to lighthouses. They are often black or red, following the buoyage marking system. These lights may have low-powered, continuously operating radio beacons and fog signals.

Range Lights

Range lights may be white, red or green and may be fixed or flashing. They are arranged so when in line (one over the other) they indicate the boater is on a safe course. They are usually visible only in one direction. By steering a course to keep these lights in line, the boater will remain within the channel. Many range lights are located on shore, so a chart is necessary to determine where to change course.

Lighthouses

Lighthouses are found along the coasts and on some interior waterways. They are placed on prominent headlands, at harbor entrances or on isolated dangers. These structures are painted solid colors or with bands or patterns. The lights have colors and flashes which, with the painted patterns, help identify individual lighthouses.

Radio Beacon

Radio beacons are located at many lighthouses, and shore stations. They emit radio signals in the 285 to 324 kilocycle range. Accurate use is limited to about 100 miles. Small craft operators make good use of the system, which is simple to operate and relatively low cost.

Fog Signals

Most lighthouses and some buoys and minor lights are equipped with sound. These aid the mariner when visibility is low. Charts and light lists for the area should be used for positive identification. CAUTION: Buoys fitted with bells, gongs or whistles sounded by wave motion may ring at irregular intervals. Positive identification is not always possible.

Buoys

Buoys are artificial markers. They use color, shape, numbers, light and sound to guide boaters along a safe course. Used with the right charts, they help find position. When visibility is low, buoys with gongs, bells or whistles indicate danger to boaters.

Red Right Returning

Seafarers use the phrase "red right returning" to remind them of the correct course among red and black buoys. It means that red buoys are always passed on your right or *starboard* side when returning to port from open sea (or upstream.) The opposite also holds true. When leaving port toward sea, red buoys are left and black buoys are starboard. Red buoys are always even-numbered. Black buoys are odd-numbered.

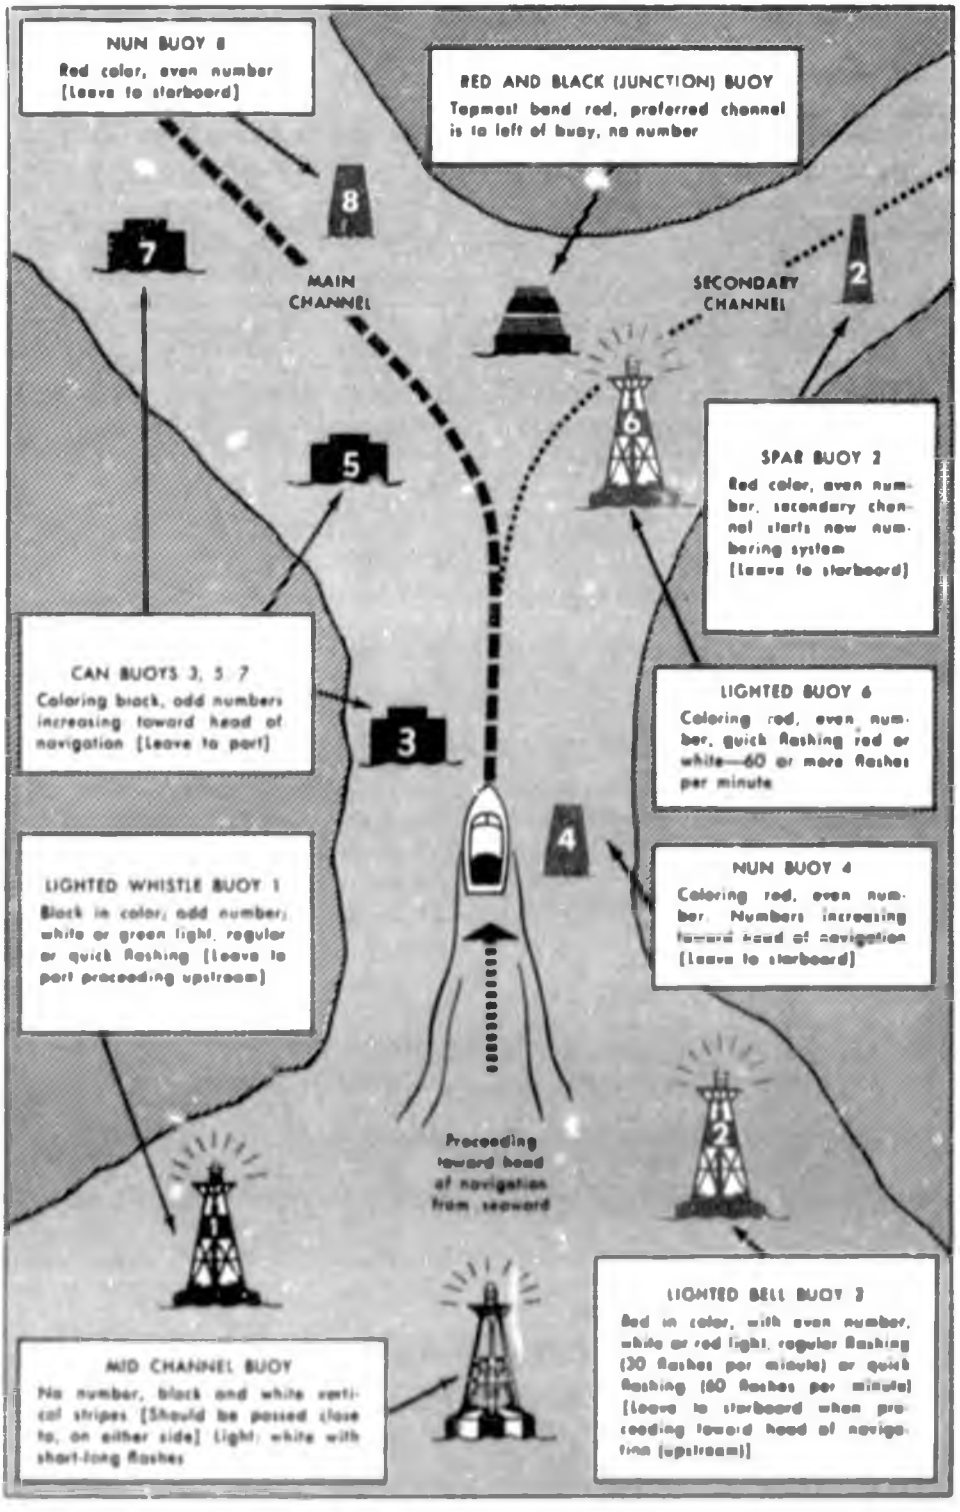
On some channels it is difficult to determine the seaward direction. On these waters you must compare the aids you see with a nautical chart. Some examples of these are the Atlantic and Gulf coasts and the Great Lakes.

On most rivers it is assumed that red is to starboard (right) while proceeding from sea to river head. Don't be confused by local terminology that describes left bank and right bank with the flow of the river. To be sure, use a nautical chart.

Sometimes buoys are missing, adrift, or off the chartered position or station. Heavy storms, ice flows or collisions may move a buoy. Even buoys on the correct station should be passed at a distance. They may be very close to the danger they mark. Report misplaced buoys to the proper authorities.

NAVIGATIONAL AIDS

Federal Channel Marker System



SAILOR'S WORKSHEET 5

1. Name four ways that navigational aids guide the boater.

_____

2. What are four natural aids to navigation?

_____

_____

3. U.S. waters are marked with a _____

4. The red nun or red spar buoy should be on the _____ side when going upstream or entering a channel from a larger body of water.

5. The black can or black spar buoy should be on the _____ side when going upstream or entering a channel from a larger waterway.

6. Red nun or red spar buoys have _____ numbers.

7. Black can or black spar buoys have _____ numbers.

8. Identify the navigational aids:

A. _____

B. _____

C. _____

A.

B.

C.

9. Name five different kinds of navigational aids.

_____

10. What are the three R's in boating and what do the mean?

_____

_____

COMPASS

The Compass

While not required by law for the private boater an accurate compass is probably one of the most important and interesting pieces of equipment on a boat. In its simplest form the compass is a needle that points to North.

Small boat compasses use a compass card instead of a needle. This is simply a round disk that sits on top of the magnetized needle or bar. Around the compass card on the frame of the compass are the degrees of the entire compass, 360 total.

Contrary to common belief, the compass card or the needle of the compass does NOT turn. It stands still and the boat along with the frame of the compass turns around it. Because of this you can look at the compass and see which direction you are going by reading the lubber line against the compass card. In a way, the compass card is like having a little world floating in front of you, and no matter how you change course it is constantly in the same position as the earth you are boating on.

Practice cruising by course, that is, draw a line across the chart (maps of water areas are properly called charts) from where you start to where you wish to go. Note the degrees of your course and hold that course with your compass until you reach your destination. Did you steer a straight line or did you have to change your heading often? With a little practice you'll find that steering a course with your compass will leave a straight wake behind your boat, proof that you're not zig zagging your way across the water.

To understand better how to use a compass, simply hold a boat compass in your hands, note the degrees by using the lubber line that is your course to a point across the room. Holding the compass steady, walk across the room holding your course. Now turn around and come back. If you do it properly you'll add or subtract exactly 180 degrees.

Practice finding the return course by adding or subtracting 180 degrees. Remember the answer always has to be LESS than 360 degrees. For example if your outbound course is 40 degrees, you can return to your starting point by cruising 220 degrees. Never confuse 030 with 300 degrees. Most compasses do not show the last zero, therefore, 3 on your compass indicates 30 degrees and the number 30 means 300.

Once you have your compass properly adjusted for your boat, keep metal objects, especially anything with a magnet like a flashlight, small radio or stereo speaker as far away as possible. Magnetized or large metal objects may turn your compass card from several feet away. Electric wiring is always suspect if it runs close to your compass. Be sure to check your compass by switching on and off all the electrical

switches. Snapping on the running lights could change your compass card by several degrees or make it fail completely. Digital wrist watches have been reported to change compass headings by as much as five degrees.

Nautical Charts

Most lakes and rivers have some kind of chart available to help the boater avoid danger areas and find his way from one point to another. Large bodies of water, bays, rivers, oceans and lakes have been charted by the National Ocean Survey.

NOS charts provide much detailed information about water depth, marker buoys, dangers under the water and over it, as well as an accurate picture of shorelines and waterways.

Estimating one's position on the water is always difficult because distance is deceiving over the water. The best rule for deciding where you are is to identify at least three landmarks or navigational aids in as much of a complete circle as possible. Compare their positions to the chart you are using.

Keeping an eye on only one point is a good way of going aground or running over rocks that are plainly marked on your chart. Learning to recognize the landmarks and navigational aids is a skill that only comes with practice.

WEATHER

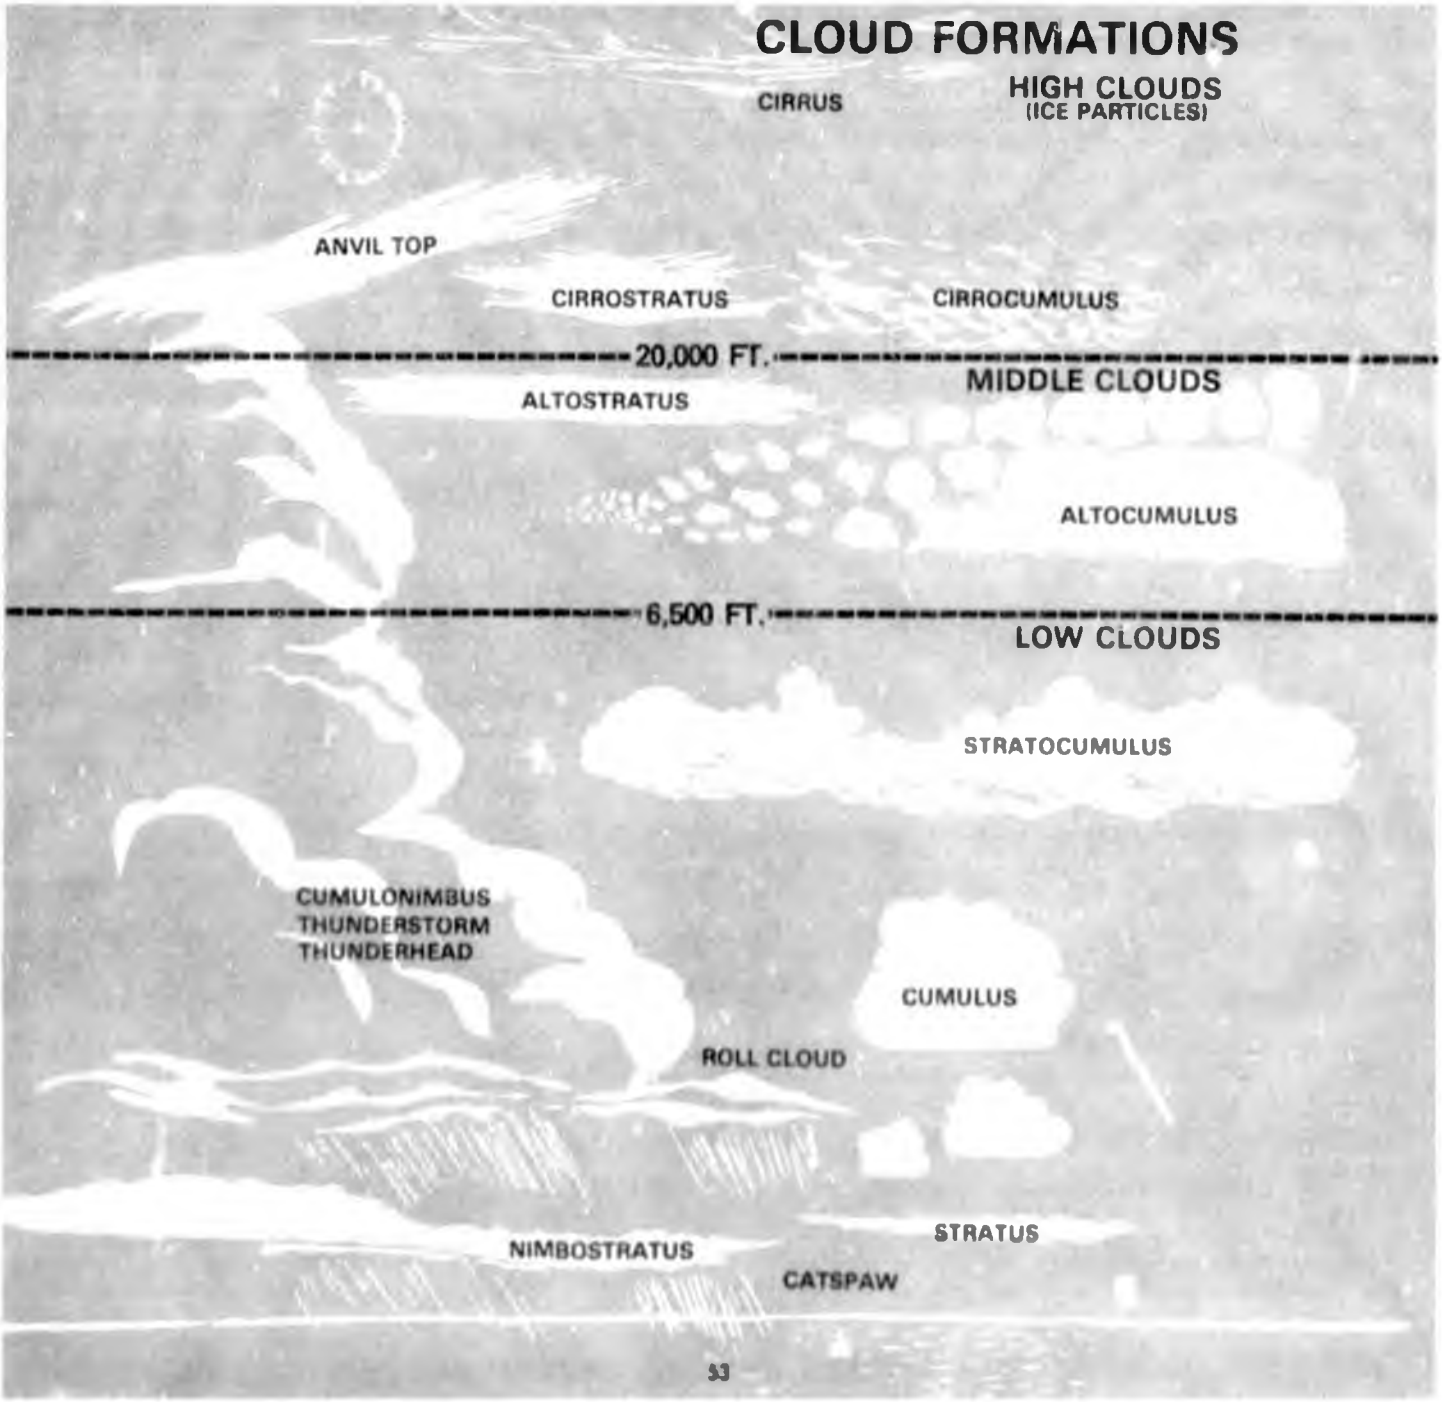
Weather is uncertain and difficult for even a professional to predict. Always watch for signs of changing weather. Check reports and forecasts often.

While no rules are always true, here are a few guidelines to help determine weather changes.

Bad weather changes come from the west. T is is usually true. A storm to the west will likely hit soon. It seldom passes by. Storms to the north or east may pass over. But, be prepared! There is also a good chance of getting caught right in the middle of it.

Watch for wind shifts. This usually means weather is changing.

Check the barometer. Moving air creates pressure changes when it passes over the earth. A barometer registers air pressure. When pressure is heavy, the baron er has a high reading. A rising barometer indicates fair weather ahead. When pressure is high, clouds are high in the sky. Low clouds usually accompany low pressure.



WEATHER

Winds and Currents

Winds and *currents* can greatly affect a motorboat's course. If a boat sits deep in the water, it will be influenced more by current than wind. Likewise, a high-riding boat will be affected more by wind than current. In plotting a course, take winds and currents into account. Before taking a motorboat into strong currents or winds, practice safe handling in calm waters.

Always allow *leeway* for current and wind. When underway, check navigational signs and aids frequently. If one has been missed, do not proceed. Turn back until the proper course is re-established. If lost, anchor and wait for help. Remember, always allow for leeway, which does not affect the compass, to stay on course.

A motorboat in a river or stream is best handled going against the current. Going down stream, the boat must go faster than the current. Otherwise, it cannot be steered. Never drift in strong currents. Current speed is changeable. In narrow channels, current speed increases. In wider channels, the current usually decreases.

Currents and winds can be very helpful to the boater. Learn to use them to advantage.

Tides

The movement of tides affect water speed and depth. Water depth may vary by 10 feet or more on tidal waters. A safe course at noon may be dangerous three hours later. Learn to read and understand tide tables.

Wind-barometer Table

Wind Direction	Barometer Reduced to Sea Level	Character of Weather
SW to NW	30.10 to 30.20, steady	Fair, with slight temperature changes for 1 or 2 days.
SW to NW	30.10 to 30.20, rising rapidly	Fair followed by rain within 2 days.
SW to NW	30.20 and above, stationary	Continued fair with no decided temperature change.
SW to NW	30.20 and above, falling slowly	Slowly rising temperature, fair for 2 days.
S to SE	30.10 to 30.20, falling slowly	Rain within 24 hours.
S to SE	30.10 to 30.20, falling rapidly	Wind increasing in force, with rain within 12 to 24 hrs.
SE to NE	30.10 to 30.20, falling slowly	Rain in 12 to 18 hours.
SE to NE	30.10 to 30.20, falling rapidly	Increasing wind and rain within 12 hours.
E to NE	30.10 and above, falling slowly	In summer, with light winds, rain may not fall for several days. In winter, rain in 24 hours.
E to NE	30.10 and above, falling fast	In summer, rain probably in 12 hours. In winter, rain or snow, with increasing winds, will often set in when the barometer begins to fall and the wind sets in NE.
SE to NE	30.00 or below, falling slowly	Rain will continue 1 or 2 days.
SE to NE	30.00 or below, falling rapidly	Rain with high wind, followed within 36 hours by clearing, and in winter, colder.
S to SW	30.00 or below, rising slowly	Clearing in a few hours, fair several days.
S to E	29.80 or below, falling rapidly	Severe storm imminent, followed in 24 hours by clearing, and in winter, colder.
E to N	29.80 or below, falling rapidly	Severe NE gale and heavy rain; in winter, heavy snow and a cold wave.
Going to W	29.80 or below, rising rapidly	Clearing and colder.

NOTE: The table includes general statements about the weather and can be very useful. However, the latest official Weather Bureau forecast should be used whenever the forecast is available. These forecasts are available on scheduled marine radioplane broadcasts, from commercial radio stations, and from the Weather Bureau offices.

WEATHER

Weather Signals

When potentially dangerous wind or sea conditions exist or are forecast, storm signals are displayed. These include small craft, gale, storm and hurricane warnings. Small craft warnings are directed to craft of many sizes and designs. Do not set out in storm warnings unless the boat can handle conditions forecast. Check with local weather stations, Coast Guard radio or Weather Bureau broadcasts (162.55 MegaHertz) for the latest weather forecast. Also check local weather and sea conditions.

When afloat, watch for these signs of dangerous weather ahead:

1. **Dark, threatening clouds** may indicate a squall or thunderstorm.
2. Watch for a **steady increase in wind or sea.** Pay special attention to increasing winds blowing against a strong tide. Steep waves may form, capable of capsizing a boat.
3. **Heavy static on the AM radio** may indicate thunderstorms nearby.
4. Always check **radio weather broadcasts** and warnings.

Fog can be a serious threat to the boater. It forms frequently in coastal waters, especially during summer. Fog may reduce visibility to only a few feet. Landmarks and navigational aids disappear. At first sign of fog, the boater should proceed to buoy. If practical, he should then return to harbor.

It is wise to record compass course and time between buoys upon departure and return to harbor. This easy reference may someday help avoid disaster.

Sea Anchor

Caught in Foul Weather

1. Reduce speed. Proceed with caution.
2. Head for nearest shore that is safe to approach. Stay in protected area until storm subsides if one is near.
3. Head bow into waves at slight angle. Watch for floating debris.
4. Secure loose items. Have emergency gear ready.
5. Keep bilges free of water.
6. Seat passengers on bottom of boat near center line. Put on life jackets.
7. If motor fails...drag sea anchor (tackle box, bucket or shirt with neck and sleeves knotted) from bow.

National Weather Service Storm Advisories

SAILOR'S WORKSHEET 6

1. Though not required by law the _____ is one of the most important pieces of navigational equipment.
2. A road _____ is for highway use; a _____ is for navigational use.
3. A barometer registers _____
4. Low clouds usually accompany: (a) high (b) low pressure.
5. In addition to wind, a motorboat's course can be affected by _____
6. What is leeway?

   _____
7. Identify the following storm signals:

   (a) _____

   (b) _____

   (c) _____

   (d) _____

8. What is the first thing you should do if caught in foul weather?

   _____
9. You should _____ _____ your boat into the waves if caught in bad weather.
10. What is a sea anchor?

    _____
11. Three articles which can be used as sea anchors in an emergency are:

    _____
12. Bad weather usually comes from the _____

Part IV

RULES of the ROAD

Understanding the Rules of the Road

A word of encouragement, you will not be expected to quote all the rules of the road. However, no matter where you do your boating, others have the right to assume that you know what you are doing. Remember, when you take the wheel or tiller, there is a presumption of knowledge! If you fail to observe the rules the fact that you did not know them will not be accepted as a valid defense.

Navigational skills, like driving skills, are meaningless without a set of basic rules of the road. These rules are often common sense guidelines. The reason for having rules is to prevent collision. They supply uniform patterns of passing, direction and safe operating behavior. They help prevent accidents.

(The Rules taught in this course are primarily Inland Rules of the Road. International Rules are similar, however, there are a few major differences, especially in sound signals, lights and shapes. For further information, refer to CG-169 Navigation Rules and CG-169-1 Colregs).

The determination of where Inland Rules begin and International Rules cease is at times difficult. A general rule is: "the waters inshore of a line approximately parallel with the general trend of the shore, drawn through the outermost buoy or other aid to navigation of any system of aids are inland waters". Many charts also show the location of these divisions. See CG-169-1 for further information in given areas.

Safety Tips and Regulations

1. Reckless or Careless Operation

Avoid causing harm or injury to any person, boat or property. Respect the property and rights of others on the water. **No person should operate any vessel or manipulate any water skis, aquaplane or similar device in a reckless or negligent manner so as to endanger the life, limb or property of any person.**

2. Operator Awareness

Always keep a sharp lookout for other boats, swimmers or obstacles. Never operate a boat while under the influence of alcohol or drugs.

3. Speed Regulations

When no limits are posted, operate the boat so it will not endanger others. The boat must be able to stop safely within the clear distance ahead. When passing near marinas, fishing areas, swimming areas, boat servicing buoys or similar activities, reduce speed. Skippers are responsible for damage caused by wakes.

Every vessel shall, under conditions of reduced visibility, go at a moderate speed with careful regard for existing circumstances and conditions. Other actions such as speeding in confined or restricted areas, "buzzing" or "wetting down" others, skiing at prohibited times or in restricted areas, can also be construed to be reckless or negligent operation.

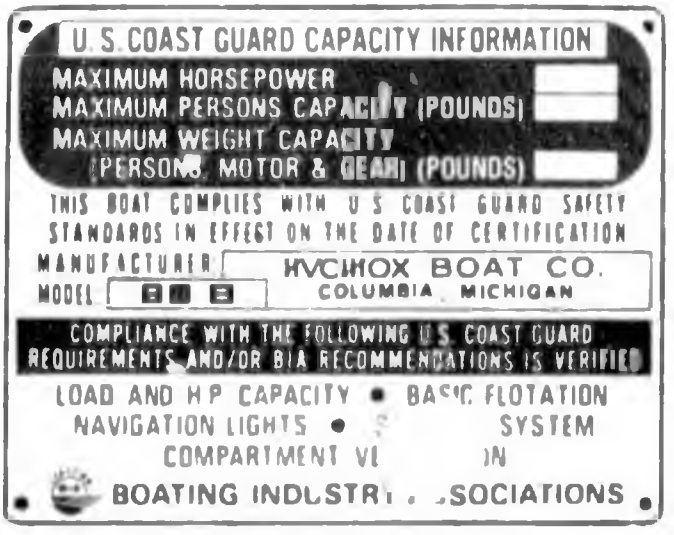
4. Restricted Areas

Some waterways limit boat or motor size use. Check federal regulations before departing. In some cases, a launching permit may be necessary.

5. Overloading

Consider weather and existing conditions. Never load a boat with passengers or cargo beyond its safe carrying capacity. For a guide, check the manufacturer's load capacity plate.

This plate is found inside the boat in full view of the operator's station. It gives maximum load and horsepower rating. It is mandatory on new boats, single hull vessels under 20 feet and can be helpful matching motor to boat.



Outboard Capacity Plate

RULES of the ROAD

6. Riding on Decks or Gunwales

Riding on the bow, gunwale or transom of a vessel propelled by machinery underway when such position is not protected by railing or other reasonable deterrent to falling overboard or riding in a position or manner which is obviously dangerous. (This does not apply to a vessel's crewmen in the act of anchoring, mooring or making fast to dock or another vessel or the necessary management of a sail.)

7. Interference with Navigation

Never obstruct a channel or fairway or interfere with the travel of other boats. Avoid anchoring in heavily traveled areas. Do not block launching areas.

8. Mooring to Buoys

The only buoys you are permitted to moor to are mooring buoys. Mooring to a navigation buoy or other aid to navigation is illegal.

9. Sewage Disposal

No person shall maintain or operate in or upon the navigable waters of any lake, reservoir or fresh water impoundment of this state any vessel which is equipped with a toilet unless such toilet is sealed or otherwise rendered inoperable or designed so that no human excreta can be discharged into such waters.

10. Water Skiing

Have at least two persons aboard a boat towing a waterskier; the operator and observer who must be 12 years of age or older. Skiing from sunset to sunrise is extremely dangerous.

Water skis and aquaplanes will not be operated in a manner to endanger safety of persons or property. Passing the towline over another vessel or skier or navigating between a vessel and its tow is also prohibited.

Although skiers are not required to wear Coast Guard approved life jackets, they are considered persons "on board". If an approved PFD is not worn by the skier, one must be on board.

Definitions

As we develop the subject, we will be using terms which may be unfamiliar or new. Because these rules are in fact laws, exact definitions become very important. The following terms will appear throughout this Chapter, so let's "define our terms" before we proceed further.

Vessel - The word "vessel" includes every description of water craft, including nondisplacement craft and seaplanes, used or capable of being used as a means of transportation on water.

Motorboat - Any vessel propelled by machinery, including any sailing vessel under sail AND power.

Sailing Vessel - Any vessel which is under sail alone, including any power vessel under sail alone.

Underway - Not at anchor, aground or made fast to the shore.

Danger Zone - The area from dead ahead of a vessel to two points abaft the the starboard beam.

Right-of-Way - The right and duty to maintain course and speed.

Stand-On [Privileged] Vessel - The vessel which has the right-of-way.

Give-Way [Burdened] Vessel - The vessel which must keep clear of the stand-on vessel.

Visible (when applied to lights) - Visible on a dark, clear night.

Short Blast (on whistle) - A blast of about one second duration.

Prolonged Blast (on whistle) — A blast of four to six seconds duration.

Long Blast — A blast of eight to twelve seconds duration.

Right of Way

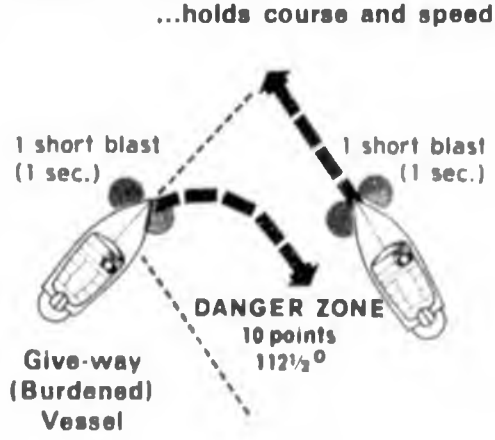
On the water, the stand-on (privileged) vessel has the right-of-way. The give-way (burdened) vessel must give way. At night, running lights indicate which boat has the right-of-way. The lights give information about size, direction, speed and the way it is turning. A green light is on the starboard side of the boat; a red light on the port side. If a red light is visible, that boat is the stand-on vessel. The location of the white stern light helps tell what the other boat is doing. Always use common sense. This is especially important at night. The other boator may not know what the lights mean. Proceed slowly and with caution. If both boats obey the rules of the road, the maneuver is completed without danger and a collision is avoided.

Note: Under Inland, Great Lakes and Western Rivers rules of the road, signals are sounded for intention of movement. Under International rules of the road, the signals are only given when the movement is being executed.

RULES of the ROAD

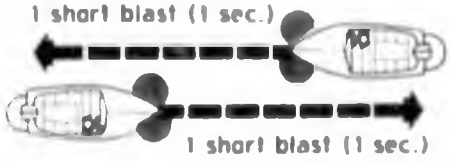
The following diagrams indicate the proper, safe way to maneuver in several situations. These rules of the road are used on waters throughout the country. Learn them well.

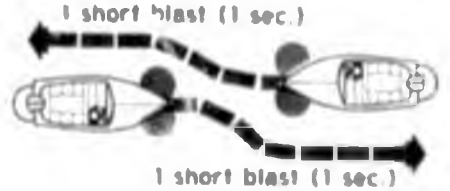
Crossing Situation



When two motorboats are approaching each other at right angles with risk of collision, the motorboat having the other boat on its port (left) side shall hold its course and speed and the other shall keep out of the way by directing its course to starboard (right) or if necessary, by slowing, stopping or reversing.

Meeting Situation





When meeting head-on, or nearly so, either vessel shall signal its intention with one short blast which the other vessel shall answer promptly. Each vessel shall then turn to its starboard (right) and pass with the other vessel on its port (left) side. When two powerboats are meeting head to head or nearly so, neither is the stand-on vessel.

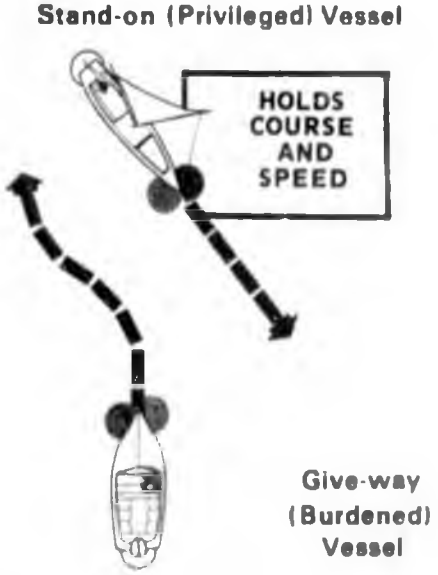
When courses are so far to the starboard of each other as not to be considered as meeting head-on but risk of collision still exists, either vessel shall immediately give two short blasts which the other vessel shall answer promptly by two short blasts and each shall pass with the other vessel on its starboard.

When two motorboats are running in the same direction and the vessel astern desires to pass, it must give the sound signals indicated above.

If the course ahead is not safe for passing, the stand-on (privileged) vessel shall indicate so by four or more short rapid blasts under Inland rules and five or more short rapid blasts under International rules.

A motorboat approaching another motorboat from the stern and overtaking it shall keep out of the way of the overtaken vessel. The vessel being overtaken shall hold its course and speed.

RULES of the ROAD



Sailboats, Other Vessels

A sailboat usually has right-of-way over motorboats—except when the sailboat is the overtaking boat or when it is under power. The motorboat then keeps clear and passes astern of the sailboat.

Boats propelled by oars or paddles have the right-of-way over motorboats. Small pleasure craft must yield to large vessels in narrow channels. Large craft cannot move as easily as small boats.

Other Situations

At any time when there is danger of collision and conditions prevent immediate compliance by either vessel with the other vessel's signals, the danger signal shall be sounded and both vessels shall be stopped or backed, if necessary, until signals for passing with safety are sounded and understood.

A motorboat nearing a bend in a channel where vessels approaching from the other direction cannot be seen, shall signal with long long blast (8 to 12 seconds) under Inland rules and with one prolonged blast (4 to 6 seconds) under International rules which should be answered with the same signal by any approaching motorboat within hearing.

Motorboats shall keep to the starboard side of narrow channels whenever safe and practicable.

Motorboats shall give and answer signals for passing when in sight of each other and passing or meeting within one-half mile. A vessel does not signal when another vessel is seen directly ahead crossing her course. Unnecessary use of sound signals prohibited. When boats are put in reverse, a signal of three short blasts will be made.

Traffic Hazards

Never water ski or cut in front of a tow. The pilot has a blind spot in front of the barges. He may not spot a fallen skier or a disabled boat.

Also stay away from the sides or back of the tow. Strong suction currents can draw a boat into the propellers. A dangerous current may also extend several hundred feet astern of the towboat.

It is important to avoid even moored barges. Currents can pull a boat underneath. Do not launch a boat upstream of a moored barge. A boat with a hard-to-start motor may drift down before the boater realizes the danger.

Fog Signals

The law prescribes signals to identify vessels under conditions of reduced visibility such as fog, mist, heavy rain or snow.

1. One prolonged blast (4 to 6 seconds) every two minutes under International rules and every minute under Inland rules must be sounded by a motorboat underway and not towing.

2. One prolonged blast followed by two short blasts every two minutes under International rules and every minute under Inland rules must be sounded by a motorboat underway and towing another vessel. The vessel being towed must sound one prolonged and three short blasts every two minutes under International rules.

3. A sailboat underway must sound one prolonged blast followed by two short blasts every two minutes under International rules. Under Inland rules, a sailboat on a starboard tack must sound one blast every minute, two blasts every minute if on a port tack and three blasts in succession every minute if running free.

4. Bell ringing rapidly for about five seconds at interval of one minute is the signal given by a vessel at anchor under both Inland and International rules.

A motorboat hearing a fog signal apparently forward of its beam shall stop engines and navigate with caution until danger of collision is over.

SAILOR'S WORKSHEET 7

1. The purpose of the Rules of the Road is to prevent _____

   What should you do if no speed limits are posted?

   _____

3. Who is responsible for the damage caused by the wake of a boat?

   _____

4. The only kinds of buoys that may legally be used for mooring are _____ buoys.

5. What vessels must obey the Rules of the Road?

   _____

6. A boat with the right-of-way is called the _____ boat.

7. A boat which does not have the right-of-way is called the _____ boat.

8. In a crossing situation the boat to _____ has the right-of-way.

9. What must you do if your boat is being overtaken by another boat?

   a. Slow down.

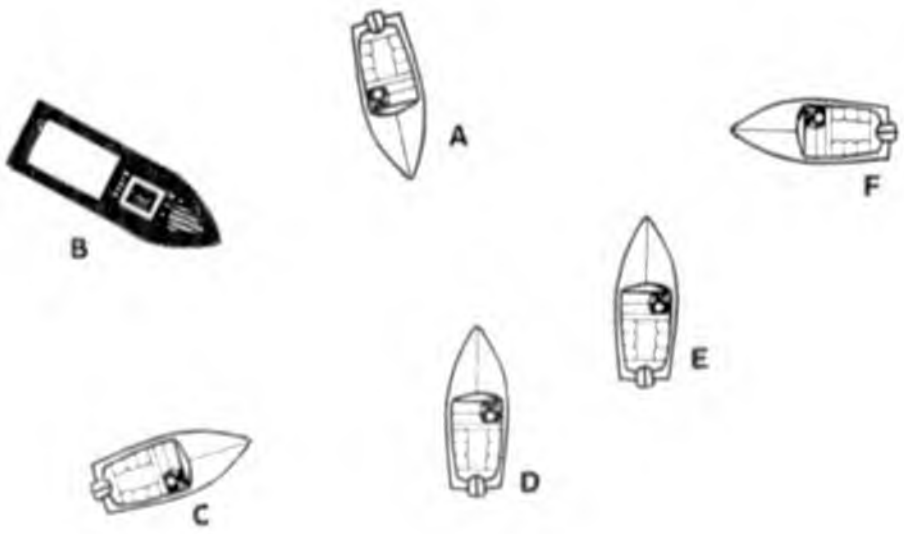
   b. Speed up.

   c. Hold your course and speed.

   d. Turn to starboard.

Test continues on page 63.

SAILOR'S WORKSHEET 7



10. C and D are in _____ situation under Inland rules. C signals with one short blast. D answers by sounding _____. (5 points each)

11. D and E are in a situation of _____ . _____ is the give-way (burdened) vessel _____ must maintain course and speed.

12. A and D are meeting _____ _____ or nearly so. Both boats must _____ and pass each other on the _____ side.

13. Between E and F, _____ is the stand-on (privileged) vessel and _____ must turn to _____

14. If B is a large freighter in a narrow channel what must C and D do?

_____

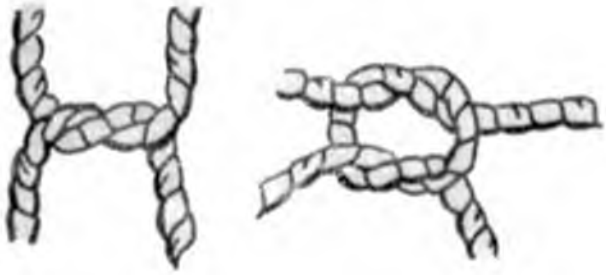
KNOTS

A line is a rope that is being used on board. A boater doesn't throw the rope. In nautical terms, he heaves a line.

Lines protect people and boats and when used with care, can last for many years. In tying knots, "practice makes perfect."

A boater uses six basic knots. Learn them well.

1. Square Knot
2. Bowline
3. Anchor Bend
4. Clove Hitch
5. Figure Eight
6. Half Hitch



Square Knot

Simple to make (so everyone says), the square knot is used for many applications for light duty work.

Bowline

Handiest of the knots, the bowline is probably the most difficult of those presented here. Use it whenever an eye or loop is needed. The bowline will neither slip nor jam.

Anchor Bend

The anchor bend is used to fasten a line to a ring or anchor. It is also called a fisherman's knot.

Clove Hitch and Half Hitch

The clove hitch is simply two loops with an end tucked under. This knot is used to secure the boat to a piling or similar structure for a short stay. For securing longer than thirty minutes, use two half hitches to lock the clove hitch.

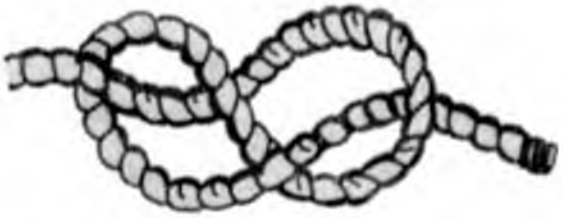


Figure Eight

This knot is principally used as a stopping knot. It is placed at the end of a line to keep it from running through a block jam cleat or other opening. The figure eight can also be used temporarily in place of "whipping" to prevent a line from unraveling.

How To Make Fast To A Cleat

The knot above, when finished, is a figure 8 with one loop reversed. Note that by snubbing the free end back under, the knot can be released without disturbing the boat. Most boaters take a half dozen figure 8's before locking with the reverse; two or three will do.

Here are some basic rules to keep lines strong and safe:

1. Keep them free from mud, dirt and grease.
2. Keep them coiled and stowed in a dry place. This helps prevent kinks and rot.

PREPARATION

When you prepare for your first cruise, remember that a boat is very unsafe if it is not loaded properly. Careful loading of supplies and equipment as well as the safety of passengers is the responsibility of the skipper.

Loading

When loading, stow all supplies securely, and well out of the way. Use a checklist to make sure all equipment is aboard, and always:

1. Keep deck areas clear.
2. Fasten gear to prevent shifting.
3. Distribute all weight evenly.
4. Never overload a vessel.

Loading

Boarding

When passengers are ready to board, the skipper should let them know which area of the boat they may or may not use. Assist them in putting on their PFD's. Make sure mooring lines remain secured to keep the boat steady while boarding.

When boarding a small boat from a dock or low pier, step aboard *amidship* (center of the boat). Stay low and hold onto the gunwales to keep your balance.

Don't carry equipment when boarding. Keep your hands free and have someone on the dock pass supplies to you after you are aboard.

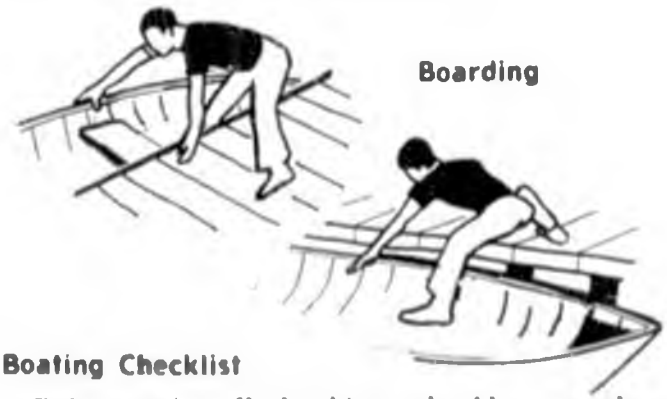
If the boat is moored by bow lines or beached bow first, board over the bow. This will keep the craft stable.

When passengers are aboard, the skipper must make sure their weight is distributed evenly so the boat is *trim*. Total weight of the passengers, motor and gear should not exceed Coast Guard or BIA capacity plate limitations.

(See page 58 for more information on the capacity rating plate.)

Heavy loads decrease a boat's *freeboard* (amount of space between the boat's rail and the waterline. If loaded too heavily, small waves or wakes may swamp the boat. Check your load before getting underway. Make sure the boat is not overloaded.

Passengers should remain seated at all times. If changing seats or standing is necessary, reduce speed to slow or stop completely. When moving, keep low and use the gunwales for balance.



Boarding

Boating Checklist

Before casting off, the skipper should go over these final safety checks. Double checking and even triple checking is a good idea.

- ☐ 1. Safety equipment, including anchor and line and distress flag, aboard and accessible.
- ☐ 2. Coast Guard approved PFD for each person on board. (Plus one throwable device on vessels 16 ft. or over.)
- ☐ 3. Lines coiled and out of way.
- ☐ 4. Ample fuel in tanks.
- ☐ 5. Paddles or oars on board.
- ☐ 6. Lights and whistles in working order.
- ☐ 7. Boat doesn't leak.
- ☐ 8. Water is bailed.
- ☐ 9. Bilges clean, clear, free from gasoline vapors.
- ☐ 10. No fuel leaks.
- ☐ 11. Spilled gasoline wiped up.
- ☐ 12. Weather report OK for boating.
- ☐ 13. Gear fastened and out of way.
- ☐ 14. Passengers seated; boat trim.
- ☐ 15. Mooring lines snug.
- ☐ 16. Propeller clear of weeds, rocks, etc.
- ☐ 17. Motor safety chain attached to boat.
- ☐ 18. Motor shut off valve open.
- ☐ 19. Tool kit and extra parts on board.
- ☐ 20. Skipper is alert and sober, aware of local regulations,...and in the right frame of mind.

PREPARATION

BOATING FLOAT PLAN

This plan for boats is similar to that used by airplane pilots. When you plan to boat, especially on larger waters, it is a good idea to leave information with friends or relatives.

The boating float plan is designed to assist officers in locating you if something should happen.

Leave this plan with the local marina operator, one of your relatives, or a close friend. (Be sure to cancel the plan when you return.)

Float Plan

1. DESCRIPTION OF BOAT Inboard _____ Outboard _____

A. Boat number and or name _____
B. Size _____
C. Make _____
D. Capacity _____
E. No. Engines _____
F. Horsepower _____
G. Fuel: Gas _____
Diesel _____

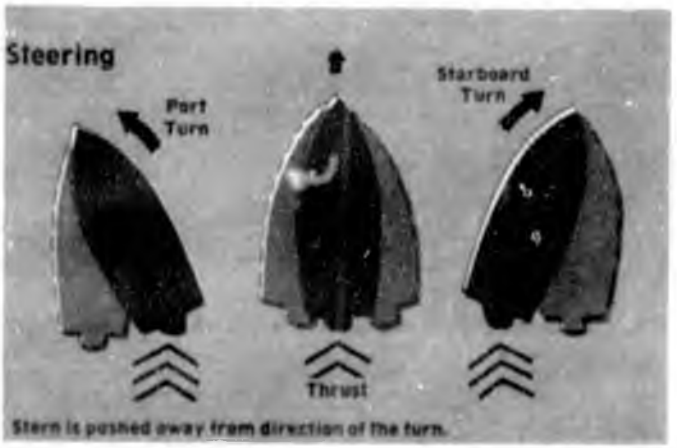
1. Equipment is required by conscientiousness and good sense but not necessarily by law.
2. Equipment can be useful in some circumstances.

THE FIRST CRUISE

With the equipment loaded and passengers aboard, the skipper is ready for the first cruise. Keep the mooring lines secured and start the engine in neutral. If using an outboard with starting cord, remember to stay seated. If operating an inboard, ventilate the engine compartment for at least five minutes before starting.

Be sure the area is clear before leaving the dock. Cast off lines, signal and pull away slowly. Coil lines and stow them out of the way.

On the first cruise, be sure to take along an experienced adult boater. Then practice making slow turns. Remember the stern moves in the direction it is pushed by the motor. Practice until you feel comfortable at the controls.



Leaving the Dock or Pier

Here are a few tips for casting off and leaving the dock.

With the wind or tide holding the boat to the dock:

1. Cast off stern line. Keep bow line secured.
2. Turn the motor or rudder to carry the stern away from the pier.
3. Shift into forward, go slowly ahead against the bow line.
4. After the stern swings away from the pier, shift to reverse to gain slack in the bow line. Cast off and back away from the dock until clear.
5. Shift to forward and leave the moorage at slow speed.

On the lee side of the dock:

1. Cast off lines.
2. Use an oar or paddle and push to keep the boat clear of dock.
3. Let the wind or current carry the boat out away from the dock.
4. Shift to forward and angle slowly away from the dock.

Once underway, pull in the fenders and make sure all lines are in and coiled. Travel at a slow no-wake speed until away from docks, floats, swimmers and other craft.

Skipper's Duties When Underway

After the boat is loaded and you've maneuvered out of the dock area, the skipper's responsibilities don't end. When underway, always:

1. Be thoroughly familiar with the way the boat handles. Know the distance it takes to stop after throttling down, the turning radius, most efficient cruising speed, etc.
2. Avoid taking any unnecessary risks that may endanger the crew or boat. Always choose the safest course.
3. Frequently check your position in relation to landmarks and aids to navigation. Know where you are at all times.
4. Note the weather, wind and current, if they are changing and how it is affecting the boat.
5. You now know the rules of the road, (page 58), be sure to follow them. In heavy traffic areas slow down and be extra cautious.
6. Always stop to render assistance to those in danger or distress. This means anything from a stalled engine to more serious situations.
7. In addition to the boat, the skipper is responsible for the passengers. Make sure they stay seated and act in a safe, responsible manner while aboard.

Cruising

An overnight cruise is a pleasant way to enjoy boating. There is adventure afloat, things to do and places to see.

First check the boat over carefully. Then chart a course. Stow extra parts and tools aboard. A portable radio is a must for weather reports. Compass, flashlights, drinking water, extra line, toilet articles, insect repellant, warm bedding and matches should all be aboard before setting out.

Be sure to allow plenty of time to reach your destination. Be familiar with the other ports along the way.

Keep a log. Its fun and gives you a record of your trip and everything that happened.

Use the motor wisely. Full speed ahead burns up extra gas and saves little time. On boats with planing hulls, get up to planing speed as soon as possible, then slow to about 70 percent power while staying on the plane. Conserve our energy resources.

MOORING

Docking

It is a good idea to practice docking in open water with an anchored float. Learn how the current and wind can move the boat from every direction.

When docking, head into the current and wind whenever possible. This gives better control of the boat. If the wind is stronger than the current, head into the wind.

When approaching a dock, move slowly. Have fenders in place and lines ready. Be ready to use forward, neutral and reverse gears. Ramming into a dock will damage both it and the boat. A good skipper doesn't bump any part of the craft. Ease the boat into the landing.

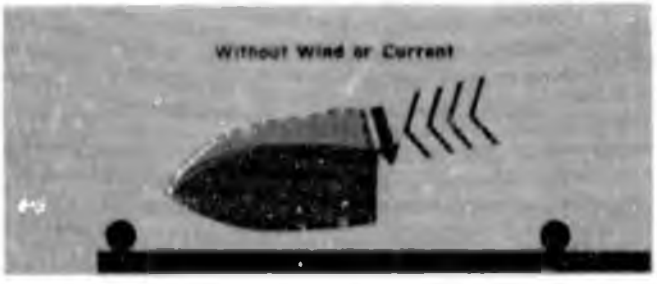
When close, toss lines to someone on the pier. If no one is available, pull the boat into the dock with a boat hook or your hand. Step ashore with the bow line. Secure this line first and then the stern line, if headed into the wind or current. Don't shut off the engine until all lines are fast.

When heaving or throwing lines make sure they are coiled. Heave them underhand for a smoother toss. Use enough line to allow for changes in water level and motion caused by rough water.

Learn how to dock in all possible weather conditions. Here are some basic guidelines for several different situations.

Without Wind or Current

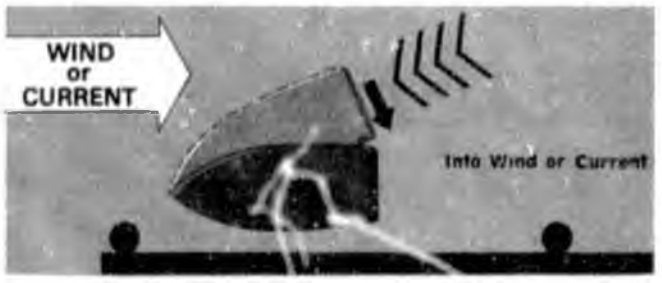
When there is no wind or current, the skipper should approach the dock at a very slight angle (10 to 20 degrees). When the bow is close to the dock, shift the craft into reverse to slow headway. Then ease into the landing.



Into the Wind or Current

When the wind or current is coming from the bow, approach the dock at a slight angle (20 to 30 degrees). When the bow is close to the pier, turn the boat so it is parallel to the dock.

The stern will then swing into the landing. If necessary, shift into reverse to slow the boat.



With Wind or Current from the Dock

When the wind or current is coming from the direction of the pier, again approach slowly, this time at a fairly sharp (45 degree) angle. At the dock, shift into neutral and secure a bow line. Turn the rudder hard the direction away from the dock. Next slowly go forward against the bow line. This will cause the stern to move to the landing.

With Wind or Current toward the Dock

With the wind or current moving into the landing, approach so the boat is parallel to the dock. Shift into neutral and let the wind and current carry the craft into the pier. It may be necessary to do some steering.

With Wind or Current Astern

Docking with the wind and current coming from behind the boat is very difficult, and should be avoided if possible. If not, be ready to continually use reverse gear to slow momentum. Approach the dock at a slight angle. When the bow is close, use reverse to slow headway. Make fast the stern line first, then the bow line.

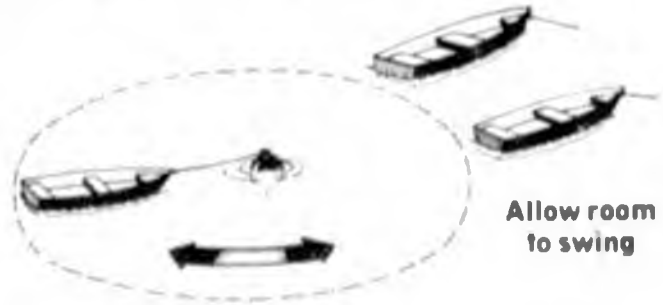
ANCHORING

Anchoring

At times the boater may wish to anchor to swim, eat, fish or just to relax. When anchoring, choose a spot with a level holding bottom, protection from the wind, and water of suitable depth. Such an anchorage is good for overnight and frees the skipper from worrying about the weather.

If mooring away from wharves or piers, allow enough clearance for a full circle swing of the boat and the swing of boats moored nearby. Don't depend on the current alone to keep the boat in line. Use an extra anchor with at least six times as much line as the depth of the water in which anchored. A long line cushions the shock of rough water and winds on the boat. It helps hold the anchor better. Be sure that all lines are tied fast and don't jam or slip.

Before thinking about how to anchor, decide where to anchor. The navigation chart can help find a good protected, flat bottomed spot to anchor.



Move the bow slowly to the spot where the anchor will lie. Slow down, use reverse gear to control motion. Then lower the anchor over the side, hand over hand. Never stand in the coils of line on deck. Don't attempt to heave the anchor by casting from the side of the boat. Lower it as described above, then, the possibility of fouling the anchor is minimized.

With the anchor on the bottom and the boat slowly in reverse, line can be payed out as the boat takes it, preferably with a turn of line around the cleat. Stop the line when it is out about six times the depth of the water: The anchor will get a quick sure bite into the bottom. Shorten the line if needed, make line fast and shut off the motor.

After the boat is anchored, line it up with a landmark on the far shore. Then you'll be able to tell if it does begin to drift.

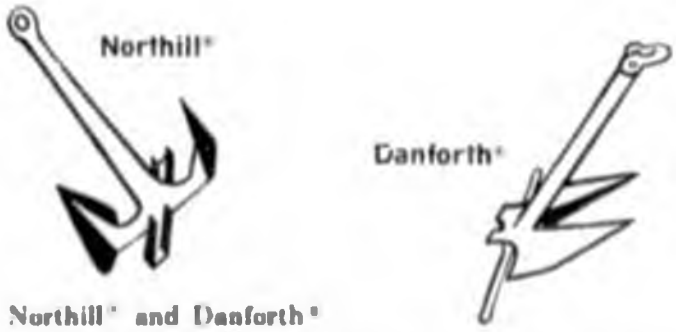
Types of Anchors

For many years, anchors were limited to relatively few types. The Navy® anchor was the most popular. Improved variations of each type appeared and radically new designs, based on holding power rather than weight evolved.

The Danforth® and the Northill® are the most popular small boat anchors. The Danforth® is perhaps the most common type. This anchor has tremendous holding power for its weight. In the Danforth® anchor, the flukes are long and sharp. It is designed so heavy strains will bury the anchor completely.

To choose the right anchor, proportion the anchor weight to the boat length. A small anchor of ½ pound per foot, a medium anchor of 1 pound per foot and a large anchor of 2 pounds per foot.

Types of Anchors



Northill® and Danforth®

These popular lightweight anchors are among the most popular. They hold well on most bottoms, once set properly.

Mushroom

Often used for long-term moorage, this anchor works best in sand and mud.

Stockless or Navy®

The Navy® anchor is a heavyweight. It uses weight for its holding power. It is used primarily on large vessels.

SAILOR'S WORKSHEET 8

1. When mooring a boat, it is best to hea _____ and the _____.
2. An anchor line should usually be _____ _____ times the depth of the water anchored in.
3. An anchor should be: (a) thrown out (b) lowered over the side.
4. Name these five basic knots used in boating.

_____ _____

_____

_____

_____

_____

5. The figure eight knot is used primarily as a _____
6. Line that is to be stowed should be in a dry _____ _____ _____ place.
7. The _____ is used for light duty work.
8. The _____ is used to tie a line temporarily to a pile or bollard.
9. The _____ _____ is known as the handiest of knots.
10. A _____ _____ would be used in securing a line over a cleat.

COAST GUARD
1462

Part V

ACCIDENTS

An accident can happen whenever you're afloat. If another boat is in distress, offer aid. However, do not interfere with rescue operations by others with better knowledge or equipment.

Accidents usually occur without warning. Never stand up in a small boat when underway, fishing or starting the motor. It only leads to trouble. Remember, riding on decks or gunwales is unwise and in some states illegal. A quick stop or turn may toss a person overboard into the propeller. Always decrease speed gradually when stopping in a boat with a low transom. The wake may swamp the boat. Accidents are often caused because a basic safety rule has been ignored or broken. Common causes of boating accidents are:

1. Engine too big or too heavy
2. High speed turns
3. Overloading
4. Riding on decks or gunwales
5. Damage from wakes
6. Lack of Personal Flotation Devices
7. Explosion and fire during fueling or leakage

Small open boats capsizing cause more fatalities than any other boating accident. Some examples of these are fishing and hunting boats and whitewater rafts. Usual causes of capsizings are:

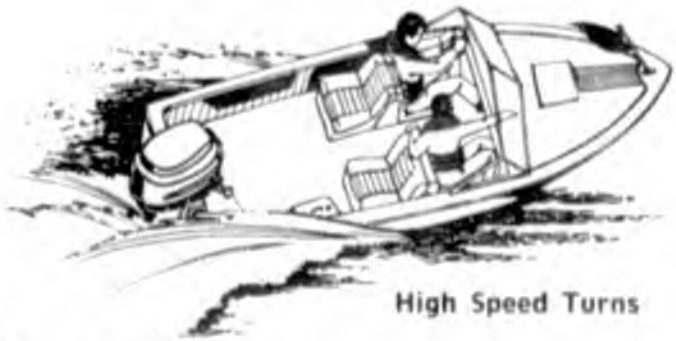
1. Taking the boat into waters beyond its capability of operating safely.
2. Overloading boat with passengers and equipment.
3. Inexperienced boaters operating in unsafe waters.

An overloaded boat loses buoyancy and stability. The boat then capsizes easily. Sometimes the wake of a passing boat or a passenger's sudden movement is enough to capsize an overloaded boat. *AN OVERLOADED BOAT IS A DANGEROUS BOAT.*

Should the boat capsize, grab a lifesaving device. Swim to the boat and hold on. Do not try to swim to shore. It is usually farther than it looks. And, it is easier to spot an overturned boat than a swimmer. As a general rule, wear a personal flotation device and stay with the boat until help comes.

Causes of Accidents

Engine Too Big or Too Heavy

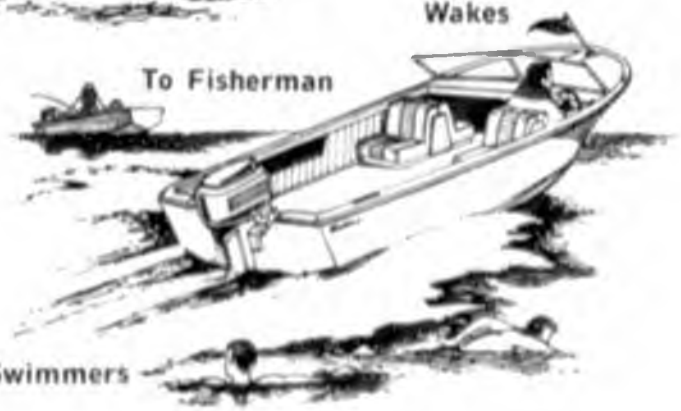


High Speed Turns

Overloading

Damage from Wakes

To Fisherman



Riding on Decks or Gunwales

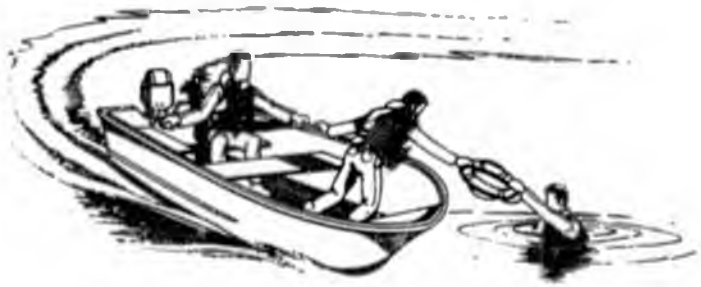
To Swimmers

ACCIDENTS

Person Overboard

In the event of a person overboard, follow these procedures:

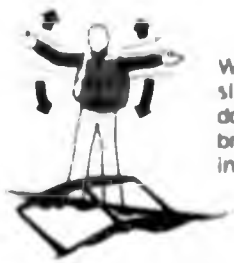
1. Swing stern away by turning the wheel toward the side the person went over.
2. Toss him a life saving device...even if he can swim. A life ring is the preferred device. It can be thrown farther and is easier to hang on to. However, use whatever device is nearest. Time is essential.
3. Slow the boat.
4. Keep the person in view. Other persons onboard should act as lookouts. At night, direct the best possible lights on the victim.
5. Try to approach the person from downwind or into the waves. Always use common sense and good judgement. Consider existing conditions, water temperature, physical condition and ability of the victim and what other help is available.
6. If someone aboard is capable, he may put on a life saving device with a line attached to the boat. He should then enter the water to assist the person needing help.
7. Assist the person in boarding the boat. It is difficult to climb into a boat from the water. If a person is hurt or cold, he may require help.
8. Depending on the size and construction of the boat, the person should be brought in over the bow or stern.
9. Always stop the motor when someone is going over the side or coming aboard.



