Currently, Bethel Receiving Home is operating at a loss. Since its opening in 1980, the receiving home has lost approximately $32,000. According to a superior court judge in Bethel and the administrative director of Bethel Social Services, Inc., a major reason for the receiving home's financial problems is the inadequate cost of care rate paid to Bethel Receiving Home by the Department of Health & Social Services. According to the director of Bethel Social Services, Inc., the rate was set too low when the home opened because the state's estimation of the anticipated usage was low. Superior Court Judge Christopher Cook maintains that the receiving home would be financially viable if their daily rate was approximately $100.00.

Department's position: The Department of Health & Social Services is generally supportive of maintaining placement facilities for abused and neglected children and delinquent youth especially in rural areas where alternative placement resources are scarce. The department also recognizes the high costs inherent in operating receiving home facilities in rural areas. However, under Chapter 138 of the statutes, the department is required to pay Bethel Receiving Home a daily cost of care rate of $75.52.

Issues worthy of closer consideration:

1) The Department of Health & Social Services recommends amending Section 2, lines 15 and 16 in order to clarify the intended method of grant disbursement. The proposed wording is as follows:

"Section 2. The appropriation made by this act shall be disbursed in accordance with AS 37.05.316." (please refer to attached statutes)

2) What is the actual intent of the appropriation? According to representatives from the Department of Health & Social Services, the attorney general has ruled that it is illegal to give grants for prior expenditures. The grant in SB 97 is designated for the operation of the Bethel Receiving Home during the fiscal year ending June 30, 1983. On the other hand, grants to improve programs and facilities are acceptable.

3) The daily cost of care rate is usually figured from the past year's expense budget which a program submits to the Department of Health and Social Services. Bethel Social Services arrived at their request for $115.00 per day by averaging the rates paid to receiving homes in Anchorage, Juneau, Nome and the North Slope.

4) If enacted, HB 383 "An act relating to payments authorized for residential child care services" will increase the cost of care rate paid to Bethel Receiving Home by 2.5%. The Department of Health & Social Services agrees that the increase would help reduce present problems somewhat, but will not reimburse the home for past losses nor prevent the home from operating at a loss in the future.

Department of Transportation and Public Facilities. All bids with the names of the bidders and the amounts of the bids, together with all documents pertaining to the award of a contract, shall be made a part of a file or record and retained by the department for three years, unless reproduced by microfilming and these files or records are open to public inspection at all reasonable times. An aggrieved bidder may within five days after an award of contract appeal to the department for hearing, with notice to interested parties, for redetermination and final award in accordance with law.

(b) A contract for professional services shall be awarded in accordance with AS 24.23 or AS 36.98. (§ 4 art IV ch 82 SLA 1955; am § 1 ch 64 SLA 1976; am Executive Order No. 39, § 11 (1977); am § 9 ch 144 SLA 1982)

Effect of amendments. — The 1982 amendment, effective July 22, 1982, designated the former provisions of this section as subsection (a), and in that subsection, added "Except as otherwise provided in AS 37.05.230" to the beginning, deleted "taking into consideration conformity with the specifications, terms of delivery, and other conditions imposed in the call for bids" from the end of the first sentence, and substituted the present second, third, and fourth sentences for those set out in the main pamphlet. The amendment also added subsection (b).

Article 5. General Provisions.

Section
315. Grants to municipalities
316. Grants to named recipients
317. Grants to unincorporated communities
318. Exemption from regulations
319. Definitions

Sec. 37.05.300. Interpretation of AS 37.05.010 — 37.05.330.

Opinions of attorney general. — As to applicability of the chapter to the University of Alaska, see notes under this catchline following chapter heading.

Sec. 37.05.315. Grants to municipalities.

(a) When an amount is appropriated or allocated as a grant to a municipality, the Department of Administration shall promptly notify the municipality of the availability of the grant. When the Department of Administration receives an agreement executed by the municipality which provides that the municipality (1) will spend the grant for the purposes specified in the appropriation or allocation, (2) will allow, on request, an audit by the state of the uses made of the grant; and (3) assures that, to the extent consistent with the purpose of the appropriation or allocation, the facilities and services provided with the grant will be available for the use of the general public, the Department of Administration shall pay the grant directly to the municipality. The agreement executed by a municipality under this section shall be on a form furnished by the Department of Administration and shall be executed within 60 days after the effective date of the appropriation or allocation.

(b) An appropriation or allocation for a grant to a municipality for construction of a public facility lapses if substantial, ongoing work on the project has not begun within five years after the effective date of the appropriation or allocation.

(c) In accepting a grant of money for construction of a public facility, a municipality covenants with the state that it will operate and maintain the facility for the practical life of the facility and that the municipality will not look to the state to operate or maintain the facility or pay for its operation or maintenance. This requirement does not apply to a grant of money for repair or improvement of an existing facility operated or maintained by the state at the time the grant is accepted if the repair or improvement for which the grant is made will not substantially increase the operating or maintenance costs to the state.

(d) Not less than 20 percent of a grant shall be paid to a municipality within 10 days of the effective date of the agreement under (a) of this section. The remainder of the grant shall be paid either in monthly installments equal to the amount of grant money the municipality expended in the previous month or in a lump sum as determined by the Department of Administration. (§ 1 ch 156 SLA 1980; am § 1 ch 4 SLA 1982)

Effect of amendments. — The 1982 amendment, effective January 16, 1982, in subsection (a), substituted "amount is appropriated or allocated" for "appropriation is made" in the first sentence, inserted "or allocation" in items (1) and (3) in the second sentence, and added "and shall be executed within 60 days after the effective date of the appropriation or allocation" to the end of the third sentence; redesignated the former fourth and fifth sentences of subsection (a) as subsection (d); inserted "or allocation" in two places in subsection (b); substituted "a" for "each" preceding "municipality covenants" and "the practical life of the facility and that the municipality" for "its practical life and that it" in subsection (c); added the second sentence of subsection (c); deleted the provisions of former subsections (d), (f), and (g), which may now be found in AS 37.05.316, 37.05.317, and 37.05.318, respectively; and in present subsection (d), added "under (a) of this section" to the end of the first sentence. The substance of the provisions of former subsection (e) may now be found at the end of the third sentence of subsection (a).

Sec. 37.05.316. Grants to named recipients.

When an amount is appropriated or allocated to a department as a grant for a named recipient which is not a municipality, the department to which the appropriation or allocation is made shall promptly notify the named recipient of the availability of the grant and request the named recipient to submit a proposal to provide the goods or services specified in the appropriation act, or both, for which the appropriation or allocation is made. At the same time, the department may issue a request for proposals from other qualified persons to provide the same goods or services, or both, in the same area. The department shall contract with the named recipient unless the Office of the Governor, with due regard for any local expertise or experience among those making proposals, determines that an award of the contract to a different party would

better serve the public interest. If the contract is awarded to another party than that named by the legislature, the basis of that action shall be stated in writing at the time the grant is issued and a copy of the written statement shall be sent to the Legislative Budget and Audit Committee. A contract shall be executed within 60 days after the effective date of the appropriation or allocation. The purchase of the goods or services, or both, shall be in accordance with AS 37.05.230(1)(C). (§ 2 ch 4 SLA 1982)

Effective dates. — Section 3, ch. SLA 1982, provides that this section take effect January 16, 1982, in accordance with AS 01.10.07(c).

Editor's notes. — The provisions of this section were formerly contained in AS 37.05.315(d) as it existed prior to the 1982 amendment of that section.

Sec. 37.05.317. Grants to unincorporated communities. When an amount is appropriated or allocated as a grant under this section to an unincorporated community, it shall be disbursed as follows:

(1) Within 45 days after the effective date of the appropriation or allocation, the Department of Community and Regional Affairs shall notify the governing body of the unincorporated community, if any, that a grant is available.

(2) The Department of Community and Regional Affairs shall determine if there is a qualified incorporated entity in the community area that will agree to receive the grant and administer it, subject to terms generally applicable to private grantees. If there is more than one such entity, the Department of Community and Regional Affairs shall select the most qualified and the grant shall be awarded to that incorporated entity for the purposes specified in the appropriation act. However, the Department of Community and Regional Affairs shall give preference to a nonprofit corporation organized by a community for receipt of the grant.

(3) If there is no incorporated entity qualified to receive the grant, the Department of Community and Regional Affairs shall administer the program as specified in the appropriation act directly or through agents or contractors with whom it may contract in the community area. (§ 2 ch 4 SLA 1982)

Effective dates. — Section 3, ch. 4, SLA 1982, provides that this section take effect January 16, 1982, in accordance with AS 01.10.07(c).

Editor's notes. — The provisions of this section were formerly contained in AS 37.05.316(f), which was deleted by the 1982 amendment.

Sec. 37.05.318. Exemption from regulations. Notwithstanding the Administrative Procedure Act (AS 44.62), the Fiscal Procedures Act (AS 37.05), and the Executive Budget Act (AS 37.07), a state agency may not adopt regulations or impose additional requirements or procedures to implement, interpret, make specific, or otherwise [illegible] the provisions of AS 37.05.315 — 37.05.317 unless required

by the federal government for participation in federal programs. (§ 2 ch 4 SLA 1982)

Effective dates. — Section 3, ch. 4, SLA 1982, provides that this section take effect January 16, 1982, in accordance with AS 01.10.07(c).

Editor's notes. — The provisions of this section were formerly contained in AS 37.05.316(g), which was deleted by the 1982 amendment.

Sec. 37.05.319. Definitions. In AS 37.05.315 — 37.05.317, "appropriation" and "allocation" have the meanings set out in AS 37.07.120(4) and (5). (§ 2 ch 4 SLA 1982)

Effective dates. — Section 3, ch. 4, SLA 1982, provides that this section take effect January 16, 1982, in accordance with AS 01.10.07(c).

NOTES TO DECISIONS

The University of Alaska is subject to the provisions of this chapter. February 28, 1977, Op. Att'y Gen.

There is no constitutional obstacle to making the University of Alaska subject to the provisions contained in this title. February 28, 1977, Op. Att'y Gen.

Sec. 37.07.010. Statement of policy. It is the purpose of this chapter to establish a comprehensive system for state program and financial management which furthers the capacity of the governor and legislature to plan and finance the services which they determine the state will provide for its citizens. The system shall include procedures for

(1) the orderly establishment, continuing review, and periodic revision of the program goals and policies of state agencies and financial goals and policies of the state;

(2) the development, coordination and review of long-range program and financial plans that will implement established state goals and policies;

(3) the preparation, coordination, analysis, and enactment of a budget which is organized to focus on the services provided by state agencies and on the cost of those services and which provides for implementation of policies and plans in the succeeding budget period;

Chapter 138

AN ACT

Relating to vision and hearing screening examinations, public assistance, and other assistance provided by the state; and providing for an effective date.

---

* Section 1. FINDINGS. The legislature finds that the present method for establishing payment rates under AS 47.40 for residential child care services is inadequate. The Department of Health and Social Services shall conduct a study of alternatives to the method of establishing payment rates under AS 47.40. The study shall be conducted by a committee of five members appointed by the commissioner of the Department of Health and Social Services. Three members of the committee shall be employees of the Department of Health and Social Services and two members shall be providers of residential child care services. The study shall contain, among other matters determined by the department, a suggested redefinition of the manner in which rates for residential child care services are calculated, a consideration of the method and amount of reimbursement for capital costs of residential child care facilities, and the availability and use of other sources of money to finance residential child care services and to finance the construction of residential child care facilities. The committee shall report its findings to the legislature on or before the 30th day of the Second Session of the Thirteenth Legislature. The legislature further finds that the rates established under AS 47.40 should be suspended from June 30, 1982 to July 1, 1984.

* Sec. 2. The operation of AS 47.05.010(14), AS 47.40.010, 47.40.040, and 47.40.050 is suspended from July 1, 1982 through June 30, 1984. During the

period of suspension, payment for services provided by residential child care facilities shall be made solely in accordance with the provisions of secs. 3 and 4 of this Act.

* Sec. 3. For fiscal year 1983, the payment authorized per day for each child placed by the Department of Health and Social Services in an existing residential care facility is:

Alaska Children's Services Receiving Home (Anchorage)	$149.85
Alaska Children's Services Jesse Lee Home (Anchorage)	165.46
Alaska Children's Services Rabbit Creek Group Home (Anchorage)	166.40
Alaska Children's Services North Star Home (Anchorage)	103.55
Alaska Children's Services Aquarius House (Anchorage)	107.60
Alaska Children's Services Colletti House (Anchorage)	117.51
Alaska Baptist Family Service Center (Anchorage)	117.02
Booth Memorial Home (Anchorage)	146.90
Hilltop Home, Inc. (Anchorage)	85.53
Kenai Peninsula Community Care Center (Kenai)	91.74
Kodiak Baptist Mission (Kodiak)	61.61
Turning Point Boys Ranch (Willow)	105.37
North Star Children's Home (Dot Lake)	62.25
Presbyterian Hospitality House (Fairbanks)	111.98
Juneau Receiving Home (Juneau)	106.17
St. Jude Center, Inc. Receiving Home (Juneau)	2.33
Nome Receiving Home (Nome)	116.97
Manilaq Group Home (Kotzebue)	167.00
North Slope Borough Children's Receiving Home (Barrow)	168.35
Ketchikan Teen Home I (Ketchikan)	74.26
Ketchikan Teen Home II (Ketchikan)	81.61
Ketchikan Children's Home Intensive Treatment Unit (Ketchikan)	152.56
Sitka Receiving Home (Sitka)	40.66

Bethel Receiving Home (Bethel)	75.52
Bethel Group Home (Bethel)	59.06
Covenant High School (Unalakleet)	51.16

* Sec. 4. For fiscal year 1984 the payment rates for residential child care services shall be the amounts set out in sec. 3 of this Act increased by five percent.

* Sec. 5. For fiscal years 1983 and 1984 the Department of Health and Social Services may contract for residential child care services with a facility not listed in sec. 3 of this Act at a rate to be determined by the Department.

* Sec. 6. AS 14.30 is amended by adding a new section to read:

Sec. 14.30.075. VISION AND HEARING SCREENING EXAMINATIONS. (a) A vision and hearing screening examination shall be given to each child attending school in the state. The examination shall be made when the child enters school or as soon thereafter as is practicable, and at regular intervals specified by regulation by the governing body of the district.

(b) The Department of Health and Social Services shall

(1) set standards for the performance of vision and hearing screening;

(2) train and certify public health nurses and school district employees to conduct hearing and vision screening tests;

(3) assist with referral and follow-up of children needing professional examination or treatment; and

(4) assist with maintenance and repair of screening equipment.

* Sec. 7. AS 44.29.020 is amended to read:

Sec. 44.29.020. DUTIES OF DEPARTMENT. The Department of Health and Social Services shall administer the state programs of public health and social services, including: (1) maternal and child health services;

POSITION PAPER/Department of Health & Social Services

POSITION PAPER

SENATE BILL NO. 97
PAGE 1

"An Act making a supplemental appropriation to the Department of Health and Social Services for payment as a grant to Bethel Social Services, Inc.; and providing for an effective date."

Senate Bill No. 97 makes an appropriation of $65,000 to the Department in the form of a grant designated for Bethel Social Services, Inc. to operate the Bethel Receiving Home during the remainder of the current fiscal year.

There are a variety of problems inherent in operating such facilities in Bush communities which are either unique to those facilities or exaggerated because of their location. For example, initial start-up and ongoing operating costs of such facilities are usually greater than for urban facilities.

In addition, smaller facilities located in rural areas generally have less predictable resident populations and suffer from cash flow problems.

The number of emergency placements has declined in the Bethel area as it has statewide. This decline has resulted from changing needs of children and more effective efforts to comply with the Indian Child Welfare Act, which mandates preferential placement of Native children in the homes of relatives or in Native foster homes. This has proven particularly problematic, however, to those facilities, such as the Bethel Receiving Home, operating in areas in which the majority or a very large percentage of the population is Native. Thus, while staffing is generally maintained at levels adequate to provide for the average population of the facility and for emergency circumstances the actual number of residents is often below the level required to provide fiscal support for the facility's operation. Since contracting for a number of beds is not allowable under existing purchase of services law, the facility cannot be assured of income necessary for operation during those periods when few or no placements are made.

In summary, the Department is supportive of maintaining facilities such as the Bethel Receiving Home which serve as necessary placement resources for abused or neglected children and for delinquent youth who do not require detention. Maintenance of such facilities in rural areas is critical due to the general paucity of alternative resources. Without such resources many children and youth would necessarily be placed in urban facilities far from the systems of support provided in their communities and separated from their families. Such separation at times nullifies efforts to resolve the precipitating social or family problems and may prevent reunification of the child and family or rehabilitation of delinquent youth.

POSITION PAPER/Department of Health & Social Ser

The intended method of disbursement of grant funds would be more clearly stated if Section 2, Lines 15 and 16 of the Bill were amended to include only the specific statutory citation for disbursing grants to named recipients other than a municipality. The appropriate wording would be:

> "Sec. 2. The appropriation made by this act shall be disbursed in accordance with AS 37.05.316."

To: Representative Mae Tischer, Chairman
House Health, Education and Social Services Committee

From: Representative Walt Furnace

Date: January 30, 1984

RE: CS SB 129 (Rules)

Attached please find an amendment which I feel would strengthen CS SB 129 (Rules). Specifically it establishes a standard by which CPR classes should be taught.

Additionally, for the Alaska Chapter of the National Heart Association, February 13th begins National Heart Month. This might be an appropriate date for a hearing on CS SB 129 (Rules).

P.S. Mae — this amendment is a recommendated by the American Heart association.

Dear Representative Tischer:

At the risk of bugging you, I'd ~~like to~~ reiterate my request of February 7th. You remember I asked you to move CSSB 129 if you found it within yourself so to do? From what you told me in the hall the other day, I assumed that it was just a question of time.

Time becomes a little more critical now, inasmuch as the Senate passed the companion appropriation bill SB 130 on the morning of February 21st.

Thanks again for any consideration you may show us.

FROM: Senator Robert H. Ziegler, Sr.

RE: CPR Bills, SB 129 and SB 130.

Committee substitute for SB 129 adds CPR and cancer training to programs which schools are encouraged to include in their curriculum. SB 130 provides funds for purchase of manikins and films for CPR training.

The purpose of the original bills was to encourage CPR training by providing the training-manikins which the school district may otherwise not be able to afford.

As the bill is currently written, the school district is not required to implement a CPR program before receiving a manikin. Perhaps a letter of intent should be included with the bill stating that unless a school implements an approved CPR program, they are not eligible to receive the manikins.

On separate paper, I have taken the liberty to provide a draft of the letter for your consideration.

RHZ:lk

3

LETTER OF INTENT

It is the intent of the House in passing SB 129 and SB 130 that in order to receive a CPR manikin, a school district must include a program approved by the American Heart Association or American National Red Cross in the school curriculum.

To the extent possible, the Department of Health and Social Services shall arrange for technical assistance to help establish an approved CPR training program.

In the event any school district chooses not to develop a CPR program or accept funds for a manikin or training films, a manikin or films may be purchased for any other school district which documents a need for additional CPR training aids.

SB 129, WHICH INCLUDES CPR TRAINING AS A PROGRAM SCHOOL DISTRICTS ARE ENCOURAGED TO INCLUDE IN THEIR CURRICULUM, AND SB 130, WHICH PROVIDES FUNDS TO PURCHASE MANIKINS FOR SCHOOL DISTRICTS WHICH INCLUDE CPR TRAINING IN ~~THE~~ their CURRICULUM AND TO PROVIDE EMERGENCY FILMS FOR THE TRAINING, WAS INTRODUCED LAST YEAR IN ORDER TO ASSIST SCHOOL DISTRICTS IN TEACHING CPR TO ALASKAN STUDENTS.

IT HAS BEEN PROVEN, AS YOU SENATORS GRAPHICALLY HAVE WITNESSED, THAT CPR, WHEN ADMINISTERED IMMEDIATELY AFTER AN EMERGENCY SITUATION, SAVES [redacted] LIVES.

JUST RECENTLY, A YOUNG BOY WHO WAS UNDER WATER FOR 20 MINUTES, WAS SAVED AFTER ALMOST AN HOUR OF CPR PRIOR TO TRANSPORTATION TO A HOSPITAL FOR MORE ADVANCED TREATMENT.

ONE OF THE BASIC PROBLEMS IN ALASKA THAT HAS THWARTED UNIVERSAL CPR TRAINING, ESPECIALLY IN THE RURAL AREAS, IS THE LACK OF ENOUGH MANIKINS FOR STUDENTS TO PRACTICE ON.

THROUGH THESE TWO BILLS, IF A SCHOOL DISTRICT INCLUDES CPR TRAINING IN THE SCHOOL CURRICULUM, THE DISTRICT WILL BE ENTITLED TO RECEIVE A MANIKIN AND THE USE OF TRAINING FILMS. IF A DISTRICT ALREADY HAS A MANIKIN, IT CAN EITHER ORDER ANOTHER ONE OR A "BABY MANIKIN" FOR USE IN TRAINING for INFANT CPR.

THERE ARE 53 SCHOOL DISTRICTS IN THE STATE AND THE AMOUNT REQUESTED WILL COVER THE COSTS OF THE MANIKINS AND SOME EXTRA MONIES FOR THE PURCHASE OF AND SHIPPING COSTS FOR EMERGENCY EDUCATIONAL FILMS.

THE AMOUNT BEING REQUESTED IS A SMALL PRICE TO PAY FOR SUCH AN IMPORTANT PROJECT, ONE WHICH CAN SAVE LIVES THROUGHOUT ALASKA.

Southeast Region Emergency Medical Services Council

BOX 2170

SITKA, ALASKA 99835

TELEPHONE 747-8005
747-6370

December 16, 1982

Senator Richard Eliason
P.O. Box 143
Sitka, Alaska 99835

Dear Senator Eliason:

I'm really pleased that you are interested in promoting the inclusion of CPR in school curricula. I consider knowledge of the technique to be critical for anyon living in Alaska. CPR has to be started within 4 - 6 minutes once the heartbeat stops if the victim is to survive which isn't enough time for an ambulance to arrive.

I think that the most exciting news in emergency medicine in the past few years, and particularly relevant to Southeast Alaska, is that people who drown in cold water can be resuscitated with no resulting brain damage even after submersion for long periods. Cases have been documented after submersion for up to 45 minutes. As soon as the victim is pulled out of the water, however, CPR must be initiated immediately. Just a few years ago, rescuers would not have known to try resuscitation on such victims. We have an excellent videotape on this topic that we show in all CPR classes. If you have a chance before the session begins, you may want to stop by our office to see it.

As we discussed, I found through speaking to several people from the State Department of Education that Alaska has a fairly strong policy of local determination over school curricula. The enclosed statute, however, provides a very appropriate place to add cardiopulmonary resuscitation as a health related subject that school districts should be encouraged to provide. I understand that when this paragraph was first added, it led to the Department's development of health education curricular materials for use by school districts. The addition of CPR to this paragraph should help us in establishing this as a priority subject for their attention.

In order to teach CPR, school districts must have available a certified CPR instructor, an adult mannikin, a baby mannikin and a film depicting the technique.

Our office, over the past few years, has been training CPR instructors and now have instructors available in most Southeast communities. We have used part of our operating grant funds to cover travel costs to provide this training. EMS programs that parallel ours in other

regions of the State have been doing the same to varying degrees.

One of the obstacles encountered by these volunteer instructors is the availability of the mannikins and film. In the past, we have loaned out mannikins but availability as well as the cost of shipping them (they are quite heavy) posed a problem. With some of the capitol funds you helped to provide last session, we were able to provide matching funds for several communities but gaps remain, especially on a Statewide basis.

In talking to teachers and administrators, I found little resistance to offering CPR as long as they could work out the logistics of having the instructor and training equipment available. I think that an effective approach would be to provide, as an incentive, a CPR mannikin, torso style, for any school district that incorporates CPR into it's curriculum.

There are 53 school districts in the State. Safety Inc., an Anchorage supplier, quote the price after April 1, 1983 of $420 per mannikin plus shipping which I consider a good price. The maximum cost for the program, allowing $30 per mannikin for shipping, would be $23,850. If a school district had already purchased an adult mannikin, they could use the funds instead to buy a baby mannikin ($350) or a second adult as it is much easier if more than one is available for students to practice on.

The film we can loan from our office. We already have two copies but they are booked up for months in advance so I'll be requesting a couple more copies in our agency's capitol budget request this session. I will also talk to the other EMS programs to make sure they have it available to loan.

I think that this approach is one that for a relatively small amount of State funds, a great deal of local commitment might be generated. Since Regional EMS programs are involved in CPR instruction and coordination, I think that the funds would best be allocated to us through the State EMS Office. As we receive copies of all CPR class rosters, we can easily identify which schools are offering CPR or, for school districts that are not, we can assist them in getting programs started.

I just wrote a memo to our Board members on some of our current projects which I've enclosed for your information.

Hope you have a nice Christmas.

Yours Truly,

Laurel

Laurel Anderson
Executive Director

POSITION PAPER/Department of Health and Social Services

POSITION PAPER

Senate Bill No. 129

"An Act relating to cardiopulmonary resuscitation (CPR) instruction in the ublic schools "

This bill would amend AS. 14.30.360 (a) to add instruction in cardiopulmonary resuscitation (CPR) to health education programs which are encouraged by the state to be taught in public schools.

The Division of Public Health of the Department of Health and Social Services strongly supports this bill for the following reasons:

1) Numerous national studies have shown that if a victim of cardiac arrest receives basic CPR within four minutes of collapse and advanced cardiac life support within eight minutes, the victim has a good chance of survival;

2) CPR is the basic, initial recommended treatment for any condition resulting in cardiac arrest, including severe trauma, drowning, or electric shock;

3) Medical experts in the Division of Public Health believe that, if all able bodied citizens are trained in CPR, numerous lives can be saved each year; and

4) One good way to ensure that large numbers of citizens receive CPR instruction is to include it in school curricula.

Recommended by: E. S. Rabeau, M.D.
E.S. Rabeau, M.D., Director
Division of Public Health

Date: Feb. 23, 1983

Approved by: Robert London Smith
Robert London Smith
Commissioner

Date: 2/25/83

Sec. 14.30.360. Curriculum. (a) Each district in the state public school system shall be encouraged to initiate and conduct a program in health education for kindergarten through grade 12. The program should include instruction in physical health including alcohol and drug abuse education, dental health, family health, environmental health, and appropriate use of health services.

(b) The state board shall establish by regulation guidelines for a health education program. A school health education specialist position shall be established and funded in the department to coordinate the program statewide. Adequate funds to enable curriculum and resource development, adequate consultation to school districts, and a program of teacher training in health education shall be provided. (§ 1 ch 188 SLA 1976; am § 1 ch 106 SLA 1978)

Revisor's notes. — The words "of education" were deleted following "board" and "department" by the revisor of statutes under AS 01.05.031 and 14.60.010.

Effect of amendments. — The 1978 amendment inserted "including alcohol and drug abuse education" in the second sentence of subsection (a).

Editor's notes. — Section 2, ch. 106, SLA 1978, provides: "It is the intent of the legislature that public school systems implement a program of alcohol and drug abuse education in coordination with other health education programs."

Sec. 14.30.370. Evaluation. Health education programs conducted under AS 14.30.360 shall be evaluated by the department in the same manner as other curriculum programs are evaluated, except that the evaluation shall also include changes in the health status of the pupils as determined by physical and dental examinations conducted under AS 14.30.070 and 14.30.120. (§ 1 ch 188 SLA 1976)

Revisor's notes. — The words "of education" were deleted following "department" by the revisor of statutes under AS 01.05.031.

WRANGELL, ALASKA 99929

Senator Bob Ziegler
Alaska State Legislature
Pouch V (MS 3100)
Juneau, Alaska 99811

Dear Senator Ziegler,

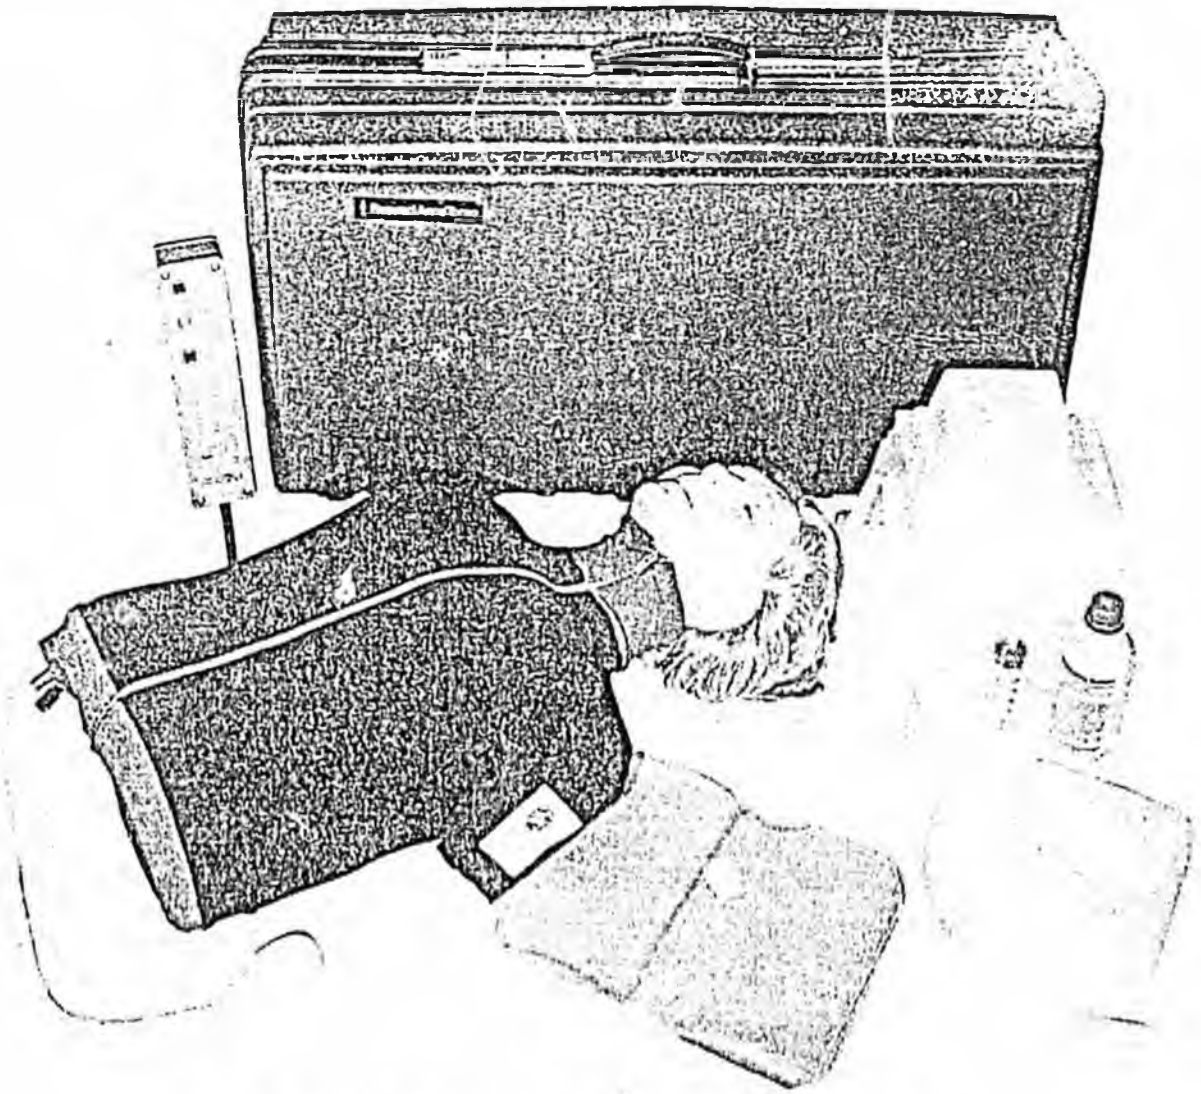
We want to take this opportunity to thank you for your continued support of E.M.S. programs in Southeast Alaska.

It has come to our attention that you and Senator Eliason are proposing legislation to encourage CPR and First Aide instruction in the schools. We heartily lend our support toward this endeavor, and would ask you to also seek changes through the Board of Education that would require teachers to be certified in CPR and First Aide in order to meet requirements for recertification. This could be accomplished through inservice, utilizing local instructors, and we feel it is important that those who deal every day with large numbers of children should have these skills.

Wallace "Butch" Schmidt, Wrangell High School Science and Computer teacher, become a CPR instructor in 1982 and certifed seventy-three High School students in CPR from among his classes. Butch plans to become a First Aide instructor and is very enthusiastic about teaching these skills.

He has asked the Wrangell School Board to set aside funds in the 1983/84 Budget that he may continue to offer these skills to the students. He has proposed that funding be used for equipment needs and also that one period a day be funded to teach the skills. Butch would like to see ALL public school employees certified in First Aide and CPR.

The Wrangell EMS Council has also applied for grant monies to cover fifty percent of some equipment which can be used both for public school and Community classes.



We hope that you will continue to support us in this worthwhile effort. If you have any questions, please do not hesitate to contact either Butch or myself.

Sincerely,

Trudy Johnson RN

Trudy Johnson, R.N.

GSJ/skj

RESUSCI ANNE TORSO

Resusci Anne Torso has most of the features of the full-sized Resusci Anne. The manikin, which comes without arms and legs, is lightweight, easy to maintain and economically priced. It is an ideal companion to full-sized CPR manikins like Resusci Anne and Recording Resusci Anne. Resusci Anne Torso comes with the same accessories as the full-sized Resusci Anne, and is available both with and without the signal box (same box used for Resusci Anne).

PART No. 5411101
Resusci Anne Torso complete with electronics, in a sturdy, plastic molded carrying case, disinfection kit, spare lungs and instruction manual. $435.00

(last year's catalog price. Has increased).

PART No. 5402001
Resusci Anne Torso Practice without electronics, in a sturdy, plastic molded carrying case, disinfection kit, spare lungs and instruction manual. $290.00

To Convert Torso Models: To full body models

PART No. 5411240
Signal Box and Electronics (For Torso Practice Models) $229.50

PART No. 5411255
Full-Body Kit (Arms, Legs, and Trousers) $160.00

PART No. 5411210
Full Body Carrying Case $113.50

Community EMT Classes - Although we are working with communities the size of Craig & larger to develop their own EMT Instructor capabilities; our staff expects to continue to provide EMT classes for the very small communities. During January, Donna will be teaching in Elfin Cove & Tenakee, We are also expecting to offer an EMT class in Meyers Chuck this winter, and Port Alexander this Spring.

Thorne Bay Ambulance - The now completed Green Lakes Hydro Project donated to us their ambulance which we, in turn, donated to the newly incorporated town of Thorne Bay. Through fundraising events & matching funds from our office, Thorne Bay now has the ambulance equipped & in service. Since Thorne Bay is connected by road to a physician staffed clinic in Craig, the ferry terminal in Hollis, and several logging camps; an ambulance based there should prove valuable.

In-Service Coordinators Meeting - Nursing In-service Coordinators from Southeast Hospitals met with Cindy Jimmerson in Anchorage the evening before the Symposium. One of the topics discussed was the planned EMT course for nurses to be provided at each hospital this winter. In-service Coordinators plan to explore with local fire depts. the possibility of their observing during runs as a follow up to the training.

Introduction to Legislators - Letters introducing our program have been sent to newly elected legislators in Southeast. Programs being offered in their district this winter were summarized.

Prince of Wales EMT - During October, Steve Tuthill & Donna Limbeam offered an EMT Class in Klawock. Trainees from Southeast, primarily from Prince of Wales communities & logging camps, attended. Instructional assistance was provided by Dr. Gary Carlson from Ketchikan; Joan Nugent, Itinerant PHN; and Kurt Welser, RN (though not presently employed as such) from Thorne Bay. John Saito from SEARHC concurrently offered an EMT refresher class for Craig & Klawock EMT's. Steve & Donna also trained a few Craig & Klawock residents as CPR Instructors during their visit.

CPR in the Schools - Next weeks, I will be offering a presentation on CPR curricula for the schools at the "Small Schools Conference" in Anchorage. Barbara Johnson of the Heart Association will be assisting & Gloria Way of the State EMS Office will introduce a packet she developed on watersafety instruction. The conference will include administrators & teachers from small schools throughout Alaska. Senator Eliason has expressed an interest in introducing legislation geared toward encouraging CPR inclusion in school curricula. This conference should offer an opportunity to find out how widespread CPR in the schools is at present, & what obstacles are being encountered.

EMS Supplement - We plan to put together a news supplement on EMS in Southeast during January. Cindy will be serving as editor for this collection of articles which will then be inserted in all Southeast newspapers. If you have ideas for good articles or are willing to write one, please contact Cindy.

MEMORANDUM

TO: House H.E.S.S.

FROM: Linda Otey, Committee Aide

DATE: April 30, 1983

RE: SB 229, "An Act Making a Special Appropriation to the University of Alaska for certain Capital Projects and Planning."

LEGISLATIVE HISTORY:

SB 229 is a product of the Senate Finance Committee. When studying capital project requests for the University, that committee separated the capital projects into two pieces of legislation. SB 229 became the vehicle for classroom facilities through all stages of planning, design, renovations, and construction.

CSSB 19 (Fin) (Title change) (efd fld) is the vehicle used for capital project requests for the University specifically dealing with land acquisition, planning, design, and construction of student housing.

SECTIONAL ANALYSIS: SB 229

Section 1:

Make 2 sections only if necessary

25.3 million for University of Alaska - Anchorage classrooms. 1.0 million for Anchorage Community College - 26.3 million. Form 35-A (attached), page 33, and page 38 of Prioritization Paper from University, 84-6.

Section 2:

3.8 million for construction of an agriculture classroom facility at Mat-Su Community College, no Form 35 available. See backup from Senator Kerttula.

Section 3:

450,000 for design of classroom, lab, and office facility at Prince William Sound Community College. Form 35-A attached. Backup from Representative Cato available. (84-11 pg. 33 & 40.)

Section 4:

1.5 million for design of classroom facilities at Fairbanks - University of Fairbanks. Form, 35-A (attached) shows 20 million dollars. The formula used for design and planning costs is 7.5% of the total cost = 1.5 million (7.5 x 20 million) 8[illegible] page 39.

Section 5:

600,000 design for petro engineering/geology building at University of Fairbanks. This is part of a five-year plan. No current Form 35 available. No further information or backup available.

Section 6:

2.3 million for Duckering Building addition at Fairbanks - UAF. Continuation of project funded last year. No further information or backup available.

Section 7:

1.150 million to University of Alaska - Fairbanks for Fine Arts Instructional Space/Native Facility. 84-3 page 32 of priority list from University. No Form 35 available. Page 36 for description.

Section 8:

2.747 million for building deficiencies at University of Alaska - Fairbanks. No Form 35 available. Priority 84-3 page 32 and 36.

Section 9:

1.5 million for phase II design for Tanana Valley Community College. Form 35 (attached) page 33 and 40, 84-11.

Section 10:

4.1 million for construction of a forestry sciences lab at the University of Alaska - Juneau. Part of the five-year plan. Received planning money last year. See backup per Representative Duncan (attached).

Section 11:

570,000 for phase II design of classroom facility at Sitka Community College. Not ready for construction 84-14 page 34 and 42. Sitka concurred. Form 35 attached.

Section 12:

Appropriation subject to capital projects 37.25.020.

Section 13:

Immediate effective date.

PROJECT DESCRIPTION

This project will provide an approximately 94,000 SF new facility on the University of Alaska, Anchorage, campus to provide classrooms, laboratories, laboratory theatre, and offices to accomodate expanding enrollments in the College of Arts and Sciences.

The facility will be located on the UAA campus to the east of the existing library building.

The facility shall be compatible with existing campus structures, campus master planning elements, and the natural environment. Development of required on-site parking areas and finish landscaping are to be included in the project.

Approximate distribution of proposed space: (SF)

Laboratory Theatre/Lecture Hall	4,840	Janitorial	940
Recital Hall/Stage Area	5,173	Mechanical	7,520
Theatre and Speech Labs	12,872	Restrooms	1,800
Music Labs	9,263	Circulation	15,040
Art Labs	20,229	Wall Space	4,700
General Classrooms	6,612	Net Non-Assignable	30,000
Faculty Offices	3,800		
Administrative Offices	1,211		
Subtotal Net Assignable SF =	64,000	Total Gross SF	94,000

Total Annual Expenditure (Capital Cost)	25,300.0	2,732.4	17,077.5	5,490.1			

Project Justification

Project Need

UAA has experienced rapid growth since its inception. Despite the necessity of turning away qualified students for lack of space, credit hour production has increased steadily. Local public schools, and other inadequate facilities have been utilized in lieu of University facilities.

The Board of Regents has adopted instructional space utilization standards for urban campuses of 30 hours per week for average scheduled classrooms and 20 hours per week for average scheduled laboratory use. UAA has exceeded this recognized standard by more than 10%.

Additional instructional space is no longer obtainable. Temporary faculty offices are inadequate and separated from instructional facilities.

Identification of Alternatives Considered

The alternative to housing UAA in adequate facilities is to delay its development into an adequate four year institution in Anchorage (Southcentral Alaska).

Estimated Costs

Costs have been estimated by a consultant hired by the Department of Facilities Planning and Construction projected for a bid date in FY 83 with 10% added for increased construction costs in FY 84.

RE: Proposed $3.8 million building at Mat-Su

I have discussed the Mat-Su agricultural building with the Regents since it was first proposed some months ago. There is a general feeling that the building would be highly appropriate and would fit in with long-term plans of the University for agricultural education and research.

There is no way that the Regents have to assign a formal priority order to the building at this time. The next meeting to the Board will not be until April 14-15. However, we are all in agreemnt that the building will provide much needed classroom, laboratory and shop space for existing programs in agricultural science, as well as provide some general classrooms for Mat-Su Community College. The building will be located with other buildings on the community college campus. However, the new building will be used not only by the community college but also for cooperative extension and rural education programs.

The building will provide about 23,750 gross square feet and 15,450 square feet of new net assignable space. It will significantly strengthen and improve existing programs. Presently, for example, Mat-Su Community College does not have such things as plant sciences and soils laboratories with suitable equipment, which the new structure will provide.

The building will be unitquely placed for the University and the State since it will permit use of existing personnel at the research farm and plant materials center. They are currently located about 1/2 mile from the community college campus where the new building will be placed.

cc: Board of Regents

SB 18

Matanuska-Susitna Community College

OF THE

UNIVERSITY OF ALASKA

P.O. BOX 899
PALMER, ALASKA 99645

(907) 745-4255

The proposed agricultural/classroom building will provide the much needed facilities for the program in agricultural science, as well as general classrooms for academic use.

Mat-Su Community College is located in the heart of the Matanuska Valley which has been long recognized for its agricultural activity. The college has offered various courses in agriculture through the years, but is now expanding its curriculum which will lead to an associate degree in agricultural science. It is anticipated that the associate degree program will be approved this spring by the University of Alaska Board of Regents.

The college program in agriculture is strengthened considerably because of its proximity to the agricultural experimental station and the plant materials center. The experimental station has many professional individuals who teach a number of courses in the agricultural curriculum at the college. These individuals have the current expertise which is important in presenting accurate information peculiar to the Alaskan environment. Also, the physical location of their activities is in close proximity to the college and field trips which witness first hand observations enhances the quality of the entire agriculture program. The plant materials center also offers first hand practical observations to our students.

Interest in agriculture courses is evident by the increasing number of students that are enrolling in various agriculture subjects which are presently being offered at the college. During 1982 spring semester, the college enrolled seventy individuals in various agriculture courses. Many of these individuals were enrolled for more than one agricultural course. There are one hundred and sixty enrollents in agriculture classes during the 1983 spring semester. This has not included the non-credit agricultural symposiums which are done in cooperation with the Cooperative Extension Service. These symposiums are conducted during the latter part of each semester and will attract approximately one hundred additional people.

There have been numerous inquiries both in person and by phone about agriculture courses. Until recently, there was no attempt to keep track of how many since these inquiries were received by several different individuals at the college. These inquiries seem to fall into three categories. They are:

1. individuals interested in degree program in agriculture
2. individuals interested in selective courses for personal use
3. teachers interested in upgrading their knowledge in agriculture

An interest survey to initiate a two-year associate degree program in agriculture and horticulture or in animal science to be offered in the Matanuska Valley and Anchorage area was conducted during the 1980 Alaska State Fair. The survey yielded approximately one hundred and seventy five signatures and mailing addresses of prospective students. A copy of this survey is on file in the Agriculture Coordinator's office at the Matanuska-Susitna Community College.

(Continued)

Many individuals in the community who are now employed in some areas of agriculture have expressed a desire to enroll in courses which would update their skills and knowledge.

Mat-Su Community College is the only community college in the state offering a full-time program in agriculture. Thus, it is imperative that adequate facilities are available for instructional and demonstration purposes. There are presently no existing facilities at the college designed specifically for this program. There is an office currently being used for two full-time faculty memebers and the existing biology laboratory is utilized for some of the classes. However, a biology laboratory is not suitable for a long-range agricultural laboratory. Therefore, the new building which includes both plant and animal labs is essential.

Alaska State Legislature
Juneau, Alaska

Greetings:

Attached you will find Prince William Sound Community College's 1983 Progress Report. This report is presented in support of our need for a campus building. We are a rapidly growing community college and in need of adequate space to meet accreditation requirements. We have made a number of requests for facilities in the past four years. Prince William Sound Community College is the only community college with no laboratory facilities and no permanent facility.

Thank you for any support you can give us in acquiring a campus building.

Sincerely,

John Devens, Ph.D.
President

EXPLANATIONS:

1) Any student taking at least one credit is counted as a credit student, even though he/she may be involved in non-credit activity; the non-credit headcount is restricted to those students taking only non-credit courses. The two headcounts added together will give an unduplicated student count.
2) "P/T" indicates a part-time student, taking less than 12 credits; "F/T" indicates a full-time student, taking 12 or more credits in a semester.
3) The Cordova Extension has had non-credit activity in the Fall 1982 semester, but the statistics are not available at this time. Those non-credit students will affect the non-credit headcount for the Fall 1982 semester.

PROJECT DESCRIPTION

The purpose of this capital request is to obtain space for research and graduate training at the Fairbanks campus. Lack of space is now the most restrictive factor on research and student training. This request is for an extension to the (existing) C. T. Elvey Building on the West Ridge of campus. Though an extension to the Geophysical Institute itself is an important aspect (see later), the main purpose is to provide for further development of all research undertaken by the University, and to provide for the offices of state and federal government which have close scientific connection with the University.

The proposed extention of the Elvey Building entails the construction of a three-story wing north of the existing main block of the Elvey Building. The total gross area for the addition would be approximately 56,200 square feet. The estimated net assignable area would be approximately 35,300 net square feet. (The lowest floor of the extention should match the second floor (mall level) of the Elvey Building.) In addition, the ground level (presently the parking lot level north of the Elvey Building) will require expenditures for surfacing, lighting, etc.

Assignment of areas would be approximately as follows.

Conference room and associated services areas, projection room, etc.			3,500 net square feet
Library:	Stacks	7,500 square feet	
	Study area	2,200 square feet	
	Offices and work area	1,000 square feet	
	Microfile and reading area, etc.	300 square feet	11,000 net square feet
Archives and associated areas			4,000 net square feet

AGENCY UNIVERSITY OF ALASKA

PROGRAM ADULT AND POSTSECONDARY EDUCATION

Revised Date

FY 84

00103

University staff offices and laboratories			
Laboratory space (two)	3,700 square feet		
Office space (ten)	250 square feet		9,900 net square feet
Federal and/or State agencies:			
Laboratory space (seven)	1,100 square feet		
Office space (twelve)	250 square feet		6,200 net square feet
Observers quarters			700 net square feet
Computer Annex:			
Offices	720 square feet		
Interactive picture system	200 square feet		
User area and computer terminal	600 square feet		
Documentation files and supplies	380 square feet		1,900 net square feet
		Total:	41,700 net square feet

The extension should be architecturally consistent with the existing Elvey Building, both in construction details (first floor of extension at the same level as the second floor of the main block, Elvey Building; second floor of the extension at the same level as the third floor of the main block, etc.). It should also be aesthetically consistent in style and appearance.

Total Annual Expenditure (Capital Cost)	20,000.0	800.0	6,800.0	6,500.0	5,900.0		

Project Justification

The most restrictive factor in any further growth or Organized Research on the Fairbanks campus is the lack of office and laboratory space for the faculty engaged in research and the students who are candidates for advanced degrees. This is now the primary factor influencing the appointment of any new members of faculty (new fields of investigations). It also affects the acceptance of graduate students.

Need for additional space is most severe on the West Ridge area of the campus where the major research institutes are located. The factor that the Environmental Protection Agency has closed the Arctic Environmental Research Laboratory (regrettable though this was) and that the space became available to the University is the only reason the Institute of Marine Science, the Institute of Arctic Biology and the Agricultural Experiment Station have been able to make any new appointments to their staff and to accept more graduate students. This unexpected circumstance gave a reprieve but space that became available is now heavily used. We again face severe problems when considering any new programs or staff appointments -- where to put the people, where to install their equipment.

There are eight facets to this particular request to expand the Elvey Building which should be stated in order that the concept can be understood in its entirety.

1) Floor loading in the library and archives area (fifth floor) of the Geophysical Institute (Elvey Building) is excessive and far beyond the design figures. The library and archives have to be moved. The eophysical Institute library is outstanding as a specialized library and the archived records and data are unique. It is proposed to relocate them in the extension to the Elvey Building.

35b PROPOSED CAPITAL PROJECT

2) Moving the library and archives to the (proposed) extension of the Elvey Building with proper provision for their expansion -- and, of course, with engineering provisions for the anticipated weight -- would free space in the Elvey Building for other uses (office and laboratory) by the Geophysical Institute. (See also point 7 below concerning modification to the existing Elvey Building.) This, plus the allocation of certain additional space in the proposed extension, is expected to accommodate the needs of the Geophysical Institute for about five years from 1981.

3) Most specialized libraries on the West Ridge would be combined in the one area, centralized in the proposed extension to the Elvey Building. By freeing space in other buildings, this would help to meet the need for office and laboratory space on the West Ridge.

4) The conference room in the annex of the Elvey Building seats less than 100 persons and is used frequently to meet the needs for lectures, conferences, seminars, workshops, etc. Quite apart from the demand for lecture and seminar rooms in the ordinary course of research and instruction, the University is increasingly being invited to host national and international meetings, some of which involve large numbers of people.

5) The need for additional office and laboratory space is felt by all major research and teaching units on the West Ridge and is critical even now in many cases, quite apart from future projections. Those affected are the Institute of Marine Science, Institute of Arctic Biology, Geophysical Institute, the Cooperative Units, the Agricultural Experiment Station and the Mineral Industry Research Laobraotry. Much of the space in the new extension would be used to meet this need. (Some institutes might be moved entirely, but detailed allocations of space have not been developed at this stage.)

6) Many state and federal agencies, some of which are already located on campus, need new space (or additional space) on the Fairbanks campus and have asked for it. There are mutual benefits in having University and agency staffs working in close cooperation in all the main areas of research, instruction and public service. It is proposed that part of the new extension be made available on a rental basis (or through memoranda or agreement in which services are rendered to the University by the staffs of agencies). Potential tenants are: (1) State -- Department of Natural Resources, Department of Environment Conservation, Department of Transportation and Department of Fish and Game; and (2) Federal -- U.S.G.S. Alaska Geology Branch, U.S.G.S. Water Resources and Bureau of Mines. Some of these agencies already occupy space in various buildings on the Fairbanks campus; the space now occupied by them would be freed for other users of the respective buildings.

7) The substantial move of personnel from other buildings to the new extension implies renovation of the vacated areas, e.g. the present library and archives space in the Elvey Building would have to be refitted for office and laboratory use. The cost of renovations should be included in this proposal in order to meet the needs of users of all buildings affected.

8) Geophysics is becoming an increasingly quantitative science requiring large scale data processing and numerical modeling. For this reason the Geophysical Institute's computer facilities have been increased substantially with the addition of a new VAX 11-780 computer with terminals. The growing use of the equipment, projected additions and an increasing staff of computer programmers and operators necessitate additional space. An addition to the annex will provide the space with minimal disruption and cost since it can be constructed on the existing patio of the north of the annex.

The above eight factors express the need for the proposed extension to the Elvey Building and the consequences for building renovation elsewhere on the Fairbanks campus. This proposal is independent of, and does not conflict with, the Geophysical Institute's proposed modifications to the existing (eastern) annex of the Elvey Building. The proposal may conflict with requests for other new buildings or modifications on the West Ridge, e.g. Institute of Marine Science, Institute of Arctic Biology, Geophysical Institute, the Cooperative Units, the Agricultural Experiment Station and the Mineral Industry Research Laboratory.

There are two other aspects of the present proposal which should be considered. Both are put forward tentatively as reminders rather than as fully established needs which have been well considered (points 1 through 8 above). (1) Food services (especially lunch) are desirable somewhere on the West Ridge for the entire year. This area is heavily occupied by staff and students; driving to the central (lower) campus and parking are difficult, if not impossible, especially in winter. One option would be to include kitchen and dining facilities in the extension to the Elvey Building. The other option would be to modify and continue using the existing kitchen of the Arctic Health Research Center, extend its dining room to allow for more users, and provide for year round service. (2) The proposed extension to the Elvey Building would be built above the parking lot behind the Elvey Building, thereby providing sheltered (winter) parking for official University vehicles and the opportunity for more comfortable maintenance of vehicles operated by the West Ridge divisions and institutes.

Documentation of Estimated Capital Costs:
The estimated cost of construction and construction contingency of the new wing on the Elvey Building is approximately $15.5 million which has been determined with the advice of Facilities, Planning and Construction Office personnel. It is assumed that this amount will cover the cost of making the connection between the existing building and this proposed addition, and some modifications to the existing building. It is assumed that this amount will cover the costs of landscaping and extending the north driveway to the new addition from the O'Neill Resources Building parking areas.

Analysis of Estimated Impact on Operating Expenses:
Operating costs of the extension to the Elvey Building assuming a gross area of 56,200 square feet are expected to be approximately $416,100 in the first year of operation.

Identification of Alternatives Considered:
There are several alternative approaches to providing more space for research, instruction and public service functions on the West Ridge. They vary in policy as well as architecture.

1) Add two floors on top of the main block of the existing Elvey Building. The foundation of the main structure (not the eastern annex) were designed to accommodate two more floors. This would provide an additional gross space of 18,400 square feet (net assignable about 15,000 square feet). A drawback to this approach is the serious distruption to the work of the Geophysical Institute while construction is in progress. The unit (square foot) cost is also likely to be higher. Location of the enlarged conference room on a higher floor would be inconvenient. Relation of the (heavy) library archives on a high floor would present engineering problems and also locate them inconveniently for West Ridge users. This approach would probably realize less than the proposed assignable area, 35,300 net square feet.

2) Construct an entirely new building for research, instruction, library, archives, conferencing, cafeteria and rental by state and federal agencies, etc. on the West Ridge. Doing this would enable a longer range planning, provision for more space (approximately 90,000 net square feet), but correspondingly increased cost.

3) Curtail all growth of research and advanced education of the University of Alaska, Fairbanks; hold all such activities to their present spaces and budgets. This will be inexpensive in the short-term. On the longer haul, however, other universities and agencies will do the work that has to be done in Alaska on ecology, the environment, sea and land resources, the atmosphere, seismic and volcanic risks, etc.

4) Temporarily accommodate needs by installing and equipping house trailers as laboratories and offices. This could be done more cheaply than constructing permanent buildings. This was common practice on the central Fairbanks campus during the 1960's.) Such temporary structures are unsightly, only partially satisfactory to staff and students, cannot accommodate the library, archival and conference room equipment, and have to be disposed of subsequently. This is merely a device for "buying time" prior to a more permanent solution.

5) Alternative to the computer annex include decentralizing the computing facilities. However, this would require the programming staff to relocate to various parts of the building remote from each other, the computer and its terminals resulting in inefficient operations and additional costs. A second option would be to convert existing storage space to office needs, but costs would then approximate the costs of the addition, create a critical storage problem and be in violation of fire and safety regulations.

PROJECT DESCRIPTION

This project will provide funds to complete the planning and design of a total campus facility for Tanana Valley Community College. Planning for the campus was begun in fiscal year 1982 in conjunction with the schematics for the first building funded under a 1978 obligation bond. Of necessity, planning and design for the campus had to be severely limited due to both the intent of the authorization and the amount of funding available. A Users Committee, which was appointed for the planning of a master plan and the Phase I building, and the TVCC Community College Council have endorsed a concept for future campus development which has been approved by the Board of Regents. The Regents have also dedicated a parcel of land to TVCC for use for the campus.

The first building (Phase I) will house Student Services (admissions, records, registration and counseling), Business Services (purchasing, payables, receivables, and personnel) and the Campus President's office. Funding is now needed to complete the planning and design of the remainder of the campus (Phase II and III). These future facilities will house the instructional programs and academic support offices, shops and storage areas, study areas, classrooms and laboratories. The total size of Phase II and III is 140,195 gross square feet.

Tanana Valley Community College does not presently have any physical facilities of its own nor any facilities under its direct control. There is confusion in the service area over where people and programs are located, and there is inconvenience to the students in attending classes and obtaining information. The completion of planning and design for the campus is an important step toward the realization of the goal of providing a totally comprehensive campus and in providing an identity and definite location for the college.

Administration and Other							
Total Annual Expenditure (Capital Cost)	1,500.0	1,500.0					

Project Justification

Tanana Valley Community College, established in July 1974 and having no facilities of its own, utilizes space on the University of Alaska Fairbanks campus for administrative support services, student services, specific instructional activities and programs and for general classroom use. Limited space has also been obtained at the Hutchison Career Center for specific programs and technical support services and other space in the community is leased for program and activity use.

Space for the programs, offices and support services on the Fairbanks campus is at a premium as both TVCC and UAF are experiencing enrollment increases and program expansion. With this expansion and increased enrollment comes the need for additional classrooms, laboratories, storage space and offices. This space is not available for either institution and often overcrowded conditions exist.

As TVCC becomes more comprehensive, enrollment in present programs is expected to increase and requests for additional instructional services will be forthcoming. Planning and design funds for the campus mean a step toward the construction of a total facility which will enable the college to be adaptable and flexible, serving its constituency quickly and effectively.

PROJECT DESCRIPTION (8)

All planning, design, architectural and engineering for the Forestry Sciences Lab. have been completed. This request will secure right of way and an access road from the back loop road as well as site preparation, excavation, installation of utilities, building foundation, and a parking lot for the 29,000 sq. ft. (8,500.0) facilitywhich will empoly approximately 40 persons when completed. Operation and maintenance of the facility will be the responsibility of the U.S.Forest Service who will occupy a portion of the building.

The research branch of the Forest Service has maintained for several years a small staff headquart ered at Juneau, which operates throughout coastal Alaska. This research staff while making good progre on field studies, has been seriously handicapped by the lack of laboratory facilities. The Forest Service is expanding substantially its Juneau research unit, in order to accelerate solutions to the many high prioritity laboratory facilities is increasingly critical.

The laboratory plans include about 800 square feet for University staff. Close proximity of the laboratory to the University will facilitate the participation of Forest Service scientists in teachin and student guidance roles, studen use of Forest Service library, as well as the potential for Univers students to secure temporaty or permanent employment, and do graduate work in cooperation with the Forestery Sciences Laboratory.

An adjacent 7.51 acre parcel of Forest Service land will be make available to the University at completion of the laboratory. The Forest Service will lease the laboratory from the University.

135 LEGISLATIVE REQUEST PROPOSED CAPITAL

March 1, 1982

A FORESTRY SCIENCES LABORATORY AT THE AUKE LAKE CAMPUS OF THE UNIVERSITY OF ALASKA

PRESENT STATUS

The 1981 Alaska Legislature appropriated $875,000 for planning a Forestry Sciences Laboratory on the University of Alaska campus at Juneau. The Architectural and Engineering plans are well along to completion. Construction costs of the laboratory are estimated at $8.78 million if funds are appropriated by the 1982 legislature. Construction could begin by fall, 1982, with completion and occupancy of the facility by spring, 1984.

Statistics for the laboratory are:

- Gross space - 29,000 square feet
- Planning costs A&E, etc. - $875,000 (appropriated 1981)
- Estimated construction costs (if bid summer, 1982) - $8,780,000
- Total staff (including 18 scientists) - Approximately 40
- Estimated completion and occupancy - 1984

WHY THE LABORATORY IS NEEDED

Southeast Alaska is beautiful, and rich in natural resources. These resources--including timber, fish, and wildlife--are important contributors to the economy of Southeast Alaska. Demands for the commercial and recreational use of the resources will continue to increase as the population of the area grows and markets expand. Proper management of resources, while protecting the beauty and uniqueness, requires new knowledge; results of research conducted elsewhere cannot be safely applied to the ecosystems of southeast Alaska. Research is needed to increase the productivity of Alaska's forests. Equally needed is new information for protecting and enhancing other forest resources including recreation, fish, wildlife and esthetic values.

The Research branch of the Forest Service has maintained for several years a small staff headquartered at Juneau, which operates throughout coastal Alaska. This research staff, while making good progress on field studies, has been seriously handicapped by the lack of laboratory facilities. The Forest Service is expanding substantially its Juneau research unit, in order to accelerate solutions to the many high priority forest and related resource problems in S.E. Alaska. Thus, the need for laboratory facilities is increasingly critical.

While the research is directed at solving on-the-ground field problems, laboratory facilities are required to analyze soil, water, and plant samples; determine habitat requirements of anadromous fish; learn to suppress forest insects and diseases; and conduct a variety of controlled experiments. A laboratory and associated facilities is an essential base of operations for field work.

The staff of the Forestry Sciences Laboratory now makes do with offices and makeshift laboratory rooms on the sixth floor of the Federal Office Building in Juneau. An office building is unsuitable as a laboratory. It is not possible to grow plants, rear animals, conduct controlled environment experiments, or engage in other activities normally conducted in biological laboratories. There is no safe place to store or use volatile chemicals and it is not possible to vent fumes. As a result, the research staff must either limit or cancel urgently needed work in order to avoid unsafe conditions.

A laboratory is urgently needed that would provide the facilities, equipment and space to conduct the research needed to understand the complex interactions of plants and animals of the coastal ecosystems and their physical environment. Field studies would be supplemented and extended by laboratory facilities. Work presently planned could be done more quickly. Important work now foregone because of the lack of laboratory facilities could be done.

FOREST SERVICE - UNIVERSITY OF ALASKA ARRANGEMENTS

The laboratory plans include about 800 square feet for University staff. Close proximity of the laboratory to the University will facilitate the participation of Forest Service scientists in teaching and student guidance roles, as well as the potential for university students to secure temporary or permanent employment, and do graduate work in cooperation with the Forestry Sciences Laboratory.

An adjacent 7.51-acre parcel of Forest Service land will be made available to the University at completion of the laboratory. The Forest Service will lease the laboratory from the University. (See enclosed Agreement)

dministration and Other							
otal Annual Expenditure (Capital Cost)	6,500.0						

oject Justification

Currently only one building exists on the Sitka Community College campus, allowing a total of 5,700 gross square feet. This will not even accommodate the college staff and allow for 2-3 general classrooms. During the spring semester of 1982, over 700 students enrolled in coursework through Sitka Community College. With the exception of the office occupations, all vocational courses and programs are limited to being taught only on an evening basis. This building will enable students to enroll in certain programs on a full rather than half-time basis. These include Welding and Marine Maintenance Technology as well as enable expansion of the fisheries instruction coursework. Classes in these subjects are consistently full.

Currently there is a shortage of two faculty offices for Collective Bargaining Unit member faculty. The new building will provide for these as well as eventual faculty expansion.

The present Phase I building has no storage space other than in cabinets located in classrooms; consequently, it is necessary to lease additional space off campus.

The new building will enable a student center area for study or meeting place. Additionally, the new building will provide a support/office area for local cultural organizations. The building should be one story, but designed to accommodate a second level in the future.

Alternatives Considered

There does not exist any adequate rental space in the Sitka area that would accommodate the academic and vocational programs needs of the campus. Acquisition of temporary facilities has been considered, but this offers only some short term assistance, and (continued)

Statewide Budget Office
September 30, 1982

84-1 MASTER PLANNING AND NEEDS ASSESSMENT $ 4,060.0

Each year the University receives many questions concerning the eventual developmental plans for a campus. There is need for a substantial amount of funds to perform the long-range campus development plans, especially in response to a detailed needs assessment for each location. The campus development plans and needs assessment processes must be under the control of the University architect and must be performed in a rigorous manner. This is the highest priority of the University of Alaska system.

84-2 UA/FAIRBANKS MAJOR REPAIRS AND RENOVATION $ 4,000.0

The dormitories located at the University of Alaska Fairbanks campus, after several years of insufficient maintenance funds, are in need of substantial repairs and renovations. These renovations include upgrading heating systems, replacement and upgrade of kitchen equipment, renovation of student rooms, replacement of dormitory room doors, conversion of storage space to laundry rooms, and upgrade a variety of apartment furnishings.

84-3 GENERAL REPAIR AND RENOVATION $ 11,667.3

The University has historically been underfunded in terms of receiving funds to maintain current physical plant. All units of the University have a substantial need for funds to repair facilities to protect the buildings from the weather,

improve the efficiency of the energy systems, and renovate existing spaces to make them more usable for current programs. The amount to be allocated to each unit depends on a formula utilizing total square footage available, age of buildings, number of people using the facilities, location, and type of structure.

84-4 UA/FAIRBANKS - ESSENTIAL OBLIGATIONS $ 435.0

This project will provide cathodic protection for the dock at the Seward Marine Education Center. Specifically, the repairs will include the bulk head and cells at the dock approach, west end abutment, southwest corner of the warehouse and the bull rail on the west end of the old rail bulkhead. Without this protection, electrolysis will occur and deteriorate the steel pilings with an ultimate result in the loss of the dock.

84-5 UAJ STUDENT HOUSING $ 13,200.0

This project is for student housing which will provide students with low-cost room and board while attending the University of Alaska, Juneau. The addition of this facility is considered essential by the regional accreditation organization. The proposed building(s) will have a total area of 65,823 square feet and will house 200 single students in dormitory-type buildings which will include common recreational, cafeteria, study room areas, computer room; laundry room and resident manager's quarters. Also included will be housing for 50 married students which will feature individual kitchenettes, common recreational and study room areas, computer room, laundry room, and manager's quarters. Parking

is included in the project. The proposed facility will be a ten minute (appproximate) walk from the Auke Lake Campus.

84-6 UAA CLASSROOM/LABORATORY/OFFICE BUILDING $ 25,300.0

This project will provide a 84,000 square foot facility on the Anchorage campus to provide classroom, laboratories and faculty offices for expanding enrollments in the College of Arts and Sciences and parking spaces as required by code. An FY82 appropriation for $786,700 was to permit the initial design and engineering for this project.

84-7 UAF STUDENT HOUSING $ 11,000.0

The student housing complex will be designed to accommodate single students and student families. A $500,000 appropriation was received in FY82 for dormitory design (student residencies). The building program will require each living unit to be an apartment which will accommodate four single students or a student family. Approximately eighty living units are planned. Each living unit will have a kitchen, a living room, two bedrooms and one bathroom. The units will be furnished. A central facility for mail, laundry and storage is also planned. There will not be a food service facility. The project will be located in the vicinity of the existing student family housing facilities on the campus. The June 1982 "On-campus student housing market analysis" feasibility study by housing consultant Ira Fink, recommends construction of 175 housing units by UAF. This request for funds in the amount of $11 million is to construct Phase I of a larger total project.

84-8 STATEWIDE SERVICES BUILDING $ 18,800.0

The project will be an office structure of 64,000 gross square feet (50,000 NASF) to house all the University of Alaska Statewide Administrative Service functions, including support spaces, i.e., conference rooms, storage areas, work rooms, computer facilities, etc. required for their functioning. $604,500 was appropriated in FY82 to perform the initial design and engineering work, and this work will be awared this fall.

84-9 UAF CLASSROOM/LABORATORY/OFFICE $ 20,000.0

The purpose of this capital request is to obtain space for research and graduate training at the Fairbanks campus. $500,000 was appropriate in FY82 for the initial planning and design of the facility. Lack of space is now the most restrictive factor on research and student training. This request is for an extension to the (existing) C. T. Elvey Building on the West Ridge of campus. Though an extension to the Geophysical Institute itself is an important aspect, the purpose is to provide for further development of all research undertaken by the University, and to provide for the offices of state and federal government which have close scientific connection with the university. The total gross area for the addition would be approximately 56,200 square feet. The estimated net assignable area would be apprc imately 35,300 net square feet.

84-10 ESSENTIAL EQUIPMENT $ 3,345.4

UA/Fairbanks requires a substantial infusion of new equipment to accommodate a recurring need as a result of expanded enrollment and technological improvements. This project will purchase shelving fixtures to complete the UAA bookstore facility for full use. Without these funds there would be an inadequate amount of shelving to display items the bookstore is selling. Funds are included to purchase the furnishings necessary to complete the UAA administration/classroom building. The location of this facility was moved due to the wetland issue. This resulted in additional costs and surveys, soil testing, and administrative and expense fees. Without this additional funding, the administration building will not be totally operational. Additional items to be funded include equipment for the UA/Juneau Marine and Technology Center and for Anchorage Community College's Applied Science Building.

84-11 SITE DEVELOPMENT, CAMPUS IMPROVEMENTS, LAND ACQUISITIONS $ 14,320.0

The individual projects included in this category are usually preliminary to building new facilities or funds to improve surrounding areas. Funds are being requested to design the campus at Tanana Valley Community College, purchase land at UA/Anchorage, Northwest Community and Ketchikan Community College, improve pedestrian walkways at Anchorage Community College, a variety of roads and streets and parking improvements in the community college division and grounds improvement and landscaping at UA/Fairbanks.

84-12 ANCHORAGE COMMUNITY COLLEGE CLASSROOM/ADMINISTRATION BUILDING $ 10,600.0

Anchorage Community College requests a new building to replace three temporary, relocatable structures currently housing instructional programs and support services. The current temporary structures are unsafe and have been condemned by the Anchorage Fire Marshal. This building would permit centralization of administration and student service departments. It will also provide space for instructional programs, computer labs and conference rooms. Programs and functions that will be programmed into or accommodated by Phase I are: Home Economics, Computer Assisted Instructional Labs, Chancellor and Deans, Public Affairs, Business, Personnel, Accounting, Payroll, Purchasing and Public Safety.

84-13 UA/ANCHORAGE CAMPUS HOUSING $ 5,000.0

This request will provide campus housing for 100 students. The housing will consist of a series of units within a structure which would provide for single or married students without remodeling construction. The units will have self-contained bath, dining and sleeping areas for a small group or family. Site work will include utilities, roads, walkways, lighting and landscaping. The facilities will be located in the vicinity of an existing shopping center on the south side of the campus. The projected building site is currently owned by Alaska Pacific University and leased for purchase by the University.

84-14 CCREE - SITKA PHASE II $ 6,500.0

This request is for the second building (Phase II) for the Sitka Community College Campus. It will contain vocational shops, general classrooms, offices, storage, and community service rooms. It includes permanent and operational equipment.

84-15 COMMON USE INFORMATION EQUIPMENT $ 3,167.6

Equipment in this category includes such items as computer hardware for the computer network, development of new systems for use by the whole University system, and library books and media equipment at UA/Anchorage and UA/Juneau. This equipment is used by a wide variety of people. The computer equipment in particular needs to be purchased to permit a continued and planned upgrade of the facilities from year-to-year as a result of changing technology.

84-16 EQUIPMENT $ 4,884.1

There is an ongoing need to purchase instructional, research, and direct support equipment throughout the University system. This is all in excess of replacement equipment funds which are normally available in the operating budget. The university has greatly expanded its programs and the amount of equipment purchased has lagged behind. Major upgrades in the area of instructional telecommunications and high technology areas require something more substantial than simple replacement.

Statewide Budget Office
September 30, 1982

84-17 FISHERIES RESEARCH AND INSTRUCTION AT UA/JUNEAU $ 385.0

These funds would be used to complete Phase II of the seawater circulation system at UA/Juneau which would include a permanent pumphouse and reservoirs, supply pumps, filters and headtanks. The seawater system is used for holding marine animals and plants for teaching and research purposes at UA/Juneau. Phase I has already been completed. Additionally, this relatively new program has expanded into the new third floor addition of the Fishery Science Building and the facility needs a variety of equipment to be operational. Some examples of equipment include a freezer/dryer, ultracentrifuge, computer terminals. chromatograph, and aquariums.

84-18 ADMINISTRATIVE EQUIPMENT $ 913.2

Funds are being requested for Statewide Administration to microfilm and store all pertinent design and construction drawings for all University facilities. This would permit better recordkeeping and be a more secure way of keeping track of our facilities. Funds are also being requested for UA/Anchorage to purchase physical plant equipment for snow removal, general maintenance, ground maintenance, and equipment for th maintenance shop. Additional equipment including word processors and computer terminals are also needed.

84-19 ENERGY CONSERVATION $ 2,395.5

The UA/Fairbanks coal handling facility project would improve the efficiency of handling 75,000 tons of coal per year at the UA/Fairbanks heating plant. The proposal is for building a heated enclosure large enough to hold ten railroad cars of coal. The structure would be designed so that coal can be thawed from waste heat from the power plant which would result in more efficient burning of the coal in the furnaces. At present, up to five men must be utilized to help with coal handling. This structure would permit the reduction to one or two persons. UA/Anchorage building modifications for energy and safety is being requested for the modification of the energy modules to heat supply and combustion air when the ambient condition is below freezing. Funding for a building automation system for the UAA/ACC campus is also requested. This system would permit monitoring of campus energy utilities and energy user systems in each facility. Control would be provided for each of the fire zones in each campus facility.

SENATE BILL NO. 229

IN THE LEGISLATURE OF THE STATE OF ALASKA

THIRTEENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act making special appropriations to the University of Alaska for certain capital projects and planning; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. The sum of $26,300,000 is appropriated from the general fund to the University of Alaska for construction of classroom facilities at the Anchorage campus and the Anchorage Community College campus.

* Sec. 2. The sum of $3,800,000 is appropriated from the general fund to the University of Alaska for construction of an agricultural classroom ~~facility~~ at the Matanuska-Susitna Community College.

* Sec. 3. The sum of $450,000 is appropriated from the general fund to the University of Alaska for design of a classroom, laboratory and office facility at the Prince William Sound Community College.

* Sec. 4. The sum of $1,500,000 is appropriated from the general fund to the University of Alaska for design of classroom facilities at the Fairbanks campus.

* Sec. 5. The sum of $600,000 is appropriated from the general fund to the University of Alaska for engineering and design for the petroleum engineering/geology building at the Fairbanks Campus.

* Sec. 6. The sum of $2,300,000 is appropriated from the general fund to the University of Alaska for construction of the Duckering Building addition at the Fairbanks campus.

* Sec. 7. The sum of $1,150,000 is appropriated from the general fund to the University of Alaska for the Fine Arts Instructional Space/Native

Studies Facility at the Fairbanks campus.

* Sec. 8. The sum of $2,747,000 is appropriated from the general fund to the University of Alaska for correction of building code deficiencies at the Fairbanks campus.

* Sec. 9. The sum of $1,500,000 is appropriated from the general fund to the University of Alaska for phase II design for a campus facility for Tanana Valley Community College.

* Sec. 10. The sum of $4,100,000 is appropriated from the general fund to the University of Alaska for construction of a forestry sciences laboratory at the Juneau campus.

* Sec. 11. The sum of $570,000 is appropriated from the general fund to the University of Alaska for phase II design of a classroom facility at Sitka Community College.

* Sec. 12. The appropriations made by this Act are for capital projects and are subject to AS 37.25.020.

* Sec. 13. This Act takes effect immediately in accordance with AS 01.-10.070(c).

PROJECT DESCRIPTION (8)

All planning, design, architectural and engineering for the Forestry Sciences Lab. have been completed. This request will secure right of way and an access road from the back loop road as well as site preparation, excavation, installation of utilities, building foundation, and a parking lot for the 29,000 sq. ft. (8,500.0) facilitywhich will empoly approximately 40 persons when completed. Operation and maintenance of the facility will be the responsibility of the U.S.Forest Service who will occupy a portion of the building.

The research branch of the Forest Service has maintained for several years a small staff headquartered at Juneau, which operates throughout coastal Alaska. This research staff while making good progres on field studies, has been seriously handicapped by the lack of laboratory facilities. The Forest Service is expanding substantially its Juneau research unit, in order to accelerate solutions to the many high prioritity laboratory facilities is increasingly critical.

The laboratory plans include about 800 square feet for University staff. Close proximity of the laboratory to the University will facilitate the participation of Forest Service scientists in teaching and student guidance roles, studen use of Forest Service library, as well as the potential for Universi students to secure temporaty or permanent employment, and do graduate work in cooperation with the Forestery Sciences Laboratory.

An adjacent 7.51 acre parcel of Forest Service land will be make available to the University at completion of the laboratory. The Forest Service will lease the laboratory from the Universty.

35 LEGISLATIVE REQUEST PROPOSED CAPITAL

March 1, 1982

A FORESTRY SCIENCES LABORATORY AT THE AUKE LAKE CAMPUS OF THE UNIVERSITY OF ALASKA

PRESENT STATUS

The 1981 Alaska Legislature appropriated $875,000 for planning a Forestry Sciences Laboratory on the University of Alaska campus at Juneau. The Architectural and Engineering plans are well along to completion. Construction costs of the laboratory are estimated at $8.78 million if funds are appropriated by the 1982 legislature. Construction could begin by fall, 1982, with completion and occupancy of the facility by spring, 1984.

Statistics for the laboratory are:

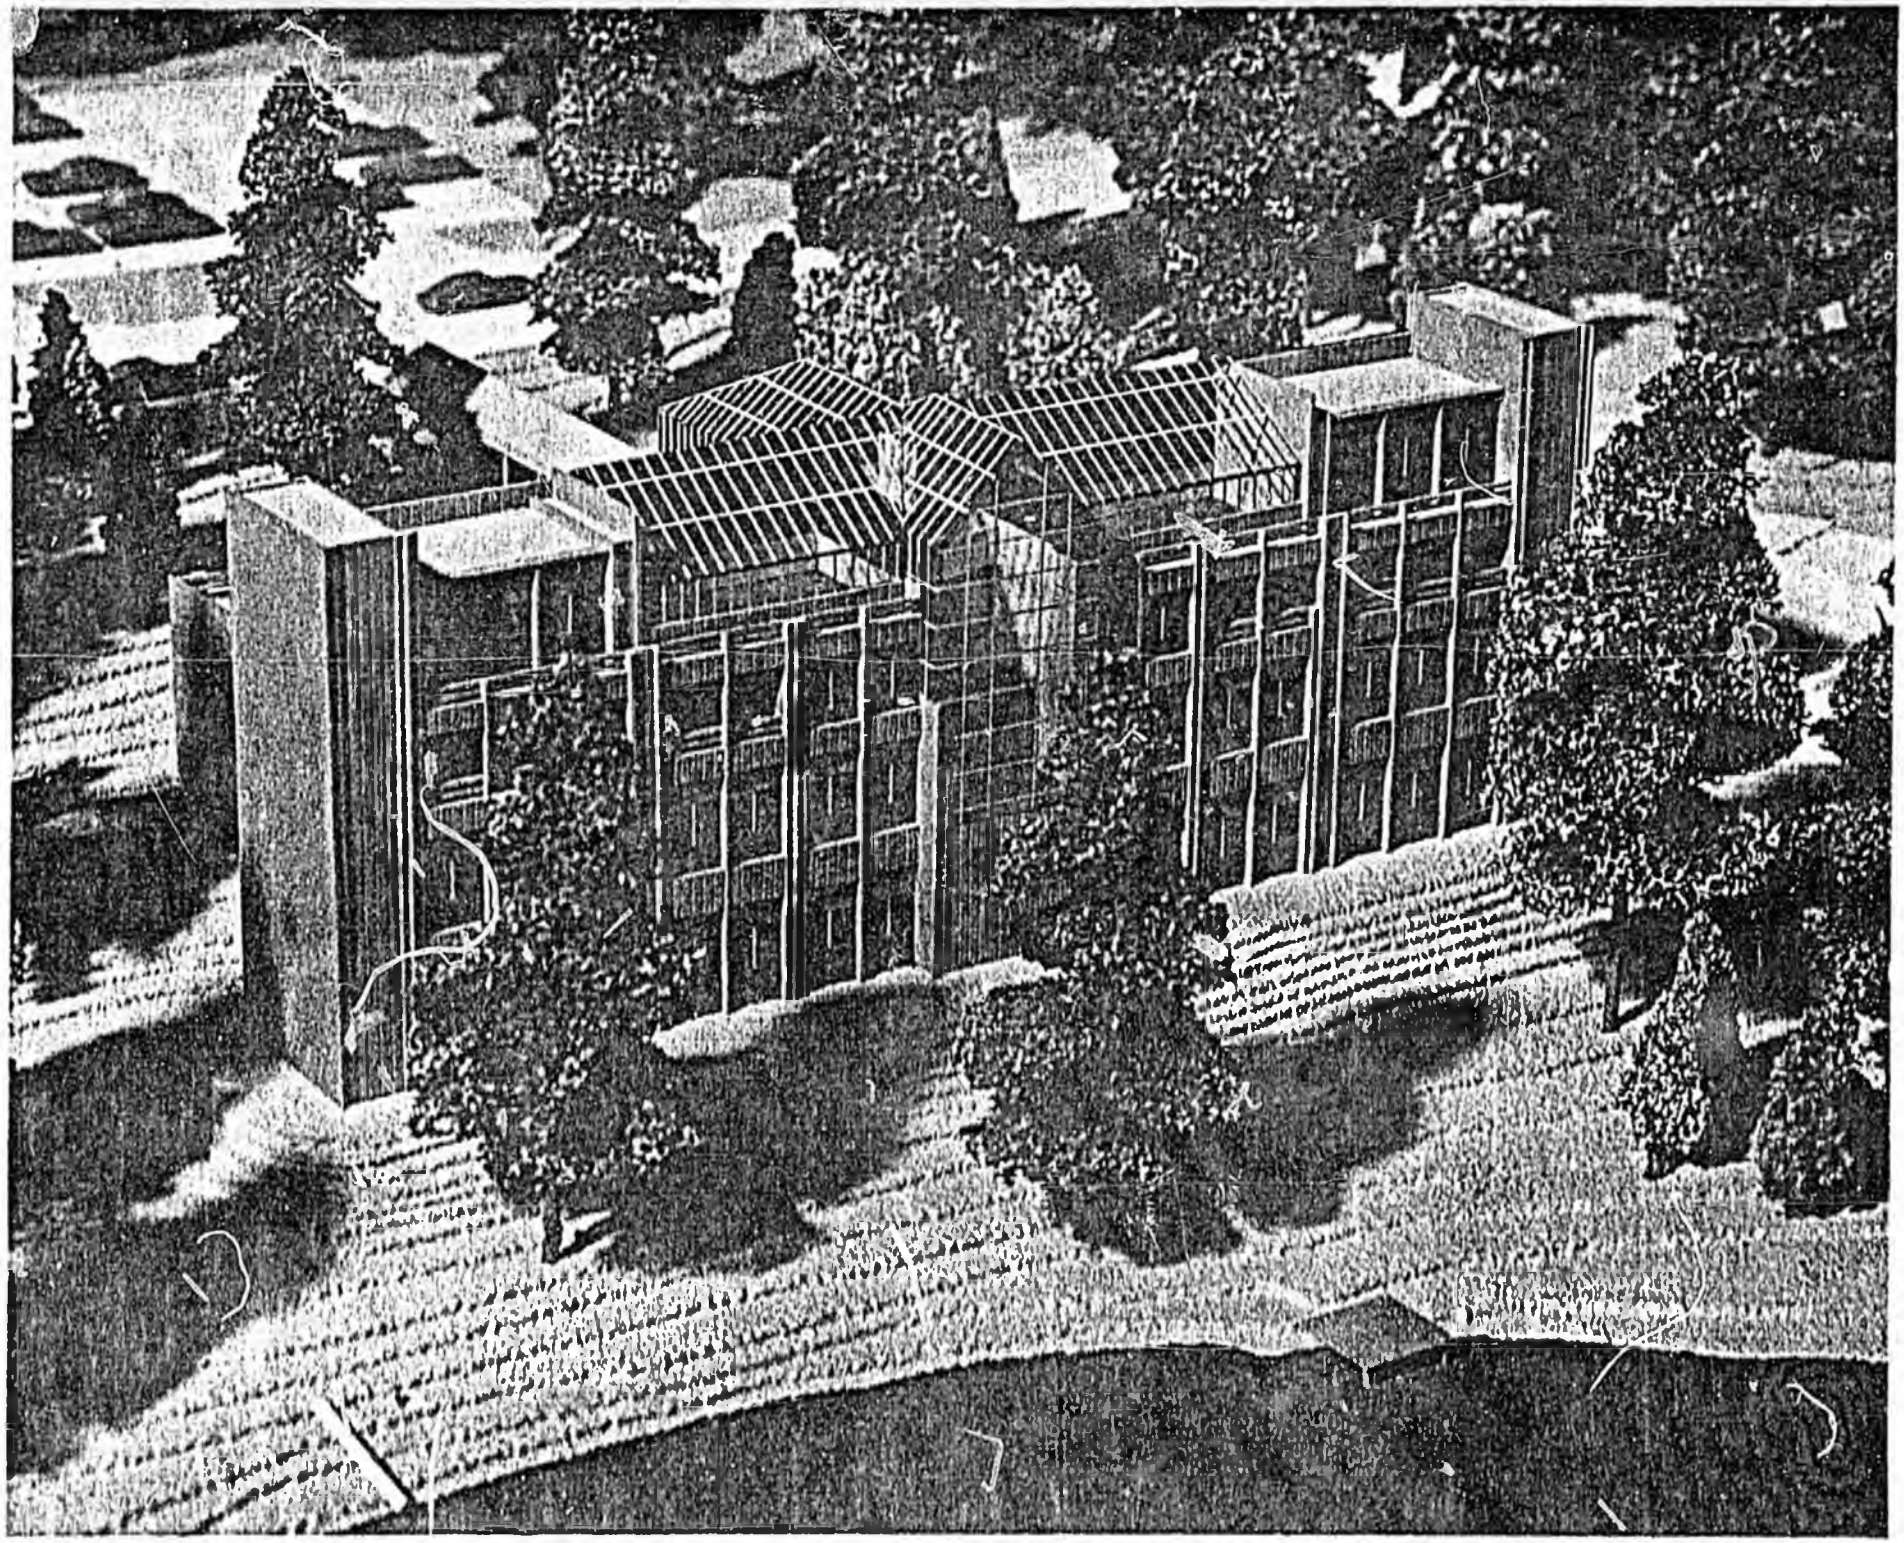
- Gross space - 29,000 square feet
- Planning costs A&E, etc. - $875,000 (appropriated 1981)
- Estimated construction costs (if bid summer, 1982) - $8,780,000
- Total staff (including 18 scientists) - Approximately 40
- Estimated completion and occupancy - 1984

WHY THE LABORATORY IS NEEDED

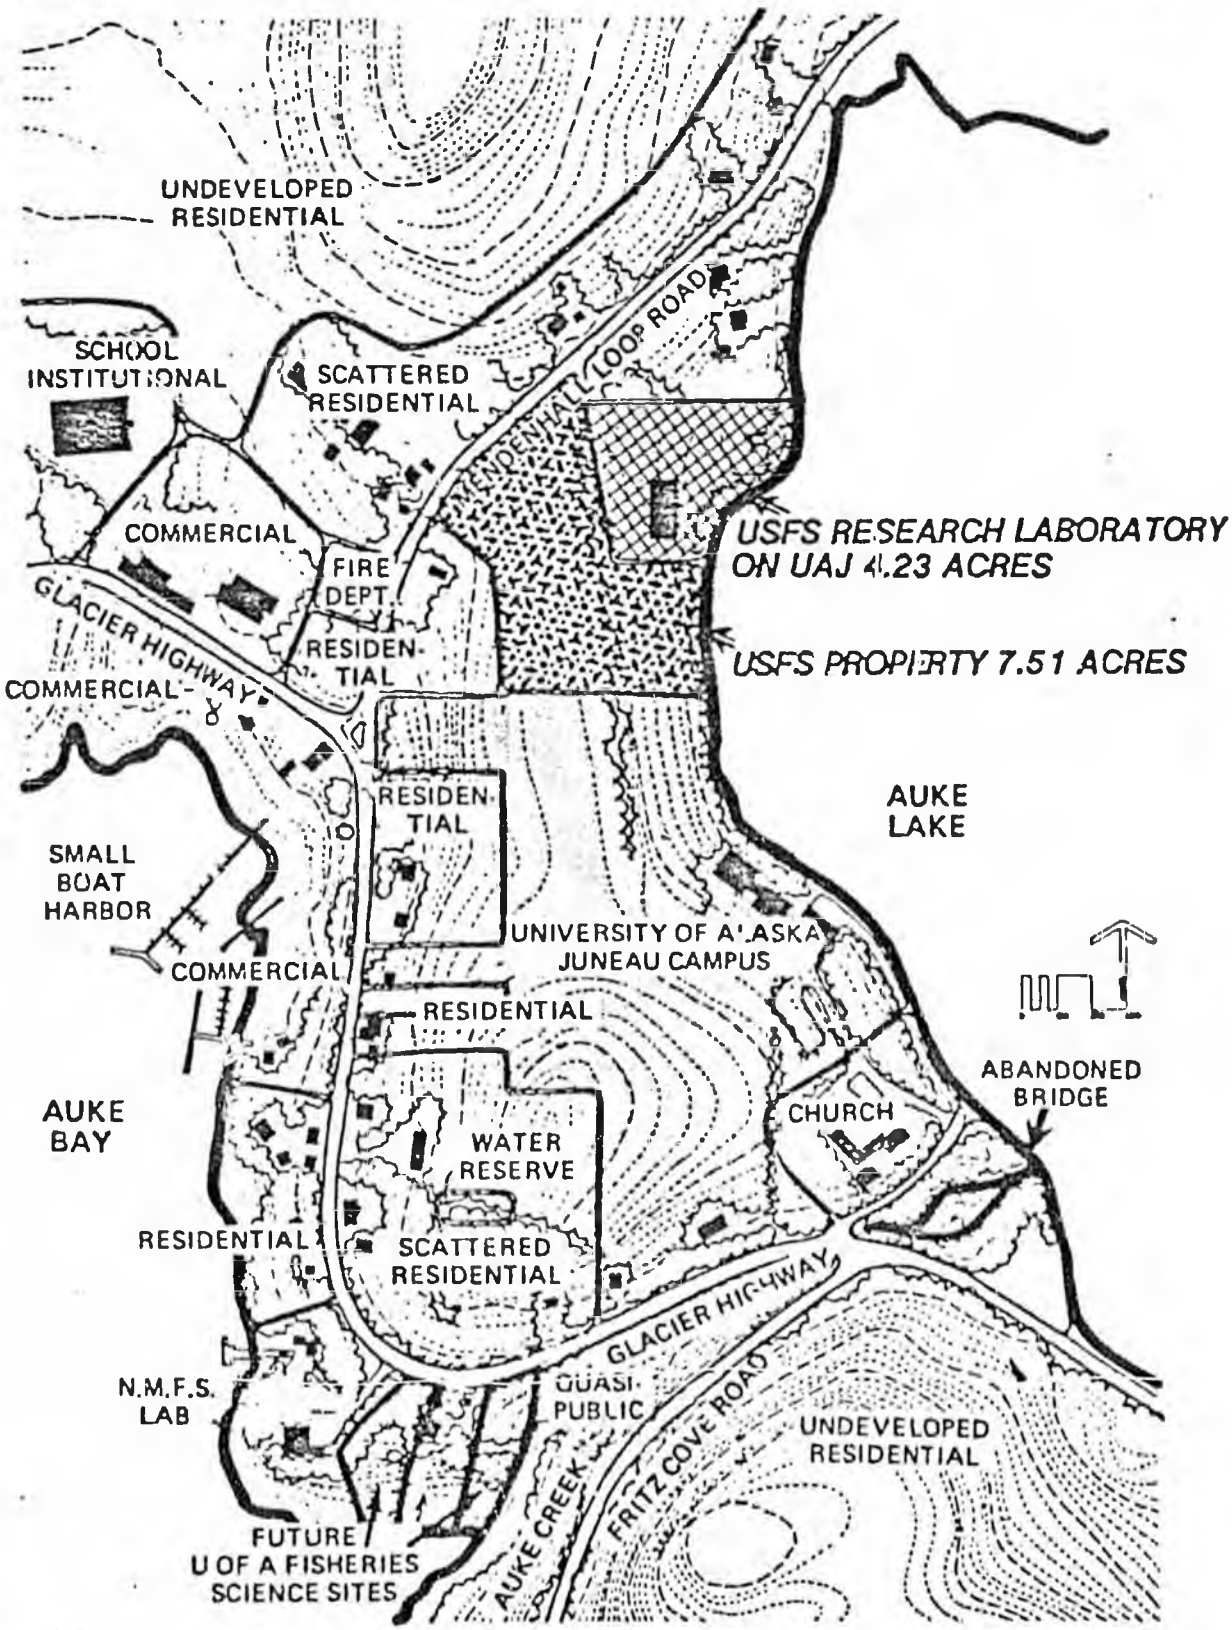
Southeast Alaska is beautiful, and rich in natural resources. These resources--including timber, fish, and wildlife--are important contributors to the economy of Southeast Alaska. Demands for the commercial and recreational use of the resources will continue to increase as the population of the area grows and markets expand. Proper management of resources, while protecting the beauty and uniqueness, requires new knowledge; results of research conducted elsewhere cannot be safely applied to the ecosystems of southeast Alaska. Research is needed to increase the productivity of Alaska's forests. Equally needed is new information for protecting and enhancing other forest resources including recreation, fish, wildlife and esthetic values.

The Research branch of the Forest Service has maintained for several years a small staff headquartered at Juneau which operates throughout coastal Alaska. This research staff, while making good progress on field studies, has been seriously handicapped by the lack of laboratory facilities. The Forest Service is expanding substantially its Juneau research unit, in order to accelerate solutions to the many high priority forest and related resource problems in S.E. Alaska. Thus, the need for laboratory facilities is increasingly critical.

While the research is directed at solving on-the-ground field problems, laboratory facilities are required to analyze soil, water, and plant samples; determine habitat requirements of anadromous fish; learn to suppress forest insects and diseases; and conduct a variety of controlled experiments. A laboratory and associated facilities is an essential base of operations for field work.



The staff of the Forestry Sciences Laboratory now makes do with offices and makeshift laboratory rooms on the sixth floor of the Federal Office Building in Juneau. An office building is unsuitable as a laboratory. It is not possible to grow plants, rear animals, conduct controlled environment experiments, or engage in other activities normally conducted in biological laboratories. There is no safe place to store or use volatile chemicals and it is not possible to vent fumes. As a result, the research staff must either limit or cancel urgently needed work in order to avoid unsafe conditions.



A laboratory is urgently needed that would provide the facilities, equipment and space to conduct the research needed to understand the complex interactions of plants and animals of the coastal ecosystems and their physical environment. Field studies would be supplemented and extended by laboratory facilities. Work presently planned could be done more quickly. Important work now foregone because of the lack of laboratory facilities could be done.

FOREST SERVICE - UNIVERSITY OF ALASKA ARRANGEMENTS

The laboratory plans include about 800 square feet for University staff. Close proximity of the laboratory to the University will facilitate the participation of Forest Service scientists in teaching and student guidance roles, as well as the potential for university students to secure temporary or permanent employment, and do graduate work in cooperation with the Forestry Sciences Laboratory.

An adjacent 7.51-acre parcel of Forest Service land will be made available to the University at completion of the laboratory. The Forest Service will lease the laboratory from the University. (See enclosed Agreement)

LABORATORY SITE AND ADJACENT LAND USE

AGREEMENT

This Agreement is made and entered into this 2nd day of March, 1983, by and between the University of Alaska, a constitutional corporation organized and existing under the laws of the State of Alaska, (hereinafter referred to as "University") and the United States Forest Service, Department of Agriculture, United States of America (hereinafter referred to as "Government").

WITNESSETH:

WHEREAS, Government desires the construction by University of a Forestry Sciences Laboratory, necessary utility hook-ups and access roads (hereinafter referred to as "Facility") on certain real property in Juneau, Alaska, owned by University and described in Exhibit A, attached hereto and by this reference made a part hereof; and

WHEREAS, such a facility has been designed from funds appropriated by the 1981 State of Alaska Legislature; and

WHEREAS, Government desires to lease the Facility for the uses and purposes provided for in the Lease attached hereto as Exhibit D and by this reference made a part hereof; and

WHEREAS, University supports the furthering of knowledge regarding the management and protection of Alaska's forest resources; and

WHEREAS, University desires to obtain title to that certain real property in Juneau, Alaska, described in Exhibits B and B1, attached hereto and by this reference made a part hereof, for the purpose of enhancing the campus of the University of Alaska, Juneau; and

WHEREAS, the real property described in Exhibits B and B1 is presently reserved by Government for research purposes; and

WHEREAS, the purposes to be accomplished by the research reservation can be accomplished at the Facility; and

WHEREAS, Government desires to obtain title to certain real property located near the Wrangell Narrows in Southeastern Alaska, more specifically described in Exhibit C, attached hereto and by this reference made a part hereof, for forestry nursery and related research purposes; and

WHEREAS, University and Government are willing to enter into an agreement to specify the actions and achieve the results desired by both parties.

NOW THEREFORE, in consideration of the mutual promises contained herein, the parties do hereby agree as follows:

1. The term of this Agreement shall commence upon execution by both parties and shall run for a period of twenty (20) years thereafter unless sooner terminated according to the terms and conditions set forth below.

2. University agrees to design and build the Facility upon its real property described in Exhibit A for the use and benefit of Government in accordance with the provisions of this paragraph 2 and paragraph 5 below; provided, however, that the following conditions have first been met:

A. The State of Alaska Legislature shall have appropriated sufficient funding to design and build the Facility. (It shall not be the responsibility of the University to seek said funding.); and

B. Government shall have issued such letters of approval or other documents as may be required by the Bureau of Land Management (hereinafter referred to as "BLM"), to accept or approve University's "Application for Land for Recreation or

Public Purposes" in order to classify, lease and patent to University the real property described in Exhibit B. (Said letters of approval or other documents may contain the stipulation that BLM not issue a "Recreation or Public Purpose Lease" until the State of Alaska Legislature has appropriated sufficient funding to design and build the Facility.) And provided further that Government shall not have revoked its withdrawal (PLO 2068) of the real property described in Exhibit B or consented to the disposal of said property to any third party without the prior written consent of University at any time before 1) said property is classified for recreation or public purposes, or 2) this Agreement is terminated, whichever occurs first; and

C. Government shall have granted and conveyed to University, within ninety (90) days after the effective date of an Act appropriating funds for the Facility, a thirty (30) year "Special Use Permit" with one hundred percent (100 %) fee waiver for University's exclusive use and occupancy for educational purposes of the real property described in Exhibits B and B1; said permit to terminate should the University exercise any option to terminate this Agreement; and

D. BLM shall have approved University's Application to classify the real property described in Exhibit B for recreation or public purposes, and the property is so classified; and

E. Government shall have reviewed and approved the site survey, schematic plans and working drawings for the Facility (hereinafter referred to as the "Plans"). And provided further that should any conflict arise between 1) the provisions of the approved Plans for the Facility and 2) the provisions set forth

in Schedules A and B attached to the Lease set forth in Exhibit D, the approved Plans shall prevail.

3. University may, at its sole option, terminate this Agreement at the end of two years after the effective date hereof for any or all of the following reasons: a) failure of State of Alaska Legislature to appropriate sufficient funding to build the Facility; b) Government's failure or refusal to grant University the "Special Use Permit" referred to in paragraph 2.C. above; or c) BLM's failure or refusal to classify the real property described in Exhibit B for recreation or public purposes.

4. If the conditions set forth in paragraph 2 above are met or if University elects, pursuant to paragraph 3 above, to continue this Agreement notwithstanding the lack of complete satisfaction of all conditions precedent, then University and Government shall mutually select a portion of the real property described in Exhibit C, to be exchanged for the real property described in Exhibit B1. Said exchange shall be effectuated by the delivery to University by Government of a warranty deed to the real property described in Exhibit B1 and by the delivery to Government by University of a quitclaim deed to the selected portion of the real property described in Exhibit C. Government shall pay all fees and costs required by the Government for the exchange, including, but not limited to, survey costs.

5. If the conditions set forth in paragraphs 2 and 4 above are met or waived, and upon substantial completion of the Facility, University shall let and lease to Government and Government shall take and lease from University the real property described in Exhibit A, including the Facility, for an initial five (5) year term with ten (10) one (1) year optional renewals in accordance with the terms and conditions contained in the Lease set forth in Exhibit D; provided, however, that University reserves the sole right to terminate the Lease at the end of the initial term or any one (1) year renewal thereof on account of BLM's continued failure or refusal to grant University a "Recreation or Public Purpose Lease" to the real property described in Exhibit B.

Government agrees to submit for University's countersignature, two original signed copies of the Lease set forth in Exhibit D within thirty (30) days after University shall have notified Government of substantial completion of the Facility. University agrees to return one fully executed original copy of said Lease to Government within thirty (30) additional days thereafter. The term of said Lease shall commence upon the date of its execution by University.

6. Upon University's receipt of patent title to the land described in Exhibit B and upon reimbursement to University by Government of all fees and costs paid by University to BLM to acquire said patent title, University shall, by quitclaim deed, convey to Government the real property described in Exhibit C, together with affixed improvements, except for that portion selected for exchange as described in paragraph 4 above.

7. This Agreement cannot be sold, assigned or otherwise transferred by either party without the prior written consent of the other party.

8. All notices shall be either hand delivered or sent, return receipt requested, through the United States mail to the parties at the addresses shown below:

UNIVERSITY	GOVERNMENT
Director Statewide Office of Land Management 3354 College Road Fairbanks, Alaska 99701	Robert L. Ethington Station Director 809 N.E. Sixth Avenue Portland, Oregon 97232

9. Government agrees to indemnify and save harmless University, its Board of Regents, officers, agents and employees from and against all claims, demands, judgments, costs and expenses (including reasonable attorney's fees) which may arise by reason of injury to or death of any person or damage to any property occurring on the real property described in Exhibits A, B, B1 and C when such injury, death or damage is attributable to the negligent or wrongful acts of Government, its agents, employees or representatives. Provided, however, Government shall be bound only to the extent that funds are appropriated for such purposes and to the extent that such obligation is authorized by law.

10. The failure of either party to insist upon the strict performance of any provision of this Agreement or to exercise any right, power or remedy upon a breach thereof shall not constitute a waiver by said party of any such provision, right, power, remedy, breach or subsequent breach of the same or any other provision.

11. The failure by either party to perform any duty imposed on it by this Agreement or the failure to conform its conduct to the standards imposed by this Agreement and all applicable statutes, regulations, ordinances, rules and codes shall be deemed a default under this Agreement.

In the event of default and except as otherwise provided above, the aggrieved party shall provide the defaulting party with thirty (30) days written notice of default and the opportunity to cure. If after thirty (30) days have expired and the defaulting party has failed to cure the default, the aggrieved party may, at its sole option, terminate this Agreement. In addition, the parties shall be entitled to any and all remedies provided by law.

12. Government agrees that, in the performance of its obligations pursuant to this Agreement, it will exercise its best, good faith efforts.

13. Except as otherwise provided above, Government and University agree to execute, without charge therefore, any additional documents necessary to perform their respective obligations arising pursuant to this Agreement.

14. Each party warrants that it has the authority to enter into this Agreement and that the persons signing for each are expressly authorized to do so. Government warrants further that the United States of America is the owner of record to the real property described in Exhibits B and B1 of this Agreement.

15. Time is of the essence in this Agreement.

16. Nothing in this Agreement shall be construed so as to render University in any way or for any purpose liable as a partner or joint venturer of Government, or in any way as creating a relationship of principal and agent between the parties hereto and neither party shall have the power to bind or obligate the other except as set forth in the Agreement.

17. This Agreement shall be binding upon and inure to the benefit of the parties' respective heirs, successors and assigns.

18. If any provision of this Agreement or any application thereof shall be invalid or unenforceable, the remainder of this Agreement and any other application of such provision shall not be affected thereby.

19. This Agreement sets forth all of the terms, conditions, convenants and agreements of the parties relative to the subject matter hereof and supersedes any and all former agreements, oral or written, which upon the execution and delivery hereof are hereby terminated and of no further force and effect. There are no terms, conditons, convenants or agreements with respect hereto except as herein provided. This Agreement may be modified by a document in writing and signed by both parties.

IN WITNESS WHEREOF, the parties hereto have executed this Agreement the day and year first above written.

Valdez, Alaska 99686

January 10, 1983

Alaska State Legislature
Juneau, Alaska

Greetings:

Attached you will find Prince William Sound Community College's 1983 Progress Report. This report is presented in support of our need for a campus building. We are a rapidly growing community college and in need of adequate space to meet accreditation requirements. We have made a number of requests for facilities in the past four years. Prince William Sound Community College is the only community college with no laboratory facilities and no permanent facility.

Thank you for any support you can give us in acquiring a campus building.

Sincerely,

John Devens, Ph.D.
President
Prince William Sound
Community College

PRINCE WILLIAM SOUND COMMUNITY COLLEGE
1983 PROGRESS REPORT

I appreciate this opportunity to present highlights regarding the Prince William Sound Community College program. As many of you know, the Prince William Sound Community College program dates back to 1971 when concerned citizens of the city of Valdez petitioned the University of Alaska to establish an extension office in Valdez to offer post-secondary programming. As an extension of the University of Alaska, Fairbanks, the Valdez Learning Center offered its first courses in 1971. All of these early courses were taught by part time instructors and the program was headed by a part-time coordinator. The program continued to grow throughout the pipeline era and in 1975 the local Policy Advisory Council petitioned the Board of Regents to allow the Valdez Learning Center community college status. This request for community college status was denied in 1975.

Community college status was granted in July of 1978 and the Valdez Learning Center officially became Prince William Sound Community College with extension centers in Copper Basin and Cordova.

Currently, Prince William Sound Community College maintains its administrative offices and full-time faculty at its Valdez center and has full-time extension center programs in Copper Basin and Cordova. Instructional programming is also provided in other communities in the service region including Tatitlek, Whittier, Kenny Lake, Copper Center, Glennallen, Lake Louise and Chitina. Eight full-time instructors and approximately 30 part-time instructors offer in excess of 60 courses per semester throughout the Prince William Sound region. A 71% increase in credit hour production since the fall semester of 1980 is an excellent indication of the acceptance of this program.

Today, Prince William Sound Community College has 28 staff members and a student enrollment of 1,000. Current facilities in Valdez include three buildings, formerly used as housing by the State of Alaska. These buildings were designed as small apartments and were never intended for use as administrative or instructional facilities. Class size is often limited because of the small size of the rooms used as classrooms.

There are no laboratories of any kind. This severely limits the programs and courses that can be offered as the most fundamental and basic science course requires practical laboratory experience.

Other facilities include the loan of warehouse space at the City dock which temporarily houses the welding program and some of the marine technology courses. Rented office space houses the media services department and provides one classroom, space is also on loan from the State of Alaska in the State Court and Office Building which contains the media services studio.

In Copper Basin, leased space provides for two offices and two classrooms and in Cordova, space rented from the school district provides one office and one classroom. At all three sites, school district facilities are used extensively to augment the physical classroom space.

Preliminary architectural studies have been conducted with local community members, students, faculty and staff. A two phase plan has resulted from these meetings. The first phase provides administrative and classroom space as well as specialized areas for the TV studio, marine technology and office occupations programs. The second phase would follow in the next budget year and would include shop facilities in a separate building.

In February and March of 1982, a comprehensive needs assessment was done in the Prince William Sound Community College region. The needs assessment was undertaken to determine: 1) the educational interests of graduating high school students; 2) the courses, programs and services desired by permanent area residents; 3) the knowledge area residents had of the college and its programs; 4) the preferred sources of information regarding the college; and 5) the barriers that prevented adults from continuing their learning activities.

The survey indicated that slightly over 50% of the high school students viewed Prince William Sound Community College as a place to take classes that would prepare them for jobs. High school students indicated they preferred courses in the area of business administration, electronics and office occupations.

Of the adult population surveyed, 96% believed the college should offer courses of study to prepare students for employment through vocational, technical or occupational areas. 89% believed the students should receive courses in preparation for transfer to a four year institution and 70% believed PWSCC should provide entertainment programs, public lectures and recreational opportunities for the community residents. The adult population indicated they desired courses in the areas of business administration, computer science, welding, commercial fishing technology, electronics, marine technology, office occupations and petroleum technology.

Everyone surveyed was aware of the existence of the college and 85% of the individuals surveyed were aware of the programs and services offered by the college. Over 50% of the people surveyed were planning to take courses at the college within the near future. Only 3% of the individuals indicated they had never recieved advertisements or information about the college.

Various problems were sighted as barriers preventing continuing education for adults. Of the barriers sighted, job responsibilities, scheduling, and child care problems were major obstacles. A lack of basic skills was listed by 5% of the individuals as problems preventing them from taking advantage of the college programs.

The most important result of the survey is a clear indication of the support for PWSCC. 90% of the individuals surveyed believed the adult education programs are worthy of the investment of their tax dollars, an attitude reflected by the continuing financial support offered the college by the City of Valdez. Respondents demonstrated their confidence in the future of the college by expressing interest in programs or classes not yet offered.

Based on the [illegible] of the community-wide needs assessment and a self study completed in January, 1982, PWSCC is currently working towards a number of objectives including: 1) accreditation; 2) enhancement of the Community College Council; 3) the development of more resources for the outreach programs; 4) development of adequate facilities to service the individuals in the PWSCC region.

ACCREDITATION: Although PWSCC received community college status in July of 1978, we have delayed applying for candidacy for accreditation until recently due to our lack of solid funding, faculty, library and library resources, and adequate facilities. With the completion of our consortium library agreement with the City of Valdez, the increase in our staff to include eight full-time faculty members and a Coordinator of Student Services capable of providing counseling services, and the increase in our budget to the approximate amount suggested by the Board of Regents for a startup community college, we feel we are ready to go forward for accreditation. The current schedule includes hiring a consultant to work with us in preparation of our application for the June 1983 meeting of the Northwest Association of Schools and Colleges, with the anticipated visit of the evaluation team during the fall of 1983, and the Northwest Association's decision regarding our candidacy to come at their December, 1983 meeting.

COMMUNITY COLLEGE COUNCIL: The Prince William Sound Community College has a nine member Regional Community College Council and a number of vocational and academic advisory committees. The Community College Council is made up of two

representatives from the Copper Basin area, five individuals from the Valdez area, and two individuals from the Cordova area. The members of the Community College Council are extremely supportive of the college and provide a wide representation of our region.

In addition to the Community College Council, advisory committees have been formed in each of the three major areas. The advisory committees in the Copper Basion region and in Cordova respond directly to the Extension Coordinator with recommendations regarding programming needs in the respective areas. Valdez has several advisory committees which work with the Campus President or the Director of Vocational Programs. The Campus President has lunch with the Valdez Advisory Committee every other Monday. These lunch meetings are used to share information regarding the college and to receive input regarding the community's perception of the college.

During the coming year, new by-laws will be developed with regard to the regionwide Community College Council. The Community College Council has expressed strong interest in being involved in the accreditation process, facilities planning and in the budget process.

PROGRAM REVIEW: With the expansion of educational offerings and services provided by Prince William Sound Community College has come a welcome growth in our student body. During the past year, Prince William Sound Community College has experienced a move towards the development of a more traditional, full-time student body.

During the past two years, Prince William Sound Community College has acquired eight full-time faculty and has developed a number of programs. We feel the following programs and areas of emphasis deserve mention within this report:

Alaska Studies: In the area of history and the social sciences, Dr. John Bury has firmly established the Center for Alaska Studies as an integral part of the PWSCC instructional program. During this past year, the program received the Ester Billman Certificate of Excellence from the Alaska Historical Society. This resulted, in part, from the establishment of a nautical archaeology program and the direction of over 14 different oral history and research projects on Prince William Sound which are to be published. In addition, the program offered over 35 courses in Alaska history, wildlife, arts, and literature and also worked with establishing PWSCC as a part of the Nationwide Elderhostel-Chautauqua Program. This program, which works with senior citizens who wish to continue their education,

saw 104 students over the age of 60 attend college level classes for credit at PWSCC. During the summer of 1983, the program has booked 240 students over the age of 60 to participate in six separate programs.

Developmental Disabilities: In January of 1982, Janis Johnson became the faculty member teaching in the developmental disabilities program. Ms. Johnson came to Prince William Sound Community College from the Parsons Program in Kansas where she served as a program coordinator. During the past year the Associate of Arts program in Developmental Disabilities has been revised and PWSCC will be seeking permission to change the Associate of Arts program to an Associate of Applied Science in Developmental Disabilities. The State of Alaska Department of Education has recently provided a grant to the employees at the Harborview Developmental Center to pay for their involvement in the PWSCC Developmental Disabilities program. This is the only program of its kind in the State of Alaska and one of only a few other such programs in the country.

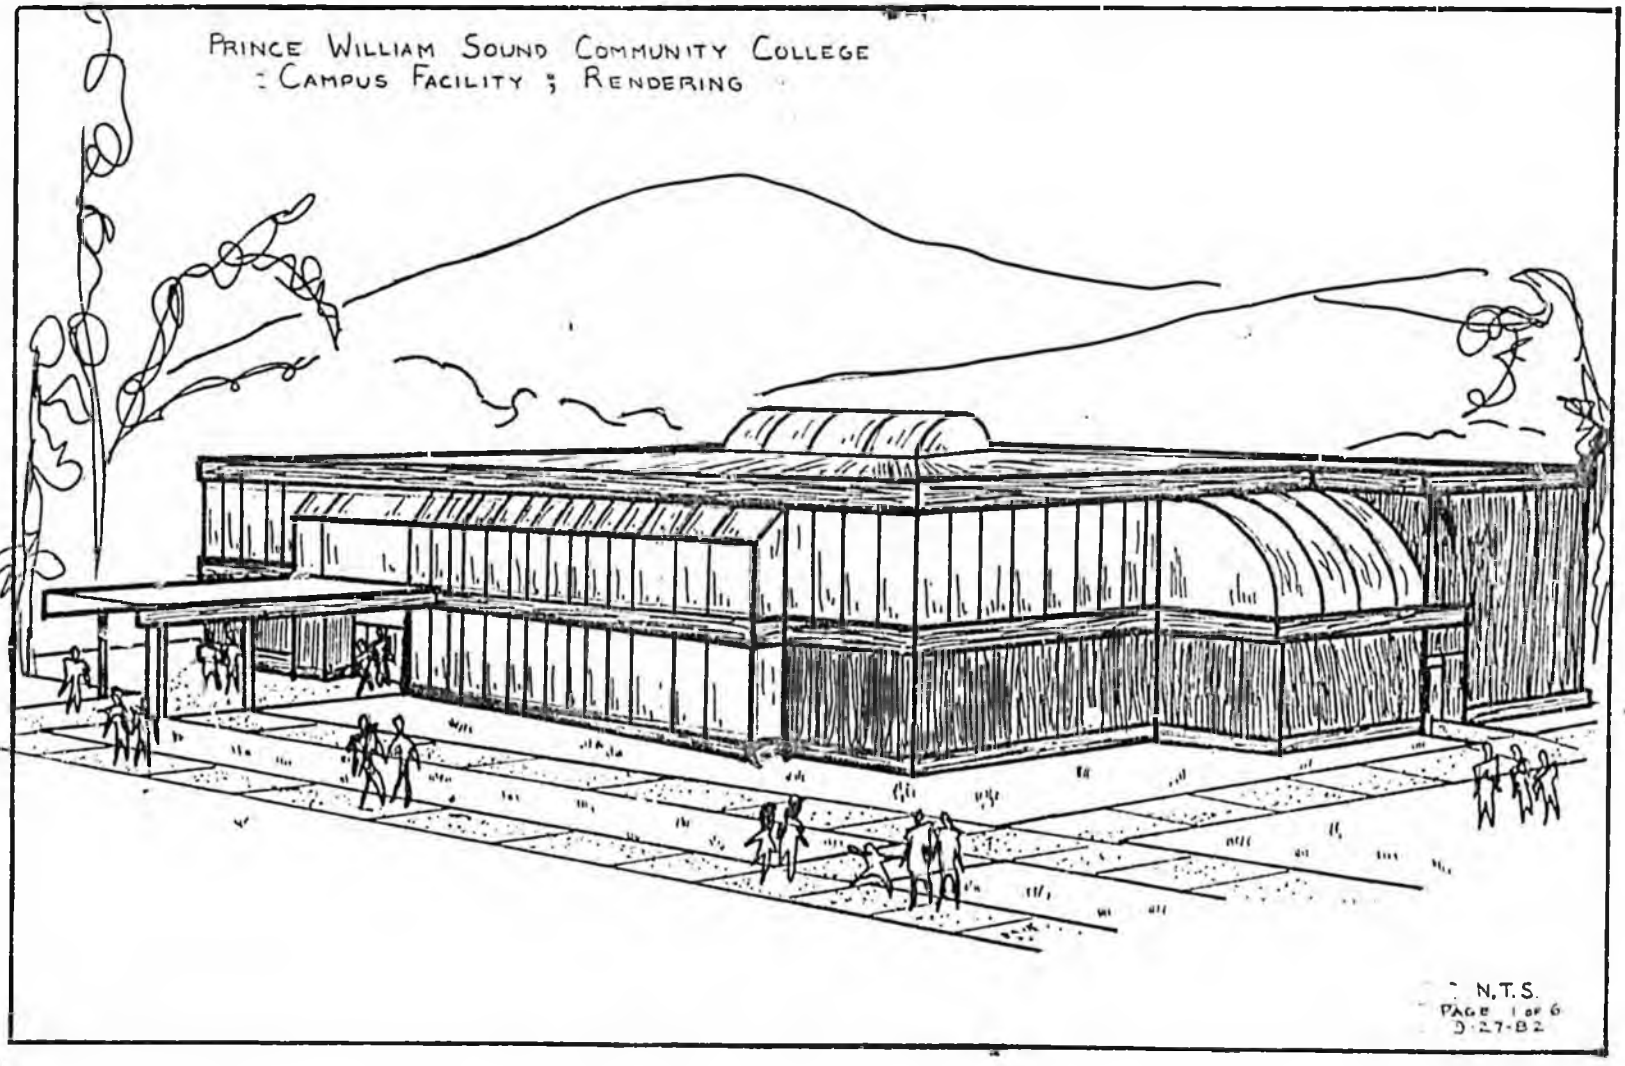
Welding Programs: In January of 1982, Rick Watson joined the PWSCC staff as a welding instructor. Mr. Watson received his training and much of his experience in ship building yards on the west coast. Mr. Watson has developed a number of courses in welding which serve the needs of our local fishermen and employees at the Alyeska Pipeline Service Company, as well as offering the standard courses in shielded metal arc welding and gas welding. Our courses in welding are usually limited to 12 individuals and almost without exception are full.

Office Occupations: Kristen Forrester was moved from part-time instructor to full-time faculty member in the office occupations area in January of 1982. Since that time Ms. Forrester has continued to work very hard towards establishing an office occupations laboratory on campus. A special appropriation from the State Legislature has made it possible to develop a laboratory and purchase the needed office occupations equipment to promote this program which is also offering the National Certified Professional Secretary Program.

Fisheries: During this past year, Dr. Philip Chung has joined Kevin Hekrdle as an instructor for the marine program at Prince William Sound Community College. Dr. Chung specializes in seafood technologies and has been very instrumental in research and development projects with local fishermen and local fish processors. With the advent of the Statewide FITC program, Prince William Sound Community College is re-evaluating its role in delivery of fisheries courses to the Prince William Sound region.

Liberal Arts: The liberal arts program has been instrumental in the development of the regional publication "Soundings" and our English and humanities instructor, Gail Renardson, coordinated the efforts to present a writer's workshop during the past year which brought Pulitzer Prize winning novelist, Michael Shaara, and Alaska's Poet Laureate, Richard Dauenhauer to Valdez as instructors.

Student Services: Student services is a new department which was formed when PWSCC hired Linda Fossen as the Coordinator of Student Services in September of 1982. Since her arrival in Valdez, Ms. Fossen has developed a program to provide counseling to PWSCC students in the areas of financial aid, career planning, and academic and personal counseling. She has also developed a program of testing and referral services and job placement assistance for our students. Other projects which will be undertaken by the student services department include working with the PWSCC staff towards accreditation for the college and working directly with the student body in setting up a student government organization on the PWSCC campus.



Media Services: Media Services has greatly expanded its offerings over the past year. Tom Van Brocklin, Coordinator of Media Services, has initiated the offering of media production courses to augment the darkroom and photography classes usually offered at PWSCC. Television production courses have been used to provide a "stringer" service to KTUU, Channel 2 News, which airs nightly over the satellite to the entire state. As a result of this service, seven tapes have been provided on specific news stories from the Valdez area. Media services has also recently completed a video production called "Interior Alaska: A Land of Extremes". This 14-minute bilingual video production was prepared for the Copper River Native Association and funded from grant monies provided by the Department of Education.

Adult Basic Education: Adult Basic Education has long been and continues to be one of the main thrusts of community service for PWSCC. The ABE department is headed by Coordinator, Susan Bury, formerly the State Director for ABE in Iowa before coming to Valdez. Since January of 1982, the ABE program has provided 12,636 contact hours working with 188 students. Since January, 42 students have received GED diplomas and 83 others are currently making progress towards their GED. Through the ABE program, 60% of the students who were unemployed when they started the program are now employed. Five students have been helped in receiving their U.S. citizenship. The average student graduating from the PWSCC G.E.D.

program scores in the low 70's when compared to a national average of 58 on the national test.

Outreach Programming: PWSCC's extension centers in the Copper Basin area and in Cordova have continued to grow at a rapid rate. Additional growth in the outreach areas will be dependent upon the resources which can be applied to setting up programs in the smaller communities which are currently not being fully served. During the past year, PWSCC has expanded into offering course work in the village of Tatitlek and has received requests for increased work in Whittier and the Lake Louise area. Growth in the Copper Basin area has been steady with a dramatic increase in the number of native students taking college level courses. Meetings with the Advisory Committee in the Copper Basin area suggest a strong desire for the development of a program which supports the cottage industries associated with arts and crafts. The Cordova program continues to show strong emphasis in courses which support the fisheries industry.

GROWTH PROJECTIONS: Currently, PWSCC is serving 11% of the population in the service region. Comparing the current Fall semester with the Fall semester of 1980, we can see that PWSCC has had a 71% increase in credit hour production. This same increase is evident in our unduplicated head count and in the number of full time students. We anticipate continued growth, however, it will probably be at a somewhat slower rate than it has been during the past several years. Our growth is limited to the funds available for outreach programs and our lack of facilities both in Valdez and at our Extension Centers.

Spring 1982	234	20	156		125	1	515	21	536
Fall 1982	232	13	165	2	150		547	15	562

Non-Credit Headcount

	Valdez	Copper Basin	Cordova	Total
Spring 1980	299	117	11	427
Fall 1980	361	84	38	483
Spring 1981	209	147	48	404
Fall 1981	279	11		290
Spring 1982	373	83	449	905
Fall 1982	346	88		434

EXPLANATIONS:

1) Any student taking at least one credit is counted as a credit student, even though he/she may be involved in non-credit activity; the non-credit headcount is restricted to those students taking only non-credit courses. The two headcounts added together will give an unduplicated student count.
2) "P/T" indicates a part-time student, taking less than 12 credits; "F/T" indicates a full-time student, taking 12 or more credits in a semester.
3) The Cordova Extension has had non-credit activity in the Fall 1982 semester, but the statistics are not available at this time. Those non-credit students will affect the non-credit headcount for the Fall 1982 semester.

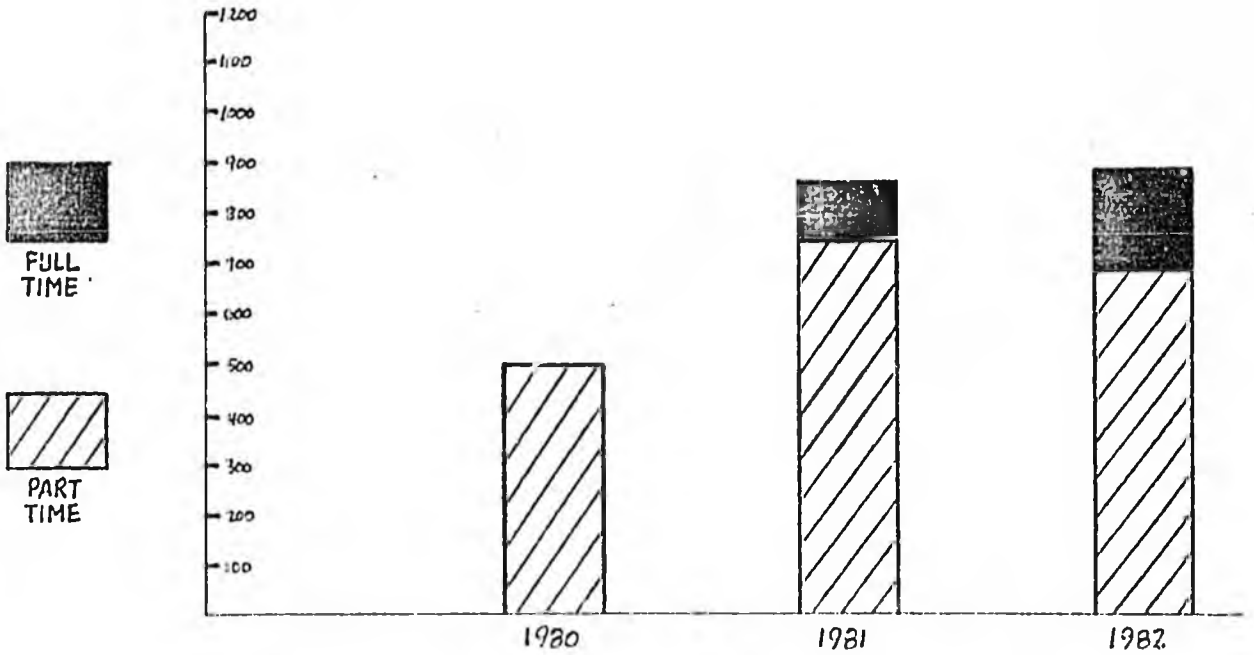
EXPLANATIONS:



1) "NCR" indicates that these are the course contact hours of those students represented in the non-credit headcount; "CR" indicates that these are the course contact hours of those students represented in the credit headcount who were involved in non-credit activity.
2) When the statistics for the Cordova Extension non-credit activity become available, they will affect the non-credit contact hours for the Fall 1982 semester.
3) One additional note: There is still some light credit and non-credit activity at all three units, so the Fall 1982 data is subject to possible changes.

Dear Ms. Fisher

I am writing in response to your Public Opinion Message regarding SB 229.

On May 2, 1983, the House Health, Education and Social Services Committee held a public hearing on SB 229, and passed the bill out of committee.

Senate Bill 229 is now referred to the Finance Committee.

Sincerely,

Mae Tischer

Analysis
Alaska Chapter, National Association of Social Workers

Section 1 -Provides that a court order is required for inspection of adoption records and deletes the State Registrar's authority to adopt regulations with respect to such inspection. (It is currently the practice of the State Registrar to release original birth certificates by regulation although the Statutes prohibit such release.)

Section 2 -Provides for access to adoption information and requires the State Registrar to notify biological parents by certified mail (addressee only) of a request for identifying information made by adult adoptees.
-Permits release of identifying information to adult adoptee unless State Registrar has received a written objection to the release from the biological parent.
-Permits the release of eight items of non-identifying information to adoptive parents and/or adoptees 18 years of age or older.
-Requires that after the effective date of the Act the State shall provide the non-identifying information on a standard form.
-Requires the State Registrar to attach to the original birth certificate the name and address of the adoptee and or the biological parent should they so request and then enables release of the name and address of the adoptee to the biological parent and the biological parent to the adoptee.
-Requires that anyone placing a child for adoption after the effective date provide the eight items of non-identifying information to the State Registrar.
-Requires that the Department of Health and Social Services attempt to obtain the eight non-identifying information items upon request for adoptions occurring before January 1 1984.
-Requires maintenance of records.

Section 3 -Amends A.S.25.23.060 to provide that consent to adoption forms must state the person's right to withdraw the consent and also that a copy of the consent form be provided to the person.

Section 4 -Clarifies access to adoption records under A.S.25.23.150 and provides for release of non-identifying information on request and for identifying information with consent.

Section 5 -Clarifies language prohibiting release of identifying information on adoption.

Section 6 -Prohibits the disclosure of the name of either an adoptee or a biological parent.

Section 7 -Requires persons or agencies placing children for adoption to obtain for the State Registrar the eight items of non-identifying information and a statement that the biological parent is aware of the release of information proceedures and that the State Registrar must attach current information on them and on the adoptee to the original birth certificate at any time.
-Requires that the non-identifying information shall be attached to the original birth certificate.
-Requires that the biological parent must be given a copy of their completed consent form.

The Alaska Chapter, National Association of Social Workers believes that CSSSSB 241 addresses the interests of both adoptees and biological parents and provides a balance between their needs. Furthermore, CSSSSB241 provides for a change in adoption record keeping for the future in order to address a fundamental injustice which has heretofore been done adoptees by denying them access to information about themselves.

Adoption Records: Open or Closed

by
Cecilia "Pudge" Kleinkauf, MSW, ACSW
Associate Professor, Dept. of Social Work
University of Alaska-Anchorage

Should adoption records be sealed? That question has been undergoing significant debate in the legislature of virtually every state in the United States during the last five years. The secrecy with which our society has surrounded adoption in modern times is no longer blindly accepted, but has emerged from the shadows into the light of painful re-examination. Legislators, judges and attorneys, as well as adoptees, biological parents, researchers and mental health professionals, are finally considering whether such secrecy really serves the best interests of all the parties to adoption.

History

Adoption, a legal and social avenue to parenthood, is as old as recorded history. The ancient Greeks, Egyptians and Romans all had specific methods by which adults assumed parenthood for children not born to them. Most cultures also sanction arrangements of various kinds for the establishment of other than biological parenthood. Originally adoption served mainly to meet the needs of adults, both those who were childless and those who were unwilling or unable to raise a child, modern adoption practices, except for grey or black market adoptions, focus on meeting the needs of children.

From colonial times until the latter half of the 19th century, indenture arrangements by orphanages and various forms of foster or work-home placements served to substitute for the adoption of many children. Individual children could still be adopted, however, through the passage of a specific act of adoption by the appropriate legislative body. Following the passage of a general adoption law in Massachusetts in 1851, other states also enacted laws, which at first mainly provided for a legal record of the transfer of the child. Not until the '30's did laws begin to reflect the requirement for the sealing of records and the issuance of a new birth certificate.[1] The intent behind such provisions were a wish to "erase" the social stigma of illegitimacy, protection of adoptive parents from intrusion by biological parents, denial of the differences between biological and adoptive parenthood and a disregard of the adoptee's interest in knowing his or her origins.

Contributing Social Forces

"Within the past twenty years, however, five trends emerged that have had a decided impact on the adoption issues we confront today. They are: a declining birth rate,[2] changing sexual mores, increasing concern about the rights of minority groups, mounting interest in personal genealogy, and an increasing

oncern about the rights of minority groups, mounting interest in personal genealogy, and an increased tendency to view the courts as the final arbiter of all disputes."[2]

While a decline in the birth rate has meant fewer children available for adoption, and the turning of many prospective adoptive parents to the black or grey market,[3] it has probably also contributed (at least in part) to the increasing numbers of couples investigating alternate avenues to parenthood, such as artificial insemination, "test-tube" pregnancies, and surrogate arrangements. A reduction in the availability of adoptable infants, coupled with an increase in the availability of older or "hard to place" children, has undoubtedly encouraged both adoption agencies and adoptive parents to re-examine preferences and practices.

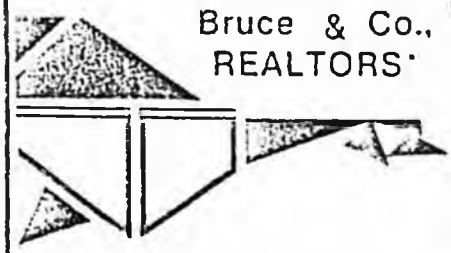
Sexual mores have changed, and single parenthood — with or without marriage — is an accepted fact of modern life. Increased awareness and utilization of a variety of methods of contraception, together with safe and legal abortions, have reduced the numbers of unwanted children available for adoption. Marriages which are childless by choice contribute to some reduction in the numbers of prospective adoptive couples.

The '60's and '70's have been characterized by numerous "rights" movements by varied minority groups. Adoption has been affected by efforts to ensure that Black, Chicano, and Indian children are placed with families who can ensure the transmission of racial and cultural heritage as well as by the women's movement focus on the issue of choice as it relates to childbearing. Adoptees and biological parents have also established a variety of organizations to further their rights as minority groups.

Interest in one's "roots" is hardly limited to adoptees although their "searches" have received more publicity than those of others, · except perhaps for Alex Haley.[4] Because of the secrecy of adoption records and thus the difficulty in obtaining information, adoptees are often left with

incomplete information about their biological heritage, blood siblings, medical and genetic history and racial background. The wish to know one's heritage, coupled with the belief that discrimination results from laws which deny only adoptees access to information about themselves have provided the greatest impetus to the open records movement.[5]

Groups and organizations comprised of adoptees, biological parents and adoptive parents have also formed to affect adoption practices as well as to advocate, and educate the parties to adoption in everything from legislative action, and judicial reform to methods and skills for "the search".



The courts, while identified in most state statutes as the avenue through which adoptees can have their records opened, have proven unresponsive to the petitions for access to information, whether the basis has been medical, emotional or financial.[6] The fact that most statutes direct the courts to base the decision on "good cause" which is an overly vague term, has also contributed to efforts to enact legislation providing for more identifiable criteria, especially where more universal access to information is desired.

Adoption Agency Practices

The procedures of adoption agencies are beginning to change in light of the current efforts toward open adoption records. The Child Welfare League of America, recognized as the national standard-setter for adoption and other child welfare services, recommends that the adoption agencies carefully gather significant information so that it will be available in the future, inform parties to the adoption that firm guarantees of confidentiality can no longer be made because of changing laws, and assist the biological parent(s) to consider whether or not they will be willing to be contacted by the adoptee when he/she attains adulthood.[7]

The increase in adoption of older children, where maintenance of confidentiality is neither wise nor possible,[8] has also contributed to re-examination of current adoption practice, as has a proposal for "open adoption" by Baran, Pannor and Sorosky. Open adoption is "an adoption in which the birth parents meet the adoptive parents, participates in the separation and placement process, relinquishes all legal,

oral, and nurturing rights to the child, but retains the right to continuing contact and to knowledge of the childs' whereabouts and welfare."[9]

Psychological Issues

The dilemma of conflicting "rights" and "needs", however, provides the backdrop for all efforts to revise sealed adoption records laws. While some take the position that "needs" are not to be equated with legal rights,[10] that issue will not be debated here. The adoption triangle, so well described by Sorosky, Baran and Pannor,[11] consists of three parties (five individuals usually) each with separate but intertwining needs—the biological or birth parent(s), the adoptee, and the adoptive parents. Meeting the need of the adoptee to know his origins, violates, in the minds of many, the need of the biological parent to maintain anonymity. It is also seen by some as violating the need of the adoptive parents to maintain distance between themselves and the biological parent. In the reverse, the need of the biological parents' need to remain anonymous violates the adoptees' need for information.

Attitudes of the parties to the adoption triangle regarding access to information are changing.[12] A survey undertaken in Alaska during 1980 by this author revealed that adoptees, biological and adoptive parents overwhelmingly believed adoptees should have access to non-identifying information. Over 80% of the adoptees and biological parents, and 65% of the adoptive parents believed identifying information (names) should be released if that person's consent had been obtained.[13]

Searching

It must be noted, that not all requests for information or "searching" are for the purpose of obtaining names and seeking reunion. The fact that Scotland (as well as England, Finland, and Israel) permits access to adoption records enabled Triseliotis in 1973 to inter-

view 70 Scottish adoptees who had requested information during 1969-70. About one-third only wanted background information.[14] Weidells' study of the results of the first 13 months of Minnesota's open records law also revealed requests for information on genetic history and birth relatives.[15] Court requests for access to records have also been made for everything from medical history to the establishment of inheritance.[16]

Adoptees who "search" in an attempt to locate biological parents do so for a variety of reasons. The completion of an identity, and the establishment of "wholeness" like everyone else seem to be the most universal motivation.[17] In almost every study done, female adoptees are much more desirous than male adoptees of learning more about their birth parents and more about their biological heritage and are more anxious to make contacts with the birth parents. It is suggested that women, as child bearers, are more concerned with their genetic heritage, are freer to acknowledge the complex feelings associated with adoptive status, are more likely to define themselves in terms of family, and may have more identity conflicts in our society."[18] Sorosky, et. al., also provide an excellent review of other research related to the psychological and social issues in adoption as they pertain to the various developmental stages in the life as an adoptee, male or female.[19]

Kadushin, after having reviewed the available research related to "searching", concludes that, "when adoptees meet their biological parents, in 80 percent of the cases or better, the meeting proves to be successful and satisfying to the participants."[20]

.ndian children—even though adopted—had a right to participation in their tribe prompted passage of the Indian Child Welfare Act by Congress in 1978. This act gives Indian adoptees 18 years of age or older access to information about the tribal affiliation of their biological parents.

Federal legislative efforts have generally centered on (1) a national registry system to facilitate contact between adoptees and biological parents, (2) a system of intermediary contact to obtain consents or (3) a release of all information on request. Because of the fact that many adoptions involve the laws of more than one state, "a proposal for such a federally sponsored but not necessarily federally operated-national adoptee-birthparent registry was introduced in the U.S. Senate in April, 1980 by Senator Carl Levin (D-Mich.). The proposal (S2561) died in committee."[21]

State Open Records Legislation

During 1977, Connecticut and Minnesota became the first states to enact legislation, permitting access to identifying information with the consent of the person to be identified. North Dakota followed in 1979. Michigan passed such legislation in 1980 as did Florida and Nebraska, while Iowa amended its adoption statues to provide for the release of non-identifying a registry to facilitate reunions.[22]

Modeled generally after Minnesota and Connecticut, legislation to increase access to adoption records was introduced in Alaska in the 1980 legislative session by Representative Terry Gardiner (HB 792) and in the 1981 session by Senators Rodey, Sturgulewski, and Stimpson (SB 399) but neither bill has, as yet, passed. Both bills initially provided for:

1. Establishment of an intermediary system whereby the state would attempt to make contact with a biological parent to obtain a release of the original birth certificate when the adult adoptee had requested such information.
2. Establishment of a list of items (taken from Connecticut laws) constituting non-identifying information which could be released on request of the adult adoptee.

In addition to releasing non-identifying information, the 1981 version of the bill also included provisions for *gathering* specific non-identifying information (i.e. medical) and the attachment of such information to the original birth certificate. Adult adoptees would be provided such non-identifying information on request. Additionally the original birth certificate would be accompanied by an affidavit signed by the biological parent(s) which either granted or denied access to the original certificate by the adoptee upon her/his attaining the age of majority. Affidavits could be changed at any time.

The 1981 version of the bill was pending in the Senate Judiciary Committee at the conclusion of the 1981 legislative session, and will be carried over into the 1982 session when it is expected to receive additional attention.

The examination of Alaska's adoption statutes, prompted by the study of these bills, revealed that while present law clearly seals adoption records and prohibits the release of original birth certificates, the Bureau of Vital Records, within the Alaska Department of Health and Social Services, had promulgated regulations for itself which permitted release of original birth certificates. When this discrepancy came to light, legislative committees became extremely concerned about a governmental unit's authority to enable itself to act counter to the statutes.

As a result of this statute versus regulation, issue, debate on the bills expanded from consideration of whether or not to provide mechanisms for adult adoptees to learn their origins, and whether this provision was a valid function of government, to how to amend the law in order to control development of regulations which contradicted it. Concerns were also raised about state liability as the result of violation of privacy laws.

As of this writing (July 1981) the present version of the CSSB 399 does not contain a requirement that the State of Alaska establish an intermediary system whereby biological parents could be located and their consent obtained (or refused) for the release of the original birth certificate. Prohibition on the release of identifying information is maintained and the court is reaffirmed as the only avenue of gaining access.

CSSB 399 if passed, would, however, require certain non-identifying information and an affidavit permitting or denying access to the birth certificate to be attached to the certificate at the time of adoption. The non-identifying information would be available to the adult adoptee on request as would the certificate if the biological parent has consented.

Conclusion

The fundamental issues of the adoptee's "right to know" versus the biological parents' "right to privacy" will not be resolved easily, but the debate will continue in 1982. Many believe that the creation of an adoption registry through which adult adoptees and biological parents willing to have their names released could register to locate each other may be at least part of the answer since no state intercession or mediation between the parties is required. Others contend that a mediator system is necessary in order to notify biological parents that their child wants to contact them and provide assistance to all parties.

The dilemmas in adoption will not be resolved by avoidance or by stubbornly clinging to the status quo. Only open debate and examination of the issues will further the "search" for answers. Alaska, like other states, is embarking on that journey.

SECTIONAL ANALYSIS CSSSB 241 (JUDICIARY) AM

SECTION 1

Deletes the authority by regulation to disclose information concerning adoption or legitmation.

SECTION 2

Provides for access to adoption records and sets the procedure for the notifying of the biological parent. Permits the release of eight items of non-identifying information to adoptive parents and/or adoptees 18 years or older. Requires that after the effective date of the act the State shall provide the non-identifying information on a standard form. Requires that anyone placing a child for adoption after the effective date, provide the ten items on non-identifying information to the State Registrar. Requires that the Department of Health and Social Services attempt to obtain the ten non-identifying information items upon request for adoptions occuring before January 1, 1985. Requires maintenance of records.

SECTION 3

Consent to adoption forms must state the person's right to withdraw the consent and also that a copy of the consent form be provided to the person.

SECTION 4

Non-Identifying information shall be filed with the clerk of the court

SECTION 5

Clarifies language prohibiting release of identifying information on adoption

SECTION 6

Clarifies language on the release of information concerning disclosure or identity of adoptive children or adoptive parents.

SECTION 7

Adds the requirement for the inclusion of non-identifying information to the documents which must be provided to the court. Also adds the requirement of a statement that the biological parent is aware of the procedures of the release of adoption information

SECTION 8

Effective date clause

POSITION PAPER/Department of Health & Social Services

AMENDED POSITION PAPER
CSSS SB 241 (Jud) am

"An Act relating to adoption; and providing for an effective date."

CSSS Senate Bill 241 (Jud) amends the Vital Statistics Act and the adoption statute pertinent to access to adoption records and consent procedures. The Bill has the effect of denying persons adopted in Alaska prior to enactment of this Bill access to their original birth certificates, which is presently permitted by regulation. The Bill provides that, for adoption which occurred prior to January 1, 1985, the State Registrar may not release any information on the biological parent named on the certificate without that person's permission. However, it does allow for a biological parent to file a statement with the Bureau of Vital Statistics permitting access. This Bill reflects the view that the present practice does not protect the confidentiality of the biological parents since their names are made available without their consent or knowledge. While this position may have merit, persons adopted prior to the enactment of this proposed legislation would argue that since the State did not provide a mechanism for collection and retention of non-identifying information before January 1, 1985, they should not be denied access to the information which is presently on file, namely, the original birth certificate.

Even though the Bill provides a means of sending notice of the request by certified mail to the biological parents, the problem of what would happen if one parent agreed to disclosure and the other did not is not addressed.

The Division of Family and Youth Services receives numerous inquiries every year from parents who have relinquished a child and from adult adoptees wanting to locate their biological families. CSSS SB 241 (Jud), as written, would deny access to any identifying information, unless specific instructions are left on record by the biological parent. The national trend is moving more toward open adoption records. While the Division of Family and Youth Services would support the collection of non-identifying information it would recommend considering access to identifying information where available.

CSSS SB 241 (Jud) states the State registrar shall provide the adoptive parents and the adoptee who is age 18 years or older, certain non-identifying information, to wit: age of biological parent, nationality, ethnic background, race, health history, education, physical appearance, talents, existence of other children, religion and type of termination of parental rights. The Division of Family and Youth Services supports the collection of such information because it believes that such facts are necessary for an adopted person to have, as they are responsive to the human need to know "who I am".

POSITION PAPER/Department of Health & Social Services

AMENDED POSITION PAPER

CSSS SB 241 (Jud) am
PAGE 2

When the Division of Family and Youth Services is the agency involved in a placement, most of this information is collected, if available. All closed adoption files of the Division are on microfilm and total about 5,500.

CSSS SB 241 (Jud) makes it incumbent on the Commissioner of the Department of Health and Social Services to obtain this information on all other adoption placements, which include those made by private agencies and independent adoptions. The majority of the adoptions in Alaska are by private agencies or are independent. In 1983 the Division handled only one-sixth (1/6) of the total. In past years it was only one-ninth (1/9) of the total.

The Bill also amends the adoption statute to provide that a consent to adoption is not valid unless the consent form states that the person has a right to withdraw the consent and is provided with a copy of the consent. The Department would support the amendment.

CSSS SB 241 (Jud) am

Assumptions

The Division of Family and Youth Services is assuming that the research work will take only two years with one Social Worker III and a half-time Clerk Typist II. This Division is involved in only about one-sixth of the adoptions in this State. The Social Worker III will need to travel to research the remaining five-sixths of the adoption records throughout the State. Travel, Contractual Services and Commodities are estimates. An inflation factor of 5% is used for the succeeding year.

Program Summary

Positions: There will be two positions necessary to do the research work, one full-time Social Worker III and a part-time Clerk Typist II.

Other Expenditures:

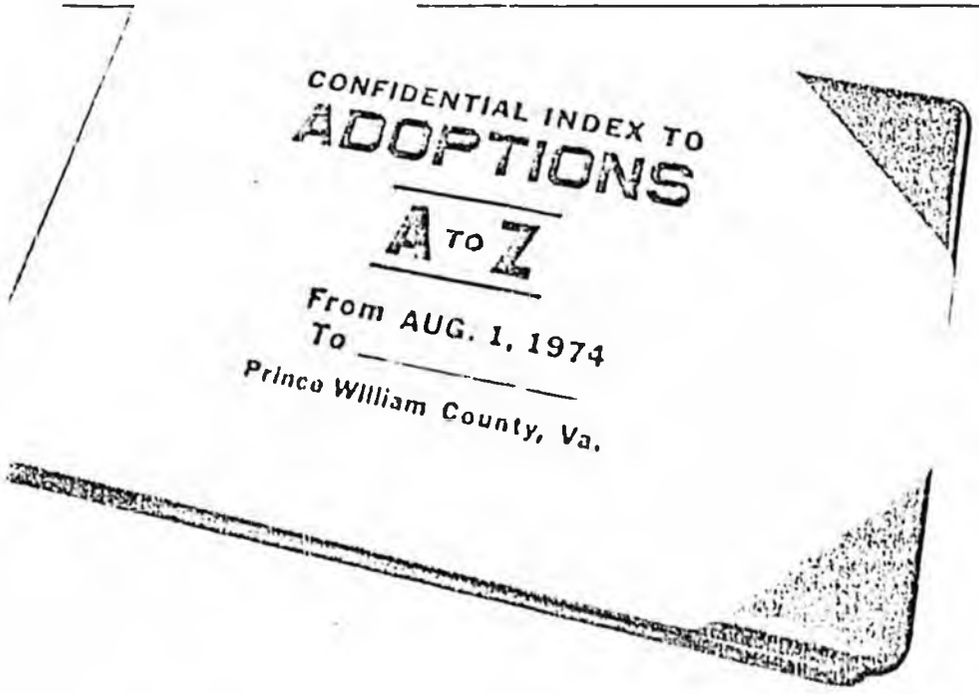
Travel will be necessary for the Social Worker III to research the adoption files in each district court.

Contractual services will be necessary to cover the costs of duplication and lease of equipment.

Commodities will be necessary for clerical/office supplies.

Funding: The funding will be from general funds.

Computations



Travel is computed at an average trip cost of $840 for six trips.

Contractual services is computed at $7,000 for equipment rental, $3,000 for telephone and postage, $4,000 for printing and copying charges and $1,000 for miscellaneous expenses.

Commodities is computed at $400 per position.

Discrimination Against the Adoptee

BY JOANNE W. SMALL

Only adoptees are denied their genealogy by law. Likewise, only adopted citizens are issued a birth certificate that represents a legalized fraud.

Joanne W. Small, M.S.W., is a founder of Adoptees in Search (P.O. Box 41016, Bethesda, Maryland 20014), an organization that supports the opening of adoption records to adult adoptees. She is an adoptee and has been successful in finding her birth family.

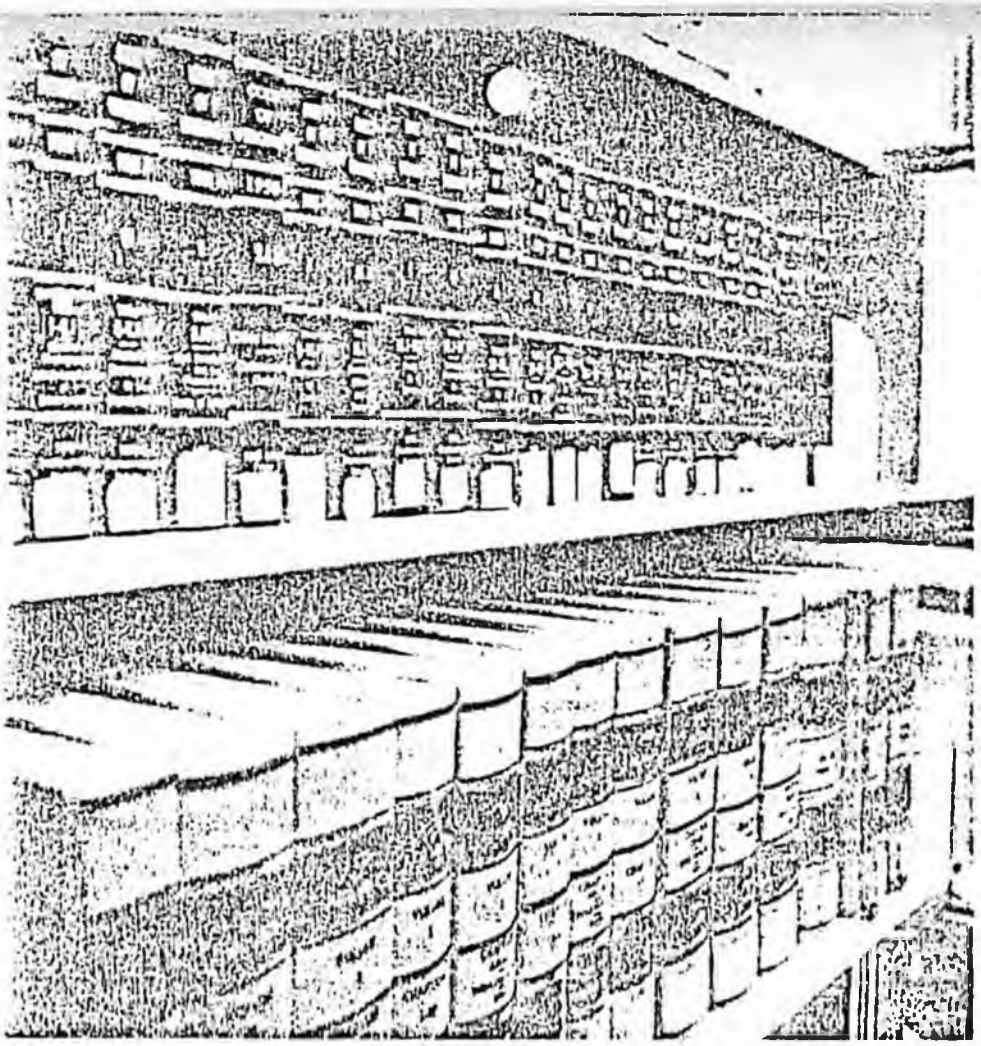
© 1979 American Public Welfare Association

[T]here are certain rights which belong to a man independent of his position in a civil society. Since society does not bestow these rights, it cannot justifiably take them away . . . such rights are inalienable.



—Edward H. Madden, "Civil Disobedience"

Within the next five years an estimated one half million adopted children in the United States will attain majority.[1] They will have achieved the right to vote, to marry without parental consent, and to enter into contracts. They will have attained full adult status in every respect except one. These same adult citizens will be deprived of the right to direct access to information concerning their genetic heritage, their ethnic background, their biological parentage, and their name—all in accordance with American adoption policy which is sanctioned by law and instituted to protect them as children. The scope for this policy extends to almost every adopted person—child or adult—whether they are adopted by relative or nonrelatives, and whether they are adopted as children or as adults.

In the 1940s states began to enact legislation designed to keep an adoptee's biological origins confidential by sealing their birth and adoption records and issuing new birth certificates on which the names of the adoptive parents were substituted for the names of the biological parents. The amended certificate became the only proof of birth available for public inspection. Access to the original birth certificate could be gained only by court order and for "good cause." But such court orders are rarely granted: courts are reluctant not to follow legislatively established mandates.[2]

One purpose of the sealed records laws, which were made to apply retroactively, was to remove the stigma of illegitimacy from the public record.

Adult adoptees are the victims of discrimination. In all but seven states adult adopted citizens are currently denied access to their original birth record when all other citizens have that right.

A 1977 study indicates that the sealed records laws have been successful. Of those adult adoptees surveyed, a sample possessed virtually no information concerning their genetic origins.

Yet, prior to the 1940s there was no sealed records policy. Undoubtedly, most children adopted before World War II were born out of wedlock. The fact that sealed records are a relatively recent phenomenon is confirmed by the fact that adopted persons who are now in their thirties represent the first generation to have had their birth records sealed at adoption.

A 1977 study indicates that the sealed records laws have been successful. Of those adult adoptees surveyed, a sample possessed virtually no information concerning their genetic origins. Adult adoptees reported that they knew an average of three out of twenty-two items of information concerning their national, ethnic, and religious backgrounds as well as the physical, occupational, health, educational, or personality characteristics of their genetic forebears. It was clear that the question, "Who am I?" could not be answered by adoptees in terms of their genetic identity.[3]

The rationales underlying the enactment of the original sealed records legislation are increasingly being called into question. Yet, many state legislatures are refusing to pass proposed legislation that would allow adult adopted citizens direct access to their original birth records at the age of majority. When open records legislation was enacted in Minnesota in 1978, the principle of granting adult adopted citizens the right to direct access to their original birth records at majority was compromised: the adult adoptee's biological parents were granted an ascendant right to a veto. Such a restriction is analogous to compromising a citizen's right to vote by requiring payment of a poll tax or passing a literacy test.

Discrimination is defined as making a distinction ". . . in favor of or against a person or thing on the basis of the group, class, or category to which the person or thing belongs, rather than according to actual merit."[4] Adult adoptees are the victims of such discrimination. In all but seven states adult adopted citizens are currently denied access to their original birth record, and, consequently, to knowledge of their genetic origins when all other citizens have that right. That is discrimination.

The estimated five million adoptees in the United States comprise a minority, a "social group in some way distinct from the dominant, more influential group in the society."[5] It is the fact of having been adopted, or having become members of a family through a legal rather than a biological process, that distinguishes adoptees from the dominant, non-adopted population. A person does not generally choose to become a member of the adoptee minority; membership is usually attained by means of a legal process in which the person involved has had no voice.

Why Most Adoptees Choose to Remain Closeted

Adoptees are not highly visible, as are members of some minorities, e.g., blacks, Indians, hispanics. It is their status, not their color or ethnicity, that sets them apart. They are stigmatized by negative attitudes toward illegitimacy whether they were born "illegitimate" or not. The media have contributed substantially to raising public consciousness concerning matters of adoption within the last couple of years. There have been reports of court cases, legislative activities, adoptee activist groups, stories of searches for genetic roots, and dramatizations portraying the

personal concerns for identity as in *Roots* and *Superman*. The vast majority of adoptees, however, chooses to remain closeted. The following examples tell why.

A happily married father of four and editor of a national magazine had just discovered, at the age of forty-five, that he had been adopted in infancy. He reacted with feelings of shock, anger, disbelief, and disconnectedness. The news created for him an identity crisis of major proportion. Fortunately, he had read about Adoptees in Search in the *Washington Post* only a month before his discovery. Such a group that might be able to help him unravel the mystery of his origins appeared to him as nothing less than a lifesaver.

This man chose to tell only a few of his closest and dearest friends of his unhappy discovery, or, to put it another way, of his newfound status, for he had become, through a momentary slip of his elderly aunt's tongue, an adoptee. And what was the reaction of these few, longtime friends? It went something like this: "Oh, gee, John. What a surprise. Well, look, it's really ok. . . . That is . . . we mean . . . we still like you."

During an interview for a program on adoption, a Silver Spring, Maryland radio announcer confessed that when he was a child, the cruelest, the most devastating, the worst possible thing that he could think to do to get even with his sister was to tell her that she had been adopted. As a matter of fact, she was not adopted.

Standing before the Maryland legislature a year ago, an impassioned state senator, motioning toward a group of adopted adult citizens who had come to testify as proponents of open records legislation, vehemently declared that adoptees had sordid origins; that a number of these "kids" were "born as a result of incest, murder, rape, and robbery"; that the damage done by opening records could be "astronomical." In apparent agreement with his viewpoint, another senator stated that there could be no question that where babies were given up for adoption, some of the facts are very grim, that there can be no excuse for disrupting a family years later by resurrecting the grim facts.

> Adoptees are stigmatized by negative attitudes toward illegitimacy whether they were born "illegitimate" or not.

Last fall, a major District of Columbia newspaper editorialized that placing a child for adoption seldom, if ever, is a matter that does not involve grievous personal burdens, guilts, and apprehensions, and that birth mothers who have made so painful a decision ought not to have to confront this "terrible circumstance" in the future.

Even some adoptive parents seem to demean their adopted children. The president of a local private adoption foundation, an adoptive parent, said, "I am opposed to efforts . . . to open adoption records . . . without minimal safeguards, such as screening the motives of the adoptees. . . . Giving a hunting license usually portends ill for the quarry."

A few years ago, a national magazine carried an article by a child psychologist, an adoptive parent, who had written a number of United States government pamphlets advising adoptive parents on a variety of adoption subjects. She declared that adult adoptees who search appear to lack impulse control, not unlike thieves. In the same vein, a young lawyer testified that records ought not to be opened to adult adoptees: there might be an adoptee who would use that information to find and murder his biological parent.

A District of Columbia City Council member and a Maryand state senator, both adoptive parents, are credited with leading the opposition that killed open records legislation in these jurisdictions. Legislators report also that some adoptive parents have registered their opposition to open records legislation, frequently citing the privacy of the birth parent as their basis of concern.

A colleague and fellow adoptee recently sought nonidentifying family background information from a Catholic adoption agency. She was subjected to an hour-and-a-half interview. Sensitive as to the nature of the worker's questions, she finally asked the worker, "Are you giving me a mental status exam?" "I would if I could," answered the worker.

The District of Columbia City Council has even considered raising the age of majority of its adopted citizens from eighteen to thirty-five. It was also proposed that before adult citizens born and adopted in the District of Columbia could view their original birth certificate they would first have to obtain the permission of both adoptive parents and both birth parents regardless of their age and status. It was also suggested that adult adopted citizens seeking birth records and information in the District of Columbia must be in need of psychological counseling. The messages communicated were blatantly discriminatory. One can only wonder whether society really is safe with adoptees on the loose.

The Roots of Attitudes Toward Adopted Persons

The above examples reflect the views of legislators, lawyers, mental health professionals, adoption social workers, media personnel, and the man on the street. They represent extremely negative, hostile, and punitive attitudes toward adopted people. They seem to spring from deeply held religious, sexual, economic, and social values that have their roots in sixteenth century England. Pinchbeck and Hewitt describe the transition in public attitudes:

> [U]ntil the sixteenth century, bastardry had not been thought of as any great shame. Men took care of their bastards, were indeed often proud of them, and in many cases brought them home to their wives or mothers to be brought up. Children born out of wedlock were thus found to be

growing up in their father's house with their half-brothers and sisters without a hint of disgrace either to themselves or to their natural parents.[6]

The Poor Law of 1576 indicates a substantial shift in attitude:

> First, concerning Bastards begotten and born out of lawful Matrimony (an Offence against Gods law and Mans Lawe) the said bastards now lette to be kepte at the chardge of the Parishe where they bee borne, to the greate Burden of the same Parishe and in defrauding of the Reliefe of the impotent and aged true Poor of the same Parishe, and to the evil Example and Encouradgement of lewde Lyef. . . .[7]

The association of adoption with illegitimacy is not without substance. Illegitimate children have been, by far, the principal source of children for adoption by adults to whom they were not biologically related. In fact, the Children's Bureau of the U.S. Department of Health, Education, and Welfare estimates that in the early 1970s illegitimate children accounted for 87 percent of all nonrelative adoptions. The circumstances of the child's origins and relinquishment, it seems, are seen as so undesirable that the information must be locked away—and for all time. The societally sanctioned sealing of birth and adoption records perpetuates discrimination against a minority. The very fact of sealing records reinforces the enduring and widespread public notions about adoptees. The prejudice and stereotypes generated and sustained by those attitudes are extremely resistant to modification or eradication.

A syndicated columnist recently wrote, "The image of the unwed father was always a seedy one. He was a man who skipped town one step ahead of the shotgun. He left behind a woman 'in trouble,' and a child who grew up a swearword."[8] Another author wrote, "Many of the children given up for adoption are illegitimate, and many more are born to teenage mothers ill-equipped to care for them." These mothers "should have a chance to build a new life without remaining vulnerable to possible embarrassment and recrimination," and "may not care to be confronted with [their] shame decades later."[9] Continuing public association of adoption with swearwords and shame can only reinforce existing prejudice.

> In most states adults adopted as children remain forever children in terms of adoption law and practice.

A major problem for adopted persons is that legislation and practice have failed to take account of the fact that children grow up. In most states adults adopted as children remain forever children in terms of adoption law and practice. As adults, adoptees ought not to be subjected to legislation enacted to protect them as children. Nor should these adopted adults continue to be referred to by the media as "adopted children."

Adoptees Are Stigmatized As Being Different, Inferior

Arguments that deny an adult adopted citizen direct access to his or her original birth record—arguments attesting to need for confidentiality, protection, freedom from shame of illegitimacy and questionable origins, etc.— become rationalizations in defense of discrimination. The adoptee becomes identified with a group that is stigmatized not only as different, but inferior. Paradoxically, the primary recipient of adoption services, the individual whom the adoption establishment exists to serve, finds himself or herself in an adversary role when asking for that which is granted to all nonadopted persons.

It is important to understand that the state, in accordance with the principle of *parens patriae*, is parent to all children and is obligated to protect its children through the exercise of legislative and regulatory powers embodied in adoption statutes and regulations.[10] Statutes providing for the issuance of new birth certificates and the sealing of the original records were based on recommendations of adoption workers. These recommendations provided the basis for the standards set by the Child Welfare League of America in 1938.[11] The social agencies and the courts represent the state in carrying out their protective roles through child welfare services and functions. Thus the state has founded and maintains an adoption "establishment." Social agencies, courts, and special interest subgroups represent the establishment—the "in group."

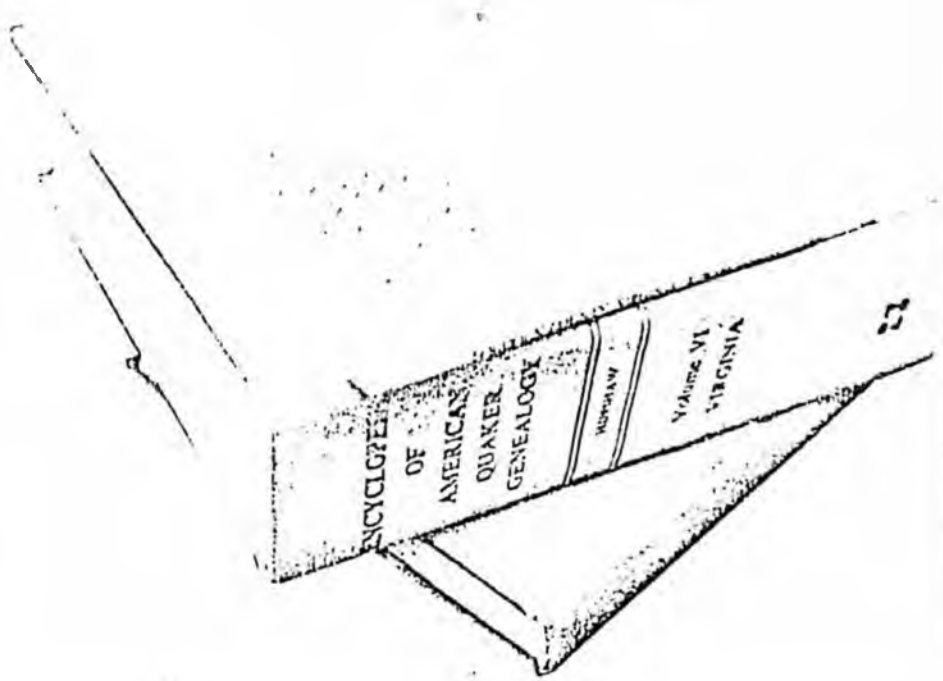
Many who make their living off the adoption industry seem to be threatened by suggestions, criticisms, and demands of those who must live within the adoption system. A number of adoption agency representatives and special interest subgroups (professionals rendering adoption-related services) argue that release of birth records to adult adoptees would increase abortions and decrease adoptions. Such arguments, unsubstantiated in open records states, appear to be directed toward maintenance of personal and/or institutional livelihood.

Arguments that deny an adult adopted citizen direct access to his or her original birth records, i.e., protection of birth and adoptive parents and confidentiality, actually seek to protect the perceived interests of the establishment at the expense of the adoptee—the primary client of adoption services. These arguments enable

> Arguments that deny an adult adopted citizen direct access to his or her original birth record become rationalizations in defense of discrimination.

The societally sanctioned sealing of birth and adoption records perpetuates discrimination against a minority.

the "in group" to maintain control over the adoptee minority: to keep them "in their place," retained in a secondary position, dependent on and subject to agency authority. Yinger says that "critical to the whole idea of social discrimination is the fact that it is embedded in social structures and sustained by group practices."[12]



The adoptive status carries with it social disgrace, disapproval, and legally sanctioned discrimination that, in effect, deny first-class citizenship to adopted persons. Only adoptees are denied their genealogy by law. Likewise, only adopted citizens are issued a birth certificate that represents a legalized fraud.

An adoptee is the product of the adoption industry which bestows special rights on adoptive and birth parents. In becoming a product, certain rights are abrogated for the adoptee: the right to one's birth name and the record of one's birth.

The denial of this basic right is not appreciated by such as the District of Columbia council member who said of open records legislation:

> [It] is lopsided to the pinnacle of selfishness. The stated primary aim of the bill is to afford adult adoptees the opportunity "to determine their self-identity for purposes of self-fulfillment. . . ."
>
> The selfishness of this is blatantly horrible. The members of the council should recognize this bill for what it is: legislation to give a small group of people with selfish interests what they want—whatever that is.[13]

These kinds of remarks illustrate the reactions elicited when adult adoptees seek to obtain what all others already possess.

At one time few people identified differential treatment of blacks as discrimination. If we were to delete the word "adoptee" from proposed open records legislation—especially where it includes provisions for veto by biological and/or adoptive parents, for psychological counseling, for waiting periods, for advanced age of majority, etc.—and insert the word "Jew," "black," "Indian," "Catholic," or "woman" in its place, more people might understand why many adult adopted citizens object so strongly to such proposals.

Arguments put forward to deny adult adopted citizens that which all other citizens have—direct access to their original birth records and the right to know their origins—are rationalizations in defense of discrimination.

Juneau, Alaska 99811

Dear Ms. Tisher:

As a constituent in your district, I am hoping you will support and move CSSB 241. I feel adult adoptees deserve to have rights to their records and this bill will help balance out other legislation regarding adoptees. Please move this bill which will resolve the dilemma of adoption records once and for all. Thank you.

Sincerely,

Carol Sullivan

February 24, 1984

Representative Mae Tischer

Pouch V

Juneau, Alaska 99811

Dear Representative Tischer,

CSSB 241 which is now before the House Health, Education and Social Services Committee addresses a crucial need on the part of adult adoptees for information about themselves. Further it provides realistic balances between the rights of adoptees and the rights of biological parents. Section 7 also corrects the problem adult adoptees find themselves in presently by establishing mechanisms for maintainence of information for adoptions which take place in the future.

CSSB 241 deserves your support. I urge you to hear the Bill as soon as possible and to move it on to the House Judiciary Committee in the very near future.

Thank you for your attention to this important legislation.

Sincerely,

Cecilia Kleinkauf

Senate Judiciary Committee
Letter of Intent

CSSSSB 241 (Judiciary)

It is the intent of the Judiciary Committee that the right of privacy of the biological parents of an adopted child shall be recognized as preferential when said parent or parents have consented to an adoption, as contra-distinguished from the adopted person's "right to know." Furthermore, it is the intent of the committee, when requests for identifying information are made by an adopted person, that notice of such requests must be given each biological parent insofar as possible. However, on behalf of an adopted person who is seeking genealogical identification of his or her biological parents, this legislation provides - and this committee intends - that such information may be divulged provided that no objection to the release of the same has been filed by that biological parent.

Bill Ray

Senator Bill Ray, Chairman
Senate Judiciary Committee

Adopted 1/25/84

603 West 12th
Juneau, Alaska 99801

May 3, 1983

Senator Bill Ray, Chairman
Members, Senate Judiciary Committee
Pouch V
Juneau, Alaska 99801

Dear Mr. Chairman and Members of the Committee:

Because I may be unable to attend the meeting tomorrow, I have requested Jan Ivey to deliver this letter concerning SSSB 241 and I would appreciate having it read into the record.

It is obvious that much careful thinking and craftsmanship have gone into the development of this legislation. As an adoptive parent, I particularly appreciate the care that has gone into the development of Sec. 18.50.500 (c), providing for a substantial amount of information to be made available to adoptive parents and adoptees. However, I am very concerned about the provisions of Sec. 18.50.500 (a), which provide for the sealing of adoption records.

I can well understand the distress and concern on the part of biological parents which must have led to the inclusion of this section in the legislation. People who have made the very painful decision to part with a child have often done so in part because of the fear of society's rejection of them for an "error" in either morals, judgment, or caution. The fear of having this painful episode in their pasts "catch up" to them is real and is understandable. Nonetheless, they <u>are</u> parents; having relinquished a child does not wipe out the reality that they have borne or fathered a child. And that fact sets a chain of events in motion which may include a communication from or meeting with that child 18 years down the line. Those of us who are parents of adoptees have an absolute responsibility to teach our children the importance of respecting the rights, feelings, and confidentiality of our children's bio-parents. We owe these first parents that and must make every attempt to pass that caring on to our children. But our children have a right, if it is important to them in adulthood (and it is neither a sign of failure nor of success of the adoption if they decide to seek their bio-parents) to have access to that very significant information about their own lives. It's wonderful to provide adoptees with information about their bio-parents appearance, heritage, hobbies, etcetera. But knowing that your bio-father played the guitar or your mother was a basketball captain does not answer the question "who was he? who was she?".

I am particularly concerned about the fact that this legislation is written so that action is required on the part of bio-parents in order to allow access to information so that in fact it will take an active step by bio-parents to allow their children to have access to this information. This further weights things against the adopted child who reaches the age of majority and desires the information. If his or her bio-parents never heard of this legislation or never got around to filing a certificate, the case is closed.

I just read this bill today, so I have not had time to carefully research or document my thinking about the rights of adoptees. I believe there is a whole body of research and study on this very controversial subject, and my recollection is that most states are moving toward more openness rather than closure of records. I believe that England has for ten years or more had a procedure which allows adoptees access to their adoption records when they have reached the age of majority. I want our Alaskan adoptees to have the same right.

I will close by explaining that I am an adoptive mother. My daughter will have access to the information on her biological parents regardless of the action taken on this bill, because we have the information for her already and will provide it to her when she is older. My husband and I plan to adopt again, however, and have many friends who have adopted children or are adoptees, and for all of those people we believe it is important that there be access to original adoption records. I have also discussed this with friends who have relinquished children, and although reactions are mixed (fear, excitement, curiosit desire to "just forget", worry about adoptee's reaction), the three people I talked with acknowledged the right of their children to this information. I hope that the members of this committee will also acknowledge that right and amend SSSB 241 accordingly.

Sincerely,

Susi L. Gregg-Fowler

ADMINISTRATION PAPER/Department of Health & Social Serv

"An Act relating to adoption; and providing for an effective date."

Senate Bill No. 241 amends the Vital Statistics Act and the adoption statute pertinent to access to adoption records and consent procedures. The Bill has the effect of denying persons adopted in Alaska prior to enactment of this Bill access to their original birth certificates, which is presently permitted by regulation. The Bill provides that, for adoption which occurred prior to January 1, 1984, the State Registrar may not release any information, on the biological parent named on the certificate without that person's permission. However, it does allow for a biological parent to file a statement with the Bureau of Vital Statistics permitting access. This Bill reflects the view that the present practice does not protect the confidentiality of the biological parents since their names are made available without their consent or knowledge. While this position may have merit, persons adopted prior to the enactment of this proposed legislation would argue that since the State did not provide a mechanism for collection and retention of non-identifying information before January 1, 1984, they should not be denied access to the information which is presently on file, namely, the original birth certificate.

The Division of Family and Youth Services receives numerous inquiries every year from parents who have relinquished a child and from adult adoptees wanting to locate their biological family. Senate Bill 241, as written, would deny access to any identifying information, unless specific instructions are left on record by the biological parent. The national trend appears to be moving more toward open adoption records and for older children, the biological parent often remains active in his child's life, even after parental rights are terminated. While the Division of Family and Youth Services would support the collection of non-identifying information it would recommend considering access to identifying information where available.

For adoptions occurring after January 1, 1984, information on the biological parents including race, physical characteristics, religion, health history, and existence of another child or children will be collected, and this non-identifying information may be provided to adoptive parents and to adopted persons 18 years of age or older. The Bill also recommends that information be collected on the legal relationship, if any, between the biological parents. The Department would question whether it is necessarily in the best interests of the child to collect this information (for example, when the child is the result of an incestuous relationship) and would recommend removal of that item.

Minor changes are also recommended in three additional areas:

- Page 2, line 3: "prepared by the commissioner" be removed to make the Bill consistent with other areas of AS 18.50. The Registrar of Vital Statistics would normally be the person with the responsibility for preparing new forms.

Page 3, line 12: "and a person..." be changed to "or a person..." as it is necessary for only one of the sources mentioned to provide necessary information to the State Registrar.

Page 3, lines 18 and 19: omit the words "request the commissioner" to make the sentence more consistent with present procedure.

The Bill also amends the adoption statute to provide that a consent to adoption is not valid unless the consent form states that the person has a right to withdraw the consent and is provided with a copy of the consent. The Department would support the amendment.

Mae Tischer - Representative
Pouch V
Juneau, Alaska 99811

Dear Representative Tischer,

This letter is sent in support of Senate Bill 241 and House Bill 427 both of which address the issue of adoption.

Senate Bill 241 is one of the most comprehensive bills in relation to adoption which I have seen. It provides for non-identifying background in information to be given to adult adoptees. All adoptees should have access to it if they wish. Bill 241 also allows for consenting adult adoptees and birth mothers to find each other by attaching their names and current addresses on the original birth certificate (in sections 18.50.500 (d) and (e)).

I am, however, confused about 18.50.500 (a) in which identifying data appears to be available to an adult adoptee "if certified mail.....is returned to the state registrar undelivered." Does this mean that if the biological parent has moved (perhaps 10 or 15 years earlier) and the registrar doesn't have the current address, that the biological parent has no choice in the matter? Or can the stipulation of the "written objection from a biological parent" be one which was written and filed with the registrar at or after the time of relinquishment? I favor granting the biological parent more latitude in filing her (or his) objection to such disclosure.

House Bill 427 provides that home studies be completed prior to the placement of a child in an adoptive home. This bill is important because of the emotional trauma which could happen to all parties if a child is placed in a home which is later found to be unsuitable, resulting in the subsequent removal of the child. The State Dept of Family & Youth Services can provide the court with a list of agencies and individuals who are well qualified to complete these studies.

Thank you for consideration of these matters.

Very Truly yours,

Carol Johnson

The Honorable Mae Tischner
Chairwoman - House HESS
Alaska House of Representatives
Pouch V
Juneau, Alaska 99811

Dear Representative Tischner:

I am opposed to CSSSSB 241 (Jud) am, an act relating to adoption, because it will restrict my adopted son's access to his original birth certificate which names his biological parents.

I offer you solutions to this problem and the many others this bill generates. Please see the testimony which I plan to present before your committee when you hold a public hearing.

There is no great urgency to pass this bill because the present process of adult adoptee access to the original birth certificate is legal, is working well, and the law does not need changing. Non-identifying information is already being gathered by Health and Social Services.

I urge you NOT to calender this bill unless you and all members of the HESS committee have the time and interest to study all the issues carefully. It is better for all adoptees to let this bill die in your committee than to pass it out as now written.

Thanking you,

Joyce E. Lanier

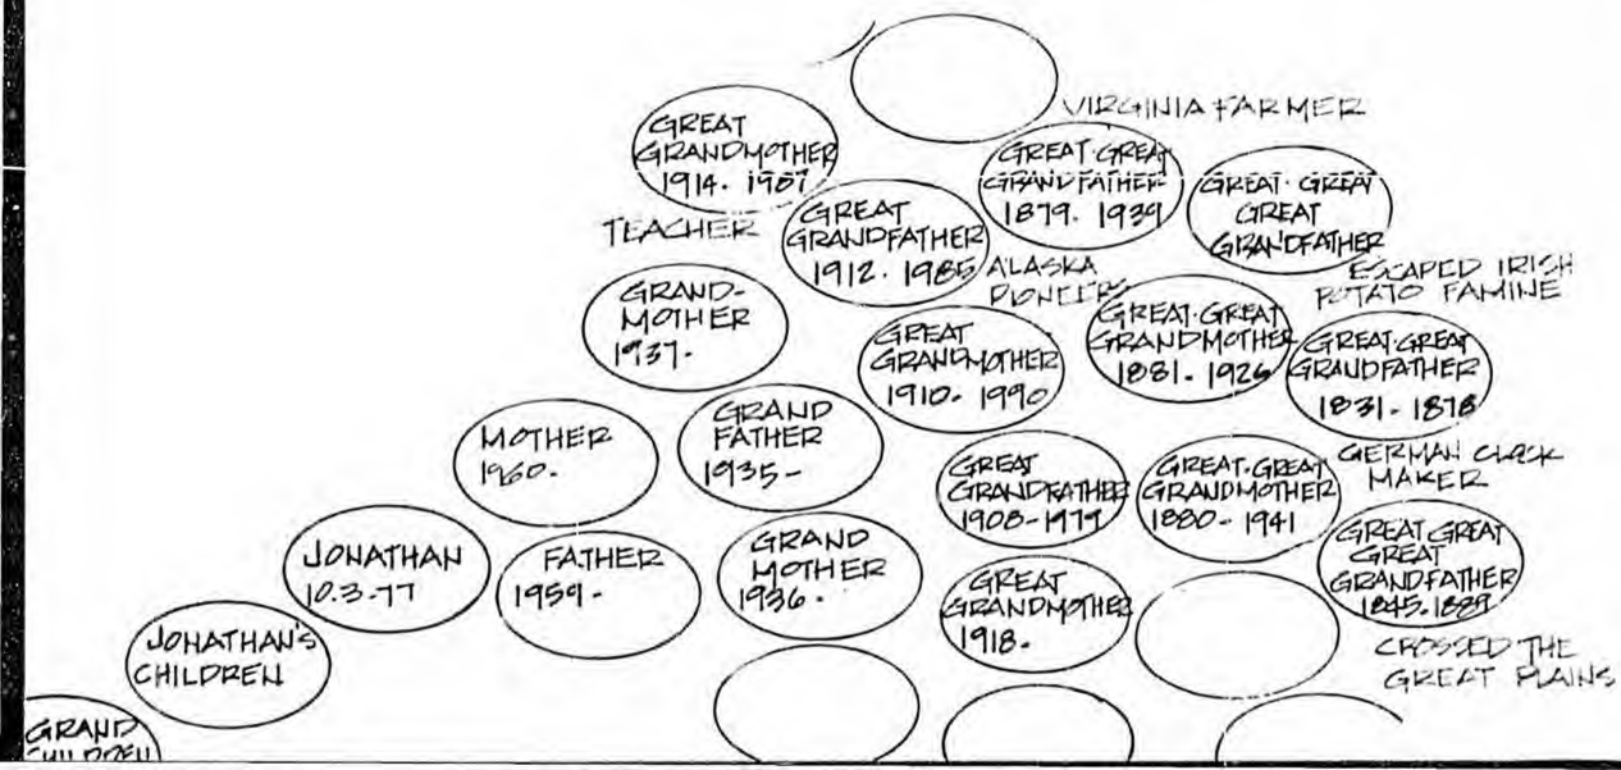
Testimony on CSSSSB 241 (Jud) am, an act relating to adoption
by Joyce Lanier 4505 Dredge Lake Rd., Juneau, AK 99801
12th Legislature 2nd session 1984



INTRODUCTION

I am the adoptive mother of Jonathan who is 6 years old. Because of him, I oppose this bill as well as the intent of the bill as set forth by the Senate Judicary Committee.

I believe the most important person in the adoption triangle is the adoptee for he had no voice in the adoption process. An adoptee's right to the truth of his origins is more important than the birth parent's wish for privacy. The adoptee was severed from his birth parents through no fault of his own. Birth parents choose to relinquish the child; adoptive parents choose to adopt the child. I am not saying these were easy decisions, but our prime reponsibilities are for the adoptee.

We study the past to see the future. At the present time, an adoptee age 18 or older, may study his history by obtaining unconditionally his original birth certificate which names his biological parents. Knowing the names of those parents will provide an avenue for the adoptee to seek answers to such questions as:

Who am I? Where did I come from? Who do I look like? What am I worth if I was given away?

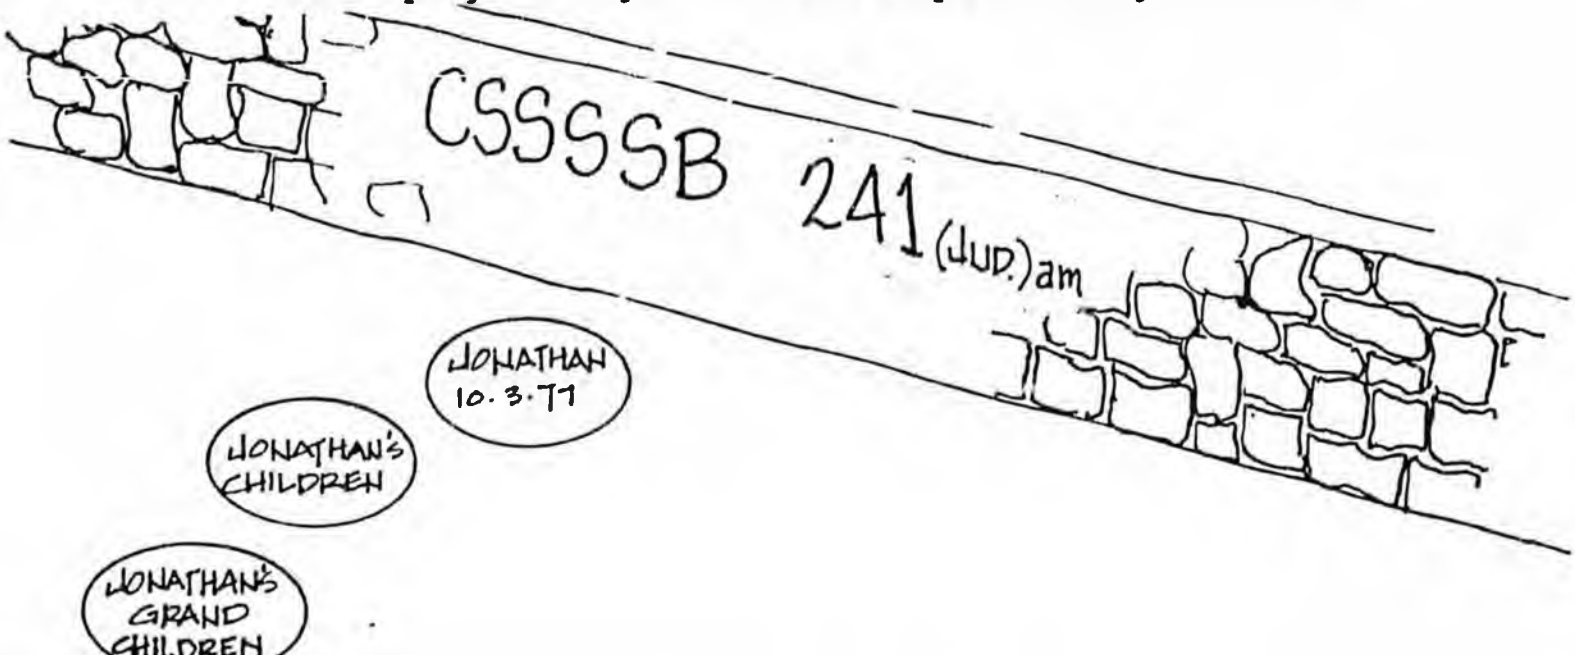
PROBLEMS WITH CSSSSB 241 (Jud) am, an act relating to adoption
by Joyce Lanier 4505 Dredge Lake Rd. Juneau, Ak. 99801

1. It repeals the current statutes and regulation which now allow an adult adoptee unconditional access to his original birth certificate, which names his birth parents. The present process is legal and is working well.

2. It gives the birth parent all the power over the release of the original birth certificate, and thereby reverses the original intent of Alaska's sealed record laws. It contends that the birth parent's wish for privacy is more important than his/her responsibility to provide the adoptee the truth of his beginnings.

3. It allows all of us, birth parents, adoptive parents, the legislature, and the general public to shirk our reponsibilites to the adoptee.

4. There are no provisions in this bill or the current statutes to allow an adult adoptee's descendants access to the adoptee's original birth certificate. Generations to come are adversely affected.



5. It discriminates against adoptees who are not 18 before the effective date of the bill and against adoptees as opposed to non-adoptees.

6. There are no provisions to allow birth parents to update background information or to change statements they may file with the Registrar.

7. Hobbies, special interests and occupations are not included in the list of non-identifying information.

8. Adoptive parents are not officially informed of the adoptee's rights to background information and the original birth certificate at age 18.

9. There are no provisions to allow birth parents to receive unidentifable progress reports on the adoptee during childhood.

EXPLANATION OF MAJOR PROBLEMS

PRESENT PROCESS IS WORKING WELL

Adoptees in Alaska have always had access to their original birth cerificates.

The statutes (21-3-20) of 1947 which sealed original [illegible] certificates and issued substitute birth certificat[illegible] stipulated that the registrar shall open the birth certificate to the adoptee of legal age. The [illegible] intent of the act was to protect the name and status of the CHILD. Nothing was said about protecting the name and status of the ADULT, whether it be the adopted person in adulthood or the birth parent. Such protection is a burden for the adult adoptee and I suspect the lawmakers of 1947 maintained access to the original birth certificate for adoptees for that reason.

In a 1951 amendment describing the substitute birth certificate the statute stated, "The intent of this section is to enable the preparation of a birth certificate for the adopted CHILD as nearly as possible like that of other CHILDREN." The adult adoptee was treated like an adult. He could still obtain a birth certificate like that of other adults - that is, one that named the biological parents.

Over the years the statutes have been amended but always the ADULT adoptee has retained the right to the original birth certificate. The present process is working well. It has withstood a test of 37 years. There have been no complaints to the State Registrar. No birth parents have testified at any of the three hearings I have attended on this legislation. I have also listened to tapes of hearings on SB 399, a similar bill in the last legislature. No birth parent or birth parent group testified in favor of restricted access to the original birth certificate.

PRESENT PROCESS IS LEGAL

Today AS 18.50.220 New Certificate of Birth,and 7 AAC 05.730 Filing of Certificate govern. The birth certificate is treated separately in the statutes, apart from adoption proceedings and court hearings. In fact, a new certificate of birth is an option of the adoptive parents and is not part of adoption proceedings; it is not issued until after the adoption becomes final.

The statutes and regulations do not conflict. To confirm that legality, I quote from an Attorney General's opinion of March 1, 1979, to the State Registrar of Vital Statistics:

> "This will confirm our oral advice to you that the Bureau of Vital Statistics must provide a copy of his original birth

certificate to an adopted child who has attained the age of 18 years and requested it, if the copying cost is paid....."

"....AS 18.50.220 (b) (1) apparently sets up a separate procedure for the certificate after the adoption."

PRIVACY NOT PROMISED IN STATUTES OR REGULATIONS

The state is NOT subject to any liability in releasing original birth certificates to adoptees because privacy has not been promised in the statutes or regulation. To further support that contention, please consider this from the draft version of the Model Adoption Act:

> Privacy is not promised in states that allow records to be opened by court order for good cause. Therefore, there could could be no enforceable contract of secrecy between birth parents and the state. (Alaska is one of these states.)
>
> Biological parent and child are considered co-owners of birth information, and thus, there can be no legally protected interest in keeping one's identity secret from the adoptee.
>
> Adoption was created for the benefit of the adoptee and the states cannot sanction an agreement - namely sealed record laws which have proven NOT to be in the adoptee's best interests.
>
> A birth parent's interest in reputation is not alone deserving of constitutional protection. Cf. Paul v. Davis 424 U.S. 693 (1976)
>
> An adoptee's right to information regarding his origins must prevail over the birth parent's presumed interest in anonymity.
>
> in re Adoption of Female Infant 107 Wash. L. Rep 337 (D.C. Super Ct. Jan 31, 1979) 5 Family Law Rep. 2311 BNA (Feb. 20, 1979)
>
> The interests of adoptive & birth parents and the state in keeping records sealed are of less importance than the adoptee's interest in personal growth and identity which can result from his meeting a birth parent - a reunion made easier by the adoptee's access to the original birth certificate.

<u>BILL GIVES BIRTH PARENTS CONTROL OVER THE ORIGINAL BIRTH CERTIFICATE</u>

Even though over 90% of birth parents will probably give permission to release the original birth certificate to the adoptee, the fact that their consent is required is degrading to the adoptee.

I grew up in the South when Black people had to sit at the back

of the bus. They weren't allowed to sit at the front. Times have changed. Today Blacks are allowed to sit at the front of the bus. But, what if they were required today to ask permission from the driver to sit at the front? Even though 95% of the drivers would say "yes" wouldn't it be humilating to the Black person to have to ask? Wouldn"t that place all the power in the hands of the bus drivers?

Now would this legislature ever dream of passing a law requiring any minority or class of citizens to ask permission to sit in the front of the bus? No, this legislature would not. But essentially that is what this bill would be doing to adoptees- allowing them in the front of the bus only with permission, allowing them access to information about themselves only with permission,
forcing some of them to the back where they're unable to see where they're going, denying some of them information and therefore, stifling them.

OUR REPONSIBILITIES

As mentioned previously, adoption was instituted for the benefit of the adoptee - A child who had no voice in the process. In any discussion of the balancing of rights we must remember that our responsibilities to the adoptee are more important than any one parent's rights, whether they be birth parents or adoptive parents.

All of us involved in the adoption process have a responsibility to provide the adoptee with an avenue to seek his true personal identity:

BIRTH PARENTS REPONSIBILITIES
To provide for the CHILD - background information such as biographical sketches, physical descriptions, sibling existance, medical history - and to update them regularly.

(Health & Social Services in recent years has been collecting background information for the adoptive parents, but this was probably not done in the late 60's and early 70's. My attorney gave us information on our son's birthmother. Birth parents who don't want to be contacted should realize that the more background information they give, the less likely the adoptee may want to contact them.)

To provide for the ADULT adoptee- communication with the adoptee if he/she requests so that the adoptee may complete his picture of himself.

THE LEGISLATURE'S REPONSIBILITIES
To maintain the laws and regulations that allow adult adoptees to learn the names of the biological parents through access to the original birth certificate.

ADOPTIVE PARENTS' REPONSIBILITIES

To recognize the importance to the adoptee of his true heritage and to provide the background information to the child when they judge he/she is ready for it.

To provide support to the adult adoptee in his search for the biological parents.

To lobby for adoption laws that are in the adoptees best interests.

Our meeting our reponsibilities will serve notice to the public that it is indeed the adoptee's RIGHT TO KNOW which takes precedence in all cases, so that the public will have empathy with the adoptee's problems, will understand the adoptee's need to search for his birth parents, will be more helpful to him in that search, and will support open adoption record laws. And so that someday there will be no controversy.

The consequences of our NOT meeting these responsibilites may indeed be grave. Studies show adolescent adoptees have more trouble in life, that they face more obstacles than normally experienced. Without a background on which to build an ego they are more apt to be dependent, fearful, slow learners, under achievers, run aways and vandals. Adoptees comprise about 13% to 16% of psychiatry patients but only about 2% of the general population.

Many adult adoptees who don't know their past history suffer "genealogical bewilderment." They are denied the opportunity that millions of people pursue who are consumed with a passion to search the past for their ancestors. Thousands of ancestor hunters join descendant societies such as the Sons & Daughters of the American Revolution. An ancestor search begins with one's self and that is the stumbling block adoptees face. The first unknown on an adoptee's family tree is himself.

ADOPTEE'S DESCENDANTS ADVERSELY AFFECTED

The descendants of the adoptee who is denied his original birth certificate will also face a stone wall in their ancestor searches. There will be no stepping stones to the past for them. So a hundred years from now the repercussions of this bill will still be felt.

DISCRIMINATION

This bill will discriminate against adoptees who are under 18 before the effective date of the bill. They cannot get a copy of their original birth certificates before the law is changed. The law at the time of their adoption did not provide a collection system for background information. Adoptees who expected to get but are denied the original birth certificate under the provisions of this bill will have nothing - no original birth

certificate and no background information.

Essentially this bill will be changing the rules in the middle of the game for them. I don't believe the members of this legislature want to do that. After all, when you raised the drinking age from 19 to 21, you inserted a clause allowing those who were already 19 to drink.

The bill also discriminates against adopotees as opposed to non-adoptees. Non-adoptees don't have to get permission form their parents to get their birth certificates.

PROPOSED AMENDMENTS

While I believe no parent has the right to deprive the adoptee to the knowledge of his true heritage and that the adoptee's need for that information takes precedence over any parent's desire for privacy, I am not completely unfeeling for those birth parents who wish to remain strangers to their off-spring. I have a done a lot of research and I propose amendments which treat all sides is of the adoption triangle with respect and compassion.

1. Maintain the present process of adoptee access to the original birth certificate and additionally allow an adoptee's adult descendants access. The generations to come are also adversely affected by sealed records.
Strengthen the present process by writing it in the statutes.

2. Allow the biological parent to place a statement with the original birth certificate as to whether she/he would WELCOME contact with the ADULT ADOPTEE. I believe most adoptees would respect that wish. There are many adoptee groups who provide support and advice on birth parent search and contact.

(From what I read most adoptees are very discreet when they do contact a birth parent. They do not suddenly appear on the birth parent's doorstep, but most often telephone, making sure it is a good time to talk.)

(Most adoptees are not looking for a long term relationship with the birth parents. They only want their questions answered.)

I think such a system would be for the adoptee's advantage as well. They would know ahead of time just how the birth parent would feel about a reunion.

3. Allow and encourage birth parents to update background information and to change statements.

- Many inheritable problems in a birth parent's family may not occur until many years after the adoption. Newsweek magazine recently reported that there are over 3,000 genetic diseases. Adoptees who are deprieved of communication with the birth family may also be deprieved unnecessarily of the benefits of genetic engineering- the wave of the future in disease prevention and health care.

-Birth parents are usually very young when they relinquished the child and have not developed the interests and careers that the adoptee may be interested in knowing about. They may have other children after the adoption which would be the adoptee's siblings.

4. Insert hobbies, special interests and occupation in the list

of background information collected. This may suggest to enlightened adoptive parents the activities to attempt or to stress.

5. Inform adoptive parents of the adoptee's rights so that there will be no surprises when the adoptee wants to find his birth parents.

-This would emphasize the importance of the adoptee's very own identity. Some adoptive parents do not tell the child he is adopted and would not give him the background information. If they knew he could get it anyway when he became 18 they would be more apt to give it to him when he really needed it, and they would be more apt to support him ina search for the birthparents. For having a background on which to build an ego will help the adoptee to become a more mature and well adjusted adult.

6. Request the adoptive parents prepare a progress report on the adopted child every few years and attach to the original birth certificate or made available by other means to the birth parents.

-Birthparents usually never forget the adoptee. This would help the birthparents cope with the tragedy and perhaps guilt of having surrendered a child to some stranger.

SUMMARY:

1. The present system of releasing the original birth certificate is LEGAL and we have had no problems with it.

2. An adoptee's information on his true heritage is very important to his psycholgical well-being.

3. A birth parent's responsibility to provide background information and to be available to the adult adoptee is more important than the birth parent's right to privacy.

4. No adoptee should have to seek permission from anyone to obtain information about himself.

5. Background information is being collected NOW and the law does not need changing regarding access to the original birth certificate. Therefore, there is no great urgency to pass this bill the way it is written now.

SO PLEASE CONSIDER THIS BILL CAREFULLY.
Over 15,000 adoptions have already taken place in Alaska. PLease continue to allow ALL adoptees unconditional access to their original birth certificates. Please, leave stepping stones to the past for our adoptees, not stone walls.

4505 Dredge Lake Rd.
Juneau, Alaska 99801
February 17, 1984

The Honorable Milo Fritz
The Honorable Mae Tischer
Co-chairmen, House HESS Committee
Alaska State Legislature
Juneau, Alaska 99811

Dear Representatives Fritz & Tischer:

CSSSSB 241 (Jud), an act relating to adoption, seeks to amend AS 18.50.220 and thus delete the regulation 7 AAC 05.730 which now allows an adult adoptee unconditional access to his original birth certificate. The requestor of this legislation contends that privacy is promised biological parents in adoption proceedings and that is not now being honored since Vital Statistics releases the original birth certificate to the adult adoptee upon request.

After reviewing the statutes - Title 25, chapter 23 adoption and AS 18.50.210 and AS 18.50.220 New Certificate of Birth I find that:

-The statutes treat birth certificates separately from adoption proceedings. It is the adoption proceedings - court hearings and related records that are confidential as per AS 25.23.150. Birth certificates are not part of the adoption proceedings. In fact, a new certificate of birth (which names adoptive parents) is not prepared until AFTER an adoption decree becomes final. (AS.23.170)

-An adoption can take place without the issue of a substitute birth certificate because a substitute certificate is an option adoptive parents can choose. (AS 25.23.170)

-The present practice of releasing original birth certificates is legal. AS 18.50.220,New Certificate of Birth,allows regulations to be written concerning the inspection of the original birth certificate. The regulation 7 AAC 05.730 authorizes the Registrar to do so.

-The statutes and regulations also provide that records may be opened by order of the court. Thus, there exists another method by which confidentially is not assured to any party involved.

The issue of privacy is a moot point in this proposed legislation.

Sincerely,

Judson Lanier
Member, Alaska Bar Association

STATE
of ALASKA

MEMORANDUM

MAR 07 1979

TO Ms. Joan Brooks, State Registrar
Bureau of Vital Statistics
Department of Health and Social Services

DATE March 1, 1979

FILE NO

TELEPHONE NO.

FROM AVRUM M. GROSS
ATTORNEY GENERAL

SUBJECT Copying of Original Birth Certificate when a New Certificate has been Issued

By:
Richard L. Peter
Assistant Attorney General

This will confirm our oral advice to you that the Bureau of Vital Statistics must provide a copy of his original birth certificate to an adopted child who has attained the age of 18 years and requested it, if the copying cost is paid. The copy should be identified however by a notice that a new certificate has been issued for the subject.

Because of some apparent inconsistencies we will recapitulate the statutes and regulations providing for inspection of records involved in an adoption.

AS 20.15.150 provides in pertinent part:

> (b) All papers and records pertaining to the adoption . . . are subject to inspection only on consent of the court and all interested persons.
>
> (c) Except as authorized in writing by the adopted child if 14 or more years of age, or by the adoptive parent . . . no person is required to disclose the name or identity of either an adoptive parent or an adopted child.

And 7 AAC 05.670 provides: "All reports of . . . adoption proceedings . . . are open to the public only under order of the Superior Court." These apparently refer to materials relating to the adoption with the exception of the original birth certificate, because while AS 20.15.080 requires that a "certified copy of the birth certificate . . . if available . . . shall be filed with the clerk" of court, AS 18.50.220(b)(1) apparently sets up a separate procedure for handling the certificate after the adoption. It provides that a new certificate shall be substituted for the original and

> Thereafter the original certificate and the evidence of adoption [reported by the court] . . . are not subject to inspection except upon order of the superior court or as provided by regulation;

This is implemented by 7 AAC 05.730 which provides: "The State Registrar may open all or part of such sealed file for inspection by the person whose record it is, if of legal age."

This authority refers to inspection of such records by its language, but two sections of AS 09.25 extend the access to copying them. AS 09.25.110 provides:

> Unless specifically provided otherwise, The books, records, papers, files, accounts, writings, and transactions of all agencies and departments are public records and are open to inspection by the public under reasonable rules during regular office hours. The public officer having the custody of public records shall give on request and payment of costs a certified copy of the public record.

And AS 09.25.120 provides in pertinent part:

> Every public officer having custody of the records not included in the exceptions shall permit the inspection, and give on demand and on payment of the legal fees therefor a certified copy of the writing or record, and the copy shall in all cases be evidence of the original.

These sections equate copying with inspection, and impose the duty of making copies available at cost.

However, the concern you have expressed over the copying of an original birth certificate which has been -- at least temporarily -- superseded by a new certificate of birth, is reasonable, but has not been addressed by either the legislature or your department's regulations.