Distress Signals

Blink white light for SOS — 3 dots, 3 dashes, 3 dots.

Flash mirror to sun.



Wave arms slowly up and down. Hold bright cloth in hands.

Spread dye on water. Turns green or orange.

Light a fire using oil or diesel in a metal pail. DO NOT USE GASOLINE!

Sound horn, whistle or bell rapidly and repeatedly.

Ignite red or orange smoke signal, rocket or flare.

Wave orange flag.

Display orange cloth.

Send "may day" over radio.

ACCIDENTS

Assistance and Rescue

When helping others, remember:

1. Always be ready to help if possible.
2. Help save lives, but never risk a life to save equipment.
3. Never take unnecessary chances. Use equipment to save lives.
4. Don't panic.

Get lifesaving devices ready. Approach the accident cautiously. Watch for people in the water. Toss lifesaving devices to those who do not have them. Give

help first to anyone who seems to be having trouble. Talk to the people in the water. They can tell you if they are all right.

To pick a person from the water, approach slowly and stop motor alongside. Heave a line and bring him in over the stern or bow. Balance the boat so it does

not roll too much when people crawl aboard. Do not overload the boat.

If there are more people requiring help than the boat will safely hold, bring aboard those most in need of help. Be sure all others have adequate life saving devices. Heave a line to the others and secure it to the stern cleat. This will allow them to be towed slowly to shore and will also prevent an overloading situation.

Survival in the Water

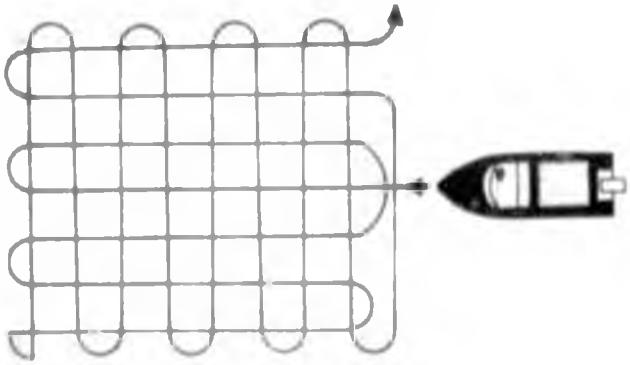
You may fall overboard or be forced into the water from a boat accident. Don't panic or fight the water. Swim slow and easy to conserve strength. Hang onto the boat unless it is in danger.

Any piece of equipment will help you float and signal for help. In a fire or explosion throw overboard anything that floats. Tie a rope to the boat and to the floating gear. If the boat is on fire you can then float a safe distance away and not lose the boat. Floating debris is easier to see than one person in the water.

Clothing can preserve body heat and help you float. Take it off only if it hampers movement. Fasten clothing around neck to hold in air. Keep arms under water. Hold air in trousers around the knees by bending legs. Hunters and fishermen can use air trapped in boots if they are kept underwater. You can also use clothing as a signaling device.

You may begin to lose body heat through hypothermia. (See page 79) If exhausted or losing consciousness, tie yourself to anything that floats.

Typical Search and Recovery Pattern



Accident Reporting

Boating accident reports help state and federal authorities reduce or eliminate future accidents.

Accidents include capsizing, collision, foundering, flooding, fire, explosion and disappearance of people or equipment other than by theft.

The operator of a boat involved in an accident is responsible for filing a report with the appropriate authorities. Reports are generally required for accidents that result in death or injury or in loss or damage over $100. Know the requirements for your area.

SAILOR'S WORKSHEET 9

1. What are the seven most common causes of boating accidents?

_____

2. An overloaded boat is a _____ boat.

3. If you see another boat in trouble you should _____.

4. If a boat is in trouble but is being aided by another boat better equipped than yours you should _____

_____

5. What are some things you can do to help people who are in the water following a boating accident?

_____

_____

_____

6. What is the first thing you should do if a person falls off your motorboat?

_____

7. Number these statements in the order you would follow in the event of a person overboard from your motorboat.

___ Stop the motor.
___ Swing the stern away from the person overboard.
___ Bring the person aboard over the bow or the stern.
___ Throw the person a lifesaving device.
___ Slow the boat.
___ Approach the person slowly from downwind or into the waves.

8. How many of the 10 distress signals can you name?

_____

9. Who is responsible for reporting a boating accident?

_____

10. What are three reasons a boat capsizes?

_____

11. If forced into the water from a boating accident, you should: (a) swim to nearest shore (b) stay with the boat unless it's in danger.

12. When in the water, clothing can preserve _____ and help prevent

_____.

FIRST AID

First Aid Courses

Learn as much about good boating and safety afloat as possible. Take an approved first aid course from the American Red Cross or other organization. Equip the boat with marine first aid kit. Include enough supplies to take care of nearly every kind of minor accident that might occur. Have information needed to use these supplies properly.

Remember — the first duty of a skipper is the safety of passengers, crew and boat.

Injuries

The most likely dangers are burns, serious bleeding, broken bones, drowning and shock.

Some first aid will be necessary while the injured person is being taken back to shore for professional help.

Shock

Shock can cause death if not treated promptly, even though the injury itself may not be serious enough to cause death. Any person with a serious injury should be treated for shock even though shock symptoms have not appeared.

Bleeding

Most bleeding can usually be controlled by applying a pad of clean cloth directly over the wound with elevation if injuries permit. For more serious bleeding, a large cloth should be applied and bandaged into place. Make sure it is not too tight.

If a limb is injured and the blood is bright red and spurting, pressure on the supplying arteries is needed. The pressure points are on the inner side of the arm midway between the shoulder and elbow and on the upper leg at the center of the angle where the leg joins the body. Direct pressure and elevation should also be continued.

Burns

A burn is a serious, painful injury and should be treated carefully. First aid objectives are to prevent infection, relieve pain and treat for shock.

There are three degrees of burns. **First degree** burns redden the skin, **second degree burns form a blister, and third degree** burns char or destroy tissues.

Broken Bones

If a person breaks a bone while aboard, keep the

INJURY	WATCH FOR THESE SIGNS	TREATMENT
Broken Bones	Pain, tenderness, deformity and possible bleeding.	Immobilize broken ends and adjacent ends. Control bleeding with direct pressure. Keep still and treat for shock.
Burns	**Degrees** 1st — Skin is red. 2nd — Skin is blistered. 3rd — Skin is charred.	Burned area should immediately be immersed in cold water. 70° Add ice to cool water but do not apply to burned surface. Apply a cold pack to difficult areas. 3rd degree — apply a thick, dry, sterile dressing to keep air out.
Heart Failure Epilepsy	Victim is obviously ill with no apparent external injury. Clutching chest, convulsions.	Send for help immediately. Loosen collar, assist to a sitting or reclining position which ever makes breathing easier. Help with prescribed medicine. For convulsions do not restrain victim.
Objects in eyes, ears and nose.	Local irritation, tearing and wetting.	Eye. Don't rub. Lift particles out with corner of clean handkerchief. If unsuccessful or particle embedded, cover both eyes and get medical attention. Ear and nose. Get medical attention, don't try to remove.
Poisoning	Blurred vision, stomach cramps, vomiting, headaches, convulsions or deep sleep.	Get medical help immediately. If victim is conscious, dilute the poison by having them drink a glass of milk or water. DO INDUCE VOMITING. Contact a poison control center for further instructions.
Shock	Pale, clammy skin, irregular breathing, fast, weak, pulse. Possible unconsciousness.	If breathing is regular and no chest injuries exist, raise hips and legs. If conscious and unnauseated, give liquids, but never alcohol. Never force fluids on unconscious person. Keep victim comfortable.
Sunburn	Red, painful skin and chills. Fever and shock occasionally accompany severe sunburns.	Apply cold compress to sunburned area. Get medical help for severe sunburns. Prevention: Use sunscreen lotion before and during timed exposures to sun. Stop exposure when burn is first noticed.
Unconsciousness	Victim is not awake, does not respond to external stimuli.	Keep victim lying down. Cover to keep warm. Turn head to side in case of vomiting. Get medical attention. Stand by to give artificial respiration if breathing stops. Liquids or foods should never be given to an unconscious person.

broken limb from moving. Stop the bleeding.

If a person in the water is suspected of having a broken back or neck, **Do Not Remove Him From The Water!** Keep head above surface and summon aid of a rescue service.

Carbon Monoxide Poisoning

Carbon monoxide gas is a by-product of gasoline engines. It may also be produced by catalytic heaters, charcoal, gas lanterns and gas stoves. Know the symptoms and how to treat them.

Carbon monoxide is odorless and tasteless. It is extremely toxic in small quantities. **Symptoms are dizziness, ringing in the ears, headache, nausea, loss of motion and unconsciousness.** To treat, get the victim in fresh air. If necessary apply mouth to mouth resuscitation and get medical help. Precautions against carbon monoxide poisoning are to keep lots of fresh air flowing through the boat, to zig-zag the course and to run faster than the wind. If you have a catalytic heater, be sure to have adequate ventilation. Do not leave the heater burning through the night.

Mouth to Mouth Resuscitation

Mouth to mouth resuscitation should be used for people who have stopped breathing because of: **drowning, electric shock, foreign objects in the throat, head and chest injuries, heart attack, poisoning, shock, smoke suffocation, smothering and stroke.**

A Person May Not Be Dead Just Because He Stops Breathing! A person who stops breathing might live if someone starts mouth to mouth resuscitation. The victim's lips, tongue and nails may have turned blue. This simply means he needs air. Start mouth to mouth resuscitation right away. This will give him air more efficiently than any other way known. It will not hurt him and it might save his life.

Mouth to mouth resuscitation means blowing air into a person through his mouth and then letting the air come out. Be sure his mouth is empty and his tongue hasn't slipped back in his throat. Breathe deeply, hold his nose shut and blow air in his mouth. Watch for his chest to rise. When his chest rises, let the air come out of him. Repeat this cycle until he starts breathing on his own. If he should stop again, keep breathing for him. Blow 12 times a minute—about as often as you breathe yourself.

Don't waste time by moving him to shore or going for help. Clear the mouth of obstructions as soon as possible by delivering four sharp back blows with the heel of your hand over the victim's spine between the shoulder blades, placing your other hand on his chest to support him. Whenever possible, the victim's head should be lower than his chest to utilize the effect of gravity.

If he is pulled from the water, lay him on his back. Pull his shoulder up over your knee to raise his chest and start mouth to mouth resuscitation. Water may come out between breaths. **Getting Air Into His Lungs Is More Important Than Draining The Water.**

If the air won't go in, pull his lower jaw forward. Start blowing into his mouth with at least ten fast breaths. If air does not go in, his head may not be at the proper angle or there may still be something in his throat. Use your left thumb to hold his mouth open and reach in with your finger to pull out the object and to clear his throat.

1. Begin immediately
2. Place victim on back.
3. Clear mouth of foreign matter or any obstructions.
4. Tilt the head back gently to open the airway. Place one hand under the neck (behind the head) and the other on the forehead.
5. Pinch the nostrils closed, using the hand that is on the forehead.
6. Place your mouth over mouth of victim and blow.
7. First blowing effort should determine whether or not victim has any obstructions.
8. Remove your mouth and listen for the return rush of air that indicates air exchange.
9. If you are not getting air exchange, recheck head and jaw position and clear victim's mouth again.
10. You should be able to see victim's chest rise.
11. Normal rate: 12 per minute for adults, 20 shallow breaths for children.

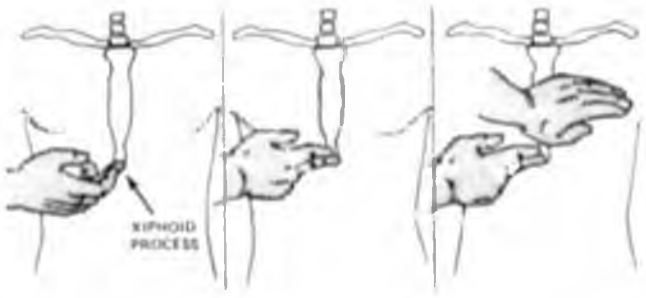
If the above maneuver does not succeed, then try the Manual Thrust method:

FIRST AID

The Manual Thrust Method

1. Stand behind the victim and wrap your arms around their waist.

2. Place the thumb side of your fist against the victim's abdomen, slightly above the navel and below the ziphoid process (tip of the breastbone)



3. Grasp your fist with your other hand and press it into the victim's abdomen with a quick upward thrust.

4. Repeat the back blow and the manual thrust until they are effective or the victim becomes unconscious.

If the victim is unconscious, follow the above procedures, but add the Finger Probe:

Open the victim's mouth with one hand, insert the index finger of your other hand down the inside of the cheek and deep into the throat to the base of the tongue. Then use a hooking action to dislodge the foreign body and maneuver it into the mouth so that it can be removed. Sometimes it is necessary to use the index finger to push the foreign body against the opposite side of the throat to dislodge and lift it. Be careful not to force the object deeper into the airway. If the foreign body comes within reach, grasp it and remove it.

After clearing the throat of any obstructions, put your mouth to his and breathe for him. If in the water, hold the person by locking your arm under his, tilt his head back as far as possible and begin.

If the victim is a child, hold him up by his ankles, with his head down, and slap hard between the shoulder blades to loosen the object. Then clear his throat and start mouth to mouth resuscitation again.

Hypothermia

The loss of body heat is probably the greatest hazard to the survival of a person in the water. The rate of body heat loss depends on water temperature, the protective clothing worn, physical condition, age, sex, and the manner in which the survivor conducts himself. (When a person swims, blood is forced through the large muscles of the upper body and it is cooled as it flows close to the skin surface. Upon return to the heart and deep body tissues, this cooled blood lowers the core temperature of the body.)

An abnormally low body core temperature can be recognized by a variety of symptoms. Very early during exposure, the body tries to combat the excessive heat loss both by constricting its surface blood vessels (to reduce heat transfer by blood to surface) and by shivering (to produce more body heat). However, if the exposure is severe, the body is unable to conserve or produce enough heat. Its core temperature begins to fall, creating a condition known as "hypothermia". As the body core temperature ap-

Hypothermia Chart

Water Temperature (F)	*Exhaustion or Unconsciousness*	*Expected Time of Survival*
32.6	under 15 min.	under 15-45 min.
32.5-40.0	15-30 min.	30-90 min.
40-50	30-60 min.	1-3 hr.
50-60	1-2 hr.	1-6 hr.
60-70	2-7 hr.	2-40 hr.
70-80	3-12 hr.	3-indefinitely
over 80	indefinitely	

NOTE: In the water temperature we find in Alaska, 35°-42°F, the symptoms of hypothermia occur very rapidly.

proaches 95°F, it starts to fall more rapidly. As the temperature continues to fall, signs of pain, tiredness, poor coordination, numbness, poor speech and mental confusion appear. As the internal temperature decreases into the 80s, unconsciousness may result, as well as a bluishness of the skin, collapse of the veins in the skin, enlargement of the pupils, muscle stiffness, irregular heart rate and a weak, barely detectable pulse. Death may occur when the core temperature range is between 80°to 85°F but it is more likely to occur when the body core temperature drops below 80°F.

If you are involved in a boat casualty and are forced to abandon, your survival procedure should be preplanned.

1. Locate and wear a personal flotation device as quickly as possible. This is probably the single most important item of survival equipment, and it may increase a person's survival time (but unless assistance is available, death may occur ultimately due to loss of body heat. When a person is forced to exert energy to stay afloat, i.e., treading water, swimming, heat loss increases and survival time decreases).

2. Try to enter the water in a lifeboat or raft. By doing so, you will avoid wetting your insulation and losing your valuable body heat to the water.

3. Wear several layers of clothing. If you are fortunate enough to stay dry and enter the water in a lifeboat or raft, the trapped air within your layers of clothing will provide excellent insulation. (It has been shown that body areas that are wet can lose heat over 200 times faster than if the same area were dry and exposed to the same temperatures.) However, if you become wet in abandoning your boat, the layers of clothing, although wet will slow down the rate of body heat loss. Clothing having thickness such as waffle-weave underwear, woolens and pile lined garments are excellent for building up layers. An ideal outer layer of clothing would be a waterproof or coated fabric windbreaker or foul weather garment. Should you be afloat in the water, a waterproof outer garment having close fitting wristlets, anklets and collar reduces the passage of water through those openings and helps to cut down body heat loss.

4. Protect your head, neck, groin and the sides of your chest; for these are areas of rapid heat loss to cold water. In addition, waterproof or water-repellent insulation gloves or mittens with a snug fit at the wrists reduce the water exchange at the hands, preserve body heat and prolong the usefulness of the hands in performing helpful maneuvers. Insulated boots and layers of socks impact the same protection to the feet. A great deal of body heat can also be conserved by covering the head with an effective hood (An unprotected head could lose up to ½ of the body's total heat production at 40°F, up to ¾ at 5°F. This loss is even greater at lower temperatures, especially when the head is wet). Useful head covers include woolen hats, foam rubber scuba-type hoods, ski-hats or foul weather hoods. The neck can be protected with a towel, scarf or other cover.

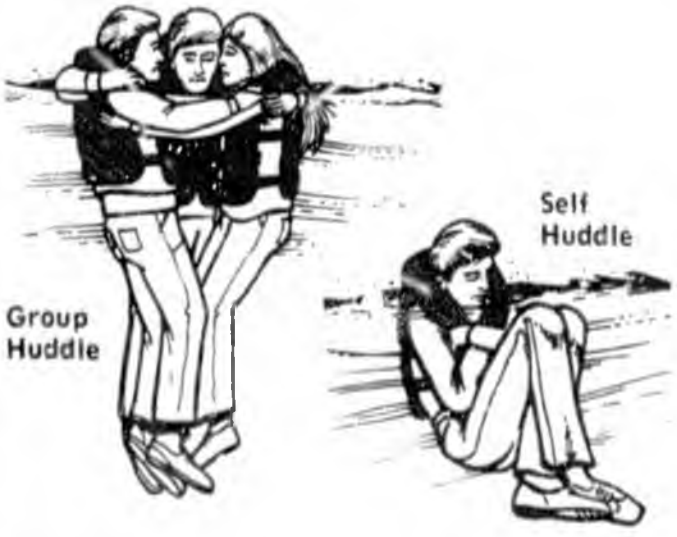
5. You must enter the water directly, try to minimize the shock of sudden cold immersion. A sudden plunge into the cold water can cause rapid death or an uncontrollable rise in breathing rate resulting in an intake of water into the lungs. If jumping is necessary, try to hold your breath, pinch your nose and, in general, avoid swallowing water during the plunge.

6. Once in the water, orient yourself and try to locate the boat, lifeboats, liferafts or other floating objects. If you were unable to prepare yourself, button up now as much as possible. In cold water you may experience violent shivering and great pain in the limbs. These are natural body reflexes that are not dangerous.

7. While afloat in the water, do not attempt to swim unless it is to reach a nearby craft, a fellow survivor or a floating object on which you can lean or climb (but remember, distances on water are deceptive, your goal may appear closer than it actually is). Unnecessary swimming motion will "pump" out the warmed water between your body and the clothing layers and increase the rate of body heat loss. In addition, unnecessary movements of your arms and legs send warm blood from your body's inner core to its cold outer layer. This results in a very rapid heat loss. Remain as still as possible in the water, however painful it may be. Remember pain will not kill you but heat loss will.

8. The body position you assume in the water is very important in conserving your body heat. Tests show that the best body position is the HELP position (Heat Escape Lessening Position) wherein you hold your knees up to your chest in a "doubled up" fashion with your arms tight against the side of your chest. This position minimizes the exposure to the cold water of your groin and chest sides, both areas of high heat loss. Try to keep your head and neck out of the water.

Another heat conserving position is to huddle closely to one or two others afloat, making as much body contact as possible.



The HELP Position

9. Try to board a lifeboat, raft or other floating platform or object as soon as possible. Remember, you lose body heat about 25 times faster in water than in air. Since the effectiveness of your insulation has been seriously reduced by water soaking, you must now try to shield yourself from wind to avoid a wind-chill effect. If you manage to climb aboard a lifeboat, shielding can be accomplished with the aid of a canvas cover or tarpaulin or an unused garment. Huddling close to the other occupants of the lifeboat or raft will also conserve body heat.

10. Keep a positive attitude about your survival and rescue. This will improve your chances of extending your survival time until rescue comes. Your will-to-live does make a difference.

The treatment of hypothermia will of course depend on both the condition of the survivor and the facilities available. Generally speaking, survivors who are rational and capable of recounting their experiences, although shivering dramatically, merely require removal of all wet clothes and replacement with dry clothes or blankets. Hot sweet drinks and rest in a warm environment are also recommended.

In more serious cases, where the victim is semiconscious, unconscious or apparently dead, contact should be made immediately with a ship or shore medical facility. While awaiting medical instructions, administer the following first aid care to the survivor immediately:

1. After removing the victim from the cold water, gently transfer him to a warm environment.

2. Remove his clothes only if it can be done with a minimum of movement of the victim's body. Do not massage him.

3. Lay the unconscious or semiconscious victim in a face up and slightly head down position, unless vomiting occurs.

4. If available, administer warm, humidified oxygen by face mask. The oxygen will not only assist victims if they are having difficulty breathing or have a low respiratory rate but it will also provide core rewarming. Of course, mouth-to-mouth resuscitation is always advisable if the victim is having problems breathing and no other form of assistance is available.

5. Begin to rewarm the victim actively. Do not delay! Even conscious hypothermia victims have died following apparently successful rescues because rewarming attempts were delayed or were inadequate. Any of the following warming methods are recommended preferably in the order given:

a. Place the survivor in a bath of stirred hot water at a temperature of 105°110°F or a temperature in which an observer can comfortably leave his arm. Keep the arms and legs out of the bath, to delay the return of blood circulation to the extremities.

b. Apply hot, wet towels or blankets at 115 F° to the victim's head, neck, groin, chest and abdomen. Again, do not attempt to warm his arms and legs.

c. Apply your own body warmth by direct body-to-body contact with the victim. A blanket should then be wrapped around you and the victim to conserve the heat you are supplying. Just wrapping a hypothermia victim in a blanket without a heat source is ineffective because he is not generating sufficient heat to rewarm himself.

6. In no case should the victim be given alcohol. Alcohol dilates the "peripheral" blood vessels and also depresses mental ability. A person who drinks to increase their survival time will probably die happier, but sooner.

7. Unconscious victims should be given nothing to eat or drink.

Cold Water Drowning

Every year approximately 75 people drown in Alaska making drowning the second leading cause of

accidental death. This statistic is made even more tragic because many of those deaths may have been avoided. Recent medical research has indicated that victims, who in the past have been considered beyond help, may be saved despite long submergence and the absence of any sign of life. This is particularly true if the water is cold (as it is in Alaska) and the victim is young.

Sudden face contact with cold water (below 70 degrees F) sometimes touches off a primitive response called the "mammalian diving reflex". This complex series of body responses shuts off blood circulation to most parts of the body except the heart, lungs and brain. Thus, what little oxygen remains in the blood gets transported to the brain where it is needed the most. Even though there may be very little oxygen in the blood, it can be enough since the cooled brain requires much less oxygen than normal.

Procedures for revival of drowning victims are similar to regular hypothermia procedures; however, there are several important differences. These procedures follow:

1. Clear the air passage and begin mouth to mouth rescue breathing and external heart massage (CPR) IMMEDIATELY. DO NOT worry about getting water out of the victim's lungs...the body will absorb it quickly.

2. Prevent the victim from losing more body heat, but DO NOT rewarm the victim. Improper rewarming may harm the victim.

3. Get the victim to the nearest medical facility QUICKLY. CPR must be continued uninterrupted until the victim is under the c[illegible] of competent medical personnel.

4. Do not give up. DROWNING VICTIMS LOOK DEAD. Their skin is blue and cold to the touch. There is no detectable heart beat or breathing. The eyes are fixed and dilated, and there is no other sign of life. However, if the water was cold there is still a good chance of survival.

5. Children and young people are the most frequent drowning victims. However, they are also good candidates for resuscitation since they have a more pronounced "Diving Reflex". In research at the University of Michigan Hospital, two thirds of the cold water drowning victims that were successfully resuscitated were 3[illegible] years old and younger. The colder the water and the younger the victim, the better the chance for survival.

Mouth to mouth resuscitation should begin immediately.

Wind Chill Factor

As we have noted, your body is continually producing and losing heat. Wind increases heat loss by reducing the thin layer of warm air next to your skin. This heat loss increases as wind speed increases. When air temperature is below freezing and the wind takes away heat faster than your body can replace it, you get frostbite. The danger of frostbite to exposed skin increases as the air temperature goes down or the wind speed goes up. The combined effect of wind and temperature is expressed in the wind chill chart as an equivalent temperature. This expresses the effective temperature acting upon exposed flesh.

Any movement of air past your body, such as that produced by walking, running, skiing or riding in an open vehicle, has the same cooling effect as wind. You should consider this in addition to natural wind when you use the windchill chart.

Any clothing or material which reduces or stops the effect of wind will give protection to the area covered but don't try to estimate this protection when you use the windchill chart. Of course wet clothing or footgear has a much reduced insulating value and will result in body heat loss nearly equal to that of exposed flesh.

Here's how you use the chart: find the estimated or actual wind speed in the left-hand column and the actual temperature in degrees F across the top. Come across and down. The intersection on the chart is the equivalent temperature — the effective temperature acting upon exposed flesh. Precautions should be taken accordingly.

Wind Chill Chart

SAILOR'S WORKSHEET 10

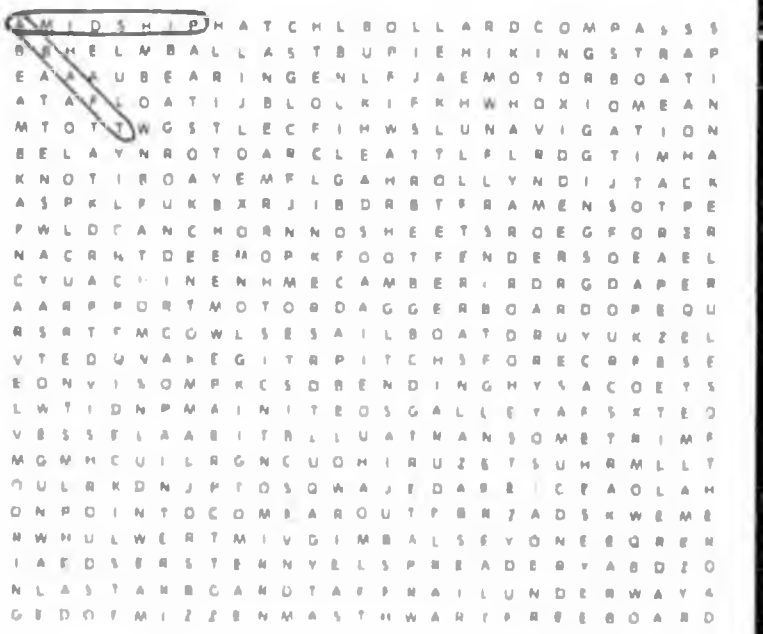
1. All boats should have a marine _____ kit on board.
2. First aid courses are offered by the American _____.
3. Blowing air into a person through his mouth or nose and then letting the air come out is called _____ resuscitation.
4. Applying a pad of clean cloth directly over a wound is one method of stopping _____ _____.
5. Symptoms of dizziness, ringing in ears, headache, nausea and unconsciousness indicate _____ poisoning.
6. Hypothermia is the _____
7. Pretend you have the following emergencies on board your boat. Read the list of injuries and write the letter indicating the right treatment in the space provided.

INJURY		TREATMENT
_____ Unconsciousness	A.	Immobilize broken ends and adjacent joints. Control bleeding with direct pressure. Keep still and treat for shock.
_____ Sunburn	B.	Burned area should immediately be immersed in cold water. 70° Add ice to cool water but do not apply to burned surface. Apply a cold pack to difficult areas. 3rd degree — apply a thick, dry, sterile dressing to keep air out.
_____ Poisoning	C.	Send for help immediately. Loosen collar. Assist to a sitting or reclining position which ever makes breathing easier. Help with prescribed medicine. For convulsions do not restrain victim.
_____ Shock	D.	Eye: Don't rub. Lift particles out with corner of clean handkerchief. If unsuccessful or particle embedded, cover both eyes and get medical attention. Ear and nose: Get medical attention, don't try to remove.
_____ Broken Bones	E.	Get medical attention immediately. Check for antidote on poison container. If none available, have person drink lots of water or milk. Do not induce vomiting. Contact poison control center immediately for further instructions.
_____ Burns	F.	If breathing is regular and no chest injuries exist, raise hips and legs. If conscious and unnauseated, give liquids, but never alcohol. Never force fluids on unconscious person. Keep victim comfortable.
_____ Objects in Eyes	G.	Apply cold compress to sunburned area. Get medical help for severe sunburns. Prevention: Use sunscreen lotion before and during timed exposures to sun. Stop exposure when burn is first noticed.
_____ Heart Failure	H.	Keep victim lying down. Cover to keep warm. Turn head to side in case of vomiting. Get medical attention. Stand by to give artificial respiration if breathing stops. Liquids or foods should never be given to an unconscious person.

GLOSSARY

Can you find all 112 nautical terms hidden in the puzzle?

Words can be found across, down and diagonally on the page. Some terms are easy. If you can't find them all, look in the glossary for words marked with a square.



■**Abaft** — Toward the stern

■**Abeam** — Amidship, at a right angle to the keel.

■**Aboard** — On, in or into a boat.

■**Afloat** — On the water.

■**Aft** — Describing the after section of a vessel, or things to the rear of amidship and near the stern.

■**Aground** — Touching bottom.

Ahead—Forward on a line with the boat's keel.

Alee—To the leeward side.

■**Amidship** — Describing the mid-section of a vessel, either with reference to length or width.

■**Anchor** — A forging or casting shaped to grip the sea bottom and, by means of a cable or rope, hold a boat in a desired position.

■**Astern** — Toward the stern. An object that is aft of a boat is said to be *astern of the boat.*

■**Athwart** — Across.

Athwartship—At right angle to the boat's keel.

Awash—At the level of the water.

■**Aye**—*Yes* while aboard a boat or ship.

■**Bail**—To remove water from a boat.

Come About—To change course or tack in a sailboat.

■**Ballast** — Heavy material such as iron, lead or stone placed in the bottom of the hold to keep a vessel steady.

■**Battens** — Thin strips of wood, plastic or other material set in pockets and sewed into the sail to hold or improve the set of a sail. On some racing boats the battens extend from leech to mast.

■**Beacon** — A post or buoy placed over a shoal or bank to warn vessels, also a signal mark on land.

■**Beam** — Imaginary line amidship at right angles to keel of vessel. Also vessel's width amidship.

■**Bearing** — The direction or point of the compass in which an object is seen.

Bight—A loop in any part of a line except the end, also a cove.

■**Belay** — To make fast to a cleat or belaying pin, also to cancel an order.

■**Below** — Beneath or under the deck. One *goes below* when going down into the cabin.

■**Bend** — To fasten by means of a bend or knot.

■**Bilge** — The lower internal part of a boat's hull, adjacent to the keelson.

■**Block** — A device with sheaves or pulleys through which the direction of a sheet or line can be controlled and by which extra leverage can be obtained.

■**Bollard** — A strong post for holding lines fast.

■**Boom** — A spar used to extend the foot of the sail.

■**Bow** — The forward part or front of the boat.

Bridle—A span of line with the ends secured and another line secured at its center for towing or lifting.

Bulkhead — Vertical partition in a boat.

Buoy — A floating, anchored navigational aid.

Burdened Vessel — One which must stay clear of vessels having right-of-way. The give-way vessel.

■**Caulking; Calking** — Forcing a quantity of filler material into the seams of the planks in a boat's deck or hull to make them watertight.

Camber — The arch of a deck, sloping downward from the center toward the sides.

Capacity Plate — Must be in full view of the operator's station. Gives maximum weight capacity and horsepower rating.

■**Capsize** — To turn over.

Carburetor Backfire Flame Arrestor — Required equipment on all motorboats except outboards and diesels. Reduces chance of backfire in internal combustion engines.

■**Cardinal Points** — The four main points of a compass.

■**Carvel** — A system of planking in which the outside planking of a boat is flush. The edges meet, giving the shell a smooth surface.

Cast Off — To let go or untie a line.

Catamaran — Sailboat with two narrow hulls connected by a deck, plus two rudders.

■**Centerboard** — A pivoting board or metal plate, housed in a slotted trunk, which can be raised or lowered. When lowered it reduces a sailboat's tendency to sideslip when tacking.

■**Chart** — A map of a body of water that contains necessary piloting information.

■**Chine** — The intersection of sides and bottom of flat

or V-bottom boats.

■ **Cleat** — A piece of wood or metal with projecting ends to which lines are made fast.

Clew — The rear lower corner of a sail.

■ **Clinker** — A method of planking in which the lower edge of each strake overlaps the upper edge of the strake next below. (also called lapstrake.)

■ **Cockpit** — A well or sunken space in the afterdeck of a small boat for the use of the helmsman and crew. Forward cockpits are common in motor cruisers.

■ **Come About** — To change course or tack in a sailboat.

■ **Compass** — The instrument which shows the course of a vessel.

Course — The point of the compass toward which the boat is being steered.

■ **Cowls** — Hooded openings used for ventilation.

■ **Current** — The movement of the water in a horizontal direction.

■ **Daggerboard** — A vertical sliding centerboard on a sailboat.

Dead Ahead — Directly forward of a boat, on a line extending from the keel.

■ **Deck** — Any permanent covering over a compartment, hull or any part thereof.

■ **Dinghy** — A small open boat.

Displacement Hull — Type of hull that plows through the water even when more power is added.

Documented Vessel — Vessel registered with the U.S. Coast Guard.

■ **Draft** — The depth of the vessel below the water line, measured vertically to the lowest part of the hull.

Drift — The amount a boat is pushed off course by the current.

■ **Dry Rot** — A fungus decay which causes wood to become brittle and to fall apart.

Ease Off — To slack off.

■ **Ebb** — The reflex of the tide.

■ **Estuary** — An inlet or arm of the sea.

■ **Fathom** — Six feet.

Fend Off — To hold off when making a landing or coming along side.

■ **Fenders** — Objects placed along the side of the boat to protect the hull from chafing.

■ **Flare** — The outward spread of the boat's sides from the waterline to the rail at the bow.

■ **Foot** — The lower edge of a sail.

■ **Fore** — Used to distinguish the forward part of a boat or things forward of amidships.

Forward — Toward the bow.

■ **Frame** — Ribs of the hull, extending from the keel to the highest continuous deck.

Freeboard — Vertical distance measured on a boat's side amidships from the waterline to the gunwale.

Galley — The kitchen area of a boat.

Gimbals — The brass ring in which a compass sets to keep it level.

Give-Way [Burdened] Vessel · One which must stay clear of vessels having the right-of-way.

■ **Gunwale** — The upper edge of a boat's side. (Pronounced gun-nel.)

■ **Halyard** — A wire and/or line used to hoist and lower a sail or the line to hoist a flag or signal.

■ **Hatch** — An opening in a boat's deck to allow persons or cargo to go below.

■ **Head** — A marine toilet.

Headway — moving ahead or speed through the water.

Heave — To throw.

Heel — To lean or tip but not capsize.

■ **Helm** — The wheel or tiller by which a ship is steered.

■ **Hiking Strap** — A strap attached to floorboards or a centerboard trunk under which a crewman can hook his foot allowing him to hike his body out over the side of the boat.

■ **Hull** — The body of a boat.

Hypothermia — A physical condition when the body loses heat faster than it can produce it.

Inboard — Toward the center of the boat.

■ **Jib** — A triangular sail set on a stay, forward. A genoa jib is larger in size and is used for more speed.

■ **Jibe** — To tack before the wind in a sailboat.

■ **Keel** — A permanently positioned, principal fore-and-aft backbone member of a boat's hull used for stability and/or ballast.

■ **Knot** — To bend a line. Also, a unit of speed equal to one nautical mile (6,076.10 feet) an hour.

■ **Lee** — The opposite side from which the wind blows.

Leech — The after edge of a fore-and-aft sail.

■ **Leeward** — Situated on the side turned away from the wind. (Opposite of windward.)

Leeway — The amount a boat is carried leeward by the wind's force.

Line — Rope that is aboard or around a boat.

■ **List** — Leaning or inclining of vessel toward the side.

Log — A record or diary of a vessel's journey.

Lubber Line — A mark or permanent line on a compass that shows the center line of the boat.

■ **Luff** — The forward edge of a fore-and-aft sail. Also to cause the sail to flutter.

■ **Main** — The principal mastand sail.

■ **Mainsail** — The largest sail hoisted on the mast.

Mast — A spar set upright to support rigging and sails.

■ **Mizzen Mast** — The aftermost mast of a ship.

■ **Mooring** — Commonly, the anchor, chain, buoy, pennant, etcetera by which a boat is permanently anchored in one location.

Mooring Buoy — A buoy you may legally moor to instead of an anchor.

Motorboat — Any watercraft propelled by machinery, whether or not such machinery is the principal source of propulsion. For numbering purposes, the term shall not include a vessel which has a valid marine document issued by the U.S. Coast Guard or any federal agency successor thereto.

Navigation—Directing a ship from port to port.

Nun Buoy — A conical red buoy bearing an even number and marking the starboard side of a channel from seaward.

Oar — A long wooden instrument with a flat blade at one end, used for propelling boats.

Outboard—Away from the center or toward the outside of the boat.

Painter — A line attached to the bow of a boat used for making it fast.

PFD — Personal flotation device.

Pitch — The fore or aft movement as the bow and stern rise and fall due to wave action.

Planing Hull — Type of hull that is shaped to glide easily across the water at high speeds.

Point—One of 32 points of the compass equal to 11¼ degrees. There are 10, 12, 20 and 32 point lights indicating the arc of the compass through which they are visible. A 32 point light is one visible from every point in the compass or all around the horizon. A sailboat's ability to sail close to the wind.

Port — The left side of a boat when you are facing toward the bow, also a destination.

Privileged Vessel—The vessel with the right-of-way. Also called the stand-on vessel.

Propeller — Equipment piece connected to lowest part of drive shaft on all motors. It spins to move boat.

Rib – An athwartship frame on a boat.

Rigging—The general term for all the lines or ropes.

Roach—The curved stern edge of a sail.

Roll — The sideward motion of a boat caused by wind and waves.

Rudder — A device used for steering and maneuvering, attached to a stern or rudder post — not necessary on outboards because the unit can to moved to change direction of thrust.

Rules of the Road — The international regulations for preventing collisions at sea.

Sailboat — A boat powered by wind and sails which may or may not have an auxiliary engine.

Scope — The length of the anchor line or chain. 6 to 1 scope means that the length of the anchor line from the boat to the anchor is 6 times the depth of the water.

Scupper — A hole allowing water to run off the deck.

Sea Anchor—A drag thrown over the bow to keep a boat pointed into the wind or sea.

Sheets—Lines used to trim a sail.

Shrouds — Those wires or lines that run down from a mast to the sides of the boat and serve as bracing.

Spar — General term for masts, yards, booms, etc.

Spar Buoy — (or black can. Buoy) — A channel marker bearing an uneven number and showing the port side of a channel from seaward.

Spinnaker — A light sail, usually of considerable spread, roughly triangular and fully cut, which is hoisted forward of the mast and used for increased speed when reaching or running.

Splice—To join two lines together permanently by weaving them together.

Spreader — A bar or strut that projects from a mast in order to spread shrouds or stays and give better support to a mast.

Squall—A brief storm that arrives suddenly.

Stand-On (Privileged) Vessel — The vessel with the right-of-way.

Starboard — The right side of a boat when you are facing toward the bow.

Stay- A line or wire to support a mast in a fore-and-aft direction.

Stern — The after end or back of a boat.

Stem—The upright post or bar of the bow.

Stow—To pack the cargo.

Strake — Planks running fore and aft on the outside of a vessel.

Tack — To come about, so that the wind from one side is brought around to other.

Taffrail—The rail around a boat's stern.

Thwart—A seat extending horizontally on a boat.

Tide — The alternate rise and fall of waters caused by the gravitational attraction of moon and sun.

Tiller — A bar or handle for turning a boat's rudder or an outboard motor.

Transom — The planking which forms the after end of a small square-stern boat. (Outboard motors are

Trapeze — A wire secured near the top of the mast, with a seat or sling on its lower end. In strong breezes a crewman can support himself in the trapeze and extend himself far out over the water to counteract the heeling force of the wind.

Trim — To arrange weights in a vessel in such manner as to obtain desired draft at bow and stern.

Trimaran — Sailboat with three hulls, the center one being the largest.

Unbend — To cast off or untie.

Underway — Vessel in motion, i.e., when not moored, at anchor or aground.

Vessel—Watercraft, other than seaplanes, capable of being used as transportation on the water.

Wake — Moving waves, track or path that a boat leaves behind it, when moving across the waters.

Waterline—A line on a boat's hull which indicates proper trim.

Way — Movement of a vessel through the water. Technically it is *under way* when not at anchor, aground or made fast to the shore. The common usage is interpreted as progress through the water: *Headway* when going forward and *Sternway* when it is going backwards or astern.

Well — Area at the rear of a boat in which the motor is sometimes installed.

Whipping—A method of preventing the ends of a line from unraveling.

Windward—Toward the wind.

WHAT MAKES A GOOD SKIPPER?

1. *The first duty of a good skipper is the safety of the boat and its passengers.*

2. *A good skipper is always in control of the craft and the situation.*

3. *A good skipper knows the laws and rules and obeys them.*

4. *A good skipper does not stretch his ability or that of the boat.*

5. *A good skipper knows the job, the boat and its equipment.*

6. *A good skipper studies boating and updates knowledge.*

7. *A good skipper keeps a checklist on safety equipment and goes over it each time before casting off.*

8. *A good skipper takes all necessary supplies aboard.*

9. *A good skipper does not waste fuel supplies or energy.*

10. *A good skipper always plots the safest course and stays on it.*

11. *A good skipper is thoughtful of other boats and people.*

12. *A good skipper is always alert to danger.*

13. *A good skipper aids others in danger or distress.*

14. *A good skipper does not take chances.*

15. *A good skipper thinks before acting.*

16. *A good skipper keeps the craft clean and shipshape.*

17. *A good skipper keeps a log.*

Are you a good skipper?

DEPARTMENT OF TRANSPORTATION

SS HB 390

Revenue to State if boating bill passes

$ 450,000 /yr on registration or more
@ $5/boat ~ 200,000 on titling

250,000 if fed. law passes

+ penalties

900,000

Coast Guard budget
200,000

Registration can be done by 1 person in Juneau
Public Safety may try to budget offices all over state
Motor Vehicle Field offices could handle it all - little added expense

Do State Police & Troopers have boats now

Public Law 92-75
92nd Congress, H. R. 19
August 10, 1971

An Act

To provide for a coordinated national boating safety program.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Federal Boat Safety Act of 1971". Federal Boat Safety Act of 1971.

DECLARATION OF POLICY AND PURPOSE

SEC. 2. It is hereby declared to be the policy of Congress and the purpose of this Act to improve boating safety and to foster greater development, use, and enjoyment of all the waters of the United States by encouraging and assisting participation by the several States, the boating industry, and the boating public in development of more comprehensive boating safety programs; by authorizing the establishment of national construction and performance standards for boats and associated equipment; and by creating more flexible regulatory authority concerning the use of boats and equipment. It is further declared to be the policy of Congress to encourage greater and continuing uniformity of boating laws and regulations as among the several States and the Federal Government, a higher degree of reciprocity and comity among the several jurisdictions, and closer cooperation and assistance between the Federal Government and the several States in developing, administering, and enforcing Federal and State laws and regulations pertaining to boating safety. 85 STAT. 213 85 STAT. 214

DEFINITIONS

SEC. 3. As used in this Act, and unless the context otherwise requires—

(1) "Boat" means any vessel—

(A) manufactured or used primarily for noncommercial use; or

(B) leased, rented, or chartered to another for the latter's noncommercial use; or

(C) engaged in the carrying of six or fewer passengers.

(2) "Vessel" includes every description of watercraft, other than a seaplane on the water, used or capable of being used as a means of transportation on the water.

(3) "Undocumented vessel" means a vessel which does not have and is not required to have a valid marine document as a vessel of the United States.

(4) "Use" means operate, navigate, or employ.

(5) "Passenger" means every person carried on board a vessel other than—

(A) the owner or his representative;

(B) the operator;

(C) bona fide members of the crew engaged in the business of the vessel who have contributed no consideration for their carriage and who are paid for their services; or

(D) any guest on board a vessel which is being used exclusively for pleasure purposes who has not contributed any consideration, directly, or indirectly, for his carriage.

(6) "Owner" means a person who claims lawful possession of a vessel by virtue of legal title or equitable interest therein which entitles him to such possession.

(This Act is 16 pages long)

(7) "Manufacturer" means any person engaged in—

(A) the manufacture, construction, or assembly of boats or associated equipment; or

(B) the manufacture or construction of components for boats and associated equipment to be sold for subsequent assembly; or

(C) the importation into the United States for sale of boats, associated equipment, or components thereof.

85 STAT. 214
87 STAT. 215

(8) "Associated equipment" means—

(A) any system, part, or component of a boat as originally manufactured or any similar part or component manufactured or sold for replacement, repair, or improvement of such system, part, or component;

(B) any accessory or equipment for, or appurtenance to, a boat; and

(C) any marine safety article, accessory, or equipment intended for use by a person on board a boat; but

(D) excluding radio equipment.

(9) "Secretary" means the Secretary of the Department in which the Coast Guard is operating.

(10) "State" means a State of the United States, the Commonwealth of Puerto Rico, the Virgin Islands, Guam, American Samoa, and the District of Columbia.

(11) "Eligible State" means one that has a State boating safety program which has been accepted by the Secretary.

APPLICABILITY

SEC. 4. (a) This Act applies to vessels and associated equipment used, to be used, or carried in vessels used, on waters subject to the jurisdiction of the United States and on the high seas beyond the territorial seas for vessels owned in the United States.

(b) Sections 5 through 11 and subsections 12(a) and 12(b) of this Act are applicable also to boats moving or intended to be moved in interstate commerce.

(c) This Act, except those sections where the content expressly indicates otherwise, does not apply to—

(1) foreign vessels temporarily using waters subject to United States jurisdiction;

(2) military or public vessels of the United States, except recreational-type public vessels;

(3) a vessel whose owner is a State or subdivision thereof, which is used principally for governmental purposes, and which is clearly identifiable as such;

(4) ships' lifeboats.

BOAT AND ASSOCIATED EQUIPMENT STANDARDS AND USE

SAFETY REGULATIONS AND STANDARDS

SEC. 5. (a) The Secretary may issue regulations—

(1) establishing minimum safety standards for boats and associated equipment, and establishing procedures and tests required to measure conformance with such standards. Each standard shall be reasonable, shall meet the need for boating safety, and shall be stated, insofar as practicable, in terms of performance;

(2) requiring the installation, carrying, or using of associated equipment on boats and classes of boats subject to this Act; and prohibiting the installation, carrying, or using of associated equipment which does not conform with safety standards established

under this section. Equipment contemplated by this clause includes, but is not limited to, fuel systems, ventilation systems, electrical systems, navigational lights, sound producing devices, fire fighting equipment, lifesaving devices, signaling devices, ground tackle, life and grab rails, and navigational equipment.

(b) A regulation or standard issued under this section—

(1) shall specify an effective date which is not earlier than one hundred and eighty days from the date of issuance, except that this period shall be increased in the discretion of the Secretary to not more than eighteen months in any case involving major product design, retooling, or major changes in the manufacturing process, unless the Secretary finds that there exists a boating safety hazard so critical as to require an earlier effective date; what constitutes major product redesign, retooling, or major changes shall be determined by the Secretary;

(2) may not compel substantial alteration of a boat or item of associated equipment which is in existence, or the construction or manufacture of which is commenced before the effective date of the regulation; but subject to that limitation may require compliance or performance to avoid a substantial risk of personal injury to the public that the Secretary considers appropriate in relation to the degree of hazard that the compliance will correct; and

(3) shall be consistent with laws and regulations governing the installation and maintenance of sanitation equipment.

PRESCRIBING REGULATIONS AND STANDARDS

SEC. 6. In establishing a need for formulating and prescribing regulations and standards under section 5 of this Act, the Secretary shall, among other things—

(1) consider the need for and the extent to which the regulations or standards will contribute to boating safety;

(2) consider relevant available boat safety standards, statistics and data, including public and private research, development, testing, and evaluation;

(3) consider whether any proposed regulation or standard is reasonable and appropriate for the particular type of boat or associated equipment for which it is prescribed;

(4) consult with the Boating Safety Advisory Council established pursuant to section 33 of this Act regarding all of the foregoing considerations.

DISPLAY OF LABELS EVIDENCING COMPLIANCE

SEC. 7. The Secretary may require or permit the display of seals, labels, plates, insignia, or other devices for the purpose of certifying or evidencing compliance with Federal safety regulations and standards for boats and associated equipment.

DELEGATION OF INSPECTION FUNCTION

SEC. 8. The Secretary may, subject to such regulations, supervision, and review as he may prescribe, delegate to any person, or private or public agency, or to any employee under the supervision of such person or agency, any work, business, or function respecting the examination, inspection, and testing necessary for compliance enforcement or for the development of data to enable the Secretary to prescribe and to issue regulations and standards, under sections 5 and 6 of this Act.

EXEMPTIONS

SEC. 9. The Secretary may, if he considers that boating safety will not be adversely affected, issue exemptions from any provision of this Act or regulations and standards established thereunder, on terms and conditions as he considers appropriate.

FEDERAL PREEMPTION

SEC. 10. Unless permitted by the Secretary under section 9 of this Act, no State or political subdivision thereof may establish, continue in effect, or enforce any provision of law or regulation which establishes any boat or associated equipment performance or other safety standard, or which imposes any requirement for associated equipment, except, unless disapproved by the Secretary, the carrying or using of marine safety articles to meet uniquely hazardous conditions or circumstances within the State, which is not identical to a Federal regulation issued under section 5 of this Act.

ADMISSION OF NONCONFORMING FOREIGN-MADE BOATS

SEC. 11. The Secretary of the Treasury and the Secretary may, by joint regulations, authorize the importation of a nonconforming boat or associated equipment upon terms and conditions, including the furnishing of bond, which will assure that the boat or associated equipment will be brought into conformity with the applicable Federal safety regulations and standards before it is used on waters subject to the jurisdiction of the United States.

PROHIBITED ACTS

SEC. 12. (a) No person shall—

(1) manufacture, construct, assemble, introduce, or deliver for introduction in interstate commerce, or import into the United States, or if engaged in the business of selling or distributing boats or associated equipment, sell or offer for sale, any boat, associated equipment, or component thereof to be sold for subsequent assembly, unless—

(A) it conforms with regulations and standards prescribed under this Act, or

(B) it is intended solely for export, and so labeled, tagged, or marked on the boat or equipment and on the outside of the container, if any, which is exported.

(2) affix, attach, or display a seal, label, plate, insignia, or other device indicating or suggesting compliance with Federal safety standards, on, in, or with a boat or item of associated equipment, which is false or misleading;

(3) fail to furnish a notification as required by section 15(a) or exercise reasonable diligence in fulfilling the undertaking given pursuant to section 15(c) of this Act.

(b) No person shall be subject to any penalty contained in this section if he establishes that he did not have reason to know in the exercise of due care that a boat or associated equipment does not conform with applicable Federal boat safety standards, or who holds a certificate issued by the manufacturer of the boat or associated equipment to the effect that such boat or associated equipment conforms to all applicable Federal boat safety standards, unless such person knows or reasonably should have known that such boat or associated equipment does not so conform.

(c) No person may use a vessel in violation of this Act or regulations issued thereunder.

(d) No person may use a vessel, including one otherwise exempted by section 4(c) of this Act, in a negligent manner so as to endanger the life, limb, or property of any person. Violations of this subsection involving use which is grossly negligent, subject the violator, in addition to any other penalties prescribed in this Act, to the criminal penalties prescribed in section 34.

(e) No vessel equipped with propulsion machinery of any type and not subject to the manning requirements of the vessel inspection laws administered by the Coast Guard, may while carrying passengers for hire, be used except in the charge of a person licensed for such service under regulations, prescribed by the Secretary, which pertain to qualifications, issuance, revocation, or suspension, and related matters.

(f) Section 12(e) of this Act shall not apply to any vessel being used for bona fide dealer demonstrations furnished without fee to business invitees. However, if on the basis of substantial evidence the Secretary determines, pursuant to section 6 hereof, that requiring vessels so used to be under the control of licensed pe ns is necessary to meet the need for boating safety, then the Secretary may promulgate regulations requiring the licensing of persons controlling such vessels in the same manner as provided in section 12(e) of this Act for persons in control of vessels carrying passengers for hire.

TERMINATION OF UNSAFE USE

SEC. 13. If a Coast Guard boarding officer observes a boat being ed without sufficient lifesaving or firefighting devices or in an overloaded or other unsafe condition as defined in regulations of the Secretary, and in his judgment such use creates an especially hazardous condition, he may direct the operator to take whatever immediate and reasonable steps would be necessary for the safety of those aboard the vessel, including directing the operator to return to mooring and to remain there until the situation creating the hazard is corrected or ended.

INSPECTION, INVESTIGATION, REPORTING

SEC. 14. (a) Every manufacturer subject to the provisions of this Act shall establish and maintain records, make reports, and provide information as the Secretary may reasonably quire to enable him to determine whether the manufacturer has acted or is acting in compliance with this Act and the regulations issued thereunder. A manufacturer shall, upon request of an officer, employee, or agent authorized by the Secretary, permit the officer, employee, or agent to inspect at reasonable times factories or other facilities, books, papers, records, and documents relevant to determining whether the manufacturer has acted or is acting in compliance with this Act and the regulations issued thereunder.

(b) All information reported to or otherwise obtained by the Secretary or his representative pursuant to subsection (a) of this section containing or relating to a trade secret or other matter referred to in section 1905 of title 18 of the United States Code or 42 Stat. 23.
authorized to be exempted from public disclosure by subsection 552(b) of title 5, United States Code, shall be considered confidential 80 Stat. 383.
for the purpose of that section of title 18, except that, upon approval by the Secretary, such information may be disclosed to other officers, employees, or agents concerned with carrying out this Act or when relevant in any proceeding under this Act.

NOTIFICATION OF DEFECTS; REPAIR OR REPLACEMENT

SEC. 15. (a) Every manufacturer who discovers or acquires information which he determines, in the exercise of reasonable and prudent judgment, indicates that a boat or associated equipment subject to an applicable standard or regulation prescribed pursuant to section 5 of this Act either fails to comply with such standard or regulation, or contains a defect which creates a substantial risk of personal injury to the public, shall, if such boat or associated equipment has left the place of manufacture, furnish notification of such defect or failure of compliance as provided in subsections (b) and (c) of this section, within a reasonable time after the manufacturer has discovered the defect.

Notification, recipients.

(b) The notification required by subsection (a) of this section shall be given to the following persons in the following manner—

(1) by certified mail to the first purchaser for purposes other than resale: *Provided*, That the requirement for notification of such first purchaser shall be satisfied if the manufacturer exercises reasonable diligence in creating and maintaining a list of such purchasers and their current addresses and sends the required notice to each person on said list at the address appearing thereon;

(2) by certified mail to subsequent purchasers, if known to the manufacturer;

(3) by certified mail or other more expeditious means to the dealers or distributors of such manufacturer to whom such boat or associated equipment was delivered.

Contents.

(c) The notification required by subsection (a) of this section shall contain a clear description of such defect or failure to comply, an evaluation of the hazard reasonably related thereto, a statement of the measures to be taken to correct such defect or failure to comply, and an undertaking by the manufacturer to take such measures at his sole cost and expense.

(d) Every manufacturer shall furnish to the Secretary a true or representative copy of all notices, bulletins, and other communications to dealers or distributors of such manufacturer or to purchasers or subsequent purchasers, of boats or associated equipment of such manufacturer, regarding any defect relating to safety in such boats or associated equipment or any failure to comply with a standard, regulation, or order applicable to such boat or associated equipment.

Public information.

The Secretary may publish or otherwise disclose to the public so much of the information contained in such notice or other information in his possession as he deems will assist in carrying out the purposes of this Act, but shall not disclose any information which contain or relates to a trade secret unless he determines that it is necessary to carry out the purposes of this Act.

(e) If through testing, inspection, investigation, research, or examination of reports carried out pursuant to this Act the Secretary determines that any boat or associated equipment subject to this Act—

(1) fails to comply with an applicable standard or regulation prescribed pursuant to section 5; or

(2) contains a defect which relates to safety,

and if the Secretary determines that notification provided under this section is appropriate, he shall notify the manufacturer of the boat or associated equipment of such defect or failure to comply. The notice shall contain the findings of the Secretary and shall include a synopsis of the information upon which the findings are based. Upon receipt of such notice, the manufacturer shall furnish the notification described in subsection (c) to the persons designated in subsection (b), unless the manufacturer disputes the Secretary's determination, in

which case the Secretary shall afford such manufacturer an opportunity to present his views to establish that there is no failure of compliance or defect relating to safety. Where the Secretary determines it is in the public interest, he may publish notice of such proceeding in the Federal Register and afford interested persons, including the Boating Safety Advisory Council, an opportunity to comment thereon. If after such presentation by the manufacturer the Secretary determines that such boat or associated equipment does not comply with an applicable standard or regulation, or that it contains a defect related to safety, the Secretary may direct the manufacturer to furnish the notification specified in subsection (c) of this section to the persons specified in subsection (b) of this section.

Notice; publication in Federal Register.

(f) For purposes of section 15, the term "associated equipment" includes only such items or classes of associated equipment as the Secretary shall by regulation or order prescribe after determining that the application of the requirements of this section to such items or classes of associated equipment is reasonable, appropriate, and in furtherance of the purposes of this Act.

"Associated equipment."

(g) The Secretary is authorized to promulgate regulations defining and establishing procedures and otherwise furthering the purposes of this section.

Rule making powers.

RENDERING OF ASSISTANCE IN CASUALTIES

SEC. 16. (a) The operator of a vessel, including one otherwise exempted by subsection 4(c) of this Act, involved in a collision, accident, or other casualty, to the extent he can do so without serious danger to his own vessel, or persons aboard, shall render all practical and necessary assistance to persons affected by the collision, accident, or casualty to save them from danger caused by the collision, accident, or casualty. He shall also give his name, address, and the identification of his vessel to any person injured and to the owner of any property damaged. The duties imposed by this subsection are in addition to any duties otherwise imposed by law.

Vessel operator, duties.

(b) Any person who complies with subsection (a) of this section or who gratuitously and in good faith renders assistance at the scene of a vessel collision, accident, or other casualty without objection of any person assisted, shall not be held liable for any civil damages as a result of the rendering of assistance or for any act or omission in providing or arranging salvage, towage, medical treatment, or other assistance where the assisting person acts as an ordinary, reasonably prudent man would have acted under the same or similar circumstances.

Liability exemption.

NUMBERING OF CERTAIN VESSELS

VESSELS REQUIRING NUMBERING

SEC. 17. An undocumented vessel equipped with propulsion machinery of any type shall have a number issued by the proper issuing authority in the State in which the vessel is principally used.

STANDARD NUMBERING

SEC. 18. (a) The Secretary shall establish by regulation a standard numbering system for vessels. Upon application by a State the Secretary shall approve a State numbering system which is in accord with the standard numbering system and the provisions of this Act relating to numbering and casualty reporting. A State with an approved system is the issuing authority under the Act. The Secretary is the issuing authority in States where a State numbering system has not been approved.

46 USC 527 note.

(b) If a State has a numbering system approved by the Secretary under the Act of September 2, 1958 (72 Stat. 1754), as amended, prior to enactment hereof, the system need not be immediately revised to conform with this Act and may continue in effect without change for a period not to exceed three years from the date of enactment of this Act.

(c) When a vessel is actually numbered in the State of principal use, it shall be considered as in compliance with the numbering system requirements of any State in which it is temporarily used.

(d) When a vessel is removed to a new State of principal use, the issuing authority of that State shall recognize the validity of a number awarded by any other issuing authority for a period of at least sixty days before requiring numbering in the new State.

(e) If a State has a numbering system approved after the effective date of this Act, that State must accept and recognize any certificate of number issued by the Secretary, as the previous issuing authority in that State, for one year from the date that State's system is approved, or until its expiration date, at the option of the State.

(f) Whenever the Secretary determines that a State is not administering its approved numbering system in accordance with the standard numbering system, or has altered its system without his approval, he may withdraw his approval after giving notice to the State, in writing, setting forth specifically wherein the State has failed to meet the standards required, and the State has not corrected such failures within a reasonable time after being notified by the Secretary.

EXEMPTIONS

SEC. 19. (a) The Secretary, when he is the issuing authority, may exempt a vessel or class of vessels from the numbering provisions of this Act under such conditions as he may prescribe.

(b) When a State is the issuing authority, it may exempt from the numbering provisions of this Act any vessel or class of vessels that has been exempted under subsection (a) of this section or otherwise as permitted by the Secretary.

DESCRIPTION OF CERTIFICATE OF NUMBER

SEC. 20. (a) A certificate of number granted under this Act shall be pocket size, shall be at all times available for inspection on the vessel for which issued when the vessel is in use, and may not be valid for more than three years. The certificate of number for vessels less than twenty-six feet in length and leased or rented to another for the latter's noncommercial use of less than twenty-four hours may be returned on shore by the vessel's owner or his representative at the place from which the vessel departs or returns to the possession of the owner or his representative. A vessel which does not have the certificate of number on board shall be identified while in use, and comply with such other requirements, as the issuing authority prescribes.

Transfer, notice.

(b) The owner of a vessel numbered under this Act shall furnish to the issuing authority notice of the transfer of all or part of his interest in the vessel, or of the destruction or abandonment of the vessel, within a reasonable time thereof, and shall furnish notice of any change of address within a reasonable time of the change, in accordance with prescribed regulations.