Therefore, we would suggest that when you copy an original birth certificate for which a new certificate has been issued, this fact should be displayed upon the face of the copy, either by typing upon the copy: "A New Certificate of Birth has Been Issued", or by duplicating such a notice by placing it on an unused portion of the document when the copy is made. This will prevent the copy being used as the only or latest evidence of birth, and keep the original clean should it be necessary to restore it to the public file on vacation of the adoption, as provided by AS 18.50.220.

Because such a procedure will affect the general public we suggest that you adopt regulations providing for it under the Alaska Administrative Code. We are prepared to assist you in drafting them so please call upon us.

Church supports rights of adoptee to find roots

OVERTURE 39
a resolution for open records
by The UNITED PRESBYTERIAN CHURCH
1981

The U.S. Presbyterian Church's Northern wing is the first American denomination to say adult adoptees should legally be able to learn the names of their natural parents.

The United Presbyterian Church, U.S.A. Wednesday called for an "open records policy" which would allow adopted persons, once adults, to gain access to their birth records, currently sealed at the time of adoption.

Their resolution says, "Permanent sealed records have created a mythology about adoption, which is that adopted persons have only one set of parents. The surrender paper in effect becomes a certificate attesting to the death of any relationship at any time between the original parent and child, thus creating for the child a pair of ghost parents who are not in their graves but who may live in the next town, or have hereditary illnesses that do not surface until they are in the middle years and whose children, born later, may unknowingly risk incest with when they attend college or work in the same work places with their half-sisters or half-brothers."

The Rev. Susan Andrews, pastor of Kuchell Memorial Presbyterian Church in East Hanover, N.J., and a sponsor of the resolution, said the church must debate moral issues involved in the debate.

She said she became interested in the issue when a parishioner unsuccessfully searched for her birth mother. "She had an issue of human rights as well as one of pastoral rights," said Ms. Andrews.

The issue of "open records" for adult adoptees has been a legal battle between adoptee rights groups and state governments, which currently seal the records.

CHRONICLE —Houston, TEXAS
May 28, 1981

"Every great and commanding movement in the annals of the world is the triumph of enthusiasm. Nothing great was ever achieved without it." - Ralph Waldo Emerson

Once a year, 650 delegates from United Presbyterian Churches across the country meet to consider theological and social matters of importance to the church's ministry. In May, this body - the General Assembly - met in Houston, and one of the issues considered was that of supporting the rights of adult adoptees to the truth of their origins as outlined in Title V of the Model State Adoption Act.

Overture 39, the text of which follows, was channeled to the Social Justice and Rights of Persons Committee, and passed by that committee upon recommendation of a sub-committee which spent three hours discussing the issues with adoptees and adoptive parents present. When the Overture came up on the floor of the General Assembly, there was a thirty-minute debate, followed by a vote of approximately 600 - 25 in favor of the Overture. We are printing it for you in hopes that (a) you will be encouraged by it and (b) that you might consider submitting a similar document to your worshipping community for consideration and action. Judeo-Christian history has had a powerful impact on people the world over, and continues to do so. As religious bodies work for national and international peace, let us urge them to work on this area of peacemaking within and among persons on all sides of the adoption triangle.

OVERTURE ON RECOGNIZING THE RIGHT OF ADULT ADOPTEES TO KNOWLEDGE OF THEIR ORIGINS BY ALLOWING THEM ACCESS, UPON REACHING THE AGE OF MAJORITY, TO THEIR ORIGINAL BIRTH CERTIFICATES, COURT AND AGENCY RECORDS...ALSO ON RECOGNIZING THE NEED OF ORIGINAL PARENTS OF ADULT ADOPTEES TO HAVE SOME MEANS TO COMMUNICATE THEIR DESIRES FOR CONTACT WITH THEIR RELINQUISHED SON OR DAUGHTER.

Whereas God our Creator saw fit to use an adult adoptee who was well aware of the truth of his origins to deliver the Israelites from bondage to the Egyptians; and

Whereas the Psalmist acknowledged the Presence of God in the creation of every individual when he said, "You created every part of me; you put me together in my mother's womb...When I was growing there in secret, you knew that I was there—you saw me before I was born"; and

Whereas Isaiah affirmed the unlikelihood of a mother's ability to erase the memory of a child she birthed when he said, "So the Lord answers, 'Can a woman forget her own baby and not love the child she bore?' Even if a mother should forget her child, I will never forget you"; and

Whereas Jesus said,"You will know the truth, and the truth will set you free"; and

Whereas the sealed records laws instituted in the last five decades have prevented adopted persons, over whom a contract is made in their infancy when they are helpless to participate in it, from ordinarily knowing the truth of their origins by permanently sealing original birth certificates, agency and court records pertaining to their adoption; and

Whereas any non-adopted person in the United States has the absolute right to obtain personal vital statistics for a minimal fee, an adoptee must go to court—however expensive and unsuccessful the process—to request a judge to issue a "good cause" order to know the simple truth of who gave birth to her or him; and

Whereas because of permanently sealed records, adoptees have no medical, cultural or religious history and often experience emotional anguish; and

Whereas permanently sealed records have created a mythology about adoption, which is that adopted persons have only one set of parents; the surrender paper in effect becomes a certificate attesting to the death of any relationship at any time between the original parent and child, thus creating for the child a pair of ghost parents who are not in their graves but who may live in the next town, or have hereditary illnesses which do not surface until they are in their middle years (long after any medical history taken at the time of the child's birth), and whose children, born later, may unknowingly risk incest when they attend college or work in the same work places with their half sisters or brothers; and

Whereas our Lord spoke often of acceptance, forgiveness and reconciliation as qualities desirable for believers to experience daily in their human and spiritual growth; and

Whereas the Department of Health and Human Services now has before it the proposed Model State Adoption Act which includes "Title V. Records," which would grant adult adoptees the right of access to their original records to learn their identity at birth and that of their natural parents, and which would grant original parents of adult adoptees the right to ask the agency which handled the adoption to contact the adult adoptee to notify her/him that the original parent desires contact; a section supported in testimony by the National Association of Social Workers, "Not all adoptees will wish to know the birth parent, nor to meet her/him, but surely the option should be there as opposed to a rigid secrecy which can leave adoptees feeling that there is some monstrous secret in their past."

Therefore, the Presbytery of Newton, The United Presbyterian Church in America, sitting in regular session on 3/10/81 in Madison, N. J., does hereby overture the 193rd General Assembly of the United Presbyterian Church in the U.S.A. meeting in Houston, Texas, May 19-25, 1981:

That it go on record as supporting the rights of adult adoptees to receive, upon request, copies of their original birth certificates, court and agency records pertaining to their adoption;

That it support Title V of the Model State Adoption Act and Procedures prepared under section 202 of the Child Abuse Prevention and Treatment and Adoption Reform Act of 1978, which would grant adult adoptees the aforementioned information, and which would grant natural parents a more limited right as explained above;

That it act through the General Assembly Mission Council...in encouraging and stimulating synods, presbyteries and local churches to take the following types of action in supporting adoptees who have reached adulthood, in their desire to know the truth of their origins;

1) Send letters of support of Title V of the Model State Adoption Act to congresspersons and to the President of the U.S.;
2) Write letters to the editors of local newspapers and national magazines expressing support of open records;
3) Work to help all persons involved in the adoptive triangle—natural and adoptive parents and adoptees, who comprise 10% of our population—face the reality of their situations with honesty, openness and compassion for one another.

(b) The petitioner or his attorney shall furnish with the petition for adoption information in the possession of the petitioner necessary to prepare the adoption report. The social, welfare agency or other person concerned shall supply the court with additional information in his possession necessary to complete the report. The furnishing of the information is a prerequisite to the issuance of a final decree in the matter.

(c) Whenever an adoption decree is amended or vacated, the court shall prepare a report on a form prescribed and furnished by the bureau. The report shall include the facts necessary to identify the original adoption report and the facts amended in the adoption decree necessary to properly amend the original report, or the new certificate of birth if already established.

(d) Before the 11th day of each calendar month, the court shall forward to the bureau reports of decrees of adoption, including those vacated or amended, which were entered in the preceding month, together with the related reports the bureau requires.

(e) When the bureau receives a report of an adoption, or vacation or amendment of an adoption from a court for a person born outside the state, a copy shall be made for the bureau's files and the original shall be forwarded to the appropriate registration authority in the state of birth. (§ 17 ch 118 SLA 1960)

Am. Jur. reference. — 1 Am. Jur., Adoption of Children, § 49.

Sec. 18.50.220. New certificate of birth. (a) The state registrar shall establish a new certificate of birth for a person born in the state, upon proper request that the certificate be made, and upon receipt of

(1) an adoption report as provided in § 210 of this chapter, or a certified copy of the decree of adoption from a court of competent jurisdiction in another state, together with the information necessary to identify the original certificate of birth and to establish the new certificate of birth; however, a new certificate of birth may not be established if so requested by the court decreeing the adoption, the adoptive parents, or the adopted person if he is of legal age; or

(2) the evidence required by law and regulation proving that the person has been legitimated.

(b) When a new certificate of birth is established, the actual place and date of birth shall be shown. The new certificate shall be substituted for the original certificate of birth, and

(1) thereafter, the original certificate and the evidence of adoption or legitimation are not subject to inspection except upon order of the superior court or as provided by regulation; however, the regulation shall allow inspection by an agent of the state or federal government acting in the performance of his official duties;

(2) upon receipt of a report that an adoption has been vacated, the original certificate of birth shall be restored to its place in the files and

Alaska, upon adoption or legitimation and the submission of the required documents and other necessary information as required by the State Registrar; provided that such new certificate of birth shall not be established in cases of adoption if such negative request be received from the court decreeing the adoption, the person himself if of legal age, or from the adoptive parents. (In effect before 7/28/59; am 7/25/60, Reg. 2)

Authority: AS 18.50.220
AS 25.20.050

7 AAC 05.710. REQUEST. Proper request for a new certificate shall be considered a written and signed request: in the case of adoption, from the adoptive parents, or from the adopted person if of legal age; and in the case of legitimation, from one of the parents, or from the legitimated person if of legal age. The form and type of request acceptable shall be determined by the State Registrar. (In effect before 7/28/59; am 7/25/60, Reg. 2)

Authority: AS 18.50.220
AS 25.20.050

7 AAC 05.720. FORM OF CERTIFICATE. The new birth certificate shall be prepared upon the same type of form, and look as much like a regular birth certificate as possible. Nothing on it shall state or refer to the fact that it is a new certificate. The actual date and place of birth shall be shown, and any question of legitimacy shall be answered in the affirmative. The name on the birth certificate shall be as ordered in the decree, if so specified; otherwise as requested by the parents. The name of the attendant or other person signing the original certificate shall be copied on the new certificate. The personal particulars shall reflect as much as possible the new situation of adoption or legitimation, and these and any other items shall be completed as specified by the State Registrar. (In effect before 7/28/59; am 7/25/60, Reg. 2)

Authority: AS 18.50.220
AS 25.20.050

7 AAC 05.730. FILING OF CERTIFICATE. When the new certificate of birth has been established, it shall be substituted in place of the original certificate. All references to the original certificate shall be removed or deleted from the regular indexes, and from any other source to which the public might have access. The original certificate, any attachments thereto, and all correspondence, decrees, adjudications, or other reference to the adoption or legitimation shall be sealed away from any inspection except upon order of a superior court; provided that the State Registrar may open all or part of such sealed file for inspection by the person whose record it is, if of legal age; by an agent of the state or federal government acting in the performance of official duties; or for any necessary administrative purpose within the bureau. (In effect before 7/28/59; am 7/25/60, Reg. 2)

Authority: AS 18.50.220
AS 25.20.050

7 AAC 05.740. PROCEDURE ON ADOPTION. Upon receipt of a report that an adoption has been vacated, the original certificate of birth shall be restored to its place in the files; and the new certificate together with all evidence and related material shall be sealed away from inspection except upon order of a superior court, or for administrative inspection by the State Registrar. (In effect before 7/28/59; am 7/25/60, Reg. 2)

Authority: AS 18.50.220
AS 25.20.050

7 AAC 05.750. NEW ORIGINAL CERTIFICATE. If no certificate of birth is on file for the person for whom a new certificate is to be established, an original certificate must be prepared and registered in accordance with the provision of the Vital Statistics Act, these regulations, and the instructions of the State Registrar before a new certificate of birth may be established. (In effect before 7/28/59; am 7/25/60, Reg. 2)

Authority: AS 18.50.220
AS 25.20.050

7 AAC 05.760. SEALING OF COPIES. When a new certificate of birth is established in the bureau, the State Registrar shall direct that any local copies of the original record in the custody of local recorders be sealed away from inspection except upon order of a superior court or demand of the State Registrar. Upon the vacation of any adoption, the State Registrar shall direct the proper disposition of any pertinent local records. The State Registrar may supply a copy of the new certificate to the same local recorder to substitute in place of the

visions of Section 9 hereof before becoming absolute. This decree so entered shall contain an order granting custody of the child to the adoptive parent or parents, and, if same has been requested, the issuance and filing of a substitute birth certificate as hereinafter provided.

to parent.

SECTION 9. FINAL DECREE ABSOLUTE, WHEN. Within six months after the entry of the final decree any parent who has not received actual notice of the adoption proceeding in time to appear or object thereto may move to vacate the decree, and for an award of the custody of the adopted child to him; providing, that such motion shall not be entertained unless accompanied by an affidavit disclosing good grounds for objection to the adoption. If it appears to the satisfaction of the Court that there are good grounds and sufficient reasons for setting aside the adoption if the allegations of the affidavit are true, the Court may order a hearing upon said motion, fix a time and place therefor, specify the parties to be notified which shall include all interested parties present at the original proceeding with ample time for their appearance, and upon such hearing the Court may deny the motion or grant the same by setting aside the adoption and make a re-determination of who shall have the custody of said child. No such motion shall be granted unless the person filing the same is a fit and proper person and otherwise entitled to the exclusive custody of such child as shown by the evidence at such hearing. Appeal may be taken as from a final decree.

ns to set

SECTION 10. SUBSTITUTE BIRTH CERTIFICATE. (a) Whenever six months has expired after a final decree of adoption and change of name has been entered in any Court of competent jurisdiction within the Territory of Alaska and no proceedings have been started to set same aside, or if the adoption is otherwise finally sustained, said Court shall, upon request by a proper party, send a certified copy of said decree to the Registrar of Vital Statistics who shall, upon receipt thereof, prepare and issue a substitute certificate of birth of the child so adopted. This certificate shall contain all of the information required in an original certificate of birth, except that it shall show the new name of the child so adopted instead of the old, although the true date of the child's birth shall be retained, and shall give the statistical particulars of the foster parents in the place and in the stead of the natural parents and shall make no reference to the natural parents of the said child, and the statement pertaining to legitimacy shall in all such cases be shown in the affirmative. The Registrar shall strike out the words, "Attendant's Own Signature" on the substitute record and insert in their stead the words, "Territorial Registrar" and sign as such, and all dates of recording are to be left as on the original.

Form of certificate.

(b) The Registrar of Vital Statistics immediately upon completion of such substitute certificate shall seal his original record of the birth, and file in its stead the substitute birth certificate, and thereafter said original record so sealed may be opened by the Registrar only upon demand of the child so adopted upon his having attained his majority, or upon order of any Court of competent jurisdiction. Thereupon the Registrar shall send a certified copy of the substitute birth certificate to the Commissioner and/or recorder having on file the adopted child's original certificate of birth. Such recording officer shall forthwith enter the substitute copy in his files in the place and stead of the original copy on file. Upon such filing of the substitute birth certificate, said officer shall seal the original birth certificate and it may thereafter be opened only upon the same conditions as hereinabove prescribed for the Registrar.

Sealing of records.

(c) Upon request for issuance of a certified copy of a birth certificate after substitute certificate has been filed, the Commissioner, Recorder or Registrar, as the case may be, shall, as a matter of course, issue a certified copy of

Certified copies issued.

CHANGES PROPOSED BY JOYCE LANIER FEB 1984

Offered: 1/26/84
Referred: Rules

IN THE SENATE BY THE JUDICIARY COMMITTEE

CS FOR SPONSOR SUBSTITUTE FOR SENATE BILL NO. 241 (Judiciary)

IN THE LEGISLATURE OF THE STATE OF ALASKA

THIRTEENTH LEGISLATURE - SECOND SESSION

A BILL

For an Act entitled: "An Act relating to adoption; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 18.50.220(b)(1) is amended to read:

(1) thereafter, the original certificate and the evidence of adoption or legitimation are not subject to inspection except upon order of the superior court; ~~however, the state registrar [OR AS PROVIDED BY REGULATION, HOWEVER, THE REGULATION]~~ BY THE ADOPTED PERSON AGE 18 OR OLDER & HIS/HER DESCENDANTS AGE 18 OR OLDER AND shall allow inspection by an agent of the state or federal government acting in the performance of the agent's [HIS] official duties;

* Sec. 2. AS 18.50 is amended by adding new sections to read:

ARTICLE 6. ACCESS TO ADOPTION INFORMATION.

Sec. 18.50.500. ACCESS TO ADOPTION INFORMATION. (a) Upon receipt by the state registrar of a request by an adopted person 18 years or older for information identifying the adopted person's biological parents, the state registrar shall give notice of the request to the biological parents by certified mail, deliverable to the addressee only. Information identifying a biological parent shall be disclosed to an adopted person 18 years or older if certified mail sent to a biological parent is returned to the state registrar undelivered or if the state registrar has not received a written objection from a biological parent under this section.

(b) If a written objection by a biological parent is received by the state registrar within 30 days of the notice required under (a) of

18.50.500 (a) A BIOLOGICAL PARENT NAMED ON THE ORIGINAL BIRTH CERTIFICATE MAY FILE WITH THE STATE REGISTRAR A STATEMENT AS TO WHETHER HE/SHE WOULD WELCOME CONTACT WITH THE ADOPTED PERSON AGE 18 OR OLDER.

(6) THE STATE REGISTRAR SHALL DISCLOSE INFORMATION IDENTIFYING THE BIOLOGICAL PARENTS OF AN ADOPTED PERSON WHO IS 18 YEARS OLD OR OLDER AND THE STATEMENTS OF THE BIOLOGICAL PARENTS AS DESCRIBED IN (a) OF THIS SECTION.

this section, the state registrar may not disclose the identifying information on that biological parent to an adopted person unless disclosure is ordered by the court under AS 25.23.150.

(c) The state registrar shall provide the adoptive parents of a person adopted after January 1, 1985, and an adopted person who is 18 years of age or older after January 1, 1985, the following nonidentifying information on a standard form prepared by the commissioner regarding each biological parent named on the original certificate of birth if the information is available:

(1) the age of the biological parent at the birth of the adopted person but not the birth date of the biological parent;

(2) the heritage of the biological parent, including:

(A) national origin;

(B) ethnic background; and

(C) race and tribal membership;

(3) the health history of the biological parent and of blood relatives of the biological parent;

(4) education, which is the number of years of school completed by the biological parent at the time of the birth of the adopted person;

(5) general physical appearance of the biological parent at the time of the birth of the adopted person in terms of height, weight, color of hair, eyes, skin, and other information of a similar nature;

(6) the existence of another child or children of the biological parent;

(7) whether the biological parents were alive at the time of adoption;

(8) the religion of the biological parent;

(10) OCCUPATION
(11) HOBBIES, TALENTS, SPECIAL INTERESTS

(9) whether the adopted person was legitimate at the time of adoption.

(d) The state registrar shall, on the request of an adopted person over the age of 18 years, attach to the original birth certificate of the adopted person the current address and name of the adopted person. The information provided under this subsection may be released to the biological parent of the adopted person.

(e) The state registrar shall, on the request of a biological parent, attach to the original birth certificate of the child of the biological parent the current address and name of the biological parent. The information provided under this subsection may be released to the child of the biological parent.

Sec. 18.50.510. MAINTENANCE OF RECORDS. (a) The commissioner, a child adoption agency, and a person authorized by law or regulation to place a person for adoption shall furnish the state registrar the information concerning biological parents required under AS 18.50.500(c) for all adoptions that occur after January 1, 1985. If the information concerning biological parents required under AS 18.50.500(c) is requested but is not available for adoptions that occurred before January 1, 1985, the state registrar shall request the commissioner to attempt to obtain the required information from the child adoption agency, records of the commissioner, or court adoption records, or a person authorized by law or regulation to place a person for adoption.

(b) A child adoption agency licensed under AS 47.35.100 and a person authorized by law or regulation to place a person for adoption shall maintain records required under AS 18.50.500(c) and by the regulations of the commissioner. If a child adoption agency or a person authorized by law or regulation to place a person for adoption

ceases to place persons for adoption, it shall transfer its records to the commissioner.

Sec. 18.50.520. DEFINITIONS. In AS 18.50.500 - 18.50.520

(1) "adoptive parent" means a parent who adopted a person under AS 25.23;

(2) "biological parent" means a birth parent who is named on the original certificate of birth of an adopted person;

(3) "child adoption agency" means a child adoption agency licensed under AS 47.35.100;

(4) "commissioner" means the commissioner of health and social services;

(5) "state registrar" means the state registrar appointed under AS 18.50.030.

* Sec. 3. AS 25.23.060(a) is amended to read:

(a) The required consent to adoption shall be executed at any time after the birth of the child in the presence of the court or in the presence of a person authorized to take acknowledgements. The consent is not valid unless

(1) the consent form states that the person required to consent to adoption under AS 25.23.040 has the right to withdraw that consent as provided in AS 25.23.070(b); and

(2) the person signing the consent is provided with a copy of the consent.

* Sec. 4. AS 25.23.080(c) is amended to read:

(c) A certified copy of the birth certificate or verification of the birth record of the person to be adopted, if available, the non-identifying information specified in AS 18.50.500(c), if available, and the required consents, relinquishments, and termination orders shall be filed with the clerk.

* Sec. 5. AS 25.23.150(b) is repealed and reenacted to read:

(b) The papers and records relating to the adoption that are a part of the permanent record of the court are subject to inspection only upon consent of the court. The papers or records relating to the adoption that are in a file in the department or in an agency are subject to inspection only with consent of all interested persons or by order of the court for good cause shown. Except as provided in this section, adoption records of the Bureau of Vital Statistics established under AS 18.50 are subject to inspection under the provisions of AS 18.50.

* Sec. 6. AS 25.23.150(c) is amended to read:

(c) Except as authorized in writing by the adopted child if 14 or more years of age, or by the adoptive parent, or upon order of the court for good cause shown [IN EXCEPTIONAL CASES], a [NO] person may not [IS REQUIRED TO] disclose the name or identity of either an adoptive parent or an adopted child.

* Sec. 7. AS 25.23 is amended by adding a new section to read:

Sec. 25.23.185. RECORDS AND INFORMATION. (a) A person or agency petitioning for adoption, the department, or a person placing a child for adoption shall obtain from each known biological parent of the adopted person for the state registrar

(1) the information listed in AS 18.50.500(c) on a form prepared by the department;

(2) a statement ~~that the biological parent is aware of the procedure set out in AS 18.50.500(a) and (b)~~ AS TO WHETHER THE BIOLOGICAL PARENT WISHES TO HAVE CONTACT WITH THE ADOPTED PERSON WHEN THE ADOPTEE IS AGE 18 OR OLDER.;

(3) a statement that indicates the biological parent has been informed that the state registrar must attach the biological parent's current name and address to the original birth certificate at any time the biological parent wishes to have a current address

attached.

(b) The statement and the information provided by a biological parent under (a) of this section shall be attached to the original birth certificate of the adopted person.

(c) The biological parent shall be given a copy of a statement provided under (a)(2) of this section.

* Sec. 8. This Act takes effect January 1, 1985.

(d) THE BIOLOGICAL PARENT MAY CHANGE A STATEMENT FILED UNDER (a)(2) OF THIS SECTION AND MAY UPDATE FACTS FILED UNDER (a)(1) OF THIS SECTION AT ANY TIME AND THIS OPTION OF THE BIOLOGICAL PARENT SHALL BE STATED ON THE COPY OF THE STATEMENT PROVIDED TO THE BIOLOGICAL PARENT UNDER (c) OF THIS SECTION.

(e) THE ADOPTIVE PARENTS SHALL BE ADVISED IN WRITING ON A FORM PROVIDED BY THE COMMISSIONER THAT THE ADOPTEE AT AGE 18 MAY OBTAIN A COPY OF THE ORIGINAL BIRTH CERTIFICATE ALONG WITH THE BACKGROUND INFORMATION DESCRIBED UNDER (a)(1) OF THIS SECTION AND THE STATEMENTS OF THE BIOLOGICAL PARENTS DESCRIBED IN (a)(2) OF THIS SECTION

(f) THE COMMISSIONER SHALL REQUEST ON A PERIODIC BASIS THAT THE ADOPTIVE PARENTS PROVIDE TO THE DEPARTMENT A PROGRESS REPORT ON THE CHILD'S HEALTH, SOCIAL & PHYSICAL DEVELOPMENT. THE REPORT SHALL BE ATTACHED TO THE ORIGINAL BIRTH CERTIFICATE & SHALL BE AVAILABLE TO THE BIOLOGICAL PARENTS UPON REQUEST.

Senator Robert Ziegler, Sr.

FROM: Karla Forsythe KF
General Counsel
Alaska Court System

SUBJECT: SS for SB 241, an act relating to adoption.

The Alaska Court System appreciates this opportunity to bring to your attention court-related concerns about SS for SB 241, an act relating to adoption.

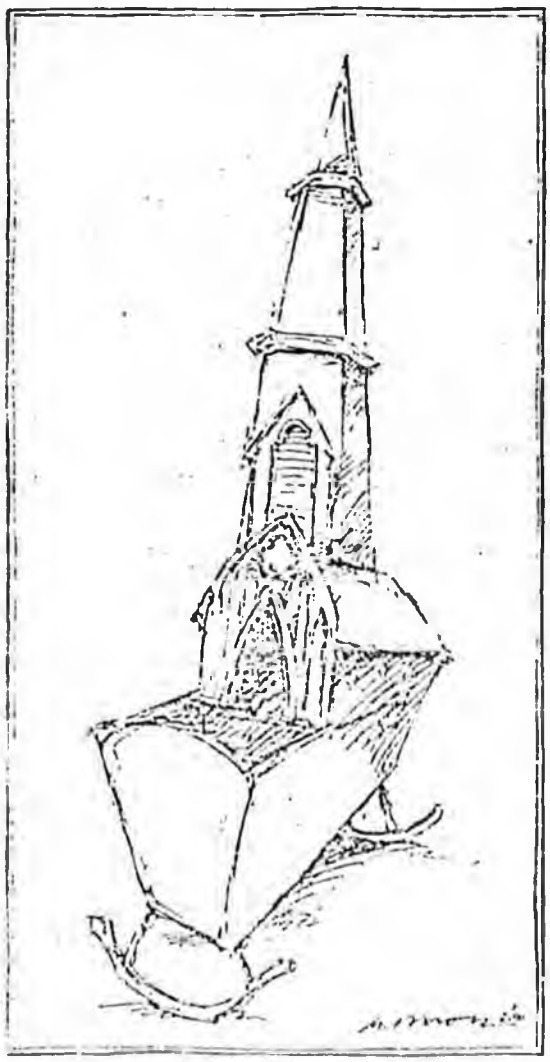
Under section six of the proposed legislation, the clerk of the superior court, the department of health and social services, or the person placing a child for adoption is required to obtain from each known biological parent a variety of nonidentifying information, as well as statements about access to identifying information. It is the position of the court system that the reference to the clerk of the superior court should be deleted.

The practical effect of including the court as one of the information-gathering agencies is to add a new and inappropriate clerical procedure to the work of the courts. The implication of this section is that if an agency or the

department is not involved in an adoption, the court should obtain the information. In almost all step-parent adoptions, an agency or the department is not involved, so the court would have to collect the information from the biological parent. These types of adoptions comprise a substantial portion of the court's adoption workload. Moreover, in these situations the biological parent is often difficult to contact. Therefore the court will spend a great deal of time obtaining this information, which will likely require additional staff in major court locations. This investigatory function is not compatible with the court's adjudicatory role.

An easier and more appropriate way to obtain this information in step-parent adoptions is for the person petitioning for adoption and not the court to furnish it to the registrar. If the phrase "person placing a child for adoption" is intended to include these petitioners, the court's concerns with section six can be remedied simply by deleting the reference to the clerk of the superior court. However, if petitioners in step-parent adoptions are not meant to be included in the phrase, they should be specifically mentioned. If this is the case, the court system suggests that lines 10-12, page five of the proposed bill, should read: "The person petitioning for the adoption, the department, or the person placing a child for adoption shall obtain from each known biological parent of the adopted person for the state registrar . . . ."

Deleting the reference to the court comports with the apparent intent of the legislation. Proposed section 18.50.510 requires the commissioner, an adoption agency, or a person placing an adoptee, and not the court, to provide information to the registrar. It is inconsistent to then require the court to obtain the information under the adoption provisions of title 25. Also, a reference to the court implies that inability or failure to obtain the information will affect the court's review of the adoption. However, it is clear from proposed section 18.50.500 that the missing information results not in denial of the adoption, but in nondisclosure.



In summary, the court system recommends deletion of the reference to the "clerk of the superior court" from section six.

Anchorage Daily News - 1: 3-80

Public opinion favors opening adoption records

By CECILIA F. LEINKAUF

Throughout the winter and spring of 1980, the subject of "opening" adoption records in Alaska received a good deal of attenion.

A public forum, sponsored by the League of Women Voters, the National Associaiton of Social Workers and the Social Work Department at the University of Alaska generated much discussion and a series of resolutions supporting opening records for release of non-identifying information (i.e. — medical, racial data) and opening records for release of identifying information with the consent of the individual whose name is released. Legislation was also introduced in the 11th Alaska Legislature to amend the Alaska statutes to provide for open records but did not pass.

In order to determine the opinions of the general public regarding adoption issues, the Social Work Department at the University of Alaska agreed to undertake a research survey of public opinion and make the results available to the legislature and the public at large.

Both KIMO-TV, Channel 13, and the Anchorage Daily News provided assistance by actually publicizing the short questionnaire, thus assuring participation by the general public.

The survey asked the following questions:

1) Whether responents believed that non-identifying information should be available to adult adoptees without a court order.

2) Whether respondents believed that identifying information (names) should be accessible to adult adoptees, adoptive and biological parents —

a) Only with written consent of the person to be adopted;

b) Only with a court order and the written consent of the person to be adopted;

c) Only with a court order;

d) Not at all;

3) Whether adoptions should be done by a licensed adoption agency or the state – except for relative or step-parent adoptions.

One hundred forty-two (142) individuals responded to the brief questionnaire. Of this number — 19 were adopted persons, 37 were adoptive parents, 22 were biological parents of a child released for adoption, 18 were professional and 46 were classified "other." composite breakdowns of their responses are as follows:

1) Those believing that non-identifying information should be available to adult adoptees without a court order —

Yes.....89 percent
No.....6 percent
Don't Know.....4 percent

2) Those believing that identifying information (names) should be accessible to adult adoptees, adoptive and biological parents —

Written consent.....77 percent
Court order & written consent.....15 percent
Only with court order.....2 percent
Not at all.....4 percent
Don't know.....1 percent

3) Those believing that adoptions should be done by a licensed adoption agency or the state – (except for relative or stepparent adoptions)

Yes.....65 percent
No.....17 percent
Don't Know.....18 percent

Contrary to what might be expected, when the responses are broken down by adoptees, adoptive parents and biological parents, the support for open records remains strong within each discrete group.

Of those respondents who were ADOPTIVE PARENTS, 67 percent believed that access to identifying information should be granted with the consent of the person to be identified. Ninety-five percent believed adult adoptees should have access to non-identifying information without a court order. Fifty-one percent of the adoptive parents believed adoptions should be done by a licensed agency or the state and 35 percent disagreed. Fourteen percent weren't sure.

Of those respondents who were the BIOLOGICAL PARENT of a child released for adoption, 82 percent believed that access to identifying information should be granted with the written consent of the person to be identified. Ninety-one percent believed adult adoptees should have access to non-identifying information without a court order. Forty-five percent of the biological parents believed adoptions should be done by a licensed agency or the state. Forty-one percent weren't sure and 14 percent disagreed.

Of the respondents who were ADOPTEES, 81 percent believed that access to identifying information should be provided with the written consent of the person to be identified. Ninety-five percent believed that access to non-identifying information should be possible without a court order, and 84 percent believed adoptions should be done by a licensed agency or the state. Eleven percent disagreed and five percent weren't sure.

Of the remaining respondents, 80 percent believed that written consent should be required for the release of identifying information, 87 percent believed that access to non-identifying information should be possible without court order and 74 percent believed a licensed agency or the state should do the adoptions.

Survey results such as these give clear indicatons of changing social attitudes about adoption and about "secret" adoptive records.

It is obvious that the majority of respondents in this survey believe that Alaska should "open" adoptive records. It remains to be seen whether the 12th Alaska Legislature will agree.

Cecilia "Pudge" Kleinkauf is a faculty member of the University of Alaska, Anchorage with the Department of Social Work.

Oklahoma Law Review Summary

Attacks on the sealed record laws spread nationwide in the 1970's as activists for adoptees' rights began lobbying legislators to amend laws that prevented adopted persons from finding out the circumstances of their own adoption. Challenges to the laws began to be voice in state and federal courts with plintiffs claiming that such laws violated constitutional rights. Among rights adoptees assert are violated by the closure statutes are a first amendment right to receive significant personal information, a ninth amendment right to personhood and privacy, and denial of equal protection of the law under the fourteenth amendment. State courts have uniformly upheld sealed record laws against all such attacks. The U.S. Supreme court has not yet decided the constitutionality of sealed record laws.

Modern adoption procedures are primarily designed to protect the welfare of the adoptee, they simutaneously safeguard the rights of the biological and adoptive parents. Like other aspects of family law, adoption is governed by state rather than federal rules. In most jurisdictions, adoption proceedings are closed and records are sealed to protect rights of the parties involved.

** Pro sealed records: One court reasoned that sealed record laws offer assurance to a biological mother that instead of haphazardly placing the child herself, she can allow desirous and qualified persons to adopt the infant. She will be protected in the process so that no one will ever know by means of the adoption proceedings that the child was illegitimate, if such is the case. The statutes further purport to assure the adoptive parents that the child may be treated as their own and that they need not fear the adoption records will hurt the child or their relationship with the child. Sealed record laws were enacted basically to protect the adoptee from any possible stigma of illegitimacy they might bear, to allow a parent-child relationship to form in the adoptive family without the threat of interference from the biological parents, and to afford the biological mother a chance to make a new life for herself, secure in the knowledge that this phase of her life would not be revealed. Most sealed record laws were enacted in an era when illegitimacy carried a devastating legal and social stigma.

** The sudden appearance of the child years later could be a shocking experience. Traditionally, when a parent places a child for adoption, that parent is given a promise of anonymity. Opening adoption records might be humiliating to a mother who surrendered a child years ago, and who would not want to confront a part of her life long buried in the past.

** Adoptive parents fear that the liberalization of sealed record laws would lead to the loss of their adopted child to the biological parent, once the child and parent locate each other.

** With a scarcity of babies available to adopt, many fear a powerful black market will emerge. Perhaps legislators and courts believe that statutes that deny confidentiality in adoption procedures would be another factor that might force biological parents covertly to surrender a child they cannot support.

** Con sealed records: With maturation, many adoptees experience identity crises, health problems that possibly have a genetic connection, and curiosity about their biological heritage. One study of the psychological status of adults revealed that only a small portion of adoptees become well-adjusted adults. Other studies show adoptees are prone to emotional and psychological problems, all traceable to a lack of identity. One psychologist notes that one's identity has to do with immediate life involvements (the adoptive family) and a larger sense of heritage. It is in the latter category that adoptees feel identity-deficient. Without this sense of heritage, psychologist reson, adoptees have no sense of continuity, wholeness, or fidelity, all of which are important to identify formation. Thus, the conspiracy of silence against the adult adoptee prevents the development of a full self-identity. While confidentiality may serve its purposes in the adoptee's young life when the parent-child relationship is forming, it is questionable whether insistence upon such a policy remains in a adoptee's best interests once adulthood is reached, the "best interests" rationale should extend into the life of the adult adoptee.

** A relationship between parent and child that has developed throughout the adoptee's young life is not easily endangered by outside persons or influences. While adoptive parents have a valid interest in keeping adoption records sealed during the adoptee's youth, that interest decreases after the parent-child relationship has blossomed. Furthermore, one commentator suggest that most adoptees experience a deeper sense of love and appreciation for the adoptive parents as a result of establishing a relationship with biological relatives. It is reasonable to believe that revealing the information sought by adoptees concerning their identity would lead to their mental health and happiness.

** States must consider the mental health of those persons for whose adoptions they are responsible. Medical studies reveal that some adoptees who are denied the opportunity to seek out biological parents or genealogical history have suffered severe psychological stress. A suggestion was made that states should establish some provision in their adoption laws to help these adoptees overcome their disorder and thus keep that person from becoming a burden on the state.

** Adoption laws are drafted to result in the best interests of the adoptee, in many cases, revealing information about the adoption process is in the best interest of the adoptee.

Among the avenues of constitutional argument open to an adoptee seeking access to birth records or adoption proceedings is the challenge that sealed record laws violate first amendment rights. One theory supporting the purpose of the first amendment is that it promotes a "marketplace of ideas" concept that allows the free exchange of information, enabling all person to participate knowledgeably in government and society. Sealed adoption laws that are the cause of psychological stress on adoptees arguably frustrate one of the basic premises of the first amendment. The Supreme Court has extended the first amendment beyond its literal terms. On numerous occasions, the Court has held that the amendment protects the right to receive information. It has been argued that this includes information about the adoption process, but courts have rebuffed that argument. Another court faced with a challenge to sealed record laws noted that no constitutional or personal rights were unconditional and absolute to the exclusion of the rights of all other. That court thought that the conditional limitation (the good cause requirement) of the challenged statute promoted a valid state policy of protecting privacy rights. Applying a balancing test, the court found that the adoptees' first amendment rights were outweighed by the countervailing rights of the other interested parties.

A plaintiff's attempt to invoke the right to receive information in this context would seem to be an overly broad extension of the right and an unprecedented interpretation of the first amendment. But a general conclusion that all biological and adoptive parents wish to keep adoption information confidential once the adoptee reaches adulthood should not be made. In those cases where all parties are amenable to releasing the information, the adoptee should have the right to view adoption records.

Although the Constitution does not explicitly mention a right to privacy, such a fundamental right has been found to exist in the penumbras of the first, third, fourth, fifth, and ninth amendments. The definition of privacy and the nature of the interests it encompasses have not clearly been set forth. The Supreme Court has deemed fundamental two types of privacy interests: those involving traditional family ties and decisions about control over one's own body. The privacy right limits governmental interference into individual decisions regarding these issues deemed fundamental. Adoptees allege that the right to know genealogical identity is similar to areas in which privacy has been held to apply. (extended to such areas as abortion, marriage, contraception, procreation, child rearing, and education) The privacy right arguably could encompass an adoptee's right to view birth records because the ability to make decisions involving fundamental rights is likely influenced by identity formation gained through those records. Preventing access to information about an adoptee's genetics may hamper the decision-making process concerning such things as procreation and contraception. Without such genealogical facts, the adoptee has no information upon which to base intelligent decisions. Thus, sealed record laws prevent adoptees from fully exercising fundamental rights by deterring dissemination of information needed to make decisions protected by the right to privacy. Such a governmental intrusion is forbidden

by the Constitution. One court has held that information regarding heritage and heredity, while it may be important to forming identity, is nevertheless not so intimately personal as to fall within the zones of privacy implicitly protected by the Bill of Rights penumbras. The penumbral rights that adoptees use to assert a right of access to files is the same right opponents assert to keep the files closed.

Establishing a fundamental privacy right to birth records would entitle adoptees to strict scrutiny of the closure laws. The state would have to show that a compelling interest is served by the statute and that less intrusive alternatives are unavailable. Although the purposes served by sealed record statutes are important, arguably even compelling, there are less intrusive means of achieving the goals such laws are aimed to meet. Procedures could be developed to contact birth parents through a liaison. If the parent refused to cooperate, privacy rights would still be protected and parents would be able to appear and meet with the adoptee if neither party wanted to remain silent.

Suggested Reforms

Under most current sealed record laws, an adoptee must make a showing of some form of good cause in order to inspect records. However, what constitutes good cause is left to the subjective discretion of the judge and is nowhere defined in most state statutes. A suggestion offered by the Superior Court of New Jersey in Mills v. Atlantic City Department of Vital Statistics. The court held that when an adoptee seeks access to adoption records during minority, the minor must satisfy the good cause requirement. When the adoptee reaches majority, the burden of proof shifts to the state to show an absence of good cause. If biological parents consent to disclosure, the records may be opened on demand.

A court-supervised intermediary process would offer another solution that would be consistent with the rights of all parties involved. A person appointed by the court to act as an intermediary could seek out the biological parents and inform them of the adoptee's desire to meet them.

Court and legislators should abandon the popular all or nothing approach to adoption record laws in an effort to best serve the needs of all persons involved. Courts thus far have not taken he incentive; thus it falls to the state legislatures to initiate this desirable change.

Rewriting the Adoption Story

The Old Version Was Based on More Fiction Than Fact—the Belief that Law Could Mirror Biology. Today's Adoption Procedures Are More Realistic

Who may adopt? Who may be adopted? How important is it to match religion or race? When is a birth parent's consent unnecessary to complete adoption? Under what circumstances can a birth mother revoke her consent after she has relinquished her child? These questions of the '60s were based on traditional thinking of adoption. Today's questions are not only based on changes in family patterns but on a new way of thinking about the concept of adoption.

The institution of adoption was incorporated into U.S. law in 1851, when Massachusetts enacted the first American adoption statute that provided for judicial supervision over adoptions. In other states, adoption was a private legal act, like a conveyance of real estate or a commercial contractual transaction. Before 1851, other state statutes merely authenticated and made a public record of private agreements.

For the past century, our adoption laws and practices have followed the Roman legal tradition of attempting to make law mirror biology. This tradition was based on the notion that the adopted child, by physical appearance alone, could have been the birth child of the adoptive parents. The adoptive parents were supposed to be people who, by appearance and age, could have conceived the infant. Thus, adoption laws were designed to imitate nature.

Throughout history, a birth mother has had two options: she could choose the adoptive parents and relinquish her child to them--often without going to court; or she could leave the decision to a licensed private or public social service agency that would receive the child, obtain the relinquishment, and then place the child—usually with a childless couple. Most American adoptions consisted of unwed mothers, whose newborn or infant children were released directly from a hospital nursery or a special short-term foster home. For an unwed mother, adoption was a socially acceptable alternative.

But times have changed. The patterns of earlier years are now the exception, not the rule. Today, adoption is usually the end of a process that began as a child neglect or abuse proceeding. While there are still some newborns being placed for adoption, the typical profile of the adoptive child in the '80s is a three-to-five-year-old youngster who has lived with his or her birth mother, then with a series of foster parents, and has lacked a permanent home for at least a year. The birth mother usually has failed to rehabilitate herself, and the most likely candidates to adopt the child are the child's foster parents.

Foster care has become a first step toward adoption. In the past, foster parents often were excluded as candidates because of the matching physical requirements and factors such as financial eligibility. Now, foster parents often are given priority because they have formed strong emotional bonds with the child. They have become the child's "psychological parents."

Government-subsidized adoption programs, which provide the financial support for children to be adopted by their foster parents, was an idea in the '60s. It became a reality in the '70s and is being implemented in the '80s.

CHILDREN BORN OUT OF WEDLOCK

During these 20 years, there has been a great deal of litigation over the status and rights of children born out of wedlock. The U.S. Supreme Court has moved in the direction of declaring illegitimacy a suspect classification under the Equal Protection Clause of the Constitution. The legal distinction between legitimate and illegitimate

BY SANFORD N. KATZ

births has been blurred, and some state statutes have eliminated the distinction altogether—stating that all children are legitimate. But the highest court in the land has not gone that far.

This new attempt to give illegitimate children the same rights as legitimate children has encouraged legislative change, particularly in the area of parental consent. For years, the child born out of wedlock was considered the child of the mother. And unless an unwed father acknowledged paternity or was declared the father through judicial proceedings, he was virtually a legal nonentity. Not only did the father have no rights to the custody of his illegitimate children, but the children had no rights to the companionship of their unwed father.

Although *Stanley v. Illinois*, 405 U.S. 645 (1972), was not an adoption case but a case of neglect and dependency, it had a major effect on adoption law. *Stanley* held that an unwed father who had sired and lived with his three children and their mother intermittently for 18 years was, upon the mother's death, entitled to a hearing before his children could be removed for reasons of neglect. Under Illinois law, Mr. Stanley was not considered a "parent" and thus was not entitled to due process of law because he was not married to his children's mother. The Supreme Court stated in a footnote that its decision also affected adoption.

This case and many that followed it, such as *Rothstein v. Lutheran Social Services*, 405 U.S. 1051 (1972), where the father's rights were considered, have had an impact on all state adoption statutes. In most instances, fathers of children born out of wedlock now must be accorded the opportunity to consent to the adoption of their biological offspring. But there are practical problems in providing this opportunity. Procedures to implement *Stanley* are still being worked out by states to ensure fairness to the biological father without jeopardizing the adoption of the child.

OPEN ADOPTION

"Open adoption" is a concept of the 1980s that represents a new idea about adoption. It is the antithesis of the Roman ideal—it does not seek to imitate nature and makes no attempt to be a fiction. The essence of open adoption is to provide the child with the opportunity to maintain ties with his or her biological family.

Traditionally, adoption required the complete termination of the biological parent-child relationship, for both legal and practical reasons. Once adoption was decreed, the child was no longer considered the child of the birth parents. Ties with the biological family were severed, unless the child's adoptive parents chose to continue some contact, usually in intra-family adoptions.

Today, most adoptees are older children who have memories of their earlier childhood and have some contact, if minimal, with their birth families. In cases where contact has been beneficial, but not so positive as to demand return to their birth parents, some courts have made allowances in the decree for visitation by certain members of the biological family. This is usually done only if the child desires it.

Open adoption is controversial because it challenges the basic goal of adoption—to accomplish a complete transplant of a child from the birth family to the adoptive family. Some opponents prefer that contact with the biological family be accomplished voluntarily, without decreeing it, or that guardianship be used rather than adoption.

With open adoption, the mystery of biological birth is eradicated. The price, however, is that it creates a different model for the parent-child relationship. The question is whether society is ready for it.

LOOKING AHEAD

During the next decade, states that forbid private adoptions are likely to reexamine that policy and the roles of professionals in the adoption process. I anticipate that our legislatures will ask whether it is fair to give agencies a monopoly in the placement of children for adoption of newborns or whether birth parents should be allowed to choose a suitable family for their child.

Other questions facing us in the '80s include: In states that do not allow private adoptions, how can adoptive applicants be assured of fair treatment? Is surrogate motherhood a socially acceptable alternative to traditional adoptive placement? Should there be state regulation of this newly adapted scientific method, or should women and physicians alone be the sole decision makers?

The open records controversy will continue. The debate over whether adoptive children have the legally protected right to inspect their adoption records should prompt states to reevaluate their legislation. The open records issue is an emotional one that needs rethinking. By changing the laws to allow free access to the records by anyone in the adoption triad, we will radically alter adoption in America.

Because adoption has existed in essentially one form for over one and one-half centuries, changes that affect underlying assumptions and strongly felt social values have been, and will continue to be, slow in coming. Those involved in adoption reform must be patient.

The Family Law Section's Adoption Committee is developing a new Model Adoption Act. The Committee is trying to propose an act that takes into account what adoption of children means in the '80s and how it can be accomplished with fairness to all the participants.

In any discussion of adoption, however, we must not lose sight of its primary goal: to provide a permanent, secure, and loving home for a child whose birth parents are unable or unwilling to meet the child's needs. Throughout the process of change, we must never cease to ask the basic question: "Is it well with the child?" ■

Sanford N. Katz, professor of law at Boston College Law School, is a past chairman of the Family Law Section. He is editor-in-chief of the Family Law Quarterly *and president of the International Society on Family Law.*

SENATE ADVISORY COUNCIL

MEMORANDUM

TO: Senator Kerttula

FROM: Elizabeth J. Hickerson

RE: Adoption Legislation

DATE: March 14, 1983

Last year SB 399 was introduced and passed the Senate with a committee substitute out of Judiciary. This session a very similar bill has been drafted regarding the issue of non-identifying information for adoptees and their adopted parents. Also included in the bill is a procedure whereby an adoptee or the biological parents can attach information to the original birth certificate with identifying information.

The primary intent of the adoption bill is to provide vital non-identifying information to adoptees. Basically, adult adoptees have stated that they feel a void in their lives due to the fact that information regarding their biological parents is missing. Not only is access to medical history vital, but adult adoptees have stated repeatedly that additional non-identifying information is essential to knowing oneself and past roots.

This bill would provide a means of collecting non-identifying information at the time of adoption and attaching this to the birth certificate. No identifying information as to the biological parent is included.

In addition this bill provides an optional mechanism whereby either the biological parent or the adoptee upon reaching 18 years of age can provide identifying information to the other party. The bill provides that at any time a biological parent can attach identifying information (name, address, etc.) to the child's birth certificate for release. This can be revoked at any time by the biological parent. At the same time the adult adoptee can attach similar information to his/her birth certificate. This basically provides a mechanism whereby the parties can establish direct contact with one another.

Neither of these two sections permits identification of the parties being released unless they so request. The parties must take affirmative steps for identifying information to be released. The state would merely establish a registry to assist those wishing to release identifying information.

As it is today children are born, biological parental rights are terminated and adoption takes place without the benefit of background information on the biological parent being preserved. With passage of this bill, non-identifiable information will be preserved and accessible, and a mechanism will be created to aid those wishing to identify themselves.

Sec. 18.20.020. License required. No person or government unit, except the federal government, acting severally or jointly with another person or governmental unit may establish, conduct or maintain a hospital in the state without a license. (§ 40-6-2 [illegible] 1949; am § 3 ch 112 SLA 1957)

Cross references. — As to requirement for certificate of need to construct or alter a health care facility, see AS 18.07.011 — 18.07.111.

Opinions of attorney general. — A nursing home is considered a hospital for the purpose of the licensing provisions. 1963 Op. Att'y Gen., No. 7.

If a person establishes a hospital which gives general and medical treatment and in addition provides nursing service, both aspects of hospital operation are nonetheless within the same hospital, and there is no justification for breaking up the operations of one hospital into separable units for licensing purposes; therefore, one license should be required for the entire hospital operation. 1963 Op. Att'y Gen., No. 7.

Collateral references. — Licensing and regulation of nursing or rest homes. 97 ALR2d 1187.

Sec. 18.20.030. Application and fees. Application for a license shall be made to the department upon a form provided by it, and shall contain the information the department requires, which may include affirmative evidence of ability to comply with the reasonable standards, rules and regulations prescribed under AS 18.20.060 — 18.20.080. Each application for a license shall be accompanied by a license fee of $10. The department shall deposit all fees received in the state treasury. (§ 40-6-4 ACLA 1949)

Sec. 18.20.040. Issuance and renewal of license and posting. Upon receipt of an application for license and the license fee, the department shall issue a license if the applicant meets the requirements established under AS 18.20.060 — 18.20.080. If the applicant does not meet the requirements established under AS 18.20.060 — 18.20.080 but makes continued efforts to comply with them, the department may grant him a temporary or provisional license for a reasonable period of time. A license, unless suspended or revoked, is renewable annually without charge upon filing by the licensee, and approval by the department of an annual report on the uniform date and containing the information in the form the department prescribes by regulation. Each license issued is for the premises and person or governmental unit named in the application and is not transferable or assignable except with the written approval of the department. Licenses shall be posted in a conspicuous place on the licensed premises. (§ 40-6-5 ACLA 1949; am § 4 ch 112 SLA 1957)

Sec. 18.20.045. Insurance required.

Repealed by § 40 ch 177 SLA 1978.

Editor's notes. — The repealed section derived from § 39, ch. 102, SLA 1976.

As to purpose of repealing act, see § 1, ch. 177, SLA 1978 in the 1978 Temporary and Special Acts and Resolves.

Sec. 18.20.050. Denial, suspension or revocation of license. The department may deny, suspend or revoke a license in a case in which it finds that there has been a substantial failure to comply with the requirements established under AS 18.20.060 — 18.20.080. (§ 40-6-6 ACLA 1949)

Sec. 18.20.060. Regulations and standards. The department shall adopt, amend, and enforce rules, regulations and standards for all hospitals designed to further the accomplishment of the purposes of AS 18.20.010 — 18.20.130 in promoting safe and adequate treatment of individuals in hospitals in the interest of public health, safety and welfare. (§ 40-6-7 ACLA 1949)

Sec. 18.20.070. Compliance with regulations. Each hospital in operation at the time the department adopts rules and regulations or

SOURCE OF FUNDS TO OFFSET FISCAL IMPACT OF BILL:

ANALYSIS:

This act amends the state's statutes covering the treatment of mentally ill persons. The amendment clarify existing law and provide additional safeguards for the general public and the relatives of mentally ill persons, while seeking to protect the legal rights of persons suffering from mental illness. The amendments will not require any additional legal services, over those currently being provided, and their enactment will not have a fiscal impact on the department's operations.

HEALTH-ANALYSIS
12/1/83

The Division of Mental Health and Developmental Disabilities does not foresee any increase or decrease in expenditures as a result of the passage of SB 346 at this time. The primary purpose of this bill is mainly directed at reducing the procedural requirements of A.S. 47.30.655 - 47.30.915, changing the age of majority from 14 to 18 years of age, changing the period of time for the initial commitment from 21 to 30 days and the third period of commitment from 120 to 180 days, expanding the definition of peace officers to include mental health professionals, and slightly relaxing the standards for commitment.

We do not believe that any of these proposed amendments will increase or decrease the number of mentally ill persons that will require hospitalization. The amendments should, however, make it easier to commit the mentally ill which should result in more professional staff time available to provide direct patient care and treatment rather than excessive time being expended in the commitment process.

Council under § 1524(c)(2)(A) of P.L. 93-641, and only after consideration of comment and advice of the Advisory Board on Alcoholism. In awarding grants, the department shall further consider the amount of money that is available for all applications and whether an application would contribute to the wise development of a comprehensive program of alcoholic rehabilitation and prevention.

(c) Grants shall be awarded in a ratio of 90 percent state money to 10 percent community money for the costs of providing staff and limited improvement, renovation or new construction of facilities for alcoholic detoxification, rehabilitation or "half-way house" care. The department may waive all or part of the requirement that state money be matched by community money if the department finds that community money is unavailable and waiver of the requirement is in the best interests of the state. No grant for improving, renovating or constructing may exceed $50,000 except when there is a lack of applicants for available money and then only with the approval of the Review Board on Alcoholism. The department is not required to award all money available under this program, or the full percentages specified in this subsection, when another source of money is available or could reasonably be made available to the applicant.

(d) Money used by the applicant to qualify for state money may be from any source other than the state. The cost of developing an application is not reimbursable from the grant. The value of real property to be used directly in conjunction with the grant may be used in calculating the required amount of community money, as allowed by regulations of the department.

(e) No grant may be awarded under this section unless the application includes a plan which provides for

(1) the expenditure of grant money for education and other preventative measures, or the treatment of alcoholics;

(2) the reception of advice and comment from a local advisory board, or, if a local advisory board cannot be formed because the area is sparsely populated, from the governing bodies of private nonprofit health organizations, regarding the design, implementation, and evaluation of the plan and action to be taken;

(3) goals, expressed in quantifiable terms that express the intended impact of the assistance provided under the plan upon the number of individuals needing or utilizing such assistance;

(4) coordination with the goals and objectives of the health systems plan developed by the health systems agencies under § 1513(b)(2) of P.L. 93-641.

(f) The department shall monitor the implementation of the plan required under (e) of this section, and shall terminate payment of grant money if the plan is not implemented or approval of the program as a public or private treatment program under AS 47.37.110 is not granted within one year of the award of the grant, or is suspended, revoked, limited or restricted. Modification of the plan required by (e) of this section must be approved by the department before implementation of the modification.

(g) The department shall provide management training for persons administering a program receiving grant money under this section.

(h) If the department determines, after the award of a grant under (c) of this section, that the community is capable of bearing a greater portion of the cost of a program than originally determined, the department may

(1) reduce the award by that portion of the cost of a program which the department subsequently determined the community could bear; or

(2) terminate payment of the grant entirely. (§ 2 ch 101 SLA 1970; am § 1 ch 126 SLA 1975; am §§ 1, 2 ch 116 SLA 1978; am § 33 ch 168 SLA 1978; am § 1 ch 150 SLA 1980)

Effect of amendments. — The 1980 amendment substituted "90" for "75", and "10" for "25", deleted "except that in communities designated as poverty areas the ratio shall be 80 percent state money to 10 percent community money" following "community money" near the beginning of subsection (c), inserted the second sentence of subsection (c), and substituted "Review" for "Advisory" near the end of the third sentence of subsection (c).

Article 6. Mental Health Program.

Section
655. Purpose
660. Powers and duties of department

Sec. 47.30.655. Purpose. The purpose of this major revision of Alaska civil commitment statutes (AS 47.30.660 — 47.30.915) is to more adequately protect the legal rights of persons suffering from mental illness. The legislature has attempted to balance the individual's constitutional right to physical liberty and the state's interest in (1) protecting society from persons who are dangerous to others; and (2) protecting persons who are dangerous to themselves, by providing due process safeguards at all stages of commitment proceedings. In addition, the following principles of modern mental health care have guided this revision:

(1) that persons be given every opportunity to accept voluntary treatment before involvement with the judicial system;

(2) that persons be treated in the least restrictive alternative environment consistent with their treatment needs;

(3) that treatment occur as promptly as possible and as close to the individual's home as possible;

(4) that a system of mental health community facilities and supports be available;

(5) that patients be informed of their legal rights and be informed of and allowed to participate in their treatment program as much as possible;

(6) that persons who are mentally ill but not dangerous to others be committed only if there is a reasonable expectation of improving their mental condition. (§ 1 ch 84 SLA 1981)

Editor's notes. — The parenthetical expression in the first sentence was added by the revisor of statutes pursuant to AS 01.05.031.

Sec. 47.30.660. Powers and duties of department. The department is the mental health authority of the state and shall

(1) administer a comprehensive program for the prevention of mental illness and the care and treatment of the mentally ill, including inpatient and outpatient care and treatment and the procurement of services of specialists or other persons on a contractual or other basis;

(2) take the actions and undertake the obligations which are necessary to participate in federal grants-in-aid programs and accept federal or other financial aid from whatever sources for the study, examination, care, and treatment of the mentally ill;

(3) administer AS 47.30.660 — 47.30.915;

(4) designate, operate, and maintain treatment facilities equipped and qualified to provide inpatient and outpatient care and treatment for the mentally ill;

(5) provide for the placement of mentally ill patients in designated treatment facilities;

(6) enter into arrangements with governmental agencies for the care or treatment of the mentally ill in facilities of the governmental agencies in the state or in another state;

(7) enter into contracts with treatment facilities for the custody and care or treatment of the mentally ill;

(8) enter into contracts which incorporate safeguards consistent with AS 47.30.660 — 47.30.915 and the preservation of the civil rights of the patients with another state for the custody and care or treatment of patients previously committed from this state under 48 U.S.C., sec. 46 et seq., and P.L. 830, 84th Congress, 2nd Session, 70 Stat. 709;

(9) prescribe the form of applications, records, reports, requests for release, and consents to medical or psychological treatment required by AS 47.30.660 — 47.30.915;

(10) require reports from the head of a treatment facility concerning the care of patients;

(11) visit each treatment facility at least annually to review methods of care or treatment for patients;

(12) investigate complaints made by a patient or an interested party on behalf of a patient;

(13) delegate upon mutual agreement to another officer or agency of it, or a political subdivision of the state, or a treatment facility designated, any of the duties and powers imposed upon it by AS 47.30.660 — 47.30.915; and

(14) adopt regulations to implement the provisions of AS 47.30.660 — 47.30.915. (§ 1 ch 84 SLA 1981)

Editor's notes. — Section 6, ch. 84, SLA 1981, provided: "Except as provided in this Act, the provisions of AS 47.30.660 — 47.30.815 enacted by sec. 1 of this Act do not in themselves impair any action taken in a proceeding pending under statutes in effect before October 1, 1981, nor do they apply retroactively to terminate the detention of a person previously committed under statutes in effect before October 1, 1981. However, 90 days after October 1, 1981, the provisions of this Act apply to all persons committed under statutes in effect before October 1, 1981."

Article 7. Voluntary Admission for Treatment.

Section		Section	
670.	Standards for voluntary admission	690.	Admission of minors under 14 years of age
675.	Notice of rights	695.	Notice of request for release of minors under 14 years of age from detention and commitment
680.	Discharge of voluntary patients		
685.	Notice of intent to leave facility; commitment		

Editor's notes. — Section 6, ch. 84, SLA 1981, provided: "Except as provided in this Act, the provisions of AS 47.30.660 — 47.30.815 enacted by sec. 1 of this Act do not in themselves impair any action taken in a proceeding pending under statutes in effect before October 1, 1981, nor do they apply retroactively to terminate the detention of a person previously committed under statutes in effect before October 1, 1981. However, 90 days after October 1, 1981, the provisions of this Act apply to all persons committed under statutes in effect before October 1, 1981."

Sec. 47.30.670. Standards for voluntary admission. A person 14 years of age or older may be voluntarily admitted to a treatment facility if he is suffering from mental illness and he voluntarily signs the admission papers. (§ 1 ch 84 SLA 1981)

Sec. 47.30.675. Notice of rights. (a) Upon the application of a person for voluntary admission, or at the time a person admitted under AS 47.30.690 reaches the age of 14, he shall be given a copy of the following documents which shall be explained to him as necessary:

(1) notice of rights as set out in AS 47.30.825 — 47.30.865 and an explanation of any document served upon him; and

(2) notice that should he desire to leave at a time when the treatment facility determines that he is mentally ill and as a result is likely to cause serious harm to himself or others or to gravely disabled, the facility could initiate commitment proceedings against him.

(b) If an applicant for voluntary admission does not understand English, the explanation shall be given in a language he understands. (§ 1 ch 84 SLA 1981)

Sec. 47.30.680. Discharge of voluntary patients. A patient who no longer meets the standards established in AS 47.30.670 shall be discharged from the treatment facility. (§ 1 ch 84 SLA 1981)

Sec. 47.30.685. Notice of intent to leave facility; commitment. A voluntary patient who is 14 years of age or older and who desires to leave a treatment facility must submit to the facility a written notice of intent to leave on a form provided to him by the facility. Upon immediate investigation, the patient shall be evaluated in writing and discharged immediately or given written notice that involuntary commitment proceedings will be initiated against him. The treatment facility may detain the patient for no more than 48 hours after receipt of the patient's notice of intent to leave in order to initiate involuntary commitment proceedings. (§ 1 ch 84 SLA 1981)

Sec. 47.30.690. Admission of minors under 14 years of age. (a) A minor under the age of 14 may be admitted for 21 days evaluation, diagnosis, and treatment at a designated treatment facility if his parent or guardian signs the admission papers and if, in the opinion of the professional person in charge,

(1) he is gravely disabled or is suffering from mental illness and as a result he is likely to cause serious harm to himself or others;

(2) there is no less restrictive alternative available for his treatment; and

(3) there is reason to believe that the patient's mental condition could be improved by the course of treatment.

(b) The minor may be released by the treatment facility at any time during the 21-day period if the professional person in charge or his designated mental health professional determines the minor would no longer benefit from continued hospitalization and the minor is not dangerous. The minor's parents or his guardian must be notified by the facility of the contemplated release and that, unless they initiate involuntary commitment proceedings, the minor will be released. (§ 1 ch 84 SLA 1981)

Sec. 47.30.695. Notice of request for release of minors under 14 years of age from detention and commitment. The parent or guardian of a minor who is less than 14 years of age may request and obtain immediate release of the minor at any time, unless as the result of mental illness, the minor is likely to cause serious harm to himself or others (§ 1 ch 84 SLA 1981)

---

Editor's notes. — Section 6, ch. 84, SLA 1981, provided: "Except as provided in this Act, the provisions of AS 47.30.660 — 47.30.815 enacted by sec. 1 of this Act do not in themselves impair any action taken in a proceeding pending under statutes in effect before October 1, 1981, nor do they apply retroactively to terminate the detention of a person previously committed under statutes in effect before October 1, 1981. However, 90 days after October 1, 1981, the provisions of this Act apply to all persons committed under statutes in effect before October 1, 1981."

Sec. 47.30.700. Initiation of involuntary commitment procedures. (a) Upon petition of any adult, a judge shall immediately conduct a screening investigation or direct a local mental health professional employed by the department or by a local mental health program that receives money from the department under AS 47.30.520 — 47.30.620 or another mental health professional designated by the judge, to conduct a screening investigation of the person alleged to be mentally ill and, as a result of that condition, alleged to be gravely disabled or to present a likelihood of serious harm to himself or others. Within 48 hours after the completion of the screening investigation, a judge may issue an ex parte order orally or in writing, stating that there is probable cause to believe the respondent is mentally ill and that condition causes the respondent to be gravely disabled or to present a likelihood of serious harm to himself or others. The court shall provide findings on which the conclusion is based, appoint an attorney to represent the respondent, and may direct that a peace officer take the respondent into custody and deliver him to the nearest appropriate facility for emergency examination or treatment. The ex parte order shall be provided to the respondent and made a part of the respondent's clinical record. The court shall confirm an oral order in writing within 24 hours after it is issued

(b) The petition required in (a) of this section shall allege that the respondent is reasonably believed to present a likelihood of serious harm to himself or others or is gravely disabled as a result of mental illness and shall specify the factual information on which that belief is based including the names and addresses of all persons known to the petitioner who have knowledge of those facts through personal observation. (§ 1 ch 84 SLA 1981)

Sec. 47.30.705. Emergency detention for evaluation. A peace officer who has probable cause to believe that a person is gravely disabled or is suffering from mental illness and is likely to cause serious harm to himself or others of such immediate nature that considerations of safety do not allow initiation of involuntary commitment procedures set out in AS 47.30.700, may cause the person to be taken into custody and delivered to the nearest evaluation facility. A correctional facility may be used as an emergency evaluation facility if an evaluation facility is not available. Upon arrival at the evaluation facility, the peace officer shall complete an application for examination of the person in custody and be interviewed by a mental health professional at the facility. (§ 1 ch 84 SLA 1981)

Sec. 47.30.710. Examination. (a) A respondent who is delivered under AS 47.30.700 to 47.30.705 for emergency examination and treatment to an evaluation facility shall be examined and evaluated as to his mental and physical condition by a mental health professional and by a physician within 24 hours after arrival at the facility.

(b) If the mental health professional who performs the emergency examination has reason to believe that the respondent is (1) mentally ill and that condition causes the respondent to be gravely disabled or to present a likelihood of serious harm to himself or others, and (2) is in need of care or treatment, the mental health professional may hospitalize him, or arrange for hospitalization, on an emergency basis. If a judicial order has not been obtained under AS 47.30.700, the mental health professional shall apply for an ex parte order authorizing hospitalization for evaluation. (§ 1 ch 84 SLA 1981)

Editor's notes. — The word "respondent" was substituted for the word "person" in the first sentence of subsection (b) by the revisor of statutes pursuant to AS 01.05.031.

Sec. 47.30.715. Acceptance of order. When a facility receives a proper order for evaluation, it must accept the order and the respondent for an evaluation period not to exceed 72 hours. The facility shall promptly notify the court of the date and time of the respondent's arrival. The court shall set a date, time and place for a 21-day commitment hearing, to be held if needed within 72 hours after the respondent's arrival, and the court shall notify the facility, the respondent, his attorney, and the prosecuting attorney of the hearing;

arrangements. Evaluation personnel, when used, shall similarly notify the court of the date and time when they first met with the respondent. (§ 1 ch 84 SLA 1981)

Sec. 47.30.720. Release before expiration of 72-hour period. If at any time in the course of the 72-hour period the mental health professionals conducting the evaluation determine that the respondent does not meet the standards for commitment specified in AS 47.30.700, the respondent shall be discharged from the facility or the place of evaluation by evaluation personnel and the petitioner and the court so notified. (§ 1 ch 84 SLA 1981)

Sec. 47.30.725. Commitment proceeding rights; notification. (a) When a respondent is detained for evaluation under AS 47.30.660 — 47.30.915, he shall be immediately notified orally and in writing of his rights under this section. Notification shall be in a language understood by the respondent. His guardian, if any, and if the respondent requests, an adult designated by the respondent, shall also be notified of the respondent's rights under this section.

(b) Unless a respondent is released or voluntarily admits himself for treatment within 72 hours of his arrival at the facility or, if he is evaluated by evaluation personnel, within 72 hours from the beginning of his meeting with evaluation personnel, he is entitled to a court hearing to be set for not later than the end of that 72-hour period to determine whether there is cause to detain him after the 72 hours have expired for up to an additional 21 days on the grounds that he is gravely disabled or mentally ill and as a result presents a likelihood of serious harm to himself or others. The facility or evaluation personnel shall give notice to the court of the releases and voluntary admissions under AS 47.30.700 — 47.30.820.

(c) The respondent has a right to communicate immediately, at the department's expense, with his guardian, if any, or an adult designated by the respondent and the attorney designated in the ex parte order, or an attorney of the respondent's choice.

(d) The respondent has the right to be represented by an attorney, to present evidence, and to cross-examine witnesses who testify against him at the hearing.

(e) The respondent has the right to be free of the effects of medication and other forms of treatment to the maximum extent possible before the 21-day commitment hearing; however, the facility or evaluation personnel may treat him with medication under prescription by a licensed physician or by a less restrictive alternative of his preference if, in the opinion of a licensed physician in the case of medication, or of a mental health professional in the case of alternative treatment, the treatment is necessary to

(1) prevent bodily harm to the respondent or others;

(2) prevent such deterioration of the respondent's mental condition that subsequent treatment might not enable him to recover; or

(3) allow the respondent to prepare for and participate in the proceedings.

(f) A respondent, if he is represented by counsel, may waive, orally or in writing, the 72-hour time limit on the 21-day commitment hearing and have the hearing set for a date no more than seven calendar days after his arrival at the facility. The respondent's counsel shall immediately notify the court of the waiver. (§ 1 ch 84 SLA 1981)

Sec. 47.30.730. Procedure for 21-day commitment; petition for commitment. (a) In the course of the 72-hour evaluation period, a petition for commitment to a treatment facility may be filed in court. The petition must be signed by two mental health professionals who have examined the respondent, one of whom is a physician. The petition must

(1) allege that the respondent is mentally ill and as a result is likely to cause harm to himself or others or is gravely disabled;

(2) allege that the evaluation staff has considered but has not found that there are any less restrictive alternatives available that would adequately protect the respondent or others; or, if a less restrictive involuntary form of treatment is sought, specify the treatment and the basis for supporting it;

(3) allege with respect to a gravely disabled respondent that there is reason to believe that the respondent's mental condition could be improved by the course of treatment sought;

(4) allege that a specified treatment facility or less restrictive alternative that is appropriate to the respondent's condition has agreed to accept the respondent;

(5) allege that the respondent has been advised of the need for, but has not accepted, voluntary treatment, and request that the court commit the respondent to the specified treatment facility or less restrictive alternative for a period not to exceed 21 days;

(6) list the prospective witnesses who will testify in support of commitment or involuntary treatment;

(7) list the facts and specific behavior of the respondent supporting the allegation in (1) of this subsection.

(b) A copy of the petition shall be served on the respondent, his attorney, and his guardian, if any, before the 21-day commitment hearing. (§ 1 ch 84 SLA 1981)

Sec. 47.30.735. 21-day commitment. (a) Upon receipt of a proper petition for commitment, the court shall hold a hearing at the date and time previously specified according to procedures set out in AS 47.30.715.

(b) The hearing shall be conducted in a physical setting least likely to have a harmful effect on the mental or physical health of the

respondent, within practical limits. At the hearing, in addition to other rights specified in AS 47.30.660 — 47.30.915, the respondent has the right

(1) to be present at the hearing; this right may be waived only with the respondent's informed consent; if the respondent is incapable of giving informed consent, the respondent may be excluded from the hearing only if the court, after hearing, finds that the incapacity exists and that there is a substantial likelihood that the respondent's presence at the hearing would be severely injurious to his mental or physical health;

(2) to view and copy all petitions and reports in the court file of his case;

(3) to have the hearing open or closed to the public as he elects;

(4) to be proceeded against according to the rules of evidence applicable to civil proceedings;

(5) to have an interpreter if he does not understand English;

(6) to present evidence on his behalf;

(7) to cross-examine witnesses who testify against him;

(8) to remain silent.

(c) At the conclusion of the hearing the court may commit the respondent to a treatment facility for not more than 21 days if it finds, by clear and convincing evidence, that the respondent is mentally ill and as a result is likely to cause harm to himself or others or is gravely disabled.

(d) If the court finds that there is a viable less restrictive alternative available and that the respondent has been advised of and refused voluntary treatment through the alternative, the court may order the less restrictive alternative treatment for not more than 21 days if the program accepts the respondent.

(e) The court shall specifically state to the respondent, and give him written notice, that if commitment or other involuntary treatment beyond the 21 days is to be sought, the respondent shall have the right to a full hearing or jury trial. (§ 1 ch 84 SLA 1981)

Sec. 47.30.740. Procedure for 90-day commitment following 21-day commitment. (a) At any time during the respondent's 21-day commitment, the professional person in charge, or his professional designee, may file with the court a petition for a 90-day commitment of that respondent. The petition must include all material required under AS 47.30.730(a) except that references to "21 days" shall be read as "90 days"; and

(1) allege that the respondent has attempted to inflict or has inflicted serious bodily harm upon himself or another since his acceptance for evaluation, or that he was committed initially as a result of conduct in which he attempted or inflicted serious bodily harm upon himself or another, or that he continues to be gravely disabled, or that he demonstrates a current intent to carry out plans of serious harm to himself or another;

(2) allege that the respondent has received appropriate and adequate care and treatment during his 21-day commitment;

(3) be verified by the professional person in charge, or his professional designee, during the 21-day commitment.

(b) The court shall have copies of the petition for 90-day commitment served upon the respondent, his attorney, and his guardian, if any. The petition for 90-day commitment and proofs of service shall be filed with the clerk of the court, and a date for hearing shall be set, by the end of the next judicial day, for not later than five judicial days from the date of filing of the petition. The clerk shall notify the respondent, his attorney, and the petitioner of the hearing date at least three judicial days in advance of the hearing.

(c) Findings of fact relating to the respondent's behavior made at a 21-day commitment hearing under AS 47.30.735 shall be admitted as evidence and may not be rebutted except that newly discovered evidence may be used for the purpose of rebutting the findings. (§ 1 ch 84 SLA 1981)

Sec. 47.30.745. 90-day commitment hearing rights. (a) A respondent subject to a petition for 90-day commitment has, in addition to the rights specified elsewhere in AS 47.30.350 — 47.30.915, or otherwise applicable, the rights enumerated in this section. Written notice of these rights shall be served on the respondent, his attorney, his guardian, if any, and may be served on an adult designated by the respondent at the time the petition for 90-day commitment is served. An attempt shall be made by oral explanation to insure that the respondent understands the rights enumerated in the notice. If the respondent does not understand English, the explanation shall be given in a language he understands.

(b) Unless the respondent is released or voluntarily admits himself following the filing of a petition and before the hearing, he is entitled to a judicial hearing within five judicial days of the filing of the petition as set out in AS 47.30.740(b) to determine if he is mentally ill and as a result is likely to cause harm to himself or others, or if he is gravely disabled. If the respondent voluntarily admits himself following the filing of the petition, the voluntary admission constitutes a waiver of any hearing rights under AS 47.30.740 or under AS 47.30.685. If at any time during the respondent's voluntary admission under this subsection, the respondent submits to the facility a written notice of intent to leave, the professional person in charge may file with the court a petition for 120 day commitment of the respondent under AS 47.30.770. The 120-day commitment hearing shall be scheduled for a date not earlier than 90 days after the respondent's voluntary admission.

(c) The respondent is entitled to a jury trial upon request filed with the court if the request is made at least two judicial days before the hearing. If the respondent requests a jury trial, the hearing may be

continued for no more than 10 calendar days. The jury shall consist of six persons.

(d) If a jury trial is not requested, the court may still continue the hearing at the respondent's request for no more than 10 calendar days.

(e) The respondent has a right to retain an independent licensed physician or other mental health professional to examine him and to testify on his behalf. Upon request by an indigent respondent, the court shall appoint an independent licensed physician or other mental health professional to examine him and testify on his behalf. The court shall consider an indigent respondent's request for a specific physician or mental health professional. A motion for the appointment may be filed in court at any reasonable time before the hearing and shall be acted upon promptly. Reasonable fees and expenses for expert examiners shall be determined by the rules of court.

(f) The proceeding shall in all respects be in accord with constitutional guarantees of due process and, except as otherwise specifically provided in AS 47.30.700 — 47.30.915, the rules of evidence and procedure in civil proceedings.

(g) Until the court issues a final decision, the respondent shall continue to be treated at the treatment facility unless the petition for 90-day commitment is withdrawn. If no decision has been made within 20 days of filing of the petition, not including extensions of time due to jury trial or other requests by the respondent, he shall be released. (§ 1 ch 84 SLA 1981)

Sec. 47.30.750. Conduct of hearing. The hearing under AS 47.30.745 shall be conducted in the same manner, and with the same rights for the respondent, as set out in AS 47.30.735(b). (§ 1 ch 84 SLA 1981)

Editor's notes. — The words "under AS 47.30.745" was added following "hearing" by the revisor of statutes pursuant to AS 01.05.031.

Sec. 47.30.755. Court order. (a) After the hearing and within the time limit specified in AS 47.30.745, the court may commit the respondent to a treatment facility for no more than 90 days if the court or jury finds by clear and convincing evidence that the respondent is mentally ill and as a result is likely to cause harm to himself or others, or is gravely disabled.

(b) If the court finds that there is a less restrictive alternative available and that the respondent has been advised of and refused voluntary treatment through the alternative, the court may order the less restrictive alternative treatment after acceptance by the program of the respondent for a period not to exceed 90 days. (§ 1 ch 84 SLA 1981)

Sec. 47.30.760. Placement at closest facility. Treatment shall always be available at a state operated hospital, however, if space is

available and upon acceptance by another treatment facility, a respondent who is committed by the court shall be placed by the department at the designated treatment facility closest to his home unless the court finds that

(1) another treatment facility in the state has a program more suited to the respondent's condition, and this interest outweighs the desirability of the respondent being closer to home;

(2) another treatment facility in the state is closer to the respondent's friends or relatives who could benefit him through their visits and communications; or

(3) the respondent wants to be further removed from his home, and the mental health professionals who sought his commitment concur in the desirability of removed placement. (§ 1 ch 84 SLA 1981)

Sec. 47.30.765. Appeal. The respondent has the right to an appeal from any order of involuntary commitment. The court shall inform the respondent of this right. (§ 1 ch 84 SLA 1981)

Sec. 47.30.770. Additional 120-day commitment. (a) The respondent shall be released from involuntary treatment at the expiration of 90 days unless the professional person in charge files a petition for a 120-day commitment conforming to the requirements of AS 47.30.740(a) except that all references to "21-day commitment" shall be read as "the previous 90-day commitment" and all references to "90-day commitment" shall be read as "120-day commitment".

(b) The procedures for service of the petition, notification of rights, and judicial hearing shall be as set out in AS 47.30.740 — 47.30.750. If the court or jury finds by clear and convincing evidence that the grounds for 90-day commitment as set out in AS 47.30.755 are present, the court may order the respondent committed for an additional treatment period not to exceed 120 days from the date on which the first 90-day treatment period would have expired.

(c) Successive 120-day commitments are permissible on the same ground and under the same procedures as the original 120-day commitment. An order of commitment may not exceed 120 days.

(d) Findings of fact relating to the respondent's behavior made at a 21-day commitment hearing under AS 47.30.735, a 90-day commitment hearing under AS 47.30.750, or a previous 120-day commitment hearing under this section shall be admitted as evidence and may not be rebutted except that newly discovered evidence may be used for the purpose of rebutting the findings. (§ 1 ch 84 SLA 1981)

Sec. 47.30.775. Commitment of minors. The provisions of AS 47.30.700 — 47.30.815 apply to minors. However, all notices required to be served on the respondent in AS 47.30.700 — 47.30.815 shall also be served on the parent or guardian of a respondent who is a minor, and parents or guardians of a minor respondent shall be notified that they may appear as parties in any commitment proceeding concerning the

minor and that as parties they are entitled to retain their own attorney or have one appointed for them by the court. A minor respondent has the same rights to waiver and informed consent as an adult respondent under AS 47.30.660 — 47.30.915; however, he shall be represented by counsel in waiver and consent proceedings. (§ 1 ch 84 SLA 1981)

Sec. 47.30.780. Early discharge. The professional person in charge shall at any time discharge a respondent on the ground that the respondent is no longer gravely disabled or likely to cause serious harm as a result of mental illness. A certificate to this effect shall be sent to the court which shall enter an order officially terminating the involuntary commitment. (§ 1 ch 84 SLA 1981)

Sec. 47.30.785. Authorized absences. A respondent undergoing involuntary treatment on an inpatient basis under AS 47.30.700 — 47.30.815 may be authorized to be absent from the treatment facility during times specified by the professional person in charge, or his professional designee, when an authorization to be absent is in the best interests of the respondent and he is not likely to cause harm to himself or others. (§ 1 ch 84 SLA 1981)

Sec. 47.30.790. Return from unauthorized absence. When a respondent undergoing involuntary treatment on an inpatient basis is absent from the treatment facility without, or in excess of, authorization under AS 47.30.785, the professional person in charge, or his professional designee, may contact the appropriate peace officers who shall take the respondent into custody and return him to the treatment facility. If it is determined by the professional person in charge to be necessary, a member of the treatment facility staff shall accompany the peace officers when they take the respondent into custody. (§ 1 ch 84 SLA 1981)

Sec. 47.30.795. Involuntary outpatient care for committed persons. (a) A respondent who was originally committed to involuntary inpatient care under AS 47.30.700 — 47.30.915 may be released before the expiration of his commitment period if a provider of outpatient care accepts him for specified outpatient treatment for a period of time not to exceed the duration of his commitment, and if the professional person in charge, or his professional designee, finds that

(1) it is not necessary to treat the respondent as an inpatient to prevent him from harming himself or others; and

(2) there is reason to believe that the respondent's mental condition would improve as a result of the outpatient treatment.

(b) A copy of the conditions for early release shall be given to the respondent, his attorney, his guardian, if any, the provider of outpatient care, and the court.

(c) If during the commitment period the provider of outpatient care determines that the respondent can no longer be treated on an

outpatient basis because he is likely to cause harm to himself or others or is gravely disabled, the provider shall give the respondent oral and written notice that he must return to the treatment facility within 24 hours, with copies to the respondent's attorney, his guardian, if any, the court, and the inpatient treatment facility. If the respondent fails to arrive at the treatment facility within 24 hours after receiving the notice, the professional person in charge may contact the appropriate peace officers who shall take the respondent into custody and transport him to the facility. If it is determined by the professional person in charge to be necessary, a member of the treatment facility staff shall accompany the peace officers when they take the respondent into custody.

(d) If the provider of outpatient care determines that the respondent will require continued outpatient care after the expiration of his commitment period, the provider may initiate further commitment proceedings as if he were the professional person in charge, and the provisions of AS 47.30.660 — 47.30.915 apply, except that provisions relating to inpatient treatment shall be read as applicable to outpatient treatment. (§ 1 ch 84 SLA 1981)

Sec. 47.30.800. Conversion of involuntary outpatient treatment to inpatient commitment. (a) A respondent ordered by the court under the provisions of AS 47.30.700 — 47.30.915 to receive involuntary outpatient treatment may be required to undergo inpatient treatment when the provider of outpatient care finds that (1) the respondent is mentally ill and is likely to cause serious harm to himself or others or is still gravely disabled; (2) the respondent's behavior since the hearing resulting in court-ordered treatment indicates that he now needs inpatient treatment to protect himself or others; (3) there is reason to believe that the respondent's mental condition will improve as a result of inpatient treatment; and (4) there is an inpatient facility appropriate to the respondent's need which will accept him as a patient. Treatment for these respondents shall be available at state-operated hospitals at all times.

(b) Upon making the findings specified in (a) of this section, the provisions of AS 47.30.795(b) relating to notice and AS 47.30.745 relating to hearing apply. (§ 1 ch 84 SLA 1981)

Sec. 47.30.805. Computing periods of time. (a) Except as provided in (b) of this section,

(1) computations of a 72 hour evaluation period do not include Saturdays, Sundays, legal holidays, or any period of time necessary to transport the respondent to the treatment facility;

(2) a 21-day commitment period expires at the end of the 21st day after the 72 hours following initial acceptance;

(3) a 90 day commitment period expires at the end of the 90th day after the expiration of a 21 day period of treatment;

(4) a 120-day commitment period expires at the end of the 120th day, after the expiration of a 90-day period of treatment or previous 120-day period, whichever is applicable.

(b) When a respondent has failed to appear or absented himself contrary to any order properly made or entered under AS 47.30.660 — 47.30.915, the relevant commitment period shall be extended for a period of time equal to the respondent's absence if written notice of absence is promptly provided to the respondent's attorney and his guardian, if there is one, and if, within 24 hours after the respondent has returned to the evaluation or treatment facility, written notice of the corresponding extension and the reason for it is given to the respondent, his attorney, his guardian, if any, and to the court. (§ 1 ch 84 SLA 1981)

Sec. 47.30.810. Habeas corpus. Nothing in AS 47.30.660 — 47.30.915 may be construed as limiting a person's right to a writ of habeas corpus. (§ 1 ch 84 SLA 1981)

Sec. 47.30.815. Limitation of liability; penalty for false application. (a) A person acting in good faith upon either actual knowledge or reliable information who makes application for evaluation or treatment of another person under AS 47.30.700 — 47.30.915 is not subject to civil or criminal liability.

(b) The following persons may not be held civilly or criminally liable for detaining a person under AS 47.30.700 — 47.30.915 or for releasing a person under AS 47.30.700 — 47.30.915 at or before the end of the period for which the person was admitted or committed for evaluation or treatment if the persons have performed their duties in good faith and without gross negligence:

(1) an officer of a public or private agency;

(2) the superintendent, the professional person in charge, the professional designee of the professional person in charge, and the attending staff of a public or private agency;

(3) a public official performing functions necessary to the administration of AS 47.30.700 — 47.30.915;

(4) a peace officer responsible for detaining a person under AS 47.30.700 — 47.30.915.

(c) A person who wilfully initiates an involuntary commitment procedure under AS 47.30.700 without having good cause to believe that the other person is suffering from a mental illness and as a result is gravely disabled or likely to cause serious harm to himself or others, is guilty of a felony. (§ 1 ch 84 SLA 1981)

Article 9. Patient Rights.

Section	Section
825. Patient rights: Medical	845. Confidential records
840. Prohibition of experimental treatments	850. Expungement of records
835. Civil rights not impaired	855. Posting of rights
840. Right to privacy and personal possessions	860. Notices in languages other than English
	865. Discrimination prohibited

Sec. 47.30.825. Patient rights: Medical. Each patient who is receiving services under AS 47.30.660 — 47.30.915 has the following rights:

(1) A patient, or his counsel, guardian, or the adult designated in accordance with AS 47.30.725 if the patient is mentally incapable of participation, is entitled to participate in formulating his individualized treatment plan and to participate in the evaluation process as much as possible, at minimum to the extent of requesting specific forms of therapy, inquiring why specific therapies are or are not included in his treatment program, and being informed as to his present medical and psychological condition and prognosis. The treating physician may not withhold any of this information from the patient.

(2) A patient has the right to know the name of medication that he is asked to take, what its purpose is, and what side effects may occur with this medication. If the patient is incapable of understanding the purpose and side effects of the medication, the treating physician or mental health professional shall explain it to the patient's counsel or guardian or, if there is no guardian, the adult designated in accordance with AS 47.30.725.

(3) A locked quiet room, or other form of physical restraint, may not be used, except as provided in this paragraph, unless a patient is likely to physically harm himself or others unless restrained. The form of restraint used shall be that which is in the patient's best interest and which constitutes the least restrictive alternative available. When practicable, the patient shall be consulted as to his preference among forms of adequate, medically advisable restraints including medication, and his preference shall be considered. Nothing in this section is intended to limit the right of staff to use a quiet room at the patient's request or with his knowing concurrence when considered in the best interests of the patient. Patients placed in a quiet room or other physical restraint shall be checked at least every 15 minutes or more often if good medical practice so indicates. Patients in a quiet room must be visited by a staff member at least once every hour and must be given adequate food and drink and access to bathroom facilities. At no time may a patient be kept in a quiet room or other form of physical restraint against his will longer than necessary to accomplish the purposes set out in this paragraph. All uses of a quiet room or other restraint shall be recorded in the patient's medical record, the information including but not limited to the reasons for its use, the duration of use, and the name of the authorizing staff member.

(4) A patient has the right to be free from unnecessary or excessive medication. Psychotropic medication shall be administered only on the order of a licensed physician when the physician determines that such medication is in the best interest of the patient or will prevent serious harm to others.

(5) A patient capable of giving informed consent has the absolute right to accept or refuse electro-convulsive therapy or aversive conditioning. A patient who lacks substantial capacity to make this decision may not be given such therapy or conditioning without a court order.

(6) In no event may treatment include psychosurgery, lobotomy, or other comparable form of treatment without specific informed consent of the patient, including a minor unless he is clearly too young or disabled to give an informed consent in which case the consent of his legal guardian is required. In addition, such treatment may not be given without a court order after hearing compatible with full due process.

(7) When, in the written opinion of a patient's attending physician, a true medical emergency exists and a surgical operation is necessary to save the life, physical health, eyesight, hearing or member of the patient, the professional person in charge, or his professional designee, may give consent to the surgical operation if time will not permit obtaining the consent of the proper relatives or guardian or appropriate judicial authority. However, an operation may not be authorized if the patient is not a minor and knowingly withholds consent on religious grounds.

(8) A patient upon discharge shall be given a discharge plan specifying the kinds and amount of care and treatment he should have after discharge and such other steps as he might take to benefit his mental health after leaving the facility. The patient shall have the right to participate, as far as practicable, in formulating his discharge plan. A copy of the plan shall be given to the patient, his guardian, the court if appropriate, and any follow-up agencies. (§ 1 ch 84 SLA 1981)

Sec. 47.30.830. Prohibition of experimental treatments. (a) Experimental treatments involving any significant risk of physical or psychological harm may not be administered to a patient.

(b) If the personnel of an evaluation or treatment facility are uncertain as to whether a proposed treatment is experimental or is experimental as applied to a particular patient or would involve a significant risk of mental or physical harm to the patient, the matter may be referred to the commissioner for a determination. The patient, his attorney, his guardian, if any, and an adult designated by the patient, shall, simultaneously with the referral to the commissioner, be provided with copies of all the documents by which the referral is made and shall have the opportunity to provide evidence to the commissioner on the question.

(c) A determination by the commissioner that a treatment is experimental and entails significant risks of mental or physical harm is binding upon all persons involved in the administration of treatment to a patient. (§ 1 ch 84 SLA 1981)

Sec. 47.30.835. Civil rights not impaired. (a) A person may not deny to a person who is undergoing evaluation or treatment under AS 47.30.660 — 47.30.915 a civil right, including but not limited to, the right to free exercise of religion and the right to dispose of property, sue and be sued, enter into contractual relationships, and vote. A person who violates this subsection commits the crime of interference with constitutional rights under AS 11.76.110.

(b) Court-ordered evaluation or treatment under AS 47.30.660 — 47.30.915 is not a determination of legal incapacity under AS 13.26.005 — 13.26.330. (§ 1 ch 84 SLA 1981)

Sec. 47.30.840. Right to privacy and personal possessions. A person undergoing evaluation or treatment under AS 47.30.660 — 47.30.915 shall

(1) not be photographed without his consent and that of his guardian if a minor, except that he may be photographed upon admission to a facility for identification and for administrative purposes of the facility; all photographs shall be confidential and may only be released by the facility to the patient or his designee unless a court orders otherwise;

(2) at the time of admission to an evaluation or treatment facility, have reasonable precautions taken by the staff to inventory and safeguard his personal property; a copy of the inventory signed by the staff member making it shall be given to the patient and made available to his attorney and any other person authorized by the patient to inspect the document;

(3) have access to an individual storage space for his private use while undergoing evaluation or treatment;

(4) be permitted to wear his own clothing, to keep and use his own personal possessions including his toilet articles if they are not considered unsafe for him or other patients who might have access to them, and to keep and be allowed to spend a reasonable sum of his own money for his own needs and comfort;

(5) be allowed to have visitors at reasonable times;

(6) have ready access to letter writing materials, including stamps, and have the right to send and receive unopened mail;

(7) have reasonable access to a telephone, both to make and receive confidential calls. (§ 1 ch 84 SLA 1981)

Sec. 47.30.845. Confidential records. Information and records obtained in the course of a screening investigation, evaluation, examination, or treatment are confidential and are not public records, except as the requirements of a hearing under AS 47.30.660 — 47.30.915 may

necessitate a different procedure. Information and records may be copied and disclosed under regulations established by the department only to

(1) a physician or a provider of health, mental health, or social and welfare services involved in caring for, treating, or rehabilitating the patient;

(2) the patient or an individual to whom the patient has given written consent to have information disclosed;

(3) a person authorized by a court order;

(4) a person doing research or maintaining health statistics, if the anonymity of the patient is assured, and the facility recognizes the project as a bona fide research or statistical undertaking;

(5) the division of corrections in a case in which a prisoner confined to the state prison is a patient in the state hospital on authorized transfer either by voluntary admission or by court order;

(6) a governmental or law enforcement agency when necessary to secure the return of a patient who is on unauthorized absence from a facility where the patient was undergoing evaluation or treatment. (§ 1 ch 84 SLA 1981)

Sec. 47.30.850. Expungement of records. Following the discharge of a respondent from a treatment facility or the issuance of a court order denying a petition for commitment, the respondent may at any time move to have all court records pertaining to the proceedings expunged on condition that he file a full release of all claims of whatever nature arising out of the proceedings and the statements and actions of persons and facilities in connection with the proceedings. (§ 1 ch 84 SLA 1981)

Sec. 47.30.855. Posting of rights. The rights set out in AS 47.30.825 — 47.30.855 shall be prominently posted in all treatment facilities in places accessible to all patients. A patient who does not understand English shall have his rights explained to him in a language he understands. (§ 1 ch 84 SLA 1981)

Sec. 47.30.860. Notices in languages other than English. When practicable all documents and notices required by AS 47.30.660 — 47.30.915 to be served on a respondent, or on his parents, guardian or adult designee, shall be explained in a language the person understands if he is not competent in English. (§ 1 ch 84 SLA 1981)

Sec. 47.30.865. Discrimination prohibited. (a) The fact that a person is or has been evaluated or treated for mental illness may not be a basis for discrimination in

(1) seeking employment;

(2) beginning or continuing professional practice or previous occupation.

(3) obtaining or retaining housing;

(4) obtaining or retaining licenses or permits, including but not limited to a motor vehicle license, motor vehicle operator's and chauffeur's license, and a professional or occupational license.

(b) Applications for positions, licenses, and housing may not contain requests for information concerning evaluation or treatment experiences.

(c) It is unlawful for a person to aid, abet, incite, compel, or coerce the doing of an act forbidden under this section or to attempt to do so. (§ 1 ch 84 SLA 1981)

Article 10. Miscellaneous Provisions.

Section
870 Transportation
875 Nonresident patients
880 Interstate compact
885 Rights outside state
890 Provision for personal needs upon discharge
895 Disposition of personal property and unclaimed money
900 Disposition of money and personal property subject to claim
905 Fees and expenses for judicial proceedings
910 Liability for expense of placement in a treatment facility
915 Definitions

Sec. 47.30.870. Transportation. When a person is to be involuntarily committed to a facility, the department shall arrange, and is authorized to pay for, the person's necessary transportation to the designated facility accompanied by appropriate persons and if necessary by a peace officer. The department shall pay return transportation of a person, his escorts, and if necessary a peace officer, after a determination that the person is not committable, at the end of a commitment period, or at the end of a voluntary stay at a treatment facility following an evaluation conducted in accordance with AS 47.30.715. When advisable, one or more relatives or friends shall be permitted to accompany the person. The department may pay necessary travel, housing, and meal expenses incurred by one relative or friend in accompanying the person if the department determines that the person's best interests require that he be accompanied by the relative or friend and the relative or friend is indigent. (§ 1 ch 84 SLA 1981)

Sec. 47.30.875. Nonresident patients. (a) The admission papers of a person who is admitted to a treatment facility under AS 47.30.660 — 47.30.915 shall include a statement as to his residence. The department may return a patient who is not a resident of the state to the state of his residence with court approval if the person has been committed. If the state in which he has residence does not accept him as a patient, the person shall be treated as a resident of this state under the provisions of AS 47.30.660 — 47.30.915.

(b) To facilitate the return of nonresident patients the department may enter into a reciprocal agreement or compact with another state providing for the prompt return under appropriate supervision of residents of that state who are mentally ill. A mentally ill resident of this state who has been placed in a facility outside this state may be admitted with the approval of the department to a treatment facility in the state designated by the department. The department may enter into reciprocal agreements or contracts with another state providing for custody, care or treatment, or return of mentally ill residents of this state by the other state and for the custody and care or treatment of mentally ill residents of that state by this state on a reimbursable basis. A resident of this state who has been committed in another state and is returned in accordance with this section shall, within 72 hours of his admission to the designated facility, be examined. After examination the mental health professional in charge shall release him or shall petition for involuntary commitment as prescribed in AS 47.30.740.

(c) In taking action under (a) and (b) of this section, consideration shall be given to the best interests of the patient, particularly to the relationship of the patient to his family, legal guardian, or friends to maintain relationships and encourage visits beneficial to the patient. (§ 1 ch 84 SLA 1981)

Sec. 47.30.880. Interstate compact. This state ratifies and adopts by reference "The Interstate Compact on Mental Health" consisting of 14 articles approved on September 30, 1955, by the Northeast State Governments Conference on Mental Health. The department is designated as compact administrator with full power to carry out the purpose of the compact and to make all necessary regulations to implement the compact. (§ 1196 ch 87 SLA 1957; added by § 11 ch 127 SLA 1969; AS 47.30.180)

Editor's notes. — This section derives from former AS 47.30.180 and was renumbered by the revisor of statutes under AS 01.05.031 to accord with the revision of the mental health statutes in Chapter 84, SLA 1981.

Sec. 47.30.885. Rights outside state. Nothing in AS 47.30.660 — 47.30.915 alters or impairs the application or availability to a patient, while hospitalized in another state under contractual arrangements entered in accordance with AS 47.30.660 — 47.30.915, of the rights, remedies or safeguards provided by the laws of this state. (§ 1 ch 84 SLA 1981)

Sec. 47.30.890. Provision for personal needs upon discharge. The department shall insure that

(1) a patient is not discharged from a treatment facility without suitable clothing; and

(2) a discharged indigent patient is furnished

(A) suitable transportation to his permanent residence in this state or to another suitable place at the discretion of the department; and

(B) a reasonable amount of money to meet his immediate needs. (§ 1 ch 84 SLA 1981)

Sec. 47.30.895. Disposition of personal property and unclaimed money. (a) Articles of personal property and unclaimed money in the custody of a treatment facility that belong to a patient who dies before discharge, or to a patient who leaves the hospital without authority, if unclaimed by the patient or his legal heirs or representatives within one year after the death or departure of the patient, shall be disposed of in the manner prescribed by the department and the proceeds shall be deposited in the state treasury.

(b) If a mentally ill individual has died in a foreign facility and the department desires to recover the patient's personal property under this section, the commissioner or his designated representative may secure the property and for that purpose only is designated the decedent's administrator. Property so recovered shall be disposed of as provided by law. (§ 1 ch 84 SLA 1981)

Sec. 47.30.900. Disposition of money and personal property subject to claim. The department shall make diligent inquiry in every instance after departure without authority or death of a patient, to ascertain the whereabouts of the patient or that of his legal heirs or representatives, and shall turn over to the proper person the money or articles of personal property in the custody of the facility to the credit of the patient. Claims to the money or articles of personal property, including claims by the state, may be presented to the department at any time. If a claim other than by the state is established by clear and convincing evidence more than one year after the death or departure without authority of a patient, it shall be certified to the legislature for consideration and the legislature may pay the claim. (§ 1 ch 84 SLA 1981)

Sec. 47.30.905. Fees and expenses for judicial proceedings. (a) The witnesses, expert witnesses, and the jury in commitment proceedings under AS 47.30.660 — 47.30.915 are entitled to the fees, compensation, and mileage established by the administrative rules of court for other jurors and witnesses. Compensation, mileage, fees, transportation expenses for a respondent, and other expenses arising from evaluation and commitment proceedings shall be audited and allowed by the superior court of the judicial district in which the proceedings are held. To the extent that services of a peace officer are used to carry out the provisions of AS 47.30.660 — 47.30.915, he is entitled to fees and actual expenses from the same source and in the same manner as for his other official duties.

(b) An attorney appointed for a person under AS 47.30.660 — 47.30.915 shall be compensated for his services as follows:

(1) the person for whom an attorney is appointed shall, if he is financially able under standards as to financial capability and indigency set by the court, pay the costs of the legal services;

(2) if the person is indigent under those standards, the costs of the services shall be paid by the state. (§ 1 ch 84 SLA 1981)

Sec. 47.30.910. Liability for expense of placement in a treatment facility. (a) A patient, or his legal representative acting in a representative capacity, or his spouse, or his parents if the patient is under the age of 18, shall pay or contribute to the payment of the charges for the care, transportation, and treatment of the patient when hospitalized under AS 47.30.660 — 47.30.915. Charges assessed after an order for commitment for treatment is issued and charges assessed when a patient is hospitalized at a facility operated by the department, or under a contract for services with the department, may not exceed the actual cost of the care and treatment. The department may order payment by the patient or by the person responsible for payment for the patient's care and treatment under this subsection, according to ability to provide for payment. The department may make necessary investigations to determine the ability to pay and may require sworn statements of income by the patient, or his legal representative acting in a representative capacity, or his spouse or parent. In the exercise of his discretion, the commissioner may impose full liability for the patient's actual cost of care and treatment on the patient, his legal representative, his spouse, or parent for refusal to supply a sworn statement of income. An order for payment shall be issued by the department within six months after the date on which the charge was incurred. The order shall remain in full force and effect unless modified by subsequent court or department order. Liability under this subsection shall be determined as follows: A patient hospitalized under AS 47.30.660 — 47.30.915, or the person responsible for payment of charges for the patient, may be required to pay according to his ability to provide for payment, and in the manner and proportion which the department finds is not detrimental to the patient's rehabilitation. The department shall, at any time that it determines the action will serve the best interests of the state and the patient or the person responsible for payment, relieve the patient or the person responsible for payment from liability for charges for the care, transportation, and treatment of the patient.

(b) As used in (a) of this section, the term "actual cost of the care and treatment" means either the rate provided for by a contract entered into under AS 47.30.660 — 47.30.915, or, in the absence of a contract, a daily rate approved by the department.

(c) The department may charge, or accept from a person money or property, for the care or treatment of an inpatient or outpatient or for

other purposes, even if the payment is not required by an order of the department, so long as the total payments received do not exceed the actual cost of care or treatment.

(d) All money paid by the patient or on his behalf to the department under this section shall be deposited in the state treasury.

(e) If an order for payment is entered by the department under this section, and delinquency in the payment of any amount due the state under the order continues for a period of more than 30 days after the notification to the patient or the legal representative, spouse, or parent of the patient by the department, the state may proceed to collect the amounts due by appropriate proceedings. An action to enforce the collection of payments may only be brought within three years after the date of notification of a delinquent payment.

(f) The orders of the department issued under this section may relate only to charges incurred after October 1, 1981. (§ 1 ch 84 SLA 1981)

Sec. 47.30.915. Definitions. In AS 47.30.660 — 47.30.915

(1) "commissioner" means the commissioner of health and social services;

(2) "court" means a superior court of the state;

(3) "department" means the Department of Health and Social Services;

(4) "designated treatment facility" means a hospital, clinic, institution, center, or other health care facility that has been designated by the department for the treatment or rehabilitation of mentally ill persons and for the receipt of these persons by court-ordered commitment, but does not include correctional institutions;

(5) "evaluation facility" means a health care facility that has been designated or is operated by the department to perform the evaluations described in AS 47.30.660 — 47.30.915; or a medical facility licensed under AS 18.20.020;

(6) "evaluation personnel" means mental health professionals designated by the department to conduct evaluations as prescribed in AS 47.30.660 — 47.30.915 who conduct evaluations in places in which no staffed evaluation facility exists;

(7) "gravely disabled" means a condition in which a person as a result of mental illness, is in danger of physical harm arising from such complete neglect of basic needs for food, clothing, shelter, or personal safety as to render serious accident, illness or death highly probable if care by another is not taken;

(8) "inpatient treatment" means care and treatment rendered inside or on the premises of a treatment facility, or a part or unit of a treatment facility, for a continual period of 24 hours or longer;

(9) "least restrictive alternative" means mental health treatment facilities and conditions of treatment which are

(A) no more harsh, hazardous, or intrusive than necessary to achieve the treatment objectives of the patient; and

(B) involve no restrictions on physical movement nor supervised residence or inpatient care except as reasonably necessary for the administration of treatment or the protection of the patient or others from physical injury;

(10) "likely to cause serious harm" means a person who

(A) poses a substantial risk of imminent and substantial bodily harm to himself, as manifested by recent attempts at suicide or bodily harm;

(B) poses a substantial risk of imminent and substantial bodily harm to one or more other persons as manifested by behavior causing or attempting harm, including, in regard to evaluations, at least one incident within 30 days before the filing of a petition for emergency hospitalization; or

(C) demonstrates a current intent to carry out plans of serious harm to himself or another;

(11) "mental health professional" means a psychiatrist or physician who is licensed to practice in this state or employed by the federal government; a clinical psychologist licensed by the state Board of Psychologists and Psychological Associate Examiners; a psychological associate with a clinical psychology or counseling specialty licensed by the Board of Psychologists and Psychological Associate Examiners; a registered nurse with a master's degree in psychiatric nursing, licensed by the State Board of Nursing; and a social worker with a master's degree in social work and experience in the field of mental illness;

(12) "mental illness" means an organic, mental, or emotional impairment that has substantial adverse effects on an individual's ability to exercise conscious control of his actions or ability to perceive reality or to reason or understand; mental retardation, epilepsy, drug addiction, and alcoholism do not per se constitute mental illness, although persons suffering from these conditions may also be suffering from mental illness;

(13) "peace officer" includes a state police officer, municipal or other local police officer, state, municipal, or other local health officer, public health nurse, United States marshal or deputy United States marshal, or a person authorized by the court;

(14) "provider of outpatient care" means a mental health professional or hospital, clinic, institution, center, or other health care facility designated by the department to accept for treatment patients who are ordered to undergo involuntary outpatient treatment by the court or who are released early from inpatient commitments on condition that they undergo outpatient treatment;

(15) "screening investigation" means the investigation and review of facts which have been alleged to warrant emergency examination or treatment, including interviews with the persons making the allegations, any other significant witnesses who can readily be contacted for interviews, and if possible, the respondent, and an investigation and evaluation of the reliability and credibility of persons

providing information or making allegations;

(16) "state" means a state of the United States, the District of Columbia, the territories and possessions of the United States, and the Commonwealth of Puerto Rico, and, with the approval of the United States Congress, Canada;

(17) "professional person in charge" means the senior mental health professional at a facility or his designee; in the absence of a mental health professional it means the chief of staff or a physician designated by the chief of staff. (§ 1 ch 84 SLA 1981)

Chapter 35. Private Institutions.

Article 1. Foster Homes, Boarding Homes and Institutions.

Section
20 License or permit required
40 Licensing
50 [Repealed]
55 Provisional license
80 Definitions

Sec. 47.35.020. License or permit required. No person may, without a license or permit to do so,

(1) maintain or conduct, for more than 90 days, a boarding home, foster home, group home, institution, or other place for the regular reception or care of children under 16 years of age, or a foster home, group home, or institution for the care of dependent adults; or

(2) engage in the business of receiving or caring for children under 14 years of age, with or without compensation, in a nursery in which five or more children not related by blood or marriage, or legal adoption, to the owner, operator or manager of the business are lodged. (§ 3 ch 17 SLA 1951; am § 3 ch 42 SLA 1973; am § 3 ch 253 SLA 1976; am § 2 ch 45 SLA 1977; am § 1 ch 97 SLA 1982)

Effect of amendments. — The 1982 amendment inserted "for more than 90 days" near the beginning of paragraph (1) and made minor changes in style.

Sec. 47.35.040. Licensing. (a) The department shall issue a license to a facility if it determines that the facility has met the standards for operation set out in AS 47.35.010 — 47.35.080 and the regulations adopted under AS 47.35.010 — 47.35.080.

(b) A license is valid for two years after the date of issuance unless it is revoked or modified. The department may revoke a license or modify a license to provisional status if it determines that a facility is not in compliance with AS 47.35.010 — 47.35.080 or the regulations adopted under AS 47.35.010 — 47.35.080.

(c) The department may waive compliance with a standard set out in regulations adopted under AS 47.35.010 — 47.35.080 if an acceptable alternative is established that meets the purpose of the provision and reasonably assures the well-being of persons in care.

(d) A license may not be transferred to a different facility or owner.

(e) The department shall give written notice of revocation or modification under (b) of this section 30 days before the effective date of the action. However, if the health or well-being of children or dependent adults is in jeopardy, the revocation or modification action is effective immediately upon the issuance of written notice by the department. (§§ 5, 8 ch 17 SLA 1951; am § 4 ch 42 SLA 1973; am § 2 ch 97 SLA 1982)

Effect of amendments. — The 1982 amendment substituted the present provisions of the section for the provisions set out in the main pamphlet.

Sec. 47.35.050. Duration of license or permit.

Repealed by § 5 ch 97 SLA 1982.

Cross references. — For present provisions covering the subject matter of the repealed section, see AS 47.35.040(b) and (e).

Editor's notes. — The repealed section derived from § 6, ch 17, SLA 1951; § 5, ch 42, SLA 1973; § 3, ch 45, SLA 1977.

Sec. 47.35.055. Provisional license. (a) The department shall issue a provisional license to a new facility if the facility submits to the department an acceptable plan for operation that is in conformity with the provisions of AS 47.35.010 — 47.35.080 and the regulations adopted under AS 47.35.010 — 47.35.080. After the department determines that the new facility is operating in conformity with the provisions of AS 47.35.010 — 47.35.080 and the regulations adopted under AS 47.35.010 — 47.35.080, the department shall issue a license under AS 47.35.040 to the facility.

(b) The department may issue a provisional license to a facility that is licensed under AS 47.35.040 but is temporarily unable to conform to the provisions of AS 47.35.010 — 47.35.080 or the regulations adopted under AS 47.35.010 — 47.35.080.

(c) The department may issue a provisional license under (b) of this section only if the facility submits to the department an acceptable plan to bring the facility into conformity with the provisions of AS 47.35.010 — 47.35.080 and the regulations adopted under AS 47.35.010 — 47.35.080 within the time specified in the provisional license.

(d) A provisional license is valid for a period not exceeding one year from the date of issuance. The department may renew a provisional license for an additional period not to exceed one year. (§ 3 ch 97 SLA 1982)

Sec. 47.35.080. Definitions. In AS 47.35.010 — 47.35.100

(1) "boarding home or foster home" means an establishment providing regular care for less than six children not related by blood or marriage to the foster parents;

April 6, 1984

Dear Rep. Davis

I wish to write and voice my support for CSSB 346 which I understand the senate has sent to the House this week.

My first husband suffers from chronic manic depressive illness. His initial break down was a nightmare for myself and his family - and I believe for him. Although he was obviously seriously disoriented we were not able to get help for him against his will. He had to do serious bodily harm to someone else before he could be treated involuntarily. As a result, I had to spend time hiding from him until he finally injured someone. As I was pregnant at the time and caring for our older small child, I could not risk being the person he would injure.

A few years later, he returned to Fairbanks when our oldest child was critically ill in the hospital - and chose that time to experiment with his mental stability by not taking his medication. Knowing he was at risk for another breakdown, I refused to let him visit his son unsupervised. He became angry and later did indeed have another breakdown in the course of which he was jailed twice and finally sent to API.

When he was released from API,

they notified me that he was be[illegible]
released and that he intended to
leave for Seattle BUT they made it
clear that they had only notified me
because he had given his permission
as IN THEIR OPINION he was no threat
to any of his family members. I
thanked them for notifying me, but
told them that in light of the then
recent Charles Meach murders their
opinion of who was and was not
dangerous did not have much credibility.

Although our situation resolved
itself without anyone being injured,
our family experienced a very tense
summer with one child in the
hospital and the other not allowed
to play outside without constant direct
adult supervision. I believe that
patients do have rights, but I also
believe that their family members
have rights as well. Living with
a mentally ill family member can
be exhausting, frustrating, frightening
and dangerous, especially when the
law offers no protection from the patient.

Thank you for your time.

TO: All Members of the House HESS Committee
FROM: Representative Mae Tischer, Chairman, House HESS

RE: CSSB 346 (Judiciary), Amended: Presentation by Dr. Linus Pauling

The House HESS Committee will continue its hearings on the Senate Judiciary Committee Substitute for Senate Bill 346, Amended, "An Act relating to the treatment of mentally ill persons," on Wednesday, May 2, at 1:15 p.m., in the House Resources Committee Room (C-118), with a special teleconference presentation by Dr. Linus Pauling on the subject of nutritional therapy for the treatment of mentally ill persons.

As earlier correspondence has indicated, Dr. Pauling is regarded as an expert on this issue. The attached information from Who's Who in America will shed some light on his background.

I ask that you review the attached background material in preparation for this hearing. Your cooperation will make Dr. Pauling's presentation more understandable and useful.

The Honorable Mae Tischer
Alaska State House of Representatives
Pouch V
Juneau, Alaska 99811

Dear Representative Tischer:

SB 346, relating to the treatment of mentally ill persons has passed the Senate and has been referred to your committee.

This bill is the result of a year and a half of work by the Senate, and addresses the concerns of all who testified in the many hearings conducted around the state.

I was pleased to incorporate your amendment for the right to a nutritionally sound and medically appropriate diet (Section 21). A significant amount of new patients' rights will be added to the mental health commitment law with the passage of this bill.

My interest in this legislation was sparked by input from family grounds of the chronically mentally ill, the Alaska Mental Health Association and the Alaska Psychiatric Association. The major revision in the law of 1981 brought about dramatic changes in the treatment of the mentally ill, and I see SB 346 as a refinement of those provisions.

I am enclosing some backup material on this legislation for your perusal. I know this is a difficult and emotional issue, but I find that this bill has a broad base of support.

I will be happy to meet with you at any time to discuss this issue.

With best wishes, I am

Sincerely,

Joe P. Josephson

Enclosure

treatment services under the following categories: inpatient hospital, physician services, and nonphysician services, respectively.

• Almost every state has placed limitations on psychologists' services. In **GEORGIA**, for example, psychological services cannot exceed five hours of evaluation and testing, and therapy per recipient per calendar year; **INDIANA** requires prior approval for ongoing psychotherapy. In **MINNESOTA**, up to ten hourly sessions per recipient a year are covered; and **NEBRASKA** limits psychotherapy to $500 per patient a year except by prior authorization.

• Two states, **OREGON** and **WISCONSIN**, provide direct reimbursement to other mental health professionals. In **OREGON**, registered social workers can be paid for preauthorized diagnostic services within the scope of their licenses, while certain masters level mental health clinicians (masters of social work, psychology, and psychiatric nurses) may be reimbursed for psychotherapy in **WISCONSIN**.

WAIVERS

• Two states, **MICHIGAN** and **WISCONSIN**, have received waivers to provide mental health services under Section 2175 of the Omnibus Reconciliation Act of 1981 (OBRA). Both states received approval to implement mental health care case-management arrangements which restrict the providers from whom the recipient may obtain services.

• Four states, **CALIFORNIA, COLORADO, RHODE ISLAND** and **VERMONT**, have received waivers under Section 2176 of OBRA to implement home- and community-based programs for the mentally ill.

COPAYMENTS

• Six states (**GEORGIA, KANSAS, NEVADA, NORTH CAROLINA, VIRGINIA** and **WISCONSIN**) require that recipients contribute to the cost of various types of mental health services.

Federal and State officials may obtain one copy of the survey free of charge. Others may obtain a copy by sending $9 to IHPP.

Children's Mental Health Services

MICHIGAN's legislature is considering a proposal (HB 4358) that creates a new section of the Mental Health Code, specifically focusing on emotionally disturbed children. The bill consolidates and modifies existing sections of the code (procedures for admissions, objections and prerelease planning) and creates several new sections that recognize the special needs and status of children. The bill has passed the House and is being considered by the Senate.

HB 4358 establishes a single-entry system through **MICHIGAN's** community mental health boards for those children in the public mental health system. It requires a certified diagnostic and treatment service to determine a minor's suitability for public mental health services, and a prerelease or postrelease plan for each minor leaving hospitalization. HB 4358 also requires the Department of Mental Health to promulgate rules concerning the admission and discharge procedures for children entering the specialized treatment unit for state wards from the Department of Social Services. The measure would permit a minor 14 years or older to request hospitalization, although consent by a parent or guardian continues to be required for treatment of a minor while hospitalized. However, the provisions of the bill allow minors 14 or older to receive mental health services on an outpatient basis, without the consent or notification of their parents.

MASSACHUSETTS is considering a bill (S 742) which would permit minors age 12 and older to receive mental health treatment or counseling on an outpatient basis without the consent of their parents or legal guardians. Although **WASHINGTON** failed to pass a similar measure, legislators agreed to establish a study committee on children's mental health services with the following objectives: 1) to perform a program, management, and fiscal review of existing publicly funded children's mental health and related children and family services; 2) to determine the extent to which certain laws have been implemented (e.g., continuum of care, prevention, early intervention, and diversion from involuntary commitment; and 3) to determine the need for and type of children's mental health and related services focusing on such categories as those mentioned above. The final report must be submitted to the legislature by December 15, 1984, and will include budgetary and statutory recommendations.

At the federal level, the Office of State and Community Liaison, National Institute of Mental Health, has received a total of 44 grant applications under the

Child and Adolescent Service System Program (CASSP). Grants will be awarded to approximately eight states to develop state-level foci for planning, service-system improvement strategy development, and the initiation of community-level demonstrations of service system development. Approximately $1.5 million is available for this program. An independent committee will meet March 21-23 to review the proposals. Its recommendations will be presented at the May meeting of the National Advisory Mental Health Council. Officials anticipate that awards will be made in July.

Dedicated Taxes

A number of so-called dedicated tax bills are currently under consideration in several legislatures. An **IDAHO** bill (HB 464) would create an alcohol awareness account to be financed by a portion of the state tax on liquor and beer. The account would support the operation of the governor's commission on alcohol awareness and training. **MASSACHUSETTS** is considering a measure (S 1769) would add a surtax on alcoholic beverages and direct the funds to alcoholic rehabilitation centers or for matching federal grants designated for prevention of alcohol abuse and alcoholism. A **SOUTH CAROLINA** proposal (H 3459) would levy a 10 percent surtax on all taxes imposed on beer and wine and require that 75 percent of the revenue generated be returned to the counties on a per capita basis to be used for prevention and treatment of alcoholism and drug abuse.

A proposal (SB 3617) under consideration in the **WASHINGTON** state senate would dedicate a portion of the state's highway safety funds derived from penalty assessments on drunk drivers to the operation of an alcohol awareness program. The alcohol awareness program would be directed toward teenage drivers and young adults up to age 25. It would include presentations and educational curricula designed to illustrate the dangers of alcohol misuse, the effects and impairments of alcohol on the body, and to prevent drunk driving. A separate bill in the **WASHINGTON** House (HB 1701) would assess an additional tax of 6.5 cents per liter on wine not bottled in the state and an additional $3.30 per barrel of beer and deposit the funds in a Drunk Driving Deterrence and Victims Compensation Account. The bill provides that the funds shall be distributed in the following manner: (1) $2 million per biennium to the state patrol to be used for educational programs in public schools concerning alcohol and drug abuse and traffic safety; (2) a sufficient amount for the Crime Victims Compensation Account to pay claims by those injured by intoxicated drivers; and (3) $3 million per biennium to the Department of Social and Health Services' Alcohol Treatment Programs.

MISSOURI's SB 514 seeks to create an alcoholism and drug abuse treatment and rehabilitation trust fund by applying a surcharge of 20 cents per gallon on the sale of spirituous liquors. The monies will go for funding community alcoholism and drug abuse treatment and rehabilitaion services. Similarly, a **PENNSYLVANIA** proposal (H 1740) would increase the state tax on liquor and devote 10 percent of the revenue derived from the increase to a Drug and Alcohol Programs Augmentation Account. The purpose of the account is to support alcohol rehabilitation and treatment programs, as well as promote education, prevention and early intervention programs designed to eliminate alcohol abuse and drug addiction.

An **OHIO** bill (HB 654) would increase the state's sales tax on liquor by 2 cents a gallon and earmark the additional revenues for adolescent alcohol drug abuse treatment programs. A separate **OHIO** measure (HB 628) would levy an additional 2 cent tax on beer, wine and liquor. Forty percent of the revenues must go to the counties' alcohol and drug abuse treatment and prevention distribution fund; 10 percent would go to the Department of Mental Health's drug abuse special account and 10 percent to the Department of Health's alcoholism special account.

In the past few years, **MAINE, UTAH,** and **KANSAS** enacted statutes requiring that a certain portion of their states' taxes on liquor be dedicated to alcohol and drug abuse prevention activities.

A new statute in **NEW JERSEY** establishes the Alcohol Education Rehabilitation and Enforcement Fund (A 3468, Chapter 53). The law increases the wholesale tax on alcohol from 6.5 percent to 7.3 percent, and devotes approximately 11 percent of the revenue generated by the increase to the new Alcohol

SUBJECT: Notification of Parent or Guardian

#1

The following language is suggested in order to satisfy the request by Representative Tischer for assurance that parents or guardians are notified when a minor presents himself for inpatient psychiatric hospitalization.

Page 3, line 14 add a new section (b) to read:

(b) The parent or guardian of a minor under the age of 18 that presents himself at a designated treatment facility must be notified immediately by the facility of the minor's whereabouts.

Existing subsections (b) and (c) should be changed to (c) and (d).

Preface

In the article *Insanity* in the ninth edition of the Encyclopaedia Britannica (1881) insanity is defined as a chronic disease of the brain inducing chronic disordered mental symptoms. The author of the article (J. Batty Tuke, M.D., Lecturer on Insanity, School of Medicine, Edinburgh) then stated that this definition

> possesses the great practical advantage of keeping before the student the primary fact that insanity is the result of disease of the brain, that it is not a mere immaterial disorder of the intellect. In the earliest epochs of medicine the corporeal character of insanity was generally admitted, and it was not until the superstitious ignorance of the Middle Ages had obliterated the scientific, though by no means always accurate, deductions of the early writers that any theory of its purely psychical character arose. At the present day it is unnecessary to combat such a theory, as it is universally accepted that the brain is the organ through which mental phenomena are manifested, and therefore that it is impossible to conceive of the existence of an insane mind in a healthy brain.

By 1929, when the fourteenth edition of the Encyclopaedia Britannica was published, the situation had changed, largely because of the development of psychoanalysis by Sigmund Freud. The earlier definition of insanity was deleted, and replaced by discussions from two points of view: the point of view of the materialistic school

> that though in many states of insanity no observable structural changes are found, they exist all the same, only they are such that our imperfect methods cannot detect them, and in time they will be discovered . . .

and the point of view of the psychogenic school,

> that though mental disease may arise secondarily to physical disorder, the symptoms are psychological reverberations of that disorder and the body of an individual must be regarded as environmental to the ego. . . . The many structural changes which are found in certain forms of insanity should be reviewed as probably secondary to a perverted mentality.

Psychoanalysis has failed, and psychiatry is now rapidly returning to the scientific approach, the recognition of the corporeal character of mental disease, with manifestations determined to some extent by environmental stress and past experience. Supportive psychotherapy has great value—an example is the explanation to the schizophrenic patient and his family that his disturbed behavior and thinking are the result of an imbalance in the molecular composition of his body, and that this imbalance can be corrected (Hawkins, Chapter 29 of this volume). The recognition of the effectiveness of phenothiazines and other drugs (and the ineffectiveness of psychoanalysis) has accelerated the reacceptance of the concept that mental disease is disease of the brain, and that the brain itself needs to be treated, by changing its molecular composition.

The relation of vitamins to mental disease became evident as soon as vitamins were discovered. One manifestation of pellagra is psychosis. Pellagra is a vitamin-deficiency disease, and the psychosis is cured (averted) by the provision of an adequate intake of the vitamin (niacin). It is estimated that in the first decades of this century 10 percent of the persons in psychiatric hospitals were pellagrins (Kety, 1970). The discovery in 1937 that niacin is the pellagra-preventing vitamin soon led to its trial in controlling mental disease in patients not suffering from pellagra. Cleckley et al. (1939) and Sydenstricker and Cleckley (1941) reported some success in treating 48 subjects with acute mental illness of one sort or another by use of moderately large doses of niacin (300 to 1,500 mg per day, as compared with the pellagra-preventing intake of about 12 mg per day).

In 1943 Kaufman described the deterioration in mental and physical health of 150 patients with a disease to which he gave the name aniacinamidosis, and in 1949 he published a larger book on this subject, with discussion of 455 patients. Measurements of impairment of joint mobility and increase in blood sedimentation rate gave objective information about the progress of the disease. He found that most of the patients improved greatly on a regime of 1 to 5 g of niacinamide per day, in divided doses (6 to 16 per day), continuing for as long as nine years (Kaufman, 1955). He observed no untoward reactions from niacinamide in several thousand patient-years of continuous use. His recommended intake of niacinamide for treatment of restricted mobility of joints and other manifestations of aniacinamidosis is 4 or 5 g per day. Many of his patients showed striking improvement in mental health as well as physical health on this regime.

The effective introduction of megavitamin therapy for schizophrenia came in the period from 1952 on through the work of Hoffer and Osmond, as described in several chapters of this book. After making some studies on a few patients with encouraging results, they carried out several double-blind and blind comparisons of niacin, niacinamide, and a placebo. A study with 171 subjects (73 receiving 3 g of niacin per day for all or part of the period of study, 98 receiving a placebo) gave a statistically significant difference in the number transferred to the mental hospital and a difference in the number of suicides (0 and 4, respectively) with borderline statistical significance (Hoffer et al., 1957). Another study with 82 subjects (43 receiving 3 g of niacin per day and 39 receiving a placebo) gave a difference with high statistical significance in the number classified as improved or unimproved (Hoffer, 1962).

It is evident from the published accounts of these studies that amounts larger than 3 g per day of niacin or niacinamide are needed for a pronounced therapeutic effect for many schizophrenic patients. Hoffer and Osmond had in fact observed that daily amounts of niacin or niacinamide larger than 6 g seemed to be required by some patients, and also that many patients benefited from receiving 3 to 6 g per day of ascorbic acid. Other vitamins, especially pyridoxine in amounts 600 mg to 1,500 mg per day, have been found to be beneficial. In addition, many schizophrenics, probably more than 80 percent, suffer from hypoglycemia, which needs to be corrected, as described in some chapters in this book. The orthomolecular treatment of schizophrenia includes more than the routine administration of 3 g of niacin or niacinamide per day.

The importance of good nutrition to good health cannot be denied. There is much evidence to support the thesis that for most people the optimum daily intake of ascorbic acid is far larger than the usually recommended daily allowance (Pauling, 1970): 3 to 6 g per day, the amount customary in megavitamin treatment of schizophrenia, may well be only the average optimum for most human beings. Little effort has been expended in the study of the amounts of vitamins required for optimum health. The decision by most psychiatrists who do not accept the principles of orthomolecular psychiatry to restrict the intake of vitamins by their patients to certain arbitrary levels, without checking the possible benefit for the patient of an increased intake, cannot be justified.

Part of the resistance to megavitamin therapy is based on the idea that an increased intake of a vitamin should be subjected to as thorough testing as a new synthetic drug. This is nonsense; the vitamins are substances to which the human body has long been accustomed, and the toxicities of the water-soluble vitamins are known to be low and the side effects few. Another part of the resistance is the result of a misunderstanding of the meaning of statistical significance. Investigations described as attempts to replicate Hoffer and Osmond's results are reported to have failed to show a statistically significant difference between the subjects receiving niacin or niacinamide and those receiving a placebo. This conclusion is then incorrectly interpreted as meaning

that the investigations have shown niacin or niacinamide to have no greater value than a placebo.

For example, Hoffer had reported that mentally ill children receiving niacinamide and ascorbic acid benefited more than those receiving a placebo. Greenbaum (1970) then reported that he was unable to confirm the claimed value of niacinamide in his double-blind study of 17 children receiving niacinamide (1000 mg per day per 50 lb. body weight) and 24 children receiving a placebo (also 16 receiving niacinamide and a tranquilizer). The principal criterion was the increase during the six months of the study in the score on a clinical scale of observable behavior categories. Greenbaum reported that "there was no significant difference attributable to niacinamide." This statement is seriously misleading. The average improvement in the score was in fact 4.0 units for the niacinamide group and 2.6 units for the placebo group. The difference between 4.0 and 2.6 is reported as not statistically significant. But we see that Greenbaum found 54 percent greater improvement in the niacinamide group than in the placebo group. From Greenbaum's result we can say that it is more likely that niacinamide has an effect (54 percent greater than the placebo) than that it has no effect, but it is not 20 times more likely ($P < 0.05$, accepted as statistically significant).

The statistical significance is determined by the design of the investigation. If Greenbaum had got the same result (54 percent more improvement for the niacinamide group than for the placebo group) with a larger number of subjects the null hypothesis of equal effect of niacinamide (in the dosage used) and placebo could have been rejected with statistical significance ($P < 0.05$).

Ban (1971) states that "The hypothesis, based on these findings [by Hoffer], that nicotinamide therapy is useful in childhood schizophrenia was not verified by Greenbaum in a carefully designed—placebo controlled—study." I consider this statement to be wrong. Greenbaum found 54 percent more improvement in the niacinamide group than the placebo group. Surely 54 percent more improvement is useful. The amount of improvement, 54 percent, is unreliable, but that is what he found.

I have discussed this matter in some detail because much of the objection to the use of orthomolecular methods in psychiatry is based upon similar misrepresentations of the reported studies.

Another investigation that is quoted as having provided evidence against the hypothesis that niacin or niacinamide has value in the treatment of schizophrenia was published by Ananth et al. in 1970, with the title "Nicotinic acid in the prevention and treatment of artificially induced exacerbation of psychopathology in schizophrenics." It is known that a substance, such as the amino acid methionine, whose molecules can donate methyl groups to other molecules has the property of exacerbating the mental illness of schizophrenics when it is ingested, and it has been suggested that the effectiveness of niacin and niacinamide in controlling schizophrenia results from the action of their molecules as methyl acceptors—that is, they remove methyl groups

om some methylated compounds in the body that may be causing the mental illness. n the investigation by Ananth et al. schizophrenia patients were given daily doses of ethionine. Some of the patients also were given niacinamide. All of the patients owed a pronounced exacerbation of their mental illness. The result has been terpreted as showing that niacinamide does not neutralize the methyl-donating fect of methionine in exacerbating schizophrenia by virtue of its function as a methyl ceptor. This conclusion is, however, not justified, because there was a serious flaw the design of the experiment. The patients were given 20 g of methionine per day. er 16 g of niacinamide per day would be required to accept the methyl groups nated by 20 g of methionine, but the patients were given only 3 g. It could have en predicted that the experiment would fail.

There is thoroughly convincing evidence that the methods of orthomolecular sychiatry discussed in this book have great value. Some aspects of the scientific asis of these methods are presented in the earlier chapters. Some of the chapters are most interest to biochemists. Most of the chapters can, I believe, be read with derstanding and profit by physicians and by laymen who have some acquaintance ith the terminology of chemistry and other sciences. Despite the progress that has en made in controlling it, mental illness is still the cause of a tremendous amount of ffering. The work of Hoffer, Osmond, Hawkins, and others has shown that the ethods of orthomolecular psychiatry can be used to decrease the amount of this ffering. I join my co-editor, Dr. David Hawkins, and the other contributors to this ook in expressing the hope that it will be found useful not only by scientists and hysicians but also by those who suffer from schizophrenia and by their families.

I thank Dr. Gustav Albrecht for his help.

Orthomolecular Psychiatry

LINUS PAULING

INTRODUCTION

The methods principally used now for treating patients with mental disease are psychotherapy (psychoanalysis and related efforts to provide insight and to decrease environmental stress), chemotherapy (mainly with the use of powerful synthetic drugs, such as chlorpromazine, or powerful natural products from plants, such as reserpine), and convulsive or shock therapy (electroconvulsive therapy, insulin coma therapy, pentylenetetrazol shock therapy). I have reached the conclusion, through arguments summarized in the following paragraphs, that another general method of treatment, which may be called orthomolecular therapy, may be found to be of great value, and may turn out to be the best method of treatment for many patients.

Orthomolecular psychiatric therapy is the treatment of mental disease by the provision of the optimum molecular environment for the mind, especially the optimum

(*Reprinted with permission from* Science, *19 April 1968, vol. 160, pp. 265–271.* *Copyright © 1968 by the American Association for the Advancement of Science.*)

concentrations of substances normally present in the human body.[1] An example the treatment of phenylketonuric children by use of a diet containing a smaller tha normal amount of the amino acid phenylalanine. Phenylketonuria (Folling, 193· results from a genetic defect that leads to a decreased amount or effectiveness of th enzyme catalyzing the oxidation of phenylalanine to tyrosine. The patients on a nor mal diet have in their tissues abnormally high concentrations of phenylalanine an some of its reaction products, which, possibly in conjunction with the decreased cor centration of tyrosine, cause the mental and physical manifestations of the diseas (mental deficiency, severe eczema, and others). A decrease in the amount of phenyl alanine ingested results in an approximation to the normal or optimum concentra tions and to the alleviation of the manifestations of the disease, both mental an physical.

The functioning of the brain is dependent on its composition and structure; that is on the molecular environment of the mind. The presence in the brain of molecules o N,N-diethyl-D-lysergamide, mescaline, or some other schizophrenogenic substanc is associated with profound psychic effects (see, for example, Woolley, 1962). Cher kin has recently pointed out (1967) that in 1799 Humphry Davy described simila subjective reactions to the inhalation of nitrous oxide. The phenomenon of genera anesthesia also illustrates the dependence of the mind (consciousness, ephemeral memory) on its molecular environment (Pauling, 1961; Miller, 1961).

The proper functioning of the mind is known to require the presence in the brain of molecules of many different substances. For example, mental disease, usually associated with physical disease, results from a low concentration in the brain of any one of the following vitamins: thiamine (B_1), nicotinic acid or nicotinamide (B_3), pyridoxine (B_6), cyanocobalamin (B_{12}), biotin (H), ascorbic acid (C), and folic acid. There is evidence that mental function and behavior are also affected by changes in the concentration in the brain of any of a number of other substances that are normally present, such as L(+)-glutamic acid, uric acid, and γ-aminobutyric acid.[2]

OPTIMUM MOLECULAR CONCENTRATIONS

Several arguments may be advanced in support of the thesis that the optimum molecular concentrations of substances normally present in the body may be different from the concentrations provided by the diet and the gene-controlled synthetic

[1] I might have described this therapy as the provision of the optimum molecular composition of the brain. The brain provides the molecular environment of the mind. I use the word mind as a convenient synonym for the functioning of the brain. The word orthomolecular may be criticized as a Greek-Latin hybrid. I have not, however, found any other word that expresses as well the idea of the right molecules in the right amounts.

[2] The literature is so extensive that I refrain from giving references here.

echanisms, and, for essential nutrilites (vitamins, essential amino acids, essential ty acids) different from the minimum daily amounts required for life or the "recommended" (average) daily amounts suggested for good health. Some of these arguments are presented in the following paragraphs.

EVOLUTION AND NATURAL SELECTION

The process of evolution does not necessarily result in the normal provision of optimum molecular concentrations. Let us use ascorbic acid as an example. Of the mammals that have been studied in this respect, the only species that have lost the power to synthesize ascorbic acid and that accordingly require it in the diet are man, other Primates (rhesus monkey, Formosan long-tail monkey, and ring-tail or brown capuchin monkey), the guinea pig, and an Indian fruit-eating bat (*Pteropus medius*).[3] Presumably the loss of the gene or genes controlling the synthesis of the enzyme or enzymes involved in the conversion of glucose to ascorbic acid occurred some 20 million years ago in the common ancestor of man and other Primates, and occurred independently for the guinea pig and for one species of bat and one bird, in each case in an environment such that ascorbic acid was provided by the food. For a mutation rate of 1/20,000 per gene generation and for even a very small advantage for the mutant (0.01 percent more progeny) the mutant would replace the earlier genotype within about 1 million years. The advantage to the mutant of being rid of the ascorbic-acid-synthesis machinery (decrease in cell size and energy requirement, liberation of machinery for other purposes) might well be large, perhaps as much as 1 percent; a disadvantage nearly as large (less by 0.01 percent) resulting from a less than optimum supply of dietary ascorbic acid would not prevent the replacement of the earlier species by the mutant. Hence, even if the amount of the vitamin provided by the diet available at the time of the mutation were less than the optimum amount, the mutant might still be able to replace its predecessor. Moreover, it is possible that the environment has changed during the last 20 million years in such a way as to provide a decreased amount of the vitamin. Even a serious disadvantage of the changed environment would not lead to a mutation restoring the synthetic mechanism within a period of a few million years, because of the small probability of such mutations, far smaller than of those resulting in loss of function.

Moreover, the process of natural selection may be expected later on to lead to the survival of a species or strain that synthesizes somewhat less than the optimum amount of an autotrophic vital substance rather than of the species or strain that synthesizes the optimum amount. To synthesize the optimum amount requires

[3] For references, see Stone (1965). The only other vertebrates known to require exogenous ascorbic acid are the red-vented bulbul, *Pycnonotus cafer*, and related passeriform birds.

about twice as much biological machinery as to synthesize half the optimum amount. As suggested in Figure 1-1, the evolutionary disadvantage of synthesizing a less than

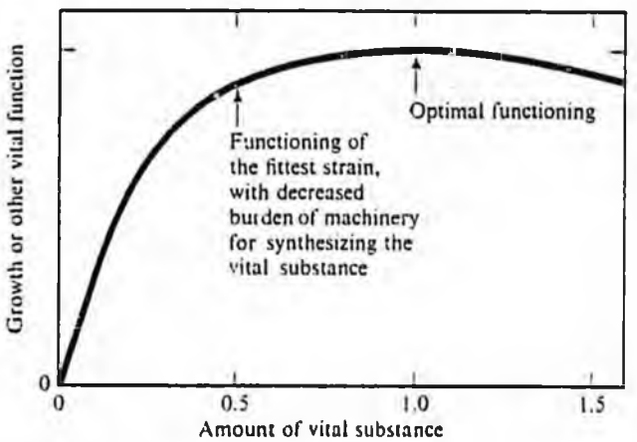

FIGURE 1-1.
Diagrammatic representation of growth rate or other vital property of an organism as function of the concentration of vital substance in the organism, showing the concentration at which the differential advantage of an increased amount of vital substance is just balanced by the differential disadvantage resulting from an increased amount of machinery for synthesis, and the concentration that gives optimum functioning without consideration of the burden of the machinery for synthesis.

optimum amount of the vital substance may be small, and may be outweighed by the advantage of requiring a smaller amount of biological machinery. Evidence from the study of microorganisms is discussed in the following paragraphs.

EVIDENCE FROM MICROBIOLOGICAL GENETICS

Many mutant microorganisms are known to require, as a supplement to the medium in which they are grown, a substance that is synthesized by the corresponding wild-type organism (the normal strain). An example is the pyridoxine-requiring mutant of *Neurospora sitophila* reported by G. W. Beadle and E. L. Tatum in their first *Neurospora* paper, published in 1941.

Several species of *Neurospora* that have been extensively studied are known to be able to grow satisfactorily on synthetic media containing inorganic salts, an inorganic source of nitrogen, such as ammonium nitrate, a suitable source of carbon, such as sucrose, and the vitamin biotin. All other substances required by the organism

e synthesized by it. Beadle and Tatum found that exposure to x-radiation produces utant strains such that one substance must be added to the minimum medium in rder to permit the growth at a rate approximating that of the normal strain. Their yridoxine-requiring mutant was found to grow on the standard medium at a rate nly 9 percent of that of the normal strain. When pyridoxine (vitamin B_6) is added to :e medium, the rate of growth of this strain at first increases nearly linearly with the oncentration of the added pyridoxine and then increases less rapidly, as shown in igure 1-2.[4] The growth rate of the normal strain without added pyridoxine is equal) that of the mutant with about 10 micrograms of the growth substance per liter in ie medium. At a concentration about four times this value (40 micrograms per liter) he growth rate of the mutant strain reaches a value 7 percent greater than that of the ormal strain without added pyridoxine.

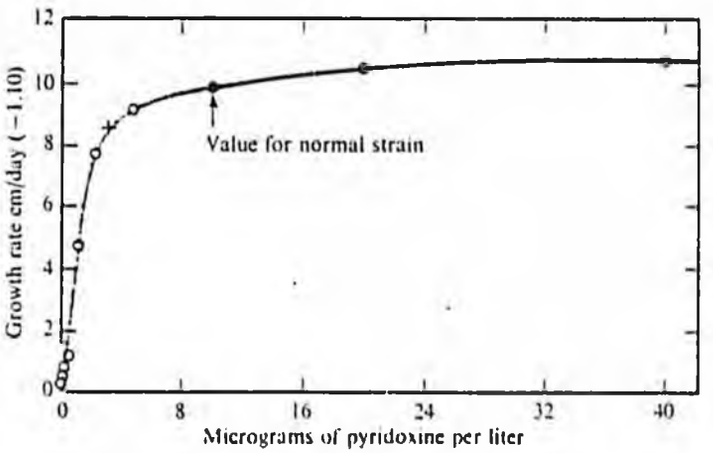

FIGURE 1-2.
The observed rate of growth of a pyridoxine-requiring *Neurospora* mutant (Beadle and Tatum, 1941), as function of the concentration of pyridoxine in the medium.

The point of maximum curvature of the curve in Figure 1-2, at about 3.2 micrograms of pyridoxine per liter (indicated by a cross), may be reasonably considered to mark the division between the region of vitamin deficiency (to the left) and the region of normal vitamin supply (to the right), such as might permit the mutant to compete with the wild type, which has the growth rate represented by the filled circle in Figure 1-2. The point marked by the cross might well correspond to an "adequate" or "recommended" amount of the vitamin, in that the growth rate of the mutant is only

[4] The points in Figure 1-2 represent my measurement of the slopes of the growth curves shown in Figure 1 of Beadle and Tatum (1941). They agree closely with the points of their Figure 2, except for one point, that for 1.2 μg/liter, which may have been misplotted.

12 percent less than that of the wild strain, and that the amount of the vitamin would have to be increased threefold to make up this 12 percent.[5]

As shown in Figure 1-2, quadrupling the concentration of pyridoxine that gives the mutant a growth rate equal to that of the wild type causes a further increase in growth rate by nearly 10 percent. The growth rates of the mutant and the wild type at very large concentrations of the vitamin have not been measured, so far as I know, and the optimum concentration is not known. From the work of Beadle and Tatum (1941) the optimum concentration may be taken to be greater than 40 micrograms per liter; that is, more than ten times the "adequate" concentration for the mutant and more than four times the concentration equivalent to the synthesizing capability of the wild type. The growth rate of the mutant at the optimum concentration is more than 22 percent greater than that at the "adequate" concentration and more than 9 percent greater than that of the normal strain.

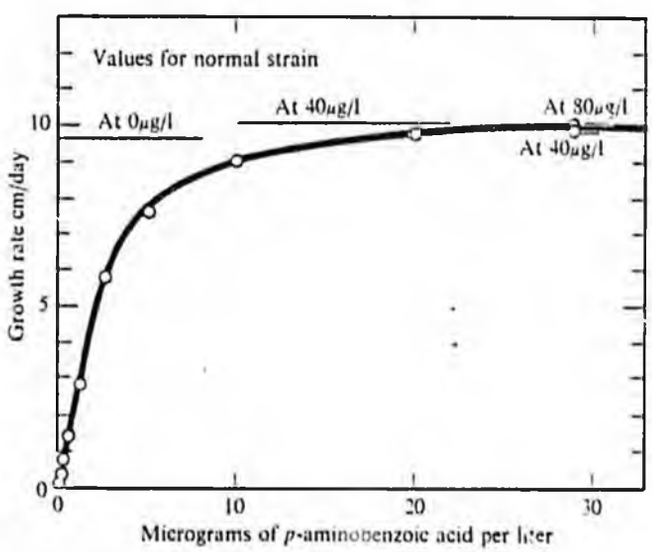

FIGURE 1-3.
The observed rate of growth of a *p*-aminobenzoic-acid-requiring *Neurospora* mutant (Tatum and Beadle, 1942), as function of concentration of the growth substance in the medium.

Similar results have been reported for other mutants of *Neurospora*. The values found by Tatum and Beadle (1942) for a *p*-aminobenzoic-acid-requiring mutant of *Neurospora crassa* as a function of the concentration of *p*-aminobenzoic acid added to the standard medium are shown in Figure 1-3. The growth-rate curve is similar in

[5] The reported growth rate for the normal strain in a medium with 40 μg of added pyridoxine per liter is 3 percent greater than that for the basic medium, as shown by the slopes of the lines in Figure 1 of Beadle and Tatum (1941).

shape to that for the pyridoxine-requiring mutant. The value of the growth rate for the normal strain of *Neurospora crassa* with no added *p*-aminobenzoic acid is equal to that for the mutant at a concentration of added *p*-aminobenzoic acid of about 15 micrograms per liter. A value about 4 percent greater is found for the normal strain at 80 micrograms per liter and for the mutant strain at 80 micrograms per liter, as indicated in Figure 1-3.

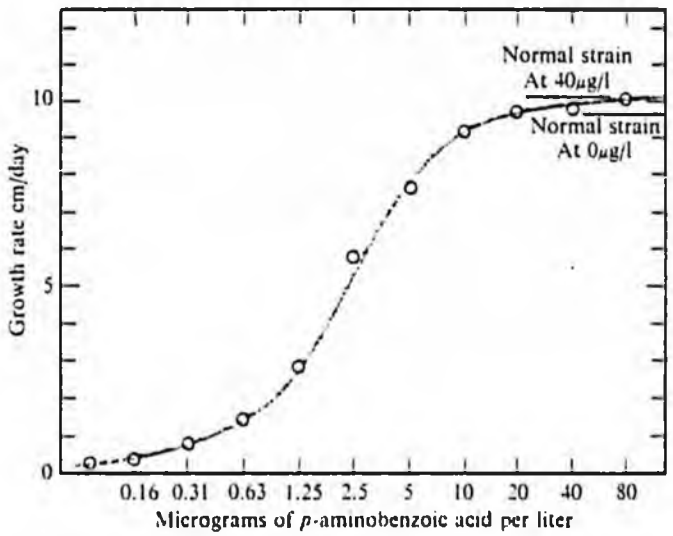

FIGURE 1-4.
Observed rate of growth of a *p*-aminobenzoic-acid-requiring *Neurospora* mutant as function of the logarithm of the concentration of *p*-aminobenzoic acid.

It is customary to plot values of the growth rate against the logarithm of the concentration of the growth substance, as shown in Figure 1-4. The amount of increase accompanying a doubling in the concentration of the growth substance is a maximum at 1.25 to 2.5 micrograms per liter, and decreases thereafter to about half the value for each successive doubling.

From these two examples we see that there may be a significant increase in rate of growth of the normal strain through addition of some of the growth substance that it synthesizes to the medium in which it is grown; that is, that the amount of the growth substance that is synthesized by the normal strain is not the optimum amount, but is somewhat less, leading to a rate of growth approximately 7 percent less than the maximum in the case of pyridoxine (with the normal strain of *Neurospora sitophila*) and 4 percent less for *p*-aminobenzoic acid (with the normal strain of *Neurospora crassa*). Many other examples are known of microorganisms that grow more

abundantly in a medium containing vitamins, amino acids, or other substances that they are able to synthesize than on a minimum medium.

Evidence supporting the above arguments has been presented recently by Zamenhof and Eichhorn (1967) in a paper entitled "Study of microbial evolution through loss of biosynthetic functions: Establishment of 'defective' mutants." These authors carried out experiments involving competitive growth in a chemostat of an auxotrophic mutant (a mutant requiring a nutrilite) and a prototrophic parent in a medium of constant composition containing the nutrilite. They found that the "defective" mutant has a selective advantage over the prototrophic parental strain under these conditions. For example, an indole-requiring mutant of *Bacillus subtilis* was found to show a strong selective advantage over the prototrophic back-mutant when the two were grown together in a medium containing tryptophan: the relative number of cells of the latter decreased 10^6-fold in 54 generations. They also found that greater advantage to the auxotroph accompanies a greater number of biosynthetic steps that have been dispensed with (earlier block in a series of reactions), with the final metabolite available. They point out that a mutant with a gene deletion would be at a distinct selective advantage over a point mutant, in that not only the synthesis of the metabolite, but also that of the structural gene, the messenger RNA, and perhaps the inactive enzyme itself would be dispensed with, and that accordingly the mutant with a deletion would replace the point mutant in competition. They mention evidence that some of the "defective" strains occurring in nature have lost one or more of their structural genes by deletions, rather than by point mutations.

MOLECULAR CONCENTRATIONS AND RATE OF REACTION

Most of the chemical reactions that take place in living organisms are catalyzed by enzymes. The mechanisms of enzyme-catalyzed reactions in general involve (1) the formation of a complex between the enzyme and a substrate molecule, and (2) the decomposition of this complex to form the enzyme and the products of the reaction. The rate-determining step is usually the decomposition of the complex to form the products or, more precisely, the transition through an intermediate state of the complex, characterized by activation energy less than for the uncatalyzed reaction, to a complex of the enzyme and the products of reaction, with a rapid dissociation. Under conditions such that the concentration of the complex corresponds to equilibrium with the enzyme and the substrate, the rate of the reaction is given by the following equation (the Michaelis–Menten equation; Michaelis and Menten, 1913):

$$R = \frac{d[S]}{dt} = \frac{kE[S]}{[S] + (1/K)}. \tag{1}$$

In this equation $[S]$ is the concentration of the substrate, E is the total concentration of enzyme (present both as free enzyme and enzyme complex), K is the equilibrium constant for formation of the enzyme complex ES, and k is the reaction-rate constant for decomposition of the complex to form the enzyme and reaction products. This equation corresponds to the case in which there are no enzyme inhibitors present.

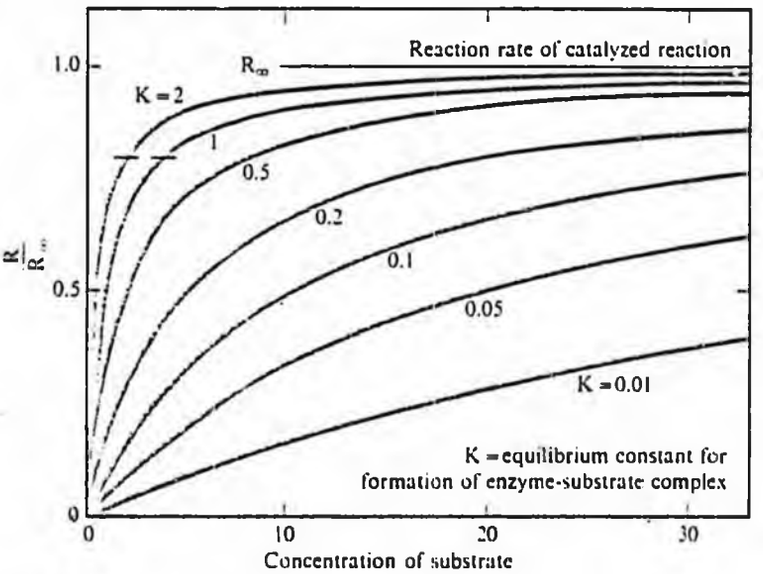

FIGURE 1-5.
Curves showing calculated reaction rate R/R_∞ of catalyzed reaction as function of the concentration of the substrate, for different values of the equilibrium constant K for formation of the enzyme-substrate complex.

Values of the reaction rate calculated from this equation for different values of K are shown in Figure 1-5. The curves are similar in shape to those of Figures 1-2 and 1-3. At concentrations much smaller than K^{-1} the reaction rate is proportional to the concentration of substrate. At larger concentrations, as the amount of enzyme complex becomes comparable to the amount of free enzyme, the reaction rate changes from the linear dependence. At substrate concentration equal to K^{-1} the slope of the curve is one-quarter of the initial slope, and the value is one-half of the value corresponding to saturation of the enzyme by the substrate.

The similarity of the curves of Figures 1-2 and 1-3 to appropriate curves in Figure 1-5 suggests that the growth substance may be involved in an enzyme-catalyzed reaction in which it serves as the substrate. The normal strain of the organism manufactures an amount of the substrate such as to permit the reaction to take place at what

may be considered a normal rate, 90 or 95 percent of the maximum rate, wh sponds to saturation of the enzyme. As described above, the gain in rea associated with the manufacture of a larger amount of the substrate, witl sponding advant ge to the organism, might be balanced by the disadvant organism associated with the upkeep of the larger amount of machinery re manufacture the increased amount of substrate. An increase in rate of this could also be achieved by an increase in the amount of the enzyme synthesiz organism. Here, again, the advantage to the organism resulting from this may be overcome by the disadvantage associated with the increase in the ar machinery required for the increased synthesis. During the process of evolut has presumably been selection of genes determining the concentrations of zymes catalyzing successive reactions such as to achieve an approximatio optimum reaction rate with the smallest amount of disadvantage to the org

The rate of an enzyme-catalyzed reaction is approximately proportiona concentration of the reactant, until concentrations that largely saturate the are reached. The saturating concentration is larger for a defective enzyme v creased combining power for the substrate than for the normal enzyme. For defective enzyme the catalyzed reaction could be made to take place at or normal rate by an increase in the substrate concentration, as indicated in Fig The short horizontal lines intersecting the curves indicate what may be cal "normal" reaction rate, 80 percent of the maximum. For $K = 2$ the "normal" achieved at substrate concentration $[S] = 2$. At this substrate concentrati reaction rate is only 29 percent of the maximum and 35 percent of "normal" mutated enzyme with $K = 0.2$; it could be raised to the "normal" value by a t increase in the substrate concentration, to $[S] = 20$. Similarly, the still great advantage of low reaction rate for a mutated enzyme with K only 0.01 could be come by a 200-fold increase in substrate concentration, to $[S] = 400$. This me ism of action of gene mutation is only one of several that lead to disadvanta manifestations that could be overcome by an increase, perhaps a great increase, concentration of a vital substance in the body. These considerations obviously gest a rationale for megavitamin therapy.

MOLECULAR CONCENTRATIONS AND MENTAL DISEASE

The functioning of the brain and nervous tissue is more sensitively dependent or rate of chemical reactions than the functioning of other organs and tissues. I bel that mental disease is for the most part caused by abnormal reaction rates, as de mined by genetic constitution and diet, and by abnormal molecular concentration essential substances. The operation of chance in the selection for the child of hal

complement of genes of the father and mother leads to bad as well as to good genotypes, and the selection of foods (and drugs) in a world that is undergoing rapid scientific and technological change may often be far from the best. Significant improvement in the mental health of many persons might be achieved by the provision of the optimum molecular concentrations of substances normally present in the human body. Among these substances, the essential nutrilites may be the most worthy of extensive research and more thorough clinical trial than they have yet received. One important example of an essential nutrilite that is required for mental health is vitamin B_{12}, cyanocobalamin. A deficiency of this vitamin, whatever its cause (pernicious anemia; infestation with the fish tapeworm *Diphyllobothrium*, whose high requirement for the vitamin results in deprivation for the host; excessive bacterial flora, also with a high vitamin requirement, as may develop in intestinal blind loops), leads to mental illness, often even more pronounced than the physical consequences. The mental illness associated with pernicious anemia (a genetic defect leading to deficiency of the intrinsic factor [a mucoprotein] in the gastric juice and the consequent decreased transport of cyanocobalamin into the blood) often is observed for several years in patients with this disease before any of the physical manifestations of the disease appear (Smith, 1950). A pathologically low concentration of cyanocobalamin in the serum of the blood has been reported to occur for a much larger fraction of patients with mental illness than for the general population. Edwin et al. (1965) determined the amount of B_{12} in the serum of every patient over 30 years old admitted to a mental hospital in Norway during a period of 1 year. Of the 396 patients, 5.8 percent (23) had a pathologically low concentration, less than 101 picograms per milliliter, and the concentration in 9.6 percent (38) was subnormal (101 to 150 picograms per milliliter). The normal concentration is 150 to 1300 picograms per milliliter. The incidence of pathologically low and subnormal levels of B_{12} in the serums of these patients, 15.4 percent, is far greater than that in the general population, about 0.5 percent (estimated from the reported frequency of pernicious anemia in the area, 9.3 per 100,000 persons per year). Other investigators[6] have also reported a higher incidence of low B_{12} concentrations in the serums of mental patients than in the population as a whole, and have suggested that B_{12} deficiency, whatever its origin, may lead to mental illness.

Nicotinic acid (niacin), when its use was introduced, cured hundreds of thousands of pellagra patients of their psychoses, as well as of the physical manifestations of their disease. For this purpose only small doses are required; the recommended daily allowance (National Research Council) is 12 milligrams per day (for a 70-kilogram male). In 1939 Cleckley et al. reported the successful treatment of 19 patients, and

[6] Hansen et al. (1966) report serum B_{12} concentration below 150 pg/ml in 13 of 1,000 consecutive patients admitted to a Copenhagen psychiatric clinic. Henderson et al. (1966) report that 9 of 1,012 unselected psychiatric patients in a region in Scotland were found to have B_{12} deficiency, in addition to 5 pernicious anemia patients in the group.

in 1941 Sydenstricker and Cleckley[7] reported similarly successful treatment of 29 patients with severe psychiatric symptoms by use of moderately large doses of nicotinic acid (0.3 to 1.5 grams per day). None of these patients had physical symptoms of pellagra or any other avitaminosis. More recently many other investigators have reported on the use of nicotinic acid and nicotinamide for the treatment of mental disease. Outstanding among them are Hoffer and Osmond, who since 1952 have advocated and used nicotinic acid in large doses, in addition to the conventional therapy, for the treatment of schizophrenia (Hoffer et al., 1957; Hoffer, 1962, 1966; Osmond and Hoffer, 1962; Hoffer and Osmond, 1964). The dosage recommended by Hoffer is 3 to 18 grams per day, as determined by the response of the patient, of either nicotinic acid or nicotinamide, together with 3 grams per day of ascorbic acid. Nicotinic acid and nicotinamide are nontoxic (the lethal dose, 50 percent effective [LD_{50}], is not known for humans, but probably it is over 200 grams; the LD_{50} for rats is 7.0 grams per kilogram for nicotinic acid and 1.7 grams per kilogram for nicotinamide), and their side effects, even in continued massive doses, seem not to be commonly serious. Among the advantages of nicotinic acid, summarized by Osmond and Hoffer (1962), are the following: it is safe, cheap, and easy to administer, and it is a well-known substance that can be taken for years on end, if necessary, with only small probability of incidence of unfavorable side effects.

Another vitamin that has been used to some extent in the treatment of mental disease is ascorbic acid, vitamin C. A sometimes-recommended daily intake of ascorbic acid is 75 milligrams for healthy adults. Some investigators have estimated that the optimum intake is much larger (Kyhos et al., 1945), perhaps 3 to 15 grams per day, according to Stone (1966, 1967). Williams and Deason (1967) have emphasized the variability of individual members of a species of animals; they have reported their observation of a 20-fold range of required intake of ascorbic acid by guinea pigs, and have suggested that human beings, who are less homogeneous, have a larger range.

Mental symptoms (depression) accompany the physical symptoms of vitamin-C deficiency disease (scurvy). In 1957, Akerfeldt reported that the serum of schizophrenics had been found to have greater power of oxidizing N,N-dimethyl-*p*-phenylenediamine than that of other persons. Several investigators then reported that this difference is due to a smaller concentration of ascorbic acid in the serum of schizophrenics than of other persons. This difference has been attributed to the poor diet and increased tendency to chronic infectious disease of the patients (Benjamin, 1958; Kety, 1959), and has also been interpreted as showing an increased rate of metabolism of ascorbic acid by the patients (Hoffer and Osmond, 1960; Briggs, 1962). It is my opinion, from the study of the literature, that many schizophrenics have an increased metabolism of ascorbic acid, presumably genetic in origin, and that the

[7] References are given in this paper to some earlier work on nicotinic acid therapy.

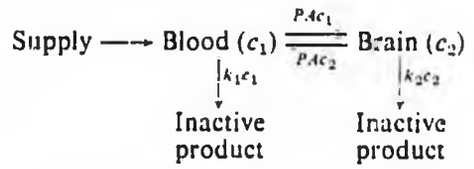
gestion of massive amounts of ascorbic acid has some value in treating mental disease.

Other vitamins (thiamine, pyridoxine, folic acid) and other substances (zinc ion, magnesium ion, uric acid, tryptophan, L(+)-glutamic acid, and others) influence the functioning of the brain. I shall review work on L(+)-glutamic acid as a further example. L(+)-Glutamic acid is an amino acid that is present at rather high concentration in brain and nerve tissue and plays an essential role in the functioning of these tissues (Weil-Malherbe, 1936). It is normally ingested (in protein) in amounts of 5 to 10 grams per day. It is not toxic; large doses may cause increased motor activity and nausea. In 1943 Price et al. reported favorable results for glutamic acid therapy of convulsive disorders (benefit to one out of three or four patients with petit mal epilepsy; Waelsch, 1948). Zimmerman and Ross (1944) then reported an increase in maze-running learning ability of white rats given extra amounts of glutamic acid. Zimmerman and many other investigators then studied the effects of glutamic acid on the intelligence and behavior of persons with different degrees and kinds of mental retardation. L(+)-Glutamic acid is apparently more effective than its sodium or potassium salts. The effective dosage is usually between 10 and 20 grams per day (given in three doses with meals), and is adjusted to the patient as the amount somewhat less than that required to cause hyperactivity. Several investigators[a] have reported an improvement in personality and increase in intelligence (by 5 to 20 I.Q. points) for many patients with mild or moderate mental deficiency.

LOCALIZED CEREBRAL DEFICIENCY DISEASES

The observation that the psychosis associated with pernicious anemia may manifest itself in a patient for several years before the other manifestations of this disease become noticeable has a reasonable explanation: the functioning of the brain and nervous tissue is probably more sensitively dependent on molecular composition than is that of other organs and tissues. The observed high incidence of cyanocobalamin deficiency in patients admitted to a mental hospital, mentioned above, suggests that mental disease may rather often be the result of this deficiency, and further suggests that other deficiencies in vital substances may be wholly or partly responsible for many cases of mental illness.

The foregoing arguments suggest the possibility that under certain circumstances a deficiency disease may be localized in the human body in such a way that only some of the manifestations usually associated with the disease are present. Let us consider, for example, a vitamin or other vital substance that is normally metabolized by the



[a] A recent survey of the role of glutamic acid in cognitive behaviors has been published by Vogel et al. (1966). Many references to earlier work are given in this paper.

catalytic action of an enzyme normally present in the tissues and organs of the body In a person of unusual genotype there might be an especially great concentration of this enzyme in one body organ, with essentially the normal amount in other organs. Through the action of this enzyme in especially great concentration the steady-state concentration of the vital substance in that organ might be decreased to a level much lower than that required for normal function. Under these circumstances there would be present a deficiency disease restricted to that organ.

An especially important case is that of the brain. We may, as a rough model of the human body, consider two reservoirs of fluid, the blood and lymph, with volume V_1, and cerebrospinal fluid, the extracellular fluid of the brain and spinal column, with volume V_2. We assume that a vital substance is destroyed in each of these reservoirs at a characteristic rate, corresponding to the rate constants k_1 and k_2, that it diffuses across the blood-brain barrier at a rate determined by the product of the permeability and area of the barrier and the difference $c_2 - c_1$ of the concentrations in the two reservoirs, and that it is introduced from the gastrointestinal tract into the first reservoir at a constant rate. The steady-state concentrations are then in the ratio

$$c_1/c_2 = 1 + (k_2V_2/PA)$$

where PA is the product of permeability and the area of the blood-brain barrier. The steady state corresponds to the following system:

From this equation it is seen, as shown also in Figure 1-6, that for small values of k_2V_2/PA the difference in steady-state concentrations in the cerebrospinal fluid and the blood is small, but that through either decrease in permeability of the barrier or increase in the metabolic rate constant k_2 the steady-state concentration in the brain becomes much less than that in the blood.

This simple argument leads us to the possibility of a localized cerebral avitaminosis or other localized cerebral deficiency disease. There is the possibility that some human beings have a sort of cerebral scurvy, without any of the other manifestations, or a sort of cerebral pellagra, or cerebral pernicious anemia. It was pointed out by Zuckerkandl and Pauling (1962) that every vitamin, every essential amino acid, every other essential nutrilite represents a molecular disease (Pauling et al., 1949) which our distant ancestors learned to control, when it began to afflict them, by selecting a therapeutic diet, and which has continued to be kept under control in this way. The localized deficiency diseases described above are also molecular diseases, compound molecular diseases, involving not only the original lesion, the loss of the ability to

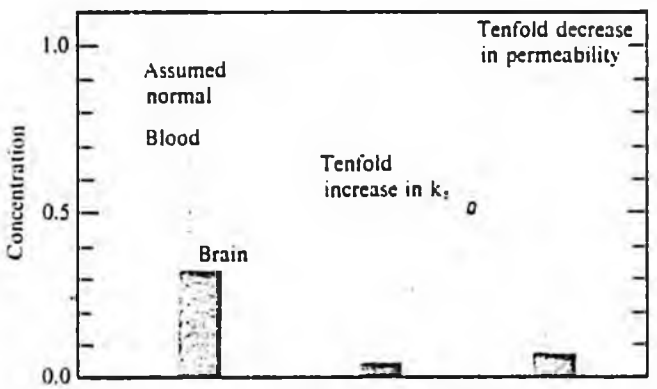


FIGURE 1-6.
Values of the concentration of a vital substance in the blood and in the cerebrospinal fluid for three different assumed sets of values of blood-brain barrier permeability and rate of destruction in the cerebrospinal fluid.

nthesize the vital substance, but also another lesion, one that causes a decreased e of transfer across a membrane, such as the blood-brain barrier,[9] to the affected gan, or an increased rate of destruction of the vital substance in the organ, or some her perturbing reaction.

It has been suggested by Huxley et al. (1964), partially on the basis of the observations of Böök (1953, 1958) and Slater (1958) on the incidence of schizophrenia in atives of schizophrenics, that schizophrenia is caused by a dominant gene with incomplete penetrance. They suggested that the penetrance, about 25 percent, may in me cases be determined by other genes and in some cases by the environment. I ggest that the other genes may, in most cases, be those that regulate the metabolism of vital substances, such as ascorbic acid, nicotinic acid or nicotinamide, yridoxine, cyanocobalamin, and other substances mentioned above. The reported success in treating schizophrenia and other mental illnesses by use of massive doses of me of these vitamins may be the result of successful treatment of a localized cerebral deficiency disease involving the vital substances, leading to a decreased penetrance of the gene for schizophrenia. There is a possibility that the so-called gene for schizophrenia is itself a gene affecting the metabolism of one or another of these vital substances, or even of several vital substances, causing a multiple cerebral deficiency.

I suggest that the orthomolecular treatment of mental disease, to be successful, should involve the thorough study of and attention to the individual, such as is

[9] It has been suggested by Melander and Martens (1958, 1959) and by Hoffer and Osmond (1966) that the effects of taraxein (Heath et al., 1958) may result from changing the permeability of the blood-brain barrier.

customary in psychotherapy but less customary in conventional chemotherapy. the course of time it should be possible to develop a method of diagnosis (measu ment of concentrations of vital substances) that could be used as the basis for det mining the optimum molecular concentrations of vital substances for the individ patient and for indicating the appropriate therapeutic measures to be taken. My workers and I are carrying on some experimental studies suggested by the forego considerations, and hope to be able before long to communicate some of our resu

SUMMARY

The functioning of the brain is affected by the molecular concentrations of many su stances that are normally present in the brain. The optimum concentrations of the substances for a person may differ greatly from the concentrations provided by h normal diet and genetic machinery. Biochemical and genetic arguments support t idea that orthomolecular therapy, the provision for the individual person of t optimum concentrations of important normal constituents of the brain, may be t preferred treatment for many mentally ill patients. Mental symptoms of avitaminos sometimes are observed long before any physical symptoms appear. It is likely th the brain is more sensitive to changes in concentration of vital substances than a other organs and tissues. Moreover, there is the possibility that for some persons th cerebrospinal concentration of a vital substance may be grossly low at the same tim that the concentration in the blood and lymph is essentially normal. A physiologic abnormality such as decreased permeability of the blood-brain barrier for the vit substance, or increased rate of metabolism of the substance in the brain, may lead to cerebral deficiency and to a mental disease. Diseases of this sort may be called local ized cerebral deficiency diseases. It is suggested that the genes responsible for abnor malities (deficiencies) in the concentration of vital substances in the brain may b responsible for increased penetrance of the postulated gene for schizophrenia, and that the so-called gene for schizophrenia may itself be a gene that leads to a localized cerebral deficiency in one or more vital substances.

Orthomolecular Psychiatry: Treatment of Schizophrenia

DAVID HAWKINS

INSTRUCTIONS TO THE PATIENT

Education of the Patient: Explanation of the Illness and Test Results

Subsequent to the completion of tests and the diagnostic interview, the patient is given an interpretation of all the test findings and the diagnosis, including a biochemical explanation of his illness. It is explained to him how the HOD test reveals faulty perception, and he is told his exact HOD score and its correlation with his symptoms. It is then explained that a medical regimen will be prescribed that is designed to correct the brain's faulty perceptual functioning. An adequate understanding of the illness frequently relieves irrationality rapidly.

Similarly, when it is explained to the patient that paranoia is a result of faulty brain chemistry and it is labeled "paranoia" he becomes less paranoid and more rational. Unless the condition is of considerable duration, so that it has become

systematized with many attendant secondary gains, paranoid symptoms usually diminish rapidly. An adequate explanation to the patient of his illness is an extremely important therapeutic procedure and sets the stage for all the treatment procedures that follow.

We use the term "metabolic dysperception" (see Chapter 19 by Kowalson and Chapter 26 by Robie) to most accurately describe the patient's condition, and we explain that metabolic dysperception, if it gets bad enough, can produce overt clinical schizophrenia. We have yet to see a patient who has rejected this explanation, if expressed correctly. Many of the patients respond very positively and will state that this is the first time a psychiatrist has ever been honest with them.

Telling the patient that he has a specific illness allows him to assume the sick role with all the attendant benefits that accrue in our society, as have been well described by Siegler and Osmond (1969). Once the patient and family understand the nature of the illness they are usually willing to accept it and do something about it. The family no longer has to utilize denial or reaction formation to handle their guilt, anger, and other emotional reactions which automatically stem from psychological formulations of the illness. Under these conditions, families readily assent to counselling in those instances where disturbed family interaction is apparently impeding the patient's progress.

General Medical Regimen

The patient is told that he will be placed on a regimen consisting of diet, megavitamins, medications, and prescribed periods of exercise, rest, and sleep. No more than 8 hours of sleep is advised as more has been shown to increase fatigue and disability (Globus, 1969). Daily physical exercise is prescribed for its physiological benefit. Anxiety in mental patients has been demonstrated to be accompanied by elevated lactate levels as a result of altered energy systems (Pitts and McClure, 1967; Beebe and Wendell, 1968; also see Chapter 21 by Beebe and Wendell). The beneficial effect of exercise has also been reported by members of Schizophrenics Anonymous; they claim that of all the forms of exercise, swimming is the most subjectively beneficial.

Patients are advised to avoid excessive fatigue and stress and they are placed on a hypoglycemic diet which consists primarily of the avoidance of sugar and sweets, reduction of starch, and elimination of caffeine. Because there is an increasing interest in functional hypoglycemia there are a number of recent books available to the patient (see Chapter 22 by Meiers). A booklet "Hypoglycemia and Me" by the Hypoglycemic Foundation[1] is excellent and provides all the information needed.

---

[1] Available from Adrenal Metabolic Research Society of the Hypoglycemia Foundation, P.O. Box 48, Fleetwood, Mount Vernon, New York, N.Y. 10552.

Patient self-help groups such as Health Frontiers[2] hold regular meetings, distribute educational literature, and sponsor informative lectures by endocrinologists.

The use of adrenal cortical extract (ACE) in the alleviation of hypoglycemic episodes is occasionally necessary. Our experiences have indicated that in certain patients it can be demonstrated to have a marked benefit and in several instances, the use of the ACE injections has made it unnecessary to hospitalize patients who had precipitated relapses by going off their diets. "Physicians Guidelines to Diagnosis and Treatment of Hypoglycemia or the Hypoadrenocortical State" and "Hypoadrenocorticism" are available from the Hypoglycemia Foundation to physicians only.[3]

We also advise patients that strong aged cheeses such as Roquefort and Camembert should be avoided as these have been reported by the members of SA to aggravate their symptoms.

Patients appreciate the reasons for all of these instructions and are far more cooperative when the rationale is given. It is useful to clarify the difference between a vitamin *deficiency* disease and a vitamin *dependency* disease (Rosenberg, 1970) in which vitamins are being used in pharmacologic rather than replacement doses. To aid in their understanding of the illness, educational literature is made available and most patients and families find helpful the educational package which is available from the Schizophrenia Association of Long Island.[4] In our experience, the more the patient and family know about the illness, the better the result.

Joining Schizophrenics Anonymous is recommended when it appears the patient would benefit, and we suggest to family members that they join one of the schizophrenia associations, become acquainted with the other families, and attend the educational lectures. Many patients become interested in the hypoglycemic aspect of the illness and appreciate being referred to patient self-help groups concerned with this illness.

With the alcoholic-schizophrenic patients, treatment is first concentrated on the schizophrenia and they are referred to SA. In each of the SA groups, there are also members of Alcoholics Anonymous and, as the patient improves, these recovered alcoholics introduce the patient to AA. If the patient is not going to SA then he is referred directly to AA after his HOD score has gone down and the schizophrenic process has abated. Surprisingly, at that point the schizophrenic-alcoholic usually abruptly stops drinking without the prolonged struggle and battle typical of the nonschizophrenic alcoholic. The patient frequently attends both SA and AA groups and as the schizophrenic process dissolves, he usually drifts away from SA and continues in just AA.

MEDICATION

Psychotropic Drugs

The academic drug researcher operates at a distinct disadvantage—he cannot employ the great variety of techniques which the clinician utilizes almost automatically in his daily practice. Also, the researcher can only handle very limited data and the number of controlled variables must of necessity include only those that are most obvious and that lend themselves to data collection and processing. The parameters of research designs are, therefore, arbitrarily quite limited, as are the results. Unfortunately, the results of such studies are often extrapolated beyond the confines of the data and the results are stated in terms which do not limit the results to the conditions of the study. Because he is unencumbered by such limitations, it is usually possible for the clinician to accomplish more with any given drug than the literature infers. The more complex the illness being treated, the more this general principle holds true, and it is especially so in schizophrenia.

Correct sequencing of medications is important in the psychopharmacology of schizophrenia. By changing the sequence it is often possible to obtain results with the same drug to which the patient was previously unresponsive. A similar observation has also been made by Kline (1969), who noted, in doing cross-over studies, that patients may react differently to the same dose of the same drug when it is later re-introduced and that this phenomenon creates a previously unrecognized problem for drug research. We have learned that this can be done deliberately—a patient can be "set up" to respond to a drug that we intend to administer at a later date. In doing this, advantage can be taken of certain readily observable principles of central nervous system activity such as the rebound phenomenon. For instance, a patient will often readily respond to an "up" drug if it is rapidly introduced during the immediate period following cessation of a "down" drug and vice-versa. Brain function, as a general rule, tends to be compensatory, and this natural tendency can be used to purposely "sensitize" a patient to the effect of the same or another drug. In attempting to induce this reaction, the action of the "sensitizing" drug should be in the opposite direction from the drug whose response we later need to effect a recovery.

Researchers who are not clinically experienced are often puzzled by the "polypharmacy" that they come across, because, from the limitations of a theoretical viewpoint, it "doesn't make sense." The clinician, however, often follows by "intuition" certain principles in drug usage which have been learned by experience. Besides sequencing, these include: utilization of mutual synergisms and antagonisms, balancing off of side effects, purposely utilizing desired side effects, extending dosage ranges by concurrent use of antagonists, calculating onsets and durations of action, predicting progressive loss of response, predicting development of tolerance or loss

of tolerance, estimating effective dosage ranges at different stages of the illness, and predicting phases of drug responses. Because of all these clinically important factors, which are not included in research designs, it is common for clinicians to obtain quite different results from those that are received from academic studies. In daily practice the clinician automatically compensates for biological individuality (Williams, 1971) and the difference between patients, which in psychiatric conditions are more marked than in other kinds of illness. In psychiatry it is common for patients to require 10 to 100 times the "average dose" of a given substance before they respond favorably.

Additional reasons for the traditional "town versus gown" difference in the results of treatment between clinicians and academic researchers are provided by understanding Joseph Wilder's "Law of Initial Value," which states that the pre-stimulus state of the organism determines the response as much as does the nature of the stimulus itself. The chemical importance of this concept has been reviewed by Lesse (1971). Because of the antipsychotic effect of the phenothiazines, all patients are placed on either a suitable phenothiazine or other antipsychotic medication if this has not been done previously. According to Hollister (1971), antipsychotic drugs "contribute the most therapeutic benefits in schizophrenia—there is little direct evidence that traditional therapies add more," and all antipsychotics produce a postsynaptic dopamine receptor blockade leading to stabilization of the membrane at the receptor site.

The site of action may also be an enzymatic protein in the presynaptic membrane adjacent to the intersynaptic cleft (Teller and Denber, 1968). They point out that the defective protein at the synaptic site is probably quite small and that the antipsychotic drugs are capable of changing protein structure even in minute doses. The change in structure then causes change in functioning of the enzymatic activity. Utilizing a "framework molecular model" (available from Prentice-Hall, Inc., Englewood Cliffs, N.J.) they demonstrated, for instance, that the "architectural" characteristic of chlorpromazine and mescaline allowed for a demonstration of their mutually antagonistic action by action at the cell's protein membrane discs.

Spontaneous disinhibition of neuronal circuits, because they are connected in series rather than parallel, can result in clinically significant symptoms even though only a few sites are involved. This may lead to production of reverberative circuits in which apparent perceptions may occur, for instance, without external stimulation. Also, in chronic schizophrenia there is a disturbance of internal inhibitory activity (Saarma, 1968), and Saarma and Vasar (1970) have demonstrated that this disturbance is positively influenced by nicotinic acid. Teller and Denber conclude that the symptoms resulting from the endogenous genetic defect in schizophrenics are similar, from the viewpoint of molecular biology, to those that are exogenously caused by the psychotomimetic drugs. Bradley and Johnston made a valuable contribution to future research in this area in their work on "The Molecular

Pharmacology of Hallucinogens" (1968). Animal research until this time had been based only on gross behavioral changes in response to the drugs being investigated. Bradley and Johnston introduced the use of operant conditioning techniques to determine more subtle behavioral changes in response to a series of possible psychotogens. By correlating these more subtle responses to a series of structural changes in the molecules being studied, they have come closer to approximating the human condition in drug research with experimental animals.

It is explained to the patient that the phenothiazines are being prescribed, not as tranquilizers, but for their effect in reducing the HOD score and for their antischizophrenic action. Intelligent patients appreciate a brief explanation of the action of the phenothiazines so that they get to know that chlorpromazine has a "down" action and is, therefore, useful when they are agitated, or upset, or have insomnia, whereas fluphenazine, especially in lower doses, has an "up" action. An explanation is given of extra-pyramidal side effects and the reason for prescribing anti-Parkinsonian medication.

Patients are told that if they get blurred vision, the anti-Parkinsonian drug dose is too high, and that if they get restless legs or cannot sit still, it is too low. An explanation is given that the phenothiazines are not properly called tranquilizers and that that term should be reserved for drugs of the meprobamate type. This removes the common prejudice against taking tranquilizers. Many patients are either fearful of tranquilizers or they have reaction formations against them and do not want to become dependent on them. Clarification of this issue is often of considerable importance because some patients will discontinue antipsychotic drugs, with dire results, for these reasons.

The dose of phenothiazines is reduced as the patient improves and his medication is shifted from one end of the phenothiazine spectrum to the other, depending on what phase of illness or recovery he is in currently. We have seen many patients whose impairment was impeded by their being kept on the wrong phenothiazine due to the mistaken notion that all phenothiazines are interchangeable. As an example:

> A 28-year-old schizophrenic man was admitted to a hospital with paranoid symptoms. He was placed on 600 mg of chlorpromazine, following which the paranoid symptoms disappeared. He then became depressed and apathetic. During the next year-and-a-half he had psychotherapy three times a week, but did not improve and so was discharged at the end of that time as having achieved maximum hospital benefit. Medication remained the same throughout the entire hospital stay and he was discharged on the same dosage.
>
> When seen at the clinic, he was still "down," apathetic, listless, and indifferent. The notes in the patient's hospital record indicated that this was thought to be due to the schizophrenic process. At the first visit, his medication was changed from 600 mg chlorpromazine to 5 mg fluphenazine three times daily. Within 24 hours the entire symptom constellation disappeared. He became alert, responsive, and energetic, and eventually recovered.

The best clinical principle is that the patient should be on the right dosage of the right phenothiazine at the right time. We tell the patient that as he recovers the dosage will be reduced, but that he will be kept on a small, perhaps "bed-time only" maintenance dose for its beneficial chemical effect even though he has long since not needed a tranquilizer. This again demonstrates to the patient that the phenothiazine is not being used as a tranquilizer, but for its biochemical effect. This explanation results in increased patient cooperativeness.

Antidepressants may be necessary in this connection. We have found that activation of the tricyclic antidepressants by thyroid medication may bring about a prompt response. This has been recently reported by Prange et al. (1969) and Earle (1970). It is important, as mentioned before, that the patient's euthyroid status be ascertained prior to placing him on this combination of medications. The patient's active symptoms should always be first brought under control with a phenothiazine before the antidepressant is introduced.

Another medication which is useful in the treatment of schizophrenia is methylphenidate hydrochloride (Ritalin®). If the depression is not too severe, 10 to 20 mg three times per day before meals will alleviate fatigue and depression, as well as any sedation effects from the phenothiazines. This medication at times has relieved depressions of suicidal degree in less than an hour and helps to tide the patient over until his basic condition improves sufficiently that the depression passes. Overreliance on this medication can lead to a diminution of effect. It can be used to potentiate the effects of the tricyclic antidepressants. This synergistic effect results in an increase of blood levels of the antidepressants through enzyme inhibition (Wharton et al., 1971). Overusage by schizophrenic patients is rare, and in our experience has occurred only in those who have a problem with multiple drug abuse.

An additional use for thyroid medication in the euthyroid schizophrenia patient is in the treatment of periodic catatonia. In this condition, between upsets, the patient's HOD score may be within the normal range, and when an attack occurs the score rises precipitously. The typical response to 3 or 4 grains of thyroid daily is exemplified by the following case:

> A 41-year-old housewife had been hospitalized *15 times* in the last seven years for recurrent acute schizophrenic episodes uncontrolled by massive doses of chlorpromazine. When seen in the office between attacks, her HOD score was only 10. The attacks were always preceded by a period of insomnia and often occurred during the pre-menstrual period. In addition to megavitamins and a hypoglycemic diet, she was placed on 4 grains of Proloid® daily at the first visit. Since then she has not had a single recurrence—she feels and functions as though she had never been ill. She returns to the clinic for follow-up visits every three months.

Although the successful use of thyroid in treating schizophrenia has been the subject of many papers in psychiatry for more than 40 years, apparently many

clinicians do not think of using it because schizophrenics are usually euthyroid. The periodic catatonic is a readily recognizable subgroup of the schizophrenias and the value of using thyroid in this condition has been reported by many researchers, including Gjessing (from 1932 on, but recently see 1964, 1967, 1969), Danziger (1958), Danziger and Kindwall (1953, 1954), Gunne and Gemzell (1958), Sourkes (1962, 1970), Lochner et al. (1963), Minde (1966), Cookson et al. (1967), Jenner (1967), Vestergaard (1969), and Hoffer (1967). Thyroid can be used in treatment of the recurrently ill schizophrenic as well as for other types of schizophrenia.

Hoffer and Osmond (1967) reviewed the literature and noted that the average dose of thyroid used was 5 grains daily. Danziger and Kindwall (1953, 1954) gave doses of 2 to 20 grains but found that few patients required more than 10 grains. All researchers have commented on the considerable resistance of the schizophrenic to thyroid hormone and in our own work we have observed the same phenomenon. Our most common dose is 3 to 5 grains daily, and many patients who were previously unresponsive to treatment will recover when this amount of thyroid is added. Many of these are patients who do not present the classic periodic pattern; one will be described later.

Megavitamins

We routinely use mega doses of four vitamins for a variety of reasons in treating schizophrenic patients, and this has resulted in increased rates of recovery. It is still not possible to predict exactly which patients will benefit by megavitamins and it remains for future researchers to give us the useful clinical indicators to identify these patients in advance. Work supported by the Canadian Mental Health Association (Ban, 1969; Ananth et al., 1969; Ban and Lehmann, 1970) is proceeding in that direction and preliminary results indicate that there is a segment of the schizophrenic population that responds to either nicotinic acid and pyridoxine or pyridoxine alone and may eventually be identifiable.

Ananth, Ban, and Lehmann report (1972) that the therapeutic effect of nicotinic acid in chronic schizophrenics is potentiated by pyridoxine. This was demonstrated in a 48-week double blind control study in which pyridoxine alone, nicotinic acid alone, or the two together were demonstrated to have a statistically significant therapeutic effect. The therapeutic effect was demonstrable even though the patients had been hospitalized for an average of 10.9 years, were not on hypoglycemic diets, and the doses of both pyridoxine (75 mg daily) and vitamin B3 (3 g a day) were considerably below the dosages we routinely prescribe.

In general, it can be said from our own experience that the higher the patient's HOD score, the greater the likelihood of response to an overall megavitamin treatment regimen. The schizophrenic patient whose illness could be called "metabolic

rception" responds the best. The grown-up childhood schizophrenic with the OD score, postural stigmata of propioceptive deficit, and primarily visual per-al distortions is the least likely to benefit. The most significant visual perceptual tion in this group of patients is loss of depth. This particular distortion, even it is induced hypnotically in normal subjects, produces a schizophreniform nse with primitivization and regression, as has been shown by Aaronson in al studies (1967a, b, 1968). This type of patient appears to belong to a different iemical subcategory of the subtypes of the schizophrenias.

e megavitamins and the phenothiazines act clinically as though they had a gistic action, and for that reason patients are kept on a low daily dose of a othiazine prophylactically even after they have recovered. Sainz (1964) has onstrated that the phenothiazines elevate blood ascorbic acid levels, and there be a variety of synergistic effects such that the antipsychotic action of the pheno-ines may be augmented by the megavitamins. Demonstration of the effective-of the combination requires correction of co-existing functional hypoglycemia. any patients, in our experience, recovery was prevented by lack of adherence to ypoglycemic diet. As an example:

> A 26-year-old unemployed schizophrenic man had been ill for several years and had been hospitalized several times, during which he had had shock treatment and all other available forms of therapy. By the time he came to the clinic, he was surly, uncooperative, paranoid, and obese. The Glucose Tolerance Test revealed definite functional hypoglycemia and he was placed on the usual regimen of megavitamins, phenothiazines, and a hypoglycemic caffeine-free diet.
>
> For the next one-and-a-half years no progress was achieved and during visits he was highly uncommunicative, despite high doses of vitamins and phenothiazines. It was then discovered from his family that he was drinking at least half a case of a cola beverage per day and on week-ends he usually drank a whole case daily. Cessation of the cola ingestion resulted in rapid, progressive improvement with noticeable changes in behavior, communicability, and relationship with the family. His inappropriateness and surly, gauche manner disappeared and he is continuing to improve.

When we first began using megavitamins in treating childhood schizophrenics we re unaware of the importance of ameliorating the hypoglycemia and, therefore, r first reports on the use of nicotinamide in schizophrenic children stated that . . niacin and niacinamide were found to be relatively ineffective in childhood izophrenics and less effective in adult schizophrenics with childhood onset" awkins, 1967, 1968b). Similar negative experiences have been reported by Roukema d Emory (1970) and Greenbaum (1970b), who also demonstrated that nicotina-ide alone in the treatment of childhood schizophrenia, except for improvement in me individual cases, did not produce statistically significant results. It was Cott 969) who pointed out that recovery of childhood schizophrenics on megavitamins as not possible until the hypoglycemia was corrected, and that unless this was

done it was useless to proceed. The importance of this concept cannot be overemphasized, as in this group as well as certain other patient groups no recovery at all is possible unless the hypoglycemia is corrected.[5] In this connection it might be well to emphasize again that recovery after the acute phase is over can be delayed for long periods of time if the patient is allowed to sleep beyond 8 hours a day. The apathy and lassitude which ensue from prolonged oversleep can negate attempts at rehabilitation.

Our initial combination of megavitamins usually consists of 1 gram niacinamide, 1 gram ascorbic acid, 50 mg pyridoxine, and 400 I.U. of natural vitamin E, repeated four times daily. Although occasionally an adolescent girl will develop nausea as a result of this dose of niacinamide and require a reduction of dosage, this combination is tolerated by the majority of patients without any side effects. The most frequent complaints are about the nuisance of taking the pills and, occasionally, difficulty in swallowing them.

For a time, we hypothesized that the difficulty in swallowing, especially in adolescent girls, was hysterical in origin, but we discovered this was often due to esophageal dysfunction associated with schizophrenia as reported by Hussar and Bragg (1969, 1970). Their study on the swallowing functioning in schizophrenics using cineradiographic techniques demonstrated that almost half of the schizophrenic patients showed various degrees of swallowing abnormalities and that chlorpromazine medication had no effect on the swallowing mechanism. The conclusion of their study was that "these results contribute to an understanding of the not infrequent tragic episodes of asphyxiation on food among chronic schizophrenic patients often incorrectly ascribed to tranquilizer medication."

Both niacinamide and ascorbic acid are available in capsules, which are more easily swallowed than pills. The ascorbic acid available in crystalline form can be mixed easily with orange juice.

The maximum therapeutic dose of niacin or niacinamide is about 1 gram per day below the nausea-inducing dose. We routinely begin by using niacinamide and later switch the patient to niacin if there are specific indications to do so, such as the existence of concomitant alcoholism, elevated cholesterol, or hypoglycemia, or if the schizophrenic has been precipitated by LSD. Although the flushing side-effect of niacin can be controlled by cyproheptidine (Periactin®) 4 mg four times daily (Robie, 1967), the flush unnecessarily alarms patients even when it has been previously explained to them. Niacin also appears to be more beneficial than niacinamide in treating the alcoholic-schizophrenic, although we do not have statistical studies to prove that this is so.

Recent studies (Davis and Walsh, 1970; Lieber and DeCarli, 1970) have demonstrated metabolic pathways in alcoholics which may account for nicotinic acid's

---

[5] Hypoglycemic episodes, for instance, will trigger post-LSD "flashbacks."

action in this disorder. Thus, alcohol, by way of its primary metabolite, acetaldehyde, competitively inhibits nicotinamide-adenosine-dinucleotide-linked aldehyde dehydrogenase, which interferes with the metabolic disposition of the biogenic amine dopamine, producing aberrant metabolites. Prolonged consumption of alcohol enhances the activities of the enzyme-reduced nicotinamide-adenosine-dinucleotide phosphate oxidase. In this connection, alcoholics have also been demonstrated to have a deficiency of vitamin C as exemplified by a lower level leukocyte ascorbic acid in control groups (G. . Iberg, 1970).

Although Saarma and Vasar (1970) report that with nicotinic acid there is an appearance of clinical improvement between the fourth and sixth week of treatment, in our experience the response to the megavitamins is generally more delayed and not discernible until the third to sixth month. A very noticeable or marked degree of improvement as compared to patients who are treated with just phenothiazines is most obvious by the end of the first year.

Improvement can be speeded up by the use of parenteral injections of the megavitamins, in which case a noticeable improvement begins within a few weeks (see Chapter 25 by Cott). Patients who have been on adequate oral doses for a considerable length of time without improvement will often suddenly respond when switched to parenteral administration. The ability of the intestinal tract to handle a given compound is not the same in all persons (Faloon, 1970). Some patients may have a defect in transport enzyme systems so that a patient may have been on a high dosage of ascorbic acid for some time and yet still show a subnormal blood ascorbic acid level. This level then suddenly increases to normal when much smaller doses of ascorbic acid (500 mg) are given by injection.

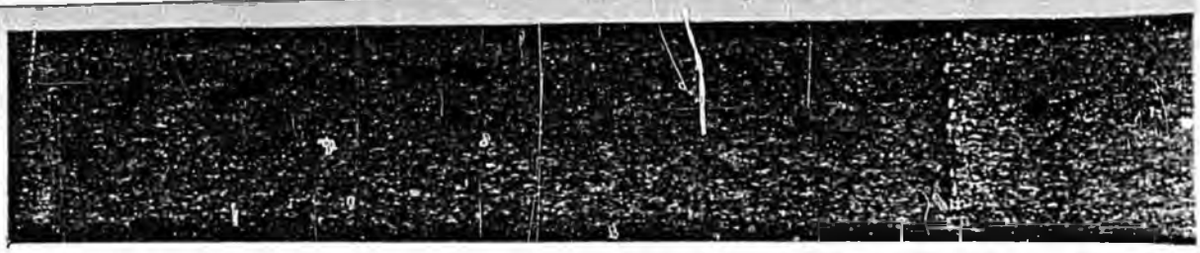
Multiple modes of action of nicotinic acid in schizophrenia have been described (see Chapter 11 by Hoffer), including the recent work of Galzigna (1969, 1970) and Galzigna and Rizzoli (1970) showing that nicotinamide reacts rapidly with the aminochromes, reducing them. In the absence of nicotinamide in the brain tissue, the aminochromes react with acetylcholine to form a stable complex which acts as an endogenous hallucinogen. They conclude that "if we consider adrenochrome reduction derivatives as non-toxic excretion products of the psychotogen aminochromes, a rationale for the clinical use of nicotinamide in mega doses as a therapy for mental illness is provided." Further work is in progress to demonstrate the nature of this interaction with ascorbic acid which is central to the authors' "short circuit" theory of the onset of mental illness.

Nicotinic acid has nonspecific properties of blocking the production of stress-induced gastric ulcers in laboratory animals and it also blocks the L-dopa-induced exacerbation of symptoms in schizophrenic Parkinsonian patients (Yaryura-Tobias, 1971). Research is currently being done to determine the effect of nicotinamide in reducing the stress responses (cold pressor test) of normal students to final examinations (Bovard, 1971, personal commun.). The contraindications for using nicotinic

acid have been described by Hoffer and Callbeck (1959), Hoffer (1962, 1969), Hoffer and Osmond (1966), Mosher (1970), and Newbold (1970), and have been reviewed in other chapters. The four main contraindications to niacin are those of peptic ulcer, hypertension, diabetes, and gout. The niacin-induced hyperglycemia may alter insulin requirements in diabetics. The histamine-release, which produces the flush, results in hyperchlorhidria in ulcer patients. The elevation of uric acid may precipitate gout attacks, and if the hypertensive patient is on a reserpine-type anti-hypertensive agent, the patient may possibly go into shock. The cholesterol-lowering effect has been demonstrated in long-term heart studies and the heart studies have discovered the same contraindications (Boyle, 1968). Here, obviously, the lowering of blood cholesterol is sought, and it is a side benefit when niacin is taken by schizophrenics.

In the review articles mentioned earlier concerning the possible side effects of nicotinic acid, several cases of possible hepatic toxicity were reported. When the effect of nicotinic acid in producing false positive liver enzyme tests is discounted, these appear to be questionable. We have not seen any cases of noninfectious jaundice which did not clear up when the phenothiazine was discontinued. In addition, we have seen several cases of intercurrent infectious hepatitis as demonstrated by liver function tests and liver biopsy. The majority of patients who develop phenothiazine jaundice were continued on the megavitamins and the jaundice cleared up with no difficulty. In a few cases, because of the isolated reports in the literature, megavitamins were discontinued along with all other medications, and the patients were subsequently replaced on nicotinamide with no recurrence of jaundice. At this time, we consider that jaundice due to nicotinic acid, although unlikely, may be a remote possibility and treatment will depend upon the judgment of the attending internist.

We explain to patients that both vitamin E and ascorbic acid are prescribed for their antioxidant effects. Ascorbic acid alone has been shown in controlled studies to benefit psychiatric patients as evidenced by improvements in their Wittenborn and MMPI scores (Milner, 1963). The effect of vitamin C in preventing the common cold has been reviewed by Pauling (1970), and this is of benefit to schizophrenic patients, who characteristically show a clinical worsening and an increase of perceptual difficulties as a response to viral infections. For those patients in whom this has been a problem, we recommend the sustained-action form of ascorbic acid in capsule granulated form, which sustains ascorbic acid blood levels during sleep (Riccitalli, 1972) and thereby eliminates recurrent colds in the majority of patients. We frequently have observed minor relapses and setbacks in recovered patients in response to upper respiratory virus infections and a possible mechanism for this observation has been described by Teller and Denber (1968) related to abnormal protein structure (such defects can occur genetically, or be caused by malnutrition, avitaminosis, infection, toxins, or immunologic reactions). The greater retention of



rbic acid in schizophrenic patients has been shown by Cowan et al. (1970) and iously by Herjanic and Herjanic (1969) and VanderKamp (1966). Current es by Pauling and Robinson and by Herjanic are reported in Chapters 2 and 14 his volume.

igh doses of ascorbic acid may occasionally cause mild diarrhea in some viduals and it may cause false positive urine tests in diabetics who use commercial e test kits. A case is also reported in which ascorbic acid shortened the prombia time in a patient who was receiving a Warfarin (Coumadin®) anticoagulant senthal, 1971). In treating over 5,000 patients with 4 grams or more of ascorbic per day, however, we have not had a single instance of any serious side effects.

/e explain to patients that vitamin B6, pyridoxine, is necessary as a precursor of tinic acid. It is an intermediary step in the biotransformation of tryptophan to tinic acid where it is required for the hydroxylation of kynurenine (derived from tophan) to 3-OH-kynurenine and for the further metabolism of 3-hydroxykynine to 3-hydroxyanthranilic acid (immediate precursor to nicotinic acid; Gibbs Walshe, 1969). Vitamin B6 deficiency interferes with the metabolism of amino s, proteins, and biogenic amines, and causes abnormalities of nervous system vity in man, where the pathological effects of deficiency are most marked on the loping brain. Abnormalities of vitamin B6 metabolism have been associated not / with schizophrenia but also with a variety of other abnormalities of the central /ous system, and B6 deficiency at the subcellular level may be produced by a ıber of antimetabolites (Knapp, 1966; Coursin, 1969). The antagonism between min B6 and L-dopa is a recent illustration (Duvoisin et al., 1969; Cotzias and avasilion, 1971). Pyridoxine in high doses has been used by Cott (1969) in the tment of childhood schizophrenia. The role of pyridoxine in psychiatric disorders recently been summarized by Ananth, Ban, and Lehmann (1972) in their paper tled "Potentiation of Therapeutic Effects of Nicotinic Acid by Pyridoxine in onic Schizophrenics" presented at the Canadian Psychiatric Convention in ntreal, June 8, 1972. This paper states that pyridoxine potentiates the action of tinic acid, possibly by opening up the kynurenine cycle of tryptophan metabolism thereby decreasing the formation of indoles. In their study, already referred to, doxine alone had a therapeutic effect in schizophrenics as well. In more than 0 patients we have not observed a single side effect from pyridoxine administra- of 200 mg daily.

is best to write down the medication schedule and the recommendations for p and diet on a card and give it to the patient at the initial visit. It is also advisable dicate to the pharmacist that all medications be labelled to show the name and age size. Unless this is done, there will be mistakes and many call-backs as most ents are perceptually disordered and unable to remember verbal instructions.

n summary, the addition of megavitamins is inexpensive and safe, and very itively influences the long-term outcome. Side effects of a serious nature are quite

rare and easily avoided. The occurrence of even the most mild side effects is avoided by giving niacinamide instead of niacin. Precise identification of those patients most likely to respond is not yet possible but, in general, the more elevated the HOD, the more likely the response, provided however, that concomitant hypoglycemia is also corrected.

INVOLVEMENT OF THE PATIENT IN AN INTEGRATED COMMUNITY TREATMENT SYSTEM

Because of the severity of a patient's condition or situation, hospitalization may either be required or elective. The average length of hospitalization for intensive hospital treatment (which may or may not include a course of ECT) in our series of patients over the last five years is eight weeks. Ten to twelve weeks may be necessary however, if the patient has been taking large doses of methedrine (speed). ECT rapidly reduces the HOD score, and this effect is most marked in the younger age groups, as will be discussed later.

If the schizophrenia has been exacerbated by LSD or methedrine to the degree that the patient is psychotic, then ECT, in our experience, is often necessary, as the psychosis otherwise tends to persist. It is also very effective with the depressive aspect of the patient's illness, which may be creating a suicidal risk. The response to ECT is different if the patient has been preparatorily pretreated. If, while in the hospital, the patient receives high-dosage megavitamins both orally and parenterally and is on phenothiazines and a hypoglycemic diet, the relapses following cessation of ECT formerly seen in schizophrenics seldom occur and the improvement is maintained following discharge.

Curiously, annoying side effects from medication seldom occur in a hospital setting. The patient who had side effects from practically every medication tried as an outpatient will probably have none from much higher doses of the same medication if he is hospitalized. In the hospital, patients are given 500 mg of ascorbic acid and 200 mg of niacinamide intramuscularly three times weekly in addition to the usual oral doses. Few patients fail to improve from intensive hospital treatment and even many of the severe chronic patients improve sufficiently so that they can be discharged and treated as outpatients.