DISPLAY OF NUMBER

SEC. 21. A number required by this Act shall be painted on, or attached to, each side of the forward half of the vessel for which it was

issued, and shall be of the size, color, and type as may be prescribed by the Secretary. No other number may be carried on the forward half of the vessel.

SAFETY CERTIFICATES

SEC. 22. When a State is the issuing authority it may require that the operator of a numbered vessel hold a valid safety certificate issued under terms and conditions set by the issuing authority.

REGULATIONS

SEC. 23. The issuing authority may prescribe regulations and establish fees to carry out the intent of sections 17 through 24 and section 37 of this Act. A State issuing authority may impose only terms and conditions for vessel numbering (1) which are prescribed by this Act or the regulations of the Secretary concerning the standard numbering system, or (2) which relate to proof of payment of State or local taxes.

FURNISHING OF INFORMATION

SEC. 24. Any person may request from an issuing authority vessel numbering and registration information which is retrievable from vessel numbering system records of the issuing authority. When the issuing authority is satisfied that the request is reasonable and related to a boating safety purpose, the information shall be furnished upon payment by such person of the cost of retrieval and furnishing of the information requested.

STATE BOATING SAFETY PROGRAMS

ESTABLISHMENT AND ACCEPTANCE

SEC. 25. In order to encourage greater State participation and consistency in boating safety efforts, and particularly greater safety patrol and enforcement activities, the Secretary may accept State boating safety programs directed at implementing and supplementing this Act. Acceptance is necessary for a State to receive full rather than partial Federal financial assistance under this Act. The Secretary may also make Federal funds available to an extent permitted by subsection 27(d) of this Act to national nonprofit public service organizations for national boating safety programs and activities which he considers to be in the public interest.

BOATING SAFETY PROGRAM CONTENT

SEC. 26. (a) The Secretary shall accept a State boating safety program which—

(1) incorporates a State vessel numbering system previously approved under this Act or includes such a numbering system as part of the proposed boating safety program;

(2) includes generally the other substantive content of the Model State Boat Act as approved by the National Association of State Boating Law Administrators in conjunction with the Council of State Governments, or is in substantial conformity therewith, or conforms sufficiently to insure uniformity and promote comity among the several jurisdictions;

(3) provides for patrol and other activity to assure enforcement of the State boating safety laws and regulations;

(4) provides for boating safety education programs;

(5) designates the State authority or agency which will administer the boating safety program and the allocated Federal funds; and

(6) provides that the designated State authority or agency will submit reports in the form prescribed by the Secretary.

(b) The requirements of subparagraph (a) (2) of this section shall be liberally construed to permit acceptance where the general intent and purpose of such requirements are met and nothing contained therein is in any way intended to discourage a State program which is more extensive or comprehensive than suggested herein, particularly with the regard to safety patrol and enforcement activity commensurate with the amount and type of boating activity within the State, and with regard to public boat safety education, and experimental programs which could enhance boating safety.

ALLOCATION OF FEDERAL FUNDS

SEC. 27. (a) The Secretary shall allocate the amounts appropriated to the several States as soon as practicable after July 1 of each fiscal year for which the funds are appropriated.

(b) In order to encourage and assist the States in the development of boating safety programs during the first three fiscal years for which funds are available under this Act, the funds shall be allocated among applying States having a boating safety program, or which indicate to the Secretary their intention to establish boating safety programs in accordance with section 25 of this Act. One-half of the funds shall be allocated equally among the applying States. The other half shall be allocated to each applying State in the same ratio as the number of vessels propelled by machinery numbered in that State bears to the number of such vessels numbered in all applying States.

(c) In fiscal years after the third fiscal year for which funds are available under this Act the moneys appropriated shall be allocated among applying States. Of the total available funds one-third shall be allocated each year equally among applying States. One-third shall be allocated so that the amount each year to each applying eligible State will be in the same ratio as the number of vessels numbered in that State, under a numbering system approved under this Act, bears to the number of such vessels numbered in all applying eligible States. The remaining one-third shall be allocated so that the amount each year to each applying eligible State shall be in the same ratio as the State funds expended or obligated for the State boating safety program during the previous fiscal year by a State bears to the total State funds expended or obligated for that fiscal year by all the applying eligible States.

Limitation.

(d) The Secretary may allocate not more than 5 per centum of funds appropriated in any fiscal year for national boating safety activities of one or more national nonprofit public service organizations.

ALLOCATION LIMITATIONS; UNOBLIGATED OR UNALLOCATED FUNDS

SEC. 28. (a) Notwithstanding the allocation ratios prescribed in section 27 of this Act, the Federal share of the total annual cost of a State's boating safety program may not exceed 75 per centum in fiscal year 1972, 66⅔ per centum in fiscal year 1973, 50 per centum in fiscal year 1974, 40 per centum in fiscal year 1975, and 33⅓ per centum in fiscal year 1976. No State may receive more than 5 per centum of the Federal funds appropriated or available for allocation in any fiscal year.

(b) Amounts allocated to a State shall be available for obligation by that State for a period of three years following the date of allocation. Funds unobligated by the State at the expiration of the three-year period shall be withdrawn by the Secretary and shall be available with other funds to be allocated by the Secretary during that fiscal year.

(c) Funds available to the Secretary which have not been allocated at the end of a fiscal year shall be carried forward as part of the total allocation funds for the next fiscal year for which appropriations are authorized by this Act.

DETERMINATION OF STATE FUNDS EXPENDED

SEC. 29. In accordance with regulations prescribed by the Secretary computation by a State of funds expended or obligated for the boating safety program shall include the acquisition, maintenance, and operating costs of facilities, equipment, and supplies; personnel salaries and reimbursable expenses; the costs of training personnel; public boat safety education; the costs of administering the program; and other expenses which the Secretary considers appropriate. The Secretary shall determine any issues which arise in connection with such computation.

AUTHORIZATION FOR APPROPRIATIONS FOR STATE BOATING SAFETY PROGRAMS

SEC. 30. For the purpose of providing financial assistance for State boating safety programs there is authorized to be appropriated $7,500,000 for the fiscal year ending June 30, 1972, and $7,500,000 for each of the four succeeding fiscal years, such appropriations to remain available until expended.

PAYMENTS

SEC. 31. (a) Amounts allocated under section 27 of this Act shall be computed and paid to the States as follows:

(1) During the first three fiscal years that funds are available the Secretary shall schedule the initial payment to each State at the earliest possible time after application and compliance with subsection 27(b) of this Act.

(2) For fiscal years after the third fiscal year for which funds are available, the Secretary shall determine during the last quarter of a fiscal year, on the basis of computations made pursuant to section 29 of this Act and submitted by the States, the percentage of the funds available for the next fiscal year to which each eligible State shall be entitled. Notice of the percentage and of the dollar amount, if it can then be determined, for each State shall be furnished to the States at the earliest practicable time. If the Secretary finds that an amount made available to a State for a prior year is greater or less than the amount which should have been made available to that State for the prior year, because of later or more accurate State expenditure information, the amount for the current fiscal year may be increased or decreased by the appropriate amount.

(b) Notwithstanding any other provision of law, the Secretary shall schedule the payment of funds consistent with the program purposes and applicable Treasury regulations, so as to minimize the time elapsing between the transfer of funds from the United States Treasury and the subsequent disbursement thereof by a State.

Failure to comply, payments termination.

(c) Whenever the Secretary, after reasonable notice to the designated State authority or agency, finds that—

(1) the boating safety program submitted by the State and accepted by the Secretary has been so changed that it no longer complies with this Act or standards established by regulations thereunder; or

(2) in the administration of the boating safety program, there has been a failure to comply substantially with the standards established by the regulations;

the Secretary shall notify the State authority or agency that no further payments will be made to the State until the program conforms to the established standards or the failure is corrected.

Records, availability for audit.

(d) The Secretary shall, by regulation, provide for such accounting, budgeting, and other fiscal procedures as are necessary and reasonable for the proper and efficient administration of this section. The Secretary and the Comptroller General of the United States shall have access for the purpose of audit and examination, to any books, documents, papers, and records that are pertinent to Federal funds allocated under this Act.

CONSULTATION AND COOPERATION

SEC. 32. (a) In carrying out his responsibilities under this Act the Secretary may consult with State and local governments, public and private agencies, organizations and committees, private industry, and other persons having an interest in boating and boating safety.

Coast Guard, utilization.

(b) The Secretary may advise, assist, and cooperate with the States and other interested public and private agencies, in the planning, development, and execution of boating safety programs. Acting under the authority of section 141 of title 14, United States Code, and consonant with the policy defined in section 2 of this Act, the Secretary shall insure the fullest cooperation between the State and Federal authorities in promoting boating safety by entering into agreements and other arrangements with the State whenever possible. Subject to the provisions of chapter 23, title 14, he may make available, upon request from a State, the services of members of the Coast Guard Auxiliary to assist the State in the promotion of boating safety on State waters.

63 Stat. 505.

14 USC 821.

BOATING SAFETY ADVISORY COUNCIL

SEC. 33. (a) The Secretary shall establish a National Boating Safety Advisory Council (hereinafter referred to as "the Council"), which shall not exceed twenty-one members, whom the Secretary considers to have a particular expertise, knowledge, and experience in boating safety. Insofar as practical, to assure balanced representation, members shall be drawn equally from (1) State officials responsible for State boating safety programs, (2) boat and associated equipment manufacturers, and (3) boating organizations and members of the general public. Additional persons from those sources may be appointed to panels to the Council which will assist the Council in the performance of its functions.

Membership.

(b) In addition to the consultation required by section 6 of this Act the Secretary shall consult with the Council on any other major boat safety matters related to this Act.

(c) Members of the Council or panels may be compensated at a rate not to exceed the rate provided for Federal classified employees of grade GS–18 when engaged in the duties of the Council. Members, while away from their homes or regular places of business, may be allowed travel expenses, including a per diem in lieu of subsistence as authorized by section 5703 of title 5, United States Code, for persons in the Government service employed intermittently. Payments under this section shall not render members of the Council employees or officials of the United States for any purposes. Compensation. 5 USC 5332 note. 80 Stat. 499; 83 Stat. 190.

CRIMINAL PENALTIES

SEC. 34. Any person who willfully violates section 12(c) of this Act or the regulations issued thereunder shall be fined not more than $1,000 for each violation or imprisoned not more than one year, or both.

CIVIL PENALTIES

SEC. 35. (a) In addition to any other penalty prescribed by law any person who violates subsection 12(a) of this Act shall be liable to a civil penalty of not more than $2,000 for each violation, except that the maximum civil penalty shall not exceed $100,000 for any related series of violations. Whenever any corporation violates section 12(a) of this Act, any director, officer, or executive employee of such corporation who knowingly and willfully ordered or knowingly and willfully authorized such violation shall be individually liable to the civil penalties contained herein, in addition to the corporation: *Provided, however*, That no such director, officer, or executive employee shall be individually liable under this subsection if he can demonstrate, by a preponderance of the evidence, (1) that said order or authorization was issued on the basis of a determination, in the exercise of reasonable and prudent judgment, that the nonconformity with standards and regulations constituting such violation would not cause or constitute a substantial risk of personal injury to the public, and (2) that at the time of said order or authorization he advised the Secretary in writing of his action under this proviso.

(b) In addition to any other penalty prescribed by law any person who violates any other provision of this Act or the regulations issued thereunder shall be liable to a civil penalty of not more than $500 for each violation. If the violation involves the use of a vessel, the vessel, except as exempted by subsection 4(c) of this Act, shall be liable and may be proceeded against in the district court of any district in which the vessel may be found.

(c) The Secretary may assess and collect any civil penalty incurred under this Act and, in his discretion, remit, mitigate, or compromise any penalty prior to referral to the Attorney General. Subject to approval by the Attorney General, the Secretary may engage in any proceeding in court for that purpose, including a proceeding under subsection (d) of this section. In determining the amount of any penalty to be assessed hereunder, or the amount agreed upon in any compromise, consideration shall be given to the appropriateness of such penalty in light of the size of the business of the person charged, the gravity of the violation and the extent to which the person charged has complied with the provisions of section 15 of this Act or has otherwise attempted to remedy the consequences of the said violation. Secretary, civil penalty. Powers.

Collection referral.

(d) When a civil penalty of not more than $200 has been assessed under this Act, the Secretary may refer the matter for collection of the penalty directly to the Federal magistrate of the jurisdiction wherein the person liable may be found for collection procedures under supervision of the district court and pursuant to order issued by the court delegating such authority under section 636(b) of title 28, United States Code.

82 Stat. 1113.

INJUNCTIVE PROCEEDINGS

Boats or equipment, U. S. jurisdiction.

Notice, hearing opportunity.

SEC. 36. The United States district courts shall have jurisdiction to restrain violations of this Act, or to restrain the sale, offer for sale, or the introduction or delivery for introduction, in interstate commerce, or the importation into the United States, of any boat or associated equipment which is determined not to conform to Federal boat safety standards, upon petition by the Attorney General on behalf of the United States. Whenever practicable, the Secretary shall give notice to any person against whom an action for injunctive relief is contemplated and afford him an opportunity to present his views, and except in the case of knowing and willful violation, shall afford him a reasonable opportunity to achieve compliance. The failure to give notice and afford such opportunity does not preclude the granting of appropriate relief.

CASUALTY REPORTING SYSTEMS

SEC. 37. (a) The Secretary shall prescribe a uniform vessel casualty reporting system for vessels subject to this Act, including those otherwise exempted by paragraphs (1), (3), and (4) of section 4(c).

(b) A State vessel numbering system and boating safety program approved under this Act shall provide for the reporting of casualties and accidents involving vessels. A State shall compile and transmit to the Secretary reports, information, and statistics on casualties and accidents reported to it.

State reports to Secretary.

Fatal casualties.

(c) A vessel casualty reporting system shall provide for the reporting of all marine casualties involving vessels indicated in subsection (a) of this section and resulting in the death of any person. Marine casualties which do not result in loss of life shall be classified according to the gravity thereof, giving consideration to the extent of the injuries to persons, the extent of property damage, the dangers which casualties create, and the size, occupation or use, and the means of propulsion of the boat involved. Regulations shall prescribe the casualties to be reported and the manner of reporting.

(d) The owner or operator of a boat or vessel indicated in subsection (a) of this section and involved in a casualty or accident shall report the casualty or accident to the Secretary in accordance with regulations prescribed under this section unless he is required to report to a State under a State system approved under this Act.

(e) The Secretary shall collect, analyze, and publish reports, information, or statistics together with such findings and recommendations as he considers appropriate. If a State accident reporting system provides that information derived from accident reports, other than statistical, shall be unavailable for public disclosure, or otherwise prohibits use by the State or any person in any action or proceeding against an individual, the Secretary may utilize the information or material furnished by a State only in like manner. Reports and recommendations, publication.

APPROPRIATIONS AUTHORIZATION

SEC. 38. There is authorized to be appropriated amounts as may be necessary to administer the provisions of this Act.

85 STAT. 227

85 STAT. 228

GENERAL REGULATIONS

SEC. 39. The Secretary may issue regulations necessary or appropriate to carry out the purposes of this Act.

SAVINGS PROVISION

SEC. 40. Compliance with this Act or standards, regulations, or orders promulgated hereunder shall not relieve any person from liability at common law or under State law.

MISCELLANEOUS PROVISIONS

SEC. 41. (a) The following are repealed: Repeals.

(1) Section 7, as amended, and sections 13 and 14 of the Motorboat Act of 1940, Public Law 76–484, April 25, 1940 (54 Stat. 165); 70 Stat. 154;

(2) The Federal Boating Act of 1958, Public Law 85–911, September 2, 1958 (72 Stat. 1754), except subsections 6(b) and 6(c) thereof; 72 Stat. 1755. 46 USC 526f, 526l, 526m.

(3) The Act of March 26, 1960, Public Law 86–396 (74 Stat. 10); and 46 USC 527 note.

(4) The Act of August 30, 1961, Public Law 87–171 (75 Stat. 408). 46 USC 526u.

(b) Subsection (c) of section 6 of the Federal Boating Act of 1958, September 2, 1958 (72 Stat. 1754), is amended to read as follows: 46 USC 527, 527a, 527e, 527h.

"(c) Such Act of April 25, 1940 (46 U.S.C. 526-526t), is further amended by adding at the end thereof the following new section: 46 USC 526u.

"'SEC. 22. (a) This Act applies to every motorboat or vessel on the navigable waters of the United States, Guam, the Virgin Islands, the Commonwealth of Puerto Rico, and the District of Columbia, and every motorboat or vessel owned in a State and using the high seas, except that the provisions of this Act other than sections 12, 18, and 19 do not apply to boats as defined in and subject to the Federal Boat Safety Act of 1971.

"'(b) As used in this Act—

"'The term "State" means a State of the United States, Guam, the Virgin Islands, the Commonwealth of Puerto Rico, and the District of Columbia.'" "State."

46 USC 390 et seq.

(c) Any vessel, to the extent that it is subject to the Small Passenger Carrying Vessel Act, May 10, 1956 (70 Stat. 151), or to any other vessel inspection statute of the United States, is exempt from the provisions of this Act.

(d) Nothing contained in this Act shall be deemed to exempt from the antitrust laws of the United States any conduct that would be unlawful under such laws, or to prohibit under the antitrust laws of the United States any conduct that would be lawful under such laws.

(e) Regulations previously issued under statutory provisions repealed, modified, or amended by this Act continue in effect as though promulgated under the authority of this Act until expressly abrogated, modified, or amended by the Secretary under the regulatory authority of this Act.

54 Stat. 163. 46 USC 526. 72 Stat. 1754. 46 USC 527 note.

(f) Any criminal or civil penalty proceeding under the Motorboat Act of 1940, as amended, or the Federal Boating Act of 1958, as amended, for a violation which occurred before the effective date of this Act may be initiated and continue to conclusion as though the former Acts had not been amended or repealed hereby.

Approved August 10, 1971.

LEGISLATIVE HISTORY:

HOUSE REPORT No. 92-124 (Comm. on Merchant Marine and Fisheries).

July 8, considered and passed House.
July 13, considered and passed Senate, amended, in lieu of [illegible].
July 29, House concurred in Senate amendment.

AN ALASKAN TRAGEDY

WE'RE #1 WITHOUT EVEN TRYING

Since the turn of the century, boating has steadily grown to become one of the nations's most popular pastimes. Correspondingly, the boating accident statistics have also grown. As the years went by the Congress enacted several pieces of legislation to deal with the growing problem. Finally, on August 10, 1971, the Federal Boat Safety Act was signed into law establishing minimum standards which would provide the public with reasonably safe boats and equipment. At the same time the Act stressed the need for the individual states to enact equivalent legislation of their own, thus motivating the public to boating safety awareness through public education and operator and equipment requirements.

With the enactment of the Federal Boat Safety Act of 1971, the vast majority of states have recognized the inherent dangers associated with boating and during the ensuing years 47 states have enacted boating safety legislation which squarely faced the problems head on. Their actions and subsequent programs have significantly turned the tide of rising boating accidents and deaths within their states. These programs have received national acclaim for the advancements that have been made in the field of boating safety education and public protection.

To better coordinate their activities among themselves, the National Association of State Boating Law Administrators (NASBLA) was formed to serve as a viable public forum for reviewing and improving upon the federally approved state boating programs. In those states where there is no Federally approved state boating program, such as Alaska, the Coast Guard acts as the boating law administrator for areas that fall under Federal jurisdiction. Consequently, as one of only three states with this very limited federal boating safety program, Alaska's boaters are paying dearly through personal injury, loss of life and loss of property.

HERE IS JUST AN EXAMPLE.....

Alaska has more than 3 million lakes that comprise about 5.2 million acres. They may range in size from the small Arctic ponds to the 1,000 square mile Iliamna Lake. In 1978, the tragedy of boating deaths struck eight times on Alaska's lakes.

However, many more deaths occur each year on our inland rivers and in particular along Alaska's largest, the Yukon. Last year nearly a third of Alaska's boating deaths occurred on these inland rivers.

The most boating deaths occured along Alaska's 34,000 miles of coastline. In 1978, seventy-one deaths were reported on Alaska's coastal waterways and in addition to these fatalities over $2 million dollars in personal property was lost in boating accidents.
In all, ninety-eight boating fatalities occurred on Alaskan waters last year, second only to motor vehicle fatalities as the largest category of accidental deaths. When this figure is compared with the rest of the United States, Alaska has by far the worst boating record—— over 7 times the National average and 2 times more fatalities than the next leading state. (Depicted in Tables 1 and 3).

The three states with largest boating population, California, Texas, and Minnesota, rank 22nd, 35th, and 45th respectively, in the number of boating fatalities. Yet, each state alone has over 500,000 registered boats, more than 15 times the number of boats registered in Alaska. It is interesting to note that Alaska, New Hampshire, and Washington (the only three states without a state boating safety act) rank 1st, 3rd, and 8th in number of boating fatalities.

Another thing to be remembered in the case of California and Texas, is that the boating season in many areas of these states last year round, unlike Alaska, which has a boating season of 6 months or less.

It is evident from these statistics that Alaska has a severe boating problem when compared to the rest of the United States. What can we do to solve this problem or at least bring it under control?

The most effective and proven means for dealing with this problem would be to legislate a comprehensive state boating safety program.

How is a state boating safety program going to change Alaska's unenviable record of boating activity?

First of all, it will identify and charge a state agency with the responsibility for implementing a coordinated boating safety program. Not just another law enforcement program of the Department of Public Safety, but more importantly a means to implement a comprehensive public education program.

Why an education program?

With a state as vast as Alaska the emphasis needs to be focused on public education with public protection programs as a companion when necessary. The resources and expertise of the Department of Education would be utilized to assist in the development and operation of a public education program. In addition, the Coast Guard can be called upon for assistance, training and advice for program development in order to establish effective programs.

How would public protection be handled with the new law?

In addition to the education program, incorporation of the Federal boating regulations into the state boating law, as proposed, would provide procedures and policies for dealing with violators, as well as provide for the minimum operator requirements for safety equipment and boat operation. Specific sections of the act will empower state law enforcement officials with the necessary authority to carry out its provisions. Existing manpower from the Department of Public Safety could be utilized for public protection purposes without the necessity of recruiting more personnel to enforce boating laws.

Doesn't Alaska currently have state boating laws?

The existing state boating statutes cover only minimum operator requirements, which in many cases are inaccurate. This vagueness leaves the law ineffective and consequently, rarely enforced.

What about the Coast Guard, don't they enforce the federal boating laws in Alaska?

Yes, they do, but the key word here to remember is Federal. In the Federal Boat Safety Act of 1971, the Congress designated the Coast Guard as the administrator of the federal boating program and in the following year the Coast Guard inaugurated a nationwide public boating safety program. In Alaska a full time staff of ten was assembled solely to carry out the federal boating safety program, however, because of this limited manpower the program was restricted to only coastal waters. Well, needless to say, in those seven years Alaska's boating population has almost doubled, but the Coast Guard's program hasn't expanded, even in the coastal areas. In the beginning there was an initial drop in the number of fatalities, but the number of boating deaths has soared with the growing boating population. In addition to that, almost half of the boating deaths in Alaska occur on inland rivers and lakes, places that are inaccessible to the Coast Guard or in many cases out of their jurisdiction. Each year the number of complaints received by the Alaska State Troopers, the Coast Guard and other state and federal agencies concerning the negligent operation of boats continues to mount, especially along the inland rivers. Sure the Coast Guard does a good job with the resources they have available, but this growth in boating activity has reduced their effectiveness to that of a token program, with no change in sight.

Won't a new boating law create more regulations for the boater?

No! Only existing regulations will continue to be enforced. What a boating law will do is enable the state to administer and pursue a boating program with little or no federal interference thereby shifting boating control from the federal government to the state.

With the passage of a state boating safety act, where will the revenues come from to administer these programs?

Current federal funding assistance for state boating programs is scheduled to run out in Fiscal Year 1980. Other proposals have also included the establishment of Federal marine fuel taxes which would then be dispursed to only those states with Federally approved boating laws, such as this one being proposed for Alaska. The state could expect to receive somewhere in the neighborhood of $250,000 from the proposed marine fuel tax bill.

One in-state source of revenue, but a fairly small one, would be a boat and outboard motor titling program. With the existing Coast Guard registration system, a Certificate of Numbers is not unequivocal proof of ownership. A titling program is sorely needed, both to protect the owner and any lienholders on a boat or outboard motor.

Another source of in-state revenue available and by far the largest, would be monies generated by a state operated boating registration program. At the present time this program is administered on behalf of the Federal government by the Coast Guard in Juneau, with all the revenuues from this program being deposited in the U. S. Treasury. None of the revenues remain in Alaska!! The program, administered on a yearly basis utilizing the fee structure as proposed, will generate approximately $500,000 per year to directly support the state boating programs, an amount commensurate with the cost to administer the programs to be undertaken by this law.

What advantages are there to numbering boats?

Most importantly, boats need to be numbered to aid in search and rescue. For example, if a boat is found adrift or capsized, in just a matter of minutes the boat owner can be identified through the numbers on the hull and a check can be made with owner, relatives or neighbors to determine if there was anyone on board or if the boat was just adrift.

The boat registration program also provides an added benefit for the prosepective boat buyer. Financial institutions will more readily lend money for the purchase of boats if some form of previous ownership can be provided.

For commercial fishermen who are applying to the Limited Entry Commission to fish in Alaskan waters, boat registration lends to the proof of vessel ownership, both past and present, as required by the Commission.

With the future development of the bottom fisheries industry, the registration of boats will be essential to facilitate effective management of those fisheries.

Boat numbers also fulfill other useful purposes. Among them law enforcement, educational contact, accident reporting and consumer defect notification.. Whether used for tracing a person for the negligent operation of a boat, to provide boating safety materials, or to notify a consumer of a possible product defect, all protect and serve the public welfare.

With the passage of a comprehensive state boating safety program won't the Coast Guard reduce its effort in boating safety in Alaska?

Quite the contrary, the Coast Guard has a dedicated committment to boating safety in Alaska. The presence of a state boating safety program would lend a new dimension to the Coast Guard's role in this area. Specifically, the Coast Guard would assist the State in establishing its own program, provide training to educators and peace officers, and work hand and hand with state and local agencies.

But what if the legislature fails to enact a state boating safety law, what will the consequences be?

With no possibility of the Coast Guard expanding their boating program, the number of boating accidents and fatalities will continue to soar as the boating population grows.

Without a doubt the proposed state boating law will provide the boaters of Alaska with a program designed to meet their special needs without burdening the non-boater.

STATISTICS

1. Alaska has the highest fatality rate in the United States —— over 7 times the National average.

2. Next to motor vehicle fatalities, boating deaths represent the largest category of accidental deaths in Alaska.

3. Of the 98 deaths that occurred on Alaskan waters in 1978, approximately 50% occurred inland —— in areas presently inaccessible to the Coast Guard or out of their jurisdiction.

PRESENT STATE LAW

1. The present state boating laws are contained in Title 5, Amusements and Sports, of the Alaska State Statutes; Chapter 25, Watercraft.

2. The present law in many cases is obsolete. Being passed in 1961, the Federal laws have superseded much of the Alaska State law.

3. The remaining sections represent only a skelton law enforcement program, which is rarely enforced.

PROPOSED STATE LAW

1. Establishes a coordinated boating education program utilizing the Department of Education and other state agencies as needed..

2. Incorporates the Federal boating statutes into the state law.

3. Will establish a more effective state "public protection" program.

PROGRAM FUNDING

1. Federal Assistance

a. State Boating Funds -- These are due to expire in FY 80.

b. Proposed Marine Fuel Taxes -- Being considered by Congress to fund Federally approved state boating programs. The state could expect to receive approximately $250,000 from this proposal.

2. State Revenues -- approximately $500,000 will be generated from a boat registration program, based on the proposed fee schedule contained in the law. (Additional revenues may be raised from a Titling program as proposed).

COAST GUARD ASSISTANCE

1. Training and assistance will be provided by the Coast Guard for initial development of educational programs.

2. Initial training of law enforcement officers to assist in the development of an effective public protection program.

3. The Coast Guard will continue its coastal boarding program for enforcement of boating safety laws.

4. The Coast Guard will continue with present educational programs -- in relation to the Coast Guard Auxiliary.

5. The Coast Guard will remain a viable support agency for state assistance.

ADVANTAGES TO STATE IN ESTABLISHING A BOATING SAFETY PROGRAM

1. The State will assume management, administration and control versus the present Federal intervention.

2. Revenues will remain in Alaska, available for state usage, instead of being deposited with the Federal government.

3. Offers programs and protection to the entire state, not just coastal areas.

1. Expand the benefits to more than ten times the present level.

TABLE 1 TEN LEADING STATES
IN BOATING FATALITIES FOR 1977*

III. ANALYSIS (See Fiscal Note Preparation Instructions, Section III)

FY82 would be the first year of full program operation. FY81 estimates contain most of the $623.2 initial equipment budget, which includes 18 vehicles, $252.0; 18 boats, $217.0; and radios, $46.7. Salary and benefit costs for FY82 staff are summarized: Director, Information Officer, and Secretary, $120.6; 3 regional supervisors, $121.5; 8 journeyman Boating Safety Officer IIs, $293.6; 7 BSOIs, $239.5; 15 summer aides, $161.2; and the equivalent of 6 full-time clerical positions, $126.1. Computer hardware and software is estimated at $100.0. To fund interagency needs, $100.0 is budgeted.

Costs are based upon mid 1980 prices, no inflation is added. Space, utility, communications, travel, commodities, office equipment, etc. needs are estimated for each position. More detail is available.

III. ANALYSIS (See Fiscal Note Preparation Instructions, Sec. on III)

The purpose of this fiscal note is to explain that revenue would be collected under the proposed Certificate of Number and Certificate of Title Fees. Estimating 25,000 boats in Alaska, about $250,000 would be collected annually for certificates of number ($10 per boat) assuming full compliance. Certificates of title would generate $25,000 ($5,000 x 5) assuming 20% of the boats were sold each year. Outboard motors (25 hp & up) are estimated to be on 20% of all boats; title transfer fees would generate $5,000 per year (25,000 x 20% = 5,000 x 20% = 1,000 x $5 = 5,000). $250,000 + $25,000 + $5,000 = $280,000.

Revenue would increase gradually, but would not approach its full potential until at least the third year of the program. Original certificates of title would account for a larger proportion of overall revenue at first, but would later be substantially reduced. No estimate is included for cash penalties for violation of the statutes or regulations on boating safety.

tion of devices extends to a point five miles outside the territorial limits of the political subdivision if no other political subdivision of the state is exercising similar authority over the same devices. (§ 6 ch 109 SLA 1960)

Sec. 05.20.110. Exclusion of transportation devices under jurisdiction of other agencies from chapter. This chapter does not extend to the department or to political subdivisions authority to prescribe regulations pertaining to transportation facilities or devices subject to the regulatory jurisdiction of other state or local agencies. (§ 9 ch 109 SLA 1960)

Sec. 05.20.120. Definitions. In this chapter, unless the context otherwise requires:

(1) "department" means the Department of Public Safety;

(2) "device" means a device which is designed and operated for the conveyance or movement of persons and which is used as a source of or aids in the promoting of entertainment, pleasure, play, relaxation or instruction, including but not limited to ski tows, roller coasters, merry-go-rounds and Ferris wheels. (§§ 1, 2 ch 109 SLA 1960)

Chapter 25. Watercraft.

Article
1. Safety Requirements (§§ 05.25.010—05.25.020)
2. Accidents and Liability (§§ 05.25.030—05.25.040)
3. General Provisions (§§ 05.25.050—05.25.100)

Article 1. Safety Requirements.

Section
10. Safety requirement
20. Water skis and surfboards

Sec. 05.25.010. Safety requirement. (a) Every watercraft operated on inland waters shall carry and exhibit between sunset and sunrise at least one white light to show all around the horizon.

(b) Every watercraft operated on inland waters shall carry at least one life preserver, or lifebelt, or ring buoy, or other device of the sort approved by the United States Coast Guard for each person on board, so placed as to be readily accessible. Every watercraft carrying passengers for hire shall carry, so placed as to be readily accessible, at least one life preserver of the sort approved by the United States Coast Guard for passenger carrying watercraft for each person on board.

(c) Every motor-driven watercraft operated for hire shall carry a fire extinguisher capable of promptly and effectually extinguishing burning gasoline. (§ 4 ch 63 SLA 1961)

Legislative committee report.—For legislative committee report on original bill, see House Journal (1961), page 106.

person on water skis, or a surfboard, or similar devices unless (1) the watercraft is equipped with a rearview mirror in which the person being towed can be viewed, (2) or there is in the watercraft a person of 12 years of age or older in addition to the operator, in a position to observe the progress of the person being towed. (§ 5 ch 63 SLA 1961)

Article 2. Accidents and Liability.

Section
30. Collisions, accidents and casualties
40. Owner's civil liability

Sec. 05.25.030. Collisions, accidents and casualties. (a) The operator of a watercraft involved in a collision, accident or casualty shall give to other persons affected by the collision, accident or casualty such assistance as may be necessary to save them from or minimize any danger caused by the collision, accident or casualty, and to give his name, address and identification of his watercraft in writing to any person injured and to the owner of any property damaged in the collision, accident or casualty.

(b) In the case of collision, accident, or casualty involving a watercraft, the operator of the watercraft, if the collision, accident or casualty results in death or injury to a person or damage to property in excess of $100, shall file with the department a full description of the collision, accident or casualty, including such information as the department, by regulation, requires. (§ 6 ch 63 SLA 1961)

Sec. 05.25.040. Owner's civil liability. The owner of a watercraft is liable for injury or damage caused by the negligent operation of his watercraft whether the negligence consists of a violation of a state statute, or neglecting to observe ordinary care in the operation of the watercraft as the rules of the common law require. The owner is not liable, however, unless his watercraft is used with his express or implied consent. It is presumed that his watercraft is being operated with the knowledge and consent of the owner, if at the time of the injury or damage, it is under the control of his spouse, father, mother, brother, sister, son, daughter, or other member of his immediate family. This chapter does not relieve any other person from a liability which he would otherwise incur, and does not authorize or permit recovery in excess of injury or damage actually incurred. (§ 8 ch 63 SLA 1961)

Article 3. General Provisions.

Section
50. Declaration of policy
60. Prohibited operation
70. Exemptions
80. Enforcement
90. Penalties
100. Definitions

Supplement

Sec. 05.25.050. Declaration of policy. It is the policy of this state to promote safety for persons and property in and connected with the use, operation and equipment of vessels in recreational pursuits in inland waters and to promote uniformity of laws relating thereto. (§ 1 ch 63 SLA 1961)

Sec. 05.25.060. Prohibited operation. (a) No person shall operate a watercraft whether for recreational purposes or any other purpose or manipulate water skis, surfboard, or similar device on inland waters in a reckless or negligent manner so as to endanger the life or property of another person.

(b) No person shall operate a watercraft whether for recreational purposes or any other purpose or manipulate water skis, surfboard, or similar device on inland waters while under the influence of any intoxicating liquor, narcotic drug, barbiturate or marijuana. (§ 3 ch 63 SLA 1961)

Sec. 05.25.070. Exemptions. Watercraft and persons operating watercraft are exempt from this chapter except § 60(b) of this chapter when participating in the area set aside for a public regatta, race, marine parade, tournament or exhibition on inland waters. (§ 7 ch 23 SLA 1961)

Sec. 05.25.080. Enforcement. Every peace officer may enforce this chapter and in the exercise of enforcement may stop and board watercraft subject to this chapter. (§ 9 ch 63 SLA 1961)

Sec. 05.25.090. Penalties. A person who violates any provision of this chapter is guilty of a misdemeanor and is punishable by a fine of not more than $500, or by imprisonment of not more than six months, or by both, for each violation. (§ 10 ch 63 SLA 1961)

Sec. 05.25.100. Definitions. As used in this chapter, unless the content otherwise requires,

(1) "department" means the Department of Public Safety;

(2) "inland waters" means the water in a lake or river or stream within the territorial limits of the state;

(3) "operate" means to navigate or otherwise use a watercraft for recreational purposes as opposed to business, subsistence or commercial purposes;

(4) "watercraft" means every description of vessel, other than a seaplane on the water, used or capable of being used as a means of transportation on water and devoted to recreational pursuits unless otherwise expressly provided in this chapter; and excepting vessels having a valid marine document issued by the United States or foreign governments. (§ 2 ch 63 SLA 1961)

tion of devices extends to a point five miles outside the territorial limits of the political subdivision if no other political subdivision of the state is exercising similar authority over the same devices. (§ 6 ch 109 SLA 1960)

Sec. 05.20.110. Exclusion of transportation devices under jurisdiction of other agencies from chapter. This chapter does not extend to the department or to political subdivisions authority to prescribe regulations pertaining to transportation facilities or devices subject to the regulatory jurisdiction of other state or local agencies. (§ 9 ch 109 SLA 1960)

Sec. 05.20.120. Definitions. In this chapter, unless the context otherwise requires:

(1) "department" means the Department of Public Safety;

(2) "device" means a device which is designed and operated for the conveyance or movement of persons and which is used as a source of or aids in the promoting of entertainment, pleasure, play, relaxation or instruction, including but not limited to ski tows, roller coasters, merry-go-rounds and Ferris wheels. 1979 ANNUAL CONVENTION

Resolution 79-32

WHEREAS, an amendment to the Federal Boating Safety Act of 1971 was recently introduced in Congress (H.R. 4310) by Representative Biaggi of Pennsylvania, and

WHEREAS, the primary purpose of this amendment is to "improve recreational boating safety and facilities through the development, administration, and financing of a national recreational boating safety and facilities improvement program," and

WHEREAS, for the State of Alaska to become eligible for this federal funding, Alaska must institute a Boating Safety Act, and

WHEREAS, in 1978 and 1979, 170 individuals died in water-related accidents, and 19 others as a result of drowning, and

WHEREAS, the act will enable the State of Alaska to provide statewide boating safety sessions,

NOW THEREFORE BE IT RESOLVED, that the Alaska Federation of Natives urges the enactment of a "Recreational Boating Safety and Facilities Improvement Act".

RESOLUTION COMMITTEE RECOMMENDATION Do Pass

CONVENTION RECOMMENDATION Do Pass

STATISTICS

1. Alaska has the highest fatality rate in the United States --- over 7 times the National average.

2. Next to motor vehicle fatalities, boating deaths represent the largest category of accidental deaths in Alaska.

3. Of the 75 deaths that occurred on Alaskan waters in 1978, approximately 50% occurred inland --- in areas presently inaccessible to the Coast Guard or out of our jurisdiction.

PRESENT STATE LAW

1. The present state boating laws are contained in Title 5, Amusements and Sports, of the Alaska State Statutes; Chapter 25, Watercraft.

2. The present law in many cases is obsolete. Being passed in 1961, the Federal laws have superseded much of the Alaska State law.

3. The remaining sections represent only a skelton law enforcement program, which is rarely enforced.

PROPOSED STATE LAW

1. Establishes a coordinated boating education program utilizing the Department of Education and other state agencies as needed.

2. Incorporates the Federal boating statutes into the state law.

3. Will establish a more effective state "public protection" program.

PROGRAM FUNDING

1. Federal Assistance

a. State Boating Funds -- These are due to expire in FY 80, however they will most likely be extended for one more year.

b. Proposed Marine Fuel Taxes -- Being considered by Congress to fund Federal'y approved state boating programs.

2. State Revenues --- approximately $500,000 will be generated from a boat registration program, based on the proposed fee schedule contained in the law. (Additional revenues may be raised from a Titling program as proposed)

COAST GUARD ASSISTANCE

1. Training and assistance will be provided by the Coast Guard for inititial development of educational programs.

2. Inititial training of law enfocement officers to assist in the development of an effective public protection program.

3. The Coast Guard will continue its coastal boarding program for enforcement of boating safety laws.

4. The Coast Guard will continue with present educational programs --- in relation to the Coast Guard Auxiliary.

5. The Coast Guard will remain a viable support agency for state assistance.

ADVANTAGES TO STATE IN ESTABLISHING A BOATING SAFETY PROGRAM

1. The State will assume management, administration and control versus the present Federal intervention.

2. Revenues will remain in Alaska, available for state usage, instead being deposited with the Federal government.

3. Offers programs and protection to the entire state, not just coastal areas.

4. Expand the benefits to more than ten times the present level.

January 31, 1980

The Honorable Patrick J. Carney
Alaska State Legislature
House of Representatives
Pouch V
Juneau, Alaska 99811

Dear Pat:

Pursuant to your call yesterday regarding the dating of fresh milk in our market place, I find that dairy plants outside the state are coding their milk with 15 to 20 day "pull dates" after bottling. If the stores have milk from outside and it has reached the "pull date' or is getting within a day or two of that date, they usually "special" this product until it is disposed of.

Various other states regulate "pull dates"; for instance, Maryland 7 days, Florida 10 days, New Jersey 5 days. Some of the states have not yet adopted a regulation concerning this matter; as you are well aware this is a relatively new objective.

A recent article in Hoard's Dairyman by noted milk experts in Wisconsin indicated it was evident that after six days milk started to deteriorate in quality, flavor, etc.

Very truly yours,

Jack Flint
General Manager

Matanuska Maid, Inc.

December 7, 1978

Mr. Allen Lynn, Director
Department of Agriculture
State of Alaska
510 South Alaska
Palmer, AK 99645

For distribution to the
Milk Advisory Board
December 12, 1978

Dear Mr. Lynn:

Matanuska Maid has been engaged in the production and processing of dairy products in the State of Alaska since 1940. Since that time, the members of Matanuska Maid have successfully competed in the market place with their locally produced products and have assured the Alaskan consumer of a wholesome and adequate supply of fresh milk. Even during times of great disastrous acts of God, shipping strikes, and other such interruptions in the normal flow of commerce, the Alaskan milk producer has contributed greatly to the health and welfare of the State of Alaska. During these last three decades, the dairy farmer has surmounted many, many problems including surpluses, being a victim of reduced markets because of Class 3 milk products being shipped into the area and sold at lesser prices, and unfair trade practices creating chaotic conditions within the industry.

Milk production in Alaska as reported in the "Alaska Farm Reporter" declined by 15% in September of this year compared to the same month a year ago. This really is no surprise with the decline in raw milk price and the adverse milk feed/price ratio.

I believe the dairy industry should be favorably compared to the "Delta Barley" project by the State administration. With the present amount of fluid milk that is being shipped into Alaska (except Southeastern) there is room for at least 30 more dairy farms of an average size that is present today. It is necessary to consider that the market for this milk is already here. It is not necessary to export this product from the United States with its international complications. From the time the milk is produced by the farmer, the processing plants are already established and the distribution system is in place and working.

Milk control programs have been operating in the other states since the early 1930s. The regulation of fluid milk markets did not originate in this country. These regulations started in Holland, spread to France and England, then to Canada, Australia, New Zealand and the United States.

In 1962 the legislature for the State of Alaska recognized the importance of some type of needed regulation concerning the marketing of milk and passed the necessary enabling legislation entitled "The Marketing of Milk" that we are discussing. This statute creates a milk advisory board and determines the duties of the Director of Agriculture of the State of Alaska regarding dairy products. This statute is not unlike laws created by legislatures in many other states. The objectives of milk control legislation are laid down in various ways in the individual state laws. A major objective of practically all states is the assurance of an adequate supply of wholesome milk at fair and reasonable prices to the farmers as well as the consumer. All state control advisory agencies have authority to require licensing of distributors and have the power to investigate, inspect and audit, as well as require reports from processors. Other objectives noted in about one-third of the state laws are orderly marketing and the regulation of fair trade practices. Benefits to farmers through establishing fair prices and fostering intelligently directed production is another aim. It should be noted that 95% of all fluid milk is priced under state control laws or federal marketing orders. A total of 37 states have state milk control programs.

Some of the major characteristics of state milk control programs are: 17 states and Puerto Rico were establishing producer prices in 1976, 15 states were authorized to set wholesale prices and 14 states were authorized to set retail prices. The widening of market areas, as well as the price cutting activities and known competition associated with such extensions, has led a number of other states to enact laws regulating trade practices and sales below cost for fluid milk. In 1976 trade practices extended to 28 states and Puerto Rico. Eleven states without authority to set prices had laws prohibiting sales of milk below cost. All but 3 states that set retail prices also prohibited sales below cost.

Because milk is an essential food, it is especially vulnerable to predatory trade practices. It is a commodity which must be produced, processed, distributed and consumed in less than three weeks. Because of the short life of the product, a dairy farmer or a processor can be put out of business in a short time if predatory practices develop which make it impossible to market the product. In prior years, Alaska was somewhat immune from the milk markets in the lower 48 because processing techniques and transportation difficulties did not make it feasible to move milk from these markets to Alaska. However, with improved processing techniques and transportation, it has now become economically feasible to move milk from the lower 48 into the larger population centers of Alaska. This pressure being applied to the Alaskan dairy industry is very severe and the only way that the

Alaskan dairy industry will survive is to implement the Statute that was established in 1962.

It is apparent that the present state administration and the legislature desires to encourage the entire agricultural industry in Alaska. This is recognized by the fact that the state has recently sold acreage in the Big Delta area for the so-called Barley Project with a budget this year of some $5,000,000 and with an anticipated projected budget of approximately $20,000,000. To continue this effort of encouraging agriculture within the State, I believe that it is necessary to develop a milk control program. I believe it is necessary to provide the Alaskan farmer with a level of income commensurate with that received by other segments of our economy and to enable farmers to maintain a progressive industry in the face of ever-increasing costs. It is also necessary to insure the consumer an adequate supply of milk for our growing population and to provide for sense of uses within the State. It is interesting to note that on Thursday, June 19, 1958, Mr. James Wilson, Commissioner of Agriculture stated that there were approximately 100 families engaged in dairying throughout the State that year. Now there are 10. That figure has declined by about 90%.

Milk is one of the best buys in the grocery store today at $.34 per pound. No other high protein, high mineral and vitamin food can match that price per pound and it is 100% edible.

Some of the existing problems that presently plague the dairy industry are:

1. Sales below cost
   a. Even though these sales may account for only 10 to 12% of the entire market they cause major disruption.

2. Unrealistic pull dates on the products
   a. 18 days to 25 days
   b. A recent article in Hoard's Dairyman dated October 10, 1978, reported on a study done by Lester Hankin, Walter Dillman, and George Stephens.

      They state in part "age of samples in retail stores and schools varied from 0 to 16 days. Average age was 4.3 days in 1970-71 and 4.7 days in 1974 and 1975. In 1975 the average age of samples with unsatisfactory flavor score was 6.2 days."

      Many states have regulations concerning "pull dates" on dairy products and they are controlled in various ways. They seem to range from 5 to 7 days from the date of production

Mrs. Carolyn Nicholas
Box 177
Kenai, Alaska 99611

Dear Mrs. Nicholas:

It was with a good deal of interest that I received today your letter inquiring about legislation that would allow the sale of raw milk in the state of Alaska. I suppose the letter particularly caught my eye because I myself was raised on a dairy farm in Wisconsin.

Upon doing a bit of preliminary checking I understand that several years ago it was legal to sell raw milk but that such provisions in the law were repealed some ten or twelve years ago.

I have forwarded a copy of your letter and the accompanying information to Representative Patrick Carney of Wasilla who, prior to coming into the Legislature, operated a dairy farm for several years in the Matanuska Valley. He has indicated an interest in helping to develop some legislation along the lines you request.

It will undoubtedly take a bit of time and a considerable amount of research to try to come up with a workable piece of legislation which will not only make it possible to sell raw milk but which would protect the legitimate public health interests of Alaskan citizens.

As you suggest there would need to be accompanying legislation of some sort that would provide for a state testing program.

Again, my initial reaction to your bill is one of interest. Perhaps upon digging into the subject further I may conclude that there are more problems than immediately meets the eye. However, there is only one way to find out and therefore I intend to research the subject further.

Very respectfully,

Patrick M. O'Connell
Representative

POC:mcrs
cc. P. Carney

Kenai, Alaska
February 16, 1979

Representative Pat O'Connel$_1$
House of Representatives
Juneau, Aslaka

Dear Mr. O'Connell:

I am enclosing the pages from the Oregon laws and regulations pertaining to fluid milk. I an most interested in seeing that Alaska have one like it or similar.

Laws and regulations applicable to raw milk willbe found ~~under~~under ORS 621.072, 621.077, 621.117, 621.124 and ORS Chapter 603, sections 24-600.5, 24-602.5, 24-603.5, 24-624.5, 24-650.6, 24-656.01 and 24-658.5.

There are other states that have a raw milk bill but I singled out Oregon because it was closest to Alaska. I know that the Matanuska Maid company and other Companies like that would b. opposed to selling raw milk in Alaska.

I am sure that you are aware that many small farmers and homesteaders in Alaska do sell raw milk even though it is illegal to do so. These people are few at this time but hopefully with the passage of such a bill there would be others that would build up a large herd and sell on a larger scale. Right now to do such a things would mean some capital behind you because of the pasturizing plant bhat would have to be set up.

There would be an expense by the State to put something like this together but I feel that the additional people that they would need to test the cows would be off-set by the revenue gained from the farmers. and the income they would derive from it.

I would be very interested to know your feelings on the subject and I will be sending copies to both Hugh and Clem.

Sincerely,

Carolyn Nicholas

Carolyn Nicholas

hapter, may approve by regulation the procedures, processes, practices, methods and he use of the Ring Test or the Whey Test. [1957 c.346 §6]

GRADES AND STANDARDS OF QUALITY FOR FLUID MILK

621.055 Definitions for ORS 621.055 to 621.124. As used in ORS 621.055 to 621.124, unless the context requires otherwise:

(1) "Distributor" means a person purchasing, only, unpasteurized fluid milk and causing it to be processed, including pasteurization, and bottled for distribution and sale for human consumption.

(2) "Fluid milk" includes milk and any other product made by the addition of any substance to milk or to any milk product which is produced, processed, distributed, sold, offered for sale or exposed for sale for human consumption in liquid form and shall include the fluid milk products for which a standard of identity has been established by the department.

(3) "Milk" means the lacteal secretion of cows and goats.

(4) "Nonprocessing distributor" means a person who sells fluid milk in consumer sized units under his own brand or trade name, which fluid milk has been processed and packaged for such person by a distributor or producer-distributor.

(5) "Person" means and includes any individual, partnership, association or corporation and his or its agents.

(6) "Producer" means a person engaged in the production on a dairy farm of unpasteurized fluid milk, but who does not bottle fluid milk for distribution and sale for human consumption.

(7) "Producer-distributor" means a person producing unpasteurized fluid milk on a dairy farm and bottling such milk, either pasteurized or unpasteurized, on the premises where produced for distribution and sale for human consumption; but a producer-distributor may purchase unpasteurized milk from a producer and distribute such milk after pasteurization.
[Amended by 1955 c.714 §11; 1959 c.346 §2]

621.060 Establishing standards of quality and identity. (1) Official state standards of quality shall be established by the department for fluid milk, both pasteurized and unpasteurized, in the manner prescribed by ORS 632.900 to 632.935.

(2) The standards of quality established shall be based upon:

(a) The health of the cows and goats;

(b) The physical facilities of dairies and milk processing plants;

(c) The standard of sanitary maintenance of dairies and milk processing plants including equipment used therein, the cleanliness of operating personnel, and the cleanliness of adjacent land areas;

(d) The physical facilities for the transportation of fluid milk, and the methods and standards of sanitary maintenance of such facilities;

(e) The quality of the fluid milk as shown by an examination by means suitable to the determination of its quality, and also, the factors affecting the nutritional value of fluid milk as a human food; and

(f) Any other factor found by the department, upon hearing, to affect the quality, odor, flavor or wholesomeness of fluid milk.

(3) Definitions and standards of identity for fluid milk may be established by the department.
[Amended by 1971 c.789 §1]

621.062 Deviation from standard of identity prohibited. No person shall process, distribute, sell, offer for sale or expose for sale fluid milk which does not conform to a standard of identity established by the department.
[1959 c.346 §3]

621.065 Designation of grades. There shall be two standards of quality established for fluid milk. The highest standard of quality established for fluid milk shall be designated as "grade A." The other standard of quality shall be designated as "grade B."
[Amended by 1955 c.714 §12]

621.070 License required to use grade designation. No person shall use any grade designation on bottle caps, in advertising, on labels or in any other manner connected with the sale of fluid milk, unless the person has obtained from the department a license to use the grade designation.

621.072 Licensing to use grade designation; determination of fees. (1) The department shall issue a license to use the grade designation "grade A" or "grade B" to any person who:

(a) Makes written application for a license; and

(b) Is engaged in the business of producing or distributing, or both, fluid milk; and

(c) Meets the requirements of the particular grade designation for which application is made.

(2) If a person carries on both the activities of a producer and of a producer-distributor such person shall obtain a separate license for each such activity.

(3) Before and after issuing a license under ORS chapter 621 the department shall as it deems necessary inspect the physical facilities of the applicant's dairy or plant and such other factors as may relate to the production or distribution of fluid milk. The physical facilities must conform to the requirements created by regulation for the production and distribution of fluid milk meeting the standards of quality for which the license to use the particular grade designation is sought.

(4) Each license issued under this section expires one year from the date of its issuance unless sooner revoked and may be renewed upon application of the licensee. Each application for a license or annual renewal thereof shall be accompanied by a license fee. The fees for the several types of licenses shall in so far as reasonable and practical be based upon the cost of inspection. If a business under one entity or ownership is required to obtain more than one type of license under ORS 621.055 to 621.291, the fees shall be adjusted by the department in order that an owner is not required to pay more than a total of $120 during each license period.

(5) The fees which shall be established by the department, shall not exceed the following for each annual license:

Producer	$55
Producer-distributor	$80
Distributor	$80
Nonprocessing distributor	$50

(6) The department may refuse to issue or renew, or may suspend or revoke a license for any violation of ORS 621.055 to 621.120 or rule thereunder.

[Formerly 621.075; 1967 c.254 §1; 1971 c.773 §8]

621.076 [Formerly 621.080; repealed by 1963 c.48 §5]

621.075 [Amended by 1955 c.714 §13; renumbered 621.072]

621.077 Bacterial standards. All fluid milk shall conform to the same bacterial standards.

[Formerly 621.082]

621.079 Milk sampler's licenses required for certain operations. (1) Each person who operates or drives a farm pickup milk tank truck for the purpose of transporting milk in bulk from a farm, other than a farm owned or controlled wholly or in part by such person, to any receiving point shall obtain a license from the department as provided by subsections (1) to (3) of ORS 621.081 authorizing such person to take samples of milk for bacteriological analysis by the department.

(2) Each distributor who receives milk in producer containers shall designate at least one plant employe who shall obtain a license as provided by subsections (1) to (3) of ORS 621.081 from the department authorizing such person to take samples of milk for bacteriological analysis by the department.

[1959 c.145 §§2, 3]

621.080 [Amended by 1959 c.145 §9; renumbered 621.074]

621.081 Milk sampler's license; fee. (1) Each applicant for a milk sampler's license shall be required to demonstrate satisfactorily by written examination given by the department an adequate knowledge of milk sanitation as it relates to the sampling and handling of fluid milk and cream for bacteriological analysis. Each application for a license shall be accompanied by a fee of $10. The fee shall not be refunded for any reason.

(2) Examinations for licenses shall be given by the department at least once annually in Salem, and at such other places as appears by the volume of applications to be necessary and practical.

(3) The department shall issue licenses to the applicants it finds to be qualified. Each license shall be valid for so long as the licensee is employed in a position where milk sampling is necessary, unless revoked or suspended by the department.

(4) The department may revoke or suspend or refuse to reissue the license of any person licensed to take milk samples as provided by ORS 621.079 who fails to take such samples as are required by the department or who does not or has not complied with the provisions of ORS 621.079 to 621.083 or regulations promulgated under the authority of ORS 561.190 or 621.079 to 621.083.

[1959 c.145 §§4, 5, 6, 8; 1963 c.48 §3; 1971 c.773 §9]

621.082 [1955 c.714 §16; renumbered 621.077]

(b) Which is not labeled on the container or container cap with the name and address of the producer, distributor, nonprocessing distributor or producer-distributor of the milk and the applicable state grade; except that containers of unpasteurized fluid milk shipped by producers to a milk plant for pasteurization and which are identified by shipper name or number shall not be required to be so labeled.

(2) No person shall bottle unpasteurized fluid milk except on the premises where it is produced.

(3) No producer or a producer-distributor shall sell or offer for sale fluid milk during the period while such producer's or producer-distributor's license to use a grade designation on fluid milk has been suspended under ORS 621.120.

(4) No distributor shall knowingly purchase fluid milk from any person whose license to use a grade designation has been suspended under ORS 621.120.

(5) No distributor shall knowingly purchase fluid milk from any person who has not received a license under ORS 621.072.

(6) Each container of fluid milk sold, exposed for sale, or offered for sale, by a nonprocessing distributor shall be labeled on the container or on the container cap with either the name and address of the distributor or producer-distributor processing and bottling the fluid milk or with a code number, assigned by the department, identifying such distributor or producer-distributor.

[Amended by 1955 c.714 §14]

621.117 Distributor or producer-distributor may sell only milk that is pasteurized or from disease-free herd; exception. No distributor or producer-distributor shall sell, offer or expose for sale any fluid milk for human consumption which has not been pasteurized or produced by a disease-free herd, except that when not more than one reactor animal appears when the herd is tested for brucellosis, milk may still be sold if the animal is slaughtered as provided in ORS chapter 597 and the herd is retested twice at 30- to 60-day intervals and no reactors appear. If one or more reactors appear at either of such tests the herd must regain a disease-free status.

[1955 c.714 §9(3); 1957 c.346 §3; 1969 c.182 §5]

621.118 Pasteurization equipment; supervision by licensed pasteurizer operator. (1) Where pasteurization equipment is used by a distributor or producer-distributor, the pasteurization process shall be under the direct supervision of a pasteurizer operator licensed under ORS 621.266, and the provisions of ORS 621.261, 621.266 and 621.276 apply to such pasteurizer operator and the pasteurization process. If the pasteurizer operator fails to comply with the regulations promulgated by the department under ORS 621.261, his license may be revoked or suspended or otherwise limited.

(2) No distributor or producer-distributor shall operate or permit the operation of any pasteurization equipment except under the direct personal supervision of a person licensed as a pasteurizer operator under ORS 621.266.

[1955 c.714 §9(1), (2)]

621.119 Falsely representing milk pasteurized prohibited. No person shall falsely represent by word, design, device or by any other means that any fluid milk has been pasteurized.

[1955 c.714 §9(4)]

621.120 Suspension of grade use privilege. (1) In addition to the powers conferred on the department pursuant to ORS 621.055 to 621.115, the department may suspend the privilege of any person to use a grade designation on containers of fluid milk produced or distributed by him. The power of suspension may be exercised by the department for any violation of ORS 621.055 to 621.120, or of the regulations promulgated under the authority of those sections.

(2) No suspension shall be for a period longer than 10 days; except that in all cases the department shall assure itself that the violation for which the suspension was imposed has been corrected by the person against whom it was imposed before the suspension is lifted.

(3) No suspension shall be imposed unless the department has, within the three months immediately preceding the violation for which the suspension is to be imposed, first notified in writing the person to be suspended that a further violation of the same character will be grounds for suspension by the department. The notice of suspension shall be in writing and shall state length of the suspension and the reason for the suspension.

(4) The provisions of ORS chapter 183 do not apply to suspensions imposed under

authority of this section, however, appeal shall be in the manner provided by ORS 183.480 and 183.500. Nothing in this subsection shall be construed to deprive any person of the right to present any defense he may have to a criminal prosecution instituted for violation of ORS 621.035 to 621.115, nor shall it deprive him of the right to a declaratory judgment in a proper case.
[Amended by 1961 c.425 §14]

621.124 Milk not to be sold if from diseased animals or from animals that have not been tested or retested for brucellosis. (1) As used in this section "test" means a test for brucellosis performed by a veterinarian in a manner approved by the department.

(2) The tests required by this section shall only be made by state, assistant state or deputy state veterinarians employed or appointed by the department, or veterinarians employed by the United States Department of Agriculture.

(3) No person shall sell, offer or expose for sale any fluid milk with knowledge that such milk has been produced from a herd of cows or goats one or more of which are infected with brucellosis at the time the milk was produced, or with knowledge that all animals in such herd have not been tested or retested for brucellosis.
[1957 c.348 §5 (enacted in lieu of ORS 621.125)]

621.125 [Amended by 1955 c.14 §1; repealed by 1957 c.348 §4 (ORS 621.124 enacted in lieu of ORS 621.125)]

DAIRY PRODUCTS PLANTS

621.151 Title of ORS 621.151 to 621.291. ORS 621.151 to 621.291 shall be known and may be cited as the Oregon Dairy Products Plant Act.
[1953 c.686 §30]

621.152 Definitions for ORS 621.151 to 621.291. As used in ORS 621.151 to 621.291, unless the context requires otherwise:

(1) "Contract milk hauler" means a person who, under the terms of a contract or agreement for hire or pay, accepts and transports bulk milk from the premises of milk producers, receiving or transfer stations to milk or other dairy products plants.

(2) "Cream" means that portion of milk which consists of milk fat.

(3) "Dairy products" means butter, all known varieties of cheese, frozen desserts and frozen dessert mixes containing milk, cream or nonfat milk solids; and evaporated, condensed, sterilized, concentrated, powdered, dried or fermented milk, whey, cream or skimmed milk processed for human consumption.

(4) "Dairy products plant" means:

(a) Any establishment in which milk is received, processed or used in manufacturing dairy products for human consumption

(b) Any place or premises in or at which milk is received or collected.

(c) Any contract milk hauler, or person having mobile equipment, including bulk tank truck, used in the transportation of milk or cream.

(d) Any nonprocessing cooperative, corporation, association or person serving as a marketing agent for producers.

(5) "Department" means the State Department of Agriculture.

(6) "Disease-free herd" shall mean a herd of cows or goats which is not an infected herd as defined in this subsection. "Infected herd" shall mean a herd of cows or goats in which a reactor animal has been discovered by any of the tests authorized by law, and which has not regained its disease-free status following such slaughter of reactor animals and retesting of the herd as may be prescribed by the department pursuant to ORS chapter 596 or other applicable law.

(7) "Licensee" means a person licensed to operate a dairy products plant pursuant to the provisions of ORS 621.151 to 621.291.

(8) "Milk" means the lacteal secretion of cows or goats.

(9) "Milk hauler or receiver" means a person who, in the course of his employment, accepts bulk milk or milk products from a producer, milk plant, receiving or transfer station, and transports such commodity to a milk or dairy products plant.

(10) "Pasteurize" means the process established by the department pursuant to ORS 621.261, by which each particle of milk, cream or any dairy product is treated, usually by heat, for the purpose of destroying or rendering harmless bacterial organisms, including pathogenic organisms and viruses.

(11) "Producer" means a person who produces milk to be sold to a dairy products plant.

(12) "Unreasonable amount of sediment" means milk or cream which contains more

FLUID MILK AND CREAM

Definitions

[ED. NOTE: Unless otherwise specified, sections 24-600.5 through 24-679.5 were adopted by the Department of Agriculture January 18, 1960 and filed with the Secretary of State January 19, 1960 as Administrative Order AD 630.]

24-600 [Repealed 1-19-60 by AD 630.]

24-600.5 DEFINITIONS. As used in this order and sections 24-600.5 to 24-678.5, unless the context otherwise requires:

(1) "Distributor" means a person purchasing, only, unpasteurized fluid milk and causing it to be processed, including pasteurization, and bottled for distribution and sale for human consumption.

(2) "Fluid milk" includes milk and any other product made by the addition of any substance to milk or to any milk product which is produced, processed, distributed, sold, offered for sale or exposed for sale for human consumption in liquid form and shall include the fluid milk products for which a standard of identity has been established by the department.

(3) "Milk" means the lacteal secretion of cows and goats.

(4) "Nonprocessing distributor" means a person who sells fluid milk in consumer sized units under his own brand or trade name, which fluid milk has been processed and packaged for such person by a distributor or producer-distributor.

(5) "Person" means and includes any individual, partnership, association or corporation and his or its agents.

(6) "Producer" means a person engaged in the production on a dairy farm of unpasteurized fluid milk, but who does not bottle fluid milk for distribution and sale for human consumption.

(7) "Producer-distributor" means a person producing unpasteurized fluid milk on a dairy farm and bottling such milk, either pasteurized or unpasteurized, on the premises where produced for distribution and sale for human consumption; but a producer-distributor may purchase unpasteurized milk from a producer and distribute such milk after pasteurization.

(8) "Contract milk hauler" means a person who, under the terms of a contract or agreement for hire or pay, accepts and transports bulk milk from the premises of milk producers, receiving or transfer stations to milk or other dairy products plants.

(9) "Milk hauler or receiver" means a person who, in the course of his employment, accepts bulk milk or milk products from a producer, milk plant, receiving or transfer station, and transports such commodity to a milk or dairy products plant.

(10) "Certified laboratory" is an industry or commercial laboratory which has been certified by the department's chief laboratory officer or his official representative for tests specified in these fluid milk regulations and may be limited to a specific test, to a specific method, and to specific products.

Hist: Subsections 8, 9, 10 filed 9-27-71 as AD 951 (18-71)

Standard of Identity

24-602 [Repealed 1-19-60 by AD 630.]

24-602.5 STANDARD OF IDENTITY. The following standards of identity for fluid milk and the products of fluid milk are hereby established:

(1) "RAW MILK" is unpasteurized milk the milkfat content of which is not less than 3.25 percent and the solids-not-fat content is not less than 8.25 percent.

(2) "PASTEURIZED MILK" is milk which has been pasteurized and the milkfat content of which is not less than 3.25 percent and the solids-not-fat content of which is not less than 8.25 percent.

(3) "HOMOGENIZED MILK" is pasteurized milk which has been homogenized, the milkfat content of which is not less than 3.25 percent and the solids-not-fat

least 1.0 percent egg yolk solids, sugars, and flavoring (spices). A maximum of 0.6 percent stabilizer and emulsifiers may be added. [See paragraph (c) of this subsection.]

(c) All eggnogs and eggnog products shall be pasteurized in approved and properly operated equipment so that every particle is heated and continuously held for the following minimum specified times and temperatures:

(A) 155° F. and held at or above this temperature for at least 30 minutes or

(B) 175° F. and held at or above this temperature for at least 30 seconds.

(26) OPTIONAL INGREDIENTS. The following safe and suitable ingredients may be used:

(a) Carriers for vitamins A and D may be added.

(b) Concentrated skim milk, nonfat dry milk, refined lactose, or other milk derived ingredients to increase the nonfat solids content of food may be added; provided, that the ratio of protein to total nonfat solids of the food, and the protein efficiency ratio of all protein present shall not be decreased as a result of adding such ingredients.

(c) When one or more of the optional milk derived ingredients in (b) of this subsection are used, emulsifiers, stabilizers, or both, may be added in an amount not more than 2 percent by weight of the solids in such ingredients. Emulsifiers, stabilizers, and nutritive sweeteners may be added to half and half and to cream products.

(d) Nonfat dry milk solids used in recombined or reconstituted milk or milk products, as defined in subsection (12) of this section, or added to pasteurized fluid milk products to increase the milk-solids-not-fat (S.N.F.) content shall meet the sanitation standards contained in the 1971 edition of the "Recommended Sanitation Ordinance for Condensed or Dry Milk Products Used in Grade A Pasteurized Milk Products".

(e) Food grade acids.

(27) "PROTEIN FORTIFIED" fluid milk products are fluid milk products to which nonfat milk solids or other approved milk derived protein have been added to at least a total of 10 percent milk derived nonfat solids. The ratio of protein to total nonfat solids of the product and the protein efficiency ratio of all protein present, shall not be decreased as a result of adding such ingredients. The phrase "Protein Fortified" preceding the product name, or the phrase "Fortified with Protein" following the name shall be the standardized name.

(28) "ACIDIFIED MILK AND MILK PRODUCTS" are milk and milk products obtained by the addition of food grade acid(s) to pasteurized milk, lowfat milk, skim milk (nonfat milk), resulting in a product acidity of not less than 0.50 percent expressed as lactic acid.

LABELING, ADVERTISING, AND DISPLAY

24-603.5 LABELING. All final delivery containers used for the sale of fluid milk or any product of fluid milk for which a standard of identity has been established shall be plainly labeled and marked with:

(1) Standard of identity NAME as set forth in OAR 603-24-602.5.

(2) GRADE of the contents.

(3) The word "pasteurized" if the products have been pasteurized or the word "ultra-pasteurized" if they are thermally processed at or above 280° F. for at least 2 seconds. In the standards of identity the words "pasteurized" and "ultra-pasteurized" are interchangeable de-

pending upon heat treatment during processing.

(4) The word "raw" if the contents are raw.

(5) The word "homogenized" if the contents have been homogenized.

(6) The name and post office address including zip code of the distributor, producer-distributor, or nonprocessing distributor. This shall be the legal business name and in the case of a corporation, only by the actual corporate name, which may be preceded or followed by the name of the particular division of corporation. In the case of an individual, partnership, or association, the name under which the business is conducted shall be used.

(7) The phrase "within the limits of good manufacturing practice" refers to a reasonable deviation from the declared standard or label claim.

(8) The quantity of contents shall be declared and only in units of half pint, 10 fl. oz., pint, quart, half gallon, gallon, 2-1/2 gallons, or multiples of gallons. The term "net" or "net contents" are optional; however, qualifying words such as "liquid" and "fluid" are prohibited. For containers less than half pints the quantity declaration shall be expressed in fluid ounces (Fl. oz.). In case of sour cream, cultured sour cream, cultured half and half, yogurt and yogurt products the quantity statement may be in net weight (net wt.), avoirdupois, but only in units of 8, 16, and 32 ounces. Net weight of 16, 32, and for wholesale containers greater than 32 oz., dual quantity statement is required, e.g., net wt., 16 oz. (1 lb.) or net wt. 32 oz. (2 lbs.).

(9) Identity of the milk plant at which the contents are pasteurized and bottled. In case of a nonprocessing distributor a code number assigned by the department may be used in lieu of the name and address of the milk plant at which the milk is pasteurized and bottled.

(10) The label shall show the list of ingredients including the common name of edible stabilizers or emulsifiers if stabilizers or emulsifiers have been added. When modified starch is added as an optional ingredient, the product name on the principal display panel shall be immediately followed by the terms "with starch" or "with starch added". The following product grouping may be listed by their common name:

(a) Skim milk, concentrated skim milk, and nonfat dry milk may be declared as "skim milk".

(b) Milk, concentrated milk, and dried milk may be declared as "milk".

(c) Bacterial cultures may be declared by the word "cultured" followed by the name of the substrate, e.g., "made from cultured skim milk or cultured buttermilk".

(d) Sweetcream buttermilk, concentrated sweetcream buttermilk, and dried sweetcream buttermilk may be declared as "buttermilk".

(e) Cheese whey, concentrated cheese whey, and dried cheese whey may be declared as "whey".

(f) Cream, dried cream, and plastic cream (sometimes known as concentrated milkfat) may be declared as "cream".

(g) Butteroil and anhydrous butterfat may be declared as "butter".

(h) Dried whole eggs, frozen whole eggs, and liquid whole eggs may be declared as "eggs".

(i) Dried egg whites, frozen egg whites, and liquid egg whites may be declared as "egg whites".

(j) Dried egg yolks, frozen egg yolks, and liquid egg yolks may be declared as "egg yolks".

(k) Sugar (sucrose) shall be declared as "sugar", and invert sugar may be declared as "sugar".

(l) Sweeteners derived from corn may be declared as "corn sweeteners".

(11) Labeled grade of milk product shall not be higher than the lowest grade of any one constituent of fluid milk of which it is composed.

(12) The words "selected", "select", "premium", "special", "superior", "better", or similar terms either specifying or implying that the contents of the enclosure are select, selected, or of higher quality than ordinary grade A milk or grade B, as the case may be, shall not be permitted, unless there is prominently displayed in close connection with the above-mentioned terms a qualifying statement subject to approval by the depart-

shown on the No. 2 standard sediment chart disc.

Hist: Amended 9-27-71 by AD 951(18-71)

24-619.5 HOMOGENIZATION TEST STANDARD. Compliance with homogenization standard shall be deemed to be met providing the sample of milk or fluid milk products labeled "homogenized", when examined after 48 hours of quiescent storage, shows no visible cream separation occurs in the milk and the milkfat percentage of the milk in the top 100 ml. of milk in a quart bottle, or of proportionate volumes in containers of other sizes, does not differ by more than 10 percent from the milkfat percentage of the remaining milk as determined after thorough mixing.

Hist: Amended 9-5-74 by AD 1044(34-74)
Effective 10-1-74

24-620 [Repealed 1-19-60 by AD 630.]

24-620.5 PHOSPHATASE TEST STANDARD. The phosphatase test standard shall be deemed to be met providing the sample of milk and milk products labeled "pasteurized" when examined shows a negative reaction as determined by the modified Sanders-Sager Method, contained in the latest edition of "Standard Methods for Examination of Dairy Products" published by American Public Health Association or an equivalent method. Four samples of pasteurized milk and two samples of milk products shall be examined each sampling period.

Hist: Amended 9-5-74 by AD 1044(34-74)
Effective 10-1-74

24-621.5 ABNORMAL MILK STANDARD. Compliance with the abnormal milk standards for retail raw milk and raw milk for pasteurization shall be determined by examination or testing for total somatic cells of at least four samples of milk from each producer or producer-distributor every six-month period. The somatic cell count shall be determined by the Wisconsin mastitis test (W.M.T.), the direct microscopic somatic cell count (D.M.S.C.C.), or any other test giving comparable results and approved by the department.

Hist: Filed 7-1-68 as AD 883(13-68)
Effective 7-1-68
Amended 9-5-74 by AD 1044(34-74)
Effective 10-1-74

24-622 [Repealed 1-19-60 by AD 630.]

24-622.5 SAMPLING PERIOD STANDARD means the examination or testing of at least four samples of milk and milk products during any consecutive six-month period for compliance with the standards set forth in OAR 603-24-614.5 to 24-621.5, inclusive.

Hist: Filed 7-1-68 as AD 883(13-68)
Effective 7-1-68
Amended 9-5-74 by AD 1044(34-74)
Effective 10-1-74

24-623.5 ACCEPTABLE QUALITY OF FLUID MILK. "Acceptable quality of fluid milk" is that which is free of objectionable flavors and odors and is normal in appearance. Flavors and odors, including those of obnoxious weeds which are not removed by plant processing, are objectionable for grade A use, but slight or moderate feed flavors and odors which are normally removed during the processing are not objectionable. The blend temperature of the milk in farm tank shall not rise above 50° F. at any time during the second or subsequent milkings.

Hist: Filed 9-27-71 as AD 951(18-71)
Amended 9-5-74 by AD 1044(34-74)
Effective 10-1-74

24-624 [Repealed 1-19-60 by AD 630.]

24-624.5 INSPECTION STANDARD means the sanitary inspection of each

licensed producer dairy at least once and each distributor and producer-distributor at least twice every six months period for compliance with the sanitary regulations established for the various grades of milk as contained herein.

24-626 [Repealed 1-19-60 by AD 630.]

24-626.5 OTHER METHODS OF TESTING. Nothing contained in 24-614.5 to 24-621.5 shall be construed as preventing the use of any other method of examining or testing milk and milk products for compliance with the standards contained in these sections which have been demonstrated to be accurate and are approved by the department.

Effective 7-1-68

PROCEDURES FOR THE EXAMINATION AND TESTING OF MILK AND MILK PRODUCTS; ENFORCEMENT

24-630 [Repealed 1-19-60 by AD 630.]

24-630.5 THE COLLECTION, TRANSPORTATION, AND ANALYSES OF MILK SAMPLES. Sampling, bacterial plate counts, coliform counts, temperature tests, phosphatase tests, sediment tests, and other laboratory tests used in the examination of milk and milk products to determine standards of quality shall conform to the procedures as contained in the thirteenth edition of "Standard Methods for the Examination of Dairy Products" published in 1972 by the American Public Health Association or to any other method approved by the department. Such examination may include such other chemical and physical analyses as the department may deem necessary.

Hist: Filed 7-1-68 as AD 883(13-68)
Effective 7-1-68
Amended 9-5-74 by AD 1044(34-74)
Effective 10-1-74

24-631.5 STANDARDS FOR LICENSED MILK SAMPLERS. Tank truck drivers and milk plant personnel licensed to officially sample milk for bacterial analysis from farm bulk milk tanks or producer containers at receiving plants shall use the following equipment and sampling procedures:

(1) Milk Sampling: Equipment.

(a) Devices used for taking samples of milk shall be one of the following as designated by the department:

(A) Metal pipette constructed of stainless steel or aluminum seamless tube 18 to 24 inches long and having a diameter of not less than 1/4 inch or more than 1/2 inch.

(B) Metal dipper made of stainless steel or its equivalent, smooth joints, with at least a 12-inch handle and having a capacity of not less than 10 milliliters.

(C) Single-service approved type paper pipette 18 to 24 inches in length with a diameter not less than 1/4 inch.

(D) Vacuum sampling tube of a type approved by the department having a capacity of not less than 5 milliliters.

(E) Clean sterile metal or single-service pipettes shall be individually wrapped or carried in a clean dust-tight case or cylinder. Where sampling dipper is used, truck sampling or pump compartment shall be provided with a metal cylinder for storage of dipper in a chlorine sanitizing solution of not less than 200 PPM between samplings.

(F) Sample bottle where used shall be clean and sterile. Bottle shall have a capacity of not less than 2 oz. and be of a wide mouth design at least equivalent to a french square style bottle with metal or plastic screw cap with approved type liner. Pre-sterile plastic bag may be approved as an alternate sample container.

(G) Sample case or compartment.

(i) Tank trucks used in taking delivery of milk from farm bulk milk holding tanks shall be equipped with a metal or plastic dust-tight compartment for storing sample bottles. The compartment shall be so constructed that samples can be iced or temperature otherwise controlled so as to not exceed 40° F. while

shall not prevent the initiation of other enforcement actions as are available.

Hist: Filed 7-1-68 as AD 883(13-68)
Effective 7-1-68
Amended 9-5-74 by AD 1044(34-74)
Effective 10-1-74

24-641.5 GRADING. (1) Each shipment or pick-up of grade A fluid milk shall be graded as to its acceptable quality by a licensed grader. If it is not acceptable and is rejected as unfit for grade A use, a record (forms supplied by the department) is to be made showing:
(a) Producer's name and number
(b) Market or pooling agent
(c) Date and time
(d) Quantity
(e) Cause for rejection
(f) Disposition of the rejected milk.
(2) The original copy of the record is to be forwarded to the department, Dairy and Consumer Services Division, not later than seven days following the rejection.

Hist: Filed 9-27-71 as AD 951(18-71)
Amended 9-5-74 by AD 1044(34-74)
Effective 10-1-74

24-642.5 TESTS AND ANALYSES. In addition to official laboratory results, certified laboratories using recognized standard methods may perform tests and analyses for standard plate count, coliform count, phosphatase, growth inhibitors (antibiotics), added water (cryoscope), abnormal milk, and potable water for which they are certified and such results may be acceptable as official. Tests and analyses of finished products performed by the processor of that product are not acceptable as official, unless approved by the department.

PRODUCER AND PRODUCER-DISTRIBUTOR REQUIREMENTS

24-650 [Repealed 1-19-60 by AD 630.]

24-650.5 [Repealed 9-5-74 by AD 1044 (34-74).]

24-650.6 RAW MILK AND CREAM STANDARDS. The following standards for raw milk and cream are hereby established:
(1) "GRADE A RAW MILK" is fluid milk bottled on a dairy farm where produced by a disease-free herd, which is in conformance with all the items of sanitation specified in OAR 603-24-656.01 to 24-656.22, and the examination and tests of which, as determined in accordance with OAR 603-24-614.2 to 24-640.5, for each sampling period reveal that the bacteria count does not exceed 20,000 per milliliter, the temperature does not exceed the average of 45° F., the sediment content is not in excess of a No. 2 sediment test, and the somatic cell count does not exceed the limit (See OAR 603-24-639.5), and the bacterial inhibitor test is negative.
(2) "GRADE A RAW CREAM" is cream which conforms to all the requirements of grade A raw milk, as defined in subsection (1) of this section, except that the somatic cell count is not applicable.
(3) "GRADE A RAW MILK FOR PASTEURIZATION" is fluid milk produced by a disease-free herd on a dairy farm in conformance with all the items of sanitation specified in OAR 603-24-656.01 to 24-656.21, except the provisions of OAR 603-24-656.22 (Bottling and Capping) and such portions of other items or sections as are herein indicated, when delivered to the milk plant, and the examination and tests of which, as determined in accordance with OAR 603-24-614.2 to 24-640.5, for each sampling period reveal that the bacteria count does not exceed 80,000 per milliliter, the temperature does not exceed the average of 45° F. nor the blend temperature of milk in a farm tank does not exceed 50° F. at any time during the second or subsequent milkings, and the sediment content is not in excess of a No. 2 sediment test. Provided further, that the milk is defined as acceptable quality under OAR 603-24-623.5, and the bacteria inhibitor test is negative.

24-652 [Repealed 1-19-60 by AD 630.]

24-652.5 [Repealed 9-5-74 by AD 1044 (34-74).]

24-654 [Repealed 1-19-60 by AD 630.]

24-654.5 [Repealed 9-5-74 by AD 1044 (34-74).]

Producer Regulations

24-656 [Repealed 1-19-60 by AD 630.]

[ED. NOTE: Unless otherwise specified sections 24-656.01 to 24-656.22 were adopted by the Department of Agriculture June 27, 1968 and filed with the Secretary of State July 1, 1968 as AD 883 (13-68). Effective July 1, 1968. Repeals AD 676.]

24-656.01 HEALTH OF COWS AND ABNORMAL MILK. (1) All herds of cows producing milk for human consumption as defined in OAR 603-24-600.5 and for which a standard of identity has been established in OAR 603-24-602.5 shall be in compliance with the laws of the state of Oregon and regulations promulgated thereunder relating to tuberculosis and brucellosis.

(2) No person shall sell, offer or expose for sale any milk with knowledge that such milk has been produced from a herd of cows or goats one or more of which are infected with brucellosis or tuberculosis at the time the milk was produced, or with knowledge that all animals in such herd have not been tested or retested for brucellosis or tuberculosis.

(3) Brucellosis:

(a) Raw milk producer-distributor herds must be officially blood tested at least once every six months. In cases of dairy cattle, three brucellosis ring tests (BRT) at approximately equal intervals on commingled milk may be substituted only for every other routine six-month blood test. All herds with suspicious BRT results must be officially blood tested within twenty-one days. Where not more than one reactor (from official blood test) appears, raw milk may continue to be bottled and sold if animal is removed for slaughter and herd retested twice at thirty to sixty-day intervals and no reactor appears. If one or more reactors appear at either of such tests, no more raw milk may be sold for human consumption until the herd regains a disease-free status by following the retest schedule as shown in subparagraph (D) of paragraph (b) of this subsection.

(b) Herds producing raw milk for pasteurization:

(A) Herds must be officially milk ring tested at least three times per year.

(B) All dairy herds and all eligible cattle in such herd or herds showing a suspicious reaction to the brucellosis ring test (BRT) shall be tested by the official blood test within 21 days from the time the results of the BRT test are forwarded by the department to the owner of such herd or herds.

(C) Reactors to an official blood test in a dairy herd must be removed from the milking herd and all the remaining animals shall be officially blood tested at 30 to 60-day intervals until two successive clean blood tests are obtained, followed by a third blood retest not less than 2 months nor more than 4 months from the date of the second clean 30 to 60-day retest. The first retest shall not be made less than 30 days after removal of the reactor animal or animals. Until the third successive clean retest has been completed, the department shall not again declare the herd to be brucellosis-free or consider removing the herd from quarantine.

(D) Out-of-state producers in a certified brucellosis-free area as determined by USDA-State Cooperative program are deemed to be in compliance with the Oregon brucellosis test requirements.

(4) Tuberculosis:

(a) Raw milk producer-distributor herds:

(A) Herds must be tested at least once every twelve months.

(B) Raw milk for human consumption cannot be bottled and sold from infected herds until a tuberculosis disease-free status is regained as outlined in subparagraph (B) of paragraph (b) of this section.

(b) Raw milk for pasteurization:

(A) All animals over two years of age must be tested at least once every six years.

(B) If a tuberculosis reactor animal is found in a dairy herd as a result of the test, the entire herd shall be placed under quarantine and all cattle in the herd must be retested in not less than 60 or more than 90 days from the date of removal of reactors. If this test shows no reactors, the herd may then be released from quarantine. If a reactor is found on any retest, the herd shall be retested in the same manner as provided in case reactors are found on an original test. If no tuberculosis lesions are found on the slaughtered reactor animals, the herd thereafter needs only one clean test for release from quarantine. Dairy herds must be tested within 21 days following the time that the owner is notified of the infection. Retesting shall be carried out as required above.

(C) Out-of-state producers in a modified accredited tuberculosis-free area as determined by United States Department of Agriculture-State Cooperative program are deemed to be in compliance with Oregon tuberculosis test requirements.

(5) Cows which show an extensive induration of one or more quarters of the udder upon physical examination and/or secreting abnormal milk shall be temporarily excluded from the milking herd. Cows giving bloody, stringy, or abnormal milk shall be excluded from the herd until re-examination shall show that the milk has become normal.

(6) Milk from quarters of cow's udder treated with antibiotics for udder infection shall not be sold for human consumption for a minimum of 72 hours after the last treatment or withheld according to manufacturer's recommendation.

(7) For other diseases such tests and examinations as the department may require after consultation with the State Veterinarian shall be made at intervals and according to methods prescribed by him, and any diseased animals or reactors shall be disposed of as he may require.

(8) Most recent brucellosis blood test and tuberculosis test certificates or copies thereof, shall be posted in milk house or placed on file in office of the milk inspection service.

Hist: Amended 9-5-74 by AD 1044(34-74) Effective 10-1-74

Milking barn, stable, or parlor - construction

24-656.02 CONSTRUCTION AND MAINTENANCE OF MILKING BARN, STABLE, OR PARLOR. A milking barn, stable, or parlor shall be provided on all dairy farms, in which the milking herd shall be housed during the milking time operations, and constructed and maintained in accordance with the following:

(1) Gutters, floors, and feed troughs shall be constructed of good quality concrete or equally impervious material. Floors shall be easily cleaned (brushed surfaces permitted) and shall be graded to drain and maintained in good repair and free of excessive breaks or work areas that may create pools. Water under pressure shall be plumbed to the milking stable and be available for washing floors.

(2) Walls and ceilings shall be finished with smooth surfaced wood, tile, smooth surfaced concrete, cement plaster, brick, or other equivalent materials with light colored surfaces. Walls may be painted a darker color up to 60 inches in height from the floor. Walls, partitions, doors, shelves, windows, and ceilings shall be kept in good repair; and surfaces shall be refinished whenever wear or discoloration is evident. A curb at least 12 inches in height shall be required in all new

containers, equipment, and utensils by insects and rodents and by chemicals used to control such vermin.

(5) Pesticides approved by the department shall be used in accordance with manufacturer's direction and shall be used so as to prevent t' 'amination of milk, milk contain ment, utensils, feed, and water

24-656.22 BOTTLING AND CAPPING. (1) Raw fluid milk and milk products shall be bottled on the dairy farm where produced by means of an approved bottling machine equipped with a cover and readily cleanable, automatic filler valves. Filler valves shall be equipped with an apron or other approved device to prevent water or condensation from gaining entrance to the final delivery container during filling process. Where automatically operated bottler is used the infeed conveyor from the bottle washer to the filler shall be equipped with an over-head shield. Bottles shall be capped with a mechanical capper which is an integral part of the bottling machine. Hand capping is prohibited. Caps and single service containers shall be purchased in sanitary containers and stored in a clean dry place.

(2) The cap or cover shall protect the pouring lip to at least the largest diameter.

(3) Final delivery containers shall be washed and subjected to an approved bactericidal treatment to reduce bacterial count to less than one per milliliter of capacity and stored in a room where used in an inverted position at a sufficient height above the floor to prevent contamination of containers.

(4) Filling, capping, and labeling of raw fluid milk final delivery containers shall be done by the licensee or under his direct supervision.

Grade B Raw Milk and Cream

24-658 [Repealed 1-19-60 by AD 630.]

24-658.5 GRADE B RAW MILK AND GRADE B RAW CREAM are fluid milk and cream which conform to all the requirements of Grade A Raw Milk and Grade A Raw Cream as found in 24-650.5 and 24-652.5, and which conform to all the sanitation requirements contained in 24-656.01 to 24-656.22 except:

(1) Milking Stable. The floors may be of tongue and groove wood construction but must be smooth, tight, kept clean and in good repair.

(2) Milkhouse. The milkhouse may consist of one room which may open directly into milk stable if cows are not housed therein between milking periods and no roughages are fed in the stable. The milk house shall be equipped with at least a two-compartment wash sink.

(3) Bottling and Capping. Final delivery containers must be filled by an approved mechanical method. A hand operated filling valve may be used if it is equipped with a condensation diverting apron. Final delivery containers may be manually capped if a sanitary parchment covering is placed underneath a plug or disc-type cap. The parchment or similar water-impervious material shall be of sufficient size to extend over the edge of the pouring lip of the final delivery container.

Structure of Fisheries Development Office
Proposed in SSHB516

1. The office will be composed of seven (7) staff members:

   Program Director
   (3) Development Specialists (Fisheries)
   Marketing/product Development Specialist
   Management Assistant
   Research Analyst

   Support will be provided by the equivalant of one full-time typist.

2. The office will encompass:

   a. Functions assigned to the bottomfish coordinator (special assistant) and research analyst presently operating in the Office of the Governor.

   b. Fisheries development, assistance and support activities of two existing development specialists in the Division of Economic Enterprise.

   c. Four new staff positions will provide better ability to handle marketing and product development issues, to more efficiently acquire, organize and distribute data and information to the public and generally to perform the lead/coordinating role defined in the legislation.

3. The Department of Commerce and Economic Development is presently assessing the organizational structure and operating procedures of the Division of Economic Enterprise. Specifically, how the fisheries development office will be organized within the department or where it will be physically located has not yet been determined. The function of the office is viewed as extremely important and it will be organized in such a manner so as to be as visible and effective as possible. Possible alternatives range from the creation of a new division to the formation of a special unit within the Division of Economic Enterprise.

4. To compliment the creation of an office of fisheries development, two additional administrative actions will be encouraged:

   The first is to establish a process to achieve routine public and industry involvement in the shaping of State policies and programs related to fisheries resource/industry development and to provide an opportunity for the monitoring and review of the fisheries development office activities. Active public involvement is also an integral part of the bottomfish development plan.

The second is to encourage the establishment of clear and specific working policies and operating guidelines for every unit of State government whose activities affect commercial interests of the fishing industry. It is felt that the goals of the administration fo. fisheries resource/industry development clearly communicated to each agency would provide an important influence.

III. ANALYSIS (See Fiscal Note Preparation Instructions, Section III)

The budget represents amounts required for operations of office over and above amounts contained in Governor's FY 81 budget submission covering existing functions to be incorporated (Bottomfisheries program - $2,741,200; Division of Economic Enterprise - $136,083).

Annual budget change generally assumes a 10 percent increase per year in all catagories except travel which is estimated to increase 25 percent per year.

IN THE HOUSE BY OSTERBACK AND FULLER

CS for SPONSOR SUBSTITUTE FOR HOUSE BILL NO. 516

IN THE LEGISLATURE OF THE STATE OF ALASKA

ELEVENTH LEGISLATURE - SECOND SESSION

A BILL

For an Act entitled: "An Act establishing the office of fisheries development."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*Section 1. AS 44.33 is amended by adding new sections to read:

ARTICLE 11. OFFICE OF FISHERIES DEVELOPMENT.

Sec. 44.33.502. OFFICE OF FISHERIES DEVELOPMENT. There is established in the Department of Commerce and Economic Development the office of fisheries development.

Sec. 44.33.504. COORDINATION OF STUDIES AND DEVELOPMENT ACTIVITIES:

(a) This office shall be the lead agency in state government for fisheries development. The office shall coordinate all fisheries development-related studies, recommendations, proposals and activities made or conducted by the departments and agencies of the state. As far as practicable, the office shall coordinate the fisheries development-related studies, recommendation, and proposals made in this state with similar activites in other states.

(b) The office shall make suggestions to departments and agencies of the state with respect to appropriate activities which would further the development of the state's fisheries.

Sec. 44.33.506. COMPREHENSIVE BOTTOMFISH PLAN. The office of fisheries development shall establish a comprehensive bottomfish development plan which shall include detailed project schedules and budgets, and a method for monitoring the performance of bottomfish projects included in the plan. The office shall determine and emphasize in the bottomfish plan those projects which most compliment the needs of private sector fishery entities, especially industry-wide activities like AFDF. The office shall amend the plan as necessary.

Sec. 44.33.508. ANNUAL REPORT. The office shall prepare an annual report. The report shall include a summary of fisheries development activities in the state, a description of the actions taken by the office to coordinate fisheries development activities, a summary of the plan esteblished under AS 44.33.506, and suggestions for the more efficient development of the fisheries of the state. The office shall distribute copies of the report to the governor and commissioners of Community & Regional Affairs, Fish & Game, Revenue, Labor, Transportation/Public Facilities, and to each legislator.

Sec. 44.33.510. DEFINITION. For the purposes of AS 44.33.502 44.33.510 (1) "office" means the office of fisheries development. (2) "Fisheries Development" means commerce, taxation, finance, marketing, economics, and business aspects of fisheries.

*Section 2. (a) The office of fisheries development established in AS 44.-33.502., enacted by section 1 of this Act, shall conduct studies to identify:

(1) types of private investment in the Alaska fisheries industry which are most likely to occur before January 1, 1990;

(2) types of organizations for the harvesting, processing, and marketing of bottomfish species which are consistent with market conditions and conductive to participation by Alaska residents;

(3) methods for the state to assist residents with the formation of the organizations determined under (2) of this subsection, including enabling legislation, organizational grants, educational assistance, and direct organizational and technical assistance; and

(4) economic incentives and other means to encourage development of the fish and shellfish industry in a manner consistent with market conditions and beneficial to the Alaska economy and to Alaska residents.

(b) The office shall prepare a report summarizing the findings of the studies required by this section and shall distribute copies of the report to the governor and the legislature by February 1, 1982 and annually thereafter.

Proposed Ammendment To
CS SS HB 516

from B. Mule

Sec. 44.33.503 INTENT

It is the intent of the legislature that:

(a) the State encourage, and provide for, greater development and eventual maximization of Alaskan fisheries, consistent with public interest;

(b) the State do everything in its power to assure development and utilization of Alaskan fisheries by residents of the State. alleviating the effects of apparent ownership or control of major segments of the fishing industry by non-resident interests;

(c) the State combine the various government agencies dealing with fisheries development into a single, effective agency so that benefits of this developing industry accrue to Alaskans and the effort of the State is not fragmented.

MEMORANDUM

DATE: February 20, 1980

TO: Terry Gardiner, Speaker
House of Representatives

FROM: Representative Alvin Osterback al Osterback

This is to request travel and two days per diem for Dr. Frank Orth of Belluvue, Washington to attend a House Resources hearing on February 26. On that day we plan to have a hearing on SSHB 516 and HB 697 which resulted from the conclusions of the 1980 Interim Bottomfish report. As Dr. Orth was instrumental in the drafting of these bills it would be most helpful to have him at the hearing. Please make arrangements for the travel and per diem.

Thank you.

Phone 206-455-3507

M E M O R A N D U M

To: House Resources Committee

From: John Sund, A.A. Rep. Gardiner

Date: February 27, 1980

Re: HB 516

It is my understanding that during the committee's consideration of HB 516 on February 26, a memorandum consisting of two pages titled "Fisheries Legislation Analysis" with my name penned in as the author was circulated to the committee.

I wish to clarify several things regarding that memorandum. The memorandum consists of eight pages only of which the first two pages were given to the committee. Secondly, the memorandum was prepared by Mr. Wally Miller at the request of Representative Gardiner when Mr. Miller was a consultant to the Aquaculture Policy Study Committee. I have enclosed a copy of the entire memorandum for the committee's review as it was given to the staff of the House Resources Committee.

The basic thrust of the memorandum states that if the state if going to address the issue of a comprehensive fishery development approach, it should do so in an organized and comprehensive manner. The portions of the memorandum that were not distributed to the committee lay out basic areas that should be addressed and some basic elements to the plan that should be included.

A second memorandum which was not distributed to the staff of the House Resources Committee is also attached for your review. Although the first portion of the memorandum deals with discussion of discounting techniques as that applies to resource evaluation may not be of interest to the committee members, the latter portion of the memo deals with the establishment of the lead agency concept for developing programs which involve more than one state department. The proposed legislation which is attached to the memo is a copy of the Washington State lead agency statutes.

Since the proposed bill HB 516 uses the words "lead agency" in its draft it is perhaps appropriate for the committee to address the concept of how lead agencies operate in other states.

I apologize for the confusion this may have created with the committee, but I felt an obligation to provide the committee members an opportunity to be cognizant of the entire memorandum on this subject.

MEMORANDUM

February 4, 1980

TO: Members of the Aquaculture Policy Study Committee

FROM: Wallace G. Miller WGM

SUBJECT: Additional Comments - Final Report

I have been requested to elaborate upon two items contained in the final report. The first item has to do with why we did not explicitly recommend the use of discounting revenues and costs in the Return on Investment and Cost Benefit Analysis Models. The second is a request for additional information about the duties and responsibilities associated with the designation of a lead agency.

With regard to the use of discounting the current practice of most economists is to discount future revenues and costs in order to: (1) express future revenues and costs in terms of today's dollars and; (2) to provide a means for evening out differing peaks and valleys in cost and revenue streams.

In our report we gave considerable thought to the effect that discounting could have on the aquaculture project selection process. We recommended that discounting not be used unless it could be assured that it would not create a bias toward selecting short-term projects over long-term projects. We also recommend that the economic analysis be conducted using constant dollars (i.e., 1979) and current dollars (reflecting future estimates of costs and prices) in order to take into account possible economic changes in the fishery.

The following table shows a discount rate of 15% for a 10 year period.

Year	Discount Factor*
1	.850
2	.723
3	.614
4	.522
5	.444
6	.377
7	.321
8	.273
9	.232
10	.197

* Slight error due to rounding.

As the table would indicate, a dollar of revenue obtained in year one would be roughly twice as valuable as a dollar obtained in year five and over four times as valuable as a dollar of revenue obtained in year ten. Fisheries resource development is a long-term proposition. An over emphasis on short-term rewards through the application of discounting could introduce a bias in the project selection process.

This problem with discounting has been recognized by other economists dealing with fisheries development projects.

The Food and Agriculture Organization of the United Nations and FAO Fisheries Technical Paper 149 entitled, Manual on the Identification and Preparation of Fishery Investment Projects makes the following comments regarding discounting. (pages 6-7) "...the present value of relatively longer-term (fisheries) benefits is very low. It must be said, because it has been all too often the basis of private decision-making, that in principle, and at high discount rates, larger immediate benefits can have a greater present value than a smaller stream of benefits continuing in perpetuity."

"The flaw in this argument is that the use of discounting methods expresses the present worth of a project to present people in a specified economic environment. It says nothing about the worth, or otherwise, of a present project to future people, whose calculus with respect to such a project would be quite different. It may reasonably be argued from the theory of Consumers Surplus that future generations would prefer some fish to no fish at all, and at the expense...of the present generation."

Notwithstanding this very valid concern about the bias which discounting could introduce in the project evaluation process, the author of the FAO report goes on to endorse the discounting procedure without recommending any satisfactory method to counteract the bias.

The author also states that, "The simple Rate of Return may be used because os its ease of calculation as a preliminary indication of particular use to the analyst at the (project) identification stage."

In summary, we have stopped short of recommending the use of a particular discounting technique because we see no way of counteracting the short-term bias which could be introduced by this procedure particularly in the species selected for aquaculture projects (i.e., pinks over coho because of the earlier return) as well as in the type of aquaculture project to be undertaken.

Finally, and perhaps most importantly the role of economic analysis needs to be placed in perspective along with other factors which much be considered in evaluating an aquaculture project. According to Gordon Campleman, author of FAO Fisheries Technical Paper 149, "This is to say that the purpose of project appraisal (economic analysis) is less to establish a uniquely probable rate of return on the capital involved than to reveal the financial and economic "bones" of a project and to establish its ranking among other competing possible projects in the economy at large, similarly measured.* In the final analysis, the appraisal specialist cannot assume the role, of the investor. Even where none of the figures and computations are disputed, final acceptance or rejection of a project depends, in large part, upon the feel of the investor or financing institution for the degree of risk involved, their evaluation of non-quantifiable social effects, political factors, etc."

With regard to the request for additional information regarding the duties and responsibilities of a lead agency designation, I have attached a copy of a section of Washington Administrative Code WAC 197-10-200 through WAC 197-10-260 which deals with the application of the lead agency concept as it is used in the implementation of the State Environmental Policy Act.

This application of the lead agency concept is a general model which allows for different state or different local government agencies to assume lead agency responsibility for making threshhold determinations of environmental impact and for preparing environmental impact statements.

The use of the lead agency is a relatively new concept in governmental organization. It serves a critically important role which is often overlooked or neglected by traditional government bureaucratic organizations. For example, Alaskan fisheries issues cut across federal agencies (NMFS, NPFMC) state agencies (ADF & G, C & ED, DE to name but a few. Without a formalized lead agency system in place, coordination and communication among the bureaucratic entities becomes hapenstance, if indeed they occur.

---

* Emphasis supplied by underlining.

If a lead agency system were implemented for Alaskan fisheries the roles and responsibilities, where they are currently, clearly definable can be specified in the system. As new issues arise which have not been previously defined and assigned to a lead agency, the lead agency system has provisions for the assignment of this new responsibility. In essence the use lead agency concept is designed to overcome the two most often voiced complaints about bureaucratic organization. These are: bureaucratic statement, "That's not my responsibility," and the equally bureaucratic turfism position, "That program belongs in my organization." The lead agency concept can help overcome needless delay and reduce haggling over turf by afixing responsibility through a formal process.

The use of the lead agency concept is being implemented in new ways. For example, in a tri-county area, one county will assume lead agency responsibility for public transportation while another will assume the responsibility for public health services in the tri-county area. To be sure there is plenty of arguments as to whether preferential treatment is accorded to the residents of a county with lead agency status, however, the continued use of this new form of government suggests to me that it is preferable to each county unit of government attempting to be all things to its residents.

I believe the application of a lead agency concept which formally defines the roles and responsibilities of the federal, state and regional associations involved in the salmon aquaculture program is a critically important step forward toward creating a cohesive Alaskan Salmon Resource Development Program. In fact, without such a structural foundation, I believe it will be difficult, if not impossible, for such a program to exist in a state beyond only a hollow name.

LEAD AGENCY

WAC 197-10-200 LEAD AGENCY--RESPONSIBILITIES. The lead agency shall be the only agency responsible for complying with the threshold determination procedures of WAC 197-10-300 through -390; and the lead agency shall be responsible for the supervision, or actual preparation, of draft EISs pursuant to WAC 197-10-400 through -495, including the circulation of such statements, and the conduct of any public hearings required by this chapter. The lead agency shall also prepare or supervise preparation of any required final EIS pursuant to WAC 197-10-550 through -695.

WAC 197-10-203 DETERMINATION OF LEAD AGENCY--PROCEDURES. (1) The first agency receiving or initiating a proposal for a major action, or for any part of a proposal when the total proposal involves a major action, shall determine the lead agency for that proposal. To ensure that the lead agency is determined early, agencies shall determine the lead agency for all proposals for a major action they receive, unless the lead agency has been previously determined or the agency receiving the proposal is aware that another agency is in the process of determining the lead agency. The lead agency shall be determined by using the criteria in WAC 197-10-205 through -245.

(2) If the acting agency determines that another agency is the lead agency, it shall mail to such lead agency a copy of the application it received, together with its determination of lead agency and explanation thereof. If the agency receiving this determination agrees that it is the lead agency, it shall so notify the other agencies with jurisdiction. If it does not agree, and the dispute cannot be resolved by agreement, the agencies shall immediately petition CEP for a lead agency determination pursuant to WAC 197-10-260.

(3) If the acting agency determines that it is the lead agency, it shall immediately mail a copy of its determination and explanation thereof to all other agencies with jurisdiction over the proposal. The acting agency shall then proceed, as the lead agency, to the threshold determination procedure of WAC 197-10-300 through -390. If another agency with jurisdiction objects to the lead agency determination, and the dispute cannot be resolved by agreement, the agencies shall immediately petition CEP for a lead agency determination pursuant to WAC 197-10-260.

(4) Any agency receiving a lead agency determination to which it objects shall either resolve the dispute, withdraw its objection, or petition to CEP for a lead agency determination within fifteen days of receiving the determination.

(5) To make the lead agency determination, an acting agency must determine to the best of its ability the other agencies with jurisdiction over the proposal. This can be done by requesting the information from a private applicant,

or through consultation with the information centers established pursuant to RCW 90.62.120 within the Environmental Coordination Procedures Act of 1973 (ECPA).

WAC 197-10-205 LEAD AGENCY DESIGNATION--GOVERNMENTAL PROPOSALS. The lead agency for all proposals initiated by an agency shall be the agency making the proposal. In the event that two or more agencies share in the implementation of a proposal, the agencies shall by agreement determine which agency will assume the status of lead agency. For the purposes of this section, a proposal by an agency does not include proposals to license private activity.

WAC 197-10-210 LEAD AGENCY DESIGNATION--PROPOSALS INVOLVING BOTH PRIVATE AND PUBLIC CONSTRUCTION ACTIVITY. When the total proposal will involve both private and public construction activity, it shall be characterized as either a private or a public project for the purposes of lead agency designation, depending upon whether the primary sponsor or initiator of the project is an agency or from the private sector. Any project in which agency and private interests are too intertwined to make this characterization shall be considered a public project. The lead agency for all public projects shall be determined pursuant to WAC 197-10-205.

WAC 197-10-215 LEAD AGENCY DESIGNATION--PRIVATE PROJECTS FOR WHICH THERE IS ONLY ONE AGENCY WITH JURISDICTION. For proposed private projects for which there is only one agency with jurisdiction, the lead agency shall be the agency with jurisdiction.

WAC 197-10-220 LEAD AGENCY DESIGNATION--PRIVATE PROJECTS REQUIRING LICENSES FROM MORE THAN ONE AGENCY, WHEN ONE OF THE AGENCIES IS A COUNTY/CITY. For proposals for private projects which require licenses from more than one agency when at least one of the agencies requiring a license is a county/city, the lead agency shall be the county/city within whose jurisdiction is located the greatest portion of the proposed project area, as measured in square feet. For the purposes of this section, the jurisdiction of a county shall not include the areas within the limits of cities or towns within such county.

WAC 197-10-225 LEAD AGENCY DESIGNATION--PRIVATE PROJECTS REQUIRING LICENSES FROM MORE THAN ONE STATE AGENCY. (1) For private projects which require licenses from more than one state agency, but require no license from a county/city, the lead agency shall be one of the state agencies requiring a license, based upon the following order of priority:

(a) Department of ecology.
(b) Department of social and health services.
(c) Department of natural resources.
(d) Department of fisheries.
(e) Department of game.
(f) Utilities and transportation commission.
(g) Department of motor vehicles.
(h) Department of labor and industries.

(2) For private projects requiring a license from more than one state agency, but requiring no license from a county/city, and when none of the state agencies requiring a license is on the above list, the lead agency shall be the licensing agency which has the largest biennial appropriation.

(3) When, due to the provision of subsection (1) of this section, an agency would be the lead agency solely because of its involvement in a program jointly administered with another agency, the other agency shall be designated the lead agency for proposals for which it is primarily responsible under agreements previously made between the two agencies for joint operation of the program.

WAC 197-10-230 LEAD AGENCY DESIGNATION--SPECIFIC PROPOSALS. Notwithstanding the lead agency designation criteria contained in WAC 197-10-205 through -225, the lead agency for proposals within the areas listed below shall be as follows:

(1) For all governmental actions relating to thermal power plants for which certification is required under Chapter 80.50, RCW, the lead agency shall be the thermal power plant site evaluation council: PROVIDED, That for any public project requiring such certification and for which the study authorized by RCW 80.50.175 will not be made, the lead agency shall be the agency initiating the project.

(2) For all private projects relating to the utilization of geothermal resources subject to Chapter 79.76, RCW, the lead agency shall be the department of natural resources.

(3) For all private projects requiring a license or other approval from the oil and gas conservation committee pursuant to Chapter 78.52, RCW, the lead agency shall be the department of natural resources, except that for projects subject to RCW 78.52.125, the EIS shall be prepared in accordance with that section.

(4) For all private activity requiring a license or approval under the Forest Practices Act of 1974, Chapter 76.04, RCW, the lead agency shall be the department of natural resources: PROVIDED, That for any proposal which will require a license from a county/city acting under the powers enumerated in RCW 76.09.240, the lead agency shall be the county/city requiring the license.

(5) For all private projects requiring a license or lease to use or affect state lands, the lead agency shall be the state agency managing the lands in question: PROVIDED, That this subsection shall not apply to the sale or lease of state-owned tidelands, harbor areas or beds of navigable waters, when such sale or lease is incidental to a larger project for which one or more licenses from other state or local agencies is required.

(6) For all proposals which are being processed under the Environmental Coordination Procedures Act of 1973 (ECPA), Chapter 90.62, RCW, the lead agency shall be determined by the department of ecology; except that when county/city licenses are applied for prior to filing the ECPA application, a lead agency shall be determined pursuant to the standards of these guidelines prior to granting such county/city licenses.

(7) For private projects which require the issuance of a National Pollutant Discharge Elimination System (NPDES) permit under § 402 of the Federal Water Pollution Control Act (33 USC § 1251, et seq.), for a pulp or paper mill or oil refinery, the lead agency shall be the department of ecology.

(8) For proposals to construct a pipeline greater than six inches in diameter and fifty miles in length, used for the transportation of crude petroleum or petroleum fuels or oil or derivatives thereof, or for the transportation of synthetic or natural gas under pressure, the lead agency shall be the department of ecology.

(9) For proposals that will result in an impoundment of water with a water surface in excess of forty acres, the lead agency shall be the department of ecology.

(10) For proposals to construct facilities on a single site designed for, or capable of, storing a total of one million or more gallons of any liquid fuel, the lead agency shall be the department of ecology.

(11) For proposals to construct any new oil refinery, or an expansion of an existing refinery that shall increase capacity by ten thousand barrels per day or more, the lead agency shall be the department of ecology.

(12) For proposals to construct any new metallic mineral processing plant, or to expand any such existing plant by ten percent or more of design capacity, the lead agency shall be the department of ecology.

WAC 197-10-235 LOCAL AGENCY TRANSFER OF LEAD AGENCY STATUS TO A STATE AGENCY. For any proposal for a private project where a city or town with a population of under five thousand or a county of fifth through ninth class would be the lead agency pursuant to the designation criteria of WAC 197-10-210 through -230, and when one or more state agencies are agencies with jurisdiction over the proposal, such local agency may at its option transfer the lead agency duties to that state agency with jurisdiction appearing first on the priority listing in WAC 197-10-225. In such event the state agency so determined shall be the lead agency and the agency making the transfer shall be an agency with jurisdiction. Transfer is accomplished by the county, city or town transmitting a notice of the transfer together with any relevant information it may have on the proposal to the appropriate state agency with jurisdiction. The local agency making the transfer shall also give notice of the transfer to any private applicant and other agencies with jurisdiction involved in the proposal.

WAC 197-10-240 AGREEMENTS AS TO LEAD AGENCY STATUS. Nothing herein shall prohibit an agency from assuming the role of lead agency as a result of an agreement among all agencies with jurisdiction.

WAC 197-10-245 AGREEMENTS BETWEEN AGENCIES AS TO DIVISION OF LEAD AGENCY DUTIES. Two or more agencies may by agreement share or divide the responsibilities of lead agency through any arrangement agreed upon. In such event, however, the agencies involved shall designate one of them as the nominal lead agency, which shall be responsible for complying with the duties of the lead agency under these guidelines. Other agencies with jurisdiction shall be notified of the agreement and determination of the nominal lead agency.

WAC 197-10-260 DISPUTE AS TO LEAD AGENCY DETERMINATION --RESOLUTION BY CEP. (1) In the event that the agencies with jurisdiction are unable to determine which agency is the lead agency under these guidelines, any agency with jurisdiction may petition CEP for such determination. Such petition shall clearly describe the proposal in question, and include a list of all licenses and approvals required for the proposal. Any such petition shall be filed with CEP within fifteen days after receipt by the petitioning agency of the determination to which it objects. Copies of the petition shall be mailed to any private applicant involved, as well as to all other agencies with jurisdiction over the proposal. The applicant and agencies with jurisdiction may file with CEP a written response to the petition within ten days of the date of the initial filing.

(2) Within fifteen days of receipt of a petition, CEP shall make a written determination of the lead agency, which shall be mailed to the applicant and all agencies with jurisdiction. CEP shall make its determination in accordance with these guidelines; or in the event the guidelines do not control, the lead agency shall be the agency whose action, license, or licenses will have the greatest effect on the environment.

WAC 197-10-270 ASSUMPTION OF LEAD AGENCY STATUS BY ANOTHER AGENCY WITH JURISDICTION. When there has been an assumption of lead agency status by another agency with jurisdiction over a proposal, pursuant to WAC 197-10-345, the lead agency responsibilities regarding threshold determination procedures (WAC 197-10-300 through -390) transfer to the new lead agency.

FISHERIES LEGISLATION ANALYSIS

A. Proposed Legislation Analyzed

HB 553 - The bill would require Alaska Department of Commerce and Economic Development to provide solutions to the Bristol Bay salmon marketing problem.

HB 518 - The bill would create a Fisheries Development Committee.

HB 517 - The bill would appropriate $1,250,000 to ADC & ED to provide a grant to the Alaska Fisheries Development Foundation for bottomfish development.

HB 519 - The bill would appropriate $300,000 to the Fisheries Development Committee.

HCR 36 - This Concurrent Resolution would require the Governor to create a bottomfish plan.

HB 516 - The bill would establish an Office of Fisheries Development in ADC & ED.

HCR 37 - The concurrent resolution would require ADC & ED to prepare a bottomfish plan.

B. Major Legislative Goals

The major goals of the proposed legislation appear to be:

1. To establish a new office for fisheries development (which may encompass shellfish, bottomfish and salmon) which has lead agency responsibility in conducting studies and formulating recommendations as well as to provide a single point of responsibility and accountability for coordinating fisheries studies and development activities carried out by other state agencies.

2. To provide for legislative oversight over the development of bottomfish in Alaska and adjacent waters.

3. To encourage the executive branch to develop a bottomfish plan for the State of Alaska.

4. To provide solutions to the Bristol Bay salmon marketing problems.

C. Analysis of Proposed Legislation

The goals expressed in the legislation are straight forward. Action and results are desired in several areas of the fishery and the importance of this desire is pointedly made by the proposed creation of an legislative oversight committee and the proposed language contained in HCR 36.

Based upon our recent analysis of the Alaskan fishery we have expressed many similar concerns addressed by the proposed legislation.

For example, whereas the proposed legislation calls for the creation of an Office of Fisheries Development, we recommend that a lead agency be designed to coordinate all Alaskan fisheries resource development activities including shellfish, bottomfish and salmon. The Alaskan fishery is very dynamic and while Bristol Bay salmon might be this year's problem, king crab could for example, be a major issue next year. What we have recommended is a more general fisheries authority which would allow the lead agency to stay on top of a broader spectrum of issues. Hopefully, this broader authority will help avoid the need in the future to resort to crisis management measures to obtain desired results.

For the most part the establishment of an Office on Fisheries Development and the designation of a lead agency goes after the same point: we need a central, responsible organization which can be held accountable for fisheries development. While we suggested ADF & G could be designed the lead agency, such a designation could also be assigned to ADC & ED.

A second recommendation included in our study which is not fully addressed in the proposed legislation is the scope and content of the plan to be prepared.

For example, we proposed that an Alaskan Fisheries Resource Development Plan be created. (This responsibility could be assigned to the proposed office or a lead agency, which in turn could be ADC & ED.)

The scope of the Alaskan Fisheries Resource Development plan would initially cover three areas. These are:

Bottomfish
Salmon
Shellfish
(Others may be added later)

While we recognize the urgent need to get moving on bottomfish, unless some meaningful effort is undertaken in the other areas we could get back into a crisis management situation (like the Bristol Bay salmon problem) which typically results in last minute temporary fixes to the problem.

The content of the Alaskan Fisheries Development Plan, for each species as appropriate, would include:

1. A Stock Assessment - This portion of the plan would identify species demographics (number, size, geographic distribution, etc.) as well as estimates of harvest rates based upon such factors as reproduction cycle, predation, disease, growth and maturation characteristics, breeding, feeding, survival rates and other relevant factors.

2. A Harvest Capability Assessment - This portion of the plan would identify all of the vessels by gear type as well as other harvesting methods, including average harvest capability, maximum capability, minimum harvest rates to sustain operations. The number of crew and on-board personnel would also be idenfified.

3. A Processing Capability Assessment - This portion of the plan would identify all of the processing vessels, plants and other processing modes available in the Alaskan fishery.

4. A Market Capacity Assessment - This portion of the plan would identify current and potential markets by species and stocks, tonage, quality, price and customer for Alaskan fisheries product.

5. Stock/Harvest/Processing/Marketing Alternatives - The intent of this portion of the plan is to identify the alternative rates under differing economic and biological assumptions at which the various stocks can be harvested, processed and marketed. Against these estimates the capability to harvest can be compared to determine averages and shortages in fleet composition by gear type and for targeted species.

The third element which can now be introduced is the processing capability

If we accept the idea that an allowable harvest rate by species and stocks can be established, and further that the existing fleet, or as supplemented by foreign vessels if necessary in selected fisheries, can accomplish the harvest, the next step is to ensure that processing facilities to support the harvest are available on land or on vessels.

The next critical steps in this chain of activities is the marketing of the catch. In Seattle recently a fisherman gave his catch of bottomfish away free because there was no market for them. Beyond this simple example market quotas need to be set which on the one hand ensure adequate compensation to fishermen and on the other, reasonable satisfaction of the market demand. These market quotas need to be compared to the species and stocks available as well as the harvest capability and finally, defining the alternative means for bringing each of these four elements into reasonable balance.

As you can see item 5 requires a substantial interaction between stocks; harvesting; processing and marketing. Many alternatives are available and the goal should be to achieve a reasonable balance among these interacting elements. Once a reasonable balance is agreed upon by the affected parties the next step would be to <u>perpare a plan</u> to achieve the desired balance. (Technically, the stock assessment, harvest capability assessment, processing capability assessment and market capacity assessment are not plans but instead are <u>facts</u> upon which a solid plan can be based.

Assuming that sufficient alternative mixes of the four elements are examined and general agreement is achieved on a particular mix, the next step is to prepare a plan to carry out the desired mix. The elements of the plan are:

6. <u>A Harvest Regulation and Development Plan</u> - The objective of this plan is to either through regulation and/or economic incentives to bring the harvest capability into balance with the allowable harvest rates.

7. <u>A Processing Regulation and Development Plan</u> - The objective of this plan would be to establish quality control and grading standards as well as economic incentives to help match the various processing capabilities required to the geography of the harvest volumes. (The quality control and grading aspect could be made a separate plan if additional emphasis is desired.)

8. <u>A Marketing Plan</u> - Based upon the stocks, harvest and processing capability as well as current market demands, the objective of this plan would be to define those courses of action which would result in achieving a full harvest of available species and stocks, which are fully processed to high standards and which allows fishermen to make a good living and processors a fair profit.

9. A Transportation and Port Facilities Plan - The objective of this plan will be to identify the transportation modes (air, water, land) and equipment necessary to support the marketing plan. Port and such ancillary facilities as repair, fuel storage, etc. need to be included to ensure that the post processing delivery system functions smoothly.

Realistically, if Alaska is to fully enjoy the benefits of its Alaskan fishery, three additional elements to the Alaskan Fisheries Resource Development Plan need to be included. These are described as follows:

10. An Alaskan Fisheries Research Plan - Even a casual reading of Alaskan Fishermen or in discussions with fisheries biologists, fishermen and processors the topic of the need for more information about many different aspects of the fishery invariable arises. Without a scientific and research information foundation, management of the fishery will continue to be based upon "gut feel" and other equally arbitrary bases. A consolidated federal/state research center, as we recommended could provide great support to ensuring that the resource is protected and harvested at biologically justifiable rates.

11. An Alaskan Fisheries Financing Plan - If Alaska is going to increase its share of the rewards (as compared to Seattle or foreign based fishermen) it must be prepared to invest in vessels, research and technology, transportation and port facilities. The plan should identify the types of economic incentives required as well as a realistic budget level for the new Office or lead agency.

12. An Alaskan Fisheries Legislation Plan - The proposed legislation provides an excellent start and with some consideration given to the points raised in this analysis could provide the full direction required to achieve the stated goals.

D. Organization Analysis

In the preceding Section C, an attempt was made to briefly define the elements of an Alaskan Fisheries Resource Development Plan which addresses the fishery in a functional manner. The suggested planning framework recognizes the need to obtain facts through assessments as well as the need to study the alternative means of achieving the desired balance among species availability, harvest capability, processing capability and market capacity.

In addition Section C identifies some specific steps which the State of Alaska should be prepared to take if the State is to realistically realize some of the desired benefits from the fishery.

The definition of the elements of a plan, of and by itself, is no guarantee that the plan will be accomplished. Two additional requirements are necessary. The first is for an organization to be created which has the expertise and resources to develop a good plan; the second is for an organization which has sufficient authority to ensure the plan is implemented.

Leaving aside for a moment, the expertise and resources requirement, the authority requirement is of critical importance because it, in the final analysis, will determine whether a good plan gathers dust on a shelf or becomes the roadmap for management decision-making.

In examining the present organizational entities now involved in managing the Alaskan fishery, it is clear that presently no single organization has sufficient authority to carry-out a plan.

Regardless of whether a new Office of Fisheries Development or a lead agency is designated, careful consideration must be given to providing the selected organization with sufficient authority so that the organization can be held accountable for its success or failure in achieving planned results. Some of the types of authorities which could be assigned to the proposed new Office or lead agency are listed below. Again, the point is made that an organization can only be held accountable if it has the authority to act.

1. Place new Office Director on the Board of ADF & G.

2. Place International Fisheries Coordinator in the office.

3. Place Bottomfish Coordinator in the office.

4. Place Office Director on North Pacific Council.

5. Place Aquaculture Coordinator in the office and formalize organization of regional aquaculture association.

6. Give office "A-95" review and approval authority over all government financial fisheries research and development activities including projects approved by the Renewable Resources Corporation as they pertain to fisheries development.

7. Place aquaculture loan approval in office.

8. Place office staff members on regional aquaculture planning teams.

9. Create a state/federal fisheries development task force with new office director as chairman.

10. Negotiate agreements with Forest Service, National Marine Fisheries and the North Pacific Council which clearly establishes Alaska's right to ensure heavy consideration is given to Alaska's Fisheries Development Plan.

11. Create a permanent legislative oversight committee on fisheries and charge it with responsibility to perfect the statutory framework necessary for the office to accomplish its job in a business-like manner.

12. Require annual reports showing progress against the plan.

At first glance the 12 organizational steps may seem excessive, however, it is important to remember that results can only be demanded from those who have the authority to act. This is not to suggest that all 12 organizational actions are fully inclusive or that all 12 are necessary to achieve the desired results. Others will have to decide on the most appropriate level of authority which is capable of producing the desired results.

Assuming that a balance between organizational authority and desired results can be achieved, the next step is to define the expertise and resources required to perform. Given the wide range of possible organizational options it is difficult to estimate the numbers of staff required to perform the work. However, it is possible to define some of the types of skills which will be required to perform the assigned work. These include:

1. Fisheries Biologists (species generalists)
2. Economists
3. Data Processing System Designers and Programmers
4. Fisheries Scientists (species or particular area specialists)
5. Fisheries Marketing Experts
6. Processing and Quality Control Experts
7. Fishing Fleet (gear type) Experts
8. Transportation/Port Facilities Experts
9. Fisheries Research Scientists
10. Competent Management

Hearing held 1/29/80 - Reported out as CS HB 517

Memo to: Jack Fuller

HB517 "Special Appropriation ($1,250,000) to Commerce Dept. for grants to Alaska Fisheries Development Foundation."