Patients who appear shaky at the time of discharge or have difficult home situations or who have become disabled by the long duration of their illness benefit considerably from a convalescent period in a halfway house where they can be maintained on the same therapeutic regimen with monthly visits for changes of medication and evaluative follow-up. The use of SA, family groups, day activities programs, and

involvement with other supportive units of a treatment complex are described in Chapters 28 and 29.

Patients' self-help groups, such as Recovery, can also be of benefit to certain patients who have residual symptoms, so that, no matter what the family's financial limitations are, a great deal of supportive help and definitive group psychotherapy is available to both patient and family at no cost.

Pathological family interaction in which abnormal pressures are exerted on the patient by his family, or where there is a disturbed family situation that can impede his recovery, may require either family group therapy or parent counselling to facilitate the patient's recovery. This can be suspected as an operative factor when the patient's HOD score decreases progressively but is not accompanied by a return to normal function. The disability may then be stemming from an overprotective parent who infantilizes the patient rather than from the previously active schizophrenic process, and this pattern may require therapeutic intervention. At times this may be actively resisted by the dominant parent, who has unwittingly utilized the patient's illness for secondary gain or for other pathologic reasons.

Highly specialized group therapy may be necessary for the patient who has become heavily involved with the drug culture because unless this is done he tends to fall back into the same drug usage which precipitated his schizophrenia. In this type of group therapy, we have found that a straight chemical approach brings the best response. In this group setting, which differs markedly from the traditional analytically oriented group therapy, there is considerable discussion of drugs and their biochemical effects and especially the effects of drugs on the HOD score. The therapist needs to have knowledge of the current drug scene and the whole psychedelic subculture, especially language, life styles, and an awareness of what has recently been termed Consciousness III (Reich, 1970).

Once the patients learn that mescaline, psylocybin, LSD, STP and methedrine elevate the HOD score—with the risk of "freaking out"—they begin leaving these dangerous drugs alone. They learn that these drugs are truly psychotogens for them and that many of them have had to be hospitalized for LSD- or speed-precipitated schizophrenia psychoses. Patients inevitably discover that neither marijuana nor hashish has a residual effect on their HOD score and, therefore, for a period of time, excessive use of these two drugs may replace their former involvement with the more dangerous drugs that are likely to precipitate hospitalization and psychosis. As their HOD scores come down, the use of marijuana diminishes and they begin to function again and return to school or to work.

Prolongation of the excessive marijuana smoking may be associated with altered time perception, which should then be tested for with a timing device such as an electronic metronome (see Chapter 18 on Cyschronia). Until this specific schizophrenic syndrome is alleviated, attempts to dissuade the patient from excessive pot smoking are almost always unsuccessful.

PSYCHOTHERAPY

From the model of schizophrenia which we have described, and the description of the diagnostic process, it is apparent that the patient has already been oriented to his illness and that this has been augmented by explanations of the meaning of the laboratory and perceptual test results. In addition to an explanation of the biochemical and perceptual aspects of the illness an explanation is given of how these interfere with functioning, feeling, and relating to others.

Although the illness intensifies pre-existent psychological conflicts and personality problems, it is explained to the patient that the initial phase of therapy will be devoted to medical recovery from the illness and that coexistent psychological problems will not be dealt with primarily until the HOD score is within the normal range. The explanation given for this is that impaired brain function causes so many different kinds of symptoms and effects on the personality that there would be no way of knowing, until the patient gets better, which of them are results of the patient's own personal problems and which are manifestations of an active disease process. The analogy given here is similar to a toxic brain syndrome. A more common example is that of the alcoholic who when actively drinking may develop an enormous range of pathologic symptoms and behavior and when sober may have only mild or no indications for psychotherapy.

Most patients readily concur with this treatment plan. The majority of patients will have already undergone previous psychotherapy, often of a prolonged and intensive nature with a number of therapists, so that they are seldom motivated to take part in any kind of formal psychotherapy. Many patients are actively opposed to psychotherapy as well as being bitter about such previous experiences.

The resentment of patients and families and the turmoil ensuing from previous experience with psychotherapy were responsible for much of the bitter comment about traditional methods of psychiatric treatment for schizophrenia which appeared in the early issues of the *Newsletter* of the American Schizophrenia Association. This same conflict and disillusionment has been reported by professionals themselves when a member of their family has become ill. For example, a Professor of Psychiatry reported his own disheartening experience with this dilemma (Kysar, 1968).

At the North Nassau Mental Health Center, five years of experience using the orthomolecular approach were compared with the previous five years when traditional psychiatry approaches were used. This comparison showed that dynamically based psychotherapy was of very limited benefit in schizophrenia. Although parent counselling and educational and supportive therapy were demonstratively beneficial, and often critically so, therapies based on theories of a psychodynamic etiology of the patient's schizophrenia brought questionable benefit (Hawkins, 1969). Whether psychotherapy or pharmacotherapy was more important was glaringly demonstrated

by the disastrous consequences which occurred when patients discontinued medication. Most patients relapsed upon termination of medication, but showed little response to termination of psychotherapy. One of the most common reasons for hospitalization was discontinuance of medication, yet hospitalization was never required because of a therapist's absence or termination of psychotherapy. Hospitalization was in fact more often preceded and precipitated by the patient's decision to "go for analysis." Those patients placed on the orthomolecular program who continued in psychotherapy with their previous analyst did considerably less well than those patients in whom psychotherapeutic intervention was kept to an absolute minimum.

The clinic's conclusions have been corroborated by similar findings from large-scale research studies done elsewhere as well as by the collective experience of patients and their families.

Information about the value of psychotherapy in schizophrenia can be obtained from three additional decisive areas: (1) controlled studies in the scientific literature: (2) reports from therapists in institutions who have had extensive, long-term experience with the use of psychoanalytic psychotherapy in the treatment of schizophrenia; and (3) the experiences of large numbers of patients and their families.

During recent years, there have been several large-scale authoritative studies on the value of psychotherapy in schizophrenia, the most extensive being that of May (1968, 1969), in which a comparison was made of five different treatment methods in schizophrenia. This study was so extensive and included so many collaborators that a research project of its magnitude on the value of psychotherapy will probably never be duplicated. The study was supported by the State of California Department of Mental Hygiene, U.S. Department of Health, Education and Welfare, U.S. Public Health Service, the National Institute of Mental Health, the University of California Health Services, and the research committee of the Los Angeles Psychoanalytic Society, and there was collaboration with many other authorities too numerous to mention.

In review of this work, Barnes (1971) considers the study to be the most meticulous, intensive, complex, and comprehensive research design in the field of psychiatric therapy. He notes that many will disbelieve the results but

> more for emotional reasons than on the basis of any critical analysis of the work . . . these findings are of the greatest importance both to clinical psychiatry and to mental health program administration . . . it also leads us to wonder about the efficacy of the various therapies used in out-patient work with ambulatory patients, both schizophrenics and others.

The conclusions of this immense study were that medication alone, whether combined with psychotherapy or not, was the most effective and efficient treatment for most patients. Electroconvulsive therapy was the second most effective treatment.

Individual psychotherapy and milieu therapy were found to be the least effective, most expensive, and most time consuming.

Another series of important studies on the value of psychotherapy in the treatment of schizophrenia was reported from the Department of Psychiatry, Harvard Medical School, at the Massachusetts Mental Health Center. The conclusion from these computerized studies was that psychotherapy alone, even with experienced psychotherapists, did little or nothing for chronic schizophrenic patients, even over two years time (Grinspoon et al., 1967, 1968). In another study by the same researchers (Grinspoon et al., 1969) the same conclusions were reached: medication with or without psychotherapy had the most marked benefits. These studies confirm the earlier findings of May and Tuma (1965) that psychotherapy alone does not improve the schizophrenic patient's chances for improvement. In a further study by Shaffer et al. (1971) the authors conclude that there was no demonstrable difference in the results whether a patient received psychotherapy by either a "Type A" or a "Type B" therapist.

The findings of these extensive studies are supplemented by the 10-year study done by the American Psychoanalytic Association, in which data supplied by 386 analysts on over 3,000 patients reported an overall rate of symptom cure for schizophrenia of 9 percent (1968).

The second area of informative data is supplied by those institutions with long-term intensive experience in the use of psychoanalytic therapy with schizophrenia. Of these, Chestnut Lodge in Rockville, Maryland, is probably the best known. Two recent books from that institution indicate the failure of this method of treatment. In *Schizophrenia and the Need-Fear Dilemma* (Burnham et al., 1969) the psychoanalytic theory of schizophrenia is deftly presented together with an explanation of the lack of positive clinical results obtained. As a matter of fact, all of their case histories end with the patient either dead or still sick with schizophrenia. In the second book, *Conflicts and Reconciliation: A Study on Human Relations in Schizophrenia* (Stierlan, 1969), a similar lack of clinical results is reported.

Gray (1970) points out in a review article that "Sigmund Freud always held that schizophrenia was not amenable to psychoanalytic cure" and that "the challengers of this statement have failed to disprove the truth of it."

The clinic has had the opportunity to provide treatment for a number of patients who had prior long-term in-patient psychoanalytic treatment. In almost every case these patients who had been unresponsive to intensive, long-term psychoanalytic therapy promptly responded to a medical regimen. After 8 weeks of medication and/or ECT in a hospital, the majority had recovered. They are now employed, or back in college, able to socialize and some married. The following case is illustrative:

> This 24-year-old man had been ill with schizophrenia for six years and for the last two years had been in the hospital for psychoanalysis during which time he received no drugs of any kind. The family was alarmed at his deteriorating condition as he had

decided to commit suicide by not eating and the institution refused to use any medications. The family experienced great difficulty in getting the patient transferred to a medically oriented hospital and finally had to threaten legal action to obtain his release. The patient was so disturbed that the hospital had to wrap him in wet sheets mummy fashion and move him by ambulance because of their refusal to use tranquilizer medication.

On admission to the Brunswick Hospital, the patient was mute, withdrawn, severely depressed, negativistic, and uncooperative. After 8 weeks of intensive hospital treatment he recovered sufficiently to be discharged. Within a few months, he was gainfully employed, and was taking college courses in the evening. He then moved away from his family, became independent, and subsequently married.

The foregoing would tend to augment the findings of Will (1970), who concludes an article on psychotherapy in schizophrenia with the statement "*few schizophrenic patients will be helped in this prolonged, expensive and largely unattainable treatment.*"

The general consensus of many schizophrenic patients also has been that the results of psychotherapy were disappointing. Not only are their experiences discussed at meetings of Schizophrenics Anonymous and the various schizophrenia associations throughout the United States, but their collective experience also was expressed resentfully in the first few volumes of the *Newsletter* of the American Schizophrenia Association, as was previously mentioned. Autobiographies by former patients or their families reflect the same attitudes. *In Search of Sanity* by Gregory Stefan (1966) and *Gone is Shadow's Child* (Foy, 1970) are typical examples.

From the foregoing survey of important sources of information, the evidence is that psychotherapy based on psychoanalytic formulations of schizophrenia is of no statistically demonstrable benefit to patients. When done by therapists who are less than expert, psychotherapy may well be deleterious. Therefore, the requests of patients and their families for the inclusion of medication in the patient's treatment is hardly irrational, nor does it constitute "uninformed lay opinion." Many families, especially those who belong to a schizophrenia association, are very well informed and have read extensively. Dr. May's book, for instance, among many others, is for sale at association meetings. (One of the families of the Long Island Schizophrenia Association recently co-sponsored a major professional symposium on Gilles de la Tourette's Syndrome—which indicates a rather high degree of sophistication.)

In the clinic's experience, most patients do not desire or require formal psychotherapy once their HOD scores have returned to normal. During the initial period of the illness, while the patient's HOD score is still elevated, the less interference the patient experiences from the psychiatrist, the better will be the result. Patients who continue in dynamically oriented psychotherapy during this phase recover much slower and to a lesser degree. This conclusion became apparent after several years of experience with patients who were in therapy elsewhere and who were allowed to continue in therapy while the clinic handled their medications. As a group, these patients recovered to such a noticeably lesser degree that the clinic finally had to

recommend that patients discontinue that type of psychotherapy until they had medically recovered from the worst of their illness. When this practice was followed, results were much better—when patients did resume therapy, it was usually for far different reasons than the ones for which they had originally sought it.

After the initial diagnostic visit, patients are usually seen weekly to adjust medications until an effective regimen has been established. This usually occurs by the end of the first month and visits during the second and third months are usually bi-weekly. The average patient is then seen monthly for the remainder of the first year. During the second year patients are usually seen every two or three months, and during the third year they are seen every three or four months.

Inasmuch as the patients go through various stages of recovery, the problems that they present during these periods of time will vary. Initially, the patient needs an explanation and interpretation of the illness followed by support and encouragement. During the first year, the main concerns are associated with symptoms, but these progressively diminish, so that by the end of the first year problems relating to returning to functioning in the various areas of life will be presented. The second year is devoted primarily to the problems of re-entry into a social life, returning to work, or returning to school, and there is a desire to become independent of the family who has supported the patient during the illness. Dependency conflicts become almost routinely manifest and at times family therapy or parental counselling may be required to handle the family's matching anxieties regarding resolution of this conflict. Adolescent-type problems then typify the second stage of recovery, which constitutes the "re-entry" phase.

During the third year, many patients will have grown and progressed beyond the level of functioning which preceded their illness. Many will state that they are "weller" than they were before they became ill, and at this time the actual onset of the illness will be dated retrospectively. This will almost always precede the previously accepted date of onset. This occurs because the patients never knew what it was to feel and function well, and now that they experience this, they will frequently give the exact time in their lives when the internal change had occurred which signalled the real beginning of the illness. Many function with perceptual impairment for years; one characteristic of this state is the subjective certainty that one has "always been this way." Patients may need practical advice as they enter areas of life in which they have never before ventured.

During the second and third years of treatment, when some patients marry and begin having children, their questions concern genetic predisposition and pertain to what percentage of their children may be expected to develop the same illness. Almost routinely, newly married recovered schizophrenics want to know if there are any ways in which they can prevent the occurrence of schizophrenia in their children or detect it early. It is important to advise the women to stay on the medical regimen during pregnancy to prevent post-partum relapses.

Some patients, especially if they became ill during early adolescence, will have developed sizeable, secondary neurotic gains—especially the fulfillment of dependency wishes—and will continue to display immature child-like behavior even though their HOD scores have returned to normal. Some will tenaciously cling to the sick role even though it is no longer appropriate and they may require both explanation of what they are now doing as well as firm encouragement in a more mature direction. Often, these problems become disguised by the patient's adoption of self-serving interpretations of the youth culture "drop-out" pattern. Group therapy techniques are often useful to overcome these delayed maturational problems.

The adolescent rebellion pattern may coexist or predominate, instead of the passive dependent style. As is well known, this may also be a reaction formation. These conflicts associated with the dependence-independence growth phase may require adroit handling, as well as considerable forbearance. Families forget that schizophrenics can demonstrate the same problems that other young people do in our culture and that the problems that they are having with the patients are not all due to schizophrenia. It is frequently necessary to reorient families to this fact, as they lose their perspective from living so intimately with the illness.

In summary, during the acute phase of the illness, when the patient's HOD score is elevated, the most effective psychotherapy is an educational approach, which is of considerable benefit to both patient and family. This is followed by supportive practical advice as the patient recovers and goes through the successive stages of recovery, during which time he may have changing symptoms, which merely indicate that he is passing through a different phase, rather than getting worse, as he may erroneously conclude. The well-known appearance of depression following disappearance of the paranoid and hallucinatory symptoms is an example, and the patient needs to be reassured that the depression symptom will also pass and respond to treatment as did the previous phase.

After the patient's HOD score has returned to normal, specific conflicts may be handled either by supportive, individual therapy or group therapies. At this stage, recurrence of symptoms accompanied by elevation in HOD score indicates that the cause is biochemical and should be treated by a change in the medical regimen. Symptoms unaccompanied by a rise in the HOD score, on the other hand, are probably stemming from interpersonal or psychological conflicts and are, therefore, treated psychotherapeutically.

The approach to the patient during the initial phase of the illness has certain parallels with handling the psychedelic experience, in that every effort is made to influence favorably the patient's set and setting (which includes the therapeutic setting) so that the patient will be subject to benign experiences as much as possible. Following this principle will greatly increase the likelihood of recovery and the prevention of unfortunate sequellae. The importance of respecting the patient's extreme vulnerability when his defenses are inoperative is paramount. Analogies

between the schizophrenic and psychedelic experiences have been made by many authors, including Silverman (1968), Hoffer and Osmond (1967), and Laing (1967).

If the altered biochemistry of some people spontaneously sends them on a "voyage of discovery into inner space" then their experiences should be made as positive as is possible. This is also emphasized by Dabrowski (1964) in his book, *Positive Disintegration*, which demonstrates the possibility of reintegration at a higher level of functioning, as so many of our patients actually do.

In our view it is a serious misunderstanding to consider, as Laing has done, that if some people are defined as having schizophrenia the word itself is an epithet or a damaging "label." A vase can be used to hit someone over the head, but that does not mean that vases are inherently damaging or evil. *All* labels are potentially damaging—the fact that a person is labelled as American, Catholic or Protestant, black or white, rich or poor, educated or whatever, will put that person in very serious trouble in certain social circumstances. Some groups in society will negatively use any label that can be thought of. We should see to it the word schizophrenia is not used in that way against our patients, but the dilemma is not solved by pretending that the condition does not exist.

Although from a theoretical viewpoint the schizophrenic experience can be made a positive one, it should not be allowed to last indefinitely. Even a voluntary psychedelic experience is emotionally exhausting and the subject is relieved when it is over. Because the situation in which the schizophrenic experience occurs is seldom favorable for any length of time, the "voyage" of the schizophrenic illness is endlessly painful. We have never known a patient to have regrets that the experience was finally over—the plunge into another experiential world was involuntary. Even those patients who became schizophrenic following the intentional use of psychedelics did not intend to go that far—they meant to only spend a day that way—not years or maybe forever.

RESULTS AND RESPONSE TO TREATMENT

General Problems in Evaluating Treatment Results in Schizophrenia

Once it becomes known that a particular institution is using a new or helpful approach to an illness it tends to attract a distorted sample of patients. A progressively increasing percentage is made up of difficult and intractable cases. Determining the results of treatment then becomes more difficult and interpretation of statistics is less and less meaningful. Reporting of results in schizophrenia is notoriously fraught with

almost impossible obstacles, so that no matter how carefully research designs have been devised they are still subject to criticism in some area. Each professional discipline has its own criteria of what is meaningful. Control groups can also be grossly misleading, as the variables which one researcher considers essential to control are ignored by another. As Williams (1971) has shown, even identical twins are not biochemically nor even anatomically equal. Matching groups of patients with schizophrenia as to age, classical diagnosis, sex, or occupational group may actually be of minimal importance.

Of considerably more clinical significance would be the matching of groups of patients who are identical with respect to HOD score, incidence and severity of hypoglycemia, type of previous treatment, and favorability of life circumstances. Of importance also are the patient's degree of knowledge of his illness and the manner in which it has been presented to him. The use of the medical model itself, for instance, has an effect in that the patient is allowed to be ill when he is ill. The nonspecific effects of Selye's general adaptation syndrome also have to be taken into account, as the response of the patient during the alarm reaction can be quite different from the response of a patient when he is in the stage of chronic resistance or exhaustion.

We would also have to know whether the average HOD scores in the contrasting groups, even though numerically equal, were on the rise, indicating a worsening of the condition, or were falling, indicating a process of remission. We could not, for example, compare pneumonia patients based just on their temperature. A temperature of 102° might occur because the patient is in the process of going into a fulminating crisis where the temperature might eventually reach 107°, or because his temperature has been previously higher, which would indicate that he is in the process of getting well.

Evaluations of drug responses are difficult to assess, as many such studies utilize fixed dosages instead of the *optimal* dosages which take into account individual variation. Fixed-dosage-schedule studies, therefore, give only mathematical probability figures and fail to indicate the real clinical usefulness of a given medication when used in the proper dosage and in the proper sequence.

Because of the impossibility of meeting all these crucial requirements, results of any treatment method in schizophrenia are probably most usefully conveyed to clinicians by giving as detailed and accurate a description of the clinical response as is possible, so that the results could be duplicated. The average busy clinician is interested in treatment methods that are practical and produce observable results. In daily practice, he tends to be pragmatic and unimpressed by the polemics of theoreticians. Most physicians are aware that the ultimate scientific explanation of most of the treatments they use in daily practice will not be forthcoming in the near future. Practical considerations prevail when the physician is confronted by the sick patient.

Practical Factors: Acceptability, Applicability, Cost, and Safety

The orthomolecular approach circumvents most of the public's objections to psychiatric treatment. Psychiatry has generally been accused of developing treatments which are totally impractical in that they are either extremely time consuming, expensive, and drastic, they produce serious side effects, they fail to produce results, or they are so objectionably named as to cause them to be rejected and resisted. In addition, many of the treatment modalities require a high degree of motivation, sophistication, verbal ability, and insight, and the absence of factors which would result in their not being accepted for a particular treatment. Intensive psychotherapy, for instance, exemplifies many of these objections, and in addition often results in alienation of the patient from the family, which in itself is an extremely serious side effect.

"Shock" treatment, by its very name, has such dread connotations that its applicability and acceptability have been seriously curtailed. Long-term hospitalizations for psychodynamic therapies are extraordinary in cost and disappointing in results. Imprudent publicity and actions by some agencies have caused many patients to be more concerned with side effects than they are with getting well. This has reached such a degree that recently a depressed patient who wanted to commit suicide was reluctant to take antidepressants because they might cause side effects! She was not even aware of the absurdity of her position, so deeply had this fear been embedded in her mind. Another block in reaching large numbers of patients is the idea that all psychotherapy is "Freudian." Schizophrenic patients especially are not enthusiastic about the prospect of having their personal privacy invaded by interrogation, especially when it does not pertinently relate to what they are experiencing.

In our experience with the orthomolecular–medical model-approach to a wide variety of patients representing the whole socio-economic scale, this treatment method has been extremely well accepted. The involvement of patients and their families in an integrated community system allows them to compare notes, observe results, and compare experiences of different treatment methods. This has had a remarkable effect on morale and cooperation and it results in a beneficial increase in education of both patients and their families.

Because return visits are widely spaced and diminish in frequency with time, this treatment method is economically feasible and compares favorably with more traditional ones. Patients feel that their illness is being monitored by some objective means rather than by just the subjective opinion of the psychiatrist or family.

The treating psychiatrist has objective data upon which to base treatment and verify results so that this treatment method is also well accepted by the professional. In addition, the treatment method can be used in private, hospital, and clinic practice

and is suitable for treating large numbers of patients at significant savings in cost and manpower.

The safety factor is considerable, and this is important in our present society. Because psychotherapy with this treatment system is aimed primarily at educating and increasing the understanding of patient and family, disruption of the family is not a side effect of treatment. Patients are not advised to leave the family unit, because the family is not viewed as pathogenic. A recovered patient may decide to leave a family unit because he feels that the particular family structure is deleterious to his recovery, but that is an individual matter which may be handled by family therapy. In our experience with this method, in the majority of instances when the patient leaves the family unit it is because he is well enough to make it on his own. As patients recover, they develop insight into the fact that the illness caused perceptual distortions, and that many of their perceptions of family interaction were distorted and subsequently remained in that form in their memories. Recognition of this results in reconciliation with the family more frequently than disruption. The storing up of distorted memories of a family interaction has been described by others, including Rubinfine (1971), who stated that

> schizophrenics suffer impairment of consciousness from infancy onward so that percepts are registered in this altered state and memories from this state of infancy onward are impaired. These distorted perceptions become openly evident in the decompensated state and treatment requires correcting these altered percepts.

The side effects that we have observed in treating over 5,000 patients with megavitamins have been minimal and minor. We have seen no side effects from vitamin E except for loose stools in one patient. Pyridoxine has not produced side effects in any case. Vitamin C in in the routine dosage of 4 grams a day has not resulted in discernible side effects. Although loose stools are supposedly a possibility, we have not observed this. We have three patients with a history of gout on 4 grams per day and there has been no increase in uric acid level, nor attacks of gouty arthritis. There is serious doubt as to whether ascorbic acid produces any significant incidence of side effects. This was reviewed in an article on the subject in World Medical News, Vol. 12, Issue No. 8, February 26, 1971. Patients who were pregnant were continued on megavitamins with no untoward effects on either the mother or the baby.

Niacinamide in a dosage of 4 grams a day can produce nausea in a few patients, usually adolescent girls. This can be circumvented by the use of buffered niacinamide in capsule form, the addition of one tablet per day of meclazine (Bonine®), or by lowering the dosage.

The side effects of niacin have been extensively reviewed in articles by Hoffer (1969), Mosher (1970), and Boyle (1968); the contraindications remain those of duodenal ulcer, hypertension, gout, and diabetes. If niacin is not used in these conditions (although it can be with adequate medical controls) the only side effects seen are those

of the initial flush and occasional nausea. The flush can be diminished by taking the full starting dosage of 1 gram four times a day with meals and a glass of cold milk in the evening, or by premedicating the patient with cyproheptadine (Periactin®). The flush disappears in 24 to 36 hours and is hastened by raising the dosage rather than by lowering it (on a low dosage, patients will continue to flush indefinitely). Inasmuch as the flush is due to a release of histamine from the mast cells, the histamine is sufficiently "washed out" after a day so that insufficient histamine is released by subsequent doses to cause further flushing. Nausea can be controlled by the same measure as with niacinamide. An inositol salt of nicotinic acid, available in Canada as Linodil®, also effectively circumvents nausea. Young patients, especially those with red hair and fair complexions are least tolerant of niacin and may develop a recurrent itchy rash requiring its discontinuance. The niacin flush may also produce heartburn or other gastrointestinal symptoms in a minority of cases, also requiring its discontinuance. Niacin may also give false positive liver enzyme tests and should be discontinued two days prior to the testing procedure. It will also cause hypoglycemic changes in the glucose tolerance curve, and accordingly should not be given for 48 hours before that test.

We have seen patients who have taken 20 to 40 grams of niacin daily for prolonged periods with no adverse effect. In general, as both Hoffer and Mosher conclude, and our experience corroborates, niacin appears to be relatively harmless as long as due caution is taken in avoiding its use in the presence of the aforementioned contraindications.

Administratively, the orthomolecular approach provides several sizable advantages. The cost, waiting time, and professional manpower for psychodiagnostic testing are greatly reduced. Psychiatrists can handle large numbers of patients without any special equipment, although having one's own biochemical laboratory is a distinct advantage. Continuity of treatment is not interrupted when there is a change of doctors, which is a frequent circumstance in clinics and hospitals and one that poses difficulties if the therapy is based primarily on psychotherapy. The treatment method results in enormous economic advantages in that seeing a patient once a month costs about one-twelfth as much as seeing patients three times weekly for long-term therapy.

Joining Schizophrenics Anonymous and taking part in the activities of the schizophrenia associations further reduces costs in that they supply specific group therapy at no cost to the patient. When the cost of treatment in the average case is prorated over a three-year period the annual cost of treatment itself will amount to only a few hundred dollars, which compares very favorably with any other available treatment system. Even in those cases where hospitalization is necessary the comparative cost is still relatively low because the average duration of hospitalization with this treatment method is only 8 weeks, and rehospitalization is seldom necessary except in a very chronic and severe case where the patient has been ill since childhood.

Because this treatment method utilizes objective monitoring of the patient's response, it facilitates reporting of improvement by treatment agencies, and this may become of progressive importance. In New York City, for instance, all mental health agencies contracting with the City's Funding Agency must now demonstrate tangible outcome of treatment to justify funding. With this treatment system, response to treatment in individuals or groups can be demonstrated even before the patient's behavior begins to reflect that improvement. The following case is an illustrative example:

> A 34-year-old housewife developed schizophrenia postpartum. She had been hospitalized and then treated unsuccessfully for two years. When the patient applied for treatment at the clinic she was depressed and relatively immobilized, with a HOD score of 110. On a treatment regimen of megavitamins, hypoglycemic diet, phenothiazines, antidepressants, and supportive therapy, she clinically remained essentially the same, with neither symptomatic nor behavioral improvement.
>
> Serial HOD testing showed, however, that the score was coming down progressively. It was not until the fourteenth month of treatment, when the HOD score got down to 30, that her symptoms finally disappeared and she resumed total functioning. Two months prior to her behavioral recovery the question of hospitalization had arisen. Because of the trend of the HOD scores, however, hospitalization was not advised, as it appeared to be only a matter of time before the HOD score would finally reach the level where recovery would occur.

In this case, several important things were demonstrated. First, an unnecessary hospitalization was avoided, but had it occurred her recovery two months later would have been falsely attributed to it. Second, a behavior rating scale or multiple interviewing techniques would have erroneously concluded at the end of the first year of treatment that she was no better, when in fact the basic disease process was considerably improved. The obverse is also true, in that, for instance, many patients have worked the very day they committed suicide, and the HOD score could have picked up the increasing severity of their illness despite behavioral status quo. The pressures in our society toward normal behavior are so enormous that relatively normal behavior may still occur in the face of *serious* degrees of illness.

Evaluation of Effectiveness

In view of the previously described difficulties in evaluating treatment results in schizophrenia, a variety of ways of demonstrating the effectiveness of this treatment approach can be described in terms that are appropriate for different settings.

OFFICE PRACTICE

The only absolute control which meets all of the essential criteria is the utilization of the patient as his own control. This also eliminates the problem of placebo or transference responses. In this regard, it is useful for the physician to select from his own practice patients with whom he has become familiar, whose failure to recover despite all previous treatments had been personally observed, and about whom he has collected a great deal of subtle and usually unreported data. A change in the patient's response then becomes readily apparent even though transmission of this observation to others may only sound anecdotal and be difficult to demonstrate convincingly. The following two cases are illustrative:

Case No. 1: This 33-year-old housewife and mother of three young children had been overtly and severely psychotic with schizophrenia for five years. The family had unlimited means and provided her with the best of professional help. She had been in a number of hospitals and was treated by many highly qualified psychiatrists. She had had all the psychotropic drugs in massive doses and in multiple combinations, as well as several courses of electroshock therapy. Despite all this, her condition became progressively worse. She was openly delusional, suicidal, out of contact, and irrational.

Because of the hopelessness and severity of her condition, a prefrontal lobotomy was finally advised and it was scheduled to be performed. At this point, the family asked if she could be given a trial of megavitamin therapy before resorting to the drastic surgical procedure. The reply was "Lobotomy, yes—niacin, no!" The family then had the patient transferred, against medical advice, out of the hospital and had her admitted to the Brunswick Hospital. The patient was not at all happy about the transfer; she did not like the new hospital, did not believe any treatment would help, and did not like the new doctor—she did, however, agree to take the prescribed medications.

On a combination of megavitamins, thyroid, hypoglycemic diet, and a small dose of tranquilizers, she recovered in 10 weeks. She was discharged from the hospital 4 years ago and during the intervening time has returned to full normalcy, including taking care of her children, running her household, and becoming active in the PTA and other social activities. In addition, she is working at a part-time job. She is seen for after-care visits at the clinic every four months. She looks well, feels well, and has no symptoms. During February 1971, she was interviewed by a correspondent on CBS News on nationwide television and she gave no sign of ever having been ill.

Case No. 2: A 24-year-old unmarried, unemployed young woman with a diagnosis of borderline paranoid schizophrenia had spent 10 years in weekly psychotherapy during which time she had three different therapists. Despite everything, she remained "half well" in that her borderline paranoia prevented her from holding a job, keeping a boyfriend, or making close friends. She stayed home and bemoaned her fate that she would always be disabled and would never be able to get married. She felt herself to be a social fifth wheel and an embarrassment to her family, who belonged to a subculture in which for a young woman of her age to be unmarried was a social disgrace. All of the psychodynamic possibilities had been repeatedly explored, but her condition remained static. In addition to different phenothiazines, a variety of medications had

been tried. She usually had unpleasant side effects and her attitude toward medications was suspicious.

At this point, the therapist put her on a sugar-free diet with no explanation, except that it might help her to take off weight. She was also placed on the megavitamin regimen with the explanation that vitamins might give her more energy. Because she suffered from apathy, listlessness, and hypochondriasis, she agreed. Within a few months she began to demonstrate a different emotional tone and lost the hostile, paranoid edge in her interactions with others, so that for the first time in her life she made a friend. Soon after, also for the first time, she was able to keep a boyfriend (prior to this time she had gone out with many young men but she was so hypercritical that seldom did they call her for a second date).

She now was able for the first time to hold a job and get along with her superiors. In the past she had always become paranoid and had either been fired or quit in a huff. She subsequently married, now has two children, and functions normally as a housewife. All medications were prophylactically temporarily increased after the birth of each child to prevent a postpartum episode.

To the clinician then, the efficacy of a new treatment method is most convincingly evidenced by a clinical response in patients who have failed to recover by all previously tried methods.

HOSPITAL PRACTICE

Changes in the collective HOD scores of groups of patients demonstrate the effectiveness of a given procedure. A research project done at the Brunswick Hospital demonstrated the usefulness of this method in determining the effect of ECT in the treatment of schizophrenia (Chiossone et al., 1969). In this study, all patients were given both the HOD and OIT tests on admission and again on discharge. The same patients were also evaluated on a clinical rating scale and although there was no statistically significant difference between the two groups at the time of their discharge as far as their degree of recovery, suitability for discharge, and scores on the rating scale, the HOD scores demonstrated that there had been a marked difference in response to treatment.

All patients were treated with phenothiazines, megavitamins, accessory symptomatic medications, group therapy, and all the other usual adjunctive measures, with the exception that 85 patients received ECT and 55 served as controls. When the results were tabulated and graphed, the very significant effect of ECT was observable. This was most marked in the younger age groups (Fig. 30-1).

Figure 30-2 shows the effect of ECT as compared to the control group by graphing only improvement in the percentage of scores above the median on the perceptual subscale of the HOD test.

Figure 30-3 graphs the same results, except that the improved scores have been obtained by totalling the paranoid and perceptual subscales. The purpose of comparing these subscales with the total scores is to eliminate the effect of improvement

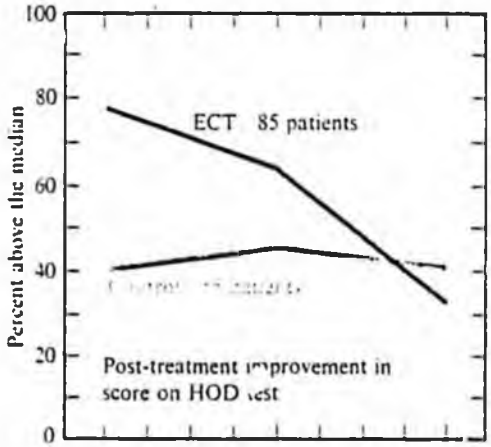


FIGURE 30-1.

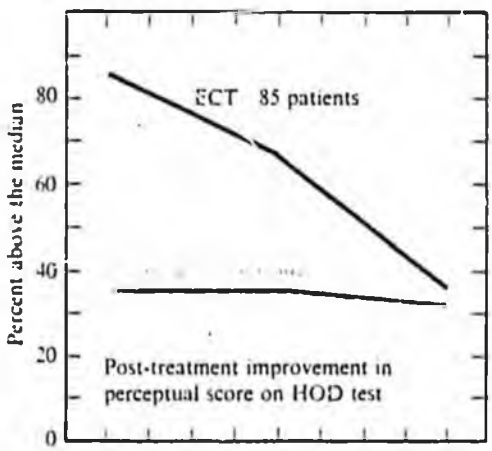

FIGURE 30-2.

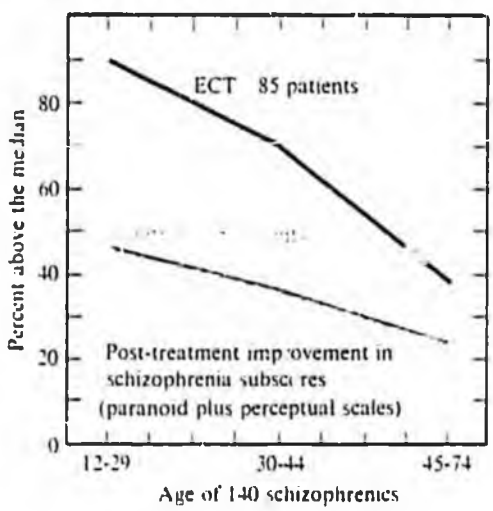

FIGURE 30-3.

in the patient's depressive susbcales, as depression in and of itself is not intrinsic to the schizophrenic process and is often only reactive. By eliminating the depressive subscale, comparison of the two groups demonstrates the substantial benefit of ECT in the young schizophrenic and it demonstrates that this is not due to the alleviation of any accompanying depression, but rather to an alleviation of the schizophrenic process itself.

Without the use of the HOD test, this marked difference could not have been demonstrated as rating scales based on behavior showed no difference between the two groups. This study again supports the view that schizophrenia is both an inner experience and a perceptual disorder and not just abnormal behavior, arbitrarily labeled as schizophrenia.

In reporting the above data, a method was selected to by-pass rater bias and to demonstrate that behavioral rating scales would have been grossly misleading. Also, it was assumed for purposes of this study that the patients were in a worsening condition with a rising HOD score at the time of their admission to the hospital. In addition, all patients were on the same diet and all patients were seriously ill. This type of reporting of data is suitable for evaluation of the effectiveness of a treatment which has a rapid response. During a short-term hospital stay it would be impossible to evaluate the effects of other treatment measures such as the use of thyroid or megavitamins, which usually take a few months or even six months to a year to demonstrate results.

A follow-up study was conducted at the Brunswick Hospital during a two-year period to determine the effects of the continuance of megavitamins on the recovery rate (Hawkins et al., 1970). So that results of the study would be comparable to other follow-up studies reported in the literature, it was arbitrarily decided to use the rehospitalization rate as evidence of response, as that is the most frequently cited criterion. The pros and cons of utilization of rehospitalization rates have been well discussed over the years and will not be cited here except to say that in a practical way it represents the resultant of many factors, including social survival. The study included 140 patients who had been hospitalized because of severe schizophrenia, during which time the patients were hospitalized for an average length of 8 weeks. While in the hospital, all patients received phenothiazines, megavitamins, and adjunctive therapy. The diagnoses were confirmed by HOD testing and no cases were included in which there was doubt about the diagnosis. At the time of discharge from the hospital megavitamins were discontinued in 85 patients. The remaining patients were subdivided into subgroups taking the megavitamins for periods of three months or for one year. Tabulation of the rates of rehospitalization (to any hospital) over the two-year period of study revealed that among the control group, in whom megavitamins were discontinued, 35 percent were rehospitalized. Of patients who continued on the megavitamins for three to six months, 25 percent were rehospitalized. The rehospitalization rate for the patients who stayed on megavitamins for one year

or more was 16 percent (9 of 57 patients). The χ^2 score value for this comparison is in excess of the 5.99 required for a significance at the 0.05 level, indicating a definite correlation between the continuation of the megavitamin therapy and a 50 percent lower readmission rate than for the patients in the control group.

CLINIC PRACTICE

In a clinic setting it is possible to follow large numbers of patients for a considerable length of time and also to observe subgroups in which schizophrenia is associated (for example, with alcoholism, drug abuse or homosexuality). In evaluating a new treatment method, several of the most common sources of evaluative error need to be eliminated—rater bias, placebo reaction, and positive transference "cures."

Placebo effect can be eliminated by studying patients who have had many trials over the years on multiple drugs without success and also by waiting for a year to pass before evaluating results. Rater bias can be bypassed by objective testing, such as the HOD test. Other objective data can also be used, such as achievement of sobriety by the alcoholic, discontinuance of drug abuse, cessation of homosexual activity, return to college, or whatever criteria are appropriate to the sample being studied.

Positive transference reactions can be eliminated by a variety of techniques which are also applicable to private practice. Using patients as their own controls is obviously the best. Looking for a difference in recovery rates between patients who have a positive transference and those who have a negative transference is another commonsense approach. In actual practice, treating large numbers of patients who are chronically ill and who have had a number of therapists and many different drugs eliminates most doubts, as it is obvious that if they were prone to placebo or transference cures they would not still be ill. There is really no answer to the question of spontaneous remissions except that in the comparison of large groups of patients over many years it can be assumed that the spontaneous remission rates in both groups will have equalized.

One criterion for the effectiveness of a medical regimen is the response of the patient when it is discontinued. Another way of ascertaining the specificity of a treatment modality is to determine the type of case or disease entity where it does not work. In schizophrenia, which is most likely a group of different biochemical illnesses, evaluation of drug studies requires clinical interpretation. As an example, if the effectiveness of a given antibiotic in treating pneumonia is reported in percentages, it can well be that of all pneumonias treated by a given drug, only 10 percent might respond. This might be taken to mean that the antibiotic is only 10 percent effective, and therefore hardly warrants marketing. The clinical fact may be, however, that the 10 percent represents a particular type of pneumonia for which the particular antibiotic is close to 100 percent effective and is in fact specific for that type of pneumonia but not for others. It would appear that in the psychiatric

literature similar conditions prevail. The importance of some of these factors was pointed out by Fritz Freyhan in his presidential address to the American Psychopathological Association. The influence of the double-blind study on the actual practice of clinical psychiatry has been curiously nil. Not a single treatment used in psychiatry was discovered by the use of the double-blind method, with one single exception—the first double-blind study done in psychiatry (actually it was a triple-blind study), devised by Hoffer and Osmond to study the effect of niacin in schizophrenia, and the results of this meticulous, long-term study were generally ignored for some years (see Chapter 10 by Osmond on the history of the niacin treatment).

In reporting data, then, the clinical researcher is confronted by a communications problem (Heston, 1970). We have found that the most useful style of reporting results to other clinicians is in terms of definite observations that include enough data about the circumstances to allow the results to be duplicated. To report the total clinical experience of treating 5,000 schizophrenic patients with a new treatment method involving a new conceptual framework over a five-year period presents sizeable difficulties. Because the setting itself influences treatment results, some general description of the situation in which a clinical experience takes place will be described.

The clinic itself is situated in a very informal setting, above a set of stores, and is innocuous and unforbidding in appearance. Each office is decorated differently so that a schizophrenic patient is unlikely to feel depersonalized or lost. The informality extends to the waiting room which lends itself to conversation and is friendly rather than institutional in style and atmosphere. It is not the kind of place where a patient is likely to feel like a number. Each patient and family becomes aware that specific arrangements are being made for them individually. Over the years, many of the families and clinic staff have had meetings under a variety of circumstances and have developed a certain community feeling and mutual concern. To some degree, the well-being of each patient then subsequently becomes part of the total community concern, so that if a given patient is not doing well there is an immediate feedback. This is a unique situation and although it exerts considerable pressure on the staff, it also results in a certain enthusiasm and a heightened therapeutic intention. There is an expectation that every patient is going to improve sooner or later, therefore any self-fulfilling prophecies that occur are likely to do so to the patient's benefit.

The patient most likely to respond to this overall treatment regimen has an elevated HOD score and a discernible perceptual dysfunction. These represent the majority of patients and most of these patients will have improved or recovered by the end of a year. The patients who fail to improve are, as stated previously, usually those in whom the onset was in early childhood, and they are further characterized by low HOD scores, primarily visual distortions, and the stilted postural attitudes indicative of an underlying proprioceptive disorder of long duration. This latter group constitutes the

minority of patients, and of them only about half will improve.[5] Also, they do not show the complete recovery which frequently occurs in the more favorable group. Even so, the improvement may be in areas which are extremely important to patient and family, so that limited improvement may still be of considerable importance. The following case is an example:

> A 30-year-old chronic schizophrenic patient was brought to the clinic after having had 15 years of continuous prior treatment, including six hospitalizations where she had a full course of insulin shock treatment plus a total of 125 electroshock treatments. The family indicated that this was to be the last trial of treatment before they would reluctantly have to accept permanent state hospital placement for the patient. The family reported that she was incontinent, refused to wear her false teeth, constantly rocked, and was uncommunicative. She therefore presented a considerable nursing problem for her parents.
>
> The patient was placed on an overall treatment regimen of hypoglycemic diet, megavitamins, phenothiazines, and thyroid. She responded very slowly, but by the end of two years her appearance was markedly improved, she used make-up, wore her teeth, spoke politely, had stopped rocking, and had long since been continent. The family was able to take her on social family visits, and could travel in public with her.
>
> This patient was far from recovered, however, in that her affect was flat, her behavior was still moderately inappropriate, and her overall style was awkward and somewhat stilted, but her family was extremely pleased. The treatment also had been based on bi-monthly and then tri-monthly visits, which were within the family's financial capacity.

The megavitamin approach is effective in other conditions associated with an elevated HOD score, such as alcoholism or post-psychedelic drug reactions. It is the most effective treatment for post-LSD "flashbacks" of the type reported by Horowitz (1969) and far more efficient than psychotherapy (Hoffer, 1972). It also is of benefit to some hyperkinetic children and also to some with learning disorders (Rossi, 1967; Green, 1970, 1971). There are many adolescent patients who present a clinical picture of pseudo-psychopathic behavior due to an underlying, unrecognized schizophrenia disorder, and in these patients the behavior improves on the overall megavitamin regimen.

We have not observed any benefit from megavitamins on convulsive disorders but the hypoglycemic diet has helped several. Megavitamins are also ineffective in manic-depressive or other psychoses. They are also ineffective in the psychoneuroses. (Many "neurotic" patients, however, are greatly helped by the hypoglycemic diet—especially depressed, anxious, phobic, fatigued, irritable, or hypochondriacal patients. In many of these, the diet eliminated the need for psychotherapy.) We have

---

[5] These results were confirmed by a research study conducted by the Institute for Child Behavior Research in which it was reported that 50 percent of the children responded to megavitamins (Rimland, 1970, 1972, and Chapter 24 of this book).

treated six patients with prior lobotomies and none of them responded to the treatment although their diagnosis was definitely that of schizophrenia.

The homosexual schizophrenic patient responds quite favorably, and by the end of the first year of treatment the majority report the disappearance of the supposed homosexuality. In these cases, no discussion of the homosexual pattern was entered into during the entire year and the recoveries from these patterns were reported spontaneously. It would seem that the perceptual disorganization impairs the self-image, including sexual identity. This was accompanied in these patients by regression and the development of pseudo-homosexuality, as has been described by Ovesey (1954, 1955a, 1955b). This was most likely to occur with male schizophrenics. Several female schizophrenic patients who were also alcoholic continued a homosexual life style despite abatement of the schizophrenic process.

Postpartum psychotic episodes were completely eliminated in our schizophrenic patients with this treatment method. By prophylactically increasing doses of medications immediately following delivery, this complication was prevented, which was in marked contrast to clinical experience of years past. On the other hand, several patients who had previously recovered and then stopped all medication became pregnant and did have postpartum relapses.

Therapeutic results do not depend on a positive transference. Its presence, however, is helpful, not so much to the eventual outcome as to the ease of clinical management of the case. We have treated a number of patients via family members and also by mail with results equal to those for patients seen in the clinic. The following case is an example:

> A 44-year-old man with chronic paranoid schizophrenia of 10-years duration had been given up as hopeless after many years of treatment. The family kept him home in an upstairs room where his condition was disturbed and dishevelled. He screamed obscenities at his hallucinatory enemies, refused to change clothes, refused to take any medication, and exhibited no interest in external events. The family came to the clinic, learned of the megavitamin treatment and worked out a combination of vitamins titrated with bicarbonate of soda and flavored with chicory, which was then placed surreptitiously in all of his beverages.
>
> After a few months he began to respond and improve, and at that point a small dose of thioridazine in liquid form was added to his formula. By the end of the year he had become a clothes dandy, carried on a normal conversation, was no longer hallucinating, was calm, read a daily paper, watched television, and answered the telephone. Two years later he continues to do well and is planning to live on his own, which has created apprehension with the family, as they are still reluctant to inform him of their secret treatment. When they finally tried to persuade him to take megavitamins he said he didn't think he needed them as he had been doing pretty well on his own for the last few years!

Getting patients to take the medication and stay on it is seldom a problem, especially after they have had an opportunity to experience subjective improvement.

A few patients who have recovered will feel so well that they will experiment with discontinuance of the therapeutic regimen and promptly relapse. One reason this occurs is that in altered states of consciousness there is difficulty in remembering what one has learned in another state of consciousness. This has also been demonstrated experimentally in animals and is a common clinical observation. This phenomenon does not appear to be attributable to the mechanism of denial, although that, too, may at times play a role. Recovery from relapses unfortunately is usually slower and more difficult than was the original recovery. This is more true in children than adults, however, and has been reported also by Cott (1969).

As patients recover, certain questions tend to recur. Many of these relate to the ability to concentrate and the question of when to return to college or work. Initially, when the patient's HOD score is high, his ability to concentrate is markedly impaired, and we usually ask patients if they are able to follow a story on television. When the HOD score is close to 100 this is usually not possible, but as the patients recover they will report that they are now able to follow the story, so this is a favorable indicator. It is usually some months and, in many cases, close to the end of the first year of treatment, before concentration returns to the point that the patient is able to remember what he has read, and we advise him not to return to college until this capacity has returned. We recommend that the patient take 6 credits the first semester and if that goes well, that he take 12 credits the following semester and then 15 credits thereafter. Allowing patients to return to school prematurely invites failure and discouragement.

Return to work, on the other hand, is quite different and this may occur almost immediately or as soon as the patient feels "up to it." It is a common observation then that the patient is capable of returning to work sometimes the very day following discharge from the hospital and yet he is unable to take evening college courses for a whole year.

As has been pointed out previously, we avoid invading the patient's personal privacy when his HOD score is elevated and interpersonal contact is painful. This saves a great deal of reparative work later which would otherwise become necessary to undo the deleterious effects of such intrusions. Where the patient has already had this unfortunate prior experience, some reparative therapy to the patient's damaged self-esteem may become necessary as he recovers. A patient's resentment over having had this experience forced upon him in the past can be amazingly severe.

Lastly, it is on the administrative level that the effect of the orthomolecular treatment approach first becomes most strikingly apparent. There is an almost immediate disappearance of waiting lists. There is a marked reduction of diagnostic testing costs and time. There is a progressive increase in the case load within the same budget and manpower limitations, and there is an overall improvement in treatment results which is expressed in a very positive feedback. The level of functioning in group therapy with schizophrenic patients increases noticeably to a higher level and the

percentage of patients who are capable of such interaction also increases greatly. The preoccupation is no longer with "keeping the patient out of the hospital" but rises to the level of counselling him about the advisability of seeking a better job at this time, or on the timing of an impending marriage.

Another response noticeable to administration is that sizeable numbers of patients who were on welfare at the time they began treatment will be off welfare by the end of a year, since their social disablement stemmed from a previously undiagnosed perceptual disorder.

GROUP AND HALFWAY HOUSE EXPERIENCE

All of the Schizophrenics A onymous groups that did not use the orthomolecular-megavitamin approach soon failed and all the groups that were successful had taken the orthomolecular approach. In Alcoholics Anonymous, many members were unable to stay sober until they were placed on a sugar-free diet with megavitamins. In 1972, an estimated 20,000 to 25,000 alcoholics were taking megavitamins.

This approach is an integral part of the therapeutic regimen in many alcoholic rest homes. Of these, the most comprehensive and intensive therapeutic regimen is the one in use at Guest House, Lake Orion, Michigan, for alcoholic priests. In their experience, high-dosage megavitamins and hypoglycemic diets are critically essential in the recovery of a sizeable percentage of their alcoholics. It is notable that they achieve an overall recovery rate of 80 percent (Ripley, 1969, personal commun.).

A more elaborate study by Smith (1971) included 4,243 alcoholics. Of these, a group of 507 patients had been carefully followed for five years. All were long-time-treatment failures, and 400 of the 507 cases had been sober for two years and more, which is quite remarkable considering the severity of their condition. A formal cross-over double-blind study of two sanitarium groups will be completed in 1972. A full report of 3,673 patients will also be forthcoming. In this study, it can already be reported that niacin was superior in effectiveness to niacinamide.

Similar positive results were reported by Hawkins (1967) in the first group of clinic patients treated with this method. In that group there were 53 alcoholic-schizopnrenic patients. By the end of a year, 41 patients were active in AA and 36 had achieved sobriety.

When the HOD test was given to residents at a halfway house for soft drug users (Kinsman Hall, New York), almost two-thirds were found to have abnormally elevated scores and they were unresponsive to the intensive therapy until placed on megavitamins (Palmer, 1970; Hepper, 1970, personal commun.). The experience of this halfway house could be expected from the work already done on the use of the HOD test with psychedelic-drug users by the LSD Rescue Service which is in operation in major cities throughout the United States (Peters, 1971, personal commun.).

The LSD Rescue Service has for years relied primarily on giving megavitamin doses and on attempting to raise blood sugar level to counteract adverse psychedelic drug reactions. It is notable that they have discovered that high doses of thiamine hydrochloride have been found to be beneficial in reducing the craving and return to the use of methedrine (speed).

The use of niacin and niacinamide in ameliorating LSD reactions is well known among the more knowledgeable members of the drug subculture and has been reported widely in the underground newspapers. *The Hippy's Handbook* (Bronsteen, 1967) details this use under "Rx for a Bad Trip" and also has this to say about psychiatry, "Without one single exception, every hippy interviewed had, at one point, gone to a therapist—in every single case the experience was negative . . . modern psychiatry is out of touch with young people. . . ." The "Practical Advice" section of Abbie Hoffman's *Revolution for the Hell of It* (1968) includes similar advice to avoid the psychiatric establishment and to use niacin or niacinamide for "freak-outs." The use of megavitamins for the "drug wipeout" is described in the Do It Now Foundation's *Conscientious Guide to Drug Abuse* (Pawlick, 1971).

The evidence then for the effectiveness of the combination of megavitamins and hypoglycemic diets in correcting perceptual disorders, whether they are associated with outright schizophrenia, alcoholism, or drug use, is derived from widespread experience in a variety of patient population groups and settings.

We can compare the results of this treatment with statistics as given by authorities in the field of schizophrenia. For instance, the Chief of the Center for Studies of Schizophrenia for the National Institute of Mental Health, Dr. Lorin Mosher, indicates that only 30 percent of the patients who develop schizophrenia are able to return to work, and according to Caffey et al. (1970) only 15 percent of patients who had been hospitalized for any appreciable length of time ever function in a completely normal way thereafter. Statistics from the New York State Department of Mental Hygiene indicate that 55 percent of patients hospitalized for schizophrenia are readmissions and in this percentage are many patients with multiple rehospitalizations. As compared to these overall large-scale statistical guidelines, it would appear beyond any doubt that the orthomolecular psychiatric approach offers substantial and valid hope to patients and family. As the number of patients increases, the development of an integrated community system for the treatment of schizophrenia evolves to meet the growing needs of the patient population. The strength of the system, however, relies entirely on demonstrable results.

SUMMARY

Following the diagnostic process, the patient is given the results of the tests and the diagnosis, along with an explanation of his illness based on the orthomolecular

medical model and the significance of his perceptual disorder. The patient is then placed on a medical regimen consisting of a hypoglycemic diet, prescribed rest and exercise, phenothiazines, and other ancillary medications and megavitamins. The importance of detecting and treating functional, relative, or absolute hypoglycemia is stressed.

While the HOD score is elevated, psychotherapeutic intervention is kept to an absolute minimum. Those problems that still remain after the HOD score has returned to normal may be dealt with by psychotherapy if the patient is so motivated. Recovery is facilitated by the use of ancillary measures such as SA, group therapy, family therapy, AA, halfway houses, or specialized drug groups. Case histories and vignettes are used to explain and illustrate many of these principles. Evidence is reviewed to corroborate the experience that psychodynamically oriented psychotherapy does not influence the basic disease process itself to any statistically demonstrable degree.

The patient group most responsive to the orthomolecular approach is identified by an elevated HOD score, which demonstrates perceptual dysfunction. The majority of these patients recover by the end of the first year, re-enter life's activities during the second year, and in the third year are able to function on a higher level than they were before they became ill. We have not seen this response with any other treatment method.

The general problems inherent in evaluating the results of treatment in schizophrenia have been briefly surveyed and an attempt made to report a huge mass of data in terms which are useful to the clinician.

The orthomolecular approach is very practical. There is a high degree of acceptability and it is suitable for a wide range of applications in a variety of settings such as private practice, hospital, clinic, halfway house, and a diversity of groups. Because patient visits are widely spaced, there is a great saving in cost, not only to the patient, but also to the institution. With proper safeguards, there is an ample safety factor. Medical contraindications to the use of certain vitamins in high dosage are enumerated and toxicity is reviewed. The positive safety and cost factors are augmented by the establishment of a specialized laboratory.

We have described the effectiveness of this overall treatment approach with several thousand patients over a five-year period. Its evaluation in private practice has been with an emphasis upon using the patient himself as the ideal control, and we have also discussed how this overall system is used in hospital practice. We included the results of a study utilizing group improvements in HOD scores to demonstrate the effectiveness of ECT. This study demonstrated the defect of behavioral rating scales and the marked effectiveness of ECT in amelioration of the schizophrenic process especially in the younger patient. The results of a two-year follow-up study to evaluate the effect of continuance of megavitamins on the relapse rate have been reported. Using the rehospitalization rate as the criteria of effectiveness, the control group had twice the relapse rate of the megavitamin group.

The patients most likely to respond to this treatment have elevated HOD scores associated with schizophrenia, or schizophrenia plus homosexuality, psychedelic drug abuse, or alchoholism. Although each requires different handling, the overall results are promising and the degree of positive response in the majority of cases was responsible for the development of an integrated community system for the treatment of schizophrenia. The system is related to a variety of other treatment settings where a large body of positive results with this approach have been reported over the years.

The overall results from such a wide range of clinical experience correlates with both theoretical formulations and laboratory research to establish a broad foundation for the concept of orthomolecular psychiatry.

NUTRITION AND ORTHOMOLECULAR THERAPY

Prepared for the

APA Commission on Psychiatric Therapies

NUTRITION AND ORTHOMOLECULAR THERAPY

Nutrition is a branch of biology which studies the requirements for foods, their composition, and the processes by which they are converted into energy and the tissue growth and repair required for health and life. Prior to about 1750, nutrition was naturalistic and ethno-pharmacological. Plant and animal foods of unknown chemical composition were eaten in diets which varied greatly from culture to culture. Centuries of trial and error had demonstrated their value or danger. Certain foods were designated by Hippocrates to have special curative properties which were useful in the treatment of many of man's illnesses. Others were poisonous or tabooed for unknown reasons. In the period from 1750 to 1900, as chemistry developed, foods were simply classified chemically as carbohydrates, proteins, fats and the non-combustible ash. Attempts to raise animals on diets containing only these quickly showed the inadequacy of this simple classification. The golden age of nutrition occurred between 1900 and 1950. When the need for micronutrients was discovered, a conceptual revolution occurred with the insight that much of man's illness resulted from the absence of significant dietary constituents. To the established infectious and toxic theories of illness were added the deficiency diseases. With the discovery of vitamins, essential amino acids and trace elements, the nature of common diseases like pellagra, beri beri, scurvy, nutritional anemia and protein malnutrition were quickly understood. The development of quantitative standards for daily requirements of these nutrients for man, animals, and plants stimulated revolutionary changes in food production and several major public health triumphs. It is difficult to recognize that less than 50 years ago there were more than 200,000 cases of pellagra annually in this country. Mortality from this illness averaged 33% and about 10% of the beds in insane asylums

the country were occupied by demented patients with this illness. In the South, where pellagra was endemic because of the staple diet of corn, fatback and molasses, from 1/3 to 1/2 of the state mental hospital population had physical symptoms of pellagra and dementia (1). Pellagra was also very common among sharecroppers and in prisons, orphanages, and other state institutions. The discovery in 1937 that vitamin B_3 (niacin) was the antipellagra vitamin and the subsequent fortification of most cereal products with this vitamin made pellagra virtually absent in this country. Clinical nutritional research was greatly accelerated in World War II because of the need to develop adequate military rations. It led to the semi-quantitative determination of human needs for most nutrients. It was so successful that World War II was the first war in which more combat troops died from war injuries than from malnutrition and infection (2). The spin-offs to civilian nutrition were large. Today, nutritional science is sufficiently advanced so that, in this country, malnutrition is uncommon and when it does occur, it is likely a function of poverty, alcoholism, or self-selected inadequate diets. This is not true in the Third World where millions of children are stillborn, retarded, or die within the first few years of life because of the unavailability of adequate calories, protein, or micronutrients (3). In the world as a whole, malnutrition today remains as large a public health problem as infectious disease with which it constantly interacts.

In the richer, industrialized world, research in nutrition has moved into more specialized areas. In medicine, there have been significant advances in the study of the nutritional needs of special populations like pregnant women, premature infants, and the elderly. Vitamin requirements have been shown to increase when some drugs are administered for treatment of tumors, convulsions,

or even contraceptive purposes (4). Great advances have been made in furnishing the nutritional requirements of postsurgical patients or those with severe burns by total parenteral feeding. Specialized nutritional needs have been found for some patients with ophthalmological or dermatological disease. Genetic illnesses, like phenylketonuria, have been found to be clinically responsive to minimizing the intake of the amino acid phenylalanine. Rare genetic autosomal recessive illnesses characterized by mental retardation and multiple somatic defects have been found. These can be prevented or cured by the daily administration of very large quantities of particular vitamins (3,5,6).

Nutritional theories of the etiology of common mental illness and behavior disorders and treatments based on these theories are very controversial. Nevertheless, new diagnostic methods have shown that several psychiatric illnesses may be complicated by nutritional deficiency and may respond to nutritional supplementation. We shall discuss these below. These are all reviewed in an excellent text, Nutritional Support of Medical Practice (7). A comprehensive review is offered in the five volumes entitled Nutrition and the Brain (8).

Many natural foods, especially those from plants, contain chemicals which are biologically active and may be either toxic or therapeutically useful. Many of these substances have been identified and isolated in pure form and now are useful products in our pharmacological armamentarium. In the industrialized world, food chemists supplement natural foods with nutrients and also with natural and synthetic additives which enhance the taste and appearance of foods and diminish spoilage, thus enhancing their useful distribution. Residues from synthetic herbicides and insecticides used to increase crop production and steroids and

antibiotics used to increase animal food production may appear in our food. Because of this, there has arisen the quasi-nutritional subspecialty of nutritional toxicology designed to protect the public from foods which might contain dangerous chemicals like mercury in fish or selenium in wheat or foods to which chemicals are purposely added during processing. There has also been increasing interest in what might be called nutritional pharmacology. Selected, specific nutrients like the amino acids tyrosine and tryptophan or the quaternery ammonium compound choline can be fed in doses greatly above their usual intake levels in order to elevate neurotransmitters in the brain. Such precursor therapy is actively under investigation and its interest to psychiatry will be discussed below. Although the substances used are natural and even essential in our daily diet in small quantities, quantities employed in precursor therapy are so much greater than are ordinarily required that we choose to call the use of the substances in these quantities "pharmacological." Moreover, their biological effects at high concentrations may be different from and unrelated to their primary action. For example, nicotinic acid and nicotinamide have identical nutritional value as vitamin B_3. In very high doses, nicotinic acid causes vasodilation and lowers blood cholesterol; nicotinamide does not. These actions of nicotinic acid at high doses are considered pharmacological (9).

There is also included under the rubric of nutrition, the study of food allergy and hypersensitivity to either specific foods or to commercial additives. Reactive hypoglycemia, generally attributed to the use of high carbohydrate diets which result in the over-production of insulin which, in turn, leads to hypoglycemia has also been studied in relation to clinical states as diverse as panic disorders, depression, and aggression leading to crime and delinquency (10,11).

Along with the slow, cautious, and steady advances in nutrition, there continues to be what we call "pseudonutrition". Nutritional fads have been promulgated in the lay press, in books, and in a few journals. These attribute many common somatic and psychiatric complaints to inadequate or toxic diets. They promise much: enhancing longevity, diminishing the risk of, or improving the treatment of cancer, heart disease, and the major mental illnesses with appropriate dietary therapies. These generally unproven treatments are especially popular among those with illnesses which are chronic and for which conventional medical or psychiatric treatment is slow, not yet fully adequate, and often, expensive. Patients with cancer and mental illness seem to be extraordinarily susceptible to seduction by these claims. Substantial efforts and quantities of time and money have been spent in scientific trials to test the claims of nutritional faddists. Despite many negative results, the claims persist. We shall, therefore, devote some time and space to a discussion of the theory which underlies the claims of the therapeutic value of orthomolecular psychiatry, additive free diets, hypoglycemic diets, and diets designed to eliminate substances to which patients claim to be hypersensitive and which they feel may cause the major mental illnesses.

Nutritional Principles

Man, as an evolutionary product of the animal kingdom, has nutritional needs similar to those of other mammals. The complex foods he eats are digested to simpler molecules which are then absorbed and resynthesized under genetic interactions to the multitude of compounds of which he is made. Maintenance of body temperature, movement, growth, repair and reproduction require energy supplied mainly by the oxidation and carbohydrate and fat. Metabolic end products like exhaled carbon dioxide or urinary nitrogen metabolites need constant replacement from dietary intake. Even the body minerals are constantly turning over metabolically and must be replaced by ingested food. For growth and development, a positive balance of calories and essential nutrients must be supplied. For adult maintenance the balance should be zero. Control of appetite and food intake involves a complex set of sensors and feedback systems in the brain and endocrine organs which are beyond the scope of this chapter.

Despite the capacity of each species to synthesize the myriad of compounds unique to it, some things must be supplied in the diet. These include water, the major anions and cations of the cellular fluids and skeleton, and trace elements like copper, manganese, cobalt, fluorine, vanadium, selenium, and zinc. Ten amino acids cannot be synthesized and must be furnished. They are needed for the synthesis of proteins and other nitrogenous compounds. Thirteen vitamins are required, four of these are fat soluble, eight are members of the vitamin B complex and vitamin C is uniquely required by man, primates, the guinea pig, an East Indian bat, and a bird. It is a remarkable testimony to the synthetic capacities of the body that the thousands of compounds of which we are made can all be synthesized from approximately two dozen organic compounds furnished in the diet.

Several features of man's nutrition deserve comment. First, as mentioned previously, he is quite rare in requiring vitamin C. The evolutionary purpose of this is not known. Second, he is an omnivore who eats a greater variety of foods than any other known species except perhaps the rat. Undoubtedly, this offers a great evolutionary advantage since it permits man to survive on the indigenous food of any region on earth. Third, he is apparently the only species whose choice of diets is determined by taste, smell, color, appearance, and even texture. He is the only animal for whom eating is both a necessity and an aesthetic experience. In contrast to most animals who eat the same food every day of their lives, man constantly seeks variety and, whenever possible, gets it. The aesthetic qualities of food have had interesting social consequences. For example, it may be argued that Columbus discovered America while looking for food additives; that is, the spices that help to preserve food and enhance its taste and color. In the industrialized United States, food companies compete vigorously to produce products which are more attractive than their competitors even though they are nutritionally equivalent. This is done with food additives. Many of the food fads are based upon presumed, but unproven, hazards created by commercial food processing. Man still attributes to foods magical properties which can hurt or help him.

Fourth, the precise nutritional requirements for man are less well known than they are for the domesticated animals which supply his food. There are several reasons for this. Experiments can be done on food animals which cannot be done safely with man. Animals are bred to be genetically homogeneous and efficient in their conversion of food to milk, eggs, or edible animal protein. Their daily activities and energy output are much more closely regulated than are those

of man. Finally, the economics of the food industry make it essential to know the minimum food requirements of animals for maximum growth and marketability. Despite the difficulties in precisely determining the nutritional requirements of man, reasonable estimate have been made since 1941, by the Food and Nutrition Board, National Research Council of the National Academy of Sciences. These are revised every five years; the 9th edition (121) was published in 1980. It offers recommended daily allowances (RDA) for calories, protein, minerals, and vitamins for men, women, and children. The RDA are not minimal requirements. Recognizing substantial variance in man's nutritional needs because of genetic heterogeneity and living habits, they are calculated by the Board to exceed average nutritional needs by a "safe margin" allowing for individual differences in a basically healthy population. The magnitude of the safety factor is substantial. For example, the minimal requirement for folic acid is estimated to be about 50micrograms per day; the RDA is 400micrograms. The RDA has been accepted by the American Medical Association (122) and is used by the Food and Drug Administration for food labelling. It is also the basis on which the Department of Agriculture and the United States Public Health Service established national food programs and nutritional educational programs. The RDA can be found in most standard texts of medicine, pharmacology, and biochemistry (3,4,7).

In an affluent society, man's omnivorous appetite and his wish for variety makes it easy to obtain a nutritionally sound, balanced diet. RDA requirements are generally met by diets which offer a mixture of four food groups in adequate proportions. These groups are (1) Fruits, vegetables, and fruit juices; (2) Grains and grain products; (3) Meats and meat products; (4) Milk and milk products.

Such diets offer adequate nutrients as well as taste and variety. When they are consumed, vitamin or mineral supplementation is not required. Impoverished populations here or abroad who subsist largely on grain and who have no variety in their diets generally need supplementation with vitamins, minerals, and other proteins.

Under special conditions of illness, severe dieting, heavy alcohol consumption, stress, pregnancy or lactation, supplementation may be desirable with modest quantities of vitamins. Massive supplementation with megadoses of vitamins is required only in three conditions. (1) In the genetic vitamin dependency or insufficiency illnesses, (2) When there are transport difficulties for nutrients in the gut or across other cell membranes, and (3) When antivitamin antimetabolites are used as in the treatment of cancer.

Some orthomolecular psychiatrists believe that the brain may have nutritional requirements so much larger than the other body tissues that cerebral avitaminosis may exist and may account for much major mental illness.

But, malnutrition generally produces mental changes along with somatic changes like weight loss or anemia. In early or minimal nutritional deficiences mental changes may occasionally appear before readily observable physical changes ensue. But, careful examination will reveal lowered blood or tissue levels of vitamins or minerals. The mental changes associated with vitamin deficiency are nonspecific. Perusal of the literature shows that weakness, irritability, anxiety, anorexia, lassitude, depression, apathy, anergia, headache, dizziness and inability to concentrate have been reported in subjects or patients with mild deficiency of any of the water soluble

vitamins. When the deficiency is severe, memory loss, disorientation, delusions, hallucinations, and other signs of dementia may appear.

Clinical ecologists, advocates of the Feingold diet, and some orthomolecular psychiatrists believe that in some individuals, the brain may be uniquely allergic or hypersensitive to certain foods, food additives, or other environmental chemicals. Such hypersensitivity is considered by them to be related to hyperkinesis in children and a variety of illnesses including schizophrenia, depression, anxiety, drug addiction and antisocial behavior.

But, allergy or hypersensitivity when it exists involves the whole body and is manifested by physical symptoms like asthma and urticaria as well as by nonspecific mental complaints.

In the following sections we shall discuss: Consequences of protein calorie malnutrition, psychiatric manifestations of deficiencies of some of the B complex vitamins and the use of amino acids in pharmacological doses as precursors of neurotransmitters. Finally, we shall devote the remainder of the chapter to an examination of what we call "pseudonutrition" in relation to psychiatric practice.

Protein Calorie Malnutrition

Many studies conducted in impoverished socities have shown that severe, prolonged protein calorie malnutrition is especially devastating to infants and children and that the consequences are prolonged and likely irreversible. The results of such studies have been summarized in several excellent monographs derived from international conferences on this subject (12,13). The reasons for this high vulnerability is the rapid growth of the human brain in infancy and the effects of malnutrition on its growth and development. Winnick (14) has shown that, in the human, the number of brain cells increases linearly from gestation until birth and then more slowly until about 10 months of age, at which time it virtually stops. Cell size, in contrast to cell number, continues to increase for several years. Myelination occurs rapidly at birth and is still occurring at two years. The weight of the brain increases rapidly through gestation and the first two years of life, its rate of growth diminishes thereafter, but adult weight is not reached until adolescence. Studies on the brains of children who have died from malnutrition show that children dying from marasmus in the first two years of life have from 15 to 50% fewer brain cells than normal children of comparable age. Children with kwashiorkor who become malnourished after being taken off the breast in the second or third year of life have a normal number of brain cells, but the size of the cells is diminished (15). Studies of the behavior of children who survive early malnutrition show that such children have profound disturbances in the acquisition of language, motor skills, interpersonal relationships, and adaptive and motivational behavior. Memory defects have also been found (12,14). Most of these studies have been limited to children studied only a few years after recovery from malnutrition. However,

an ongoing longitudinal study by Cravioto and DeLicardi (16) should ultimately give an answer to the question of whether or not the damaging consequences of early malnutrition are truly irreversible. If they are, it would lead to a vicious cycle in which malnutrition during infancy results in a large pool of poorly functioning people who, because of their poor level of functioning, rear their children under conditions destined to produce a new generation of malnourished people (14,16). Children born in the poverty that leads to malnutrition also live in social and family environments which are themselves capable of retarding mental and behavioral development. Some ingenious experiments on rats, conducted by Francova (13) have shown that protein deficient rats, raised with their mothers and litter mates show about 20% decrement in exploratory activity. Rats on normal diets that have restricted optical and acoustical stimuli show about a 30% decrement in exploratory activity. Rats deprived of both protein and environmental stimuli show a 90% decrement. The effects of both types of deprivation simultaneously are thus more than additive; they are synergistic. The introduction of an "aunt," a nonpregnant virgin female, into the cages of protein deprived infant rats elevated their performance to that of normal rats, even though such a "mother's helper" did not lactate and was unable to offer food. She did, however, stimulate them by grooming and retrieving them. DeLicardi and Cravioto have conducted experiments which led to similar conclusions in impoverished children from an agricultural community in Central America. In this population, 83% of the children showed no clinical signs of malnutrition, 11% showed mild and moderate malnutrition, and 5% showed severe malnutrition. Yet, the families of all of the children had approximately equal incomes, land, and food. Therefore, no correlation could be established between the amount of food available to the

families of these children and the level of malnutrition. However, a significant correlation was found by psychologists who studied this cohort of children while unaware of their nutritional antecedents. They found that the degree of psychological stimulation offered at age six months to those children who later developed severe malnutrition was significantly lower than that of controls from the same population matched by age and birth weight. In children whose diets are marginal nutritionally, psychosocial deprivation predisposes them to severe malnutrition. Malnutrition, in turn, diminished activity, motivation, exploratory behavior, and those complex signals that ordinarily elicit a stimulating and gratifying response from adult parents. A vicious cycle is thus set up in which the effects of malnutrition synergize with those of environmental deprivation. The consequences may lead to irreversible emotional and mental disorders of development. The interaction between nutrition and psychosocial stimulation is not unique to rats or man. All species that have been studied show the same interaction (13).

Vitamin Deficiency States

Vitamin Requirements

Several methods have traditionally been used to determine the vitamin requirements of human subjects. One, employed commonly with conscientious objectors during World War II was the deliberate production of nutritional deficiency followed by the measurement of the quantity of nutrient required to eliminate the signs and symptoms of the deficiency and to maintain health. This quantity was then considered the recommended dietary allowance, and was added to the K rations of our troops. Variations on this strategy use populations in which nutritional deficiency is endemic. Another approach is to measure abnormal metabolites of carbohydrate and protein known to exist in specific deficiencies in the blood and urine. For example, elevated blood lactate and pyruvate occurs in thiamine deficiency. The dose of a specific vitamin required to correct this biochemical abnormality is considered to be the daily requirement. The third approach is the direct measurement of the vitamin in the blood and urine by chemical or microbiologic means. "Normal" levels have been established. This strategy involves the use of large populations of healthy subjects of different age, sex, and race in order to obtain normative data. Recently a new approach to the measurement of vitamin requirements has been proposed. This is based on the assumption that the enzymes requiring cofactors should be fully saturated with cofactor at all times and that a vitamin deficiency exists if they are unsaturated. For example, serum or erythrocyte glutamic-oxalacetic transaminase activity is measured with and without added pyridoxalphosphate, the cofactor. If activity is greater with added cofactor, the enzyme is unsaturated and a

deficiency is said to exist. This method is somewhat controversial but it may be useful in detecting cases of vitamin deficiency and vitamin insufficiency illnesses (17).

Using such methods, a number of vitamin deficiency states relevant to psychiatry have been found; usually they are secondary to the use of pharmacological agents. They most commonly follow the long term use of antituberculosis drugs, anticonvulsants, oral contraceptives, and anti-tumor drugs (18).

The functions of the water soluble vitamins in the nervous system, the manifestations of deficiency and their therapeutic utility has recently been reviewed in great detail (8.19). The following emphasizes features unique to psychiatry:

Vitamin B_6

Vitamin B_6 has many neurobiological functions. It is the precursor of a coenzyme required for more than 50 enzymes in the body. It is so widely distributed in our food supply that it has not been found to occur in populations throughout the world. It has been produced experimentally. Mental symptoms associated with deficiency include lassitude, weakness, depression, anorexia, and confusion. Somatic symptoms include a microcytic anemia which fails to respond to iron but improves dramatically following treatment with small doses of the vitamin. Isoniazide and cycloserine form carboxyl addition compounds with pyridoxal or pyridoxal phosphate that make it unable to function as a cofactor in the approximately 50 enzymes with which it is associated. The administration of vitamin B_6 supplement along with antituberculosis medication reveals that both neurologic and psychiatric symptoms disappear when supplementary vitamin is given in appropriate quantities (20). Estrogens have been shown to compete with pyridoxal phosphate for binding sites among its numerous apoenzymes. High estrogen levels which

occur during pregnancy or the use of oral contraceptives seem to increase the requirements for vitamin B_6. In therapeutic trials on women who developed depression during pregnancy or while taking oral contraceptives, vitamin B_6 supplementation has been reported to improve mood and to correct the abnormal urinary excretion of tryptophan metabolites (21,22,23). Based on such findings some investigators recommend the inclusion of supplemental B_6 into oral contraceptive preparations (22). In Spain, manufactured oral contraceptives contain 25mg of pyridoxine and the combination is reported to produce fewer side effects (24). The RDA for vitamin B_6 for adults is 2.0mg/day. Doses 10 times this are safe and can prevent deficiencies due to drugs administered for other purposes. Although vitamin B_6 is not very toxic, doses several hundred or thousand times of the estimated daily requirement have been reported to cause convulsions and liver hypertrophy (

Vitamin B_3

Vitamin B_3 (niacin, niacinamide, nicotinic acid, nicotinamide) is combined with adenine, ribose and phosphoric acid in the body cells to form nicotinamide adenine dinucleotide (NAD). This is a cofactor for many enzymes which catalyze oxidation reduction reactions which are involved in energy release from carbohydrate, the synthesis of fatty acids, steroid metabolism, etc. Niacin in the judgment of some is not truly a vitamin because limited quantities can be synthesized from the metabolism of the essential amino acid tryptophan (26). While this is correct, historical usage, plus the fact that niacin deficiency can be produced on diets ordinarily adequate in tryptophan seem to us to warrant continued classification as a vitamin. Corn, which is deficient in both tryptophan and niacin, is the common food staple in countries where pellagra was common and where it continues to exist. Hartnup's disease is an autosomal recessive disease characterized by diminished absorption of neutral amino acids including tryptophan. Some of its

symptoms resemble pellagra and these respond to niacin (27). The recommended daily allowance of niacin is 6.6mg/1000 calories of food or about 10-20mg/day. The requirement increases during pregnancy and lactation (27).

Pellagra is characterized by a triad of symptoms - dermatitis, diarrhea, and dementia. In early deficiency, psychiatric symptoms are diffuse and include apathy, depression, anxiety and memory deficits. In severe pellagra, mania, delirium, organic dementia, bulbar palsy, and visual field deficits may be present. The EEG has excessive theta and delta activity. This returns to normal after niacin treatment. Routine manufacture of wheat flour and all cereal products supplemented with niacin has caused pellagra to virtually disappear in the U.S. Niacin deficiency in the brain, without deficiency in other tissues, has been claimed by orthomolecular psychiatrists to account for schizophrenia and other mental disturbances. This will be discussed later.

In pharmacological doses of 10-30grams/day, nicotinic acid, but not nicotinamide, lowers blood cholesterol and causes transient cutaneous vasodilation manifested by a flush (19). Nicotinamide, but not nicotinic acid, at doses of 250mg/day tranquilizes rodents and diminishes locomotor activity in gerbils (28). At similar doses, it increases REM sleep and it has been reported to be of benefit to some insomniacs (29). Nicotinamide also binds weakly to the benzodiazepine receptor (30). At ordinary dietary doses, the brain concentrations of nicotinamide are likely to be too low for biologically significant binding to this receptor, but at megadoses, this might occur. At such doses, niacinamide might have anxiolytic properties like the benzodiazepines. This has not been tested. Nicotinic acid and nicotinamide are identical as vitamins; the different properties of the two compounds occur only at pharmacological doses. Thus,

there is no evidence to relate their pharmacological properties shown at high doses to their classical vitamin action as precursors of NAD. Niacin and niacinamide are not very toxic even in megadoses, but in view of their use in orthomolecular psychiatry at doses 100-500 times higher than the average nutritional requirement, it is worth noting that reported side effects include hepatoxicity (31), hypotension, tachycardia, and hyperglycemia (32). There is a very recent report of severe sensory neuropathy from pyridoxine abuse at doses of 2-6mg/day for several months (158,159). These toxic must be balanced against any presumed therapeutic utility.

Vitamin B_{12}

Vitamin B_{12} (cyanocobalamin) is unique in three regards. It is the only vitamin containing a mineral (cobalt) as part of its chemical structure; it is not found in plants and its absorption from the gut requires a highly specialized mechanism the failure of which results in pernicious anemia. The RDA is about 3.0mg/day. 1micro daily causes remission of pernicious anemia. The vitamin is involved in transmethylation reactions, the synthesis of amino acids, purines and pyrimidines. It is vital for blood formation and the maintenance of neuronal integrity.

A number of studies have shown that 25-30% of patients with untreated pernicious anemia have either major or minor psychiatric problems (33). These include depression and apathy, irritability, confusion, and paranoid states. Neurological symptoms results from demyelination of the dorsal columns of the pyramidal tracts and result in the syndrome known as combined system disease. As many as 60% of untreated pernicious anemia patients have been found to have an abnormal EEG (33,34). Deficiencies of vitamin B_{12} may arise from strict vegetarian diets, but more often follow failure to absorb the vitamin as when there is lack of the gastric intrinsic factor or in ileitis and following bowel surgery. It may also follow chronic ingestion of alcohol or after the administration of neomycin, para-amino salicyclic acid or colchicine. There is an increased requirement for vitamin B_{12}

during pregnancy. Since folic acid is required for the absorption of B_{12}, folate deficiency may be accompanied by B_{12} deficiency (35,36).

Although a large percentage of patients with hematologic and neurologic findings of vitamin B_{12} deficiency also have psychiatric symptoms,

> in a significant number of patients the psychiatric manifestations may be the first symptoms and can antedate anemia or spinal cord disease. A recent report (37) presents two cases of organic psychosis without anemia or spinal cord symptoms that responded dramatically to the appropriate administration of intramuscular B_{12}. It is noteworthy that both patients had normal hematologic profiles. Diagnosis was made by finding low serum levels of B_{12}. With restoration of appropriate B_{12} levels, the presenting symptoms disappeared. Evans et al. (37) recommends consideration of B_{12} deficiency and serum B_{12} determination of all patients with organic psychiatric symptoms whose cause is not clearly known. Even more recently, Van Tiggelem et al. (38) have suggested that blood levels of B_{12} may not always correlate with cerebrospinal fluid levels and that the latter may be much lower.

Folic Acid

Folic acid (pteroyl glutamic acid) is involved in: hydroxylation reactions required for norepinephrine and serotonin synthesis, transmethylation reactions, the synthesis of the purine bases, adenine and guanine, and the pyrimidine base thymine. Folic acid is, therefore, indispensible for the production of DNA and RNA. Transmethylation reactions are involved in myelin synthesis and in the inactivation of the neurotransmitters norepinephrine and serotonin. The RDA is less than 0.5mg/day. It doubles during pregnancy. Serum concentrations in man range from 5-30ng/ml. Folate deficiency has been produced in experimental animals. Diminished learning capacity and EEG changes have been reported in rat pups born of mothers with folate deficiency.

Folic acid, as the name implies, is present in leafy green vegetables and in meats. In man, folate deficiency occurs endemically in severely malnourished populations. It can be produced experimentally in volunteers on folate deficient diets and iatrogenically in marginally nourished people by the administration of anticonvulsants like diphenylhidantoin, oral contraceptives, or the antifolates used in the treatment of malignancy. In experimental folate deficiency, forgetfulness and insomnia appear at the same time as megaloblastic anemia and can be quickly reversed by the vitamin. In less pure deficiency states, occurring among the aged or chronically institutionalized patients, the spectrum of mental disorders includes apathy, irritability, depression, psychosis, delirium and dementia (39).

Folate deficiency can readily be determined by measurement of blood levels. When this is done, as many as 30% of psychiatric admissions have been reported to be deficient (39). Of a sample of admissions to a psychogeriatric ward, 67% have been reported to be folate deficient (40). Carney and Sheffield found that

about 25% of 432 psychiatric admissions have low blood folate levels. Folate treated patients with organic psychoses, endogenous depression and schizophrenia had shorter hospital stays and left in better clinical state than untreated patients (36).

An association between folate deficiency and gestational difficulties has been recognized for many years. Population surveys have shown that about 15% of women, especially among the poor, have marginal or deficient blood levels. Deficiency during pregnancy is associated with an increase in prematurity and teratogenicity.

In the last few years, evidence has accumulated which tends to relate folic acid deficiency during early gestation to neural tube defects and to the Fragile X syndrome of mental retardation. Both of these are polygenic illnesses in which the phenotypic expression of the genotypic defect is apparently determined by the nutritional state of the uterine environment. Smythells (42) has found that when 493 women who had already given birth to a child with neural tube defect gave birth to a second child, 23 of these had children with such a defect. In 397 similar women who were given a vitamin supplement containing folic acid prior to conception and through the first menstrual period, only 3 had such recurrences. This strikingly significant difference cannot be readily explained except by a direct prophylactic effect of vitamin supplementation very early after conception.

The Fragile X chromosome is a relatively newly discovered cause of mental retardation. The fragility of the X chromosome can be rectified <u>in vitro</u> by folic acid (43). Lejeune (44) has reported that the administration of folic acid greatly reduced symptoms of autism and psychotic complications of mental retardation in 7 out of 8 such patients.

Both of these interesting findings clearly require confirmation. If confirmed, they will represent a major advance in the understanding and treatment of two devastating illnesses of concern to neurologists, psychiatrists, and pediatricians through appropriate nutritional supplementation early in conception. A series of studies have shown that folic acid can be added to staple foods, as nicotinic acid commonly is, and that such fortification is feasible, safe, and effective (155). Until this is done, oral administration of folic acid tablets at a level of 0.5mg/day to pregnant women, especially those living in poverty, appears to be prudent (155).

A genetic vitamin dependency illness which required about 20mg of folic acid daily has been reported. These rare cases presented with homocystinuria. One such patient showed mild mental retardation with symptoms of schizophrenia which improved after folate administration and recurred 6 months after the supplementary vitamin was dicontinued (41).

Quasi-Nutrition

Precursor Therapy

Communication between neurons in the central nervous system, it is generally accepted, is overwhelmingly chemical. Neurotransmitters synthesized in presynaptic neurons are extruded into the synaptic cleft when the neuron fires. They then engage specific receptors on post synaptic neurons and initiate a series of metabolic steps which may excite, inhibit, or modulate their activity. More than 20 neurotransmitters are thought to exist; they range in composition from simple amino acids to complex polypeptides. The classical neurotransmitters, dopamine, norepinephrine, serotonin, and acetylcholine have been the most studied. The paradigm for precursor therapy is the use of L-DOPA in Parkinson's disease. The enzyme for the conversion of tyrosine to L-DOPA is lacking in the striatal neurons of the brain from patients with this disease. But, the decarboxylation of L-DOPA to dopamine can still take place. Hence, L-DOPA in pharmacological doses permits the synthesis of sufficient dopamine to be therapeutically effective for several years.

More than a decade ago, it was discovered by Wurtman and his coworkers (45) that the synthesis and release of several neurotransmitters in presynaptic neurons can be influenced by the concentration of precursors offered to them. The amino acids tryptophan and tyrosine are the precursors of serotonin and norepinephrine respectively. Choline is the precursor for the synthesis of acetylcholine. The conversion of precursors to active neurotransmitters is enzymatic. When saturating concentrations of the precursors are available, the rate at which transmitters can be synthesized is limited by the enzymatic capacity. But, concentrations of the dietary precursors in the blood is not constant and under some conditions the rate limiting enzymes may not be saturated, but can become so if

large doses of precursors are administered. Precursor therapy is relatively safe, because feedback inhibition and other neuronal control mechanisms prevent the synthesis of more transmitter than is needed by the neuron at any particular time. Consequently, few side effects are noted when subjects are given pharmacological doses of tyrosine, tryptophan (46), or choline (47,48) that is, amounts much greater the quantities usually ingested in the diet.

The finding that levels of neurotransmitters in the brain can be altered by experimentally manipulating the quantity of ingested precursor had led to considerable basic research as well as clinical research on both normal volunteers and patients in whom there is reason to believe that there may be a neurotransmitter deficiency.

Dietary precursors must be absorbed from the gut, transported in the blood, penetrate the blood brain barrier, and finally enter into appropriate neurons. These are complex processes which depend initially on the quantity of the precursor in the diet, the effectiveness of the gut in absorbing them, and the transport mechanisms within the blood. Circulating amino acids then compete with each other for active transport through the blood brain barrier into the brain (45,49). The ratio of plasma tryptophan, for example, to the sum of the concentration of other neutral amino acids like tyrosine, phenylalanine, leucine, isoleucine, and valine determines the penetrability of tryptophan into the brain, and, hence, the brain serotonin concentration. Thus, a high protein meal in which many amino acids compete for transport into the brain depresses serotonin synthesis in the rat brain (45,50). A high carbohydrate, low protein meal raises brain serotonin because it elicits the secretion of insulin which lowers the blood levels of other neutral amino acids without affecting tryptophan. Doses of tryptophan as large as 10-15grams would be

more likely to diminish transport of other amino acids into the brain than doses of 1-3grams.

Tryptophan and Tyrosine

Tryptophan, administered at a dose of 50mg/kg to healthy young men in the morning, significantly increased self reports of fatigue and inertia and reduced vigor and activity (46). It is interesting to note that in this same experiment, tyrosine at 100mg/kg had undetectable effects. It is also worth noting that tryptophan did not cause depression, anxiety, confusion, nor anger in this experiment.

Tryptophan has also been used in the treatment of insomnia with apparent favorable effects. Doses of 1 to 5 grams before bedtime have been reported to reduce sleep latency without producing distortions of physiological sleep as measured by EEG recordings (51). Doses of 10-15 grams cause EEG changes but these are less pronounced than those resulting from the use of hypnotics. The mechanism for the effectiveness of tryptophan in insomnia is presumed to be due to its effects on serotonin levels in the brain stem (52). The use of L-tryptophan for the treatment of insomnia is still experimental even though the amino acid is available for sale in health food stores. The current literature suggests that it would have substantial advantages over conventional hypnotics, but it appears not to be uniformly effective for insomniacs. Furthermore, the long term effects of doses of 5-15grams per day require further investigation.

Serotonin deficits have been implicated in some depressions and mania and clinical trials with tryptophan were conducted with mixed results (53,54). Since tryptophan is rapidly catabolized enzymatically by liver pyrollase, the idea occurred that the concomitant administration of an inhibitor could more effectively

raise brain serotonin. Nicotinic acid and nicotinamide are both pyrollase inhibitors and in a preliminary report, encouraging results were obtained with the combination of tryptophan and nicotinamide in the treatment of depression (55). These results have not been confirmed. In very recent work, it has been reported that tryptohan diminishes sensitivity to mild pain and in people over forty increases the likelihood of errors in performance tasks (56).

The administration of tyrosine can, under certain circumstances, elevate levels of brain catecholamines (45,57). It has been reported to help some patients with depression (58) and mild Parkinson's disease (57). Continued clinical research in which tyrosine or tryptophan is used with depressed patients might help to distinguish depressions in which norepinephrine is involved from those in which the defect may be in serotonin metabolism.

Choline and Lecithin

Several studies have shown that the administration of choline or lecithin, the precursors of acetylcholine, increased cholinergic function in the brain (59). On the basis of this finding, clinical research has been conducted in which there is a possible disorder in acetylcholine metabolism. Tardive dyskinesia is one such disorder Presumably the disorder arises because of prolonged administration of neuroleptics, wh chronically block striatal dopamine receptors, cause these receptors to become supersensitive to dopamine (60). Some dopamine receptors are present on cholinergic neurons and their supersensitivity probably causes a chronic decrease in the release of acetylcholine by decreasing the firing rates of the cholinergic neurons. Davis et al. (61) reported marked clinical improvement after giving oral choline to a patient with tardive dyskinesia. Several additional studies have confirmed this (62,63). Unfortunately, large doses of choline have undesirable side effects.

including a socially unacceptable odor which results from the degradation of ingested choline to trimethylamine by intestinal bacteria. Lecithin, a phosphatidyl choline, is the most common source of our dietary choline. Lecithin is more effective than choline in raising plasma choline levels (64). Several reports suggest that it, too, is effective in diminishing symptoms of tardive dyskinesia (65,66). A review of the literature suggests that there is modest improvement in the motor function of about 1/2 of the patients who receive lecithin. Interestingly, the antipsychotic action of neuroleptics has not been reported to be diminished by the administration of either choline or lecithin.

Choline has been administered to schizophrenic subjects and failed to modify their clinical symptoms (67). Lecithin has been administered to manic patients with encouraging results (68). Disorders in acetylcholine function have been suggested in Huntington's Disease, Friedrich's Ataxia, and Tourette Syndrome. The results of therapeutic trials with choline or lecithin in those illnesses are equivocal. They have been reviewed by Growden et al. (69).

Alzheimer's disease, the most common cause of dementia among the elderly, is characterized by impaired functioning of cholinergic neurons. On autopsy, the brains of such patients show a dramatic loss of brain choline acetyltransferase (71,70,45). Memory deficits are characteristic of Alzheimer's disease and many studies have been conducted to measure the effects of acethylcholine precursors in normal people and in patients with Alzheimer's disease (48,72). These studies have not convincingly demonstrated any enhancement of memory after treatment with acetylcholine precursor.

Alternative methods for enhancing cholinergic activity include the use of choline esterase inhibitors and cholinergic agonists. Physostigmine, a reversible

short acting choline esterase inhibitor and arecoline, a short acting cholinergic agonist, improve memory when given in low doses to healthy young adults (73,74). Physostigmine, in a double blind experiment, enhanced the memory processes of patients with Alzheimer's disease for brief periods (75).

It is curious that physostigmine, which enhances cholinergic function by inhibiting the enzyme which destroys acetylcholine, should be more effective than precursors which increase the concentration of this neurotransmitter. The reason is not known, but it immediately raises the question of whether a combination of a precursor and a choline agonist or choline esterase inhibitor might be additive or synergistic. To the best of our knowledge, this has not yet been tested.

The precursor strategy with tryptophan, tyrosine, and choline has thus far yielded results which are of great research interest but have only preliminary and uncertain clinical utility. This type of research is young, and vigorous. We may hazard a guess that greater clinical effects from precursors may be achieved when they are combined with other types of psychotronic drugs. Tryptophan or tyrosine combined with tricyclics might accelerate the therapeutic process or decrease the required dose in depression. Stern and Mendels have reviewed the literature on the use of such combinations in the treatment of refractory depression (76). A recent report suggests that the combination of physostigmine and lecithin improves memory in Alzheimer's disease (75).

Pseudo-Nutrition

Food Additives and Hyperkinesis

In 1975, the late Dr. Ben F. Feingold, a pediatrician and allergist, proposed that some children have a central nervous system variant that predisposes them to sensitivity to synthetic food additives, particularly to food colors and the antioxidants butylated hydroxyanisole (BHA) and butylated hydroxytoluene (BHT). He claimed that in such children hyperkinetic behavior results from the ingestion of these additives. The use of an additive free diet which he developed led to dramatic improvement or even cure in from 50-70% of hyperkinetic/learning disabled children. He stated that 75% of children who had been treated with stimulant medication could discontinue the treatment (77). The diet, he claimed, became effective in several days to several weeks and the younger the patient, the more rapid and complete his response. Total and permanent adherence to the diet is mandatory, Feingold insisted, because even a minor infringement produces a return of symptoms within about 3 hours, which may persist as long as 72 hours. Feingold based his findings on extensive clinical experience in open studies. He did not conduct controlled, double blind trials to test his hypothesis. The Feingold dietary treatment gained considerable popularity among the lay public and more than 20,000 families of hyperkinetic children were reported to adhere to the diet and to advocate its use (78). Feingold urged that labelling of additives be mandatory and the immediate clinical application of an additive free diet in school food programs to a congressional committee by stating: "it is not necessary to await the availability of basic data, it has been demonstrated that these children respond to dietary intervention" (79). Several uncontrolled clinical studies supported Feingold. Rigorous double blind studies, conducted in 7 centers and involving about 200 children have generally failed to replicate his findings (84).

Two types of controlled studies have been conducted. Harley et al. (80) offered families with hyperactive children two different diets blindly at weekly intervals. One was a conventional diet; the other was prepared solely from foods recommended by Feingold. In 36 school age boys, based on teacher and objective ratings, no significant differences in behavior occurred with the diet. With these school age children, a few parents reported a significant improvement when the additive free diet followed the controlled diet, but they were unable to detect differences when the order was reversed. In preschool age children, where only parental ratings were available, a few parents were able to consistently detect differences with the additive free diet compared to the usual diet.

Most of the double blind studies have been challenge trials; that is, children, who ate additive free diets because their parents believed that they improved on them, were blindly "challenged" by the addition of cookies or drinks which contained food color additives. About 200 children have been tested in several studies conducted throughout the U.S. (81,82,83). A summary of these experiments and the results and conclusions has been reported (84). The National Institutes of Health (88) and the American Council on Science and Health (85) have concurred. The data from these studies have recently been examined statistically by an independent group who have come to the same conclusions (86). The conclusions from these many studies are that Feingold's claims that 50-70% of children improve dramatically on an additive free diet and deteriorate rapidly after minor infractions from the diet cannot be supported in careful double blind trials. At most, 3 of the 200 children were reported by their mothers to deteriorate significantly when challenged with food colors. In these 3 children, objective tests and/or outside observers were not used. The Nutrition Foundation Report (84) concluded that there was

insufficient evidence to require a special symbol on food labels indicating the presence or absence of these food additives for the purpose of treating these behavioral disorders. There is also insufficient evidence to suggest a ban on food containing artificial food colorings in federally supported school programs.

Rimland, Vice President of the Academy of Orthomolecular Psychiatry, has challenged the methods, results, and conclusions of those who failed to confirm Feingold's results (87).

Food and Environmental Allergy and Hypersensitivity

The notion that hypersensitivity or allergy to foods or other environmental agents like gasoline fumes, soaps, or hydrocarbons results in medical or psychiatric illness is subscribed to by what Brodsky calls a "medical subculture" (89). Clinical ecologists and some orthomolecular physicians are among those who support this view. It has been popularized extensively by books and in the media (90,91,92,93). Symptoms which have been related to such sensitivity or allergy include lethargy, depression, palpitations, sleep disturbance, mood swings, poor concentration, anxiety attacks, aggressiveness, and delinquent behavior. The Feingold hypothesis (77) that hyperactivity and learning disability in children is related to the ingestion of common synthetic food additives seems to be a specific variant of the food hypersensitivity thesis which focuses on synthetic food additives and natural salicylates. Hoffer (94) has claimed that many of his schizophrenic patients who failed to respond favorably to megavitamins do respond to five days of starvation followed by diets in which single items of food to which the patients are not sensitive are carefully introduced.

Pierson et al. recently sought objective evidence for the role of food hypersensitivity in 23 patients who attributed a wide variety of their physical and psychological symptoms to food allergies (95). These patients were seen independently for initial diagnosis by a psychiatrist who withheld his findings from the other investigating physicians. The allergists assessed the patients by medical and dietary history, a physical examination, and skin tests for common inhalant and food antigens. The patients were then put on exclusion diets consisting of uncommon foods to which they had no alleged hypersensitivity. All the patients improved. Single foods which the patients had themselves incriminated were then

added openly. Many patients became ill with their initial complaints. Blind tests were then performed using the same foods, freeze dried, and in opaque capsules. The investigators found that only four of the 23 patients had true food hypersensitivity. None of these four had significant psychiatric symptoms and all of them had physical symptoms characteristic of atopy, i.e., allergic rhinitis, urticaria, asthma or atopic eczema which appeared even when the offending foods were given blindly. The 19 in whom food hypersensitivity could not be confirmed in the blind trials had physical and psychological symptoms not characteristic of the atopic syndrome; 18 of these 19 patients had been diagnosed by the intake psychiatrist as having significant psychiatric illness; 10 of these were considered neurotically depressed, the remainder had other neuroses and personality disorders but none were psychotic. The authors conclude that psychogenic reactions to food are very common and that some form of double blind testing is the only certain means by which the diagnosis of food hypersensitivity can be established. They note that "since the dangers of unwise dietary restriction are real, patients should not be encouraged to restrict their diet without specialist, dietetic advice and without objective confirmation of food hypersensitivity."

There have been claims that food allergies are responsible for delinquency and criminal behavior (96,97,98). Statements are made that food allergies are common in delinquents but prevalance rates are not given. The only reported double blind studies of behavioral change in relation to food allergy have used sublingual testing, a method whose validity is considered doubtful (99).

Clinical ecologists go farther. Patients are initially tested for dietary sensitivity and are placed on elimination diets. If these are not helpful, they are placed in a "chemical free" environment in a hospital. If they improve in

that environment, they are then treated by prescribed avoidance of environments which include the common substances like perfume, smoke, etc. to which they claimed sensitive. Such avoidance inevitably leads to major changes in their lives including a move to a "clean climate". Patients may also receive injections of the indicted substances in order to desensitize themselves. According to Brodsky (89) they spend much of their time on diets, tests for sensitivity, reading about allergies, participating in a support group of similar patients, and tending to worker's compensation claims.

Schizophrenia and Gluten

In 1966, Dohan suggested that peptides derived from cereal grain glutens may play an important role in the pathogenesis of schizophrenia in genetically predisposed people. This proposal was based on the observations of considerably higher than chance occurance of celiac disease in schizophrenics as well as schizophrenia among adults with celiac disease. In addition, both schizophrenia and celiac disease have been reported to be three times more prevalent in Ireland than in England and Wales. Dohan also found a strong correlation between a change in rates of admission of female patients with schizophrenia to psychiatric institutions and a change in wheat consumption during World War II among five

countries (USA, Canada, Finland, Sweden, and Norway) variously affected by the war. Following these observations, he and his colleagues studied the effects of milk free and cereal free diet on schizophrenic patients. 47 schizophrenic patients randomly assigned to a cereal free diet showed a significant increase in rate of release from hospitals compared to 55 patients on a high cereal diet. No differenc was found when wheat gluten was added to the cereal free diet in a subsequent double blind study (100).

Singh and Kay (101) found that schizophrenic patients who received neuroleptics and a cereal free, milk free diet showed a significant decline when challenged with wheat gluten in a double blind manner. They suggested that clinical improvement on a gluten free diet and subsequent deterioration on gluten challenge may be related to a gluten mediated decrease in neuroleptic absorption. In support of this, Fried et al. (102) found that wheat gluten given to mice 20 minutes before a 1mg/kg dose of haloperidol reduced the amount of neuroleptic absorbed into the blood stream. Recently, however, Osborne et al. (103) found that 5 chronic schizophrenic patients did not improve on a gluten free diet; furthermore, the gluten free diet had no effect on blood levels of butaperazine, which had been administered in constant doses throughout the study. The study, however, selected patients who had failed to respond to traditional neuroleptic therapy and who thus might represent an atypical subpopulation. Also, as the authors note, their patients were on the special diet for 36 weeks. Dohan and Grassberger (104) stressed that chronic patients may require months or years of gluten free diets before significant results are achieved.

Potkin et al. (105) studied 8 chronic schizophrenic patients who were maintained on a diet free of gluten, cereal grains and milk and who were challenged

in a double blind manner with dietary wheat gluten and placebo. They found no deterioration in clinical status (as measured by the BPRS) on gluten challenge; however, Singh and Kay (106) have pointed out that with an N of 8, the authors' chances of detecting a true small or medium effect of gluten would be only 7% and 15%, respectively.

Hallert (107) who has studied many celiacs in Sweden where it has a relatively high prevalence rate found no schizophrenia in adult celiacs, but did find significant depression. He suggests that celiac disease is not an appropriate model. Dohan recently (108) reviewed the evidence supporting the model and suggests approaches for further study.

Recently, Zioudrous et al. (109) reported that gluten peptides have naloxone-reversible endorphin activity at brain opiate receptor sites. This finding might explain a link between gluten free diets and clinical response in a subpopulation of schizophrenics. However, such a relationship has yet to be consistently demonstrated and the important observations of Dohan's group and Singh and Kay merit further exploration.

"Reactive, Relative, or Postprandial Hypoglycemia"

In animals and man, food intake is intermittent and yet the blood sugar levels, except for transient rises after eating, remains relatively constant. Such homeostasis requires the synchronized participation of the liver, muscles, pancreas, other endocrine organs and the central nervous system. Most body tissues can tolerate fluctuations in blood sugar but the brain, which is unable to store glucose or glycogen in significant quantities and which uses glucose as its primary fuel, requires a constant supply. In the resting state, the brain accounts for 80% of the glucose consumed by the body.

Glucose homeostasis is remarkably effective. In a normal population, fasting levels of plasma glucose range from 50-115mg/dc. Such levels occur 5-6 hours after feeding and do not change significantly overnight. In well nourished individuals, blood glucose levels change very little after several days of fasting. Many physical illnesses like diabetes or islet cell tumors of the pancreas can either elevate or lower the fasting blood sugar (110,111).

Reactive, relative, or postprandial hypoglycemia is an abnormal degree of depression of the extracellular glucose concentration reflected in the plasma, without a well defined cause. When plasma levels fall below 50mg/dc or blood levels below 40mg/dc, symptoms and signs of adrenergic hyperactivity or nervous system depression or a combination of the two usually appear. Hypoglycemic activation of the adrenergic system causes tremulousness, anxiety, hunger, sweating, palpitations, and tachycardia. Central nervous system hypoglycemia causes perturbations of cortical and subcortical functions with symptoms of fatigue, headache, weakness, diplopia, confusion, amnesia, incoordination, seizures and coma. There is substantial variation in the cluster of symptoms of hypoglycemia from patient to patient.

Several of the symptoms of hypoglycemia resemble those with which anxious, depressed, and hypochrondiacal patients present. Consequently, some patients may diagnose themselves as having hypoglycemia. The tendency to do this is augmented by popular books in the lay press which have featured hypoglycemia as a global cause for a welter of illnesses and antisocial behavior like "nervous breakdown", alcoholism, juvenile delinquency, drug dependence, inadequate sexual performance, and overt aggression in prisoners (112,113,114).

Some orthomolecular physicians and clinical ecologists are among the physician groups who attribute much mental illness and antisocial behavior to hypoglycemia and who treat this condition with low carbohydrate, high protein diets. Psychotropic drugs are frequently added but this is not usually acknowledged. While the majority of endocrinologists, psychiatrists, and criminologists have not accepted nutritional theories and dietary treatments of neurotic and antisocial behavior, these theories have, nonetheless, had an impact on prisons, probation departments, and school systems. The Los Angeles County Probation Department, for example, banned the consumption of chocolates, other sweets, and refined sugar products from juvenile facilities and is attempting to reduce consumption of processed and additive-containing foods in prisons (115). There have also been malpractice suits in which patients have claimed that their physicians missed the diagnosis of reactive hypoglycemia and, therefore, mistreated them.

The concept that postprandial or reactive hypoglycemia is common in the population has not been generally accepted by the medical profession. The American Diabetes Association (116), in collaboration with other societies, has published statements to downplay the prominence of the misattribution of hypoglycemia as a cause of multiple illness. Yager and Young (117) have referred to the epidemic

proportions of the incorrect diagnosis of hypoglycemia as a cause for multiple psychiatric and somatic complaints. Too often the diagnosis is made without a glucose tolerance curve at all. Diagnosis by questionnaires which attempt to relate symptoms to eating habits is inadequate. Many patients who have affective, somatization or anxiety disorders report a relationship of symptoms to food intake which is not borne out in a glucose tolerance test (110,118,119).

The reasons for the conflict between those who emphasize hypoglycemia as a major contributor to multiple psychiatric illnesses and those who discount it lie largely in the rigor with which a 5 hour glucose tolerance test is conducted and in how it is interpreted. In this test, the patient should be prepared by eating a diet containing about 250gm of carbohydrate daily for three days. He is then fasted overnight, and is given 50-100gms of sugar orally in solution. Alterations in plasma or blood glucose are monitored at half hour intervals for the ensuing five hours, while subjective symptoms are recorded. The typical normal glucose tolerance curve shows a rise of 60-70mg/dc in the first 30-60 minutes; this is the period when glucose enters the circulation from the gastrointestinal tract. In normal persons, increasing glucose concentration, abetted by cholinergic signals, stimulate insulin secretion. The increased circulating insulin in conjunction with declining glucagon production results in decreasing hepatic glucose output and a fall of blood glucose to levels approximating or slightly lower than the fasting state over the next four hours. By the fifth hour, there is usually recovery to base levels. At its peak, blood glucose levels in normal subjects seldom exceeds 160mg/dc. Higher levels suggest diabetes. At the nadir, glucose levels below 50mg/dc should raise the suspicion of reactive hypoglycemia. For a definitive diagnosis to be made, the low blood sugar values should coincide in time with the symptoms of adrenergic activation and central nervous system hypoglycemia referred to above. The diagnosis

should not be made on the basis of a low blood sugar without clinical symptoms or on symptoms alone without a low blood sugar. Many patients report symptoms and signs of anxiety with blood sugar levels above 70; others may have the blood sugar fall to levels of below 40 without manifest symptoms or signs of hypoglycemia (118). Since the glucose tolerance test may vary from day to day in any patient, borderline tests should be repeated. Orthomolecular psychiatrists interpret the results of glucose tolerance tests differently from endocrinologists. An example of orthomolecular interpretation is shown in the work of Meiers who claims that 70% of schizophrenics have relative hypoglycemia (123).

The notion that hypoglycemia is related to panic attacks, reported by patients, has recently been tested by Gorman et al. (11). These investigators measured the blood sugar in ten patients who met DSM III criteria for panic disorder or agorophobia at the moment when panic was experienced by the patient during an infusion of 0.5molar sodium lactate under single blind conditions. They found that, on the average, such patients had a fasting blood sugar of 98mg/dc and at the moment of panic it was 94mg/dc. None of these patients had serum glucose levels even close to hypoglycemic levels. These findings demonstrate that hypoglycemia is not a necessary condition for panic attacks, but do not, of course, prove that hypoglycemia may not cause panic attacks. To determine the latter, it may be necessary to experimentally lower blood sugar in such patients by an insulin tolerance test and then determine whether it triggers panic and whether the blood sugar levels correlate well with the onset of panic. It is also now possible for patients who suspect that they have hypoglycemia related to panic, or to any other clinical symptoms to screen themselves at home by collecting capillary blood on impregnated filter paper. They can measure the blood sugar levels themselves or send it to a laboratory for analysis (120). In either type of experiment, a close correlation between clinical symptoms and blood sugar

values must be found in order to designate hypoglycemia as a proximate cause of the symptoms. It seems likely that such research will be conducted in the near future.

In summary, there is little evidence from carefully conducted research to support the concept that reactive hypoglycemia is a common condition and that it is causally related to psychiatric or behavioral disorders. Nonetheless, some professionals and patients are convinced a priori that emotional illness and inappropriate behavior is caused by postprandial or relative hypoglycemia which follows a high dietary intake of carbohydrates. Individuals who choose to believe this may alter their diets to diminish intake of simple sugars and to increase protein and complex carbohydrates with little danger or expense. But, the translation of hypoglycemic mythology into dietary regulation on a mass scale in schools or prisons is not justified.

Orthomolecular Psychiatry

> "Psychiatry seems unusually vulnerable to almost any fad which happens to drift into its amoeboid maw."
> (Osmond, 1982)

The theory, practice, and clinical value of megavitamin therapy and orthomolecular psychiatry has been the subject of debate for almost twenty years. An American Psychiatric Association Task Force reviewed the evidence thoroughly in 1973 and was very critical (124). Orthomolecular psychiatrists responded (125), calling the Task Force Report biased, unfair, and full of errors. Pauling (126) was also critical. His criticisms were answered by Klein (127) and Wyatt (128). A book Orthomolecular Psychiatry: Treatment of Schizophrenia which details their theory and practice was published in 1973 (129). A detailed update of the APA Task Force critique which included a review of the role of the water soluble vitamins in the nervous system was published in 1979 (130). The present chapter summarizes some older reviews of this subject and adds material published since that time.

Orthomolecular Theory

The term "megavitamin therapy" was coined in the early 1950s to describe a treatment for acute schizophrenia that employed doses of vitamin B_3 (nicotinic acid or nicotinamide) in the dose range of 3-30 grams daily. The theoretical basis for this treatment was initially pharmacological, not nutritional. The originators of megavitamin therapy attributed the pathogenesis of schizophrenia to the endogenous formation of adrenochrome and adrenolutein whichare hallucinogenic condensation products of oxidized adrenaline. Adrenaline is formed by methylation of noradrenaline and in schizophrenia the formation was thought to be excessive. hese products caused pe ceptual distortions which were the primary causes of schizophrenia. The perceptual defects could be detected and quantified by a psychological card sorting test called Hoffer-Osmond Diagnostic Test (

They see schizophrenia as primarily a perceptual disorder. For example, Hawkins, co-editor of the book Orthomolecular Psychiatry (129,p627) says, "Clinically, the illness begins as altered subjective experiences associated with changes in perception and these may or may not in time result in the observable changes upon which a diagnosis or schizophrenia has hitherto been based .... At this stage of the illness, the diagnosis may be made by interviewing techniques focused on detection of these subjective changes. The perceptual changes may also be detected by objective measures such as the HOD and EWI tests which parallel changes in the severity of the illness. The stage of the illness may be called metabolic disperception. It precedes the appearance of overt clinical schizophrenia -- the signs and symptoms of schizophrenia are secondary to the perceptual disorders and these in turn precede the tertiary impairments in social functioning." Hawkins then presents evidence to support the proposition that all of the manifestations of schizophrenia can be produced by perceptual changes alone. The HOD score is described by him as being more accurate than the usual clinical criteria in evaluating the degree of the patient's illness and response to treatment. He say (129,p617), "The majority of patients that we see with schizophrenia are not overtly psychotic. Although schizophrenia is technically classified as a psychosis, the development of irrationality indicates an advanced degree of the state of the illness. We, therefore, view schizophrenia as a disease process which is capable of producing psychosis." He continues (129,p602 "The HOD test consists of 145 true-false questions, read and answered by the patient which are designed to measure visual, auditory, olfactory, touch, taste, and time perception as well as thought and mood disturbances. Underlying this work is the assumption now supported by substantial experimental evidence that there is a genetic predisposition in schizophrenics which under certain conditions leads to errors in metabolism resulting in the formation of chemicals that may interfere with the function of the central nervous system which is responsible for maintaining perceptual abilities."

Kelm (129,p327-342) defines metabolic disperception as "people who suffer from varying degrees of abnormal perception, with corresponding changes in thought, mood

and behavior who respond favorably to megavitamin B_3 and allied therapy if treated before irreversible damage has developed." Subclinical pellagra is defined as "a deficiency syndrome characterized by the presence of perceptual changes affecting any or all of the five senses associated with neurasthenia. The HOD and related tests can measure the degree of perceptual abnormality and changes in thought and mood."

Hawkins (129,p620) continues, "For routine use, the HOD test. . . .is the most useful test, not only to confirm the diagnosis, but also to determine the degree of illness and to monitor the response to treatment. Beneficial measures are followed by a reduction of the HOD score and deleterious measures or an increase in the illness are followed by an increase. It can be administered and scored by anyone in the office. Shock treatment brings the most rapid reduction in the HOD score, the phenothiazines will also lower the score considerably, but usually not to within normal range. The patient can take the test retroactively; that is, he can answer the question according to how he felt when most ill or at any specified time in the past."

Hoffer remains committed to nicotinic acid deficiency as the primary cause of of schizophrenia, which he sees as cerebral pellagra. He says (129,p250), "If all the vitamin B_3 were removed from our food, everyone would become psychotic within 1 year. This pandemic psychosis would resemble pellagra and it would resemble schizophrenia. It could not be called pellagra, because none of the antecedents of that disease would exist."

"Schizophrenia and pellagra are not identical since they require different quanitities of vitamin B_3. Most symptoms of pellagra are alleviated by doses of vitamin B_3 below 1 gram/day, but a small proportion may need many times as much. Most schizophrenia respond to 3 to 6 grams, but a small proportion may require more than 20 grams per day" (129,p251).

But, Hoffer also believes in the use of ECT in the treatment of schizophrenics who do not respond to megavitamins. Commenting on the failure of others to confirm megavitamin therapy, he says (129,p206), "Several experiments are underway, but they are testing only 1 part of the program. For example, they do not use ECT. It is, therefore, necessary to reiterate that the megavitamin program is not one which can be completed in a single month or six months or a year. Time alone is no criterion. One starts with the simplest therapy that is chemotherapy alone using megavitamin doses plus all the other chemotherapies available to psychiatry as indicated in each case. The patients who recover are maintained on the program in order to keep them well. Patients who do not recover within 3 months are then given a series of ECT in addition to the chemotherapy. They may require a second or even a third series. With any acute series, using ECT if there is insufficient improvement within three months of beginning chemotherapy, one can expect a recovery rate of over 90% within one year and improvement in the other 10%."

He also says (129,p559), "All patients were treated with phenothiazines, megavitamins, accessory symptomatic medication, group therapy and all the other usual adjunctive measures. The exception was that 85 patients received ECT and 55 served as controls. When the results were tabulated and graphed, the very significant effect of ECT was observable. This was most marked in the younger age groups."

To prevent or treat schizophrenia, it was thoug necessary to reduce adrenaline formation. Since adrenaline was formed by methylation of noradrenaline, a means to diminish methylation was sought.

When nicotinic acid or nicotinamide are administered in large doses n-methyl-nicotinamide is formed and is rapidly excreted; hence, both compounds are methyl acceptors. Since they are relatively non-toxic in large doses, they were chosen as competitive inhibitors of the methylation of noradrenaline. It is worth emphasizing that they were not chosen as nutrients; indeed, in a 1957 publication advocating the use nicotinic acid in the treatment of schizophrenia, Hoffer et al. (131) speculated about the mechanism of therapeutic action of nicotinic acid. They chose as the most likely mechanism the ability of nicotinic acid to be a methyl acceptor which would reduce the formation of the endogenous hallucinogen adrenochrome. They rejected its role as a vitamin, saying, "psychosis (sic) association with pellagra does in many ways resemble the schizophrenic psychosis except that it contains qualities of toxic confusion. However, the incidence of avitaminosis among schizophrenic persons is no greater than among the general population. Doses adequate to treat any unknown deficiency are without affect on schizophrenia; it may, therefore, be concluded that this factor is unimportant." (131)

In 1968, Pauling (132) published a theoretical paper in which he suggested that some forms of mental illness might be due to deficiencies in essential nutrients occurring in susceptible individuals eating an ordinarily adequate diet. Man's genetic heterogeneity leads to biochemical individuality with large variations in the need for essential nutrients, especially vitamins (132). The brain might differ from other organs in its nutritional requirements so that localized cerebral deficiency could occur. Pauling named his concept "orthomolecular psychiatry" and he defined it as "the treatment of mental disease by the

provision of the optimum molecular environment for the mind, especially the optimum concentration of substances normally present in the human body." With the publication of this interesting theoretical paper, clinicians who had been practicing megavitamin therapy quickly adopted Pauling's concept and claimed that what they had been practicing from 1952 to 1968 was, indeed, orthomolecular psychiatry. This conceptual shift from the transmethylation hypothesis in which nicotinic acid was a pharmacological methyl acceptor to a nutritional hypothesis in which schizophrenia was cerebral pellagra treatable by nicotinic acid functioning as a true vitamin was accompanied by the formation of an Academy of Orthomolecular Psychiatry and a name change of their journal from the Journal of Schizophrenia to the Journal of Orthomolecular Psychiatry. With this shift in theory, many other vitamins and hormones were added to their therapeutic armamentarium. The scope of the conditions which orthomolecular psychiatrists treat has also been expanded to include autism, hyperkinesis, depression, anxiety, alcoholism, drug addiction, delinquency, etc. Their current practice is perhaps best described by Hawkins. "Clinicians practicing orthomolecular psychiatry are using a combination approach which varies from patient to patient depending upon the biochemical peculiarities of a given case and which often includes high doses of niacin or niacinamide, ascorbic acid, pyridoxine, vitamin E, thyroid, vitamin B_{12}, hypoglycemic diets, cereal free diets, daily physical exercise, lithium, the phenothiazines, and also the commonly used tranquilizers and antidepressants."(133). Electroconvulsive shock therapy is still frequently used (125). The current theory is expressed by Hoffer (134), "There is a simple message: The most important treatment for psychosis is nutritional. Other treatments which are considered THE treatment by the American Psychiatric Association are merely palliative."

The change in the theory of schizophrenic pathogenesis from excessive transmethylation to nutritional deficiency broadened the therapeutic ingredients of orthomolecular practice greatly. With the first theory, there was a pharmacological need for nicotinic acid as a methyl acceptor and no special needs for other vitamins and nutrients. With the nutritional theory there is room for the addition of many other micronutrients to the therapeutic program. In current practice, many nutrients are added in megadoses simultaneously. Nonetheless, nicotinic acid seems to be always included in the therapeutic cocktail for schizophrenia and this is because that illness continues to be looked at as cerebral pellagra. Hoffer says, "It is clear that there are no clinical grounds for separating the two diseases. A distinction is artificial". He also says, "schizophrenia is a vitamin B_3 dependent condition or an NAD deficiency disease" (135). Nonetheless, other water soluble vitamins and minerals are also used in megaquantities.

The concept of reactive hypoglycemia and of food or environmental allergy as causative agents in many types of mental illness and behavioral disorders has also been adopted (136). Orthomolecular psychiatrists who originally rejected psychotropic drugs as unnecessary poisons imposed on the medical profession and patients by heavy industrial advertising is now accepted as sometimes useful adjunctive therapy. Characteristic of orthomolecular psychiatry is the absence of psychological or social causes for mental illness or aberrent behavior. Nor is there any admission of a useful role for psychological treatment, although halfway houses and self help groups are used.

The transmethylation hypothesis is testable and has been tested by many investigators over the past 20 years. No evidence of any excess transmethylation

has been found. If anything, there may be diminished transmethylation (137,143). There is also neither clinical nor laboratory evidence for a metabolic defect similar to that found in pellagra in any of the schizophrenias. This subject was thoroughly reviewed a decade ago in the APA Task Force Report (124) and no evidence to the contrary has appeared since that time.

The Pauling statement that there is an optimum molecular environment for the neurons in the brain is probably true, but it is not testable, because optimum, especially for any single individual, cannot be defined nor determined. It is like saying that there should be an optimum income, education, and degree of health and freedom for every citizen. There would be enormous arguments by people of different political persuasions about the meaning of the term. Pauling noted that optimum intake of phenylalanine should be very low for the patient with phenylketonuria. But, in general he tended to view optimum as very much larger than the RDA. He suggested that genetic variance in the transport of vitamins across the blood brain barrier might, in selected individuals, result in a cerebral avitaminosis despite normal blood and other tissue levels of these nutrients. He also felt that the protein apoenzymes for which vitamins or their derivatives function as coenzymes might be genetically defective so that much higher concentrations of coenzymes were necessary in order for the enzymes to function. He stated that "the so-called gene for schizophrenia may itself be a gene that leads to a localized cerebral deficiency in one or more vital substances" (126,132).

Roger Williams (138), more than 30 years ago, had presented evidence for a degree of variability within a species which he called biochemical individuality that might account for differences in nutritional requirements. Pauling's hypothesis was an elaboration of Williams' thesis. Williams' thesis is also not arguable in principle, but the quantitative aspects

need empirical testing. We all readily accept biochemical individuality for things like height, weight, hemoglobin, intelligence, caloric needs, metabolic rate, etc., but generally speaking, such variability is seldom more than 15%. Orthomolecular theory suggests that differences in vitamin requirements might be as great as several thousand percent. Some evidence has been found in rare genetic diseases to support this. There are about 25 known genetic "vitamin-responsive in-born errors of metabolism"(139). These disorders are genetic autosomal recessives and are so rare that a total of less than 1,000 cases have been described in the world literature. All of the water soluble B vitamins except niacin and riboflavin have been implicated. Vitamin dependency illnesses are characterized by an increase in the requirement for a specific vitamin that ranges from 10 to several hundred times the RDA. This is because they have mutant apoenzymes which require high concentrations of cofactor to function. Vitamin dependency illnesses are manifest at birth or in early childhood and they are generally associated with mental retardation as well as with multiple somatic disorders ranging from convulsions to severe anemias. Patients with these illnesses show demonstrable abnormalities in circulating amino acids or other metabolites. Unless they are treated with megadoses of the appropriate vitamin early in life such patients show retardation in growth and development and usually die in childhood. Orthomolecular psychiatrists apparently believe that the large differences in nutritional needs which occur in the rare genetic vitamin dependency illnesses are common in psychiatric patients of all types. Hoffer, for example, believes that schizophrenia is a vitamin B_3 dependent condition or an NAD deficiency disease (135). Since schizophrenia fails to meet the many other criteria established for the definition of autosomal recessive genetic diseases, it becomes necessary for him to postulate that the vitamin dependency characteristic is localized to the brain.

There is another genetic variant less severe than the vitamin dependency illnesses which Blass calls "vitamin insufficiency illness" (140). This occurs in that small fraction of alcoholics who develop Wernicke-Korsakoff syndrome. Such patients are apparently able to grow normally to adulthood on ordinary daily requirements of thiamine and an average diet, but under the unusual circumstances of heavy alcohol consumption when the vitamin intake diminishes and the vitamin requirement may increase, the syndrome develops. This condition can be detected by measurement of a thiamine dependent protein apoenzyme called transketolase which in Wernicke patients requires a much higher concentration of thiamine pyrophosphate in order to function adequately. Folkers et al. (141) have reported that patients with carpal tunnel syndrome may also have a vitamin insufficiency syndrome because their erythrocyte glutamate oxaloacetate transaminase (EGOT) is unsaturated at normal dietary levels of pyridoxine. At megadoses the enzyme becomes saturated and new enzyme synthesis is induced. Of interest to psychiatry has been the report of Rimland et al. (142) who recently found that massive doses of pyridoxine could improve the symptoms of about 30% of autistic children and that in such children pyridoxine causes a drop in the urinary excretion of homovanillic acid, a major metabolite of dopamine. It is, therefore, possible that a subgroup of autistic children may have a vitamin B_6 insufficiency illness. Detection of this particular subgroup can thus far not be made clinically or biochemically. Moreover, even though some improvement occurs when these children are given pyridoxine, they are still very far from being psychologically well.

The possibility that schizophrenia or even a significant subgroup of the schizophrenias is a vitamin dependency illness must be considered very remote. They have multiple somatic abnormalities which have not been found in schizophrenics.

They are generally mentally retarded and they have distinct biochemical abnormalities in the blood or urine which are detectable at birth or in early infancy. They respond quickly and dramatically to large doses of the single vitamin required to remedy their genetic metabolic abnormality. Schizophrenia fails to meet any of these criteria.

Is schizophrenia a vitamin insufficiency illness which resembles the Wernicke-Korsakoff syndrome? Again, it is very unlikely. A vitamin dependent specific enzyme defect has not been found, nor is there any evidence of a metabolic abnormality.

Recent Studies:

Some literature has appeared in the last several years dealing with megavitamin therapy and orthomolecular princples in autism, learning disability and mental retardation. Rimland et al. conducted a double blind crossover study of the effects of high doses of vitamin B_5 on autistic children (142). LeLord has studied the effects of high doses of vitamin B_6 and magnesium on autistic children (145) Both groups have reported positive findings. The results suggest that in a heterogeneous illness like autism there may be a subgroup that responds to this treatment. The degree of response is modest but statistically significant.

Kershner and Hawke (146) studied the efficacy of adding megavitamins to a diet low in carbohydrates high in protein with 20 learning disabled children who carried diagnoses of hyperactivity, minimal brain dysfunctions, or both. After a double blind six month period of treatment, the addition of megavitamins failed to produce any significant improvement when compared to the diet alone on a variety of intellectual, school achievement, perceptual, and behavioral measures. The efficacy of the diet alone could not be assessed because no dietary control group was employed. The parents of 18 of these children reported improvement in their children on this diet regardless of whether megavitamins or placebo were added. As the authors cautiously point out, this may reflect parent enthusiasm and/or the child's maturation rather than dietary effects.

In 1981, Harrell et al. (147) reported the results of a study in which 16 children (age range 5-15) with either Down's syndrome or unclassified mental retardation (IQ 17-70) received either placebo or a supplement containing 11 vitamins and 8 minerals for a four month period. All subjects were also placed on diets which restricted the intake of "sugary foods and soft drinks" and encouraged consumption of fruits and milk. All but one of the subjects were also given thyroid hormone because of low morning axial temperatures. At the end of four months,

the children were evaluated by 2 of 7 psychologists who did not all use the same IQ testing instruments. One of the psychologists, the principle investigator, was not blind to the conditions of the experiment. During the first four months of treatment, the five children who received supplemental vitamins increased their average IQ by 5-9.6 points and the 11 subjects on placebo showed negligible change. In a second phase of the experiment, all 16 of the subjects received vitamin supplements and the 11 subjects who had been on placebo in the first phase showed an average IQ increase of 10 points. The Harrell study has received considerable attention because of the implications of its conclusions. However, it has also received much criticism because of the weakness of its design and methodology.

Coburn et al. (157) carried out a replication study using mentally retarded young adults. This experiment was conducted entirely on a double blind basis with a uniform IQ testing procedure. None of the subjects, including those on the Harrell supplementation, showed any improvement in performance on the Stanford Binet test at 10 and 20 weeks. Admittedly, the Coburn study examined mentally retarded patients who were older than those studied by Harrell et al. Possibly, improvement in IQ may be limited to very young subjects. However, given the methodological weaknesses in the Harrell study and the absence of confirmatory replication studies at this point, there is reason to skeptical. Replication studies are required for both professional responsbility and in the public interest.

Conclusion:

The history of medicine clearly shows that theory and practice are often dissociated. Regardless of the weaknesses of orthomolecular theory, the question may be asked, Does it work? The APA Task Force addressed this question by translating the hypotheses into testable questions. In doing so, they focused only on the testing of the value of nicotinic acid in the treatment of schizophrenia. It was felt that this was justified because nicotinic acid was the cornerstone of megavitamin and, later on, orthomolecular theory and because the original publications for therapeutic efficacy used only this vitamin. The results of studies by many investigators who did double blind controlled studies are given in detail by the Task Force Report (124). The results were negative. Nicotinic acid as the sole medication for newly admitted schizophrenics was no better than an inactive placebo. As an adjuvant medication to phenothiazines it was worse and increased the duration of hospital stay and the amount of neuroleptic required. For chronic patients receiving neuroleptics, it was also worse than placebo. The Task Force was critical of the use of the Hoffer-Osmond card sorting test for perceptual difficulties which was the primary instrument for diagnosing schizophrenia and for measuring change with megavitamin therapy.

Since the publication of the APA Task Force Report in 1973, many other professional, academic organizations have reviewed the field of orthomolecular psychiatry and have arrived at similar conclusions. The Royal Australian and New Zealand College of Psychiatrists concluded that orthomolecular medicine has "no status in the practice of medicine or psychiatry. Its clinical role is unproven and the pathology tests cannot be justified for the rational practice of internal medicine or psychiatry". The Canadian Mental Health Association collaborative study indepndently investigated some of the underlying

hypotheses supporting orthomolecular psychiatry and obtained negative results. The American Academy of Pediatrics' Committee on Nutrition, looking specifically at the published evidence on megavitamn therapy for childhood psychoses and learning disabilities, concluded that "megavitamin therapy as a treatment for learning disabilities psychoses in children including autism is not justified on the basis of documented clinical results" (144).

The reply of Hoffer and Osmond to the APA Task Force Report was published in 1976 by the Canadian Schizphrenia Foundation of which Hoffer is President (125). The authors are careful to say that it does not necessarily represent the opinion of the Directors nor all the members of the Foundation. It is 121 pages long; more than twice as long as the Task Force Report. The interested reader should examine it carefully.

Hoffer and Osmond (125) state that the Task Force Report and the data upon which it was based were grossly unfair and biased. They have many objections: (1) Fixed doses of nicotinic acid at 3 grams/day were used; some patients require 20 to 30 grams; (2) Orthomolecular claims were for acute schizophrenics; the so-called attempts at replication employed chronic schizophrenics; (3) Megavitamin practitioners use ECT as an adjuvant when necessary; it was not used in the replication experiments, which they feel should not be called "replication"; (4) The double blind trials which counted heavily in the Task Force judgment were unnecessary and restrictive. Criticism of megavitamin therapy research which failed to do control studies is unfair becuase it is unethical for practitioners to withhold treatment which they know is effective;(5) The Task Force Report based its judgment solely on research on vitamin B_3; megavitamin therapy has evolved to a much more complex therapeutic program which now uses other vitamins, minerals, psychotropic drugs, hormones, and other procedures; (6) The NAD experiments were

were done with a preparation which was not enterically coated. Hoffer had the megavi used with specially coated tablets which resisted digestive enzymes; (7) The Task Force selected from the literature all negative reports and did not adequately weigh the confirmatory reports.

At a more political level, Hoffer and Osmond feel the report is biased because (1) Dr. Lipton, the Chairman, was an avowed opponent, (2) at least two of the other members were opponents for different reasons, (3) no orthomolecular practitioners were on the Task Force, (4) The Task Force used pejorative adjectives in describing the work of the megavitamin therapists.

Most of the work of the orthomolecular psychiatrists is printed in their Journal of Orthomolecular Psychiatry, which is published quarterly by the Academy of Orthomolecular Psychiatry and the Canadian Schizophrenia Foundation. The Journal averages about 75 pages in each issue. It is not indexed in many major citation services, such as Index Medicus, and few medical school or university libraries in this country subscribe to it. . . .

In a one year period (4th quarter 1981 to 4th quarter 1982), half of the full length articles were essays or reviews (15) with an additional 3 editorials, 5 case reports, 14 pages of Letters to the Editor, and 8 pages of book reviews. Only 10 articles presented data, and the vast majority of these were so flawed in methodology and so confused and confusing in purpose so as to prohibit labeling them as scientific reports.

The essays and reviews cover such topics as "Principles of Bio-Ecologic Medicine", "Towards the Orthomolecular Environment" ["We have seen how the migration of our species into space may bring us into the environment that most closely approximates the optimum for human beings, the ortho-environment. . ." (156)], "Allergies and Schizophrenia", and "Stigma and Mental Illness: Theory versus Reality."

Several of the papers and Letters to the Editor make imaginative and, perhaps, correct statements. For example, we are told that Lactobacillus Casei in the

human gut serves as an antidepressant and mild euphoriant since their cell walls contain phenylethylamine" (150). The use of mercury amalgams for filling teeth may result in chronic mercury poisoning (151). Manganese and nicotinic acid supplementation prevents tardive dyskinesia in patients receiving neuroleptics (152). Nearly 100,000 schizophrenic patients have been treated in the past 20 years. There is no doubt in the mind of every physician who has used these vitamins as part of a sophisticated treatment approach that it is remarkably beneficial (153). But data are seldom given, at most there will be an anecdotal case report.

The orthomolecular psychiatry may be called a belief system or subculture. It is not cautious and self correcting as a science should be.

It should be apparent that few, if any. research psychiatrists would agree with the orthomolecular definition of psychiatric disorders., their conc its pathogenesis, and the psychological instruments they use to measure its severity or its change with treatment. Given these vast differences, it is easy to understan why systematic attempts using research criteria to replicate their work invariably fail.

Orthomolecular psychiatrists say that clinical experience is enough to validate their procedures and that controlled blind studies are unethical. There may be other reasons, such as orthomolecular psychiatrists who are mainly in pri practice. Only a few hold academic or research positions.

Few psychiatric patients have unique nutritional requirements. Nutritional research in relation to psychiatry continues at a steady, if not spectacular pace. The pharmacological use of nutrients as in precursor therapy shows considerable promise. The special nutritional requirements of the early fetus and of geriatric patients are receiving constant attention and it seems very likely that these will be better understood and treated.

POSITION PAPER/Department of Health & Social Services

POSITION PAPER

Senate Bill No. 346

"An Act relating to the treatment of mentally ill persons."

In October, 1981, Chapter 84, SLA 1981 became effective. This act completely revised Alaska's involuntary commitment laws for mentally ill persons that required involuntary hospitalization or treatment. Upon its effective date, there was considerable concern that the Act was procedurally cumbersome, which would require that an excessive amount of professional treatment staff time be consumed in filling out forms, testifying in court, and other non-treatment related activities. While the Act has proven workable and involuntary commitment of the mentally ill have continued to occur, there are a number of areas in the Act that have proven repeatedly troublesome since its effective date. Senate Bill 346 is an attempt to amend some of those troublesome provisions that have tended to inhibit or hamper the treatment of the involuntarily committed mentally ill patient.

The majority of the amendments that are proposed in Senate Bill 346 are technical rather than substantive in nature, a number of the amendments are intended to change the Act in a way that is seen by many as improving its effectiveness. Those amendments that are considered to require clarification are discussed below:

Page 1, Section 1, Line 20:

During the period of time the Act has been in effect, many areas have applied literal interpretation to the requirement that "every" opportunity be afforded to respondents to accept voluntary treatment. The result has been instances in which a prospective involuntary patient has repeatedly refused to accept voluntary treatment until the court hearing is actually in progress or about to begin and then suddenly decides he will accept voluntary treatment. The court proceedings cease and the petition for commitment is dismissed. If, prior to arrival to API for involuntary admission, the patient changes his mind and again refuses voluntary treatment (as has been the case), the entire involuntary commitment process must be started anew.

This has been cause for considerable concern and confusion. The amendment offered would change "every" opportunity to "reasonable" opportunity to accept voluntary treatment. This would allow for some discretion in its interpretation. Thus, if a patient repeatedly refused voluntary treatment, the commitment process would proceed even if the patient requested voluntary treatment at a later time. This would insure that treatment would be possible and the expensive commitment process would not have to be repeated unnecessarily.

Page 2, Section 2. Line 7:

Under the Act, the age of majority for purposes of accepting or rejecting voluntary treatment without the consent of a parent or guardian was set at 14 years old. This has created a number of difficulties especially for those children between the ages of 14 and 18 years of age.

For example, a 14 year old child could present himself at API and request admission without the knowledge or approval of the parent or guardian. As A.S. 47.30.845 (Confidential Records) does not give the hospital the authority to release any information to the parents or guardians of a person 14 years of age or older without the permission of the patient, it may not be legal for us to tell parents or guardians the whereabouts or condition of their child.

Also, a 14 year old child that would benefit from evaluation or treatment at API but does not meet involuntary civil commitment standards may not be admitted at the request of the parents or guardian unless the child voluntarily agrees to accept treatment. Thus, some mentally ill children may not receive necessary mental health care and treatment even though their parents or guardian attempt to provide these services for them. In cases such as this, it becomes even more ludicrous if the Division of Family and Youth Services attempts to file a petition to have the court find the youth as a child in need of aid by alleging that the child's medical needs are being neglected. If the parents or guardian sought voluntary hospitalization of the child that is 14 years old but the child refused treatment, then parental neglect, which would support a finding of a child in need of aid status, is not possible.

The amendment proposed would change the age of majority under this section from 14 to 18 years of age. This would be consistent with other statutes that govern the care of treatment of these children and adolescents as well as correct these legal anomalies.

Page 3, Section 5, Line 12

This would increase the period of time for voluntary hospitalization of a minor by 9 days (from 21 to 30 days). This additional time will increase the ability of the hospital to provide a more thorough and comprehensive evaluation and treatment program for mentally ill children.

Page 3, Section 5, Line 22-23,

This language would broaden the circumstances under which a minor may be accepted for admission at the hospital if the professional person in charge believes that hospitalization is necessary on a voluntary basis. This added provision could prove very helpful in addressing the treatment needs of mentally ill children and adolescents who are at risk of further deterioration and need hospitalization. Under the existing statutes, unless improvement in their condition can be reasonably expected, admission may not be possible. We believe this added provision will prove helpful in providing necessary care and treatment for this group of patients.

Page 4, Section 6, Lines 6-26

The addition of this language provides needed clarification regarding the circumstances and procedures for releasing or retaining mentally ill minors with or without the consent of the parent or guardian. It is especially pertinent as there have been occasions when the safety of the child or others was questionable and the child was not committable but the parents or guardian have demanded immediate release of the child. This amendment will make it possible to insure the safety of all concerned prior to release of the minor.

Page 5, Section 7, Line 3

By granting mental health professionals the authority to take mentally ill persons into custody under an emergency situation and deliver them to an evaluation facility, a number of problems will be alleviated. Under the existing statutes, if a physician in an emergency room examines an individual that is brought to the hospital by relatives or friends, and the patient is clearly mentally ill and is in need of immediate hospitalization, the physician may have to call the police in order to have a peace officer take the patient into custody and sign an application for the patient's examination. This situation may occur in any hospital in Alaska including API.

Under the proposed amendment, the physician or any other health care professional that is included in the definition of a mental health professional under A.S. 47.30.915(11), can sign the application for examination under A.S. 47.30.705 and have the patient held in custody pending completion of the exam and receipt of an ex part order.

Page 5, Section 7, Lines 9-12

As written, this proposed amendment, if strictly interpreted, could tend to prohibit the completion of examination or evaluations of patients that were detained in jails or correctional centers even if qualified evaluation personal were available. We certainly agree in principle that jails and correctional centers should not be used to hold the non-criminal, mentally ill; however, in practice, we have found that under certain exceptional circumstances, a jail or correctional center may be the only facility available to detain the patient at the local level for purposes of evaluation and insure the safety of the patient and the community.

It has been our experience that the utilization of there types of facilities is neither widespread nor indiscriminate and is used only on a very short-term basis. Nevertheless, when it is necessary to house patients in jails or correctional centers, we proceed with the examination, evaluation, and involuntary commitment process when the necessary resources are locally available. The time spent by these

patients under these circumstances is then counted for purposes of the 24 hour and 72 hour time limit that is required for examinations and evaluations to occur by mental health professionals. This tends to insure that patients are not detained longer than necessary and treatment, if indicated, can commence immediately.

Consequently, we recommend that this amendment be deleted and that the existing language in A.S. 47.30.705 on lines 12-15 (in brackets) should be retained.

Page 5, Section 7, Line 24

This amendment would change the period of time for the first involuntary commitment from 21 to 30 days and is repeated throughout Senate Bill 346. The additional 9 days would tend to reduce the administrative workload of our treatment staff while having little or no effect on the period of time patients are actually involuntarily hospitalized.

Rather than interrupt treatment on the 21st day in order to undergo the 90-day commitment process, treatment could continue for an additional 9 days if necessary. This would allow medications and other forms of therapy an additional period of time to stabilize the patient, possibly resulting in a discharge of the patient between the 21st and 30th day.

Page 9, Section 10, Lines 17-19

This amendment is designed to insure that a less formal courtroom atmosphere is possible during the involuntary civil commitment process. This should make the commitment proceedings less painful and frightening to the mentally ill respondent.

Page 9, Section 10, Lines 27-28

The addition of this provision to allow a respondent to call his own experts or other witnesses to testify on his behalf is not seen as necessarily having an impact on the Division of Mental Health and Developmental Disabilities unless the respondent decides to call experts from API to testify on his behalf. It may, however, have a financial impact on the Alaska Court System if the respondent is indigent and the court has to pay the expenses of the experts and other witnesses called by the respondent on his behalf.

Page 12, Section 13, Line 7

This amendment would change the 120-day commitment to 180 days and is repeated throughout the bill. This change will reduce the administrative and procedural requirements necessary for the long-term, chronic mentally ill patients that require extended periods of involuntary hospitalization.

Page 13, Section 16, Lines 23-26

This additional requirement for notification of a patients family or guardian as well as any person known to been threatened by the patient of his unauthorized absence from the treatment facility is supported by the Division of Mental Health and Developmental Disabilities. We feel that this is an appropriate and necessary measure in cases such as this.

Page 14, Section 18, Lines 8-9

The addition of this language is seen as necessary and will correct what appears to have been an oversight when the he Act was drafted. It simply makes specific that computations of time for a patient being evaluated or a patient being detained for evaluation do not include Saturdays. Sundays, legal holidays, or transportation time and are not to be included in the 72 or 48 hour time limitation prescribed by the Act.

Page 15, Section 19, Lines 6-7

This adds mental health professionals among those that may not be held civilly or criminally liable for detaining and transporting a person, under the Act. This amendment is consistent with this section of the Act.

Page 15, Section 20, Lines 15-17

This amendment will require that an adult designated by the respondent must give informed consent in cases in which the patient is unable to give informed consent prior to certain treatments being authorized. We feel this is an appropriate addition to the Act.

Page 15, Section 21, Lines 28-29

This simply requires that an adult designated by the patient must be provided a copy of the patient's discharge plan. This is consistent with A.S. 47.30.845 under the existing statutes regarding confidential information.

Page 17, Section 24, Lines 6-8

This proposed amendment would clarify the circumstances under which the hospital may release confidential information and records to law enforcement agencies when they are concerned that a patient or ex-patient may present as an imminent danger to the community. Under certain circumstances, we feel it is in the best interests of the community and the patient to take such action.

Page 17, Section 24, Line 13

The addition of this language will include hospitals operated by the federal government, such as the PHS facilities, for use as evaluation facilities for purposes of the Act. Under the existing statutes, these facilities are not included in the definition of an evaluation facility and some of these federal facilities have not been able or willing to be utilized in this capacity.

Page 17, Section 24, Lines 21-25

This addition to the definition of a gravely disabled person will significantly clarify and improve our position with respect to the involuntary care and treatment of these patients. An additional period of hospitalization may help prevent further deterioration of gravely disabled persons in order to avoid or reduce the risk of further tragedy and/or agony.

Page 18, Section 27, Line 1

This amendment offered in the bill will reduce the standard upon which a potentially suicidal person may be taken into custody and involuntarily committed. It is our belief that this is both necessary and appropriate given our current rate of death by suicide in Alaska.

Page 18, Section 27, Lines 5-8

As in the previous section, this language will alter the standard for involuntary hospitalization of a person that may present as a danger to others or to the property of others. This may allow some seriously mentally ill persons to be involuntarily committed before they actually harm another person or another person's property.

Page 18, Section 28, Lines 17-20

This simply requires that a psychologist or a psychological associate must be trained specifically in clinical psychology in order to be considered a mental health professional for purposes of screening, examination, and evaluation under the Act.

Page 18, Section 28, Lines 22-24

This amendment is intended to include in the definition of mental health professionals those registered nurses that have experience in psychiatric nursing in a JCAH accredited psychiatric hospital for purposes of screening, examination, and evaluation under the Act. This is considered an appropriate addition to this definition.

POSITION PAPER/Department of Health & Social Services

The Department of Health and Social Services generally supports the amendments contained in Senate Bill 346 and endorses its passage with the exceptions noted above.

The Division of Mental Health and Developmental Disabilities does not foresee any increase or decrease in expenditures as a result of the passage of SB 346 at this time. The primary purpose of this bill is mainly directed at reducing the procedural requirements of A.S. 47.30.655 - 47.30.915, changing the age of majority from 14 to 18 years of age, changing the period of time for the initial commitment from 21 to 30 days and the third period of commitment from 120 to 180 days, expanding the definition of peace officers to include mental health professionals, and slightly relaxing the standards for commitment.

We do not believe that any of these proposed amendments will increase or decrease the number of mentally ill persons that will require hospitalization. The amendments should, however, make it easier to commit the mentally ill which should result in more professional staff time available to provide direct patient care and treatment rather than excessive time being expended in the commitment process.

MENTAL HEALTH COMMITMENT LAW

Senate HESS 9/23/83

Attendance: Josephson, P. Moss. Sens. V. Fischer, P. Fischer, and Halford excused.

018 Josephson convened meeting regarding mental health commitment law testimony.

093 Josephson: Our purpose today is to receive testimony on the question of mental health commitment. I think our purpose would be better served if those wishing to testify could talk to how you evaluate the existing law, what changes you would like to see, rather than to address any specific work draft as a mark-up vehicle.

120 Sonya Benson, representing Representative Niilo Koponen: I don't have any specific testimony at this time.

129 Mrs. Ann Denardo, Family of Chronically Ill Victims, Fairbanks: Our son is schizophrenic and housed at A.P.I. We've had a lot of experience of with this commitment act and we find it to be burdensome, vague, and emotional. We feel families should have a great role in commitment procedures. A broader criteria for commitment should be studied based on ability to function with thought processes.

198 Denardo: Under paragraph 7, 'gravely disabled' means a condition in which a person is a result of mental illness. We would like to add 'or is not receiving such care in mental medical treatment as is necessary for health and safety' or 'a person who thought processes, perception of reality or judgment is substantially impaired'.

230 Josephson: Has this language been used anywhere else?

273 Denardo: I've studied other acts from other states, and this language comes from a combination of law in two or three other states. We also suggest that a study be done of other commitment acts.

299 Denardo: Commitment procedures should be redefined, with a view to creating a less adversarial situation and family. Court procedures are either civil or criminal. Commitment comes under civil procedure. In civil procedure, there has to be cross-examination and rules of evidence presented. This puts family members in the position of testifying against their child. I would like to suggest that the legislature study the possibility of another procedure, not civil and not criminal, but a procedure just for mental commitments.

335 Denardo: Mentally ill patients should receive better continuity of care as they move from hospital to community. Commitment procedures should reflect this need. We feel that the courts should be better apprised to the mental health system and the whole problem of severe mental illness.

374 Josephson: What do families experience in Fairbanks, being far from API? What happens as the family member enters the system?

389 Denardo: First of all, there aren't very many involuntary commitments from Fairbanks because we do all we can to convince the patient that they should go in on a voluntary admission. It's emotionally easier because the court procedures are skipped. We then have to pay for transportation to A.P.I. I think this is a legislative oversight. When there is an involuntary commitment, the patients airfare is paid to Anchorage. We have asked for designated beds. We desperately need a psychiatric unit here in Fairbanks. There are approximately 200 chronically mental ill people in this area. We have no half-way houses or programs. The Community Mental Health Center struggles along on a few dollars. They have a small day treatment program, but it's insufficient for the needs of the community.

421 Denardo: Because of the high cost of travel, meals, hotel accommodations, rent-a-cars, etc., I am only able to visit my son once a month. We feel that the most important part of treatment for the patient is proximity to family and friends.

477 Denardo: Twenty years down the line, we will look at the neuroleptic medications as pharmaceutical labotomies. With this medication, the patients are not cured. They are put into a medicated miasthma. They can't move. Patients say that the medication makes them feel unpleasant, sick, and tired. My own son was taken off the medication because he couldn't get out of bed. This is the condition in which he returns home.

510 Josephson: For the schizophrenic, is it the only thing we have?

559 Denardo: There are no other therapies that professionals are using at this point. At this time, more than 20% of the patients don't respond to this medication. Some patients do come out of their psychotic state, but many others fall into the pharmaceutical labotomies. Eventually, all patients develop a nervous disorder, which is totally irreversable. In many cases, the liver of the patient is ruined.

601 Josephson: Do you have any anxiety that the language, 'a person whose thought processes, perception of reality or judgment is substantially impaired', could be abused by commiting people who are eccentric, etc.?

610 Denardo: No. The screening process is cumbersome and is so comprehensive that I can't see an eccentric person being committed.

621 Josephson: Is your organization part of a national group?

629 Denardo: We are part of The National Alliance for the Mentally Ill.

683 Denardo: There is inappropriate jailing of mental ill patients. People having psychotic crisis are treated as criminals. Once they get into the criminal system, it is quite hard for them to get out of it. They get on probation, they get put into A.P.I. and know that when they are released, they have to return to jail for breaking probation. They, in turn, have no incentive to be released for A.P.I.

740 End of Side A. Turned to Side B

001 Cathleen Nixer, Nurse Manager, Psychiatric Inpatient Unit, Fairbanks Memorial Hospital: Many of the problems we face with the mental health system, is based on a premise that the mental health service delivery system in Alaska is decentralized, when in fact, it is not. When the Mental Health Law was passed in 1981, there was only one in-patient treatment facility in the state, A.P.I. Today, there still remains only one designated in-patient treatment facility in the state.

103 Nixer: The easiest way for a mentally ill person to receive treatment would be through the commitment process. They at least receive care why the legal process is taking place. It's sort of a Catch-22 situation, since we encourage people to accept voluntary treatment, yet we provide no funding for this treatment.

210 Moss: What is the average number of patients in the Fairbanks facility?

216 Nixer: Our average daily count runs around 7 to 8 patients. We have an 11 bed in-patient unit, with a proposal for 1985 for 17 beds.

270 Josephson: What is the longest patient stay you've experienced?

274 Nixer: Approximately 30 days.

305 Moss: Will the 17 beds be additional beds?

308 Nixer: Yes.

318 Moss: Are you receiving any federal funding?

326 Nixer: Sometimes patients are eligible for the standard medicaid programs. We would like to see patients who may voluntarily elect to seek their treatment after a commitment process in Fairbanks, which is close to their home.

458 Maureen Phillips, Board of NARA: The designated bed problem has come up in a recent meeting with the NARA Board. The University of Alaska health coverage for mental illness does not allow for patients to be admitted to anything other than a "designated mental facility", not designated medical floor a hospital. I feel it is important that something be done about the designated bed situation here in Fairbanks.

491 Josephson: That appears to conclude the testimony this afternoon. We will make minutes of this meeting available to our colleagues who are absent today. Thank you very much for coming.

538 Meeting adjourned.

Senate Health, Education & Social Services Committee
October 14, 1983
Anchorage

TOPIC: Mental Health Commitment Bill (Work draft of "An Act relating to the treatment of mentally ill persons.")

ATTENDANCE: Senators J. Josephson (Chairman), R. Halford
Excused - P. Fischer; Absent - V. Fischer, H. Moss

The hearing was commenced at 9:15 by Chairman Josephson.

Introductory remarks by Chairman Josephson:

Previously we've heard testimony in Anchorage and recently in Fairbanks on this issue.

This new draft incorporates ideas from Department of Health and Social Services, family groups and others, particularly those who work with troubled children.

New draft incorporates these changes: involvement of correction system is reduced in terms of dealing with the mentally ill; age change from 14 to 18; time computations changed from 21-90-120 days to 30-90-180 days for commitment periods; commitment period for minors changed from 21 to 30 days; records can be made available to law enforcement agency if substantial concern over any danger to community; qualifier added to right to privacy and personal possessions - if professional in charge determines not in the best interest of patient or will pose a threat to safety, visitors and telephone calls can be denied; approval of psychologist would be added requirement for patient wanting to change from involuntary to voluntary; court proceeding would be as informal as possible; family and guardians would be notified if patient is absent without leave; form consent required of parent or guardian of patient's right relating to alternative treatments; and notification of parent or guardian of discharge plan.

Other areas you may wish to consider today; hearings for minors; equal protection of the law relating to minors; time period commitment for minors; designated facilities; involuntary outpatient commitment; use of correctional system for mentally ill; and transportation costs for voluntary committed people where costs are paid for as required by statutes.

40 Jerry L. Schraider, M.D., Alaska Psychiatric Association

Appreciate the hearing being held, general reaction to working draft is supportive.

Have often been frustrated and confused over commitment law, mental health professionals are not all legalistically minded, don't have available legal counsel when working in these situations (often crisis situation) and must proceed best we can in interest of patient. Because of confusion, believes there's been some people that should've been committed who were not.

Will study draft further and hopes it will be submitted as legislation.

170 Ed Essa, Staff, Rep. Mae Tischer

Submitted letter addressed to Senator Josephson by Rep. Tischer stating that extensive research has suggested that nutritional deficiencies have a correlation with mental illness and that when deficiencies are identified and treated, improvements in the mental health of clients are made. Propose that the draft bill require extensive and mandatory nutritional analysis of each client be made upon admittance. This way the client is treated both mentally and physically.

190 Deborah B. Geeseman, M.D., private psychiatrist (formerly did work with children at API)

Supports most of what's in the bill. Suggested minor changes - 1) Pg 5, ln 19; instead of "21 days" should be 30 days. 2) Pg 4, ln 7; "the person" should be self.

Need a better working relationship with police force and understanding of what goes on with commitment laws.

Admission of minors - child under 14 cannot remain in hospital for evualation or treatment for no more than 21 days (under current law) without having a commitment hearing. An adult who wants to be voluntary committed may stay in hospital as long as they want or treatment facility deems necessary. Then if they want to leave hospital, it becomes a legal issue.

For children, often a good evualation cannot be made until after 3-4 weeks. Limited resources are available for treatment of children in Alaska. Only have one facility for extensive psychiatric treatment. Have some facilities for conduct and behavorial management of children (but full and have a waiting list).

260 Supports change in age from 14-18.

Pg 2, lns 23-29; not sure you need any of these three criteria, one just needs to make sure the person is mentally ill or gravely disabled. Or if it remains in #3 (pg 3, ln 1) should be "deteriorate further if" not "treated" (add not to sentance).

290 Sen. Josephson - While at API you noted that severe psychosis does not appear that often below the age of 14, correct?

Yes.

Sen. Josephson - What additional facilities do you feel Alaska needs for young children?

Difficult in state with our small population and distance from other states (where we could jointly share use of facilities). Presently we don't have a sizeable population of psychiatric young children. When we do, they will need a place, the only facility we have now is API. Would like to see other facilities that would address more extensively psychiatric needs of children.

PART II

As draft now stands, court has to get involved in 30 days, recommends 30 days be taken out, child could be a voluntary patient.

Many times children need evualation when they encounter some trauma (ex: divorce of parents). If that evualation goes beyond the time limit set, they could end up with commitment as legal statement on their record. If it remains on their record, can hamper their future.

Pg 3, Section 47.30.695; support it but has trouble with the wording. #2, lns 18-21, part (a)(b) (lns 22-29) - believes it to imply if child is dangerous, can still discharge them against medical advice. Dosen't feel its consistant. #2, ln 18; should read "treating physician," release of (should be added) "the minor" would be seriously detrimental to child's health that (should be added) "the treating physician may". (b) lns 26-29 the minor is likely to cause serious harm to self or others, or there's reason to believe the release could place the minor in immediate danger (should be added) "refuse to discharge".

60 Joseph Reum, Handicapped Services Coordinator, Municipality of Anchorage

Pg 4, ln 26 - "commitment hearing, to be held if needed", Who determines need?

Sen. Josephson - Depends whether patient is voluntary or involuntary.

80 Dr. Conrad, Superintendent, API

Submitted memorandum on admission statistics for FY'83.

Out of 1013 admissions, 500 were voluntary, 36% came involuntary under Title 47. Out of 100 involuntary patients, 73% have dropped out of involuntary channel before 72 hour limit.

Agree with Dr. Geeseman's comment on page 3 that paragraph 2a is inappropriate, not allowed that option with an adult.

Under present statute, cannot release information on history of violence to law enforcement agencies. In our judgement, release of this information (when there's concern about safety) might be helpful.

140 Patient would be better served by expeditious entry into treatment using physician's certificate. Most times used is after a suicide attempt.

150 Sen. Halford - In analysis of American Psychiatric Association guidelines, we don't allow certain types of evidence, we protect communication between patient and docto.. What kind of a problem does this bring up in involuntary commitment?

Has caused a problem by not allowing hearsay evidence at commitment hearing. Often it's highly relevant and meaningful evidence but due to rules of evidence not allowed because it's hearsay.

180 Often relatives and other people are frightened to testify for fear the person being committed will hold a grudge or seek revenge later. Also consider some people (to testify) live far away (would be expensive for transportation cost).

200 Sen. Josephson - What happens during, example a domestic conflict and people exaggerate testimony or state it falsely?

When it does occur, then don't rely on element of danger but fall back on object of evidence of mental illness. Do not proceed to commitment hearing if lacking evidence of mental illness.

210 In vast majority of cases, most do not go forward to hearing, and where there is mental illness, majority of patients accepts need for treatment. When cases do go to court, public defenders and probate masters become very involved.

240 Sen. Josephson - What is treated as confidential?

Commitment hearing itself is confidential.

260 David D. Samson, M.D., Psychiatric Supervisor, Anchorage Community Mental Health Center.

Mentally ill are more prone to be brought in for disturbing peace, public nuisance kinds of things, where their liberties are not essentially protected.

Concept of outpatient commitment should be addressed. What do you do when outpatients don't show up for their scheduled appointments?

Generally supportive of draft and comments that have also been made.

PART III

Voluntary medication on outpatient is a problem. Sometimes people are crafty enough to manipulate the system and be released (these are the dangerous ones).

30 Natelie Gottstein, Executive Director, Alaska Mental Health Association

Commends Committee for making changes, particularly inclusion of physician to be able to institute commitment procedures and redifinition of gravely disabled.

Pg 2, ln 10; concerned about definition of "timely", what's considered timely?

Dr. Conrad - Would interpret to be 8-12 hours.

70 N. Gottstein - Pg 16, ln 5; definition of mental health professional - important people working in the bush (social workers, etc) be included in this definition. A further clarification of social worker might be in order due to so many areas of social work.

90 Sen. Josephson - There's another bill on licensing of social worker and we may run into some difficulty with that.

100 Sen. Josephson - Is there an official position by Mental Health Association on this?

Not on this, but we will make recommendations before January.

110 Sen. Halford - What does Association think in terms of communication between doctor and patient, should be available in commitment hearings or not?

Don't have an official position. My opinion - if hearings are closed, then in very specific and well defined instances, that privilege should be opened. In individuals right to receive treatment, the doctor's opinion certainly is an important matter.

150 Sen. Josephson - Question of changing or relaxing rule of confidentiality, would it have the effect of causing people not to tell doctors what they would otherwise say? Or would it have a useful affect in bringing these matters out into the commitment hearing? The real danger would be if patients refused to give information to their doctors for fear it would be used against them (in court). That people shouldn't be afraid to see a psychiatrist when they have problems.

These relaxations in confidentiality need to be carefully worded, possibly be limited to psychiatric people for involuntary commitment.

200 Dr. Jay Verkozen, clinical psychologist (private practice)

Pg 13, lns 27-28; issue of psychosurgery, lobotomy, or other comparable forms of treatment. Not specific with other comparable forms. Consider these types of barbarisms and should be done away with. Psychosurgery has been abused.

PART IV

80 Sen. Josephson - (to Dr. Conrad) Has there been any record keeping in Alaska of psychosurgery or lobotomy given?

Dr. Conrad - No, the only way would be to ask all the neurosurgeons. Electroshock - no one to my knowldege at API has been administered with it.

J. Verkozen - But it does go on regularly at Providence.

Pg 14, lns 19-23; suspension of people's rights; if you're going to do something to someone, need to be clear about it with the person and if it's not in their interest to know about it, then it shouldn't be done.

150 You can't treat people psychologically unless you get them involved in it. If somebody might be better off with something, it doesn't mean you can force it on them.

170 Pg 8, ln 20 (#4) "efficient" - efficient for what? For commitment? For civil liberty?

250 Pg 8, ln 15 (#2); Right to view and copy all petitions - they should be given copies and helped to understand it.

Pg 12, lns 25-27; good point that family or guardian be notified on patient's absence.

Pg 11, ln 14; Disagree with 180 days for commitment, more advantageous for longer length of time.

Pg 5, ln 22; "gravely disabled" - too broad.

Pg 6, lns 4-5; replace "maximum extent possible" with absent of violence.

PART V

Dr. Conrad - Two cases of patients at API treated involuntary: 1. if violent to themself or to others; 2. severly catonic people (who don't eat or drink)

J. Verkozen - Pg 6; objects to (e)(2) and (3), lns 14-18; aren't necessary.

Pg 13, ln 9; objects to 72 hours, procedure should be speeded up rather than be long.

Pg 4; notion of deputizing all physicians in state so they can commit someone. This authority should stay with the police. All physicians shouldn't have this type of power. You're just making a cosmetic change, you're still locking someone up.

Dr. Glade Birch, Acting Director, Anchorage Community Mental Health Center

It's a good document.

Balance of right of people to receive treatment and their civil liberties. That's the balance we're maintaining.

Regarding who has the authority to commit someone, remember we're talking about all Alaska (including the bush). Physician does have degree of training in recognizing mental illness, where police officer dosen't. To protect civil liberties of people, it's better for at least someone qualified in mental health to make determination of commitment.

As a neuropsychologist, be very careful before you write into statute prohibitation against treatments.

Individuals released as outpatients from API, isn't a comfortable solution to it. You may consider transitional living (intermediate type of commitment). (A transitional facility where they could receive supervision.)

Has reservations about having licensed social workers being able to commit someone (pg 4). You may get a social worker who has no actural diagnostic abilities.

Topic of confidentiality. Two solutions: 1) treatment (must maintain confidentiality in this); 2) examination with notice for commitment (person knows it is commitment, does not have to disclose information, takes away effectiveness of examination).

Sen. Josephson - What a person discloses when he wants treatment is going to be in stream of what is revealed in commitment process, no way to unlearn that material.

That's why I tried to make the distinction. The disclosure of patient's statement when presenting himself for treatment needs to be protected. If someone is going to testify at commitment proceeding, may have to be a separate examination by another person.

200 Steve Harrison, Regional Administrator for South Central Region, Division of Mental Health

Agrees with Dr. Birch in including mental health professional in emergency detention. If we use a mental health professional, we should use those with national accreditation for social workers.

Law is workable, changes are good.

240 Frances Purdy, Mental Health Program Coordinator, Behavorial Health Division, Municipality of Anchorage

Thanks for nonsexist law.

Pg 3, Part a; lns 22-25 should be deleted, they should not be able to release someone who is dangerous.

Pg 12, lns 25-27; good idea to notify parents or guardians of patient's absence. May also want to add anyone that has been threatened by patient, also may add immediate notification instead of 3 hours.

Pg 14, lns 24-27; good idea.

Consider what other states have done with mental health professional being the office of involuntary commitment. Probably more important for Anchorage than for the bush. Impractical to have officer in bush for involuntary commitment. In Anchorage, specifically we're beginning to need an area of expertise in just emergency cases. Check into Washington state statutes. They have designated person who is trained to do reading of rights, is impartial, not hired by institution or other agency.

PART VI

Jim Parsons, Manager, Behavorial Health Division, Municipality of Anchorage (former member of licensing board of psychologists)

Concurs with Purdy's opinion of release of minors when we don't do that with adults.

Most of my concerns have been covered.

Pg 16; licensing law for psychiatrist is generic rather than speciality. There are some psychologist trained in areas other than clinical who may not have expertise in mental illness at all. May be a good idea to say licensed by state with adequate clinical training or something similar rather than clinical psychologist since we don't license in that sense.

Mention of social workers appears to be too broad. Perhaps should use national accreditation with it. Too broad to say experienced in field of mental illness rather than having some type of specific training in that area.

30 Cecilia Kleinkauf, Alaska Chapter, National Association of Social Workers

Pg 16; issue of professional social work, as included in definition of "mental health professional" - just received the draft copy and will have to be reviewed by board before Assoc. takes a position on it and makes recommendations.

Admission of minors at API - the bill, as it is, would constitute age discrimination on state in regards to minors. Minor has a constitutional right to liberty equal to adults. Unconstitutional to deprive minor of right to liberty for a greater amount of time than an adult (in institutionalizing). We have repeated this point at every hearing.

One item not covered in bill is protection of court for child's right regardless of his/her parent's right. Does not provide the child the right to a court hearing which court then hears evidence as to institutionalize the child. The bill leaves the right to child's parents and to mental health professional. Sometimes parents don't act in best interest of their children.

There are a number of children institutionalized at API whom mental health professionals say these children are not probably mentally ill but "there's no place else to put them".

The previous director of State Division of Mental Health testified at Senator Parr's Committee stating it is frequently difficult, if not impossible, to make definitive diagnosis with respect to mental illness in children.

Sen. Josephson - Which is an explanation as to why we have a longer period to evualate. I don't think the Constitution requires that you cannot make classification if there is a rational basis for it.

Why is it ok to institutionalize a child without court's protection in mental illness, and in statutes of state, it's not ok to institutionalize without court's protection when it comes to delinquincy?

PART VII

Grandfathering clause on social worker - the language and amendments proposed by National Association Social Work Chapter. Only spoke to baccalaureate level of social work. Individuals will not be grandfathered at master's level of social work with training in any other field. Anyone who is grandfathered, who wishes to be called a social worker and be licensed under social work law, could at maximum, only be licenses as a baccalaureate level. Only level grandfather amendments refer to.

Meeting was adjourned by Chairman Josephson at 12:50 pm.

Dear Senator Josephson:

I have read the proposed draft bill that you are submitting to the legislature in the forth coming session. It contains precisely those very important amendments and stipulations that I have been trying to encourage for a number of years regarding mental health commitments.

If you will check the admission record of Sitka over the past six and a half years, that our clinic has been here; you will see that we have an extremely low admission rate. This is because we have treated people in our local hospitals rather than sending them to API. Often in doing so we have had great difficulty getting under the 72 hour limit before having to go into the court room. Usually within 72 hours, I am able to obtain the person's voluntary commitment but on those few cases where I am not able to do so we end up sending some to API that we could very easily have treated in our local hopitals.

Your bill will very nicely resolve that problem and should, if we in the mental health field do our part, reduce the admission rate to API dramatically.

Congratulations on your good work.

Cordial regards,

Stanley T. Laughridge, Ph. D.

RE: THE MENTAL HEALTH COMMITMENT LAW

Dear Senator Josephson:

We urge you to incorporate the changes proposed by the Department of Health and Social Services and the Alaska Psychiatric Association and in particular the amendment to add licensed psychologists in changing procedures for emergency detention for evaluation in Sec.47.30.705.

In our experience the present state of things in which a peace officer must be convinced that there is probable cause to believe that a person is gravely disabled or is suffering from mental illness and is likely to cause serious harm to himself or others and should be taken into custody for evaluation is highly precarious. Just recently we had a case of a possible suicide and homocide situation in which help was delayed past a critical point because the peace officier did not believe the physician and licensed psychologist who were urging intervention. When it's a matter of arranging a flight before dark every minute is crucial. It is perhaps unfair to expect a peace officer to understand the dynamics of depression or paranoia without any particular training when years of post-graduate training and supervised experience are needed for a psychologist to do so. It is time Alaska made better use of the unique qualifications that psychologists do provide for intervention in and prevention of tricky situations.

Sincerely,

Judy Ringenson-Knutsson

Alaska Senate
Pouch V (MS 3100)
Juneau, Alaska 99811

Dear Senator Josephson,

I am writing relative to Senate Bill No.346 related to certain revisions of Title 47 of the Civil Commitment Statutes.

I am strongly in favor of the revisions relative to admission of minors, changing the age from 14 to 18 years of age.

The procedure for emergency detention for evaluation is improved by allowing the mental health professional in addition to a police office to have an individual taken into custody. The procedure relative to placement or utilization of the jail for protective custody and holding prior to transportation is appropriate and is an accurate description of the need for rural areas such as Kenai.

I am also in favor of the use of a 30 day as opposed to a 21 day commitment procedure.

I sincerely appreciate the opportunity to comment on the revisions in this Statute.

Respectfully Submitted,

Paul E. Turner, Ph.D.

RE: Chronic Mental Ilness

Dear Senator Josephoson:

The enclosed article tells you who I am and what I am about.

During last week's teleconference with our Fairbanks legislators, I addressed short comings in Chapter 84, Laws of Alaska, relating to mentally ill persons.

1. Families should have a greater role in and be consulted with regard to commitment procedures.

2. A broader criteria for commitment should be studied, based on ability to function rather than just being a danger to self or others.

3. Commitment and guardianship procedures should be redefined with a view to creating a less adversarial situation between patient and family.

4. Mentally ill patients should receive better continuity of care as they move from hospital to community and commitment procedures should reflect this need.

In this week's teleconference we will address the glaring lack of hospital space for our chronically mentally ill relatives. While other states are grappling with problems of closed wards and community acceptance, Alaska struggles to get patients out of the corridors and into the wards! The only State facility, Alaska Psychiatric Institute, is perpetually overcrowded.

The Fairbanks Memorial Hospital is willing and able to become a designated treatment facility for psychiatric patients. I don't understand the mechanisms involved in such a designation and would appreciate your telling me. I do understand the urgent need for such a facility in the Interior.

I urge you to work toward this goal as a positive step toward a better mental health delivery system for the entire State of Alaska.

Sincerely,

Ann F. DeNardo

RECOMMENDATIONS FOR AMENDMENTS TO ALASKA'S COMMITMENT ACT

The Commitment Act, Chapter No. 84, Laws of Alaska, has caused a great deal of pain to families already engulfed in an ultimate tragedy--the loss of a loved-one; loss through the ravages of a disease as old as mankind, and for which we know no cause or cure.

We are familiar with the Commitment Act on a experiential level and on paper and make the following recommendations for amendments:

1. Families should have a greater role in and be consulted with regard to commitment procedures.

2. A broader criteria for commitment should be studied, based ability to function when thought processes, perception of reality or judgement is substantially impaired.

3. Commitment procedures should be redefined with a view to creating a less adversarial situation between patient and family.

4. Mentally ill patients should receive better continuity of care as they move from hospital to community and commitment procedures should reflect this need.

5. The courts, the judiciary, should be better apprised of the mental health system.

The above five points are overall conclusions. Some specific changes by page, section, and line were given in testimony before Senators Josephson and Fisher of the Hess Committee in Anchorage on March 19, 1983.

The above five points are still pertinent and present a good summary of the attached material presented in testimony before the HESS committee on September 23, 1983, in Fairbanks, Alaska.

TESTIMONY BEFORE THE SENATE HESS COMMITTEE
Re: Mental Health Commitment Law
September 23, 1983 - Fairbanks, Alaska

The families of severely mentally ill victims have worked with the Mental Health Commitment Law for two years. We wish to convey our position regarding the bill.

Section 47.30.660. This section sets out the powers and duties of the Department of Health and Social Services. Paragraph (4) of this section calls for the Department to designate, operate and maintain treatment facilities...to provide...care and treatment for the mentally ill. A treatment facility is defined in 47.30.915(15). In spite of the directive to designate treatment facilities, the API remains Alaska's only such facility.

Section 47.30.670. This section sets out standards for voluntary admission. A patient who accepts voluntary admission can leave the hospital anytime "against medical advice," or AMA. This is why there are so many voluntary admissions as opposed to involuntary. A psychiatrist might do a screening at this point to determine a patient's ability to function and make these decisions.

Section 47.30.705. This section addresses emergency detention for evaluation. It states that a police officer"...may cause the person to be taken into custody and delivered to the nearest evaluation facility. A correctional facility may be used as an emergency evaluation facility if an evaluation facility is not available... (and) the peace officer shall...be interviewed by a mental health professional at the facility." There are no mental health professionals at the correctional facilities.

Section 47.30.710. Examination. This section states that a person so placed in a correctional facility shall be examined and evaluated within 24 hours. This puts a person in jail for 24 hours because of an illness he cannot control. There is no other illness where, due to the illness itself, a person is incarcerated!

Section 47.30.715. Acceptance of Order. In this section the court is ordered to set a date for hearing and notify the respondent's attorney. There is no directive for the attorney to make an effort to see the respondent. Often the first contact the respondent has with his attorney is in the courtroom itself, immediately preceeding the hearing.

Section 47.30.735. This section sets out the civil procedure for a 21 day commitment. These procedures should be redefined in order to create a less adversarial situation between patient and family. Families become the caretakers following hospitalization in 50-55% of the cases. It is important to understand that hospitals do not cure patients. They are only stabilized with neuroleptic medications and returned to the family with their illness in tact, and the added belief that the family has turned against them.

Judicial procedures are either civil or criminal. Commitment procedures are civil. Families feel it might be possible to create a new area within which commitments could be handled. We request the Judiciary Committee to study this concept with a view toward lessening the adversarial approach.

Section 47.30.790. This section deals with absence without leave. If a patient is absent from a treatment facility without authorization a peace officer is instructed to take the patient into custody and return him to the treatment facility. This section should include a provision that the family or guardian be notified of such absence with a specified time, say 3 hours.

Section 47.30.795. This section addresses involuntary outpatient care. Paragraph (c). It states that if it is determined that respondent needs inpatient care due to a critical condition, oral and written notice that he must return to a treatment facility within 24 hours must be given him. If the patient is experiencing thought disorder this gives him 24 hours to get out of town. This section further states a police officer shall pick up the patient if he has not complied with the notice. The respondent is not a criminal, to be served and treated as a criminal. We object to the constant posture of addressing mental disease as criminal.

Section 47.30.825. This section deals with patient rights. Paragraph (6) of this section prevents psychosurgery, lobotomy, or other form of treatment without specific, informed consent of the patient and a court order. We would like to see a provision included that would also require specific informed consent given by "an adult designated in accordance with 47.30.725". (This is an adult designated by the respondent.)

Again, paragraph (8) of this section should insure a copy of the discharge plan is given to "an adult designated in accordance with 47.30.725". Families rarely know of any discharge plan and it is the nature of the disease that patients will not follow through without help.

Section 47.30.845. This section deals with confidential records. Paragraph (2) of this section makes it possible for an individual to whom the patient has given written consent to receive records and information on the patient. This release of records should be dated within a specified time period,-say-one year. This release of records to a designated individual should not be open-ended, but lapse within a restricted time frame.

Section 47.30.870. This section deals with transportation of patient and escort to the designated facility following involuntary commitment. (In this State, of course, this means a trip to Anchorage.) There is provision authorizing the Department to pay for transportation of patient and escort the API for INVOLUNTARY commitments only. Provision should be made to authorize payment of transportation costs for VOLUNTARY commitments as well. At present the family, or the patient, must bear this cost. This creates a continuing financial burden for families trying to remain "case manager" over the years. The continuing financial burdens encourage families to give up attempts to maintain relationships beneficial to the patient.

Section 47.30.875. This section addresses nonresident patients and the return of a mentally ill resident of this state who has been placed in a facility outside of this state. Paragraph (c) of this section is the only section of this Act which mentions the importance of maintaining family relationships and encouraging visits beneficial to the patient. It is ironic that this important approach to treatment is mentioned only under such subtitle as "nonresident patients". We would like to see the encouragement of more family involvement.

Section 47.30.915. Definitions. Paragraph (7) defines "gravely disabled" and paragraph (10) defines "likely to cause serious harm". It is the contention of everyone involved with this Act that these definitions must be broadened. This is such a complicated and emotional issue that agreement is difficult. As a consequence many people who need mental health treatment desparately are not being served. Instead of waiting for a person to commit a crime, or attempt to commit a crime, we recommend the following criteria to enlarge the definition of a mentally ill person for purposes of providing treatment:

(7) "gravely disabled" means a condition in which a person, as a result of mental illness,...
(b) or is not receiving such care and mental medical treatment as is necessary for health and safety, or a person whose thought processes, perception of reality or judgement is substantially impaired.

We would like to see a study of other states' commitment laws in reference to their criteria for commitment.

ALASKA PSYCHIATRIC ASSOCIATION

ALASKA DISTRICT BRANCH
of
AMERICAN PSYCHIATRIC ASSOCIATION

February 4, 1983

Senator Joseph Josephson
Alaska State Legislature
Pouch V
Juneau, Alaska 99811

Dear Senator Josephson:

The Alaska District Branch of the American Psychiatric Association is a professional organization which represents the majority of the physicians in Alaska who are specialist in the field of psychiatry. The membership is composed of psychiatrists who work in both the private and public sector. The members of our organization have an ongoing interest in any subject which affects the treatment of mentally ill individuals. As a result of this interest we were actively involved in the development and passage of the Alaska Statute for the Civil Commitment of the Mentally Ill (AS 47.30). Our national organization has also been very active in monitoring the subject of civil commitment and has recently developed guidelines on this subject which we recently provided you.

The Alaska District Branch supports fully the objectives of the current Alaska Statute on Civil Commitment of the Mentally Ill which became law in October of 1981. After the first year of experience with this new law and after discussion with judicial and civic leaders, we wish to recommend certain amendments to the law which we believe will assure that its worthwhile goals are more effectively achieved. These amendments are provided in the enclosed material.

The experience during the past year has indicated to us that the following refinements are needed:

1. The Definition of "Gravely Disabled" needs to be expanded to recognize that some patients, if left untreated, will needlessly lose their capacity to be self-reliant.

2. There are many instances when physicians have clearly psychotic or suicidal persons under care in an emergency setting, and need to arrange for their hospitalization at the Alaska Psychiatric Institute. The current requirement that a peace officer be called to form an independent judgement and duplicate work already accomplished is unnecessarily cumbersome. Allowing the physician the authority to arrange for emergency detention would simplify this procedure. When family and friends are willing and able to transport the patient, the peace officer would be free for more serious business.

3. The patient and society could be better served if the rules governing evidentiary and procedural matters at commitment hearings under this law were promulgated so as to facilitate a more informal and efficient presentation of all the relevant facts.

4. The definition of "likely to cause harm to self and others" has set such a rigid standard that some of the most dangerous clients have not been committed. The issue of dangerousness is a complex one and the judge must be given the opportunity to weigh both the magnitude of the risk and the magnitude of the harm. Also, the law needs to recognize that harm to others may include property.

5. An unanticipated consequence of the current law, has created an undue hardship in the care and treatment of children under the age of 14. The right to be voluntarily hospitalized and treated, which is available to everyone over the age of 14, is curtailed for children and limited to 21 days. After 21 days, even if the parents, the child, and the treating physician agree that continued treatment is needed, the law forces them to obtain an involuntary commitment.

6. Since very few persons actually require involuntary commitment, it would facilitate their care and treatment if the law recognized that patients in this group lack the necessary understanding to accept treatment voluntarily, and authorize the use of medications and other treatments under the direction of a licensed physician subject to the medical rights already guaranteed the patients in Article 9 of Section 47.30.

7. In some instances the law requires the staff of the hospital to respond "immediately" when, in practice, a "timely" response is all that is practical or needed.

As we gain experience with the new commitment statute, I am sure we will have other suggested changes. However, for the present time, we feel these changes are urgently needed to iron out some of the procedural problems and to improve the care and treatment of the mentally ill. We would be happy to provide any additional documentation you may need. We hope you will consider putting the attached amendments in bill form and submitting them to the Legislature.

Sincerely,

Carla Hellekson, M.D.
President
Alaska Psychiatric Association

October 12, 1983

The Honorable Joe Josephson
Member of the Alaska State Senate
Anchorage, Alaska 99501

Dear Senator Josephson:

Thank you for your kind offer to submit a suggestion to your committee during deliberations on the "Mental Health Commitment Law," scheduled for Thursday, October 13.

I am sorry that House HESS hearings in Fairbanks prevent my discussing this matter with your committee personally; however, I have asked Ed Essa to present this letter to you for your consideration.

In recent years, medical science has come a long way in better understanding mental illness. Research has uncovered some very interesting facts. Perhaps the most intriguing discoveries relate to the effects vitamin and other nutritional deficiencies have on our mental well-being. Extensive research has suggested that nutritional deficiencies have a correlation with mental illness, and that when deficiencies are identified and treated with vitamin therapy, some startling improvements in the mental health of clients are made.

Given this information and with the knowledge that our mental health is tied intricately to our physical health, I am proposing that the draft bill you are considering be adapted to require an extensive and mandatory nutritional analysis of each client upon admittance; and that these findings be used as the basis for appropriate intensive theraputic treatment, along with other applied therapy. In this way, the whole client is treated -- both mentally and physically.

Your favorable consideration of this suggestion may well serve to improve the methods of treating many Alaskans who want to be healthy, while helping to induce a marked decrease in the recurrence of mental illness.

Senator Josephson, thank you for extending me the courtesy to be heard today. I join with many others in seeking a continued dialogue on this encouraging new approach to a long-standing and seemingly worsening

problem that faces our state and our nation.

Respectfully,

Mae

Mae Tischer
State Representative

Anchorage, Alaska 99501

Dear Senator Jcsephson,

I am writing to you relative to recent Senate HESS Committee Hearings on the Title 47 Commitment Statute.

I am writing to request that licensed psychologists be given the same prerogatives as physicians within the Statute. For example in 47.30.705, the recommended change is that emergency detention for evaluation can be made by a police office or a physician. Generally, however, licensed psychologists are much more able in terms of training, expertise, education and practice to be able to make determinations of need for emergency detention. It would seem wise to include this independent profession in this activity. There are also other sections that are being amended in Title 47 adding the medical profession as the identified entity, for example 47.30.815(b)(4). In those instances I think that clinical psychologists should also be included.

Thank you very much for this opportunity to correspond with you relative to this issue.

Respectfully,

Paul E. Turner, Ph.D.

Cordova, Alaska 99574

Nov. 5, 1983

Senator Joe Josephson
Pouch V
Juneau, Alaska 99811

Dear Senator Josephson,

I am writing in regard to the proposed changes to the Mental Health Commitment Law. My concern is that the proposed law will not allow a licensed psychologist in Alaska to initiate emergency detention for evaluation (under sec. 47.30.705).

Here in Cordova, our health team includes a licensed psychologist working in a mental health clinic which is a department of the hospital. The psychologist is often the person most immediately involved with patients who might be a danger to themselves or to others. It is imperative that this professional be allowed to initiate emergency detention for evaluation in cases with serious potential. It has been our experience that the psychologist often works closely with the local police department to defuse crisis situations in Cordova.

Thank you for your attention.

Sincerely,

Oliver S. Osborn MD

October 25, 1983

Senator Joe Josephson
1526 "F" Street
Anchorage AK 99501

Dear Senator Josephson:

It has come to my attention that the Senate Health Education and Social Services Committee is reviewing Alaska's Mental Health Commitment Law of 1981 (SP100). I am essentially in support of the changes which have been proposed.

Under Section 47.30.705 regarding emergency detention for evaluation, I would recommend the following addition to the revised statute:

> "A peace officer or a physician licensed in this state or a psychologist licensed in this state who has probable cause to believe that a person is suffering from a mental illness and is likely to cause serious harm to the person or others of such immediate nature that considerations of safety do not allow initiation of involuntary commitment procedures set out in AS 47.30.700, may cause the person to be taken into custody and delivered to the nearest evaluation facility. A person taken in to custody for emergency evaluation may not be placed in a jail or other correctional facility except for protective custody purposes and only while needing transportation to a treament facility. The peace officer or physician or psychologist shall complete an application for examination of the person in custody and be interviewed by a mental health professional at the facility."

In addition, I would recommend that AS 47.30.815(b) (4) be further ammended to read:

> "A peace officer or physician or psychologist responsible for detaining or transporting a person under AS 47.30.700-47.30.915."

Alaska has a pool of well qualified psychologists whose competency and training have been carefully scrutinized by the Board of Psychologists and Psychological Associate Examiners as well as the Division of Occupational Licensing. Insofar as many rural mental health practitioners in the state are licensed psychologists, it would seem appropriate and expedient to include this professional group in the emergency detention clause. With regard to

familiarity with psychiatric disorders, conducting mental status evaluations, and determining the appropriateness of civil commitment, licensed psychologists are well prepared to handle the responsibilities involved in civil commitment in a professional manner.

Thank you for considering this input to the legislative process. I appreciate your consideration.

A Division of the National Mental Health Association

March 6, 1984

RECEIVED

MAR 19 1984

Josephson,

Senator Joe Josephson
Pouch "V"
Juneau, Alaska 99811

Dear Senator Josephson:

The Alaska Mental Health Association commends the Senate HESS committee for undertaking the review of the Mental Health Commitment Statute. As you know, implementation of the current Statute which was enacted in 1981 has revealed some major problems which the current bill addresses. We wholeheartedly support this effort.

Our concern is that the mentally ill of Alaska receive the best available treatment in a timely manner, in their home community or as close as possible. We believe the procedures established by this Statute must protect individual civil/human rights AND provide for the protection of society. These goals must be accomplished in a manner that recognizes that the primary purpose of this statute is to enable individuals who are mentally ill to receive appropriate treatment. On the whole we believe the Bill does this quite well.

When we consider that mental disease is today's most common disabling condition, one of its least understood, one of its most difficult to treat and yet, the major disease group we spend the least amount of research dollars to study, we can see why the central purpose of the Statute must be to provide care and treatment.

We believe that the current Statute needed to be reviewed and improved. Before commenting specifically on the proposed changes in the Statute, we would offer the following proposal:

> Since one of the original purposes of the Statute was to provide for evaluation and treatment as close to the individual's home as possible, we suggest the Legislature conduct a study of the commitments during the past year to determine whether or not this purpose is being met. Another important purpose the Statute attempted to include was to provide for a timely judicial review and supervision of the commitment process. The study should also focus on the actual length of time required for judicial involvement.

With respect to some of the specific proposed changes, in AS 47.30.655-915 we have the following comments and suggestions:

#1 AS 47.30.690 Admissions of minors, line 12:

The limitation on the involuntary admission of a minor should be increased to 60 days. It is generally recognized that therapy with minors, when hospitalization is necessary, requires a longer average length of stay than do adults. Even this requirement will place a needless burden on the facility and the parents if they live in remote portions of Alaska.

#2 Sec. 47.30.705 Emergency detention for evaluations - Line 3:

The extension of the emergency detention's powers to all "mental health professionals" has both advantages and disadvantages. It greatly expands the numbers of people who will have the power in the bush areas. This will create the kind of flexibility that is needed to provide timely and local action. The disadvantage is that many, if not most, non-medical mental health professionals have not received training or experience in the legal and clinical issues involved in the commitment process. As a consequence, we recommend that these powers be somewhat more limited. The law should limit this power to (i) peace officers and (ii) physicians and mental health professionals who have had sufficient training to properly perform this function. In conjunction with this, we would like to see the establishment of a system to train and designate "mental health professionals" who will have the expertise to exercise this function. Although this will require an additional state expenditure, it should not be prohibitive.

#3 AS 47.30.730(b) - 30 day commitment, line 26:

The extension of the commitment to provide 30 days of treatment is recommended because it is a reasonable length of time considering the seriousness of these disorders.

#4 AS 47.30.735(b)(4):

The attorney member of our Board of Directors informs us this section does not make sense because the rules of civil procedure and evidence would not be "informal but efficient presentation of evidence" in that they are formal rules. It appears the intent is for the respondent to be given a choice between (i) the formal rules of evidence and the rules of Civil Procedure and (ii) an informal set of rules. The draft we have reviewed does not make this at all clear.

#5 AS 47.30.845(7) - Confidential Records, Line 7:

We feel that the "presumed mentally ill person" standard is (i) not defined and (ii) too broad. "Presumed" by whom? What does "presumed mentally ill" mean anyway? If the intent is to release records of former mental patients, that is what should be stated. If the intent is something else, that should be stated. In any event, the standard should be in language that is susceptible to clear interpretation and implementation.

#6 AS 47.30915 (7) - Definition of "gravely disabled":

We strongly support the passage of this amended language as many psychotic patients' symptoms prevent them from seeking the treatment which may restore them to a nearly normal state of mind.

#7 AS.47.30.915 (10) - Definition of likely to cause serious harm:

We strongly recommend the amendments to this section since, in our opinion, the former language created a "standard" which was too restrictive and led to persons being released who were actually dangerous.

Sincerely

Dr. Jerry Schrader
President

ALASKA MENTAL HEALTH ASSOCIATION

2611 Fairbanks Street, Suite A Anchorage, Alaska 99503
Telephone 276-1705

A Division of the National Mental Health Association

February 29, 1984

Senator Joe Josephson
Pouch V
State Capitol
Juneau, Alaska 99811

Dear Senator Josephson:

On February 15, 1984, I was involved in an emergency commitment situation which occurred at approximately 4:30 p.m., and which I think exemplifies one of the basic problems with the current commitment law. A patient came to the Fairbanks Community Mental Health Center for treatment and expressed an intent to kill herself. After evaluating her, the mental health professional called Carol Davis, the Probate Clerk who ordinarily handles these cases for the Magistrate. Ms. Davis stated she could not order an involunatry emergency commitment after hours because she could not do the paperwork. She would give the order if a physician at the hospital requested it. She advised the Center to call the police and have them exercise their authority to Emergency Commit the patient.

When the municipal police arrived, they said they knew they could commit, but refused to exercise their power because it is their agency's policy to avoid this responsibility except when they "encounter" a person in the usual course of their duties. They appeared to feel that the court system was "dumping" the responsibility on their shoulders after hours.

As you know, under current law, neither the mental health professional or a physician can act in this type of situation alone. In fact, the policemen involved were aware of this and also aware that they were the only ones empowered to act alone. Needless to say, this stalemate tied up the mental health professional - who was forced to cancel other patients - the court representative, and the police. It was finally resolved by an extra-legal (in my opinion) act. The police officer said that he would transport the patient to the Fairbanks hospital emergency room if the emergency room doctor would agree to see her and, in effect, authorize the involuntary transport. This freed the Center to resume its activities and seemed to shift the responsibility to the hospital.

I think you can see that the Mental Health Center and the patients are caught in a kind of territorial dispute between the municipal police and the court

system. Since both of these systems feel free to operate independently, the "system" of care breaks down. It results in one emergency commitment system for 9:00 a.m. to 5:00 p.m., and another for 5:01 p.m. to 8:59 a.m. A similar stand-off has occurred in Anchorage, although the situation in Fairbanks is more complicated because the system must depend upon a private hospital.

The provision in the revised commitment bill which reinstates the physician certificate (or mental health professional certificate) would alleviate this this problem.

It would also be alleviated if the courts and the police would work cooperatively.

Sincerely,

Jerry L. Schrader, M.D.
President, Alaska Mental Health Association

DIVISION OF MENTAL HEALTH AND DEVELOPMENTAL DISABILITIES

March 6, 1984

The Honorable Bill Sheffield
Governor
State of Alaska
Pouch A
Juneau, AK 99811

Dear Governor Sheffield:

Your Mental Health Advisory Council has been following the developments of Senate Bill Number 346 amending an Act entitled: "An act relating to the treatment of mentally ill persons." We are aware that many public hearings have occurred prior to its introduction January 11, 1984 by Senators Josephson and Halford. Additionally, individual professionals, the Alaska Psychiatric Association and the Alaska Psychological Association have had consultation and input into these revisions with strong support for these amendments. These amendments are thought to represent improvements in the treatment of adolescents and adults from the standpoint of both providers and consumers.

Your advisory Council heard today that this bill is being held "hostage" pending untold bargaining possibilities. Since these amendments would improve the quality of care and likely result in more efficiently and less cost for both the Mental Health and Judicial Divisions, it seems unfortunate to delay its enactment.

Your Mental Health Advisory Council recommends your support for the quick passage of this act. On behalf of all Council Members thank you for your consideration.

Sincerely,

Herbert G.W. Bischoff, Ph.D.

Dear Senator Josephson:

The Legislative Committee of the Alaska Psychiatric Association has reviewed Senate Bill 346 -"An Act relating to the treatment of the mentally ill." We support the proposed amendments. We have one additional suggestion pertaining to page 18, line 24. We believe the inclusion of a period of experience for psychiatric nurses is a good idea, but we do not believe this should serve to eliminate a Masters Degree in Psychiatric Nursing from the list of mental health professionals. A simple "or" in line 24, page 18 would suffice to change this.

Thank you once again for your efforts on the behalf of the mentally ill.

Sincerely,

Jerry L. Schrader, M.D.
Legislative Representative
Alaska Psychiatric Association

April 6, 1983

Dennis DeWitt
Alaska Hospital Association
319 Seward Street
Juneau, Alaska 99801

Dear Dennis,

I have reviewed the work draft that would amend the current act relating to the treatment of the mentally ill persons and have the following comments.

Much of this work draft simply cleans up the language of the current legislation. (Apparently the law is going to allow for those rare instances when a female is mentally ill!)

Several areas in the work draft propose significant content changes. In all cases these content changes would significantly improve the current legislation.

1. AS 47.30.915 (7) and AS 47.30.915 (10) change the definition of 'gravely disabled' and 'likely to cause serious harm.' The proposed changes in these definitions, if enacted, would greatly improve the ability of the legal system and providers of mental health care to intervene appropriately in situations where emergency detention is in the best interest of the patient.
2. Section 47.30.705 This proposed change allows a physician to initiate the involuntary commitment procedures. This is an essential addition to the current legislation and entirely appropriate.
3. The other content changes (dealing with the detention and commitment of minors, etc.) also upgrade the current legislation and make it more workable.

Overall there are no objections in the changes proposed by this work draft. The content changes deserve support and would markedly improve the current legislation governing the treatment of the mentally ill.

I would reccommend that the Alaska Hospital Association support a bill that reflects the content and intent of the work draft.

Sincerely,

M. J. Emmert, R.N.
Director of Nursing Service

JUNEAU, ALASKA 99811
PHONE: 465-3030

April 14, 1983

Document No. 83-152

The Honorable Joe Josephson
Senator
Alaska State Legislature
Pouch V
Juneau, AK 99811

Dear Senator Josephson:

RE: AS 47.30.655 - 47.30.915
(Involuntary Commitment Act for Mentally Ill Persons)

We appreciate the work you are undertaking and would like to add our comments to those you have already received regarding possible amendments to Alaska's recently enacted civil commitment statutes for mentally ill persons. As you know, the Division of Mental Health and Developmental Disabilities supports the general intent of the Act but feels it is procedurally too cumbersome. This seems to have resulted in treatment staff wasting their time in complying with procedures and filling out numerous forms rather than providing treatment for mentally ill persons.

I have enclosed a copy of our earlier suggested amendments that were prepared during the previous administration. The status of these suggested amendments is unknown to us. Upon review, however, I believe that you will agree that they are primarily designed to facilitate treatment. In addition, I am confident that the Attorney General's Office will be able to assist your staff in determining which forms, notices and procedures that are presently required can be deleted while still protecting the rights of the mentally ill.

Another area of extreme importance in the successful implementation of this Act has been the availability, or lack thereof, of detoxification facilities and other alcohol and substance abuse programs and services. Experience has shown that the emergency involuntary hospitalization at API of persons with a primary diagnosis of alcoholism has increased dramatically since the new Act became effective. This is cause for considerable concern to us as our bed space for legitimate psychiatric emergency cases is in extremely short supply. We believe that if additional alcoholism and substance abuse programs offering emergency

inpatient care were available, especially in Anchorage, that the number of referrals of intoxicated persons to API would be substantially reduced. You may be interested to know that the provisions of the Uniform Alcoholism and Intoxification Treatment Act (AS 47.37.010 - 47.37.270) have never been fully implemented, partially as a result of a lack of inpatient facilities that offer various types of alcoholism services and treatment.

The most utilized provision of the Uniform Alcoholism and Intoxification Treatment Act seems to have been what is called the "12-hour drunk law." This provision allows persons that are seriously incapacitated as a result of alcohol to be placed in a local jail or state correctional center for up to 12 hours with no criminal charges being filed. In the past, this has permitted law enforcement agencies the opportunity to take intoxicated persons into custody and house them in a jail or correctional center until the person has regained sobriety and is no longer in danger of harm as a result of his inebriated condition.

Unfortunately, as a consequence of the extreme shortage of bed space in all of Alaska's correctional centers, law enforcement agencies are no longer able to deliver these incapacitated persons to correctional facilities and have them held in custody until they are no longer incapacitated by alcohol. More simply put, as a result of serious overcrowding in our correctional systems, drunks are being taken to API and kept there until they sober up sufficiently to make a diagnosis. More often than not, the diagnosis reveals that they are suffering primarily from alcoholism and not a major mental illness. At that point they are discharged and referred elsewhere. This results in a serious misuse of the few psychiatric resources we have. It is our position that these limited resources should be exclusively available to the seriously mentally ill person that presents himself, or is presented, to Alaska's only designated psychiatric hospital.

In addition to the recommended amendments contained in the enclosure, as well as the previously mentioned concerns, we have listed below a number of other changes to the Act that we would like to support:

1) We recommend that the period of commitment be changed from 21 days, 90 days, and 120 days to 30 days, 90 days, and 180 days. It is our opinion that this would reduce the administrative workload of our treatment staff while having little or no effect on the period of time patient's are actually involuntarily committed.

   Rather than interrupt treatment after 21 days in order to undergo the 90-day commitment process, treatment could continue for an additional 9 days if necessary. This would allow medications and other forms of therapy some additional time to stabilize the patient, possibly resulting in a discharge between the 21st and 30th day. The change from 120

days to 180 days is simply to reduce the administrative and procedural requirements necessary for the long-term, chronic metally ill patients that require extended periods of hospitalization.

2) We propose that all references to a minor child be changed from age 14 to age 18 throughout the Act. Numerous situations have arisen as a consequence of this provision that indicate it has fostered confusion as well as placing young people and API in an awkward position with regard to their status. It is also not in concert with other provisions of Title 47 that address the care and treatment of minors in Alaska.

3) Under AS 47.30.730(a)(3), we recommend that the following language be added with regards to gravely disabled: "... or that painful or dangerous regression could be prevented and the respondent could maintain the capacity for self-reliance;...". It has been our experience that some gravely disabled individuals may not be expected to actually improve during hospitalization, but if left untreated can be expected to suffer substantially, even to the point of requiring permanent institutionalization as a result.

4) Under AS 47.30.840(4), (5), (6), and (7), we suggest that provision be made to restrict these rights in unusual circumstances in which harm to the patient or others may result if these rights are exercised. We propose adding "... unless the professional person in charge determines it is not in the best interests of the patient and will pose a threat to the safety or well being of the patient or others;..." to these sections.

5) We recommend that AS 47.30.845 be amended to add a provision that would allow confidential information or records to be disclosed to law enforcement agencies in emergency situations involving a current or former patient. In order to restrict this disclosure we suggest the following section be added: "(7) a law enforcement agency when there is substantiated concern over imminent danger to the community by a presumed mentally ill person."

This would allow the disclosure of information to law enforcement agencies that may be helpful in preventing needless injury or death occurring as a result of the actions of a mentally ill persons during an emergency situation.