This Fdtn. is a private fdtn. orginally funded by federal funds. Their office is in Anchorage – exec. director is Sara Hemplill. Al Burch, a member of the foundation's Board of Directors (who lives in Kodiak) is to testify. This foundation is one of the strongest factors in fisheries development in the private sector.

These yearly grants are to be used for projects consistent with the goals established by the legislature by resolution for bottomfish development or which would transfer bottomfish harvesting or processing from other states or countries to Alaska's bottomfish industry.

The foundation must receive specified amounts of matching funds from private Alaskan bottomfish industry. The yearly grants to the foundation deminish in size while the matching funds from private sector must increase in proportion each year. A means of encouraging and stimulating involvement of private industry in bottomfish development.

– Will to add wording in Sec. 2 to spell out what bottomfish "goals" of legislature are. Will have proposed Committee substitute to add this done by lawyer before ... hrg.

	$1,250,000

IN THE HOUSE BY THE RESOURCES COMMITTEE

CS FOR HOUSE BILL NO. 517

IN THE LEGISLATURE OF THE STATE OF ALASKA

ELEVENTH LEGISLATURE - SECOND SESSION

A BILL

For an Act entitled: "An Act making a special appropriation to the Department of Commerce and Economic Development for grants to the Alaska Fisheries Development Foundation; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. The sum of $1,250,000 is appropriated from the general fund to the Department of Commerce and Economic Development for distribution in the form of grants to the Alaska Fisheries Development Foundation in the following amounts in the fiscal years ending on June 30 of the following years, subject to sec. 2 of this Act:

1981	$500,000
1982	375,000
1983	250,000
1984	125,000

* Sec. 2. The grants provided in sec. 1 of this Act may only be used for projects of the Alaska Fisheries Development Foundation which

(1) have as a primary purpose the transfer to the Alaska bottomfish industry of bottomfish harvesting or processing technology from other states or countries; or

(2) are consistent with the following goals:

(A) to maximize economic benefits to Alaskans;

(B) to maximize private-sector participation and to minimize public-sector involvement;

(C) to avoid public-sector expenditure commitments which

exceed the dollar value of benefits created by the expenditure; and

(D) to avoid undesirable environmental, cultural, and social effects.

* Sec. 3. The grants for 1982, 1983 and 1984 in sec. 1 of this Act may not be distributed until the Alaska Fisheries Development Foundation receives the following amounts in the applicable year as matching funds from the private bottomfish industry in Alaska:

1982	$125,000
1983	250,000
1984	375,000

* Sec. 4. The unexpended and unobligated portion of the appropriation made by this Act lapses into the general fund June 30, 1984.

* Sec. 5. This Act takes effect July 1, 1980.

HB517

ALASKA'S FISHING INDUSTRY

Sara Hemphill
Executive Director
Alaska Fisheries Development Foundation, Inc.

Since the end of the gold rush era, the fishing industry has played a key role in the Alaskan economy. This industry, like so many others, has been noted for its boom or bust character with the demise of one fishery forcing the development of another.

The vagaries of harvesting a dynamic migratory resource which is sensitive to climatic changes and a part of a complex ecosystem which we have just begun to study are many. Aside from the natural biological problems which face the harvester/hunter vis a vis what, where and how much will be his catch, it is the man-made and perceived impediments which present industry with the majority of its hurdles. And yet this industry thrives despite increasingly shorter seasons for established fisheries.

While the development of the vast year-round groundfish fishery presents a partial solution to the boom/bust, short season problem, full domestic utilization of this fishery is still several years away and will require extensive coordination and cooperation on the part of all involved, not to mention substantial capital investments, both private and public.

In the interim, the high valued fisheries will continue to dominate the picture. Increased landings in established fisheries was the rule in 1979 with shrimp and troll salmon the notable exceptions. The predicted domestic harvest for 1980 promises even more of the same for Alaska as well as increased activity in the whitefish industry.

STATUS OF THE FISHERIES

A brief recap of the 1979 fishing activity will serve as a general scenario of what Alaska can expect in the near future.

The salmon catch of 87.4 million was the largest since 1941 and is expected to increase next year. The 1979 Bristol Bay fishery significantly exceeded predictions and thus caught the industry by surprise. Plagued with regulations and limits

as a result of increased effort, the troll fishery is gradually waning. As a general rule, increased effort has resulted in a smaller per capita take.

The combination of the glut of salmon and market concentration in Japan has resulted in a love/hate situation which is proving troublesome. It affects prices in all fisheries.

To date, the shell fish catch promises to exceed last year's 334-million pounds. Again, tanner crab landings should surpass king crab. The alarmingly short twenty-two day king crab fishery is a matter of concern despite its estimated harvest of 118,000,000 pounds. Price cuts from $1.01 to $ .86 after fishing had begun will provide topics for lively conversation at the very least. The shrimp harvest has again significantly dropped off from 1978 landings. The impending moratorium in foreign take of tanner in 1981 with a 50% cutback in 1980 is hopefully a sample of the hardline the United States is going to follow from now on.

Significantly increased interest in the herring-sac-roe fishery has been demonstrated on all fronts. The domestic harvest has grown dramatically from 0 to 13,000 mt in five years. An early run this spring in Bristol Bay took many by surprise and especially hurt out-of-state fishermen who could not respond soon enough to the alert. This fishery is the last small vessel fishery which is available to the active fishermen living in the Bering Sea area and is one which they have identified as the prime target for their development efforts. One can look for possible legislation and regulations encouraging the small boat fleet.

The "very" managed halibut fishery maintained its 20 million pound harvest in spite of increased effort. As with tanner crab, this fishery will see a moratorium on foreign involvement within two years. The blackcod landings have increased dramatically this year and approach the 4000 mt domestic quota. Despite the fact that the Japanese have a two-year supply of pot caught sablefish from California and Oregon, the market is ever strong for Alaskan line caught blackcod - a situation about which the quality-conscious longline fishermen are very happy.

The limited entry question is becoming livelier and promises to dominate a sizeable portion of the management and decision-making sessions. The king crab fishermen are

"safe" at least for the immediate future; the impending moratorium on foreign take of tanner crab and the developing groundfish fishery pick up the slack harvesting capacity. The halibut fishery is in a somewhat different state. Overfished and with stocks still in a slight decline, the fishermen will face a moratorium on new licenses in 1980, leading to limited entry in this fishery in 1981. Many propose the same course of action for blackcod. Though there is talk among the biologists of decline in blackcod stocks, both in size of individual fish and total poundage, such statements are vehemently contradicted by the fishermen.

Interest in the whitefish fishery is burgeoning and ranges from jigging machines for 30 foot vessels to 250-300 foot factory freezers. Landings from the Gulf of Alaska are up over last year and promise to increase significantly in 1980. Tax breaks and loan guarantee programs have encouraged the construction of new large highly-efficient multi-species vessels; these costly boats will demand year-round fishing in order to stay afloat.

A promising trend generally toward the rebuilding of the stocks of many fisheries is attributed to the reduced foreign harvest and improved management under the 200 mile limit law. Stock availability and harvesting capacity, however, are only part of the picture in predicting the future of Alaskan fisheries.

While full systems are in place and functioning for the harvesting and processing of traditional, high-value fish, such is not the case with the lower value, high volume whitefish. Impediments to the domestic development abound and such issues as the availability of markets, both foreign and domestic; pending and contemplated federal and State legislation and regulation; the availability of private investment capital; degree of real and perceived foreign involvement and control in the industry; extent of infrastructure support facilities including steady affordable labor; ability of the industry to develop technical expertise, both on shore and off shore; the posture and attitude of industry members toward each other; and the degree of cooperation and coordination between the industry and the local, State and federal entities all will play key roles in the future development of the Alaskan fishing industry.

Though numerous and imposing, the impediments are ones about which something can be done; they are man-made. If properly managed, the resource is infinite. With the world food protein shortage on the rise and the annual yield of finfish from waters off Alaska holding steady at 1.5 million metric tons, the bottomline is: the fish are here! Alaska's future is promising though not promised.

Traditional fisheries are being stressed both from a steady decline in the resource as well as increased effort. Thus, management schemes will underscore natural economic incentives and encourage development of underutilized species to fill the ever-widening gap between supply and demand. Because the participants are, for the most part, small operations with sizeable cash flow problems and a myriad of roadblocks to circumvent, it will take organization and cooperation on the part of all to realize Alaska's potential.

Having occupied the seat at the bottom of the totem pole in the national scheme of priorities, both Alaska and the fishing industry historically have had an uphill battle. Rather than viewing all the impediments as problems, we can approach them positively as opportunities upon which to build in order to guide and expedite development to suit our needs.

Full domestic utilization of Alaskan whitefish is still at least ten years away and thus difficult to describe. Assuming the biomass of available fish remains constant, one industry forecaster predicted the following as a possible scenario for full utilization of whitefish total allowable catch (TAC).

SOUTHEASTERN ALASKA

Ten, less than 100 foot longline vessels, could realize on an annual basis a catch of 1.47 million pounds each and thus fully harvest the 6700 metric tons (mt) of Southeastern TAC for sablefish, Pacific cod and rockfish. The trawl fish TAC of 15,700 mt would require eight 60-80 foot trawlers to average 4.3 million pounds each annually.

WESTERN GULF OF ALASKA

TAC for sablefish, cod and rockfish of 14,300 mt would be harvested most cost effectively by eight 90-120 foot longline vessels averaging annually 3.9 million pounds apiece. The trawl fishery in this area has a TAC of 289,000 mt which

would most efficiently be harvested by a combination of twenty 80-100 foot trawlers and thirty-four 100-130 foot trawlers averaging annually six and fifteen million pounds apiece, respectively.

BERING SEA

In the Bering Sea, six 110-170 foot longline freezers could each average 5.5 million pounds annually to fill the sablefish and Pacific cod TAC of 15,000 mt or 33 million pounds. It is suggested that in order to encourage a local fishery that an additional cod quota of 20,000 mt could be harvested by seventy-three St. Pierre dories resulting in .6 million pounds per year per vessel. The remaining vast fishery amounting to a TAC of 1,406,500 mt would be harvested most efficiently by a combination of ten 120-130 foot trawlers averaging 20 million pounds per year, thirty-three 140-200 foot block freezers averaging 30 million pounds annually and thirty-two 250-300 foot filleting ships handling an average of 59 million pounds per year.

The hypothesis would involve 234 vessels with an investment of $944,100,000 and $197,500,000 investment in shore processing and maintenance facilities. It would employ 5,000 fishermen, 6,000 processing workers and plant support staff. The total private sector investment in Alaska would be $1,141,600,000

This scenario does not consider the public expenditures which must necessarily accompany and will exceed such private investment. Nor does it account for the upgrading and modification of vessels in the existing fleet, a situation we can count on. Thus, adjustments can and should be made accordingly in the scenario to account for such participation.

The above is only a single game plan which, with the exception of the Aleutian dories, assumes that the most efficient vessels for targeting the year-round fishery are large (over 80 foot) all-weather boats with substantial hold capacity and state of the art equipment. It assumes further a trend toward on-shore processing where facilities currently exist and off-shore processing where they do not. There are, of course, a myriad of combinations which might occur. One thing is certain: it is a fact that the fishing industry will continue to play a major and ever-expanding role in Alaska's future.

Mary Levan, Administrative Assistant
Committee on Natural Resources
Alaska State Legislature
Pouch V
Juneau, Alaska 99811

Dear Mary:

Sorry for the delay sending the audit information - we moved our office this week. Please note new address, the phone number is the same.

Enclosed is a copy of the State of Alaska Special Review of December 18, 1978 (which you probably already have) and Financial Statements for the nine months ended June 30, 1979 and for the year ended September 30, 1979.

Thanks for the copy of CSHB517, sorry your secretary resigned, let me know if you need anything else. I tried to reach John Crandall (465-3706) on January 30th regarding the scheduling before the Finance Committee but he hasn't called me back yet. Presumably we will hear when it is set.

Sincerely,

Bettymae Jones

CERTIFIED PUBLIC ACCOUNTANTS

IN PRINCIPAL AREAS OF THE WORLD

The Board of Directors
Alaska Fisheries Development
Foundation, Inc.
Anchorage, Alaska

We have examined the balance sheet of Alaska Fisheries Development Foundation, Inc. as of September 30, 1979, and the related statements of revenues, expenses and transfers, changes in fund balances and changes in financial position for the year then ended. Our examination was made in accordance with generally accepted auditing standards and, accordingly, included such tests of the accounting records and such other auditing procedures as we considered necessary in the circumstances.

In our opinion, the aforementioned financial statements present fairly the financial position of Alaska Fisheries Development Foundation, Inc. at September 30, 1979, and the results of its operations and changes in financial position for the year then ended, in conformity with generally accepted accounting principles applied on a basis consistent with that of the preceding year, except for the change, with which we concur, in the method of accounting for grant revenues as described in Note 3 to the financial statements.

NOTES TO FINANCIAL STATEMENTS

1. Organization and Summary of Significant Accounting Policies:

Organization

The Alaska Fisheries Development Foundation, Inc. (incorporated March 6, 1978 as Alaska Fisheries Development Corporation) was organized for the purpose of identifying the research and development needs of the Alaskan fishing industry, and soliciting funding for projects and studies which address those needs.

The Foundation is an Alaska nonprofit corporation exempt from income tax under Section 501(c)(3) of the Internal Revenue Code.

Significant Accounting Policies

The financial statements of the Foundation have been prepared on the accrual basis of accounting. To ensure observance of limitations and restrictions placed on the use of resources available to the Foundation, the accounts of the Foundation are maintained in accordance with the principles of fund accounting. This is the procedure by which resources for various purposes are classified for accounting and reporting purposes into funds established according to their nature and purposes.

Revenues received that are restricted to program use in periods subsequent to the end of the accounting period are recorded as deferred revenues and will be recognized as earned when the services are performed. Expenses are recognized when incurred.

Contributions are considered unrestricted funds unless the contribution has been restricted to a specific program or purpose by the donor. Noncash contributions are valued at their fair market value at the date received.

Office furniture and equipment acquired by purchase are recorded at cost. Those acquired by contributions are recorded at their estimated fair value at the time of donation. All fixed assets are accounted for in the Unrestricted Fund. Purchases of furniture and equipment and related debt service payments financed by grants in the Restricted Funds are accounted for as transfers from such funds to the Unrestricted Fund. Depreciation will be computed on the straight-line method over the estimated useful lives of the related assets.

2. Description of Funds:

Unrestricted Fund - This fund accounts for all sources of revenue or expenditures not related to grants or contracts and all transactions not required to be accounted for in another fund.

Restricted Fund

State Grant Fund - This fund accounts for all grants received from the State of Alaska and for which the donor has restricted usage to a specific purpose or program. This fund has accounted for grant proceeds totaling $' 0,000 awarded in 1978 by Acts of the State Legi ature for the purpose of establisl ing an office in Alaska and hiring an executive director ($100,000) and to establish bottom fish research ($10,000).

Federal Grant Fund - This fund accounts for all grants and contracts received from the Federal government and the use of which are restricted to a specific purpose or program. This fund currently accounts for a grant from the National Oceanic and Atomospheric Administration, National Marine Fisheries Service for an implementation plan of a groundfish fishery off Alaska.

3. Restatement of Financial Statements:

The beginning fund balance of the Unrestricted Fund has been restated to reflect accounting practices recommended in Statement of Position 78-10 Accounting Principles and Reporting Practices for Certain Nonprofit Organizations issued in December 1978 by the American Institute of Certified Public Accountants and to segregate the Restricted State Grant Fund.

This statement recommends that grants should be accounted for in the statement of revenues and expenses to the extent that expenses have been incurred for the purpose specified by the grantor during the period. Amounts received but not yet expended should be accounted for as deferred revenue until grant restrictions are met.

The effects of the required retroactive accounting change upon beginning fund balances of the Unrestricted Fund and Restricted State Grant Fund are detailed in the adjustments reflected in the accompanying statement of changes in fund balances.

4. Notes Payable:

Note payable to bank on February 1, 1980, bearing 13½% interest; without collateral	$10,000
Note payable to bank on demand, bearing 13½% interest; without collateral	7,000
	$17,000

5. Contingencies:

Reimbursement claims under Federal and State grants are subject to audit and adjustment by grantor agencies. In the opinion of management, no material liability exists with respect to such contingencies.

PURPOSE OF THE REVIEW

In accordance with the provisions of Title 24 of the Alaska Statutes, a special review of the Alaska Fisheries Development Corporation (AFDC) was conducted to determine:

1. The extent and nature of financial transactions relating to $110,000 in funding received from the State.

2. The progress AFDC has made towards meeting the stated goals and objectives relating to the above funding.

3. Progress made by AFDC towards obtaining other sources of funding to ensure AFDC's continued existence.

ORGANIZATION AND FUNCTION

The Alaska Fisheries Development Corporation (AFDC) is a private, not-for-profit corporation, chartered on March 6, 1978. The purpose of the Corporation as defined by its Articles of Incorporation is "to provide a non-political, non-partisan, industry-wide organization interested in the commercial development of fisheries and aquatic products"; and "to conduct business and plan industry research and development needs, secure financing, administer projects and disseminate results and conclusions".

As of November 10, 1978, the voting membership of AFDC included ten harvester groups and thirteen processing companies. In addition, there are fifteen non-voting associate members, including interested businesses and associations.

The corporate powers of the Corporation are vested in the Board of Directors, which is made up of ten directors. Five Board members are harvesters who are elected from each of five geographic regions designated by the Articles of Incorporation; the other five members are processors who are elected without regional consideration. Nominations for the directors are submitted by the Corporation's membership; nominees are elected by the voting members of the Corporation at the Corporation's annual meeting.

In addition to the ten voting Board members, the Board also includes eight ex officio members.

The Corporation received $110,000 in 1978 from the State of Alaska, through the Department of Commerce and Economic Development in two separate grants. A $10,000 grant was to be used to establish a bottomfish research association. The purposes of the $100,000 grant was to allow AFDC to establish an office in Alaska and hire an executive director.

AFDC publishes a newsletter to keep its members up-to-date on the Corporation's activities and new developments in the bottomfish industry. Four newsletters have been published since March, 1978.

Compliance

The following is an analysis of the requirements the Alaska Fisheries Development Corporation (AFDC) must meet in order to be in compliance with the two grants given it by the State of Alaska:

1. $10,000 grant awarded to AFDC to establish a bottomfish research association.

Alaska Fisheries Development Corporation was formed as of March 6, 1978. Per its Articles of Incorporation, one of the purposes of the Corporation is to plan research for the commerical development of fisheries and aquatic products. The Corporation is specifically interested in bottomfishing.

2. $100,000 grant awarded to AFDC to establish an office in Alaska and hire an executive director.

Sara Hemphill was hired as executive director of AFDC as of October 15, 1978. Ms. Hemphill had worked with the Corporation as a consultant since its inception. She had also served on the Board of Directors as a harvester representative from the Yakutat-and-South-to-Sitka region.

To select an executive director, the Board of Directors of AFDC appointed five of its members to a Search Committee to make a recommendation for the executive director position. The Search Committee, after studying the resumes received from nineteen applicants, interviewed five of the applicants determined to be best qualified. The Search Committee recommended to the Board that Ms. Hemphill be offered the position after determining that she was most qualified for the job. The full Board of Directors then voted to offer Ms. Hemphill the job.

Ms. Hemphill accepted the job and has moved from Seattle to Anchorage to assume the duties as executive director. Her salary as executive director is $45,000 annually. Office space was rented by the Corporation at Alaska Pacific University in mid November, 1978.

The $100,000 grant also stipulates that the Corporation shall submit a financial report to account for all State and Federal funds received by the Corporation. These reports are to be submitted to the Department of Commerce and Economic Development by June 30 of each year. The first report will be due June 30, 1979.

Financial

As of September 30, 1978, Alaska Fisheries Development Corporation incurred expenses of $71,988 compared with revenues of $116,284, per the Corporation's financial statements on pages 10 through 15. This leaves a fund balance of $44,296.

Of the $71,988 in expenses, actual expenditures as of September 30, 1978, amounted to $34,576; accounts payable and accrued executive director's fees amounted to $32,412 and $5,000 respectively.

During our review, we noted that the $110,000 received from the State was put directly into a checking account. In the future, excess funds should be invested in order to take advantage of any interest income that accrues. The funds can then be transferred to a checking account as needed.

Program Evaluation

In February of 1978, AFDC applied to the National Marine Fisheries Service (NMFS), under the U. S. Department of Commerce, for $1.45 million in Saltonstall-Kennedy (S-K) funds. It was intended by the drafters of the S-K Act that S-K funds be used for fisheries research; AFDC's proposal involved research in the bottomfish industry.

At the time AFDC submitted its proposal and up until December, NMFS and the U. S. Department of Commerce promised AFDC that it would receive the funds applied for.

However, as of late December, no Federal funds have been awarded to AFDC. The decision to award the S-K funds to AFDC has been forestalled in the Federal budgeting process. Therefore, the status of S-K funding is uncertain until a decision is made during the 1979 Congressional session.

Alaska Fisheries Development Corporation is presently looking into a possible alternative source of funding from the Economic Development Administration, U. S. Department of Commerce, in the form of grants-in-aid. These grants would probably be limited to approximately $100,000 for administration purposes.

ALASKA FISHERIES DEVELOPMENT CORPORATION

NOTES TO FINANCIAL STATEMENTS

SEPTEMBER 30, 1978
(Unaudited)

Note 1 Summary of Significant Accounting Policies

a) The corporation maintains its books and records on the cash basis of accounting and adjusts to the accrual basis for financial statement purposes.

b) The Alaska Fisheries Development Corporation intends to apply for tax exempt status under Sec. 501 of the Internal Revenue Code. As of September 30, 1978, no application had been filed.

Note 2 Accounts Payable

The accounts payable at September 30, 1978, are as follows:

Payable To	For	Amount
Stafne & Hemphill	Professional services	$29,580
Members of the board of directors:	Travel and lodging	2,816
	Other expenditures	16
		$32,412

Note 3 Professional Services

The amount expended for professional services ($44,676) was for services performed by Stafne & Hemphill, for the period from January through August of 1978, in preparing proposals for Alaska Fisheries Development Corporation and in negotiations with various agencies on behalf of the corporation.

Note 4 General

Alaska Fisheries Development Corporation was formed in March, 1978, as a nonprofit educational and scientific research and development organization with the purpose of providing a nonpolitical, nonpartisan, industry-wide organization interested in the commercial development of fisheries and aquatic products in Alaska.

Note 5 Restatement

These financial statements have been restated to correct an overreporting of expenditures for professional fees and travel and lodging and a corresponding overreporting of accounts payable.

A BILL

For an Act entitled: "An Act relating to fish disease control."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 16.05.251(a)(8) is amended to read:

(8) investigating and determining the extent and effect of fish disease, predation, and competition among fish in the state, exercising control measures considered necessary to the resources of the state;

* Sec. 2. AS 16.05.251(a)(10) is amended to read

(10) prohibiting and regulating the live capture, possession, transport, or release of native or exotic fish or their eggs;

* Sec. 3. AS 16.05 is amended by adding a new section to read:

Sec. 16.05.868. FISH HEALTH INSPECTIONS. For any fish health inspection the department determines is necessary the department may substitute for its own inspection the inspection of a professional fish health specialist who is certified by the American Fisheries Society, Fish Health Section.

* Sec. 4. AS 16.10.460 is amended by adding a new subsection to read.

(b) The cost of any inspection performed by the department under AS 16.10.400 -- 16.10.470 will be borne by the department.

* Sec. 5. AS 16.10.420(9) is repealed.

HB529

Alaska State Legislature
House of Representatives

POUCH V

Chairman, House Resources Committee

From: Representative Terry Gardiner T.G.

Date: February 27, 1980

Re: Amendment to HB 529

Attached is a proposed amendment to HB 529. The purpose of the amendment is to clarify in the proposed legislation the standards of people who are qualified to do fish health inspections in the state. It is my concern that all fish health inspections be held to the same standard and that there not be two standards imposed in the state, (1) the Department of Fish and Game and, (2) all other people involved in the fisheries.

The language I have proposed as an amendment to the bill will clarify the issue that all fish health inspections that the department determines necessary are performed by a competently certified person. It leaves the discretion of whether to have a fish health inspection or not with the department, but that once the department decides to form an inspection or require one that the qualifications of the person doing this inspection is set out in statute.

AMENDMENT TO HB 529

The following language is proposed as an amendment to Section 3 of HB 529.

Sec. 16.05.86E. FISH HEALTH INSPECTIONS. All fish health inspections the department determines necessary shall be performed by a professional fish health specialist certified by the American Fisheries Society, Fish Health Section.

Justification: The proposed amendment makes it clear that all fish health inspections will be based on the same standards and performed by a competently certified person.

MEMORANDUM

TO: House Judiciary Committee

DATE: January 21, 1980

FILE NO:

TELEPHONE NO: 465-4108

FROM: Gregory F. Cook
Executive Director
Boards of Fisheries and Game

SUBJECT: Personal Consumption Fishery; House Bill 544

In response to the January 21, 1980 telephone request from Sandra Stringer of your office, enclosed is a copy of Proposal #428, Personal Consumption Fishery which was before the Board of Fisheries during its Fall 1979/1980 regulatory meeting. The proposal was rejected and the Board instead adopted a management plan for the Copper River salmon fisheries (#80-66-FB) which is also enclosed.

BACKGROUND INFORMATION

The Copper River subsistence fishery has existed for many years. Prior to construction of the Richardson Highway, participants in this fishery were mainly local residents. As road conditions improved and more leisure time became available, the number of non-local fishermen increased. These new participants in the fishery have come primarily from the Fairbanks and Anchorage areas.

Increased fishing pressure and poor returns of fish to the Copper Rive system in recent years has required the Board of Fisheries to take action to restrict commercial, sport and subsistence fisheries in the Copper River area. Restricting these fisheries has been a complex and difficult task. Consequently, the Board has considered a variety of alternatives before taking action. One alternative approach, suggested by the Board itself, was to create a category to be known as "personal consumption" fisheries. Such a classification would remove the fishery from the legislatively-mandated priority of subsistence.

This option was rejected by the Board of Fisheries at their public meeting in December 1979. The Board also rejected a second alternative proposed which called for differentiation among subsistence users by gear type only. The Board elected instead to develop a management plan: The plan's goal is to insure that subsistence needs are met first for those most dependent on the resource. Other subsistence users whose level of dependence is generally lower receive a lower priority as specified in AS 16.05.251(b).

PERSONAL CONSUMPTION FISHERY

428. 5 AAC 41.001-900. PERSONAL CONSUMPTION FISHERY. Establish a personal use category of fishermen that allows the taking of fish by gear not allowed under current sport fishing regulations. Fish taken under the regulations of this chapter could only be used for personal consumption, not for barter, trade, or sale.

The proposed regulation reads as follows:

ARTICLE 1.
STATEWIDE PROVISIONS.

5 AAC 41.001. APPLICATION OF THIS CHAPTER. (a) Regulations in this chapter apply to personal consumption fishing for finfish, shellfish, and aquatic plants.

(b) The regulations of this chapter do not prohibit the personal consumption of finfish, shellfish, or aquatic plants legally taken under the subsistence, commercial, and sport fishing regulations of this title.

(c) The unlawful possession of fish (5 AAC 39.197), the definitions (5 AAC 39.975) and the abbreviations and symbols (5 AAC 39.997) set forth and defined in ch. 39 of this title are applicable to the regulations in this chapter.

5 AAC 41.005. PERSONAL CONSUMPTION FISHING PERMITTED. Finfish, shellfish, and aquatic plants may be taken for personal consumption only as provided in this chapter.

5 AAC 41.010. METHODS, MEANS, AND GENERAL RESTRICTIONS. (a) Fish may be taken for personal consumption only by dip net.

(b) Fish may be taken for personal consumption only by residents.

(c) It is unlawful to buy, sell, trade, or barter personal consumption caught fish or their parts.

5 AAC 41.015. PERSONAL CONSUMPTION FISHING PERMITS AND REPORTS. (a) Finfish, shellfish, and aquatic plants may be taken only under the authority of a personal consumption fishing permit issued by the commissioner or a local representative of the department.

(b) The following permit conditions apply unless otherwise specified by the personal consumption fishing regulations in this chapter:

(1) the numbers of fish taken for personal consumption may not exceed the limits set out in the permit;

(2) permits must be obtained from a local representative of the department prior to personal consumption fishing;

(3) permits must be retained in the possession of the permittee and be readily available for inspection while taking or transporting the species for which the permit is issued;

(4) the permit may designate the species and numbers of fish to be harvested, time and area of fishing, the type and amount of fishing gear and other conditions necessary for management or conservation purposes;

(5) if specified on the permit, each personal consumption fisherman shall keep accurate daily records of the catch involved, showing the number of fish taken by species, location and date of the catch and such other information as the department may require for management or conservation purposes;

(6) personal consumption fishing reports must be completed on forms provided by the department and submitted to the department office from which the permit was issued at a time specified by the department for each particular area and fishery;

(7) if applicable, the total annual possession limit for the permittee must be entered on each permit by the department representative issuing the permit; if applicable the department representative issuing the permit shall require from an applicant documented proof of residency, income, or other criteria required by regulation, or in the absence of such documentation, a signed affidavit setting forth duration of residency, income, or other criteria required by regulation, to determine the applicable annual possession limit and residency of the applicant;

(c) If the return of catch information necessary for management and conservation purposes is required by a personal consumption fishing permit, a permittee who fails to comply with such reporting requirements is ineligible to receive a personal consumption permit for that activity during the following calendar year, unless the permit applicant demonstrates to the department that failure to report was due to loss in the mail, accident, sickness, or other unavoidable circumstances.

5 AAC 41.020. DEFINITIONS. In this chapter

(1) "personal consumption fishing" means the taking, attempting to take or possession of finfish, shellfish, or aquatic plants by an individual for consumption as food by that individual or his immediate family;

(2) "dip net" means a bag-shaped net suspended from a frame, which may not exceed five feet in any outside dimension, is attached to a single handle and is operated by hand.

ARTICLE 12.
PRINCE WILLIAM SOUND AREA.

5 AAC 41.600. DESCRIPTION OF THE PRINCE WILLIAM SOUND AREA. The Prince William Sound area includes all waters of Alaska between the longitude of Cape Fairfield and the longitude of Cape Suckling.

5 AAC 41.605. DESCRIPTION OF DISTRICTS AND SUBDISTRICTS. (a) The Upper Copper River district consists of all waters of the main Copper River from the confluence of the Slana River downstream to an east-west line crossing the Copper River at the confluence of the unnamed stream located approximately 1 /4 mile below the U.S.G.S. gauging cable across the Copper River, as designated by Alaska Department of Fish and Game regulatory markers;

(b) the Chitina subdistrict consists of all waters of the main Copper River from the downstream edge of the Chitina-McCarthy Road Bridge downstream to an east-west line crossing the Copper River at the confluence of the unnamed stream located approximately 1-1/4 mile below the U.S.G.S. gauging cable across the Copper River, as designated by the Alaska Department of Fish and Game regulatory markers.

5 AAC 41.610. FISHING SEASONS. In the Chitina subdistrict of the Upper Copper River district, salmon may only be taken from June 1 through September 30.

5 AAC 41.620. LAWFUL GEAR AND GEAR SPECIFICATIONS. Salmon may be taken only by dip net.

5 AAC 41.625. WATERS CLOSED TO PERSONAL CONSUMPTION FISHING. All waters of the Prince William Sound area, except for those in the Chitina subdistrict are closed to personal consumption fishing.

5 AAC 41.630. PERSONAL CONSUMPTION FISHING PERMITS. Salmon may only be taken under the authority of a personal consumption fishing permit. Only one permit per year will be issued to an individual or household.

5 AAC 41.64[illegible]. PERSONAL CONSUMPTION BAG AND POSSESSION LIMITS. The total annual possession limit for each permit is as follows:

(1) 15 salmon for a permit issued to an individual not a member of a household under (2) of this section;

(2) 30 salmon for a permit issued to the head of a houshold.

Justification: This is an alternative to existing regulations in response to a request by the Board of Fisheries at the March 1979 meeting.

Proposed by: Staff on request of the Board of Fisheries.

Commercial Fishermen of Cook's Inlet (216)

Action Taken:

ALASKA BOARD OF FISHERIES

COPPER RIVER SALMON MANAGEMENT PLAN

I. INTRODUCTION: The purpose of this plan is to insure an adequate escapement of salmon into the Copper River system and to provide management guidelines for equitable allocation of the harvestable resource.

II. COPPER RIVER SALMON RUN

A. This policy governs only those salmon which pass the department sonar counters located at the Million Dollar Bridge.

B. The Commercial Fisheries Division shall manage the Copper River commercial fishery to attain a total escapement into the Copper River of 350,000 salmon to insure that adequate escapement reach the spawning gounds and provide for a sport and subsistence harvest. The desired weekly escapements are shown in Table 1.

C. The Commercial Fisheries Division shall manage the subsistence fishery on the Copper River consistent with AS 16.05.251(b) and to insure adequate escapement by restricting the subsistence harvest to the following levels (Table 2) based on escapement as determined by sonar evaluations and any other appropriate means.

D. The department shall prepare application forms to obtain information necessary to determine what persons are qualified to receive subsistence permits described in Section III.

III. PERMITTING

A. Subsistence Permits: Permits may be issued to persons who show the greatest level of need for subsistence salmon on the basis of:

--- Customary and direct dependence upon the resource as the mainstay of one's livelihood,
--- Local residency, and
--- Availability of alternative resources.

1. Class A Permit: A Class A Permit may be issued to any person who satisfies all of the following criteria:

a. Dependency

i. 55 years of age or older

ii. Annual income of no more than the amount identified in 5 AAC 01.630(b) (2) (B) and as

the income criteria regulation may be from time to time amended.

iii. Use of a fishwheel to catch fish in the Copper River in ten of the last twelve years.

c. Residency

i. Proximity to the resource as determined by Copper River residency as follows:

A Copper River Basin resident is an Alaska resident (as defined in Title 16) who for the preceding twelve consecutive months has maintained his place of residence and voting residence (if applicable) in the area described below and who does not maintain a permanent residence or voting residence elsewhere. The area includes Game Management Units 11, 13-A, 13-B, 13-C, 13-D as described in 5 AAC 90.010 and the Jacksina River drainage to its confluence with the Nabesna River.

2. Class B Permit: A Class B Permit may be issued to any person who is a Copper River Basin resident as defined above.

3. Class C Permit: A Class C Permit may be issued to any state resident who applies to and is determined by the Commissioner of Fish and Game or his delegate as a person who satisfies all of the following criteria:

a. Household size of three persons or more,

b. Household having one or more persons over 55 years old,

c. No more than one full-time employed person in the household,

d. Participation in the fishery for eight of the last ten years, and

e. Annual household income not to exceed $10,000.

4. Class D Permit: A Class D Permit may be issued to any resident of the State of Alaska as defined in Title 16.

B. Permitting

1. When escapements of less than 300,000 are projected, the face value (number of fish allowed per permit) of permits as described in 5 AAC 01.630 may be reduced to insure that all permittees would be allowed to fish.

2. When escapement projections improve significantly during the season, face values of permits may be increased up to

full value as described in 5 AAC 01.630.

3. Permits must be returned no later than October 31 or a permit for the following year may be denied as provided in 5 AAC 01.015(c).

4. During closed fishing periods, the Chitina permit issuing station may be closed or operated at reduced hours to reduce manpower costs.

C. Delayed Season Opening

When sonar counts prior to June 1 indicate less than 250,000 projected escapement, the subsistence season opening may be delayed up to ten days to allow more accurate assessment of run strength and confirm appropriate allowable harvest allocations.

IV. COPPER RIVER SUBSISTENCE CHINOOK SALMON FISHERY:

When the Copper River dip net subsistence fishery is closed to the taking of sockeye salmon, it may be open to the taking of chinook salmon between June 1 through July 10, up to seven days per week.

V. COPPER RIVER SUBSISTENCE COHO SALMON FISHERY:

If the Copper River subsistence fishery is closed or restricted because of an inadequate escapement of sockeye and chinook salmon, the fishery may be reopened September 1 for the taking of coho salmon, which constitute the majority of the salmon at that time. By September 1, the escapement of sockeye and chinook salmon has essentially passed through the area. Also by this time, the subsistence fishery effort has decreased and constitutes less than five percent of the total effort on the fishery.

VI. UPPER COPPER RIVER SOCKEYE SALMON SPORT FISHERY:

When projected sockeye salmon escapements to the upper Copper River fall below 250,0000, sport fishing for sockeye salmon shall be closed.

VII. COPPER RIVER CHINOOK SALMON COMMERCIAL FISHERY:

During years when commercial sockeye salmon fishery closures are in effect, limited chinook salmon harvests may be allowed under the following conditions:

A. The incidental catch of sockeye salmon may not exceed ten percent of chinook salmon weekly harvest quotas when less than 250,000 sockeye salmon escapement is projected. When 250-350,000 sockeye salmon escapement is projected, the incidental catch may not exceed twenty percent.

B. Maximum drift gill net per vessel shall be 150 fathoms of 8 ¼-inch or larger mesh.

C. Fishing periods may not exceed six hours in length and fishing time will be set to avoid periods of maximized catch potential.

There will be two fishing periods per week unless more than 80 percent of the week's quota is taken during the first period.

D. When weekly quotas are not obtained, no more than ten percent of that quota may be taken in the following week.

E. 1. Weekly quotas for 1980 are as follows:

Week*	Harvest Allocation
21	2,000
22	4,000
23	3,000
24	1,000

2. Adjustments of up to one week may be made in the overall harvest allocation timing to compensate for seasonal variations due to early or late spring breakup or other environmental conditions.

* Statistical weeks are in numerical sequence beginning with week number one (1), which is the week ending with the first Saturday of the calendar year.

ADOPTED: January 11, 1980
Anchorage, Alaska

VOTE: 6/0

Table 1. Expected upriver escapement by week based upon percent of average weekly sockeye salmon catch from the Copper River District to produce 350,000 desired escapement and 250,000 minimum escapement.**

SUMMARY OUTLINE OF TESTIMONY ON HB 544

Prepared by
Gregory F. Cook, Executive Director
Boards of Fisheries and Game
Alaska Department of Fish and Game

Presented to the House Resources Committee
January 22, 1980

HB 544 SEEKS TO PREVENT THE DEPARTMENT AND THE BOARD OF FISHERIES FROM MAKING NEW CATEGORIES OF FISHERIES, SUCH AS "PERSONAL CONSUMPTION" FISHERIES. IN CONTRAST TO THE BOARD OF FISHERIES, NO SUCH AUTHORITY IS CURRENTLY PROVIDED THE DEPARTMENT UNDER TITLE 16. THE ISSUE MAY NOW ACTUALLY BE MOOT SINCE THE BOARD OF FISHERIES REJECTED A PROPOSED REGULATION TO CREATE SUCH A PERSONAL CONSUMPTION CATEGORY AT THEIR DECEMBER, 1979, PUBLIC MEETING. NONETHELESS, YOU MAY FEEL THAT SOME ACTION IS STILL APPROPRIATE. TO ASSIST YOU, I HAVE SOME BRIEF BACKGROUND INFORMATION TO PRESENT.

FIRST, THE COPPER RIVER SUBSISTENCE FISHERY--BOTH FISHWHEEL AND DIPNET--WILL BE MANAGED IN 1980 ACCORDING TO THE COPPER RIVER MANAGEMENT PLAN. (COPIES OF THAT PLAN ARE AVAILABLE.) THE PLAN PROVIDES FOR ALLOCATION OF SOCKEYE SALMON AMONG DIFFERENT ALASKANS BASED ON A VARIETY OF CRITERA. THOSE CRITERIA WERE SELECTED BASED ON THE MANDATES OF THE "SUBSISTENCE LAW" (CHAPTER 151, SLA 1978), AND EMPHASIZE:

1. CUSTOMARY AND TRADITIONAL DEPENDENCE
2. AVAILABILITY OF ALTERNATIVE RESOURCES
3. LOCAL RESIDENCY

NEXT IT SHOULD BE EMPHASIZED THAT THE LAW MANDATES A PRIORITY FOR ALL SUBSISTENCE USES. THOSE USES TAKE PRIORITY OVER ALL COMMERCIAL AND ALL SPORT USES.

FINALLY, THE BOARD OF FISHERIES IS CONCERNED THAT THE LEVEL OF SUBSISTENCE USE SHOULD, IN MOST INSTANCES, BE KEPT WITHIN CUSTOMARY AND TRADITIONAL LEVELS OF USE. FOR EXAMPLE, IT HAS COME TO THE BOARD'S ATTENTION THAT AN INCREASING NUMBER OF FISHERMEN ARE NOW DRIVING TO RAMPART TO FISH THE YUKON WITH GILLNETS AND PARTAKE OF THE SUBSISTENCE PRIORITY. AN UNLIMITED EXPANSION OF SUBSISTENCE USE IN THIS AREA, AS WELL AS OTHERS, COULD, IN SOME INSTANCES, CAUSE A CLOSURE OF COMMERCIAL AND/OR SPORT FISHERIES. THIS MAY OR MAY NOT BE IN THE PUBLIC'S BEST INTERESTS.

A FUNDAMENTAL QUESTION WHICH YOU MAY WISH TO CONSIDER IN EVALUATING HB 544 IS HOW BROAD DO YOU WISH THE SUBSISTENCE PRIORITY TO BE? AT THE PRESENT TIME, THE BOARD OF FISHERIES MAY CLASSIFY NEW, NON-CUSTOMARY, NON-TRADITIONAL USES AS SOMETHING DIFFERENT FROM SUBSISTENCE. THIS REMOVES THOSE NON-TRADITIONAL ACTIVITIES FROM THE SUBSISTENCE PRIORITY. I SUGGEST THAT YOU LEAVE THIS AUTHORITY TO CLASSIFY WITH THE BOARD OF FISHERIES.

TO EXPRESS YOUR CONCERN FOR THIS ISSUE OF CLASSIFICATION, YOU MAY WISH TO CHANGE THE FORM ONLY OF THIS BILL. THE NEW FORM COULD BE A HOUSE JOINT RESOLUTION. THE RESOLUTION COULD REQUEST PRIOR CONSULTATION WITH THE LEGISLATURE BEFORE THE BOARD MAKES A DECISION TO RECLASSIFY A FISHERY FROM SUBSISTENCE TO ANOTHER CATEGORY. IN THIS MANNER, YOU WOULD LEAVE THE BOARD OF FISHERIES FREEDOM TO CONTINUE TO MANAGE THE RESOURCE, YET STILL MAKE VERY CLEAR YOUR CONCERNS.

THE BOARD OPPOSES PASSAGE OF HB 544. THE BOARD FEELS IT IS IMPORTANT TO PREVENT NEW, NON-TRADITIONAL USES OF FISHERY RESOURCES FROM RESTING UNDER THE BROAD UMBRELLA OF SUBSISTENCE. THE ABILITY TO CREATE NEW CATEGORIES OF FISHERIES IS AN IMPORTANT TOOL IN PREVENTING THE UNLIMITED EXPANSION OF NEW, NON-TRADITIONAL "SUBSISTENCE" FISHERIES.

THANK YOU.

HB 566

UNIVERSITY OF ALASKA, FAIRBANKS
Fairbanks, Alaska 99701
INSTITUTE OF ARCTIC BIOLOGY

November 6, 1979

Representative H. Pappy Moss
P. O. Box 182
Delta, Alaska 99737

Dear Pappy,

I was pleased to have had the opportunity of talking to you in Nome last week but regret we did not have time to discuss the reindeer industry or the Cantwell Reindeer Research Station. Three items are of considerable importance and I will describe them briefly at this time. Hopefully, you will want further information and I will be more than pleased to meet with you at your convenience.

I have a critical need for feed for the research reindeer at Cantwell. In fact, if feed does not become available very soon, I will have to destroy the herd this winter. This situation has come about because of rising costs and falling financial support for research. You mentioned the wisdom of tying the reindeer project into the Delta agricultural project. I have the reindeer, facilities and assistance needed for the required experimental feeding programs. Moreover, these reindeer are not now on a specific research project. Thus, if the State or a farmers coop can donate the feeds needed for the research, I will be pleased to initiate it immediately.

Secondly, the Cantwell Reindeer Station was built and supported almost entirely by federal grants and contracts. The buildings are all from military surplus and most of the construction and maintenance has been done on weekends, holidays, etc. by friends in Cantwell, my graduate students and me. I have now visited nearly every reindeer research station in Scandanavia and in Siberia and I can state without qualification that we in Alaska have the best equipped and most functional station for reindeer research in the world.

The funds that supported this station came from an Atomic Energy Commission Contract that began in 1967 and terminated in 1977. Since that time I have kept the station "open" through small grants from the Bureau of Indian Affiars and the Reindeer Herders Association in Nome (really BIA funds!).

Continued...

UNIVERSITY OF ALASKA
INSTITUTE OF ARCTIC BIOLOGY

I am most embarrassed by the fact that the station manager, Mr. Danny Berberick, receives no salary for his efforts in keeping the station "presentable", for feeding the reindeer, for conducting tours for the several thousand tourists that visit the station each summer, and for any and all maintenance jobs that attend such a research facility. His only compensation is the privelege of living in a military surplus house trailer - he even has to pay for his own utilities! In brief, there should be some means for state support of this facility and the reindeer, at least until we can build a more elaborate and extensive station on the Seward Peninsula. I will enclose a "bare bones" budget for your consideration.

Lastly, I have been asked and encouraged to submit a supplement to the University of Alaska, Fairbanks budget request to establish research and teaching programs on behalf of the reindeer industry. I will deliver this proposal to Representative Brian Rogers this week. I am also getting letters in support of the proposal from the Reindeer Herders Association, the Nome Chamber of Commerce, village and regional native corporations, and in addition, resolutions passed by the Rural Area Development Council and the Reindeer Sub-Committee of the Alaska Cooperative Land Managers Task Force. I sincerely hope you will give this program your enthusiastic support and that you will encourage your fellow representatives on the agricultural and finance committees to do the same.

Respectfully,

JACK R. LUICK
Professor

PLEASE REPLY BY e-mail

BUDGETS FOR CANTWELL RESEARCH STATION

I. "Bare Bones Budget" to Assure Our Research Potential is Maintained:

Salaries	
Station Caretaker @ 25% time	$ 5,000
Staff Benefits	1,000
Reindeer Feed	
12 Reindeer @ $300/Yr./Reindeer	3,600
Misc.-Operating Costs and Repairs	2,400
	$12,000/Yr.

II. "Minimal Operating Budget":

This budget will pay the costs of maintaining and operating the Cantwell Station and in addition, will provide a decent salary for the station caretaker.

Salaries	
Station Caretaker @ 50% fulltime	$10,000
Summer Help (Improvements & Repairs)	6,000
Staff Benefits	2,000
Reindeer Feed	
12 Reindeer @ $300/Yr./Reindeer	3,600
Utilities, Telephone, Fuels, Postage, etc.	2,400
Supplies and Miscellaneous Expenses	3,000
Travel	
(Intra-state, i.e. delivery of Supplies, Freight)	1,000
Equipment	
(e.g., To Replace Existing Equipment)	2,000
	$30,000

Mr. Danny Karmun
c/o Reindeer Herders Association
Kawerak, Inc.
P. O. Box 505
Nome, AK 99762

Dear Danny,

In reviewing budgets that make funds available to me for reindeer research and for providing other assistance to the Reindeer Herders Association, I note that the situation is grim. Indeed I should advise you now that it is most unlikely that I will be able to participate in the grazing seminar in Anchorage, the December work session in Kotzebue and the workshop in Candle in February - moreover, unless something opens up soon, I will have to destroy the small (12 reindeer) research herd at Cantwell as there are no funds to buy feed for them.

On the other hand, I hope to have sufficient funds to continue the research programs that center on the antler industry and on possible adverse handling effects of reindeer in June in order to remove their antlers while in velvet. I think these areas are of such very great importance that all funds available to me should be used to assure a successful completion of the research.

I regret that I will be unable to participate in your seminars and workshops, but know that others can provide all the information and guidance you presumably need as you strive to develop new programs. I refer especially to Dave Scott, Bob Pegau, Dr. Dieterich, Mike Harker, and Dave Swanson.

Sincerely yours,

JACK R. LUICK

Dr Jack F Luick
University of Alaska
Institute of Arctic Biology
Fairbanks, AK. 99701

Dear Jack:

Received your letter today regarding the Cantwell research station and want you to know that the Reindeer Herders Association enthusiastically supports continued funding of this station until a research center can be developed on the Seward Peninsula.

The need for continued applied research as well as the need for basic research are utmost on our list of priorities. Any discontinuation of such program would indeed be devastating to the growth of the reindeer industry.

We support your actions and wish to heartily thank you and your associates for your efforts in working with us to develop a successful reindeer industry.

Again, we recognize the importance of continious funding and hope to work closely with you, the House Agriculture Committee and the State Legislature to ensure the continuation of these studies.

Sincerely,

The Reindeer Herders Association

Representative Pat Carney
Agriculture Committee
Pouch V
Juneau, Alaska 99811

Dear Representative Carney:

Senator Ferguson requested that we develop a scaled-down version of the Seward Peninsula Reindeer Research and Extension Station for inclusion in the Senate's agricultural package. Enclosed is a copy of the proposal that was developed by Sig Restad from the Agriculture Experiment Station, Jack Luick from the University of Alaska, Linda Zummer and myself.

The funding requested in the proposal would allow us to take the initial step towards developing a first class reindeer research station. The station can then continue to grow along with the reindeer industry.

If you have any questions about the proposal, please let me know.

Thanks for your continued interest in programs for the reindeer industry.

Sincerely,

Lynn Zeltlin Hale
Fisheries Development Specialist

SEWARD PENINSULA REINDEER RESEARCH AND EXTENSION STATION

Introduction

Domestic reindeer were first introduced to Alaska in the late 1800's to provide a reliable food supply for the people of Northwest Alaska. While the size and success of the State's reindeer industry has fluctuated over the last 90 years, the need for a dependable meat supply in this part of Alaska remains. Currently, there are about 26,000 head of reindeer in Alaska; most are located on the Seward Peninsula. Recent range studies by USDA's Soil Conservation Service indicate that the Seward Peninsula's carrying capacity is much greater, about 250,000 animals. This number of animals could provide a sustained yield of close to 3 million pounds of meat annually. Reindeer meat is excellent quality and is preferred by Northwest Alaskan residents. In addition, the reindeer industry through the direct employment of herders and the sale of antlers makes a substantial contribution to this region's economy - an area where other economic opportunities are limited.

While the reindeer industry has great promise and can make a significant contribution to Alaska's agricultural development, its growth has been impeded both by a lack of knowledge about reindeer as a livestock animal and the application of already existing knowledge to Alaska's reindeer industry.

The objective of this proposal is to develop a reindeer research and extension station on the Seward Peninsula which would specifically address the research and extension needs of the reindeer industry. The need for such a reindeer station on the Seward Peninsula has been recognized by reindeer herders, scientists and government agencies for a number of years. All other northern latitude nations with reindeer populations have invested much time and money in reindeer research, but Alaska has done very little.

A Seward Peninsula Research and Extension Station would serve as a focal point for educators, researchers, extension agents and the reindeer industry. Applied research, disease control and animal husbandry programs would be the station's initial focus. Extension personnel would analyze and transfer the results of research and techniques developed both at the station and by other nations to the herders. The station also would provide a location for training programs and workshops.

Station Development

The Seward Peninsula Reindeer Research Station will be developed in a series of steps. It is recommended that a Station Advisory Committee composed of one representative each of the Reindeer Herders' Association; Division of Agriculture, Department of Natural Resources; the University of Alaska; and the U. S. Department of Agriculture oversee the planning and operation of the Station.

Until station facilities are constructed, research and administrative staff will work out of the Nome reindeer slaughterhouse. This use of the Nome slaughterhouse makes maximum use of existing facilities and provides a base of operation on the Seward Peninsula while the station's other facilities are being constructed. Initial facilities at the station site will consist of fenced pastures, corrals, one multipurpose building, a bunkhouse, and an animal barn and storage shed. As the station grows, additional facilities can be added.

This facility will complement existing research facilities and teaching programs at the University of Alaska by providing a Seward Peninsula field station.

REINDEER RESEARCH

INSTITUTE OF ARCTIC BIOLOGY

University of Alaska

Fairbanks, Alaska

FOREWORD

This brochure is presented by the Institute of Arctic Biology chiefly for the benefit of agencies and persons concerned with the development of Alaska's reindeer industry. Additionally, information is provided for scientists and others interested in conducting scientific investigations with reindeer and caribou at the Institute of Arctic Biology and its various Field Stations. Attention is focused on the research and training potential of the Institute's Cantwell Reindeer Research Station, a facility developed in 1967/68 under contract with the U.S. Atomic Energy Commission primarily for studies on the passage of fallout radionuclides through arctic and subarctic food chains. In 1973 a grant from the National Institutes of Health enabled us to upgrade the Station to the extent that we can now undertake research activities in direct support of the reindeer industry. As an added benefit, the village of Cantwell is located in the heart of the Alaska Range, adjacent to Mt. McKinley National Park and far from the disturbing influences of urban environments – circumstances that make the Station ideally suited for educational activities such as Reindeer Workshops, Apprenticeship Programs, Conferences, Seminars, etc. The Station also offers living accommodations for students, staff and families as well as an extensive library of scientific reports, review articles, bibliographies and reference volumes from the world's literature on reindeer biology and husbandry.

– J. R. LUICK

ADMINISTRATION

The Cantwell Reindeer Research Station is administered by the University of Alaska through its Institute of Arctic Biology. Research and teaching activities are conducted under grants and contracts awarded by federal and state agencies in furtherance of their proprietory interests, goals and missions. Inquiries for further information regarding use of the Station should be addressed as follows:

Professor Jack R. Luick
Institute of Arctic Biology
University of Alaska
Fairbanks, Alaska 99701, U.S.A.
Telephone: AC907/479-7657

SCIENTIFIC STAFF

A Task Force of scientists and educators from the University of Alaska [Institute of Arctic Biology (IAB), Alaska Cooperative Wildlife Research Unit (ACWRU), Institute of Agricultural Sciences (IAS) and Cooperative Extension Service (CES)], supported by colleagues in the U.S. Bureau of Land Management (BLM), U.S. Bureau of Indian Affairs (BIA) and Alaska Department of Fish and Game (ADFG), has been organized to provide research and educational programs on behalf of the reindeer industry. This Task Force is staffed with specialists representing several areas that concern reindeer herders and several are already working on problems that will be confronting the industry shortly, e.g. transportation corridors across reindeer ranges, chemical pollution of rangelands and rivers, oil and gas pipelines, multiple use of grazing lands, etc.

TABLE OF ORGANIZATION

	Name	Affiliation	Area of Interest
A	University Staff that would contribute to research activities		
	Luick, Jack R	IAB	Director of Reindeer Research and Educational Programs, Reindeer Husbandry
	Dieterich, Robert A	IAB	Co Director, Reindeer Diseases and Veterinary Medicine
	McKendrick, Jay D	IAS	Range Vegetation
	Scarborough, William B	CES	Marketing and Extension
	Thomas, Wayne C	IAS	Economics and Business Management
	White, Robert G	IAB	Reindeer Nutrition
B.	Collaborators willing to assist in research and educational programs as needed		
	Cameron, Raymond D.	ADFG	Reindeer and Caribou Biology/Ecology
	Chapin, F. Stuart	IAB	Vegetation Research
	Holleman, Dan F	IAB	Communication Systems
	Klein, David R.	ACWRU	Range Ecology and Wildlife Management
	Lent, Peter C.	ACWRU	Reindeer Behavior and Predator Control
	Mitchell, William W.	IAS	Agronomics
	Pegau, Robert E.	ADFG	Range Management
	Scott, David	BLM	Land Resources and Management

APPLIED RESEARCH AND EDUCATION

Examples of several educational and research programs are listed to reflect the potential of the University of Alaska through its Cantwell Reindeer Research Station to provide direct and prompt assistance to the reindeer industry. The extent to which these areas and/or programs are activated depends for the most part only upon the level of funding received from concerned agencies.

Short Term Research Programs that could be initiated with minimal delay, results obtained within 1 - 3 years after activation, for example:

Management and marketing problems associated with the development of a reindeer cow/calf operation.

Develop techniques for processing and marketing reindeer antlers by the Reindeer Herders Association for sale to foreign markets.

Study the economic advantages, if any, of producing reindeer steers for market (studies with beef cattle indicate that reindeer herders may receive greater economic return from marketing of reindeer bull carcasses).

Course studies on communication systems for locating reindeer herds and for communication networks between home base, reindeer herds, snow travelers, aircraft, etc.

Develop low cost, semi permanent, emergency shelters for herders (transportable, relatively indestructable, etc. such as geodesic domes, Yurts, etc.).

Develop and test various methods of fencing rangelands to control the movement of reindeer (and caribou).

Establish dog kennels to breed and train reindeer herding dogs.

Continuing Programs in applied reindeer husbandry research (could be activated in relatively short time but need support for several years to yield maximum benefits to reindeer herders).

Predator control (including non-lethal methods of predator control to satisfy the concern of naturalists, ecologists, etc.).

Warble fly research.

By-product research (hides, blood, ground meat, bone, etc.).

Import and maintain herds of special reindeer for breeding purposes, e.g. Hargin strains from Siberia, Pearyi reindeer from Spitzbergen, woodland caribou from British Columbia.

Disease research, especially toward the control and/or elimination of brucellosis.

Range management programs and rotational grazing schemes.

Revegetation studies and "cultivated" crop production.

Development of markets for reindeer meat and meat by-products.

Emergency feeds and feeding programs to prevent starvation during inclement weather.

Educational and Instructional Programs

Reindeer workshops for novice and/or experienced herders.

Apprenticeship program (instruction and practical experience in reindeer herding to prepare prospective herders for advanced training with experienced herders on the Seward Peninsula).

Specialized courses such as:

- Meat cutting and processing.
- Antler processing for foreign markets.
- Diseases of reindeer.
- Breeding and selection programs for herd improvement.
- Business management, economics and bookkeeping.

Conferences and seminars for administrators, legislators and/or supervisors.

Reindeer Herder Newsletter (news and research reports).

Paraveterinary training.

Apprenticeship training for herders.

CANTWELL REINDEER RESEARCH STATION

The Cantwell Reindeer Research Station was established during the spring of 1968 to fulfill the need for a research area where studies with reindeer could be conducted under natural grazing conditions. Located along the east boundary of Mt. McKinley National Park (63°23' N, 148°56' W) at Mile Post 319.5, Alaska Railroad, the Cantwell-Broad Pass area has long been grazed by indigenous caribou and moose, and from 1922 to 1928 was the center of a U.S. Government reindeer herding operation.

The Station is located near the junction of the Denali and McKinley highways, approximately half way between Fairbanks and Anchorage. The two sections of land (520 hectares) assigned to the University by the U.S. Department of the Interior, Bureau of Land Management, are approximately 1/3 mile from the village of Cantwell and consist, for the most part, of a relatively treeless hill with discrete areas of typical taiga vegetation. Situated approximately at the top of Broad Pass, elevation 2,250', the area is drained to the north by Cantwell Creek and the Jack River, both tributaries of the Nenana River. Drainage to the south leads to the middle fork of the Chulitna River. The average annual snowfall is 113" (record snowfall 190" in 1946-47) and the average temperature during the coldest month, January, is 2.1°F, while the average high temperature in July, the warmest month, is 52°F (record low -45°F occurred in February 1947 while the record high 89°F was recorded in June 1961).

To date, 28 hectares of this land have been subdivided into 8 grazing paddocks. Lane fences from these paddocks lead to the reindeer handling area, which contains working and cutting corrals, a field laboratory building, and an animal research barn. These buildings provide shelter for the experimenters during inclement weather, laboratory bench space, equipment and supplies for initial treatment and/or preservation of biological samples, and reindeer holding pens, metabolism stalls, etc. Electrical power is supplied by a 5 kw gasoline generator adjacent to the field laboratory building.

The main Station in Cantwell consists of three 10' x 60' house trailers which provide living accommodations for scientists, students and technicians. There is also a 20' x 80' research laboratory, library and study area, an experimental Greenhouse and a Conference Center (under construction). Communication between researchers in the field and at the Station is made possible through a radio communication network that includes aircraft, portable units (on foot, truck, snow machine, etc.) and base station.

Although research efforts have emphasized nutritional and environmental physiology of reindeer, the Station is being used increasingly by wildlife behaviorists, plant and animal ecologists, lichenologists, microbiologists, etc. Because of its location in the heart of the Alaska Range with easy access to both taiga and mountain tundra vegetation and wildlife, the facility has attracted visiting scientists from other states and abroad as well as researchers from within Alaska. Indeed, in so far as is known, the Cantwell Reindeer Research Station is the only facility in the world devoted to studies on the fundamental biology of *Rangifer tarandus*, the reindeer and caribou. In 1972, scientists associated with the Station sponsored the First International Reindeer/Caribou Symposium, a conference that attracted more than 150 reindeer scientists from the several circumpolar nations.

The Station is sponsored by the Institute of Arctic Biology, University of Alaska, the Atomic Energy Commission, and the Cantwell Store (Herman Cotter and Robert Smith, Props.).

BUILDINGS AND LIVING QUARTERS

Office and Living Quarter Buildings (12' x 60'); all utilities and completely furnished.

Staff Headquarters and Living Quarter Buildings (12' x 20'); all utilities and completely furnished.

Bunkhouse (12' x 60'); furnished for six (6) men.

Library and Office (one end of bunkhouse building); library contains a complete collection of research reports, text books and reference books pertinent to reindeer husbandry. Research reports on reindeer production are obtained weekly through a world wide literature searching service (ASCA). Copies of these reports are obtained through arrangement with the University of Alaska library.

Mechanical, Electrical and Plumbing Shop (approximately 250 sq. feet).

Research Laboratory and Veterinary Health Care Building (20' x 80',.

Field Research Laboratory (10' x 20').

Field Research Barn (10' x 20').

Feed Storage Shed (10' x 20').

Corrals and Animal Feeding Facility

Experimental Greenhouse.

Conference Center (under construction); this building will be used for workshops, lectures and demonstrations, special briefing sessions, conferences and seminars at various levels, etc. It will also provide office and study areas as well as the library and reference collection.

LABORATORIES AND RESEARCH FACILITIES

Nutrition Research Laboratory; fully equipped.

Meats Research Laboratory; basic equipment including meat saw, meat grinder and large whole carcass grinder on order other equipment undoubtably will be needed to complete this area.

Veterinary Research Facility including pathology and diagnostic laboratory, surgery, autopsy and post-operative care. This facility is scheduled for completion summer of 1975.

Field Research Barn is available in the fenced grazing area and can be used to supplement research activities in the new research laboratory building. Additional reindeer research facilities are available at the Institute of Arctic Biology where specialized apparatus such as controlled environment chambers, a whole body ^{60}Co irradiator "Bossy Nova", respiration apparatus, etc. are available for intensive physiological and nutritional research studies.

UTILITIES AT THE RESEARCH STATION

Propane, fuel oil, water, telephone, CB radio communication network, electricity (220 volt/3 phase) and sewage disposal system.

VEHICLES

Dodge Crew Cab Truck, two wheel drive.

Dodge Crew Cab Truck, four wheel drive.

Dump Truck (on order).

Dozer with bucket and/or blade (on order).

Two "Sno Tracs" (all terrain vehicles).

Miscellaneous Trailers (water, flat bed, cargo, etc.).

SUPPORTIVE FACILITIES AND EQUIPMENT AT CANTWELL

Boom truck.*

Dozer with Blade.*

Back hoe and bucket loader.*

Grader.*

Restaurant.

Store.

Laundry.

Living quarters.

Garage.

Available storage.

Railroad off loading facilities.

Post Office.

Alaska Department of Fish and Game, Cantwell Station.

Alaska State Troopers, Cantwell Station.

Alaska Railroad; passenger and freight service.

Fairbanks Air Service; passenger and freight service.

* Available for hire at minimal rates.

This figure shows the bunkhouse, greenhouse and the foundation for a log Conference Center which will be used for instructional purposes, seminars, and will also house the reindeer library.

The main office building at the Station Headquarters also functions as a communications center and kitchen.

Reindeer library for use by researchers at the Cantwell Station contains an up-to-date collection of research reports from Reindeer Stations in the USSR, Scandinavia, Canada and Alaska. The world's literature is searched weekly through a computer-programmed searching service and copies of pertinent reports are obtained for our reindeer libraries at Cantwell and at the Institute of Arctic Biology.

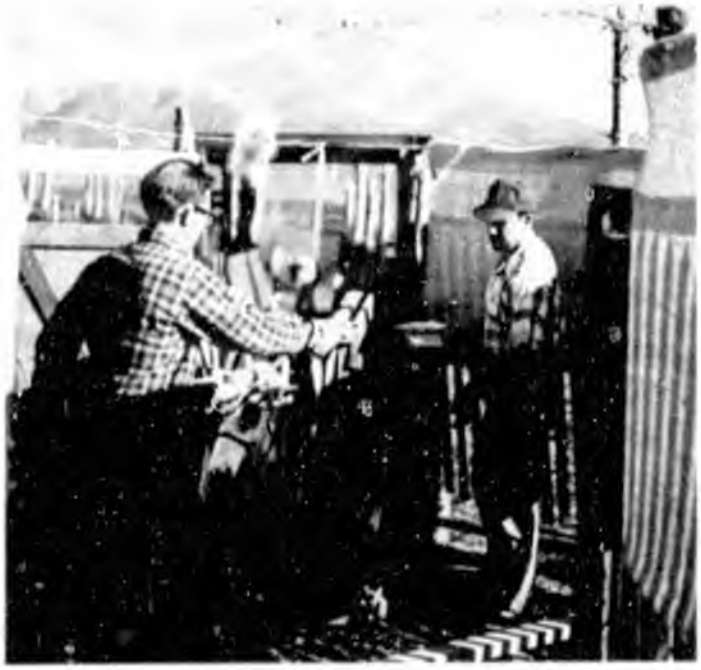
Reindeer Research Laboratory also includes areas for surgery and pathology, autopsy, meats research, metabolism and physiology, and a small animal vivarium.

An aerial photograph of the research area and adjacent rangelands. (Panorama Mountain appears in the background.)

Cantwell resident Frank Second Chief is shown feeding the reindeer during winter, 1970.

This photograph shows Cantwell resident Mike Pedro operating a steam jenny to thaw holes in the permafrost for fence posts.

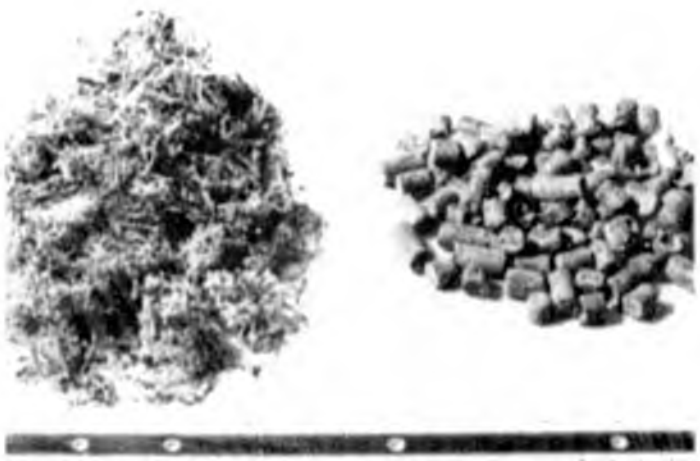
Food storage building (right) and "self-feeder" (left) within the main grazing paddock.



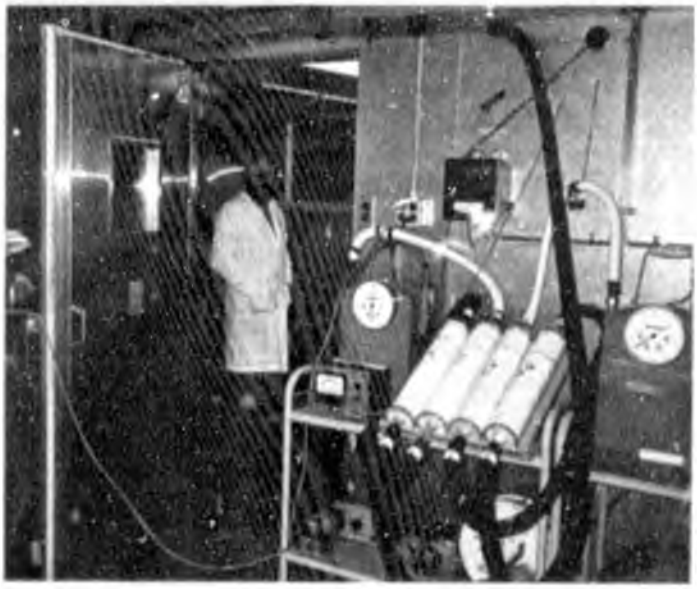
Radioecologists F. W. Whicker (left) and D. F. Holleman are shown weighing a young male reindeer in the Cantwell corral.

Cantwell resident Bud Carlson is shown at the field laboratory building. Strong winter winds frequently cause severe drifting and compacting of snow, especially in the immediate vicinity of corrals and research buildings.

All-terrain vehicles "Sno-Tracs" and pick-up trucks are available for researchers working in the field.

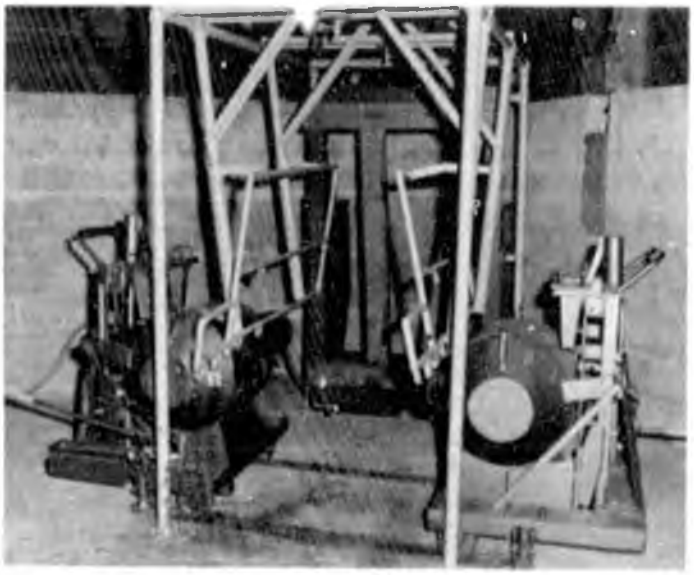


This photograph shows hand-picked lichens (left) and lichens that have been made into pellets (right) for use during nutrition experiments.



This photograph shows J. R. Luick standing inside the controlled environment chamber at the Institute of Arctic Biology where two reindeer are being maintained for studies on the effects of environment on body composition.

J. R. Luick (left) and D. F. Holleman (right) are shown discussing the liquid scintillation counter that is used to measure radioactive isotopes in various biological samples.



Cobalt-60 (^{60}Co) irradiator at the Institute of Arctic Biology which is used for studying the effects of ionizing radiation on body function.

The photograph shows the portable scintillation counter being used to measure the radioisotope body burden of male reindeer "Pierre".

Visiting Norwegian scientist Dr. Hans Staaland collects a sample of saliva from an esophogeal fistulated reindeer. This fistula also enables researchers to collect samples of food actually selected by the reindeer while grazing on rangelands.

J. R. Luick measuring the depth of the rump fat pad (in this case, 3") that was deposited on a well nourished male caribou during the brief summer period of fattening.

Dr. R. G. White observes an experimental reindeer that is fitted with a respiration mask for studies on its energy requirement during various types of activity.

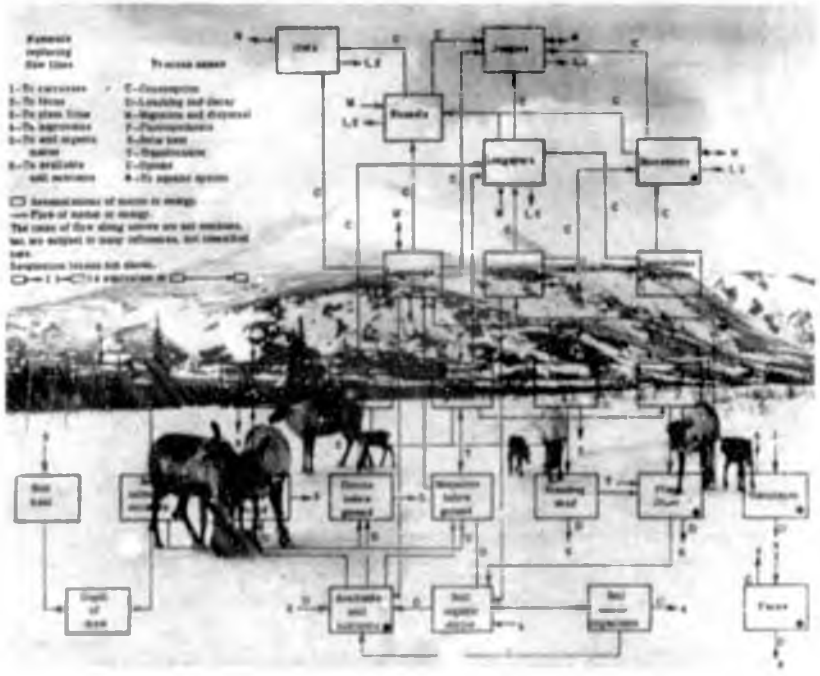
Reindeer "Pierre" has a full set of antlers by mid June. The growth of this antler rack was induced by changing the length of daylight hours.

Cantwell resident Tex Allbright holds a large gray wolf which he trapped along the fence lines at the Cantwell Reindeer Station during the winter 1968-69.

Norwegian reindeer scientist Eigil Reimers (left) and Dr. R. G. White have just obtained a sample of reindeer milk.

Drs. M. K. Yousef (left) and R. D. Cameron (right) are shown inserting a tube into the rumen of a reindeer. This tube will be used to remove samples of fluids and food from the reindeer's stomach when needed for the experimental study.

Research scientist M. K. Yousef with reindeer "Pierre" during an experiment to determine the heat production of reindeer during summer. Dr. M. Yousef is now stationed at the University of Nevada at Las Vegas.



This photograph shows an overlay block diagram of a proposed model for an arctic ecosystem. Research with reindeer at Prudhoe Bay, sponsored by the International Biological Programme, provided information needed to complete and make operational this model.

From left to right, research assistant Steve Person, Dr. White and veterinary student Paul Frelier, performing field surgery on a tranquilized caribou at Prudhoe Bay.

Dr. Robert White and Paul Frelier leading two reindeer to a new grazing area at Prudhoe Bay, summer 1972. These reindeer were flown from the Cantwell Research Station to Prudhoe Bay for studies relating to caribou biology in the vicinity of the oil fields.

Ecosystem studies included determining the role of maternal milk in the nutrition and energy balance of her calf, seasonal changes in milk composition and the effects of nutrition on milk synthesis. The photograph shows the lactating female cow with a rumen fistula plug and a backpack for instruments needed for the continuous infusion of ^{14}C-labeled metabolites.

Dr. Robert G. White lectures students on the importance of nutrition in successful reindeer breeding.

Extension specialist Bill Scarborough demonstrates a tanning method as one way to utilize reindeer by-products.

Veterinarian Robert Dieterich shows students how to judge the age of reindeer by examining teeth.

Instructor Robert A. Pegau, Alaska Department of Fish and Game (Nome) shows a species of lichen to Robert Akpik (Point Ley). Others in the photograph are, left to right, Nancy Akpik (Point Ley), Dr. R. D. Cameron (ADF&), Chuck Wheeler (Nome), Dr. R. G. White, Ed Shavings and Dale Smith (Nunivak Island), Bob Tidd (BIA, Bethel) and Norman Ongtowasruk (Wales).

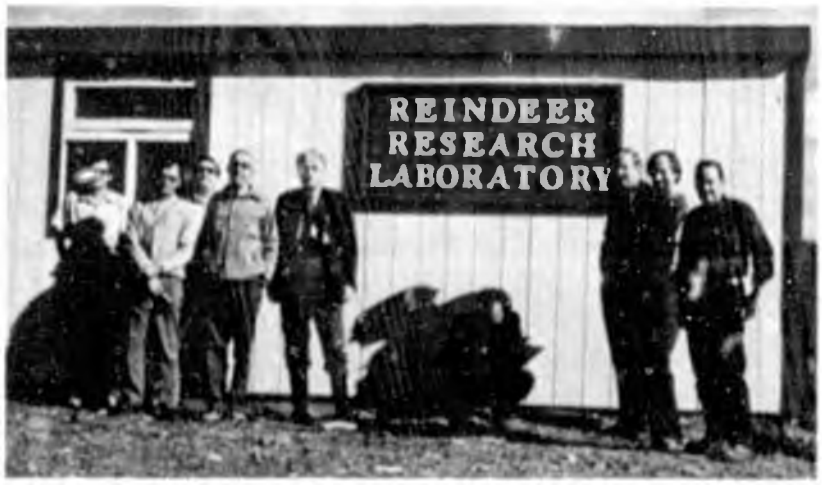
Students Abel Akpik (left) and Dale Smith (right) practice roping reindeer "cowboy style".

Participants in the Reindeer Herders Workshop watch veterinarian R. A. Dieterich castrate a young male reindeer. Students shown standing, left to right, are Norman Ongtowasruk (Wales), Chuck Wheeler (Nome), Jimmy Kvamme (Aniak), Bill Scarborough, Instructor, University of Alaska, Bob Tidd (BIA, Bethel) and Ed Shavings (Nunivak Island).

Veterinarian R. A. Dieterich shows Kvamme how to clean and dress a wound that has been contaminated with insect larvae.

Two aircraft were used to demonstrate techniques for locating a reindeer herd to participants in the Reindeer Workshop. Pilot veterinarian Robert Dieterich demonstrated how radar and other all-weather aircraft locator techniques can be used to find reindeer regardless of weather conditions. Alaska Department of Fish and Game range specialist Bob Pegau (Nome) also used the aerial classroom technique to instruct students on evaluation of reindeer ranges from the air.

In August 1974 three reindeer scientists from the USA visited Soviet Reindeer Stations at Norilsk and Yakutsk in Siberia. The photograph shows the USA and USSR reindeer group on the tundra ranges near Norilsk. USA scientists included D. R. Klein (left), Cooperative Wildlife Research Unit, James Hemming, Bureau of Land Management (third from left), and J. R. Luick, University of Alaska (sixth from left). Soviet scientists Edward Borozdin, A. D. Mukhachev and Nadia Borozdin (second, fourth and fifth from left, respectively) represent the Extreme North Agricultural Research Institute at Norilsk.



Three scientists from the USSR visited the Cantwell Station during summer 1974. These included Professor V. L. Kontrimavichus, Institute of Biological Problems of the North, Magadan (second from left), Dr. V. D. Denisov, Department of Nature Preserves, Moscow (fifth from left) and Dr. V. Borisov, Central Laboratory on Nature Conservation, Moscow (kneeling).

Dr. Edward Borozain and Chief herder Spiridon Balin, kneeling center, point out symptoms of brucellosis in a male reindeer. Photograph taken on tundra range near Norilsk, Siberia.

This photograph shows Dr. Robert White explaining research activities to the Soviet delegation at the Cantwell Reindeer Station, September 1974.

In 1972, reindeer scientists at the University of Alaska sponsored the First International Reindeer/Caribou Symposium, a highly successful four-day meeting that was attended by more than 150 reindeer scientists and wildlife biologists representing all the circumpolar nations. This photograph shows Norwegian reindeer scientist, Dr. Sven Skjenneberg, telling Symposium participants about research activities at the Norwegian State Tame Reindeer Institute, Harstad, Norway.

UNIVERSITY OF ALASKA, FAIRBANKS

INSTITUTE OF ARCTIC BIOLOGY

Lynne: The purpose of this letter is to get these programs back into the public eye again. Thanks — FRL

November 6, 1979

Representative Brian Rogers
Room 710 F Gruening Building
University of Alaska
Fairbanks, AK 99701

Dear Representative Rogers:

I enclose copies of two programs for teaching and research that were proposed for the FY81 University of Alaska budget on behalf of the reindeer herders of Alaska. According to the Director of the Agricultural Experiment Station, Dr. James Drew, these program requests were deleted from the AES and SALRM budget requests because they could not be accommodated within the 19% ceiling placed on the developmental budget.

I am also enclosing resolutions that were adopted by the Rural Area Development Council in Kotzebue (10/14/76) and in Nome (5/18/78) and by the Reindeer Herders Association in Nome (8/31/76). In addition, you should receive letters in support of these programs from : Mr. John Shaeffer, NANA Reindeer Corporation, the Nome Chamber of Commerce, the Reindeer Herders Association, the Reindeer Sub Committee of the Alaska Cooperative Land Managers Task Force (Mr. Ted Freeman, Chairman), the Sitnsauk Native Village Corporation, the Nome Eskimo Community and the Alaska Federation of Natives.

As you are doubtlessly aware, much of this renewed interest in the reindeer industry stems directly from the rapidly developing velvet antler industry. For example, I estimate that this year the sale of velvet antler (a renewable agricultural resource!) probably grossed about 1.5 million dollars. Further, if this stimulus to increase herd sizes continues until the herds reach the carrying capacities of the ranges, the annual gross income on the Seward Peninsula alone, based on 1979 prices, will probably exceed 5 million dollars. Most important, when this occurs Alaska's reindeer industry will be producing a very significant amount of meat that is preferred by it's native peoples.

Continued...

UNIVERSITY OF ALASKA
INSTITUTE OF ARCTIC BIOLOGY

The purpose of the enclosed programs is to provide the research needed by our producers in order to achieve their very realistic goals. Further, they will provide the teaching aids, curricula and training programs that are needed to develop a reindeer industry that is founded on modern livestock industry techniques.

Please advise if there is anything more I can do to assure that these programs get consideration by the legislature this year.

Respectfully,

JACK R. LUICK
Professor

COVER PROGRAM: UNIVERSITY OF ALASKA

EXPLAIN WHICH COVER PROGRAM OBJECTIVE IS AFFECTED, AND HOW.

The reindeer industry has requested research assistance on reindeer. This program would emphasize research to: (1) develop husbandry practices that will assist in a transition from meat to broader orientation toward by-product development; (2) develop disease control and animal management as it relates to changing herd practices and related organizational systems; (3) develop markets and reindeer products; (4) develop improved range management techniques; and (5) improve nutritional practices and management.

Applied Reindeer Research - Teaching Program

COVER PROGRAM

UNIVERSITY OF ALASKA

EXPLAIN WHICH COVER PROGRAM OBJECTIVE IS AFFECTED, AND HOW.

The University of Alaska by Alaska statutes has the responsibility for research, extension and education for the development of agriculture and Alaska's natural resources. This increment addresses the education portion of a program to develop the reindeer industry in Alaska and will support:

1. The training of Extension personnel and field based teachers as well as the support of back-up specialists for specific problems and concerns of the reindeer industry.
2. The development of curriculum and workshops and support for instruction fees and travel costs for planning and organization of the program.
3. The development of educational materials and teaching aids for items such as horn cutting, animal first aid, range plants, castration, and disease recognition and control

BRIEFLY DESCRIBE WHAT THIS INCREMENT PURCHASES IN TERMS OF MANPOWER AND OTHER RESOURCES.

Personal Services - 6 man months of professional salary

Travel - $ 4,000 to organize, develop and deliver educational services

Contractual Services - $12,000 for air charters, back-up specialists, duplication of teaching materials, postage, and phone rental

Commodities - $ 4,000 Supplies for teaching and office support of the educational program.

ALASKA RURAL DEVELOPMENT COUNCIL - 10/14/76

Resolution No. 3

regarding

DEVELOPMENT OF A REINDEER INDUSTRY

WHEREAS, there is and will continue to be a severe shortage of meat available from within the Northwest and northern Alaska regions due to restrictions on caribou harvest, and

WHEREAS, NANA Regional Corporation has undertaken to establish a reindeer herd which will be able to provide a relatively cheap and reliable source of meat in Northwest Alaska, and

WHEREAS, NANA Regional Corporation desires to manage this herd on a basis of maximum sustainable yield consistent with maintenance of the range, and

WHEREAS, NANA Regional Corporation intends to increase the herd as rapidly as possible consistent with maintenance of the range,

NOW, THEREFORE, BE IT RESOLVED that the Alaska Rural Development Council endorses the attempts of NANA to develop the reindeer industry in Northwest Alaska, and

BE IT FURTHER RESOLVED that federal and state agencies are encouraged to continue and increase their technical educational and financial support for the reindeer industry, including establishment of a reindeer research facility in northwest Alaska, and

BE IT FURTHER RESOLVED that said agencies be encouraged to assist NANA Regional Corporation in establishing programs of cooperation with the Soviet Union and North European nations to exchange technology, train personnel, increase herds by importation of breeding stock, and ship meat directly to Alaska if feasible, and

BE IT FURTHER RESOLVED that the members of this Council will endeavor to assist NANA and other herd owners to efficiently manage and increase the herds so as to meet the food needs of the people of NW Alaska.

ALASKA RURAL DEVELOPMENT COUNCIL - May 17-18, 1978

Nome, Alaska

Resolution Regarding Research and Education on Reindeer

WHEREAS, University of Alaska personnel, such as Dr. Jack Luick, of the Institute of Arctic Biology, have spent years developing research data and collecting information beneficial to the changing conditions of the reindeer industry with very limited financial support, and

WHEREAS, Continued support of this work is very uncertain, and

WHEREAS, Changing conditions such as the sale of reindeer antlers and possible changes in land ownership require a continual evaluation of reindeer management needs, and

WHEREAS, Data for making these management decisions requires considerable research and education capabilities now,

HEREBY BE IT RESOLVED that the Alaska Rural Development Council at its May 17th and 18th Nome meeting, urges the Alaska State Legislature to support, through the University of Alaska, an expanded program of applied reindeer research and education, and

BE IT FURTHER RESOLVED that this resolution be sent to the following:

Governor of Alaska
President of the Alaska Senate
Speaker of the House
President, University of Alaska
President, Board of Regents, University of Alaska

STATE OF ALASKA
THE LEGISLATURE

LEGISLATIVE AFFAIRS AGENCY

MEMORANDUM February 21, 1980

SUBJECT: Herring (CSHB 590)

TO: Representative Terry Gardiner
Attn: Sharon Stoops, A.A.

FROM: Kenneth E. Vassar
Legislative Counsel

Enclosed is the committee substitute you requested for House Bill 590. Section 1 of the bill amends AS 16.10.172 by providing that stripping of herring, while generally wasteful and to be discouraged, is acceptable in some parts of the state because of the lack of local industries and abundance of herring in those parts of the state. Section 1 further declares that the areas described in AS 16.10.173(f) (added by Section 2 of the bill) are such areas where herring stripping is acceptable.

The guidelines established in the amendments to AS 16.10.172 in Section 1 of the bill are not exactly the same as those in Greg Cook's memo which you provided with your request. Greg had suggested that biological, social and economic factors combine in certain areas of the state to make stripping acceptable. I have some concerns about the local or special legislation questions this bill raises (which I will discuss later in this memo), and one of those questions relates to the fair and substantial relationship between the classification created in Section 2 of the bill - setting apart certain areas of the state for special treatment - and a matter of statewide concern. A legislative finding that biological, social and economic factors in certain areas of the state justify special treatment for those areas seems vague and not likely to assist a court in determining how the classification fairly and substantially relates to a problem you are seeking to resolve. Therefore, I talked with Greg to see if some more specific guidelines could be devised. The result is the two-pronged approach incorporated in Section 1 relying on (1) the lack of a local industry and (2) an abundance of herring.

The more specific guidelines will go far toward establishing the fair and substantial relationship between the classification and the problem to be solved; however, it does not end the inquiry. Article II, sec. 19, Constitution of the State of Alaska provides in part:

> "The legislature shall pass no local or special act if a general act can be made applicable."

Essentially, an act challenged as local or special is analyzed in the same manner as an act challenged as violative of equal protection. Abrams v. State, 534 P.2d 91 (1975); State v. Lewis, 559 P.2d 630 (1977). However, there is one significant difference between the two analyses. Under equal protection analysis, the act must fairly and substantially relate to a legitimate state interest or concern. Under local or special legislation analysis, the interest or concern is, at least in part, determined to be "legitimate" only if it is statewide in nature. That is, even though the act may treat certain areas of the state or certain groups of people differently from other areas or groups, it is not local or special if it fairly and substantially relates to a matter of statewide concern or interest. Thus, in Abrams, the court found the incorporation of the Eagle River-Chugiak Borough to be a matter which is not of statewide interest or concern and found the legislation authorizing the formation of that borough to be local legislation. On the other hand, in Lewis, the court found the capital move to be a matter of statewide concern, and legislation which fairly and substantially related to the capital move was not found to be local or special.

The question in this bill, then, is whether stripping of herring is a matter of statewide concern. Presumably, the argument in favor of the bill would be to the effect that the distinct and unique circumstances in this area of the state justify treating it differently from others. However, a similar type of argument was made to justify the incorporation of Eagle River-Chugiak as a borough. The court stated:

> "We do not find this justification persuasive. Numerous other localities within organized boroughs can also claim to be unique in certain respects." 534 P.2d at 95.

I think stripping of herring is probably not a matter of statewide concern; therefore, I would anticipate that this bill would be considered local legislation. Even though an act is found to be local legislation, it is nevertheless permissible if no general act can be made applicable. However, I think a general act can be made applicable in this case. Using the same or similar guidelines established in Section 1 of the bill, the Board of Fisheries could be instructed to discover the areas of the state where those circumstances exist and to allow stripping in those areas by regulation.

Finally, if stripping of herring is found to be of statewide interest, the fair and substantial relationship between the classification and the interest rests upon the guidelines established in Section 1 of the bill. One of those guidelines is a finding that herring exists in abundance in the area. Aside from the policy considerations, it seems that linking such a finding to an area of the state by a legislative enactment is risky business. These kinds of circumstances change from time to time. How quickly they are likely to change, I do not know. However, it is possible that, by making this finding, the legislation may fairly and substantially relate to the area at the time the legislation is enacted while losing, either gradually or suddenly depending upon the state of the herring population, its fair and substantial relationship over time. This would require the legislature to either act as a board of fisheries to keep track of the herring population and make amendments to the law as needed or to allow the law to lose its fair and substantial relationship to the area over time. If the former occurs, it would seem that the legislature will have stepped over into an executive function; if the latter occurs, new questions of equal protection would arise.

KEV:ljb

Enclosure

(HB590) - Question of Constitutionality of prohibiting the taking of herring out of state before processing.

According to both Ken Vassar (legislative lawyer) and Greg Cook (Fish & Game) this is probably unconstitutional

→ 1930's supreme court case about shrimp in North Carolina or Louisiana -- Same situation except that a "shrimp war" was going on. Court ruled it was illegal to require processing in one state.

→ This bill would interfere with federal inter-state commerce laws & regs.

Alaska Administrative Code - Register 70, July 1979
AAC 39.198 states that foreigners (not legally admitted to U.S.) cannot take ~~herring~~ fish from Alaska before it has been processed

Also is State statute regarding ~~king~~ live Crab
AS 16.10.240 Says no live crab can be shipped or sent out of Alaska. But, it says that crab may be shipped live via air freight after pre-packaging.

(See also 16.05.685(i). Unlawful to process crab on a commercial crab fishing vessel unless vessel remains within one registration area from time crab is caught to time of dock delivery).

AS 16.10.172 concerns utilization of herring (may not harvest roe & waste the rest)

~~AS 16.10.~~

AS16.05.920 Unlawful to ... taking, transporting, selling or purchasing fish ... contrary to ... Regulations

Carl Rosier noted these statutes and says that Alaska has no primary processing laws

P. O. Drawer 4220 Kenai, Alaska 99611 Phone: (907) 283-7000

February 22, 1980

Chairman Alvin Osterback
House Resource Committee
Alaska State House of Representatives
Pouch V
Juneau, Alaska 99811

Dear Chairman:

This letter is for the purpose of conveying my aporeciation for the opportunity to appear before your Committee on the matter of HB 590. It is also for the purpose of relating my impression of testimony made during that meeting of February 21, 1980.

Before addressing the issue specifially, I must extend to you my apology for any impression you may have had that my testimony was more aggressive than necessary. I feel, however, that the matter of HB 590 is of extreme importance economically to the State and industry, and further, I am not used to being put in a position of when once recognized by the Chair of having to defend myself against somewhat pointed arguments from the floor, regardless of their legitimacy.

As President of an Alaskan corporation which has rightfully earned a ranking position in the industry, I must stick to my testimony that regardless of all else, the portion of the Bill titled, Section 16.10.175 Removal of Herring From The State, must pass. Amendments should clarify, however, as follows:

1. Icing should not be qualified as a processing technique;

2. Salting should only be allowed in the case of food herring with roe content under 5%, and in such case should be packaged as food in cartons containing less than 200 lbs. This will additionally allow easier enforcement of the 5% rule.

It is my sincere belief that given the proper economic incentive the industry can indeed handle the upcoming harvest to a processed state within the State's jurisdiction. If there is any question regarding frozen capacity, when coupled with stripping capacity, there is little doubt that the industry can process the 1980 Berring Sea catch within the State's jurisdiction.

Opponents of this bill show little care about the economics of the consideration or the impact to the State and existing State processors. They rather are arguing towards self-serving goals with the

defense that "no one can prove to us that the product can be handled and, therefore, we who are serving foreign interests or non-resident fishermen must be recognized in our right to the product. Further, we say that salted Bering Sea herring tendered to in-State processors is not economically feasible and, therefore, will not be accomplished".

To the first argument I say that before it happened, no one could have conceived such a massive and effectual air lift of Bristol Bay sockeyes in 1979, nor could anyone guarantee that such a massive flotilla of floating processors could have frozen so much salmon in the NakNek-Kvichak areas.

Additionally, it was inconceivable until this past season that a majority of 1979 Bristol Bay sockeyes would be frozen rather than canned. The quality and spoilage considerations for salmon are much greater than for herring. Regardless, the industry successfully processed to the frozen state much more Bristol Bay salmon in 1979 than is necessary to completely process by all means the 1980 Togiak herring catches.

It follows that whenever economic incentive exists, industry can and will develop accordingly sufficient processing capacity. In the case of herring processing, it will only require employment of existing capacities. It is up to the State to set the guidelines now in February of 1980 towards the goal of how the State wishes to develop its valuable herring resource. Arguments at this date will only be reinforced by the supposition that processing goals can not be met.

If this Bill is effective in the future, however, it will then be the case that arguments are reinforced by claims of economic displacement, jeopardy of established business, and a multitude of other arguments as to why the State should not require in-State processing. Referring to the "illogical" argument that Togiak herring can not be sucessfully tendered or air lifted to other processing areas of the State, either fresh or salted, it should be considered that, that is exactly what is being done now by foreign interests over much greater distances; and, yet, salted or lightly salted herring are transported as distant as Korea, Vancouver, or Seattle destinations for processing.

It should be quite apparent that in-State tendering would be easier than out of State tendering since the product would not be moved as far, it is probably more economically feasible. It certainly is of much, much greater importance by way of economic return to the State.

The last item I wish to emphasize is that if there is any question about the capacity to process the 1980 herring harvest to the frozen state, those questions are of a lesser magnitude than what will happen to the State's processors without some protection. However, if the ultimate goal is to give the maximum guarantee towards maximum processing capacity in the State, then questions will be removed if stripping of herring is allowed and carcasses allowed to be discarded in all processing areas beyond a 50-mile radius of a fish meal rendering plant.

The discharge of unused carcases is not really an economic waste, nor is it a biological waste, it is only an aesthetic problem.

Herring are by number the most prodigious fish species in the world. We are harvesting roe herring (greater than 5%) strictly for the roe which is of much higher economic value than the entire carcass. Even then, our harvests are strictly monitored. If a two-year adjustment period is granted to the industry towards full utilization of the herring carcass by product of the vast Bering Sea harvest, then any further question can be removed about processing capacity. This is true only, however, if the privilege is extended to processing areas outside of the Togiak district where a large number of large-capacity shore facilities exist.

In the case of our company's situation, we operate an approximate 30,000 sq. ft. plant on the Kenai River; we have large freezing and stripping capacities, and are preparing both production lines. We wish to freeze as much herring as is possible, however, any carcasses which are unusable, we would propose to run through our plant's offal grinding system, which would be discharged in deep water as is permitted to us by State and EPA authorities for salmon and related wastes.

The final point I would like to stress to you, Mr. Chairman, is that you must consider very carefully not only the testimony you are hearing on HB 590, but you must also consider very seriously who is giving the testimony, what is their purpose, and is the purpose consistent with the best possible goals of the State. I believe seriously "that you and the Resource Committee are charged with the obligation to effect for the State and its residents the absolute maximum in-State benefit wherever possible; very little else should be considered".

As one significant resident employer, I would like to offer the suggestion, as President, that our company's interests are the same as those best suited to meet that goal. We wish to continue our business totally in State. We ask only for the benefit that we will have fair access to our State's resources, and to a much favored status in comparison to foreign or non-resident processing interests. If the State and its Resource Committee does not do its utmost to help in-State processors now when in-State processors desperately need the help,

then I would suggest that ultimately there would be none left; and if the industry suffers further setbacks, you will be left with nothing but foreign processing ships and probably very sporadic markets for the State's resident fishermen.

Mr. Chairman and honorable Committee members, I hope you will consider seriously the balances and impact of your decision.

Sincerely,

SALAMATOF SEAFOODS, INC.

February 18, 1980 letter to City of Kenai
Kenai Peninsula Borough letters of endorsement (6)

House Resource Committee
February 7, 1980

I. INTRODUCTION

A. Company - 100% Alaskan owned; incorporated in the State in 1973:

Size, volume, position in industry, particularly in herring, employment, 1979 raw fish tax discussions.

B. Personal -

Time in industry, 18 years fisherman - processor.
Formal education in Biological Sciences.

II. ORIENTATION

Alaska should review its entire philosophies regarding management of its fishing industry. In light of the fact that its 1979 ex-vessel values alone were on the order of 700 Million Dollars, this thought should surely bear some consideration.

However, true impact of fisheries is fact that in addition to this 700 Million is added substantial payrolls of the State's processors and the notable multiplier effect this has on Alaskan economy, especially in light of the fact that generally these are imported - dollars injected directly into the private sector.

Noting that the socio-economic impact is so great it stands that some consideration be given to how best to manage the economics of a fishing as to the best benefit of Alaska and its citizens.

In my opinion HB 590 is one of first examples of such legislation.

The unfortunate reality - usually fisheries are managed only on premise that when a biological surplus exists it should be harvested by whatever means available w/o due consideration of the particular socio economics involved. This, of course, is as much a fallacy as is conservation for the sake of conservation. I say, what purpose is there for Alaska to allow harvest if there is not maximum benefit to the State and its citizens to do such? It is time that biological management be counled with economic management and by economic management I mean maximizing economic benefit to State, its resident fishermen, its processors.

DEFINE PROCESSING IN CASE OF HERRING

I strongly advocate Alaska proceed stepwise toward maximizing value added within the State. Since processing in the fishing industry is very labor intensive, Alaska can only benefit by such direction. Benefit to labor, transport, taxes, etc.

In the case of HB 590, we strongly support it and suggest that since Alaska herring industry is just now experiencing a rapid growth, now is the time to set the guidelines by which to create the most value to the State via in-State processing, and at the same time insure the quality reputation.

Without protection of bills such as HB 590, in-State processing will not only not develop, but will likely decline once the alternate modes of handling are developed. This is especially true for herring, since roe in fish can be easily preserved in unprocessed state long enough to allow cheap bulk transport to outside and generally foreign processing facilities where plants already exist, and labor is tremendously cheaper.

What's at stake -- herring -- a probably 1980 1st whole value to processors at up to 100 Million Dollars, depending upon actual volume harvested, quality and current market development. If fully realized, and if property regulated, the large bulk of those dollars can enter the economy; and being new dollars to the State, would be magnified greatly in impact due to the related multiplier of the particular economies.

What is the worst case if HB 590 doesn't pass?

- *Multitude of Canadian processing plants waiting idle, even greater Japanese trampers carrying lightly salted fish to Korea and Japan. These are being prepared now.

- *1979 Togiak example

  Trampers, 300-400 ft. tanker barges

- *Once proven, these could transport from SE, CI, PWS, anywhere.

Since out-of-state operators have a greater tendency to attract non-resident fishermen and since this is a developing non-limited fishery, there are a multitude of fishermen from Bellingham, Seattle, Astoria, San Francisco, and S_____ wishing to join these operations.

In a worse case analysis, an out-of-state fisherman, tenderman, barge, or tramper operator, travel to Bristol Bay to harvest and transport the fish out. In 1979 the Bristol Bay case was about $600/ton. Alaska gets 3% or $18 return.

Extending the worst case to 40-50,000 State-wide harvest, Alaska gets $720,000-$900,000 in raw fish tax--nothing else.

Obviously this won't result, for all herring close to 50% value is likely lost.

We are required to capitalize in Alaska labor, identify each carton by packer origin, and our Ala a health number, where is this, and Alaska quality contro[illegible] tanker operations hauling product to Canada or Korea?

* Processing does exist in Alaska. Bering Sea must apply.
Canadian herring restrictions.

Rep. Cotter (Sam) Rules House Committee

Steven Noyer Dir. Commercial Fisheries

Similar
Unprocessed fish is now required
Classifying processing

*Foreign not acceptable any
cooking, canning, salting - 20%, freezing.

*Salting not acceptable - in every case the purpose is to get roe.

**Processing required 2 man days/ton for roe

16.10.162

It is policy of legislature process shall be eliminated
Ref. to item 3.

*No reason to utilize carcase.

1979 take (52,000,000 (9,000,000 is bait)
(900,000 kelp
(43,000,000 roe

Bristol Bay 70% salted

Herring is most numerous species in world.

**Salting accomplishes nothing.

Attn: Mayor Vincent O'Reilly

Gentlemen:

This letter will serve to advise you of a very important bill currently in the House which we believe has the potential to provide tremendous economic impact upon the City of Kenai and the entire Borough. Enclosed you will find a copy of HB 590, relating to a requirement to effect processing of herring within the State's jurisdiction. As President of Salamatof Seafoods, Inc., a substantial employer in the City of Kenai and the Kenai Peninsula Borough, I solicit your support for this most important bill.

It has the impact of not only creating employment, but also of plant utilization and in-State quality control. Stepwise this bill may create a vehicle for further guidelines requiring the maximum value added to be realized within the State for all species of our seafood resources. This I strongly advocate.

Referring specifically to herring, I have included an outline from my testimony before the House Resource Committee on Thursday, February 7th. The notes are not fully descriptive since it was my outline, however, the points are basically:

1. If Alaska wishes to receive the maximum benefit from a seafood harvest, it must so direct the processing industry by legislative action, otherwise, overhead and labor will be utilized elsewhere wherever possible.

2. The adverse market reputation for quality of Alaskan seafood can only be overcome by greater quality control measures. This, in turn, can only be scrutinized as processing occurs within the State's jurisdiction.

3. The current economic depression of the Alaskan seafood industry and especially of the Kenai Peninsula processors can be in part lessened by proper utilization of the vast herring resource just recently proven economically so important.

4. In a worst case analysis and in an industry based out of State, there would be left to the State only $18 per ton or less by way of taxes for the herring harvested. This correlates to a State-wide return of $720,000-$900,000. If a best case analysis is a stake, a first wholesale value by in-State processors of up to $100 Million Dollars of new dollars in 1980 can be realized. These new dollars, in turn, have even greater

impact when the particular multipliers are realized via the economics involved.

5. Our industry rule of thumb is that each ton of herring processed to the roe finished product requires about two man days of labor. If the projected Bristol Bay harvest were all processed to the roe state, it would create about 60,000 man days of employment for process workers. This is in addition to the employment of the fishermen and tendermen levels. Processing to a frozen state would require comparable labor plus capital investment only of a slighter consequence. Salting or brining of herring requires an inconsequential labor impact and, hence, a tremendous economic loss to the State and Borough.

6. Of the 1980 Bristol Bay harvest, we estimate it is probable that a minimal 20% will be processed by Kenai Peninsula processors if the product is not taken from them via foreign bulk transport means. If this is the case, at stake is a minimum 12,000 man days of labor plus the sales dollars generated into the economy by the particular Borough seafood processors involved. This will have impact upon the transportation industry and related supply industry and numerous other segments of our local economy.

7. In both the Canadian province of British Columbia and the state of California, the tremendous impact of requiring in-province or in-state processing has been realized. In each of those areas, legislation for the purpose of limiting the exports of unprocessed seafood, and especially herring, has been effected much more strictly than is proposed by HB 590. In both of those areas it has been realized that if the resource is to be harvested, it should be for the maximum economic benefit, which can only be realized by the export of the finished product.

I thank you for your consideration of this hastily prepared message. The time factor involved is that currently the matter will be brought before House Committee again on Thursday, February 22nd. I solicit a strong and immediate support of this bill to our Representatives as you deem appropriate.

Sincerely,

SALAMATOF SEAFOODS, INC.

Dear Committee Members:

The Greater Kenai Chamber of Commerce has passed a motion in support of Hb 590.

Since the fish processing industry is a substantial segment of our economy we have a local interest in this bill. Many summer jobs are provided by the local processors. Herring processing is advantageous because it extends the season for these employees. The additional dollars also circulate in our community to the benefit of the local businesses and, therefore, all of our citizens.

We also feel that in-state manufacturing, refinement, or processing of Alaska's natural resources is a goal that should be pursued within practical limitations. There is no question about the practicality of herring processing.

We urge passage of HB 590.

Respectfully submitted,

Dear Sirs:

This requests your favorable consideration and passage of House Bill 590, proposing a requirement to effect minimum processing for herring in-state.

Where there is an industrial capability in-state to accomodate processing which will inject add-on value from fisheries resources into the State's economy and create additional employment for local residents, it would be in the best interests of Alaska that implementing legislation be effected.

House Bill 590 is a means toward this end and I ask that you support this bill.

Sincerely,

Frank McIlhargey
Economic Development Director

PROPOSED CHANGES

HB 590

Original sponsors: Gardiner and Moss

IN THE HOUSE BY THE RESOURCES COMMITTEE

CS FOR HOUSE BILL NO. 590

IN THE LEGISLATURE OF THE STATE OF ALASKA

ELEVENTH LEGISLATURE - SECOND SESSION

A BILL

For an Act entitled: "An Act relating to herring; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. LEGISLATIVE FINDINGS AND POLICY ON HERRING STRIPPING.

(a) Notwithstanding AS 16.10.172, the legislature finds that in certain circumstances the processing technique described in AS 16.10.172(3), commonly referred to as "stripping", provides benefits of such importance to the state economy that the benefits outweigh the waste even if discard of the carcass is involved in the process.

(b) It is the policy of the legislature that the stripping process wherein the carcass is discarded is acceptable only if the herring is taken from waters in which the herring population is large enough to support a stripping industry ~~without substantially reducing the availability of the herring for other uses,~~ and only if the ~~stripping~~ discarding process is conducted in an area of the state where in which adequate meal or local ~~industry either does~~ reduction facilities do not exist within a 50-mile radius or, if it does exist, is insufficient to provide reasonable economic support to the people who live in the area.

WE PREFER SECTION 2 TO BE DELETED, HOWEVER, IF INCLUDED SHOULD READ AS FOLLOWS:

* Section 2. HERRING STRIPPING.

(a) The legislature finds that the area of purchase described in (b) of this section is an area where the ~~stripping~~ purchase of herring for roe is acceptable under the criteria established in sec. 1 of this Act.

(b) Notwithstanding AS 16.10.173 and until July 1, 1981, or 1982 or 1983, *(options) ~~the stripping of commercially taken herring for the purpose of removing and selling the roe product~~ discard is authorized if herring is taken from, and ~~the stripping process occurs within~~, an area north of 58 degrees latitude; south of 60 degrees latitude; east of 162 degrees 10 minutes 30 seconds longitude; and west of 158 degrees 53 minutes 30 seconds longitude.

* Section 3. AS 16.10 is amended by adding a new section to article 3 to read:

Section 16.10.175. REMOVAL OF HERRING FROM STATE.

(a) It is unlawful for a person to remove herring from the state before the herring has been frozen or otherwise processed for shipment.

(b) In this section, "processed for shipment" includes, but is not limited to, ~~salting~~ no stripping or salting of the herring; however, it does not include salting of the herring if five percent or more of the body weight of the herring consists of roe. Such salted herring should be packed in cartons no larger than 200 lbs. net, as is consistent with packaging requirements for food products.

* Section 4. This Act allows easier enforcement and takes effect immediately in accordance with AS 01.10.070(c).

evasion of other applicable state and federal laws and regulations.

(f) The provisions of this section apply to foreign vessels and aliens in the internal waters and the territorial sea of the state.

(g) As used in this section

(1) "aliens" means aliens not admitted to the United States with immigrant or other resident alien status under the immigration and naturalization laws of the United States;

(2) "existing ports" means those Alaskan marine ports designated in 19 C.F.R. sec. 1.2;

(3) the phrase "foreign vessels and aliens" includes foreign vessels staffed with aliens, foreign vessels staffed with U.S. citizens, and U.S. vessels staffed with aliens; and

(4) "foreign vessels" means vessels not documented under the laws of the United States or documented under the laws of a state.

SALMON FISHERY

Section
230. Gear
240. General gear specifications and operation
250. Gill net specifications and operation
260. Seine specifications and operation
270. Troll specifications and operation
280. Identification of stationary fishing gear
290 Closed waters

5 AAC 39.230. GEAR. Only those gill nets, seines, troll lines, fishwheels, spears or other appliances as provided for in chs. 03 - 39 of this title may be used to take salmon.

Authority: AS 16.05.250(3)

5 AAC 39.240. GENERAL GEAR SPECIFICATIONS AND OPERATION. (a) A salmon fishing vessel shall operate, assist in operating, or have aboard it or any boat towed by it, only one legal limit of salmon fishing gear in the aggregate except as otherwise provided in this title.

(b) Unhung gear sufficient for mending purposes may be carried aboard fishing vessels.

(c) A purse seine, hand purse seine or beach seine may not be fished simultaneously with gill net gear by any individual or vessel.

(d) Salmon fishing nets shall be measured, either wet or dry, by determining the maximum or minimum length of the cork line when the net is fully extended with traction applied at one end only.

(e) The interim-use or entry permit card holder is responsible for the operation of the net.

Authority: AS 16.05.251(4)

5 AAC 39.250. GILL NET SPECIFICATIONS AND OPERATION. (a) The trailing of gill net web is prohibited at any time or place where fishing is not permitted.

(b) Set gill nets shall be removed from the water during any closed period.

(c) Gill net web must contain no less than 25 filaments until December 31, 1978. After December 31, 1978, gill net web must contain no less than 30 filaments.

Authority: AS 16.05.251(4)

5 AAC 39.260. SEINE SPECIFICATIONS AND OPERATION. (a) In the use of purse seines and hand purse seines, not more than one anchor may be used to hold the seine, lead and seine boat during a set.

(b) Repealed 3/26/76.

(c) A purse seine is considered to have ceased fishing when all the rings are out of the water.

(d) A hand purse seine is considered to have ceased fishing when both ends of the seine are fast to the vessel.

(e) A beach seine is considered to have ceased fishing when all of the lead line is above the water on the beach.

(f) Where the use of leads is permitted, a purse seine vessle may not have or use more than one lead of legal length and depth, without purse

(3) press releases and announcements in local newspapers and commercial radio stations;

(4) telegrams and commercial radio facilities.

Authority: AS 16.05.060

5 AAC 39.197. UNLAWFUL POSSESSION OF FISH. No person may possess, purchase, sell, barter or transport fish within the state or within waters subject to the jurisdiction of the state if that person knows or has reason to know that the fish were taken or possessed in contravention of chs. 01 – 39 of this title.

Authority: AS 16.05.251(a)(10) and (b)

5 AAC 39.198. COMMERCIAL FISHING AND RELATED OPERATIONS BY ALIENS NOT LAWFULLY ADMITTED TO THE UNITED STATES. (a) Foreign vessels or aliens or both are prohibited from

(1) the catching, taking, or harvesting of fish resources;

(2) the tendering, offloading, or other movement or handling of fish resources until processing has been completed;

(3) the processing of fish resources; or

(4) any attempt at, preparation for, or assistance of the foregoing, with the intent of disposing of the fish resources for profit, or by sale, barter, trade, or in commercial channels.

(b) As used in this section, "processing" means completion of

(1) cooking,

(2) canning,

(3) smoking,

(4) salting, which means uniformly mixing at a minimum salting level of at least 20 percent of the weight of the fish resources,

(5) drying, or

(6) freezing.

(c) Aliens and foreign vessels are not prohibited from transporting fish resources outside the state, or engaging in other business activities respecting fish resources, after processing has been completed. Any vessel used pursuant to this authorization, whether domestic or foreign

(1) must not be equipped for the harvesting of fish resources; and

(2) must be in compliance with applicable state and federal laws.

(d) The commissioner, after consultation with the Board of Fisheries, may, under conditions and limitations determined by him, grant a limited exception to this section with respect to a particular fishery and permit foreign vessels to process fish resources at an existing or constructive port, or to transport fish resources outside the state from an existing or constructive port that processing takes place, if he determines after investigation that

(1) the volume of fish resources expected to be taken in the fishery under current regulations exceeds the anticipated processing capability of facilities operated by United States processors;

(2) there is no practical opportunity for United States processors to make emergency arrangements to handle the excess volume;

(3) there is a likelihood of substantial wastage of fish resources taken in the fishery if foreign processing or transportation capacity is not utilized; and

(4) there is no significant likelihood of clandestine foreign fishing operations if the exception is granted.

(e) With respect to paragraph (d) of this section the commissioner may recognize and designate constructive ports, provided

(1) the ports are within the internal waters of the state;

(2) there is no existing port within reasonable running time from fishing grounds which are the subject of a substantial fishery; and

(3) there is no significant opportunity for clandestine violations of (a) of this section or

Japan's Roe Market In Shambles—NW Concerned

By Bruce Ramsey
Marine Writer

The largest bankruptcy in the history of the Japanese fishing industry has sent waves of concern through the Northwest seafood industry.

The victim, according to the Japan Times, was Hokusho Co., one of the largest Japanese wholesalers of imported herring roe (eggs) from the U.S. and Canada. Hokusho left behind debts of 31 billion yen, or about $129 million, owed to 130 creditors. It is not known how many of those creditors are Americans.

According to the English - language Japan Times, the Japanese government has offered low - interest loans to prevent further bankruptcies among fish wholesalers.

Herring roe has been a lucrative part of the Northwest and Alaska seafood industry. The fishery only lasts a few days as it moves northward, from San Francisco Bay to northern Puget Sound to Vancouver Island to Southeastern Alaska to Togiak, Alaska, on the Bering Sea. But it is probably the most rewarding fishery in terms of dollars - per - hour.

Industry sources say the collapse of Hokusho has left the Japanese roe market — the world's only roe herring market — in shambles. They relate a tale of avarice and miscalculation stretching across the North Pacific.

Roe is made into "kazunoko," a delicacy eaten only by Japanese, and only during Shogatsu, the three - day New Year's celebration. This Oriental caviar is traditionally believed to promote virility in men.

In 1972, the Japanese government abolished a government monopoly in roe imports, throwing open the business to the powerful Japanese trading companies. What followed, according to the Japanese newspaper Asahi Shimbun (as quoted in the Alaska Fishermen's Journal) was a frenzied struggle for market share among the top trading companies, including Marubeni, Taiyo and Mitsubishi.

The height of the competition came during last spring's herring roe fishery off the west coast of Vancouver Island. The year before, the season has ended with roe herring at $350 a ton at Togiak. Last spring, the fishery companies sent boats stuffed with cash to the herring grounds.

The market price was bid to the $2,000 to $3,000 level, and briefly hit $5,000 (Canadian dollars) a ton. At this price, a lucky fisherman could pay for his boat in one well - placed seine.

Gary Spitz, president of the B.C. Fisheries Association, said last May that one fisherman hauled in $1.2 million (Canadian). This was by no means an average catch, but it stirred up a kind of Klondike fever among many fishermen.

When the wholesale markets for herring roe opened last fall in Osaka, the prices were double the 1978 prices. There was little traded, but prices refused to fall.

The newspapers picked up the story, charging a conspiracy to corner the market and demanding an investigation. "Who's to Blame for the Kazunoko Insanity?" screamed a headline in the Dec. 15 Asahi Shimbun.

Prices stayed high as the Shogatsu holiday approached. "Everybody believed that the market is way up there," said a source in a Japanese seafood company. "Our sources in Tokyo kept telling us the market is fake, that if you look at the volume traded, you'll see it is very low."

He said the high price was mainly achieved by allied companies buying and selling to each other. "This product was never going anywhere," the source said. "It was never leaving the cold storage."

But the Japanese housewife, who was assumed to be willing to pay almost any price for the kazunoko, broke with tradition during the New Year's celebration in January. She boycotted it. Industry sources say only half the kazunoko was sold, and the wholesale price plunged from about $25 a pound to about $9.

The price collapse broke Hokusho and reportedly caused a substantial loss to Mitsubishi.

"This obviously has caused a great shock at Mitsubishi," said Reid Rogers, chairman of Seattle's New England Fish Co. (Nefco). "We anticipate they will continue in the seafood business once they sort themselves out.

"The bankruptcy had no direct impact on Nefco. We had no direct credits with the company that went bankrupt."

A Mitsubishi spokesman said the Seattle office didn't know anything more than what they read in the Japanese newspapers.

The crash has cast a pall over the upcoming roe herring fisheries off Vancouver Island, Southeastern Alaska and Togiak. At 1979 prices, these fisheries had been regarded as a kind of Irish Sweepstakes, with many small losers but a few huge winners for those who found the herring.

"I can't find a buyer in roe herring," says Lyle Johnson, president of Alaska Canada Fisheries Inc., Seattle. "They smile a lot and say, 'Very risky, very risky.' Canada radically cut the quota (from 11,000 metric tons to 4,000) but even that didn't get them excited.

"I think there'll be a market by the time the season starts in Togiak, in May," said Johnson. "But there's nothing happening in roe herring now between the Japanese buyer and the independent U.S. processor."

IN THE HOUSE BY THE RESOURCES COMMITTEE

CS FOR HOUSE BILL NO. 590

IN THE LEGISLATURE OF THE STATE OF ALASKA

ELEVENTH LEGISLATURE - SECOND SESSION

A BILL

For an Act entitled: "An Act relating to herring."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 16.10.172 is amended to read:

Sec. 16.10.172. LEGISLATIVE POLICY ON UTILIZATION OF HERRING. (a) The legislature finds the following: (1) extensive and valuable herring populations are available for harvest in waters subject to the jurisdiction of the state; (2) commercial markets are available for herring processed in several forms; (3) one processing technique presently employed involves deliberately permitting decomposition of the herring carcass to allow for removal and subsequent sale of the roe product, with the consequence that the flesh is unusable and discarded. The legislature finds that in certain circumstances the processing technique described in (3) of this section, commonly referred to as "stripping", provides benefits of such importance to the state economy that the benefits outweigh the waste involved in the process. [DECLARES THAT THE PROCESS REFERRED TO IN (3) OF THIS SECTION IS WASTEFUL AND DOES NOT CONSTITUTE UTILIZATION OF THIS RESOURCE FOR THE MAXIMUM BENEFIT OF THE PEOPLE.]

(b) It [THEREFORE, IT] is the policy of the legislature that the stripping [THIS] process is acceptable (1) only if the herring is taken from waters in which the herring population is large enough to support a stripping industry described in (2) of this subsection without substantially reducing the availability of the herring for other uses; and (2) the stripping process is conducted in an area of the state where

local industry either does not exist or, if it does exist, it is insufficient to provide reasonable economic support to the people who live in the area. The legislature finds that the areas described in AS 16.10.173(f) are areas where the stripping of herring roe is acceptable [SHOULD BE ELIMINATED TO THE FULLEST EXTENT POSSIBLE].

* Sec. 2. AS 16.10.173(a) is amended to read:

(a) Unless otherwise authorized by this chapter it [IT] is unlawful for a person, as defined in AS 01.10.060 and including a joint venture, to waste or to cause to be wasted any commercially taken herring.

* Sec. 3. AS 16.10 is amended by adding new sections to article 3 to read:

Sec. 16.10.174. HERRING STRIPPING. The stripping of commercially taken herring for the purpose of removing and selling the roe product is authorized if the herring is taken from, and the stripping process occurs within, an area north of 58 degrees latitude; south of 60 degrees latitude; east of 162 degrees 10 minutes 30 seconds longitude; and west of 158 degrees 53 minutes 30 seconds longitude.

Sec. 16.10.175. REMOVAL OF HERRING FROM STATE. (a) It is unlawful for a person to remove herring from the state before the herring has been frozen or otherwise processed for shipment.

(b) In this section, "processed for shipment" includes, but is not limited to, icing, stripping or salting of the herring; however, it does not include salting of the herring if five percent or more of the body weight of the herring consists of roe.

Dear Committee Members:

The Greater Kenai Chamber of Commerce has passed a motion in support of HB 590.

Since the fish processing industry is a substantial segment of our economy we have a local interest in this bill. Many summer jobs are provided by the local processors. Herring processing is advantageous because it extends the season for these employees. The additional dollars also circulate in our community to the benefit of the local businesses and, therefore, all of our citizens.

We also feel that in-state manufacturing, refinement, or processing of Alaska's natural resources is a goal that should be pursued within practical limitations. There is no question about the practicality of herring processing.

We urge passage of HB 590.

Respectfully submitted,

Richard I. Morgan

Subject: House Bill 590

Dear Sirs:

This requests your favorable consideration and passage of House Bill 590, proposing a requirement to effect minimum processing for herring in-state.

Where there is an industrial capability in-state to accomodate processing which will inject add-on value from fisheries resources into the State's economy and create additional employment for local residents, it would be in the best interests of Alaska that implementing legislation be effected.

House Bill 590 is a means toward this end and I ask that you support this bill.

Sincerely,

Frank McIlhargey
Economic Development Director

City of Kenai
P.O. Box 580
Kenai, Alaska 99611

Attn: Mayor Vincent O'Reilly

Gentlemen:

This letter will serve to advise you of a very important bill currently in the House which we believe has the potential to provide tremendous economic impact upon the City of Kenai and the entire Borough. Enclosed you will find a copy of HB 590, relating to a requirement to effect processing of herring within the State's jurisdiction. As President of Salamatof Seafoods, Inc., a substantial employer in the City of Kenai and the Kenai Peninsula Borough, I solicit your support for this most important bill.

It has the impact of not only creating employment, but also of plant utilization and in-State quality control. Stepwise this bill may create a vehicle for further guidelines requiring the maximum value added to be realized within the State for all species of our seafood resources. This I strongly advocate.

Referring specifically to herring, I have included an outline from my testimony before the House Resource Committee on Thursday, February 7th. The notes are not fully descriptive since it was my outline, however, the points are basically:

1. If Alaska wishes to receive the maximum benefit from a seafood harvest, it must so direct the processing industry by legislative action, otherwise, overhead and labor will be utilized elsewhere wherever possible.

2. The adverse market reputation for quality of Alaskan seafood can only be overcome by greater quality control measures. This, in turn, can only be scrutinized as processing occurs within the State's jurisdiction.

3. The current economic depression of the Alaskan seafood industry and especially of the Kenai Peninsula processors can be in part lessened by proper utilization of the vast herring resource just recently proven economically so important.

4. In a worst case analysis and in an industry based out of State, there would be left to the State only $18 per ton or less by way of taxes for the herring harvested. This correlates to a State-wide return of $720,000-$900,000. If a best case analysis is a stake, a first wholesale value by in-State processors of up to $100 Million Dollars of new dollars in 1980 can be realized. These new dollars, in turn, have even greater

impact when the particular multipliers are realized via the economics involved.

5. Our industry rule of thumb is that each ton of herring processed to the roe finished product requires about two man days of labor. If the projected Bristol Bay harvest were all processed to the roe state, it would create about 60,000 man days of employment for process workers. This is in addition to the employment of the fishermen and tendermen levels. Processing to a frozen state would require comparable labor plus capital investment only of a slighter consequence. Salting or brining of herring requires an inconsequential labor impact and, hence, a tremendous economic loss to the State and Borough.