6) An additional area that, in our opinion, should be revised is the area of involuntary outpatient commitment. Thusfar, there have only been a limited number of these types of commitments. It seems, however, that none have proven successful for various reasons. While the idea of involuntary outpatient

commitment appears sound, the provisions of the Act appear to militate against the successful utilization of this less restrictive alternative. Perhaps your proposed revision to the definition of "likely to cause serious harm" will have a positive influence on the successful use of outpatient commitment.

It should be noted, with regards to outpatient treatment, that AS 47.30.800(a) requires persons seeking conversion from involuntary outpatient commitment to inpatient commitment must have direct knowledge that the respondent is mentally ill or gravely disabled. If the respondent fails to report to the provider of service, than the provider will be unable to substantiate the allegations necessary to convert the commitment to inpatient treatment.

7) In AS 47.30.745(b), the last sentence should read "... not later than 90 days..." rather than "... not earlier ...." as it currently reads.

8) The final area in which we would recommend revision is the requirement that all patients be given the opportunity to be voluntarily admitted. We do not dispute the value of this option in the vast majority of cases that require psychiatric hospitalization; there are, however, instances in which it may not be wise or prudent to be required to offer or allow the voluntary admission of some patients to the hospital. Certainly, the substitution of "reasonable" for "every" in Section 1 of your draft is a step in the right direction. We would hope that it would be interpreted to mean in cases in which it was deemed unreasonable, that involuntary commitment proceedings would commence.

While I am confident that these recommendations for amendments do not represent a panacea for all that is wrong with such a complicated set of laws, I am certain that these, along with many other suggestions that you have received, represent a substantial improvement in providing for the care and treatment of Alaska's mentally ill. Again, I would like to thank you and your staff for giving this information your review and consideration. My staff and I look forward to working with you and other members of the Legislature in revising our civil commitment laws.

Sincerely,

Robert London Smith

February 3, 1984

DOCUMENT #84-32

The Honorable Joe Josephson
Alaska State Senator
Alaska State Legislature
Pouch V
Juneau, AK 99811

Dear Senator Josephson:

RE: Senate Bill 346
(Suggested Amendment)

The language listed below is suggested as an amendment to Senate Bill 346 to allow persons under the age of 18 to be voluntarily hospitalized by their parents or guardians for additional 30 day periods. Under the existing statute, children and adolescents may not be voluntarily hospitalized by their parents or guardians for a period longer than 21 days even if they meet the criteria for hospitalization under A.S. 47.30.690. The amendment would rectify this oversight.

On page 4, line 3, Section 5 of Senate Bill 346, we recommend that the following subsection be included:

> "(c) Additional 30-day voluntary admissions of a minor under the age of 18 may be sought by parents or guardians if, in the opinion of the professional person in charge, the conditions under subsections (1), (2), and (3) continue to exist."

This amendment is considered especially important, even critical, in providing the necessary and appropriate level of care for this oftentimes fragile group of patients.

We will be happy to provide you or other members of the Senate Health, Education, and Social Services Committee with any additional information you may require concerning this proposed amendment as well as any questions you may have regarding our Position Paper which was submitted earlier.

Sincerely,

Robert London Smith

American Psychiatric Association

GUIDELINES FOR LEGISLATION ON THE PSYCHIATRIC HOSPITALIZATION OF ADULTS[1]

These Guidelines Deal With:

Emergency Psychiatric Evaluation
Voluntary Admission
Involuntary Hospitalization
Right to Treatment
Right to Refuse Treatment
Patients' Rights
Legal Immunity for Mental Health Personnel

---

[1] These Guidelines for Legislation on the Psychiatric Hospitalization of Adults have been prepared and approved by the American Psychiatric Association in order to assist psychiatrists, legislators and the public in considering possible revisions of civil commitment laws. The American Psychiatric Association believes that these Guidelines constitute a responsible set of proposals which would improve the process of psychiatric hospitalization in many states. However, because local laws, community conditions, and medical practices vary, state and local psychiatric associations and individual psychiatrists may properly support provisions which differ in many respects from these general Guidelines.

ADDENDUM A-1

Section 1. SHORT TITLE

These provisions governing the psychiatric hospitalization of adults may be cited as Title I of the Mental Health Code.[1]

Section 2. LEGISLATIVE PURPOSES

This Act is intended to achieve and shall be construed so as to promote these legislative purposes:

-- To make available psychiatric evaluation, care and treatment to all persons who suffer from severe mental disorders and can benefit from treatment, and to encourage voluntary rather than involuntary admission whenever hospitalization is necessary;

-- To safeguard the legal rights of patients in a manner which will advance and not impede the therapeutic and protective purposes of psychiatric hospitalization;

-- To provide workable procedures for obtaining consent to and administering medications and other treatments;

-- To provide legal immunity for reasonable, good-faith efforts to implement this Act, and legal penalties for knowing, willful efforts to subvert the processes in this Act; and

-- To provide a statutory framework for the promulgation of regulations by the Department of Mental Health.

Section 3. DEFINITIONS

As used in this Act, the terms below shall have the meanings indicated:

"aversive therapy" means any treatment or procedure which, because it is believed to be painful or physically uncomfortable to the patient, is administered in order

---

[1] These Guidelines deal only with persons who may be hospitalized for psychiatric care and treatment under the civil commitment process; they do not deal with persons who may be confined for forensic evaluation or other purposes under the criminal justice process.

to reduce the frequency or intensity of a behavior; except that aversive therapy does not refer to verbal therapies, seclusion or physical restraints used in conformity with Section 10.F., or psychotropic medications which are not used for purposes of aversive conditioning.

"consistent with the least restrictive alternative principle" means that (1) each patient committed solely on the ground that he is likely to cause harm to himself or to suffer substantial mental or physical deterioration shall be placed in the most appropriate and therapeutic available setting, that is, where treatment provides the patient with a realistic opportunity to improve, and which is no more restrictive of his physical or social liberties than is believed conducive to the most effective treatment for the patient; and (2) each patient committed solely or in part on the ground that he is likely to cause harm to others shall be placed in a setting in which treatment is available and the risks of physical injury or property damage posed by such placement are warranted by the proposed plan of treatment.

"court" means the court or judicial officer designated under the laws of this State for the discharge of the functions described in this Act.

"emergency situation" means a situation in which the patient exhibits substantial behavior which is self-destructive, assaultive, or threatens significant damage to the property of others, or which indicates that the patient is suffering extreme anxiety amounting to panic, or sudden exacerbation of his severe mental disorder.

"experimental treatment" means any treatment other than one which is commonly accepted for treatment of the mental disorder involved or is supported by widely accepted scientific studies, and is provided by a qualified health professional; if such treatment poses a significant risk of harm to the patient.

"informed consent to treatment" means a knowing and voluntary decision to undergo treatment, evidenced in writing, and made by a person who has the capacity to make an informed decision, after the treatment facility has explained to the person the nature and effects of the proposed treatment.

"lacks capacity to make an informed decision concerning treatment" means that the person, by reason of his mental disorder or condition, is unable despite

conscientious efforts at explanation, to understand basically the nature and effects of hospitalization or treatment, or is unable to engage in a rational decisionmaking process regarding such hospitalization or treatment as evidenced by inability to weigh the possible risks and benefits.

"likely to cause harm to himself or to suffer substantial mental or physical deterioration" means that as evidenced by recent behavior, the person (1) is likely in the near future to inflict substantial physical injury upon himself, or (2) is substantially unable to provide for some of his basic needs such as food, clothing, shelter, health or safety, or (3) will if not treated suffer or continue to suffer severe and abnormal mental, emotional or physical distress, and this distress is associated with significant impairment of judgment, reason or behavior causing a substantial deterioration of his previous ability to function on his own.

"likely to cause harm to others" means that as evidenced by recent behavior causing, attempting or threatening such harm, a person is likely in the near future to cause physical injury, physical abuse, or substantial property damage to another person.

"patient" means any person receiving evaluation, care or treatment under this Act, except that "patient" for purposes of the rights provided in Section 10 shall refer only to persons in residential treatment programs.

"person" means for purposes of any provision of this Act authorizing the commitment or treatment of a "person," an individual aged eighteen years or more.[2]

"psychosurgery" means any procedure which by direct access to the brain, removes, destroys, or interrupts the continuity of brain tissue which is histologically normal (as distinguished from normal in its physiological or psychological functioning) for the primary purpose of altering behavior or treating a mental disease or disorder. Psychosurgery includes the implantation of electrodes with such an effect and

---

[2] For provisions concerning persons under the age of eighteen, refer to the American Psychiatric Association's "Guidelines for Psychiatric Hospitalization of Minors" (1981).

for such a purpose, with or without subsequent electrocoagulation. Psychosurgery does not include neurosurgical procedures designed to treat reliably diagnosed intractable physical pain or epilepsy.

"severe mental disorder" means an illness, disease, organic brain disorder, or other condition which (1) substantially impairs the person's thought, perception of reality, emotional process, or judgment, or (2) substantially impairs behavior as manifested by recent disturbed behavior.[3]

"treatment facility" means a community mental health facility, a general medical facility providing psychiatric services, or other psychiatric facility or program meeting applicable licensing standards, which has been approved for the provision of services under this Act by the Department of Mental Health; provided that no jail or other correctional facility shall be approved as a treatment facility for any persons other than those who could otherwise lawfully be detained there.

Section 4. EMERGENCY PSYCHIATRIC EVALUATION

4.A. Detention by a Police Officer

1. A police officer may take a person into custody, and transport the person to a treatment facility for emergency psychiatric evaluation if and only if:

a. the person would otherwise be subject to lawful arrest and the police officer believes that the person is in need of emergency psychiatric treatment; or

b. the police officer has probable cause to believe that the person has attempted suicide within the last 48 hours; or

c. the police officer has probable cause to believe, based on his personal observation and investigation, or based on the petition of any interested adult under subsection

---

[3] Mental retardation, epilepsy, or other developmental disabilities do not, in themselves, constitute a severe mental disorder. States may wish to provide by other provisions of law for persons whose use of or addiction to intoxicating substances warrants hospitalization.

4.C. and such corroboration as the police officer deems necessary in the circumstances, that the person is suffering from a severe mental disorder as a result of which he is likely to cause harm to himself or to others or is manifestly unable to care for some of his basic needs, and that immediate hospitalization is necessary to prevent harm to the person or to others; or

d. he is acting upon the certification of a licensed physician under subsection 4.B.

2. Any person taken into custody pursuant to this subsection shall be presented promptly to a treatment facility. Correctional facilities shall not be used as temporary shelter for such persons except for the protective custody of the person pending transportation to a treatment facility.

3. Upon or shortly after taking a person into custody, the police officer shall take reasonable precautions to safeguard and preserve the personal property of the person unless a guardian or responsible relative is able to do so. Upon presenting a person to a treatment facility the police officer shall inform the staff in writing of the facts which caused him to take the person into custody, and specifically state whether the person is otherwise subject to arrest.

4.B. Certification by a Licensed Physician

A person may be taken into custody by a police officer, or accepted by an ambulance service, and transported and presented to a treatment facility for emergency psychiatric evaluation, when a licensed physician certifies in writing that he has examined the patient in the last 72 hours, or that he has ongoing medical responsibility for the person and has knowledge of his current condition, and on such basis he has probable cause to believe that such person is suffering from a severe mental disorder as a result of which: he lacks capacity to make an informed decision concerning treatment; and he is (1) likely to cause harm to himself or to suffer substantial mental or physical deterioration, or (2) likely to cause harm to others; and immediate hospitalization is necessary to prevent such harm.

4.C. Petition by Any Interested Adult

Any interested adult may petition for, or present a person for, emergency psychiatric evaluation by alleging based on personal observation that he has probable cause to believe that such person is suffering from a severe mental disorder as the result of which: he is likely to cause harm to himself or to others or is manifestly unable to care for some of his basic needs; and immediate hospitalization is necessary to prevent harm to the person or to others.

4.D. Treatment Facility Determination

1. Upon the presentation of a person to a treatment facility pursuant to this Section 4, the facility shall accept the person and shall promptly examine him to determine whether he meets the criteria for emergency evaluation and treatment set forth in subparagraph 2.

2. The person shall be admitted for emergency evaluation and treatment only if the examining psychiatrist determines that there is probable cause to believe that the person suffers from a severe mental disorder as the result of which: he lacks capacity to make an informed decision concerning treatment; and he is (1) likely to cause harm to himself or to suffer substantial mental or physical deterioration, or (2) likely to cause harm to others; and immediate hospitalization is necessary to prevent such harm.

3. If the examining psychiatrist determines that there is not probable cause to believe that the person meets the criteria for emergency evaluation and treatment, the person shall be released. If a person was presented to the treatment facility by a police officer and was otherwise subject to lawful arrest, he shall continue under the custody of police officers.

4.E. Advice of Rights

The treatment facility shall advise any person admitted for emergency evaluation and treatment of the purposes and possible duration of emergency evaluation, and of his rights under this Act, as soon after admission as his medical condition permits.

4.F. Hearing on Emergency Evaluation

1. Each person who is admitted to a treatment facility shall receive a preliminary hearing before the court within five business days of admission or be discharged, unless he has, after consultation with counsel, executed a written waiver of such hearing. The hearing shall be informal and subject to such rules as the court sets consistent with fundamental fairness.

2. The court shall determine at the close of the hearing, or within five business days of the patient's admission, whether he should be discharged. A patient shall then be discharged, unless the court determines that there is probable cause to believe that he satisfies the criteria for thirty-day commitment provided in Section 6, and unless within two business days of the court's decision a petition for such commitment is filed with the court.

4.G. Duration of Emergency Evaluation and Treatment

The period of emergency evaluation and treatment shall in no case exceed fourteen days.

Section 5. VOLUNTARY ADMISSION

5.A. Admission

1. A treatment facility may admit a person if after examining the patient a psychiatrist [or: "a physician"]* on the staff or with privileges at the treatment facility believes the person is mentally ill and in need of hospitalization, and if the person gives written consent to admission. Prior to such admission, the person shall be advised orally and given a written statement of his rights under this Act; provided that if his condition upon admission makes such advice infeasible and the medical reasons are entered in the record, such advice may be deferred until the patient's medical condition permits, for not more than 48 hours. Each patient shall be asked to sign an acknowledgement that he has been so advised and has consented to voluntary admission for treatment.

2. Initial consent to voluntary admission for treatment shall be valid for sixty days. Thereafter,

---

* Optional provision.

a patient may remain at the treatment facility for periods of up to one hundred eighty days each upon a signed consent executed after the patient has had an opportunity to consider with such persons as he wishes his need for continued hospitalization and treatment.

3. If the responsible psychiatrist [or: "the responsible physician"][5] has substantial reason to believe that a person seeking to admit himself or to consent to further hospitalization lacks capacity to make an informed decision concerning treatment, he shall obtain in addition to the consent of the patient, the informed consent of the patient's next of kin or guardian. The responsible psychiatrist [or: "the responsible physician"][6] shall renew his effort to obtain the informed consent of the patient if the patient regains the capacity to make an informed decision concerning treatment.

5.B. Discharge or Petition for Thirty-Day Commitment

Any patient who is voluntarily admitted to a treatment facility shall be discharged within five business days of his written request for discharge (and any patient who indicates his desire to be discharged but is unable to write shall be assisted to put his request in writing), unless a petition for thirty-day commitment is filed within that period by the treatment facility or the patient's next of kin or guardian.

5.C. Conversion from Involuntary to Voluntary Status

A patient who is subject to involuntary hospitalization pursuant to Sections 4, 6, or 11 of this Act may at any time convert to voluntary status if the responsible psychiatrist [or: "the responsible physician"][7] agrees that such conversion is made in good faith and that the patient is an appropriate patient for voluntary hospitalization.

---

[5] Optional provision.

[6] Optional provision.

[7] Optional provision.

Section 6. THIRTY-DAY COMMITMENT

6.A. Petition

1. Persons who are present at a treatment facility under voluntary admission but have requested discharge, and persons present at a treatment facility for emergency psychiatric evaluation, may be committed involuntarily for a period of up to thirty days upon a petition filed by the treatment facility or by the next of kin or guardian; and other persons may be so committed upon a petition filed by any interested adult. The petition shall allege that such person meets the criteria set forth in subsection 6.C. The petition shall set forth the facts supporting the allegations, and, in the case of petitions filed by a treatment facility, describe why the patient requires treatment. The petition shall be filed with the court, which shall have copies promptly served upon the patient, the next of kin or guardian, and the patient's attorney if known.

2. The copies of the petition served by the court shall be accompanied by a notice advising of the person's rights concerning the proceeding.

6.B. Summons for Evaluation; Psychiatric Report

1. Upon the filing of a petition for thirty-day commitment of a person who is not currently under emergency evaluation or voluntary admission, the court shall issue a summons to the person to submit to an examination (on an outpatient basis) conducted by a psychiatrist at a treatment facility or a private psychiatrist. The examining psychiatrist shall promptly prepare a report on his examination and file it with the court. The court shall have copies promptly served upon the patient, the next of kin or guardian, and the patient's attorney if known.

2. A person served with a summons to submit to a psychiatric examination may in lieu of such examination submit a report of a psychiatrist stating that he has recently examined the person, or has ongoing medical responsibility for the person and knowledge of his current condition, and that in his opinion the person does not meet the criteria for involuntary commitment. The petition for commitment may then be dismissed by the court, or continued.

6.C. Criteria for Thirty-Day Commitment[4]

A person may be involuntarily committed for a period of up to thirty days if, after the hearing provided in Section 6.D., the court determines, based upon clear and convincing evidence, that:

1. the person is suffering from a severe mental disorder; and

2. there is a reasonable prospect that his disorder is treatable at or through the facility to which he is to be committed, and such commitment would be consistent with the least restrictive alternative principle; and

3. the person either refuses or is unable to consent to voluntary admission for treatment; and

4. the person lacks capacity to make an informed decision concerning treatment; and

5. as the result of the severe mental disorder, the person is (1) likely to cause harm to himself or to suffer substantial mental or physical deterioration, or (2) likely to cause harm to others.

6.D. Hearing on Thirty-Day Commitment

1. Every person as to whom a petition for thirty-day commitment has been filed shall be notified by the court sufficiently in advance to be able to prepare for the hearing, and shall receive a prompt hearing. For persons confined for emergency psychiatric evaluation, or currently under voluntary admission, this hearing shall take place within three business days of the filing of the petition.

2. The respondent shall be present at the hearing unless the court finds (1) that he has knowingly and voluntarily waived such right after consulting with counsel, or (2) that because his behavior at the hearing

---

[4] Refer to the Commentary for a discussion of the disposition of various types of persons who do not meet the criteria in Section 6.C.

is so disruptive, it cannot reasonably continue in his presence. Hearings shall be held in the treatment facility wherever feasible given the other functions of the court.

3. Any respondent who is unable to pay for counsel shall have the right to be provided with counsel to prepare for and represent him at the hearing. [Any respondent who is unable to pay for an examination for purposes of the hearing shall have the right to be provided with one examination by a licensed psychiatrist, at the expense of the (state or local government).][9]

4. The District Attorney or County Counsel shall represent the interests of the State at the hearing. [If the District Attorney or County Counsel fails to proceed with the commitment, the next of kin or a petitioning party may retain counsel to do so in his stead, and the reasonable costs of such counsel shall be paid by the (state or local government).][10]

5. The rules governing evidentiary and procedural matters at hearings under this Act shall be promulgated so as to facilitate informal, efficient presentation of all relevant, probative evidence and resolution of issues with due regard to the interests of all parties. Hearsay evidence may be received, and experts and other witnesses may, consistent with law, testify to any relevant and probative facts at the discretion of the court.

6. Patients shall not have a "right to remain silent" at a psychiatric examination or hearing conducted pursuant to this Act; provided that no patient shall be held civilly or criminally liable for not speaking or testifying. Any information obtained from or disclosed by the patient during the course of evaluation or treatment is admissible in any hearing provided in this Act without regard to whether it would otherwise be privileged; provided that no disclosure made by the patient during the course of evaluation or treatment or in any proceeding conducted under this Act, and no opinion testimony based on such disclosures, may be admitted against the patient on the issue of guilt in a criminal proceeding unless he places his mental condition in issue in such proceeding, and the disclosure or opinion is relevant to such an issue raised by him.

---

[9] Optional provision.

[10] Optional provision.

7. The hearing shall be closed to the public, unless the respondent requests that it be open, or the court determines for other good cause that the hearing should be open. The court shall keep a complete record, written or recorded, of every hearing.

8. At the conclusion of the hearing, or within one business day thereafter, the court shall make its findings, including specific findings as to whether the commitment is warranted because the person is (a) likely to cause harm to others, or (b) likely to cause harm to himself or to suffer substantial mental or physical deterioration, or (c) both (a) and (b). As to any person found likely to cause harm to himself or to suffer substantial mental or physical deterioration, the court shall further make findings as to whether commitment is warranted because the person (1) is likely in the near future to inflict substantial physical injury upon himself, or (2) is substantially unable to provide for some of his basic needs such as food, clothing, shelter, health or safety, or (3) will, if not treated, suffer severe and abnormal mental, emotional or physical distress, and this distress is associated with significant impairment of judgment, reason, or behavior causing a substantial deterioration of his previous ability to function on his own.

9. The court shall enter an order discharging the person unless it finds by clear and convincing evidence that the person satisfies all of the criteria for commitment in Section 6.C., in which event it shall enter an order committing the person for evaluation and treatment for a period of "up to thirty days." If at any time during thirty-day (or any subsequent) commitment a patient is absent without permission, the order of commitment constitutes a continuing authorization to the treatment facility and to any police officer to procure his return.

Section 7. INFORMED CONSENT TO MEDICATION OR OTHER TREATMENT -- VOLUNTARY PATIENTS

7.A. Informed Consent

Except in an emergency situation, a treatment facility shall, prior to beginning any course of medication or other treatment for a patient who is subject to voluntary admission under Section 5, obtain informed consent to treatment. If the patient does not lack

capacity to make an informed decision concerning treatment, the consent shall be his own. If he does lack such capacity, the consent shall be that of his next of kin or guardian, provided that such a patient may receive appropriate medications or other treatments, except as limited by Section 8.C., until such time as the consent or refusal to consent of such next of kin or guardian can be obtained.

7.B. Revocation of Consent

A voluntary patient (or the next of kin or guardian who consented to treatment on his behalf) may revoke consent to treatment at any time by a reasonably clear statement in writing (and patients who indicate a desire to revoke consent but are unable to write shall be assisted to put their statement in writing). If such consent is revoked, the treatment shall be promptly discontinued, provided that a course of treatment may be concluded or phased out where necessary to avoid the harmful effects of abrupt withdrawal.

7.C. Refusal to Consent

Except in an emergency situation, any voluntary patient (himself or through his next of kin or guardian) shall have the right to refuse any and all medications or other treatments. If appropriate medications or treatments are refused, the facility may then discharge the patient, and shall not be liable in any respect for such action.

Section 8. INFORMED CONSENT TO MEDICATION OR OTHER TREATMENT -- INVOLUNTARY PATIENTS

8.A. Consent During Emergency Evaluation

Following admission and during the period of emergency evaluation provided in Section 4, the treatment facility may administer medications or other treatments, except as limited by Section 8.C., to a patient consistent with good medical practice and without the informed consent of the patient or his next of kin or guardian. However, prior to administering any such medication or other treatment, the staff shall explain the purposes, nature, and effects of the treatment and shall request the patient's consent to it, unless the responsible

psychiatrist [or: "the responsible physician"][11] determines that the patient's condition makes doing so infeasible or harmful to him, and enters the reasons for not doing so in the record.

8.B. Consent During Thirty-Day or Subsequent Commitments

It being a prerequisite to involuntary commitment that the person lacks capacity to make an informed decision concerning treatment, the treatment facility shall be authorized to administer medications or other treatments, except as limited by Section 8.C., to such persons consistent with good medical practice without their consent. Although consent to treatment is not required, during the course of treatment the responsible psychiatrist [or: "the responsible physician"][12] shall consult with the patient and his next of kin or guardian, and give consideration to the views they express concerning treatment and any alternatives.

8.C. Special Therapies

Notwithstanding subsections A. and B. above, a treatment facility shall not administer aversive therapy, experimental treatment, psychosurgery, or any other special therapy designated by the Department of Mental Health except as provided by law or in regulations promulgated by the Department of Mental Health.

8.D. Other Medical/Surgical Treatments

Consent for other medical/surgical treatments not intended primarily to treat a patient's mental disorder shall be obtained in accordance with applicable law.

Section 9. PROVISION OF TREATMENT

9.A. General Duty To Provide Treatment

Every patient shall be provided with prompt, competent and appropriate treatment, which offers him a realistic prospect of improvement. Patients shall be afforded treatment by sufficient numbers of duly qualified personnel, in facilities which meet applicable

---

[11] Optional provision.

[12] Optional provision.

licensing and accreditation standards, which conform to applicable regulations of the Department of Mental Health, and which are able adequately to care for and treat the patients they serve.

9.B. Individual Treatment Plan

1. A written individual treatment plan shall be prepared, with the participation of the patient to the extent he is able, during voluntary admission or emergency psychiatric evaluation, or if a person has been subject to neither, then within seven days of a patient's thirty-day commitment. The individual treatment plan shall be approved by the responsible psychiatrist [or: "the responsible physician"],[13] and the course of treatment actually administered shall conform to the plan.

2. The patient's progress in attaining the objectives in the treatment plan shall be noted in his records and revisions in the plan shall be made as appropriate. The patient, and if the patient desires, the next of kin or guardian, shall be afforded an opportunity to participate in considering any substantial change in the treatment plan.

3. The individual treatment plan shall be available upon request to the patient, and to any other person designated by him, provided that the responsible psychiatrist [or: "the responsible physician"][14] may preclude disclosure of the individual treatment plan to the patient or others for a period not to exceed seven days from the request, if he states in writing why disclosure would be harmful to the patient.

9.C. Administration of Medications and Other Treatments

1. Medications and other treatments shall only be prescribed, ordered and administered in conformity with accepted clinical practice. Medication shall be administered only in accordance with the written order of a physician or upon a verbal order, noted in the patient's medical record and subsequently signed by the physician. Medication shall be administered only by a qualified physician, or qualified nurse, or by

---

[13] Optional provision.

[14] Optional provision.

qualified other persons pursuant to procedures approved by the Department of Mental Health. The attending physician shall review regularly the drug regimen of each resident patient under his care and shall monitor any symptoms of harmful side effects. Prescriptions for psychotropic medications shall be written with a termination date not exceeding thirty days thereafter, but may be renewed.

2. Medications and other treatments shall be administered in accordance with all applicable law.

3. If a patient is given any psychotropic or other medication which has an effective duration of action including the day of a court hearing, the facts concerning its administration and effects, and the patient's mental status and behavior in the absence of medication, shall be brought to the attention of the court.

9.D. Other Medical/Surgical Care

All patients shall be provided with prompt, regular and competent medical care for physical ailments under the supervision of a licensed physician. Every patient shall have a reasonably complete physical examination at appropriate intervals.

Section 10. RIGHTS OF PATIENTS

10.A. Preservation of Rights

No right of any person (including but not limited to the right to register and vote at elections; rights to acquire, use and dispose of property including contractual rights; rights to sue and be sued; rights relating to licenses, permits, privileges and benefits under law; and rights concerning domestic relations) shall be denied or reduced solely by reason of his having been evaluated, committed or treated under this Act, except as otherwise specifically provided herein or in other applicable law. A finding of lack of capacity to make an informed decision concerning treatment under Section 5 shall not alone establish lack of competence for any other purpose. A treatment facility may for clinical reasons preclude a patient who is believed to lack competence from making substantial dispositions of his property until his competence can be decided by a court.

10.B. Right to Treatment

Patients shall have a right to treatment to the extent provided in Sections 9, 10.C., and 10.D.

10.C. Healthful and Humane Environment

Every patient shall have the right to a healthful and humane environment. Every treatment facility shall provide a clean, sanitary, safe and comfortable environment in a structure which complies with applicable licensing requirements governing physical facilities, nutrition, health and safety, and medical services, and for aspects of care for which there are not mandatory requirements, with generally accepted professional standards. In addition, every patient shall have a right to a humane psychological environment which protects him from harm or abuse, provides reasonable privacy, promotes personal dignity and provides opportunity for improved functioning.

10.D. Least Restrictive Alternative and Leaves of Absence

1. Every patient shall have the right to treatment consistent with the least restrictive alternative principle.

2. Leaves of absence may be granted in appropriate cases at the discretion of the treating facility. Police officers shall be authorized to and shall, at the request of a treatment facility, take into custody and return to the treatment facility any person who has been committed there and leaves without proper authorization or does not return at the end of an authorized leave of absence.

10.E. Institutional Labor

1. Patients have a right to perform labor as part of a therapeutic program.

2. Patients may not be required to perform labor, except that to the extent they are able, they may be required to perform (1) tasks necessary to care for their personal possessions, (2) routine, nondegrading housekeeping tasks necessary to maintain their living quarters, or (3) other tasks which the responsible

psychiatrist [or: "the responsible physician"][15] approves and which are monitored as part of a therapeutic program for the patient. No patient shall be subjected to any loss of any right under this Act (as distinguished from a privilege which is conferred as part of a therapeutic program) because of his refusal to perform such tasks.

3. Any patient labor which confers an economic benefit upon the institution beyond merely supplementing employee performance of housekeeping tasks shall be compensated on a reasonable basis in accordance with applicable law, and the proceeds of such labor shall be paid to the patient or his designee.

10.F. Restraints and Seclusion[16]

1. Restraints and seclusion may be of therapeutic benefit to some patients and therefore may be administered in conformity with good medical practice.

2. Every patient shall have the right to be free from unwarranted or inappropriate restraints or seclusion.

3. A patient shall be physically restrained or placed in seclusion only at the written order of a physician or upon a verbal order noted in the patient's record and subsequently signed by the physician.

4. During any period in which a patient is restrained or secluded, he shall be periodically checked and cared for properly to assure his well-being.

10.G. Corporal Punishment

Every patient shall have the right to be free from corporal punishment.

10.H. Nutrition

Every patient shall have the right to a nutritionally sound and medically appropriate diet.

---

[15] Optional provision.

[16] These provisions establish only a basic framework for the use of restraints and seclusion. More detailed guidelines are being prepared by the American Psychiatric Association to deal with the many subtle problems which arise.

10.I. Exercise and Recreation

Every patient shall have reasonable opportunities for physical and outdoor exercise and access to recreational areas and equipment. Reasonable limitations may be set by general rules or, for clinical reasons, in particular cases.

10.J. Visitors

Every patient has the right to receive visitors of his choosing with reasonable privacy. Reasonable limitations on access of visitors may be set by general rules or, for clinical reasons, in particular cases.

10.K. Communications

1. Every patient shall have the right to send and receive mail. Reasonable rules governing inspection (but not reading) of incoming mail may be enforced, provided that they are necessary to substantial health care purposes and that they preserve the patient's privacy rights to the extent compatible with his clinical status.

2. Every patient shall have the right to reasonably private access to telephones, including the right to make long-distance calls to the extent he can arrange for payment for such calls.

3. A treatment facility shall provide reasonable assistance to patients in exercising their communication rights. Reasonable limitations on use of the mails and telephones may be set by general rules or, for clinical reasons, in particular cases.

10.L. Practice of Religion

Every patient shall have the right to practice or refrain from practicing religion, and pressure shall in no event be placed on those who do not wish to practice religion. The treatment facility shall provide appropriate assistance so that patients wishing to practice a religion have a reasonable opportunity to do so.

10.M. Personal Possessions

Every patient shall have the right to keep, use and store personal possessions and to maintain and use

bank accounts or other sources of personal funds, unless precluded from doing so by order of a court. Reasonable limitations may be set by general rules or, for clinical reasons, in particular cases.

10.N. Notice of Rights

As soon after admission as his medical condition permits, a patient shall be advised orally and given a written statement of his rights under this Act, and such a statement of rights shall be posted so that it is available to patients.

10.O. Non-Retaliation

No patient shall be retaliated against or subjected to any adverse change of conditions or treatment solely because of his having asserted his rights.

10.P. Access to Counsel

A patient may at any time have a telephone conversation with or be visited by his lawyer.

Section 11. SUCCESSIVE PERIODS OF COMMITMENT

11.A. Sixty-Day Re-Commitment

1. Any person who has been subject to a thirty-day commitment pursuant to Section 6, may be re-committed for up to sixty days upon a petition by the treatment facility or by the next of kin or guardian. The petition may be filed with the court at any time prior to the expiration of the thirty-day commitment. The petition shall include a statement of the treatment facility as to why the person still meets the criteria for involuntary commitment; what treatment has been provided and what progress has been made; why a further period of commitment is warranted; and the identity of the person who has knowledge concerning the case. The petition shall be promptly served by the court on the patient, the next of kin or guardian, and the patient's attorney.

2. The patient shall be entitled to a hearing before the court on the petition on or before the first business day following the expiration of the thirty-day commitment, and shall have all other rights to which he was entitled at the hearing on thirty-day commitment.

3. The court shall order that the person be discharged unless it determines (a) by clear and convincing evidence that the person still satisfies the criteria for involuntary commitment, and (b) that there is a reasonable prospect that a substantial therapeutic purpose would be served by a further period of commitment.

11.B. One Hundred Eighty-Day Re-Commitments

1. Any person who has been subject to sixty-day re-commitment pursuant to Section 11.A. may be re-committed for up to one hundred eighty days upon a petition filed with the court by the treatment facility or by the next of kin or guardian. The petition shall include a statement of the treatment facility as to why the person still meets the criteria for involuntary commitment; what treatment has been provided and what progress has been made; why a further period of commitment is warranted; and the identity of the person who has knowledge concerning the case. The petition shall be promptly served by the court on the patient, the next of kin or guardian, and the patient's attorney.

2. The patient shall be entitled to a hearing before the court on the petition on or before the first business day following expiration of the operative period of commitment and shall have all other rights to which he was entitled at the hearing on thirty-day commitment.

3. The court shall order that the person be discharged unless it determines (a) by clear and convincing evidence that the person still satisfies the criteria for involuntary commitment, and (b) that there is a reasonable prospect that a substantial therapeutic purpose would be served by a further period of commitment.

4. Additional re-commitments for periods of up to one hundred eighty days each may be ordered in accordance with Section 11.B.1-3 when warranted.

11.C. Waiver of Hearings

A patient may waive any hearing to which he is entitled under this Section 11 upon a written waiver which the court finds is knowingly and voluntarily executed by the patient.

Section 12. DISCHARGE

12.A. The responsible psychiatrist [or: "the responsible physician"][17] shall review periodically whether a patient still meets the criteria for lawful commitment, and if he concludes that the patient does not, he shall undertake discharge procedures as provided herein.

12.B. As to a patient committed because he was likely to cause harm to himself or to suffer substantial mental or physical deterioration, if the responsible psychiatrist [or: "the responsible physician"][18] concludes that the patient no longer meets the criteria for lawful commitment, he may discharge the patient directly.

12.C. As to a patient committed solely because, or partly because, he was likely to cause harm to others, if the responsible psychiatrist [or: "the responsible physician"][19] concludes that the patient no longer meets the criteria for lawful commitment, or that the patient's treatment program has been completed or is unlikely to provide further benefits, he shall apply to the court for an order discharging or transferring the patient, as may be appropriate. The application shall set forth the relevant facts. The court may conduct an informal hearing, subject to such procedures as the court sets. Nothing in this subsection shall reduce any rights to hearings which patients have pursuant to other provisions of this Act.

12.D. Discharge of any patient may be delayed for a reasonable period of time in order to arrange transportation or lodging for the patient, or for other good cause.

12.E. A person who has been discharged from emergency evaluation, thirty-day commitment or a subsequent period of commitment may be re-committed only pursuant to the same procedures provided in this Act and upon a showing of some new circumstances warranting such commitment which were not known at the time of discharge.

---

[17] Optional provision.

[18] Optional provision.

[19] Optional provision.

12.F. The responsible psychiatrist [or: "the responsible physician"][28] may, as part of an individual treatment plan for a patient who is involuntarily committed, release such patient to outpatient treatment upon the condition that if the patient fails to follow through with or respond acceptably to such outpatient treatment, he may be returned to inpatient treatment for the remainder of the operative period of commitment.

12.G. Nothing in this Act shall limit any other legal rights or remedies concerning discharge which a patient may have or acquire pursuant to law, regulation or policy, including the right to petition for a writ of habeas corpus.

Section 13. CONFIDENTIALITY AND DISCLOSURE OF INFORMATION

[This Section adopts the American Psychiatric Association's "Model Law on Confidentiality of Health and Social Service Records."]

Section 14. REPRESENTATION OF PATIENTS

14.A. Right to Counsel at Hearings

Every patient shall have a right to counsel to represent him at court hearings under this Act, except that a patient need not be provided with counsel for the preliminary hearing on emergency evaluation provided in Section 4.F.

14.B. Resolution of Grievances in Treatment Facilities

Every treatment facility shall establish a fundamentally fair procedure for the assertion, resolution, and redress of patients' grievances, and shall have a patients' representative or similar person who shall hear patients' grievances, attempt to resolve problems, and protect patients' interests.

14.C. Representation by Next of Kin or Guardian

Any right of patients provided in this Act may be exercised on behalf of a patient who is unable to exercise such right by a next of kin or guardian, in accordance with State law.

---

[28] Optional provision.

Section 15. TRANSPORTATION

Whenever a patient is to be brought to or from a treatment facility, or is to be transferred to another facility or to a home, the court may direct the sheriff, state police or other appropriate authorities to furnish suitable transportation.

Section 16. NON-DEROGATION OF PATIENTS' RIGHTS

Rights conferred upon patients by this Act shall be in addition to, and nothing in this Act shall revoke or reduce, any rights, privileges or immunities which a patient may have or acquire by law, regulation or policy.

Section 17. COSTS OF CARE

In accordance with law, indigent public patients shall receive care and treatment under this Act without charge to them. Patients committed under this Act who are able to pay may be required to pay some reasonable costs of care and treatment, and to that end treatment facilities and the State shall be authorized to recover such costs from them or their estate, their family, custodians of their property, or third parties liable for the costs of their care or treatment, in conformity with law. The liability of patients, their families, and others for the long term care of patients committed as likely to cause harm to others shall be specially limited by regulations of the Department of Mental Health.

Section 18. IMMUNITIES AND PENALTIES

18.A. Immunities

1. In the absence of willful misconduct or gross negligence, no officer, director, staff member or employee of a treatment facility shall be liable for acts or omissions within the scope of his employment related to admission, evaluation, care, treatment, nonadmission, transfer, removal of restrictions upon, or discharge of a person, pursuant to this Act.

2. No other person who, acting in good faith and with a reasonable basis, participates in any of the processes provided in this Act shall be liable for such actions.

3. Notwithstanding any other provision of this Act, no police officer, no officer, director, staff member or employee of a treatment facility, and no other person or entity performing actions pursuant to this Act, shall be liable for any action of a patient who is discharged from or is absent from a treatment facility pursuant to this Act.

4. Under no circumstances shall any person performing actions pursuant to this Act have a duty to, or be liable for failing to, notify, advise or warn anyone concerning the non-admission, transfer, removal of restrictions on, or discharge of any person.

18.B. Penalties

1. Any person who knowingly and willfully gives substantial, false information or takes other wrongful action for the purpose of distorting, corrupting or interfering with the processes provided in this Act shall be subject to a civil fine, and shall be liable for injunctive relief and money damages, in addition to any other liability under law.

2. Any person who takes into custody, admits for evaluation or commitment, detains for a further period of time, discharges, or administers medication or treatment to a patient, or takes other action affecting the substantial rights of a patient, doing so knowingly and willfully in substantial violation of this Act, shall be subject to a civil fine, and shall be liable for injunctive relief and money damages, in addition to any other liability under law. This subsection shall not be invoked in cases of minor, merely technical, or otherwise justifiable breaches of the provisions of this Act.

Section 19. REGULATIONS

The Commissioner of Mental Health is empowered to promulgate regulations to implement this Act which are consistent with its provisions.

Section 20. CONSTRUCTION

20.A. Gender and Number

As used in this Act, pronouns shall refer to both male and female persons equally, and articles shall refer to singular and plural references equally.

20.B. Severability

If any provision of this Act or its application to any person or circumstance is held invalid, it is the legislative intent that such invalidity not affect other provisions or applications which can be given effect apart from that which is invalidated, and to this end the provisions of this Act shall be deemed severable.

20.C. Construction Against Implied Repeal

This Act is intended as a unified, general Act covering its subject matter, and accordingly none of its provisions shall be deemed impliedly repealed by subsequent legislation if such a construction reasonably can be avoided.

ADDENDUM

This addendum contains Guidelines for states which do not wish to undertake a comprehensive revision of their civil commitment laws, but do wish to add provisions for the commitment of persons who are likely to "suffer substantial mental or physical deterioration."

* * *

DEFINITIONS

As used in this Act, the terms below shall have the meanings indicated:

* * *

"consistent with the least restrictive alternative principle" means that (1) each patient committed solely on the ground that he is likely to cause harm to himself or to suffer substantial mental or physical deterioration shall be placed in the most appropriate and therapeutic available setting, that is, where treatment provides the patient with a realistic opportunity to improve, and which is no more restrictive of his physical or social liberties than is believed conducive to the most effective treatment for the patient; and (2) each patient committed solely or in part on the ground that he is likely to cause harm to others shall be placed in a setting in which treatment is available and the risks of physical injury or property damage posed by such placement are warranted by the proposed plan of treatment.

* * *

"lacks capacity to make an informed decision concerning treatment" means that the person, by reason of his mental disorder or condition, is unable despite conscientious efforts at explanation, to understand basically the nature and effects of hospitalization or treatment, or is unable to engage in a rational decisionmaking process regarding such hospitalization or treatment as evidenced by inability to weigh the possible risks and benefits.

"likely to cause harm to himself or to suffer substantial mental or physical deterioration" means that as evidenced by recent behavior, the person (1) is likely in the near future to inflict substantial physical injury upon himself, or (2) is substantially unable to provide for some of his basic needs such as food, clothing, shelter, health or safety, or (3) will if not treated suffer or continue to suffer severe and abnormal mental, emotional or physical distress, and this distress is associated with significant impairment of judgment, reason or behavior causing a substantial deterioration of his previous ability to function on his own.

* * *

"severe mental disorder" means an illness, disease, organic brain disorder, or other condition which (1) substantially impairs the person's thought, perception of reality, emotional process, or judgment or (2) substantially impairs behavior as manifested by recent disturbed behavior.[1]

* * *

EMERGENCY PSYCHIATRIC EVALUATION

Detention by a Police Officer

A police officer may take a person into custody, and transport the person to a treatment facility for emergency psychiatric evaluation if:

* * *

-- the police officer has probable cause to believe, based on his personal observation and investigation, or based on the petition of any interested adult and such corroboration as the police officer deems necessary in the circumstances, that the person is suffering from a severe mental disorder as a result of which he is likely to cause harm to himself or others or is manifestly unable to care for some of his basic needs, and that immediate hospitalization is necessary to prevent harm to the person or to others;

* * *

Certification by a Licensed Physician

A person may be taken into custody by a police officer, or accepted by an ambulance service, and transported and presented to a treatment facility for emergency psychiatric evaluation when a licensed physician certifies in writing that he has examined the patient

---

[1] Mental retardation, epilepsy, or other developmental disabilities do not, in themselves, constitute a severe mental disorder. States may wish to provide by other provisions of law for persons whose use of or addiction to intoxicating substances warrants hospitalization.

in the last 72 hours or that he has ongoing medical responsibility for the person and has knowledge of his current condition, and on such basis he has probable cause to believe that such person is suffering from a severe mental disorder as the result of which: he lacks capacity to make an informed decision concerning treatment; and he is (1) likely to cause harm to himself or to suffer substantial mental or physical deterioriation, or (2) likely to cause harm to others; and immediate hospitalization is necessary to prevent such harm.

* * *

Treatment Facility Determination

Upon the presentation of a person to a treatment facility, the facility shall accept the person and shall promptly examine him to determine whether he meets the criteria for emergency evaluation and treatment set forth below.

The person shall be admitted for emergency evaluation and treatment only if the examining psychiatrist determines that there is probable cause to believe that the person suffers from a severe mental disorder as the result of which: he lacks capacity to make an informed decision concerning treatment; and he is (1) likely to cause harm to himself or to suffer substantial mental or physical deterioration, or (2) likely to cause harm to others; and immediate hospitalization is necessary to prevent such harm.

* * *

CRITERIA FOR COMMITMENT

A person may be involuntarily committed for a period of up to ( )[2] days if after the hearing the court determines, based upon clear and convincing evidence, that:

1. the person is suffering from a severe mental disorder; and

---

[2] Insert the time period under existing law.

2. there is a reasonable prospect that his disorder is treatable at or through the facility to which he is to be committed, and such commitment would be consistent with the least restrictive alternative principle; and

3. the person either refuses or is unable to consent to voluntary admission for treatment; and

4. the person lacks capacity to make an informed decision concerning treatment; and

5. as the result of the severe disorder, the person is (1) likely to cause harm to himself or to suffer substantial mental or physical deterioration, or (2) likely to cause harm to others.

* * *

INFORMED CONSENT TO MEDICATION OR OTHER TREATMENT -- INVOLUNTARY PATIENTS

* * *

It being a prerequisite to involuntary commitment that the person lacks capacity to make an informed decision concerning treatment, the treatment facility shall be authorized to administer medications or other treatments, except special therapies which are subject to particular laws or regulations, to such persons consistent with good medical practice without their consent. Although consent to treatment is not required, during the course of treatment the responsible psychiatrist shall consult with the patient and his next of kin or guardian, and give consideration to the views they express concerning treatment and any alternatives.

SUBJECT: Mental health commitment laws
(Work Order No. 13-1516)

TO: Senator Joe Josephson
Chairman, Senate Health, Education and
Social Services Committee

FROM: Edward H. Hein EHA
Legislative Counsel

You have asked for a comparison of the American Psychiatric Association's draft guidelines for psychiatric hospitalization of adults with Alaska's mental health commitment laws (AS 47.30.655 - 47.30.915). I have enclosed a section-by-section comparison, with the APA guidelines on the left-hand pages and the corresponding Alaska statutes on the right-hand pages. My comments follow.

In general, there are many similarities between the APA guidelines and Alaska law. Both provide for emergency or involuntary commitments, voluntary commitments, initial periods of detention followed by longer periods of extension, standards, hearings, patient rights, immunities for mental health professionals, and penalties for bad faith commitments. In most cases Alaska law appears to provide equal or better patient protections than those recommended by the APA.

The major specific differences between the guidelines and the statutes are as follows:

1. Emergency detention. Under APA section 4.A.2. a person taken into custody for emergency evaluation may not be placed in a jail or other correctional facility, except for protective custody purposes and only while awaiting transportation to a treatment facility. Under AS 47.30.705. a correctional facility may be used as an emergency evaluation facility if a regular evaluation facility is unavailable.

2. Petition for invcluntary commitment. Under APA section 4.C. any "interested adult" may petition for an emergency psychiatric evaluation of another person. The APA does not define what "interested" means. Under AS 47.30.700 "any adult" may petition for involuntary commitment of another person.

3. Deadline for emergency examination. Under APA section 4.D.1. a treatment facility must examine a person under emergency detention "promptly" after arrival at the facility. Under AS 47.30.710 the examination and evaluation must be completed within 24 hours of arrival.

4. Advisement of rights. Under APA section 4.E. a treatment facility must notify a person admitted for emergency evaluation of the purposes and possible duration of the evaluation, as well as the person's legal rights relating to commitment. Under AS 47.30.725 there is no specific requirement of notice relating to the purposes and duration of evaluation. But the Alaska statute requires that notice be both oral and written and in a language the person understands.

5. Hearing after emergency detention. Unde APA section 4.F. a person under emergency detention must receive a hearing before a court within five business days after being admitted to a facility. This right to a hearing may be waived in writing upon advice of counsel. The hearing is informal and is conducted under rules set by the court consistent with "fundamental fairness". After the hearing a person may be discharged by the court or committed for 30 days. Under AS 47.30.725 a person under emergency or involuntary detention has a right to a hearing within 72 hours of arrival at the facility. The person may not waive the right to a hearing, but may waive the 72-hour limit if the person is represented by counsel. However, the hearing must be held within seven calendar days of the person's arrival at the facility. The person has a right to communicate, immediately after arrival at the facility, with a guardian or other adult and with an attorney. At the hearing the person has a right to be represented by an attorney, to present evidence and to cross-examine witnesses. Subject to specified exceptions, the person has a right to be free of the effects of medicine or treatment before the hearing. After the hearing the person may be discharged or committed for a period of 21 days. Additional hearing rights are

specified elsewhere in the APA guidelines and the Alaska statutes.

6. Voluntary admission. Under APA section 5.A. a person believed to be mentally ill and in need of hospitalization may be admitted voluntarily if the person consents in writing after being advised of rights. The consent is effective for 60 days, but may be renewed for an unlimited number of periods of up to 180 days each. Under AS 47.30.670 the only requirements are that the person (1) in fact be suffering from mental illness, (2) be 14 years old or older, and (3) "voluntarily" signs the admission papers. A person under 14 years of age may be "voluntarily" admitted for a period of 21 days if (1) the minor's guardian or parent signs the admission papers and (2) the senior mental health professional at the facility concludes that specified criteria are met. Presumably the minor is automatically released after 21 days unless the minor is admitted again under the same requirements as for initial admittance.

7. Discharge from voluntary admission. Under APA section 5.B. any person voluntarily admitted must be discharged within five business days after submitting a written request for discharge, unless the treatment facility or the person's guardian files a petition for 30-day commitment. Under AS 47.30.685 - 47.30.695 a person who was voluntarily admitted to a treatment facility shall be discharged immediately upon submitting a written notice of intent to leave the facility. However, the treatment facility may hold the person for 48 hours after receiving an intent to leave notice in order to initiate involuntary commitment proceedings. In that case, the facility must give the person written notice of its intent to initiate the proceedings by the time the person would otherwise be released. A person who is under 14 years of age must be discharged immediately upon the request of the parent or guardian, unless the minor, if released, is likely to cause serious harm to himself or another as a result of a mental illness.

8. Conversion of status. Under APA section 5.C. a person who was committed involuntarily may change to a voluntary admitee with a psychiatrist's approval. No comparable provision exists in Alaska law.

9. Further periods of commitment. The APA guidelines provide for 30-day, 60-day, 90-day, and 180-day commitments. Alaska law provides for 21-day, 90-day, and 120-day

commitments. Each period of commitment is to be preceded by a hearing under both the APA guidelines and the Alaska statutes. The patient's rights at the hearing vary considerably, however, under the two different schemes. The most noticeable differences are that (1) the APA guidelines allows the use of hearsay evidence so long as it is relevant, while Alaska requires the use of civil rules of evidence; (2) the APA denies a patient's Fifth Amendment right to remain silent, while Alaska law specifically recognizes it; and (3) the APA does not allow the exclusion from evidence of privileged communications between the patient and psychiatrist or physician made during the course of evaluation or treatment, whereas Alaska law recognizes such an evidentiary privilege.

10. Petitions for further periods of commitment. Under both the APA guidelines and Alaska law, all commitments are initiated by the filing of a petition. Under APA section 6.A. a petition for a 30-day commitment of a person already at a treatment facility may be filed by the facility or by the person's "next of kin" or guardian. If the person is not currently committed, any "interested adult" may file a petition for a 30-day commitment of the person. The language of the guidelines does not make clear whether additional petitions may be filed for successive commitments of 30-days each. Under APA section 11.A. a person who "has been subject to" a 30-day commitment may be recommitted for an additional 60-day period upon a petition filed by the treatment facility or the person's "next of kin" or guardian. (The drafting here is imprecise and ambiguous. The phrase "has been subject to" could mean "has ever been subject to" or it could mean "is currently under" or it could mean "has met the criteria for".) Under APA section 11.B., a person committed for any period of time and who is dangerous to himself or herself may be committed for one additional period of "up to 90 days" upon a petition filed by the treatment facility or by the person's next of kin or guardian at any time before the current period of commitment expires. Under APA section 11.C., a person who "was committed for up to 30 days and is subject to 60-day recommitment" and who is likely to harm others may be committed for successive additional periods of 180 days each upon a petition filed by the person's next of kin or guardian, or by the state "upon advice of the treatment facility". Under AS 47.30.730, a petition for a 21-day commitment must be signed by two mental health professionals who have examined the person. It is not clear who may file

the petition. Under AS 47.30.740, a petition for a 90-day commitment may be filed by "the professional person in charge" while the person is under a 21-day commitment. Under AS 47.30.770 the "professional person in charge" may file a petition for a 120-day commitment of a person who is under a 90-day commitment. Successive commitments of 120 days each are authorized.

11. Informed consent. Under APA section 7, a treatment facility must obtain a patient's informed consent before administering medicine or treatment to a voluntary admitee in a non-emergency situation, unless the person lacks capacity to consent. A voluntary admitee may revoke consent in writing at any time except in an emergency. Under APA section 8, an involuntary admitee, or a voluntary admitee in an emergency, may be treated or given medicine without informed consent. Under AS 47.30.825, every mental patient has the right to know the name, purpose and side effects of medicine to be administered. In a "true medical emergency", surgery to save the "life, physical health, eyesight, hearing or member of the patient" may be performed without the consent of the patient, guardian or court. The law specifically recognizes an adult patient's right to not be operated on if the patient knowingly withholds consent on religious grounds.

12. Special therapies. Under APA section 8.C. experimental treatments, psychosurgery, aversive therapy or other special therapy designated by the appropriate state department may not be administered, except as provided by law or regulation. AS 47.30.825 provides that a lobotomy or psychosurgery may not be performed without specific informed consent, a full due process hearing, and a court order. Electro-convulsive therapy or aversive conditioning requires informed consent or, if the patient lacks substantial capacity to give informed consent, a court order. Under AS 47.30.830 experimental treatments involving any significant risk of physical or psychological harm are prohibited.

13. Patient rights. This is one area where the APA guidelines are more thorough than Alaska law. Under both schemes patients have rights to privacy, property, civil rights such as voting, mail, access to attorneys and visitors, and treatment consistent with the "least restrictive alternative" principle. APA section 10, however, also provides a right to "nutritionally sound and medically appropriate diet", a right to exercise and recreation, a

right to perform labor, and a right to be free from corporal punishment.

14. Discharge. Under APA section 12.F. a person may, as part of an individual treatment plan, be released from commitment at a facility to outpatient treatment. The person may, however, be returned to inpatient treatment for failure to comply with the outpatient treatment program requirements. APA section 15 provides that law enforcement or other appropriate authorities shall provide transportation of patients to and from a treatment facility. Under AS 47.30.825, a person upon discharge from a facility must be given a discharge plan suggesting, but not requiring, the kinds and amounts of treatment the person should have to maintain mental health. The person has a right to participate in formulating the discharge plan. Also, under AS 47.30.890 a person is entitled to "suitable clothing" upon discharge, and if indigent, to transportation to the person's permanent residence in the state and "a reasonable amount of money to meet immediate needs". See also AS 47.30.795.

15. Confidentiality. The APA guidelines adopt by reference the "Model Law on Confidentiality of Health and Social Service Records". AS 47.30.845 provides that patient records are confidential and not public records, and specifies the persons or agencies to whom records and information may be disclosed.

16. Grievance procedures. APA section 14.B. requires that treatment facilities establish "fundamentally fair" procedures for patients' grievances. Alaska statutes have no similar provision.

17. Immunities. Under APA section 18.A. employees of a treatment facility are not liable for acts or omissions within the scope of employment, absent willful misconduct or gross negligence. Other persons who act in good faith and with a reasonable basis are not liable for actions provided for under the guidelines. The guidelines disclaim any liability for actions by a patient who is absent from a treatment facility or who has been discharged. Finally, the guidelines disclaim any liability for failure to warn or notify anyone of a patient's discharge. Immunity under Alaska law is much more limited. Under AS 47.30.815 a person is not subject to criminal or civil liability for petitioning for evaluation or treatment of another person in

good faith and upon actual knowledge or reliable information. Also, four classes of officials may not be held civilly or criminally liable for detaining or releasing a person "at or before the end of" the period for which the person was committed, so long as the official acted in good faith and without gross negligence.

18. Penalties. APA section 18.B. provides that a civil fine, injunctive relief and money damages may be imposed or granted if a person (1) "knowingly and willfully gives substantial, false information or takes other wrongful action for the purpose of distorting, corrupting or interfering with the processes provided in this Act" or (2) commits, detains, discharges, or treats a patient, or otherwise affects a patient's "substantial rights" knowingly and willfully in substantial violation of the guidelines. AS 47.30.915 makes it a class C felony to willfully initiate an involuntary commitment procedure without good cause.

19. Miscellaneous provisions. The last four pages of the comparison booklet (enclosed) consist of provisions of Alaska law for which there are no corresponding provisions in the APA guidelines. Note especially AS 47.30.760, providing for placement at the closest facility; AS 47.30.765, providing for appeal of involuntary commitment orders; AS 47.30.875, providing for handling of nonresident patients; AS 47.30.880, adopting the Interstate Compact on Mental Health; and AS 47.30.895 - 47.30.900, disposition of personal property and money of patients who die while in custody or who leave a facility without authority. Note one error: AS 47.30.795, relating to outpatient care and appearing among the miscellaneous provisions, actually corresponds with APA section 12.F. and should have appeared opposite that section.

If you have any questions or comments, feel free to contact me at your convenience.

GIVEN TO PATIENTS AT API
(MUST BE IN A LANGUAGE UNDERSTOOD BY PATIENT)

PATIENT'S RIGHTS

Your legislators have tried to protect your rights to freedom and at the same time protect everyone from dangerous people and protect people who are harmful to themselves because of mental illness.

The following are your rights according to law:

1. You may join in developing your treatment plan, and you are entitled to be informed of your medical and psychological condition and prognosis.

2. You will be told the name, purpose, and side effects of any medication you are asked to take.

3. No unnecessary or excessive medication will be given to you. All medication will be given only on the order of a licensed physician.

4. Physical restraint will not be used on you unless you behave in a manner harmful to yourself or others.

5. You will not receive electroconvulsive therapy, aversive conditioning, experimental treatment or psychosurgery.

6. You will be given a discharge plan outlining the kind and amount of care and treatment you should have after discharge.

7. Your civil rights will not be impaired.

8. Your hospital record and I.D. photograph will be confidential.

9. Unless you sign a release of responsibility, your personal property will be inventoried and safe-guarded and returned to you at discharge.

10. You will have private storage space, and will be allowed to wear your own clothing, and keep certain personal possessions and a reasonable amount of your own spending money.

11. You may have visitors during visiting hours.

12. You will have access to letter writing materials and stamps, and may send and receive unopened mail.

13. You will have reasonable access to a phone and may make and receive confidential calls.

14. After discharge you may move to have all court records pertaining to your care expunged.

Under the law certain rights may be restricted by your doctor when it is necessary for the protection of yourself or others.

The following additional information will help you better understand your care here. If you still have questions, ask your nurse or social worker:

1. No matter what your legal status is, the more you want to help yourself and work with the staff in an honest, open manner, the quicker and more effective will be your recovery.

2. You do not have the right to do the following:

   - Injure or threaten others.

   - Damage property

   - Intrude on the rights of others, such as rudeness, shouting, or excessive noise that you can control.

   - Make messes for others to clean up.

   - Bring or use drugs, alcohol or weapons.

   - Do illegal acts (break the law). This includes writing threatening letters or making threatening or obscene phone calls.

If you feel you are being treated unfairly or improperly, please follow these steps:

1) Bring it up in the community meeting.

2) If you are not satisifed with the results of that action, bring it up with your nursing advisor, doctor, or any member of the treatment team.

3) If not satisfied, write down your problem and complaint and forward it to the Superintendent.

4) You always have the right to write to your attorney, the State Ombudsman, the Commissioner of the Department of Health and Social Services, or the Superior Court which may have been involved in your hospitalization.

If you feel you've been discriminated against in any way because of race, color, sex, religion, age, or national origin, you may file a complaint with the Civil Rights Commission. You can get the forms from the Administrator's Office. If you need help in filling them out, see your nurse advisor or the Hospital Administrator's Office.

HALOPERIDOL (Systemic)

Haloperidol (ha-loe-PER-i-dole) is used to treat nervous, mental, and emotional conditions. It is used also to control nausea and vomiting and the effects of Gilles de la Tourette's disease. Haloperidol is available only with your doctor's prescription.

Before Using This Medicine

In order to decide on the best treatment for your medical problem, your doctor should be told:

—if you have any of the following medical problems:

- Alcoholism
- Blood disease
- Epilepsy
- Glaucoma
- Heart or circulation disease
- Kidney disease
- Liver disease
- Lung disease
- Overactive thyroid
- Parkinson's disease
- Prostate enlargement
- Severe mental depression
- Stomach ulcers
- Urination problems

—if you are now taking any of the following medicines or types of medicine:

- Amphetamines
- Anticonvulsants (seizure medicine)
- Antihypertensives (high blood pressure medicine)
- Asthma medicine
- Epinephrine
- Ulcer medicine

—if you are now taking central nervous system (CNS) depressants such as:

- Antihistamines or medicine for hay fever, other allergies, or colds
- Barbiturates
- Narcotics
- Prescription pain medicine
- Sedatives, tranquilizers, or sleeping medicine
- Tricyclic antidepressants (medicine for depression)

Proper Use of This Medicine

Use this medicine only as directed by your doctor. Do not use more of it, do not use it more often, and do not use it for a longer period of time than your doctor ordered.

If this medicine upsets your stomach, it may be taken with food or milk to lessen stomach irritation.

If you miss a dose of this medicine, take it as soon as possible unless it is within 6 hours of your next scheduled dose. Do not double doses. Instead, go back to your regular dosing schedule. If you have any questions about this, check with your doctor.

Precautions While Using This Medicine

Your doctor should check your progress at regular visits, especially for the first few months you take this medicine.

Sometimes haloperidol must be taken for several days to several weeks before its full effect is reached in the treatment of certain mental and emotional conditions.

Do not suddenly stop taking this medicine without first checking with your doctor. Your doctor may want you to reduce gradually the amount you are taking before stopping completely.

This medicine will add to the effects of alcohol and other medicines that slow down the nervous system such as: antihistamines or medicine for hay fever, other allergies, or colds; barbiturates; medicine for seizures; narcotics; prescription pain medicine; sedatives, tranquilizers, or sleeping medicine; or tricyclic antidepressants (medicine for depression). ***Check with your doctor before taking any of the above while you are taking this medicine.***

This medicine may cause some people to become drowsy or less alert than they are normally, especially as the amount of medicine is increased. Even if you take this medicine at bedtime, you may feel drowsy or less alert on arising. ***Make sure you know how you react to this medicine before you drive, use machines, or do other jobs that require you to be alert.***

Although not a problem for many patients, dizziness, light-headedness, or fainting may occur, especially when getting up from a lying or sitting position. Getting up slowly may help. However, if the problem continues or gets worse, check with your doctor.

Side Effects of This Medicine

Along with its needed effects, a medicine may cause some unwanted effects. Although not all of these side effects appear very often, when they do occur they may require medical attention. Check with your doctor if any of the following side effects occur:

More common

- Shuffling walk
- Stiffness of arms and legs
- Tic-like, jerky movements of head, face, mouth, and neck
- Trembling and shaking of hands and fingers

Less common

- Difficulty in urination
- Dizziness, light-headedness, or fainting
- Fine, worm-like movements of tongue
- Skin rash

Rare

- Sore throat and fever
- Yellowing of eyes and skin

Other side effects may occur which usually do not require medical attention. These side effects may go away during treatment as your body adjusts to the medicine. However, check with your doctor if any of the following side effects continue or are bothersome:

More common

- Blurred vision
- Constipation
- Dry mouth

TRICYCLIC ANTIDEPRESSANTS (Systemic)

Applies to:
Amitriptyline (a-mee-TRIP-ti-leen)
Desipramine (dess-IP-ra-meen)
Doxepin (DOX-e-pin)
Nortriptyline (nor-TRIP-ti-leen)
Imipramine (im-IP-ra-meen)

Does *not* apply to:
Protriptyline

This medicine belongs to the group of medicines known as tricyclic antidepressants or "mood elevators." It is used to relieve mental depression and depression that sometimes occurs with anxiety. One form of this medicine (imipramine) may be used to treat enuresis (bedwetting). Tricyclic antidepressants are available only with your doctor's prescription.

Before Using This Medicine

In order to decide on the best treatment for your medical problem, your doctor should be told:

—if you have experienced an allergic reaction to other tricyclic antidepressants.

—if you have any of the following medical problems:

Alcoholism	Heart disease
Asthma (history of)	High blood pressure
Difficult urination	Liver disease
Enlarged prostate	Overactive thyroid
Glaucoma	Stomach or intestinal problems

—if you are now taking any other medicines, including over-the-counter (OTC) or nonprescription medicine, especially the following:

Allergy medicine	Other medicine for depression
Antihistamines	Pain medicine
Barbiturates	Sedatives
Blood pressure medicine	Seizure medicine
Cold remedies	Sleeping medicine
Hay fever medicine	Tranquilizers
Narcotics	

—if you are now taking or have taken within the past 2 weeks monoamine oxidase (MAO) inhibitors such as:

Isocarboxazid	Phenelzine
Pargyline	Tranylcypromine

Proper Use of This Medicine

Take this medicine only as directed by your doctor.

To lessen stomach upset, take this medicine with food, unless your doctor has told you to take it on an empty stomach.

Sometimes this medicine must be taken for several weeks before you begin to feel better.

Keep this medicine out of the reach of children since overdose is especially dangerous in young children.

If you miss a dose of this medicine, take it as soon as possible and then go back to your regular dosing schedule. However, if a once-a-day bedtime dose is missed, do not take that dose in the morning. Instead, check with your doctor.

Precautions While Using This Medicine

It is very important that your doctor check your progress at regular visits.

Do not stop taking this medicine without first checking with your doctor. Your doctor may want you to reduce gradually the amount you are using before stopping completely.

Before having any kind of surgery (including dental surgery) or emergency treatment, tell the doctor or dentist in charge that you are using this medicine.

This medicine will add to the sedative effects of alcohol and other medicines that slow down the nervous system such as antihistamines or medicines for hay fever, other allergies, or colds; barbiturates; medicine for seizures; narcotics; other medicine for depression; prescription pain medicine; sedatives, tranquilizers, or sleeping medicine. *Check with your doctor before taking any of the above while you are taking this medicine and also for several days after you stop taking it.*

This medicine may cause some people to become drowsy or less alert than they are normally. *Make sure you know how you react to this medicine before you drive, use machines, or do other jobs that require you to be alert.*

Dizziness, lightheadedness, or fainting may occur, especially when getting up from a lying or sitting position. Getting up slowly may help. If this problem continues or gets worse, check with your doctor.

Side effects of this Medicine

Along with its needed effects, a medicine may cause some unwanted effects. Although not all of these side effects appear very often, when they do occur they may require medical attention. Check with your doctor if any of the following side effects occur:

More common

Blurred vision	Irregular heartbeat (pounding, racing, skipping)
Constipation	Problems in urinating

Less common

Eye pain	Hallucinations (seeing, hearing, or feeling things that are not there)
Fainting	Shakiness
	Unusually slow pulse

Rare

Seizures	Sore throat and fever
Skin rash and itching	Yellowing of eyes and skin

LITHIUM (Systemic)

Lithium (LI-thee-um) is a medicine used in the treatment of certain mental and emotional conditions. Lithium is available only with your doctor's prescription.

Before Using This Medicine

In order to decide on the best treatment for your medical problem, your doctor should be told:

—if you are pregnant or if you intend to become pregnant while using this medicine.

—if you are breast-feeding an infant.

—if you have any of the following medical problems:

Heart disease	Severe infection
Kidney disease	Thyroid disease
Parkinson's disease	

—if you drink large amounts of coffee or tea.

—if you are on a low-salt diet.

—if you are now taking any of the following medicines or types of medicine:

Asthma medicine	Haloperidol
Caffeine	Potassium iodide
Chlorpromazine	Sodium bicarbonate (baking soda)
Diuretics (water pills, especially thiazide-type)	

Proper Use of This Medicine

Take this medicine exactly as directed. Do not take more of it, do not take it more often, and do not take it for a longer period of time than your doctor ordered.

Sometimes this medicine must be taken for 1 to several weeks before you begin to feel better.

While taking this medicine, *drink 2 or 3 quarts of water or other fluids each day*, and use a normal amount of table salt in your food, unless otherwise directed by your doctor.

Take this medicine immediately after meals or with food or milk to lessen stomach upset, unless otherwise directed by your doctor.

If you miss a dose of this medicine, take it as soon as possible unless it is 2 hours or less until your next scheduled dose. Do not double doses. Instead, go back to your regular dosing schedule. If you have any questions about this, check with your doctor.

Precautions While Using This Medicine

Your doctor should check your progress at regular visits to make sure that the medicine is working properly and that possible side effects are avoided.

This medicine may cause some people to become drowsy or less alert than they are normally. *Make sure you know how you react to this medicine before you drive, use machines, or do other jobs that require you to be alert.*

Use extra care in hot weather and during activities that cause you to sweat heavily, such as hot baths, saunas, or exercising. The loss of too much water and salt from your body may lead to serious side effects from this medicine.

Do not drink large amounts of caffeine-containing beverages, such as coffee, tea, or colas, while taking this medicine. Since lithium is lost from the body through the urine, the increased urine flow caused by caffeine may lessen the medicine's effect.

Side Effects of This Medicine

Along with its needed effects, a medicine may cause some unwanted effects. Although not all of these side effects appear very often, when they do occur they may require medical attention. Check with your doctor if any of the following side effects occur:

More common

Nausea and vomiting
Shakiness and tremor

Less common

Drowsiness	Swelling of feet and lower legs
Mental confusion	Weakness
Pains in lower Stomach	Slurred speech

Rare

Blurred vision	Jerking of arms and legs

Other side effects may occur which usually do not require medical attention. These side effects may go away during treatment as your body adjusts to the medicine. However, check with your doctor if any of the following side effects continue or are bothersome:

More common

Decreased sexual ability	Dry mouth
Diarrhea	Increased thirst
Dizziness	Increased urination

Less common

Skin eruption or rash

Signs of low thyroid function

Coldness of fingers and toes	Menstrual changes
Constipation	Muscle aches
Dry, puffy skin	Sleepiness
Headache	Tiredness
	Unusual weight gain

BENZTROPINE (Systemic)

Benztropine (BENZ-troe-peen) is a medicine used to treat Parkinson's disease, sometimes referred to as "shaking palsy." By improving muscle control, benztropine allows more normal movements of the body as the disease symptoms are reduced. Benztropine is available only with your doctor's prescription.

Before Using This Medicine

In order to decide on the best treatment for your medical problem, your doctor should be told:

—if you have any of the following medical problems:

Asthma	High blood pressure
Bronchitis	Intestinal blockage
Difficult urination	Kidney disease
Emphysema	Liver disease
Enlarged prostate	Myasthenia gravis
Glaucoma	Overactive thyroid
Hiatal hernia	Severe ulcerative colitis

—if you are taking any of the following medicines or types of medicine:

Amantadine	Medicine for diarrhea
Antacids	Medicine for Parkinson's disease
Antihistamines or medicine for hay fever, other allergies, or colds	Medicine for sleep
Haloperidol	Nerve medicine
Heart medicine	Sedatives or tranquilizers
	Ulcer medicine

—if you are now taking or have taken within the past 2 weeks monoamine oxidase (MAO) inhibitors such as:

Isocarboxazid	Phenelzine
Pargyline	Tranylcypromine

Proper Use of This Medicine

Take this medicine only as directed by your doctor To lessen stomach upset, take this medicine immediately after meals or with food, unless your doctor has told you to take it on an empty stomach.

If you miss a dose of this medicine, take it as soon as possible. If it is within 8 hours of your next dose, do not take the missed dose at all and do not double the next one. Instead, go back to your regular dosing schedule. If you have any questions about this, check with your doctor.

Precautions While Using This Medicine

This medicine will add to the effects of alcohol and other medicines that slow down the nervous system such as antihistamines or medicine for hay fever, other allergies, or colds; barbiturates; medicine for depression; medicine for seizures; narcotics; prescription pain medicine; sedatives, tranquilizers, or sleeping medicine. *Check with your doctor before taking any of the above while you are taking this medicine.*

Do not take this medicine within 1 hour of taking antacids or medicine for diarrhea. Taking them too close together will make benztropine less effective.

This medicine may cause your eyes to become more sensitive to light than they are normally. Wearing sunglasses may help lessen the discomfort from bright light.

This medicine may cause some people to become drowsy, dizzy, or less alert than they are normally. *Make sure you know how you react to this medicine before you drive, use machines, or do other jobs that require you to be alert.*

Benztropine will often reduce your tolerance of heat, since it makes you sweat less, causing your body temperature to increase. *Use extra care not to become overheated during exercise or hot weather while you are taking this medicine, as this could possibly result in heat stroke.*

Your mouth, nose, and throat may feel very dry while you are taking this medicine. *To help relieve mouth dryness, chew sugarless gum or dissolve bits of ice in your mouth.*

Check with your doctor if you develop intestinal problems such as constipation. This is especially important if you are taking other medicine while taking benztropine, because if the problems are not corrected serious complications may result.

Side Effects of This Medicine

Along with its needed effects, a medicine may cause some unwanted effects. Although not all of these side effects appear very often, when they do occur they may require medical attention. Check with your doctor if any of the following side effects occur:

More common

Constipation

Less common

Difficult urination

Rare

Eye pain
Skin rash

THIOXANTHENES *(Systemic)*

Applies to:
Chlorprothixene (klor-proe-THIX-een)
Thiothixene (thye-oh-THIX-een)

This medicine belongs to the general family of medicines known as thioxanthenes. It is used in the treatment of nervous, mental, and emotional conditions. This medicine is available only with your doctor's prescription.

Before Using This Medicine

In order to decide on the best treatment for your medical problem, your doctor should be told:

—if you have ever had any unusual reaction to other thioxanthene or phenothiazine medicines.

—if you have any of the following medical problems:

- Alcoholism
- Blood disease
- Glaucoma
- Heart or circulation disease
- Liver disease
- Lung disease
- Parkinson's disease
- Stomach ulcers
- Prostate enlargement
- Urination problems

—if you are now taking any of the following medicines or types of medicine:

- Amphetamines
- Anticonvulsants (seizure medicine)
- Epinephrine
- Guanethidine (high blood pressure medicine)
- Levodopa
- Ulcer medicine

—if you are now taking central nervous system (CNS) depressants such as:

- Antihistamines or medicine for hay fever, other allergies, or colds
- Barbiturates
- Narcotics
- Prescription pain medicine
- Sedatives, tranquilizers, or sleeping medicine
- Tricyclic antidepressants (medicine for depression)

—if you are now taking or have taken within the past 2 weeks monoamine oxidase (MAO) inhibitors such as:

- Isocarboxazid
- Pargyline
- Phenelzine
- Tranylcypromine

Proper Use of this Medicine

Do not take more of this medicine or take it more often than your doctor ordered. This is particularly important when it is given to children, since they may react very strongly to the effects of the medicine.

This medicine may be taken with food or a full glass (8 ounces) of water or milk to reduce stomach irritation.

Sometimes this medicine must be taken for several weeks before its full effect is reached in the treatment of certain mental and emotional conditions.

If you miss a dose of this medicine, take it as soon as possible. If it is two hours or less until your next dose, do not take the missed dose at all and do not double the next one. Instead, go back to your regular dosing schedule. If you have any questions about this, check with your doctor.

Precautions While Using This Medicine

Your doctor should check your progress at regular visits, especially for the first few months you take this medicine.

Do not stop taking this medicine without first checking with your doctor. Your doctor may want you to reduce gradually the amount you are taking before stopping completely.

This medicine will add to the effects of alcohol and other medicines that slow down the nervous system such as: antihistamines or medicine for hay fever, other allergies, or colds; barbiturates; medicine for seizures; narcotics; prescription pain medicine; sedatives, tranquilizers, or sleeping medicine; or tricyclic antidepressants (medicine for depression). *Check with your doctor before taking any of the above while you are taking this medicine.*

This medicine may cause some people to become drowsy or less alert than they are normally, especially during the first few weeks the medicine is being taken. Even if you take this medicine only at bedtime, you may feel drowsy or less alert on arising. *Make sure you know how you react to this medicine before you drive, use machines, or do other jobs that require you to be alert.*

Dizziness, lightheadedness, or fainting may occur, especially when getting up from a lying or sitting position. Getting up slowly may help. If the problem continues or gets worse, check with your doctor.

Sometimes, patients may show signs of restlessness and excitement after taking this medicine. If this occurs, stop taking the medicine and check with your doctor.

This medicine will often make you sweat less, causing your body temperature to increase. Use extra care not to become overheated during exercise or hot weather while you are taking this medicine, since overheating could possibly result in heat stroke. Also, hot baths or saunas may make you feel dizzy or faint while you are taking this medicine.

A few people who take this medicine may become more sensitive to sunlight than they are normally. When you first begin taking this medicine, avoid too much sun or too much use of a sunlamp until you see how you react. If you have a severe reaction, check with your doctor.

Do not take this medicine within an hour of taking antacids or medicine for diarrhea. Taking them too close together may make this medicine less effective.

Side Effects of This Medicine

Along with its needed effects, a medicine may cause some unwanted effects. Although not all of these side effects appear very often, when they do occur

ANTIHISTAMINES (Systemic)

Applies to:
Azatadine (a-ZA-ta-deen)
Bromodiphenhydramine (broe-moe-dye-fen-HYE-dra-meen)
Brompheniramine (brome-fen-EER-a-meen)
Carbinoxamine (kar-bi-NOX-a-ameen)
Chlorpheniramine (klor-fen-EER-a-meen)
Dexchlorpheniramine (dex-klor-fen-EER-a-meen)
Dimethindene (dye-meth-IN-deen)
Diphenylpyraline (dye-fen-il-PEER-a-leen)
Doxylamine (doxe-ILL-a-meen)
Pyrilamine (peer-ILL-a-meen)
Tripelennamine (tri-pel-E.NN-a-meen)
Triprolidine (trye-PROE-li-deen)

Does not apply to:
Cyproheptadine
Dimenhydrinate
Diphenhydramine
Hydroxyzine
Promethazine
Trimeprazine

Antihistamines are used to relieve or prevent the symptoms of hay fever and other types of allergy. Certain antihistamine preparations are available only with your doctor's prescription. Others are available without a prescription; however, your doctor may have special instructions on the proper dose of the medicine for your medical condition.

Before Using This Medicine

In order to decide on the best treatment for your medical problem, your doctor should be told:

—if you are breast-feeding an infant.

—if you have any of the following medical problems:

Enlarged prostate	Overactive thyroid
Heart disease	Stomach ulcer
High blood pressure	Urinary tract blockage
Increased eye pressure	

—if you are now taking any central nervous system (CNS) depressants such as:

Barbiturates	Prescription pain medicine
Medicine for seizures	Sedatives, tranquilizers, or sleeping medicine
Narcotics	Tricyclic antidepressants (medicine for depression)
Other antihistamines or medicine for hay or colds	

—if you are now taking or have taken within the past two weeks monoamine oxidase (MAO) inhibitors such as:

Isocarboxazid	Phenelzine
Pargyline	Tranylcypromine

Proper Use of This Medicine

Antihistamines are used to relieve or prevent the symptoms of your medical problem. Take them only as directed. Do not take more of them or take them more often than your doctor ordered.

Take this medicine with food or a glass of water or milk to lessen stomach irritation.

If you are taking the long-acting tablet form of this medicine, the tablets are to be swallowed whole. Do not break, crush, or chew before swallowing.

Do not give this medicine to premature or newborn infants, unless otherwise directed by your doctor.

Precautions While Using This Medicine

Antihistamines will add to the effects of alcohol and other medicines that slow down the nervous system, such as anesthetics, including dental anesthetics; tranquilizers; medicine for depression; narcotics; prescription pain medicine; medicine for seizures; sleeping medicine; sedatives; or medicine for hay fever, other allergies, or colds. *Check with your doctor before taking any of the above while you are taking this medicine.*

This medicine may cause some people to become drowsy or less alert than they are normally. Even if taken at bedtime, it may cause some people to feel drowsy or less alert on arising. *Make sure you know how you react to this medicine before you drive or do other jobs that require you to be alert.*

Side Effects of This Medicine

Along with its needed effects, a medicine may cause some unwanted effects. The following side effects may go away during treatment as your body adjusts to the medicine; however, check with your doctor if they continue or are bothersome:

More common

Dizziness	Upset stomach or stomach pain
Drowsiness	
Thickening of the bronchial secretions	

Less common or rare

Blurred vision	Nervousness, restlessness, or trouble in sleeping(especially in children)
Difficult or painful urination	
Dryness of mouth, nose, and throat	Skin rash
Headache	Unusual increase in sweating
Loss of appetite	Unusually fast heartbeat

Other side effects not listed above may also occur in some patients. If you notice any other effects, check with your doctor.

PHENOTHIAZINES (Systemic)

Applies to:
Acetophenazine (a-set-oh-FEN-a-zeen)
Butaperazine (byoo-ta-PAIR-a-zeen)
Carphenazine (kar-FEN-a-zeen)
Chlorpromazine (klor-PROE-ma-zeen)
Fluphenazine (floo-FEN-a-zeen)
Perphenazine (per-FEN-a-zeen)
Piperacetazine (pi-per-a-SET-a-zeen)
Prochlorperazine (proe-klor-PAIR-a-zeen)
Promazine (PROE-ma-zeen)
Thioridazine (thye-oh-RID-a-zeen)
Trifluoperazine (trye-floo-oh-PAIR-a-zeen)
Triflupromazine (trye-floo-PROE-ma-zeen)

Does *not* apply to:
Ethopropazine
Methdilazine
Methotrimeprazine
Promethazine
Propiomazine
Thiethylperazine
Thiopropazate
Trimeprazine

Phenothiazines (fee-noe-THYE-a-zeens) are a family of medicines used to treat nervous, mental, and emotional conditions; some are used also to control anxiety, nausea and vomiting, and severe hiccups. Phenothiazines are available only with your doctor's prescription.

Before Using this Medicine

In order to decide on the best treatment for your medical problem, your doctor should be told:

—if you have ever had any unusual reaction to any of the phenothiazine medicines.

—if you are pregnant or if you intend to become pregnant while using this medicine.

—if you are breast-feeding an infant.

—if you have any of the following medical problems:

Alcoholism	Lung Disease
Blood disease	Parkinson's disease
Glaucoma	Prostate enlargement
Heart or circulation disease	Stomach ulcers
Liver disease	Urination problems

—if you are now taking any of the following medicines or types of medicine:

Amphetamines	Guanethidine (high blood pressure medicine)
Anticonvulsants (seizure medicine)	Levodopa
Asthma medicine	Ulcer medicine
Epinephrine	

—if you are now taking central nervous system (CNS) depressants such as:

Antihistamines or medicine for hay fever, other allergies, or colds	Prescription pain medicine
Barbiturates	Sedatives, tranquilizers, or sleeping medicine
Narcotics	Tricyclic antidepressants (medicine for depression)

—if you are now taking or have taken within the past two weeks monoamine oxidase (MAO) inhibitors such as:

Isocarboxazid	Phenelzine
Pargyline	Tranylcypromine

Proper Use of This Medicine

Do not take more of this medicine or take it more often than your doctor ordered. This is particularly important when it is given to children, since they may react very strongly to the effects of the medicine.

Sometimes this medicine must be taken for several weeks before its full effect is reached in the treatment of certain mental and emotional conditions.

Do not stop taking this medicine without first checking with your doctor. Your doctor may want you to reduce gradually the amount you are taking before stopping completely.

If you miss a dose of this medicine and your dosing schedule is one dose to be taken:

Once a day— Take the missed dose as soon as possible. Then go back to your regular dosing schedule. But if you do not remember the missed dose until the next day, do not take it at all and do not double the next one. Instead, go back to your regular dosing schedule.

Two times a day— Take the missed dose as soon as possible. Then go back to your regular dosing schedule. However, if it is almost time for your next dose, do not take the missed dose at all and do not double the next one. Instead, go back to your regular dosing schedule.

More than two times a day— If you remember within an hour or so of the missed dose, take it right away. Then go back to your regular dosing schedule. But if you do not remember until later, do not take the missed dose at all and do not double the next one. Instead, go back to your regular dosing schedule.

If you have any questions about this, check with your doctor.

Precautions While Using This Medicine

Your doctor should check your progress at regular visits, especially for the first few months you take this medicine.

This medicine will add to the effects of alcohol and other medicines that slow down the nervous system

such as: antihistamines or medicine for hay fever, other allergies, or colds; barbiturates; medicine for seizures; narcotics; prescription pain medicine; sedatives, tranquilizers, or sleeping medicine; or tricyclic antidepressants (medicine for depression). *Check with your doctor before taking any of the above while you are taking this medicine.*

This medicine may cause some people to become drowsy or less alert than they are normally, especially during the first few weeks the medicine is being taken. Even if you take this medicine only at bedtime, you may feel drowsy or less alert on arising. *Make sure you know how you react to this medicine before you drive, use machines, or do other jobs that require you to be alert.*

Dizziness, lightheadedness, or fainting may occur, especially when getting up from a lying or sitting position. Getting up slowly may help. If the problem continues or gets worse, check with your doctor.

Sometimes, patients may show signs of restlessness and excitement after taking this medicine. If this occurs, stop taking the medicine and check with your doctor.

This medicine will often make you sweat less, causing your body temperature to increase. *Use extra care not to become overheated during exercise or hot weather while you are taking this medicine,* since overheating could possibly result in heat stroke. Also, hot baths or saunas may make you feel dizzy or faint while you are taking this medicine.

A few people who take this medicine may become more sensitive to sunlight than they are normally. When you first begin taking this medicine, avoid too much sun or too much use of a sunlamp until you see how you react. If you have a severe reaction, check with your doctor.

Side Effects of This Medicine

Along with its needed effects, a medicine may cause some unwanted effects. Although not all of these side effects appear very often, when they do occur they may require medical attention. Check with your doctor if any of the following side effects occur:

More common (occurring with increase of dosage)

Muscle spasms, especially of neck and back	Tic-like (jerky) movements of head, face, mouth, and neck
Restlessness	Trembling and shaking of hands and fingers
Shuffling walk	

Less common

Fainting	Skin rashes
Fine, worm-like movements of tongue	

Rare

Eye problems	Yellowing of eyes and skin
Sore throat and fever	

Other side effects may occur which usually do not require medical attention. These side effects may go away during treatment as your body adjusts to the medicine. However, check with your doctor if any of the following side effects continue or are bothersome:

More common

Blurred vision	Dry mouth
Constipation	Increased sensitivity of skin to sun
Decreased sweating	Nasal congestion
Dizziness	Unusually fast heartbeat
Drowsiness	

Less common

Changes in menstrual period	Difficult urination
Decreased sexual ability	Swelling of breasts

This medicine may cause the urine to turn pinkish red to red or reddish brown; this is harmless and may be expected. If you have questions about this, ask your doctor or pharmacist.

Other side effects not listed above may also occur in some patients. If you notice any other effects, check with your doctor.

ADDITIONAL INFORMATION

For patients taking this medicine by mouth

This medicine may be taken with food or a full glass (8 ounces) of water or milk to reduce stomach irritation.

Do not take this medicine within an hour of taking antacids or medicine for diarrhea. Taking them too close together may make this medicine less effective.

If you are taking a liquid form of this medicine, try to avoid getting it on your skin or clothing because it may cause a skin rash or other irritation.

If your medicine comes in a dropper bottle, it must be diluted before you take it. Just before taking, measure each dose with the specially marked dropper and dilute it in ½ glass (4 ounces) of tomato or fruit juice, water, soup, coffee, tea, milk, or carbonated beverage.

For patients taking the extended-release tablet form of this medicine

The extended-release tablets or capsules are to be swallowed whole. Do not break, crush, or chew before swallowing.

For patients using the suppository form of this medicine

How to insert suppository: First remove the foil wrapper and moisten the suppository with water. Lie down on side and push the suppository well up into the rectum with finger.

If the suppository is too soft to insert because of storage in a warm place, before removing the foil wrapper chill the suppository in the refrigerator for 30 minutes or run cold water over it.

For patients receiving this medicine by injection

The effects of the long-acting injection form of this medicine may last for up to 6 weeks. The precautions and side effects information for this medicine applies during this period of time.

Article 9. Patient Rights.

Section		Section	
825	Patient rights: Medical	845	Confidential records
830	Prohibition of experimental treatments	850	Expungement of records
835	Civil rights not impaired	855	Posting of rights
840	Right to privacy and personal possessions	860	Notices in languages other than English
		865	Discrimination prohibited

Sec. 47.30.825. Patient rights: Medical. Each patient who is receiving services under AS 47.30.660 — 47.30.915 has the following rights:

(1) A patient, or his counsel, guardian, or the adult designated in accordance with AS 47.30.725 if the patient is mentally incapable of participation, is entitled to participate in formulating his individualized treatment plan and to participate in the evaluation process as much as possible, at minimum to the extent of requesting specific forms of therapy, inquiring why specific therapies are or are not included in his treatment program, and being informed as to his present medical and psychological condition and prognosis. The treating physician may not withhold any of this information from the patient.

(2) A patient has the right to know the name of medication that he is asked to take, what its purpose is, and what side effects may occur with this medication. If the patient is incapable of understanding the purpose and side effects of the medication, the treating physician or mental health professional shall explain it to the patient's counsel or guardian or, if there is no guardian, the adult designated in accordance with AS 47.30.725.

(3) A locked quiet room, or other form of physical restraint, may not be used, except as provided in this paragraph, unless a patient is likely to physically harm himself or others unless restrained. The form of restraint used shall be that which is in the patient's best interest and which constitutes the least restrictive alternative available. When practicable, the patient shall be consulted as to his preference among forms of adequate, medically advisable restraints including medication, and his preference shall be considered. Nothing in this section is intended to limit the right of staff to use a quiet room at the patient's request or with his knowing concurrence when considered in the best interests of the patient. Patients placed in a quiet room or other physical restraint shall be checked at least every 15 minutes or more often if good medical practice so indicates. Patients in a quiet room must be visited by a staff member at least once every hour and must be given adequate food and drink and access to bathroom facilities. At no time may a patient be kept in a quiet room or other form of physical restraint against his will longer than necessary to accomplish the purposes set out in this paragraph. All uses of a quiet room or other restraint shall be recorded in the patient's medical record, the information including but not limited to the reasons for its use, the duration [illegible] and the name of the [illegible]

(4) A patient has the right to be free from unnecessary or excessive medication. Psychotropic medication shall be administered only on the order of a licensed physician when the physician determines that such medication is in the best interest of the patient or will prevent serious harm to others.

(5) A patient capable of giving informed consent has the absolute right to accept or refuse electro-convulsive therapy or aversive conditioning. A patient who lacks substantial capacity to make this decision may not be given such therapy or conditioning without a court order.

(6) In no event may treatment include psychosurgery, lobotomy, or other comparable form of treatment without specific informed consent of the patient, including a minor unless he is clearly too young or disabled to give an informed consent in which case the consent of his legal guardian is required. In addition, such treatment may not be given without a court order after hearing compatible with full due process.

(7) When, in the written opinion of a patient's attending physician, a true medical emergency exists and a surgical operation is necessary to save the life, physical health, eyesight, hearing or member of the patient, the professional person in charge, or his professional designee, may give consent to the surgical operation if time will not permit obtaining the consent of the proper relatives or guardian or appropriate judicial authority. However, an operation may not be authorized if the patient is not a minor and knowingly withholds consent on religious grounds.

(8) A patient upon discharge shall be given a discharge plan specifying the kinds and amount of care and treatment he should have after discharge and such other steps as he might take to benefit his mental health after leaving the facility. The patient shall have the right to participate, as far as practicable, in formulating his discharge plan. A copy of the plan shall be given to the patient, his guardian, the court if appropriate, and any follow-up agencies. (§ 1 ch 84 SLA 1981)

Sec. 47.30.830. Prohibition of experimental treatments. (a) Experimental treatments involving any significant risk of physical or psychological harm may not be administered to a patient.

(b) If the personnel of an evaluation or treatment facility are uncertain as to whether a proposed treatment is experimental or is experimental as applied to a particular patient or would involve a significant risk of mental or physical harm to the patient, the matter may be referred to the commissioner for a determination. The patient, his attorney, his guardian, if any, and an adult designated by the patient, shall, simultaneously with the referral to the commissioner, be provided with copies of all the documents by which the referral is made and shall have the opportunity to provide evidence to the commissioner on the question.

(c) A determination by the commissioner that a treatment is experimental and entails significant risks of mental or physical harm is binding upon all persons involved in the administration of treatment to a patient. (§ 1 ch 84 SLA 1981)

Sec. 47.30.835. Civil rights not impaired. (a) A person may not deny to a person who is undergoing evaluation or treatment under AS 47.30.660 — 47.30.915 a civil right, including but not limited to, the right to free exercise of religion and the right to dispose of property, sue and be sued, enter into contractual relationships, and vote. A person who violates this subsection commits the crime of interference with constitutional rights under AS 11.76.110.

(b) Court-ordered evaluation or treatment under AS 47.30.660 — 47.30.915 is not a determination of legal incapacity under AS 13.26.003 — 13.26.330. (§ 1 ch 84 SLA 1981)

Sec. 47.30.840. Right to privacy and personal possessions. A person undergoing evaluation or treatment under AS 47.30.660 — 47.30.915 shall

(1) not be photographed without his consent and that of his guardian if a minor, except that he may be photographed upon admission to a facility for identification and for administrative purposes of the facility; all photographs shall be confidential and may only be released by the facility to the patient or his designee unless a court orders otherwise;

(2) at the time of admission to an evaluation or treatment facility, have reasonable precautions taken by the staff to inventory and safeguard his personal property; a copy of the inventory signed by the staff member making it shall be given to the patient and made available to his attorney and any other person authorized by the patient to inspect the document;

(3) have access to an individual storage space for his private use while undergoing evaluation or treatment;

(4) be permitted to wear his own clothing, to keep and use his own personal possessions including his toilet articles if they are not considered unsafe for him or other patients who might have access to them, and to keep and be allowed to spend a reasonable sum of his own money for his own needs and comfort;

(5) be allowed to have visitors at reasonable times;

(6) have ready access to letter writing materials, including stamps, and have the right to send and receive unopened mail;

(7) have reasonable access to a telephone, both to make and receive confidential calls. (§ 1 ch 84 SLA 1981)

Sec. 47.30.845. Confidential records. Information and records obtained in the course of a screening investigation, evaluation, examination, or treatment are confidential and are not public records, except to the requirements of a hearing under AS 47.30.660 — 47.30.915 may

necessitate a different procedure. Information and records may be copied and disclosed under regulations established by the department only to

(1) a physician or a provider of health, mental health, or social and welfare services involved in caring for, treating, or rehabilitating the patient;

(2) the patient or an individual to whom the patient has given written consent to have information disclosed;

(3) a person authorized by a court order;

(4) a person doing research or maintaining health statistics, if the anonymity of the patient is assured, and the facility recognizes the project as a bona fide research or statistical undertaking;

(5) the division of corrections in a case in which a prisoner confined to the state prison is a patient in the state hospital on authorized transfer either by voluntary admission or by court order;

(6) a governmental or law enforcement agency when necessary to secure the return of a patient who is on unauthorized absence from a facility where the patient was undergoing evaluation or treatment. (§ 1 ch 84 SLA 1981)

Sec. 47.30.850. Expungement of records. Following the discharge of a respondent from a treatment facility or the issuance of a court order denying a petition for commitment, the respondent may at any time move to have all court records pertaining to the proceedings expunged on condition that he file a full release of all claims of whatever nature arising out of the proceedings and the statements and actions of persons and facilities in connection with the proceedings. (§ 1 ch 84 SLA 1981)

Sec. 47.30.855. Posting of rights. The rights set out in AS 47.30.825 — 47.30.855 shall be prominently posted in all treatment facilities in places accessible to all patients. A patient who does not understand English shall have his rights explained to him in a language he understands. (§ 1 ch 84 SLA 1981)

Sec. 47.30.860. Notices in languages other than English. When practicable all documents and notices required by AS 47.30.660 — 47.30.915 to be served on a respondent, or on his parents, guardian or adult designee, shall be explained in a language the person understands if he is not competent in English. (§ 1 ch 84 SLA 1981)

Sec. 47.30.865. Discrimination prohibited. (a) The fact that a person is or has been evaluated or treated for mental illness may not be a basis for discrimination in

(1) seeking employment;

(2) resuming or continuing professional practice or previous occupation;

(3) obtaining or retaining housing;

(4) obtaining or retaining licenses or permits, including but not limited to a motor vehicle license, motor vehicle operator's and chauffeur's license, and a professional or occupational license.

(b) Applications for positions, licenses, and housing may not contain requests for information concerning evaluation or treatment experiences.

(c) It is unlawful for a person to aid, abet, incite, compel, or coerce the doing of an act forbidden under this section or to attempt to do so. (§ 1 ch 84 SLA 1981)

Article 10. Miscellaneous Provisions.

Section	Section
870. Transportation	900. Disposition of money and personal property subject to claim
875. Nonresident patients	905. Fees and expenses for judicial proceedings
880. Interstate compact	910. Liability for expense of placement in a treatment facility
885. Rights outside state	915. Definitions
890. Provision for personal needs upon discharge	
895. Disposition of personal property and unclaimed money	

Sec. 47.30.870. Transportation. When a person is to be involuntarily committed to a facility, the department shall arrange, and is authorized to pay for, the person's necessary transportation to the designated facility accompanied by appropriate persons and if necessary by a peace officer. The department shall pay return transportation of a person, his escorts, and if necessary a peace officer, after a determination that the person is not committable, at the end of a commitment period, or at the end of a voluntary stay at a treatment facility following an evaluation conducted in accordance with AS 47.30.715. When advisable, one or more relatives or friends shall be permitted to accompany the person. The department may pay necessary travel, housing, and meal expenses incurred by one relative or friend in accompanying the person if the department determines that the person's best interests require that he be accompanied by the relative or friend and the relative or friend is indigent. (§ 1 ch 84 SLA 1981)

Sec. 47.30.875. Nonresident patients. (a) The admission papers of a person who is admitted to a treatment facility under AS 47.30.660 — 47.30.915 shall include a statement as to his residence. The department may return a patient who is not a resident of the state to the state of his residence with court approval if the person has been committed. If the state in which he has residence does not accept him as a patient, the person shall be treated as a resident of this state under the provisions of AS 47.30.660 — 47.30.915.

(b) To facilitate the return of nonresident patients the department may enter into a reciprocal agreement or compact with another state providing for the prompt return under appropriate supervision of residents of that state who are mentally ill. A mentally ill resident of this state who has been placed in a facility outside this state may be admitted with the approval of the department to a treatment facility in the state designated by the department. The department may enter into reciprocal agreements or contracts with another state providing for custody, care or treatment, or return of mentally ill residents of this state by the other state and for the custody and care or treatment of mentally ill residents of that state by this state on a reimbursable basis. A resident of this state who has been committed in another state and is returned in accordance with this section shall, within 72 hours of his admission to the designated facility, be examined. After examination the mental health professional in charge shall release him or shall petition for involuntary commitment as prescribed in AS 47.30.740.

(c) In taking action under (a) and (b) of this section, consideration shall be given to the best interests of the patient, particularly to the relationship of the patient to his family, legal guardian, or friends to maintain relationships and encourage visits beneficial to the patient. (§ 1 ch 84 SLA 1981)

Sec. 47.30.880. Interstate compact. This state ratifies and adopts by reference "The Interstate Compact on Mental Health" consisting of 11 articles approved on September 30, 1955, by the Northeast State Governments Conference on Mental Health. The department is designated as compact administrator with full power to carry out the purpose of the compact and to make all necessary regulations to implement the compact. (§ 1 [9(e)] ch 87 SLA 1957; added by § 11 ch 127 SLA 1959; AS 47.30.180)

Editor's notes. — The section derives from former AS 47.30.180 and was renumbered by the revison of statutes under AS 01.05.031 to accord with the revision of the mental health statutes in Chapter 84, SLA 1981.

Sec. 47.30.885. Rights outside state. Nothing in AS 47.30.660 — 47.30.915 alters or impairs the application or availability to a patient, while hospitalized in another state under contractual arrangements entered in accordance with AS 47.30.660 — 47.30.915, of the rights, remedies or safeguards provided by the laws of this state. (§ 1 ch 84 SLA 1981)

Sec. 47.30.890. Provision for personal needs upon discharge. The department shall insure that

(1) a patient is not discharged from a treatment facility without suitable clothing; and

(b) The petition required in (a) of this section shall allege that the respondent is reasonably believed to present a likelihood of serious harm to himself or others or is gravely disabled as a result of mental illness and shall specify the factual information on which that belief is based including the names and addresses of all persons known to the petitioner who have knowledge of those facts through personal observation. (§ 1 ch 84 SLA 1981)

Sec. 47.30.705. Emergency detention for evaluation. A peace officer who has probable cause to believe that a person is gravely disabled or is suffering from mental illness and is likely to cause serious harm to himself or others of such immediate nature that considerations of safety do not allow initiation of involuntary commitment procedures set out in AS 47.30.700, may cause the person to be taken into custody and delivered to the nearest evaluation facility. A correctional facility may be used as an emergency evaluation facility if an evaluation facility is not available. Upon arrival at the evaluation facility, the peace officer shall complete an application for examination of the person in custody and be interviewed by a mental health professional at the facility. (§ 1 ch 84 SLA 1981)

Sec. 47.30.710. Examination. (a) A respondent who is delivered under AS 47.30.700 to 47.30.705 for emergency examination and treatment to an evaluation facility shall be examined and evaluated as to his mental and physical condition by a mental health professional and by a physician within 24 hours after arrival at the facility.

(b) If the mental health professional who performs the emergency examination has reason to believe that the respondent is (1) mentally ill and that condition causes the respondent to be gravely disabled or to present a likelihood of serious harm to himself or others, and (2) is in need of care or treatment, the mental health professional may hospitalize him, or arrange for hospitalization, on an emergency basis. If a judicial order has not been obtained under AS 47.30.700, the mental health professional shall apply for an ex parte order authorizing hospitalization for evaluation. (§ 1 ch 84 SLA 1981)

Editor's notes. — The word "respondent" was substituted for the word "person" in the first sentence of subsection (a) by the revisor of statutes pursuant to AS 01.05.031.

Sec. 47.30.715. Acceptance of order. When a facility receives a proper order for evaluation, it must accept the order and the respondent for an evaluation period not to exceed 72 hours. The facility shall promptly notify the court of the date and time of the respondent's arrival. The court shall set a date, time and place for a 21 day commitment hearing, to be held if needed within 72 hours after the respondent's arrival, and the court shall notify the facility, the respondent, his attorney, and the prosecuting attorney of the hearing arrangements. Evaluation personnel, when used, shall similarly notify the court of the date and time when they first met with the respondent. (§ 1 ch 84 SLA 1981)

Sec. 47.30.720. Release before expiration of 72-hour period. If at any time in the course of the 72-hour period the mental health professionals conducting the evaluation determine that the respondent does not meet the standards for commitment specified in AS 47.30.700, the respondent shall be discharged from the facility or the place of evaluation by evaluation personnel and the petitioner and the court so notified. (§ 1 ch 84 SLA 1981)

Sec. 47.30.725. Commitment proceeding rights; notification. (a) When a respondent is detained for evaluation under AS 47.30.660 — 47.30.915, he shall be immediately notified orally and in writing of his rights under this section. Notification shall be in a language understood by the respondent, his guardian, if any, and if the respondent requests, an adult designated by the respondent, shall also be notified of the respondent's rights under this section.

(b) Unless a respondent is released or voluntarily admits himself for treatment within 72 hours of his arrival at the facility or, if he is evaluated by evaluation personnel, within 72 hours from the beginning of his meeting with evaluation personnel, he is entitled to a court hearing to be set for not later than the end of that 72-hour period to determine whether there is cause to detain him after the 72 hours have expired for up to an additional 21 days on the grounds that he is gravely disabled or mentally ill and as a result presents a likelihood of serious harm to himself or others. The facility or evaluation personnel shall give notice to the court of the releases and voluntary admissions under AS 47.30.700 — 47.30.820.

(c) The respondent has a right to communicate immediately, at the department's expense, with his guardian, if any, or an adult designated by the respondent and the attorney designated in the ex parte order, or an attorney of the respondent's choice.

(d) The respondent has the right to be represented by an attorney, to present evidence, and to cross-examine witnesses who testify against him at the hearing.

(e) The respondent has the right to be free of the effects of medication and other forms of treatment to the maximum extent possible before the 21 day commitment hearing; however, the facility or evaluation personnel may treat him with medication under prescription by a licensed physician or by a less restrictive alternative of his preference if, in the opinion of a licensed physician in the case of medication, or of a mental health professional in the case of alternative treatment, the treatment is necessary to

(1) prevent bodily harm to the respondent or others;

(2) prevent such deterioration of the respondent's mental condition that subsequent treatment might not enable him to recover; or

(3) allow the respondent to prepare for and participate in the proceedings.

(f) A respondent, if he is represented by counsel, may waive, orally or in writing, the 72-hour time limit on the 21-day commitment hearing and have the hearing set for a date no more than seven calendar days after his arrival at the facility. The respondent's counsel shall immediately notify the court of the waiver. (§ 1 ch 84 SLA 1981)

Sec. 47.30.730. Procedure for 21-day commitment; petition for commitment. (a) In the course of the 72-hour evaluation period, a petition for commitment to a treatment facility may be filed in court. The petition must be signed by two mental health professionals who have examined the respondent, one of whom is a physician. The petition must

(1) allege that the respondent is mentally ill and as a result is likely to cause harm to himself or others or is gravely disabled;

(2) allege that the evaluation staff has considered but has not found that there are any less restrictive alternatives available that would adequately protect the respondent or others; or, if a less restrictive involuntary form of treatment is sought, specify the treatment and the basis for supporting it;

(3) allege with respect to a gravely disabled respondent that there is reason to believe that the respondent's mental condition could be improved by the course of treatment sought;

(4) allege that a specified treatment facility or less restrictive alternative that is appropriate to the respondent's condition has agreed to accept the respondent;

(5) allege that the respondent has been advised of the need for, but has not accepted, voluntary treatment, and request that the court commit the respondent to the specified treatment facility or less restrictive alternative for a period not to exceed 21 days;

(6) list the prospective witnesses who will testify in support of commitment or involuntary treatment;

(7) list the facts and specific behavior of the respondent supporting the allegation in (1) of this subsection.

(b) A copy of the petition shall be served on the respondent, his attorney, and his guardian, if any, before the 21-day commitment hearing. (§ 1 ch 84 SLA 1981)

Sec. 47.30.735. 21-day commitment. (a) Upon receipt of a proper petition for commitment, the court shall hold a hearing at the date and time previously specified according to procedures set out in AS 47.30.715.

(b) The hearing shall be conducted in a physical setting least likely to have a harmful effect on the mental or physical health of the

respondent, within practical limits. At the hearing, in addition to other rights specified in AS 47.30.660 — 47.30.915, the respondent has the right

(1) to be present at the hearing; this right may be waived only with the respondent's informed consent; if the respondent is incapable of giving informed consent, the respondent may be excluded from the hearing only if the court, after hearing, finds that the incapacity exists and that there is a substantial likelihood that the respondent's presence at the hearing would be severely injurious to his mental or physical health;

(2) to view and copy all petitions and reports in the court file of his case;

(3) to have the hearing open or closed to the public as he elects;

(4) to be proceeded against according to the rules of evidence applicable to civil proceedings;

(5) to have an interpreter if he does not understand English;

(6) to present evidence on his behalf;

(7) to cross-examine witnesses who testify against him;

(8) to remain silent.

(c) At the conclusion of the hearing the court may commit the respondent to a treatment facility for not more than 21 days if it finds, by clear and convincing evidence, that the respondent is mentally ill and as a result is likely to cause harm to himself or others or is gravely disabled.

(d) If the court finds that there is a viable less restrictive alternative available and that the respondent has been advised of and refused voluntary treatment through the alternative, the court may order the less restrictive alternative treatment for not more than 21 days if the program accepts the respondent.

(e) The court shall specifically state to the respondent, and give him written notice, that if commitment or other involuntary treatment beyond the 21 days is to be sought, the respondent shall have the right to a full hearing or jury trial. (§ 1 ch 84 SLA 1981)

Sec. 47.30.740. Procedure for 90-day commitment following 21-day commitment. (a) At any time during the respondent's 21-day commitment, the professional person in charge, or his professional designee, may file with the court a petition for a 90-day commitment of that respondent. The petition must include all material required under AS 47.30.730(a) except that references to "21 days" shall be read as "90 days"; and

(1) allege that the respondent has attempted to inflict or has inflicted serious bodily harm upon himself or another since his acceptance for evaluation, or that he was committed initially as a result of conduct in which he attempted or inflicted serious bodily harm upon himself or another, or that he continues to be gravely disabled, or that he demonstrates a current intent to carry out plans of serious harm to himself or another

(2) allege that the respondent has received appropriate and adequate care and treatment during his 21-day commitment;

(3) be verified by the professional person in charge, or his professional designee, during the 21-day commitment.

(b) The court shall have copies of the petition for 90-day commitment served upon the respondent, his attorney, and his guardian, if any. The petition for 90-day commitment and proofs of service shall be filed with the clerk of the court, and a date for hearing shall be set, by the end of the next judicial day, for not later than five judicial days from the date of filing of the petition. The clerk shall notify the respondent, his attorney, and the petitioner of the hearing date at least three judicial days in advance of the hearing.

(c) Findings of fact relating to the respondent's behavior made at a 21-day commitment hearing under AS 47.30.735 shall be admitted as evidence and may not be rebutted except that newly discovered evidence may be used for the purpose of rebutting the findings. (§ 1 ch 84 SLA 1981)

Sec. 47.30.745. 90-day commitment hearing rights. (a) A respondent subject to a petition for 90-day commitment has, in addition to the rights specified elsewhere in AS 47.30.350 — 47.30.915, or otherwise applicable, the rights enumerated in this section. Written notice of these rights shall be served on the respondent, his attorney, his guardian, if any, and may be served on an adult designated by the respondent at the time the petition for 90-day commitment is served. An attempt shall be made by oral explanation to ensure that the respondent understands the rights enumerated in the notice. If the respondent does not understand English, the explanation shall be given in a language he understands.

(b) Unless the respondent is released or voluntarily admits himself following the filing of a petition and before the hearing, he is entitled to a judicial hearing within five judicial days of the filing of the petition as set out in AS 47.30.740(b) to determine if he is mentally ill and as a result is likely to cause harm to himself or others, or if he is gravely disabled. If the respondent voluntarily admits himself following the filing of the petition, the voluntary admission constitutes a waiver of any hearing rights under AS 47.30.740 or under AS 47.30.785. If at any time during the respondent's voluntary admission under this subsection, the respondent submits to the facility a written notice of intent to leave, the professional person in charge may file with the court a petition for 120-day commitment of the respondent under AS 47.30.770. The 120-day commitment hearing shall be scheduled for a date not earlier than 90 days after the respondent's voluntary admission.

(c) The respondent is entitled to a jury trial upon request filed with the court. If the request is made at least two judicial days before the hearing. If the respondent requests a jury trial, the hearing may be

continued for no more than 10 calendar days. The jury shall consist of six persons.

(d) If a jury trial is not requested, the court may still continue the hearing at the respondent's request for no more than 10 calendar days.

(e) The respondent has a right to retain an independent licensed physician or other mental health professional to examine him and to testify on his behalf. Upon request by an indigent respondent, the court shall appoint an independent licensed physician or other mental health professional to examine him and testify on his behalf. The court shall consider an indigent respondent's request for a specific physician or mental health professional. A motion for the appointment may be filed in court at any reasonable time before the hearing and shall be acted upon promptly. Reasonable fees and expenses for expert examiners shall be determined by the rules of court.

(f) The proceeding shall in all respects be in accord with constitutional guarantees of due process and, except as otherwise specifically provided in AS 47.30.700 — 47.30.915, the rules of evidence and procedure in civil proceedings.

(g) Until the court enters a final decision, the respondent shall continue to be treated at the treatment facility unless the petition for 90-day commitment is withdrawn. If no decision has been made within 20 days of filing of the petition, not including extensions of time due to jury trial or other requests by the respondent, he shall be released. (§ 1 ch 84 SLA 1981)

Sec. 47.30.750. Conduct of hearing. The hearing under AS 47.30.745 shall be conducted in the same manner, and with the same rights for the respondent, as set out in AS 47.30.735(b). (§ 1 ch 84 SLA 1981)

Editor's notes. — The word "under AS" was added by the revisor of statutes pursuant to AS 44.62.125 following "hearing" in 01.05.031.

Sec. 47.30.755. Court order. (a) After the hearing and within the time limit specified in AS 47.30.745, the court may commit the respondent to a treatment facility for no more than 90 days if the court or jury finds by clear and convincing evidence that the respondent is mentally ill and as a result is likely to cause harm to himself or others, or is gravely disabled.

(b) If the court finds that there is a less restrictive alternative available and that the respondent has been advised of and refused voluntary treatment through the alternative, the court may order the less restrictive alternative treatment after acceptance by the program of the respondent for a period not to exceed 90 days. (§ 1 ch 84 SLA 1981)

Sec. 47.30.760. Placement at closest facility. Treatment shall always be available at a state-operated hospital; however, if space is

(5) that patients be informed of their legal rights and be informed of and allowed to participate in their treatment program as much as possible;

(6) that persons who are mentally ill but not dangerous to others be committed only if there is a reasonable expectation of improving their mental condition. (§ 1 ch 84 SLA 1981)

Editor's notes. — The parenthetical expression in the last sentence was added by the revisor of statutes pursuant to AS 01.05.031.

Sec. 47.30.660. Powers and duties of department. The department is the mental health authority of the state and shall

(1) administer a comprehensive program for the prevention of mental illness and the care and treatment of the mentally ill, including inpatient and outpatient care and treatment and the procurement of services of specialists or other persons on a contractual or other basis;

(2) take the actions and undertake the obligations which are necessary to participate in federal grants-in-aid programs and accept federal or other financial aid from whatever sources for the study, examination, care, and treatment of the mentally ill;

(3) administer AS 47.30.660 — 47.30.915;

(4) designate, operate, and maintain treatment facilities equipped and qualified to provide inpatient and outpatient care and treatment for the mentally ill;

(5) provide for the placement of mentally ill patients in designated treatment facilities;

(6) enter into arrangements with governmental agencies for the care or treatment of the mentally ill in facilities of the governmental agencies in the state or in another state;

(7) enter into contracts with treatment facilities for the custody and care or treatment of the mentally ill;

(8) enter into contracts which incorporate safeguards consistent with AS 47.30.660 — 47.30.915 and the preservation of the civil rights of the patients with another state for the custody and care or treatment of patients previously committed from this state under 48 U.S.C., sec. 46 et seq., and P.L. 830, 84th Congress, 2nd Session, 70 Stat. 709;

(9) prescribe the form of applications, records, reports, requests for release, and consents to medical or psychological treatment required by AS 47.30.660 — 47.30.915;

(10) require reports from the head of a treatment facility concerning the care of patients;

(11) visit each treatment facility at least annually to review methods of care or treatment for patients;

(12) investigate complaints made by a patient or an interested party on behalf of a patient;

(13) delegate upon mutual agreement to another officer or agency of it, or a political subdivision of the state, or a treatment facility designated, any of the duties and powers imposed upon it by AS 47.30.660 — 47.30.915; and

(14) adopt regulations to implement the provisions of AS 47.30.660 — 47.30.915. (§ 1 ch 84 SLA 1981)

Editor's notes. — Section 6, ch 84, SLA 1981, provided "Except as provided in this Act, the provisions of AS 47.30.660 — 47.30.915 enacted by sec. 1 of this Act do not in themselves impair any action taken in a proceeding pending under statutes in effect before October 1, 1981, nor do they apply retroactively to terminate the detention of a person previously committed under statutes in effect before October 1, 1981. However, 90 days after October 1, 1981, the provisions of this Act apply to all persons committed under statutes in effect before October 1, 1981."

Article 7. Voluntary Admission for Treatment.

Section		Section	
670	Standards for voluntary admission	690	Admission of minors under 14 years of age
675	Notice of rights	695	Notice of request for release of minors under 14 years of age from detention and commitment
680	Discharge of voluntary patients		
685	Notice of intent to leave facility; commitment		

Editor's notes. — Section 6, ch 84, SLA 1981, provided "Except as provided in this Act, the provisions of AS 47.30.660 — 47.30.915 enacted by sec. 1 of this Act do not in themselves impair any action taken in a proceeding pending under statutes in effect before October 1, 1981, nor do they apply retroactively to terminate the detention of a person previously committed under statutes in effect before October 1, 1981. However, 90 days after October 1, 1981, the provisions of this Act apply to all persons committed under statutes in effect before October 1, 1981."

Sec. 47.30.670. Standards for voluntary admission. A person 14 years of age or older may be voluntarily admitted to a treatment facility if he is suffering from mental illness and he voluntarily signs the admission papers. (§ 1 ch 84 SLA 1981)

Sec. 47.30.675. Notice of rights. (a) Upon the application of a person for voluntary admission, or at the time a person admitted under AS 47.30.690 reaches the age of 14, he shall be given a copy of the following documents which shall be explained to him as necessary:

(1) notice of rights as set out in AS 47.30.825 — 47.30.865 and an explanation of any document served upon him; and

(2) notice that should he desire to leave at a time when the treatment facility determines that he is mentally ill and as a result is likely to cause serious harm to himself or others or is gravely disabled, the facility could initiate commitment proceedings against him.

(b) If an applicant for voluntary admission does not understand English, the explanation shall be given in a language he understands. (§ 1 ch 84 SLA 1981)

Sec. 47.30.680. Discharge of voluntary patients. A patient who no longer meets the standards established in AS 47.30.670 shall be discharged from the treatment facility. (§ 1 ch 84 SLA 1981)

Sec. 47.30.685. Notice of intent to leave facility; commitment. A voluntary patient who is 14 years of age or older and who desires to leave a treatment facility must submit to the facility a written notice of intent to leave on a form provided to him by the facility. Upon immediate investigation, the patient shall be evaluated in writing and discharged immediately or given written notice that involuntary commitment proceedings will be initiated against him. The treatment facility may detain the patient for no more than 48 hours after receipt of the patient's notice of intent to leave in order to initiate involuntary commitment proceedings. (§ 1 ch 84 SLA 1981)

Sec. 47.30.690. Admission of minors under 14 years of age. (a) A minor under the age of 14 may be admitted for 21 days evaluation, diagnosis, and treatment at a designated treatment facility if his parent or guardian signs the admission papers and if, in the opinion of the professional person in charge,

(1) he is gravely disabled or is suffering from mental illness and as a result he is likely to cause serious harm to himself or others;

(2) there is no less restrictive alternative available for his treatment; and

(3) there is reason to believe that the patient's mental condition could be improved by the course of treatment.

(b) The minor may be released by the treatment facility at any time during the 21 day period if the professional person in charge or his designated mental health professional determines the minor would no longer benefit from continued hospitalization and the minor is not dangerous. The minor's parents or his guardian must be notified by the facility of the contemplated release and that, unless they initiate involuntary commitment proceedings, the minor will be released. (§ 1 ch 84 SLA 1981)

Sec. 47.30.695. Notice of request for release of minors under 14 years of age from detention and commitment. The parent or guardian of a minor who is less than 14 years of age may request and obtain immediate release of the minor at any time, unless as the result of mental illness, the minor is likely to cause serious harm to himself or others. (§ 1 ch 84 SLA 1981)

Article 8. Involuntary Admission for Treatment.

Section		Section	
700	Initiation of involuntary commitment procedures	760	Placement at closest facility
705	Emergency detention for evaluation	765	Appeal
710	Examination	770	Additional 120 day commitment
715	Acceptance of order	775	Commitment of minors
720	Release before expiration of 72 hour period	780	Early discharge
725	Commitment proceeding; rights; notification	785	Authorized absences
730	Petition for 21 day commitment; petition for commitment	790	Return from unauthorized absence
735	21 day commitment	795	Involuntary outpatient care for committed persons
740	Procedure for 90 day commitment following 21 day commitment	800	Conversion of involuntary outpatient treatment to inpatient commitment
745	90 day commitment hearing rights	805	Computing periods of time
750	Conduct of hearing;	810	Habeas corpus
755	Court order	815	Limitation of liability; penalty for false application

---

Editor's notes. Section 6, ch 84, SLA 1981, provided: "Except as provided in this Act, the provisions of AS 47.30.660 — 47.30.915 enacted by sec. 1 of this Act do not invalidate or impair any action taken in a proceeding pending under statutes in effect before October 1, 1981, nor do they apply retroactively to terminate the detention of a person previously committed under statutes in effect before October 1, 1981. However, 90 days after October 1, 1981, the provisions of this Act apply to all persons committed under statutes in effect before October 1, 1981."

Sec. 47.30.700. Initiation of involuntary commitment procedures. (a) Upon petition of any adult, a judge shall immediately conduct a screening investigation or direct a local mental health professional employed by the department or by a local mental health program that receives money from the department under AS 47.30.520 or 47.30.620 or another mental health professional designated by the judge, to conduct a screening investigation of the person alleged to be mentally ill and, as a result of that condition, alleged to be gravely disabled or to present a likelihood of serious harm to himself or others. Within 48 hours after the completion of the screening investigation, a judge may issue an ex parte order orally or in writing, stating that there is probable cause to believe the respondent is mentally ill and that condition causes the respondent to be gravely disabled or to present a likelihood of serious harm to himself or others. The court shall provide findings on which the conclusion is based, appoint an attorney to represent the respondent, and may direct that a peace officer take the respondent into custody and deliver him to the nearest appropriate facility for emergency examination or treatment. The ex parte order shall be provided to the respondent and made a part of the respondent's clinical record. The court shall confirm an oral order in writing within 24 hours after it is issued.

outpatient basis because he is likely to cause harm to himself or others or is gravely disabled, the provider shall give the respondent oral and written notice that he must return to the treatment facility within 24 hours, with copies to the respondent's attorney, his guardian, if any, the court, and the inpatient treatment facility. If the respondent fails to arrive at the treatment facility within 24 hours after receiving the notice, the professional person in charge may contact the appropriate peace officers who shall take the respondent into custody and transport him to the facility. If it is determined by the professional person in charge to be necessary, a member of the treatment facility staff shall accompany the peace officers when they take the respondent into custody.

(d) If the provider of outpatient care determines that the respondent will require continued outpatient care after the expiration of his commitment period, the provider may initiate further commitment proceedings as if he were the professional person in charge, and the provisions of AS 47.30.660 — 47.30.915 apply, except that provisions relating to inpatient treatment shall be read as applicable to outpatient treatment. (§ 1 ch 84 SLA 1981)

Sec. 47.30.800. Conversion of involuntary outpatient treatment to inpatient commitment. (a) A respondent ordered by the court under the provisions of AS 47.30.700 — 47.30.915 to receive involuntary outpatient treatment may be required to undergo inpatient treatment when the provider of outpatient care finds that (1) the respondent is mentally ill and is likely to cause serious harm to himself or others or is still gravely disabled; (2) the respondent's behavior since the hearing resulting in court-ordered treatment indicates that he now needs inpatient treatment to protect himself or others; (3) there is reason to believe that the respondent's mental condition will improve as a result of inpatient treatment; and (4) there is an inpatient facility appropriate to the respondent's need which will accept him as a patient. Treatment for these respondents shall be available at state operated hospitals at all times.

(b) Upon making the findings specified in (a) of this section, the provisions of AS 47.30.795(b) relating to notice and AS 47.30.745 relating to hearing apply. (§ 1 ch 84 SLA 1981)

Sec. 47.30.805. Computing periods of time. (a) Except as provided in (b) of this section,

(1) computations of a 72-hour evaluation period do not include Saturdays, Sundays, legal holidays, or any period of time necessary to transport the respondent to the treatment facility;

(2) a 21-day commitment period expires at the end of the 21st day after the 72 hours following initial acceptance;

(3) a 90-day commitment period expires at the end of the 90th day after the expiration of a 21-day period of treatment;

(4) a 120-day commitment period expires at the end of the 120th day, after the expiration of a 90-day period of treatment or previous 120-day period, whichever is applicable.

(b) When a respondent has failed to appear or absented himself contrary to any order properly made or entered under AS 47.30.660 — 47.30.915, the relevant commitment period shall be extended for a period of time equal to the respondent's absence if written notice of absence is promptly provided to the respondent's attorney and his guardian, if there is one, and if, within 24 hours after the respondent has returned to the evaluation or treatment facility, written notice of the corresponding extension and the reason for it is given to the respondent, his attorney, his guardian, if any, and to the court. (§ 1 ch 84 SLA 1981)

Sec. 47.30.810. Habeas corpus. Nothing in AS 47.30.660 — 47.30.915 may be construed as limiting a person's right to a writ of habeas corpus. (§ 1 ch 84 SLA 1981)

Sec. 47.30.815. Limitation of liability; penalty for false application. (a) A person acting in good faith upon either actual knowledge or reliable information who makes application for evaluation or treatment of another person under AS 47.30.700 — 47.30.915 is not subject to civil or criminal liability.

(b) The following persons may not be held civilly or criminally liable for detaining a person under AS 47.30.700 — 47.30.915 or for releasing a person under AS 47.30.700 — 47.30.915 at or before the end of the period for which the person was admitted or committed for evaluation or treatment if the persons have performed their duties in good faith and without gross negligence:

(1) any officer of a public or private agency;

(2) the superintendent, the professional person in charge, the professional designee of the professional person in charge, and the attending staff of a public or private agency;

(3) a public official performing functions necessary to the administration of AS 47.30.700 — 47.30.915;

(4) a peace officer responsible for detaining a person under AS 47.30.700 — 47.30.915.

(c) A person who willfully initiates an involuntary commitment procedure under AS 47.30.700 without having good cause to believe that the other person is suffering from a mental illness and as a result is gravely disabled or likely to cause serious harm to himself or others, is guilty of a felony. (§ 1 ch 84 SLA 1981)

Detaining the Insane

Detention Hospitals, Mental Health, and Frontier Politics in Alaska, 1910-1915

Thomas G. Smith

The strong interest in social history during the last decade has produced several studies on the care and treatment of disadvantaged, dependent, and deviant persons. Significant general works have been undertaken, but local, state, and institutional studies, especially ones set in the 20th century are lacking. This essay explores the efforts of Alaskans to establish detention hospitals for the mentally ill between 1910 and 1915. Although students of Alaskan history point to poor treatment of the insane as evidence of the federal government's neglect of and indifference toward Alaska, the study reveals that Alaskans themselves must share the blame. In addition, the essay provides insights into mental health policy, Alaskan politics, and federal-territorial relations during the period.[1]

By the turn of the century, the prevalence of mental illness was a growing concern among many Alaskans. As the population surged due to the gold rushes of the 1890s, so did the number of insane. The arduous journey, excruciating work, harsh climate, loneliness, and dashed hopes sometimes proved more than pioneers could endure. In 1900 nine Alaskans were adjudged insane. By 1910 the number had climbed to 130, and a decade later the figure reached 217. Responding to pleas for assistance from Alaskans, the federal government provided for the care of the mentally ill in the civil government bill of 1900. That measure made insanity a criminal offense. The person accused in a written complaint was arrested by the marshal, brought before a district commissioner, and tried by a six-man jury. If found guilty, he was committed to an asylum. Since Alaska had no mental hospital, the governor was empowered to contract with the lowest-bidding institution west of the Rocky Mountains for the care of the insane. From 1904 to 1956 the Morningside Sanitarium (formerly Mount Tabor), near Portland, Oregon, held the contract.[2]

The contract system came under severe attack by residents of Alaska. They complained that it was an archaic and inhumane practice not followed by any other American state or territory. Noncontiguous dependencies such as Hawaii, Puerto Rico, and the Philippines all had asylums that were built and maintained at local or territorial expense. Not until 1912, however, did Alaska win territorial status and its own government; in the meantime, it had to rely on the federal government to care for the insane.[3]

Alaskans also decried the practice of incarcerating the afflicted in jails until they could be transported to Oregon. In interior Alaska the mentally ill often had to spend as long as six months in jail until weather conditions permitted transportation to the "outside." An Alaska asylum was the solution, but Congress rejected the proposal for such an institution because of cost ($75,000 for the building alone). Alaskans next implored the government to establish small hospitals in which the mentally afflicted could be temporarily detained pending removal to Morningside.[4]

---

1. See, for example, Gerald Grob, *Mental Institutions in America* (New York, 1973); Blake McKelvey, *American Prisons* (Montclair, N.J., 1977); David Rothman, *The Discovery of the Asylum* (Boston, 1971), and *Conscience and Convenience: The Asylum and Its Alternatives in Progressive America* (Boston, 1980). For criticisms of the way the federal government dealt with Alaska's insane, see *Alaska Daily Empire* (Juneau), Nov. 6, Dec. 6, 30, 1912; Ernest Gruening, *The State of Alaska* (New York, 1968), 280.

2. For the early treatment of Alaska's insane, see Thomas G. Smith, "The Treatment of the Mentally Ill in Alaska, 1884-1912: A Territorial Study," *PNQ*, Vol. 65 (1974), 17-28. Also see Claus-M. Naske, "Bob Bartlett and the Alaska Mental Health Act," *ibid.*, Vol. 71 (1980), 31-39.

3. Apparently Alaskans were not troubled by assigning criminal status to the insane, indigent sick, elderly, etc., lacking asylums, almshouses, old folks homes, and local charities; they classified social dependents as criminals in order to assure them of government care. The federal government also maintained Indians who were mentally ill (a government asylum was established in 1898 at Canton, S.D.). Canada, like Alaska, transported its insane from remote and sparsely populated areas to provincial hospitals rather than build mental institutions in the Yukon and Northwest Territories. See Henry Hurd, ed., *The Institutional Care of the Insane in the United States and Canada*, 4 vols. (Baltimore, 1916-17), III, 630-32, 871-80; IV, 2-25, 228-36.

4. For introduction of these two measures, see *Congressional Record*, 61st Cong., 2d Sess., 1910, pp. 1498 (H.R. 20111), 5243 (H.R. 24833); for the texts of these bills, *ibid.*, 6853, and 61st Cong., 2d Sess., House Document 637, p. 2 (Serial 5836).

The need for some type of "holding tank" or detention center seemed obvious to the residents of interior Alaska. Detailed descriptions of mental breakdowns appeared frequently in the press. "DANGEROUS LUNATIC NOW AT LARGE" ran a Nome *Nugget* headline in October 1908. The escaped "lunatic" threatened to kill the district judge, marshal, and commissioner. In Fairbanks, a "crazed" woman shot to death the police chief in 1908. A year later in the same city a "madman" tried to kill the proprietor of the Pioneer Hotel by hurling a boulder through the window, and a knife-wielding, "blood-seeking headhunter" went berserk in Dempsey Lewis's saloon before being felled by a pool cue. In Fairbanks, the roster of persons taken into custody included the president of the Washington-Alaska Bank, an Indian woman, a prospector who repeatedly tried to commit suicide, a sourdough who imagined he was being run over by automobiles, and a woodchopper from Fox City who broke down when fire destroyed 12 cords of firewood. The Fairbanks *Daily News-Miner* pointed out that the number of insane in that community in 1909 had doubled over the previous year.[5]

Alarmed by the increasing frequency of insanity, Fairbanksans called for proper detention facilities for the afflicted. The federal jail lacked sufficient space to accommodate both prisoners and mental patients. Attempts to integrate criminals and the insane resulted in "pandemonium." On one occasion an insane man "kept everyone awake . . . by praying loudly and the noise was well calculated to make the rest of the prisoners nervous." The *News-Miner* noted that the number of insane was increasing at such a rapid rate that "separate quarters must necessarily be provided for them." The grand jury of the fourth judicial division at Fairbanks concurred.[6]

James Wickersham, Alaska's delegate to Congress, also advocated proper facilities for the care of the insane. Wickersham was a fiery progressive from Fairbanks who had served as a federal district judge at Eagle, Nome, and Fairbanks before being elected delegate in 1908. In February 1910, he tried to convince Congress to appropriate money for a permanent insane asylum in southeastern Alaska (HR 20111). When that effort failed, he introduced new legislation in April calling for an appropriation of $50,000 to build detention hospitals at Fairbanks and Nome for the temporary care of the insane (HR 24833). The House Committee on Territories recommended passage of the measure, declaring that the mentally afflicted "are entitled to the most scrupulous care, and should not be subjected to commitment in an ordinary jail." With an eye for economy, however, the committee recommended $25,000 instead of $50,000 for the project. The Senate Committee on Territories also approved the measure. Despite stiff opposition from some economy-minded congressmen, the bill was passed into law "In the interest of humanity."[7]

James Wickersham, who wrote the defective hospitals bill, blamed others for the delay in construction. (Whalen Collection, University of Alaska Archives, Fairbanks)

Specifically, the measure called for the establishment of a detention hospital in the second judicial division at Nome and in the fourth judicial division at Fairbanks. Insane persons would receive temporary care in a detention center until trails and waterways thawed sufficiently to permit the U.S. marshal to transport them to the Morningside Sanitarium in Oregon. Each hospital was to cost no more than $12,500. The marshal, the governor of Alaska, and the U.S. district judge, acting as a board of governors, would call for bids and award a contract for construction. Once completed, the detention houses would be administered and maintained by the Department of Justice.[8]

From the beginning, the detention hospitals project encountered difficulties. Although the bill became law on June 25, 1910, the summer expired without any attempt to implement it. Pressed for an explanation by the *Alaska Citizen*, Governor Walter E. Clark stated that, after reading the measure carefully, he had discovered a shortcoming which made it "practically inoperative." According to the governor, the law was defective because it failed to provide for the acquisition of sites on which to build the hospitals. John Rustgard, U.S. district attorney at Juneau, supported the governor's interpretation of the bill and advised him not to proceed without instructions from the Justice Department. Judicial officers from Nome expressed similar views.[9]

But U.S. District Judge Peter D. Overfield of Fairbanks voiced a different opinion. He favored prompt implementation of

5. Nome *Nugget*, July 17, Oct. 21, Nov. 2, 1908, Fairbanks *Daily News-Miner*, April 12 (headhunter), 14, May 4, Oct. 29, 1909 (hereafter cited as *News-Miner* with appropriate date).

6. *News-Miner*, Aug. 6, 1909.

7. 61st Cong., 2d Sess., 1910, House Report 1238, p. 2 (first quotation) (Serial 5593); *Congressional Record*, (1st Cong., 2d Sess., 1910, pp. 6053-58 (6056, last quotation), *Care of the Insane in Alaska: Statements of Hon. James Wickersham, Delegate from Alaska, Hon. W. R. Ellis, M.C., Mr. George Coe, Stanfield, Oregon, March 4 and April 1, 6, and 20, 1910*. House Committee on the Territories (Washington, D.C., 1910), 19, 26-28, 31-32.

8. 36 Stat. 852 (1910). In 1910 Alaska was divided into four judicial divisions; in the second and fourth, waterways froze and land routes were virtually impassable for seven or eight months of the year.

9. *Alaska Citizen* (Fairbanks), July 10, 1910; John Rustgard to Walter E. Clark, Oct. 3, 1910, Clark to Peter D. Overfield, Oct. 8, 1910, Overfield to Clark, Oct. 8, 1910, Box 564, File 4-7-2-1, Record Group 129, Department of Justice (DJ), National Archives.

the law and accused Clark and Rustgard of pettiness and needless delay. Although Wickersham had failed to provide for hospital sites when he drafted the bill, the oversight could be remedied, Overfield held, by securing donated land. Residents of Fairbanks were eager to have a detention hospital and would furnish land to the government free of charge. Nome residents would probably follow suit. Clark rejected Overfield's suggestion because he doubted the legality of accepting land as a gift on behalf of the federal government.[10]

Pointing out that on several occasions in the past the federal government had accepted "gratuitous deeds of lands for public purposes," Overfield urged the governor to seek the advice of the U.S. attorney general; if land donation proved unacceptable, Congress might be asked to remedy the problem by authorizing the acquisition of land or by permitting the hospitals to be built as additions to the Fairbanks and Nome jails.[11]

Although the governor agreed to consult the attorney general, he did not agree to present the case objectively. Indeed, besides underscoring the law's legal defects, Clark assured the attorney general that the detention hospitals were "entirely unnecessary" because adequate provisions had been made "for the temporary care of the insane in the modern jails erected at Nome and Fairbanks two years ago." He denounced Overfield's dogged support for the detention houses as political loyalty to Wickersham, who was responsible for the judge's appointment, and he also censured Overfield for showing disrespect for the governor's office by "his conspicuous absence without excuse from a public dinner in my honor at Fairbanks."[12]

In October 1910 the Justice Department declared the hospitals act defective because it lacked provision for the acquisition of land; hence, it found that Governor Clark had properly delayed construction of the hospitals. Since the federal government did not own land in Fairbanks and Nome appropriate for hospital sites, the attorney general recommended referring "the matter back to Congress for a further expression of its wishes." Inexplicably, he failed to rule on whether the federal government could accept hospital sites as a gift from the residents of Fairbanks and Nome.[13]

Governor Clark's objections to the detention hospital law were guided by political as well as legal considerations. Clark and Wickersham were bitter political enemies despite being members of the Republican party. Republicans in Alaska and around the nation were divided into regular and progressive factions. Clark and Lewis W. Shackleford, Alaska's Republican national committeeman, headed the regulars; Wickersham, the progressives.

Disturbed by his independence, GOP regulars referred to Wickersham as a "political harlot" and in the delegate race of 1910 nominated Edward S. Orr, a businessman from Fairbanks, to oppose him. The Socialists also entered a candidate, William O'Connor, a newspaper editor from Tanana. The Democrats, a minority party in Alaska, refused to run a candidate. When the votes were counted, the incumbent, Wickersham, easily retained his seat.[14]

Although the detention hospitals were not an issue in that election, residents of interior Alaska were growing increasingly irritated by the lack of action on the project. In March 1911 the grand jury of the fourth judicial division reported that the federal jail at Fairbanks was "inadequate for the proper care and detention of insane persons, of whom there are several now in custody." Due to overcrowding, it was necessary to confine the sane and insane in the same room. The grand jury found that practice unacceptable from a humanitarian standpoint and urged immediate construction of a detention center.[15]

In May the town council of Fairbanks passed a resolution offering the federal government free of charge a parcel of land on which to erect a detention hospital. Noting that the residents of Fairbanks "are pressing me pretty hard," Governor Clark forwarded the resolution to Attorney General George Wickersham (no relation to the delegate) for an opinion. At the same time, Clark recommended that the detention center be erected as an addition to the Fairbanks jail instead of as a separate facility.[16]

Even as he obstructed implementation of the hospitals act, Governor Walter Clark blamed Wickersham for the delay. (Bunnell Coll., University of Alaska Archives)

Nearly two months elapsed without a decision. Numerous Fairbanksans seethed over the delay and sought scapegoats. Some considered the lack of progress another example of federal indifference toward Alaska. Others, particularly the Republican press in Fairbanks, faulted Wickersham for having drafted a defective bill. In an editorial entitled "Our Detained Hospital," the Fairbanks *Daily Times* criticized the delegate for failing to follow the "businesslike course" of admitting his mistake and introducing legislation to rectify it. Had he introduced corrective legislation, the community "would have a detention hospital built and running today." Wickersham had rejected that course of action, the editor opined, because as a politician he was concerned mainly with retaining office. "He is making political capital out of the fact that the hospital is not built," the newspaper charged. "Such political capital is worth more to him than the hospital would be, so he has deliberately failed to remedy the matter."[17]

Wickersham himself blamed the delay on Governor Clark and District Attorney Rustgard. The delegate claimed that he had purposely omitted provision for the purchase of land sites in the bill because he planned to build the centers on public land. The public domain, he stated, had been utilized in the past for jails, courthouses, and telegraph offices. It could also be used for detention centers. "It would have been considered silly," he explained to the Fairbanks Commercial Club, "for the United States to appropriate money out of its own treasury to buy its own land in Alaska for a United States hospital. Nobody but Governor Clark and Mr. John Rustgard would have ever thought of such a foolish proposition, and they would not have thought of it except for the fact that they wished to make the law a failure."[18]

Pro-Wickersham newspapers such as the *Alaska Citizen* echoed the delegate's charges. The *Citizen* held that there was "no one to blame for the delay" but Clark, who had advanced "the ridiculous proposition that the government could not accept a donated site." That view, the paper continued, was based on Clark's "bitter opposition to the delegate, and his determination that Wickersham shall get nothing for the territory that could in any way enhance his prestige."[19]

The federal jail at Fairbanks housed both prisoners and the insane: the women slept in this 12-by-14-foot room with a sloping ceiling and one window. (National Archives)

Nonetheless, the argument in defense of the law was weak. If the hospitals were to be erected on public land, the act should have so specified. Moreover, its author should have realized that public land was unavailable in Fairbanks and Nome: once a patent is granted for a townsite, the land is no longer public. Instead of introducing corrective legislation, Wickersham stubbornly defended a defective law and blamed his political enemies for sabotaging the hospitals. As the Fairbanks *Daily Times* remarked, "the delegate overlooked an important detail in his bill, and in trying to cover it up is attempting to unload upon the governor whatever blame exists."[20]

In August 1911 the attorney general instructed Governor Clark to proceed with the construction of the Fairbanks hospital. Instead of being constructed on a donated site, the facility would be erected on top of the federal jail. Such a plan would minimize delay and save expense by using the same personnel to operate both institutions.[21]

But the instructions sparked a heated protest from Wickersham. Addressing the Fairbanks Commercial Club on September 28, he ridiculed the idea of housing "poor crazy people" above the "dirty old rotten jail." His plan, he reminded the town's businessmen, was to build the hospitals on public land. Appealing to their booster spirit, he informed his listeners that the Fairbanks detention facility was part of a larger plan to secure a permanent insane asylum in the town. That larger effort would be stymied, he warned, unless Alaskans insisted upon

construction of detention centers separate from the jails at Fairbanks and Nome.[22]

Urged on by Wickersham, the commercial club branded the Justice Department's plan to build the hospital as an addition to the jail "unsafe, unsanitary, and undesirable generally." It forwarded to Washington a petition signed by more than 900 residents protesting the proposal as "an act of injustice." The petitioners demanded a separate facility for the temporary care of the mentally ill.[23]

Other Fairbanks civic groups joined the protest. The Tanana Valley Democratic Club unanimously adopted a resolution condemning the governor for concocting a scheme whereby the "prisoners will be a nuisance to the sick, and the insane a nuisance to the prisoners." Moreover, the town council of Fairbanks announced its displeasure with the proposal by passing an ordinance forbidding the detention of the insane "upon the upper, second or higher story" of any wooden building. The Fairbanks press also lambasted the plan, calling it a "sorry makeshift." To accept a portion of the appropriation and build the hospital above the jail, said the *Daily Times*, would qualify Fairbanksans "to become the first inmates of such a hospital." The editor of the *Daily Times* urged the governor to build a hospital on a donated site and worry later about the legal consequences. Such a move, he declared, "would be worthy [of] the red blood of the pioneer."[24]

The strong protest from Fairbanks brought results. In October 1911, the Justice Department decided to "suspend action" on the construction of the hospital as an upper story to the jail. More than a year passed without further developments.[25]

Meanwhile, the issue continued to provoke controversy between Clark and Wickersham. The delegate repeatedly blamed the absence of a detention center on "one petty man, with a wooden nutmeg heart." Appealing to the emotions of a Fairbanks audience, Wickersham pointed out that if one's mother or wife were arrested because she was mentally ill, she would be confined in a "dirty jail" because the governor was so "spiteful" he refused to spend the money Congress had appropriated for a modern detention facility.[26]

Predictably, Clark denied Wickersham's charges. He reiterated the fact that his position was based not on politics but on his interpretation of the law, an interpretation supported by the Justice Department. It would be foolish, he stated, to proceed with the construction of the hospital on a donated site without prior approval from the federal government. What contractor, he asked, would build a hospital without official authorization? Neither Clark nor Wickersham explained why he did not push for an official decision on the legality of building on a donated site.[27]

Wickersham's opponents used the defective hospitals act against him in the delegate election of 1912 but without effect. Indeed, his successful efforts to obtain for Alaska an elective territorial government more than offset any loss of votes caused by his mishandling of the detention hospitals affair. Running as an independent "Bull Mooser," he was reelected, defeating a regular Republican, a Socialist, and two Democrats.[28]

On the national level, the Republican party, split between regulars and progressives, lost the White House to Woodrow Wilson. Although he was disappointed that Theodore Roosevelt, his idol, had lost, Wickersham was confident that he would be able to cooperate with the new president. And he was encouraged when Wilson's secretary of the interior, Franklin K. Lane, invited his opinions on Alaskan issues, including the appointment of a new governor.[29]

Created in August 1912, Alaska's first territorial legislature took the lead in securing construction of the detention centers, though prohibited by law from dealing with the insane. The territorial government act had left to the federal government responsibility for the care of the mentally ill, which meant that vic-

tims would continue to be farmed out to Morningside Sanitarium and that patients in interior Alaska would be held in jails until detention facilities were constructed. But in April 1913, Alaskan legislators forwarded to Congress a joint memorial protesting the practice of detaining the insane in jails and requesting an appropriation of $4,000 to buy land on which to build two detention houses. The memorial went unheeded.[30]

Despite the lack of congressional action, supporters of the detention hospitals were encouraged when President Wilson named John F. A. Strong to succeed Walter Clark as governor of Alaska. Born in New Brunswick in 1859, Strong had been in Alaska since 1897. He had engaged briefly in mining, then entered the newspaper business, and was editor of the Democratic Juneau *Daily Empire* at the time of his appointment.[31]

In June 1913, the new governor and Wickersham met with Secretary of the Interior Lane to discuss the detention hospitals. Sympathetic, Lane agreed to build the hospitals promptly if Strong could secure donated land. Within three months, the governor had obtained the sites, and Lane had authorized him to advertise for construction bids. Strong's success convinced some Alaskans that the previous delay had been "for political and personal reasons only." It also showed that Washington could be moved to action when Alaskans put aside politics and united behind a project.[32]

Construction of both hospitals began in September and concluded in December 1913. After a delay of more than three years, then, the communities of Fairbanks and Nome possessed detention hospitals. The Fairbanks facility was a 2-story wooden building, 42 feet square, located on 1.25 acres of land at the corner of Turner Street and Tenth Avenue. It had a porch that ran along the full front of the first floor and a large second-story balcony. The first story contained a kitchen, oak-paneled dining room, seven rooms, a bath, and a padded cell. On the second floor were four rooms, one ward, a shower-bath, and two padded cells. The facility had electric lights and steam heat and could accommodate 15 male and 5 female patients. Local residents described the building as "a thing of

Within six months of assuming office, J. F. A. Strong had delivered the Nome and Fairbanks hospitals; opening them was the next step. (Bunnell Coll., Univ. of Alaska Archives)

beauty" that was "equipped with all modern conveniences." The Nome hospital was similarly appointed, though lacking the large front porch and balcony. The Nome *Nugget* described it as a "monument" to the builder. In Juneau, the *Alaska Daily Empire* editorialized that the "construction of these institutions marks a step forward in caring for unfortunate men and women of the Territory."[33]

Financial considerations, however, prompted Washington to reevaluate its decision to open the hospitals. The money to maintain the centers was to come from an appropriation of $500,000 for support of prisoners in all the states and territories. Marshal Emmet R. Jordan of Nome informed the Justice Department in early 1914 that it would cost $17,500 a year to maintain each of the detention hospitals. The attorney general balked at spending $35,000 yearly to provide temporary care for a handful of patients. It cost only twice that amount, including transportation, to maintain 150 Alaska patients at the Morningside Sanitarium in Oregon.[34]

Marshal Lewis T. Erwin of Fairbanks, who had replaced Henry Love in 1913, took issue with Jordan's figures. Erwin estimated that operation of the Fairbanks hospital would cost only $7,500 per year. Because the two estimates differed so significantly, the Justice Department refused to open the facilities until accurate figures had been secured. On the recommendation of the U.S. superintendent of prisons, the attorney general sent an inspector to Alaska to determine the cost of running the hospitals and the necessity of opening them.[35]

Proud of their new facilities, residents of Fairbanks and Nome were distressed to learn that neither structure might be utilized. "Loss of the detention hospital" would "be a serious blow" to the community, declared the Fairbanks *Daily Times*; "It means that we will be right back where we were before the building of the hospital was authorized, except that we have the structure to remind us of the long fight made to secure the hospital." There was a pressing need for the centers, according to that paper, and townspeople "have every reason to expect the terms of the bill to be carried out, for, after all, the cost of maintenance is a question which should have been investigated before the money for the building was appropriated."[36]

Equipped with electric lights, steam heat, and other conveniences, the Nome facility was hailed as a step forward in the care of the insane. (National Archives)

Meanwhile, Governor Strong, Delegate Wickersham, and Marshal Erwin of Fairbanks pushed Attorney General T. W. Gregory to open the detention hospitals. Erwin was especially insistent. On March 5, he had wired the Justice Department: "Have now three insane, jail not proper place." Four days later he had telegraphed: "Have just taken into custody insane woman in addition to three insane men reported. Hospital much needed." On June 2 he sent yet another message informing the attorney general that he had 14 prisoners in the jail, including two women. One of the women was insane. "No place to keep women except jail attic. Roof covered with tin. Fear women cannot live in such quarters during warmest summer weather. No toilet except men's department. Women taken ladies toilet courthouse. Makes it bad handling raving maniac. Condition insane woman requires three matrons eight-hour shifts." The marshal asked permission to transfer both women to the detention hospital where they could receive proper care. The attorney general refused the request and advised the marshal to install toilet facilities in the jail, fix the roof, and transport the insane woman to Morningside.[37]

That same month, R. J. W. Brewster, the Justice Department's investigator, arrived to inspect the hospitals. After examining the facilities, he recommended against opening them. His reason: expense. He estimated that the yearly operating costs of each institution, including heat, light, food, guards, a cook, repairs, and sundry expenses, would exceed $7,000.

The number of insane in interior Alaska was not large enough to justify the expense of operating two detention centers, Brewster advised. At Nome only three people were adjudged insane during fiscal year 1913-14, and these victims were housed in the jail for a total of 45 days; since the hospital would stand empty most of each year, Brewster recommended that the building be transferred to another government department and put to better use. At Fairbanks he found that 21 individuals had been adjudged insane in fiscal year 1913. "This hospital," he declared, "should never have been built, and although there is more reason for its opening than there is for the opening of the Nome institution, I do not see the *real* necessity which would warrant the expense of operation." To those who argued that modern mental health care practice called for separate facilities for the sane and insane, he replied that the "theory may be beautiful but would be expensive to carry out."[38]

The delay over opening the detention hospitals became a campaign issue in the delegate election of 1914. Running as a "Woodrow Wilson Progressive," Wickersham sought his fourth term as delegate. He was opposed by John M. Brooks, a Socialist from Jack Wade Creek, and Charles E. Bunnell, a Democrat from Valdez who had the support of the Wilson administration. Alaska Republicans did not nominate a candidate.[39]

Throughout the campaign Wickersham reminded his constituents of his past accomplishments, including passage of the territorial government act, the Alaska railway bill, and the detention hospitals measure. That the hospitals remained closed, he asserted, was the fault of Marshal Erwin, a Democrat and political enemy. Wickersham accused Erwin of obstructing efforts to open the hospitals, and he asked Alaskans to consider the "inhumanity of an officer who keeps a sick prisoner in the attic of that dirty, filthy jail when you have a fine detention hospital where she should be kept."[40]

Wickersham's charges against Erwin were unwarranted. The Justice Department advised the marshal to issue a statement "disclaiming all responsibility for the failure to open and occupy the de-

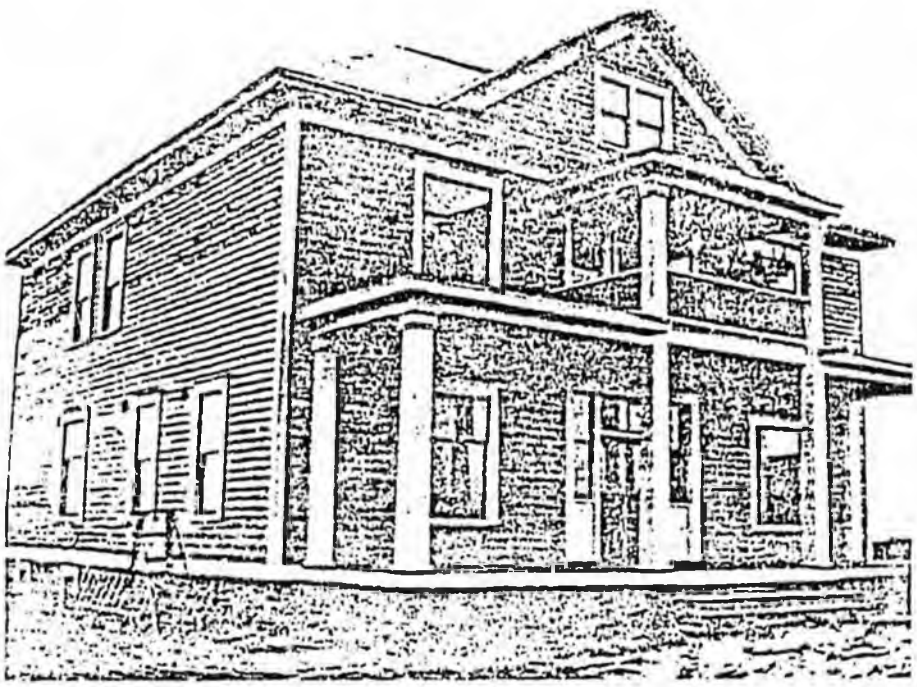
40. Quoted in Erwin to attorney general, Nov. 14, 1914, Box 564, File 4-7-2-1, RG 129, DJ.

tention hospital." Opponents of Wickersham were probably correct when they declared that his attack on the marshal was a smokescreen to cover up his own ineptness. The Democratic Fairbanks *Daily Times* reminded readers that the law "was so clumsily drawn that the hospital never would have been built but for the efforts of Governor Strong and the Democrats of Fairbanks." Despite Wickersham's irresponsible charges, he was reelected with votes to spare.[41]

After his reelection, Wickersham continued to lash out against Erwin for failing to utilize the hospitals. In mid-November 1914, he informed the press that the marshal permitted the caretaker to use the Fairbanks institution as a "chicken coop." Producing a photograph that showed chickens hanging lifeless by their feet from a rope stretched across the hospital's balcony, Wickersham urged Fairbanksans to petition the Justice Department to use the hospital for needy mental patients not dead chickens.[42]



The delegate also censured the Justice Department for its indifference. He informed the Fairbanks Commercial Club on November 9 that "there is no reason in the world why the Department of Justice should not make the necessary appropriation to maintain the institution." Instead of utilizing a modern facility, he noted, the federal government is confining the insane in a "hellhole." He implored club members "to get busy, to do something to force the proper parties to open the hospital and I pledge myself to do all I can to help."[43]

Wickersham made good his promise. On January 6, 1915, he sent a long letter to the attorney general lamenting the policy of holding Alaska's insane in "dirty foul-smelling old jails." He enclosed three photographs taken by the Fairbanks health officer, Dr. J. A. Sutherland, showing the "exact condition of the room in the attic" of the Fairbanks jail where insane women were housed. "In this stinking hole the United States of America keeps the insane women who fall into their clutches," the delegate wrote. "It is a disgrace to the Department of Justice that such a condition may continue to exist." He reminded the attorney general that the detention hospitals act was intended to prevent the "vile arrangement" of housing the mentally ill in jails. Failure to open the institutions for financial reasons, he believed, was unjustified. According to section 2 of the act, the hospital expenses were to be paid "from the same fund as the expenses of the United States jails under the same marshal." Enclosing the "chicken coop" photograph, Wickersham informed the attorney general that the hospital at Fairbanks was being used to accommodate slaughtered chickens instead of mentally afflicted human beings. He exhorted the Justice Department to make proper use of the Nome and Fairbanks structures at once.[44]

Wickersham's hard-hitting letter to Washington was not entirely accurate. He had written on the photograph that the jail was a "dirty-hole," a description that was exaggerated, as Erwin, Dr. Sutherland, and several newspapers pointed out. Yet the delegate's main point was on the mark—namely, that the detention hospitals and not jails should be used for the temporary confinement of the mentally afflicted and that the government, in delaying the opening of the facilities, had failed to execute the law. Responding to Wickersham's letter, the attorney general stated that the issue was "under consideration" and would be resolved soon.[45]

Actually, the Justice Department was working diligently to rid itself of both buildings, to "turn them loose" on other government departments. The Bureau of Education in the Interior Department wanted the Nome building as a medical facility for Indians. The deal fell through though when the Justice Department insisted that the Interior Department take

both "white elephants"; having no use for the Fairbanks facility, the secretary of the interior refused the offer.[46]

Residents of Fairbanks were enraged when they learned of the Justice Department's attempts to unload their hospital. The mayor, marshal, district judge, and district attorney sent wires to the attorney general reminding him that the Fairbanks City Council had donated land for a "detention hospital only" and would oppose using the building and grounds for any other purpose. One Fairbanks citizen scored the federal government for being parsimonious toward a land "which has returned so much more than it cost to the government which owns it." The three local newspapers pushed hard for the cause by running editorials that supported the opening of the detention hospital.[47]

The strong protest brought results. In March 1915, nearly five years after Congress passed Wickersham's bill, the attorney general instructed Erwin to open the Fairbanks hospital immediately. That message elicited "great joy" among Alaska's territorial officials. Nomites, on the other hand, had little to cheer about; their facility remained closed. Inspired by the Fairbanks success, however, Nome residents, including the mayor, city council, Western Federation of Miners, and several fraternal organizations, petitioned Washington in June and repeatedly during the next year, but without results. In 1921 the Justice Department transferred the building to the Bureau of Education for use as a residence for teachers.[48]

In Fairbanks the triumph was short lived. Within five months of the hospital's opening, high operating costs caused the Justice Department to contemplate closing it again. Governor Strong admitted that the building required around-the-clock caretakers and that it would "always be a source of continued expense to the Government, whether occupied or not." Yet he advised against shutting down the institution because a "considerable percentage of the patients would recover, and the expense of their transportation to Morningside Sanitarium and their maintenance there would be avoided." Wickersham sided with Strong and blamed the high maintenance costs on the extravagance of Erwin, whom he accused of using the hospital as a place of residence.[49]

Wickersham's charges prompted an investigation by the Department of Justice. Asked for a response, Erwin maintained that he was making every effort to keep expenses at a minimum. He reported that from the opening of the hospital in March 1915 through August, a total of seven patients had been detained for 114 days at a cost of $2,000. Admitting that he lived at the hospital, he claimed that his presence saved the government money by obviating the need for a guard and custodian to watch the patients. He paid his own board and maintained a garden on the grounds that brought the government $625 worth of produce. He also economized by feeding the inmates fish, moose, and mountain sheep, which he provided free of charge. "I have attempted to economize and save the Government all I could at the same time rendering a good service but not a wasteful one," Erwin declared.[50]

Erwin's report convinced the Justice Department that the operation of the facility "has been economical and careful under the circumstances." Yet the paucity of inmates and high cost of their care (approximately $15 per day for each) did not seem to warrant keeping the hospital open on a permanent basis. Nonetheless, the attorney general decided to "continue its operation during the closed period of this winter in order to get a complete list of the cost of its maintenance."[51]

The Justice Department's position proved "disquieting" to Wickersham. Moreover, he continued to attack the marshal for extravagance. In December 1915, he wrote a scathing letter to the attorney general accusing Erwin of reckless spending and graft. He pointed out that for much of the year the hospital contained no patients, yet the cost of a building caretaker and electricity totaled $1,260. This money could have been saved, the delegate contended, had the facility been closed when it was unoccupied. The only reason for a caretaker, he declared, was that the marshal "wants the use of this nice, warm, new, handsome, well lighted building as a private residence: he needs the caretaker and his wife as servants, and he is annoyed that insane persons are intruded upon his privacy."[52]

Once again Wickersham's charges were groundless and probably sparked by political animosity. As most federal officials in Fairbanks realized, the hospital required the services of a permanent caretaker to protect the building and grounds from vandalism. It was necessary to heat the structure to prevent burst pipes and frost damage. Moreover, the institution might be needed at any time to detain an individual who suddenly became insane. To shut down the facility when it was unoccupied seemed senseless. Judge Charles Bunnell and District Attorney R. J. Roth both believed that the marshal's residence in the hospital re-

sulted in an efficient and economical operation. To avoid the appearance of impropriety and to silence Wickersham, however, they recommended that the marshal cease living there. The attorney general agreed.[53]

To secure the permanent operation of the detention hospital, Wickersham stressed the need for humane care of the mentally ill and for following the dictates of Congress. He emphasized that in 1910 Congress passed legislation establishing detention hospitals for patients in interior Alaska who could not be promptly shipped stateside. "Now what authority has an Attorney General, the Marshal, or any one else," he asked, "to disregard and violate that law?" Will the Justice Department return to the archaic practice of keeping the mentally ill in jails? he queried. He advised the attorney general to continue the operation of the institution and to adhere to "humane methods for the care and protection of the insane sick entrusted to your care, as you are instructed to do by Congress."[54]

Wickersham's appeal proved persuasive. The detention hospital was not shut down, and it remained in operation for two decades. In the 1930s the facility served as both a detention hospital and jail until a new federal building was erected in 1933.

Although Alaskans in 1910 sought to provide humane care for the insane by maintaining them in detention centers rather than jails, they achieved modest success only after five years of delay caused by indifference and parsimony at the federal level and political factionalism within Alaska itself. When territorial officials at last united behind Governor Strong in 1913 and 1915, they got two hospitals built and one operating; the second—for lack of patients and excessive maintenance costs—never opened. The detention center episode was one of the early fights in the long crusade for mental health care in Alaska; it would take another 40 years for Alaskans to obtain a permanent asylum. □

E. T. Barnette

E. T. Barnette: The Strange Story of the Man Who Founded Fairbanks. By Terrence Cole. (Anchorage: Alaska Northwest, 1981. ix, 163 pp. Illustrations, notes, selected bibliography, index. $7.95)

Terrence Cole has put flesh on a phantom. The year of Barnette's birth is uncertain. When, or where, or from what cause he died is unknown. There are, apparently, only two probable Barnette photographs. In one his face is obscured, and in the other a fur hat and a bushy moustache hide his hairline and mouth. Paradoxically, Barnette was as substantial as he was phantasmal.

Cole's study of the real Barnette is a fine historical narrative and investigation. Barnette established a trading post on the Chena River in 1901. The trading post became Fairbanks, while Barnette became a prosperous merchant, miner, and banker. He was a large man, ambitious, gregarious, and plausible. He invested much of his money in a Kentucky farm and a Mexican plantation. Affable though he was, court suits and controversy swirled round him. He throve until his bank collapsed in 1911, a few months after he had resigned its presidency and left town. The bank failure was the beginning of the end of Barnette's fortune. His Mexican property suffered from the turmoil of revolution, his wife divorced him and won a large property settlement, and his comeback attempts were ineffectual.

Such schemes and adventures call for placement in the context of western and Alaskan history, yet Cole's interpretations rarely venture beyond the judgments of contemporaries. Those judgments were possibly too particularistic and severe, delivered as they were from a provincial "sourdough" perspective. For instance, Barnette's manufactured rush to Fairbanks certainly duped some gullible miners. Nevertheless, it was in the tradition of western boom-town promotionalism. Interpretive lacunae aside, Cole writes with verve. He skillfully relates Barnette to the development of Fairbanks and the Alaska-Yukon interior. His book is nicely composed, with many pertinent maps and photographs. Best of all, Cole, a widely published Alaska historian, is not yet out of his twenties. Therefore we may look forward to many more worthwhile studies from the author of *E. T. Barnette*. □

RE: Version 3, Proposed House CS for CS for Senate Bill 346 (HESS)

Attached please find a copy of Version 3 of a proposed House HESS CS for CS for Senate Bill 346, "An Act relating to the treatment of mentally ill persons."

The amendments to the bill, indicated with blue highlighting on the attached draft, are found on the pages and lines indicated below. A brief explanation of the effect of each amendment is provided. Please note that page and line references are to Version 3, House CS for CS for Senate Bill 346 (HESS), dated May 15, 1984.

1. Page 1, line 20: This phrase was slightly reworded so as to give added emphasis to the requirement that persons be given ample opportunity to accept voluntary treatment.

2. Page 3, lines 24 - 26: This sentence was rewritten so as to accommodate a couple of substantive and technical amendments: (a) at the request of the Court System, the words "under AS 25.24.310" (circled on line 25 of the draft) were inserted in order to clarify the legal mechanics for the appointment of guardians ad litem as described in this section; (b) the words "as soon as possible" (circled on line 26 of the draft) were inserted so as to require the prompt appointment of a guardian ad litem for each minor.

3. Page 3, lines 28 and 29: As in amendment 2(a) above, the words "under AS 25.24.310" were inserted at the request of the Court System in order to clarify the legal mechanics for the appointment of guardians ad litem under this section.

4. Page 4, lines 11 - 15: This amendment would require a treatment facility to inform as soon as possible the parent or guardian of a minor under 18 years of age if the minor is detained at or admitted or committed to the treatment facility.

5. Page 13, lines 27 and 28: The catch line for AS 47.30.790 was changed so as to more accurately reflect the contents of the section.

6. Page 16, lines 4 - 16: This set of amendments would require a treatment facility to evaluate all patients present in the facility for more than 72 hours to determine if any individual patients have nutritional deficiencies. In conjunction with the original requirement that the treatment facility provide a nutritionally sound diet, this amendment further requires the facility to take appropriate steps to correct any identified deficiencies.

7. Page 20, line 11: This amendment merely returns the language in the bill to the way it appears in present law, deleting the reference to "a psychologist trained in clinical psychology."

8. Page 20, lines 17 - 18: This amendment inserts the word "substantial" before the word "experience," the effect of which would be the application of a higher standard (requiring substantial experience, instead of some possibly lesser degree of experience) when determining the kind of social worker who would be qualified to act as a "mental health professional."

9. Page 20, line 18: This amendment, meant as a purely technical amendment, changes the phrase "experience in the field of mental illness" to "experience in the field of mental health."

10. Page 20, lines 27 - 29; Page 21, lines 1 - 3: This amendment inserts temporary law requiring the division of mental health and developmental disabil-

ities to review the literature concerning orthomolecular psychiatric methods (nutritional therapy) in order to determine their potential uses in the treatment and diagnosis of mentally ill persons in the state; and to submit the report to the legislature by February 1, 1985.

Amendments 1, 2(b), 5, 7, 8 and 9 are found in Version 3 of the proposed House HESS Committee Substitute only. Amendments 2(a), 3, 4, 6 and 10 (in substance) have appeared in one or more of the earlier versions of the proposed House HESS Committee Substitute.

Please review this proposed CS and share your suggestions or comments with me as soon as possible. If there are no additional suggestions or comments, this will be the Version of the bill which we will discuss and hopefully move out during our next HESS meeting. I would appreciate receiving your response as soon as possible.

Attachment

SECTIONAL ANALYSIS OF CSSB 346 (JUD)am - AN ACT RELATING TO THE TREATMENT OF MENTALLY ILL PERSONS BY Josephson and Faiks.

NOTE: Throughout the bill, the age of majority has been changed from 14 to 18, commitment time periods have been from 21, 90 and 120 days to 30, 90, and 180 days, and neutral words have been substituted for gender pronouns.

Section 1 — Provides a word change ("every" to "reasonable") to limit the endless paperwork from patients transferring in and out of voluntary status.

Section 2-5 — Changes the age of majority under the title from 14 to 18 to make this statute consistent with others dealing with juveniles. Section 4 also changes the term "immediate" to "timely" in order to avoid the inoperable situations caused by literal interpretation of the language.
Section 5(b) provides for the appointment of a guardian ad litem for each minor to monitor appropriateness of placement. Subsection (3) adds language to admission procedures to allow treatment of those minors whose condition could worsen if untreated.

Section 6 — Provides options for the release of a minor, and options to keep a minor in danger of harming self or others. (Statutory basis for procedure currently used at A.P.I.)

Section 7 — Adds "mental health professional" to current law allowing peace officers to take someone into custody for emergency evaluation. It also limits the use of a correctional facility for the mentally ill, providing only emergency protective custody while awaiting transportation to an evaluation facility.

Section 8-9 and 10 — Technical amendments concerning time computations and neutral language to comply with other sections of this bill.

Section 11 — Adds to respondents rights in a 30 day commitment hearing; that the rules of evidence and civil procedure be applied in an informal way;
that experts and other witnesses may testify on the respondent's behalf.

Section 12, 13 and 14 — Time computation changes.

Section 15 — Adds a new section providing that medication and treatment may be administered to an involuntarily committed patient in compliance with patient's rights.

Section 16 — Provides new language to the statute dealing with unauthorized absences providing that a parent, guardian or a person known to have been threatened by the patient will be immediately notified.

Section 17 — Adds a new section to the statute relating to the change of status from involuntary to voluntary, providing that the physician must agree that the transfer is appropriate and must be made in good faith.

Section 18 — Provides that acceptance of order, and 48 hour detention period time computations will not include weekends and holidays.

Section 19 — Amends liability section to include a mental health professional who detains and transports a patient.

Section 20 — Provides that an adult designated as a guardian shall be provided with a copy of a patient's discharge plan.

Section 21 — Adds a new section to the law providing that a patient has the right to a nutritionally sound and medically appropriate diet.

Section 22 — Adds to the patient's rights section of law, additional rights to:
be free of corporal punishment;
exercise and recreation;
at any time have a visit or phone conversation with an attorney;
not be retaliated against for assertion of rights.

Section 23 — Allows for temporary suspension of certain patient rights (wearing personal clothing, phone calls, visitors and recreation) only after the initial evaluation period, if there is a threat to the patient or others.

Section 24 — Allows access to confidential records by a law enforcement agency if there is substantial concern over imminent danger from a presumed mentally ill person.

Section 25 — Includes federal facilities in the definition of "evaluation facility".

Section 26 — Expands the definition of "gravely disabled" to include persons who are not in imminent danger, but whose lack of treatment would cause deterioration of their condition.

Section 27 — Expands the definition of "likely to cause serious harm" beyond recent attempts to include threats and likelihood of injury in the near future.

Section 28 — Changes language relating to psychologists and psychological associates, to be consistent with their licensing statute, which indicates that they do not have a "specialty designation" but have training in clinical psychology.

Section 29 — Definition of mental illness.

Re: SCS CSHB 357(Rls) am S -- state regulation of religious schools
Our file: 388-095-83

Dear Governor Sheffield:

At the request of Emil Notti on your behalf, we have reviewed SCS CSHB 357(Rls) am S which addresses the degree to which certain religious schools are to be regulated by the state.

This bill diminishes the authority of executive agencies over all religious pre-elementary schools and over religious elementary and secondary schools which elect to comply with various requirements. The provisions of the bill, and the constitutional issues which they generate, are discussed below. We do not believe that the constitutional issues are sufficiently clear to require veto of this bill.

In order to qualify for the protections afforded by this bill, a school must be operated by a church or other nonprofit religious organization that is exempt from federal taxation and does not receive direct state or federal funding. It is therefore possible that, except with respect to licensure of pre-elementary schools, executive authority over some religious schools would remain unchanged even if this bill becomes law.

Section 1 of the bill amends AS 14.07.020(8) which currently requires the Department of Education (DOE), in cooperation with the Department of Health and Social Services (DHSS), to "exercise general supervision" over public and private pre-elementary schools. The bill would delete reference to DHSS, would prohibit licensing of any pre-elementary schools, and would

eliminate authority to supervise the "educational component" of pre-elementary schools operated by a church or other qualifying religious organization.

Section 2 of the bill makes it clear that the system of voluntary accreditation of elementary and secondary schools established by AS 14.07.020(10) does not vest authority in DOE to "license" schools operated by a church or other qualifying religious organization.

Section 3 of the bill adds an exemption from compulsory public school attendance for children who attend an educational program operated by a church or other qualifying organization which meets the requirements set out in sections 4 -- 8 of the bill. The compulsory education statute, AS 14.30.010, which would be amended by sec. 3, currently exempts children who attend private schools which employ certificated teachers, who are tutored by certificated tutors, or who attend private schools in which the average student proficiency is not less than that found in nearby public schools, as measured by national achievement tests.

Sections 4 -- 8 of the bill would amend AS 14.45 to provide a means through which elementary and secondary schools operated by churches or other qualifying religious organizations can become partially exempt from state regulation. The exemption would not extend to laws relating to physical health, fire safety, sanitation, immunization, and physical examinations.

The requirements for exemption are set out in new AS 14.45.030 -- 14.45.040. New AS 14.45.030 requires that the religious school maintain monthly attendance records for each student, operate on a regular schedule for a school year of at least 180 days, and annually report to DOE the number of students in each grade and the school calendar. In addition, the parents of each child must file an annual notice of enrollment, signed by the parent and school administrator, with the local public school superintendent. The religious school most notify the superintendent if the child leaves school. New AS 14.45.035 requires that the religious schools administer at least one nationally standardized test, selected by the school from a list compiled by DOE, to children in grades 1, 3, 6, and 9. The test must measure achievement in English grammar, reading, spelling, and mathematics. The results must be maintained by the school and be made available to the child's parent or guardian and "authorized representatives" of the state. New AS 14.45.040 requires that the religious schools maintain "adequate" student records,

including records of immunizations, physical examinations, testing, and courses taken.

Finally, sec. 9 repeals AS 14.45.020 which authorizes DOE to provide final exam questions and diplomas for eighth graders in private and denominational schools. Apparently, this authority has not been exercised since well before statehood.

In general, SCS CSHB 357(Rls) am S would establish two categories of private schools, those which are operated by a church or other qualifying religious organization and those which are not. This gives rise to the legal question of whether or not the disparate treatment afforded each category is in keeping with the equal protection clauses of the state and federal constitutions.

Although courts have developed separate tests under each, the state and federal constitutions both require that there be reasons for treating these categories of private schools differently. The bill itself does not contain a statement of purpose. However, it has been characterized by supporters as an effort to accommodate the free exercise of religion.

The free exercise of religion is protected by the First Amendment to the United States Constitution and by art. 1, sec. 4, of the Alaska Constitution. Courts have developed a threefold test to determine whether state educational requirements impermissibly limit the free exercise of religion: (1) whether the regulated activity is motivated by and rooted in a legitimate and sincerely held religious beliefs; (2) the degree to which the parties' free exercise of religion has been burdened; and (3) whether the state has a compelling interest in the regulation which justifies the burden. Wisconsin v. Yoder, 406 U.S. 205, 32 L.Ed.2d 15, 92 S.Ct. 1526 (1972). The focus of this test is on the exercise of religion; "[t]he religious character of an organization does not provide a shield from regulation which no way affects religious beliefs or acts." In re Rabbinical Seminary Netzach Israel Ramailis, 450 F.Supp. 1078, 1081 (E.D. N.Y. 1978).

Unfortunately, the limits of permissible regulation have not been clearly established. On one hand, courts have acknowledged that religious schools combine religious and secular education and have invalidated state regulations which unreasonably interfered with the former. E.g., Lemon v. Kurtzman, 403 U.S. 602, 29 L.Ed.2d 745, 91 S.Ct. 2105, reh den 404 U.S. 876, 30 L.Ed.2d 123, 92 S.Ct. 24 (1971); State v. Whisner, 351 N.E.2d 750 (Ohio 1976). On the other hand, courts have acknowledged that

"if the state must satisfy its interest in secular education through the instrument of private schools, it has a proper interest in the manner in which those schools perform their secular educational function." Board of Education v. Allen, 392 U.S. 236, 247, 20 L.Ed.2d 1060, 88 S.Ct. 1923 (1968). For example, state regulations requiring certified teachers, a minimum curriculum, and state licensure have been approved. E.g., New Jersey State Board of Higher Education v. Board of Directors of Shelton College, 448 A.2d 988 (N.J. 1982); State v. Faith Baptist Church, 301 N.W.2d 571 (Neb. 1981), app. dism. 454 U.S. 803, 70 L.Ed.2d 72, 102 S.Ct. 75 (1982); State v. Shaver, 294 N.W.2d 883 (N.D. 1980). See also Pierce v. Society of Sisters, 268 U.S. 510, 69 L.Ed.2d 1070, 45 S.Ct. 571 (1925).

This is also an area in which courts may defer to the legislature. In State v. Rivinius, 328 N.W.2d 220, 231 (N.D. 1982), the Supreme Court of North Dakota, after approving a teacher certification requirement, indicated that "[w]e are not implying or intimating that the legislature may not work out a system that will be satisfactory to both sides -- meaning the state and the defendants -- and still accomplish the constitutional mandate." See also West Virginia State Board of Education v. Barnette, 319 U.S. 624, 638, 87 L.Ed. 1628, 63 S.Ct. 1178 (1943).

Because the United States Supreme Court has yet to resolve some of these issues, we cannot state with certainty that SCS CSHB 357(Rls) am S provides protections to religious schools beyond those which are constitutionally required. However, since it precludes various means of regulation which, at least for elementary and secondary schools, have been approved by lower courts, we believe this result to be likely. If this is true, the legislation would fall on equal protection grounds unless other reasons based on actual differences between the two categories of private schools could be found to support it. In addition, it would be subject to challenge as an aid to religion under the establishment clauses of the state and federal constitutions.

It is noteworthy that present regulatory requirements of DOE are minimal and that this bill is based on legislation, enacted in North Carolina in 1972, which has not been challenged in court. N.C. Gen. Stat. § 115-257.1, et seq. (Cum. Supp. 1979). We also acknowledge that substantial arguments can be made in its support. See generally "State Regulation of Private Religious Schools in North Carolina -- A Model Approach," 16 Wake Forest Law Review 405 (1980). Accordingly, we do not believe that veto on constitutional grounds is required.

Except as noted, this bill presents no constitutional or other major legal problems. It is possible, however, that problems of statutory interpretation could arise as DOE attempts to exercise its remaining authority in this area.

Sincerely,

Norman C. Gorsuch
Attorney General

To: Legislators and interested others
From: League of Women Voters, AAUW (American Association of University Women), NAEYC (National Association for the Education of Young Children), the Alaska Women's Lobby

Re: SB 354, HB 514 An Act relating to the regulation of private schools.

Requesting: An ammendment defining the term "pre-elementary school" in Sec. 2. AS 14.07.020. (8)..."pre-elementary schools is this paragraph means schools for children ages three through five years when the schools' primary function is educational and the program operates for four or fewer hours per day."

Problem: Without this ammendment a loophole is created in Alaska statute that permits any program offering care to children up to 10 hours or more a day to exempt itself from health and safety regulations governing all Alaskan day care centers - even though that program is not functionally different from a day care program.

Issues: (1) Education of pre-elementary children is different than the academic emphasis of elementary education, due to shorter attention spans and the need for more physical movement.

(2) All quality childcare programs at the pre-elementary level have educational components which include teaching basic life skills including self-sufficiency, socialization, and basic cognitive skills. Based on content there is no functional difference between a full day "pre-school" and a good day care center.

(3) When a young child is in care for all day every day, the program ceases to be solely a "school" and must include attention to nutritional needs, health of the staff, supervision with at least one staff person to 10 pre-schoolers so that the staff can attempt to meet the individual needs of each child, and enough space to meet the needs to be physically active.

(4) Most legitimate pre-schools operate from two and a half to four hours a day. Even kindergarten limits 6 year olds to two and a half to three hours. Elementary and high school kids attend only 6 hours, yet we permit a three year old to attend "school" 10 hours a day!

Re: SCS CSHB 357(Rls) am S -- state regulation of religious schools
Our file: 388-095-83

Dear Governor Sheffield:

At the request of Emil Notti on your behalf, we have reviewed SCS CSHB 357(Rls) am S which addresses the degree to which certain religious schools are to be regulated by the state.

This bill diminishes the authority of executive agencies over all religious pre-elementary schools and over religious elementary and secondary schools which elect to comply with various requirements. The provisions of the bill, and the constitutional issues which they generate, are discussed below. We do not believe that the constitutional issues are sufficiently clear to require veto of this bill.

In order to qualify for the protections afforded by this bill, a school must be operated by a church or other nonprofit religious organization that is exempt from federal taxation and does not receive direct state or federal funding. It is therefore possible that, except with respect to licensure of pre-elementary schools, executive authority over some religious schools would remain unchanged even if this bill becomes law.

Section 1 of the bill amends AS 14.07.020(8) which currently requires the Department of Education (DOE), in cooperation with the Department of Health and Social Services (DHSS), to "exercise general supervision" over public and private pre-elementary schools. The bill would delete reference to DHSS, would prohibit licensing of any pre-elementary schools, and would

eliminate authority to supervise the "educational component" of pre-elementary schools operated by a church or other qualifying religious organization.

Section 2 of the bill makes it clear that the system of voluntary accreditation of elementary and secondary schools established by AS 14.07.020(10) does not vest authority in DOE to "license" schools operated by a church or other qualifying religious organization.

Section 3 of the bill adds an exemption from compulsory public school attendance for children who attend an educational program operated by a church or other qualifying organization which meets the requirements set out in sections 4 -- 8 of the bill. The compulsory education statute, AS 14.30.010, which would be amended by sec. 3, currently exempts children who attend private schools which employ certificated teachers, who are tutored by certificated tutors, or who attend private schools in which the average student proficiency is not less than that found in nearby public schools, as measured by national achievement tests.

Sections 4 -- 8 of the bill would amend AS 14.45 to provide a means through which elementary and secondary schools operated by churches or other qualifying religious organizations can become partially exempt from state regulation. The exemption would not extend to laws relating to physical health, fire safety, sanitation, immunization, and physical examinations.

The requirements for exemption are set out in new AS 14.45.030 -- 14.45.040. New AS 14.45.030 requires that the religious school maintain monthly attendance records for each student, operate on a regular schedule for a school year of at least 180 days, and annually report to DOE the number of students in each grade and the school calendar. In addition, the parents of each child must file an annual notice of enrollment, signed by the parent and school administrator, with the local public school superintendent. The religious school most notify the superintendent if the child leaves school. New AS 14.45.035 requires that the religious schools administer at least one nationally standardized test, selected by the school from a list compiled by DOE, to children in grades 1, 3, 6, and 9. The test must measure achievement in English grammar, reading, spelling, and mathematics. The results must be maintained by the school and be made available to the child's parent or guardian and "authorized representatives" of the state. New AS 14.45.040 requires that the religious schools maintain "adequate" student records,

including records of immunizations, physical examinations, testing, and courses taken.

Finally, sec. 9 repeals AS 14.45.020 which authorizes DOE to provide final exam questions and diplomas for eighth graders in private and denominational schools. Apparently, this authority has not been exercised since well before statehood.

In general, SCS CSHB 357(Rls) am S would establish two categories of private schools, those which are operated by a church or other qualifying religious organization and those which are not. This gives rise to the legal question of whether or not the disparate treatment afforded each category is in keeping with the equal protection clauses of the state and federal constitutions.

Although courts have developed separate tests under each, the state and federal constitutions both require that there be reasons for treating these categories of private schools differently. The bill itself does not contain a statement of purpose. However, it has been characterized by supporters as an effort to accommodate the free exercise of religion.

The free exercise of religion is protected by the First Amendment to the United States Constitution and by art. 1, sec. 4, of the Alaska Constitution. Courts have developed a threefold test to determine whether state educational requirements impermissibly limit the free exercise of religion: (1) whether the regulated activity is motivated by and rooted in a legitimate and sincerely held religious beliefs; (2) the degree to which the parties' free exercise of religion has been burdened; and (3) whether the state has a compelling interest in the regulation which justifies the burden. Wisconsin v. Yoder, 406 U.S. 205, 32 L.Ed.2d 15, 92 S.Ct. 1526 (1972). The focus of this test is on the exercise of religion; "[t]he religious character of an organization does not provide a shield from regulation which no way affects religious beliefs or acts." In re Rabbinical Seminary Netzach Israel Ramailis, 450 F.Supp. 1078, 1081 (E.D. N.Y. 1978).

Unfortunately, the limits of permissible regulation have not been clearly established. On one hand, courts have acknowledged that religious schools combine religious and secular education and have invalidated state regulations which unreasonably interfered with the former. E.g., Lemon v. Kurtzman, 403 U.S. 602, 29 L.Ed.2d 745, 91 S.Ct. 2105, reh den 404 U.S. 876, 30 L.Ed.2d 123, 92 S.Ct. 24 (1971); State v. Whisner, 351 N.E.2d 750 (Ohio 1976). On the other hand, courts have acknowledged that

"if the state must satisfy its interest in secular education through the instrument of private schools, it has a proper interest in the manner in which those schools perform their secular educational function." Board of Education v. Allen, 392 U.S. 236, 247, 20 L.Ed.2d 1060, 88 S.Ct. 1923 (1968). For example, state regulations requiring certified teachers, a minimum curriculum, and state licensure have been approved. E.g., New Jersey State Board of Higher Education v. Board of Directors of Shelton College, 448 A.2d 988 (N.J. 1982); State v. Faith Baptist Church, 301 N.W.2d 571 (Neb. 1981), app. dism. 454 U.S. 803, 70 L.Ed.2d 72, 102 S.Ct. 75 (1982); State v. Shaver, 294 N.W.2d 883 (N.D. 1980). See also Pierce v. Society of Sisters, 268 U.S. 510, 69 L Ed.2d 1070, 45 S.Ct. 571 (1925).

This is also an area in which courts may defer to the legislature. In State v. Rivinius, 328 N.W.2d 220, 231 (N.D. 1982), the Supreme Court of North Dakota, after approving a teacher certification requirement, indicated that "[w]e are not implying or intimating that the legislature may not work out a system that will be satisfactory to both sides -- meaning the state and the defendants -- and still accomplish the constitutional mandate." See also West Virginia State Board of Education v. Barnette, 319 U.S. 624, 638, 87 L.Ed. 1628, 63 S.Ct. 1178 (1943).

Because the United States Supreme Court has yet to resolve some of these issues, we cannot state with certainty that SCS CSHB 357(Rls) am S provides protections to religious schools beyond those which are constitutionally required. However, since it precludes various means of regulation which, at least for elementary and secondary schools, have been approved by lower courts, we believe this result to be likely. If this is true, the legislation would fall on equal protection grounds unless other reasons based on actual differences between the two categories of private schools could be found to support it. In addition, it would be subject to challenge as an aid to religion under the establishment clauses of the state and federal constitutions.

It is noteworthy that present regulatory requirements of DOE are minimal and that this bill is based on legislation, enacted in North Carolina in 1972, which has not been challenged in court. N.C. Gen. Stat. § 115-257.1, et seq. (Cum. Supp. 1979). We also acknowledge that substantial arguments can be made in its support. See generally "State Regulation of Private Religious Schools in North Carolina -- A Model Approach," 16 Wake Forest Law Review 405 (1980). Accordingly, we do not believe that veto on constitutional grounds is required.

Except as noted, this bill presents no constitutional or other major legal problems. It is possible, however, that problems of statutory interpretation could arise as DOE attempts to exercise its remaining authority in this area.

Sincerely,

Norman C. Gorsuch
Attorney General

MEMORANDUM February 16, 1984

SUBJECT: Sectional analysis of HCS CSSB 354 (Rules)

TO: Representative Mae Tischer
Chairman, House HESS Committee

FROM: Keith B. Levy KBL
Legislative Counsel

You have requested a sectional analysis of HCS CSSB 354 (Rules), "An Act relating to the regulation of private schools." The main thrust of the bill is to allow religious and other private schools to opt out of the general laws and regulations applicable to private schools if they agree to comply with certain minimal requirements.

Section 1 states that the purpose of the bill is to guarantee that the state will not interfere with the constitutional right of freedom of religion while at the same time ensuring the quality of all education in the state and allowing diversity in education by encouraging private education.

Section 2 amends the duties of the Department of Education with respect to private education (AS 14.07.020). It provides that the department will consult with the state fire marshall and the state sanitarian rather than the Department of Health and Social Services on matters of health and safety (AS 14.07.020(7)). It clarifies that the department must require physical examinations and immunizations in pre-elementary schools (AS 14.07.020(7)). Section 2 also provides that the department is no longer responsible for the general supervision of pre-elementary schools and nurseries except for those pre-elementary schools that receive direct state or federal funding. Supervision over public pre-elementary schools will no longer be done in cooperation with the Department of Health and Social Services (AS 14.07.020(8)). Section 2 also makes clear that the department may provide voluntary accreditation for any private school that requests it, although the department is

not authorized to require private schools to be licensed (AS 14.07.020(10)). Finally, section 2 defines "pre-elementary schools" for the purpose of this section (AS 14.07.020(b)).

Section 3 amends the state's compulsory education law (AS 14.30.010) to provide that attendance at a school operating in compliance with AS 14.45 (see section 5, below) satisfies the compulsory education requirements.

Section 4 provides that a private school that does not choose to comply with AS 14.45 (see section 5, below), is not exempt from other laws and regulations relating to education and must make attendance reports in the same manner as public schools.

Section 5 provides the minimum requirements a religious or other private school must meet if it elects to be exempt from other provisions of law and regulations. This exemption is only available to religious and other private schools that do not receive state of federal funding and only applies to compulsory school age children. However, even these schools are subject to laws and regulations relating to physical health, fire safety, sanitation, immunization, and physical examinations (AS 14.45.100).

The parent or guardian of a child of compulsory school age enrolled in an exempt school must file an annual notice of enrollment with the local public school superintendent on a form signed by the school administrator and the parent (AS 14.45.110(a)). The school must notify the local public school superintendent if the child is no longer attending or enrolled in the school. The exempt school must maintain monthly attendance records, operate on a regular schedule of at least 180 days, and report to the commissioner of education annually the number of students enrolled in each grade and the school calendar (AS 14.45.110(b)).

An exempt school must also administer a nationally standardized test to all students in grades four, six, and eight at least once each school year (AS 14.45.120(a)). The test must measure achievement in English grammar, reading, spelling, and mathematics (AS 14.45.120(b)). The school must maintain records of the results of these tests and make them available to the parent or guardian of the student. The school is required to make composite test results available annually to an authorized representative of the

Department of Education, but these results are not public information unless each public school is subject to similar testing requirements, the result of which are also public (AS 14.45.120(c)).

The exempt schools are also required to maintain permanent student records reflecting immunizations, physical examinations, standardized testing, academic achievement, and courses taken at the school. The administrator of the school must certify under oath or by affirmation to the Department of Education that these records are being maintained (AS 14.45.130). Finally, "religious school," as used in these sections, is defined as a private school operated by a church or other religious organization that does not receive direct state or federal funding (AS 14.45.140), and "private school" is defined as any school that does not receive direct state or federal funding.

It should be kept in mind that these provisions are not mandatory unless the private school chooses to exempt itself from other laws and regulations relating to education. Also, this option is available to all private schools, religious and otherwise.

LEGISLATIVE AFFAIRS AGENCY

MEMORANDUM February 11, 1984

SUBJECT: Health and safety regulation of private pre-elementary schools (HCS CSSB 354 (Rules))

TO: Representative Mae Tischer
Chairman, House HESS Committee

FROM: Keith B. Levy
Legislative Counsel

You have requested an opinion on the implication of HCS CSSB 354 (Rules) with respect to health and safety regulation of private pre-elementary schools. The bill, while removing the supervision of private pre-elementary schools from the Department of Education, in no way removes the power of the Department of Public Safety to regulate these schools with respect to fire safety or the Department of Health and Social Services to regulate with respect to health standards. In fact, several sections in the bill as well as other provisions of law make it clear that private pre-elementary schools may be regulated with respect to health and safety.

To begin with, AS 14.07.020(7), as amended by section 2 of the bill, provides that the Department of Education shall:

> prescribe by regulation, after consultation with the state fire marshal and the state sanitarian, standards that will assure healthful and safe conditions in the public and private schools of the state including a requirement of physical examinations and immunizations in pre-elementary schools.

That section applies general health and safety standards to all the public and private schools in the state, including the pre-elementary schools. It also imposes a specific requirement of physical examinations and immunizations on pre-elementary schools. In other words, all pre-elementary

schools are subject to health and safety regulations generally under the bill.

Moreover, Title 18 of the Alaska Statutes sets out provisions for health and safety, all of which, if appropriate, apply to pre-elementary schools unless some specific exemption exists. There is no such exemption in HCS CSSB 354 (Rules). Specifically, AS 18.70.080 provides for the Department of Public Safety to adopt regulations for fire safety applicable to all public buildings. "Buildings" is defined very broadly in AS 18.70.300 and would clearly apply to pre-elementary schools.

In conclusion, HCS CSSB 354 (Rules), while providing that private pre-elementary schools are no longer subject to general regulation by the Department of Education, has no effect on the ability of that department and other departments to regulate these schools with respect to health and safety.

LEGISLATIVE AFFAIRS AGENCY

MEMORANDUM February 16, 1984

SUBJECT: Regulation of private schools: comparison of HCS CSSB 354 (Rules) with CSSB 354 (Jud) am

TO: Representative Mae Tischer
Chairman, Health, Education, and
Social Services Committee

FROM: Keith B. Levy KBL
Legislative Counsel

You have requested a comparison of CSSB 354 (Jud)am, the Senate version, with HCS CSSB 354 (Rules), the House version of an act relating to the regulation of private schools. The House and Senate versions are essentially the same, with only a few substantive differences. The two bills differ as follows:

(1) In the Senate version, AS 14.07.020(7) is amended to clarify the fact that the Department of Education may regulate health and safety standards in all public and private schools, including certain specific requirements in "private pre-elementary" schools. In the House version, the word "private" is removed. This is merely a technical change since under either version the department would have this power with respect to both public and private pre-elementary schools. In other words, it does not alter the department's statutory powers in this regard.

(2) The Senate version amends AS 14.07.020(8) to provide that the Department of Education has general supervision over public pre-elementary schools and those private pre-elementary schools "that are not in facilities associated with an elementary school that operates grades one through three." The House version differs in that it gives this general supervisory power to the department only with respect to pre-elementary

schools "that receive direct state or federal funding." In other words, the House version limits the department's general supervisory powers to public pre-elementary schools, and any pre-elementary school that receives money from the state or federal government.

(3) The House version removes the definition of "pre-elementary school" from AS 14.07.020(8) and places it in a new subsection (b), having the effect of applying the definition to the entire section. This is not a substantive change, but merely clarifies the fact that the definition applies throughout AS 14.07.020.

(4) The Senate version provides that the exemption provided for in AS 14.45, added by the bill, does not apply to "a facility which serves children under the age of six years and which receives state payments or subsidies" (AS 14.45.100). That sentence was removed from the House version. For several reasons, however, that sentence had no real substantive effect. To begin with, the exemption provided for in AS 14.45.100 applies only to children of compulsory school age, i.e., from 7 to 16 years of age (see AS 14.45.110). Thus, the exemption could not apply to children under the age of six. Moreover, the House version adds a definition of "private school" under AS 14.45, indicating that a private school is one that does not receive direct state or federal funding (AS 14.45.140(1)). Thus, the exemption could not apply to a school that receives government money anyway. Therefore, the removal of the second sentence of AS 14.45.100 in the House version has no substantive effect with respect to the Senate version.

(5) The Senate version requires standardized testing of certain schools for students enrolled in grades two, four, six, and ten (AS 14.45.120(a)). The House version changes the requirement to apply to students in grades four, six, and eight.

(6) The Senate version requires the chief administrative officer of certain private schools to certify that records are being maintained. The House version makes clear that this certification must be made to the Department of Education.

KBL:ojb
J3/102

Effect of amendments. — The 1979 amendment substituted "or offense specified in AS 18.67.101" for "specified in AS 18.67.100" in paragraph (5).

Chapter 70. Fire Protection.

Article
1. Prevention and Investigation (§§ 18.70.010 — 18.70.100)

Police power as authorizing statute imposing upon owner or occupant liability for expense of fighting fire starting on his land or property. 90 A.L.R.2d 876.

Liability of one negligently causing fire for injuries sustained by person other than firefighter in attempt to control fire or to save life or property. 91 A.L.R.3d 1202.

Sec. 18.70.010. General function of Department of Public Safety with respect to fire protection. The Department of Public Safety shall foster, promote, regulate, and develop ways and means of protecting life and property against fire, explosion, and panic. (§ 1 ch 66 SLA 1955)

NOTES TO DECISIONS

Common-law duty to take action concerning fire hazards after inspection. — Whether or not the state had a statutory duty to take action concerning hazards discovered at a hotel, where the state fire officials undertook to inspect a hotel for fire hazards, and in doing so they discovered a series of conditions constituting an "extreme life hazard," and there was evidence that they discussed some of these hazards with the manager of the hotel, promised him a more formal notification of fire code violations, and took no further action, the state fire officials had a duty to proceed further with regard to the recognized hazards, since the state assumed a common-law duty, owed to the victims of the fire, by its affirmative conduct. Adams v. State, Sup. Ct. Op. No. 1318 (File No. 2326), 555 P.2d 235 (1976).

Where the state had not undertaken to inspect a hotel and eliminate the fire hazards, it did not assume any common law duty. State v. Jennings, Sup. Ct. Op. No. 1319 (File Nos. 2322, 2423), 555 P.2d 248 (1976).

Duty to exercise reasonable care in conducting inspections. — Once an inspection has been undertaken the state has a further duty to exercise reasonable care in conducting fire safety inspections, and liability will attach where there is a negligent failure to discover fire hazards which would be brought to light by an inspection conducted with ordinary care. Adams v. State, Sup. Ct. Op. No. 1318 (File No. 2326), 555 P.2d 235 (1976).

What constitutes reasonable care will vary with the circumstances and hazards involved. Adams v. State, Sup. Ct. Op. No. 1318 (File No. 2326), 555 P.2d 235 (1976).

Sec. 18.70.020. Duties of Department of Public Safety. The Department of Public Safety shall aid in the enforcement of all laws and ordinances and the rules and regulations adopted under AS 18.70.010 — 18.70.100 and all other laws relating to fires or to fire prevention and protection, and shall encourage the adoption of fire prevention measures by means of education, and shall prepare or have prepared for dissemination information relating to the subject of fire prevention and extinguishment. (§ 2 ch 66 SLA 1955)

NOTES TO DECISIONS

Common-law duty to take action concerning fire hazards after inspection. — *See* note to AS 18.70.010.

Adams v. State, Sup. Ct. Op. No. 1318 (File No. 2326), 555 P.2d 235 (1976).

Sec. 18.70.030. Investigation of fires resulting from crime. If there is reason to believe that a fire has resulted from crime or that a crime has been committed in connection with a fire, the Department of Public Safety shall report that fact in writing to the district attorney of the judicial district in which the fire occurred. If the fire occurred in an incorporated city with a regularly organized fire department, the investigation and report shall be made in conjunction with the fire official of that area. (§ 3 ch 66 SLA 1955)

Sec. 18.70.040. Cooperation with fire insurance companies. The Department of Public Safety may assist, receive assistance from, and otherwise cooperate with an investigator or agent employed by a fire insurance company licensed to do business in the state, or with an investigator or agent employed by an association of insurance companies licensed to do business in the state. (§ 4 ch 66 SLA 1955)

Sec. 18.70.050. Power of department to inspect buildings. The Department of Public Safety may enter any building subject to regulation under AS 18.70.080 during reasonable hours for the sole purpose of inspecting the property or abating a fire hazard. (§ 5 ch 66 SLA 1955; am § 3 ch 176 SLA 1968)

NOTES TO DECISIONS

Purpose of fire inspection is to protect life and property from fire. Adams v. State, Sup. Ct. Op. No. 1318 (File No. 2326), 555 P.2d 235 (1976).

Common-law duty to take action concerning fire hazards after inspection. — See note to AS 18.70.010. Adams v. State, Sup. Ct. Op. No. 1318 (File No. 2326), 555 P.2d 235 (1976).

Fire inspector must obtain warrant. — Defendant could not be prosecuted for exercising his constitutional right to insist that the fire inspector obtain a warrant authorizing entry upon defendant's locked warehouse. See v. City of Seattle, 387 U.S. 541, 87 S. Ct. 1737, 18 L. Ed. 2d 943 (1967).

Sec. 18.70.060. Removal of property from fire. During a fire and in the absence of the owner or claimant, the Department of Public Safety may protect personal property affected by removing it. If the owner or claimant does not take charge of the property within 24 hours the Department of Public Safety may store it at the owner's or claimant's expense. (§ 1 ch 66 SLA 1955)

Sec. 18.70.070. Abatement of fire hazards. The Department of Public Safety may require the owner of a commercial business or public property to abate a fire hazard which exists in violation of law or regulations, and the Department of Public Safety may take appropriate action to assure such abatement. (§ 7 ch 66 SLA 1955)

NOTES TO DECISIONS

Common-law duty to take action concerning fire hazards after inspection. — See note to AS 18.70.010. Adams v. State, Sup. Ct. Op. No. 1318 (File No. 2326), 555 P.2d 235 (1976).

Sec. 18.70.075. Authority of municipal fire department officers and their personnel. (a) An officer of a municipal fire department or his authorized representative, while providing fire protection services, has the authority to

(1) control and direct activities at the fire;

(2) order a person to leave a building or place in the vicinity of the fire, for the purpose of protecting the person from injury;

(3) blockade a public highway, street, or private right-of-way temporarily while at a fire;

(4) trespass upon property at or near the scene of a fire at any time of the day or night;

(5) enter a building, including a private dwelling, or upon premises where a fire is in progress, or where there is reasonable cause to believe a fire is in progress, for the purpose of extinguishing the fire;

(6) enter a building, including a private dwelling, or premises near the scene of the fire for the purpose of protecting the building or premises or for the purpose of extinguishing the fire which is in progress in another building or premises;

(7) upon 24-hour notice to the owner or occupant, inspect for preplanning all buildings, structures, or other places within the municipality, except the interior of a private dwelling, where combustible material is or may become dangerous as a fire menace to the building;

(8) direct the removal or destruction of a fence, house, motor vehicle, or other thing which he may judge necessary to remove or destroy to prevent the further spread of the fire.

(b) An owner or occupant of a building or place specified in this section or any other person on the site of a fire or other emergency who refuses to obey the order of an officer of a municipal fire department or his authorized representative in the exercise of his official duties is guilty of a misdemeanor, and upon conviction, is punishable by imprisonment for one year, or by a fine of not more than $1,000, or by both.