6. Of the 1980 Bristol Bay harvest, we estimate it is probable that a minimal 20% will be processed by Kenai Peninsula processors if the product is not taken from them via foreign bulk transport means. If this is the case, at stake is a minimum 12,000 man days of labor plus the sales dollars generated into the economy by the particular Borough seafood processors involved. This will have impact upon the transportation industry and related supply industry and numerous other segments of our local economy.

7. In both the Canadian province of British Columbia and the state of California, the tremendous impact of requiring in-province or in-state processing has been realized. In each of those areas, legislation for the purpose of limiting the exports of unprocessed seafood, and especially herring, has been effected much more strictly than is proposed by HB 590. In both of those areas it has been realized that if the resource is to be harvested, it should be for the maximum economic benefit, which can only be realized by the export of the finished product.

I thank you for your consideration of this hastily prepared message. The time factor involved is that currently the matter will be brought before House Committee again on Thursday, February 22nd. I solicit a strong and immediate support of this bill to our Representatives as you deem appropriate.

Sincerely,

SALAMATOF SEAFOODS, INC.

I. INTRODUCTION

A Company - 100% Alaskan owned; incorporated in the State in 1973:

Size, volume, position in industry, particularly in herring, employment, 1979 raw fish tax discussions.

B. Personal -

Time in industry, 18 years fisherman - processor.
Formal education in Biological Sciences.

II. ORIENTATION

Alaska should review its entire philosophies regarding management of its fishing industry. In light of the fact that its 1979 ex-vessel values alone were on the order of 700 Million Dollars, this thought should surely bear some consideration.

However, true impact of fisheries is fact that in addition to this 700 Million is added substantial payrolls of the State's processors and the notable multiplier effect this has on Alaskan economy, especially in light of the fact that generally these are imparted dollars injected directly into the private sector.

Noting that the socio-economic impact is so great it stands that some consideration be given to how best to manage the economics of a fishing as to the best benefit of Alaska and its citizens.

In my opinion HB 590 is one of first examples of such legislation.

The unfortunate reality - usually fisheries are managed only on premise that when a biological surplus exists it should be harvested by whatever means available w/o due consideration of the particular socio-economics involved. This, of course, is as much a fallacy as is conservation for the sake of conservation. I say, what purpose is there for Alaska to allow harvest if there is not maximum benefit to the State and its citizens to do such? It is time that biological management be coupled with economic management and by economic management I mean maximizing economic benefit to State, its resident fishermen, its processors.

DEFINE PROCESSING IN CASE OF HERRING

I strongly advocate Alaska proceed stepwise toward maximizing value added within the State. Since processing in the fishing industry is very labor intensive, Alaska can only benefit by such direction. Benefit to labor, transport, taxes, etc.

In the case of HB 590, we strongly support it and suggest that since Alaska herring industry is just now experienceing a rapid growth, now is the time to set the guidelines by which to create the most value to the State via in-State processing, and at the same time insure the quality reputation.

Without protection of bills such as HB 590, in-State processing will not only not develop, but will likely decline once the alternate modes of handling are developed. This is especially true for herring, since roe in fish can be easily preserved in unprocessed state long enough to allow cheap bulk transport to outside and generally foreign processing facilities where plants already exist, and labor is tremendously cheaper.

What's at stake -- herring -- a probably 1980 1st whole value to processors at up to 100 Million Dollars, depending upon actual volume harvested, quality and current market development. If fully realized, and if property regulated, the large bulk of those dollars can enter the economy; and being new dollars to the State, would be magnified greatly in impact due to the related multiplier of the particular economies.

What is the worst case if HB 590 doesn't pass?

*Multitude of Canadian processing plants waiting idle, even greater Japanese trampers carrying lightly salted fish to Korea and Japan. These are being prepared now.

*1979 Togiak example

Trampers, 300-400 ft. tanker barges

*Once proven, these could transport from SE, CI, PWS, anywhere.

Since out-of-state operators have a greater tendency to attract non-resident fishermen and since this is a developing non-limited fishery, there are a multitude of fishermen from Bellingham, Seattle, Astoria, San Francisco, and S_____ wishing to join these operations.

In a worse case analysis, an out-of-state fisherman, tenderman, barge, or tramper operator, travel to Bristol Bay to harvest and transport the fish out. In 1979 the Bristol Bay case was about $600/ton. Alaska gets 3% or $18 return.

Extending the worst case to 40-50,000 state-wide harvest, Alaska gets $720,000-$900,000 in raw fish tax--nothing else.

Obviously this won't result, for all herring close to 50% value is likely lost.

We are required to capitalize in Alaska labor, identify each carton by packer origin, and our Alaska health number, where is this, and Alaska quality control on tanker operations hauling product to Canada or Korea?

* Processing does exist in Alaska. Bering Se st apply.
Canadian herring restrictions.

**Processing required 2 man days/ton for roe

16.10.162

It is policy of legislature process shall be eliminated
Ref. to item 3.

*No reason to utilize carcase.

1979 take (52,000,000 (9,000,000 is bait)
(900,000 kelp
(43,000,000 roe

Bristol Bay 70% salted

Herring is most numerous species in world.

**Salting accomplishes nothing.

(4) better manage the fishery by providing a visible means of determining how much gear is actually being fished."

Sec. 16.10.130. Penalties for violation of § 120 of this chapter. A person who violates § 120 of this chapter is guilty of a misdemeanor, and upon conviction is punishable by imprisonment for not more than six months, or by a fine of not more than $1,000 or by both. (§ 2 ch 26 SLA 1959)

Editor's note. — Section 4, ch. 103, SLA 1977, effective August 1, 1978, amended this section to read as follows: "**Sec. 16.10.130. Penalties for violation of §§ 120 — 125 of this chapter.** A person who violates §§ 120 — 125 of this chapter is guilty of a misdemeanor and upon conviction is punishable by imprisonment for not more than six months, or by a fine of not more than $1,000, or by both.

Section 1, ch. 103, SLA 1977, provides: "INTENT. It is the intent of this Act to require positive identification of shellfish pots or buoys, or both, used in the taking of king crab within areas in which the Board of Fisheries has regulations limiting the total amount of gear allowed per vessel in order to

(1) more adequately enforce shellfish pot limits for king crab;

(2) assist in preventing the theft of gear;

(3) prevent the transfer of gear to prohibited areas; and

(4) better manage the fishery by providing a visible means of determining how much gear is actually being fished."

Article 3. Herring Spawn.

Section
140 — 170. [Repealed]
172 Legislative policy on utilization of herring
173 Utilization of commercially taken herring

Secs. 16.10.140 — 16.10.170.
Repealed by § 2 ch 91 SLA 1970.

Sec. 16.10.172. Legislative policy on utilization of herring. The legislature finds the following: (1) extensive and valuable herring populations are available for harvest in waters subject to the jurisdiction of the state; (2) commercial markets are available for herring processed in several forms; (3) one processing technique presently employed involves deliberately permitting decomposition of the herring carcass to allow for removal and subsequent sale of the roe product, with the consequence that the flesh is unusable and discarded. The legislature declares that the process referred to in (3) of this section is wasteful and does not constitute utilization of this resource for the maximum benefit of the people. Therefore, it is the policy of the legislature that this process should be eliminated to the fullest extent possible. (§ 1 ch 9 SLA 1977)

Effective date. — Section 2, ch. 9, SLA 1977, provides: "This Act takes effect January 1, 1978."

Sec. 16.10.173. Utilization of commercially taken herring. (a) It is unlawful for a person, as defined in AS 01.10.060 and including a joint venture, to waste or to cause to be wasted any commercially taken herring.

(b) As used in this section, "waste" means the failure to use the flesh of commercially taken herring for reduction to meal, production of fish food, human consumption, food for domestic animals, scientific or educational purposes, or round herring bait. Normal, inadvertent loss of flesh associated with the uses described in this subsection which cannot be prevented by practical means does not constitute waste. The commissioner may authorize other uses of commercially taken herring not inconsistent with the intent of this section and § 172 of this chapter at his discretion upon receipt of a request accompanied by a detailed justification.

(c) For purposes of this section, "flesh" means all muscular body tissue surrounding the bony skeleton of the herring.

(d) The Board of Fisheries may adopt regulations under the Administrative Procedure Act (AS 44.62) it considers necessary for implementation of this section. The board may delegate its authority under this section to the commissioner.

(e) The provisions of this section do not apply to herring taken commercially in the Bering Sea (including appurtenant bays, sounds, estuaries, and water of the state) north of 56° North Latitude, until January 1, 1979. (§ 1 ch 9 SLA 1977)

Effective date. — Section 2, ch. 9, SLA 1977, provides: "This Act takes effect January 1, 1978."

Article 4. Migratory Fish and Shellfish.

Section
180 Legislative findings
190 Regulations
200 Unlawful taking prohibited
210 Unlawful sale or offer prohibited
220 Penalties for violation of §§ 200 and 210 of this chapter
230 Exemptions

Sec. 16.10.180. Legislative findings. The legislature finds and recognizes these facts.

(1) Migratory fish and migratory shellfish are present in commercial quantities inside and outside the territorial waters of the state.

(2) Migratory fish and migratory shellfish taken from the waters of the state are indistinguishable, in most cases, from those taken from the adjacent high seas.

(3) Substantial quantities of migratory fish and migratory shellfish move inshore and offshore intermittently and at various times during a given year and in so doing often enter and leave territorial waters of the state.

Effect of amendment. — The 1975 amendment deleted "rule or" preceding "regulation" near the middle of the section and substituted "Board of Fisheries" for "board" near the middle and near the end.

Cited in Hjelle v. Brooks, 424 F. Supp. 595 (D. Alas. 1976).

Sec. 16.10.220. Penalties for violation of §§ 200 and 210 of this chapter. A person who violates §§ 200 and 210 of this chapter is guilty of a misdemeanor, and upon conviction is punishable by a fine of not more than $5,000 or by imprisonment for not more than one year, or by both. (§ 5 ch 121 SLA 1960)

Sec. 16.10.230. Exemptions. Sections 180 — 220 of this chapter do not apply to

(1) those species of salmon in international waters of the Pacific Ocean which are regulated by the International Pacific Salmon Fisheries Commission or by laws of the United States or rules or regulations promulgated under those laws;

(2) the use of nets for fishing for or taking salmon for the purposes of scientific investigation authorized by state law; and

(3) existing laws and regulations prohibiting the taking of salmon by means of nets on the high seas. (§ 6 ch 121 SLA 1960)

Article 5. Transportation of Fish and Shellfish.

Section

240 Transportation of King, Dungeness or Tanner crab

250 Penalty

Sec. 16.10.240. Transportation of King, Dungeness or Tanner crab. No person may take out of, ship, transport, or send from this state any live King crab, species Paralithodes camtschatica, live Dungeness crab, species Cancer magister, or live Tanner crab, species Chionoecetes bairdi, except that all of these species may be shipped live via air freight after pre-packaging. (§ 1 ch 33 SLA 1962, am § 2 ch 3 SLA 1966; am § 1 ch 14 SLA 1969)

Legislative committee reports. — For report on ch. 5, SLA 1960 (SB 182), see 1960 House Journal, pp. 50, 51. For report on ch. 14 SLA 1969 (SB 172 am S), see 1969 House Journal, p. 216.

Sec. 16.10.250. Penalty. A person, association, or corporation violating § 240 of this chapter or contributing to or cooperating in the violation of § 240 of this chapter is guilty of a misdemeanor, and upon conviction is punishable by a fine of not more than $5,000, or by imprisonment for not more than one year, or by both. Each unlawful removal of live crab is a separate offense. Vessels and equipment used in or in aid of a violation of § 240 of this chapter may be seized and disposed of as provided in AS 16.05.190. Conviction under § 240 of this

Article 7. General Provisions.

Section	Section
905. Alien activities prohibited	930. Exempted activities
910. Penalty	940. Definitions
920. Certain acts made unlawful	950. Title of the chapter

Sec. 16.05.905. Alien activities prohibited. Alien persons not lawfully admitted to the United States are prohibited from engaging in commercial fishing activities or taking marine mammals in the territorial waters of the State of Alaska as they presently exist or may be extended in the future. (§ 1 ch 85 SLA 1964)

Sec. 16.05.910. Penalty. Any alien person who violates § 905 of this chapter is guilty of a misdemeanor, and upon conviction is punishable by a confiscation and forfeiture of the fishing vessel used in such violation, or by imprisonment of any such person for not more than one year, or by fine of not more than $10,000, or by all or any two of the foregoing punishments. (§ 2 ch 85 SLA 1964)

Sec. 16.05.920. Certain acts made unlawful. (a) Unless permitted by this chapter or by regulation made under this chapter, it is unlawful for a person to take, possess, transport, sell, offer to sell, purchase or offer to purchase fish, game or marine aquatic plants, or any part of fish, game or aquatic plants, or a nest or egg of fish or game

(b) No person may knowingly disturb, injure or destroy a notice, signboard, seal, tag, aircraft, boat, vessel, automobile, paraphernalia, equipment, building or other improvement or property of the department used in the administration or enforcement of this chapter, or a poster or notice to the public concerning the provisions of this chapter, or regulation adopted under this chapter, or a marker indicating the boundary of an area closed to hunting, trapping, fishing or other special use under this chapter. No person may knowingly destroy, remove, tamper with, or imitate a seal or tag issued or used by the department or attached under its authority to a skin, portion, or specimen of fish or game, or other article for the purpose of identification or authentication in accordance with this chapter or a regulation adopted under this chapter. (§ 28 art I ch 94 SLA 1959, am § 3 ch 110 SLA 1970)

State may regulate extraterritorial fishing. — Paramount rights in the seabed and subsoil beyond the three-mile limit were vested in the federal government. However, that principle of federal exclusivity does not preclude state regulation of fishery resources in the waters over the seabed. State v. Sarmiski, Sup. Ct. Op. No. 1339 (File No. 2544), 536 P.2d 929 (1976).

Enforcement of the state's regulatory scheme in a case involving scallop fishing activities in extraterritorial waters was within the sphere of the state's prerogative to regulate extraterritorial fishing. State v.

Criterion in determining cost of license. — In determining the amount to be paid for fishing gear licenses, the criterion is the residence of the operator of the gear. 1959 Op. Att'y Gen., No. 38.

Sec. 16.05.680. Unlawful purchases. It is unlawful for a person, his agent, or his representative

(1) to have in his employ a fisherman who is not licensed under § 480 of this chapter,

(2) to purchase fish from a fisherman who is not so licensed, if the fisherman is not exempt under § 660 of this chapter from the license requirement of § 480 of this chapter without regard to the employment or purchase, or

(3) to purchase fish from an association which is not exempt under § 662 of this chapter. (§ 10 art III ch 94 SLA 1959; am § 2 ch 96 SLA 1963; am § 2 ch 73 SLA 1970)

Editor's note. — Section 11, ch. 105, SLA 1977, effective January 1, 1978, amended this section to read as follows: "It is unlawful for a person, his agent, or his representative

"(1) to have in his employ, in the harvesting, transporting or purchasing of fish, a fisherman who neither is licensed under § 480 of this chapter nor is the holder of a permit issued under ch. 43 of this title,

"(2) to purchase fish from a fisherman who neither is the holder of a permit issued under ch. 43 of this title, nor is exempt under § 660 of this chapter, or

"(3) to purchase fish from an association other than one to which a permit has been issued under § 662 of this chapter."

Sec. 16.05.685. Processing on commercial crab fishing vessels. (a) It is unlawful to process any species of crab on a commercial crab fishing vessel unless

(1) the vessel remains within one registration area from the time the crab is caught to the time of dock delivery;

(2) the operator of the vessel notifies the department of proposed changes in location before moving to another registration area, and

(3) the operator of the vessel provides quarters for inspectors of the department who may inspect the crab catch on the vessel at any time.

(b) The restrictions set out in (a) of this section do not apply to processing aboard the fishing vessel for and as donations to charity, for consumption aboard the vessel, or for dockside retail sales from the vessel.

(c) In this section,

(1) "process" means to butcher, cook, chill, or freeze crab for commercial use,

(2) "registration area" means a specific king crab registration area as designated by regulation of the Board of Fisheries and includes the Bering Sea shellfish area and the western Aleutian Islands king crab area. (§ 2 ch 70 SLA 1974, am § 12 ch 206 SLA 1975)

Effect of amendment. — The 1975 amendment substituted "Board of Fisheries" for "Board of Fish and Game" in paragraph (2) of subsection (c).

MAR 11 1990
DEPARTMENT OF FISH AND GAME

Dear Sirs:

By unanimous vote, Fish and Game Advisory Board for Delta Junction, disapproved the passage of House Bill 599.

Reference: Buffalo

We believe Fish and Game has performed in an admirable fashion with the resources available. Some of the comments about the cantankerous Guild of the Buffalo herd. are guided only through extensive management and improved forage. We feel if domestic buffalo are released free ranging in the Delta area there will be little mingling of the herds and it will exceed the carrying capacity of the land.

Dear Mr. Lowe:

Thank you for the copy of your note to the Governor's Office regarding HB 599. We in the Department, especially the Game Division and the Board of Game, appreciate your support of our past management practices for the Delta bison herd. The concerns which your local Fish and Game Advisory Committee voiced are appropriate for consideration by the Legislature. Consequently, I have taken the liberty of forwarding your letter to the Resources Committee of the House and the Senate. Additionally, I have enclosed a draft letter of intent scheduled for introduction on the floor of the House when HB 568 is considered.

Again, let me repeat my personal thanks to the people of the Delta area for their strong support for maintaining the integrity of the wild, free-roaming buffalo.

Sincerely,

Russell W. Clark

Dear Sir:

By unanimous vote, Fish and Game Advisory Board for Delta ~~Junction~~, disapproved the passage of House Bill 699.

Reference: Buffalo

We believe Fish and Game has proposed as the most feasible option with the resources available. Some of the comments about the controlled Guided Hunts for buffalo bulls are granted only through extreme management and improved forage. We feel if the excess buffalo are released free range in the Delta area there will be total mingling of the herds and it will exceed the carrying capacity of the land.

DK:tlm

TESTIMONY TO HOUSE RESOURCES COMMITTEE ON HB 599

GREGORY F. COOK, EXECUTIVE DIRECTOR
BOARDS OF FISHERIES AND GAME
ALASKA DEPARTMENT OF FISH AND GAME
FEBRUARY 4, 1980

THE ALASKA BOARD OF GAME ENCOURAGES PRIVATE INDIVIDUALS TO RAISE EITHER MUSKOXEN, REINDEER, OR BISON FOR PRIVATE USES, SUCH AS LIVESTOCK. TO FACILITATE THIS, THE BOARD HAS PASSED REGULATIONS TO IMPLEMENT AS 16.40.010 (THE "SURPLUS ANIMALS" LAW). SIMILARLY, THE DEPARTMENT HAS ESTABLISHED PROCEDURES FOR IMPORTING ANIMALS INTO ALASKA SUCH AS BISON OR REINDEER. THESE EXIST' ; PROCEDURES ARE TODAY BEING USED SUCCESSFULLY. FOR EXAMPLE, THESE PEOPLE NOW HAVE PERMITS:

A) MR. BURTON, KODIAK - 100 BISON
B) MR. WOELKERS, SEWARD - 5 BISON
C) PUBLIC SCHOOL, SOLDOTNA - 3 BISON

THERE IS NO LEGAL IMPEDIMENT TO PRIVATE PERSONS OBTAINING AND IMPORTING ANIMALS.

THE BOARD AND THE DEPARTMENT SHARE A COMMON CONCERN: CONSERVATION OF WILDLIFE RESOURCES. OUR CONCERN DERIVES FROM THE SAME SOURCE: THE ALASKA CONSTITUTION. BECAUSE OF OUR STATE CONSTITUTION, THE BOARD AND THE DEPARTMENT ARE DUTY-BOUND TO SEE THAT EXISTING WILDLIFE RESOURCES--THE ANIMALS THEMSELVES AND THE HABITAT THEY DEPEND UPON FOR SURVIVAL--CONTINUE IN PERPETUITY.

IN 1979, THE BOARD OF GAME HELD A SERIES OF THREE PUBLIC HEARINGS TO DETERMINE WHETHER OR NOT DISPOSITION OF WILD, ALASKAN BISON INTO PRIVATE

HANDS WOULD BE ADVISABLE. THE OVERWHELMING PUBLIC RESPONSE (OVER 200 PEOPLE TESTIFIED) WAS NO± KEEP THE DELTA BISON AS A WILD, FREE-ROAMING HERD± ANY "SURPLUS" SHOULD BE KEPT FOR THE ENTIRE PUBLIC, NOT PRIVATE PARTIES.

THE BOARD OF GAME HAS HONORED THIS EXPRESSION OF PUBLIC WILL. BASED ON THE LARGE NUMBER OF APPLICANTS FOR HUNTING LICENSES, AND THE LARGE NUMBER OF PEOPLE WHO ENJOY USES OF THE BISON THAT DO NOT INVOLVE TAKING (SUCH AS VIEWING, PHOTOGRAPHY, ETC.), THE BOARD DID NOT DECLARE ANY BISON "SURPLUS" AND DID NOT TRANSFER ANY BISON INTO PRIVATE OWNERSHIP. INSTEAD, THE BOARD IS ENCOURAGING PRIVATE PARTIES TO PURCHASE BISON ON THE OPEN MARKET IF THEY WANT DOMESTIC ANIMALS. AS THE PUBLIC STATED, WILD HERDS SHOULD BE KEPT WILD FOR THE USE OF ALL ALASKANS.

IN SUMMARY, I WISH TO STRESS TWO THINGS:

1. THE BOARD DOES NOT OPPOSE RAISING BISON, REINDEER, OR MUSKOXEN PRIVATELY;

2. THE BOARD STRONGLY ENCOURAGES THE LEGISLATURE TO SUPPORT THE WILD HERDS OF BISON, MUSKOXEN, AND CARIBOU FOR THEIR UNIQUE VALUES TO THE ENTIRE PUBLIC. ALASKA'S WILD HERDS OF BISON AND MUSKOXEN ARE SMALL AND THEY NEED YOUR PROTECTION.

Telephone discusssion with Mr. Wendell Jackson, South Dakota Department of Fish, Game, and Parks, Division of Custer State Park, January 31, 1980.

The Custer State Park encompasses 73,000 acres. Because of its size it warrants a separate division within the Department of Fish, Game, and Parks. In the park are free ranging, managed herds of elk, sheep, and bison. The bison are the primary source of income and this income is used to fund the Custer State Park Division (it pays almost all administrative costs).

There are approximately 1400 head of bison in the park. They graze over an area of 25,000 acres and are rounded up once each year to vaccinate for brucellosis. Hunting permits are issued for the mature bulls (over 3 years old, the bulk are 4-10 years) for $1250.00. These permits are open to anyone, resident or not, and the average is 10 to 15 permits per year. The herd is decreased to 950 head annually, through hunting and auctioning. Of the 400 head which are auctioned, 200 are calves, the remainder being yearlings or two year olds. The average auction price is $603.00. The principal source of income for the park is from this auction. 500 of the remaining 950 head are mature cows. There are concessions and a motel in the park and a few bison are slaughtered annualy to provide meat for these services. The bison are classified as "domestic" (as they are in all states Mr. Jackson was familiar with) but they are "treated same as domestic stock with health requirements".

The elk are hunted only by permit. There are 170 permits issued

per year and 70% of the hunters issued permits get their game. Elk were slaughtered by the state in the past but issuing hunting permits seems to be a better method.

III ANALYSIS (See Fiscal Note Preparation Instructions, Section III)

Section 1 requires that the Commissioner of Revenue revoke or suspend certain fish processor and buyer licenses as governed by AS 44.62. A staff conferee and typing position will be required. Contractual hearing officer funds will be needed.

Positions - 1 PFT Hearing Officer, R 24 @ $3,339 = 40.1
Benefits - 6.0, FICA - 2.7, H.I. - 1.4 = 10.2

1 PFT Clerk Typist III, R 9 @ $1,277 = 15.1
Benefits - 2.4, FICA - 1.0, H.I. - 1.4 = 4.8

RE SSHB630 SEC. 2.AS16.10.294(C) IS AMENDED TO READ

(C) IF A LICENSED FISH PROCESSOR OR PRIMARY FISH BUYER FAILS TO FULFILL HIS OBLIGATION AS SET OUT IN AS16.10294 OR PURCHASES RAW FISH IN VIOLATION OF AS16.10.265, HIS LICENSE SHALL BE SUSPENDED FOR A PERIOD OF TIME THE COMMISSIONER DETERMINES IS APPROPRIATE. AFTER THREE SUSPENSIONS HIS LICENSE MAY BE PERMANENTLY REVOKED.

PACIFIC PEARL SEAFOODS STRONGLYOBJECTS TO THIS AMENDMENT TO SSHB630. WE FEEL THAT THE RESPONSIBILITY FOR POLICING THE FISHERMEN SHOULD NOT FALL ON THE PROCESSOR. THIS IS A JOB FOR THE DEPARTMENT OFPUBLIC SAFETY, IT IS WHAT THEY ARE GETTING PAID FOR. OUR EMPLOYEES WORKING THE FISH TENDERS ARE ONLY PART TIME AND ARE NOT HIRED TO TAKE THE RESPONSIBILITY OF HAVING OUR LICENSE SUSPENDED OR REVOKED.

THE LIABILITY TO US AS PROCESSORS IN THIS SITUATION IS FAR TOO GREAT AND CANNOT BE JUSTIFIED. WE CNNOT LIVE WITH IT OR OPERATE UNDER THOSE CONDITIONS. WE STRONGLY URGE--DEMAND--THAT THIS AMENDMENT BE DELETED FROM SSHB630.

BY: DATE:

SUMMARY

(1) RELATED BILLS (SIMILAR OR CONFLICTING)

(2) OTHER AGENCIES AFFECTED BY BILL

(2) a. ORGANIZATIONAL SUPPORT FOR BILL	(2) b ORGANIZATIONAL OPPOSITION TO BILL

(3) PROGRAM EFFECTS OF BILL

Would be no fiscal impact as long as applicant are required to use existing field offices of the Division of Motor Vehicles.

(4) FISCAL IMPACT ☐ NONE ☐ FISCAL ANALYSIS ATTACHED

(5) AMENDMENTS PROPOSED

#1: Page 2, line 1, change AS28.15.080 to 28.15.111 (080 no longer exists)

#2: Change 16.10.26" (c) from "class B misdemeanor" to "Class A Misdemeanor in accordance with AS 11.56.210.

(6) COMMENTS

The bill does solve a major problem being now detected in the various fisheries throughout the state, that being the lease or loan of entry permits.

Personal identification is important to the integrity of the permits and this bill does support the picture ID, and the inspection by peace officers. Do not see any reason for another type of identification card, however as bill permits two forms of photographic ID presently in use, those being the drivers license, and/or personal identification card. The personal identification card presently has room to include the entry permit number if so desired.

IN THE HOUSE BY THE RESOURCES COMMITTEE

CS FOR SPONSOR SUBSTITUTE FOR HOUSE BILL NO. 630

IN THE LEGISLATURE OF THE STATE OF ALASKA

ELEVENTH LEGISLATURE - SECOND SESSION

A BILL

For an Act entitled: "An Act relating to limited entry and providing penalties for the taking and sale of fish without an entry permit or interim-use permit."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 16.10 is amended by adding new sections to read:

Sec. 16.10.265. PURCHASE OF FISH FROM PERMIT HOLDERS. (a) A licensed fish processor or primary fish buyer may purchase raw fish only from a seller who holds an entry permit or an interim-use permit issued or transferred to the seller in accordance with AS 16.43.

(b) When a fisherman sells fish to a fish processor or primary fish buyer, the fisherman shall have in his possession an entry permit or interim-use permit issued or transferred to him under AS 16.43 and

(1) a picture identification card; or

(2) if the entry permit or interim-use permit was transferred to the fisherman under AS 16.43.180, an emergency transfer slip completed in accordance with AS 16.43.180 and with regulations of the Alaska Commercial Fisheries Entry Commission adopted under AS 16.43.180.

(c) If requested by a fish processor or primary fish buyer or by a peace officer, the fisherman shall present the picture identification card or emergency transfer slip required to be in his possession under (b) of this section for inspection.

(d) If a licensed fish processor or primary fish buyer purchases raw fish in violation of this section, the commissioner of revenue shall suspend his license for a period of time the commissioner of revenue

determines is appropriate. After three suspensions his license may be permanently revoked by the commissioner of revenue. Proceedings to suspend or revoke a license under this subsection are governed by the Administrative Procedure Act (AS 44.62).

(e) In (b)(1) of this section "picture identification card" means an identification card issued by a local, state, or federal agency which bears a photograph of the person to whom the card is issued. A "picture identification card" may include, but is not limited to, a motor vehicle operator's license issued under AS 28.15.080, an identification card issued under AS 18.65.310, or a fishermen's identification card issued under AS 16.10.267.

Sec. 16.10.267. FISHERMEN'S IDENTIFICATION CARDS. (a) Upon payment of a $5 fee, the Department of Public Safety shall issue a fishermen's identification card to a person who requests one. The fishermen's identification card shall be identical to an identification card issued under AS 18.65.310 except that the fishermen's identification card may include the number of an entry permit possessed by the person identified on the card.

(b) A person may obtain a fishermen's identification card by applying to the Department of Public Safety on forms and in the manner prescribed by the Department of Public Safety.

(c) A person who knowingly makes a fraudulent written statement or application for a fishermen's identification card concerning age, race, sex, entry permit number or other identifying characteristics, is guilty of a class B misdemeanor.

(d) It is a class B misdemeanor for a person to possess, use, produce or manufacture a fraudulent fishermen's identification card.

(e) It is a class B misdemeanor for a person to allow a fishermen's identification card issued to him to be used by another person.

* Sec. 2. AS 16.10.296 is amended to read:

Sec. 16.10.296. DEFINITIONS. In AS 16.10.265 - 16.10.296 [AS 16.10.270 - 16.10.296], unless the context otherwise requires,

(1) "commissioner" means the commissioner of labor;

(2) "fish" means any species of aquatic fin fish, invertebrates and amphibians, shellfish, or any other raw fishery resource, in any stage of its life cycle, found in or introduced into the state;

(3) "fish processor" means a person engaging or attempting to engage in a business for which a license is required under AS 43.75.010 - 43.75.090;

(4) "primary fish buyer" means a person, other than a cooperative corporation organized under AS 10.15, engaging or attempting to engage in the business of originally purchasing or buying any raw fishery resource in intrastate, interstate, or foreign commerce.

* Sec. 5. AS 16.43.360(a) is amended to read:

(a) A person who violates or assists in the violation of a provision of this chapter or a regulation promulgated under this chapter is, upon conviction, guilty of a misdemeanor and is punishable by a fine of not more than $5,000 for a first conviction, and a fine of not more than $10,000 for a second or third conviction. Upon a third conviction, the person shall forfeit all interim-use and entry permits held by him and loses eligibility for future issuance or transfer of interim-use or entry permits for a period of three years. Upon a first or second conviction under this section, the court may in its discretion order a forfeiture of interim-use or entry permits held by him as well as a loss of eligibility for future issuance or transfer of interim-use or entry permits or order a suspension of fishing rights under interim-use or entry permits held or to be held by him for a period of not more than three years. This subsection does not apply to violations of AS 16.43.

140(a).

* Sec. 4. AS 16.43.360 is amended by adding a new subsection to read:

(f) A person who violates the provisions of AS 16.43.140(a), upon conviction, shall forfeit the value of the fish caught by the person in the course of the violation. In addition, the person is subject to the following penalties:

(1) a fine of not less than $1,000 or more than $5,000 upon the first conviction;

(2) a fine of not less than $5,000 or more than $10,000 and loss of all fishing privileges in the state, including subsistence, sport and commercial fishing privileges, for two years after the date of conviction upon the second conviction;

(3) forfeiture of the vessel and gear used in the violation and imprisonment for a period of not less than three months or more than one year upon each conviction after the second.

SENATE BILL NO. 391

IN THE LEGISLATURE OF THE STATE OF ALASKA

ELEVENTH LEGISLATURE - SECOND SESSION

A BILL

For an Act entitled: "An Act relating to the taking and sale of fish without an entry permit or interim-use permit."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 16.10 is amended by adding a new section to read:

Sec. 16.10.265. PURCHASE OF FISH FROM PERMIT HOLDERS. A licensed fish processor or primary fish buyer may purchase raw fish only from a seller who holds an entry permit or an interim-use permit issued or transferred to the seller in accordance with AS 16.43.

* Sec. 2. AS 16.10.294(c) is amended to read:

(c) If a licensed fish processor or primary fish buyer fails to fulfill his obligations as set out in AS 16.10.290 or purchases raw fish in violation of AS 16.10.265, his license shall be suspended for a period of time the commissioner determines is appropriate. After three suspensions his license may be permanently revoked.

* Sec. 3. AS 16.10.296 is amended to read:

Sec. 16.10.296. DEFINITIONS. In AS 16.10.265 - 16.10.296 [AS 16.10.270 - 16.10.296], unless the context otherwise requires,

(1) "commissioner" means the commissioner of labor;

(2) "fish" means any species of aquatic fin fish, invertebrates and amphibians, shellfish, or any other raw fishery resource, in any stage of its life cycle, found in or introduced into the state;

(3) "fish processor" means a person engaging or attempting to engage in a business for which a license is required under AS 43.75.010 - 43.75.090;

(4) "primary fish buyer" means a person, other than a co-operative corporation organized under AS 10.15, engaging or attempting to engage in the business of originally purchasing or buying any raw fishery resource in intrastate, interstate, or foreign commerce.

* Sec. 4. AS 16.43.360(a) is amended to read:

(a) A person who violates or assists in the violation of a provision of this chapter or a regulation promulgated under this chapter is, upon conviction, guilty of a misdemeanor and is punishable by a fine of not more than $5,000 for a first conviction, and a fine of not more than $10,000 for a second or third conviction. Upon a third conviction, the person shall forfeit all interim-use and entry permits held by him and loses eligibility for future issuance or transfer of interim-use or entry permits for a period of three years. Upon a first or second conviction under this section, the court may in its discretion order a forfeiture of interim-use or entry permits held by him as well as a loss of eligibility for future issuance or transfer of interim-use or entry permits or order a suspension of fishing rights under interim-use or entry permits held or to be held by him for a period of not more than three years. <u>This subsection does not apply to violations of AS 16.43.-140(a).</u>

* Sec. 5. AS 16.43.360 is amended by adding a new subsection to read:

(f) A person who violates the provisions of AS 16.43.140(a), upon conviction, shall forfeit the value of the fish caught by the person in the course of the violation. In addition, the person is subject to the following penalties:

(1) a fine of not less than $1,000 or more than $5,000 upon the first conviction;

(2) a fine of not less than $5,000 or more than $10,000 and loss of all fishing privileges in the state, including subsistence,

sport and commercial fishing privileges, for two years after the date of conviction upon the second conviction;

(3) forfeiture of the vessel and gear used in the violation and imprisonment for a period of not less than three months or more than one year upon each conviction after the second.

IN THE HOUSE BY ANDERSON

CS HOUSE BILL NO. 665

IN THE LEGISLATURE OF THE STATE OF ALASKA

ELEVENTH LEGISLATURE - SECOND SESSION

A BILL

For an Act entitled: "An Act relating to late applications for limited entry permits; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. FINDINGS. The legislature finds that

(1) many persons who were otherwise qualified for limited entry permits have not received permits solely because of their failure to submit an application to the Alaska Commercial Fisheries Entry Commission before the closing date for applications set by the commission in accordance with AS 16.43.260(b);

(2) in order to prevent economic distress among fishermen and their dependents, to regulate entry into the commercial fisheries without unjust discrimination, and to ensure that permits are awarded on the basis of hardship, as defined in AS 16.43.250, it is necessary to ensure that persons eligible for permits are not denied permits solely because of a failure to apply in a timely fashion.

* Sec. 2. APPLICATIONS FOR LIMITED ENTRY PERMITS. Notwithstanding the provisions of AS 16.43.260 relating to closing dates for application periods, the Alaska Commercial Fisheries Entry Commission shall accept applications for limited entry permits, for those fisheries for which the application periods have closed, from all persons who meet the eligibility requirements of AS 16.43.260(a) but who failed to apply for limited entry permits for the fisheries within the time period established by the Alaska Commercial Fisheries Entry Commission for the fisheries. Persons who have previously submitted applications to the Alaska Commercial Fisheries Entry Commission after

the closing dates of the application period for the fisheries, but before the effective date of this Act shall be considered to have applied under this section. The Alaska Commercial Fisheries Entry Commission shall process applications received under this section as if they had been submitted during the application period set by the commission, except that the commission shall afford an additional reasonable period of time for the submission of supporting evidence. The application period established in this section shall open on the effective date of this Act and shall close on December 31, 1980. Commercial Fisheries Entry Commission shall substantially complete the processing of timely applications before the implementation of this act.

* Sec. 3. The Alaska Commercial Fisheries Entry Commission shall process applications received under sec. 2. of this Act in accordance with regulations applicable to the fishery into which entry is sought except as otherwise provided in sec. 2 of this Act. The Alaska Commercial Fisheries Entry Commission shall issue permits to persons applying under this Act who demonstrate hardship equal to that shown by persons previously issued permits, except that no permits shall be issued to persons who would suffer only minor economic hardship from exclusion under AS 16.43.250(c). The Alaska Commercial Fisheries Entry Commission may issue permits in excess of the maximum number of permits established for a fishery under AS 16.43.230 - 16.43.240 for the purposes of this section. This section does not authorize the Alaska Commercial Fisheries Entry Commission to revoke a permit previously issued.

* Sec. 4. This Act takes effect immediately in accordance with AS 01.10.-070(c).

MEMORANDUM State of Alaska

TO: Robert J. Simon
Chairman
Commercial Fisheries Entry
Commission

DATE: March 6, 1980

FILE NO:

TELEPHONE NO:

FROM: Derrill L. Johnson
Director of Administration
Commercial Fisheries Entry
Commission

SUBJECT: Financial Analysis of HB-665 - Late Application Bill

You asked that I prepare a preliminary estimate of the incremental costs should HB 665 be enacted. I utilized the following assumptions: (1) we will receive 5,000 handtroll applications in FY 81; (2) the late application period will generate 5,000 additional applications; (3) the 600 case backlog in adjudications is to be completed prior to awarding permits under the new application period; and (4) the Commission's intent is to finalize the processing of the new applications in two years. There is no provision for application assistance or other type of professional services added to this estimate.

You have noted that HB 665 does not have a Finance Committee referral at present. Additionally, there seems to be at least some question as to whether the bill will be amended in a manner which will affect the fiscal impact. Hence, I hope this memorandum suffices until a formal fiscal note is required. Because of the short time allowed to complete this estimate, I believe there could be a 5% change in the final figure of 1,154.7 even if the bill is not amended.

Dear Mr Osterback,

I am writing to you concerning HB 665, Sate appreciation for Limited Entry Permits.

My father Simeon Yuklek and Stepfather Stephan Lewis both eligible to apply for permits. My brother Stephan Lewis was not old at the time of application. My father was a Yupik speaking Eskimo, who spoke little English and didn't know about the application process. My father still doesn't read and write at the time and my brother I had just graduated. I have just moved of my wife's home village to Ekwok to be closer to her family. By the time I found out about the application period

My brother died in 1975 and my father in 1977. Since I am the only living male in the Yukluk family, I think I should be allowed to apply for a permit and carry on with the only livelihood I have ever known, fishing.

When you vote on HB. 665 please consider my situation.

Sincerely yours,

April 23, 80

Alvin Osterback

Re: H.B. 665 - Late Applications for Limited Entry Permits

Dear Sir:

I wish very much to be able to apply for a limited Entry Permit.

It was my life time occupation since I was a young man for only 3 months out of a year. Some times less than 3 months.

Thank You,
Sincerely Yours,
John Moore

P.S. Sometimes I need some monies to get by the winter seasons.

HB 665

Alexander Creek
4-24-80

Alvin Austerback
House Resource Com.

Dear Sir:

For five years I fished on the "West" side of Nushagak Bay, Bristol Bay. Fish returns were then, from '68 thru '72, very poor & fishing time greatly restricted. It was a poor living. Then came "limited entry". I had few funds then for any purpose & didn't relize by not applying that I would have my chance to apply.

I still have my beach site & my old F-number (2337) but have had to fish part time for someone else

because I have no entry permit.

I want to make a living for myself & feel I can now, that management has improved our in-shore fish run. To do this I need to have my "entry permit".

Please support House Bill # 665.

Sincerely

Karen Thiele

April 27, 1980

House of Representatives
State of Alaska
Allen Osterback

Am writing you in regards to reopening the application period for fishing permits in Bristol Bay.

We fished the Bay beginning in 1948 thru 1952, two years, then in 1965, 1966, 1967, 1968, 1969, 1970 and 1972. I held both drift and set net licenses and fished both alternately, in the years 1967 thru 1972 with 1971 being the only year when I did not do any drift gillnetting.

I did not apply for a drift permit for two reasons, first, I thought I could make a living every year on the beach setnetting, and didn't want to afford the $20.00 for the drift permit.

Since 1973 we've had a severely curtailed season on the Kvichak section every year since then

except for 1979 when we were allowed to fish the entire season. Even 1975 when we expected, and had, a good run we weren't allowed an opening on the Kuchak section until the 6th of July, when the run was at least half over. For the above reasons I would like a chance to re-apply for a drift gillnet permit so I can continue to fish while the Kuchak section is closed for escapement reasons.

I thank you for proposing to reopen the application period for gillnet fishing permits in Bristol Bay.

Respectfully,
Earl Tuck

Re: H.B. 665

Honorable Gentlemen:

I applied for a permit to fish in Alaska in 1977 and was denied and given 30 days to appeal in Suprior Court, which I did and lost. I appealed to the Supreme Court, but on the basis of the Apokedak decision my attorneys deem it futile to proceed. They did, however, tell me about H.B. 665. I encourage you to pass it.

In my case I did not recieve a notice of the Permit System.

I fished in Alaska from 1929 to 1942 when I was frozen on a job in a shipyard. In 1953 I went back and fished through 1970 when I came down with double lobar pneumonia and emphesema and was in and out of hospitals for the next four years. In 1976 I felt well enough to go fishing but was told it was closed. So in 1977 when it was opened for those who did not have enough points to qualify in 1974 and 1975 I decided to apply since I had more than the required amount of points. I was denied because I had not fished in 1974 and 1975. It was at this time I was given 30 days to appeal to the Superior Court.

In the case of the Treaty Indians vs. Washington State, the Federal Government sent out officials who served injuctions on each and every fisherman that held a license and I think that the Entry Commission could at least have sent notices by registered mail.

I hope you can find a way to solve some of the inequities involved as to the n 'ives, residents, and non-residents that-shall we say-"missed the boat".

May the Legislature give every effort to pass H.B. 665.

Respectfully yours,

Britanus K. Vik

Re: House Bill 665
Limited Entry-Late Applicants

Dear Representative Osterback:

I would like to take this opportunity to discuss the problem addressed by House Bill 665 prior to the tele conference hearing currently scheduled for March 3, 1980. This bill would establish a new application period for those persons who failed to submit an application within the time periods set for their particular fishery.

The reasons for the failure to apply in time are numerous and were by and large outside of the individual person's control. The chief reason was the lack of understanding by persons that there was an application period and that they were in fact eligible to apply. These problems were most prevalent in the rural areas of the state where people were isolated from the communications media and application assistance. Language difficulties posed a particular problem in those areas of the state (Bristol Bay and the Yukon-Kuskokwim area) where English is a second language.

This bill does not make any substantive changes in the Limited Entry Act, and the eligibility and point requirements would remain the same following passage. It would merely allow those persons who were originally eligible for a permit to now apply and recieve that for which the law states they are otherwise qualified.

This legislation is important for a number of reasons. First of all, it is obviously very important to the individual person who now cannot pursue his or her chosen occupation. This is particularly poignant in the case of rural Alaskan residents who do not have other employment opportunities available to them. Secondly, it is important to rectify an injustice which resulted from the implementation of a radically new law.

Finally, this legislation would not have any appreciable effect on the condition of Alaska's fisheries. It would mean a very small increase in the number of permits in any particular fishery and the majority of these new permits would be issued to Alaskan residents who were least able to comply the application procedure for the reasons mentioned above.

I plan to present further testimony to your committee in Juneau on March 3rd. If you have any specific questions, or have need for further information, please feel free to contact me.

Sincerely,

Re: HB 665

Gentlemen:

Adoption of House Bill 665 is respectfully urged.

We have referred several people to the Alaska Commercial Fisheries Entry Commission relative to what would have appeared to be great injustices committed by the Commission itself, including situations involving illness or disability.

The prior permit holders were not given notice in some instances, and inadequate notice in other instances. Additionally, our clients have written the Commission and have received no acknowledgment of receipt of the communications, and that has been the experience of this writer personally. When acknowledgment is belatedly made by the Commission, it then flips the coin by stating contact was not timely, totally ignoring earlier communication.

We are all aware that innocent mistakes, oversights, etc., exist. However, the citizenry may well be warranted in its belief relative to the Commission that it has intentionally "pigeon-holed" or "round filed" communications with citizens having business with it.

I am aware of the seriousness of this allegation, as I am myself an elected official, serving as Prosecuting Attorney for this County. I sincerely believe that the State of Alaska has by bureaucratic fiat deprived people of their property rights, accomplished not by reason of the law being incorrect, but rather

Continued Page Two:

by administrative error, ommission, ove ight or other excuse to reduce workload.

I trust that these comments will be of assistance to you.

Very sincerely,

George F. Hanigan

MEMORANDUM

TO: House Resources Committee,
Nels A. Anderson, Jr.

FROM: Fred Torrisi/David Snyder

RE: H.B. 665 - Limited Entry Late Applications

DATE: March 3, 1980

A. The Problem

In 1975, a number of persons failed to file applications for limited entry permits. Most of these persons live in rural Alaska and cannot afford to purchase permits. So despite the fact that they had enough points to qualify for their permits, they cannot obtain them and are consequently forced out of the only occupation available, unless they can find employment crewing for someone else.

This situation was caused by many factors. The Commercial Fisheries Entry Commission provided application assistance which reached many people, but without such assistance those persons not literate in English had no chance of understanding the 8 page application and accompanying 41 page instruction booklet. In the villages of Bristol Bay, many people were not planning to fish because of the poor predictions for 1975 and didn't realize that a failure to apply would forever bar them from fishing. Older persons under the same misconception didn't apply while their daughters and sons applied but failed to qualify --leaving the entire family without permits.

Rural Alaskans were impacted the most by the application process because of their lack of sophistication and their geographical and cultural remoteness from Limited Entry. And those same persons,--who perhaps speak only Yup'ik and don't understand Limited Entry even today--are precisely the ones unable to purchase permits on the (inflated) open market. [1]

[1] The continuing problems encountered by rural Alaskans are discussed in Dr. Langdon's report to the Limited Entry Study Group, January 17, 1980, see, e.g., pp 25-26, 49-54, 66-73; see also J. Anthony Koslow's (1980) report for the legislature "Limited Entry Policy and the Bristol Bay Salmon Fishermen,: recommendation #4 at p.22.

B. H.B. 665

House Bill 665 requires the Entry Commission to accept applications for another six months and to issue permits to those persons providing enough points under the regulations already in effect. It is clear that most of these people will be resident Alaskans and no one not eligible in 1975 will be made eligible by this law.

The bill is necessary because the Entry Commission does not think it has the authority to accept applications now and it hasn't accepted any (except for those in which Postal or Commission error was proved) since May 18, 1975. While some fisheries already have the number of permits originally authorized by the Commission, the "optimum number" has not been determined for any fishery and there is no evidence that the acceptance of late applications will adversely impact any of them. It may well be found that improved management techniques and the 200 mile limit have increased the number of returning salmon in Alaskan waters; if not, the Commission should commence with the "buy back" program already authorized by the legislature.

C Commission Opposition

The Entry Commission on February 25, 1980, released its analysis of HB 665, suggesting that it not be passed or that it be substantially amended. The main thrust of its content was that there were so many persons entitled to permits that didn't get them, that serious effects on the existing program would result if applications were accepted now. The Commission also raises many administrative problems.

It is ironic that the Commission uses the magnitude of its own failure to oppose the attempt to resolve the problem. While no State monies are required to implement HB 665, it might be appropriate to consider a Commission request for funds to hire an additional person or two; it is certainly not appropriate to consider administrative inconvenience to the Commission on the same level as the hardship caused those men and women who failed to obtain the permit to which they were entitled by statute. (In today's market, the administrative cost does not amount to the value of even one entry permit in some fisheries.)

The Commission memorandum of last week is too lengthy to answer in detail here; but we ask that none of its conclusions be accepted without further discussion. For example, its methodology in estimating the number of entry permits which would be issued as a result of this bill is flawed by two basic assumptions: (1) that the set of persons who failed to apply have identical (statistically) characteristics of past participation and economic dependence as those who applied in 1975 and (2) that everyone who failed to apply in 1975 would apply in a new application period. Neither assumption is valid and the estimates of new permits made in the report are twice as high as can actually be expected.

We remain available at the above phone number to discuss HB 665 with any interested legislator.

Feb. 26th 1980

RE. House Bill 665
Limited Entry Late Applicants

Dear Mr. Alvin Osterback
I cant make it to the hearing in Dillingham march 3rd so I am writing to let you know that I would like to House bill is passed.
I made a late application for my set net permit and hope to get it if the bill is passed. Please vote for the bill

Re: H.B. 665

Dear Representatives Osterback and Miles:

I have been asked by clients, some of whom are your constituents, to propose an amendment to the late applications bill. My clients are not late applicants, but are fishermen who have submitted timely applications but have not had their qualifications for an entry permit thoroughly reviewed by the Commission. Their problem is that they have not made timely requests for an administrative hearing or have not timely submitted evidence supporting point claims under the regulations. H.B. 665 as it now reads does not apply to such individuals.

For this reason, we would like to see the addition of one change in the bill which would permit their applications to be evaluated in the same manner as those of late applicants. We suggest the inclusion on page 2, line 7 after the word "evidence" of one sentence to read:

> "Persons who have previously submitted applications may raise new issues under the regulations and may submit supporting evidence and shall have their applications reviewed in the same manner as individuals who initially failed to apply but meet the eligibility requirements of AS 16.43.260(a)."

This single amendment in the bill would not contribute significantly to the workload of the Commission's applications processing staff and would insure that all fishermen received

a thorough and impartial review of their qualifications for a permanent entry permit. Your consideration of this amendment is greatly appreciated.

Yours very truly,

Loren Domke

March 4, 1980

Representative Al Osterback,
Chairman, House Resources
House of Representatives
Pouch V
Juneau, Alaska 99811

Dear Representative Osterback:

Enclosed are copies of letters written to Representative Nels Anderson that were read into the record at the public teleconference on HB665 yesterday for your record.

Also enclosed is a copy of a resolution from the Bristol Bay Native Association that they ask that I telecopy you today to include in the record for public testimony on HB665. I have just telecopied this resolution to your office via the Juneau Information Office.

Enclosed is a copy of all the participants in yesterday's public teleconference.

I would like to thank you for taking the time to make sure that all our witnesses were heard from Bristol Bay since many of them were here from villages in the outlying area as far away as Egegik and Dondalton. They expressed their appreciation in being heard, too.

This teleconference was quite fascinating to people who had never participated in one before. It was aired live over the local radio station KDLG which you know reaches down to your neck of the woods as well as most of Bristol Bay.

We had at least 50 people here in my office which comfortably holds 10 people, so you can imagine the crowd.

Sincerely,

Dorothy M Larson

BOARD EXECUTIVE COMMITTEE

RESOLUTION NO. 80-11

WHEREAS, many rural residents of the State of Alaska, in particular the Bristol Bay region have not received limited entry permits for which they were otherwise qualified, solely because of their failure to submit timely applications to the Commercial Fisheries Entry Commission; and,

WHEREAS, the individual persons failure to submit a timely application was due to factors beyond his or her control: namely, the lack of understanding by such individuals of their rights under the Limited Entry Act and of the need to submit an application or be forever barred from pursuing their livelihood; the shortness of the application period; the geographical remoteness of the communities in which such individuals lived from the centers of communication and application assistance, and the misinformation prevalent concerning the standards of eligibility for limited entry permits; and,

WHEREAS, these individuals are now prevented from participating in one of the few only occupations they have known, or that is available to them in their community; and,

WHEREAS, the State of Alaska has an obligation to rectify the injustice caused by the implementation of the Limited Entry Act.

NOW THEREFORE BE IT RESOLVED that the Bristol Bay Native Association supports House Bill 665 and the establishment of a new application period for limited entry permits.

RE: HB 665

Dear Mr. Miles and Mr. Osterbach:

I'm an attorney in Bethel who has worked with limited entry problems in the Bethel service area for the past three and a half years, first as an attorney with Alaska Legal Services, and now with Nunam Kitlutsisti. I would like to take this opportunity to make some very brief comments on HB 665.

HB 665 is a very narrow bill aimed at a specific problem: persons who have enough points to obtain a permit but failed to apply in a timely fashion. It is my understanding that the Commission is claiming that the passage of such a bill will result in a flood of new permit holders which will overcrowd the fishery. My experiences do not lend credence to this assertion. During the past three and one-half years I have spoken with approximately 250 individuals concerning the problems they have had with limited entry permits. Out of that number only 10 or 15 would receive permits if a new application period were opened. Although the Commission might expect numerous applications if such an application period were opened, I do not believe that the administrative problem which this would create justifies the continued denial of permits to persons who have enough points but failed to apply in a timely fashion.

These persons who had enough points but failed to apply on time were not at fault. There seem to be two classes of persons who failed to apply on time. The first class consists of individuals who were not physically present in the area during the application period and had no knowledge of the limited entry system or application period until it was too late. The reasons for such absence are varied: military service, higher education, and incarceration are but a few. The second class of such individuals are generally older, fail to understand English, and are culturally and geographically isolated from the Commission's chain of paperwork. Both classes of individuals were long-time commercial fishermen who depended upon the industry for their income and will suffer severe financial hardship if they continue to be excluded from the fishery. I can see no rational justification for continuing to exclude this handful of individuals from the fishery.

The one concern which I have about HB 665 is that it does not go far enough. The bill would simply open a new application period. The bill does not guarantee that persons with sufficient points will receive permits since they are still required to apply for a permit. Needless to say, many of the reasons that persons failed to apply during the original application period, such as linguistic differences, cultural and geographical isolation, and absence from the State, continue to the present day, and it might be expected that these reasons will continue to frustrate the smooth flow of paperwork. Consequently, I recommend that the bill contain a provision that simply requires the Commission to inspect its records and automatically issue permits to those persons with a sufficient number of points. Such a provision would insure that the problem which the bill seeks to address is actually corrected.

In the absence of such a provision, the bill should require a lengthy application period (at least one additional year) coupled with strong outreach requirements insuring that persons with sufficient points are notified by the Commission of the new application period and informed that they appear to qualify for a permit.

Sincerely,

Kenneth R. Hamm

HB 665

Dear Mr. Osterback,

I am writting to you in the support of the house bill 665. This bill must pass & I hope it does for the sake of us Alaskan Fishermen. We have fished all our lives in Alaska until they came out with this limited entry hogwash. How many of us Alaskans that depends on seasonal fishing to support our families, must work elsewhere for odd jobs which hardly pay to support a family. And most of us fishermen in Alaska are not skilled in most good paying jobs to support our families

Sincerely Yours
Ruben Lincoln

Panel V
Juneau, Ak. 99801

Dear Mr. Osterback,

— I understand they had a meeting in Willingham Mar. 3rd and I cannot. — I might go to that meeting cause it costs hauling mail from Akhiok to Willingham then back to Akhiok. — I had history of commercial license back in 1957, 1960, 1961 1962, 1963, 1964, 1965; 1966, 1967, 1968, 1969, 1970, 1971, 1972 1973 ~~1974~~ 1975, 1976, 1978, 1979, but did not fish in 1974 cause — I was working for Alaska Fisheries in Seattle. — I then — I filled out application for permit in 1974 but, didn't get enough point for permit. — In 1967 I fished in Chignik Area in 1968 or 69 — I fished with my older brother he went then I

→

fished myself at the end or latter part of the season at least two weeks using a company boat. In 1960 right up to 1979 I fished with my father (Earl). I've been trying, trying get my permit. I went to Alaska Legal Services office in Dlg about permit they had told me about having a meeting in Dlg. Mar. 3rd to testify for a permit eventually I didn't go to the meeting they had in Dlg. I hopefully will put another application for a permit.

Sincere
John Westcott

Mar 13, 1980

Dear Mr. Ostrosack

I support House Bill 665
Cause when the Limited Entry
Permits came in and when I had to
go to work out of town, and I
had my wife take the application
to Alaska Legal Services, and they
told her I didn't have the points
and they told her not to send in
my application in, so she didn't.
and when I got home from out
of town. she told me and I was
late, and then I have sent in my
Application in Juneau. couple of
times. and I get the same Answer
all the time. and now that I am
back. where I was born, and want
to live here. since most of my
Children are on their own. and
the wife want to live here.

our

I have a hard time to make a living, since she dont want me to leave here for more that a time. and that what it takes if I have to work for wages. but if I could fish most of the time. I wont be gone over six weeks then I would be home with her. and the two children that is still home with me.

Sincerely yours.
Vinnie Rolfe

from Bethel

March 3, 1980

Dear People,

My name is Joseph A. Therchik and I am a Fisherman for many years starting from when I was a young man.

My problem is this, when the deadline came around for applying for permits I was away from home attending training. I heard nothing about this deadline until I returned home to fish in 1976 and the deadline had passed by then. I tried to apply even though it was latebut was denied because the deadline had passed.

I am in favor of this House Bill 665 and feel it should be passed so that people as myself who missed the deadline can get their permits and make a living. If I got my permit I would fish it and this would help me with my many bills as I support my parents.

THANKYOU,

Joseph A. Therchik

RESOLUTION NO. 80-10

A RESOLUTION SUPPORTING HOUSE BILL 665 AND THE ESTABLISHMENT OF NEW APPLICATION PERIOD FOR LIMITED ENTRY PERMIT.

WHEREAS, many rural residents of the State of Alaska, including the Yukon-Kuskokwim Delta region have not received limited entry permits for which they were otherwise qualified, solely because of their failure to submit timely applications to the Commercial Fisheries Entry Commission; and,

WHEREAS, the individual persons failure to submit a timely application was due to factors beyond his or her control: namely, the lack of understanding by such individuals of their rights under the Limited Entry Act and of the need to submit an application or be forever barred from pursuing their livelihood; the shortness of the application period; the geographical remoteness of the communities in which such individuals lived from the centers of communication and application assistance, and the misinformation prevalent concerning the standards of eligibility for limited entry permits; and,

WHEREAS, those individuals are now prevented from participating in one of the few or only occupations they have known, or that is available to them in their community; and,

WHEREAS, the State of Alaska has an obligation to rectify the injustice caused by the implementation of the Limited Entry Act,

NOW, THEREFORE, BE IT RESOLVED that the Lower Yukon/Kuskokwim Aquaculture Association supports House Bill 665 and the establishment of a new application period for limited entry permits.

HB665 in favor

Alvin Osterbeck
House Resources Committee
Alaska Legislature
Juneau,

April 19, 1982

Dear Mr. Osterbeck

I have set netted in Cutbank in South Naknek since 1959. I have fished every year since 1959 except for one year in 1972.

When I went to get my permit, the guy who was helping fill them out said if I didn't fish in 1972 I couldn't get my permit. When he told me this, I didn't try to apply for my permit.

Since I am leaving Cove in, I have been fishing with my mother, I would like to fish my own set net site if I could get my permit. I hope I can apply for my permit again.

I live in Naknek, Alaska and have lived here since I was born in 1942.

Thank You

Elaine Ruckle

14 April 1980

Dear; Rep. Osterback

I am writting to let you know that I am infavor of the late files bill # HB665.

I was born and raised in Bristol Bay and fishing was my only income. I went into the marine corps, and was not informed about the limited entry and nothing was sent to me. When I got discharged I could not fish with my own boat like I planned.

I am trying to get a permit under this bill, with the help of Alaska legal services.

Many people in this area support this bill.

Andrew O. Peterson Jr.

HB 665 - in favor

April 17, 1980

Dear Mr. Alvin Osterback,

I am writing in regards to the bill to open a new application period for limited entry permits. It is important to me and my family that we have a permit since I have a family of four and plan to increase in the future. And what my husband makes being a crew member isn't enough to provide sufficiently for the year. We have to ask for subsistance from another source during the winter months to get our food, clothing, and fuel.

The reason I didn't apply for the permit when other people were first applying, I was away in school out in Oregon. Since then I married and have a family of four. It's been six years we've been living here and there, living with

people. We're trying to get settled but it's hard not having a permit. And wanting a home for us. We need a permit very bad. Having one will help us get what we need.

Thank You,

Sincerely,

Mr. Mrs. Paul Panamaroff
Koliganek, Alaska
-99576-

Right now we are living with people in Dillingham. Hopefully we'll be moving to Koliganek after finding if my husband makes enough to build a small house.

RE: H.B. 665 - Late Applications
for Limited Entry Permits

Dear Mr. Osterback:

I am writing to you because I support H.B. 665 - Late Applications for Limited Entry Permits Bill. I was denied the privilege of getting my Limited Entry Permit because the Limited Entry Commission said I applied too late. So, I have been using my mother's permit to commercial fish salmon.

Since fishing is my main occupation, I would like to get my own permit, so that I can transfer mom's permit back to her, and be satisfied with myself of owning my own permit.

I only work on C.E.T.A. eligible jobs, when they're available, but at $700.00 a month take-home-pay, that's not very much. The C.E.T.A. monies that I earned have all been "eaten-up' by monthly living expenses. Especially here in Dillingham, house and apartment rents range from $550.00 - $1,000.00 a month. This does not include utilities and heating expenses, or for food, clothing expenses. If it were not for my partial dependance on subsistance foods, I don't think I would make it financially.

It's tough living in small towns and villages. I'm sure you already assume that. A lot of the Native people here in Bristol Bay also use bush airplane taxis to get around and they are all charter rates. We need the fishing money we earn to survive, both financially and economically.

Let me give you a sample village Native family so that you can visualize what village living is really like. Most of the Native persons who were denied permits parents are older, the approximate age of their parents are between 50 to 65 plus. The Native parents, who were never educated, except to 4th grade, live mainly on subsistence foods, such as: salmon, wild berries, wild greens in the summer; moose, late wild berries, fish, ducks in the fall; trout, pike fish, ptarmigan, stored berries, seal in the winter and spring. The parents are getting some monthly public assistance funds from the State--Old Age Benefits, which varie, an approximate amount received per month for both parents could be $400.00 a month, if the parents are eligible.

This Old Age Benefits is the older Native parents monthly income. Again, this money goes for living expenses, such as stove oil, gas, and bush plane fares, as well as food expenses. Could you stretch $400.00 a month on all that with 6 children to feed and clothe and still meet your living expenses?

The above example, is a typical village lifestyle for most of the way the Natives of Bristol Bay life.

Therefore, I strongly urge you to pass the House Bill 665 - for Late Applications for Li ited Entry Permits, for us Alaska Natives who did not get Limited ntry Permits, and feel that something has been taken out from us, the right to salmon fish in our own Bristol Bay waters with the pride that we will have cash for the harsh winter, after the salmon season closes.

Sincerely,

Helen M. Chythlook

HB 665

April 16, 1980

From; Gilly Jacko
Pedro Bay (907)793-8001
Alaska 99647

Subject; H.B. 665-Late Applications for Limited Entry Permits.

To Whom It May Concern;

Dear Sir's,

I want to apply for a limited entry permit. I live in a small village of Pedro Bay Alaska. I have tried to get my permit for several years now, but to date I have not. I fished for Red Salmon cannery for about Ten years. I also fished for Alaska Packers for over Twenty years. I am an old man, but I have lots of children, We live from fishing, I raised my whole family from fishing. I and my family need the chance to live like other people, with a permit. With a permit in the family we can live again, my children are fisherman but without a permit, I had a fishing license before that, the same year it went to limited entry, nobody let me know about it, nobody came here and told me that it went to limited entry. The next year after that we had a fire in the house, and my old licenses were burned up in that fire, then I had nothing to show that I had over therty years of fishing in Bristol Bay. I tried since then to get my permit but its hard for me because I need somebody to help me. The fact is that the reason I did not know to apply for a permit when people were first applying is that I did not know about it, nobody told me you had to apply for it, then that year I went fishing, they said I could not, because I needed that permit, and I have been trying for it since then, but to no progress. If I get my permit, I will not sell it to anyone, I will keep it in my family, for me and Momma, for my Sons, for us to use like we did before in raising our families. I have lots of grandchildren that there papas could work for me for percentage of the catch,. I and my wife, my sons and my son-in-laws, not to mention all my grandchildren need that permit, we make our sole living from fishing, our life is baised on fishing, Please help us, we need to live good again, like other people are souposted to live. Now they tell me to apply again, but it dont look good, we need that permit for this season, for 1980 fish run. Please follow with the House Bill No. 665, We lived our whole lives from fishing, our ancestors lived from fishing, Please help us.
You make your living at what you do best, We also do the same thing as you. If you were told you could not make your living, what would you do then ? We need our living back, Please give it to us.
Please comply at once with this urgent letter, as Me and my family, as humans, need to fish again.

Sincerly Yours,

Gilly Jacko

re: HB 665

Dear Representative Osterback:

After the teleconference hearing on HB 665, during which over 50 persons testified in support of the bill, the United Fishermen of Alaska mailed the enclosed letter to an unknown (but large) number of permit holders. It is my understanding that many of these persons have written to oppose the bill since then. Because the primary beneficiaries of the bill are rural Alaskans, many of whom live in small villages without access to the media, I would like to respond to what I perceive as a misdirected effort by those misinformed by the UFA letter.

First of all, the Commission report which supplied the 560 figure for Bristol Bay drift was refuted by attorneys practicing in Anchorage, Homer, Kodiak and Dillingham at the teleconference. Yet UFA and the Commission continue to use the figure as if it were true, and UFA made matters worse by speaking of 560 new permits as if the bill created rights heretofore nonexistent. In fact, 560 is the maximum theoretical number of such permits possible if absolutely everyone who failed to apply in 1975 did so this time and if the correlation between preprinted (computerized) points and actual points were the same as in the original period. Clearly this would not be true, in that many of the persons failing to apply in 1975 did so because they did not have a chance at proving enough points to obtain a permit. The only ones with enough points to get a permit who failed to apply were those misinformed of the nature and procedure involved--primarily rural Alaskans.

Those of us representing persons failing to apply by the deadline know by experience that most persons who will try to obtain a permit if HB 665 becomes law will fail to prove enough points to do so. None of the nonresidents who have called me in this regard appear to have enough points, and in fact few of the local people seeking drift permits would actually qualify. But those who did miss the opportunity to obtain a permit have suffered a devastating loss, as was evident at the teleconference, and that loss becomes no less of one because 3000 opportunists might also try to take advantage of a new application period. The bill does not change the point system in any way, a point not made by UFA and not understood by the Outside persons who think HB 665 will allow them to receive permits for which they were not--and are not--qualified.

From the beginning, limited entry has been misunderstood by large numbers of those who had to deal with it. As one who was in Dillingham in 1974-75, I can tell you that explaining the concept and application procedure was a formidable task. Many village residents don't understand today what has occurred, and especially older persons. Because the 1975 ADF&G forecast was poor, many local persons ignored the limited entry publicity (such as there was; KDLG was not on the air then, on the assumption that they would apply the following year. Others who had retired didn't apply because they failed to appreciate that a new species of property had been created and that their sons and daughters might not be able to qualify for permits because they lacked the requisite number of points.

In the last five years, many of these people, or their children, have learned what has occurred. While a new application period would not reach everyone, it would place permits in the hands of a sizable number of Alaskans, for whom there exists no alternative source of income. This result is well worth the administrative inconvenience to the Commission caused by re-applying the 1975 point system to new applications; it would appear in any event that the CFEC budget needs to be increased.

Please contact me if you have questions on any of the foregoing. As the UFA letter indicates, there are alot of misconceptions about HB 665, and in fairness to the disenfranchised men and women denied permits, it is necessary to correct these before the Committee votes on the bill

Thank you.

Sincerely,

Frederick Torrisi
Attorney

UNITED FISHERMEN OF ALASKA

Sharon Macklin
Executive Director

TO: ALASKA'S FISHERMEN

FROM: PHIL DANIEL
Executive Advisor, UFA

Limited Entry is in big trouble! There is a bill before the legislature, that, if passed would create 560 new drift permits in the Bristol Bay drift fishery alone. That would amount to a 30% increase in the number of permits that presently exist in that fishery. Unfortunately, no one knows how many new permits would be issued in the other limited fisheries in the state. These figures are simply not available.

This bill, HB 665, is known as the "late filer bill", and it would establish a new application period for people who failed to apply for permits during the two previous application periods. At least 4,000 people would be allowed to apply. Needless to say, drastic increases in the number of fishermen entering the fishery will most likely result in losses of fishing time.

The United Fishermen of Alaska is trying to ammend the bill to get the numbers down. If that approach fails, we will be forced to try and kill the bill. You should be advised, however, that this legislation has strong support in the legislature.

We need your support! The most effective weapon that UFA has rests on your willingness to make yourself heard. We desperately need a flood of letters and telegrams to key legislators.

Please write or send telegrams to the following members of the legislature: Representative Nels Anderson, Representative Alvin Ott (chairman of the House Finance Committee), Representative Terry Gardiner (Speaker of the House), Senator Clem Tillion (President of the Senate), Senator Bill Sumner, and Senator George Hohman, as well as your local senator and representative. Send your letters addressed to: Pouch V, Juneau, Alaska 99811. It is not possible to overemphasize the importance of doing so immediately!

Please be polite. You should emphasize the fact that there is already too much gear in most of our fisheries, that we cannot afford further reductions in fishing time and that we are looking at dismal price projections for this coming year.

You should also be advised that the UFA's lobbying effort is in financial difficulty. We have tried to raise money for what we assumed would be a major Limited Entry battle this year. The crisis is now upon us, and the money has not come in. Some of you have contributed, and we appreciate your support very much. The fact remains, however, that most fishermen have failed to respond. If you believe that large increases in the amount of gear in your fishery is desirable, then you should do nothing. On the other hand, if you view this bill as a danger, you should send a check to the Limited Entry Defense Fund, c/o the United Fishermen of Alaska, 197 S. Franklin Street, Juneau, Alaska 99801.

If more money does not come in we will be forced to cut down on our lobbying effort.

A personal note: If it becomes necessary to cut back, I will be the first to go. Since there are other things that I would just as soon be doing, it's not such a bad idea from my viewpoint. In my opinion, however, we are in deep trouble, and I am not convinced that we can afford a cut in the lobbying effort at this time.

Phil Daniel

Nels Anderson Jr.
House of Representatives
Pouch V-- Capitol
Juneau, Alaska 99811

Dear Representative Anderson,

I am in support of HB 665 I am in favor of applying for a entry permit.

I have fished most of my life as a fishing partner and have fished as a set net gear holder. (1964- 1966) Set netting in Bristol Bay has been my only source of income. If I am awarded a permit it would give me back my traditional summerjob. Not having a permit has caused a hardship because i am unable to set net anymore.

I failed to file for a permit since I was not aware of the Limited Entry but until it was to late the following year.

Sincerely Yours;

Lucy E. Gloko

RESOLUTION NO. [illegible]

A RESOLUTION SUPPORTING HOUSE BILL 665 AND THE ESTABLISHMENT OF NEW APPLICATION PERIOD FOR LIMITED ENTRY PERMIT.

WHEREAS, many rural residents of the State of Alaska, including the AYK region have not received limited entry permits for which they were otherwise qualified, solely because of their failure to submit timely applications to the Commercial Fisheries Entry Commission; and,

WHEREAS, the individual persons failure to submit a timely application was due to factors beyond his or her control: namely, the lack of understanding by such individuals of their rights under the Limited Entry Act and of the need to submit an application or be forever barred from pursuing their livelihood; the shortness of the application period; the geographical remoteness of the communities in which such individuals lived from the centers of communication and application assistance, and the misinformation prevalent concerning the standards of eligibility for limited entry permits; and,

WHEREAS, these individuals are now prevented from participating in one of the few or only occupations they have known, or that is available to the in their community; and,

WHEREAS, the State of Alaska has an obligation to rectify the injustice caused by the implementation of the Limited Entry Act,

NOW, THEREFORE, BE IT RESOLVED that the [illegible] supports House Bill 665 and the establishment of a new application period for limited entry permits.

Dear Representative Osterback and Anderson:

I would like to present written testimony for the record on HB 665. I am in favor of HB 665 and would like you to read the following information that gives an example of someone who is considered a late filer.

Frank Brothers, my son-in-law began fishing with me in Bristol Bay in 1967. In 1968 and 1969, Mr. Brothers worked in Kodiak as a fisherman. In 1970, he fished my boat because I was disabled and couldn't fish. Following that, he fished as a partner in 1971, 72, and 73. He then went to work on the pipeline. While working on the pipeline, he wrote for information on getting a limited entry permit. He was sent the information and an application. He sent the application back to the Commission and did not receive an answer or acknowledgement of receipt of the application. He wrote again and they wrote back and told him he was too late and that he missed the filing deadline. He figured that he was ineligible and continued to work in the fishery as a boatpuller. In 1976 he reapplied for a limited entry permit, but was refused or denied because he did not meet the filing deadline. Mr. Brothers had enough points, however. The reason his application was denied was because of the filing deadline.

He has worked as a fisherman for many years and has a wife and four children and they are all dependent upon fishing as their main source of income and livelihood.

Is there any way for your people to check on this for me and for my son-in-law Frank Brothers? I would appreciate receiving an answer after you have had a chance to look into this case with the Limited Entry Commission offices. I will be looking forward to hearing from you. Can you please send a copy of my letter to the Limited Entry Commission? Thank you very much for your time and help in this matter.

Sincerely,

Frank Hiratsuka

I CAME HERE LAST YEAR FROM FLORIDA. I CAN APPRECIATE A LIMITED ENTRY PROGRAM MAINLY FOR KEEPING THE "FISH POPULATION" UP.

HOWEVER, IN REGARD TO HB 808 AND 665 I FEEL THAT FAIRNESS AND RESPECT TO THE "OLD TIMERS" HERE HAS BEEN NEGLECTED. THEY SHOULD BE ALLOWED PERMITS SIMPLY BECAUSE THEY ARE ALASKA[illegible]DENTS AND HAVE BEEN FOR SOME TIME. THE INCOME THEY MAKE FISHING STAYS HERE IN ALASKA WHERE AS A LOT OF PERMIT OWNERS TAKE THEIR MONEY BACK TO THE "LOWER 48" WITH THEM. I THINK THESE ALASKANS SHOULD BE ALLOWED PERMITS.

RE: HB 665

Dear Mr. Miles and Mr. Osterbach:

I'm an attorney in Bethel who has worked with limited entry problems in the Bethe service area for the past three and a half years, first as an attorney with Alaska Legal Services, and now with Nunam Kitlutsisti. I would like to take this opportunity to make some very brief comments on HB 665.

HB 665 is a very narrow bill aimed at a specific problem: persons who have enough points to obtain a permit but failed to apply in a timely fashion. It is my understanding that the Commission is claiming that the passage of such a bill will result in a flood of new permit holders which will overcrowd the fishery. My experiences do not lend credence to this assertion. During the past three and one-half years I have spoken with approximately 250 individuals concerning the problems they have had with limited entry permits. Out of that number only 10 or 15 would receive permits if a new application period were opened. Although the Commission might expect numerous applications if such an application period were opened, I do not believe that the administrative problem which this would create justifies the continued denial of permits to persons who have enough points but failed to apply in a timely fashion.

Those persons who had enough points but failed to apply on time were not at fault. There seem to be two classes of persons who failed to apply on time. The first class consists of individuals who were not physically present in the area during the application period and had no knowledge of the limited entry system or application period until it was too late. The reasons for such absence are varied: military service, higher education, and incarceration are but a few. The second class of such individuals are generally older, fail to understand English, and are culturally and geographically isolated from the Commission's chain of paperwork. Both classes of individuals were long-time commercial fishermen who depended upon the industry for their income and will suffer severe financial hardship if they continue to be excluded from the fishery. I can see no rational justification for continuing to exclude this handful of individuals from the fishery.

The one concern which I have about HB 665 is that it does not go far enough. The bill would simply open a new application period. The bill does not guarantee that persons with sufficient points will receive permits since they are still required to apply for a permit. Needless to say, many of the reasons that persons failed to apply during the original application period, such as linguistic differences, cultural and geographical isolation, and absence from the State, continue to the present day, and it might be expected that these reasons will continue to frustrate the smooth flow of paperwork. Consequently, I recommend that the bill contain a provision that simply requires the Commission to inspect its records and automatically issue permits to those persons with a sufficient number of points. Such a provision would insure that the problem which the bill seeks to address is actually corrected.

In the absence of such a provision, the bill should require a lengthly application period (at least one additional year) coupled with strong outreach requirements insuring that persons with sufficient points are notified by the Commission of the new application period and informed that they appear to qualify for a permit.

Sincerely,

Kenneth R. Hamm

RE: Statement in Support of House Bill 665

From: Timothy E. Troll, City Manager, St. Mary's, Alaska.

First I want to thank you for the opportunity to make this statement. I am sorry that I cannot be here personally but my duties in St. Mary's prevent it.

Before becoming the Manager for the City of St. Mary's I was an attorney for Legal Services Corporation in Bethel and spent a large part of my time working to obtain permits for people in this area. I consider the work I did in the area of Limited Entry law to be the most rewarding and most important work I did.

House Bill 665 is needed to correct a grave injustice that has occurred in the administration of the Limited Entry law. I completely disagree with those opinions you may have heard that this law will open the floodgates to new permit applicants. It certainly will not in the AYK fisheries. Regardless, I don't think this consideration the most important. House Bill 665 does no more than implement what is already required by the existing law.

I would like to read to you Section 16.43.270.

> Sec. 16.43.270. Initial issuance of entry permits. (a) The commission shall issue entry permits, for each fishery, first to all qualified applicants in the priority classifications designated under § 250(b) of this chapter and then to qualified applicants in order of descending priority classification, until the number of entry permits issued equals the maximum number of entry permits established under §§ 230 — 240 of this chapter for each fishery, except that no person within a priority classification specified under § 250(b) of this chapter may be denied an entry permit.

You will note that the last sentence in this section says 'that no person within a priority classification specified under §250(b) of this chapter may be denied an entry permit." Referring to §250(b) it says: "The commission shall designate in the regulations those priority classifications of applicants who would suffer significant economic hardship by exclusion from the fishery. The sole criteria established is economic hardship. Time of application is not a factor in determining hardship. As such according to §270(a) any person who has enough points to receive a permit will suffer economic hardship if excluded from the fishery and thus cannot be denied a permit.

On the Kuskokwim that point level is eight (8) and on the Lower Yukon that point level is ten (10). Any person who comes within these point levels cannot be denied a permit under the present law, even if he did not submit a timely application.

To add to the unfairness of using an application deadline to exclude people from the fishery consider that the Entry Commission knew most of the persons entitled to receive permits before it sent out the applications. In many cases the Commission preprinted points on the application and often the points preprinted were enough for a permit. Why didn't the Commission just send a permit? What was the need for having an application at all? Three of my clients at Legal Services had precisely this problem. Each was sent an application with enough points preprinted to receive a permit. By the Commission's own standards these individuals suffer significant hardship by exclusion from the Fishery, yet they are excluded. Their exclusion is at bottom a penalty for not reading or understanding english.

2

Mrs. Farris R. Crookston
286 N. 2650 E.
Layton, Utah 84041

April 1, 1980

Representative Allen Osterbach

Dear Sir:

I have been trying for three years to get my limited entry permit to no avail of course. I was a late filer. Not because I didn't know about filing but because I didn't think I qualified. (See enclosures).

I know you are busy - and I have included most of the correspondence concerning it. If you can't take time to read it all - please read my letters to the Commission and the red lined portions of the last letter from the Commission.

Since then I have called several times and they said they would pull my file and give me a new random - but they didn't. Also I think it is worthy to note that they accepted my check for the permit - told me they would give me a permit, then subsequently did not - but they did keep the check. That has been almost three years. It seems to me that if they kept my money then I should get the permit.

I have fished all my life with my husband on Palmate. I lived in Bonneville since 1965 and still do - I need and desire that permit. Please help me get it.

Passage of SB 66 will ensure ... Please vote for it.

Very hopefully yours,

Farris R. Crookston

August 31, 1977

Gentlemen:

According to your instructions you will not accept this application for an entry permit. I am submitting it irregardless of the instructions and for good reason.

It would have been submitted in the beginning had it not been for confusion created by the commission itself as to who could qualify for such a permit.

I fished side by side with my husband on our set net site since 1965. I had gear license (probably) during the years 1970, 1971, 1972, 1973, 1974. My sons held them from 1965 through 1969 and would have applied for entry permits had not the same confusion you created existed in their minds.

I have never had a commercial license because the law states that a wife fishing with her husband need not have one.

I have never delivered fish in my name because we saw no need for more than one account at the cannery for a family operation. All fish were delivered in my husbands name.

I own half of the set net site and half of the gear.

The confusion of which I speak was generated when we first received application for entry permits. The implication (at least in our minds) was that it would take 20 points to qualify for such a permit and since my husband was the only one with 20 or more points he was the only one of us to apply. Never in our wildest dreams did we ever imagine that 6 points would ever qualify one of us.

About a year ago I wrote and explained some of these things, and rather than a reply, we received a list of names of people who might sell. I don't want to buy one. I want my own. Couldn't you have sent some information at that time and at least tried to be helpful?

My husband phoned the other day and found out the 6 points was all that was necessary to qualify. Weren't we naive not to recognize that the 20 points mentioned would eventually be lowered to 6 points? On that basis, I had three sons and one daughter that may have qualified.

I therefore submit the following application and ask for special consideration because I refuse to believe that the Great State of Alaska is so rigid and unbending that they will not help solve a problem which they themselves generated.

We need one entry permit. [illegible] help us get it.

Respectfully yours,

Sophia [illegible]

S.K.E.

01 A6LH

STATE OF ALASKA

JAY S. HAMMOND, GOVERNOR

COMMERCIAL FISHERIES ENTRY COMMISSION

POUCH KB - JUNEAU 99811

November 9, 1977

Mrs. Farris Crookston
286 N. 2650 E.
Layton, Utah 84041

Dear Mrs. Crookston:

Governor Hammond has requested that I reply directly to your letter to him concerning your application for an entry permit for the Cook Inlet set net fishery. Please excuse the delay in acknowledging the letter you sent to the Entry Commission on August 31, 1977, along with an entry permit application form. The form you used was for a special group of applicants made eligible under a State Supreme court decision and is part of a different application process. Consequently, it got routed into a different part of the system.

Your letter of August 31st indicates that you did not apply during the original application period which ran from December 19, 1974 through May 1975 because of confusion created by the Commission that caused an implication in your mind that it would take 20 points to qualify for a permit.

Item 8 on the original application form is a box containing the following statement:

> "Any time you have 20 or more verifiable points, you will receive an entry permit and you may skip to part 3 on the reverse side. Since permits may be awarded to those with fewer verifiable points, all other applicants, including those uncertain of points, are urged to complete all lines from 9 - 24."

Page 2 of the general instructions for these applications repeats that information.

Under the cover sheet for the instructions, the first item is a letter from then acting chairman of the Commission, Roy A. Rickey. The third paragraph of that letter begins,

"Should you need assistance in completing the application, do not hesitate to call our Juneau office (area code 907 586-3456) if you cannot find anyone to help you locally." Concerning other points raised in your letter of August 31st:

1) The instructions on pgs. 5 and 6 explain specifically what it is necessary to do to receive credit for active participation as a gear license holder if fish were not landed in your name.

2) The instructions concerning crewman credit on pgs. 7 and 8 explain what is to be done to receive crewman credit in years when you did not fish as a gear license holder.

3) The note at the bottom of pg. 8 of the instructions explains the procedure to be followed if you were a crewman for your husband and not required to have commercial license.

If you were confused, there was an opportunity to telephone or write the Entry Commission, or contact one of its agents, to receive application assistance. Your file does not indicate any such contact with the Commission.

While the application process is admittedly complex, the Entry Commission has made all reasonable efforts to be clear, to dispell confusion, and to provide application completion assistance. It is regrettable that you did not submit an application during the 1974-75 application period. If you can demonstrate that you were clearly misled or erroneously advised by the Commission or one of its agents, then the Commission may be able to accept a late application from you, depending on the nature of the evidence submitted. Given the information currently before the Commission, there is no authority under which we may accept a late application from you.

Sincerely,

Allan Adasiak
Chairman

AA:eb

cc: Jay S. Hammond
Governor

November 16, 1977

State of Alaska
Commercial Fisheries Entry Commission
Pouch RR
Juneau, Alaska

Dear Mr. Adasiak:

It was with a great deal of disappointment that I read your letter dated November 9, however I feel fully justified in asking that you reconsider my case. Fishing Cook Inlet is our life and our lively-hood. What ever else we do during the year is secondary and the day we arrive in Utah at the end of the season is the day we begin our preperations for our return trip back to Kenai. Mr. Adasiak, we need that permit, please help me get it.

There is no new information, no new facts, but may I point out to you some things I feel are worth the consideration of the Commission.

In your letter, which I include here for your convience, you mention that my application was misrouted and that was the reason for the delay in answering. You merely asked to be excused for your confusion, yet I attached a note directly to the application stating that it was a late application and not of the catogory mentioned. If your people were confused by my one paragraph, then try to imagine, if you can, the confusion that we must have felt as we ploughed through 41 pages of instructions, maps and directions, you sent to us. Not to mention the 10 or 12 years of fish slips closing statements and old applications for gear license and etc.. We were confused.

In your closing paragraph you mention that if I can demonstrate I was misled or erroneously advised that you could reconsider my position. I think I can demonstrate that we were clearly misled by the very paragraph (item 8) that you quote as that portion which clarifies the matter. It all boils down to what you communicated or thought you communicated to me, and I didn't think you said what you thought you said. The inclusion of the word fewer makes the whole paragraph highly subjective depending on ones point of view. For example, "a lot of snow" to a person in southern Utah could mean 10 or 15 inches, but a lot of snow to a person in northern Utah would have to mean 10 or 15 feet, and thats a pretty broad interpretation for four simple words.

A person who saw no need for limited entry and was against it would probably have applied after reading item 8 if they had only one point. We felt that limited entry might be a fine thing and talked about the fact that perhaps Alaska had a system that might hold up in court after a couple of failures, and we adopted the position that, and this is in the God's truth, that fewer than 20 points might mean 19 points or maybe even drop as low as 18 points. We never even once considered that it might go as low as 15 points. We felt at the time that I might have 10 or 12 points and never once did it cross our minds that fewer than 20 might some day mean 6.

That brings me to the top of page two of your letter. Having taken the position that we did on item 8 we felt in our hearts that a call to Juneau would only serve to varify our conviction that fewer might mean 18 or 19 points. We did not pursue points 1, 2 and 3 because we felt we had already been defeated by item 8, so naturally there is no record of a phone call or inquiry. We filed for a permit for my husband, put the directions away and considered the matter closed until we learned this summer that 6 points could have qualified me. If this is not a clear cut demonstration of clearly being mislead, however unintentional on your part, then I shall probably never see one.

It is easy for you to look back in retrospect and tell me now what I should have done then, but that is hardly necessary, I can do that.

Another point: Can you honestly say that at the time the document was written that you thought 6 points might qualify a person? If you didn't then your position on item 8 was much like mine, and if you did, then don't you feel you could have made it more clear by indicating that fewer than 20 points could have meant as few as 6 points.

I told the only other fisherman down here, that I know of, that I was reapplying for an entry permit, and his reply was that it wouldn't do any good because one had to have 20 points to qualify. He (Ben Carlson) has fished in Kenai since about 1958, and had the very definite impression that a permit could not be granted with less than 20 points. That was in October of this year, and he got his impression from the same 41 sheets of instruction as I did. I was clearly not the only one who was misled. His address is 92 S. 2nd E. box 234, Richmond, Utah 84321. If you care to contact him or I can get a written notorized statement from him if it would be helpful.

You also mentioned in your last paragraph that if I could demonstrate I was clearly misled by the Commission on one of your agents that you would reconsider my application.

On August 31, 1977 I submitted a letter and application to the Commission asking for consideration on the very matter we are discussing. Sometime later I received a form letter from the Commission acknowledging receipt of the application. The letter stated that the application had been accepted, that my twenty dollars was on deposit and that they hoped to have all of the applications processed sometime in November. It further stated that if I had the necessa " 6 points I would receive an entry permit. If I did not have the necessary 6 points that my money would be refunded to me. Since I had at least 6 points I was fully confident that my entry permit was assured.

May I quote from your closing paragraph, "It is regrettable that you did not submit an application during the 1974-75 application period." This is clearly an admission that I had the necessary points to qualify, otherwise there would be nothing to regret.

Further my son Kent Crookston Star Route 4957 Hoyard Road, Palmer, Alaska 99645, called the Commission to see if he might qualify for a permit. While on the phone he inquired about the status of my application. He was told that my application was received and a special hearing would be held considering it. He too would file a signed notorized statement to that effect for your inspection.

About a week before I received your disappointing letter, Norma Perlman of Kuna, Idaho called me and offered to sell me her permit because she had a buyer for it and wanted to give me a chance to buy it. She had given me first rights of refusual last spring. I told her of the letter I had received from the Commission. She felt as I did, that my entry permit would be forth comming, an so offered her permit to the other party. I mention this to point out how sure I was of the information I received from the Commission. Now I find that the information was erroneous. There will be no entry permit forth comming. I think this demonstrates that I have been given erroneous information by the Commission or one of its agents. I therefore ask that the Commission accept my late application, and that they make a decision in my favor.

I will get signed statements from the two parties and forward them to you for inclusion but feel this letter cannot wait for them now.

I committed no crime in filing late, I ask to be excused for my ignorance or stupidity, or whatever you choose to call it. I cannot offer you any documentation other than that which I have mentioned. My only weapon is the truth and I pray to God that you will recognize it as such. I am a deeply religious person and would offer you nothing else.

I do not seek a permit to resell at a profit, I seek it to use, then pass on to my sons for their use when we turn our set net site over to them at some future date.

I further ask, Mr. Adasiak, that you reverse your decision and that you become my personal champion in convincing the Commission that they should issue me an entry permit.

This probably sounds like I am trying to rationalize for my own short comings, or blame the Commission. Please rest assured that such is not the case. I feel as you do, that the Commission tried in everyway to make the information say what you wanted it to say. Unfortunately that is seldom possible, not necessarily because of the complexity of the system so much as the complexity of the human mind. I only hope I am capable now of conveying to you that which I think I said.

If you can think of anything I might be able to send you that would be of help, please advise me as to the nature of it and I will try and supply it to you.

What more can I say? I rest my case and I thank you very much.

Respectfully yours,

Harris Crookston

01 A6LH

STATE OF ALASKA

JAY S. HAMMOND, GOVERNOR

COMMERCIAL FISHERIES ENTRY COMMISSION

POUCH RB - JUNEAU 99801

November 30, 1977

Mrs. Farris Crookston
286 N. 2650 E.
Layton, Utah 84041

Dear Mrs. Crookston:

We are most sorry to inform you that the Commission cannot under the Limited Entry Law and regulations accept your late application for a Cook Inlet set net entry permit.

The Commission is authorized to issue 686 entry permits for the Cook Inlet set net fishery. By regulation, an application period extending through April 18, 1975 was established in which applications were accepted. An additional application period for selected individuals not included in the original application period was later ordered by the Alaska Supreme Court. Only where an application was lost in the mail, or where the Commission erred in advising an individual, has the Commission deviated from these application periods. The reason for an application period may not be readily apparent: it is because until all applications are finally before the Commission and processed, no final decisions on the point level of issuance can be made. All permits for the Cook Inlet set net fishery have now been issued.

The Commission cannot accept the proposition that it misadvised you in its statements in the application form and accompanying instructions. We recognize that the application was complex; this was caused primarily by the complexity of the law itself, by the requirement that we obtain all information relevant to an applicant's qualifications, and by the fact that the application was necessarily designed to apply to applicants for 19 different salmon fisheries.

To be quite frank, the Commission had no idea what number of points would be required for issuance of a permit for each of the 19 salmon fisheries addressed by the application form. The issuance level simply was contingent upon too many factors over which the Commission then had no control or knowledge, including:

- the Commission did not know how many eligible fishermen would apply for their permit
- the Commission had no computerized form of data for years prior to 1969
- the Commission had no accurate information concerning the number of applicants that would qualify for set net site ownership
- the Commission had no data for estimating the number of crewman participation points that would be awarded
- the Commission was unable to project what portion of the entry permit applicants would qualify for income dependence points

In short, the issuance level would not be known until all applications were finally processed. We did, however, encourage every eligible applicant to apply for his or her entry permit.

It is also most unfortunate that you did not contact the Commission during the application period to obtain assistance in determining your actual point qualification. According to the information you have to date given us, together with existing state records, it appears that you would have qualified for in excess of 20 points, and thus would have received a permit at the outset. You did hold gear licenses each year from 1965 to 1972, and apparently fished with your husband during all the time he fished. This represents 16 points. You also fished with him each year in at least a crewmember capacity (by assisting the fishing operation) in each year from 1965 to 1966. For this you would have received four points. You also qualified for at least four points for investment in set net gear and site, as you apparently recognize. This is a total of 24 points, and we have not addressed the possibility of income dependence points (a potential of 10 points).

Furthermore, based just on the information you apparently had during the application period, it appears you could have demonstrated qualification for 18 or more points (which you believed to be within the realm of possibility). You knew you had a gear license in 1970 and 1972 (since you sent us these licenses), and that you had participated at least as a crewman every other year

from 1965 to 1971. This is a total of 14 points. You also knew that you qualified for at least four points for site and gear ownership, or four more points. This equals 18 points without any consideration of potential points for income dependence upon the fishery.

We can understand your distress at finding that you would have qualified for an entry permit had you applied, but the Commission has no other choice at this time. I am sorry we cannot be of assistance to you.

Sincerely,

John N Garner
Commissioner

LETS GIVE THEM A CHANCE NOW!

CITY OF KWETHLUK

RESOLUTION NO. [illegible]

RECEIVED 4-9-80

A RESOLUTION SUPPORTING HOUSE BILL 665 AND THE ESTABLISHMENT OF NEW APPLICATION PERIOD FOR LIMITED ENTRY PERMIT.

WHEREAS, many rural residents of the State of Alaska, including the Yukon-Kuskokwim region have not received limited entry permits, for which they were otherwise qualified, solely because of their failure to submit timely applications to the Commercial Fisheries Entry Commission; and

WHEREAS, the individual persons failure to submit a timely application was due to factors beyond his or her control; namely, the lack of understanding by such individuals of their rights under the Limited Entry Act and of the need to submit an application or be otherwise barred from pursuing their livelihood; the shortness of the application period; the geographic remoteness of the communities in which such individuals reside from the locations of information and application centers; and the unusual conditions prevalent during the fishing season which made it impossible for many to enter permits; and

WHEREAS, these individuals are now precluded from participating in the new or only experimental fisheries, even though they have fished, or their livelihood is available to them in these areas; and

WHEREAS, the State of Alaska has an obligation to restore the losses occasioned by the implementation of the Limited Entry Act;

NOW, THEREFORE, BE IT RESOLVED that the State Legislature supports House Bill 665 and the establishment of a new application period for limited entry permits.

HB665

STATE OF ALASKA

JAY S. HAMMOND, GOVERNOR

DEPARTMENT OF LAW

OFFICE OF THE ATTORNEY GENERAL

POUCH K-STATE CAPITOL
JUNEAU, ALASKA 99811

465-3600
April 25, 1980

Representative Nels A. Anderson, Jr.
Eleventh Legislature -
Second Session
Pouch V
Juneau, Alaska 99811

Re: HB 665

Dear Representative Anderson:

Yesterday, at House Resource Committee Hearings on HB 665, you requested that this department prepare a legal opinion on the constitutionality of that legislation. The legislation would provide for a second application period for fisheries currently placed under limited entry, and would allow the commission to exceed the maximum numbers established in AS 16.43.230-240 to accommodate additional permits issued under the legislation.

As I informed the committee orally yesterday, the legislation suffers no clearly fatal constitutional deficiency. There is, however, a constitutional question which the legislation raises which cannot be disregarded. Under existing law, the commission sets issuance levels for each fishery according to its point system -- that issuance level reflecting the number of permits which can be issued in a particular fishery without exceeding the maximum numbers established pursuant to statute. For example, if the maximum

CC-CBLM

number for a particular fishery is 1,000, and the commission determines, after reviewing all the timely applications, that 1,000 persons have finally been classified at 17 or more points, the issuance level will, of course, be 17.

The maximum number, in turn, is set at historical gear intensity levels. AS 16.43.230-240. In light of the Alaska Supreme Court's recent decision in CFEC v. Apokedak, _____ P.2d ____ (Op. No. 2011; February 5, 1980), we believe there is little question that it is constitutionally permissible for the legislature to initially freeze gear intensity in a particula fishery to historical levels. Since the commission's point system had been previously upheld by the court (Younker v. CFEC, 598 P.2d 917 (Alaska 1979)), there would appear to be no question that the commission may properly distinguish, in our hypothetical fishery, between persons with 16 points, and persons with 17 points, as long as the issuance level is tied to the maximum numbers established in §§ 230-240.

Under HB 665, however, testimony before the committee indicates that no one knows how many additional permits, above the maximum number, may be issued if the legislation passes. As a result, the distinction between those with 16, and those with 17 points may become blurred if substantial numbers of additional permits are issued by legislative choice. Thus, a person with 16 points may now be able to argue that the legislature has voluntarily abandoned the maximum number concept, and has not replaced it with any other independently

derived gear intensity figure which would justify an issuance level of, again, 17.

A response, of course, would be that the Act already envisions that maximum numbers may be exceeded in order to accommodate all those gear license holders who would suffer significant hardship by exclusion from the fishery. AS 16.43.250(a). Since the legislature has already, properly, accommodated this type of "hardship" in the point scheme, it is likewise competent for the legislature to accommodate the perceived "hardship" created by the legislature's previous establishment of application deadlines. The analogy is less than clean. First, under HB 665, late applicants would be eligible for permits at the issuance level, rather than at the "significant hardship" level. Second, even if this aspect of HB 665 were amended, in most fisheries the bill would result in the maximum numbers being exceeded for reasons other than the accommodation of those who have demonstrated significant hardship, since, under the bill, those with less than 20 points would be able to retain their permits, even if the consequence of that retention was the substantial exceeding of the maximum number.

Again, it is difficult to judge the likely success of this argument. The legislature should retain substantial flexibility to adjust any particular piece of legislation to deal with a particular problem which arises after the fact. We would hope, after the supreme court's decision in CFEC v.

Apokedak, supra, that the law is no different in Alaska. Whatever the ultimate resolution of this question by the supreme court, we would be less than honest in failing to note that some in this state have been less thar restrained in their eagerness to initiate litigation concerning limited entry. This department currently handles some 150 limited entry law suits, and, although recent court decisions have substantially reduced our incoming case load, the cold fact remains that there is a tendency in this state to grope for grounds for litigation on this program, regardless of the merits of the arguments concocted. */ As a result, this department is, perhaps, overly conservative in its concern over any legislative initiative which would raise additional legal issues -- irrespective of their weight.

In sum, we believe that the better view of the law is that HB 665 is constitutional. In all likelihood, however, it will result in additional litigation. First, litigation may arise with respect to the issue that I have described in this letter. Second, this legislation envisions a second application period, with, of course, a second application deadline. We haven't the slightest doubt that the same

---

*/ Much of this litigation involves late application cases where inadequate notice was alleged. Three separate superior courts have ruled that the commission clearly satisfied any conceivable notice requirement.

complaints raised with respect to the initial application period will also be raised with respect to the second application period established by the legislature -- regardless of the efforts taken by the commission to notify persons of the pendency of this deadline. As you are awar , the efforts arranged by the commission, with respect to providing notice of the initial application deadline, in large part through the Bristol Bay Native Association in your area, were undertaken because many concerned parties believed, and represented through a consent agreement with the state, that these steps would be adequate to notify potential applicants. For some reason, many of those parties no longer believe those efforts were adequate. Given this course of conduct, we are deeply concerned that a second, unfortunate round of fault finding may well occur with respect to the efforts which would be initiated under this bill.

If you have any further questions, please feel free to contact me.

RE: HB 665

Dear Representative Osterback:

I have just received a copy of an opinion letter dated April 25, 1980 from Jonathan Tillinghast of the Attorney Generals office which finds that HB 665 would be constitutional. Mr. Tillinghast's comments at the April 24th hearing were somewhat ambiguous and I thought you would want to know his final opinion.

Mr. Tillinghast states that there is a possibility that there will be additional litigation which of course is true for any piece of legislation. However, the constitutional questions do not seem to be significant and the Bill is clearly constitutional as now written.

The only change that we have proposed to the bill as written is to prohibit issuance of permits to persons who would suffer only "minor economic hardship" by exclusion from a fishery as defined by the Commercial Fisheries Entry Commission. This would be accomplished by adding the following words after the second sentence of Section 3 of the bill:

", except that no permits shall be issued to persons who would suffer only minor economic hardship from exclusion under A.S. 16.43.250(c)."

PROPOSED AMENDMENT

I appreciated the opportunity to be able to address the Committee on this issue which is of paramount concern to the rural citizens of this state. I would like to reiterate my support for this bill and my belief that no adverse impacts will be felt by fishermen or the fishery.

If you have any further questions concerning this legislation, please feel free to contact me.

Sincerely yours,
ALASKA LEGAL SERVICES CORP.

CPC RESOLUTION #80-1

ENTITLED: "In Support of HB 665"

WHEREAS, Representative Nels Anderson has introduced Legislation (HB 665) which would permit certain individuals to file applications for Limited Entry Permits, in spite of the fact that certain deadlines have passed; and,

WHEREAS, one of the identified problems with the present Limited Entry Statute is that many Alaskan Residents, primarily rural residents, were denied the opportunity to apply during the allotted time; and,

WHEREAS, although estimates vary as to the number of persons who may qualify for Entry Permits under the terms of the Legislation, it is safe to say that the overall impact would be minimal, especially in light of the demonstrated biological recovery of the Salmon Resource;

now, therefore be it

RESOLVED: That the Citizen's Participation Conference does hereby support and endorse HB 665, and urges the Alaska Legislature to pass said bill.

DATED this 20th day of March, 1980, in Juneau, Alaska.

Resolution #80- 2

A Resolution Supporting House Bill 665 and the Establishment of a New Application Period for Limited Entry Permits.

WHEREAS: Many rural residents of the State of Alaska, including the Aleutian Peninsula region have not received limited entry permits for which they were otherwise qualified, solely because of their failure to submit timely applications to the Commercial Fisheries Entry Commission; and

WHEREAS: The individual persons failure to submit a timely application was due to factors beyond his or her control: namely, the lack of understanding by such individuals of their rights under the Limited Entry Act and of the need to submit an application or be forever barred from pursuing their livelihood; the shortness of the application period; the geographical remoteness of the communities in which such individuals lived from the centers of communication and application assistance, and the misinformation prevalent concerning the standards of eligibility for limited entry permits; and

WHEREAS: These individuals are now prevented from participating in one of the few or only occupations they have known, or that is available to them in their community; and

WHEREAS: The State of Alaska has an obligation to rectify the injustice caused by the implementation of the Limited Entry Act,

NOW THEREFORE BE IT RESOLVED, that the Aleutian/Pribilof Islands Association, Inc. supports House Bill 665 and the establishment of a new application period for limited entry permits.

PASSED this 14th day of February, 1980

ATTEST:

Secretary

Chairman, Board of Directors

To: House Resources Committee
re: HB 665
April 24, 1980
from: David B. Snyder, Alaska Legal Services, Dillingham
Fred Torrisi, Dillingham

a. The persons affected.

In 1975, the Commercial Fisheries Entry Commission began the implementation of a unique program of limiting entry into Alaska's fisheries. That year, 13 salmon fisheries were limited. Applications were accepted through May 18, 1975. Except for persons proving postal error or Commission misadvice, no-one who failed to apply for an entry permit by the deadline has been able to fish in any of these fisheries as a gear license holder since then.

A separate application period was established for the Arctic-Yukon-Kuskokwim areas in 1976. In this area also, a number of persons eligible for permits under the Limited Entry law failed to apply and lost forever their right to harvest salmon as a gear license holder.

It is our sincere belief that most of the persons who met the hardship standard for entry permits established by AS 16.43.250 but who failed to apply, were Alaska residents. The Commission, faced with the task of reaching thousands of widely scattered fishermen, mailed cards to those persons whose eligibility could be programmed on its computer, and issued press releases which were widely disseminated in newspapers and radio. But no radio station was in operation in Bristol Bay until after May 18, 1975, and no newspaper of general circulation exists even now.

In retrospect, it is apparent that a much longer application period should have been held. When the Alaska Native Claims Settlement Act was passed, 2 years was given to enroll everyone and Congress later passed a late application law to catch those who were missed. The Commission could have held the application period open for a long time while simply requiring that permits be obtained prior to actually fishing. Instead, understandably anxious to begin the final classification of applicants so that the issuance level of the point system could be determined, a shorter period was used (less than six months) and people missed the cut-off date.

The 1975 application period was fraught with problems. Former Commissioner Jay Stovall, in a letter dated February 5, 1980, recalls that he told an eligible set net fisherman in Bristol Bay that he had virtually no chance for a permit because he didn't have enough points. In fact, so few eligible persons applied in that fishery that everyone received a permit. Others recall hearing that 20 points were required for a permit; in fact, 20 points guaranteed a permit. This was the first year of a novel program and many mistakes were made.

The ADF&G forecast for the Bay in 1975 was very bad. Those electing not to fish often didn't realize that they needed to apply in order to fish in future years. After generations of applying for licenses annually, it took some families some time to realize what the concept of limited entry was all about.

The Commission did outreach to contact people, but it took hours just to complete one application even after one was familiar with the 40 page instruction booklet. The literacy rate in western Alaska is among the worst in the country,

and a large percentage of people either don't understand English at all, or speak it as a second language.

Older persons were especially likely to miss the deadline, because they didn't understand the fact that their daughters and sons would not necessarily be able to obtain permits on their own. Of the more than 200 late applicants represented by Alaska Legal Services, many are older Alaska Natives who do not read (or often speak) English.

Other persons failed to apply because they didn't get any notice at all. Some were away at school, others in the military. Still others filled out the cards requesting applications and thought that the card itself was the application. But whatever the reason, it is apparent that the less sophisticated, the poor and the uneducated were the ones most often losing the permits.

b. HB 665

The bill before the Committee does not change the point system or make anyone eligible for permits who was previously ineligible. It does not "open things up." What it does is allow the Commission to exceed the "maximum numbers" to accept late-filed applications, until December 31, 1980.

The "maximum numbers" represent the amount of gear in the water during the highest year between 1969 and 1972. For example, in the Bristol Bay drift fishery the maximum number was 1669 (although there are about 1700 permits issued for that fishery for various reasons including the Isakson Supreme Court decision). The optimum number of units of gear (AS 16.43.290) has not been determined for any fishery, nor has the buy-back authorized by AS 16.43.310 been implemented. It is possible that the optimum number may exceed the "maximum" number in some fisheries; the United Fishermen of Alaska are supporting a bill (HB 1015) to issue new permits in those fisheries which have "recovered" since 1975.

If the improved management techniques and the 200 mile limit do not result in Alaska's fisheries being able to support more gear (a questions perhaps as much related to marketing as biology), then the buy-back is the remedy--not denying permits to those who depend on fishing for their livelihood.

c. Testimony prior to 4/24/80.

Approximately 50 persons testified at the teleconference hearing held March 3, 1980, and no-one testified against the bill. Persons failing to apply explained what happened to them and the consequences during the last five years. Clearly this is a bill which will benefit these Alaskans far more than will the tax repeal or distribution of oil wealth; this bill will return to them their chosen occupation.

The letters and telegrams since that date have been somewhat divided on the bill, but in numbers they overwhelmingly support it due to the presence of numerous resolutions and petitions. Village councils of several western Alaska villages have passed resolutions supporting the bill, and the City of Togiak filed a petition signed by about a hundred residents. The Aleutian-Pribilof Island Association, Inc., the Kodiak Area Native Association, the lower Yukon-Kuskokwim Aquaculture Association, the Rural Alaska Resources Association

and the Bristol Bay Native Association all passed resolutions supporting the bill, and the Citizens' Participation Conference held in Juneau endorsed it as well. It is significant that organizations and municipalities of the region primarily impacted by the bill support it (in this writer's examination of the letters written against the bill, only two were found from residents of western Alaska).

d. The number of permits likely to be issued.

Anyone fishing as a gear license holder between 1960 and 1972 is eligible to apply for a permit. The point system is then used to determine if one will qualify for a permit. Because applications have not been processed for those not applying before the deadline, it is impossible to predict exactly how many new permits will be issued.

It is, however, possible to perceive certain factors and draw inferences with respect to the number of permits likely to result. Because the Commission has attempted to do this in its memorandum of 2/25/80 for the Bristol Bay drift gillnet fishery, some discussion of this fishery may be instructive.

According to computer records some 813 eligible applicants failed to timely apply for permits for this fishery. As noted earlier, many of these persons had the belief that 20 points were required for permits and elected not to apply. It is our opinion that the magnitude of the problem is illustrated by the fact that so many eligible persons failed to apply--but it does not follow that several hundred permits will be issued in this fishery if HB 665 becomes law.

The Commission memo states that its computer has information verifying only 9 eligible applicants at 17 points or more (the issuance level in this fishery), but goes on to postulate 551 will end up proving 17 points. This of course assumes that everyone applies in a second application period, an assumption clearly invalid, although it is again impossible to state exactly how many would in fact apply.

But more importantly, the Commission's second assumption is also erroneous. Although only 37 persons have more than 11 points (according to computer info), and 634 have less than 6 points, the Commission assumes 551 will obtain permits by projecting actual point totals by analogy to the class of persons who in fact applied in 1975. That correlation, while placing an upper limit on permit awards is clearly inapplicable directly to non-filers because many non-filers in fact made conscious decisions not to apply because they did not have very many points.

It is not a contradiction to say a) the application period failed because a lot of people failed to apply, and b) most of those people won't qualify for permits. In the ideal system, all eligible persons will apply and those who qualify will receive permits. But if two fishermen receive applications with -0- preprinted points and one has fished all his life and the other fished only one year, the former is far more likely to apply--leaving the latter on the computer run of eligible persons who failed to apply. For those who did not comprehend the nature of limited entry or received no actual notice--the persons this bill seeks to help--the correlation is true; but for that large group of more informed persons who knew they had little chance of qualifying for permits, it is not.

In three fisheries, so few applications were received that permits were issued at -0- points. We suggest that section 3 of the proposed bill be amended by adding, at the end of the second sentence, the words "except that no permit shall be issued to persons who would suffer only minor hardship from exclusion under AS 16.43.250(c)." This would require, for example, that permits only be issued in the Bristol Bay set net fishery to those proving more than 6 points. Those suffering hardship were supposed to receive permits; those suffering only minor hardship can properly be excluded in those fisheries for which the maximum number has been reached.

e. Administrative burden on the Commission.

The Commission is administering a program of tremendous importance to Alaskans, and it should be funded in an amount sufficient to enable it to do its job. The amount of outreach assistance spent in Bristol Bay in 1975 was less than the present value of one drift gillnet permit there.

The fiscal note submitted with this bill includes a substantial amount to clear up the Commission's backlog of cases; if it is funded in the amount requested, it should be made clear that applicants under the new application period should receive permits to which they are entitled expeditiously.

f. Conclusion.

It is true that some persons will receive permits under this bill who consciously elected not to apply for them in the original application period. It is also true that in some years, in some fisheries, there will be an increased amount of gear in the water when there shouldbe less.But neither of these reasons is sufficient to refuse to award permits to the persons who testified at the teleconference and who inhabit virtually every village of southwestern Alaska. The "maximum numbers" are a completely arbitrary set of gear limitations which were selected as a starting point to limit entry; the Commission has yet to determine optimum numbers. While everyone excluded by limited entry may cry for a change, one group stands out as equitably entitled to their permits as the intended beneficiaries of the original act: those who would suffer hardship by exclusion from the fishery for which they were eligible. HB [illegible] would rectify this inequity. If the State's marketing efforts fail, or if the determination is made in a given fishery that the resource cannot support the number of units of gear in the water, then the buy-back provisions of the statute should be implemented. Neither of these conclusions is evident at this point, and it is unfair to penalize qualified fishermen by forever excluding them from the fishery.

Juneau, Alaska 99811

Dear Sirs:

I do not support H.B. 665 for the following reasons:

With a possibility of larger boats after December 31, 1981 in the Bristol Bay area, the outer limits will probably have to expand to fit the needs of the larger fleet.

With the amount of gear in the water now it is ortrageous. With excess gear it will be worse than maggots, especially when the runs are in certain areas and most of the fleet concintrates in that area.

I feel people selling thier permits, the state should have fisrt priority. Then lease the- to the people who depend or have a hardship if they depend on the fishery for cash economy. Of course at a low price, or depending on the catch. Then after the permits have been paid off by leasing each year, issue them to the qualified people who depend on the fishery for a living. For your information I do not have a permit, and do not wish to obtain one at this time. I am a fishing partner though.

Sincerely,

Marilyn Nelson

Dear Sir:

In reaponse to HB 665, I would like to express my opposition to this bill based upon the following reasons:

1. I have watched the fishing time become less and less in the Cook-Inlet during the last ten years.

2. Since limited entry began, fishermen have been able to improve their equipment by investment in newer and safer boats, many of which have been financed by State loans, if HB 665 passes our fishing time will be diminished accordingly and the State of Alaska may be the owner of a rather large fleet of modern gillnetters.

3. Prices being quoted today surely will be a large economic blow to most of the Gillnetters in Alaska without having fishing time reduced by the addition of more permits to various areas.

One thing that stands out more than any other factor when reviewing the limited entry program is: This program is presently working, so give it a chance to totally succeed. I am not requesting total immunity from scrutiny since all programs should be subject to a critical review from time to time; however, with this in mind, please be reminded that many areas, such as Cook Inlet where I fish, produced fish enough to average $18,000 to $22,000 gross income per boat in the drift fleet during 1978 which was the best season in the last 20 years.

Respectfully,

Thomas H. Wagoner

3-27-80

Dear Sir -

I am writing to protest bill HB665. I feel there is already too much gear in most of our fisheries so that we cannot afford further reductions in fishing time. We are also looking at dismal price projections for this coming year. It is hard enough making a living at fishing, please do not make it harder!

Sincerely -

Tom Pirtle

Re: HB 665

3/26/80

Dear Rep. Osterback:

As a life time fisherman & one who was granted one limited entry permit (SE Seine) and who saved and worked hard in order to purchase another (power Troll) & thus broaden my fishing activities I urge you to seriously consider NOT increasing the no. of permits

Fishermen in SE AK have already been severely restricted in area openings, fishing time, gear & now are experiencing huge fuel price increases (1st mile) along with depressed prices for our fish. The forecast for a poor SE Seine year plus perhaps tighting of limit Seiner restrictions does not brighten the picture.

Having entered other fisheries (i.e. longline) I find the same problems is already developing in

That area.

Obviously There are some Tough years ahead – Those of us who will Keep fishing regardless because this is what we done to do world just like a fighting chance to make a living.

Sincerely,
Mac Johnson

Anchorage, March 25th 19[illegible]

I, as a fisherman of the Brisol Bay & a holder of a Limeted Entry Permit, strongly oppose the bill HB665.
I did not qualify for a permit & had to pay a handsome sums in order to keep on fishing.
Twice those people had a chance to apply for permits & failed to do them & now, since fishing became a big business, everybody wants a permit without paying for it.
I would like to hear your answer on this.

RE: HB 665

Dear Rep. Osterback:

On our Cook Inlet fish sites we have five permits, which are more than adequate. We have been fishing in Cook Inlet for more than 12 years. Every year our records verify that less and less salmon are being caught by us and our fellow Limited Entry permit fishermen along the West Foreland Cook Inlet Sites. The only fact sustaining the Commercial Fisherman's living is the fact that salmon prices keep increasing every year due to the fact that there is less fish.

To allow HB 665 to pass would be disastrious to the Commercial Limited Entry Fishermen. We already have enough Alaskan citizens trying to make a living from commercial fishing.

Sincerely,

Charles F. Davis

Pouch V
Juneau, Alaska 99811

Sir:

I urge you to vote against HB 665.

There is already too much gear in Alaska and to issue more permits would ultimately result in the loss of fishing time. We cannot afford this because of the price projection for the coming year.

I have fished in Bristol Bay and the Port Moller area for thirty years. Many of us have many thousands of dollars invested in gear. Please don't put this in jeopardy.

Sincerely yours,

Elmer T. Hjorten

Dear Sir

I just read there is a bill before the legislature to increase the number of permits in the fisheries.

It is a fact the current number of fisherman is able to flood the market so please dont add any more year to the fishery.

Yours truly,

Robert White

April 1, 1980

Dear Concerned Legislator:

I am a commercial fisherman and am married to one. I would like to express my concern about HB 665, the 'late-filers' bill.

I genuinely feel there were several people left out of the Limited Entry system through no fault of their own. Anyone who did not apply because their village was not properly notified, or because a language barrier was not considered should have a chance to file, even this late.

So--Please, please, please look at some compromises.

If HB 665 goes through as it is now, not only those deserving permits, but also financial speculators will be able to enter the fishery. There were many people who did not apply back then because they did not think the fishery could provide enough income and they did not realize the potential growth of the value of the permit. To safeguard against unscrupulous 'carpetbaggers', make any new permits non-transferable.

I urge you to consider that if you support this bill in its present form, you shake the whole basis of the fishery. Limited Entry was voted on by the people of the state to protect us from encroachment from outside the state. Limited Entry must remain. Without it, we would have tremendous numbers of fishermen, bot residents and non-residents, and no one would be able to make a living. The vast majority of fishermen do not make what those in Bristol Bay or Chignik have recently made. Please look at statewide fishing net incomes.

The Limited Entry Commission already has laws it can act upon to increase the number of permits in any fishery that has recovered biologically and economically to stand extra fishing effort. Please pursue this angle. The Commission right now seems to be unwilling to do this; it is afraid of lawsuits. Push it; push it hard to allow more permits. And see that those persons who most deserve a permit under the 'late-filers' bill get first priority. Make the Commission do its job.

To summarize. If you feel you must pass this bill, please amend it. It would be far better though, to use existing legislation to allow more permits to be issued.

Thank you for your time. Work to protect the right of fishermen to earn a living!

Alice Bartoo

Alice Bartoo

Representative Alvin Osterback:

Concerning HB 665 ("late Filer Bill")

With fuel prices nearly double last years; boat maintenance, gear and all other expenses up nearly as much fishermen are looking at a 25%-50% decrease in price! Further, the Alaska Dep. of Fish & Game has announced extensive cutbacks and closures will have to be effected this season due to more gear and pressure in the fisheries than they can sustain.

Please consider that HB 665 will further this problem of too much gear, and cause even more restrictions. Fishermen simply cannot afford further restrictions in fishing time and remain in business.

Sincerely,

Robert Derris
Box 1234

4/2/80

Representative Osterback - sir:-
Bill #HB 565 - No no, no, Yakutat area is already over fished, no more permits. We have short weeks now. Beginning 1½ days a week to decide the fish among the fishermen we already have. Yakutat has had dozens of downings of rookies trying to learn. Rivaling for sets causes disapearances. - Frank W. Johnson

HB665

Kauffman
R.R. 4-4253-5
Juneau, AK
99803

3-30-80

Dear Rep Alvin Osterbuck,

I am a fisherman and deeply concerned about HB. 666 - a bill to issue Limited Entry permits to those who filed late.

Yes, I have a vested interest in the outcome of that legislation. My objection is this. The increase or decrease of limited entry permits is a process that ~~involves~~ should involve the Dept. of Fish and Game Limited Entry commission, and State Board of Fisheries. If they feel an increased number of permits should be issued because the resource has comeback and can stand it that is fine. But to have the legislature mandate permits in the political arena, where the issuance of a large number of permits would be tantamount to buying votes is ridiculous.

I well remember the effort put out to get people to respond in qualifying for a permit. Some folks did not get permits who had a good case - however if they were fishermen and not speculators they applied permits and continued to fish. Such opportunities are not denied anyone - many people have worked their way into fishing under limited entry. H.B. 665 would put too much gear in the water and result in a loss in fishing time, I oppose it.

Thank you, Dave Kauffman

Mar 26

Dear Rep Osterbauer,

We are against the passage of bill HB615, for several reasons. For one, it is not fair for the state to [illegible] offering free permits [illegible] who had to pay alot of money [illegible] eligible to my Classic Ram permit) & have to resort to making it [illegible] investment or break to get mine. If they start having to cut to free, this [illegible] for me. My two permits I value will [illegible] anything I will not only have missed out on a free permit but my investment because [illegible] ing ATV + the addition of [illegible] by would be devastating. There isn't enough room or money to handle them. Thank A.P

March 26, 1980.

Senator Clem Tillion,
President of the Senate,
Alaska State Legislature,
Pouch V,
Juneau, AK 99811.

Dear Senator Tillion,

We are writing regarding House Bill 665, the "late filer" bill which would effectively end limited entry in the Bristol Bay area. Commercial fishing is our source of living, and half our income comes from Bristol Bay. Although expansion of permits seems reasonable in the light of the 1979 season and the 1980 prediction, we feel that this is a short-sighted view. We have not forgotten the lean years from 1970-1978, and a thirty percent increase in licences in future lean years could well be disastrous for those of us who depend upon the fishery for a living.

The Bristol Bay fishery is cyclical in nature, with some years being very good and some being very poor, and a few moderate years in between. We would like to see the fishery managed so that full-time fishermen can make a living from it. There is no doubt about the efficiency of the present fleet to harvest the largest runs into the Bay. The problem is one of markets, and the legislature could be very helpful in providing assistance in developing such markets. We are looking at a poor price this year simply because the markets are not available, and of course the State of Alaska will lose revenue for this same reason. Rather than expanding the fleet to directly compete for an already limited market, which in turn will drive down prices and tax revenues, we would like to see an aggressive market program on the part of the State.

It should also be pointed out that increasing the number of licenses will create undue political pressure on the Alaska Dept. of Fish and Game during the lean years, to open the seasons when they should perhaps remain closed. We would suggest that the Bristol Bay fleet not be permitted to expand until several years of this cycle have gone by. We suspect that those who now want permits in order to make a "quick buck" will vanish as soon as the going gets a little rough, leaving those of us who are committed to the fishery facing a shorter season and curtailed income.

Thank you for your attention to this very important issue.

Yours truly,

Kent Martin
Irene Martin

March 28, 1980
Kirkland, Washington

Representative Alvin Osterback
Pouch V
Juneau, Alaska 99811

Dear Sir:

In reference to the late-filer legislation, please note that many areas of Alaska are hard hit by depleted runs and overfishing.

Copper River's five hour King season, no red season, and no immediate relief in sight is an example. Prince William Sound has a disaster forecast, The Southeast has a poor forecast, and Kodiak and the Cook Inlet forecasts are not too good, either.

Limited Entry has made it possible for fishermen to borrow to purchase safe efficient vessels which are not paid for and may never be. It has saved loss of life and accident. It has made it possible for families to man boats and thereby earn an acceptible living which also improves family life.

These late filers could have and would have filed if they had forseen a monetaryvalue in the permits, most of them boat pullers who still have the same opportunity as before to fish.

Many fishermen who had quit filed and got in by the skin of their teeth so to speak, only to immediately sell the permit, thus adding to the already overfished conditions.

These late filers could be put on a waiting list to be issued a permit if and when an area needed more fleet to efficiently make the harvest. Meanwhile, they still have the original option of boat-pulling.

I do not like to see a fishing and the livelihood of a fleet destroyed by these people who were too lackadaisical to get on the ball when there may have been a chance which they were not interested in. Most of them would be no threat to the active fleet, but the industrious enterpriser who they would sell their permits to would hurt the fisheries.

I speak with over 40 years experience as a boat owner and fisherman.

Sincerely yours,

Carl (Rusk) Becker