(c) In this section, "inspect for preplanning" means to conduct limited inspections for purposes of preparing a fire attack plan in the event of a future emergency, but does not include inspections for purposes of determining compliance with statutory or municipal fire code requirements. (§ 2 ch 215 SLA 1975)

Sec. 18.70.080. Regulations. The Department of Public Safety shall adopt rules and regulations for the purpose of protecting life and property from fire and explosion by establishing minimum standards for

(1) fire detection and suppression equipment;

(2) fire and life safety criteria in commercial, industrial, business, institutional or other public building, and buildings used for residential purposes containing four or more dwelling units;

(3) any activity in which combustible or explosive materials are stored or handled in commercial quantities;

(4) conditions or activities carried on outside a building described in (2) or (3) of this section likely to cause injury to persons or property. (§ 8 ch 66 SLA 1955; am §§ 1, 2 ch 176 SLA 1968; am § 1 ch 23 SLA 1971)

NOTES TO DECISIONS

Common-law duty to take action concerning fire hazards after inspection. — See note to AS 18.70.010. Adams v. State, Sup. Ct. Op. No. 1318 (File No. 2326), 555 P.2d 235 (1976).

Sec. 18.70.081. Approval of fire protection systems. Before October 30 of each year the Department of Public Safety shall prepare and make available a list of approved fire protection systems to the Department of Community and Regional Affairs, the Department of Commerce and Economic Development, and the public. (§ 1 ch 46 SLA 1980)

Sec. 18.70.082. Remote housing facilities. Any construction camp, logging camp, cannery, or oil or mining camp that has buildings not in a fire department service area in which persons are housed in dormitories or similar facilities shall be equipped with an automatic fire detection system in that portion of the building used for living or sleeping purposes. In this chapter an automatic fire detection system means a type of automatic fire detection system approved by the state fire marshal. (§ 1 ch 65 SLA 1970)

Sec. 18.70.084. Standard fire hose and hydrant threads required. All fire protection equipment to be purchased by state and municipal authorities, or any other authority having charge of public property, shall be equipped with national standard fire hose threads for fire hose couplings and hydrant fittings as adopted by the state fire marshal under AS 18.70.080. (§ 1 ch 48 SLA 1970)

Sec. 18.70.085. Sale of nonstandard equipment. No person may sell or offer for sale in Alaska any fire engine, fire hose, hydrant, or other equipment for fire protection purposes unless the equipment is fitted and equipped according to minimum standards adopted by the state fire marshal under AS 18.70.080. Fire equipment for special purposes or research programs, or special features of fire protection equipment found appropriate for uniformity within a particular protection area, may be exempted from this requirement by the state fire marshal. (§ 1 ch 48 SLA 1970)

Sec. 18.70.090. Enforcement of regulations. The Department of Public Safety and the chief of each city fire department and their authorized representatives in their respective areas may enforce the regulations adopted by the Department of Public Safety for the prevention of fire or for the protection of life and property against fire or panic. All state peace officers may assist the Department of Public Safety in the enforcement of AS 18.70.010 — 18.70.100 and the regulations adopted under it. The authority conferred in AS 18.70.010 — 18.70.100 extends to the enforcement of the provisions of AS 11.46.400 — 11.46.430. (§ 9 ch 66 SLA 1955; am § 8 ch 117 SLA 1968; am § 20 ch 166 SLA 1978)

Effect of amendments. — The 1978 amendment deleted "rules and" preceding "regulations" in the first and second sentences and substituted "AS 11.46.400 — 11.46.430" for "AS 11.20.010 — 11.20.050, and 11.20.070" at the end of the third sentence.

NOTES TO DECISIONS

City fire chief can enforce standards without delegation by state fire marshal. — The language of this section would indicate that the fire chief in each city can enforce state fire standards independently of any delegation by the state fire marshal's office. State v. Jennings, Sup. Ct. Op. No. 1319 (File Nos. 2322, 2420, 555 P.2d 248 (1976).

State not liable for city's negligence. — Where the state fire marshal's office, in accordance with its policy, had deferred to the city's fire prevention agency for the purposes of fire prevention and inspection within the city limits, and, thus, the state fire marshal referred complaints about the hotel to the city fire marshal for action; and the city conducted inspection and initiated enforcement, there is no principal-agent relationship between the state and the city which would justify holding the state vicariously liable for the city's negligence. State v. Jennings, Sup. Ct. Op. No. 1319 (File Nos. 2322, 2420, 555 P.2d 248 (1976).

Common-law duty to take action concerning fire hazards after inspection. — See note to AS 18.70.010. Adams v. State, Sup. Ct. Op. No. 1318 (File No. 2326), 555 P.2d 245 (1976).

Collateral references. — Power to require closing of place of amusement or other place of public assembly because of fire hazard or unsanitary conditions. 140 A.L.R. 1048.

Destruction of building in emergency. 14 A.L.R.2d 78.

Sec. 18.70.095. Smoke detection devices. Smoke detection devices shall be installed in all living units built, manufactured or sold in the state. The devices shall be of a type and deployed in a manner approved by the state fire marshal. (§ 1 ch 148 SLA 1975)

NOTES TO DECISIONS

Applied in Northern Lights Motel, Inc. v. Sweeney, Sup. Ct. Op. No. 1386 (File No. 2476), 561 P.2d 1176, aff'd on rehearing, 563 P.2d 256 (1977).

Sec. 18.70.100. Violation. (a) A person who violates any provision of AS 18.70.010 — 18.70.100 or the published rules and regulations or orders adopted under it from which no appeal has been taken within 30 days after the issuance of a final order is, severally, for each violation, guilty of a misdemeanor, and is punishable by a fine of not more than $500, or by imprisonment for not more than six months, or by both. A person aggrieved by a final order of the Department of Public Safety may appeal to the superior court within 30 days after the issuance of the order. The imposition of one penalty for a violation does not excuse the violation and a person guilty of a violation shall correct the violation within a reasonable time. When not otherwise specified, each 10 days that a prohibited condition is maintained is a separate offense.

(b) The application of the penalty prescribed in (a) of this section does not prevent the Department of Public Safety from enforcing the removal of the prohibited conditions. (§ 10 ch 66 SLA 1955; added by § 1 ch 113 SLA 1957)

Collateral references. — Giving false fire alarm by telephone as minor criminal offense. 97 A.L.R.2d 510.

Article 2. Fire Escapes.

Section
110—140 [Repealed]

Secs. 18.70.110 — 18.70.140.

Repealed by § 2 ch 23 SLA 1971.

Editor's notes. — The repealed article derived from § 40-4-1, ACLA 1949 to § 40-4-3, ACLA 1949; § 40-4-6, ACLA 1949.

Article 3. Mutual Fire Aid Agreements.

Section
150 Adoption of mutual fire aid agreements
160 Agreement not to affect insurance rates or liability

Collateral references. — 35 Am. Jur. 2d, Fires, §§ 1-4.

36A C.J.S., Fires, §§ 15, 16

Constitutionality of statute or ordinance requiring proprietor of place of amusement to furnish fire or police protection at his own expense. 8 A.L.R. 1628.

Fire department as pertaining to the governmental or to the proprietary branch of municipality. 9 A.L.R. 143; 33 A.L.R. 688; 84 A.L.R. 614.

Statute relating to municipal fire departments as interference with local self government. 100 A.L.R. 1076; 141 A.L.R. 903.

Police power as authorizing statute imposing upon owner or occupant liability for expense of fighting fire starting on his land or property. 90 A.L.R.2d 875.

Sec. 18.70.150. Adoption of mutual fire aid agreements. A city, other incorporated entity, and other fire protection groups may organize a mutual-aid program by adopting an ordinance or resolution authorizing and permitting their fire department, fire company, emergency relief squad, fire police squad or fire patrol to go to the aid of another city, incorporated entity, or fire protection group, or territory outside of it. While extending aid under AS 18.70.150 and 18.70.160 the fire department, company, squad, or patrol has the same privileges and immunities it possesses when it performs the same functions in its own area. The ordinance or resolution may authorize the heads of the fire department to extend aid, subject to conditions and restrictions prescribed in the ordinance or resolution. (§ 1 ch 92 SLA 1957)

NOTES TO DECISIONS

This section represents an erroneous belief that cities are not liable in tort for negligence connected with fire-fighting activities. City of Fairbanks v. Schaible, Sup. Ct. Op. No. 97 (File Nos. 112, 113), 375 P.2d 201 (1962).

As a city which maintains a fire department may be held liable for injuries resulting from negligence connected with the department's firefighting activities. City of Fairbanks v. Schaible, Sup. Ct. Op. No. 97 (File Nos. 112, 113), 375 P.2d 201 (1962). See contra: City of Fairbanks v. Gillettson, 16 Alaska 590 (1957), aff'd, 262 F.2d 734 (9th Cir. 1959), where § 56-2-2 ACLA 1949 (now AS 09.65.070) was ignored by both the district court and the Court of Appeals.

Collateral references. — Fire departments as pertaining to the governmental or to the proprietary branch of municipality. 9 A.L.R. 143; 33 A.L.R. 688; 84 A.L.R. 614.

Sec. 18.70.160. Agreement not to affect insurance rates or liability. An agreement made under AS 18.70.150 and 18.70.160 shall be carried out in a manner which does not raise insurance rates. An agreement may not reduce the liability of an insurance company in case of loss during the absence of men and equipment. (§ 1 ch 92 SLA 1957)

Article 4. General Provisions.

Section
300 Definition of building

Sec. 18.70.300. Definition of building. In this chapter "building" means a structure, installation, facility, or edifice erected or in the process of being erected and which is used or intended for use as a commercial, industrial, business, institutional, other public building, or residential building containing four or more dwelling units. (§ 4 ch 176 SLA 1968; am § 27 ch 32 SLA 1971)

Revisor's notes. — In ch. 176, SLA 1968, this section was numbered 18.70.165.

Chapter 72. State Regulation of Fireworks.

Section
10 Regulation of sale of dangerous fireworks
20 Regulation of sale of salable fireworks
30 Fireworks wholesaler's license
40 Violation

Modern status of doctrine of sovereign immunity as applied to public schools and institutions of higher learning. 33 ALR3d 703.

Sec. 14.07.010. Department of Education. The Department of Education includes the commissioner of education, the state Board of Education, and the staff necessary to carry out the functions of the department. (§ 1 ch 98 SLA 1966)

NOTES TO DECISIONS

Quoted in Begich v. Jefferson, Sup. Ct. Op. No. 481 (File No. 894), 441 P.2d 27 (1968).

Cited in Tunley v. Municipality of Anchorage School Dist., Sup. Ct. Op. No. 2160 (File Nos. 4796, 4797, 4826), 617 P.2d 490 (1980).

Sec. 14.07.020. Duties of the department. The department shall

(1) exercise general supervision over the public schools of the state except the University of Alaska;

(2) study the conditions and needs of the public schools of the state and adopt or recommend plans for the improvement of the public schools;

(3) provide advisory and consultative services to all public school governing bodies and personnel;

(4) prescribe by regulation a minimum course of study for the public schools;

(5) establish, in coordination with the Department of Health and Social Services, a program for the continuing education of children who are held in detention facilities in the state during the period of detention;

(6) accredit those public schools which meet accreditation standards prescribed by regulation by the department; these regulations shall be adopted by the department and presented to the legislature during the first 10 days of any regular session, and become effective 45 days after presentation or at the end of the session, whichever is earlier, unless disapproved by a resolution concurred in by a majority of the members of each house;

(7) prescribe by regulation, after consultation with the Department of Health and Social Services, standards that will assure healthful and safe conditions in the public and private schools of the state; the standards for private schools may not be more stringent than those for public schools;

(8) in cooperation with the Department of Health and Social Services, exercise general supervision over public and private pre-elementary schools and over the educational component of nurseries as defined in AS 47.35.080(4); pre-elementary schools in this paragraph means schools for children ages three through five years when the schools' primary function is educational;

(9) provide accredited elementary and secondary correspondence study programs available to any Alaskan through a centralized office of correspondence study;

(10) accredit private elementary and secondary schools which request accreditation and which meet accreditation standards prescribed by regulation by the department;

(11) review plans for construction of new public elementary and secondary schools and for additions to and major rehabilitation of existing public elementary and secondary schools and, in accordance with regulations adopted by the department, determine and approve the extent of eligibility for state aid of a school construction project begun after July 1, 1978; for the purposes of this paragraph, "plans" include educational specifications, schematic designs, and final contract documents;

(12) provide educational opportunities in the areas of vocational education and training, basic education, and fire-service training to individuals over 16 years of age who are no longer attending school;

(13) administer the grants awarded under AS 14.11.020. (§ 1 ch 98 SLA 1966; am § 2 ch 69 SLA 1971; am § 6 ch 104 SLA 1971; am § 1 ch 190 SLA 1975; am § 6 ch 50 SLA 1977; am §§ 1-3 ch 126 SLA 1978; am § 10 ch 147 SLA 1978; am § 1 ch 86 SLA 1979; am § 24 ch 59 SLA 1982; §§ 1, 2 ch 92 SLA 1982)

Revisor's notes. — A reference to AS 14.11.020 was substituted for a reference to AS 14.07.190 in paragraph (13) by the revisor of statutes under AS 01.05.031 to conform to the renumbering of that section.

Effect of amendments. — The first 1978 amendment deleted "private, and denominational" preceding "schools" near the beginning of paragraph (6), inserted "and private" preceding "schools" in paragraph (7), added the langunge beginning "the standards for private schools" to the end of paragraph (7), and added paragraph (10).

The second 1978 amendment added paragraph (11).

The 1979 amendment added paragraph (12).

The first 1982 amendment substituted "of" for "and" preceding "new public elementary" in paragraph (11).

The second 1982 amendment substituted "'plans' include" for "a 'plan' includes" in paragraph (11), inserted "and approve" and "the" preceding "purposes of this paragraph" in that same paragraph, and added paragraph (13).

DEPARTMENT OF LAW

OFFICE OF THE ATTORNEY GENERAL

February 6, 1984

The Honorable Mae Tischer
Alaska State House
Pouch V
Juneau, AK 99811

Re: HCS CSSB 354 (HESS)

Dear Representative Tischer:

You have asked whether HCS CSSB 354 (HESS) presents legal problems.

The line between legal issues and policy issues is often unclear in controversial areas of the law. We have reviewed HCS CSSB 354 (HESS) with an eye toward the former. Accordingly, we express no view on the overall wisdom of this legislation.

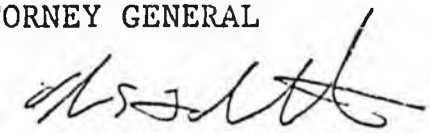
HCS CSSB 354 (HESS) is structurally similar to CSHB 514 (HESS) which we addressed in our letter to you of January 23, 1984. Each bill avoids the equal protection problems which we identified during our review of SCS CSHB 357 (RIs) am S.

Although we believe that HCS CSSB 354 (HESS) presents no significant constitutional problems, there are at least two questions of statutory interpretation which could arise as this legislation is implemented.

The first question is whether the definition of pre-elementary school contained in proposed AS 14.07.020(8) adequately distinguishes between pre-elementary education and child care. We are informed that these categories are factually very similar. Child care is subject to regulation by the Department of Health and Social Services under AS 47.35.

The second question concerns the meaning of the second sentence of proposed AS 14.45.100. This sentence states that certain private pre-elementary schools are not eligible for the general exemption from state regulation contained in the first sentence of AS 14.45.100. However, this exception appears to be

superfluous since, as a result of changes made in AS 14.07.020, regulation of private pre-elementary schools would be limited to health and safety matters which the first sentence of AS 14.45.100 does not affect.



It appears that the second sentence of proposed AS 14.45.100 is intended, in part, to assure that the exemption is not available to private schools which receive public funds. If this is the case, an issue arises as to why it is limited to facilities which serve children under six years of age. We suggest that you consider deleting the phrase "which serves children under the age of six years and" or, alternatively, deleting this sentence in its entirety and adding to proposed AS 14.45.140 a definition of "private school" which addresses this issue.

We note that the addition of a definition of "private school" to AS 14.45.140 could also be used to limit coverage of AS 14.45 to elementary and secondary schools. This seems to be the intent of language which was added to proposed AS 14.45.110(a), the effect of which is limited to that subsection. As we have indicated, coverage of pre-elementary schools seems unnecessary since agency authority to regulate them is restricted by changes made in proposed AS 14.07.020.

We have previously discussed each of these questions with your staff. If you have additional questions, please do not hesitate to contact this office.

Very truly yours,

NORMAN C. GORSUCH
ATTORNEY GENERAL

House of Representatives
HEALTH, EDUCATION AND SOCIAL SERVICES COMMITTEE

MEMORANDUM

TO: Representative Mae Tischer
FROM: Bill Lovell, Staff
DATE: February 20, 1984

RE: Comparison of HCS CSSB 354 (HESS) and HCS CSSB 354 (Rules)

I have prepared the following comparison of the HESS Committee version and the Rules Committee version of a House Committee Substitute for Committee Substitute for Senate Bill 354, "[a]n Act relating to the regulation of private schools."

Section 1 of the House Rules Committee Substitute contains no variations from the House HESS version.

Section 2 of the House Rules Committee Substitute contains six variations from the House HESS version. On the page and line(s) indicated, the House Rules Committee Substitute makes the following changes:

Page 1, line 22, creates a new subsection (a), including language currently in AS 14.07.020, except for the repositioning of the definition of "pre-elementary schools" and other changes indicated below. This change is only technical, allowing the definition of "pre-elementary schools" to be included in a new subsection (b) described below.

Page 2, line 19, deletes "private" before the phrase "pre-elementary schools" on lines 19 and 20. This change is basically technical. Since the law already mandates that standards for private schools may not be more stringent than those for public schools, it follows that similar physical examinations and immunizations must be required of both public and private pre-elementary schools. Deleting the word "private," as indicated above, clarifies this intent.

Page 2, line 23, deletes "public" after the phrase "supervision over." This change becomes basically technical when taken in conjunction with the next change in this paragraph as explained on page 2 of this analysis.

Page 2, line 24, inserts "that receive direct state or federal funding" after the phrase "pre-elementary schools." This change extends Department of Education supervisory authority to include, not only public pre-elementary schools, but all pre-elementary schools, public or private, that receive any direct state or federal funding.

Page 2, lines 26 - 28, deletes the definition of "pre-elementary schools." This definition is contained substantively in the new subsection (b) below.

Page 3, lines 21 - 23, creates a new subsection (b) that includes the definition of "pre-elementary schools" previously contained substantively in AS 14.07.020 (8), except that the definition in (b) now applies to all of AS 14.07.020, where it had previously applied only to paragraph (8).

Section 3 of the House Rules Committee Substitute contains no variations from the House HESS version.

Section 4 of the House Rules Committee Substitute contains no variations from the House HESS version.

Section 5 of the House Rules Committee Substitute contains two variations from the House HESS version. On the page and line(s) indicated, the House Rules Committee Substitute makes the following changes:

Page 5, line 25, deletes "A facility that serves children under the age of six years and receives state payments is not eligible for the exemption provided by this section." In his review of the House HESS Committee Substitute for CSSB 354, Assistant Attorney General Rick Robertson advised that the sentence indicated above was ambiguous and should be substantively modified, or deleted with subsequent changes to other related sections of the bill. Briefly, Mr. Robertson noted that the bill did not at that time authorize the Department of Education to supervise any private pre-elementary schools, beyond basic health and safety; therefore, there were no regulations from which private pre-elementary schools could be exempt. The Rules Committee Substitute deletes the indicated statement; adds a new definition of private schools which prohibits exemption by pre-elementary schools that receive direct state or federal funding; and explicitly extends Department of Education authority to include pre-elementary schools that receive direct state or federal funding.

Page 7, lines 18 - 19, inserts a definition of "private school"

for these sections. This definition effectively prohibits a school that receives any direct state or federal funding from being exempt from Department of Education regulation. The addition of this definition requires the drafter to put the definition of "private school" into a new paragraph (1) and the definition of "religious school," also contained in the House HESS version, into a new paragraph (2).

A copy of the Rules Committee Substitute with highlighted changes is being provided to each interested member of the House.

MEMORANDUM

TO: Representative Mae Tischer
FROM: Bill Lovell, Staff
DATE: February 20, 1984

RE: Analysis of HCS CSSB 354 (Rules)

I have worked with Keith Levy of the Division of Legal Services to prepare the following analysis of the House Rules Committee Substitute for Committee Substitute for Senate Bill 354, "[a]n Act relating to the regulation of private schools."

Section 1 states that the purpose of the bill is to guarantee that the state will not interfere with the constitutional right of freedom of religion or with the right of parents to choose to have their children attend private schools while at the same time ensuring the quality of all education in the state and encouraging diversity in education.

Section 2 amends the duties of the Department of Education with respect to private education (AS 14.07.020). The bill creates a new subsection (a) in the law, including language currently in AS 14.07.020, except for the repositioning of the definition of "pre-elementary schools" and other changes indicated below. New language provides that the department will consult with the state fire marshal and the state sanitarian rather than the Department of Health and Social Services on matters of health and safety (AS 14.07.020(7)). It states that the department must require physical examinations and immunizations in pre-elementary schools (AS 14.07.020(7)). Section 2 also provides that the department is authorized to supervision only those pre-elementary schools which receive direct state or federal funding. Supervision of pre-elementary schools will no longer be done in cooperation with the Department of Health and Social Services (AS 14.07.020(8)). Finally, section 2 makes clear that the department may provide voluntary accreditation for any private school that requests it, although the department is not authorized to require private schools to be licensed (AS 14.07.020(10)). A new subsection (b) defines pre-elementary schools, as used in this section, as schools for children ages three through five years when the schools are primarily educational in purpose.

Section 3 amends the state's compulsory education law (AS 14.30.010) to provide that attendance at a school operating in compliance with AS

14.45 (see section 5 below) satisfies compulsory attendance requirements.

Section 4 provides that a private school that does not choose to comply with AS 14.45 (see section 5, below), is not exempt from other laws and regulations relating to education and must make attendance reports in the same manner as public schools.

Section 5 provides the minimum requirements a religious or other private school must meet if it elects to be exempt from other provisions of law and regulations. However, even these schools are subject to laws and regulations relating to physical health, fire safety, sanitation, immunization, and physical examinations (AS 14.45.100).

The parent or guardian of a child of compulsory school age enrolled in an exempt school must file an annual notice of enrollment with the local public school superintendent on a form signed by the school administrator and the parent (AS 14.45.110(a)). The school must notify the local public school superintendent if the child is no longer attending or enrolled in the school. The exempt school must maintain monthly attendance records, operate on a regular schedule of at least 180 days, and report to the commissioner of education annually the school calendar and the number of students enrolled in each grade (AS 14.45.110(b)).

An exempt school must also administer a nationally standardized test to all students in grades four, six, and eight at least once each school year (AS 14.45.120(a)). The test must measure achievement in English grammar, reading, spelling, and mathematics (AS 14.45.120(b)). The school must maintain records of the results of these tests and make them available to the tested student's parent or guardian. The school is required to make composite test results available annually to an authorized representative of the Department of Education, but these results are not public information unless each public school is subject to similar testing requirements, the results of which are also public information (AS 14.45.120(c)).

The exempt schools are also required to maintain permanent student records reflecting immunizations, physical examinations, standardized testing, academic achievement, and courses taken at the school. The administrator of the school must certify to the department, under oath or affirmation, that these records are being maintained (AS 14.45.130). "Private school," as used in these sections, is defined as a school that does not receive direct state or federal funding. (AS 14.45.140 (1)). Finally, "religious school," as used in these sections, is defined as a private school operated by a church or other religious organization that does not receive direct state or federal funding (AS 14.45.140(2)).

It should be kept in mind that these provisions are not mandatory unless

the private school chooses to exempt itself from other laws and regulations relating to education. Also, this option is available to all private schools, religious and otherwise.

IN THE HOUSE BY TISCHER

HOUSE BILL NO.

IN THE LEGISLATURE OF THE STATE OF ALASKA

THIRTEENTH LEGISLATURE - SECOND SESSION

A BILL

For an Act entitled: "An Act relating to the regulation of private schools." Purpose clause here

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 14.07.020 is amended to read:

Sec. 14.07.020. DUTIES OF THE DEPARTMENT. The department shall

(1) exercise general supervision over the public schools of the state except the University of Alaska;

(2) study the conditions and needs of the public schools of the state and adopt or recommend plans for the improvement of the public schools;

(3) provide advisory and consultative services to all public school governing bodies and personnel;

(4) prescribe by regulation a minimum course of study for the public schools;

(5) establish, in coordination with the Department of Health and Social Services, a program for the continuing education of children who are held in detention facilities in the state during the period of detention;

(6) accredit those public schools which meet accreditation standards prescribed by regulation by the department; these regulations shall be adopted by the department and presented to the legislature during the first 10 days of any regular session, and become effective 45 days after presentation or at the end of the session, whichever is earlier, unless disapproved by a resolution concurred in

by a majority of the members of each house;

(7) prescribe by regulation, after consultation with the state fire marshal and the state sanitarian [DEPARTMENT OF HEALTH AND SOCIAL SERVICES], standards that will assure healthful and safe conditions in the public and private schools of the state; the standards for private schools may not be more stringent than those for public schools;

(8) [IN COOPERATION WITH THE DEPARTMENT OF HEALTH AND SOCIAL SERVICES,] exercise general supervision over public [AND PRIVATE] pre-elementary schools [AND OVER THE EDUCATIONAL COMPONENT OF NURSERIES AS DEFINED IN AS 47.35.080(4)]; pre-elementary schools in this section [PARAGRAPH] means schools for children ages three through five years when the schools' primary function is educational;

(9) provide accredited elementary and secondary correspondence study programs available to any Alaskan through a centralized office of correspondence study;

(10) accredit private ~~elementary and secondary~~ schools which request accreditation and which meet accreditation standards prescribed by regulation by the department; nothing in this paragraph authorizes the department to require private ~~sectarian and nonsectarian~~ religious schools to be licensed;

(11) review plans for construction of new public elementary and secondary schools and for additions to and major rehabilitation of existing public elementary and secondary schools and, in accordance with regulations adopted by the department, determine and approve the extent of eligibility for state aid of a school construction project begun after July 1, 1978; for the purposes of this paragraph, "plans" include educational specifications, schematic designs, and final contract documents;

(12) provide educational opportunities in the areas of vocational education and training, basic education, and fire-service training to individuals over 16 years of age who are no longer attending school;

(13) administer the grants awarded under AS 14.11.020;

goes to item (7) (14) require physical examinations and immunizations in private ~~sectarian and nonsectarian~~ pre-elementary schools.

* Sec. 2. AS 14.30.010(b) is amended to read:

(b) This section does not apply if a child

(1) is provided an academic education comparable to that offered by the public schools in the area, either by

(A) attendance at a private school in which the teachers are certificated according to AS 14.20.020;

(B) tutoring by personnel certificated according to AS 14.20.020; [OR]

(C) attendance at a private school in which the average student proficiency is not less than the ~~average~~ proficiency found in the public schools in the area as measured by national achievement tests; the board [DEPARTMENT] with assistance from representatives of the private schools shall adopt [PROMULGATE] regulations defining the subject areas to be tested and the minimum average scores to be achieved; or

Clarify matter (D) attendance at an educational program operated in religious or other compliance with AS 14.45 by a private ~~sectarian or nonsectarian~~ school;

(2) attends a school operated by the federal government;

(3) has a physical or mental condition which a competent medical authority determines will make attendance impractical;

(4) is in the custody of a court or law enforcement

authorities;

(5) is temporarily ill or injured;

(6) has been suspended or denied admittance according to AS 14.30.045;

(7) resides more than two miles from either a public school or a route on which transportation is provided by the school authorities, except that this subsection does not apply if the child resides within two miles of a federal or private school which the child is eligible and able to attend;

(8) is excused by action of the school board of the district at a regular meeting or by the district superintendent subject to approval by the school board of the district at the next regular meeting;

(9) has completed the 12th grade;

(10) is enrolled in a full-time program of correspondence study approved by the department; in those school districts providing an approved correspondence study program, a student may be enrolled either in the district correspondence program or in the centralized correspondence study program;

(11) is equally well-served by an educational experience approved by the school board as serving the child's educational interests despite an absence from school, the request for excuse is made in writing by the child's parents or guardian, and approved by the principal or administrator of the school that the child attends.

* Sec. 3. AS 14.45.030 is amended to read:

Sec. 14.45.030. ATTENDANCE AND ANNUAL REPORTS REQUIRED. (a) Teachers and others in charge of private sectarian ~~or nonsectarian~~ [OR DENOMINATIONAL] schools not operated in compliance with this ~~chapter~~ article are not exempt from laws and regulations relating to education, and

shall make regular monthly attendance reports and annual reports to the commissioner in the same manner as teachers and superintendents in the public schools.

* Sec. 4. AS 14.45 is amended by adding new sections to read:

ARTICLE 2. EXEMPT PRIVATE ~~SECTARIAN~~ Religious SCHOOLS.

Sec. 14.45.100. EXEMPTION. A private ~~sectarian~~ religious school that complies with AS 14.45.100 - 14.45.130 is exempt from other provisions of law and regulations relating to education except law and regulations relating to physical health, fire safety, sanitation, immunization, and physical examinations.

Sec. 14.45.110. REQUIREMENTS OF EXEMPT SCHOOLS. (a) The parent or guardian of a child enrolled in a private ~~sectarian~~ Religious school that complies with AS 14.45.100 - 14.45.130 shall file an annual notice of enrollment in the school for the child with the local public school superintendent for the area in which the child resides on a form provided by the department. The form shall be signed by the parent or guardian and the chief administrative officer of the school and returned to the local public school superintendent by the parent or guardian. The school shall notify the local public school superintendent within a reasonable time if the child is no longer enrolled in or attending the school.

(b) A private ~~sectarian~~ Religious school that elects to comply with AS 14.45.100 - 14.45.130 shall maintain monthly attendance records for each student enrolled in the school, shall operate on a regular schedule, excluding reasonable holidays and vacations, during at least 180 days of the year, and shall make an annual report to the commissioner of the number of students in each grade and the school calendar.

Sec. 14.45.120. STANDARDIZED TESTING REQUIREMENTS. (a) A private ~~sectarian~~ religious school that elects to comply with AS 14.45.100 -

14.45.130 shall administer a nationally standardized test selected by the chief administrative officer of the school to all students enrolled in grade; ~~one, three~~ 4, six, and ~~nine~~ 8 at least once each school year.

(b) The nationally standardized test must measure achievement in English grammar, reading, spelling, and mathematics.

(c) A private ~~sectarian~~ religious school that elects to comply with AS 14.45.100 - 14.45.130 shall maintain records of the results of the nationally standardized tests and the records shall be made available to the parent or guardian of the student. Each school shall make composite test results for the school available annually to an authorized representative of the department. The composite test results of a private ~~sectarian~~ or ~~nonsectarian~~ school operated in compliance with this chapter are not public information unless each public school is also required to administer a nationally standardized test Refer to (b) and the composite test results for each public school are public information.

Sec. 14.45.130. RECORDS. A private ~~sectarian~~ school that elects to comply with AS 14.45.100 - 14.45.130 shall maintain student permanent records reflecting immunizations, physical examinations, standardized testing, academic achievement and courses taken at the school. The chief school will certify the records as being kept

ARTICLE 3. EXEMPT PRIVATE NONSECTARIAN SCHOOLS.

Sec. 14.45.150. EXEMPTION. A private nonsectarian school that complies with AS 14.45.150 - 14.45.180 is exempt from other provisions of law and regulations relating to education except law and regulations relating to physical health, fire safety, sanitation, immunization, and physical examinations.

Sec. 14.45.160. REQUIREMENTS OF EXEMPT SCHOOLS. (a) The parent or guardian of a child enrolled in a private nonsectarian school that complies with AS 14.45.150 - 14.45.180 shall file an annual notice of

enrollment in the school for the child with the local public school superintendent for the area in which the child resides on a form provided by the department. The form shall be signed by the parent or guardian and the chief administrative officer of the school and returned to the local public school superintendent by the parent or guardian. The school shall notify the local public school superintendent within a reasonable time if the child is no longer enrolled in or attending the school.

(b) A private nonsectarian school that elects to comply with AS 14.45.150 - 14.45.180 shall maintain monthly attendance records for each student enrolled in the school, shall operate on a regular schedule, excluding reasonable holidays and vacations, during at least 180 days of the year, and shall make an annual report to the commissioner of the number of students in each grade and the school calendar.

Sec. 14.45.170. STANDARDIZED TESTING REQUIREMENTS. (a) A private nonsectarian school that elects to comply with AS 14.45.150 - 14.45.180 shall administer a nationally standardized test selected by the chief administrative officer of the school to all students enrolled in grades one, three, six, and nine at least once each school year.

(b) The nationally standardized test must measure achievement in English grammar, reading, spelling, and mathematics.

(c) A private nonsectarian school that elects to comply with AS 14.45.150 - 14.45.180 shall maintain records of the results of the nationally standardized tests and the records shall be made available to the parent or guardian of the student. Each school shall make composite test results for the school available annually to an authorized representative of the department. The composite test results of a private sectarian or nonsectarian school operated in compliance with

this chapter are not public information unless each public school is also required to administer a nationally standardized test and the composite test results for each public school are public information.

Sec. 14.45.180. RECORDS. A private nonsectarian school that elects to comply with AS 14.45.150 - 14.45.180 shall maintain student records reflecting immunizations, physical examinations, standardized testing, and courses taken at the school.

* Sec. 5. AS 44.27.020 is amended to read:

Sec. 44.27.020. DUTIES OF DEPARTMENT. The Department of Education shall

(1) administer the state's program of education at the elementary, secondary, and adult levels, including, but not limited to, programs of vocational education and training, vocational rehabilitation, library services, correspondence courses, adult basic education, and fire-service training, but not including degree programs of postsecondary education or an educational program operated in compliance with AS 14.45 by a private sectarian or nonsectarian school;

(2) administer the historical library;

(3) plan, finance and operate related school and educational activities and facilities.

* Sec. 6. AS 14.45.020 is repealed.

The Honorable Jan Faiks
Alaska State Senate
Pouch V
Juneau, AK 99811

Re: Sectarian and Nonsectarian Schools

Dear Senator Faiks:

Enclosed, pursuant to your request of this afternoon, is a revision of the draft legislation you provided this office on November 17, 1983. This revision resolves the constitutional issues which we have discussed. I must emphasize, despite the fact that some changes have been made, that our efforts should not be construed as expressing support for this legislation as a matter of policy.

If you have questions in this regard, please do not hesitate to let me know.

Sincerely,

NORMAN C. GORSUCH
ATTORNEY GENERAL

IN THE _____

_____ BILL NO.

IN THE LEGISLATURE OF THE STATE OF ALASKA

THIRTEENTH LEGISLATURE - SECOND SESSION

A BILL

For an Act entitled: "An Act relating to the regulation of private sectarian and nonsectarian schools."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. The purpose of this Act is to eliminate unnecessary state involvement in the affairs of private schools and to protect religious freedom as expressed through affiliation with sectarian educational institutions.

* Sec. 2. AS 14.07.020(7) is amended to read:

DRAFT

(7) prescribe by regulation, after consultation with the State fire marshall + STATE SANITARIAN ~~Department of Health and Social Services~~, standards that will assure healthful and safe conditions in the public and private pre-elementary, elementary, and secondary schools of the state; the standards for private schools may not be more stringent than those for public schools;

* Sec. 3. AS 14.07.020(8) is amended to read:

(8) [IN COOPERATION WITH THE DEPARTMENT OF HEALTH AND SOCIAL SERVICES,] exercise general supervision over public [AND PRIVATE] pre-elementary schools [AND OVER THE EDUCATIONAL COMPONENT OF NURSERIES AS DEFINED IN AS 47.35.080(4)]; pre-elementary schools in this paragraph means schools for children ages three through five years when the schools' primary function is educational;

* Sec. 4. AS 14.07.020(10) is amended to read:

(10) accredit private pre-elementary, elementary, and secondary schools which request accreditation and which meet

accreditation standards prescribed by regulation by the department;

* Sec. 5. AS 14.30.010(b)(1) is amended to read:

(1) is provided an academic education comparable to that offered by the public schools in the area, either by

(A) attendance at a private school in which the teachers are certified according to AS 14.20.020;

(B) tutoring by personnel certified according to AS 14.20.020; or

(C) attendance at private sectarian or nonsectarian school operated in compliance with AS 14.45 [ATTENDANCE AT A PRIVATE SCHOOL IN WHICH THE AVERAGE STUDENT PROFICIENCY IS NOT LESS THAN THE AVERAGE PROFICIENCY FOUND IN THE PUBLIC SCHOOLS IN THE AREA AS MEASURED BY NATIONAL ACHIEVEMENT TESTS; THE DEPARTMENT WITH ASSISTANCE FROM REPRESENTATIVES OF THE PRIVATE SCHOOLS SHALL PROMULGATE REGULATIONS DEFINING THE SUBJECT AREAS TO BE TESTED AND THE MINIMUM AVERAGE SCORES TO BE ACHIEVED];

** Sec. 6. AS 14.45.020 ~~and AS 14.45.030~~ are repealed.

* Sec. 7. AS 14.45 is amended by adding new sections to read:

CHAPTER 45. PRIVATE [AND DENOMINATIONAL] SCHOOLS

ARTICLE 1. GENERAL PROVISIONS

Sec. 14.45.030. ATTENDANCE AND ANNUAL REPORTS REQUIRED. Teachers and others in charge of private [OR DENOMINATIONAL] schools shall make regular monthly attendance reports and annual reports to the commissioner in the same manner as teachers and superintendents in the public schools.

* Sec. 8. AS 14.45 is amended by adding new sections to read:

ARTICLE 2. EXEMPT SCHOOLS

Sec. 14.45.100. EXEMPTION FROM EDUCATION LAWS. A private sectarian or nonsectarian school operated in compliance with

AS 14.45.100 -- 14.45.140 is exempt from other provisions of state law and regulations relating to education except laws and regulations relating to physical health, fire safety, sanitation, immunization, and physical examinations.

Sec. 14.45.110. ATTENDANCE REPORTS OF EXEMPT SCHOOLS. (a) The parent or guardian of a child enrolled in a private sectarian or nonsectarian school that elects to comply with AS 14.45.100 -- 14.45.140 shall file with the superintendent of the public school district in which the child resides a notice of enrollment within 30 days after enrollment of the child in the school on a form provided by the department. The form must be signed by the parent and the chief administrative officer of the school.

(b) A private sectarian or nonsectarian school that elects to comply with AS 14.45.100 -- 14.45.140 shall notify the superintendent if the child is no longer enrolled in or attending the school.

CALENDAR(?)

Sec. 14.45.120. PROGRAM REQUIREMENTS OF EXEMPT SCHOOLS. A private sectarian or nonsectarian school that elects to comply with AS 14.45.100 -- 14.45.140 shall operate on a regular schedule, excluding reasonable holidays and vacations, during at least 180 days of the year, and shall report to the department the school calendar and the number of students in each grade within 30 days after the start of each school year.

Sec. 14.45.130. STUDENT RECORDS OF EXEMPT SCHOOLS. (a) A private sectarian or nonsectarian school that elects to comply with AS 14.45.100 -- 14.45.140 shall maintain permanent student records, including records of daily attendance, immunizations, physical examinations, testing, courses taken at the school, and grades received.

(b) Upon reasonable notice the school shall make student records maintained under this section available for inspection by the

department.

STATE OF ALASKA
THE LEGISLATURE

LEGISLATIVE AFFAIRS AGENCY

POUCH Y - STATE CAPITOL
JUNEAU, ALASKA 99811
907 465-3800

MEMORANDUM

February 6, 1984

SUBJECT: Attorney General's analysis of HCS CSSB 354 (HESS)

TO: Representative Mae Tischer
Chairman, Health, Education, and
Social Services Committee

FROM: Keith B. Levy KBL
Legislative Counsel

You have requested an analysis of a letter from the Attorney General concerning the latest draft of HCS CSSB 354(HESS). The Attorney General's letter indicates that the bill presents no significant constitutional problems, an opinion with which I agree. The criticisms of the bill in the Attorney General's letter only relate to potential problems of statutory interpretation and style. They are, for the most part, matters of clarity which could be adopted, but are probably not essential.

First, the Attorney General notes that the bill does not adequately distinguish between pre-elementary schools and child care. As amended by the bill, AS 14.07.020(7) provides that the Department of Education, after consultation with the state fire marshall and the state sanitarian, regulates the health and safety aspects of private schools, including pre-elementary schools. Under AS 47.35, however, the Department of Health and Social Services regulates nurseries (child care centers). The Attorney General apparently feels that AS 14.07.020(7) should contain a clear definition of pre-elementary schools so that a nursery or pre-elementary school could not choose between the Department of Education and the Department of Health and Social Services simply by calling itself a nursery or a pre-elementary school.

While I agree that there is some potential confusion here, it is my opinion that a change is not essential. AS 47.35.080(4) defines nursery rather clearly and excludes

establishments "whose primary function is educational," i.e., pre-elementary schools. Accordingly, it is clear that D.H.S.S regulates nurseries, while D.O.E regulates the health and safety aspects of all public and private schools, including pre-elementary schools. In other words, the confusion that the Attorney General is concerned with is insignificant when the bill is read in conjunction with AS 47.35.080(4).

The second question raised by the Attorney General has to do with the second sentence of AS 14.45.100, in section 5 of the bill. That sentence, which was added as a Senate floor amendment, provides that "a facility that serves children under the age of six and receives state payments is not eligible for the exemption provided by this section."

The Attorney General points out that the sentence is superfluous since the exemption provided for in that section does not affect programs for children under compulsory school age anyway. This observation is correct, and moreover, private schools are ineligible to receive direct state aid under Art. VII, sec. 1 of the state constitution. Therefore, I agree that the sentence is unnecessary and could be removed entirely. However, since the sentence neither adds nor subtracts substantively from the bill, removing or amending it is not essential.

Finally, the Attorney General notes that the Senate amended AS 14.45.110(a) in section 5 of the bill to make clear that the section only applies to children of compulsory school age. The Attorney General points out that all of AS 14.45 was intended to apply only to compulsory school age children, and therefore this distinction should be made throughout AS 14.45, or a definition added to clarify the point.

Again, I agree with the Attorney General's analysis. It is true that some language indicating that the provisions of AS 14.45 apply only to compulsory school age children would add clarity to the bill. However, the change is not essential since the provisions of AS 14.45 indicate implicitly that they apply only to school age children. This is indicated by section 3 of the bill which amends the compulsory school attendance law to provide that compliance with AS 14.45 satisfies the compulsory attendance requirement. It also follows from the fact that a private school may elect to comply with AS 14.45 or not, as it chooses.

In conclusion, I agree with the Attorney General's criticisms of HCS CSSB 354(HESS) insofar as the changes suggested would add clarity to the bill. However, these changes are not essential to the bill from a legal standpoint.

KBL:ojb
J3/056

STATE OF ALASKA
THE LEGISLATURE
LEGISLATIVE AFFAIRS AGENCY

MEMORANDUM January 31, 1984

SUBJECT: Sectional analysis of HCS CS SB 354 (HESS)

TO: Representative Mae Tischer
Chairman, House HESS Committee

FROM: Keith B. Levy KBL
Legislative Counsel

You have requested a sectional analysis of HCS CS SB 354 (HESS), "An Act relating to the regulation of private schools." The main thrust of the bill is to allow religious and other private schools to opt out of the general laws and regulations applicable to private schools if they agree to comply with certain minimal requirements.

Section 1 states that the purpose of the bill is to guarantee that the state will not interfere with the constitutional right of freedom of religion while at the same time ensuring the quality of all education in the state and allowing diversity in education by encouraging private education.

Section 2 amends the duties of the Department of Education with respect to private education (AS 14.07.020). It provides that the department will consult with the state fire marshall and the state sanitarian rather than the Department of Health and Social Services on matters of health and safety (AS 14.07.020(7)). It clarifies that the department must require physical examinations and immunizations in private pre-elementary schools (AS 14.07.020(7)). Section 2 also provides that the department is no longer responsible for the general supervision of private pre-elementary schools and nurseries. Supervision over public pre-elementary schools will no longer be done in cooperation with the Department of Health and Social Services (AS 14.07.020(8)). Finally, section 2 makes clear that the department may provide voluntary accreditation for any private school that requests it, although the department is not authorized to require private schools to be licensed (AS 14.07.020(10)).

Section 3 amends the state's compulsory education law (AS 14.30.010) to provide that attendance at a school operating in compliance with AS 14.45 (see section 5, below) satisfies the compulsory education requirements.

Section 4 provides that a private school that does not choose to comply with AS 14.45 (see section 5, below), is not exempt from other laws and regulations relating to education and must make attendance reports in the same manner as public schools.

Section 5 provides the minimum requirements a religious or other private school must meet if it elects to be exempt from other provisions of law and regulations. However, even these schools are subject to laws and regulations relating to physical health, fire safety, sanitation, immunization, and physical examinations (AS 14.45.100). The exemption is also not available to schools that serve children under the age of six and receive state funds.

The parent or guardian of a child of compulsory school age enrolled in an exempt school must file an annual notice of enrollment with the local public school superintendent on a form signed by the school administrator and the parent (AS 14.45.110(a)). The school must notify the local public school superintendent if the child is no longer attending or enrolled in the school. The exempt school must maintain monthly attendance records, operate on a regular schedule of at least 180 days, and report to the commissioner of education annually the number of students enrolled in each grade and the school calendar (AS 14.45.110(b)).

An exempt school must also administer a nationally standardized test to all students in grades four, six, and eight at least once each school year (AS 14.45.120(a)). The test must measure achievement in English grammar, reading, spelling, and mathematics (AS 14.45.120(b)). The school must maintain records of the results of these tests and make them available to the parent or guardian of the student. The school is required to make composite test results available annually to an authorized representative of the Department of Education, but these results are not public information unless each public school is subject to similar testing requirements, the result of which are also public (AS 14.45.120(c)).

The exempt schools are also required to maintain permanent student records reflecting immunizations, physical examinations, standardized testing, academic achievement, and courses taken at the school. The administrator of the school must certify under oath or by affirmation to the Department of Education that these records are being maintained (AS 14.45.130). Finally, "religious school," as used in these sections, is defined as a private school operated by a church or other religious organization that does not receive direct state or federal funding (AS 14.45.140).

It should be kept in mind that these provisions are not mandatory unless the private school chooses to exempt itself from other laws and regulations relating to education. Also, this option is available to all private schools, religious and otherwise.

an organization of Alaskan School Administrators

January 24, 1984

The Honorable Mae Tischer
House of Representatives
Chairman, Health, Education
and Social Services
Pouch V
Juneau, AK 99811

Dear Representative Tischer:

The Alaska Council of School Administrators would like to go on record as supporting H.B. 514 as amended. We are particularly pleased that the bill calls for a process of notifying local school districts about enrolled or non-enrolled students as found in Sec. 14.45.110. This bill enables the chief administrative officer of a district to fulfill his requirements under the compulsory attendence law AS Sec. 14.30.030.

Once again, we support the bill as written and urge its adoption.

Sincerely,

Don MacKinnon
Executive Secretary

23 January 1984

The Alaska Division of AAUW would like to go on record in support of an amendment to HB 519/SB 354, relating to the regulation of private schools. On page two of the bill (in Sec. 2. AS 14.07.020.) we would recommend that (8) read as follows: "...pre-elementary schools in this paragraph means schools for children ages three through five years when the school's primary function is educational and the program operates for four or fewer hours a day." Of specific concern to us is the health and safety of pre-elementary children ages 3 through 5 who spend from five to 10 or more hours daily in care outside their home.

Without this ammendment a loophole is created or rather maintained in Alaska statute that permits any program offering care to children up to 10 hours or more a day to exempt itself from health and safety regulations governing all Alaskan day care centers - even though that program is not functionally different from a day care program. The Dept. of Education has been called to task over the last several years by both the State Division of Internal Audit and the Federal Office of Child Development for the lack of a clear definition. Says the latter: "Your statute is indeed weak, allowing for confusion and almost any interpretation..." The Dept. audit found that "neither of the statutes [D.O.E.'s wording nor D.H.S.S's AS 47.35.010-80] set criteria nor define what is to be considered a primarily educational facility versus a child care facility;" and "because primarily educational has not been defined, neither the regulato: Departments, the facilities themselves, nor the public has a positive definition to use in deciding whether or not a program is a preschool or daycare program. As a result, any facility may choose to be classified as a preschool, and avoid the requirement to comply with daycare standards."

One of the issues involved here is that education of pre-elementary children is different than the academic emphasis of elementary education, due to shorter attention spans, the need for more physical movement (and the need for physical rest), and the underlying necessity of children needing to learn pre-academic skills. Goals for a pre-schooler are different than those for an older child, and Early Childhood educators set out the following as desirable outcomes of a preschool education:

a. Development of a positive self-concept, a sense of self-worth that comes from experiencing success, and a growing awareness of one's strengths as well as one's weakness.
b. Achievement of independence in decision making and a sense of mastery over one's environment (buttons, bows and zippers...); plus an achievement of mutual interdependence - a sense of responsibility for self and others within a community or group.
c. Movement from preoccupation with one's own biological and

psychological needs toward involvement in outside interests and activities; finding pleasure from human interaction; seeking problems and finding satisfaction in solving them.

d. Internalizing the concepts of problem solving abilities.
e. Coping with change and wider relationships.

Parents overwhelmingly want the option of an enrichment program for their children - the inclusion of life-expanding experiences not normally available in the home - and early enrichment has been shown to be important to the full development of all types and classes of children. Because of these factors all quality childcare programs at the pre-elementary level have (and all programs are encouraged to have) educational components teaching the basic life skills of self-sufficiency, socialization, and basic cognitive skills. Parents and community are no longer willing to accept custodial childcare or "warehousing" of kids as acceptable. Thus based on educational content there is no functional difference between a full day "preschool" and a good day care center. In fact in the D.O.E. audit, "of the 19 daycare programs surveyed, 18 stated they offered a preschool program." Ironically in Alaska while parents are lured by the term "preschool" into thinking they are doing better by their children, the standards for preschools are considerably lower than for daycare centers. [See attachment for comparison.]

When a young child is in care for all day every day, the program ceases to be solely a "school" and must include attention to nutritional needs, rest, staff health, adequate supervision with enough staff to attempt to meet the individual needs of each child, and enough space to meet the need to be physically active. Quality childcare is commonly described in national studies as having a tight child/staff ratio (a small number of children to each staff member). Safety in emergencies is a factor, but in normal times children under five need more individual attention than they will ever need at any other time. To form strong and positive self-concept, children need to be listened to, supported and encouraged. A large number of children can be tolerated in "school"-like situations for short periods during the day when activities are highly structured, but the emphasis must necessarily be on control. On a full time basis that can contribute to degrees of "maternal deprivation" resulting from the lack of a strong, rewarding relationship in the early years with a single close adult. "Preschools" have no child/staff ratio requirements. Similarly "pre-schools" have no minimum space requirements although the D.O.E. audit pointed out that adequate space is "absolutely necessary to ensure a quality, developmentally-orientated child care program":

> "the higher the quality of space in a center, the more likely were teachers to be sensitive and friendly in their manner toward children, to encourage children in their self-chosen activities and to teach consideration for the rights and feelings of self and others. Where spatial quality was low, children were less likely to be involved and interested, were more likely to exhibit agressive behavior, and teachers more likely to be neutral and insensitive in their manner, to use large amounts of guidance and restriction, and to teach arbitrary rules of social living."

There can be a workable definition of "pre-elementary school". Most legitimate pre-schools operate from two and a half to three

hours a day, as do most kindergartens for 6 year olds. Even elementary and high school kids do not attend school longer than about 6 hours a day, yet we permit three year olds to attend "school" 10 hours a day. We expect pre-schools to offer a fairly highly structured program for children and often the child/staff ratio is large (20 or more youngsters to 1 adult), but on a short time basis this can be acceptable. Beyond four hours the needs of small children demand more nurturing and less structured care, more space and less control, provision for a nutritional meal and snacks, a time for rest and naps, and the assurance that staff are not carriers of T.B., and assurance that an emergency plan is operable After four hours children need more individual attention.

All 50 states regulate full-day child care, though in many states it took a tragedy to enact licencing laws. Without this amendment, Alaska is the only state not regulating full day programs which are funtionally identical to day care centers.
The results are a "risk to children", says the D.O.E. audit, for "programs quickly call themselves pre-elementary schools when they learn that is a means of escaping regulations." Please don't let tragedy have to happen first, before we correct what no other state will tolerate.

Preschool Standards are Lower Than Daycare Standards

In Alaska, the Department of Education's standards for preschools are lower than the Department of Health and Social Services standards for daycare centers. For example, the only preschool standard equal to daycare standards is the immunization standard as shown in the following table.

COMPARISON OF DAYCARE AND PRESCHOOL STANDARDS

STANDARD	DAYCARE	PRESCHOOLS
License Renewal	Annual	5 yrs.
Agency Review	Annual	5 yrs.
Staff Pupil Ratio	1-10	no standard
** Indoor Space	35 sq. ft.per child	no standard
Outdoor space	75 sq. ft.per child	no standard
Fire Inspection	Annual	5 years
Sanitation Inspection	Annual	5 years
Health Program	required	no standard
Prone Rest	required	no standard
Immunizations	required	required
Nutrition Program	required	no standard
* Corporal Punishment	regulated	no standard

The Department of Health and Social Services also requires that daycare programs provide opportunities and experiences to promote the individual child's physical, emotional, social and intellectual growth, as outlined below:

- -- opportunities for balance of active/quiet play, group and individual, and indoor and outdoor play;
- -- opportunities for individual self expression in conversation. imaginative play and creative expressions;
- -- use of games, toys, books, sand, puzzles, for intellectual and social development;
- -- walking excursions/field trips; and
- -- equipment and furniture be of sufficient quality and quantity and appropriate to a child's use.

* The regulation reads: "Satisfactory compliance with this subsection requires that ... (7) caregivers not use any form of corporal punishment unless otherwise approved in writing by the parent of the child, and that they not use any other technique which is humiliating, shaming, frightening, or otherwise damaging to a child."

** "Several studies have found that most social involvement appears to occur at medium density (35-50 sq. ft. per child), while agressiveness occurs at higher densities (below 35 sq. ft.) and random behavior occurs in large undifferentiated settings (over 50 sq. ft.)."

House of Representatives
HEALTH, EDUCATION AND SOCIAL SERVICES COMMITTEE

MEMORANDUM

TO: Representative Mae Tischer
FROM: Bill Lovell, Staff
DATE: February 9, 1984

RE: Analysis of HCS CSSB 354 (Rules)

For your convenience, I have prepared the following analysis of the House Rules Committee Substitute for Committee Substitute for Senate Bill 354, "[a]n Act relating to the regulation of private schools."

Section 1 states that the purpose of the bill is to guarantee that the state will not interfere with the constitutional right of freedom of religion or with the right of parents to choose to have their children attend private schools while at the same time ensuring the quality of all education in the state and encouraging diversity in education.

Section 2 amends the duties of the Department of Education with respect to private education (AS 14.07.020). The bill creates a new subsection (a) in the law, including all language currently in AS 14.70.020. New language provides that the department will consult with the state fire marshal and the state sanitarian rather than the Department of Health and Social Services on matters of health and safety (AS 14.07.020(7)). It clarifies that the department must require physical examinations and immunizations in pre-elementary schools (AS 14.07.020(7)). Section 2 also provides that the department is no longer responsible for the general supervision of pre-elementary schools that receive state or federal funding. Supervision of pre-elementary schools will no longer be done in cooperation with the Department of Health and Social Services (AS 14.07.020(8)). Finally, section 2 makes clear that the department may provide voluntary accreditation for any private school that requests it, although the department is not authorized to require private schools to be licensed (AS 14.07.020(10)). A new subsection (b) defines pre-elementary schools as being for children ages three through five years and primarily educational in purpose.

Section 3 amends the state's compulsory education law (AS 14.30.010) to provide that attendance at a school operating in compliance with AS 14.45 (see section 5 below) satisfies compulsory attendance requirements.

Section 4 provides that a private school that does not choose to comply with AS 14.45 (see section 5, below), is not exempt from other laws and

regulations relating to education and must make attendance reports in the same manner as public schools.

Section 5 provides the minimum requirements a religious or other private school must meet if it elects to be exempt from other provisions of law and regulations. However, even these schools are subject to laws and regulations relating to physical health, fire safety, sanitation, immunization, and physical examinations (AS 14.45.100).

The parent or guardian of a child of compulsory school age enrolled in an exempt school must file an annual notice of enrollment with the local public school superintendent on a form signed by the school administrator and the parent (AS 14.45.110(a)). The school must notify the local public school superintendent if the child is no longer attending or enrolled in the school. The exempt school must maintain monthly attendance records, operate on a regular schedule of at least 180 days, and report to the commissioner of education annually the number of students enrolled in each grade and school calendar (AS 14.45.110(b)).

An exempt school must also administer a nationally standardized test to all students in grades four, six, and eight at least once each school year (AS 14.45.120(a)). The test must measure achievement in English grammar, reading, spelling, and mathematics (AS 14.45.120(b)). The school must maintain records of the results of these tests and make them available to the parent or guardian of the student. The school is required to make composite test results available annually to an authorized representative of the Department of Education, but these results are not public information unless each public school is subject to similar testing requirements, the results of which are also public (AS 14.45.120(c)).

The exempt schools are also required to maintain permanent student records reflecting immunizations, physical examinations, standardized testing, academic achievement, and courses taken at the school. The administrator of the school must certify to the department, under oath or affirmation, that these records are being maintained (AS 14.45.130). "Private school," as used in these sections, is defined as a school that does not receive direct state or federal funding. (AS 14.45.140 (1)). Finally, "religious school," as used in these sections, is defined as a private school operated by a church or other religious organization that does not receive direct state or federal funding (AS 14.45.140(2)).

It should be kept in mind that these provisions are not mandatory unless the private school chooses to exempt itself from other laws and regulations relating to education. Also, this option is available to all private schools, religious and otherwise.

SUBJECT: Attorney General's analysis of HCS CSSB 354 (HESS)

TO: Representative Mae Tischer
Chairman, Health, Education, and Social Services Committee

FROM: Keith B. Levy KBL
Legislative Counsel

You have requested an analysis of a letter from the Attorney General concerning the latest draft of HCS CSSB 354(HESS). The Attorney General's letter indicates that the bill presents no significant constitutional problems, an opinion with which I agree. The criticisms of the bill in the Attorney General's letter only relate to potential problems of statutory interpretation and style. They are, for the most part, matters of clarity which could be adopted, but are probably not essential.

First, the Attorney General notes that the bill does not adequately distinguish between pre-elementary schools and child care. As amended by the bill, AS 14.07.020(7) provides that the Department of Education, after consultation with the state fire marshall and the state sanitarian, regulates the health and safety aspects of private schools, including pre-elementary schools. Under AS 47.35, however, the Department of Health and Social Services regulates nurseries (child care centers). The Attorney General apparently feels that AS 14.07.020(7) should contain a clear definition of pre-elementary schools so that a nursery or pre-elementary school could not choose between the Department of Education and the Department of Health and Social Services simply by calling itself a nursery or a pre-elementary school.

While I agree that there is some potential confusion here, it is my opinion that a change is not essential. AS 47.35.080(4) defines nursery rather clearly and excludes

establishments "whose primary function is educational," i.e., pre-elementary schools. Accordingly, it is clear that D.H.S.S regulates nurseries, while D.O.E regulates the health and safety aspects of all public and private schools, including pre-elementary schools. In other words, the confusion that the Attorney General is concerned with is insignificant when the bill is read in conjunction with AS 47.35.080(4).

The second question raised by the Attorney General has to do with the second sentence of AS 14.45.100, in section 5 of the bill. That sentence, which was added as a Senate floor amendment, provides that "a facility that serves children under the age of six and receives state payments is not eligible for the exemption provided by this section."

The Attorney General points out that the sentence is superfluous since the exemption provided for in that section does not affect programs for children under compulsory school age anyway. This observation is correct, and moreover, private schools are ineligible to receive direct state aid under Art. VII, sec. 1 of the state constitution. Therefore, I agree that the sentence is unnecessary and could be removed entirely. However, since the sentence neither adds nor subtracts substantively from the bill, removing or amending it is not essential.

Finally, the Attorney General notes that the Senate amended AS 14.45.110(a) in section 5 of the bill to make clear that the section only applies to children of compulsory school age. The Attorney General points out that all of AS 14.45 was intended to apply only to compulsory school age children, and therefore this distinction should be made throughout AS 14.45, or a definition added to clarify the point.

Again, I agree with the Attorney General's analysis. It is true that some language indicating that the provisions of AS 14.45 apply only to compulsory school age children would add clarity to the bill. However, the change is not essential since the provisions of AS 14.45 indicate implicitly that they apply only to school age children. This is indicated by section 3 of the bill which amends the compulsory school attendance law to provide that compliance with AS 14.45 satisfies the compulsory attendance requirement. It also follows from the fact that a private school may elect to comply with AS 14.45 or not, as it chooses.

In conclusion, I agree with the Attorney General's criticisms of HCS CSSB 354(HESS) insofar as the changes suggested would add clarity to the bill. However, these changes are not essential to the bill from a legal standpoint.

SB 354

BILL SB0354
PAGE 01765
DATE 01/13/84
CHAMBER SENATE
TEXT SENATE BILL NO. 354 by Senators Faiks, Kerttula, Bennett, Ferguson, Ray, Moss, Pettyjohn, Halford, P. Fischer, Gilman and Kelly, entitled:

"An Act relating to the regulation of private schools."

was read the first time and referred to the Judiciary Committee.

BILL SB0354
PAGE 01782
DATE 01/17/84
CHAMBER SENATE
TEXT President Kerttula stated that SENATE BILL NO. 354 (regulation of private schools) would have an additional referral to the Health, Education and Social Services Committee. SENATE BILL NO. 354 was referred to the Judiciary Committee and the Health, Education and Social Services Committee.

BILL SB0354
PAGE 01798
DATE 01/19/84
CHAMBER SENATE
TEXT The Judiciary Committee considered SENATE BILL NO. 354 (regulation of private schools) and recommended it be replaced with

CS FOR SENATE BILL NO. 354 (JUD)

Senator Ray, Chairman and Senator Ziegler signed "no recommendation". Senators Pettyjohn and Eliason signed "do pass". SENATE BILL NO. 354 was referred to the Health, Education and Social Services Committee.

BILL SB0354
PAGE 02348
DATE 01/24/84
CHAMBER HOUSE
TEXT COMMITTEE SUBSTITUTE FOR SENATE BILL NO. 354 (Judiciary) amended, by the Judiciary Committee, entitled:

"An Act relating to the regulation of private schools."

was read the first time and referred to the Health, Education & Social Services Committee.

The Health, Education and Social Services Committee considered SENATE BILL NO. 354 (regulation of private schools). Senator Josephson, Chairman, signed "do pass if amended". Senator Paul Fischer signed "do pass". Senator Halford signed "do pass when amended". Senator Vic Fischer signed "do not pass unless amended".
The committee attached a zero fiscal note.
SENATE BILL NO. 354 was referred to the Rules Committee.

The Rules Committee considered SENATE BILL NO. 354 (regulation of private schools) and a majority of the committee recommended it be placed on the January 24 supplemental calendar. The report was signed by Senator Faiks, Chairman and concurred in by Senators Ferguson, Ray and Kelly.

SENATE BILL NO. 354 (regulation of private schools) was read the second time.

Senator Ray moved and asked unanimous consent that the Judiciary Committee Substitute offered on page 1798 be adopted. Without objection, §CS FOR SENATE BILL NO. 354 (JUD)¶ was adopted.

CS FOR SENATE BILL NO. 354 (JUD) was read the second time.

Senator Vic Fischer offered the following Amendment No. 1:

Page 2, line 23: following "pre-elementry schools" insert: "§and private pre-elementary schools that are¶ §not in facilities associated with an elementary school¶ §operating grades one through three¶"

Senator Vic Fischer moved that Amendment No. 1 be adopted.

Senator Ray offered the following amendment to Amendment No. 1:

Delete "operating" and insert "that operates"

Senator Ray moved for the adoption of the amendment to Amendment No. 1. Senator Gilman objected, then withdrew his objection. Senator Rodey asked unanimous consent. There being no further objection, the amendment to Amendment No. 1 was adopted.

Senator Vic Fischer moved and asked unanimous consent that Amendment No. 1 as amended be adopted. Senator Ferguson objected.

The question being: "Shall Amendment No. 1 as amended be adopted?" The roll was taken with the following result:

CS SB 354 (JUD) Am #1 as amended

Yeas:	14	Fahrenkamp, Faiks, Fischer Vic, Gilman, Halford, Josephson, Kelly, Kerttula, Mulcahy, Pettyjohn, Ray, Rodey, Sackett, Ziegler
Nays:	2	Ferguson, Fischer Paul
Excused:	4	Bennett, Eliason, Moss, Sturgulewski

and so, Amendment No. 1 as amended was adopted.

Senator Josephson offered the following Amendment No. 2:

Page 5, line 20: Add the following sentence to Sec. 14.45.100. "A facility which serves children under the age of six years and which receives state payments or subsidies is not eligible for the exemption provided by this section."

Senator Josephson moved and asked unanimous consent that Amendment No. 2 be adopted. Senator Pettyjohn objected, then withdrew his objection. There being no further objection, Amendment No. 2 was adopted.

Senator Josephson offered the following Amendment No. 3:

Page 5, line 24: after "child" insert "of compulsory school age"

Senator Josephson moved and asked unanimous consent that Amendment No. 3 be adopted. Without objection, Amendment No. 3 was adopted.

Senator Josephson offered the following Amendment No. 4:

Page 6, line 14: delete "one, three, six, and nine" and insert "two, four, six and ten"

Senator Josephson moved and asked unanimous consent that Amendment No. 4 be adopted. Senator Ferguson objected, then withdrew his objection. There being no further objection, Amendment No. 4 was adopted.

Senators Halford and Josephson offered the following Amendment No. 5:

Page 7, lines 9-10: delete "under oath to the department"

Senator Halford moved and asked unanimous consent that Amendment No. 5 be adopted. Senator Ray objected.

Senator Halford moved and asked unanimous consent that Amendment No. 5 be withdrawn. Without objection, Amendment No. 5 was withdrawn.

Senators Josephson and Halford offered the following Amendment No. 6:

Page 7, lines 9-10: after "under oath" insert "by affirmation" and delete "to the department"

Senator Josephson moved and asked unanimous consent that Amendment No. 6 be adopted. Without objection, Amendment No. 6 was adopted.

Senator Ray moved and asked unanimous consent that §CS FOR¶ §SENATE BILL NO. 354 (JUD) am¶ be considered engrossed, advanced to third reading and placed on final passage. Without objection, it was so ordered.

CS FOR SENATE BILL NO. 354 (JUD) am was read the third time.

Senator Ferguson moved and asked unanimous consent that his name be deleted as a co-sponsor on the original bill. Without objection, it was so ordered.

The question being: "Shall CS FOR SENATE BILL NO. 354 (JUD) am (regulation of private schools) pass the Senate?" The roll was taken with the following result:

CS SB 354 (JUD) am 3RD

Yeas:	15	Fahrenkamp, Faiks, Fischer Paul, Fischer Vic, Gilman, Halford, Josephson, Kelly, Kerttula, Mulcahy, Pettyjohn, Ray, Rodey, Sackett, Ziegler
Nays:	1	Ferguson
Excused:	4	Bennett, Eliason, Moss, Sturgulewski

and so, CS FOR SENATE BILL NO. 354 (JUD) am passed the Senate.

CS FOR SENATE BILL NO. 354 (JUD) am was engrossed, signed by the President and Secretary and transmitted to the House for consideration.

BILL SB0354

DATE 02/16/84
CHAMBER HOUSE
TEXT The Rules Committee has had COMMITTEE SUBSTITUTE FOR SENATE BILL NO. 354 (Judiciary) amended (relating to the regulation of private schools) under consideration and recommends it be replaced with HOUSE COMMITTEE SUBSTITUTE FOR COMMITTEE SUBSTITUTE FOR SENATE BILL NO. 354 (Rules) (same title), and reports it back as follows: Fuller (Chairman), Barnes, Phillips, Liska, Tischer and M. M. Miller recommend do pass.
CSSB 354(Jud)am was returned to the Rules Committee for placement on the calendar.

Regulation of Religious Schools

SENATE BILL NO. 354, (see page 18). The five-day hearing notice rule was waived on January 16 so the bill could be heard in Judiciary. January 17 a Health, Education & Social Services referral was added. Reported back from Judiciary on January 19 with the committee recommending it be replaced with a CS and as follows: Ray (Chairman) and Ziegler signed "no recommendation"; Pettyjohn and Eliason signed "do pass." To Health, Education & Social Services.

Note: A corrected version of SB 354 was printed on Monday, January 16. The bill that we summarized in last week's report (p. 18) was printed by mistake. The following is a sectional analysis of the bill, prepared by Keith B. Levy, Legislative Counsel:

You have requested a sectional analysis of SB 354, "An Act relating to the regulation of private schools." The main thrust of the bill is to allow religious and other private schools to opt out of the general laws and regulations applicable to private schools if they agree to comply with certain minimal requirements.

Section 1 states that the purpose of the bill is to guarantee that the state will not interfere with the constitutional right of freedom of religion while at the same time ensuring the quality of all education in the state.

Section 2 amends the duties of the Department of Education with respect to private education (AS 14.07.020). It provides that the department will consult with the state fire marshall and the state sanitarian rather than the Department of Health and Social Services on matters of health and safety (AS 14.07.020(7)). It clarifies that the department must require physical examinations and immunizations in private pre-elementary schools (AS 14.07.020(7)). Section 2 also provides that the department is no longer responsible for the general supervision of private pre-elementary schools and nurseries. Supervision over public pre-elementary schools will no longer be done in cooperation with the Department of Health and Social Services (AS 14.07.020(8)). Finally, section 2 makes clear that the department may provide voluntary accreditation for any private school that requests it, although the department is not authorized to require private schools to be licensed (AS 14.07.020(10)).

Section 3 amends the state's compulsory education law (AS 14.30.010) to provide that attendance at a school operating in compliance with AS 14.45 (see section 5, below) satisfies the compulsory education requirements.

Section 4 provides that a private school that does not choose to comply with AS 14.45 (see section 5, below), is not exempt from other laws and regulations relating to education and must make attendance reports in the same manner as public schools.

Section 5 provides the minimum requirements a religious or other private school must meet if it elects to be exempt from other provisions of law and regulations. However, even these schools are subject to laws and regulations relating to physical health, fire safety, sanitation, immunization, and physical examinations (AS 14.45.100).

The parent or guardian of a child enrolled in an exempt school must file an annual notice of enrollment with the local public school superintendent on a form signed by the school administrator and the parent (AS 14.45.110(a)). The school must notify the local public school superintendent if the child is no longer attending or enrolled in the school. The exempt school must maintain monthly attendance records, operate on a regular schedule of at least 180 days, and report to the commissioner of education annually the number of students enrolled in each grade and the school calendar (AS 14.45.110(b)).

An exempt school must also administer a nationally standardized test to all students in grades one, three, six, and nine at least once each school year (AS 14.45.120(a)). The test must measure achievement in English grammar, reading, spelling, and mathematics (AS 14.45.120(b)). The school must maintain records of the results of these tests and make them available to the parent or guardian of the student. The school is required to make composite test results available annually to an authorized representative of the Department of Education, but these results are not public information unless each public school is subject to similar testing requirements, the result of which are also public (AS 14.45.120(c)).

Regulation of Pvt. Schools

CS FOR SENATE BILL NO. 354 (JUD)(AM), (see pages 18;74;133). Received in the House January 24 and referred to Health, Education and Social Services.

Regulation of Private Schools

CS FOR SENATE BILL NO. 354 (JUDICIARY)(AMENDED), (see pages 18;74). Before the Senate on January 24. The Judiciary CS was adopted by unanimous consent. The following amendments were adopted:

--Am. No. 1 as amended. Original amendment by Vic Fischer, amended by Ray, and adopted, 14-2. Nays: Ferguson & Paul Fischer. Changes language in Sec. 2 to direct the Dept. of Education to "... exercise general supervision over public pre-elementary schools and private pre-elementary schools that are not in facilities associated with an elementary school that operates grades one through three." Underlined material added by amendment. Currently DOE, in cooperation with the Dept. of H&SS, exercises general supervision over both public and private pre-elementary schools, as well as over the educational component of nurseries.

--Am. No. 2 by Josephson, by unanimous consent. Adds to section granting exemption from school laws to private schools that comply with certain health and safety laws: "A facility which serves children under the age of six years and which receives state payments or subsidies is not eligible for the exemption provided by this section."

--Am. No. 3 by Josephson, by unanimous consent. Amends "Requirements of Exempt Schools" to read: "The parent or guardian of a child enrolled in a religious or other private school that complies with AS 14.45.100 - 14.45.140 shall file an annual notice of enrollment in the school for the child of compulsory school age with the local public school superintendent ...." (Underlined material added.)

--Am. No. 4 by Josephson, by unanimous consent. Requires exempt religous and private schools to comply with standardized testing requirements--administering a nationally standardized test to all students enrolled in grades two, four, six, and ten (was "grades one, three, six, and nine" in Judiciary CS).

--Am. No. 6 by Josephson and Halford, by unanimous consent. Amends section on records to read: "The chief administrative officer of a school that elects to comply with AS 14.45.100 - 14.45.140 shall certify under oath by affirmation [TO THE DEPARTMENT] that the records required under (a) of this section are being maintained." (Underlined material added, bracketed material deleted from Judiciary version by Am. 6.)

operated by a church or other religious organization that does not receive direct state or federal funding (AS 14.45.140).

It should be kept in mind that these provisions are not mandatory unless the private school chooses to exempt itself from other laws and regulations relating to education. Also, this option is available to all private schools, religious and otherwise.

The Senate Judiciary Committee made two additions to the "Purpose" in Sec. 1: "In conformity with the fundamental right to freedom of religion guaranteed by the constitutions of the United States and the State of Alaska and in recognition of the right of parents to choose to have their children educated in private schools, it is the purpose of this Act ... (3) to allow diversity in education by encouraging private education." (Underlined material added by Judiciary.)

Regulation of Private Schools

CS FOR SENATE BILL NO. 354 (JUD)(AM), (see pages 18;74;133; 143). Reported back to the Senate on February 1 by Health, Education & Social Services with a majority recommending it be replaced with a House HESS CS and that it do pass. Concurring: Tischer (Chmn.), Uehling, M. W. Miller and Martin. Goll, Koponen and Davis recommended "pass Senate version." To Rules.

The House HESS CS makes the following changes to the Senate version:

--Deletes Senate floor amendment relating to general supervision by DOE over private pre-elementary schools that are not in facilities associated with an elementary school that operates grades one through three (Am. No. 1 as amended, page 133).

--Deletes "or subsidies" from Am. No. 2 adopted by the Senate (see page 134).

--Changes "of compulsory school age" (added by Am. No. 3, page 134) to more logical place in sentence: "The parent or guardian of a child of compulsory school age enrolled in a religious or other private school that complies with AS 14.45.100 - 14.45.140 shall file an annual notice of enrollment in the school for the child with the local public school superintendent ...."

--Changes grades for administering standardized tests to grades four, six and eight (was two, four, six and ten--see Am. No. 4, page 134).

--Amends section on records to read: "The chief administrative officer of a school that elects to comply with AS 14.45.100 - 14.45.140 shall certify to the department under oath or by affirmation, that the records required under (a) of this section are being maintained." (Underlined material added by House HESS CS--same section amended by the Senate, see Am. No. 6, page 134.)

PROPOSED AMENDMENT TO

CS FOR SENATE BILL 354 (Judiciary)

*Section 1. PURPOSE. In conformity with the fundamental right to freedom of religion guaranteed by the constitutions of the United States and the State of Alaska; and in recognition of the right of parents to choose to have their children educated in private schools, it is the purpose of this Act

(1) to ensure that in matters of education by religious organizations, the state shall not control or interfere with the rights of conscience and religious liberty; and

(2) to further the state's legitimate interest in ensuring the quality of all education, and

(3) to allow diversity in education by encouraging private education.

IN THE HOUSE

SPONSOR SUBSTITUTE FOR HOUSE BILL NO. 514

IN THE LEGISLATURE OF THE STATE OF ALASKA

THIRTEENTH LEGISLATURE - SECOND SESSION

A BILL

For an Act entitled: "An Act relating to the regulation of private schools."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. PURPOSE. In conformity with the fundamental right to freedom of religion guaranteed by the constitutions of the United States and the State of Alaska and in recognition of the right of parents to choose to have their children educated in private schools, it is the purpose of this Act

(1) to ensure that in matters of education by religious organizations the state shall not control or interfere with the rights of conscience and religious liberty;

(2) to further the state's legitimate interest in ensuring the quality of all education, including private education; and

(3) (to allow diversity in education by) encouraging (minimizing STATE regulation of) private education. State involvement in the affairs of

* Sec. 2. AS 14.07.020 is amended to read:

Sec. 14.07.020. DUTIES OF THE DEPARTMENT. The department shall

(1) exercise general supervision over the public schools of the state except the University of Alaska;

(2) study the conditions and needs of the public schools of the state and adopt or recommend plans for the improvement of the public schools;

(3) provide advisory and consultative services to all public school governing bodies and personnel;

(4) prescribe by regulation a minimum course of study for the public schools;

(5) establish, in coordination with the Department of Health and Social Services, a program for the continuing education of children who are held in detention facilities in the state during the period of detention;

(6) accredit those public schools which meet accreditation standards prescribed by regulation by the department; these regulations shall be adopted by the department and presented to the legislature during the first 10 days of any regular session, and become effective 45 days after presentation or at the end of the session, whichever is earlier, unless disapproved by a resolution concurred in by a majority of the members of each house;

(7) prescribe by regulation, after consultation with the state fire marshal and the state sanitarian [DEPARTMENT OF HEALTH AND SOCIAL SERVICES], standards that will assure healthful and safe conditions in the public and private schools of the state including a requirement of physical examinations and immunizations in private pre-elementary schools; the standards for private schools may not be more stringent than those for public schools;

(8) [IN COOPERATION WITH THE DEPARTMENT OF HEALTH AND SOCIAL SERVICES,] exercise general supervision over public [AND PRIVATE] pre-elementary schools [AND OVER THE EDUCATIONAL COMPONENT OF NURSERIES AS DEFINED IN AS 47.35.080(4)]; pre-elementary schools in this paragraph means schools for children ages three through five years when the schools' primary function is educational;

(9) provide accredited elementary and secondary correspondence study programs available to any Alaskan through a centralized office of correspondence study;

(10) accredit private [ELEMENTARY AND SECONDARY] schools which request accreditation and which meet accreditation standards prescribed by regulation by the department; nothing in this paragraph authorizes the department to require religious or other private schools to be licensed;

(11) review plans for construction of new public elementary and secondary schools and for additions to and major rehabilitation of existing public elementary and secondary schools and, in accordance with regulations adopted by the department, determine and approve the extent of eligibility for state aid of a school construction project begun after July 1, 1978; for the purposes of this paragraph, "plans" include educational specifications, schematic designs, and final contract documents;

(12) provide educational opportunities in the areas of vocational education and training, basic education, and fire-service training to individuals over 16 years of age who are no longer attending school;

(13) administer the grants awarded under AS 14.11.020.

* Sec. 3. AS 14.30.010(b) is amended to read:

(b) This section does not apply if a child

(1) is provided an academic education comparable to that offered by the public schools in the area, either by

(A) attendance at a private school in which the teachers are certificated according to AS 14.20.020;

(B) tutoring by personnel certificated according to AS 14.20.020; or

(C) attendance at an educational program operated in compliance with AS 14.45.100 - 14.45.140 by a religious or other private school [ATTENDANCE AT A PRIVATE SCHOOL IN WHICH THE

AVERAGE STUDENT PROFICIENCY IS NOT LESS THAN THE AVERAGE PROFICIENCY FOUND IN THE PUBLIC SCHOOLS IN THE AREA AS MEASURED BY NATIONAL ACHIEVEMENT TESTS; THE DEPARTMENT WITH ASSISTANCE FROM REPRESENTATIVES OF THE PRIVATE SCHOOLS SHALL PROMULGATE REGULATIONS DEFINING THE SUBJECT AREAS TO BE TESTED AND THE MINIMUM AVERAGE SCORES TO BE ACHIEVED];

(2) attends a school operated by the federal government;

(3) has a physical or mental condition which a competent medical authority determines will make attendance impractical;

(4) is in the custody of a court or law enforcement authorities;

(5) is temporarily ill or injured;

(6) has been suspended or denied admittance according to AS 14.30.045;

(7) resides more than two miles from either a public school or a route on which transportation is provided by the school authorities, except that this subsection does not apply if the child resides within two miles of a federal or private school which the child is eligible and able to attend;

(8) is excused by action of the school board of the district at a regular meeting or by the district superintendent subject to approval by the school board of the district at the next regular meeting;

(9) has completed the 12th grade;

(10) is enrolled in a full-time program of correspondence study approved by the department; in those school districts providing an approved correspondence study program, a student may be enrolled either in the district correspondence program or in the centralized correspondence study program;

(11) is equally well-served by an educational experience approved by the school board as serving the child's educational interests despite an absence from school, the request for excuse is made in writing by the child's parents or guardian, and approved by the principal or administrator of the school that the child attends.

* Sec. 4. AS 14.45.030 is amended to read:

Sec. 14.45.030. NON-EXEMPT SCHOOLS [ATTENDANCE AND ANNUAL REPORTS REQUIRED]. Teachers and others in charge of religious or other private [OR DENOMINATIONAL] schools not operated in compliance with AS 14.45.100 - 14.45.140 are not exempt from laws and regulations relating to education. Non-exempt schools shall make regular monthly attendance reports and annual reports to the commissioner in the same manner as teachers and superintendents in the public schools.

* Sec. 5. AS 14.45 is amended by adding new sections to read:

ARTICLE 2. EXEMPT RELIGIOUS AND OTHER PRIVATE SCHOOLS.

Sec. 14.45.100. EXEMPTION. A religious or other private school that complies with AS 14.45.100 - 14.45.140 is exempt from other provisions of law and regulations relating to education except law and regulations relating to physical health, fire safety, sanitation, immunization, and physical examinations.

Sec. 14.45.110. REQUIREMENTS OF EXEMPT SCHOOLS. (a) The parent or guardian of a child enrolled in a religious or other private school that complies with AS 14.45.100 - 14.45.140 shall file an annual notice of enrollment in the school for the child with the local public school superintendent for the area in which the child resides on a form provided by the department. The form shall be signed by the parent or guardian and the chief administrative officer of the school and returned to the local public school superintendent by the parent or guardian. The school shall notify the local public school

superintendent within a reasonable time if the child is no longer enrolled in or attending the school.

(b) A religious or other private school that elects to comply with AS 14.45.100 - 14.45.140 shall maintain monthly attendance records for each student enrolled in the school, shall operate on a regular schedule, excluding reasonable holidays and vacations, during at least 180 days of the year, and shall make an annual report to the commissioner of the number of students in each grade and the school calendar.

Sec. 14.45.120. STANDARDIZED TESTING REQUIREMENTS. (a) A religious or other private school that elects to comply with AS 14.45.100 - 14.45.140 shall administer a nationally standardized test selected by the chief administrative officer of the school to all students enrolled in grades four, six, and eight at least once each school year.

(b) The nationally standardized test must measure achievement in English grammar, reading, spelling, and mathematics.

(c) A religious or other private school that elects to comply with AS 14.45.100 - 14.45.140 shall maintain records of the results of the nationally standardized tests and the records shall be made available to the parent or guardian of the student. Each school shall make composite test results for the school available annually to an authorized representative of the department. The composite test results of a religious or other private school operated in compliance with AS 14.45.100 - 14.45.140 are not public information unless each public school

(1) is also required to administer a nationally standardized test that measures achievement in English grammar, reading, spelling, and mathematics; and

(2) the composite test results for each public school are public information.

Sec. 14.45.130. RECORDS. (a) A religious or other private school that elects to comply with AS 14.45.100 - 14.45.140 shall maintain permanent student records reflecting immunizations, physical examinations, standardized testing, academic achievement, and courses taken at the school.

(b) The chief administrative officer of a school that elects to comply with AS 14.45.100 - 14.45.140 shall certify under oath to the department that the records required under (a) of this section are being maintained.

Sec. 14.45.140. DEFINITION. In this chapter

(1) "religious school" means a private school operated by a church or other religious organization that does not receive direct state or federal funding.

* Sec. 6. AS 14.45.020 is repealed.

Representative Walt Furnace
Pouch V
Juneau, AK 99811

Dear Mr. Furnace:

I would like to express my support for Senate bill 129 and Senate bill 130 which will provide for the teaching of cardiopulmonary resuscitation in the schools and provide funds for the necessary instructional materials. I believe this life saving information should be known by as many people as possible. Providing this instruction in the schools will give a large and ever growing number of individuals capable of providing resuscitation and I think the cost is quite small compared to the benefits.

Sincerely,

Joanne Wallington, M.D.

Linda Kozisek

SB 130

January 18, 1984

I want to thank the sponsors of HB 514 and Senate Bill 354 for their attitude, concern, and intentions. The purpose of this legislation as expressed is excellent. The assurance of religious liberty and a child's education without conflict is supported by most of us. However, there is an incongruence in the bill as written. Section I subsection (1) states that "the state shall not control or interfere with the rights of conscience and religious liberty;". Yet, in this bill churches seeking exemptions have to meet conditions and file reports to the state.

I am the Minister of Education for Glacier Valley Baptist Church, in Juneau. As a church we can not request or accept an exemption from the Department of Education. Exemptions can only be granted to a lesser by a greater power. We can not take an easy way out from possible confrontations if that way involves denial of the Sovereignty of our Lord.

The state can still meet its obligations of ensuring that a child receives an education that prepares him as a viable member of society, by placing the primary responsibility of education where it belongs, on the parent. The parent should be responsible for the reports to the state if he elects to educate his child in a program other than the public schools, or state controlled alternatives.

In view of the purpose of this legislation, please see my enclosure for the suggested changes.

Thank you.

Sincerely,

William E. Brown

William E. Brown
Minister of Education

Page 1 line 16 DELETE "all" from all education. In line 19 one example is given that voids the "all" aspect.

Section 14.45.030. page 5 lines 3-9 DELETE If you don't meet the requirements of the exemption (voluntary or otherwise) you are under Department of Education's control.

Section 14.45.100. page 5 lines 11-16 DELETE Asking for an exemption implies recognition of control or higher authority. This is incongruent to the stated purpose of the legislation in Section I subparagraph (1) and (2)

30 January 1984

SB 354 relating to regulation of private schools:

Members of House HESS Committee, I am here today representing both the State Division of the American Association of University Women at the direction of our State President Evelyn Bonner of Sitka, and the State League of Women Voters at the direction of Paula Ziegler who is today in Ketchican and cannot attend herself.

Both organizations believe in quality child care for children of pre-elementary age, and that care given any child outside his or her home should provide enriching and varied experiences with parental involvement strongly encouraged. While the bill before you speaks to the education of children from age three through grade 12, we are confining our remarks to the pre-kindergarten child, whose need for individual attention from adults is higher than at any other time in that child's life, and who is particularly vulnerable when receiving care from persons other than her or his family.

We realize that this bill is going to pass, but because it deals with the Dept. of Education statutes that have been found to be inadequate by the State Dept. of Internal Audit as well as the Federal Office of Child Development, we feel obligated to bring these problems to your attention. Of highest concern is that there is no definition of the word "preschool" in the statute. Currently there are aproximately 250 unlicensed/uncertificated "preschools" operating in the state and about 100 of these are functionally identical to licensed day care centers. When this bill is enacted, Alaska will be the only state in the Union that does not regulate programs that operate full day (up to 10 hours or more) care of pre-school children. In states other than Alaska, preschools are considered to be of short hour duration which generally concentrate on structured planned activities. Parents overwhelmingly want enrichment/education programs for their children, and believe that by sending their children to preschool programs they are doing the best for their children. However most are unaware that the Division of Internal Audit and the Senate Advisory Council's Day Care Status Report found that "standards for preschool certification were significantly lower than standards for day care center licensure," and under this bill would be practically non-existant.

Citizens and parents have come to rely on certain consumer protection standards that they believe are in place concerning basic health and safety at the very least. Most parents assume that the Fire Marshall's inspection includes a requirement that there be a minimum number of staff to care for the children under emergencies. It does not, although the Senate Advisory Report points out that the 1982 Natl. Fire Code utilized by Alaska determines that a minimum staff to child ratio of 1 to 10 is necessary for an acceptable

SB354 (The Private School Bill) passed the state senate on Tuesday, January 24th. The bill will go a long way in protecting the liberty of parents to send their child to a religious or private school.

Six amendments were added to the bill during the senate floor debate just prior to passage. They are listed below along with comments about their effect upon the bill.

AMENDMENT #1

Sec. 2. AS 14.07.020 (Para. 8)
Page 2 lines 23-25

"and private pre-elementary schools that are not in facilities associated with an elementary school that operates grades one through three"

There has been controversy over the difference between a child care center and a "pre-school." An attempt was made to say that a program was a "pre-school" if the children aged 3-5 attended less than 4 hours a day. That approach should be resisted. Parents should decide how long they want their children in a particular program.

A second approach was the one found in this amendment. It could create some serious problems. A church in a community with no public-school kindergarten may wish to have a church kindergarten, but be denied the right unless it was also willing to have a Christian school--at least for grades 1-3.

This could lead to an "equal protection" problem for the church and in the eyes of the Attorney General's office. The church could sue the state to indicate that it was being denied the right to have a Christian kindergarten. The administration may find in this Amendment #1 all it needs to veto the entire bill. The concept of Amendment #1 was not in the agreement that was made between legislators and the administration when they agreed to the legislation this year.

There is a third approach that could solve the problem and yet remain within the spirit of the legislative-administration decision. All child-care centers receive state funds for monetary help to parents that qualify as low-income. It amounts to thousands of dollars. None of the groups that wish to be exempt under this bill receive nor wish these funds. Separate the two groups on the basis of FUNDING. This also fits the definition section on page 7 of the bill.

Additional reasons for rejecting Amendment #1

1). ...not in facilities...Some church schools have more than one facility either on the same property or at different locations. If interpreted in a narrow fashion, some groups that deserve the exemption may find it denied. 2). What about a school for grades above third grade. Will they qualify?

SUGGESTED SOLUTION

A new amendment needs to be substituted by the House. Suggested wording:

"and private pre-elementary schools that receive direct state funding."

A second less-desirable amendment could read--

"and private pre-elementary schools that are associated with an elementary or secondary school program."

AMENDMENT #2

Sec. 5 14.45.100
Page 5 lines 22-25

"A facility which serves children under the age of six years and which receives state payments or subsidies is not elgible for the exemption provided by this section."

The overall thrust of this amendment is appropriate except for two words--"or subsidies." There is a growing number of people that classify a tax-exemption as a "subsidy." These two words must be removed lest a few years from now the whole purpose of the bill be lost as far as the church schools being exempt.

AMENDMENT #3
Sec. 5 14.45.110
Page 5 line 29

"of compulsory school age"

This is a good amendment that will eliminate a lot of paperwork for both the schools and government. This section is in the bill to satisfy the Compulsory School Law. However the law applies to children above the pre-school age. Therefore parents of these children should not have to notify the local school district that their pre-school child is attending a private or church school.

AMENDMENT #4
Sec. 4 14.45.120
Page 6 line 19

"two, four, six and ten"

It is difficult to test children in grade 2 on the subject of "English grammar." The state tests the public schools on an "Assessment Test" in grades 4 and 8. I would suggest that the following be substituted for Amendment #4.

Substitute - "four, six, and eight" OR "four, six, eight, and ten."

AMENDMENT #5 and 6
Sec.5 14.45.130 (Para. b)
Page 7 Lines 14-15

"or by affirmation ~~to the department~~"

One amendment adds three words
the other deletes three words

These two amendments are probably workable and don't need changing unless the administration threatens to veto the bill because "to the department" is deleted. That is something that should be investigated.

THE DEPARTMENT OF EDUCATION NEEDS TO IMPROVE MANAGEMENT OF PRESCHOOL PROGRAMS

FEBRUARY 1982

STATE OF ALASKA
OFFICE OF THE GOVERNOR
DIVISION OF INTERNAL AUDIT

05-41

SUMMARY

The Department of Education is responsible for preschool programs in the State of Alaska. There are at least 185 early childhood programs in the state that provide preschool services.

This report shows that the Department of Education needs to better manage preschools, and needs to define which early childhood programs should be classified as preschools. The report also shows that the Department needs to set standards for preschools.

BETTER MANAGEMENT OF PRESCHOOL PROGRAMS IS NEEDED

The Department has certified only 28 early childhood programs as preschools, and has monitored even fewer. Historically, the Department has placed little emphasis on preschools. In addition, deciding which early childhood programs actually are preschools is difficult because the Department has not provided a definition of preschools. The lack of a definition causes confusion for those attempting to manage other child care programs.

STANDARDS FOR PRESCHOOLS SHOULD BE IMPROVED

The Department has not developed adequate preschool standards. And, although Alaska Statutes require that the Department of Education cooperate with the Department of Health and Social Services in regulating preschools, there has been little cooperation. Inadequate standards lead to inconsistent care for similar populations in preschool and daycare centers, and lessens the value of the preschool certification process.

RECOMMENDATIONS

To assure that the Department of Education meets their management responsibilities for preschools, we recommend the Commissioner require that:

- -- preschool programs in Alaska are regulated; and
- -- preschool programs are monitored to assure compliance with requirements.

To help eliminate the confusion in determining which early childhood programs are preschools, we recommend the Commissioner provide a definition of which early childhood programs are preschools.

To assure that the similar populations in preschool and daycare programs receive consistent care, we recommend the Commissioner of the Department of Education cooperate with the Commissioner of the Department of Health and Social Services in developing health, safety and developmental standards for preschools. We also recommend the Commissioner of the

Department of Education develop standards for the educational component of preschools.

DEPARTMENT COMMENTS

In response to our draft report, the Commissioner of the Department of Education and the Commissioner of the Department of Health and Social Services agreed with our recommendations and are taking action to improve management of early childhood programs. (See Appendices I and II)

APPENDIX I - Department of Education Response
APPENDIX II - Department of Health and Social Services Response

INTRODUCTION

There are at least 37,000 children 6 years old or younger in Alaska. Many of these children spend part of their time in organized early childhood programs, such as preschools. Research has produced abundant evidence that a good child development program has significant short and long term effects. Early childhood programs have been found to have a positive effect on a child's self respect, proficiency at learning, achievement and intelligence test scores, reduction of grade failure, and social development. According to a major economic study the benefits of a quality child development program provide a 248 percent return on the original investment.

In the State of Alaska, the Department of Education is responsible for setting preschool standards for a level of care that will insure safety, reduce predictable harm, and provide developmental opportunities. The Department of Health and Social Services is similarly responsible for daycare programs.

DEPARTMENT OF EDUCATION RESPONSIBILITIES

Alaska Statute 14.07.020 provides that the Department of Education, in cooperation with the Department of Health and Social Services, exercise general supervision over public and private preschools and over the educational component of daycare centers, and prescribe regulations that will assure healthful and safe conditions in the schools. The Departments' responsibility is defined in Section 4 of the Alaska Administrative Code 60.010 which requires the Department issue a certificate of approval after:

- conducting an investigation of preschool applicants;
- reviewing the proposed plan of education, mode of operation and supervision of children; and
- investigating whether the programmatic objectives of the preschool are being met.

This regulation also requires that preschools have:

- a valid Department of Education certificate displayed with effective dates;
- insurance;
- a Cumulative Health Record Form and records of immunization of children;
- records of physical exam and records of immunization for staff and volunteer workers;
- a disaster plan;
- documentation, on file with the Department of Education, showing inspections for public safety were made before certification and;
- provided programmatic requirements to the Department of Education.

DEPARTMENT OF HEALTH AND SOCIAL SERVICE RESPONSIBILITIES

The role of the Department of Health and Social Services is to license, investigate and supervise daycare centers; and to issue and enforce regulations. Facilities that are primarily educational are exempt from Department of Health and Social Service regulation.

OTHER STATE INVOLVEMENT IN PRESCHOOL AND DAYCARE PROGRAMS

The Department of Community and Regional Affairs contracts with local communities to provide daycare assistance to enable parents to work or enter training. In addition, the State, through the Department, provides funds to Federal Head Start programs in Alaska.

The Department of Commerce and Economic Development provides a revolving loan fund to enable daycare facilities to obtain loans when necessary to meet licensing standards.

In addition, the Department of Environmental Conservation and the Department of Public Safety review early childhood programs for compliance with fire and sanitation standards.

SCOPE OF THE REVIEW

We performed the following steps in reviewing Department of Education's role in exercising general supervision of Alaska's preschools:

- -- reviewed applicable statutes and administrative procedures;
- -- interviewed educators, Departmental administrators, and early childhood learning center staff;
- -- visited preschools;
- -- reviewed and analyzed documents of the Department of Education and preschools; and
- -- gathered information by questionnaires to similar programs in other states, and to preschool and daycare centers in Alaska.

BETTER MANAGEMENT OF PRESCHOOL PROGRAMS IS NEEDED

Historically, the Department of Education has taken little action to manage preschools and has not allocated resources for managing preschools. As a result, the Department has certified and monitored few preschools, which could expose the State to liabilities. In addition, the Department's failure to develop a definition which distinguishes between child care programs and preschools results in confusion for those attempting to manage other child care programs.

THE DEPARTMENT OF EDUCATION MAKES LITTLE EFFORT TO MANAGE PRESCHOOLS

Little staff time or funds are allocated to performing the Department's statutory obligation in early childhood education. The Department staff member responsible for early childhood education programs is also responsible for guidance and counseling, and private and denominational schools. Only about one eighth of her staff time is allocated to the early childhood program. In addition, the Department of Education budgets show that no funds have been allocated to early childhood programs in the last 5 years.

FEW PROGRAMS ARE CERTIFIED

The Department of Education certifies few preschool programs. Responses to questionnaires from 41 of Alaska's 52 school districts showed that there are at least 167 preschool programs in the State. Yet, during the past 5 years the Department of Education has certified only 28 programs. In addition, many of the 28 certificates were given without the necessary documentation on file in the Department. For example, of the 28 programs certified, the Department did not have a fire and sanitation inspection report on file for 12 of the programs, did not have documentation of insurance for 18 programs and did not have programmatic requirements for 18 of the programs.

In addition, many daycare centers are offering preschool programs without Department of Education supervision over the educational component. For example, of the 19 daycare programs surveyed, 18 stated they offered a preschool program but were not certified by the Department of Education.

FEW PROGRAMS ARE MONITORED

The Department is not making onsite visits to monitor the safety, medical records, insurance records or to see if the school is actually implementing a curriculum. The Department has made only about 15 onsite visits in the last 5 years. The early childhood coordinator stated that seven of the onsite visits occurred as a result of a crisis situation and the other reviews were performed on lunch hours while traveling for other reasons.

LIABILITY EXISTS FOR NONPERFORMANCE OF STATUTORY RESPONSIBILITY

The concept of "State Certification" implies to the public that:

-- the preschool is, in fact, an education institution; and

-- the State, through the appropriate agency, has determined the preschool to be in compliance with appropriate laws and regulations.

In a November 1980 memo to the Department of Law, the Commissioner of Health and Social Services expressed concern about the number of unregulated preschools. The Commissioner stated in the memo that the problem of unregulated preschools causes unequal application of the law and has the following results.

1. Lowering respect for Alaska statutes in general.

2. Enforcement problems for this Department. Programs quickly call themselves pre-elementary schools when they learn that is a means of escaping regulations.

3. Risk to children in unregulated pre-elementary schools.

4. A large early childhood population subject to immunization regulations but not receiving the immunizations.

In response, the Department of Law noted that:

> "This office understands that the Department of Education does not now investigate facilities applying for certification and does not supervise the physical examination of immunization requirements. Nor is the department involved in monitoring of other health and safety codes.
>
> Even assuming that there are no certifiable pre-elementary schools in Alaska, the department's records should reflect that applications have been submitted and that investigations have taken place sufficient to determine that the Department of Education finds that no facility is a pre-elementary school or a day care facility with an education component."

The Department of Laws' advisor to the Department of Education told us that the Department of Education has been designated to perform a responsibility and currently is not performing it. Failure to perform where there is a duty to perform, can place the State in a position of exposure to liability.

PRESCHOOLS ARE NOT DEFINED

Alaska Statute 14.07.020 (8) provides that the Department of Education "...exercise general supervision over public and private pre-elementary

schools...when the school's primary function is educational." Alaska Statute 47.35.010-80 provides that the Department of Health and Social Services license..."an establishment providing care and services for any part of the 24-hour day for a child... but does not include any establishment whose primary purpose is educational." Neither of the statutes set criteria nor define what is to be considered a primarily educational facility versus a child care facility.

In 1975, the Department of Health, Education and Welfare (Federal Office of Child Development) commented in a letter to the Department of Health and Social Services that "Your statute is indeed weak, allowing for confusion and almost any interpretation..." The letter said that the most difficult job for the two Departments was the formulation of a clear and full definition of a facility whose function is "primarily educational", and the Departments should work towards better statutes and a clarification of the primarily educational function. The letter said a definition is needed so each applicant will know whether or not the law applied to their program and so each Department has a positive definition to use in deciding whether or not a facility is in their area of responsibility.

Even though the statute is weak, the Department could take action to establish standards and a definition of preschools, but they have not done so. In 1971, the Attorney General stated that a determination must be made whether a given school is actually primarily educational, and the "Department of Education...may define what type of program or programs is primarily educational."

RESPONSIBILITY FOR REGULATION IS NOT CLEAR

Because primarily educational has not been defined, neither the regulatory Departments, the facilities themselves, nor the public has a positive definition to use in deciding whether or not a program is a preschool or daycare program. As a result, any facility may choose to be classified as a preschool, and avoid the requirement to comply with daycare standards. For example, 8 of the 28 certified preschools provide daycare services but do not have to comply with daycare standards because they chose to be certified as preschools.

This problem also creates confusion for regulatory agencies. At locations where both preschool and daycare services are provided, the Department of Health and Social Services has found it difficult to determine compliance because two different standards are used. For example, children in the Department of Education regulated preschool program often intermingle with children in the Department of Health and Social Services regulated daycare program, thereby changing the acceptable staff pupil ratio.

In addition, the Municipality of Anchorage also has difficulty issuing accurate, legal and meaningful permits because some child care centers are providing services regulated by their ordinance and services regulated by the Department of Education.

The Department of Health and Social Services and the Municipality of Anchorage told us that the regulatory confusion also results in some early childhood programs being unregulated. For example, we found 36 early childhood programs unregulated by either the Department of Health and Social Services or the Department of Education.

STANDARDS FOR PRESCHOOLS SHOULD BE IMPROVED

The Department of Education's preschool standards do not assure that certified preschools provide quality educational programs in a safe and healthy setting. Alaska Statutes require that the Department of Education cooperate with the Department of Health and Social Services in regulating preschools, but cooperation has not occurred. In addition, the statutes do not give the Department authority to enforce standards. Inadequate standards lead to inconsistent care for similar populations in preschools and daycare centers. Also, the value of the preschool certification process is questionable because of the inadequate standards.

PRESCHOOL STANDARDS IN ALASKA ARE INADEQUATE

Preschool standards should assure that certified preschools provide quality educational programs in a safe and healthy setting. But, the Department of Education has not established educational standards for preschools. In addition, the Departments health and safety standards for preschools are lower than the standards the Department of Health and Social Services has established for daycare centers.

Standards are Needed to Assure Quality Preschool Programs

According to Federal and national association authorities in the field of child care and development, there are two levels of standards. First, there is licensing, which is the base level and assures that a program or facility meets health, safety and child development standards.

The second level generally supplements basic licensing and is designed to assure quality where a specialized service, such as education, is being offered. Thus, a facility providing child care should be licensed, while a facility operating as a preschool should have a child care license plus be certified as a preschool.

Educational Standards Have Not Been Developed

The Department of Education has not developed specific educational standards for preschools. The Department only requires that preschools provide written information concerning the schools philosophy and goals. Examples of standards that many states have set for preschools are those relating to teacher certification and space requirements.

Teacher Certification

According to education authorities the quality of the staff determines, to a high degree, the excellence of an educational program. For example, The Teacher Education Committee of the Association for

Childhood Education International has recommended that teachers of children three through eight years of age:

-- should have study in the areas of physical and biological sciences, mathematics and philosophy, language and literature, the social and behavioral sciences, and the fine arts.

-- should have a minimum of twenty-four semester hours of professional preparation in the field of early childhood education,

-- should have supervisory experience with young children, and

-- should be required to take refresher courses and to keep active affiliation with professional organizations.

In a recent survey of 26 states, 17 said they require separate certification, four said they require a separate early childhood endorsement, and five said they currently have no requirement on early childhood teacher certification.

Alaska is one of the five states surveyed that does not require any early childhood training as a prerequisite for teaching children under age six. The Department of Education allows any person 19 years old or over, or any student who is age 16 and enrolled in a training program, to be a staff member.

Space

National experts advise that an adequate amount of space available for children's activities is absolutely necessary to ensure a quality, developmentally-orientated child care program. For example, research has shown that space effects the quality of living and learning within a center:

> "the higher the quality of space in a center, the more likely were teachers to be sensitive and friendly in their manner toward children, to encourage children in their self chosen activities, and to teach consideration for the rights and feelings of self and others. Where spatial quality was low, children were less likely to be involved and interested, and teachers more likely to be neutral and insensitive in their manner, to use large amounts of guidance and restriction, and to teach arbitrary rules of social living."

In addition, tendencies towards social versus aggressive behavior has been found to be effected by space and according to a research study report:

"Several studies have found that most social involvement appears to occur at medium density (35-50 sq. ft.), while aggressiveness occurs at higher densities (below 35 sq. ft.) and random behavior occurs in large, undifferentiated settings (over 50 sq. ft. per child)."

Eight of the ten states who responded to our survey on this question required a minimum of 35 square feet per child. The Department of Education has not established space requirements for preschools in Alaska.

Preschool Standards are Lower Than Daycare Standards

In Alaska, the Department of Education's standards for preschools are lower than the Department of Health and Social Services standards for daycare centers. For example, the only preschool standard equal to daycare standards is the immunization standard as shown in the following table.

COMPARISON OF DAYCARE AND PRESCHOOL STANDARDS

STANDARD	DAYCARE	PRESCHOOLS
License Renewal	Annual	5 yrs.
Agency Review	Annual	5 yrs.
Staff Pupil Ratio	1-10	no standard
Indoor Space	35 sq. ft.per child	no standard
Outdoor space	75 sq. ft.per child	no standard
Fire Inspection	Annual	5 years
Sanitation Inspection	Annual	5 years
Health Program	required	no standard
Prone Rest	required	no standard
Immunizations	required	required
Nutrition Program	required	no standard
Corporal Punisnment	regulated	no standard

The Department of Health and Social Services also requires that daycare programs provide opportunities and experiences to promote the individual child's physical, emotional, social and intellectual growth, as outlined below:

- -- opportunities for balance of active/quiet play, group and individual, and indoor and outdoor play;
- -- opportunities for individual self expression in conversation. imaginative play and creative expressions;
- -- use of games, toys, books, sand, puzzles, for intellectual and social development;
- -- walking excursions/field trips; and
- -- equipment and furniture be of sufficient quality and quantity and appropriate to a child's use.

COOPERATION IN DEVELOPING PRESCHOOL STANDARDS HAS NOT OCCURRED

Alaska Statutes require that the Department of Education cooperate with the Department of Health and Social Services in the general supervision

THE VALUE OF ALASKA'S PRESCHOOL CERTIFICATION PROCESS IS QUESTIONABLE

Those who are aware of the Department of Education's standards for preschools generally consider the preschool certification process to be meaningless. For example:

-- Many of the early childhood educators we interviewed said that because of the Department's inadequate standards, the preschool certificates issued by the Department do not assure a quality preschool program. Certification is, in fact, misleading to parent consumers.

-- We interviewed instructors of two early childhood training programs and both teach their students that the Department's standards are not an acceptable standard to assure a quality preschool program.

-- We visited one two-hour a day educationally oriented program that chose to be licensed as a day care center rather than a preschool because they thought parents would have no assurance of a quality preschool program if it only complied with the the Department's preschool standards.

-- The legislature recently mandated that eligibility for a child care grant program is dependent on compliance with day care licensing standards. Those preschools certified by the Department of Education are not eligible for the grants unless they also have a daycare license.

CONCLUSIONS AND RECOMMENDATIONS

CONCLUSIONS

The Department of Education needs to better manage preschool programs. During the past 5 years, the Department certified only 28 preschools and visited for monitoring purposes only 15 preschools. But, our analysis shows that there are at least 167 preschools. And, 18 of 19 daycare programs surveyed said they provided preschool services. In addition, because the Department of Education has not provided a definition of preschools there is confusion for those attempting to manage other early childhood programs.

The Department of Education has not cooperated with the Department of Health and Social Services in developing standards for preschool programs. Currently, there is inconsistent care for similar populations in preschools and daycare programs because preschool standards are lower than daycare standards. Preschools programs should meet daycare standards and should meet additional standards for education.

RECOMMENDATIONS

To assure that the Department of Education meets their management responsibilities for preschools, we recommend the Commissioner require that:

-- preschool programs in Alaska are regulated; and

-- preschool programs are monitored to assure compliance with requirements.

To help eliminate the confusion in determining which early childhood programs are preschools, we recommend the Commissioner provide a definition of which early childhood programs are preschools.

To assure that the similar populations in preschools and daycare programs receive consistent care, we recommend the Commissioner of the Department of Education cooperate with the Commissioner of the Department of Health and Social Services in developing health, safety and developmental standards for preschools. We also recommend the Commissioner of the Department of Education develop standards for the educational component of preschool.

DEPARTMENT COMMENTS

Both the Department of Education and Department of Health and Social Services responded to a draft of this report. Their comments are summarized below and are included as appendices I and II of this report.

Department of Education

The Commissioner of the Department of Education agreed with our recommendations and listed actions the Department has taken or will take to resolve the problems associated with managing preschool programs. The actions include:

-- Developing a tentative agreement with the Department of Health and Social Services and the Department of Community and Regional Affairs for coordination of early childhood programs.

-- Introducing a request for statutory change to require all child care programs be licensed by the Department of Health and Social Services for base level standards.

-- Development of standards for a voluntary education certification process in addition to the mandatory base level licensing.

-- Establishing on site reviews for evaluation of the educational component of certified preschools. (See Appendix I)

Department of Health and Social Services

The Commissioner of the Department of Health and Social Services agreed with our recommendations and is also in agreement with the plans for improvement as presented by the Department of Education. (See Appendix II)

MEMORANDUM State of Alaska

TO: John O'Meara, Director
Division of Internal Audit
Office of the Governor

DATE: February 2, 1982

FILE NO:

TELEPHONE NO: 465-2800

FROM: Marshall L. Lind, Commissioner
Department of Education

SUBJECT: Response to Draft Report

Attached is our response to your draft report titled "The Department of Education Needs to Improve Management of Preschool Programs". As you will note in our response, we are planning a series of actions which will address the conditions described in your report.

You and your staff are to be complimented for the professional manner in which the review was conducted and the report presented. The findings and recommendations are proving useful to us in planning how to better meet our responsibilities for preschool programs.

RESPONSE TO
THE DEPARTMENT OF EDUCATION NEEDS TO IMPROVE MANAGEMENT OF PRESCHOOL PROGRAMS

FEBRUARY 1982

STATE OF ALASKA
DEPARTMENT OF EDUCATION

INTRODUCTION:

The Department of Education is in basic agreement with the findings of the report by the Division of Internal Audit titled "The Department of Education Needs to Improve Management of Preschool Programs". In responding, therefore, we will make no effort to counter any of the findings of the report. We also believe that nothing would be gained by attempting to present reasons for our past activities in the management of preschool programs. Rather, we will present those actions which have been taken and those planned to address the conditions described in the report.

ACTIONS TAKEN:

During the past two months we have met several times with a representative from Health and Social Services and once with a representative from Community and Regional Affairs. These meetings have resulted in a tentative agreement between the three departments for the coordination of early childhood programs. We have also met with representatives from the Alaskan chapters of the National Association for the Education of Young Children to discuss plans for the role these chapters might play in the management of preschool programs. A presentation has also been made before the State Board of Education. At this meeting the board voted unanimously to endorse the early childhood education career ladder certification concept. The Board was also advised of tentative plans for carrying out Department of Education responsibilities for preschools.

ACTIONS PLANNED:

The tentative plan for managing preschool programs consists of the following steps. The conditions from the report, which will be addressed by each step, are presented following the description of each step.

PROPOSED STEP I:

All day care programs, including those claiming to be preschool programs, will be licensed by the Department of Health and Social Services. This base level of licensing will be mandatory and no programs should be exempt from the licensing requirement.

CONDITIONS ADDRESSED:

Requiring that all programs which provide services for preschool age children be licensed by Health and Social Services will clear up the confusion which currently exists for regulating agencies, and for the care providers. It will not be necessary to make a predetermination of whether or not a program is "primarily education." Programs will not be able to avoid basic licensing requirements by claiming to be educational programs. The plan will insure that all programs meet basic health, safety and child development standards, and will eliminate instances of inconsistent care for similar populations of children and differential treatment of care providers.

The plan will also negate the need for the Department of Education to obtain the enforcement authority giving it the power to close schools which do not meet basic health and safety standards, since Health and Social Services already has this authority and will be responsible for base level licensing which will insure adequate health and safety standards.

Implementing Step I of the plan will necessitate a change in statute. The Departments of Health and Social Services and Education are currently working cooperatively to determine those required changes. We anticipate that we will be introducing requests for statutory changes during this legislative session.

The change in licensing requirements will also greatly increase the staff load for Department of Health and Social Services licensing personnel. This will not correspond with a decrease for Department of Education personnel, since Department of Education personnel are not currently involved in licensing. Successful implementation will, therefore, require an increase in the Department of Health and Social Services licensing budget.

PROPOSED STEP II:

Day care centers wishing to have their educational programs certified will, on a voluntary basis, notify the Department of Education. An on-site review of these facilities will be conducted using a criteria for preschool programs. Those programs successfully meeting the criteria will be certified by the Department of Education.

CONDITIONS ADDRESSED:

This step will satisfy the Department of Education's statutory responsibility for certifying preschool programs. It will also provide a definition for preschool programs without making it a condition for base level licensing.

Since the certification process is voluntary only those programs choosing to go beyond base level licensing will do so.

It is anticipated that certification will be at two levels, a basic acceptance level and an exemplary level. We plan to develop an on-site review process which will involve persons from the regional chapters of the National Association for the Education of Young Children as members of the review teams. This will result in a peer monitoring process administered by the Department of Education.

The standards for preschool programs which will be used as the criteria for certification will be developed by a Task Force during the Spring of this year. The Task Force will be made up of persons from the state who are knowledgable in the area of preschool education and who represent the various groups who will be impacted by the plan for managing preschool programs.

CONCLUSION:

These, then are the activities which have taken place and the plans for future activities which will enable the Department of Education to better manage preschool programs.

We feel that the plans represent a cooperative inter-departmental effort which will result in the coordination and better management of preschool programs as well as early childhood programs in general.

STATE OF ALASKA

JAY S. HAMMOND, GOVERNOR

DEPT. OF HEALTH AND SOCIAL SERVICES

John O'Meara, Director
Division of Internal Audit
Office of the Governor
Pouch AU
Juneau, Alaska 99811

Dear Mr. O'Meara:

This is in response to your draft report titled "The Department of Education Needs to Improve Management of Preschoo Programs." The Department of Health & Social Services is in general agreement with the findings of the audit. The document captures the essence of a serious problem and we are hopeful that the plan developed between the Departments--of Education and Health & Social Services will provide corrective action. We have received the Department of Education's response to the audit which outlines that plan.

The Department of Health & Social Services is pleased to have been a participant in recent meetings between representatives of the Departments of Education, Community & Regional Affairs, and Health & Social Services. The dialogue which has begun is extremely useful and the tentative inter-departmental agreement establishes a new precedent of coordinating between three departments around concerns for young children and their families.

The Department of Health & Social Services is in full agreement with proposed Step 1 of the Department of Education's response, that all child care facilities now called Day Care Centers, Family Day Care Homes, and Preschools be licensed under one standard by the Department of Health & Social Services. A recognized principle of government is responsibility to provide equal protection and opportunity to all citizens. For young children who spend part of the day away from their families, the State fulfills this responsibility in part, through licensing to assure a basic level of care and protection, adequate program, and opportunity for development. Licensing under one standard will eliminate the disparity between the care children receive in day care facilities and preschools.

The Department of Health & Social Services is in full agreement that a change of statute is necessary to implement Step 1. In the ten years since the statutes were changed, the disparity has increased rather than decreased. A clear legislative mandate is required to correct a problem of this long standing.

The Department of Health & Social Services will require an increase in staff to perform the licensing studies. Without additional staff the Department of Health & Social Services could not accept the responsibility for an estimated 167 additional programs.

The Department is aware that some programs not now regulated may be fearful that Department of Health & Social Services regulation would result in closure of needed programs. The Department, should it receive the authority, fully intends to implement carefully and in as a supportive manner as possible. Every person or organization whose activities are regulated through licensing has the right to notice of the requirements and an opportunity to comment on them. When there are findings of non-compliances, information for correcting areas of non-compliance will be provided and reasonable time limits for meeting the new standards will be established. It is the Departments' belief that in regulating a new area, two years may be required for full implementation.

The Department of Health & Social Services believes that proposed Step 2 in the Department of Education's response, the certification of educational programs on a voluntary basis, will be well received by providers of early childhood programs. Our experience with day care centers is that directors want to have the educational component of their programs recognized. We are also in agreement that peer monitoring through regional chapters of the National Association for the Education of Young Children is an appropriate role for a professional organization to take and are therefore, in agreement with the Department of Education's plan to use this model.

It is the intent of the Department of Health & Social Services to fully cooperate with the Department of Education in implementing the proposed plan in a timely manner. It is also our intent to continue work on the inter-departmental agreement between the Departments of Education, Community & Regional Affairs, and Health and Social Services for the coordination of Early Childhood programs.

The Division of Internal Audit is to be commended for the careful study given to this important area.

Sincerely,

Helen D. Beirne

ARGUMENT

I.

THE CIVIL AND RELIGIOUS RIGHTS OF PARENTS IN THE EDUCATION OF THEIR CHILDREN ARE VALUES STRONGLY RECOGNIZED BOTH IN THE PRONOUNCEMENTS OF THE CATHOLIC CHURCH AND THE UNITED STATES SUPREME COURT'S INTERPRETATION OF THE UNITED STATES CONSTITUTION.

This case requires this court to determine the extent to which a state may limit the fundamental right of parents to educate their children in accordance with their religious beliefs.

The Catholic Church recognizes a primary and most significant role which parents must play in the education of their children. For example, the Second Vatican Council stated:

> [S]ince parents have conferred life on their children, they have a most solemn obligation to educate their offspring. Hence, parents must be acknowledged as the first and foremost educators of their children. Their role as educators is so decisive that scarcely anything can compensate for their failure in it. For it devolves on parents to create a family atmosphere so animated with love and reverence for God and others that a well-rounded personal and social development will be fostered among the children. Hence, the family is the first school of those social virtues which every society needs.
>
> SECOND VATICAN ECUMENICAL COUNCIL, DECLARATION ON CHRISTIAN EDUCATION, GRAVISSIMUM EDUCATIONIS (1965), no. 3.

In a recent pronouncement Pope John Paul II elaborated on the nature of this primary parental role and explained that it could never be completely alienated to others:

> The right and duty of parents to give education is essential, since it is connected with the transmission of human life; it is original and primary with regard to the educational role of others, on account of the uniqueness of the loving relationship between parents and children; and it is irreplaceable and inalienable, and therefore incapable of being entirely delegated to others or usurped by others.
>
> POPE JOHN PAUL II, APOSTOLIC EXHORTATION, THE ROLE OF THE CHRISTIAN FAMILY IN THE MODERN WORLD, FAMILIARIS CONSORTIO (1981) (hereinafter "FAMILIARIS CONSORTIO"), at no. 36 (emphasis in original).

The significance of the right and duty of Christian parents to educate their children in a manner comporting with their faith led the Pope to state that the "rights of parents to choose an education in conformity with their religious faith must be absolutely guaranteed." FAMILIARIS CONSORTIO at no. 40.

Interestingly the concerns the Catholic church has expressed have been mirrored to a large extent by the pronouncements of the United States Supreme Court in cases involving constitutional challenges to state statutes impinging upon parents' religiously motivated choices in the education of their children. The first case lending support to this conclusion is Pierce v. Society of Sisters, 268 U.S. 510 (1925). There the Supreme Court upheld a challenge to a law forbidding attendance at private schools on the basis of a "liberty" interest which the Court felt inhered in the Due Process Clause, U.S. CONST., amend. XIV. The Court noted that there was a "liberty of parents and guardians to direct the upbringing and education of children under their control." 268 U.S. at 534-535. The Court further observed, "The child is not the mere creature of the State; those who nurture him and direct his destiny have the right, coupled with the high duty, to recognize and prepare him for additional obligations." 268 U.S. at 535.

Although Pierce was decided under a "substantive due process" rationale, which fell out of favor for a time before making a powerful return in the "personal privacy" cases of the last two decades, the same basic right of parental educational direction was reaffirmed, primarily on the basis of the Free Exercise Clause, U.S. CONST., amend. I, in Wisconsin v. Yoder, 406 U.S. 205 (1972). There the Court concluded that enforcement of Wisconsin's compulsory education statute would impinge upon Amish parents' rights to direct their children's religious upbringing. See Id. at 215-219. The Court's holding further determined that the involved State interests in compulsory education could not, override the parents' legitimate claims under the Free Exercise Clause. See Id. at 219-236.

The above discussion demonstrates most clearly that Catholic parents place a great value on their right and responsibility to educate their children in a manner comporting with their religious faith. They recognize that this right and responsibility is primarily theirs, cannot be completely alienated to another entity, requires careful and deliberate exercise and should be protected against any deleterious state action. They further recognize that this right and responsibility is not a creation of a Church, but a basic trait of parenthood. Accordingly, Baptist parents enjoy the same basic right and responsibility in the education of their children and this right and responsibility must be protected from adverse state interference. The above discussion further demonstrates that the United States Supreme Court has recognized the basic right and responsibility parents have for the education of their children in accordance with their religious beliefs as inhering in the Constitution and subject to State interference only when necessary to protect a compelling state interest. With this background we now consider the sectarian school systems which have arisen from the exercise of constitutionally protected parental educational

choice and the particular examples of State interference with these sectarian schools which are alleged to infringe upon this parental choice.

II.

CONSTITUTIONALLY PROTECTED CATHOLIC PARENTAL EDUCATIONAL CHOICES, LIKE CONSTITUTIONALLY PROTECTED PROTESTANT EDUCATIONAL CHOICES, HAVE RESULTED IN SECTARIAN SCHOOLS WITH DIFFERENT EDUCATIONAL PURPOSES AND REGIMENS THAN PUBLIC SCHOOLS. THUS, TEACHER OR CURRICULUM REQUIREMENTS TAILORED FOR PUBLIC SCHOOLS ARE UNSUITABLE FOR SECTARIAN SCHOOLS AND CAN IMPAIR CONSTITUTIONALLY PROTECTED PARENTAL EDUCATIONAL CHOICES.

In efforts to exercise their constitutional rights to educate their children in accordance with their religious beliefs, Catholic and Protestant parents have each formed school systems which serve as alternatives to the public school system. In their brief and the trial record, the Plaintiff-Appellees have made this court aware of the pervasively Christian character of the Fundamentalist Protestant school. It is interesting to note that the Catholic school, like the Fundamentalist Protestant school, is founded upon a distinctly Christian approach to education.

A description of the distinctly Christian approach of the Catholic school may be found in The Sacred Congregation for Catholic Education's document, THE CATHOLIC SCHOOL, issued March 19, 1977. The Sacred Congregation makes clear that the distinctive feature of a Catholic school is "its reference to a Christian concept of life centered on Jesus Christ." SACRED CONGREGATION FOR CATHOLIC EDUCATION, THE CATHOLIC SCHOOL (1977), at no. 33. "Christ is the foundation of the whole educational enterprise in a Catholic school," Id. at no. 34, and "The Catholic School is committed . . . to the development of the whole man, since in Christ, the Perfect Man, all human values find their fulfillment and unity." Id. at no. 35. The goal at which the Catholic school aims is "forming in the Christian those particular virtues which will enable him to live

a new life in Christ and help him to play faithfully his part in building up the Kingdom of God." Id. at no. 36. Based on these premises the Catholic school has the tasks of synthesizing culture and faith and faith and life. Id. at no. 37. "The first [of these two tasks] is reached by integrating all the different aspects of human knowledge through the subjects taught, in the light of the Gospel; the second in the growth of the virtues characteristic of a Christian." Id.

This description of the Catholic school, like the descriptions of the Baptist schools this Court has been provided with in Plaintiffs' briefs and the trial record, requires one clear conclusion. That is that private sectarian schools, including Catholic schools, have as their central purpose to "instruct a child in the way he should go"[1] through bringing a child to a point of informed adherence to and practice of basic Christian values. Accordingly, a private sectarian school, like a Catholic school, will fundamentally differ from a public school by including the instruction of Christian values as they relate to every phase of the curriculum. The important presence of Christian values in sectarian school courses means that these courses may often not clearly resemble courses taught in a public school. Further, the qualifications necessary to teach these value laden subjects in a sectarian school will differ from those needed to teach the same type of courses in a public school in which transmission of religious values is forbidden. This means that the constitutional guarantee of parental educational choice can only be preserved if parents opting for sectarian education are permitted to choose sectarian schools which have teachers and curricula which may substantially differ from those found in public schools. State regulations which attempt to require private schools to

---

[1] Proverbs 22:6.

conform to requirements which may be appropriate for public schools, thus, can significantly impair the constitutionally protected parental choice of sectarian education. As will be seen more fully in succeeding pages, the state requirements at issue in this case have this unconstitutional effect.

III.

THE REQUIREMENT OF 1921 MICH. PUB. ACTS 302, SECTION 3, MICH. COMP. LAWS ANN. § 388.553 (1976), THAT TEACHERS IN PRIVATE SCHOOLS HOLD A TEACHING CERTIFICATE EQUIVALENT TO THAT REQUIRED OF PUBLIC SCHOOL TEACHERS IS AN IMPINGEMENT UPON PARENTS' CONSTITUTIONALLY PROTECTED RIGHTS TO EDUCATE THEIR CHILDREN IN ACCORDANCE WITH THEIR RELIGIOUS BELIEFS WHICH DOES NOT ADVANCE A COMPELLING STATE INTEREST NOR CONSTITUTE THE LEAST RESTRICTIVE MEANS TO ACHIEVE ANY ARGUABLY PRESENT STATE INTEREST.

In 1921 P.A. 302, Section 3, MICH. COMP. LAWS ANN. § 388.553 (1976), the State has enacted a "certification" requirement for private school teachers, which reads in relevant part:

> No person shall teach or give instruction in any private, denominational or parochial school within this state who does not hold a certificate such as would qualify him or her to teach in like grades of the public schools of the state . . . .

In approaching the issue of whether this proposal unconstitutionally interferes with rights guaranteed by the Free Exercise Clause of the U.S. CONST., amend. I, it is first necessary to examine whether there exists any burden on the free exercise of religion. See Sherbert v. Verner, 374 U.S. 398, 403 (1963). The free exercise right involved is that of parents of private school children to effectively exercise their constitutionally protected right to choose a sectarian education for their children. If this right is burdened by the state regulation, the State will be required to prove that this regulation implements a compelling state interest, and that the regulation is the means placing the least restriction on parents' free exercise rights which can implement this interest. See Sherbert, 374 U.S. at 406-408.

Addressing the question of whether the proposal burdens free exercise requires a further examination of the role of the teacher in the sectarian school context. As Plaintiffs' brief and trial testimony makes clear, a teacher in the Baptist schools is involved in a ministry in which he or she is shaping young people in accordance with Christian values. The teacher in the Catholic school has this same responsibility. In the first of the two tasks of the Catholic school explained supra, the integration of faith and culture, the teacher plays a critical role. The Sacred Congregation for Catholic Education noted in this respect:

> Since the educative mission of the Catholic school is so wide, the teacher is in an excellent position to guide the pupil to a deepening of his faith and to enrich and enlighten his human knowledge with the data of the faith. While there are many occasions in teaching when pupils can be stimulated by insights of faith, a Christian education acknowledges the valid contribution which can be made by academic subjects towards the development of a mature Christian. The teacher can form the mind and heart of his pupils and guide them to develop a total commitment to Christ, with their whole personality enriched by human culture.
>
> SACRED CONGREGATION FOR CATHOLIC EDUCATION, THE CATHOLIC SCHOOL (1977), at no. 40.

The specific qualifications and duties of the teacher in the sectarian Christian school have been further explained by the Sacred Congregation in these manners:

> The school considers human knowledge as a truth to be discovered. In the measure in which subjects are taught by someone who knowingly and without restraint seeks the truth, they are to that extent Christian. Discovery and awareness of truth leads man to the discovery of Truth itself. A teacher who is full of Christian wisdom, well prepared in his own subject, does more than convey the sense of what he is teaching to his pupils. Over and above what he says, he guides his pupils beyond his mere words to the heart of total Truth.
>
> The cultural heritage of mankind includes other values apart from the specific ambient of truth. When the Christian teacher helps a pupil to grasp, appreciate and assimilate these values, he is guiding him towards eternal realities. This movement towards the Uncreated Source of all knowledge highlights the importance of teaching for the growth of faith.
>
> Id. at nos. 41, 42.

Finally, the Sacred Congregation emphasized the crucial role of the teacher in the process of integrating faith and culture:

> The achievement of this specific aim of the Catholic school depends not so much on the subject matter or methodology as on the people who work there. The extent to which the Christian message is transmitted through education depends to a very great extent on the teachers. The integration of culture and faith is mediated by the other integration of faith and life in the person of the teacher. The nobility of the task to which teachers are called demands that, in imitation of Christ, the only Teacher, they reveal the Christian message not only by word but also by every gesture of their behaviour. That is what makes the difference between a school whose education is permeated by the Christian spirit and one in which religion is only regarded as an academic subject like any other.
>
> Id. at no. 43.

Although the Sacred Congregation places special emphasis on the Catholic school teacher's critical role in the pupils' integration of faith and culture, it emphasizes that the teacher's role also extends into the very central matter of the pupils' integration of faith and life: "The fundamental aim of teaching is the assimilation of objective values, and, when this is undertaken for an apostolic purpose, it does not stop at an integration of faith and culture but leads the pupil on to a personal integration of faith and life." Id. at no. 44. More specifically, the Sacred Congregation directs:

> The Catholic school should teach its pupils to discern in the voice of the universe the Creator Whom it reveals and, in the conquests of science, to know God and man better. In the daily life of the school, the pupil should learn that he is called to be a living witness to God's love for men by the way he acts, and that he is part of that salvation history which has Christ, the Saviour of the world, as its goal.
>
> Id. at no. 45.

This background of the Catholic school, as part of the species of sectarian schools this proposal attempts to regulate, illustrates the absolutely crucial role of the unabashedly Christian teacher to the successful working of the school. Thus, any state regulation which would restrict this pool of Christian

teachers will burden religious protections guaranteed by the Free Exercise Clause, U.S. CONST., amend. I. By substantially diminishing the pool of available teachers with the requisite Christian qualifications, the State's certification requirement impedes the carrying out of sectarian school parents' Free Exercise right to select the teachers who would most effectively fulfill the crucial role of a sectarian school teacher. More specifically, the sectarian school is required to forego the services of many teachers who would superiorly transmit to students the authentic Christian approach to both religious and secular subjects. Instead, the school is required to select teachers who are less capable, and perhaps almost unqualified, on the important basis of their religious convictions, but who possess valid teaching certificates which, even in secular subjects, bear little relationship to their ability to effectively teach. Thus, when sectarian schools choose to comply with the type of certification requirements found in this case, the result can be a lessening of the schools' ability to effectively transmit Christian values to students. Because transmission of these values constitutes the central and unique mission of the sectarian school, and the purpose for which parents would choose a sectarian school to effectuate their Free Exercise rights to educate their children in accordance with their religious beliefs, the statute's impairment of the sectarian school's ability to effectively transmit Christian values is an unconstitutional interference with these parents' rights, under the Free Exercise Clause, U.S. CONST., amend. I.

While the teacher certification requirement wreaks havoc with parents' rights to effectively choose a sectarian school for their children, it is not an appropriate means to accomplish any interests the State may have in insuring that sectarian school children receive a proper education. Although the State may have a compelling interest in compulsory school attendance generally, it

does not follow that the state has carried its burden of proving that its certification requirements achieve this interest in the manner least restrictive to parental rights to educate their children in accordance with their religious beliefs. Initially, the fact that only a handful of the states have been shown to require certification for private school teachers is strong evidence that a certification requirement is unnecessary to satisfy the educational interests all states share. Further, the State has offered little clear empirical evidence to demonstrate that a certification requirement is necessary to guarantee high quality education. Finally, there are undoubtedly means which place fewer restrictions on free exercise rights, such as requiring parents to educate their children, requiring schools to provide the acknowledged universal "basics" of education and limiting any gross parental abuse of their educational duty through child abuse statutes, which could effectively monitor and guarantee the reception of quality education. Accordingly, the requirement for certification of private school teachers is an unconsitutional infringement upon sectarian school parents' rights to educate their children in accordance with their religious beliefs.

IV.

THE REQUIREMENT OF 1921 MICH. PUB. ACTS 302, SECTION 1, MICH. COMP. LAWS ANN. § 388.551 (1976), THAT COURSES OF STUDY IN PRIVATE SCHOOLS BE OF THE SAME STANDARD AS THOSE PROVIDED BY THE GENERAL SCHOOL LAWS OF THE STATE IMPERMISSIBLY IMPINGES UPON PARENTS' FREE EXERCISE RIGHTS UNDER THE U.S. CONST., AMEND. I, TO EDUCATE THEIR CHILDREN IN ACCORDANCE WITH THEIR RELIGIOUS BELIEFS, IS NOT NECESSITATED BY A COMPELLING STATE INTEREST AND IS NOT THE METHOD TO ACHIEVE ANY PURPORTED GOVERNMENTAL INTEREST WHICH HAS THE LEAST EFFECT UPON THE PROTECTED RIGHTS.

The curriculum regulations present much the same problems as the teacher certification requirements, and are unconstitutional for very similar reasons.

Curriculum, like teacher qualities, is a central feature distinguishing sectarian private schools from public schools and parental preferences for a private school are often based upon this distinction. It is well known that public schools are generally restricted in their ability to transmit Christian values. See Abington Township School District v. Schempp, Murray v. Curlett, 374 U.S. 203 (1963) (Prohibiting Bible reading in public schools except when studied as literature); Engel v. Vitale, 370 U.S. 421 (1962) (Prohibiting recitation of government composed prayer in public schools). In sharp contrast, sectarian schools are very concerned with the transmission of these values. In the case of Catholic schools it has been noted:

> The specific mission of the school, then, is a critical, systematic transmission of culture in the light of faith and the bringing forth of the power of Christian virtue by the integration of culture with faith and of faith with living. Consequently, the Catholic school is aware of the importance of the Gospel-teaching as transmitted through the Catholic Church. It is, indeed, the fundamental element in the educative process as it helps the pupil towards his conscious choice of living a responsible and coherent way of life.
>
> SACRED CONGREGATION FOR CATHOLIC EDUCATION, THE CATHOLIC SCHOOL (1977), at no. 49.

The pervasive importance of gospel teaching is further emphasized in its lack of confinement to specific religion courses in a sectarian school and its role in insuring that students obtain more than a mere intellectual appreciation of the truths of Christ:

> Without entering into the whole problem of teaching religion in schools, it must be emphasized that, while such teaching is not merely confined to "religious classes" within the school curriculum, it must, nevertheless, also be imparted explicitly and in a systematic manner to prevent a distortion in the child's mind between general and religious culture. The fundamental difference between religious and other forms of education is that its aim is not simply intellectual assent to religious truths but also a total commitment of one's whole being to the Person of Christ.
>
> Id. at no. 50.

Obviously, sectarian schools, including Catholic schools, must have significant latitude in the development of their curricula if they are to serve as effective objects of parents' constitutionally protected rights to educate their children in accordance with their religious beliefs. However, the framework of state regulation of private school curricula in this case has great potential to impair this required freedom. The "same standard" language of the involved statute is construed to require comparison to the local public school curriculum,[2] but is sufficiently vague to permit a number of different modes of enforcement. If the enforcing entity were to interpret this language only to require a review of course titles to see that the sectarian school curriculum included instruction in the acknowledged universal "basics" of education, there would normally not be significant impairment of religious freedom. But, even under this minimal review there would be a potential for significant potentially objectionable courses in areas such as sex education or "values clarification" which can be found in many public school curricula.

Further, the language of the involved statute does not require the enforcing entity to limit its inquiry into whether private schools are of the "same standard" as public schools to an examination of course titles. If an enforcing entity were to determine that the "same standard" requirement extended to the content of courses in each school, significant infringement of parental rights would result. This would occur because the content of a sectarian school course, in which the Gospel should be emphasized, could differ in major respects from similar courses in public schools in which the Gospel is not emphasized.

---

[2] See Sheridan Road Baptist Church v. State, No. 80-26205-A2, slip op. at 7 (Ingham Co. Cir. Ct. Dec. 29, 1982).

Thus, the ambiguous language of the statute, standing alone, results in great potential for infringement of parental rights under the Free Exercise Clause to educate their children in accordance with their religious beliefs. However, the significant difficulties inherent in this ambiguous statute are aggravated by the fact that the body enforcing the statute is not an "impartial" governmental body. Instead, the superintendent of the school district in which the sectarian school is located has enforcement responsibilities. See Sheridan Road Baptist Church v. State, No. 80-26205-A2, slip op. at 7 (Ingham Co. Cir. Ct. Dec. 29, 1982). It is not difficult to imagine the potential for abuse which may exist when a public school superintendent, whose system is losing students and state aid by the presence of vibrant sectarian schools, is given the responsibility to enforce the standards these sectarian schools must meet. Accordingly, the statute in this case represents a significant infringement of parents' constitutional rights to educate their children in accordance with their religious beliefs.

Although the statute significantly infringes upon parents' constitutional rights, there exists little relationship between the statute and the state's expressed purpose of "quality education." Initially, the trial judge correctly noted that the statute does not guarantee quality education on a state-wide basis, but instead merely insures that the private school will match the quality of the local public school. Further, if the statute only requires an inspection of course titles, it is difficult to see what major positive or negative impact it would have on the quality of education. Finally, if the statute requires a significant conformity between the content of private and public school courses, it could actually have the effect of reducing educational quality by forcing superior sectarian school courses to resemble inferior public school courses. In any event it is clear that the statute is neither an appropriate means to

achieve the stated purpose of quality education nor the "least restrictive means" to achieve this end. Accordingly, the statute is an unconstitutional infringement of sectarian school parents' Free Exercise rights to educate their children in accordance with their religious beliefs.[3]

---

[3] Although this brief's focus has been on parental Free Exercise rights to educate their children in accordance with their religious beliefs, it appears that both the teacher certification and curriculum requirements create an unconstitutional excessive entanglement between government and sectarian schools. In noting that a more indirect regulation, involving sectarian school teachers' collective bargaining rights, could pose "entanglement" problems, the United States Supreme Court noted:

> "Whether the subject is 'remedial reading,' 'advanced reading,' or simply 'reading,' a teacher remains a teacher, and the danger that religious doctrine will become intertwined with secular instruction persists." Meek v. Pittenger, 421 U.S. 349, 370 (1975). Cf. Wolman v. Walter, 433 U.S. 229, 244 (1977). Good intentions by government --or third parties--can surely no more avoid entanglement with the religious mission of the school in the setting of mandatory collective bargaining than in the well-motivated legislative efforts consented to by the church-operated schools which we found unacceptable in Lemon, Meek, and Wolman.
>
> NLRB v. Catholic Bishop of Chicago, 440 U.S. 490, 501-502 (1979).

The thrust of the Catholic Bishop language would appear to be that, even if government regulation of sectarian school teacher qualifications and curricula did not impinge upon parental Free Exercise rights, pervasive regulation of these matters, which appears to be actually or potentially present in this case, could present an unconstitutional "excessive entanglement" between the state and sectarian schools. It would further appear that this rationale formed much of the basis of the ruling under review in this matter.

RELIEF

Based upon the foregoing discussion, the Catholic League for Religious and Civil Rights requests that this Court rule that 1921 Mich. Pub. Acts 302, Sections 1 and 3, MICH. COMP. LAWS. ANN. §§ 388.551 and 388.553 (1976), violate the Free Exercise Clause of the U.S. CONST., amend. 1, and award the Plaintiff-Appellees any relief to which they are entitled in this action.

Respectfully submitted, this 5th day of July, 1983.

STATE OF MAINE, DEPARTMENT OF EDUCATIONAL AND CULTURAL SERVICES, COMMISSIONER OF EDUCATIONAL AND CULTURAL SERVICES and MEMBERS OF THE MAINE STATE BOARD OF EDUCATION,

Defendants;
Counterclaimants

FINDINGS OF FACT AND
CONCLUSIONS OF LAW

CYR, C.J.

The plaintiffs challenge the constitutionality of various Maine statutes and regulations governing compulsory education and the approval of private schools. The counterclaim against the ten church schools and their pastors or administrators demands a judicial declaration that their failure or refusal to provide defendants with school approval information violates Maine law, and permanent injunctive relief requiring plaintiffs to provide the information "as a condition to continued operation of their respective schools with compulsory school age children" during the hours such children would otherwise be attending an approved school. Partial summary judgment has been granted in favor of the defendants. See Bangor Baptist Church v. State of Maine, 549 F. Supp. 1208, 1232 (D. Me. 1982).

On the stipulations of the parties and on the exhibits[2] and the testimony received during the eight-day trial the Court makes the findings of fact and conclusions of law contemplated by Fed. R. Civ. P. 52(a).

I. History of Present Dispute

The earliest evidence of the present dispute is a March 24, 1977 letter from the administrator of Bangor Christian Schools (Bangor Christian) requesting the Maine Department of Educational and Cultural Services (Department) to exempt Bangor Christian from a Department regulation requiring private schools to submit a five-year plan for basic approval. Describing Bangor Christian as an integrated auxiliary of the Bangor Baptist Church, the administrator informed the Department that Bangor Christian believed that the regulation requiring the submission of a five-year plan went "beyond the legitimate responsibility of the State to see that each municipality provides suitable education for their [sic] youth." The administrator represented that Bangor Christian, an approved school,[3] had "always adhered to . . . governmental control" respecting the maintenance of certain minimal standards "in order to qualify as a safe, healthful, bona fide school," but that it objected to "the increasing involvement of government in the lives of private individuals and private institutions." Expressing concern that the request would "eventually

involve" unnecessary and unacceptable state "control [of] religious instruction" and that the "humanistic and secular approach of the public education system" is diametrically opposed to the "integrated, Christian approach" at Bangor Christian, the administrator asked that Bangor Christian be permitted to control its own educational planning and direction.

Plaintiff Maine Association of Christian Schools (MACS) was founded in the spring of 1979 to promote and improve Christian school education in Maine and to defend Christian schools against perceived encroachments by state regulation.[4] Plaintiff Herman C. Frankland, the pastor of Bangor Baptist Church, became President of MACS, and Ralph Yarnell became its Executive Director.

On May 15, 1979, MACS called a general meeting of its member schools to discuss the "right position of Christian Schools in Maine" with respect to state approval. Defendants' Exhibit 1. At that meeting MACS members[5] voted to pay $1,200 to have two lawyers and an educator address them the following month and "to give . . . counsel with regard to philosophy, strategy etc.," id. Meanwhile, MACS members unanimously voted to take no official position regarding state approval. Schools choosing "to buck state approval in the meantime would be doing so without any backing from MACS." Id.

On June 8, 1979 John McLario, Esq., a Wisconsin attorney specializing in the representation of Christian schools, addressed the MACS Board of Directors and the MACS constituency. On June 23, 1979

Dr. Paul Cates, an evangelist and former vice president of the American Association of Christian Schools (AACS), addressed the administrators and pastors of all MACS-member schools, as well as many church aud church school-board members. On June 29, 1979 the group was addressed by David Gibbs, Esq., of Gibbs & Craze (Cleveland), which specializes in representing religious schools involved in disputes with state regulators. These three individuals informed the MACS administrators and pastors as to the constitutional standards governing state regulation of church schools.

On August 1, 1979 Wallace LaFountain, a consultant to the Department, invited the administrators of all Christian schools in Maine to an August 13, 1979 conference to discuss the certification of Christian-school principals, the approval of Christian-school curricula and the church-school approval process itself. As of August 5, 1979 all Christian schools known to be operating in Maine with compulsory-school-age children in attendance during normal public-school hours had obtained state approval.[6] At that time several new Christian schools proposed to operate during the 1979-80 school year without obtaining state approval.

On August 5, 1979 Reverend Frankland notified all MACS-member pastors and administrators of an emergency meeting to be held August 10, 1979 for the purpose of determining the position MACS should take at a meeting scheduled with state officials for August 13.

On August 7, 1979 the MACS Board of Directors drafted a four-point

plan for presentation to the Department as an alternative to formal school approval of the eight new Christian schools scheduled to open that fall. The plan called for a one-year moratorium on the state school-approval requirements, during which the new Christian schools would

1. receive the approval of the Department of Public Safety and the Department of Human Services prior to opening;

2. permit Department officials to conduct on-site observation of the schools in operation;

3. teach a "bona fide curriculum" meeting the requirements of Maine law; and

4. employ teachers qualified for state certification.

During the one-year moratorium MACS would seek legislative exemption from the statutory requirement of school approval. Tr. at 66.

On August 8, 1979 Department consultant LaFountain met with MACS representatives to determine their position regarding state approval of church schools. MACS officials informed LaFountain that their church schools were integral parts of their religious ministries and not susceptible, either on constitutional or biblical authority, to state control, because acquiescence to any form of state approval of church-school teachers, principals or curricula would violate their biblically-based religious conviction that Christ, not the state, is sole sovereign in such matters. The MACS representatives announced that the as-yet unapproved church schools would reject state approval

because acquiescence to state approval might imply a state right-of-control, and because acquiescence might later be used in court to demonstrate that their professed religious beliefs regarding state control were based on nonreligious preferences, rather than religious conviction. LaFountain was then informed of the MACS four-point plan. See Defendants' Exhibit 4.

The factors which influenced plaintiffs to adopt the position taken at the August 8, 1979 meeting included: (1) a January 1978 statement issued by NERAACS, setting forth objections to state approval; (2) an increase in the number of requirements for school approval; (3) the nationwide growth of the teaching program known as Accelerated Christian Education (ACE);[7] (4) a growing awareness that fundamentalist Christians in other states were involved in challenges to similar statutes; (5) a concern that the approval laws were vague; and (6) a maturation of fundamentalist Christian convictions regarding the total sovereignty of Christ over the church and its ministries. Tr. at 20-21, 219-21, 241-43, 504-13.

When the unapproved church schools planning to open in the fall of 1979 expressed their desire to join MACS, but advised that they could not accept state approval, the members of MACS decided to stand beside the new church schools in opposition to state approval. Tr. at 221.

On August 13, 1979, 88 Christian educators and pastors attended a conference with Department officials, who expressed satisfaction with the request that Christian school principals not be required to obtain state certification.

On August 16, 1979, MACS officials met with the newly-appointed Commissioner of Education, Harold Raynolds (Commissioner), and presented a more detailed version of their four-point plan for dealing with the new unapproved church schools during the 1979-80 school year. See Defendants' Exhibit 9. The MACS proposal stated that MACS would (1) act as a catalyst to have new MACS-member schools inspected for health and safety purposes prior to opening; (2) arrange visitations to MACS-member schools by Department officials; (3) assure the Department that each MACS-member school was presenting a bona fide curriculum consistent with state requirements; and (4) assure the Department that each MACS-member school employed teachers who were qualified for state certification. These proposals were intended as an interim substitute for state approval while MACS pursued a legislative resolution of the problem.

Plaintiff Frankland wrote the Associate Commissioner of the Department on August 16, 1979 in response to a request for an explanation of the religious objection to state approval. Reverend Frankland described the church schools as the teaching arms of the Church, integrally connected with it. He characterized state licensure of church schools, their curriculum or their staff as tantamount to licensing the churches, their ministers and the subject matter taught in church, stating that to permit such regulation would be to render unto Caesar that which belongs to God. In order to avoid having their religious conviction regarding state regulation diluted in the eyes of

the law to a mere preference, wrote Reverend Frankland, the churches must object to state regulation of their schools.[8]

On August 30, 1979 the Commissioner informed MACS of the Department's position that the minimum standards required of public and private schools "do not impose an onerous burden upon schools which seek approval." The Commissioner described as "reasonable" the regulations requiring minimum hours of instruction, employment of only "qualified instructors" and instruction in prescribed subjects. The Commissioner advised that the Department would -

> carry out its mandate to approve public and non-public schools in accordance with the laws of the State of Maine [and] . . . only consider waiving part or all of the minimum standards utilized in the approval process if it can be established that the standards in question violate an individual's constitutionally protected rights and that the State's interest in adhering to those standards is not of sufficient magnitude to override the claimant's rights.

The Commissioner went on to say that "[u]nder no circumstances will the Department waive the requirement that all public and non-public schools be approved in order to be able to operate as schools in the State of Maine." (Emphasis added.)

On September 11, 1979, after meeting with representatives of MACS, the Department issued a press release captioned, "Statement Regarding the Approval of Private Schools," which asserts that the Department "is presently reviewing the curriculum, the educational programs, and the credentials of the teachers of certain private schools which

object on constitutional grounds to the formal school approval mandated by law." The press release further stated -

> [i]t is the Department's position that during the school year 1979-80 each of these schools will meet the minimum standards for approval required by law. If the Department is satisfied that the schools have met the minimum standards for approval, then the Department will treat these schools as having been approved for attendance purposes during the school year 1979-80.

Defendants' Exhibit 10. When this press release was issued MACS was informed that the four new schools would "not risk truancy litigation" provided the requirements outlined in the press release were satisfied.

On September 12, 1979, in response to a request from the Department, MACS agreed to submit sanitation information regarding three schools and to update the sanitation and fire safety information relating to a fourth school. MACS agreed to answer all questions on the school approval form as to which there were no constitutional objections.

On September 17, 1979, MACS notified its members of a "sensitive . . . meeting" scheduled for September 21, 1979 with Charles Craze, Esq., of Gibbs & Craze.[9] MACS members were advised that they must "decide what their convictions are regarding state approval in advance of the meeting." The letter instructed MACS members to read the enclosed articles regarding religious convictions and state licensure of Christian schools. One article, by Paul Cates, states that its purpose is to enable the reader "to give Biblical explanations for the

stand you take" against state regulation of religious entities. The article emphasizes that in order for beliefs to be constitutionally protected they must be convictions as opposed to preferences.

The second article MACS members were asked to read before the September 21, 1979 meeting described constitutional, educational and scriptural reasons for opposing state licensure of Christian schools. The article identifies the following risks of state regulation:

1. the state will impose its "child-centered" teaching methodology upon church-school students in contravention of the "subject-centered . . . methodology" of the Christian schools;

2. the state will impose a secular humanist philosophy upon the church schools;

3. the state will mandate sex education courses and other programs and approaches offensive to Christian values;

4. the state will ban the types of student discipline required by the Bible; and

5. the state will prescribe textbooks of poor quality.

The scriptural bases for opposing state licensure were stated as follows:

> The responsibility for training a child is first laid on the parents (Pro. 22:6 and Eph. 6:4). Human government is ordained by God to suppress those who work violence and evil in society (Rom. 13:3-4). The mission of the church is clearly to preach and teach. The home, church and state must maintain their proper roles.
>
> . . . .
>
> Christians are certainly commanded to obey laws of their nation (I Pet. 2:13). Advocates of civil disobedience find little encouragement in scripture. The only

> scriptural justification for a Christian to disobey his government would be in the case where the law of Caesar conflicts with the law of God. Yet, one might point out that Paul faced jail and punishment by the state in most of his ministry. Again, however, his offence was only preaching and teaching, and he obeyed God rather than Caesar.

At the September 21, 1979 meeting with Attorney Craze, separate letters were drafted in behalf of 19 MACS-member schools[10] for delivery to the Commissioner, each letter advising in substance that after much contemplation the church-school authorities had concluded that their biblical convictions compelled them to reject state regulation of their schools and teachers, which are integral and inseparable parts of the religious ministry of their churches.

On September 28, 1979, Department officials met with MACS representatives and Attorney Gibbs, and the 19 letters were presented to the Commissioner. In anticipation of a legislative resolution of the problem in 1980 the Commissioner assured MACS that the new church schools could continue to operate during the 1979-80 school year without fear of state action.

On October 11, 1979, MACS advised all of its members of the identity of the 19 MACS-member schools which had already submitted letters to the Commissioner, and urged five other MACS-member schools to submit letters.[11]

During November and early December, 1979, six more churches operating Christian schools wrote the Commissioner, rejecting state approval. See Defendants' Exhibits 15a - 15f.

In 1980, MACS drafted and sponsored two bills for presentation to the 109th Maine Legislature. Both bills provided that church schools which declare their religious convictions against state approval would be exempt from state approval requirements. The legislature rejected both bills in March 1980.

After the defeat of these bills, MACS formally prohibited its members from accepting or retaining school approval.

The Department wrote the unapproved church schools requesting the information needed to determine their eligiblility for approval.

On May 29, 1980, MACS' new attorney, William Ball, Esquire, wrote the Commissioner requesting information concerning the Maine compulsory education statutes and regulations. Attorney Ball asked the Commissioner to explain the statutory basis for regulations requiring private schools, as a prerequisite to approval, to submit a statement of (1) educational philosophy, goals and objectives, and a plan for accomplishing the same; (2) the "methods and procedures" to be utilized to measure attainment of school goals; (3) financial position and policies; and (4) the program of instruction. Attorney Ball asked if the Commissioner interpreted the state regulations as requiring that private schools request an inspection of their facilities, curricula and staff qualifications prior to commencement of operations. Attorney Ball inquired whether the Department regulation prohibiting the operation of unapproved schools was directed only at public schools and, if not, what the statutory basis was for such a regulation, pointing out that though Maine statutes do provide for penalties

against parents who enroll their children in a school not approved for attendance purposes, there were no statutes "directed at schools" and no statutes forbidding the operation of unapproved private schools.

During the 1980-81 school year the dispute between the church schools and the defendants remained at a standoff. The Department attempted to obtain compliance, clarify the approval application form, and determine whether any particular requirement burdened any school. MACS failed to respond to any of defendants' requests for substantive comments on how the approval regulations could be made less offensive to the religious beliefs of its constituency.

In September, 1980 the Commissioner advised the appropriate public school superintendents that nine Christian schools had opened without state approval. "In order to prevent the students from becoming victims [of the] approval controversy" (Defendants' Exhibit 35), the Commissioner recommended that the superintendents forward to those unapproved church schools, on request, copies of the necessary student records in the possession of the public schools, but retain the original student records.

On October 14, 1980 the Commissioner instructed all public school superintendents to indicate separately in their 1980-81 enrollment reports those students residing within their school administrative districts who were attending unapproved schools. The Commissioner concluded his letter by stating - "[u]ntil you hear further from this office, you should not take any legal steps to enforce the truancy

laws against students attending these unapproved schools." See Defendants' Exhibit 36.

On October 9, 1981 the Commissioner formally advised nine unapproved church schools[12] of the Department's intention to "commence a legal action" in state court unless certain information was furnished by October 20, 1981. The Commissioner insisted that "a private school may provide education to children of compulsory school age during hours of the day when such children would otherwise be attending public schools only if it is approved by the Commissioner." The Commissioner stated that approval must be obtained in accordance with the rules adopted by the Department, copies of which had been sent to the schools on September 25, 1981. Enclosing an application form, the Commissioner informed the church schools that the minimum information required to obtain Department approval to operate consisted of evidence that the school

> 1. has been inspected by the Department of Human Services for compliance with state health and sanitation standards;
>
> 2. has been inspected by the Fire Marshal for compliance with the Life Safety code;
>
> 3. offers a course of study meeting the minimum curriculum requirements;
>
> 4. has an instructional staff which is either certified or qualified for certification; and
>
> 5. maintains and safeguards adequate attendance, health and academic records.

The Commissioner allowed that the required information could be provided by authorizing Department representatives to visit the schools, observe their operations and inspect their records.

The original complaint in this action was filed on October 16, 1981.[13] The complaint was amended on October 28, 1981 by adding, as plaintiffs: Bangor Christian, Grace Baptist Church Schools, five churches and the five affiliated unapproved church schools which had received the Commissioner's letter of October 9, 1981.

On October 30, 1981, defendants agreed to refrain from undertaking any enforcement action against the five church schools added as plaintiffs two days earlier.

On November 20, 1981, defendants withdrew their earlier motion that this Court abstain from hearing this case.

On December 4, 1981, defendants filed their answer and a counterclaim against the five plaintiff church schools which had received letters from the Commissioner, as well as four nonplaintiff church schools which had received letters. Plaintiffs joined the latter four church schools as plaintiffs on December 28, 1981.

Prior to trial the parties agreed that although the provisions of Title 20-A of the Maine Revised Statutes Annotated were not to become effective until July 1, 1983, plaintiffs' claims and defendants' counterclaim were to be adjudicated as if those provisions were in effect at the time of trial, since Title 20-A was merely a recodification of pertinent provisions of Title 20.[14]

II. Counterclaim

The counterclaim presents the ripest controversy and its resolution controls the context in which the Court must determine the ripeness and substance of the claims asserted by the plaintiffs.

The counterclaim alleges that each plaintiff church school: (1) is operating with compulsory-school-age children in attendance, and without state approval; (2) has failed or refused in the past and will refuse in the future to respond to Department requests for information needed to determine its approvability; and (3) if unapprovable, is threatening the health, physical safety and welfare of the children in attendance.

Defendants demand that the Court (1) declare that the failure or refusal to complete and submit the 'Basic School Approval' application or to provide the information requested thereon in some other manner is violative of Maine law; and (2) enjoin the church schools from operating with compulsory-school-age children in attendance during normal public school hours until the church schools submit or make available to the Commissioner the information necessary to demonstrate compliance with state school-approval requirements.

Plaintiffs admit that the plaintiff church schools are unapproved and operating with compulsory-school-age children in attendance, but deny that they have failed or refused to respond to requests for information relating to school health, sanitation and fire safety.[15]

Plaintiffs affirmatively assert that defendants have an adequate remedy at law and that several of plaintiffs' constitutional claims, including their constitutional claim that various state regulations are ultra vires, bar relief under the counterclaim.

Consideration of the counterclaim begins with an examination of the relationship between the Maine statutes governing school attendance, Chapter 211 of Part 3 of Title 20-A, as amended by P.L. 1983 c. 435, 1983 Me. Legis. Serv. 2583-93, and the statutes relating to private schools, Chapter 117 of Part 2 of Title 20-A.

Compulsory Attendance and Private Schools

The core requirement of the compulsory attendance section (§5001) of Chapter 211 of the Maine education statutes is that persons age seven or older must attend a public school during its regular annual session until they reach age 17. 20-A M.R.S.A. §5001(1), as amended by P.L. 1983 c. 485 §21, 1983 Me. Legis. Serv. at 2590-91. Exemption from the public-school attendance requirement is accorded students who obtain "equivalent instruction in a private school . . . and if the equivalent instruction is approved . . ." 20-A M.R.S.A. §5001(2)(D)(1) (emphasis added), provided that the appropriate local public school officials receive a certificate reflecting the name and residence of the student seeking exemption and the name of the private school the student is attending, signed by the person or persons in charge of the private school.[16] 20-A M.R.S.A. §5001(2)(D)(2).

Local public school officials make the initial determination as to whether a student is receiving equivalent instruction in a private school. If local public school officials deny the exemption because the private school instruction is not considered "equivalent," an appeal may be taken to the Commissioner. Id. §5001(2)(D)(2).

In order to come within the relevant [paragraph (D)(1)] statutory exception to the compulsory public-school education requirement, a child must not only receive equivalent instruction, but the instruction must be "approved by the Commissioner."[17] An "approved private school" is defined in Title 20-A, section 1(2), as "a private school approved for attendance purposes under chapter 117," 20-A M.R.S.A. §1(2) (1983); a reference to section 2901, where it is provided that -

> [a] private school may operate as an approved private school for meeting the requirement of compulsory school attendance under section 5001 if it:
>
> 1. Hygiene, health, safety. Meets the standards for hygiene, health and safety under Titles 22 and 25; and
>
> 2. Is either:
>
> A. Currently accredited by the New England Association of Colleges and Secondary Schools; or
>
> B. Meets the department's requirements for approval for attendance purposes under section 2902.[18]

20-A M.R.S.A. §2901 (1983).

Under a delegation of authority from the Maine Legislature, see 20-A M.R.S.A. §405(3)(E), the Board of Education (Board) has promulgated regulations expressly made applicable to "[p]rivate schools approved for attendance purposes by the department . . ." by section 2902 of Title 20-A.[19]

Informed by the statutory definition of the term "approved private school" appearing in sections 2901 and 2902, the Board promulgated a new regulation during the course of the trial of the present action.

> A private elementary or secondary school shall not operate for purposes of meeting the statutory compulsory school attendance requirements unless it has been approved by the Commissioner of Educational and Cultural Services prior to commencing operation with students present.

05-071 CMR 125, section 1-A, subsection (A)(1) (as amended February 10, 1983) (Defendants' Exhibits 72 & 100-102) (emphasis added).

The Board regulations further provide that:

> Nine months preceding the day on which the school plans to begin operations, it shall file with the Commissioner a notice of intent to operate a school for purposes of meeting the compulsory school attendance requirements.

Id., subsection (A)(2) (emphasis added).

The Board regulations relating to private-school health and safety requirements provide that:

> A private school may not operate unless it complies with the health and safety requirements of Maine law applicable to schools generally, including the standards for hygiene, health, and safety under Titles 22 and 25 of the Maine Revised Statutes Annotated.[20]

Id., subsection (D)(1) (emphasis added).

Subsection I(4) of the Board regulations provides:

> Whenever the Commissioner determines that a private school is operating with compulsory school-age children in attendance and (a) does not meet the requirements for approval, or (b) has failed or refused to provide information for approval, he may institute proceedings in a court of competent jurisdiction to seek injunctive relief to prevent the non-public school from operating until such time as it meets the requirements for approval or provides information sufficient to demonstrate that it meets the requirements for approval.

Id., subsection (I)(4).

Defendants rely upon Title 20-A, the Board regulations and the equity powers of the Court in support of their requests for declaratory and injunctive relief.

A. Application of the Erie Doctrine

Although the counterclaim invokes the Court's ancillary, rather than its diversity, jurisdiction, the choice of law is governed by the Erie doctrine, see Erie R. Co. v. Tompkins, 304 U.S. 64 (1938).

> [I]t is the source of the right sued upon, and not the ground on which federal jurisdiction over the case is founded, which determines the governing law. . . . Thus, the Erie doctrine applies, whatever the ground for federal jurisdiction, to any issue or claim which has its source in state law. . . . Likewise, the Erie doctrine is inapplicable to claims or issues created and governed by federal law, even if the jurisdiction of the federal court rests on diversity of citizenship.

19 Wright, Miller & Cooper, Federal Practice and Procedure: Jurisdiction §4515, at 275 (1982), quoting Maternally Yours, Inc. v. Your Maternity Shop, Inc., 234 F.2d 538, 540 n.1 (2d Cir. 1956) [emphasis in original; elipses by Wright, Miller & Cooper]. Maine law

is the source of the rights asserted in the counterclaim.

According to the great weight of authority,[21] absent a contrary federal constitutional or statutory provision, see Skelly Oil Co. v. Phillips Petroleum Co., 339 U.S. 667, 674 (1949) [availability of declaratory relief in diversity case is controlled by 28 U.S.C. §2201], federal rule, see Hanna v. Plumer, 380 U.S. 460 (1965), or some overriding federal policy, see Byrd v. Blue Ridge Rural Electric Cooperative, Inc., 356 U.S. 525, 533-40 (1958) [invoking strong federal policy favoring jury trial], federal courts should afford whatever equitable remedy would be available in state court for the enforcement of a right created by state law. See System Operations, Inc. v. Scientific Games Devel. Corp., 555 F.2d 1131, 1143 (3d Cir. 1977); Franke v. Wiltschek, 209 F.2d 493, 494-95 (2d Cir. 1953); Transcontinental Gas Pipe Line Corp. v. Gault, 198 F.2d 196 (4th Cir. 1952); 2 Moore, Federal Practice ¶2.09, at 2-58 (1983); 19 Wright, Miller & Cooper, Federal Practice and Procedure: Jurisdiction §4513, at 214.

Since in this instance the standards governing the appropriateness of equitable relief are essentially similar under Maine law and federal law,[22] no important federal policy and no federal statute or rule will be contravened as a result of the choice of Maine law.

B. Relief Under Statutory and Regulatory Provisions

Defendants apparently contend that section 2901 empowers the Court to enjoin the operation of the plaintiff church schools during normal

public-school hours, regardless of whether injunctive relief would be appropriate under the Court's inherent equity powers. The Maine Law Court recognizes, see Town of Shapleigh v. Shikles, 427 A.2d 460, 464 (Me. 1981), that where "a statute provides for injunctive relief upon the showing of a violation, the party seeking such relief need not make a showing of irreparable harm in the normal equity sense," UV Industries, Inc. v. Posner, 466 F. Supp. 1251, 1255 (D. Me. 1979). But since the "historic injunctive process has been one of great flexibility in administering practical equity, . . . [such a provision] should not be lightly implied by the court in construing legislation." Town of Shapleigh v. Shikles, 427 A.2d at 464. Cf. Norfolk Redevelopment & Housing Authority v. Chesapeake & Potomac Telephone Co., ___ U.S. ___, 52 U.S.L.W. 4007, 4009 (November 1, 1983) ["the common law ought not to be deemed repealed, unless the language of a statute be clear and explicit for this purpose"].

Sections 2901 and 2902 neither impose nor delegate the power to impose direct sanctions against unapproved private schools, nor do the compulsory attendance provisions of Chapter 211 purport to empower direct action against unapproved private schools.[23] The plain legislative design of the Maine Education Law is to ensure that each child attends public school or obtains an equivalent education. One means[24] of obtaining an equivalent education is to attend an approved private school, that is, a private school which has demonstrated that it is in compliance with sections 2901 and 2902.[25]

Administrative Interpretation of Approval Requirements

The unmistakable import of the statutory school-approval scheme notwithstanding, the defendants have insisted from the outset[26] that it is implicit in the language of section 2901, which provides that a private school "may operate as an approved private school for meeting the requirements of compulsory school attendance. . . ," that an unapproved private school may not operate at all during normal public school hours with compulsory-school-age children in attendance. See Defendants' Memorandum Regarding Ultra Vires Issue, at 6.

Although courts do "not lightly disregard the interpretation given a statute by those charged with its administration, an administrative construction is not conclusive." Soucy v. Board of Trustees, 456 A.2d 1279, 1281 (Me. 1983). "[S]uch deference 'must yield to the fundamental approach of determining the legislative intent, particularly as it is manifest in the language of the statute.'" Central Maine Power Co. v. Maine Public Utilities Commission, 458 A.2d 739, 741 (Me. 1983), quoting Central Maine Power Co. v. Maine Public Utilities Commission, 436 A.2d 880, 885 (Me. 1981). An administrative agency construction, even one put forth by those who participated in drafting the statute, may be rejected upon consideration of the plain language of the statute, "the context in which it must be read," Stewart v. Inhabitants of Durham, 451 A.2d 308, 310 (Me. 1982), or the fact that a different construction will avoid "constitutional difficulties,"[27] id. [construction of grandfather clause by town selectmen conflicted with

plain meaning and with overall purpose of mobile home ordinance and gave rise to "serious constitutional questions"]. See also Clardy v. Town of Livermore, 403 A.2d 779, 782 (1979) [ordinance construed by court contrary to interpretation of town officials since it was "fairly open to an interpretation making decision (of the constitutional question) unnecessary"]; Farmington Dowel Products Co., Inc. v. Forster Manufacturing Co., Inc., 153 Me. 265, 272 (1957) [Law Court avoids constitutional question by concluding that a ten-word phrase "crept into the law by some inadvertence. . ."].

The plain language of section 2901 is entirely consistent with its long legislative history,[28] leaving no room for an administrative interpretation at odds with both.

Language of Statute

If the legislature had meant to ban the operation of unapproved private schools, "it would have said so in clear and unmistakable language. It is not for [the Court] to read into the statute an intent which is obviously not there," Squires v. Inhabitants of Augusta, 155 Me. 151, 167 (1959). Especially in view of the fact that the present action was commenced months before the 110th Legislature completed its debate on the recodification of the Education Laws,[29] i.e., Title 20-A, it would not have been difficult to draft section 2901 so as to provide that "no private school may operate with

compulsory-school-age children in attendance unless it meets the private-school approval requirements."[30]

The defendants essentially invite the Court to ignore all language in the opening clause of section 2901 following the phrase "[a] private school may operate. . . ."[31] "Nothing in a statute may be treated as surplusage if a reasonable construction supplying meaning and force is otherwise possible." Labbe v. Nissen Corp., 404 A.2d 564, 567 (Me. 1979). But cf. Farmington Dowel Products Co., Inc. v. Forster Manufacturing Co., Inc., supra. All of the language rendered mere surplusage under defendants' interpretation becomes imbued with both "meaning and force" by construing section 2901 as a description of the criteria prescribed for private schools which may be considered adequate alternatives to public schools for compulsory attendance purposes.

The Statutory Scheme

The Maine statutory scheme of compulsory education is an historically enlightened legislative response to the important parental and public interests inherent in the education of the young; one not lightly to be disregarded by courts, see Squires v. Inhabitants of Augusta, 155 Me. at 167, by municipalities, see id., or by administrators, cf. Central Maine Power Co. v. Public Utilities Commission, 458 A.2d at 741; Maine School Administrative District No. 15 v. Raynolds, 413 A.2d 523, 529-31 (Me. 1980). See Squires v.

Inhabitants of Augusta, 155 Me. at 159 ["The State educational policy cannot and must not be interfered with by any subordinate governing body."] In order to determine the legislative intent in relation to a particular section of a comprehensive statute, courts should consider the statutory scheme in its entirety and "interpret[] [the] statute . . . so that all of its provisions are read in harmony and are effectuated." Seven Islands Land Company v. Maine Land Use Regulation Commission, 450 A.2d 475, 480 (Me. 1982). Yet defendants' construction of section 2901 ill serves, indeed it dramatically alters, the long-standing legislative scheme underlying compulsory education in Maine.[32]

Compulsory-school-age children who fail to establish their entitlement to an exemption from the requirement of public school attendance are considered "habitual truants" if "[a]bsent from school without excuse for the equivalent of 10 full days, or for at least 1/2 day on 7 consecutive days, within any 6-month period." 20-A M.R.S.A. §5051(1). Any person who has control over an habitual truant and bears primary responsibility for that truancy is guilty of a "civil violation" and "shall be punished by a forfeiture of not more than $200," 20-A M.R.S.A. §5053(4)(A)(1), payable "to the treasurer of the school administrative unit in which the offense was committed for the support of its public schools." 20-A M.R.S.A. §5053(4)(B).

The Maine Legislature has prescribed detailed procedural safeguards and placed primary reliance upon local public school officials for the conciliation of truancy disputes and for the enforcement of

the truancy laws. Local public school officials are directed, under the Commissioner's guidance, to promulgate reasonable rules for the enforcement of the truancy laws. 20-A M.R.S.A. §5003.

It is the statutory duty of the public school principal to report an habitual truant to the public school superintendent, whose statutory duty it is to attempt to resolve the problem informally and, if unsuccessful, to refer the matter to the local school board, together "with the principal's report and any other useful information." 20-A M.R.S.A. §5051(2)(A)-(B). It is the duty of the school board to hear the matter after giving seven days' written notice to the parent or guardian of the alleged truant, stating the date, time and purpose of the hearing, the necessity that parents and child attend, and the right to inspect the child's attendance records and the principal's report. 20-A M.R.S.A. 5051(2)(C).

After considering the facts and discussing the matter with the child and with the parent or guardian, the local board is required either (1) to direct the child to attend school as required by statute and inform the parent or guardian of the legal responsibility to assure the child's attendance, or (2) to waive the compulsory attendance requirement, provided the child is at least 14 years old. 20-A M.R.S.A. §5051(2)(D).

A decision adverse to the parent or guardian may be appealed to the Commissioner, who is required to appoint "a fair hearing officer" to hear the appeal and report on the testimony presented, recommending

a disposition to the Commissioner, who is required to affirm, modify or reverse the decision of the local school board.[33] 20-A M.R.S.A. §5051(2)(E).

Attendance officers elected yearly by the school board are required to investigate alleged habitual truancies and report to the school board. Upon the written direction of the school board or the superintendent, attendance officers are required to file a complaint in Maine district court seeking imposition of the forfeitures prescribed by section 5053. 20-A M.R.S.A. §5052(2).

Defendants' interpretation of the education laws would arrogate to the Commissioner the powers and responsibilities entrusted by the legislature to local public school authorities, see 20-A M.R.S.A. §2 (1981), and eliminate entirely the sensitive administrative safeguards of notice, hearing and conciliation which are prerequisite to the commencement of any judicial proceeding for the enforcement of the truancy laws.

The 110th Legislature recodified, without substantive change,[34] the various long-standing statutory provisions prescribing truancy sanctions against parents, see 20-A M.R.S.A. §§2901, 2902, 5001(1), (2)(D), & 5051-53, notwithstanding the fact that plaintiffs' present counsel pointed out to the Commissioner as early as May 1980 that there did not appear to be any statutory basis for prohibiting the operation of unapproved schools.

Under its scheme for the governance of compulsory education the 110th Legislature has mandated that local public school officials

make every reasonable effort at conciliation with the parents of alleged truants prior to the commencement of administrative action. Next, the legislature has prescribed several levels of administrative proceedings in advance of any recourse to judicial action. Nowhere in this elaborate statutory scheme is there the slightest indication that the legislature meant to permit the circumvention of these procedural requirements merely because the Commissioner or any other defendant may consider the closing of private schools more appropriate than truancy-law enforcement against parents.

Inviting Unnecessary Constitutional Issues

Defendants' construction is not only at odds with the legislative scheme, it gratuitously raises grave constitutional problems. See United States v. Lee, 455 U.S. 252, 257-58 (1982) [limitations on religious liberty must be "essential to accomplish an overriding governmental interest"]; Johnson v. Robison, 415 U.S. 361, 384-86 (1974) [distinguishing between direct and indirect burdens on religion]; Braunfeld v. Brown, 366 U.S. 599, 605-07 (1961) [plurality opinion] [regulation of secular activity, so as indirectly to make religious practice more expensive, "wholly different" from legislative attempts to make religious practice unlawful]; Pierce v. Society of Sisters, 268 U.S. 510, 534-35 (1925) [statute seriously (though indirectly) impairing value of property of private schools, held unconstitutional]. See also Southeastern Promotions, Ltd. v. Conrad,

420 U.S. 546, 558-59 (1975) ["presumption against prior restraints is heavier - and the degree of protection broader - than that against limits on expression imposed by criminal penalties"]; Kunz v. New York, 340 U.S. 290, 293-95 (1951) [ordinance giving police commissioner unbridled discretion to grant or refuse permits to speak on religious matters in public streets was invalid prior restraint on exercise of First Amendment rights]; Martin v. City of Struthers, 319 U.S. 141, 146-49 (1943) [ordinance forbidding knocking on doors or ringing doorbells in order to distribute handbills or circulars was invalid as applied to Jehovah's Witness seeking to advertise religious meeting, despite state claim of nuisance]. See generally Jeffries, Rethinking Prior Restraint, 92 Yale L.J. 409 (1983).

Legislative Acquiescence

Struggling against the clear language, history and legislative scheme of the compulsory education statutes and disregarding the serious constitutional difficulties raised by their efforts to close church-affiliated schools, defendants contend that their construction of section 2901 is binding on the Court because the 109th Legislature acquiesced in their construction.

Legislative acquiescence offers a precarious perch from which to construe a statute even in the best of circumstances. Legislative acquiescence is "significant" in assessing the intent of a Maine legislature, if the administrative interpretation is reasonable, has

been called to the attention of a legislature subsequent to the enacting legislature and if it is reasonably inferable that the administrative interpretation was recognized by the later legislature as a valid construction. See In re Spring Valley Development, 300 A.2d 736, 743-45 (Me. 1973) [after attention of 105th Legislature had been specifically directed to administrative interpretation of bill enacted by 104th, actions of 105th became "significant" in assessing intent of 104th]. See also Androscoggin County Savings Bank v. Campbell, 282 A.2d 858, 865 (Me. 1971) [ambiguous statutory amendments in 1969 not to be construed as contrary either to 1917 Attorney General's opinion or to interpretation given by banking commissioners since 1917].

MACS sponsored two bills before the 109th Legislature (L.D. 1817 and L.D. 1980) to exempt church-sponsored schools from the school approval requirements. Since each bill stated that it was designed to "make approval optional for church-sponsored schools," and would have exempted these schools from approval and their students from compliance with the compulsory public-school attendance law, it is fair to infer either that someone involved in drafting these bills knew of the Commissioner's interpretation or that the drafter thought that approval was or might be considered a condition precedent to the lawful operation of a private school. But both the trial record and the legislative record make clear that these bills were sponsored, and, at least initially, probably drafted, by MACS, which was well

aware of the Commissioner's consistent contention that an unapproved private school cannot operate at all with compulsory-school-age children in attendance, see, e.g., pp. 13-15 supra. See 1980 Me. Leg. Rec. 387 (House, March 10, 1980) [Senator Trotzky stating, "This bill was brought in by (MACS)"].

Much of the floor debate centered on the right and duty of the state to influence or control sectarian schools, see id., at 344-50 (House, March 10, 1980); id., at 386-87 (Senate, March 11, 1980), but it does not follow that the legislature was aware that the Commissioner considered Department approval to be a precondition for lawful operation.[35] Certainly, subjecting the parents of children attending church schools to truancy actions (the legislatively-contemplated response to nonapproval, which has only since been disavowed by the Commissioner) would have a significant affect on the schools, thereby affording the state substantial de facto control over the church schools. Furthermore, there is not the slightest indication in the record of this case or in the legislative record from which it reasonably could be inferred that the 109th Legislature recognized the Commissioner's interpretation as valid.

In the context of the present case there is no ambiguity requiring resort to "legislative" acquiescence, no pertinent administrative interpretation was called to the attention of the 109th Legislature and its reasons for rejecting L.D. 1817 and L.D. 1980 were unrelated to whether the Commissioner is or ever has been empowered by statute to close unapproved private schools.

The Court is therefore satisfied that neither section 2901 nor any other statutory provision prohibits private schools from operating merely because they are unapproved or refuse to seek or accept approval. A fortiori, no statutory provision requires the Court to fashion injunctive remedies against the operation of unapproved private schools without due regard for the public and private interests involved.

The Regulatory Scheme

Subsection I(4) of the regulations purports to authorize the Commissioner to "seek" injunctions against the operation of unapproved private schools. The Board regulations neither expressly prohibit nor purport to empower injunctive relief against the operation of unapproved private schools; any such regulation would be invalid.

A "legislative" rule[36] is valid only if the legislature has authorized its promulgation. Anheuser-Busch, Inc. v. Walton, 135 Me. 57 (1937). See Maine School Admin. Dist. No. 15 v. Raynolds, 413 A.2d at 529; State v. Dube, 409 A.2d 1102, 1104 (Me. 1979); Frank v. Assessors of Skowhegan, 329 A.2d 167, 170 (Me. 1974). Thus a legislative rule is void if it extends, modifies or conflicts with the enabling statute. Anheuser-Busch, Inc. v. Walton, 135 Me. at 66-68; 1 Cooper, State Administrative Law 254 (1965). See Frank v. Assessors of Skowhegan, 329 A.2d at 170. The relevant enabling statute, see 20-A M.R.S.A. §405(3)(E), merely directs the Board to "[a]dopt or

amend rules on requirements for approval and accreditation of elementary and secondary schools." 20-A M.R.S.A. §405(3)(E). The statutory directive to adopt rules governing "approval" and "accreditation" is designed to ensure greater definition of the criteria for exemption from compulsory public school attendance available to students attending approved private schools, and forms a comfortable fit within the legislative scheme of the compulsory education laws, by focusing enforcement efforts upon the individual student and parent.

The defendants apparently assert that the Board is empowered to authorize the Commissioner to bypass the elaborate truancy-law enforcement scheme put in place by the legislature by proceeding directly to court for injunctive relief against the operation of unapproved private schools. Although the defendants may consider the closing of unapproved private schools in these circumstances a more efficient and expeditious means of securing compliance with the compulsory education laws on the part of private school students and their parents,[37] it is not for the defendants, but for the legislature, if and when it chooses, to do so, and the legislature has not chosen to do so.

In its recent recodification of the education laws the 110th Legislature manifested no intention to redirect enforcement sanctions from the parents of students attending unapproved private schools to

the unapproved private schools themselves. See pp. 26-30 supra. As the Law Court has held in an analogous context:

> [The Commission's] power to make rules and regulations extends only to such details of administration as are necessary to carry out and enforce the mandate of the legislature. What the [Commission] has attempted to do in this instance constitutes a flagrant usurpation of a prerogative which belongs to the legislature, and is subversive of those principles which are the foundation of orderly government. The regulations in question are invalid. . . .

Anheuser-Busch, Inc. v. Walton, 135 Me. at 67-68 [involving rules and regulations of State Liquor Commission].

Similarly, to the extent that the board regulations attempt to institute a scheme whereby private schools can operate only if approved, the Board has exceeded its power and its regulations are invalid.[38]

C. Relief Under the Inherent Equity Powers of the Court

Requests for injunctive relief are addressed "to the conscience of the chancellor. . . ," Town of Shapleigh v. Shikles, 427 A.2d at 465, who is guided by the balance between the needs of the party requesting injunctive relief and the hardship which injunctive relief would visit upon the party enjoined, Town of Shapleigh v. Shikles, 427 A.2d at 464; Natale v. Kennebunkport Board of Zoning Appeals, 363 A.2d 1372, 1377 n.9 (Me. 1976), and by the public interest, see Ingraham v. University of Maine at Orono, 441 A.2d 691, 693 (Me. 1982);[39] Note, Developments In The Law - Injunctions, 78 Harv. L. Rev. 994, 1001

(1965). The Law Court "has always been conservative" in its approach to the appropriateness of injunctive relief, Haskell v. Thurston, 80 Me. 129, 132 (1888), which is "extraordinary [relief] only to be granted with the utmost caution when justice urgently demands it and the remedies at law fail to meet the requirements of the case." Bar Harbor Banking & Trust Co. v. Alexander, 411 A.2d 74, 79 (Me. 1980). Thus, the need for injunctive relief is per se insufficient, unless the moving party "show[s] plainly that [his] right is clear," Haskell v. Thurston, 80 Me. at 132, and that absent injunctive relief the violation of that right will cause irreparable injury, Bar Harbor Banking & Trust Co. v. Alexander, 411 A.2d at 79.

Defendants' Need

(i) The Right Violated

The contention that the operation of unapproved private schools contravenes section 2901 must fail for the reasons previously discussed. The other relevant respect in which the plaintiff church schools are alleged to have acted unlawfully is by "inducing habitual truancy."

The defendants assert that "the record evidence . . . demonstrates beyond any question that . . . [the ten church schools and the pastors and administrators in charge of these schools] induce their students to attend their unapproved schools." Defendants' Memorandum Regarding Ultra Vires Issue, at 10. On the basis of the entire record in this

case there appear to be but two plausible forms which any such "inducement" of habitual truancy might take: first, that the very operation of an unapproved church school with compulsory-school-age children in attendance constitutes an inducement of habitual truancy; and second, that the pastors or administrators induce students to attend their church schools by communicating their religious belief that the Bible commands Christians to establish schools in order to instill biblical principles and that Christ is the sole sovereign in such matters. See Plaintiffs' Proposed Findings, ¶¶11, 13, 17, 21-25, 27, 31, 63-64, and transcript citations therein.

Title 20-A M.R.S.A. §5053(1)(B) provides that it shall be a "civil violation" to induce a student to violate section 5051, subsection 1 (defining habitual truancy). See State v. McDonough, Doc. No. Pen-83-252 slip op., at 8 n.5 (Me. December 8, 1983) [offense of being primarily responsible for the habitual truancy of a student under one's control is a civil violation]. "A person guilty of" inducing habitual truancy "shall be punished by a forfeiture of not less than $500," 20-A M.R.S.A. §5053(4)(A)(2), payable "to the treasurer of the school administrative unit in which the offense was committed for the support of its public schools," id. §5053(4)(B). (Emphasis added.)

Under Maine law the operation of an unapproved church school attended by compulsory-school-age children does not constitute an inducement of habitual truancy. The Maine Supreme Judicial Court authoritatively defines the term "induce" as follows:

> Webster's New International Dictionary, 2d Ed., defines 'induce' as 'to bring on or about; to effect; cause.' Black's Law Dictionary, 4th Ed., defines 'induce' as 'to bring on or about, to effect, cause to influence to an act or course of conduct, lead by persuasion or reasoning, incite by motives, prevail on.' The term induce signifies a successful persuasion; that the act has been effective and the desired result obtained. State v. Stratford, 55 Idaho 65, 37 P.2d 681 (1934); Hautau v. Kearney & Trecker Corporation, 179 F. Supp. 490 (D.C. 1959); Vol. 21 Words and Phrases, Permanent Ed., p. 481.

State v. Miller, 252 A.2d 321, 324-35 (Me. 1969) [inducing one to take indecent liberties means that persuasion has resulted in the doing of the indecent act]. Other courts similarly hold that to "induce" requires some form of persuasion. International Brotherhood of Electrical Workers v. National Labor Relations Board, 341 U.S. 694, 701-04 & n.7 (1951) ["induce" in N.L.R.A. means to lead on; to influence; to prevail on; to move by persuasion or influence]; United States v. Burkley, 591 F.2d 903, 917 (D.C. Cir. 1978) [relative to entrapment defense, inducement refers to government persuasion, harassment or other pressure on defendant to commit the crime]; Fromberg, Inc. v. Thornhill, 315 F.2d 407, 411 (5th Cir. 1963) [under statute forbidding active inducement of patent infringement, inducement "has connotations of active steps knowingly taken . . . as distinguished from accidental or inadvertent]; In the Matter of Kearney Chemicals, Inc., 468 F. Supp. 1107, 1111 (D. Del. 1979) [in tort case for inducing breach of contract, "induce" refers to causing one by persuasion or intimidation to choose one course of conduct over another].

These judicial definitions conform to the meaning commonly given the term "induce," which involves some form of persuasion or influence as an essential element.

The fact that "inducing" habitual truancy carries a substantially more stringent penalty (forfeiture of not less than $500) than does the offense of being primarily responsible for the truancy of a child under one's control (forfeiture of not more than $200) makes clear that the legislature considers inducing habitual truancy to be a more serious matter than "being responsible" for truancy. Indeed, the Statement of Fact accompanying the 1981 bill, which reduced the penalties for these offenses, stated, "This bill . . . would change the penalty section for a parent responsible for truancy to a civil violation punishable by either a $200 or a $500[40] forfeiture, depending on the nature of the offense." 110th Me. Leg., H.P. 1177, L.D. 1401, [emphasis added], enacted as amended P.L. 1981 c. 391 §1, 1981 Laws of Maine at 620. An interpretation removing the element of persuasion from the ordinary meaning of "induce" would disregard the clear legislative directive that the penalty for "inducing" habitual truancy should apply only to conduct more severe than merely "being responsible" for truancy.

In recognition of the judicial "obligation to avoid constitutional decisions when other grounds are available," Morris v. Travisono, 707 F.2d 28, 33 (1st Cir. 1983), the Court concludes that mere operation of these unapproved church schools with compulsory-school-age children

in attendance does not constitute an inducement of habitual truancy.[41] Indeed, since defendants allege that the plaintiffs "operate schools for compulsory school age children . . . and . . . induce their students to attend," Defendants' Memorandum Regarding Ultra Vires Issue, at 10, it is not entirely clear that defendants contend that the mere operation of an unapproved school constitutes an "inducing." And, even assuming the contrary, under the equities of this case injunctive relief is inappropriate.

Irreparable Injury

There can be no irreparable injury where adequate relief is available at law. Bar Harbor Banking & Trust Co. v. Alexander, 411 A.2d at 79; 11 Wright and Miller, Federal Practice and Procedure §2944, at 392 (1973). "If the legal remedy available to the plaintiff would be as effective as . . . [injunctive] relief, there is no need for the court to invoke its equity jurisdiction."[42] Id. at 396.

An available legal remedy generally is considered inadequate if it can be secured only through a multiplicity of actions, as when the conduct is likely to be of a recurring nature. Id. at 397-98. But even if the operation of unapproved schools does constitute an inducement of habitual truancy, there is no reason to suppose that prosecutions under section 5053(1)(B) would be inadequate or need be multiplicitous. It does not appear that the authorized penalty, i.e., a forfeiture of not less than $500, is inadequate to prevent recurring

violations. Cf. City of Tupelo v. Walton, 237 Miss. 892, 116 So.2d 808 (1960) [owner enjoined from operating store in violation of Sunday closing law where authorized fine was insignificant, and owner had 75 prior convictions and statute authorized injunction]; State v Preuss, 217 Minn. 100, 13 N.W.2d 774 (1944) [25 prior convictions].

There are two principal reasons advanced in explanation of the customary judicial reluctance to enjoin the commission of a crime, see, e.g., United States v. Zenon, 711 F.2d 476, 479 (1st Cir. 1983); Dommer v. Crawford, 638 F.2d 1031, 1047 (7th Cir. 1980); United States v. Jalas, 409 F.2d 358, 360 (7th Cir. 1969); 11 Wright & Miller, Federal Practice and Procedure §2942, at 386 (1973); Note, Developments in the Law - Injunctions, 78 Harv. L. Rev. at 1013. The first reason, i.e., "concern for rights [of the alleged offender] to the safeguards of criminal procedure," United States v. Zenon, 711 F.2d at 479, has been criticized, with some justification, as illogical,[43] and, in any event, may be inapposite here.[44] But the second justification: to prevent frustration of the legislatively-prescribed sanction and circumvention of prosecutorial discretion, 11 Wright & Miller, Federal Practice and Procedure §2942, at 386 (1973); Note, Developments in the Law - Injunctions, 78 Harv. L. Rev. at 1016, relates to the adequacy of the available legal remedy. The complex enforcement scheme crafted by the legislature and the great latitude left to "prosecutors" under that scheme, see pp. 28-29 supra, speak forcefully in favor of a finding that the sanction selected by the

legislature is adequate, regardless of whether inducing habitual truancy be deemed a criminal or civil violation.

Burden of Injunctive Relief on Plaintiffs

There is a strong presumption against the constitutional validity of any restraint of future expression. Bantam Books, Inc. v. Sullivan, 372 U.S. 58, 70 (1963). See also Near v. Minnesota, 283 U.S. 697, 713-23 (1931) [statute permitting public officials to bring publisher before judge to obtain injunction against publication of scandalous and defamatory matter was an unconstitutional prior restraint].

Religious worship and discussion, integral aspects of the curricula of the plaintiff church schools, constitute forms of speech and association entitled to full First Amendment protection. Widmar v. Vincent, 454 U.S. 263, 269-70, n.6 (1981) [state-university regulation prohibiting use of facilities for religious worship and teaching was content-based discrimination against religious speech, not narrowly drawn to serve a compelling state interest]. "[T]he regulation of a communicative activity . . . must adhere to more narrowly drawn procedures than is necessary for the abatement of an ordinary nuisance." Vance v. Universal Amusement Co., Inc., 445 U.S. 308, 315 (1980) [per curiam]. "[T]he burden of supporting an injunction against a future [communication] is even heavier than the burden of justifying the imposition of a criminal sanction for a past

communication." Id. at 315-16. "[A] free society prefers to punish the few who abuse rights of speech after they break the law than to throttle them and all others beforehand." Id. at 316 n.13 [emphasis in original].[45]

At first glance it may seem superficial to draw a distinction between closing down unapproved church schools, on the one hand, and multiple truancy prosecutions against the parents of unapproved church-school students, on the other. But aside from the singularly sufficient reason that the Maine Legislature has mandated truancy-law enforcement and has never authorized the closing of a private school by courts or administrators for any reason relevant to the present action, there is a vital difference between the two approaches and it goes to the heart of the plaintiffs' objections in this case.

Defendants claim a right to close[46] schools which plaintiffs assert are "pervasively sectarian" institutions, Cuesnongle v. Ramos, 713 F.2d 881, 883 (1st Cir. 1983),[47] in order to protect the state's interest in the compulsory education of Maine children. Without a doubt the closing of a "pervasively sectarian" school would burden the First Amendment rights of more individuals (those teaching and preaching at, and those supporting and attending, the institution) in a more direct and substantial manner than truancy actions against the parents or guardians of the "habitual truants" whose education the state seeks to promote.[48] Therefore, the requested injunctive relief raises far more problematic constitutional questions than those

brought into play by the truancy-prosecution scheme prescribed by the legislature.

And from a purely practical perspective as well injunctive relief would impose substantially greater burdens on all of the plaintiffs, the churches, schools, parents and staff, than would enforcement under the legislative scheme. The requested injunctive relief (apparently) would prohibit the operation of an unapproved church school during public school hours if a single compulsory-school-age child were in attendance, in derogation of the religious liberties of the nonschool-age students and despite the fact that the school-age child might be otherwise exempt from the requirement of compulsory attendance at a public school. For example, the local school board may excuse compliance with the compulsory education laws for students 14 years of age or older. 20-A M.R.S.A. §§5002(1)(E), 5051(2)(D)(2). Alternatively, a compulsory-school-age child attending an unapproved church school may have obtained an exemption by establishing that the school (which may be unapproved solely because it refused to seek approval) provides "equivalent instruction," or by establishing that the child receives "equivalent instruction" "in any other manner" for which the approval of the Commissioner has been obtained. 20-A M.R.S.A. §5001(2)(D).[49]

The Public Interest

The Maine legislature perceives the public interest as requiring that truancy-law enforcement be commenced at the local level by local officials who are directed to consider and address the needs of the individual student, whereas the requested injunctive relief would relegate the individual student to the backgr und of the constitutional controversy between church and state.

It does not appear that the plaintiff church schools have acted unlawfully;[50] if they have acted unlawfully, it does not appear that defendants' remedy at law is inadequate; and injunctive relief would pose a severe risk of burdening protected First Amendment rights. Accordingly, injunctive relief against the church schools is not warranted.

D. Dismissal of Counterclaim

There being no relevant legislative prohibition and no legislative delegation of the power to prohibit the operation of private schools, the defendants are no more entitled to the requested declaratory relief than to injunctive relief. There being no obligation to seek approval, the plaintiff church schools are not required to provide the information n cessary to obtain approval. Whether unapproved schools may be required to furnish to the state the names, addresses and attendance records of their students is not before the Court, since it

does not appear that there has been any attempt to impose such a requirement.[51]

Except for possible prosecution under the truancy laws, nonapproval is the only direct consequence of the failure or refusal of the plaintiff church schools to provide the school approval information demanded by the Department.

The counterclaim is therefore DISMISSED.

III. COMPLAINT

There being no legislative license to close unapproved private schools, the Court must next determine whether the complaint presents a "case or controversy."

Article III, section 2, of the United States Constitution restricts the exercise of the judicial power of the United States to "[c]ases . . . [and] [c]ontroversies." U. S. Const. art. III, §2, cl. 1.

A. Ripeness of Claim for Relief Enjoining Truancy Actions Against Parents[52]

The doctrine of "ripeness" has undergone significant transformation from the days when the term "advisory opinion" was afforded a sweeping definition. See International Longshoreman's and Warehousemen's Union v. Boyd, 347 U.S. 222 (1954). Since the watershed decision in Abbott Laboratories v. Gardner, 387 U.S. 136

(1967), ripeness jurisprudence has assumed a decidedly practical bent.[53] Absent congressional action curtailing jurisdiction, "[t]he problem [of the ripeness of a challenge to a statute, regulation or rule] is best seen in a twofold aspect, requiring . . . evalua[tion of] both the fitness of the issues for judicial decision and the hardship to the parties of withholding court consideration." Id. at 149.

Fitness of Issues for Judicial Decision

The existence of a sufficiently developed factual record is essential to any determination that problematic constitutional issues are ripe for judicial review. Babbitt v. United Farm Workers National Union, 442 U.S. 289, 301, 304 (1979); Abbott Laboratories v. Gardner, 337 U.S. at 149; American Committee for Protection of Foreign Born v. Subversive Activities Control Board, 380 U.S. 503, 505 (1965) [per curiam]. Due to the fact-specific nature of the constitutional claim asserted by the parent-plaintiffs, Bangor Baptist Church v. State of Maine, 549 F. Supp. at 1216-20, their claim cannot be considered ripe without a fully developed record, cf. Abbott Laboratories v. Gardner, 387 U.S. at 149 [sparse factual record no obstacle to ripeness where "issue tendered is a purely legal one"]. Although the parties have labored to develop the record, most of their efforts have focused upon whether the state's interest in either "licensing" or closing the various plaintiff church schools overrides the plaintiffs' religion-

based interest in insulating their church schools from the state approval requirement. Much of that evidence is rendered valueless since Maine law simply establishes a private-school approval scheme for the purpose of determining the eligibility of private school students to an exemption from the public-school compulsory attendance requirement. What remains to be decided under the parent-plaintiffs' request that the defendants be enjoined from prosecuting parents under the truancy laws is whether the compulsory education law, despite its flexibility and myriad exceptions, impermissibly burdens the exercise of the religious beliefs of the plaintiff-parents.[54] The present record relevant to these issues is extraordinarily sparse.

The very existence of this flexible, in some respects fairly new, and largely untested, statutory scheme, itself militates against judicial review. Although the Board's present approach to the implementation of the statutory scheme implicates serious First Amendment concerns, those constitutional concerns are mooted by the Court's ruling that the Board's present approach is invalid under the statutory scheme. See p. 36 supra. Presumably, new Board regulations implementing a different approach will follow. How the new Board regulations may comport with the statutory scheme and affect plaintiffs' constitutional rights are questions which time, not speculation, can best answer. See California Bankers Association v. Shultz, 416 U.S. 21, 55-56 (1974) [challenge to statutory record-keeping requirement, on grounds that it "could possibly be used to obtain" protected information, held nonjusticiable].

Hardship To The Parties

Affecting both the fitness of the challenge for judicial review and the hardship to the parties in the absence of judicial review, the likelihood of enforcement is central to the ripeness of an anticipatory challenge to a statute prohibiting conduct arguably entitled to constitutional protection.

> A plaintiff who challenges a statute must demonstrate a realistic danger of sustaining a direct injury as a result of the statute's operation or enforcement. O'Shea v. Littleton, 414 U.S. 488, 494 (1974). But '[o]ne does not have to await the consummation of threatened injury to obtain preventive relief. If the injury is certainly impending that is enough.' Pennsylvania v. West Virginia, 262 U.S. 553, 593 (1923); see Regional Rail Reorganization Act Cases, 419 U.S. 102, 143 (1974); Pierce v. Society of Sisters, 268 U.S. 510, 526 (1925).
>
> When contesting the constitutionality of a criminal statute, 'it is not necessary that [the plaintiff] first expose himself to actual arrest or prosecution to be entitled to challenge [the] statute that he claims deters the exercise of his constitutional rights.' Steffel v. Thompson, 415 U.S. 452, 459 (1974); see Epperson v. Arkansas, 393 U.S. 97 (1968); Evers v. Dwyer, [358 U.S. 202,] at 204. When the plaintiff has alleged an intention to engage in a course of conduct arguably affected with a constitutional interest, but proscribed by a statute, and there exists a credible threat of prosecution thereunder, he 'should not be required to await and undergo a criminal prosecution as the sole means of seeking relief.' Doe v. Bolton, 410 U.S. 179, 188 (1973). But 'persons having no fears of state prosecution except those that are imaginary or speculative, are not to be accepted as appropriate plaintiffs.' Younger v. Harris, 401 U.S. 37, 42 (1971); Golden v. Zwickler, 394 U.S. 103 (1969). When plaintiffs 'do not claim that they have ever been threatened with prosecution, that a prosecution is likely, or even that a prosecution is remotely possible,' they do not allege a dispute susceptible to resolution by a federal court. Younger v. Harris, [401 U.S.] at 42.

Babbitt v. United Farm Workers National Union, 442 U.S. at 298-99 (1979).[55]

The First Circuit recently found no "case or controversy" where a juvenile brought a First and Fourteenth Amendment facial challenge against a city curfew ordinance directed against persons under age 16. McCollester v. City of Keene, 668 F.2d 617, 621-22 (1st Cir. 1982). The court considered the action unripe because the juvenile plaintiff failed to allege the conduct in which she intended to engage and because the challenged ordinance was susceptible to an interpretation by local officals which would limit its reach to after-curfew conduct posing a risk of injury or disturbance to others. Id. at 620-21. The First Circuit said that "there is no case or controversy unless the plaintiff is subject to something more than a speculative risk of prosecution." Id. at 621.

> There must be 'a credible threat of prosecution' of the plaintiff personally, Babbitt, supra, which means, in the words of Justice Brennan - a justice whose opinion in Steffel shows him sympathetic to a broad construction of Article III in connection with complaints seeking a federal court declaratory judgment with respect to the constitutionality of state statutes - a 'likelihood that a prosecution will actually ensue.' Regional Rail Reorganization Act Cases, supra.

Id. at 621. See also City of Los Angeles v. Lyons, ___ U.S. ___, 103 S.Ct. 1660, 51 U.S.L.W. 4424, 4426-28 (1983); Munoz-Mendoza v. Pierce, 711 F.2d 421, 426-30 (1st Cir. 1983); High Ol' Times, Inc. v. Busbee, 621 F.2d 135, 139 (5th Cir. 1980) [plaintiff must demonstrate "a genuine threat of imminent prosecution"]; Bickham v. Lashof, 620 F.2d

1238, 1247 (7th Cir. 1980) ["case or controversy" requirement satisfied by showing that state intended to prosecute act plaintiff expressed intention to commit]; St. Martins' Dress, Inc. v. Carey, 605 F.2d 41, 44-45 (2d Cir. 1979) [no "case or controversy" in challenge to child pornography statute where prosecutors declared that they would not enforce statute in regard to the book which was the object of plaintiff's complaint]; Rincon Band of Mission Indians v. County of San Diego, 495 F.2d 1, 4-6 (9th Cir.), [absent some relevant history of prosecution, statements made by deputy sheriffs to Indians, that gambling ordinance was applicable to all in the county, and by the sheriff, that all laws would be enforced, were insufficient threats of prosecution to give rise to "case or controversy" in challenge to enforcement of ordinances on Indian reservations], cert. denied, 419 U.S. 1008 (1974). See generally Comment, Threat of Enforcement - Prerequisite to a Justiciable Controversy, 62 Colum. L. Rev. 106 (1962).

There is no threat by any state or local official to enforce the truancy laws against any of these plaintiff parents. The record reveals that defendants expressly disavow any intention to institute, encourage or permit truancy actions against the parents of church-school students. See Babbitt v. United Farm Workers National Union, 442 U.S. at 302. The Commissioner testified that, if it were held that truancy actions against the parents of children attending unapproved church-schools offered the only means of enforcing the

school approval laws and regulations, he would "act through the courts" rather than institute truancy actions, Tr. at 1085, 1139, and that before he could pursue truancy actions against parents he would first have to obtain legislative authorization for additional funding and staff, id. at 1144.[56] Enforcement of the truancy laws against the parents of children attending unapproved church-schools was characterized by the Commissioner as a "misuse" of the truancy laws, and "inappropriate, if not harmful," Tr. at 1139-41. The trial testimony was corroborative of an earlier affidavit in which the Commissioner stated that he had "discouraged" local officials from undertaking truancy enforcement against the parents of the students of these unapproved church schools.[57] Second Supplementary Affidavit of Commissioner Raynolds, ¶13 (filed April 20, 1982). On October 14, 1980 the Commissioner instructed school superintendents that, "[u]ntil [they] hear from . . . [the Commissioner's] office, [they] should not take any legal steps to enforce the truancy laws against students attending these unapproved schools." Defendants' Exhibit 36.

These representations by the Commissioner, together with the position consistently taken throughout these proceedings by the defendants, through their counsel, see, e.g., Defendants' Post-Trial Brief, at 59 ["truancy actions are an inappropriate, ineffective and unacceptable . . . way of dealing with the issues in this case"], demonstrate that the defendants do not contemplate, even if they are empowered to pursue or "direct,"[58] truancy prosecutions against the

parents of children attending the plaintiff church schools.

Furthermore, the record is devoid of evidence that a truancy proceeding has ever been commenced, even to this day, against a parent or guardian of any child attending any unapproved private school, much less one of the unapproved plaintiff church schools. Moreover, there is no evidence that there has ever been a threat, by local public school officials or by any of the defendants, to bring, encourage or permit any such truancy action. Instead, the record reveals: (1) repeated disavowals by the Commissioner of any intention to proceed with truancy actions against either students or parents; (2) instructions by the Commissioner to all public school superintendents to refrain from truancy actions against those students and parents "until [the Superintendents] hear from . . . [the Commissioner's] office;" (3) uniform compliance by local public school officials with the instructions of the Commissioner; (4) uncontradicted evidence that, before resorting to truancy actions against the parents of students attending these unapproved schools, the Commissioner would first have to obtain legislative authorization for additional staff and funding; and (5) no intimation whatever that any of the defendants would resort to truancy actions to enforce the compulsory education laws once it had been finally determined by the courts that direct action to close unapproved private schools is ultra vires.

Finally, the complaint does not allege and the record does not indicate that any potential truancy-action prosecution against the

plaintiff parents has chilled the exercise of their First Amendment rights or affected the actions of those parents or any other plaintiff. See Doe v. Bolton, 410 U.S. at 188-89 [challenge to Connecticut abortion statute justiciable since doctors alleged that the statute "chilled and deterred" practice of their profession].

Since the defendants deny any intention to institute truancy actions against the parents of students attending these unapproved church schools, neither plaintiffs nor defendants can point to any relevant hardship resulting from the Court's refusal to enjoin.

B. Claim for Relief Enjoining Actions Against Schools for Inducing Truancy by Mere Operation

In dismissing defendants' counterclaim, the Court has held that mere operation of an unapproved private school does not violate the prohibition against inducing habitual truancy. See pp. 36, 46-47 supra. Accordingly, and in view of the judicial obligation to avoid serious constitutional issues when other grounds are available, p. 40 supra, the Court does not reach the issue as to whether a statute authorizing such an action would violate the constitutional rights of the plaintiffs. Moreover, the Court is satisfied that enjoining the defendants from instituting such actions under the current statute would be inappropriate.[59] "[T]here is no evidence before [the Court] that would indicate that defendants will not accept in good faith" the Court's holding as to the meaning of the word "induce." Wulp v. Corcoran, 454 F.2d 826, 835 (1st Cir. 1972).

C. The Claim for Relief
Enjoining Actions Against Pastors

Ripeness

The only other credible prospect of truancy prosecution which might be considered sufficient to present a "case or controversy" under the complaint in this action results from the absence of any express disavowal of an intention to commence actions against the plaintiff pastors for inducing habitual truancy in violation of 20-A M.R.S.A. §5053(1)(B). See Babbitt v. United Farm Workers National Union, 442 U.S. at 302. Although the Commissioner did not actually threaten any such prosecution of the pastors in the letters which precipitated the present action, the language of those letters, see Defendants' Exhibits 46a-i [Attorney General will "commence legal action"], is broad enough to encompass an action under the "inducing" statute, and, as of February 16, 1983, defendants' attorneys considered the statute applicable to the conduct of at least some of the plaintiffs. See Defendants' Memorandum Regarding Ultra Vires Issue, at 10-11. Moreover, actions against the plaintiff pastors would fit neatly into the strongly held view of the Commissioner, see pp. 52-53 supra, and defense counsel, see p. 53 supra, that enforcement of the compulsory education laws should be directed at the plaintiff schools, rather than at their students or the parents of their students. Indeed, defendants' threatening assertion, that "the plaintiffs . . . induce their students to attend their unapproved schools," [Defendants Memorandum Regarding Ultra Vires Issue, at 10], appears to refer to

the religious edification of parishioners by the plaintiff pastors. The record is adequately developed as to the nature and basis of this religious instruction. There can be little doubt that in every sense of the word pastors do "induce" parishioners to send their children to church-affiliated schools . that the threatened enforcement actions raise serious constitutional questions.

Accordingly, the claim for injunctive relief protecting the right of the pastors to preach the Gospel is ripe.

Merits

Prosecution of the pastors or the administrators of church schools for inducing truancy, whether in sermons or in other communications with students or parents in the congregation, would raise fundamental free speech and free exercise concerns.[60]

In 1945 the Supreme Court observed that in establishing the boundary "where the individual's freedom ends and the State's power begins . . . the usual presumption supporting legislation is balanced by the preferred place given in our scheme to the great, the indispensable democratic freedoms secured by the First Amendment." Thomas v. Collins, 323 U.S. 516, 529-30 (1945). When First Amendment rights are implicated,

> [t]he rational connection between the remedy provided and the evil to be curbed, which in other contexts might support legislation against attack on due process grounds, will not suffice. These rights rest on firmer foundation. Accordingly, whatever occasion would restrain orderly discussion and persuasion, at appropriate time and place, must have clear support in public danger, actual or impending. Only the gravest abuses, endangering paramount interests, give occasion

> for permissible limitation. It is therefore in our tradition to allow the widest room for discussion, the narrowest range for its restriction, particularly when this right is exercised in conjunction with peaceful assembly.

Id. at 530. "For these reasons any attempt to restrict those liberties must be justified by clear public interest, threatened not doubtfully or remotely, but by clear and present danger." Id. See also id., at 532 (intrusion permitted "only if grave and impending public danger requires" it). "The substantive evil must be extremely serious and the degree of imminence extremely high before utterances can be punished." Landmark Communications, Inc. v. Virginia, 435 U.S. 829, 845 (1978). Government authorities may not "forbid or proscribe advocacy of the use of force or law violation except where such advocacy is directed to inciting or producing imminent lawless action and is likely to incite or produce such action." Brandenburg v. Ohio, 395 U.S. 444, 447 (1969) (footnote omitted) [per curiam]. See also Hess v. Indiana, 414 U.S. 105 (1973) [disorderly conduct statute unconstitutionally applied to anti-war protester since there could be no rational inference "that his words were intended to produce, and likely to produce imminent disorder"]. Courts must balance the magnitude and imminence of the danger posed by the speech, against "the need for free and unfettered expression," as well as the "possibility that other measures will serve the State's interests." Landmark Communications, Inc. v. Virginia, 435 U.S. at 843. See also State v. John W., 418 A.2d 1097, 1102 (Me. 1980) [constitutionality of

disorderly conduct conviction must be tested by balancing magnitude and character of evil, as well as its likelihood, against need for free and unfettered expression].

Any action brought against plaintiff pastors, administrators or church schools for inducing truancy by "preaching" that the Bible commands fundamentalist Christians to send their children to schools regulated solely by fundamentalist Christians would certainly "restrain orderly discussion and persuasion," Thomas v. Collins, 323 U.S. at 530. Such a restraint would also hinder the right of assembly and the free exercise of religion. Defendants have not suggested any "grave[] abuses, endangering paramount interests," id., which would justify the threatened restraints. Clearly, there are other, less problematic measures, i.e., enforcement of the truancy laws, which would serve the state interests involved.

Plaintiffs therefore are entitled to declaratory and injunctive relief[61] precluding defendants from bringing actions against them on the grounds that they induce truancy through their statements to parents that the education of their children is a religious duty and that the state should have no role in regulating the education of Christian children.

Dated at Bangor, Maine this 20th day of December, 1983.

United States District Judge

1/The plaintiffs are: ten independent fundamentalist Christian churches and their affiliated schools and pastors; the chief administrators of four of the plaintiff church schools; four parents whose children attend either Bangor Christian Schools or the Grace Baptist Church Schools; two parents of pupils attending Ellsworth Christian School, which is a member of plaintiff Maine Association of Christian Schools (MACS); a Bangor Christian Schools teacher and its principal; a Grace Baptist Church Schools teacher; and MACS.

Calvary Foursquare Church and Gardiner Christian Academy appear to have been omitted from the Second Amended Complaint through inadvertence, after having been added as plaintiffs on December 28, 1981. The chief administrator of Gardiner Christian Academy (Reverend Allen) was named as a plaintiff in the Second Amended Complaint. After defendants counterclaimed against Gardiner Christian Academy, it responded and Gardiner Christian Academy is treated as a plaintiff in the trial stipulation filed with the Court on January 30, 1983. Accordingly, the pleadings are hereby amended to conform to the evidence, pursuant to Fed. R. Civ. P. 15(b).

Also dropped as a party plaintiff is Reverend William Greenwood, the administrator of Kingfield Christian Academy, which has ceased operations and was dropped as a party, along with its affiliate, First Baptist Church, on January 25, 1983.

2/Plaintiffs' 'Revised List of Exhibits,' as supplemented at trial, contains 98 exhibits. Defendants' 'Final Revised List of Exhibits,' as supplemented at trial, contains 102 exhibits. All exhibits were admitted into evidence, except plaintiffs' Exhibit 38, which was withdrawn, and defendants' Exhibits 89 and 90.

3/See note 6 infra.

4/Prior to the spring of 1979 many of the schools which founded MACS belonged to its regional predecessor, Northeast Region American Association of Christian Schools [NERAACS], an organization of Christian schools in New England and New York. NERAACS was gradually phased out of existence as its members formed state associations.

5/Thirteen of the 23 Christian school members of MACS in 1979 are no longer members:

South Hope Christian School
Clinton Christian School
Blaisdell Baptist Academy
Lisbon Falls Christian Academy
Penobscot Valley Christian Academy

Tabernacle Christian Academy
Heritage Christian Academy
Mid-Coast Christian School
Hermon Christian School
Limestone Christian Academy
Enfield Christian School
Central Maine Christian School
Ossippee Valley Christian School.

The ten schools which have remained MACS members since 1979 are

Bangor Christian Schools
Grace Baptist Church Schools
Wayside Christian School
Downeast Christian School
Ellsworth Christian School
West Sumner Christian School
Calvary Christian Academy (Turner)
Kennebec Valley Christian School
Northwoods Christian School
Wiscasset Christian Academy.

Of these, only Bangor Christian and Grace Baptist Church Schools are plaintiffs in this action.

The following seven schools, the first five of which are plaintiffs, have since joined MACS:

Falls Road Christian School
Lee Christian Schools
Victory Christian Schools
Sebec Christian Academy
Athens Christian Academy
Calvary Hill Christian School
Hartland Christian School.

6/Bangor Christian, which began operating in 1970, obtained state approval for each of its first eight years of operation and in 1978 received a five-year approval certificate which expired in June, 1983. Until at least 1975 Bangor Christian displayed its certificate of state approval in the school catalogs and expressed pride in having achieved the academic quality evidenced by state approval. See Defendants' Exhibit 67. Reverend Frankland testified that the certificate was displayed in order to demonstrate to parents that "we weren't some fly-by-night organization." Tr. at 285.

Grace Baptist Church Schools obtained initial state approval in 1976 and renewed approval in 1977 and 1978.

7/The ACE teaching program, marketed by a Texas-based company, consists of a series of booklets on various subjects, each of which is called a Packet of Accelerated Christian Education (PACE). Each PACE contains Bible-oriented instructional information and self-test questions on a particular subject. Students work at their own speed in each subject. After completing the booklet and passing the self-test and a supervised test, students move on to the next sequentially-numbered PACE until they reach the twelfth level of achievement. The supervisors who administer the tests do not teach regularly, but remain available to maintain discipline and to assist students on request.

8/Reverend Frankland wrote as follows:

> This brings us to the crux of the matter. The United States Constitution and the Maine Constitution guarantees (sic) us certain religious liberties under the First Amendment, if these beliefs and practices are convictions on our part and not preferences. In order for the courts to rule it is a conviction rather than preference, we must be willing to go to jail for, or die for said beliefs.
>
> Some judges and state agencies are asking, 'Why was this not an issue 10 years ago?' Our reply is, 'We were in unchartered waters endeavoring to be good citizens and actually not aware we were rendering unto Caesar that which belongs to God.' After 200 successful court cases across the nation and a refining of our own philosophy, we are forced to act immediately, or we have no guarantees under the First Amendment. In the judge's eyes, these things are not a conviction with us if we continue allowing the State to have jurisdiction in this area, when we know in our heart it is wrong. Therefore, we have several new schools starting this fall which believe this to the point they are willing to go to jail for their convictions, and we who had previously accepted basic approval and state licensure are convinced we must stand with them.

Defendants' Exhibit 8.

9/The notice states that it is late in going out "because MACS has been waiting for the tape and the sample letter from David Gibbs." It goes on to state "that the tape will be made while Charles Craze is here. The letters will be drafted at the same time."

10/The ten schools which have belonged to MACS since 1979, see n.5 supra, were among the 19 schools whose pastors or administrators wrote letters to the Commissioner.

11/These five schools were located in Hermon, Canaan, Limerick, Clinton and North Whitefield. The latter three were described as "not [having] a conviction against state approval."

12/These nine schools were Kingfield Christian Academy, Farmington Christian School, Lee Christian Schools, Sebec Christian Academy, Victory Christian Schools, Athens Christian Academy, Gardiner Christian Academy, New Life Academy and Windham Assembly Christian Academy. Eight of these schools are plaintiffs in this action. Kingfield Christian Academy has ceased operations. Farmington Christian School is now known as Falls Road Christian School, a plaintiff.

13/The original plaintiffs were Bangor Baptist Church and Grace Baptist Church, the pastor of each church, four parents whose children were attending either Bangor Christian or Grace Baptist Church Schools, the principal of Bangor Christian, one teacher from Bangor Christian and one from Grace Baptist Church Schools, and MACS. Bangor Christian and Grace Baptist Church Schools were added as plaintiffs on October 28, 1981.

14/Disputes as to the constitutionality of legislative enactments are not necessarily unripe merely because the enactments are not effective as of the commencement of the action, see Colautti v. Franklin, 439 U.S. 379, 383 (1979) [permitting challenge of abortion statute before statute became effective]; Blanchette v. Connecticut General Insurance Corp., 419 U.S. 102, 142-43 (1974); Pierce v. Society of Sisters, 268 U.S. 510, 535-36 (1925); Arizona v. Atchison, T. & S. F. R. Co., 656 F.2d 398, 402-03 (9th Cir. 1981), rather their ripeness is determined by considering whether, in view of the need for judicial economy, the surrounding circumstances warrant judicial relief, see Blanchette v. Connecticut General Insurance Corp., 419 U.S. at 144-48. Of the many factors militating in favor of interpreting and testing the constitutionality of the provisions of Title 20-A, the most significant is that the provisions of Title 20-A went into effect on July 1, 1983. The Supreme Court has considered, as relevant to the issue of ripeness, events which took place after the entry of a judgment by a circuit court of appeals. Buckley v. Valeo, 424 U.S. 1, 115-17 (1976). A fortiori, events occurring after the commencement of an action and before any decision by the trial court are appropriate for consideration in testing ripeness. See Lynch v. Dukakis, No. 82-1884 slip op., at 10 (October 12, 1983) [district court acted permissibly in finding that defendant "would not comply" with, and in conforming equitable relief to, strictures of statute effective 11 days after the entry of the court's order].

Furthermore, from the outset of this action the validity and intendment of various regulations and statutes, both those which were

then, and those which are now, in force, have affected the ongoing relationship between the plaintiff church schools and the defendants. See Blanchette v. Connecticut General Insurance Corp., 419 U.S. at 144. Finally, the parties have developed the present record in light of the strictures of Title 20-A. See id., at 143.

Accordingly, the Court is satisfied that the mere fact that Title 20-A went into effect following the commencement of this suit does not bar judicial review of its provisions. Of course, this does not mean that the Court should or must resolve all disputes arising under Title 20-A. "'Even where some of the provisions of a comprehensive legislative enactment are ripe for adjudication, portions of the enactment not immediately involved are not thereby thrown open for a judicial determination of constitutionality.'" Id. at 145-46, quoting Communist Party v. SACB, 367 U.S. 1, 71 (1961).

In reviewing the provisions of Title 20-A the Court will consider the clarifying amendments made by P.L. 1983 c. 485, 1983 Me. Legis. Serv. 2583, which became effective on June 24, 1983.

15/It was stipulated at trial that all of the plaintiff schools are now in compliance with all Maine laws regarding health, sanitation and safety. Tr. III, at 469.

16/Also exempt from compulsory attendance at public schools are:

(1) persons who graduate from high school before age 17, see 20-A M.R.S.A. §5001(2)(A);

(2) persons who have (a) completed the 9th grade (or reached age 15), (b) obtained their parents' and their school board's permission to leave school [denial by the board is appealable to the Commissioner, see 20-A M.R.S.A. §5001(3)], and (c) agreed in writing to meet annually until age 17 to review educational needs, 20-A M.R.S.A. §5001(2)(B);

(3) persons who obtain "equivalent instruction . . . in any other manner arranged for by the school committee or the board of directors," provided such instruction is approved by the Commissioner, 20-A M.R.S.A. §5001(2)(D);

(4) persons age 14 or older participating in a "suitable program of work, work study or training" who have the consent of their parents or guardians and the approval of their principal (appealable to the school board), 20-A M.R.S.A. §§5001(2)(E), as amended by P.L. 1983 c. 485, §21, 1983 Me. Legis. Serv. at 2591, & 5002; and

(5) persons age 14 or older as to whom the local school board has waived the compulsory education requirement, 20-A M.R.S.A. §§5001(2)(E), as amended by P.L. 1983 c. 485 §21, supra, & 5051(2)(D)(2).

17/As originally adopted 20 M.R.S.A. §5001(2) provided as follows:

> 2. Exceptions. Compulsory attendance shall not apply to the following:
>
> A. Persons who graduate from high school before their 17th birthday;
>
> B. Persons who have:
>
> (1) Reached the age of 15 or completed the 9th grade;
>
> (2) Permission to leave school from their parent or legal guardian;
>
> (3) Permission to leave school from the school board or its designee; and
>
> (4) Agreed in writing with their parent or legal guardian and the school board or its designee to meet annually until their 17th birthday to review their educational needs;
>
> C. Students who obtain equivalent instruction in an approved private school shall be credited with attendance at a private school only if a certificate showing their names, residence and attendance at the school, signed by the person or persons in charge of the school, has been filed with the school officials of the administrative unit in which the students reside;
>
> D. Equivalent instruction is as follows:
>
> (1) A child shall be excused from attending a public day school if he obtains equivalent instruction in a private school or in any other manner arranged for by the school committee or the board of directors and if the equivalent instruction is approved by the commissioner; and

(2) If any request to be excused is denied by a local school committee or board of directors, an appeal may be filed with the commissioner. The commissioner shall review the request to be excused to determine whether the local school committee or board of directors has been correct in its finding that no equivalent instruction is available. If the commissioner finds that equivalent instruction is available to the child, he shall approve the request to be excused; or

E. Children shall be credited with attendance at a private school only if a certificate showing their names, residence and attendance at the school, signed by the person or persons in charge of the school, has been filed with the school officials of the administrative unit to which the children reside.

Chapter 485, section 21, of the Maine Public Laws (1983), supra, however, repealed paragraph (C) [without relettering paragraphs (D) or (E)]. The amendment also added to subsection (2) new paragraph (E), which makes clear that the compulsory attendance requirement shall not apply to "[a] person whose absence is excused under section 5002 or 5051."

18/Private schools approved for attendance purposes by the department shall:

1. Immunization. Comply with the immunization provisions under section 6351;

2. Language of instruction. Use English as the language of instruction except as specified under section 4602;

3. Courses required by statute. Provide instruction in history as specified under section 4601, subsection 1 and English as specified in section 4601, subsection 2;

4. Commissioner's basic curriculum. Provide instruction in the basic curriculum established by rule by the commissioner under section 4601, subsection 4;

5. Certified teachers. Employ only certified teachers;

6. Secondary schools. For private secondary schools:

A. Meet the requirements of a minimum school year under section 4801;

B. Provide a school day of sufficient length to allow for the operation of its approved education program;

C. Have a student-teacher ratio of not more than 30 to one;

D. Include not less than 2 consecutive grades from 9 to 12; and

E. Maintain adequate, safety (sic) protected records; and

7. State board rules. Meet the requirements applicable to the approval of private schools for attendance purposes established by the state board pursuant to section 405, subsection 3, paragraph E.

20-A M.R.S.A. §2902 (1983).

19/Section 2902, subsection 7, requires that

> [p]rivate schools approved for attendance purposes by the department shall:
>
> . . . .
>
> Meet the requirements applicable to the approval of private schools for attendance purposes established by the state board pursuant to section 405, subsection 3, paragraph E.

20-A. M.R.S.A. §2902(7) (emphasis added). Not surprisingly and as expressly stated in the statute itself (see italics), "private schools approved for attendance purposes by the Department" must meet the Board requirements "applicable to . . . approval of private schools for attendance purposes. . . . (Emphasis added.)

20/There appears to be statutory authority for forbidding the operation of schools which are not in compliance with state health, safety and hygiene standards.

Title 25, section 2392 of Maine Revised Statutes Annotated authorizes the State Fire Marshal or state fire inspectors to "forbid the use of any building or other structure which, (sic) does not conform to the laws, ordinances, rules and regulations promulgated by the Commissioner of Public Safety . . . [and] which creates a danger to other property or to the public." (Supp. 1982-83). An order to repair, remove or vacate a structure must be in writing, state a reasonable time within which to undertake such action and be served on the owner and the occupant. 25 M.R.S.A. §2392. The owner or occupant may within 24 hours of receiving such an order appeal to the Commissioner of Public Safety who is required to hold a hearing regarding the order and render a final decision on the issue within 30 days after such hearing. Failure to comply with a final order is a Class E crime punishable by a fine of not less than $100. See also 25 M.R.S.A. §§2357, 2358, 2360 [building inspectors, fire inspectors, municipal officers may order removal or rectification of inflammable conditions dangerous to safety of a building or surrounding premises].

Title 22, section 42(3), authorizes the Department of Human Services to seek to enjoin violations of its rules and regulations relating to plumbing and subsurface sewage disposal.

The local health officer is authorized by statute to require occupants to quit any dwelling place which is unfit for occupancy due to "want of cleanliness or other cause" and which is a cause of sickness to the occupants or the public. 22 M.R.S.A. §461. He may close the premises until restored to a sanitary condition, id., and in doing so, if he seeks the assistance of "any constable, that constable is required to render assistance." 22 M.R.S.A. §462. See also 22 M.R.S.A. §1015 [district and superior court judges authorized to issue any order necessary for proper enforcement of statutes and rules relating to communicable diseases]; 22 M.R.S.A. §1016 [Department of Health and Human Services authorized to order dismissal of all students and employees of any school in the event of an actual or threatened outbreak of communicable disease]; 22 M.R.S.A. §1561 [local health officer may order removal or discontinuance of any source of filth deemed potentially injurious to health].

21/Forty-five years after the Supreme Court decided Erie, uncertainty still exists as to the extent to which state law controls the power of the federal courts to enjoin violations of state substantive law. Indeed, Guaranty Trust Company v. York, 326 U.S. 99 (1945), which interpreted Erie as requiring a federal court to apply a state statute of limitations to an equitable claim arising under state law, provides seemingly conflicting directives. York declares that in resolving disputes in diversity actions the federal court is, "in effect, only another court of the State [and] cannot afford recovery if the right to recover is made unavailable by the State, nor can it substantially

affect the enforcement of the right as given by the state." Id. at 108-09 [emphasis added]. It can scarcely be doubted that the availability of alternative or additional equitable remedies in federal, as opposed to state, court may "substantially affect the enforcement of the right." Yet York contains the following dictum which may be read as divorcing equitable remedies from rights, leaving only the latter to be controlled by state law:

> This does not mean that whatever equitable remedy is available in a State court must be available in a diversity suit in a federal court, or conversely, that a federal court may not afford an equitable remedy not available in a State court. Equitable relief in a federal court is of course subject to restrictions: the suit must be within the traditional scope of equity as historically evolved in the English Court of Chancery; a plain, adequate and complete remedy at law must be wanting; explicit Congressional curtailment of equity powers must be respected; the constitutional right to trial by jury cannot be evaded. That a State may authorize its courts to give equitable relief unhampered by any or all such restrictions cannot remove these fetters from the federal courts. State law cannot define the remedies which a federal court must give simply because a federal court in diversity jurisdiction is available as an alternative tribunal to the State's courts. Contrariwise, a federal court may afford an equitable remedy for a substantive right recognized by a State even though a State court cannot give it.

Id. at 105-06 [citations omitted].

That dictum has confounded a number of commentators, see 19 Wright, Miller & Cooper, Federal Practice and Procedure: Jurisdiction, §4513, at 208, and notes and comments cited therein.

22/As is the case under Maine law, see pp. 22-23, 36-37 infra, absent a contrary statute a request for injunctive relief under federal law implicates the court's discretion and is to be granted only if no adequate remedy at law exists and the competing interests of the parties so indicate, and generally only if the right to relief is clear. See 11 Wright & Miller, Federal Practice and Procedure §2942, at 367-68 (1973). However, the reluctance to grant injunctive relief, still prevalent in federal courts, see id. at 369-78, appears yet greater in the Maine judicial system. See p. 37 infra. Whereas the parameters of judicial discretion to enjoin "crimes" are relatively well defined in the First Circuit, see United States v. Zenon, 711 F.2d 476, 479 (1st Cir. 1983), the Court is unaware of any instance in which the Maine Law Court has addressed this issue.

23/The failure or refusal of a private school to obtain Department approval is not necessarily without indirect consequences, since in some instances nonapproval could deter attendance.

24/See n. 16 supra.

25/Additional approval requirements apply to private schools receiving public funds, see 20-A M.R.S.A. §§2951-55; to those serving only nonresidents, see 20-A M.R.S.A. §3051; and to those offering special or vocational education programs, 20-A M.R.S.A. §3001-02. The plaintiff church schools do not come within any of these special provisions.

26/Defendants were clearly informed of the Court's concern as to the sufficiency of the statutory basis for the Board regulations no later than October 26, 1982, when the Court denied their motion for summary judgment:

> These [Board] regulations may have transformed the scheme selected by the Legislature for the enforcement of the compulsory education laws, i.e., the truancy laws, into an unauthorized administrative system for the licensing of private schools.

Bangor Baptist Church v. State of Maine, 549 F. Supp. 1208, 1231-32 (D. Me. 1982).

27/"Courts must construe legislative enactments so as to avoid the danger of unconstitutionality . . . [since] [t]he cardinal principle of statutory construction is to save, not to destroy," State v. Davenport, 326 A.2d 1, 5-6 (Me. 1974); a principle "fully consistent with the general rule" of giving effect to legislative intent, since drafters of laws are assumed to have intended those laws to have constitutional sway, Stewart v. Inhabitants of Durham, 451 A.2d 308, 311 (Me. 1982).

28/The legislative history reveals that "the Education Committee [meant] to make [no] . . . substantive changes at all in this recodification." 1982 Me. Leg. Rec. 315, 539-40 (House, March 23, 1982 & April 5, 1982) (comments of Rep. Connolly - Chairman of Education Committee). See also id. at 315 (comments of Rep. Murphy) [during drafting process, any proposed change that any member of public thought would possibly change meaning was left in its original language]; id. at 483-84, 533-34 (Senate, March 31, 1982 & April 1, 1982) (comments of Sen. Trotzky - Chairman of Joint Standing Committee on Education) [no substantive changes were made during drafting process]; id. at 539 (House, April 5, 1982) (comments of Rep. Thompson - member of Education Committee) [all agree that the

recodification makes no substantive changes]. In fact, in response to objections made to the 110th Legislature by Christian schools, it was specifically stated by legislative leaders that the recodification did not alter the governance of state approval of private schools, id. at 315 (comments of Rep. Connolly), and that the recodification was "not intend[ed] to affect the consideration of issues in [this action]," id. at 532 (comments of Sen. Trotsky).

See also n.32 infra.

29/See 1982 Me. Leg. Rec. 540 (House, April 5, 1982).

30/Instead, the terminology used in section 2901 contrasts sharply with that used in the statutes enacted in 1975 regulating day care facilities and nursery schools. See 22 M.R.S.A. §§7801-04, 8301, 8404. Whereas section 2901 provides that "[a] private school may operate as an approved private school. . . ," the statutes regulating day care facilities and nursery schools provide that "[n]o person, firm, corporation or association shall operate a nursery school [or day care facility] without having . . . a written license therefor from the Department of Human Services." 22 M.R.S.A. §§7801, 8402.

Also conspicuously absent from the subchapter of the statutes governing basic approval of private schools are provisions limiting administrative discretion in prescribing licensing requirements, see 22 M.R.S.A. §8402(1), requiring prompt issuance of licenses, see 22 M.R.S.A. §8402(4), setting license fees and terms, see 22 M.R.S.A. §§7801(2), 8303, 8402(2) & (5), authorizing the issuance of temporary or conditional licenses, see 22 M.R.S.A. 7802(2)-(4), authorizing hearings under the Maine Administrative Procedure Act for any person whose initial application for a license has been denied, see 22 M.R.S.A. §7802(c) (compare 20-A M.R.S.A. §§2904-05 [hearings for nonrenewal and removal of approval], with 05-071 CMR 125 section 1-A (I)(2) [Commissioner makes final determination as to initial approval]), requiring an Administrative Court proceeding prior to suspension or revocation of a license, see 22 M.R.S.A. §7803(1); 5 M.R.S.A. §10051(2), and granting regulators the right of entry to inspect licensed facilities for compliance, see 22 M.R.S.A. §7804.

A comparison of the elaborate protective provisions in the statutes governing day care facilities and nursery schools further demonstrates that Chapter 117, subchapter 1, of the education laws was not viewed by the legislature as establishing a private-school licensing scheme. Had such a licensing scheme been intended by the legislature it seems inconceivable that something at least remotely similar to the restrictive language and procedural safeguards of Title 22 would not have been used.

31/Defendants would read section 2901 as though written: "A private school may operate ~~as an approved private school for meeting the requirement of compulsory school attendance under section 5001~~ if it: . . ."

32/Defendants' construction of section 2901 is also at odds with the crystal clear language of the private-school approval section as it existed from its legislative inception in 1955 until the recodification of the education statutes in 1982. As originally enacted, see P. L. 1955, c. 369, §1, and as it remained through 1981, the approval section read "no school shall be given basic approval for attendance, tuition or subsidy purpose . . . unless it meets the following requirements. . . ." See 20 M.R.S.A. §1281 (1982-83 Supp.) (emphasis added). There was not the slightest legislative intimation that this provision empowered the closing of any unapproved school by anyone, whether administrator or judge.

The 1982 recodification separated the matter contained in 20 M.R.S.A. §1281 into five sections of title 20-A. See 20-A M.R.S.A. §§2901, 2951, 4401, 4404, 4801. Section 1281 was amended, by section 2901, to read: "A private school may operate as an approved private school for meeting the requirement of compulsory school attendance under section 5001 if it. . . ." 20-A M.R.S.A. §2901 (1981). There is not a whisper in its legislative history which would hint that this amendment represented a departure from the legislative intent of section 1281 as it had existed for over 25 years. See, e.g., n.28 supra. Similarly, the preamble to P.L. 1983 c. 485, indicates that the amendments made by that law were intended to resolve "existing ambiguities."

33/There is no right of appeal to the Commissioner if the local board waives the compulsory attendance requirement.

34/See nn.28 & 32 supra.

35/The following paragraph from the statement submitted to the Education Committee by the Department contains the only hint in the legislative history of these bills that the legislature may have been aware of the Commissioner's interpretation of the compulsory education laws:

> In conclusion, the Department recognizes that private, religious schools have a place in the State and that they provide a legitimate alternative to public schools. However, the Department also feels it is essential that these schools meet the minimum standards required by the Maine Constitution and by the Legislature which all schools must abide by to be able to operate in the State of Maine.

But since the statutory provisions then in force provided absolutely no basis for the power the Commissioner claims to have had (and still have), see n.32 supra, it is inconceivable that the legislature understood and accepted the full import of this assertion, without discussion. Indeed, the remainder of the Department's Statement indicates that the Department understood the approval scheme to mean only that "if non-public, private schools are going to be used to satisfy the compulsory attendance law, then these schools must comply with certain minimum standards and be approved. . . ." (Emphasis added.)

The statement by the Commissioner before the Education Committee on February 14, 1980 likewise indicates that the proposed amendments were an effort to chart an optional path for certain church-affiliated schools to qualify as suitable alternatives to public day schools, rather than to repeal any existing law which might be perceived as authorizing direct action to close unapproved private schools. See Defendants' Exhibit 19, Statement of Commissioner Raynolds (February 14, 1980) [in order to satisfy compulsory attendance requirement through attendance at private school, the private school must meet certain standards].

Moreover, had the 109th Legislature understood, agreed with and "acquiesced" in the Commissioner's interpretation, the 110th Legislature could have adopted unambiguous language to that effect as part of its recodification of the education laws, without doing violence to its policy of making no substantive change, see nn.28 & 32 supra. Instead, the wording of sections 403(3)(E), 2901, 2902, 5001(1) and 5051-53 of new Title 20-A makes clear that private school "approval" is, as it has always been, merely the means of satisfying one of the exceptions to compulsory public school attendance. See n.16 supra & p. 45 infra. Under these circumstances a finding of "legislative acquiescence" would represent a reckless approach to statutory construction.

36/Legislative rules are products of the exercise of delegated power to create law through rules. 2 K. Davis, Administrative Law Treatise §7:8 (2d ed. 1979). If valid, legislative rules are binding on courts. On the other hand, interpretative rules, which merely represent the administering agency's interpretation of existing law, may issue without an express delegation of authority. Id.

37/The Commissioner states that although children attending unapproved private schools may be considered habitual truants, he has discouraged local school superintendents from truancy actions, because their parents might be acting in the "good faith belief that their children [were] receiving the benefits and protections of the State's compulsory education laws," and because truancy actions on a broad scale would be "unduly burdensome" and expensive for local school officials,

the Department and the courts. See Affidavit of Commissioner Raynolds, dated April 20, 1982, at 5.

38/If considered interpretative, as opposed to legislative, the regulations, of course, are not binding on the Court. See Soucy v. Board of Trustees, 456 A.2d 1279, 1281 (Me. 1983); General Electric Co. v. Gilbert, 429 U.S. 125, 141 (1976); Skidmore v. Swift & Co., 323 U.S. 134, 140 (1944); 2 Davis, Administrative Law Treatise §7:10, supra. Cf. Maine School Admin. Dist. No. 15 v. Raynolds, 413 A.2d 523, 531 (Me. 1980) [indicating that an administrator's interpretation of regulation does not bind courts].

39/The Ingraham court stated,

> Before granting a preliminary or permanent injunction, the Court must find that four criteria are met:
>
> (1) that plaintiff will suffer irreparable injury if the injunction is not granted,
>
> (2) that such injury outweighs any harm which granting the injunctive relief would inflict on the defendant,
>
> (3) that plaintiff has exhibited a likelihood of success on the merits (at most, a probability; at least, a substantial possibility),
>
> (4) that the public interest will not be adversely affected by granting the injunction.

Ingraham v. University of Maine at Orono, 441 A.2d 691, 693 (Me. 1982). But although the Law Court referred to "preliminary" and "permanent" injunctions, it does not appear that Ingraham establishes a four-point talismanic test for determining the propriety of permanent injunctive relief. Rather, the court was defining the test controlling its power to grant injunctions under Me. R. Civ. P. 62(g). This conclusion finds support in the Law Court's citation to Women's Community Health Center v. Cohen, 477 F. Supp. 542, 544 (D. Me. 1979), which summarized the test in the First Circuit for granting a preliminary injunction, and further support in the reference to "a likelihood of success on the merits." (Emphasis added.)

40/L.D. 1401 prescribed forfeitures of not less than $200 and not less than $500, but was changed by Committee Amendment A, 110th Me. Leg., Filing No. H-396, to provide that the penalty for being responsible for a child's truancy is a forfeiture of "not more than $200."

41/Whether the plaintiff-pastors in some other way may have induced habitual truancy within the meaning of the statute is irrelevant to this counterclaim. "The 'principles of equity jurisprudence' suggest that 'the scope of injunctive relief is dictated by the extent of the violation established . . . [and] the relief afforded [may not be] more burdensome than necessary to redress the complaining parties.'" Lynch v. Dukakis, supra at 21, quoting Califano v. Yamasaki, 442 U.S. 682, 702 (1979). See Town of Shapleigh v. Shikles, 427 A.2d at 464. Enjoining the operation of unapproved church schools would be an overbroad response to the transgressions of individuals encouraging attendance at those schools.

42/Of course, the state need not show the inadequacy of a criminal law remedy were it to appear that the legislature has authorized civil injunctive relief against future violations of the substantive law. United States v. Cappetto, 502 F.2d 1351, 1358-59 (7th Cir. 1974).

43/The nature of the sanction is central to the determination as to whether a proceeding is criminal. See n.44 infra. Obviously, injunctive relief is not a sanction endemic to criminal law. Nothing is gained by noting that violation of the injunction may lead to a finding of contempt and to eventual imprisonment, for that is so irrespective of the nature of the conduct (civil or criminal) forming the basis for the injunction.

> The argument [that the constitutional rights of criminal defendants preclude injunctions against crimes] contains a more fundamental weakness: it assumes that one of the purposes in enacting a criminal statute is to give special protection to the defendant or to the conduct the statute proscribes. Suppose, for example, that state A makes criminal the maintenance of a certain nuisance and that state B does not, but will issue an injunction against it. It is anomalous that state A, which has manifested its policy by penal legislation, should be thought to be more solicitous of the defendant's welfare than state B, whose legislature has not acted. Yet, according to the argument, a court of state A should be disabled from enjoining the nuisance. Assuming, arguendo, that trial by jury would be a desirable feature of either the civil or criminal aspects of injunction procedure, it is hard to see why the injunction defendant whose conduct is also criminal has a greater claim to jury trial than an injunction defendant whose conduct is not criminally proscribed.

Note, Developments in the Law - Injunctions, 78 Harv. L. Rev. 994, 1019 (1965).

44/Whether conduct proscribed by statute is "criminal," thereby implicating the protections of criminal procedure, is, in the first instance, a matter of statutory construction to be determined conformably with the legislative intent. State v. Anton, 463 A.2d 703, 705 (Me. 1983). See United States v. Ward, 448 U.S. 242, 248-49 (1980). Where the legislature intends the offense to be considered civil, courts must inquire further whether the statutory scheme is "so punitive either in purpose or effect as to negate that intention." State v. Anton, 463 A.2d at 706, quoting United States v. Ward, 448 U.S. at 249.

The 1981 amendment [ch. 391, 1981 Me. Laws 620] to the predecessor of section 5053, i.e., 20 M.R.S.A. §911, may have been designed to constitute the proscribed conduct (i.e., inducing habitual truancy) a civil violation rather than a criminal offense.

Prior to 1981, inducing habitual truancy had been considered a criminal offense. See Shaw v. Small, 124 Me. 36, 40 (1924). However, the relevant portion of chapter 391 amended 20 M.R.S.A. §911(8), as follows:

> Any person who induces a chil to absent himself from school, or harbors or conceals such child when he is absent ~~shall be punished by a fine of not more than $25 or by imprisonment for not more than 30 days for each offense If the~~ commits a civil violation for which a forfeiture of not less than $500 shall be adjudged. The court ~~imposes a sentence of probation, it~~ may ~~in its sentence, as a condition of probation~~ require that the ~~convicted~~ person receive professional counseling by a qualified professional counselor who shall be selected by the convicted person, with the approval of the court, or by the court.

The Statement of Fact accompanying the bill, L.D. 1401 (1981), provided in part, "This bill . . . would change the penalty section for a parent responsible for truancy to a civil violation punishable by either a $200 or $500 forfeiture, depending on the nature of the offense."

In the process of recodifying the education laws, the legislature inserted the words "guilty" and "punishable," language which might suggest that inducing habitual truancy was to be considered a criminal offense. See State v. Clayton, 584 P.2d 1111, 1113 (Alaska 1978). Clayton is clearly distinguishable. The Alaska legislature had declared that certain traffic infractions are "not considered criminal." But by focusing on, inter alia, the use of certain criminal phraseology in the relevant provisions, the Clayton court

concluded that the legislature intended the infractions to be "quasi-criminal offenses," not "civil in nature." State v. Clayton, 584 P.2d at 1113. Section 5053 expressly declares that inducing habitual truancy is a "civil violation." In short, the language embodied in and accompanying the 1981 amendment to 20 M.R.S.A. §911, the fact that section 5053 declares the "offenses" listed therein to be "civil violations" and the further fact that the subsequent recodification was not intended to effect substantive change, nn.28 & 32 supra, may well warrant the conclusion that the Maine legislature intended that inducing habitual truancy be considered a civil violation.

If so, the safeguards of criminal procedure apply in prosecutions for inducing habitual truancy only if "the statutory scheme . . . is 'so punitive in purpose or effect as to negate [the legislature's] intent.'" State v. Anton, 463 A.2d at 706, quoting United States v. Ward, 448 U.S. at 248. The considerations used to determine whether constitutional guarantees apply to 'civil' penalty provisions include:

> Whether the sanction involves an affirmative disability or restraint, whether it has historically been regarded as a punishment, whether it comes into play only on a finding of scienter, whether its operation will promote the traditional aims of punishment — retribution and deterrence, whether the behavior to which it applies is already a crime, whether an alternative purpose to which it may rationally be connected is assignable for it, and whether it appears excessive in relation to the alternative purpose assigned.

Id. at 706, quoting Kennedy v. Mendoza-Martinez, 372 U.S. 144, 168-69 (1963). Thus, the degree of severity of the penalty is important. Id. In addition to these factors, courts consider "the nature of the conduct, whether adverse collateral consequences may arise and whether there exists the possibility of pretrial arrest and detention." Id. Finally, legislative "use of terminology associated with the criminal law" may undercut the intent to create a civil offense. Id. at 708.

Sanction

Although inducing habitual truancy is no longer punishable by incarceration, it is at least arguable that the authorized "forfeiture" (minimum of $500; with no maximum) is "so unreasonable or excessive that it transform[s] what was clearly intended to be a civil penalty into a criminal penalty." State v. Anton, 463 A.2d at 707. Certainly the threat of an unlimited fine provides significant deterrence, a "traditional aim[] of punishment," id. at 706.

Scienter

As previously discussed, the term "induce," both in legal and lay parlance, connotes intent. Therefore, scienter appears to be an element of the offense of inducing habitual truancy. See pp. 38-40 supra. On the other hand, since it does not appear that an inducement of truancy violates any other "criminal" statute, the conduct to which the prescribed "forfeiture" applies is not "already a crime."

Statutory Language

The incorporation in section 5053 of the terms "guilty" and "punishment" arguably evidences a legislative determination that inducing habitual truancy is to be condemned, a concept endemic to criminal and not civil law. Brown v. Multnomah County Dist. Court, 570 P.2d 52, 59 (Or. 1977). See State v. Anton, 463 A.2d at 708.

Arrest and Detention

Although 20-A M.R.S.A. §5053(3) makes reference to "[w]arrants and legal process" for the enforcement of section 5053, it does not appear that arrest warrants may issue against persons who induce habitual truancy, see Me. R. Crim. P. 1, 4 & 9 and Me. R. Crim. P. (district court) 1 & 4. For the purpose of obtaining credible identification, a law enforcement officer may detain a person the officer has probable cause to believe has committed a civil violation. 17-A M.R.S.A. §17. But a formal arrest is permitted only if the person refuses or intentionally fails to supply credible identification. Id.

Thus, the factors relevant to determining whether a person charged with inducing habitual truancy is entitled to the protections of criminal procedure do indeed "point in different directions," State v. Anton, 463 A.2d at 706.

The fact that the offense of being primarily responsible for the habitual truancy of a child who is under one's control has been held to be a civil violation, State v. McDonough, Doc. No. Pen-83-252 slip op. at 8 n.5 (Me. December 8, 1983), is not dispositive of the characterization of the offense of inducing habitual truancy. Although both offenses are defined in 20 M.R.S.A. §5053, the offense of "inducing" habitual truancy carries a much more stringent sanction ("forfeiture" of not less than $500) than the offense of being primarily responsible for habitual truancy ("forfeiture" of not more than $200), and scienter appears to be an element of inducing, but perhaps not of being primarily responsible for, habitual truancy. Therefore, the characterization of the offense, a matter which was neither raised nor

briefed by the parties, is better left to the state courts. For present purposes it is sufficient to note that the possibility that inducing habitual truancy is a "crime" provides yet another reason to withhold injunctive relief.

45/See also Hunter, Toward a Better Understanding of the Prior Restraint Doctrine: A Reply to Professor Mayton, 67 Cornell L. Rev. 283, 284-87, 292-96 (1982).

46/Of course, the defendants do have the right to request the courts to close unapproved schools, both by virtue of their "standing" in the present action and by virtue of a Board regulation, see 05-071 CMR 125, section I-A, subsection I(4) (as amended Feb. 10, 1983). Thus viewed, however, their assertion of right is without that legislative sanction which would reduce the heavy burden of proof incumbent upon any private litigant seeking similar drastic relief in the face of severe equitable and constitutional obstacles.

47/In order to be considered "pervasively sectarian" a school must not only be run directly by a church, but have "attributes such as integration of secular and religious education, mandatory religious instruction, religious based admission policies [and have] as a central purpose the inculcation of religious values [or the preparation of] students for a religious career." Cuesnongle v. Ramos, 713 F.2d 881, 883 (1st Cir. 1983).

48/A burden on the free exercise of religion may be justified only "by showing that it is the least restrictive means of achieving some compelling state interest," Thomas v. Review Board of Indiana Employment Security Division, 450 U.S. 707, 718 (1981). Although it is unnecessary to decide on the present record (there being no authority for defendants' attempt to close the church-schools), the closing of pervasively religious institutions does not appear to be "the least restrictive means" of achieving the state's interest in assuring that children between 7 and 17 attend adequate schools for a minimum number of hours during 175 days per year or obtain equivalent instruction in some other manner. While administrative convenience has at times justified some burdens on religious exercise, see United States v. Lee, 455 U.S. 252, 259-61 (1982) [inconvenience of accommodating "the comprehensive social security system with myriad exceptions flowing from a wide variety of religious beliefs"], it is highly unlikely that the administrative burden of pursuing numerous prosecutions under an existing truancy system could be considered sufficient justification for directly burdening these plaintiffs, particularly since it is not unreasonable to expect that the general deterrent effect likely to flow from the initiation of exemplary prosecutions against a few truancy law violators may well promote improved compliance with the compulsory school attendance laws.

49/Of course, injunctive relief would have to be limited so as to reflect these possibilities. See Lynch v. Dukakis, No. 82-1884 slip op. at 21 (1st Cir. October 17, 1983). But drafting such an injunction would be a cumbersome and perilously difficult undertaking. Certainly the defendants' proposal is overbroad. More importantly, injunctive relief would burden the plaintiff church schools with the task of determining which students are (and perhaps which students may be) exempt from the compulsory attendance requirement. Finally, since the essence of their free exercise claim is that plaintiffs should not be made to answer to the state for their ("biblically-mandated") educational activities, any requirement that the plaintiff schools assume an active role in the enforcement of the truancy laws against the parishioners of their affiliated churches would heighten significantly the threatened intrusion upon plaintiffs' asserted religious convictions.

50/The Maine compulsory education scheme differs importantly from that considered in State ex rel. Douglas v. Faith Baptist Church, Neb., 301 N.W.2d 571 (1981), appeal dismissed sub nom. Faith Baptist Church v. Douglas, 454 U.S. 803 (1981), where the Nebraska Supreme Court upheld a judgment enjoining the operation of a church school for refusal to comply with statutory requirements imposed upon "[a]ll private, denominational, and parochial schools in the State of Nebraska. . . ," Neb. Rev. Stat. §79-1701. The Nebraska statutes governing private schools provide that "[a]ny person violating any of the provisions of [Article 17, governing private, denominational and parochial schools] shall be guilty of a Class III misdemeanor." The Nebraska Supreme Court held that injunctive relief was not foreclosed merely because state law prescribed penal sanctions. 301 N.W.2d at 575. The United States Supreme Court summarily dismissed the appeal. 454 U.S. 803. The essential distinction here is that Maine law neither requires private schools to obtain approval as a condition precedent to their right to operate nor does it imply any sanction (except possible prosecution for inducing habitual truancy) for operating as an unapproved school.

51/Private schools which seek approval are required to disclose their "policy with respect to" attendance records. Regulations under the heading "Procedures and Standards for Basic School Approval of Private Schools" provide that "[t]he school shall maintain a register of the daily attendance of all pupils throughout the school year . . . [and] notify the superintendent of [local] schools . . . if a pupil withdraws from school or is habitually truant from school." 05-071 CMR 125, section 1-A, subsection (F)(1)(3), as amended February 10, 1983. The regulations apparently impose no such requirement on schools which do not seek approval.

52/The second Second Amended Complaint prays for a declaration that the requirements of the compulsory education law and school approval

scheme are contrary to the First, Ninth and Fourteenth Amendments to the Constitution, and for relief enjoining "defendants . . . from taking any action in an attempt to impose upon plaintiffs [those requirements]." [Emphasis added.] It has been clear throughout that plaintiffs' primary concern is with the state's alleged right to license or close unapproved schools. That concern is answered by the Court's holding that Maine law establishes only an optional approval system, not a licensing scheme. Therefore, in determining whether the complaint raises any justiciable issues the Court must consider seriatim the other "actions" which defendants conceivably could take "in an attempt to impose upon the plaintiffs [the requirements of the compulsory education law and the school approval scheme].

Title 20-A M.R.S.A. section 13003(2) provides that a person teaching at a public school without a teacher's certificate "shall be barred from receiving pay or wages for that teaching." No penalty is prescribed for teaching at a private school without a certificate.

Plaintiff teachers have not even alleged, much less "demonstrate[d,] a realistic danger of sustaining a direct injury as a result of the . . . enforcement," Babbitt v. United Farm Workers National Union, 442 U.S. at 298, of any statutory or regulatory provision other than those directed against the church-schools. See n.55 infra.

53/For a discussion of the development of the law of ripeness, see 4 K. Davis, Administrative Law Treatise 349-93 (2d ed. 1983).

54/The justiciability of plaintiffs' request to enjoin actions against schools and pastors for inducing habitual truancy is considered below. See pp. 55-59 infra.

55/On occasion the Supreme Court has found the likelihood of enforcement of a challenged statute too remote to give rise to a "case or controversy." See Poe v. Ullman, 367 U.S. 497 (1961) [challenge to legislation prohibiting use of, or giving medical advice as to, contraceptive devices was nonjusticiable, because no one had been prosecuted since its enactment in 1879 despite open and notorious sales of contraceptives]; United Public Workers v. Mitchell, 330 U.S. 75, 88-89 (1947) [action by federal employees challenging constitutionality of Hatch Act prohibition of political activity was nonjusticiable, since plaintiffs merely alleged their desire to engage in politics and their fear of dismissal, but failed to allege an actual violation or an actual threat of disciplinary action].

56/This testimony reflects the Commissioner's consistent misconception as to the legislative placement of primary responsibility for the enforcement of the truancy laws. It is clear beyond doubt from the statutes that the Maine legislature has imposed that responsibility

primarily upon local public school officials. See 20-A M.R.S.A. §§5051, 5052 & 5053. See nn.57 & 58 infra.

57/Subchapter I of Chapter 211 of Title 20-A, M.R.S.A., dealing with compulsory attendance (§5001), alternate programs (§5002) and administration (§5003), expressly provides that the local public school boards "shall administer" subchapter I, see §5003(1), and adopt rules "to carry out this subchapter," see §5003(2). Subsection (3) of section 5003 provides that "[t]he Commissioner shall guide school boards in adopting these rules." 20-A M.R.S.A. §5003(3).

58/Section 254 provides:

> The Commissioner shall have the following duties.
>
> 1. General duty. The commissioner may inspect and have general supervision over all public schools and shall advise and direct superintendents and school boards in the discharge of their duties, by circular letters and personal conferences.

20-A M.R.S.A. §254.

The Court need not decide whether section 254 empowers the Commissioner to "direct superintendents and school boards" to refrain from "the discharge of their duties," as well as "direct" those officials "in the discharge of their duties." If the Commissioner does not have the authority to direct superintendents and school boards to refrain from truancy actions, those officials who might pose more than a speculative risk of prosecution to the plaintiffs (i.e., local superintendents and school boards) are not before the Court.

59/No declaratory relief is granted on this point because none is requested.

60/The principles applicable to speech in general are clearly applicable as well to religious speech. "[S]peech about religion is speech entitled to the general protections of the First Amendment." Widmar v. Vincent, 454 U.S. 263, 269 n.6 (1981). See also Heffron v. International Society for Krisna Consciousness, Inc., 452 U.S. 640, 647 (1981).

61/The right of these pastors to preach their interpretation of the Bible is clear. The requested injunction would ensure the preservation of that right and protect the pastors (and the public) from the expense of presenting (and resolving) this same constitutional claim as a defense to a state court action for "inducing" habitual truancy. On the other hand, injunctive relief will impose no burden on the

defendants, who remain free to pursue legislatively-prescribed means for the protection of the interests of the state. Accordingly, injunctive relief is appropriate under the standards relevant to this federal claim, see n.22 supra.

CIVIL 81-0180-B

JUDGMENT

In accordance with the Court's Order for Entry of Judgment entered this date in the above matter,

JUDGMENT is hereby entered (1) for the defendants against the plaintiffs on plaintiffs' claims for declaratory and injunctive relief, except as otherwise provided in clauses (3) and (4) hereof; and (2) dismissing plaintiffs' claims, except as otherwise provided in clauses (3) and (4) hereof; (3) for the plaintiffs as against the defendants on plaintiffs' claim for a judicial declaration that the bringing of actions against the plaintiff pastors, administrators or church schools on the ground that they have induced habitual truancy through their statements to parents that the education of their children is a religious duty and that the state should have no role in regulating the education of Christian children would violate the rights secured to the plaintiffs by the First and Fourteenth Amendments of the United States Constitution; (4) for the plaintiffs against the defendants on plaintiffs' claim for injunctive relief enjoining the defendants from bringing actions against the plaintiff pastors, administrators or schools on the ground that they have induced habitual truancy through their statements to parents that the education of their children is a religious duty and that

the state should have no role in regulating the education of Christian children; (5) for the plaintiffs as against the defendants on defendants' counterclaim; and (6) dismissing the counterclaim.

Dated at Bangor, Maine this 20th day of December, 1983.

STAFF REVIEW

SB 362, "An Act relating to the applicability of the scholarship loan program to students attending more than one postsecondary educational institution; and providing for an effective date," introduced by Senator Kerttula, makes a change in AS 14.43.160 (2), the Scholarship Loan Program, that allows students attending more than one postsecondary educational institution, one or more of which may not be associated with an eligible consortium of postsecondary education institutions, to be eligible to particpate in the state's student loan program.

The bill provides for an immediate effective date.

SB
373

Asbestos: Still a Danger in Schools

By Elaine S. Knapp, editor

For Phyliss Adams and Ann Gibbs the last year has been a frustrating one—trying to get their local school board to remove asbestos from the school their children attend.

"It's frustrating, our children are being poisoned and there's not anything we can do," Mrs. Gibbs declared. What the Lexington, Kentucky, housewife has done is work through the PTA, form a group of concerned parents, go door-to-door telling parents of the danger, gather hundreds of signatures on petitions, read volumes on asbestos, call and write federal agencies and confront the school administrator and board.

After a year of parental pressure being applied and at least a decade after school authorities knew of the asbestos hazard, Mrs. Gibbs said, "We don't think anything will be done until the government makes them (the school board)." School authorities maintain the asbestos will be cleaned up if money is available for renovation next year.

Ironically, the major government effort to control asbestos lies in Mrs. Gibbs and others like her. Telling parents and teachers that their school has asbestos and relying on them to pressure local action is the heart of the U.S. Environmental Protection Agency's (EPA) strategy to rectify the nationwide problem of asbestos in the schools.

No effective federal program exists to protect school children from asbestos, state efforts vary widely and local schools often ignore the danger due to the cost of cleanup.

Asbestos Dangers

[redacted] exposure to asbestos in[redacted] some health [redacted] according to the Congress, the EPA and the scientific community. Children are especially vulnerable, according to the EPA guidance document on asbestos sent to schools. [redacted] remaining life-expectancy provides the 20 or 30 years it takes for disabling and fatal asbestos-related diseases to develop.

Large numbers of children may be exposed in a contaminated school and exposure is continuous during the school year. Children are active and breathe more frequently than adults possibly inhaling more asbestos fibers. Smoking can increase the cancer risk due to asbestos exposure.

Most hazardous is friable asbestos that can be crumbled. It sends deadly fibers into the air which may lodge in the lungs indefinitely, according to EPA's guidance document. Asbestos workers often develop a chronic and debilitating lung disease called asbestosis. Lower and shorter exposures are linked to lung and other cancers. Even brief exposure can result in death many years later.

Asbestos diseases include: 1) asbestosis, a disease in which asbestos clogs the lungs, 2) pleural calcification, a deposit of calcium salts in the lung lining, 3) malignant tumors of the lung, 4) mesothelioma, a rapid and fatal cancer of the lung, and 5) intestinal and uterine cancers.

Where It Is, What to Do

Use of asbestos materials was common in schools and other buildings from the mid-1940s until EPA banned sprayed asbestos in 1973. Friable (or soft) asbestos-containing material was used for fireproofing,

insulation or decoration. It was usually sprayed on overhead surfaces, steel beams, ceilings, walls and pipes.

As friable asbestos material ages, it breaks down and releases fibers into the air. School activities can damage or disturb asbestos, such as a ball hitting a gym ceiling. Asbestos material can be disturbed by maintenance activities, vandalism, water damage or vibration from people or machinery and release fibers into the air.

Many experts believe removal of asbestos is the only final and satisfactory solution to asbestos exposure. However, removal may cost more initially and be more complicated. Temporary measures include encapsulation by spraying asbestos with a sealant or enclosing the asbestos. EPA and other experts warn that such temporary measures make removal more difficult and dangerous later on, and must be constantly monitored.

The EPA guidelines call for asbestos work only after construction of sealed containment barriers and worker protection as mandated by OSHA. All but asbestos workers should be kept out of the sealed area and worker change rooms are required.

Hot Potato

Asbestos in the schools has been a "hot potato" tossed among various levels of government and federal agencies. One reason is that removal of asbestos can be quite expensive, especially if large areas of buildings are affected. Funding is basically up to local schools as is asbestos detection and control. No federal funds are available and state aid varies.

The U.S. EPA requires schools to inspect for asbestos and notify parents and employees of asbestos hazards. The EPA doesn't require removal or abatement. "The theory is that PTAs and employees would pressure local districts to take remedial action," said Terrell Hunt, assistant to EPA Deputy Administrator Alvin Alm.

However, a recent internal EPA report found that many schools did not meet EPA's June 1983 deadline for asbestos detection, record keeping and notification.

No Federal Funds

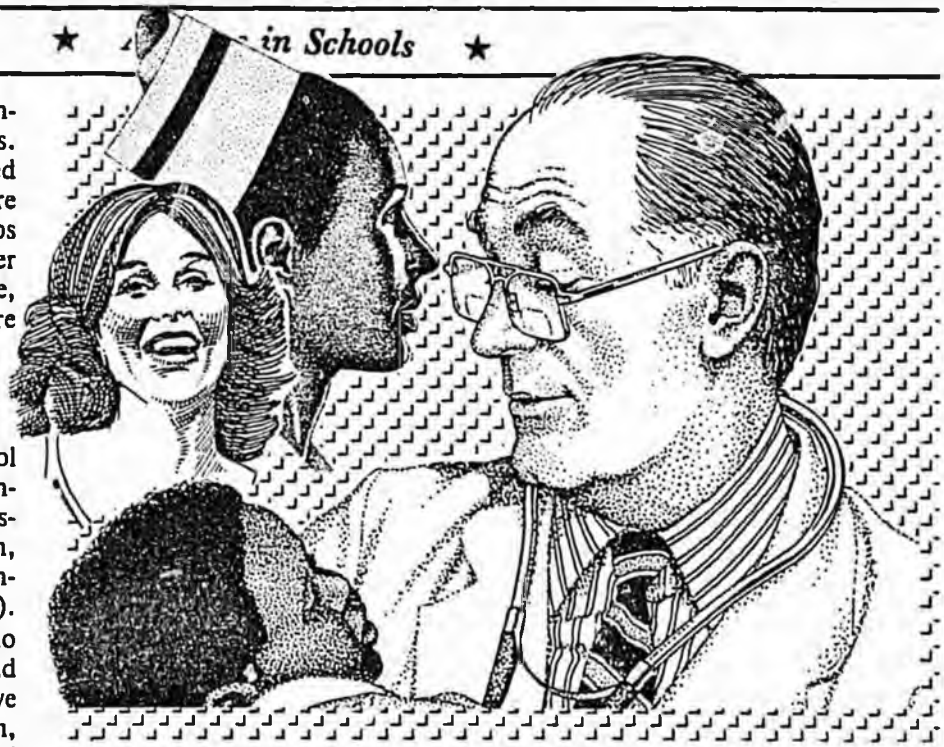
Federal funds of $172 million authorized by the Asbestos School Hazard Detection and Control Act of 1980 were never appropriated. Grants were promised for schools to identify asbestos hazards and loans for mitigation of asbestos hazards. But funds were never requested by the Department of Education, reported John Bennett, aide to U.S. Rep. George Miller, D-California, who sponsored the act. In 1983, a $50 million recommendation by the House was omitted in a House-Senate conference.

The U.S. Department of Education had a task force which set standards for state grants in 1980, according to W. Stanley Kruger, deputy director for state and local education programs. However, when the program wasn't funded, the department "deferred to EPA," Kruger said.

Under pressure from Congress, the department reactivated its task force in October 1983 and is gathering information on asbestos to send to chief state school officials, Kruger said. The department also reactivated its requirement that states file plans for asbestos in the schools' programs and report on their progress every six months. All but two states have filed.

EPA's Program

The federal effort has largely been a requirement by the EPA that schools inspect for asbestos hazards, sample and analyze material to determine if asbestos is present, keep records of the inspection, post notices, and notify parents and employees if asbestos is found. Although schools were to comply with the rule by June 1983, the EPA doesn't know how many did. It does not require schools to report to it and must send federal inspectors to schools to check their records. EPA staff said when the EPA regulation was written that the administration opposed imposing a data reporting requirement. The EPA recently doubled its field force of inspectors by adding 16 people through a contract with the American Association of Retired Persons, Hunt said. These include retired architects and engineers. Primarily, EPA staff look at school records and physically inspect some schools. However, there's not enough inspectors to cover but a small portion of the nation's schools.



In providing technical advice, EPA can help schools determine the best strategy for evaluating the risk and responding to asbestos, Hunt said. He said that anything short of removal is considered a short-term solution.

Connie Derocco, environmental protection specialist with EPA, said that out of 1,527 schools inspected in 468 districts, some 60 percent did not comply with EPA rules. Most failed

cont'd pg. 6

to notify and warn PTAs and employees of asbestos materials. Schools know they will be pressured once the word is out, and they are hesitant to deal with the asbestos problem, Derocco explained. After receiving a notice of noncompliance, schools have 30 days to act before the EPA files a civil complaint.

Labor Union Concern

An estimated 3.24 million school children and 648,000 school employees are potentially exposed to asbestos, according to Kitty Conlan, research analyst with the Service Employees International Union (SEIU).

The SEIU is lobbying Congress to fund the 1980 act for grants and loans to schools. Schools don't have the money to cleanup on their own, Conlan said. "It's definitely a federal responsibility," Conlan said. "It's a nationwide problem which affects the health of millions of people."

SEIU is suing the EPA to require schools to cleanup flaking asbestos. "Schools say if EPA thinks asbestos is so bad, then EPA would require them to get rid of it," Conlan commented.

EPA does give schools good technical advice on how to get rid of asbestos, Conlan noted. But some schools accept the lowest bid rather than follow EPA guidelines. If the cleanup is not done right, the asbestos danger can be worsened.

Conlan said SEIU doesn't think suing asbestos' manufacturers is worthwhile, citing lack of action on suits filed by asbestos workers. "We're hesitant to have our members litigate themselves to death," she said.

Conlan added that school districts can also be held responsible for asbestos. "They can face a big liability," she commented.

Lawsuits Filed

A number of lawsuits on behalf of school boards and building owners in Kentucky, Mississippi, New Hampshire, Florida, South Carolina, Alabama and Tennessee, have been filed by a South Carolina law firm.

Daniel Speights noted that legal theories available to school boards against manufacturers of asbestos include: contract (the products were not fit for the uses intended), negligence (the manufacturers were negligent in informing users of the risks associated with the products), strict liability (manufacturers should be strictly liable for failing to warn of asbestos hazards), and restitution (manufacturers have a duty to abate the hazard).

A civil action filed on behalf of the Barnwell, South Carolina, school district notes that school districts and public officials could be held liable for failing to abate a health hazard.

A September 1981 report by the U.S. attorney general to Congress recommended that school authorities seek to recover asbestos abatement expenses from asbestos manufacturers. The report said federal litigation would be inefficient unless Congress imposed liability on asbestos manufacturers.

Asbestos manufacturers are being sued by at least 20,000 people on the grounds that the companies knew of asbestos hazards and covered them up, according to a September article in the *National Journal*.

A 1983 report from the Rand Institute says that asbestos litigation and compensation has cost an estimated $1 billion over the past decade. Only 37 cents of every dollar went for actual compensation to plaintiffs. Estimates of the number of deaths due to asbestos over the next 30 years range from 74,000 to 265,000.

Future Problems

Generally, 15-40 years can elapse between asbestos exposure and manifestation of certain diseases. For instance, shipyard workers exposed during World War II may only now be filing claims, according to the Rand study. Despite this knowledge, no attempt is being made to monitor school children exposed to asbestos.

An internal EPA memo written in November 1978 called for long-term surveillance of children who are exposed. The memo noted that when they reach adulthood these children could then be informed and notified of their childhood exposure. They could be medically examined more frequently for respiratory diseases and cancer.

EPA Regions, States

Because no one tracks data on asbestos in the schools on a national basis, *State Government News* interviewed asbestos coordinators in five of the 10 EPA regions and several state asbestos coordinators.

Generally, the federal regional EPAs have switched their emphasis from providing technical assistance on identifying and dealing with asbestos in the schools to checking school records on asbestos inspections. Most found a high percentage of schools either had not inspected or had not notified parents and employees of asbestos in the schools as required by the EPA.

State programs differ widely in scope and authority. While a few states fund asbestos removal and cleanup, most simply help schools identify asbestos or provide other technical assistance.

Region I

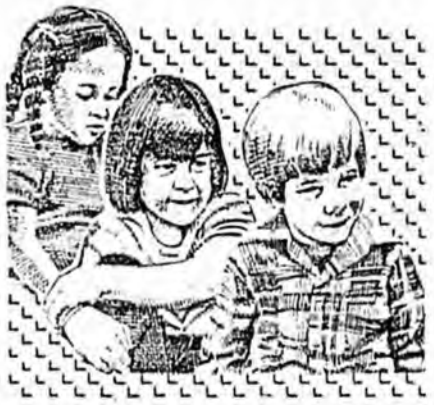
"Compliance is terrible," said Paul Heffernan, asbestos coordinator for EPA Region I covering Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island and Vermont.

Five full-time EPA inspectors have visited 160 districts covering 400 schools and issued 58 notices of noncompliance. Of the EPA violations, 37 percent had not even inspected and 53 percent had not notified parents or employees of asbestos found. Many school administrators didn't want to be "bothered," others had not read the regulation and others simply refused to post a warning in the building.

Oddly enough, schools in states which had asbestos programs in the late 1970s were most difficult to convince they needed to inspect for asbestos in ways not done in earlier years. For instance, the latest regulations require insulation of pipes and boiler rooms.

With 3,300 school districts in the region, there is no way EPA can inspect them all, Heffernan said. However, press releases announce schools found in violation, so the hope is that other schools will inspect rather than see themselves in the headlines.

Asbestos abatement efforts vary widely even in the same school district and among neighboring school districts, Heffernan said. He said West Haven, Connecticut, had an effective program while North Haven, next door, had none. While Hartford, Connecticut, spent $6 million on big problems in five schools, it had not tackled "mini-disasters" in 37 others. The same situation existed in Boston.



In the region, New Hampshire sent a checklist of EPA requirements plus abatement actions to help schools comply with the EPA.

Connecticut has granted $6.5 million since 1976 to localities for asbestos control in schools, reported Richard Krissinger, coordinator of school facilities, state Department of Education. State grants range from 40 to 80 percent of cost, depending on the aid formula the town qualifies for. If asbestos is found, the "chances are good it will be removed," Krissinger said. "We treat it as a health violation."

The state "accepts encapsulation" as an abatement measure, but doesn't encourage it. Krissinger said, "We believe removal is the only answer."

Al Siniscalchi, acting chief of the toxic hazard section of the Connecticut Department of Health Services and Education, noted that the state also provides technical assistance to schools. Schools were sent EPA guidelines and seminars were co-hosted by the state and EPA Region I.

A job freeze has reduced a former staff of nine to four and most inspections are now done by local health departments. Connecticut does follow-up inspections after asbestos removal to make sure the school is safe. Safe disposal of large amounts of asbestos is supervised by the state Department of Environmental Protection.

Maine is in good shape, according to Roy Nisbett, director of the Division of School Facilities. Most of the asbestos found was confined to pipe wrapping and boiler rooms. The state notified schools of the EPA rule and 90 percent complied with inspection requirements, Nisbett said. The Division of Industrial Safety trained school personnel to conduct asbestos inspections.

A proposed bill in Maine would authorize a bond issue to reimburse local schools for the cost of asbestos removal and repair.

In spite of the fiscal contraints caused by Proposition 2 1/2, public pressure has spurred asbestos abatement in Massachusetts, said Mike Malchik, assistant engineer, Division of Occupational Hygiene. "Parents and teachers are adamant about getting it (asbestos) down," Malchik said. The legislature allocated $2 million in 1983-84 to repay part of school removal costs if removal is recommended by the state.

Massachusetts inspects public buildings and schools, samples, analyzes samples and recommends abatement measures. There are at least five engineers and a project engineer available. The schools are being re-surveyed based on new guidelines, as inspections in 1978 only covered sprayed-on asbestos in public areas.

Region II

EPA Region II asbestos coordinator, Arnold Freiberger, has seven inspectors to check some 3,000 schools in New York and New Jersey. Out of 108 districts inspected, only 13 were in compliance with EPA rules, 32 had minor violations and 63 had either failed to inspect or identify asbestos or to post notices and notify parents and teachers.

New York has provided funds for asbestos control, reported Henry Binzer, associate in school business management, state Department of Education. In addition to state grants of $1.75 million annually for the past four years, school districts may tap state building aid for asbestos control.

An annual state survey of schools revealed 509,000 square feet of potentially hazardous asbestos.

The New York State School Asbestos Safety Act of 1979 required schools to identify asbestos and, if it is hazardous, take control measures. Encapsulation is most popular with schools. "The problem is that still has to be watched," Binzer noted. Removal is permanent, but expensive.

The state does not give advice on specific jobs, but provides an educational program for contractors and information to schools.

cont'd pg. 8

New Jersey doesn't provide specific aid for asbestos removal, but schools can get assistance through the foundation aid program, said Dr. Irving M. Peterson, manager, Facility Planning Services, state Department of Education.

In 1979, a governor's Task Force on Asbestos set minimum specifications for removal of friable asbestos. The specifications, which contractors must follow, require notification of state and federal agencies prior to the start of a project, require documentation of the contractor's qualifications, and require the contractor to follow stringent procedures for removal. The standards do not permit encapsulation (by coating the asbestos-containing layer) in New Jersey.

The state must approve all construction projects, plans, make field inspections to assure the work area is set up properly so contamination doesn't spread and check at the end of the project. Contractors, agents and workers must all attend a one-day state-EPA seminar and carry certification cards on the job.

Out of 2,400 public schools in New Jersey, asbestos removal projects have been approved in 350. Costs have totaled $46 million, for an average of $131,000 per school. It's up to local districts to remove the asbestos and as many as 100 more may not have acted yet.

Region IV

EPA doesn't have the resources to inspect school compliance with asbestos regulations, declared Dwight Brown, asbestos coordinator for Region IV covering Alabama, Georgia, Kentucky, Mississippi, North Carolina, South Carolina and Tennessee.

Most commonly, schools have either failed to inspect or to notify parents, Brown noted. He added that common law requires building owners to identify and notify occupants of hazards, and to provide medical surveillence if there is evidence of exposure.

Region IV also provides technical assistance and its intensive seminars on asbestos are attended by many from outside the region.

Most of the asbestos found in Georgia schools was in boiler rooms or pipe wrapping and has been corrected, said Lovett Fletcher, asbestos coordinator. State environmental, health and education departments worked with the U.S. EPA to provide information and hold seminars for superintendents. In addition, 70 environmental health specialists were trained to assist local systems. Schools with acute problems could get matching state aid through the state capital outlay, Fletcher said.

Kentucky helps schools comply with EPA inspection requirements, but has no money to aid them, said Jim Judge, unit director of property insurance, Department of Education. Asbestos cleanup was estimated to cost $26 million last year, but a survey now underway could change that estimate. Judge noted that the EPA doesn't require removal and many schools "are hesitant to post a warning." Asbestos problems in the state's 180 districts range from major ones with ceilings to boiler rooms.

Affected schools mostly include those built from World War II to the early 1970s. Judge said certain architects used lots of asbestos while others didn't.

South Carolina selected the critical points of EPA's regulations in requiring public and private schools to inspect, sample and analyze for asbestos, said Lee Bacot, asbestos coordinator, Department of Health and Environment. Results of the school surveys and health hazard assessments were required to be publicized in meetings and by notifying parents.

Out of 1,200 public schools, 1,080 or 90 percent complied with EPA's rule and 270 found friable asbestos. Only about 30 percent of the 450 private schools complied.

Asbestos inspectors must be certified by the state and must send survey results to the state. A one-day course is offered by the state to consultants and state and local staff. Schools are provided information, but the state does not provide specific advice or any funds.

Tennessee had a governor's task force on asbestos in 1978, according to Robert Foster, chief, technical services, Division of Air Pollution Control, Bureau of the Environment.

Out of 1,773 schools, 150 reported potentially hazardous asbestos.

The state provides free analysis of suspected asbestos materials, provides information to schools, and conducts training sessions. Because there is a shortage of EPA inspectors, Tennessee Gov. Lamar Alexander wrote the EPA offering to help enforce the inspections. However, EPA has not responded. The state plans to proceed to develop the data anyway, Foster said.

"We're convinced asbestos in the schools is one of the more important health problems," Foster declared. "It's an absolute human carcinogen. It causes serious irreversible health effects. Even brief exposure can cause painful disease. Children are

EPA's new rule requiring parental notice "triggered a lot of work," Peterson said. As many projects were approved last year as in the previous four years.

even at more risk."

The goal should be to eliminate the hazard, Foster continued, while the EPA only requires inspections and warnings which can lead to panic and make schools vulnerable to unscrupulous contractors. People need to be educated on how to abate the hazard, he said. He added that although "most want to do the best, it's hard to convince them that a little dust out of the ceiling will kill them."

"I've gone in schools where the material (asbestos) was hanging off chairs," Foster said. In that case the superintendent closed the schools upon the state's recommendation. More troublesome are marginal situations, Foster noted, where schools don't understand the potential hazard. "They look to the state or federal government," he said. "But hope for federal or state aid is a loser."

Region V

"There's quite a few violations of EPA's rule," said Anthony Restaino, asbestos coordinator for Region V covering Illinois, Indiana, Michigan, Minnesota, Ohio and Wisconsin.

Many school officials thought asbestos "was a low priority, didn't take time to inspect, didn't touch asbestos-materials to see if it crumbled or didn't notify parents or employees," Restaino said. Out of 43 school districts inspected, 29 were in violation. The Region V inspection staff was recently doubled to eight.

Illinois treats asbestos as a health and public safety issue, said Ralph Morrisette, architect, school facilities and organization section, State Board of Education.

Under Illinois law, school boards can hire an architect to determine if school building conditions endanger lives. After a survey of the cost to remove the asbestos, the local district can levy a tax for the amount without a referendum. Because schools are able to raise the funds, most of those with asbestos are having it removed, Morrisette said.

Most Wisconsin schools have inspected for asbestos, reported Nori Roden, school asbestos program coordinator, Department of Health and Social Services.

Out of 3,027 schools, 3,006 inspected and 1,089 found friable asbestos. Corrective action was taken by 583: 395 rewrapped pipes, 94 removed asbestos, 33 enclosed it and 61 encapsulated it.

Wisconsin has had an asbestos program since 1980. The Department of Industrial Labor and Human Relations conducted asbestos inspections when it conducted fire and other safety inspections. Samples were analyzed by the state lab. The Department of Public Institutions targeted schools for the free inspections, helped with record keeping, and provided technical assistance and consultation services. The health department computerized and coordinated the data and consults on health effects of asbestos.

A position paper being developed by the health department will most likely recommend removal of all friable asbestos, Roden said. "We're cautious of encapsulation and enclosure," she said. Advantages of the temporary measures include less cost and time, but the disadvantage is the "asbestos is still in the building," Roden said.

Minnesota in 1983 authorized a $25 per pupil unit capital expenditure levy and aid for asbestos removal or encapsulation and PCB cleanup with Department of Education approval.

Region VIII

The major violation found in Region VIII is that schools "aren't willing to put up notices," said Steve Farrow, EPA asbestos coordinator for Colorado, Montana, North Dakota, South Dakota, Utah and Wyoming. Instead, schools are trying to remove or encapsulate the asbestos first, he said.

Of the states, Farrow said that Utah's problems were with pipes and boiler rooms, North Dakota was making progress and Wyoming had few major problems.

Chuck Johanningmeier, technical advisor for the region, said, "Many people hoped it would go away. Medically, it is just getting worse." A Fargo teacher had contacted the EPA after discovering asbestos debris left in a school storeroom. Not long afterwards, the lawyer for the teacher's estate reported the man had died of mesothelioma (a rare cancer associated with asbestos exposure).

Unqualified contractors can do more damage than if the asbestos was left alone, Johanningmeier said. A proposed measure before the Colorado Legislature will require contractors to be certified to work on asbestos.

In another case, a contractor left asbestos which students and teachers dusted up. As a result the EPA is helping write specifications in a contract for cleanup which will be available to others as well.

There are some bright spots as well. Johanningmeier praised the work of Gill Johnson, the asbestos coordinator for a Jefferson County, Colorado, district. Johnson overcame school resistance and succeeded in cleaning up the asbestos in the district's schools.

No Cavalry in Sight

Although asbestos was recognized as a nationwide health problem by the Congress in 1980, there's no real federal effort to protect the health of exposed school children. Even though most states have asbestos coordinators, few states mandate cleanup or provide funds for removal. Essentially, asbestos removal or cleanup is left up to local school districts. Local school officials may not be willing or understand how to inspect for asbestos. Some may not understand the health dangers or legal liability they incur by allowing asbestos to remain. Apparently, many refuse to adequately notify parents or teachers if asbestos is found. Even then, students have no choice but to attend the school and teachers may be fearful of retribution if they take action. Many schools don't have or don't want to spend the money it takes to remove or cleanup asbestos.

Alvin L. Alm, deputy administrator of the EPA, recently acknowledged that the agency was reconsidering its approach to asbestos in the schools.

Re: Asbestos Abatement

Dear Colleagues:

1. Today, I informed Tom Freeman of the Anchorage School District (ASD) of the status of SB 373, amended, relating to the asbestos abatement program and the issue of a shortened school term temporarily for Bartlett High School.

2. ASD, through Peter Partnow, its lawyer, and a Washington, D.C. law firm, is preparing to join in a suit brought by school districts against asbestos manufacturers (see enclosed newspaper article). SB 373 could be amended in the House to include a provision that any school district getting state financial aid would reimburse the state, to the extent of litigation proceeds, out of any proceeds of such litigation. Thus the state would be subrogated to the interests of the school district where proceeds are collected to the extent of the state's aid for asbestos abatement. This seems to be a fair proposition which ASD, according to Mr. Freeman, would be willing to support, and which would perhaps make it easier to move appropriations through this legislature. I have already discussed this proposal with Senator Sackett.

3. Senator Sackett asks that SB 373, as amended by the House, also direct the Department of Labor and/or the Department of Law to survey all public facilities of the state regarding asbestos problems, and to report to the next

legislature with regard to its findings regarding the asbestos hazards in all facilities, not just schools; the issue of public liability if the hazards are not abated; the probable cost of abatement; a timetable for abatement; and the possibility of the state recouping some of the abatement costs through litigation like that described in paragraph 1 above and the enclosed news article. I strongly concur. I would be glad to assist either with additional information or in drafting amendments.

With best wishes, I am

Sincerely,

Joe P. Josephson
State Senator

35 U.S. School Boards Sue to Force Manufacturers to Remove Asbestos

By JAMES BARRON

With the Environmental Protection Agency stepping up its campaign against asbestos in schools, more than 35 school boards around the nation have filed lawsuits to get asbestos manufacturers to pay for removing the potentially hazardous material from their buildings.

The agency says 62 percent of the school districts it has inspected violate some of the Federal regulations that require local school officials to inspect and report on asbestos. Alvin Alm, Deputy Administrator of the E.P.A., said the figure dropped as low as 50 percent earlier in the year but climbed recently as the inspections continued.

To improve the compliance rate, the environmental agency has proposed fines of more than $300,000 against 16 school districts where Federal inspectors found problems.

Four of the school districts fined were in New Jersey: Brick Township, South Orange, Springfield Township and Dumellen. The largest fine was $102,000 against the Waterbury public schools in Connecticut. There, the agency said it had found that 16 of 26 schools contained asbestos that could become airborne.

Some Call E.P.A. Rules Vague

Some local school officials say the agency's rules are vague and subjective and its inspectors interpret them arbitrarily. But others have turned to the courts because of the high cost of removing asbestos, more than $100,000 a school by some estimates.

One case in South Carolina was settled last month when U.S. Gypsum agreed to pay $875,000 to the school district in Lexington County. One in Pennsylvania may be used as the basis for a suit that would consolidate all the claims against manufacturers by school boards around the country.

Asbestos was widely used as fireproofing insulation between World War II and the late 1970's. It has since been found to pose a threat of a variety of serious diseases, including mesothelioma, a cancer of the lining of the lungs that is often fatal.

The E.P.A. says it cannot estimate how many children face possible future health problems from attending classes in schools containing asbestos or how much exposure causes a health hazard. The National Education Association, which maintains that children are more susceptible to asbestos-related diseases than adults, says there are asbestos problems in 14,000 schools. The teachers' union has threatened to make asbestos removal a bargaining issue this year.

Under the Federal rules, more than 121,000 public and private schools with more than 50 million pupils are required to notify parents and school employees if asbestos is found by inspectors. In most cases, there are two types of asbestos in schools: asbestos in ceiling insulation and asbestos wrapping on plumbing and heating equipment.

The environmental agency's inspectors are supposed to check for asbestos that crumbles or can be pulverized at a touch, but they may also cite school districts for failing to keep detailed records on their own inspections.

"The unsettling thing is I'm afraid that is sidetracking the E.P.A.'s attention from the real issue, which is what's hazardous," said William Anderson, a lawyer who represents the National Association of School Boards. "It's also creating an adversarial situation. The E.P.A. is making enemies of many school districts as a result of what the schools see as nit-picking and unfair enforcement."

The Syracuse public schools complied with New York state regulations before the Federal environmental inspectors arrived. Ernest Rookie, the system's facilities supervisor, said the Federal inspectors questioned whether there was asbestos in an auditorium ceiling at Fowler High School.

"We had already taken samples in nine different spots," he said. "They were proved to be not asbestos. The E.P.A. came through and demanded a lab analysis. It cost $450, and we were sure that stuff wasn't asbestos."

Fine Is Called 'Unreasonable'

In Waterbury, Thomas G. Parisot, an assistant corporation counsel, called the proposed fine "unreasonable" and questioned how the agency had determined it. Long before the Federal inspectors showed up, he said, Waterbury made plans to have the asbestos removed.

"The E.P.A. inspected only four schools before it lowered the boom," he said. "They were not really familiar with the makeup of our school system when they issued their complaint. We say any asbestos-containing material is limited in comparison to other districts. We don't have any spray-on beam insulation, wall insulation, or the kinds of materials that are a great deal more friable."

He said samples taken before the E.P.A. inspection "indicated there was no exposure problem for airborne concentrations."

Many school boards are divided on how to proceed with the suits, stalled since Federal District Judge James M. Kelly ruled in Philadelphia that all the cases should be combined and tried there.

After lawyers representing many of the other districts with pending cases protested, he scheduled a hearing on whether to go ahead with the merged legal actions. The case before him originally concerned only the schools in Lancaster, Pa., which had sued the Lake Asbestos Company, a Canadian company, among others.

"To require thousands of lawsuits to be tried in one forum means that each individual school district will be lost in the mass," said Daniel Speights, a Hampton, S.C., lawyer handling more than a dozen cases. Historically, parties in a class action do not get the amount in damages that they would get if they tried their cases separately. Many of them could file locally and try the case in a year or less."

David Berger, one of the lawyers who represented the Lancaster districts when the case began, said individual trials would prove "costly, repetitive and duplicative."

"If everyone operates independently," he said, "that might make it impossible for anyone to recover. There is no way this industry could withstand $4 billion or $5 billion in judgments relating to school claims, which is what would happen if we used the tremendously ineffective case-by-case basis."

Ruckelshaus En

By PHILIP SHABECOFF

Special to The New York Times

WASHINGTON, May 19 — One year after his return as Administrator of the Environmental Protection Agency, William D. Ruckelshaus is widely credited with restoring morale, stability, purpose and credibility to an agency he found in a state of chaos.

But his critics, including members of Congress and environmentalists, charge that he has failed in leadership on such important environmental issues as emissions into the air of sulfur and nitrogen oxides that fall in particles called acid rain, killing aquatic life and threatening forests; that he is seeking to weaken environmental regulation by weighing risks to health against other social values; that he is serving as a benign front for what the critics call the anti-environmental policies of the Reagan Administration.

In an interview in his office overlooking the Potomac, Mr. Ruckelshaus denied that the Administration was anti-environment.

"It is a fair criticism of this Administration that the environment is not one of its high priorities — it has not been a high priority of the President in his career," he said. But he added that "this Administration has much more sympathy for the environment than the Nixon Administration," though many major environmental laws were passed during that Administration's tenure. Honorable Mae Tischer
Chair
Committee on Health, Education and Social Services
House of Representatives
Alaska State Legislature
Juneau, Alaska

Dear Mae:

Re: SB 346; SB 373

In the light of our common interest in the problems of the mentally ill, and all of the work our committees have done on this subject, I am hopeful that your committee will soon submit its report on SB 346. I believe the bill will pass the House if the House has the opportunity. In addition, I do not object to your amendment, if I understand it rightly, about nutritional testing and programs, and I would urge the Senate to concur if the House passes SB 346 with that amendment.

On another subject, the Senate has passed SB 373 relating to asbestos abatement. An amendment I offered on the Senate floor is designed to avoid double-shifting of Bartlett High School students, by giving the Commissioner of Education the authority to ease the 180-day school term requirement if the school district submits a plan for a shorter term (not less than 150 days) which will give approximately equal education, e.g., by lengthening the school day. This would permit work to be done at Bartlett High School during interims between the spring and fall terms, so that double-shifting will not be necessary. Superintendent Gene Davis has asked for this. I am hopeful, again, that the House of Representatives will have an opportunity to consider SB 373 as amended. If you need additional information, please advise.

Sincerely,

Joe

Joe P. Josephson

Mae- As per our chat this a.m. Thanks. JPJ

TO: Members of the House HESS Committee
FROM: Representative Mae Tischer, Chairman, House HESS MT

RE: Proposed House CS for CS for Senate Bill 373 (HESS)

Attached please find a copy of the proposed House CS for CS for Senate Bill 373 (HESS), "An Act establishing an asbestos health hazard abatement program; and providing for an effective date."

The proposed amendments to the bill, indicated on the attached draft, are found on the pages and lines indicated below. Please note that, for the ease of the members, page and line references are to CS for Senate Bill 373 (Finance), amended, offered May 3, 1984. A brief explanation of the effect of each amendment is provided.

1. Page 1, line 9: The catch line for Section 1 of the bill is amended by deleting "FINDINGS AND" in order to reflect changes made to this section in amendment 2.

2. Page 1, lines 9 - 25: This amendment deletes the "Findings" portion of Section 1 of the bill, leaving only the "Purpose" portion. Legal counsel has advised that this amendment will have no legal effect on the bill.

3. Page 3, line 24: In conformity with amendment 4, this amendment deletes paragraph 9 of the new AS 18.28.020 and renumbers the remaining paragraphs accordingly.

4. Page 4, line 4 - Page 5, line 5: This amendment deletes establishment of the proposed Department of Labor Certification Programs, and renumbers remaining sections of the Act accordingly.

5. Page 6, line 15: This amendment inserts new language to read:

> "Sec. 18.28.080. RIGHT TO SUBROGATION. When the state has expended funds to abate asbestos health hazards under AS 18.28.030, the state shall be subrogated to all of the rights of a municipality or borough to recover damages for asbestos health hazards in a school building. The right to subrogation is limited to the amount of funds the state has expended to abate asbestos health hazards in a school building that is the subject of a legal action by a municipality or borough seeking to recover damages. A municipality or borough shall deposit in the general fund, to the extent of the related state expenditures on its behalf, damages awarded in a legal action under this section."

The amendment, suggested by Senator Josephson, would require school districts which successfully sue for costs associated with abatement and which get state financial aid to reimburse the state, to the extent of litigation proceeds, out of any proceeds of such litigation; thereby "subrogating the state to the interests of the school district where proceeds are collected, to the extent of the state's aid for asbestos abatement."

/wtl

BACKGROUND ON ASBESTOS HEALTH HAZARDS

FOLLOWING WORLD WAR II, ASBESTOS WAS RECOGNIZED AS THE "MIRACLE" MATERIAL - NOT ONLY AN EXCELLENT INSULATOR BUT ALSO FIREPROOF. THEREFORE, IT WAS WIDELY USED IN ALL CONSTRUCTION PROJECTS.

ASBESTOS WAS KNOWN TO BE DANGEROUS LONG BEFORE IT CAME TO THE NOTICE OF THE PUBLIC IN THE EARLY SEVENTIES. CONGRESS HAD NUMEROUS HEARINGS ON THE HEALTH ASPECTS OF ASBESTOS, AND PASSED IN 1980, LEGISLATION TO REMOVE ASBESTOS FROM SCHOOLS BECAUSE IT WAS RECOGNIZED ~~TO~~ THAT CHILDREN ARE MORE SUSEPTIBLE TO THE INGESTION OF ASBESTOS FIBERS THAN THE GENERAL PUBLIC. CASES WERE DOCUMENTED WHERE ASBESTOSIS WAS CONTRACTED BY PEOPLE LIVING IN PROXIMITY TO FACTORIES AND SHIPYARDS WHERE ASBESTOS WAS IN HEAVY USE, AND BY FAMILY MEMBERS OF ASBESTOS WORKERS. HEALTH RELATED DISEASE DOES NOT APPEAR FOR 20 - 40 YEARS AND IS ALWAYS TERMINAL.
THE FEDERAL LAW REQUIRING ASBESTOS IDENTIFICATION AND REMOVAL IN SCHOOL BUILDINGS, UNFORTUNATELY, WAS NOT ACCOMPANIED BY ANY APPROPRIATION TO AID SCHOOLS IN CARRYING OUT THE MANDATE. THE E.P.A. PUT OUT REGULATIONS REQUIRING IDENTIFICATION AND TESTING OF ASBESTOS BY SCHOOLS BY JUNE 30, 1983. DWIGHT BROWN, DIRECTOR OF THE E.P.A.'S ASBESTOS IN SCHOOLS PROJECT APPEARED ON CNN TWO WEEKS AGO, STATING THAT THE E.P.A. HAS DONE VERY LITTLE, AND WHAT HAS BEEN DONE IS INEFFECTIVE.

SCHOOLS CONTACTING OUR OFFICE ABOUT THESE BILLS, AND PARTICULARLY THOSE IN RURAL AREAS, STATED THAT THEY HAD DIFFICULTY GETTING ASSISTANCE FROM THE E.P.A. AND ATTEMPTED TO CARRY OUT THE REGULATIONS AS BEST AS POSSIBLE WITH VERY LITTLE INFORMATION. THE E.P.A. HAS .1 PERSON WORKING ON ASBESTOS IN ALASKA.

THE LAW ALSO REQUIRED SCHOOLS TO NOTIFY PARENTS AND EMPLOYEES OF ASBESTOS LOCATED IN BUILDINGS - PLACING THE SCHOOLS IN A PRECARIOUS POSITION BY RAISING PUBLIC CONCERN ABOUT AN OBVIOUS HAZARD THAT, FINANCIALLY, THEY WERE IN NO POSITION TO ADDRESS.

THESE BILLS ARE AN ATTEMPT TO PROVIDE FUNDING FOR ASBESTOS REMOVAL IN SCHOOLS IN A SAFE, ORDERLY FASHION THAT WILL GUARANTEE THE PROTECTION OF THOSE EMPLOYED TO REMOVE THE MATERIAL.

THE SUPERINTENDENT FROM KODIAK CONTACTED ME WITH AN ISSUE NOT ADDRESSED IN THE BILL, AND THAT IS THE DIFFICULTY OF FINDING A PLACE TO DUMP THE ASBESTOS AFTER REMOVAL. HE STATED THAT THEY HAD RENOVATED THEIR JUNIOR HIGH SCHOOL AND DUMPED THE MATERIAL IN A COAST GUARD AREA WHICH HAS NOW BEEN CLOSED. PERHAPS THE DEPARTMENT OF LABOR WOULD BE ABLE TO ADVISE SCHOOLS ON THIS MATTER.

MEMORANDUM

TO: JOE JOSEPHSON
FROM: NANCY DEITRICK
RE: SB 374 - ASBESTOS ABATEMENT APPROPRIATION BILL

E.P.A. REQUIREMENTS

The E.P.A. regulations mandated: (47 FR 23360-23389)

1. Testing for asbestos in every school district by June 30, 198
2. Notification of parents and school board about asbestos healt hazards discovered.
3. Notification of school employees of hazards with instructions on how to minimize exposure to asbestos.
4. Maintenance of records on asbestos testing and notification.

Since 1979, the EPA has put forth technical assistance to districts concerning asbestos hazards and abatement. This has consisted of manuals and workshops for school officials in the major areas of the state. Kathy Pazera, of the Juneau EPA office, told me that the EPA has so far applied sanctions in two states for non-compliance with these regulations, and that there is heavy public pressure concerning a more aggressive stance on asbestos in schools. The EPA has just rewritten regulations for demolition and renovations of asbestos containing materials.

Although the $172 million authorized for the Asbestos School Hazard Detection and Control Act of 1980 was never appropriated, there is speculation that the regulations requiring public knowledge of asbestos hazards were designed to bring pressure on states for funding asbestos removal.

A civil suit filed on behalf of a South Carolina school district notes that school districts and public officials could be held liable for failure to abate a health hazard.

Tues. 5-15-84

JOHN:

re: Asbestos Health Hazard problem (SB-373, SB-374)

Per your request, I have talked with Alison Elgee in Dept. of Education.

In general the problem is a recent one in terms of public awareness of the potential hazards of asbestos materials used in construction of school and public buildings.

In Alaska only Anchorage and to some degree Fairbanks have been able to identify asbestos hazards in their schools. Anchorage has done the most extensive survey of hazards.

In Anchorage, for example, their first estimate of removal of asbestos from Bartlett High School was roughly $6 million. TODAY, the business manager for the school district reports the estimate has now shot up to somewhere between $13 and $22 million. Bartlett's problems are that when the school was constructed asbestos was sprayed on the walls as a fire safety/prevention measure. This type of asbestos is called "friable" and means that the substance releases fibers in the air which are breatheable by humans and subsequently can cause health hazards (cancer, lung problems, etc.). The Bartlett case is a little unique in that apparently the federal government would provide for some funds necessary to remove the hazardous asbestos, but their is a question as to how much the feds would put up.

Other school districts HAVE NOT identified their asbestos hazards either because they lack the necessary funding, expertise and/or personnel to do the job...or simply have not been made aware of the serious nature of the problem and as a result have felt no (or little) pressure to act on the matter.

DOE received $2.5 million in HB-691, passed earlier this year, to survey the asbestos hazard problems throughout the public school system (i.e., the more rural school districts).

Getting a handle on the overall costs to remove hazardous asbestos in schools is not easy because it is a new problem, there is insufficient data from all school districts and estimates seem to vary from week-to-week, as in the case of Bartlett school in Anchorage.

MORE DETAILED INFORMATION could possibly be provided from D.O.E if they were permitted to use the $2.5 million they already have to identify the problem areas and report back to the legislature with funding requests for next year.

DOE says that their cost estimates to remove hazardous asbestos would far exceed the $17 million currently proposed in SB-374, which is a companion to SB-373, creating an asbestos health hazard program to remove hazards... but they cannot give a relatively accurate figure until they've had time to assess the problems throughout Alaska.

MG

ASBESTOS IN SCHOOLS

The following needs have been identified from the Senate HESS Committee's request for information:

Kodiak	$1,138,507	
Petersburg	107,000	
Delta Greely	99,700	
Cordova	120,000	(In progress)
Nenana	15,000	($5,000 already spent)
Anchorage	14 - 16.6 million	($6,101,300 in SB 403)
Fairbanks	1,385,000	($1,385,000 in SB 403)
Skagway	25,000	
Kuspuk	5,296	
Mat-Su	105,959	(expended)
Ketchikan	5,000,000	(estimate)
Juneau	300,000	(expended, estimate several million)

**There is $2,500,000 in HB 691 for statewide asbestos removal

The Department of Labor has estimated that there are 220 schools that remain to be tested. They estimate the cost for sampling and testing to be $296,100 for those schools, this amount has been included in SB 374.

5/2 4:45pm. Mike Scott said they will do a Finance CS with these amendments

Mick Coltran, of the Laborers Union, has requested more stringent sanctions for violations. A memo from Vic Fischer was sent to Senator Ferguson, but I don't know if these recommendations are to be included in a Finance CS. They are:

Insert page 4, line 14:

(e) A contractor who violates (b) of this section is guilty of a class A misdemeanor.

(f) A contractor who violates (c) of this section is guilty of a class B misdemeanor.

STATE OF ALASKA
THE LEGISLATURE

LEGISLATIVE AFFAIRS AGENCY

POUCH Y - STATE CAPITOL
JUNEAU, ALASKA 99811

M E M O R A N D U M May 28, 1984

SUBJECT: Emergency closure days (AS 14.03.030(2))

TO: Representative Mae Tischer
Chairman, House HESS Committee

FROM: Keith B. Levy KBL
Legislative Counsel

You have asked whether AS 14.03.030(2) permits a school district to use an "emergency closure day" to conduct an asbestos abatement program. AS 14.03.030 provides that the school term is at least 180 days in session, except that, subject to the approval of the Commissioner of Education,

> ...an "emergency closure day" may be substituted for a day in session because of conditions posing a threat to the health or safety of students.

The answer to your question turns on whether the condition sought to be remedied by the asbestos abatement program poses a threat to the health or safety of students.

I have reviewed the memo you received from Ron Lorenson of the Department of Law as well as the memo from William Thompson of the Department of Education. The Department of Education memo concludes that if an inspector certifies that a building should not be occupied because the asbestos poses a threat to the health or safety of the children, an emergency closure day is authorized. The Department of Law disagrees to the extent that it believes an emergency closure day is authorized only if it is the result of "bona fide emergency situations which school officials could not reasonably anticipate in advance." In other words, under the Department of Law's interpretation, emergency closure days are not authorized for a planned abatement program, even if the program presents a threat to the health or safety of students.

Although the Department of Law's interpretation of AS 14.03.030(2) is not unreasonable, I disagree that the statute does not authorize emergency closure days for asbestos abatement programs. Although the statute uses the word "emergency," the plain language of the definition does not require anything but a threat to the health or safety of the students. If an abatement program is used to remedy conditions posing such a threat, it would appear to authorize an emergency closure under AS 14.03.030(2).

It should be noted, however, that under AS 14.03.030(2), all emergency closure days are "subject to the approval of the commissioner." Therefore, even if an emergency closure is authorized under AS 14.03.030(2), the Commissioner of Education has the power to veto a school district's determination that an emergency closure day is called for.

If I may be of further assistance, please contact me.

KBL:ojb

MEMORANDUM State of Alaska

TO: The Honorable Representative Mae Tischer
Alaska State Legislature
House of Representatives

DATE: May 25, 1984

FILE NO: 4203M

TELEPHONE NO: 465-2865

SUBJECT: Emergency Closure/
Shortened School Year

FROM: William D. Thomson, Director
Management, Law and Finance
Department of Education

Per our telephone conversation this morning, the 1983 Legislature amended AS 14.03.030. School Term by adding a section where an emergency closure day may be substituted for a day in session because of conditions posing a threat to the health or safety of students.

If an inspector certifies that because of friable asbestos a threat to the health of children occupying a school exits, therefore, the building should not be occupied, this would constitute an "emergency closure day" until the condition could be corrected, if alternate arrangements for the childrens' education could not be accomodated.

If you have further questions, please feel free to call.

of concern your legal liability as "owner" of your school buildings. Following federal regulations scrupulously won't protect your schools against a potential lawsuit if an asbestos removal worker should die from cancer, so you should be very careful in hiring a contractor, says attorney Luis Nido, of Brace and Patterson, a Washington, D.C., law firm that does asbestos work. Hire a highly specialized firm whose technicians are able to testify in court, adds attorney James B. Bedingfield of Coos Bay, Ore., who represents several school systems involved in asbestos abatement. And keep careful daily records to document your efforts to ensure the safety of workers, as well as students and staff, while asbestos abatement work is being done in your schools. On these and other issues related to asbestos, "Uncovering the Asbestos Hazard," published by the National School Boards Association's Council of School Attorneys, provides comprehensive legal, legislative, and medical background on asbestos in the schools. (It's available for $100 by writing to the council at 1055 Thomas Jefferson St. N.W., Washington, D.C. 20007.)

And, perhaps most important, know what you're getting into before you launch a program of asbestos containment or removal. George Harris, assistant superintendent in Montgomery, Ala., advises setting up an interdisciplinary team composed of board members, administrators, your school attorney, perhaps parents or other community members, and the architect and engineer you select to help do the job. (See article below.) Asbestos expert Dwight Brown suggests that this interdisciplinary team (or at least one member of it) should attend one of the seminars on asbestos in the schools conducted by E.P.A. and private consulting groups. These seminars have as speakers doctors, engineers, architects, attorneys, contractors, and others knowledgeable about asbestos. (For more information, contact Brown at A.H.P. Research, Inc., 3763 Vineyard Way, Marietta, Ga. 30062; 404/973-8689.)

Asbestos in schools is a wrenching, emotional issue—and it no longer is lying dormant. School board members and school administrators need to take action and take action *now*. □

Sidestep asbestos hysteria: Explain the risk (and your response) to the public

By George Harris

WE ALL WANT safe schools, but when it comes to the risky business of removing asbestos, school board members and school administrators sometimes bear the brunt of community criticism. At least, that's what happened in the Montgomery County (Alabama) Public Schools (K-12; enr.: 35,000) when we were faced with the difficult task of removing asbestos from about half of our 52 schools. Perhaps there's a lesson for you in the way we handled this emotional issue.

We knew little about asbestos until we read *Asbestos in schools: Walls and halls of trouble*, in the November 1978 issue of the JOURNAL. We knew even less about potential asbestos hazards in our own schools, other than that asbestos-containing materials had been required by the architects who designed many of our buildings. Consultation with those architects revealed that Yes, the ceilings in most of the classrooms were coated with cementitious, sprayed-on asbestos products. Materials used in the walls and halls of the schools we were so proud of when they were built in the 1950s and '60s were fireproof, attractive, and acoustically satisfactory. They also were potential causes of cancer and other life-threatening diseases.

'Our slide show and public talks about asbestos set the stage for a calm resolution of the problem'

We immediately began to gather samples from some of our buildings with sprayed-on ceilings. Laboratory tests confirmed what we had not wanted to believe: We had asbestos in our buildings—in far greater amounts than we had suspected. By January 1979, we knew we had more than 300,000 square feet of the stuff only a few feet above the heads of approximately 15,000 students. By this time, other school systems in Alabama were becoming aware of the problem, and the state superintendent of education called for a statewide report on asbestos in schools.

Publicity was widespread, and within months, we began to feel the uncomfortable effects of public awareness. The state PTA president wrote to local PTA officials, urging their support of federal legislation to provide funding to help school systems inspect buildings for asbestos-containing materials. With our local PTAs alerted to the danger of asbestos, we soon were receiving letters from legislators and from worried parents who wanted to know what the Montgomery schools were doing to protect their children. Public criticism peaked when a local newspaper published an editorial entitled "Silent Death." Next to the editorial was a cartoon showing a distressed mother sending her children off to school with gas masks on their faces. From then on, I knew the asbestos problem had to be Number One on my agenda. We had been waiting to see if any state agencies would

George Harris is assistant superintendent in Montgomery, Ala.

Schools are required to post warnings wherever friable asbestos exists. When asbestos is removed, areas are quarantined and workers wear protective suits.

recommend a course of action, but now we knew we were on our own.

In January 1982, the Montgomery school board passed a resolution making asbestos cleanup a matter of top priority and directing the staff to develop an asbestos control program immediately. We formed a committee composed of the superintendent, the board attorney, two board members, and me. Here, briefly, is how our committee confronted the issue:

Our first step was to request proposals from architectural firms. After carefully interviewing all the applicants, we chose an architectural/engineering firm that had proven experience in asbestos abatement and removal. We then presented our selection to the board, which approved our recommendation.

Before we could begin actually solving our problem, though, we needed more background on the hazards of asbestos and the medical and legal risks of removing it from our buildings. So we attended a seminar on asbestos in schools held in Atlanta. The seminar was conducted by, among others, the regional asbestos coordinator for the Environmental Protection Agency (E.P.A.). Seminars like the one we attended are a good source of comprehensive, accurate information on such matters as how to approach specific asbestos problems, how to hire a competent lab to test samples, and how to inspect and monitor the asbestos contractor's work to ensure a safe and thorough job.

Not long after we returned from the Atlanta seminar, the situation heated up at home. Several PTA members at one school began distributing leaflets urging parents to call and find out when asbestos abatement contracts would be awarded and when the asbestos-containing materials would be removed from their schools. The group broadcast their concerns over local radio stations, intensifying the pressure on us to speed up the process.

By early summer 1982, the surveys confirmed that a total of 24 school sites (some with more than one building) contained more than 500,000 square feet of dangerous, friable (or loose, crumbling) asbestos-containing materials. The boiler coverings, water heater jackets, and pipe coverings in these schools and 16 others were coated with asbestos that would have to be removed. We had hoped to award cleanup contracts for a number of the schools that summer; unfortunately, although a bond issue for school construction already had been approved by the state legislature, the funds were not made available to local school systems because of the state's tight economic situation. It became clear we couldn't complete the work by the opening of the 1982-83 school year. The local news media incited a public outcry with charges that the schools were moving too slowly, suggesting we somehow were negligent in solving the crisis.

The board and administration decided positive public relations measures were in order, so I put together a slide presentation illustrating how the Montgomery schools had responded to the asbestos hazard since we first became aware of it. The 40-minute, narrated presentation explained why asbestos posed health risks, where it had been found in our schools, how the press and community had reacted to the discovery of hazardous materials, and what we were doing to make the schools safe. One of our board members presented the slide show, along with a speech on the school board's responsibility in removing asbestos, at a regional school board association meeting. The presentation was such a success that we used the slide show at subsequent PTA and community group meetings. These discussions have gone a long way in garnering support for our efforts and reassuring parents, staff, and community members that we are, indeed, on top of the problem—and moving as quickly as possible to make schools safe.

Community support is important, but it takes money to get the job done, so we continued to fight for funding from the state. Finally, in January 1983, we received more than $1 million from the state for asbestos abatement. We immediately awarded contracts for asbestos removal in four schools, to be completed during the spring recess. Soon after, we received an additional $2.4 million in state bond money; that amount should allow us to complete the project. By the end of last summer, we successfully had removed 360,000 square feet of asbestos-containing materials from 17 schools. We currently are advertising for bids on the abatement jobs yet to be done, and we anticipate that the Montgomery schools will be completely free of asbestos-containing materials and their accompanying hazards by this summer.

Our slide presentation, meanwhile, has traveled many miles. In the past year, I've shown it at seminars conducted at several universities and at a National School Boards Association Council of School Attorneys' asbestos seminar held last summer.

If your schools haven't yet dealt with the asbestos problem, it's time you did. It's an emotional issue, and it requires delicate handling if you want to avoid hysterical accusations from the community. We've found that our slide show and discussions with the community have helped set the stage for a calm and constructive resolution of the problem.

If you'd like more information on how to put together a presentation for parents and community members on asbestos abatement, write to me at the Montgomery Public Schools, P.O. Box 1991, Montgomery, Ala. 36197. □

HB 246

CS FOR HOUSE BILL NO. 246 (L&C) by the Labor and Commerce Committee, entitled:

"An Act relating to the deregulation of interest rates; and providing for an effective date."

was read the first time and referred to the Labor and Commerce Committee and the Judiciary Committee.

STANDING COMMITTEE REPORTS

SB 79

The Resources Committee considered SENATE BILL NO. 79 (toxic and hazardous substances in the workplace) and recommended it be replaced with

CS FOR SENATE BILL NO. 79 (RES)

with a majority do pass. The report was signed by Senator Fahrenkamp, Chairman and concurred in by Senators Vic Fischer, Eliason, Ziegler, Paul Fischer and Sturgulewski. Senator Mulcahy signed "no recommennation".

The committee attached:

SENATE RESOURCES COMMITTEE
LETTER OF INTENT, SB 79

The purpose of this legislation is to inform employees of the identity of and the health hazards and proper handling procedures for hazardous and toxic substances in their workplace through a communication and safety education program adopted by employers. While this legislation is designed to cover most employers in the state utilizing substances defined in the bill, it is not the intent to require employers to be responsible for the generation or creation of the information required to be posted or communicated to employees. Rather, the bill is designed under the assumption that federal regulations will be promulgated in the near future by the Occupational Safety and Health Administration (OSHA) which will require manufacturers to develop and distribute information for all the substances covered by the bill. The provision requiring that such information accompany substances imported into the state and the provision requiring the State Department of Labor to keep information on file for all substances covered by the bill are designed to aid employers in readily obtaining the required information.

PRESS RELEASE FROM THE PUBLIC INFORMATION OFFICE
ALASKA DEPARTMENT OF ENVIRONMENTAL CONSERVATION
JUNEAU, ALASKA 99811 (907) 465-2606

Bill Sheffield, Governor Richard A. Nevé, Commissioner
Joe Ferguson, Information Officer

FOR IMMEDIATE RELEASE April 20, 1983

ASBESTOS IN ALASKA
by Jana Baumann, Information Officer
Department of Environmental Conservation

JUNEAU--Twenty years ago the word "asbestos" meant progress, indestructibility; a nearly perfect component for building materials to insulate and to fireproof.

Today the mention of asbestos may bring a grim response and thoughts of cancer and lung diseases. What was once thought of as a miracle material is now known to be extremely harmful, especially when it is dispersed into the air and inhaled.

What is asbestos?

Asbestos is a naturally occurring mineral that can be separated into fibers. It is very lightweight and nearly industructible. Before the early 1970s, asbestos was widely used as a component in thermal, electrical, and acoustical insulation, fireproofing, ceiling tiles, and decoration. These applications were most cost effective in large buildings like schools, factories and office buildings.

What are the harmful effects of asbestos?

The danger to human health from asbestos occurs when minute fibers are breathed and become lodged in the lungs. Asbestos containing materials are often friable which means the fibers can be readily separated from the material in which it is

-MORE-

used and become airborne. Fireproofing or insulation which is damaged and crumbling can release invisible asbestos fibers into the air.

Cancers of the chest and lungs and other organs have been positively associated with asbestos exposure. There is no known "safe" exposure. Even brief contact could result in irreversible damage that may not be detected until many years after exposure.

When the health effects of asbestos exposure were documented, many corrective programs were initiated for workers who handle it and for the public who may be unknowingly exposed at their school or workplace. In Alaska, several state and federal agencies regulate asbestos exposure, handling and disposal. Following is a brief summary of agency responsibilities.

Schools and Public Buildings

The U.S. Environmental Protection Agency regulates inspection of schools for identifying asbestos containing materials. The superintendent of each school district in Alaska has been instructed to inspect all school buildings in the district for friable asbestos by June 23, 1983. Each type of friable material located in the school buildings must be tested for asbestos content. Samples must be tested using Polarized Light Microscopy.

School districts are required to keep a record of all the inspections and results from each school building. If asbestos containing material is found in a school, additional information on the location and quantity of this material must be kept on file at the administrative office of the school and at the school district office. The school district must notify employees and the parent-teacher association about the presence of asbestos containing materials.

Instruction is available on how to inspect public buildings and schools which may contain friable asbestos. Booklets and video tapes may be borrowed from the Alaska Operations Office of the U.S. Environmental Protection Agency in Juneau or from the Alaska State Library.

Asbestos emissions to the air inside the work place

The Alaska Department of Labor, Division of Occupational Safety and Health, regulates exposure of workers to airborne asbestos fibers inside the work place. The regulations also govern asbestos exposure during demolition and renovation work.

The regulations set standards for exposure levels of asbestos fibers in the air, and specify work practices such as ventilation and clothing and engineering controls for most workers in the state. Exposure criteria for federal employees and workers on offshore oil rigs or seafood processors are regulated by the U.S. Department of Labor, Occupational Safety and Health.

Questions regarding asbestos exposure or work practices in the work place should be directed to Alaska Department of Labor, Division of Occupation Safety and Health. Sampling of our materials in the work place is also done by this agency.

Asbestos emissions to the outside air

The U.S. EPA has established standards to limit emissions of asbestos to the outside air. These rules govern manufacturing plants which produce cement, fireproofing materials, insulation, and other materials which include asbestos as a component. The rules also govern materials used in roadway surfacing and emissions from asbestos milling operations. These regulations also limit release of asbestos to the air during renovation and demolition activity and fabricating operations that utilize commercial asbestos.

Asbestos Disposal

The U.S. EPA has regulations which regulate handling and disposal of asbestos. Materials containing friable asbestos must be specially contained and wetted. Landfills or disposal sites must meet certain specifications in order to accept the material. Operators of the disposal site must cover it and post warning signs.

Following is a list of agencies which regulate some aspect of asbestos in Alaska, the situations for which they are responsible, and the person to contact.

Responsible Agency	Asbestos Situation

REPLY TO
ATTN OF:

February 1, 1984

Joe Cladouhos, Director
Division of Environmental Quality Management
Alaska Department of Environmental Conservation
Pouch O
Juneau, Alaska 99811

RE: Senate Bill No.'s 373 and 374 introduced on 1/25/84

Dear Mr. Cladouhos:

As a result of a request by your staff, we have provided a review of the current asbestos regulations and our comments on Senate Bills 373 and 374. We strongly support the concept of both these Bills. The EPA Alaska Operations Office (AOO) has been actively involved in 1) providing guidance to schools on school regulation 40 CFR Part 763, 2) providing information to contractors conducting demolition/renovation of friable asbestos, 3) inspecting asbestos demolition/renovation projects and 4) responding to all complaints in this area. The AOO also notifies the State Department of Labor (SDoL) on each demolition/renovation asbestos project for which we receive a notification.

Our staff in Alaska is limited to .1 of a person year for asbestos activities; therefore, we strongly support efforts from state agencies which supplement our efforts. We feel that Senate Bill 373 in conjunction with the present EPA, U. S. Department of Labor (DoL), and SDoL regulation would provide for a more complete asbestos program for Alaska; however, appropriations in Bill 374 may not be adequate to fulfill all the designated tasks for the asbestos program.

Background:

At the present time the U. S. Environmental Protection Agency (EPA) requires the identification of friable asbestos in schools in accordance with regulations (40 CFR Part 763) promulgated under the Toxic Substance Control Act (TSCA). In addition, all projects involving the demolition and/or renovation of friable asbestos in buildings are regulated by EPA in accordance with 40 CFR Part 61, Subpart B. These regulations were promulgated under the authority provided to EPA in the Clean Air Act (CAA). The U. S. Department of Labor and the SDoL also have regulations addressing removal and demolition of asbestos from structures (29 CFR 1910.1001 and OH&EC 04.0102 respectively).

Unlike regulations promulgated under the CAA, the school regulations promulgated in accordance with TSCA cannot be delegated to state or local governing agencies. This does not prevent a state or local governing agency from developing its own asbestos program for schools. For the most part Senate Bill 373 would supplement the present EPA school regulations; however, some overlap occurs in the requirement to establish guidelines for schools to identify asbestos health hazards [18.28.050 (5)]

Detailed Comments:

According to Section (1) (b) of Senate Bill 373 there are three main purposes for the Act. Our comments on each of these is discussed in the following text:

1) We support the testing and analysis of friable materials for asbestos content. According to the Bill, the Alaska Department of Environmental Conservation (ADEC) would provide this service. In accordance with EPA regulations (40 CFR Part 763) all local education agencies were to complete the following tasks by June 28, 1983:

-conduct inspections of schools for friable materials

-collect samples of all materials identified as friable.

-have each sample analyzed by Polarized Light Microscopy (PLM) for asbestos content.

During 1984 the EPA will be conducting inspections of three major school districts in Alaska; however, there have been no inspections of Alaska schools conducted to date. As a result it is not known which schools in Alaska are in compliance with the EPA regulation and therefore some schools may require sampling.

There are approximately 550 schools in Alaska. Each specific friable material type is required to be sampled in three separate areas. Assuming only one type of asbestos is present in each school, 1,650 samples would be representative of the total schools. The information that schools have voluntarily supplied to EPA on their compliance status indicates that schools have more than one type of friable material. Depending on the laboratory, sample analysis costs range from $25.00 to $45.00 per sample. Based on this information the appropriation of $75,000.00 to ADEC may not be adequate to accomplish the analysis of samples from schools and public facilities in Alaska if commercial laboratories are utilized.

2) We support the dissemination of information pertaining to friable asbestos material. Both U. S. Department of Labor and EPA have information and videotapes available that pertain to identification and removal of friable asbestos. The U. S. Department of Health and Human Services has information available on the health effects resulting from asbestos exposure. There is a need for coordinating the distribution of the current and newly generated asbestos publications to the public. Again, the present Bill assigns this responsility to ADEC but the $75,000.00 allocation may be inadequate.

3) Section 18.28.050 (5) of Senate Bill 373 requires ADEC to establish quidelines for determining asbestos health hazards. These quidelines would be used by school officials to establish a sampling plan for friable asbestos. This overlaps with EPA requlations 40 CFR 763.105 and 763.107 on the inspection and sampling of friable material.

We support the correction of identified asbestos health hazards in schools and public facilities. Senate Bill 373 goes one step beyond the EPA school regulations by requiring schools that have the potential to release asbestos fibers, to eliminate friable asbestos material . (It is our understanding that elimination includes an action which would correct the asbestos hazard, but does not necessarily require removal).

We strongly support the appropriations to the Department of Community and Regional Affairs (CRA) for correcting identified asbestos hazards in schools and public facilities. The EPA has not been successful in acquiring an appropriation from Congress for schools requesting financial support for abatement of friable astestos.

If you should have any questions on our comments please contact Kathryn Pazera of my staff.

Sincerely,

Ronald A. Kreizenbeck, Director
Alaska Operations Office

cc: S. Hungerford ✓

JUNEAU EMPIRE - MAY 22, 1984

Asbestos fibers temporarily halt work at Baranof

By CHRISTOPHER JARVIS
The Juneau Empire

Repair work at Juneau's historic Baranof Hotel was halted May 11 so state inspectors could be sure no hazardous amounts of asbestos fibers were floating in the air.

Work resumed last week after tests on air samples taken from the hotel revealed the amount of asbestos was far below minimum state safety standards, said state Department of Labor Safety Consultant Douglas Wahto.

In fact, Wahto said the amount of asbestos fiber floating in the air in Los Angeles probably far exceeds the amount found at the Baranof.

The Division of Labor Standards and Safety of the state Department of Labor was asked to evaluate the amount of asbestos by Wick Construction, the firm hired to repair damage caused in an April 27 fire that gutted most of the hotel's main floor.

Minimal safety levels for airborne asbestos fibers is .2 percent per square centimeter, Wahto said, and air samples taken from the basement of the hotel resulted in levels of .005 percent of asbestos, "which is absolutely nothing, minimal," Wahto said. The basement had the highest level of airborne fibers, Wahto said.

Asbestos in building materials was banned by the federal Environmental Protection Agency in 1978, said Richard Arab, deputy director of the Division of Occupational Safety and Health.

Construction materials made in part with asbestos is common in buildings constructed or remodeled prior to 1978, Arab said.

The Baranof work stoppage was "a precaution you have to take in any of these old buildings," Wahto said. Asbestos is frequently found when doing any renovation or demolition work in older buildings, Wahto said, and materials containing asbestos are either disposed of by following federal guidelines or are "encapsulated" using a sealer "that's indestructible, practically," Wahto said.

RESOLUTION No. 84 - 10:

SUBJECT: ASBESTOS ABATEMENT IN ALASKA SCHOOLS

WHEREAS, friable asbestos, similar to that which was discovered in schools in the Anchorage School District, exists in numerous other schools in school districts throughout the State; and

WHEREAS, an Asbestos Technical Panel, convened in Anchorage by the Anchorage School Board, reviewed thoroughly health hazards associated with asbestos in Anchorage schools; and, as a result, recommended that friable asbestos be removed from Anchorage schools as an unacceptable health hazard[1]; and

WHEREAS, many Alaskan school children in school districts other than Anchorage may be exposed to health hazards from asbestos that are preventable; therefore

BE IT RESOLVED, that the Anchorage Medical Society urges passage of Senate Bills 373 and 374; and

BE IT FURTHER RESOLVED, that the Anchorage Medical Society urges the Governor to form a special task force with representatives of Department of Health and Social Services, Department of Labor, Department of Education, Department of Transportation and Public Facilities, Department of Environmental Conservation, parents of school children, and teachers to implement an asbestos abatement program in all Alaskan schools in accordance with recognized standards for asbestos abatement[2]; and

BE IT FURTHER RESOLVED, that the Anchorage Medical Society urges implementation of an asbestos abatement program which will include the following tasks:

1. Implement and insure completion of a comprehensive survey to identify and categorize asbestos in all Alaskan schools.
2. Evaluate health hazards associated with any asbestos (friable asbestos and asbestos in other forms) discovered in the survey and make recommendations for appropriate medical surveillance of students, teachers and workers exposed to asbestos.
3. Insure notification of teachers, parents, and students of the presence of friable asbestos identified in Alaskan schools in accordance with guidelines established by the EPA.
4. Recommend a plan for removal of friable asbestos, where necessary, and develop appropriate bid specifications and guidelines so that school districts can be assured that asbestos will be removed according to established standards which protect workers, students, parents and teachers during the removal process as well as insure that asbestos is removed totally and is adequately disposed of in approved sites.
5. Increase awareness of the health hazards associated with asbestos and protect against future problems by making sure that asbestos containing materials are not used in new construction.

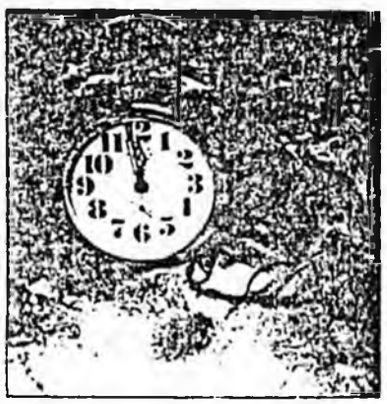
ASBESTOS

The clock is ticking in your schools, and inaction could prove to be devastating



By Kathleen McCormick

ALL TALK AND no action: That's the way the asbestos-in-schools game has been played in the past several years by the federal government and thousands of U.S. school systems. It's time—past time—to respond to the potentially fatal hazards of asbestos in our schools. The ante has been raised in recent months, and from the look of things, school boards that haven't complied yet with federal regulations concerning inspection, notification, and record keeping could be in for a rough time. And even if you *have* made the inspections, posted the required notices, and notified parents and staff of potential health risks in your schools, you still might be the target of a lawsuit should a student or staff member become ill or die because of an asbestos-related disease.

That's not exactly reassuring news, but you can take some steps to meet federal regulations and protect your students and staff. Prudent school leaders would do well to consider carefully some of the recent developments in medical research, federal enforcement, and legal actions. Read on:

The medical risks

As far back as the 1930s, manufacturers of asbestos knew the substance was a killer. But the American public first became aware of the hazard when the Environmental Protection Agency (E.P.A.) banned some uses of sprayed-on asbestos in 1973, after research concluded that thousands of shipyard workers who had handled the substance during World War II were dying (or had died) of asbestos-related diseases. Five years later, an award-winning article in this magazine broke the disconcerting news to school

The asbestos ante has been raised in recent months, and boards that don't respond could be in for trouble

leaders that U.S. schoolchildren faced imminent danger from asbestos. In schools built between 1946 and 1973, tens of thousands of tons of asbestos products were used for fireproofing, soundproofing, and insulating ceilings, walls, pipes, and boilers. As friable (loose or flaking) asbestos materials age, they release tiny particles into the air; if enough particles are inhaled, they can cause cancer and a variety of respiratory ailments. And if these materials get wet (say, from a roof that leaks) or are disturbed (perhaps by maintenance workers who fix electrical wiring in the ceiling), countless particles are dispersed, presenting an even greater health hazard.

What are the risks? Cancer, for starters! The most common form of asbestos-related cancer is lung cancer. Next is mesothelioma, a rare and fatal tumor of the membrane linings in the chest or abdominal cavities; its only known cause is asbestos. Exposure to the deadly mineral filaments released by asbestos also has been proved to cause cancers of the colon, rectum, stomach, esophagus, kidney, larynx, and pharynx. An associated disease is asbestosis, a scarring of the lungs that progressively robs the victim of breath and sometimes of life. The effects of asbestos are pervasive even among people who don't work directly with the stuff: Research has shown that among the immediate families of asbestos workers, 1 percent of the family members died from an asbestos-related cancer, and one-third were afflicted with asbestosis.

The number of airborne asbestos particles in your schools, of course, is considerably smaller than what asbestos workers once were exposed to on a daily basis. But that doesn't reduce the overall risk—nor does it absolve you from the responsibility of dealing with the problem. Dr. Edwin C. Holstein, clinical assistant professor at the Environmental Science Laboratories of Mount Sinai School of Medicine in New York, explains: "All scientific evidence suggests there is no safe dose of asbestos. Any exposure, no matter how small, will increase the risk of cancer." Dr. Holstein and his colleagues at Mt. Sinai, the preeminent U.S. institution for medical research on asbestos, have concluded the substance is a public health problem that must be remedied as soon as possible.

"For any one person, the risk is low," says Dr. Holstein. "But for a school system, sheer numbers tell you that you have a problem. It's like the half-full/half-empty glass of water," he notes. "The optimists say the health risks of asbestos are tiny; the pessimists—including public health authorities—know some people are going to die from exposure to asbestos."

Kathleen McCormick is assistant editor of the JOURNAL.

OPINIONS EXPRESSED BY THE JOURNAL OR ANY OF ITS AUTHORS DO NOT NECESSARILY REFLECT POSITIONS OF THE NATIONAL SCHOOL BOARDS ASSOCIATION

And they'd like to see schools help prevent those deaths—no matter how few—by removing the risk.

It could be many years before we're able to draw conclusions on the effects of asbestos exposure in schools. The risks vary, of course, depending on individual people, the condition and location of asbestos materials in school buildings, and the amount and duration of exposure. The appalling truth, according to Dr. Holstein: "It's false reassurance if no one is sick [now], because they might be sick by 1990 and dead by 1992." But despite the tendency for people to personalize this kind of highly emotional, life-and-death issue, he says, school board members and administrators should assure concerned parents that "there's no need to get hysterical; it's a problem that can be remedied."

The remedy

At the very least, you already should have complied with all federal regulations pertaining to asbestos in schools. Three sets of regulations have been issued. First, Department of Education (ED) regulations specify *how* states must distribute information on asbestos to schools, according to the Asbestos School Hazard Detection and Control Act of 1980. Second, Occupational Safety and Health Administration regulations detail procedures for the protection and decontamination of asbestos abatement workers and for measuring airborne asbestos. Schools engaged in containing and removing the friable fibers must comply with these procedures. Third—and more to the point—are the E.P.A. regulations: As of June 1983, you're responsible for having met the requirements of Section 6(a) of the Toxic Substances Control Act (T.S.C.A.), which were specified in "Friable Asbestos-Containing Materials in Schools; Identification and Notification Rule" (47 *Federal Register* 23360, May 27, 1982).

E.P.A. issued this rule because its Technical Assistance Program (TAP), launched in 1978, had limited success in getting schools to comply voluntarily with previous E.P.A. inspection and record-keeping guidelines. The T.S.C.A. rule applies to all elementary and secondary schools, except those built after December 31, 1978, and those that can document they already have checked buildings and either found no friable asbestos or satisfactorily dealt with the material. Schools were given one year to comply with the requirements.

(1) *Inspection.* You must inspect each building for friable materials.

(2) *Sampling.* If you find friable materials, you must take samples, following E.P.A. instructions.

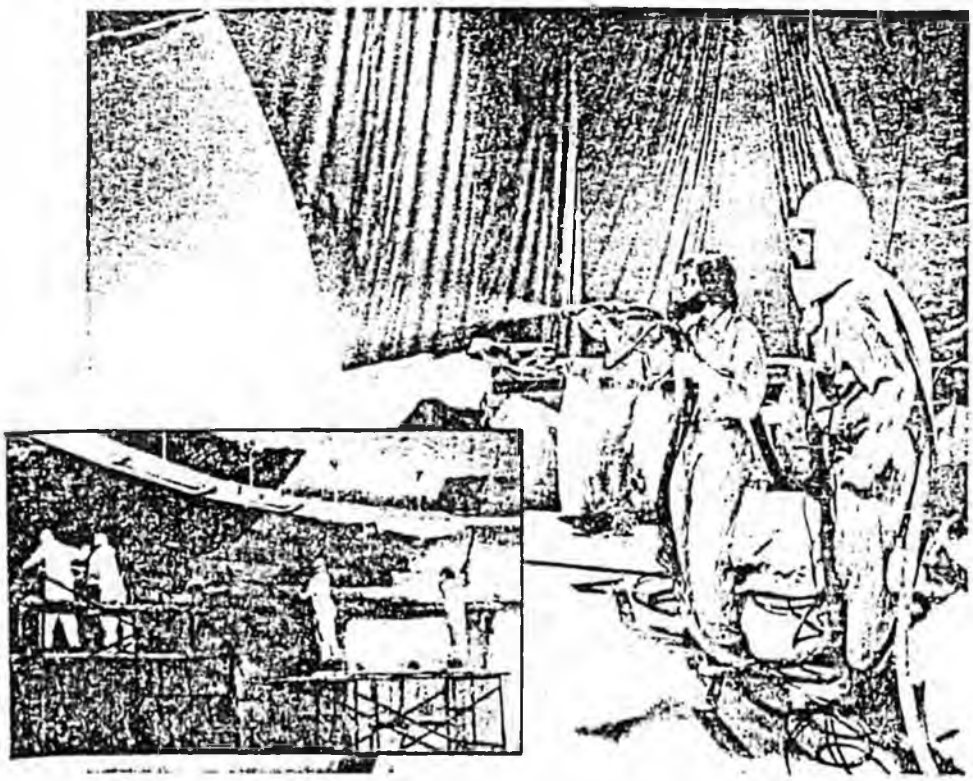
(3) *Analysis.* A qualified laboratory must perform an analysis using polarized light microscopy, a sophisticated (and expensive) technique for measuring the amount of asbestos fibers in asbestos-containing materials.

(4) *Warnings and notifications.* You must post warning signs wherever you find friable asbestos-containing materials in schools—and send written notification to the staff and the P.T.O. of each school involved, specifying where the hazardous materials are located.

Note that the T.S.C.A. rule does *not* require you to remove, cover, or encapsulate the asbestos; it's up to individual school systems to decide how to dispense with the offending material. The rule also doesn't require you to report your findings to E.P.A., although you *do* need to keep complete and detailed records documenting your compliance with the T.S.C.A. rule.

Once you've found asbestos in your schools, you have a choice of four acceptable ways to resolve the problem: (1) removing the material altogether; (2) enclosing the areas containing asbestos to prevent fibers from escaping; (3) encapsulating completely the area that contains or is coated with asbestos; and (4) observing and maintaining the affected surfaces to avoid any damage that could cause the release of more fibers. Experts say removal is the only surefire way to rid your schools finally and completely of asbestos hazards. But the removal process itself is an extremely dangerous undertaking; a faulty or incomplete removal job could present even greater health hazards to your students and staff, as well as to asbestos abatement workers. So before you contract for any asbestos containment or removal work, refer to the technical advice presented in the E.P.A. document, "Guidance for Controlling Friable Asbestos-Containing Materials in Buildings," published in March 1983. And even though other measures might work in some schools, many school systems have found that public pressure is brought to bear on the school board to remove asbestos completely—regardless of expense.

The cost



E.P.A. estimates that as many as 14,000 U.S. schools might contain dangerous friable material composed of more than 1 percent asbestos—which means more than 3 million students and 250,000 staff members are at risk right now. The agency estimates the total cost of asbestos abatement at $1.4 billion nationwide, or $100,000 per school building. Some school systems already have spent millions. According to Dwight Brown, formerly asbestos coordinator for E.P.A. Region IV in Atlanta, schools can expect to pay between $3 and $10 per square foot for asbestos removal—and the price can go as high as $28 per square foot. What drives the cost so high is the need for sophisticated analysis equipment and clothing to protect workers, Brown explains. Analysis of asbestos samples using an electron microscope goes for between $200 and $500 per sample—and you might need scores of samples to determine the hazard level in only one school.

Without a doubt, asbestos is a financial burden for school systems. At President Reagan's behest, Congress repeatedly has refused to provide funds to accompany the federal regulations it requires schools to obey. Part of the Asbestos School Hazard Detection and Control Act of 1980, for example, called for $700 million in grants and interest-free loans to help state and local education agencies identify and correct asbestos hazards in schools; no appropriations were made. Don't count on E.P.A. for changes in the funding situation, either: Officials there say they have no plans to request or provide money for school systems to deal with asbestos problems.

School systems in several states are fortunate to be reimbursed for expenses they incur in removing asbestos. In the past four years, for example, New York has given more than $12 million in grants and state building aid to help local asbestos removal programs. And in the same period, Florida has appropriated $10.5 million for asbestos removal. These are notable exceptions, however. Most school leaders have to dig into general operating budgets to come up with the funds. Such cost considerations, along with federal regulations that are at once technical and vague, have caused many school leaders to avoid the issue of asbestos altogether. But ducking the issue can only bring harm to your schools.

The consequences

Forewarned is forearmed: E.P.A. is stepping up its monitoring of schools' compliance. Although the agency has no conclusive statistics, E.P.A. officials say the rate of noncompliance by schools is high. Proferred proof: An E.P.A. staff

Space-age procedures are needed to eliminate asbestos from schools. Here, abatement workers wet down and remove the substance from a school gymnasium.

memorandum in August 1983 indicated that 80 percent of a sample of 167 schools were in violation of the E.P.A. inspection rule. And, according to E.P.A.'s compliance monitoring office, inspections conducted in 275 school systems since June 1983 show that 190—nearly 70 percent—had not complied with E.P.A. regulations on obtaining asbestos samples, notifying parents, keeping records, and so forth. The 275 school systems inspected include approximately 80 of the 100 largest school systems in the U.S.

Now something is being done about that kind of slackness: In fact, E.P.A. inspectors could come knocking on your door any day, asking to see your records. You could be cited for violations of T.S.C.A. on these grounds: failure to inspect schools; failure to sample friable materials; failure to analyze asbestos samples; failure to notify parents and staff; and failure to keep records.

Depending on the number and type of violations, your schools could be fined as much as *$25,000 per day per violation*—an amount that quickly could snowball into an outrageous sum. Here's how the fine system works: If E.P.A. finds you haven't complied with T.S.C.A., your central office will be given 30 days to certify compliance in writing. If certification isn't received within 30 days, E.P.A. files a civil complaint against your schools. Agency officials then will ask to see a compliance schedule as a demonstration of your good intentions. If these negotiations fail—if you don't cooperate—E.P.A. will attempt to collect the fines it has levied against your schools.

If you think the E.P.A. is making idle threats, think again: Under the direction of old/new Director William Ruckleshaus, E.P.A. has become more vigilant and is going after asbestos in schools as one of its Top Ten priority items. E.P.A.'s design in these aggressive actions is to force schools into compliance through pressure from the community, according to Connie DeRocco, a specialist in E.P.A.'s asbestos enforcement program. It stands to reason that school board members and administrators would tend to choose compliance over the chance that a concerned parent might blow the whistle on the schools' negligence.

Other signs that E.P.A. means business: The agency is doubling its monitoring staff for fiscal year 1985. And then there's the Philadelphia case: E.P.A. has threatened to set a precedent by filing a civil complaint for noncompliance against the Philadelphia schools, to the tune of $378,000 in fines ($6,000 for each of 63 nursery and day care centers housed in buildings leased by the school system that weren't inspected for asbestos). School officials are trying to head off the complaint by inspecting the buildings; E.P.A. officials say they are willing to negotiate as long as the Philadelphia schools can show they mean to comply fully with E.P.A. regulations.

But public pressure also is mounting on E.P.A. itself to issue more stringent and specific regulations on asbestos in schools. In response to a petition filed last November by the Service Employees International Union—prompted by the asbestos-related death of a school custodian—E.P.A.'s Ruckleshaus announced in late February that the agency will set formal standards for schools to remove or seal crumbling asbestos materials.

The legal ramifications

Before you make any decisions about asbestos in your schools, consult your school attorney. Advice from Dwight Brown, who has conducted seminars on asbestos in schools for the past five years: Devise a three-part legal action plan with your attorney concerning cost recovery, tort claim defense, and the process of administering contracts for removing and disposing of asbestos.

One legal question on everyone's mind: Can you recover costs of removing asbestos from the manufacturers of the material? "The Attorney General's Asbestos Liability Report to the Congress," published in September 1981, says schools should have a good chance of recovery in court. The bankruptcy last year of a major asbestos producer, Johns Manville Co., cast a pallor over what some school attorneys had held were excellent chances to recover costs. But in February, Lexington County School District No. 5 in South Carolina brought suit against U.S. Gypsum Co. to recover approximately $300,000—the cost of removing asbestos from Irmo High School. (The potentially precedent-setting case was about to come to trial as the JOURNAL went to press.) The school system is being represented by Daniel A. Speights of Hampton S.C. Speights anticipates having filed as many as 30 asbestos-related lawsuits against U.S. Gypsum Co., National Gypsum Co., and W.R. Grace & Co. by July on behalf of school systems in Florida, Alabama, Mississippi, New Hampshire, and other states. He says these cases stand a "good chance" of winning. The Lexington suit, too, could open the floodgates for thousands of lawsuits against asbestos manufacturers.

Other legal issues you should be aware

(2) Requiring the owner or operator of a stationary source, other than a stationary source owned or operated by the United States, to obtain permits, licenses, or approvals prior to initiating construction, modification, or operation of such source.

[Sec. 116, Clean Air Act as amended (42 U.S.C. 7416)]

[38 FR 8826, Apr. 6, 1973, as amended at 43 FR 8800, Mar. 3, 1978]

61.17 Circumvention.

No owner or operator subject to the provisions of this part shall build, erect, install, or use any article machine, equipment, process, or method, the use of which conceals an emission which would otherwise constitute a violation of an applicable standard. Such concealment includes, but is not limited to, the use of gaseous diluents to achieve compliance with a visible emissions standard, and the piecemeal carrying out of an operation to avoid coverage by a standard that applies only to operations larger than a specified size.

[40 FR 48299, Oct. 14, 1975]

Subpart B—National Emission Standard for Asbestos

61.20 Applicability.

The provisions of this subpart are applicable to those sources specified in 61.22.

61.21 Definitions.

Terms used in this subpart are defined in the act, in Subpart A of this part, or in this section as follows:

(a) "Asbestos" means actinolite, asbestite, anthophyllite, chrysotile, crocidolite, tremolite.

(b) "Asbestos material" means asbestos or any material containing asbestos.

(c) "Particulate asbestos material" means finely divided particles of asbestos material.

(d) "Asbestos tailings" means any solid waste product of asbestos mining or milling operations which contains asbestos.

(e) "Outside air" means the air outdoors.

(f) "Visible emissions" means any emissions which are visually detectable without the aid of instruments and which contain particulate asbestos material.

(g) "Asbestos mill" means any facility engaged in the conversion of any intermediate step in the conversion of asbestos or into commercial asbestos. Outside storage of asbestos materials is not considered a part of such facility.

(h) "Commercial asbestos" means any variety of asbestos which is produced by extracting asbestos from asbestos ore.

(i) "Manufacturing" means the combining of commercial asbestos, or in the case of woven friction products the combining of textiles containing commercial asbestos, with any other material(s), including commercial asbestos, and the processing of this combination into a product as specified in § 61.22(c).

(j) "Demolition" means the wrecking or taking out of any load-supporting structural member and any related removing or stripping of friable asbestos materials.

(k) "Friable asbestos material" means any material that contains more than 1 percent asbestos by weight and that can be crumbled, pulverized, or reduced to powder, when dry, by hand pressure.

(l) "Control device asbestos waste" means any asbestos-containing waste material that is collected in a pollution control device.

(m) "Renovation" means the removing or stripping of friable asbestos material used on any pipe, duct, boiler, tank, reactor, turbine, furnace, or structural member. Operations in which load-supporting structural members are wrecked or taken out are excluded.

(n) "Planned renovation" means a renovation operation, or a number of such operations, in which the amount of friable asbestos material that will be removed or stripped within a given period of time can be predicted. Operations that are individually non-scheduled are included, provided a number of such operations can be predicted to occur during a given period of time

(o) "Emergency renovation" means a renovation operation that results from a sudden, unexpected event, and is not a planned renovation. Operations necessitated by non-routine failures of equipment are included.

(p) "Adequately wetted" means sufficiently mixed or coated with water or an aqueous solution to prevent dust emissions.

(q) "Removing" means taking out friable asbestos materials used on any pipe, duct, boiler, tank, reactor, turbine, furnace, or structural member from any building, structure, facility, or installation.

(r) "Stripping" means taking off friable asbestos materials from any pipe, duct, boiler, tank, reactor, turbine, furnace, or structural member.

(s) "Fabricating" means any processing of a manufactured product containing commercial asbestos, with the exception of processing at temporary sites for the construction or restoration of buildings, structures, facilities or installations.

(t) "Inactive waste disposal site" means any disposal site or portion thereof where additional asbestos-containing waste material will not be deposited and where the surface is not disturbed by vehicular traffic.

(u) "Active waste disposal site" means any disposal site other than an inactive site.

(v) "Roadways" means surfaces on which motor vehicles travel including, but not limited to, highways, roads, streets, parking areas, and driveways.

(w) "Asbestos-containing waste material" means any waste which contains commercial asbestos and is generated by a source subject to the provisions of this subpart, including asbestos mill tailings, control device asbestos waste, friable asbestos waste material, and bags or containers that previously contained commercial asbestos.

(x) "Structural member" means any load-supporting member, such as beams and load supporting walls; or any non-load-supporting member, such as ceilings and non-load-supporting walls.

[38 FR 8826, Apr. 6, 1973, as amended at 39 FR 15398, May 3, 1974; 40 FR 48299, Oct. 14, 1975; 42 FR [illegible]]

§ 61.22 Emission standard.

(a) Asbestos mills: There shall be no visible emissions to the outside air from any asbestos mill except as provided in paragraph (f) of this section.

(b) Roadways: The surfacing of roadways with asbestos tailings or with asbestos-containing waste that is generated by any source subject to paragraphs (c), (d), (e) or (h) of this section is prohibited, except for temporary roadways on an area of asbestos ore deposits. The deposition of asbestos tailings or asbestos-containing waste on roadways covered with snow or ice is considered "surfacing."

(c) Manufacturing: There shall be no visible emissions to the outside air, except as provided in paragraph (f) of this section, from any of the following operations if they use commercial asbestos or from any building or structure in which such operations are conducted.

(1) The manufacture of cloth, cord, wicks, tubing, tape, twine, rope, thread, yarn, roving, lap, or other textile materials.

(2) The manufacture of cement products.

(3) The manufacture of fireproofing and insulating materials.

(4) The manufacture of friction products.

(5) The manufacture of paper, millboard, and felt.

(6) The manufacture of floor tile.

(7) The manufacture of paints, coatings, caulks, adhesives, sealants.

(8) The manufacture of plastics and rubber materials.

(9) The manufacture of chlorine.

(10) The manufacture of shotgun shells.

(11) The manufacture of asphalt concrete.

(d) Demolition and renovation: The requirements of this paragraph shall apply to any owner or operator of a demolition or renovation operation who intends to demolish any institutional, commercial, or industrial building (including apartment buildings having more than four dwelling units), structure, facility, installation, or portion thereof, which contains any pipe,

(i) or coated with friable asbestos material, except as provided in paragraph (d)(1) of this section; or who intends to renovate any institutional, commercial, or industrial building, structure, facility, installation, or portion thereof where more than 60 meters (ca. 260 feet) of pipe covered or coated with friable asbestos material is stripped or removed, or more than 15 square meters (ca. 160 square feet) of friable asbestos material used to cover or coat any duct, boiler, tank, reactor, turbine, furnace, or structural member are stripped or removed.

(ii) The owner or operator of a demolition operation is exempted from the requirements of this paragraph: *Provided*, (A) the amount of friable asbestos material in the building or portion thereof to be demolished is less than 80 meters (ca. 260 feet) used to insulate pipes, and less than 15 square meters (ca. 160 square feet) used to insulate or fireproof any duct, boiler, tank, reactor, turbine, furnace, or structural member, and (B) the notification requirements of paragraph (d)(2)(ii) are met.

(2)(i) Written notification shall be postmarked or delivered to the Administrator at least 20 days prior to commencement of demolition and shall include the information required by paragraph (d)(2) of this section, with the exception of the information required by paragraphs (d)(2)(iii), (vi), (vii), (viii), and (ix), and shall state the measured or estimated amount of friable asbestos materials which is present. Techniques of estimation shall be explained.

(ii) Written notice of intention to demolish or renovate shall be provided to the Administrator by the owner or operator of the demolition or renovation operation. Such notice shall be postmarked or delivered to the Administrator at least 10 days prior to commencement of demolition, or as early as possible prior to commencement of emergency demolition subject to paragraph (d)(6) of this section, and as early as possible prior to commencement of renovation. Such notice shall include the following information:

(A) Name of owner or operator.

(B) Description of the building, structure, facility, or installation to be demolished or renovated, including the size, age, and prior use of the structure, and the approximate amount of friable asbestos materials present.

(C) Address or location of the building, structure, facility, or installation.

(D) Scheduled starting and completion dates of demolition or renovation.

(E) Nature of planned demolition or renovation and method(s) to be employed.

(F) Procedures to be employed to meet the requirements of this paragraph and paragraph (j) of this section.

(G) The name and address or location of the waste disposal site where the friable asbestos waste will be deposited.

(H) Name, title, and authority of the State or local governmental representative who has ordered a demolition which is subject to paragraph (d)(6) of this section.

(3)(i) For purposes of determining whether a planned renovating operation constitutes a renovation within the meaning of this paragraph, the amount of friable asbestos material to be removed or stripped shall be:

(A) For planned renovating operations involving individually nonscheduled operations, the additive amount of friable asbestos material that can be predicted will be removed or stripped at a source over the maximum period of time for which a prediction can be made. The period shall be not less than 30 days and not longer than one year.

(B) For each planned renovating operation not covered by paragraph (d)(3)(i)(A), the total amount of friable asbestos material that can be predicted will be removed or stripped at a source.

(ii) For purposes of determining whether an emergency renovating operation constitutes a renovation within the meaning of this paragraph, the amount of friable asbestos material to be removed or stripped shall be the total amount of friable asbestos material that will be removed or stripped as

event that necessitated the renovation.

(4) The following procedures shall be used to prevent emissions of particulate asbestos material to outside air:

(i) Friable asbestos materials, used on any pipe, duct, boiler, tank, reactor, turbine, furnace, or structural member, shall be removed from any building, structure, facility or installation subject to this paragraph. Such removal shall occur before wrecking or dismantling of any portion of such building, structure, facility, or installation that would break up the friable asbestos materials and before wrecking or dismantling of any other portion of such building, structure, facility, or installation that would preclude access to such materials for subsequent removal. Removal of friable asbestos materials used on any pipe, duct, or structural member which are encased in concrete or other similar structural material is not required prior to demolition, but such material shall be adequately wetted whenever exposed during demolition.

(ii) Friable asbestos materials used on pipes, ducts, boilers, tanks, reactors, turbines, furnaces, or structural members shall be adequately wetted during stripping, except as provided in paragraphs (d)(4)(iv), (d)(4)(vi) or (d)(4)(vii) of this section.

(iii) Pipes, ducts, boilers, tanks, reactors, turbines, furnaces, or structural members that are covered or coated with friable asbestos materials may be taken out of any building, structure, facility, or installation subject to this paragraph as units or in sections provided the friable asbestos materials exposed during cutting or disjointing are adequately wetted during the cutting or disjointing operation. Such units shall not be dropped or thrown to the ground, but shall be carefully lowered to ground level.

(iv) The stripping of friable asbestos materials used on any pipe, duct, boiler, tank, reactor, turbine, furnace, or structural member that has been removed as a unit or in sections as provided in paragraph (d)(4)(iii) of this section shall be performed in accordance with paragraph (d)(4)(ii) of this section. Rather than comply with the wetting

ventilation and collection system may be used to prevent emissions to the outside air. Such local exhaust ventilation systems shall be designed and operated to capture the asbestos particulate matter produced by the stripping of friable asbestos material. There shall be no visible emissions to the outside air from such local exhaust ventilation and collection systems except as provided in paragraph (f) of this section.

(v) All friable asbestos materials that have been removed or stripped shall be adequately wetted to ensure that such materials remain wet during all remaining stages of demolition or renovation and related handling operations. Such materials shall not be dropped or thrown to the ground or a lower floor. Such materials that have been removed or stripped more than 50 feet above ground level, except those materials removed as units or in sections, shall be transported to the ground via dust-tight chutes or containers.

(vi) Except as specified below, the wetting requirements of this paragraph are suspended when the temperature at the point of wetting is below 0°C (32°F). When friable asbestos materials are not wetted due to freezing temperatures, such materials on pipes, ducts, boilers, tanks, reactors, turbines, furnaces, or structural members shall, to the maximum extent possible, be removed as units or in sections prior to wrecking. In no case shall the requirements of paragraphs (d)(4)(iv) or (d)(4)(v) be suspended due to freezing temperatures.

(vii) For renovation operations, local exhaust ventilation and collection systems may be used, instead of wetting as specified in paragraph (d)(4)(ii), to prevent emissions of particulate asbestos material to outside air when damage to equipment resulting from the wetting would be unavoidable. Upon request and supply of adequate information, the Administrator will determine whether damage to equipment resulting from wetting to comply with the provisions of this paragraph would be unavoidable. Such local exhaust ventilation systems shall be designed and operated to capture the as-

stripping and removal of friable bestos material. There shall be no ible emissions to the outside air m such local exhaust ventilation d collection systems, except as pro- d in paragraph (f) of this section.

5) Sources subject to this paragraph exempt from the requirements of 61.05(a), 61.07, and 61.09.

6) The demolition of a building, ucture, facility, or installation, pur- nt to an order of an authorized rep- entative of a State or local govern- ntal agency, issued because that ilding is structurally unsound and in ger of imminent collapse is exempt m all but the following require- nts of paragraph (d) of this section:

i) The notification requirements cified by paragraph (d)(2) of this ction;

ii) The requirements on stripping of able asbestos materials from previ- ly removed units or sections as cified in paragraph (d)(4)(iv) of is section;

iii) The wetting, as specified by ragraph (d)(4)(v) of this section, of able asbestos materials that have n removed or stripped;

iv) The portion of the structure ng demolished that contains friable bestos materials shall be adequately tted during the wrecking operation.

c) Spraying: There shall be no visi- emissions to the outside air from e spray-on application of materials ntaining more than 1 percent asbes- s, on a dry weight basis, used on uipment and machinery, except as ovided in paragraph (f) of this sec- n. Materials sprayed on buildings, uctures, pipes, and conduits shall ntain less than 1 percent asbestos on y weight basis.

1) Sources subject to this paragraph exempt from the requirements of 61.05(a), § 61.07, and § 61.09.

2) Any owner or operator who in- nds to spray asbestos materials ich contain more than 1 percent as- stos on a dry weight basis to insu- e or fireproof equipment and ma- inery shall report such intention to e Administrator at least 20 days ior to the commencement of the raying operation. Such report shall clude the following information:

(i) Amount of asbestos material.

(ii) Address of owner or operator.

(iii) Location of spraying operation.

(iv) Procedures to be followed to meet the requirements of this paragraph.

(3) The spray-on application of materials in which the asbestos fibers are encapsulated with a bituminous or resinous binder during spraying and which are not friable after drying is exempted from the requirements of paragraphs (e) and (e)(2) of this section.

(f) Rather than meet the no-visible-emission requirements as specified by paragraphs (a), (c), (d), (e), (h), (j), and (k) of this section, an owner or operator may elect to use the methods specified by § 61.23 to clean emissions containing particulate asbestos material before such emissions escape to, or are vented to, the outside air.

(g) Where the presence of uncombined water is the sole reason for failure to meet the no-visible-emission requirement of paragraphs (a), (c), (d), (e), (h), (j), or (k) of this section, such failure shall not be a violation of such emission requirements.

(h) Fabricating: There shall be no visible emissions to the outside air, except as provided in paragraph (f) of this section, from any of the following operations if they use commercial asbestos or from any building or structure in which such operations are conducted.

(1) The fabrication of cement building products.

(2) The fabrication of friction products, except those operations that primarily install asbestos friction materials on motor vehicles.

(3) The fabrication of cement or silicate board for ventilation hoods; ovens; electrical panels; laboratory furniture; bulkheads, partitions and ceilings for marine construction; and flow control devices for the molten metal industry.

(i) Insulating: Molded insulating materials which are friable and wet-applied insulating materials which are friable after drying, installed after the effective date of these regulations, shall contain no commercial asbestos. The provisions of this paragraph do not apply to [illegible] materials which are spray applied; such materials are regulated under § 61.22(e).

(j) Waste disposal for manufacturing, fabricating, demolition, renovation and spraying operations: The owner or operator of any source covered under the provisions of paragraphs (c), (d), (e), or (h) of this section shall meet the following standards:

(1) There shall be no visible emissions to the outside air, except as provided in paragraph (j)(3) of this section, during the collection; processing, including incineration; packaging; transporting; or deposition of any asbestos-containing waste material which is generated by such source.

(2) All asbestos-containing waste material shall be deposited at waste disposal sites which are operated in accordance with the provisions of § 61.25.

(3) Rather than meet the requirement of paragraph (j)(1) of this section, an owner or operator may elect to use either of the disposal methods specified under (j)(3) (i) and (ii) of this section, or an alternative disposal method which has received prior approval by the Administrator:

(i) Treatment of asbestos-containing waste material with water:

(A) Control device asbestos waste shall be thoroughly mixed with water into a slurry and other asbestos-containing waste material shall be adequately wetted. There shall be no visible emissions to the outside air from the collection, mixing and wetting operations, except as provided in paragraph (f) of this section.

(B) After wetting, all asbestos-containing waste material shall be sealed into leak-tight containers while wet, and such containers shall be deposited at waste disposal sites which are operated in accordance with the provisions of § 61.25.

(C) The containers specified under paragraph (j)(3)(i)(B) of this section shall be labeled with a warning label that states:

CAUTION

Contains Asbestos

Avoid Opening or

Breaking Container

Breathing Asbestos is Hazardous

to Your Health

Alternatively, warning labels specified by Occupational Safety and Health Standards of the Department of Labor, Occupational Safety and Health Administration (OSHA) under 29 CFR 1910.93a(g)(2)(ii) may be used.

(ii) Processing of asbestos-containing waste material into non-friable forms:

(A) All asbestos-containing waste material shall be formed into non-friable pellets or other shapes and deposited at waste disposal sites which are operated in accordance with the provisions of § 61.25.

(B) There shall be no visible emissions to the outside air from the collection and processing of asbestos-containing waste material, except as specified in paragraph (f) of this section.

(4) For the purposes of this paragraph (j), the term all asbestos-containing waste material as applied to demolition and renovation operations covered by paragraph (d) of this section includes only friable asbestos waste and control device asbestos waste.

(k) Waste disposal for asbestos mills: The owner or operator of any source covered under the provisions of paragraph (a) of this section shall meet the following standard:

(1) There shall be no visible emissions to the outside air, except as provided in paragraph (k)(3) of this section, during the collection, processing, packaging, transporting or deposition of any asbestos-containing waste material which is generated by such source.

(2) All asbestos-containing waste material shall be deposited at waste disposal sites which are operated in accordance with the provisions of § 61.25.

(3) Rather than meet the requirement of paragraph (k)(1) of this section, an owner or operator may elect to meet the following requirements in paragraphs [illegible]

ceived prior approval by the Administrator:

(i) There shall be no visible emissions to the outside air from the transfer of control device asbestos waste to the tailings conveyor, except as provided in paragraph (f) of this section. Such waste shall be subsequently processed either as specified in paragraph (k)(3)(ii) of this section or as specified in paragraph (j)(3) of this section.

(ii) All asbestos-containing waste material shall be adequately mixed, with a wetting agent recommended by the manufacturer of the agent to effectively wet dust and tailings, prior to disposition at a waste disposal site. Such agent shall be used as recommended for the particular dust by the manufacturer of the agent. There shall be no discharge of visible emissions to the outside air from the wetting operation except as specified in paragraph (f) of this section. Wetting may be suspended when the ambient temperature at the waste disposal site is less than −9.5° C (ca. 15° F). The ambient air temperature shall be determined by an appropriate measurement method with an accuracy of ±1° C (±2° F) and recorded at least at hourly intervals during the period that the operation of the wetting system is suspended. Records of such temperature measurements shall be retained at the source for a minimum of 2 years and made available for inspection by the Administrator.

(j) The owner of any inactive waste disposal site, which was operated by sources covered under § 61.22(a), (c) or (e) and where asbestos-containing waste material produced by such sources was deposited, shall meet the following standards:

(1) There shall be no visible emissions to the outside air from an inactive waste disposal site subject to this paragraph, except as provided in paragraph (j)(5) of this section.

(2) Warning signs shall be displayed at all entrances, and along the property line of the site or along the perimeter of the sections of the site where asbestos-containing waste material was deposited, at intervals of 100 m (ca. 330 ft) or less, except as specified in paragraph (j)(4) of this section. The signs shall be posted in such a manner and location that a person may easily read the legend. The warning signs required by this paragraph shall conform to the requirements of 20" x 14" upright format signs specified in 29 CFR 1910.145(d)(4) and this paragraph. The signs shall display the following legend in the lower panel, with letter sizes and styles of a visibility at least equal to those specified in this paragraph.

LEGEND

ASBESTOS WASTE DISPOSAL SITE

DO NOT CREATE DUST

Breathing Asbestos is Hazardous to Your Health

Notation

1" Sans Serif, Gothic or Block

¼" Sans Serif, Gothic or Block

14 Point Gothic

Spacing between lines shall be at least equal to the height of the upper of the two lines.

(3) The perimeter of the site shall be fenced in a manner adequate to deter access by the general public, except as specified in paragraph (j)(4) of this section.

(4) Warning signs and fencing are not required where the requirements of paragraphs (j)(5) (i) or (ii) of this section are met, or where a natural barrier adequately deters access by the general public. Upon request and supply of appropriate information, the Administrator will determine whether a fence or a natural barrier adequately deters access to the general public.

(5) Rather than meet the requirement of paragraph (j)(1) of this section, an owner may elect to meet the requirements of this paragraph or may use an alternative control method for emissions from inactive waste disposal sites which has received prior approval by the Administrator.

(i) The asbestos-containing waste material shall be covered with at least 15 centimeters (ca. 6 inches) of compacted non-asbestos-containing material, and a cover of vegetation shall be

adequate to prevent exposure of the asbestos-containing waste material; or

(ii) The asbestos-containing waste material shall be covered with at least 60 centimeters (ca. 2 feet) of compacted non-asbestos-containing material and maintained to prevent exposure of the asbestos-containing waste; or

(iii) For inactive waste disposal sites for asbestos tailings, a resinous or petroleum-based dust suppression agent which effectively binds dust and controls wind erosion shall be applied. Such agent shall be used as recommended for the particular asbestos tailings by the dust suppression agent manufacturer. Other equally effective dust suppression agents may be used upon prior approval by the Administrator. For purposes of this paragraph, waste crankcase oil is not considered a dust suppression agent.

[38 FR 8826, Apr. 6, 1973, as amended at 39 FR 15398, May 3, 1974; 40 FR 48299, Oct. 14, 1975; 43 FR 26374, June 19, 1978]

§ 61.23 Air-cleaning.

If air-cleaning is elected, as permitted by §§ 61.22(f) and 61.22(d)(4)(iv), the requirements of this section must be met.

(a) Fabric filter collection devices must be used, except as noted in paragraphs (b) and (c) of this section. Such devices must be operated at a pressure drop of no more than 4 inches water gage, as measured across the filter fabric. The airflow permeability, as determined by ASTM method D737-69, must not exceed 30 $ft^3/min/ft^2$ for woven fabrics or 35 $ft^3/min/ft^2$ for felted fabrics, except that 40 $ft^3/min/ft^2$ for woven and 45 $ft^3/min/ft^2$ for felted fabrics is allowed for filtering air from asbestos ore dryers. Each square yard of felted fabric must weigh at least 14 ounces and be at least one-sixteenth inch thick throughout. Synthetic fabrics must not contain fill yarn other than that which is spun.

(b) If the use of fabric filters creates a fire or explosion hazard, the administrator may authorize the use of wet collectors designed to operate with a unit contacting energy of at least 40 inches water gage pressure.

(c) The administrator may authorize than that described in paragraphs (a) and (b) of this section if the owner or operator demonstrates to the satisfaction of the administrator that the filtering of particulate asbestos material is equivalent to that of the described equipment.

(d) All air-cleaning equipment authorized by this section must be properly installed, used, operated, and maintained. Bypass devices may be used only during upset or emergency conditions and then only for so long as it takes to shut down the operation generating the particulate asbestos material.

[38 FR 8826, Apr. 6, 1973, as amended at 40 FR 48302, Oct. 14, 1975]

§ 61.24 Reporting.

The owner or operator of any existing source to which this subpart is applicable shall, within 90 days after the effective date, provide the following information to the administrator:

(a) A description of the emission control equipment used for each process;

(b) If a fabric filter device is used to control emissions, the pressure drop across the fabric filter in inches water gage.

(1) If the fabric filter device utilizes a woven fabric, the airflow permeability in $ft^3/min/ft^2$ and, if the fabric is synthetic, indicate whether the fill yarn is spun or not spun.

(2) If the fabric filter device utilizes a felted fabric, the density in oz/yd^2, the minimum thickness in inches, and the airflow permeability in $ft^3/min/ft^2$.

(c) For sources subject to §§ 61.22(j) and 61.22(k):

(1) A brief description of each process that generates asbestos-containing waste material.

(2) The average weight of asbestos-containing waste material disposed of, measured in kg/day.

(3) The emission control methods used in all stages of waste disposal.

(4) The type of disposal site or incineration site used for ultimate disposal, the name of the site operator, and the name and location of the disposal site.

(d) For sources subject to § 61.22(k)

(2) The method or methods used to comply with the standard, or alternative procedures to be used.

(c) Such information shall accompany the information required by § 61.10. The information described in this section shall be reported using the format of Appendix A of this part.

[Sec. 114, Clean Air Act as amended (42 U.S.C. 7414)]

[38 FR 8826, Apr. 6, 1973, as amended at 40 FR 48302, Oct. 14, 1975; 43 FR 8800, Mar. 3, 1978]

§ 61.25 Waste disposal sites.

In order to be an acceptable site for disposal of asbestos-containing waste material under § 61.22(j) and (k), an active waste disposal site shall meet the requirements of this section.

(a) There shall be no visible emissions to the outside air from any active waste disposal site where asbestos-containing waste material has been deposited, except as provided in paragraph (e) of this section.

(b) Warning signs shall be displayed at all entrances, and along the property line of the site or along the perimeter of the sections of the site where asbestos-containing waste material is deposited, at intervals of 100 m (ca. 330 ft) or less except as specified in paragraph (d) of this section. Signs shall be posted in such a manner and location that a person may easily read the legend. The warning signs required by this paragraph shall conform to the requirements of 20" × 14" upright format signs specified in 29 CFR 1910.145(d)(4) and this paragraph. The signs shall display the following legend in the lower panel, with letter sizes and styles of a visibility at least equal to those specified in this paragraph.

LEGEND

ASBESTOS WASTE DISPOSAL SITE

Do Not Create Dust

Breathing Asbestos is Hazardous to Your Health

Notation

1" Sans Serif, Gothic or Block

½" Sans Serif, Gothic or Block

14 Point Gothic

Spacing between lines shall be at least equal to the height of the upper of the two lines.

(c) The perimeter of the disposal site shall be fenced in order to adequately deter access to the general public except as specified in paragraph (d) of this section.

(d) Warning signs and fencing are not required where the requirements of paragraph (e)(1) of this section are met, or where a natural barrier adequately deters access to the general public. Upon request and supply of appropriate information, the Administrator will determine whether a fence or a natural barrier adequately deters access to the general public.

(e) Rather than meet the requirement of paragraph (a) of this section, an owner or operator may elect to meet the requirements of paragraph (e)(1) or (e)(2) of this section, or may use an alternative control method for emissions from active waste disposal sites which has received prior approval by the Administrator.

(1) At the end of each operating day, or at least once every 24-hour period while the site is in continuous operation, the asbestos-containing waste material which was deposited at the site during the operating day or previous 24-hour period shall be covered with at least 15 centimeters (ca. 6 inches) of compacted non-asbestos-containing material.

(2) At the end of each operating day, or at least once every 24-hour period while the disposal site is in continuous operation, the asbestos-containing waste material which was deposited at the site during the operating day or previous 24-hour period shall be covered with at least 15 centimeters (ca. 6 inches) of compacted non-asbestos-containing material, except for the uppermost 15 centimeters (ca. 6 inches) of asbestos-containing material which shall be covered at the end of each operating day.

(3) Rather than meet the requirements of paragraphs (e)(1) and (e)(2) of this section, an owner or operator may elect to cover asbestos-containing waste material with at least 60 centimeters (ca. 2 feet) of compacted non-asbestos-containing material, if he also compacts each layer of asbestos-containing waste material before covering it with non-asbestos-containing material.

(4) Rather than meet the requirements of paragraphs (e)(1), (e)(2), and (e)(3) of this section, an owner or operator may elect to cover asbestos-containing waste material with a resinous or petroleum-based dust suppression agent which effectively binds dust and controls wind erosion. Such agent shall be used as recommended for the particular dust by the dust suppression agent manufacturer. Other equally effective dust suppression agents may be used upon prior approval by the Administrator. For purposes of this paragraph, waste crankcase oil is not considered a dust suppression agent.

[40 FR 48302, Oct. 14, 1975]

Subpart C—National Emission Standard for Beryllium

§ 61.30 Applicability.

The provisions of this subpart are applicable to the following stationary sources:

(a) Extraction plants, ceramic plants, foundries, incinerators, and propellant plants which process beryllium ore, beryllium, beryllium oxide, beryllium alloys, or beryllium-containing waste.

(b) Machine shops which process beryllium, beryllium oxides, or any alloy when such alloy contains more than 5 percent beryllium by weight.

§ 61.31 Definitions.

Terms used in this subpart are defined in the act, in subpart A of this part, or in this section as follows:

(a) "Beryllium" means the element beryllium. Where weights or concentrations are specified, such weights or concentrations apply to beryllium only, excluding the weight or concentration of any associated elements.

(b) "Extraction plant" means a facility chemically processing beryllium ore to beryllium metal, alloy, or oxide, or performing any of the intermediate steps in these processes.

(c) "Beryllium ore" means any naturally occurring material mined or gathered for its beryllium content.

(d) "Machine shop" means a facility performing cutting, grinding, turning, honing, milling, deburring, lapping, electrochemical machining, etching, or other similar operations.

(e) "Ceramic plant" means a manufacturing plant producing ceramic items.

(f) "Foundry" means a facility engaged in the melting or casting of beryllium metal or alloy.

(g) "Beryllium-containing waste" means material contaminated with beryllium and/or beryllium compounds used or generated during any process or operation performed by a source subject to this subpart.

(h) "Incinerator" means any furnace used in the process of burning waste for the primary purpose of reducing the volume of the waste by removing combustible matter.

(i) "Propellant" means a fuel and oxidizer physically or chemically combined which undergoes combustion to provide rocket propulsion.

(j) "Beryllium alloy" means any metal to which beryllium has been added in order to increase its beryllium content and which contains more than 0.1 percent beryllium by weight.

(k) "Propellant plant" means any facility engaged in the mixing, casting, or machining of propellant.

§ 61.32 Emission standard.

(a) Emissions to the atmosphere from stationary sources subject to the provisions of this subpart shall not exceed 10 grams of beryllium over a 24-hour period, except as provided in paragraph (b) of this section.

(b) Rather than meet the requirement of paragraph (a) of this section, an owner or operator may request approval from the Administrator to meet an ambient concentration limit on beryllium in the vicinity of the stationary source of 0.01 $\mu g/m^3$, averaged over a 30-day period.

(1) Approval of such requests may be granted by the Administrator provided that:

(i) At least 3 years of data is available which in the judgment of the Administrator demonstrates that the future ambient concentrations of beryllium in the vicinity of the stationary source will not exceed 0.01 $\mu g/m^3$, averaged over a 30 day period. Such 3-year period shall be the 3 years ending 30 days before the effective date of this standard.

(ii) The owner or operator requests

New York, New York 10029

Until recently there was only limited awareness of the extent of asbestos use in public school buildings. Reports existed of damaged asbestos surfaces in a grade school in Wyoming,[1] a university dormitory in California,[2] and in the Yale School of Arts and Architecture in New Haven, Connecticut.[3] In each case, public concern [illegible] the removal of the asbestos material. In both the Wyoming school and the [illegible] Library, air measurements by optical microscopy showed asbestos concentrations that in some circumstances exceeded 5 f/ml, the time-weighted-average occupational standard in effect at the time. In the fall of 1976, flaking of sprayed-on asbestos was reported in a school in Howell Township, New Jersey, leading to its removal and to further concern about the presence of deteriorating asbestos in other school buildings in New Jersey. As a consequence, the New Jersey Department of Education requested that the school administrators report the presence and condition of asbestos surfaces in all school buildings within the state. Responses revealed that 265 (of approximately 2400) schools in all 142 districts in the State had nearly three million square feet of what they considered to be asbestos material in classrooms, auditoriums, hallways and other rooms accessible to pupils.

Asbestos Surfacing Materials in New Jersey Schools

In cooperation with the Department of Education of New Jersey, the Environmental Sciences Laboratory of Mount Sinai School of Medicine undertook an investigation of the asbestos use in New Jersey schools.[4] All of the schools with asbestos surfacing material in twenty-one districts were selected for study. The selection was accomplished using random numbers, but also employed a weighting factor to include more of those school districts which had reported greater use of asbestos. In all, forty-eight schools were visited and samples were taken of the material thought to be asbestos. These were analyzed for their asbestos content and for the presence of other mineral materials. Areas such as classrooms, hallways, auditoriums, cafeterias and locker rooms were priority locations for sampling, since they are used by large numbers of students as well as by faculty. In general the suspect materials were on ceilings, although they might also have been applied to walls. Of 64 samples collected, 50 were in such areas, the remainder being from custodial or boiler rooms.

During visual inspection of these schools and the analysis of collected samples, three general types of asbestos containing material were found. One was a friable,

loosely bonded, fibrous mat approximately one-half inch thick. The mat had been applied by blowing a mixture of asbestos, mineral (rock) wool, clay binders (as, bentonite), adhesives, synthetic resins and other proprietary agents through a two- to four-inch diameter hose. Upon leaving the hose, the material passed through a water spray which activated the adhesives and binders. The applied material would then

Wed material would then

have been tamped and often sprayed with emulsion type sealers—latex or acrylic paints. Most material of this type observed in this survey was readily damageable and could also break loose from the underlying surface because of the inadequacy of the bi..ers. In the schools visited, the most troublesome problems were those seen with ..ais type of material and its application. FIGURES 1 and 2 illustrate extreme examples of damaged and deteriorating sprayed-on asbestos ceilings. Approximately one-third of the schools visited had this type of material applied. Its use in boiler rooms and custodial areas was more frequent, however.

A second type of coating material was a dense, compactible mixture of asbestos and other products, such as vermiculite. This would have been applied in the wet state to walls and ceilings, compacted and formed into a relatively smooth matrix. This material would also usually be over-painted, either shortly following application or subsequently. In the schools we visited, spontaneous disintegration of such materials was not seen. However, in areas accessible to students, various degrees of abuse were observed. Severe damage of such m: terial is shown in FIGURES 3 and 4.

Thirdly, asbestos was found incorporated in cementitious or plaster-like matrices. These were applied as slurries to w..lls and ceiling: forming a textured surface of considerable hardness which would usual.. be over-painted. Such plasters or textured paints have considerable stability and ..re unlikely to allow the release of asbestos fibers through erosion. Although damage to these surfaces can occur from physical abuse or abrasion, this was infrequently seen.

In each school visited the asbestos material was categorized as above and an estimate made of damage or deterioration. The results are outlined in TABLE 1.

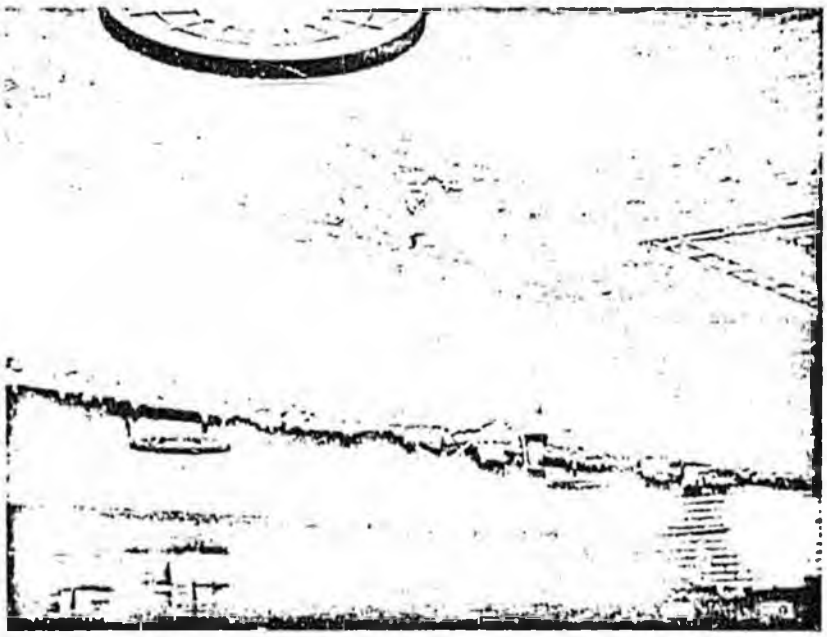

FIGURE 2. Disintegration of fibrous spray material in a building storage area. The conditions seen occurred spontaneously, with no evidence of external abuse.

NOTICE: THIS MATERIAL MAY BE PROTECTED BY COPYRIGHT LAW (TITLE 17 U.S. CODE)

FIGURE 3. Damage to cementitious asbestos spray in a school hallway. Some of the indentations occurred from flagpoles inadvertently striking the ceiling during color guard practice.

Overall, two-thirds of schools with asbestos surfaces had some visible evidence of damage to the material.

The x-ray analysis of materials, by and large, confirmed the presence of asbestos in those schools that had reported its use. Such was the case in 97% of the schools that believed their sprayed-on material contained asbestos. In only two schools was the reported presence of asbestos not confirmed by x-ray diffraction analysis of the sampled material. On the other hand, this survey did not provide information on the number of schools that may have been mistaken in their belief that they had no asbestos in surfacing material, and, as a result, did not report its presence. That this possibility exists is exemplified by one instance in which a school official stated that his administration had been told by its architect that the sprayed-on plaster material in their school was asbestos free. An analysis of the material, however, revealed that it contained about 2% chrysotile. Further, many schools did not report the presence of asbestos in school areas not used by pupils, such as boiler rooms where extensive use of asbestos occurs. While not accessible to students, the possibility exists that such asbestos could be dislodged and transported into student use areas.

Similar data from other areas indicate the use in New Jersey is fairly typical. New York City has reported asbestos surfaces to be present in 351 of approximately 1100 schools in the city.[5] Massachusetts found asbestos in student areas of 138 of 1200 schools surveyed.[6] Widespread use of asbestos has also been reported in schools in Indiana, Kentucky and other states.[7] If the estimates from those states surveyed are applicable to the entire nation, two to six million pupils may be attending schools with asbestos surfaces in pupil areas.[1] An additional 100,000 to 300,000 teachers would also be exposed.

Asbestos Concentrations in Schools and in the Ambient Air

Air samples have been taken in ten schools in which asbestos materials were used as surface coatings in halls, cafeterias, libraries and other pupil-use areas. Three of the schools were located in surburban areas of New Jersey and Massachusetts, and seven

TABLE 1
CONDITION OF ASBESTOS SURFACES IN 64 NEW JERSEY SCHOOLS

Type of Asbestos Material	Intact Undamaged	Minimum Damage, No Deterioration	Localized Damage or Deterioration	Severe Damage or Deterioration	Totals
Loose, friable fibrous asbestos spray material	4 (18%)	10 (45%)	5 (23%)	3 (14%)	22
Moderately dense asbestos spray material, often in association with vermiculite or perlite	15 (42%)	13 (36%)	4 (11%)	4 (11%)	36
Plaster or textured paint material with asbestos binder	4 (67%)	1 (17%)	1 (17%)	0 (0%)	6
Totals	23 (36%)	24 (38%)	10 (16%)	7 (11%)	64

in urban centers of New York and New Jersey. The schools were selected for air sampling because of visible damage in some of the asbestos surfaces. The samples were collected on 0.8 μm pore size membrane filters and analyzed using electron microscopic techniques that determined the amount of chrysotile asbestos in each specimen. This variety of asbestos was quantitated because it could easily be identified on the basis of its unique tubular structure. Amphibole asbestos (either amosite or crocidolite) could also be present in the air of schools or in the ambient air, but is much less commonly found. For example, only seven of 64 bulk material samples in schools contained either of these minerals. However, if present in the air sampled, such asbestos would add to those concentrations measured.

To prepare a sample for analysis, a portion of the sample, mounted on a microscope slide, was ashed in a low temperature-activated oxygen furnace for approximately four hours. This served to remove the membrane filter material, all organic material in the collected sample, soot and other carbonaceous material. The residue, consisting mostly of fly ash and mineral matter, was dispersed on microscope slides in a solution of 1% nitrocellulose in amyl acetate. Upon evaporation o[illegible] amyl

acetate, the dispersal was scanned for uniformity and representative areas were chosen for transfer to electron microscope grids for scanning. The samples thus prepared were scanned at magnification of 20,000X. Typically, four to eight 100 μm squares of separate grids from each sample were scanned, and the mass of chrysotile fibers was determined by sizing each individual fiber. Control blank filters were processed with each set of four samples and background levels of chrysotile determined from them subtracted from that found on sample filters.

TABLE 2 lists the distribution of chrysotile concentrations found in samples taken over four to eight hours in these ten schools. Chrysotile asbestos concentrations ranged from 9 nanograms/cubic meter of sampled air (ng/m^3) to 1950 ng/m^3 with an average of 217 ng/m^3. Outside air samples at three of the schools varied from 3 ng/m^3 to 30 ng/m^3 with an average of 14 ng/m^3. In all samples but two (which measured 320 ng/m^3 and 260 ng/m^3) no asbestos was visible on the floor of the area sampled although surface damage was generally present near the area sampled. The highest value (1950 ng/m^3) was in a sample following routine sweeping of a hallway in a school with water damage to the asbestos surface. However, no asbestos was visible on the floor prior to sweeping.

TABLE 3

DISTRIBUTION OF 24-HOUR CHRYSOTILE ASBESTOS CONCENTRATIONS IN THE AMBIENT AIR OF UNITED STATES CITIES[8]

Electron Microscopic Analysis		
Asbestos Concentration (ng/m^3) Less than	Number of Samples	Percentage of Samples
1.0	61	32.6
2.0	119	63.6
5.0	164	87.7
10.0	176	94.2
20.0	184	98.5
50.0	185	99.0
100.0	187	100.0

These concentrations in schools with damaged asbestos surfaces can be compared with those found in other circumstances. Asbestos of the chrysotile variety has been found to be a ubiquitous contaminant of ambient air. A study of 187 quarterly composite samples collected in 48 United States cities during 1969 to 1970 showed chrysotile asbestos to be present in virtually all metropolitan areas.[8] TABLE 3 lists the distribution of values obtained in that study. Each value is from a composite of five to seven 24-hour samples and thus averages over possible peak concentrations which could occur periodically or randomly. It is noteworthy that 98.5% of these ambient air samples had concentrations less than 20 ng/m^3, a value *exceeded* by 96% of the school samples.

In a study of the ambient air of New York City, in which samples were taken only during daytime working hours, higher values than those mentioned above were obtained.[9] These were six- to eight-hour samples collected between 8:00 A.M. and 5:00 P.M., and reflect what could be intermittently higher concentrations during those hours compared to night time periods, for example. TABLE 4 records the chrysotile

NOTICE: THIS MATERIAL MAY BE PROTECTED BY COPYRIGHT LAW (TITLE 17 U.S. CODE)

content of 22 samples collected in the five boroughs of New York. It should be noted that the samples analyzed in all of the studies discussed above were taken during a period when fireproofing highrise buildings by spraying asbestos-containing material was permitted. The practice was especially common in New York City. While no sampling station was known to be located adjacent to an active construction site, unusually high levels could nevertheless have resulted from the procedure. The highest concentration measured in these samples, 65 ng/m^3, was exceeded by 70% of the school samples and the average of all 26 school samples (217 ng/m^3) was more than 10 times the average of the New York City samples (17 ng/m^3).

Of particular relevance to the current study are the analyses for chrysotile of 116 samples of indoor and outdoor air collected in or near 19 buildings in five United States cities.[10] The buildings sampled included those in which various asbestos minerals had been applied as fireproofing material to the steelwork or for acoustic or decorative purposes. Average values for the air inside buildings ranged from 2.5 ng/m^3 to 200 ng/m^3, with individual measurements ranging from 0 to 800 ng/m^3.

For outside air the variation for the average concentration at a given site extended from 0 to 48 ng/m^3. Little contamination was found in buildings utilizing cementitious

TABLE 4

CHRYSOTILE CONTENT OF AMBIENT AIR IN NEW YORK CITY BY BOROUGH (6- TO 8-HOUR DAYTIME SAMPLES)[9]

Sampling Locations	Number of Samples	Asbestos Concentration (ng/m^3)	
		Range	Average
Manhattan	7	8–65	30
Brooklyn	3	6–39	19
Bronx	4	2–25	12
Queens	4	3–18	9
State.. Island	4	5–14	8

material but 47% of buildings with friable asbestos materials, either on room surfaces or in return air plenums, had air concentrations in excess of 20 ng/m^3 versus 14% of all outside control samples. Twenty-four samples were taken in buildings with asbestos applied to wall and ceiling surfaces for decorative or acoustic purposes. Of these, three showed concentrations exceeding 100 ng/m^3 in areas where the asbestos was damaged. However, in the absence of damage, air concentrations similar to background were observed.

The majority of the data on asbestos concentrations in schools were obtained in circumstances in which damage had occurred to friable, noncementitious asbestos-containing sprayed material with consequent dislodgement of asbestos fibers. In general, when significant levels were found, physical deterioration of the surface of the material was evident. While fewer data exist regarding air concentrations associated with damage to cementitious asbestos-containing sprayed material, the finding of higher chrysotile concentrations in one school with such material raises the same question here as well. Thus, the conclusions that can be drawn from these data include the following.

1. If visible damage to or erosion of any asbestos-containing sprayed material is evident, increased asbestos air concentrations would have existed at the time of damage and may still persist.

NOTICE: THIS MATERIAL MAY BE PROTECTED BY COPYRIGHT LAW (TITLE 17 U.S. CODE)

2. As such damage is likely to recur or to continue, asbestos air concentrations in excess of background (50 ng/m^3) may be expected in the future.
3. Where visible damage or erosion is not evident, asbestos air concentrations are likely to be little different from background, but the possibility of later damage and future asbestos fiber release with concomitant increased air concentrations cannot be excluded.

Environmental Asbestos Health Effects

Serious asbestos disease associated with direct[11-13] or indirect[14] occupational exposure to asbestos has been extensively documented. Of increasing importance, are the findings of asbestos disease in other than occupational circumstances. In 1960 Wagner reviewed 47 cases of mesothelioma found in the Northwest Cape Province, South Africa in the previous five years.[15] Of this number, roughly half were in people who had worked with asbestos. Virtually all of the rest were in individuals who had, decades before, simply lived or worked in an area of asbestos mining (one lived along a roadway in which asbestos fibers were shipped). This germinal observation demonstrated that asbestos exposure of limited intensity, often intermittent, could cause mesothelioma. The hazard was further pointed by the findings of Newhouse,[16] who showed that mesothelioma could occur among people whose potential asbestos exposure consisted of their having resided near an asbestos factory or in the households of asbestos workers. Twenty of 76 cases from the files of the London Hospital were the result of such exposure, 31 were occupational in origin and asbestos exposure was not identified for 25.

A recent extensive study of the effects of household exposure has been conducted by Dr. Henry Anderson and his colleagues of the Mount Sinai School of Medicine.[17] In a clinical survey of 679 family contacts of former asbestos factory workers, it was found that the x-rays of 35% of these individuals showed abnormalities characteristic of asbestos exposure. It did not matter greatly what the relationship to the worker was; the asbestos dust in the household could effect any resident—wife, sons, daughters, parents. While almost all were currently asymptomatic, and while most would perhaps suffer no impairment from their past exposure, others may be stricken with an asbestos-related cancer as a result of past household asbestos exposure. (During this continuing survey, five deaths of mesothelioma have already been identified in this group of family contacts.)

Unfortunately, no exposure data exist on the concentrations of asbestos dust to which these various populations were exposed 20, 30, or 40 years ago. Thus, direct dose-response data on asbestos health effects in environmental circumstances do not exist. However, recent measurements of asbestos concentrations in the homes of workers, around sites where asbestos materials were sprayed as fireproofing or in the neighborhood surrounding uncontrolled asbestos-processing facilities, usually yield values in the hundreds of ng/m^3, with concentrations only rarely exceeding 1000 ng/m^3.[18] This suggests that the long-term exposure of many children to concentrations above 100 ng/m^3 may not be without later risk of asbestos disease.

Chapter No.

93

AN ACT

Relating to toxic and hazardous substances in the workplace; and providing for an effective date.

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

THE ACT FOLLOWS ON PAGE 1, LINE 9

Approved by the Governor: July 25, 1983
Actual Effective Date: Sections 1, 3, and 4 take effect July 26, 1983; and Section 2 takes effect July 1, 1984

Chapter 93

AN ACT

Relating to toxic and hazardous substances in the workplace; and providing for an effective date.

* Section 1. AS 18.60.030 is amended by adding new paragraphs to read:

(12) annually publish a list of toxic and hazardous substances;

(13) maintain a current set of OSHA form 20's or equivalent information for toxic and hazardous substances, and other information relevant to toxic and hazardous substances;

(14) assist employers, upon request, to identify and obtain information on toxic and hazardous substances and develop employee safety education programs.

* Sec. 2. AS 18.60 is amended by adding new sections to read:

Sec. 18.60.065. IMPORTATION OF TOXIC AND HAZARDOUS SUBSTANCES. Toxic and hazardous substances imported into the state shall be accompanied by a federal Occupational Safety and Health Administration (OSHA) form 20 or equivalent information. This requirement does not apply to a substance for which the in-state purchaser has already received the most current information.

Sec. 18.60.066. EMPLOYEE SAFETY EDUCATION PROGRAMS. (a) An employer shall conduct a safety education program for an employee before the employee performs a new work assignment that may result in the employee being exposed to a toxic or hazardous substance for which the employee has not received safety instruction as provided under (b

of this section.

(b) An employee safety instruction program shall inform the employee of

(A) the location, properties, and known or suspected acute and chronic health effects of the hazardous or toxic substances to which the employee is exposed in the workplace;

(B) the nature of the operations that could result in exposure to hazardous or toxic substances, as well as any necessary handling or hygienic practices or precautions; and

(C) the location, purpose, proper use, and limitations of personal protective equipment used in the workplace.

Sec. 18.60.067. INFORMATION PROVIDED ON EMPLOYEE'S REQUEST. (a) An employer shall make available to an employee on request a copy of the most recent OSHA form 20 or equivalent written information for a toxic or hazardous substance to which the employee may be exposed. If the employer does not have the copy or information requested, the employer shall request a copy from the department or the manufacturer of the substance within three state government working days after receiving the request.

(b) If the copy or information requested under (a) of this section is not made available to the employee within 15 calendar days after the request is received, the employer shall take measures to assure that employees are not exposed to the substance to which the copy or information pertains until the copy or information is made available to the employee who made the request. This subsection applies only to substances for which an OSHA form 20 or equivalent information is required under OSHA regulations. This subsection does not alter, deny, or abrogate any right an employee may have under law to refuse to work under hazardous circumstances.

Chapter 93

Sec. 18.60.068. POSTING OF INFORMATION IN WORKPLACE. (a) The department shall print and make available to employers posters that contain notice of the provisions of this chapter relating to toxic and hazardous substances.

(b) An employer whose employees are or may be exposed in the workplace to a toxic or hazardous substance shall display the following information in a manner designed to notify the employees:

(1) a poster printed by the department under (a) of this section; and

(2) an OSHA form 20 or equivalent information for each toxic or hazardous substance to which an employee may be exposed in the workplace

(A) under normal conditions of work; or

(B) during a reasonably foreseeable emergency, including equipment failure and rupture of containers.

(c) Instead of posting the information required under (b)(2) of this section, an employer may post a list of the chemical name and product name of each toxic or hazardous substance to which an employee may be exposed in the workplace, together with an identification of a location, in or near the workplace and accessible to employees, where an employee may inspect the information listed under (b)(2) of this section.

* Sec. 3. AS 18.60.105 is amended by adding new paragraphs to read:

(6) "be exposed" means to ingest, inhale, or absorb through the skin or eyes a substance, or fumes or other potentially harmful aspect of a substance;

(7) "OSHA" means the federal Occupational Safety and Health Administration;

(8) "toxic or hazardous substance" includes

(A) a chemical listed in 29 CFR Part 1910, Subpart Z, Toxic and Hazardous Substances, "General Industry Standards", Occupational Safety and Health Administration;

(B) a chemical listed in "Threshold Limit Values for Chemical Substances and Physical Agents in the Work Environment", American Conference of Governmental Industrial Hygienists (Latest Edition);

(C) a substance for which an OSHA form 20 or equivalent information is required under OSHA regulations; and

(D) a substance determined by the department, in accordance with the Administrative Procedure Act (AS 44.62), to be a health hazard to an employee who is exposed to the substance, including a carcinogen, reproductive toxin, irritant, corrosive, sensitizer, hepatotoxin, nephrotoxin, neurotoxin, agent that acts on the hematopoietic system, agent that damages the lungs, a cutaneous hazard and an eye hazard;

(9) "toxic or hazardous substance" does not include

(A) substances that because of their physical state, volume, or concentration do not pose a health hazard upon exposure;

(B) substances that are goods, food, drugs, cosmetics, or tobacco products intended for personal consumption; or

(C) substances in transit;

(10) "transit" means conveyed in a sealed or unopened container by a mode of transportation.

* Sec. 4. AS 18.60.105 is amended by adding a new subsection to read:

(b) In AS 18.60.030(14), 18.60.065 - 18.60.068, and 18.60.105-(a)(9)

(1) "employee" means a person who works for an employer,

but not in a place used primarily as a personal residence;

(2) "employer" means a person, including the state and a political subdivision of the state, who has one or more employees working in a place not used primarily as a personal residence.

(3) "health hazard" means a substance capable of causing acute or chronic adverse effects to health;

(4) "workplace" means a place of employment other than a place used primarily as a personal residence.

* Sec. 5. Sections 1, 3, and 4 of this Act take effect immediately in accordance with AS 01.[illegible].070(c).

* Sec. 6. Section 2 of this Act takes effect July 1, 1984.

EPA: schools ignore law about asbestos warnings

WASHINGTON (AP)—Local school officials, worried about their budgets or about "panic and hysteria," are widely ignoring a federal law requiring parents to be notified about dangerous asbestos in their school buildings, a government study says.

The study by the Environmental Protection Agency said that study said.

In many cases, the study said, school officials did not want to notify parents because of the money the school district would have to spend if forced to clean up the asbestos hazard.

School officials "are reluctant to notify parents because they believe this will result in a redirection of limited operating funds and-or create unnecessary panic and hysteria," the study said.

But whatever the reason, the EPA study added, it is undermining the program to get rid of hazards from asbestos that face millions of schoolchildren.

"The success or failure of the asbestos in schools rule, which relies heavily upon public involvement, is the degree to which information is communicated to the public," the study said. "Poor public awareness has resulted in only slight activity on the part of the parent groups in schools."

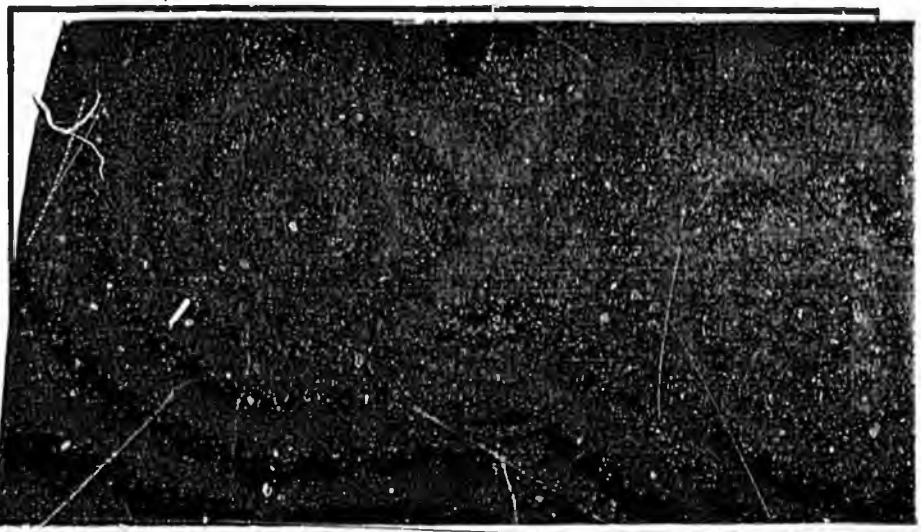
The finding are included in an internal program review requested by EPA Deputy Administrator Al Alm and completed in December. A copy was obtained by The Associated Press.

The study involves asbestos insulation that once was widely used in schools and other public buildings. Health officials now say that some types of asbestos can flake into microscopic particles that can be inhaled, causing lung cancer or other lung diseases. There is no known safe exposure level.

Under federal law, school officials are required to inspect their buildings for hazardous asbestos and to notify parents and school employees if it is found. It is then up to the local officials to decide what to do.

The law covers more than 37,000 public, private and parochial school systems with more than 50 million students.

The EPA study was intended to find out how well the program was working. Some of its findings, including the conclusion that two-thirds of the nation's schools are in violation of some part of the law, have been reported earlier.



The EPA study did not blame school officials alone. It also found that the agency itself needed to devote more money and people to the program, including more than doubling the EPA inspection program.

"The agency has not issued a high-level statement detailing the risks of exposure to asbestos and the importance of considering various abatement options," the study said. "The regions and the public have not been made fully aware and have received mixed signals on the seriousness of asbestos health hazards."

The congressional author of the asbestos in schools law, Rep. George Miller, D-Calif., focused on those shortcomings in his analysis of the report.

"This document, drafted by EPA's own experts, again confirms the shocking inadequacy of this administration's approach to a threat that endangers the health of millions of school children," Miller said. "It is apparent that at least some officials within EPA are trying to warn their agency about the consequences of the current policies."

Whatever the failings of the agency, however, the study indicated that school officials have not endorsed the program wholeheartedly.

Funding limits asbestos removal

Associated Press

Washington — Local school officials, worried about their budgets or about "panic and hysteria," are widely ignoring a federal law requiring parents to be notified about dangerous asbestos in their school buildings, a government study says.

The study by the Environmental Protection Agency said that of 275 schools inspected by EPA, 190 were found to be violating the federal law on asbestos insulation. Of those 190, the EPA said, 134 had violated the requirement that parents be notified of the excess levels.

"Consequently, we can conclude that the parents of students exposed are in many cases unaware of the existence of such a hazard," the study said.

In many cases, the study said, school officials did not want to notify parents because of the money the school district would have to spend if forced to clean up the asbestos hazard.

School officials "are reluctant to notify parents because they believe this will result in a redirection of limited operating funds and-or create unnecessary panic and hysteria," the study said.

But whatever the reason, the EPA study added, it is undermining the program to get rid of hazards from asbestos that face millions of schoolchildren.

"The success or failure of the asbestos in schools rule, which relies heavily upon public involvement, is the degree to which information is communicated to the public," the study said. "... Poor public awareness has resulted in only slight activity on the part of the parent groups in schools."

The finding are included in an internal program review requested by EPA Deputy Administrator Al Alm and completed in December. A copy was obtained by The Associated Press.

The study involves asbestos insulation that once was widely used in schools and other public buildings. Health officials now say that some types of asbestos can flake into microscopic particles that can be inhaled, causing lung cancer or other lung diseases. There is no known safe exposure level.

Under federal law, school officials are required to inspect their buildings for hazardous asbestos and to notify parents and school employees if it is found. It is then up to the local officials to decide what to do.

The law covers more than 37,000 public, private and parochial school systems with more than 50 million students.

Whatever the failings of the agency, however, the study indicated that school officials have not endorsed the program wholeheartedly.

Federal funds to help remove asbestos

by Stephen J. Dowries 2/9/84
Times Writer

The federal government has offered at least $2.1 million to help remove asbestos at Bartlett High School, a school district official said Wednesday.

And federal dollars will also pay for removing asbestos at Mount Spurr Elementary School, said assistant superintendent Tom Freeman.

Freeman said the federal Department of Education made the offer in a letter received by the district Tuesday, after three months of lobbying by the school district and members of the school board.

The district wanted the federal government to pay a portion of the bill for the schools because they are both on federal land.

About 35 acres of Bartlett is on federal land and technically belongs to the federal government, Freeman said. The other 113 acres have been deeded to the municipality, he said. The district operates the whole school.

Mount Spurr is on Elmendorf Air Force Base. The school district estimates it will cost $80,000 to remove asbestos at the school.

Negotiations between the district and the DOE that might result in even more money being obtained are still continuing. The district is seeking additional funds because cost estimates for Bartlett are increasing, Freeman said.

The $2.1 million represents 38 percent — the federal government's share — of what the district originally believed the Bartlett project would cost: $5.5 million.

"We've informed them that it may be more," Freeman said.

Howard Games, a DOE project engineer in Seattle, said a request for the money would go to DOE offices in Washington as soon as the school district provides a revised estimate of the cost. The estimate could come as early as next week.

Construction firms will be asked to come up with estimated costs of removing asbestos at Bartlett. The firms will also seek a way to complete the work without disrupting the school year, which could mean higher costs.

The federal Environmental Protection Agency has linked exposure to asbestos with lung cancer and other diseases. The Anchorage School Board last year ordered asbestos removed from all district buildings.

The state legislature is now considering a district request for $10 million to remove asbestos from six schools, among them Bartlett and Mount Spurr. Bartlett is the top priority and has by far the most asbestos.

Anchorage lawmakers have already proposed $8.7 million for Anchorage asbestos removal.

DOE representatives will come to Anchorage in the next couple of weeks to advertise for bids on the Mount Spurr project, Freeman said.

The bid specifications will be drawn up by Gobbell, Hays and Pickering, the firm evaluating the asbestos problem for the school district.

Another DOE official, Jim Ishihara, said the federal government is also paying for asbestos removal on other Alaska schools: a $2.2 million project at Reeve Junior and Senior High School in Adak and a $250,000 project at nine schools in Fair-

Sent to all school districts and private schools

Note: Under TAP, in 1979 all schools were sent copies of Document 1 & 2

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

JUN 10 1982

THE ADMINISTRATOR

Dear School Administrator:

On May 27, 1982, the Environmental Protection Agency (EPA) published a rule in the Federal Register (47 FR 23360-23399) requiring all public and private elementary and secondary schools in the United States to identify friable asbestos-containing materials, maintain records, and notify employees of the location of the friable materials which contain asbestos. When friable asbestos-containing materials are found, schools must provide the employees with instructions on reducing exposure to asbestos, and notify the school's parent-teacher association.

Since 1979, EPA has operated a Technical Assistance Program (TAP) to help schools identify and correct potential hazards due to asbestos in schools. However, many schools did not respond to EPA's effort under the TAP. EPA is now requiring all schools to identify friable asbestos-containing materials and notify employees and parent-teacher organizations of their presence. These actions must be completed by June 28, 1983.

To assist schools in complying with the rule, we are enclosing a copy of the rule along with copies of "Asbestos-Containing Materials in School Buildings: A Guidance Document, Parts 1 and 2." Should you need a copy of any forms for this rule or other general information, please contact the Industry Assistance Office (TS-799), Office of Toxic Substances, Environmental Protection Agency, Rm. E-511, 401 M Streets, S.W., Washington, D.C. 20460. Phone: Toll free, 800-424-9065. In Washington, D.C., call 544-1404. Outside the Continental U.S., call Operator-202-554-1404. If you need technical assistance, please contact the appropriate Regional Asbestos Coordinator listed in the rule on page 23361.

Private schools for requests

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY

Office copy

DATE: 2 August, 1982

SUBJECT: Identification and Notification requirements for Friable Asbestos-Containing Materials in Schools

FROM: A. B. Christensen, Asbestos Technical Advisor, Region X

A B Christensen

TO:

Each public school district has been mailed a separate package containing copies of "Asbestos-Containing Materials in School Buildings: A Guidance Document", Parts I & II (the orange colored booklets) and the new Regulation dated Thursday May 27, 1982, "Friable Asbestos-Containing Materials in Schools: Identification and Notification" (which requires inspection of all public and private schools for the presence of friable asbestos-containing material).

The responsibility for compiling and maintaining records in each school district (Local Education Agency) is placed on the individual districts. This mailing is designed to assist you to fulfill the requirements. You may find much of the work was already accomplished under the "Voluntary Asbestos Survey Program".

To assist each district and school have in their file the required information, we have made up some "check-off" lists for your use. One blank copy for the district and blank copies for the individual schools in the district are attached. For those districts and schools that are not complicated by the presence of any friable materials it will be a simple matter to fill in the blanks which apply. Those districts and schools which have friable materials are, obviously, required to complete inspections and analysis and to comply with the additional requirements of the rule as outlined on the "check-off" list and spelled out in the regulation. Please retain a copy of the "check-off" list with your file.

The check lists are made out to try to cover every situation so please bear with the seeming duplication on the second page of each list.

Should you require copies of any of the following reference materials:

(1) Guidance Documents, Parts I & II,
(2) Mathematical formula referred to in Part I, Chapter 7, page 14 (The Algorithm),
(3) Polarized Light Microscopy (PLM) laboratory listing,
(4) Any other pertinent information, please call or write direct to:

Environmental Protection Agency
School Asbestos Program M/S 524

copy of the friable-asbestos results of any Alaska school that complies with the present regulation.

5) List of those schools represented at your presentation in Anchorage and Fairbanks.

Thank you for your time and effort.

September 17, 1982

Sincerely,

Chris Christensen, Asbestos Technical Advisor
EPA/Region X
1200 Sixth Avenue
Seattle, Washington 98101

Dear Christensen
A. Smith

The EPA-AOO, Juneau would like to express their appreciation for your presentation on the May 27, 1982 Regulation on Friable Asbestos-Containing Materials in Schools conducted in Juneau (9/13), Anchorage (9/14), and Fairbanks (9/15) for all Alaska school district representatives. I think this explanation, and clarification of the relatively new rule will help to promote Alaska schools to comply with the regulation.

As we discussed, you are planning to distribute a letter explaining the new friable-asbestos regulation to each Alaska school district and private school. Hopefully, this will clarify the regulation for those school representatives who were unable to attend your presentation and encourage each school to comply with the regulation in a timely manner. If we can be of any assistance to you in notifying Alaska schools of their responsibility in identifying friable-asbestos materials in their schools, please contact us.

In order to complete our records concerning this project would you please send us a copy of the following material:

1) The 1982 cover letter that accompanied the new regulation and Guidance Document distributed to all school districts and private schools.

2) The follow-up letter (yellow) and attachments you will be distributing to school districts and private schools.

3) Copy of the friable-asbestos results of all Alaska schools that complied with the volunteer program.

4) Copy of the friable-asbestos results of any Alaska school that complies with the present regulation.

5) List of those schools represented at your presentation in Anchorage and Fairbanks.

Thank you for your time and effort.

Sincerely,

[illegible]

Kathy Pazera

The Honorable Joe P. Josephson
Alaska State Legislature
Pouch V
Juneau, Alaska 99811

Dear Senator Josephson:

The Anchorage School District has been monitoring the asbestos fiberous material that is located within 55 schools since 1979. This requirement was federally mandated by the Environmental Protection Agency (EPA). In June, 1983, we were again mandated by the EPA to post each school that contained asbestos and to notify all occupants of the building of its location.

The Anchorage School District structured a formal process by which prequalified bidders were selected and given the opportunity to bid on six abatement projects. Bartlett-Begich Junior/Senior High School was a separate item due to the magnitude of asbestos within the school. The five other schools were bid as a unit which includes West, East, and Dimond High Schools, Clark Junior High School, and Mt. Spurr Elementary School.

The bids were opened on Wednesday, May 9, 1984. The base bid for Bartlett had a low $13,005,300 and a high of $22,166,000. We received three bids for this project. We received two bids for the five school project with a high of $1,980,000 to a low of $1,538,240.

We will be approximately $10 million short from awarding a contract for the removal of asbestos at Bartlett. At the present time the District is very appreciative of the approximately $6.5 million which was awarded in HB 403.

The low bid, if accepted, is $14,543,540. This bid indicates that Bartlett would have to be closed for at least one semester. The District is analyzing some of the options for Bartlett's 2,000 students which would not impact on the educational program.

If Bartlett was to be completed over two summers, it would require an additional $4 million. This, however, does not include storage for all of the furniture and equipment housed in Bartlett's 324,000 square feet.

The options available to us is to reject all bids, rebid the five schools by themselves, or reject Bartlett because of lack of funds. This question comes to the School Board on May 21, 1984, and it is imperative that the District receive the funding for this very important program.

We have appreciated all your efforts on behalf of the Anchorage community, its children, and their future.

Sincerely,

E. E. (Gene) Davis

National PTA Bylaws, Article II.c

Asbestos: Still a danger in schools

by Elaine S. Knapp

For Phyllis Adams and Ann Gibbs the last year has been a frustrating one—trying to get their local school board to remove asbestos from the school their children attend.

"It's frustrating, our children are being poisoned and there's not anything we can do," Mrs. Gibbs declared. What the Lexington, Kentucky, housewife has done is work through the PTA, form a group of concerned parents, go door-to-door telling parents of the danger, gather hundreds of signatures on petitions, read volumes on asbestos, call and write federal agencies and confront the school administrator and board.

After a year of parental pressure being applied and at least a decade after school authorities knew of the asbestos hazard, Mrs. Gibbs said, "We don't think anything will be done until the government makes them (the school board)." School authorities maintain the asbestos will be cleaned up if money is available for renovation next year.

Ironically, the major government effort to control asbestos lies in Mrs. Gibbs and others like her. Telling parents and teachers that their school has asbestos and relying on them to pressure local action is the heart of the U.S. Environmental Protection Agency's (EPA) strategy to rectify the nationwide problem of asbestos in schools.

No effective federal program exists to protect schoolchildren from asbestos, state efforts vary widely and local schools often ignore the danger due to the cost of cleanup.

Asbestos dangers

Any exposure to asbestos involves some health risk, according to the Congress, the EPA and the scientific community. Children are especially vulnerable, according to the EPA guidance document on asbestos sent to schools. Their remaining life expectancy provides the 20 to 40 years it takes for disabling and fatal asbestos-related diseases to develop. Large numbers of children may be exposed in a contaminated school and exposure is continuous during the school year. Children are active and breathe more frequently than adults, possibly inhaling more asbestos fibers. Smoking can increase the cancer risk due to asbestos exposure.

Most hazardous is friable asbestos that can be crumbled. It sends deadly fibers into the air which may lodge in the lungs indefinitely, according to EPA's guidance document. Asbestos workers often develop a chronic and debilitating lung disease called asbestosis. Lower and shorter exposure can result in death many years later.

Asbestos diseases include: 1) asbestosis, a disease in which asbestos clogs the lungs, 2) pleural calcification, a deposit of calcium salts in the lung lining, 3) malignant tumors of the lung, 4) mesothelioma, a rapid and fatal cancer of the lung and 5) intestinal and uterine cancers.

Hot potato

Asbestos in the schools has been a "hot potato" tossed among various levels of government and federal agencies. One reason is that removal of asbestos can be quite expensive, especially if large areas of buildings are affected. Funding is basically up to local schools as is asbestos detection and control. No federal funds are available and state aid varies.

The U.S. EPA requires schools to inspect for asbestos and notify parents and [school] employees of asbestos hazards. The EPA doesn't require removal or abatement. "The theory is that PTAs and employees would pressure local districts to take remedial action," said Terrell Hunt, assistant to EPA Deputy Administrator Alvin Alm.

However, a recent internal EPA report found that many schools did not meet EPA's June 1983 deadline for asbestos detection, record keeping and notification.

No federal funds

Federal funds of $172 million authorized by the Asbestos School Hazard Detection and Control Act of 1980 were never appropriated. Grants were promised for schools to identify asbestos hazards and loans for mitigation of asbestos hazards. But funds were never requested by the Department of Education, reported John Bennett, aide to U.S. Representative George Miller, D-Calif., who sponsored the act. In 1983, a $50 million recommendation by the House was omitted in a House-Senate conference.

The U.S. Department of Education had a task force which set standards for state grants in 1980, according to W. Stanley Kruger, deputy director for state and local programs. However, when the program wasn't funded, the department "deferred to EPA," Kruger said.

Under pressure from Congress, the department reactivated its task force in October 1983 and is gathering information on asbestos to send to chief state school officials, Kruger said. The department also reactivated its requirement that states file plans for asbestos in the schools' programs and report on their progress every six months. All but two states have filed.

EPA's program

The federal effort has largely been a requirement by the EPA that schools inspect for asbestos hazards, sample and analyze material to determine if asbestos is present, keep records of the inspection, post notices, and notify parents and employees if asbestos is found. Although schools were to comply with the rule by June 1983, the EPA doesn't know how many did. It does not require schools to report to it and must send federal inspectors to schools to check their records. EPA staff said when the EPA regulation was written that the administration op-

This is a reprint of a portion of an article appearing in State Government News, *March 1984. It is authored by and printed with permission of Elaine S. Knapp, its editor.*

posed imposing a data reporting requirement. The EPA recently doubled its field force of inspectors by adding 16 people through a contract with the American Association of Retired Persons, Hunt said. These include retired architects and engineers. Primarily, EPA staff look at school records and physically inspect some schools. However, there are not enough inspectors to cover but a small portion of the nation's schools.

In providing technical advice, EPA can help schools determine the best strategy for evaluating the risk and responding to asbestos, Hunt said. He said that anything short of removal is considered a short-term solution.

Connie Derocco, environmental protection specialist with EPA, said that out of 1,527 schools inspected in 468 districts, some 60 percent did not comply with EPA rules. Most failed to notify and warn PTAs and employees of asbestos materials [manufacturers]. Schools know they will be pressured once the word is out, and they are hesitant to deal with the asbestos problem, Derocco explained. After receiving a notice of noncompliance, schools have 30 days to act before the EPA files a civil complaint.

Labor union concern

An estimated 3.24 million schoolchildren and 648,000 school employees are potentially exposed to asbestos, according to Kitty Conlan, research analyst with the Service Employees International Union (SEIU).

The SEIU is lobbying Congress to fund the 1980 act for grants and loans to schools. Schools don't have the money to clean up on their own, Conlan said. "It's a nationwide problem which affects the health of millions of people."

SEIU is suing the EPA to require schools to clean up flaking asbestos. "Schools say if EPA thinks asbestos is so bad, then EPA would require them to get rid of it," Conlan commented.

EPA does give schools good technical advice on how to get rid of asbestos, Conlan noted. But some schools accept the lowest bid rather than follow EPA guidelines. If the cleanup is not done right, the asbestos danger can be worsened.

Conlan said SEIU doesn't think suing asbestos' manufacturers is worthwhile, citing lack of action on suits filed by asbestos workers. "We're hesitant to have our members litigate themselves to death," she said.

Conlan added that school districts can also be held responsible for asbestos. "They can face a big liability," she commented.

Lawsuits filed

A number of lawsuits on behalf of school boards and building owners in Kentucky, Mississippi, New Hampshire, Florida, South Carolina, Alabama and Tennessee have been filed by a South Carolina law firm.

Daniel Speights (a school board attorney) noted that legal theories available to school boards against manufacturers of asbestos include: contract (the products were not fit for the use intended), negligence (the manufacturers were negligent in informing users of the risks associated with the products), strict liability (manufacturers should be strictly liable for failing to warn of asbestos hazards), and restitution (manufacturers have a duty to abate the hazard).

A civil action filed on behalf of the Barnwell, South Carolina, school district notes that school districts and public officials could be held liable for failing to abate a health hazard.

A September 1981 report by the U.S. attorney general to Congress recommended that school authorities seek to recover asbestos abatement expenses from asbestos manufacturers. The report said federal litigation would be ineffective unless Congress imposed liability on asbestos manufacturers.

Asbestos manufacturers are being sued by at least 20,000 people on the grounds that the companies knew of asbestos hazards and covered them up, according to a September article in the *National Journal*.

A 1983 report from the Rand Institute says that asbestos litigation and compensation has cost an estimated $1 billion over the past decade. Only 37 cents of every dollar went for actual compensation to plaintiffs. Estimates of the number of deaths due to asbestos over the next 30 years range from 74,000 to 265,000.

What you should do about asbestos in your school

Given current asbestos rules and regulations, PTAs should check on the following:

1. Was each school in your district inspected for friable asbestos? If not, request this action immediately.
2. Was an analysis of asbestos samples, using polarized light microscopy, conducted?
3. Are records of the asbestos inspection on file in the school district?
4. Does the PTA have a copy of the report in its records?

In schools where asbestos was found, has the school complied with the following:

1. Did the school district notify the children's parents, either directly or through the PTA?
2. Were school employees notified of the location of the materials?
3. Did the school post a standard form in administrative and custodial areas?
4. Are measures being taken, if not already completed, to remove asbestos in the school?
5. Did the school district provide maintenance and custodial employees with instructions for reducing exposure to asbestos?

If asbestos was found in your school, but corrective measures are not being taken, the following steps should be pursued:

1. The PTA should work with the school to affect removal or abatement. Invite parents, teachers, employees of the building, the school principal, and the superintendent to a PTA meeting. Request information about the degree of the asbestos problem and what plans are being developed for cleanup.

2. If plans are not under way or seem unsatisfactory, contact the school board to inform it of your concern. If informal discussions do not produce results, get the issue on the agenda of the next school board meeting. Be prepared to provide the facts, including the inspection reports and the cost of abatement, to school board members.

3. Meanwhile, inform your state legislature and the U.S. Congress about the problems and the degree of difficulty there is in terms of cleanup.

4. If the school board is unable or unwilling to ameliorate the problem, one resort would be a lawsuit. Be sure that you have tried every alternative before taking this step.

Fairbanks North Star Borough - Program for Progress

Project Title

Fairbanks Schools Asbestos
Identification and Removal Project

☒ Equipment ☐ Road
☒ Structure ☐ Utility
☐ Service

Capital Request $1,385,000

Estimated Annual M & O Cost No Increase in Annual M & O Costs.

Description, Objectives and Public Benefit

During November 1983, sixteen school facilities of the Fairbanks North Star Borough were surveyed by a professional consultant for the presence and extent of asbestos. Asbestos was found in thirteen of the sixteen schools surveyed. This asbestos is "friable" or in a condition to release small fibers into the air. Non-friable asbestos was also found in these schools, usually in a cement-like compound on pipe elbows and fittings.

Friable asbestos is associated with a number of serious illnesses; consequently, the Federal government has issued strict regulations governing the use of asbestos and occupational exposure to airborne asbestos fibers.

The objective of this project is to protect the health of all Borough school building users by the removal or encapsulization of the asbestos materials.

The asbestos hazards were assessed and prioritized in order of the most serious potential risks of exposure. These priorities are:

URGENT:	Requires immediate attention to eliminate or reduce the risk of severe exposure to asbestos fibers.
PRIORITY ONE:	The facility contains friable asbestos which is accessible to all building occupants.
PRIORITY TWO:	The facility contains asbestos which is accessible to maintenance and custodial personnel.

A summary of asbestos findings and cost estimates for removal are given in Table 1.

Project Schedule

Encapsulization began December 1983 with local fund appropriation. Removal scheduled for summer 1984.

A JOINT VENTURE OF
HOLDEN & ASSOCIATES AND
WILLIAM J. KING &
ASSOCIATES

January 31, 1984

Mr. Harry Rogers, Superintendent
Petersburg City Schools
P.O. Box 329
Petersburg, Alaska 99833

RE: Petersburg High School
Asbestos Removal

Per your request we have evaluated the quantity and cost of removal of the asbestos pipe insulation in the 1951 portion of the Petersburg High School.

Per your testing information, the known area of asbestos is confined to the heating supply and return mains, and the insulation of the old boiler. We assume that vertical piping in walls or classes would not be removed. The cost of removing the horizontal runs and the boiler insulation is $107,000.

We have assumed that pieces would be removed in 5' to 10' lengths and properly disposed of according to State and Federal law.

Sincerely,

W. Keith Gerken

Jan. 16, 1984

Mr. Ray Camardella
Kodiak Island Borough School District
P.O. Box 886
Kodiak, Alaska 99615

Dear Mr. Camardella:

Enclosed is the cost estimate for the asbestos abatement of the spray-applied material in Kodiak High School. We have included our recommendation for abatement, approximate cost and time figures, and phasing possibilities to allow for portions of the building to remain in use during the abatement.

If you have any questions concerning this report or would like to continue on with plans and specifications, please feel free to contact me.

We look forward to working with you on your asbestos abatement problems.

Sincerely,

GOBBELL·HAYS·PICKERING

William L. Wagner

WLW/cr

Enclosures

KODIAK ISLAND BOROUGH SCHOOL DISTRICT

INTRODUCTION

This report was prepared in response to the Kodiak Island Borough School District's request for the proper selection of appropriate abatement measures and cost estimates. Enclosed are Gobbell·Hays·Pickering's recommendations for abatement and approximate construction cost.

VIEWING THE PROBLEM

Asbestos abatement selection is a highly subjective and often difficult process. There are no standards, governmental or otherwise, which provide for clear-cut choices. Abatement costs must be balanced against present and future building use, building life, health considerations, and legal liability; abatement solutions must take into account that balance.

GOBBELL·HAYS·PICKERING feels it is necessary for all concerned to evaluate the level of existing exposure and chance for potential exposure prior to choosing an abatement method. We consider it our professional responsibility in dealing with this problem to provide recommendations toward establishing a safe environment which functions as originally intended or better. The Attorney General's Asbestos Liability Report to the Congress contains the statement that there is no known safe lower limit of exposure to asbestos fibers. We feel that exposure should be eliminated if at all practical for health reasons and legal ramifications to the owner. Here, too, cost is a factor. For example, one lawsuit in the future could cost the owner more than a more expensive, but possibly better, original abatement choice.

SELECTION OF A CORRECTIVE ACTION

The following is the United States Environmental Protection Agency's comparison of asbestos abatement alternatives for encapsulation and removal, which we feel are the only two appropriate abatement measures for this application. Outlined with each method are their opinions as to some of the advantages and disadvantages and their thoughts as to when the methods are appropriate or inappropriate. Our abatement recommendation is made with these considerations in mind, and also with practical, health and legal considerations tempered with architectural and engineering experience in asbestos abatement projects.

Method: REMOVAL

Advantages of Method

Eliminates asbestos source

Eliminates need for special operations and maintenance program

Disadvantages of Method

Replacement with substitute material may be necessary

Porous surface also may require encapsulation

Improper removal may raise fiber levels

Appropriate Applications

Always

Inappropriate Applications

Never

General Comments

Containment barriers needed

Worker protection required

Wet removal is required for all types of asbestos

Disposal may be a problem in some areas

Unusual circumstances, complex surfaces, and the presence of utilities may require special removal techniques

Method: ENCAPSULATION

Advantages of Method

Reduces asbestos fiber release from material

Initial cost may be lower than removal

Does not require replacement of material

Disadvantages

Asbestos source remains and must be removed later

If material is not in good condition, sealant may cause material to delaminate

Periodic reinspection required to check for damage or deterioration

Repair of damaged or deteriorated encapsulated surfaces required

Encapsulated surface is difficult to remove and may require dry techniques for eventual removal

Long-term cost may be higher than removal

Appropriate Applications

Material still retains bonding integrity

Damage to material not likely

Material not highly accessible

Material granular cementitious

Inappropriate Applications

Material does not adhere well to substrate

Material is deteriorating or damaged, or damage is likely

Water damage is evident

Material is fibrous, fluffy

General Comments

Containment barriers needed

Worker protection needed

Airless sprayers should be used

Damaged pipe insulation may be taped but not sprayed

Previously encapsulated materials may have to be re-encapsulated

With our previous experience and the United States Environmental Protection Agency's opinions in mind, we have selected removal of all asbestos-containing spray-applied material in the high school. With encapsulation cost exceeding 70% of removal cost and still requiring a costly maintenance program because the material and owner liability still exist, we feel removal is the optimum solution.

PHASING

We have divided the school into two areas we feel can be done in phases to help keep part of the building open during abatement. Phase I includes the major portion of the affected areas, including the multi-purpose entry, library and classrooms of both levels. Phase II would include the corridor outside the gym and pool and two fan rooms on either side of the gym. The first and second floors were not separated due to complications in access to the stairwell during abatement and with the height of the ceiling in the multi-purpose entry.

KODIAK ISLAND BOROUGH SCHOOL DISTRICT
KODIAK HIGH SCHOOL

TABLE A

Removal/Replacement Cost - Phase I

Item	Quantity	Cost/Item	Total
Demolition			
Dropped Ceiling Removal	24,855 S.F.	2.10	$ 52,195.50

Cost Summary

Demolition		
Phase I		$ 52,195.50
Phase II		3,633.00
		$ 55,828.50
Asbestos Removal		
Phase I		$ 600,814.50
Phase II		45,029.00
		$ 645,843.50
Replacement		
Phase I		$ 371,992.65
Phase II		25,842.90
		$ 397,835.55
	Construction Total	$1,099,507.55
	Air Monitoring Total	39,000.00
	Total Project Cost*	$1,133,507.55

*Estimated costs are **excluding** A/E fees

NOTE 1: The asbestos removal figures have been developed using wage rates for asbestos workers instead of general laborers. Prices could be reduced if the Department of Labor approves the use of general laborers and does not require asbestos workers for the removal of the fireproofing.

DRAFT

SECTION 1

EXECUTIVE SUMMARY

Swearingen Associates surveyed two school facilities at Delta Junction and Fort Greely which are operated by the Delta/Greely School District, REAA #15. These schools were surveyed for the presence and extent of asbestos. On December 20 and December 21, 1983, the following facilities were evaluated:

Delta Junction	Fort Greely
1. Delta Junction School	1. Greely School
2. Univ. of Alaska Bldg.	
3. Metals and Ag. Shop	
4. Class Module 1, 2, 3, 4, 5	
5. Support Module A, B, C	

Asbestos was found in the Delta Junction and Greely schools and in the five (5) class modules. No asbestos-containing materials were identified in the University Building, the Shop Building, or in the three Support Modules.

The asbestos found in these facilities was generally in a sound, cement-like compound used as thermal insulation. In several locations, however, "friable" asbestos was identified: asbestos which is in a condition to release microscopic particles into the air. (Examples of friable asbestos include sprayed-on materials and materials which have been physically damaged.)

Friable asbestos, when inhaled or ingested, is associated with a number of serious illnesses; consequently, the Federal government, mainly the Environmental Protection Agency and the Occupational Safety and Health Administration, have issued strict and comprehensive reg-ulations governing the use of asbestos and the limits of occupational exposure to airborne asbestos fibers.

We have prioritized our findings in order of the most serious potential risks of exposure. These priorities are:

PRIORITY ONE: The facility contains friable asbestos which is accessible to all building occupants.

PRIORITY TWO: The facility contains friable asbestos which is accessible to maintenance and custodial personnel only.

PRIORITY THREE: The facility contains only non-friable asbestos which is accessible to all building occupants.

DRAFT

PRIORITY FOUR: The facility contains only non-friable asbestos accessible to maintenance personnel only.

The facilities which have a Priority One asbestos hazard are:

The five Classroom Modules at the Delta Junction School

The facilities which have a Priority Two asbestos hazard are:

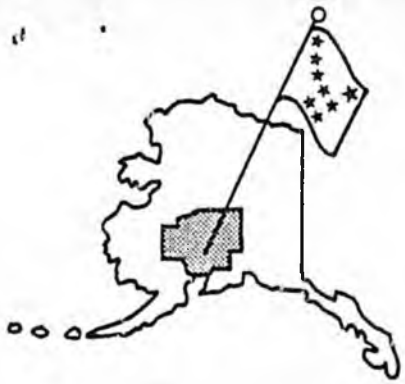
Delta Junction School
Fort Greely School

No facilities were identified with only a Priority Three asbestos hazard.

No facilities were identified with only a Priority Four asbestos hazard.

The five Classroom Modules have sprayed-on accoustical ceilings which had been previously sampled and found to contain approximately five percent (5%) asbestos. Air monitoring in each of these modules conducted as part of this survey established that air borne fiber count was less than four percent (4%) of the allowable limit. (Note that the EPA standard test for air borne fibers includes all fibers--lint, dust, asbestos, and animal--not just asbestos.)

There are several techniques which are used to reduce the risks of exposure to asbestos fibers. These include removal of the asbestos containing material, sealing or encapsulating the asbestos-containing material to prevent fiber release, enclosing or barricading the asbestos-containing material so that contact with it is unlikely, and administrative controls and procedures. The latter three, encapsulation, enclosing and administrative controls, all require extensive record keeping and periodic re-inspection. They also will seriously impact future facility modifications as well as retaining a potential hazard in the event of a fire or earthquake. Asbestos removal is generally considered to be the most desireable abatement procedure for schools. The initial costs are higher than the alternatives; however, the potential for future damages are gone as are the administrative requirements for record maintenance.



Swearingen Associates developed a cost estimate for the asbestos removal in the facilities schools identified above: The estimated cost of $99,700 includes asbestos removal and disposal, surface refinishing or insulating, preparation of removal specifications and contract, and, performance verification and certification.

TABLE I

SUMMARY OF ASBESTOS FINDINGS AND COST ESTIMATES

FACILITY	EXPOSURE	CONDITION	PRIORITY	ABATEMENT COST*
DELTA JUNCTION SCHOOL	MAINTENANCE	FRIABLE	P - TWO	$ 8,910
UNIVERSITY OF ALASKA BLDG./	NONE	N/A	N/A	NONE
METALS & AG. SHOP	NONE	N/A	N/A	$ NONE
CLASS MODULES 1, 2, 3, 4, 5	PUBLIC	FRIABLE	P-ONE	$ 70,920
SUPPORT MODULES A, B, C	NONE	N/A	N/A	$ NONE
FORT GREELY SCHOOL	MAINTENANCE	FRIABLE	P-TWO	$ 19,870
			TOTAL	$ 99,700

*Abatement costs include asbestos removal and disposal, surface refinishing or new insulation, removal specifications and contract preparation, and final project acceptance and certification.

Josephson

March 20, 1984

Joe P. Josephson
State Senator
State Capitol
Pouch V
Juneau, AK 99811

Dear Senator Josephson:

The Valdez City Schools has been inspected and does not contain an airborne asbestos condition. Any asbestos is incapsulated and does not contain a condition which is hazardous to students and/or employees or public as caused by asbestos fibers.

I appreciate your efforts in providing financial support to eliminate any hazard which may be caused by airborne asbestos. My only recommendation would be to develop criteria which would assist school districts in applying for the monies. I feel that the costs involved may be tremendously varied pending individual districts' plans for removing asbestos; particularly in the case of demolition and rebuilding.

Thank you for the opportunity to provide input.

Sincerely,

GEORGE MAYKOWSKYJ
Superintendent

ASSOCIATION OF ALASKA SCHOOL BOARDS

ASBESTOS SURVEY

School District	Information Gathered
Adak	Removal project will be under way this summer through H.H.S. at a total cost of $120,000 which included capsulating the pipes earlier this school year.
Alaska Gateway	No asbestos problem
Aleutian Region	No asbestos problem
Anchorage	Approximately $10 million dollars. Asbestos expert, Wayne Tenzel, will be available for testimony January 24 and 25 as well as the first part of February. (Written report will be mailed to AASB.)
Chatham	No asbestos problem
Copper River	No asbestos problem
Cordova	Cost estimates range from $34,000-$38,000 bid (direct contact with contractors) to $80,000 estimates from engineers who will set up removal plans. Usual engineering costs 10-15% of the contract price. Additional factor replacement of material removed - $20,000-$40,000.
Fairbanks	Total cost for all 21 schools in the Fairbanks area is $1,568,045.00. (Written report will follow via mail.)
Galena	No asbestos problem
Haines	No asbestos problem
Kenai	No asbestos problem
King Cove	No asbestos problem
Lake and Peninsula	No asbestos problem
Nenana	No dollar amount has been determined to date.
Nome	No asbestos problem
North Slope	No asbestos problem

ASBESTOS SURVEY

Respirator use, allowed under this section, is on a sliding scale according to exposure levels. Respirator use is allowed as follows, provided that they have NIOSH and MSHA approval:

1. Any respirator must be an approved type. Approval currently is a combined MSHA/NIOSH designation, which means that respiratory equipment is jointly approved by the Mine Safety and Health Administration and the National Institute of Occupational Safety and Health. In the future, it is possible that respirators will be approved only by NIOSH. All approved respirators carry an approval number. Respirators are approved only for specific types of hazard and within certain contamination limits. Make sure that respirators you are using are designed and approved for the hazard encountered and the concentration at which it is encountered.

2. Re-usable or single-use air purifying respirators for use in atmospheres with exposure up to 10 times that limit of 2 fibers per cubic centimeter (cc) of air for an 8-hour exposure or 10 times the limit of 10 fibers per cc for a short exposure.

3. Powered air purifying respirators for up to 100 times the limit.

4. Type C supplied air or pressure demand type respirators where the exposure exceeds 100 times the limit.

Disposable clothing is suggested for employees working in asbestos atmospheres(See Appendix C). In addition, monitoring of exposure levels on both an initial and continuing basis must be performed. Caution signs are required in work areas and all debris must be bagged and labeled before disposal in accordance with the provisions of 04.0102. Medical monitoring is another important part of the program. Every employee exposed to asbestos in concentrations greater than 0.1 fiber per cubic centimeter (f/cc) must have a medical examination made available to him within 30 days of his first exposure and annually thereafter. If an employee terminates his employment, or is terminated, a medical exam must be available to him within 30 days of the termination. All medical records must be retained by employer for 20 years.

APPLICATION OF STANDARDS

The OSH code as written is extremely hard to comply with in the construction industry. They were written for static industrial applications. The entire 04.0102 asbestos standard is part of the 01.0101 verticalized standard and must be adhered to. The effects of asbestos do not show until as late as 20 years after the initial exposure. The legal and moral ramifications of not providing proper protection for employees are enormous. Liability suits in the millions of dollars have already been awarded to exposed employees and their associated costs far overshadow OSH penalties. We are then faced with a two-fold problem in construction operations. First and foremost is whether or not employees are adequately protected and secondarily, are we in compliance with OSH standards? Since the existence of asbestos cannot be determined in the field, and many construction operations which come in contact with asbestos are of short duration we have a difficult time gaining 100% compliance with OSH regulations. This policy can only be a guide to initial employee protection and seeks a method of safeguarding the employee and OSH compliance.

This document is intended to aid in short term, small or low exposure routine situations. It is not intended for use on abatement projects where the scope of the project is solely to remove asbestos from a structure. Because of the many other factors involved in abatement work like EPA regulations, protection of the owners future interest, etc., monitoring should always be conducted for abatement projects.

ASBESTOS POLICY AND SAFE WORKING PRATICES

For the purpose of simplification, we are dividing this sub-section into three areas we have been able to identify where the construction process comes into contact with asbestos.

Notify him that because he had taken these actions you will consider his rights waived unless he informs you within 5 days that he will take a physical. This notice should also be certified mail or personal service with certification. If you use our data base concept you will almost always have a provide medical monitoring since it is extremely unlikely that exposures would fall under the 0.1 fiber limit. If you do not use the data base you will have to air monitor to determine whether or not medical surveillance is required.

EMPLOYEE TRAINING

An important part of any asbestos program must be employee hazard awareness. Employees likely to be exposed must be told about what produces asbestos dust, such as cutting. While all of us are aware of the health hazard, many of us fail to realize that it is so abundant in repair, remodeling, and emergency work. We must instruct our employees in safe working practices, covering thoroughly the following topics:

1) The health hazard.

2) The areas of work most likely to have exposure problems.

3) The importance and proper use of respiratory protection.

4) The importance of treating all suspect material as asbestos until proven otherwise.

5) The importance of having all suspect material tested.

6) The importance of having air tests made.

7) A thorough understanding of OSH regulations.

8) A thorough knowledge of techniques for limiting airborne concentrations.

9) A thorough understanding of personal protective equipment.

DATA BASE CONCEPT

One way to handle the problem of air monitoring is to use a data base concept. The OSH standard is loosely worded about actual monitoring requirements and hard to apply to construction operations.

We feel that the monitoring requirements can be technically met if each company does air monitoring for a range of examples of exposures it deals with. This data could then be applied to different projects with similar circumstances and materials. Each company can in effect establish a data base of probable concentrations for each type of exposure and rpotect their employees accordingly.

Many contractor air samples indicate properly handled asbestos will be below two fibers, the current OSH respirator requirement level. In spite of this we feel that respirators are absolutely required for any work with asbestos containing materials. While the current OSH level is 2 fibers per cubic centimeter, we have reason to believe it will soon be lowered. It is only prudent to provide respiratory protection for all exposures including those assumed to be reasonably low. While it is possible to make an informed decision that air monitoring is not required, we do not feel that the same can be said for the use of respirators. It is a keystone of the data base concept that employee protection be supplied and used for the so called low level exposures (those below current OSH respiratory requirement limits).

When an asbestos exposure situation is encountered you have two choices: monitor or use the data base concept. If you use data basing, review your file for similar situations. Make an informed decision based on past exposure experience. Be sure to allow an adequate safety factor when deciding on a respirator type. If your expected exposure is near the top of the allowable limits for the respirators you have selected, go to the next type up the protective ladder.

04.0102 —ASBESTOS

(a) Definitions.

For the purpose of this section.

(1) "Asbestos" includes chrysotile, amosite, crocidolite, tremolite, anthophyllite, and actinolite.

(2) "Asbestos fibers" means asbestos fibers longer than 5 micrometers.

(b) Permissible exposure to airborne concentrations of asbestos fibers.

(1) Standard effective July 7, 1972. The 8-hour time-weighted average airborne concentrations of asbestos fibers to which any employee may be exposed shall not exceed five fibers, longer than 5 micrometers, per cubic centimeter of air, as determined by the method prescribed in paragraph (e) of this section.

(2) Standard effective July 1, 1976. The 8-hour time-weighted average airborne concentrations of asbestos fibers to which any employee may be exposed shall not exceed two fibers, longer than 5 micrometers, per cubic centimeter of air, as determined by the method prescribed in paragraph (e) of this section.

(3) Ceiling concentration. No employee shall be exposed at any time to airborne concentrations of asbestos fibers in excess of 10 fibers, longer than 5 micrometers, per cubic centimeter of air, as determined by the method prescribed in paragraph (e) of this section.

(c) Methods of compliance.

(1) Engineering methods.

(i) Engineering controls. Engineering controls, such as, but not limited to, isolation, enclosure, exhaust ventilation, and dust collection, shall be used to meet the exposure limits prescribed in paragraph (b) of this section.

(ii) Local exhaust ventilation.

(a) Local exhaust ventilation and dust collection systems shall be designed, constructed, installed, and maintained in accordance with the American National Standard Fundamentals Governing the Design and Operation of Local Exhaust Systems, ANSI Z9.2–1971, which is incorporated by reference herein.

(b) See § 1910.6 concerning the availability of ANSI Z9.2–1971, and the maintenance of a historic file in connection therewith. The address of the American National Standards Institute is given in § 1910.100.

(iii) Particular tools. All hand-operated and power-operated tools which may produce or release asbestos fibers in excess of the exposure limits prescribed in paragraph (b) of this section, such as, but not limited to, saws, scorers, abrasive wheels, and drills, shall be provided with local exhaust ventilation systems in accordance with subdivision (ii) of this subparagraph.

(2) Work practices.

(i) Wet methods. Insofar as practicable, asbestos shall be handled, mixed, applied, removed, cut, scored, or otherwise worked in a wet state sufficient to prevent the emission of airborne fibers in excess of the exposure limits prescribed in paragraph (b) of this section, unless the usefulness of the product would be diminished thereby.

(ii) Particular products and operations. No asbestos cement, mortar, coating, grout, plaster, or similar material containing asbestos shall be removed from bags, cartons, or other containers in which they are shipped, without being either wetted, or enclosed, or ventilated so as to prevent effectively the release of airborne asbestos fibers in excess of the limits prescribed in paragraph (b) of this section.

(iii) Spraying, demolition, or removal. Employees engaged in the spraying of asbestos, the removal, or demolition of pipes, structures, or equipment covered or insulated with asbestos, and in the removal or demolition of asbestos insulation or coverings shall be provided with respiratory equipment in accordance with paragraph (d)(3)(iii) of this section and with special clothing in accordance with paragraph (d)(3) of this section.

(d) Personal protective equipment.

(1) Compliance with the exposure limits prescribed by paragraph (b) of this section may not be achieved by the use of respirators or shift rotation of employees, except:

(i) During the time period necessary to install the engineering controls and to institute the work practices required by paragraph (c) of this section;

(xi) Laundering:

(a) Laundering of asbestos contaminated clothing shall be done so as to prevent the release of airborne asbestos fibers in excess of the exposure limits prescribed in paragraph (b) of this section.

(b) Any employer who gives asbestos-contaminated clothing to another person for laundering shall inform such person of the requirement in (a) of this subdivision to effectively prevent the release of airborne asbestos fibers in excess of the exposure limits prescribed in paragraph (b) of this section.

(c) Contaminated clothing shall be transported in sealed impermeable bags, or other closed, impermeable containers, and labeled in accordance with paragraph (g) of this section.

(e) *Method of measurement.*

All determinations of airborne concentrations of asbestos fibers shall be made by the membrane filter method at 400–450 × (magnification) (4 millimeter objective) with phase contrast illumination.

(f) *Monitoring.*

(1) Initial determinations. Within 6 months of the publication of this section, every employer shall cause every place of employment where asbestos fibers are released to be monitored in such a way as to determine whether every employee's exposure to asbestos fibers is below the limits prescribed in paragraph (b) of this section. If the limits are exceeded, the employer shall immediately undertake a compliance program in accordance with paragraph (c) of this section.

(2) Personal monitoring.

(i) Samples shall be collected from within the breathing zone of the employees, on membrane filters of 0.8 micrometer porosity mounted in an open-face filter holder. Samples shall be taken for the determination of the 8-hour time-weighted average airborne concentrations and of the ceiling concentrations of asbestos fibers.

(ii) Sampling frequency and patterns. After the initial determinations required by subparagraph (1) of this paragraph, samples shall be of such frequency and pattern as to represent with reasonable accuracy the levels of exposure of employees. In no case shall the sampling be done at intervals greater than 6 months for employees whose exposure to asbestos may reasonably be foreseen to exceed the limits prescribed by paragraph (b) of this section.

(3) Environmental monitoring.

(i) Samples shall be collected from areas of a work environment which are representative of the airborne concentrations of asbestos fibers which may reach the breathing zone of employees. Samples shall be collected on a membrane filter of 0.8 micrometer porosity mounted in an open-face filter holder. Samples shall be taken for the determination of the 8-hour time-weighted average airborne concentrations and of the ceiling concentrations of asbestos fibers.

(ii) Sampling frequency and patterns. After the initial determinations required by subparagraph (1) of this paragraph, samples shall be of such frequency and pattern as to represent with reasonable accuracy the levels of exposure of the employees. In no case shall sampling be at intervals greater than 6 months for employees whose exposures to asbestos may reasonably be foreseen to exceed the exposure limits prescribed in paragraph (b) of this section.

(4) Employee observation of monitoring. Affected employees, or their representatives, shall be given a reasonable opportunity to observe any monitoring required by this paragraph and shall have access to the records thereof.

(g) Caution signs and labels.

(1) Caution signs.

(i) Posting. Caution signs shall be provided and displayed at each location where airborne concentrations of asbestos fibers may be in excess of the exposure limits prescribed in paragraph (b) of this section. Signs shall be posted at such a distance from such a location so that an employee may read the signs and take necessary protective steps before entering the area marked by the signs. Signs shall be posted at all approaches to areas containing excessive concentrations of airborne asbestos fibers.

(ii) Sign specifications. The warning signs required by subdivision (i) of this subparagraph shall conform to the requirements of 20" x 14" vertical format signs

(3) Annual examinations. On or before January 41, 1973, and at least annually thereafter, every employer shall provide, or make available, comprehensive medical examinations to each of his employees engaged in occupations exposed to airborne concentrations of asbestos fibers. Such annual examination shall include, as a minimum, a chest roentgenogram (posterior-anterior 14 x 17 inches), a history to elicit symptomatology of respiratory disease, and pulmonary function tests to include forced vital capacity (FVC) and forced expiratory volume at 1 second ($FEV_{1.0}$).

(4) Termination of employment. The employer shall provide, or make available, within 30 calendar days before or after the termination of employment of any employee engaged in an occupation exposed to airborne concentrations of asbestos fibers, a comprehensive medical examination which shall include, as a minimum, a chest roentgenogram (posterior-anterior 14 x 17 inches), a history to elicit symptomatology of respiratory disease, and pulmonary function tests to include forced vital capacity (FVC) and forced expiratory volume at 1 second ($FEV_{1.0}$).

(5) Recent examinations. No medical examination is required of any employee, if adequate records show that the employee has been examined in accordance with this paragraph within the past 1-year period.

(6) Medical records.

(i) Maintenance. Employers of employees examined pursuant to this paragraph shall cause to be maintained complete and accurate records of all such medical examinations. Records shall be retained by employers for at least 20 years.

(ii) Access. The contents of the records of the medical examinations required by this paragraph shall be made available, for inspection and copying, to the Assistant Secretary of Labor for Occupational Safety and Health, the Director of NIOSH, to authorized physicians and medical consultants of either of them, and, upon the request of an employee or former employee, to his physician. Any physician who conducts a medical examination required by this paragraph shall furnish to the employer of the examined employee all the information specifically required by this paragraph, and any other medical information related to occupational exposure to asbestos fibers.

APPENDIX A

THE NEW OSH STANDARD

On Friday November 4, 1983 OSHA issued an Emergency Temporary Standard (ETS) on asbestos. These emeregency requirements will remain in effect for six months under the rules governing the issuance of Emeregency Temporary Standards. This means that it will be in effect until May 4, 1984.

During this time period we expect OSHA to go through the formal rule making process in order to cause a permanent change in the existing standard. We would be very much surprised if this formalization process resulted in a final standard with provisions much different than those outlined in the ETS.

The complete text of the Emergency Temporary Standard is printed after this explanation.

The ETS does not effect the data base concept since we are providing employee protection from zero exposures on up. It does, however, reduce the margin of error and place an even greater emphasis on careful work procedures.

It requires additional employee training and lowers the permissable exposure level (PEL) to .5 fibers from the current 2 fibers per cc of air. This is a 75% reduction in the amount of asbestos that an employee can be exposed to without respiratory protection. The .1 fiber action level for medical surveillance remains unchanged.

In addition the approval level for each type of respirator is reduced to a multiple of the new lower PEL.

Single use repirators have a maximum concentration approval of 5 fibers per cc (10 times .5) rather than 20 fibers (10 times 2) for as long as the ETS is in effect. Our data base indicates that about 5% of all construction exposures could exceed the 5 fiber limit on single use respiators.

Full face piece purifying and powered air purifiers are approved up to 50 fibers per cc (100 times .5) rather than up to 200 fibers (100 times 2). Any concentration over 50 fibers requires the use of airline respirators.

Appendix B

RESPIRATOR PROGRAM FOR USE IN CONJUNCTION WITH POSSIBLE ASBESTOS EXPOSURE

Because of the possibility of asbestos exposure during repair, remodeling and emergency work, we recommend that the following items be part of the equipment furnished crews involved in these projects:

1. Respirators
2. Disposal Bags and Decals
3. 20" x 14" Caution Sign
4. Protective Clothing

The most important part of this entire program is the immediate use of respiratory protection by personnel contacting possible asbestos containing materials.

Steps to be followed in respirator use:

1. Select a respirator designed for use in asbestos atmospheres and carrying a NIOSH-MSHA approved number.
2. Instruct and train employees in:
   a. The asbestos health hazard
   b. The use of respirator stressing the importance of a tight fit.
   c. Respirator maintenance and cleaning.
3. Set up a procedure for Respirator Use and Work Area Surveillance. These duties can best be assigned to the crew foreman on most construction activities.

OSH requires a written respiratory protection plan whenever respirators are in use. Your company can establish such a program by reviewing the requirements of OSH code 04.0102.

A publication of the Milwaukee Construction Industry Safety Council entitled "Contractors Guide to Respirator Use and Written Respirator Programs" will be useful in your fu[illegible] efforts.

Appendix C

SIGNS AND PROTECTIVE CLOTHING

Areas where work with possible asbestos containing materials must be marked by 20" x 14" Caution Signs (yellow, with black letters) containing the exact wording called for in the standards. Contact us or your trade association for help in obtaining these signs.

A label must be attached to all bags containing asbestos material before disposal. Help in obtaining these labels is available from many trade associations.

Protective clothing can also be of the disposable type and offer several advantages:

1. Low initial cost
2. Ease of storage
3. No laundering costs
4. No danger of contamination during laundry operations
5. Ease of disposal

Innovative Safety for an Innovative Industry

I-RESPIRATOR TYPES

A respirator is a device designed to ensure the wearer of a breathable non-contaminated supply of air. There are two basic types of respirators, those that purify the existing atmosphere by filtering contaminants out and those that provide clean air from an outside source. There are several types of respirators within each of the above categories. A basic respirator program starts with a thorough understanding of the respirators available and the uses and limitations of each.

Air-Purifying Respirators remove the contaminants from air before breathing by filtering out contaminants, such as dust, fumes and mists. The simplest form of respirator in this category is commonly known as a single use or disposable respirator. These units are low cost and offer protection for certain types of low level exposures. They are generally used for dusts and fiber removal. As with all types of respirators, each manufacturer's product is approved for only certain types of contaminants and specific exposure levels.

The next most complicated type of air-purifying respirators is also designed for dusts and mists and features removable purifying elements. It is reusable as long as the elements are changed and it is properly maintained and cleaned. It is generally approved for higher concentrations than the single-use respirator. It can be purchased in quarter-mask, half-mask and full-face piece styles. Each style offers, successively, more protection with the full-face piece offering some protection for the eyes as well.

Closely related to the above respirator style are chemical cartridge and cannister respirators for gases and fumes. These respirators feature replaceable filter units and come in quarter, half and full-face styles. The filters remove harmful gases and vapors by way of a chemical reaction that absorbs or renders them harmless. Each filter element is effective only against a specific hazard or class of hazards. Filter cartridges are color coded according to a universal scheme, enabling the user to positively identify the proper cartridge for the hazard present.

The last type of respirator, in the air-purifying class, is known as a powered air purifying unit. This is a high efficiency mechanical unit. Powered air purifies come in half-mask and full-face mask or hood styles. A fan forces contaminated air through a filter and pure air into the face piece. Depending on the approved cartridges used, they can be effective for particles and gases or vapors.

It is important to note that none of the air-purifying respirators can be used in oxygen deficient atmospheres, since they do not supply air. They are also only effective against the particular contaminant and the concentration they are approved for.

The second major category of respirators are termed air supply units. As the name implies, they provide their own source of air from an outside supply. They can be used in high concentrations of most any type of hazardous substance.

The values, we have been discussing, represent a term in Industrial Hygiene known as a TLV or threshold limit value. When we say carbon monoxide is regulated by OSHA at concentrations of 50 PPM, we mean that it has a TLV of that amount. A TLV is the concentration value below which workers, exposed for extended periods of eight hour days, are assumed to suffer no ill effects. Concentrations above the TLV are considered dangerous and require contractor action either in the form of engineering or administrative controls. TLV's are also referred to as PEL's (Permissable Exposure Limits) when talking in terms of OSHA compliance.

Another commonly used term in Industrial Hygiene is TWA or Time Weighted Averages. PEL's are usually expressed in terms of Time-Weighted Averages. A time-Weighted Average is simply an average of the various exposures occuring during a normal work day. Using a TWA and carbon monoxide as an example an exposure of 4 hours at 75 PPM and 4 hours at 25 PPM yields a time-weighted average of 50 PPM or no excessive employee exposures. Occasionally, hazardous substances, which are regulated on the basis of Time-Weighted Averages, have upper exposure limits (UEL) which cannot be exceeded without proper employee protection.

IV TESTING EQUIPMENT AND METHODS

Effective health protection requires that monitoring of concentration levels be done. No effective program can exist without an accurate idea of the contaminant levels present in the work environment. Since respirators are only approved and effective for specific concentrations, the hazard concentration must be established even to make an accurate selection. The types and methods of air monitoring are varied, ranging from simple units for spot checks to sophisticated continuous monitors. Equipment suppliers can help you choose the exact type of monitoring equipment for your needs and the hazards you are encountering. Most of the time, they will train your employees in the use and maintenance of the equipment. It is important to know exactly the kind and extent of service the manufacturer will provide before purchasing any monitoring equipment. It is also possible to have monitoring handled by an outside consultant.

V ENGINEERING vs ADMINISTRATIVE CONTROL

The cornerstone of any Construction Program, involving Industrial Hygiene, Respirator Protection and Hazardous Substance Control, is an understanding of the relationship between Engineering and Administrative Controls. OSHA law requires that Engineering Control be applied first, wherever possible, to hazardous-substance situations. Engineering controls are methods of reducing the amount of contaminants in the work environment by controlling and modifying the source of the contaminant. They include such things as isolation, enclosure, ventilation and dust collection. Perhaps the most feasible administrative control for construction operations is substitution. Wherever possible, non-hazardous and non-toxic substances should be substituted for harmful ones. This truly limits the hazard at the source. The Construction Health Specialist is always alert for ways and places to substitute.

For example, the problem caused by asbestos has been virtually eliminated in new construction, through the use of new materials. The application of engineering controls can also be effectively achieved in many cases by changes in the work processes. The use of engineering controls require imaginative and innovative thought.

These basic elements must be covered in detail in your respiratory protection program. The writing of a program for your company is a major undertaking. Each company encounters different hazards in their day to day operation. Before beginning preparation of a written program:

1. Identify the hazards found in your activities. This can best be done by obtaining data sheets on all materials used. Someone must be responsible for obtaining this basis information.

2. Take every available option to eliminate the use of known hazardous substances.

3. Determine the exposure levels of hazardous substances that are in use. This can only be done through accurate monitoring.

4. Investigate the types of respiratory equipment, specifically designed and approved for the hazard encountered. Before buying any respiratory equipment, find out what services the seller supplies with his equipment. Will he help train and fit? Does he have specific and detailed use instructions?

5. Because construction operations are diverse, complex, and widespread, you must establish an internal notice of use of hazardous substances system. Make someone (job superintendent) responsible for notifying safety personnel of intended usage.

6. Set up a specific training and fitting program for respirator use. No one can tell for certain in construction, when and where in the construction process, hazardous substances will be encountered. Because of the high turnover, periodic general training of employees may not be sufficient. A training program, done immediately before respirator use, appears to be the only effective way to combat infrequent use of regulated hazardous substances.

7. Make one individual responsible for administering your program, keeping your records, and inspecting your equipment. Provide him with all the training possible.

8. Plan for every contingency. Be thoroughly prepared and avoid future trouble.

9. Establish a working relationship with a doctor or clinic familiar with industrial medicine and respirator use.

Having done the required "homework" you can now begin to draft your company's respiratory use program

VIII SAMPLE RESPIRATORY PROGRAM

A.

It is the intended purpose of _____ company to provide a safe and healthful workplace environment for all employees. To further this purpose we have established this respirator use program. The requirements of this program are binding on all employees.

4. Wherever possible, respirators will be assigned to individual workers for their exclusive use. Workers will be responsible for maintenance and sanitation of respirators assigned to them. Periodic and frequent spot checks will be made by supervisory personnel to insure compliance. Respirators, for the exclusive use of an individual, will be cleaned at least once a day at the end of the shift. Respirators, used by more than one worker, shall be cleaned and disinfected after each use. Respirators will be stored in a clean, sanitary place on the jobsite reserved solely for that purpose. No respirators may be removed from any jobsite except on written authorization from the Safety Director. If respirators are individually assigned, they shall bear the name of the person to whom they are assigned.

5. Areas, where respirators are in use, shall be closely monitored to insure compliance and safe conditions. Unauthorized and untrained personnel will be prohibited from entering these areas. Crew sizes for work, requiring respiratory protection, will be kept to the smallest practical size and the makeup, for short-duration operations, will not be changed unless absolutely necessary.

6. This program will be under constant review to determine that it meets its stated goal of providing maximum employee protection. Suggestions for improvement of this program should be submitted to _____ at _____ and are openly encouraged. Questions should also be referred to _____.

7. _____ Company has made arrangements with _____ (Doctor or Clinic) to handle medical requirements for respirator use. Employees will be required to furnish medical information in order to be sure that respirator use will not, in itself, be detrimental to their health.

This policy will be amended, from time to time, to improve it's performance. The proper use of respirators requires the active participation of all employees. The _____ Company is making a commitment to a healthful work environment for the good of us all.

_____

President (etc.)

USING THE MODEL PROGRAM

OSHA regulations were designed for General Industry which is more static in nature. The work process and materials used change very seldom and with longer planning times in general industry. Construction is different altogether. The products we use are specified by owners and architects, and we have no control over them. Each construction project is unique and uses different materials. We do not have the luxury of knowing exactly what chemical hazards we may encounter down the road. This changeable nature makes respiratory protection programs hard to formulate. We cannot begin the selection process until we are able to identify the hazardous components of each project.

ment shall be cleaned and disinfected immediately after each use.

The following requirements from 29 CFR Part 1910 (General Industry) have been identified as applicable to construction (29 CFR 1926.103 *Respiratory protection*), in accordance with their respective scope and definitions.

§ 1910.94 Ventilation.

(a) *Abrasive blasting.*—(1) *Definitions applicable to this paragraph* • • •

(ii) *Abrasive-blasting respirator.* A continuous flow air-line respirator constructed so that it will cover the wearer's head, neck, and shoulders to protect him from rebounding abrasive.

• • • • •

(5) *Personal protective equipment.* (i) Only respiratory protective equipment approved by the Bureau of Mines, U.S. Department of the Interior (see 30 CFR Part 11) shall be used for protection of personnel against dusts produced during abrasive-blasting operations.

(ii) Abrasive-blasting respirators shall be worn by all abrasive-blasting operators: • • •

(B) When using silica sand in manual blasting operations where the nozzle and blast are not physically separated from the operator in an exhaust ventilated enclosure.

• • • • •

(8) *Scope.* This paragraph (a) applies to all operations where an abrasive is forcibly applied to a surface by pneumatic or hydraulic pressure, or by centrifugal force. It does not apply to steam blasting, or steam cleaning, or hydraulic cleaning methods where work is done without the aid of abrasives.

• • • • •

§ 1910.134 Respiratory protection.

(a) *Permissible practice.* (1) In the control of those occupational diseases caused by breathing air contaminated with harmful dusts, fogs, fumes, mists, gases, smokes, sprays, or vapors, the primary objective shall be to prevent atmospheric contamination. This shall be accomplished as far as feasible by accepted engineering control measures (for example, enclosure or confinement of the operation, general and local ventilation, and substitution of less toxic materials). When effective engineering controls are not feasible, or while they are being instituted, appropriate respirators shall be used pursuant to the following requirements.

(2) Respirators shall be provided by the employer when such equipment is necessary to protect the health of the employee. The employer shall provide the respirators which are applicable and suitable for the purpose intended. The employer shall be responsible for the establishment and maintenance of a respiratory protective program which shall include the requirements outlined in paragraph (b) of this section.

(3) The employee shall use the provided respiratory protection in accordance with instructions and training received.

(b) *Requirements for a minimal acceptable program.* (1) Written standard operating procedures governing the selection and use of respirators shall be established.

(2) Respirators shall be selected on the basis of hazards to which the worker is exposed.

(3) The user shall be instructed and trained in the proper use of respirators and their limitations.

(4) Where practicable, the respirators should be assigned to individual workers for their exclusive use.

(5) Respirators shall be regularly cleaned and disinfected. Those issued for the exclusive use of one worker should be cleaned after each day's use, or more often if necessary. Those used by more than one worker shall be thoroughly cleaned and disinfected after each use.

(6) Respirators shall be stored in a convenient, clean, and sanitary location.

(7) Respirators used routinely shall be inspected during cleaning. Worn or deteriorated parts shall be replaced. Respirators for emergency use such as self-contained devices shall be thoroughly inspected at least once a month and after each use.

(8) Appropriate surveillance of work area conditions and degree of employee exposure or stress shall be maintained.

(9) There shall be regular inspection and evaluation to determine the continued effectiveness of the program.

(10) Persons should not be assigned to tasks requiring use of respirators unless it has been determined that they are physically able to perform the work and use the equipment. The local physician shall determine what health and physical conditions are pertinent. The respirator user's medical status should be reviewed periodically (for instance, annually).

(11) Approved or accepted respirators shall be used when they are available. The respirator furnished shall provide adequate respiratory protection against the particular hazard for which it is designed in accordance with standards established by competent authorities. The U.S. Department of Interior, Bureau of Mines, and the U.S. Department of Agriculture are recognized as such authorities. Although respirators listed by the U.S. Department of Agriculture continue to be acceptable for protection against specified pesticides, the U.S. Department of the Interior, Bureau of Mines, is the agency now responsible for testing and approving pesticide respirators.

(c) *Selection of respirators.* Proper selection of respirators shall be made according to the guidance of American National Standard Practices for Respiratory Protection Z88.2-1969.

(d) *Air quality.* (1) Compressed air, compressed oxygen, liquid air, and liquid oxygen used for respiration shall be of high purity. Oxygen shall meet the requirements of the United States Pharmacopoeia for medical or breathing oxygen. Breathing air shall meet at least the requirements of the specification for Grade D breathing air as described in Compressed Gas Association Commodity Specification G-7.1-1966. Compressed oxygen shall not be used in supplied-air respirators or in open circuit self-contained breathing apparatus that have previously used compressed air. Oxygen must never be used with air line respirators.

(2) Breathing air may be supplied to respirators from cylinders or air compressors.

(i) Cylinders shall be tested and maintained as prescribed in the Shipping Container Specification Regulations of the Department of Transportation (49 CFR Part 178).

(ii) The compressor for supplying air shall be equipped with necessary safety and standby devices. A breathing air-type compressor shall be used. Compressors shall be constructed and situated so as to avoid entry of contaminated air into the system and suitable in-line air purifying sorbent beds and filters installed to further assure breathing air quality. A receiver of sufficient capacity to enable the respirator wearer to escape from a contaminated atmosphere in event of compressor failure, and alarms to indicate compressor failure and overheating shall be installed in the system. If an oil-lubricated compressor is used, it shall have a

cleaning procedure and be assured that he will always receive a clean and disinfected respirator. Such assurances are of greatest significance when respirators are not individually assigned to workers. Respirators maintained for emergency use shall be cleaned and disinfected after each use.

(4) Replacement or repairs shall be done only by experienced persons with parts designed for the respirator. No attempt shall be made to replace components or to make adjustment or repairs beyond the manufacturer's recommendations. Reducing or admission valves or regulators shall be returned to the manufacturer or to a trained technician for adjustment or repair.

(5) (i) After inspection, cleaning, and necessary repair, respirators shall be stored to protect against dust, sunlight, heat, extreme cold, excessive moisture, or damaging chemicals. Respirators placed at stations and work areas for emergency use should be quickly accessible at all times and should be stored in compartments built for the purpose. The compartments should be clearly marked. Routinely used respirators, such as dust respirators, may be placed in plastic bags. Respirators should not be stored in such places as lockers or tool boxes unless they are in carrying cases or cartons.

(ii) Respirators should be packed or stored so that the facepiece and exhalation valve will rest in a normal position and function will not be impaired by the elastomer setting in an abnormal position.

(iii) Instructions for proper storage of emergency respirators, such as gas masks and self-contained breathing apparatus, are found in "use and care" instructions usually mounted inside the carrying case lid.

(g) *Identification of gas mask canisters.* (1) The primary means of identifying a gas mask canister shall be by means of properly worded labels. The secondary means of identifying a gas mask canister shall be by a color code.

(2) All who issue or use gas masks falling within the scope of this section shall see that all gas mask canisters purchased or used by them are properly labeled and colored in accordance with these requirements before they are placed in service and that the labels and colors are properly maintained at all times thereafter until the canisters have completely served their purpose.

(3) On each canister shall appear in bold letters the following:

(i)—

Canister for _____
(Name for atmospheric contaminant)

or

Type N Gas Mask Canister

(ii) In addition, essentially the following wording shall appear beneath the appropriate phrase on the canister label: "For respiratory protection in atmospheres containing not more than _____ percent by volume of _____."

(4) Canisters having a special high-efficiency filter for protection against radionuclides and other highly toxic particulates shall be labeled with a statement of the type and degree of protection afforded by the filter. The label shall be affixed to the neck end of, or to the gray stripe which is around and near the top of, the canister. The degree of protection shall be marked as the percent of penetration of the canister by a 0.3-micron-diameter dioctyl phthalate (DOP) smoke at a flow rate of 85 liters per minute.

(5) Each canister shall have a label warning that gas masks should be used only in atmospheres containing sufficient oxygen to support life (at least 16 percent by volume), since gas mask canisters are only designed to neutralize or remove contaminants from the air.

(6) Each gas mask canister shall be painted a distinctive color or combination of colors indicated in Table I-1. All colors used shall be such that they are clearly identifiable by the user and clearly distinguishable from one another. The color coating used shall offer a high degree of resistance to chipping, scaling, peeling, blistering, fading, and the effects of the ordinary atmospheres to which they may be exposed under normal conditions of storage and use. Appropriately colored pressure sensitive tape may be used for the stripes.

TABLE I-1

Atmospheric contaminants to be protected against	Colors assigned*
Acid gases	White.
Hydrocyanic acid gas	White with ½-inch green stripe completely around the canister near the bottom.
Chlorine gas	White with ½-inch yellow stripe completely around the canister near the bottom.
Organic vapors	Black.
Ammonia gas	Green.
Acid gases and ammonia gas	Green with ½-inch white stripe completely around the canister near the bottom.
Carbon monoxide	Blue.
Acid gases and organic vapors	Yellow.
Hydrocyanic acid gas and chloropicrin vapor	Yellow with ½-inch blue stripe completely around the canister near the bottom.
Acid gases, organic vapors, and ammonia gases	Brown.
Radioactive materials, excepting tritium and noble gases	Purple (Magenta).
Particulates (dusts, fumes, mists, fogs, or smokes) in combination with any of the above gases or vapors	Canister color for contaminant, as designated above, with ½-inch gray stripe completely around the canister near the top.
All of the above atmospheric contaminants	Red with ½-inch gray stripe completely around the canister near the top.

*Gray shall not be assigned as the main color for a canister designed to remove acids or vapors.

Note: Orange shall be used as a complete body, or stripe color to represent gases not included in this table. The user will need to refer to the canister label to determine the degree of protection the canister will afford.

61.145 - 61.147, 61.152, 61.154 and 61.156

Definitions - CFR 40 Part 61 Section 61.141

Friable asbestos material - any material containing more than 1 percent asbestos by weight that hand pressure can crumble, pulverize or reduce to powder when dry

Renovation - altering in any way one or more facility components. Operations in which load-supporting structural members are wrecked or taken out are excluded

Demolition - wrecking or taking out of any load-supporting structural member of a facility together with any related handling operations.

Visible emissions - emissions containing particulate asbestos material that are visually detectable without the aid of instruments. Excludes condensed uncombined water vapor.

Facility Component - pipe, duct, boiler, tank, reactor, turbine, furnace or structural member

Demolition / Renovation of Friable Asbestos

Applicability Categories Section 61.145

61.145(a) Demolition ≥ 260 lin. feet (pipes) or ≥ 160 sq. ft other fac. comp.

Notification Req. Section 61.146

Written notification to EPA required.
Postmark/Deliver 10 days prior to demolit.

(1) Name/addr. of owner/op. of rem./dem. firm
(2) Bldg. description (size, age, prior use)
(3) Amount of asb. in facility

(4) Fac. location for dem./renov.
(5) Start date / Completion date
(6) Descrip. of dem./renov. and methods
(7) Procedures followed in dem./renov. to comply with Subpart M
(8) Name & location of waste disp. site

Emission Control Proced. Section 61.147

(a) Remove asb. before wrecking or dismantling that would break asb. mat. or preclude access. Exception – demolition
- Asb. on fac. component encased in concrete
- Wet wherever asb. is exposed while dem.

(b) Removal of facility component w/ asbestos in sections
- Wet the areas to be cut
- Do not drop – lower the units to ground

(c) Removing/stripping asb. from intact facility components

Notification Req. Section 61.146

Demolition / Renovation Projects

Standards for Waste Disposal of Friable Asbestos *

61.152

(a) Deposit all asbestos waste (friable & control equip) at waste disposal site operated by 61.158

(b) No visible emissions (collection, process, packaging, transport, deposit)

-OR-

1) Treat asb. waste with water (No V.E. or use Air cleaning 61.154)

- Seal wet asbestos in leak-tight containers (suggest 6 mil bag)
- Label containers (61.152(b)(1)iii OR 29CFR 1910.1001(g)(2)(vii))

-OR-

2) Process asbestos waste into non-friable forms (no V.E. or use Air cleaning 61.154)

-OR-

3) Submit alternative disposal to EPA for approval

* Demolition/Renovation projects < 260 lin.ft. or < 160 sq.ft. of friable asb are excluded from EPA waste disposal requirements but are not excluded from DofL or ADEC regulations.

Demolition / Renovation Projects
Active Waste Disposal
61.156

a) No V.E. from waste disposal site

b) Natural barrier or warning signs & fencing

c) Instead of a) and b) at least once every 24 hours newly deposited asbestos waste covered with a minimum of 6 inches of compacted non-asbestos-containing material.

MEMORANDUM State of Alaska

TO: Dick Stokes, SERO
Bob Flint, SCRO
Pete McGee, NRO

DATE: October 12, 1983

FILE NO:

TELEPHONE NO:

FROM: Stanley W. Hungerford, Chief
Air and Solid Waste Management
SWH for

SUBJECT: Waste Asbestos Disposal Responsibilities

There seems to be some confusion concerning our role and responsibility in asbestos disposal. Specifically, what laws address asbestos, what permits are required, and who issues them. Dick Williams and Dave Estes have compiled a list of the pertinent laws and policies on asbestos acttivities. Please circulate copies to your staff for their reference.

I. ASBESTOS IS NOT A HAZARDOUS WASTE UNDER RCRA.

RCRA covers ignitable, corrosive, reactive, EP toxic, and listed wastes. It does not recognize long-term health effects as a separate criteria.

II. ASBESTOS IS A HAZARDOUS AIR POLLUTANT UNDER NESHAPS.

Federally, asbestos is an air pollutant addressed by 40 CFR 61. These regulations address air emissions from activities that involve asbestos, and specify operating procedures that should prevent hazardous emissions.

ADEC has not taken on that part of NESHAPS, and any situation encountered should be referred to EPA, Alaska Operations Office, Juneau.

III. NO FEDERAL PERMITS APPLY TO ASBESTOS DISPOSAL AT ALASKAN LANDFILLS.

IV ASBESTOS IS A HAZARDOUS WASTE UNDER OUR SOLID WASTE REGULATIONS, 18 AAC 60.

18 AAC 60.910.(11)...' "hazardous waste" means a solid waste or combination of solid wastes, which because of its quantity, concentration, or physical, chemical or biological characteristics may cause or significantly contribute to

(a) an increase in mortality or an increase in serious irreversible, or incapacitating reversible illness; or

(b) a substantial present or potential hazard to human health or the environment when improperly treated, stored, transported, disposed of, or otherwise managed.'

Diseases caused by breathing asbestos dust, such as lung cancer and asbestosis, definitely increase mortality.

V. ASBESTOS DISPOSAL REQUIRES AN ADEC WASTE DISPOSAL PERMIT.

Asbestos is a solid waste and, therefore, requires a Waste Disposal Permit under AS 46.03.100 and 18 AAC 60.200.(a).

Asbestos is also "hazardous" and requires "specific approval" from the department according to 18 AAC 60.087.(a).

"Specific Approval" should be given via conditions in a new permit or an amendment of an existing permit.

Approvals should be granted for an overall operation, not for each bag, barrel or truckload.

V. ASBESTOS DISPOSAL PROCEDURES.

All the solid waste disposal standards in 18 AAC 60 apply to asbestos disposal. In addition, the following requirments must also be met:

a. Waste asbestos must be thoroughly wetted and placed in a water-tight container before burial. Containers may be barrels, drums, or double -four mil or thicker- plastic bags.
or Single six mil

b. All containers shall have a warning label attached that states:

CAUTION

CONTAINS ASBESTOS

AVOID OPENING OR BREAKING CONTAINER

BREATHING ASBESTOS IS HAZARDOUS
TO YOUR HEALTH

c. Apply 2 FEET of cover soil to the wastes at the end of each operating day, or if cover is not applied

1. install fencing or provide other approved access controls, and
2. post signs at site entrances and at 100 foot intervals along the site boundary that state in one inch or taller lettering:

ASBESTOS WASTE DISPOSAL SITE

DO NOT CREATE DUST

BREATHING ASBESTOS IS
HAZARDOUS TO YOUR HEALTH

VI. ASBESTOS REMOVAL AND HANDLING PROCEDURES ARE OSHA AND EPA CONCERNS.

ADEC should refer the public to these agencies when appropriate. We are not authorized or trained to interpret and enforce their regulations. Also, we lack the staff and funding needed to take on any more programs.

Conclusion:

Asbestos is a "hazardous solid waste" under Alaskan Law. We regulate its disposal with the Solid Waste Management Regulations, 18 AAC 60, and the Waste Disposal Permit program. All disposal must be approved in writing, i.e., by permit condition. Disposal activities must comply with departmental standards and procedures. Signs and fences are NOT required if the waste is covered on the day of deposition. All removal, handling, and air pollution control activities are EPA concerns and must be referred to them.

Please call Dick or Dave if you have any questions or corrections.

ALASKA CHAPTER A.G.C.
EDUCATION COMMITTEE

presents a

CONSTRUCTION INDUSTRY SEMINAR
"ASBESTOS REMOVAL"

A timely safety seminar for:

- *GENERAL CONTRACTORS
- *SAFETY PROFESSIONALS
- * SUBCONTRACTORS
- *INSURANCE BROKERS
- * PUBLIC ADMINISTRATORS
- *BUILDING OWNERS

*NOTE: Date change Anchorage only

HOTEL CAPTAIN COOK
ANCHORAGE, ALASKA
APRIL 18, 1984

FAIRBANKS INN
FAIRBANKS, ALASKA
APRIL 20, 1984

SEMINAR OBJECTIVE:

THIS SEMINAR IS PRESENTED FOR GENERAL CONTRACTORS, SUBCONTRACTORS, SAFETY PROFESSIONALS, PUBLIC ADMINISTRATORS, BUILDING OWNERS AND OTHERS INVOLVED IN OR CONSIDERING ASBESTOS REMOVAL WORK. PARTICIPANTS WILL LEARN ASBESTOS HEALTH HAZARDS, ASBESTOS REGULATIONS, ABATEMENT PROCEDURES, PROTECTIVE EQUIPMENT, MONITORING, EMPLOYEE TRAINING, SIGNING AND WASTE DISPOSAL PROCEDURES.

MATERIALS:

COPY OF THE ASBESTOS REGULATIONS, SAMPLE PERMIT FORMS AND RESPIRATOR USAGE CHART, BIDDER PREQUALIFICATION FORMS. REQUIRED BY SOME OWNERS, EPA SCHOOL ASBESTOS REMOVAL PROGRAM.

REGISTRATION FORM

We will attend the Asbestos Abatement Procedures Seminar in _____ Anchorage - April 18

_____ Fairbanks - April 20

The following people will be attending from our company:

_____

_____

_____

Registration Fee: $25 per person
(Includes Lunch)

Check enclosed in the amount of $_____ for 0_____ registrations.

04.0102 Asbestos. (a) Definitions, for the purpose of 04.0102.

(1) "Asbestos" includes chrysotile, amosite, crocidolite, tremolite, anthophyllite, and actinolite.

(2) "Asbestos fibers" means asbestos fibers longer than five micrometers.

(b) Permissible exposure to airborne concentrations of asbestos fibers.

(1) Standard effective July 7, 1972. The 8-hour time weighted average airborne concentrations of asbestos fibers to which any employee may be exposed shall not exceed five fibers, longer than five micrometers, per cubic centimeter of air, as determined by the method prescribed in 04.0102(e).

(2) Standard effective July 1, 1976. The 8-hour time weighted average airborne concentrations of asbestos fibers to which any employee may be exposed shall not exceed two fibers, longer than five micrometers, per cubic centimeter of air, as determined by the method prescribed in 04.0102(e).

(3) Ceiling concentration. No employee shall be exposed at any time to airborne concentrations of asbestos fibers in excess of 10 fibers, longer than five micrometers, per cubic centimeter of air, as determined by the method prescribed in 04.0102(e).

(c) Methods of compliance.

(1) Engineering methods.

(A) Engineering controls. Engineering controls, such as, but not limited to, isolation, enclosure, exhaust ventilation, and dust collection, shall be used to meet the exposure limits prescribed in 04.0102(b).

(B) Local exhaust ventilation.

(i) Local exhaust ventilation and dust collection systems shall be designed, constructed, installed, and maintained in accordance with the American National Standard Fundamentals Governing the Design and Operation of Local Exhaust Systems, ANSI Z9.2-1971, which is incorporated by reference herein.

(ii) See 1910.6 of the Federal Occupational Safety and Health Act concerning the availability of ANSI Z9.2-1971, and the maintenance of a historic file in connection therewith. The address of the American National Standards Institute is given in 04.0109.

(C) Particular tools. All hand-operated and power-operated tools which may produce or release asbestos fibers in excess of the exposure limits prescribed in 04.0102(b), such as, but not limited to, saws, scorers, abrasive wheels, and drills, shall be provided with local exhaust ventilation systems in accordance with 04.0102(c)(1)(B).

(2) Work practices.

(A) Wet methods. Insofar as practicable, asbestos shall be handled, mixed, applied, removed, cut, scored, or otherwise worked in a wet state sufficient to prevent the emission of airborne fibers in excess of the exposure limits prescribed in 04.0102, unless the usefulness of the product would be diminished thereby.

(B) Particular products and operations. No asbestos cement, mortar, coating, grout, plaster, or similar material containing asbestos shall be removed from bags, cartons, or other containers in which they are shipped, without being either wetted, or enclosed, or ventilated so as to prevent effectively the release of airborne asbestos fibers in excess of the limits prescribed in 04.0102.

(C) Spraying, demolition, or removal. Employees engaged in the spraying of asbestos, the removal, or demolition of pipes, structures, or equipment covered or insulated with asbestos, and in the removal or demolition of asbestos insulation or coverings shall be provided with respiratory equipment in accordance with 04.0102(d)(2)(C) and with special clothing in accordance with 04.0102(d)(3).

(d) Personal protective equipment.

(1) Compliance with the exposure limits prescribed by 04.0102(b) may not be achieved by the use of respirators or shift rotation of employees, except:

(A) During the time period necessary to install the engineering controls and to institute the work practices required by 04.0102(c),

(B) In work situations in which the methods prescribed in 04.0102(c) are either technically not feasible or feasible to an extent insufficient to reduce the airborne concentrations of asbestos fibers below the limits prescribed by 04.0102(b); or

(C) In emergencies.

(D) Where both respirators and personnel rotation are allowed by 04.0102(d)(1)(A), (B) or (C), and both are practicable, personnel rotation shall be preferred and used.

(2) Where a respirator is permitted by 04.0102(d)(1), it shall be selected from among those approved by the Bureau of Mines, Department of the Interior, or the National Institute for Occupational Safety and Health, Department of Health, Education, and Welfare, under the provisions of 30 CFR Part 11 (37 F.R. 6244, Mar. 25, 1972), and shall be used in accordance with 04.0102(d)(2)(A), (B), (C) and (D).

(A) Air purifying respirators. A reusable or single use air purifying respirator, or a respirator described in 04.0102(d)(2)(B) or (C), shall be used to reduce the concentrations of airborne asbestos fibers in the respirator below the exposure limits prescribed in 04.0102(b), when the ceiling or the 8-hour time weighted average airborne concentrations of asbestos fibers are reasonably expected to exceed no more than 10 times those limits.

(B) Powered air purifying respirators. A full facepiece powered air purifying respirator, or a powered air purifying respirator, or a respirator described in 04.0102(d)(2)(C), shall be used to reduce the concentrations of airborne asbestos fibers in the respirator below the exposure limits prescribed in 04.0102(b), when the ceiling or the 8-hour time weighted average concentrations of asbestos fibers are reasonably expected to exceed 10 times, but not 100 times, those limits.

(C) Type "C" supplied-air respirators, continuous flow or pressure-demand class. A type "C" continuous flow or pressure demand, supplied-air respirator shall be used to reduce the concentrations of airborne asbestos fibers in the respirator below the exposure limits prescribed in 04.0102(b), when the ceiling or the 8-hour time weighted average airborne concentrations of asbestos fibers are reasonably expected to exceed 100 times those limits.

(D) Establishment of a respirator program.

(i) The employer shall establish a respirator program in accordance with the requirements of the American National Standards Practices for Respiratory Protection, ANSI Z88.2–1969, which is incorporated by reference herein.

(ii) See 1910.6 of the Federal Occupational Safety and Health Act concerning the availability of ANSI Z88.2–1969 and the maintenance of a historic file in connection therewith. The address of the American National Standards Institute is given in 04.0109.

(iii) No employee shall be assigned to tasks requiring the use of respirators if, based upon his most recent examination, the examining physician determines that the employee will be unable to function normally wearing a respirator, or that the safety or health of the employee or other employees will be impaired by his use of a respirator. Such employee shall be rotated to another job or given the opportunity to transfer to a different position whose duties he is able to perform with the same employer, in the same geographical area and with the same seniority, status, and rate of pay he had just prior to such transfer, if such a different position is available.

(3) Special clothing. The employer shall provide, and require the use of, special clothing, such as coveralls or similar whole body clothing, head coverings, gloves, and foot coverings for any employee exposed to airborne concentrations of asbestos fibers, which exceed the ceiling level prescribed in 04.0102(b).

(4) Change rooms.

(A) At any fixed place of employment exposed to airborne concentrations of asbestos fibers in excess of the exposure limits prescribed in 04.0102(b), the employer shall provide change rooms for employees working regularly at the place.

(B) Clothes lockers. The employer shall provide two separate lockers or containers for each employee, so separated or isolated as to prevent contamination of the employee's street clothes from his work clothes.

(C) Laundering.

(i) Laundering of asbestos contaminated clothing shall be done so as to prevent the release of airborne asbestos fibers in excess of the exposure limits prescribed in 04.0102(b).

(ii) Any employer who gives asbestos-contaminated clothing to another person for laundering shall inform such person of the requirement in 04.0102(d)(4)(C)(i) to effectively prevent the release of airborne asbestos fibers in excess of the exposure limits prescribed in 04.0102(b).

(iii) Contaminated clothing shall be transported in sealed impermeable bags, or other closed, impermeable containers, and labeled in accordance with 04.0102(g).

(e) Method of measurement. All determinations of airborne concentrations of asbestos fibers shall be made by the membrane filter method at 400–450 X (magnification) (4 millimeter objective) with phase contrast illumination.

(f) Monitoring.

(1) Initial determinations. Within six months of the publication of 04.0102 every employer shall cause every place of employment where asbestos fibers are released to be monitored in such a way as to determine whether every employee's exposure to asbestos fibers is below the limits prescribed in 04.0102(b). If the limits are exceeded, the employer shall immediately undertake a compliance program in accordance with 04.0102(c).

(2) Personal monitoring.

(A) Samples shall be collected from within the breathing zone of the employees, on membrane filters of 0.8 micrometer porosity mounted in an open-face filter holder. Samples shall be taken for the determination of the 8-hour time-weighted average airborne concentrations and of the ceiling concentrations of asbestos fibers.

(B) Sampling frequency and patterns. After the initial determinations required by 04.0102(f)(1), samples shall be of such frequency and pattern as to represent with reasonable accuracy the levels of exposure of employees. In no case shall the sampling be done at intervals greater than six months for employees whose exposure to asbestos may reasonably be foreseen to exceed the limits prescribed by 04.0102(b).

(3) Environmental monitoring.

(A) Samples shall be collected from areas of a work environment which are representative of the airborne concentration of asbestos fibers which may reach the breathing zone of employees. Samples shall be collected on a membrane filter of 0.8 micrometer porosity mounted in an open-face filter holder. Samples shall be taken for the determination of the 8-hour time-weighted average airborne concentrations and of the ceiling concentrations of asbestos fibers.

(B) Sampling frequency and patterns. After the initial determinations required by 04.0102(f)(1), samples shall be of such frequency and pattern as to represent with reasonable accuracy the levels of exposure of the employees. In no case shall sampling be at intervals greater than six months for employees whose exposures to asbestos may reasonably be foreseen to exceed the exposure limits prescribed in 04.0102(b).

(4) Employee observation of monitoring. Affected employees, or their representatives, shall be given a reasonable opportunity to observe any monitoring required by 04.0102 and shall have access to the records thereof.

(g) Caution signs and labels.

(1) Caution signs.

(A) Posting. Caution signs shall be provided and displayed at each location where airborne concentrations of asbestos fibers may be in excess of the exposure limits prescribed in 04.0102(b). Signs shall be posted at such a distance from such a location so that an employee may read the signs and take necessary protective steps before entering the area marked by the signs. Signs shall be posted at all approaches to areas containing excessive concentrations of airborne asbestos fibers.

(B) Sign specifications. The warning signs required by 04.0102(g)(1)(A) shall conform to the requirements of 20 inches by 14 inches vertical format signs specified in 01.1202(d)(4), Subchapter 1, General Safety Code, AOSAHS, and to 04.0102(g)(1)(B). The signs shall display the following legend in the lower panel, with letter sizes and styles of a visibility at least equal to that specified in 04.0102(g)(1)(B).

Legend	Notation
Asbestos	1 in. Sans Serif, Gothic or Block
Dust hazard	3/4 in. Sans Serif, Gothic or Block
Avoid breathing dust	¼ in. Gothic
Wear assigned protective equipment	¼ in. Gothic
Do not remain in area unless your work requires it	¼ in. Gothic
Breathing asbestos dust may be hazardous to your health	14 point Gothic

Spacing between lines shall be at least equal to the height of the upper of any two lines.

(2) Caution labels.

(A) Labeling. Caution labels shall be affixed to all raw materials, mixtures, scrap, waste, debris, and other products containing asbestos fibers, or to their containers, except that no label is required where asbestos fibers have been modified by a bonding agent, coating, binder, or other material so that during any reasonably foreseeable use, handling, storage, disposal, processing, or transportation, no airborne concentrations of asbestos fibers in excess of the exposure limits prescribed in 04.0102(b) will be released.

(B) Label specifications. The caution labels required by 04.0102(g)(2)(A) shall be printed in letters of sufficient size and contrast as to be readily visble and legible. The label shall state:

CAUTION

Contains Asbestos Fibers
Avoid Creating Dust
Breathing Asbestos Dust May Cause
Serious Bodily Harm

(h) Housekeeping.

(1) Cleaning. All external surfaces in any place of employment shall be maintained free of accumulations of asbestos fibers if, with their dispersion, there would be an excessive concentration.

(2) Waste disposal. Asbestos waste, scrap, debris, bags, containers, equipment, and asbestos-contaminated clothing, consigned for disposal, which may produce in any reasonably foreseeable use, handling, storage, processing, disposal, or transportation, airborne concentrations of asbestos fibers in excess of the exposure limits prescribed in 04.0102(b), shall be collected and disposed of in sealed impermeable bags, or other closed, impermeable containers.

(i) Recordkeeping.

(1) Exposure records. Every employer shall maintain records of any personal or environmental monitoring required by 04.0102. Records shall be maintained for a period of at least 20 years and shall be made available upon request to the Commissioner of Labor, the Director of the Division of Occupational Safety and Health, and to authorized representatives of either.

(2) Employee access. Every employee and former employee shall have reasonable access to any record required to be maintained by 04.0102(i)(1) which indicates the employee's own exposure to asbestos fibers.

(3) Employee notification. Any employer found to have been exposed at any time to airborne concentrations of asbestos fibers in excess of the limits prescribed in 04.0102(b) shall be notified in writing of the exposure as soon as practicable but not later than five days of the finding. The employee shall also be timely notified of the corrective action being taken.

(j) Medical examinations.

(1) General. The employer shall provide or make available at his cost, medical examinations relative to exposure to asbestos required by 04.0102(j).

(2) Preplacement. The employer shall provide or make available to each of his employees, within 30 calendar days following his first employment in an occupation exposed to airborne concentrations of asbestos fibers, a comprehensive medical examination, which shall include, as a minimum, a chest roentgenogram (posterior–anterior 14 x 17 inches), a history to elicit symptomatology of respiratory disease, and pulmonary function tests to include forced vital capacity (FVC) and forced expiratory volume at one second ($FEV_{1.0}$).

(3) Annual examinations. On or before January 31, 1973, and at least annually thereafter, every employer shall provide, or make available, comprehensive medical examinations to each of his employees engaged in occupations exposed to airborne concentrations of asbestos fibers. Such annual examination shall include, as a minimum, a chest roentgenogram (posterior–anterior 14 x 17 inches), a history to elicit symptomatology of respiratory disease, and pulmonary function tests to include forced vital capacity (FVC) and forced expiratory volume at one second ($FEV_{1.0}$).

(4) Termination of employment. The employer shall provide, or make available, within 30 calendar days before or after the termination of employment of any employee engaged in an occupation exposed to airborne concentrations of asbestos fibers, a comprehensive medical examination which shall include, as a minimum, a chest roentgenogram (posterior–anterior 14 x 17 inches), a history to elicit symptomatology of respiratory disease, and pulmonary function tests to include forced vital capacity (FVC) and forced expiratory volume at one second ($FEV_{1.0}$).

(5) Recent examinations. No medical examination is required of any employee, if adequate records show that the employee has been examined in accordance with 04.0102(j) within the past one-year period.

(6) Medical records.

(A) Maintenance. Employers of employees examined pursuant to 04.0102(j) shall cause to be maintained complete and accurate records of all such medical examinations. Records shall be retained by employers for at least 20 years.

(B) Access. The contents of the records of the medical examinations required by 04.0102(j) shall be made available, for inspection and copying, to the Assistant Secretary of Labor for Occupational Safety and Health, the Director of NIOSH, to authorized physicians and medical consultants of either of them, and, upon the request of an employee or former employee, to his physician. Any physician who conducts a medical examination required by 04.0102(j) shall furnish to the employer of the examined employee all the information specifically required by 04.0102(j) and any other medical information related to occupational exposure to asbestos fibers.

STAFF REVIEW

CS FOR SB 384 (HESS), "An Act relating to food banks," by Senators Ferguson, Kelly, Rodey, et al, amends the Alaska Food, Drug and Cosmetic Act (AS 17.20) by adding language relating to the liability of food banks and individual donors. CSSB 384 (HESS) is identical to CSHB 496 (HESS) by Representatives Koponen and Miller. The Department of Environmental Conservation, Division of Environmental Quality Management, estimates the fiscal impact of CSSB 384 (HESS) to be Zero for FY 85, FY 86, and FY 87 (Please see fiscal note for greater detail).

The bill provides that a donor to a food bank is not subject to civil or criminal liability arising from an injury or death attributable to the condition of donated food if the injury or death is not a result of the gross negligence, recklessness, or intentional misconduct of the donor. The bill specifically states that nothing in the bill prohibits the donation of canned goods with misbrands or missing labels, and food that would not be readily marketable because of appearance or grade, or because it is surplus.

The bill provides that a food bank is not liable for injury or death attributable to the condition of donated food if the food bank inspects the food received in a reasonable manner and if the injury or death is not the direct result of the negligence, recklessness, or intentional misconduct of the food bank. Food banks may accept misbranded food or food with missing labels, or food that would not be readily marketable because of appearance or grade, or because it is surplus.

"Donor" is defined in such a way as to exclude a person who acts in a commercial capacity as a manufacturer, packer, processor, bottler, or similar entity, if that activity is the person's primary activity.

The bill does not provide for an effective date and would therefore become law 90 days after the Governor signs the bill.

HEALTH, EDUCATION AND SOCIAL SERVICES COMMITTEE

MEMORANDUM April 23, 1984

TO: Representative Mae Tischer
FROM: Bill Lovell, Professional Assistant, HESS Committee

RE: Analysis of CSSB 384 (HESS)

I have prepared the following analysis of the Senate HESS Committee Substitute for Senate Bill 384, "[a]n Act relating to food banks."

CSSB 384 (HESS) amends AS 17.20 (Alaska Food, Drug and Cosmetic Act) by adding new sections, the effects of which are described below.

Sec. 17.20.345 provides that a donor to a food bank is not subject to civil or criminal liability for damages resulting from the consumption of donated food, unless such damages are the result of extreme negligence, recklessness, or misconduct by the donor. In other words, gross negligence, recklessness, or misconduct must be proven before a food bank donor is held civilly or criminally liable for damages attributable to the consumption of donated food. This provision subjects food bank donors to a more stringent test than food bank operators when determining negligence, recklessness, or misconduct.

The bill specifically states that nothing in this section prohibits the donation of apparently suitable goods solely because of missing labels, appearance, or lower grade or marketability.

Sec. 17.20.346 provides that a food bank is not subject to civil or criminal liability for damages resulting from the consumption of goods received and distributed by the food bank if, prior to distribution, the food bank had inspected the food in a reasonable manner; if the food bank had had no actual or constructive knowledge that the food was adulterated, tainted, or contaminated; and if the aforementioned damages were not the result of negligence, recklessness, or misconduct by the operators of the food bank. In other words, simple negligence, which is more easily proven than

gross negligence, must be proven before a food bank operator can be held civilly or criminally liable for damages attributed to the consumption of food distributed by the food bank. This provision of the bill subjects food bank operators to a less stringent test than donors when determining negligence, recklessness, or misconduct.

The bill specifically states that nothing in this section prohibits a food bank from distributing apparently suitable food solely because of missing labels, appearance, or lower grade or marketability.

Sec. 17.20.347 defines "donor," as used in AS 17.20.345 and 17.20.346, as including a person, farmer, retailer, slaughter-house under state supervision, freight company, distributor, wholesaler, or similar entity. This provision specifically permits operators of state supervised slaughter-houses to donate suitable meats to food banks.

The section specifically excludes from the definition of "donor," any person who acts in a commercial capacity as a manufacturer, packer, processor, bottler, or similar entity, if that activity is the person's primary activity.

This section further provides that "food bank" means an organization recognized by the state or federal government as a nonprofit organization and that operates principally to collect, inspect, and salvage donated food for free distribution to needy persons.

House Health, Education, and Social
Services Committee

FROM: Senator Frank Ferguson

DATE: April 23, 1984

SUBJ: Senate Bill 384

In Nome, Barrow and Kotzebue we have food donors and banks at many of our churches who, under current law, run the risk of civil and criminal liability for any injury or death arising out of the use of any donated food.

This bill provides protection for honest, civic minded individuals and businesses who wish to donate edible foodstuffs for those less fortunate. However, should the donor provide food knowing that it could cause injury or death, they would face both criminal and civil liability.

Collateral references. — 35 Am. Jur. 2d, Food, § 3 et seq.
36A C.J.S., Food, § 9(2).

Sec. 17.20.010. Definitions and standards for food. When, in the judgment of the commissioner, honest and fair dealing in the interest of consumers will be promoted, the department shall adopt regulations fixing and establishing, for food or class of food a reasonable definition and standard of identity, a reasonable standard of quality, and reasonable standards of fill of container. In prescribing a definition and standard of identity for food or class of food in which optional ingredients are permitted, the department shall, for the purpose of promoting honesty and fair dealing in the interest of consumers, designate the optional ingredients which shall be named on the label. The definitions and standards adopted shall conform as far as practicable to the definitions and standards adopted under authority of the federal act. The department shall establish a mobile canned food inspection service available upon request to food packers or processors inside the state. (§ 9 ch 129 SLA 1949; am § 1 ch 125 SLA 1955)

Sec. 17.20.020. Adulterated food. (a) Food is adulterated if

(1) it bears or contains a poisonous or deleterious substance which may render it injurious to health; but in case the substance is not an added substance the food is not considered adulterated under this paragraph if the quantity of the substance does not ordinarily render it injurious to health;

(2) it bears or contains added poisonous or added deleterious substance which is unsafe within the meaning of AS 17.20.030;

(3) it consists in whole or in part of a diseased, contaminated, filthy, putrid, or decomposed substance, or if it is otherwise unfit for food;

(4) it has been produced, prepared, packed, or held under unsanitary conditions in which it may have become contaminated with filth, or in which it may have been rendered diseased, unwholesome, or injurious to health;

(5) it is, in whole or in part, the product of a diseased animal or an animal which has died otherwise than by slaughter, or that has been fed upon the uncooked offal from a slaughterhouse;

(6) its container is composed, in whole or in part, of a poisonous or deleterious substance which may render the contents injurious to health.

(b) Food is adulterated if

(1) a valuable constituent has been omitted or abstracted in whole or part;

(2) a substance has been substituted in whole or part for a valuable constituent;

(3) damage or inferiority has been concealed;

(4) a substance has been added or mixed or packed with it to increase its bulk or weight, or reduce its quality or strength, or make it appear better or of greater value than it is.

(c) Confectionery is adulterated if it bears or contains an alcohol or nonnutritive article or substance except harmless coloring, harmless flavoring, harmless resinous glaze not in excess of four-tenths of one per cent, harmless natural wax not in excess of four-tenths of one per cent, harmless natural gum, and pectin. This subsection does not apply to confectionery containing less than one-half of one per cent by volume of alcohol derived solely from the use of flavoring extracts, or to chewing gum containing harmless nonnutritive masticatory substances.

(d) Food is adulterated if it bears or contains a coal tar color other than one from a batch which has been certified under authority of the federal act. (§ 10 ch 129 SLA 1949)

Collateral references. — Trichinosis, proofs, 11 Am. Jur. POF, pp. 373-417. botulism poisoning, 16 Am. Jur. POF, pp. 243-271.

Liability of packer, foodstore, or restaurant for causing trichinosis, 96 ALR3d 451.

Sec. 17.20.030. Tolerances for added poisonous ingredients. A poisonous or deleterious substance added to food, except where the substance is required in the production of food or cannot be avoided by good manufacturing practice, is unsafe for purposes of the application of AS 17.20.020(a)(2). When the substance is required or cannot be avoided, the department shall adopt regulations limiting the quantity of it to the extent necessary for the protection of public health. A quantity exceeding the limits fixed is unsafe for purposes of the application of AS 17.20.020(a)(2). While a regulation limiting the quantity of a substance in the case of any food is in effect, the food is not, by reason of bearing or containing an added amount of the substance, adulterated within the meaning of AS 17.20.020(a)(1). In determining the quantity of the added substance to be tolerated in or on food, the department shall consider the extent to which the use of the substance is required or cannot be avoided in the production of each article and the other ways in which the consumer may be affected by that or other poisonous or deleterious substances. (§ 11 ch 129 SLA 1949)

Sec. 17.20.040. Misbranded foods. Food is misbranded if

(1) its labeling is false or misleading in any particular;

(2) it is offered for sale under the name of another food;

(3) it is an imitation of another food, unless its label bears, in type of uniform size and prominence, the word "imitation" and, immediately thereafter, the name of the food imitated;

(4) its container is made, formed, or filled so as to be misleading;

(5) it is in package form unless it bears a label containing (A) the name and place of business of the manufacturer, packer, or distributor; and (B) an accurate statement of the quantity of the contents in terms of weight, measure, or numerical count; however, under (B) of this paragraph reasonable variations are permitted, and exemptions for small packages shall be established by regulations prescribed by the department;

(6) a word, statement, or other information required by or under authority of this chapter to appear on the label or labeling is not prominently placed with the conspicuousness (as compared with other words, statements, designs or devices, in the labeling) and in terms which make it likely to be read and understood by the ordinary individual under customary conditions of purchase and use;

(7) it purports to be or is represented as a food for which a definition and standard of identity has been prescribed by regulations as provided by AS 17.20.010, unless (A) it conforms to the definition and standard, and (B) its label bears the name of the food specified in the definition and standard and the common names of optional ingredients other than spices, flavoring, and coloring present in the food as required by regulation;

(8) it purports to be or is represented as (A) a food for which a standard of quality has been prescribed by regulations, and its quality falls below that standard, unless its label bears, in the manner and form the regulations specify, a statement that it falls below that standard; or (B) a food for which a standard of fill of container has been prescribed by regulation as provided by AS 17.20.010 and it falls below the applicable standard of fill of container, unless its label bears, in the manner and form as the regulations specify, a statement that it falls below that standard;

(9) it is not subject to the provisions of (7) of this section, unless it bears labeling clearly giving (A) the common or usual name of the food, if any, and (B) in case it is fabricated from two or more ingredients, the common or usual name of each ingredient, except that however spices, flavorings, and colorings, other than those sold as such, may be designated as spices, flavorings, and colorings, without naming each; however, to the extent that compliance with the requirements of (B) of this paragraph is impracticable, or results in deception or unfair competition, exemptions shall be established by regulations promulgated by the department, but the requirements of (B) of this paragraph do not

apply to food products which are packaged at the direction of purchasers at retail at the time of sale, the ingredients of which are disclosed to the purchasers by other means in accordance with regulations adopted by the department;

(10) it purports to be or is represented for special dietary uses, unless its label bears information concerning its vitamin, mineral, and other dietary properties the commissioner determines to be, and by regulations prescribes as, necessary in order fully to inform purchasers as to its value for those uses;

(11) it bears or contains artificial flavoring, artificial coloring, or chemical preservative, unless it bears labeling stating that fact; however, to the extent that compliance with the requirements of this paragraph is impracticable, exemption shall be established by regulations adopted by the department. (§ 11 ch 129 SLA 1949)

Collateral references. — Validity and construction of regulations dealing with misrepresentation in the sale of Kosher food, 52 ALR3d 959.

Sec. 17.20.045. Misbranding halibut. No person may label or offer for sale any food fish product designated as halibut, with or without additional descriptive words, unless the food fish product is Hippoglossus or Hippoglossus Stenolepsis. A person who violates this section is guilty of misbranding food under provisions of this chapter. (§ 1 ch 59 SLA 1968)

Sec. 17.20.050. Emergency permit control. When the department finds after investigation that the distribution in the state of a class of food may, by reason of contamination with microorganisms during the manufacture, processing, or packing, be injurious to health, and that the injurious nature cannot be adequately determined after the articles have entered commerce, it, in that case only, shall adopt regulations providing for the issuance of permits to manufacturers, processors, or packers of that class of food, to which shall be attached the conditions governing the manufacture, processing, or packing of that class of food, for a temporary period of time as may be necessary to protect the public health. After the effective date of the regulations, and during the temporary period, no person may introduce or deliver for introduction into commerce the food so manufactured, processed or packed by any manufacturer, processor, or packer unless the manufacturer, processor, or packer of it holds a permit issued by the commissioner. (§ 12(a) ch 129 SLA 1949)

Sec. 17.20.060. Suspension and reinstatement of emergency permit. The commissioner may suspend immediately upon notice a permit issued under AS 17.20.050 if it is found that the conditions of the permit have been violated. The holder of a suspended permit may apply for the reinstatement of the permit, and the commissioner, immediately after prompt hearing and an inspection of the establishment, shall reinstate the permit if it is found that adequate measures have been taken to comply with and maintain the conditions of the permit as originally issued or as amended. (§ 12(b) ch 129 SLA 1949)

Sec. 17.20.070. Inspection by department. An officer or employee designated by the commissioner shall have access to a factory or establishment, the operator of which holds a permit from the commissioner, for the purpose of ascertaining whether or not the conditions of the permit are being complied with. Denial of access for inspection is ground for suspension of the permit until access is freely given. (§ 12(c) ch 129 SLA 1949)

Sec. 17.20.072. Enforcement authority. The commissioner is responsible for enforcing AS 17.20.010 — 17.20.075, and may delegate that authority as appropriate. This section does not limit the authority of peace officers. (Executive Order No. 51, § 19 (1981))

Sec. 17.20.075. Definitions. In AS 17.20.010 — 17.20.075,

(1) "commissioner" means the commissioner of environmental conservation;

(2) "department" means the Department of Environmental Conservation. (Executive Order No. 51, § 19 (1981))

Validity, construction, and application of provision of § 507(f) of Federal Food, Drug, and Cosmetic Act (21 USCS § 357(f)) requiring person objecting to

proposed repeal or amendment of regulation providing for certification of antibiotic drugs, to state "reasonable grounds" therefor, 22 ALR Fed. 883.

Sec. 17.20.080. Adulterated drugs and devices. (a) A drug or device is adulterated if

(1) it consists in whole or in part of a filthy, putrid, or decomposed substance;

(2) it has been produced, prepared, packed, or held under insanitary conditions in which it may have been contaminated with filth, or in which it may have been rendered injurious to health;

(3) it is a drug and its container is composed, in whole or in part, of poisonous or deleterious substance which may render the contents injurious to health; or

(4) it is a drug and it bears or contains, for purposes of coloring only, a coal tar other than one from a batch certified under the authority of the federal act.

(b) A drug is adulterated if it purports to be or is represented as a drug the name of which is recognized in an official compendium, and its strength differs from, or its quality or purity falls below the standard set forth in the compendium. The determination as to strength, quality, or purity shall be made in accordance with the tests or methods of assay set forth in the compendium, or in the absence or inadequacy of tests or methods of assay, those prescribed under authority of the federal act. A drug defined in an official compendium is not adulterated under this subsection because it differs from the standard of strength, quality, or purity set forth in the compendium, if its difference in strength, quality, or purity is plainly stated on its label. When a drug is recognized in both the United States Pharmacopoeia and the Homeopathic Pharmacopoeia of the United States it is subject to the requirements of the United States Pharmacopoeia unless it is labeled and offered for sale as a homeopathic drug, in which case it is subject to the provisions of the Homeopathic Pharmacopoeia of the United States and not to those of the United States Pharmacopoeia.

(c) A drug is adulterated if it is not subject to the provisions of (b) of this section and its strength differs from, or its purity or quality falls below, that which it purports or is represented to possess.

(d) A drug is adulterated if a substance has been

(1) mixed or packed with it to reduce its quality or strength; or

(2) substituted wholly or in part for it. (§ 14 ch 129 SLA 1949)

Sec. 17.20.090. Misbranded drugs and devices. A drug or device is misbranded

(1) if its labeling is false or misleading in any particular;

(2) if it is in package form unless it bears a label containing (A) the name and place of business of the manufacturer, packer, or distributor; and (B) an accurate statement of the quantity of the contents in terms

of weight, measure, or numerical count; however, under (B) of this paragraph reasonable variations shall be permitted and exemptions for small packages shall be established by regulations adopted by the department;

(3) if a word, statement, or other information required by or under authority of this chapter to appear on the label or labeling is not prominently placed with conspicuousness as compared with other words, statements, designs, or devices, in the labeling and in terms which render it likely to be read and understood by the ordinary individual under customary conditions of the purchase and use;

(4) if it is for use by man and contains a quantity of the narcotic or hypnotic substance alpha-eucaine, barbituric acid, beta-eucaine, bromal, cannabis, carbromal, chloral, coca, cocaine, codeine, heroin, marijuana, morphine, opium, paraldehyde, peyote, or sulphonmethane, or a chemical derivative of any of them, which has been by the commissioner after investigation found to be and by regulations under this chapter designated as habit forming; unless its label bears the name, and quantity or proportion of the substance or derivative and in juxtaposition with it the statement "Warning—May be habit forming";

(5) if it is a drug and is not designated solely by a name recognized in an official compendium unless its label bears (A) the common or usual name of the drug; and (B) in case it is fabricated from two or more ingredients, the common or usual name of each active ingredient, including the kind and quantity or proportion of alcohol, and including, whether active or not, the name and quantity or proportion of bromides, ether, chloroform, acetanilid, acetphenetidin, amidopyrine, antipyrine, atropine, hyoscine, hyoscyamine, arsenic, digitalis glucosines, mercury, quabain, strophanthin, strychnine, thyroid, or derivative or preparation of any of these substances contained in them; however, to the extent that compliance with the requirements of (B) of this paragraph is impracticable, exemptions shall be established by regulations adopted by the department;

(6) unless its labeling bears (A) adequate directions for use; and (B) adequate warnings against use in those pathological conditions or by children where its use may be dangerous to health, or against unsafe dosage or methods or duration of administration or application, in the manner and form necessary for the protection of users; however, where a requirement of (A) of this paragraph as applied to a drug or device is not necessary for the protection of the public health, the department shall adopt regulations exempting the drug or device from these requirements;

(7) if it purports to be a drug the name of which is recognized in an official compendium, unless it is packaged and labeled as prescribed in the compendium; however, the method of packing may be modified with the consent of the commissioner, and when a drug is recognized

in both the United States Pharmacopoeia and the Homeopathic Pharmacopoeia of the United States, it is subject to the requirements of the United States Pharmacopoeia with respect to packaging and labeling unless it is labeled and offered for sale as a homeopathic drug, in which case it shall be subject to the provisions of the Homeopathic Pharmacopoeia of the United States; and not to those of the United States Pharmacopoeia;

(8) if it has been found by the commissioner to be a drug liable to deterioration, unless it is packaged in the form and manner and its label bears a statement of the precautions the department by regulation requires as necessary for the protection of public health; and no regulation shall be established for a drug recognized in an official compendium until the commissioner has informed the appropriate body charged with the revision of the compendium of the need for packaging or labeling requirements and that body has failed within a reasonable time to prescribe the requirements;

(9) if it is a drug and its container is made, formed, or filled so as to be misleading or if it is an imitation of another drug; or if it is offered for sale under the name of another drug;

(10) if it is dangerous to health when used in the dosage, or with the frequency or duration prescribed, recommended, or suggested in its labeling;

(11) if (A) it is a drug sold at retail and contains any quantity of aminopyrine, barbituric acid, cinchophen, pituitary, thyroid, or their derivatives, or (B) it is a drug or device sold at retail and its label as originally packed bears a statement that it is to be dispensed or sold only by or on the prescription of a physician, dentist or veterinarian, unless it is sold on a written prescription signed by a member of the medical, dental, or veterinary profession licensed by law to administer the drug or device, and its label as dispensed bears the name and place of business of the seller, the serial number and date of the prescription, and the name of the member of the medical, dental or veterinary profession, and the prescription shall not be refilled except on the written authorization of the prescribing physician, dentist or veterinarian. (§ 15 ch 129 SLA 1949)

Collateral references. — Failure to warn as basis of liability under doctrine of strict liability in tort. 51 ALR3d 239.

Liability of manufacturer or seller for injury or death allegedly caused by failure to warn regarding danger in use of vaccine or prescription drug. 91 ALR3d 748.

Sec. 17.20.100. Exemptions in case of drugs and devices. A drug sold on a written prescription signed by a member of the medical, dental, or veterinary profession, except a drug sold in the course of the conduct of a business of selling drugs pursuant to diagnosis by mail, is exempt from the requirements of AS 17.20.030(2) and (b) if (1) the member of the medical, dental, or veterinary profession is licensed by

law to administer the drug, and (2) the drug bears a label containing the name and place of business of the seller, the serial number and date of the prescription, and the name of the member of the medical, dental, or veterinary profession. (§ 16 ch 129 SLA 1949)

Sec. 17.20.105. Preparation of drug prescription by pharmacist. (a) In preparing a drug prescription a pharmacist shall indicate on the drug container the name and strength of the drug contained in it, unless specifically directed otherwise by the prescribing physician, osteopathic physician, dentist or veterinarian. If a drug is a mixture of pharmacologically active substances, only the name of the mixture need be indicated on the container, or in the absence of a name, the term "physician's mixture" may be used.

(b) In preparing a prescription, a pharmacist may not substitute a drug for a registered brand or trade name product specified unless the pharmacist obtains permission from the author of the prescription; but if the prescribing physician, osteopathic physician, dentist or veterinarian is temporarily unavailable, the pharmacist may, if unable to supply the drug requested, substitute a drug or preparation of approximately equal therapeutic value so long as the pharmacist notifies the author of the prescription at an early opportunity. (§ 1 ch 17 SLA 1971)

Sec. 17.20.110. Sale of new drugs. A person may not sell, deliver, offer for sale, hold for sale or give away a new drug unless

(1) an application for it has become effective under the federal act, or

(2) when not subject to the federal act unless the drug has been tested and has not been found to be unsafe for use under the conditions prescribed, recommended, or suggested in the labeling of it, and before selling or offering it for sale there has been filed with the commissioner an application setting out

(A) full reports of investigations which have been made to show whether or not the drug is safe for use;

(B) a full list of the articles used as components of the drug;

(C) a full statement of the composition of the drug;

(D) a full description of the methods used in, and the facilities and controls used for, the manufacture, processing, and packing of the drug;

(E) samples of the drug and articles used as components of it which the commissioner requires; and

(F) specimens of the labeling proposed to be used for the drug. (§ 17(a) ch 129 SLA 1949)

Collateral references. — Right of medical patient to obtain, or physician to prescribe, Laetrile for treatment of illness — state cases. 6 ALR4th 219

Sec. 17.20.120. Application for sale of new drugs. The application provided for in AS 17.20.110 is effective on the 60th day after the filing of it. If the commissioner finds, after notice to the applicant and providing an opportunity for a hearing, that the drug is not safe for use under the conditions prescribed, recommended, or suggested in the proposed labeling, the commissioner shall, before the effective date of the application, issue an order refusing to permit the application to become effective. An order refusing an application to become effective may be revoked by the commissioner. (§ 17(b) (d) ch 129 SLA 1949)

Sec. 17.20.130. Exemptions. AS 17.20.110 does not apply to a drug (1) intended solely for investigational use by experts qualified by scientific training and experience to investigate the safety in drugs provided the drug is plainly labeled "for investigational use only"; or (2) licensed under the V[illegible], Serum, and Toxin Act of July 1, 1902 (U.S.C. 1934 ed. title 42, chap. 4). (§ 17(c) ch 129 SLA 1949)

Editor's notes. — The Virus, Serum, and Toxin Act has been superseded by 42 U.S.C. 262.

Sec. 17.20.132. Enforcement authority. The commissioner is responsible for enforcing AS 17.20.080 — 17.20.135, and may delegate that authority as appropriate. This section does not limit the authority of peace officers. (Executive Order No. 51, § 19 (1981))

Sec. 17.20.135. Definitions. In AS 17.20.080 — 17.20.135,

(1) "commissioner" means the commissioner of health and social services;

(2) "department" means the Department of Health and Social Services. (Executive Order No. 51, § 19 (1981))

Article 3. Cosmetics.

Section	Section
140 Adulterated cosmetics	152 Enforcement authority
150 Misbranded cosmetics	155 Definition

Sec. 17.20.140. Adulterated cosmetics. A cosmetic is adulterated if

(1) it bears or contains a poisonous or deleterious substance which may render it injurious to a user under the conditions of use prescribed in the labeling or advertisement of it, or under conditions of use which are customary or usual; however, this provision does not apply to coal tar hair dye, the label of which bears the following legend conspicuously displayed: "Caution — this product contains ingredients which may cause skin irritation on certain individuals and a preliminary test according to accompanying directions should first be made. This product must not be used for dyeing the eyelashes or eyebrows; to do so may cause blindness." and the labeling of which bears adequate directions for preliminary testing, and for the purposes of this paragraph and (5) of this section the term "hair dye" does not include eyelash dyes or eyebrow dyes;

(2) it consists in whole or in part of a filthy, putrid, or decomposed substance;

(3) it has been produced, prepared, packed, or held under insanitary conditions by which it may have become contaminated with filth or made injurious to health;

(4) its container is composed, in whole or in part, of a poisonous or deleterious substance which may make the contents injurious to health;

(5) it is not a hair dye and it bears or contains a coal tar color other than one from a batch which has been certified under authority of the federal act. (§ 18 ch 129 SLA 1949)

Collateral references. — Liability of seller of cosmetics for injuries on theory of breach of warranty as affected by buyer's or user's allergy or unusual susceptibility to injury from article. 26 ALR2d 969.

Sec. 17.20.150. Misbranded cosmetics. A cosmetic is misbranded if

(1) its labeling is false or misleading in any particular;

(2) it is in package form unless it bears a label containing (A) the name and place of business of the manufacturer, packer, or distributor; and (B) an accurate statement of the quantity of the contents in terms of weight, measure, or numerical count; however, under (B) of this paragraph reasonable variations shall be permitted, and exemptions as to small packages shall be established by regulations adopted by the department;

(3) a word, statement, or other information required by or under authority of this chapter to appear on the label or labeling is not prominently placed on it with conspicuousness as compared with other words, statements, designs, or devices, in the labeling, and in terms which make it likely to be read and understood by the ordinary individual under customary conditions of purchase and use;

(4) the container is made, formed, or filled so as to be misleading. (§ 19 ch 129 SLA 1949)

Sec. 17.20.152. Enforcement authority. The commissioner of environmental conservation is responsible for enforcing AS 17.20.140 — 17.20.155, and may delegate that authority as appropriate. This section does not limit the authority of peace officers. (Executive Order No. 51, § 19 (1981))

Sec. 17.20.155. Definition. In AS 17.20.140 — 17.20.155, "department" means the Department of Environmental Conservation. (Executive Order No. 51, § 19 (1981))

Article 4. False Advertising.

Section
160. False advertising generally
170. Specified false advertising
172. Enforcement authority
175. Definitions

Collateral references. — 3 Am. Jur. 2d, Advertising, §§ 2, 4 et seq., 37 Am. Jur. 2d, Fraud and Deceit, § 561.

What constitutes "false advertising" of food products or cosmetics within §§ 5 and 12 of the Federal Trade Commission Act (15 USCS §§ 45, 52), 50 ALR Fed. 16.

Sec. 17.20.160. False advertising generally. An advertisement of a food, drug, device, or cosmetic is false if it is false or misleading in any particular. (§ 20(a) ch 129 SLA 1949)

Sec. 17.20.170. Specified false advertising. The advertisement of a drug or device representing that it has an effect on albuminuria, appendicitis, arteriosclerosis, blood poison, bone disease, Bright's disease, cancer, carbuncles, cholecystitis, diabetes, diphtheria, dropsy, erysipelas, gallstones, heart and vascular diseases, high blood pressure, mastoiditis, measles, meningitis, mumps, nephritis, otitis media, paralysis, pneumonia, poliomyelitis (infantile paralysis), prostate gland disorders, pyelitis, scarlet fever, sexual impotence, sinus infection, smallpox, tuberculosis, tumors, typhoid, uremia, or venereal disease is false advertising. An advertisement not in violation of AS 17.20.160 is not false under this section if it is disseminated only to members of the medical, dental, or veterinary profession, or appears only in the scientific periodicals of these professions, or is disseminated only for the purpose of public health education by persons not commercially interested, directly or indirectly, in the sale of the drug or device. However, when the commissioner determines that an advance in medical science has made a self medication safe as to any of the diseases named in this section, the department shall by regulation authorize the advertisement of drugs having curative or therapeutic effect for the disease, subject to the conditions and restrictions the commissioner considers necessary in the interests of public health. This section shall not be construed as indicating that self medication for diseases other than those named in this section is safe or efficacious. (§ 20(b) ch 129 SLA 1949)

Sec. 17.20.172. Enforcement authority. The commissioner is responsible for enforcing AS 17.20.160 — 17.20.175, and may delegate that authority as appropriate. This section does not limit the authority of peace officers. (Executive Order No. 51, § 19 (1981))

Sec. 17.20.175. Definitions. In AS 17.20.160 — 17.20.175,

(1) "commissioner" means the commissioner of health and social services;

(2) "department" means the Department of Health and Social Services. (Executive Order No. 51, § 19 (1981))

Article 5. Enforcement.

Section
180. Regulations
190. Hearings
200. Inspections and examinations
210. Reimbursement for expenses
220. Publication of reports and information
230. Detention or embargo of goods
240. Petition for libel for condemnation
250. Destruction of adulterated or misbranded goods
260. Exemption from destruction
270. Immediate destruction of contaminated food
280. Injunction proceedings

Collateral references. — 25 Am. Jur. 2d, Drugs, Narcotics, and Poisons, §§ 7 et seq., 28 et seq., 35 Am. Jur. 2d, Food, § 63 et seq.

Seizure of food, 9 Am. Jur. Trials, pp. 59-130.

Sec. 17.20.180. Regulations. The Department of Environmental Conservation and the Department of Health and Social Services may adopt regulations for the efficient enforcement of their respective portions of this chapter. Each department may make the regulations conform, in so far as practicable, with those adopted under the federal act. (§ 21(a) ch 129 SLA 1949; am Executive Order No. 51, § 20 (1981))

Effect of amendments. — The 1981 amendment substituted "Department of Environmental Conservation and the Department of Health and Social Services" for "department," substituted "adopt" for "promulgate" preceding "regulations" and added "of their respective portions" following "efficient enforcement" in the first sentence. In the second sentence, the amendment substituted "each" for "the" preceding "department" and substituted "adopted" for "promulgated" following "with those."

Sec. 17.20.190. Hearings. Hearings authorized or required by this chapter shall be conducted under the provisions of the Administrative Procedure Act (AS 44.62). (§ 21(b) ch 129 SLA 1949)

Sec. 17.20.200. Inspections and examinations. (a) The commissioner of environmental conservation or an agent shall have free access at reasonable hours to a factory, warehouse, or establishment in which foods or cosmetics are manufactured, processed, packed, or held for introduction into commerce, or to enter a vehicle being used to transport or hold these foods or cosmetics in commerce, in order to

(1) inspect a factory, warehouse, establishment, or vehicle to determine if the provisions of the commissioner's respective portions of this chapter are being violated, and

(2) secure samples or specimens of a food or cosmetic after paying or offering to pay for the sample.

(b) The commissioner of environmental conservation shall make or have made examinations of samples secured under this section to determine whether or not a provision of the commissioner's respective portions of this chapter is being violated.

(c) The commissioner of health and social services has the same powers and duties with respect to drugs and devices as the commissioner of environmental conservation has with respect to food and cosmetics under (a) and (b) of this section. (§ 22 ch 129 SLA 1949; am § 1 ch 80 SLA 1957; am Executive Order No. 51, § 21 (1981))

Effect of amendments. — The 1981 amendment added "of environmental conservation" following "the commissioner" and deleted "drugs, devices" following "food" twice in the introductory language of subsection (a). Also in subsection (a), the amendment added "of his respective portions" following "if the provisions" in paragraph (1) and deleted "drug, device" following "food" in paragraph (2). In subsection (b), the amendment added "of environmental conservation" following "commissioner" and added "of his respective portions" following "not a provision." The amendment also added subsection (c).

Collateral references. — Validity of inspection conducted under provisions of Federal Food, Drug, and Cosmetic Act (21 USCS § 374(a)) authorizing FDA inspectors to enter and inspect food, drug or cosmetic factory, warehouse, or other establishment, 18 ALR Fed. 734.

Sec. 17.20.210. Reimbursement for expenses. The Department of Environmental Conservation and the Department of Health and Social Services may make expenditures from money appropriated for the administration of their respective portions of this chapter to reimburse authorized employees or agents for amounts expended without receipt, covering purchases or services obtained in securing evidence of a violation of their respective portions of this chapter, upon vouchers certified by the disbursing and certifying officers of the appropriate department. Disbursement shall not exceed $800 in any biennium. (§ 22 ch 129 SLA 1949; am § 1 ch 80 SLA 1957; am Executive Order No. 51, § 22 (1981))

Effect of amendments. — The 1981 amendment substituted "Department of Environmental Conservation and the Department of Health and Social Services" for "department" near the beginning of the first sentence, added "their respective portions of" preceding "this chapter" twice in the first sentence and added "appropriate" preceding "department" near the end of the first sentence.

Sec. 17.20.220. Publication of reports and information. (a) The commissioner of environmental conservation and the commissioner of health and social services may have published from time to time reports summarizing judgments, decrees, and court orders which have been rendered under their respective portions of this chapter, including the nature of the charge and the disposition of it.

(b) The commissioner of environmental conservation may have disseminated information regarding food and cosmetics which the commissioner considers necessary in the interest of public health and the protection of the consumer against fraud. This section does not prohibit the commissioner from collecting, reporting, and illustrating the results of the commissioner's investigations.

(c) The commissioner of health and social services has the same power with respect to drugs and devices as the commissioner of environmental conservation has with respect to food and cosmetics under (b) of this section. (§ 23 ch 129 SLA 1949; am Executive Order No. 51, § 23 (1981))

Effect of amendments. — The 1981 amendment added "of environmental conservation and the commissioner of health and social services" following "the commissioner" and added "their respective portions" following "rendered under" in subsection (a). The amendment also added "of environmental conservation" following "commissioner" and deleted "drugs, devices" following "regarding food" in subsection (b) and added subsection (c).

Sec. 17.20.230. Detention or embargo of goods. (a) Whenever the commissioner of environmental conservation finds or has probable cause to believe that a food or cosmetic is adulterated, or so misbranded as to be dangerous or fraudulent within the meaning of this chapter, the commissioner shall affix to it a tag or other appropriate marking, giving notice that it is or is suspected of being adulterated or misbranded and has been detained or embargoed, and warning all persons not to remove or dispose of it by sale or otherwise until permission for removal or disposal is given by the commissioner or the court. A person may not remove or dispose of a detained or embargoed article by sale or otherwise without this permission.

(b) The commissioner of health and social services has the same duty with respect to drugs and devices as the commissioner of environmental conservation has with respect to food and cosmetics under (a) of this section. (§ 6(a) ch 129 SLA 1949; am Executive Order No. 51, § 24 (1981))

Effect of amendments. — The 1981 amendment designated the existing section as subsection (a) and added subsection (b). In subsection (a), the amendment added "of environmental conservation" following "the commissioner" and deleted "drug, device" following "food" in the first sentence.

NOTES TO DECISIONS

Cited in State, Comm'r of Dep't of Health & Social Servs. v. Seward Marine Serv., Inc., Sup. Ct. Op. No. 2113 (File No. 2113), 612 P.2d 1010 (1980).

Sec. 17.20.240. Petition for libel for condemnation. When an article detained or embargoed under AS 17.20.230 has been found by the commissioner of environmental conservation or the commissioner

of health and social services, as the case may be, to be adulterated or misbranded, the appropriate commissioner shall petition the superior court for a libel for condemnation of the article. When that commissioner finds that a detained or embargoed article is not adulterated or misbranded, the commissioner shall remove the tag or other marking. (§ 6(b) ch 129 SLA 1949; am Executive Order No. 51, § 25 (1981))

Effect of amendments. — The 1981 amendment added "of environmental conservation or the commissioner of health and social services, as the case may be" preceding "to be adulterated" in the first sentence and substituted "that" for "the" preceding "commissioner" in the second sentence.

Sec. 17.20.250. Destruction of adulterated or misbranded goods. If the superior court finds that a detained or embargoed article is adulterated or misbranded, it shall, after entry of the decree, be destroyed at the expense of the claimant, under the supervision of the commissioner of environmental conservation or the commissioner of health and social services, as the case may be. Court costs and fees and storage and other proper expenses shall be taxed against the claimant of the article. (§ 6(c) ch 129 SLA 1949; am Executive Order No. 51, § 26 (1981))

Effect of amendments. — The 1981 amendment added "of environmental conservation or the commissioner of health and social services, as the case may be" at the end of the first sentence.

Sec. 17.20.260. Exemption from destruction. When the adulteration or misbranding can be corrected by proper labeling or processing of the article, and after entry of the decree and after costs, fees, and expenses have been paid and a good and sufficient bond, conditioned that the article will be properly labeled or processed has been executed, the court may order that the article be delivered to the claimant for labeling or processing under the supervision of the commissioner of environmental conservation or the commissioner of health and social services, as the case may be. The claimant shall pay the expense of supervision. The bond shall be returned to the claimant of the article on representation to the court by the appropriate commissioner that the article is no longer in violation of this chapter, and that the expenses of supervision have been paid. (§ 6(c) ch 129 SLA 1949; am Executive Order No. 51, § 27 (1981))

Effect of amendments. — The 1981 amendment added "of environmental conservation or the commissioner of health and social services, as the case may be" following "the commissioner" near the end of the first sentence and added "appropriate" preceding "commissioner" in the third sentence.

Sec. 17.20.270. Immediate destruction of contaminated food. Meat, seafood, poultry, vegetable, fruit, or other perishable article in

any room, building, vehicle of transportation or other structure which is unsound, or contains filthy, decomposed, or putrid substance, or a substance that may be poisonous or deleterious to health or otherwise unsafe, is a nuisance. Whenever the commissioner of environmental conservation finds such an article, the commissioner shall immediately condemn or destroy it or in any other manner render it unsalable as human food. (§ 6(d) ch 129 SLA 1949; am Executive Order No. 51, § 28 (1981))

Effect of amendments. — The 1981 amendment added "of environmental conservation" following "the commissioner" in the second sentence.

Sec. 17.20.280. Injunction proceedings. The commissioner of environmental conservation and the commissioner of health and social services may apply to the superior court for, and the court has jurisdiction to grant, a temporary or permanent injunction restraining a person from violating their respective portions of AS 17.20.290. (§ 4 ch 129 SLA 1949; am Executive Order No. 51, § 29 (1981))

Effect of amendments. — The 1981 amendment added "of environmental conservation and the commissioner of health and social services" following "commissioner" and added "their respective portions of" following "person from violating."

Article 6. Prohibited Acts and Penalties.

Section	Section
290. Prohibited acts	320. Effect of written guaranty
300. Determination of misleading labeling or advertisement	330. Liability for dissemination of false advertising
310. Penalties	

Collateral references. — 25 Am. Jur. 2d, Drugs, Narcotics, and Poisons, § 40 et seq; 35 Am. Jur. 2d, Food, §§ 63 et seq., 74 et seq.

Sec. 17.20.290. Prohibited acts. (a) The following acts and the causing thereof are prohibited:

(1) the manufacture, or sale, or delivery, holding, or offering of sale of food, drug, device, or cosmetic that is adulterated or misbranded;

(2) the adulteration or misbranding of food, drug, device or cosmetic;

(3) the receipt in commerce of food, drug, device, or cosmetic that is adulterated or misbranded, and the delivery or proffered delivery of them for pay or otherwise;

(4) the sale, delivery for sale, holding for sale, or offering for sale of an article in violation of AS 17.20.050 — 17.20.070 and 17.20.100,

(5) the dissemination of a false advertisement;

(6) the refusal to permit entry or inspection, or to permit the taking of a sample, as authorized by AS 17.20.200;

(7) the giving of a guaranty or undertaking which is false, except by a person who relied on a guaranty or undertaking to the same effect signed by and containing the name and address of the person residing in the state from whom the person who relied on the guarantee or undertaking received the food, drug, device, or cosmetic in good faith;

(8) the removal or disposal of a detained or embargoed article in violation of AS 17.20.230 — 17.20.270;

(9) the alteration, mutilation, destruction, obliteration, or removal of the whole or part of the labeling of, or the doing of any other act with respect to, a food, drug, device, or cosmetic, if the act is done while the article is held for sale and results in the article being misbranded;

(10) forging, counterfeiting, simulating, or falsely representing, or without proper authority using a mark, stamp, tag, label or other identification device authorized or required by regulations adopted under AS 17.20.230 — 17.20.270;

(11) the using, on the labeling of a drug or in an advertisement relating to a drug, of a representation or suggestion that an application with respect to the drug is effective under AS 17.20.110 or that the drug complies with the provisions of that section;

(12) the sale or offering for sale of frozen fish as fresh fish;

(13) the improper labeling and drug substitution by pharmacists under AS 17.20.105.

(b) The commissioner of environmental conservation or a designee of the commissioner is responsible for enforcing the provisions of paragraphs (a)(1), (2), (3), (4), (6), (7), (8), (9), and (10) of this section, if the subject of the prohibited act involves food or cosmetics, and the provisions of paragraph (a)(12) of this section. This subsection does not limit the authority of peace officers.

(c) The commissioner of health and social services or a designee of the commissioner is responsible for enforcing the provisions of paragraphs (a)(1), (2), (3), (4), (6), (7), (8), (9), and (10) of this section, if the subject of the prohibited act involves drugs or devices, and the provisions of paragraphs (a)(5), (11), and (13) of this section. This subsection does not limit the authority of peace officers. (§ 3 ch 129 SLA 1949; am § 1 ch 119 SLA 1967; am § 2 ch 17 SLA 1971; am Executive Order No. 51, § 30 (1981))

Cross references. — For adulteration of food and its sale, see AS 17.05.020.

Effect of amendments. — The 1981 amendment added subsections (b) and (c).

Sec. 17.20.300. Determination of misleading labeling or advertisement. If an article is alleged to be misbranded because the labeling is misleading, or if an advertisement is alleged to be false

because it is misleading, in determining whether the labeling or advertisement is misleading, there shall be taken into account among other things representations made or suggested by statement, word, design, device, sound or combination of them, and the extent to which the labeling or advertisement fails to reveal facts material in the light of the representations or material with respect to consequences which may result from the use of the article to which the labeling or advertisement relates under the conditions of use prescribed in the labeling or advertisement or under customary or usual conditions of use. (§ 201 ch 129 SLA 1949)

Collateral references. — Products liability of manufacturer or seller for injury or death allegedly caused by failure to warn regarding danger in use of vaccine or prescription drug, 91 ALR3d 748.

Promotional efforts directed towards prescribing physician as affecting prescription drug manufacturer's liability for product-caused injury, 91 ALR3d 1080.

What constitutes "false advertising" of food products or cosmetics within §§ 5 and 12 of the Federal Trade Commission Act (15 USCS §§ 45, 52), 50 ALR Fed 16.

Sec. 17.20.310. Penalties. A person who violates the provisions of AS 17.20.290, upon conviction, is punishable by imprisonment for not more than six months, or by a fine of not more than $500, or by both. If the violation is committed after a conviction under this section has become final, the person is punishable by imprisonment for not more than one year, or by a fine of not more than $500, or by both. (§ 5(a) ch 129 SLA 1949)

Sec. 17.20.320. Effect of written guaranty. A person is not subject to the penalties of AS 17.20.310 for having violated AS 17.20.290(1) or (3) if that person establishes a guaranty or undertaking signed by and containing the name and address of the person residing in the state from whom the article was received in good faith, to the effect that it is not adulterated or misbranded within the meaning of this chapter. (§ 5(b) ch 129 SLA 1949)

Sec. 17.20.330. Liability for dissemination of false advertising. No publisher, radio-broadcast licensee, or agency or medium for the dissemination of an advertisement, except the manufacturer, packer, distributor, or seller of the article to which a false advertisement relates, is liable under AS 17.20.310 for the dissemination of the false advertisement, unless the publisher, licensee, agency or medium has refused the request of the commissioner of health and social services to furnish the name and post office address of the manufacturer, packer, distributor, seller, or advertising agency, residing in the state who caused dissemination of the advertisement. (§ 5(c) ch 129 SLA 1949; am Executive Order No. 51, § 31 (1981))

Effect of amendments. — The 1981 amendment deleted "on" preceding "the request of," added "of health and social services" following "the request of the commissioner" and deleted "the commissioner" preceding "the name and post office address."

Collateral references. — What constitutes "false advertising" of food products or cosmetics within 21 § 5 and 12 of the Federal Trade Commission Act (15 USCS §§ 45, 52), 50 ALR Fed. 16.

Article 7. General Provisions.

Section	Section
340. Scope of provisions dealing with sale	370. Definitions
350. Report of minor violations	380. Short title
360. Hearing before report of criminal violation	

Sec. 17.20.340. Scope of provisions dealing with sale. The provisions of this chapter regarding the sale of food, drugs, devices, or cosmetics include the manufacture, production, processing, packing, exposure, offer, possession, and holding of them for sale; the sale, dispensing, and giving of them, and the supplying or applying of them in the conduct of a food, drug, or cosmetic establishment. (§ 2(q) ch 129 SLA 1949)

Sec. 17.20.350. Report of minor violations. Nothing in this chapter requires either the commissioner of environmental conservation or the commissioner of health and social services, as the case may be, to report minor violations of their respective portions of this chapter for prosecution, or for the institution of libel or injunction proceedings, when that commissioner believes that the public interest will be adequately served by a suitable written notice or warning. (§ 8 ch 129 SLA 1949; am Executive Order No. 51, § 32 (1981))

Effect of amendments. — The 1981 amendment added "either" following "chapter requires," added "of environmental conservation or the commissioner of health and social services, as the case may be" following "the commissioner," added "of their respective portions" following "report minor violations" and substituted "that" for "the" preceding "commissioner believes that."

Sec. 17.20.360. Hearing before report of criminal violation. The attorney general, to whom the commissioner of environmental conservation or the commissioner of health and social services, as the case may be, reports a violation of this chapter, shall institute appropriate proceedings in the superior court without delay and prosecute them in the manner required by law. Before a violation of this chapter is reported to the attorney general, the person against whom the proceeding is contemplated shall be given appropriate notice and an opportunity to respond to the appropriate commissioner, orally or in writing, in person or by attorney, with regard to the contemplated proceeding. (§ 7 ch 129 SLA 1949; am Executive Order No. 51, § 3 (1981))

Effect of amendments. — The 1981 amendment added "of environmental conservation or the commissioner of health and social services, as the case may be" following "commissioner" in the first sentence and added "appropriate" preceding "commissioner" in the second sentence.

Sec. 17.20.370. Definitions. In this chapter

(1) "advertisement" means a representation disseminated, other than by labeling, for the purpose of inducing, or which is likely to induce directly or indirectly the purchase of food, drugs, devices or cosmetics;

(2) "antiseptic", in the labeling or advertisement of a drug, is a representation that it is a germicide, except in the case of a drug purporting to be, or represented as, an antiseptic for inhibitory use as a wet dressing, ointment, dusting powder, or other use involving prolonged contact with the body;

(3) "contaminated with filth" means food, drug, device, or cosmetic not securely protected from dust, dirt, and as far as necessary by all reasonable means, from foreign or injurious contamination;

(4) "cosmetic" means an article intended to be rubbed, poured, sprinkled, or sprayed on, introduced into, or otherwise applied to the human body for cleansing, beautifying, promoting attractiveness, or altering the appearance, and an article intended for use as a component of an article enumerated in this paragraph; except that the term does not include soap intended for cleansing purposes only;

(5) "device" except when used in AS 17.20.040(6), 17.20.090(3), 17.20.150(3), 17.20.290(10) and 17.20.300 means an instrument, apparatus, and contrivance, including its components, parts, and accessories, intended for use in the diagnosis, cure, mitigation, treatment, or prevention of disease in man or animal, or to affect the structure or function of the body of man or animal;

(6) "drug" means an article recognized in the official United States Pharmacopoeia, official Homeopathic Pharmacopoeia of the United States, or official National Formulary; an article intended for use in the diagnosis, cure, mitigation, treatment, or prevention of disease in man or animal; an article other than food, intended to affect the structure or function of the body of man or animal; and an article intended for use as component of an article specified in this paragraph but does not include devices or their components, parts, or accessories;

(7) "federal act" means the Federal Food, Drug, and Cosmetic Act, 21 U.S.C. 301 — 392; 52 Stat. 1040 — 1059;

(8) "food" means an article used for food or drink for man or animal, chewing gum, and articles used for components of either of them;

(9) "immediate container" does not include a package liner;

(10) "label" means a display of written, printed or graphic matter upon the immediate container of an article; however, a requirement made by or under authority of this chapter that a word, statement, or other information appear on the label is not complied with unless the

word, statement, or other information also appears on the outside container or wrapper of the retail package, if there is one, or is easily legible through the outside container or wrapper;

(11) "labeling" means the label and other written, printed or graphic matter upon an article or its container or wrapper accompanying the article;

(12) "new drug" means a drug the composition of which is such that it is not generally recognized among experts qualified by scientific training and experience to evaluate the safety of drugs as safe for use under the conditions prescribed, recommended, or suggested in the labeling of it; or a drug the composition of which is such that the drug, as a result of investigations to determine its safety for use under such conditions, has become so recognized, but which has not, otherwise than in these investigations, been used to a material extent or for a material time under those conditions;

(13) "official compendium" means the official United States Pharmacopoeia, official Homeopathic Pharmacopoeia of the United States, official National Formulary, or supplements to them. (§ 2(a) — (k) (m) — (p) (r) ch 129 SLA 1949; am § 6 ch 104 SLA 1971; am § 14 ch 208 SLA 1975; am Executive Order No. 51, § 41 (1981))

Revisor's notes. — This section was reorganized in 1983 to alphabetize the words defined.

Effect of amendments. — The 1981 amendment repealed former definitions of "commissioner" and "department."

Collateral references. — Marijuana, psilocybin, peyote or similar drugs of vegetable origin as narcotics for purposes of drug prosecution, 50 A.L.R.3d 1164.

Sec. 17.20.380. Short title. This chapter may be cited as the Alaska Food, Drug and Cosmetic Act. (§ 1 ch 129 SLA 1949)

Chapter 30. Controlled Substances.

Article
1. Regulation of Manufacture, Distribution, Prescription, and Dispensing of Controlled Substances (§§ 17.30.010 — 17.30.080)
2. Enforcement, Forfeiture and Review Provisions (§§ 17.30.100 — 17.30.130)
3. Education and Research (§ 17.30.140)
4. General Provisions (§§ 17.30.150 — 17.30.900)

Cross references. — For transitional provisions, see sec. 24, ch. 45, SLA 1982 in the Temporary and Special Acts; for declaration of legislative purpose, see sec. 1, ch. 45, SLA 1982 in the Temporary and Special Acts.

Collateral references. — 28 C.J.S., Drugs and Narcotics Supplement, § 1 et seq.

Construction or provision of Uniform Narcotic Drug Act or similar statute dealing with obtaining or procuring the administration of a narcotic drug by fraud or deceit, 25 A.L.R.3d 1118.

Article 1. Regulation of Manufacture, Distribution, Prescription, and Dispensing of Controlled Substances.

Section
10. Regulations
20. Registration requirements
30. Registration
40. Denial, revocation, and suspension of registration
50. Order to show cause
60. Records of registrants
70. Order forms; prescriptions
80. Unlawful administration, prescription and dispensation of controlled substances

Collateral references. — 25 Am. Jur. 2d, Drugs, Narcotics, and Poisons, §§ 7 et seq., 28 et seq.

Sec. 17.30.010. Regulations. (a) The Board of Pharmacy shall adopt regulations under the Administrative Procedure Act (AS 44.62) which are necessary for the administration of this chapter, and may charge reasonable fees relating to the registration and control of the manufacture, distribution, and dispensing of controlled substances as authorized by federal law in the state.

(b) Regulations adopted under this chapter by the board shall be patterned after federal law so that the legitimate manufacture, distribution, and dispensing of controlled substances is subject to regulations regarding registration, record-keeping, order forms and prescription requirements that are identical to those required by federal law or regulations. (§ 4 ch 45 SLA 1982)

Cross references. — For penalty for furnishing false or fraudulent information in or omitting material information from any application, report, record, or other document required to be kept or filed under this chapter, see AS 11.71.040(a)(8). For penalty for failure to make, keep, or furnish any record, notification, order form, statement, invoice, or information required under this chapter, see AS 11.71.030(a)(4).

Editor's notes. — Section 24, ch. 45, SLA 1982 provides: "Orders issued and regulations adopted under a law amended or repealed by this Act and in effect on January 1, 1983, and not in conflict with this Act continue until amended or repealed."

Sec. 17.30.020. Registration requirements. (a) A person who manufactures, distributes, dispenses, or conducts research with a controlled substance in the state or who proposes to manufacture, distribute, or dispense a controlled substance in the state, shall register annually with the board in accordance with regulations adopted under AS 17.30.010.

HOUSE HEALTH, EDUCATION & SOCIAL SERVICES
STANDING COMMITTEE

CSSB 354 (Jud) am "An Act relating to the regulation of private schools".

WITNESS REGISTER

Carl Larson
General Manager
Food Bank of Alaska
Juneau, Alaska 99801
Position Statement: In support of HB 496.

Gary Newman
Fairbanks, Alaska
Position Statement: Suggested changes in HB 496.

Barbara Smith
FISH Organization
Anchorage, Alaska
Position Statement: In favor of HB 496.

Connie Wallace
Executive Director
Fairbanks Food Bank
Fairbanks, Alaska
Position Statement: Noted concerns with some of the language in

HB 496.

Barbara Burke
Abused and Aide Shelter
Anchorage, Alaska
Position Statement: In support of HB 496.

Bill Barker
Bean's Cafe
Anchorage, Alaska
Position Statement: Didn't state position on HB 496.

Michael McQuinn
Student
University of Alaska, Anchorage
Position Statement: In favor of HB 32.

David Alcott
Chancellor
University of Alaska, Anchorage
Position Statement: In favor of HB 32.

Ed Bickerstaff
Chancellor
University of Alaska, Anchorage
Position Statement: In support of HB 32.

Roger Wordsley
Student Services
Anchorage Community College
Position Statement: In support of HB 32.

Sandy Berkie
Student
ACC/UAA
Position Statement: Urged passage of HB 32.

Bob Baldwin
Chairman
UAA Citizen's Advisory Committee
Position Statement: In support of HB 32.

Carol Lund
Director of Student Activities
Position Statement: Urged passage of HB 32.

Harry Nichols
Dean of Students
UAA
Position Statement: Supports HB 32.

Lee Pickard
Campus Affairs
UAA

Position Statement: In support of HB 32.

John Herring
Student
UAA
Position Statement: Urged passage of HB 32.

Ramona Suetopka-Duerre
President
Alaska Native Education Association
Position Statement: Strongly supports HB 32.

John O'Shea
UAA Alumni Association
Position Statement: Representing Alumni Association, he urged passage of HB 32.

Mary M. Wilson
Montessori Creative Training Center
1422 O Street
Anchorage, Alaska 99501
276-2971
Position Statement: Supports HB 514.

Fae Scott
Secretary to Ms. Green
Tom Thumb Montessori School
1831 Bunker
Anchorage, Alaska 99503
Position Statement: Supports HB 514 without amendments.

Safiyyah Shaheed
Montessori School
1224 Richardson Vista
#350
Anchorage, Alaska
279-1247
Position Statement: Supports HB 514 without amendments.

Katherine Miller
Tom Thumb Montessori
5915 Doncaster Dr.
Anchorage, Alaska
337-5006
Position Statement: In favor of HB 514.

Margaret Green
Director
Tom Thumb Montessori
1901 Spenard Drive
Anchorage, Alaska 99503
Position Statement: Supports HB 514.

Harry Bates

SR 2, Box 4110
Chugiak, Alaska
688-2242
Position Statement: In favor of CSHB 514.

Mac Culver
Hillcrest Christian School
SR 3 Box 5946
Chugiak, Alaska
688-3813
Position Statement: In favor of CSHB 514.

Burt Carney
P.O. Box 10-1779
Anchorage, Alaska
Position Statement: Supports SB 354, concerned with CS.

Daniel Glover
Church Christian Harvester
9109 Brayton Drive
344-2244
Position Statement: Supports SB 354.

Kalen Saxton
Position Statement: Supports HB 354.

Mary Beth Juday
Position Statement: In favor of CSSB 354.

Tim Ewell
Position Statement: In support of SB 352.

Joan Hurst
Position Statement: Opposed HB 354 and SB 352.

Sister Eileen Brown
Fairbanks, Alaska
Position Statement: Questioned language in HB 354.

Patty Meritt
Position Statement: Opposes both HB 354 and SB 352.

Doug Schmedlen
Position Statement: Favored HB 514.

Lloyd Bellamy
Position Statement: In support of CSSB 354.

Edwin Rinner
Position Statement: In support of CSSB 354.

Jerry Wainscott
Position Statement: Urged passage of CSSB 354.

Robert Alley
Position Statement: Supports CSSB 354.

Robert Byron
Position Statement: In support of CSSB 354.

Walt Arden
Abott Loop Christian Center
Position Statement: Supports CSSB 354.

ACTION NARRATIVE

TAPE#1, Side A

Recording Number 0001 — Chairman Tischer called the meeting to order at 10:15 a.m., acknowledged members present and introduced HB 496 to the committee.

Number 0017 — Rep. Koponen, sponsor of HB 496 comes to the stand to testify. He said the bill intended to exempt food banks and doners from liability. Alaska is one of three states without this legislation. Significant difference between this bill and similar legislation was vetoed by the 11th Legislature under Governor Hammond. This bill excludes commercial foods. This bill maintains standards for the food.

Number 0070 — Rep. Koponen: We will be looking at changes in this bill which will provide restrictions.

Number 0080 — Chairman Tischer: We ought to look at provisions which allow the giving away of food. Referred to example.

Number 0104 — Chairman Tischer: I've seen folks dig in garbage behind retail grocers and pull out perfectly good food. Seems more humane to let them be given food out of back of a truck.

Number 0114 — Rep. Koponen: I agree, it's a tremendous waste. We want to come up with a bill which will take care of this waste, but provide some standards for this food.

Number 0130 — Rep. Koponen: Food banks are co-op ventures of Salvation Army and other groups. We want looser language which will permit easier distribution of food.

Number 0143 — Chairman Tischer: Cited another example: Got from store food they were going to throw away. Can we provide this legality again?

Number 0166 — Rep. Koponen: Stores discourage that because of liability. Different stores have different policies.

Number 0198 — Carl Larson of Juneau, General Manager of Food Bank Alaska: Thanks for the chance to testify. Many organizations rely on food

banks and food donations for their food. This bill would help incentive to donate. People and commercial organization don't donate for fear of liability.

Number 0250 — Ward of Food Bank said he gives to organizations such as Bean's Cafe and it is tax deductible. These provisions deal with food from surplus.

Number 0273 — Rep. Larson: Trying to determine value of giving away hard to access.

Number 0284 — Rep. Ward: If I were a fisherman with extra fish; could I give them to food bank and deduct from taxes their full value?

Number 0318 — Chairman Tischer: How does your organization function? Are you paid?

Number 0327 — Carl Larson: Food bank started in 1979. We get "Request for Proposal" grants from the municipality, plus others. I get $1400 a month and our driver gets $7.50 an hour.

Number 0412 — Rep. Ward: How many people served last year?

Number 0420 — Mr. Larson: We estimated 6500.

Number 0420 — Rep. Ward: We aren't coordinating what we're trying to do.

Number 0463 — Mr. Larson: There are 10 different Salvation Army Programs, 8 different children's organization and others. We always try to recruit.

Number 0468 — Chairman Tischer: What criteria to get food from you?

Tape 1, Side B
Recording
Number 0006 — Gary Newman from Fairbanks: This bill will allow food to be given to animals too, rather than wasted. Suggested change; we need to be more specific in certain people's exclusion.

Number 0045 — Barbara Smith, Anchorage from FISH Organization: We're emergency food distribution agency staffed by volunteers. We receive food from food bank. We also distribute. We re-package some foods, so

we're concerned about our liability.

Number 0092 — Barbara Smith: We have been serving about 110 families per month. There is no means test, $6,480 of meals per month. This month we have seen a great increase in number of needy families.

Number 0124 — Rep. Ward: Do you have a problem with people getting tax credit for donating?

Number 0140 — Barbara Smith: We encourage our doners to take a tax credit. There are two types: Food of marginal quality and food simply out of date.

Number 0185 — Chairman Tischer: It's incomprehensible for hungry person who receives free food to criticize that food. Maybe we ought to void responsibility of giver. Food receivers eat at their own risk.

Number 0206 — Barbara Smith: I think this bill addresses that. The bill makes it clear that the food bank makes every effort to provide sanitation for its food.

Number 0242 — Rep. Koponen: This bill was vetoed when we had our canned fish problem in Alaska. Canned food probably should not be included in this bill.

Number 0254 — Barbara Smith: We do not accept home canned food. We cannot trust it. We are careful.

Number 0290 — Connie Wallace, Executive Director of Fairbanks Food Bank: We work with several agencies and every church in town. People who need short-term help concern me. That's why we work with pastors.

Number 0343 — 1976 Tax Reform Act addresses Rep. Ward's tax deduction question.

Number 0363 — Connie Wallace; about animal food. In Fairbanks we can use food for animals so that nothing goes to waste.

Number 0424 — Connie Wallace: botulism problem, we make use of city sanitarian. We have people who know lots about food handling. Urge change in excluding manufactures. This will need to be changed in next couple of years.

Tape 2, Side A

Recording Number 0001	Rep. Ward: Enough salmon rot on beaches in Alaska to feed everyone in the state. Please comment.
Number 0015	Connie Wallace: I share your concern. Nationally, 137 million tons of food are wasted yearly. There's no reason for anyone in America to be hungry.
Number 0041	Chairman Tischer: In California, tons of oranges rot each year when there's a bumper crop to help the price up. Anything subsidized by government will do this.
Number 0055	Beverly Burke from Anchorage: Representing the Abuse, and Aid Shelter; $1000 a month in for those people, 25% food from food bank. This bill is a good balance.
Number 0090	Bill Barker from Anchorage for Bean's Cafe: Bean's Cafe cooks for 200 people twice daily for street people of Anchorage. The main donator is the food bank.
Number 0120	Rep. Ward: There's no criteria for price on raw salmon. That's why so much waste. Can't get a tax deduction for giving fish away because of the lack of criteria.
Number 0141	Bill Barker: Bean's Cafe gets salmon from sport fishermen who empty last year's catch from freezer.
Number 0154	Rep. Davis: I'm a commercial fisherman. So much goes to waste because it rots so fast. Agree it is a waste, but how to solve is an answered question.
Number 0171	Chairman Tischer: It seems a simple matter to save this food for hungry people and save liability suits from flying everywhere, we should pass a bill like this.
Number 0204	Testimony on HB 406 concluded.
Number 0239	Chairman Tischer introduces HB 32 and welcomes all sites.
Number 0261	Rep. Furnace: We have obligation to provide student housing for Anchorage City College and University of Alaska, Anchorage. Long-standing agreement with campuses. This bill

calls for $15 million on first come first serve basis.

Number 0293 — Rep. Furnace: Let me repeat. We have an obligation and a long-standing agreement.

Number 0301 — Rep. Ward: This bill is contrary to capital request budget which provides for Juneau campus housing. The design of dorms are very large.

Number 0316 — Rep. Furnace: I hope message is clear to pass this legislation, lets not let this die because of quality of design.

Number 0348 — Rep. Martin: Juneau housing is a gimmick to attract students to that campus. The Anchorage campus needs housing, it has for 11 years. We should be flexible on design. Priority is a question. I hope students will have input about what is priority for who gets housing; rural students, etc. Maybe not first come, first serve, but these details unimportant compared to getting legislation passed.

Number 0429 — Michael McQuinn on behalf of UAA/ACC students: I work primarily with rural students as Orientation Officer at Anchorage Community College. Housing is a primary reason there's a high drop-out rate of Native students.

Tape 2, Side B
Recording
Number 0001 — Michael McQuinn: Help make cultural transition if the Natives could live on campus.

Number 0020 — Rep. Koponen: Have you decided how to split use of housing between ACC/UAA?

Number 0025 — Mr. McQuinn: Seems to be good communication between both Chancellors.

Number 0048 — Rep. Martin: Cost to students in borrowing for loan. Students with available housing to borrow for less than those without housing. We could save $6 million a year by providing housing. Within three years, savings will pay for this new housing.

Number 0078 — Rep. Ward asks Rep. Martin: What will the

on going operation cost of this be if approved?

Number 0082 — Rep. Martin: I could not answer. Addition in operation would be small.

Number 0099 — Mr. McQuinn: Concerned with equal opportunity education for handicapped, from to physically handicapped. My greatest concern.

Number 0110 — David Alcott, Chancellor at University of Alaska, Anchorage: Very pleased with testimony. Concerned with accessibility to education. The money; $15 million to provide housing for 350 students. Type of housing; concerned to provide maximum for minimum dollars. Least operating costs too.

Number 0153 — David Alcott. Hope for $250 a month for student housing.

Number 0168 — Rep. Ward: How many students would utilize dorms if available?

Number 0173 — Mr. Alcott: Housing needs will be between 900 and 1400 students. We will make these figures available. No risk that we'll build too many rooms.

Number 0194 — Ed Bickerstaff, Chancellor at Anchorage Community College; joint partnership is growing between two campuses. Same set of standards for both schools in priority who gets housing.

Number 0270 — Chairman Tischer: Legislature sees duplication of effort from architects in school design. Why not use the functional design already designed?

Number 0293 — Mr. Bickerstaff: Students requests; privacy and cheap cost. Universities are moving increasingly away from traditional housing. Operating costs will fall almost one-half if we go from traditional dorm to the apartment style housing.

Number 0349 — Chairman Tischer: Do we have to have the ancillary help? Can't the students take the place of janitors, etc? Can we take away the frills?

Number 0388 — Rep. Ward: What about the provision for 1%

cost going to art-work? Will this hinder?

Number 0400 — Mr. Bickerstaff: I think some of the art around is an asset. I'm pleased. The art is complimentary to the brick and concrete buildings. If I had choice, I'd rather put that 1% to student housing.

Number 0428 — Rep. Martin: Anchorage has stereotype of students who are older, married and have housing. More freshmen coming, but leaving because of the lack of housing. We want these freshmen.

Tape 3, Side A
Recording
Number 0001 — Chairman Tischer asks the witnesses to keep their testimony short. Offers to accept testimony in writing.

Number 0009 — Roger Wordsley, Vice-Chair of Student Services at ACC: Our housing is not designed for older married students. Rural students coming to ACC is our highest priority.

Number 0024 — Mr. Wordsley: Dorms versus apartment type, we don't plan to furnish extras. We will provide some sort of food service.

Number 0045 — Sandy Berkie, Student at ACC/UAA; urged passage of HB 32. To hold on to our students, we must build housing, education is our best natural resource.

Number 0066 — Rep. Ward: Student Loan Program; should that loan be made if those courses are offered here?

Number 0073 — Sandy Berkie; it should be restricted. Keep resources in this state.

Number 0079 — Chairman Tischer repeats Rep. Ward's question.

Number 0083 — Rep. Ward: I agree with trying to help our students here.

Number 0090 — Bob Baldwin, Chairman of UAA Citizen's Advisory Committee: The priorities are; classroom space and planning money to lay out campus.

Number 0110 — Mr. Baldwin: Student housing; a roadblock in developing the campuses. Regret the Governor's empty promise to support this in his capital budget. The designs are not extravagant, art in public places we strongly support. We have barren campuses.

Number 0161 — Rep. Ward: Public art, optional or mandatory?

Number 0183 — Mr. Baldwin: Committee has no position on that.

Number 0188 — Carol Lund, Director of Student Activities: Students and I support HB 32, cited popularity of bill from last year.

Number 0110 — Harry Nichols, Dean of Students, UAA: Count me as another member of University community who supports this legislation. If the campus will be seen as University, housing must be provided.

Number 0235 — Lee Pickard, Vice-Chairman of Campus Affairs, UAA: I support this bill, I'd like to answer any questions.

Number 0254 — Chairman Tischer: If bill goes, would you need more support staff?

Number 0269 — Lee Pickard: No extra staff required, you can't realistically expect students to do their own cleaning.

Number 0301 — John Herring, Student at UAA; strongly supports HB 32.

Number 0334 — Rep. Ward: Do you know any students who transferred out because of lack of dorms?

Number 0337 — John Herring: I almost transferred because of that.

Number 0370 — Ramona Suetopka-Duerre, President of Alaska Native Education Association: We're very concerned with the problem of the dorms. We strongly support HB 32.

Number 0400 — John O'Shea, Representing UAA Alumni Association: I affirm all prior testimony, rural students are being discriminated against because of lacking housing.

Tape 3, Side B

Recording	
Number 0001	Chairman Tischer: Introduc s HB 514 and clarifies the committee is not addressing day care centers and witnesses should confine testimony to specific legislation by name.
Number 0047	Mary Wilson, Teacher, Montessori School: Limit for preschool to (4) hours (in SB 354) has our parents mad. Support HB 514.
Number 0066	Fae Scott, Secretary, Montessori School: She was against the (4) hour limitation. Our schools are very good, a good atmosphere for the citizens of tomorrow.
Number 0093	Fae Scott: We want HB 514 without amendments.
Number 0105	Safiyyah Shaheed, Teacher, Montessori: Supports HB 514 without amendments.
Number 0115	Katherine Miller: In support of HB 514 as is. The (4) hour limit not germane, it's a poor criteria. Recommended deleting amendment on Page 2, Lines 22-25.
Number 0157	Margaret Green, Director, Montessori School: Our paperwork is the same as that for the University. Very controlled. I represent parents of 650 children, the (4) hour limit is unfounded. Susan Clark's past testimony did not represent the University Women. The (4) hour limit do disservice to our school.
Number 0212	Ms. Green: We do have fire safety and other health codes. Please burry this legislation it has taken much time already.
Number 0221	Rep. Koponen: (4) hour limitation never offered by either house.
Number 0230	Rep. Uehling: Please comment later on your feelings toward SB 354.
Number 0281	Harry Bates, Principle: In favor of CSHB 514 and am against amendments 1 and 2 of CSSB 354.
Number 0332	Mac Culver: Thanked committee for interest and agreed with Mr. Bates' testimony. Substantive changes might negate agreement with Governor and Attorney General.

Number 0378 — Burt Carney, Pastor: Handed out a document which he read as testimony to the committee. He supported SB 354 and was concerned with amendment 1 of CSSB 354.

Tape 3, Side B
Recording
Number 0011 — Rep. Koponen: We should discuss with the Attorney General to see what the changes will be.

Number 0017 — Rep. Uehling: Last three amendments are fine with you? (Yes).

Number 0041 — Daniel Glover: Agreed with Mr. Carney's testimony. Parents who go to the trouble of placing their children in these private schools do care about their children, and are capable of choosing wisely for their children.

Number 0084 — Kalen Saxtor: In support of SB 354 with exception of amendments.

Number 0135 — Mary Beth Juday: Concerned that children in day-care facilities have their needs met. children don't belong in academic programs all day long. They won't learn to be children, such as play and socialize, when they are in school all day. In favor of CSSB 354.

Number 0159 — Chairman Tischer: Do you want always to reserve the right to choose for your own children? (Yes).

Number 0187 — Ms. Juday: Its the government's responsibility to ensure safety and other standards for our children.

Number 0220 — Tim Ewell: Restated Mr. Carney's testimony.

Number 0260 — Joan Hurst: As a private citizen; she opposed both HB 514 and SB 354. The state is obliged to watch out for school's health and safety, including child/staff ratio. She said she objects to certain school exemptions.

Number 0349 — Sister Eileen Brown: Agreed with most of Ms. Juday's testimony, and asked for some clarification with the language on Page 2, Line 8.

Number 0376 — Rep. Koponen clarifies the language.

Number 0422 — Sister Eileen Brown: We are in favor of the government's health and safety requirements and thanks the committee.

Number 0453 — Patty Meritt: Both bills will increase inconsistency in regulations. She was against both bills.

Tape 4, Side A
Recording
Number 0016 — Patty Meritt: Teacher with certain training should be able to teach with bigger ratios of students.

Number 0028 — Rep. Koponen: Any suggestions for regulations?

Number 0032 — Ms. Meritt: Look at other states, many schools have bigger ratio allowances. Age makes a difference to ratio; so does teacher qualification.

Number 0052 — Doug Schmedlen: Agreed with Mr. Carney's testimony. emphasized that amendments 1 and 2 need attention, the original bill HB 514 was a good bill. Referred to concerns about subsidies.

Number 0074 — Lloyd Bellamy: Agreed with Mr. Carney's testimony.

Number 0080 — Edwin Rinner: As parent of four children, he believed this bill is appropriate. Appreciated the Governor's interest and that of the legislators, and also agreed with Mr. Carney's suggestions for changing the amendments.

Number 0100 — Jerry Wainscott: Concurred with Mr. Carney's testimony. Thanked the committee for their work and urged passage of the bills.

Number 0115 — Robert Alley: Concurred with Mr. Carney's statement and thanked the committee members.

Number 0145 — Robert Bryon, Wasilla Children's Center: He supported Mr. Carney's testimony and sending 18 students from Wasilla to Peter's Creek. Next year we hope to help them in our own school in Wasilla, there will be about 40 children.

Number 0166	Walt Arden: Endorses Mr. Carney's testimony.
Number 0183	Chairman Tischer thanked the witnesses for coming to the hearing and the committee will soon put the bill on the floor.
Number 0190	No further business to come before the committee, Chairman Tischer adjourned the meeting at 3:04 p.m.

ACTION NARRATIVE

TAPE#1, Side A
Recording
Number 0001 Chairman Tischer called the meeting to order

at 1:20 p.m., and recognized the members present. She announced the committee calendar, welcomed all teleconference sites and stated her intent to move the bill out of committee.

Number 0022 — Rep. Martin moved that CSHB 496 (HESS) be brought up for consideration. No objection, so ordered.

Number 0026 — Chairman Tischer called the first witness to testify, Rep. Koponen who is the sponsor of the bill.

Number 0037 — Rep. Koponen stated that the liability is limited to constructive knowledge of any type of fraud. The committee substitute defines liability as gross negligence rather than legal negligence. The law is written in one section of the bill so people don't have to pick around. The donor section defines donor as farmer, retailer, wholesale, freight company, etc. It excludes manufactures of canned foods, said Rep. Koponen.

Number 0078 — Chairman Tischer asks if Matanuska Maid made sour cream and something happened so the package didn't look good, could they give that to a food bank?

Number 0102 — Rep. Koponen responds yes, that is better than the indigents picking through the garbage bins.

Number 0110 — Joe Cladouhos from the Department of Environmental Conservation stated that the Department supports HB 496 and they had no problems with the present language.

Number 0122 — Representatives Pestinger and Uehling are now present for the committee meeting.

Number 0129 — Elizabeth Shaw from the Department of Law is the next witness to testify. She defines liability of donors; one of the problems for the original bill was that it didn't change the standards that applied to food donors. We wanted the new bill to define standards of negligence, said Ms. Shaw.

Elizabeth Shaw said theory or negligence presupposes a standard of behavior and that's the reasonable and prudent person

standard. The juries use that standard to determine negligence, they want people to act reasonably and prudently at all times - doing what a reasonable and prudent person would do. This encourages donors to give to food banks and this donor would not be liable if he acted reasonably and prudently.

Ms. Shaw continues. This bill has two categories; one is a donor which excludes those of commercial capacities. Retailers, however, would be considered a donor.

Page 1, line 13: previous draft stated injury not be attributed to donor if not a direct result. We questioned the use of direct, said Ms. Shaw.

Page 2, line 7: The in food bank, injury or death is not a direct result. There is an intentional difference between the two standards.

Number 0230 — Chairman Tischer asks for questions.

Number 0233 — Rep. Pestinger moved that CSHB 496 (HESS) be passed out of committee with individual recommendations. No objections, so ordered. Representatives Tischer, Pestinger, Martin, Uehling, Davis and Koponen signed a "do pass" recommendation.

Number 0254 — No further business to come before the committee, Chairman Tischer adjourned the meeting at 1:58 p.m.

SB 384/HB 496

465-3600

June 30, 1980

The Honorable Jay S. Hammond
Governor
State of Alaska
Pouch A
Juneau, Alaska 99811

Re: SCS CSHB 686 am S
(limiting liability of
donors of food)
Our File: J-88-146-80

Dear Governor Hammond:

This office has reviewed SCS CSHB 686 am S, the principal thrust of which relieves a person donating food to a nonprofit organization of any civil or criminal liability flowing from any adulteration or misbranding of the food, unless the alteration is the result of intentional or grossly negligent conduct on the part of the donor.

"Grossly negligent conduct" is defined as "the intentional failure to perform a duty with reckless disregard of consequences that affect the life or property of another." (The legislature forgot the comma after "duty," thus changing the literal meaning, but we assume that we know what was intended.) A donee may ask the commissioner of health and social services to inspect the food to determine if it is adulterated or misbranded.

The commissioner may delegate this inspection duty, and a broad range of other enforcement and inspection duties, to the Department of Environmental Conservation.

This bill is apparently well intentioned; it is designed to encourage the donation of food to nonprofit

organizations for their use or distribution--presumably to needy persons. However, it exacts too great a price from prospective donees as a reward for the eleemosynary conduct.

The bill's failure to distinguish between donors who are manufacturers, packers, or bottlers and those who are not is, we think, a fatal flaw. It is a well-established principle of law that manufacturers, bottlers, and packers are liable for damages resulting from a failure to exercise that degree of care required to insure that the product is fit for use and is free from taint. See 32A C.J.S. Food, sections 59-60. This bill would relieve those manufacturers from liability for negligence for illness caused by unfit food when they give away rather than sell their products. While it is admirable to encourage the donation of food to needy causes, it is unwise to eliminate the ordinary standard of care and its attendant liability. We can, for example, imagine a manufacturer whose warehouse is laden with food of marginal fitness who would like to donate it for a tax deduction. We do not think it proper to eliminate this person's liability for negligence should one of the donees become ill from adulterated or unfit food. Poor people receiving donated food should have no less protection than people who buy food from the donor.

The class of persons who manufacture food should be held to a uniform standard of care regardless of whether the food is sold or given away. To do otherwise would be to encourage socially irresponsible conduct disguised as beneficent bounty. We would suggest that you veto this bill.

Sincerely,

Wilson L. Condon
Attorney General

WLC:ml:MRL

GARY C. NEWMAN
S.R. BOX 51233
FAIRBANKS, ALASKA 99701

SB 384/HB 496

January 23, 1984

House FESS Committee

I am in support of House Bill 496, relating to food banks.

This bill would remove the impediment of liability from the donation by food vendors of surplus or waste food. By doing so, it would allow the use of tons of food for human or animal consumption that is presently being destroyed by the vendors.

For one who has had animals such as pigs, chickens and cows, this bill would allow them to have the waste that is presently thrown away by food vendors. At present, the vendors won't give away food which is waste by their standards even for animal use because there is the chance that the food would really be used for human consumption and they are concerned about the liability question, as I stated earlier.

While this issue may affect only a small proportion of our state's population, it would allow the use of tons of resources that are expensively imported into our state for use for something other than landfill.

I urge your support of this bill.

Gary C. Newman

FOOD BANK OF ALASKA

P.O. Box 3324, Anchorage, Ak 99510
1025 Orca Street, # N8, Anchorage
907-276-4776

JAN 1984 RECEIVED

SB 384/
HB 496

January 5, 1984

Dear Friends:

The holidays are over and we have all of you to thank for your support during the 1983 year. It has been a very good year for the Food Bank. I can't give all the details on this short letter, but I will be glad to do so at the Annual Meeting Friday, February 3rd, 1984 at 6:30 pm. The First Christian Church at 3031 LaTouche street will host the meeting. It will begin with dinner. The public is invited to share in the report of 1983 activities. Please phone the Food Bank, 276-4776, with your reservations. Donation for the dinner will be $7.50. Ballots will be mailed to all individuals that have donated $10.00 to the Food Bank and all Agencies that have donated $25.00 during 1983.

The Bureau of Land Management recently had a canned food drive with interdepartmental competition. The total poundage donated to the Food Bank was a shade under 500 lbs. That makes it the largest single food drive in recent history! Thanks to all the employees of the BLM.

The Food Bank has finally bought a Kerosun Heater!! No more freezing in the office for the volunteers or staff. We still need a nice, well running 4X4 to pick up the overflow for the High Cube van. If any one knows of a bargain let us know. (Or if you know of someone who would be willing to donate one)

In the last newsletter I let it be known that we needed snow tires. Well the plea did not go unheard. I would like to thank the Salvation Army for donating two studded tires and the Firestone store on Post Rd for donating three tires and mounting. The Firestone donation was arranged by Allen Bentson of Alaska Sales and Service. Thank you Allen, Salvation Army and Firestone.

The Food Bank is having an activity called "Can Skate" if you can skate then come to the Anchorage Roller Rink on January 24, 1984 with two cans of food and you can skate for free! This has been arranged in cooperation with Mark Dade of the Anchorage Roller Rink. We are hoping for a very good turnout. If you can't skate you can drop of donations there on the 24th anyway.

I hope to see each of you at the annual meeting and at the skating rink. I thank each and everyone of you for your support during the 1983 year and look forward to your continued support.

Sincerely,

Carl M. Larsen
General Manager

P.S. Please RSVP by January 31 for the Annual Meeting.

"Cache and Share / Don't Waste Food"

SB 384 / HB 496

Gleaners fight hunger, salvage food in 11 states

In produce fields and fruit groves scattered across America, hard-pressed Americans are increasingly using a concept as old as the Bible to fight hunger. It is gleaning, the salvaging of food that otherwise would rot in the fields, whether inadvertently left behind or discarded because of blemishes, bruises, or low prices.

Gleaners are gathering some of that food through privately organized efforts in at least 11 states: Arizona, California, Colorado, Florida, Kansas, Maryland, Michigan, Missouri, Oregon, Texas, and Washington. They help fill what Congress' General Accounting Office calls "an unmet need" for food assistance among those not qualifying for government food programs, and GAO says states can help increase the amount of gleaned food.

California and Oregon, for example, give state tax deductions to farmers for the value of food gleaned from their fields. First passed in 1977, California's A.B. 120 this year was extended through 1984.

"It's an incentive for churches and other groups to go out and get the produce and say to a store or grower that he can get a tax deduction," says California Assemblyman David Kelly, who sponsored the renewal. Stores and growers can claim a charitable deduction — in addition to the business expense — for the value of gleaned or discarded food. A study is underway to determine the amount of lost taxes on such food.

In addition, the Food Marketing Institute says that 34 states have passed "Good Samaritan" laws limiting the liability of food donors. Ohio's is illustrative: "No person who in good faith donates perishable food to an agency is liable in civil damages for injury, death, or loss to persons or property that arises because that perishable food . . . is not fit for human consumption," if the food was reasonably considered safe at the time it was donated.

Tax deductions and Good Samaritan laws, the GAO said, are "positively affecting the amount of food being donated."

Gleaning takes its cue from Leviticus 19:9-10: "When you harvest the produce of your field, do not completely mow the edge of your field or gather the gleanings of your harvest . . . leave them for the poor." Today food is also gleaned from supermarket waste.

Gleaners are the needy or volunteers gathering food for others. The needy keep what they can use with the excess going to such places as food banks. "It's not a freebie program — you work for what you get," says Judi Amos, of Everett, Wash., who has labored as a gleaner among potatoes and peaches.

"The program's really helped out my budget," adds Rachel Brown, who supports three children on welfare and food stamps. After years of dependence on others, she says with pride, "I'm helping myself and helping others."

GLEANING HARVEST — Rachel Brown and her nephew, Anthony Miller, stand next to boxes of pears and vegetables that were her share for a day's work of gleaning in Washington state.

In-state preference laws enacted to govern public contract awards

One sidelight of the recent recession is that several legislatures are worried about state and local government contracts being awarded to out-of-state firms. As a consequence, at least 21 legislatures have enacted in-state preference laws.

The "Buy Minnesota" law passed last May, for example, has received nationwide publicity reflecting the generic pros and cons of implementing such protectionist legislation. (These laws differ from "Buy American" laws requiring the purchase of American-made goods and services over those from foreign countries — which don't specify whether they must come from in-state firms.)

According to the author of the Minnesota legislation, State Representative Pat Beard, the law was intended to improve in-state employment and thus increase state tax revenues.

Beard found that 13 other states exercise in-state preference laws that include a 2-15 percent break in bidding on public works jobs against out-of-state contractors. States exercising preference are Alaska, Arizona, Arkansas, Hawaii, Louisiana, Maine, Montana, New Mexico, Oklahoma, South Carolina, Washington, West Virginia, and Wyoming. Among them, the preference law may apply only to state agencies or extend also to municipalities and school districts.

The Minnesota law includes a provision that says any contract awarded by a state agency for engineering services, erection, construction, alteration or repair of any public building or structure, or for any public work improvement, when competitive bidding is not required, must be awarded to a Minnesota resident.

"If competitive bidding is required by law," the statute continues, "the contract must be

Re: H.B. 496 – Food Banks

fm. Rep. Niilo Koponen

Waste not, want not

WASHINGTON, DC

How are America's poor to eat when their unemployment pay runs out, or when they can no longer make do on food stamps and welfare? The recession has provided an answer: a jerry-built, but enviably efficient, system of emergency food centres. This network stretches across the nation, using food that would otherwise go to waste, and shunts it quickly and in large quantities from grower or manufacturer to the various centres that feed the hungry. It is a charitable operation which employs only a few hundred people and is completely decentralised. It has grown with such speed that it has already left the agriculture department's much criticised surplus commodity programme, ensnarled in red tape, far behind.

The emergency food system has its origins in the soup kitchens of the depression and before, but its growth in the past few years has been startling. Although all involved would like to consider it a temporary institution, there is a growing belief that it is here to stay and, if anything, will grow much larger.

Sixty-one regional food banks are the system's backbone. Each consists of a large warehouse equipped with freezers and usually manned by a small, paid staff supplemented by volunteers. These food banks are connected through Second Harvest, a non-profit-seeking organisation, which acts as a food broker. From its base in Phoenix, Arizona, Second Harvest approaches farmers and food manufacturers for donations and then shunts this food through three regional offices out to its members. The member food banks, either individually or through pools, pay the cost of transport, which is also sometimes donated. Once the food reaches a food bank, it is then given out to hundreds of the bank's members: churches, day centres for infants and the elderly, soup kitchens and various other organisations.

The member groups, which would previously have bought food on the open market, now support their food bank by paying a tax of between five and 12.5 cents a pound for the food they take. In this way the budget of the food bank, usually running anywhere from $100,000-250,000 a year, is covered. In some instances food banks are paid for by small donations. In Oklahoma, 600 people send in cheques of from $5 to $25 a month to keep the major local food banks going.

The entire system is private and non-profit seeking. To make sure it stays that way for tax purposes, Second Harvest certifies its member banks, inspects their operations, ensures that they charge no more than 12.5 cents a pound in taxes, and satisfies itself that the bank members in turn are charitable organisations as defined under the tax laws.

No shortage of takers

Second Harvest began as an experimental arm of the now defunct Community Services Administration in the Carter era. Last year it handled 600m lb of food. This year the volume is expected to exceed 100m lb. Much of the food consists of products that would otherwise be thrown out by the manufacturer, not because they are bad, but because they cannot be sold for other reasons: for example, discolouration or misspelled labels. When a Middle Eastern food broker went out of business, a trailer of macaroni with Arabic labeling was given to a food bank in New Jersey. Second Harvest dispensed 32 train carloads of a cereal which its manufacturer thought too oddly-flavoured to sell. The companies can deduct cost and half the unrealised profit from their taxes when they make such donations.

Some food banks rely heavily on farm surpluses. In northern California, where there are five large food banks, the banks collaborate to find out what crops are in surplus and to carry out exchanges between different areas. The bank in Watsonville, for example, supplies tons of artichokes and lettuce and gets, in exchange, peaches from the bank in Santa Clara and tomatoes from the bank in Sacramento. Farmers give food that would otherwise go to waste. What is left in the fields after harvest is also, in many cases, gathered in by teams of volunteer gleaners who take their pickings to the banks for sorting, cleaning and packing.

A report by a research group in Washington noted a dramatic increase in people coming to programmes served by the food banks. More than half the 181 programmes surveyed said that provision of free meals or food baskets had increased by more than half between February, 1982, and February, 1983. The Community Food Bank of New Jersey in Newark provides a good indication of the trend. Last autumn the bank was handling 10,000 lb of food a month. Now it distributes 200,000 lb a month across the state to 300 different groups which provide food to 30,000 people every day.

Some food banks in the Second Harvest system also distribute federal surplus foods under the government's programme. For the most part these consist of butter, cheese and non-fat dry milk from the government's huge surpluses. But some food banks refuse to handle federal foods on the ground that it involves too much paper work. In certain states food banks say they have been deliberately denied federal food shipments, which instead have been handed out through local politicians as patronage.

Salvation Army aims to replenish dwindling food bank

DAVID CLITHEROE
'We don't turn anyone away'

by Chriss Swaney
Times Writer

4/20/84

When a boxer goes down for the 10 count, he usually gets saved by the gong or the referee. That's not the case, however, for the emergency food bank at the Salvation Army's McKinnell House.

The food bank is going down for a 10 count and Salvation Army officials say they don't have the money to revive it.

"We're in bad shape. Our food supplies are so low now that we're trying to decide how long we can stretch things out," said Capt. David Clitheroe, director of social services.

Clitheroe said dwindling emergency food supplies are the result of a 51 percent increase in walk-in clients in the past three years and a 37 percent decrease in food funding.

Normally, the Salvation Army spends $80,000 on its emergency food program. But inflation and an increased number of needy families in Anchorage have whittled funds to $50,000.

Because of the decreases, the normal three-day food box which includes nine meals for a family of four has been cut back to a one-day box of food. There are also serious shortages in meat, dairy products and canned goods.

"These are things we generally try to supply needy families with," Clitheroe said. The flood of needy families has been so great that the Army's food policy of assisting families once every 90 days is frequently extended. "We don't turn anyone away," Clitheroe said. The cost of feeding people has also risen from $7.14 per person in 1982 to $10.50 per person in 1984.

McKinnell House, a short-term shelter for families and an emergency food repository located at 546 E 15th Ave., is operated by the Salvation Army Emergency Services Program. It served more than 9,000 people last year.

"We expect to see even more people this year. But I'm worried about how we can adequately help them," Clitheroe said.

He attributes the massive influx of needy families to three overriding problems: the shaky economy, tighter food stamp regulations and increased migration of younger families to Anchorage.

"Many are still coming to find the great American dream. But once they get here, they're finding the job situation is tight," Clitheroe said.

Take the Bearfield family of Juneau, for example. They came to Anchorage for a better way of life. But they ended up standing in food stamp lines and filling out yards of eligibility forms.

"We applied for food stamps Dec. 5 but didn't get any until February. If it hadn't been for the Salvation Army emergency food program my family would have starved," Bearfield said. The Bearfields have three children: Pamela, 3, Christina, 5, and Wanda, 14.

"We waited months before we got any permanent help," Bearfield said.

For some families, Clitheroe said, the food stamp vigil continues. The Meyer family, who still relies heavily on the Salvation Army emergency food program, applied for food stamps March 8. "We still haven't received any yet," said Sandy Meyer.

"We're living on navy bean soup and the generosity of the Salvation Army," she said. The Meyer family has two children: Brandi, 1, and Marie, 3.

Salvation Army officials claim current overloads are due in part to the lengthy and complex food stamp application process. Legally, the state can spend up to 30 days verifying need.

Jan Hanson, regional manager for southcentral division of public assistance, said applications for food stamps are up. "We're seeing more applications because building starts are down and the fishing industry has been unpredictable for the past two seasons," she said.

Hanson also said that there seems to be a misunderstanding about the entire food stamp program. "We're not an emergency relief service. We are committed to giving long-term assistance. That's why we send people to emergency shelters like McKinnell House," Hanson said.

The overload at McKinnell House is only the tip of the iceberg. Other emergency food providers like St. Francis House at 817 W. Sixth Ave. and Bean's Cafe at 425½ E. Fifth Ave. are seeing more needy people as a result of the already overworked Salvation Army emergency food program.

"I have drawers full of referrals. The only immediate answer is to cut back services. I hope we never get to the point where we can't help at all. Hunger and homelessness in America have reached epidemic levels," Clitheroe said.

SB

DEPARTMENT OF PUBLIC SAFETY

POSITION PAPER

CS for SENATE BILL 446 (Rls) am

The Council on Domestic Violence and Sexual Assault supports the CS for SB 446. "An Act relating to a personal safety curriculum in public schools." The Council supported the original legislation because it is important to teach children that they have a right to protection from sexual assault or domestic violence. The Council also supports the change in the original bill that the Council participate in the review and development of personal safety curriculum.

In developing the curriculum, it is important that attention be placed on the existing sexual assault/domestic violence curricula as developed by the Council on Domestic Violence and Sexual Assault, Standing Together Against Rape in Anchorage or the Youth Network in Juneau. In FY 83, the Council contracted with Migima, Inc. to develop a curriculum for child sexual assault. A manual and two video tapes were developed and one copy of the manual was sent to most school districts in the state. The Council does not have sufficient funds to further reproduce or disseminate the materials. Also, Standing Together Against Rape in Anchorage has developed a sexual assault curriculum which has been implemented in the Anchorage school district; and the Youth Network in Juneau, which includes the Aiding Women from Abuse and Rape Emergencies and Men Emerging Now, both Council funded programs, has developed a comprehensive behavioral health curriculum that includes domestic violence and sexual assault components. The Youth Network's curriculum has been accepted and used in the Juneau school district. In developing a statewide public safety curriculum, existing curricula need to be reviewed and considered. Implementation plans need to address existing approaches. Also, since the topics are so sensitive, child sexual assault and domestic violence information must be presented in a sensitive manner by trained professionals.

The Council's involvement in this process will not require additional resources.

Robert J. Sundberg
Commissioner

MEMORANDUM

TO: Mae Tischer, Chair
House HESS

FROM: Senator Jay Kerttula

SUBJECT: CSSB 446 (Rules), an act relating to personal safety curriculum in public schools.

DATE: April 5, 1984

Attached is back-up for CSSB 446 (Rules). The intent of this legislation is to provide children with education necessary to identify and report child abuse, sexual abuse and domestic violence.

CSSB 446 has been endorsed by the Alaska Network on Domestic Violence and Sexual Assault, the Alaska Women's Commission, Anchorage and several individuals who work in the health, education and social service professions.

If you need further information on this legislation, please don't hesitate to contact my office.

ALASKA NETWORK ON DOMESTIC
VIOLENCE AND SEXUAL ASSAULT
110 Seward #13 Juneau Alaska 99801
(907)586-3650

POSITION PAPER

SB 446: An Act relating to public safety curriculum in public schools

The Alaska Network on Domestic Violence and Sexual Assault, a non-profit corporation representing 20 programs statewide that provide services to victims of domestic violence and sexual assault, supports SB446, which requires school districts to provide a curriculum for grades K through 12 on the prevention of child abuse, sexual assault, and domestic violence.

Because incidences of child sexual assault are so high, it is crucial that children, parents, and educators be provided with prevention information. Three Network member programs (STAR in Anchorage and AWARE and MEN in Juneau) have developed and implemented curricula on these issues which are being utilized in Anchorage and Juneau schools. Other Network member programs have provided in-service training to educators and presentations to school groups and classes on child sexual assault. Additionally, the Council on Domestic Violence and Sexual Assault has developed a curriculum for classroom use on this issue.

It is the Network's opinion that these existing Alaska-specific materials be reviewed and, if necessary, modified for implementation on a statewide basis.

It is important to realize that providing children with information concerning child sexual assault and domestic violence will result in an increased rate of disclosure of such incidences and the need to provide services to child victims and parents. Trained professionals should present this information in order to sensitively and effectively handle disclosures. To that end, the Network recommends that domestic violence and sexual assault program staff people, who have been trained in provision of direct services to child victims and non-offending parents, participate in curriculum development, implementation, and presentation.

Pouch V
Juneau, Alaska 99811

Dear Senator Kerttula:

The Alaska Women's Commission is committed to supporting all efforts made at preventing and aiding the victims of domestic violence, sexual assault and child abuse. We wish to take this opportunity to thank you for sponsoring the following bills this session that address these issues:

SCR 37, SB 477, SB 472, SB 446 and SB 445

We appreciate your continued concern for the welfare of Alaska's women and children. If the Women's Commission can be of any assistance in supporting your efforts, please don't hesitate to contact us.

Sincerely,

Kathy Marshall

Kathy Marshall
Executive Director

Senator Jay Kertulla
Pouch V
Juneau, AK 99811

Dear Senator Kertulla:

I wanted to write and tell you your efforts are appreciated, at least by me in your support of children's issues.

I was recently informed that you were the prime Senate sponsor of SCR 37, SB 445, SB 446, and SB 447. Believe me, our state needs to be aware of our child abuse problem. With particular reference to expanding curriculum and teacher in-service within our school system, I want to commend your efforts. Hopefully, someday soon the community will realize that children don't learn because of problems within their personal life; be it child abuse, domestic violence, alcholic/addicted parents, or their chemical dependency. Although I cannot speak for the educators, ones who have come to know me are ecstatic about your involvement and support of their betterment as the "direct line" to our children.

Thank you again and keep up the good work! If I can be of assistance, feel free to contact me.

Sincerely,

Marguerite

FRONTIERSMAN 1/12/84

Wake up about sexual abuse

SPECIAL EDITORIAL

During the past year, the Frontiersman has reported sexual abuse and assault cases involving children as young as 2 and as old as 15.

Sexual crimes against children are the most prevalent and serious of felony crimes in the Matanuska-Susitna Valley.

According to Alaska State Trooper statistics, 45 Valley children were the victims of reported sexual crimes in 1983.

Most sexual abuse remains unreported for months, years, sometimes forever.

National statistics indicate that one in four people will be sexually abused or assaulted in their lifetime.

Our children are being attacked by thieves who steal sexual gratification, who plunder innocence, who leave behind pain. Sometimes the thieves are the children's own parents, sometimes a friend of the family or a relative.

The pain remains far longer than the actual memory. Different children handle it in different ways. Some may appear to be unaffected by an adult's intrusion of their bodies; 20 years later they may awaken to a screaming nightmare of childhood.

Other children may fear adults, or men, or women. Incest victims may engage in lengthy internal battles, vacillating between love and loathing, trying to separate affection from humiliation, anger from hate, forgiveness from martyrdom.

We are shocked when we hear of the violation of a child. We want to think of the perpetrators as "animals" or "psychos." We want to believe that the friend, neighbor, relative or member of the community who's convicted of sexual abuse or assault is some kind of aberrant human being. But there's only one thing that seems to commonly set "them" apart from "us."

Many of the perpetrators of sexual crimes against children were victims themselves. It's no excuse for their crime. But it indicates a pattern that must be broken now.

It's not enough that the Valley has one of the best teams in the state for dealing with sexual assaults.

We are educating ourselves and each other. We share the outrage and h[illegible] when we learn of abused children. But why have we left the potential victims in the dark?

We need a system for the early identification of sexual abuse. Now.

Children must know that sexual abuse is most often perpetrated by someone they know, not a stranger in a sedan offering candy.

An enlightened approach by the school district would help.

Children need to know what abuse is. They should be encouraged to report it, no matter who the perpetrator is. They deserve the right to have a safe place to go, a safe person to tell.

It has nothing to do with "sex education."

It has to do with the knowledge that could save them. Children have a right in our society to be educated. When that education could save them, the right becomes an imperative.

TO: REP. MAE TISCHER
Chair - House HESS

FROM: Max Gifford, A.A. Mike
SENATOR JOHN SACKETT

Subj: SB-508, supplemental funding for Bethel Social Services and Sitka Youth Services

Please let me apologize for having left our meeting so abruptly this morning.

Attached is the backup material and a copy of our earlier memo (dated: 4-19-84) concerning SB-508.

The attachments will explain the funding figures and how the figures were calculated.

Your question, with respect to encumbered funds in the Department of Health is a good one and should be answered by the Department. I do not know why the department would choose to encumber funds while apparently ignoring the needs of these two service organizations that were under funded when the "full cost of care" funding mechanism was suspended for FY83 and FY84.

When I discussed the issue of a supplemental with Senator Sackett, earlier this session, he preferred that a bill providing supplemental funding be drafted rather than using the reappropriation bill to fund the Bethel and Sitka shortfalls.

Per your request, I am trying to get answers about encumbered funds by the Department of Health and Social Services. I will do my best.

* Copy sent to your staff. Max

MEMORANDUM

To: Representative Mae Tischer
Chair, House HESS Committee

From: Senator John Sackett JCS

Subject: Calendaring of SB 508, supplemental appropriations for Bethel Social Services and Sitka Youth Services

In 1982, the Legislature suspended the "full cost of care" funding mechanism for residential child care and established an interim frozen rate schedule. Because of the cyclical nature of the figures used as a base in establishing those rates, the Bethel and Sitka programs have suffered unfair funding shortfalls every year since then.

I have attached additional backup information and am requesting that you calendar SB 508 as soon as possible. Thank you in advance.

Alaska State Legislature

Senate

Committee on Finance

Juneau, Alaska 99811

MEMORANDUM APR 09 1984

TO: Members, SENATE FINANCE COMMITTEE

FROM: Senator John Sackett JCS

Subj: SB-508, supplemental appropriations for Bethel Social Services and Sitka Youth Advocates.

Amount: $166,510

Attached are the current daily rates established by Ch. 138, SLA 1982, for residential care facilities when a child is placed by the Department of Health and Social Services.

As you know, it is acknowledged that both rate schedules for Bethel and Sitka were miscalculated.

SB-508 provides funding to correct the inequity in the daily rate.

Attached also, are a memo from Senator Eliason explaining the method of calculating the Sitka shortfall and a memo from Bethel Social Services, Inc. fully detailing their funding shortfall.

A supplemental was offered last year to offset funding shortfalls for Bethel (SB-97), and Senator Eliasion was able to reappropriate funds to cover the Sitka shortfall. This is the last year a supplemental should be necessary as legislation creating a new funding system for care facilities is now pending before the Legislature (SB-431).

period of suspension, payment for services provided by residential child care facilities shall be made solely in accordance with the provisions of secs. 3 and 4 of this Act.

* Sec. 3. For fiscal year 1983, the payment authorized per day for each child placed by the Department of Health and Social Services in an existing residential care facility is:

Alaska Children's Services Receiving Home (Anchorage)	$149.65
Alaska Children's Services Jesse Lee Home (Anchorage)	165.44
Alaska Children's Services Rabbit Creek Group Home (Anchorage)	166.4[illegible]

Sitka Receiving Home (Sitka)	40.6[illegible]

Bethel Receiving Home (Bethel)	75.52
Bethel Group Home (Bethel)	59.06
Covenant High School (Unalakleet)	51.16

* Sec. 4. For fiscal year 1984 the payment rates for residential child care services shall be the amounts set out in sec. 3 of this Act increased by five percent.

* Sec. 5. For fiscal years 1983 and 1984 the Department of Health and Social Services may contract for residential child care services with a facility not listed in sec. 3 of this Act at a rate to be determined by the Department.

* Sec. 6. AS 14.30 is amended by adding a new section to read:

Sec. 14.30.075. VISION AND HEARING SCREENING EXAMINATIONS. (a) A vision and hearing screening examination shall be given to each child attending school in the state. The examination shall be made when the child enters school or as soon thereafter as is practicable, and at regular intervals specified by regulation by the governing body of the district.

(b) The Department of Health and Social Services shall

(1) set standards for the performance of vision and hearing screening;

(2) train and certify public health nurses and school district employees to conduct hearing and vision screening tests;

(3) assist with referral and follow-up of children needing professional examination or treatment; and

(4) assist with maintenance and repair of screening equipment.

* Sec. 7. AS 44.29.020 is amended to read:

Sec. 44.29.020. DUTIES OF DEPARTMENT. The Department of Health and Social Services shall administer the state programs of public health and social services, including (1) maternal and child health services;

Chapter 138

AN ACT

Relating to vision and hearing screening examinations, public assistance, and other assistance provided by the state; and providing for an effective date.

---

* Section 1. FINDINGS. The legislature finds that the present method for establishing payment rates under AS 47.40 for residential child care services is inadequate. The Department of Health and Social Services shall conduct a study of alternatives to the method of establishing payment rates under AS 47.40. The study shall be conducted by a committee of five members appointed by the commissioner of the Department of Health and Social Services. Three members of the committee shall be employees of the Department of Health and Social Services and two members shall be providers of residential child care services. The study shall contain, among other matters determined by the department, a suggested redefinition of the manner in which rates for residential child care services are calculated, a consideration of the method and amount of reimbursement for capital costs of residential child care facilities, and the availability and use of other sources of money to finance residential child care services and to finance the construction of residential child care facilities. The committee shall report its findings to the legislature on or before the 30th day of the Second Session of the Thirteenth Legislature. The legislature further finds that the rates established under AS 47.40 should be suspended from June 30, 1982 to July 1, 1984.

* Sec. 2. The operation of AS 47.05.010(14), AS 47.40.010, 47.40.040, and 47.40.050 is suspended from July 1, 1982 through June 30, 1984. During the

MEMORANDUM

TO: Senator John Sackett

FROM: Senator Dick Eliason

DATE: February 21, 1984

RE: Supplemental appropriation for Sitka Receiving Home

Due to the exceptional low daily rate allowed the Sitka Receiving Home ($42.70 per "provider day") over the last two fiscal years there is a critical, and unfair shortfall in the Home's operating budget. Sitka, like Bethel, received a small supplemental grant last session to help them over the FY 83 shortfall but we need to provide coverage for FY 84. Hopefully, legislation will pass this session which will finally correct the inequity in funding for these homes and both Bethel and Sitka will be self-sustaining on their allowed payments after this year.

It would seem reasonable to figure Sitka at the same level of funding as the Juneau Receiving Home. Sitka has been at $42.70 while Juneau is at $111.48. The difference per day of care is then $68.78. In FY 33 Sitka provided 967 days of care. FY 84 is likely to be at about that same level. Therefore a reasonable supplement amount to include for the Sitka Receiving Home now for FY 84 would be $66,510 ($68.78, the difference betwe.n the Sitka rate and the Juneau rate, multiplied by the estimated number of days of care provided.)

I would very much appreciate any help you could provide in getting this funding in.

Bethel Social Services, Inc.

• A PRIVATE NON-PROFIT CORPORATION •

Hon. Senator John Sackett
State Capitol
Pouch V
Juneau, Alaska 99811

Dear Senator Sackett:

Here is the information your aide, Max Gifford, requested of us for the supplemental appropriation for the operation of the Bethel Receiving Home.

As you already know, there was a freeze imposed on the cost of care rates two years ago. We were not aware of this freeze and at that time were expecting our rate at the Receiving Home to increase following an audit that we requested. The audit was denied by the State, and we were told we would have to make do with the existing rate.

To prepare the figure we are requesting for the supplemental, I have taken an average of the rates paid to the residential child care centers in the State of Alaska (Anchorage, Willow, Fairbanks, Barrow, Bethel, and Nome) and subtracted our rate from the average. I then multiplied this figure by the number of child care days. As you will see we had a great number of child care days, and that in itself should show you how valuable this project is to the Delta region. The facility has been greatly utilized this past year and with this additional operational monies, we will be able to make the Bethel Receiving Home a First rate facility to house the children of the Delta.

Sincerely,

Loreen M. Foster

Loreen M. Foster
Administrative Director, B.S.S.

P.O. Box 271 • Bethel, Alaska 99559 • (907) 543 - 2840 or 543 - 3447

ACS Receiving Home, Anchorage	$ 149.85

ACS North Star, Anchorage	103.55
ACS Rabbit Creek Grp. Hm,, Anch.	166.40
Booth Memorial Home, Anchorage	146.90
Hilltop Home, Inc., Anchorage	85.53
Turning Point Boys Ranch, Willow	105.37
PHH-Receiving Home, Fairbanks	111.98
PHH-Treatment Unit, Fairbanks	111.98
North Slope Borough Rec. Hm., Barrow	170.80
Bethel Receiving Home, Bethel	79.30
Bethel Group Home, Bethel	59.06
Nome Receiving Home, Nome	109.20
TOTAL	$1832.74

$1832.74 divided by 15 centers is an average rate of $122.18 per day.

The Bethel Receiving Home's rate is $79.30, subtracted from the average gives us a deficit of $42.88.

The Bethel Receiving Home had a total of 2,369 provider days last FY year ('83).

2369 multiplied by $42.88 is a total supplimental request of $ 101,582.72

TOTAL SUPPLEMENTAL REQUEST - $ 101.582.72

DIVISION OF FAMILY AND YOUTH SERVICES

April 27, 1984

The Honorable Mae Tischer
Alaska State House
Pouch V
Juneau, AK 99811

Dear Representative Tischer:

You had asked for responses to three questions regarding the Governor's Symposium on Child Abuse and Neglect for Southeast Alaska to be held in Sitka on May 16, 17, 18, 19, 1984.

1. You were concerned about why you had not been invited to the Symposium. Your invitation was mailed from Anchorage two weeks ago by the University of Alaska which is the contractor facilitating the logistical planning for the Symposium. Since you have not received it, I am happy to extend a personal invitation for you to attend. I have enclosed the registration material for your convenience. I have also included information about the child abuse and neglect conference we are co-sponsoring with the Center for Children and Parents in Anchorage, AK. I think both of these conferences are offering excellent topics which may be of interest to you.

2. You had expressed concern about whether or not this type of training would be available in the rest of the State. We are very hopeful that we will have funding in FY 85 which will enable us to sponsor similar projects in our other Regions using Southeast as a model. The Southeast Symposium is designed to interface with two training grants which were made to two Southeast agencies for improving community coordination of services to families. The goal of the training grants is to establish a team in each community who will advocate and assist in providing services to abused and neglected children and their families. If funding is available, we will duplicate this total project in each Region.

3. You wanted to know how the Symposium is being funded. At the end of FY 83 lapsing funds were identified and addressed through SCS 2d SCHB J309 309 (3d Fin) am S, Chapter No. 106. I have attached the pertinent Sections of that Act and as you can see there is conflict between Section 89 and Section 271 as to the status of those funds.

   James Baldwin, Assistant Attorney General, determined that the lapsing funds from FY 83 would be available through June 30,

1984. (See enclosed). I have also included a copy of the memorandum which identifies the legislative intent for the funds. The Symposium has been allocated $75,000 and the major part of that funding is being utilized to pay the travel cost for people from Southeast Alaskan communities to attend and participate.

We certainly would welcome your attendance. If you have any other question, please feel free to contact me at 465-3170.

Sincerely,

Michael L Price

MLP:MAG:wb

MEMORANDUM State of Alaska

TO: Mike Price, Director
Div. of Youth and Family Services
Dept of Health & Social Services

DATE: September 8, 1983

FILE NO: 366-126-84

TELEPHONE NO: 465-3600

FROM: Norman C. Gorsuch
Attorney General

SUBJECT: Lapse date for FY 83 juvenile custody appropriation

By: James L. Baldwin
Assistant Attorney General
Governmental Affairs-Juneau

You have asked whether the governor's veto of sec. 89, ch. 106, SLA 1983 also deleted the lapse date extension contained in sec. 271 of that chapter for the appropriation amended by sec. 89. The governor's veto of sec. 89 was intended to return the juvenile custody appropriation initially enacted in sec. 79, ch. 101, SLA 1982 to the amount originally appropriated without reduction. Governor's veto message (Exhibit I).

The lapse date extension for sec. 89 is inartfully drafted because it provides that the appropriation "made" in sec. 89 is extended. However, the effect of sec. 89 is to reduce an existing operating appropriation by $25,000 not to reenact the FY 83 juvenile custody appropriation. The intent of sec. 271 appears to be to extend the lapse date for the unobligated balance of the juvenile custody appropriation enacted in ch. 101, SLA 1982.

Department of Health and Social Services records disclose that as of the effective date of ch. 106, the unobligated balance of the appropriation was $554,493. There is no evidence of legislative intent to make the extension of the lapse date for the juvenile custody appropriation contingent on enactment of the reduction vetoed by the governor.

We believe that the reappropriation, transfer, or amendment of an existing appropriation makes the entire unexpended balance of the original appropriation subject to the governor's legislative power to veto. However, the veto of sec. 89 did not affect the existence of the juvenile custody appropriation, only the attempt to reduce the authorized amount.

Absent clear evidence of legislative intent to the contrary, we believe that the lapse date for the juvenile custody appropriation enacted in sec. 79, ch. 101, SLA 1982, p. 32, lines

18 and 19 is June 30, 1984. We hope this memorandum answers your question.

MEMORANDUM

TO: Sen. Frank Ferguson

FROM: Sen. Dick Eliason

DATE: May 12, 1983

RE: Request for amendment to SB 158

Part of Sec. 38 of CSSB 158(HESS) extends the lapse date for Sec. 79, ch. 101, SLA 1982, page 32, line 19, until June 30, 1984.

This language was added in HESS at my request. It was to enable the Div. of Family and Youth Services to utilize the unexpended portion of the original $4,586,500 social services appropriation to establish a child abuse social worker position on Prince of Wales Island and a child abuse training program in rural Southeast.

Since the time that amendment was made, both the House and Senate Finance Committees included a new social worker for Prince of Wales in their DHSS operating budgets. Now a portion of the approximately $200,000 in unlapsed funds is available for other related and pressing needs.

I now request that Sec. 38 in the HESS CS be left intact and that the following language be added to SB 158:

Sec.___. Sec. 79, Chapter 101, Lines 18 and 19 are amended to read:

	Allocation	Appropriation	Gen. Fund
Social Services, Foster Care	$4,561,500 (4,586,500)	$15,501,200 (15,526,200)	$15,501,200 (15,526,200)

Sec.___. The sum of $25,000 is appropriated from the general fund to the Dept. of Health and Social Services for payment as a grant to the Sitka Receiving Home for operating expenses.

These changes will result in a zero fiscal impact as we simply returned $25,000 of unexpended money to the general fund from the original Foster Care appropriation and re-appropriated the same amount for the Sitka Receiving Home. I have back-up information on the need for this funding for the Home if it is needed and this appropriation is supported by the Administration.

The remaining funds will not lapse until June 30, 1984, as per Sec. 38 of CSSB 158 HESS.

It is my intent, and I request that the Finance Committee attach to the bill as its intent, that those remaining unlapsed funds be used as follows:

> The Division of Family and Youth Services will use the remaining and unlapsed funds to contract for training programs in rural Southeast Alaska dealing with identification, prevention, and treatment of child abuse and neglect.

I appreciate your consideration of my request and hope that my proposed amendments and intent language will be included in the Finance CS for SB 158. If further information is needed please contact me.

April 9, 1984

Dear Alaskan Legislator:

You are cordially invited to attend the Governor's Symposium on Child Abuse and Neglect being held in Sitka on May 16, 17, and 18, 1984. The Division of Family and Youth Services is extremely pleased to be able to offer this program on coordination and networking services in Southeast Alaska and we are very hopeful that you will be able to attend.

The enclosed agenda describes the workshops being presented and we think every one of them will offer some new ideas and perspectives. It is a limited registration, so be sure and complete the form as soon as possible. If you have any questions regarding the symposium, please feel free to contact me at 465-3170.

Hope to see you there!

Senate Bill 508, "An Act making supplemental appropriations to the Department of Health and Social Services for payments as grants to Bethel Social Services, Inc. and Sitka Youth Advocates, Inc.; and providing for an effective date," introduced by the Senate Finance Committee, makes the following appropriations, totalling $166,510:

--$100,000 to the Department of Health and Social Services for a grant to Bethel Social Services, Inc. for the operation of the Bethel Receiving Home during fiscal year 1984.

--$66,510 to the Department of Health and Social Services for a grant to Sitka Youth Advocates, Inc. for the operation of the Sitka Receiving Home during fiscal year 1984.

The bill provides for an immediate effective date.

JANUARY 31, 1984

THE HONORABLE MAE TISCHER
HOUSE OF REPRESENTATIVES
CAPITOL, ROOM 110
POUCH V
JUNEAU, AK 99811

DEAR MADAM:

THE CRAIG CITY SCHOOL DISTRICT IS INTERESTED IN SOLICITING YOUR SUPPORT TO RECTIFY AN ERROR IN OUR SCHOOL DISTRICT'S FUNDING. I HAVE ENCLOSED MY LETTER OF NOVEMBER 17, 1983 TO THE COMMISSIONER OF EDUCATION, HAROLD REYNOLDS, JR. AND HIS RESPONSE TO THIS LETTER DATED JANUARY 25, 1984. I BELIEVE BOTH LETTERS ARE SELF-EXPLANATORY AND SPEAK FOR THEMSELVES.

PLEASE NOTE OUR EXISTING LOSS FOR SCHOOL YEAR 1983-84 (APPROXIMATELY $92,000), AND AGAIN OUR LOSS FOR THE 1984-85 SCHOOL YEAR (APPROXIMATELY $92,000), WILL BE SUBSTANTIAL AND UNRECOVERABLE UNLESS LEGISLATIVE ACTION IS TAKEN DURING THIS SESSION.

YOUR ATTENTION TO THIS MATTER IS APPRECIATED. IF YOU WISH, PLEASE CONTACT ME FOR FURTHER INFORMATION.

SINCERELY,

WILLIAM D. MILLHORN
SUPERINTENDENT

WDM:ES
ENCLOSURES 2

CRAIG SCHOOL DISTRICT

NOVEMBER 17, 1983

COMMISSIONER HAROLD REYNOLDS, JR.
POUCH F
JUNEAU, ALASKA 99811

DEAR COMMISSIONER REYNOLDS:

THIS LETTER IS INTENDED TO EXPLAIN A FINANCIAL SITUATION IN CRAIG SCHOOL DISTRICT WHICH CREATES AN INEQUITY THAT NEEDS TO BE RECTIFIED IF OUR SCHOOL SYSTEM IS TO RECEIVE EQUAL CONSIDERATION IN FUNDING.

AS CURRENTLY APPLIED, THE FORMULA FOR APPORTIONMENT WILL GREATLY REDUCE OUR ALLOCATION. THIS PRIMARILY DOES NOT REFLECT A LOSS OF STUDENTS. INSTEAD, THE REDUCTION OCCURS BECAUSE THE FINAL FIGURE USED DID NOT INCLUDE A UNIT FOR OUR BILINGUAL PROGRAM.

OUR ALLOCATION WITH ADM FUNDING IS $6,734; HOWEVER, OUR NEIGHBORING DISTRICTS--KLAWOCK, $7,417; HYDABURG, $9,163; AND THORNE BAY, $9,669--RECEIVE CONSIDERABLY MORE. YET OUR PROGRAMS, NEEDS, AND COSTS ARE VERY SIMILAR. IN ADDITION, IT IS MY UNDERSTANDING THAT NONE OF THE OTHER DISTRICTS IN THE STATE WILL UNDERGO THIS TYPE OF UNDERFUNDING WHEN THE FORMULA IS APPLIED.

IN THE PAST, OUR DISTRICT'S RELATIONSHIP WITH THE DEPARTMENT OF EDUCATION HAS BEEN EXCELLENT: INTERNAL MATTERS HAVE BEEN RESOLVED THROUGH GOOD COMMUNICATION AND COOPERATION. I HAVE EVERY CONFIDENCE THAT THIS CIRCUMSTANCE WILL CONTINUE.

HOWEVER, I HAVE BEEN ADVISED BY DOE OFFICIALS THAT THE OVERSIGHT IN OMITTING OUR DISTRICT'S BASE FIGURE CANNOT BE CORRECTED THROUGH THEIR OFFICES. INSTEAD, ONLY THE LEGISLATURE, WHICH ESTABLISHED THE ALLOCATION LEVELS, CAN RECTIFY THE OVERSIGHT.

THEREFORE, I REQUEST THAT OUR DISTRICT'S BASE FIGURE BE RECONSIDERED, NOW TAKING INTO ACCOUNT THE BILINGUAL PROGRAM WHICH WAS OMITTED, AND A READJUSTMENT BE DONE TO CORRECT THE INEQUITY.

IT IS MY HOPE THAT BY BRINGING THIS FINANCIAL SITUATION TO YOUR ATTENTION NOW, IT CAN BE REVIEWED AND RECTIFIED PRIOR TO THE NEXT LEGISLATIVE SESSION, A TIME WHEN YOU WILL BE CONCENTRATING YOUR FULL EFFORTS UPON OTHER STATE-WIDE, REGIONAL, AND DISTRICT PRIORITIES.

SINCERELY,

WDM/LS

JUNEAU, ALASKA 99811

January 25, 1984

JAN 30 1984

William Milhorn, Superintendent
Craig City Schools
Box 71
Craig, Alaska 99921

Dear Mr. Milhorn:

In response to your letter of November 17, 1983, expressing your concerns regarding the Craig City School District's allocation under Chapter 92, SLA 1983, you are correct that the interim funding scheme as a substitute for the Public School Foundation Program formula did not take into account your district's loss of students.

AS 14.17.031(d) provides for a "hold harmless" clause which was based on loss of instructional units from year-end to year-end. Clearly, using the base year of 1982, the Craig District lost a sufficient number of students/instructional units to trigger the "hold harmless" clause.

The Legislature, in arriving at its per ADM amount by district, did not take into account the loss of students, since, apparently, they used the 1st quarter revised reports and a percentage of that amount in setting the ADM number.

Including the loss of students under "hold harmless", the Craig City District's entitlement under a revised calculation scheme, treated similarly to other districts, would be in the neighborhood of $7,300 per ADM.

The bilingual program for your district was not approved until after the 1st quarter of 1983; therefore, the claiming of that instructional unit was not reflected until the year-end final foundation report and did not reflect in the determination of the ADM dollar estimate. This also holds true for other school districts which may have had increases in special education, vocational education, or bilingual education between the first quarter and year end.

You are correct that only the Legislature can correct the problem, since each district's ADM amount is established in statute.

Please feel free to contact us for any support you may need in this matter.

Sincerely,

Harold Raynolds, Jr.
Commissioner

MEMORANDUM

TO: Members of the House
FROM: Representative Mae Tischer
DATE: June 21, 1983

RE: Conference Committee Substitute for House Bill 251

The following is an analysis of Conference Committee Substitute for House Bill 251.

Section 1 provides for payment of up to 90% for:

(A) current year bond repayments made by a municipality on indebtedness incurred after December 31, 1981, and authorized before July 1, 1983;

(B) cash repayments made by a municipality after June 30, 1982, and before July 1, 1983, during the fiscal year two years earlier (the two-year lag is a result of the delay in the Department of Education receiving audits; and

(C) school construction debt payments for bonds that are submitted to the Department of Education for approval before July 1, 1983, and are authorized by the voters before October 15, 1983, not to exceed $6,600,000 if the annual ADM growth rate is between 7 percent and 12 percent, or $20,000,000 if the annual ADM growth rate exceeds 12 percent. Any payments beyond those amounts are subject to the new 50 percent reimbursement rate contained in Section 2.

Section 1 of the bill is taken from the Senate version, except that paragraph (C) is added.

Section 2 provides for payment of 50% for:

(A) bond repayments made by a municipality on indebtedness incurred after June 30, 1983; and

(B) cash repayments made by a municipality after June 30, 1983, during the fiscal year two years earlier.

Section 2 is taken from the Senate version, unchanged.

Section 3 provides that the state may not allocate money to a municipality for a school construction project that has not been approved by the Commissioner of Education. In approving the project, the commissioner shall require full information on the bonding issue to be subsequently approved by the voters; no call-back options; a minimum pay-back period of ten years; and a demonstration of need. Section 3 is taken from the Senate version, except for two technical changes to the requirements for the approval of bond issues, as recommended by bond counsel.

Section 4 states the findings of the legislature and the legislature's intent to provide an alternative mechanism for public funding of schools in Alaska. Section 4 is taken from the House version, unchanged.

Section 5 suspends from July 1, 1983, through June 30, 1984, the operation of pertinent statutes affecting the current foundation funding formula; retains the Hold-Harmless Clause of AS 14.17.031(d) -- i.e. if the ADM decreases by 10% during the period of suspension, the previous year's ADM figures are used for calculating instructional units (in order to provide for drastic declines in school enrollments due to economic reasons). This section specifically suspends the following statutes:

AS 14.17.021 (a)	Basic state aid formula (Instructional unit x Unit allotment)
AS 14.17.022	Funds for Centralized Correspondance Study
AS 14.17.023	Supplemental Equalization Aid (Adjusts the allotments with respect to local tax contributions with the Department of Community and Regional Affairs determining the amount).
AS 14.17.031 (a), (b), (c), and (e)	Instructional units (IU's) - Total number of IU's within each school district in regard to various types of schools and program components.
AS 14.17.041	Tables of allowable instructional units
AS 14.17.051	Instructional Unit Allotment - dollar amount provided for each Instructional Unit
AS 14.17.056	Definition of Base Instructional Unit Value ($42,450)
AS 14.17.082	Fund balance changes in school operating fund; audited by Legislative Budget and Audit by

	April 15 of each year
AS 14.17.160	Allocation of funds on preliminary computation
AS 14.17.180	Payment under final computation
AS 14.17.225 (b)	Proration of funds proscribed by AS 14.17.010.

Section 5 is taken from the House version, unchanged.

Section 6 sets the dollar amount per ADM for each school district and for centralized correspondance study. These figures are based on 97.23% of full entitlement as exists presently for funds provided in FY 83 plus the supplemental appropriation of HB 73. Subject to adjustment under AS 14.17.021 (b), REAA's do not reflect reduction for PL 874 funds; those deductions will be made pursuant to Section 5. Section 6 was taken from the House version, unchanged.

Section 7 states the determination of state aid based on reports submitted under AS 14.17.170 (payment under adjusted computations). Payment distribution is set to replace AS 14.17.160. This section is taken from the House version.

Section 8 states the funds necessary for increased enrollments based on last quarter count (November 1983) will be placed into the supplemental program account and distributed per ADM's in Section 6. Available funds will be distributed on a prorata basis among school districts with increases in average daily membership. This section is taken from the House version.

Section 9 states that continuation level funding will be maintained for certain programs -- bilingual, special education, and vocation education programs. This section is taken from the House version, unchanged.

Section 10 requires the Commissioner of Education to recommend to the legislature by January 9, 1984, a method of revising and improving the public school foundation program. This section is taken from the Senate version, except that references to instructional unit calculations are changed to conform with the House formula which is based on average daily membership calculations.

Sections 11 and 12 are the effective date clauses. Specifically, Section 11 provides that Sections 1 - 3 of the bill, the school construction debt provisions, take effect July 1, 1983. Section 12 provides that Sections 4 - 10 of the bill, the new educational funding provisions, take effect immediately. These two sections differ from the effective dates in either the Senate version and the House version in that they apply different effective dates to different sections of the bill.

Section 13 provides that Sections 4 - 10, all of the bill except for the school construction debt provisions, are repealed June 30, 1985. This section is not contained in either the House or Senate versions.

STAFF REVIEW

Senate Bill 519, "An Act relating to state support for education; and proving for an effective date," introduced by the Senate Finance Committee, amends portions of Chapter 82, SLA 1983 (Conference Committee Substitute for House Bill 251). SB 519 extends last year's suspension of the Foundation Program for education funding, through June 30, 1985. The amounts of state aid per student would be the amounts established last year for FY 84 relating to state support for education, adjusted for cost-of-living changes and multiplied by the average daily membership reported by each district for 1984.

The bill provides for an immediate effective date.

LEGISLATIVE AFFAIRS AGENCY

M E M O R A N D U M April 16, 1984

SUBJECT: Sectional analysis of SB 519; state support for education

TO: Representative Mae Tischer
Chairman, Health, Education, and Social Services Committee

FROM: Keith B. Levy KBL
Legislative Counsel

You have requested a sectional analysis of SB 519, relating to state support for education. SB 519 amends a number of sections from ch. 82, SLA 1983. Chapter 82, SLA 1983 suspended many of the provisions of the foundation funding formula (AS 14.17) for fiscal year 1984, including AS 14.17.160. It contained a provision allowing the state aid for fiscal year 1984 to be adjusted in a manner substantially similar to that provided in AS 14.17.160 (see sec. 7, ch. 82). Chapter 82 also provided that if the Commissioner of Education did not submit to the legislature a method of revising the formula by January 9, 1984, then an alternative formula would be used for fiscal year 1985, "the provisions of AS 14.17 notwithstanding" (sec. 10, ch. 82, SLA 1983). Thus, while sec. 7 of ch. 82 provides for the adjustments to state aid for fiscal year 1984, it does not provide for those adjustments for fiscal year 1985. SB 519 amends ch. 82, SLA 1983, to clarify how the funding formula is to be adjusted for fiscal year 1985.

Section 1 amends sec. 5, ch. 82, SLA 1983, to suspend certain provisions of the foundation formula through the end of fiscal year 1985.

Section 2 amends sec. 10, ch. 82, SLA 1983, to provide that state aid for fiscal year 1985 is to be based on the amounts used in fiscal year 1984, adjusted by the average daily membership figures reported by each district for fiscal year

1984. The state aid for fiscal year 1985 is to be further adjusted to reflect the revised average daily membership figures reported by each district under AS 14.17.170 for fiscal year 1985. AS 14.17.170 requires periodic updating of the average daily membership figures to make the funding calculations more accurate.

Section 3 provides for an immediate effective date.

DIVISION OF FAMILY AND YOUTH SERVICES

April 27, 1984

The Honorable Mae Tischer
Alaska State House
Pouch V
Juneau, AK 99811

Dear Representative Tischer:

You had asked for responses to three questions regarding the Governor's Symposium on Child Abuse and Neglect for Southeast Alaska to be held in Sitka on May 16, 17, 18, 19, 1984.

1. You were concerned about why you had not been invited to the Symposium. Your invitation was mailed from Anchorage two weeks ago by the University of Alaska which is the contractor facilitating the logistical planning for the Symposium. Since you have not received it, I am happy to extend a personal invitation for you to attend. I have enclosed the registration material for your convenience. I have also included information about the child abuse and neglect conference we are co-sponsoring with the Center for Children and Parents in Anchorage, AK. I think both of these conferences are offering excellent topics which may be of interest to you.

2. You had expressed concern about whether or not this type of training would be available in the rest of the State. We are very hopeful that we will have funding in FY 85 which will enable us to sponsor similar projects in our other Regions using Southeast as a model. The Southeast Symposium is designed to interface with two training grants which were made to two Southeast agencies for improving community coordination of services to families. The goal of the training grants is to establish a team in each community who will advocate and assist in providing services to abused and neglected children and their families. If funding is available, we will duplicate this total project in each Region.

3. You wanted to know how the Symposium is being funded. At the end of FY 83 lapsing funds were identified and addressed through SCS 2d SCHB J309 309 (3d Fin) am S, Chapter No. 106. I have attached the pertinent Sections of that Act and as you can see there is conflict between Section 89 and Section 271 as to the status of those funds.

   James Baldwin, Assistant Attorney General, determined that the lapsing funds from FY 83 would be available through June 30,

1984. (See enclosed). I have also included a copy of the memorandum which identifies the legislative intent for the funds. The Symposium has been allocated $75,000 and the major part of that funding is being utilized to pay the travel cost for people from Southeast Alaskan communities to attend and participate.

We certainly would welcome your attendance. If you have any other question, please feel free to contact me at 465-3170.

Sincerely,

Michael L Price

MEMORANDUM State of Alaska

TO: Mike Price, Director
Div. of Youth and Family Services
Dept of Health & Social Services

DATE: September 8, 1983

FILE NO: 366-126-84

TELEPHONE NO: 465-3600

FROM: Norman C. Gorsuch
Attorney General

SUBJECT: Lapse date for FY 83 juvenile custody appropriation

By: James L. Baldwin
Assistant Attorney General
Governmental Affairs-Juneau

You have asked whether the governor's veto of sec. 89, ch. 106, SLA 1983 also deleted the lapse date extension contained in sec. 271 of that chapter for the appropriation amended by sec. 89. The governor's veto of sec. 89 was intended to return the juvenile custody appropriation initially enacted in sec. 79, ch. 101, SLA 1982 to the amount originally appropriated without reduction. Governor's veto message (Exhibit I).

The lapse date extension for sec. 89 is inartfully drafted because it provides that the appropriation "made" in sec. 89 is extended. However, the effect of sec. 89 is to reduce an existing operating appropriation by $25,000 not to reenact the FY 83 juvenile custody appropriation. The intent of sec. 271 appears to be to extend the lapse date for the unobligated balance of the juvenile custody appropriation enacted in ch. 101, SLA 1982.

Department of Health and Social Services records disclose that as of the effective date of ch. 106, the unobligated balance of the appropriation was $554,493. There is no evidence of legislative intent to make the extension of the lapse date for the juvenile custody appropriation contingent on enactment of the reduction vetoed by the governor.

We believe that the reappropriation, transfer, or amendment of an existing appropriation makes the entire unexpended balance of the original appropriation subject to the governor's legislative power to veto. However, the veto of sec. 89 did not affect the existence of the juvenile custody appropriation, only the attempt to reduce the authorized amount.

Absent clear evidence of legislative intent to the contrary, we believe that the lapse date for the juvenile custody appropriation enacted in sec. 79, ch. 101, SLA 1982, p. 32, lines

18 and 19 is June 30, 1984. We hope this memorandum answers your question.

MEMORANDUM

TO: Sen. Frank Ferguson

FROM: Sen. Dick Eliason

DATE: May 12, 1983

RE: Request for amendment to SB 158

Part of Sec. 38 of CSSB 158(HESS) extends the lapse date for Sec. 79, ch. 101, SLA 1982, page 32, line 19, until June 30, 1984.

This language was added in HESS at my request. It was to enable the Div. of Family and Youth Services to utilize the unexpended portion of the original $4,586,500 social services appropriation to establish a child abuse social worker position on Prince of Wales Island and a child abuse training program in rural Southeast.

Since the time that amendment was made, both the House and Senate Finance Committees included a new social worker for Prince of Wales in their DHSS operating budgets. Now a portion of the approximately $200,000 in unlapsed funds is available for other related and pressing needs.

I now request that Sec. 38 in the HESS CS be left intact and that the following language be added to SB 158:

Sec.___. Sec. 79, Chapter 101, lines 18 and 19 are amended to read:

	Allocation	Appropriation	Gen. Fund
Social Services, Foster Care	$4,561,500 (4,586,500)	$15,501,200 (15,526,200)	$15,501,200 (15,526,200)

Sec.___. The sum of $25,000 is appropriated from the general fund to the Dept. of Health and Social Services for payment as a grant to the Sitka Receiving Home for operating expenses.

These changes will result in a zero fiscal impact as we simply returned $25,000 of unexpended money to the general fund from the original Foster Care appropriation and re-appropriated the same amount for the Sitka Receiving Home. I have back-up information on the need for this funding for the Home if it is needed and this appropriation is supported by the Administration.

The remaining funds will not lapse until June 30, 1984, as per Sec. 38 of CSSB 158 HESS.

It is my intent, and I request that the Finance Committee attach to the bill as its intent, that those remaining unlapsed funds be used as follows:

> The Division of Family and Youth Services will use the remaining and unlapsed funds to contract for training programs in rural Southeast Alaska dealing with identification, prevention, and treatment of child abuse and neglect.

I appreciate your consideration of my request and hope that my proposed amendments and intent language will be included in the Finance CS for SB 158. If further information is needed please contact me.

Dear Alaskan Legislator:

You are cordially invited to attend the Governor's Symposium on Child Abuse and Neglect being held in Sitka on May 16, 17, and 18, 1984. The Division of Family and Youth Services is extremely pleased to be able to offer this program on coordination and networking services in Southeast Alaska and we are very hopeful that you will be able to attend.

The enclosed agenda describes the workshops being presented and we think every one of them will offer some new ideas and perspectives. It is a limited registration, so be sure and complete the form as soon as possible. If you have any questions regarding the symposium, please feel free to contact me at 465-3170.

Hope to see you there!

Sincerely,

SENATE RESOLUTION 9 by the Senate HESS Committee Relating to a state policy for the developmentally disabled.

This resolution was developed by the Committee following a joint hearing of the House and Senate HESS Committees with the Governor's Council for the Handicapped and Gifted at the end of January.

The Governor's Council explained their funding priorities, needs assessment and long range plans as they have in the past. The plan for 1984-86 was divided into regions of the state, with detailed information on the population, current service levels and needs.

The many advocacy and family groups involved with the Governor's Council feel that the needs for services within the community for the developmentally disabled are long overdue. Plans of service have been developed for six years - but are not implemented. Institutional care continues to absorb most of the developmentally disabled dollars, while many people remain unserved.

For this reason, the HESS committee has introduced SR 9, requesting the Governor and his departments to present to the legislature in 1985 a comprehensive plan for the developmentally disabled that will advance the following goals:

*improve their innate dignity, value and rights.

*expand their opportunities in employment, education and community living.

*the delivery of social services in the least restrictive manner

*the exploration of community based alternatives to institutionalization.

(J) programs which train persons to work with or assist older Alaskans;

(K) transportation services;

(L) educational activities; and

(M) employment services;

(4) "sponsor" means the provider of one or more service programs or pilot projects for the benefit of older Alaskans, including

(A) a municipality of the state; and

(B) a nonprofit corporation organized under the laws of the state.

(C) an educational institution.

(5) "commission" means the Older Alaskans Commission established in AS 44.21.200. (§ 1 ch 152 SLA 1980; am §§ 10-12 ch 79 SLA 1981)

Effect of amendments. — Section 10, ch. 79, SLA 1981 added subparagraph (C) in paragraph (4). Section 11 of ch. 79 added paragraph (5). Section 12 of ch. 79 repealed paragraph (1) which defined the office on aging.

Chapter 80. Persons with Handicaps.

NOTES TO DECISIONS

Purpose of chapter. — The purpose of AS 47.80.010 through 47.80.900 is to provide affirmative services to the handicapped. In re K.M.L., Sup. Ct. Op. No. 2325 (File No. 4708), 626 P.2d 574 (1981).

Minimal institutionalization a goal. — A fundamental goal of AS 47.80.010 through 47.80.900 is to minimize institutionalization in the habilitation of handicapped individuals. In re K.M.L., Sup. Ct. Op. No. 2325 (File No. 4708), 626 P.2d 574 (1981). See AS 47.80.110.

No authority to involuntarily commit the handicapped. — The statutory scheme of AS 47.80.010 through 47.80.900 does not give the courts authority to involuntarily commit the handicapped. In re K.M.L., Sup. Ct. Op. No. 2325 (File No. 4708), 626 P.2d 574 (1981).

AS 47.80.010 through 47.80.900 contains no implicit authority for the involuntary commitment of those handicapped individuals who fall within its scope. In re K.M.L., Sup. Ct. Op. No. 2325 (File No. 4708), 626 P.2d 574 (1981).

February 29, 1984

Honorable Joe Josephson
Alaska State Senate
Pouch V
Juneau, Alaska 99811

Dear Senator Josephson:

Re: SR 9 Proposed Policy for the Developmentally Disabled

The full Board of South Central Health Planning and Development, Inc., met on February 25, 1984. This proposed resolution establishing a policy for development of a comprehensive program of services for developmentally disabled Alaskans was discussed fully. A motion to support SR 9 was passed unanimously.

The situation for developmentally disabled Alaskans has reached crisis levels. This resolution establishes a direction to begin addressing the solutions in an effective, organized fashion. I urge you to support this resolution and the tenets it espouses.

Sincerely,

Steve Lesko
President

RECEIVED

Josephson,

GOVERNOR'S COUNCIL FOR THE HANDICAPPED AND GIFTED

1984 LEGISLATIVE PRIORITIES

In accordance with the Council's responsibilities under Alaska Statute 47.80 to "advise the executive and legislative branches on programs and policies regarding these citizens", the Governor's Council for the §handicapped and Gifted makes the following recommendations for consideration during the 1984 session of the Alaska Legislature. Included for each of the six priority programs are estimated funding levels required to meet full service needs, Council recommendations for F85 program funding and the Governor's proposed budget figures.

INFANT LEARNING PROGRAMS

Increase Required to Meet Full Service Need (Provide service to and additional 141 children in unserved areas at approximately $3000/child.)	+423.0
F85 Recommended Funding Level	2,514.0
Governor's Proposed F85 Budget	2,091.0
INCREASE OVER PROPOSED F85 BUDGET	+423.0

RESPITE AND DAY CARE

Increase Required to Meet Full Service Need (30-40 hours/day added to existing programs, 85-100 hours/day in unserved areas)	+ 320.0
F85 Recommended Funding Level	1,041.6
Governor's Proposed F85 Budget	889.4
INCREASE OVER PROPOSED F85 BUDGET	+152.2

PERSONAL AIDES AND ATTENDANTS

Increase Required to Meet Full Service Need (Approximatley 25 persons in need of service at $21,900/person/year.)	+547.5
F85 Recommended Funding Level	660.0
Governor's Proposed F85 Budget	330.0
INCREASE OVER PROPOSED F85 BUDGET	+330.0

HOMEMAKER SERVICES

Increase Required to Meet Full Service Need (15 hours/week for an additional 250 handicapped children and adults.)	+2,831.3
F85 Recommended Funding	2,409.6
Governor's Proposed F85 Budget	2,234.6
INCREASE OVER PROPOSED F85 BUDGET	+175.0

COMMUNITY LIVING SERVICES

Increase Required to Meet Full Service Need (An array of vocational services and residential support and training for 77-81 individuals presently on program waiting lists.)	+3,480.0
F85 Recommended Funding	5,194.3
Governor's Proposed F85 Budget	4,610.6
INCREASE OVER PROPOSED F85 BUDGET	+583.7

GIFTED/TALENTED SPECIAL EDUCATION

Increase Required to Meet Full Service Need (Funding the Honor's Institute, one FTE position for G/T in DOE, support of program field	+251.0
F85 Recommended Funding	251.0
Governor's Proposed F85 Budget	0
INCREASE OVER PROPOSED F85 BUDGET	+251.0

STATE OF ALASKA

BILL SHEFFIELD, GOVERNOR

DEPT. OF HEALTH AND SOCIAL SERVICES

DIVISION OF MENTAL HEALTH AND
DEVELOPMENTAL DISABILITIES

POUCH H 04
JUNEAU, ALASKA 99811
PHONE: 465-3370

October 12, 1983

Mr. David F. Maltman
Executive Director
Protection and Advocacy
for the Developmentally Disabled
325 East 3rd, 2nd Floor
Anchorage, AK 99501

Dear Mr. Maltman:

In some ways your letter of September 22 is difficult to answer because we do not have all of the reliable information we would like. In addition, future needs in Alaska depend on the growth of the state and the nature of that growth as well as the kind of innovation that take place within the field.

However, with the above conditions and in an attempt to be clear and brief, the list of needed services based on current verified client demand for programs of the type administered by the Developmental Disabilities Section are as follows:

Verified Client Need By Program	Estimated Yearly Operational Cost
Respite Care Services	
30 - 40 hours per day added to existing programs	$ 70,000
85 - 100 hours per day for new families mainly in non-urban areas statewide	250,000
Vocational Training Services	
50 persons verified on waiting lists of existing programs in Anchorage, Ketchikan, Juneau, Kodiak and Fairbanks	500,000
25 persons waiting for program development in the Kenai, Southeast Alaska, and Bethel	200,000

Residential Support and Training	
38 persons on waiting lists for existing services - - - - - - - - - - - - - - -	1,200,000
15 persons in need of new in-home support services and group homes in Kenai and Anchorage - - - - - - - - - - - -	300,000
8 persons with Autism having highly specialized needs - - - - - - - - - - - - - - -	300,000
16 - 20 mentally retarded/emotionally disturbed persons needing highly specialized services (Anchorage, Valdez, and Kodiak) - - - - - - - - - - - - - - -	900,000

Again, the data regarding clients is based on our best judgement of client needs that have been verified by the Division. The estimated figures for yearly operational costs are based on a good deal of experience with the cost of community programs in Alaska. Except for a portion of the final program listing (i.e. MR/ED programs in Valdez) the list is composed of estimates of need for community based programs as opposed to institutional programs. Also, the list assumes that existing programs would generally remain to meet needs of the currently served population.

One final caveat is that the cost estimate should not imply the ability of the State Division of Mental Health and Developmental Disabilities to fund programs. In fact, State revenues have for the past two years precluded the possibility of adding to most programs administered by the Department of Health and Social Services, including those to developmental disabled persons. It appears that the future revenue picture is bleak, also.

With the conditions described, I believe you will find the list accurate. If not, or if you have questions or concerns, please do not hesitate contacting me. You may wish also to contact the Governor's Council for the Handicapped and Gifted. The descriptions of need found in the Council's recently developed State Plan may provide a more comprehensive statement.

Sincerely,

Robert P. Gregovich, Ph.D.
Program Administrator
Developmental Disabilities

Attention Robert London Smith PH.D.
Commissioner

Dear Dr. Smith

I am appalled that you (your department) would instruct Dr. Gregovich to stand up in front of the Senate and ask that they vote down Senate Resolution - 9.

How can you take this position? What in the resolution; which simply calls for the recognition of the rights and dignity of nature for the developmentally disabled, can be so offensive to you?

It is apparant to me, that Greek letters of learning after a person's name do not remove the shrouds of ignorance and prejudice. It is ironic that a Dr. of Philosophy would stand in front of the Senate and speak using the tenat of argument - "AD IGNORANTUM". This same tenat he would then take to his students and berate its principal of argument as fallacious.

There is a statement that "history repeats itself," perhaps it is so. Approximately 115-125 years ago, ignorant people decried a proclamation put forth by a man named Lincoln, it was entitled the "Emancipation Proclamation". Would you have stood up then Dr. and called for it to be voted down? 200 Hundred years ago when men argued the rights and dignity of man, a bill came forth, it was called "The Bill of Rights", would you have stood up then and decried that this bill be voted down?

The language in Sr-9, to most degree, is no different in context then in a reply sent by the Governor to House Majority Leader Ramona Barnes. This resolution as passed by the Senate is going to be introduced by the House.

How can you set yourself above the Governor, the Legislature, and most importantly the people to run in opposition to those directions mandated of you and your department to take?

Dr. Rabbeau was asked in the HESS Finance subcommittee meeting what position your department took in planning for the Developmentally Disabled? His response was that this issue was not an issue, not a priority. He intimated no planning is being done or will be done.

Let me assure you Dr. we will write the plan for you and hopefully in its writing will determine a means to exclude your need or your department's need for continuence.

I commend the Governor and the Legislature for their understanding and support of the concerns of Developmentally Disabled People. I commend the Governor in his proclamation calling this the decade of the disabled. I commend the Governor for opening his home here in Anchorage for a reception for Special Olympics to support Developmentally Disabled People. I commend the Legislature both House and Senate for their tremendous support this year.

I ask of the Governor and the Legislature how we, all of us, can continue to allow you and your department to run in direct opposition to us?

Respectfully

Representative Mae Tischer
Alaska State Legislature
Pouch V
Juneau, Alaska 99811

Dear Mae

I wish to express my deepest appreciation in all that you have done to assist us in meeting the needs of the developmentally disabled. We are not through the woods but you and others like you give a beacon to light our path. I give you my sincere pledge that the things promoted to you will be accomplished to the best of my ability and while I can still draw a breath.

As a business person, I have experienced first hand what can be done in a shared partnership with government, people, business, and the community working together. Mary Jane speaks of you with pride and reverence, I see now that her judgement is well placed.

I firmly believe that community programs are most cost effective and with the full utilization of the partnership can continue to remain that way. Assuming all things planned for our recreation center can be brought forth, I envision the soon to be realized ability to make our program totally self sufficient. If we are able to bring in the rental incomes available in our overall program, we may never need State or Municipal assistance, while providing tremendous programs for the developmentally disabled.

Thank you again, If down the road I may assist you in any way, please call on me.

Respsectfully

Joseph H. Laird

Juneau Association for Retarded Citizens

"Retarded Children CAN Be Helped"

I'm Pam Wills Peters, the President of the Juneau Association for Retarded Citizens. The Juneau ARC is in favor of House Resolution 13, as we believe this is a basic statement of Human Rights for Alaskans who have developmental disabilities.

Also, we would like to urge you to increase the budget for community services that Governor Sheffield has already adopted. There are families in the Juneau ARC that have needed community services for years. A 3.6 million dollar increase will meet the current needs for community services throughout Alaska, including Juneau. We appreciate your interest in the ~~developmentally disabled~~ developmentally disabled population in Alaska.

Pamela Ann Wills Peters

Kew Humphrey's / DiR - Retir & Benefits —

Resol was amended in Senate HESS & we can now support this.

Tischer - Expanded bill
McMillan - Pt asst for Health Insurance
Humph - Gen. govt members. = 317 per mo —
all employees - 40 million per yr.

① Gone to bid to see what market is willing to offer. Ulty comp health plan — benefits are extraordinary. The best avail for public employees anywhere. Therefore Realistic price for coverage.

PERS & TRS - Same health benefit system = 157.81 per mo.
① difference = audio visual dental not included
McMillan - 150 deductible - 90% up to 1950 then 100%

① Not fully self-insured — experience rated — level of premium dictated incidents.

Tischer: Why - need for Resolution —

Humphrys - We will pursue in any event - 1 the comp review rather than ongoing report.

Intent - Suggested by a gentleman who wanted to sell a "staywell" plan to the state.

Health Costs: 3rd party payments - no cost containment.

① Expand role of SBS - more basic level of underlying coverage. It would not go to annuity account.

Labor Relations w/in DOA does negotiating.

Fritz - Hold action on HB 225 until he can return even if it tomorrow —

Re: Summary/ CSSCR 12 (HESS) "Requesting the governor to direct that a study be conducted by the Dept. of Administration to investigate cost control alternatives for state employee health insurance plans".

The Senate HESS CS requests the Governor to direct that a study be conducted by the Dept. of Administration to investigate cost control alternatives and design modifications for state employee health insurance plans, including institution of a "stay well" health insurance plan for state employees.

The original resolution requested the Governor to establish a special task force to study the question. This version requires the Dept. of Admin. to report its findings to the Governor and the Legislature by Jan 16, 1984.

Subject: SCR 12.

Dear Senator Josephson:

The Alaska State Hospital Association has reviewed SCR 12 and wishes to inform you of our support.

The "stay well" program proposed in this measure has the potential to draw the consumer back into a consideration of the economics of seeking health care services. This will, in our judgement begin to address the problem of ever increasing utilization in general and specifically such problems as inappropriate use of hospital emergency rooms. When the consumer feels no economic difference in the use of a physician's office or an emergency room, all too often the consumer opts for the one most likely available at the consumer's convenience, the emergency room. When insurance pays for either the physician or emergency room visit there is no effective difference to the consumer. The "stay well" program you suggest would offer some incentive, even if minor and indirect, it would be a great improvement.

While there are many facets to the cost of health care, the misuse and over use by the consumer is a major part of the problem. We believe that SCR12 begins to address that part of the problem. We are anxious to help secure its passage.

Sincerely,

Dennis L. DeWitt
President

AMERIGARD'S "STAY WELL" PROGRAM

An alternative approach for providing Health Care Benefits.

INTRODUCTION

The Amerigard STAY WELL program is one which puts the responsibility for the use and administration of health care funds back where it belongs -- with the employee.

By dividing the usual expenditures for health care benefits between special Amerigard accounts and premiums for a high deductible major medical policy, the cost to an organization for providing these benefits may be substantially reduced. This is accomplished by

- offering incentives to employees for staying well
- allowing employees to administer their own health care funds
- eliminating much of the paperwork required by traditional health insurance programs.

FACTS about the current situation

- Health insurance costs are exploding upward
- The associated administrative burden is also increasing
- Business and industry are caught between increasing employee demand for health care coverage and soaring costs

To cope with this situation, most organizations are pursuing one or more of the following options:

- Continuing "business as usual" and absorbing the added costs.
- Tightening controls on current programs by making staff cuts, etc.
- Deferring additional benefits and cutting existing programs.
- Seeking alternatives to traditional health care programs.

Amerigard's Stay Well program is NOW AVAILABLE and provides the alternative that many managers have been looking for. Amerigard is a not-so-traditional program whose features include:

- Sharing responsibility with employees for their own health care plan.
- Providing incentives to employees to stay well and on the job.
- Simplifying the administrative system so that paying for care received is as simple as writing a check.

The Bottom Line Results

- Reduces costs, administrative burden, and time away from work (as much as 40% in some cases).
- Provides an improved benefit plan with first dollar coverage.
- Boosts worker and organization productivity.
- Improves employee morale.

Why Does Amerigard Work?

Amerigard's STAY WELL program is NOT another insurance program. It invokes a different principle, that of Free Enterprise. Everyone benefits when costs are reduced and employees are kept on the job.

In traditional programs, the only way to get anything out of the benefit is to use it! The more you use it, the more you gain! With Amerigard's STAY WELL Program, participants have first dollar coverage when they need it and are given cash back when they do not.

Does Amerigard keep people from going to the doctor when they are sick? Newsweek doesn't think so. Nor does Larry Parcell, Vice President of Blue Shield of California, who holds that "(STAY WELL) is probably the most innovative concept since major medical insurance caught on in the 1950's." (Newsweek, August 25, 1980)

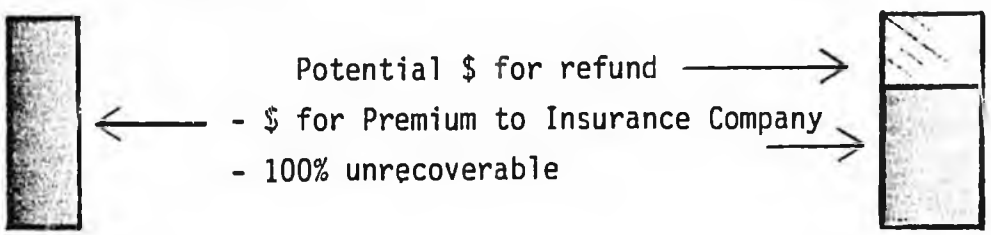
Savings accrue with the reduction of unnecessary doctor visits, which health economists agree is at least 50%.

The results with Amerigard are:

- Much less time lost due to "illness".
- Substantial savings to the organization.
- First dollar coverage when needed.
- Cash back to the participant for staying well.

How Amerigard Works

In traditional programs, all premiums paid are lost; all fees paid go directly to the insurance carriers. Such programs are usually accompanied by lots of forms, many restrictions and hassles in payments to the concerned parties.



With the Amerigard Program, the usual expenditure is divided-- with a portion, the employer pays for a high deductible major medical policy which is less expensive. The balance is deposited into special accounts that have been established, by Amerigard, for each participant. Especially prepared checks, designed so that they can be used only for medically related expenses, are given to each participant. The participants "administer" THEIR OWN account just as they do their personal checking account.

- When services, such as doctors visits, medication, laboratory and x-ray procedures, are received, they are paid for by check from the Amerigard account. PAYMENT IS IMMEDIATE, WITHOUT FORMS.
- Should charges reach the deductible limit, the participant follows the procedure established by the major medical carrier.
- Cancelled checks and monthly statements provide proof of payment toward the deductible limit.
- Funds remaining in the Amerigard accounts at the end of the year are returned to the employer and employee in the manner determined when the program is established.

TYPICAL EXAMPLES

Traditional Program

Amerigard Program

Example 1

No benefit used. Amerigard account balance is divided between employer and participant.

Major Medical Premium. Fixed cost; unrecoverable

Example 2

Balance in account after a portion of the account has been used. Divided and refunded.

Portion used for medical care. Unrecoverable.

Major Medical Premium. Fixed Cost; unrecoverable.

Example 3

Account balance entirely used; unrecoverable.

Major Medical Premium. Fixed Cost; unrecoverable.

What are the other benefits?

In addition to the benefits that were listed previously, consider the fact that:

- The local economy is stimulated. Amerigard account funds are deposited by the employer in local banks just as regular deposits are, thus increasing local capital reserve and allowing banks to be of greater service to businesses and individuals in the community.

- There is no reward for fraud. Participants who do not cheat get money back anyway!

- With no third party involvement, medical matters are private once more, between the physician and the patient.

- By keeping employees well and on the job, productivity gains may well surpass the premium savings realized.

- And remember, none of those time consuming forms are necessary!

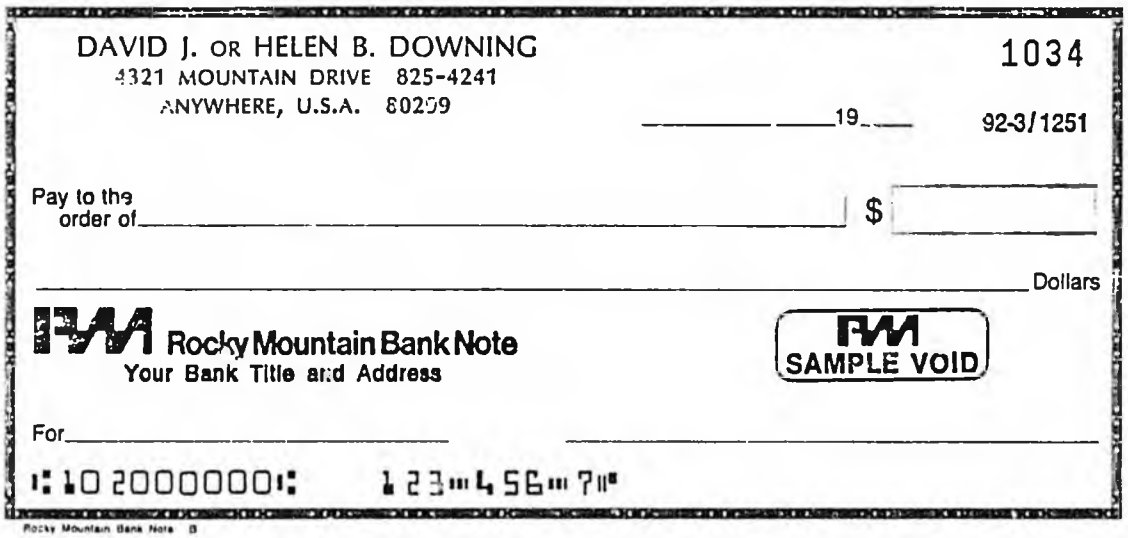
Who likes Amerigard?

Employees like it because of the first dollar coverage; cash back if they stay well; they manage the program; medical matters are kept confidential.

Employers like it because it saves money; increases productivity by keeping people on the job; cuts down on administrative burden; it makes employees happy.

Doctors like Amerigard because bills are paid immediately (most spend one third of their money collecting the other two thirds); there are no forms so their administrative burden is reduced too; and, almost all patients they see are those who are really sick.

Does anyone Not like Amerigard?



So far, we have not heard of anyone who dissapproves of the idea of saving money while providing improved benefits to their employees; or of a doctor who does not care to be paid promptly.

How much does the Amerigard service cost?

We charge an initial enrollment fee of $10.00 per employee plus an annual fee of $10.00 per participating employee thereafter. That is the total charge for our services.

Health care costs in America are going to be controlled. We believe strongly that control should come by way of the FREE ENTERPRISE system and WITHOUT GOVERNMENT INTERVENTION which is our only alternative.

APPENDIX

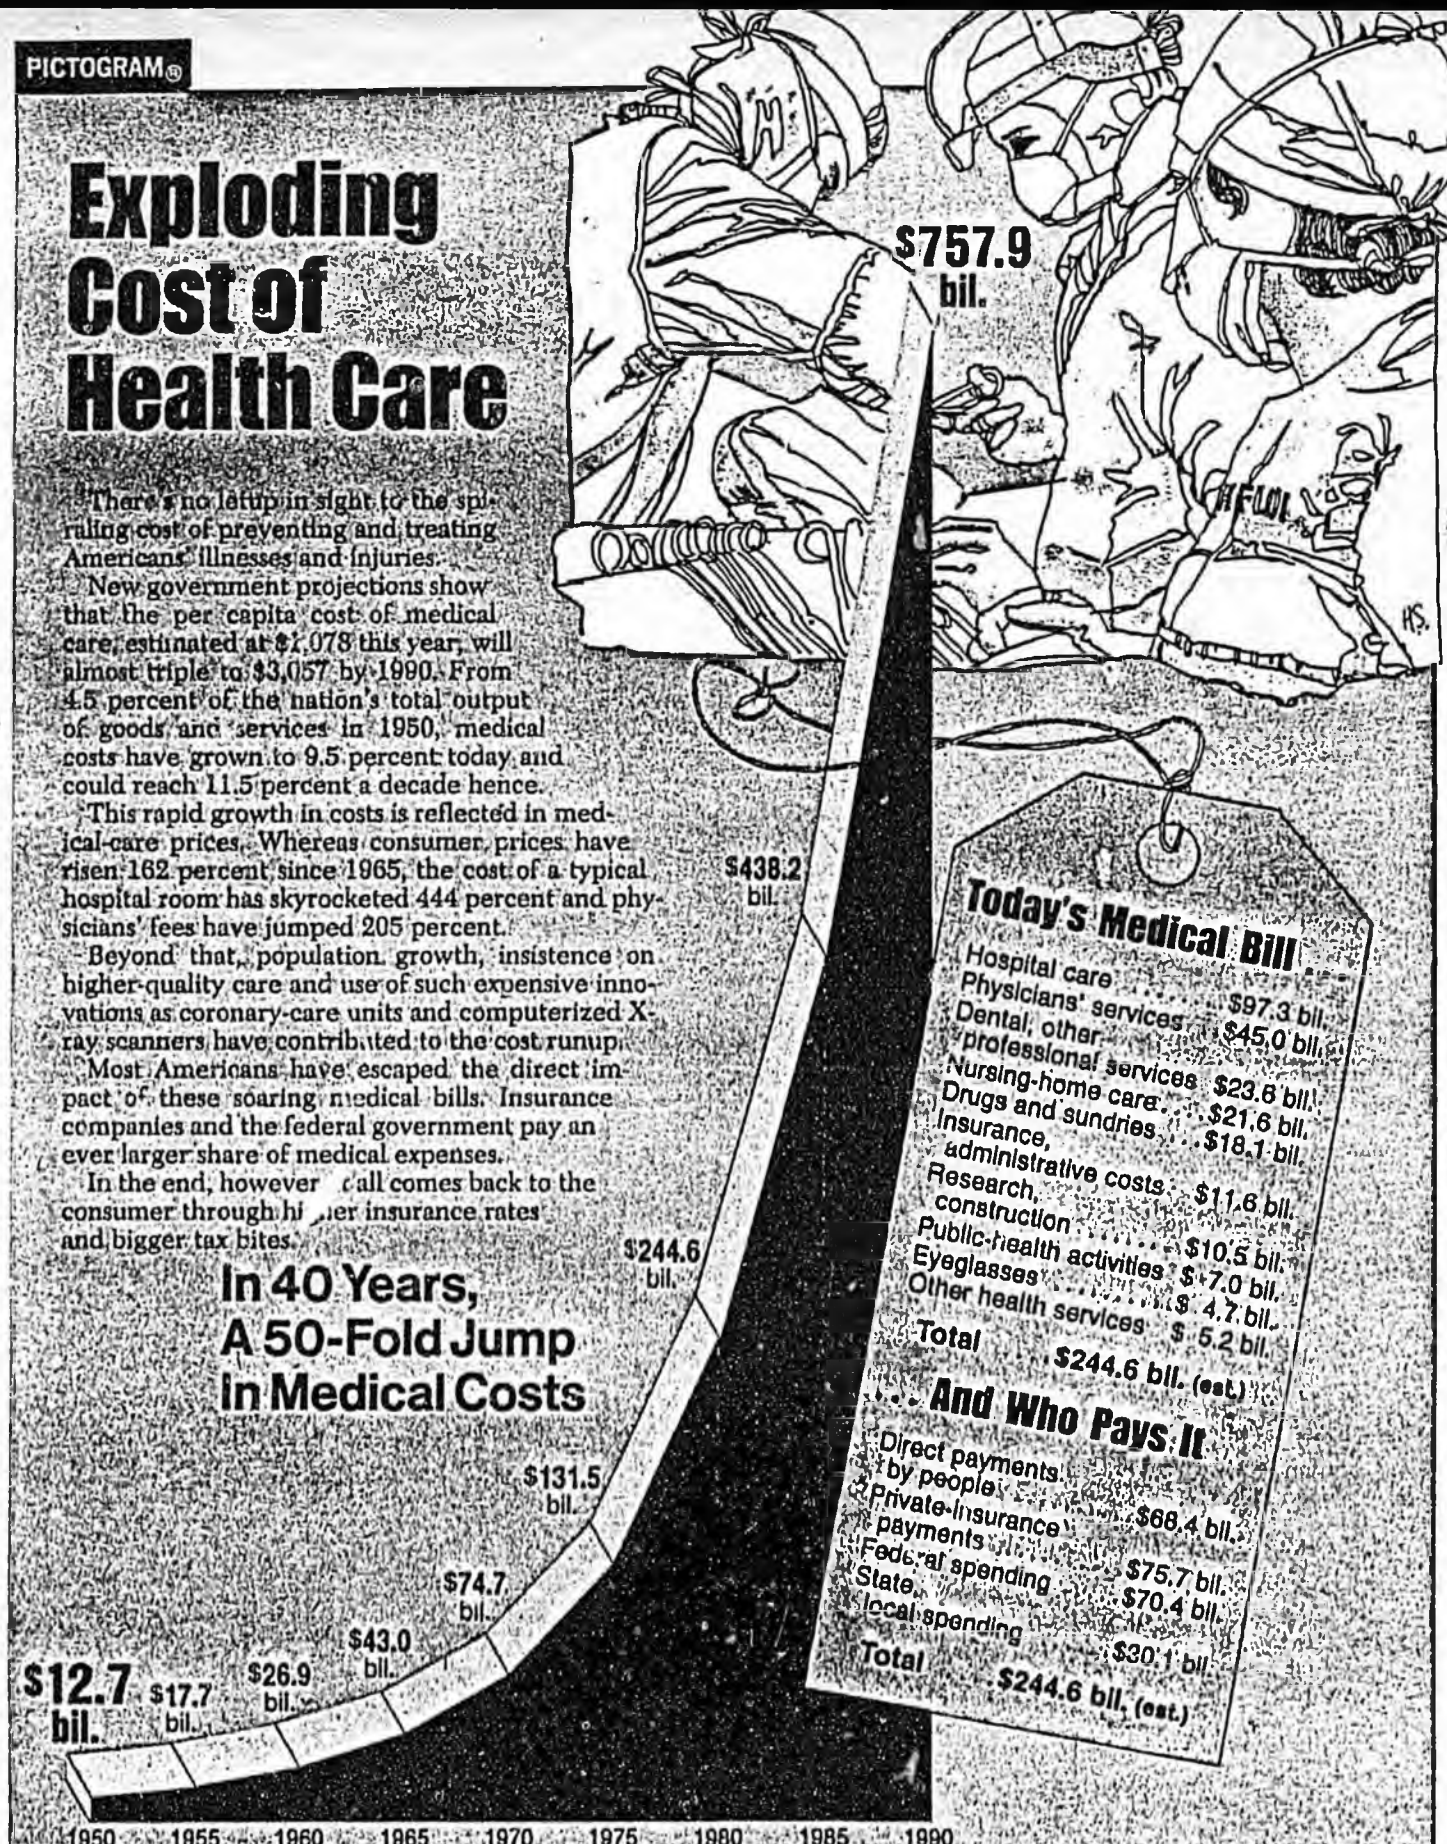
Rocky Mountain Bank Note B

PICTOGRAM®

Exploding Cost of Health Care

There's no letup in sight to the spiraling cost of preventing and treating Americans' illnesses and injuries.

New government projections show that the per capita cost of medical care, estimated at $1,078 this year, will almost triple to $3,057 by 1990. From 4.5 percent of the nation's total output of goods and services in 1950, medical costs have grown to 9.5 percent today and could reach 11.5 percent a decade hence.



This rapid growth in costs is reflected in medical-care prices. Whereas consumer prices have risen 162 percent since 1965, the cost of a typical hospital room has skyrocketed 444 percent and physicians' fees have jumped 205 percent.

Beyond that, population growth, insistence on higher-quality care and use of such expensive innovations as coronary-care units and computerized X-ray scanners have contributed to the cost runup.

Most Americans have escaped the direct impact of these soaring medical bills. Insurance companies and the federal government pay an ever larger share of medical expenses.

In the end, however, all comes back to the consumer through higher insurance rates and bigger tax bites.

In 40 Years, A 50-Fold Jump in Medical Costs

Today's Medical Bill . . .

Hospital care	$97.3 bil.
Physicians' services	$45.0 bil.
Dental, other professional services	$23.6 bil.
Nursing-home care	$21.6 bil.
Drugs and sundries	$18.1 bil.
Insurance, administrative costs	$11.6 bil.
Research, construction	$10.5 bil.
Public-health activities	$ 7.0 bil.
Eyeglasses	$ 4.7 bil.
Other health services	$ 5.2 bil.
Total	$244.6 bil. (est.)

. . . And Who Pays It

Direct payments by people	$68.4 bil.
Private-insurance payments	$75.7 bil.
Federal spending	$70.4 bil.
State, local spending	$30.1 bil.
Total	$244.6 bil. (est.)

Medical costs account for an increasingly large share of the economy—almost $1 of every $10 spent today, compared with $1 of every $20 in 1960—and that share is expected to keep expanding.

USN&WR chart—Basic data: U.S. Dept. of Health & Human Services

An Idea Whose Time Has Come

- As the originators of MasterCharge, electronic calculators, and Xerox can tell you, even the best ideas meet some resistance. "Stay Well" is so simple, it's hard to understand, and people may have to hear it several times before the light comes on.

- Blue Cross, Blue Shield, and major insurance companies are trying to hold down health costs by attempting to influence the provider side of the equation by reducing the length of hospital stays, encouraging the pooling of expensive medical equipment, and providing health-related literature to their members.

- Amerigard applauds their efforts on the provider side but sees real benefit from influencing the demand side as well by seeking to reduce unnecessary lost time due to illness at the source, and by greatly simplifying the administrative system.

- Currently, Blue Shield, several major insurance companies, and even Crocker Bank of San Francisco are experimenting with variations of a "Stay Well" idea. They are learning what Amerigard knows--"Stay Well" works.

Newsweek, August 25, 1980

Making Good Health Pay Off—in Cash

The more people go to doctors, the higher the health-insurance premiums their employers must pay. Until last year health insurance ranked second only to salaries in the budget of the Mendocino County, Calif., Office of Education. But a new "stay well" plan that provides a cash incentive to avoid unnecessary doctor bills might help trim the exorbitant cost of health care.

Under the plan, employees are paid to stay away from doctors. The California agency used to spend $105 a month for each of its 218 employees for insurance to cover nearly all medical expenses. The new plan eliminates this coverage and instead provides a $500-deductible Blue Shield policy that costs the county $65 for each employee. In addition, another $40 a month is set aside to provide a pool to cover the first $500 of the employee's bills. If the employee spends less than $500 in any year, he can collect the difference in cash when he leaves his job. A worker who spent only $100 annually for two years would collect $800. "It's so simple that it's screwy nobody ever thought of it before," says Assistant Superintendent Ed Nickerman.

The idea seems to be working. After eleven months, nearly 100 employees had incurred no medical bills, 47 had spent less than $200 and only 22 had exceeded their $500 limit. "Before, I kind of overdid it," says teacher Dan Raner. "Now I feel I have an investment in my own health." Partly as a result of the plan, the county doesn't face a premium increase this year. "I think this is probably the most innovative concept since major-medical insurance caught on in the 1950s," says Larry Parcell, vice president of Blue Shield of California.

The stay-well plan promises to spread throughout California. Other school districts, the state administration and private businesses all are considering versions. The Bank of America, for example, soon hopes to start a pilot program among some of its 63,000 employees, who now contribute from $10 to $25 out of their own paychecks for health insurance. Under the bank's plan, employees who file no health-insurance claims during one year would get free coverage the next. None of the plans, experts seem to agree, would discourage anyone who is really sick from going to the doctor. But, health economists say, at least half of all physician visits are unnecessary.

THE SUNDAY OREGONIAN
MAY 17, 1981

Health insurance plan rewards well patients

A Beaverton doctor who sees "about 10,000 patients a year" has come up with a new health care insurance plan that "pays people not to be sick."

"My office is loaded with people who come in and the company says they are sick and have to see a doctor before they can come back to work," Dr. Charles K. Chapman said in an interview. "Individuals take sick leave and use their medical insurance at a cost to both the individual and the company. It costs the individual sick-leave time and the company the loss of the employee's services for a day."

Noting that most health insurance is prepaid, Chapman said: "The only way to derive benefit from the prepaid plan is to use the benefits, whether needed or not. 'It's paid for, so I may as well use it' seems to be the all too-human response."

Chapman has a program called the *Americare Plan, which "rewards you for being well." Basically, the plan returns a part of the premium to the individual for not using the insurance.

Using $1,000 in premiums as an example, Chapman explained that it is divided into two $500 parts. The first part of the premium is used to purchase a $500 deductible major medical plan from any major insurance program. "This functions as any standard insurance plan would," he said, "covering costs in excess of $500."

The remaining $500 is deposited in a local bank as a "pool." This, according to Chapman, is the key to the plan because "the consumption or maintenance of these monies is in the hands of the patient." If the insured does not use any of the "pool" fund, he receives $250 back in cash the first of December, the anniversary date of the plan.

"Thus, his self-restraint is rewarded in the most tangible form that Americans understand — cash payment," the doctor said.

If the insured used $120 for health expenses, he would be returned $190 in cash or 50 percent of the $360 unused in the pool fund.

DR. CHARLES K. CHAPMAN

Money in the pool is used first. When that is exhausted, the major-medical part is tapped. If the pool is used completely, the insured does not receive any "reward."

Each participant is issued a credit card that is used when there are medical expenses.

"Charges at the doctor's office, lab costs and other expenses are charged against the account and the doctor is paid immediately," he said. "No forms. No hassles."

The company realizes productivity gains, he said. "With up to 50 percent less lost time due to illness, the potential impact to worker and organization productivity is staggering. The premium savings could be a drop in the bucket compared with the money made here."

It also represents a boost to the local economy because the program funds are held in local banks.

*Prior to July 1981, Amerigard Inc. was known as Americare Inc.

Department of Administration to report its findings to the governor and the legislature before January 16, 1984.

A COPY of this resolution shall be sent to the commissioner of the Department of Administration.

Fiscal Note

SCR 12

IV Analysis: It is assumed that organizations represented on the task force would have Juneau representatives and there would be no travel and per diem expenses.

The $25.0 expenditure is for benefit consultation and research.

Position Paper

Senate Concurrent Resolution No. 12

The Department of Administration is aware of so-called "stay well" programs and has already done some preliminary research on the feasibility of similar plans for the State of Alaska. We believe that SCR 12 might be fruitful if it were amended.

First, rather than establishing a task force to perform the original research work and develop alternatives, we suggest that this department develop the report which then could be circulated among and discussed with all concerned parties. Second, it is important that the scope of the report be broadened to include other possible cost containment alternatives such as modifying our existing cafeteria style Supplemental Benefits System. The approach should be well integrated and take into account possibilities such as federal taxation of employer-paid health insurance premiums and consider the tax consequences of any cash distributions under the program.

The department could support such an amended resolution but cannot support the existing version. Technical groundwork must be laid before informed decisions on alternatives can be made.

SPEECH
May 18, 1983

SENATE CONCURRENT RESOLUTION NO. 26
Local School Advisory Boards

SCR 26 IS AN EFFORT TO ENABLE TEACHERS THE OPPORTUNITY TO PROVIDE INPUT TO THE DECISION MAKING PROCESS AND POLICIES OF LOCAL SCHOOL BOARDS. AS IT IS NOW, TEACHERS HAVE VERY LITTLE ACCESS TO THE DECISIONS MADE ON PROGRAM, CURRICULUM, AND EVEN TEACHING MATERIALS AND TEXTBOOKS THAT ARE USED IN THE CLASSROOM.

LEGISLATION COULD PROVIDE A PROCESS WHEREBY TEACHERS, ADMINISTRATION, AND THE COMMUNITY ALL HAVE A SAY IN THE QUALITY OF EDUCATION THAT STUDENTS WILL RECEIVE.

IT IS REASONABLE TO ASSUME THAT TEACHERS HAVE KNOWLEDGE AND EXPERTISE IN THE AREA OF EDUCATION, AND THAT THEIR DIRECT DEALING WITH STUDENTS GIVES THEM THE ADDITIONAL ADVANTAGE OF BEING AWARE OF STUDENTS NEEDS AND CAPABILITIES. BECAUSE OF THIS ADVANTAGE, TEACHERS WOULD BE AN INVALUABLE ASSET ON A LOCAL ADVISORY BOARD, WHICH WOULD REPORT TO LOCAL

SCHOOL BOARDS, AND THEREBY HAVE A MORE DIRECT EFFECT ON POLICIES THAT AFFECT THEM AND STUDENTS.

THE QUALITY OF EDUCATION NEEDS TO BE A HIGH PRIORITY WITH THIS LEGISLATURE AND PROVIDING FOR LOCAL SCHOOL ADVISORY BOARDS IS ONE STEP IN THE RIGHT DIRECTION.

Dear Frank,

Thanks for your call inviting a response and suggestions (legislative and otherwise) to the National Commission on Excellence in Education report: "A Nation at Risk". I have attached a copy of the report because my comments and suggestions are specifically referenced to it.

Our Board will be discussing the Report at our meeting in Juneau, 13 and 14 May, and you are more than welcome to participate at anytime your schedule permits.

Absent a specific policy statement from our Board I can comfortably predict an extremely positive response from the Board and from teachers generally to the Report since so much of it keys in on specific concerns that we have perceived as serious problems for quite some time. The bottom line is that "quality education costs money" and the federal government has had a substantial obligation to help. Their current effort is only 7.4 cents out of each dollar spent for education.

If we could achieve Congressional support (including our delegation) for the American Defense Educational Act, that figure would rise substantially.

Re: The Report....

1. We agree with the need for fundamental reform. The point on page 2 relative to public education having to deal with personal, social and political problems not being resolved at home and by other institutions is a very serious one. This suggests that it is incumbent on all of us to better articulate the role of public education to the public, and enlist their support.

2. The statistical data on pages 4 and 5 is not defensible and can be changed....with a broad base of support. The point on page 8 that teachers become the scapegoats is well taken and clearly demonstrates the need for better understanding and a broader commitment to support public education. We have no problem with accountability if we could have a more meaningful role in certification, determination of the substance of teacher preparation programs, determination of who enters the profession, and use and disbursement of resources.

3. We agree with the general conclusion that standards and expectations have become minimal requirements rather than guidelines toward excellence. Expectations and aspirations need reinforcement from all segments of the education/public community.

4. I personally think the results of the Gallup poll referenced on page 12 suggest that the general public is willing to make meaningful commitments, including financial, to public education. Someone needs to make the "call" for the support and commitment - perhaps you are the one to do it.

5. More specifically, regarding findings:

a) Teachers have little, if any, access to decisions on substance; program, curriculum, even teaching materials and textbooks. Legislation could make this a trilateral process: the public(community), the profession (teachers) and the administration/board.

b) Teachers have a lot more to offer on expectations than is currently being realized but whatever the suggestions that are made, they must receive support and reinforcement from boards/administration and from parents.

c) Teachers desperately want more time to teacher and be freed from administrative tasks and other minutiae which seem to increase yearly. A partial answer is to legislate that class size, load, pupil-teacher ratios and "other" assignments are negotiable issues.

d) In terms of making the teaching profession more attractive, while it is true that our salaries are higher than "outside", I think there is still need for concern in that they don't seem to be attractive enough for Alaskans to make the commitment to teaching as a career/profession and at the entry levels they still require part-time jobs to supplement income. Additionally, legislation can provide teachers a more meaningful role in professional decision making. The policy statement in the Public Employees Relation Act: AS 23.40.070 - with meaningful implementation would bring a better focus to this issue.

6. Relative to the recommendations, we concur in whole or in part with nearly all of them and this is the general area which probably represents the greatest legislative potential. The only real caution is that we really can't legislate "attitudes" and this component will require everyone working more closely to goals and objectives defined through a common effort.

a) Tougher standards in high school require State Board direction, State Department of Education assistance, and public support. NEA and teachers concur. The American Defense Education Act also addresses this issue.

b) We support higher standards for college admission but caution against nationwide standardized tests as a primary criteria. We should use a variety of diagnostic measures which uniquely address our circumstance here in Alaska.

c) We support the need to look at alternatives attendant to the use of time, the school day and the school year. Again, the options must address the unique circumstances here in Alaska.

d) Needless to say, we support the call for higher salaries as an incentive to make the profession more attractive to quality people. However, salaries alone won't do it. There must be a greater role for teachers in professional decision making as there is in other professions. Point 4 on page 25 seems to be a key. In my opinion this represents an area for greater activity on the part of our Department of Education.

NEA and NEA-Alaska have a lot of human and professional resources, resources to put into a common effort and we are prepared to do so. While we are an interest group with responsibility to advocate the interests of our members we also are committed to quality public education and will embrace the opportunity to have a greater and more meaningful role in working to achieve it.

Frank, I would really appreciate the opportunity for further discussion of this Report and its potential. Thanks.

Sincerely,

Robert Manners
Executive Secretary

New Rochelle, New York

Richard Wallace
Principal
Lutheran High School East
Cleveland Heights, Ohio

INTRODUCTION

Secretary of Education T. H. Bell created the National Commission on Excellence in Education on August 26, 1981, directing it to examine the quality of education in the United States and to make a report to the Nation and to him within 18 months of its first meeting. In accordance with the Secretary's instructions, this report contains practical recommendations for educational improvement and fulfills the Commission's responsibilities under the terms of its charter.

The Commission was created as a result of the Secretary's concern about "the widespread public perception that something is seriously remiss in our educational system." Soliciting the "support of all who care about our future," the Secretary noted that he was establishing the Commission based on his "responsibility to provide leadership, constructive criticism, and effective assistance to schools and universities."

The Commission's charter contained several specific charges to which we have given particular attention. These included:

- assessing the quality of teaching and learning in our Nation's public and private schools, colleges, and universities;
- comparing American schools and colleges with those of other advanced nations;
- studying the relationship between college admissions requirements and student achievement in high school;
- identifying educational programs which result in notable student success in college;
- assessing the degree to which major social and educational changes in the last quarter century have affected student achievement; and
- defining problems which must be faced and overcome if we are successfully to pursue the course of excellence in education.

The Commission's charter directed it to pay particular attention to teenage youth, and we have done so largely by focusing on high schools.

Selective attention was given to the formative years spent in elementary schools, to higher education, and to vocational and technical programs. We refer those interested in the need for similar reform in higher education to the recent report of the American Council on Education, To Strengthen the Quality of Higher Education.

In going about its work the Commission has relied in the main upon five sources of information:

- papers commissioned from experts on a variety of educational issues;
- administrators, teachers, students, representatives of professional and public groups, parents, business leaders, public officials, and scholars who testified at eight meetings of the full Commission, six public hearings, two panel discussions, a symposium, and a series of meetings organized by the Department of Education's Regional Offices;
- existing analyses of problems in education;
- letters from concerned citizens, teachers, and administrators who volunteered extensive comments on problems and possibilities in American education; and
- descriptions of notable programs and promising approaches in education.

To those public-minded citizens who took the trouble to share their concerns with us--frequently at their own expense in time, money, and effort--we extend our thanks. In all cases, we have benefited from their advice and taken their views into account; how we have treated their suggestions is, of course, our responsibility alone. In addition, we are grateful to the individuals in schools, universities, foundations, business, government, and communities throughout the United States who provided the facilities and staff so necessary to the success of our many public functions.

The Commission was impressed during the course of its activities by the diversity of opinion it received regarding the condition of American education and by conflicting views about what should be done. In many ways, the membership of the Commission itself reflected that diversity and difference of opinion

during the course of its work. This report, nevertheless, gives evidence that men and women of good will can agree on common goals and on ways to pursue them.

The Commission's charter, the authors and topics of commissioned papers, a list of the public events, and a roster of the Commission's staff are included in the appendices which complete this volume.

PREPUBLICATION COPY April 19, 1983

A NATION AT RISK

Our Nation is at risk. Our once unchallenged preeminence in commerce, industry, science, and technological innovation is being overtaken by competitors throughout the world. This report is concerned with only one of the many causes and dimensions of the problem, but it is the one that undergirds American prosperity, security, and civility. We report to the American people that while we can take justifiable pride in what our schools and colleges have historically accomplished and contributed to the United States and the well-being of its people, the educational foundations of our society are presently being eroded by a rising tide of mediocrity that threatens our very future as a Nation and a people. What was unimaginable a generation ago has begun to occur--others are matching and surpassing our educational attainments.

If an unfriendly foreign power had attempted to impose on America the mediocre educational performance that exists today, we might well have viewed it as an act of war. As it stands, we have allowed this to happen to ourselves. We have even squandered the gains in student achievement made in the wake of the Sputnik challenge. Moreover, we have dismantled essential support systems which helped make those gains possible. We have, in effect, been committing an act of unthinking, unilateral educational disarmament.

Our society and its educational institutions seem to have lost sight of the basic purposes of schooling, and of the high expectations and disciplined effort needed to attain them. This report, the result of 18 months of study, seeks to generate reform of our educational system in fundamental ways and to renew the Nation's commitment to schools and colleges of high quality throughout the length and breadth of our land.

That we have compromised this commitment is, upon reflection, hardly surprising, given the multitude of often conflicting demands we have placed on

our Nation's schools and colleges. They are routinely called on to provide solutions to personal, social, and political problems that the home and other institutions either will not or cannot resolve. We must understand that these demands on our schools and colleges often exact an educational cost as well as a financial one.

On the occasion of the Commission's first meeting, President Reagan noted the central importance of education in American life when he said: "Certainly there are few areas of American life as important to our society, to our people, and to our families as our schools and colleges." This report, therefore, is as much an open letter to the American people as it is a report to the Secretary of Education. We are confident that the American people, properly informed, will do what is right for their children and for the generations to come.

The Risk

History is not kind to idlers. The time is long past when America's destiny was assured simply by an abundance of natural resources and inexhaustible human enthusiasm, and by our relative isolation from the malignant problems of older civilizations. The world is indeed one global village. We live among determined, well-educated, and strongly motivated competitors. We compete with them for international standing and markets, not only with products but also with the ideas of our laboratories and neighborhood workshops. America's position in the world may once have been reasonably secure with only a few exceptionally well-trained men and women. It is no longer.

The risk is not only that the Japanese make automobiles more efficiently than Americans and have government subsidies for development and export. It is not just that the South Koreans recently built the world's most efficient steel mill, or that American machine tools, once the pride of the world, are being displaced by German products. It is also that these developments signify

a redistribution of trained capability throughout the globe. Knowledge, learning, information, and skilled intelligence are the new raw materials of international commerce and are today spreading throughout the world as vigorously as miracle drugs, synthetic fertilizers, and blue jeans did earlier. If only to keep and improve on the slim competitive edge we still retain in world markets, we must rededicate ourselves to the reform of our educational system for the benefit of all--old and young alike, affluent and poor, majority and minority. Learning is the indispensable investment required for success in the "information age" we are entering.

Our concern, however, goes well beyond matters such as industry and commerce. It also includes the intellectual, moral, and spiritual strengths of our people which knit together the very fabric of our society. The people of the United States need to know that individuals in our society who do not possess the levels of skill, literacy, and training essential to this new era will be effectively disenfranchised, not simply from the material rewards that accompany competent performance, but also from the chance to participate fully in our national life. A high level of shared education is essential to a free, democratic society and to the fostering of a common culture, especially in a country that prides itself on pluralism and individual freedom.

For our country to function, citizens must be able to reach some common understandings on complex issues, often on short notice and on the basis of conflicting or incomplete evidence. Education helps form these common understandings, a point Thomas Jefferson made long ago in his justly famous dictum:

> I know no safe depository of the ultimate powers of the society but the people themselves; and if we think them not enlightened enough to exercise their control with a wholesome discretion, the remedy is not to take it from them but to inform their discretion.

Part of what is at risk is the promise first made on this continent: All, regardless of race or class or economic status, are entitled to a fair chance and to the tools for developing their individual powers of mind and spirit to the utmost. This promise means that all children by virtue of their own efforts, competently guided, can hope to attain the mature and informed judgment needed to secure gainful employment, and to manage their own lives, thereby serving not only their own interests but also the progress of society itself.

Indicators of the Risk

The educational dimensions of the risk before us have been amply documented in testimony received by the Commission. For example:

- International comparisons of student achievement, completed a decade ago, reveal that on 19 academic tests American students were never first or second and, in comparison with other industrialized nations, were last seven times.
- Some 23 million American adults are functionally illiterate by the simplest tests of everyday reading, writing, and comprehension.
- About 13 percent of all 17-year-olds in the United States can be considered functionally illiterate. Functional illiteracy among minority youth may run as high as 40 percent.
- Average achievement of high school students on most standardized tests is now lower than 26 years ago when Sputnik was launched.
- Over half the population of gifted students do not match their tested ability with comparable achievement in school.
- The College Board's Scholastic Aptitude Tests (SAT) demonstrate a virtually unbroken decline from 1963 to 1980. Average verbal scores fell over 50 points and average mathematics scores dropped nearly 40 points.
- College Board achievement tests also reveal consistent declines in recent years in such subjects as physics and English.
- Both the number and proportion of students demonstrating superior achievement on the SAT's (i.e., those with scores of 650 or higher) have dramatically declined.
- Many 17-year-olds do not possess the "higher order" intellectual skills we should expect of them. Nearly 40 percent cannot draw

inferences from written material; only one-fifth can write a persuasive essay; and only one-third can solve a mathematics problem requiring several steps.

- There was a steady decline in science achievement scores of U.S. 17-year-olds as measured by national assessments of science in 1969, 1973, and 1977.

- Between 1975 and 1980, remedial mathematics courses in public 4-year colleges increased by 72 percent and now constitute one-quarter of all mathematics courses taught in those institutions.

- Average tested achievement of students graduating from college is also lower.

- Business and military leaders complain that they are required to spend millions of dollars on costly remedial education and training programs in such basic skills as reading, writing, spelling, and computation. The Department of the Navy, for example, reported to the Commission that one-quarter of its recent recruits cannot read at the ninth grade level, the minimum needed simply to understand written safety instructions. Without remedial work they cannot even begin, much less complete, the sophisticated training essential in much of the modern military.

These deficiencies come at a time when the demand for highly skilled workers in new fields is accelerating rapidly. For example:

- Computers and computer-controlled equipment are penetrating every aspect of our lives--homes, factories, and offices.

- One estimate indicates that by the turn of the century millions of jobs will involve laser technology and robotics.

- Technology is radically transforming a host of other occupations. They include health care, medical science, energy production, food processing, construction, and the building, repair, and maintenance of sophisticated scientific, educational, military, and industrial equipment.

Analysts examining these indicators of student performance and the demands for new skills have made some chilling observations. Educational researcher Paul Hurd concluded at the end of a thorough national survey of student achievement that within the context of the modern scientific revolution "We are raising a new generation of Americans that is scientifically and technologically illiterate." In a similar vein, John Slaughter, a former Director of the National Science Foundation, warned of "a growing chasm between

a small scientific and technological elite and a citizenry ill-informed, indeed uninformed, on issues with a science component."

But the problem does not stop there, nor do all observers see it the same way. Some worry that schools may emphasize such rudiments as reading and computation at the expense of other essential skills such as comprehension, analysis, solving problems, and drawing conclusions. Still others are concerned that an over-emphasis on technical and occupational skills will leave little time for studying the arts and humanities that so enrich daily life, help maintain civility, and develop a sense of community. Knowledge of the humanities, they maintain, must be harnessed to science and technology if the latter are to remain creative and humane, just as the humanities need to be informed by science and technology if they are to remain relevant to the human condition. Another analyst, Paul Copperman, has drawn a sobering conclusion. Until now, he has noted:

> Each generation of Americans has outstripped its parents in education, in literacy, and in economic attainment. For the first time in the history of our country, the educational skills of one generation will not surpass, will not equal, will not even approach, those of their parents.

It is important, of course, to recognize that the average citizen today is better educated and more knowledgeable than the average citizen of a generation ago--more literate, and exposed to more mathematics, literature, and science. The positive impact of this fact on the well-being of our country and the lives of our people cannot be overstated. Nevertheless, the average graduate of our schools and colleges today is not as well-educated as the average graduate of 25 or 35 years ago, when a much smaller proportion of our population completed high school and college. The negative impact of this fact likewise cannot be overstated.

Hope and Frustration

Statistics and their interpretation by experts show only the surface dimension of the difficulties we face. Beneath them lies a tension between hope and frustration that characterizes current attitudes about education at every level.

We have heard the voices of high school and college students, school board members, and teachers; of leaders of industry, minority groups, and higher education; of parents and State officials. We could hear the hope evident in their commitment to quality education and in their descriptions of outstanding programs and schools. We could also hear the intensity of their frustration, a growing impatience with shoddiness in many walks of American life, and the complaint that this shoddiness is too often reflected in our schools and colleges. Their frustration threatens to overwhelm their hope.

What lies behind this emerging national sense of frustration can be described as both a dimming of personal expectations and the fear of losing a shared vision for America.

On the personal level the student, the parent, and the caring teacher all perceive that a basic promise is not being kept. More and more young people emerge from high school ready neither for college nor for work. This predicament becomes more acute as the knowledge base continues its rapid expansion, the number of traditional jobs shrinks, and new jobs demand greater sophistication and preparation.

On a broader scale, we sense that this undertone of frustration has significant political implications, for it cuts across ages, generations, races, and political and economic groups. We have come to understand that the public will demand that educational and political leaders act forcefully

and effectively on these issues. Indeed, such demands have already appeared and could well become a unifying national preoccupation. This unity, however, can be achieved only if we avoid the unproductive tendency of some to search for scapegoats among the victims, such as the beleaguered teachers.

On the positive side is the significant movement by political and educational leaders to search for solutions--so far centering largely on the nearly desperate need for increased support for the teaching of mathematics and science. This movement is but a start on what we believe is a larger and more educationally encompassing need to improve teaching and learning in fields such as English, history, geography, economics, and foreign languages. We believe this movement must be broadened and directed toward reform and excellence throughout education.

Excellence in Education

We define "excellence" to mean several related things. At the level of the individual learner, it means performing on the boundary of individual ability in ways that test and push back personal limits, in school and in the workplace. Excellence characterizes a school or college that sets high expectations and goals for all learners, then tries in every way possible to help students reach them. Excellence characterizes a society that has adopted these policies, for it will then be prepared through the education and skill of its people to respond to the challenges of a rapidly changing world. Our Nation's people and its schools and colleges must be committed to achieving excellence in all these senses.

We do not believe that a public commitment to excellence and educational reform must be made at the expense of a strong, public commitment to the equitable treatment of our diverse population. The twin goals of equity and high-quality schooling have profound and practical meaning for our economy and society, and we cannot permit one to yield to the other either in principle or in practice.

To do so would deny young people their chance to learn and live according to their aspirations and abilities. It would also lead to a generalized accomodation to mediocrity in our society on the one hand or the creation of an undemocratic elitism on the other.

Our goal must be to develop the talents of all to their fullest. Attaining that goal requires that we expect and assist all students to work to the limits of their capabilities. We should expect schools to have genuinely high standards rather than minimum ones, and parents to support and encourage their children to make the most of their talents and abilities.

The search for solutions to our educational problems must also include a commitment to life-long learning. The task of rebuilding our system of learning is enormous and must be properly understood and taken seriously: Although a million and a half new workers enter the economy each year from our schools and colleges, the adults working today will still make up about 75 percent of the workforce in the year 2000. These workers, and new entrants into the workforce, will need further education and retraining if they--and we as a Nation--are to thrive and prosper.

The Learning Society

In a world of ever-accelerating competition and change in the conditions of the workplace, of ever-greater danger, and of ever-larger opportunities for those prepared to meet them, educational reform should focus on the goal of creating a Learning Society. At the heart of such a society is the commitment to a set of values and to a system of education that affords all members the opportunity to stretch their minds to full capacity, from early childhood through adulthood, learning more as the world itself changes. Such a society has as a basic foundation the idea that education is important not only because of what it contributes to one's career goals but also because of the value it adds to the

general quality of one's life. Also at the heart of the Learning Society are educational opportunities extending far beyond the traditional institutions of learning, our schools and colleges. They extend into homes and workplaces; into libraries, art galleries, museums, and science centers; indeed, into every place where the individual can develop and mature in work and life. In our view, formal schooling in youth is the essential foundation for learning throughout one's life. But without life-long learning, one's skills will become rapidly dated.

In contrast to the ideal of the Learning Society, however, we find that for too many people education means doing the minimum work necessary for the moment, then coasting through life on what may have been learned in its first quarter. But this should not surprise us because we tend to express our educational standards and expectations largely in terms of "minimum requirements." And where there should be a coherent continuum of learning, we have none, but instead an often incoherent, outdated, patchwork quilt. Many individual, sometimes heroic, examples of schools and colleges of great merit do exist. Our findings and testimony confirm the vitality of a number of notable schools and programs, but their very distinction stands out against a vast mass shaped by tensions and pressures that inhibit systematic academic and vocational achievement for the majority of students. In some metropolitan areas basic literacy has become the goal rather than the starting point. In some colleges maintaining enrollments is of greater day-to-day concern than maintaining rigorous academic standards. And the ideal of academic excellence as the primary goal of schooling seems to be fading across the board in American education.

Thus, we issue this call to all who care about America and its future: to parents and students; to teachers, administrators, and school board members;

to colleges and industry; to union members and military leaders; to governors and State legislators; to the President; to members of Congress and other public officials; to members of learned and scientific societies; to the print and electronic media; to concerned citizens everywhere. America is at risk.

We are confident that America can address this risk. If the tasks we set forth are initiated now and our recommendations are fully realized over the next several years, we can expect reform of our Nation's schools, colleges, and universities. This would also reverse the current declining trend--a trend that stems more from weakness of purpose, confusion of vision, underuse of talent, and lack of leadership, than from conditions beyond our control.

The Tools at Hand

It is our conviction that the essential raw materials needed to reform our educational system are waiting to be mobilized through effective leadership:

- the natural abilities of the young that cry out to be developed and the undiminished concern of parents for the well-being of their children;
- the commitment of the Nation to high retention rates in schools and colleges and to full access to education for all;
- the persistent and authentic American dream that superior performance can raise one's state in life and shape one's own future;
- the dedication, against all odds, that keeps teachers serving in schools and colleges, even as the rewards diminish;
- our better understanding of learning and teaching and the implications of this knowledge for school practice, and the numerous examples of local success as a result of superior effort and effective dissemination;
- the ingenuity of our policymakers, scientists, State and local educators, and scholars in formulating solutions once problems are better understood;
- the traditional belief that paying for education is an investment in ever-renewable human resources that are more durable and flexible than capital plant and equipment, and the availability in this country of sufficient financial means to invest in education;
- the equally sound tradition, from the Northwest Ordinance of 1787 until today, that the Federal government should supplement State, local, and other resources to foster key national educational goals; and

- o the voluntary efforts of individuals, businesses, and parent and civic groups to cooperate in strengthening educational programs.

These raw materials, combined with the unparalleled array of educational organizations in America, offer us the possibility to create a Learning Society, in which public, private, and parochial schools; colleges and universities; vocational and technical schools and institutes; libraries; science centers, museums, and other cultural institutions; and corporate training and retraining programs offer opportunities and choices for all to learn throughout life.

The Public's Commitment

Of all the tools at hand, the public's support for education is the most powerful. In a message to a National Academy of Sciences meeting in May, 1982, President Reagan commented on this fact when he said:

> This public awareness--and I hope public action--is long overdue. . . . This country [illegible]n American respect for education. . . . Our challenge now is to create a resurgence of that thirst for education that typifies our Nation's history.

The most recent (1982) Gallup Poll of the Public's Attitudes Toward the Public Schools strongly supported a theme heard during our hearings: People are steadfast in their belief that education is the major foundation for the future strength of this country. They even considered education more important than developing the best industrial system or the strongest military force, perhaps because they understood education as the cornerstone of both. They also held that education is "extremely important" to one's future success, and that public education should be the top priority for additional Federal funds. Education occupied first place among 12 funding categories considered in the survey--above health care, welfare, and military defense, with 55 percent selecting public education as one of their first three choices. Very clearly, the public understands the primary importance of education as the foundation

for a satisfying life, an enlightened and civil society, a strong economy, and a secure Nation.

At the same time, the public has no patience with undemanding and superfluous high school offerings. In another survey, more than 75 percent of all those questioned believed every student planning to go to college should take 4 years of mathematics, English, history/U.S. government, and science, with more than 50 percent adding 2 years each of a foreign language and economics or business. The public even supports requiring much of this curriculum for students who do not plan to go to college. These standards far exceed the strictest high school graduation requirements of any State today, and they also exceed the admission standards of all but a handful of our most selective colleges and universities.

Another dimension of the public's support offers the prospect of constructive reform. The best term to characterize it may simply be the honorable word "patriotism." Citizens know intuitively what some of the best economists have shown in their research, that education is one of the chief engines of a society's material well-being. They know, too, that education is the common bond of a pluralistic society and helps tie us to other cultures around the globe. Citizens also know in their bones that the safety of the United States depends principally on the wit, skill, and spirit of a self-confident people, today and tomorrow. It is, therefore, essential--especially in a period of long-term decline in educational achievement--for government at all levels to affirm its responsibility for nurturing the Nation's intellectual capital.

And perhaps most important, citizens know and believe that the meaning of America to the rest of the world must be something better than it seems to many today. Americans like to think of this Nation as the preeminent country for generating the great ideas and material benefits for all mankind. The citizen

is dismayed at a steady 15-year decline in industrial productivity, as one great American industry after another falls to world competition. The citizen wants the country to act on the belief, expressed in our hearings and by the large majority in the Gallup Poll, that education should be at the top of the Nation's agenda.

Findings

We conclude that declines in educational performance are in large part the result of disturbing inadequacies in the way the educational process itself is often conducted. The findings that follow, culled from a much more extensive list, reflect four important aspects of the educational process: content, expectations, time, and teaching.

Findings Regarding Content

By content we mean the very "stuff" of education, the curriculum. Because of our concern about the curriculum, the Commission examined patterns of courses high school students took in 1964-69 compared with course patterns in 1976-81. On the basis of these analyses we conclude:

- Secondary school curricula have been homogenized, diluted, and diffused to the point that they no longer have a central purpose. In effect, we have a cafeteria-style curriculum in which the appetizers and desserts can easily be mistaken for the main courses. Students have migrated from vocational and college preparatory programs to "general track" courses in large numbers. The proportion of students taking a general program of study has increased from 12 percent in 1964 to 42 percent in 1979.

- This curricular smorgasbord, combined with extensive student choice, explains a great deal about where we find ourselves today. We offer intermediate algebra, but only 31 percent of our recent high school graduates complete it; we offer French I, but only 13 percent complete it; and we offer geography, but only 16 percent complete it. Calculus is available in schools enrolling about 60 percent of all students, but only 6 percent of all students complete it.

- Twenty-five percent of the credits earned by general track high school students are in physical and health education, work experience outside the school, remedial English and mathematics, and personal service and development courses, such as training for adulthood and marriage.

Findings Regarding Expectations

We define expectations in terms of the level of knowledge, abilities, and skills school and college graduates should possess. They also refer to the time, hard work, behavior, self-discipline, and motivation that are essential for high student achievement. Such expectations are expressed to students in several different ways:

- by grades, which reflect the degree to which students demonstrate their mastery of subject matter;
- through high school and college graduation requirements, which tell students which subjects are most important;
- by the presence or absence of rigorous examinations requiring students to demonstrate their mastery of content and skill before receiving a diploma or a degree;
- by college admissions requirements, which reinforce high school standards; and
- by the difficulty of the subject matter students confront in their texts and assigned readings.

Our analyses in each of these areas indicate notable deficiencies:

- The amount of homework for high school seniors has decreased (two-thirds report less than 1 hour a night) and grades have risen as average student achievement has been declining.
- In many other industrialized nations, courses in mathematics (other than arithmetic or general mathematics), biology, chemistry, physics, and geography start in grade 6 and are required of all students. The time spent on these subjects, based on class hours, is about three times that spent by even the most science-oriented U.S. students, i.e., those who select 4 years of science and mathematics in secondary school.
- A 1980 State-by-State survey of high school diploma requirements reveals that only eight States require high schools to offer foreign language instruction, but none requires students to take the courses. Thirty-five States require only 1 year of mathematics, and 36 require only 1 year of science for a diploma.
- In 13 States, 50 percent or more of the units required for high school graduation may be electives chosen by the student. Given this freedom to choose the substance of half or more of their education, many students opt for less demanding personal service courses, such as bachelor living.

- "Minimum competency" examinations (now required in 37 States) fall short of what is needed, as the "minimum" tends to become the "maximum," thus lowering educational standards for all.

- One-fifth of all 4-year public colleges in the United States must accept every high school graduate within the State regardless of program followed or grades, thereby serving notice to high school students that they can expect to attend college even if they do not follow a demanding course of study in high school or perform well.

- About 23 percent of our more selective colleges and universities reported that their general level of selectivity declined during the 1970s, and 29 percent reported reducing the number of specific high school courses required for admission (usually by dropping foreign language requirements, which are now specified as a condition for admission by only one-fifth of our institutions of higher education).

- Too few experienced teachers and scholars are involved in writing textbooks. During the past decade or so a large number of texts have been "written down" by their publishers to ever-lower reading levels in response to perceived market demands.

- A recent study by Education Products Information Exchange revealed that a majority of students were able to master 80 percent of the material in some of their subject-matter texts before they had even opened the books. Many books do not challenge the students to whom they are assigned.

- Expenditures for textbooks and other instructional materials have declined by 50 percent over the past 17 years. While some recommend a level of spending on texts of between 5 and 10 percent of the operating costs of schools, the budgets for basal texts and related materials have been dropping during the past decade and a half to only 0.7 percent today.

Findings Regarding Time

Evidence presented to the Commission demonstrates three disturbing facts about the use that American schools and students make of time: (1) compared to other nations, American students spend much less time on school work; (2) time spent in the classroom and on homework is often used ineffectively; and (3) schools are not doing enough to help students develop either the study skills required to use time well or the willingness to spend more time on school work.

- In England and other industrialized countries, it is not unusual for academic high school students to spend 8 hours a day at school, 220

DAYS PER YEAR. IN THE UNITED STATES, BY CONTRAST, THE TYPICAL SCHOOL DAYS LAST 6 HOURS AND THE SCHOOL YEAR IS 180 DAYS.

- O IN MANY SCHOOLS, THE TIME SPENT LEARNING HOW TO COOK AND DRIVE COUNTS AS MUCH TOWARD A HIGH SCHOOL DIPLOMA AS THE TIME SPENT STUDYING MATHEMATICS, ENGLISH, CHEMISTRY, U.S. HISTORY, OR BIOLOGY.
- O A STUDY OF THE SCHOOL WEEK IN THE UNITED STATES FOUND THAT SOME SCHOOLS PROVIDED STUDENTS ONLY 17 HOURS OF ACADEMIC INSTRUCTION DURING THE WEEK, AND THE AVERAGE SCHOOL PROVIDED ABOUT 22.
- O A CALIFORNIA STUDY OF INDIVIDUAL CLASSROOMS FOUND THAT BECAUSE OF POOR MANAGEMENT OF CLASSROOM TIME, SOME ELEMENTARY STUDENTS RECEIVE ONLY ONE-FIFTH OF THE INSTRUCTION OTHERS RECEIVED IN READING COMPREHENSION.
- O IN MOST SCHOOLS, THE TEACHING OF STUDY SKILLS IS HAPHAZARD AND UNPLANNED. CONSEQUENTLY, MANY STUDENTS COMPLETE HIGH SCHOOL AND ENTER COLLEGE WITHOUT DISCIPLINED AND SYSTEMATIC STUDY HABITS.

FINDINGS REGARDING TEACHING

THE COMMISSION FOUND THAT THAT NOT ENOUGH OF THE ACADEMICALLY ABLE STUDENTS ARE BEING ATTRACTED TO TEACHING; THAT TEACHER PREPARATION PROGRAMS NEED SUBSTANTIAL IMPROVEMENT; THAT THE PROFESSIONAL WORKING LIFE OF TEACHERS IS ON THE WHOLE UNACCEPTABLE; AND THAT A SERIOUS SHORTAGE OF TEACHERS EXISTS IN KEY FIELDS.

- O OO MANY TEACHERS ARE BEING DRAWN FROM THE BOTTOM QUARTER OF GRADUATING HIGH SCHOOL AND COLLEGE STUDENTS.
- O THE TEACHER PREPARATION CURICULUM IS WEIGHTED HEAVILY WITH COURSES IN "EDUCATIONAL METHODS" AT THE EXPENSE OF COURSES IN SUBJECTS TO BE TAUGHT. A SURVEY OF 1,350 INSTITUTIONS TRAINING TEACHERS INDICATED THAT 41 PERCENT OF THE TIME OF ELEMENTARY SCHOOL TEACHERS CANDIDATES IS SPENT IN EDUCATION COURSES, WHICH REDUCES THE AMOUNT OF TIME AVAILABLE FOR SUBJECT MATTER COURSES.

- THE AVERAGE SALARY AFTER 12 YEARS OF TEACHING IS ONLY $17,000 PER YEAR, AND MANY TEACHERS ARE REQUIRED TO SUPPLEMENT THEIR INCOME WI PART-TIME AND SUMMER EMPLOYMENT. IN ADDITION, INDIVIDUAL TEACHERS HAVE LITTLE INFLUENCE IN SUCH CRITICAL PROFESSIONAL DECISIONS AS, FOR EXAMPLE, TEXTBOOK SELECTION.
- DESPITE WIDESPREAD PUBLICITY ABOUT AN OVERPOPULATION OF TEACHERS, SEVERE SHORTAGES OF CERTAIN KINDS OF TEACHERS EXIST: IN THE FIELD OF MATHEMATICS, SCIENCE, AND FOREIGN LANGUAGES; AND AMONG SPECIALISTS IN EDUCATION FOR GIFTED AND TALENTED, ALNGUAGE MINORITY, AN HANDICAPPED STUDENTS.
- THE SHORTAGE OF TEACHERS IN MATHEMATICS AND SCIENCE IS PARTICULARLY SEVERE. A 1981 SURVEY OF 45 STATES REVEALED SHORTAGES OF MATHEMATICS

MORT MONDALE

IPD

NEA

1503 EST

IPMAFUB AHG

teachers in 43 States, critical shortages of earth sciences teachers in 33 States, and of physics teachers everywhere.

- Half of the newly employed mathematics, science, and English teachers are not qualified to teach these subjects; fewer than one-third of U.S. high schools offer physics taught by qualified teachers.

Recommendations

In light of the urgent need for improvement, both immediate and long term, this Commission has agreed on a set of recommendations that the American people can begin to act on now, that can be implemented over the next several years, and that promise lasting reform. The topics are familiar; there is little mystery about what we believe must be done. Many schools, districts, and States are already giving serious and constructive attention to these matters, even though their plans may differ from our recommendations in some details.

We wish to note that we refer to public, private, and parochial schools and colleges alike. All are valuable national resources. Examples of actions similar to those recommended below can be found in each of them.

We must emphasize that the variety of student aspirations, abilities, and preparation requires that appropriate content be available to satisfy diverse needs. Attention must be directed to both the nature of the content available and to the needs of particular learners. The most gifted students, for example, may need a curriculum enriched and accelerated beyond even the needs of other students of high ability. Similarly, educationally disadvantaged students may require special curriculum materials, smaller classes, or individual tutoring to help them master the material presented. Nevertheless, there remains a common expectation: We must demand the best effort and performance from all students, whether they are gifted or less able, affluent or disadvantaged, whether destined for college, the farm, or industry.

Our recommendations are based on the beliefs that everyone can learn, that everyone is born with an urge to learn which can be nurtured, that a solid high

school education is within the reach of virtually all, and that life-long learning will equip people with the skills required for new careers and for citizenship.

RECOMMENDATION A: CONTENT

We recommend that State and local high school graduation requirements be strengthened and that, at a minimum, all students seeking a diploma be required to lay the foundations in the Five New Basics by taking the following curriculum during their 4 years of high school: (a) 4 years of English; (b) 3 years of mathematics; (c) 3 years of science; (d) 3 years of social studies; and (e) one-half year of computer science. For the college bound, 2 years of foreign language in high school are strongly recommended in addition to those taken earlier.

Whatever the student's educational or work objectives, knowledge of the New Basics is the foundation of success for the after-school years, and, therefore, forms the core of the modern curriculum. A high level of shared education in these Basics, together with work in the fine and performing arts and foreign languages, constitutes the mind and spirit of our culture. The following Implementing Recommendations are intended as illustrative descriptions. They are included here to clarify what we mean by the essentials of a strong curriculum.

Implementing Recommendations

1. The teaching of English in high school should equip graduates to: (a) comprehend, interpret, evaluate, and use what they read; (b) write well-organized, effective papers; (c) listen effectively and discuss ideas intelligently; and (d) know our literary heritage and how it enhances imagination and ethical understanding, and how it relates to the customs, ideas, and values of today's life and culture.

2. The teaching of mathematics in high school should equip graduates to: (a) understand geometric and algebraic concepts; (b) understand elementary probability and statistics; (c) apply mathematics in everyday situations; and (d) estimate, approximate, measure, and test the accuracy of their calculations. In addition to the traditional sequence of studies available for college-bound students, new, equally demanding mathematics curricula need to be developed for those who do not plan to continue their formal education immediately.

3. The teaching of science in high school should provide graduates with an introduction to: (a) the concepts, laws, and processes of the physical and biological sciences; (b) the methods of scientific inquiry and reasoning; (c) the application of scientific knowledge to everyday life; and (d) the social and environmental implications of scientific and technological development. Science courses must be revised and updated for both the college-bound and those not intending to go to college. An example of such work is the American Chemical Society's "Chemistry in the Community" program.

4. The teaching of social studies in high school should be designed to: (a) enable students to fix their places and possibilities within the larger social and cultural structure; (b) understand the broad sweep of both ancient and contemporary ideas that have shaped our world; (c) understand the fundamentals of how our economic system works and how our political system functions; and (d) grasp the difference between free and repressive societies. An understanding of each of these areas is requisite to the informed and committed exercise of citizenship in our free society.

5. The teaching of computer science in high school should equip graduates to: (a) understand the computer as an information, computation, and communication device; (b) use the computer in the study of the other Basics and for personal and work-related purposes; and (c) understand the world of computers, electronics, and related technologies.

In addition to the New Basics, other important curriculum matters must also be addressed.

6. Achieving proficiency in a foreign language ordinarily requires from 4 to 6 years of study and should, therefore, be started in the elementary grades. We believe it is desirable that students achieve such proficiency because study of a foreign language introduces students to non-English-speaking cultures, heightens awareness and comprehension of one's native tongue, and serves the Nation's needs in commerce, diplomacy, defense, and education.

7. The high school curriculum should also provide students with programs requiring rigorous effort in subjects that advance students' personal, educational, and occupational goals, such as the fine and performing arts and vocational education. These areas complement the New Basics, and they should demand the same level of performance as the Basics.

8. The curriculum in the crucial eight grades leading to the high school years should be specifically designed to provide a sound base for study in those and later years in such areas as English language development and writing, computational and problem solving skills, science, social studies, foreign language, and the arts. These years should foster an enthusiasm for learning and the development of the individual's gifts and talents.

9. We encourage the continuation of efforts by groups such as the American Chemical Society, the American Association for the Advancement of Science, the Modern Language Association, and the National Councils of Teachers of English and Teachers of Mathematics, to revise, update, improve, and make available new and more diverse curricular materials. We applaud the consortia of educators and scientific, industrial, and scholarly societies that cooperate to improve the school curriculum.

RECOMMENDATION B: STANDARDS AND EXPECTATIONS

We recommend that schools, colleges, and universities adopt more rigorous and measurable standards, and higher expectations, for academic performance and student conduct, and that 4-year colleges and universities raise their requirements for admission. This will help students do their best educationally with challenging materials in an environment that supports learning and authentic accomplishment.

Implementing Recommendations

1. Grades should be indicators of academic achievement so they can be relied on as evidence of a student's readiness for further study.

2. Four-year colleges and universities should raise their admissions requirements and advise all potential applicants of the standards for admission in terms of specific courses required, performance in these areas, and levels of achievement on standardized achievement tests in each of the five Basics and, where applicable, foreign languages.

3. Standardized tests of achievement (not to be confused with aptitude tests) should be administered at major transition points from one level of schooling to another and particularly from high school to college or work. The purposes of these tests would be to: (a) certify the student's credentials; (b) identify the need for remedial intervention; and (c) identify the opportunity for advanced or accelerated work. The tests should be administered as part of a nationwide (but not Federal) system of State and local standardized tests. This system should include other diagnostic procedures that assist teachers and students to evaluate student progress.

4. Textbooks and other tools of learning and teaching should be upgraded and updated to assure more rigorous content. We call upon university scientists, scholars, and members of professional societies, in collaboration with master teachers, to help in this task, as they did in the post-Sputnik era. They should assist willing publishers in developing the products or publish their own alternatives where there are persistent inadequacies.

5. In considering textbooks for adoption, States and school districts should: (a) evaluate texts and other materials on their ability to present rigorous and challenging material clearly; and (b) require publishers to furnish evaluation data on the material's effectiveness.

6. Because no textbook in any subject can be geared to the needs of all students, funds should be made available to support text development in "thin-market" areas, such as those for disadvantaged students, the learning disabled, and the gifted and talented.

7. To assure quality, all publishers should furnish evidence of the quality and appropriateness of textbooks, based on results from field trials and credible evaluations. In view of the enormous numbers and varieties of texts available, more widespread consumer information services for purchasers are badly needed.

8. New instructional materials should reflect the most current applications of technology in appropriate curriculum areas, the best scholarship in each discipline, and research in learning and teaching.

RECOMMENDATION C: TIME

We recommend that significantly more time be devoted to learning the New Basics. This will require more effective use of the existing school day, a longer school day, or a lengthened school year.

Implementing Recommendations

1. Students in high schools should be assigned far more homework than is now the case.

2. Instruction in effective study and work skills, which are essential if school and independent time is to be used efficiently, should be introduced in the early grades and continued throughout the student's schooling.

3. School districts and State legislatures should strongly consider 7-hour school days, as well as a 200- to 220-day school year.

4. The time available for learning should be expanded through better classroom management and organization of the school day. If necessary,

additional time should be found to meet the special needs of slow learners, the gifted, and others who need more instructional diversity than can be accommodated during a conventional school day or school year.

5. The burden on teachers for maintaining discipline should be reduced through the development of firm and fair codes of student conduct that are enforced consistently, and by considering alternative classrooms, programs, and schools to meet the needs of continually disruptive students

6. Attendance policies with clear incentives and sanctions should be used to reduce the amount of time lost through student absenteeism and tardines

7. Administrative burdens on the teacher and related intrusions into the school day should be reduced to add time for teaching and learning.

8. Placement and grouping of students, as well as promotion and graduation policies, should be guided by the academic progress of students and their instructional needs, rather than by rigid adherence to age.

RECOMMENDATION D: TEACHING

This recommendation consists of seven parts. Each is intended to improve the preparation of teachers or to make teaching a more rewarding and respected profession. Each of the seven stands on its own and should not be considered solely as an implementing recommendation.

---

1. Persons preparing to teach should be required to meet high educational standards, to demonstrate an aptitude for teaching, and to demonstrate competence in an academic discipline. Colleges and universities offering teacher preparation programs should be judged by how well their graduates meet these criteria.

2. Salaries for the teaching profession should be increased and should be professionally competitive, market-sensitive, and performance-based. Salary, promotion, tenure, and retention decisions should be tied to an effective evaluation system that includes peer review so that superior teachers can be rewarded, average ones encouraged, and poor ones either improved or terminated.

3. School boards should adopt an 11-month contract for teachers. This would ensure time for curriculum and professional development, programs for students with special needs, and a more adequate level of teacher compensation.

4. School boards, administrators, and teachers should cooperate to devel p career ladders for teachers that distinguish among the beginning instructor, the experienced teacher, and the master teacher.

5. Substantial nonschool personnel resources should be employed to help solve the immediate problem of the shortage of mathematics and science teachers. Qualified individuals including recent graduates with mathematics and science degrees, graduate students, and industrial and retired scientists could, with appropriate preparation, immediately begin teaching in these fields. A number of our leading science centers have the capacity to begin educating and retraining teachers immediately. Other areas of critical teacher need, such as English, must also be addressed.

6. Incentives, such as grants and loans, should be made available to attract outstanding students to the teaching profession, particularly in those areas of critical shortage.

7. Master teachers should be involved in designing teacher preparation programs and in supervising teachers during their probationary years.

RECOMMENDATION E: LEADERSHIP AND FISCAL SUPPORT

We recommend that citizens across the Nation hold educators and elected officials responsible for providing the leadership necessary to achieve these reforms, and that citizens provide the fiscal support and stability required to bring about the reforms we propose.

Implementing Recommendations

1. Principals and superintendents must play a crucial leadership role in developing school and community support for the reforms we propose, and school boards must provide them with the professional development and other support required to carry out their leadership role effectively. The Commission stresses the distinction between leadership skills involving persuasion, setting goals and developing community consensus behind them, and managerial and supervisory skills. Although the latter are necessary, we believe that school boards must consciously develop leadership skills at the school and district levels if the reforms we propose are to be achieved.

2. State and local officials, including school board members, governors, and legislators, have the primary responsibility for financing and governing the schools, and should incorporate the reforms we propose in their educational policies and fiscal planning.

3. The Federal government, in cooperation with States and localities, should help meet the needs of key groups of students such as the gifted and talented, the socioeconomically disadvantaged, minority and language minority students, and the handicapped. In combination these groups include both national resources and the Nation's youth who are most at risk.

4. In addition, we believe the Federal government's role includes several functions of national consequence that States and localities alone are unlikely to be able to meet: protecting constitutional and civil rights for students and school personnel; collecting data, statistics, and information about education generally; supporting curriculum improvement and research on teaching, learning, and the management of schools; supporting teacher training in areas of critical shortage or key national needs; and providing student financial assistance and research and graduate training. We believe the assistance of the Federal government should be provided with a minimum of administrative burden and intrusiveness.

5. The Federal government has the primary responsibility to identify the national interest in education. It should also help fund and support efforts to protect and promote that interest. It must provide the national leadership to ensure that the Nation's public and private resources are marshaled to address the issues discussed in this report.

6. This Commission calls upon educators, parents, and public officials at all levels to assist in bringing about the educational reform proposed in this report. We also call upon citizens to provide the financial support necessary to accomplish these purposes. Excellence costs. But in the long run mediocrity costs far more.

America Can Do It

Despite the obstacles and difficulties that inhibit the pursuit of superior educational attainment, we are confident, with history as our guide, that we can meet our goal. The American educational system has responded to previous challenges with remarkable success. In the 19th century our land-grant colleges and universities provided the research and training that developed our Nation's natural resources and the rich agricultural bounty of the American farm. From the late 1800s through mid-20th century, American schools provided the educated workforce needed to seal the success of the Industrial Revolution and to provide the margin of victory in two world wars. In the early part of this century and continuing to this very day, our schools have absorbed vast waves of immigrants and educated them and their children to productive citizenship. Similarly, the Nation's Black colleges have provided opportunity and undergraduate education to the vast majority of college-educated Black Americans.

House of Representatives
HEALTH, EDUCATION AND SOCIAL SERVICES COMMITTEE

STAFF REVIEW

Senate Concurrent Resolution 47, relating to new minimum requirements for graduation from a public high school, by the Senate Rules Committee, requests that the State Board of Education make the new minimum requirements for graduation from a public high school effective after the 1984 - 1985 school year. Citing numerous reasons, contained in the resolution's nine "whereas" clauses, the resolution contends that the new minimum graduation requirements would force a considerable hardship on students who are currently juniors in high school and on the staff of the effected schools.

May 22, 1984

The Honorable Jan Faiks
Alaska State Senate
Pouch V
Juneau, AK 99811

Dear Senator Faiks:

The Alaska Council of School Administrators urges the adoption of Senate Concurrent Resolutions No. 47 as a reasonable solution to the problem created by the new regulations on High School Graduation requirements adopted by the State Board. The additional procedures adopted by the Department of Education in Numbered Memorandum 84-24 and 27 have confused the process enough, so we urge the adoption of the resolution.

I have enclosed a letter on the subject, that I have transmitted to Commissioner Reynolds, for your information.

Sincerely,

Don MacKinnon

Don MacKinnon
Executive Director

an organization of Alaskan School Administrators

May 22, 1984

Harold Raynolds, Commissioner
Department of Education
Pouch F
Juneau, AK 99811

Dear Commissioner Raynolds:

This letter is a follow-up seeking clarification to your statement at the May 8 State Board meeting about the Department's appeal process for students from school districts for the year 1984-85. It was my understanding, and those districts present, that it was the Department's intent to deal with the exceptions on a district-by-district basis or at least, group like students and not have the department rule on each individual case.

It now appears that D.O.E. No. Memorandum 84-27, dated May 4, in effect runs counter to our understanding of your intent at the State Board meeting. The memo clearly states that waivers will be handled on a student-by-student basis.

The reason that you did not hear additional concerns from both Juneau and Fairbanks school districts at the board meeting was because your answer satisfied their concerns. Both districts, however, were prepared to present their arguments to the State Board urging the Department not to treat the waivers on an individual student basis.

It is our belief you have created a paper nightmare for the Department and allowed little time for districts to react to the individual cases before school is out. This, in fact, will create a hardship on students who by now have planned their next years schedule.

Introduced in Senate Rules is Concurrent Resolution No. 47 which may, in fact, be the best solution to the entire problem. The effect of

this resolution would be to exempt the class of 1984-85 from the new requirements and eliminate the problem if the State Board was to concur.

Your consideration on the matter would be appreciated.

Sincerely,

Don MacKinnon
Executive Director

LEGISLATIVE PLATFORM

Alaska Commission on the Status of Women

February 1983

Introduction

The Alaska Commission on the Status of Women commits itself to **legislative action** and **advocacy** to secure equal opportunity, equal access, and equal treatment for women in all areas. Women's issues are no longer secondary concerns to be shunted aside when state and national leaders develop and implement public policy. The **economy, education, housing, jobs, criminal justice**, and **peace** are all women's issues, as well as the traditional areas of equal rights, reproductive rights, health, and the elimination of poverty and hunger. The following statements represent the Commission's principles for action on state and national legislative issues. Implied in each statement is support for effective administration, citizen participation, and adequate budget appropriations to secure these objectives.

The positions are based on Commission study and testimony provided by women throughout the state at conferences, meetings, and teleconference hearings.

Advocacy

The work of advocating for women's issues must continue. The majority of those who have addressed their concerns to this Commission have testified to the importance of having a voice for women in Alaska. Consequently, the Alaska Commission on the Status of Women formally proposes and supports the continuation of a women's commission in this state beyond the current termination date of June 30, 1983.

Equity

The Commission is committed to equity for women in all areas. In keeping with this position it supports:

- passage of the Equal Rights Amendment;
- an end to discrimination on the basis of parenthood, marital status, or sexual preference;
- curtailment of veterans' preferences which result in discrimination against women and obstruct equal access to employment, housing, credit, or other essential services and opportunities; and
- legislative reform at the national and state level to prohibit discrimination on the basis of sex or marital status in insurance access, rates, benefits, or coverage.

The Commission opposes budget cuts at the state or federal level which impoverish social programs that have proven effective in assisting women to escape poverty.

Women in Public Life

Women can and must assume the responsibility of leadership roles in the public policy and judicial positions of our state and nation. The Commission therefore supports:

- appointment of more women and minorities to judgeships and policy-making positions throughout the public sector;
- appointment of officials who have an understanding of and a demonstrated commitment to improving the status of women;
- encouragement, recruitment, and training of women as candidates for elected and appointed positions; and
- recognition of women's accomplishments through declaration of Women's History Month at the national level.

Children and Youth

The Commission supports a national and statewide policy on child care, with accompanying legislation and adequate appropriations to address the vital need for quality, affordable, accessible care for children of employed parents and for respite care for developmentally disabled and handicapped children. The Commission supports legislation and policy directives which would:

- address the pressing Alaskan problem of insufficient and inadequate child care facilities and child care programs, and fund an adequate administrative capacity at the state level to review and monitor both;
- establish meaningful state licensing standards for child care facilities and caregivers;
- provide continuing training for caregivers;
- establish an ongoing state office to address the needs of children and youth; and,
- provide for child care facilities in state office buildings.

In addition to the above the Commission urges the introduction of legislation or directives to:

- require withholding of wages by employers under direction of the Child Support Enforcement Agency, and withholding of tax refunds by the Internal Revenue Service for child support payments;
- permit granting of sick leave for parents when children are ill;
- permit granting of leave to new parents for childrearing purposes without loss of seniority or benefits;
- permit state board and commission members to pay for child care as a per diem type expense; and
- require public and private agencies to supply medical information regarding genetic disorders and diseases to prospective adoptive parents, to physicians, and to the individual who is the offspring of an incestuous union.

The Commission supports the use of public funds for child care programs, tax incentives for employers who provide child care as a benefit, and encouragement of the development of private, non-profit child care programs.

The Commission also supports development of adequate programs to deal with runaway youths.

Health

The Commission will continue its efforts to focus attention on health needs of women, and on health education in the schools. In addition the Commission will continue to support:

- protection of women's rights to privacy and freedom of choice regardless of age;
- state funding for abortion for low income women;
- increased funding for reproductive health services including family planning, pre- and postnatal care, abortion, alternative birthing centers, and community health clinics;
- comprehensive sex education programs;
- legislation to license social workers;
- legislation to establish health and welfare safeguards related to the workplace, such as protection for operators of video display terminals (VDTs);
- protection of health programs jeopardized by federal cutbacks and policy changes; and
- establishment of a state health insurance program to provide for the health needs of residents who have no access to other insurance coverage.

Minority and Rural Women

Minority and rural women face unique circumstances in Alaska. Cultural and geographical conditions require special sensitivity and awareness on the part of policy makers. Through the sponsoring of regional women's conferences, the Commission has attempted to assist rural and minority women to identify their needs and strengths, and to communicate their concerns to policy makers and administrators. The Commission will continue its efforts to ensure employment of women, especially rural, Native, and other minority women on major Alaskan projects. In addition it supports:

- protection of the subsistence lifestyle and the fish and game resources necessary to support it;
- increased communication between Native and non-Native women to promote an understanding of each other's lifestyles;
- networking among women's groups of diverse backgrounds and perspectives; and
- protection and strengthening of culturally sensitive programs for all minority groups.

Homemakers

The Commission continues to support:

- full funding of displaced homemakers programs, other education and training programs for displaced homemakers, and Women's Resource and Crisis Centers;
- economic security for a spouse who chooses to work solely in the home; and
- national, state, and local laws and policies which protect and reflect the contribution of the homemaker.

Employment

The Commission is committed to increasing women's employment opportunities, to fighting discrimination in employment and training, and to full funding of child care assistance to enable parents to support their families or to seek employment. The Commission specifically supports improvement of the state's own personnel record in the following areas:

- increasing access for women to higher paying positions in state government;
- developing career ladders for women to enable them to move out of dead end jobs;
- requiring the use of the "5+5" personnel procedure (This procedure allows a manager to select from not only the top five scorers in a class, but from the top five qualified women and minorities as well. Because the veterans' preference of adding five points to their score has aided primarily white men, this procedure opens up access to employment for qualified women and minorities.) in departments where woman and minorities are underutilized;
- assuming a leadership role in raising and addressing the issues of pay equity and comparable worth; and
- increasing women's access to training opportunities within departments.

The Commission is committed to making employment arenas free of sex bias and discrimination. In accordance with this it will continue its efforts to ensure employment of women, especially rural, Native, and other minority women, on major Alaskan projects and in major Alaskan industries. The Commission supports:

- the use of written affirmative action programs, with goals and time-tables for hiring and promotion of women and minorities;
- the elimination of job segregation and the establishment of the principle of equal pay for work for comparable value; and
- federal, state, and local laws prohibiting sexual harrassment.

The Commission will continue to support employment training and vocational education programs which:

- provide training for traditional and non-traditional employment with a special emphasis on better paying jobs for women;
- mandate the elimination of sex stereotyping and sex discrimination in access to training and placement; and
- provide participant stipends, transportation, child care, and other support services needed by trainees.

Education

All legislation, regulatory reform, and enforcement activity relating to sex equity in education are of primary importance to the Commission. Working in concert with other women's rights and educational organizations the Commission supports:

- vigorous implementation and enforcement of the Alaska statute prohibiting sex discrimination in education (AS 14.18). (Particular concern has been expresed about non-compliance at the University level.);
- increased availability of higher educational opportunities in rural Alaska which are geared to the needs and interests of the community. Courses and programs should not be altered without input from the community; and
- efforts of the Alaska Native Women's Statewide Organization to make bilingual classes mandatory where desired by the parents.

Criminal Justice

The Commission supports full funding of domestic violence and sexual assault programs. It supports adequate funding for rehabilitation programs for perpetrators of violence. The Commission supports more training for judges, attorneys, and other criminal justice system personnel in matters relating to domestic violence and sexual assault. This is especially critical in areas of rural Alaska.

The Commission supports:

- legislation to provide for mandatory participation in treatment and rehabilitation programs as part of sentencing for convicted sex offenders. Such treatment should be in addition to and not in lieu of time to be served;
- legislation to repeal limitations on awarding compensation to victims of violent crimes when the perpetrator is a relative or member of the same household; and
- funding of legal assistance for low income women, particularly through adequate funding of the Alaska Legal Services Corporation.

The Commission also supports a review of state laws which affect victims of violent crimes to determine if they are adequate to protect the victims' constitutional rights. Particular concern has been expressed by the Alaska Native Women's Statewide Organization about implementation and enforcement of AS 12.25.030(B).

Finally, the Commission supports development of an Alaskan correctional system which is adequate to house and rehabilitate persons convicted of violent crimes, and which provides appropriate, equal, and adequate provision for women as well as for men.

Peace

As representatives of women we are keenly aware that no issue is or has ever been more important to women than concern for life. We are also concerned that military spending increases are continually made at the cost of social programs. As women constitute a disproportionate share of the poor, the elderly, and the vocationally untrained, they are unduly affected by such decisions.

For these reasons the Commission:

- urges the Alaska Legislature to establish a ballot initiative calling for bilateral nuclear freeze; and
- supports the concept of a National Peace Academy.

Economics

The Commission supports:

- aggressive efforts to ensure equal access for women to consumer and commercial credit;
- increased availability of loan programs for women starting or running their own businesses;
- enforcement of government regulations designed to increase federal, state, and local procurement efforts with women-owned firms; and
- improvements in public and private pension systems necessary to ensure that women reach retirement age with economic security.

ADDRESS CORRECTION REQUESTED

February 3, 1983

REPORT OF THE SENATE COMMITTEE ON HEALTH, EDUCATION AND SOCIAL SERVICES RE SJR 1.

Mr. President:

The Committee on Health, Education and Social Services has had under consideration SJR 1, by Senator Vic Fischer and other senators. The majority of the Committee recommends that SJR 1 do pass.

Recently, the Committee has received hundreds of messages and has heard public testimony, pro and con, for approximately two and one-half hours.

While testimony before the Committee was divided, messages of support were delivered on behalf of numerous organizations with large Alaska memberships, including NEA-Alaska, the American Association of University Women (Alaska Chapter), the League of Women Voters, and Alaska components of the National Organization of Women (NOW).

ERA is not a new issue in Alaska, despite the recent rush of public input. This legislature was one of our nation's first to ratify the originally submitted ERA. And, in 1972, Alaska voters approved our "little ERA" -- the alaska constitutional amendment which prohibits discrimination on the basis of sex.

As noted in SJR 1, the daily lives of Alaskans show no evidence of ills or evils, attributable to the people's approval of the State constitutional ban on sex-based discrimination, which ERA opponents foresee for the nation if ERA becomes part of the national Constitution.

Some opponents of SJR 1 say that further consideration of the issue would be "a waste of time and money."

Your Committee respectfully disagrees with that view. Any assumption that legislative inaction on ERA would quell further consideration of this vital issue is false. This issue is not going away; it should not go away. In the Congress, over 200 representatives have co-sponsored a House joint resolution providing for the resubmittal of a national ERA to the state legislatures for ratification. Across the country, ERA proponents are redoubling their efforts. They see a changed legislative landscape -- a landscape which finds new faces in state legislatures following the defeat or retirement of many key legislators who opposed ERA in the past.

Opponents argue that the goal of equal rights for women, however laudatory, can be attained through other means, e.g., through a piece-by-piece modification of state and federal laws and regulations which discriminate, or permit discrimination, against women. Your Committee finds that such attempts, piece-by-piece, to ameliorate the problem of sex-based discrimination are bound to be unsatisfactory.

In the words of a leading treatise on ERA:

> Over the years, some proponents of women's rights have thought that discrimination could be ended most effectively if legislatures prepared men and women gradually for equality by a series of step-by-step reforms. . . However such suggestions unrealistically assume a delicacy and precision in the legislative process which has no relationship to actual legislative capability. More importantly, the process is unlikely to be completed within the lifetime of any woman now alive. Such a method requires multiple actions by fifty legislatures and the federal congress, by the courts and executive agencies in each one of these jurisdictions, and by similar government authorities in numerous political subdivisions as well. The government machinery would have to be mobilized to repeal or modify the statutes and practices in scores of different areas where unequal treatment now prevails. To be comprehensive such efforts would require a tremendously expensive, sophisticated, and sustained political organization, both nationally and within every state and locality. Campaigns to change the laws one by one could drag on for many years, and perhaps in some areas never be finished. "The Equal Rights Amendment: A Constitutional Basis for Equal Rights for Women", by Barbara A. Brown, Thomas I. Emerson, Gail Falk, and Ann E. Freedman, 80 Yale Law Journal 871, 833 (1972).

The authors of the quoted treatise went on to point out the "need for a single coherent theory of women's equality before the law, and for a consistent nationwide application of this theory", and found that "(t)his is scarcely possible through legislative change alone." Ibid.

We Americans have inherited from our nation's founders the federal constitutional amending process. It provides for the

incorporation, into our national Charter, of changes in the basic governing assumptions of our country. The use of this process to record and symbolize such changes, and to help make those changes tangible in the lives of our people, is well understood insofar as the right of every American to be free from discrimination on the basis of race, color, religion or national origin is concerned. The use of the same process in the case of sex-based discrimination thus fits comfortably into our American constitutional tradition.

In our judgment, some opponents of ERA and SJR 1 grossly overstate their case and adopt an alarmist tone not supported by reason or experience.

For example, they have asserted that ERA will deprive people of privacy in the performance of personal bodily functions.

However, under the federal and state constitutions, an independent right of privacy has been recognized. At the federal level, the right of privacy was recognized by the Supreme Court of the United States in Griswold v. Connecticut and other decisions. The federal right of privacy is derived from a combination of various more specific rights in the First, Third, Fourth, Fifth and Ninth Amendments. In Alaska, the right of privacy rests upon an explicit State constitutional amendment approved directly by vote of the people.

The independent privacy right permits the separation of sexes in public rest rooms, in the sleeping quarters of prisons or other public institutions, and in other situations which involve disrobing, sleeping or the performance of personal bodily functions. Police practices by which a search involving the removal of clothing could only be performed by a police officer of the same sex would remain permissible.

ERA opponents have also made exaggerated claims that ERA will cause husbands to stop supporting their wives, or compel women who choose to be homemakers to change their lifestyles, or eliminate any right to alimony in divorce decrees, or the right to child support.

Again, neither reason nor history supports these claims. For example, nothing in ERA would prohibit an award of alimony to a spouse of either sex who has been out of the labor force for a long time in order to make a non-compensated contribution to the well-being of the family unit. Nothing in ERA would prohibit a court from ordering child support to the spouse having custody of a dependent child.

ERA speaks only to discrimination under state or federal law; it does not speak, or purport to regulate, voluntary practices of individuals in their familial relationships. Indeed, in the realm of marriage and the family, the greatest

influences upon actual behavior are the social customs, economic realities, religious traditions and practices, and individual preferences and economic status of the people involved. ERA would not regulate such voluntary behavior of individuals in their private lives. The Alaska experience since 1972 proves this.

In summary, both the research and the history of the State amendment since 1972 make manifest that opponents have exaggerated alarmingly the claims of ERA's effect in areas traditionally protected through the constitutional concept of privacy or with regard to personal lifestyle choices of free Americans.

If one compares the history of ERA with the long struggle for women's suffrage, or the longer struggle -- still in progress -- against race-based discrimination, the ERA movement is relatively young. Resubmission by the Congress of ERA, for consideration by state legislatures, would be appropriate. This issue is not fading away; if anything, momentum for the amendment appears to be growing. Legislatures in the '80s should have an opportunity to consider this vital issue, without being restricted by a few adverse decisions in certain states in the past. As a leader in the efforts to bring sex-based discrimination to an end, Alaska can cite its own experience and memorialize the Congress to give state legislatures a new opportunity to ratify ERA.

Respectfully submitted,

Joe P. Josephson, Chairman

Victor Fischer, Vice-Chairman

H. "Pappy" Moss

MINORITY REPORT OF THE SENATE COMMITTEE ON HEALTH, EDUCATON AND SOCIAL SERVICES RE SJR 1

Dear Mr. President:

The undersigned Senators who are members of the Senate Committee on Health, Education and Social Services have carefully considered the implications of SJR 1 to the state of Alaska and its citizens and submit this minority report recommending that SJR 1 does not pass.

Even though Alaska was among the first states to ratify the first Equal Rights Amendment, we believe that events since that time demand that this body re-examine carefully the implications of that amendment to Alaska, the legislature and Alaskan citizens. We submit that the law has changed substantially since the article cited by the majority report was published in 1972, the same year that the amendment was passed out of the Congress and ratified by Alaska.

As correctly noted in the majority report, Alaska in 1972 amended its state constitution to specifically prohibit discrimination on the basis of sex. Therefore, clearly Alaskans do not need the additional protection of the Equal Rights Amendment in the federal constitution. And while as the majority report states, no particular problems have developed from this addition to our state constitution, it cannot be analogized to the federal constitution as will become evident in the following discussion.

The Equal Rights Amendment is unnecessary. Since 1971, the United States Supreme Court has routinely applied the protections of the 5th and the 14th Amendments to women and to gender based discrimination to invalidate many state and federal actions.[1] For example, the United States Supreme Court recently invalidated a Louisiana law that gave a husband exclusive control over the disposition of property owned by both spouses during the marriage

[1] Reed v. Reed, 404 U.S. 71 (1971). Frontiero v. Richardson, 411 U.S. 677 (1973). Board of Education v. La Fleur, 414 U.S. 632 (1974). Stanton v. Stanton, 421 U.S. 7 (1975). Taylor v. Louisiana, 419 U.S. 522 (1975). Weinberger v. Wiesenfeld, 420 U.S. 636 (1975). Turner v. Department of Employment Security, 423 U.S. 44 (1975). Craig v. Boren, 429 U.S. 190 (1976). Califano v. Goldfarb, 430 U.S. 199 (1977). National Gas Co. v. Satty, 434 U.S. 136 (1977). Caban v. Mohammed, 441 U.S. 380 (1979). Davis v. Passman, 442 U.S. 228 (1979). Orr v. Orr, 440 U.S 268 (1979). Califano v. Westcott, 433 U.S. 76 (1979). Wengler v. Druggists Mutual Insurance Co., 100 S.Ct. 1540 (1980). Michael M. v. Superior Court of Sonoma County, 101 S.Ct. 1200 (1981). Kirchberg v. Feenstra, 101 S.Ct. 1195 (1981). There are several other lower court decisions which are not listed.

on the basis that it violated the Equal Protection Clause of the 14th Amendment.[2] It held that gender-based discrimination is unconstitutional absent a showing that the classification furthers an important governmental interest. To more fully understand this standard, the Court's ruling in Michael M. v. Superior Court of Sonoma County,[3] is important. This case involved an appeal by a young man who had been convicted of statuatory rape. He argued that the statute unlawfully discriminated against him on the basis of gender since men alone were liable. The Court said that where gender classifications realistically reflected the fact that the sexes were not similarly situated, such laws do not violate the Constitution.

In addition to the direct Consctitutional protections, the courts have also applied the protections of the Title VII of the Civil Rights Act of 1964 to prevent sex discrimination.[4] Title VII states that it is unlawful to discriminate against any individual with respect to compensation, terms, conditions, or privileges of employment, because of such individual's race, color, sex, or national origin. Congress was able to apply its provisions to state actions by relying on its authority guaranteed by the 14th Amendment. There are other important laws which currently guarantee women's rights.

Title IX of the Civil Rights Act of 1964 which applies to all public education requires it to be free from discrimination based upon sex. The Equal Employment Opportunity Act of 1972 likewise prohibits sex discrimination and applies to all employers of at least 15 employees who are engaged in businesses affecting interstate commerce. States are prohibited from denying equal educational opportunities on the basis of sex by the Equal Educational Opportunities Act of 1974. The Equal Pay Act of 1963 applies to all federal and state employers, as well as to employers engaged in interstate commerce. The Equal Credit Opportunity Act of 1974 applies to all creditors and prevents discriminatory credit practices. For these federal laws to be enforceable against states and employers engaged in interstate commerce, the Congress must have Constitutional authority to enact them. In all of these cases, the courts have uniformly upheld Congress' authority.

This becomes important to our position, because even if the Equal Rights Amendment was to be ratified, the laws implementing it would still need to be enacted by Congress. It is difficult to imagine what other areas important to the majority of Alaskans would become law as a result of the Equal Rights Amendment.

2 Kirchberg v. Feenstra, 101 S.Ct. 1195 (1981).
3 101 S.Ct. 1200 (1981).
4 Fitzpatrick v. Bitzer, 427 U.S. 445 (1976). Dothard v. Rawlinson, 433 U.S. 321 (1977). City of Los Angeles Dept. of Water and Power v. Manhart, 435 U.S. 702 (1978).

For the past ten years, there has been tremendous conflict over what the Equal Rights Amendment will accomplish. As evident in the Senate and House hearings and in a Harvard Civil Rights - Civil Liberties Law Review, Constitutional scholars cannot agree on the standard of review that would apply to sex discrimination cases under the Equal Rights Amendment. Some proponents of the amendment assert that it would not invalidate laws concerning homosexual relations, intersexual occupancy of sleeping facilities in public institutions, or women in combat, while others disagree.[5] Opponents to the amendment are equally convinced that it will.

In our opinion, these arguments miss the point. The fact that recognized authorities of the Constitution and the United States Supreme Court can entertain such diametrically opposing views of the same language demonstrates that it is impossible to give a confident interpretation until the amendment's ratification and subsequent judicial interpretations. Such judicial pronouncements may take literally hundreds of years.[6]

One important consequence that cannot be ignored is that the judiciary makes mistakes. If mistakes are made at the level of the Congress or the state legislatures, they can be rectified by the appropriate body. Where, however, mistakes are made in a judicial interpretation of a Constitutional provision the effects are drastic. Such mistakes can only be corrected by the death, the retirement, or change of mind of the Supreme Court justices, or by constitutional amendment. It is highly unlikely that any of these might occur.

Two remaining areas concern us and are the strongest

[5] The authors of the article relied upon by the majority report states:

"The Equal Rights Amendment will have a substantial and pervasive impact upon military practices and institutions. As now formulated, the Amendment permits no exceptions for the military. Neither the right to privacy nor any unique physical characteristic justifies different treatment for the sexes with respect to voluntary or involuntary service, and pregnancy justifies only slightly different conditions of service for women. . . . Women will serve in all kinds of [military] units, and they will be elgible for combat duty."

Brown, Emerson, Falk, & Freedman, The Equal Rights Amendment: A Constitutional Basis for Equal Rights for Women, 80 Yale L.J. 871, 969, 978 (1972). Note, The Legality of Homosexual Marriage, 82 Yale L.J. 573 (1973).

[6] The 14th Amendment was designed to correct the injustices of an earlier United States Supreme Court decision holding that a black man was not entitled to constitutional protections even if he had been born a free man. Nothing really was accomplished until the civil rights movement of the 1960's. Decisions regarding racial discrimination are still being decided.

arguments against supporting SJR 1 and the Equal Rights Amendment; shifting legislative power to the federal judiciary and shifting states' rights to the federal government.

Passage of the Equal Rights Amendment would further erode the checks and balances originally built into the United States Constitution. Our founders established 3 branches of government and created a system of checks and balances to prevent the executive, the legislature or the judiciary from becoming too powerful. In recent years, the judiciary has usurped the authority of the legislature.[7] By definition, a constitutional amendment which limits what government can do places limitations on the legislature, because normally it is the legislature that has policy making authority. But constitutional amendments can only be interpreted by the judiciary. We believe that our constituency would find us more responsive to them than a small group of lawyers who are appointed to lifetime positions.

More importantly to us as Alaskans is that not only would the governmental power shift from the legislature to the judiciary, but it would also shift from the state to the federal government. This would be accomplished by section 2 of the amendment. The basic premise of the Constitution is to ensure that the people have as direct a say in the government as possible. It is our view that this can be best accomplished by leaving the most authority possible within the state legislature.

As elected state senators, we are particularly concerned over the amendment's encroachment on our legislative authority and on the shifting of governmental power from the states to the federal government and judiciary. While politically it is hard to oppose the Equal Rights Amendment, we do not believe that we can betray the trust that our constituency placed in us to be mindful of federal intrusions upon our authority. We believe that the protections sought by the majority of people are already included in the federal constitution, as evidenced by the recent United States Supreme Court decisions discussed briefly above and in the numerous laws already enacted by the Congress and applicable to the states. We further believe that any additional protection that our constituency identifies as necessary can be best addressed at the state level.

[7] Even the Alaska Supreme Court has decided issues that many believe belong to the legislature by deciding, for example, that Alaskans have the right to marijuana for personal use. If citizens are unhappy with that decision, there is literally nothing they can do, because the court has decided that this activity is protected by the Alaska Constitution. Whereas, if the decision had been made by the legislature, the citizens could speak on the issue. In a sense, this means that rather than Alaskans being governed by themselves, they are governed by an elite few.

REPORT OF THE SENATE COMMITTEE ON HEALTH, EDUCATION AND SOCIAL SERVICES RE SJR 1.

Mr. President:

The Committee on Health, Education and Social Services has had under consideration SJR 1, by Senator Vic Fischer and other senators. The majority of the Committee recommends that SJR 1 do pass.

Recently, the Committee has received hundreds of messages and has heard public testimony, pro and con, for approximately two and one-half hours.

While testimony before the Committee was divided, messages of support were delivered on behalf of numerous organizations with large Alaska memberships, including NEA-Alaska, the American Association of University Women (Alaska Chapter), the League of Women Voters, and Alaska components of the National Organization of Women (NOW).

ERA is not a new issue in Alaska, despite the recent rush of public input. This legislature was one of our nation's first to ratify the originally submitted ERA. And, in 1972, Alaska voters approved our "little ERA" -- the alaska constitutional amendment which prohibits discrimination on the basis of sex.

As noted in SJR 1, the daily lives of Alaskans show no evidence of ills or evils, attributable to the people's approval of the State constitutional ban on sex-based discrimination, which ERA opponents foresee for the nation if ERA becomes part of the national Constitution.

Some opponents of SJR 1 say that further consideration of the issue would be "a waste of time and money."

Your Committee respectfully disagrees with that view. Any assumption that legislative inaction on ERA would quell further consideration of this vital issue is false. This issue is not going away; it should not go away. In the Congress, over 200 representatives have co-sponsored a House joint resolution providing for the resubmittal of a national ERA to the state legislatures for ratification. Across the country, ERA proponents are redoubling their efforts. They see a changed legislative landscape -- a landscape which finds new faces in state legislatures following the defeat or retirement of many key legislators who opposed ERA in the past.

Opponents argue that the goal of equal rights for women, however laudatory, can be attained through other means, e.g., through a piece-by-piece modificatior of state and federal laws and regulations which discriminate, c. permit discrimination, against women. Your Committee finds that such attempts, piece-by-piece, to ameliorate the problem of sex-based discrimination are bound to be unsatisfactory.

In the words of a leading treatise on ERA:

> Over the years, some proponents of women's rights have thought that discrimination could be ended most effectively if legislatures prepared men and women gradually for equality by a series of step-by-step reforms. . . However such suggestions unrealistically assume a delicacy and precision in the legislative process which has no relationship to actual legislative capability. More importantly, the process is unlikely to be completed within the lifetime of any woman now alive. Such a method requires multiple actions by fifty legislatures and the federal congress, by the courts and executive agencies in each one of these jurisdictions, and by similar government authorities in numerous political subdivisions as well. This government machinery would have to be mobilized to repeal or modify the statutes and practices in scores of different areas where unequal treatment now prevails. To be comprehensive such efforts would require a tremendously expensive, sophisticated, and sustained political organization, both nationally and within every state and locality. Campaigns to change the laws one by one could drag on for many years, and perhaps in some areas never be finished. "The Equal Rights Amendment: A Constitutional Basis for Equal Rights for Women", by Barbara A. Brown, Thomas I. Emerson, Gail Falk, and Ann E. Freedman, 80 Yale Law Journal 871, 833 (1972).

The authors of the quoted treatise went on to point out the "need for a single coherent theory of women's equality before the law, and for a consistent nationwide application of this theory", and found that "(t)his is scarcely possible through legislative change alone." Ibid.

We Americans have inherited from our nation's founders the federal constitutional amending process. It provides for the

incorporation, into our national Charter, of changes in the basic governing assumptions of our country. The use of this process to record and symbolize such changes, and to help make those changes tangible in the lives of our people, is well understood insofar as the right of every American to be free from discrimination on the basis of race, color, religion or national origin is concerned. The use of the same process in the case of sex-based discrimination thus fits comfortably into our American constitutional tradition.

In our judgment, some opponents of ERA and SJR 1 grossly overstate their case and adopt an alarmist tone not supported by reason or experience.

For example, they have asserted that ERA will deprive people of privacy in the performance of personal bodily functions.

However, under the federal and state constitutions, an independent right of privacy has been recognized. At the federal level, the right of privacy was recognized by the Supreme Court of the United States in Griswold v. Connecticut and other decisions. The federal right of privacy is derived from a combination of various more specific rights in the First, Third, Fourth, Fifth and Ninth Amendments. In Alaska, the right of privacy rests upon an explicit State constitutional amendment approved directly by vote of the people.

The independent privacy right permits the separation of sexes in public rest rooms, in the sleeping quarters of prisons or other public institutions, and in other situations which involve disrobing, sleeping or the performance of personal bodily functions. Police practices by which a search involving the removal of clothing could only be performed by a police officer of the same sex would remain permissible.

ERA opponents have also made exaggerated claims that ERA will cause husbands to stop supporting their wives, or compel women who choose to be homemakers to change their lifestyles, or eliminate any right to alimony in divorce decrees, or the right to child support.

Again, neither reason nor history supports these claims. For example, nothing in ERA would prohibit an award of alimony to a spouse of either sex who has been out of the labor force for a long time in order to make a non-compensated contribution to the well-being of the family unit. Nothing in ERA would prohibit a court from ordering child support to the spouse having custody of a dependent child.

ERA speaks only to discrimination under state or federal law; it does not speak, or purport to regulate, voluntary practices of individuals in their familial relationships. Indeed, in the realm of marriage and the family, the greatest

influences upon actual behavior are the social customs, economic realities, religious traditions and practices, and individual preferences and economic status of the people involved. ERA would not regulate such voluntary behavior of individuals in their private lives. The Alaska experience since 1972 proves this.

In summary, both the research and the history of the State amendment since 1972 make manifest that opponents have exaggerated alarmingly the claims of ERA's effect in areas traditionally protected through the constitutional concept of privacy or with regard to personal lifestyle choices of free Americans.

If one compares the history of ERA with the long struggle for women's suffrage, or the longer struggle -- still in progress -- against race-based discrimination, the ERA movement is relatively young. Resubmission by the Congress of ERA, for consideration by state legislatures, would be appropriate. This issue is not fading away; if anything, momentum for the amendment appears to be growing. Legislatures in the '80s should have an opportunity to consider this vital issue, without being restricted by a few adverse decisions in certain states in the past. As a leader in the efforts to bring sex-based discrimination to an end, Alaska can cite its own experience and memorialize the Congress to give state legislatures a new opportunity to ratify ERA.

Respectfully submitted,

Joe P. Josephson, Chairman

Victor Fischer, Vice-Chairman

H. "Pappy" Moss

MINORITY REPORT OF THE SENATE COMMITTEE ON HEALTH, EDUCATON AND SOCIAL SERVICES RE SJR 1

Dear Mr. President:

The undersigned Senators who are members of the Senate Committee on Health, Education and Social Services have carefully considered the implications of SJR 1 to the state of Alaska and its citizens and submit this minority report recommending that SJR 1 does not pass.

Even though Alaska was among the first states to ratify the first Equal Rights Amendment, we believe that events since that time demand that this body re-examine carefully the implications of that amendment to Alaska, the legislature and Alaskan citizens. We submit that the law has changed substantially since the article cited by the majority report was published in 1972, the same year that the amendment was passed out of the Congress and ratified by Alaska.

As correctly noted in the majority report, Alaska in 1972 amended its state constitution to specifically prohibit discrimination on the basis of sex. Therefore, clearly Alaskans do not need the additional protection of the Equal Rights Amendment in the federal constitution. And while as the majority report states, no particular problems have developed from this addition to our state constitution, it cannot be analogized to the federal constitution as will become evident in the following discussion.

The Equal Rights Amendment is unnecessary. Since 1971, the United States Supreme Court has routinely applied the protections of the 5th and the 14th Amendments to women and to gender based discrimination to invalidate many state and federal actions.[1] For example, the United States Supreme Court recently invalidated a Louisiana law that gave a husband exclusive control over the disposition of property owned by both spouses during the marriage

[1] Reed v. Reed, 404 U.S. 71 (1971). Frontiero v. Richardson, 411 U.S. 677 (1973). Board of Education v. La Fleur, 414 U.S. 632 (1974). Stanton v. Stanton, 421 U.S. 7 (1975). Taylor v. Louisiana, 419 U.S. 522 (1975). Weinberger v. Wiesenfeld, 420 U.S. 636 (1975). Turner v. Department of Employment Security, 423 U.S. 44 (1975). Craig v. Boren, 429 U.S. 190 (1976). Califano v. Goldfarb, 430 U.S. 199 (1977). National Gas Co. v. Satty, 434 U.S. 136 (1977). Caban v. Mohammed, 441 U.S. 380 (1979). Davis v. Passman, 442 U.S. 228 (1979). Orr v. Orr, 440 U.S 268 (1979). Califano v. Westcott, 433 U.S. 76 (1979). Wengler v. Druggists Mutual Insurance Co., 100 S.Ct. 1540 (1980). Michael M. v. Superior Court of Sonoma County, 101 S.Ct. 1200 (1981). Kirchberg v. Feenstra, 101 S.Ct. 1195 (1981). There are several other lower court decisions which are not listed.

on the basis that it violated the Equal Protection Clause of the 14th Amendment.[2] It held that gender-based discrimination is unconstitutional absent a showing that the classification furthers an important governmental interest. To more fully understand this standard, the Court's ruling in Michael M. v. Superior Court of Sonoma County,[3] is important. This case involved an appeal by a young man who had been convicted of statuatory rape. He argued that the statute unlawfully discriminated against him on the basis of gender since men alone were liable. The Court said that where gender classifications realistically reflected the fact that the sexes were not similarly situated, such laws do not violate the Constitution.

In addition to the direct Constitutional protections, the courts have also applied the protections of the Title VII of the Civil Rights Act of 1964 to prevent sex discrimination.[4] Title VII states that it is unlawful to discriminate against any individual with respect to compensation, terms, conditions, or privileges of employment, because of such individual's race, color, sex, or national origin. Congress was able to apply its provisions to state actions by relying on its authority guaranteed by the 14th Amendment. There are other important laws which currently guarantee women's rights.

Title IX of the Civil Rights Act of 1964 which applies to all public education requires it to be free from discrimination based upon sex. The Equal Employment Opportunity Act of 1972 likewise prohibits sex discrimination and applies to all employers of at least 15 employees who are engaged in businesses affecting interstate commerce. States are prohibited from denying equal educational opportunities on the basis of sex by the Equal Educational Opportunities Act of 1974. The Equal Pay Act of 1963 applies to all federal and state employers, as well as to employers engaged in interstate commerce. The Equal Credit Opportunity Act of 1974 applies to all creditors and prevents discriminatory credit practices. For these federal laws to be enforceable against states and employers engaged in interstate commerce, the Congress must have Constitutional authority to enact them. In all of these cases, the courts have uniformly upheld Congress' authority.

This becomes important to our position, because even if the Equal Rights Amendment was to be ratified, the laws implementing it would still need to be enacted by Congress. It is difficult to imagine what other areas important to the majority of Alaskans would become law as a result of the Equal Rights Amendment.

2 Kirchberg v. Feenstra, 101 S.Ct. 1195 (1981).
3 101 S.Ct. 1200 (1981).
4 Fitzpatrick v. Bitzer, 427 U.S. 445 (1976). Dothard v. Rawlinson, 433 U.S. 321 (1977). City of Los Angeles Dept. of Water and Power v. Manhart, 435 U.S. 702 (1978).

For the past ten years, there has been tremendous conflict over what the Equal Rights Amendment will accomplish. As evident in the Senate and House hearings and in a Harvard Civil Rights - Civil Liberties Law Review, Constitutional scholars cannot agree on the standard of review that would apply to sex discrimination cases under the Equal Rights Amendment. Some proponents of the amendment assert that it would not invalidate laws concerning homosexual relations, intersexual occupancy of sleeping facilities in public institutions, or women in combat, while others disagree.[5] Opponents to the amendment are equally convinced that it will.

In our opinion, these arguments miss the point. The fact that recognized authorities of the Constitution and the United States Supreme Court can entertain such diametrically opposing views of the same language demonstrates that it is impossible to give a confident interpretation until the amendment's ratification and subsequent judicial interpretations. Such judicial pronouncements may take literally hundreds of years.[6]

One important consequence that cannot be ignored is that the judiciary makes mistakes. If mistakes are made at the level of the Congress or the state legislatures, they can be rectified by the appropriate body. Where, however, mistakes are made in a judicial interpretation of a Constitutional provision the effects are drastic. Such mistakes can only be corrected by the death, the retirement, or change of mind of the Supreme Court justices, or by constitutional amendment. It is highly unlikely that any of these might occur.

Two remaining areas concern us and are the strongest

[5] The authors of the article relied upon by the majority report states:

"The Equal Rights Amendment will have a substantial and pervasive impact upon military practices and institutions. As now formulated, the Amendment permits no exceptions for the military. Neither the right to privacy nor any unique physical characteristic justifies different treatment for the sexes with respect to voluntary or involuntary service, and pregnancy justifies only slightly different conditions of service for women. . . . Women will serve in all kinds of [military] units, and they will be elgible for combat duty."

Brown, Emerson, Falk, & Freedman, The Equal Rights Amendment: A Constitutional Basis for Equal Rights for Women, 80 Yale L.J. 871, 969, 978 (1972). Note, The Legality of Homosexual Marriage, 82 Yale L.J. 573 (1973).

[6] The 14th Amendment was designed to correct the injustices of an earlier United States Supreme Court decision holding that a black man was not entitled to constitutional protections even if he had been born a free man. Nothing really was accomplished until the civil rights movement of the 1960's. Decisions regarding racial discrimination are still being decided.

arguments against supporting SJR 1 and the Equal Rights Amendment; shifting legislative power to the federal judiciary and shifting states' rights to the federal government.

Passage of the Equal Rights Amendment would further erode the checks and balances originally built into the United States Constitution. Our founders established 3 branches of government and created a system of checks and balances to prevent the executive, the legislature or the judiciary from becoming too powerful. In recent years, the judiciary has usurped the authority of the legislature.[7] By definition, a constitutional amendment which limits what government can do places limitations on the legislature, because normally it is the legislature that has policy making authority. But constitutional amendments can only be interpreted by the judiciary. We believe that our constituency would find us more responsive to them than a small group of lawyers who are appointed to lifetime positions.

More importantly to us as Alaskans is that not only would the governmental power shift from the legislature to the judiciary, but it would also shift from the state to the federal government. This would be accomplished by section 2 of the amendment. The basic premise of the Constitution is to ensure that the people have as direct a say in the government as possible. It is our view that this can be best accomplished by leaving the most authority possible within the state legislature.

As elected state senators, we are particularly concerned over the amendment's encroachment on our legislative authority and on the shifting of governmental power from the states to the federal government and judiciary. While politically it is hard to oppose the Equal Rights Amendment, we do not believe that we can betray the trust that our constituency placed in us to be mindful of federal intrusions upon our authority. We believe that the protections sought by the majority of people are already included in the federal constitution, as evidenced by the recent United States Supreme Court decisions discussed briefly above and in the numerous laws already enacted by the Congress and applicable to the states. We further believe that any additional protection that our constituency identifies as necessary can be best addressed at the state level.

[7] Even the Alaska Supreme Court has decided issues that many believe belong to the legislature by deciding, for example, that Alaskans have the right to marijuana for personal use. If citizens are unhappy with that decision, there is literally nothing they can do, because the court has decided that this activity is protected by the Alaska Constitution. Whereas, if the decision had been made by the legislature, the citizens could speak on the issue. In a sense, this means that rather than Alaskans being governed by themselves, they are governed by an elite few.

In summary, we ask that the Senate carefully weigh the true import of SJR 1 and not pass it.

Respectfully submitted,

Paul Fischer

From: Senator Jay Kerttula
Senate President

Subject: SJR 26, WAMI medical school positions

Date: March 20, 1984

Because of the increase in Alaska's population and the increase in qualified applicants for the WAMI program, it is necessary to increase Alaska's quota in this medical training program from 10 to 15.

Attached please find back-up information for Senate Joint Resolution 26.

WAMI Medical Education Program

Initial letter to selected legislators. Sen. Kerttula expanded by introducing SJR 26

Applicant pressure has further increased since the graph was drawn

UNIVERSITY OF ALASKA, FA
Fairbanks, Alaska 99701

April 25, 1983

Dear ( )

This is to solicit your support for increasing the number of WAMI medical school positions for Alaskan students from 10 to 15 positions per year.

Since 1975 the WAMI Program has provided a mechanism through which Alaska contracts for 10 positions for Alaskan students in each entering class of the University of Washington School of medicine. These ten Alaskan medical students take their first year of medical school on the Fairbanks campus. They then join their classmates from Washington, Montana and Idaho in Seattle for the second, third and fourth years of medical school. Parts of the third and fourth year curricula are taught in Anchorage and Ketchikan.

Each year Alaska ranks at or near the bottom of the national listings of the numbers of medical education openings per capita (see attachment #1). The number of Alaskan applicants to the program continues to increase. (See attachment #2) This year 49 students are contending for 10 places.

The present 10 positions per year will provide only half the number of new physicians needed to simply replace physicians leaving Alaskan practice through normal attrition (600 m.d.s with 30 years practice duration = 20 replacements needed per year). Population growth will of course add to this requirement.

The University of Washington School of Medicine is, for the first time since 1975, in a position to accept more Alaskans. We can add more students to the first year class in Fairbanks without additional cost. This is true because our faculty needs are based on the range of subjects taught, not on class size. If we accept more Alaskans into the program we must, however, be prepared to pay the University of Washington for teaching these student in the second, third and fourth years. The cost per student year will be approximately $30,000. Thus the added costs of moving from 10 to 15 positions per year are as follows as the four year medical school program is filled.

Additional Students

Fiscal Year	University of Alaska	University of Washington	Additional Cost
F.Y.84	5	0	$ 0
F.Y.85	5	5	$150,000
F.Y.86	5	10	$300,000
F.Y.87 (and succeeding years)	5	15	$450,000

We now have accepted our authorized class of 10 students for the coming academic year. We have, in addition, designated 7 fully qualified alternates.

We could admit up to 5 of these alternates to the coming year's program without an appropriation. We would, however, be incurring a major financial commitment in succeeding years. We thus feel we must have some substantive action by the State government endorsing this program expansion and, insofar as possible, committing future support.

Senator Kerttula has agreed to sponsor a resolution along these lines. I hope you will be able to support this effort.

Sincerely,

Wayne W. Myers, M.D.
Director, WAMI Program

Inquiry from Harry Crawford and response.
Response indicates that cost of $30,000 per student-year is an upper limit figure - actual cost would be slightly lower.

Wayne W. Myers, M.D.
Director, WAMI Program
University of Alaska, Fairbanks
Fairbanks, AK 99701

Dear Dr. Myers:

Thank you for your letter soliciting the Governor's support for increasing the number of WAMI medical school positions for Alaskans.

As I understand this program, Alaska currently contracts for 10 students per year. Now, the University of Washington is proposing to increase our "quota" to 15, and you are requesting our support for this increase. I have a few questions for which I would appreciate answers before I can formulate a recommendation on this issue. I requested information on WAMI costs and have been provided the figures listed below.

1982-83 Costs

(i) Student Fees (Paid to U of W)

Student Level	Per Student Fee
1st Year	at Fairbanks
2nd Year	$25,737
3rd Year	$25,416
4th Year	$16,988

(ii) Administrative Cost (Paid to U of W)

Overall Program Administration	$ 91,531
Clinical Site Cost (Travel)	48,896
U of W Faculty Support	46,903
	$187,330

(iii) University of Fairbanks costs cannot be identified specifically for these students.

If these are incorrect, please correct them; if you can expand upon them, please do so.

You have indicated that the per year cost of these new students is approximately $30,000 each. How does that relate to the breakout above? Will the 2nd year cost be increasing for U of W or will the administrative costs increase due to the increased number of students? Are these administrative costs fixed by the WAMI contract or do they change annually? How are they set? Similarly, do the per student fees change or have we always paid $16,988 per 4th year student, for example? If they do change, how are they set?

Finally, I would like to know how successful our eight years of WAMI participation have been. Specifically, how many Alaskan WAMI students have graduated and returned to practice medicine in Alaska?

Provided with these answers and information, I will be much better able to make a recommendation on your request. Thank you again for calling this to our attention.

Sincerely,

Larry Crawford

Larry Crawford
Chief of Staff

May 20, 1983

Larry Crawford
Chief of Staff
Office of the Governor
State of Alaska
Juneau, AK 99811

Dear Mr. Crawford:

Thank you for your letter of 12 May regarding WAMI medical student positions. Before moving to more detailed information, I should make clear that the figure of $30,000 per student year which I quoted was a simplified upper limit figure, taking into account probable inflation over the proposed transition period of at least four years. The intent was to avoid any later impression that this program expansion had been sold on less than full revelation of the overall cost.

Charges by the University of Washington to Alaska for educating its medical students are based on a cost study by Kasonic, Chavelle & Associates submitted in 1974. Since then, Mr. Kasonic has periodically updated the original figures to consider inflation. The full cost study has not been repeated. A copy of the original cost finding procedures, the most recent inflation update and our FY83 bill from the U of W are attached.

Costs of training second year, third year and fourth year students are developed as noted above. Resident tuition and fees paid by Alaska WAMI students to the U of W are subtracted. We are billed for the difference. Tuition and fees are set by the Washington State legislative process and hence difficult to predict.

The items designatd in your letter as "Clinical site cost (Travel)" represents the extra expense of operating obstetrics/gynecology, family medicine and psychiatry training units in Anchorage and a family medicine training unit in Ketchikan, compared to the cost of operating similar units in Seattle. If we are to increase Alaskan class size it may become highly desirable to develop a fifth clinical training site in the state. This would add $10,000 to $15,000 to our annual bill.

Finally, I have attached our most recent data on the whereabouts of WAMI graduates. After graduation from medical school, M.D.s spend three or more years in internship and residency training. There are no such training programs in Alaska. Also, some students assume military or National Health Service Corps obligations in return for scholarships in medical school. Of twenty-one Alaskans who have completed their training and service obligations, nine are practicing in Alaska. Thirty-nine are still in medical school. Thirty-three are in internships, residency training, or fulfilling federal service obligations.

Another indictor of success of the program is to recognize it as a four state network which includes medical school internships and residencies. The WAMI Program, as thus defined, has helped train about half the family physicians who have entered practice in Alaska in the past 10 years.

I appreciate your interest in this matter. Please let me know what additional information might be useful

Sincerely,

Wayne W. Myers, M.D.

Dear Dr. Myers:

It's nice to hear from you again. It's been a number of years since we corresponded while I was District Director of Muscular Dystrophy Association.

Regarding your request for increasing medical school positions, the House members will very shortly be acting on the State operating budget, which has already gone through the hearing process including the U of A budget.

Representative Terry Martin, Chairman of Finance Subcommittee, has received a copy of your letter from me and if there are any revisions to be made, he will be recommending them.

The WAMI program has been a great success for our students and merits our support.

Thanks again for writing. It was good to hear from you.

Dear Dr. Myers,

Thank you for your recent letter regarding the WAMI program.

I am pleased to learn that an opportunity presently exists for additional Alaskan students to enter the WAMI medical program, and I believe that this situation should be taken full advantage of.

Alaska has traditionally experience a great deal of attrition in many professional areas, including the field of medicine, and I believe that by allowing 15 students per year to enter the WAMI medical school it will be possible to achieve a greater degree of stability in this field.

You have my support for the resolution which Senator Kerttula will be introducing during this legislative session.

Sincerely,

Mike

RE: WAMI Medical School Positions

I understand that serious consideration is being given by the University of Alaska to increase the number of WAMI medical school positions for Alaskan students from 10 to 15 per year. I am attaching a copy of the material I received from Wayne Myers, M.D., Director of the WAMI program. Over the past years, it has been extremely difficult for qualified Alaskans to enter this program due to the limited number of positions available. I am delighted to hear that you have agreed to sponsor a resolution supporting additional slots for the WAMI program. I would be pleased to co-sponsor your resolution.

RESOLUTION NO. 83 - 20

SUBJECT: Support for WAMI Program Increase

WHEREAS, the State of Alaska supports Alaskan residents participating in the WAMI Medical Education Program; and

WHEREAS, the number of qualified applicants has increased and available positions remained the same (10 students); and

WHEREAS, other states support over three times as many state supported medical students as Alaska; and

WHEREAS, Alaska's population is increasing;

THEREFORE BE IT RESOLVED, that the ASMA support an increase in the number of WAMI students entering the program from 10 to 15.

JUNEAU, ALASKA 99811

Wayne W. Myers, M.D.
Director, WAMI Program
University of Alaska, Fairbanks
Fairbanks, Alaska 99701

Dear Dr. Myers:

Thanks for providing me with information on need for additional WAMI medical school positions for Alaskan students.

While I believe WAMI is an excellent program and I support the opportunities it provides our students with career choices they may not otherwise have, I'm afraid that the financial reality of declining state revenues is forcing the Legislature to make some pretty tough decisions. We are having to reduce and make substantial funding changes in many programs -- and it seems there is always someone there with good reasons why we shouldn't take such action. At the same time, it would be extremely difficult to justify any increases in an existing programs -- such as WAMI.

I regret I can't support your request at this time. You have my support, but unfortunately I just don't believe we can afford the additional positions at this time.

Sincerely,

Jan Faiks
Senator

change in penalties under the AECA would be retroactive and to allow adequate time to implement the change in pricing for training. All other sections would be effective on October 1, 1983.

S. 638

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Special Security Cooperation Act of 1983".

MILITARY SALES AND RELATED PROGRAMS

SEC. 101. (a) In addition to amounts otherwise made available for the fiscal year 1983 for loan guaranties under section 24(a) of the Arms Export Control Act, $425,000,000 of loan principal are authorized to be so guaranteed during such fiscal year.

(b) In addition to amounts otherwise made available for the fiscal year 1983 to carry out the provisions of section 503 of the Foreign Assistance Act of 1961, there is authorized to be appropriated $142,000,000 to carry out such provisions for such fiscal year.

ECONOMIC SUPPORT FUND

SEC. 102. In addition to amounts otherwise authorized to be appropriated for the fiscal year 1983 to carry out the provisions of chapter 4 of part II of the Foreign Assistance Act of 1961, there is authorized to be appropriated $82,000,000 to carry out such provisions for such fiscal year.

INTERNATIONAL ORGANIZATIONS AND PROGRAMS

SEC. 103. In addition to amounts otherwise made available for the fiscal year 1983 to carry out the provisions of chapter 3 of part I of the Foreign Assistance Act of 1961, there is authorized to be appropriated for the fiscal year 1983 $4,500,000 to carry out such provisions, for payment to the International Atomic Energy Agency.

SECTION-BY-SECTION ANALYSIS OF THE PROPOSED SPECIAL SECURITY COOPERATION ACT OF 1983

I. INTRODUCTION

The proposed Special Security Cooperation Act of 1983 contains freestanding provisions in order to authorize supplemental international security assistance to meet urgent needs for fiscal year 1983.

II. PROVISIONS OF THE BILL

Section 101. Military sales and related programs

This section authorizes an increase of $425,000,000 in the limit established in P.L. 97-377 on the total principal amount of loans for which guaranties may be issued during fiscal year 1983 under section 24(a) of the AECA.

In addition, this section authorizes an increase in appropriations of $142,000,000 above the amount made available in P.L. 97-377 for fiscal year 1983 to carry out the military assistance program. Although the President's budget for fiscal year 1984 requested a supplemental appropriation of $167,000,000 to carry out the military assistance program for fiscal year 1983, section 506(c) already provides authorization to appropriate that part of the budget request ($25,000,000) which is proposed to be used for reimbursement to the Department of Defense for defense articles, defense services and military education and training previously drawn down pursuant to section 506(a).

Section 102. Economic support fund

The President's budget for fiscal year 1984 requested a supplemental appropriation of $344,500,000 for the Economic Support Fund for fiscal year 1983. This section increases by $82,000,000 the authorization of appropriations for fiscal year 1983 for this Fund, made by P.L. 97-113. The amounts appropriated in P.L. 97-377 for this Fund for fiscal year 1983 were $62,500,000 less than the amount authorized by P.L. 97-113.

Section 103. International organizations and programs

This section authorizes an increase in appropriations of $4,500,000 above the amount made available in P.L. 97-377 for fiscal year 1983 to carry out Chapter 3 of part I of the Foreign Assistance Act of 1961, as amended. These funds will be used for payments to the International Atomic Energy Agency.

S. 639

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SHORT TITLE

SEC. 1. This Act may be cited as the "Lebanon Emergency Assistance Act of 1983".

ECONOMIC SUPPORT FUND

SEC. 2. (a) It is hereby determined that the national interests of the United States would be served by the authorization and appropriation of additional funds for economic assistance for Lebanon in order to promote the economic and political stability of that country and to support the international effort to strengthen a sovereign and independent Lebanon.

(b) Accordingly, in addition to amounts otherwise authorized to be appropriated for fiscal year 1983 to carry out the provisions of chapter 4 of part II of the Foreign Assistance Act of 1961, there is authorized to be appropriated $150,000,000 to carry out such provisions.

(c) The amounts appropriated pursuant to this section are authorized to remain available until expended.

MILITARY SALES AND RELATED PROGRAMS

SEC. 3. (a) In order to support the rebuilding of the armed forces of Lebanon, the Congress finds that the national security interests of the United States would be served by the authorization and appropriation of additional funds to provide training for the Lebanese armed forces and to finance procurements by Lebanon of defense articles and defense services for its security requirements.

(b) In addition to amounts otherwise made available for the fiscal year 1983 to carry out the provisions of chapter 5 of part II of the Foreign Assistance Act of 1961, there are authorized to be appropriated for the fiscal year 1983 $1,000,000 to carry out such provisons.

(c) In addition to amounts otherwise made available for the fiscal year 1983 for loan guarantees under section 24(a) of the Arms Export Control Act, $100,000,000 of loan principal are authorized to be so guaranteed during such fiscal year.

SECTION-BY-SECTION ANALYSIS OF THE PROPOSED LEBANON EMERGENCY ASSISTANCE ACT OF 1983

I. INTRODUCTION

The proposed Lebanon Emergency Assistance Act of 1983 ("the Bill") contains freestanding provisions in order to authorize supplemental international security assistance for the fiscal year 1983 for Lebanon. The amounts which would be authorized in the Bill represent the total amounts which are proposed to be allocated to Lebanon in fiscal year 1983 from amounts made available pursuant to this Bill and Public Law 97-377 for the Economic Support Fund, the International Military Education and Training program, and the Foreign Military Sales Credit program.

II. PROVISIONS OF THE BILL

Section 1. Short title

This section provides that the Bill may be cited as the "Lebanon Emergency Assistance Act of 1983".

Section 2. Economic support fund

This section consists of three subsections, as follows:

(a) This subsection states the determination of Congress that the national interests of the United States would be served by the authorization and appropriation of additional funds for economic assistance to promote the economic and political stability of Lebanon and to support the international effort to strengthen its sovereignty and independence.

(b) This subsection authorizes the appropriation of $150,000,000 for economic support pursuant to chapter 4 of Part II of the Foreign Assistance Act, in addition to amounts otherwise authorized for that chapter by Public Law 97-133.

(c) This subsection provides that the amounts appropriated pursuant to this section are authorized to remain available until expended.

Section 3. Military sales and related programs

This section consists of three subsections as follows:

(a) This subsection is a finding by the United States Congress, in support of the rebuilding of the armed forces of Lebanon, that the authorization and appropriation of supplemental funds for military sales and related programs would serve the national security interests of the United States. These additional funds would be used to provide training for the Lebanese armed forces and to finance procurements by Lebanon of defense articles and defense services for its security requirements.

(b) This subsection authorizes the appropriation of an additional $1,000,000 for the fiscal year 1983 for the International Military Education and Training (IMET) program. This authorization is in addition to the amounts made available for the IMET program by Public Law 97-377.

(c) This subsection authorizes an increase of $100,000,000 is the limit established in Public Law 97-377 on the total principal amount of loans for which guaranties may be issued during fiscal year 1983 under section 24(a) of the Arms Export Control Act.

By Mr. DOLE (by request):

S. 640. A bill to amend the Internal Revenue Code of 1954 to provide for the inclusion of certain employer contributions to health plans in an employee's gross income; to the Committee on Finance.

S. 641. A bill to provide for voluntary private alternative coverage for medicare beneficiaries, and for other purposes; to the Committee on Finance.

S. 642. A bill to restructure the medicare hospital insurance program; to the Committee on Finance.

S. 643. A bill to make improvements in the medicare and medicaid programs, and for other purposes; to the Committee on Finance.

HEALTH INCENTIVES REFORM LEGISLATION

• Mr. DOLE. Mr. President, I am introducing today, at the request of the administration, the major components of the health incentives reform program. There are five components of the package, one of which—the pro-

posed Medicare Prospective Payment Rates Act—was introduced on February 23, 1983.

The following four bills are those that are being introduced today: First, limitation on exclusion for employer health plan payments; second, the Medicare Voucher Act of 1983; third, the Medicare Catastrophic Hospital Cost Protection Act; and, fourth, the Health Care Financing Amendments of 1983.

NEED FOR ACTION

As many of my colleagues are aware, health care costs continue to escalate at an alarming rate, far exceeding the increase in prices overall.

This year the Federal Government will spend approximately $57 billion on the medicare program. At the same time, we expect to spend $19 billion on services for the poor under the medicaid program.

Rising health care costs are a problem that affects all of us. As the President pointed out in the letter of transmittal accompanying the health incentives reform program, increasing costs affect the elderly who are covered by medicare, and face the threat of increasing out of pocket costs. The poor continue to see medicaid coverage reduced as States and the Federal Government are forced by rising costs to make cutbacks. Workers with employment-based health insurance have received lower cash wages because of the unchecked cost increases for health benefits.

The President's package of health care program reform measures is designed to address each of these areas. The Senator from Kansas is particularly pleased to note the inclusion of the provision limiting the exclusion for employer health plan payments.

Under the proposal contained in the administration's fiscal year 1984 budget, employer contributions to accident or health plans for an employee would be included in the employee's income to the extent they exceed, first, $175 per month—$2,100 per year—if the plan covers the employee and his family, or second, $70 per month—$840 per year—if the plan covers only the employee. The provision would apply for taxable years beginning after December 31, 1983. The $175 and $70 amounts would be indexed to adjust for inflation.

Amounts included in the employee's income under the proposals would also be subject to social security taxes.

There would be a transition rule to exempt premiums paid under collective-bargaining agreements signed before January 31, 1983.

The total exclusion from employees' income for employer paid medical coverage is the second largest, statutory fringe benefit in the Tax Code. The largest is the exclusion from income of pension contributions and earnings.

The revenue loss estimate for this total exclusion from income is estimated to be $18.6 billion in fiscal year 1983 and $21.3 billion in fiscal year 1984.

The administration's proposal would reduce this revenue loss by $2.3 billion in fiscal year 1984 and $4.4 billion in fiscal year 1985. Therefore, even after a cap on the exclusion, the tax benefit for receiving part of your compensation in the form of health care would be very substantial.

Many experts believe that our present tax treatment of employer provided health benefits has been a contributing factor in the trend toward excessive coverage and escalating medical costs.

We will have to examine whether a dollar cap on the exclusion from an employee's income will change consumer behavior in a desirable way. For example, will a cap encourage copayments and more efficient health care, or will some workers, such as low-income individuals receive insufficient coverage?

Even if we decide to limit employer paid tax free medical insurance, there are still a number of questions to be resolved with respect to a so-called tax cap. These include the level at which the cap is set. For instance, should there be a national cap or one which varies in different areas of the country, thereby recognizing differing costs of care; how often should the limit be updated; and how do we prevent adverse selection—the case where all the healthy choose low option insurance and the sick, high option. Another obvious question is how to deal with self-insured plans which are increasing in number.

It is not likely that we on the Federal level would attempt to establish a minimum benefits package in conjunction with a tax cap. That is clearly the jurisdiction of the State insurance commissioners and in the lands of labor and business.

CONCLUSION

Medicare is a program which has grown at an alarming rate since its creation 17 years ago. The trust fund is rapidly approaching a period of time in which it will no longer have sufficient funds to finance program expenditures. Something must be done to prevent this potential insolvency. The President's proposals are an attempt to address this problem and others. The Senator from Kansas urges his colleagues to give these bills their serious consideration.

Mr. President, I request that a summary of each bill be included in the record following my comments.

There being no objection, the summaries were ordered to be printed in the RECORD, as follows:

S. 640—LIMITATION ON EXCLUSION FOR EMPLOYER HEALTH PLAN PAYMENTS

GENERAL EXPLANATION

Current law

All employer contributions to health insurance plans for employees are excluded from the employees' income and wages for purposes of income and employment taxes. This tax treatment generally applies to all insurance coverage, regardless of cost, and to all medical benefits, no matter how extensive. The same rule generally applies to amounts paid by an employer to or on behalf of an employee under a self-insured medical plan.

Reasons for change

Excluding employer contributions to health plans from gross income creates an inequity between individuals covered by employer health plans and those who are not so covered. The latter group must pay for their health care with after tax dollars, while the health care of the former group is provided with before tax dollars. For example, an employee with $23,000 of total compensation consisting of $20,000 of cash wages and $3,000 of health insurance coverage will pay $804 less in Federal income and Social Security taxes than one with $23,000 of cash wages.

The preferential treatment of employer paid health benefits encourages employees to receive large amounts of their compensation in that form. This has led to a significant decline in the amount of compensation subject to tax and indirectly has led to higher tax rates on cash wages.

From a health policy viewpoint, many employees have such generous insurance plans that they bear very little, if any, of the cost of doctors' visits or hospital services. They therefore tend to overuse doctor and hospital services and medical tests. The very rapid increase in health care costs in recent years can be attributed at least in part to this tax-induced incentive to demand additional health care with little or no regard to its actual costs.

Proposal

Employer contributions to a health plan would be includible in gross income to the extent that they exceed $70 per month ($840 per year) for an individual employee, or $175 per month ($2,100 per year) for family coverage.

The proposal will generally be effective January 1, 1984. However, in order to allow renegotiation of existing contracts, the proposal will not be effective with respect to employer contributions to employer health plans, the amounts of which are fixed by a legally binding contract entered into on or before January 31, 1983, until the earlier of January 31, 1986, or the first date after January 31, 1983 on which such amounts cease to be fixed by the contract.

Effects of proposal

The amount of employer contributions is determined, in the case of an insured plan, on the basis of the premiums charged for such insurance. The insurance premiums paid by the employer on behalf of employees will be divided by the number of covered employees. If the employer maintains different plans covering different groups of employees, each plan will be treated separately in determining employer costs per employee.

In the case of noninsured plans, the amount of the employer contributions will be based on the costs of providing coverage under the plan. Costs of providing coverage may be determined based on reasonable estimates of such costs.

To the extent that employer contributions exceed the $70 individual/$175 family monthly ceilings, the excess would be includible in the income of the covered employee. Even if employer health plan payments exceed the $70 individual/$175 family monthly amounts, only the excess will be included in the employee's gross income. For example, if the employer paid $185 per month for family health coverage for an

employee, $10 per month would be included in the employee's gross income. Thus, $10 would be subject to income tax and FICA and FUTA taxes (if applicable). Most current employees will pay no additional tax because these employees have insurance coverage costing less than the applicable ceiling amount.

Revenue estimate

Fiscal years:	Billions
1984	$2.1
1985	4.3
1986	6.0
1987	8.0
1988	10.7

LIMITATION ON EXCLUSION FOR EMPLOYER HEALTH PLAN PAYMENTS

TECHNICAL EXPLANATION

Summary of the proposal

Employer contributions to a health plan would be includible in gross income to the extent that they exceed $70 per month ($840 per year) for an individual employee, or $175 per month ($2100 per year) for family coverage.

Detailed description

Under the proposal, the amount of any excess employer contributions to a health plan with respect to coverage of an employee during the payroll period will be included in the employee's gross income. Employer contributions for a payroll period are excess employer contributions to the extent they exceed the monthly dollar limit for such employee, prorated to reflect the length of the payroll period. For 1984, the monthly dollar limit is $70 for an employee with individual coverage under the plan and $175 for an employee with family coverage under the plan. For years after 1984, the monthly dollar limit will be adjusted to reflect changes in the Consumer Price Index. An employee will be treated as having individual coverage unless the employee has a spouse or a dependent who is covered under the plan.

The employer contribution to a health plan with respect to an employee will be the cost of coverage of the employee under the plan reduced by the amount of the employee's contributions for such coverage. The annual cost of coverage with respect to an employee will be the aggregate annual cost of providing coverage for all employees with the same type of coverage (individual or family) under the plan as that of the employee, divided by the number of such employees. The cost of coverage with respect to an employee for a payroll period will be the annual cost of coverage prorated to reflect the length of the payroll period. Any cost of providing coverage under a plan which is allocable to workmen's compensation or to a purpose other than providing medical care is not taken into account in determining the cost of coverage under the plan.

The annual cost of providing coverage under an insured plan (or any insured part of a plan) will be determined based on the net premium charged by the insurer for such coverage. The annual cost of providing coverage under a noninsured plan (or any noninsured part of a plan) will be based on the costs incurred with respect to the plan, including administrative costs. In lieu of using actual administrative costs, an employer may treat 5 percent of the plan's incurred liability for benefit payments as the administrative costs with respect to the plan. A plan will be a noninsured plan to the extent the risk under the plan is not shifted from the employer to an unrelated third party.

The cost of coverage under the plan must be determined in advance of the payroll period and must be redetermined not less often than once every 12 months. The cost of coverage must be redetermined whenever there are significant changes in the coverage provided under the plan or in the composition of the group of covered employees. The cost of coverage is determined separately for each separate plan of the employer. Coverage of a group of employees is a separate plan if such coverage differs from the coverage of another group of employees. Where the actual cost of coverage cannot be determined in advance, reasonable estimates of the expected cost of coverage are to be used. Where the cost of coverage fluctuates each year depending on the experience of the employer under the plan, an average annual cost of coverage will be used.

If an estimate is determined not to be a reasonable estimate, the employer will be liable for the income taxes (at the maximum rate applicable to individuals) and the employment taxes (both the employer's and the employee's share) that would have been imposed on the additional amount that would have been included in the income of employees as excess employer contributions if the actual cost of coverage had been used to determine the amount of excess employer contributions.

In the case of multiemployer plans to which an employer makes contributions, the multiemployer plan is to be treated as the employer for purposes of determining the cost of coverage and the liability for errors in estimates of the cost of coverage. Each employee's excess employer contributions will be determined based on this cost of coverage. However, for purposes of the employer's obligations to withhold from wages and to pay employment taxes, the amount of excess employer contributions will be considered to be a portion of each contribution made by the employer to the plan. The portion of each contribution to be treated as an excess employer contribution will be based on the ratio of the plan's excess employer contributions per employee per month to the total monthly employer contribution per employee.

Effective date

In general, the proposal would apply to employer contributions made with respect to payroll periods beginning after December 31, 1983. However, the proposal will not apply to employer contributions to employer health plans, the amounts of which are fixed by a legally binding contract entered into on or before January 31, 1983, until the earlier of January 31, 1986, or the first date after January 31, 1983 on which such amounts cease to be fixed by the contract.

S. 641—SUMMARY OF PROPOSED MEDICARE VOUCHER ACT OF 1983

Section 1 would assign the draft bill the short title "Medicare Voucher Act of 1983".

Section 2 would permit the Secretary to contract with health benefits organizations (HBOs) (a broad range of health insurers and health services providers, including health maintenance organizations (HMOs) and competitive medical plans (CMPs)) to provide private alternative coverage for Medicare beneficiaries (other than individuals suffering from end-stage renal disease, or who are working and are 65 years of age or older but under 70) who chose to participate in such a private plan. Section 2 would also enact additional amendments to current provisions of law concerned with Medicare contracts with such organizations to—

Establish a single, coordinated open enrollment period during August and September of each year (but only for that number of new enrollees, in order of applications filed, previously specified by an HBO); and to enable the Secretary, to the extent feasible, to provide for individuals who move from the area served by one HBO to an area served by another (similar to the system used by the health benefits program for Federal employees);

Preclude new enrollments for individuals receiving only Supplementary Medical Insurance (SMI) benefits;

Preclude new cost-based contracts;

Permit HBOs to offer separate benefit packages for employer-based groups;

Permit HBOs to offer one or more benefit packages as long as each package covered at least those services for which Medicare pays and covered inpatient hospital services for every day of hospitalization, which benefit levels, coinsurance, and deductibles to be set by the HBO;

Eliminate current requirements as to premium levels and benefits, and require only that the average cost-sharing for the portion of benefits for which Medicare pays not exceed the average cost-sharing (including amounts above the Medicare reasonable charge) under Medicare;

Permit HBOs to provide annual rebates of up to $500 (instead of charging premiums), not consider those rebates as income for purposes of Medicaid, Aid to Families with Dependent Children, Supplemental Security Income, Food Stamps, Low-Income Home Energy Assistance, or low-income housing programs, and treat those rebates as Social Security benefits for purposes of the Federal income tax laws; and

Preempt provisions of State or local law requiring benefits more extensive that those under section 2.

Section 3 would enact conforming amendments that would—

Repeal the requirement for the Secretary to conduct a study of additional benefits that are required under existing law (but not under the provisions of section 2); and

Require payments to HBOs under section 2 to take into account services furnished by physician assistants or nurse practitioners if Medicare would pay for those services when furnished by a physician.

Section 4 would make the provisions of section 2 applicable to services furnished after 1984. Section 4 would also—

Retain the transitional provisions enacted in 1982 when Congress amended the provisions of law providing for payments to HMOs;

Permit any enrollee of an HMO or CMP at the end of 1984 not already covered by those earlier transition provisions to continue his enrollment under the provisions of law then current if either the HMO or CMP had a cost-based contract with the Secretary or if the enrollee was enrolled for Medicare SMI (but not Hospital Insurance (HI) benefits), unless the Secretary found that the new provisions should apply to all members of an HMO or CMP because of administrative costs or other administrative burdens; and

Apply the provisions of section 2 to enrollees who also receive benefits under Medicaid only after the Secretary finds that it is administratively feasible.

S. 642—SUMMARY OF PROPOSED MEDICARE CATASTROPHIC HOSPITAL COST PROTECTION ACT

Section 1 would assign the draft bill the short title "Medicare Catastrophic Hospital Cost Protection Act".

Section 2 would restructure benefits under the Medicare Hospital Insurance program. Under current law, Medicare covers only the first 90 days of a hospitalization during any spell of illness, plus a lifetime reserve of 60 additional days. An inpatient hospital de-

Memorandum

TO: REPRESENTATIVE MAE TISCHER
Chair - House HESS

FROM: Max Gifford
Administrative Assistant
Senator John Sackett

Subj: SJR 27 (Sackett) Health Cost Containment Act

The matter of the proposed Health Cost Containment Act pending before the U.S. Congress was brought to Senator Sackett's attention late last session. It was pointed out that while the federal legislation was an effort to hold the line on health care costs in the United States, what was being proposed would result in roughly $500 to $600 per year in taxable employer health benefit contributions for about 13,000 state employees in Alaska. The employer contributions would, in part, be seen as part of the employees gross income and subsequently t[illegible]d accordingly. Of particular note for Alaskans was that the dollar limitations were based on lower 48 standards thus resulting in higher federal tax withholding for Alaskans. Of significance, too, was the claim by the proponents that their legislation would reduce health costs. No evidence was offered that such would be the case in Alaska.

As a result, Senator Sackett introduced SJR-27, opposing the Health Cost Containment Tax Act, June 3, 1983. The resolution passed the Senate, June 26, 1983, but clearly did not reach the House of Representatives in time to be acted upon.

Since that time, I have learned that most experts feel the Health Cost Containment Act will not pass the current session of Congress. I am told, but without letters of substance, that the legislative package received less than enthusiastic reception from Members in the U.S. Senate and that the Administration has also dropped the matter.

I understand that other states have voiced their opposition to the Cost Containment Act. Senator Sackett agrees that it would not hurt to add Alaska's objections to the proposal and would welcome favorable action on SJR-27, by the State House of Representatives.

Should you have more questions please do not hesitate to contact Senator Sackett's office at 465-3753. I will do my best to find any information you might need.

1ST SESSION

S. 640

To amend the Internal Revenue Code of 1954 to provide for the inclusion of certain employer contributions to health plans in an employee's gross income.

IN THE SENATE OF THE UNITED STATES

MARCH 1 (legislative day, FEBRUARY 28), 1983

Mr. DOLE (by request) introduced the following bill; which was read twice and referred to the Committee on Finance

---

A BILL

To amend the Internal Revenue Code of 1954 to provide for the inclusion of certain employer contributions to health plans in an employee's gross income,

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. SHORT TITLE.

This Act may be cited as the "Health Cost Containment Tax Act of 1983".

SEC. 2. CERTAIN EMPLOYER HEALTH PLAN CONTRIBUTIONS INCLUDED IN INCOME.

(a) INCLUSION IN INCOME.—

(1) IN GENERAL.—Part II of subchapter B of chapter 1 (relating to items specifically included in

gross income) is amended by adding at the end thereof the following new section:

"SEC. 87. EXCESS EMPLOYER CONTRIBUTIONS TO HEALTH PLANS.

"(a) GENERAL RULE.—

"(1) INCLUSION IN INCOME.—If an employee is covered by an employer health plan at any time during a payroll period and there is an excess employer contribution to such plan with respect to coverage of the employee during such payroll period, then an amount equal to such excess employer contribution shall be included in the gross income of the employee for such payroll period.

"(2) TREATMENT OF AMOUNT INCLUDED.—For purposes of this title, any amount included under paragraph (1) in an employee's gross income for a payroll period shall be treated as compensation paid to the employee in cash on the earliest date on which any other compensation for such payroll period is paid to the employee or included in the employee's gross income.

"(b) EXCESS EMPLOYER CONTRIBUTION.—

"(1) IN GENERAL.—For purposes of this section, the term 'excess employer contribution' means, with respect to coverage of an employee during a payroll period, the excess of—

"(A) the employer contributions made by a single employer to one or more plans with respect to coverage of the employee during the payroll period, over

"(B) the applicable monthly dollar limit for coverage of such employee multiplied by a fraction, the numerator of which is 12 and the denominator of which is the number of payroll periods in a calendar year.

"(2) SPECIAL RULE FOR MULTIEMPLOYER PLANS.—If an employer makes contributions with respect to an employee for a payroll period to a health plan which is, or is part of, a multiemployer plan, then solely for purposes of the employer's obligations under subtitle C, the excess employer contribution shall be considered to be an amount equal to the employer's actual contributions to the plan multiplied by a fraction, the numerator of which is the excess employer contributions, determined as provided in paragraph (1), for 1 month with respect to coverage of all employees under the plan, and the denominator of which is the total monthly employer contributions, determined as provided in subsection (d), for 1 month with respect to coverage of all employees under the plan. For purposes of this paragraph only, the excess employer contribu-

tions under the plan may be determined on the basis of a single cost of coverage for both individual and family coverage (as provided in subsection (c)(1)) and a single monthly dollar limit (as provided in subsection (c)(3)).

"(c) MONTHLY DOLLAR LIMITS.—

"(1) MONTHLY DOLLAR LIMITS FOR 1984.—The applicable monthly dollar limit for coverage of an employee during any payroll period beginning in calendar year 1984 shall be—

"(A) $70 for coverage of an individual employee, or

"(B) $175 for coverage of an employee and one or more members of the employee's family.

"(2) MONTHLY DOLLAR LIMITS FOR YEARS AFTER 1984.—The monthly dollar limits for coverage of an employee during any payroll period beginning in a calendar year after 1984 shall be the monthly dollar limit provided in paragraph (1) multiplied by a fraction, the numerator of which is the Consumer Price Index for the 12-month period ended June 30 of the calendar year immediately preceding the calendar year in which the payroll period begins, and the denominator of which is the Consumer Price Index for the 12-month period ended June 30, 1983. Each monthly dollar limit so determined shall be rounded to the nearest whole

dollar. For purposes of this paragraph, the Consumer Price Index for a 12-month period shall mean the average of the Consumer Price Indexes for All Urban Consumers published by the Department of Labor for each month in the 12-month period.

"(3) SINGLE MONTHLY DOLLAR LIMIT.—In the case of a health plan which is, or is part of, a multiemployer plan, the multiemployer plan may apply a single dollar limit to coverage of all employees under the plan for purposes of applying the special rule in subsection (b)(3). The single monthly dollar limit shall be a weighted average determined, in the manner prescribed by the Secretary in regulations, based on the applicable monthly dollar limits provided in paragraph (1) or (2) and the percentage of employees having each type of coverage.

"(d) EMPLOYER CONTRIBUTIONS.—The employer contributions to any health plan with respect to coverage of an employee for a payroll period shall be the cost of coverage of the employee for such payroll period reduced by any contributions made by the employee for such coverage.

"(e) COST OF COVERAGE.—

"(1) COST PER EMPLOYEE.—The cost of coverage shall be determined separately for individual coverage and family coverage under each plan of the em-

ployer, except that for purposes of applying the special rule in subsection (b)(2), a single cost of coverage may be determined for individual and family coverage. Such single cost of coverage shall be a weighted average determined, in the manner prescribed by the Secretary in regulations, based on the cost of coverage for each type of coverage separately and the percentage of employees having each type of coverage. The annual cost of coverage of an employee shall be determined by dividing the aggregate annual cost of providing coverage for all employees who are covered under the plan and who have the same type of coverage (individual or family) as the employee, by the number of such employees. In making such determination, accounts shall be taken into account with respect to any employee only for periods during which such employee is covered by the plan. The cost of coverage of an employee for a payroll period shall be the annual cost of coverage for the employee multiplied by a fraction, the numerator of which is 1 and the denominator of which is the number of payroll periods in a calendar year.

"(2) TIME FOR DETERMINING COST OF COVERAGE.—The cost of coverage under a plan for a payroll period shall be determined prior to the beginning of the payroll period and shall be redetermined not less often

than once every 12 months. The cost of coverage shall be redetermined whenever there are significant changes in coverage or in the composition of the group of employees covered.

"(8) DETERMINATION OF COST OF COVERAGE.—The annual cost of providing coverage under a plan shall be based on the cost to the employer of insurance for any insured coverage under the plan, plus all costs incurred with respect to noninsured coverage under the plan. Where the cost to the employer of insurance reflects the employer's prior experience under the plan, an average cost of such insurance, based on premiums for the three immediately preceding years (adjusted to reflect changes in the cost of health insurance), may be used. The cost of providing noninsured coverage shall equal the liability incurred for benefit payments under the plan plus all other costs, including administrative costs, incurred with respect to the plan. In lieu of determining the actual amount of other costs (costs other than the liability incurred for benefit payments), an employer may treat an amount equal to 7 percent of the liability incurred for benefit payments as equal to such other costs. In the case of a health plan that is, or is part of, a multiemployer plan, the cost of coverage

under the plan shall be determined as if the multiemployer plan were the employer.

"(4) ESTIMATION OF COSTS.—Where the actual cost of providing coverage cannot be determined in advance, the cost of coverage shall be based on a reasonable estimate that takes into account such factors as the Secretary may prescribe in regulations.

"(5) ESTIMATE NOT REASONABLE.—If the cost of coverage under a plan for any payroll period is determined on the basis of estimates, and such estimates are determined not to be reasonable, then the employer or, in the case of a plan which is, or is part of, a multiemployer plan, the multiemployer plan shall be liable for the taxes that would have been imposed under this title with respect to all employees on the amount by which the excess employer contribution for each employee, determined on the basis of the actual cost of coverage, exceeds the amount of such excess employer contribution, determined on the basis of the estimated cost of coverage, if such excess amount had been included, for the calendar year in which the payroll period begins, in the taxable income of each employee and—

"(A) each employee was subject to the maximum rate of tax imposed on individuals under section 1,

"(B) the remuneration of each employee for employment (including such excess) for the calendar year did not exceed the contribution and benefit base amount for such year (as determined under section 230 of the Social Security Act), and

"(C) the remuneration of each employee for employment (excluding such excess) for the calendar year exceeded $6,000.

"(6) AMOUNTS NOT FOR MEDICAL CARE.—Any cost of providing coverage under a plan which is properly allocable to—

"(A) workmen's compensation, or

"(B) a purpose other than the providing of medical care,

shall not be taken into account in determining the cost of coverage for purposes of this section.

"(f) INDIVIDUAL COVERAGE.—In any case where an employee has coverage other than individual coverage, and the employee has no spouse or dependent who is actually covered by reason of the employee's coverage, then the employee must notify the employer (or the multiemployer plan in the case of a plan which is, or is part of, a multiemployer

plan) of such fact. Such an employee shall be treated for all purposes under this section as having individual coverage.

"(g) INFORMATION REPORTS BY MULTIEMPLOYER PLANS.—Each multiemployer plan which includes an employer health plan with respect to which there are excess employer contributions for a calendar year must, prior to February 1 of the succeeding calendar year, provide an information report to each employee with respect to whom contributions to the plan were made during the calendar year. Such information report shall include the following:

"(1) The amount of the excess employer contributions with respect to the employee for such calendar year, and

"(2) The amount of employer contributions to the plan that were treated by employers under section 87(b)(2) as excess employer contributions included in the gross income of the employee.

"(h) LIABILITY FOR OVERESTIMATES.—No employer or multiemployer plan shall be subject to any liability by reason of a determination that the cost of coverage determined by the employer or the multiemployer plan exceeded the actual cost of coverage.

"(i) DEFINITIONS.—For purposes of this section—

"(1) EMPLOYER HEALTH PLAN.—The term 'employer health plan' means an arrangement to which the

employer makes contributions to provide (directly or through insurance, reimbursement, or otherwise) medical care for employees and their families in the event of personal injury or sickness. The term 'employer health plan' does not include any arrangement for the provision of medical care for individuals in active service in the Armed Forces of the United States or for the families of such individuals.

"(2) SEPARATE PLANS.—

"(A) DIFFERENT COVERAGE FOR SEPARATE GROUPS.—If a group of one or more employees receives coverage which differs from the coverage received by a second group of one or more employees, each such group shall be treated as covered by a separate plan. Individuals whose primary health insurance coverage is coverage under title XVIII of the Social Security Act shall be treated as receiving different coverage from individuals whose primary health insurance coverage is other than coverage under title XVIII of the Social Security Act.

"(B) EMPLOYER DETERMINATION.—The determination of whether two groups of one or more employees receiving identical coverage shall each be treated as covered by a separate plan shall be

made by the employer except as otherwise prescribed by the Secretary in regulations.

"(3) EMPLOYEE.—The term 'employee' does not include an individual who is an employee within the meaning of section 401(c)(1) (relating to self-employed individuals).

"(4) FAMILY.—The term 'family' means, with respect to an employee, the employee's spouse and any dependents of the employee.

"(5) MEDICAL CARE.—The term 'medical care' has the meaning given such term by paragraph (1) of section 213(e).

"(6) NONINSURED COVERAGE.—The term 'noninsured coverage' means any coverage, the risk of which is not shifted from the employer to an unrelated third party. All other coverage is insured coverage.

"(7) MULTIEMPLOYER PLAN.—The term 'multiemployer plan' means an employee welfare benefit plan (within the meaning of section 3(1) of the Employee Retirement Income Security Act of 1974)—

"(A) to which more than one employer is required to contribute, and

"(B) which is maintained pursuant to one or more collective bargaining agreements between

one or more employee organizations and more than one employer."

"(8) PAYROLL PERIOD.—The term 'payroll period' has the meaning provided such term in section 3401(b).

"(9) SINGLE EMPLOYER.—The term 'single employer' shall mean a single employer determined under rules similar to the rules provided by subsections (b), (c), and (m) of section 414.".

(2) The table of sections for part II of subchapter B of chapter 1 is amended by adding at the end thereof the following:

"Sec. 87. Excess employer contributions to health plans.".

(b) EXCLUSION FROM INCOME.—Section 106 is amended by striking the word "Gross" at the beginning thereof and inserting in lieu thereof the words "Except as provided in section 87 with respect to excess employer contributions, gross".

(c) EMPLOYMENT TAX AMENDMENTS.—

(1) FEDERAL INSURANCE CONTRIBUTIONS ACT AMENDMENTS.—Section 3102 is amended by adding at the end thereof the following new subsection:

"(d) SPECIAL RULE FOR EXCESS EMPLOYER CONTRIBUTIONS.—

"(1) In the case of excess employer contributions (within the meaning of section 87(b)) which constitute

wages, subsection (a) shall be applicable only to the extent that collection can be made by the employer, at or after the date on which such excess employer contributions are treated as paid to the employee under section 87(a)(2) and before the close of the 30th day following such date, by deducting the amount of the tax from such wages of the employer (excluding excess employer contributions, but including funds turned over by the employee to the employer pursuant to paragraph (2)) as are under control of the employer.

"(2) If the tax imposed by section 3101, with respect to excess employer contributions (within the meaning of section 87(b)), exceeds the wages of the employee (excluding excess employer contributions) from which the employer is required to collect the tax under paragraph (1), the employee may furnish to the employer, on or before the 30th day following the date on which the excess employer contributions are treated as paid to the employee under section 87(a)(2), an amount of money equal to such excess.

"(3) If the tax imposed by section 3101 with respect to excess employer contributions which constitute wages exceeds the portion of such tax which can be collected by the employer from the wages of the em-

ployee pursuant to paragraph (1), such excess shall be paid by the employee.".

(2) RAILROAD RETIREMENT TAX ACT AMENDMENTS.—Section 3202 is amended by adding at the end thereof the following new subsection:

"(d) SPECIAL RULES FOR EXCESS EMPLOYER CONTRIBUTIONS.—

"(1) In the case of excess employer contributions (within the meaning of section 87(b)) which constitute wages, subsection (a) shall be applicable only to the extent that collection can be made by the employer, at or after the date on which such excess employer contributions are treated as paid to the employee under section 87(a)(2) and before the close of the 30th day following such date, by deducting the amount of the tax from such wages of the employee (excluding excess employer contributions, but including funds turned over by the employee to the employer pursuant to paragraph (2)) as are under control of the employer.

"(2) If the tax imposed by section 3201, with respect to excess employer contributions (within the meaning of section 87(b)), exceeds the wages of the employee (excluding excess employer contributions) from which the employer is required to collect the tax under paragraph (1), the employee may furnish to the

employer, on or before the 30th day following the date on which the excess employer contributions are treated as paid to the employee under section 87(a)(2), an amount of money equal to such excess.

"(3) If the tax imposed by section 3201, with respect to excess employer contributions which constitute wages exceeds the portion of such tax which can be collected by the employer from the wages of the employee pursuant to paragraph (1), such excess shall be paid by the employee.".

(3) COLLECTION OF INCOME TAX AT SOURCE AMENDMENTS.—Section 3402 is amended by adding at the end thereof the following new subsection:

"(s) EXCESS EMPLOYER CONTRIBUTIONS.—In the case of excess employer contributions (within the meaning of section 87(b)) which constitute wages, subsection (a) shall be applicable only to the extent that the tax can be deducted and withheld by the employer, at or after the date on which such excess employer contributions are treated as paid to the employee under section 87(a)(2) and before the close of the calendar year in which such date occurs, from such wages of the employee (excluding excess employer contributions, but including funds turned over by the employee to the employer for the purpose of such deduction and withholding) as are under the control of the employer. Such tax shall not at any

time be deducted and withheld in an amount which exceeds the aggregate of such wages and funds (including funds turned over under section 3102(d)(2) or section 3202(d)(2)) minus any tax required by section 3102(a) or section 3202(a) to be collected from such wages and funds.".

(4) GENERAL RULE.—Chapter 25 (relating to general provisions relating to employment taxes) is amended by adding at the end thereof the following new section:

"SEC. 3508. TREATMENT OF EXCESS EMPLOYER CONTRIBUTIONS.

"(a) For purposes of this subtitle, any amount required to be included in the gross income of an employee under section 87(c) shall not be treated as a payment under a plan or system established by the employer on account of sickness or accident disability or medical or hospitalization expenses in connection with sickness or accident disability.

"(b) In the case of an employer who makes contributions to a health plan that is, or is part of, a multiemployer plan, then the amount of the excess employer contribution for purposes of the employer's liabilities and obligations under sections 3102, 3111, 3202, 3221, 3301, and 3401 shall be the amount determined under section 87(b)(2).".

(2) CLERICAL AMENDMENT.—The table of sections for chapter 25 is amended by adding at the end thereof the following new item:

"Sec. 3508. Treatment of excess employer contributions.".

(c) EFFECTIVE DATES.—

(1) IN GENERAL.—Except as provided in paragraphs (2) and (3), the amendments made by this section shall apply to payroll periods beginning after December 31, 1983, in taxable years ending after such date.

(2) EMPLOYMENT TAXES.—The amendments made by subsection (c) shall take effect January 1, 1984.

(3) LEGALLY BINDING CONTRACTS.—The amendments made by this section shall not apply with respect to employer contributions to an employer health plan, the amounts of which are fixed by the terms of a legally binding contract in effect on January 31, 1983, prior to the earlier of January 31, 1986, or the first date on which the amounts of such employer contributions cease to be fixed by the terms of such a contract. For purposes of this paragraph the amounts of employer contributions cease to be fixed by the terms of a contract on the earliest of the date the contract terminates, the date the contract is extended, the date the contract is reopened or renegotiated, the date any

terms of the contract are altered, amended, or otherwise changed, or the date any party to the contract has a right to terminate either the entire contract or that portion of the contract relating to the employer health plan.

O
